Recession and start-up costs force the suspension of scheduled flights in May 1983. Various unimplemented plans are made to resume operations in 1984, including the start-up of services from Newark to Bedford, Massachusetts, or relocation to Puerto Rico and the initiation Caribbean services.

LIBERTY EXPRESS: United States (1994-1997). The Falls Creek, Pennsylvania-based "USAir Express" partner **Crown Airways** is purchased at the end of 1993 by megaregional **Mesa Airlines**. Early in 1994, the subsidiary is reformed as a **Mesa Air Group** division and begins offering "USAir Express" service from Pittsburgh with a fleet of 8 Beech 1900Cs and 4 Shorts 360-200s.

Enplanements for the year total 76,771.

The fleet is rationalized in 1995 to include 13 Beech 1900Cs. Traffic figures are now reported with those of **Mesa Air Group**.

Operations continue apace in **1996**. A Beech 1900D with 2 crew and 14 passengers makes such a hard landing at Bradford Airport, Pennsylvania, on February 7 that it bounces up and off the runway to the left, skidding 1,148 ft. before stopping; although the aircraft is badly damaged, there are no fatalities.

During the first week of January **1997**, **Mesa Air Group** is again reorganized. The operating divisions Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced by four new units: America West Express, Independent, United Express, and USAir Express. Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**. Liberty Express will be merged into the USAir Express section.

On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional will repaint its aircraft in a modified version of the major's new grey and dark blue livery.

LIBERTY HELICOPTERS: P.O. Box 1338, Linden Municipal Airport, Linden, New Jersey 07036, United States; Phone (908) 474-9700; Fax (908) 474-0488; http://www.libertyhelicopters.com; Year Founded 1985. Liberty is set up at Linden, New Jersey, during the first quarter of **1985**. Executive and small group passenger charters in the New York City area begin on April 10. In addition to airport transfers, the carrier also makes courier flights and provides sling-load services.

Originating from the VIP Heliport, the company begins sight-seeing tours of "The Big Apple" on September 6, **1990**. Growth, brought about by an aggressive marketing plan aimed at both domestic and international customers, allows the company to open a second location, at the Downtown Manhattan Heliport, in **1995**. By the end of the decade, Liberty enjoys annual revenues of \$12 million.

In **2000**, President Patrick Day oversees a workforce of 45 and a fleet that now includes 8 Eurocopter AS-350B A-Stars plus 1 each AS-355F TwinStar, SA-365N Dauphin, and Bell 206L LongRanger.

LIBYAN AIRWAYS: Libya (1952–1953). Tripoli travel agency owner Sayyed Mohammed Senussi Giaber joins with the British independent airline **Silver City Airways, Ltd.** to form this carrier in **1952**. The U.K. operator provides 2 wet-leased Bristol 170 Freighters, which are employed to operate nonscheduled all-cargo services to Benghazi and Kufra.

Weekly scheduled roundtrip Bristol services are initiated between Tripoli and Benghazi in January **1953**. Unable to maintain its viability against intense competition from regional carriers, the company shuts its doors before year's end.

LIBYAN ARAB AIRLINES: Libya (1969–1990): Following a coup against King Idris led by Col. Muammar Qaddafi in August **1969**, the new government changes the corporate identity of **Kingdom of Libya Airlines** to LAA on September 1.

During the fourth quarter, \$14 million worth of orders are placed for two Boeing 727-200s. Enplanements for the year, under both names, total 201,620.

The fleet in **1970** includes 3 Sud Est SE-210 Caravelle VIRs, 2 Fokker F.27-100s, 1 Douglas DC-3, and 1 Gates Learjet 23. International destinations visited include Rome, Geneva, Paris, London, Malta, Athens, Beirut, and Cairo, while domestic points served are Al Bayda, Benghazi, Djerba, Ghadames, Marsa El Brega, Sabhah, and Tubruq.

Passenger boardings drop 6% to 190,208 while cargo traffic is off 13.5%.

Airline employment is increased 25% in **1971** to 1,113. The fleet now comprises 3 Sud-Est SE-210 Caravelle VIRs, 2 newly delivered B-727-2L5s, and 2 Fokker F.27-200s.

A total of 207,100 passengers are carried.

Freight accelerates 29% in **1972** while passenger boardings jump 27% to 370,000.

Airline employment in **1973** stands at 1,436. Service is inaugurated to Geneva and Misurata.

En route from Tripoli via Benghazi to Cairo on February 21, Flight 114, a B-727-2L5 with 8 crew and 103 passengers, strays over the northern tip of Great Bitter Lake in the Israeli-occupied Sinai Peninsula. The jetliner is intercepted at 5,000 ft. by two Israeli Air Force McDonnell Douglas F-4E Phantom II fighters, which attempt to force the aircraft to land. After the Boeing allegedly ignores the warnings to divert and raises its undercarriage, which had been lowered. The Phantoms interpret this as an effort to escape and open fire on the Boeing.

Severely damaged, Flight 114 attempts an emergency belly landing, but crashes in the desert 15 km. E of the Suez Canal. The copilot and four passengers survive. Defence Minister Moshe Dayan offers the Israeli government's public regret over the tragedy and to show it, announces plans to compensate the families of the victims.

A B-727-2D6A is wet-leased from **Air Algerie, S.A.** for a replacement, as orders are placed for two B-727-2L5As that will enter service in **1974**; the Boeing will have **Air France** crews. Scheduled flights begin between Tripoli and Misurata.

Passenger bookings for the year climb 11% to 408,000, but cargo traffic is off by 13.3%.

The Algerian trijet is retained in **1974**, but the two new Boeings are delayed. Plans to withdraw the Caravelles are shelved. Orders are placed for six more F.27-200s, which will support the energy industry. Later in the year, the **Air France** crews operating the **Air Algerie, S.A.** B-727 go on strike; with job actions illegal in Libya, the French are ordered out of the country and crews are provided by **Royal Air Maroc, S.A.**

During the year, cargo accelerates 22.5% and boardings soar 15.9% to 408,000.

The workforce in **1975** totals 1,725. New and enlarged training programs are launched as the company is given exclusive rights under January's Law No. 5 to operate all airline services within the country. The law will force small competitors to merge or fail. Six new F.27-600s are delivered and are placed on domestic routes. The B-727-2L5As are delivered at the end of the year.

Passenger boardings are up 37% to 558,000 while freight climbs 28%.

One B-720-023B, leased from **Middle East Airlines, S.A.L. (2)**, and three more B-727-2L5As are delivered in **1976**, as airline employment grows to 2,300 and the carrier is reorganized into a public corporation.

On July 6, twenty-year-old Libyan Mustafa Hadlumagid hijacks a B-727-2L5A carrying 98 passengers en route from Tripoli to Benghazi and orders it flown to Tunisia. When landing permission at Tunis is denied, the aircraft is directed to Palma de Mallorca, where the youth frees his hostages and surrenders to Spanish police.

Passenger boardings climb 19.95% to 669,909 (plus 202,813 charter travelers); freight advances by 38%.

Amin B. Marghani is named chairman in **1977** with Hasan M. Cuniali as general manager. The carrier's three Caravelles are retired. The Boeing jetliners open new routes from Tripoli to Frankfurt, Athens, Tunis, and Casablanca and from Benghazi to Rome and London. Domestic schedules are significantly increased.

Airline employment stands at 2,500 in **1978** as Cuniali replaces Marghani as chairman. Four B-737-2L5s and four F.27-400s are placed in service. Delivery of the last two "Baby Boeings" have been held up by the U.S. government until Libya signs the Hague International Convention on Hijacking.

Enplanements total 861,031.

Badri Ali Hasan succeeds Cuniali as chairman in **1979**. Service is inaugurated to Madrid, Moscow, Sofia, and Warsaw. The first five Ilyushin Il-76s freighters are delivered in LAA livery. As the remaining 38 arrive over the next 5 years, many will also be shared (complete with changed colors) with Jamahiriya Air Transport.

A request to Boeing for three B-747 Jumbojets is cancelled in May by order of the U.S. Department of State, which has determined that Libya is in violation of the Hague Convention.

En route from Benghazi to Tripoli on August 24, a B-727-2L5A with 59 passengers is hijacked by a lone gunman, who diverts it to Larnaca,

Cyprus. The pirate surrenders, requesting political asylum. Instead, he will be extradited back to Libya and reportedly executed.

An F.27-400 en route from Hon to Tripoli on October 16 is taken over by three gunmen, who order it flown to Switzerland. The Fokker flies to Malta, instead; on the ground, the pirates demand and receive permission to hold a news conference, during which they surrender.

Before the end of the year, Libyan Arab Air Cargo is formed as a wholly owned, all-cargo subsidiary.

Cargo grows 11.7% and passenger boardings grow 19.3% to pass the one million-mark for the first time (1,066,952).

Routes are opened to Karachi and Malta in 1980; orders are placed for three F.28-4000s for the fleet. Although Boeing has sought permission to complete three B-747-2L5Bs for the carrier, it is prohibited. Finished through the painting phase, the aircraft are later sold to **VARIG Brazilian Airlines (Viacao Area de Rio Grandense, S.A.)**. Still, several older B-707 Stratoliners are acquired from the used aircraft market.

An F.27-400 is lost at Chad on March 26, 1981; there are no other details available regarding the accident.

On November 27, the carrier signs a contract to purchase 10 Airbus aircraft. The next day, a second F.27-400 is destroyed in Chad. Five F.27-500s are ordered as replacements.

Three Lebanese Muslims, who say they are seeking the return of Imam Moussa Sadr, who is imprisoned in Israel, seize a B-727-2L5A over Italy on December 7 and force it to fly to Beirut, and then to Athens. The next day the aircraft, with 38 hostages aboard, is allowed to land in Tehran and on December 9 the Boeing departs for Beirut, where the hijackers free their captives and surrender. Passenger bookings for the year total 1.48 million.

The U.S. Department of State orders the Airbus order cancelled in early 1982 because the European consortium aircraft employ significant numbers of American components. The Libyans propose the acquisition of \$597.5 million worth of Boeing airliners and, although the manufacturer again seeks an export license, the DOS again blocks the sale.

Enplanements grow steadily this year, reaching 1,550,000.

Libyan army lieutenants At-Tawali and Mansur Al-Mahdi hijack a B-727-2L5A en route from Sabha to Tripoli with 158 passengers aboard, on February 20, 1983 and force it to land at the airport at Valletta, Malta. Refusing to refuel the airliner, Prime Minister Dom Mintoff opens negotiations from the control tower, which continue for three days. On February 23, the pirates release their captives and surrender after Mintoff promises them political asylum. Mintoff's reprieve leads to a diplomatic dispute with Col. Muammar Qaddafi.

A B-707-338C with 5 crew crashes 30 km. N of Sabha, Libya, on March 14 and explodes; there are no survivors.

Routes are started to Milan, Damascus, Jeddah, Tunis, and Algiers and four A310-203s and six A300-600Rs are ordered from Toulouse. This new request for Airbus equipment involves a certain amount of subterfuge designed to get around the U.S. ban. The aircraft will be leased or sold to banks and other non-airline concerns. U.S. intelligence gains knowledge of the plan and the airliner acquisition must be cancelled.

En route from Tripoli to Athens on June 22, a B-727-2L5A is taken over by two armed men, who divert it to Larnaca, Cyprus, where they surrender. They will be tried and given seven-year prison sentences.

A total of 1,758,999 travelers are flown on the year.

In 1984, the Fokker F.28-4000s enter service. Bookings fall to 1,627,701. In 1985, services are offered to 17 destinations in Asia, Europe, and North Africa, as well as domestically. Passenger boardings drop 0.31% to 1,579,000.

A by-product of Mideast terrorism, the Benina military airfield (previously the U.S. Wheeler Field) becomes target for a U.S. raid on April 14, 1986. Several LAA airliners are damaged when bombs fall from 23 F-111 bombers based in England and F-14As from the carriers U.S.S. *America* and U.S.S. *Coral Sea*. The next day, an Ilyushin Il-76T freighter is involved in a landing accident at Tripoli.

An F.27-600 with 39 passengers is destroyed as the result of a bad landing at Zella on June 6; no injuries are reported.

Following a break in diplomatic relations, Libyan airliners are banned from the U.K. at the end of October. As of November 1, Libyan-U.K. air freight must be flown by charter or transshipped over from airports on the Continent. Another F.27-600 crashes at Gialo on December 31 under unknown circumstances.

Moftah Saad Al-Diew becomes chairman in 1987; the entire top management of the airline is changed and a new team is installed.

In June 1988, two former **British Caledonian Airways, Ltd. (BCAL)** A310-203s are acquired by devious means. As a result of U.S. diplomatic intervention, these must first be leased to **Air Algerie, S.A.** Initially given Algerian livery and leased to the Libyans, who provide the flight crews, the two Airbuses begin operation on Libyan routes in the early fall.

Not long after takeoff from London (LHR) as a continuation of Flight 103, the 18-year-old **Pan American World Airways (1)** B-747-121 *Clipper Maid of the Sea* with 16 crew and 243 passengers, explodes in midair 31,000 feet over Lockerbie, Scotland. The blast immediately rips the fuselage apart and causes catastrophic structural failure; the cockpit and forward fuselage separate from the main body which, as it falls to earth, loses all four engines and suffers disintegration of the rear fuselage.

There are no survivors from the plane and an additional 11 people on the ground are killed and 5 injured when the center fuselage and wings crash into the Sherwood Crescent subdivision of Lockerbie. The debris erupts into a huge fireball that digs a giant crater, destroying at least 20 homes outright and damaging others beyond repair. Investigators will initially look to Iran, but will soon thereafter develop information that Libyan agents, perhaps connected to the national airline, are behind the atrocity.

Just after takeoff from Zella 74 on a June 6, 1989 service to Tripoli, the No. 1 engine of an F.27-600 with 3 crew and 36 passengers must be shut down. The Fokker attempts to return to its point of origin, but is unable to maintain altitude and must make a forced landing in the desert. There are no fatalities.

In 1990, the carrier is renamed **Jamahiriya Libyan Arab Airlines**.

LIBYAN AVIATION COMPANY, LTD.: Libya (1960–1967). LACL is formed at Benghazi on July 4, 1960 by Capt. Brian L. R. Pocock, C. H. J. Bos, and Abdul Mejid Bujazia. Employing Douglas DC-3s and de Havilland DH 104 Doves, the company undertakes ad hoc charters in support of exploration and oil pipeline interests.

In 1961, Pocock and Bos are bought out, but form another company, Air Bos, Ltd., which is given a contract to provide management and support services. The number of Douglas transports is increased to four, plus a de Havilland Canada DHC-2 Beaver.

In June 1962, a management and consultant services contract is signed with newly reformed Biggin Hill-based **Metropolitan Air Movements, Ltd.** Capt. Pocock, having become managing director of the British carrier, leases two, later five, Metropolitan Doves for use in Libya.

Charter services throughout Libya and nearby countries continues apace, although one Metropolitan Dove, leased from Keegan Aviation, is lost in a crash on February 26, 1964. Both Libyan Aviation and **Metropolitan Air Movements, Ltd.** cease all operations in early 1967.

LIBYAN NATIONAL AIRWAYS (LINAIR): Libya (1962–1975). Linair is set up at Tripoli in 1962 to provide passenger and cargo charters on behalf of the energy industry. Shareholding is divided between local Libyan concerns and **Sabena Belgian World Airlines, S.A.**, which provides the aircraft and technical support, including Douglas DC-3s. Z. Y. Lenghi is president.

Sabena turns over its interest to **Belgian International Air Services, S.A.** in July 1965. The new support airline picks up where the state carrier had left off.

Flights continue through the remainder of the decade and into the 1970s with a fleet that comprises six DC-3s and a Fokker F.27-200. In

January 1975, **Libyan Arab Airlines** is given exclusive authority to operate in the country, forcing Linair out of business.

LIDCA (LINEAS AEREAS DEL CARIBE, S.A.): Carrera 56, No. 74-22 Edificio LAC, Barranquilla, Colombia; Phone 57 (58) 347 923; Fax 57 (58) 458 291; Code LC; Year Founded 1954. LIDCA is formed at Barranquilla in early 1954 by Alfonso R. Aria. The first of what would eventually comprise a fleet of 11 Curtiss C-46s and 3 Fairchild C-82s is assembled and all-cargo operations are started to Colombian and Caribbean destinations. Bogota also serves as a terminus.

A Curtiss C-46D with two crew is lost near Medellin on November 24; although the aircraft must be written off, there are no fatalities.

A decade and a half following its start-up, the airline shares the fate of others attempting success in the Latin American air freight business—it shuts down. The suspension is only temporary as services are resumed.

During the early 1980s, the fleet includes 2 each Douglas DC-9-54Fs and 2 DC-6s. Destinations visited include Bogota, Miami, Cali, Cartagena, and Medellin.

LIDCA is not immune to the rash of Cuban hijackings in this time period. En route from Barranquilla to Bogota on October 2, 1984, a DC-8-54F is seized on the ground during a stop at Cartagena. The gunman, who has other family members in tow, requires that the freighter be diverted to Havana.

Flights continue through the remainder of the decade and the next. Orlando Donado is president and the company operates 3 Douglas DC-8-54Fs to Caribbean destinations.

LIDER TAXI AEREO, S.A.: Rua Haroldo Paranhos S/Nr., Aeroporto de Congenhas, São Paulo, 04357-060, Brazil; Phone 55 (247) 623 202; Fax 55 (247) 622 039; Year Founded 1958. Jose Alfonso Assumpcao founds what will eventually become Latin America's largest air taxi service at Belo Horizonte (capital of Minas Gerais State) during the summer of 1958. On demand service (passenger, cargo, and charter) begins from Aeroporto de Pampulha with 3 Cessna 170s on November 14.

During 1959–1961 the fleet is increased by 12 aircraft, with Cessna 180s and 182s predominating. The operator's first hanger is opened at its Belo Horizonte base in 1962 and three Aero Commander 500Bs join the fleet. In 1963–1967, the Aero complement grows to 12 and charter services are maintained to such destinations as Belem, Brasilia, São Paulo, and Rio de Janeiro.

A Learjet is added to the fleet in 1968 and during 1969–1971, bases are opened at Belem, São Paulo, Rio de Janeiro, Brasilia, and Manaus. Four additional Gates Learjets are acquired. A sales division is formed in 1972 and Assumpcao becomes the exclusive Learjet distributor in Brazil and, later, Paraguay. A helicopter division is formed in 1973.

In 1974–1980, as additional Learjets are acquired, the helicopter fleet, comprising mostly Bell types for which Assumpcao also becomes sole Brazilian distributor, is employed in support of the Petrobras state oil industry operating offshore and in the Amazon region. Enplanements in 1981 are 113,464 and due to economic recession, 98,537 in 1982.

In 1983, Lider helicopters are leased to Globe TV, which in turn begins an extensive advertising campaign on behalf of the charter carrier. In the middle 1980s, the fleet grows to comprise 7 Aero Commanders, 8 Learjet 35s, 2 Learjet 55s, 8 Bell 212s, 4 Bell 205s, 14 Bell 206s, and 5 Bell 222s. Airline employment exceeds 650 and the extensive operations built up are maintained throughout the remainder of the decade. Unhappily, as the Brazilian economy declines into chaos, so does traffic, which is off 60% by the end of 1989.

Government approval is received in July 1990 for the establishment of new scheduled domestic passenger and cargo services throughout the country under the name **Air Brasil**. In April 1991, LTA, hoping to beat competitors in the introduction of jetliners on the Rio–São Paulo air bridge, establishes its new **Air Brazil, S.A.** subsidiary.

Three British Aerospace BAe 146-200s are acquired, but **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.), VASP (Viacao Aerea Sao Paulo, S.A.), and Transbrasil, S.A. (Linhas Aereas Transbrasil)** replace their Electras more quickly than anticipated. Consequently, Lider withdraws its backing in December and **Air Brazil, S.A.** never gets off the ground.

Unscheduled air taxi and rotary-wing work is continued during the remainder of the decade. Managing Director Paulo Assumpcao oversees a fixed-wing fleet that includes 6 Beech 400A Beechjets, 4 Learjet 55 Longhorns, and 3 Learjet 35 Century 3s. The helicopter complement contains 6 Bell 206B JetRangers, 3 Bell 206L LongRangers, 6 Bell 212s, 4 Bell 414s, and 6 Sikorsky S-76 Spirit IIs.

LIETUVA AIR COMPANY, A.B. (AIR LITHUANIA, LTD.): 132 Valveriu Street, Karmetava Airport, Kaunas, 3018, Lithuania; Phone 370 (7) 291 770; Fax 370 (7) 226 030; <http://www.airlit.huania.lt>; Code TT; Year Founded 1991. A new national airline is established on September 13, 1991 from the former Kaunas subdivision of **Aeroflot Soviet Airlines** to provide nonscheduled domestic flights. Services are inaugurated later in the day with a fleet of 6 Yakovlev Yak-40s.

The owned fleet is increased in April 1992 by the addition of a Tupolev Tu-134A. A Tupolev Tu-154B is leased during the summer to operate charters to Stambul.

Enplanements for the year total 5,894.

In 1993, Chairman Kestutis Aurila oversees a workforce of 206.

The first regularly scheduled regional nonstop return flight by this company occurs on February 12 over a route from Kaunas to Budapest. Scheduled return service is introduced from Kaunas to Prague in April, with a new roundtrip service added in June from Kaunas to Kristianstad via Palanga. Frequencies from Kaunas to Helsinki commence in August, with roundtrips from Kaunas to Hamburg via Palanga beginning in November.

Passenger boardings this year increase to 6,047.

Airline employment is reduced by six workers in 1994. Orders are placed for two Fokker F.27-200s, with options taken on two others. Scheduled roundtrips are launched in September from Kaunas to Oslo.

Passenger traffic doubles during these 12 months, with customer bookings increasing 95.9% to 27,209. A total of 46 tons of cargo are also flown.

Airline employment stands at 200 in 1995. The fleet includes 6 Yak 40s, 1 Tu-134A, and 2 F.27-200s. Destinations visited include Budapest, Hamburg, Kristianstad, Oslo, Palanga, Poprad, Tatry, and Prague.

On July 17, the state-owned carrier is reorganized into a joint-stock company.

Enplanements climb 38.6% to 37,709, while 153.4 tons of goods are also transported.

Ten new employees are hired in 1996. To meet customer need, a bus service is initiated between Palanga Airport and Klaipeda, Kaunas Airport, and Vilnius.

In April, regularly scheduled roundtrips are started from Kaunas to Tallinn via Palanga. The service from Kaunas to Oslo is rerouted in August to fly from Kaunas to Oslo via Palanga. New roundtrips are launched in November from Kaunas to Billund via Palanga.

Despite the new service initiation, traffic falls badly, dropping 8% to 34,320 passengers flown. Freight is also off, with only 78.2 tons flown.

An Aero International (Regional) ATR42-320 is leased during the first quarter of 1997. On February 11, the Lithuanian government declares its intentions to privatize both of its carriers starting in the fall of 1998.

Following delivery of the ATR42-320 in April, it is placed into service to Kristianstad from Kaunas, and Palanga. With the start of the summer vacation schedule, long-haul charters are operated to Palma de Mallorca in Spain and Varna in Bulgaria.

In June, the Lithuanian Ministry of Transport approves a plan to merge the company with **Lithuanian Airlines, A.B.** On July 9, it is announced that Lietuva will first be merged with another small carrier, Vilnius-based Lietuvos Avioliņas, Ltd.

During the summer, two Yak-40s are leased out. Meanwhile, the number of weekly flights to Budapest, as well as to Billund and Oslo, is increased from two to three.

Rather than merge Air Lithuania into **Lithuanian Airlines, A.B.**, the former becomes a subsidiary on September 11. Although its shares are turned over to the other carrier, it retains its identity and is allowed to function as a regional operator.

Passenger boardings for the year accelerate 29.3% to 44,363. Cargo traffic, however, declines, with only 75.3 tons flown.

Airline employment stands at 178 in 1998. During the summer, the numbers of weekly flights from Kaunas are again increased—to Billund from three to five, Kristianstad from five to six, and Prague from two to three.

The carrier now offers a total of 27 weekly departures to 6 destinations in Germany, the Czech Republic, Norway, Sweden, Hungary, and Denmark.

On August 17, Tomas Laurinaitis is appointed director general as the company structure is somewhat changed. A new passenger-handling department is created at Kaunas Airport and begins operations in September.

Flights to Oslo are switched from the old airport at Fornebu to the new location 47 km. N of the city. Thrice-weekly Yak-40 roundtrips begin from Palanga to Moscow on October 22.

Customer bookings climb 8.2% to 48,000. Figures reveal that 50.1 tons of goods have also been transported.

A second ATR42-320 is placed into service in January 1999. Thrice-weekly roundtrips commence on October 31 from Kaunas to Cologne and Bonn.

Enplanements for the year total 48,000.

A total of 173 workers are employed at the beginning of 2000.

LIGACOE AEREAS REGIONAIS, S.A. (LAR). See LAR TRAN-SREGIONAL, S.A.

LIGNE AERIENNE ROI-ALBERT, S.A. (LARA): Belgium (1920–1922). In the Belgian Congo, **Syndicat National Pour l'Etude des Transport Aeriens, S.A. (SNETA)** joins with the aerial survey operator **Comite d'Etudes Pour le Navigation Aerienne au Congo, S.A. (CENAC)** under the joint title **Ligne Aerienne du Roi Albert, S.A. (LARA)** on July 1, 1920. The experimental east to west air service is named in honor of the king of Belgium. Levy-Lepan R three-seat flying boats are employed to launch the first segment of a route between the Congolese towns of Leopoldville and Stanleyville, flying from the former destination as far as Ngombe. This is the first intra-African air service.

Despite the irksome necessity of reattaching the aircraft's fabric after each flight, the Ngombe end of the Congo service is extended by the little pusher biplanes to Lisala on March 3, 1921. During the summer, the 1,078-mile Stanleyville route is finished and opened.

The combined LARA service is completed on June 7, 1922; in two years of operations, 95 passengers and 4,400 pounds of mail and freight are transported between the 4 towns on the Leopoldville–Stanleyville route.

To combine and upgrade both the Congolese and European operations, the Belgian government takes over SNETA's assets on May 23, 1923 and forms them into the new state airline, **Societe Anonyme Belge d'Exploitation de la Navigation Aerienne—Sabena**.

LIGNES AERIENNE SEYCHELLES, LTD. See LAS (LIGNES AERIENNE SEYCHELLES, LTD.)

LIGNES AERIENNES CONGOLAISES, S.A. (LAC): BP 10120, Airport de N'Djili, Kinshasa, Democratic Republic of the Congo; Phone 243 (12) 20 874; Fax 243 (12) 20 964; Code QC; Year Founded 1997. In early May 1997, following the overthrow of the government of Zaire by rebel forces under Desire Kabila, the new Congo

Republic is established. In April, the new transport minister, Aubert Mukendi, who had headed **Air Congo, S.A. (2)** between 1964–1968, proposes that a new airline to succeed the former flag carrier, **Air Zaire, S.A.** be established. He suggests that the company be named Congo Airways, S.A.

President Kabila directs Mukendi to turn the project over to the chief executive's personal pilot, Capt. Paul Mukandila. For a variety of reasons, including the start-up of competing **Zaire Express, S.A.**, which has claimed **Air Zaire, S.A.**'s air traffic rights, the Congo Airways scheme is dropped.

Instead, a new national airline, **Lignes Aeriennes Congolaises, S.A.** is established, with Mukendi as president. The company name, incidentally, translates as Congo Airlines; the same name, in English, will later be employed by **Zaire Express, S.A.** Most of the previous 2,500-person workforce is rehired, many or most of whom had not been paid a salary since 1993–1994. All uniforms worn are former **Air Zaire, S.A.** outfits, with a few new patches.

In a show of support to the new government, the government of Rwanda, which had seized **Air Zaire, S.A.**'s last operational B-737-298C, *Lac Upemba*, in April 1996, now returns the aircraft to Kinshasa's N'Djili Airport for overhaul and repainting. **Air Zaire, S.A.**'s second B-737-298C, *Lac Tumba*, and Douglas DC-8-54, inoperable at Kinshasa, begin overhaul and repainting as well. The new livery will replace the previous white, red, and green color scheme with a white fuselage and a blue tail, with a large centered yellow star and six smaller ones just inside the rear edge.

On September 22, the Xinhau New Agency of China reports that the company has announced that it will resume passenger and cargo flights to Lagos on October 1. Although the substance of the dispatch is correct, the service start-up date is off by two months.

When the B-737-298C *Lac Upemba* returned from Rwanda is ready, it undertakes the new carrier's first service on November 1 on behalf of the government; the inaugural flight visits Bukavu and Goma. The first scheduled public service begins on November 26 from Kinshasa to Mbuji-Mayi, Kisangani, and Lubumbashi.

International service commences on December 1 with regular flights to Lagos and Luanda; flights to Lome start on December 5. At year's end, President Mukandila is able to proudly announce that all of his employees have been paid for their work since November 1.

In need of freight capacity and with the DC-8-54 still in the shop, LAC wet-leases a B-707-324C from **Angola Air Charter, S.A.** in early January 1998. Cargo flights commence on January 25 transporting food supplies on behalf of the UN.

Electing to discontinue cooperation with his Ugandan and Rwandan allies, leader Kabila orders the last of their troops out of the country in July.

A renewed civil war breaks out on August 2 and has a significant impact on the airline's schedule. The B-707-348C Stratofreighter of **Congo Airlines, S.A. (3)** is seized on the ground at Goma as the fighting begins, along with a chartered LAC B-707F.

On August 4, Tutsi rebels under Comdr. Jean-Pierre Ondekane and Rwandan soldiers seize the airport at Kisangani. The facility is reportedly recaptured six days later.

Angola and Zimbabwe now begin to intervene in the fighting on behalf of the Kabila government. Rwanda, meanwhile, covertly employs a pair of B-727s to airlift troops and equipment from Goma to Kitona AFB, near the Atlantic Ocean. Uganda joins Rwanda in threatening to intervene openly in an effort to protect their own long-term interests. Angolan troops capture Kitona AFB on August 23.

President Kabila also receives support from Sudan and Chad, while Burundi also assists his opponents.

A number of charter pilots are also captured and these are required to fly military equipment and troops from Uganda and Rwanda to rebel positions in the eastern part of the country. In addition, the Stratoliners haul freedom fighters from their strongholds to points in the west, where they battle for towns held by forces loyal to Kabila.

Government forces suffer serious setbacks in their efforts to put down the rebellion and enemy forces move into the mineral-rich province of Eastern Kasai. Communities ranging in size from villages to cities the size of Kindu are surrounded, attacked, and often captured.

To assist in resupply efforts, anti-Kabila forces charge, the Kinshasa-government employs the civil airliners of LAC and CAL as troop transports. One of these, a CAL B-727-30, is shot down by a rebel missile over Kindu (440 km. SW of Goma) on October 10.

Flights continue during the remainder of the year and into 1999.

In January, a five-year code-sharing and wet-lease agreement is signed with **City Bird, S.A.** Under its terms, the Belgian new entrant will fly passengers and cargo between Europe and Kinshasa on a weekly basis, using LAC flight codes. The arrangement will allow LAC to resume international air links abandoned in 1992, with passenger services starting in May and A300-600F freighter flights beginning in summer.

A public row between City Bird and **Sabena Belgian World Airlines, S.A.** erupts in Brussels on April 27 over City Bird's month-old dual-designator pact with LAC. Claiming that the new arrangement is a surprise action that will damage the pioneer line, which operates between Brussels and Kinshasa four times a week, Sabena demands \$9.22 million in damages. It also indicates that it is seeking an arbitration ruling that City Bird's actions constitute a unilateral termination on its part of the commercial arrangement with Sabena.

City Bird, S.A. President/CEO Victor Hasson calls a news conference to rebut the Sabena action. Hasson complains that Sabena had not wanted the LAC link in the first place and given its 11.2% stake and seat on the City Bird board, should have known about it. Both companies, which do not suspend their existing pact, indicate that there are no plans to terminate their cooperation agreement and acknowledge that arbitration may take six months to a year.

The wet-lease pact with **City Bird, S.A.** begins on May 17. Weekly B-767-339ER roundtrips, conducted in the manner of those launched by City Bird with **Luxair (Luxembourg Airlines, S.A.)** at the end of March, are undertaken between Brussels and Kinshasa.

AirlinersOnline.Com reports on September 23, 2000, that LAC has acquired a DC-10-30 previously operated by **AVENSA (Aerovias Venezolanas, S.A.)**.

During October, arrangements are concluded between the company and **Air Zimbabwe Corporation** under which the latter would begin to service internal Democratic Republic of the Congo routes for the planeless Congolese airline.

The new arrangement on behalf of LAC begins on November 21, as wet-leased Air Zimbabwe aircraft operate roundtrip from Harare to Lumbumbashi, Mbujimayhi, and Kinshasa. The pact between the two companies is further extended on December 7 when Air Zimbabwe takes over the moribund international LAC frequencies to Paris and Brussels.

LIGNES AERIENNES FARMAN, S.A.: France (1919–1922). On February 8, 1919, the Farman brothers sponsor the first Paris–London proving flight. An F-60 Goliath with 12 military passengers, piloted by their chief test pilot Lt. Lucien Bossoutrot, flies from the Toussus le Noble Airport near Paris to the British airfield at Kenley and on to London (Croydon). For many years, the trip will, erroneously, be hailed as the first international flight in Europe.

The feat is duplicated two days later when Bossoutrot employs a converted Caudron C.23 bomber to fly five journalists on a prescheduled proving flight between Paris and Brussels. A scheduled weekly 2 hr. 30 min. Paris–Brussels F-60 service starts on March 22. At the completion of the third flight on April 6, Belgian customs officials examine the passengers and their possessions—the first customs check in the history of air transport.

Proving flights are made to Casablanca and Etienne between August 11–16. During the first day, pilot Bossoutrot, flying a Farman Goliath, sets a distance record: 1,273 nonstop miles in 18 hrs. 23 min.

On August 13, regularly scheduled Paris–Copenhagen flights commence. The pioneer carrier is officially registered on August 26. Regularly scheduled Paris–London frequencies are inaugurated in September.

Employing twin-engine Farman F-50Ps, a Paris–Brussels route is opened to regular service on July 1, 1920; the route is extended to Amsterdam on May 17, 1921. In 1922, the company is renamed **Societe Generale de Transport Aerien, S.A. (SGTA)**.

LIGNES AERIENNES FELOU, S.A.: Kayes, Mali; Year Founded 2000. LAF is established at Kayes in the fall of 2000 to offer all-cargo services. Revenue flights to Bamako begin with a lone Antonov An-24RV leased from **Gomelavia**.

LIGNES NATIONALES AERIENNES CONGOLAISES. See **LINA CONGO**

LIMBERG AIRWAYS, B.V.: The Netherlands (1973–1978). Organized at Maastricht in early 1973, this Dutch operator inaugurates twice-daily scheduled Fokker F.27 flights to London (LGW) on September 29. These services are discontinued in March 1974 and the company undergoes a period of reorganization. Revenue operations are relaunched in early 1975; worldwide charter flights are undertaken in cooperation with **Transmeridian Air Cargo, Ltd.** The arrangement continues for four years until terminated in spring 1978, at which time Limberg Airways, B.V. stops flying.

LINA CONGO (LIGNES NATIONALES AERIENNES CONGOLAISES, S.A.): PB 2203, Brazzaville, Congo; Phone 242 813 065; Fax 242 828 034; Code GC; Year Founded 1965. After buying out all the remaining **UTA French Airlines, S.A.** financial interest, the privately owned **Air Congo (Brazzaville), S.A.** is reformed by the government in August 1965. To avoid the confusion with the flag line of the Democratic Republic of the Congo, the new airline is named Lina Congo.

Operations to previously served destinations are maintained throughout the remainder of the decade, particularly over the triangle-shaped network linking Point-Noire with Brazzaville and the Gabonese city of Moanda.

During the late 1960s, Director General Aime Portella's fleet comprises 1 leased Douglas DC-6B and 3 DC-3s. Scheduled flights are undertaken from Brazzaville's Maya Maya Airport to Djambala, Dolié, Fort Rousset, Impfondo, Jacob, Kelle, Loukolela, Makoua, Ouesso, and Pointe-Noire.

Two Antonov An-24s are received from the Soviet Union in 1970 and fly local routes in central Africa and occasionally to Paris (Le Bourget). By 1973, both have been taken over by the air force. Enplanements in 1974 reach 54,948.

Airline employment in 1975 is 219. The carrier's DC-6B and DC-3s are now withdrawn in favor of two Fokker F.27-600s, two de Havilland Canada DHC-6-300s, a Fokker F.28, and a Nord 262. Service is undertaken to seven new destinations bringing the number of stops within the route network to 22. New marketing initiatives are now begun.

Passenger boardings accelerate 27.7% to 76,000.

Scheduled service is inaugurated to the Angolan city of Luanda in March 1976.

Operations continue apace during the remainder of the decade. During the early **1980s**, one F.27-600 is withdrawn and is replaced by a Fokker F.28-1000 and a leased Boeing 737-2Q5CA. Additional destinations added to the system by the middle of the decade include Boundji, Epena, Ewo, Loubomo, Mossendjo, Okoyo, Owanda, Sibiti, Souanke, and Zanaga; the Brazzaville–Pointe-Noire connection is maintained by daily jetliner service.

In January **1987**, the carrier contracts with **Cameroon Airlines** for the heavy maintenance of its B-737-2Q5CA. The Boeing is withdrawn in **1988** and in August an agreement is signed with **Air Gabon** for the initiation in the fall of a pooled operation over the Pointe-Noire–Libreville route.

The fleet in **1989** comprises 1 Fokker F.28-1000, 1 Friendship, and 2 Twin Otters. Another B-737-2Q5CA is leased in late **1990** and is employed in early **1991** to inaugurate an international service to Bangui.

In **1992**, Director General Jean Jacques Ontsa's company employs 250 workers. One of the Twin Otters, with three crew and five passengers en route to Brazzaville on March 12, crashes at Etsouali in a thunderstorm (three dead).

The fleet in **1993** includes 1 each B-737-2Q5CA, DHC-6-300, and F.28-1000. The Boeing is subleased to **Air Afrique, S.A.** and services linking Brazzaville to Loubomo and Pointe-Noire are provided by the remaining three aircraft. An F.27-600C is leased from the French carrier **Air Jet, S.A.** in **1994**.

The **Air Afrique, S.A.** lease continues in **1995** and in **1996** the government contracts with Aviation Capital Partners to privatize the company and help develop its operations. This is accomplished during the remainder of the decade. On the last day of **2000**, a Boeing 727-217 is leased from Air Exchange.

LINAIR HUNGARIAN REGIONAL AIRLINES, LTD.: 1675 Budapest, P.O. Box 53, Ferihegy, Airport Terminal 1, H-1675, Hungary; Phone 36 (1) 296-7791; Fax 36 (1) 296-7891; http://www.linair.hu; Code LIN; Year Founded 1995. Privately owned LinAir is set up at Budapest in **1995** to operate scheduled third-level commuter services to domestic points near the capital city. Tamas Kovacs is managing director and he begins revenue operations with a single Yakovlev Yak-40 on several short-haul routes previously operated by **MALEV Hungarian Airlines**.

Flights continue in **1996–1998**. During the latter year, a homepage is opened on the Internet's World Wide Web. By **1999**, the fleet has been increased to include two more Yak-40s, which now offer charter flights, many for businessmen, to several European cities and Mideast destinations.

A total of 31 workers are employed at the beginning of **2000**. Twelve-times-a-week roundtrips commence on July 28 between Budapest and Zagreb, Croatia. The company's two Yak-40s operate this service as **MALEV Partner** flights on behalf of the Hungarian major.

LINCOLN AIRLINES (PTY.), LTD.: Australia (1987–1997). Malcolm J. Catt founds Lincoln at Port Lincoln, South Australia, in **1987** to offer scheduled passenger and cargo flights to Adelaide. Operations commence and continue with 1 Embraer EMB-110P Bandeirante and 2 Piper PA-31-350 Navajo Chieftains.

Operations continue apace in **1988–1990** and in **1991–1992** the revised fleet of 2 Chieftains and 1 each Embraer and Cessna 402 makes 28 weekly roundtrips between Port Lincoln and Adelaide.

Traffic requires addition of a second Bandeirante in **1993** and enplanements in **1994** total 30,000. Customer bookings dip slightly in **1995**, to 29,159.

Operations continue apace in **1996–1997** as the two Bandeirantes continue the same number of weekly frequencies as they had at the beginning of the decade. At the end of the latter year, the company is merged with **Augusta Airways (Pty.), Ltd.** to form **Airlines of South Australia (Pty.), Ltd. (2).**

LINEA DE AVIACION CONDOR TAMPA, S.A.: Peru (1935–1941). Acting on behalf of New York-based **Tampa-New Orleans-Tampico Air Lines, Inc.**, Hugh Wells forms **Condor Peruana de Aviacion, S.A.** at Lima on October 7, **1935**. Two years will transpire until the first step can be taken to meet the company's plans for a multistop New Orleans–Buenos Aires route.

Wells receives Peruvian permission to import four Curtiss BT.32 Condors on February 23, **1937**, but is restricted from employing them on a transcontinental route for fear that they might be diverted into the Chaco War.

For a year, Wells' twin-engine biplanes do charter work. Cargo is flown to remote towns and mining communities, photographic surveys are undertaken, and tobacco is hauled from Andean towns like Tarapoto down to Lima.

In **1938**, the company is reorganized and renamed to show its connection with the American airline. Multistop scheduled services are inaugurated from Lima up to Iquitos via Huanuco, Tarapoto, and Yurimaguas. In **1939** the capital city is linked for the first time to Cuzco, 13,000 feet up in the Andes.

Unable to compete, unsubsidized, against **Faucett Peruvian Airlines, S.A.** or **Pan American-Grace Airways (PANAGRA)**, despite gallant efforts in **1940**, Condor Tampa is forced to cease scheduled revenue flights in April **1941**. All company assets are commandeered by the government on May 23.

LINEA INTERNACIONAL AEREA, S.A.: Ecuador (1957–1959). LIA is set up at Guayaquil in **1957** to operate all-cargo charters throughout the country. Two Curtiss C-46 Commandos are acquired during the first half of **1958** and are employed to launch revenue services in September. Unable to achieve economic viability, the company shuts its doors within a year.

LINEAS AEREAS CANARIAS, S.A. (LAC): Spain (1985–1991). LAC is formed in the Canary Islands in **1985** to provide services from Los Rodeos Airport on Tenerife. While permission is sought from the government to launch scheduled operations, the new entrant offers charter flights with a pair of Vickers Viscount 800s purchased from **British Air Ferries, Ltd.**

Authority for scheduled flights is not received and charter operations continue apace in **1986–1988**. During these years, the Viscounts are replaced by five leased McDonnell Douglas MD-83s; the first, christened *Isla de Lanzarote*, arrives at Santa Cruz de Tenerife in October 1987.

Enplanements in **1989** total 752,000. Operations continue apace in **1990** and the company is merged into **Meridiana Air, S.A.** on May 1, **1991**.

LINEAS AEREAS CANEDO, LTDA.: Aeropuerto Jorge Wilsterman Rampa Oeste, P.O. Box 1721, Cochabamba, Bolivia; Phone 591

(42) 54001; Fax 591 (42) 54001; Year Founded 1981. LAC is set up at Santa Cruz-El Trompillo in 1981 to offer domestic cargo and passenger charters. Operations commence with 4 Douglas DC-3s, one of which began life with **Pennsylvania-Central Air Lines** in 1939. Destinations visited include Guayamerin, Magdalena, San Joaquin, San Ramon, and Santa Ana. The following year, the company takes over the Trinidad-Guayamerin route of **LAB (Lloyd Aero Boliviano, S.A.)**.

Flights continue throughout the decade.

During the early 1990s and because of the recession that affects airlines everywhere, the company elects to sell its DC-3s and revert to lightplanes, adding in their place three Aero Commanders. Business begins to improve after 1995. Service continues in 1996-1997, during which time the company's base is moved to Cochabamba in the northern part of Bolivia.

Rolando Canedo Lopez remains president in 1998 and he now flies a pair of former USAF Convair C-131Ds (military version of the CV-440), among the last of their type in commercial operation anywhere in the world. These are joined in the next two years by a CV-440 painstakingly repaired after its crash while in service with **NEBA (North East Bolivian Airways, Ltda.)**.

LINEAS AEREAS DEL CENTRO, S.A. de C.V.: Mexico (1975-1982). This third-level airline is formed at Mexico City in 1975 to offer scheduled services to Colima and Guadalajara. In addition, the company's single Convair CV-440 and Douglas DC-3 undertake regularly appointed flights to Morelia, Uruapan, Apatzingan, and Lazara Cardenas in Michoacan Province.

Flights continue in 1976-1977, during which years the fleet is increased by the addition of a pair of de Havilland Canada DHC-6-100 Twin Otters. A chartered DHC-6-100 with 2 crew and 19 passengers crashes into mountainous terrain near Mexico City on September 9, 1978 (18 dead).

Unable to remain viable in the face of rising fuel costs and the world economic recession of the early 1980s, the airline is forced into bankruptcy in 1982.

LINEAS AEREAS MIXTECAS, S.A. de C.V.: Mexico (1956-1970). This small commuter is formed at Huajuapán in the state of Oaxaca in 1956. Employing single-engine smallplanes, the little carrier offers flights to various destinations in Oaxaca as well as in the state of Guerrero.

As is the case for many small airlines facing competition from the third-level operation established by **Aeronaves de Mexico, S.A. de C.V.**, it cannot survive financially and goes out of business in 1970.

LINEAS AEREAS NACIONALES, S.A.: Honduras (1963-1975). Having begun in 1963 as a La Ceiba-based air taxi charter operation, LANSAs steps up to scheduled passenger and freight flights in 1967. Within three years, the company is operating four Douglas DC-3s on flights around the country.

The company's big opportunity arrives in November 1972 when the U.S. CAB grants authority for all-freight services from San Pedro Sula to Miami via Grand Cayman, Belize, and Cozumel. A Curtiss C-46 Commando and a Douglas DC-4 are acquired and the new route is inaugurated in early 1973.

The carrier suspends services in April 1975 as the result of technical problems.

LINEAS AEREAS NACIONALES, S.A. See also LANSAs (LINEAS AEREAS NACIONALES, S.A.)

LINEAS AEREAS NAVARRAS, S.A.: Garcia Ximenez 3, 1st Floor, Pampiona, E-31002, Spain; Phone 34 (48) 212 852; Fax 34 (48) 212 569; <http://www.irinfo.es/aviacion/navarra.html>; Code ZH; Year Founded 1994. The Spanish carrier **Air Truck, S.A.**, with the government district of Navarre, establishes this commuter subsidiary in late 1994. Orders are placed for three Avions de Transport Regional ATR 42-320s; these arrive during the spring and summer of 1995 and enter third-level service under contract from the parent. Destinations visited include Granada and Madrid.

In June 1996, Air Truck is renamed **Air Track, S.A.**; however, this corporate move has no impact whatsoever upon this regional associate, which operates as before.

Flights continue in 1997-2000. Markets served include Barcelona, Granada, Madrid, Munich, Pampiona, and San Sebastian.

LINEAS AEREAS PATAGONIAS ARGENTINAS, S.R.L. See LAPA (LINEAS AEREAS PATAGONIAS ARGENTINAS, S.R.L.)

LINEAS AEREAS POSTALES ESPANOLAS, S.A. (LAPE): Spain (1932-1939). Following the failure of **CLASSA** in April 1932, this new carrier is formed by the Spanish Republic to take over its routes. Employing the Ford Tri-Motor, Junkers G.24s, Rohrbach Rolands, and Fokker F-VII/3ms of its predecessor, LAPE begins a program of both route and fleet expansion. Flights begin to Bordeaux and Paris and the company joins IATA. Regularly scheduled flights from Madrid to the Canary Islands are restarted in 1933, with stopovers in several North African cities.

Another Rohrbach Roland is received from **Deutsche Luft Hansa, A.G. (DHL)** in 1934. Two ex-DHL Junkers Ju-52/3ms, the *Lothar von Richthofen* and *Emil Thuy*, will be delivered in the next two years.

Following the success of the **KLM (Royal Dutch Airlines, N.V.)** Douglas DC-2 in the previous October's England to Australia MacRobertson air race, the LAPE board of directors, during a meeting held in flight in November, requests that Spanish Director General of Aeronautics Ismael Warleta de la Quintana order five Douglas airliners from Fokker, their European distributor.

The company's first DC-2 is completed at the Douglas plant in California on January 12, **1935** and arrives at Cherbourg by ship in mid-March. Following its assembly Fokker technicians, the aircraft arrives in Spain in April and is christened *Hercules* at a ceremony. The aircraft inaugurates Madrid to Paris (Le Bourget) roundtrips on May 22. Late in the month, a second DC-2 arrives and is named *Orion*. On August 6, a Fokker F-VII/3m is employed to inaugurate service from Madrid and Valencia to Palma de Mallorca.

LAPE receives a third DC-2 on March 1, **1936** that it christens *Sagitario* and during the second week of the month, the three American-made transports fly 9,810 pounds of government gold to Paris for safekeeping. By April, a total of 908 passengers have been transported on 153 flights over the new routes from Madrid and Valencia to Palma de Mallorca.

A fourth Douglas, the *Mallorca*, arrives in June and like its predecessors, serves on the Spain-France route.

On July 1, services are initiated to Paris, Berlin, and Geneva as well as Valencia and Majorca. The outbreak of the Spanish Civil War on July 18 prevents delivery of the fifth DC-2 and causes suspension of scheduled passenger services, including those to Palma de Mallorca.

The Douglas in Paris is summoned back to Madrid empty while Operations Manager Joaquin Mellado leads the *Orion* and *Mallorca* to Seville's Tablada Airport, where he has orders to support Republic forces. Upon arrival, the *Mallorca* is disabled when a Nationalist officer, Capt. Vara de Rey, shoots out its starboard engine. Mellado is able to refuel the *Orion* and two Fokker F-VIIb/3ms, outfit them with bomb racks, and attack the Tetuan airfield in Morocco. The aircraft return to Madrid, necessitated by the fall of Tablada.

The DC-2 *Mallorca*, damaged by small arms fire at Tablada, is captured by Nationalist troops and repaired by July 25. It is turned over to Grupo 42 of General Franco's air force, where it is christened *Capitan Vara de Rey*. Piloted by Capt. Carlos de Haya, later a famous Nationalist fighter pilot, the Douglas helps to ferry troops from Morocco to Spain and drops supplies to forces surrounded at the Santuario de la Cabeza monastery near Cordoba.

The three Douglas transports remaining in the Republic's hands are equipped with bomb chutes and a pair of machine guns and are sent to hit Nationalist positions, including airfields and the barracks outside of Madrid, at San Sebastian and Oviedo. In the first and only air-to-air combat between airliners, the *Sagitario*, while assaulting Badajoz on August 4, encounters the *Capitan Vara de Rey*. The two aircraft circle one another while their gunners unsuccessfully exchange fire.

On August 11, the *Capitan Vara de Rey* flies General Franco from Morocco to Spain; the Fascist leader will retain the aircraft as his personal transport for the remainder of the war. The next day, the *Orion* completes its seventh gold flight to Paris in a series begun on July 31; in the two weeks, seven metric tons (one ton per flight) have been ferried out. The aircraft disappears from all records at the end of August, its fate unknown.

During the remainder of August and into September, the LAPE transports fly supplies on behalf of the Republic's forces, and also make occasional bombing sorties. The *Hercules* is renamed *Toledo* on September 1 and another DC-2 is acquired from France on September 10-11 and, a week later, is placed on the gold service to Paris. After the fall of Toledo to Nationalist forces on September 29, the *Toledo* is rechristened *Hercules*.

LAPE pilot Jose-Maria Carreras ferries a fifth DC-2 from Paris to Barcelona on October 26; previously flown by **Swissair, A.G.**, the Douglas will be part of a package that also includes two Lockheed Orions and a General Aviation Clark GA-43A. By November, the bulk of Spain's gold is in France, from whence it will be secretly forwarded to the U.S.S.R.

Company headquarters are transferred to Salamanca, northwest of Madrid in early **1937** while, in France, the original Douglas DC-1 is purchased from the Viscount Forbes, Earl of Granard, by La Societe Francaise de Transports Aeriens, S.A. for transfer to the Spanish republic. The DC-2 acquired the previous September is destroyed on the ground at La Albericia airfield, Santander, on April 6.

While landing at Tarragona with 35 fully armed troops in May, a DC-2 is damaged; despite a wing bent to a 17-degree angle, the plane is able to safely return to its Valencia base. Acquired from Switzerland the previous fall, a DC-2 is employed during the year's first half as flying headquarters of Russia's chief advisor, Maj. Gen. Jacob Smushkevich, who will take the cover name "General Douglas," keeping it even after he transfers the aircraft to LAPE during the summer. Throughout the year, the carrier's Douglas transports continue to fly gold, silver, and other valuables to Paris as payment for goods and services, covert and overt. In late November, a DC-2 is employed by Republic officials to fly roundtrip to Ankara via Malta for the funeral of Kemal Ataturk.

LAPE transports continue their military support activities throughout **1938**. The supply of valuables all but exhausted, the company halts "gold flights" to Paris in midyear. The DC-1, painted in camouflage, is delivered in November and enters commercial service over routes from Barcelona to Toulouse and Paris and to Valencia and Santander.

Following the collapse of Barcelona in March **1939**, the DC-1 and DC-2s fly Republic officials to France. On March 23, the aircraft transports Colonels Ortega and Garigo from Madrid to Burgos, where the two men unsuccessfully attempt to obtain better terms from General Franco. The Republic government capitulates to the Nationalists in April, ending the Civil War.

The DC-1 and three remaining DC-2s are returned to Madrid in May, where they are entered on a new civil aircraft register, along with the *Capitan Vera de Rey*. The DC-1 initially remains unnamed and the Nationalist hero-transport retains its name. The *Hercules* is renamed *Carlos Haya*, the *Sagitario* is remarked as the *Ramon Franco*, and the final unit is christened *Garcia Morato* in honor of a fighter ace.

Late in the year, LAPE is replaced by a new organization, **Compania Anonima Espanola de Transporte Aereo, S.A. (SAETA)**, to which all of its aircraft are transferred. Following one more change the following spring, the carrier's lineage will reach its final form as **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)**.

LINEAS AEREAS SURAMERICANAS COLOMBIA, S.A. See **LAU (LINEAS AEREAS SURAMERICANAS COLOMBIA, S.A.)**

LINEAS AEREAS TACA DE COLOMBIA, S.A.: Colombia (1944-1947). TACA de Colombia is formed at Bogota on November 17, **1944** by Lowell Yerex's **TACA (Transportes Aereos Centro Americanos, S.A.)**. Employing a Douglas DC-3 and operating in cooperation with **Lineas Aereas TACA de Venezuela, S.A.**, the carrier inaugurates direct Bogota-Caracas flights on January 2, **1945**.

A certificate allowing operations from Bogota to Miami is received from the U.S. CAB on July 17, **1946**; however, due to a series of accidents and a severe financial downturn, the company is unable to fly the Florida service.

The parent **TACA (Transportes Aereos Centro Americanos, S.A.)** withdraws its financial support on January 13, **1947**, dooming its subsidiary to a bankruptcy in May.

LINEAS AEREAS TACA DE VENEZUELA, S.A.: Venezuela (1944-1957). TACA de Venezuela is founded at Caracas on August 18, **1944**. Capitalized at 700,000 bolivars, the company's shares are owned by Venezuela (55%) and **TACA (Transportes Aereos Centro Americanos, S.A.)** (45%). Employing Lockheed Lodestars and in cooperation with **TACA de Colombia, S.A.** in perhaps South America's first pooled

operation, direct nonstop flights to Bogota are inaugurated on January 2, 1945. Service to Ciudad Bolivar begins seven days later. On March 2, the company begins flying to San Antonio and Valera via Maracaibo. Capitalization is raised to 2.1 million bolivars on October 1.

Routes are maintained and frequencies increased during 1946 as Douglas DC-3s join the fleet. Direct service to Bogota from Maracaibo and Caracas is launched on July 1, 1947. Despite the carrier's expansion, the collapse of the TACA (Transportes Aereos Centro Americanos, S.A.) parent in 1950 brings ruin.

The company is liquidated and thus passes in 1952 to LAV Venezuelan Airlines, S.A., which operates it under its own name until 1957.

LINEAS AEREAS TAXADER, S.A. See TAXADER (LINEAS AEREAS TAXADER, S.A.)

LINEAS INTERAMERICANA AREA, S.A.: Colombia (1950–1962). Little is known about this Bogota-based domestic all-cargo carrier beyond two facts. It begins domestic freighter services in 1950 and during the decade comes to operate, although not simultaneously, a fleet of 9 Curtiss C-46 Commandos. In his *Curtiss C-46 Commando* (London: Air Britain, 1978), author John H. Davis suggests the company was merged with LIDCA (Lineas Aereas del Caribe, S.A.) in or about 1962.

LINEE AEREE ITALIANE, S.p.A. (LAI): Italy (1946–1957). With government and industrial backing (60%) and minority shareholding (40%) by Transcontinental & Western Airlines (TWA), LAI is formed on September 16, 1946. In 1947–1949, domestic routes are built and flown with a fleet of 7 Douglas DC-3s. In January 1950, LAI becomes the final airline to order a DC-6. With Trans World Airlines (TWA) support, the carrier receives a transatlantic license and on July 5, launches Rome–New York multistage flights with Douglas DC-6s, initially leased from the Argentine airline FAMA (Flota Aerea Mercante Argentina, S.A.).

Following receipt of the 175th production DC-6 in the first quarter of 1951, Rome to New York frequencies are tripled in April. En route to New York on December 23, a DC-6 makes an emergency landing at Milan. Although the plane is destroyed by fire, all aboard escape.

The failed Italian combined carrier Avio Linee Italiane-Flotte Reunite, S.p.A. is taken over on March 31, 1952, giving LAI its first extensive European regional network. Luxury service from Rome to New York begins on July 25 and Paris is added as a stop on the New York service as of August 6.

Operations continue apace in 1953, although a strike grounds the airline from February 24 to March 7. The company is again idled by strike on March 1, 1954. Europe to New York frequencies are increased again on May 30. Managing Director Gen. Gallo reports the same day that the line will continue to use piston-engine planes in the near future.

In the first major crash at New York's Idlewild Airport, an LAI DC-6B inbound from Rome on December 18 with 32 aboard, is unable to execute any of four instrument-landing attempts in fog and rain and crashes into Jamaica Bay (26 dead).

A fleet of six Vickers Viscount 785s is ordered in the fall of 1955; four Lockheed L-1649As are requested in December.

The Italian air transportation industry is examined by the government during 1956. Four Lockheed L-1649A Starliners, to be named *Roman*, *Ambrosian*, *Vesuvian*, and *Sicilian*, are ordered on March 3. Another pilots' strike grounds the carrier between May 9 and 27. The Viscounts enter service later in the year as Trans World Airlines (TWA)'s holding falls to 30%.

Shortly after takeoff for New York from Orly Airport on November 23, a DC-6B crashes into two homes near Paris and burns (35 dead). On December 22, a new Viscount 785 with 21 aboard, disappears while on a Rome to Milan flight; the wreckage is found atop Mount Giner the next day and there are no survivors.

On January 1, 1957, President Gen. Aldo Urbani urges that his company be merged into Alitalia. During the spring, four additional

Viscounts are ordered. The government's decision having been taken, LAI is now closed down and its assets are transferred on August 8 to Alitalia, S.p.A. The Trans World Airlines (TWA) share is sold to the Instituto per la Ricostruzione Industriale, which on September 1 forms the new state carrier Alitalia, S.p.A. (Linee Aeree Italiane). TWA will be allowed to receive the four Starliners ordered the previous year.

LINEE AEREE TRANSCONTINENTALE ITALIANE, S.p.A. (LATI): Italy (1939–1941). In the late summer of 1939, Umberto Klinger, CEO of the state airline Ala Littoria, S.p.A., assembles pilots with transatlantic experience (including Bruno Mussolini) into a special division, Ala Littoria Linee Atlantiche, with the purpose of beginning service to Brazil and Argentina. The first Savoia-Marchetti SM-83A is delivered. Following the outbreak of World War II in September, the division is turned into the independent LATI.

With SM-83As on the overland legs and SM-83Ts flying the ocean, weekly flight operations begin on December 21 over a route from Rome to Seville, Villa Cisneros, Sal Island, Natal, Recife, and Rio de Janeiro. Two SM-83As depart simultaneously from Italy and Argentina; the crew and three passengers in the European plane are killed in a crash at Mogador, French Morocco.

Avoiding Allied territory and air patrols, the Italian transoceanic service continues in 1940. On August 15, Brazil renews the previous Ala Littoria, S.p.A. certificate in the name of LATI. A second SM-83A is lost in January 1941. LATI receives an Argentine permit in February, but in April, under U.S. pressure, Brazil imposes a \$1,000 fine, claiming the carrier is warning Italian ships concerning the British blockade.

The transatlantic route is extended to Buenos Aires in September. Fuel supplies are cut by the U.S. on December 11 and unable to operate, the carrier collapses on December 22. All assets in Brazil will be taken over by the government there on February 13, 1942.

LINHAS AEREAS DE SAO TOME E PRINCIPE (TRANSPORTES AEREOS DE SAO TOME, S.A.): Sao Tome and Principe (1975–1985). This government-operated airline is created in 1975 as the national carrier of the former Portuguese island possession off the coast of Gabon. With 1 each Fokker F.27 Friendship, Piper PA-31-310 Navajo, and Britten-Norman BN-2 Islander, the company maintains scheduled services between the two islands of the Democratic Republic until ceasing operations in December 1985.

LINILE AERIENE ROMANE (LAR). See LAR ROMANIAN AIRLINE

LINILE AERIENE ROMANE EXPLOATATE CU STATUL, S.A. (LARES): Romania (1932–1941). In early 1932, the Romanian government forms this carrier to provide competition to the French-owned Compagnie Internationale de Navigation Aerienne, S.A. (CIDNA), which will shortly become part of Air France. A fleet of Junkers F-13s

is purchased and agreements reached with nearby foreign governments for the launch of international flights.

In 1935, the Messerschmitt-designed IAR-36 is received; built by Bucharest manufacturer Intreprindere Constructivii Aeronautice Romane, the aircraft enters service on various domestic routes, including that between the capital city and Cernauti. Toward 1936, the carrier purchases seven de Havilland DH 89As as an initial step in a large fleet upgrade.

On July 13, 1937, LARES is reformed into a national airline by the purchase of the competing French-backed domestic company **Societe Anonyme Roumaine de Transports Aeriens, S.A. (SARTA)**. The route network is upgraded domestically and internationally, routes are opened to Berlin, Warsaw, Milan, and Athens. By 1939, the fleet includes 1 Junkers Ju-52/3m, 4 F-13s, 2 Douglas DC-2s, 11 Lockheed L-10 Electras, 5 Savoia-Marchetti SM-73s, 13 Poetz 56s, and 7 Dragon Rapides; passenger boardings for the year approach 20,000. All operations cease in 1941.

LINJEFLYG, A.B.: Sweden (1950-1993). Swedish newspaper publishers form the charter carrier **Airtaco, A.B.** in 1950 to deliver their product from Stockholm to outlying areas. The operation is acquired on April 2, 1957, on a fifty-fifty basis, by the air holding company **ABA Swedish Airlines, A.B.** and by **SAS (Scandinavian Airlines System)**. Reformed to operate domestic services and given its current title, the carrier inaugurates scheduled Convair CV-440 flights on September 30.

A solid domestic network is established in 1958-1968 offering both passenger and cargo services, primarily with propeller equipment, although four French Nord 262s are acquired. Indeed, the fleet grows to comprise 18 CV-440s and 4 Nord 262s.

Having prematurely descended from its November 20, 1964 service from Stockholm, a CV-440 with 4 crew and 39 passengers, touches ground 2 km. short of the runway at Angelholm and catches fire (31 dead).

Enplanements in 1969 are 739,224 and the workforce totals 653. Revenues total \$17.97 million.

Freight traffic rises 12.5% in 1970 and passenger boardings are up 16.3% to 752,085. Gross income climbs 14% to \$20.9 million, leaving a net profit of \$171,000.

Enplanements dip in 1971 to 694,540.

Customer bookings rebound by 2.3% to 902,000 in 1972. Four Convairs are sold to Aegis Marketing International and new equipment is ordered that will eventually make the airline an all-F.28 operator. President Arne Wickberg retires on March 31 and is succeeded by Sten Sandberg.

Bookings increase 2.3% to 902,000.

Three Fokker F.28-1000s that are, incidentally, the only jetliners at this time that can meet the noise regulations of Stockholm's Bromma Airport, are received in May and June 1973. The employee population is now 745 and the fleet now includes the 3 F.28-1000s, plus 4 Nord 262s and 14 Convairliners.

Customer bookings climb 4.7% to 934,503 and freight grows by 1.8%

Fuel shortages in 1974 cause service cuts on certain of the 24 maintained routes during the first quarter. The four Nord 262s are sold to the Mohawk Air Services division of the U.S. carrier **Allegheny Airlines (1)**.

Passenger boardings accelerate 11.2% to pass the one million-mark for the first time at 1,002,000. Cargo is level.

The workforce in 1975 is 828 and orders are placed for 5 more F.28s. Minority 25% shareholding is acquired in the new commuter airline **Swedair, A.B.**; ownership will climb to 75%.

A two-month strike of traffic personnel and engineers results in a 12% dip in enplanements to 881,000.

As the result of Swedish government reorganization of domestic services in 1976, the carrier in January takes over two of the daily roundtrip frequencies of **SAS (Scandinavian Airlines System)** between Stockholm and Lulea. During the year, the workforce is increased by 17.3% to 971. Three more F.28-1000s are received, with orders outstanding for five others. Two of the former, received in December, are the first production model F.28-4000s.

Passenger traffic rebounds as boardings jump 38% to 1,298,734.

Two additional F.28-4000s are placed in service in 1977. All 22 aboard die in the crash of a Viscount at Stockholm on January 16. By July, a number of operations have been transferred to or planned for Stockholm's Arlanda Airport.

Enplanements drop slightly to 1,209,504.

Jan Carizon is appointed president/CEO in January 1978, succeeding N. Horjel. He now oversees a workforce of 1,118 and a fleet comprising 10 Fokker F.28-4000s, 3 F.28-1000s, and 11 CV-440s. An off-peak, low-fare pricing concept is introduced in November.

On the year, another F.28 and 3 de Havilland DHC-6 Twin Otters are acquired and boardings accelerate 12.1% to 1,376,000.

Airline employment stands at 1,130 in 1979. The last CV-440 is sold and the long-standing free in-flight refreshment service, which has reached a cost of Kr 2.5 million (\$330,000) per year is replaced with complementary soft drink, tea, or coffee.

Still, passenger bookings skyrocket 37.3% to 2,029,101. An operating profit of \$15.8 million is banked.

Despite deteriorating world economic conditions in 1980, the Swedish local service airline increases its workforce by 2.8% to 1,232. Off-peak afternoon fares are introduced to fill empty F.28s between the morning and evening business rushes.

President/CEO Carizon becomes **SAS (Scandinavian Airlines System)** President/CEO on December 31. He is succeeded at Linjeflyg by Olle Hedberg and Capt. P.O. Olemyr becomes vice president-operations.

Meanwhile, for the year, the company posts a 2.1% boost in enplanements, up to 2,022,000. Revenues advance by 20% to \$141.5 million while expenses are held to \$133.5 million. Profits are made: \$8 million (operating) and \$1.19 million (net).

The employee population grows by 5.5% in 1981 to 1,300. Passenger boardings increase again, up 14.3% to 2,440,278. Cargo declines by 4.9% to 2.88 million FTKs.

One hundred more workers are hired in 1982 and the fleet comprises 3 F.28-1000s and 12 F.28-4000s. The carrier is one of six now participating in an ICAO grant to train personnel from **Biman Bangladesh Airlines**.

A total of 2,690,177 passengers are carried, a 10.2% increase, while cargo advances 9.3% to 3.15 million FTKs.

The workforce is dramatically increased in 1983, up 32.1% to 1,850, while capacity is increased in January when another F.28-4000, delivered in December, enters service.

In October, Stockholm operations are transferred from Bromma Airport to the International Arlanda Airport.

Customer bookings accelerate 6.9% to 1,875,015 and freight traffic rises 9.7% to 3.46 million FTKs. Profits of \$4 million (operating) and \$10.4 million (net).

The three DHC-6s are disposed of in early 1984 and replaced by a SAAB-Fairchild SF340 leased from **Swedair, A.B.** It joins a fleet comprising 3 F.28-1000s and 13 F.28-4000s. Christer Magnusson succeeds Managing Director Hedberg. As a result of the devaluation of the kroner, Swedes find it too expensive to travel abroad and the company's summer charter business is off by 25%.

Enplanements reach 3.1 million, a 9.8% boost. Revenues advance 18.1% to 150.2 million while expenses are held to \$148.2 million, a 20.3% increase. The operating profit is cut in half to \$2 million while net gain totals \$10.2 million, and comes on top of a \$12-million operating profit.

Employment increases 3.6% in 1985 to 1,669 as another SF340 is wet-leased from **Swedair, A.B.** The carrier adopts a new logo and blue and gold paint scheme.

Passenger bookings rise 11% to 3.45 million. Revenues jump 20% to \$216 million and with expenses up only 18.5%, a \$17-million operating profit is generated.

The payroll grows by 8.8% in 1986 to 1,850. Linjeflyg becomes completely nonsmoking in January and in August, the airline accepts its 18th F.28, a dash 4000. Orders remain outstanding for two more F.28-4000s.

Customer boardings ascend 6.1% to 3,666,000 and revenues climb 8.8% to \$272 million. The operating gain swells to \$21 million.

The workforce is reduced by 2.7% in 1987 even as another good traffic season is enjoyed. Managing Director Magnusson operates 18 F.28s over a large regional route centered upon Stockholm.

The company celebrates its thirtieth anniversary at the end of August with festivities costing \$400,000. Following an air show over downtown Stockholm climaxed by a 20-minute formation flight by 8 F.28s at altitudes between 1,000 and 1,500 feet, the company sponsors a birthday party, with food, drink, and entertainment for 3,000 people.

Passenger enplanements climb 9.6% to 4,113,700 while freight improves a less spectacular 2.2% to 3.88 million FTKs.

Christer Nilsson becomes managing director in 1988 as 2 more F.28s are acquired and airline employment grows by 38.9% to 2,500.

Customer bookings jump 9.7% to 4,513,900 while cargo moves ahead another 2.3% to 3.97 million FTKs.

Passenger boardings swell 4.9% in 1989 to 4,732,809 and freight climbs an equal 4.9% to 150.66 million FTKs.

Company employment is cut a slight 0.2% in 1990 to 2,000. The fleet, however, is enlarged by the addition of eight SAAB 340s. Following a decision by the Swedish government to deregulate the nation's domestic airline industry, **SAS (Scandinavian Airlines System)** sells its 50% shareholding to the shipping company Bilspedition in September for \$82.6 million. Managing Director Nilsson is named president of the fully independent airline.

Customer bookings move upward by 3.8% to 4,914,412 and cargo climbs 10.6% to 4.23 million FTKs.

In 1991, one SAAB 340 is withdrawn leaving the company with 7 turboprops and 16 Fokker F.28-4000 jetliners. Plans to sell the carrier's 75% shareholding in **Swedair, A.B.** are shelved in April following the latter's decision not to merge with **Salair**.

A plan (abortive as it turns out) is unveiled under which the company would join with **LOT Polish Airlines, S.A.** to create a joint-venture regional airline. Boeing's 100th B-737-500, Dash-53A, is delivered to the carrier in October.

Passenger boardings fall 18.2% to 4,021,417 while freight is down by 11.7% to 3.73 million FTKs.

In 1992, Chairman Martin Lundberg and President Jan Sundling oversee a workforce of 2,200. Frequencies to the nation's 38 markets are increased as the result of the arrival of 4 B-737-59Ds. Orders remain outstanding for five more.

In March, it is announced that **SAS (Scandinavian Airlines System)** will purchase back the 50% interest sold to Bilspedition, plus an additional 1%, to take majority shareholding. The regional continues to operate as an independent, linking its Swedish operations with the major's.

Customer bookings continue to decline, dropping 5.9% to 3,785,400. Cargo is unchanged at 3.73 million FTKs.

On January 1, 1993, Linjeflyg is merged into **SAS (Scandinavian Airlines System)**. There is an unofficial website at <http://fly.to/linjeflyg>.

LINK AIR (PTY.), LTD.: Australia (1991-1994). Link is established at Wagga Wagga in the early summer of 1991 to offer scheduled passenger and cargo flights to Brisbane. Revenue services commence in July with a Rockwell Turbo Commander 690.

Traffic success in 1992-1993 requires that the fleet be increased by the addition of a second Turbo Commander and a Piper PA-31-310 Navajo. Operations cease in 1994.

LINK AIRWAYS (PTY.), LTD.: South Africa (1989-1992). Link Airways is formed at Johannesburg in late 1989 through the merger of **Magnum Airlines (Pty.), Ltd.**, **Border Air (Pty.), Ltd.**, and **Citi Air (Pty.), Ltd.** The initial fleet includes 3 Fairchild Metro IIs and 9 Piper PA-31-350 Navajo Chieftains. David White and I. Dowell are named joint general managers, reporting to Executive Director J. Morrison. Revenue flights commence over the routes of the merger partners in

early 1990 and by Christmas, a total of 73,405 passengers have been transported.

Airline employment in 1991 stands at 140. Through August, a total of 44,000 passengers are transported, a 10.2% decline. Operations cease on June 1, 1992.

LION MENTARI AIRLINES: Jaya Building, 7th Floor, J1MH, Thamrin No. 12, Jakarta, 10340, Indonesia; Year Founded 2000.

Another of the new airlines authorized under Indonesian law, Lion is established at Jakarta during the spring of 2000 to offer scheduled revenue service. Shareholding is divided between President Rusdi Kirana (49%) and local, unnamed partners (51%). The company's operating license allows for scheduled services on 48 domestic routes, but only five are planned for this year. Of the four Being 737-200As on order, one, a Dash-2P5A, has been delivered under lease from NAT Aviation by June 15.

Twice-daily Boeing 737-2P5A return frequencies are inaugurated on June 30 linking the carrier's base with Pontianak. Lion's \$115 one-way fare on this route is almost 30% lower than that charged by the state carrier **Merpati Nusantara Airlines**. Additionally, Lion attempts to attract its passengers through the provision of better service. For example, it offers tray meals instead of box lunches and gives toys away to children.

The Pontianak launch makes Lion the second new carrier after **Awair International Airlines** to begin service in 2000. When the delivery of a second "Baby Boeing" from ILFC is delayed in July, an Airbus Industrie A300B4 is leased short-term and employed to fly passengers from Jakarta to both Medan and Surabaya.

During late fall as the carrier plans for a serious upgrade in its services, arrangements are made for fleet expansion. Instead of additional Western charter orders, however, President Rusdi Kirana places an order for up to 25 Yakovlev Yak 42Ds from Russia. The first Yak arrives in Indonesia in November and, after passing flight feasibility and safety tests, is awarded its government airworthiness certificate.

On December 9, daily Yak-42D return service is launched from Jakarta to Kuala Lumpur via Surabaya. The second Yak-42D arrives in mid-December and is employed to initiate daily roundtrips from Medan to Penang and Kuala Lumpur on December 20. Plans are made for the receipt of two more Yaks in January.

LIONAIR (PTY.), LTD.: Asian Aviation Centre, Colombo Airport, Ratmaia, Sri Lanka; Phone 94 (1) 622 622; Fax 94 (1) 611 540; Code LNS; Year Founded 1994. Owned by the U.S. firm Lionvert, Inc., USA and having government backing, Lionair is established at Colombo on July 29, 1994, to fly unscheduled passenger and cargo services to regional destinations. Donald T. McDevitt is chairman, Chandran Rutnam is co-chairman, and Wing Comdr. (Ret.) Palitha Wijesuriya is managing director/CEO. Operations commence on October 24 with a pair of Antonov An-24s.

Although specific figures are not provided, company officials, on the date of the first anniversary in October 1995, claim that the company has made a "solid profit" for its first 12 months.

Flights to 8 destinations continue and by 1998, airline employment stands at 22.

Just after takeoff from the Palaly AFB on a September 30 service to Colombo, Flight 602, an An-24 with 7 crew and 48 passengers, disappears off Mannar. While a search is undertaken, the airline is ordered to stop flying to Colombo by the Civil Aviation Department (CAD) on advice of the Ministry of Defense (MOD).

The CAD investigates the disappearance during the next month, but no wreckage is found. It is widely believed that the loss is the work of the Liberation Tigers of Tamil Eelam. Still, Managing Director Wijesuriya writes the CAD on October 30, seeking to resume flights on November 9. Approval from the CAD and MOD is not forthcoming.

On January 25, 1999, the Sri Lankan Defence Ministry informs the press, including the BBC, that **Helitours, Ltd.** will be reactivated to operate daily service into the Jaffna Peninsula. The service will replace the

frequencies previously provided by Lionair before its aircraft was destroyed.

Although Managing Director Wijesuriya has continued to seek authorization for a service restart, it still has not been received by the spring of 2000.

LIONAIR, S.A. See **CARGOLUX AIRLINES INTERNATIONAL, S.A.**

LIPETSK STATE AIR COMPANY (LIPETSKOE STATE AVIA KOMPANIYA): Lipetsk Airport, 398000, Russia; Phone 7 (0742) 250 106; Code LIP; Year Founded 1993. LUAD is a reformed **Aeroflot Soviet Airlines** unit based at Lipetsk Airport. In 1993, Comdr. Yaroslav V. Spiridonov's mixed fleet of 40 Antonov An-2s, 13 Yakovlev Yak-40s, 1 Yak-42s, and Mil Mi-2 helicopters continue regional services as before. The workforce in 1994 totals 790.

Flights continue in 1995–2000, during which years two Yak 40s are withdrawn and replaced with two Yak-42s. In addition, a large complement of Mil Mi-2s is acquired; 24 helicopters undertake charters and aerial support contract work.

LISLE AIR SERVICE: United States (1965–1966). LAS is set up at Fresno, California, in the fall of 1965 to provide scheduled passenger and cargo services to Sacramento. Employing a Cessna 206, Lisle begins revenue flights in November. Unable to achieve viability, the tiny commuter disappears in 1966.

LITHUANIAN AIRLINES, A.B. (LIETUVOS AVIALINIOS): A.Gustaieio 4, Vilnius Airport, Vilnius, 232038, Lithuania; Phone 370 (2) 306 017; Fax 370 (2) 266 828; <http://www.lal.lt>; Code TE; Year Founded 1991.

This new national carrier is originally founded at Vilnius in 1989 as one of three **Aeroflot Soviet Airlines** divisions given an autonomous status. Indeed, it is the first airline to be formed for the newly independent Baltic republics. Plans call for development of a separate fleet and route structure.

In 1990, Stasys Dailyka is appointed managing director and during the remainder of the year and into 1991, he assembles a fleet comprised of 4 Antonov An-24s, 3 An-26s, 9 Tupolev Tu-134As, and 12 Yak-42Ds.

These are employed to start regional services to Ekaterinburg, Groznyg, Kiev, Mineral Vody, Moscow, Odessa, St. Petersburg, Samara, Tskent, Ufa, and Warsaw.

A single Boeing 737-2Q8A is leased with which to inaugurate scheduled international passenger services to Berlin, Frankfurt, and Copenhagen. A six-month contract is signed with **MALEV Hungarian Airlines** to provide flight crew and technicians to operate the plane.

On September 20, the company is officially registered and begins operations under the jurisdiction of the Ministry of Transport and Communications. The first B-737-2Q8A flight to Copenhagen is operated on December 20.

In 1992, the first full year of independent service, LA continues to operate its Boeing 737-2Q8A with support and pilot training provided under contract by **MALEV Hungarian Airlines**. On August 3, weekly service is inaugurated to London—one flight to Gatwick and one to Heathrow; the British frequencies on October 25 become twice weekly to London (LGW) from Vilnius. The carrier joins IATA during the fourth quarter.

A total of 631,516 passengers and 5.25 million FTKs are flown during the year.

The training contract with MALEV is completed on January 20, 1993. The number of short-haul Boeings is increased to four during the year as new international routes are opened to Amsterdam, Paris, and Stockholm. Yak-42 service between Vilnius and London (LGW) is increased to thrice weekly. At the beginning of the winter scheduled in October, the U.K. base is switched to London (LHR).

Customer bookings plunge 66.8% to 209,637 while cargo drops a huge 81.1% to 992,000 FTKs.

In 1994, Managing Director Dailyka oversees a workforce of 1,200. On a tour of the U.S. and Canada, Dailyka retains the services of three to four consultants, including Bill Walker, an aircraft sales and lease specialist. Scheduled frequencies are initiated to Hamburg and Tallin, while charter flights are made to Athens and Istanbul. A new red and white color scheme is introduced during the fall.

Passenger boardings jump 11% to 232,588 as freight ascends 13.5% to 7.88 million FTKs.

Managing Director Dailyka and U.S. advisor Walker prepare a new business plan at the beginning of 1995. Points outlined include modernization of the internal organizational structure, westernization of book-keeping and accounting practices, computerization, improved marketing, and the acquisition of Western aircraft with which to replace Soviet capacity. As a result of their work, new offices are opened in Frankfurt, Warsaw, Stockholm, Moscow, London, and Copenhagen.

Walker, whose five-year contract with the airline requires him to be in Vilnius one week per month, is particularly interested in selling the company's fleet of Antonov An-2s to aircraft enthusiasts in the U.S., to and from which he commutes each month.

Passenger carriage is not nearly as successful as it had been a year earlier—enplanements decline by 12.5% to 203,415. Cargo is a completely different story, with 7.88 million FTKs operated.

There are no changes in the employee population in 1996 and the owned fleet now includes 12 Yak-42s, 6 Tu-134As, and 1 Lockheed L-1329 Jetstar 731. Also operated, under charter, are 1 each B-737-2Q8A, B-737-2T2A, and B-737-2T4A. A code-sharing alliance is signed with **Finnair O/Y** in May. It leads to dual designator flights that begin in August on a route from Vilnius to Helsinki. Two SAAB 340Bs are requested in December.

Customer bookings dip another 0.2% to 202,917, but freight traffic plunges 40% to 2.28 million FTKs.

The workforce is cut by 3.5% in 1997, to 1,045. Early in January, the company, hubbing on Vilnius, launches regional services with the first leased SAAB 340. Initial schedules include flights to Berlin, Warsaw, and Kiev.

On February 11, the government of Lithuania announces its intention to privatize both of its carriers beginning in the fall of 1998. The second Swedish-built turboprop is delivered in April.

In June, the Ministry of Transport approves a plan to merge the company with **Lietuva Air Company, A.B. (Air Lithuania, Ltd.)**. This transfer does not occur.

Rather than merge Air Lithuania into Lithuanian, the former becomes a subsidiary of the latter on September 11. Although its shares are turned over to the other carrier, Air Lithuania retains its identity and is allowed to function as a regional operator.

By the end of the year, the company is visiting markets at Amsterdam, Berlin, Copenhagen, Ekaterinburg, Frankfurt, Hamburg, Kiev, London, Moscow, Odessa, Paris, Samara, St. Petersburg, Stockholm, Tallinn, Tashkent, and Warsaw. Charters are also flown to Athens and Istanbul.

Passenger boardings shoot up by 11% to 225,868 while cargo climbs 29% to 2.5 million FTKs. Revenues ascend 3.6% to 53 million.

In early May 1998, a strategic alliance, effective September 1, is entered into with **SAS (Scandinavian Airlines System)**. The two will try to blunt aggressive Baltic marketing by **Finnair O/Y** by offering reciprocal code-sharing and ground handling, while coordinating their Baltic routes. On May 12, a dual-designator pact is inked with **Air Baltic, A.S.**

A B-737-382, first flown by **TAP-Air Portugal, S.A.**, is chartered from ILFC in June and arrives wearing the airline's new livery.

A marketing and code-sharing agreement is signed with **LOT Polish Airlines, S.A.** on September 4. When the pact takes effect on October 26, the two sell tickets on each other's route between Vilnius and Warsaw, which LOT flies in the morning and LAL in the evening.

During the fall, two SAAB 2000s are leased from their manufacturer. The first arrives at Vilnius on November 19 and enters service on November 22 over the route to Stockholm. The second SAAB 2000 is delivered on December 16.

Customer bookings jump 11.5% to 252,000, while cargo traffic falls 9.3% to 2.27 million FTKs.

By the beginning of 1999, airline employment has been increased by 10% to 1,150. On February 26, an agreement is made to fly members of the Lithuanian National Olympic Committee. Also in February, a new Amber Miles frequent flyer program is unveiled.

During the first quarter, a new homepage is opened on the World Wide Web. With backing from the Transport and Communications Ministry, additional capacity is acquired, including two B-737-200As (a Dash-2T4A and Dash-2T2A) purchased on credit supplied by the U.S. Export-Import Bank and a pair of SAAB 340Bs.

New services are introduced between Vilnius and Minsk on June 16 and during July both pilots and flight attendants begin to wear new uniforms.

Internet booking becomes possible in September.

Customer bookings slide 3.1% during the 12 months to 244,000 while cargo traffic drops 27% to 1.66 million FTKs.

Capt. Stasys Jarmalavicius is director general at the beginning of 2000 and airline employment stands at 1,181. Destinations visited include Berlin, Copenhagen, Frankfurt, Stockholm, Paris, London, Moscow, Warsaw, Helsinki, Kiev, Minsk, Riga, and Tallinn.

The last of the company's Russian-made airliners, a Yak-42, is withdrawn from service on February 23 and sold.

A marketing and code-sharing agreement is signed with **KLM (Royal Dutch Airlines, N.V.)** on February 24. Under its terms, the partners are able to jointly operate a service from Vilnius to Amsterdam.

A new supervisory board and board of directors is approved on March 21; on March 27, Kestutis Auryla is appointed director general.

The new subsidiary Aviatours & Partners begins business in May as the tour operator arm of Lithuanian Airlines. Customers are urged to book holiday trips, via the firm, for Turkey, Spain, and Bulgaria. In July, the company enters into an exclusive contract with the 700-unit European Minotel hotel chain.

When **Air Ukraine** is forced to drop its service between Kiev and Vilnius on September 11, Lithuanian increases return frequencies on the route from thrice weekly to five times a week on October 28.

Figures for the first nine months are released at the end of October and show that passenger boardings have risen 36% as compared to the same period a year earlier. Despite these gains, rising fuel prices and a weak Euro are causing losses—profitless prosperity.

Just after the New Year, traffic figures for the entire year are released and show passenger boardings up 21% over 1999 to 294,800; freight traffic has risen 2% to 1.69 million FTKs. Anticipating losses of about \$5 million due to an 11.71% increase in costs, the State Property Fund steps in and replaces the old management with a new one led by a new chairman, the Deputy Transport Minister Kazimieras Savinis.

LITORAL (SERVICIOS AEREOS LITORAL, S.A.) See **AEROLITORAL (SERVICIOS AEREOS LITORAL, S.A.)**

LIVERMORE AIR SERVICE: United States (1968–1970). LAS is founded at Tonopah, Nevada, in the fall of 1968 to provide scheduled air taxi flights over local routes. Employing small Cessna 205s and 206s, the company begins commuter flights on October 1, maintaining them until it goes out of business in 1970.

LIZ-AIR, A.B.: Sweden (1989–1990). Liz-Air is established at Stockholm in 1989 to offer regional services, hopefully as the first Western operator of the Czechoslovak Let 410 turboprop. While Swedish government certification of the aircraft is awaited, operations commence with 2 Cessna 404 Titans and 1 Beech Baron.

The company is unable to achieve financial viability before the certification process is completed and is forced to shut its doors in January 1990.

LJ ASSOCIATES: Westmoreland County Airport, Latrobe, Pennsylvania 15650, United States; Phone (412) 537-0520; Fax (412) 537-

9504; Year Founded 1987. Originally established as the FBO at Westmoreland County Airport in 1987, LJ over the next decade also undertakes a significant business in executive and small group passenger charters, local, regional, and worldwide. Many flights are undertaken on behalf of the steel industry and other heavy manufacturing concerns in the Pittsburgh area.

In 2000, the company employs 12 pilots and operates a fleet of 2 British Aerospace BAe (HS) 125-700 Hawkers, 1 IAI Westwind I, 1 Learjet 25D, 2 Beech King Air 100s, and 2 Bell 206B JetRanger helicopters.

LLOYD AERO BOLIVIANO, S.A. See **LAB (LLOYD AERO BOLIVIANO, S.A.)**

LLOYD AEREO CORDOBA, S.A.: Argentina (1925–1927). In order to transverse the Sierra de Cordoba mountain range, the government of the Province of Cordoba, in cooperation with representatives of the German aircraft manufacturer Junkers, then in the region demonstrating their aircraft, forms LAC on January 1, 1925.

Capitalized at SP 75,000 and employing 2 Junkers F-13s, the new airline initiates services in May, flying from Cordoba across the mountains to Rio Cuarto via Villa Dolores. A second route, sponsored by the Cordoba auto club, is begun in the fall west to the Laguna Mar Chiquita.

The daily flights continue without incident during 1926 and service is upgraded by the addition of a trimotor Junkers G.24 floatplane. Unable to resolve misunderstandings over patronage and grants-in-aid, the local Junkers officials are forced to shut down the growing enterprise in 1927.

LLOYD AIRLINES: United States (1960–1961). Lloyd is established at Miami in 1960 to offer nonscheduled passenger and cargo services to destinations throughout South America. A Lockheed 049 Constellation is purchased from **Braniff International Airways** and flights duly commence.

En route from Miami to Uruguay on August 2, 1961, the company's transport is intercepted over Bolivia by a Bolivian Air Force North American F-51D, which has orders to force the plane down upon suspicion of smuggling. According to reports, the Constellation's pilot fires his revolver through an open cockpit window at the fighter plane, chasing it off. Regardless of the veracity of this report, the Lockheed lands at Santa Cruz de la Sierra, where it is promptly impounded, putting Lloyd out of business.

LLOYD AVIATION, C.A.: Calle El Callao, Red Cachamay, P B Pto Ordaz, Edo Bolivar, 8015, Venezuela; Phone 58 (86) 514584; Fax 58 (86) 527078; Year Founded 1990. The largest rotary-wing operator in Venezuela, Lloyd Aviation undertakes both domestic and offshore flights, the latter in support of the nation's energy industry. President Pedro Ferrer's fleet soon includes 8 Bell 206B JetRangers, 3 Bell 206L LongRangers, 5 Bell 212s, 4 Bell 214s, 7 Bell 412s, and 10 Sikorsky S-76s.

A decade later, President Ferrer's fleet features 3 JetRangers, 1 LongRanger, and 1 Augusta A109.

LLOYD HELICOPTERS (PTY.), LTD.: Australia (1969–2000). Initially established by Guy Lloyd as an FBO and fixed-wing charter operation at Wayville in the late 1960s, this concern receives its helicopter operator license in 1969 and changes its name and basic flight mission the following year. For most of the decade, Lloyd helicopters are engaged in general domestic aerial work, including passenger and express charters, photography, agriculture, and forest fire patrols. Meanwhile, a fleet of up to 12 twin-engine lightplanes continue to provide passenger charters around the island continent.

During the middle-to-late 1970s, Lloyd provides pioneering leadership in the development of Australia's air medevac services, which will come to comprise one of the world's most extensive state-supported networks. A Bell 206L LongRanger is first dedicated to medevac on a

part-time basis in **1978**. Lloyd will continue to provide the vision that will, eventually, lead all of Australia's states into the funding of helicopter emergency services.

Two years later in **1980**, the company inaugurates a dedicated air medevac service for South Australia employing the same specially equipped helicopter(s) previously employed ad hoc. The same year, it receives authority from the Australian government to operate twin-turbine equipment and to perform helicopter maintenance.

As emphasis on rotary-wing operations intensifies in the early **1980s**, owner Lloyd elects to conclude his fixed-wing operations and to expand further, now into international services. With all of his lightplanes withdrawn, Lloyd ventures into international services and into offshore support of the energy industry for the first time in **1985**. Over the next decade, Lloyd helicopters will see service in Cambodia, China, India, Korea, Myanmar (Burma), the Philippines, Papua New Guinea, New Zealand, and Thailand.

As the decade draws to a close, LH is able to take over when the National Safety Council shuts its doors and cuts adrift its major helicopter medevac network. In addition, the company gains a contract from the RAAF to provide search and rescue (SAR) on a model first demonstrated by **Bristow Helicopters, Ltd.** in the U.K. A contract is won to provide helicopter support services for the police of Victoria and support for energy exploration in the Timor Sea begins.

Early in the **1990s**, Chairman Lloyd begins to search for an international partner. At the same time, new work appears in the form of Australia's largest oil support contract, acquired with Woodside Petroleum for Eurocopter Super Puma flights. Service is operated from Darwin, Karratha, Troughton Island, Onslow, and other points as required.

On January 9, **1992**, Lloyd purchases a 50% stake in **National Jet Systems (Pty), Ltd.** of Adelaide. The remaining shares continue to be held by National's founder Warren Seymour.

In **1993**, Lloyd begins discussions with Alan Latham of the U.K.'s **Bond Helicopters, Ltd.** concerning a possible merger. Meanwhile, beginning on July 24, upwards of five Sikorsky S-76s are ordered. These will join the company's single unit that is now dedicated to SAR work at fighter plane bases under a new RAAF contract. At the same time, Teledyne Controls/Stewart Hughes health and usage monitoring systems (HUMS), plus flight-data and cockpit-voice recorders, are requested for two Bell 214STs and a Bell 412 used on offshore operations. The order marks the first sale of a HUMS designed for medium-sized helicopters.

Despite founder Lloyd's death, the union with the British concern is completed in **1994**. In July, minority interest in new Chairman Latham's parent, **Bond Helicopters, Ltd.**, is sold to **Helikopter Service, A.S.** of Norway (ownership will become 100% within two to three years) and Lloyd gains corporate sisters that give it worldwide capability.

In midyear, the company leases a Bell 412 from HAS, which is employed on a fire-fighting contract in New South Wales. One of the company's own 412s and a Bell 212 are shipped to Portugal on behalf of Bond to assist Heli-Portugal, S.A. with fire fighting.

Four Sikorsky S-76A+s join the fleet in early **1995**. These powerful aircraft are assigned to the company's offshore work in West Australia. A contract with Total for offshore oil support in southern Thailand using two S-76A+s is renewed in July.

In August, the company announces plans to build a commercial heliport in downtown Melbourne. In September, the New South Wales government tenders bids to prospective operators to take over its medevac network. The three local community-supported operators are matched by a bid from Lloyd and as the government moves to reorganize, the press watches and reports on what becomes an emotional battle between the three versus the outsider from a neighboring state.

Late in the year, the company gains renewal of the RAAF search and rescue contract.

In February **1996**, Lloyd becomes the Australian partner in the new Helikopter Services Group, which is headquartered in Norway and includes the operational arms of its European sisters. Remaining autonomous in operation, each company will report directly to the HSG;

however, such subsidiaries as each has acquired will continue to report directly to its owner. Additionally, Lloyd, Bond, and HS will increase support to one another where required. For example, Lloyd still maintains a Bell 206L LongRanger into Portugal on behalf of Bond to help fight forest fires.

In July, the government of New South Wales renews, for just three months, its contract with three local community-supported EMS operators. The reorganization proceeds and plans are again made to open competition for the support contract.

An A\$38-million (\$20-million) contract to provide police and ambulance helicopter service throughout the state of Victoria is received from the Victoria government in Melbourne on August 16. Although Lloyd will take over ownership and maintenance of three Eurocopter Dauphins and an Ecureil at its new heliport, the Victoria Police air wing will continue to command and fly the units.

Lloyd opens its new Melbourne heliport, located in the city's central dock area, in early fall; the facility includes a hangar large enough to house eight helicopters.

In October, the New South Wales government cancels its plans to reorganize its medevac operations and negotiates new contracts with the three local EMS operators currently holding bids. In addition, Lloyd receives a contract to provide coverage for Canberra and the state's southeastern quadrant. It will work with the Australian Capital Territory Heli Service and New South Wales Health Department.

At year's end, one-half of Lloyd's fleet is engaged in medevac work, for which contracts are held with every Australian state, as well as the federal capital of Canberra. It also continues to manage the police air wing of Victoria, including three SA-365C Dauphins and an AS-350B.

In **1997**, the fleet includes 5 Bell 412STs, 3 Bell 212s, 7 Bell 206B JetRangers, 3 Bell 206L LongRangers, 13 Sikorsky S-76s, 4 Eurocopter AS-332L Super Pumas, 3 AS-365C Dauphins, and 1 AS-350B. Work is begun on a new maintenance facility and heliport in Melbourne. Following the finalization of the arrangement to enter into a group with **Bond Helicopters, Ltd.** and **Helikopter Air Service, A.S.**, the carrier's Australian parent company is renamed Lloyd Helicopter Services (Pty.), Ltd.

The company begins flying a new contract during the first quarter on behalf of New South Wales, which provides forest fire-fighting capability over the entire southern half of the state. It also begins its EMS service over the southeastern section of the state, plus the federal capital at Canberra.

Flights continue in **1998**. On February 9, the company is awarded a two-year A\$12-million contract by Shell Development (Australia) for support of the energy firm's drilling requirements in the Sea of Timor. At the same time, an AS-332L-1 Super Puma is acquired from **MHS Aviation Services Sqn. Bd.** under a lease-purchase arrangement to service the new pact.

On June 13, the Aberdeen (Scotland) *Press and Journal* reports that **Canadian Helicopter Corporation, Ltd. (CHC)** is targeting either Norway's **Helikopter Services, A.S.** or one of its subsidiaries (most likely U.K.-based **Bond Helicopters, Ltd.**) as a possible takeover target.

Two new contracts are won on June 26. The first extends by six months the carrier's contract with BHPP for operations in the Timor Sea using a Super Puma Mk. 1. The second renewal is inked with Total for offshore support of that company's operation out of Thailand for the next four years. A pair of S-76A++s will be utilized for the first two years and three for the last two years.

The existing contract for two Bell 206B JetRangers to provide support for Santos is extended for a period of three years, beginning on October 1. Under a contract signed with the government on September 17, a Bell 412ST is stationed at Canberra, beginning on October 1, to provide search and rescue service over the next five years.

Having successfully concluded a new contract with the government midway through the third quarter of the previous year, Lloyd, on January 1, **1999**, begins a five-year contract to provide search and rescue support for the RAAF. Five S-76A++ helicopters are operated.

The Aberdeen (Scotland) *Press and Journal* reports on January 12 that the **Canadian Helicopter Corporation, Ltd.** has purchased a package of 5.1 million shares in **Helikopter Services, A.S. Group**. The 25% stake in the Norwegian operator, valued at a "knock-down price" of £16 million (Nkr 40 per share), is acquired from an institutional investor via the CHC Norwegian subsidiary Vinland Helicopters. The purchase makes CHC the largest shareholder in HAS, as well as its subsidiaries, **Bond Helicopters, Ltd.** and Lloyds.

An additional 5% stake in HSG is acquired on March 24, together with controlling interest. Interviewed by the *Press and Journal*, Helikopter Services Group Chairman Reidar Lund indicates that the action is regarded as an "unfriendly takeover" attempt. CHC Chief Financial Officer Jo Mark Zurel discourages "takeover speculation" and claims the share purchase is a moneymaking exercise.

On April 14, Reuters, Ltd. publishes the news that CHC will bid Nkr 45 per share for the remaining shares in Helikopter Services, A.S. Group and that the official offer will be released within a week, again through its Norwegian subsidiary, Vinland Helicopters. After a preliminary discussion, the Norwegian operator indicates that the offer, compared to booked capital, is too low.

CHC counters on April 26 with an offer, via Vinland, of Nkr 45 per share for the remaining shares. CHC also indicates that the offer is conditional upon Vinland gaining a minimum of 90% of HSG stock. Again rebuffed, CHC will increase the offer to Nkr 60 per share by early June.

During the fall, Australian forces are tasked by the UN to restore order to the Indonesian province of East Timor. Lloyd receives a short term contract to provide humanitarian assistance.

A new East Timor contract, valued at \$9.1 million, is received from the UN on May 1, 2000. Under its terms, a pair of AS-332L Super Pumas provide personnel transportation, while a Bell 212 is engaged in medevac operations. The international body will commend the operator for its skill in saving lives in the troubled region.

Effective October 19, all of the subsidiaries of the **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, Lloyd Helicopters (Pty.), Ltd. emerges as **CHC Helicopters Australia (Pty.), Ltd.** Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

Employing a mixed fleet of Bell and Eurocopter aircraft, including Super Pumas and Dauphins, the concern continues operations as before. The main focus remains support of oil and gas exploration, although a variety of EMS, SAR, and charter flights continue to be offered, including support for the UN effort in East Timor.

LLOYD INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1961–1971). Shipbrokers Brian Lloyd and Alastair Macloed form LIA (becoming joint managing directors) at Cambridge Airport on January 18, 1961. A Douglas DC-4 is delivered in March and after overhaul allows the charter carrier to commence revenue operations on June 1 with a passenger charter London (LGW)—Basel.

Various destinations on the Continent are flown during the summer as well as several long-distance charters to Hong Kong. On October 8, a fueling accident at Malaga results in an explosion that destroys the DC-4. A replacement Douglas is chartered from Trans World Leasing late in the month.

In March 1962, the Trans World airliner is replaced by two DC-4s purchased from **Alaska Airlines**, one delivered that month and one in May. The charter business is expanded throughout Europe and the Far East with additional inclusive-tours and ad hoc missions performed that year and in 1963. In the latter year, the company's base of operations is switched to London (LGW) from Cambridge and Brian Lloyd sells his shareholding.

A DC-6C is purchased from **Alaska Airlines** in March 1964 and after its refurbishing, is delivered on June 18 and begins revenue charter service on June 27 with a flight from Glasgow to Barcelona. Singapore, Palma, Tel Aviv, Ostend, Perpignan, Rimini, and Valencia are some of the destinations visited during the year.

Two Bristol Britannia 312s are purchased from **British Overseas Airways Corporation (BOAC)** in the spring of 1965, being delivered in April and July, respectively. The second is immediately placed out on lease to **British Eagle Airways, Ltd.** Meanwhile, in June, a DC-4 is sold. Lloyd's Britannia 312 inclusive-tour operations begin on July 10 with a flight from Glasgow to Palma.

Permission is now sought to operate twice-weekly, scheduled, all-cargo services between London and Hong Kong. With the turboprop available to handle holiday flights, the two DC-4s and DC-6 are chartered as freighters, primarily in the haulage of freight for the Ministry of Defence. With both Britannias available in early December, their London base is switched from Gatwick Airport to Stansted, although the Douglas base remained at Gatwick.

Enplanements for the year total 25,973.

The workforce in 1966 totals 72. The DC-6 is sold in March and the limited amount of cargo work is passed to the DC-4. Inclusive-tours are flown almost exclusively from Glasgow on behalf of Mercury Air Holidays.

In 1967, the Britannias are converted to all-cargo configuration in hopes the company might win approval for a scheduled freight brought to the Far East. When the ATLB refuses the quest, ad hoc charters are won and fulfilled instead. Meanwhile, the DC-4 is leased out to **Air Ferry, Ltd.** Late in the year, Lloyd is purchased by the Far East Aviation Company, Ltd.; however, A. L. Macloed remains as managing director.

The carrier's three aircraft maintain a schedule of ad hoc freight charters during 1968. During the summer, a **Donaldson International Airways, Ltd.** Britannia 317 is chartered for use on inclusive-tour services out of Glasgow. In September, a weekly unscheduled Britannia operation is undertaken between London (STN) and Hong Kong via Rotterdam and Bangkok. The DC-4 is sold in December.

In 1969, **Donaldson International Airways, Ltd.** takes over the Mercury Air Holidays inclusive-tour contract held by Lloyd for seven years. Two Britannia 307F freighters are acquired in January and February and Donaldson's Britannia 317 is returned in March. Ad hoc charters continue as before. Revenue passenger miles total 7,939,152.

Lloyd becomes a jet operator in April 1970 with the delivery of a Boeing 707-321. Following workup, it enters service on April 22 with a charter from London (STN) to Karachi and on to Kuala Lumpur. The Boeing flies a variety of ad hoc charters not only to the Far East during the summer, but to North America on affinity group flights as well.

Substantial shareholding is taken in the Costa Rican airline **LACSA (Lineas Aereas Costarricenses, S.A.)** in October, but plans for scheduled service to Costa Rica from England are not completed. In December, a Britannia freighter is leased to **British European Airways Corporation (BEA)**, then awaiting its Merchantmen.

Enplanements decrease to 48,467 but revenue passenger miles increase to 203.56 million.

On January 7, 1971 the company agrees to operate scheduled freight service for **East African Airways Corporation** from London to Lusaka. In February, a B-707-324C arrives and along with the 707-321 flies summer affinity group charters to North America beginning in April. On behalf of Clarkson's Holidays, Ltd., inclusive-tour Britannia flights are started Bristol and Cardiff to Beauvais and Rotterdam. Far East cargo services advance to six per week. Another B-707-324C is delivered in December.

Early in 1972, the Far East cargo flights are increased to eight per week; however, as the previous summer's North American services had not proven profitable, the company is forced into receivership on June 16, ceasing all operations three days later when its operation permit is withdrawn.

LLOYD LUFTDIENST, GmbH. See **DEUTSCHER AERO LLOYD A.G.**

LLOYD LUFTVERKEHR SABLATNIG, GmbH.: Germany (1919–1923). The German aircraft manufacturer Sablatnig Flugzeugbau, employing one of its Sablatnig N1s, begins a scheduled service on March 19, 1919 from Berlin to Warnemünde. Joining with **Deutsche Luft Reederei, GmbH. (DLL)** on July 5, a route is opened from the former capital city to Swinemünde and in September, cooperating with the Danish associate **Dansk Luft Expresit, A.S.**, Sablatnig P.1s extend it to Copenhagen. Due to the same fuel shortage crisis that hits DLL, operations are curtailed at the end of September.

On October 8, the builder joins with the Bremen-based Norddeutscher Lloyd (NDL) shipping concern, which provides additional capital and access to the supplies of its associate Deutsche Petroleum A.G. Together the two form Lloyd-Luftverkehr Sablatnig GmbH. (LLS)

In 1920, new Sablatnig P.IIs are employed to open Berlin–Bremen flights, stretching that route on to the Ruhr city of Gelsenkirchen. When the Allies occupy the Rhineland, the Gelsenkirchen leg terminates at Münster.

When Hamburg-Amerikanische Packetfahrt (HAPAG) establishes its **Deutscher Aero-Union, A.G.** holding group in early 1921 (in cooperation with A.E.G. and Zeppelin), its shipping rival NDL elects to move into airlines so as not to lose ground in the new air travel business. On March 8, it creates **Lloyd Luftdienst GmbH.** to coordinate bookings and promotions for several smaller companies that can now be nurtured, especially by Lloyd associate Deutsche Petroleum A.G.

LLS and **Deutsche Luft Lloyd, GmbH. (DLL)**, who is assigned Bremen–Berlin route, connect their flights so as to provide an integrated route system to the Rhur, the Baltic, and west of Berlin. In the summer, holiday operations are conducted from Bremen to Wangerooge Island and along the Baltic coast from Travemünde via Warnemünde and Sassnitz to Swinemünde. At the end of the year, the Revel-based Estonian carrier **Aeronaut, A.S.** is formed with support from Sweden and Denmark.

During the summer of 1922, LLS flights begin to Norderney Island. As the Lloyd Luftdienst system grows, it becomes possible for LLS to connect with **Lloyd Ostflug/Danziger Lloyd Luftdienst, GmbH.** operations and offer its passengers through-passage from Berlin as far as Riga. In Poland, connecting F-13 service from Danzig to Lemberg and Warsaw is available courtesy of **Aero Lloyd Warschau, GmbH.** On February 6, 1923, HAPAG and NDL merge their airline groups, **Deutscher Aero Union, A.G.** and **Lloyd Luftdienst, GmbH.** to form **Deutscher Aero Lloyd, A.G.**

LLOYD OSTFLUG, GmbH.: Germany (1920–1923). Having been unable to win approval from the German Air Ministry (Reichluftamt) for the creation of an airline because he has no aircraft, former German naval officer Gotthard Sachsenberg contacts Hugo Junkers during the summer of 1920 seeking assistance. Junkers, who is seeking ways to place his F.13 cabin monoplane, readily agrees. In order to gain sufficient capitalization, Sachsenberg is convinced of the necessity of involving other investors.

On November 7, Norddeutscher Lloyd's umbrella organization **Lloyd Luftdienst, GmbH.** welcomes newly created Lloyd Ostflug (LO), which is incorporated in association with the aircraft builders Albatros-Flugzeugwerke, GmbH. and Junkers. Since November 11, 1919, Albatros had been flying a Berlin to Königsburg route via Stettin and Danzig in cooperation with Junkers and the license-holder Ostdeutsche Landwirtschafts, GmbH. Each of the four shareholders contributes RM 1 million in start-up capital and Sachsenberg becomes CEO.

Employing a modified military Rumpler Ru C I, the new airline inaugurates airmail flights on December 27 from Berlin to Johannisthal, Schneidmühl, Danzig, and Königsburg.

In February 1921, World War I ace Erhard Milch establishes Danziger Luftpost, GmbH. at Danzig. Lloyd Ostflug, GmbH. begins to cooperate

with the Milch concern. Passenger service is inaugurated over the Berlin–Königsburg route in March. New Junkers F-13s now make it possible to fly a system of 14-hr. daily return services from Königsburg to Berlin, connecting at the German capital with **Lloyd Luftverkehr Sablatnig, GmbH.** or **Deutsche Luft Lloyd, GmbH.** to continue west. The new service is faster, by 4 hours, than trains operating between Berlin and Königsburg and one-way tickets are priced at RM 975. Stettin joins the route network in May.

Under the rigidly enforced "Polish Corridor" provision of the Versailles Treaty, only Danzig-registered aircraft are allowed to fly over the area separating Germany in the west from East Prussia and thus the Albatros route dies.

It is replaced in March 1922 by the LO link with newly created **Danziger Lloyd Luftdienst, GmbH.** set up by Norddeutscher Lloyd in March. The Königsburg route is extended in May to Memel, Riga, and Reval on behalf of Danziger Luftpost, GmbH. Another connection is also added in early May between Stettin and Hamburg.

At this point, Norddeutscher Lloyd establishes its own air transport company, **Lloyd Luftdienst, GmbH.**, which takes over the shipping line's shareholding in LO.

During the summer, LO and Danziger Luftpost, GmbH. undertake further efforts to expand eastward. In Poland, the two companies enter into discussions with the Fanto and Polnaft oil companies, which agree to participate in the formation at Danzig of a Polish airline, **Aero Lloyd Warschau, S.A.** Under terms of the July pact, the oil companies will provide fuel, Junkers Flugzeugwerke, A.G. will supply F.13s, and Danziger Luftpost will provide ground support and operational management. Revenue services commence in September over a route from Danzig to Warsaw and Lemberg.

On February 6, 1923, **Lloyd Luftdienst, GmbH.** and **Deutsche Aero Union, A.G.** merge their components to form **Deutscher Aero Lloyd, A.G.** The flight activities of LO cease on May 31.

LOFTLEIDIR H.F./ICELANDIC AIRLINES, H.F.: Iceland (1944–1979). Three local pilots—Kristinn Olsen, Alfred Eliasson, and Sigudor Olafsson—with Canadian bush flying experience, return from North America late in the first quarter of 1944, intent upon selling their Stinson SR Reliant floatplane to **Flugfélag Islands, H.F.** When they are unable to do so, they form Loftleidir (Skyways) at Reykjavik on March 10 and begin domestic operations the following month.

On June 4, 1945, a Douglas C-47 converted to civil DC-3 standard becomes the first passenger-carrying Icelandic aircraft to arrive at Stockholm from Reykjavik. Domestic flights with a few charters to Sweden are continued in 1946.

Having obtained a war surplus Douglas DC-4, the carrier begins international operations with 37 passengers on national day, June 17, 1947, over a route from Reykjavik to Copenhagen. With approval of the U.S. CAB for six-times-per-week Copenhagen–New York via Reykjavik and Gander service, the two DC-4s now available begin transatlantic flights on August 25, 1948. The number of transatlantic flights must be cut during 1949 due to Iceland's poor economy.

En route to the U.S. from Luxembourg on September 18, 1950, a C-54B freighter with six crew is forced down on Vatna Jokull Glacier, 135 mi. N of Reykjavik; a USAF C-47 on skis lands on the glacier and finds the six unhurt. The rescue plane is damaged upon takeoff the next day, but a ground party reaches the crash site and saves all on September 20. Unfortunately, an excess of expenses over revenue now forces cancellation of all international flights.

Only domestic services are maintained through 1951. A DC-3 with 20 aboard disappears on February 1 while en route from Vestman to Reykjavik; the wreckage is found the next day and there are no survivors. Later in the year, the second DC-4 is badly damaged in a takeoff accident.

Early in 1952, the national government begins to regulate the domestic air transport industry, assigning local business to **Flugfélag Islands, H.F.** With a new marketing name, Loftleidir/Icelandic Airlines, H.F., the

directors of the transoceanic carrier now abandon domestic operations in favor of a return to the North Atlantic. The government, for its part, designates **Lofteidir, H.F.** as the national flag carrier of Iceland.

Meanwhile, with **SAS (Scandinavian Airlines System)**, the national flag carrier of the three Scandinavian countries, longtime Norwegian carrier **Braathens SAFE (South American and Far East Air Transport, A.S.)** seeks a partner that will allow it to continue to fly across the Atlantic. Following negotiations, an arrangement is struck with Lofteidir, H.F. that will allow the Oslo-based pioneer to continue flying to New York. With two DC-4s (one from each company), a joint venture operation, which remains Icelandic on the surface, is begun.

Bargain prices some 10% lower than that of the other transatlantic carriers are offered to induce passengers to fly the four-engine Douglas transports from Oslo and Copenhagen. The first low-cost transatlantic flight departs Reykjavik for New York on June 12.

A total of 2,000 passengers are carried on the year.

To the consternation of IATA (to which it does not belong), unsubsidized Lofteidir significantly strengthens its value-based transatlantic concept in 1953 and begins its long-standing tenure as a maverick airline. Fares to North America will be non-IATA economy rates, although those flown through sectors east of Iceland will eventually come to have IATA-agreed tariffs. Restrictions imposed by the competition insure that Lofteidir, H.F. remains one technological step behind; the restriction brings about the marketing slogan "We're slower . . . but our fares are lower!"

Enplanements reach 5,000 as additional DC-4s are put on the line.

The marketing title "Icelandic Airlines" is introduced in 1954 as bookings skyrocket to 11,000.

Under pressure, **Braathens SAFE, A.S.** begins a gradual withdrawal from its compact. On May 23, 1955, Luxembourg becomes the carrier's European transatlantic terminus, with flights now going through Iceland. From now on the company will be known as the Grand Duchy's official airline.

Traffic increases another 5,000, to 17,000.

Despite the fact that it flies older aircraft and must stop at Iceland, the carrier continues to turn the stopover into an advantage. Throughout the decade and into the next two, the company will promote duty-free shopping opportunities and offer inexpensive hotel and sight-seeing packages for stopovers that last up to two days.

The fleet's DC-4s transport 22,000 travelers over the North Atlantic in 1956 and 25,000 in 1957. The need for newer equipment forces retirement of certain DC-4s and their replacement with Vickers Viscount turboprops. Boardings climb to 32,000 in 1958 and to 35,000 in 1959.

Enplanements for the "hippie airline" dip to 33,000 in 1960. The first two Douglas DC-6Bs arrive at Reykjavik in late spring 1961 and are placed on the North Atlantic routes in July. They help customer bookings rebound to 38,000 in 1961 and exceed 45,000 in 1962.

In 1963, IATA begins an effort to eliminate low-fare competition through a general 20% reduction in fares by member airlines (and 30% on services to Luxembourg). Still, traffic for Icelandic, which is proud to be the last piston-engine operator on the North Atlantic, surpasses 50,000 passengers transported on the year.

The workforce totals 615 in 1964. Two Canadair CL-44JD Monsars (monsters) are acquired, one in June and one in November, joining a fleet now comprising 7 DC-6Bs.

The Bristol Britannia derivatives, outfitted with 189 seats, are the largest Western-built passenger airliner in service anywhere. Charter operations are started with two dedicated DC-6Bs. Enplanements total 87,875.

Two more CL-44Js are purchased in 1965 and are sent back to Canada for power plant conversion to Rolls Royce Tyne turboprops. Also, ground is broken for a Reykjavik hotel.

Passenger boardings accelerate 37% to 141,051.

Airline employment stands at 1,150 in 1966. Equipped with British engines, the first CL-44J is delivered on March 13. As the result of an agreement between the engine-maker and Icelandic's public relations di-

rector, Sigurour Magnusson, the giant airliner, along with the other CL-44Js to join the fleet, will be marketed as "Rolls Royce 400s." The IATA effort to squeeze the carrier off the North Atlantic is largely defeated as the company reduces its own fares by 20% to 30%; the larger capacity of the Canadairs allows Icelandic to compete, even against jetliners.

The Reykjavik hotel is completed during the fourth quarter and a total of 157,000 travelers are carried on the year.

Bookings swell to 185,600 passengers in 1967. The employee force in 1968 drops to 948. New sales offices are occupied at Mexico City and Washington, D.C.

Another Rolls Royce-powered CL-44J is delivered; this Canadair combines with three others already on hand and five DC-6Bs to boost freight traffic 48.7% on the year, although passenger boardings dip to 183,375.

At the beginning of 1969, company DC-6Bs are chartered to make relief flights during the fighting in Biafra, Nigeria.

Still, passenger traffic falls again, down to 163,686 passengers flown.

International Air Bahamas, Ltd. is acquired and merged in late 1970. The first of two new Douglas DC-8-63CFs, leased from **Seaboard and Western Airlines**, are placed on the North Atlantic run and help passenger bookings to leap 42% up to 283,000; cargo grows by 41.9%.

The workforce is now 1,272 and a second DC-8-63 plus a DC-8-51 are delivered in 1971; these join a fleet that also comprises 4 Canadair CL-44s and 4 DC-6Bs.

Enplanements for the year decline slightly to 278,640.

Airline employment in 1972 stands at 1,122 and a total of 23 weekly New York to Luxembourg flights are offered. The major portion of Icelandic's maintenance department is transferred to Luxembourg from New York.

Passenger traffic recovers to rise 8.6% to 324,000. Freight traffic is off by 6.4%.

The workforce in 1973 is 1,286. Thrice-weekly Chicago-Luxembourg service is inaugurated in May. Icelandic begins a slow merger process with **Flugfelag Islands-Icelandair H.F.** in August. Although consolidated under a new holding company, Flugleidir H.F., Icelandic Airlines maintains a separate operating identity and continues to focus on the transatlantic market. A total of 33 weekly flights are offered—11 to the U.S. and 22 to Europe.

Customer bookings climb 0.8% to 327,000, but freight traffic skyrockets by 85%. The company's fortieth anniversary is celebrated in 1974.

During 1974-1978, Chairman Kristjan Gudlaugsson and Managing Director Alfred Eliasson oversee an employee population of 1,220 and the operation of 4 DC-8-63CFs.

On November 15, 1978, a DC-8-63CF with 10 crew and wet-leased to **Garuda Indonesian Airlines** is carrying 249 Indonesian Muslim pilgrim passengers from Jeddah to Surabaya. After overshooting the runway on its final approach to the intermediate stop at Colombo, Sri Lanka, the aircraft crashes into some trees in a coconut plantation (183 dead). The disaster is labeled as the fourth worst in aviation history to date.

Also during the year, a third U.S. gateway is opened at Baltimore.

Early in 1979, the company acquires a DC-10-30. However, just as the peak transatlantic tourist season is about to get underway in May, a similar unit operated by **American Airlines** crashes at Chicago (ORD). The U.S. FAA orders the Douglas wide-bodies operating in American airspace grounded, forcing the Iceland operator to switch back to DC-8s. Corporate integration is completed on October 1, as Icelandic and Icelandic are fully merged into a new national carrier with the latter's name, **Flugfelag Islands (2)/Icelandair, H.F.** Flugfelag becomes the domestic trade name, with Icelandair used for international services.

LOGANAIR, LTD.: St. Andrews Dr., Glasgow Airport, Paisley, Renfrewshire, England, PA3 2TG, United Kingdom; Phone 44 (141) 848-7594; Fax 44 (141) 887-6020; <http://www.british-airways.com/>

[inside/wrldwide/partners/franchise/docs/loganair.shtml](#); **Code LC**; **Year Founded 1962**. On February 1, 1962, a modest air taxi, **Capital Cities (Aero), Ltd.**, is purchased by Duncan Logan Construction, Ltd., to fly its workers (in a single Piper PA-27 Aztec) from Glasgow to various Scottish job sites. Duncan Logan renames the operator Loganair, Ltd., and places his son in charge.

Upon the death of company Chairman William Logan in 1966, new Managing Director Scott Grier reforms Loganair into an airline company to provide scheduled commuter services to remote Scottish communities. The first regularly appointed route is inaugurated on September 13, Glasgow (Renfrew)–Oban–Mull. A Mull–Coll spur is opened soon thereafter.

Single-engine service with a Bolkow Bo-208 Junior and Piper PA-32 Cherokee Six, both obtained earlier, continues apace in 1967. Two Britten-Norman BN-2s are ordered and following demonstration flights with machines leased from their manufacturer, the first purchased unit, christened *Captain E. E. Freeson OBE*, is employed to start scheduled services to the Orkney Islands from Kirkwall on August 27. The second BN-2, the *Captain David Barclay MBE*, is placed on the Mull route on September 1.

The Islander service now offered between the Orkney Islands of Westray and Papa Westray will later gain the record of being aviation's shortest scheduled flight in a piston-engine aircraft. Elapsed time for the service is normally 2 minutes, although, under favorable circumstances, the journey has been completed in less than 60 seconds!

In May 1968, a Beech 18 is purchased to fly cargo charters as well as to fulfill a Post Office night airmail contract, Glasgow to Blackpool. During the summer, BN-2 service is started to the Inner Hebrides. The tiny regional is acquired in October by the National Commercial Bank, forerunner of the Royal Bank of Scotland.

A Short SC-7 Skyvan 3 is delivered on March 4, 1969 and placed in service three days later, Glasgow–Stornoway. Beginning in July, the Beech 18 and Shorts Skyvan start a Glasgow–Stavanger via Aberdeen route, the company's first international service.

The same month, a Piper PA-23 Aztec is leased for 30 days from CSE Aviation, replacing an Aztec rented for a month back in June. In September, a BN-2 begins air ambulance and charter service to the Shetland Islands from a base at Sumburgh.

A new scheduled Sumburgh–Unst Shetland Islands route is opened in May 1970. In September, an Islander is rented for a quarter from **Glossair, Ltd.** For lack of passengers, the Stavanger route is closed in November. In 1971, Loganair becomes the second British carrier to order the BN-2A Trislander. The *Captain E. E. Freeson OBE* is sold in May and replaced by an Islander christened *Robert McKean OBE*. In August, **British Eagle Airways, Ltd.**'s abandoned Dundee–Glasgow route is acquired and started.

Sumburgh–Whalsay scheduled service begins in the spring of 1972. A new Islander joins the fleet in June, allowing sale of the *Captain David Barclay MBE* in July. Isle of Skye to Glasgow and Inverness scheduled flights begin on July 4. The following day services are extended from Durnoch to Inverness and Wick; proving unsuccessful, they are suspended on November 29. Meanwhile in August and November, two Islanders are leased from **Humber Airways, Ltd.** while a BN-2 is also purchased in November. The last Aztec is sold in September.

Another BN-2 is acquired in January 1973 and is given the name of an earlier aircraft, *Captain E. E. Freeson*. The unprofitable Isle of Skye–Inverness route is abandoned in February. Another Islander is acquired in March and named *Sister Jean Kennedy*. On April 1, the entire Scottish Air Ambulance Service is acquired from **British European Airways Corporation (BEA)**; 7 BEA airfields are added to the 23 Loganair has been serving since 1965. Later in the month, the two **Humber Airways, Ltd.** BN-2s are returned.

The first of two BN-2A Trislanders ordered in 1971 is delivered to Glasgow on June 9; following workup, it is sent to Sumburgh in September to make proving flights in support of the North Sea oil industry. A BN-2 is leased from Cannon Aviation in November and another

is chartered from Shorelink in December, the same month the second BN-2A is delivered and the Short Skyvan is sold.

Enplanements for the year are 28,480.

The employee population in 1974 numbers 93. The Shorelink Islander is returned in January. On April 1, the Trislanders are placed in scheduled service on the Glasgow–Dundee and Isle of Skye route. Later in the month, the Cannon Aviation Islander is returned as a third Trislander is received. The former **British Airways, Ltd. (2)** routes from Glasgow to Barra and Tiree are acquired on September 1. With Chevron now taking an interest, the carrier elects to increase its service to the offshore oil industry. In September, a Trislander is positioned in Aberdeen to fly ad hoc oil charters.

Passenger boardings accelerate 11% to 32,000.

The Beech 18 is withdrawn in March 1975 and presented to the Royal Scottish Museum as the last of its type to fly in the U.K. The Barra and Tiree routes are officially turned over by BA on April 1. The unprofitable Glasgow–Dundee scheduled route is halted on May 30.

Although Chevron withdraws from its association, in August, Burmah Oil signs a three-year contract for the use of two company Trislanders out of Aberdeen, requiring the purchase of two more BN-2As. In September, BA's Stornoway–Benbecula and Barra routes are acquired. The government withdraws its Shetlands subsidy during the same month, temporarily ending Loganair service until political pressure can restore funding.

Three more Trislanders are delivered in 1976, two in March and one in May, allowing start-up of the Burmah Oil service in April. Other Trislander flights from Aberdeen reach Amsterdam, Cork, London (LHR) and Stavanger. Also in April, four-times-per-day Kirkwall–Wick scheduled frequencies begin, along with twice-daily operations from Wick to Inverness. Lacking subsidy, the Coll, Mull, and Oban services are halted in late spring.

The first de Havilland Canada DHC-6 Twin Otter is placed into service in 1977, as enplanements reach 123,690.

The fleet in 1978 comprises 3 Twin Otters, 8 Trislanders, and 7 Islanders.

Passenger boardings jump 26% to 133,000.

Seven de Havilland Canada DHC-6 Twin Otters are added in 1979. Following conclusion of the Burmah Oil contract and the world fuel crisis, the commuter begins a painstaking rationalization of routes and aircraft.

Enplanements total 190,490.

The workforce is reduced by 7.4% in 1980 to 250. Routes are now extended to larger cities, beginning with the inauguration of flights to Edinburgh and Blackpool. Consequently, the fleet is increased by the addition of two Embraer EMB-110 Bandeirantes and a Shorts 330. One Twin Otter and four Trislanders are withdrawn.

Passenger boardings accelerate 11.4% to 215,000.

Destinations visited in 1981 include Glasgow, Edinburgh, Londonderry, Isle of Man, Campbelltown, Islay, Tiree, Barra, Skye, Inverness, Aberdeen, Wick, Kirkwall, Sumburgh, and Unst. The fleet now comprises 2 Shorts 330s, 9 Twin Otters, 2 Embraer EMB-110 Bandeirantes, 3 Britten-Norman Trislanders, and 7 BN-2 Islanders. Belfast Harbour and Manchester frequencies are initiated in 1982.

The DHC-6-300 *Skianyn Vannin* is leased to **Manx Airlines, Ltd. (2)** in October 1983 for an 18-month period. In November, British Midland Bank acquires 75% shareholding (Managing Director Grier continues to hold the remaining 25%) and turns direction of the airline over to its subsidiary, **British Midland Airways, Ltd.**

Passenger boardings reach 210,000.

Enplanements jump 18% in 1984 to 242,000.

The employee population increases 10% to 275 in 1985 and the world's shortest scheduled commercial flight—2 minutes between Westray and Papa Westray in the Orkney Islands—now officially enters the record books.

Bookings for the year rise 7.1% to 258,000.

Fifty more employees are hired in **1986**, by which time Scottish commitments are being met with a fleet that includes 6 BN-2 Islanders, 5 DHC-6s, 2 Shorts 360-300s, and 1 Fokker F.27 Friendship.

Having mistaken Laphroaig for Port Ellen on June 12, Flight 423, a DHC-6-300 with 2 crew and 14 passengers, turns onto final approach and collides with a 360-ft.-high hill (1 dead).

Passenger boardings jump 6.3% to 274,851.

The workforce grows another 15.2% in **1987** to 363 and 2 more Shorts 360-300s and another Fokker Friendship join the fleet. A leased DHC-7 is introduced on the Manchester-Belfast route during the spring.

Customer bookings rise 18.1% to 324,487.

Capt. B. R. Bayley becomes CEO in **1989** even as Managing Director Grier continues. The first jetliner, a British Aerospace BAe 146, is purchased.

Enplanements through the first half are up over the same period a year earlier by 17.7% to 216,881.

Company employment grows 5.7% in **1990** to 555. A second BAe 146 is acquired, along with two ATPs and a Shorts 360-300. Capt. Roly Beaumont becomes Managing Director. Destinations now visited include Belfast, Edinburgh, Glasgow, Inverness, Islay, Kirkwall, Lerwick, Londonderry, Manchester, Stornoway, Tiree, and Wick. Services to the Channel Islands are increased.

Passenger boardings accelerate 7.2% to 607,000.

The payroll is sliced 20.8% in **1991** to 440 as the BAe 146s are withdrawn and replaced by 3 BAe Jetstream 61s (ATPs).

A total of five refurbished BAe Jetstream 31s are in service by the end of October; the new planes upgrade existing services and inaugurate new routes from Edinburgh and Glasgow to Orkney and Shetland and from Glasgow to Southampton.

Statistics are reported for the first 10 months and show customer bookings up 11.8% to 594,822. Cargo, however, is down by 3.8% to 251,000 FTKs.

The employee population resumes its upward mark in **1992**, climbing 27.3% to 560. The fleet is enhanced by the addition of 2 more Jetstream 61s, which brings the total to 5, along with 3 leased DHC-6-310s, 5 Jetstream 31s and 6 Shorts 360-300s. During the year, one Jetstream 61 is leased to **Manx Airlines, Ltd.** New markets initiated include Sumburgh, Bergen, Birmingham, Guernsey, Shetland, Southampton, Benbecula, and Conaught.

In December, the Scottish Air Ambulance Service awards the company a \$2.8-million contract to provide fixed-wing emergency medical service flights for all of Scotland. The service will be coordinated with a rotary-wing medevac service that will be operated by **Bond Helicopters, Ltd.**

Recession causes passenger boardings to fall 14% for the year to 594,913, while freight plunges 23.4% to 219,000 FTKs.

Airline employment in **1993** stands at 560 as the first of 3 Jetstream 41s are acquired in January. The launch customer places its new aircraft into domestic service between Southampton and Manchester on February 1. The company's first Continental service, Southampton to Brussels, is inaugurated by the J-41 in March.

Other new routes started include Manchester to Dublin, Southampton, and Guernsey, Birmingham, Kirkwall to Sumburgh, and Glasgow to Knock. Two Pilatus-Britten-Norman PBN-2 Islanders are based in the Northern Isles and a Beech King Air is stationed at Aberdeen in April to begin, with **Bond Helicopters, Ltd.**, the first integrated aeromedical service in the U.K. A 24-hour "air desk" at Aberdeen coordinates the EMS assets.

In July, a £25-million order is placed for three BAe ATPs.

Customer bookings for the year are level, but freight grows by 8.4%.

The company begins to concentrate exclusively on Scottish services during **1994**, transferring its other routes, along with its five BAe ATPs and three Jetstream 41s, to sister Airlines of Britain regional **Manx Airlines, Ltd. (2)** on March 28. In April, a code-sharing agreement is signed with **British Airways, Ltd. (2)** under which the company will operate

regional and Scottish flights to the Orkney and Shetland Islands for the major in aircraft painted in modified BA livery.

These "British Airways Express" flights commence in July using Shorts 360-300s in place of the retired DHC-6 Twin Otters. The new aircraft are not suited to their duties and mechanical problems cause many flights to be canceled, particularly in late fall. The decision is taken to resume Twin Otter operations, with the first, leased from **Wideroe's Flyvelskap, A.S.**, entering service in November.

As is anticipated, passenger boardings plunge 50.1% through November to 296,487.

The fleet in **1995** includes 8 Shorts 360-300s and 5 Pilatus Britten-Norman PBN-2 Islanders. The leased Wideroe Twin Otter is replaced with a refurbished Loganair unit painted in modified BA livery. It begins flying from Glasgow via Tiree to Barra on January 18.

Having been shrunk to accommodate its new specialist role, Loganair suffers an anticipated traffic decline throughout the year. Enplanements fall 14.8% to 252,288.

Airline employment stands at 60 in **1996**. The small regional soldiers on until October. During that month, sister carrier **Manx Airlines (Europe), Ltd. (2)** is renamed **British Regional Airlines, Ltd.** and is given authority, as a BA franchise partner, to operate all of the internal Scottish services previously flown by **British Airways Regional, Ltd.**

The Shorts 360-300s are withdrawn and Loganair operations are now incorporated into **British Regional Airlines, Ltd.**

Passenger bookings since January have continued to fall, dropping 8.2% to 251,214.

The workforce is increased by 16.7% in **1997** to 70. The fleet comprises 5 Pilatus Britten-Norman PBN-2 Islanders and 1 de Havilland Canada DHC-6-300 Twin Otter.

In a management buyout, Scott Grier, Stephen Bond, and Trevor Bush purchase the company on March 1 and take it independent again. With Bush as managing director, the company continues to operate specialist BA franchise service for the Scottish Air Ambulance Service, as well as its regular passenger routes to the Orkney and Shetland Islands. Customer boardings plunge 75% to 62,706.

A Shorts 360-300 with 3 crew and 20 passengers crash-lands at Stornoway Airport in Scotland on February 9, **1998** after a flight from Benbecula; the airport fire service attends and assists with the removal of passengers, none of whom are seriously hurt.

Plans to replace the aging Shorts 360-300s on the twice daily Glasgow to Shetland roundtrips and the daily roundtrips from Edinburgh to both Kirkwall and Shetland are shelved on July 28 when **British Regional Airlines, Ltd.** decides to turn these Orkney Island routes over to Loganair. Word of the changeover is leaked to the press before BRA can make a public announcement the next day, causing further alienation between that airline and the political leadership of northern Scotland.

With a fleet of three Shorts 360-300s and three Shorts 360-200s (one always kept in reserve), Loganair takes over the BRA routes on October 27. In addition, routes from the Orkney Islands to Inverness and Wick are also started. Chairman Grier pledges that a new hangar will be constructed at Kirkwall.

Passenger boardings jump 30.1% to 82,000, while 4,000 FTKs are also operated.

By the start of **1999**, airline employment has been increased by 58.6% to 111. By the end of the winter season in March, the Shorts 360-200s have been replaced with SAAB 340Bs.

Passenger boardings skyrocket 81.6% to 158,000. Airline employment at the beginning of **2000** stands at 154, a 38.7% increase over the previous 12 months.

In late August, a de Havilland Canada DHC-6-300 is dry-leased from **Zimex Aviation** and is employed to provide backup for its own Twin Otter flying from Glasgow to Isle of Barra contract. The second machine also allows the introduction of flights from Barra to Benbecula and from Glasgow to Tiree, Campbelltown, and Islay. Upon the completion of the arrangement, the Zimex DHC is returned on November 27.

In late December, the company is one of two chosen by the Irish government to operate the nation's Public Service Obligation (PSO) routes for the next three years, being specifically awarded the new route from Londonderry to Dublin. This will be operated in January with Shorts 360-300s.

LOIDE AEREO NACIONAL, S.A.: Brazil (1949–1962). Having lost two of its three Douglas C-47 freighters in crashes during two years of charter operations, **TCA (Transportes Carga Aerea, S.A.)** is reorganized on August 24, 1949 TCA CEO Rui Vacant remains as president and capitalization is increased to 30 million cruzeiros.

Three Curtiss C-46A Commandos are imported from the U.S. and together with the remaining TCA C-47, two scheduled routes are inaugurated: Rio de Janeiro–Lapa-Fortaleza and Rio de Janeiro and Belo Horizonte–Formosa–Carolina–São Luis. Toward year's end, the carrier joins in a technical consortium for maintenance and facilities with two smaller, but older airlines: **TABA (Transportes Aereos Bandeirantes, S.A.)** and **LAP (Linhas Aereas Paulistas, S.A.)**.

With competition growing over Brazil's domestic routes in 1950, officials of the three carriers elect to follow the example set that year by **TAN (Transportes Aereos Nacional, S.A.)** and form a complete operating consortium.

A C-46A with three crew is destroyed beyond salvage at Campinha Grande, Brazil, on December 17; there are no fatalities.

The consortium move is taken on August 24, 1951 under Loide's umbrella name. At the same time, new service is started from Rio de Janeiro to Manaus via Anapolis, Carolina, and Santarem.

There are three accidents this year. A C-46A is destroyed at Guanabara Bay, Brazil, on April 15; there are no fatalities. While approaching Aracaju, Brazil, on July 12, a DC-3 with 5 crew and 28 passengers hits high ground and crashes; there are no survivors. A C-46A, with three crew and four passengers, is lost at Cochabamba on July 29; there are no survivors.

The next two years are also unsafe. A C-46A with six crew, crashes into the Rio Negro River after failing its climbout from Manaus, Brazil, on May 24, 1952; there are no survivors.

While on approach to Potosi, Bolivia, from Camiri on November 3, 1953, a DC-3 with 3 crew and 25 passengers is lost; there are no survivors.

Flights are conducted without incident in 1954.

During the remainder of the year and through 1955, Loide builds up a substantial long-haul network connecting most of the nation's state capitals, duplicating some of the routes flown by larger carriers. At the same time, the fleet grows to comprise 16 C-46 freighters and 3 C-46 passenger-configured transports. As a method of avoiding wasteful competition and route duplication, Loide and **Panair do Brazil, S.A.** reach an agreement on November 22, 1956 for coordinated operations on the long segments in the north and northeast part of the country.

The experiment is set to run two years beginning in January 1957. Loide orders four DC-6As in February and during the remainder of the year obtains four DC-4s from the American carriers **Western Airlines** and **United Air Lines**. During the year, the company's registers show it has the largest fleet of C-46s in South America—26.

One of the new U.S. aircraft, with 74 passengers, fails its takeoff from Rio de Janeiro on February 2, 1958 and crashes (five dead).

The pooling plan with **Panair do Brazil, S.A.** never receives official federal approval and ends in July. A DC-4 with 6 crew and 5 passengers, is lost at Maraso Bay, Brazil, on August 12 (10 dead).

A C-46 crashes while on approach to Campina Grande on September 5 (13 dead). The first DC-6A arrives in December and is christened *Azadonas*.

The DC-6A order is completed on February 10, 1959 with the delivery of the 74th and last unit of its type to roll off the Douglas production lines. At this point the freighters are leased to **Panair do Brazil, S.A.** for a two-year period. In July, all-cargo DC-4 charters are initiated to Miami. Two DC-4s are lost in crashes during the summer, but are promptly replaced by new four-engine Douglas Fours.

The big event of 1960 is the introduction of deep-discount day excursions between Rio de Janeiro and the federal capital of Brasília—lunch provided. The fleet now includes 8 DC-4s, 8 C-46s, and 4 DC-6As.

In March 1961, the DC-6As return from **Panair do Brazil, S.A.** and are placed on Loide's Miami and other long-haul routes. In one final effort to win a continuing contest with the larger and older carriers, Loide, on October 24, seeks a larger route network by purchasing **NAB (Navegacao Aerea Brasileira, S.A.)**. The takeover is more expensive than expected and rather than declare bankruptcy, the newly enlarged carrier sells out to the government of São Paulo on January 7, 1962. That local government turns over operational control of the former consortium to **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**.

LOKEN AVIATION: United States (1989–1997). Following an eight-month battle with the inspection office of the Alaska regional FAA division, the Juneau-based scheduled air taxi **Channel Flying Service** is reformed into Loken Aviation, Inc., a Part 135 charter operator, in December 1989.

Following a period of satisfactory unscheduled lightplane service, the carrier elects to begin scheduled operations to bush and regional destinations in 1991. A single de Havilland Canada DHC-5, one of the few ever employed by an American commuter carrier, is employed to fly 265 passengers and 24,218 pounds of mail during the 12-month period.

Founder Craig J. Loken's company continues in 1992–1993 and in 1994 enplanements total 2,589, a 44% boost over the previous year.

Loken becomes an affiliate of the newly established **Lynden Air Cargo** during the spring of 1995. Consequently, the DHC-5 and several DHC-2 Beavers haul a total of 4,547 passengers, an impressive 76% increase.

En route from Hoonah to Elfin Cove on a July 19, 1996 nonscheduled charter on behalf of **Lynden Air Cargo**, a Loken Aviation DHC-2 smashes into steep terrain near the latter point. The aircraft is destroyed by the impact and subsequent fire; the pilot is killed.

The good traffic fortune cannot be maintained this year as customer bookings plunge 20% to 3,650. Loken Aviation struggles on in 1997, but finally ceases flying during the summer. Lynden Air Cargo informs the DOT on September 24 that Loken is out of business and petitions that its certificate be reissued eliminating the Loken trade name. A new certificate is duly allowed on October 8.

LONDON CITY AIRWAYS, LTD.: United Kingdom (1987–1991). Earlier known as **Eurocity Express, Ltd.**, this small Airlines of Britain group STOL operator, under the direction of Nigel Harris, begins flying into and from London (LCY) with a pair of leased de Havilland Canada DHC-7s in October 1987. Orders are placed for four Dash 7s as the chartered aircraft undertake services to Paris and Brussels. The later operations are conducted in association with **Sabena Belgian World Airlines, S.A.** French flights are curtailed at year's end for a month as the result of an ATC dispute with the field's other carrier, **Brymon Airways, Ltd.**

Service to Paris resumes early in 1988. During the spring and summer, a marketing agreement is signed with **UTA French Airlines** and flights begin to Amsterdam. Beginning on July 24, two leased BAe 146-200s undertake a series of noise tests at London (LCY) sponsored by the CAA. British officials are so concerned with noise that groups of local citizens are driven to the airport during tests; after watching takeoffs and landings, they are polled as to their opinions about the noise levels.

British officials work to lengthen the runways at London (LCY) in order that larger British Aerospace BAe 146-200s might be accommodated. The carrier, however, in financial trouble, must cut services in half in 1989 and transfers one Dash 7 to **Brymon Airways, Ltd.** and sells a second to the British Antarctic Survey. Following two years of discussion, an interline-ticketing agreement is signed with **Air France** in December that is designed to increase traffic on the route to Paris from London's Docklands STOLport.

Services continue to deteriorate during the first half of 1990 and in August, the four-times-per-day Paris service from Docklands is dropped. At the same time, **Brymon Airways, Ltd.** takes over the re-

gional's route to Amsterdam. Figures are reported for the first 8 months of the year and show a total of 53,367 passengers flown.

On September 1, the decision is taken to merge the carrier and its 70 workers into **British Midland Airways, Ltd.** Only one route is operated, as two DHC-7s, painted in BMA livery offer Diamond Class service to Brussels. In **1991**, the company is renamed **Love Air, Ltd.**

LONDON EUROPEAN AIRWAYS, LTD.: United Kingdom (1985–1990). In February **1985**, newly formed London European Airways, Ltd. begins regional and commuter service in England and to Amsterdam with one Vickers Viscount 806 and one Shorts 330. In June, Managing Director N. R. Harford's new entrant purchases **Euroflite, Ltd.** from McAlpine Aviation, Ltd. Flights begin to Brussels late in the year.

Unable to swallow the **Euroflite, Ltd.** merger and taking big financial losses, LEA in April **1986** is forced to lay off its 50 employees and cease trading. Late in the year, the company's assets are acquired by the independent Irish carrier **Ryanair, Ltd.** Reformed into a sister airline of the Irish company, Harford's former airline will operate as **Ryan European Airways, Ltd.** for the next four years.

In November **1990**, **Ryan European Airways, Ltd.**, now primarily a charter operation, is renamed LEA. Operations continue with a British Aerospace BAe (BAC) 1-11-518FG and a 1-11-476FM, the latter leased from Ryanair. The BAe (ROMBAC) 1-11-561RC, previously chartered from **TAROM (Transporturile Aeriene Romane, S.A.)**, is returned. Operations cease at the end of the year.

LONDON EXECUTIVE AVIATION, LTD.: Stapleford Airport, Stapleford Tawney, Essex, England, RM4 1SJ, United Kingdom; Phone 44 (1708) 688 420; Fax 44 (1708) 688 663; http://www.FLYLEA.com; Year Founded 1995. LEA is set up at Stapleford Airport in **1995** to provide executive and small group passenger charters around the country and into Northwest Europe. Also flown are aerial photography and survey missions, cargo and express, and air ambulance.

Within five years, Operations Director Amanda Patchey oversees the work of 16 pilots and the operations of aircraft from 4 bases.

Two Piper PA-31-310 Navajos are flown from Stapleford, along with 5 PA-34 Senecas and 1 Beech Super King Air 200. The company's only executive jet, a Cessna 550 Citation II, is based at London (LCY) while Senecas are also dispatched from Cambridge and Manchester.

LONDON FLIGHT CENTRE, LTD. See LOVE AIR, LTD.

LONDON, SCOTTISH AND PROVINCIAL AIRWAYS, LTD.: United Kingdom (1934). LS & PA is registered at London on February 7, **1934**. Employing an Airspeed Courier, it makes a London–Glasgow (Renfrew) via Nottingham and Manchester, proving flight on March 19. On August 6, twice-daily Leeds to Paris service is initiated via Nottingham, London (Heston), and Le Touquet, with two Airspeed Couriers. Seven days later, the Monospar ST.10, which had won the Kings Cup air race in July, is used for one day between London (Heston) to Leeds in place of a Courier.

Operations cease at the end of summer.

LONE STAR AIRLINES: United States (1991–1996). Fort Worth, Texas-based **Exec Express II** is renamed in June **1991**. Philip H. Trenary remains chairman/CEO and his fleet includes 8 Fairchild Metro IIIs. Frequencies are continued from Dallas (DFW) to St. Louis and Joplin, Missouri, and Liberal and Garden City, Kansas, the latter stop added during the year.

In the fall, negotiations are completed for the takeover of fellow Texan carrier **Conquest Airlines**.

Bookings climb to 69,200. Orders are placed for another Metro III. The net loss falls to \$487,530 as revenues jump to \$11.09 million and expenses to \$11.58 million.

Airline employment stands at 90 in **1992** as the ninth Metro is placed into service and the **Conquest Airlines** acquisition is completed.

While on a test flight from Hot Springs, Arkansas, on August 25, a Metro III with three crew aboard rolls right and crashes near the end of the runway; there are no survivors.

Late in the year, the fastest growing airline at Dallas (DFW) inaugurates flights to Columbia, Missouri, Ponca City, Oklahoma, Camden, Arkansas, and Terre Haute, Indiana.

Passenger boardings swell 47.4% to 71,772.

Destinations visited in **1993** include Terre Haute, Memphis, St. Louis, Columbia, Joplin, Branson, Mountain Home, Jonesboro, Harrison, Hot Springs, El Dorado, Magnolia, Enid, Ponca City, Dallas (DFW), Brownwood, Alpine, Austin, and Paris, Texas.

Chairman Trenary enters shareholding negotiations with a consortium of Chihuahua, Mexico-based government agencies and commercial businesses. Stratega Mercadotecnica Chihuahuan undertakes an air service survey. A Fairchild Metro 23 is ordered in late December; the order will subsequently be doubled.

Enplanements for the year increase 28% to 92,741. Revenues are now \$16.34 million, expenses are down to \$15 million and a \$1.34-million net profit can be reported on top of a \$41.9-million pretax gain.

Following implementation of the North American Free Trade Agreement (NAFTA) and completion of the air service survey in early **1994**, the Mexican consortium, led by American Industries International Chairman Luis Lara and Internacional de Ceramica Chairman Victor Almeida, elects to buy into the airline. In exchange for 49% equity, the Lone Star Promotora de Vuelos Internacionales (International Flight Promoters) gains three of the carrier's nine board seats and a 22% voting interest (the maximum allowed under U.S. law). Trenary remains chairman/CEO of the airline.

An Embraer EMB-120 Brasilia is placed into service during the spring for flights between Dallas (DFW) and Chihuahua, but will eventually prove unsuccessful. One Metro III is replaced in August and September by two Metro 23s and orders are placed for four Dornier 328-110s. Essential Air Service (EAS) routes are maintained to 16 cities in 4 states.

Late in the year, plans are made to inaugurate services to Mexico in the first quarter of **1995**, following receipt of the first of the Dorniers on February 1. Among the operations scheduled to begin are direct daily roundtrip Dallas (DFW) flights to Chihuahua City, Torrejon, and Saltillo and service from El Paso to Chihuahua.

Passenger boardings jump 15.8% to 107,414, but freight slides 6.3% to 53.43 million FTKs. Revenues increase 8% to \$13.4 million.

The workforce is increased by 161.1% in **1995** to 235 to handle inauguration of the services noted above. Two Dornier 328-110s arrive in January; one is put to work on charters and the other opens service between Dallas and Chihuahua City on February 1. On July 10, Dornier 328-110 frequencies commence to Torreon and Saltillo, both via the Texas town of Del Rio.

During the second week in August, a third Dornier begins flying to Aguascalientes and San Luis Potosi. Notice is given to Harrison and Hot Springs, Arkansas, that service to those cities will end when the government ends the EAS subsidy later in the year. Enplanements, nevertheless, fall 20.8% to 85,058.

While on initial climb to altitude from Enid, Oklahoma, on June 11, **1996**, a Metro 23 with a pilot and seven passengers, suffers an uncommanded shutdown of its right engine. A safe emergency landing is made back at the point of origin and no injuries are reported.

Employing a Metro III freighter, the company in July inaugurates a Motorola-subsidized daily cargo route from Chihuahua to Dallas (DFW) that links the electronics manufacturer's Mexican factory with its Global Paging Infrastructure Division's world headquarters at Fossil Creek business park.

By summer, the company is in significant financial difficulty; it owes over \$3 million alone on its Dorniers. Majority interest in the carrier is purchased by Peak International in October. Founder/CEO Philip Trenary resigns and is replaced as interim president by Vice President-Flight Operations Allen McGinness. Peak International's owners

amalgamate Lone Star into their **Aspen Mountain Air**. Services under the new name begin on November 1.

LONG AND HARMON AIRLINES: United States (1934–1935). On February 9, 1934, the Post Office cancels all existing airmail contracts during the so-called “Air Mail Scandal” controversy. The U.S. Army Air Corps is tasked to fly the mail, a military option that fails. At the end of March, the Post Office rebids the contracts and opens the applications a month later.

Among the new applicants are Dallas-based Long and Harmon, which secures the subsidy for AM-15, a multisegment route formerly operated by **American Airways**. Employing a Ford Tri-Motor 4-AT-29 and several single-engine lightplanes, the company begins flying mail and passengers from Fort Worth to Amarillo and Houston and Galveston to Brownsville via Fort Worth. Two larger Ford Tri-Motors, 5-AT-70 and 5-AT-86, are acquired in September.

Successful in **Braniff Airways’** backyard, the new entrant is taken over by the Braniff brothers on January 1, 1935.

LONG ISLAND AIRLINES: United States (1984–1991). **Montauk Caribbean Airlines** is renamed by founder Robert O. King in 1984 and the former **Ocean Reef Airways** subsidiary is sold. Michael Peragine is named president and nonstop daily scheduled services are undertaken linking the company’s base at the East Hampton Airport in New York with Boston and New York (LGA).

In defiance of a town order to halt operations by October 1, LIA continues to fly in and out of East Hampton until the town, contending the commuter has violated its lease, evicts it on November 11. The fleet employed before and after headquarters are moved to Republic Airport at Farmingdale, New York, comprises 2 Piper PA-31-350 Navajo Chieftains and 1 PA-23 Aztec.

King sells out to Peragine in 1985 and flights begin to Washington, D.C. (DCA). In 1986–1987, the fleet is upgraded by the addition of two de Havilland Canada DHC-6-300 Twin Otters, a Fairchild Metro III, and two more Navajo Chieftains. The Metro is withdrawn in 1989.

In 1990, another Twin Otter and another Navajo Chieftain are acquired, together with two Beech Barons. In November, the scheduled routes and La Guardia slots and terminal spaces are purchased by **Southern Jersey Airways**. Long Island continues to operate a charter service from Republic Airport, but recession causes operations to cease in early 1991.

LONGHORN AIRLINES: United States (1965–1967). Longhorn is established in Lafayette, Louisiana, in the fall of 1965 to offer scheduled third-level passenger and cargo services to Houston and New Orleans. With a fleet of Cessna and Piper lightplanes, the company begins daily roundtrip revenue services on October 21.

Operations continue apace in 1966 and in 1967 the company transfers to Fort Worth. After completing its move, it does not operate.

LONGKEN GENERAL AVIATION: 86 Shengping Road, Jiamus, 154002, China; Year Founded 1988. When CAAC (The General Administration of Civil Aviation of China) loosens its grasp on China’s civil aviation in the mid-to-late 1980s, it also opens the way for the establishment of a number of nonscheduled operators. One of these is Longken General Aviation, set up at Jiamus in 1988 to provide executive and small group passenger charters.

Operations continue apace and by 1999–2000 President Hongjun’s fleet comprises a pair of HAMC Y-11s.

LONS FLYING SERVICE. See **ALASKA ISLAND AIR**

LORAIR LTD.: 1000 E. Valencia Rd., Tucson, Arizona, 85706, United States. Phone (520) 294-3136; Fax (520) 889-4496; <http://www.lorair.com>; Code: LOR; Year Founded: 1999. LorAir, Ltd. is established by its CEO, Ron Clark, at Tucson, Arizona, in 1999

to provide passenger charters and contract service flights, mostly on behalf of the casino industry. Revenue flights commence on behalf of the Grand Casino in Gulfport/Biloxi, MS. Wearing “Grand Casino” titles on its bright red tail, the B-737-247 employed is one of the oldest Dash-200s still flying, having been delivered new to **Western Airlines** in 1968.

The carrier garnishes significant adverse publicity on November 25 when it strands a 124-member group of mourners from Texas A & M University, led by its president, Dr. Ray Bowen, in Stockton, California, where they have come to attend the funeral of Jeremy Frampton, one of those killed in the bonfire collapse of November 18. The majority remain stuck in local hotels over another day while the carrier brings in a chartered replacement aircraft.

Enplanements for the year total 54,000. At the beginning of 2000, the company operates three B-737-247s on regularly scheduled sub-service charters on behalf of CAIG Air between Miami and Managua. It also flies weekday charters on behalf of the Fort Lauderdale-based consolidator Swissjet, from Boston to Fort Lauderdale and on to Montego Bay, Aruba, and Curaçao. LorAir also undertakes contract flights for the U.S. Forestry Service and the U.S. Bureau of Prisons (“Conair”).

Swissjet files an application with the DOT on June 25 seeking its own operating authority. If granted, the LorAir contract will be withdrawn. The CAIG sub-service flights end on June 30.

A contract is signed with Vacation Express Charter Service on July 17 under which the carrier will provide holiday tourists flights on its behalf from Charlotte, NC, beginning in December. Before the new arrangement can begin, LorAir declares Chapter XI bankruptcy on October 3.

On June 12, 2001, a letter of intent will be signed with California-based Transtar Holdings under which that concern will take over 51% control and bring the carrier back to fiscal viability.

LOS ANGELES AIR SERVICE: United States (1947–1960). Kerkor “Kirk” Kerkorian and Rose Peculs found LAAS at Los Angeles Airport in 1947 to offer charter cargo services and aircraft leasing throughout the western United States. Incorporated in December 1948 and equipped with a single war-surplus Douglas C-47 (converted to civil DC-3 standard), the small operator inaugurates unscheduled flights to Las Vegas.

A CAB certificate as a Large Irregular is received on July 8, 1949. The assets (two Sikorsky S-43s) of **Amphibian Air Transport Service** are purchased on July 12 and air taxi services from Glendale to Catalina Island are maintained.

Unable to achieve viability with the Catalina service, that portion of the business is closed down on March 22, 1950 and the amphibians are sold to **Reeve Aleutian Airways**. Early in the second quarter, Kerkorian adds a DC-4 that is used when the company obtains a military contract following the outbreak of the Korean War in June. Unlike some others, the company does not make large wartime profits.

During the spring of 1951, Kerkorian purchases a wrecked **British Overseas Airways Corporation (BOAC)** Lockheed L-049 Constellation and an undamaged wing from a crashed **Air France** Constellation; the Anglo-French combine is welded back into a useable aircraft, which is leased to **California Central Airlines**. Following a CAB advisory that it might restrict the business of “non-skeds,” Kerkorian ceases operations and grounds, leases, or sells off his little fleet.

When the anticipated action does not occur, the company, having been reequipped, resumes revenue service in May 1954. Among its aircraft is the Constellation, returned after CCA’s February failure. Flights continue until January 1957, when the carrier is again shut down.

Following a 22-month hiatus in service, LAAS resumes operations in December 1958. On July 18, 1960, to avoid confusion with the helicopter carrier **Los Angeles Airways** and to emphasize a planned expansion in its route system, the company changes its name to **Trans-International Airlines (1)**.

LOS ANGELES AIR TAXI. See **DESERT COMMUTER AIRLINES**

LOS ANGELES AIRWAYS (LAA): United States (1944–1971). A disciple of helicopter designer Igor Sikorsky, **Hawaiian Air Lines** maintenance official Clarence M. Belinn assembles a group of businessmen in Los Angeles in **1944** to create a rotary-wing airline. Los Angeles Airways (LAA) is incorporated on May 11, **1944**. Belinn files two petitions with the CAB, one for the operation of a helicopter airline and the other for a combined air and ground service that would operate in the Los Angeles area until rotary-wing aircraft become available.

Actual start-up will need to wait until after the conclusion of World War II. In **1945**, the CAB rejects the air and ground concept.

In **1946**, LAA is chosen by the U.S. Post Office to implement an experimental helicopter airmail route. A temporary CAB certificate is granted on May 22, **1947** and Belinn and his vice president-operations, Arthur G. Tobey, begin to search for flight equipment and crews, as well as write a handbook of procedures for their new enterprise. All of this is quickly accomplished and on October 1, LAA, employing 3 Sikorsky S-51s, begins the world's first regularly scheduled helicopter mail operation, flying from the roof of the downtown post office building to Los Angeles (LAX).

In 2 months, 21 tons of mail is carried between the roof of the downtown Post Office and Los Angeles (LAX).

The unique airline's route network spreads out from the Los Angeles hub in **1948** to Newport Beach, the San Fernando Valley, and San Bernardino. Mail tonnage for the year reaches 1,250.

On June 11, **1951**, the company receives a CAB permit to open the world's first helicopter passenger service. More than three years will be required to make the transport of customers a reality. Express is added in **1952**.

In July **1953**, the CAB renews the pioneer's certification, while again agreeing to the transport of passengers to, from, and between the area's airports. Meanwhile, in December, the first scheduled helicopter air express services are launched. The enplanement of travelers does not begin until its newly ordered Sikorsky S-55s are ready to enter service on November 22, **1954**. At year's end, records show that mail tonnage carried has risen to 3,050.

Passenger flights in the Los Angeles metropolitan area commence on March 1, **1955** and in **1956** the company is making 72 daily S-55 flights (17 with passengers) between 16 California cities. Among the destinations visited are communities in the San Fernando Valley, the San Gabriel Valley, the coastal area south of Los Angeles via Whittier and Long Beach to Santa Ana, and the original shuttle route between the Post Office and Los Angeles (LAX). The latter will reach an eventual peak of 85 daily roundtrips.

By **1958**, LAA possesses 7 Sikorsky S-55s and on March 15, **1959** the company orders 2 turbine-powered S-62Ls, followed by 5 S-61s on October 22. On June 14, **1960**, an S-55 with nine aboard crashes on take-off at Anaheim; all aboard are hurt. A taxiing S-55 with eight aboard hits a ground service vehicle near Gate 18 on July 17. On December 21, Los Angeles Airways introduces its first S-62L.

An S-55 crash-lands at Whittier, California, on January 6, **1961**; all three aboard are hurt. On March 1, **1962**, the helicopter carrier inaugurates the world's first multiengine, turbine-powered transport helicopter service when it places the 28-passenger Sikorsky S-61L into flight operations.

San Francisco-Oakland Airlines (SFO-1), having petitioned the CAB for a permanent, nonsubsidized operating certificate, argues in its hearings before the CAB in the spring of **1963** that government support is not necessary for a helicopter line to be successful. In its arguments, company officials cite LAA as a prime example of waste and inefficiency. True or not, the charges will lead to an eventual end of Congressional funding for all of the rotary-wing airlines. On July 15, an S-61L with three aboard on a training flight crashes at Los Angeles.

Enplanements for the year total 161,282.

Airline employment in **1964** stands at 194 and the carrier operates 7 helicopters. Groundwork and proving flights are undertaken for instru-

ment operation of the four S-61Ls and Whittier, California, becomes a scheduled destination.

On May 8, an S-61L with 17 aboard crashes while landing at Anaheim, but there are no serious injuries. Instrument Flight Landing (IFL) certification is obtained from the FAA late in the year. Passenger boardings climb 18.5% to 197,891 and revenues are up by 19% to \$3.41 million.

The workforce in **1965** is increased by 12. Over the years, LAA has taken in considerable operating revenue from the mail subsidy acquired at its birth, but on April 11, Congress terminates the support program citing the company's high costs. Still, the CAB grants the company a permanent operating certificate.

Service is expanded as new frequencies are started between Los Angeles (LAX) and West San Fernando Valley, Thousand Oaks, Oxnard, and Ventura. Service to Whittier is reinstated and the Van Nuys heliport is relocated to an upgraded facility. Scheduled passenger instrument flight rules (IFR) flights by the carrier's four Sikorsky S-61Ls are inaugurated with great publicity.

Passenger boardings increase 22% to 245,192 and air express is up by 19%.

A fifth S-61L is received in **1966**. In order to avoid closure of the pioneer, the CAB agrees when **American Airlines** and **United Air Lines** step forward with an offer to acquire coequal control via a \$3.2-million loan arrangement. All mail and express services are suspended and the two begin to operate the carrier as an airport shuttle.

LAA operates nine helicopters in **1967**, its peak year. A total of 396,000 passengers are transported and 40,000 freight ton-miles are flown.

The employee population in **1968** numbers 251. On May 22, the worst accident in U.S. civil helicopter operations to date occurs. A chartered chopper's crew of 2 is returning 21 children and adult passengers to Los Angeles after a day at Disneyland. The chopper develops a runaway rotor that cuts into the craft, causing it to crash at Compton, California, and burn; there are no survivors.

The carrier ceases operations while a review is made. A defective rotor is found in aircraft wreckage and the fleet's other four machines are examined and receive replacements. Service resumes on August 20. This fatal Sikorsky crash brings much adverse reaction and a downturn in traffic and profits. Two de Havilland Canada DHC-6-100 Twin Otters are now leased and on December 22 an S-61L is involved in an accident at Paramount, California.

Passenger boardings for the year decline to 327,879 and revenues are \$3.84 million.

In **1969**, as potential customers not only turn cautious but switch to fixed-wing air taxis, LAA reacts by acquiring four more Twin Otters, in addition to a scheduled S-61L. When these Twin Otters begin to arrive, they join the earlier units in flying from Los Angeles (LAX) to Ontario and San Bernardino. The company's pilots, members of the Air Line Pilots Association (ALPA), now strike for higher pay on October 20, crippling LAA for six months.

The job action, finally settled by mutual agreement on April 24, **1970**, proves fatal as the company, unable to recoup financially, is forced out of business in October. Its assets are purchased by **Golden West Airlines** in **1971**.

LOS ANGELES–SAN DIEGO AIR LINE (RYAN AIRLINES): United States (1925–1927). Late in 1924, California aircraft engineer Claude Ryan obtains six war surplus Lincoln Standard J biplane trainers, which he converts into five-seat airliners, equipping each with the then-new Hispano Suiza 150-hp engine. Although Congress passes the Kelly Air Mail Act in February **1925** that provides subsidies to be administered by the U.S. Post Office, that executive agency does not speedily offer awards. Desirous of putting his Standards to work, Ryan elects to open an air passenger transport service on his own, without government sponsorship.

To that end, he begins a scheduled San Diego to Los Angeles frequency on March 1. It will enter the record books as the first regularly

scheduled passenger operation flown year-round over the U.S. mainland (this fine point separates it from **Pacific Marine Airways'** over-water service started in **1921–1922**). Tariff for the hour-and-a-half, 120-mile, one-way service is \$17.50 (\$26.50 roundtrip), with ground fare to the airport included.

LA-SDAL is very popular with customers during its inaugural year—so much so that Claude Ryan purchases Donald Douglas' first aircraft, *The Cloudster*, the first flying machine able to lift a load exceeding its own weight. Designed with David Davis as a transcontinental airliner in the back of a Los Angeles barbershop and first flown on February 24, 1921, the large biplane is employed over the commercial route as well as in the transport of prospective real estate purchasers to San Clemente Island. Late in the year, the aircraft's propeller and upper wings are damaged in a landing accident. During repairs, Douglas converts it into an 11-seat cabin airliner for use in the new season.

During **1926**, the carrier transports 5,600 passengers between its two gateways. *The Cloudster* is occasionally employed on charter services, the last of which brings its end. In December, the aircraft is rented to fly a cargo of beer from Mexicali to American tourists in Tijuana who are avoiding U.S. Prohibition laws. During this airlift, the plane, piloted by J. J. Harrigan, is diverted to fly a wealthy Chinese businessman to Ensenada where, arriving after dusk, the plane is crashed while attempting a beach landing.

Having proven the value of his air transport ideas, Ryan, in **1927**, quits the airline business to concentrate on building aircraft. Among his creations are numerous mailplanes, including one upgraded model that will enter the history books as *The Spirit of St. Louis*.

LOT POLISH AIRLINES (POLSKIE LINIE LOTNICZE): 17 Stycznia Str. 3900906, Warsaw, PL-00-908, Poland; Phone 48 (2) 606-8215; Fax 48 (2) 896-0909; <http://www.lot.com>; Code LO; Year Founded 1929. On January 1, **1929**, the government of Poland simultaneously nationalizes domestic air transport services and creates the state airline LOT Polish Airlines by merging **Aerolot, S.A.** and **Aero T.Z., S.A.** A special design competition to design a company logo is won by Tadeusz Gronowski, who offers a stylized flying crane. Domestic service is undertaken, starting the next day, with the Junkers F-13s formerly owned by **Aerolot, S.A.** Later in the year, additional F-13s and several single-engine Fokker F-VIIas are acquired, allowing the route network to stretch from Warsaw to Danzig, Lvov, Krakow, Poznan, and Vienna via Krakow.

During the first half of **1930**, the company orders 10 Fokker F-VII/3ms. In November, the Podlaska Wytwornia Samolotow (PWS) builders of Warsaw deliver the first of two Model 20Ts, which begin flying from the national capital to Bucharest via Lvov and Czerniowce. Passenger boardings for the year approach 12,000.

In March **1931**, the carrier becomes a full member of the International Air Traffic Association, forerunner of the present IATA. The first four Fokker F-VIIb/3ms are received in late spring and beginning on June 27 are employed to inaugurate services from Danzig to Salonica via Warsaw, Bucharest, and Sophia. Also in June, the Lublin R-XI, built at Lublin by Plage & T. Laskiewicz, is delivered for testing. The company's fleet now comprises the Lublin, 13 F-13s, 6 Fokker F-VIIas, and the 4 F-VIIb/3ms.

Service is started from Warsaw to Katowice and Bydgoszcz. Flights between Warsaw and Bucharest are launched in early **1932** and are later extended to Sofia and Saloniki via Lvov, Czerniowce, and Bucharest, while in the north, Warsaw is connected to Vilnius, Riga, and Tallinn. In April, the PWS 24 prototype is tested and orders are placed for five production models.

On May 3, **1933**, the five Polish-designed PWS-24s are placed in service on the Warsaw–Poznan route. Later in the year, the PZL-44 *Wicher* is tested. LOT's foreign network continues to grow in **1934**, with Berlin added as a destination. Orders are placed for two Douglas DC-2s, to be powered by British-made Bristol Pegasus VI engines.

Seven upgraded PWS 24bis are placed in service in the spring of **1935**; unsatisfactory, they will be withdrawn in a year. Following vari-

ous demonstrations in the U.S., the two DC-2s arrive at Amsterdam from New York by ship in July and August. Reassembled by technicians from Fokker, Douglas's European sales agent, they enter service on the route from Warsaw to Berlin via Posen on September 5, cutting its scheduled time from three plus hours to two. Orders are placed for Lockheed Model 10A Electras, the first of which arrives crated from the United States on November 22.

A second Electra arrives on January 4, **1936** and with Bristol Pegasus engines, two Douglas DC-2Bs are acquired during the year. A bilateral air agreement is signed between Poland and Finland in midyear, with CEO Wacław Makowski signing for Poland.

One of the new Douglas transports is employed on October 3 to extend the Salonika leg from Warsaw down to Athens. The premier Electra crashes at Tomaszow on December 28.

The DC-2 *Taurus* is sold to LOT in February **1937** by **Deutsche Lufthansa, A.G. (DLH)**. On April 29, service is pushed from Helsinki and Warsaw to Beirut, Lebanon, and to Lydda, Palestine, via Lvov, Czerniowce, Bucharest, Sofia, Thessaloniki, Athens, and the island of Rhodes. At 4,300 km., the route is the longest meridional route opened in Interwar Europe. Whereas the conventional train and ship service over this route requires ten days, the flights are made in just 34 hours.

Two more Lockheed Model 10As arrive on May 17 and 24, respectively, but another Electra is destroyed in a crash on November 11, this time at Warsaw. On November 28, the former German airliner *Taurus* crashes in the Rhodopa Mountains of Bulgaria (six dead).

During the year, orders are placed for 10 Lockheed Model 14-H Super Electras.

As part of preparations for the hoped-for start of transatlantic services in 2 years, a 25,600-mile test and delivery flight is made to Warsaw from Burbank in May **1938** by General Manager Makowski with the first of 10 new Lockheed Model 14H Super Electras. The 85-hour aerial voyage is routed via Mazatlan, Mexico City, Panama, Lima, Santiago de Chile, Buenos Aires, Rio de Janeiro, Natal, Dakar, Casablanca, Tunis, and Rome.

The newsworthy event marks the first transatlantic delivery flight of an airliner from a manufacturer to a customer and LOT's first delivery of mail from South America. A total of eight Super Electras enter service during the spring and summer, with several on the service to Romania. Two are lost in Bucharest crashes; one each on July 22 and August 13.

Airline employment at the beginning of **1939** stands at 694 and LOT operates 26 airplanes to 25 cities.

In January, two new Lockheed L-14 Super Electras are placed in service, joining a fleet modernized over the decade and now comprising 3 Junkers Ju-52/3ms, 3 Douglas DC-2s, and 12 Lockheed L-10/14 Electras and Super Electras. Four more of the latter are acquired between March 20 and May 2. Service is started to Helsinki and to Copenhagen via Gdynia.

As the summer of disaster approaches, the LOT network covers Western Europe with connections to 21 cities in 13 nations. The company now serves six international multistop flight connections, with one of the most important being that from Helsinki to Budapest via Tallin, Riga, Kovno, Vilnius, Warsaw, and Krakow.

Following the announcement of the Russo-German nonaggression pact on August 23, the company begins to transfer units of its fleet to Great Britain, including six of its Super Electras that will be operated by **British Airways, Ltd. (1)**. Prior to the outbreak of war on September 1, approximately 65,000 passengers and 1,400 tons of cargo have been carried on the year.

On the day World War II begins, Luftwaffe Stukas destroy an L-10A Electra on the ground at Wiszenka. At the same time, Germany's Romanian ally captures two Super Electras, one after crash landing at Bucharest, while Estonia takes over a third, which will crash at Riga. One of the DC-2s is lost on September 5, while the other is taken over by the Romanian government on September 10. In southeast Poland, one L-10A is damaged at Horondenka on September 12 and abandoned. When Soviet Red Army

forces roll into the nation five days later, another is captured at Kolomyja. Both are turned over to **Aeroflot Soviet Airlines**.

LOT now ceases operations for five years. Of the 26 aircraft on hand on September 1, only 5 are lost to enemy action; although taken over by their recipients, the remainder escape destruction. All ground facilities and other property are destroyed.

With Poland still a combat zone in **1944**, certain LOT activities are resumed under auspices of the Polish Committee of National Liberation. On August 24, Duda Roman becomes the first passenger of the reconstituted airline, which begins conducting courier, liaison, and passenger flights with rebuilt ex-Luftwaffe Junkers Ju-52/3ms from Lublin to Bialystok, Rzeszow, Jaroslaw, and Przemyśl.

A Polish Inspectorate of Civil Aviation is formed in February **1945**. On March 6, a resolution of the Council of Ministers recreates LOT as a state enterprise. The decree is published as Item #1 in the *Polish Monitor* (March 16, no. 1).

Destroyed hangars and buildings at Warsaw's Okęcie Airport are reconstructed. Twenty Li-2s are acquired from the Soviets, allowing regular domestic services to be resumed to nine major Polish cities on March 30: Warsaw, Lodz, Krakow, Rzeszow, Lublin, Poznan, Katowice, Olsztyn, and Bydgoszcz. Flights to Gdansk (as Danzig is now renamed) begin on May 14, followed by a service from Warsaw to Wrocław (formerly Breslau) that starts on June 18.

London service begins toward the end of the year. Poland thus becomes the first East European country to reestablish its air transport industry.

Warsaw-Berlin services are restarted in May **1946** and orders are placed for nine new Douglas DC-3s. Ju-52/3m roundtrip service from Warsaw to Paris via East Germany begins on July 4. Five days later, roundtrips are inaugurated from Warsaw to Stockholm. As the result of the new August 7 bilateral air agreement between Poland and Czechoslovakia, LOT is able to inaugurate direct air services from Warsaw to Prague on August 27.

Enplanements during the 12 months total 54,489 and 2,537 FTKs are operated.

In **1947** routes are also initiated to Paris and Stockholm. The fleet now includes 5 Polikarpov Po-2s, 25 Li-2s, and 9 DC-3s.

Services start to Bucharest, Budapest, Belgrade, Copenhagen, and Brussels during **1948-1949**, with several routes, such as Warsaw to Belgrade, Paris, and Budapest flown by five French-made Sud-Est SE-161 Languedocs, the first Western airliners sold to a Communist nation in the postwar era. Service to Stockholm is now withdrawn.

A Lisunov Li-2T is lost near Popow on May 26, 1948. There is no information on passenger or crew loss.

During April of the latter year, five Ilyushin Il-12Bs are received from Russia and will form the backbone of the Polish fleet for a decade. On April 29, an Li-2 en route from Gdansk to Lodz with 16 passengers is seized by 4 of the passengers and diverted to Stockholm.

On August 25, the company is able to claim a perfect four-year safety record. On December 16, 16 of the 18 people aboard an Il-18B en route from Warsaw to Gdynia participate in its takeover. The Ilyushin is flown to Bornholm Island, Denmark, where the pirates receive political asylum. The plane is claimed by and returned to the Polish Aviation Ministry two days later.

In **1950**, LOT is a signatory to the Berlin Agreement that links the airlines of the Warsaw Pact countries into a confederation; emphasis is placed on service to domestic locations and Socialist capitals during the next six years.

An Li-2P with 16 passengers is lost at Lodz on November 15; there are no survivors.

The fleet in **1951** includes 24 Li-2s, 6 C-47s, and 4 Il-12Bs.

Customer bookings reach 113,176, while 5,187 FTKs are operated.

Although services will be maintained in mid-decade, losses continue to occur. An Li-2T is lost near Siwina on May 19, **1952**; there is no information on casualties. An Ilyushin Il-12B is lost while landing at Warsaw on July 18.

Under unclear circumstances, a DC-3 is lost at Katowice on March 13, **1953**. An Li-2P is lost under unclear circumstances at Limanova on March 19, **1954**.

Thrice-weekly services to Moscow begin on April 4, **1955**. Orders are placed for 13 Il-14s and flights to Vienna commence.

An Li-2P is lost under unclear circumstances at Katowice on April 14. The one-millionth passenger (cumulative) is transported.

The first Il-14 is registered on June 20, **1956**. The workforce stands at 1,424 and enplanements are 199,561.

In **1957**, flights begin to Athens and during the summer are extended to Tirane via Belgrade.

En route from Warsaw to Moscow on June 14, Flight 232, an Il-14P with five crew and eight passengers is lost near Vnukovo Airport, Moscow (nine dead).

Late in the year, three Convair CV-240s are received from the U.S.

Enplanements during the 12 months total 224,276.

In early **1958**, the carrier begins flying to London and Zurich. While on an April 11 training flight over Warsaw, a CV-240 with four crew loses a propeller in flight; although the aircraft must be written off following the subsequent crash landing, there are no fatalities.

Ordered earlier from the Flugzeugwerke Dresden, the VEB-152 II four-engine jetliner makes its maiden flight on December 4.

Flights to Rome begin in **1959** and in cooperation with **KLM (Royal Dutch Airlines, N.V.)** to Amsterdam. The last Il-12Bs are withdrawn.

A Lisunov Li-2P is lost near Tcz, Poland, on August 25, **1960**; there are no other details.

A total of 175,700 passengers are flown on the year as the company's 40 aircraft visit 24 cities.

The workforce in **1961** totals 1,571. On May 24, the first of eight new Il-18 turboprops enter service on a Warsaw-Moscow route.

Among the 201,600 customers transported on the year is the two-millionth traveler (cumulative). A total of 8,350 FTKs are also operated.

Three more turboprops, British-made Vickers Viscount 804s, join the fleet in **1962**. One of the new Viscount 804s with 5 crew and 28 passengers, crashes while on final approach to Warsaw from London on December 19; there are no survivors.

Bookings for the year increase to 245,700.

The first postwar service to a destination outside of Europe is opened in **1963** to Cairo.

An Li-2 with 3 crew and 12 passengers is destroyed on December 16 as the result of a bad landing at Warsaw; there are no fatalities.

Passenger bookings are 237,900.

In **1964**, the routes to Stockholm and Helsinki are reopened and in **1965** new routes are introduced to Milan—the airliner inaugurating Warsaw-Milan service on May 1 lands at the wrong Italian airfield—and Frankfurt.

While on a positioning flight, a Vickers Viscount 804 with four crew crashes near St. Truiden, Belgium, on August 20; there are no survivors.

The Frankfurt service is opened by the fourth new Il-18 on September 7.

Enplanements are 368,200.

Airline employment at the beginning of **1966** stands at 2,756. A further step in carrier development comes when a new stop at Beirut represents initial deployment into the Middle East. Flights to Baghdad, Beirut, Benghazi, and Damascus follow. The first 3 of 10 Antonov An-24s ordered for domestic flights are received in March, allowing the inauguration of Warsaw-Wrocław return service on April 20.

Passenger boardings are 493,700 and 35,544 FTKs are operated.

The **1967** fleet includes 8 Il-18s, 11 An-24s, and 10 Il-14s. Orders are outstanding for 6 Tupolev Tu-134s and 5 more An-24s.

The airline joins with **Aer Lingus-Irish International Airlines** on January 22 to announce the initiation of weekly roundtrip services from Poland to North America; the Irish line will fly the transatlantic leg and connect with LOT at Shannon. On May 1, the carrier joins with **Trans World Airlines (TWA)** in opening a one-stop service from New York to Warsaw.

Customer bookings jump to 696,900.

With the support of **Aeroflot Soviet Airlines**, Warsaw is linked to Leningrad and Kiev in **1968** while the airline, simultaneously, introduces its first jetliners, the Tu-134s. The fleet now comprises 34 aircraft and new routes are opened to Kiev. Enplanements are 773,800.

On final approach to Warsaw on January 24, **1969**, Flight 149, an An-24V with 4 crew and 44 passengers, strikes trees, a pair of 30,000-volt power lines, and electric railway cables, before hitting the ground. The aircraft skids to a halt on a road; although it is damaged beyond repair, there are no fatalities.

Coming in from Warsaw, an An-24V with 5 crew and 48 passengers crashes into Polica Mountain, near Krakow, on April 2; there are no survivors.

Also in April, service to Istanbul is introduced. The opening of a modern international airport at Warsaw's Okęcie Airport now greatly improves LOT's passenger capabilities.

En route from Warsaw to East Berlin on October 19, an Il-18 with 74 passengers is seized by two East Germans, who force it to land at Tegel Airport in the French sector of West Berlin, seeking political asylum. During the hijacking, the craft is buzzed by Soviet MIG fighters, which also buzz the airport in an unsuccessful effort to keep the plane from landing. The plane will be allowed to return and the pirates will be tried; each will receive a two-year prison term.

Armed with toy pistols and a fake bomb, two skyjackers take over an An-26 with 20 passengers en route from Warsaw to Bratislava on November 20 and divert it to Austria. As in the October incident, the aircraft is allowed to return and the perpetrators are put on trial. They will receive prison sentences of 24 and 27 months, respectively.

The fleet grows to 38 aircraft and enplanements for the year are 856,200.

In May **1970**, a LOT Tu-134 touches down for the first time at Madrid, launching services from Warsaw via Geneva.

En route from Stettin to Gdansk on June 5, an An-24 with 23 passengers is hijacked to Copenhagen by a man holding a hand grenade; in Denmark, the man seeks political asylum. Instead of freedom, he will be tried and sentenced to a Danish prison for 3 1/2 years.

The airline will now be subjected to a string of attempted and successful skyjackings.

On June 10, the crew of an airliner foils an armed hijacking attempt by two men during a Katowice-Warsaw flight; authorities later report the pirates had planned a diversion to Vienna. The would-be pirates will be tried and sentenced to jail for four and five years, respectively.

Wanted for rape and blackmail, a criminal armed with a grenade seizes an An-24 on an August 7 domestic service and orders it to divert to West Germany. The pilot covertly manages to land in East Berlin, where the hijacker is captured. Tried, he will be sentenced to separate prison terms for air piracy, blackmail, and rape.

Three men and two women armed with grenades take over an Il-14 domestic flight between Gdansk and Warsaw on August 19 and force it to fly to Bornhold, Denmark. All are granted political asylum.

On August 26, an attempted hijacking to Vienna of an Il-14 on a Katowice-Warsaw flight with 27 aboard is foiled when the bomb carried by the hijacker explodes prematurely. Although the pirate and 10 others are hurt, the pilot is able to land safely. When he recovers from his wounds, the pirate will be tried and sentenced to 25 years in prison.

LOT acts as host to the director general of IATA, Knut Hammarström, during his official visit to Poland. Passenger bookings are 958,600.

At the beginning of **1971**, the carrier orders three Ilyushin Il-62s and opens an office in Montreal.

Bookings reported at year's end total 1,085,700, the first time that the one million-mark is surpassed. A total of 71,734 FTKs are also operated.

In January **1972**, service is begun to Hamburg. On March 16, the first Il-62 is delivered and is christened *Nicholas Copernicus*; the second arrives on April 27 and is named *Tadeusz Kosciuszko*. Both Russian-made jetliners begin service on May 15 over routes from Warsaw to Moscow,

London, Paris, and Rome. A series of charter flights are undertaken in May and June from Warsaw to such destinations as Chicago, New York, Boston, Toronto, Montreal, and to Tashkent, Calcutta, and Hanoi.

Offices are opened in New York and Amsterdam and regularly scheduled service begins to Baghdad. On December 13, President Nixon approves a permit for LOT to begin flights between Poland and New York, thrice weekly, until October 1976.

Passenger traffic rises to 1,342,900.

The employee population in **1973** is 4,500. Transatlantic service is opened on April 16, Warsaw-New York twice weekly. A new route is opened to Damascus the same month. Another Il-62 is received. On June 15th, American Harvey Reisman becomes the 10 millionth passenger carried since 1945.

Bookings advance a staggering 116% to 1,563,700 and cargo traffic is up by just 11 percentage points less.

The New York frequency is increased to three-per-week in April **1974**; simultaneously, two additional Il-62s, the *Kazimierz Pulaski* and the *Henryk Sienkiewicz*, are placed in service. On April 26, Cologne becomes the third West German stop and on May 5, routes are initiated to Tunis and Algiers.

In July, joint services commence with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** over a route from Warsaw to Madrid. Destinations now total 47 international and 10 domestic. Flights to the Leipzig Trade Fair begin in September.

Boardings decline 26% to 1,162,000, but cargo is up by 20%.

Airline employment in **1975** stands at 4,739. Early in the year, the airline and Polish Ministry of Communication introduce overnight airmail service, called POSTLOT. Routes are stretched to Benghazi (April 4) and Lyon (April 21). The corporate identity is changed and comes to feature a new logo, new aircraft livery, and new uniforms for all. In September, the carrier goes on line with the reservations system LOTAR.

On September 26, a LOT Il-62 becomes the first Polish airliner to cross the equator since World War II when it flies a charter group of Dalmor Shipping Line employees from Gdansk to Lima, Peru. In October, Dalmor sends fishermen by LOT from Gdansk to Tijuana, Mexico. In November, LOT opens a Tokyo office and hosts a conference of Warsaw Pact ("Berlin Agreement") airlines.

Systemwide enplanements drop to 1,596,000, but freight traffic climbs a healthy 39.4%.

The number of employees is increased by 4.3% in **1976** to 4,943. Beginning in April, LOT undertakes several charters to Montreal, including a number for the Olympic Games. The domestic network is extended with the opening of services to Slupsk on May 3. A second transatlantic service is started on June 4 from Warsaw to Montreal.

En route from Copenhagen to Warsaw on November 4, a Tu-134 is taken over by a lone hijacker, who orders the Tupolev diverted to Vienna, where he surrenders and seeks political asylum. The man will be tried and sentenced to four years in prison.

Also in November, the carrier engages **Aeroflot Soviet Airlines** in a "friendly" competition concerning customer service satisfaction. Late in the year, new gates are opened at Warsaw and the carrier begins international services from Gdansk, with flights to Berlin, Budapest, Burgas, and Varna.

Passenger traffic declines 2.3% as 1,560,773 passengers are carried. Freight, on the other hand, grows by 18% to 30.36 million FTKs.

Preparing to depart from Krakow on April 24, **1977**, on a charter to Nuremberg, West Germany, a Tu-134 is subjected to an attempted skyjacking by a lone assailant. Before the aircraft can depart, the would-be pirate is overpowered by police.

En route from Warsaw to Beirut via Varna on May 13, an An-12BP freighter with nine crew, strikes power lines and trees and crashes eight km. S of its destination; there are no survivors.

During the summer, the number of weekly flights is increased from 418 to 603. An office is opened in Sydney, Australia. A new livery is introduced domestically and on June 24, Zielona Gora is added to the domestic network.

LOT begins a new Far Eastern route on September 14, flying twice weekly from Warsaw to Bangkok via Baghdad, Dubai, and Bombay. The crew of an An-24 with 50 passengers overpowers a lone assailant who has taken over a domestic service from Katowice to Warsaw on October 18.

In February 1978, Capt. Damian Zuchowski completes 10 million kilometers in the air, an airline record. Director General W. Wilanowski oversees a workforce of 5,211 and the operation of a fleet comprising 7 Ilyushin Il-62s, 9 Il-18s, 5 Tupolev Tu-134s, 5 Tu-134As, and 16 Antonov An-24s.

Scheduled domestic passenger and cargo services now link Warsaw with Gdansk, Slupsk, Bydgoszcz, Koszalin, Szczecin, Poznan, Wroclaw, Katowice, Krakow, and Rzeszow. International markets outside of Europe, Africa, and the Middle East include Bombay and Bangkok in Asia and New York and Montreal in North America. Charter flights reach out to Manila, Vancouver, Buenos Aires, and Rio de Janeiro.

In June, the new livery of 1977 is painted on all Tu-134s and Il-62s and introduced throughout the remainder of the system.

On August 30, using an unloaded starter's pistol, Detlef Alexander Tiede hijacks a Tu-134 with 70 other passengers en route from Gdansk to East Berlin to Templehof AFB, West Berlin, where he and 7 East German passengers ask for political asylum. Put on trial, Tiede will receive an eight-month jail sentence.

In November, Kuwait is added as a stop. On December 5th, LOT carries its one-millionth international passenger in a single year.

The workforce in 1979 totals 5,324. The company marks its fiftieth anniversary with a yearlong celebration. During the first quarter, a joint-venture agreement is signed with Air France under which the two companies agree to timetable coordination and revenue-sharing on their routes from Poland to France.

Service is started to Luxembourg on April 6. On May 1, daily nonstop flights are introduced from New York during the summer season, with the frequency increased to five per week during the year's remainder; the Montreal connection is increased to two per week.

LOT's first English-language in-flight magazine, *Kaleidoscope*, is introduced in May and in June, Pope John Paul II completes his Polish visit and departs the country aboard a LOT Tu-134A. It is the first of six times that he will fly with the airline. July sees the 20-millionth (cumulative) postwar passenger boarding.

Overall bookings for the year total 1,997,000 as the company's 46 aircraft visit 56 cities. Freight traffic is up by 8.5% to 257.8 million FTKs. The number of employees is increased another 7.2% in 1980 to 5,891.

A Tu-134 overruns the runway while landing at Warsaw on January 23 and catches fire; all aboard are safely evacuated before the aircraft is destroyed.

On final approach to Warsaw after a flight from New York (JFK) on March 14, an Il-62 with 10 crew and 77 passengers experiences last-minute engine problems, overshoots the runway, crashes, and explodes; there are no survivors. Among the victims are 22 members of the U.S. amateur boxing team.

On May 19, a direct route is opened between Warsaw and Bombay. Two Il-62Ms are received.

Charter flights are undertaken to Chicago during the summer while in June nonstop flights are launched to Manchester, England.

On a December 4 domestic flight from Zielona Gora to Warsaw, an An-24 with 25 aboard is commandeered by Andrzej Perka, who orders it flown to West Berlin. At Templehof Airport, Perka asks for political asylum. Instead, he will be tried and sent to prison for four years.

Passenger enplanements this year decline 8.4% to 1,826,000.

The employee population climbs again in 1981, rising by 3.7% to 6,109. The fleet overseen by Director General Jozef Kowalski includes 4 Il-62s, 2 Il-62Ms, 9 Il-18s, 7 Tu-134As, 4 Tu-134s, and 16 An-24s.

A January 10 escape to the West goes awry for four pirates who take over an An-24 flying between Katowice and Warsaw. The four are nabbed at the Polish capital by police as they attempt to move to another aircraft that can fly them to Germany.

An An-24B with 5 crew and 47 passengers crashes near Redzikowo on March 26 after losing a propeller (1 dead).

Employees threaten to strike on July 9 over the government's rejection of Bronislaw Klimaceswski as the company's new director general. Strike talks will continue throughout the month, but a job action will be narrowly averted on July 23 when Klimaceswski takes office.

Meanwhile, on July 21, a lone assailant, claiming to have a hand grenade (which is really a fake), takes over an An-24 on a domestic service and causes it to be diverted to West Berlin. There, police take him in hand; he will be tried and sentenced to a prison term of three years.

August and September will be remembered as the months of skyjackings. On August 5, an An-24 with 49 passengers is taken over during a service from Katowice to Gdansk; when the plane arrives at its destination, the pirate surrenders.

While on an August 11 domestic flight, another An-24 is taken over by a "dissatisfied customer" who demands to be flown to West Germany. The pilot is able to trick the pirate into believing that the aircraft has arrived in the West when it arrives at its destination. The man is taken in hand by Polish police when he reaches the bottom of the air stairs.

En route from Wroclaw to Warsaw with 50 passengers and a crew of 5 on August 22, another An-24 is hijacked to West Berlin, where the pirate surrenders to authorities. Tried, the freedom-seeker will receive a prison term of 5 1/2 years.

On September 18, 12 Poles, aged 17 to 24, hijack an An-24 operating between Katowice and Warsaw. Seeking asylum, they order it to fly to the U.S. air base at West Berlin. The 8 pirates over age 18 are tried and sentenced to prison for terms of 1 to 4 years.

While en route from Warsaw to Koszalin on September 22, an An-24 is subjected to a skyjacking attempt by three men and a woman demanding to be flown to West Germany. Instead, the pilot returns to Warsaw, where police capture the pirates.

Seven days later, on September 29, a lone assailant attempts to take over an An-24 at Warsaw as it is preparing for departure on a domestic service. Threatened into putting down his razor blade by other passengers, the pirate surrenders to police who have boarded the aircraft.

The government issues a declaration of martial law on December 13 and closes its airspace to western overflights two days later. Meanwhile, President Ronald Reagan suspends Poland's civil aviation privileges in the U.S. on December 14. On December 17, Warsaw television reports that eight LOT aircraft have been able to fly during the day, the first departures permitted since the imposition of martial law.

Enplanements for the year total 1,711,000, a drop of 6.4%, while cargo falls by 21.5% to 23.62 million FTKs.

Beginning on January 11, 1982, the carrier begins flying a reduced, but regular, schedule of flights to certain foreign capitals, with three to four frequencies per day. Following the lead of Austria and France, the U.K., as of January 30, refuses LOT landing privileges at London.

On April 30, a LOT pilot diverts a domestic An-24 flight from Wroclaw to Warsaw, with 52 aboard, to West Berlin, bringing his wife, two daughters, and several other relatives along as passengers. There, asylum is sought for all and although the copilot, his relatives, and a 19-year-old man elect to remain in the West, 14 others return to Poland.

En route from Katowice to Warsaw on June 9, an An-24 is subjected to an attempted takeover by two armed men; when the turboprop lands at its destination, the two pirates are captured by police.

Throughout the remainder of the year, political turmoil severely impacts upon the carrier's traffic, frequencies, and personnel activities. The surge of hijackings continues.

While en route from Warsaw to Budapest on August 25, an Il-18 with 55 passengers is taken over by two men who order it diverted to West Berlin. Once the plane lets down, the pirates are taken in hand by German police; the Il-18, its crew, and other passengers are released to return to Poland. The perpetrators will be tried and sentenced to 4 1/2 years in prison.

One of three company security guards aboard an An-24 with 38 passengers en route from Wroclaw to Warsaw on November 22, takes over

the aircraft and orders it flown to West Germany. Although hurt in a gun battle that erupts with the other guards after the plane lands, he is able to jump out and run into American hands.

A total of only 575,120 passengers are flown this year.

The workforce is increased by 3.5% to 5,559 in **1983** as the calming political unrest leads to traffic recovery. Still, not all are happy. Ryszard Kuzminski, a LOT mechanic, flees to Canada for asylum on March 6 by hiding in the baggage compartment of an Il-62 for 14 hours.

Although freight is off 1.9% to 14.34 million FTKs, boardings skyrocket 60.5% to 1,455,524.

The workforce is increased to 5,643 in **1984** and the fleet now features 7 Il-62Ms. Passenger boardings climb 27.3% to 1,852,000, as freight advances 5.4% to 10.53 million FTKs.

Eight Tu-154Ms are purchased in **1985**. Even though passenger bookings are off 0.56% for the year to 1,587,000, freight is up 29.29%.

The payroll grows 2.6% in **1986** to 6,163 as the company decides to retire all of its Il-18s and Tu-134s.

During the spring, the in-house tour operator Air Tours Poland is established. It will offer inclusive-tour services for foreign travelers wishing to see the sights of Warsaw (particularly the Old Town), the palaces and castles of Krakow, the religious significance of Czestochowa, and the shipyards of Gdansk, home of the revolutionary movement. The company coordinates every aspect of travel to and from Poland, including currency exchange, hotel reservations, and tour guides.

En route from Wroclaw to Warsaw on August 28, a Tu-134 with 56 passengers is captured by a lone assailant, who holds a straight razor to the throat of a female flight attendant. He will be captured by security police, tried, and sent to prison for five years.

Passenger boardings are up by 1.7%, to 1,819,896. Cargo continues to grow by 21.8% to 19.19 million FTKs.

The workforce is reduced by 2.5% in **1987** to 6,006. Weekly Il-62M return service from Warsaw to Beijing via Moscow is inaugurated on March 25. A new downtown Warsaw air terminal begins construction as service is also inaugurated to Larnaca and Kiev.

Less than an hour after takeoff from Warsaw on May 9 on a service to New York (JFK), Flight 5055, a chartered Il-62M with 11 crew and 172 passengers, suffers the loss of its No. 1 and No. 2 engines. The aircraft attempts to return to its point of origin, but crashes into a forest 6 km. from the end of the runway and catches fire. There are no survivors from Poland's worst-ever commercial air accident.

Bound for Iraq with 110 people aboard on May 12, a Tu-154M makes a safe emergency landing at Warsaw after the pilot finds a malfunction in the plane's hydraulics. A company Il-62M transports Pope John Paul II from Krakow to Rome following his third Polish visit.

While flying between Warsaw and Krakow on September 6, an An-24, with 30 passengers, is hijacked by a lone assailant, who demands to be flown to West Germany. The perpetrator is quickly overcome by the plane's other passengers.

Customer bookings rise 2.1% to 1,858,418, but freight slides 5.3% to 13.19 million FTKs.

The fleet in **1988** includes 8 Il-62Ms, 1 leased DC-8, 7 Tu-134As, 4 Tu-154Ms, 2 leased Tu-154Bs, 12 An-24s, and 10 Il-18s. Late in the year, the airline approaches a group of Western banks, led by Citicorp, to raise a \$160-million, 12-year loan; 15 will subscribe \$220 million.

Orders are outstanding for 11 Tu-154Ms and in November orders are placed for three B-767s, two Dash-200s, and a Dash-300.

While en route from Warsaw to Rzeszow on November 2, Flight 703, an An-24B with 4 crew and 25 passengers suffers engine failure and attempts to return to Warsaw to make an emergency landing. The plane goes out of control and crash-lands in a field at a point 170 mi. SE of the city, rolls into a ditch, and catches fire (one dead).

Passenger boardings jump 8.6% to 2,017,781 and freight swells 19% to 15.69 million FTKs.

The payroll grows 1.4% in **1989** to 6,089. The unduplicated route mileage is 78,750, as service is provided to 44 cities in 36 countries. LOT becomes the first East Bloc airline to fly the B-767 wide-body

when the two Dash 25DERs, having arrived in April and May, are christened *Gnieszno* and *Kracow* and enter service in late spring.

During the summer, the four Il-62s are withdrawn from North Atlantic service as the 2 new Boeings offer 12 nonstop roundtrip flights per week to the U.S., including 6 to New York, 4 to Chicago, and 2 to Montreal. The Il-62s are assigned to other long-haul routes and charter work and in September the carrier begins to offer its first-ever supersaver and youth fare programs.

In October, IATA convenes its annual meeting in the new 42-story hotel, air terminal, and convention center built by the airline in Warsaw as its headquarters and reservations heart. The facility, Poland's first joint stock venture with foreign investors, has Marriott and Austria's Ilbau as its other partners.

Customer bookings surge 14.2% to 2,305,118 (the largest total in company history to date) while cargo skyrockets 94.8% to 30.58 million FTKs.

Company employment is increased by 15.6% in **1990** to 7,296. In February, nonstop service is inaugurated from Gdansk and Krakow to Moscow and a weekly roundtrip is begun from Warsaw to Sharjah, UAE. Weekly nonstop roundtrips commence on April 6 from Warsaw to Newark. Later in the month, a maintenance agreement is signed with **SAS (Scandinavian Airline System)** covering technical support of two new Boeing 737-59Ds leased from the Stockholm-based major.

In May, frequencies between Warsaw and New York (JFK) are increased from four to six; a B-767-35DER, given the name *Warsaw*, arrives at Warsaw's Okecie Airport for service in June, under charter from **Air New Zealand, Ltd.**

The new wide-body is employed to launch nonstop roundtrips to Los Angeles, Vancouver, Toronto, Bangkok, and Singapore. The company suffers a passenger traffic decline not only after Iraq's August invasion of Kuwait, but throughout the year as Communism fails in Eastern Europe and the Soviet Union.

Overall enplanements decline 25.6% to 1,714,968. Freight, on the other hand, increases 69.8% to 51.94 million FTKs. Revenues total \$344.7 million, but expenses are higher and a net \$43.1-million loss is suffered.

The payroll is sliced 16.4% in **1991** to 6,100. In an adroit marketing coup, the company sells 7 of its Soviet-made Il-62s and 10 An-24s in January to the new Ukrainian airline **Avialinie**. The \$15 million obtained from the sale is employed to help pay for the two Boeing 767-25DERs and B-767-35DER, the latter chartered from **Air New Zealand, Ltd.** The Kiwi carrier dispatches maintenance personnel to Warsaw, under contract, to oversee the care of its airliner, while two LOT officials are posted to Auckland to review various service, marketing, scheduling, and route planning operations. Also during the year, the first of five Avions de Transport Regional ATR72-202s arrive for service on the domestic network.

On March 8, Director General Klimacesski announces that the airline will be partially privatized; under a government plan, 49% shareholding will be offered to private investors. First, however, all Soviet-made aircraft will have to be replaced by Western planes before the airline can offer shares to foreign investors.

Joint venture discussions are held with Sweden's **Linjeflyg, A.B.** covering domestic and regional services. These negotiations, however, which include creation of a shared airline subsidiary, collapse when markets during this recession are judged to be too soft to sustain the operation.

On May 17, weekly nonstop B-767-35DER charter flights are launched from Warsaw to Los Angeles. A majority of the Sejm votes on June 14 to gradually transfer ownership of the carrier from the public to the private sector.

In July, in addition to five flights per week from New York (JFK), new daily service is started from both JFK and Newark to Warsaw.

An exchange-of-seats pact is signed with **Alitalia, S.p.A.** in July covering services from Warsaw to Milan and Rome.

Passenger boardings fall 29.7% to 1,208,355 and freight declines 19.4% to 41.89 million FTKs. The net loss is cut to \$43.14 million on top of an operation loss of \$20.07 million on revenues of \$361.4 million.

The number of employees continues to freefall in 1992, dropping 29.6% to 4,403. The fleet now includes 5 ATR72-202s, 4 B-737-55Ds, 2 B-737-59Ds leased from **SAS (Scandinavian Airlines System)**, 2 B-767-25DERs, 1 B-767-35DER chartered from **Air New Zealand, Ltd.**, 7 Tu-134As, and 14 Tu-154Ms.

During the spring, Banker's Trust and its affiliate, BT Securities, is contracted to provide advice in arranging a \$264-million, 12-year U.S. Export-Import Bank loan necessary for the purchase of 9 B-737s. Okecie International Airport II is opened at Warsaw as the airline's international hub. It features new passenger and cargo terminals and a catering facility. New services are inaugurated to Vilnius, Kiev, Minsk, and Lvov.

The **American Airlines** subsidiary, AMR Services, signs a five-year contract with the airline in July to provide ramp and cargo handling services at the new Warsaw airport facilities. A contract is signed with Lufthansa Consulting, a subsidiary of **Deutsche Lufthansa, A.G.**, to provide general management training for 20 of the airline's senior officials.

Poland's prime minister, Hanna Suchocka, endorses a new bill regarding the company's future from the Sejm on November 16.

On December 16, LOT is transformed from a government owned and operated operation into a joint stock holder company, as a transitional move toward hoped-for privatization two years hence. PLL LOT S.A. is capitalized at ZL 2072 billion (approximately \$149.5 million).

A new nine-seat supervisory board is formed, with Poland's under-secretary for civil aviation, Boguslaw Liberadzki, as chairman; Director General Klimaceswski, an old-line Communist, is dismissed and his departure is acrimonious.

Four B-737-500s, covered by a commercial note arranged by Banker's Trust, are delivered on December 17, tying the manufacturer's record for the largest number of deliveries of the same model on a single day. The company's new status is registered with the appropriate Warsaw court on December 29.

Customer bookings recover and ascend 3.8% to 1,254,324 as freight bounces upward by 14.2% to 48.4 million FTKs. Revenues are up 5.5% to \$277.7 million and expenses rise 1.8% to \$288.45 million. As a result, the operating loss is \$12.07 million and net loss is \$9.4 million.

In 1993, the new president/CEO, Jan Litynski, the 21-year veteran who served as commercial director of the airline, and his executive vice president, Zbigniew P. Kiszczak, oversee a workforce of 4,511, down 0.8% from the previous year. The fleet is increased by the addition of the 3 B-737-45Ds, 3 ATR72-202s, and 1 B-737-55D delivered in December; 4 of the 7 Tu-134As and all 14 Tu-154Ms are now withdrawn.

The company undergoes a restructuring designed to convert the company from a socialist form of management to a profit-oriented Western approach. The number of operating divisions is reduced from eight to four: operations, finance, technical, and marketing and sales. A block-space agreement between the new LOT Polish Airlines, S.A. with **Balkan Bulgarian Airlines** takes effect in March covering frequencies between Warsaw and Sofia.

In April, Banker's Trust is appointed adviser for additional equity maneuvers, strategic planning, and a search for foreign investment. Claiming the existence of procedural irregularities, the nation's transport ministry does not approve the arrangement, which is left in limbo. New routes are opened to Riga, Oslo, Dusseldorf, and Kuwait. LOT and Air Tours Poland expects to handle 15,000 visitors for the first time.

In August, a block-space agreement is inked with **CSA (Czechoslovak Airlines)** covering a route from Warsaw to Prague, which will be flown by ATR72-202s 12 to 13 times per week. New routes are opened from Warsaw to Riga and to Stockholm via Oslo and from Katowice to Frankfurt and Wroclaw via Poznan to Dusseldorf.

Talks with **British Airways, Ltd. (2)** aimed at increasing frequencies between the two airlines' capitals are suspended on November 1 when LOT demands compensation for the fares it will lose if the number of flights grow. Direct services between Warsaw and London are temporarily terminated.

Passenger boardings swell 10.7% to 2,388,848 while cargo ascends 5.7% to 54.9 million FTKs. Revenues jump 7.7% to \$296.3 million, but

expenses are up by 6% to \$304.1 million. The operating loss is cut to \$7.8 million while a \$3.42-million net profit is generated.

Airline employment falls by 4.7% in 1994 to 4,300. Early in the year, another B-767, a Dash-204, is leased from **Air New Zealand, Ltd.** At the same time, a DC-10-30 is wet-leased from **Finnair O/Y**. Over 1,400 employees are in training to raise the level of passenger services to meet Western standards.

The dispute with **British Airways, Ltd. (2)** is settled in March when the British airline is allowed to increase its weekly flights to nine per week. Flights to Zagreb begin during the second quarter as three flights per week are shared between the carrier and **Croatian Airlines**. Split, Beirut, and Nice also join the company's expanding Western network.

As of April 1, LOT is the first central European carrier to operate a fleet of all-Western aircraft, which is certified by the Australian consulting company BDW Aviation Service (Pty.), Ltd. to be the youngest fleet with any airline worldwide. Also in April, block-space flights commence with **TAROM (Transporturile Aeriene Romane, S.A.)** on a service from Warsaw to Bucharest.

On May 10, a 60-day, nonbinding memorandum of understanding, without financial links, is signed with **American Airlines**. Under its terms, the two pledge to share communications, reservations, and technical support systems while working toward a code-sharing agreement. Limited frequent flyer and training program collaboration will also begin.

Finding that it requires additional summer capacity, the DC-10-30, which had been returned to Helsinki at the end of the first quarter, is chartered once more in June. Flights begin from Krakow to Vienna. During this quarter, a company that had previously been of service to **KLM (Royal Dutch Airlines, N.V.)** is retained to train employees in customer services.

Pooled flights commence with **Aeroflot Russian International Airlines (ARIA)** in July over a route from Moscow to Warsaw. Also during the summer, block-space service begins with **Austrian Airlines, A.G.** between Warsaw and Vienna.

During the summer, dual-designator service begins with **Croatia Airlines** employing a Polish ATR72-202 over a route from Warsaw to Zagreb.

An additional marketing and code-sharing agreement is signed with **American Airlines** in September for forthcoming services linking Warsaw with New York (JFK) and Chicago (ORD). An advertising and promotion campaign, which will win prizes the following year, is undertaken in the American market; the principal slogan, often proclaimed in elegant white and red posters in travel offices, is "Poland Is Free . . . The flight very reasonable."

In November, twice-weekly service is inaugurated from Warsaw to Tallin, capital of Estonia. A month later, service is inaugurated to Thessaloniki, Zagreb, and Nice. A nonequity agreement is reached with **Air France** for creation of a passenger and cargo cost and revenue-sharing program.

Customer bookings this year accelerate 13.9% to 1,495,955, while freight balloons 11.9% to 56.1 million FTKs. Revenues move up 3.7% to \$307.36 million, but expenses jump 5% to \$320.53 million. Consequently, there is an operating loss of \$13.16 million. Net gain plunges to \$916,000.

Airline employment in 1995 stands at 4,079, a 5.6% drop over the previous year. All seven of the Tu-134s are now out of service and the last of seven Ty-154Ms, the final Soviet-made aircraft in the inventory, will go by fall. Another B-767-35DER is received; christened *Gdansk*, it will be employed to open several new international routes.

On January 17, under a code-sharing agreement with **Austrian Airlines, A.G.**, the company inaugurates daily ATR72-202 roundtrips between Krakow and Vienna. The service complements one provided by a **Tyrolean Airways, A.G.** Fokker 50 since the previous November.

Also in January, a block-space arrangement begins with **Deutsche Lufthansa, A.G.** on frequencies between Warsaw and Berlin. The German terminus is moved from Berlin's Schoenefeld Airport to the larger

Tegel Airport. ATR72-202s that LOT had previously operated to Schoenfeld are replaced by the German flag line's B-737s.

A block-space service begins in cooperation with **Swissair, A.G.** in March on a route from Krakow to Zurich. The daily roundtrips are also operated by **Crossair, Ltd. SAAB 2000s**.

On April 20, the Polish government announces plans to sell a 29% stake in the carrier by the end of next year. A cargo division is established in August to handle the carrier's freight in a more professional manner. All GSA and sales agreements for freight are revised, marketing research is undertaken, and a wide-ranging advertising campaign is undertaken to emphasize the new cargo service.

At year's end, it is noted that service on the Warsaw-Prague route has grown by 60% in the last 12 months.

Enplanements jump 16.2% to 1,839,376 and cargo climbs 19.4% to 67.7 million FTKs. *The Journal of Commerce* will report in its December 30, 1996 issue that LOT Cargo has carried 7,700 tons of goods from Poland during the year, while importing 9,100 tons.

Operating revenues also move ahead by 19.4%, rising to \$367.12 million. Even though they are up 21.1%, expenses total \$363.85 million, leaving a \$3.26-million operating gain and a \$2.48-million net profit.

The workforce is cut 1.2% in 1996 to 4,030 and the B-767-35DER *Warsaw* is leased to **Air New Zealand, Ltd.** The company, in conjunction with Air Tours Poland, releases a 26-page pamphlet in February designed to attract tourists to traditional and not-so-traditional destinations around the country.

In April 1, the company begins to code-share with **Air France** on 14 weekly frequencies from Warsaw to Paris, Lyon, and Nice and from Krakow to Paris. On May 31, the carrier launches low-cost "Flying Bus" fares for tourists wishing to visit Poland and surrounding countries through the end of August.

On July 26, a marketing and operations agreement is concluded with **DHL Worldwide Express**; at this point, the Polish line becomes general sales agent in the country for the Brussels-based cargo carrier. The next day, ATR72-202 service, 14 times per week, begins from Warsaw to Szczecin; passengers wishing to travel on to Kolobrzeg and Koszalin are now able to connect to that city via a new Ivecoturbo Minibus.

DHL Worldwide Express launches B-727F freight service on August 1 from Copenhagen to Katowice via Warsaw. At Prague on August 27, grand ceremonies are held to celebrate the fiftieth anniversary of LOT's Warsaw-Prague air service.

Under terms of the July 26 agreement, a B-727F painted in **DHL Worldwide Express** colors with LOT markings introduces roundtrip service from Brussels to Warsaw on September 8. The B-727F that had previously operated through Warsaw from Copenhagen to Katowice is sent to Berlin to fly from the German city to Katowice.

After two years in a holding pattern, the code-share agreement with **American Airlines** finally takes off on September 16. Six weekly flights are inaugurated from Miami to Warsaw via New York (JFK) while daily service is initiated from Los Angeles to Warsaw via Chicago (ORD). The U.S. carrier performs the domestic segments while LOT handles the international service with one of its B-767-35DERs.

Reworking the plans originally proposed for a joint-venture regional airline with **Linjeflyg, A.B.**, LOT establishes its own fully owned feeder subsidiary, **EuroLOT, S.A.**, at Warsaw in December. Also in December, the company spins off its fuel business into Petrolot, which it will jointly own (49%) with the Petrochemia Plock oil refinery (51%).

During the year, the company has flown over 650 charter flights that transport some 120,000 passengers. Meanwhile, no privatization advisor is yet appointed because the bidders have demanded excessive fees for their consulting services.

Passenger boardings surge 10.6% to 2,033,352, passing the 2 million mark for the first time; a total of 75.07 million freight FTKs are operated, an 18.9% increase. Overinvestments lead to a net loss of approximately \$13 million.

The number of employees inches up by 0.5% in 1997 to 4,050. A new code-sharing agreement with **Alitalia, S.p.A.** takes effect on March 30.

Daily, except Thursday and Sunday, LOT B-737-45Ds will fly roundtrip from Warsaw to Rome; the other two days will be serviced by the Italian major's MD-80s. At the same time, LOT begins dual-designator flights from Warsaw to Milan on Wednesdays, Fridays, and Saturdays (a second flight on Fridays stops in Krakow) while Alitalia MD-80s serve the same route each weekday.

LOT agrees to share its code with **Aeroflot Russian International Airlines (ARIA)** in an April 1 agreement on flights, beginning on May 1, from Warsaw to St. Petersburg. The joint cost and revenue-sharing plan with **Air France** is scrapped in April at LOT's request; it is replaced by a block-seat, code-sharing agreement. The first of five new Boeing jetliners to be delivered this year, a B-737-45D, arrives at Warsaw on April 30. Some \$225 million in financing for the new jetliners has been arranged by Chase Manhattan Bank and Polska Kasa Opieki, S.A.

With the mission of taking over the flag carrier's domestic and regional services, **EuroLOT, S.A.** is equipped during early spring with eight Aero International (Regional) ATR72-202s leased from its parent. On May 1, the block-seat agreement with **Air France** takes effect. The two are enabled to resell 30 seats on each other's flights on new joint routes from Krakow to Paris and from Warsaw to Lyon and Nice. The roundtrip Warsaw-Paris route is increased from 14 to 28 weekly services.

The sixth B-767-35DER is received during the month and "Flying Bus" fares are offered again, between May 31 and August 31. On June 12, the government announces its decision to proceed with the long-delayed privatization of the airline, confirming that it will continue to retain a 51% stake. A new tender for privatization will be opened soon; meanwhile, the supervision of LOT and this process will be transferred to the Ministry of Treasury from the Ministry of Transport and Maritime Economy.

On June 18, the B-737-45D received at the end of April is employed to return Pope John Paul II to Rome from Krakow following his fifth visit to his native country. Three more of the type are received by month's end. In a formal religious ceremony presided over by Archbishop Juliusz Paez at Poznan on June 29, the latest B-767-35DER is christened *Poznan*. The plane will service transatlantic routes.

On July 1, these ATRs launch 200 weekly roundtrip frequencies from Warsaw to 5 other Polish cities. Plans are made to provide it with additional turboprops in order that it might start regional flights to cities in Scandinavia, France, Germany, Austria, and the Baltic States.

Also on July 1, the pact with **American Airlines** is deepened as dual-designator service is expanded to 26 U.S.-Poland services from 3 AA gateways. On July 9, LOT begins to share its code on all American Airlines flights between Chicago and Miami and between New York (JFK) and Los Angeles. LOT had previously placed its "LO" designator code only on selected flights between those cities.

On July 20, it is decided to spin off the company's charter division into a separate company during the following year and to sell a minority stake in it to outside concerns. A team is ordered to examine the financial and legal aspects of such a move.

Since January, demand for tourist flights to the Mediterranean have increased by 50%, requiring the company to lease a pair of B-737-300s during the summer to provide required lift.

A new Polish government is elected in September and privatization planning is intensified.

LOT and **Continental Airlines** sign a pro rata accord at Warsaw on November 6, cutting fares on joint routes. The reduced fares will apply on LOT's services to Frankfurt, London, Manchester, and Paris, with onward connections by Continental to 130 destinations in the U.S. Also in early November, a new supervisory board is elected with Andrzej Majkowski as chairman.

Weekly roundtrip B-767-35DER service is inaugurated on December 6 from Krakow and Warsaw to New York and Chicago. After Wislawa Szymborska collects the Nobel Prize for Literature late in the month, she returns to Warsaw aboard a special LOT flight.

Customer bookings surge 15% to 2,338,000, while cargo increases 43.5% to 95.4 million FTKs. Still, due largely to the high installments

its pays for its leased Boeings, a ZI 137.5-million (\$33.92-million) loss is suffered.

In January 1998, a strategic alliance is entered into with **British Airways, Ltd. (2)**. Discussions begin on a possible equity investment in the Polish flag carrier by the British giant and planning is undertaken concerning the inauguration of code-sharing flights.

The code-sharing agreement with **American Airlines** is expanded on February 27. American places its "AA" code upon LOT's roundtrip B-767-35DER services from Warsaw to New York (JFK) and Chicago (ORD). LOT in turn is allowed to place its code on American connections to Boston and Washington, D.C. (IAD) via New York (JFK), to Seattle via Chicago (ORD), and to San Francisco and Dallas (DFW) via both New York (JFK) and Chicago (ORD).

The code-sharing agreement with **American Airlines** is further expanded on March 4; five new U.S. gateways are added to the program, including Cleveland, Denver, Phoenix, Syracuse, and Washington, D.C. (DCA). The Washington, D.C. and Syracuse flights connect through New York (JFK), while the others connect via Chicago (ORD).

On March 11, a dual-designator arrangement is entered into with the **British Airways, Ltd. (2)** partner **Finnair, O/Y**. Under its terms, flights from Warsaw to Helsinki will be served by Finnish aircraft seven times a week and six times a week by LOT. Dual-designator flights to points in the Baltic region are planned for the summer of 1999.

In May, flights are increased between Warsaw and Helsinki.

Beginning on May 10, a summer-long series of Sunday-over-Monday-back B-767-35DER roundtrips are offered between Toronto and Krakow.

Following delays in the formulation of foreign ownership laws, the government, in July, announces that the privatization of LOT will be postponed for a year. At the same time, the Warsaw-based consulting company Business Management & Finance, together with SH & E of the U.S. and Dresdener Kleinwort Benson & Commerzbank are appointed privatization advisors.

Dual-designator reciprocal service is launched on August 10 over the respective thrice-weekly LOT and **British Airways, Ltd. (2)** routes between Warsaw and Manchester, as well as on LOT's two weekly return services between Gdansk and London (LGW).

A marketing and code-sharing agreement is signed with **Lithuanian Airlines, A.B. (Lietuvos Avialinijos)** on September 4. When the pact takes effect on October 26, the two sell tickets on each other's route between Vilnius and Warsaw, which LOT flies in the morning and LAL in the evening.

The last of the weekend roundtrip tourist flights between Krakow and Toronto is operated on September 20.

Service is maintained apace during the remainder of the year. Passenger boardings jump 11% to 2.59 million, with robust growth reported in charter operations. Freight traffic declines 9% as 23,400 tons of goods are flown. Revenues accelerate 16% to \$535 million. After years in the red, the company shows a ZI 1.9-million (\$474,300) profit for the year.

LOT celebrates its seventieth anniversary on January 2, 1999. On January 27, LOT provides transport for an 11-day visit to New York, cosponsored by the Polish-American Travelers Club, of the famous Polish alpinist and explorer Andrzej Zawada.

On February 25, a \$200-million request is placed with Embraer for 12 EMB-145 ExpressJets; 6 orders are firm and 6 are options. The order is a first for the Brazilian manufacturer from an East European carrier.

During the second week of April, the treasury ministry reports that the first stage of LOT's privatization may be completed by the end of the year or early 2000. On April 20, Treasury Minister Emil Wasacz indicates that the government, on the advice of the economic council, has cleared the sell-off, which will commence with the sale of an initial 10% stake to a strategic investor. That partner will be required to raise the airline's capital by between 30 and 50% and will hold upwards of 38% shareholding by the end of the process. Up to 15% of LOT's shares will be given to its employees, while the state will retain 51% voting majority.

Pope John Paul II returns to Rome from Krakow on June 17 on the same B-737-45D that had brought him to Krakow 13 days earlier; the

pontiff is met at Ciampino Airport by Italian President Carlo Azeglio Ciampi.

A block-seat, code-sharing agreement is signed with **El Al Israel Airlines, Ltd.** on August 30. Under its terms, the two will sell seat groupings on each other's scheduled services between Warsaw and Krakow and Tel Aviv beginning in mid-September.

It is announced on November 19 that SAirGroup, parent of **Swissair, A.G.**, has outbid both **British Airways, Ltd. (2)** and **Deutsche Lufthansa, A.G.** to purchase a 10% stake in LOT by year's end. In making the award, Polish Treasury Minister Emil Wasacz indicates that the stake will be increased to 37.6% through a recapitalization of the airline.

Passenger boardings rise 4% to 2,603,000. Operating revenues increase 23.7% to \$639,493,000, while expenses rise 23.6% to \$638,624,000. The profits are \$869,000 (operating) and \$845,000 (net).

Airline employment at the beginning of 2000 stands at 4,156, a 1.4% increase over the previous 12 months. The B-737 fleet now includes 6 Dash-55Ds, 3 Dash-53Cs, 2 Dash-36Ns, and 7 Dash-45Ds.

The current weekday B-737 service from Warsaw to Brussels is doubled on March 27 through the addition of a second, morning, departure. Thrice-weekly roundtrips between Warsaw and Turin begin in May.

During the spring, the American unscheduled operator **Tradewinds Airlines** has unsuccessfully attempted to gain permission from the government of Poland for the initiation of charter services into Poland. Company officials appeal to the Department of Transportation, which exerts heavy pressure.

On June 1, the DOT warns the Warsaw government, as well as executives at LOT and **American Airlines** that it will unilaterally cancel the code-sharing pact between LOT and AA unless Tradewinds is granted access under the bilateral air agreement between the two countries.

On June 14, orders are placed for nine Embraer ERJ-145 Amazons. The aircraft are to be financed through Polish tax leases, the first such transactions in the country's history. A "Performance Improvement Package" is launched in mid-July; 100 projects are initiated, including enhancements to ground and in-flight services. It now also takes over business representation of the "Qualiflyer" group in Poland.

EuroLOT, S.A. is entirely reorganized into a purely low-cost service division of LOT on August 1, losing its autonomous status. As a result, all management functions, such as sales and ticketing, revenue management, route planning, and purchasing are transferred back to the parent airline. All aircraft are now wet-leased from LOT. The changeover is part of the "Performance Improvement Package."

Poland A.M. reports on October 6 that the company will soon triple its number of flights to 2,300 every week. It will also enlarge its fleet by 11 aircraft and will then fly 5 B-767s, 18 B-737s, 13 ATRs, and 13 ERJ-145s.

It is reported on October 7 that LOT will spend some \$218 million to bring itself up to full "Qualiflyer" group standard. Beginning at the end of the month and continuing over the next few years, the number of flights from an enhanced Warsaw hub will be boosted from 800 every week to 2,200.

The opening of the fall schedule on October 29 brings several increases in weekly roundtrip frequencies from Warsaw. Flights to Prague increase to 12, Milan to 16, Vienna to 11, Stockholm and Paris to 10, and Zagreb to 4. Daily nonstop ERJ-145 return flights are initiated from Poznan to Dusseldorf.

Daily B-737-300 roundtrip service is started on November 1 from Warsaw and London (LGW) to Hamburg. Also on November 1, new daily ERJ-145 return frequencies are initiated to Brussels from both Poznan and Gdansk. Operations at Warsaw are now divided into 6 daily connecting "waves."

All 3 B-737-500s previously operated by **AOM French Airlines, S.A.** are leased in November and enter service before Christmas.

Deputy Polish Treasury Minister Aldona Kamela-Sowinska reports on December 17 that the decision to continue with the privatization of LOT will be made after the treasury ministry has had a chance to study the airline's 2000 financial results.

On December 19, Frederick Sorensen, the EU Commission's aviation negotiator, meets with LOT and Polish government officials in Warsaw and is able to reach an agreement concerning full liberalization of air transport between Poland, the EU, and other EU candidate nations. The happy event will occur on November 1, 2004. Poland is granted a transition period, until January 1, 2004, to prepare its air transportation national carrier monopoly, LOT, for full market liberalization and the competitive requirements that will entail. It is anticipated that the Polish government will approve in January.

Customer bookings for the year accelerate 7.2% to 2.79 million. Revenues advance 41% to 373.6 million zloty, while gross profits accelerate to 49.7 million zloty (\$11.4 million). These figures represent a significant improvement in LOT's financial situation and will encourage the treasury to push for the second stage of the airline's privatization.

LOTUS AIR, S.A.E.: 81-AL-Obour Buildings, Building #5, Nasr City, Cairo, Egypt; Phone 20 (2) 392 3795; Fax 20 (2) 392 3799; <http://www.lotusair.com>; Code TAS; Year Founded 1997. Lotus Air is established at Cairo on December 17, 1997 to offer passenger charters between Egypt and Europe, especially Germany. Employing the marketing slogan, "The Spirit of Egypt," the company, under the leadership of Managing Director Ali Dashti, charters an Airbus Industrie A320-211 and an A320-212, the latter from ILFC.

Upon delivery of the new Dash-211, wearing Lotus and "The Spirit of Egypt" titles on April 22, 1998, the company is able to inaugurate revenue services on May 1. The second aircraft is subchartered to Sabre Airways, Ltd. of the U.K. through July.

Flights to European destinations continue without headline or incident during the remainder of the year and in 1999. During this period, two more A320s are chartered, one each Dash-212 and Dash-214.

Arrangements are completed with CIT Aero space on August 18, 2000, for the lease of an additional pair of A320-231s that will enter service in May 2003 and August 2004.

LOTUS INTERNATIONAL AIR, FZE: Sharjah Airport International Free Zone, P.O. Box 8006, Sharjah, United Arab Emirates; Phone (9716) 557-0560; Fax (9716) 557-0563; <http://www.lotusair.com>; Year Founded 1999. Lotus Air is established at Sharjah in 1999 to provide air cargo charters to points in Asia, Africa, and Europe. With the acquisition of an owned Antonov An-12 from Russia, the company is able to launch and continue its on-demand services.

LOUISIANA AIRCRAFT: 4225 Chuck Yeager Ave., East Baton Rouge Parish, Baton Rouge, Louisiana 70807, United States; Phone (504) 356-1401; Fax (504) 359-3919; Year Founded 1941. Originally established as the FBO at Baton Rouge Metropolitan Airport-Ryan Field in 1941, LA, over the next half-century, also operates a significant executive and small group passenger charter business. Customers are flown throughout the U.S. and into Mexico and the Caribbean, many in support of the energy industry.

By 2000, the concern employs 9 pilots and flies 1 British Aerospace BAe (HS) 125-800 Hawker, 1 IAI Westwind I, 1 Beech Super King Air 300, 2 Super King Air 200s, 1 King Air 90, and 3 Beech 58 Barons.

LOVE AIR, LTD.: United Kingdom (1991-2000). The scheduled airline operation of London Flight Center, **London City Airways, Ltd.** is renamed by its founder, Nigel Harris, in 1991. Operations are undertaken with 1 Embraer EMB-110 Bandeirante, 2 British Aerospace BAe (HS) 748-B2s, and 4 Piper PA-31-350 Navajo Chieftains.

Passenger boardings climb 31.4% to 14,720 while freight rises 103% to 28,000 FTKs. Revenues ascend 29.4% to \$2.4 million and produce an operating surplus of \$840,269. The net profit is \$72,146.

As a marketing stunt, a couple is married over international waters on St. Valentine's Day, February 14, 1992. The only operator to provide scheduled service from the ex-RAF airfield at Biggin Hill, Love Air's enplanements increase 36.4% to 2,495. Through November of 1993,

passenger boardings climb 0.2% to 2,421. They do better in 1994, swelling 42.3% to 3,446.

Traffic falls off dramatically in 1995. Through November, the latest reporting period, company officials note a 34.2% drop in enplanements, down to 2,268.

Airline employment stands at 64 in 1996 and the company's 5 aircraft transport a total of 1,011 passengers, a huge 55.7% drop. Orders are outstanding for two British Aerospace BAe Jetstream 32s.

The workforce is cut by 17.2% in 1997 to 53. Scheduled service is inaugurated from Biggin Hill to Caen, Le Touquet, and Rouen on September 14 under a code-sharing agreement with **Regional Airlines, S.A.** The first J-32 arrives in late fall. Passenger boardings increase to 4,741.

The second Jetstream 32 joins the fleet during the summer of 1998. Thrice-weekly roundtrips begin on August 31 from Biggin Hill to Deauville. Customer bookings during the 12 months fall to 1,000; 4,000 FTKs are also operated.

Airline employment stands at 18 in 1999 and the fleet includes 2 J-32s and 2 Navajo Chieftains. At the beginning of August, two more J-32s are acquired for use on the **Regional Airlines** code-sharing service.

In severe financial difficulty, the company, which had not been able to make a profit as either an air taxi operator or on scheduled flights on behalf of Nantes-based **Regional Airlines, S.A.**, ceases operations on April 30, 2000.

LTE INTERNATIONAL AIRWAYS, S.A.: Calle de Ter 27, Palma de Mallorca, Balearic Islands, 07009, Spain; Phone 34 (71) 475 700; Fax 34 (71) 478 886; <http://www.irinfo.es/aviacion/lte.html>; Code XO; Year Founded 1987. This Spanish charter carrier is organized at Palma de Mallorca on April 29, 1987 as an operating subsidiary of the German operator **LTU International Airlines, GmbH.**, which holds a 25% interest. Hans-Joachim Driessen is named president with Christian Leifheit as managing director. Two Boeing 757-2G5s are leased from the parent and are employed to inaugurate unscheduled and inclusive-tour flights on November 1 between the Spanish mainland and the Canary and Balearic Islands, in addition to Austria, Finland, Italy, Norway, Switzerland, and the Dominican Republic. A total of 90.8 million revenue passenger kilometers (RPKs) are flown in the next two months.

The workforce increases 42.5% in 1988 to 171 and enplanements during the first full year of service total 350,871.

The payroll is increased by another 60.2% in 1989 to 274 and a third leased B-757-2G5 is acquired in April.

Passenger boardings accelerate by 52.1% to 529,670.

Company employment rises another 10.2% in 1990 to 302 and the fleet comprises 1 leased B-757-225 from the LTU subsidiary **LTU-Sud International Airlines, GmbH.**, along with 3 B-757-2G5s.

The unsettled political situation leads to a 17.1% drop in customer bookings to 439,000.

Another chartered Dash-225 is acquired in 1991 as a new livery is introduced and as the result of reunification, the carrier increases its service into the newer and low volume airports. Enplanements reach 745,503.

Airline employment in 1992 stands at 373 and the chartered fleet now includes 1 B-757-236, 1 B-757-225, and 3 B-757-2G5s, the last 4 aircraft being leased from LTU. LTU assumes total shareholding on December 31.

Passenger boardings ascend 22.1% to 957,000.

President Driessen oversees a workforce of 300 in 1993, down 19.6% from the previous year. Increasing competition brings a traffic decline of 16.3% as only 800,800 passengers are flown.

Airline employment is slashed another 43.3% in 1994 to 170 and only 3 chartered B-757-2G5s are employed. This curtailment reflects a sharp decline in traffic as passenger boardings drop 39.1% to 487,900.

There is no change in the workforce in 1995. Enplanements rebound somewhat, climbing by 7.8% to 526,100.

Airline employment is increased by 11.8% in 1996 to 190 and the company's 3 aircraft transport a total of 639,100 passengers, a 21.5% increase.

Flights continue in 1997. Enplanements fall to 636,286.

The picture brightens somewhat in 1998. Passenger boardings climb 3.3% to 658,000. During the year, airline employment is increased by 5.3% to 200.

LTS (LUFT TAXI, mbH.): Flugplatz, Strausberg, D-15344, Germany; Phone 49 (3341) 312 276; Fax 49 (3341) 311 339; Year Founded 1992. As Germany is being reunited, this air taxi service is set up at Berlin's Schoenfeld Airport in 1992. Flights begin with a single Cessna 421.

LTS (LUFTTRANSPORT-SUED, A.G. & Co.): Germany (1984-1988). This charter carrier is formed at Munich in December 1983 by the owners of Lufttransport Unternehman GmbH./LTU International Airlines, GmbH. as a long-haul subsidiary. Following the delivery of the first of two Boeing 747-225s, LTS charter service begins in July 1984. With the arrival of the second Jumbojet, operations are expanded in 1985 along routes complementing those of LTU to the Canary Islands, North Africa, southern Europe, and the Mediterranean. Two B-757-225s also arrive. A total of 899.2 million RPKs are accomplished by the 225-employee carrier in 1986, an upward boost of 276.2%.

In 1987, RPKs swell 40.1% to 1.26 billion. In January 1988, the carrier is reformed and renamed **LTU Sued International Airlines, GmbH.** Its aircraft are repainted from a pleasing blue livery to that of the parent.

LTU INTERNATIONAL AIRLINES (LUFTTRANSPORT UNTERNELHMAN GmbH. & CO., KG): Halle 8, Flughafen, Dusseldorf, D-40474, Germany; Phone 49 (211) 941 80; Fax 49 (211) 941 871; http://www.ltu.de; http://www.ltu.com; Code LT; Year Founded 1955. Having purchased a Vickers Viking from **British European Airways Corporation (BEA)**, Englishmen Ronald Myhill and Bernard Dromgoole forms **Lufttransport Union, GmbH. (LTU)** on October 20, 1955. German restrictions on foreign investment force Myhill and Dromgoole to cease control in December. In 1956, its new owner/managing director, A. J. Ahrens, gives the inclusive tour and charter operator its present name, which translates as "Air Transport Enterprise."

Services are undertaken with Vickers Vikings from Frankfurt in January 1957 with an initial flight to Catania, Sicily, via Nice. Later in the year, Bristol 170s and de Havilland DH-104 Doves are acquired.

Expansion follows throughout the remainder of the year and into 1958 from Frankfurt and Cologne to holiday destinations in southern Europe, North Africa, and the Canary Islands destinations of Palma de Mallorca and Tenerife follow. The fleet is increased by the addition of Douglas DC-4s and Nord-Est Nord 262s.

Operations continue, largely without change, during 1959 and in 1960 the base is switched to Dusseldorf's Lohausen Airport. During the year, as preparations are made for the addition of new Dutch-made turbo-props, the Bristols, de Havillands, Nordes, and DC-4s are all withdrawn.

The first Fokker F.27-200s arrive in 1961 and the last Vickers Viking is withdrawn in 1963. Sud-Est SE-210 Caravelle IIIs join the carrier's fleet in 1965. LTU is the first European charter operate the French-made jetliner.

Retirement of the F.27 propeller equipment commences in 1967-1968 and during the latter year the Caravelle IIIs are replaced with Caravelle XRs.

On February 28, 1969, the carrier is the first airline to receive a Fokker Fellowship; it introduces the premier production model F.28-1000 into charter service on April 1 and receives its second F.28-1000 the following day. By year's end, LTU is an all-jet airline.

During the 1970s, operations to the Greek archipelago, the Balearic and Canary Islands intensify. The fleet in 1972 includes 5 Caravelle XRs and 4 F.28-4000s, which are insufficient in lift to accommodate this growth. To provide additional capacity, a new Lockheed L-1011 TriStar 1 is ordered in October.

The wide-body is delivered on May 29, 1973. At this time, an option is taken on another Lockheed wide-body for the spring of 1975. The arrival of these aircraft will allow the carrier to retire its F.28-4000s.

Operations continue apace in 1974 as the TriStar option is cancelled. A second, used L-1011 TriStar I is, however, acquired from **Eastern Air Lines** on November 8, 1975; it will be sold and repurchased five times over the next decade. The last Caravelle XR is withdrawn at year's end.

Three L-1011s that Lockheed has been unable to deliver to **Pacific Southwest Airlines (PSA)** are offered to LTU at the end of 1976.

In early 1977, plans are made to trade the company's two TriStars back to Lockheed for the newer PSA units; one is, however, retained. L-1-11 service to New York begins in April, followed by flights to Los Angeles in June. Meanwhile, between March and May, the two earlier TriStars are traded in to Lockheed on three new L-1011s that the manufacturer has been unable to deliver to **Pacific Southwest Airlines (PSA)**.

In 1978, Ahren's unscheduled operation flies 4 TriStar 1s and 3 Caravelle XRs. The route network is expanded during the year by the addition of new markets at Nassau and Curaçao. Another L-1011 is acquired in March 1979 followed by two more from **Eastern Air Lines** in the spring of 1980, along with two long-range L-1011 TriStar 500s, the first of which arrives from Lockheed in April.

As before, the major European services for the remainder of the decade of the 1980s are flown from gateways at Dusseldorf, Frankfurt, Munich, and Stuttgart to vacation destinations in Italy, Spain, Portugal, Greece, and Turkey. Transatlantic destinations reached from Frankfurt include New York, Chicago, Los Angeles, San Francisco, Seattle, Miami, and Tampa. Charters are also flown to North Africa, the Middle and Far East, and the Caribbean Islands.

The "regularly scheduled charter carrier" begins Dusseldorf-Frankfurt shuttle flights in 1981. An eighth L-1011 TriStar I arrives from **Eastern Air Lines** in December. The fleet in 1982 includes 6 L-1011 TriStar 1s and 2 L-1011-500s.

Passenger boardings reach 1.9 million while the 9th consecutive net profit, \$10 million, is reported.

Upon its formation in December 1983, an interest is taken in **LTS (Lufttransport Sud, GmbH.)**. Enplanements for the year total 2,281,282.

Airline employment grows 2.3% in 1984 to 949 and orders are placed for 5 Boeing 757-2G5s. Thursday flights are inaugurated to Munich late in the year from Los Angeles and San Francisco. Customer bookings accelerate only 0.9% to 2,302,000, while freight falls by 1.4% to 845,000 FTKs.

In 1985-1986, General Manager Hans-Joachim Driessen's fleet comprises 6 TriStar 1s and 2 TriStar 500s. A total of 6.96 million RPKs are flown during the latter year, a 19.6% improvement over the previous 12 months.

The first of five B-757-2G5s is delivered during the first quarter of 1987. In April, **LTE International Airways, S.A.**, a Spanish operating subsidiary, is formed and based at Palma de Mallorca; a 25% interest is taken and it will begin operations in November with leased equipment. RPKs improve by 9.4% to 7.6 billion.

The workforce is increased by 16.7% in 1988 to 1,611. The fleet now includes 6 TriStar 1s and 3 TriStar 500s, plus 5 B-757-2G5s. Orders are placed for 3 B-767-3G5ERs.

In January, **LTS (Lufttransport Sud, GmbH.)** is purchased outright; renamed **LTU Sud International Airways, GmbH.**, it operates joint services with its parent, as Hans-Joachim Driessen and Joachim Beickler, joint managing directors of LTU, assume the same posts with the subsidiary.

Passenger boardings this year jump 10.3% to 3,554,667 and revenues ascend 6.7% to \$550.6 million.

Company employment rises another 25.5% in 1989 to 1,858. Delivery is taken early in the year on two of the three ordered B-767-3G5ERs and orders are placed for four McDonnell Douglas MD-11s with which to replace the Lockheeds. The new Boeings enter service in April as a

third arrives. Also in April, a third L-1011 TriStar 500 is received, having been purchased from **United Airlines**.

The company, having joined the Amadeus reservations system, approaches the government seeking certification as a scheduled air carrier. In November, weekly service is inaugurated from Dusseldorf to Honolulu via Frankfurt and Anchorage.

Customer bookings surge ahead by 13.9% to 4,049,000 and cargo moves up 7.4% to 5.95 million FTKs.

The workforce is reduced in **1990** to 1,370 and the fleet now includes 7 B-757-2G5s, 3 B-767-3G5ERs, 6 TriStar 1s, 1 TriStar 200, and 3 TriStar 500s; orders are outstanding for 5 Airbus Industrie A330-322s and 4 McDonnell Douglas MD-11s.

In April and May, the company begins negotiations with the U.S. DOT for authority to operate charters to the U.S.

In late spring, the company discovers that its wide-bodies can earn significant income by hauling cargo in available spaces. A new cargo division is established at Dusseldorf under the direction of Ralph R. Auslander.

The company joins IATA on July 1 as four new scheduled routes are inaugurated to New York, Miami, Los Angeles, and San Francisco.

Passenger boardings jump 13.2% to 4,488,961 and revenues ascend 17.9% to \$736.7 million.

Airline employment for the sister carriers declines a joint 8% in **1991** to 2,000. While undergoing a maintenance check in the Dusseldorf hangar on June 28, the interior of an L-1011 TriStar I catches fire; although mechanics tow it outside, it is a total loss. A replacement TriStar is leased from **American Trans Air** for 11 days before another TriStar can be made available from **Eastern Air Lines**.

During the year, 58 destinations are served, including many in Spain, Turkey, and Greece, and new scheduled markets at Atlanta, Bangkok, Colombo, Acapulco, Male, Montego Bay, Abu Dhabi, Barcelona in Venezuela, Punta Cana, Puerto Plata, Porlamar, Santo Domingo, San Jose, Cancún, and Orlando.

The first MD-11 is delivered late in the year and on the evening of December 31, the new McDonnell Douglas transport circles 26,000 ft. over Germany and provides a live, televised 20-min. concert by the 10-piece Polish chamber orchestra Sinfonia Varsovia, conducted by Justus Frantz. At the conclusion of the publicity-gathering event, the trijet takes the players, plus 200 invited guests, on to Majorca.

Traffic statistics for the year as a whole are now also combined and show customer bookings for both carriers together sliding 4.1% to 4,305,570; cargo skyrockets 117.4% to 29.3 million FTKs.

A TriStar 1 is withdrawn in **1992** as two more MD-11s join the fleet. Complete control of **LTE International Airways, S.A.** is now assumed. New destinations now include Abu Dhabi, Durban, Goa, Hurghada, Kathmandu, and Langkawe. In July, the company agrees to buy 90% of the Thomas Cook Group, Ltd. from British Midland Bank for £200 million; the remaining 10% is taken by Dusseldorf-based Westdeutsche Landesbank (WestLB), Germany's third largest bank and also an LTU owner (34.3%).

The workforce for the sister carriers is increased by 3.1% to 2,401 and their overall passenger boardings recover, climbing 11.1% to 4,782,000. Freight, however, declines by 2.7% to 28.38 million FTKs.

Joint airline employment in **1993** stands at 2,432, up 1.3% from the previous year. The combined fleet includes 4 MD-11s and 4 B-767-3G5ERs and new markets are opened at Kilimanjaro, Santiago de Cuba, Varadero, and Windhoek.

LTU's 98 stations are now linked together by the Champ system of **Cargolux Airlines International, S.A.**

Customer bookings accelerate 8.2% to 5,176,132 while cargo swells 21.5% to 90.9 million FTKs.

The combined workforce of the two companies is slashed 3.8% in **1994** to 2,340. Flights are started in the summer to Los Angeles.

Passenger boardings swell 4.9% to 5,654,000 and combined revenues jump 7.4% to \$1.11 billion. The combined net profit is \$97.7 million.

There is no change in the workforces of the two carriers in **1995** as the three A330-322s finally enter service. The company celebrates its fortieth anniversary.

When the main runway is closed at Stuttgart Airport between July 31 and October 4, the company leases a British Aerospace BAe 146-200s from **Manx Airlines, Ltd. (2)** and employs it to maintain services from the cross-runway of the Baden-Württemberg Airport.

Enplanements for the linked companies rise 5.1% to 5,921,482, while revenues swell 13.1% to \$1.2 billion.

Employment at the two airlines grows 8.1% in **1996** to 3,122 and in May LTU begins to code-share with **Air New Zealand, Ltd.** on the Kiwi carrier's frequencies from Los Angeles to Frankfurt. Service to Phoenix begins in November.

On December 19, the former **Rheinland Air Service, GmbH.** becomes a commuter subsidiary and begins to operate domestic services on behalf of its parent under the name **RAS Fluggesellschaft, mbH.** The last of the Lockheed TriStars is withdrawn by year's end.

The company's 25 aircraft transport a total of 6,879,000, a growth-rate of 3.6%. Additionally, 20,000 tons of cargo are also flown. Revenues of \$2.2 billion are generated.

LTU reports in February **1997** that it is the first German airline to equip its entire fleet with traffic alert and collision avoidance system (TCAS) avionics. On March 7, the company resumes weekly MD-11 flights from New York to Dusseldorf and Munich.

The company's Florida operations are consolidated on May 1 when the company eliminates a Tampa stop on its service between Dusseldorf and Fort Myers. The carrier now offers eight weekly frequencies to four Sunshine State destinations: Miami, Orlando, Daytona Beach, and Fort Myers. On Wednesday afternoons, roundtrip services are flown between Miami and San Jose, Costa Rica. As of the May, the average age of LTU's fleet is 5.5 years.

On May 5, an MD-11 replaces the B-767-3G5ER on the route from Dusseldorf to Phoenix.

Following a report of losses, the company is restructured during July; it is suggested that a number of long-haul routes be suspended within six months, that the German internal feeder network be terminated, and the MD-11s retired.

On November 5, weekly B-767-3G5ER frequencies are inaugurated from Dusseldorf via Fort Myers to Puerto Vallarta, Mexico. Also in the fall, LTU, in a cost-cutting move, absorbs its separately operated subsidiary **LTU Sud International Airways, GmbH.**, hubbed in Munich.

In early December, **Swissair, A.G.** outbids **Gemini Air Cargo** and is able to purchase LTU's four MD-11s.

Saturday nonstop roundtrip B-767-3G5ER frequencies are initiated on December 20 from Dusseldorf to Denver. The service is timed to allow connections with LTU departures to or from Hamburg, Munich, and Berlin (Tempelhof Airport) for the benefit of German passengers who wish to enjoy Colorado's ski season.

Enplanements for the year total 7.2 million.

Having uncovered three "absolutely unacceptable" maintenance deficiencies as the result of required record checks during the amalgamation of **LTU Sud International Airways, GmbH.**, the carrier in January **1998** terminates three senior managers involved.

In order to gain German antitrust office approval for the merger of **Hapag-Lloyd Fluggesellschaft, mbH.** and Touristik Union International (TUI), WestLB, at the beginning of the year, is required to divest itself of its 34.2% interest in LTU. A search is started for another concern or concerns willing to take on LTU.

The Germany to Denver winter schedule ends on March 28. Replacement of the MD-11s begins with one B-767-3G5ER and two B-757-2G5s coming on as replacements. When the fleet change is completed, capacity will have been reduced by 11% and attendant savings affected.

After months of negotiation, WestLB completes arrangements during October for the sale of its LTU stake to SAirGroup, parent of **Swissair, A.G.**, in a phased transaction effective January 1.

In order to devote additional capacity to its operations in Florida, the carrier, having warned of its action nine months earlier, drops its weekly Dusseldorf to Phoenix service on October 27.

Passenger boardings for the year drop to 5,926,000; however, group income drops 2.6% to DM 3.9 million (\$2.3 million).

LTU Group in 1999 employs 5,305 workers, of whom 2,876 work directly for the airline, a 9.4% decline.

On January 1, WestLB and several private investors turn over a combined 49.9% of LTU Group to a newly formed SAirGroup subsidiary, LTU Holdings. In order that European civil aviation rules might be satisfied, German investors assume 39.9% of the shares in LTU Holdings, together with the remaining WestLB 10.2% stake. The remaining 50.1% of LTU will be purchased into LTU Holdings in a later phase.

LTU International is quickly restructured, with a significant housecleaning of personnel. Kunoi Holdings Switzerland, A.G. provides Peter Fankhauser as the new CEO of LTU Holdings, while veteran **Swissair, A.G.** executive Peter Haslebach becomes the airline's new managing director.

Plans are now announced by SAirGroup for the creation of a large European Leisure Group, which will include not only LTU International, but the **Swissair, A.G.** subsidiary **Balair/CTA**, **Sabena Belgian World Airlines, S.A.**'s subsidiary **Sobelair, S.A.**, **Crossair, Ltd.**, **Air Europe, S.p.A.**, and **Volare, S.p.A.** The new arrangement, under the direction of the project leader, Stefan Helsing, is designed to be part of an integrated network built around the already existing "Atlantic Excellence" and "QualiFlyer" alliances.

With the opening of the summer season at the end of March, LTU flies from 10 German airports to 62 destinations in 22 countries, including points as far afield as Cuba, South Africa, Kenya, and the U.S. A total of 60 weekly departures are made from the home base at Dusseldorf.

During the spring, slot-congested Dusseldorf Airport imposes an 11 p.m. curfew, although special dispensation is granted to LTU for landings until midnight.

Twice-weekly A330-322 roundtrips are initiated on November 8 from Germany to San Jose, Costa Rica, via Miami.

Enplanements total 7.4 million. Although revenues of DM 4 billion (\$2.05 billion) are generated, there is a DM 224-million (\$112,948,000) net loss.

Airline employment at the beginning of 2000 stands at 5,200, a huge 80.8% increase over the previous 12 months. Long-haul charters continue to be offered with a fleet which includes 1 owned and 5 leased A330-223s, 5 B-767-3G5ERs, 1 B-767-33A, 9 B-757-2G5s, and 1B-757-225.

With assistance from minority owner SAirGroup, LTU, beginning in April, moves to shore up its sagging distribution network, while also designing a fleet renewal program. Additionally, it is decided to spin off the carrier's noncore catering, ground handling, maintenance, and information activities to SAirGroup, the latter two as joint ventures. This move will reduce the LTU payroll by 800 names; another 700 positions through reductions in force are anticipated through natural attrition over the next 3 years. The previous year's poor financial showing also sees the departure of the carrier's chief financial officer and marketing director.

With the beginning of the summer schedule on March 26, LTU boosts its Dusseldorf to Los Angeles service from two weekly return flights to three.

A B-757-2G5 is chartered to **JMC Airlines, Ltd.** on April 16; it arrives in England on May 1 wearing full JMC Colors.

On May 10, a contract is signed to purchase six A320-200s as a first step to transforming its entire fleet to an Airbus fleet by 2003. Twelve more Airbus units, including seven A330-200s, will be formally requested in the months ahead. The commonality will reduce pilot training and maintenance costs significantly.

Also during May, the company enters into discussions with **Airtours International Airways, Ltd.** concerning a possible combination of tour operations. Although talks concerning the wet-lease of aircraft continue, the principal discussions are broken off by Airtours Managing Di-

rector Timothy Byrne on August 9. The UK operator is required to provide its full attention to stemming the losses being suffered by partner **Fti Fluggesellschaft, GmbH.**

SAGroup completes arrangements on August 21 for the sale of the company's parent, LTU Touristik, GmbH., to the Cologne-based tour operator Rewe Touristik, GmbH., effective January 1. The West LB bank will continue to hold its 10.1% minority stake in the airline, while SAirGroup will remain its largest and most dominant owner (49.9%). Together, Rewe Touristik and LTU Touristik will form Germany's second largest tourism group, with annual combined turnover of DM 14.7 billion.

On September 5, Fti Fluggesellschaft, GmbH., places a contract with LTU for the wet-lease of a pair of B-767-3G5ERs in April next as it switches away from **Britannia Airways Germany, GmbH.** The aircraft will transport Fti passengers to Cuba and the Dominican Republic.

A decline in visitors caused the company to announce, on September 21, that it will not fly to Jamaica after the end of March.

After SAGroup transfers control and part of the equity in parent LTU to Rewe Touristik, GmbH. in September, LTU is forced to review its core business activities with a view to returning to profitability. In mid-October, the regional subsidiary RAS Fluggesellschaft, mbH. is sold to Wings Factor, of Moenchengladbach, which destination is now added to that small carrier's Shorts 360-300 network.

Two Next Generation B-737-75Bs leased from **Germania Fluggesellschaft, GmbH.** are returned at the end of the summer season on October 28. In an effort to gain a saleable number of seats, the company also begins to return four leased A330-223s.

LTU and **Sabena Belgian World Airlines, S.A.** begin to operate joint services from Dusseldorf, Frankfurt, Munich, and Stuttgart to Brussels on December 1; Sabena provides the flight equipment.

The company experiences two emergency landings for the same flight number within hours on December 9. The B-757-2G5 departing Hamburg for Lanzarote with 95 passengers suffers a hydraulic failure and quickly returns to its point of origin, where the customers are shuffled on board a second B-757-2G5, which makes a second departure. Just into the flight, the second plane must shut down an engine for technical reasons and return to Hamburg. There the passengers are transferred to a third B-757-2G5, although five (perhaps believing a third takeoff may be bad luck) remain behind. Except for being many hours late, this time the flight to Lanzarote is completed without a hitch.

On December 11, the carrier leases one each A330-200 and A320-214 from CIT Aerospace for delivery in February and May, respectively.

LTU LUFTTRANSPORT, GmbH.: Germany (1970-1995). Hans-Joachim Peters founds this small executive charter operation at Munster-Osnabruck Airport in 1970. Operations continue with little fanfare over the next 24 years and in 1994 the company employs 8 workers and operates a fleet of 2 Beech Super King Air 200s and 1 Cessna Citation SS1. Flights cease in 1995.

LTU SUD INTERNATIONAL AIRWAYS, GmbH.: Germany (1988-1997). Having become a member of the Dusseldorf-based LTU Group, **LTS (Lufttransport Sud, A.G. & Co.)** is reformed and renamed in January 1988. Hans-Joachim Driessen and Joachim Beickler, joint managing directors of **LTU International Airlines, GmbH.**, assume the same posts with this subsidiary. Passenger charter and inclusive-tour flights are continued with 3 Boeing 757-2G5s, now given the red and white livery of the parent. Enplanements for the year total 424,100. Weekly roundtrip flights begin on November 1, 1989 from Dusseldorf and Frankfurt to Honolulu. Traffic statistics for the year are not released.

In 1990, the fleet comprises 9 Boeing 757-2G5s (3 of which are leased out to **LTE International Airways, S.A.**), 2 B-757-225s (1 of which is chartered to **LTE International Airways, S.A.**), and 3 B-767-3G5ERs. In January, the carrier introduces New York to Frankfurt, Dusseldorf, and Munich roundtrip fares of \$369, with fares from Miami of \$439; the offer expires on March 11. Destinations visited by the

803-employee company include Brasilia, the Canary Islands, Costa Rica, Kenya, the Caribbean, Malaysia, the Maldives, Mexico, Nepal, North Africa, South Africa, Sri Lanka, the Mediterranean holiday ports, Thailand, and the U.S. Passenger boardings skyrocket to 1,745,600.

Beginning in 1991 statistics for the two carriers are reported together and will be found under the entry for **LTU International Airlines**. The fleet is increased in 1992 by the addition of a B-767-33AER. In 1993, airline employment stands at 999 while combined figures are again shown in 1994-1995.

The fleet in 1996-1997 includes 11 B-757-2G5s, 4 B-767-3G5ERs, 2 B-757-225s, and a B-767-33AER. In the fall of the latter year, Dusseldorf-based **LTU International Airlines, GmbH**, in a cost-cutting move, absorbs its separately owned, Munich-hubbed subsidiary.

LUCAS AIGLE AZUR, S.A.: France (1977-1987). Lucas Aigle Azur is organized at Pontoise Cedex in 1977 to provide scheduled nonstop daily passenger services in the summertime between Deauville and London (LGW). The 20-employee company obtains a fleet comprising 1 Embraer EMB-110 Bandeirante, 2 Beech Super King Air 200s, 1 Beech King Air 100, 1 Beech B80 Queen Air, and 1 Piper PA-23 Aztec. Air taxi, air ambulance, and charter flights are also offered.

Managing Director Jean Denis' carrier continues operations over the next decade largely without change in purpose, routes, or equipment. In 1987, the company is renamed **Aigle Azur Transport Aeriens, S.A.**

THE LUDINGTON LINE. See **NEW YORK, PHILADELPHIA AND WASHINGTON AIRWAY**

LUFT HANSA. See **DEUTSCHE LUFT HANSA, A.G. (DLH)**

LUFTFAHRTGESELLSCHAFT WALTER, GmbH. (LGW): Flugplatz 11, Dortmund, Mordrhein-Westfalen, D-44319, Germany; Phone 49 (231) 21980; Fax 49 (231) 212 798; http://www.lgw-flug.de; Code HE; Year Founded 1992. Bernard Walter establishes this third-level commuter operation at Dortmund in 1992. A workforce of 25 is recruited and a fleet of 2 Dornier 228-200s, 2 Cessna 404 Titan IIs, and 1 Pilatus Britten-Norman PBN-2 Islander is assembled. Revenue flights are inaugurated and continue, linking the company's base with Hamburg, Erfurt, and Rostock.

Operations continue apace in 1993-2000. With the fleet enhanced with another pair of Dornier 228-200s, additional destinations visited include Berlin, Cologne, Dortmund, Dusseldorf, Hanover, and Koln/Bonn.

LUFTHANSA CARGO AIRLINES, A.G.: P.O. Box 1244, Langer Kornweg 34i, Keisterbach, D-6092, Germany; Phone 6107-777-700; Fax 6107-777-880; http://www.lufthansa-cargo.com; Code LH; Year Founded 1977. German Cargo Airlines, GmbH. is established as a charter subsidiary of **Deutsche Lufthansa, A.G.** on March 10, 1977. For most of the next two decades, it will operate freight on behalf of its parent, using its aircraft and reporting its traffic figures with those of DLH.

To cut costs, Chairman Jurgen Weber unveils a new program on November 27, 1994 that will eliminate 8,400 jobs, abolish unprofitable routes, and spin off air freight, catering, and some passenger services to independent subsidiaries called profit centers. This is the first time an airline has divided its passenger and cargo operations into separate entities; the practice will become common.

Lufthansa Cargo Airlines, A.G. stands alone as of January 1, 1995. Wilhelm Althen, a former DLH vice president who had served with GCA, is named chairman and oversees a workforce of 4,800. The fleet includes 2 Boeing 737-230Cs, 1 of which is leased from **Air Atlanta Icelandic H.F.**, 1 leased B-737-3S3F, 1 leased B-737-3S3F, 5 B-747-230Fs, 1 of which is chartered to **Atlas Air** in the U.S., 6 leased B-747-230BFs, 2 leased Douglas DC-8-73AFs, and 3 leased DC-8-73CFs.

The company operates a huge network. There are 15 destinations in Africa, 27 in Asia and the Pacific, 24 in Germany and the CIS, and sev-

eral in North America, including New York. A partnership arrangement, completed the previous year, is in place with **Aviatrans Airlines** and covers service via Moscow to 56 CIS locations.

To meet the escalating demands of exporters of textiles and agricultural products, the carrier inaugurates twice-weekly service to Tirana, Albania, in September. The pact with Aviatrans is renewed and enhanced in December.

During its first year as an independent, LCAG operates 6.23 billion FTKs, a 9.6% increase.

Airline employment in 1996 totals 4,883. Early in the year, a hub is established at Sharjah, UAE, to serve as a center for all-cargo flights to and from the Indian subcontinent.

At the end of April, the number of weekly all-cargo frequencies operated with **Singapore Airlines, Ltd.** from Singapore to Frankfurt via Sharjah is increased from twice weekly to four times a week.

Transatlantic services are significantly increased during the summer as the carrier operates 35 flights weekly to the U.S. and Canada. At the same time, the company invests 40% minority shareholding in and receives a management contract from the new **Hinduja Cargo Services, Ltd.** (also known as Lufthansa Cargo India). Headquartered at Delhi, the new carrier, 60% held by the nonresident London-based Hinduja Group, leases three B-727-243Fs with which to begin operations.

In September, **Hinduja Cargo Services, Ltd.** contracts with the American freight charter operator **Custom Air Transport** to provide flight services to Sharjah, UAE, from six cities on the subcontinent. A total of 1.03 billion tons of cargo are flown worldwide this year and revenues of \$1.88 million are generated.

The company's sixth Indian cargo market is opened by **Hinduja Cargo Services, Ltd.** at Hyderabad in 1997 when its B-727-243Fs, flown by **Custom Air Transport** crews, inaugurates services; the market joins the GCA destinations of New Delhi, Bombay, Madras, Bangalore, and Kathmandu. Flights are also made to Colombo, Sri Lanka.

An order is now placed for three McDonnell Douglas MD-11F freighters; it is the first new order for the MD-11 since **Singapore Airlines, Ltd.** had cancelled its request back in 1991.

It is reported in September that, for the first six months of the year, the carrier has posted a DM 33-million (\$18.7-million) profit as compared to a DM 44-million loss of the same period a year earlier.

In mid-October, the company inaugurates weekly service into Indonesia's new Hang Nadim Airport, which is located just 20 miles from Singapore.

When LCAG determines during the month that it no longer requires its 25.4% stake in **Cargolux International Airlines, S.A.**, that shareholding is sold by parent **Deutsche Lufthansa, A.G.** to **Swissair, A.G.**'s **Swisscargo**, which is owned by SAirGroup's SAirLogistics subsidiary.

In December, LCAG executives meet near Frankfurt with the cargo directors of the five airlines in the "Star Alliance" to coordinate plans for the creation of a global air-cargo system.

For the year, the company's 15 freighters operate 6.44 million FTKs, a 3.4% rise, and haul 1.05 billion tons of goods. Revenues ascend to \$2.15 billion.

At the beginning of 1998, LCAG is the 2nd largest airline in the world in terms of freight carried and the 24th in net profit. The fleet now includes 11 B-747-200Fs and 5 MD-11Fs.

In January, in a continuing effort to develop and expand joint products and cooperation, the carrier enters into a series of "business partnership plans" with selected air freight forwarders. These include Jet Speed (Pty.), Ltd. in Hong Kong, Hellmann International Forwarders, GmbH. in Germany, and the U.S. concerns Expeditors International and Air Express International.

A subcontract is entered into with **HeavyLift Cargo Airlines, Ltd.** in February. It is operated from Frankfurt to and from Athens and Istanbul by an Airbus Industrie A300B4-203F chartered from HeavyLift and flown under contract by **TransAer International Airways, Ltd.** At the end of February, the LCAG board approves the purchase of three additional MD-11Fs, with delivery scheduled for February 1999.

The company, on April 1, commences "td.Flash" and "td.X" express services in an effort to provide the same sort of time-definitive and traceable delivery of general packages and cargo as is offered by **Federal Express** and **UPS (United Parcel Service)**. The new product is introduced at 53 **Deutsche Lufthansa, A.G.** stations in Germany and Europe.

A ceremony at Frankfurt on July 1 marks the arrival of the first two MD-11Fs from Long Beach.

As the result of negotiations successfully completed during the summer for a joint weekly all-cargo service with **SAS (Scandinavian Airlines System)** and **Japan Air Lines Company, Ltd.** (2), an LCAG B-747-230F begins flying on behalf of the three between Frankfurt, Goteborg, and Osaka on September 21.

The carrier's North Asia headquarters are moved to Shanghai in October.

The company greatly expands its express product line during November. The time-definite services are available to 100 destinations.

On the year, cargo traffic ascends 2.2% to 6.69 billion FTKs. Financial data is released with that of the parent group. It is noted that, having handled 93,000 tons on 4,200 flights, Sharjah is now the carrier's second largest cargo hub behind Frankfurt.

In a joint service with **Air China International Corporation**, Lufthansa Cargo, on January 15, 1999, inaugurates weekly roundtrip all-cargo flights between Frankfurt and Shanghai employing one of its MD-11Fs. These direct freight flights are upgraded to twice weekly in March.

Also during the first quarter, the company announces that it will temporarily suspend services into Dallas (DFW) from March 26 through October 29 in order to implement growth elsewhere and allow freighter rotation.

Frequencies on the joint service between Frankfurt, Goteborg, and Osaka are increased to three per week during April.

Also at the beginning of the second quarter, the company's express product line is boosted. Not only are 63 destinations added to the schedule just for these time-definite services, but a new tailor-made and integrated package, Service Package, is also introduced.

In something of a surprise move, LCAG resumes MD-11F flights to Dallas (DFW) on May 31, five months earlier than it had anticipated. Large quantities of high-tech equipment, computers, petroleum and chemical machinery, live animals, and perishables are flown from the Texas airport, thrice weekly to Mexico City and four times a week to Frankfurt. A high volume of auto-related parts and perishables come in from Mexico.

It is announced on September 1 that, effective November 1, weekly frequencies between Frankfurt and Kuala Lumpur, Malaysia, will be increased from one to three.

During September, a 29% stake is taken in a joint venture with Pudong International Airport (51%) and Jim Hai Jet Air (20%) to operate a large new cargo terminal at this Shanghai airport.

The cargo division of **KLM (Royal Dutch Airlines, N.V.)** informs **HeavyLift Cargo Airlines, Ltd.** on October 6 that it will not, in light of the forthcoming merger by the Dutch carrier with **Alitalia, S.p.A.**, be renewing its contract for the lease of two British A300 freighters. In response, HeavyLift now turns around and leases one to Lufthansa Cargo. Also in October, Pudong International Airport at Shanghai opens a new cargo terminal that it jointly operates with Lufthansa Cargo.

Cargo traffic jumps 5.6% to 7.07 billion FTKs.

The workforce at the beginning of 2000 totals 4,883. Among the world's top 25 airlines, Lufthansa Cargo is 2nd in FTKs.

It is reported in March that DHL Airways will soon be taken over by the combined forces of Deutsche Post and **Deutsche Lufthansa, A.G.** Each has a 25% + 1 share stake in the company and its European counterpart, DHL International. Although smaller than either **Federal Express (FedEx)** or **United Parcel Service (UPS)**, **DHL Worldwide Express** (parent of both DHL-A and DHL-I) leads both in cross-border mail and express deliveries (38% against 20% for the former and 15%

for the latter). It has also made purchases in trucking, logistics, and air freight that rivals both of the American giants.

The story is part of a general revelation in the aviation media that Deutsche Post and Deutsche Lufthansa Group are reviewing several schemes for a joint-venture (code-named PELIKAN) merging of their logistic activities. PELIKAN would see the joining of DHL Worldwide with Lufthansa Cargo with Deutsche Post-owned Air Express International.

At this point, **United Parcel Service (UPS)** demands that the EU Commission require Deutsche Post to split up its commercial and public service activities. UPS had originally petitioned the EUC in 1994 alleging unfair competition in the parcel post sector; now it emerges that Deutsche Post has invested almost \$5 billion in the years since to build up its parcel post activities, while recently engaging in alliance discussions with both DHL and **Deutsche Lufthansa, A.G.** It is anticipated that the Commission will respond by April, but it will not open its formal investigation until August.

On April 16, the company reaches an agreement with **Philippine Airlines** under which the latter will sell space aboard the German line's Manila to Frankfurt cargo flights.

It is revealed on April 20 that Lufthansa Cargo is terminating its arrangement with **Hinduja Cargo Services, Ltd.**, which has been feeding the German major's Frankfurt-bound MD-11Fs at Sharjah for flights to India. With increased demand, Lufthansa Cargo is now operating its Frankfurt service nonstop.

It is announced on April 27 that the carrier is joining with **SAS (Scandinavian Airlines System)** and **Singapore Airlines, Ltd.** to create an air freight joint venture to be known as New Global Cargo. The new entity will integrate the cargo networks of the three founders; based at Frankfurt, it will eventually have 60 long-range freighters and operate to 500 destinations in 35 nations.

During May, Lufthansa Cargo moves closer to several air freight forwarders in May when it enters into an alliance with Deutsche Post, owner of Danzas and AEI.

A commercial and operational alliance is formed between Lufthansa Cargo and the cargo division of **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)** on May 31. When the partnership takes effect on November 2, the German line will be able to instantly boost its business in Brazil, while the Brazilian carrier will be able to increase sales by 40% without any new aircraft. Frequencies between Brazil and Germany will grow from five to nine weekly flights, with incoming cargo connections made via VARIG for Bogota, Buenos Aires, and Montevideo.

In early July, Jean-Peter Jansen becomes chairman of the carrier's executive board.

On August 20 and 21, two B-747-230F depart Frankfurt with 91 horses that are being transported 20,000 km. to Sydney for the Olympic Games via Dubai and Singapore. Another B-747-230F transports 52 horses from the U.K. Olympic Equestrian Team in Australia on August 23, followed by another B-747-230F, from Frankfurt, transporting 45 more four-legged contestants, including all 17 from Germany's 3 Olympic equestrian teams.

On August 22, *Flight International*, in its annual commercial airline survey, reports that Lufthansa Cargo is the second largest cargo airline in the world after **Federal Express (FedEx)**.

The horses transported to Australia in late August are all returned to Europe on special October 2-6 charters.

On November 2, Lufthansa Cargo and **DHL Worldwide Express** jointly announce the introduction of their first cooperation in Russia and the CIS, a daily return cargo service from Moscow to Cologne. As a result of the new route, DHL will be able to significantly reduce its delivery times, allowing 90% of deliveries to and from Moscow to be delivered the next day, with times to 30 cities in Russia and the CIS via Moscow to be reduced as well.

Deutsche Post, A.G. completes an initial public offering on November 20 and moves to acquire a controlling 70% stake in **DHL**

Worldwide Express. It also begins the process of forming a closer alliance with Lufthansa Cargo.

Later in the month, Lufthansa Cargo takes over the management of all cargo activities for **Spanair, S.A.**, including its three international freight flights.

In December, new Chairman Jean-Pierre Jansen and his second in command, Andreas Otto, reform the company. Effective January 1, it will have three major divisions: Global Freighter Operations (flight operations), Global Cargo Handling Services (ground handling), and Global Cargo Net (e-commerce). Also, as the year ends, it is announced that the carrier will, in January and February, take delivery of the last two MD-11Fs purpose-built at Long Beach and employ them to launch a new thrice-weekly service to Melbourne via Auckland.

A total of 1,801,817 tons of cargo and mail are delivered during the year, a 3.2% increase over 1999.

At a Long Beach, California, ceremony attended by almost 1,000 people on March 1, 2001, Lufthansa Cargo will accept delivery of the 200th MD-11, the last aircraft to be built under the McDonnell Douglas—or Douglas—name. The event will occur 80 years almost to the day after Donald Douglas flew his first plane.

LUFTHANSA CARGO INDIA. See **HINDUJA CARGO SERVICES, LTD.**

LUFTHANSA CITYLINE, GmbH: Am Holzweg 26, Kriftel, D-65830, Germany; Phone 49 (61) 92 407-0; Fax 49 (61) 92 407 466; <http://www.lhcityline.com>; Code CL; Year Founded 1992. **DLT (Deutsche Luftverkehrs, GmbH.)** is renamed Lufthansa CityLine, GmbH. in March 1992 and becomes responsible for the parent's nonstop European regional services. **Deutsche Lufthansa, A.G.** will provide a number of support services, but under terms of the contract between the two carriers, it will also receive all of Lufthansa CityLine, GmbH.'s after-tax profits (if any).

Helmut Horn and Gerhard Schmidt are appointed joint managing directors. Airline employment is increased by 46.1% to 865. The initial fleet comprises 6 Avions de Transport Regional ATR42-320s leased from **Cimber Air, A.S.**, 23 Fokker 50s (11 of which are leased), and 3 British Aerospace BAe (HS) 748-B2s, which are soon placed out of service.

During September, it is announced that the company's German domestic and feeder services have been reduced to 15% of total operations as the result of high airport fees and low fares. A plan is announced to cooperate with ICE, the rail service that is its chief competitor.

In November, the carrier, European launch customer for the Canadair CRJ-100ER Regional Jet, places the first 2 of the 13 units of the new aircraft requested into service. No longer considering itself a regional operator, the company orders the word "regional" removed from these new jetliners and chooses not to renew its membership in the European Regional Association (ERA).

At this point, a new, modified **Deutsche Lufthansa, A.G.** livery, including the famous "crane on the tail," is also applied to all of the line's aircraft. The company's 1,500-sq.-m. flight training center for the RJ is opened in December at Berlin's Schoenefeld Airport. It is operated by the new CityLine Simulator and Training, GmbH. subsidiary. Passenger boardings this year ascend 18.8% to 1,391,843.

On January 1, 1993, **Deutsche Lufthansa, A.G.** takes the company over as a wholly owned subsidiary and establishes for it an additional new base at Cologne. Airline employment stands at 865 and the leased fleet of new Managing Director Karl Friedrich Rausch includes Cimber's 6 ATR42-330s, 2 CRJ-100ERs, and 27 Fokker 50s.

While landing at Bremen on January 6 after a service from Paris, Flight 5634, a DHC-8-301 with 4 crew and 19 passengers, must choose an alternative runway after a **Korean Air Lines/Korean Air (KAL)** B-747 suffers a burst tire upon landing. As it does so, the DHC descends

rapidly and flies into the ground 1,800 m. short of the runway (four dead).

As more CRJs arrive, they join the first two on the city-pair routes of Cologne–Stockholm, Cologne–Barcelona, Cologne–Madrid, Cologne–Rome, Berlin (Tempelhof Airport)–Stockholm, and Stuttgart–Stockholm.

The new units also initiate services in March from Hamburg to Stockholm, Milan, Manchester, and Warsaw as well as from Hanover to Barcelona, Munich to Oslo, and Frankfurt to Lugano. By summer, the carrier has been folded into the DLH domestic subsidiary Lufthansa Express, GmbH. and assumes responsibility for all of its parent's 100-seater nonstop European flights, serving 60 cities in 20 countries, including new markets at Riga, Bucharest, Sofia, and Vilnius.

The fleet in 1994 includes 5 **Cimber Air, A.S.** ATR42-320s, 13 Canadair CRJ-100ER Regional Jets, and 25 Fokker 50s. Two more CRJ-100ERs arrive in May and June. Also, on June 16, a \$75-million order is placed for three Avro (BAe) RJ85s, plus three options. Also requested are eight more Canadair CRJ-100ER Regional Jets.

Registered D-AVRO, the first RJ85 is delivered on October 17. In his acceptance speech, Managing Director Rausch notes that the new aircraft will be employed to offer city-class, single-class service under a new program known as CityLine Europe, which will hub at Munich. The Canadairs and Fokkers will join the program as soon as new leather seating can be fitted. The service will also feature different menus every week graded by flight stage length: 90 minutes, 90–130 minutes, and over 130 minutes.

The next two RJ85s arrive on November 18 and December 12, respectively, and also enter CityLine Europe service.

Enplanements this year reach 2,198,325.

Airline employment grows 14.6% in 1995 to 1,321 as the fleet replacement program also picks up speed. In January, the company's requests for Avro aircraft is increased by seven in a \$175-million follow-on order. Eight more Canadairs, valued at \$146 million, are also requested. The Fokker 50 contingent declines to 13 after 10 CRJ-100ERs begin to enter service after April. In addition, three more Avro RJ85s arrive by May, a seventh in June, and three more during the fall. In addition, four **Cimber Air, A.S.** ATR42-320s remain in operation.

Meanwhile, early in the year, CityLine Europe flights from Munich commence to Amsterdam, Copenhagen, Leipzig, Milan, Minsk, Rome, Sofia, and Vienna. Flights to Oslo, Budapest, and Florence are also inaugurated.

Passenger boardings jump 15.8% to 2,610,837.

The workforce is increased by 12.3% in 1996 to 1,484 as the fleet replacement program approaches its end. The addition of 8 Canadair Regional Jets increases the number of that type in the fleet to 29; meanwhile, 5 Avro RJ85s arrive, bringing representation of that type to 17. The last three Fokker 50s are turned over to Avro as partial payment; the manufacturer passes them on to a leasing concern.

In April, the joint-venture CityLine Avro Simulator and Training facility opens at Berlin's Schoenefeld Airport. Work begins on a DM 18-million (\$10-million) headquarters, office, and warehouse complex at Bonn's Konrad Adenauer Airport, which is scheduled to open in late 1998. The facility will become known as "the airplane," because its ground plan is designed roughly along the lines of a Canadair jetliner.

An agreement with the pilots' union, also in April, allows the carrier to remove the CityLine Europe titles previously painted on the new RJ85s and replace them with Lufthansa titles.

A route is started from Bremen to London (LCY). Primarily to serve the needs of Siemens, which is building a new factory in the Wallsend region of Great Britain and needs transport for its employees, Lufthansa CityLine, GmbH., on July 15 launches twice-weekly CRJ roundtrip flights from Munich to Newcastle via Birmingham.

It is announced in November that the company's Kriftal operation will be integrated at Cologne in 1998. In December, a \$70 million follow-on order is placed for three more Canadair CRJ-100ERs, plus three options.

Customer bookings this year increase 17.5% to 3,067,780.

The employee population is reduced by 3.6% in 1997 to 1,430.

The carrier's unions, in January, agree to a new labor contract with the carrier. In exchange for a new pension plan, the 1,530 employees waive wage increases in favor of profit sharing.

In February, the last Fokker 50s and the **Cimber Air, A.S.** ATRs are retired as the carrier accepts one more Canadair and two RJ85s. The Fokkers are passed to affiliate **Contactair Flugdienst, GmbH. & Co.**

Also in February, CityLine becomes the first European airline to receive certification for the Flight Dynamics head-up guidance system, HGS-2000. The company equips its 28 Canadairs with the system and on March 1 is permitted by the government aviation ministry to become the first German regional authorized to make manual Category 3A instrument landings.

The need for transport for Siemens employees now having ended, the twice-weekly flights into Newcastle cease on March 26.

On April 1, European skies are totally deregulated. On this date, the company takes over the Friedrichshafen to Dusseldorf route from which **Regional Airlines, S.A.** had elected to retire following its purchase of the turboprop routes of **Deutsche BA Luftfahrtgesellschaft, GmbH.**

Also on April 1, the company joins with Bombardier Business Aircraft, Ltd. to form European Business Jet Services at Schoenefeld Airport in Berlin. When it begins flying in the fall, EBJS will offer charter services to those European destinations with no scheduled air service.

The 200th CRJ-100ER built is delivered to the carrier on October 24; it is the carrier's 30th Canadair. Three days later, thrice-daily weekday Avro RJ85 service is inaugurated between Frankfurt and London (LCY).

Passenger boardings accelerate 25.4% to 3,841,000. The figure represents more than a third of all Lufthansa intra-European flights. Revenues total DM 1.37 billion, with profit up 67% to DM 10.9 million.

In early 1998 the fleet of the joint managing directors, Karl-Heinz Koepfle and Georg Steinbacher, includes 32 CRJ-100ERs and 18 Avro RJ85s.

In May, the carrier joins with **Crossair, Ltd.** to become joint European launch customer for the Fairchild Dornier 724JET. On September 17, an order is placed for 10 Bombardier Aerospace CRJ Series 700 regional jets, with options taken on 10 more. Simultaneously, a follow-on order is placed for 10 additional CRJ-100s, for delivery beginning in the first quarter of the year 2000.

Beginning in August, all of the company's Avro RJ85s are sent, one after another, to Avrotec in the U.K., where they are upgraded to the latest production standard.

The company occupies its new DM 18-million (\$10-million) headquarters, office, and warehouse complex at Bonn's Konrad Adenauer Airport during the last week in October; simultaneously, the 32nd CRJ-100ER is also received.

A \$22-million contract is signed with **Debonair, Ltd.** on November 1. Under its terms, the British airline will operate short-haul replacement services from Munich, committing five of its BAe 146-200/300s to the operation beginning in March.

As the year ends, the carrier operates to 76 destinations in 27 countries. It also carries a third of Lufthansa's European passenger traffic.

Passenger boardings ascend 14.9% to 4.39 million.

The carrier's 50th CRJ-100ER is received in January 1999 and is christened *Little Europe*. As part of its color scheme, the jetliner wears depictions of landmarks at its strongest European markets on both sides of its all-white fuselage. On the right side are renderings of Cologne Cathedral, Brussels' Atomium, London's Big Ben, the Colosseum from Rome, and the Eiffel Tower from Paris. Copenhagen's Little Mermaid, the Leaning Tower of Pisa, Berlin's Brandenburg Gate, onion domes of Eastern European churches, and the Prater in Vienna all appear on the left side.

The 51st Canadair CRJ100ER is received on March 22 and the same day enters service on the company's route from Cologne/Bonn to Barcelona. The carrier's Canadair fleet now links 51 cities in 19 European countries.

As scheduled, **Debonair, Ltd.** begins operating five BAe 146-200s from Munich on behalf of Cityline on March 28. Twice-daily "Team Lufthansa" flights are offered by four aircraft to Birmingham, Helsinki, Manchester, and Toulouse. The fifth, which had previously operated "Air France Express" service, flies one roundtrip every weekday to both Brussels and Marseilles, followed by weekend flights to Amsterdam, Marseilles, Vienna, Milan (twice), and Manchester.

Also on March 28, **Flightline, Ltd.** becomes the second British "Team Lufthansa" carrier and the seventh overall. Employing a BAe 146-200 that it had previously leased to **Aer Lingus Commuter (Aerlinite Eireann Tioranta, Ltd.)** and has now painted in the colors of the Lufthansa organization, Flightline offers daily roundtrips from Dusseldorf to Birmingham, Budapest, Helsinki, and Nice.

In need of short-term extra capacity, **Debonair, Ltd.** wet-leases a BAe 146-100 from Lufthansa CityLine. The German aircraft will be operated over the British line's routes from Moenchengladbach to London (CTN) and Barcelona through May 6.

Also on March 28, daily (except Saturday) CRJ100ER roundtrips begin from Cologne/Bonn to Geneva; at the same time, the same number of CRJ100ER return flights are started between Hanover and Vienna.

On behalf of Lufthansa CityLine, GmbH., **Deutsche Lufthansa, A.G.** places a \$1.6-billion firm order on April 29 for 60 Fairchild Aerospace 728JETS, along with 60 options, with deliveries scheduled to begin in 2002. Fairchild Aerospace Chairman/CEO Carl Albert joins with DLH Chairman/CEO Jurgen Weber in announcing that the planes for the launch customer will be assembled at the manufacturer's facilities in Oberpfaffenhofen.

During late April and early May, a number of new Canadair charter routes are opened on behalf of various tour operators. Among these is a service from Frankfurt to Patras/Araxos in Greece on April 10 and to Palermo and Catania on April 17, from Hanover and Cologne/Bonn to Shannon on May 1, and from Dusseldorf to Santiago de Compostela in northern Spain on May 9.

Upon the September 30 collapse of **Debonair Airways, Ltd.**, CityLine suspends the "Team Lufthansa" service the U.K. airline had been providing. The following week, however, it makes temporary arrangements to resume flights, handing a replacement "Team Lufthansa" contract to **British Midland Commuter, Ltd.** Plans are made for BMC to take over the five BAe-146s leased by Debonair, hire required personnel, and continue the flights from Munich. Unhappily, the relaunch is delayed by difficulties in transferring the 146 leases and a November service resumption will be pushed into the new year.

Beginning on October 16 and continuing through next April 29, Saturday CRJ100ER roundtrip charters are operated from Hamburg to the Spanish Balearic island of Ibiza. Beginning on December 26 and continuing through March 26, weekly CRJ100ER return flight charters are operated from Berlin (Tegel) to Ostersund, in central Sweden.

Overall, CityLine passenger boardings jump 11.3% on the year to 4,895,000.

Airline employment at the beginning of 2000 stands at 1,726, a 7.9% increase over the previous 12 months. The fleet now includes 39 Canadair CRJ100ERs and 18 Avro RJ85s.

The delayed inauguration of "Team Lufthansa" service by **British Midland Commuter, Ltd.** from Munich begins on February 7, employing a single leased BAe 146-200.

By March, one each chartered ERJ-145, B-737-59D, BAe 146-200, and Airbus A321-231 have been stationed at Munich to fly the CityLine subservice previously operated by **Debonair Airways, Ltd.**

The first Lufthansa Cityline Canadair CRJ200ER and the 40th Canadair regional jet received enters service on March 16. With the beginning of the summer schedule on April 1, weekly CRJ100ER return flights are launched from Hanover to Venice. Six times a week Canadair roundtrips are introduced between Hanover and Geneva on April 3.

On April 17, the B-737-59D and ERJ-145 are returned by **British Midland Commuter, Ltd.** to **British Midland Airways, Ltd.** and

replaced with two more BAe 146-200s. BMC joins "Team Lufthansa" in May and its BAes are repainted.

Business Class service is added to the one-class City Class product on July 1, differentiating a somewhat higher standard of service provided to executives on a number of its flights.

Orders are placed by CityLine on September 22 for 10 more CRJ700s, bringing the total number of company orders for the enlarged regional jet to 20.

The twice-daily CRJ roundtrips from Munich to Nice and Toulouse are increased to thrice daily on October 29. The new frequency is provided with an Avro RJ85. In keeping with the policy of parent **Deutsche Lufthansa, A.G.** to develop Munich as a second and southern hub, CityLine now raises by 40% the number of its nonstop connections from the Bavarian capital to 421 weekly flights to 35 European destinations. Daily CRJ roundtrips are started to Belgrade.

For the first time in the space of a year, CityLine, on November 9, boards its five millionth passenger. The unknown customer count reaches the new record peak on the day's Flight 5897 from Brussels to Munich.

The first full Phase III CRJ700 simulator in Europe completes installation at Berlin (Schoenefeld Airport) on December 18. Jointly financed by Bombardier Aerospace, CityLine, and simulator manufacturer, the center was opened in 1991; the CRJ700 simulator will be turned on in March.

Overall enplanements for the year jump 17.3% to 5.7 million.

LUFTTRANSPORT, A.S.: P.O. Box 2500, Tromsø, N-9002, Norway; Phone 47 7767 0022; Fax 47 7767 2975; Code L5; Year Founded 1983. This rotary-wing carrier is established at Tromsø in 1983 to provide unscheduled shuttle service to oil fields off the north coast employing four Aerospatiale AS-332L Super Pumas. Among the sites served from a field at Andenes is a gas-drilling rig in the Tromsø Field of Elf Aquitaine Norge, A.S. Another contract is held with Norsk Hydro A.S. and the state oil company Statoil for service from Andenes to two rigs in the Tromsø field.

Early in 1984, the company accepts a contract from Saga Petroleum, A.S. to fly Bell JetRangers on its behalf in Benin, Africa. Mobil Exploration Norway, Inc. now grants the charter operator a contract to fly Super Pumas from Bergen's Flesland Airport to the Statfjord field eight times per week. The contract ends the near-monopoly on offshore support held by competitor **Helikopter Service, A.S. (HS)**.

Operations continue apace over the next five years, during which time HS acquires shareholding. By 1987, HS has acquired ownership, and Lufttransport becomes a subsidiary (later a division) of the giant rotary-winged concern.

When HS is reorganized during the summer of 1989, onshore operations are made Lufttransport's responsibility.

There is little change in company operations during the early years of the 1990s. Passenger and cargo charters, VIP and executive transport, construction, external load, survey, and air-sea rescue flights continue to be provided, as well as coast guard work.

When HS is awarded a five-year emergency medical services (EMS) contract in May 1993, responsibility for operations on the new aeromedical routes is divided between Lufttransport and **A/S Morefly** from bases at Tromsø, Bronnoysund, and Vigra. Both companies are assigned purely domestic onshore responsibilities during the remainder of the year.

In 1994, Managing Director Gunnar Bjoersvik's carrier operates from bases at Voss, Bronnoysund, and Longyearbyen, Spitsbergen. The fleet includes 7 Eurocopter AS-350B Ecureuilss and 2 each SA-315s, SA-365Ns, Bell 212s, and Bell 205As, plus 5 Bell 214Bs.

Flights continue in 1995-1996. During these years, two AS-350Bs and two Bell 214Bs are withdrawn. On April 22, 1997, the company obtains a 5-year, Nkr 200-million air ambulance contract from the Norwegian Social Security Department.

By 1998, Managing Director Bjoersvik oversees a 160-person workforce and enjoys annual revenues of \$30 million. His rotary-wing fleet includes 5 Aerospatiale AS-350 Ecureuils, 2 SA-315 Lamas, 2 Bell 212s, 3 Bell 214Bs, and 2 Bell 212s. Additionally, the fixed-wing aircraft include 10 Beech Super King Air 200s, 1 Partenavia Spartacus, and 1 Dornier Do 228-200.

Lufttransport, on June 9, signs a sale and lease-back agreement for seven Beech Super King Air 200s, which it will fly in support of the Norwegian ambulance service. The deal is valued at Nkr 20 million.

During the summer of 1999, the company's **Helikopter Service, A.S.** parent is taken over by its North American rival, **Canadian Helicopter Corporation, Ltd. (CHC)**.

CHC undertakes a program of rationalization during the first half of 2000, selling off a number of noncore operations. Among these is Lufttransport, A.S., which is passed to **Norwegian Air Shuttle, A.S.** on July 14 in consideration of a sum of Nkr85 million (C\$14.3 million).

LUFTTRANSPORT SUD, GmbH. *See* **LTS (LUFTTRANSPORT SUD, GmbH.)**

LUFTTRANSPORT-UNTERNELHMEN, GmbH. & CO, KG. *See* **LTU INTERNATIONAL AIRLINES**

LUFTVERKEHR FRIESLAND BRUNZEMA & PARTNER, K.G. (LFH): Flugplatz/Airport Harle, Wittmund, Carolinensiel, D-26409, Germany; Phone 49 (4464) 8011; Fax 49 (4464) 8321; <http://www.inselfleuger.de>; Code LFH; Year Founded 1983. Organized at Wittmund in September 1983 to succeed **Luftverkehr Wilhelmshaven-Friesland, GmbH.**, President Jan-Luppen Brunzema's carrier is outfitted with 2 Britten-Norman BN-2 Islanders, 1 Cessna 206, and 1 Cessna 172C. Regularly scheduled services are inaugurated from Harle Airport on October 1 linking Wittmund with Wangerooge. Enplanements reach 3,500 by year's end and the employee population reaches seven.

Destinations served in 1984-1985 also include Baltrum, Borkum, Busum, Juist, Langeoog, Norddeich, Norderney, Westerland/Sylt, and Wyck. Harle and Helgoland are added to the route system in 1986.

Two more Cessna 172s are purchased in 1987. Flights begin to Fehmarn in 1988 and the year's enplanements total 47,315.

Airline employment is increased by 18.2% in 1989 to 13 and the fleet includes 2 Islanders and 3 172Cs. Passenger boardings ascend 5.6% to 50,121.

A third Islander and fourth 172C are acquired in 1990, followed by a fourth Cessna 172 in 1992.

In 1993, Chairman Brunzema's fleet visits Wangerooge, Langeoog, Baltrum, Norderney, Juist, Borkum, Helgoland, Heide, Busum, St. Peter-Ording, Wyk-Fohr, Westerland-Sylt, and Fehmarn. This schedule is maintained in 1994 and, as traffic improves, a fifth Cessna 172C is requested.

Late in 1995, the company places an order with Pilatus Britten-Norman for a new PBN2B-26 with which to replace one of its older units. The aircraft features use of new three-blade noise reduction propellers. The new aircraft is delivered in 1996. The workforce reaches 17 by 1997-2000.

LUFTVERKEHR SABLATNIG, GmbH. *See* **LLOYD LUFTVERKEHR SABLATNIG, GmbH.**

LUFTVERKEHR WILHELMHAVEN-FRIESLAND, GmbH.: Germany (1975–1983). LWF is organized as an air taxi in 1975, but within several years begins to offer scheduled services linking Wilhelmshaven with the Frisian Islands destinations of Schortens, Heidemuhle, Harte/Friesland, and Wangerooge. The fleet by decade's end comes to comprise 3 Britten-Norman BN-2 Islanders, 1 Cessna 402, 1 Cessna 310, and 1 Cessna 206. Operations cease late in 1983.

LUFTVERKEHRSGESELLSCHAFT RUHRGEBIET, A.G. (LURAG): Germany (1925–1926). LURAG is established at Dorsten on January 11, 1925 by local industrialists and bankers, government entities, and Junkers Flugzeugwerke, A.G. On February 24, the new company joins the airplane manufacturer's Trans Europa Union of airlines.

Employing F.13 cabin monoplanes provided by Junkers, LURAG inaugurates revenue services on April 20 that link its base with Munster, Frankfurt, Stuttgart, and the Swiss city of Zurich. Flights to Kassel, Erfurt, and Leipzig commence in July. The fleet is increased throughout the year, reaching a total of 5 F.13s and 5 G.24s.

Late in the year, as the French complete their occupation of the Ruhrgebiet, the airline transfers its operations to Essen.

The company gains shares in the new **Deutsche Luft Hansa, A.G.** when it is formed in January 1926 and shuts down its own flight operations, offering its aircraft to the new state carrier.

LUKUM AIR SERVICE, S.A.: Zaire (1981–1990). Also known as LUKAS, LAS is set up at Kinshasa in 1981 as an all-cargo carrier. Regional and domestic freight and contract service flights are launched with 2 Douglas DC-6s, 2 DC-4s, 1 Bristol Britannia 300F, and 1 DC-3.

A Boeing 707-320C is acquired in 1982, followed by a DC-8-50F in 1985. Flights continue through the end of the decade.

LUMBINI AIRWAYS, LTD.: P.O. Box 6215, Kathmandu, Nepal; Phone 977 (1) 482 725; Fax 977 (1) 483 380; Code LUMB; Year Founded 1996. With a goal of providing daily flights to domestic tourist spots, Lumbini is established at Kathmandu in 1996 as a joint venture between Nepalese and Japanese investors. R. Sakya is named managing director and he recruits a workforce of 200 and 4 de Havilland Canada DHC-6-300 Twin Otters.

Revenue flights commence on April 15, 1997, linking the carrier's base with Lukla, Pokhara, Jomsom, Meghauly, Braratpur, and Bhairahawa. Charters are also operated to bush locations such as Nepalgunj, Phaplu, and Semara.

Flights continue during the remainder of the year and into the new millennium.

LUNDY AND ATLANTIC COAST AIR LINES, LTD.: United Kingdom (1937–1939). Atlantic Coast Air Services, Ltd. is renamed Lundy and Atlantic Coast Air Lines, Ltd. on April 26, 1937; however, the previous Short Scion Lundy–Barnstaple service is continued.

In accordance with the Air Navigation Order of September 16, 1938, this carrier is granted route certification from Barnstaple–Lundy on October 21 by the new ATLB.

A total of 1,400 passengers are carried on the year.

War is declared on Germany on September 3, 1939 and all civil flying ceases; this airline operation is not resumed.

LUPENGA AIR TRANSPORT, LTD.: Zambia (1990–1993). Lupenga Air Charter is established at Lusaka in February 1990 to offer all cargo services to and from Europe. The carrier is the first private air transport company granted authority by the government to operate international services. Of the three directors, one is Panji T. Kaunda, brother of the nation's chief executive.

The company name is changed to LAT in early 1991 and a Boeing 707F is leased from Switzerland's Momac Aviation. Revenue flights commence in July linking Lusaka with Amsterdam, with stops at Nairobi northbound and Lagos southbound. Flights cease in 1993.

LUXAIR (SOCIETE LUXEMBOURGEOISE DE NAVIGATION AERIENNE, S.A.): Aeroport de Luxembourg, L-2987, Luxembourg; Phone 352 (4) 798-2311; Fax 352 (4) 443-2482; <http://www.luxair.lu>; Code LG; Year Founded 1961. SLNA is reformed as the national airline in 1961, complete with the marketing title **Luxembourg Airlines, S.A.** On April 1, 1962, the operation is renamed Luxair. Shareholders include the government (25.87%), Luxembourg Steel Industries (14.83%), the International (14.83%), General Banks (14.83%), State Savings Bank (14.83%), Radio Luxembourg (14.83%), and private citizens (.28%). Douglas DC-3 scheduled flights to Paris commence on April 2.

Services from Luxembourg Airport are gradually expanded to other European destinations, including Amsterdam, Athens, Frankfurt, London, Nice, Palma de Mallorca, Zurich, and Rome. Charter flights are also undertaken to vacation stops in the Mediterranean. Enplanements in this year total 12,000.

These operations continue apace during the remainder of the decade as the fleet is upgraded from piston-engine equipment to Vickers Viscounts, Fokker F.27s, and a Sud-Est SE-210 Caravelle VIR. In April 1964, a cooperative agreement is entered into with the South African independent **Trek Airways (Pty.), Ltd.** Trek flies its Lockheed L-1049A Starliners from Johannesburg to Luxembourg and Luxair takes them over to provide a connecting flight onto London.

A Bristol Britannia is leased in June 1968 for the joint Luxembourg–South Africa service, although the last Starliner is not withdrawn from the London connection until September 30. Given the popularity of its Mediterranean tour services, the company now establishes its own tour-operator department, Luxairtours.

The first Boeing 707-320 is received in 1970, the same year a 25% interest is taken in the new all-freight carrier **Cargolux Airlines International, S.A.**

The air taxi subsidiary **Luxavia, S.A.** is formed in 1971 to provide unscheduled regional services to smaller destinations. Enplanements for the year total 216,000.

The tenth anniversary is celebrated in 1972 as major expansion begins to unfold. The workforce now totals 450 as another B-707, a Dash-320C, and another SE-210 join the fleet. New services are inaugurated to Monastir and Ibiza and frequencies are increased on routes to Malaga, Paris, and Athens.

Passenger boardings jump 10% to 240,000.

When **Trek Airways (Pty.), Ltd.** closes down in 1976, many of its personnel and several of its aircraft are taken over by Luxair. In 1978, President Gust Graas and Managing Director Roger Sietzen oversee a workforce of 637 and a fleet comprising 1 Boeing 707-320, 1 B-707-320C, 2 B-737-2C9As, and 3 Fokker F.27s.

During 1979, flights begin to such new vacation stops as Las Palmas, Tenerife, Agadir, Rhodes, Salzburg, Malaga, Rimini, Ibiza, Catania, Bastia, and Alicante.

In October 1980, the Boeing 747SP-44 *Soutpansberg* is leased from **South African Airways (Pty.), Ltd.** to operate flights to Johannesburg.

Passenger enplanements this year reach 295,488.

The employee population in 1981 stands at 693 and the fleet includes 6 aircraft. The arrangement to charter the *Soutpansberg* falls through in January and the Jumbojet is not delivered.

Passenger boardings fall 2.6% to 288,140 as freight traffic declines 4.5% to 25.01 million FTKs.

The number of workers is increased by 8.2% in 1982 to 750. Customer bookings jump 11.1% to 320,137 while freight advances a more modest 1.9% to 25.5 million FTKs.

Still, the employee population is cut 2.7% in 1983 to 730. Passenger boardings jump 9.5% to 350,604 while cargo rises 12.7% to 28.72 million FTKs.

The payroll is reduced in 1984 to 700 as an Airbus Industrie A300B4 is acquired, which will prove too large to meet requirements. Customer bookings swell 4.8% to 367,419 as freight jumps 3.5% to 30 million FTKs.

The fleet of the 750-employee carrier in 1985 includes 2 B-737-2C9As and 5 Fokker F.27-100s. Enplanements rise a slight 0.4% to 368,900. Cargo accelerates a better 3.3% to 30.43 million FTKs. A net profit equivalent to \$1.3 million is generated.

In 1986, the subsidiary Luxair Commuter, S.A. is formed to offer scheduled regional services. It is equipped with 3 of the F.27-100s, 2 Metroliners, and 1 Cessna 421. Enplanements for both airlines advance to 387,500.

The twenty-fifth anniversary is celebrated by the 850-employee carrier in 1987. General Manager Rodger Sietzen's fleet now includes 2 B-737-2C9As, and 2 F.27-100s.

Planning once more to start long-haul service, **Luxavia, S.A.** leases the B-747SP-44 *Outeniqua* on November 1. The remainder of the year will be spent painting the giant aircraft in the operator's white and soft blue colors. It is christened *Luxavia Star*.

Passenger boardings for the 12 months jump 10.1% to 426,644.

In 1988, the air taxi subsidiary **Luxavia, S.A.** is renamed Luxair Executive, S.A. A B-737-239 is leased from **Sabena Belgian World Airlines, S.A.** during the spring.

The reliveried **South African Airways (Pty.), Ltd.** *Outeniqua*, now the *Luxavia Star*, is employed in February to inaugurate weekly roundtrip flights from Luxembourg to Johannesburg.

Plans are made in 1989 to revitalize the Luxair Executive, S.A. fleet. The **South African Airways (Pty.), Ltd.** B-747SP-44 *Soutpansberg* is chartered on August 1, but is subcontracted on the same day to **UTA French Airlines, S.A.** The French line returns the Jumbojet to Luxair on November 1 and it is simultaneously returned to SAA.

Enplanements total 495,956.

In 1990, the 1,050-employee carrier's fleets include 3 B-737-339s, 1 of which is leased from **Sabena Belgian World Airlines, S.A.**, the SAA *Luxavia Star*, 1 Embraer EMB-120 Brasilia leased from **Air Exel, Ltd.**, 2 Fokker F.27-100s, and 3 Fokker 50s.

The Brasilia and two Fokker 50s are dedicated to Luxair Commuter. In the fall, a \$37-million order is placed for two owned EMB-120s. Orders are outstanding for two B-737-4C9s. The carrier now joins with **Flugfelag Islands, H.F. (2)/Icelandair, H.F.** in acquiring shareholding in the tour operator Easy Travel.

Passenger boardings increase 8.9% to 544,408, but freight falls 15.1% to 461,000 FTKs.

Airline employment is increased a slight 0.7% in 1991 to 1,102. The leased Brasilia is returned and replaced, in August and December, by two owned units and another Fokker 50; orders are let for two B-737-5C9s. New flights are initiated to Vienna and London (STN) and service is inaugurated or enhanced to Berlin, Geneva, Hamburg, Munich, Nice, Saarbrücken, Strasbourg, and Vienna. **Safair Lines, Ltd.** is established at Johannesburg in October to compete with **South African Airways (Pty.), Ltd.** (SAA) now that the nation's air transport industry has been deregulated. Soon renamed **Flitestar Airlines, Ltd.**, it is owned and managed by Luxembourg investors, many of whom are the same personnel once associated with the noted South African international charter carrier **Trek Airways, Ltd.** Indeed, Flitestar is often seen as a continuation of that carrier, even as its organization provides for a holding company under the Trek name.

Luxair customer bookings decline 7.7% to 503,387, but cargo ascends 0.8% to 464,000 FTKs.

The fleet in 1992 includes 2 leased B-737-2C9As, 1 owned and 1 chartered B-737-4C9s, the SAA B-747SP-44, 3 Brasilias, and 4 Fokker 50s.

Destinations visited include Athens, Berlin (Tempelhof), Copenhagen, Geneva, Faro, Frankfurt, Hamburg, Johannesburg, London (LHR and STN), Malaga, Metz, Nancy, Lorraine, Milan (Bergamo), Munich, Nairobi, Nice, Palma de Mallorca, Paris, Rome, Saarbrücken, Strasbourg, Vienna, and recently added Budapest.

The 1,000-employee **Flitestar Airlines, Ltd.** acquires the smaller airlines **Air Cape (Pty.), Ltd.** and **Luxair Executive, S.A.** (now renamed **Luxair Express, S.A.**) and they continue the operations of all three as

subsidiaries of the holding company Trek Airways. Flitestar and Air Cape concentrate on South African domestic routes while Luxair continues to undertake flights between Luxembourg and Johannesburg employing the B-747SP-44 *Luxavia Star*.

Deutsche Lufthansa, A.G. acquires 13% shareholding in December and is also given an option to purchase an additional 10% stake over the next three years. At the same time, an agreement is signed with the German major covering code-sharing, through ticketing, and joint frequent flyer programs, as well as code-sharing on flights between Luxembourg and Germany.

In South Africa, **Flitestar Airlines, Ltd.** suffers heavy financial reversals during the remainder of the recession year as SAA pours additional capacity onto its domestic routes to overwhelm the independent. Additionally, pressure on yields and the devaluation of the rand against the U.S. dollar, in which most of Flitestar's leasing and other costs are paid, ends the hope for profits.

Luxair enplanements for the year total 460,115.

In 1993, Managing Director Sietzen oversees a 1,050-employee workforce. The two chartered B-737-2C9As and one leased B-737-4C9 are withdrawn. These are replaced by another owned B-737-4C9 and two B-737-5C9s.

In January, Prime Minister De Klerk's regulators require SAA to cut back capacity on domestic trunk routes by 30% in an effort to save **Flitestar Airlines, Ltd.** Unhappily, these measures come too late and the airline is forced to suspend operations in mid-April.

Trek Holdings is also forced to suspend Luxair Express, S.A. European services and the chartered South African Jumbojet *Luxavia Star* is returned.

Sufficient funding is found and **Flitestar Airlines, Ltd.** is able to resume limited domestic operations on September 1. Luxair Express, S.A. is able to reacquire the *Outeniqua* on September 3. Once again known as the *Luxavia Star*, its all-white fuselage is split by a black cheatline. Titles are worn over the forward fuselage and the tail is black-white-black, with the single word "Trek" written in tall block letters on the white.

Passenger boardings move ahead by 2.2% to 470,469 and a \$5-million net profit is reported.

Fifty workers are laid off in 1994 and one of the B-737-4C9s is leased to **Carnival Air Lines** in the U.S.

On April 11, **Flitestar Airlines, Ltd.**, which was able to resume limited services the previous fall, is in desperate need of support and signs a commercial agreement with SAA. The same day the B-747SP-44 *Luxavia Star*, otherwise known as the *Outeniqua*, is returned.

The arrangement with SAA puts an end to Flitestar's attempts to compete head on with SAA on domestic trunk routes. The holding company Trek Airways withdraws from the market after the flag carrier provides a multimillion rand payment.

Shareholders shut down Flitestar and Luxair Express, S.A. on April 20, thereby bringing South Africa's experiment with deregulation perilously close to failure.

Customer bookings jump 13.2% to 532,500 and revenues swell 12.8% to \$246 million. With expenses of only \$235 million, there is an operating surplus of \$11 million. An identical profit figure is also cheered as the net gain.

An even 1,000 workers are employed by the Luxembourg-based carrier in 1995. In October, the carrier begins code-sharing with **CSA Czech Airlines** on services between Luxembourg and Prague.

The company suffers a bad passenger traffic year as enplanements drop 19.1% to 569,700. Cargo is up, however, climbing 12.8% to 530,000 FTKs.

The fleet in 1996 includes 2 B-757-5C9s, the newest of which is named *Chateau de Bourglinster* and 4 Fokker 50s. In addition, 2 each B-737-4C9s and B-737-528s are flown under contract.

Company ownership is now divided between the government of Luxembourg (23.1%), Banque et Caisse d'Epargne de l'Etat (13.4%), Luxair employees and others (13.2%), Banque Internationale Luxembourg (13.1%), **Deutsche Lufthansa, A.G.** (13%), Banque Generale du Luxembourg (12.1%), and CLT-UFA (12.1%).

Many long-haul routes are suspended or consolidated, while, at Aeroport de Luxembourg, the carrier's new \$100-million air-cargo facility is opened.

Passenger bookings ascend during the 12 months to 794,356.

Markets visited in **1997** include Amsterdam, Copenhagen, Frankfurt, Geneva, Hamburg, London, Malaga, Manchester, Munich, Nice, Palma de Mallorca, Paris, Rome, and Saarbrücken.

In September, \$80 million worth of orders are placed with Embraer for a pair of ERJ-145 Amazons, with options taken on two more. The jetliners, which will replace Fokker 50s, are scheduled for delivery during the third quarter of 1998. When the winter schedule begins in October, the Tyrolean resorts of Seefeld and Soumlden are new destinations to be visited under the sponsorship of Luxair Tours.

Enplanements move upward by 6.3% to 844,039.

In May **1998**, Jean-Donat Calmes is named president/CEO. He separates the airline's passenger and cargo services into individual profit divisions.

The first ERJ-145 Amazon is delivered on August 1. During the year, six regional destinations are added: Bologna, Dublin, Florence, London (CTY), Stockholm, and Stuttgart.

Flights continue during the remainder of the year and airline employment is increased by 2.9% to 1,457. Passenger bookings ascend a further 5.2% to 866,870.

EMB-145 service is inaugurated to Helsinki via Stockholm on March 29, **1999**. Simultaneously, thrice-daily Fokker 50 roundtrips are started from Luxembourg to Munich via Saarbrücken. A second daily roundtrip is started to Vienna the same day, employing a new EMB-145.

A B-767-339ER is wet-leased from **City Bird, S.A.** on March 30; with two City Bird pilots, six City Bird flight attendants and two Luxair flight attendants, the aircraft inaugurates roundtrip service from Luxembourg to Newark, four times a week. The new service replaces one that **Flugfelag Islands (2) H.F./Icelandair** abandoned on January 9.

Under a new dual-designator pact with **Finnair O/Y**, Luxair inaugurates code-sharing on May 17 over a route from Luxembourg to Helsinki via Stockholm. Also during the month, Luxair begins to code-share on **United Airlines** services to Chicago (ORD), Denver, Los Angeles, Miami, San Francisco, Seattle, and Washington, D.C. (IAD).

Despite heavy traffic, the company board votes, on July 9, to end its nonstop service between Luxembourg and Newark (EWK).

Passenger boardings leap ahead by 20.6% to 1,045,000 while 6.22 million FTKs are also operated. Revenues of \$220 million are generated.

Airline employment at the beginning of **2000** stands at 866, a huge 40.6% decrease over the previous 12 months.

On March 26, an early morning B-737-5C9 return service is inaugurated from Luxembourg to Copenhagen. Weekly charters begin on April 1 to Mykonos (B-737-528), Malta (ERJ-145), and Jerez (ERJ-145).

Begun on May 1, a new route between Luxembourg and Newark International Airport is closed on November 1; despite heavy passenger demand, the route is unprofitable.

The Internet news service of *Air Transport World* magazine reports on December 5 that Christian Heinzmann will become Luxair's next president/CEO on January 1.

LUXEMBOURG AIRLINES (SOCIETE LUXEMBOURGEOISE DE NAVIGATION AERIENNE, S.A.): Luxembourg (1947-1950). Luxembourg government and private interests join **Scottish Airlines, Ltd.**, the air transport division of Scottish Aviation, in forming this independent late in **1947** to provide scheduled services from the Duchy.

Scottish agrees to provide aircraft under lease, technical, and managerial support, including its own Capt. M. R. Lacy as managing director. The Luxembourg government grants the carrier a 20-year license for routes to Zurich, Paris, and Frankfurt.

With a leased Scottish DC-3, the thrice-weekly Zurich frequency is launched on February 3, **1948**. Thrice-weekly scheduled service to Paris begins on February 10 and thrice-weekly Paris-Frankfurt flights, the only air link between the two cities, commence on February 13. In March, August, and October, two DC-3s and a de Havilland DH 89A Dragon Rapide are purchased from Scottish Airlines.

With Scottish assistance, Luxembourg Airlines begins new routes in **1949**; destinations flown include Nice, London, Athens, Brussels, Rome, and Tel Aviv. The operator is forced to cease trading in **1950** when **Scottish Airlines, Ltd.** withdraws its support and assistance.

LUXOR AIR, S.A.E.: 43 Masr El-Tamir Building, Sheraton Helipolis Hotel, First Area, Helipolis, Egypt; Year Founded 1999. Luxor is established in the summer of **1999** to offer both passenger and cargo charters to destinations throughout the Middle East, Africa, and southern Europe. Revenue operations commence with an owned Boeing 707-323C, previously operated by **Middle East Airlines, S.A.L. (2)**.

A B-737-4448 is leased from GATX Capital in early **2000**.

LVOV AIRLINES: Lvov-3 Airport, Lvov, 290003, Ukraine; Phone 380 (0322) 622 112; Fax 380 (0322) 692 215; http://www.avia.lviv.ua; Code L7; Year Founded 1995. Lvov is established at its namesake city in **1995** as a subsidiary of **Air Ukraine**. Leonti Zagreva is CEO and has the mission of operating trunk and regional replacement services on behalf of the parent concern. Revenue flights begin with 6 Antonov An-24s and 4 Yakovlev Yak-42Ds leased from **Air Ukraine**.

Service is maintained in **1996-1997**, during which time the fleet is increased by the addition of two Ilyushin Il-76Ms and two An-12Bs. As is common with other airlines, the company occasionally leases its flight equipment to other companies. At the end of the latter year, this policy will land Lvov in deep trouble.

Due to engine problems, Flight 241, an **Aerosweet Airlines** Boeing 737-200A with 8 crew and 62 passengers en route from Kiev to Thessaloniki, stops at Odessa on December 17 to change planes. When all are aboard, the chartered Lvov Airlines Yak-42 departs south and because of heavy traffic, is put into a holding pattern near Salonica. At this point, the aircraft disappears. A massive search is undertaken, during which a Greek Air Force C-130 Hercules with five crew crashes, killing all aboard. Wreckage of the Russian aircraft is found on December 20 near Mount Olympus and there are no survivors.

The airline is sued in Greek courts by relatives of two crash victims and the case drags on in **1998-1999**. During the latter year, the airline flies a total of 31,000 passengers and operates 1.57 million FTKs.

On August 8, **2000**, a Greek court orders Lvov to pay 613 million drachmas (\$1.635 million) to the parents of Panagiotis Kois and Pashalis Karathanasis, killed in the 1997 crash. In reporting the judgment three days later, *The Moscow Times* suggests that the decision could pave the way for similar damages in lawsuits filed by relatives of others killed in the disaster. On August 11, Lvov Airline appeals the Greek ruling.

LWA (GIBRALTAR), LTD.: Ostend Airport, Hangar 5, P.O. Box 24 H5, Ostend, 8400, Belgium; Phone 32 (59) 80 2623; Fax 2 (59) 80 7842; Code LE; Year Founded 1987. LWA (**Liberia World Airlines, Inc.**) is reformed at the end of **1987**; registered as LWA (Gibraltar), Ltd. it is based at Ostend Airport in Belgium. Duane Egli is CEO and offices are opened at Monrovia and in the U.S.

To take advantage of the Valentine's Day market, the company's Amsterdam-based Douglas DC-4 *Juliet Papa* undertakes two flower-laden roundtrips from Amsterdam to Southend Airport in the U.K. on February 7, **1988**. In **1989**, the jet cargo fleet, which continues to offer worldwide charters, includes 1 each B-707-330B, Douglas DC-8-54F, and DC-8-55F, which is leased to **Kabo Air**.

In 1990, the fleet is altered again as the Boeing 707-330B is replaced with a B-707-123B. A DC-8-53 is also purchased. The two are employed to undertake passenger services. In 1991, as recession deepens, the passenger flights are abandoned and the Boeing and DC-8-53 are sold, being replaced with a DC-8-55F and a DC-8-54.

In 1992, Managing Director Ela Devos' firm employs 27 workers. The company's DC-8-54F is briefly chartered to **ARCA (Aerovias Colombianas, S.A.)**.

Operations continue apace in 1993-2000. During these years, Duane Egli becomes CEO and the workforce is increased to 42.

The two DC-8s, later joined by another Dash-55F, continue to provide international freight charters into the new millennium.

LWA (LIBERIA WORLD AIRLINES, INC.): Liberia (1976-1987). Established at Monrovia in 1976, LWA offers international all-cargo charter and contract service flights to destinations throughout Europe and Africa through the remainder of the decade using Bristol Britannia 253 equipment.

During the 1980s, the fleet is altered to comprise 1 Boeing 707-330B and 1 B-727-100. Late in the decade, the Boeing trimotor is traded in for a pair of Douglas DC-8-50Fs.

A Douglas DC-4, christened *Julliet Papa*, is acquired in the summer of 1987 and is sent to Amsterdam's Schiphol Airport to operate European passenger charters on behalf of the Rotterdam-based tour company Chartermaster. The first revenue flight is made to Belgrade, Yugoslavia, on December 21. At year's end, the company is reformed as **LWA (Gibraltar), Ltd.** and, although registered in Liberia, is based at Ostend Airport in Belgium.

LYNCH FLYING SERVICE: Logan Field, Billings, Montana 59105, United States; Phone (406) 252-0508; Fax (406) 245-9491; <http://www.wtp.net/lynch>; Year Founded 1940. LFS is established as the FBO at Logan Field, Billings, Montana in 1940. In addition to the usual airport "gas station" activities, Lynch begins to offer lightplane charter services, including air taxi, air express and cargo, photography, and air ambulance flights.

Forty-six years later on November 6, 1986, a Cessna 421C Golden Eagle crashes 5 mi. SW of the airport, while on approach to Butte, Montana, killing its pilot. Flights continue without incident for the next 13 years.

In 2000, Bob Palmersheim is general manager and oversees a workforce that includes 21 full-time and six part-time pilots. From Billings, LFS operates a fleet that includes 2 each Beech King Air 100s, Cessna 340As, Cessna 182 Skylanes, and Cessna 210L Centurians, 3 each Cessna 404 Chancellors, Cessna 402B/Cs, and Cessna 310s, and 1 each Beech King Air 90 and Cessna 421C Golden Eagle.

LYNDEN AIR CARGO: Anchorage International Airport, 6441 SO Airpark Place, Anchorage, Alaska 99502, United States; Phone (907) 243-6150; Fax (907) 245-0213; <http://www.lynden.com>; Code L2; Year Founded 1995. LAC is set up at Anchorage in early summer 1995 as the airline arm of freight forwarder Lynden Air Freight to operate domestic and worldwide all-cargo charters. The decision to enter the air transport business comes as a direct result of an opening of markets brought about by the demise in April of **MarkAir**. Passenger services are offered in association with **Loken Aviation**.

Revenue flights, dominated by Alaskan by-pass Special 4th Class mail service to bush areas on behalf of the U.S. Post Office, commence on August 30 with 3 each Lockheed L-100-30 Hercules freighters.

The carrier also leases from **Zantop International Airlines** 2 Lockheed L-188AFs first flown by **Northwest Airlines** and 1 L-188CF initially operated by **Pacific Southwest Airlines (PSA)**. These simultaneously start all-cargo service to Aniak, Bethel, Dillingham, King Salmon, Kotzebue, Nome, and St. Marys.

Services continue in 1996. On a round-robin, all-cargo service from Juneau to Juneau via Hoonah and Elfin Cove on July 19, a DHC-2, char-

tered from **Loken Aviation** attempts to traverse a mountain pass, but collides at the 1,250-ft. level with steeply rising terrain. The pilot is killed.

In October, the carrier receives government certification to handle and haul hazardous waste, the cleanup of which is a growth industry in Alaska. As military installations and bases are closed, the government is forced to contract with environmental companies to dig up and properly process oil drums and other buried hazardous materials.

To handle this work, a former **Northwest Airlines** L-188AF is purchased from **Zantop International Airlines**; the three leased units are now also purchased.

Before the end of the year, Lynden begins flying to remote areas to pick up materials that have been packaged according to "hazmat" guidelines. The waste is then flown to Anchorage, where it is turned over for transport to a storage facility.

Loken Aviation, which had suffered poor traffic loads in 1996, struggles on in 1997, but finally ceases flying during the summer. Lynden Air Cargo informs the DOT on September 24 that Loken is out of business and petitions that its certificate be reissued eliminating the Loken trade name. A new certificate is duly allowed on October 8.

During the year, Lynden operates 4.3 million FTKs.

Flights continue in 1998. While landing at a private strip at Hog River, 40 mi. N of Huslia, on June 26, an L-382G with five crew clips a tree; although no injuries are reported, the Hercules sustains damage to its left wing.

In July, it is announced that the company will withdraw its four Electras and operate only Hercules freighters. Although one L-188AF is chartered to **Channel Express Air Services, Ltd.**, the other three will remain in operation alongside the L-182Gs during the remainder of the year.

Cargo traffic during the 12 months increases 72.2% to 15.42 million FTKs. Revenues balloon 87.2% to \$24.08 million, while costs, unhappily, rise to \$25 million. The operating loss "improves" to \$948,000, while the net loss grows to \$5.75 million.

Service is maintained in 1999. In July and August, the company adds a service designed to handle the shipping of household goods for companies relocating workers in Russia. When the last of the Electras is retired at year's end it is believed to be the highest-time L-188 in the world: 71,659 flight hrs. and 38,382 landings.

Freight traffic skyrockets 136.4% to 21,963,000 FTKs.

A total of 20 full-time pilots are employed at the beginning of 2000 to fly the company's 5 L-100-30 Hercules freighters. In December, the concern establishes an import and ocean brokerage division and opens offices in Las Vegas, Denver, and Charlotte, North Carolina.

LYNSTAR AVIATION: Morristown Municipal Airport, 9 Airport Road, Morristown, New Jersey 07960, United States; Phone (973) 292-2829; Fax (973) 292-1529; Year Founded 1987. Lynstar is established at Morristown Municipal Airport in 1987 to provide executive and small group passenger charters, as well as courier, flight-seeing, and other rotary-wing aerial work.

Within 13 years, Ken Keith oversees the work of 3 pilots, who fly 1 each Beech King Air 90, August A-109 Mark II, and Eurocopter AS-355B Twinstar.

LYNTON GROUP, LTD.: Denham Aerodrome, Hangar Road, Uxbridge, Middlesex, England, UB9 5DF, United Kingdom; Phone 44 (1895) 835 000; Fax 44 (1895) 832 564; Year Founded 1978. Originally established as an FBO in 1978, Lynton, by 2000, employs 15 pilots and operates a group of aircraft on executive and small group passenger charters from three airports. It also undertakes a variety of rotary-wing services, including flight-seeing, courier, and executive charters.

One Dassault Falcon 900B is flown from Leeds/Bradford, while a second is operated from Oxford-Kidlington Airport, along with 1 British Aerospace BAe (HS) 125-700 Hawker. The helicopters are based

at Denham Airport and include 5 Eurocopter AS-355F Twinstars and 2 Sikorsky S-76s.

LYNX AIR INTERNATIONAL: 1995 W. Commercial Blvd., Suite A, Fort Lauderdale, Florida 33309, United States; Phone (888) LYNX-AIR or (954) 772-9808; Fax (954) 772-1141; <http://www.lynxair.com>; Year Founded 1989. Lynx Air is established at Fort Lauderdale, Florida, in May 1989 with the goal of operating the most reliable (and in many cases the only) nonscheduled passenger transportation directly from the U.S. to and from Cap Haitien, Santiago, and Grand Turk in the Turks and Caicos Islands. All flights are conducted in a fast, comfortable, fully licensed turboprop aircraft, the Fairchild Metro III.

Besides passenger transportation, Lynx also provides a range of services for people living and working in the developing nations of the Caribbean. These services include subscription mail services, standard, and express cargo.

Flights continue apace during the 1990s with neither an accident nor a safety violation. Destinations visited come to include Cap Haitien, Exuma, Fort Myers, Grand Turk, Guantanamo, Marsh Harbour, Providenciales, and Santiago. Unhappily, the company is unable to maintain economic viability and is forced to file for Chapter XI bankruptcy protection on November 16, 1999.

LYON AIR. See ALA (SOCIEDAD DE TRANSPORTES AEREOS, S.A.)

M & N AVIATION: Ribas-Dominicci Airport, Isla Grande, San Juan, Puerto Rico 00904, United States; Phone (787) 722-5980; Fax (787) 723-0465; <http://www.guides.com/acg/mnaviation>; Year Founded 1992. M & N is set up at San Juan in 1992 to provide executive and small group passenger charters throughout the Caribbean and to the U.S., Mexico, and Canada. Within 8 years, the company employs 4 full-time pilots and operates 1 Cessna 560 Citation V executive jet and 4 Cessna 402s.

While en route with a cargo of mail from San Juan to St. Croix on a July 8, 2000, a Cessna 402C crashes into the Caribbean Sea near Vieques. Both the aircraft and pilot are lost.

MAC-AIRE AVIATION CORPORATION: United States (1962–1968). Mac-Aire is set up by James Keena at Ronkonkoma, New York, in February 1962 to provide daily roundtrip air taxi services to East Hampton, Islip, Bridgeport, New Haven, and New York (LGA). Employing Piper lightplanes, the commuter inaugurates revenue frequencies on March 28.

In September 1965, Mac-Aire is one of several small New York State commuters that are joined together into the Metro Air Service, sponsored by American Airlines to provide feed for the major at New York (JFK). Operations continue apace until Kenna's airline goes out of business in 1968.

MAC DAN AVIATION CORPORATION: 167 C Passaic Ave., Fairfield, New Jersey 07004, United States; Phone (973) 244-9400; Fax (973) 244-0239; Year Founded 1971. Originally established as the FBO at Essex County Airport in 1971, Mac Dan also undertakes executive and small group passenger charters throughout the Northeast.

In 2000, Operations Director Charles J. McKenna Jr. continues to oversee the flights of 2 Cessna 310s and 1 Beech 33 Bonanza.

MACAIR. See MCKINLEY AIR CHARTER (PTY.), LTD. (MACAIR)

MACAIR (MELANESIAN AIRLINE CHARTER COMPANY [PTY.], LTD.): Papua New Guinea (1960–1986). Formed by Bryan McCook to provide charter and contract service flights in Papua New Guinea, Macair enters the realm of scheduled airlines on May 1, 1968 when it acquires Honiara, Guadalcanal-based Megapode Airways, Ltd. from its founder Laurie Crowley. The new acquisition is turned into the subsidiary Solair (Solomon Islands Airways, Ltd.).

The de Havilland DH 104 Dove 1 that Crowley has been using is found to be hardly airworthy. McCook elects to cannibalize it for spare parts and dry-lease a replacement aircraft. Solair flight activities begin on June 1 with the second Dove provided by McCook.

Revenue activities continue apace in 1969–1974 and the fleet is increased to include 2 Doves and 2 Beech 55 Barons. At the end of the latter year, Macair wins operating routes from Honiara to Kieta, on the Papua New Guinea-owned island of Bougainville.

In April 1975, Macair and its subsidiary are purchased by Talair (Tourist Airlines of Niugini, Ltd.). Macair and Solair are allowed to continue as commuter subsidiaries of the new owner; however, their traffic and financial figures are presented with those of the parent.

To operate the new international service between the Solomons and Bougainville, Talair (Tourist Airlines of Niugini, Ltd.), in 1976–1977, replaces the Solair Doves with one each Beech B-80 Queen Air and a Britten-Norman BN-2 Islander. Upon its independence in 1978, the new sovereign nation of the Solomon Islands acquires 49% shareholding and assumes the right to purchase Talair's 51% within five years.

During the 1980s, Macair operates 20 aircraft, with 7 Dornier 228-212s the major units, but severe financial reversals finally force it to cease operations in November 1986. Solair (Solomon Islands Airways, Ltd.) is taken over by the government of the Solomon Islands a year later.

MACAIR JET, S.A.: Jorge Newbery Airport, Ave. R. Obligado, 1426 Capital Federal, Buenos Aires, Argentina; Phone 54 (11) 4777-7514; Fax 54 (11) 5777-7554; <http://www.macairjet.com.ar>; Year Founded 1994. Macair Jet is established at Buenos Aires in 1994 to offer executive and small group passenger charters. By 2000, General Manager Diego M. Colunga oversees the work of 8 full-time pilots and operates a fleet that comprises 1 each Learjet 25, Learjet 60 and Gulfstream G-1159C Gulfstream IV.

MACEDONIAN AIRLINES: Bulevar Partizanski, Opodredi 17A, Skopje, 91000, Macedonia; Phone 389 (91) 116 333; Fax 389 (91) 229 576; Code IN; Year Founded 1994.

MA is established at Skopje in the fall of 1994 to serve as flag carrier of the former Yugoslav province. Shareholding is divided between Yukan Trade International and Makedonska Banka. Zlatko Petrovski is appointed chairman/president and a Boeing 737-266 is leased from Egyptair, S.A.E. and is employed to launch revenue services linking its base with Frankfurt and various other European destinations.

Flights continue in 1995–1997, during which years the Boeing is supplemented by two Douglas DC-9-32s leased from JAT Yugoslav Airlines, plus two Yakovlev Yak-42s. Dusko Grueuski becomes chairman/president, with Mirce Dimitrouski as his deputy.

Destinations visited include Amsterdam, Berlin, Brussels, Dusseldorf, Frankfurt, Halmstad, Hamburg, Hanover, Istanbul, Kerkyra, Milan, Orio al Serio, Munich, Reykjavik, Rome, Stuttgart, Vienna, and Zurich.

Traffic figures are released for the second quarter of the latter year and show a total of 15,203 passengers flown.

Flights continue with little notice in 1998. Passenger boardings increase to 77,000.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Macedonian, on March 24, 1999, halts all scheduled service into Belgrade as Yugoslav airspace is closed. A spokesman, in making the announcement, indicates that the situation will be evaluated further; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade and other points remains halted on March 25 and for the duration of the NATO bombing campaign.

As aircraft from the NATO nations pound Yugoslav targets, hundreds of thousands of Kosovar refugees cross borders into Albania and Macedonia. Among the most notorious destinations is Blace, a no-man's-land straddling Kosovo and the former Yugoslav republic of Macedonia where, by April 4, over 65,000 refugees are huddled. As aid workers

struggle to provide relief, several governments step forward to provide sanctuary, agreeing to take various numbers of displaced persons.

Among the first nations to step forward is Turkey, which agrees to take in 20,000 people who will be assisted by the Turkish Red Crescent. After more than 500 years of Ottoman rule in the Balkans, Turkey shares a strong historical and religious bond with the Kosovar Albanians.

Late on April 5 and into April 6, a total of 9 refugee flights, carrying 1,398 displaced persons, are operated from a military airfield at Corlu, in western Macedonia, to Kırklareli, near the Bulgarian border. Seven of the services are provided by the airline's two Yak-42s plus the Egyptian Boeing, while two are flown by Turkish military Lockheed C-130s. At least one elderly woman, carried off the B-737-266 in Turkey, later dies in hospital. Additional flights will be completed in the days ahead until Operation Allied Force is concluded on June 11.

Enplanements for the year soar to a remarkable total of 202,000 and 7.53 million FTKs are also operated. The workforce at the beginning of 2000 totals 115. The carrier continues to operate 2 each B-737-46Js, B-737-230As, and DC-9-32s plus 1 B-737-42J.

Prior to the beginning of the summer schedule at the end of March, the company debuts a new color scheme that features the yellow and red of the national flag on all aircraft tails.

MAC-AIRE AVIATION CORPORATION: United States (1962–1968). Mac-Aire is set up by James Keena at Ronkonkoma, New York, in February 1962 to provide daily roundtrip air taxi services to EHosted by JAT Yugoslav Airlines CEO Mihajlo Vujinovic, a “meeting of the scheduled airlines of Southeast Europe” is held at Belgrade in mid-December to consider possible joint cooperation. Those attending include representatives of MALEV Hungarian Airlines, Rt., Croatia Airlines, Air Bosna, S.A., Air Srpska, S.A., Monenegro Airlines, Macedonian, and Adria Airways (Adria Aviopromet) (2). Due to an unplanned management change, TAROM (Romanian Air Transport-Transporturile Aeriene Romane, S.A.) is unable to participate, but expresses interest in joint activities.

Of the eight airlines participating in the conclave, six express interest in joint commercial operations, four in joint technical and maintenance activities, and five in joint training exercises. To study and discuss matters further, three working committees are established: commercial, chaired by a representative from Adria Airways (Adria Aviopromet) (2); technical, chaired by a MALEV Hungarian Airlines, Rt. representative; and training, chaired by a representative from JAT Yugoslav Airlines.

During the year, one of the company's two remaining B-727-230As is withdrawn and put up for sale.

MACEDONIAN AIRLINES, S.A.: 120 Syngou Ave., Athens, 11741, Greece; Phone 30 (1) 926 7296; Fax 30 (1) 926 7817; Code MCS; Year Founded 1992. A wholly owned subsidiary, MA is established by Olympic Airways, S.A. at Athens in 1992 to operate charter flights from the Greek province of Macedonia. Revenue operations begin and continue with 2 each Boeing 737-284As and B-737-484s leased from the parent.

During the summer of 1999, a B-737-46J is leased from Pembroke Capital. It is employed to operate not only charters, but also replacement flights on behalf of its parent to such European destinations as Geneva.

Macedonian repaints its fleet in a new color scheme during the summer and fall of 2000. A yellow sun logo appears on the navy blue tails of the aircraft.

MACEDONIAN AVIATION, LTD.: United Kingdom (1972–1974). Formed as a charter operation at London (CTN) in the summer of 1972, MAL begins ad hoc operations in October with a single de Havilland DH 104 Dove 6 purchased the month before. A Douglas DC-3 acquired in October flies its first charter on November 5 from Southend to Amsterdam. Unscheduled trips to the Continent continue during the winter.

The Dove is sold in February 1973, leaving the Douglas transport to fly a full load of ad hoc charters during the remainder of the year. Destinations include Bergen, Brussels, Jersey, Cologne, Geneva, Glasgow, Lisbon, and both passengers and freight consignments are transported. In the fall, the DC-3 is grounded for repairs and a replacement is leased for a month from Intra Airways, Ltd.

The first two weeks of January 1974 are given over to flying oil industry support flights out of Aberdeen. The profitable charter persuades company officials to purchase three more DC-3s from British Island Airways. Two are received in March; converted to combi standard, they are posted to Aberdeen in April. Meanwhile, ad hoc charters are flown throughout the spring to such destinations as Rotterdam, Lisbon, Hurn, Le Havre, Amsterdam, Gibraltar, and Belfast.

The former Limberg Airways, B.V. Tuesday service from Rotterdam to Le Havre is undertaken for a short period beginning in April; however, by summer, the company's DC-3s are fully committed at Aberdeen. The third DC-3 is received in September as the company vainly seeks financing to purchase turboprops for its Aberdeen operation. Unable to meet oil industry equipment standards, Macedonian ceases operations on November 6.

MACKENZIE AIR SERVICE, LTD.: Canada (1933–1942). MAS inaugurates operations on January 1, 1933 by flying fresh vegetables from Edmonton to the Eldorado Mines at Great Bear Lake. The route to Great Bear Lake is continued. During 1938, scheduled flights are undertaken linking the company's base with Port Radium via Yellowknife and Gordon Lake.

During the spring of 1941, the carrier is purchased by Canadian Pacific Railway and is merged with the Canadian Airways, Ltd. service from Edmonton to Prince Albert under the marketing title United Air Services, Ltd. in July. Six months later, on January 30, 1942, Mackenzie is one of several air transport companies merged to form Canadian Pacific Air Lines, Ltd.

MACKEY AIRLINES: United States (1965–1967). MA is established by Colonel Joseph Mackey as a subsidiary of his Mackey Air Taxi at Fort Lauderdale, Florida, in 1965 to operate both domestic and international scheduled services. Airline employment is 220 and the fleet includes 1 Douglas DC-3, 1 DC-4, and 6 DC-6s. Flights are inaugurated to West Palm Beach and Miami while, as a flag carrier, frequencies are also provided to the Bahamas. A total of 261,765 passengers are flown. Negotiations are initiated late in the year with Eastern Air Lines and a petition is filed seeking merger with the major. In early 1967, the airline division is sold to Eastern.

MACKEY INTERNATIONAL AIRLINES: United States (1968–1982). After selling its large-plane division to Eastern Air Lines in 1967, Col. Joseph C. Mackey, owner of Mackey Air Taxi, establishes a local third-level commuter service at his Fort Lauderdale base early in 1968. Employing a Piper PA-31-310 Navajo and a Beech 99, the carrier inaugurates scheduled passenger services to its former destinations on March 3.

Two years later, in December 1970, Mackey receives CAB authority to operate large aircraft and to take over a number of third-level routes being dropped by Eastern Air Lines and vacated with the failures of Bahamas Airways, Ltd. and Air Caicos, Ltd. A fleet of Convair CV-440s is acquired to operate the new frequencies.

Destinations visited from the enhanced Florida commuter gateways include Bimini, Georgetown, Marsh Harbour, Treasure Cay, Freeport, Nassau, North Eleuthera, Cape Eleuthera, the Turks and Caicos Islands, Rock Sound, and Cap Haitien.

Operations continue apace in 1971–1972. Stock clerks, clerical and office workers, passenger service employees, and stewards—all members of the International Association of Machinists and Aerospace Workers (IAM)—strike the carrier on March 29, 1973. Several negotiation sessions later, the job action is settled.

Enplanements for the year reach 169,752.

Airline employment in **1974** totals 255 and the fleet includes 8 Convair CV-440s and 2 Douglas DC-6s.

Passenger boardings decline 2.2% to 166,098.

The workforce is reduced by five employees in **1975**. The Miami-based carrier now receives permission from the CAB to operate 90-seat aircraft on both scheduled and charter flights between Florida and the Bahamas.

After joining the **Delta Air Lines** Deltamatic computerized reservations system, Mackey undertakes an aggressive advertising campaign to insure traffic to these new destinations. In addition, all personnel receive new uniforms. The fleet at year's end comprises 12 Convair CV-440s and Douglas DC-6Bs.

Enplanements fall another 2%, down to 161,789.

In **1976**, the number of employees is increased by 4% to 260. Flights begin to two additional Bahamian destinations while petitions are filed seeking authority to other Caribbean locations. In addition, the CAB is asked to certify the company as a first-level airline.

After the May 25 bombing of its Fort Lauderdale offices, the company cancels its current charter and projected regular flights to Cuba; the terrorism is attributed to Cuban exiles.

The 5 DC-6Bs and 6 CV-440s carry 177,330 passengers during the year, an increase of 9.6%.

By **1978**, airline employment is 250 and the fleet comprises 8 Convair CV-440s, 4 DC-6Bs, and 1 original Navajo. In **1979**, the fleet is radically altered in hopes of growth and by year's end and includes 2 CV-580s, 2 CV-440s, and 3 leased former-Delta Air Lines DC-8-51s.

A CV-440 veers off the runway while landing at Freeport in the Bahamas on November 24 and ends up 225 ft. off the runway in the water. There are no fatalities.

Enplanements for the year fall to only 41,000.

A scheduled DC-8-51 route is inaugurated on April 28, **1980** between Fort Lauderdale and Los Angeles via Las Vegas. The route is unsuccessful and is suspended in July; two Douglas transports are sold and the third is placed on charter work. As the result of a boardroom battle between its major executives and shareholders, the company shuts down on October 24.

This closure, recession, and a huge inflation are devastating; overall passenger boardings plunge 47.2% to 38,000.

During **1981**, the company resumes operations and places renewed emphasis upon its Florida commuter operations. It increases its fleet by the addition of a Short SC-7 Skyvan for its Fort Lauderdale to West Palm Beach segment and a de Havilland Canada DHC-6 Twin Otter for the Fort Lauderdale to Miami service. Unable to weather higher fuel costs and recession, the carrier ceases operations in October and is liquidated in **1982**. There is an unofficial website at <http://www.mackeyairlines.com>.

MACKNIGHT AIRLINES (PTY.), LTD.: Australia (1970–1991).

This privately owned airline is formed by John MacKnight at Deniliquin, New South Wales, in December **1970** to offer charter and scheduled commuter services throughout the state. Destinations served include Deniliquin, Hay, Tocumwal, and Wagga Wagga. Initial equipment comprises a single Aero Commander 500 and a Piper PA-60 Aerostar. These feeder services out of Wagga Wagga are maintained with little change for almost a quarter-century.

The fleet is not upgraded until the twentieth anniversary year. A Piper PA-30 Twin Comanche is acquired in **1990**, with another following in **1991**. In July of the latter year, the carrier's routes and assets are sold to **Western NSW Airlines (Pty.), Ltd.**

MACROBERTSTON-MILLER AIRLINES (PTY.), LTD.: Australia (1934–1981). On January 19, **1934**, Sir MacPherson Robertson subsidizes the start of weekly Adelaide–Kimba via Port Pirie and Whyalla service. The flights are made by a Fokker Model 4 Universal purchased by his partner H. C. Miller in 1933 and owned by the **Commercial Aviation Company (Pty.), Ltd.** The carrier's name is now

changed to the **MacRobertson-Miller Aviation Company (Pty.), Ltd.** In April, the Australian government grants internal airmail subsidies for route connections with destination points in the U.K.–Australia experimental service; the company receives a five-year contract for flights out of Perth. Following the acquisition of two de Havilland DH 84 Dragons, weekly Perth–Daly Waters frequencies are begun on October 3 via eight stops. Three days later, a temporary, two-month operation is begun from Ord River to Wyndham.

Having acquired two DH-83 Fox Moths in the spring of **1935**, a permanent Ord River–Wyndham route is opened on July 9, complementing the route started the previous year. Neither fleet nor service changes much during the next three years until the spring of **1938**, when two DH-86s are placed in service, replacing the DH-83s.

In July, the Western Australia routes are extended to Darwin via Wyndham to connect with the **Qantas Empire Airways, Ltd.** flying boat service. On August 9, the northern mail terminus is transferred to Darwin from Daly Waters and a new Lockheed Model 10A Electra arrives from the United States on October 17.

In **1939**, the routes out of Adelaide are transferred to the **Guinea Airways, Ltd.** Adelaide–Darwin network. Between **1940–1945**, mail flights are maintained and contract charters flown on behalf of the Allied war effort.

In **1946**, a Douglas C-47 is purchased from Allied war surplus, reconverted to DC-3 civil standard, and placed in service. Having survived the war, the Electra crashes at Broome Creek on June 17.

Another DC-3 is acquired in **1947**, but it is lost in a crash at Guildford Airport on July 1 (15 dead). In cooperation with **ANA (Australian National Airlines [Pty.], Ltd.)**, **Air Beef (Pty.), Ltd.** is formed in November **1948** for the transport of frozen carcasses from remote areas of Western Australia to Wyndham. A DC-3 crashes at Guildford, Western Australia, on July 2, **1949** (18 dead).

Over 5,000 carcasses are transported in **1952** as **Air Beef (Pty.), Ltd.** reaches its peak year. Competing **Airlines (West Australia) (Pty.), Ltd.**, together with its routes inland of Perth and its fleet of DH-104s, is acquired in October **1955**; MMA now stands for **MacRobertson-Miller Airline Services (Pty.), Ltd.** The carrier's first turboprop is the Fokker F.27-200 *Swan*, purchased from **Trans-Australian Airlines (Pty.), Ltd. (TAA)**; it is employed to launch Jetstream service on the Perth–Darwin route on December 28, **1959**.

The fleet in **1961** comprises the *Swan*, 3 Doves, and 6 DC-3s. Controlling interest in the airline is purchased by Ansett Transport Industries, Ltd. in **1963**; however, the carrier is left to operate under its own identity. A second F.27-200 and a Piaggio 166 are acquired in **1964**. Several new stops are added to existing routes due to new iron ore mining developments in Western Australia.

Two more F.27-200s join the fleet in **1965**. Enplanements reach 147,000 in **1966**.

The fleet in **1967** includes 4 F.27-200s, 1 F.27-100, and 8 DC-3s. Orders are outstanding for another Fokker Friendship and a de Havilland Canada DHC-6 Twin Otter. Bookings fall to 139,971.

In **1968**, one more F.27-200 and a DHC-6 are placed in service. Airline employment is 800. In March, DC-3 services from Perth to Rottne Island are suspended.

Due to the fatigue of its starboard inner main spar lower boom, Flight 1750, an F.27-200 with 5 crew and 21 passengers and en route from Perth to Port Heland on December 31, crashes 48 km. S of its Western Australia destination; there are no survivors.

The outstanding 32% shareholding is acquired by Ansett Transport Industries (Pty.), Ltd. in January **1969** and **MacRobertson-Miller Airlines (Pty.), Ltd.** becomes a wholly owned division with C. N. Kleinig as general manager.

Operations continue apace during the early **1970s** and by **1973** enplanements total 286,965. They accelerate by 8.9% in **1974** to 315,000.

Airline employment stands at 518 in **1975**. With a slowdown in the region's mineral mining business, passenger boardings accelerate only a minor 0.8% to 325,971. Freight drops 3.1% to 7.3 million FTKs.

The Ansett subsidiary is reorganized in January 1976 in an effort to generate additional bookings by emphasizing tourism. New sales and marketing campaigns are undertaken. The workforce is cut 3.7% to 492. The company's de Havilland Canada DHC-6 Twin Otter and the five Fokker F.27-100s are unable to prevent another downturn in traffic.

Passenger boardings decline 10% to 293,387 and cargo slows down 7.5%.

Enplanements begin to recover in 1977 and show a radical improvement in 1978, accelerating to 342,511.

The company employs 520 workers in 1979. Customer bookings grow a slight 1.2% to 346,671 and cargo climbs 1.7% to 7.41 million FTKs. The workforce is increased by 7.3% in 1980 to 558. Passenger enplanements jump 9.6% to 379,957 while freight declines a slight 1.9% to 7.3 million FTKs.

The division is reformed in July 1981 and is renamed **Airlines of Western Australia (Pty.), Ltd.**

MADAIR, S.A.: Malagasy Republic (1961–1962). Air Madagascar (*Société National Malagache de Transports Aériens, S.A.*) is reorganized on January 1, 1961 by the government of the Malagasy Republic, Madagascar, and TAI. Shareholding is divided between the Malagasy Republic (39%), TAI (20%), and Air France (44%).

The fleet now includes 4 DC-3s, 2 DC-4s, 6 DH 89As, and 1 Broussard. Four months later, the company is renamed Madair, S.A.

An Antananarivo–Paris route via Djibouti and Marseilles is opened on October 20 with a Douglas DC-7C leased from the French partner.

Service is taken over or started to 58 domestic points on January 1, 1962. These flights are operated with a variety of U.S.-made lightplanes, as well as five Nord 262s. Routes are also opened to neighboring islands and to Johannesburg. There are accidents.

The company is again reorganized on October 14, 1962, and the Madair name is dropped in favor of the original title.

MADANG AIR SERVICES (PTY.), LTD. See **MANDATED AIRLINES (PTY.), LTD.**

MADDUX AIR LINES: United States (1927–1929). During a reliability tour, Los Angeles Lincoln automobile dealer Jack L. Maddux is impressed with the reliability of the Ford 4-AT TriMotor. Backed by wealthy colleagues, he offers to become Ford's West Coast distributor and build an airline if two TriMotors can be flown from their Michigan factory over the mountains to Los Angeles' Rogers Airport. In anticipation, he purchases two 4-AT-Bs and hires pilot Lawrence G. Fritz to make the first delivery flight.

In mid-July 1927, aviator Fritz and his copilot, Ford Motor Company chief pilot J. Parker Van Sandt, who is also serving as operations director of **Stout Air Services**, depart Detroit for California with Ford 4-AT-7. Among the passengers are Ford Chief Engineer William B. Mayo, Ed die Hamilton, and six others.

According to Van Sandt, during this delivery flight it was he who persuaded the group to detour from Salt Lake City over the Grand Canyon to Williams, Arizona, taking in the view. This half-hour flight is credited with inspiring an entire new business, the Grand Canyon air tour industry. (Van Sandt's account was later written down as "Origin & History of **Scenic Airways**, 1926–1929," and has recently been posted on **Grand Canyon Airlines'** website.) The 4-AT-7 arrives in Los Angeles on July 27, where Fritz becomes "Commodore" of the Maddux fleet, and is joined as copilot by Edward A. Bellande, with Van Sandt returning to Stout.

The new entrant launches Los Angeles (Rogers Airport) to San Diego (Mahoney Flying Field) return passenger service on July 28, 1927. The flights, at \$15 per head, are very popular and frequencies are increased to twice daily before the end of the summer. An active publicity department is established by Maddux to promote his carrier; whenever possible, movie stars such as Dolores Del Rio are photographed next to the trimotors.

Ms. Del Rio is the star of a Raoul Walsh film *The Red Dance*, which is shot in January 1928 at Truckee, California; pilot Fritz flies 4-AT-7 in a number of the Russian Revolution-related scenes. The third Ford Tri-Motor, 4-AT-16, arrives on March 31 and on April 14 the aircraft inaugurate twice-daily flights between San Francisco and Los Angeles. A fourth Tri-Motor, 4-AT-12, is acquired on May 2. During the summer, it will be leased to Metro Goldwyn Mayer; christened *The Flying Laboratory*, it is used as an aerial cutting room during the filming of George Hill's motion picture, *Gold Braid*, starring Ramon Navarro. Meanwhile, the 4-AT-23 enters service on June 23.

Another Ford Tri-Motor, 4-AT-32, is acquired on August 25, followed by the 4-AT-33 on September 7. The 4-AT-36 is delivered on September 25 and is christened *The Glendale* in honor of the actual Los Angeles terminus. By the close of the year, Maddux can fly travelers from San Francisco via Los Angeles and San Diego to points further south in California.

A total of 9,440 passengers are transported on the year over 386,736 miles.

The first upgraded Tri-Motor, Ford 5-AT-10, is delivered on January 4, 1929. It is followed by the arrival of the \$65,475 5-AT-16 on January 16. Also on that day, the 4-AT-16 is sold to G. E. Flaherty of Los Angeles, who plans to begin an airline to be known as **Golden State Airways**. While landing at Santa Rosa, California, on January 18, the 4-AT-16, piloted by Marino J. Guglielmetti, crashes and is damaged. Ford 5-AT-17 is delivered on February 9 and the next day the carrier initiates a Los Angeles–Phoenix route, while expanding service to additional points in southern California.

The Ford 5-AT-18 arrives on February 29 followed by 5-AT-19 on March 5. In mid-month, the carrier joins with the newly established Air Express Division of **UPS (United Parcel Service)** and **Pacific Air Transport (PAT)** to ship packages from Los Angeles to Seattle. Maddux flies the UPS boxes to San Francisco, where they are transferred to PAT for shipment up to the state of Washington; service is inaugurated by the 5-AT-10.

Equipped with a large number of 4-AT-Bs and 5-ATs, Maddux, now the world's largest operator of the trimotor, also flies two Lockheed Model 5 Vegas and two Travel Air 5000s. Ford 5-AT-41 joins this collection on April 20. Enroute to Phoenix from San Diego on April 21, Ford 5-AT-10, piloted by Maurice Murphy with one crew and three passengers, is struck by a USAAC 95th Pursuit Squadron Boeing PW-9D; both aircraft crash (six dead). The replacement 5-AT-46 arrives on May 29.

In June, a 4-AT, piloted by Jack Collier and with a full complement of passengers enroute from Los Angeles to Oakland, is flown under the Carquinez Bridge over the Sacramento River in order to avoid fog, circling about for a landing at Alameda Airport. The maneuver is the first time a Ford Tri-Motor in passenger service is flown under a bridge.

While on its delivery flight, the \$55,475 5-AT-51 is employed as a press plane at Port Columbus, Ohio, during July 8 opening ceremonies for **Transcontinental Air Transport (TAT)**. Two days later, the aircraft is flown from Grand Central Air Terminal at Burbank, serving Los Angeles, up to Alameda Airport to inaugurate increased Maddux service in the San Francisco area. The pilot is TAT's chief technical advisor, Charles A. Lindbergh.

The 4-AT-23 is sold to the **Curtiss Flying Service of California** on July 12; three days later the new entrant also purchases 4-AT-32. On August 26, it is the 5-AT-51 that guides the giant German dirigible *Graf Zeppelin* into Mines Field, Los Angeles, as it arrives from San Francisco on August 26.

Ford 4-AT-36 is up-engined with Wright J-6 engines during September and, on November 16, less than a month after the New York Stock Market crash, Maddux Air is purchased by **Transcontinental Air Transport (TAT)** and becomes known as **TAT-Maddux Air Lines**. Owner Maddux receives a directorship; however, others are not so fortunate. For example, Operations Manager Daniel W. "Tommy" Tomlinson is hired as a Ford Tri-Motor copilot. During the year, 40,000 passengers are transported.

MADINA AIRLINE: Borovski Proezd 6/36, Moscow, 119619, Russia; Phone 7 (095) 470-3547; Year Founded 1995. Madina is established at Moscow in 1995 to provide domestic and regional passenger charters. M. G. Kulev is general director and he begins, and continues, revenue flights with a single Tupolev Tu-134.

MADRAS AIR TAXI SERVICE, LTD.: India (1933–1934). Founded in December 1933, this nonscheduled carrier begins experimental twice-weekly scheduled de Havilland DH 83 Fox Moth passenger and mail services between Calcutta and Madras via Puri, Vizagapatnam, and Bezwada, on February 10, 1934. These flights and the carrier cease on March 31.

MAERSK AIR, A.S.: Copenhagen Airport South, Dragoer, DK-2791, Denmark; Phone 45 32 31 44 44; Fax 45 32 31 44 90; <http://www.maersk-air.com>; Code DM; Year Founded 1969. In February 1969, A. P. Moller Shipping Co. Chairman Maersk McKinney Moller acquires a Hawker Siddeley HS 125 for corporate travel; late in the year, it is decided to offer executive charters, which commence in December.

An F.27-500 with four crew fails its takeoff from Rinne, Denmark, on December 27 for a training flight and crashes into the sea 500 yards beyond the runway; there are no fatalities.

In January 1970, the domestic freight operator **Falck Air, A.S.** is purchased and merged; however, all-cargo flights soon prove a money-losing proposition. Meanwhile, in light of the continuing popularity of the executive charters, the decision is taken to concentrate on nonscheduled service to Mediterranean holiday spots on behalf of Scandinavian inclusive-tour promoters. With an initial fleet of Fokker F.27-500s, Maersk Air is created as a fifty-fifty subsidiary of the parent's two aviation subsidiaries, A/S Maersk Aviation and Flyaktieselskabet Maersk.

In February 1971, Maersk Air (38%) joins with **SAS (Scandinavian Airlines System)** (7%) and **Cimber Air, A.S.** (5%) to create **Danair, A.S.**, the nation's new principal internal carrier, pledging flight support and equipment to the Copenhagen-based new entrant.

Operations continue apace in 1972–1973; between January 17 and March 8 of the latter year, three B-720-051Bs are purchased from the American carrier **Northwest Airlines**. Two more arrive between January 16 and February 20, 1974.

Following its January 15, 1975 bad weather landing at Vagar in the Faroe Islands, all 4 crew and 22 passengers on board an F.27-600 are safe after the plane plunges off the runway, although the aircraft must be written off.

As charter demand increases and additional destinations are added in 1976–1979, the fleet is upgraded to include 8 Boeing 737-2L9s and 2 de Havilland Canada DHC-7-102s. The latter gradually replace the original Fokkers in support of **Danair, A.S.** in scheduled services between Copenhagen and Billund, Esbjerg, Odense, Ronne, Thisted, and Skrydstrup. Managing Director Johan H. Paus's workforce grows to 600.

In addition to freight forwarding offices, Maersk travel agencies are opened in 1980 in Copenhagen, London, Hong Kong, Aberdeen, and Singapore.

Traffic figures show that enplanements for new President Bjarne Hansen's carrier have, at 1,119,255, surpassed the one million-mark.

Expansion is undertaken in 1981 in support of the offshore North Sea oil industry; an offshore-oriented subsidiary, **Maersk Helicopters, A.S.**, is created to operate a fleet of 5 Bell 212 helicopters from a base at Esbjerg Airport.

Overall passenger boardings jump 10.1% to 1,245,000.

Charter and scheduled fixed- and rotary-wing services increase in 1982, including flights over an 834-mile Boeing 737-2L9 route (the company's longest) to the Faeroe Islands in the North Atlantic. One Bell is retired in 1983 as two Aerospatiale AS-365 Super Pumas join the Offshore Division. The commuter carrier **Air Business, A.S.** (and its two Shorts 360s) are purchased on May 1 and on behalf of its new parent, launch scheduled regional flights connecting Esbjerg with Stavanger, Norway.

The Shorts are also employed on **Danair, A.S.** flights. As the result of a 1984 EEC directive allowing international regional operations, the carrier in November starts twice-daily DHC-7-102 service Billund–Southend, England; four Dash-7s are dedicated to this operation by year's end, at which time an order is placed for two B-737-3L9s.

In 1985, Maersk Air continues to undertake substantial service for its partial subsidiary, **Danair, A.S.**, while maintaining regional, international, charter, and helicopter operations. With a fifth DHC-7-102 available, boardings on the England route reach 15,000 for the first complete year. During the year, the two B-737-3L9s are delivered, replacing two B-737-2L9s on the Mediterranean holiday service.

In October, the carrier becomes the fifth airline to purchase the new Fokker 50 turboprop; four are ordered for delivery in early 1988.

Enplanements total 14,075 on the British run and the net profit is \$13.4 million.

Airline employment in 1986 stands at 950 and President Bjarne Hansen's fleet now comprises 20 aircraft: 2 B-737-3L9s, 6 B-737-2L9s, 1 HS 125-400, 5 DHC-7-102s, 1 AS-365s, and 4 Bell 212s.

In March, two additional B-737-3L9s are ordered for delivery the following June. The company, meanwhile, has five helicopters assigned to offshore support roles.

Fixed-wing passenger boardings, including 20,000 on the Southend run, exceed 1.3 million.

The workforce grows 5.3% in 1987 to an even 1,000 as the B-737-3L9s arrive in June and July.

A total of 1.58 million revenue passenger kilometers (RPKs) are flown, a 6.2% boost.

In addition to the four B-737-3L9s, the fleet in 1988 has been pared to 2 B-737-2L9s, 5 DHC-7-102s, 2 Shorts 360s, and 4 helicopters. The subsidiary **Air Business, A.S.** is reformed at **Maersk Commuter, I.S.** and equipped with the two Shorts 360s and the DHC-7-102s.

In July, the first of eight requested Fokker 50s is delivered and two more B-737-3L9s are requested. Maersk seeks permission to fly from Copenhagen to Birmingham, England; **SAS (Scandinavian Airlines System)** exercises its veto over new international routes from consortium nations to block the expansion.

Enplanements for the year dip to 1,291,000.

The 1,000-employee Danish domestic operator sees its passenger boardings dip another 5.9% in 1989 to 1,215,000.

The fleet in 1990 includes 6 Fokker 50s, 1 B-737-2L9, 7 B-737-3L9s—4 leased to **British Airways, Ltd.** (2) and three on order—and 4 B-737-5L9s, 1 of which is still on order. Four helicopters are now active in offshore support roles.

In April, the **Maersk Commuter, I.S.** subsidiary is absorbed. In England, services are switched from Southend to London (LGW) following the **SAS (Scandinavian Airlines System)** withdrawal. In October, joint venture flights begin with **Sabena Belgian World Airlines, S.A.** from Brussels to the Danish city of Billund, home to Lego toys, which now becomes a major hub with connecting flights to Britain and Belgium.

Passenger boardings for the year slip 0.5% to 1,153,000.

The fixed-wing fleet in 1991 includes 9 B-737-3L9s, 1 of which is leased to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** and 2 to **British Airways, Ltd.** (2). There are also 8 Fokker 50s, 2 of which are leased to **Deutsche Luftverkehrsgesellschaft, GmbH. (DLT)**. At the same time, an AS-332L Super Puma is leased from **Helicopter Service, A.S.** With two Bell 212s and two Super Pumas of its own, the helicopter division continues to operate offshore support flights.

During the spring, permission is won to inaugurate new scheduled passenger services from Billund to London (LGW). A previous service to Southend Airport is suspended; however, the route will briefly be flown during the summer by the Danish regional **Sun Air of Scandinavia, A.S.**

In August, the company applies for permission to fly from Copenhagen to Oslo, Stockholm, and Goteborg.

Enplanements total 1,136,640 and revenues are \$204 million; a net loss of \$3.1 million is suffered and comes after a decade of profits.

Airline employment stands at 1,038 in 1992 and the fleet now features 2 Aerospatiale AS-332Ls, 1 BAe 125 Mk. 700B, 3 Bell 212s, 8 Fokker 50s, and 5 B-737-5L9s, 1 of which is leased to the Korean carrier **Asiana Airlines**. Also included are 13 B-737-3L9s, 1 of which is leased to **Air Holland Charter, N.V.**, 7 to **Deutsche BA, GmbH.**, and 2 to **Germania Fluggesellschaft, GmbH.**

By summer, the domestic network from Copenhagen includes stops at Billund, Esbjerg, Odense, Vejens, Ronne, and the Faroe Islands.

Passenger boardings climb 11.2% to 1,280,000. Revenues climb to \$225 million and yield a profit of \$4.5 million.

Chairman Troels Dilling and President Hansen oversee a workforce of 1,200 in 1993, up 15.6% over the previous year. The Copenhagen Cargo Center, of which the company owns 40%, opens in January.

In May, the company joins with **British Airways, Ltd. (2)** to implement a rescue package designed to secure the future of the U.K. regional **Brymon European Airways, Ltd.** as well as the jobs of 500 employees of its parent organization, The Plimsoll Line, Ltd. (TPL). Under the joint agreement, the two airlines will each inject £6 million into TPL to enable it to meet its outstanding debts and restructure its three core subsidiaries. Meanwhile, Brymon Aviation and Plymouth City Airport will both become wholly owned subsidiaries of BA while BEA becomes a wholly owned subsidiary of Maersk Air.

When **Brymon European Airways, Ltd.** splits apart in July following an unsuccessful rescue attempt by the company and **British Airways, Ltd. (2)**, Maersk steps in to purchase the old **Birmingham European Airways, Ltd.** component, renaming its new subsidiary **Maersk Air U.K., Ltd.**

Maersk is the first company to take advantage of the new European Union regulations that permit 100% ownership of an airline in the nation of another EU member. The newly reformed entity becomes a BA franchise carrier in August.

On the year, Maersk Air enjoys an increase of 3.1% in customer bookings, to 1.32 million, and a 5.5% boost in revenues to \$220 million. The operating and net profits slip to an identical \$4.05 million.

The fleet in 1994 includes 12 B-737-3L9s, 4 B-737-5L9s, 8 Fokker 50s, and 1 British Aerospace BAe 125-800A. One B-737-5L9 is still leased to **Asiana Airlines** and orders are placed for six B-737-7L9s. The **Maersk Helicopters, A.S. (MHAS)** subsidiary, under the leadership of Vice President-Helicopters Jan Hagemann, flies two SA-365N Dauphin 2 helicopters.

The fixed-wing company division continues to provide regional and international services from Billund and Copenhagen to Amsterdam, Brussels, the Faroe Islands, Frankfurt, London (LGW), and Stockholm; domestic destinations include Billund, Esbjerg, Odense, Roenne, and Vejens. In October, the Kristianstad-London (LGW) via Copenhagen service is increased to six roundtrips per week.

Passenger boardings increase 31% to 1,729,000 and revenues advance 31.2% to \$286 million. Expenses climb 23.3% to \$263.7 million. Operating and net profit figures are again identical: \$22.3 million.

In 1995, seven B-737-3L9s are leased to Munich-based **Deutsche BA Luftfahrtgesellschaft, GmbH.** On September 1, a \$24-million long-term lease is signed by MHAS with **Helikopter Services, A.S.** of Norway for the lease of three Eurocopter AS-355L.1 Super Pumas.

Enplanements climb 7.9% to 1,864,800 and operating revenues accelerate 5.2% to \$303 million. Net profit reaches \$26 million.

Early in 1996, two more B-737-3L9s are sent to Deutsche BA. Code-sharing commences with **KLM (Royal Dutch Airlines, N.V.)** on March 17 from Billund to Amsterdam. The route, formerly operated by KLM, is now flown with Maersk equipment. Later in the year, Maersk Air leads a consortium that purchases majority interest in **Estonian Air, A.S.** A marketing agreement is reached with **Finnair O/Y** in November and plans for block-seat flights are announced.

Customer bookings accelerate 2.4% to 1,908,700.

A major dual-designator agreement is signed with **Finnair O/Y** during the first week of February 1997. Employing its eight available B-737-5L9s, the company launches dual-designator service from Copen-

hagen and Billund to Stockholm on April 28. Finnair will employ its DC-9-51s and, between them, the two carriers will offer 47 weekly roundtrips between the 2 Scandinavian cities.

On August 4, a code-sharing agreement is signed with **Swissair, A.G.** It takes effect on October 26 when a Maersk B-737-5L9 inaugurates daily roundtrips from Copenhagen to Geneva. The route is an extension of another new joint service that the two provide between Billund and Zurich via Frankfurt.

Passenger boardings inch up 0.7% to 1,921,600.

As a result of a five-month delay in Joint Airworthiness Authorities certification, Europe's first Next Generation B-737-700 is not delivered to Maersk until March 2, 1998. The DASH-7L9 is in service by month's end, making Maersk the airline first in Europe to operate the new type.

On June 1, Maersk Air is taken to court by the Danish Equal Status Council for demanding that its female flight attendants wear makeup. The airline is accused of gender discrimination and it is expected to be ordered to change its dress code.

Although the European Commission has begun to take a harder line toward code-sharing pacts, on July 14, EU Competition Chief Karel van Miert, speaking for the EC, approves the carrier's pact with **Finnair, O/Y**. Van Miert states that the pact has enhanced competition between Copenhagen and Stockholm, which had previously been dominated by **SAS (Scandinavian Airlines System)**.

In October, upstaging both **Finnair, O/Y** and Minister van Miert, SAS negotiates its own comprehensive commercial accord with Maersk Air, guaranteeing itself an even stronger dominant role in Nordic air transport. When the pact takes effect on March 28, it will provide for joint ground handling, marketing, frequent flyer program linkage, and dual-designator flights.

Passenger boardings drop 3% during the 12 months to 1.86 million.

By the beginning of 1999, airline employment has been increased by 3.1% to 1,279.

With the beginning of the summer schedule on March 28, twice-daily B-737-5L9 return services are launched between Copenhagen and both Athens and Venice. In addition, the three daily roundtrips from Copenhagen to Kristiansand are upgraded to B-737-5L9.

On April 1, a new B-737-5L9 return route, The Aalborg Feeder, is inaugurated four times a day between Aalborg and Billund. The flights are planned to have the best possible connections with the carrier's Billund departures for other European destinations.

A new reservations center is opened in Billund Airport on July 1. Under terms of a code-sharing agreement signed with **Deutsche Lufthansa, A.G.** on June 10, the German major is able to sell tickets on Maersk's return services from Billund to Frankfurt, for those passengers flying beyond the DLH hub, beginning on October 1. In addition to increased profits for both parties, the pact improves connections from Billund.

A Next Generation B-737-7L9 is delivered on October 19, bringing the fleet total to five, including two others received this year. Frequencies between Copenhagen and Bornholm are increased on October 29 to 40 weekly roundtrips, including early morning departures known as Fog Crushers.

Due to poor load factors, the Copenhagen to Esbjerg service, first operated in 1982, is halted on October 31.

Passenger boardings this year jump 7.5% to 2,095,000, but cargo traffic drops 33% to 654,000 FTKs. Maersk Air Group revenues advance 8.6% to \$472.77 million, even as the net gain slides to \$15.12 million.

Airline employment at the beginning of 2000 stands at 1,321, a 4.8% increase over the previous 12 months. The B-737 fleet now includes 15 Dash-5L9s, 5 Dash-7L9s, and 2 Dash-3L9s.

Two Next Generation B-737-7L9s are chartered to **Air Malta Company, Ltd.** in time for the start of the summer schedule on March 26. A B-737-5L9 is placed on half of the Copenhagen to Bornholm frequencies, thereby increasing the number of weekly seats to 3,100 each way.

On March 26, as part of a code-sharing arrangement with **SAS (Scandinavian Airlines System)**, new daily B-737-5L9 return service is inaugurated between Copenhagen and Lisbon.

On April 9, daily (except Sunday) nonstop B-737-5L9 roundtrips are inaugurated from Billund to Dublin.

On May 1, Jorn Eriksen, senior vice president at Maersk, succeeds Borge Thornbech as president of **Estonian Air, A.S.**; Thornbech returns to an executive position at Maersk.

In mid-June EU Commission officials suddenly descend upon the offices of Maersk, as well as those of Maersk owner A. P. Moeller Group, and **SAS (Scandinavian Airlines System)** as part of an investigation into the competitive results of the code-sharing pact between the two airlines. The dual-designator review, confirmed to the press by EU headquarters in Brussels, is to determine if the Maersk-SAS pact violates Commission rules.

The sixth Next Generation B-737-7L9 is delivered on October 19. The tenth anniversary of four international routes from Billund is celebrated on October 29: London (LGW), Amsterdam, Stockholm, and Brussels.

On November 1, the twice-daily roundtrip B-737-5L9 return service between Billund and Brussels becomes thrice daily. Three Canadair CRJ200LRs are leased from **Maersk Air UK, Ltd.** on November 1; the trio has been repainted from "British Airways Express" colors to the standard, two-tone scheme of the Danish line. The regional jets are scheduled to initiate daily roundtrips between Billund and Milan on November 6.

Daily Next Generation B-737-7L9 service is initiated four times a week from Copenhagen to Cairo on November 20; the next day, Next Generation B-737-5L9 thrice-weekly roundtrips commence from Copenhagen to Istanbul. Five-times-a-week B-737-5L9 return service is started on November 22 from Billund to Zurich while twice-weekly B-737-5L9 flights begin from Billund to the Faroe Islands. A fifth daily return flight is offered between Billund and Stockholm.

Six-times-a-week CRJ200LR return frequencies begin on November 22 between Billund and Milan. The service had originally been scheduled to start on November 6.

MAERSK AIR U.K., LTD.: Maersk House, 2245-2249 Coventry Road, Birmingham, England, B26 3NG, United Kingdom; Phone 44 (121) 743-9090; Fax 44 (121) 743-4123; <http://www.british-airways.com/inside/wrldwide/partners/franchise/docs/maersk.shtml>; Code VB; Year Founded 1993. When **Brymon European Airways, Ltd.** splits apart in July 1993, **Maersk Air, A.S.** of Copenhagen steps into purchase the old **Birmingham Executive Airways, Ltd.** component. Maersk is the first company to take advantage of a new European Union ruling which permits 100% ownership of an airline by another from an EU nation. Firmly in control by July, the Danish renames its new subsidiary, but chooses to see it operate as an independent in order for it to avoid service restrictions imposed by the ancient international **SAS (Scandinavian Airlines System)** compact.

Headquarters are retained at Birmingham; Peter Harris is president with Flemming Knudsen as managing director. The company is outfitted with 5 British Aerospace BAe (BAC) 1-11s and 3 BAe Jetstream 31s.

In August, the reformed entity becomes a franchise of **British Airways, Ltd. (2)**. Under its agreement with the British major, the company will repaint its aircraft in modified BA livery. These are employed to inaugurate "British Airways Express" revenue services connecting the carrier's Birmingham base with Amsterdam, Belfast, Copenhagen, Cork, Dublin, Glasgow, Milan, Newcastle, and Stuttgart.

Airline employment stands at 185 in 1994 and the fleet includes 1 each British Aerospace (BAC) 1-11-401AK and 1-11-416EK, 3 Jetstream 31s, and 2 each 1-11-408EFs and 1-11-510EXs, the latter 2 leased from **British Airways, Ltd. (2)**. Berlin and Lyon join the route network.

Enplanements for the first full year of service total 370,000.

By early 1995, the company is offering 200 "British Airways Express" flights per week from Birmingham to six European cities. Passenger boardings total 42,845.

A British Aerospace BAe Jetstream 41 is leased in September 1996. Painted in "British Airways Express" colors, it is placed into service at the beginning of October over a route from Birmingham to Newcastle.

Customer bookings rise 5% to 45,100 and revenues are \$109 million. Net gain drops to \$5.1 million.

Managing Director Knudsen returns to AP Moller Shipping Group in September 1997; he is succeeded by **Maersk Air, A.S.** Senior Vice President-Finance Gert Kristensen. Four Boeing 737-5L9s join the fleet painted in the controversial new **British Airways, Ltd. (2)** color scheme, each with a tail representing the culture of another land.

In October, the company places a \$64-million order for 3 Canadair CRJ-200LRs and takes options on 12 more. The three will be delivered during the second quarter of 1998 and will replace the BAC 1-11-400s.

Passenger boardings during these 12 months surge 22.7% to 554,352 while cargo skyrockets 66% to 1.09 million FTKs.

Flights continue in 1998. Destinations visited include Amsterdam, Belfast, Berlin, Birmingham, Copenhagen, Lyon, Milan, Newcastle, and Stuttgart.

While en route from Belfast to Birmingham on January 4, Flight 8343, a BAC 1-11, develops a minor electrical fault that causes smoke in the rear of the cockpit; a precautionary landing is made at Liverpool.

In early October, **British Airways, Ltd. (2)** leads an effort by several European airlines to prevent implementation of an Italian government decree requiring a shift of their services to the new Malpensa Airport. Consequently, when the new BA winter schedule starts on October 25, all 12 of its weekly roundtrips to Milan from Manchester and the twice-daily roundtrips from London (LGW) are switched to the new Malpensa Airport. Franchise partner Maersk is, however, permitted to continue operating its 17 weekly return flights from Birmingham into Linate Airport.

Later in the month, new services from Birmingham to Vienna and Geneva, due to start in February, are announced. The BAC 1-11 flights will be operated twice daily during the workweek and daily on weekends.

The CRJ-200LRs enter service before Christmas, with the fourth arriving just after New Year's.

Passenger boardings during the 12 months ascend 4.6% to 589,000.

BAC 1-11 twice-daily workweek roundtrips commence on February 1, 1999, from Birmingham to Vienna and Geneva. A daily roundtrip is offered between the three cities on weekends.

Two additional CRJ-200LRs are ordered from Bombardier Aerospace on February 24, along with options for two more CRJ-200LRs and five CRJ-700s. Deliveries on this request will be made in March and April 2000.

New routes to Rome and Stockholm are opened on November 1. Simultaneously, frequencies from Birmingham to Manchester are increased from four times a day to five times a day.

Customer bookings shoot up 11.4% to 686,000, while freight traffic swells 11.4% to 43.38 million FTKs.

Airline employment at the beginning of 2000 stands at 432, a 28.6% increase over the previous 12 months. The two CRJ200LRs requested the previous year are delivered as scheduled.

The BA franchise carrier introduces a Boeing 737-5L9, leased from its Danish parent, at the beginning of April. Painted in full BA franchise colors, it will soon be joined by four more of the same type.

The company's "British Airways Express" CRJ service from Newcastle to Birmingham is turned over to **British Regional Airlines, Ltd.** on October 30. The new operator downgrades the route from jet to turboprop by replacing the Canadair with a British Aerospace BAe Jetstream 41. The move is protested by **Gill Airways (Gill Aviation, Ltd.)**, which had been negotiating with Maersk Air, U.K. to take it over for itself.

Three CRJ200LRs are leased to **Maersk Air, A.S.** on November 1; the trio has been repainted from "British Airways Express" colors to the standard, two-tone scheme of the Danish line. The regional jets are scheduled to initiate daily roundtrips between Billund and Milan on

November 6. Six-times-a-week CRJ200LR return frequencies begin on November 22 between Billund and Milan. The service had originally been scheduled to start on November 6.

Options are converted on December 11 into two firm orders for a pair of CRJ700s valued at \$53.6 million. The new regional jets are scheduled for delivery in the second quarter of 2002.

As the year ends, negotiations with **British Airways, Ltd. (2)** concerning the franchise arrangement continue. The arrangement, which is scheduled to end on March 24, will be extended through the end of the upcoming summer season, with an actual decision on the pact expected by the end of April.

MAERSK COMMUTER, I.S.: Denmark (1988–1990). In 1988, the **Maersk Air, A.S.** subsidiary **Air Business, A.S.** is reformed as MCIS. Jan Goffredsen remains as general director with Leif Nielsen as operations manager. All previous routes, especially those linking Esbjerg with Stavanger and Aarhus, are maintained with the original two Shorts 360s. The reorganized regional operation is unable to expand or retain its viability and ceases operations on April 1, 1990, being absorbed into the parent company.

MAERSK HELICOPTERS, A.S. See **MAERSK AIR, A.S.**

MAFIKENG AIR SERVICE (PTY.), LTD.: South Africa (1978–1979). MAS is established by the government of the black African “homeland” of Bophuthatswana (located within the borders of the Republic of South Africa) in 1978 to operate scheduled Cessna flights and on-demand charters from an airfield near its namesake town. On July 20, 1979, the concern is renamed **Mmabatho Air Service (Pty.), Ltd.**

MAFIKENG AVIATION SERVICES, LTD. See **MAGNUM AIRLINES (PTY.), LTD.**

MAGADAN AIR CARGO (MAGADAN AERO GRUZ): Naberezhnaya Reki Magadki 7, Magadan, Magadan Zone ATD, 685007, Russia; Phone 7 (41322) 93633; Fax 7 (41322) 21082; Code MGG; Year Founded 1994. MAC is established at the Siberian city of Magadan in 1994 to provide all-cargo services throughout the vast wilderness area. M. U. Kuznechik is appointed general director and he launches revenue flights with 11 Antonov An-12s and 3 Ilyushin Il-76TDs.

Flights continue in 1995–2000; however, the number of An-12s is reduced by four. During the first quarter of the former year, an Il-76TD is chartered to **Volga-Dnepr Airlines** to help it increase its capacity on freight charters to and from China.

MAGADAN AIR CONCERN (MAGADAN AVIAKONCERN MAK): Russia (1992–2000). Based at the remote Siberian destination of Magadan, this **Aeroflot Soviet Airlines** directorate is reformed in 1992 into a semiautonomous division of the new **Aeroflot Russian International Airlines (ARIA)**. As greater independence is sought from Moscow, the company, now under Victor G. Trezbov's leadership, introduces cargo charters to Europe, Africa, Asia, and the U.S.

An Antonov An-12V with six crew and a passenger suffers fuel exhaustion and makes a forced wheels-up landing at a point 48 km. from Irkutsk on July 14; there are no fatalities.

Enplanements for the year total 814,990.

The fleet in 1993 includes 15 Ilyushin Il-76s, 20 Tupolev Tu-154s, 8 Antonov An-12s, and an unspecified number of An-24s/-26s and Yakovlev Yak-40s. As a result of the failing Russian economy, the company suffers significant traffic declines.

Passenger boardings fall 37.8% to 591,430 while freight is off 39.4% to 192.1 million FTKs.

The traffic downturn continues in 1994 as customer bookings plunge 44.2% to 330,200 and cargo drops 20.8% to 152 million FTKs. The passenger fleet is dramatically reduced in size, down to 1 each An-24, Tu-154, and Yak-40; however, an additional Il-76 is added.

Flights continue in 1995–1999, during which years cargo charters are operated to Western Europe, Asia, Africa, and the U.S. The Russian currency crisis, which begins in August 1998, has a devastating impact on the airline. By the end of 1999, the company is deeply in debt.

Having determined that Magadan Air Concern will not regain its economic viability, the Russian government's aviation authority, the FSVT, grounds the northeastern carrier on January 21, 2000. The defunct airline's assets are all seized and parceled out to its creditors.

MAGADAN AIRLINES (MAVAIL): Poselok Sokoi, Magadan, Magadan Zone ATD, 685018, Russia; Phone 7 (41300) 93644; Fax 7 (41300) 93368; Code H5; Year Founded 1995. **Magadan Air Concern (Magadan Aviakoncern MAK)** is reformed in 1995. A. A. Russ is named director general and he begins domestic and international services with a fleet of 5 Tupolev Tu-154Ms and 3 Tu-154Bs.

Flights continue in 1995–1999. Scheduled destinations now include Anchorage, Ekaterinburg, Khabarovsk, Krasnoyarsk, Moscow, Seattle, St. Petersburg, Ust-Ilimsk, and Vladivostok. The company's weekly roundtrip services to Anchorage and Seattle allow U.S. citizens a rare opportunity to see a Tu-154M on American territory.

The fleet at the beginning of 2000 includes 5 An-12s, 3 Il-76s, 7 Tu-154Bs, and 6 Tu-154Ms.

By order of a local court, the company's bank records are seized for inspection on January 20. At this point, the carrier is shut down. Flights are, however, allowed to resume on January 25.

On March 10, the company takes over the Vladivostok services to the U.S. formerly operated by **Aeroflot Russian International Airlines (ARIA)**.

MAGEC AVIATION, LTD.: London Luton Airport, Luton, Bedfordshire, England, LU2 9NT, United Kingdom; Phone 44 (1582) 724 182; Fax 44 (1582) 455 453; Year Founded 1947. Originally established as the FBO at London (CTN) in 1947, Magec, over the next half-century, also undertakes executive and small group charters, first around the country and then to northwest Europe and overseas.

By 2000, Operations Manager Richard Kneale oversees the flights of four British Aerospace BAe (HS) 125 Hawker biz jets.

MAGNICHARTERS, S.A. de C.V.: Lavarca 1128, Mitras 4, Monterrey, 64620, Nuevo Leon, Mexico; Phone 52 (83) 369-0855; Fax 52 (83) 369-0977; Code GMT; Year Founded 1994. Magnicharters is established in late 1994 as a subsidiary of Manitur, which is itself part of Gruppo Turistico Magno. Passenger charter and inclusive tour flights commence in January 1995 employing 1 each leased Boeing 737-205, B-737-205A, B-737-222, and B-737-247.

Flights to holiday points throughout North and South America and the Caribbean continue through the remainder of the decade. During this time, the Dash-205A, Dash-222, and Dash-247 are replaced with two Dash-2C3As and a Dash-2K9A. At the end of 1999, two former **Aero Continente, S.A.** B-727-130s are chartered from C-S Aviation Services.

MAGNITOGORSK STATE AIR ENTERPRISE: Magnitogorsk Airport, Chelyabinsk Region, 455033, Russia; Phone 7 (35317) 329 425; Fax 7 (35317) 346 374; Code MNG; Year Founded 1993. The former **Aeroflot Soviet Airlines** Magnitogorsk division is reformed and renamed in 1993. Vitali Martyniuk is named director general and he begins regional feeder services with a fleet of 6 each Antonov An-24Vs and An-2s, plus 4 An-26s.

During the remainder of the decade, the company also provides wet-lease contract services on behalf of Third World airlines, mostly in Africa. One more An-24V has been acquired by 2000.

MAGNOLIA AIRWAYS: United States (1975). Magnolia is set up at Alexandria, Louisiana, in 1975 to provide scheduled passenger and cargo services to New Orleans and to De Ridder and Fort Polk. Daily

roundtrips with a Piper PA-31-310 Navajo are duly inaugurated, but cannot be maintained for more than a few months.

MAGNUM AIRLINES: United States (1980–1982). Philip Kupers establishes this tiny third-level carrier at Van Nuys, California, on February 8, 1980 to provide scheduled passenger flights to Las Vegas and San Francisco. Employing a Cessna 402 and a Cessna 310, he commences revenue operations on May 10. Caught up in the ATC effects of the PATCO air traffic controllers' strike of summer 1981 and suffering from the recession, Kupers goes out of business in early 1982.

MAGNUM AIRLINES (PTY.), LTD.: South Africa (1978–1990). Magnum is founded at Johannesburg in March 1978 through the merger of **Air Lowveld (Pty.), Ltd.**, **Avna Airways (Pty.), Ltd.**, and **Mafikeng Aviation Services, Ltd.** A fleet is assembled comprising 3 Britten-Norman BN-2 III Trislanders, 8 Piper PA-31-310 Navajo Chieftains, 1 Beech B-80 Queen Air, 4 Cessna 402s, 3 BN-2 Islanders, 1 Cessna 206, 3 Beech Barons, and 1 Piper Cherokee Six.

The larger aircraft form the heart of the new operation that takes over the scheduled services of the Natal Division of **NAC (National Airways Corporation [Pty], Ltd.)** the following year. Johannesburg and Durban are now linked with Nelspruit, Middelburg, Newcastle, Vryheid, Mafeking, Dundee, Ladysmith, Pietermaritzburg, Umtata, and Mkuze.

Orders are placed for four Swearingen Metro IIs. Enplanements in 1980 the first full year of service total 67,000. Start-up and other costs (including fuel) bring an operating loss of \$1,558,391.

The workforce is increased 29.4% in 1981 to 110. Three of the four Metro IIs are delivered. During the year, the company moves from shared quarters into its own head office and becomes the first South African commuter-level airline to bring a computerized reservations system on line. New couturier uniforms are adopted late in the year.

Passenger boardings accelerate a modest 2.9% to 70,000. Revenues advance to \$4.4 million and with expenses kept in hand, an operating profit of \$26,530 is earned.

In June 1982, the company assists the newly designated flag line of Bophuthatswana, **Mmabatho Air Services (Pty.), Ltd.** to initiate scheduled services between Mafikeng and Johannesburg. A 50% stake is taken in **United Air (Pty.), Ltd.**

Enplanements for the year total 65,000.

The boarding figure climbs to 71,700 in 1983 as Magnum now offers replacement service for **United Air (Pty.), Ltd.** on routes to Pietersburg, Sishen, and Vryburg. The fleet in 1984–1985 is altered by the addition of four Fairchild-Swearingen Metro IIs.

Two de Havilland Canada DHC-8 turboprops are delivered to Managing Director Mrs. D. Farquhar's company in 1986. With the establishment of the Kerzner "kingdom" at Sun City, these are employed, with the Metroliners, to operate a shuttle service a 30 roundtrips per day between Pilanesberg and Grand Central Airport.

During 1987–1988, two more Piper Navajo Chieftains are acquired.

As the result of the failure of its No. 1 engine, a Metro II, with 2 crew and 10 passengers must execute a forced landing near Johannesburg on November 18 of the latter year; although the turboprop is destroyed, there are no fatalities.

Mrs. J. Nathanson becomes managing director in 1989 and the DHC-8s are withdrawn. Despite these changes, the carrier, already in financial difficulty, is forced to seek a merger arrangement or cease operation. Early in 1990, the company is merged with **Citi Air, Ltd.** of Durban and East London-based **Border Air, Ltd.** to form **Link Airways (Pty.), Ltd.**

MAGNUM HELICOPTER AIRLINES (PTY.), LTD.: South Africa (1977–1978). This helicopter shuttle is formed at Johannesburg in September 1977 to provide connections between Jan Smuts Airport and heliports in Pretoria. Services initially employ 4 Bell 206B JetRangers.

Upon the formation of **Magnum Airlines (Pty.), Ltd.** in 1978, the rotary-wing operator is renamed **Command Airways (Pty.), Ltd.**

MAGNUS AVIATION: N61187 Resources Drive, Sheboygan Falls, Wisconsin 53085, United States; Phone (414) 467-6151; Fax (414) 467-6611; Year Founded 1990. Magnus is set up at as an FBO at Sheboygan Falls, Wisconsin, by Jeffrey J. Magnus in 1990. Over the next 9 years, the 32-employee company also comes to operate charter passenger and cargo flights employing 1 each Cessna 172, Piper PA-23 Aztec, Piper PA-31-310 Navajo, and PA-31-350 Navajo Chieftain.

MAHALO AIR: United States (1993–1997). Hawaii's latest interisland regional, Mahalo (Hawaiian for "thank you") Air is established at Oahu in late summer 1993 by Robert N. Iwamoto Jr., president of the travel agency Roberts Hawaii, and six other local investors to offer scheduled daily roundtrips to Lihue, Kauai, and Kahului, Maui.

Honolulu CPA and investor Michael Nekoba is named CEO and his new entrant, capitalized at \$5.5 million by himself, Roberts, and four other owner/investors, is provided with a pair (later three) of leased Fokker F.27-500s. A six-month management contract is signed with Hayden Lake, Idaho-based **Empire Airlines (1)**; under its terms, the company's operations, which begin in October, will be managed until Mahalo can obtain its own operating certificate.

Orders are placed in January 1994 for six Avions de Transport Regional ATR42-320s, which are delivered between February and July. Upon receipt of its certificate from the DOT, interisland services with the multicolored European turboprops begin in November from Honolulu to Lihue, Kaunakakai, Kahului, Lanai City, and the lava field airport at Kailua-Kona on the "big island" of Hawaii.

The airline is the first to introduce one-fare level; competitors often have a lower rate for native Kamainas. A total of 66 weekday frequencies are offered, increasing to 70 on weekends.

In 1995, the company undertakes code-sharing services with **Hawaiian Airlines** and **Northwest Airlines**.

While en route over the Hawaiian Islands on December 30, an ATR42-320 with 3 crew and 21 passengers encounters severe turbulence. As the flight attendant is returning to her seat in the rear of the aircraft, she is twice bounced off the ceiling and sustains a displaced fracture of her left ankle.

The 6 ATRs transport a total of 496,404 passengers.

The employee population stands at 299 in 1996 as a seventh ATR42-320 enters service. During the summer, the carrier begins to code-share with **Hawaiian Airlines (HAL)** over routes from Honolulu to Molokai and Kapalua (West Maui Airport).

Customer bookings increase 28.8% to 639,534.

The company files for bankruptcy in September 1997. It ceases operations in November. Prior to shutdown, the company transports 324,946.

MAHAN AIR: P.O. Box 76135-1663, Kerman, Iran; Phone 98 (341) 264 312; Fax 98 (341) 263 050; Code IR; Year Founded 1994. MA is set up at Kerman in 1994 to offer charter regional and domestic passenger and cargo services. Capt. Mohammad Hassani is president and his concern begins revenue services with 2 each Ilyushin II-76TDs and Tupolev Tu-154Ms.

Operations continue apace in 1995–1996, during which years the workforce grows to 200. Traffic figures become available for the second quarter of 1997. These show passenger boardings of 169,872 and a total of 253.6 million FTKs.

Flights continue in 1998. Customer bookings for the entire 12 months climb 23.6% to 378,000, while freight traffic increases 141.4% to 616.59 million FTKs.

Airline employment at the beginning of 1999 stands at 200. Enplanements for the year total 220,000.

Destinations visited at the beginning of 2000 include Cairo, Dubai, Kish, Moscow, and pilgrim shrines in Syria. Three Airbus A300B4s, two Dash-103s and a Dash-203, previously flown by **Air Seychelles, Ltd.**, are chartered from AR Aviation during the first quarter.

Formerly operated by **Pakistan International Airlines, Ltd. (PIA)**, an Airbus A300B4-203 is purchased from ING Lease on August 1.

MAHFOOZ AVIATION, LTD.: P.O. Box 6664, King Fahad Street, Jeddah, 21452, Saudi Arabia; Phone 966 (2) 651-0550; Fax 966 (2) 651-0796; Code M2; Year Founded 1993. In the wake of the Gulf War, Sheikh Mahfooz Salem Bin Mahfooz establishes this carrier at Jeddah in early 1993 to offer international and regional passenger and cargo services. Capt. Saleem Zaidi is appointed managing director and is provided a workforce of 39 and a three-ship fleet comprising one each Boeing 707-320C, B-727-200, and Gulfstream G-159. Flights commence on May 1 and continue into 1994.

During the remainder of the decade, the carrier also operates flights for the UN and leases its aircraft out to other airlines. At the beginning of the new millennium, 2 B-757-228s and 1 B-727-251 are operated.

MAIN FLYING SERVICE: United States (1930–1931). Established at Cincinnati, Ohio, in the fall of 1930, Main is equipped with 2 Ryan B-1 Broughams, which are employed to inaugurate scheduled multistop flights to Pittsburgh on November 1 via Youngstown, Columbus, and Dayton. A total of 44 passengers are carried by year's end. Without a mail contract, passenger traffic is insufficient to permit operations to continue beyond October 1, 1931.

MAINA AIR, LTD.: General Aviation Terminal, Murtaia Muhammed Airport, Opposite Bristow Helicopter, Ikeja, P.O. Box 235, Surulere, Lagos, Nigeria; Phone 234 (1) 931 485; Fax 234 (1) 825 233; Code MAL; Year Founded 1980. MAL is set up by Alhaji Usman Lawan in 1980 to offer essential domestic air cargo charter services. Over the years, a network of markets is set up, with major stops at Jos, Kaduna, Kano, and Maiduguri. Passenger charters commence in 1994.

By the end of the decade, Chairman Lawan employs a workforce of 45 and operates a fleet of 5 Tupolev Tu-134As, 2 Yakovlev Yak-42s, and 1 Ilyushin Il-76D.

MAINE AIR: United States (1982–1983). MA is established at Bangor in 1982 to offer scheduled passenger and cargo services to Portland and Boston. Although Piper PA-23 Aztec roundtrips are duly inaugurated, recession forces the company out of business in 1983.

MAINE AIR TRANSPORT: United States (1931–1933). MAT is established at Rockland in early spring 1931 to offer unscheduled passenger charters to offshore islands. The commuter is equipped with a Fairchild FC-2, which is employed to begin flights in May.

In January 1932, the company, upgraded by the addition of a Travel Air 6000 and two float-equipped Fairchild 71s, begins scheduled passenger and air express services from Rockland to Stonington. Operations continue for a year, ending in February 1933.

MAINE AVIATION CORPORATION: Portland International Airport, Portland, Maine 04102, United States; Phone (207) 780-1811; Fax (207) 775-3359; Year Founded 1959. This corporate carrier is established in 1959 to fly business executives throughout the Northeastern U.S. and Eastern Canada. By 2000, the company employs 3 pilots and operates a fleet of 1 each Cessna 500 Citation I bizjet, Beech 99, Cessna 402, and Cessna 414 Chancellor.

MAITLAND AIR CHARTER, LTD. See MAITLAND DREWERY AVIATION, LTD.

MAITLAND DREWERY AVIATION, LTD.: United Kingdom (1959–1961). J. R. Maitland forms a small charter operation, Maitland Air Charter, Ltd., at Biggin Hill Airport early in 1959, equipping it with a Percival P.40 Prentice. Ad hoc flights commence on May 15 and in the summer it is employed to provide tourist rides from Ramsgate Airfield in Kent. A Sokol Aero 45 is purchased in June and another Prentice is added in September.

Early in 1960, W. E. Drewery becomes involved with Maitland and the company is renamed in honor of both men on March 8, with Drewery serving as chairman and Maitland as managing director.

Seeking a larger charter market, Maitland Drewery takes delivery of a Vickers Viking in March; when readied, it begins revenue flight operations from London (LGW) to Paris (LBG) on April 12. Following several flights to Rotterdam and Amsterdam, the Viking begins flying summer inclusive-tour flights for British and West German tour agencies to the Mediterranean and various Continental destinations.

The lightplanes are employed to fly air taxi and other charters, both local and international to northern France. On June 2, a second Viking is acquired and is placed in service to Tares on June 3. Requiring still additional capacity, the company now purchases four ex-Air France Vickers Viscount 708s, the first of which enters operations with a London (LGW) to Jersey flight on August 27. By fall, three of the four (the fourth will not enter service) are engaged flying tours from Britain and West Germany.

The final Viking charter is flown to Nice on February 15, 1961; both Vikings are sold in March. Lightplane and Viscount charters continue as in 1960; however, business for the latter becomes more difficult to locate and in late May, two of the Viscounts are leased to BKS Air Transport, Ltd. for six months. The third Viscount is rented to BKS in July.

Other than occasional Percival flights, the company's charter contracts are fulfilled by BKS during the remainder of the summer season. In November, the leased Viscounts are returned and in December are sold to Silver City Airways, Ltd. Drewery and Maitland close their airline the same month.

MAJESTIC AIR SERVICE: Frederick Municipal Airport, 330 Aviation Way, Frederick, Maryland 21701, United States; Phone (301) 695-8155; Fax (301) 695-8260; Year Founded 1978. MAS is set up at Frederick, Maryland, in 1978 to provide executive and small group passenger charters throughout the U.S. and to Canada, Bermuda, Mexico, and various points in the Caribbean. Twenty-two years later, William K. Caudell schedules flights for 1 each British Aerospace BAe (HS) 125-700 Hawker and Learjet 35A Century III.

MAJESTIC AIRLINES (1): United States (1988–1989). The assets of defunct Pacific Interstate Airlines are purchased in late 1988 by the Crystal Palace Resort and Casino owned by Carnival Cruise Lines of Fort Lauderdale. The lone Boeing 727-51 acquired is employed to inaugurate daily flights between the Florida city and Nassau in the Bahamas. Additionally, charters bring visitors from Cleveland, Cincinnati, and Nashville.

In 1989, Majestic is reformed and renamed Carnival Air Lines.

MAJESTIC AIRLINES (2): AMF P.O. Box 22242, Salt Lake City, Utah 84122, United States; Phone (801) 539-0612; Fax (801) 539-0617; Code 2J; Year Founded 1990. The second U.S. Majestic is set up at Salt Lake City in 1990 to offer regional and domestic services. Flights, emphasizing freight and express delivery, commence with 2 Beech 99s.

Six more Beech 99s are acquired in 1991 and are employed to expand the company's routes throughout the West. Eight years later, the company adds three Douglas DC-3s.

MAJESTIC AIRLINES (PTY.), LTD.: Australia (1994–1995). Majestic is established at Brisbane in the spring of 1994 to offer scheduled service to Hervey Bay. Two Mohawk 298s are acquired and these are employed to launch revenue services in May. Late in the year, plans are made to acquire a third Mohawk 298 in late winter. Unhappily, finances will cause the start-up to shut down in February 1995.

MAKEDONIKI AERODIAFIMISTIKI, S.A.: Stadiou St. Polykastro, P.O. Box 68, Polykastro Kilkis, 61200, Greece; Phone 30 343 22454; Fax 30 343 23886; Year Founded 1992. This air taxi and non-

scheduled freight charter operator is established in **1992** by three partners: George Savopoulos (50%), Stefanos Papadopoulos (25%), and Stergios Loukas (25%). A workforce of 7 is assembled, along with a fleet comprising 1 Cessna 210, 1 Piper PA-18, and 2 Socata TB-9s. Domestic operations begin and continue.

MAKHACHKALA AIR ENTERPRISE (DAG DAGESTAN AIRLINES). See **DASGESTAN AIRLINES (MAKHACHKALA AIR ENTERPRISE-DAG DAGESTAN AIRLINES)**

MAKUNG INTERNATIONAL AIRLINES COMPANY, LTD.: Taiwan (1989–1996). Formed at Kao-hsiung in January **1989**, Chairman Chen Wen Wu and Managing Director Chuang Chao-Cheng's new third-level airline is provided with the last two British Aerospace BAe (HS) 748s (Series 2B) to be manufactured. Services are undertaken to Makung in the Pescadores Islands, Tainan, and Taipei. Daniel Wang becomes managing director in **1990** and the first BAe 146-100 regional jetliner is placed into service late in the year.

Another BAe 146-100 joins the fleet in **1991** followed by a third in **1992**. The two U.K.-manufactured jetliners are employed to inaugurate a scheduled service from Taipei to Taitung and a charter route from Kao-hsiung to Laoag in the Philippines.

Airline employment stands at 300 in **1993–1994** and the fleet is increased by the addition of a leased Boeing 757-236. It inaugurates daily roundtrip service from Kao-hsiung to Taipei.

The Boeing is found unsatisfactory and is removed at the end of the second year in favor of a fourth BAe 146-100. The company continues to offer 30 daily roundtrip sectors from Taipei to Kao-hsiung.

In April **1995**, a 32% stake in the company is sold to **EVA Air, Ltd.** for \$18.2 million. In May **1996**, the airline is renamed **UNI Airways Corporation, Ltd.**; planes will be flown in the markings of **UNI Air**.

MALAYAN AIRWAYS, LTD.: Malaya (1937–1962). Although it is founded by Straits Steamship Co., Ltd. and Ocean Steamship Co., Ltd. (Alfred Holt & Co. and **Imperial Airways, Ltd.** are associated) and registered on October 21, **1937**, political problems and the advent of war kept MAL from beginning revenue service.

Mansfield & Co., the shipping concern, resurrects MAL at Singapore in April **1947**. Revenue flights commence on May 1 as two Airspeed AS.65 Consuls inaugurate a Singapore–Kuala Lumpur–Ipoh–Penang route. Frequencies from Singapore to Kuala Lumpur become thrice daily by year's end, while flights to Ipoh are daily and those to Kota Bharu are offered four times per week.

In early **1948**, **British Overseas Airways Corporation (BOAC)** purchases a 10% interest and replaces the Consuls with seven Douglas DC-3s. Services to Bangkok commence in April, followed by flights in June **1949** to Kuching, Labuan, and Jesselton. Singapore to Rangoon via Mergui frequencies begin in September. Routes are extended in **1950** from Singapore to Saigon, Jakarta, Palembang, and Meda.

The Kuala Lumpur-based subsidiary **Federation Air Services, Ltd.** is created in November **1951** to assist in the provision of local services near its home city. During **1952–1957**, routes and frequencies are improved and increased as services are extended not only to additional domestic destinations, but also to Sabah, Sarawak, and Brunei. During the latter year, shareholding is revised. BOAC and **Qantas Empire Airways, Ltd.** share a 64.5% stake with the governments of Sarawak, Brunei, and North Borneo, plus the Ocean Steamship Companies (6.25% each); private investors acquired 4.25% shareholding.

MAL is officially transformed into a publicly owned company on February 6, **1958**. On March 1, **Federation Air Services, Ltd.** is merged into its parent. Meanwhile, local British governments and BOAC form Labrian-based **Borneo Airways, Ltd.**

Early in **1959**, the company acquires a Douglas DC-4 from Qantas and employs it to inaugurate pooled services to Hong Kong in association with BOAC-backed **Hong Kong Airways, Ltd. (HKA)**. In August,

two Vickers Viscount 760s, purchased from now-defunct HKA are placed on regional routes.

Borneo Airways, Ltd. assumes a feeder role in **1960** as Malayan, in pool with **Cathay Pacific Airways (Pty.), Ltd.**, begins service in May to Hong Kong employing either a leased Qantas Lockheed L-1049E or a Cathay Lockheed L-188A Electra. The Hong Kong service is suspended in October after just six months. A BOAC Bristol Britannia 312 is leased during the summer of **1961** and used to resume flights to Hong Kong on September 2. The carrier's name is changed to **Malaysian Airways, Ltd.** in November **1962**.

MALAYSIA AIR CHARTER COMPANY, LTD. (MAC): Malaysia (1962–1986). MAC is formed at Kuala Lumpur in February **1962** as a general aviation operation, providing cargo and passenger contract services within Peninsular and East Malaysia. Unscheduled Cessna 310 charter flights commence on May 14. In **1969**, the Indonesian subsidiary **SMAC (Sabang Merauke Raya Air Charter)** is set up as a joint venture with a private Malaysian concern; the operation becomes free-standing on North Sumatra in **1972**.

MAC is acquired by Datuk Mohd Fathi bin Haji Ahmad in **1975** and by Marsfin Sdn. Bhd. in **1978**. Scheduled passenger services are undertaken linking the carrier's base at Kuala Lumpur with Penang, Pulau Langkawi, and Alor Setar and scheduled all-cargo flights are flown to and from Johor Bahru in East Malaysia.

The fleet of Managing Director R. J. Milne's 38-employee carrier comprises 1 each Curtiss C-46R, Shorts SC-7 Skyvan, Britten-Norman BN-2 Islander, Cessna 310, and Piper PA-23 Aztec. A bright multicolor scheme is given each aircraft, giving the company the nickname of "The Rainbow Line."

During the next four years, Mersing and Pulau Tioman join the route network and the fleet is upgraded by the addition of three Skyvans, one Islander, and a Bell 206B JetRanger helicopter. The workforce grows to 80.

In late **1980**, an interest is taken in **Malaysia Helicopter Service, Ltd.** and in the new Sri Lankan domestic carrier **Serendip Airways, Ltd.**

During the early **1980s**, flights are laid on to Malacca and to Singapore's Seletar Airport, the latter in cooperation with the **Singapore Airlines, Ltd.** subsidiary **Tradewinds Private, Ltd.** Airline employment grows to 150 and additional flight equipment is purchased: one Shorts 360, three Dornier 228-212s, and three SC-7s.

Despite these improvements, passenger traffic falls off by almost 2,000 enplanements per year; in **1981**, 13,003 passengers are flown. 11,208 people are carried in **1982** and 9,942 in **1983**. Unable to maintain its viability in the face of these traffic figures and their attendant economic reversals, the company is forced to cease operations in late **1986**. Its routes pass to **Malaysian Airline System (MAS)**.

MALAYSIA AIRLINES, LTD. (MAS): 33rd Floor, Bangunan MAS, Jalan Sultan Ismail, Kuala Lumpur, Federal Territory, 50250, Malaysia; Phone 69 (3) 261-0555; Fax 69 (3) 261-3472; http://www.malaysiaairlines.com.my; Code MH; Year Founded 1987. **Malaysian Airlines System, Ltd. (MAS)** is renamed on October 15, **1987**; although the MAS acronym is kept, it is not initially incorporated into the company's logo or aircraft livery. Still 42% owned by the government-controlled Bank Negara, the 11,154-employee carrier owns a fleet of 37 aircraft, which is enhanced by delivery of a Boeing 737-236 ordered the previous year.

The new corporate identity is accompanied by new personnel uniforms and aircraft livery, which boldly displays the word "Malaysia." A handsome 34-story office tower, built on some of the most expensive real estate in Kuala Lumpur, is occupied and the airline logo, a stylized form of the traditional Kelantan *wau* (kite), is modernized and aircraft color schemes are changed.

The company's lone B-747-3H6C continues to make a weekly roundtrip flight from Kuala Lumpur to Zurich via Dubai and Vienna.

Enplanements for the year total 6,025,944, a 9.5% increase, while cargo is up by 33.2% to 343.35 million FTKs. Profits total \$44.2 million (operating) and \$41.6 million (net).

The workforce is increased by 5% in 1988 to 11,453 and the fleet now includes 1 B-747-3H6C, 1 B-747-2H6C, 3 DC-10-30s, 5 Airbus Industrie A300B4-203s, 13 B-737-236s, 11 Fokker F.27-500s, and 4 de Havilland Canada DHC-6-300 Twin Otters. Orders are made or outstanding for 6 B-747-4H6s, 9 Fokker 50s, and 16 B-737-336/436s.

Joint services commence with **Air Mauritius, Ltd.** in March over a route from Kuala Lumpur to Mauritius. In October, the carrier joins with **Singapore Airlines, Ltd.** subsidiary **Silkair, Ltd.** to offer a joint weekly B-737-236 service to Langkawi Island, Malaysia, with a stopover at Penang Island. This year, MAS receives the Pride in Excellence Award from Boeing; the carrier is the first to receive the honor, given in recognition of B-737 on-time reliability in three consecutive years.

Passenger boardings jump 9.3% to 6,584,697 and freight increases by 9.1% to 373.21 million FTKs. Revenues move upward by 12.6% to \$597.7 million, allowing a 6th consecutive profitable year. Bottom lines show a \$61.5-million operating profit and net gain of \$60 million.

The payroll reaches 13,339 in 1989, a 16.5% boost, and the fleet includes 37 transports, with another 31 on order. The route network includes 45 domestic, 10 regional, and 20 foreign destinations and on January 1, service is launched to New Delhi and Karachi. In March, the carrier orders six B-747-4H6s while two leased B-747-2H6Cs joins the fleet in April and May.

Weekly service is inaugurated to Guangzhou, Zurich, and Fukuoka on June 1 and Istanbul, Brisbane, Auckland, Brussels, Vienna, and Ho Chi Minh City flights begin later on.

On June 12, the company's new weekly B-737-236 service to Guangzhou is suspended as the result of the political unrest at Tiananmen Square and the declaration of martial law in the city just hours after the arrival of the second flight (and its single passenger). The airline promises to review the situation in July.

Bookings by the Pilgrims Management Board are so abundant that the company must wet-lease three DC-10-30s from **World Airways** to handle all of the Hadj customers. The carrier joins IATA on July 1.

The first of nine Fokker 50s arrives in August and is placed on regional routes. B-737-236 weekly service is now restored to and from Guangzhou.

The first new B-747-4H6C is delivered in October and placed into service between Kuala Lumpur and London in December. Meanwhile, in November, the Los Angeles frequencies are increased by two per week, again via Honolulu.

Customer bookings for the year swell 14.9% to 7,568,790 while cargo is up by 8.2% to 403.73 million FTKs. Revenues ascend 13.9% to \$728.6 million and costs allow the operating profit to reach \$75.2 million. The net profit, however, slips to \$58 million.

Company employment is boosted 21.7% in 1990 to 16,227 and the fleet now includes 59 aircraft. In cooperation with **Iran Air**, joint services are inaugurated during January from Kuala Lumpur to Tehran. The airline's portion of the ABACUS reservations system comes on line and as the result of an air service agreement between Malaysia and India, the company, in April, is able to double its Kuala Lumpur to Delhi service to twice weekly. Several other new routes are started, including one to Beijing.

Throughout the year, the airline supports the national tourism agency's Visit Malaysia Year, focusing on the U.S. market. During October, a joint service agreement is signed with **All Nippon Airways Company, Ltd. (ANA)**. It is followed by an agreement with **Vietnam Airlines** in November providing for joint services from Kuala Lumpur to Ho Chi Minh City.

Under the **Air India, Ltd.** pact, joint flights to New Delhi from Kuala Lumpur commence in December. Pooled frequencies will be undertaken from Penang and Kuala Lumpur to Madras. Also during the month, the company accepts its 10th Fokker 50, the 100th of its type built.

Passenger boardings increase 19.8% to 9,065,987 while freight climbs 42.5% to 575.37 million FTKs. Revenues perk up 22.1% to \$890

million, but expenses, led by fuel costs following Iraq's August invasion of Kuwait, rise quickly and cut the operating profit to \$54.6 million. Still, only 13 airlines in the world have a better return. Net profit climbs to \$82.2 million.

Although the payroll is decreased by 26.1% in 1991 to 12,000, the fleet is increased by the addition of eight new aircraft. In January, joint flights are inaugurated with **Garuda Indonesia** between Kuala Lumpur and Denpasar. The agreement with **All Nippon Airways Company, Ltd. (ANA)** takes effect during the first quarter and employing an MAS DC-10-30, joint roundtrip service is inaugurated in March from Kuala Lumpur to Nagoya. Managing Director Tan Sri Abdul Aziz takes leave in April and is succeeded on a day-to-day basis by new CEO Dato Kamaruddin bin Ahmad.

A freight block space agreement is inked with **Korean Airlines/Korean Air (KAL)** in July covering all-cargo services over the route from Kuala Lumpur and Penang to Seoul.

Aziz retires on September 12. The same day, Chairman Mohar bin Raja Badiozaman is succeeded by Zain Azraai. Frequencies commence during the fourth quarter to Mexico City, Dhaka, Cebu City, and Surabaya.

Customer bookings leap upward by 16.3% to 10,511,072 while cargo rises 23.6% to 712.52 million FTKs.

The workforce grows 14.8% in 1992 to 19,874 and the fleet includes 1 owned and 3 leased A300B4-203s, 5 chartered B-737-2H6As, 1 each leased B-737-2M6A and B-737-2H6C, 10 owned B-737-4H6s, 7 chartered B-737-4Q8s, 4 leased B-737-4S3s, 10 chartered B-737-4Y0s, 2 B-737-405s leased from **Braathens SAFE**, 2 owned B-737-5H6s, 1 B-747-219B leased from **Air New Zealand, Ltd.**, 2 B-747-236Bs, 1 B-747-3H6C, 3 B-747-4H6s, 2 B-747-4H6Cs, 6 DHC-6-310s, 2 leased and 4 owned DC-10-30s, and 12 Fokker 50s. Orders are outstanding for 10 A330-322s, 33 B-737-4H6s, 4 B-737-5H6s, 8 B-747-4H6s, and 1 Fokker 50.

During July, the company arranges a 3-year, \$170 million syndicated loan with 27 international banks to finance its expansion. Scheduled services are inaugurated to Phnom Penh, Munich, Madrid, Johannesburg, and Hanoi.

Twice-weekly roundtrip B-747-4H6 service is inaugurated on October 25 from Kuala Lumpur to Mexico City via Taipei and Los Angeles.

On November 13, capitalization is doubled, being increased, by a rights issue of 350 million shares, to a total of 700 million shares.

Passenger boardings swell 17% to 10,976,438 and freight jumps 22.9% to 740.12 million FTKs. Revenues ascend to \$1.3 billion and allow an operating surplus of \$14 million. The net gain is \$40.5 million.

In 1993, Managing Director Ahmad oversees a workforce of 19,900, up a slight 0.1% over the previous year. The fleet is increased by the addition of 21 B-737-4H6s, 4 B-737-5H6s, and 7 B-747-4H6s.

In March, a 308.2 million ringgit (\$120 million) syndicated term loan facility is secured to help pay for all the new aircraft. By early spring, the carrier is able to claim more "Baby Boeing" maintenance experience than any other airline in Asia. Meanwhile, the new Jumbojets are employed exclusively on the nonstop routes to Europe, including Amsterdam, Paris, Madrid, Brussels, Istanbul, Frankfurt, Munich, Vienna, and Zurich. A daily nonstop roundtrip is offered between Kuala Lumpur and London (LHR).

In May, the carrier enters into a joint venture agreement with MTU Maintenance, GmbH. to form the engine repair operation Airfoil Service Sdn. Bhd. The company begins to participate in the frequent flyer program of **Continental Airlines** during June.

On July 1, a joint frequent flyer program, Passages, begins in cooperation with **Singapore Airlines, Ltd.** and **Cathay Pacific Airways, Ltd.** The three jointly incorporate Asian Frequent Flyer (Pty.), Ltd. to market the program, each taking a 33.3% stake. New markets are opened at Bali and Cebu; however, DC-10F flights are suspended to Amsterdam and Los Angeles.

Simultaneously, a joint shuttle service is opened in cooperation with **Singapore Airlines, Ltd.** between Kuala Lumpur and Singapore. The

same month, the company begins to cross-share in the frequent flyer program of **Ansett Australia (Pty.), Ltd.**, a move that will also be initiated with **British Airways, Ltd. (2)** in November.

Joint services commence with **Dragonair, Ltd.** in October on frequencies from Kuching and Kota Kinabalu to Hong Kong.

Customer bookings plunge 12% to 10,201,000 and cargo falls double that percentage, 20.2%, to 585.13 million FTKs. Although a \$6-million operating profit is recorded, so too is a net loss of \$607,000.

The number of employees inches up 0.1% in 1994 to 19,746. After borrowing \$694 million, Malaysian entrepreneur Dato' Tajudin Ramli, chairman of **Malaysian Helicopter Services, Sdn. Bhd.**, (MHS), a subsidiary of his telecommunications conglomerate Technology Resources Industry Berhad, purchases 32% controlling interest (224 million shares) of the carrier from the Bank of Negara, the nation's central bank, which holds a 42% stake. This swapping of shares, worth 1.8 billion ringgit (\$700 million), will make TRIB the airline's largest shareholder, but will not be announced until June 11.

In its efforts to promote the annual 10-day Raid Gauloises race, organized by the Paris-based Gerard Fusil Management Co. and scheduled to be held in Sarawak state on Borneo, the company's in-flight magazine portrays the isolated portions of the area as a "golden land of headhunters, hills, and hornbills." The Federation of Malaysian Consumers Associations roundly condemns the airline for its "damaging article" that claims headhunting is a passion among the tribesmen of Borneo.

A 17-year-old stowaway is found dead in the landing gear compartment of a B-747-4H6 after its March 15 arrival at Johannesburg on a service from Kuala Lumpur.

In May, a B-737-4H6 is leased to India's **Jet Airways, Ltd.**; under contract, MAS also agrees to provide maintenance, technical, and training support.

Having also arranged to purchase a 25% stake in the U.S. cargo carrier **World Airways** earlier in the year, Malaysia Airlines and MHSL join with World on June 15 to forge a code-sharing deal for a freighter service to Europe and the U.S. using a World MD-11.

The tripartite alliance takes effect on June 19 when a weekly service is opened from Kuala Lumpur to Amsterdam via Dubai and a second is started from Kuala Lumpur to Los Angeles via Penang, Taipei, and Anchorage.

Code-sharing begins, also in June, on **Ansett New Zealand, Ltd.** flights between Christchurch and Auckland.

In August, 10% equity is sought in Tail Winds, Ltd., the parent of **Jet Airways, Ltd. Gulf Air, Ltd. and Kuwait Airways, Ltd.**, however, are unwilling to dilute their stake and the arrangement fails to materialize. During the summer, flights are undertaken to Osaka (Kansai), Cape Town, Rome, and Buenos Aires.

The government appoints the new majority owner, Dato' Tajudin Ramli, chairman on August 6, succeeding Tan Sri Zain Azraai Zalnai Abidin. In September, the new chairman calls for a major restructuring of the airline.

Operations continue apace during the remainder of the year. A two-bay, wide-body maintenance workshop and office and an engine maintenance center are completed at Kuala Lumpur and Aircraft Engine Repair and Overhaul (Malaysia) Sdn. Bhd. becomes a wholly owned subsidiary.

A major marketing agreement is initiated with **Ansett Australia (Pty.), Ltd.** in October. Under its provisions, the two companies link their frequent flyer programs and undertake shared code frequencies from Kuala Lumpur to Adelaide, Melbourne, and Sydney and via Sydney and Melbourne beyond to Adelaide, Cairns, Canberra, the Gold Coast, and Hobart.

On October 30, B-737-4H6 service is inaugurated from Johor Bahru in Malaysia to three cities in Indonesia; the new weekly routes are Jakarta-Johor Bahru-Kuala Lumpur; Denpasar-Johor Bahru-Kuala Lumpur; and Surabaya-Johor Bahru-Kuala Lumpur.

In November, the carrier forms a joint venture with three other partners to operate a flight kitchen in Madras, capable of offering 5,000

meals per day. The company becomes a marketing partner of **British Midland Airways, Ltd.** during the month. In addition to providing BMA passengers through connections to some 40 Asian and Pacific destinations, MAS passengers flying from Kuala Lumpur into Britain via London (LHR) are able to seamlessly connect to the BMA U.K. destinations of Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

A block-space agreement takes effect with **Myanmar Airways** in December on flights from Kuala Lumpur to Yangon. Also in December, MHSL takes shareholding in **Royal Air Cambodge** that results in a management and operational contract for MAS from the Cambodian airline.

Overall, passenger boardings decline another 12.6% to 10,844,000 while freight does better, growing by 7.8% to 765.92 million FTKs. Revenues advance to \$1.56 billion and allow profits of \$16.4 million (operating) and \$2.7 million (net).

Airline employment is reduced by 19% in 1995 to 16,000. A comprehensive 10-year marketing and code-sharing alliance is entered into with **Virgin Atlantic Airways, Ltd.** during the third week of January. In addition, the pair agrees to joint cabin crews and linkage of their frequent flyer programs.

In February, a block-space agreement begins with **Aerolineas Argentinas, S.A.** on flights from Buenos Aires to Cape Town, Johannesburg, and up to Kuala Lumpur.

A 36-year-old stowaway from Kalimantan, Habsah Abdul Kadir, is found out during a March 15 service from Kuala Lumpur to Kota Kinabalu when a passenger manifest check in flight reveals one extra passenger. The young Indonesian maid is detained at the plane's destination, where it is found that she does not have a passport, flight ticket, or boarding pass. Malaysian Transport Minister Ling Liong Sik orders an investigation into the fifth major security breach at Kuala Lumpur Airport in the last year.

Virgin Atlantic Airways, Ltd. and MAS, employing the latter's aircraft, commence twice-daily roundtrips between Kuala Lumpur and London on April 1. The total of weekly flights to the British capital for the Malaysian flag carrier is thus increased from its present eight.

The two link their frequent flyer programs on May 22 and VA passengers are able to commence block-seat flights aboard MAS aircraft on frequencies from London to Kuala Lumpur, Sydney, Melbourne, and Adelaide. During this month and in July, the carrier sends its last two B-747-236Bs to Boeing Wichita for modification into freighters.

Flight 2133, a Fokker 50 with 4 crew and 49 passengers, lands too far down the runway at Tawau following a September 15 flight from Kota Kinabalu and the crew attempts to go around; as the plane is executing this maneuver, it crashes into a nearby residential area. Thirty-four people are killed aboard the aircraft, but no one on the ground is injured.

At an October 5 press conference, Managing Director Wan Malek Ibrahim, noting the success of Hadj and Umrah services and the demand for tourist flights into Malaysia, indicates that the carrier will aggressively pursue charter income.

Twice-weekly flights to Davao commence on November 1 via Kinabalu.

On November 3, code-sharing begins in cooperation with **Canadian Airlines International, Ltd.** aboard MAS flights from Kuala Lumpur to Vancouver via Taipei. Twice-weekly roundtrips to Macau start on November 13. At the same time, frequencies for the Sydney-Melbourne sector are increased from 8 per week to 11.

Traffic turns around: enplanements rise to 12,578,000 and cargo leaps 22.7% to 1.16 billion FTKs. Revenues increase by 17.1% to \$1.89 billion and this year's gains are up to \$59 million (operating) and an impressive \$104 million (net).

The workforce grows by 22.6% in 1996 to 19,616. An A300B4-203 is leased to **Air Maldives, Ltd.**, a B-737-4Y0 is chartered to **Royal Air Cambodge**, and two DC-10-30s are leased to **World Airways**. In exchange, MAS charts two MD-11s, one MD-11F, and one MD-11CF from **World Airways**. The two B-747-236BFs join the MD-11s and two B-737-3H6Fs in providing dedicated all-cargo services.

Employing an MD-11F, the carrier launches thrice-weekly all-cargo services on January 1 between Amsterdam and Chicago.

A management contract is signed with **Air Maldives, Ltd.** in January under which MAS will provide both management and operational services. During the month, block-space operations commence with **Middle East Airlines, S.A.L. (2)** on flights from Kuala Lumpur to Beirut and Sydney and from Beirut to Dubai.

Weekly MD-11F all-cargo roundtrips commence on January 9 to Adelaide and Melbourne in Australia, while freight service to Seoul is doubled to twice-weekly on January 16. The next day, the company launches weekly roundtrip all-cargo services to Frankfurt. The new German freight service is doubled on February 4. Simultaneously, Kuala Lumpur to Amsterdam all-cargo frequencies are increased from four per week to five.

Poor returns force cancellation of the new Amsterdam-Chicago freight service in March, just three months after it was started. On April 1, weekly direct A330-322 return service is started from Kuala Lumpur to Pusan, South Korea. MAS is the only carrier from Southeast Asia to fly direct to the southern port city.

When implemented in June, the pact with **Air Maldives, Ltd.** allows shared-code flights to commence from Male to Kuala Lumpur.

Regularly scheduled service is inaugurated on July 1 from Kuala Lumpur to Vientiane, Laos.

On August 20, the company signs for the purchase of a B-777 full-flight simulator. Direct service is started on October 30 from Langkawi to Taipei.

It is announced on November 27 that the board of directors has approved company plans to take over domestic rival **Pelangi Air Sdn. Bhd.**, in which it already holds an 18% stake via MHS.

When Mexican authorities withdraw authorization for the carrier to fly passengers from Los Angeles down to Mexico City, MAS announces on December 24 that it will cease its five-year-old air link with Mexico City as of January 1. It will continue to operate its Wednesday B-747-4H6 service from Kuala Lumpur to Los Angeles via Taipei and its thrice-weekly flights from Kuala Lumpur to Los Angeles via Tokyo (NRT).

Passenger boardings dip 0.6% to 11,419,399, but 1.04 billion FTKs are operated, a 15.7% growth. Revenues reach \$2.5 billion and leave an operating profit of \$84.82 million and a net gain of \$87.3 million.

A code-sharing agreement with **Japan Air Lines Company, Ltd. (2)** takes effect on January 14, 1997 allowing weekly cargo services from Tokyo (NRT) and Osaka (KIX) to Kuala Lumpur and Penang. The flights are operated by a MAS B-747-3H6F.

On January 21, MAS is able to successfully syndicate a \$120-million loan from nine banks. The next day, a \$283-million order is placed for Pratt & Whitney PW4056 engines with which to power its new B-747-4H6s. On January 27, a M\$150-million check is provided to the Minister of Social Services on Sabah to help assist the victims of Typhoon Greg.

Sydney Organizing Committee CEO Mal Hemerling and **Ansett Australia (Pty.), Ltd.** Chairman Rod Eddington announce on January 28 that MAS has been chosen one of seven carriers to receive the designation of official carrier for the Sydney 2000 Olympic Games.

In February, Chairman Ramli indicates that the airline is not looking for a strategic partner and that his own group would like to increase its stake to 51% by the millennium.

While landing at Sandakan Airport in the eastern state of Sabah on February 15 after a service from Kota Kinabalu, Flight 2050, a B-737-4H6 with 6 crew and 156 passengers, overshoots the rain-soaked runway, its front tires touching the grass beyond. There is no serious damage to the little Boeing and no injuries are reported to anyone aboard.

Also during the month, Deputy Prime Minister Anwar Ibrahim announces that the government is investigating the carrier's service amidst reports that quality has deteriorated for lack of pilots and cabin crew.

Severe storms near Taipei Airport cause unavoidable flight diversions beginning with the February 21 service from Kuala Lumpur to Los An-

geles via Taipei that is routed via Manila instead. On February 28, a flight in from Los Angeles must go to Okinawa, where, for lack of hotel rooms, the crew and all 295 economy class passengers must remain on board overnight.

The airline and its 1,000 pilots agree to a new contract on March 11.

In March, MAS faces additional criticism related to its service and new competition from the start-up airline **Air Asia Sdn. Bhd.** During the month, Chairman Ramli signs a memorandum of understanding with Boeing for the acquisition of up to 15 of the manufacturer's proposed B-777-200Xs.

Having departed Seattle on March 31, the company's first B-777-2H6 IGW (IGW stands for "increased gross weight") completes a record 10,823-nm. nonstop delivery flight to Kuala Lumpur in 15 hrs. 55 min., arriving on the morning of April 2. After ceremonies marking its arrival and the company's fiftieth birthday, the plane, dubbed a "Super Ranger," returns to Washington State.

Twice-weekly A330-322 roundtrips commence on April 1 from Kuala Lumpur to Shanghai. On April 27, the B-777-2H6 IGW (wearing a fiftieth anniversary emblem) arrives at Kuala Lumpur on April 27 following a 16-hr. nonstop flight from Seattle. It is again welcomed in impressive ceremonies and is then readied for revenue flights.

The new B-777-2H6 IGW enters service on May 1 over routes from Singapore to Bangkok and Hong Kong. Also in May, a block space arrangement is implemented with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on frequencies from Kuala Lumpur to Madrid and onward from Madrid to Dubai. A second B-777-2H6 IGW begins flying to Paris, Munich, Perth, and Tokyo on June 1.

A dinner dance is held at the Kristal Ballroom 1 of the Petaling Jaya Hilton Hotel on June 1 to celebrate the airline's fiftieth anniversary. At the dinner, Chairman Ramli introduces the new MAS pilot uniforms. The company celebrates its fiftieth birthday on June 9.

The company launches an electronic ticketing system on June 10, marking the beginning of a ticketless air travel era.

As the result of a March 31 agreement, the airline flies in June as the official airline of the 9th FIFA/Coca-Cola World Youth Championship scheduled for Kuala Lumpur.

As a result of the chaos following Hun Sen's coup in Cambodia and the fighting at and near Phnom Penh's Pochentong Airport, the company stops flying into the beleaguered capital from Kuala Lumpur on July 6.

It is announced by the Federation Aeronautique Internationale on August 5 that the company's second B-777-2H6 has completed a 12,455.34-mi. around-the-world service from Seattle to Kuala Lumpur and back in a record 553 mph.

The company's last B-747-312C freighter is withdrawn in August. Haze caused by the great fires in Indonesia force the company to cancel 882 domestic flights, beginning on August 20. On August 29, a block-seat code-sharing agreement is signed with **Swissair, A.G.**

Fires in Indonesia, together with haze and smog, begin to force large schedule adjustments on September 14.

By the end of September, the B-777-2H6 IGWs have initiated new wide-body services to Vienna, Zurich, Amsterdam, and Frankfurt.

On a less positive note, the continuing Southeast Asian haze problem requires that 890 domestic and 34 international flights be cancelled through September 30. In addition, another 882 flights to interior areas of Malaysia are also called off. Although 319 make-up flights are offered, the adverse schedule adjustments cost the airline M\$6.5 million (US\$1.9 million) in lost revenues.

On October 1, twice-weekly, dual-designator, all-cargo service is inaugurated in cooperation with **Virgin Atlantic Airways, Ltd.** over a route from Kuala Lumpur to London (LHR) via Osaka, Japan, on Wednesdays and via Melbourne, Australia, on Saturdays. The new freight operation employs the MD-11F that MAS has leased from **World Airways.**

Foul weather and the Indonesian fire situation continue to cause difficulties into October. On October 5, the airline must cancel all flights to the northern state of Penang following heavy rain that impairs visibility.

The next day, all of the services to the northeast resort island of Langkawi are lost to a thick haze caused by the fires. Simultaneously, heavy fog coupled with haze at Kuala Lumpur Airport forces Malaysia to divert four international flights to Penang (now reopened) and Singapore. Since mid-September, Malaysia has sent over 1,000 firefighters to help conquer the blazes in Indonesia's Sumatra and Kalimantan provinces.

Additional bad news is received on October 8 when Transport Minister Ling Liong Sik announces that the flag carrier has lost out in a tender bid to the Pilgrims Management and Fund Board to ferry Malaysians to Mecca for the annual Hadj pilgrimage. The winners are a consortium headed by **Saudi Arabian Airlines**.

The new Matsushita interactive entertainment centers aboard the company's B-777-2H6s are able to send faxes beginning in October. In addition, the number of weekly dual-designator flights with new code-sharing partner **Lauda Air, A.G.** from Vienna to Kuala Lumpur is doubled from three to six on October 26. Service to Cairo is also begun.

These achievements are overshadowed by the devaluation of the Malaysian dollar, which increases the airline's debt difficulties.

The dual-designator service with **Swissair, A.G.** begins on October 30 on thrice-weekly B-777-2H6 IGW one-stops from Kuala Lumpur to Zagreb via Vienna. In the afternoon of the welcoming ceremony, Malaysia and **Croatia Airlines** sing a code-sharing agreement for the Zagreb-Vienna sector.

In November, two former MAS DC-10-30s are ordered for use by **Transmile Air Service, Sdn. Bhd.** on Hadj service the following spring. Once the holy duty is completed, the two will be converted into freighters.

Traffic figures are not immediately released. It is noted, however, that operating revenues are up 6.6% for the year to \$1.68 billion. Costs, on the other hand, are \$1.74 billion, and cause losses of \$60.18 million (operating) and \$67.61 million (net).

The fleet at the beginning of 1998 includes 87 airplanes, all of which are Stage III certified: 49 B-737s, 17 B-747s, 4 B-777-246s, 1 A300B4-203, 12 A330-322s, and 2 each DC-10-30s and MD-11s.

It is reported on January 4 that the two DC-10-30s will be sold to a Canadian carrier later in the month. Another DC-10-30, on an aircraft, crew, management, and insurance (ACMI) contract with **World Airways**, is returned.

Also in January, a memorandum of understanding is signed with **KLM (Royal Dutch Airlines, N.V.)** under which the two companies will explore all avenues of commercial cooperation, including frequent flyer programs, joint ground handling, marketing and sales. Dual-designator services will be undertaken between Kuala Lumpur and Amsterdam.

A third B-777-2H6 IGW is delivered at the beginning of April. Later in the month, thrice-weekly roundtrips are inaugurated from Kuala Lumpur to Newark via Dubai. In addition, a special offer to attract tourists is announced. Under its terms, international passengers will be offered four nights' free accommodation at Kuala Lumpur, Langkawi, or Penang.

En route from Kuala Lumpur to Los Angeles via Tokyo on May 25, a B-747-4H6 with 20 crew and 281 passengers hits a short, sharp pocket of air turbulence over the Philippines. Seven passengers are injured and are treated at Tokyo (NRT); five continue on to California while two Japanese passengers remain behind.

On June 19, following upon the earlier memorandum of understanding, the carrier signs a commercial agreement with **KLM (Royal Dutch Airlines, N.V.)**, which will enable to introduce code-sharing on their seven (later eight) weekly nonstop services between Amsterdam and Kuala Lumpur. The pact is timed to coincide with the opening of the new KLIA Airport at Sepang, near Kuala Lumpur. Malaysia will handle KLM flights in Kuala Lumpur and KLM will service Malaysia flights in Amsterdam.

In a quite obvious effort to draw traffic away from Singapore's dominant—and physically closer—hub at Subang, the government, on

June 29, opens the brand new Kuala Lumpur International Airport at Sepang. MAS transfers its operations to the new \$2.8-billion facility, which opens amidst a variety of problems.

Dual-designator services with **KLM (Royal Dutch Airlines, N.V.)** commence on July 1. Employing B-747-4H6, Malaysia (with KLM's "KL" code utilized) begins thrice-weekly roundtrips from Kuala Lumpur to Amsterdam, while placing its "MH" designator on the four weekly nonstops KLM already operates between the two nations. Plans are announced for an upgrade of the service at the end of the year; Malaysia will switch to B-777-2H6 IGWs and increase frequencies to four per week.

Two more B-777-2H6 IGWs arrive, one each in June and July. As the new aircraft are delivered, the company's 12 A330-322s are shifted to regional routes to Singapore, Penang, Jakarta, Manila, and Langkawi.

The dual-designator agreement with **Swissair, A.G.** is intensified on July 17 as Swissair places its code on Malaysia's thrice-weekly B-777-2H6 IGW roundtrips from Kuala Lumpur to Zurich.

In need of additional capacity, **TunisAir, S.A.** leases a DC-10-30 from MAS on August 9.

Beginning in September, the B-747-4H6s are gradually withdrawn for service for 90-day upgrades with new interiors. Also during the month, the XVI Commonwealth Games are held in Malaysia and MAS, as official airline, receives worldwide attention.

By fall, the company and the government are embarrassed to learn that MAS customers do not want to make the hour-long ground commute from Kuala Lumpur to Sepang and prefer to fly from the old Sultan Abdul Aziz Shah Airport at Subang. Traffic is lost to a variety of independents, including **Pelanggi Airlines**, which have not moved.

Faced with a continuing downturn in domestic boardings, MAS, on October 25, begins to operate 17 daily B-737 return services from Subang, including twice-daily nonstops to Kota Kinabalu, Langkawi, and Penang. Only Ipoh continues to be served exclusively from Sepang. The major does not transfer all of its domestic service back to Subang for political reasons and also because it must continue to provide connections for international flights. Hoping to save money and gain face, the government, by forcing its national airline to incur the costs of operating from two large airports, has lost both face and money.

During the last full week of November, a \$250-million loan is secured from foreign sources to finance the purchase of two aircraft. Still, due to a weak Malaysian currency and a corresponding decline in traffic demand, particularly in domestic and regional markets, MAS, on November 30, posts a huge fiscal downturn for the six months ending on September 30. The net loss shown totals M\$441 million (\$116 million), compared to a profit of M\$23.50 million in the same period a year earlier.

The continuing drop in the valuation of the Malaysian dollar (down 40%) against the U.S. dollar worsens the situation. By the end of the year, company executives are able to win government support for a massive cost-cutting effort. Under plans announced late in the fourth quarter, the carrier will close down its unprofitable routes and dismiss 27% of its workforce. The abandoned routes will be offered to **Air Asia Sdn. Bhd.**

Passenger boardings plunge 12.1% to 12.52 million, while cargo traffic is off 2.4% to 1.26 billion FTKs. The net loss grows to \$184 million.

During the first week of January 1999, a major restructuring plan is presented to the airline's board of directors. In addition to refinement of the cost-cutting items noted above, a new organization, Asset Management Group, is to be created. It will take over ownership of the airline's aircraft and lease them back, thereby reducing ownership expenses.

The plan also calls for MAS to be administratively reassembled into four business units. Physical Airline will oversee airline operations while Virtual Airline will take care of sales and cargo. Derivative Business is another term for heavy maintenance activities, while Shared Services will handle financing and assets, catering, and personnel.

A rat is spotted in the first-class section of a B-777-2H6 IGW, with 15 crew and 251 passengers, a half hour after takeoff on January 8 from

Kuala Lumpur for Perth. Considerable commotion causes the captain to abort the service and return to his point of departure, where crew, passengers, and baggage are transferred to another aircraft that departs later in the day. The eradicated first-class rat is one of hundreds infesting the new Kuala Lumpur International Airport Sepang.

On January 11, an agreement is reached with the company's aviation fuel suppliers at Kuala Lumpur on a way to cut costs; MAS will pay in Malaysian instead of U.S. dollars.

The next day, service to Vancouver ends; the carrier adds additional flights from Kuala Lumpur to Los Angeles.

Philippine Airlines begins to code-share on February 1 on Malaysia's 11-times-a-week return services from Manila and Cebu to Kuala Lumpur, Kota Kinabalu, and Kuching.

Long-time Managing Director Ibrahim resigns on February 19 to take early retirement. The move fuels all sorts of rumors over the weekend concerning top-level management reorganization at the airline. Chairman Ramli, through a spokesperson, attempts to quash these stories on February 22, indicating that no such reshuffle is in prospect, even though MAS is undergoing what is termed a "transformation exercise" designed to improve company performance. Analysts agree that the airline does not need organizational change, but does need to find a way to handle its debts of M\$11.8 billion (\$3.1 billion).

As a cost-cutting measure, the company, on March 1, recalls its area managers from Brisbane and Adelaide, Australia.

Just after landing at Kota Kinabalu after a March 3 service from Kuala Lumpur, Flight 2920, a B-737-4H6 skids off the runway. No injuries are reported.

Previously operating two direct flights into South Australia, MAS, on April 26, increases the number of its weekly Adelaide flights to four.

The airline suffers a public relations setback during the first two weeks of May when it is alleged that its Jumbojets are arriving at London with dangerously low levels of fuel in their tanks. The matter is first made public by Keith Harper in the May 6 Internet issue of the Manchester *Guardian*. Harper indicates that the government transport department has confirmed that a Far East-operated B-747 made its descent across central London the previous evening with only four tons of fuel. The flight path of the incoming aircraft, following its 14-hr. flight, had taken it over Clacton in Essex and then right over the center of London via Canary Wharf, Westminster, Kensington, and Chiswick.

MAS is identified as the offending party by the *London Sunday Times* on May 9 and by David Learmount in the May 10 issue of *Flight International*. Basing his report on a variety of contacts, including the CAA's Confidential Human Factors Incident Reporting Programme (CHIRP), the magazine's operations and safety editor reveals that the carrier has been involved in 10 similar incidents at London (LHR) in recent months. British aviation rules require a minimum of 4.5 tons in aircraft landing at Heathrow, while national carrier **British Airways, Ltd. (2)** requires nine tons.

Ahmad Fuad Dahlan, the airline's vice president for Europe, the U.K., and Ireland, informs the press on May 11 that MAS did not fly over central London with near empty fuel tanks as charged in the newspaper and magazine articles. He confirms that the British government, at the direction of Transport Minister Glenda Jackson, has launched an investigation, but claims that the Transport Department is satisfied with his explanations.

At Kuala Lumpur, Malaysian Transport Minister Ling Liong Sik receives a similar report from the national airline, one that indicates that the aircraft in question is not from Malaysia Airlines. The report is passed on to the national parliament. Still, senior airline officials depart for London to explain the company's fuel policies to British authorities. Opposition political leaders urge the carrier to sue the reporting British media if the claims prove baseless.

Transport Minister Jackson meets with MAS representatives on May 12, giving them evidence that their aircraft have, indeed, landed in Britain with low fuel levels. The Far East operator is required to henceforth undergo spot checks on the fuel levels of all of its aircraft landing

in the U.K. Indeed, the CAA is instructed to increase inspections of all arriving long-haul aircraft. MAS officials, confronted with proof, pledge full cooperation.

The *Financial Times* reveals on May 13 that **British Airways, Ltd. (2)**, Malaysia's Heathrow handling agent, has reported the low-fuel situation on six occasions since January 1997. The problem has finally become public because a BA employee has contacted CHIRP concerning the questionable arrival, reporting that there is so little fuel left in the tank that his fellow engineers have been unable to conduct post-landing maintenance checks.

In discussing the fuel controversy on May 26, Transport Minister Ling Liong Sik admits to the local press that "there were certain circumstances where the fuel might have been low," but at no time was the safety of aircraft or passengers compromised.

The matter is finally cleared up during the last week of the month when the U.K. Dept. of Environment, Transportation, and the Region and CAA agree that the MAS fuel policy meets international standards. The CAA and MAS will continue to seek reasons why some of the carrier's Jumbojets apparently render misleading "fuel remaining" readings after landing at London (LHR).

A commercial agreement is signed with **Northwest Airlines** on September 23. Under its terms, the two majors will soon begin code-sharing transpacific flights. At the end of October, service between Kuala Lumpur and Medan is doubled to twice daily. Flights are also resumed between Zamboanga City and Sandakan in Sabah.

Twice-weekly B-737-4H6 service from Kuala Lumpur to Xiamen, China, is initiated on November 1. Delivery of a Next Generation B-737-7H6 BBJ is accepted next day; the aircraft is christened *Mostar*.

Customer bookings increase 25.1% to 15,659,000, even as freight falls 7.1% to 1.17 billion FTKs. Revenues jump 10% to \$1.6 billion. The previous year's net loss is turned into a \$16-million net gain.

Airline employment at the beginning of 2000 stands at 22,800, a 2.2% decline over the previous 12 months. Among the world's top 25 airlines, MAS is 22nd in passengers and 20th in employee number.

A code-sharing agreement is signed with **Garuda Indonesia** on February 11. Under its terms, the two share their designators on the return flights operated by both from Kuala Lumpur to Jakarta and Medan and the services provided by MAS from Kuala Lumpur to Surabaya and Denpasar and from Pulau Pinang to Medan.

New thrice-weekly B-777-2H6IGW nonstop roundtrips from Kuala Lumpur to Manchester, England, are initiated on March 26, along with twice-weekly B-777-2H6IGW return frequencies from Kuala Lumpur to Munich. Simultaneously, the five-times-a-week B-777-2H6IGW return service from Kuala Lumpur to Auckland becomes daily.

Complaining that the airport at Sandakan in Sabah is charging exorbitant landing fees, the company, at the beginning of the second quarter, suspends its flights into the town from Zamboanga City.

Malaysia joins in a dual-designator pact with **Middle East Airlines, S.A.L. (2)** on June 13. The "Triple-Seven" employed on the Manchester route is replaced with a B-747-4H6 on June 14. The code-sharing agreement with **Middle East Airlines, S.A.L. (2)** begins on June 16, with MAS placing its designator on MEA services from Beirut to Sydney via Kuala Lumpur, while MEA puts its code on MAS flights from Kuala Lumpur to Beirut. Two days later, on June 18, frequency on the Kuala Lumpur to Frankfurt service is boosted from four to five times a week.

In mid-June, a 10,000-sq.-ft. "Golden Lounge" is opened at London (LHR) Terminal 3. A request for a 50% increase in domestic ticket prices is filed with the government on June 29.

On July 1, the company begins to code-share with **Philippine Airlines** on flights between Manila and Kuala Lumpur and from Manila to Kota Kinabalu and Cebu.

MAS is named 19th best-managed company among non-state-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

Plans are announced on July 18 for the initiation of new services between Kuala Lumpur and Okayama, Japan, next April. Also during the

month, MAS Chairman Tan Sri Tajudin Ramli informs the media that his airline will not, as a news release from its Naluri Bhd. parent had indicated, be selling a 29% tranche of its shares to cover debt. Still, the Ministry of Finance allows MAS to raise its foreign ownership ceiling from 30% to 45%. Speculation is immediately renewed that the carrier is in discussions with another airline(s) concerning sale of a substantial equity stake.

An extensive dual-designator pact is inked with **Cathay Pacific Airways (Pty.), Ltd.** on August 7. In cooperation with the **Swissair, A.G.** cargo division **Swisscargo**, **MASKargo** inaugurates twice-weekly B-747-200F return freight flights between Kuala Lumpur and Basel/Mulhouse on August 30.

The code-sharing agreement with **Cathay Pacific Airways (Pty.), Ltd.** begins on September 2. Under its terms, the two share frequent flyer programs, airport lounges, and some handling services. Additionally, MAS places its code on Cathay's 17 weekly return services from Hong Kong to Kuala Lumpur, including seven which continue to Penang. Cathay's designator is placed on nine weekly MAS roundtrips between Kuala Lumpur and Hong Kong, including two with a Penang stopover.

Also in September, Malaysian Transport Minister Ling Liong Sik confirms that MAS is, indeed, negotiating the sale of an equity interest to **Qantas Airways (Pty.), Ltd.** Such an arrangement would also allow for an MAS entry into the "OneWorld" airline alliance. It had been reported earlier that SAirGroup, parent of **Swissair, A.G.**, has also been engaged in equity talks with the southeast Asian airline.

On October 28, the **MASKargo** subsidiary relocates its Mideast business from Dubai to Sharjah, from which nine weekly B-747-200F roundtrips to Kuala Lumpur will be offered. Additionally, regional hubs are established at Melbourne and at Hahn, Germany.

The code-sharing agreement with **KLM (Royal Dutch Airlines, N.V.)** is expanded on October 29. Under the arrangement, KLM adds three more flights between Amsterdam and Kuala Lumpur to match Malaysia's already provided daily services. The Dutch code is added to 55 additional Malaysia flights between Kuala Lumpur and 7 destinations in Australia and New Zealand, while the Malaysian designator is added to 75 weekly KLM-operated roundtrips between Amsterdam and 7 cities in Scandinavia.

On November 3, Malaysian Transport Minister Datuk Seri Dr Ling Liong Sik, while refusing to name names, indicates that a foreigner will be appointed to the position of CEO while a new chairman has also been identified.

MAS and **Northwest Airlines** are granted antitrust immunity by the DOT on November 22; their new code-sharing agreement will be implemented in January on routes from Kuala Lumpur to Los Angeles, Tokyo (NRT), and Nagoya.

On December 12, **Qantas Airways (Pty.), Ltd.** Deputy CEO Geoffrey Dixon reveals that his carrier is suspending its long-running negotiations to acquire a stake in MAS until the government of Malaysia indicates just exactly what equity percentage of the carrier is available. That word will not be forthcoming this year.

After months of negotiation, on December 20, the government's Ministry of Finance, Inc. agrees to purchase the 20.09% stake in MAS held by its chairman, Tajuddin Ramli, via his Naluri Bhd. aviation firm. Critics charge that the RM1.79 billion (\$471.6 million) paid is excessive and note that the RM8-per-share price is more than double the airline's share price on the Kuala Lumpur Stock Exchange at the close of the day's business.

A decision by Finance Minister Daim Zainuddin on a new chairman is delayed, leaving its present incumbent in a caretaker's position as the year ends. On February 15, it will be announced that Petronas oil company executive Azizan Zainul Abidin will become nonexecutive board chairman, with finance ministry official Mohamad Nor Mohamad Yusof as managing director.

MALAYSIA-SINGAPORE AIRLINES, LTD.: Malaysia/Singapore (1967-1972). Following the purchase of **Malaysian Airways, Ltd.**

from **British Overseas Airways Corporation (BOAC)**, **Qantas Empire Airways (Pty.), Ltd.**, and private interests in 1966, officials from Malaysia and Singapore discuss combined operations. These talks lead to the November 1, 1967 creation of M-SA as successor to MAL. Shareholding is divided between Singapore and Malaysia (38% each), Brunei (13.2%), BOAC and Qantas (11.6%). Former BOAC Managing Director David Craig is appointed chairman/managing director.

Previously flown routes, aircraft, personnel, and agreements are maintained. Comet 4B service, meanwhile, is extended to Perth and Sydney. Enplanements for the year are 1,005,000.

The carrier's first three Boeing 707-338C Stratoliners, leased from **Qantas Airways, Ltd.**, are placed in service on April 1, 1968 and replace the Comet 4s on overseas flights. Meanwhile, company hostesses introduce elegant *sarong kebaya* uniforms designed by Pierre Balmain. On August 1, Stratoliner flights begin to Taipei and Tokyo, while regional frequencies are introduced to Phnom Penh, Medan, and Jakarta. The former **Borneo Airways, Ltd.** Scottish Aviation Twin Pioneers are replaced with Britten-Norman BN-2 Islanders.

A total of 1,264,000 travelers are carried.

The Comet 4Bs are replaced on August 21, 1969 by five B-737-112s as MSA becomes the first airline in Asia to operate the "Baby Boeing" short-haul jetliner. B-737-112 service to Bali begins on October 19. Later in the year, the Malaysian and Singapore governments include their stakes to 42% each, leaving only 16% for the three minority partners.

Airline employment is 4,076 and bookings total 1,556,000.

Two B-707-312Cs are added in 1970 as boardings grow to 1,882,000. Cargo climbs by 28%. The fleet now comprises 3 B-707-338Cs, 2 B-707-312Cs, 5 B-737-112s, 10 F.27s, and 3 each Britten-Norman BN-2 Islanders and Douglas DC-3s. The workforce now totals 5,032 and a \$542-million profit is reported.

A restructuring becomes imminent after January 1971. Singapore leaders have, since the unification, been pushing for expanded international services while Malaysia's officials seek greater development of lengthy regional/domestic routes.

The festering philosophical differences over service leads the governments involved to determine upon dissolution of the joint airline in favor of individual national carriers. The parties involved meet to discuss an amicable dissolution on April 27; however, talks turn nasty the next day as officials are unable to agree on route frequencies.

Even as talks proceed, the route network grows to include Bombay, Bahrain, Rome, London, and Melbourne. Meanwhile, two more B-707-312Cs join the fleet and are employed, on June 2, to inaugurate a new service to London from Singapore via Bombay, Bahrain, and Rome. Malaysian Prime Minister Tun Abdul Razak coins the term MAS, Malaysian Airline System, for the proposed Malaysian carrier, which further complicates the process.

Following a particularly bitter exchange during asset division negotiations, Chairman Craig is dismissed on July 20. At this point, new bargainers enter the arena, one chairman each from Singapore and Malaysia plus Kuok Hock Nien.

A total of 1,557,000 passengers are carried during the combined airline's final year.

Three more B-707-312Cs are purchased in 1972 as routes are opened to Athens, Zurich, Frankfurt, and Osaka. The KRISCOM reservations system is installed. With dissolution negotiations finally completed and all necessary documents signed, **Malaysian Airline System, Ltd. (MAS)** and **Singapore Airlines, Ltd.** are both formally born on October 1.

MALAYSIAN AIRLINES SYSTEM (MAS), LTD. (SISTEM PENERBANGAN MALAYSIA BERHAD): Malaysia (1972-1987). Following some years of political wrangling over philosophical difference over service, the governments of Malaysia and Singapore on May 14, 1968, sign an agreement to conclude their current airline agreement. Separate names and identities are chosen and even some services are operated under the new titles. Most of the assets of the combined carrier,

including 9 Boeing 707-312Cs, 5 737-112s, and the management and technical bases, are in Singapore. Malaysia and its new MAS is left with the smaller propeller equipment (19 aircraft) and an extensive domestic system to operate in both the eastern and western parts of the nation, separated by between 500 and 1,000 miles of the South China Sea.

On October 1, 1972, the joint **Malaysia-Singapore Airlines, Ltd.** formally stand down in favor of the two individual state carriers. Despite its apparently unfavorable cut of the former company's assets, company executives at MAS, led by Chairman G. K. Rama Iyer and Managing Director Saw Huat Lye, are optimistic; when a logo is chosen, it includes the initials MAS, which in the Malay national language spells the word for "gold." The joint winged tiger logo is retired and in ceremonies at the new MAS headquarters in the Police Cooperative Building at Kuala Lumpur, the new emblem is unveiled, the *wau*, a traditional kite of Kelantan.

A total of 381,538 passengers are originated during the last quarter.

MAS is built up at its Kuala Lumpur base early in 1973. A fleet is assembled that comes to include 2 B-707-312Cs, 6 B-737-112s, 10 Fokker F.27s, and 4 Britten-Norman BN-2 Islanders; several aircraft are held under lease-purchase agreements. Revenue flight operations continue within Malaysia and provide the fastest link between east and west.

Service from Kuala Lumpur to Bandar Seri Bagawan (formerly Brunei City) begins on January 12, while flights are also started to Hong Kong and Jakarta (April 1) and Taipei (October 1).

Customer bookings climb 46.2% to 1,864,000 and freight traffic increases 75.9%.

Airline employment in 1974 stands at 5,422. Another B-707-312C joins the fleet and two more B-737-112s are delivered in September. A DC-10-30 is purchased for 1976 delivery. In addition to expanded frequencies on a revitalized domestic route network, international B-707-312C services are inaugurated to Tokyo on April 1, London via Dubai on July 1, Madras on August 1, Sydney and Manila on October 2. Working solely on behalf of this airline, the Pilgrims Management Board (Lembaga Urusan & Tabung Haji) arranges a significant number of Hadj charter flights to Jeddah.

Passenger boardings climb 26% to 2,201,000 and freight traffic skyrockets 135% to 18.93 million FTKs.

The workforce grows in 1975 to 5,641. The ninth B-737-112 (a QC) arrives in September as a second DC-10-30 is ordered. A route is opened to Melbourne on October 1. A second Sydney frequency is added plus B-737QC freighter service on domestic routes.

Freight soars 40.4% while passenger bookings increase 7.5% to 2,506,000.

The employee population in 1976 swells 15% to 6,759. The company now begins to concentrate on the region's tourism potential and on July 24, inaugurates Golden Holiday vacation flights to Bangkok and the Thai vacation resort of Pattaya.

The carrier's first DC-10-30 is delivered on August 2 and is placed in service on October 2 over its new daily Kuala Lumpur to Hong Kong, Taipei, and Tokyo route. Meanwhile, a B-707-312C route is started to Perth and Air Vice Marshal Sulaiman Sujah becomes deputy chairman.

Passenger boardings accelerate 6.2% to 2,661,000 and cargo climbs 31.8%.

A new and larger runway is opened at Penang Airport on June 19, 1977; it will allow MAS to fly tourists into that area's holiday attractions. The second DC-10-30 arrives in September and is assigned to the European service to London on October 30; on November 1, the aircraft inaugurates service to the British capital from Sydney via Kuala Lumpur and Kuwait. On November 30, Frankfurt joins the European network.

While on descent from Penang to Kuala Lumpur on December 4, the pilot of Flight 653, a B-737-2H6 with 6 other crew and 93 passengers, radios that he has lost control of his aircraft to a hijacker (later confirmed as Japanese Red Army). The Boeing continues on toward Singapore when suddenly, at an altitude of 21,000 ft., the nose of the plane is seen to pitch up, control is lost, the ship turns over into a sharp descent, and crashes into a swamp 50 km. from Johore Bharu, Singapore, disintegrated upon impact. There are no survivors. It will later be suggested that the aircraft had either run out of fuel or both pilots had been shot.

Enplanements total 2,642,075.

The employee population in 1978 totals 7,396. Orders are placed for three Airbus Industrie A300B4-203s and a B-737-212. A concentrated drive is undertaken to develop and strengthen existing routes.

Passenger traffic is up 7% to 2,843,812 while freight soars 78.2%. Operating and net profits of \$29.5 million and \$10 million are, respectively, earned.

The carrier's first A300B4-203 is delivered in September 1979 as plans are made to retire the B-707-312Cs. With a second on hand, the type begins flying to Jakarta, Madras, Perth, and Hong Kong on November 16. A labor dispute and the temporary grounding of the DC-10-30s as a result of the June 9 Chicago **American Airlines** crash permit results that are good, but less than forecast.

Passenger boardings jump 13.8% to 3,236,000, but cargo falls 17.3%. On revenues of \$251.9 million, expenses grow 10% to \$223.3 million, leaving an \$18.7-million operating profit.

Airline employment is increased by 14.7% in 1980 to 9,207 and, now that the third A300B4-203 has arrived, Airbus service is inaugurated on January 1 to Taipei, Seoul, and Tokyo. On January 4, Amsterdam joins the list of European DC-10-30 markets. The three B-707-312Cs are thereafter retired. In April, the carrier leases a DC-10-30, a B-737-212, and two F.27s pending delivery of an equivalent number of purchased aircraft plus a fifth Airbus. An Air Service Agreement is concluded on July 24 permitting wide-body service between Malaysia and Singapore and service is extended to Dubai during summer and fall.

During the year, the reconfiguration of all DC-10-30s and B-737-112s to high-density seating is undertaken, and a new color scheme is introduced on the B-737-112s and F.27s.

Passenger boardings jump 21% to 4,081,000 and freight leaps 58.8% to 110.13 million FTKs. Although revenues advance by 50.2% to \$363.6 million, expenses accelerate 57.5% to \$351.6 million. Consequently, the operating profit falls to \$12 million.

The employee population is raised by 9.9% in 1981 to 10,116. A third DC-10-30, a fourth A300B4-203, and two F.27-500s begin joining the fleet.

In April, Paris becomes the carrier's fourth European destination. Two de Havilland Canada DHC-6-300s are ordered for a local Rural Air Service and a shuttle service, jointly operated with **Singapore Airlines, Ltd.**, is opened between Kuala Lumpur and Singapore.

Cargo grows 9% to 133,000 FTKs, while passenger bookings rise 16.8% to 4.9 million. On revenues of \$351.6 million, operating and net profits of \$3.3 million and \$2.6 million are, respectively, earned.

Dato' Abdul Aziz Abdul Rahman is named managing director in March 1982 and two Boeing 747-236Bs, formerly operated by **British Airways, Ltd. (2)**, are delivered on March 12 and April 8, respectively; these are placed into operation on the Kuala Lumpur-London route. By November, the Singapore-Kuala Lumpur shuttle provides 15 daily return flights.

In December, joint services are inaugurated with **Thai Airways International, Ltd. (THAI)** over routes from Kuala Lumpur to Bangkok, Phuket, and Hat Yai and from Penang to Bangkok and Phuket.

Enplanements are 4,551,905 for the year.

Airline employment in 1983 is 10,124. From a base at Miri, three DHC-6-300s enter service to 16 destinations on a Rural Air Service into the interior of eastern Malaysia's state of Sarawak, while one Twin Otter, based at Kota Kinabalu, provides RAS for Sabah. These operations augment service by larger aircraft to 37 other domestic points.

Joint services begin with **Royal Brunei Airlines** in May on a route from Kuala Lumpur to Bahrain and Cairo. In October, an agreement is signed with **SilkAir, Ltd.** covering joint services on routes to Singapore from Kuala Lumpur and Langkawai.

Flight 684, an A300B4-203 with 14 crew and 233 passengers on final approach to Kuala Lumpur on December 18, strikes trees 2 km. from the runway that cause it to eventually hit the ground and slide to a point

1,200 m. short of the runway; although the aircraft is damaged beyond repair, there are no fatalities.

Passenger traffic climbs 3.5% to 4,716,665 while freight jumps 15% to 148.16 million FTKs.

The payroll expands by 104 personnel in 1984. One more DHC-6 joins the fleet. A \$1-million advertising campaign is undertaken in the U.S., Europe, and Australia to attract tourists. With assistance from **Swissair, A.G.**, the company inaugurates a five-year program to upgrade its KOMMAS computer system, the largest and most varied in Malaysia.

Cargo is up 17.4% to 192.58 million FTKs and passenger boardings increase 7.8% to 5,626,000. A \$41-million net profit is reported.

As a result of a joint service agreement signed with **Air Lanka, Ltd.** in February 1985, services between Kuala Lumpur and Colombo commence in April. Also, a simultaneous joint service with **Northwest Airlines** is inaugurated from Kuala Lumpur to San Francisco via Tokyo.

A twelfth B-737-212 arrives in June and in cooperation with **Alia (Royal Jordanian Airlines)** and employing a Jordanian L-1011, joint weekly roundtrip service is started from Amman to Kuala Lumpur in August.

Partial privatization is now authorized and the airline's shares are put up for sale, all except for a Special Share that the government retains in order to ensure control of major decisions. When privatization is completed in December, the government's stake is cut to 42%. The airline is the first Malaysian government agency to be privatized.

Enplanements total just over 6 million, including 150,000 flown on the Rural Air Service. On revenues of \$461 million, a \$39.9-million net profit is realized.

Joint service with **Garuda Indonesian Airlines** begins in March 1986 over a route from Kuala Lumpur to Denpasar. In May, a new cargo center, with 166,000 square feet of storage area, is opened at Kuala Lumpur. Following delivery of a B-747-3H6C on July 17, twice-weekly Kuala Lumpur-Tokyo-Los Angeles flights begin at month's end as the **Northwest Airlines** pool ends. The newly delivered Jumbojet employed on the service is the 650th B-747 manufactured by Boeing.

With radical changes ahead, the carrier stops supplying figures at the end of July. Through the year's first 6 months, bookings fall 3.7% to 3,114,891 while freight dips 3.8% to 118 million FTKs. In August, a B-737-200 is ordered for delivery during the next year. The government elects to privatize the airline and a total of 52.5 million shares are sold by it in October, as the state interest shrinks to 45%.

The semi-state carrier **Pelangi Air, Ltd.** is established on September 1, 1987, with MAS holding an 11% shareholding. A third weekly roundtrip to Los Angeles is begun via Honolulu. In one of the carrier's last substantial acts under its name, MAS, also in September, signs another cooperative agreement with **Garuda Indonesian Airlines**; in exchange for the four-month lease of an Indonesian DC-10, pilots of the two carriers are allowed access to the simulators of each. On October 15, the company is renamed **Malaysia Airlines, Ltd. (MAS)**.

MALAYSIAN AIRWAYS, LTD.: Malaysia (1962-1967). In November 1962, **Malayan Airways, Ltd.** is reconfigured and renamed Malaysian Airways, Ltd. Previous routes, personnel, aircraft, and agreements remain intact. On December 4, **British Overseas Airways Corporation (BOAC)** Comet 4Bs replace Britannia 312s on the company's new Silver Kiris service from Singapore to Hong Kong via Kuala Lumpur.

The company joins in a pooled service agreement on January 9, 1963 with **Cathay Pacific Airways, Ltd.** and **Thai Airways International, Ltd. (THAI)**. The first of five Fokker F.27-100s are delivered on May 31 and begin flying the Singapore to Kuala Lumpur trunk route. In September, the two leased Vickers Viscount 760s previously operated under lease from BOAC are transferred to **Aden Airways, Ltd.** At the same time, the new Friendships inaugurate Silver Kiris flights to Kuching.

Enplanements for this first full year of service under the company's new name total 228,373.

Merger discussions are begun with **Borneo Airways, Ltd.** in 1964. A \$1-million flight kitchen is opened to serve all airlines operating through Singapore.

A DH-106 Comet 4 with 8 crew and 60 passengers is destroyed as the result of a bad landing at Singapore on March 22; there are no fatalities.

On April 1, a wet-leased BOAC Comet 4 jetliner inaugurates a stop at Jesselton, North Borneo. In June, Chairman Dato Loke Wan is killed in an air accident on Taiwan; he is succeeded by Kuala Lumpur lawyer Yong Pung How.

Passenger boardings rise 18.6% to 280,557 and revenues are reported to have increased by 19.2%.

In April 1965, **Borneo Airways, Ltd.** is acquired and merged; its Scottish Aviation Twin Pioneers will be replaced on local services with three Cessna 310s. Borneo's base at Jesselton, a Comet 4B stop between Hong Kong and Singapore, is taken over and enlarged and its Sabah and Sarawak routes are handed over along with its fleet.

Airline employment is 1,953 and the combined fleet now includes 21 aircraft: 5 Comet 4Bs (including 4 purchased from BOAC in May), 1 Cessna 310, 4 DC-3s, 8 Fokker F.27s, and 3 Scottish Aviation Twin Pioneers. Work is begun on a new Singapore headquarters.

Passenger bookings grow 16.7% to 336,803 and revenues are up by 19%.

In 1966, the governments of Malaysia and Singapore purchase majority control of Malaysian Airways from **British Overseas Airways Corporation (BOAC)**, **Qantas Empire Airways (Pty.), Ltd.**, and private interests and begin discussing combined operations. Comet 4 service from Singapore to Manila begins on July 1.

MAL joins in a large pooling agreement on April 13, 1967; its partners include BOAC, Qantas, **Air India**, and **Air New Zealand, Ltd.** It also begins flying to Perth and Sydney, Australia.

A Scottish Aviation Twin Pioneer 1 fails its takeoff from Limbang on May 17; there are no fatalities.

The carrier's new headquarters is completed about November 1, when the carrier's name is changed to **Malaysia-Singapore Airlines, Ltd.**

MALAYSIAN HELICOPTER SERVICES, SDN. BHD.: Malaysia (1980-1996). Formed at Kuala Lumpur in late 1980 to service offshore oil rigs, MHS is owned by **Malaysian Airlines System, Ltd. (MAS)** (40%), **Malaysia Air Charter, Ltd.** (15%), **Sabah Air, Ltd.** (15%), and **Hornbill Skyways, Ltd.** (15%) plus the state of Trengganu (15%). The company receives management assistance from **Bristow Helicopters, Ltd.**

Passenger and cargo charter services and contract flights are inaugurated with a fleet comprising 1 each Sikorsky S-61N, Sikorsky S-76, and Aerospatiale SA-330J Super Puma. Services expand throughout the country and into nearby nations during the next 12 years.

MHS is listed on the Kuala Lumpur Stock Exchange in November 1990 and a number of private investors acquire shareholding. One of these, Roxy Electric Industries, for example, acquires a 33% stake on February 14, 1991, valued at M\$111 (US\$41.2 million). Still, by the end of the year, 62% of its shares are owned by Dato' Tajuddin Ramli's Malaysian-based telecommunications concern Technology Resources Industry Berhad.

In early 1992, MHS is reformed into a holding company, with the original rotary-wing operation being reformed into MHS Aviation. Tan Sri Saw Huat Lye is named chairman, with Wan Malek Ibrahim as executive director.

The MHS fleet during the remainder of the year and in 1993 includes 4 Super Pumas, 3 Bell 412s, 6 S-61s, 2 S-76As, and 6 S-76Cs. In addition, fixed-wing aircraft are available: 2 de Havilland Canada DHC-6 Twin Otters and 1 BAe 125 Srs. 700B.

A 33.3% interest in **Schreiner Airways, B.V.** of The Netherlands is purchased in April for M\$13 million (\$5 million); of the total, 28.3% of the shares are acquired from founder Robert Schreiner (who keeps a token 5%), and the remainder from other shareholders, including **KLM (Royal Dutch Airlines, N.V.)**

In November, the carrier pays \$27.4 million to acquire a 24.9% stake in the WorldCorp subsidiary **World Airways**. Since the beginning of the year, the company's stock has risen 550% from RM2.4 to RM15.7 in December.

After borrowing \$694 million, Chairman Ramli, in January 1994, purchases 32% controlling interest (224 million shares) of **Malaysia Airlines, Ltd.** from the Bank of Negara, the nation's central bank, which holds a 42% stake. This arrangement, worth M\$1.8 billion (\$700 million), will make MHS the airline's largest shareholder, but will not be announced until June 11.

The rotary-wing fleet continues to provide support services for the nation's oil and gas industry during the year.

Operations continue apace in 1995. The fleet now includes 4 Super Pumas, 3 Bell 412s, 8 S-61Ns, 2 S-76As, and 6 S-76Cs. On December 13, the company signs an accord with AR Air Taxi Aereo, S.A. to establish a joint venture helicopter-support company in Brazil.

Early in 1996, the helicopter company **MHS Aviation Sdn. Bhd.** is spun off as a freestanding company.

MALDIVES AIRWAYS, LTD.: Maldives (1984–1986). MA is created in early 1984 as a new state airline to replace **Maldives International, Ltd.**, which had stopped operations in late 1983. Initial equipment for the new entrant comprises 3 Douglas DC-8-51s and 1 Fokker F.27 and the first international services is flown to Colombo, Sri Lanka.

Traffic downturns and cash flow difficulties force the carrier to stop flying in early 1986. Domestic operations are now undertaken by reborn **Air Maldives, Ltd.**

MALDIVES INTERNATIONAL AIRLINES, LTD. (MIA): Maldives (1977–1983). MIA is formed at Male's Hulele Airport in September 1977 to succeed **Air Maldives, Ltd.**, which had abruptly halted services in May following the government's cancellation of its permits and seizure of its assets. The new national airline, jointly owned by the Maldivian government and **Indian Airlines Corporation**, employs a Boeing 737-200 wet-leased from the latter to inaugurate services to Trivandrum via Colombo on November 3. This service is maintained until late in 1983 when it, too, stops.

MALDIVIAN AIR TAXI (PTY.), LTD.: P.O. Box 2023, Male, 20-03, Maldives; Phone 960 315201; Fax 960 315203; <http://www.mataxi.com>; Year Founded 1995. MAT is set up at Male by Danish investors on November 4, 1995 to provide domestic scheduled passenger flights under the direction of Peter Selch. Revenue operations commence with a pair of float-equipped de Havilland Canada DHC-6-100s and a DHC-6-200.

Jasper Hougaard becomes general manager in 1996 and the Twin Otter fleet now includes 5 Dash-100s and 2 Dash-200s. In 1997–1999, four DHC-6-300s and two Bell 212s are added. Just after takeoff on December 6 of the latter year, a Bell 212 is forced to ditch at sea and sinks. All 10 people aboard are killed. The disaster is eerily similar to one on January 26 in which a Hummingbird Airways Mi-8 was lost.

MALERT HUNGARIAN AIR TRANSPORT CO. (MAGYAR LEGIFORGALMI): Hungary (1928–1945). The **Hungarian Aviation Joint Stock Company**, formed in 1922, is reformed and renamed in the middle of 1928. A Fokker F-VIII is acquired; Budapest builder Manfred Weiss acquires a license and builds two more, which are delivered early in the following year.

Two of the three Dutch-built Fokker F-XI Universals (as opposed to the American-made Model 4s) in existence are purchased and placed in service during 1930.

During the year, nearly 3,000 passengers are carried.

The fleet in 1931 comprises 5 aircraft, of which 2 are Fokker F-VIIIs.

Late in the decade, the carrier acquires two Savoia-Marchetti SM-73s, which are employed to start service to Prague, Munich, Warsaw, and Bucharest, and five SM-75s. By 1939, the airline owns a fleet that in-

cludes the 2 Italian trimotors plus 3 Junkers Ju-52/3ms and averages 5,000 annual passenger boardings.

Although not annexed by Germany but rather an "ally," Hungary and her airline come under the total influence of the Nazis and **Deutsche Luft Hansa, A.G. (DLH)**, respectively. All of its aircraft are requisitioned and its employees are drafted for military services. The entire fleet is destroyed by the end of 1944 and all of the nation's airfields are in ruins.

MALEV HUNGARIAN AIRLINES (MAGYAR LEGIKOZLEKEDAST VALLALAT, RT): Roosevelt ter 2, Budapest, H-1051, Hungary; Phone 36 (1) 266-9033; Fax 36 (1) 266-2759; <http://www.malev.hu>; Code MA; Year Founded 1946. In a fifty-fifty partnership, Hungary and the Soviet Union on March 29, 1946 form **Magyar-Szovjet Legiforgalmi Tarsasag (Maszovlet)** to provide domestic operations within Hungary. Maszovlet's basic regulations are published on May 4 as Hungarian statute ME 4.740/1946. All of the surviving employees of the old Malert are assigned to the new concern on August 1 and 3 days later, 5 Lisunov Li-2s (Soviet-made Douglas DC-3s), the first of 11 to be handed over by the Soviets, begin to arrive at Budapest.

On August 17, members of the Hungarian government tour the Li-2s at Budapest and are given a test ride in one of them. By August 30, work is completed at eight provincial airports plus Budapest.

Five Soviet-made Polikarpov Po-2 biplanes, the first of eight to be received, arrives at Budapest on September 26. One of these drops leaflets over a capital city soccer game on October 6, announcing the pending resumption of airline services.

Four days later, the Hungarian Post Office board of directors votes to contract with Maszovlet for airmail services. The first such flight is conducted on October 15 over a route Budapest–Szombathely via Debrecen. Airmail flights to Szeged are opened on November 4, followed by the initiation of a route from Budapest–Gyocirc–Szombathely on December 16.

Maszovlet begins its first flight attendant training course on January 27, 1947 and the next day the company's new fares come into effect. The company's first summer timetable is inaugurated on February 10 and the premier flight attendant class is graduated on April 11. The next day, passenger service is inaugurated from Budapest to Szeged. A branch office of the Central Customs Directorate is opened at Budapest Airport on April 19 and on April 21 the first four stewardesses report for duty with Maszovlet.

An Li-2 scatters leaflets over the May 1 Budapest May Day parade and on May 8 the company undertakes its first foreign flight, a charter for the Hungarian state soccer team from Budapest to Torino via Bari. A pooling contract is signed with TARS, the Romanian airline, on May 10, which enables the two companies to inaugurate roundtrip services on May 23 from Budapest to Bucharest via Arad.

CSA (Czechoslovak Airlines) and Maszovlet sign a marketing agreement on June 9, while on June 10–11 the company performs charters for the Soviet Union, transporting Russian personnel to Zurich and Prague. In cooperation with CSA, joint public flights from Budapest via Bratislava to Prague commence on June 19, followed by the initiation of service to Miskolc on June 23.

A new Hungarian three-year economic plan begins on July 11. One of its paragraphs calls for the full restoration of Ferihegy Airport. Ten days later, two more Li-2s arrive from Moscow.

A Hungarian–Polish aviation agreement is signed at Budapest on August 28 and the eighth Li-2 is delivered on September 17. Employees receive an average 9% pay increase under a new collective bargaining agreement that takes effect on October 1.

Joint frequencies with **LOT Polish Airlines** begin on October 8 between Budapest and Warsaw. Budapest to Belgrade via Szeged Li-2 services begin on December 1 in cooperation with the Soviet–Yugoslav joint airline **Jugoslovenske Sovjet Transport Aviaciza (JUSTA)**. Later in the month, company Po-2s operate emergency flights for the Ministry of Health and the national ambulance service.

Three more Li-2s arrive from the Soviet Union on January 28, **1948**. Following JUSTA's demise, the Belgrade service is suspended. Chartered Li-2s fly Hungarian athletes to the London Olympic Games between July 29 and August 14. Other highlights of the year include completion of work on Ferihegy Airport, charter flights from Budapest to Venice, a fare reduction, and the first employee newsletter.

While on a Pecs to Budapest flight on January 5, **1949**, an Li-2 with 25 passengers is seized by 22 persons, led by the captain, and flown to the U.S. zone of occupied Germany, where the dissidents obtain political asylum after landing at Munich.

Test flights commence at Ferihegy Airport during the spring and in May the company begins an airborne ambulance service, with units assigned to various airfields around the country.

A Hungarian-Bulgarian aviation agreement is signed on June 1. The company hosts an open house at Budapest on August 20. Over 100,000 attend, as parachutists jump from Maszovlet Li-2s.

An Li-2P is lost at Pecs, Hungary, on September 19; there is no information on injuries or fatalities.

A 30% fare reduction is announced on April 4, **1950** and on May 7, after special ceremonies, the new Ferihegy Airport at Budapest is opened. The first flight to Prague departs from Ferihegy next day.

The company is reformed on June 27. Gone is the joint-stock enterprise, replaced by a state-owned carrier. The 2,700 previous shares are replaced by 12 ownership stakes, which are equally divided between the Hungarians and the Soviets.

An agreement is signed between the airline and BELSPED on November 5 for the inauguration of door-to-door delivery services. Later in the year, the Hungarian Post Office contracts with the company to deliver mail overnight to 19 small domestic destinations.

By the end of the first quarter of **1951**, the overnight mail service has been expanded to 40 small Hungarian communities. Maszovlet has a fifth birthday celebration at Ferihegy Airport on March 29.

A meeting of freight-hauling companies is coordinated by the airline on April 3; during the conference, Maszovlet makes a pitch for its new door-to-door services, conducted with BELSPED. It also announces that it will soon begin all-cargo services with a dedicated Li-2.

In a humanitarian gesture, 150 children suffering from whooping cough are taken on free rides during June. The frequency of the weekly Prague-Budapest-Sofia service is doubled on July 8, the same day the airline begins flying from the new Nagykanizsa Airport.

The first concession to business travelers occurs on September 14, when those making reservations at least three days in advance receive a discount. Five more Li-2s are received during the fall and just before year's end, discount fares for children are introduced.

In February **1952**, the company undertakes a one-week test delivery of eggs for the Ministry of Food Industry. On April 1, the summer schedule is published; for the first time, it appears in Hungarian, Russian, and English. Fares are simultaneously increased.

In April, Maszovlet transports 35,000 day-old chicks for TERIMPEX from Czechoslovakia to state farms around Hungary. A new cargo delivery campaign is undertaken on May 9 as the airline begins making deliveries for the Debrecen Clothing Factory.

Chartered Li-2s on July 19 flies Hungarian athletes to the Summer Olympic Games at Helsinki. Also during the month, motorcycles built at the Budapest-based Iron and Hardware Wholesale Co. are transported to provincial cities.

The fall schedule begins on September 1. Again, no flights are allowed after 4:30 p.m. The Ministry of Transport and Postal Services delivers the first automated loading equipment (a number of forklifts) to the airline at Ferihegy Airport on September 14.

A general agency contract is signed between Maszovlet and **Swissair, A.G.** on October 1. An Li-2P is lost at Nyiregyhaza, Hungary, on October 2; there is no information on casualties.

On October 19, the company begins to require that freight shipments be properly packed. Three more Li-2s join the fleet during the fourth quarter.

Spring schedules are resumed in February **1953**. Sight-seeing tours over Budapest are offered for the first time on March 22. Summer schedules begin on April 6 and a large-scale open house is held at Ferihegy Airport on June 28. With the public able to view the MIG-15 fighter for the first time, 200,000 visitors pass through the turnstiles.

During the summer, company Po-2s conduct experimental agricultural spraying flights over a state farm. They also spray DDT over crops as they develop. Flights commence from the new airport at Zalaegerszeg on August 31.

Scheduled joint flights to Warsaw with LOT Polish Airlines, suspended the previous year, are resumed on April 19, **1954**. On April 27, two Li-2s haul 3,700-kg. of lettuce to Czechoslovakia. Flights to Berlin via Prague commence on May 18. Five Po-2s are hired by the Ministry of Agriculture on July 1 to conduct additional agricultural service flights.

The new airport at Kaposvacuter opens on October 3. The Soviet share is purchased by the state on November 6 and the airline, now completely in Hungarian control, is renamed MALEV on November 26.

An Li-2P is lost near Polna, Czechoslovakia, on December 23; there is no other information on the incident. All Soviet personnel of the former Maszovlet return home by December 31.

Enplanements for the year on the company's 9 Li-2s and 6 Po-2s total 101,900.

The fleet, on January 1, **1955**, includes 16 Li-2s, 7 Po-2s, and 1 Czech Aero-45; orders are placed for Ilyushin Il-14s. On the same day, Department VII (aviation) of the Ministry for Transport and Postal Services is merged into the airline. A general sales agency contract is signed with **SAS (Scandinavian Airlines System)** on January 2. A new Hungarian-Soviet aviation agreement is signed on February 11.

During the summer, the Ministry of Agriculture contracts for agricultural work by four Po-2s. On September 10, a Hungarian-East German aviation agreement document is drawn up.

An Li-2P is lost under unknown circumstances at Brno, Czechoslovakia, on December 16.

Scheduled services to Sofia commence on February 1, **1956**. On February 3, a Hungarian-Romanian aviation agreement is concluded.

Return flights to Vienna commence on June 5.

The annual airline open house is held at Ferihegy Airport on July 20-21. Over 100,000 people see a new **Aeroflot Soviet Airlines** Tupolev Tu-104 jetliner on display. Also on July 21, a Hungarian-Yugoslav aviation agreement is signed at Belgrade. A reciprocal general agency and trade cooperation pact is inked with **JAT Yugoslav Airlines** on August 6.

During the summer, company Po-2s are again employed by the Agriculture Ministry. Domestic frequencies and destinations are now cut back as a result of road improvements.

On July 13, an Li-2 with 20 passengers en route from Győr to Szombathely is commandeered by 7 hijackers, who win a wrestling match for control of the aircraft. The Soviet-made DC-3 is diverted to a vacant air base near Ingolstadt, West Germany, where the pirates are given political asylum. The Li-2 and 13 hostages are allowed to return to Hungary the next day.

During the Hungarian Revolution from October 23 to November 4, company aircraft ferry aid from Vienna to Budapest. Soviet troops occupy Ferihegy Airport on November 4 and close down Hungarian air transport for the next three months.

Following the restoration of peace, plans for additional domestic and international services are formulated. On January 30, **1957**, flights are allowed to resume from Budapest to Debrecen via Miskolc. Scheduled flights to Belgrade commence on February 7.

Direct service from Budapest to Debrecen is initiated on March 1 and Vienna flights resume four days later. Lettuce charters to Prague begin on March 22.

The first Il-14M arrives from the Soviet Union on April 11. As additional aircraft of this type are received, the Po-2s will be taken over by the Hungarian government for industrial use, e.g., crop spraying. Szombathely and Zalaegerszeg flights resume on April 15.

On May 7, **KLM (Royal Dutch Airlines, N.V.)** becomes the first Western airline to open an office at Budapest. A Hungarian–Netherlands aviation agreement is signed at Budapest on May 28, while a similar pact is inked with Belgium on June 1.

Service from Budapest to Bratislava begins on June 3. On June 8, general agency agreements are signed with representatives of **CSA (Czechoslovakia Airlines)**, **Deutsche Lufthansa, A.G.**, **LOT Polish Airlines**, **TAROM, S.A.**, and **TABSO**.

Under unknown circumstances, an Li-2P is lost at Budapest on June 9. Between June 14 and 29, chartered Li-2s, on behalf of Hungarofruit, deliver fresh fruit to markets in Czechoslovakia, Finland, Norway, and Sweden.

Two more Il-14Ms arrive from the Soviet Union on July 8 and on July 28 breeding pigs are transported to Budapest from Sweden and The Netherlands. A Hungarian–Swedish aviation agreement is signed at Budapest on August 2 and scheduled all-cargo domestic flights commence on August 3. Later in the month, chartered Li-2s transport shipments of live frogs from Budapest to East Berlin and London. More breeding pigs are transferred to Budapest on September 26, this time from London.

With the start of the winter schedule on October 6, the carrier now has direct air links with 28 cities in 23 countries. **SAS (Scandinavian Airlines System)** inaugurates flights to Cairo via Budapest on October 10. On October 20, the first jet service into Ferihegy Airport is operated, as a Tu-104 of **Aeroflot Soviet Airlines** arrives from Moscow.

A pooling agreement is signed with **Sabena Belgian World Airlines, S.A.** on November 6. The next day, astronomers on board an Li-2, flying at an altitude of 3,500 m., make observations of the Soviet Sputnik 2 satellite.

Airline officials and those from the Vienna office of **Air France** discuss future links on December 10. A pooling agreement is signed the next day with **SAS (Scandinavian Airlines System)**.

A Hungarian–Albanian aviation agreement is signed at Budapest on January 16, 1958. Return service begins two days later from Budapest to Copenhagen via East Berlin. Scheduled roundtrips to Tirana commence on January 23. The air service penetration of Western Europe continues on February 28 with the inauguration of return service from Budapest to Amsterdam via Prague.

Two Il-14Ps arrive from East Germany on March 8. Pooled flights with **Sabena Belgian World Airlines, S.A.** commence on March 17 from Budapest to Brussels via Prague. An Egyptian–Hungarian aviation agreement is inked at Cairo on March 20. A third East German Il-14P is received on April 21, followed by a fourth on May 16 and a fifth on May 30.

A Hungarian–Danish aviation agreement is signed at Budapest on July 17. Charter flights to the Leipzig International Fair commence on September 6 and continue for a week. Domestic air service is suspended for a week on December 25.

A Hungarian–Swiss aviation agreement is signed at Berne on January 23, 1959. An office is opened at Vienna on February 1 and on February 16 the Vienna terminus is extended to East Berlin. A new Instrument Landing System (ILS) is installed at Ferihegy Airport on March 12.

On April 7, the first scheduled service is opened from Budapest to Moscow via Kiev; it is flown with an Il-14P. A Hungarian–Norwegian air agreement is initiated on April 30.

Scheduled Il-14P roundtrips commence on May 3 from Budapest to Stockholm via East Berlin and Copenhagen. The next day, the company's Li-2s inaugurate air freight service to seven provincial communities.

Breeding pig Li-2 charter flights from London to Budapest commence on July 14 and scheduled Il-14P roundtrips to Zurich begin on July 21.

The first purchased Soviet-made Il-18 arrives at Ferihegy Airport on November 5 for inspection. The company's longest charter to date occurs on November 18, Budapest to Tunisia via Tirana.

Domestic air service is suspended for a month as of December 7. The next day, flight crews depart for Moscow for two months of Il-18 training. Meanwhile, company shops install VHF radio sets and ILS equipment on the Il-14s and five Li-2 cargo aircraft are converted back to passenger status.

Scheduled service is inaugurated on February 15, 1960 between Budapest and Frankfurt. During the month, an office is opened at Frankfurt. On March 15, inland "express" letters are initially forwarded by the Post Office to the countryside on the carrier's morning flights.

The Il-18 with trained flight crews returns from Russia on April 1, followed by a second owned aircraft the next day. When the summer schedule opens during the month, MALEV operates flights to 17 cities in 16 countries.

A Franco–Hungarian aviation agreement is signed in Paris on May 2. On May 15, nonstop Il-18 flights commence from Budapest to Moscow. The first Il-18 service to London is operated on July 4. A week later, an Il-18 flies seven tons of black currents to London.

Chartered MALEV Il-14Ps are employed between August 25 and September 11 to transport athletes to the Rome Summer Olympic Games. Il-14P service to Paris via Frankfurt is meanwhile launched on September 2. An Anglo–Hungarian aviation agreement is inked at London on October 25.

Scheduled service is started on November 23 from Budapest to Rome. Domestic air services are suspended for two months as of December 20. At month's end, three Li-2s are withdrawn from service and scrapped.

Enplanements for the year total 151,900.

Il-18 service to Moscow is restarted on January 14, 1961, while, beginning on February 1, Il-18 service is initiated from Budapest to Amsterdam via Brussels.

A new Il-18 is received from the U.S.S.R. on April 1. Four days later, scheduled London service is begun via Paris.

While on a sightseeing charter, an Li-2 with four crew and 23 passengers, crashes at Budapest on August 6; all of the people on the Douglas are killed, along with three persons on the ground.

A Hungarian–Ghanaian aviation agreement is signed at Budapest on October 23 and domestic traffic is again suspended for two months, as of December 11.

A Hungarian–Finnish aviation agreement is signed at Helsinki on February 13, 1962. In March, joint Budapest–London service is started in cooperation with **British European Airways Corporation (BEA)**.

Scheduled flights commence on June 3 from Budapest to Helsinki via East Berlin and Copenhagen. During September, an Il-18 delivers aid to Algiers. A Hungarian–Syrian aviation agreement is signed at Damascus on October 18.

Flight 355, an Il-18B with 8 crew and 13 passengers crashes while on final approach to Paris (LBG) from Budapest on November 23; there are no survivors.

Domestic air traffic is suspended on December 3 and a replacement Il-18 is received on December 27. Bookings this year total 131,138.

The February 15, 1963 date set for the resumption of domestic services must be postponed due to inclement weather. They will restart within a week. A Hungarian–Greek aviation agreement is signed at Athens on April 27 and new company uniforms are introduced on May 1.

Another Il-18 enters service on June 12, while scheduled Il-14 flights are begun on July 25 between Budapest and Munich. Similar service is inaugurated on September 17 from Budapest to Cairo via Athens.

Domestic service is again withdrawn, as of December 14. With a fleet of 20 Il-14s and Il-18s available, the carrier officially retires its entire Li-2 division later in the month.

During this year, enplanements reach 139,578.

An Il-14P is lost at Budapest on February 17, 1964; there are no details concerning the accident. Service is resumed on February 24, to Szombathely, Debrecen, and Zalaegerszeg.

On March 2, one of the retired Li-2s becomes a display at the Pecs amusement park at Szombathely. Another is sent on March 17 to the Debrecen Amusement Park. Two more Soviet-made Il-18s are received on March 28.

Scheduled return service is inaugurated by Il-18s on April 3 from Budapest to Milan. A joint MALEV-IBUSZ office is opened at Frankfurt Airport on April 19.

Weekly flights are initiated to Bratislava and Kosice on May 6. Aviation agreements are signed with the Cypriot government and with Luxembourg on June 2 and November 3, respectively. Improvements are also made at Ferihegy Airport during the summer and fall. Domestic flights end on December 5.

This year's customer bookings ascend to 154,670.

Domestic service resumes on March 1, **1965**. Scheduled service begins on April 21 from Budapest to Damascus via Athens and Nicosia. On May 21, an aviation agreement is signed with Ethiopia.

Il-14 frequencies are initiated from Budapest to Dubrovnik via either Belgrade or Zagreb, on June 5; the same day, Il-18 roundtrips start from Budapest to Kiev. An on-screen passenger travel information system is turned on during September 15 at Ferihegy Airport.

The Berlin Agreement is signed on October 27 covering overall airline operations in the Eastern Bloc countries, as well as commercial and financial activities. Company technicians at Ferihegy Airport on October 28 complete their first general overhaul of an Il-14. Domestic air traffic (with the exception of Debrecen) is halted for the winter on December 4.

Much additional work on Ferihegy Airport is completed this year, including passenger service areas and the installation of new radar and meteorological equipment.

Enplanements fall slightly, down to 152,862.

On February 1, **1966**, the Hungarian prime minister and many of his cabinet commence a month-long Il-18 charter that will take them 30,000 km. from Budapest to Nicosia, Cairo, Addis Ababa, Dar es Salaam, Asmara, Kuwait, New Delhi, Bombay, Dharan, Nicosia, and back to Budapest.

An air service agreement is signed with India on February 21.

Il-17 service is initiated to Beirut via Sofia on June 2. During the month, a chartered Il-18s transport 400 tons of apricots to London. Orders are placed for Tupolev Tu-134 jetliners.

On February 7, **1967**, a two-month flight attendant course begins; 12 women and 4 men are enrolled. Domestic flights, halted the previous December, resume on March 3.

When the summer schedule opens on April 1, MALEV is flying to 33 cities in 24 countries. This day, service to Beirut becomes nonstop, while Damascus flights no longer halt in Nicosia.

Il-18 flights begin on April 28 from Budapest to Istanbul

With the addition of a "D" model on June 21, the Il-18 fleet stands at eight. An Il-18 flies relief supplies to Jordan on July 2.

An international stewardess beauty contest is held at Budapest under MALEV sponsorship between December 4-11; contestants from 11 airlines take part. After domestic service ends, two Il-18s are sent to Moscow for conversion into Il-18D status.

The subsidiary MALEV Air Tours is created on January 1, **1968**. Il-18 flights begin on May 17 from Budapest to Luxembourg. On August 8, the company announces that it has purchased four Tupolev Tu-134s from the Soviet Union at a cost of Ft 280 million.

A modified Hungarian-Soviet aviation agreement is signed in Budapest on December 2. The carrier's first two twinjet Tu-134s join the fleet on December 22 and 26.

The Hungarian government, on January 1, **1969**, grants the airline permission to undertake foreign trading in the areas of aircraft acquisition, spare parts, and fuel.

A second international stewardess beauty contest is held at Budapest between March 5-12. Bad weather closes down Ferihegy Airport on March 15, forcing incoming flights to be diverted to Debrecen.

The two new Tu-134s enter service on April 1 with the introduction of the company's summer schedule. Initial flights take them this day from Budapest to Oslo via Copenhagen and from Budapest to Tunis via Vienna. The third Tu-134 is delivered on April 4.

The first charter flight to Glasgow is undertaken in mid-July. Offices are opened at Rome on September 23, Amsterdam on September 30, and Helsinki on October 1. On October 31, an Il-18 completes the company's 100th charter flight when it arrives at Budapest from Zurich with

a number of passengers, including the 10,000th tourist booked by the Swiss IMHOLTZ concern.

Chartered Il-18s in mid-November transport 145 Yugoslav builders from Budapest to Lusaka via Belgrade, Cairo, and Khartoum.

A Tu-134 overruns the runway while landing at Istanbul on November 19; the aircraft's landing gear collapses as it runs into the mud. No injuries are reported.

As the year ends, the company removes its Il-14s from service. With the development of the national road and highway program well advanced, domestic services begin elimination as the 1970s commence.

A new office is opened at Copenhagen on January 30, **1970**, followed by one in London on April 15. The fourth Tu-134 arrives at Ferihegy Airport from Moscow on May 6. Seasonal flights to Lake Constance commence on May 14, while, on May 23, scheduled service is inaugurated to Leningrad via Warsaw.

The Soviet Union buys back the company's decommissioned Il-14 fleet between May 30 and June 30. Two more Tu-134s are delivered on August 5 and 30, respectively; they will initially be employed as VIP government transports.

A third international stewardess beauty contest is held in Budapest from October 22-28, with contestants from 14 airlines. New offices are opened at Moscow and Istanbul on October 30. The new Tu-154 demonstrator arrives at Ferihegy Airport on November 23.

On April 2, **1971**, scheduled Tu-134 return service is inaugurated from Budapest to Madrid via Zurich. Frequencies are opened on June 1 from Budapest to Burgas and from Budapest to Varna. Il-18 flights commence three days later from Budapest to Dresden and from Budapest to Erfurt. New Tu-134As are delivered on June 19 and June 26, respectively.

En route from Oslo to Budapest on August 28, an Il-18D with 9 crew and 25 passengers and on final approach into an intermediate stop at Copenhagen, descends too low and crashes into shallow water short of the runway, near Saltenholm Island (32 dead).

Coming into Kiev on a September 16 flight from Budapest, a Tu-134 with 8 crew and 41 passengers, crashes; there are no survivors.

On December 1, a government-chartered Il-18 completes a 22,000-km. flight across Africa. New offices are opened at Milan, Stockholm, and Vienna before month's end.

By **1972**, the fleet comprises not only the 5 Tu-134 jets, but 7 Il-14s and 7 Il-18s.

Between March 13-17, a company delegation travels to Moscow to negotiate the Ft 726- million purchase of three Tu-154s. An aviation agreement is signed with the U.S. at Washington, D.C. on May 30.

Scheduled Il-18 flights begin on June 1 from Budapest to Leipzig. The company sponsors the fourth international stewardess beauty contest at Budapest on October 14-21; again, there are contestants from 14 carriers. Late in the year, a separate VIP flight unit is established.

Passenger boardings have advanced from the 154,670 in 1964 to the current year's 339,115.

Chartered by the government, an Il-18 makes a 38-hr. flight on February 12, **1973** from Budapest to Saigon via Damascus, Bombay, Rangoon, and Hanoi. Pilots and technicians depart Budapest for the Soviet Union on April 9 to begin a Tu-154 training program.

The company's first Tu-154 is delivered to Ferihegy Airport on September 5, followed by a second on October 2.

On November 19, the company finds a way to combine the radio operator's duties with those of the navigator and thereby reduces the flight crews of its Il-18s from five to four. An office is opened in Madrid during December.

This year's bookings grow to 394,878.

On March 1, **1974**, flight routing according to ICAO regulations comes into force in Hungary; flight paths are widened to 20-km. An air service agreement with Cuba is signed on March 29.

The first in-flight services are introduced aboard company aircraft on April 1, while first-class seating is reintroduced. As the summer timetable starts, the new Tu-154s begin flying to eight destinations.

The general directors of MALEV and the Societe Internationale de Telecommunication Aeronautiques (SITA) sign contracts in Paris on June 17 under which the airline will be integrated into SITA's GABRIEL reservations system. Three more Tu-154s are purchased on July 5.

A new corporate identity and aircraft livery are introduced on August 18. Two Tu-134A-3s previously employed by the government are turned over for public airline use on August 28.

Enplanements jump to 501,669.

While on a training flight from Budapest on the night of January 15, **1975**, bad weather and fog contribute to the crash of an Il-18V with nine crew; there are no survivors.

Two Tu-154s are leased from **Aeroflot Soviet Airlines** during July. As jetliners begin to arrive in quantity, they gradually replace Il-18s, which are converted into freighters. These will undertake cargo charters to Baghdad, Kuwait, Jeddah, and Tehran.

En route from Istanbul to Bucharest on September 22 with 53 aboard, an Il-18 crashes while attempting to make an emergency landing in a field near the latter city (29 dead).

While on final approach to Beirut on September 30, a Tu-154 with 10 crew and 50 passengers, mysteriously crashes into the sea; there are no survivors and no reason for the tragedy is ever determined.

Equipment for SITA's GABRIEL system is turned on at Bucharest on November 1. Two purchased Tu-154s are delivered in December.

A new office is opened at Prague on February 26, **1976**. Withdrawal of the Il-18 fleet is accelerated as the summer schedule begins on April 1. Scheduled flights to Split and Dubrovnik commence on July 1.

Arriving at Beirut on September 29 at the end of a flight from Budapest, a Tu-154 with 60 aboard plunges into the Mediterranean; there are no survivors.

A total of 464,945 passengers are transported this year.

A new office is opened in Leningrad on February 16, **1977**. When the summer schedule opens on April 1, flights to Paris are transferred to Orly Airport from Le Bourget.

Scheduled service to Barcelona and Rijeka begins on May 25 and May 31, respectively. New uniforms are introduced on July 1.

Coming in at reduced power—and a gradual loss of altitude not noticed by the crew—a Tu-134 with 8 crew and 45 passengers strikes the ground before landing at Bucharest on September 22 (29 dead).

An Il-18V is lost in a ground accident at Budapest on November 23; no other details of the incident are available.

Although exact figures are not revealed, it is reported that this year, for the first time ever, MALEV carries more than half a million passengers.

In **1978**, Director General Jozsef Javor's fleet comprises 3 Tu-154Bs, 3 Tu-154s, 2 Tu-134As, 4 Tu-134s, and 5 Il-18s, including the 10-year-old "D" model that was converted into a freighter a year earlier.

A chartered Il-18 transports eggs to Luanda on March 2–4. Two more Tu-154s are purchased on March 9. On April 1, joint service is inaugurated with **Air France** over a route from Budapest to Paris.

One each Tu-154 and Tu-134A are leased from **Aeroflot Soviet Airlines** on April 3; the latter enters service wearing both MALEV and Aeroflot titles. New offices are occupied at Helsinki on September 26. During the year, two more Il-18s are converted into freighters.

Customer bookings are reported at 697,298.

On January 1, **1979**, the company joins IATA. Between February 12–15, a chartered Il-18 transports aid supplies to Cambodia; the 24,200-km. flight requires 40 hrs. 10 min.

Two new Tu-154s arrive from the Soviet Union on March 22. With the opening of the summer schedule on April 1, several new markets are initially visited: Kuwait on April 1, Saloniki on April 5, and Baghdad on May 18.

An Il-18 freighter on November 21 completes a record-breaking 5,071-km. flight from Lagos to Budapest nonstop in 8 hrs. 21 min. A pooling agreement is signed with **Alitalia, S.p.A.** on December 19.

By **1980** the fleet grows to include 9 Tu-154/154Bs, 6 Tu-134/134As, and 4 Il-18s. On February 13–14, two Tu-134A-3s arrive and are as-

signed to the VIP flight unit. A contract is signed with **Aeroflot Soviet Airlines** on April 11 for joint operations.

Chartered Tu-154s handle the transport of Hungarian athletes to the Moscow Olympic Games between July 17 and August 4. A chartered Il-18 delivers aid supplies to Mozambique on September 21. The first MALEV flight to Afghanistan is completed on November 10 when an Il-18 arrives at Kabul with relief supplies. Twenty days later, an Il-18 delivers earthquake relief supplies to Naples. SITA's BAGTRAC computerized luggage tracking system is turned on at Budapest in December.

The employee population in **1981** stands at 3,216. In January, an Il-18 charter is flown from Budapest to Bamako, Mali. Two new Tu-154Bs arrive at Ferihegy Airport on February 28 and March 7, respectively, while on March 11, the two Tu-134A-3s are taken over from the VIP flight division.

Following a seven-year suspension, flights are resumed to Larnaca on April 3. Pooled flights with **Aeroflot Soviet Airlines** begin on May 6 from Budapest to Simferopol and from Budapest to Sochi.

A new tradition begins on July 1 as company captains welcome passengers aboard flights and provide brief operational details. Scheduled service to Tripoli begins on November 1, the same day a pooling agreement is inked with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

Coming in from Amsterdam on October 21, a Tu-154B-2 with 81 passengers breaks apart upon landing at Prague; there are no fatalities.

Enplanements this year are 1,051,268, marking the first time the airline has transported more than one million passengers. Cargo FTKs operated total 25.4 million.

A high-ranking bureaucrat, Lajos Jahoda, is appointed general director in **1982**. On January 3, an all-cargo division is commissioned while the first Tu-154 simulator is turned on at Ferihegy Airport later in the month.

Experienced in importing breeding pigs, the airline flies a shipment of mating hogs by Il-18 to Shanghai in February. Scheduled passenger flights from Budapest to Warsaw are resumed on March 11.

After an 18-month break, service to Baghdad is restarted on May 1. Two more Tu-154Bs are delivered on May 25 and June 23, respectively, while on July 18 the new SITA RAYFIDS reservations system is turned on. A duty free shop is opened by the airline at Ferihegy Airport on July 21.

Scheduled service is begun on November 1 to Algeria. The same day, seat number seating is instituted. A man with a pistol, wearing a uniform, is initially surmised to be a security guard, but is thwarted in his attempt to hijack a Tu-154 during a November 27 Warsaw to Budapest service. The perpetrator's fellow passengers and the crew overpower him.

Enplanements for the year grow to 1,070,000.

Comfort Class business-class service is introduced on January 10, **1983**. Following an eight-year suspension, service is resumed to Beirut on March 19.

On June 1 the SITA CARMEN computerized cargo reservations system is turned on. Scheduled flights from Budapest to Dubai via Kuwait are started on November 1. In early December, flights are halted to Split and Rijeka.

Passenger bookings decline to an even one million.

On January 1, **1984**, MALEV becomes the 125th carrier granted full-right membership in IATA. A record 6,474 passengers are boarded on August 31. A chartered Tu-154 is flown on September 13–19 from Budapest to Vietnam, Cambodia, Laos, and Indonesian transporting a diplomatic mission. Enplanements remain at one million.

Airline employment is 3,639 in **1985** and the fleet includes 22 jetliners. The modernized SITA GABRIEL II reservations system is turned on during January. New uniforms designed by Pierre Cardin are presented at the Atrium Hyatt Budapest on February 26. A new frequent flyer program is unveiled in March.

A reciprocal general agency contract is signed with **Air Canada, Ltd.** on May 21. A new Ferihegy 2 terminal is opened at Budapest on Octo-

ber 28 and will be exclusively employed by the airline; all other carriers will continue to employ Ferihegy Airport's less modern No. 1 terminal. Flights from Ferihegy 2 commence on November 1; the first landing is from Saloniki while the first departure is made to Sofia.

Passenger boardings increase 7.42% to 1,116,000 and freight traffic jumps 20.54%. On revenues of \$114,013,000, expenses are \$104.5 million, leaving a \$9.4-million operating profit.

The payroll climbs 13% in **1986** to 4,601 and the all-Russian-built fleet now includes 4 Il-18Fs, 12 Tu-154/154Bss, and 8 Tu-134/134As. Two more Tu-154Bs are leased from **Aeroflot Soviet Airlines** on January 15.

On May 25, 140 winners of the International Children's Day drawing competition are given an excursion flight aboard a company Tu-154. An office is opened at Szeged on June 12.

In October, the carrier introduces a no-smoking policy on 10 short-haul European routes for the winter travel season. The campaign is initiated with the slogan "Good Air in the Air!" In December, MALEV joins the Association of European Airlines.

Customer bookings accelerate 3.2% to 1,196,622 and cargo moves ahead by 2.6% to 23.68 million FTKs. Revenues are up 10.3% to \$125 million and operating profit dips to \$9.32 million.

The number of workers is cut 3.8% in **1987** to 4,612 and 3 of the Il-18Fs are withdrawn in February. With the opening of the summer season in March, 17 additional no-smoking flights are offered. At the same time, the SITA AIRFARE CRS is turned on.

On April 18, an Il-18 is donated to the flying museum at Szolnok. A new office is opened at Miskolc on September 3. On September 21, flight attendants begin serving cooled beer on Tu-154 flights.

The company boards its one-millionth passenger of the year on October 29. In November, code-sharing flights begin from Budapest to Madrid and Barcelona in cooperation with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Hungarian aircraft are exclusively employed. After an absence of several years, company officials organize an international stewardess beauty contest, which is held at Budapest on December 15-16.

Passenger boardings this year rise 10.4% to 1,321,000 while freight slides downward by 33% to 15.87 million FTKs. Operating income totals \$13.5 million.

The employee population falls again in **1988**, down by 2.3% to 4,595. The fleet now includes 6 Tu-134A-3s, 12 Tu-154B-2s, 1 Yak-40, and 1 Il-18F.

On March 30, scheduled service is inaugurated from Budapest to Hamburg. An early Tu-134 completes its last flight on April 14, a charter flight from Dusseldorf; on May 19, it is sent to the flying museum at Szolnok. Also during the month, the MALEV Flying Club purchases a 12-person Antonov An-2 biplane.

Another Tu-134 is withdrawn on July 19; two days later, a new Tu-154B is delivered to Ferihegy Airport. During August, the company negotiates with executives from GPA Group, Ltd. for the lease of three Boeing 737-200s; the company receives permission on August 31 to sign the necessary charter papers to acquire the aircraft. The next day, yet another Tu-154B is received.

A new office is opened at Debrecen is opened on September 7. A week later, company representatives sign a contract with GPA Group, Ltd. for the lease of three "Baby Boeings."

One-time mechanic Tamas Odor is appointed deputy general director in October. A British Aerospace BAe 146-200QT is leased from **TNT International Aviation Services, Ltd.** MALEV and the Australian concern create the joint-venture company, TNT-MALEV, on October 21. The BAe enters service in December over an overnight freight schedule linking Budapest with the TNT hub at Cologne. During the day, the freighter operates on the carrier's own cargo services to North Africa, Europe, and the Mideast. It should be noted that receipt of the BAe Quiet Trader makes MALEV the first East European carrier to take delivery of a Western jetliner.

Beginning on November 18, three Boeing 737-200s are acquired under charter from GPA Group, Ltd.: a Dash-2M8A, a Dash-2Q8A, and a

Dash-2T5A, all painted in the airline's new livery. Despite political pressure against the arrangement, the airline board proceeds and MALEV becomes the first Eastern European airline to receive these Western aircraft types. The first Boeing flight is undertaken on November 25 from Budapest to Rome.

Noise restrictions are put into effect at Ferihegy Airport during the fourth quarter and no flights are allowed out between midnight and 5 a.m. Also in December, following completion of a bilateral agreement between Hungary and Israel, nonstop Tu-154B-2 flights are inaugurated to Tel Aviv.

Customer bookings dip 3.8% to 1,271,119 and cargo is off by 26.7% to 11.63 million FTKs. Revenues decline 3.5% to \$132 million, expenses rise 1.1% to \$124.7 million, and the operating profit is reduced to \$7.4 million.

The payroll is increased a slight 1.8% in **1989** to 4,676. The fleet adds a second BAe 146-200QT for **TNT Worldwide Express** and deletes the Il-18F. The latter completes its 27 years of service on January 25 with a cargo flight from Budapest to Constantine, Algeria.

Also in January, the company continues to introduce its new livery, featuring a combination of white and light blue with a large block "MALEV" on the fuselage above the windowline and forward of the wing. The new scheme is now painted on all aircraft.

An aviation agreement is signed with Israel at Tel Aviv on February 28 and on March 26 scheduled flights are started to Stockholm. Two teenagers hijack a Tu-134A-3 en route from Budapest to Amsterdam via Prague to Frankfurt on March 29 to seek political asylum in West Germany.

A pooling agreement is signed on April 6 with **Pan American World Airways (1)**; the code-share is a block-space arrangement, under which the Hungarian carrier purchases 50 seats per week. On May 18, the joint, twice-weekly service is started with Pan Am to New York, employing the U.S. major's A310-324, but with a MALEV flight attendant aboard.

Service to Thessaloniki is restarted on May 29 and on June 14 scheduled flights begin to Abu Dhabi via Varna.

During the summer, B-737 flights also operate to Cairo, Larnaca, Damascus, Baghdad, Zurich, and Copenhagen. Having been ferried back to Budapest from Algeria on August 29, the withdrawn Il-18DF is sent to Papa military airfield for storage; it will later become a restaurant at Győr.

On September 7, scheduled service is initiated to Trieste; a week later, an office is opened in Stockholm. Flights begin on September 20 to Doha via Abu Dhabi. A new paint hangar is opened at Ferihegy Airport on November 3. Later in the year, an office is opened in Toronto.

Passenger boardings surge ahead by 12.4% to 1,428,631; however, freight declines by 31.5% to 7.63 million FTKs. Revenues arise by 6.4% to \$140.6 million and allow the operating profit to improve to \$7.6 million.

Three B-737-3Y0s are ordered on January 26, **1990** as a second Yak-40 is acquired. A new frequent flyer program begins during the month. A Boeing 707-320C freighter is leased on March 19 for all-cargo charters.

SITA's BAHAMAS luggage tracking system is introduced in April and in late May an in-flight wedding is performed on board a specially chartered Tu-154 as it circles Budapest.

Having been found unacceptable, the B-707 is returned on July 18 and its contract is cancelled. Thomas Deri is appointed CEO in August and begins to help the company shift away from its long-established socialist structure. When the Ft 1 billion per year annual subsidy ends, fares are increased, having a negative impact on passenger traffic.

Following a November 13 meeting of the board of directors, it is announced that company participation in the Berlin Agreement is terminated.

Enplanements for the year total 1,014,029 and revenues are Ft 17.48 billion (\$267 million). The profit is Ft 1.33 billion.

The workforce in **1991** stands at 5,145 and the fleet includes 1 BAe 146-200QT operated for TNT, 1 leased B-737-2M8, 1 leased 2Q8, 1

leased -2T5, 3 leased -3Y0s, 6 Tu-134As, 12 Tu-154Bs, and 4 Yak 40s, including 2 leased from **Aeroflot Soviet Airlines**.

Scheduled services to Dusseldorf commence on April 3, while the first B-737-3Y0 is delivered on April 12. Orders worth \$150 million a copy are placed in April for two B-767-200ERs. The Japanese trading firm Nisho Iwai and the Barclays Bank of London finance the initial down payment.

An Il-62M in full MALEV livery is leased from **CSA (Czechoslovak Airlines)** for the June–September summer period. Its first charter is operated on July 29 to Japan.

At the conclusion of his August visit to Hungary, Pope John Paul II is returned to Italy aboard a company B-737-3Y0. On September 27, passengers watch a theatrical premier on board a chartered Tu-154 en route to Cyprus.

During the fourth quarter, the carrier announces plans for privatization. Credit Suisse First Boston, Ltd. receives a contract to help MALEV find an equity partner.

On November 3, **Delta Air Lines** assumes operation of the block-seat partnership service from failed **Pan American World Airways (1)**. As before, the Hungarians purchase blocks of seats on the Atlanta-based major's four weekly A310 services to New York (JFK) via Vienna. On November 28, the business-class Comfort Class is renamed Sky Club.

In December under a six-month contract, MALEV flight crew and technicians operate Lithuanian Airlines' leased B-737-2Q8A.

Passenger boardings decline 33.2% to 910,700 and freight falls 8.7% to 5,020. Revenue reaches Ft 23.8 billion and profit grows to Ft 2.1 billion.

The payroll is cut 23% in 1992 to 3,963. On February 3, effective on June 30, a joint venture company, Aeroplex of Central Europe, is established with Lockheed Aircraft Services to provide maintenance and overhaul at Budapest Airport.

As the result of labor unrest and the loss of a legal action brought against the company by Pratt & Whitney over a power plant agreement, President/CEO Deri steps down in March. When the summer schedule begins on March 29, MALEV flies to 47 cities in 35 countries, with 210 weekly departures.

Scheduled service is resumed to Luxembourg with Yak-40s on April 10. The company's dry-leased B-767-3Y0 arrives at Ferihegy Airport on April 26 after a 10 hr. 42 min. nonstop flight from Seattle.

During the second quarter, service is inaugurated to such regional destinations as Vilnius and Krakow. At the same time, a steering committee is established to find a Western airline partner. Membership comes from MALEV; the Hungarian Ministry of Transportation, Communication, and Water Management; and the State Property Agency. Eventually, an agreement is reached with the Italian flag carrier **Alitalia, S.p.A.**

On June 30, MALEV V.P. Laszlo Gyorgy O'svath is named chairman with acting CEO Andras Pakay elevated to the twin posts of president and CEO. The same day, the carrier becomes a public limited company.

On July 1, all aircraft maintenance and overhaul is contracted out to the new MALEV and Lockheed joint-venture company, Aeroplex of Central Europe. The new firm receives orders to refurbish the Tupolev Bs at \$313,000 apiece and the Tupolev As at \$220,000 apiece. Beginning during the month and through the remainder of the year, the B-767-3Y0 dry-leased from GPA Group, Ltd. is employed to fly ethnic-market charters to Cleveland, Ohio, as well as 5,000 Japanese tourists roundtrip to Budapest from secondary airports in Japan. New offices are opened in Rome on August 1 and Miskolc on September 4.

On December 15, shareholding is divided between the Societa Italiana per le Imprese Miste All'Esteri, S.p.A. (5%), MALEV employees (14%), and the Budapest government through the State Property Agency (51%). **Alitalia, S.p.A.** acquires a \$77-million, 33% equity stake and five of nine board seats in the now partially privatized Hungarian airline.

After the contract (including a strategic alliance) is signed, **Alitalia, S.p.A.** turns over \$77 million to MALEV for fleet modernization and five of its employees assume seats on the Hungarian airline's board. In-

tegration of sales, maintenance, charter, and catering is pursued. Six-month notice is given that the code-sharing transatlantic partnership with **Delta Air Lines** will end.

bookings recover and climb 13.8% to 1,153,879; cargo advances 33.7% to 7.62 million FTKs. Revenues total \$330 million and allow a \$20-million net gain.

In 1993, Chairman O'svath and President/CEO Pakay oversee a workforce of 3,600, down 9.2% from the previous year. On January 20, a B-737 training program is completed for pilots from **Lithuanian Airlines**. The new public joint stock company holds its first general meeting on February 22.

The fleet is now increased by the inclusion of two leased B-767-27GERs, which are delivered on May 10 and May 17, respectively. With coordination between the Italian and Hungarian airlines planned at all levels and in all areas of operations, the two formally integrate their operations on the last day of the month.

On May 29, pooled MALEV and Alitalia six-times-per-week service is advertised for New York via Rome.

The company's first service to North America begins on June 1 as one of the new B-767-27GERs flies roundtrip from Budapest to Newark via Rome. Hungarian aircraft begin dual-designator flights with the Italians on frequencies from Budapest to Venice, Milan, and Rome.

Beginning on July 27 for two months, a leased B-767-3Y0 undertakes 14 roundtrip charters from Japan to Budapest, transporting 5,000 Japanese tourists to Europe. The next day, a \$123-million 12-year credit contract is signed with Barclays Bank and the U.S. Export-Import Bank.

On September 30, the joint venture with **TNT Worldwide Express** is closed down upon expiration of the 5-year contract. The last BAe 146 cargo freighter is returned.

Destinations regularly visited by fall include Amsterdam, Athens, Barcelona, Beirut, Berlin, Brussels, Bucharest, Cairo, Cologne, Copenhagen, Damascus, Dresden, Doha, Dubai, Dusseldorf, Frankfurt, Hamburg, Helsinki, Istanbul, Kiev, Kuwait, Larnaca, Leipzig, London, Madrid, Milan, Munich, New York, Paris, Prague, Rome, Sofia, St. Petersburg, Stockholm, Stuttgart, Tel Aviv, Thessaloniki, Tirana, Trieste, Varna, Vienna, Vilnius, Warsaw, and Zurich.

The Yak-40 fleet is retired on November 1 and B-767 charters to Bangkok and Las Palmas start on December 28.

Passenger boardings rise 13.1% through October to 1,129,000 while freight climbs 38.8% to 9 million FTKs. Losses are suffered: \$9.39 million (operating) and \$607,000 (net).

Airline employment is sliced by 1.4% in 1994 to 3,550 and the fleet now includes 8 Tu-154B-2s, 3 Tu-134A-3s, 2 each B-767-27GERs and B-737-2T4As, 3 B-737-3Y0s, and 1 each B-737-2K9A, B-737-2M8A, B-737-2T5A, and B-737-3Q8. All of the B-737s and the B-767-200s are leased. The **Delta Air Lines** transatlantic code-sharing arrangement is renewed in February.

At the second annual shareholders meeting on March 26, employee owners participate for the first time. Three days later, the service between New York and Budapest, flown in cooperation with **Alitalia, S.p.A.**, eliminates its stop at Rome.

The company, employing a dry-leased B-737-3Q8, inaugurates daily nonstop dual-designator roundtrips with **Delta Air Lines** between Budapest and New York (JFK) on May 2. Delta provides a flight attendant for the MALEV service. Codes are also shared on Delta's flights from Atlanta via Stuttgart to Budapest on a block-space basis; MALEV also provides a flight attendant.

Beginning on June 1 and continuing to September 21, a B-767-3Y0 undertakes 13 nonstop, roundtrip charters from Budapest to Toronto. A 10th Boeing, a B-767-3Y0, is received on August 8, followed by receipt of the first leased B-737-4Y0 on November 23, which enters service at the end of December.

On the year, customer bookings advance by 15.5% to 1,605,302 while cargo skyrockets 125.9% to 21.27 million FTKs. Revenues move up 3.3% to \$352.98 million, but expenses shoot up 3.7% to \$364.11

million. Consequently, the operating loss increases to \$11.13 million and the net loss deepens to \$6.91 million.

The workforce is reduced to 1,493 in **1995**. A Tu-154 is withdrawn on January 20 and sent to Stuttgart for use in land-based security procedures testing. Six days later, another chartered B-737-4Y0 is acquired. A general agency contract is signed with Bangkok-based JVK International Travel, Ltd. in mid-March.

On June 29, scheduled service is inaugurated to Venice. On July 19, company management agrees to start a six-month reorganization program at the end of September. Prior to that time, the U.S.-based Mercer Management Consulting is commissioned to conduct an audit. A new office is opened at Tel Aviv on September 30.

Code-sharing flights commence with **CSA Czech Airlines, A.S.** in October between Budapest and Prague. The first dry-leased Fokker 70 is received from the International Lease Finance Corporation (ILFC) on December 21.

Enplanements for the year climb 4.3% to 1,629,805 and freight skyrockets 64.1% to 29.58 million FTKs. Operating revenues are \$382.26 million, an increase of 8.3%, while expenses are \$391.83 million, a 7.6% boost. The operating loss shrinks to \$9.56 million and a \$1.49 million net profit is recorded.

Airline employment is cut another 3.7% in **1996**, dropping to 1,339. The new frequent flyer Bonus Program begins on January 1. On January 8, the first Fokker 70 enters service, flying from Budapest to Rome and back to Budapest.

The second and third Fokker 70s arrive under lease on February 14; a fourth is purchased directly from its manufacturer. Service begins to Odessa in March and beginning on March 29, the company celebrates its fiftieth anniversary with a series of jubilee events.

In October, twice-weekly frequencies are inaugurated to Bangkok.

Passenger boardings swell 14.3% to 1,856,731 and 32.95 million freight FTKs are operated, a rise of 7.3%. Operating income moves up 3.3% to \$394.76 million, but expenses jump 3.8% to \$406.14 million. The operating loss deepens to \$11.38 million, but a net \$2.3-million profit is reported.

The workforce dips 0.2% in **1997** to 3,333.

The first link between a Japanese airline and East European carriers occurs on January 18 when **Japan Air Lines Company, Ltd. (2)** signs code-sharing agreements with **CSA Czech Airlines** and MALEV. When the pact takes effect during the summer, travelers from Tokyo (NRT) or Osaka (KIX) to Frankfurt will be able to make seamless connections on to the partner lines for flights to Prague and Budapest. Between now and June, JAL will aggressively market the new alliance.

In March, MALEV implements a block-space, dual designator service with **Swissair, A.G.** on twice-weekly frequencies from Budapest to Zurich. The last three Tu-134As are sold, also in March, replaced by five (later four) leased Tu-154B2s, which are assigned to charter work.

Block-space frequencies are begun with **Air France** in April on frequencies from Budapest to Paris. In June, codes are shared with **Delta Air Lines** on the Frankfurt-Budapest and Stuttgart-Budapest segments of the American major's Flight 135 L-1011 TriStar Atlanta to Budapest service.

EU Commissioner Neil Kinnock announces on July 15 that **Alitalia, S.p.A.** will be allowed to receive a \$1.6-billion government rescue package in three stages, all tied to heavy conditions. In announcing the last bailout program to be allowed to a European airline, Kinnock notes that the carrier might have \$1 billion immediately, with the remainder coming in **1998** and **1999** if it has met various requirements, including the sale of its stake in MALEV. Negotiations between officials of the Italian and Hungarian lines on this issue begin immediately.

During the summer and fall, planning for additional privatization continues as the equity arrangement with **Alitalia, S.p.A.** ends. It is required that the state retain a 25% stake and also that 26% more must be kept in private Hungarian hands. In addition, the company begins code-sharing flights with **Aeroflot Russian International Airlines (ARIA)** on routes

between Budapest and Moscow. It also begins dual-designator service with the Romanian carrier **DAC Air**.

Two more Fokker 70s are delivered in late November. In December, MALEV becomes the first airline to offer all-cargo services into the airport at Sarajevo, Bosnia. Twice-weekly An-26 flights deliver between 500 and 5,000 kg. each.

Customer bookings move ahead by 3.5% to 1,922,152 while freight climbs 14.8% to 37.84 million FTKs. Operating revenues slid 2.4% to \$385.39 million, while expenses dip 1.8% to \$398.85 million. The operating loss increases to \$13.45 million and the net loss jumps to \$13.34 million, later reduced to \$10.55 million.

Airline employment stands at 3,500 in 1998. MALEV holds strategic discussions with **British Airways, Ltd. (2)** and it is widely expected that BA will succeed **Alitalia, S.p.A.** in the privatization process. In May, the MALEV board turns down a draft equity contract with BA because the terms offered do not allow for sufficient integration of MALEV into the British carrier.

A strategic marketing and code-sharing partnership is entered into with BA on June 1. Efforts continue to persuade BA to integrate MALEV more than is common in strategic alliances.

During July, reports begin to surface that, under terms of the rumored equity discussions, MALEV, in order for a pact to be signed, will have to forfeit its long-haul services to New York and Bangkok and cease planning for Toronto and Beijing flights. Both airlines vigorously deny the allegations.

Still, the new Hungarian right-wing coalition government of Prime Minister Viktor Orban steps in and puts a temporary freeze on MALEV's privatization process—indeed, it stops all privatization efforts in Hungary—in order to investigate the sell-offs of its predecessor. Still, both the airline and BA are confident that some arrangement will be completed, perhaps as early as August, with the British line acquiring a stake in MALEV, or in the state holding company APV.

On August 20, the company begins to code-share with **British Airways, Ltd. (2)** on the Hungarian line's six-times-a-week Fokker 70 services between Budapest and London (LGW). Under the June 1 dual-designator pact between the two companies, it is agreed that frequent flyer programs will be linked, but that the two companies will not code-share on services between Budapest and London (LHR). Discussions continue concerning the possibility of dual-designator services from Budapest to Birmingham and Manchester.

Talks with BA concerning a possible alliance drag on through the remainder of the month, September, October, and into November without resolution. Preliminary discussions are also held with executives from the "Star Alliance" and the "Qualiflyer" group concerning possible membership.

Meanwhile, on September 5, new weekly B-767-27GER nonstop roundtrips are inaugurated between Budapest and Beijing. The frequency will be doubled as seasonal demand dictates.

Fiscal results for the first half, revealed on November 1, show that the airline has lost another \$11.55 million. As a result, the state privatization agency APV replaces President Andras Derzsi and CEO Sandor Szathmary during the second week of the month.

On November 16, APV Chairman/CEO Gyula Gansperger indicates that the company will be reorganized and given a new business policy. The APV will spend "a few billion forints" on raising the airline's capital, while it rationalizes its operations and eliminates loss-making activities. When these tasks are completed, hopefully by the second half of 1999 or 2000, the company will be ready for privatization. Meanwhile, any arrangement with **British Airways, Ltd. (2)** will have to await a review by a new MALEV board of directors.

Finnish national Mikaelin Peterson harasses his 188 fellow passengers aboard a company B-767-27GER en route from Bangkok to Budapest on December 5. When cabin crew attempt to calm him, he becomes violent, punching a pilot and choking a flight attendant. Passengers and crew finally subdue the man and tie him to his seat, after which a doctor on board gives him an injection of tranquilizers. The

man dies, forcing the jet to make an emergency landing at Istanbul. An autopsy will show that the tranquilizers had mixed with either other drugs or alcohol already in the victim's bloodstream.

Also in December, in order to provide more space for business-class travelers on MALEV's B-737s, all six-abreast seating is reconfigured to five-abreast. Also during the month, two B-737-5K5s are received, replacing two Dash-200s that are returned to their lessors.

Passenger boardings ascend 4.2% during the year to 1.99 million, while cargo traffic slides 4% to 38.95 million FTKs. The net loss is "improved" to \$2.78 million.

Antal Pongracz is named general manager in January 1999. With plans for partial privatization on hold, the carrier launches a strategic reorganization in March.

With the start of the summer schedule on March 22, two new routes are introduced. B-767-27GER weekly roundtrips begin from Budapest to Toronto, while twice-weekly Fokker 70 return flights are undertaken from Budapest to Sarajevo. At this point, the MALEV route network includes 38 cities.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, MALEV, on March 24, halts all scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the NATO bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25 and for the duration of the NATO bombing campaign. Flights to south-central and south-eastern Europe experience delays of 30–60 min. due to airspace closure.

The Budapest to Toronto service becomes twice weekly on May 27. Operation Allied Force is completed on June 11. By September 1, MALEV has boosted its freighter service from Budapest to Skopje, Macedonia, to five times a week.

Also on June 11, the State Privatization and Asset Management RT makes a wholesale management change, revising the majority of the membership of both the board of directors and the supervisory board. Zsolt Hernadi remains president/CEO.

In honor of the airline's ninetieth birthday, the Hungarian Post Office, on August 18, issues a special commemorative stamp.

Effective August 30, the State Privatization and Asset Management RT purchases the MALEV shares owned by Air Invest Kft and thus raises its equity stake in MALEV to 96.8%.

By September 1, MALEV has boosted its freighter service from Budapest to Skopje, Macedonia, to five times a week.

At an extraordinary shareholders meeting on October 2, President Hernadi is succeeded as CEO by Deputy CEO for Commercial Operations Ferenc Kovacs. The new leader is given a mandate to initiate the necessary structural changes in MALEV to facilitate its privatization. The State Privatization and Asset Management RT also engineers the addition of five new members to the board of directors and two to the supervisory board. Csaba Siklos is chairman of the former and Lajos Savos is chairman of the latter.

Passenger boardings this year accelerate 9% to 2,176,000 while freight rises 11.4% to 43.38 million FTKs. Although a \$13.79 million operating loss is suffered, there is a net gain of \$17.7 million.

Airline employment at the beginning of 2000 stands at 3,130, a 3.8% drop over the previous 12 months. The all-leased B-737 fleet now includes 2 Dash-5K5s, 1 Dash-3Q8, 5 Dash-3Y0s, and 3 Dash-4Y0s. Two each B-767-27GERs and B-767-3P6ERs are also operated, along with a few old Tu-154Ms.

In March, the government chooses ING Barings, the investment banking arm of the Dutch bank ING Group, N.V., to manage its privatization efforts.

Just prior to the beginning of the summer schedule on March 26, a joint-venture agreement is signed between MALEV and Lufthansa Technik, A.G., the maintenance arm of **Deutsche Lufthansa, A.G.** Under its terms, a new maintenance, repair and overhaul (MRO) facility will be set up at Budapest to handle narrow-body jetliners, particularly

the B-737s operated by the two airlines. When operations begin in early 2001, the concern will be the third joint venture of its type outside of Germany (after the ones in Beijing and Manila).

At the end of March, the company enters into a direct, twice-weekly roundtrip competition with **Pulkovo Airlines (Aviation Enterprise Pulkovo)** over the route between Budapest and St. Petersburg.

Ticket prices are raised in early April, particularly on North American routes, to help compensate for rising fuel costs. When MALEV begins phasing out its Tu-154M fleet, one of the aircraft is turned over to the new Budapest-based charter operator **Pannon Air Service, Kft.** on May 15.

The former **Sun Express, A.O.** B-737-3Y0 is placed into service on May 23 under a five-year lease from GECAS.

It is announced on July 15 that the carrier will have withdrawn its last Tu-154 by April next. Due to poor load factors, the company suspends flights from Budapest to Beijing from July 19 through August 14.

In an event given worldwide media attention, 75-year-old Andras Tamas, a World War II Hungarian POW deposited in a Russian psychiatric hospital at Kotelnich in 1947 and forgotten for five decades, returns to Budapest from Moscow aboard the regular MALEV flight on August 11. With no record of his birth or any living relative available, the Hungarian government is uncertain as what to do with the man. He is sent to the National Psychiatric and Neurological Institute, where he will remain until a decision can be made.

On August 15, the government announces plans to sell a 49% stake in the carrier. The move follows unsuccessful efforts by the airline, at least according to the press, to interest **Swissair, A.G., British Airways, Ltd. (2),** or **Deutsche Lufthansa, A.G.** in nonequity partnership arrangements.

Previously operated by **Gulf Air Company**, a B-767-3P6ER is chartered from Rolls Royce Capital on August 22. On October 2, it is announced that the carrier's dual-designator agreement with **Delta Air Lines** on the Budapest to New York (JFK) route will end on March 25 next.

A special B-767-27GER "Golden Plane" flight arrives at Budapest from Sydney on October 3 bringing back the national Olympic team. A special ceremony and reception are held for all of the athletes, including the eight gold, six silver, and three bronze medal winners.

Hungarian Foreign Minister Janos Martonyi is embarrassed on October 10 when the flight equipment to be employed to take him on a foreign mission breaks down—twice. The exasperated leader is forced to complete his flight aboard a regularly scheduled plane from **LOT Polish Airlines, S.A.**

An 80-year-old passenger aboard the company's October 11 B-767-3P6ER service from Toronto to Budapest becomes ill to the point of clinical death. As the plane makes an emergency landing at Moncton, New Brunswick, the crew and one of the passengers, a doctor, use an on-board defibrillator to resuscitate the man. Once on the ground, the passenger is rushed to the hospital and the flight continues.

In a report distributed by the BBC on October 12, the Hungarian newspaper *Nepszava* reveals that the Hungarian intelligence services have been asked to look into a spate of recent faults with MALEV's aircraft. Since mid-July, hardly a day has passed without a company aircraft breaking down, with the latest double incident involving Foreign Minister Martonyi causing considerable consternation. The newspaper suggests that sabotage is a possibility.

On October 14, another medical emergency occurs, this time aboard a service from Budapest to Rome. A 45-year-old man suffers a heart attack, but fortunately for him, a group of doctors is travelling to a medical convention on the same flight and are able to use the first aid equipment aboard to stabilize his condition. An emergency landing is made at Zagreb and the man is rushed to the hospital.

Electronic ticketing over the Internet begins on October 15 for those wishing to book seats for departures from Budapest. On October 19, the State Privatization and Holding Company announces the results of its short-listing to 20 the number of candidates eligible to purchase equity

stakes. All are asked to sign confidentiality agreements concerning MALEV business information and those that do are invited to submit a bid before a January 8, 2001 deadline. The *Budapest Business Journal* reveals on October 23 that four of the bidders will be **Air France**, **KLM (Royal Dutch Airlines, N.V.)**, **Swissair, A.G.**, and **SAS (Scandinavian Airlines System)**. A previous suitor, **British Airways, Ltd. (2)**, has made it clear that it will not offer a bid.

By mutual decision, CEO Kovacs departs on October 26. He is succeeded on an interim basis by deputy CEO/Chief Financial Officer Erzsebet Antal.

Service between Budapest and Barcelona ends on October 29, while flights to St. Petersburg are suspended for the winter. Due to problems with its landing gear, a Fokker 70, with 40 passengers aboard, makes an emergency landing back at Budapest just after takeoff from the Hungarian capital for Brussels on October 29; no injuries are reported.

Acting CEO Antal, who has worked for the airline since 1984, is confirmed as the company's new president/CEO on November 22. Her immediate concern is formulation of a stabilization plan designed to save millions in operational costs. Key points include the retirement of the Tupolev Tu-154s by March, sale of the ground and baggage handling service, and trimming of unprofitable routes.

It is announced on December 10 that weekly B-767-3P6ER charters will be operated to Durban starting on January 22.

Hosted by **JAT Yugoslav Airlines** CEO Mihajlo Vujinovic, a "meeting of the scheduled airlines of Southeast Europe" is held at Belgrade in mid-December to consider possible joint cooperation. Attending are representatives of MALEV, **Croatia Airlines**, **Air Bosna, S.A.**, **Air Srpska, S.A.**, **Montenegro Airlines**, **Macedonian Airlines**, and **Adria Airways (Adria Aviopromet) (2)**. Due to an unplanned management change, **TAROM Romanian Air Transport (Transporturile Aeriene Romane, S.A.)** is unable to participate, but expresses interest in joint activities.

Of the eight airlines participating in the conclave, six express interest in joint commercial operations; four in joint technical and maintenance activities and five in joint training exercises. To study and discuss matters further, three working committees are established: commercial, chaired by a representative from **Adria Airways (Adria Aviopromet) (2)**; technical, chaired by a MALEV representative; and training, chaired by a representative from **JAT Yugoslav Airlines**.

Enplanements for the year accelerate 6.8% to 2,359,000, while cargo traffic is up 5% to 47.82 million FTKs.

As the year ends, MALEV executives and employees look forward to the happy bid opening set for January 8. They do not know that the invited participants will not respond as expected and that by January 9 the airline's partial privatization will be postponed indefinitely.

MALEV HUNGARIAN AIRLINES P.L.C. See MALEV HUNGARIAN AIRLINES

MALINAIR, LTD.: United Kingdom (1985–1987). During the spring and summer of 1985, Managing Director Frank Cannon and seven shareholders incorporate this carrier at Edinburgh on total capital of £128,000 provided by Cannon and six other investors. **Loganair, Ltd.** founder and former chairman Duncan McIntosh is named chairman and two Britten-Norman BN-2 Islanders are purchased with which to begin charter operations in September. With Civil Aeronautics Authority (CAA) approval in hand, scheduled services begin in December over a Glasgow–Carrickfergus and Belfast route. Although financial information will be forthcoming, traffic figures will not.

A \$16.5-million order is placed at the Farnborough Air Show in July 1986 for six new Dornier 228-100s, the first two of which are delivered in October.

Revenues total \$339,700 and a loss of \$152,000 is suffered.

In 1987, Managing Director Cannon's fleet comprises 1 Dornier 228-100 and 2 Islanders. Destinations now visited include Glasgow, Belfast, and Carrickfergus. Financial problems continue to mount as revenues

rise to \$2.3 million. Expenses increase, however, and cause a \$1.37-million loss. The company cannot sustain these negative figures and voluntarily places itself into liquidation.

MALITAS (MALI-TOMBOUTOU AIR SERVICE, S.A.): Bamako, Mali; Year Founded 1989. Malitas is set up at Bamako by Moussa B. Coulibaly in 1989 to provide regional passenger and cargo flights. Revenue services commence with 1 each Antonov An-24RV and Letov Let L-410 UVP.

A report that the company has ceased operations in 1994 proves unfounded.

By 1998–1999, the fleet retains the same aircraft types.

MALL AIRWAYS: United States (1973–1989). Richard X. Knipe organizes Mall at Albany, New York, in 1973 to provide on-demand Piper PA-23 Aztec charter services to local Empire State destinations. The decision is taken in 1980 to offer frequent daily roundtrip commuter services to Birmingham, Elmira, and Ithaca. A fleet of 2 Piper PA-31-350 Navajo Chieftains, 1 Beech 99, and the original Piper Aztec is utilized; orders are placed for a pair of British Aerospace BAe Jetstream 31s.

Two additional Beech 99s and another Chieftain are purchased in 1981–1982 and the Jetstream order is cancelled in 1983. During these years, routes are opened to New Bedford, Hartford, Buffalo, Newark, Rochester, Syracuse, and White Plains as the inaugural services to Elmira and Ithaca are abandoned. In addition, international flights are initiated to Montreal and Toronto. Enplanements in the latter year total 48,000.

The fleet in 1984 includes 6 Beech 99s, 3 Chieftains, and 1 King Air. Bookings figures are henceforth kept confidential. Inexact traffic figures are "leaked" in 1985 and are reported to be slightly above level. The fleet is increased by the addition of a seventh Beech 99 as one Chieftain is retired. Plans are made to acquire one or two Grumman Gulfstream G-1Cs.

Service is started to New York (LGA) in 1986–1987 and the fleet is increased by the addition of two Beech 99s. Two PA-31-350s are removed and replaced by a Piper King Air 90.

Another Beech 99 is purchased in 1988 as the last Navajo Chieftain is sold. During the fall, the Albany-based regional is subjected to a FAA inspection that raises numerous management and record-keeping questions. Making certain to protect his routes by wet-leasing two Beech 99s and a Beech 1900 from **East Hampton Aire**, President Knipe shuts his airline down in mid-November.

Airline employees then make certain that all of the government concerns are addressed, including the rewriting of all company manuals. Most top officials are changed, including the CEO. Knipe becomes chairman and appoints George Nemeth to succeed him as president.

Partial service is resumed on January 10, 1989 with 7 Beech 99s, plus the leased East Hampton aircraft. On September 1, the carrier is purchased by **Business Express Airlines**; the East Hampton Beeches are returned.

MALMO AVIATION SCHEDULE, A.B. (CITY AIR SCANDINAVIA): Sweden (1993–1999). Following bankruptcy and a boardroom conflict over continuation of the single international route from Stockholm's Bromma Airport to London (LCY) in the early spring, **City Air Scandinavia, A.B.** is purchased on April 16, 1993 by Viklund Crafoord, owner of Viklund Inter Trade. The company is provided with a new corporate identity, livery, logo, uniforms, etc. under the new Malmo Aviation Schedule name.

Stefan Wiklund becomes chairman/managing director, succeeding founding Chairman Bosco Janson, and places an order for 5 Avro (BAe) RJ-85s with which to supplement the fleet of 5 leased British Aerospace BAe 146-200s, 1 BAe 146-200QT, 1 BAe 146-300QT, and 1 Fairchild Hiller FH-227. The BAe QTs continue their contract with **TNT International Aviation Services**, operating cargo flights between Cologne and eight Scandinavian cities.

The passenger services from Stockholm to London and Malmo begun the previous year are continued, at least briefly. In May, the route to London becomes a political issue between the governments of Sweden and the U.K. and service over it is suspended. The first RJ85 arrives in late fall.

Enplanements for the first full year reach 350,342 and a total of 12.5 million FTKs of freight are flown.

Airline employment stands at 220 in 1994, as the London route remains dormant. The remaining four RJ85s arrive and passenger services continue to be offered to Bromma, Goteborg, Landvetter, and Malmo/Sturup. The TNT contract is halted during the summer.

Passenger boardings increase 53.4% to 531,000.

There is no change in the workforce during 1995. The company acquires another RJ85 and the 10 jetliners transport a total of 726,306 passengers, a 36.4% increase over the previous year.

A 11th aircraft, a BAe 146-200, is leased from Asset Management Organization in April 1996. It enters service from Bromma to Brussels via Malmo and also to Helsinki. Hans Kallenius becomes the new managing director and in September flights also commence to London (LCY) from Malmo.

In December, the Irish carrier **CityJet, Ltd.** is put into examinership (an equivalent of the U.S. Chapter XI bankruptcy) with accumulated losses of Ir£13 million and debts of Ir£2.4 million.

The carrier now enters into survival discussions with Malmo Aviation Schedule, A.B. while also seeking a capital injection from Irish financiers. The Swedish carrier agrees to assist, providing as part of its Ir£1.75 million (\$6.6 million) rescue plan a BAe 146-200 that it has recently purchased from **USA Airways**, as well as leasing and maintenance services valued at Ir£650,000.

Enplanements reach 741,000 on 12,594 scheduled departures.

In January 1997, a code-sharing agreement is signed with **Air U.K., Ltd.** and dual designator flights commence from Sweden to Edinburgh, Rotterdam, and Amsterdam. Also during the month, the company signs a long-term contract with BAe AMJ concerning the company's fleet of BAe 146-200s. One aircraft is purchased outright while the leases of the remainder are extended through January 2002.

The Malmo rescue plan is approved by the U.K. courts in February, giving the Swedish airline a 43% stake in **CityJet, Ltd.**

In August, Malmo launches services from Angelholm to domestic locations. Plans are made to open service from Malmo to Denmark three years hence. Meanwhile, the majority of passengers continue to board company flights from Malmo to Stockholm and Goteborg.

Given that it does not share the same strategy for the future of the company, Malmo sells its 43% stake in **CityJet, Ltd.** on December 16.

Customer bookings this year fall to 772,000 on 12,894 scheduled departures. Pretax profits total SKr 400 million (\$48.8 million).

Airline employment stands at 450 at the beginning of 1998 and the fleet operates 11 BAe 146-200s. Malmo is able to generate extra income during the spring by allowing certain of its aircraft to be painted in honor of non-airline concerns. Among the firms so honored is the Karlskrona-based cellular telephone company **Europolitan**, whose image appears on the fuselage of a BAe 146-200. A SKr 31-million profit is earned on operations during the first half-year.

The summer is taken up with corporate matters of major importance. Following several months of negotiation, it is announced on August 17, that the Crafoord-Wiklund family, which owns Malmo, has sold its shares to **Braathens, A.S.** for SKr 600 million (\$73.2 million), effective in September. The Norwegian carrier offers to purchase the shares of the remaining minority stakeholders, which includes board members and employees of Malmo.

Braathens Executive Vice President Geir Olsen is placed in charge when, upon implementation of the sale, Malmo Chairman Wiklund steps down. Malmo continues operations, now as a member of the **KLM (Royal Dutch Airlines, N.V.)** alliance that includes Braathens as a major partner. Indeed, it will be revealed that the Dutch flag carrier has contributed \$19.5 million of the Malmo purchase price.

Passenger boardings during the company's final year under this name increase by 7.3% to 818,000.

During the first quarter of 1999, the carrier is renamed **Braathens Malmo Aviation, A.B.** Its 11 BAe 146-200s are now repainted to reflect the new identity.

MALMO AVIATION, A.B.: P.O. Box 37, Malmo-Sturup, S-20120, Sweden; Phone 040 (660) 29 00; Fax 040 (660) 28 49; <http://www.maviation.se>; Year Founded 2000. Braathens's Malmo Aviation, A.B. is renamed on September 22, 2000. On November 15, Malmo begins to accept delivery of the first of nine Avro RJ100s previously operated by **SAM Colombian Airlines, S.A.** It wears the airline's bright orange-trimmed color scheme.

As they come off lease, nine of Malmo's current BAe 146-200s will be returned to BAe Systems' Asset Management arm. There is considerable speculation at year's end that **Braathens, A.S.** will soon sell the loss-making regional.

MALS AIR COMPANY (MALS AVIAKOMPANNIYA): 60 Years of October St., Moscow, 129100, Russia; Phone 7 (095) 135-0012; Fax 7 (095) 135-0012; Year Founded 1993. MALS is established at Moscow in 1993 to offer ad hoc domestic passenger and cargo charter services. A. Kutorov is general director and he initiates flights with one each Ilyushin Il-76 and Tupolev Tu-154. Operations continue apace in 1994-2000, during which years the Ilyushin is withdrawn.

MALTA AIR CHARTER, LTD.: Air Malta Building, Luqa, LQA 05, Malta; Phone 356 677 291; Fax 356 663 195; <http://www.airmalta.com/mac/index.html>; Code R5; Year Founded 1990. MAC is established during the first quarter of 1990 as a joint venture between the island government and Gozo Channel Company, Ltd. Employing an Agusta Bell 206 helicopter leased from **Balkan Bulgarian Airlines**, the company, administered as a subsidiary of the flag carrier **Air Malta Company, Ltd. (2)**, inaugurates a scheduled link between Malta and Gozo on June 27. A month later, the JetRanger is replaced with a Mil Mi-8 and flight-seeing is continued until September 30. Seasonal sight-seeing tours are resumed on June 28, 1991 and continue until October 31.

The Balkan lease ends in the spring of 1992 and is not renewed. Instead, another rotary wing craft of the same type is chartered from **Aeroflot Russian International Airlines (ARIA)**. Flights with the new helicopter resume on April 1. In October, the company becomes a year-round venture and services are continued without headline or incident until February 16, 1996 when work on Gozo Heliport requires MAC's sight-seeing flights be suspended.

When Malta Air Charter resumes its operations on April 28, the carrier inaugurates its first scheduled flights under the marketing name Gozo Wings. Flight-seeing charters also continue. In 2000, Chairman Joseph N. Tabone's fleet includes 4 Mi-8s, which are all gradually repainted in a new color scheme.

THE MALTA AIRLINES, LTD.: Malta (1950-1973). All assets of **Air Malta, Ltd. (1)** are purchased by **Malta Airways, Ltd.** on December 15, 1950. The new owners combine the two companies under the name The Malta Airlines. Fifteen days later, on December 30, the partners' individual route licenses are cancelled and the governor of Malta issues the combined firm new joint licenses valid for five years. TMA in turn contracts with **British European Airways Corporation (BEA)** to operate its services for the length of the licenses.

BEA inaugurates TMA flights on January 1, 1951, linking the island with the old Air Malta, Ltd. destinations of Catania and Tunis. A week later on January 7, TMA flights to Malta from London (Northolt) are undertaken by the British state regional's Vickers Vikings via the former MAL stops at Nice and Rome. The next day, the aircraft from London, the *Sir Henry Morgan*, continues on to Cairo over the old AML route via Tripoli and Benghazi. Stops at Tunis are withdrawn during the summer for lack of traffic.

Monthly Malta to Gibraltar via Tunis and Algiers flights begin on June 19, **1952**; BEA undertakes the service on behalf of both TMA and **Gibraltar Airways, Ltd.**, but lack of traffic causes cancellation shortly after start-up. BEA upgrades the London to Malta service on October 7, **1953** through the introduction of Elizabethan airlines; first to complete the route via Nice is the *Edmund Spenser*.

The *Edmund Spenser* is also the first to inaugurate a new service from London to Malta via Ajaccio, Corsica, on April 23, **1955**. Later the same day, *Sir Christopher Hatton* initiates a northern route completing BEA's first Corsican service. The TMA-BEA management and support contract is renewed late in the year.

As a result of the Suez conflict, the TMA service from Malta to Cairo is suspended east of Benghazi late in **1956**. Operations are resumed in early **1957** and on June 2, **1958**, Vickers Viscount 701s are introduced on the London to Malta via Nice and Rome route.

On June 5, **1960**, BEA, on behalf of TMA, undertakes nonstop 2 hr. 55 min. Comet 4B jetliner service between London and Malta. The same day, service is started to Sardinia with weekly Viscount 701 flights from London to Malta via Aighero.

Operations continue apace during the **1960s** as BEA continues to fly on behalf of TMA even after the island's independence in **1964**. In **1967**, a total of 97,448 passengers are flown.

Air Malta Company, Ltd. (2) is formed as the successor company in **1973**, just before Malta becomes a republic in the British Commonwealth the following year.

MALTA AIRWAYS, LTD.: Malta (1946–1950). MAL is formed on April 1, **1946**. Shareholding is divided between **British Overseas Airways Corporation (BOAC)** and local investors. During the summer of **1947**, BOAC's 34% interest is transferred to **British European Airways Corporation (BEA)** which, on December 1, inaugurates London (Northolt) to Malta service on behalf of MAL via Marseilles and Rome.

A license is obtained from the governor of Malta in November **1948** for the initiation of all-cargo flights from the island to Rome and London. BEA opens this service, from London to Malta via Nice and Rome with Douglas DC-3s on April 3, **1949**. On December 15, **1950**, the carrier purchases the assets of **Air Malta, Ltd. (1)** and the two companies are merged to form **The Malta Airlines, Ltd.**

MAMER AIR TRANSPORT: United States (1929–1932). Mamer is formed by Nicholas "Nick" Mamer at Spokane, Washington, in the first quarter of **1929** to offer scheduled passenger and air express flights to Portland, Oregon, via Yakima and Walla Walla. On March 30, the new owner arrives at the Ford factory to acquire his first aircraft, 4-AT-55, paying \$50,000 for it. On April 1, accompanied by Arthur Walker, Mamer departs for Washington State; the barnstorming delivery flight will take a month. Sufficient stops and \$5 demonstration rides are given during the trip to pay for the aircraft.

Employing 4-AT-55, the company inaugurates revenue flights on April 15. A second Ford Tri-Motor, 4-AT-65, is delivered on July 29. In early **1930**, flights to the West Coast are discontinued and on June 1 the Fords launch passenger and express flights every other day via various stops from Spokane to St. Paul, Minnesota. In July, operations are resumed to the Seattle area with Tacoma added. Too difficult to maintain financially, the Spokane to St. Paul route is closed on October 15.

The Spokane to Seattle and Tacoma service is continued in **1931**, along with a variety of special charters. Among these is the transport of firefighters and supplies for the U.S. Forest Service's Chamberlain Basin Meadows of the Nez Perce National Forest and Moose Creek in Selway National Forest, both in Idaho. The trimotor delivers a total of 300 people and 30 tons of goods and equipment during the summer.

Scheduled and unscheduled flights are maintained until the company ceases operations on October 1, **1932**.

MAMMOTH AIR SHUTTLE: United States (1984–1985). Employing Piper lightplanes, Mammoth inaugurates scheduled passenger com-

muter services between the California locations of Mammoth Lakes, Burbank, and Orange County (Santa Ana) in late **1984**. Unable to generate sufficient traffic to cover expenses, the new entrant fails in **1985**.

MANAGEMENT AVIATION AND NORTH SCOTTISH HELICOPTERS, LTD.: United Kingdom (1961–1984). Former RAF pilot David Bond establishes MA & NSH near Cambridge in **1961** to undertake general aerial work, with emphasis on crop-spraying in the East Anglia area. Flight service is undertaken by Bond and his two older sons employing Bell 47G helicopters; two younger boys, Stephen and Peter, work at ground jobs for their father.

After a decade of general work, the Bonds, who have for several years sought a way to enter the North Sea oil industry support market, find financial support in July **1972** from the U.K. investment capital group 3i Corporation. 3i advances the Bonds £37,000 for the purchase of one MBB Bolkow 105D twin-engine helicopter.

Sales Manager Stephen is dispatched to the offices of the large oil concerns to seek a contract, but is unable to break the market dominance of **Bristow Helicopters, Ltd.** and **British Airways Helicopters, Ltd.** With time running out in December for the repayment of 3i, the young salesman is able to convince the Conoco oil company to sign a three-month contract at a simple hourly rate of £95 pounds, with no fees for standing time.

The Conoco contract takes effect on January 1, **1973**, and will continue to be held even as **Bond Helicopters, Ltd.** is purchased by **Helikopter Service, A.S.** in 1994. The Bo-105D flies from Great Yarmouth and Humberside to serve the southern North Sea. A few other pieces of business come the carrier's way and turnover for the year totals £400,000.

When the oil companies begin opening up the northern North Sea area in **1976**, MA & NSH opens a base at Aberdeen and adjusts its name. Founder David Bond dies in **1977** and his 27-year-old son, Stephen, becomes managing director. The same year, the company diversifies further, establishing the Rotortech subsidiary to specialize in overhaul and maintenance.

During the late **1970s**, MA & NSH introduce a new industry practice, the weekly all-inclusive service whereby a helicopter is constantly available with no other requirements placed upon customers. The fleet at the end of the decade includes 22 helicopters (including those still employed on crop spraying flights over East Anglia) and the average turnover is £10 million pounds annually.

Flights continue into the new decade. In **1981**, the company begins scheduled daily Sikorsky S-76 crew-change flights in support of Union Oil direct from Aberdeen to the East Shetland basin. Two years later, the first Aerospatiale SA-365N Dauphin is introduced.

In **1984**, the company is reformed and renamed **Bond Helicopters, Ltd.**

MANCHUKO AIRWAYS. See **MANCHURIAN AIR TRANSPORT COMPANY, LTD.**

MANCHURIAN AIR TRANSPORT COMPANY, LTD. (MANSHU KOKUYUS KABUSHIKI KAISHA-MKKK): Manchuria (1932–1945). This carrier, also known as Manchuko Airways, MAT, Manko, or MKKK, is established on September 26, **1932** by the Japanese-controlled Manchukuo government and the Sumitomo Railroad syndicate to provide air transport throughout Manchuria and to act as a transport squadron for occupying Imperial Army troops. The airline will be mobilized for military duties at least 10 times in just the next 5 years.

The company is outfitted with the first of 35 Fokker Model 8 Super Universals and 25 de Havilland DH 80A Puss Moths, many of which will be license-built by the airline at Mukden. Commercial operations commence on November 3 over three principal routes: Mukden to Changchun, Harbin to Tsitsihar, and Mukden to Sinuiju, where connections can be had with the **Nihon Koku Yuso Kabushiki Kaisha (NKYKK)** service to Tokyo.

On February 22, 1933, the Japanese Army, in combat in Manchuria since the previous September, launches a new campaign at Rehe in the western portion of that former Chinese province. MKKK aircraft and crews provide support. MKKK opens several new segments in June, including a stop at Darien and flights from Tsitsihar to Hailar and Manchuli. At the latter two points, passengers, who have flown all the way from Tokyo, can make rail connections to Vladivostok.

The first two license-built Super Universals, relabeled Manko Type 1s, are completed at Mukden on October 2. In November, an MKKK Photographic Division is formed and several Model 8s are modified into camera planes. Two Fokker F-VII/3ms are imported and the fleet at year's end includes these 2 Dutch-built trimotors, as well as 16 Model 8/Manko Type 1s and 12 DH 80s. As 1933 draws to a close, MKKK initiates new routes from Mukden and Hsinking to Chengte, in Jehol Province.

At the beginning of 1934, the Mitsui Corporation ships a crated Clark GA-43, a rare aircraft built in the U.S. by General Motors, to Tokyo for the Manchurian airline. Reassembled, the new aircraft, renamed the M-701, crashes on its first flight, February 10; it then begins several months of repair.

Hsinking is proclaimed capital of Manchukuo on March 1. Also in March, MKKK flight crews are required to participate in Army Air Force training in gunnery, reconnaissance, and bombing. On May 18, the rebuilt M-701 takes off from Tokyo for a flight to Mukden—and again crashes. This time, the wreck must be written off; MKKK receives a compensatory DH 80A Puss Moth instead.

Operations continue apace in 1935. On April 1, various interchange and pooling agreements are signed with **Nihon Koku Yuso Kabushiki Kaisha (NKYKK)**. Aircraft from one company many now be flown on routes officially belonging to the other.

The first Nakajima AT-2 test aircraft, a Japanese design based upon the Douglas DC-2, begins flight tests from Mukden on September 12, 1936. To provide the Japanese Army with what is, in fact, a dedicated transport group with a civil face, **Huitong Hangkong Gonsi** or **Huitong Airways, Ltd. (HAL)**, is established at Tianjin, in north China, on November 7. The new entrant is a MKKK subsidiary, capitalized by both the carrier and the local puppet Chinese government, and begins flying Super Universals on November 17.

During the year, the company appoints its first five female flight attendants. On December 18, a commercial agreement, obtained through the leadership of MKKK executive Saburo Nagabuchi, is signed with the German airline **Deutsche Lufthansa, A.G.**; the document promises development of a new air route from Tokyo to Berlin via Manchukuo, Mongolia, and Afghanistan. In addition, 10 Junkers Ju-86Z-2 transports will be sold to Manchukuo, which will pay for them with soy beans.

The first indigenously designed company transport, the Manko MT-1, is unveiled in April 1937 and enters service in May. Also in May, five newly acquired AT-2s begin flying from Mukden to Harbin. **Nihon Koku Yuso Kabushiki Kaisha (NKYKK)** and MKKK inaugurate joint service from the Manchukuo capital of Hsinking to Tokyo on June 1, covering the 2,270-km. route in 10 hours. A new Nakajima LB2, christened *Akatsuki* (Dawn), makes a 3,000-km. proving flight on June 26 from Hsinking to Urumchi in Sinkiang province.

Aircraft and crews from MKKK are dispatched to the Chinese theater on July 12, five days after the outbreak of the Sino-Japanese War. Company aircraft bomb a Chinese force at Taiyuan on July 29. In August, another subsidiary, **Kokusai Koku Kabushiki Kaisha (KKKK)** or **International Air Lines Co., Ltd.**, is set up as a wholly owned MKKK subsidiary to participate with **Deutsche Lufthansa, A.G. (DLH)** in the inauguration of the mutual service between Tokyo and Berlin. It is given two Nakajima LB2s. Nanjing falls to the Japanese on November 13.

On April 29, 1938, newly organized **International Air Lines Co., Ltd. (IALCL)** receives two Heinkel He-116s from Germany; the pair arrive at Tokyo from Berlin in a 5-day, 23-hr. 43 min-flight and are christened *Nogi* and *Tokyo*. In late spring, the two are sent out to the MKKK fleet base in Manchukuo. The first Ju-86 arrives at Mukden in October; uncrated, it begins proving flights.

Following the retreat of the Nationalist government from Hankow to Chungking in October, MKKK begins service during October into the former point. Also in October, the Japanese government, as the result of intrigues between the military and the Ministry of Posts and Communication (which controls civilian aviation), elects to establish a new flag carrier.

On December 1, the MKKK subsidiary IALCL is merged with **Japan Air Transport Company, Ltd.** to create **Japan Air Lines Company, Ltd. (JAL)**. The two He-116s are also given to the new Japanese enterprise.

Unable to fulfill the military's air transport requirements in north China, **Huitong Airways, Ltd. (HAL)** is now disbanded. It will be succeeded on December 16 by **Zhonghua Hangkong Gongsi**, which is also known as **China Airways Corporation**. Together with this new company, which is not an MKKK affiliate, the Manchurian airline satisfies the Army's need for transport, leaving JAL-1 to concentrate on the exclusive provision of commercial services.

Junkers Ju-86 service begins on January 1, 1939, with an initial flight from Dairen to Chiamussu via Mukden, Hsinking, and Harbin. Scheduled flights commence on February 1 from Hsinking to Peking via Chinchow and Tientsin.

A significant number of MKKK aircraft (including eight Manko Type 1s and six Ju-86s) and their crews are involved between May 11 and September 5 in assisting the Japanese Army to suppress the Namonhan rebellion in Manchuria. The company undertakes logistic and evacuation missions with the German aircraft, employing detachable bomb racks, flying a number of attack sorties.

On October 1, service is inaugurated from Changchun to Tokyo via Seoul; MKKK becomes the only "foreign" carrier to base an air service in Japan before the outbreak of World War II. As of the end of the year, the company serves a total of 50 destinations.

Operations continue apace in 1940. The only significant event of the year for MKKK is a December 3 nonstop proving flight made in 10 hours by a Heinkel He-116 from Hsinking to Tokyo over Seoul and Fukuoka.

The first of some 20 Mitsubishi MC-20 I transports enters service during the first quarter of 1941. One of these inaugurates a nonstop 4.5-hr. route from Mukden to Tokyo on April 1. The service continues, even after a unit is lost with all 16 persons aboard in a June 21 crash in the Sea of Japan.

During October, as plans are put forward for the initiation of war against the Western powers, MKKK establishes an extra transport group comprising 12 AT-2s and sends it to Saigon in French Indochina to support the Japanese Army. Transport duties in this southern area commence following the Pearl Harbor attack on December 7–8.

In July, 1942, the MKKK unit in southeast Asia is assigned, along with groups from JAL-1 and **China Airways Corporation**, to the new Southern Air Transport Command (SATC) established at Singapore. MKKK is now at its peak, with 3,000 employees in China and Malaya and 140 aircraft. In addition to the types already noted, the company also flies 3 Junkers Ju-160s, 3 Ju-86s, 35 Manshu Hayabusas, 12 MC-20s and 12 AT-2s, plus several Douglas DC-3s. The principal 13,000-km. network covers destinations in Manchukuo, Japan, China, and Korea.

Flights are now largely unescorted, particularly in the Pacific arena and these become increasingly dangerous after the war turns in favor of the Allies late in 1942. In March 1943, the 12 MC-20s are transferred to Rabaul, New Britain. One ship is sent to Japan for conversion into a photographic reconnaissance aircraft and is reported to have been used for spy flights over the Philippines from December. Much of the company's fleet in the forward areas is destroyed and by October 1944, the Southern Air Transport Command must begin to curtail its operations due to the loss of aircraft and crews.

Operations cease on August 15, 1945 with Japan's surrender. In Manchukuo, now under attack from the Soviet Union, a Red Army parachute battalion captures the airfield at Mukden and much of the carrier's remaining fleet along with the puppet emperor, Pu Yi, who is preparing to board an MC-20 for an exile flight. In September, the few remaining units are passed out to local Chinese and Soviet contingents.

MANDALA AIRLINES: JL Garuda, #76, Jakarta, Pusat, 10620, Indonesia; Phone 62 (21) 420-6646; Fax 62 (21) 424-9494; <http://www.mandala.co.id>; Code RI; Year Founded 1969. Founded at Surabaya and registered at Jakarta in 1969, Mandala is formed primarily to offer scheduled passenger services to destinations in Sumatra, Java, and Sulawesi. Equipped with Douglas DC-3s, Chairman/President General Sofjar's company undertakes revenue flights beginning in February 1970. Initial frequencies are flown from Surabaya and Jakarta to Bali and Lombok.

The fleet is increased in 1971 by the addition of a pair of Vickers Viscount 806s, purchased from **CAAC (The General Administration of Civil Aviation of China)**, a Hawker Siddeley HS-748, and one Fokker F.27 Friendship. Ujungpandang, Menado, and Ambon join the route network during this year and into 1972.

All flights are pooled with **Seulawah Air Services** between 1971 and 1975 and the company is known as **Seulawah-Mandala Airlines**. In 1973, General V. A. M. Santoso succeeds the deceased General Sofjar and the government permits the carrier a share in the Hadj pilgrimage business to Jeddah (a full 1/10th share), which brings in sufficient revenues to begin increasing the fleet.

Fully independent in 1976, Mandala resumes independent regional and pioneer services linking Jakarta with Ambon, Menado, Padang, Surabaya, and Ujung Pandang. Flights continue during the remainder of the decade and the Viscount fleet is changed to comprise four Dash-832s.

By the early 1980s, Chairman/President Santoso's fleet also comprises four previously owned Lockheed L-188A/C Electras—*Rengga Gading*, *Giung Wanara*, *Dick Pitaloka*, and *Rengganis*.

A Vickers Viscount 832 with 4 crew and 40 passengers is damaged beyond repair when it runs off the runway after landing at Semarang on May 1, 1981; there are no fatalities. Late in the year, the former **Qantas Airways (Pty.), Ltd.** L-188C owned by the U.S. travel club **Nomads** is purchased; christened *Jaya Perkasa*, it enters service before Christmas.

Between 1982–1984, 10 CASA C-212-200 Aviocars are placed into service. The former **Garuda Indonesian Airways** L-188C *Palau Bali* is acquired in 1983 and christened *Aryo Bantati*.

While on approach to Panang, Malaysia, on November 30, 1985, the L-188C *Jaya Perkasa* suffers the loss of its right main landing gear; the aircraft is diverted to Medan, Indonesia, where it successfully executes a belly landing. Although all aboard escape injury, the Lockheed catches fire and is burned out.

A Nihon YS-11-100 is purchased from **TOA Domestic Airlines Company, Ltd.** of Japan on November 12, 1986 for ¥ 180 million. It is in service by the beginning of 1987.

In 1988, the fleet of 3 DC-3s, 5 Electras, and 5 Viscounts is reduced by 1 Electra, 1 YS-11-100, and 1 Viscount. Enplanements climb 10.7% to 144,246 and freight traffic is up by 47.4% to 1.36 million FTKs.

Traffic figures in 1989 are only available for the first 9 months and show a 2.6% decline in the number of customers flown, to 140,489. Cargo, on the other hand, surges 52.5% to 2.08 million FTKs. Three more Lockheed Electras are withdrawn before the end of the year.

The first CASA-Nurtanio CN-235 is acquired in 1990. Still, passenger boardings fall 11.9% to 163,158 and freight slides 9.8% to 2.63 million FTKs.

Airline employment stands at 500 in 1991 as another Electra is withdrawn. Through June, the company reports that its customer bookings are down 29% to 64,065 and cargo is off 26.8% to 1.01 million FTKs.

The fleet in 1992 includes 1 L-188A, 1 YS-11-100, 4 L-188Cs, and 1 each Viscount 816 and Viscount 832.

While on initial approach to Ambon on July 24 in a heavy storm, a Viscount 816 with 7 crew and 63 passengers crashes into Lalaboy Mountain; there are no survivors.

Through the first 9 months for which statistics are provided, bookings are up 36% to 132,806 and cargo reaches up 12.8% to 1.58 million FTKs.

In 1993, Chairman/President Santoso oversees a workforce still totaling 500 and a fleet significantly increased by the addition of one each

Boeing 737-2E7A and B-737-210A. At this point, the phase-out of the propeller equipment accelerates.

Figures are again provided through September and reveal that passenger boardings have risen by 2.9% to 136,666 and freight is up 31.1% to 2.07 million FTKs.

There is no change in the employee population during 1994; however, the last propeller airliner, an Electra, is retired as one each B-737-2L9A, B-737-230A, and B-737-291A enter service. From the Jakarta hub, the company offers daily direct flights to Medan, Padang, Palembang, Semarang, Yogyakarta, and Surabaya and indirect services to Ambon, Manado, and Denpasar.

Traffic is again reported through September and shows customer bookings up a spectacular 108.5% to 284,948 while cargo swells 93% to 3.99 million FTKs.

Company management in early 1995 unveils a blueprint for improvement. The plan includes internal consolidation, a new corporate identity, introduction of business-class services, and fleet standardization.

Enplanements total 332,413. Revenue figures are not released, but are estimated at approximately \$67 million.

The leased fleet grows in 1996 through the addition of a B-737-2V5A and a second B-737-230A. Destinations visited include Ambon, Bengkulu, Denpasar Bali, Jakarta, Jambi, Manado, Medan, Padang, Palembang, Pangkalpinang, Pontianak, Semarang, Surabaya, Ujung Pandang, and Yogyakarta.

Passenger boardings soar 18.6% to 408,369 and 5.93 million FTKs are operated, a 36.9% increase.

Flights continue in 1997, although in the months after July as the currency and economic crisis worsens, the company loses traffic, lays off employees, and withdraws aircraft. Indonesia and Indonesian aviation policy are in flux during the spring of 1998; President Suharto resigns on May 21 in the face of intense opposition.

In May, with the rupiah now valued at 17,000 to the U.S. dollar, the nation's airlines are granted permission to increase fares by 37.5%.

By the beginning of August, a cost-cutting plan that would have combined the domestic operations of Garuda, Bouraq, Merpati, and Mandala collapses; despite load factors as low as 30%, the smaller airlines refuse to join with the flag carrier.

The effects of the Asian currency crisis and the national economic downturn continue; at this point, the four companies are losing significant funds as 80% of their costs are in U.S. dollars, but only 20% of their income is in the same currency.

During the last week of August, the Indonesian Parliament does grant a long-desired fare increase. Domestic tickets increase in price by 40% on September 1; they rise again another 14% on December 1.

Flights continue in 1999. During the first six months of the year, the rupiah regains some 50% of its strength. The balance of the parliamentary-approved fare increase is postponed.

Customer bookings for the year total 747,000, while 19.69 million FTKs are operated.

Two B-737-2T4As previously operated by **MALEV Hungarian Airlines** are leased from GECAS on August 1, 2000, for a four-year period. In December, an A330B4F is wet-leased from **MNG Cargo Airlines, A.O.**

MANDARIN AIRLINES, LTD.: 13–14th Floor, 124 Minsheng East Road, Section 3, Taipei, Taiwan; Phone 886 (2) 717-1188; Fax 886 (2) 717-0716; <http://www.mandarin-airlines.com>; Code AE; Year Founded 1991. The nation's second privately owned and third international airline, MAL is formed in June 1991 specifically to fly to Australia, Canada, and other countries with which Taiwan no longer has diplomatic relations. Initial ownership is held by **China Airlines, Ltd. (CAL)** (66%) and Kuo's Development Corporation (33%); former CAA Director General Teh Ming Liu is appointed chairman. Employing a fleet of three Boeing 747SP-09s leased from its airline parent, the company inaugurates services in August to Ho Chi Minh City. The Hanoi government, fearful of offending the People's Republic of China, orders the flights halted in September.

Beginning in October, the new entrant initiates a B-747SP-09 link Taipei with Auckland, Brisbane, and Sydney. On December 7, in cooperation with **Canadian Airlines International, Ltd.**, the first direct service between Taiwan and Canada in 40 years is inaugurated—four-times-per-week, code-shared Taipei to Vancouver.

One long-range Jumbojet is retired in 1992 as orders are now placed for a B-747-400. A code-sharing agreement is reached with **Air New Zealand, Ltd.** in May covering ANZ services from Los Angeles to Frankfurt.

The 184-employee carrier becomes a wholly owned subsidiary of CAL in December.

Enplanements total 62,945 while freight climbs 20.8% to 15.74 million FTKs. Revenues are \$35.4 million, but costs are more and cause losses: \$15.97 million (operating) and \$8.36 million (net).

The workforce is increased by 12% in 1993 to 206 and the fleet now includes 3 B-747SP-09s and 1 new McDonnell Douglas MD-11, all leased from the company's parent. In January, **China Airlines, Ltd.** President Peter Bien becomes the new chairman, succeeding Teh Ming Liu, who becomes CAL chairman. A long-range Jumbojet inaugurates twice-weekly services in July from Taipei to Frankfurt via Bangkok.

Passenger boardings for the year increase 50.5% to 93,788 while cargo grows 40.9% to 22.2 million FTKs. Revenues swell 32.6% to \$47.11 million while expenses decline by 1.5%, but still total \$50.76 million. The operating loss improves to \$3.64 million and a net \$7.15 million profit is earned.

The number of employees is reduced by 5.8% in 1994 to 244 and an order is placed for 1 new B-747-409 as 3 more leased MD-11s are placed into service.

Customer bookings jump 20.5% to 120,966 while freight rises 43.9% to 28.16 million FTKs. Revenues rise 10.1% to \$54.2 million, but expenses climb 16.2% and force an operating loss of \$6 million. The net profit of \$1.96 million is reported.

The workforce grows by 14.8% in 1995 to 280. The new B-747-409, the first to be directly owned by this company, is received during the first week of July and enters service on routes from Taipei to Vancouver and Sydney. It helps the airline to enjoy another good year.

Passenger boardings swell 31.8% to 159,412 and cargo climbs 32.6% to 35.7 million FTKs. Revenues bounce upward by a third, rising 33.4% to \$72.25 million. Expenses are up 22.9% to \$74.02 million, but still, the operating loss is cut to \$1.76 million. Net gain dips to \$1.65 million.

Airline employment stands at 300 in 1996–1997 and the fleet now includes the B-747-409, 1 B-747SP-09, and 4 MD-11s. Frequencies from Taipei to Auckland, Sydney, and Vancouver continue.

On October 26 of the latter year, the company and **Air Canada, Ltd.** begin to sell tickets on each other's flights between Vancouver and Taipei and from Taipei to Vancouver. Signed in mid-September, the new code-sharing pact covers nine weekly flights.

In mid-1998, CAL announces that, during the following summer, **Formosa Airlines Corporation, Ltd.** will be combined with Mandarin Airlines, Ltd., with the latter name surviving. The reformed company will emphasize domestic service, with CAL operating all international flights. Flying only international services, Mandarin generates a profit of \$1.9 million on revenues of \$72 million.

The merger with **Formosa Airlines Corporation, Ltd.** occurs on August 8, 1999. Losing its identity, Formosa turns over its domestic routes to Mandarin along with its fleet of 7 Fokker 50s, 3 Dornier 228-200s, 2 SAAB 340s, and 2 Fokker 100s. Plans are announced for a capacity upgrade with six Boeing Next Generation 737-809s, which will be leased from **China Airlines, Ltd. (CAL)**.

The new aircraft begin to arrive in late fall and allow expansion of domestic services and withdrawal of the Fokker 100s. In November, the company trades its Vancouver, Sydney, and Brisbane routes to CAL for several regional frequencies and its Taipei–Kao-hsiung route. At this point, roundtrips between Taipei and Kao-hsiung are increased to 87 every week, while 3 weekly return services are introduced between Taipei and Yanggong.

Wearing a mandarin “gyrafalcon” design, the first of four B-737-809s are delivered by **China Airlines, Ltd.** in the spring of 2000.

Twice-weekly roundtrip service is introduced on May 1 from Taipei to Saipan. The previously operated twice-weekly Mandarin MD-11 route from Taipei to Sydney is replaced on July 4 by a new **China Airlines, Ltd. (CAL)** thrice-weekly MD-11 service.

MANDATED AIRLINES (PTY.), LTD.: Australia (1936–1961). The air transport division of **W. R. Carpenter and Company (Pty.), Ltd.** is merged with Raymond “Battlin” Parer's old **Pacific Aerial Transport (Pty.), Ltd.** on October 16, 1936 to form this new Papua New Guinea carrier, which remains a Carpenter subsidiary. The initial equipment comprises 1 Fokker V-IIA and 1 de Havilland DH 50 Moth from PAT and Carpenter, 1 Avro 642, 1 Australian-built DH-50A Moth, 3 DH-83 Fox Moths, 3 DH-84s, and 1 DH-50 Moth. The company undertakes a variety of charter services, including many previously provided by the merger partners.

On August 1, 1937, the administration of the Mandated Territory awards a single year passenger-cargo license for four routes from Salamaua to Wau, Bulolo, Otibanda, and Port Moresby and two from Wau to Otibanda and Port Moresby. Services cease following the Japanese attacks in early 1942.

When **Qantas Empire Airways (Pty.), Ltd.** acquires Carpenter's new air transport division in October 1944, the trading company retains its aerial interest in Mandated. With war-surplus DH-84s, the carrier resumes New Guinea operations during the late 1940s.

By 1950, the carrier's fleet comprises 8 Dragons, 1 Lockheed L-14 Super Electra, and 2 Douglas DC-3s. Routes are extended into the New Guinea highlands as MAL becomes the island's largest independent operator. The carrier's Lockheed L-14 crashes into a house at Lae on March 25 (three dead). A DH-84 crashes while taking off from a strip at Kerowagi in the highlands on April 2, 1951.

In 1954, the company begins chartered passenger flights between Lae and Sydney. On April 1, 1960, the Goroka-based bush carrier **Gibbes Sepik Airways (Pty.), Ltd.**—one of the world's last regular operators of the Junkers Ju-52/3m—and another lightplane jungle hopper, **Madang Air Services (Pty.), Ltd.**, are purchased and merged. In an effort to enter the New Guinea market in competition with **Trans-Australian Airlines (Pty.), Ltd.**, Ansett Transport Industries purchases MAL for A£950,000 in January 1961.

MANHATTAN AIR. See CATSKILL AIRWAYS

MANNIN AIRWAYS, LTD. See NORTHWEST AIRLINES (ISLE OF MAN), LTD.

MANSELL AVIATION: 2301 Yale Ave., SE, D-3, Albuquerque, New Mexico 87106, United States; Phone (505) 842-5743; Fax (505) 842-7071; Year Founded 1992. Mansell is set up at Albuquerque in 1992 to offer executive and small group charters throughout the U.S. Southwest. By 1999, Operations Manager Tom Rogers oversees the work of 3 pilots and the scheduling of 1 each Cessna T210 Turbo Centurion, C-310, and C-421 Golden Eagle.

MANTRUST ASHAI AIRWAYS: 2nd Floor Terminal Building, Halim Perdana Kusuma Airport, Jakarta, Timur, 13610 Indonesia; Phone 62 (21) 809-4116; Fax 62 (21) 809-4125; Year Founded 1991.

A subsidiary of Japan's **Aero Ashai Corporation, Ltd.**, this commuter is formed at Jakarta's Kusuma Airport in 1991 to offer local fixed-wing scheduled services, together with rotary wing charter flights. Captain Ridwan Zainuddin is named operations director and the initial fleet comprises 2 IPTN (CASA) NC-212-200s and 1 Gulfstream Commander 1000B.

Services are maintained and in 1992 the fleet contains 5 of the Spanish-Indonesian made Aviocars, the Commander, and 1 Beech 400 Beechjet. In 1993, the fleet is altered to include 3 British Aerospace BAe 748.B2s, 1 Beech 80 Queen Air, 1 Douglas DC-3, and the Aviocars.

These continue operations in **1994–1996**, together with 8 Bell 206B JetRangers, 2 Bell 212s, and 2 Bo-105s. By **1997–1999**, the Aviocar fleet has been boosted to 8 aircraft.

MANU'A AIR TRANSPORT: United States (1982–1985). Manu'a is established at Pago Pago, American Samoa, in the summer of **1982** to provide scheduled passenger and cargo flights from the carrier's base on the main island of Tutuila to the Manus Islands. Employing a Britten-Norman BN-2 Islanders, the new commuter inaugurates revenue services on October 1 and transports a total of 826 passengers during the fourth quarter.

Enplanements climb to 13,223 in **1983** and operations continue to Ofu and Tau from Pago Pago in **1984**. An order for a **1985** delivery of a second Islander is not filled because the company ceases operations early in the year due to fiscal difficulties.

MANUFACTURERS AIR TRANSPORT: United States (1970–1971). MAT is set up at Peoria, Illinois, in **1970** to provide scheduled passenger and cargo lightplane flights to Chicago, Galesburg, and Decatur. Service cannot be maintained beyond **1971**.

MANX AIR CHARTER, LTD. See **MANX AIRLINES, LTD. (1)**

MANX AIRLINES, LTD. (1): United Kingdom (1947–1956). **Manx Air Charters, Ltd.**, is formed by Capt. G. H. Drummond and Mr. G. S. Hankinson at Ronaldsway Airport in May **1947** to offer charters in association with Air Charter Experts. Equipped with a pair of de Havilland DH 89As, one of which is shared with ACE, the company, under Chairman Drummond, begins ad hoc passenger and cargo charters from the Isle of Man into Northern Ireland, Scotland, and England. A third Dragon Rapide is delivered in December.

Two more DH 89As are delivered in **1948**, one each in March and May, respectively. In July, ACE closes down, transferring its entire charter business to Manx. No changes are made in operations in **1949**, although a Dragon Rapide is sold in January. During the year, **British European Airways Corporation (BEA)** announces that it is withdrawing all but "essential service" from the Isle of Man.

Negotiations to merge with fellow charter-operator **Mannin Airways, Ltd.** fail in early **1950** as that carrier joins with **Northwest Airlines (Isle of Man), Ltd.** In response, Manx signs a two-year BEA associate agreement to provide summer only scheduled service between Carlisle and the Isle of Man. No changes occur in **1951** or **1952**; however, **Northwest Airlines (Isle of Man), Ltd.** fails during the latter year and sells its assets to **Lancashire Aircraft Corporation, Ltd.**

Early In January **1953**, Manx gains permission to begin additional scheduled service from the Isle of Man to Newcastle and Glasgow (Renfrew) under contract to BEA. As a result, the two Douglas DC-3s formerly flown by **Northwest Airlines (Isle of Man), Ltd.** are acquired and to stress its new airline status, the company changes its name to MAL-1 on February 21. The large American transports begin scheduled service from the Isle of Man to Newcastle and Glasgow (Renfrew) in May.

Enplanements for the year total 14,881.

Airline employment stands at 28 in **1954**, including 5 pilot captains. The DC-3s are occasionally employed on ad hoc charters during the summer, in addition to the Dragon Rapides that are similarly given a change from scheduled routes.

A total of 21,436 passengers are carried on the year.

Carbon copy operations continue apace in **1955** (although a DH-89A is sold in June) until December 22.

While on final approach from a ferry flight during the day, a DC-3 with three crew strikes trees and crashes at Dusseldorf; there are no survivors.

In May **1956**, the carrier, unable to acquire a replacement Douglas, is forced to sell out to British Aviation Services and is assigned to the northern division of **Silver City Airways, Ltd.** Allowed to continue under its own colors, MAL-1 is immediately provided, under lease, with

two Bristol 170 Mk. 21 Wayfarers which, in exchange for the surviving DC-3, are employed on scheduled and charter operations during the summer.

Another Wayfarer is leased from the parent in early **1957** along with two DH-114 Heron 1Bs, the first of which is delivered in February. An Isle of Man to Belfast route is opened in May, followed on June 1 by the introduction of coach-air flights from Glasgow (Renfrew)–Belfast and Isle of Man.

A chartered Bristol 170 Mk. 21E with 3 crew and 39 passengers crashes into a hill near Winter Hill, U.K., on February 27, **1958** (35 dead).

During the spring, MAL-1 is fully integrated into **Silver City Airways, Ltd.**

MANX AIRLINES, LTD. (2) (MANX AIRLINES EUROPE, LTD.): Isle of Man (Ronaldsway) Airport, Ballasalla, Isle of Man, IM9 2JE, United Kingdom; Phone 44 (1624) 82-6000; Fax 44 (1624) 82-6001; <http://www.manx-airlines.com>; Code JE; Year Founded 1982. In an effort to reduce losses on the services of **British Midland Airways, Ltd.** and **Air U.K., Ltd.** to the Isle of Man, British Midland Bank and the British and Commonwealth Shipping Company (holding 75% and 25% interest, respectively), form a new third-level Ronaldsway-based carrier in the spring of **1982**. The new enterprise is branded in honor of MAL-1. The initial headquarters at Compton House, Castletown, will eventually spread out to include six airport locations, with the main complexes at Viscount House and Leslie Vondy House.

British Midland Airways, Ltd. executive Terry Liddiard, who had proposed the idea for a new low-cost carrier, is named managing director and together with Capt. Norman Brewitt, is given 10 weeks to establish the operation. The initial fleet comprises 1 Vickers Viscount 800, 1 Embraer EMB-110 Bandeirante, and 2 Fokker F.27 Friendships. Scheduled services are inaugurated on November 1 to Belfast, Blackpool, Dublin, Jersey, Liverpool, Glasgow, London (LHR), and Manchester.

Passenger traffic accelerates quickly and by the end of **1983** has reached 253,000; employment is 110. However, start-up costs and the unsuitability of the Fokkers bring a net loss of £250,000. In October, the de Havilland Canada DHC-6-300 *Skianyn Vannin* is leased from **Loganair, Ltd.** for an 18-month period.

The F.27s are replaced in **1984** by two Shorts 360s and the chartered DHC-6 Twin Otter, while a Viscount 800 is leased for summer charter flights. An aggressive television advertising campaign is scheduled in Scotland and Northern Ireland.

Enplanements for the year rise 14% to 262,279 and a \$642,000 profit is earned on revenues of \$13 million.

A third Shorts 360 is acquired on lease in **1985** as the *Skianyn Vannin* is returned in March. Known as The Firecracker, the first low-cost, non-business tourist frequencies are introduced from the Isle of Man. In just 6 months, load factor is up 138% and 7,000 passengers are boarded in July alone.

The year's bookings exceed 300,000 and profits approach £1 million.

Plans are undertaken in **1986** to enter London's Unlisted Securities Market with an offering of 49% of the carrier's stock to the public. In April, the Liverpool to London (LHR) route of **British Midland Airways, Ltd.** is taken over and the one-millionth passenger is transported in July.

In late October, the carrier joins IATA and on December 1, flying the aircraft previously owned by **Birmingham Executive Airways, Ltd.**, launches five-times-per-day SAAB-Fairchild SF340 frequency to Liverpool.

Enplanements for the year total 372,581 and profits total \$6.6 million (operating) and \$3.6 million (net).

Airline employment grows 18.1% in **1987** to 222. General Manager Liddiard is elevated to the new post of managing director; his fleet now includes 1 Viscount 800, 4 Shorts 360s, and 1 SAAB SF340. Manx is the only British operator of the latter type while £27 million worth of orders are placed for three British Aerospace BAe ATPs.

Destinations visited include Belfast Harbour, Blackpool, Dublin, Edinburgh, Glasgow, Isle of Man, Liverpool, London (LHR), Manchester, Newcastle, Leeds, and Jersey. The company's fifth birthday is celebrated in November.

One Shorts 360 is withdrawn late in the year and is replaced in December by the carrier's first jetliner, a leased British Aerospace BAe 146-100.

Passenger boardings zoom upward by 16.4% to 445,678 and cargo grows by 24.9% to 316,000 pounds. Revenues advance 23.3% to \$34 million and costs are held low enough to allow an operating profit of \$6.7 million. Net gain reaches \$2.7 million (£1.36 million).

Operations continue apace in 1988, as the company becomes a unit in the Airlines of Britain group. In January, the new BAe 146-100 is introduced on the route to London (LHR). On March 16, Skyhopper service is introduced on the Liverpool to Heathrow Airport route.

New triweekly London Saver frequencies are introduced on June 17 from London (CTN) to the Isle of Man while, on July 5, a £27-million order is placed for three British Aerospace ATPs, plus spare parts.

The last scheduled flight by a Viscount arrives at London (LHR) at the end of October; the turboprop, in the fleet since 1985, is retired in November in preparation for receipt of two Advanced Turboprops.

Enplanements for the year total 491,877 and the operating profit is \$5.76 million. Net gain reaches \$2.94 million.

The payroll is increased by 15.9% in 1989 to 320 and the fleet now includes 1 BAe 146-200, and 3 Shorts 360s. Orders remain outstanding for three ATPs, which join the fleet during the first two quarters replacing the SAAB and Viscount.

A new £1-million maintenance hanger is opened at the company base, employing 40 workers. Daily Birmingham to Isle of Man services begins in June.

Passenger boardings rise 2.8% to 506,046 and revenues move up 3.6% to \$35.5 million. Costs allow operating income of \$5.89 million, and a slightly smaller net gain of \$2.35 million.

On March 26, 1990, daily roundtrip service is inaugurated from Liverpool to Dublin. London (CTN) to Isle of Man service becomes daily in May while a major new leisure hub is developed at Dublin for services to Jersey, Blackpool, Liverpool, and the Isle of Man.

Cardiff joins the route network on June 11 as part of a connect service on to Liverpool and Glasgow and a branch office is opened at the new destination under Manager Charlotte Kosh. Orders are placed for a BAe Jetstream 41, for which the airline will be the U.K. launch customer, and two more BAe Jetstream 31s, which will be acquired from the former Italian regional **Aliblu, S.p.A.**

Traffic figures are reported for the year's first 8 months and show customer bookings of 395,712. On October 17, company officials announce plans to significantly expand the Cardiff hub and to create, with Airlines of Britain Group approval, two new companies: Manx Airlines (Holdings), Ltd. and its two subsidiaries, Manx Airlines (Europe), Ltd. and MAL-2. The latter is needed to permit Manx to comply with tax laws off the Isle of Man. Frequencies from Blackpool to Jersey and from the Island of Man to Leeds/Bradford, and Newcastle become year-round.

The payroll is sliced 13.9% in 1991. In March, Manx Airlines (Europe), Ltd. is formally established as a subsidiary of Airlines of Britain Group; it will be administered alongside MAL-2 at Ronaldsway. The two new Jetstream 31s arrive on March 25, and an ATP and a Shorts 360 are also assigned to the new Cardiff operation. Two days later, Managing Director Liddiard orders a pair of Jetstream 41s. There have now been £20 million worth of J-41s requested.

Twice-daily services from the Isle of Man to Birmingham are inaugurated by MAL-2 during the spring, along with daily services to Dublin, Cardiff, and Jersey. A new route network, based on Cardiff, is inaugurated linking that southern Welsh city with Aberdeen, Belfast, Brussels, Dublin, Glasgow, Guernsey, the Isle of Man, and Jersey. ATP flights from Cardiff to Paris commence on October 28. Without aircraft to spare, a longtime, profitable contract to haul newspapers is lost.

Enplanements publicized through October reveal that passenger boardings are off by 0.1% to 517,447. Freight, on the other hand, ascends 35.3% to 326,000 FTKs. By year's end, it is recorded that 625,097 passengers have been flown and a pretax £1.61-million profit generated.

The workforce grows by 8% in 1992 to 433 and the fleet now includes 5 Jetstream 61s, 3 leased BAe Jetstream 31s, and 3 Shorts 360s. Orders are outstanding for 4 Jetstream 41s. One ATP is leased to **British Airways, Ltd. (2)**.

Daily Belfast to Aberdeen services commence on April 13. On October 23, the company obtains JAA certification to service any of several aircraft types flown in Europe.

Customer bookings recover and climb 5.6% to 660,267. Additionally, 276,000 FTKs are flown. Revenues total £55 million.

In 1993, Chairman Bishop and Managing Director Liddiard oversee a workforce of 601, up 39.1% over the previous year. The first five BAe Jetstream 41s enter service in March, along with a BAe 146-200. Several new routes are inaugurated: London (STN) to Manchester and Belfast and Waterford to London (STN) and Manchester.

A route replacement arrangement is signed with **British Midland Airways, Ltd.** on October 11. Beginning on November 1, Manx, which has purchased two more ATPs from BMA, launches four-times-per-day Belfast to London (LHR) and East Midlands service. It also takes over, initially for the winter schedule, the East Midlands-Birmingham-Jersey service of BMA. Minihubs are now established at Glasgow, Belfast, Liverpool, East Midlands, and Manchester.

Scheduled departures total 25,500 and passenger boardings increase by 14.6% to 756,138, but freight falls by 29.7% to 194,000 FTKs. Revenues decline to £32 million.

Airline employment grows with the company in 1994, rising 30% to 810. When sister carrier **Loganair, Ltd.** is detailed by Airlines of Britain Group on March 28 to concentrate exclusively on Scottish service, it transfers 21 routes plus all of its ATPs and J-41s to MAL-2, which now establishes a Jetstream 41 base at Southampton. Manx now starts 36 new services of its own and stands as the largest regional airline in the U.K.

The carrier's 10th Jetstream 41 is delivered in July, while another is leased to sister carrier **British Midland Airways, Ltd.** A new base is established at Edinburgh.

As is anticipated by company officials, scheduled departures leap upward to 45,900, while customer bookings skyrocket 88% to 1,355,544; cargo inches up 2% to 198,000 FTKs.

On January 9, 1995, with Airlines of Britain, plc., approval, Manx Airlines (Holdings) is renamed British Regional Airlines (Holdings). The airline operating subsidiaries remain divided into two separate divisions: MAL-2 and Manx Airlines (Europe), Ltd. The latter becomes a **British Airways, Ltd. (2)** franchise partner and flies BAe Jetstream 41s, ATPs, and two BAe 146-200s in "British Airways Express" livery. MAL-2 will operate all of the routes to and from the Isle of Man while Manx Airlines (Europe), Ltd. will fly the remainder, including those from Southampton, Cardiff, Belfast, and Manchester to Brussels, Rotterdam, and Paris. In addition, the regional carrier receives access to BA marketing, frequent flyer program, and airport service support.

In April, it is announced that one of the BAe 146-200s will be stationed at Stuttgart. Until then, it will fly ad hoc charters. Geared to increase travel on routes to the Isle of Man, an intense television marketing campaign is undertaken in the London market during the spring.

When the main runway is closed at Stuttgart Airport between July 31 and October 4, the company leases one of its locally based BAe 146-200s to the German charter carrier **LTU (Lufttransport Unternehmen, K.G.)**, which employs it to maintain services from the cross-runway of the Baden-Wuerttemberg Airport.

The 11th J-41 is delivered in September. The second BAe 146-200 is wet-leased for two months to the new **Air Baltic, A.B.** in October, allowing the new Latvian entrant to begin operations from Riga to Copenhagen, Helsinki, Minsk, St. Petersburg, Warsaw, and London (LGW). In November, one of the leased BAes is purchased, while a six-year charter agreement is signed for the other.

The company's 9 J-41s and 7 ATPs transport a total of 1,293,789, a 5% decline over the previous year. Still, finances are such as to allow only a £1.3-million (\$4.38-million) operating profit on a turnover of £112 million.

Airline employment is increased 10.2% in 1996 to 918 and the **Air Baltic, A.B.** lease ends. Having elected to expand its aircraft engineering business at Leeds/Bradford, the owners of **Knight Air, Ltd.** sell their routes from Leeds/Bradford to Belfast, Southampton, and Aberdeen to Manx on January 10. For its part, Manx assumes the lease of two Knight Jetstream 41s when it begins flying the new routes on March 1.

Late in the month, the carrier takes over management of **Loganair, Ltd.** and overall company employment exceeds 1,000 workers. At the same time, it is announced the Manx will launch Jetstream 31 services from Leeds/Bradford to Southampton and the Isle of Man.

In April, Aberdeen-based **Business Air, Ltd.** becomes an Airlines of Britain, plc. property. Its addition allows Sir Michael Bishop's group to blanket the U.K. with regional services, in addition to the international flights provided by BMA.

In August, **British Airways, Ltd. (2)** announces that, two months hence, it will withdraw from its loss-making Scottish internal services, including six routes serving Orkney, Shetland, and the Western Islands. British Regional Airlines (Holdings) in September changes the name of Manx Airlines (Europe), Ltd. to **British Regional Airlines, Ltd.** Plans are announced for the new BRA to take over the previous **British Airways Regional, Ltd.** services at the end of October as a BA franchise partner. Under terms of this agreement, BRA will enjoy all of the benefits of franchise partnership, including dual designator flights, computerized reservations and frequent flyer linkage, passenger and airport services. Meanwhile, **Loganair, Ltd.** operations are incorporated into BRA. MAL-2 continues separate operations.

Passenger traffic recovers, surging 19.8% to 1,581,190 and 224,000 FTKs are operated, a 25.5% growth rate. Operating income soars 18.9% to \$190.22 million while costs, up 17.8%, reach \$183.31 million. Operating gain grows to \$6.6 million.

The workforce grows by 24.6% in 1997 to 1,144. In January, MAL-2 is named "Regional Airline of the Year" for 1996 by *Air Transport World* magazine.

Two momentous announcements are made on February 24. Effective that date, Airlines of Britain, plc, the holding company that owns **British Midland Airways, Ltd., British Regional Airlines, Ltd., MAL-2, Loganair, Ltd., and Business Air, Ltd.** elects to break up British Regional Airlines (Holdings) and all of the carriers except BMA. The move will technically allow BRA (H) to continue its **British Airways, Ltd. (2)** affiliations without fear of conflict of interest decisions being made by Airlines of Britain, which is partnered with BA's competitor, **SAS (Scandinavian Airlines System)**. Sir Michael Bishop still retains ultimate ownership in both groups. MAL-2, **Loganair, Ltd., and Business Air, Ltd.** will continue a confederation with **British Regional Airlines, Ltd.** in a British Airlines Regional Group of BA franchise partners. Activities for each company will continue to be reported separately.

Also on February 24, Managing Director Liddiard announces an order for up to five Embraer EMB-145 Amazon Regional Jets, with options taken on another two. In March, **Loganair, Ltd.**, after a management buyout, reestablishes its independence outside of the British Regional Airlines Group. It will fly specialist services for Scottish Air Ambulance and scheduled services to the Orkneys and Shetlands with Twin Otters and Islanders.

The fifteenth birthday of MAL-2 is celebrated on May 10; the date also marks fifty years since the carrier's predecessor, Manx Air Charters, Ltd., began services. The first EMB-145, soon to be renamed the ERJ-145, is accepted during the Paris Air Show in June and begins BRA service during July and August from Manchester to Berlin.

Customer bookings accelerate 37.3% to 2,184,316 while 1.07 million FTKs are also operated. Operating income ascends 38.8% to \$255.64 million while expenses grow 39.5% to \$247.73 million. The operating profit reaches \$7.9 million.

In May 1998, British Regional Airlines Group CEO Liddiard acquires the services of Dresdner, Kleinwort Benson to act as sponsor and stockbroker for an initial public offering on the London Stock Exchange. The flotation will bring in income to pay for the additional acquisition of BRA Embraer ERJ-145 Amazons.

BRA Group is successfully floated on the London Stock Exchange on June 18. Thereafter, MAL-2 updates its corporate identity to reflect its deeply rooted Isle of Man associations.

Flights continue in 1999. The carrier continues to provide vital year round air links between the Isle of Man and a total of 10 destinations in the UK and Irish Republic: London (LTN & LHR), Manchester, Liverpool, Birmingham, Jersey, Leeds/Bradford, Glasgow, Southampton, and Dublin.

With the beginning of the fall schedule at the end of October, service from London (LTN) to the Isle of Man is upgraded from an ATP to a BAe 146 from Sunday through Friday. The Saturday roundtrip continues to be provided with an ATP. The BAe 146 service from London (LHR) is also operated.

During the spring of 2000, the equipment employed on the Manx network is somewhat revitalized. The three ATPs are dedicated to operate over the main provincial routes from the Isle of Man, including those to Liverpool and Manchester. A British Aerospace Jetstream 41 is introduced on the routes to Dublin, Glasgow, and Jersey. All five Manx aircraft wear new livery.

On December 7, British Regional Airlines Group, which owns both Manx and **British Regional Airlines, Ltd.**, confirms that it is in talks with an unidentified bidder. There is media speculation that the suitor is **British Airways, Ltd. (2)**.

On March 8, 2001, it will be revealed that BA will purchase British Regional Airlines Group for £78 million (\$114) and will merge it with its **Brymon Airways, Ltd.** unit.

MAOF AIRLINES, LTD.: Israel (1981–1984). Organized at Ben Gurion Airport in early 1981, this charter carrier is a subsidiary of the Maof Group, which also includes the travel agencies Maof Tours Israel and Four Seas Holidays. Equipped with a fleet that comes to comprise two Boeing 707-320Bs and two B-720-023Bs, the airline inaugurates vacation flights to destinations in the U.K., France, Germany, and southern Europe.

Unable to increase traffic yields during the years of the Lebanese crisis, the company declares bankruptcy in December 1984.

MARC FRUCHTER AVIATION: Reading Regional Airport, Reading, Pennsylvania 19605, United States; Phone (610) 374-0100; Fax (610) 374-7580; Year Founded 1978. Originally established in 1978 as the FBO at Reading Regional Airport, Marc Fruchter's concern also undertakes a growing business in executive and small group passenger charters.

By 1999, the company is flying throughout the U.S., Canada, Mexico, and Caribbean with a fleet of 2 each Beech 400 Beechjet bizjets and Super King Air 200s, plus a King Air 90.

MARCO ISLAND AIRWAYS: United States (1972–1985). MIA is organized at Miami on June 1, 1972 as a subsidiary of the Deltona Corporation. Beginning on October 1, several-times-daily roundtrip frequencies are offered to the parent's planned resort community on Marco Island with Beech 99s. Over the next 2 years, the 14-passenger commuter planes are replaced by a fleet of 3 Martin 404s; 52,140 passengers are enplaned in 1974.

The workforce in 1975 is 250. Freight traffic reaches 3.01 million ton-kilometers, a 23.4% boost, while passenger boardings advance by 5.2% to 54,583.

A fourth Martin 4-0-4 arrives in 1976. It joins the other 3 in carrying 83,545 pounds of freight and 61,695 passengers, the latter a 23% boost over the previous year.

A total of 65,714 passengers are hauled during 1977. Additionally, Marco Island to Tampa service is inaugurated. Vice President Raymond

L. Anderson, the executive in charge, oversees a workforce of 43. Bookings increase by 1% in **1978** to 66,688.

The Convair fleet is increased by 2 in **1979**, but enplanements grow by only 1% to 67,627. Freight is actually down 32.7% to 52,000 pounds.

Despite the addition of contract flights for **Air Florida** in **1980** to Key West, Georgetown, Rock Sound, Freeport, Eleuthera, Treasure Cay, and Marsh Harbour, bookings for the year decline by 16% to 56,795. Cargo is down by 11.6% to 46,000 pounds.

Airline employment grows in **1981** from 72 to 92. New **Air Florida** replacement service is inaugurated from Tampa to Lakeland as four Piper PA-31-350 Navajo Chieftains are purchased.

Unfortunately, heavy construction and lack of rooms at the Marco Islands resorts contribute to another 16% traffic decline as 47,876 passengers are carried. Even what little freight is transported is off by 35.8%, down to 30,000 pounds.

En route from Miami to Key West on July 22, **1982**, Flight 39, a Martin 4-0-4 with 12 passengers, is taken over by 2 men who divert the plane to Havana. Cuban authorities will send them to prison for 15 years.

Bookings drop off significantly, down 35.7% to 30,804, due primarily to recession. Cargo plunges 83.6% to only 8,000 pounds.

Enplanements advance again in **1983**, rising 10% to 33,100. Freight, however, declines again, dropping to 3,000 pounds.

On October 15, **1984**, the carrier is purchased by **Provincetown-Boston Airline (PBA)** and is operated as a subsidiary under its previous name. Prior to the purchase, a total of 33,082 passengers are boarded, a 30% boost; figures for the period after PBA acquisition are included with those of the new parent.

By February **1985**, MIA, its routes and aircraft are integrated and service to the Bahamas ceases.

MAR-EL AVIATION: International Airport, Nashville, Tennessee 37217, United States; Phone (615) 361-1007; Fax (615) 361-1090; <http://www.charter-jet.com>; Year Founded 1976. Mar-El Aviation is established at Nashville in **1976** to sell general aviation aircraft. During the **1980s**, the company enters the charter business, as well as the sale and repair of aircraft components and systems. In **2000**, the concern continues to offer Learjet charters worldwide and has branched out into the acquisition and sale of used corporate turbine aircraft.

MARGATE AIR (PTY.), LTD.: South Africa (1980–1985). MAL is established at Margate, in the eastern part of South Africa, in **1980** to attract vacationers and to provide scheduled passenger services, primarily for businessmen, linking Natal with Transvaal. With a workforce that reaches 10 in number and a fleet comprising 1 Piper PA-31-350 Navajo Chieftain, 1 Cessna 402B, and 2 Piper PA-28 Cherokees, Margate initiates daily and weekday roundtrips to Durban, Ladysmith, Nelspruit, Newcastle, and Vryheid.

In August **1985**, the company is reformed and renamed **Citi Air (Pty.), Ltd.**

MARIANAS AIRLINES: United States (1998). MA is established in early 1998 to offer scheduled and nonscheduled services, largely for tourists, visiting the Commonwealth of the Northern Mariana Islands. Four lightplanes are employed to offer interisland flights between Tinian, Saipan, and Rota, beginning in April.

The Asian economic crisis has a significant impact on the number of inbound vacation visitors to the Marianas and arrivals fall dramatically throughout the summer and fall. The company shuts its doors on October 28, barely six months after entering business.

MARINE AIRWAYS: United States (1936–1939). Veteran bush pilot Alex Holden, backed by Juneau entrepreneur James V. Davis, establishes MA in Juneau, Alaska, in July **1936**. Outfitted with a float-equipped Bellanca CH-300 Pacemaker and a Fairchild 71, convertible to both wheels and floats, the company begins unscheduled services to sur-

rounding mining camps and destinations in both Alaska and British Columbia.

In **1937**, the little carrier begins regularly scheduled revenue flights to Sitka and Chichagof. As has been the case since start-up, Holden and Davis continue their operations in **1938** in competition with Sheldon B. "Shell" Simmons and his cross-town **Alaska Air Transport**.

Meanwhile, three other competitors, Herbert Munter, Robert B. Ellis, and Tony Schwamm, who have also started flying services, begin to intensify the territory's competition. To meet these challengers, Holden and Simmons agree to merge their two companies on May 27, **1939**, creating the area's largest indigenous air transport firm, **Alaska Coastal Airlines**.

MARITIME CENTRAL AIRWAYS, LTD.: Canada (1941–1963). On September 30, **1941**, Carl F. Burke and Josiah Anderson, despite the obstacles of wartime restrictions and equipment shortages, are able to form this carrier at Charlottetown, Prince Edward Island, for the purpose of linking communities by air in the Maritime Provinces. Ownership is completely private and the company is the only scheduled air transport concern in the nation not controlled by either a surface carrier or a dominion government.

Employing a Barclay Grow T8P1, the men inaugurate twice-daily service on December 8 from Charlottetown to St. John via Summerside and Moncton. The route feeds **Trans-Canada Air Lines, Ltd.** and **Northeast Airlines** at the latter point. Late in the year, a Boeing 247D and a Fairchild F-24 join the fleet.

In January **1942**, twice-weekly B-247D winter frequencies are started to the Magdalen Islands. A de Havilland DH 89A Dragon Rapide joins the fleet in July. In mid-December, the U.S. Army Air Forces charts the Barclay Grow to seek a lost Boeing B-17 bomber. While landing on the sea ice at Angmagssalik, Greenland, on December 23, the plane breaks through; although the pilots escape, the aircraft is lost.

Schedules are maintained without change in **1943–1944**. In the former year, a Lockheed Model 10A Electra is acquired and in August, owner Burke wins an MBE for his daring rescue of an Anson crew stranded on an ice floe in the Gulf of St. Lawrence. The Fairchild is sold in November. Cofounder Anderson is killed flying for the RAF Ferry Command.

A Lockheed Model 12A and a Model 10B are added in March **1945**, with the former sold in July. Another Model 10B is delivered in May and a third in August, followed by two Cessna T-50 Cranes and the first Douglas DC-3 in November.

A second Lockheed Model 10A joins the fleet in January **1946**. The first Douglas enters service on February 4, weekdays over a route from Charlottetown to Halifax via New Glasgow. A second DC-3 is received later the same month, followed by a third in August. Weekday DC-3 flights are begun, meanwhile, on March 11 between Moncton and Halifax via Greenwood and Yarmouth. Also in March, the Boeing 247D is withdrawn.

Enplanements for the year total 32,000.

Scheduled services, together with passenger, ice patrol, and mail charters, continue apace in **1947**. An "international" service is launched by DC-3s on June 18, **1948**, connecting Charlottetown and Sydney with the French islands of Saint-Pierre and Miquelon, located in the Gulf of St. Lawrence. Originally purchased for its engines, a Consolidated PB5Y-5A Canso is refurbished and placed into service in July. One of the Cessna T-50 Cranes is withdrawn and scrapped in December.

In January **1950**, a DC-3 is placed into service while a Curtiss C-46As begins a year of all-cargo flights in December. A Lockheed Model 10A is withdrawn in March **1951**. Three more DC-3s are delivered, one each in April, September, and October. The last Cessna Crane is withdrawn in April and twice-weekly DC-3 flights from Moncton–Goose Bay commence in June.

By **1952**, Carl Burke's airline ranks as the third largest scheduled carrier in Canada, behind TCA and CPAL. A second Canso is purchased in February, followed by a third in March. Also in March, the C-46A is sold to **Air Maroc**.

While en route between Brunswick and Labrador, a DC-3 freighter with a pilot and three passengers, crashes in icing conditions near Gaspe on March 22; there are no survivors and the aircraft wreckage is not located until August 27, 1953.

The Dragon Rapide is retired in April and between February and December, five additional DC-3s are obtained.

Two DC-3s are sold in January 1953. A Bristol 170 Freighter is purchased from **Associated Airways, Ltd.** in March. A de Havilland Canada DHC-2 Beaver is acquired in early April and on April 23, twice-weekly DC-3 operations begin from Goose Bay to St. John's. Owner Burke, with Fred Briggs, purchases half-ownership of **Boreal Airways, Ltd.** That company is now rechristened **Boreal Air Service, Ltd.** A third DC-3 is sold in August, but two more join the fleet in September.

In 1954-1955, the carrier assumes responsibility for most of the Distant Early Warning (DEW) Line work in the Maritime Provinces. To meet the capacity demand of this work, the fleet is increased by the addition of two DC-4s, a DC-3, four Curtiss C-46As, two final Cansos, and four Avro 685 Yorks. In addition, a subcontract is let to **The Flying Tiger Line**. Tiger official Edward Holohan leads a fleet of 7 Curtiss C-46As and Douglas C-54s north to operate from a base at Churchill. A DC-3 is lost in an accident at a DEW Line site on November 25 of the latter year.

An Avro 685 York C.1 must be written off following a bad landing at Fort Chino on January 24, 1956.

While taking off from Frobisher Bay on February 13, a vehicle shifts aboard the Bristol 170 Mk. 31 with two crew, causing it to fail its take-off from Baffin Island and crash; there are no survivors.

International DC-4 charter flights now commence with transatlantic services, some of which bring Hungarian refugees to Canada. Two Beech 18s are accepted in May and June.

A second Avro 685 York C.1 freighter with three crew is lost 44 km. N of Fort Chimo, Quebec, on September 26; there are no survivors.

The small charter carrier **Mount Laurier Aviation** is purchased in December and amalgamated with **Boreal Air Service, Ltd.** to form a new, wholly owned subsidiary, **Nordair, Ltd.** Two Yorks, a DC-3, a Lockheed Model 10A, two Model 10Bs, and the Avro Anson V are withdrawn during the year.

Three DC-4s and three Beech 18s are acquired in 1957 for the Nordair subsidiary, which begins twice-weekly Montreal-Frobisher (Baffin Island) flights on May 24. The DEW Line project is completed in July, as is **The Flying Tiger Line** subcontract.

Enroute from Prestwick, Scotland, to Toronto under charter with Hungarian refugees on August 11, a DC-4 with 6 crew and 73 passengers crashes into a bog near Issoudun, Quebec, killing all aboard. The tragedy is Canada's worst air disaster to date.

During the year, three Cansos, a DC-4, and an Avro York are withdrawn. Two DC-6Bs are ordered in 1958, but they will never be delivered.

The next-to-last PBY-5A Canso is withdrawn in March 1959 and sold to **Nordair, Ltd.** A Beech 18 is withdrawn in April along with a DC-3, while a Vickers Viscount 805 is purchased from **Eagle Airways (Bermuda), Ltd.** and delivered in June, entering revenue service in July. MCA is now the only operator of this Vickers type in Canada. Two more DC-3s are sold in August.

The last Canso is sold in January 1960 and is followed in February by the final Avro 685 York; in March, a Beech 18 is withdrawn.

A DC-3 crashes at Moncton on April 13, 1961. No other details are available. The company's only DHC-2 is sold in July to Abbott Industries, Ltd.

Two DC-4s are sold to **Nordair, Ltd.** in March 1962. The Viscount is withdrawn in April and sold to **Aer Lingus Irish Airlines**. Orders are now placed for two Handley Page Herald 200s, but the request is withdrawn when a Herald is acquired from the Nordair subsidiary in November.

A C-46E is destroyed in a hangar fire at Moncton on January 11, 1963.

Older and smaller rival **Eastern Provincial Airlines, Ltd.** purchases MCA, merging it in September. **Nordair, Ltd.** is excluded from the buy-out and continues to function.

MARITIME GLOBAL AIRLINES, INC.: Canada (1991-1997). Headquartered at Burlington, Ontario, MGA is set up in 1991 to operate all-cargo services in Atlantic Canada from a base at Shearwater, Nova Scotia. Flights begin with a pair of Convair CV-580s.

When operations cease in January 1997, the company owes more than C\$835,000 to unsecured creditors. The only secured creditor is Montreal-based RoyNat, Inc., which holds a mortgage of more than C\$1 million on the two aircraft.

MARKAIR: United States (1984-1995). Freight-specialist **Alaska International Air** is renamed MarkAir in early 1984. One-time bush pilot Neil Bergt is chairman/CEO, with his longtime associate Ralph Brumbaugh as president.

Employing 4 Boeing 737-2X6Cs and 3 Lockheed L-100-30 Hercules freighters, the reborn entrant inaugurates scheduled passenger services on March 1 linking the carrier's Anchorage base with Fairbanks, Barrow, and Bethel.

In the next year, destinations will be increased by the addition of stops at Aniak, Dillingham, Galena, King Salmon, Kodiak, Kotzebue, McGrath, Nome, Prudhoe Bay, St. Mary's, and Unalakleet. Cargo flights continue to be operated with three Lockheed L-100-30 Hercules freighters. In midyear, most of the airport facilities of nearly bankrupt **Wien Air Alaska** are purchased and taken over.

Traffic data is kept confidential.

Flights begin in 1985 to Seattle via Juneau and Ketchikan. Scheduled cargo services are maintained by both the B-737-2X6Cs and four Lockheed L-100-30 Hercules freighters. Contracts are signed with several commuter carriers for feeder flights to a number of smaller communities and villages, including Bethel, Dillingham, King Salmon, Galena, McGrath, St. Mary's, and Unalakleet.

During the year, Raymond Vecchi of **Alaska Airlines** and MarkAir Chairman Bergt enter into a mutual-tolerance pact. Under its terms, the two will feed passengers into each other's flights on routes from Anchorage to Dillingham, Dutch Harbor, Kodiak, and King Salomon. The arrangement funnels **Alaska Airlines** passengers onto MarkAir which, in turn, pays a portion of each fare to the Seattle-based company and will last for just over half a decade. The two will continue to compete for passengers and cargo between Anchorage and Fairbanks, Bethel, and Prudhoe Bay.

MarkAir is another private airline unwilling to reveal its traffic figures, but it does report to the DOT that revenues of \$83 million are earned. Although an operating profit of \$10.9 million is generated, there is a net loss of \$2.9 million.

Airline employment grows 0.3% in 1986 to 608. A partnership arrangement is entered into with **Alaska Airlines** under which the large regional is able to offer Alaska's frequent flyer mileage and use the national's ticketing and scheduling networks. During the year, a Lockheed L-188PF is sold to **Spirit of America Airlines**.

Traffic figures are now released and show that passenger enplanements for the year are up 1.1% to 330,254. Freight, on the other hand, declines by 9.8% to 52.62 million FTKs. Revenues swell 3% to \$85.21 million, expenses drop 4.2% to \$68.8 million, and the operating profit is \$16.41. A net profit of \$20.28 million is achieved.

The workforce is reduced by eight (1.3%) in 1987 as the carrier suffers a bad year.

Passenger bookings decline 8.7% to 299,562 while freight falls 8.1% to 31.31 million FTKs. Revenues, too, are off by 1.9% to \$83.6 million. Expenses, however, are up by 3.3% to \$71.1 million, causing a decline in operating profit to \$12.6 million and a downturn in net gain to \$2.18 million.

The employee population resumes its upward march in 1988, growing by 15.5% to 693. The fleet now includes 4 B-737-2X6Cs, 1 B-737-2T2A, 3 Hercules freighters, and 1 de Havilland Canada DHC-7-101.

During late October, company officials meet with **Peninsula Airways** President Orin Seybert to discuss possible collaboration and a limitation of Peninsula's competition on routes between Anchorage and southwest Alaska regional hubs.

Traffic also recovers, climbing by 20.2% to 360,126 travelers flown. Revenues are up 18.5% to \$99.1 million and operating income grows to \$15.45 million. Net profit is \$3.16 million.

The workforce is increased a further 8.2% in 1989 to 750 as the carrier, now advanced into the ranks of National carriers, acquires a B-737-2T4A and enters into a complete code-sharing agreement with **Alaska Airlines**. MarkAir is now the 12th largest private employer in Alaska and the state's largest in-state airline.

In February, the airline temporarily slashes its cargo fares, thereby causing a large drop in postal freight rates. The competition protests to the Department of Justice that Chairman Bergt's tactic is a textbook example of predatory pricing designed to eliminate competition.

In April, **Reeve Aleutian Airways** is one of five Alaskan air carriers subpoenaed by the DOJ to provide information in an investigation of possible antitrust violations in the airline industry. Together with **Peninsula Airways**, **Frontier Flying Service**, **Ryan Air Service**, and **Alaska Airlines**, Reeve is required to supply documents (dating back to January 1, 1984) to a May 9 grand jury session or forward them directly to Washington.

Although the airline subpoenas do not name a target, the May 6 issue of the *Anchorage Daily News* reports the subject is MarkAir. The presidents of both **Peninsula Airways** and **Frontier Flying Service** confirm to the newspaper that DOJ lawyers have quizzed them within the last year concerning possible antitrust activities by Bergt's carrier.

Largely as a result of its new arrangement with **Alaska Airlines**, passenger boardings jump 10.6% for MarkAir to 394,248. Freight declines 6% to 43.2 million pounds. Revenues total \$85.4 million, expenses are 71.66 million, and the operating profit is \$16.16 million. Net gain reaches \$2.68 million.

The number of workers climbs 20% in 1990 to 900, 3 DHC-6-300s join the fleet, and 2 DHC-8-102s are ordered. The B-737-2T2A and B-737-2T4A are leased to **Delta Air Lines**.

President Brumbaugh resigns in January; his post is taken over by Executive Vice President Michael F. Cerkovnik. Scheduled daily roundtrips commence in May between Anchorage and Kenai.

En route from Anchorage to Unalakleet on June 2 to pick up a crowd of herring fishermen, Flight 3087, a B-737-2X6C with four crew, crashes into the side of 1,230-ft. Blueberry Ridge, 4½ mi. short of its runway destination. The aircraft skids several hundred feet, losing one engine and its tail section. No one aboard is killed and two men are able to walk away with rescuers.

Later in the year, the St. Mary's, Alaska-based **Hermen's Air** is purchased; as a wholly owned subsidiary, **Hermen's MarkAir Express** begins providing feed with six leased Cessna 208 Caravan Is.

Four-times-a-day scheduled return service from Anchorage to Homer is started on October 30.

Customer bookings jump 10.9% to 438,000, but cargo continues its tailspin, falling 33.9% to 29.4 million FTKs. Revenues increase 18.19% to \$128.3 million and costs are up 21.71% to \$112.44 million. Consequently, operating income slips to \$15.85 million, but net gain doubles to \$7.86 million.

Airline employment declines by 16.7% in 1991 to 750 and the fleet now includes 7 B-737-200s, 2 DHC-8-102s, 2 DHC-7-103s, and 3 Hercules freighters. Orders are placed in January for 5 Beech 1900Ds. The DHC-6-300s are transferred to **Hermen's MarkAir Express**.

On February 6, **Frontier Flying Service** expands from Fairbanks to Anchorage with a new Beech 99 route via McGrath and Galena. As a result, the commuter enters into a fare war over the McGrath-Anchorage segment with the much larger MarkAir, charging a roundtrip tariff of \$280. MarkAir, in retaliation, immediately drops its \$326 roundtrip ticket price to \$190. A B-737-353 is now purchased from the assets of *Air Europe, Ltd.*, which had declared bankruptcy on March 8.

The relationship between MarkAir and **Alaska Airlines** begins to deteriorate in July. MarkAir Chairman Bergt is extremely displeased when the larger carrier seeks an increase in the percentage of its take from fares of **Alaska Airlines** passengers booking onto MarkAir. **Alaska Airlines** also rejects a plan to substitute smaller, more cost-efficient aircraft for some of the jets serving Kodiak. Bergt determines to unilaterally abrogate the 1985 pact, claiming that the other side does not want to continue the special relationship.

In October, Chairman Bergt informs his employees that he is planning an expansion that will put his aircraft deep within airspace previously dominated by **Alaska Airlines**. He is, however, willing to consider a last-minute possibility of selling his airline to the larger company. Thus he travels to Seattle for a meeting with Alaska President Vecchi. No arrangement can be achieved and in the weeks that follow, an intense fare war will begin between the companies.

The senior carrier cancels its code-sharing pact with MarkAir in November, while suing MarkAir for fraud and breaking its mileage agreement. Bergt files a \$150-million counter suit charging that Alaska has moved to squash the regional by illegally terminating its code-sharing and frequent flyer agreements.

These moves, together with recession and higher costs, lead to significant decline. Late in the season, an office and the maintenance hangar at Fairbanks are sold to the Alaska Industrial Development and Export Authority (AIDEA), and leased back.

On December 2, Chief Financial Officer Steve Hartung writes to William Scott, executive director of AIDEA, reporting that the company needs money, but also needs more workers for its hangar and office complex in Fairbanks. With the right planning and help, Hartung suggests, the Fairbanks complex can employ up to 150 Alaskans.

The fare war with **Alaska Airlines** in December approaches cutthroat intensity on routes from Anchorage to Nome and to Kotzebue. Normal \$400 fares are slashed in half. MarkAir also pushes into Southeast Alaska, where **Alaska Airlines** has long enjoyed monopoly jet service and U.S. government subsidies. In addition to deep discounts on published fares, Bergt's airline offers bargains on group travel and begins to court cruise operators that require one-way transportation between Juneau and Seattle. On December 30, daily return service is inaugurated between Ketchikan and Seattle.

Enplanements this year drop 12.1% to 386,000 and freight plunges 30.6% to 21.2 million FTKs. Revenues fall 5.95% to \$120.67 million and expenses increase 3.58% to \$116.47 million, lowering operating income to \$4.19 million. The net profit is cut in half, to \$3.08 million. The company's total assets are listed at \$158 million, with \$50 million in current liability and \$76 million in noncurrent liability.

Company employment grows 20% in 1992 to 900 even as its rock-bottom rates damage its ability to pay creditors. Still, on January 2, the Hartung-Scott correspondence of December, which has resulted in a whirlwind round of negotiations over 28 days, brings an agreement. Under its terms, the State of Alaska agrees to purchase the MarkAir hangars at Bethel, Unalakleet, and Fairbanks for \$5.8 million. MarkAir, in turn, promises to lease them back, paying AIDEA \$1 million per year for 15 years in rent and to hire 112 full-time employees.

The price war with **Alaska Airlines** takes a new direction in January. In previous years, both competitors had rejected attempts by the Alaskan state government to gain discounts. When the Department of Administration approaches the two airlines seeking discounts, **Alaska Airlines** rebuffs the approach. MarkAir, on the other hand, agrees to sell tickets at 27% below regular coach fares. The state purchases 100 Anchorage-Juneau tickets and makes plans to acquire additional tokens in bulk. **Alaska Airlines** files a protest pointing out that the acquisition was made outside the normal bidding process; the statehouse agrees that additional ticket purchases will follow bidding rules.

Also in January, service is inaugurated between Juneau and Seattle. On January 17, the company sells all three of its Lockheed L-100-30 cargo planes to **Southern Air Transport (SAT)**. Painted in SAT's black, white, and gray colors, two of the aircraft will be wet-leased back to help

MarkAir operate a \$5.6 USAF contract, received the same day, to ferry cargo and passengers from Elmendorf AFB to Galena, King Salmon, Atka, Shemya, and Amchitka.

MarkAir, which has planned on operating with less than \$10 million until anticipated summer bookings provide saving income, sets the routes and leases the first B-737-400, 2 Dash-46B, to be placed on the Anchorage-Seattle route. While maintaining its competition with **Alaska Airlines**, MarkAir now awaits the typical surge in summer reservations.

The Federal Deposit Insurance Corporation files suit during the second quarter to recover \$6.3 million in overdue loans and back interest.

The first two Beech 1900Ds enter service on April 1. On April 28, Porcaro Blankenship, the company's Anchorage advertising agency, advises certain suppliers that they will have to wait for payment, which comes on May 7. Public discussion of plans for a public offering, current since the previous fall, now end. Also during the month, a third and fourth Beech 1900D arrive.

Eagerly anticipating a large number of summer reservations, employees are surprised when, by the second week of May, they have not arrived. The third week passes, but still the business boost does not occur. On May 18, Ralph Brumbaugh is lured out of retirement to reassume the president's chair, freeing Chairman Bergt from certain of the problems of day-to-day management.

Toward the end of May, MarkAir is required to lay off 120 workers. It also informs flight attendants-in-training that they must now look elsewhere for employment. Chairman Bergt warns that more layoffs may come, along with pay cuts, if the picture does not improve quickly. The new route between Juneau and Seattle is also sacrificed on May 20 and Juneau is left holding the bag for \$134,000 in airport lease fees. Simultaneously, service is halted to Sitka and Ketchikan.

The carrier disengages from its toe-to-toe competition with **Alaskan Airlines** when it is forced to file for Chapter XI bankruptcy on June 11. The carrier's creditors allow it to keep flying while it is reorganized and in a fund-raising event, it announces a Permanent Fund dividend special: four roundtrip fares for \$915. At month's end, the fifth Beech 1900D is delivered.

Over the next 60 days, aircraft leases are all renegotiated in a touch-and-go process. For example, on August 5, MarkAir is given until the close of business to wire \$214,000 to Beech Acceptance Corp. of Wichita, Kansas. The payment will allow the carrier to retain the five Beech 1900s for a week until leases can be renegotiated permanently.

Passenger boardings increase 49.7% to 578,000 and freight inches upward 0.4% to 21.24 million FTKs. Although \$18 million in revenues are obtained, the airline, while in bankruptcy, is relieved of its need to report specific financial statistics.

The payroll is increased another 31.2% in **1993** to 1,181; however, plans to emerge from Chapter XI are stalled. Flights to Denver and Phoenix end on January 10.

Still, MarkAir expands aggressively, completing plans instituted the previous year. A code-sharing agreement is signed with Gary, Indiana-based **Direct Air** in March for the operation of MarkAir-Direct feeder flights from Chicago (MDW). Chief Financial Officer Don King resigns in April to become vice president at **Yute Air Alaska**.

A hub is established at Denver and routes are inaugurated to nine communities in Indiana, Illinois, and Pennsylvania in the spring, reaching a yearend total of 15 "lower 48" destinations as far east as New York City.

Meanwhile in July, the Anchorage-based carrier is able to emerge from Chapter XI bankruptcy protection. The success is made possible through a reorganization under which unsecured creditors receive debentures covering 100% of the \$15-million debt owed, plus interest. Creditors may wait 3-5 years to receive payment or may exchange their debentures good for MarkAir flights or resale to third parties.

In September, a Flex Fare pricing system is introduced, allowing passengers savings of up to 70% on their tickets. On September 7, deep

discount roundtrips are inaugurated from Denver to Los Angeles, Washington, San Francisco, and Dallas (DFW).

All of this activity leads to a dramatic 95.7% increase in customer bookings to 1,125,000. Cargo, on the other hand, falls 36.6% to 13.94 million FTKs. Financial results are provided and show revenues earned of \$153.25 million. Expenses are \$152.76 million and allow an operating profit of \$496,528. There is, however, a net loss of \$18.18 million.

Airline employment is reduced by 32.3% in **1994** to 800. Destinations now visited include Anchorage, Seattle, San Francisco, Los Angeles, San Diego, Las Vegas, Denver, Phoenix, Kansas City, Minneapolis (MSP), Dallas (DFW), Kansas City, Chicago, Cincinnati, Atlanta, Washington, D.C., and New York.

Daily return service is inaugurated on February 17 from Seattle to Juneau and to Anchorage. Paul Bowers, the Juneau Airport manager, reminds the carrier that it still owes \$134,000 in airport lease fees from 1992.

The carrier is the 14th largest employer in the state, but it remains nearly \$1 million behind in loan and rent payments to AIDEA. An application, which will initially be rejected, is filed for the relocation of company headquarters to Denver's new international airport.

In December, the pay of most employees is cut by 10%.

The fleet by late December includes 3 each B-737-4S3s and B-737-4Y0s, 2 each B-737-317s, B-737-3M8s, B-737-2X6ACs, B-737-2T4ACs, and 1 each B-737-3S3, B-737-2T2A, B-737-2T4A, and B-737-25A.

Passenger boardings for the year skyrocket 86.2% to 2,095,000, while freight declines 35.2% to 9.04 million FTKs. Revenues increase 43.5% to \$220 million and expenses are \$216.58 million. As a result, pretax profit shoots up to \$3.41 million.

Early in **1995**, in an effort to increase its presence in the "lower 48," the company relocates its operations to Denver, while retaining its Anchorage headquarters.

The carrier also petitions the State of Alaska for a \$40-million loan guarantee with which to rescue the airline. In his appeal, Chairman Bergt cites a report from the Institute of Social and Economic Research at the University of Alaska that finds that MarkAir supports 2,200 Alaska jobs beyond its own. The report also estimates that Alaska travelers have an extra \$75 million in purchasing power annually because of the airline's low fares. Before negotiations begin, it is agreed that MarkAir will keep its headquarters in Anchorage during the time of any loan guarantee, plus one extra year.

A blue ribbon commission is appointed by AIDEA on February 1 to review the MarkAir request. It reports its findings on March 14 on its examination of a proposal from the company for a \$40-million loan guarantee to help the airline refinance. The unanimous panel vote is that the state should not assist MarkAir because the request is too risky and because state intervention on behalf of a private company is inappropriate and unfair to other competitors. It also recommends that if MarkAir can find another party to share the risks, increase its collateral, and show continuing revenues supporting its business, AIDEA could legally and morally reconsider the loan guarantee.

On March 16, the full board of directors of the AIDEA denies the loan request. As a result, the company announces that it must downsize and will, as a beginning, lay off up to 300 workers and raise fares on some Alaska routes. The workers, including pilots who survive the firings, will be subjected to 15% pay cuts. Chairman Bergt makes a last minute appeal to Governor Tony Knowles, but the governor stands by his agency's decision.

On March 30, flights originating from Alaska will be dropped to Los Angeles, San Diego, and Oakland. On April 1, unprofitable routes to Cincinnati and Baltimore are abandoned; however, daily service is inaugurated from Denver to Houston. The same day, the San Francisco terminus of the daily roundtrip to Anchorage is switched to Oakland.

Service from Seattle to Los Angeles is suspended on April 10, while plans to halt flights to Juneau on April 15 are moved up and they are also cut on April 10.

The company now owes more than \$1 million in rent payments at Denver and the U.S. Internal Revenue Service bids to liquidate the

firm's assets for unpaid taxes. These and other financial woes force MarkAir to refile for Chapter XI in April.

On July 30, FAA inspectors find maintenance discrepancies in two of the Denver-based carrier's six aircraft. As a result, MarkAir cancels a dozen flights with those planes until repairs can be made. Hundreds of passengers must scramble to find other flights.

To make matters worse, another aircraft, on a Seattle to Chicago flight via Denver, is forced to return to Seattle after it becomes the target of a bomb threat. The service eventually arrives in Denver.

After Boeing repossesses two jetliners on October 24, the company is unable to continue regular operations and converts from its present Chapter XI status to Chapter VII and is liquidated following its last flight on November 18. The company's final traffic figures are released and show that, through mid-October, enplanements are off 52.7% to 990,000. Former **USAir Shuttle** CEO Terry Hallcom makes an attempt to rescue the company, but fails by year's end.

The 1991 countersuit against **Alaska Airlines**, however, lives on. On July 22, 1998, four days before trial in the \$150-million claim is set to begin, the major announces a \$19-million settlement with MarkAir's bankruptcy trustee. Former Chairman Bergt calls the arrangement a "bittersweet victory."

MARKAIR EXPRESS: United States (1990–1995). St. Mary's, Alaska-based **Hermen's Air** is purchased by **MarkAir** in 1990. Although Stanley Hermen remains as president, the now wholly owned subsidiary is reconfigured into the national carrier's feeder, **Hermen's MarkAir Express**. A variety of support and aircraft will be transferred from MarkAir to its new associate.

En route from Cold Bay to False Pass to pick up passengers on December 21, a Cessna 208 Caravan I slams into the 200-ft. level of a mountain near Hot Springs Bay; the pilot is killed.

Second largest of the Alaskan Section 401 airlines, MarkAir Express in 1991 operates a fleet of 48 aircraft: 29 Cessna 207As, 12 Cessna 208 Caravan Is, 4 de Havilland Canada DHC-6-300 Twin Otters, 2 Cessna 185s, and 1 DHC-5.

A DHC-6-300 fails its takeoff from Chevak on October 26; there are no fatalities.

In mid-December, a sugar-like substance is found in the oil of two Twin Otters. Samples are sent to Exxon, the fluid's manufacturer, and the FBI investigates possible sabotage.

On the evening of December 22, a Cessna 207A is reported overdue on a flight from McGrath to Nikolai, about 50 mi. E of McGrath in the Kushkokwim River valley. The next morning, Air National Guard and Civil Air Patrol aircraft locate the wreckage on a snowy slope of Halfway Mountain, 20 mi. NE of McGrath. Searchers recover the pilot's body and key cargo.

A total of 199,155 passengers are flown during the first year along with 11,109,000 pounds of mail.

The fleet is increased to 56 aircraft in 1992. One of two newly acquired Cessna 207As depart Old Harbor for Kodiak on the afternoon of April 25, but one crashes in a riverbed east of the takeoff point minutes later. Low clouds, which may have contributed to the accident, prevent the second plane from spotting the wreckage. Tracking a locator signal to the crash site, a USCG helicopter rescues the injured pilot three hours later.

While en route from Dillingham to Koliganek with a mail cargo on July 20, the second new Cessna 207A, piloted by Edward Goodman, slams into the Muklung Hills six miles from the takeoff point. Reported overdue at Koliganek, a USCG helicopter picks up a signal from the wrecked plane's emergency locating device and flies to Goodman's rescue.

Passenger boardings for the year climb 30.4% to 259,663.

The fleet in 1993 includes 7 leased Beech 1900Cs, 5 Cessna 208 Caravan Is, 3 owned and 2 leased de Havilland Canada DHC-6-300s, 1 DHC-7-101, 1 chartered DHC-7-103, and several small Cessnas. Customer bookings slip 1.5% to 255,829.

An eighth Beech 1900C is acquired in 1994 and passenger boardings recover, jumping upward by 7.2% to 274,225.

When MarkAir moves to Denver early in 1995, it leaves its subsidiary behind, serving some 70 villages in the bush.

A bizarre incident occurs at Bethel on August 3 when a Cessna 172 plane leaves without its pilot during a preflight check. Having manually spun the propeller as part of routine testing, the unidentified pilot is shocked when the engine catches and the plane starts to move. The aircraft taxis across the ramp, through the weeds and plows into some bushes on the tundra 500 feet away, belly-up. No other passengers or cargo are aboard the aircraft.

Unable to achieve altitude after liftoff from a remote strip at Toksook Bay on November 3, a Cessna 207 with a pilot and six passengers, collides with rising terrain 1/4 mi. N of the runway; although no injuries are reported, the aircraft is badly damaged.

By late November, MarkAir Express is forced into Chapter XI bankruptcy; operations are suspended and the regional files for Chapter VII liquidation. During the first 11 months, 238,737 passengers have been flown (a 13% decline) and 3.31 million FTKs operated.

MAROOMBA AIRLINES (PTY.), LTD.: Fauntleroy Ave., Perth Domestic Airport, Perth, Western Australia, Australia; Phone 9478 3850; Fax 9479 7689; <http://www.capeweb.com.au/maroomba>; Code KN; Year Founded 1998. Tiny Maroomba Airlines is established at Perth in 1998 to offer seasonal roundtrip charters for Roscoe's Charters to Busselton and the Margaret River wine region. Flights begin and continue with a single Beech Super King Air 200.

MARQUETTE AIRLINES: United States (1938–1941). Briefly named **Midwest Airlines**, Marquette is established at St. Louis in the spring of 1938 to offer scheduled passenger and mail flights over the 564 miles to Detroit via Cincinnati, Dayton, and Toledo. It is the only airline started in the U.S. during the year. Employing four Stinson Model A Tri-Motors obtained from **American Airlines**, the carrier inaugurates revenue services on April 20. Once per day, each way flights are made Wednesdays through Saturdays.

Successful in the backyard of **Transcontinental and Western Air Lines (TWA)**, the smaller company is bought out by the larger on August 15, 1940. As the CAB does not immediately sanction the \$350,000 purchase, TWA leases its new acquisition's routes until government approval is received in April 1941. Amalgamation is completed on December 5.

MARSHALL'S AIR: United States (1979–1982). Alfred Marshall organizes this carrier at St. Thomas, U.S. Virgin Islands, in 1979 to offer tourist charter and cargo flights to Puerto Rico, the Windward Islands, and the Leeward Islands. Scheduled passenger flights are also initiated, linking the company base with Tortola, Anegada, and Virgin Gorda. Operations are flown with a pair of Britten-Norman BN-2 Islanders and a Beech B-58 Baron.

Unable to weather the recession, the company stops flying in 1982.

MARTINAIR HOLLAND, N.V.: Martinair Building, P.O. Box 7507, Schiphol Airport, Amsterdam, NL-1118 ZG, The Netherlands; Phone 31 (20) 601-1222; Fax 31 (20) 601-1303; <http://www.travelx.com/martinairholland.html>; Code MA; Year Founded 1958. With a leased de Havilland DH 104 Dove, Martin Schroeder forms **Martin's Air Charter (Martin's Luchtvervoermaatschappij, N.V.)** on May 22, 1958 to offer sight-seeing trips over Amsterdam and the surrounding bulb-growing areas. Flight operations begin on May 24. Employing a Vickers Viking leased from the British company Overseas Aviation, MAC begins flying bulbs to Berlin in 1959.

In April 1960, the 362nd Amsterdam-area charter flight is recorded. Douglas DC-3s are acquired in March and July and Amsterdam-Jersey and Mallorca inclusive tours are flown for the tour operator Centouri. The leased DH 104 is replaced by a purchased unit and the first transport of annuals, to Yugoslavia, is made on December 29.

During the winter off-season of **1961**, night cargo flights are undertaken for **KLM (Royal Dutch Airlines, N.V.)**. A head office is opened at Schiphol Airport on March 3. During the summer, a DC-3 flies Tibetan refugees from Kathmandu to Zurich. The newly founded Maastricht-based charter carrier **Limberg Airways, B.V.** is purchased and merged, together with its DH-104 and two DH-114 Herons. The first DC-4 is delivered on June 12, **1962**.

During the winter of **1962–1963**, a DH-114 and two DC-3s fly relief to Ameland Isle. Repainted in **Deutsche Lufthansa, A.G.** livery, a DH-114 and a DC-3 are contracted to fly passengers Frankfurt–Stuttgart while the airport at Stuttgart is under construction. A lease is signed with **Swissair, A.G.** and **SAS (Scandinavian Airlines System)** to fly their replacement jet engines. In October, the Holland-America Line, the Royal Rotterdam-Lloyd steamship line, and the Shipping & Coal Co. each take 12.2% interest in the airline.

A Convair CV-340 and a Douglas DC-7C Seven Seas are purchased from KLM in **1964**, entering charter operations on January 10 and February 27, respectively. A second DC-7C arrives in October and enters service in November, the same month the Dutch flag carrier acquires 25% of MAC. The fourth DC-3 and DC-7C are delivered in May **1965** as Seven Seas charter flights begin to the West Indies. Employment reaches 300.

Another DC-7C is acquired on February 23, **1966**. On March 24, an MAC Seven Seas becomes the first charter carrier airliner to fly the polar route to Tokyo. Re-engined as a Dash-640, the company's Convair begins a European demonstration flight on behalf of the manufacturer on April 15, reentering charter service on April 23. Two DH-104s are sold during the year and a DC-6A is acquired in the fall, during which time the airline is renamed Martinair Holland and orders its first DC-9-32 jetliner.

Another CV-640 is acquired on February 6, **1967** and the first three DC-3s are retired. The first DC-8-55 is purchased from KLM on November 15. In December, traffic rights to the U.S. are granted.

A Lockheed L-188 Electra leased from KLM is delivered on April 1, **1968**; the DC-9-32 ordered in 1966 is delivered on July 23, allowing return of the L-188. A DC-3 and a DC-7C are sold in October and during the fall, DC-7Cs and DC-6s fly famine relief operations in Biafra. A DC-8-55F enters service in November and two more DC-9-32s arrive in February and April, **1969**, respectively. A DC-7C is sold in September and a Fokker F28 is leased the same month. The third DC-8-55 is delivered in October.

Relief flights to Biafra continue in **1970** as the last DC-3 is sold in the fall. A DC-9-32 and an F28 are delivered in February and March **1971**, respectively. The DC-6A is sold in June and when the last CV-640 is sold in September, Martinair becomes an all-jet airline. The company then adopts a new livery and colors. Two DC-9-32s begin flying Hadj pilgrims from Borneo–Saudi Arabia.

A DC-10-30CF is ordered in February **1972** and Martinair becomes a KSSU Group subcontractor. A new color scheme is introduced when a DC-8-55F begins weekly cargo flights to Hong Kong on September 15, **1973**; a DC-9-32 is sold in October. The first DC-10-30CF is delivered on November 19, beginning charter service to Indonesia in December. Also in December, Martinair Holland is incorporated as a holding company, spreading its activities in future years into diversified interests.

On December 4, **1974**, a DC-8-55F is en route on a chartered Hadj flight from Surabaya, Indonesia, to Mecca via Katunayake. Carrying 9 crew and 155 passengers, including 183 Moslem pilgrims, the aircraft crashes into the densely wooded central highlands of Sri Lanka during a landing approach to Banaranaike International Airport, coming to rest on Laxabana Hill; there are no survivors.

In September and October **1975**, the carrier contracts to evacuate 11,000 Portuguese from Angola.

A second DC-10-30CF is delivered on January 5, **1976**. In December, 88 pedigree cows are flown Prestwick, Scotland–New Zealand, the longest air transport of cattle in history. The third DC-10-30CF arrives on December 23, for which a DC-8-55F is returned to McDonnell Douglas as a trade-in.

A second F28 is acquired and another DC-10-30CF is ordered in May **1977**. In November, a DC-10-30CF flies relief missions from Singapore–Phnom Penh, Cambodia.

In the wake of U.S. deregulation, North Atlantic charters are suspended in **1978**. Two DC-10-30CFs are leased and late in the year the company's fourth DC-10-30CF is delivered. In April and May, the Phnom Penh relief flights are continued.

President Schroeder oversees a workforce of 850 and enplanements for the year total 738,480.

All Dutch DC-10s are briefly grounded following the **1979 American Airlines** Chicago crash. On June 19, the carrier's PH-MBT becomes the first Douglas wide-body in the world to restart flights. During the summer, three Airbus Industrie A310s are ordered. By year's end, the workforce has been increased by 2.2% to 990.

Passenger boardings pass the million-mark for the first time, up 32% to 1,086,000. A \$6.3-million net profit is posted.

The workforce is reduced by 1% in **1980** to 950. An F28 is sold to Ansett Transport Industries.

Freight traffic for the year skyrockets 188.5% to 251 million FTKs, but passenger boardings fall 27.4% to 788,659. Total revenues are \$152 million; however, expenses rise 7.4% to \$144 million, cutting the profit to \$3.3 million.

A DC-9-80 leased from **Inex Adria** is delivered in November **1981**; in December, a DC-9-32 is sold back to McDonnell Douglas.

Freight drops 10.4% on the year to 225 million FTKs and passenger bookings dip 0.2% to 789,571. Revenues grow to \$147 million and the net profit soars to \$4.9 million, a 71.5% increase.

As the effects of the world economic recession hit home, freight traffic remains level in **1982**, but enplanements decline to 789,571.

The employee population numbers 865 in **1983**. Taipei–Amsterdam weekly charter flights commence in January. The **Inex Adria** Dash-80 is returned following receipt on February 18 of the carrier's first purchased DC-9-82 (McDonnell Douglas MD-82), which enters service on February 19.

A total of 621,000 passengers are carried, a dip of 18%; however, freight traffic jumps a significant 46% to 378.88 million FTKs.

A second MD-82 arrives in **1984**, along with two A310-200s. Beginning on December 1, the latter operate long-haul charter flights from Amsterdam to Bangkok via Keflavik.

Enplanements climb to 736,229. A net profit of \$5.15 million is recorded on top of an operating gain of \$10 million.

Employment jumps 16.2% in **1985** to 1,040 as a Boeing B-747-21AC is ordered for 1987 delivery. Late in the year, A310-200 charters are introduced to New York and Toronto.

Passenger boardings rise 13.7% to 853,104 and cargo climbs 13.4% to 500 million FTKs. Total revenues earned are up 16.1% to \$195 million, operating income is \$18 million, and the net profit is \$9 million.

Service begins to four southern European destinations and Philadelphia in **1986**. In June, a second B-747-21AC is ordered and as bookings plunge in the face of terrorism and the Chernobyl disaster, the carrier attempts to win bookings by the expensive process of joining all five U.S. airline passenger reservations systems.

Enplanements, however, dip to 824,000 and revenues are \$287 million. Still, there are profits: \$26 million (operating) and \$18.7 million (net).

Airline employment grows by 4.9% in **1987** to 1,185 as the fleet modernization program is pushed ahead. The first B-747-21AC is delivered on February 23 and christened *Prins van Oranje*, as orders are placed for two B-767-300ERs. On March 1, the Jumbojet inaugurates a series of cargo flights from Amsterdam to Hong Kong via Dubai and Muscat.

In June, the combi begins flying charters to the U.S. and Canada while in November, the aircraft introduces weekly all-cargo service from Amsterdam to Sydney, Australia.

Passenger boardings recover, climbing 22.6% to 1,065,000 and freight is up 8.5% to 676 million FTKs. Revenues advance 5.2% to

\$301.9 million and costs are held low enough to allow profits of \$27 million (operating) and \$18.2 million (net), down 2.7% from 1986.

The workforce is increased by 7.2% in **1988** to 1,270 and weekly DC-10-30CF all-cargo services from Holland to Sydney, Australia, begin in January. The second B-747-21AC arrives in September and in November it is substituted for the DC-10-30CF on the weekly Amsterdam-Seattle run.

In December, year-round transatlantic service is initiated, with the twice-weekly summer seasonal Amsterdam-Miami route flown during the winter as well.

Customer bookings increase another 11.1% to 1,183,000; however, cargo dips 0.9% to 670 million FTKs. Revenues rise 7.6% to \$295.8 million and operating income reaches \$28.7 million. Net gain doubles to \$33.5 million, but includes a \$10.5-million income from the sale of a DC-10-30CF.

Company employment is boosted another 11.4% in **1989** to 1,415 as the first of six B-767-31AERs enters service. Routes are initiated to Santo Domingo and Tampa and new Star Class service is introduced for business travelers. In April, the U.S. West Coast terminus for the company's Amsterdam service is transferred from San Francisco to Oakland. For four months, a B-747-21AC is leased to **Qantas Airways (Pty.), Ltd.** while its own Jumbos are down for maintenance.

In June, two company pilots purchase 1 of the 12 remaining North American Yale World War II trainers; it is loaded aboard a Martinair B-747-21AC at Seattle and flown to Amsterdam's Schiphol Airport.

A joint fare agreement is signed with **Balair Air Charter, A.G.** in July that allows travel between New York, Amsterdam, and Basel for one \$509 roundtrip fare. Simultaneously, the carrier introduces \$698 one-week, inclusive-tour packages at Amsterdam, including roundtrip airfares from New York or Newark. The **Balair Air Charter, A.G.** joint fare declines to \$484 in September and on October 2, Star Class service is introduced aboard the Jumbos and DC-10s on the North American routes as business-class accommodation without business-class prices.

The subsidiary Martinair Catering Services occupies a new catering facility and later in October, a joint pool agreement for maintenance, flight, technical training, and assistance for the new B-767-31AERs is signed with **SAS (Scandinavian Airlines System)**. Also during the month, the airline becomes the only carrier to offer nonstop cargo service, once per week, between Puerto Plata in the Dominican Republic and Amsterdam. The number of Miami-Amsterdam nonstops is increased from two to three on November 2 and the first B-767-31AER arrives later in the month.

Passenger boardings climb 9.8% to 1,299,000, but freight is down by 10.2% to 601.41 million FTKs. Revenues ascend 13.9% to \$351.7 million, but costs rise more quickly. As a result, the operating profit falls to \$31.7 million and net gain slips to \$22.5 million.

The payroll is increased 13.4% to 1,605 in **1990**. A second B-767-31AER joins the fleet and on November 1 weekly service is opened from Amsterdam to the Dominican Republic city of Punta Cana. The next day, November 2, new frequencies are inaugurated twice weekly from Amsterdam to Cancún and to Colombo, Sri Lanka. Twice-weekly flights are started on November 4 from Amsterdam to the Thai cities of Phuket and Bangkok.

Later in the month, frequencies are increased between Miami and Tampa and Puerto Plata. Customer bookings slide upward a weak 1.8% to 1,322,300. Cargo is boosted 22.1% to 734.3 million FTKs. Revenues rise 11.3% to \$406.5 million, but costs accelerate, forcing the operating profit down to \$24 million and net gain to \$21.2 million.

The workforce grows another 9.7% in **1991** to 1,760. Early in the year, the two A310-200s and an MD-82 are withdrawn as three more B-767-31AERs begin to arrive.

In the spring, service is inaugurated to Montego Bay, Cuba, and Santo Domingo. In April, direct flights begin from Amsterdam to Oakland, California, and frequencies on the B-747-228F route from Los Angeles and Seattle is increased to twice weekly.

During July, the company begins B-767-31AER weekly roundtrips from Amsterdam to Fort Lauderdale, becoming the only airline to provide nonstop service to that destination from Europe.

The carrier's first scheduled flights are initiated in August from Amsterdam to Palma de Mallorca. In October, nonstop B-767-31AER flights are started from Amsterdam to Fort Lauderdale and a weekly B-747-21AC frequency is stretched to Detroit and Los Angeles. In late fall, Mexican resort communities join the company's charter network and a B-747-228F is leased.

Passenger boardings ascend 5% to 1,388,400 while freight climbs 15% to 841.4 million FTKs. Revenues swell 19.2% to \$479 million and the net profit jumps to \$37.7 million.

The employee population declines in **1992**, falling 19.6% to 1,415. The fleet now includes 1 leased A310-203C, 2 leased B-747-21ACs, 1 chartered B-747-228F, 4 owned and 1 leased B-767-31AERs, 1 each Cessna 550 Citation II, Cessna 650 Citation III, and Dornier 228-212 (operated for the Dutch Coast Guard), 2 chartered DC-10-30CFs, and 1 F28-1000 flown on behalf of the government.

Bogota, and its abundance of cut flowers, becomes a cargo destination during the fall and is flown under a marketing agreement with **AVIANCA Colombian Airlines (Aerovías Nacionales de Colombia, S.A.)**.

During December, a comprehensive expansion of the U.S. West Coast cargo operation is undertaken. A new midweek service from San Francisco is started which, in turn, provides a second weekly Seattle departure timed to coincide with the carrier's Seattle sea-air clients.

On December 21, Flight 494, a DC-10-30CF with 13 crew and 327 passengers en route from Amsterdam, crashes while landing at Faro, Portugal (56 dead).

Customer bookings increase 23% to 1,703,900 while cargo booms upward by 37% to 1.15 million FTKs. The net profit is \$53.9 million on revenues of \$534.7 million.

Founder/Chairman Schroeder oversees a workforce of 2,025 in **1993**, up 15.1% over the previous year, and orders 4 McDonnell Douglas MD-11CFs. In addition to air taxi, executive, and international all-cargo flights, the company now also flies scheduled to Denver, Fort Lauderdale, Miami, New York, Newark, Los Angeles, Oakland, Seattle, Tampa, Edmonton, Toronto, Vancouver, Puerto Plata, Punta Cana, Santo Domingo, Cancún, Montego Bay, Holguin and Varadero, Bangkok, Phuket, and Portlamar.

In September, the carrier receives rights to operate scheduled services to the U.S. In cooperation with **LanChile Airlines, S.A.**, flights begin to Santiago during late fall. Amsterdam-Denver roundtrip charters commence in November. During the same month, Skycoach luxury bus service is introduced from the German cities of Hamburg and Cologne to Amsterdam's Schiphol Airport.

Unrest in Turkey has an impact on enplanements and cause passenger boardings to decline 7% to 1,586,100; freight, however, rises 2% to 1.17 billion FTKs. Revenues fall 8.5% to \$523.1 million, but a \$44.6-million net profit is still generated atop an operating gain of \$28.6 million.

Airline employment is increased by 4.4% in **1994** to 2,145 and the fleet is enhanced by the delivery of the first of five ordered MD-11s. New services are introduced during the spring and summer to Edmonton, Barcelona, Venezuela, and Bridgetown in the Barbados, and by late fall Martinair, with service to Amsterdam from Miami, Tampa, and Fort Lauderdale, actually flies to Europe from more Florida cities than any other carrier. A DC-10-30CF is sold to the Royal Netherlands Air Force (RNAF) in September.

Beginning October 24, Martinair and **KLM (Royal Dutch Airlines, N.V.)** turn KLM's previous thrice-weekly Amsterdam-Orlando route into a joint-venture employing Martinair B-767-31AERs four times a week. Both airlines will market the service in the U.S. and Europe and launch the service with a promotion that allows 36 people to fly free.

During December, plans are made to accept three more MD-11s and inaugurate flights to Freeport during the following spring.

On the year, customer bookings recover and ascend by 15.5% to 1,832,300. Cargo, meanwhile, plunges 14.7% to 1 billion FTKs. Rev-

enues increase 1.4% to \$576 million and the operating profit climbs to \$43.2 million and a net receipt of \$31.2 million is recorded.

The workforce grows by 4.3% in 1995 to 2,290. In January, the carrier receives the Market Development Award from *Air Transport World* magazine. A fleet development program is nearly completed as the carrier trades in its final A310 and three DC-10-30CFs for four MD-11CFs and one B-767-31AER. Routes are stretched to Puerto Vallarta, Grenada, and Banjul while cargo services to Central and South America, plus Africa, are enhanced. To assist with these frequencies, the DC-10-30CF sold to the RCAF the previous fall is leased back.

Enplanements increase by 4.5% to 1,915,000 while freight traffic rebounds, growing 26.8% to 1.27 billion FTKs. Revenues jump 11.4% to \$695 million and expenses swell 13.3% to \$657.5 million. Profits drop slightly, with operating gain down to \$37.5 million and net profit down to \$28.1 million. Both figures are later adjusted downward to \$34.5 million and \$25.8 million, respectively.

Airline employment is increased by 3.1% in 1996 to 2,360 and an MD-11F joins the fleet. In January, the company receives the 1995 "Market Development Award" from *Air Transport World* magazine.

Weekly all-cargo MD-11F service is inaugurated on May 1 between Amsterdam and Boston.

On May 28, Flight 631, a B-767-31AER piloted by Capt. Tjakko Weber en route from Amsterdam to Orlando with 205 passengers, suffers widespread electrical problems that blacks out the cockpit's electronic displays and forces a no-flaps emergency landing at Boston. Although several tires are blown during the landing, no injuries are reported. Capt. Weber and his crew ferry the aircraft to Boeing at Seattle on June 2 for repairs.

Passenger flights to San Juan begin and a cargo route is started to Johannesburg. While **Virgin Atlantic Airways, Ltd.** employs a B-747-4Q8 to open a new London-Johannesburg route in September, capacity on the Jumbojet's previous London-Orlando service is replaced by the wet-lease of a Martinair B-767-31AER.

As the result of a block-space, code-sharing agreement signed with **China Southern Airlines Company, Ltd.** in April, a Martinair B-747-21AC inaugurates twice-weekly roundtrips on October 1 between Amsterdam and Guangzhou. Under the agreement, CSA will transport incoming Martinair freight to other Chinese destinations.

During November, a 40% stake is taken in the Colombia airline **TAMPA (Transportes Aereos Mercantiles Panamericanos, S.A.)** as well as a 10% interest in Martin Aviation Group, the Miami-based cargo sales and service representatives for Central and South America. In cooperation with **VARIG Brazilian Airlines (Viacao Area de Rio-Grandense, S.A.)**, a second weekly MD-11 freighter service is also launched from Amsterdam to São Paulo.

Passenger boardings inch up 1.4% to 1,942,600 and 1.52 million FTKs are operated, a 19.1% increase. Operating income moves ahead by 8.5% to \$692.7 million, while expenses rise 13.5% to \$685.3 million. Operating income plunges to \$7.4 million and a net gain of \$2.44 million is posted.

The employee population climbs 8.5% in 1997 to 2,560. In January, a freight route is also inaugurated to Guangzhou in cooperation with **China Southern Airlines Company, Ltd.** During the summer, twice-weekly services are launched to Calgary and Edmonton in Canada. The **Virgin Atlantic Airways, Ltd.** wet-lease ends in April.

Customer bookings ascend to 1,945,000 while freight accelerates 17% to 1.78 billion FTKs. Operating revenue is up 17.4% to \$715.34 million and expenses are \$666.12 million. The operating profit is \$60.63 million, while a huge \$17.66 million net gain is celebrated.

At the beginning of the fortieth anniversary year of 1998, Martinair is the 20th largest airline in the world in terms of freight carried.

Back-dated to January 1, the 50% Royal Nedlloyd, N.V. stake in Martinair is officially purchased by KLM for \$168 million on February 5. Martinair is allowed to retain its independent identity and to celebrate its fortieth anniversary. An application is filed with the European Commission for a blessing of the union.

In April, it is announced that founder Schroeder will be succeeded upon his December 1 retirement by Aart van Bochove, ATC chairman for The Netherlands.

Significant expansion of freighter services to the western U.S. occurs in the fall. Twice-weekly B-747F service to Los Angeles begins on September 1.

Some 35 min. into a service from Calgary to Amsterdam on September 14, Flight 815, a B-767-31AER with 10 crew and 275 passengers, encounters engine problems. The aircraft returns to its point of origin and makes an uneventful landing; no injuries are reported.

On September 16, the upgraded Atlanta hub receives a boost as its all-cargo weekly services are increased from three to seven. Five flights are operated directly to Amsterdam, while two go south to Mexico City and Quito. Using a combination of MD-11Fs and B-747Fs, all-cargo service to Seattle is increased at the end of the month from one flight per week to three.

A three-tiered comprehensive expansion of the carrier's Latin American cargo program is launched on October 21. It is anticipated that by the end of the first quarter of 1999, the plan will lead to an increase of both routes and capacity in the region by 80%.

The first tier is kicked off when Martinair inaugurates new twice-weekly service from Miami to Buenos Aires; flights over this route will be increased to five per week. Simultaneously, twice-weekly return flights are started from Miami to Lima. Flights from Quito and Guayaquil increase from thrice weekly to five times a week, making Martinair the largest air cargo carrier operating from Ecuador.

A B-747-21AC is employed to inaugurate new weekly freight service on October 25 from Amsterdam to Denver. At the same time, all-cargo service is started to Houston (IAH).

Twice-weekly B-767-31AER return service is inaugurated on November 1 from Miami to San Jose, Costa Rica.

The second and third tiers of the company's southward expansion are initiated on November 24. Martinair itself launches weekly roundtrips from Miami to Guadalajara, while return flights from Miami to San Juan are boosted to five per week.

The activities of **TAMPA (Transportes Aereos Mercantiles Panamericanos, S.A.)**, for some time an integral part of Martinair's Latin American strategy, are now shifted into the third tier of expansion. Acquiring a DC-10-30CF on lease, the Colombian airline initiates five-times-a-week all-cargo flights linking Miami (MIA) with Bogota, Medellin, and Caracas.

Passenger boardings this year accelerate 6% to 2.06 million, while cargo traffic climbs 2% to 1.81 billion FTKs. Revenues climb 5.9% to \$811.14 million, while costs jump 14% to \$804.2 million. Operating profit climbs to \$69.64 million and a net \$28.03-million profit is reported.

By the beginning of 1999, airline employment has been increased by 12.9% to 2,880.

On January 16, Martinair inaugurates weekly roundtrip B-747F *Emerald Service* from Seattle to Shannon, Ireland, with continuation to Amsterdam. The flights are the first cargo service to Ireland from the U.S. for the Dutch carrier.

The European Commission, fearful of cargo dominance on routes from Amsterdam to North America and the Mediterranean, announces on February 1 that it will undertake an in-depth review of the Martinair merger with KLM.

Two days later, on February 3, it is announced that Martinair will begin twice-weekly B-767-31AER roundtrips between Miami and San Jose, Costa Rica, on November 1.

With the opening of the summer schedule at the end of March, new weekly B-767-31AER return flights are started from Amsterdam to Sri Lanka and the Maldives.

The EU Commission begins to negotiate with KLM, demanding substantial changes in the details of the Martinair acquisition. Particular attention is paid to the areas of cargo transport and the company's increased strength in southern Europe. Still, no one expects the marriage

to fail; indeed, on May 12, Royal Nedlloyd, N.V. announces that it will make certain acquisitions that will be covered by the as-yet-unpaid proceeds from the sale.

On May 25, KLM, in anticipation of a negative decision from the EU on its plan to take full control of Martinair, voluntarily withdraws its application to prevent the media attention that will be generated by a negative finding and to review its options in the case. The decision, fully discussed with Royal Nedlloyd, N.V. and Martinair, comes about as the result of a stalemate between KLM and the commission concerning the details of the merger.

The Financial Times reports on May 27 that Royal Nedlloyd, N.V., disappointed by the EU's pending negative vote and unconvinced that KLM has any options in the matter, has already begun the search for new investors in Martinair. Analysts do not believe their location will be a problem.

Under terms of a new contract with Flowerwings Kenya, Ltd. announced on September 21, Martinair dedicates one-half of the capacity of its thrice-weekly MD-11F return service to Amsterdam from Nairobi to the transport of 80,000 kg. of fresh flowers. Spurred by demand, fresh flower transport from Kenya has undergone a revolution since 1976, when only one weekly flight was operated.

Beginning on November 1, the number of "Flower Flights" to The Netherlands from Kenya is increased to six times a week. The same day, weekly B-767-31AER roundtrips to the Thai cities of Bangkok and Phuket are added to the schedule, along with weekly Monday return service to Havana.

Frequencies to other North American points are added or increased, including daily to Miami, twice weekly to Havana, thrice weekly to Cancún, four times a week to Orlando, and weekly to Bonaire. Charters are also offered to Aruba and Curaçao.

Thrice-weekly B-767-31AER return flights to Ciego de Avila, Cuba, start on November 2, the same day B-767-31AER service is inaugurated to San Jose, Costa Rica, four times a week (thrice weekly via Miami and weekly via Orlando). When **Air Holland Charter, B.V.** declares bankruptcy on November 4, one of the B-757-27Bs that Martinair has been leasing for the past four years is formally acquired.

Weekly B-767-31AER Saturday roundtrips begin to Penang on November 6, followed by weekly return flights the next day to Holguin, Cuba.

Passenger boardings this year rise 2.5% to 2,121,000 while freight jumps 13.3% to 2.06 billion FTKs. Revenues climb 4.8% to \$730.08 million, while expenses jump 9.2% to \$695.32 million. The operating profit falls to \$34.76 million, while net gain slides to \$13.34 million.

Airline employment at the beginning of 2000 stands at 3,070, a 6.6% increase over the previous 12 months. Among the world's top 25 airlines, Martinair ranks 18th in FTKs.

An emergency service begins with **MK Airlines, Ltd.** on March 20 in a collaborative effort to get badly needed relief supplies from Europe to flood-ravaged Mozambique. Supplies arrive at Nairobi aboard one of the Dutch line's MD-11Fs, where they are put aboard MK Airlines DC-8-55F services for Beira and Maputo.

A B-747-306C is leased from **KLM (Royal Dutch Airlines, N.V.)** for a six-month period that begins on April 30. The summer service from Amsterdam to the New York area that begins with the KLM Jumbojet on May 10, is routed to New York (JFK) instead of Newark International as in the past. The twice-weekly return flights will cease on September 24.

Weekly B-767-31AER roundtrips are inaugurated on July 4 from Amsterdam to the Brazilian city of Fortaleza.

To save money, the carrier announces on September 11 that, with the introduction of the 2001 summer schedule on April 1, service will be discontinued to Sri Lanka, the Maldives, Penang, and Ciego de Avila. Unlike before, B-747s will no longer be converted from cargo to passenger configuration for the summer season. The next day, the company announces that, as a cost-cutting measure, it will stop flying its routes from Amsterdam to Los Angeles and San Francisco in April. **The KLM (Royal Dutch Airlines, N.V.)** B-747-306C is returned on October 31.

The company's winter schedule to the Caribbean begins on November 1. Frequencies via Miami to San Juan are increased this year from two to three weekday roundtrips, with a fourth operated on Saturdays via Orlando. Additionally, seven weekly direct return services are flown to Miami, three to Orlando, and four to Havana. Frequencies to Cancún are boosted from two to three every week. The schedules previously operated to Aruba, Bonaire, Curaçao, Puerto Plata, and Punta Cans are unchanged; however, flights to Jamaica end.

The Amsterdam-Kuala Lumpur route, previously operated four times a week, becomes daily on November 1. On November 13, a memorandum of understanding is signed with **Kenya Airways, Ltd.** and **KLM (Royal Dutch Airlines, N.V.)** for the establishment of a joint sales and service organization in Nairobi. When the organization comes into being in 2001, it will employ Nairobi Airport as a hub from which to fly leased freighters on intra-African services. Sales and services in the Kenyan and African cargo markets will also be handled.

The November 28 issue of *Flight International* reveals that, beginning on April 1, the carrier will also drop its long-haul service to Cuba, Puerto Rico, Sri Lanka, and the Maldives. Flights to Orlando and San Jose, Costa Rica, will become thrice weekly while those to Cancún and Aruba will be operated twice weekly.

MARTINAIRE: 8030 Aviation Place, Suite 2000, Dallas, Texas 75235, United States; Phone (214) 358-5858; Fax (214) 350-7979; <http://users.aol.com/dispatcher/private/mra.htm>; Code MRA; Year Founded 1991. Bruce A. Martin sets up the all-cargo charter operation Martinair East at Dallas in 1991, initiating unscheduled executive and contract service flights that primarily feed the big overnight express carriers. The fleet consists of 3 Piper PA-31 Navajos, 2 Dornier 228-212s, 1 Piper T-1040, 1 Beech King Air 100, 1 Gates Learjet 35, 1 Dassault Falcon 20, and 29 Cessna 208 Caravan Is. Traffic and financial data is not released.

Hubs are opened at New York and Oklahoma City in 1992 and airline employment in 1993 totals 11. The company is purchased in December by Air Assets, a holding company headed by **Atlantic Coast Airlines** Chairman C. Edward Acker. In May 1994, Acker's concern purchases three Cessna 208B Caravans for its new subsidiary, which is now named Martinair, Inc.

While on approach to Ardmore, Oklahoma, on March 2, 1995, a Cessna 208B is unable to slow its rate of descent. The pilot elects to make a forced landing in an open field 2 mi. short of the runway. Although the aircraft is badly damaged, the flyer receives only minor injuries.

In 1996-1999, the fleet is increased to include 29 Cessna Caravans, 8 Fairchild Dornier 228-212s, 4 Fairchild Metros, and 1 Cessna 210. Additional contracts are accepted from **United Parcel Service (UPS)**, **DHL Worldwide Express**, and Airborne Express.

On February 16, 2000, Flight 633, a Cessna 208B is climbing away from the airport at McAlester, Oklahoma, on an all-cargo service to Hugo, Oklahoma. At approximately 1,000 ft., it is hit by a private Cessna 182 Skylane that is preparing to land after having diverted to McAlester from its scheduled flight plan due to weather. The Cessna 182 crashes into the ground, killing its pilot. The Caravan, though damaged, is able to make a safe emergency landing.

MARTINAIRE. See also **KITTY HAWK AIR CARGO**

FRANK MARTZ COACH COMPANY: United States (1930-1933). Martz establishes this carrier at Newark in the summer of 1930 to offer scheduled, multistop flights to Wilkes Barre, Pennsylvania. Martz inaugurates service on September 1 with a fleet of 1 Ford 4-AT and 2 Belanca CH-300 Pacemakers. A used Fokker Model 4 Universal is acquired in October, allowing frequencies to be increased to twice daily.

On July 15, 1931, service is started to Buffalo, New York. The carrier is sold to **American Airways** in February 1933, but is allowed to maintain services over its previous routes under its own name until the amalgamation process is completed on March 31.

MARYLAND AIRWAYS: United States (1964–1968). MA is set up at Easton, Maryland, in the fall of 1964 to provide scheduled passenger and cargo services across Chesapeake Bay to Washington, D.C. and Baltimore. Daily Beech 18 roundtrips are inaugurated on November 21 and are maintained into 1968.

MAS (MONTERRAT AVIATION SERVICES, LTD.): P.O. Box 225, Plymouth, Montserrat; Phone (809) 491-5342; Fax (809) 491-6205; Code MNT; Year Founded 1980. Montserrat Airways is formed at Blackburne Airfield, Plymouth, in 1980 and a Britten-Norman BN-2A Trislander is purchased with financial support from the U.K. government. Services are flown to the neighboring Leeward Islands.

In 1982, a de Havilland DHC-6 Twin Otter is added. In 1984, the carrier is renamed MASL and in association with **LIAT 9Leeward Islands Air Transport, Ltd.** maintains a continuing daily passenger frequency from Blackburne to Antigua's Coolidge Airport.

Operations continue apace during the remainder of the decade and into the next. The fleet is downgraded to include only one Pilatus-Britten-Norman PBN-2T Islander.

A total of 5,000 passengers are flown in the 6-employee carrier's lone airplane in 1991. Revenues total \$874,000 and allow profits of \$63,000 (operating) and \$22,700 (net). A Dornier 228 is acquired in 1992.

Services are maintained in 1993–1999, during which years managing director Capt. N. J. Harris' concern removes its Dornier and replaces it with a second PBN-2T.

MAS AIR, A.S.: Havalimair ic Hatlar, Binasi Kat 3, Yesilkoy, Istanbul, Turkey; Phone 90 (212) 663-0403; Fax 90 (212) 574-0553; Code MSE; Year Founded 1994. Established at Istanbul in late 1994, Mas Air begins domestic and regional revenue passenger and cargo services with three leased Antonov An-24RVs.

Flights continue in 1995–2000. During these years, CEO Ali Sen's fleet is altered to include 2 CASA C-212-100 Aviocars, 1 Shorts 360-100, 1 Bell 222, and 1 Bell 206L LongRanger.

The company is grounded in January 1999 when Clackburne Airfield is temporarily closed by the volcanic activity of Mount Chance.

MAS AIR (AEROTRANSPORTES MAS DE CARGA S.A. de C.V.): Almacen 22, Aeropuerto Internacional, Mexico DF, 155520, Mexico; Phone 52 (5) 786-9555; Fax 52 (5) 786-9553; http://www.masair.com.mx; Code MY; Year Founded 1990. MAS is set up at Mexico City on December 12, 1990 to offer international and regional all-cargo charter services on behalf of Promotora Aerea Latinamericana, S.A. de C.V. A workforce of 63 is recruited by Director General/CEO Cristian Ureta, but given the state of the national economy, revenue operations do not immediately begin.

Finally, one each Boeing 707-320C and Douglas DC-8-61F are leased and nonscheduled operations commence on April 29, 1992. Over the next five years, freight is transported on an irregular basis from Mexico City and Cancún to Bogota, Lima, Los Angeles, Miami, New York, and Viracopos. A DC-8-71F joins the fleet.

In May 1997, the U.S. DOT grants the company permission to include Guadalajara as an intermediate point on all of its approved routes to the U.S.

Flights continue in 1998. A total of 80.34 million FTKs are generated by the 63-worker company.

Cargo traffic falls 21.4% in 1999 to 63.13 million FTKs. Sales of approximately \$60 million are generated.

A total of 167 are employed at the beginning of 2000, a gigantic 165.1% increase over the previous 12 months.

The fleet includes 2 DC-8-71Fs. In May, a DC-8-61F, previously operated by **Florida West International Airways**, is acquired. The B-707-320C is passed to **Mexicana Airlines, S.A. de C.V.**, which employs it to reactivate its Mexicarga, S.A. de C.V. division.

At the end of October, Eagle Global Logistics, new majority owner of **Miami Air International**, enters into a new strategic all-cargo alliance

with **LanChile Airlines, S.A.**, as well as the freight lines it controls, **Fast Air Chile, S.A.**, MasAir, and **Florida West International Airways**.

To assist with its efforts to increase freight income, **LanChile Airlines, S.A.** formally purchases a 25% stake in MasAir on December 22 for \$5.1 million.

MASLING COMMUTER SERVICES (PTY.), LTD.: Australia (1967–1982). Established in September 1967 as the airline division of the Cootamundra-based FBO Masling Aviation and Engineering, Ltd., the carrier acquires an initial fleet of 3 Beech B-80 Queen Airs. Scheduled flights are inaugurated linking the company's airfield with Sydney, Young, Temora, West Wyalong, and Condobolin.

Services are maintained to these destinations over the next 15 years, during which time frame the fleet is upgraded by the addition of four Embraer EMB-110 Bandeirantes. In 1971, the company takes 80% controlling interest in newly formed **Aeropelican (Pty.), Ltd.** Rising fuel prices and the effects of world recession conspire to force the carrier out of business in 1982.

MASON & DIXON AIR LINES: United States (1929–1930). M & D is formed at Detroit in the late spring of 1929 to offer multistop passenger flights to Cincinnati. A fleet of all-metal G-2W Flamingos are acquired and revenue service commences in July. Operations continue apace until winter when the carrier stands down.

Flights are resumed in May 1930. A Flamingo is lost in a September 16 accident at Boswell, Pennsylvania. Services cease on November 30, at which point the company has transported 2,028 passengers on the year.

MASSACHUSETTS AIR INDUSTRIES: United States (1964–1971). E. Anthony & Sons founds this third-level operation at New Bedford in the fall of 1964 to offer scheduled services to Nantucket. Employing Cessna lightplanes, the company begins revenue flights on November 17 and maintains them until the carrier is purchased by Ottaway Newspapers on February 1, 1966.

Although the fleet is upgraded in 1967 by the addition of a Cessna 402, daily roundtrips continue as before until 1971 when the company is purchased by and merged into **Executive Airlines**.

MASZOVLET. See **MALEV HUNGARIAN AIRLINES**

MATANE AIR SERVICES, LTD. See **QUEBECAIR, LTD.**

MATK RUSAVIA: Russia (1997–2000). The International Aviation and Transport Corporation MATK Rusavia is founded in Moscow in 1997 as a joint venture between a number of Russian aviation concerns. Among the 30 shareholders are the airlines **Avia Express Cruise** and **TransEuropean Airlines**; the spare parts and maintenance companies **Aviazakaz** and **Svetloyar Avia**; the ticket reservation system **MTK Sirena**; and the **AFES** insurance company. Boris Likhachev, the former department head of foreign relations at the Soviet Aviation Ministry, is named director general and company headquarters are set up in the same Moscow office building—indeed, on the same floor—as the Russian State Service of Civil Aviation (GSGA).

Among the activities of the new concern are the manufacture of flight data recorders and other avionics-related computer hardware and software and aircraft management and leasing. In early 1998, arrangements are completed by Rusavia to charter a number of Ilyushin Il-62Ms to **Aeroflot Russian International Airlines (ARIA)**. In the spring, Director General Likhachev approaches the GSGA for an operating certificate deemed necessary for the acquisition of Western-built jetliners, which would then be to be leased to other Russian operators. Plans, which are not fulfilled, are announced for the charter of five Il-96-300s and several unbuilt Tupolev Tu-204s.

During the remainder of the year and in the next two, MATK Rusavia also operates a number of foreign charters employing Il-62Ms,

including those coming back from ARIA. These flight activities proceed without incident or headline until the final quarter of **2000**.

As GSGA Director Alexander Neradko would reveal to the press on January 16, 2000, Rusavia takes on more business than it can handle for the busy period between Christmas and New Year's. Although the company held licenses and permits (some of which have apparently turned out to be forged) to fly tourists to destinations in Southeast Asia, a number of its IL-62s had technical problems. Thus, Rusavia did not have available aircraft to repatriate its travelers from Thailand, Indonesia, and other points on nine contracted return flights. Informed of the situation involving the Russian nationals, the GSGA contacts **Aeroflot Russian International Airlines (ARIA)**; **Domodedovo Airlines, Rossiya Air Company, and Pulkovo Airlines** and asks them, for the good of the image of Russia's airlines, to complete the flights. The four comply and have all of the tourists home by January 16.

The situation for Rusavia worsens at the end of December. A television crew from RTR, which has just finished putting together a report on the passenger-stranding story, is held up on the road out of Shermetyevo 1 Airport by a gang of masked men who beat them up and steal their tapes. Rusavia and Director General Likhachev are blamed for the attack on national television over the next several days. Russian Prime Minister Mikhail Kasyanov now calls in GSGA Director Neradko and demands that the GSGA investigate and take action. At New Year's, Rusavia's operating certificate is pulled and the government promises new regulations governing air charter operators.

MATSON AIR LINES: United States (1943–1948). Officials of the Matson Navigation Company, who had had their proposal for the start-up of an airline turned down in **1942** by the CAB, elect to try again in **1943**. On September 22, the company applies for authority to commence a scheduled air service from the U.S. West Coast to Hawaii. No action will be taken in **1944** due to World War II.

A Douglas C-54 is purchased in **1945**, converted to civil DC-4 standard, and christened *Sky Matsonia*. Meanwhile, T. A. Schmidt is appointed operations manager, Leigh Murphy becomes general manager, and E. L. Sloniger, an early colleague of Charles Lindbergh's, retires from **American Airlines** to become chief pilot.

While the CAB considers the 1943 Matson request, Capt. Sloniger initiates interim nonscheduled service with the *Sky Matsonia* from San Francisco to Honolulu on July 5. Flying through the night with company officials and a load of strawberries, the aircraft arrives at sunrise on July 6 and is met by a trio of Hawaiian hula girls. The first passenger flight to Honolulu is made by the *Sky Matsonia* from Portland on July 30.

Over the next 5 months, 105 flights will be made in which 1,444 passengers are transported, along with 60,889 pounds of freight.

Charter operations continue apace in **1947**. The most significant event of the year is the near crash of the second, newly received DC-4 with 33 passengers at Oakland, California, due to engine difficulties. The incident will be employed by author Ernest K. Gann as the basis for his noted 1953 novel *The High and the Mighty*.

As Matson's service grows and enjoys success, other carriers worry—particularly **Pan American Airways (PAA)**. Pan Am. now move to block Matson's certification and, joining forces with **United Air Lines**, begins to lower fares on its one-way San Francisco to Hawaii service from \$195 to \$135. Matson cannot afford to compete with these deep discounts and must abandon its Hawaii service. While awaiting the government's decision, it now undertakes nonscheduled ad hoc flights to destinations as diverse as Paris and New York. Many Puerto Ricans reaching New York from San Juan fly aboard Matson DC-4s.

On July 30, **1948**, the CAB rules against Matson and awards the Hawaii route it needs to **Northwest Airlines** instead. Within a month, Matson shuts the doors of its air transport division and sells both DC-4s.

MATTHEWS AVIATION (PTY.), LTD.: Australia (1933–1934). After obtaining a mail contract for a route between Launceston, Tasmania, and Whitemark on Flinders Island, 120 miles offshore, this small carrier

is formed at Melbourne in early January **1933**. Employing a Saro Windhover, service is inaugurated on January 23. Flight operations cease in February **1934**.

MAUI AIRLINES: United States (1985–1988). In addition to scenic charters operated out of the company's base at Kahului on Maui, this small third-level carrier inaugurates multiple daily nonstop flights from Kahului to Honolulu on February 1, **1985** with 1 de Havilland Canada DHC-6-200 Twin Otter and 1 Piper PA-31-350 Navajo Chieftain.

In **1986–1987**, President Caleb K. Zia's airline is transferred to Guam where its 3 DHC-6s and 2 Navajo Chieftains undertake scheduled frequencies to Rota, Saipan, and Tinian. The Pipers are withdrawn in **1988** as Daniel Kong succeeds Zia as president. In deep fiscal difficulty, the company fails late in the year.

THE MAUI COMMUTER: United States (1975–1978). Jack Holman and Robert Frost establish **Ananda Air** at Kahului in late **1975** to offer scheduled passenger and cargo flights. Quickly changing the corporate identity to that of The Maui Commuter, the two inaugurate flights to Honolulu, Molokai, and Lani with 1 each Piper PA-31-310 Navajo and PA-34 Seneca.

Service continues until the company goes out of business in **1978**.

MAVRIK AIRE: Box 2157, Kenai, Alaska 99611, United States; Phone (907) 628-7457; Fax (907) 262-6790; <http://www.mavrikaire.com>; Year Founded 1998. Mavrik Aire is established at Kenai in **1998** to provide bush charter services. Employing a pair of Cessna 182 Skylanes, scenic tours, fishing and hunting trips, and bear-viewing flights are begun into the surrounding region.

MAVERICK AIRWAYS (1): United States (1974–1975). Maverick is set up at Eagle Pass, Texas, in **1974** to provide scheduled passenger and cargo services to San Antonio. Piper PA-32 Cherokee Six daily roundtrips are duly inaugurated, but cannot be maintained beyond **1975**.

MAVERICK AIRWAYS (2): United States (1994–1997). Maverick Airways Corporation, a privately held concern with 35 shareholders, is established at Denver in **1994** to review and promote regional air transportation in the Rocky Mountain area. Pat Carroll is chairman of the organization, with C. Cody Diejroger as president/CEO.

The decision to inaugurate regional and domestic scheduled and non-scheduled passenger services is taken in mid-**1996**. A workforce is recruited and 2 de Havilland Canada DHC-7-102s are leased from **Voyageur Airways, Ltd.** of Sudbury, Ontario.

The new entrant receives its FAA operating certificate on November 14. Charter flights to the Colorado communities of Grand Junction and Steamboat Springs commence on December 2. Final authorization from the U.S. DOT is received after the company submits its financial documents.

Scheduled roundtrip services from Denver to Steamboat Springs begins on January 20, **1997**. The next day, scheduled roundtrip frequencies are launched from Denver to Grand Junction.

In March, a marketing and code-sharing agreement is signed with **Frontier Airlines (2)**. The arrangement will connect passengers arriving at Denver aboard Frontier flights with Maverick's service to Steamboat Springs and Grand Junction.

Citing lack of financial return, scheduled frequencies are suspended on May 29 as the two-plane carrier returns to charter work. Passengers with Maverick tickets are able to employ them on **United Express (Mesa Air Group)** services.

The company shuts its doors by summer's end. During those months when it is in operation, it transports a total of 10,606 customers.

MAXAIR: W6381 Columbia Drive, Outagamie County Regional Airport, Appleton, Wisconsin 54914, United States; Phone (800) 833-1544; Fax (920) 738-3026; <http://www.maxair-inc.com>; Year

Founded 1969. Maxair is established at Appleton in 1969 to provide executive and small group passenger charters throughout northern Wisconsin and surrounding areas. Flights continue without headline or incident during the next 31 years, during which time a second base is set up at Straubel Airport in Green Bay.

In 2000, Charter Manager Patricia Roovers is able to book flights to over 12,000 airports nationwide, using a fleet of Beech 55 Barons, Piper PA-31-350 Navajo Chieftains, Cessna 414s, and Beech Super King Air 200s.

MAXAIR, A.B.: Sweden (1998–2001). Max Renard founds this third-level operation at Malmo in the summer of 1998 to offer regional flights linking southern Sweden with Germany and Norway. Employing two Fairchild Metro IIs, scheduled roundtrip revenue flights to Hamburg and Oslo commence on September 1.

Service is maintained in 1999. A SAAB 340B is received at the end of November and is placed into service on a route from Sturup International Airport in Sweden to Oslo, Norway, replacing a Metro II.

On August 14, 2000, twice-weekday return flights are initiated from Malmo to Karlstad. A second SAAB 340B arrives during the fall.

Maxair will cease operations on March 31, 2001.

MAY AIR X-PRESS: Rte. 3, P.O. Box 236, New Boston, Texas 75570, United States; Phone (903) 628-6446; Fax (903) 628-5044; Year Founded 1990. Thomas W. May founds this Part 135 all-cargo operation at New Boston, Texas, in 1990 to provide on-demand freight charters to local destinations on behalf of larger express carriers. By 1999, the company fleet includes 8 Beech 18s and 1 Douglas DC-3.

MAYA AIRWAYS, LTD.: Belize (1961–1997). This small, privately owned national carrier is founded by a group of local businessmen, headed by British expatriate Gordon Roe, at Belize City in the spring of 1961. It is established as a division of Maya Corporation, Ltd., with the purpose of replacing **British Honduras Airways, Ltd.** Charter and scheduled passenger services are begun and maintained to the local communities of Belize City, Corozal, San Pedro, Sartaneja, Puento Gorda, Independence, Orange Walke, and Dangriga.

Four Britten-Norman BN-2 Islanders are placed into service and Roe's son, Trevor, joins the company in 1968, becoming general manager in 1983, the same year Sir. W. H. Courtenay becomes chairman.

By 1984, the employee population of Managing Director Gordon A. Roe's carrier is 47 and the fleet comprises 4 Britten-Norman BN-2 Islanders and 3 Cessna 206s. In June, an Islander is sold to Jamaica. The workforce is reduced to 34 in 1985 and a Cessna 206 is replaced by a Cessna 182.

In early 1986, the British Army contracts with the company to operate rest and recreation flights from Belize City to Chetumal, Mexico. Despite the fact that MAL has obtained government authority, the first Islander to arrive is impounded by Mexican officials. The action ends the army arrangement.

In 1987 the fleet is altered by the deletion of the Islanders and their replacement by three BN-2A Trislanders. Scheduled service is inaugurated to Plancencia.

A fourth BN-2A is added in 1988, followed by a fifth in 1991. At this point, the Cessna 206s are withdrawn. Service is maintained throughout the nation in 1992–1993 by General Manager Trevor Roe's company as a Cessna 182 is acquired. A leased de Havilland Canada DHC-6-300 joins the fleet in 1994.

In 1995–1997, shareholding is divided between G. A. Roe & Sons, the Cloverleaf concern, and J. S. Shamon. Brian Roe is chairman, with Trevor Roe as executive director and Pablo Espat as general manager. Flights continue to domestic locations throughout Belize.

In December of the latter year, the local company Island Air is merged with MAL to create **Maya Island Airways, Ltd.**

MAYA ISLAND AIRWAYS, LTD.: 6 Fort Street, P.O. Box 458, Municipal Airport, Belize City, Belize CA, Belize; Phone 501 (2) 35794;

Fax 501 (2) 30576; <http://www.ambergriscaye.com/island>; Code MW; Year Founded 1997. The local Island Air is merged with **Maya Airways, Ltd.** in December 1997 to create MIAL. Brian Roe remains chairman, with Trevor Roe as executive director and Pablo Espat as general manager.

Revenue services continue with 5 Pilatus Britten-Norman PBN-2 Islanders and 1 each Cessna 207A, C-172, and C-208 Caravan I.

In 1999, a homepage is opened on the World Wide Web. Destinations visited in 2000 include Caye Caulker, Corozal, Dangriga, Placencia, Punta Gorda, and San Pedro in Belize and Tikal in Guatemala.

MAYAN WORLD AIRLINES, S.A.: 7A, Avenida 6-53, Zona 4, Oficinas 49Y50, Edificio El Triangulo, 2nd Floor, Guatemala City, Guatemala; Code EY; Year Founded 1997. MWA is set up at Guatemala City in January 1997 to promote the Central American "Mayan Route" cultural tourism program of its owners, a tourism concern that also operates various Central American hotels, travel agencies, and rent-a-car offices.

Outfitted with a single Aero Internacional (Regional) ATR42-320, the company inaugurates revenue services on February 14 with thrice-weekly flights to Flores.

Following the delivery of a second ATR later in the spring, flights are also started to Cancún, Belize, San Pedro Sula, Managua, and Havana.

Although frequencies are maintained during the remainder of the year and into the next, the company is unable to achieve economic viability. Consequently, the company shuts down on September 21, 1998. Efforts to find the funds with which to restart are initially unsuccessful.

A resumption of selected service with a Yak-40 is reported in late June 2000.

MAYFLOWER AIR SERVICES, LTD.: United Kingdom (1961–1964). Philip Cleife forms MASL at Plymouth Airport in early 1961. In June, Cleife obtains a de Havilland DH 89A and on the 13th of the month, while awaiting word on his route request filed with the Air Transport Licensing Board (ATLB), undertakes a proving flight from Plymouth to St. Mary's, Scilly Islands. Ad hoc charter flights continue during the remainder of the year, with a total of 258 passengers conveyed; ATLB approval for a scheduled service is received on December 5 for the route previously flown on an nonscheduled basis.

Scheduled flights to the Scillies from Plymouth begin on February 26, 1962 and continue until October 13. Meanwhile, the company's Dragon Rapide also flies replacement service for both **British European Airways Corporation (BEA)** and **Dan-Air, Ltd.** during the summer.

A total of 1,678 passengers are carried on the year.

Scheduled services to St. Mary's resume on March 9, 1963 and a second DH 89A is purchased on March 28, along with the services of a second pilot. Extensions are also flown from the Scilly Islands to Exeter and Newquay during the summer. On July 20, the company's 1961 Dragon Rapide flagship crashes at St. Mary's and is destroyed; founder, managing director, and chief pilot Cleife is badly injured.

The second DH 89A maintains scheduled services until September 30. **British Westpoint Airlines, Ltd.** unsuccessfully attempts to purchase the carrier in the fall; however, it is sold to **Scillonian Air Services, Ltd.** in December, being allowed to continue operations under its own name.

Bookings for the year total 2,679.

The Plymouth–Scilly Islands route is resumed on March 25, 1964. A leased Piper PA-23 Aztec begins flying from St. Mary's to Exeter the next day. Scillonian's Piper Aero Commanders also fly certain Mayflower services during the spring until another DH 89A can be obtained during the first week of May. It is placed in service on May 13. Late in the month, **British Westpoint Airlines, Ltd.** makes a successful tender and by the end of the summer season, Cleife's operation is totally merged.

MAYFLOWER AIRLINES: United States (1936–1945). Established in Boston in the early spring of 1936, officials of Mayflower Airlines

purchase 2 Stinson Model U Tri-Motors from **American Airlines** on April 4, naming one *Oaks Bluff Clipper*. In July, scheduled service is inaugurated to Nantucket via Provincetown, Hyannis, and Oak Bluffs with an extension from Nantucket to Providence via Oak Bluffs and New Bedford.

In October 1937, direct Boston–Springfield flights begin. The route is suspended after September 3, 1938 when one of the Stinson Model Us is destroyed in a ground accident and fire at Nantucket.

The remaining Model U maintains the Nantucket service and even operates a Boston to Hyannis via Falmouth route in 1939. However, the company goes dormant after the operating license of its aircraft expires on July 15, 1941. Its routes and certificate are purchased by **Northeast Airlines** on January 5, 1945.

MAYO AVIATION: Centennial Airport, Englewood, Colorado 80112, United States; Phone (303) 790-9777; Fax (303) 790-4909; Year Founded 1975. Mayo is set up at Denver by Bill and Gwen Mayo in 1975 to provide executive and small group passenger charters, many in support of the ski industry. The owners, members of the Minnesota Mayo Clinic family who had relocated to Colorado a decade earlier, have elected to become involved in civil aviation as a tax shelter for income derived from their chain of gas stations.

Operations continue apace during the remainder of the decade and through the 1980s. Late in the decade, the company encounters problems, including fiscal losses and safety concerns raised by the FAA. Choosing not to be a manager, cofounder Bill May leaves day-to-day operations to his wife and his son, Bill Mayo III, who is named VPO in 1987.

Former AMR Services Vice President Gilbert Wolin is brought in as a consultant in 1993. Among the first moves made at his recommendation is the transfer of the carrier's base from Stapleton Airport to Centennial. Over the next few years, Wolin, working with Mrs. Mayo and her son, energizes the company's public services, reservations, and maintenance departments, while also increasing its charter services. In 1996, Wolin is named president/chief operating officer, while Robert G. Robuck becomes chief financial officer. The following year, Bill Mayo III becomes CEO.

By 1998, the Mayo Aviation mission has been increased to the provision of nonscheduled services throughout the U.S., Canada, and Mexico. Operations Director Ben Letterhos oversees the work of 22 pilots and schedules 4 Learjet 35A Century IIIs, 1 British Aerospace BAe (HS) 125-731 Hawker, 3 Beech Super King Air 200s, and 2 King Air 90s from Colorado and 4 King Air 90s from Flagstaff, Arizona.

Flights continue in 1999–2000.

MAYRON AND CAMPBELL AVIATION, LTD. See **SASKAIR (SASKATCHEWAN GOVERNMENT AIRWAYS, LTD.)**

MBA AIRLINES OF PAPUA NEW GUINEA (PTY.), LTD.: Jacksons Airport, Box 170, Port Moresby, Papua New Guinea; Phone 675 325-0555; Fax 675 325-2219; <http://www.mbapng.com>; Code CG; Year Founded 1994. During 1994, the 250-employee, Port Moresby-based **Milne Bay Air (Pty.), Ltd.** of Chairman John R. Wild and Managing Director Simon D. Wild is renamed. The initial fleet includes 3 Beech King Air 100s, 1 Cessna 550 Citation II, 2 de Havilland DHC-6-200 Twin Otters, 1 DHC-6-300, and 1 Dornier 228-200. During the year, 5 additional Dornier 228-200s, 4 DHC-6-300s, and 2 Super King Air 200s will be added, the latter replacing the 3 King Air 100s. The request for a Dornier 328-100 is cancelled and replaced with an order for a Beech 1900D.

From its base at Port Moresby, the company continues to offer scheduled flights to Alotau, Amazon Bay, Balimo, Baimuru, Cape Vogel, Daru, Fane, Hagen, Ihu, Kerema, Kikori, Kiunga, Kuri, Lae, Lousia, Mendi, Mount Misima, Porgera, Tabubil, Tari, Tufi, Vivgani, Wanigela, and Safia.

On July 12, 1995, just after takeoff from Alotou on a service to Dagura, an in-flight fire develops on a DHC-6-300 with 2 crew and 13

passengers; the Twin Otter goes out of control and crashes into shallow water two km. off the runway. There are no survivors.

While on a charter on July 9, 1996, a DHC-6-300 with 1 pilot and 19 passengers, strikes a 9,200-ft. mountain 5 mi. from Mendi; there are no survivors.

At the request of the Papua New Guinea government, MBA, in 1996, embarks on a program to raise its operations from charter to the scheduled airline level. Plans are made for the receipt of a license for international airline operations.

While on a July 9 charter, a DHC-6-300 with a pilot and 19 passengers, strikes a 9,200-ft. mountain 5 mi. from Mendi; there are no survivors.

During the first quarter of 1997, the carrier makes a significant purchase from Bombardier. In addition to one each DHC-8-101 and DHC-102 formerly operated by **NorOntair (Ontario Northland Air Services, Ltd.)**, plus four of its six DHC-6-300s, MBA orders a pair of DHC-8-200s for delivery in September 1998.

Meanwhile, in March, MBA receives its certification as Papua New Guinea's second international airline and becomes a regional subsidiary of **Qantas Airways (Pty.), Ltd.** New routes are started from Gurney–Carins, Port Moresby–Cairns–Townsville, Daru–Cairns, and Daru–Merauke (Irian Jaya). At this point, the fleet is also boosted by the addition of two Beech 1900Ds.

No sooner has the carrier launched its new routes than some of them have to be suspended due to the Asian currency crisis that begins in late August. Delivery of the Dash-8-200s is cancelled.

The first class of cadets is graduated from the Coolangatta-based MBA Flight Training Australia division in September 1998 and all begin their flying careers with the parent airline in Papua New Guinea. Unhappily, due to economic difficulties, service to Australia must be halted.

Flights continue in 1999–2000. As the Asian economic situation improves during these years, the routes suspended in 1997 are resumed. At the start of the new millennium, MBA employs 65 pilots and operates 1 each DHC-8-101/102, 2 Beech 1900Ds, 7 DHC-6-300s, and 1 Super King Air 200. The 1900Ds are now mainly employed on corporate charters, many made for Chevron Niugini (Pty.), Ltd., which remains the largest corporate client.

MC AVIATION: 7240 Hayvenhurst Ave., Van Nuys, California 91406, United States; Phone (818) 904-9860; Fax (818) 904-0234; Year Founded 1995. Joe and Linda McGuire establish this fleet management and executive charter concern at Van Nuys Airport in 1995 to provide worldwide passenger flights. Nonscheduled services begin and continue with one each Grumman G-1159A Gulfstream IIIs and a British Aerospace BAe (HS) 125-700 Hawker.

MCCARTHY AIR ALASKA: Box 16, McCarthy, Alaska 99588, United States; Phone (907) 554-4440; <http://www.mccarthyair.com>; Year Founded 1975. Gary and Nancy Green establish this small air taxi in 1975 to fly backpackers, wilderness hikers, and remote campers into the Wrangell/St. Elias National Park area. Flight-seeing tours are also offered over glaciers, icefalls, and mile-high cliffs. Lightplane operations continue.

Lightplane operations continue and in 1999 a homepage is opened on the World Wide Web.

MCCLAIN AIRLINES: United States (1983–1988). Former **Trans World Airlines (TWA)** and Marriott hotel executive Thomas J. A. McClain establishes this niche carrier at Phoenix, Arizona, in April 1983. Plans are made to inaugurate all first-class Boeing 727-200 services at coach-class rates to Chicago, New York, and Dallas (DFW).

In mid-1984, company officials discuss the possibilities of a merger with St. Louis-based **Air 1**, but negotiations fail. By December 25, 1985, McClain has acquired over \$50 million in equity and lease financing.

Under the government's "use it or lose it" certification rule, McClain officially inaugurates services on September 25, 1986 with a lone B-727-100 roundtrip flight from Chicago (ORD) to Rockford, Illinois.

Requiring a break-even load factor of 32 passengers, executives initially expect to board 18–20 on every flight and build from there with such amenities as extra flight attendants, meals prepared in flight in "flying kitchens" and served upscale with silver and china, and telephones available at every seat.

B-727-100 twice-daily all first-class scheduled roundtrip services are finally inaugurated from Chicago to Los Angeles and to Phoenix on October 15, with a single daily Phoenix–Los Angeles frequency also available. These services replace the Rockford expedient.

On November 1, company officials announce that it will reward passengers who, in the next 2 years, accumulate 125,000 miles with the free use of one of five luxury European automobiles for a year.

These initiatives generate little traffic; 2–4 passengers are the norm for the first several weeks, and there is no positive income. As a result, three of the company's five B-727-100s are grounded on February 4, 1987. However, the payment dispute causing this action is set aside the next day, allowing flights to resume. Still faced with its lessor's debts, McClain stops operating on February 23. Chapter XI bankruptcy is declared in March and although efforts are made during the remainder of the year to restart operations, they are all unsuccessful.

As a consequence of the company's inability to resume services, the DOT, early in 1988, revokes McClain's fitness certificate, forcing it to turn in its operating certificate in May.

MCCULLOCH INTERNATIONAL AIRLINES: United States (1969–1979). Long Beach, California-based MA is organized in mid-1969 to transport potential McCulloch Properties real estate customers on site visitation flights. Lift is provided with a fleet of seven previously employed Lockheed L-188A Electras.

In order to convert its subsidiary into a strong and active full-service charter operator, McCulloch in 1970 purchases **Vance International Airways** from its owner Vance Roberts and merges it, keeping the McCulloch name. Following acquisition, the amalgamated carrier offers nonscheduled charter flights over Vance's old routes to Mexico and Canada.

Revenues for the year are \$2,423,772. Fiscal losses are suffered: \$101,763 (operating) and \$51,616 (net).

McCulloch changes its name to McCulloch International Airlines in early 1971 and is outfitted with the seven L-188As of the previous operation. Four additional Lockheed units and nine Douglas DC-8s are also obtained.

Enplanements for the year total 94,800.

Flying 9 Douglas DC-8s and 11 Electras, the country's 7th largest supplemental carrier in 1972 employs 245.

Passenger boardings increase 21% to 120,000 and revenue passenger miles flown advance 26% to 171 million. Income advances to \$15.38 million, but expenses advance even more, up to \$16.16 million. Consequently, losses continue: \$781,000 (operating) and \$516,000 (net).

The workforce in 1973 totals 190. Customer bookings fall 32.4% to 69,000. Despite this downturn, the company is able to keep its expenses under control.

Revenues total \$9.93 million and costs are \$9.19. The previous year's losses are turned around and shareholders see an operating profit of \$736,000 and a net gain of \$531,000.

The U.S. economic downturn brings a very bad year to McCulloch in 1974. In an effort to cut costs, many aircraft are grounded and sold (including all of the DC-8s) and the workforce is cut to only 94 by year's end.

Passenger boardings drop again, down by 48% to 36,000. Income falls to \$8.61 million while expenses are slightly higher at \$8.66 million. The operating loss is \$49,000. Still, a \$212,000 net profit is realized, largely as the result of assistance from the parent real estate firm.

The workforce in 1975 is 140. Four leased B-720-022s join the four Electras remaining in the fleet. In October, 81% shareholding is ac-

quired by the FGH Financial Corporation. Plans are made to expand into Mexican and Hawaiian markets.

Passenger bookings skyrocket 47.2% to 53,000. Although revenues total \$7.78 million, expenses are up to \$8.38 million. A \$600,000 operating loss is taken, although other arrangements allow an \$87,000 net profit.

The fleet in 1976 comprises 4 leased Boeing B-720-022s and 4 Lockheed L-188A Electras. One of the latter is contracted in March to transport the entourage of singer Elvis Presley during a U.S. concert tour; "the King" travels in his own Convair CV-880 *Lisa Marie*.

Customer bookings decline 15.3% to 45,000. Expenses grow again this year, rising to \$10.11 million on revenues of \$8.23 million. The operating loss climbs to \$1.87 million while a \$2.18-million net loss is difficult to digest.

Another Electra is withdrawn in 1977 as the fiscal situation continues to deteriorate. Figures are unavailable for either traffic or revenues.

In 1978, President John E. Gallagher oversees a workforce of 310 and a fleet increased only by the addition of a Grumman Gulfstream. No passengers are carried and freight FTKs operated totals only 149,000.

Unable to weather declining traffic and higher fuel prices, the carrier ceases operations in 1979.

MCGEE AIRWAYS. See **ALASKA AIRLINES**

MCKINLEY AIR CHARTER (PTY.), LTD. (MACAIR): P.O. Box 7191, Garbutt, Townsville, Queensland, 4814, Australia; Phone (07) 4728 2403; Fax (07) 4775 5076; <http://www.macair.com.au>; Code CC; Year Founded 1963. Macair is established at Townsville in 1963 to provide passenger and cargo charters, particularly on behalf of the energy industry, throughout the northwest portion of the Australian state of Queensland.

This lightplane operation is purchased by the Collings family in 1992, at which point the carrier enhances its corporate services, while also becoming an affiliate of **Qantas Airways (Pty.), Ltd.**

During the remainder of the decade, the fleet of Managing Director Peter Collings undertakes scheduled service from Townsville and Brisbane to Cloncurry and Mount Isa, from Macay to Brampton Island (site of P&O Australia Resorts), and from Cairns to Cooktown and Mount Isa. Flights are also offered to Lizard and Dunk Island, where P&O Australia Resorts also maintains holiday facilities.

A large number of fly-in/fly-out services are provided for corporate clients: 276 km. SW from Cairns to the Kidston gold mine site at Placer Dome; 230 km. N from Mount Isa to the Century mine at Pasmenco; 704 km. W from Townsville to the Selwyn mine; 733 km. W from Townsville to the Eloise mine of Amalgamated Resources; from Townsville and Brisbane to the Ernest Henry Mine located 40 km. N of Cloncurry; 707 km. W from Townsville to the Osborne mine at Placer Dome; and 664 km. W from Townsville to the Cannington mine of BHP Minerals.

Enplanements for scheduled services total 30,000 in 1999. During the year, the company becomes a feeder affiliate of **Qantas Airways (Pty.), Ltd.**

The workforce at the beginning of 2000 totals 76. By now, Peter Collings is one of three board members, one of whom includes his managing director successor Randal McFarlane. The fleet now includes 2 SAAB 340Bs, 1 Fairchild Metro 23, 4 Embraer EMB-110P1 Bandeirantes, 3 DHC-6-300 Twin Otters, and 4 Fairchild Metro IIIs, 1 of which is chartered from **Pelair Aviation (Pty.), Ltd.**

AsiaPulse News reports on May 12 that the company will soon be merged with **Transtate Airlines (Pty.), Ltd.**, with the Macair name surviving. The Cairns-based small regional, formed in 1996 as the airline subsidiary of Transjet Corporation (Pty.), Ltd., which also operates Jetcraft Aviation (Pty.), Ltd., operates scheduled services to Cooktown, Normanton, Karuba, Mornington Island, and Mount Isa in northern and western Queensland. Under a long-term contract with P&O Australian Resorts, it also flies to Dunk, Brampton and Lizard Islands.

When the event occurs a month later, the passenger activities of Transtate are passed to Macair, while **Jetcraft Aviation (Pty.), Ltd.** continues to provide express freight services. The Macair fleet is now enlarged to over 30 aircraft, including several additional Metro IIIs.

Although the Transtate homepage on the World Wide Web will remain up in early 2001, visitors to it are forwarded to the Macair site.

MCMAHON HELICOPTER SERVICES: Executive Heliport Building, 8351 Ronda Dr., Canton, Michigan 48187, United States; Phone (313) 459-5980; Fax (313) 459-6315; Year Founded 1981. McMahon is established by Brian McMahon at Canton, Michigan, in 1981 to provide air taxi and air ambulance services, as well as external load, aerial photography, forest fire control, and rescue services. Nineteen years later in 2000, President McMahon oversees a 12-person workforce and operates a fleet that comprises 4 Bell 206B JetRangers, 2 Bell 206L LongRangers, 1 Bell 222, and 1 Sikorsky S-58.

MCNEELY CHARTER SERVICE: 737 South Airport Road, West Memphis, Arkansas 72301, United States; Phone (870) 735-0207; Fax (870) 735-0855; Year Founded 1985. MCS is established at West Memphis, Arkansas, in 1985 to offer all-cargo services to regional destinations. A decade later in 1994, Reggie Hopwood is president and he employs 10 full- and two part-time pilots. From the corporate base at Memphis, 1 Piper PA-34-200 Seneca II is flown in passenger configuration, along with 1 Mitsubishi Mu-2B, 1 Fairchild Metro II, and 2 Douglas DC-3Cs in cargo configuration.

Hopwood also operates a passenger Mu-2B from Cape Girardeau, Missouri and a Beech 18 freighter from Dexter, Missouri. Destinations are visited throughout the U.S. and Canada, as well as Alaska and Mexico.

While on approach to West Memphis, Arkansas, following a November 7, 1997 positioning flight from Gulfport, Mississippi, a DC-3C with two crew loses both engines. A gear-up landing is made on a Mississippi River sandbar, during which the No. 1 engine separates. Neither flyer is badly hurt.

Although the fleet and market remains the same during the remainder of the decade, the workforce grows to include 14 full-time and 3 part-time staff.

MD EXPRESS. *See* MODILUFT

MED AIRLINES, S.p.A.: Via Virgin, Palermo, Sicily, 90146, Italy; Phone 39 (0923) 546 288; Fax Code 39 (0923) 871 873; <http://www.medairlines.it>; Code M8; Year Founded 1997. Franco Castiglione establishes Med Airlines at Trapani-Birgi Airport in Sicily in late 1997 to inaugurate scheduled flights around the island and to the mainland. Orders are placed for a pair of SAAB 2000 turboprops, the first to be operated in scheduled Italian service.

The new entrant receives its air operator's certificate on March 23, 1998. With the SAABs, plus a leased Avions de Transport Aerien ATR42-320 on hand, revenue flights commence on April 1. Initial destinations visited include Parma, Olbia, and Rome. On November 1, daily nonstop SAAB 2000 return service is inaugurated between Genova and Bari. Within two years, the company is operating regularly scheduled roundtrips to Bari, Bergamo, Bologna, Genoa, Lampedusa, Milan, Palermo, Parma, Rome, and Verona.

By the beginning of 2000, the fleet has been revised to include 3 SAAB 2000s. A BAe 146-200 is wet-leased by **Flightline, Ltd.** to the new Italian regional **Goldwing Airlines, S.p.A.** in mid-December, allowing that carrier to inaugurate daily roundtrip service between Taranto and Rome on December 20.

On December 23, a SAAB 2000 is leased to **Federico II Airways, S.p.A.**

MED AVIA (MEDITERRANEAN AVIATION COMPANY, LTD.): P.O. Box 48, M.I.A., Lura, Malta; Phone 356 689 760; Fax 356 689

841; Year Founded 1978. Med Avia is organized at Valletta in August 1978 by the governments of Malta and Libya to undertake international charter and contract service flights, many in support of the oil industry in Libya. The specific shareholders are Libyan Arab Foreign Investment Company (50%), Libyan Arab Maltese Holding Company, Ltd. (25%), and **Air Malta, Ltd.** (25%). The latter, under contract, provides management and technical support as well as a fleet of 5 CASA C-212-100/200 Aviocars. These are employed to inaugurate services in September 1979.

Services continue largely without change or notice for the next decade. In 2000, the fleet comprises 4 Aviocars. Chairman George Casar and Managing Director I. A. Zmirli oversee a workforce of 40. During most of these years, all transnational operations are halted by the UN Lockerbie embargo.

MEDITERRANEAN AVIATION COMPANY, LTD. *See* MED AVIA

MEDITERRANEAN EXPRESS, LTD.: United Kingdom (1987-1989). MEL is established at London (LGW) in January 1987 with Clair M. Waterbury as chairman. Two British Aerospace (BAC) 1-11-400s are leased and their capacity is booked for seasonal passenger charter services linking the carrier's base and Luton Airport with destinations in the Mediterranean and North Africa. Operations are inaugurated during the fall and continue apace for another year until financial reversals cause cessation.

The failed charter operation is acquired by the TEA Group in January 1989 and is reformed at Birmingham as **Trans-European Airways-U.K., Ltd.**

MEDJET INTERNATIONAL: 4900 69th St. North, Birmingham, Alabama 35206, United States; Phone (205) 592-4460; Fax (205) 592-4556; Year Founded 1976. Medjet is established at Birmingham in 1976 to provide passenger charters, specializing in air ambulance flights. By 2000, Vice President Phillip Morris schedules 2 medically equipped aircraft, both Learjet 35A Century IIIs.

MEGAPODE AIRWAYS, LTD.: Solomon Islands (1963-1968). Named for a family of large-footed South Pacific birds, MAL is formed by Laurie Crowley at Honiara in 1963 to offer internal services throughout the Solomons Islands area. Employing a Piper PA-23 Aztec, Crowley initiates charter flights from World War II's famous Henderson Field on Guadalcanal. Within a year, Megapode acquires a former British Ministry of Aviation de Havilland DH 104 Dove at Adelaide, Australia, and has it refurbished and placed into service on regularly scheduled services.

Destinations visited by the Dove in 1964-1968 include Munda and Segi Point on New Georgia, Yandina in the Russell Islands, Kirakira on San Cristobal, and Auki on Malaita Island. On May 1 of the latter year, Megapode is taken over by **Macair (Melanesian Airline Charter Company [Pty.], Ltd.)** of Papua New Guinea and is renamed **Solair (Solomon Island Airways, Ltd.)**.

MELILA JET, S.A.: Calle Orense 4, Madrid, E-28020, Spain; Phone 34 (91) 555-8004; Fax 34 (91) 555-0431; Code MJT1; Year Founded 1995. A. Paukner, a private Spanish company with travel agency interests, establishes Milila at Madrid in 1995. Ownership is divided between Paukner (78%) and other investors (12%). Gerd Peter Pauker is appointed president and revenue flights are undertaken to various holiday destinations with a pair of British Aerospace BAe 146-100s wet-leased from **Pan Air Lineas Aereas, S.A.**

Service continues in 1996-1998. When **Pan Air Lineas Aereas, Ltd.** exits the scheduled airline business during the latter year, use of the BAes ends. Milila turns to the use of executive jets for small group and VIP flights.

MELILLIAN JET, S.p.A. See **PAN AIR LINEAS AEREAS, S.A.**

MEMPHIS JET: Memphis International Airport, Memphis, Tennessee 38116, United States; Phone (901) 346-7111; Fax (901) 346-6622; <http://www.memphisjet.com>; Year Founded 1995. Following its takeover of Air Path and its single Learjet 55 Longhorn, Memphis Jet is set up by Kristi Jernigan and her brother-in-law Cecil Jernigan at the Memphis International Airport in August 1995 to provide domestic executive and cargo charters and patient transport. President Kristi and General Manager Cecil bring former AMR Combs pilot Buzz Carter into the company as chief operating officer. A business license is sought in September, a Learjet 35 and a Beech Super King Air 200 are acquired in October, and with the license in hand, flights commence in December.

Flights continue apace in 1996–2000. Among the special charters operated are those on behalf of local sports teams and for visitors wishing to view the Masters Golf tournament at Augusta, Georgia. New Orleans proves a popular destination.

MERCER AIRLINES: United States (1948–1976). Formed at Burbank, California, in 1948, this supplemental undertakes intrastate passenger and cargo services with a fleet of 3 war-surplus Douglas C-47s. Important to the company's long-term survival are contract service arrangements made with the USN for flights to Point Mugu, San Nicholas Island, Long Beach, San Diego, and San Clemente Island in California.

Operations continue apace during the remainder of the decade and throughout the 1950s. As DC-6s become available, USN-chartered frequencies are also inaugurated between Honolulu, Christmas Island, and Tarawa. The DC-6A prototype (the former military type XC-112A) is converted to civilian standard in July 1959 and acquired.

By the 1960s–1970s, President Thomas G. Vander Molen and his fellow owners operate a fleet of 3 DC-3s, 3 DC-6s, 1 DC-6A, and 1 BAC 1-11-400.

A DC-3 makes an emergency landing at Point Mugu, California, on August 4, 1972 and catches fire; although the aircraft must be withdrawn, there are no fatalities.

Just after takeoff from Burbank on a February 8, 1976 ferry service, Flight 901, the DC-6A with five crew and one passenger suffers propeller blade separation from the No. 3 engine. The plane attempts to divert to Van Nuys, but crashes onto a golf course a mile short of the runway (three dead).

The company is now reformed and its corporate identity is changed to **Pacific American Airlines**.

MERCHANT EXPRESS AVIATION SERVICES, LTD.: Nigeria 1990–1995. MEASL is established at Lagos on May 11, 1990 to offer on-demand and contract freight flights to destinations throughout Africa. The concern is a subsidiary of the air freight forwarder Merchant Express Aviation Services UK, Ltd. and Elvis Emecheta is chairman, with Capt. Shina Akinfenwa as managing director.

Regular revenue services commence from a base at Ostend, Belgium, on October 4, 1994, with a single leased Boeing 707-323C first flown by **American Airlines**. During the remainder of the year and into 1995, the company offers ad hoc subcharter services for a number of government and airline customers, including the UN Department of Humanitarian Affairs.

Following several years of political turmoil in Nigeria that has ended constitutional government, the Commonwealth suspends the country. The economic impact of this move dooms the airline.

MERCURY AIRLINES, LTD.: United Kingdom (1957–1964). On Jersey in January 1957, Lord Peter Calthorpe registers **Overseas Air Transport (Jersey), Ltd.** as an airline. The first aircraft, a de Havilland DH 114 Heron 1B, is delivered in March, but is immediately leased to **Dan-Air/Dan-Air Services, Ltd.** and **Cambrian Airways, Ltd.** As a result, the moribund company flies no services in either the start-up year or in 1958.

In late February 1959, the Heron 1B is returned, but in March it is leased out to **North-South Airlines, Ltd.** A second Heron 1B is acquired from **Silver City Airways, Ltd.** in December; it, too, is leased to North-South. Both aircraft now fly scheduled services for the lessee throughout 1960. At the end of the year, Lord Peter establishes a base at Manchester. Determined to enter the airline business under his own colors, he renames his concern **Overseas Mercury Airlines** or just **MAL**, as one Heron 1B comes off the North-South lease.

With ATLB permission, Mercury inaugurates scheduled service from Leeds and Manchester to Sandown, Isle of Wight, on May 20, 1961. The second Heron 1B comes off North-South lease in July. Also during the summer, Mercury joins North-South in operating **Air Safaris, Ltd.'s** Birmingham–Sandown services, as well as Cambridge–Jersey replacement service for **Derby Airways, Ltd.**

In September, the company undertakes, on behalf of **Jersey Airlines, Ltd.**, a scheduled route from Manchester to Bournemouth via Abington. Simultaneously, a Mooney M.21 is obtained to offer air taxi flights from Manchester Airport.

In January 1962, Mercury takes over an abandoned **North-South Airlines, Ltd.** Leeds to Isle of Wight scheduled service and is granted a scheduled frequency between Manchester and Exeter. The Heron 1Bs begin these flights in late spring, together with the offerings of the previous year. The Sandown route is now extended to Swansea.

Scheduled service continues to expand in 1963. On April 1, a direct Birmingham–Newcastle route is initiated; frequency increases on this service to five per week in July. As in 1962, inclusive tour and ad hoc charters are also provided.

A total of 12,845 passengers are carried.

A Douglas DC-3 is delivered to company headquarters at Manchester on April 17, 1964. It is placed in revenue service on April 23 with a charter from Birmingham to Amsterdam. Other charters are flown to Germany until June 1, when the American airliner is placed on the Sandown service. Liverpool–Isle of Wight service is inaugurated by Herons on May 30; the DH-114s maintain all of the previous year's scheduled services as well.

In October, five-times-per-week Manchester to Teesside scheduled service is launched. The company suddenly suspends all operations on October 31, placing all of its aircraft in storage at Manchester and they will never fly in company colors again.

MERIDIAN AIR COMPANY: PB 144, Moscow, 103473, Russia; Phone 7 (095) 913-1793; Fax 7 (095) 938-2216; Code MMM; Year Founded 1991. The executive charter operator Meridian is established at Moscow's Vnukova Airport on March 31, 1991. Eduard Kniagintchev is appointed managing director; however, there is a significant wait before services can begin. Eventually, a workforce of 18 is recruited and revenue flights are inaugurated on January 13, 1993, with a leased British Aerospace BAe 125-700 executive jet.

One-plane flights to western Russia and Europe continue during the remainder of the decade and into the new millennium.

MERIDIANA, S.p.A.: Zona Industriale A. Olbia, Sassari, I-07026, Italy; Phone 39 (789) 52 600; Fax 39 (789) 23 661; <http://www.meridiana.it>; Code IG; Year Founded 1991. To align with the Spanish sister carrier **Universair, S.A.** in which it enjoys part ownership, the Italian scheduled operator **Alisarda, S.p.A.** changes its name and corporate image on September 1, 1991.

Narcis Andreu, former CEO of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, is named chairman, Sergio Peralda, president, and Franco Trivia is appointed managing Director. Together they oversee a fleet comprising 3 British Aerospace BAe 146-200s (with orders outstanding for four more), 6 Douglas DC-9-51s, and 8 McDonnell Douglas MD-82s, 2 of which are leased. A single Bell 412 helicopter is also acquired. The workforce grows 12.8% to 1,139. The last significant even of the year is the introduction of the company's first business-class product, Electa Club.

The fixed-wing assets are employed to inaugurate scheduled passenger services from Florence to Zurich, Munich, and Frankfurt. Under both corporate names, enplanements for the year are up 10% to 1,701,379. Freight, on the other hand, declines 35.7% to 1.91 million FTKs.

The workforce is sliced by 25.4% in 1992 to 850 and the fleet is unchanged. In June, scheduled flights are initiated year-round from Verona to Rome and London (LGW). The company is now the largest privately owned airline in Italy.

Passenger boardings shoot up 14% to 1.9 million, of which 1.7 million are flown on domestic routes.

Airline employment in 1993 stands at 1,150, up 35.3% over the previous year, and the fleet includes 3 owned and 1 leased MD-83s, 2 chartered and 2 owned MD-82s, 5 owned and 1 leased DC-9-51s, 3 BAe 146-200s, and the Bell helicopter. Orders are placed for 4 Avro (BAe) RJ-85s.

Destinations visited from Olbia, Cagliari, Rome, Naples, and Palermo include each other plus Genoa, Milan, Pisa, Venice, Bologna, Catania, Florence, Barcelona, Frankfurt, London (LGW), Munich, Paris (CDG), and Zurich. Seasonal holiday charters are also undertaken to Bergamo, Frankfurt, Geneva, Munich, Naples, Nice, Paris, Turin, Venice, Verona, and Zurich.

In February, a 50% interest in **Avianova S.p.A.** is sold to three financial institutions controlled by IRA, the state holding company for **Alitalia, S.p.A.**

Customer bookings accelerate 15.7% to 2.2 million. Revenues are \$230 million and produce an operating profit of \$15.08 million and a net profit of \$775,000.

In 1994, Managing Director Trivia oversees a workforce of 850, down 26.1% from the previous year, and a fleet expanded by the addition of a fourth BAe 146-200. Plans are made for the acceptance of the RJ85s at year's end.

Passenger boardings rise 10% to 2.4 million and revenues accelerate 14.1% to \$278.2 million. Expenses jump only 12.1% to \$256.29 million, leaving an operating surplus of \$21.9 million and a net gain of \$935,000.

The RJ85 order is cancelled in 1995 and replaced by one for an MD-83. During the summer, an Avions de Transport Aerien ATR-42-320 is leased from the U.K. carrier **Titan Airways, Ltd.**

At the beginning of the winter schedule at the end of October, new service is started to Amsterdam. Enplanements for the year total 2,522,119.

Airline employment stands at 1,148 in 1996 and the fleet now includes 4 owned and 4 leased MD-82s, 5 owned and 1 chartered DC-9-51s, 4 leased BAe 146-200s, and 1 owned Bell 412. The MD-83 order remains outstanding.

During the first week of August, a satcom telephone system becomes available for passengers flying the four BAes based at Florence.

On November 24, the national antitrust authority, after a nine-month investigation, releases a report finding that **Alitalia, S.p.A.** has attempted to block competition from **Air One, S.p.A.** and Meridiana by controlling the allocation of airport landing slots, monopolizing ticket writing, and anticompetitive scheduling. The major is ordered to pay a L 415-million (US\$277,000) fine.

Still, in the face of domestic competition, legal and illegal, customer bookings slide 5.6% to 2,464,000 and cargo is down 6.1% to 139,000 FTKs. A small \$495,000 net profit is reported.

The employee population is cut a slight 0.4% in 1997 to 1,286 and the fleet remains the same. A strike cripples the company during March.

Destinations visited now include Amsterdam, Barcelona, Bergamo, Bologna, Cagliari, Catania, Florence, Frankfurt, Geneva, Genoa, London, Milan, Munich, Naples, Nice, Palermo, Paris, Pisa, Rome, Turin, Venice, Verona, and Zurich.

As a result of the spring job action, the company, at the beginning of August, scraps plans to launch Meridiana Express, which would have offered business-class services out of Verona with a fleet of MD-83s.

Code-sharing now begins over several new routes in partnership with **Alitalia, S.p.A.** and **Air Littoral, S.A.**

Consequently, passenger boardings jump 12.9% to 2,720,200 and freight rises 11.7% to 2.75 million FTKs. Operating revenues swell 15.1% to \$303.3 million and allow a net gain of \$8.7 million.

During late spring 1998, a homepage is opened on the World Wide Web. On December 29, two DC-9-51s are sold to **Hawaiian Airlines (HAL)**; they will be delivered in February.

Customer bookings move ahead by 9.4% to 2.97 million, while cargo traffic jumps 12.5% to 178.6 million FTKs. Revenues climb 22.2% to \$370.75 million, while expenses are up 17.5% to \$355.55 million. Operating profit grows to \$15.2 million, while net gain falls to \$3.21 million.

MD-82s replace DC-9-51s on the company's twice-daily nonstop roundtrips between Milan and Olbia with the introduction of the summer schedule on March 28, 1999. Beginning on May 1, MD-82s also replace DC-9-51s on the daily return services from Bologna to Cagliari, Olbia, and the Spanish city of Barcelona.

A second daily BAe 146-200 roundtrip is inaugurated at the end of the year between Florence and Amsterdam.

Passenger boardings jump 4.7% to 3,075,000. Although operating revenues total \$327.6 million, expenses are \$341.13 million. Consequently, there is a \$35.53-million operating loss.

Airline employment at the beginning of 2000 stands at 1,500, a 30.5% increase over the previous 12 months.

A new block-seat, code-sharing agreement with **Alitalia, S.p.A.** begins on January 4 aboard Meridiana aircraft flying from Rome to Olbia and Verona and from Milan to Cagliari and Olbia.

Company founder, the Aga Khan, places his 79% majority shareholding up for sale on January 21, calling in Lloyds TSB and KPMG Corporate Finance to handle the transaction. The Aga Khan has been gradually disposing of his Sardinian holdings and Meridiana is the last jewel in that crown.

On behalf of **Alitalia, S.p.A.**, twice-daily MD-82 roundtrips begin on April 15 from Bologna to Palermo. Employing a pair of Avions de Transport Aerien ATR42-320s wet-leased from **Italy First, S.p.A.**, Meridiana, again on behalf of Alitalia, S.p.A., inaugurates twice-daily roundtrips on May 1 from Naples to Bologna.

On June 1, daily return frequencies from Milan to Cagliari are expanded to 7, 3 to Catania, and 8 to Olbia. A new daily MD-82 roundtrip is started to Palermo. Frequencies from Genova to Olbia are halted on June 15 for the period through September 8. On June 16, a new twice-daily return service, delayed 15 days, is initiated from Bologna to Barcelona employing a Fokker 100 wet-leased from **Alpi Eagles, S.p.A.**

Another **Alpi Eagles, S.p.A.** Fokker 100 is chartered on June 22 for thrice-daily roundtrip frequencies between Verona and Naples. Also during this peak summer season into September, a thrice-weekly roundtrip is offered between Olbia and London (LGW).

On October 12, the airline's majority owner, the Aga Khan, takes his airline off the market. Although some expressions of interest in its acquisition have been received, none of these proposals were perceived to advance the interests of the airline, its employees, or the Sardinian economy.

On October 28, **Alitalia, S.p.A.** begins to code-share on Meridiana. BAe 146-200 roundtrips from Florence to Barcelona, Paris (CDG), and London (LGW). Daily MD-82/-83 roundtrips are inaugurated on December 1 from Catania to London (LGW) via Turin and twice-daily return service from Bologna to Naples.

The year does not end well politically for Italy's six major airlines. On December 22, it is announced that the government's competition authority has unleashed an antitrust investigation into Meridiana, as well as **Alitalia, S.p.A.**, **Air One, S.p.A.**, **Air Europe, S.p.A.**, **Volare Airlines, S.p.A.**, and **Air Dolomiti, S.p.A.** Under review is a question of whether the six had an understanding on two domestic ticket price hikes, following an earlier rise in fuel prices. In June, all of the carriers introduced a 10,000-lire (\$8) fuel surcharge, following it up in September with a 24,000-lire boost.

MERIDIANA AIR, S.A.: Spain (1990–1992). Meridiana is formed at Madrid in April 1990 to combine the assets of **Lineas Aereas Canarias, S.A. (LAC)**, **Euravia, S.A.**, and **Universair, S.A.** Shareholding is divided between the Armas, BBV, and Banesto groups, with the Italian Fimpar and the airline **Alisarda, S.p.A.** holding 20% and 5%, respectively. The company, a sister carrier of Italy's **Meridiana, S.p.A.**, is outfitted with 4 British Aerospace BAe 146-300s and 5 McDonnell Douglas MD-83s, 3 of which are leased.

Early in 1991, these are employed to inaugurate scheduled passenger service from Balencia and Barcelona to Zurich, Paris, Munich, London (LGW), Frankfurt, Hanover, Cologne, and Brussels.

Customer bookings climb 15.3% above the combined previous year total for the 3 merger partners to 829,234. Revenues zoom up 86.1% to \$74.4 million; however, expenses climb even higher. As a result, there is a \$20.3-million operating loss.

Recession forces the carrier to lose its viability in 1992 and at the end of June the company's severe start-up losses force a major cutback in services; gone are frequencies from Barcelona to Paris, Frankfurt, and Cologne. Other difficulties are caused by a failure to obtain government permission to transport scheduled domestic passengers between Valencia and Barcelona and an inability to secure interline partners. Operations cease on October 16.

MERIDIONAL (COMPANHIA MERIDIONAL DE TRANSPORTES, S.A.): Brazil (1944–1946). Meridional is formed at Rio de Janeiro in the fall of 1944, one of many new carriers being established in that city late in World War II. In the summer of 1945, three ex-RCAF Avro Ansons are purchased and employed to undertake proving flights during August. Regularly scheduled services to Vitoria and Campos commence on October 4.

The company is unable to recover financially from the crash of an Anson into a mountain outside of Rio in December and thus goes into liquidation in March 1946.

MERLIN AIRWAYS. See **MERLIN EXPRESS**

MERLIN EXPRESS: 9623 West Terminal Road, San Antonio, Texas 78216, United States; Phone (210) 824-2313; Fax (210) 826-4415; Code FAE; Year Founded 1983. John Karamanian establishes Merlin at San Antonio, Texas, in 1983 to offer scheduled regional freight services with a fleet of Douglas DC-3s and Fairchild SA-227AT Expeditors. The largest single shareholder is Fairchild Aircraft.

For many years, the company's single largest contract is held with **UPS (United Parcel Service)**. Additional replacement freight business is also operated for **Federal Express**, **DHL Worldwide Express**, and **Airborne Express**.

A decade later in 1993–1994, airline employment is 140 and the fleet comprises 11 Expeditors. During the spring of the latter year, a cooperative training agreement is signed with Florida-based Embry-Riddle Aeronautical University.

Twenty-five Fairchilds are in service during 1995. At this time, several Metro III passenger aircraft are wet-leased from **Yute Air Alaska** and employed to launch passenger charter and Yute replacement services on July 1.

Ron Stotz is president in 1996, with Hugh Crull as vice president-operations. During September and October, 17 more Metro IIIs and Metro 23s are leased from BAe Asset Management. Two Metro 23s are wet-leased to **Aspen Mountain Air**, which employs them to operate Essential Air Service (EAS) routes in the south-central U.S.

Destinations regularly visited this year and in 1997 include San Juan, Miami, Minot, North Dakota, and the Texas cities of Corpus Christi, Lubbock, and Midland.

While taxiing for takeoff from Anchorage on August 22, **Yute Air Alaska Flight 421**, a wet-leased Merlin Express Metro III with two crew and five passengers, collides with an airport tug. Although the aircraft sustains substantial damages, no injuries are reported.

Enplanements in the latter year reach 53,283.

Flights continue in 1998. In mid-November, bankrupt **Aspen Mountain Air** turns over its EAS routes to **Big Sky Airlines**. The Billings, Montana-based regional also takes over the two wet-leased Metro 23s that AMA has been flying.

Just after landing at George Charles Airport on St. Lucia on December 9, a Metro III making a 180-degree turn goes off the edge of the runway and gets stuck in the mud. The airport must be closed for several hours while workers rescue the aircraft.

Passenger boardings this year fall to 43,000.

When **Yute Air Alaska** files for Chapter XI bankruptcy protection in March 1999, it returns the two wet-leased Metros to Merlin.

Customer bookings plunge 94.7% during the 12 months to 2,000.

Airline employment at the beginning of 2000 stands at 205. In June, the company is reformed into Merlin Airways.

MERPATI NUSANTARA AIRLINES: P.O. Box 323, Jalan Angkasa 2, Jakarta, 10013, Indonesia; Phone 62 (21) 424-3608; Fax 62 (21) 424-6616; http://www.merpati.co.id; Code MZ; Year Founded 1962.

To keep open an Indonesian Air Force air bridge developed for Kalimantan in November 1958, the government, by Regulation 19/1962, forms this second state airline on September 6, 1962 to take over the routes. Working capital is £6,000. First Air Marshal Sutojo Adiputro is president with 7 employees, and the inherited ex-military fleet consists of 4 de Havilland Canada DHC-3 Otters and 2 Douglas DC-3s. Flight operations commence six days later linking Jakarta with various points on sparsely populated Kalimantan via routes that also touch at Banjarmasin, Pangkalanbun, and Pontianak.

Holland transfers political responsibility for Irian Jaya to Indonesia and the **KLM (Royal Dutch Airlines, N.V.)** subsidiary DeKroonduif pulls out in 1963. The Dutch do leave their local fleet of 4 DC-3s, 3 DHC-2 Beavers, and 2 Scottish Aviation Twin Pioneers.

After a year of service from **Garuda Indonesian Airways**, Merpati, in early 1964, is assigned the duty of maintaining and expanding services to Irian Jaya, including its governmental seat Jayapura; all DeKroonduif routes are now assumed, along with the ex-KLM, ex-Garuda fleet. KLM will, however, continue to provide subsidy for the next three years. In 1965, the company acquires eight Pilatus PC-6 Porters and three Dornier 28s.

Capt. R. B. Wibisono becomes president in 1966. Late in the year, Merpati is able to begin drawing from a special UN fund established by The Netherlands prior to its withdrawal from Dutch New Guinea. Subsidy from the Dutch flag carrier now ceases. On behalf of Merpati, orders are placed for three DHC-6-100 Twin Otters with which to develop routes from Jayapura to the Central Highlands.

The UN sends out a technical support team in 1967 under the leadership of W. C. Krishnan from India to develop a corporate base and communications center at Biak. The first Twin Otter arrives in December, as First Air Marshal Santoso becomes president. DHC-6 services are inaugurated in January 1968.

During the remainder of the year and into 1969, routes are developed to many of the nation's larger islands. Seven more DC-3s are delivered from **Garuda Indonesia Airways**. A corporate makeover now occurs as the new name Merpati Nusantara Airlines begins to appear on aircraft and all company uniforms and other items.

The fleet at the beginning of 1970 includes 2 DHC-6-100 Twin Otters, 3 Pilatus Porters, 3 Dornier Do-28s, 2 Scottish Aviation Twin Pioneers, 2 DHC-2s, in addition to the original DHC-3s and DC-3s.

The company's first modern airliners are two Vickers Viscount 828s purchased from **All Nippon Airlines Company, Ltd.** in April. By decree of the minister of communication, Merpati is now certified to conduct medium- and long-haul regional flights. Consequently, it inaugurates services from Pontianak to Kuching and from Palembang and Singapore.

ANA also supplies Merpati with a fleet of Nihon YS-11As, beginning in December.

The YS-11-102 *Nanggala* with three crew, belly lands with flaps up while on a training flight from Jakarta on April 1, **1971**; there are no fatalities.

An **American Airlines** BAC 1-11-401 Astrojet is leased for three months beginning August 11; it is test flown on regular domestic services.

Encountering aerial difficulties on November 10, one of the new Viscount 828s, the *Sabang*, with 7 crew and 62 passengers, ditches at sea near Padang, Sumatra; there are no survivors. Orders are now placed for two Vickers Vikings.

The first Vickers Vanguard 952, previously operated by **Air Canada**, Ltd., is acquired in March **1972** to service new, longer routes.

En route from Surabaya to Jakarta on April 5, a Viscount 828 is diverted to Maguwo by a pirate who demands an Rs 20-million (later reduced to Rs 5-million) ransom. The turboprop is surrounded on the ground and negotiations are begun. During the several hours that follow, the passengers are released and police manage to covertly slip a pistol to the pilot. When the moment is just right, the pirate is shot.

A second Vanguard arrives before year's end.

A DHC-6-100 with 3 crew and 10 passengers crashes near Nabire, Indonesia, on February 28, **1973**; there are no survivors.

Also during the first quarter, a new long-haul service is inaugurated from Jayapura to Jakarta via Biak and Surabaya. Between April 1 and May 15, a BAC 1-11-416 is subleased from **Pelita Air Service** and is employed to fly Australian tourists from Darwin to Denpasar on the island of Bali.

In November, two Fokker F.27 are acquired for medium-haul service. During the year, **Dirgantara Air Service** is set up as a subsidiary. Merpati's DC-3s are turned over to it and it begins flying to and in the Sunda Islands.

The two ex-Canadian Vikings are replaced in early **1974** with a pair of Vanguard 953s first flown by **British European Airways Corporation (BEA)**. Arrival of the huge aircraft create friction with **Garuda Indonesian Airways**, whose chairman is able to convince the nation's civil aviation department to restrict Merpati's acquisition of jetliners, should it seek to do so.

The BAC 1-11-416 subchartered from **Pelita Air Service** is back in Merpati colors again for a year, flying customers to Bali. Operational responsibilities are divided during the year into two major groups: Merpati Operasi Barat, which has responsibility for trunk routes; and Merpati Irian Barat, which takes over local service in New Guinea.

The two airline groups are divided into four semiautonomous divisions during **1975**, each responsible for a geographical division: Moluccas and Irian Jaya, Sulawesi, Kalimantan, and Jakarta and Sumatra. The carrier's air network now comprises 19 provinces, connecting 97 cities. By virtue of a government regulation, the company's status is changed from a state enterprise to a state-limited corporation (PT or Persero).

During this year and into **1976**, President Ramli Sumardi's fleet is strengthened through the acquisition of two more Viscount 800s, plus additional DHC-6-300s. Pioneer and trunk route development continues apace. The subsidiary **Air Bali** is formed during the latter year to operate charter and inclusive-tour services.

The highlight of **1977** is the acquisition, on behalf of the national tourist board, of a chartered Boeing 707-120B, which is employed to operate charters and inclusive tour flights to Bali, Los Angeles, Tokyo, and Manila.

Attempting to avoid a mountain during a March 29 scheduled flight, the pilot of a DHC-6-300 with 2 other crew and 20 passengers, applies full power into a steep climb—and stalls. The aircraft crashes into some trees before hitting the ground in the Bainaha Valley (13 dead).

Nearly £5 million in debt, the carrier is, by order of President Suharto, taken over by **Garuda Indonesian Airways** on October 27, **1978**. The process is financial; the Minister of Communications transfers Indonesian shareholding to the flag carrier. Desiring an outwardly independent feeder airline, Garuda officially allows Merpati to continue operations under its own name and livery. On November 14, the company is further

reorganized into Garuda's sister carrier, with Garuda corporate secretary R. A. J. Lumenta named president and a Mr. Soeritman as general manager.

The fleet now includes 1 Boeing 707-120B, 3 Vanguard 952s, 6 Viscount 800s, 1 B-737-100, 1 BAC 1-11-400, 2 Hawker Siddeley HS 748s, 4 Fokker F.27s, 19 Twin Otters, and 2 CASA C-212 Aviocars.

Merpati's new relationship with Garuda becomes official on January 1, **1979**. On January 2, a total of 727 employees, including all in top management, are released, reducing airline employment to 878 workers. Plans are thereafter formulated for revised local and regional services and with government loans, new locally constructed aircraft are ordered. Long-haul trunk routes from Jakarta to Biak via Ujungpandang and from Jakarta to Medan are surrendered to Garuda, but short- and medium-haul regional routes are retained, including services from Pontianak to Kuching, from Denpasar to Darwin, and from Medan to Penang. As part of the central government's attempt to increase the population in sparsely inhabited locations, Merpati is also charged with transporting settlers to the islands of Kalimantan, Sumatra, and Sulawesi.

The expensive charter and inclusive tour services to Los Angeles and other points are terminated, however, the company is allowed to continue their provision to regional markets. It is even given a minor, almost backup role, in the provision of Hadj pilgrim flights to Mecca in Saudi Arabia.

On October 8, the Merpati Nusantara Aircraft Maintenance Workshop is started under R. A. J. Lumenta at Ujung Pandang, Sulawesi.

Enplanements for the year total 553,544.

Airline employment is increased a significant 31.3% in **1980** to 1,100. The carrier now operates to 127 islands and all of the nation's airports.

Toward year's end, four-times-per-week service is started from Ujungpandang to Balikpapan and from Kupang to Tarakan. The first of 16 Indonesian-built IPTN (Nurtanto-CASA) NC-212-200s enters service.

Passenger boardings climb 10.4% to 617,794 while freight jumps 17.7% to 7.6 million FTKs. Revenues reach \$40 million.

Enplanements reach 759,680 in **1981**.

The employee population grows 10.5% to 1,394 in **1982**. The fleet now comprises 2 Vanguard 952s, 6 Viscount 800s, 14 Fokker F.27s, 2 Hawker Siddeley HS 748s, 16 IPTN (CASA) NC-212-200s, 19 DHC-6s. An order is placed for a CASA-Nurtanto CN-235.

Passenger boardings dip 1% to 752,158 and freight traffic is off by 3% to 7.3 million FTKs. Revenues, however, increase 25.3% to \$56.4 million.

The workforce is cut 26.6% in **1983** to 1,203. Two F.27-600s are added to the fleet and the CN-235 order is increased to 14.

Passenger bookings jump 5% to 764,000 and cargo rises 6.8% to 5.53 million FTKs.

In February **1984**, Soeritman becomes president. One Vanguard 952 is sold. One F.27-400 is withdrawn in **1985** as six more IPTN (CASA) NC-212-200s are acquired.

The Vickers Viscount 828 *Siberut* with three crew and nine passengers, overruns the runway after landing at Ambo on January 11; there are no fatalities.

The DHC-6-300 *Wetar* with 3 crew and 16 passengers, crash-lands near Mulia on August 12 (two dead).

Two Lockheed L-382G Hercules freighters are received as gifts from government-owned **Pelita Air Service** late in **1986** to replace the last remaining Vanguard 952. The Lockheeds undertake cargo services, both scheduled and charter, to remote destinations.

En route from Manado on March 20, an IPTN (CASA) NC-212-200 Aviocar with 2 crew and 14 passengers, crashes into a 1,900-ft. hill near Naha (2 dead).

On June 25, a contract is signed with IPTN for the purchase of 15 CN-235s, Indonesian-built turboprops.

HS 748 flights commence from Kupang to Darwin in an effort to lure more Australian tourists and a hub-and-spoke system is gradually intro-

duced based on the six major communities of Jakarta, Denpasar, Ujung Pandung, Manado, Kupang, and Biak.

Two Lockheed L-382G Hercules freighters are received as gifts from government-owned Pelita Air Service late in the fall to replace the last remaining Vanguard 952. The Lockheeds undertake cargo services, both scheduled and charter, to remote destinations.

The first IPTN CN-235-10 is delivered on December 15. At the same time, Merpati introduces a new logo, which shows airwaves representing air links.

With 120 destinations located from western Sumatra to New Guinea, the Merpati network in 1987 stretches for more than 3,000 miles. The world's first production IPTN CN-235-10 enters revenue service during the first quarter. During April, two F.28-4000s are leased from **Garuda Indonesian Airways** and are placed on the Kupang to Darwin route.

While on approach to Ruteng on May 23, the DHC-6-300 *Talud* with 3 crew and 10 passengers, crashes into a ravine; there are no survivors.

En route to Berau on December 30, the Twin Otter *Serui* with 3 crew and 17 passengers, crashes at Samarinda; there are no survivors.

Revenue passenger kilometers flown accelerate 22.9% to 408 million while freight increases 14.8% to 44.6 million FTKs. Revenues ascend 15.9% to \$40.7 million.

The workforce is increased by 0.3% in 1988 to 1,795. In addition, daily flights are undertaken from Bali to the resort island of Lombok. Other tourist destinations visited include Toraja, in central Sulawesi, and an island near Komodo famous for giant lizards.

For the six-month reporting period this year, passenger boardings are up 3.3% to 519,911 while freight traffic plunges 33% to 2.45 million FTKs.

In a move expected to take up to three years, **Garuda Indonesian Airways** begins transferring 11 of its 35 domestic routes to Merpati in April 1989. The flag carrier retains some domestic sectors operated on international routes, such as Jakarta to Bali.

Capt. F. H. Sumolang is named president at the end of May.

Only four months later, in September, Garuda is reformed into the holding company Garuda Indonesia Group, which had initially planned to assimilate Merpati into the major, but now elects to maintain both companies as operating subsidiaries, each with a different purpose. **Garuda Indonesia**, as the flag carrier is now known, will concentrate on long-haul business while Merpati, as has been planned, will take over the flag carrier's domestic role in the new holding company.

In the process of assuming the parent's local responsibilities, the new unit charts two DC-9-32s and 15 Fokker F.28-4000 Fellowships from Garuda Indonesia.

On September 16, the de Havilland Canada DHC-6-300 *Engano* with 3 crew and 19 passengers is lost into the jungles of the eastern province of Irian Jaya, between Manokwari and Bentuni; there are no survivors.

The carrier's statistics are now, for a time, reported with those of **Garuda Indonesia**, but contrary to expectation, the company does not disappear into Garuda, but is allowed to continue operating under its own name.

By early 1990, **Garuda Indonesia's** routes to and between the nation's many islands have been turned over. A fleet is assembled that includes 4 DC-9-32s leased from Garuda, 2 BAe (Vickers) Viscount 828s, 2 BAe (HS) 748-2As, 5 F.28-3000s, 1 F.28-3000C, and 16 F.28-4000s, all leased from Garuda. Also included are 18 IPTN (CASA) NC-212-200s, 3 C-212-100s, 11 Twin Otters, 11 CN-235-10s, 4 F.27-200s, 1 F.27-400, 6 F.27-500s, and 4 F.27-600s.

While climbing away from Lebuhanraio on April 3, the DHC-6-300 *Karakatau* loses power in its right engine; the turboprop loses height and strikes the crest of a hill. None of the 3 crew or 14 passengers are badly hurt.

In May, Lockheed Aeromod Center delivers the first of 2 requested 97-passenger L-382G Hercules aircraft modified for regional airline service; the second will arrive before year's end. Orders are outstanding for 12 CN-235-10s and those on hand begin to receive, as of September, new, modern livery.

Passenger boardings skyrocket an unbelievable 602.5% to 2,483,703 while freight balloons 390.2% to 32.48 million FTKs. Costs exceed income and there are losses: \$1.34 million (operating) and \$3.82 million (net).

Company employment jumps 36.4% in 1991 to 3,363 and the fleet is increased by the addition of three CN-235s and another leased DC-9-32.

Bad weather causes an NC-212-200 Aviocar with 3 crew and 18 passengers to make a forced landing into trees at Jalaludin on January 30 (one dead).

While on a scheduled May 10 service, Flight 7533, an F.27-600 with five crew and eight passengers, collides with cloud-shrouded Klabat Mountain; there are no survivors.

The most advanced maintenance facilities operated by an Indonesian domestic airline, the Merpati Maintenance Facility, is opened at Juanda Airport near Surabaya on September 6. Meanwhile, two new domestic routes are initiated.

The new routes help customer bookings ascend 39.3% to 3,794,677. Cargo also increases, by 41.7%, to 46.39 million FTKs. Revenues jump 42.4% to \$222.6 million, but costs are higher, causing the operating loss to decay to minus \$7.25 million. The net loss is cut to \$2.53 million.

The workforce increases another 24.9% in 1992 to 4,200. New routes are opened from Jakarta to Denpasar and Bali and Jakarta to Surabaya.

Ridwan Fatarudin now becomes the company's president.

Statistics are publicized through May and show passenger boardings up 4.3% to 1,557,201. Freight, for the same period, declines, however, by 4.4% to 17.91 million FTKs.

The retired F.27-500F fleet of **Air New Zealand, Ltd.** is purchased and begins to arrive in batches.

While descending in a storm toward Bandung after a service from Semarang on October 18, a IPTN (CASA) CN-235-10 with 4 crew and 27 passengers, crashes into Mount Puntang; there are no survivors.

The DHC-6-300 *Natuna* fails its takeoff from Wamena on December 16 and crashes; there are no fatalities.

In 1993, President/Director Frans H. Sumolang oversees a workforce of 2,150, down 48.9% since the previous year. The fleet now includes 15 IPTN (CASA) NC-212-200 Aviocars, 14 CN-235-10s, 9 F.27-500Fs, 8 each DHC-6-300 Twin Otters and F.28-4000s, 5 each British Aerospace BAe ATPs (now called Jetstream 61s) and F.27-500s, 4 F.28-3000s, 2 each BAe (HS) 748-B2s and Lockheed L-382G Hercules, and 1 each F.27-400, F.27-600, and F.28-3000C.

Flights are launched from Padang to Batu Besar and the remaining units of the former **Air New Zealand, Ltd.** F.27-500F fleet are delivered.

While taking off from Nabire on June 16, a cargo of bagged rice aboard a DHC-6-300 with three crew, begins to shift, causing the aircraft's nose to pitch up; after the plane stalls, it crashes near the runway (one dead).

While en route from Ambo on July 1, an F.28-3000 with 4 crew and 39 passengers crash-lands onto a rocky beach near Sorong (41 dead).

Figures are made available for the first nine months. Customer bookings during this period are up 5.6% to 2,768,665 while freight climbs 2.7% to 29.3 million FTKs. The first two of 12 ordered Fokker 100s enter service during October.

Towards year's end, permission is granted for the airline to depart the Garuda Indonesia Group.

The employee population totals 4,800 in 1994 and the fleet contains 104 aircraft. Located within the Merpati Maintenance Facility near Surabaya, the Merpati Training Centre is opened during the spring.

While on approach to Palu in bad weather on a June 18 service from Balikpapan, an F.27-500F with five crew and seven passengers, crashes into Mount Kalora at the 2,295-ft. level; there are no survivors.

The company employs its only dedicated freighter for six months of the summer season; the Boeing 707-323C, labeled "The International Air Freight of Indonesia," is returned to its lessor, **Buffalo Airways** of Texas, in November.

Just after landing at Semarang from Jakarta in bad weather on November 30, Flight 422, an F.28-4000 with 6 crew and 79 passengers, overruns the runway and falls into a ditch, where it breaks apart; although the aircraft is destroyed, there are no fatalities.

Traffic figures for the year show passenger boardings up to 4,192,609, while cargo dips 0.2% to 26 million FTKs.

At ceremonies that are part of the company's thirty-third anniversary celebration, the new Merpati Training Center is opened at Juanda Airport, Surabaya, on January 6, 1995. Another new building, a 16-story headquarters in Jakarta, will be opened later in the year. Flight 6715, the DHC-6-300 *Sangihe* with 4 crew and 10 passengers, is caught in bad weather on January 10 while en route from Bima to Ruteng and disappears; wreckage is never found and it is suspected that the Twin Otter fell into the ocean.

While attempting takeoff from Bintuni on July 17, a DHC-6-300 with 2 crew and 16 passengers, hydroplanes off a wet runway into a nearby banana plantation (1 dead).

In late October, President/CEO Ridwan Fataruddin refuses to lease 16 IPTN-built CN-235-220 turboprops from a lessor partly owned by Hutomo Mandal Putra, son of Indonesian President Suharto. Fataruddin considers the price—\$110,000 a copy—exorbitant. The national transport ministry does not share this position and Fataruddin is terminated. He is replaced by the airline's commercial director, Budiarto Subroto, who understands the political necessity of acquiring aircraft from the state-owned aviation plants regardless of cost.

Traffic and financial figures for the year are not released.

The workforce totals 2,150 in 1996 and the fleet has been reduced by two aircraft since 1994. The official Antara news agency reports in February that the airline has agreed to charter 16 CN-235-220s in June from Deutsche Morgan Grenfell at \$70,000 each per year for a decade.

The company's first long-haul international service is inaugurated on August 1 from Jakarta to Melbourne.

A total of 3,190,395 passengers are this year boarded and 25.83 million FTKs are operated.

Over 130 markets are visited in 1997, the largest being Balikpapan, Bandar Lampg, Bandung, Banjarmasin, Denpasar, Dumai, Ketapang, Kupang, Maumere, Medan, Padang, Palankarya, Paembang, Pekanbaru, Pontianak, Rengat, Semarang, Surabaya, Tanjung Pinan, and Waingapur.

President Subroto announces on January 30 that the company will soon receive under lease two A300-600s, three B-737-200s, and three BAe 146-100s. The announcement will prove premature.

New services are started from Jakarta and Denpasar to Melbourne and Taipei.

While on final approach to Tanjung Pandan after an April 19 service from Jakarta, control is lost of Flight 106, the BAe ATP *Sangeang* with 5 crew and 48 passengers. The aircraft enters a steep left bank and crashes in a coconut grove 1 mi. short of the runway and breaks apart (15 dead).

By Regulation 10/1997, Merpati regains its independence on April 29 and is allowed to depart from the Garuda Indonesia Group.

While attempting to land on one engine at Ambon at night and in rain on July 9, Flight 7979, the IPTN (CASA) C-212-AB4 Aviocar *Bunyu* with three crew, which is due for repairs, loses an engine and crashes 1 mi. short of the runway; there are no survivors.

On October 2, Merpati and Airfast Indonesia join two private companies in boycotting the mountain airport at Wamena in Irian Jaya, in the nation's easternmost province, citing the hazard posed by tribesmen and animals who routinely cross the runway as aircraft are departing or landing.

Catastrophic forest fires and Asia's economic crisis have a serious impact later in the year. Merpati attempts to close down 80 of its unprofitable domestic routes, but is prevented from doing so by the Minister of Transport Haryanto Dhanutirto, who orders that the company continue to operate all of its services, even those segments with load factors under 30%. Struggling with a \$253-million debt, the airline loses all of its remaining connections with Garuda Indonesia.

Indonesian aviation policy wavers during the opening months of 1998.

Having sped past the VR on its takeoff from Jakarta on May 15, Flight 715, an F.28-3000, aborts when a cargo door warning light comes on; the plane overruns the end of the runway when it cannot stop.

In late spring, Jakarta is rocked by political demonstrations and on May 21 President Suharto resigns. With the rupiah now valued at 17,000 to the U.S. dollar, the nation's airlines are granted permission to increase fares by 37.5%. Merpati cuts many services, suspending flights altogether in July.

By the beginning of August, a cost-cutting plan that would have combined the domestic operations of Garuda, Bouraq, Merpati, and Mandala collapses; despite load factors as low as 30%, the smaller airlines refuse to join with the flag carrier.

The effects of the Asian currency crisis and the national economic downturn continue; at this point, the four companies are losing significant funds as 80% of their costs are in U.S. dollars, but only 20% of their income is in the same currency.

During the last week of August, the Indonesian Parliament does grant a long-desired fare increase. Domestic tickets increase in price by 40% on September 1; they rise again another 14% on December 1.

During November, a Lockheed L-1011 TriStar 1 is leased from Orient Express Air, Ltd. of Thailand. It will be employed on Hadj flights the following spring.

After months of negotiation, a spectacular financing arrangement is concluded with the Swiss aircraft broker International Air Finance Corporation (IAF) on January 25, 1999. Under terms of the agreement, IAF, Garuda's general sales agent in Australia, will become 51% owner of the Garuda Indonesia subsidiary for the next 10 years and will inject up to \$500 million. The government of Indonesia retains control over company management, while IAF officials will serve as auditors of a fund set up to strengthen the company's financial condition and purchase new aircraft.

On February 15, Merpati cancels service from Denpasar and Bali to Melbourne and Perth, Australia. The routes are picked up by Garuda Indonesia.

A B-737-230A with 100 passengers en route from Bali to Dili on February 21, is forced to divert to Kupang in West Timor when a bomb is reported at Dili's Komoro Airport. No explosive is found.

Flights to some domestic and regional destinations resume in early March.

With the airline facing insolvency due to its failure to pay its outstanding debts, the Minister of State Enterprises, Tanri Abng, fires its entire management board on March 16. A new board is appointed that includes Wahyu Hidayat as president, succeeding Budiarto Subroto.

Chief Commissioner/Chairman Muchtarudin Siregar informs ANTARA (The Indonesian National News Agency) on April 8 that Merpati's debt is now more than Rs 1 trillion (\$117.6 million). The company's assets are minus Rs 830 million and Siregar admits, "we could say this company is bankrupt." Still, a new plan has been worked out that offers prospects for recovery. Among the scheme's key points are reduction of the fleet to 26 planes, the sale of several fleet units including 3 Fokker 100s, a rescheduling of the debt, and an increase in ticket sales.

The search for a foreign partner continues as the previous arrangement with the Swiss broker is rejected. IAF, with which an arrangement had been closed in late January, had subsequently wanted Merpati to turn over income from all of its international operations in exchange for a \$20-per-passenger cash injection.

The chairman informs the *Jakarta Post* on May 3 that the debt has swelled to Rs 1.8 trillion (\$212 million) and that the company is now technically, but definitely, bankrupt.

During the first six months of the year, the rupiah regains some 50% of its strength. The balance of the parliamentary-approved fare increase is postponed.

The onset of political violence in East Timor causes the carrier, in September, to suspend its services to Dili. Service from Jakarta to Pontianak is doubled from one weekly roundtrip to two on October 25.

In December, the Ministry of Transport issues permits to three new domestic carriers. The move is challenged (unsuccessfully) by the National Air Carriers Association on behalf of Merpati, **Bouraq Indonesian Airlines**, and **Garuda Indonesia**.

It will be the following May before financial results are released. When they are, they show the first pretax profit in three years: Rp97.9 billion (\$12.3 million).

Flights to Komoro Airport at Dili, East Timor, are resumed on January 5, 2000. Twice-weekly frequencies from Denpasar to Dili are restarted on March 3. Employing a DHC-6-300 Twin Otter, the carrier, at the end of March, boosts its weekly return service from Biak to Sorong via Kaimana and Fakfak from one flight to four.

Several new airlines, permitted under Indonesia's domestic air transport liberalization law, now take to the skies. One of these, **Lion Mentari Airlines** inaugurates twice-daily Boeing 737-2P5A return frequencies on June 30 linking its base with Pontianak. Lion's \$115 one-way fare on this route is almost 30% lower than that charged by Merpati.

To prevent provocateurs from landing into the troubled area, the Maluku governor closes the port of Ambon to passenger ships on August 10. To provide alternative lift, Merpati immediately increases its thrice-weekly return services to that point from Jakarta to four times a week.

On September 12, it is announced that the number of weekly roundtrip frequencies offered from Bali-Denpasar to Kupang will be increased from four to seven in 2001.

In December, the company begins adding 129 new flights. From Jakarta, services are started to Pontianak, Pangkalpinang, Tanjungpandan, Kuala Lumpur, Denpasar, and Makassar. Frequencies are also begun from Bandung to Denpasar and from Makassar to Surabaya.

MERRIMACK AIR SYSTEM: United States (1975–1978). MAS is founded at Lawrence, Massachusetts, in 1975 to provide scheduled air taxi services to regional destinations. Employing a fleet of Piper PA-31-350 Navajo Chieftains, daily roundtrips are inaugurated on June 16, linking the company's base with Boston, Springfield, White Plains, and New York (LGA).

Operations continue apace until 1978, when the company is transferred to Bedford, Massachusetts, and renamed **Merrimack Airways**.

MERRIMACK AIRWAYS: United States (1978–1979). In 1978, **Merrimack Air System** of Lawrence, Massachusetts, is moved to Bedford, Massachusetts, reformed, and renamed. From its new location, the company continues to maintain daily Piper PA-31-350 Navajo Chieftain services to Boston, Springfield, White Plains, and New York (LGA). Additionally, a new route is stretched from Boston to Burlington, Vermont.

Recession and high fuel costs force the company out of business in 1979.

MERRIX AIR, LTD. See **EAGLE EUROPEAN AIRWAYS, LTD.**

MESA AIR GROUP: 3753 Howard Hughes Parkway, Suite 200, Las Vegas, Nevada 89109, United States; Phone (702) 892-3773; Fax (702) 892-3950; <http://www.mesa-air.com>; Code YV; Year Founded 1994. In December 1994, the corporate organization of **Mesa Airlines** is changed and headquarters are transferred from Farmington, New Mexico, to Las Vegas, Nevada. Mesa becomes Mesa Air Group, with five operating divisions: **Air Midwest**, **Florida Gulf**, **Liberty Express**, and **WestAir Commuter Airlines Mountain West Airlines (4)**, which replaces the original Mesa Airlines with components from it and several other units; along with.

Also in December, a \$160-million order is placed for four additional Beech 1900Ds.

For the year as a whole as both **Mesa Airlines** and briefly, as Mesa Air Group, collective passenger boardings accelerate 16.2% to 5,170,252 and revenues jump 12% to \$396.13 million. With expenses of \$347.76 million, the pretax profit is up to \$48.37 million and net gain reaches \$27.68 million.

An arrangement is reached with **United Airlines** during the first quarter of 1995 to continue "United Express" service from Denver. As part of the deal, 12 DHC-8-300s are traded back to Bombardier Aerospace in April for 25 smaller, but hot-and-high DHC-8-200s that are more suited to the thinner Colorado air. A \$226-million order is placed for the turboprops and, upon their arrival, beginning next February, they will be operated by **Mountain West Airlines**. Also in April, the Columbus hub is closed.

Established at Phoenix as a new MAG division, **Desert Sun Airlines (2)**, under the direction of its President George Lippemeier, is equipped in April with a pair of Fokker 70 jetliners, the first to be flown by a North American carrier.

It is reported on May 25 that MAG has entered into discussions with **Continental Airlines** for the purchase of its "Continental Express" subsidiary. Under terms of negotiation, Mesa would take over the major's commuter in exchange for a 33% investment in MAG by Continental. The premier Fokker 70 is delivered during the month and is initially employed on crew and route familiarization flights.

Mesa rejects the \$90 million proposal on June 2. As part of a code-sharing agreement with **America West Airlines**, the first **Desert Sun Airlines (2)** Fokker 70 begins "America West Express" service from its base to Des Moines on June 12. When the other Fokker becomes available in July, more destinations will be visited.

On July 1, MAG President/CEO Clark Stevens is elected to the board of directors, expanding the governing body back to its original seven positions.

Competition is heavy during the summer on both the West Coast and the East Coast and the Columbus "America West Express" hub is closed. A freak snowstorm hits Denver on the evening of October 22. After landing on Runway 34 in the blizzard, a DHC-8-200 mistakenly exits onto the wrong taxiway and becomes stuck in deep snow. ATC controllers are forced to close the whole runway for 20 minutes until the plane can be retrieved.

During November, support is provided to the new U.K.-based regional **Community Express Airlines, Ltd.** MAG as a whole is now rated a "National" airline by the DOT at year's end.

Combined enplanements for the six divisions increase by 16% to 6,271,418, while operating income rises 14.7% to \$454.53 million. Costs climb 22.2% to \$424.96 million. Profits decline, with operating gain down to \$29.57 million and net gain off to \$14.01 million.

Overall employment stands at 4,100 in 1996. Early in the year, plans are made to return the two Dutch-made Fokker 70s operated by **Desert Sun Airlines (2)** and replace them with up to eight Canadair CRJs. Delivery delays on a number of DHC-8-200s and negotiations with pilots over a new contract are protracted.

While landing at Denver on May 2 after a flight from Gunnison, Colorado, "United Express" Flight 7591, a Beech 1900D with two crew and nine passengers, sustains substantial damage when the right main landing gear collapses; no injuries are reported. The group's 100th Beech 1900D turboprop is delivered during the month.

As is the case with **Rich International Airlines**, the FAA, in the wake of the May **Valujet Airlines** disaster, raises questions concerning the company's management structure, as well as safety, security, and maintenance operations. Following a number of hotline complaints concerning poor maintenance and flight delays, particularly at Denver, the FAA begins a "special emphasis" inspection, involving the company's five divisions.

At the same time, Colorado's U.S. Senator Ben Nighthorse Campbell (R-Colo.) asks for a Senate aviation subcommittee investigation as the result of continuing complaints received in his office concerning flight delays at Denver and elsewhere.

In July, Congress eliminates \$1.2 million in Essential Air Service (EAS) payments to MAG. As a result, the carrier is forced to halt **Air Midwest** "USAir Express" services to the Kansas cities of Dodge City, Great Bend, Garden City, and Hays served from Kansas City, plus a number of "United Express" communities visited by **Mountain West**

Airlines from Denver. Mesa's other resources are strained by a delay in the company's receipt of new Dash 8-200 turboprops and the resignation, over the past 60 days, of 38 pilots.

During the third week of August, a \$320-million order is placed with Bombardier for 16 Canadair CRJ-200ER Regional Jets; it also takes options for 32 more in 2 groups of 16 each.

On September 22, MAG reaches a settlement with the FAA to resolve a number of deficiencies that inspectors have found in the airline's operations and maintenance. The holding company, on behalf of its regional subsidiaries, agrees to pay a \$500,000 civil consent penalty, make changes in its training and internal audit programs, and make personnel changes in flight, maintenance, and ground crews. The government agrees to set aside half of the penalty if compliance is demonstrated within a year.

The company, clearly annoyed, releases full details of the accord because the deal has leaked to the media by an unknown source within the FAA. At the same time, a "continuing fitness review" of the group is launched by the DOT. The company is reincorporated in Nevada on September 27.

Having been launched, Senator Campbell's aviation subcommittee review now becomes a very public campaign designed to highlight the company's poor service within the lawmaker's state. MAG responds with public relations, town meetings, and back-up crews ready to make certain that delays are no longer a significant concern.

In October, former executive Jonathan Ornstein, currently CEO of Richard Branson's **Virgin Express Airlines, S.A.**, makes a \$50-million offer on behalf of Virgin to purchase the company's "United Express" division. The tender is rejected by Mesa's board. At the same time, talks with the company's pilots break down, bringing in the National Mediation Board (NMB).

Also during the month, discussions begin concerning a possible transfer of corporate headquarters from Farmington, New Mexico, to any of five new sites: Albuquerque, Dallas/Fort Worth, Denver, Memphis, or St. Louis.

Plans are announced for the launch of scheduled service from Fort Worth's Meacham Airport next spring. At the same time, Texas proposes a new aviation tax on airlines operating within its borders.

Under NMB supervision, the company and its 1,000 unionized pilots are able to reach an accord on November 13 concerning a new 5-year pact. The agreement gives the flyers an immediate pay increase and an integrated seniority list; the carrier gets productivity concessions.

The decision is taken on December 9 to retain corporate headquarters at Farmington. With all of the Model Ds in service, the last of the Beech 1900Cs are retired by the end of the year.

Customer bookings accelerate 2.3% to 6,413,907 and revenues climb 9.9% to \$500.36 million. Expenses are up only 6.3% to \$452.37 million and there is a \$47.99-million operating gain. The net profit more than doubles to \$30.4 million.

During the first week of January 1997, MAG is again reorganized. The decision is based upon the FAA's requirement that it integrate its independent airlines, giving the new units common manuals and procedures, as the necessary step to advance from a FAR Part 135 operator to a full-fledged Part 121 carrier.

The operating subsidiaries Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced under the new certificate by four new divisions: "America West Express," Independent, "United Express," and "USAirways Express." Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**, the FAA certificates of which are also both held by MAG.

Each of the new divisions will handle their own customer services, marketing, community relations, code-sharing arrangements, and government relations. MAG will remain as a holding company and centralized purchasing agency. The carrier begins to encounter substantial training backlogs as the shift to FAR 121 begins.

A new Independent Division, which retains the original Mesa Airlines name under President Peter Otradovec at Fort Worth, will provide jet

services with a fleet of 10 Canadair CRJ-200ERs, the first of which arrives in February. Six additional RJs are delivered, several as replacements for the two Fokker 70s flying with **America West Express**.

Training flights commence in March. The cost of the company's reorganization is seen in fiscal figures for the first quarter. As of March 31, the company has lost nearly \$1 million since January.

At the beginning of April, 11 daily roundtrips commence between Fort Worth's Meacham International Airport ("Meacham Field"), which hasn't had scheduled service in a decade, and Houston. An FAA inspection forces the company to stand down from the new route in mid-month because Canadair pilots are not able to demonstrate appropriate skill in programming their sophisticated flight management computers. The grounding forces the company to postpone plans to start services to San Antonio on June 1.

Once new training is completed and procedures are revised, Mesa is allowed on May 5 to resume its 11-times-a-day frequencies between the Texas cities with 2 new RJ200ERs. A third Canadair is also on hand, but held in "ready reserve."

The initial **America West Express** RJ200ERs arrive in late June painted in the new color scheme of **America West Airlines** with "America West Express" billboard-sized titles painted along their sides. They commence revenue services on July 7 from Phoenix to Des Moines, replacing the Fokker 70s.

Recognizing the higher costs of operating at the new Denver airport, Congress, under the leadership of U.S. Senator Pat Roberts (R-Kans.), restores—and increases—the lost EAS monies on July 1 for the next fiscal year, in the amount of \$2,797,280.

A dispute between MAG and its **United Express (Mesa Air Group)** division vs. **United Airlines** and **SkyWest Airlines** concerning access to certain West Coast markets results in a July lawsuit. UAL files suit in the U.S. District Court in Chicago seeking a determination as to the rights of all parties to the routes before any of the companies suffer economically. Mesa does not countersue.

When the jetliner service between Fort Worth and Houston (HOU) proves less popular than anticipated, President Otradovec implements a fare sale; between August 1 and August 31, the \$84 one-way tariff is reduced to just \$25. Still, frequencies will have to be cut back to six per day. It is announced on August 23 that thrice-daily Canadair CRJ roundtrips will commence on October 5 between San Antonio and Colorado Springs.

On September 1, CRJ-200ER flights commence to San Antonio from Fort Worth 6 times daily; on September 7, service to Houston is reduced from 11 to 6 daily roundtrips. Due to a clause in its Meacham Field contract, Mesa is prohibited from flying from that market to cities outside of Texas.

During the month and after a new inspection is completed, the FAA forgives half of the \$500,000 fine imposed upon the airline a year earlier.

Due to a delay in receipt of FAA approval for its Beech 1900D simulator training program, Mesa, during the month, is forced to lay off 81 pilots who have graduated from its ground school. With the company suffering fiscal reversal, it can no longer justify maintaining the flyers on the payroll until such time as they can clear their final training and become active flight crews.

With the EAS subsidy coming in hand, twice-daily **Air Midwest** "USAir Express" roundtrip Beech 1900D flights are resumed on October 1 from Hays to Kansas City via Great Bend and from Garden City to Kansas City via Dodge City. Additionally, "United Express" resumes twice-daily Beech 1900D roundtrips from Great Bend to Denver via Dodge City and twice-daily roundtrips from Hays to Denver, plus thrice-daily roundtrips from Liberal to Denver via Garden City.

CCAair board member Peter Murname, a principal in Barlow Partners and former Mesa executive Jonathan Ornstein, president of **Virgin Express Airlines, S.A.**, make a \$50-million offer in October for Mesa's "United Express" operation at Denver, along with **WestAir Commuter Airlines**. The tender is rejected.

"United Express" service from Denver to Fort Collins, Loveland, and Longmont, Colorado, is terminated as the result of low prorates from **United Airlines**, lack of capacity, and high Denver airport costs. United begins an Airport Express bus service that operates 14-times-per-day roundtrips from Denver to Fort Collins and 12 times per day to and from Longmont and Loveland.

A third Canadair enters service in November, with a fourth retained as backup. Five more CRJ-200ERs will enter service by year's end. Mesa initiates thrice-daily nonstop Canadair CRJ-200ER roundtrip service between Nashville and Colorado Springs beginning Nov. 3 with introductory fares at \$99 one-way. Flights previously scheduled to begin on October 5 are now initiated thrice daily between San Antonio and Colorado Springs.

On November 10, MAG places \$350 million in orders with Bombardier Regional Aircraft for an additional 16 CRJ-200ERs; in fact, the request actually represents the conversion of 8 DHC-8 requests and the exercise of 8 options. Four will be assigned to Mesa Airlines and 12, under a new marketing agreement, to **USAirways Express (Mesa)**.

Fort Worth to Austin CRJ-200ER service begins on November 30. Seven roundtrips are provided daily during the week with an abbreviated schedule on weekends. Having weathered the required three-month interim, the company drops "United Express" flights to Worland and Rock Springs, Wyoming, plus Pueblo and Alamosa, Colorado, at the end of the year. More worrisome, completion reliability of **America West Express (Mesa Air Group)** falls to 95% in December, three points below the minimum specified by contract.

Passenger boardings increase by 5.4% to 6,759,756. Operating revenues rise 2.1% to \$510.97 million, as expenses jump 25% to \$565.46 million. The record operating profit of 1996 becomes a \$54.48-million loss, another record; simultaneously, the record \$30.4-million net profit has been turned into a record \$48.59-million loss. In short, Mesa has undergone a "riches-to-rags" experience.

At the beginning of 1998, MAG is the 12th largest airline in the world in terms of fleet size.

Chairman Risley announces in late January that he will retire on April 30 or upon appointment of his successor, although he will continue to serve as the carrier's nonexecutive board chairman. At the same time, company veteran Robert Dynan is appointed president of the independent Mesa Airlines Division and J. Clark Stevens becomes chief operating officer.

By January 14, a Washington, D.C.-based group led by Franklin Resources has gained a 9% stake in Mesa. Since December 2, it has purchased 2.54 million common shares. On January 22, it is revealed that **Virgin Express Airlines, S.A.** CEO Ornstein has acquired a 5.33% stake—sufficient for a board seat.

The worst news of the month comes from **United Airlines**, which announces an end to its "United Express" arrangements with subsidiary **Westair Commuter Airlines**. The San Francisco component is cancelled, effective on May 31, with Pacific Northwest flights to end in September.

The loss of this operation is a serious blow, as the "United Express" relationship had been worth 47% of the group's revenue.irate investors, claiming to have lost millions over the past year due to poor management, threaten lawsuits.

On February 4, the board of directors announces that Paul R. Madden, the airline's corporate/SEC counsel from 1988 to June 1997, has been elected board chairman, with James Swigart as vice chairman. The chairman position was vacated the previous day by Mr. Risley, who becomes chairman emeritus.

To help revitalize their carrier, pilots at **Westair Commuter Airlines** offer MAG \$20 million in February for a 20% stake; MAG spurns the tender. Also during the month, former executives Jonathan Ornstein and James Swigart, the latter chief financial officer of **Virgin Express Airlines, S.A.**, of which Ornstein is CEO, return to the carrier, winning seats on the board of directors, and begin demanding management change.

Disappointed with the service it has received from Mesa (particularly completion reliability), **America West Airlines** determines during early March to conclude its code-sharing agreement with **America West Express (Mesa Air Group)**, effective April 2 and notifies MAG of its decision.

Also in March, **Westair Commuter Airlines** President Rolly Bergeson memos company employees the bad news that 1,100 of their number will be laid off by mid-June, directly as a result of the loss of the United contract.

During the month, the Canadair service to Meacham Field, which is losing \$2 million per month, is suspended, as are flights to Nashville and San Antonio from Colorado Springs. Plans are made to return up to 60 Beech 1900Ds and BAe Jetstream 31s to their lessors over the next 12 months.

On March 12, it is announced that five Canadairs will be transferred from the carrier's Fort Worth system to satisfy the MAG agreement with **USAirways**, which calls for the placement of 12 regional jets into the **USAirways Express** code-sharing program.

On March 26, **Virgin Express Airlines, S.A.** CEO Ornstein is appointed CEO, effective May 1. When **America West Airlines** learns that the former Mesa executive vice president and current Virgin Express CEO Ornstein has become involved with Mesa on a management basis, AWA relents on its contract termination decision, agreeing to rescind the termination notice. On March 31, it enters into an interim dual-designator pact. A long-term code-sharing alliance will be negotiated after Ornstein takes over as Mesa's CEO in May.

The Pacific Northwest "United Express" segment is essentially completed on April 30 and with it **United Express (Mesa Air Group)** is no more.

Having initially indicated a preference not to assume an active role in management, Jonathan Ornstein becomes Mesa CEO on May 1. He will remain chairman of **Virgin Express Airlines, S.A.**, where the Mesa board's vice chairman, James Swigart, now becomes CEO. Chief financial officer from 1985–1995, Blaine Jones now returns to that post. Three Canadair CRJs enter service with **USAirways Express (Mesa Air Group)** on May 1.

Four Beech 1900Ds are transferred to **Great Lakes Aviation** during the month as the Spencer, Iowa-based carrier begins its expansion at Denver. Mesa and the aircraft's manufacturer, Raytheon Aircraft, will turn over an additional 11 1900Ds following their maintenance-acceptance inspection.

At the beginning of May, MAG retains the International Airline Support Group to assist **Westair Commuter Airlines** with the disposition of its leased fleet of Brasilias and Jetstream 31s. The process will result in a \$16.5-million suit by aircraft lessor Jet Acceptance Corporation against the airline for J-31 lease payments that are not subject to cancellation as well as damages.

CEO Ornstein begins to restructure the group's management team on May 12. Clark Stevens vacates the chief operating officer slot to become president of Mesa Airlines, Inc., which operates as the **America West Express (Mesa Air Group)**, **USAirways Express (Mesa Air Group)**, and independently as Mesa Airlines, succeeding the resigned Robert Dynan. Michael Ferverda becomes vice president-light operations, replacing Chuck Steeber, who once again becomes a line pilot. Vice President-Planning and Pricing Benjamin Harrison resigns, as does Public Relations Director Sarah Pitcher.

Having determined that the government EAS subsidy is insufficient, MAG, on June 19, serves notice to the DOT that it will halt service to Alamogordo, Clovis, and Silver City, New Mexico, and Kingman and Prescott, Arizona, within 90 days.

The second quarter losses this year are \$9.2 million, compared to \$989,000 a year earlier. Among the \$131.1 million in expenses is a \$4-million loss taken with the cessation of jet service at Fort Worth and a \$2.5-million reserve related to an anticipated closure of a shareholder class-action suit. A clearly disappointed Chairman Ornstein promises action to reverse the decline.

In July, Mesa is able to renegotiate its financial arrangements with Raytheon Aircraft Company for 15 Beech 1900s. Under terms of the pact, \$5 million in cash is immediately generated and leases on the aircraft are reduced from \$560,000 per month to \$200,000. Mesa concurrently enters into a brokering agreement with Raytheon under which any of the Beech 1900s may be sold, with the airline receiving a portion of the profit. This arrangement marks the opening of a massive sell-off or redeployment of nearly 100 excess aircraft.

Former **Chautauqua Airlines** CEO Timothy Coon is appointed to the newly developed position of vice president of **USAirways Express (Mesa Air Group)** on July 17. Plans are made to sell the flight school at Farmington.

A new, six-year code-sharing agreement with **America West Airlines** is announced on July 23. Focusing initially on America West hub at Phoenix, the agreement contemplates adding regional operations in Las Vegas and Columbus, Ohio. Additionally, Mesa's Beech 1900s will be withdrawn in favor of CRJs and DHC-8s, which will reach totals of 12 and 14, respectively, by the end of 1999.

The next day, at the company's annual general meeting, shareholders reelect the board of directors, as restructured in early February, and approve all of management's proposals. It also approves a transfer of company headquarters from Farmington to Phoenix.

Michael Suckow is named senior director of systems operations on August 6, while, at the same time, Steve Markhoff becomes director of corporate affairs. "America West Express" frequencies to Des Moines and Fresno are increased during August.

Given the history between the leadership of the two organizations, it does not come as a surprise when, on August 27, it is announced that MAG has signed a letter of intent for the acquisition of **CCAair**. The all-stock transaction, valued at approximately \$60 million (including \$15 million in debt assumption), will be complete as soon as stockholders and government regulators approve.

Mesa will operate CCAir as a wholly owned subsidiary, which will retain its own name. Through their relationships with **USAirways**, the acquisition is also seen as a way for the combined "USAirways Express" companies to serve all of the major's hubs on the East Coast.

Although the Jet Acceptance Corp. suit is still pending, MAG, on September 4, agrees to pay \$8 million to settle several other pending lawsuits in order to prevent long legal battles. The suits had been filed earlier by disgruntled stockholders accusing present and former Mesa board and executive officials of allegedly and purposefully providing incorrect financial information.

A tentative contract is reached with Association of Flight Attendants (AFA) on September 21. Rank-and-file members will vote on the matter within weeks.

At the beginning of October, Vice President-Customer Service Mike Lewis is tasked to work closely with both the Mesa Airlines Division and "America West Express"; Vice President-Station Operations Heidi Frederick receives the same charge concerning "USAirways Express."

The independent Mesa Airlines unit, operating Beech 1900Ds from the Albuquerque hub, visit the following communities Colorado Springs, Durango, Alamogordo, Albuquerque, Carlsbad, Farmington, Hobbs, Las Cruces, Roswell, Silver City, and Dallas/Fort Worth.

On October 4, **CCAair** starts nonstop "USAirways Express" DHC-8-102 roundtrips are between Charlotte and Tallahassee four times a day.

A public ceremony and news conference are held at Albuquerque on October 16 to unveil MAG's new corporate identity. Designed to symbolize the new spirit of Mesa in the New Mexico marketplace as well the group's rejuvenation, a new logo and corporate livery are unveiled aboard a Beech 1900D. The color scheme is changed from the predominant color of green to a more modern look of purple and yellow, accented by a reddish orange sun. "We're a different company," Chairman Ornstein assures the 100 community leaders and media on hand for the event.

Under terms of its new accord with **America West Airlines**, "America West Express" assigns four new CRJs to the major's Columbus,

Ohio, hub in the fall. These are employed, beginning on October 29, to double frequencies to Baltimore and Philadelphia from two flights per day to four.

Additionally, a third daily flight is started to Boston and a fourth to New York (LGA). Frequencies to Chicago (MDW) are advanced to seven per day. A mix of CRJs and larger **America West Airlines** jetliners will operate the latter services.

Also in October, a tentative agreement, which will be ratified in November, is reached between the airline and the AFA. The labor pact, the first between the union and the airline, covers the flight attendants working with the company's "USAirways Express" and "America West Express" divisions.

It is announced at a Phoenix news conference on November 25 that MAG has settled all claims with the aircraft and equipment lessors of its defunct WestAir subsidiary for approximately \$15 million.

Enplanements for the year drop to 4.32 million, a 36% decline; revenues are off by 17.1% to \$423.54 million. Although expenses are down 17.2%, they still total \$468.32 million and cause an operating loss of \$44.78 million. The net loss grows to \$53.43 million.

In a move calculated to rebuild the strength and size enjoyed before the "United Express" disaster, MAG, on February 1, 1999, officially moves to fold **CCAair** into "USAirways Express," with the \$54-million merger to be complete by June. At that point, each **CCAair** share will have been exchanged for between 0.435 and 0.6214 Mesa share.

There are no initial plans to change **CCAair's** operations or to link the carrier's route system to that of MAG.

The carrier announces on February 25 that it has entered into a contract to sell an additional 16 Beech 1900Ds as part of its fleet restructuring project. Due to new regulatory requirements and the additional costs of maintenance, the aircraft have become too expensive to operate.

Upon completion of the transaction, the group fleet will comprise 22 CRJs, 12 DHC-8s, and 77 Beech 1900Ds. An additional 10 CRJs will be received by December 31.

Mesa CEO Ornstein and **CCAair** CEO Kenneth Gann jointly sign an extension of the "USAirways Express" service contract on March 5; the renewed marketing agreement is good through December 31, 2003.

The Mesa Airlines, Air Midwest, and **CCAair** divisions all complete 100% of their flights on May 2. To celebrate this achievement, President/CEO Ornstein, on May 6, hosts a company-wide pizza party for all 3,800 employees in every unit spread over 100 locations.

Represented by the AFA, MAG's flight attendants ratify their first contract, for four years, with the airline on June 13.

A dispute with Bombardier Aerospace over financing, trade-in, and option aircraft is settled in November for \$9 million. The arrangement between the two calls for Mesa to pay the Canadian manufacturer \$4 million immediately, with additional payments over eight months.

Also during November, the ALPA-represented pilots of Mesa Airlines and **CCAair** merge their seniority lists. Both carriers operate as **USAirways Express (Mesa Air Group)**.

Mesa Airlines passenger boardings fall 17.5% this year to 2,795,000. MAG revenues drop 17.3% to \$404,616,000, while expenses are down 26.8% to \$405,862,000. Losses improve to \$1.24 million (operating) and \$13.32 million (net).

MAG employment at the beginning of 2000 stands at 4,000, a 60% increase over the previous 12 months. Among the world's top 25 airlines, MAG now ranks 23rd in terms of its fleet size.

An agreement is signed with Empresa Brasileira de Aeronautica, S.A. on January 27 for 36 additional ERJ-145s; Mesa also has options on 64 more regional jetliners, some of which may later be converted into ERJ-135 orders.

The first ERJ-145 arrives and clears customs at Fort Lauderdale on April 28. In May, Larry Risley, founder/chairman emeritus, retires from the MAG board of directors. On June 4, the premier ERJ-145 enters service with **USAirways Express (Mesa Air Group)**. (For consistency, Mesa's "USAirways Express" operational service is filed under that list-

ing.) The CRJs displaced by the new Brazilian jets will be transferred to **America West Express (Mesa Air Group)**.

MAG is named fourth best-managed company among non-state-owned regional-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10. Also in July, Michael Lotz becomes president.

On September 19, an agreement is reached with Raytheon Aircraft Company under which the manufacturer will accept return of 20 Beech 1900Ds. The arrangement is based on an August 1 offer from Raytheon under which the 36 remaining units would be refinanced.

An agreement between Chairman/CEO Ornstein and officials from Lea County and Hobbs, New Mexico, result in a company decision to rescind plans for closure of its nonsubsidized EAS route from Hobbs to Albuquerque on October 19.

The "USAirways Express" contract is extended on November 1 from 2007–2008. Mesa promises to grow the number of ERJ-145s committed to the pact from 28 to 32.

The next day, the **Air Midwest** "USAirways Express" subsidiary signs a code-sharing agreement with **Midwest Express Airlines**. The pact is scheduled to take effect early in 2001 on 14 routes out of Kansas City.

By mid-November, Mesa is operating 10 ERJ-145s for **USAirways Express (Mesa Air Group)** and 26 CRJs for **USAirways Express (Mesa Air Group)** and **America West Express (Mesa Air Group)**. The total allows the airline to claim the title of largest independent U.S. regional jet operator.

During the first quarter of 2001, Mesa will execute a new agreement with **United Airlines**. Contingent upon the proposed merger of the major with **USAirways**, United will extend the MAG **USAirways Express (Mesa Air Group)** contract through December 3, 2010. The deal requires that both UAL and MAG drop all outstanding litigation remaining from the UAL termination of its contract with Mesa in 1998.

MESA AIR SHUTTLE. See MESA AIRLINES

MESA AIRLINES: United States (1980–1994). Founded by Larry L. Risley at Farmington, New Mexico, in October 1980, this small regional begins life as a division of Mesa Aviation Services, where Risley is president and chief mechanic. Piper Saratoga frequencies are inaugurated to Albuquerque with the new commuter entrant operating as the intrastate **Mesa Air Shuttle**.

Enplanements total 14,100 in 1981, the first full year of service. When the owners of Mesa Aviation Services lose faith in their infant air transport division in 1982, Risley and his wife Janie mortgage their home and raise \$125,000 with which to purchase the shuttle's assets. Passenger boardings for the year fall to 10,300.

The fleet in 1983 includes 2 Piper PA-31-310 Navajos, 2 Piper PA-34 Senecas, and 1 Cessna 310. Mesa now obtains an Essential Air Service contract from the U.S. government to provide service to several New Mexico cities. The first Beech 99 is received in May.

Flights begin not only to the capital, but to Vernal and Grand Junction, Colorado, as well.

The economy's recovery assists the company to attract additional customers; late in the year, it is revealed that Mesa has flown 29,136 passengers for that year.

The workforce grows 102.9% in 1984 to 69 as the corporate name and identity is changed. Service is started to Carlsbad, Hobbs, and Roswell, New Mexico, and Lubbock, Texas.

The company's 6 new Beech 99s transport 65,381 customers, a 150.3% increase over the previous 12 months. Revenues total \$2.16 million and expenses are \$2.19 million, leaving an operating loss of \$30,000 and a net downturn of \$17,000.

As 1985 begins, a route is extended to Midland and Odessa, Texas, and a Beech 1900 is acquired. The Essential Air Service (EAS) designation for several more New Mexican routes is acquired.

Passenger boardings increase 84.3% to 120,537. Profits of \$290,000 (operating) and \$185,000 (net) are posted on revenues of \$4.96 million.

The 177-employee Mesa continues to safeguard its independence in 1986, a status reinforced by the fact that **Southwest Airlines**, which dominates the Albuquerque hub, has no feeder arrangements. Mesa is the chief benefactor when **Air Midwest** abandons its former Essential Air Service (EAS) destinations in New Mexico early in the year, allowing Mesa to take them over.

Employing a fleet for 4 Beech 1900s, 5 Beech 99s, and 1 Cessna 208 Caravan I, the newly elevated large regional enjoys a remarkable year operating what its publicity department labels as "low-cost, low-fare, high-frequency" services.

Customer boardings increase again, up 78.3% to 214,956. Revenues jump 100.6% to \$9.96 million, expenses are up 87.6% to \$8.76 million, and the operating profit is \$1.19 million. A net gain of \$742,000 is achieved.

Airline employment at the nation's biggest remaining independent large regional climbs by 42.1% in 1987 to 270. The fleet now includes 5 Beech 1900s, 5 Beech 99s, 2 CATpass Beech King Airls, and 1 Cessna 208 Caravan I. Mesa is launch customer for the Beech 1300, a commuter version of the King Air 200, with an order for five.

The company name is changed to Mesa Airlines in January and in March, Mesa becomes a public corporation, initiating a \$7-million initial public stock offering. Losses are suffered during the second quarter as the result of a fare war begun on April 1 with **Trans-Colorado Airlines**. Over the next three months, this "Continental Express" carrier unsuccessfully attempts to move into Mesa's major markets. A merger is arranged with Wyoming carrier **Centennial Airlines**; however, creditors cannot come to terms on the takeover and the arrangement falls through, causing the bankruptcy of the small regional.

Mesa steps in during June to takeover failed **Centennial Airlines'** Wyoming route system and during the same month, a secondary hub is begun at Denver. A new service is also started from Dallas (DFW) to the New Mexico community of Roswell in October.

On the year, passenger bookings increase another 31.6% to 283,261. Revenues advance by 41.4% to \$15.6 million and low expenses allow profits of \$1.7 million (operating) and \$623,247 (net).

The workforce is cut by 5.5% in 1988 to 420 and 1 Beech 99 is removed. Orders are placed for two additional Beech 1900s and two Beech 1300s. In February, the DOJ files suit against the carrier for discriminatory hiring practices. Later, the unprofitable Wyoming routes acquired with **Centennial Airlines** are all gradually eliminated. The first Beech 1300 is delivered in September.

Customer bookings consequently decline by 2% to 277,578. Revenues grow 15.9% to \$18 million and operating income reaches \$1.97 million. Net profit declines to \$409,206.

The employee population grows a dramatic 55.7% in 1989 to 383. In February, service is inaugurated to the Arizona communities of Prescott, Havasu, and Bullhead City, as well as San Diego, California. In early spring, a new subsidiary, **Skyway Airlines**, is created. Outfitted with three Beech 1900s and appointed a "Midwest Express Connection" carrier, the Mesa offspring, flying under its parent's certificate, inaugurates hub-and-spoke flights from Milwaukee to eight communities on April 17. The summer is spent defeating a takeover bid by **StatesWest** and losing its own takeover bid for **Air Midwest**.

The last Beech 99 is retired in October. A bid is made, also in October to take over financially troubled **Aspen Airways**; however, this effort is ended when a sale of the Colorado commuter to Los Angeles investor Burt Sugarman is announced. Shortly thereafter, the Sugarman arrangement collapses, as do Aspen's negotiations with **WestAir Airlines**.

At year's end, the company places the winning bid (\$4 million, reports Aspen owner Donald Ringsby to his employees) for **Aspen Airways'** turboprop routes and stations. After these are peeled away from the Denver-based carrier, the remainder of the operation, save for the separately-sold fleet of 10 aging Convair 580s, is acquired by **Air Wisconsin**.

The fleet at year's end includes 13 Beech 1900s, 10 Beech 1300s, and 2 Cessna 208 Caravan Is; orders are outstanding for 10 additional 1900s.

Having survived and prospered in both the boardroom and the field, the large regional does equally as well in the air and the accounting office. Passenger boardings shoot up 44.2% to 400,187 and revenues accelerate 28.6% to \$22.5 million. Expenses climb 33% to \$20.6 million and leave the carrier with an operating profit of \$1.9 million. Net profit skyrockets to \$1.04 million.

The remaining Beech 99s are retired in 1990 in favor of seven additional 1900s and nine more 1300s. Orders are placed for eight Embraer EMB-120 Brasilas with options on eight others. Four of the Brazilian-made turboprops are now leased from **Air Midwest**. As a result of the **Aspen Airways** arrangement, Mesa now enters into its first code-sharing agreement, with **United Airlines**, from a base at Denver. Beginning in February, Mesa, doing business as "United Express," replaces **Aspen Airways** on the Casper, Wyoming–Farmington, New Mexico, route. The same month, **Skyway Airlines** wins tentative government approval to operate as a commuter.

The first Brasilia is delivered in April and by June 1, "United Express" flights have started over 11 former Aspen routes in Colorado, South Dakota, and Wyoming. New livery is adopted, including the modified **United Airlines** scheme employed on the ex-Aspen system. Openheimer & Co and Jessup, Josephthal & Co in late July underwrite and manage a public offering of two million shares of common stock.

In August, Mesa becomes launch customer for the new Beech 1900D by signing a letter of intent for the purchase of 25 machines at \$3.95 million per copy. The first secondary stock offering is made in December and brings in \$5.5 million in new equity.

Customer bookings skyrocket 87.2% to 749,118 and revenues increase 104.2% to \$45.95 million. Expenses are up 94.3% to \$40.04 million and allow an operating profit of \$5.9 million and net profit of \$3.57 million.

In 1991, the fleet of the 250-employee large regional is altered again and now comprises 40 1900Cs, 4 Embraer EMB-120 Brasilas, and 10 Fairchild Metro IIs. During the first quarter, the carrier acquires the "USAir Express" partner **Air Midwest**, headquartered at Wichita. The Cessna Caravans and Beech 1300s are retired during the second quarter. On July 1, the company joins with **United Airlines** to celebrate the fifth anniversary of their "United Express" partnership.

Like **Skyways Airlines**, the Mesa-owned **Midwest Express** feeder **Air Midwest**, upon its merger in July, continues its code-sharing activities as a subsidiary under its own name. Also during the month, the company's Farmington headquarters complex is nearly doubled in size by the opening of a new training facility.

On August 1, Beech 1900C flights commence from Albuquerque to Grand Junction, Colorado, via either Farmington or Durango. On August 28, a contract is signed for the purchase of 58 Beech 1900Ds. Twice-daily nonstop and daily one stop Beech 1900C service begins in September from Phoenix to Grand Junction.

Late in the fall, **Air Midwest** CEO Robert Priddy agrees to travel to Jacksonville and establish a new subsidiary, **Florida Gulf Airlines**. The first Beech 1900D arrives at the company's Farmington base in late November.

On behalf of the major **USAir**, **FloridaGulf Airlines** begins "USAir Express" service from Tampa in December. After a period of crew training, the new Beech 1900D enters scheduled service in mid-month.

Passenger boardings by Mesa and its subsidiaries zoom upward this year by 43.5% to pass the one million-mark in annual boardings for the first time (1,074,870). Revenues ascend 69.3% to \$77.78 million, expenses rise 74.5% to \$69.85 million, and the operating profit moves up to \$7.92 million. Net gain reaches \$5.03 million.

Early in 1992, the negotiations are completed for the acquisition of national carrier and "United Express" partner **WestAir Airlines**. When the announcement is made in February, it is revealed that the transaction, which is completed in late June, will be worth \$41.4 million. Also in June, a secondary public stock offering is made that brings in another \$30 million in new equity.

WestAir Airlines continues to operate on behalf of the major at San Francisco and Seattle. A decision is taken not to purchase the Chicago (ORD) operations of **Air Wisconsin**.

On October 1, a code-sharing agreement is entered into with **America West Airlines** to create "America West Express" commuter service through the integration of routes from each carrier's existing Phoenix operations. **America West Airlines'** six de Havilland DHC-8s are given over to the collective enterprise and Mesa's Metros are withdrawn. Also on this day, the major transfers its routes to Durango and Grand Junction, Colorado, plus Yuma, Arizona, to the regional.

The **America West Airlines** route to Flagstaff is transferred on November 1, followed by the service to Palm Springs on December 1. Late in the month, a \$90-million order is placed for 20 Beech 1900Ds. The purchase will include spare parts, training, and five formerly employed Beech 1900Cs.

Customer bookings for the year skyrocket 198.1% to 3,204,372 and revenues rise 16.2% to \$85 million. Operating income moves to \$9.6 million and the net profit is \$5.4 million. Revenues for all of the divisions combined totals \$316.6 million, allowing profits of \$24.1 million (operating) and \$14.2 million (net).

Airline employment in 1993 totals 650. In January, the company receives the 1992 "Regional Airline of the Year" award from *Air Transport World* magazine.

In February, a new CalPac division is established to provide "United Express" flights from Los Angeles as an extension of the United feed to and from Denver. In May, a \$6.2-million write-off is taken on the WestAir division, half of it coming from two **WestAir Airlines** Shorts 360s. Another secondary public stock offering is completed during June and nets \$84 million in equity.

During the summer and on a seasonal basis, the subsidiary **Florida Gulf Airlines** initiates "USAir Express" flights to communities surrounding Boston.

With the delivery of six Beech 1900Ds and two more Brasilas, the CalPac is able to increase its flights out of Denver by 30% during the summer. More flights are added to the Midland, Odessa, and Liberal routes while new frequencies are initiated to Lubbock, Jackson Hole, and Rock Springs. **WestAir Airlines** President Jonathan Ornstein is named executive vice president on October 1.

The code-sharing alliance with **Midwest Express** is terminated and on October 8 the code-sharing arrangement with **America West Airlines** is expanded. A new, small regional, **Superior Airlines**, is created to initiate commuter feed from America West's Columbus, Ohio, hub. **Westair Commuter Airlines** President Jonathan Ornstein becomes Mesa's executive vice president later in the month.

Superior Airlines begins services on December 15 from Columbus to Rochester, Detroit, Lansing, Flint, Toledo, Dayton, Akron, Canton, Louisville, Rockford, Indianapolis, South Bend, Des Moines, and Cedar Rapids.

At year's end, Falls Creek, Pennsylvania-based **Crown Airways** is purchased, along with its routes feeding Pittsburgh. Also in December, the megaregional becomes U.S. launch customer by placing contracts with Fokker for two Model 70 twinjets, plus six options, to begin delivery in 1995.

Collectively, Mesa's group of airlines enplane a total of 2,097,653 passengers, down a million from the previous year. Revenues climb 11.7% to \$353.6 million and expenses are \$115.52 million. Operating income rises to \$32.25 million and net gain reaches \$26.35 million.

In January 1994, Mesa confirms its orders for two Fokker 70s, equipped with Rolls Royce Tay 620 turbofan engines, for delivery next year.

During February, Mesa is one of the investors joining with the financial group AmWest Partners, led by Texas-based Air Partners I.P.—fresh from its bailout of **Continental Airlines**—in an effort to bring the major **America West Airlines** out of Chapter XI.

In March, the new Pittsburgh-based subsidiary **Crown Airways** is renamed **Liberty Express** and offers are made to takeover the "USAir

Express" partner **CCAair** and the "United Express" operator **Sunaire Express**. In April, the transition of **Skyway Airlines** into Superior Airlines, doing business as "America West Express" at Columbus, is completed.

Following two unsuccessful attempts to acquire **CCAair**, that financially troubled small regional's board finally approves, in April, its takeover in an exchange of stock. During the spring, a new code-sharing agreement is signed with **America West Airlines**; good through the year **2004**, the contract specifies a 97% completion reliability rate.

In May, the St. Croix, Virgin Island-based "United Express" carrier **Sunaire Express** is obtained from its parent, Aeroflight Holdings. In exchange for an investment of between \$600,000 and \$750,000 in the company as part of its Chapter XI bankruptcy reorganization, which will allow it to eventually pay off its \$2.3 million debt, Mesa will expend a total of \$3.1 million, including an infusion of \$750,000 in cash.

Executive Vice President Jonathan Ornstein departs in June to become president/CEO of "Continental Express."

A letter of intent is signed with **USAir** on August 24 for the purchase of certain ground equipment and facilities at Reading, Pennsylvania, and aircraft, including nine Beech 1900Bs and five Shorts 360s. On October 23, **Florida Gulf** is purchased from **USAir** for \$28 million and becomes the "USAir Express" carrier for Baltimore, Philadelphia, and Boston.

Also in August, Blaine Jones is appointed president of all of Mesa's operating division except the WestAir unit. Twice-daily nonstop roundtrips commence on October 1 between Denver and Cody, Wyo.

Also in October, a 10-year marketing agreement is signed with **United Airlines** for the provision of "United Express" services from Denver. The first de Havilland Canada DHC-8-300s enter service, but will not prove effective in operations from

In December, the corporate organization is changed. Mesa becomes Mesa Air Group, with five operating divisions: **Air Midwest**, **Florida Gulf**, **Liberty Express**, and **WestAir Commuter Airlines Mountain West Airlines (4)**, which replaces the original Mesa Airlines with components from it and several other units.

For the year, 4,457,989 passengers are transported and a \$58.87 million net profit is generated.

MESABA AIRLINES: 7501 26th Ave. South, Minneapolis, Minnesota 55450, United States; Phone (612) 726-5151; Fax (612) 726-5541; <http://www.mesaba.com>; Code XJ; Year Founded 1944. Pioneer aviator Gordon K. "Gordy" Newstrom establishes the fixed-base operation (FBO) Mesaba Aviation at Coleraine, Minnesota, in early **1944**. "Mesaba" is the Native American name for the iron ore range in northern Minnesota. Charters are flown with a Piper J3 Cub.

Later in the decade, the company is moved to Kent County Airport at Grand Rapids. Charter flights to Minneapolis and other points around the Gopher State are regularly undertaken during the next three decades as Mesaba flourishes as a general aviation contractor.

Mesaba Aviation is sold in **1971** to the Duluth-based Halvorson company, which, in **1973** establishes an airline division using the Mesaba name and inaugurates scheduled services to Minneapolis (MSP) on May 4 with a Cessna 421. Operations, under the direction of founder Newstrom, continue apace over the next five years, losing money each year.

Early in **1977**, Lowell Swenson and his sons Robert E. and Philip establish the FBO Northern Eagle Airways (NEA) at Thief River Falls, Minnesota. A year later, in October **1978**, the Swensons purchase the financially troubled Halvorson company. Robert becomes its CEO while Philip becomes president of NEA. Detroit Lakes, Minnesota-based **Ede-Aire** is purchased late in the year.

The number of Cessna lightplanes flown is increased during **1979-1980**. In **1981**, the family dissolves Halvorson and combines its aviation activities into a new Mesaba Aviation, Inc.

Enplanements total 10,527 and the carrier posts a net loss of \$178,000.

In **1982**, the Swensons oversee a workforce of 50, a fleet of 2 Beech 99s, and the inauguration of Essential Air Service (EAS) services to

Alexandria, Detroit Lakes, and Thief River Falls. Mesaba becomes a public stock company in the fall and \$4 million is raised in a stock offering.

Bookings triple to 31,720 and a profit of \$188,000 is recorded.

The fleet in **1983** includes 5 Beech 99s, 4 Cessna 172s, and 1 each Cessna 180, Cessna 185, Cessna 206, and Cessna 210.

A marketing arrangement is entered into with **Republic Airlines**, which also helps the company plan for FAA Part 121 certification.

Passenger boardings climb again, up to 56,534. The profit is \$425,000, on revenues of \$6 million.

Airline employment in **1984** stands at 150 and the fleet now comprises 2 newly delivered Fokker F.27-200s and 7 Beech 99s. Having received its Part 121 Air Carrier Certificate from the DOT in only five months, Mesaba in July inaugurates EAS flights to a variety of destinations, including the Minnesota communities of Bemidji, Brainerd, Fairmont, Grand Rapids, Hibbing, Mankato, Minneapolis (MSP), and Worthington. Fort Dodge and Mason City, Iowa, Omaha, Nebraska, Devils Lake and Jamestown North Dakota, and Huron, Brookings, Pierre, Mitchell, Sioux Falls, and Rapid City, South Dakota, are also visited.

In November, the carrier, having discontinued its marketing relationship with **Republic Airlines**, transfers its base from Grand Rapids to a former Republic hangar at Minneapolis (MSP). From there, flight activities are coordinated with **Northwest Airlines** in a code-sharing arrangement and a new commuter network that comes to be known as Northwest Airlink.

Mesaba launches the very first Northwest Airlink service from Minneapolis on December 1. Denoting the arrangement, company aircraft are painted with red fuselage tops, black bottoms, and white titles and markings.

Customer bookings increase 83% to 86,285, but cargo is off by 3% to 216,021 pounds. Profits total \$439,995 (operating) and \$202,216 (net).

Despite ferocious competition from **Express Airlines I**, business is good for the Minneapolis-based small regional in **1985** and orders are placed for seven Fairchild Metro IIIs. The Texas-based airplane manufacturer not only purchases five Beech 99s, it also promises Mesaba \$1 million in "fleet integration" payments to be made as its aircraft are delivered. A third F.27-200 arrives in October, financed by \$2 million in debentures from the Northwest subsidiary Northwest Aircraft, Inc.

Passenger boardings jump 54.1% to 132,967 while freight climbs 10% to 230,000 pounds. Revenues ascend 42% to \$9.7 million and with expenses held down, operating profit rises to \$1.06 million while net gain reaches \$361,155.

The fleet of the Northwest Airlink partner in **1986** includes 5 Fokker F.27-200s (2 delivered after March) and 7 Fairchild Metro IIIs. The carrier profits from the massive route realignment that follows the merger of **Republic Airlines** into its code-sharing major associate on October 1. Northwest divides its Minneapolis markets between Mesaba and Republic's former commuter affiliate **Express Airlines I**.

Customer bookings increase 91.1% to 254,157. Cargo, on the other hand, declines by 12.3% to 202,000 pounds. Revenues rise 59.6% to \$19.58 million, but expenses swell 84.6% to \$20.64 million and leave an operating loss of \$1.05 million. The net loss is \$508,000, even with a profitable fourth quarter.

The fleet in **1987** comprises 7 Fairchild Metro IIIs and 5 Fokker F.27-200s; the workforce remains at 370. A charter operation is begun in January and quickly requires the purchase of a sixth, but dedicated, F.27-200. An aggressive marketing campaign is undertaken to offer discount fares to discretionary traffic in those six markets where it supplements the major. As much of the traffic for the new charters comes from the athletic teams of the Big Ten Conference, Mesaba gains its long-standing nickname of "The Big Ten Airline."

Northwest takes over almost all of Mesaba's reservations and advertising, while continuing to handle check-in, baggage, and ticketing.

Passenger boardings increase 45.8% to 370,637 and freight is up nearly as much, by 42%, to 286,000 pounds. Revenues advance by 40.3% to \$21.8 million and costs allow a net gain of \$1.3 million.

During the first quarter of **1988**, the company's strong cash flow enables it to pay off all of its long-term bank loans. The one-millionth passenger (cumulative) is boarded on March 3. In August, the company is chosen by its major partner to become the new Northwest Airlink carrier for Detroit and Milwaukee, succeeding **Simmons Airlines**, which is purchased by **American Airlines**.

During the peak of the summer, Mesaba reaches a point where it is connecting 75% of its Minneapolis passengers directly to Northwest. A new \$4.5-million, 80,000-sq.-ft. headquarters and maintenance facility at Minneapolis (MSP) is occupied in October and service to the two new hubs begins in December. During the final quarter, three more F.27-200s are leased, along with five F.27-500s and two F.27-600s.

The year's customer bookings decline 4% to 385,461 and cargo drops 17.9% to 235,000 pounds. Operating income jumps 11.9% to \$2.82 million and net profit totals \$1.67 million.

The workforce increases in **1989**, climbing by 49.7% to 904. The fleet's 15 Fokkers and 16 Metro IIIs now provide Northwest Airlink service to 3 hubs from 34 destinations in 10 states.

In celebration of its improved status, Mesaba unveils a new corporate logo. In addition, a new headquarters and maintenance facility is occupied at Minneapolis (MSP). The two-millionth passenger (cumulative) is boarded in November.

Northwest's trust is not in error as its regional partner enplanes a total of 757,956 passengers on the year, a remarkable 96.9% increase. Freight traffic skyrockets 140% to 563,319 pounds. Revenues increase 101% to \$63.82 million, expenses swell 102.6% to \$58.6 million, and the operating profit is doubled to \$5.22 million. Net gain reaches \$2.87 million.

The payroll is increased by a slight 0.8% in **1990** to 911 and the fleet remains the same. A new Northwest Airlink aircraft livery is introduced in June, with the company's turboprops painted red above a white line just below the windowline; fuselage bottoms and underwings are grey. In July, five-times-per-day nonstop Northwest Airlink service is initiated from Detroit to Pellston, Michigan. Roundtrips start in November from Detroit to Cincinnati, Cleveland, Columbus, and Kalamazoo.

One roundtrip is added in December from Detroit to Lansing and a new maintenance facility finishes construction at Detroit. The State of Michigan honors the large regional with its "Excellence Award of Aviation Enhancement."

Passenger boardings leap upward by 22.8% to 931,080 and freight climbs 26.4% to 712,187 pounds. Revenues ascend 36.9% to \$87.36 million, expenses rise 36.1% to \$79.77 million, and operating profit increases to \$7.59 million. Net profit doubles to \$4.28 million.

Company employment is cut a slight 0.1% in **1991** to 910. President Swenson's fleet comprises 21 Fairchild Metro IIIs and 15 Fokker F.27s. Orders are placed for 25 de Havilland Canada DHC-8-102s.

In January, one roundtrip is added from Detroit to Cincinnati and daily roundtrip Metro II flights are inaugurated from Minneapolis to La Crosse. Thrice-daily roundtrips are undertaken in April between Detroit and Youngstown while in May, thrice-daily Metro III flights are launched from Chicago to New Haven, Connecticut, via intermediate stops.

In July, thrice-daily Metro III frequencies begin from Detroit to Charleston, West Virginia, and Lexington, Kentucky, while daily F.27 service is begun from Detroit to Fort Wayne. Justin Dart Jr., chairman of the President's Committee on the Employment of People with Disabilities, and his assistant, John Lancaster, are refused boarding on an August 5 flight because the company, under current law, has a right and a policy denying people in wheelchairs access to aircraft of less than 30 seats. The 2 men drive 165 miles to their destinations and the policy is subsequently changed.

On September 3, thrice-daily Metro III service is launched from Detroit to London, Ontario.

Also during the year, a new hangar is built at Detroit to support its growing Michigan hub operation; it also acquires a hangar in Wausau, Wisconsin.

Customer bookings rise 12% to pass the million-mark in annual boardings for the first time (1,041,986) while freight swells 6% to 753,820 pounds. Revenues are \$90.23 million and expenses are \$82.55 million, leaving an operating profit of \$9.2 million and net profit of \$5.41 million.

The payroll resumes its upward momentum in **1992**, growing by 25.4% to 1,285. The first leased DHC-8-102s join the fleet in May and by year's end the fleet includes 17 of the Canadian-made turboprops, 8 F.27-200s, 5 F.27-500s, and 21 Metro IIIs. All are painted in the distinctive red Northwest Airlink livery. Service is initiated from the Detroit hub to five new Midwestern destinations.

Passenger boardings jump 19.3% to 1,243,476 and revenues ascend 20% to \$118.8 million. Expenses swell 18.6% to \$106.4 million, leaving an operating profit of \$12.4 million. Net profit climbs to \$6.6 million.

The employee population inches up a slight 0.2% in **1993** to 1,289 and the fleet now includes 25 leased DHC-8-102s, 5 chartered and 3 owned F.27-200s, 3 leased F.27-500s, 1 F.27-600 chartered from the Danish carrier **Alkair Flight Operations, A.S.**, and 17 owned and 4 leased (from **Trans-States Airlines**) Metro IIIs.

With Northwest on the verge of bankruptcy, this will be a trying year for Mesaba, its Northwest Airlink partner.

In the spring, flights begin to Thunder Bay, Ontario, from Minneapolis (MSP). Other new routes initiated include Knoxville-Tri-Cities-Washington, D.C. (IAD). A dispute breaks out between the regional and its parent over the interpretation of the level of promotional fares to Mesaba destinations.

On July 1, daily flights commence between St. Cloud and Minneapolis (MSP). On October 1, negotiations are completed for the takeover of the new Fort Lauderdale-based charter operator **Sun Express Airlines** by parent AirTran Corporation and plans are made to turn it over to a new subsidiary, **Conquest Sun Airlines**. In November, Minnesota Twins baseball owner Carl Pohlad purchases a 13.3% interest in AirTran Corporation for \$10 million.

Customer bookings for the year jump 12.6% to 1,400,222 and cargo is up by an impressive 64% to 1,309,184 pounds. Revenues total \$129.6 million and expenses are \$122.9 million; as a result, the operating profit is \$6.5 million and net gain reaches \$3.7 million.

Airline employment is increased by 0.9% in **1994** to 1,300. The \$2.5-million purchase of **Sun Express Airlines**, now **Conquest Sun Airlines**, along with its certificate and two chartered Boeing 737s (a Dash-214 and a Dash-2E1A), is completed by AirTran Corporation in May. The arrangement is immediately condemned by Northwest's pilots union, which correctly points out that the purchase violates the scope clause in the collective bargaining portion of the major's contract with Mesaba's parent AirTran Corporation. That wording restricts Airtran to the operation of aircraft with less than 70 seats.

In June, Northwest threatens to withhold some \$894,000 in prorated payments to Mesaba if a resolution of the **Conquest Sun Airlines** issue is not immediately forthcoming. AirTran shareholders meet in July to find a way out of the impasse. Chairman Swenson unveils a plan on August 1 which, as soon as certain tax and legal problems are resolved with Northwest, will result in the spin-off of **Conquest Sun Airlines** to AirTran stockholders and the formation of **AirTran Airways**. Phaseout of the company's F.27s continues, with only three left in service. The last is retired on October 1.

For the year as a whole, passenger boardings increase by 3% to 1,436,529 while freight jumps 33% to 1.7 million pounds. Revenues advance 5.5% to \$136.7 million, while costs are up only 2.4% to \$125.9 million. Consequently, there is a \$10.8-million operating surplus and a net gain of \$5.9 million. These figures are later adjusted downward to \$4.7 million in each category.

The workforce grows another 7.7% in **1995** to 1,400. When **AirTran Airways** is finally spun off into a wholly owned subsidiary during September, Chairman Swenson, Chief Financial Officer Jack Olbrych, and other officials transfer to it. Northwest, meanwhile, takes a 29.7% stake

in Mesaba and signs a new 10-year Northwest Airlink agreement. The pact includes provisions under Northwest will assume responsibility for the regional's scheduling and aircraft routing for two years while guaranteeing Mesaba a minimum \$17.6-million pretax income annually.

On October 1, former **Business Express Airlines** President/CEO Bryan Bedford takes over the same post with Mesaba; Vice President/Chief Operating Officer John F. Fredericksen becomes vice president-finance and is succeeded by Darrell Richardson.

During the fall, a competition is held between the SAAB 340 and the Dornier 328-110 to win the carrier's favor as replacement for its current fleet of Metro IIIs and DHC-8-100s.

Mesaba's parent, Mesaba Holdings, and Northwest, in conjunction with Wayne County, build a new regional airline terminal at Detroit. The new \$17-million "G" concourse is opened in October.

Enplanements move ahead by 3% to 1,485,929 and operating income jumps 22.1% to \$129.1 million. Costs climb 18.2% to \$119.4 million and allow profits to grow. Pretax gain ascends to \$9.7 million while a net \$5.49-million profit is posted. The figures also include nine months for **AirTran Airways** and are later adjusted upward to \$12.3 million (operating) and \$6.97 million (net).

The employee population is increased by 16.5% in 1996 to 1,616. Mesaba now operates to 61 cities in 16 states and 2 Canadian provinces.

On March 11, large orders for new equipment are placed: 27 SAAB 340Bs and 20 used SAAB 340As, 16 of the latter first flown by Metroflight, the AMR subsidiary. In addition, options are taken on 10 new and 12 pre-owned units. The SAAB order alone will be worth \$600 million over the next 30 months.

Also during March, Mesaba signs and amends its Airline Services Agreement with **Northwest Airlines**. The pact allows for Mesaba's inclusion in all fare sales and calls for Northwest to take over all inventory and pricing functions.

In early May, a facility upgrade begins at the Minneapolis (MSP) hub. It includes improved passenger seating and the addition of workstations with telephones and modem hook-ups for business travelers' computers.

The first refurbished Metroflight SAAB 340A, painted in the carrier's bright red Northwest Airlink livery, arrives during the third week of May, with others following at the rate of two per month into the fall of 1998.

On July 15, a fifth DHC-8 service is inaugurated from Detroit Metro Airport to Muskegon. During the summer, new frequencies are inaugurated from Detroit to Elmira and Corning, New York, and from Minneapolis (MSP) to Rochester, Minnesota, and Winnipeg.

In September, the first SAAB 340B is delivered. On November 1, Northwest reaches the decision to replace its 22 DC-9-10s that do not meet Stage 3 noise requirements with 12 Avro RJ85s. Once in hand, the regional jets will be subleased to Mesaba and employed to replace the older aircraft with enhanced JetLink services from Detroit and Minneapolis (MSP).

In late December, Mesaba starts daily point-to-point return flights from Pittsburgh to Detroit. By year's end, 10 SAAB 340s from the March order are on hand.

Customer bookings soar 27.5% to 1,894,000 and revenues accelerate 8.9% to \$185.7 million. Expenses move up by 4.6% to \$166.18 million, but still allow an operating gain of \$19.58 million. A net \$11.98-million profit is reported.

Daily SAAB 340 return service is inaugurated on May 22, 1997 from Minneapolis (MSP) to Kenora, Ontario. The seasonal flights, which will end on September 3, are designed to "offer convenient service to some of the best fishing in the world" at the Lake of the Woods.

A record number of passengers (210,000) are transported during May. A record number of passengers (210,000) are transported during May. Also in May, Mesaba moves into a new 9,000-sq.-ft. regional terminal at the end of the Green Concourse at Minneapolis (MSP).

At the beginning of June, the last Metro III is retired, allowing the company to offer an all-cabin-class fleet.

On June 4, a memorandum of understanding is signed between Northwest and Mesaba Holdings covering an enhancement of Mesaba's

Northwest Airlink services. Under its terms, the carrier will replace **Express Airlines One** at Minneapolis and on August 1 will increase its daily departures from 65 to some 130. In exchange for enhanced revenues, Northwest is provided with a warrant to purchase up to 880,000 of its Northwest Airlink partner's common shares.

On June 6, the first RJ85s enter service, replacing Northwest DC-9-10s on new "JetLink" frequencies from Minneapolis (MSP) to Cincinnati, Des Moines, Grand Forks, Green Bay, and Rochester and from Detroit to Des Moines and Cincinnati.

Given the carrier's new responsibilities and its success with the three RJ85s already in service, parent Northwest during the last week of July places a \$620-million order for 24 more, which will begin delivery, under lease, to Mesaba beginning the following May.

The previous year's SAAB options are revised in October. All of those earmarked the previous March are converted into a firm order for 19 340B-Plus turboprops, which will begin delivery in February.

On December 16, twice-daily RJ85 roundtrips are inaugurated from Minneapolis (MSP) to Aspen. At year's end, Mesaba serves 91 cities in 19 states and Canada.

Passenger boardings surge 53.2% to 2,899,800. Operating revenues jump 49.3% to \$277.22 million, while expenses climb to \$246.85 million. The operating gain reaches up to \$30.36 million, while net profit totals \$19.8 million.

In January 1998, the company receives the 1997 "Regional Airline of the Year" award from *Air Transport World* magazine. This is the first time in five years that a U.S.-based regional has received the prestigious award.

The first enhanced SAAB 340B-Plus arrives in February followed by a second in March. Both wear a special silver grey livery to mark the company's twenty-fifth anniversary.

On April 6, Mesaba signs an agreement with Northwest to operate six additional RJ85s in Northwest Airlink service.

The winter service from Minneapolis to Aspen ends on April 13.

The carrier celebrates the twenty-fifth anniversary of its start of scheduled services on May 4. To mark the occasion, the airline places into revenue service a new SAAB 340B, *The Silver City Flyer*, wearing a special commemorative paint scheme that notes the anniversary and the *Air Transport World* designation. The aircraft is the 39th of its type to enter Mesaba service since June 1996.

Also in May, President/CEO Bedford announces that the board has decided, in an effort to enhance shareholder value, to declare a 3-for-2 common stock split.

Daily Avro RJ85 Northwest Airlink roundtrips commence on June 1 from Minneapolis (MSP) to Aspen for the summer season, which will extend until September 8. Beginning today, the company acquires one new RJ85 every month through November in accordance with the April 6 arrangement.

On a Friday in mid-June, the company base is subjected to a violent hailstorm and other bad weather that forces it to temporarily ground 9 SAAB 340A/Bs, 3 DHC-8s, and 4 RJ85s and to cancel 292 flights through the following Tuesday. A number of SAABs suffer extensive surface damage.

Also during the month, CEO Bedford is named Regional Airline Executive of the Year by *Commuter Regional Airline News*. By midyear, Mesaba provides service to 91 communities in 19 states and 3 Canadian provinces.

Following a period of union organizing activities, the carrier's 780 customer service and ramp service workers vote 589-191 on July 6 in an election supervised by the NMB not to accept representation from the International Association of Machinists and Aerospace Workers (IAM).

In late summer, a new maintenance and crew housing facility is opened at Rhinelander-Oneida County Airport in Wisconsin.

Company officials announce on August 18 that if Northwest pilots go on strike on August 29, Mesaba will temporarily cease operations at the same time. The carrier tells the press that nearly 80% of its traffic connects to other Northwest flights from either Minneapolis or Detroit.

Without these customers, it is not economically feasible to operate to smaller communities.

As a result of the Northwest and Mesaba action, many small communities are left without air service: Bemidji, Brainerd, Chisholm, Duluth, Eau Claire, Fort Dodge, Grand Forks, Hancock, Hibbing, Houghton, International Falls, Rockford, Superior, Thief River Falls, and Watertown. Plans to launch service to Sault Ste. Marie and Alpena, Michigan, are put on hold.

On September 3, Transportation Secretary Rodney Slater orders Mesaba and its fellow Northwest Airlink feeder **Express Airlines I** to resume service to 17 small towns in 11 states in the Midwest and South. As the DOT official puts it, federal rules prohibit the carriers from suspending air service below mandated levels without first filing a 90-day notice.

Although **Express Airlines I** reaches a preliminary agreement with the DOT on September 5, Mesaba remains dormant. On September 8, Secretary Slater and Attorney General Janet Reno announce that they will file suit against Mesaba, requiring it to reinstate scheduled air passenger service at 13 communities that have been without Essential Air Service since August 31. The suit also names Northwest, which will be required to provide the necessary support for its Northwest Airlink partner to meet its obligations.

With Mesaba shut down and unable to begin its planned services to Michigan, **Great Lakes Aviation** flies to the rescue on September 9. "United Express" Beech 1900 roundtrips, which the carrier had been scheduled to end in favor of Mesaba, are continued from Chicago (ORD) to Sault Ste. Marie and Alpena on weekdays through September 30, with twice-daily roundtrips on weekends.

Plans to cease service to Pellston on October 7 in favor of Mesaba are shelved by **Great Lakes Aviation** the next day as a second weekday and Sunday "United Express" roundtrip is introduced between that Michigan city and Chicago (ORD), also through September 30.

Also on September 10, the carrier acknowledges that the DOT and DOJ have, in fact, filed a lawsuit against them, together with Northwest, in an attempt to force it to provide service to the 13 EAS communities.

Northwest itself now steps into the dispute between the DOT and DOJ and its Northwest Airlink affiliates. The major presents the same arguments that both Mesaba and **Express Airlines I** have unsuccessfully employed with government officials. In its emergency petition with the U.S. Court of Appeals for the District of Columbia, Northwest asks the court to stay the effects of the DOT order requiring Northwest to provide support services so that its affiliates can resume EAS services. Northwest argues that its constitutional right to a hearing has been violated because the DOT issued a final order adversely affecting the carrier's interests without providing it with notice. Furthermore, as preparations for the pilot strike were made earlier in the month, the major had specifically and legally executed an agreement with the Northwest Airlink partners suspending all of its obligations, including code-sharing (an important legal point now in play), should a job action occur.

None of these suits come to trial as the Northwest strike is tentatively settled late in the evening. As is the case with **Express Airlines I**, Mesaba resumes service over its route network on September 14, reaching 100% prestrike status within two days.

With appreciation to **Great Lakes Aviation**, Mesaba inaugurates turboprop services to Pellston, Alpena, and Sault St. Marie in early October.

Twice-daily Avro RJ85 Northwest Airlink roundtrips commence on October 25 between Minneapolis (MSP) and Flint, Michigan.

On December 3, company officials reveal plans to break ground for a 126,000-sq.-ft. RJ85 maintenance hangar at Cincinnati in the spring. Also in December, the last de Havilland Canada DHC-8 is retired.

Northwest, which has vowed to complete a deal with **Continental Airlines** despite an antitrust lawsuit from the government, completes its acquisition of a controlling stake in Continental. The arrangement gives the nation's 4th-largest airline a 14% equity stake in Continental as well as voting control of up to 51% of the No. 5 carrier. Executives from both

airlines indicate that they will proceed to implement domestic code-sharing involving upwards of 850 flights.

During the 12 months, customer bookings increase 42% to 4,116,000; freight traffic, on the other hand, skyrockets by 121.4% to 155,000 FTKs. Revenues advance 19% to \$331.75 million, while expenses, although up 21.3%, are \$299.53 million. The operating profit moves up to \$32.22 million, while net gain grows to \$21.27 million.

On January 7, 1999, Northwest and **Continental Airlines** begin linking a major portion of their domestic flight schedules and implementing more international dual-designator flights. The two majors, despite DOT opposition, initiate code-sharing on approximately 850 domestic and international flights to 95 destinations.

As part of the arrangement, Continental code-shares daily on Northwest and Northwest Airlink domestic flights, including cities where it does not currently fly, such as Sioux City, Boise, Knoxville, and Spokane.

In keeping with the code-sharing agreement implemented between Northwest and **Continental Airlines** in December, Mesaba, on January 14, officially enters into a dual-designator arrangement with Continental. Under terms of the pact, the major's "CO" designator will be placed on all of Mesaba's Northwest Airlink flights in and out of Detroit (DDT) and Minneapolis (MSP) which connect to Continental flights in their hubs at Newark (EWR), Houston (IAH), and Cleveland.

On February 18, Northwest places an agreement with Bombardier Aerospace for the acquisition of 54 Canadair CRJ-200LRs. A new RJ85 is received, also on February 18, followed by another on February 25. With their arrival, the company now has 20 of the 36 RJ85s order earlier.

Mesaba begins thrice-daily Avro RJ85 Northwest Airlink roundtrips from Memphis to Cincinnati on March 1. Also from Memphis, beginning on April 4, the carrier operates its RJ85s on Northwest Airlink flights thrice daily to Wichita and Huntsville. Thrice-daily RJ85 Northwest Airlink roundtrips also begin from Memphis to Fayetteville (Northwest Arkansas Regional Airport) on May 15, replacing the SAAB 340 service previously operated by **Express Airlines I**. On May 20, the Mesaba Avro is flown to Minneapolis (MSP), where it is introduced to the local population and media.

One of the company's two daily SAAB 340 Northwest Airlink roundtrips between Minneapolis (MSP) and Traverse City, Michigan, is upgraded to Avro RJ85 service on June 15.

Mesaba President/CEO Bedford assumes the same post with **Chautauqua Airlines** on June 30.

A Bridge Hiring pact is signed with Western Michigan University at Kalamazoo on August 19. Under its terms, graduates of the WMU College of Aviation will be granted flight officer interviews by the Northwest Airlink partner.

In September, a compact is entered into with Western Michigan University for the training of pilots. The deal guarantees WMU aviation program graduates a hiring interview.

Paul F. Foley is named president/CEO in October.

Twice-weekday and thrice-weekend RJ85 roundtrips commence on December 18 from Minneapolis (MSP) to Aspen.

Passenger boardings this year accelerate 32.4% to 5,452,000, while cargo rises 14.8% to 260,000 FTKs. Revenues advance 22.4% to \$406.19 million, while expenses climb 20% to \$359.36 million. The operating profit jumps to \$46.83 million, while net gain reaches \$31.06 million.

Airline employment at the beginning of 2000 stands at 3,124, a 12.6% increase over the previous 12 months. The new 126,000-sq.-ft. Cincinnati Maintenance Facility opens in February.

Weekend RJ85 seasonal service is initiated on February 5 between Memphis and Aspen; the flights will end on April 1.

On May 1, RJ85s replace SAAB 340s on two of the company's five daily return services from Detroit to Appleton and one of six to the Wisconsin city from Minneapolis (MSP). Avros, the 36th being just received, also replace SAABs on two of three daily flights between Detroit and Bloomington, Illinois.

Ten days later, one of three SAAB 340 services from MSP to Thief River Falls Regional Airport—the afternoon flight—is discontinued.

Initially ordered in October 1996, the last of 36 RJ85s, including 6 that have arrived since January, is delivered on May 22. To remain under the scope clause Northwest has in the contract with its pilots, all of the planes have been configured for 69 seats.

New daily RJ85 service is launched from Memphis to Des Moines on June 1 and twice daily to Charlotte on June 15. The latter service is coordinated with **Northwest Airlines**, which also operates a daily DC-9-31 frequency between the two cities. Also on June 15, **Express Airlines** I CRJ200ERs replace RJ85s on the Memphis–Wichita route and on one route from Memphis to Huntsville.

Mesaba is named second best-managed company among non-state-owned regional-sized airlines in the “2000 Index of Competitiveness” published by *Aviation Week and Space Technology* on July 10.

Daily DC-9-31 roundtrips are launched by Northwest on September 1 from Detroit to Charleston, South Carolina, and complement a pair of twice-daily Avro RJ85 frequencies simultaneously started between the city pair by Mesaba.

The Rapid City–Sioux Falls route is closed on October 5. **Northwest Airlines**, on November 1, proposes to Mesaba Holdings that it acquire, for \$13 a share, all of the shares of Mesaba Holdings that Northwest does not already own. The major currently holds approximately 28% of the outstanding shares and has warrants to acquire additional shares that would increase its stake to 40%. The offer is made in the wake of one made several weeks earlier by **Mesa Air Group**.

A massive computer system failure is suffered on December 21, which affects the airlines ability to allow flights to depart as scheduled. Approximately 150 flights must be cancelled.

Enplanements for the year total 6,103,709.

MESEA AIRLINES, LTD.: M-1 Zamrudpur Community Centre, Kaliash Colony, New Delhi, India; Year Founded 1992. Mesea is established in 1992 as a subsidiary of the Mid-East Integrated Steel Company, Ltd. to provide rotary-wing work from bases at New Delhi, Bombay, and Juhu. Operations begin with a fleet of 3 Mil Mi-172 helicopters.

METAVIA AIRLINES (PTY.), LTD.: P.O. Box 787106, Edenvale, 1610, South Africa; Phone 27 (11) 883 0072; Fax 27 (11) 883 0078; Code OW; Year Founded 1984. Meteorological Aviation or Metavia is established at Neispruit in late 1984 by a group of scientists and pilots researching weather conditions in southern Africa and the Transval. Following the signing of a bilateral air agreement between the governments of Mozambique and South Africa, the company, in May 1985, launches twice-daily Cessna return flights to Maputo. This route is particularly important during the Mozambique civil war, as it allows access to schools, supplies, and medical facilities in the Lowveld.

Cessna services are continued outside the limelight until July 1993, when a single Czech-made Letov L-410UVP is added to the fleet. Thrice-daily roundtrips begin from Jan Smuts Airport to Nelspruit. From that point into 1998, Managing Director Peter Farquhar's 25-worker company operates 1 Cessna 310 and 2 Piper PA-31-350 Navajo Chiefains. Two more L-410UVPs enter service during these years.

In December, the company is purchased by **SA Airlink (Pty.), Ltd.**, which allows its new subsidiary to continue operations under its original name.

METEOR AIR TRANSPORT: United States (1951–1958). Meteor is set up at Teterboro, New Jersey, in 1951 to operate nonscheduled all-cargo charters throughout the U.S. and to South America. Revenue flights commence with 2 Curtiss C-46 Commandos leased from the USAF.

During the next four years, two more Commandos are chartered and two purchased. One of these, with five crew and two passengers, is lost at St. Louis on May 24, 1953 while on a ferry flight (six dead).

Transatlantic passenger charters, employing two leased Douglas DC-4s, begin in 1956. Unable to maintain economic viability, the company shuts its doors in 1958.

METHOW AVIATION: 3311 109th Street, SW, Building 221, Everett, Washington 98204, United States; Phone (206) 355-2055; Fax (206) 290-9522; Year Founded 1990. Hugh Glassburn establishes MA at Everett in 1990 to provide FAR Part 135 freight charters to various destinations in the Northwest. By 2000, he is operating 6 Beech 18s and 1 Douglas DC-3.

METRO AIRLINES: United States (1967–1992). **NASA Commuter Airlines** is formed by Jay L. Seaborn, CEO of a hospital service company, at Houston in 1967 to offer nonscheduled executive charter and scheduled air taxi flights to Houston (IAH) in support of the new space center at Clear Lake City. Orders are placed for four de Havilland Canada DHC-6-100 Twin Otters and an interline agreement is negotiated with **National Airlines**.

In response to local demand for passenger and cargo commuter service and the federal government's interest in having short takeoff and landing (STOL) Beech B-80 Queenaire and Twin Otter operations begin around major cities, work begins on construction of the company's own STOLport at Clear Lake City.

When construction on the new international airport lags in early 1968, the tiny carrier sells its Canadian-made turboprops, earning \$300,000 in the process. When both the airport and STOLport near completion at year's end, **NASA Commuter Airlines** buys two more Twin Otters. The **National Airlines** agreement is cancelled in early 1969 and the carrier is reformed. Under its Metro name, it negotiates a new major alliance with **Continental Airlines**.

Regularly scheduled third-level feeder flights commence on June 8 and at the world's first commercial STOLport at Clear Lake City, Texas, the 2-plane company can offer 25 half-hour roundtrips to Houston daily. Among the company's passengers are the Apollo astronauts, including one who would figure in Metro's future, Frank Borman. On October 3, a Beech Queen Air crashes at Denver (five dead).

From the beginning, the working relationship with **Continental Airlines** functions as a model for future regional affiliations. Within the next seven years, routes are opened to additional points on the Gulf Coast and in east Texas. As revenues and passenger boardings increase, the company is able to augment its original pair of de Havilland DHC-6-100 Twin Otters with three more, plus two Beech 99s.

Meanwhile, with the opening of the new Dallas–Fort Worth International Airport in 1974, the carrier's parent, having fallen on hard financial times as a result of the oil crisis, is purchased for \$3 million and merged with the interests of veterinarian and real estate investor Edmond A. Henderson. Henderson becomes chairman and an airline division, with Jay Seaborn as president/CEO, begins to operate as the Metroflight subsidiary out of Dallas–Fort Worth, complete with a feeder contract from **Braniff International Airways**. A Beech 99 with six aboard crashes at Galveston on April 30; there are no survivors.

Enplanements for the year are 189,196.

The workforce in 1975 is 132. Metroflight enjoys a very good year. Passenger boardings jump 18.8% to 233,370. The company hauls 169 tons of cargo and 98 tons of mail. Employment is increased by 36% in 1976 to 191. Destinations added to the route network include the Texas cities of Paris, Greenville, Lufkin, and Nacogdoches. In addition, frequencies are increased to Tyler and between Dallas–Fort Worth and Gladewater, Kilgore, and Longview. In July, the fleet is increased to 12 Twin Otters with delivery of the 500th Canadian turboprop built.

Customer bookings accelerate 21% to 238,376 while cargo does better, up 32.4% to 3.01 million FTKs.

By March 1977, the carrier is operating 1,234 scheduled flights weekly. On April 1, President/CEO Seaborn completes negotiations (begun the previous year) for the acquisition of **Great Plains Airlines**, together with its Texas and Oklahoma routes. After reviewing its existing

code-sharing situation and reviewing new proposals, Metroflight now agrees to accept affiliation with **American Airlines**.

Enplanements for the year total 261,045.

Bookings grow again in **1978**, rising 21.5% to 393,661; freight traffic is up 29.5% to 872,743 pounds. Orders are placed for five Shorts 330s and the fleet is increased by the addition of two DHC-6s.

In **1979**, enplanements increase by 17.2% to 461,000; cargo jumps 16.6% to 1.01 million FTKs. During these past three years, the company survives and profits from the "Texas airline fare war" through creative marketing. The battle was most heated between **Southwest Airlines (2)** and **Braniff International Airways**, but also with **Continental Airlines** involvement.

By **1980**, Metro has opened service to 24 cities in Texas, Oklahoma, and Louisiana, including Houston, Clear Lake City, Galveston, Victoria, Corpus Christi, and Lake Jackson. New markets entered include Wichita Falls, Lake Charles, Oklahoma City, McAlester, Stillwater, and Lafayette. Passengers on flights to these locations are treated to the new in-flight magazine *Sunworld*. In addition, the fleet is upgraded through the acquisition of a Convair CV-580 and five Shorts 330s. Orders are placed for four Embraer EMB-120 Brasilas and four DHC-8s. In November, a complete refurbishment of the interiors of the 16 Twin Otters is started. During the year, ticket counters at all carrier locations are remodeled.

Boardings climb 6.6% to 441,013. Profits are earned: \$1.73 million (operating) and \$979,000 (net).

Airline employment in **1981** stands at 550, a 17% boost. In the spring, the carrier replaces the **Frontier Airlines (1)** service over the route from Dallas (DFW) to Fayetteville via Fort Smith. It also begins flying regularly from San Antonio to Laredo and undertakes an Essential Air Services contract to service the Oklahoma communities of Ponce City and Enid.

Having just become a member of the CAB classification category known as the large regional, Metroflight is one of the few air transport concerns not injured by the summer's PATCO air traffic controllers' strike and subsequent ATC restrictions. As a result of adroit advertising, passenger traffic returns to prestrike levels by September and in October the carrier sets an all-time company monthly boarding record of 63,001 revenue passengers.

On October 30 with a \$3.7-million stock offering, Metroflight becomes a publicly owned Delaware holding concern and its financial health is opened to casual examination for the first time. Metroflight becomes the principal operating entity for this new holding company, one of five regionals it controls.

The acquisition of three more Convair CV-580s is required in the fourth quarter to help handle the seating demand; orders are also placed for four DHC-8s for 1986 delivery.

On the year, overall traffic jumps 38%, with 609,071 passengers carried. On revenues of \$22.7 million, up 40.5%, costs advance by 40.6% to \$20.3 million. As a result, the firm's new stockholders can see an operating gain of \$2.42 million and a net profit of \$1.36 million.

The payroll is reduced by 1.1% in **1982** to 535. During the spring, the company begins replacement service from Dallas (DFW) to Fayetteville and Fort Smith, Arkansas, on behalf of **Frontier Airlines (1)**. Following the October 31 merger of **Texas International Airlines** and **Continental Airlines**, Metro's interline partner of 13 years, the large regional ends its relationship with the latter and opts to start, in December, a new code-sharing partnership with Frank Borman's **Eastern Air Lines**.

Metro now provides feed to Eastern at Houston and San Antonio, but must also face the renewal of competition in a prime market when **Continental Airlines** reestablishes the Houston to Beaumont and Port Arthur route. Four Convair CV-580s are purchased from Frontier for \$1.6 million each and begin new service from the Dallas (DFW) hub.

Enplanements rise 10.5% to 673,066 and revenues climb 48.2% to \$33.7 million. Expenses also rise by 56.9% to \$31.9 million. These figures cause a decline in operating profit to \$1.8 million and a huge fall in net gain to \$194,000.

Five employees are laid off in **1983** as the workforce falls 1.9%; the fleet now includes 6 CV-580s, 17 DHC-6s, and 5 Shorts 330s; one of the former is sold during the year while all of the latter are leased out. In March, a \$1-million operations and Convair maintenance hangar is occupied at Lawton, Oklahoma, where the CV-580s are now based.

A DHC-6-200 is destroyed by a tornado at Lawton on April 1. A Shorts 330 is destroyed on the ground by a storm at Beaumont, Texas, on May 20.

Twin Otter flights are initiated between Houston (IAH) and Southwest Houston and Sugarland and CV-580 service begins from Dallas (DFW) to Lafayette, Louisiana. Metro's new code-sharing feeder arrangement with **Eastern Air Lines** is now implemented. On October 1, while Metro continues services to Enid, Lawton, Ponca City, and Stillwater from a base at Oklahoma City, its southern route network operating through Houston and San Antonio become Eastern Metro Express routes. Company aircraft are now painted in a modified Eastern livery.

In November, the **Eastern Air Lines** partnership is extended to Atlanta. There an affiliate, Metro Express Airlines, is created at and equipped with 12 British Aerospace BAe Jetstream 31s. Metro Vice President Michael J. Brady is transferred over from the parent to become president.

Meanwhile, prior to this launching, traffic on the year falls off 12.2% as a total of 612,736 passengers are flown. Still, revenues increase 4.8% to \$35.3 million, yielding a \$10,000 operating profit. Net profit, however, drops to \$133,000.

The payroll is boosted 45.5% in **1984** to 800 and Metro's fleet, plus that of its Atlanta-based subsidiary, includes 8 CV-580s, 14 DHC-6s, 11 Jetstream 31s, and 1 DHC-8-101. Orders are outstanding for seven more DHC-8s and one Jetstream. Metro's Hartsfield-based Metro Express Airlines division, doing business as Eastern Metro Express, begins revenue service on April 2 from Atlanta to Panama City, Florida, and Chattanooga. The industry's first dedicated code-sharing arrangement is instrumental in boosting the company's overall passenger boardings.

Destinations served by the parent and its subsidiary now include Metro's earlier Oklahoma destinations plus the Texas communities of Beaumont, Clear Lake City, Houston, Laredo, Longview, San Antonio, Sugar Land, Tyler, and Victoria. Also served are Lake Charles, Louisiana, Montgomery, Alabama, Fort Walton Beach and Panama City, Florida, Atlanta, Albany, and Augusta, Georgia, and Chattanooga and Tri-Cities, Tennessee.

During the summer, the Metro owners, Henderson and Seaborn, create another carrier, **Metro Express II**, to take over Metro's previous southwest flights as a member of the **American Airlines** "American Eagle" commuter network. Specifically activated to feed the major at Dallas (DFW), it begins life as a company affiliate rather than a subsidiary and is placed under the leadership of Executive Vice President Carter Burwell III, former president of **Pinehurst Airlines**. It is initially equipped with two Jetstream 31s transferred from Atlanta.

Competition for markets with **Delta Air Line's** "Delta Connection" commuter partner, **Rio Airways**, begins on November 1. Communities visited by the Metro affiliate include Dallas (DFW), Beaumont, Longview, and Tyler, Texas, Lawton, Oklahoma, Fayetteville and Fort Smith Arkansas, and Lafayette, Louisiana. The fleet now includes Metro's 5 CV-580s (dedicated to the new MAE II), 15 de Havilland DHC-6 Twin Otters (employed to operate MEA flights out of the Houston Hub), and 7 Shorts 330s, MEA's 10 Jetstream 31s and 2 DHC-8s (2 more Jetstream 31s and 6 DHC-8s are on order), and MEA II's 2 Jetstream 31s (orders are placed for 8 additional Jetstream 31s).

En route from Augusta to Atlanta, Georgia, on November 29, Flight 1962, an Eastern Metro Express Jetstream 31 with 13 passengers is taken over by a lone assailant, claiming to have a bomb and demanding to speak with certain relatives. After he is able to speak with one, he surrenders. The perpetrator will be found sane, tried, and given a prison sentence of six years.

During the year, an initial equity issue is offered to the public and raises almost \$4 million. Overall enplanements for the year climb by

37.9% to 844,839 and cargo also improves, up 6.3% to 961,000 pounds. Revenues rise 4.8% to \$36.97 million, while the carrier's expenses ascend only 2.3% to \$36.09 million. The operating profit is \$5.2 million, and the net profit is \$3.3 million.

The payroll increases 45.5% in 1985 to 800. Metro's Houston assets are now sold to **Royale Airlines**, allowing the company to move its corporate headquarters to Dallas (DFW), where it can more easily feed **American Airlines** through its code-sharing agreement. On April 24, Eastern Metro Express is the first U.S. carrier to inaugurate FAR Part 121 services with DHC-8-101s. Also in April, construction is undertaken on a new maintenance facility at Chattanooga's Lovell Field.

In October, Virgin Islands-based **Sun Aire** is purchased. Beginning on November 15, it is operated as a wholly owned subsidiary under the name **Aviation Associates**. The acquisition allows Metro to establish an Eastern Metro Express network under the leadership of former **Sun Aire** President R. E. Phillips. Centered on a hub at San Juan, Phillips' reborn carrier undertakes scheduled passenger and commuter services with 12 Twin Otters to destinations on Puerto Rico and to the U.S. Virgin Islands.

Following a second stock offering in December that nets just over \$5 million in a three for two stock split, the Security and Exchange Commission (SEC) investigates the legitimacy of the separation claimed between Metroflight and **Metro Express II**. Although the investigation causes a decline in the overall value of corporate stock, the income from the stock offering is employed to decrease bank debt and increase capitalization.

Expansion again causes traffic to accelerate as passenger boardings soar by 32.6% to 1,120,477. To meet the public demand, the fleet is increased by the addition of 20 new aircraft: 7 DHC-8s, 9 CV-580s, and 4 Jetstream 31s. Revenues advance 33.6% to \$54.7 million, but expenses jump faster, reducing the operating profit to \$3.5 million. Still, the net profit climbs to \$3.7 million.

Airline employment rises 40% in 1986 to 1,400 and service is expanded from 25 to 30 cities. Construction is initiated on a new corporate headquarters and maintenance facility at Dallas (DFW). Eleven more aircraft are acquired for the fleet as a whole, but the unprofitable hubs at San Antonio and Oklahoma City are abandoned.

Consolidated passenger boardings for Metro and its' subsidiaries climbs 33.2% to 1,493,977.

Operating and net profits are down due to the acquisition of five BAE Jetstream 31s during the year's second half for service that is not started and because the Tax Reform Act of 1986 eliminates investment tax credits. Thus, even though total revenues advance 32.2% to \$93.4 million, bringing Metro close to National carrier status, the operating profit falls to \$4.7 million and the net to \$3.95 million.

Airline employment is increased by 25.3% in 1987 to 1,879. When **Rio Airways**, led by Seaborn's brother Hugh, files for Chapter XI in February, Chairman Henderson exercises an option to purchase it for a mere \$1,000. Five additional cities are added to the route network in the first quarter. The company moves ahead to reequip the fleet during the year as an order is placed in June for 16 SAAB 340As to replace the Convairs; 10 arrive by year's end, along with 5 additional Jetstream 31s. With 34 of the latter type, Metro surpasses **Jetstream International Airlines** as the world's largest Jetstream operator.

Two other "American Eagle" carriers are taken over during the summer and become Metro divisions—**Metro Express II** in August and **Chaparral Airlines** in September. **Chaparral Airlines** is a \$5.7-million cash purchase. Also in September, in a move untried in the regional airline industry, Metro offers \$20 million in convertible subordinated debentures and employs the funds raised to retire a \$10-million line of credit and other costs. In December, a new company headquarters and maintenance center is occupied at Dallas (DFW).

Customer bookings climb skyward by 19.7% to 2,137,558 and revenues rise 37% to \$120.3 million. With expenses held low, profits accelerate to \$7.86 million (operating) and \$4.07 million (net).

The workforce is cut 2.8% in 1988 to 1,780. Bad weather in January causes delays and financial loss. The same month, an all-cargo sub-

sidary, **Starlite Express**, is created as successor to **Metro Express II**. Equipped with six Shorts 330 freighters, it is dedicated to service **Federal Express Airlines** as a feeder on routes from Rochester to Newark and Charleston to Louisville. The last Convair is retired during the summer as the last six SAAB 340As join the fleet. Orders are now placed for 10 SAAB 340Bs for the Chaparral division, which, as the Metroflight division, adds new frequencies.

An out-of-court settlement is reached with **Atlantis Airlines**, which had charged Metro and **Eastern Air Lines** with conspiracy. For \$110,000 in cash and 100,000 shares of Metro stock, the **Atlantis Airlines** ownership agrees to dismantle their carrier and turn over several South Carolina routes and four Jetstream 31s. Metro, in turn, files and wins a suit against **Express Airlines (I)** owner Michael Brady. Overall traffic increases.

Overall passenger boardings advance by 6.5% to 2,277,199 and freight is up 3.1% to 1.15 million FTKs. Expenses of \$144.23 million exceed the 16.6% increase in revenues to \$140.2 million and insure an operating loss of \$4.01 million. The previous year's net gain is also eliminated as a \$6.98-million net loss is taken.

In January 1989, Metroflight inaugurates nightly "American Eagle" flights from Dallas (DFW) to Jefferson County, Lafayette, and Lake Charles. A seventh nonstop service will be introduced over the route in June. The agreement made the previous year with the owners of **Atlantis Airlines** takes effect on February 15.

Moving into the northeast in April, Metro purchases the **Brockway Airlines** division of Owens-Illinois, doing business as a "Piedmont Commuter," for \$14.2 million. That airline's new division is renamed Metro Air Northeast. Negotiations are started with **Trans World Airlines (TWA)** to turn the new subsidiary into a "TWExpress" code-sharing partner.

Meanwhile, on March 4, major partner **Eastern Air Lines** is shut down by a massive job action. Because of heavy point-to-point service, the Eastern Metro Express operation in Puerto Rico, operated by Aviation Associates, suffers little. On the other hand, the Atlanta-based Metro Express Airlines is forced to realign its networks. Eight cities are dropped as flights begin to six markets previously visited by the major.

With the "TWExpress" arrangement completed, the Brockway division, now known as Metro Air Northeast, begins feeding its new partner on June 1 at Boston, Philadelphia, New York, Washington, D.C. (DCA), and 20 other northeastern destinations in direct competition with former **Brockway Air** President John Sullivan's new **Commuitair**.

Operations continue apace for the Chaparral and Metroflight divisions, which provide "American Eagle" services at Dallas (DFW).

Overall enplanements by the megaregional's 108 turboprops accelerate 11% to 2,546,355. The breakdown by division is: Metro Airlines Northeast, 527,514; Metroflight, 824,828; Aviation Associates, 355,788; Eastern Metro Express, 402,641; and Chaparral, 580,034. Although corporate revenues are up by 5.2% to \$147.45 million, expenses climb 8.1% to \$155.97 million. Most of the resulting losses are carry over from the **Eastern Air Lines** job action. The operating loss doubles to \$8.52 million, but the net loss, due to a change in accounting methods, improves to minus \$2.73 million.

The payroll is cut a slight 0.8% in 1990 to 2,106. In January, thrice-daily "American" Eagle flights are launched by Metroflight from Dallas (DFW) to Alexandria while, in February, three of the eight daily flights from Dallas (DFW) to Longview become daily. The St. Croix-based subsidiary Aviation Associates is purchased and renamed **Sun Aire Express**.

On July 1, the two Texas-based subsidiaries, Chaparral and Metroflight, are merged into one Metroflight division in order to economize on operating costs. At the same time, efforts are increased to sell the surviving "American Eagle" operation to **American Airlines**.

Meanwhile, operations continue apace until the fourth quarter, as a new service is added from Dallas (DFW) to Corpus Christi. As a result of Iraq's August 2 invasion of Kuwait, fuel prices skyrocket and as fear of war increases, it combines with recessionary factors to set the stage

for a huge downturn the following year. Still, in October, Metroflight introduces a nonstop service between Dallas (DFW) and Drake Field at Fayetteville, Arkansas.

Meanwhile, systemwide passenger boardings increase 30.2% to 3,315,272. Bookings by division are Eastern Metro Express, 765,445 (up 90%), Metro Air Northeast, 588,151 (up 10.4%), and Metroflight, 1,234,185. Freight climbs 14.3% to 625,000 FTKs. Revenues swell 36.7% to \$231 million, expenses are up 26.5% to \$234 million, and the operating loss deepens to \$10.87 million. The net loss increases to \$15.04 million.

Company employment is slashed by 54.4% in 1991 to 961. The previous year's expenses and losses are compounded in January when **Eastern Air Lines** fails and traffic slows because of the Gulf War. Metro grounds its Atlanta-based Eastern Metro Express affiliate on January 19, the day after the major's collapse. Eastern Metro Express is liquidated in February under terms of Chapter VII bankruptcy law and its 8 DHC-8-101s and 19 Jetstream 31s are returned to their lessors.

Aviation Associates is sold on February 12 for \$6.5 million. In March, the Metro Air Northeast division, begun the previous year from newly acquired **Brockway Air**, is also closed down, largely as a result of **Trans World Airlines (TWA)**'s Gulf War-caused reduction in services. This unit will be sold for a \$3.88-million promissory note to ZAL Airlines Holdings of Rochester, New York, despite a \$100-million breach of contract lawsuit filed by **Trans World Airlines (TWA)**.

By May, the megaregional has been reduced to its original Dallas-based Metroflight subsidiary, the only independent "American Eagle" carrier still flying. It services the major's principal hub with a fleet of 14 Jetstream 31s and 26 SAAB 340s. ZAL Airlines Holding defaults on its note on May 30 and on June 1, Metro files for Chapter XI bankruptcy protection. Still, efforts to downsize and survive continue.

The year's customer bookings plunge 48.4% to 1,711,005. Although revenues surge 36.9% to \$47.31 million, expenses are up 14.8% to \$52.31 million, causing an operating loss of \$4.91 million, an improvement over the previous year. Net loss is cut in half to \$8.81 million.

The carrier's 41 aircraft continue operations under bankruptcy protection in 1992. The company takes **American Airlines** to court, claiming that its code-sharing agreement is good until the year 2002. Meanwhile, AMR Corporation, American's owner, suggests a reorganization plan in September that includes a 10-year extension of the marketing agreement and a plan that will allow Metro to repay its \$64-million debt in 15 years. Reviewing the plan in October, bankruptcy judge Harold Abramson encourages both parties to settle.

Just after celebration of the twenty-fifth anniversary in mid-November, founder Jay Seaborn and his colleagues on the board of directors sell the carrier to **Simmons Airlines**, another "American Eagle," for \$44 million.

Passenger boardings for the year decline 3% to 1,660,486 and a \$461,000 operating loss is taken. Although Metro retains its airline operating certificate, Seaborn now retires and the airline, famous for its growth, disappears into history.

METRO AIRWAYS (BP/D BOHNSTEDT-PETERSEN & DYRBERG, A.S.): Denmark (1983-1993). Organized at Copenhagen's Roskilde Airport, MA is a subsidiary of BP/D Bohnstedt-Petersen & Dyrberg, A.S. After obtaining a single Fairchild-Swearingen Metro II, scheduled commuter services are inaugurated on January 10, 1983. A total of 7,028 passengers are transported during the first year.

Low-key operations to a variety of local destinations are maintained over the next decade. In 1990, the equipment consists of a single Metro III. A second Metroliner is added during 1991, but withdrawn in 1992. Operations cease in 1993.

METRO CARGO, LTD.: Switzerland (1990-1991). In one of the first major aviation ventures between East and West, this Swiss freight operation is established at Lugano in August 1990. Private Swiss investors associated with Metropolitan Aviation, also based at Lugano, join with

the Siberian directorate of **Aeroflot Soviet Airlines** to provide international cargo charters

Mario Calmai is named chairman with Shimon Lahav as managing director; they begin revenue services employing 8 Ilyushin Il-76s and 1 Antonov An-12 contributed by the Soviets. Operational services for the new entrant are provided by Zurich-based **Jet Aviation Business Jets, A.G.** under a contract that requires Metro Cargo to pay for each flight in advance.

Operations continue without incident until May 1991. During that month, Metro Cargo delays its payments to JABJ as well as its aircraft lease payments to Aeroflot. At the beginning of June, the Soviets, owed \$7 million, request that the authorities in Canton Ticino freeze Metro Cargo's bank accounts. Unfunded, Metro Cargo suspends operations, while a criminal investigation is simultaneously launched.

With Metro Cargo finished, the Soviets turn to JABJ to establish another joint operation, Jet Air Cargo, A.G., which will lease and employ, briefly, three Il-76s.

METRO COMMUTER AIRLINES: United States (1968-1970). MCA is set up at Denver in the late summer of 1968 to provide scheduled passenger and cargo services. Employing a Volpar-modified Beech 18, an Aero Commander 500B, and a Beech B-80 Queenaire, the company begins revenue flights on September 17, linking its base with Greeley, Laramie, Cheyenne, Boulder, Fort Collins, Colorado Springs, Pueblo, and Canon City.

Operations continue apace until 1970.

METRO EXPRESS II: United States (1984-1987). During the summer of 1984, **Metro Airlines'** owners Edmond Henderson and Jay Seaborn create another carrier under the "corporate opportunity doctrine" to take over Metro's previous southwest routes as a member of the **American Airlines** "American Eagle" commuter network. Specifically activated to feed the major at Dallas (DFW), it begins life as a company affiliate rather than a subsidiary and is placed under the leadership of Executive Vice President Carter Burwell III, former president of **Pinehurst Airlines**.

The new commuter is equipped with two British Aerospace BAe Jetstream 31s transferred from Metro Express I operations at Atlanta. Meanwhile, the Air Line Pilots Association (ALPA) charges that Metro Express II has been formed as an "alter ego" airline that will allow Metroflight to evade the contract it has with its pilots.

Competition for markets with **Delta Air Lines'** "Delta Connection" commuter partner **Rio Airways** begins on November 1. Communities visited include the Texas communities of Beaumont, Dallas (DFW), Longview, and Tyler; Lawton in Oklahoma; the Arkansas cities of Fort Smith and Fayetteville; and Lafayette in Louisiana.

As services increase in early 1985, Metro's five Convair CV-580s based at Oklahoma City are dedicated to the "American Eagle" operation as eight previously ordered Jetstream 31s are awaited.

ALPA files a grievance with the company claiming it is the bargaining agent for the carrier's pilots. Following a second stock offering, the Securities and Exchange Commission (SEC) begins an investigation of the carrier's claim to be a separate airline. Traffic results are not released by the privately held company.

The Jetstreams arrive in 1986 and are joined by four Shorts 330s. The SEC announces that new President Clark Stevens' Metro Express II is, indeed, an airline separate from Metroflight. In July, Metro Express II files a petition with the NMB requesting release from mediation regarding the ALPA representation question. Late in the year, the carrier is able to sell 850,000 shares of common stock, raise \$8 million, and increase company worth to \$20 million.

Passenger enplanements total 295,000.

In January 1987, after ALPA and Metroflight have agreed upon an independent arbitrator to settle their two-year-old pilot representation battle, the arbitrator finds in the union's favor. Meanwhile, the company offers 47 daily flights to 5 Texas cities plus Monroe, Louisiana. In August,

Metro Express II is one of two "American Eagle" affiliates taken over by **Metro Airlines**.

METRO INTERNATIONAL AIRWAYS: United States (1980–1983). MIA is formed by Tiger International Corporation in December 1980 at New York (JFK) to take advantage of the receipt of transatlantic authorities held by recently merged **Seaboard World Airlines**. Organized as a scheduled and package-tour passenger division of its **The Flying Tiger Line**, it is equipped with 3 Boeing 747-212Bs recently acquired by the Tiger International subsidiary Tiger Air from **Singapore Airlines, Ltd.** and 1 leased Douglas DC-8-62, complete with crews.

The first trial North Atlantic Jumbojet charter is flown in December; however, the separately managed large regional inaugurates regular charters in March 1981 to Hawaii, Europe, the Caribbean, and the Mideast. The start-up of scheduled New York to Belgium passenger service is postponed in December.

A total of 377,155 passengers are flown on the year and the division generates operating income of \$31,260,825.

As the result of lower than expected returns, DC-8-62 passenger flights cease on February 23, 1982. New York to Brussels scheduled frequencies begin in March, by which time the fleet includes 4 B-747-112Bs, all leased from the parent. Aboard the Jumbojets, three types of service are offered: Captain's Deck, Metropolitan Class, and Economy Class.

In November, the company obtains a contract from **Tower Air**, formed in August, to undertake package tour flights to Frankfurt, Paris, Zurich, and Tel Aviv. The Israeli destination also becomes a scheduled stop on the Brussels run. Tower is now Metro's general agent, in charge of its sales and passenger services.

Although the number of passengers flown is not provided, it is reported that revenue passenger kilometers (RPKs) flown increase 62.8% on the year to 4.7 billion. Revenues increase to \$58,327,014.

In February 1983, the three passenger jets acquired from **Singapore Airlines, Ltd.** are traded to **Pan American World Airways (1)** for four B-747-100Fs. Employing the Jumbojets leased from the parent, the charter operator's New York–Tel Aviv service is maintained until November, when officials of Tiger International elect to close down the unprofitable division and concentrate only on scheduled freight opportunities. The lone route is taken over by **Tower Air**.

METROJET. See **USAIRWAYS**

METROLINK. See **MIDWAY AIRLINES (1)**

METROPLEX AIRLINES: United States (1978–1981). Metroplex is set up at Fort Worth, Texas, in July 1978 to operate a daily roundtrip shuttle to Houston. Employing Cessna lightplanes, revenue flights are duly inaugurated and are maintained into early 1981.

METROPOLITAN AIR FERRY SERVICE: United States (1931). William Robertson and the Curtiss-Wright Corporation set up this early example of a same city, interairport link in late August 1931. Employing the Ford Tri-Motors 4-AT-49 and 4-AT-51, the carrier inaugurates hourly services between the Curtiss Airport on Long Island, Newark Airport, and Floyd Bennett Field on September 4. Rail and sight-seeing passengers are given the option of a \$2 interairport fee or a \$5 ticket for a roundtrip over the whole 55-mile triangular route, which features spectacular views of Manhattan from 2,000 feet.

The two aircraft cover 18,405 miles in the first month and transport a total of 2,259 passengers. Bad weather and the Great Depression combine to force the little enterprise out of business in December.

METROPOLITAN AIR MOVEMENTS, LTD.: United Kingdom (1960–1967). Air Chief Marshal Sir Guy Garrod founds this air charter operation at Biggin Hill Airport in June 1960. By December, the company has acquired a de Havilland DH 90A Dragonfly and a DH-114 Heron 2, the former being employed in aerial photography work.

On January 20, 1961, the company Heron 2 begins flying ad hoc charters for the Kidlington-based Pressed Steel Company. Simultaneously, under lease but on behalf of the steel maker, Metropolitan also flies a second Heron 2. Flights originate both at Kidlington and at London (LGW) to various British cities, while a fairly regular charter is undertaken Oxford to Paris (LBG) beginning on January 29. Later in the month, the company also purchases its own Dove 1B for use on behalf of its new wholly owned subsidiary, **Aero Exploration, Ltd.** Other French destinations reached during the year include Deauville and Vitry.

On June 22, the Dragonfly is damaged beyond repair in a crash at La Baule Airport in France. The Heron 2 leased from Pressed Steel is destroyed in a crash at Biggin Hill on July 16 (two dead). For the remainder of the year, the surviving Dove 1B and Heron 2 mount charters to France and a few on to Italy via London (LGW).

In June 1962, the carrier is reorganized, with one G. Try as chairman. The original Heron 2 is sold the same month. The carrier now becomes the management and operational backer of **Libyan Aviation, Ltd.** From this point on, the carrier flies few charters in the U.K.

On September 13, 1965, Metropolitan purchases Exeter-based **British Westpoint Airlines, Ltd.**, allowing it to fly under its prepurchase name until its failure in May 1966. When **Libyan Aviation, Ltd.** ceases operations in early 1967, Metropolitan is left without a purpose or future and thus ceases flying.

METROPOLITAN AIRWAYS, LTD.: United Kingdom (1978–1985). **Alderney Air Ferries, Ltd.** is formed on Alderney in 1978 to provide scheduled services between the Channel Islands and Bournemouth Airport in Dorsetshire with Britten-Norman BN-2 Islanders. In 1981, the company shifts its base to Bournemouth and becomes a commuter associate of both **Dan-Air/Dan-Air Services, Ltd.** and **British Caledonian Airways, Ltd.**

Outfitted with a pair of de Havilland Canada DHC-6s and a Shorts 330, the 50-employee carrier, now renamed Metropolitan, undertakes, on behalf of BCAL, a scheduled route between Newcastle and Glasgow. Simultaneously and on behalf of **Dan-Air/Dan-Air Services, Ltd.**, flights are initiated from Bournemouth to Cardiff, Bristol, Manchester, Leeds, Newcastle, and Glasgow and, during the summer, between Bristol and Cork.

Operations continue apace until the carrier ceases flying in October 1985.

MEXAIR, LTD.: Switzerland (1989–1994). Organized at Geneva in May 1989, Mexair is a joint Franco-Swiss company for which two presidents are appointed: Ronald de Smet representing Mexair France and Renzo Blanchini of Mexair Switzerland. Worldwide nonscheduled passenger and cargo services are inaugurated with a Dassault Falcon 20.

Following the breakup of the Soviet Union, it is decided that profits can be made by flying less-expensive Russian equipment. To that end, a fleet is assembled in 1992 of former **Aeroflot Soviet Airlines** aircraft, including 4 Antonov An-12Cs, 1 An-72C, 2 Ilyushin Il-76TD freighters, and 1 Yak-40 passenger plane. Airline employment in 1993 stands at 82. Unable to maintain economic viability, the enterprise shuts down in 1994.

MEXICANA AIRLINES, S.A. de C.V.: Mexicana Building, Xota No. 535, Colonia del Valle, P.O. Box 12-813, Mexico City, 03100, Mexico; Phone 52 (5) 448-3000; Fax 52 (5) 687-8786; <http://www.mexicana.com>; Code MX; Year Founded 1956. The Mexicana marketing name is given to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** in 1956. The first of four Douglas DC-7Cs to arrive during the year is delivered in February 1957.

Under a new Mexico–U.S. bilateral agreement signed on August 3, DC-7C flights commence from Mexico City to San Antonio via Monterrey on September 16. The introduction of the new route is timed to coincide with the anniversary of the nation's independence. These flights are followed on October 15 by nonstop Mexico City to Chicago DC-7C services.

In May 1958, Mexico City to Matamoros via Monterrey DC-6 daily service begins. On June 3, a DC-6 with 45 aboard crashes near Guadalajara; there are no survivors.

Max Healey succeeds Elton Silliman as general manager on July 31. Communication workers call a strike on August 18 after a wage accord is not met. In an effort to upgrade California service, a Bristol Britannia 302 is leased from **Aeronaves de Mexico, S.A. de C.V.** and is placed on the Mexico City–Los Angeles service via Acapulco.

At year's end, the carrier is virtually shut down by a paralyzing strike.

The Mexican government is forced to break the strike by taking temporary control of Mexicana on January 29, 1959. Plans for and rumors of a merger with **Aeronaves de Mexico, S.A. de C.V.** collapse. Briefly, in September, the leased Britannia 302 flies nonstop Mexico City–Los Angeles service.

En route from Mexico City to Merida de Yucatan on September 8, a DC-3 with 3 crew and 12 passengers is rocked by a bomb blast at 11,000 ft. over the Bay of Campeche. A passenger, suspected of having the explosive device in his suitcase, is blown out an access door, while all of the crew and six passengers are hurt. Despite a fire, which is extinguished on board, the aircraft makes a successful forced landing at Poza Rica, Vera Cruz, with no additional injuries.

On October 27, four de Havilland DH 106 Comet 4Cs are ordered.

Becoming the first Mexican airline to fly jetliners, Mexicana takes delivery of its initial Comet 4C on January 14, 1960. It is painted in a white-top fuselage livery with a blue cheatline along the windows, large "Mexicana" titles above the windows forward of the wings, and a tail insignia that is a replica of the Aztec calendar. Following crew familiarization, it is placed on the Los Angeles route, now known as Azteca de Oro (Golden Aztec) on July 4 and the Chicago service on August 10.

A DC-3 with 3 crew and 15 passengers makes a forced landing near Juchitepec on September 28 (8 dead). The fifth Comet 4C, the *Golden Knight*, is delivered on November 29.

During the year, the carriers **Transportes Aereos Mexicanos, S.A. de C.V.** and **Aero-Transportes, S.A. de C.V.** are purchased and merged, further strengthening Mexicana's domestic route network. In the fall, the second British jetliner is received and inaugurates flights to San Antonio, a route later extended to the new destination of Houston.

Comet 4C service begins to Dallas on April 5, 1961 and Miami on November 8 as the fleet of de Havilland jetliners reaches three. In terms of passenger miles flown, the carrier is now the 2nd largest in Latin American and the 37th largest in the world. Despite this showing, the carrier's finances are uncertain.

A crippling strike hits the carrier from April 1 to May 18, 1962 and at the end of May, de Havilland forecloses on the three Comet 4Cs, obtaining a \$12-million lien on Mexicana assets and income. In March 1963, single-class service is introduced on foreign routes while domestic fares are cut 25%. The Comet 4Cs are returned to service in 1964. On November 1–2, the airline is idled by a ground crew strike.

Services begin to Miami from the island of Cozumel in 1965 and Comet 4C flights start to Puerto Vallarta. Two Comet 4s are acquired from **British Overseas Airways Corporation (BOAC)** late in the summer. In October, a \$20-million order is placed for four Boeing 727-64s. High operating costs in 1966 lead to a \$4.6-million loss; the B-727-64 order is cut to three.

While on final approach to Mexico City on January 30, 1967, a DC-6 with 3 crew and 26 passengers stalls and crash-lands near Merida; there are no fatalities.

Wage increases, Comet operating costs, competition from U.S. airlines, and the failure to obtain additional American gateways when added to a \$13-million debt bring on the carrier's greatest crisis during the year. In August, the San Antonio–Dallas and Miami–Cozumel routes are suspended.

On September 23, the board of directors meet to consider alternatives, including bankruptcy. Construction magnate Crescencio Bellesteros purchases controlling interest (including the first **Pan American World**

Airways' last 35%) and the courts allow a deferred payment debt service plan. The year's loss is \$3.2 million.

Bellesteros officially obtains Pan Am's 35% shareholding and complete control of Mexicana Airlines on January 13, 1968. To revive the ailing airline, 10 airports held since the 1930s are sold to the government, an intensive publicity campaign is undertaken, and the 3 B-727-64s are received and placed in service. The latter will be seized in the U.S. late in the year for nonpayment of bills to the Bank of America.

Acapulco to Chicago via Mexico City service begins on November 18. The same day, two armed men hijack a DC-6 with 23 aboard on a domestic flight from Merida to Mexico City and force it to fly to Cuba; the plane is released from the island later in the day.

In December, Max Healey is succeeded as president/CEO by Manuel Sosa de la Vega. The workforce comes to fear massive layoffs and the pilots threaten another big strike. The net profit for the year is \$624,000.

The B-727-64 order is increased to four on January 28, 1969 and a lease is concluded with **Pacific Southwest Airlines (PSA)** to provide jetliners until the release of the B-727-64s in U.S. custody can be arranged in late spring.

Meanwhile, on February 8, a lone hijacker is overwhelmed as he attempts to hijack a DC-6 during a flight from Mexico City to Villahermosa.

New aircraft livery is now applied and flight attendants receive new uniforms. A route exchange is arranged with **Aeronaves de Mexico, S.A. de C.V.** whereby Mexicana receives access into Acapulco while Aeronaves receives rights into Guadalajara and Puerto Vallarta.

While on descent to Monterrey on June 4 following a service from Mexico City, a B-727-64 with 7 crew and 72 passengers, strikes high terrain and bursts into flame; there are no survivors. While on a July 26 domestic flight from Minatitlan to Villahermosa, a DC-6 with 32 aboard is diverted to Cuba. A DC-6 is damaged beyond repair in a hard landing at Tuxtla on August 20; there are no fatalities. While attempting to land in a rainstorm at Mexico City after a September 21 service from Chicago (ORD), a B-767-64 with 7 crew and 111 passengers, strikes a railway embankment at Lake Texcoco and crashes (27 dead).

The summer's accidents raise a storm of public outcry. Additional routes are reopened or originated in the fall: Miami–Cozumel on September 8 and Chicago–Acapulco via Mexico City on December 4.

Three JATO-equipped B-727-264As are ordered in the spring of 1970. En route from Merida to Mexico City on May 24, Flight 600, a B-727-64 with 79 passengers is taken over by four armed men who order it flown to Cuba. The hijacking comes as a surprise, given Mexico's excellent relationship with Fidel Castro's government. It is initially surmised that the deed is in retaliation for the death of a Guatemalan guerrilla leader in Mexican custody four years earlier. It turns out that three of the perpetrators are Dominican prisoners released to Mexico in exchange for a U.S. diplomat kidnapped earlier in the year. After refueling at the Mexican capital, the aircraft is flown to Cuba.

The first B-727-265A to arrive is the *Mexicali*, delivered on November 9.

On December 15, 1971, Mazatlan–Denver service is initiated. The fleet now comprises 3 Comet 4Cs, 2 B-727-64s, and 7 DC-6s.

A DC-6 explodes while attempting an emergency landing in the jungles near Bacalar on the Yucatan Peninsula on January 6, 1972 (23 dead). Also during the month, another DC-6 is withdrawn and sold to **TAC (Transportes Aereos de Cargo, S.A. de C.V.)** On May 6, Merida–San Juan flights commence.

En route from Monterrey to Mexico City on November 8, Flight 705, a B-727-64 with 110 passengers is taken over by 5 gunmen. At the national capital, they achieve the release of 6 political prisoners and a ransom of \$330,000, plus automatic weapons and a doctor for a wounded hostage, before forcing the plane to fly to Havana the next day. Cuba returns the plane, passengers, money, and weapons later in the day.

Dallas service is resumed on December 13. Additional Boeing trijets are delivered throughout the year and a fifth consecutive net profit is earned.

The fleet in **1973** includes 8 B-727-64s, 7 B-727-264As, and only 2 DC-6s. On February 17, DC-6 nonstop service is inaugurated from Mexico City to Cancún, now a growing resort area. The employee population is now 3,986. A B-727-64 hits a mountain peak on Mexico's Pacific coast on June 20 and explodes (27 dead). A Mexico City-Kansas City jet route is launched eight days later.

A security policeman dressed as a crew member is able to subdue a lone assailant who has taken over a B-727-264A at Mexico City Airport on October 10 before the aircraft departs.

While on final approach to Mazatlan on October 20, a B-727-14 with 6 crew and 117 passengers, mistakenly lands in a field 1.5 mi. short of the runway, losing its entire undercarriage in the process; although the Boeing must be written off, there are no fatalities.

Enplanements for the year are 2,100,336.

The employee population in **1974** stands at 4,202. The Compania Mexicana de Aviacion, S.A. de C.V.'s fiftieth birthday is celebrated on August 24 and a new logo is introduced. Three additional B-727-264As join the fleet and service begins to St. Louis and Kansas City on December 1. Additionally, a new training center for flight attendants is opened, along with a new computerized reservations and communications system. Work is begun on a new maintenance base at Mexico City. Meanwhile, on December 10, the carrier resumes weekly flights to Havana after a break of almost a decade.

Passenger boardings jump 20.2% to 2,632,000 and freight traffic is up 14.2%.

The workforce is increased to 5,015 in **1975**. One B-727-64 and the last two DC-6s are retired as two more B-727-264As are ordered and two are leased out. In July, Miami-Cancún B-727-264A service is kicked off; additional routes added during the year include Havana-Yucatan and Mexico City-Istapa and Zihuatenejo.

Passenger bookings soar 20.1% to 3,113,318, but cargo dips 6.8% to 29.34 million ton kilometers.

Airline employment grows 6.3% in **1976** to 5,450. In January, the company receives the 1975 "Technology Management Award" from *Air Transport World* magazine.

The carrier is awarded a route from Mexico City to London and plans are made to inaugurate it several years in the future.

Passenger traffic swells 22.5% as 3,814,538 passengers are carried; freight advances by 23.1%. A 10th consecutive year of profits is reported.

In July **1977**, B-727-264A service is inaugurated to San Jose del Cabo in Baja California. Later, the largest maintenance center in Latin America is dedicated at Mexico City and a new charter division is created. The fleet now includes 16 B-727-264As and 7 B-727-64s, with 2 of each type on order.

A record 4.5 million passengers are transported on the year and a net \$7.9-million profit is earned. In terms of passenger boardings, the carrier is now the largest in Latin America; it carries 40% of all commercial traffic between the U.S. and Mexico.

The workforce is increased 31.4% in **1978** to 8,047. In January, the Bank of America (which had seized two of the airline's B-727-64s in 1968) awards Mexicana a \$45-million loan—without government guarantee or U.S. Export-Import Bank financing. The Los Angeles sales and marketing unit is moved to its present address and the fleet is expanded through the addition of three B-727-64s and a B-727-264A. A huge new maintenance base is opened at Mexico City, the largest facility of its type in all of Latin America.

In December, service is inaugurated to Harlingen and San Francisco.

The company becomes the first airline in Latin America to carry 5 million passengers in a single year as boardings jump 18.5% to 5,250,000; cargo is up 13.3%. On revenues of \$236.8 million, expenses are up 29% to \$212.1 million, leaving profits of \$24.6 million (operating) and \$12 million (net).

Six additional B-727-264As join the fleet in **1979** and orders are placed on September 24 for three DC-10-15s for 1981 delivery. The wide-bodies will be especially designed by McDonnell Douglas to

accommodate Mexico City's hot and high operations. Service to St. Louis and Kansas City is suspended in July, but launched to Seattle on December 1. Other route additions include San Francisco to Mazatlan and Puerto Vallarta and Los Angeles to Mexicali and Hermosillo.

Cargo is up 15.6% and passenger boardings accelerate 16.6% to 6,207,403. Revenues rise 31.2% to \$305.5 million and expenses jump 32.7% to \$273.7 million; net income falls 19% to \$9.7 million.

The fleet in **1980** comprises 13 B-727-64s and 27 B-727-264As and is the largest B-727 assemblage outside of the U.S. The workforce totals 8,635. Routes are opened to Tijuana and Philadelphia, the latter the first gateway in the northeastern U.S.

Passenger boardings surge ahead by 21% to 7,571,000 and freight rises 26.4%.

Airline employment in **1981** is reduced 12.81% to 10,580. The first of three DC-10-15s to be delivered on the year arrives at Mexico City on June 15 and enters service on July 1; the fleet is also strengthened through the addition of eight more B-727-264As. Also in July, the Compania Mexicana de Aviacion, S.A. de C.V.'s sixtieth birthday is celebrated.

A new Mexico City reservation center is placed on line and construction is started on a Guadalajara maintenance base. Mexico City-Ciudad del Carmen flights begin.

Passenger bookings are up 7.7% to 8,151,786 and cargo accelerates by 4.5% to 710.23 million FTKs. Revenues rise 28.1% to \$586.7 million, expenses jump 26.6% to \$548.75 million, the operating profit surges upward 53% to \$37.96 million, and the net profit is \$32.7 million.

The workforce is increased 2.4% in **1982** to 12,391. As the world and national depression deepens bringing inflation, peso devaluation, and a halt to currency transfers to the U.S., Mexicana Airlines again faces a severe crisis. An order for six B-727-264As is cancelled. The Lopez Portillo government, just prior to its leaving office, attempts to nationalize the carrier and merge it with **Aeromexico (1) (Aeronaves de Mexico, S.A. de C.V.)**. On July 15, the government purchases 54% majority interest and on July 29, President Enrique M. Loaeza Tovar is appointed director general of the combined carrier, as Mexicana CEO Sosa de la Vega is forced into retirement.

The new director general now faces a multitude of problems, not the least of which is a threatened strike and the seeming impossibility of integrating the two airlines. The new government of Miguel de la Madrid scraps the merger plan in December, reinstating Sosa de la Vega as director general of Mexicana, asking him merely to rationalize and coordinate with its brief partner, while Rodolfo F. Valdez becomes president.

Passenger boardings for the year drop 6.5% to 7,623,000, and freight is off 24.5% to 57.87 million FTKs. Revenues decline 24.3% to \$443.9 million, and a net \$22.4-million loss is suffered, the first financial failure in 15 years.

The employee population drops 8% in **1983** to 11,393. Three additional DC-10-15s are delivered in January and February. New routes are opened Mexico City-Nuevo Laredo via Victoria, Chicago-Guadalajara via Puerto Vallarta, and Dallas-Cancún. The carrier now joins the **American Airlines** SABRE reservations system. The cargo subsidiary **TAM (Transportacion Aerea Mexicana, S.A. de C.V.)** is formed. Equipped with a DC-8-63F, it inaugurates all-cargo operations over a Mexico City-Luxembourg via Houston route.

A new engine overhaul facility is occupied at Queretaro while a second maintenance base is opened at Mexico City. At the main Mexico City base, a CAE-built DC-10 simulator is installed.

En route from Mexico City to Miami on September 1, a B-727-264A with 144 passengers is taken over by a lone gunman. When the aircraft lands at Merida for refueling, undercover police come aboard and overpower the perpetrator.

Passenger boardings are up 6.2% to 8,095,183 and freight is up 0.7% to 58.28 million FTKs. The carrier returns to profitability, posting a \$64.7-million operating profit and a \$26.1-million net profit on total revenues of \$403.1 million.

The workforce is increased 16.4% in **1984** to 13,221. The fleet now includes 5 DC-10-15s and 39 B-727-264As. Service is launched San

Francisco and Denver to San Jose del Carbo, a new cargo terminal is opened at Mexico City, and the carrier transfers to the **United Airlines** Apollo reservations system.

A new \$160million, 34-story Mexico City corporate headquarters building is also occupied and a total of 183 charters are flown.

Freight jumps 28.1% to 74.63 million FTKs and passenger boardings ascend 3.9% to 8,414,000. Revenues advance 19.9% to \$482.9 million and expenses are up 23.2% to \$416.6 million; the profits are \$66.3 million (operating) and \$30.2 million (net).

The workforce in **1985** stands at 12,986. Several new domestic Mexican as well as Caribbean routes are opened and two B-727-264As are leased. The charter program is upgraded as a total of 350 tour flights are made from U.S. gateways to the holiday locations of Cancún, Acapulco, and Ixtapa through August.

After the September earthquake, the carrier's reservation network serves as a primary means of communication with stricken Mexico City.

Passenger bookings climb 6.1% to 8,652,000 and freight is up 12.1% to 83.65 million FTKs. Revenues total \$538.6 million and expenses are \$522.3 million, leaving an operating profit of \$16.3 million and a record \$43.5-million net profit.

During takeoff from Mexico City for a service to Los Angeles via Puerto Vallarta and Mazatlan on March 31, **1986**, the left main landing gear brake of Flight 940, a B-727-264 with 8 crew and 159 passengers, overheats, causing a tire to burst in the wheelwell. The explosion ruptures fuel and hydraulic lines, while also severing electrical cables. As the flight proceeds north, the cabin decompresses and an emergency is declared. Spilt fuel catches fire, causing a massive fire; with control of the plane lost, it crashes into a 9,000-ft. mountain in the remote San Andreas range 100 mi. from Mexico City, near the village of Miguel el Alta. There are no survivors. Terrorism will initially be thought the cause of the disaster, but examination will reveal the true reasons for the tragedy.

Three more B-727-264As are chartered during the summer as several new U.S. services are introduced.

On July 18, jetliners from Mexicana and **American Airlines**, carrying a total of 266 passengers, both try to land on the same runway at Dallas (DFW) and nearly collide before pulling off. The sixty-fifth anniversary is celebrated, a new Mexico City cargo terminal is occupied, and a secondary maintenance base at Guadalajara is opened.

Customer bookings decline 9.8% to 8,072,211 and cargo is down 1.9% to 82.07 million FTKs. Costs exceed income and lead to losses: \$27.8 million (operating) and \$59 million (net).

Airline employment falls 3.9% in **1987** to 1,661 and the fleet includes 40 B-727-264As and 5 DC-10-15s. Hubs are created at Puerto Vallarta and Cancún and as a result of the new U.S.-Mexico bilateral air agreement, routes are stretched to several new American destinations and a reservations system is opened in San Antonio. Flights to San Antonio from Mexico City are now offered once daily and five times a week at night.

Passenger boardings fall another 2.7% to 7,856,513, but freight recovers, climbing 11.7% to 91.68 million FTKs. Revenues ascend by 15.5% to \$597 million and costs are held low enough to allow a \$26.5-million operating profit. The net downturn deepens, however, to \$65.4 million.

The workforce is cut 7.3% in **1988** to 13,027, but still remains the second largest among Latin carriers. The number of B-727-264As in the fleet is cut to 37. The U.S. route network reaches a total of 15 cities with the addition of New York on May 12 and Tampa later in the year. Also in May, the carrier becomes the first Latin American airline to join the System One computerized reservations network of Texas Air Corporation (TAC). New union contracts aimed at increasing employee productivity are negotiated and a new hub and maintenance center are occupied at Guadalajara.

Although the full privatization that was expected does not occur, record traffic and profits do. Customer bookings recover and ascend 7.4% to 8,438,790, tops among Latin American airlines. Indeed, Mexi-

cana now transports 43.4% of all travelers flying between Mexico and the U.S. Cargo does slightly better, climbing by 9.3% to 108.21 million FTKs. Revenues swell 22.8% to \$732.8 million and allow an operating profit of \$71.2 million and a record net gain of \$135.1 million.

Company employment is reduced by another 3.8% in **1989** to 12,538. Service is inaugurated to Cancún and Zacatecas from Los Angeles, from San Francisco to Los Cabos and to Cancún via Guadalajara, and from Mexico City to Denver via Mazatlan and Juarez. Daily Mexico City to New York roundtrip service begins in May and a short-term fare war is fought over the route with **Continental Airlines** and **Pan American World Airways (1)**. During the first six months of the year, the airline transports 63.5% of all traffic on this nonstop route.

The government's interest is reduced via partial privatization on August 15 to 40% as a new investment group, headed by Chase Manhattan Corporation, Drexel Burnham Lambert, financier Sir James Goldsmith, and the Mexican conglomerate Grupo Xabre, pays \$140 million for 25% shareholding. New leadership assumes office on August 22: Chairman Carlos Abedrop, Vice Chairman Jose Giral, and CEO Guillermo Martinez Garcia.

These officials pledge to purchase 100 new jetliners valued at \$2 billion in the next decade and undertake complete modernization, including introduction of the most advanced administrative and passenger reservations computer systems. During October, daily Mexico City to San Jose, California, via Guadalajara service is inaugurated.

Passenger boardings inch up 0.7% to 8,501,505 and freight rises 8.6% to 117.57 million FTKs. Revenues advance 1.6% to \$744.39 million, expenses are up 9.2% to \$722.9 million, and the operating profit plunges to \$21.49 million. The previous year's record net profit is cut to \$12.99 million.

Employment continues to fall in **1990**, down 3.9% to 12,052. The first stage of the new owners' modernization plan is announced as a \$17-million upgrade of hardware and systems for passenger, cargo, and administrative services. Much of the latter is designed to change corporate culture from that of a state-owned enterprise into a private sector operator. Four-times-per-week nonstop service is initiated from Juarez and Mexico City to Denver in January and twice-weekly flights to Denver commence from Cancún.

In the first half of the year, service is also inaugurated from Mexico City to San Jose via Guadalajara. Two regional carriers, **Aero Caribe, S.A. de C.V.** and **Aero Cozumel, S.A. de C.V.**, are taken over to create a feeder network known as Mexicana Inter. During the spring, a new business-class product is introduced, along with automated check-in at Mexico City.

A number of new nonstop routes are initiated into the U.S. on July 1, including Cancún to San Antonio, Orlando, and Miami, Los Cabos to Seattle, Monterrey to Los Angeles, and Mexico City to Miami.

Also in July, a letter of intent, worth \$1.1 billion, is signed with Airbus Industrie covering the purchase of 30 A320-231s.

During August, the company's U.S. service areas are restructured from 14 to 4 and in September, the airline begins to offer special inclusive vacation packages from America to 9 Mexican beach resorts.

Overall customer bookings climb 6.6% to 9,059,498 (the high watermark in company boarding figures) and cargo ascends 5% to 113.81 million FTKs. Expenses exceed income and there are losses: \$68.4 million (operating) and \$38.4 million (net).

The fleet in **1991** includes 2 owned B-727-2Q4As, 28 B-727-264As, and 1 DC-10-15. The remainder of the aircraft employed are leased: 2 B-727-2A1As, 4 B-727-2J7As, 1 B-727-2M7A, 2 each B-727-2Q4As and B-727-2Q6As, 4 B-727-225As, 1 B-727-281A, 1 DC-10-10, and 4 DC-10-15s.

First-class service is inaugurated in February. In March, service is suspended to Philadelphia and Baltimore in the U.S. and San Juan, Puerto Rico; losses for the first six months total nearly \$40 million. During this time, the carrier's cargo operation is split off and formed into a separate division or profit center, Mexicarga, S.A. de C.V. Jose A. Merdiola is named president of the subsidiary and he is given a B-727F with which to haul freight.

Executive Vice President-Sales Jose Kuri-Brena quits in May and after only 20 months service, CEO Garcia unexpectedly resigns in July. He is succeeded by former Mexican Social Securite Institute (IMSS) General Director Ricardo Garcia Sainz.

Meanwhile, beginning in June and continuing into the summer, a new livery is applied to the B-727-200 fleet. Tails feature the logo and reproductions of pre-Colombian art while the all-white fuselages sport the airline's name painted in black letters; interiors are also refurbished.

The nine designs draw significant public attention: Mitla, based on a design from mosaics at that archeological site northeast of Oaxaca; Epazoyucan and Meztitlan, based on friezes at the 16th-century Augustinian convents at Hidalgo; Toluca, from the textile designs of Temoaya; Nayarit, a Huichol weavers design; Saltillo, based on serape designs at Coahuila's capital; Olinala, reproductions of lacquer patterns from Guerrero; Azcapotzalco, based on a carved stela; and Talavera, based on Pueblo ceramic designs.

The regional **Aerolibertad, S.A. de C.V.** is taken over and becomes a Mexicana Inter partner under the name **Aero Jalisco, S.A. de C.V.** Service is reduced on a number of unprofitable routes and a marketing alliance is concluded with long-time rival **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**. The first of six A320-231s, leased from the manufacturer, are on hand by December, at which time the airline ranks as one of the nation's 10 largest companies in terms of sales volume. Upon its arrival at Mexico City from Toulouse, the new European-built narrow-body is the first to receive a new individual tail pattern based upon Mexican art.

Passenger boardings decline 1.8% this year to 8,548,962 and freight is off 8.3% to 104.72 million FTKs. Revenues slip 0.6% to \$977.6 million, but costs are high, leaving an operating loss of \$41.26 million. The net loss inches up to \$39.25 million.

The workforce stands at 11,200 at the beginning of 1992 and the fleet is increased by the addition of six chartered A320-231s and four Fokker 100s. Several Boeings are sent to the U.S. for conversion into B-727Fs. The combined Mexicana Inter fleet includes 15 F.27 Friendships.

On March 6, Frecuenta, Latin America's most comprehensive frequent flyer program, is introduced. With the delivery of the ninth A320-231 in July, it is decided that it is too expensive to paint the type's tails in original art schemes so it is requested that future examples have designs repeated. At this point, Airbus Industrie is requested to defer deliveries of eight A320-231s, despite the fact that the type has proven successful, even flying the long-haul, 2,300-nm. route from Bogota to Santiago.

Once the largest airline in Latin America, Mexicana now loses that position to **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**. Still, before the month is over, the company has expanded service; a new route is opened from Mexico City to Buenos Aires and the old Los Angeles to Mexico City route is continued on to Bogota.

Corporacion Falcon, S.A. de C.V. assumes control of the airline in August and declares a \$72-million loss. These bad times are reflected in statistics that are released for only the months through July. During this period, customer bookings are off another 5.7% to 4,592,691 and cargo is down 9.8% to 56.75 million FTKs.

Mexicana, which has flown to Cuba for the past 17 years and currently has 4 regular weekly flights to Havana, introduces first-class service between Mexico City and the Cuban capital on December 18.

In 1993, CEO Julian Terminel Saldana oversees a workforce of 7,500, down 33.1% from the previous year, and a fleet that includes 10 owned and 6 leased A320-231s, 2 leased B-727-2A1As, and 24 B-727-264As, 2 of which are leased to **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**. Also included are 1 chartered DC-10-10, 10 Fokker 100s, and 3 chartered and 2 owned DC-10-15s, the latter 2 also leased to the Peruvian flag carrier.

A total of 38 markets are served in Mexico, the Caribbean, Central America, and the U.S. Among points visited in the U.S. are Los Angeles, San Jose, San Francisco, Seattle, Denver, Dallas (DFW), San Antonio, Chicago, Baltimore (BWI), Philadelphia, New York, Miami, and Tampa.

A 30-year relationship ends on January 5 when the airline cancels its twice-daily nonstop roundtrips between Mexico City and Dallas (DFW). Low patronage and competition on the route, which once featured seven daily roundtrips, is given as the cause.

Also in January, the company signs a new two-year labor agreement with the machinist union representing 650 U.S.-based employees. Citing strong competition from **American Airlines**, the airline discontinues service between Mexico City and Dallas (DFW). Late in the month, it is; however, able to announce that, in a rare gesture of confidence, the U.S. FAA has granted it a two-year, rather than a one-year, renewal of its foreign repair station license.

The parent Corporacion Falcon, S.A. de C.V. board joins with that of rival **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on February 17 to announce a strengthening of their strategic alliances in the areas of shared maintenance, cargo, maintenance, and purchasing. It is claimed that there will be no merger; both companies will retain their independent identities. Cost-cutting and other restructuring measures do not bring desired results and thus 54.7% majority shareholding is sold to Aeromexico on February 26 for \$110 million in cash and credits. Aeromexico Chairman Gerardo de Prevoisin assumes the same post with Mexicana on March 1 and the Mexican government approves the takeover in May.

In early September, the "Alas de America" strategic alliance is unveiled as joint scheduling, computerized reservations, frequent flyer, yield management, purchasing, and labor agreements are signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**.

On September 10, Augusto Bojorquez, president of the Mexican Association of Travel Agents (Asociacion Mexicana de Agencias de Viajes), files a complaint with the Secretaria de Comunicaciones y Transporte charging that **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana are putting pressure on his members to give preference to those airlines when issuing tickets or selling promotional packages. There is great concern among members of the travel and hotel community, as well as other airline competitors, that the two large carriers will gain a monopoly over the Mexican domestic airline market.

Mexicana begins to code-share with the former on flights from Mexico City, Cancun, and Merida to Miami and from Mexico City to Acapulco and Huatulco. It also begins to share its code with the Peruvians on domestic Mexican routes as well as on frequencies from Cancun to Buenos Aires via Lima. Code-sharing is started with **Alitalia, S.p.A.** during November on a route from Mexico City to Miami.

Passenger boardings for the year fall 13.8% to 6,887,000 and freight is down 23.6% to 69.99 million FTKs. Revenues total \$723.68 million, but expenses are \$779.65 million. An operating loss of \$55.97 million is suffered with a net loss of \$37.32 million following. The company—for the first time—is no longer Mexico's largest national airline, an honor lost to **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**.

Airline employment is cut 3.1% in 1994 to 6,824. The company joins with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on February 17 to confirm a further strengthening of a previous marketing alliance and to quash rumors of merger. Ten days later, however, **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** pays \$110 million in stock and cash to purchase controlling interest. During the month, the carrier completes the private placement of \$50 million in convertible debt and obtains a \$135-million loan from Bancomext. It also abandons first-class service in favor of an all-economy "Premium Class."

At the end of April, several Mexican regionals join with **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)** in a merger of support services designed to make the carriers more competitive with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana. Under the arrangement, the carriers share reservation systems, maintenance facilities, ticketing, airport facilities, hangars, and work crews.

Air L.A., the U.S. regional, becomes a marketing partner in July. Under terms of the arrangement between the two airlines, the California-based operator, which has recently received its third Fairchild Metro 23,

will provide connecting flights between Los Angeles, Phoenix, and several California communities.

The carrier continues losing large amounts of money, \$39 million in the second quarter alone. Unable to keep up with aircraft lease payments and owing \$20 million for them, the airline faces the prospect from European export credit agencies of the repossession of 10 A320-231s. The company also determines that its DC-10-15s are too expensive to operate and orders them withdrawn and sold.

On September 5, Geraldo de Prevoisin Legorereta, chairman of both Mexicana and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, resigns and is succeeded by Jose Luis Llamas Portilla, an insurance executive and member of the board of directors.

It is reported in October that, after emptying his office and purging his computer files, former CEO de Prevoisin Legorereta has left Mexico. At the same time, it is acknowledged that an additional \$50–\$70 million in company liabilities have been uncovered and cannot be paid. Mexico issues an arrest warrant for the talented, once highly regarded local entrepreneur as creditors and lenders make plans to take over the airline.

Despite a difficult couple of years, advertising still proudly proclaims the company to be the most experienced airline in North America and the fourth oldest in the world. The enticing message is largely disregarded as, in December, the nation, plagued by assassination, a rebellion in the state of Chiapas, and a shaky economy, devalues its peso.

On the year, customer bookings recover, rising 5.4% to 7,194,360; however, cargo falls another 7.4% to 797.08 million FTKs. Continued economic difficulties at the national and carrier levels cause revenues to plunge to \$565.6 million and expenses to top out at \$600.89 million. As a result, the pretax loss is \$35.28 million and the net downturn skyrockets to \$359.94 million.

Airline employment in 1995 stands at 6,780, a 0.6% decrease. The company and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, now run by a consortium of banks, now face—along with the country—a six-month recession that has a horrendous impact on traffic.

In April, a marketing agreement is signed between Mexicana and **KLM (Royal Dutch Airlines, N.V.)**. An order is placed for 10 Fokker 100s, the first of which arrives under lease from GPA Group in June.

The carrier's Senior Vice President Fernando Flores is named CEO in August. He immediately unveils a "100-Day Plan" designed to reinstate staff, boost employee morale, and eliminate the carrier's weaknesses. It is revealed at this point that the former chairman, de Prevoisin Legorereta, who has been formally accused in court of embezzling \$72 million, further contributed to his company's decline the previous year by making an \$8-million donation to the country's ruling political party.

On August 14, the government approves the financial revamping plans put forward for **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana, with the provision that the group of banks controlling the two companies must be split up within three years. New international arrangements are concluded during the third and fourth quarters.

Beginning in October, joint venture passenger and cargo services are launched with the Venezuelan carrier **AVENSA (Aerovias Venezolanas, S.A.)** over a route from Caracas to Mexico City via Panama City.

The new arrangement with **KLM (Royal Dutch Airlines, N.V.)** begins on October 26, a date celebrated as the fortieth anniversary of the first KLM flight to Mexico City. The Dutch airline's schedule to Mexico is altered; service is no longer through Houston, but nonstop thrice weekly and via Orlando the other four days. KLM's passengers are able to smoothly transfer to Mexicana's extensive domestic network served by 250 flights a day.

A connection agreement is signed with **Japan Air Lines Co., Ltd. (2)** in November that provides for the seamless transfer of passengers to partner flights departing Los Angeles. A similar compact is inked with **Aeroflot Russian International Airlines (ARIA)** providing for the linking of ARIA passengers to other flights into Colombia, Central America, and South America from Mexico City.

Enplanements drop 8.7% to 6,572,629, but freight inches back up by 0.7% to 53.89 million FTKs. Still, finances are such as to allow a \$56.36-million operating profit.

The workforce is cut another 10.1% in 1996 to 5,840. As the year begins, only the modified-green Nayarit tail color scheme is retained. On March 18, the "Alas de America" strategic agreement with AeroPeru is expanded as the Mexican airline begins dual-designator flights from Lima to Buenos Aires and from Santiago to Bogota.

The fiscal picture soon also becomes one of celebration. CEO Flores and the board of directors are able to negotiate new loans and other financial agreements that will capitalize the airline's outstanding debts and result in the purchase and lease-back of the A320-231s. The arrangements will be handled by a new financial corporation, CINTRA, S.A. de C.V., which is led by banker Ernesto Martens, who has been retained by several banks to put a new package together. Government approval for the CINTRA's restructuring approach receives government approval on June 4.

Weekly nonstop return service is initiated on June 24 between Ixtapa and Zihuatanejo and Los Angeles. Offering discounts and bonuses in conjunction with the new service are the Krystal, Westin, Dorado Pacifico, Qualton, Presidente Forum, Sheraton, Doubletree, Puerto Mio, Posada Ral, and Fontan hotels.

On June 28, CINTRA offers to exchange Series A CINTRA shares for those of Mexicana; as a result, CINTRA receives 99.95% of the carrier's outstanding share capital. In essence, the nation's banks trade \$1 billion for most of the carrier's equity. A new management concern Servicios Corporativos CINTRA is established to oversee changes. Mexicana, on October 22, will cease to be a publicly traded company in Mexico.

New routes are inaugurated to Orlando and Las Vegas as the Compania Mexicana de Aviacion, S.A. de C.V. celebrates its seventy-fifth anniversary as the world's fourth oldest airline on July 12. A remodeled DC-3 and a replica of the 1921 Lincoln Standard will fly around the country assisting in the festivities. The next day, two more night roundtrips are added to the five A320-231 services already provided between Mexico City and San Antonio.

The Douglas transport, loaned to the carrier by the Fuerza Aerea Mexicana, is painted in the pioneer's colors and christened Capt. Andres Fabre Tiran for the airline's first DC-3 pilot. When the plane is exhibited at the anniversary ceremony, Capt. Tiran is in attendance.

During the summer, the downtown Mexico City headquarters building, La Torre de Mexicana, is put up for sale with a \$50-million price tag.

A DC-9-15F is leased by the Mexicarga, S.A. de C.V. division when the winter season begins in October.

A comprehensive alliance is entered into with **United Airlines** on November 25. It provides for frequent flyer program linkage, joint programming, advertising, promotions, ground handling, airport lounges, and cargo cooperation. The two will share codes on flights within the U.S. and throughout Mexico and Central America, and have access to each partner's international networks beginning the following May.

Two B-757-2Q8s are leased from the International Lease Finance Corporation (ILFC) in December; both wear the Nayarit tail design.

An A320-231 with 169 passengers is evacuated at San Jose Airport on Christmas Day following receipt by the company of a bomb threat. Police and FBI agents search the plane and, after a five-hour delay in which no explosives are found, it is permitted to depart for its original destination of Guadalajara.

Customer bookings fall another 2% to 6,438,742. Operating income soars 25% to \$837.06 million and expenses are up only 21.7% to \$746.48 million. Operating gain climbs to \$90.58 million.

The employee population grows by 12.7% in 1997 to 6,579.

While descending through 26,000 ft. toward Chicago (ORD) following a flight from Durango on March 2, Flight 199, a B-757-2Q8 with 202 passengers, experiences turbulence approximately 120 mi. S of the airport; 22 persons are injured, 4 seriously. The Mexicarga DC-9-15F is returned.

Business-class service, Clase Ejecutiva, is introduced during the early spring. A code-sharing pact is signed with **ACES Colombia, S.A.** in May and dual-designator flights commence on flights from Colombia to Santiago.

A major agreement, signed in April, is inaugurated with **United Airlines** in July. Its terms provide links to United's global market for Mexicana and to Mexicana's domestic network for United. Frequent flyer programs of the two companies are joined as are advertising and promotional activities. Connecting code-sharing via common points of service are activated throughout North and South America.

Five red diagonal stripes and the emblem of the company-sponsored Chivas soccer team are painted on a B-727-264 in September to honor the players' success in domestic cup competition.

Also during the month, a major agreement is signed with **Deutsche Lufthansa, A.G.** Under its terms, the German major will assist the Mexican line in improving its customer services. A 12-month evaluation of Mexicana procedures will be undertaken, followed by a training program for its customer service personnel. Code-sharing will begin a year later.

A new annual contract is signed with the National Pilots Union in mid-October; it grants the flyers a 25% salary increase, plus a bonus for on-time arrivals as well as other benefits.

In celebration of its 40 years of Texas flights, the carrier, on November 3, adds twice-weekly roundtrip service between Mexico City and San Antonio.

Passenger boardings accelerate 15.7% to 7,452,706 while freight advances 14.6% to 64.2 million FTKs.

Airline employment in 1998 stands at 6,000 and the fleet, 56.9% of which is Stage-III certified, includes 24 B-727s, 3 B-757s, 14 A320s, and 10 Fokker 100s.

A fourth daily nonstop Mexico City to Chicago service is introduced on January 12.

Flight 721, a Fokker 100 with 48 passengers aboard, skids off the runway at Mexico City on March 3 after completion of a service from Laredo. No injuries are reported.

Traditionally known for its single-class service, Mexicana completes, by the end of April, the introduction of business-class on all of its domestic and international flights. It also completes interior renovations on all 51 of its aircraft, bringing them up to the service standards of its major partners.

Dual-designator services with **United Airlines** commence on May 1. Under terms of the alliance, Mexicana is able to place its codes on UAL flights from Mexico City to Los Angeles, San Francisco, San Jose, Chicago (ORD), and Washington, D.C. (IAD); from Chicago (O'Hare) to Washington, D.C. (DCA), Boston, and Denver; and from Los Angeles to Honolulu, Seattle, and San Francisco.

On May 11, business-class services are introduced on all flights from Mexico to the U.S., Canada, Central and South America.

Thrice-weekly A320-231 nonstops commence on June 6 from Oakland, California, to Guadalajara, with connections to Mexico City. A week later on June 13, twice-weekly A320-231 Cancún to San Juan service is inaugurated. On Saturdays, a service is run to and from San Juan via Mexico City and Cancún.

Daily B-727-264A roundtrips are inaugurated on July 11 from Mexico City to Miami. Twice-weekly A320-231 roundtrips begin on July 12 from Miami to Merida, Yucatan. Twice-weekly B-727-264A roundtrips commence on July 13 from Chicago (ORD) to San Luis Potosi, a new destination located on the plains of north central Mexico, with continuing service to Guadalajara. The same day, twice-daily B-727-264A roundtrips are launched between Chicago and Guadalajara.

On July 17, twice-daily A320-231 service is offered between Oakland and Zacatecas in Mexico's silver-mining country, with continuing service to Mexico City.

In September, dual-designator services begin with **Deutsche Lufthansa, A.G.** to Washington, D.C. (IAD).

Also during the fourth quarter, the carrier successfully completes collective bargaining agreements with its pilots' and ground personnel unions.

It is announced on December 18 that daily nonstop roundtrips will commence on January 12 between Mexico City and Newark.

Enplanements for the year inch up 0.4% to 7,503,000, while cargo traffic is up an equal amount, with 64.45 million FTKs operated.

Airline employment stands at 6,404 at the beginning of 1999 and the fleet includes 54 aircraft, 3 more than during the previous year. The daily Newark return service duly begins on January 11. It is followed next day by the start of thrice-weekly roundtrips from Mexico City to San Juan.

The swirling wake of a Mexicana B-757-2Q8 causes a **UFS (United Feeder Service)** ATP with 50 passengers to roll 45 degrees and break off its approach into Chicago (ORD) on January 27. Both ATC and the Mexican carrier are faulted for not maintaining a proper distance between the two airliners.

In honor of the visit of Pope John II to Mexico at the end of January, the B-757-2Q8 that he will employ while in country is rechristened *S.S. Juan Pablo II* and begins to wear the papal coat of arms. Both the new name and markings will be worn for over a year.

On February 1, **Deutsche Lufthansa, A.G.** places its "DL" code on Mexicana services from Mexico City to Acapulco, Cancún, Guadalajara, Monterrey, and Merida.

On February 16, Mexico's Federal Competition Commission (CFC) begins an investigation of the airline holding company CINTRA after a pilot's union accuses its president, Ernesto Martens, of favoring growth in one of the company's airlines to the detriment of the others via the transfer of shares, routes, and aircraft. The flyers describe the practice as a "predatory action." The claim is followed by an unflattering CFC report describing CINTRA's first three years.

Two days later, on February 18, trading of the shares in CINTRA is suspended on the Mexican Stock Exchange. The action comes in the wake of a CINTRA request that the government investigate an unauthorized release to the media of its 1998 earnings figures.

The Mexican government announces on February 24 that it is postponing any decision on whether or not to break up CINTRA. The case must be studied further by the CFC.

The Ministry of Transport and Communications weighs into the CINTRA controversy on March 8. Deputy Transport Minister Aaron Dychter informs Reuters, Ltd. that the Ministry of Transport and Communications wishes CINTRA to be maintained as a "whole company," thought "not necessarily a monopoly," in order that it might compete with larger foreign air carriers. Dychter also points out that the Ministry of Transport and Communications has received few complaints about CINTRA's alleged monopolistic practices from its smaller domestic competitors.

CINTRA, the holding company for **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana, announces on April 26 that it will be investing approximately \$76 million in hush kits for its Boeing 727 fleet, in order that its units may continue flying into the U.S.

Also, the parent begins to negotiate with four U.S. banks for a \$140-million bridge loan to cover a \$134-million June loan payment to Mexico's export development bank, Bancomext, and the financial group Grupo Financiero Inbursa.

Although San Jose has a curfew from 11:30 p.m. to 6:30 a.m. Pacific Time, airlines are allowed to fly in during those hours if they are delayed due to mechanical, weather, or ATC problems. The *San Jose Mercury News* reports on April 27 that the city attorney's office has sent letters to six carriers threatening to sue or ban them from the airport and citing numerous violations of the curfew. The companies committing these "blatant violations" include, in addition to Mexicana, **American Airlines, Northwest Airlines, Reno Air, Southwest Airlines (2), and United Airlines.**

A comprehensive dual-designator marketing agreement is entered into with **Air Canada, Ltd.** on April 29. Mexicana also moves its Toronto operation from Terminal One to Terminal Two at Pearson International Airport, thereby inserting itself into the midst of Air Canada's operations and reducing connection time for its passengers.

The comprehensive code-sharing alliance entered into with **Air Canada, Ltd.** on April 29 is formalized on May 3. The frequent flyer programs of the two majors are quickly linked. While meeting with other "Star Alliance" partners at Sydney during the day, Thamnoon Wanglee, president of **Thai Airways International, Ltd. (THAI)** tells reporters that Mexicana looks set to join the multinational airline pact later this year.

On May 13, under terms of the new code-sharing agreement with **Air Canada, Ltd.**, Mexicana and its Canadian partner begin code-sharing on Toronto, Montreal, and Ottawa services via Chicago, thereby linking Air Canada's network to Mexicana's hub in Mexico City.

CINTA and the union representing flight attendants at both **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana reach agreement on May 19. The 1,500 workers will receive a 17.5% salary increase and a 4.5% benefits package boost, retroactive to May 1.

Guillermo Turincio, CINTRA chief financial officer, informs Reuters, Ltd. on May 20 that despite a negative report from the Federal Competition Commission, the holding company will receive government approval for its existence during a special meeting of the government economic cabinet in June. Also on May 20, *InfoLatina S.A. de C.V.* notes that the Puerto Rican tourist agency and Mexicana have signed an agreement that will allow the Mexican carrier to renew its direct flights to San Juan from Mexico City. Under the pact, the government of Puerto Rico will absorb half of the losses sustained during the first 12 months of operation should the route prove a loss-maker.

On June 2, **Air Canada, Ltd.** launches nonstop services, on a dual-designator basis, to Mexico City thrice-weekly on Mexicana-operated nonstops between both Toronto and Mexico City and Montreal and Mexico City.

Having completed an experimental year of offering direct reservations and sales via the Internet, the carrier, on June 17, indicates that the service will be retained and expanded.

The government ruling concerning CINTRA will not be made without a fight. On June 21, Federal Competition Commission head Fernando Sanchez Ugarte strongly criticizes CINTRA and again urges the government, on antitrust grounds, to separate **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and Mexicana.

Beginning on the 1st of July, **Air Canada, Ltd.** and Mexicana further expand their pact. Air Canada places its code upon Mexicana-operated flights to and from Guadalajara, Cancún, Acapulco, and Puerto Vallarta, while Mexicana code-shares on Air Canada-operated services to and from Winnipeg, Quebec City, Vancouver, and Calgary.

Founding member **SAS (Scandinavian Airlines System)** reveals on July 8 that Mexicana will join the international "Star Alliance" in the year 2000.

On September 11, **Air Canada, Ltd.** begins code-sharing on Mexicana flights from Mexico City to Guadalajara, Cancún, Ixtapa, and Puerto Vallarta and from Los Angeles to Guadalajara. Daily service is inaugurated by Mexicana from Leon's Aeropuerto del Bajío to Los Angeles, while new daily frequencies are introduced from that point to San Francisco.

Passenger boardings this year jump 5.7% to 7,852,000 while cargo traffic dips 0.8% to 63.93 million FTKs.

Airline employment at the beginning of 2000 stands at 6,354, a 0.8% decline over the previous 12 months. The oldest airline in Mexico, the carrier continues to maintain a route network covering 50 destinations in 9 countries.

A marketing and code-sharing agreement is signed with **AVIANCA Colombian Airlines, S.A.** on February 24; dual-designator flights will be offered between Colombia and Mexico and joint services will be provided to one another at the Bogota and Mexico City hubs.

A320-231 frequencies between Mexico City and Toronto are increased on April 5 from three weekly roundtrips to seven.

After the fueling of an A320-231 at Minatitlán, Mexico, on April 14, workers fail to detach the avgas hose from the tanker truck before driving off. The hose ruptures, spilling gas that ignites and burns out the aircraft.

Out of the physical transport of goods for some time but still on the books as a division, Mexicarga, S.A. de C.V. is revitalized in May and begins flying again, employing a Boeing 707-320C previously operated by **MAS Air (Aerotransportes MAS de Cargo, S.A. de C.V.)**.

The carrier officially becomes the 13th member of the "Star Alliance" on July 1. The next day, daily B-727264A roundtrips are inaugurated from Guadalajara to Las Vegas.

On October 3, the federal antitrust agency *Comision Federal de Competencia* rules that Mexicana and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** must be fully separated prior to their planned sale, a move that will break up their holding company, CINTRA, which itself can then be sold. The next day, Gustavo Castillo, head of the corporate asset division of Mexico's deposit insurance agency IPAB, which owns 51% of CINTRA, indicates that both airlines will be put on the market early in 2001.

The company's unionized employees, 23,000 strong, and those from **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** reject on October 10 the proposal that CINTRA be broken up and sold, thereby privatizing both airlines. Demonstrations are staged at Mexico City Airport.

Avoiding a strike, the company and its pilots union settle on a new contract on October 23; under its terms, Mexicana flyers receive a 12% wage increase.

On October 27, another A320-231 is leased from AFT Trust via GECAS for five years. Two more A320-231s, chartered from Orix, arrive in November.

On December 5, Mexicana becomes one of the first airlines to transfer its operations to the new International Terminal at San Francisco International Airport.

The eruption of the Popocatepetl Volcano 40 mi. NW of Mexico City on December 20 forces the carrier to cancel all of its flights into and out of the Mexican capital. The airport at Puebla is closed due to the fear of mudslides.

It is reported at the end of the year that the Mexican Secretary of Communications and Transportation will have its study position on the sale of the airline and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** ready in February. Still to be decided is whether the holding company CINTRA will be sold as a whole or whether the airlines will be spun off and separately sold.

Customer bookings during these 12 months accelerate 8.6% to 8.53 million, while cargo traffic rises 3.6% to 66.22 million FTKs.

MEXICANA INTER. See **AERO COZUMEL, S.A.; AERO JALISCO, S.A.; AEROMONTERREY, S.A. (1); AEROVIAS CARIBE, S.A.**

MEXICARGA, S.A. de C.V. See **MEXICANA, S.A. de C.V.**

MEXICO AIR SERVICE: United States (1979–1980). MAS is set up at Santa Monica, California, in 1979 to provide scheduled Cessna light-plane passenger and cargo commuter flights to San Diego and points in Mexico. Traffic does not develop and the company fails before its first birthday.

MEY-AIR, A.S.: Norway (1970–1974). Mey-Air is established at Oslo in the summer of 1970 to operate both local air taxi flights and charters to regional destinations. Revenue services commence with 1 each Beech 99, Beech King Air 90, and Convair CV-240.

At the end of the year, the decision is taken to enter the inclusive-tour charter arena. Contracts with tour operators are undertaken and orders are placed for a pair of Boeing 737-2H5s. As the Boeings are not immediately available, a single NAMC YS-11A is leased and employed, beginning in late March 1971. The two "Baby Boeings" are delivered in September and October, respectively, and allow the expansion of flights to southern Europe and the Mediterranean during the winter holiday season.

The company remains in business until financial trouble forces it to shut its doors in February 1974.

MGM GRAND AIR: United States (1987–1995). Capitalized at \$20 million by MGM Grand, Inc., owner Kerkor “Kirk” Kerkorian, former owner of **Western Airlines**, and President/CEO Charles Domoney receive the new entrant’s Type 401 certificate from the DOT on June 10, 1987. MGM Grand Air begins scheduled, all-first-class luxury service between Los Angeles and New York (Newark) on September 8. Roundtrip fares charged on the three former **Regent Air** 34-passenger configured Boeing 727–191s employed is \$2,034. For this fee, customers aboard the aircraft are able to enjoy four staterooms and a stand-up bar, plus gourmet meals served by flight attendants dressed in tuxedos and red bow ties.

In December, a \$16-million order is placed for three hush-kitted Douglas DC-8-62s, newly available from the Italian flag line **Alitalia, S.p.A.** A total of 31,000 passengers are carried during the 4 remaining months of the year and revenues of \$7.08 million are earned. The operating and net losses are each \$2.4 million.

In May 1988, a new frequent flyer plan is introduced; travelers are rewarded with a free ticket for every 10 trips. The Douglas transports begin modification at Burbank, California; \$14 million will be spent on airframe and engine upgrades, \$7 million on hush-kitting, and \$18 million on avionics.

Still, enplanements for the year decline to 27,037, even as revenues advance to \$22.3 million. Expenses more than exceed income and the operating loss doubles to \$4.9 million. The net loss is \$5.4 million.

The workforce is reduced by 1.7% in 1989 to 175. The carrier is reconfigured in May so that all of the seats on its four daily Los Angeles to New York frequencies are first-class; flight attendants now wear tuxedos and serve caviar.

Passenger boardings jump 18.3% to 31,988 and revenues ascend 35.8% to \$30.23 million. Costs move ahead by 9.8% to \$29.87 million and allow an operating profit of \$360,000. The net loss “improves” to \$2.57 million.

In August 1990, the company’s three Boeings are switched to worldwide charter operations as the three DC-8-62s from **Alitalia, S.p.A.** are placed on the company’s transcontinental route. In honor of their arrival, a luxurious coach-class service, Grand Class Coach, is introduced. An “alignment of service” agreement is signed with **British Airways, Ltd.** (2) in November. Under its terms, the two carriers are able to offer “the ultimate in luxury travel” as passengers are able to fly from London to New York (JFK) aboard the Concorde. Following an overnight stay at a luxury hotel in New York City, they are able to continue in first-class DC-8-62 service to Los Angeles, all for a one-way fare of \$3,966.

Scheduled customer bookings for the year jump 8.8% to 34,807 while 12,000 charter passengers are also flown. Revenues advance to \$34.7 million; however, the costs of bringing the Douglas transports on line result in an operating loss of \$10.9 million and a net loss of \$15 million.

Company employment is increased 3.3% in 1991 to 315 as letters of intent are signed for two Boeing 757-200s.

Passenger boardings increase 48.5% to 51,693. Revenues ascend 36.9% to \$47.31 million, expenses are up 14.8% to \$52.23 million, and the operating loss is \$4.91 million, an improvement over the previous year. The net loss is cut to \$8.88 million.

The payroll is reduced by 1.3% in 1992 to 311 and the fleet includes the 3 DC-8-62s and 3 B-727–191s. On January 1, MGM Grand becomes a member of the **United Airlines** Mileage Plus frequent flyer program. Former **Pan American World Airways** (1) official and **Eastern Air Lines** President Robert Gould succeeds Charles Demoney as president/CEO late in the year. He immediately orders abandonment of uneconomical scheduled services, effective December 31, and concentrates on “upscale” charter operations.

Economic conditions and overcapacity combine to push customer bookings down by 13.8% to 44,553. Although revenues are up 5.7% to \$50 million, expenses shoot up 13.1% and as a result, operating loss deepens to \$9.08 million. The net loss worsens to \$14.66 million.

The employee population declines 55.6% in 1993 to 138. The fleet of three DC-8-62s and three B-727–191s begin a year-long refurbishment

program. In January, a contract is signed with Fun Sun Tours for charters to Latin America and the Caribbean and a former **Eastern Air Lines** B-757-225 is leased to provide additional nonscheduled capacity.

The service changeover results in a decline in passenger boardings of 23.5% to 34,096. Revenues decline 57.9% to \$21.03 million, but expenses increase 68.4% to \$99.47 million and cause a dismal \$78.44-million operating loss. The net loss is, if anything, slightly worse, growing to \$79.91 million.

On September 8, 1994, the company resumes scheduled service. Leaving the company’s three DC-8-62s to fly charters, the ultra-luxury airline’s three B-727–191s are unable to make a profit on their new first-class-only New York–Las Vegas–Los Angeles route. Tickets, at \$1,423 each, do not sell and only 24,000 scheduled passengers are flown by the 300-worker airline by year’s end. The resumed scheduled flights are again ended on December 31.

Revenues increase by 3.7% to \$21.81 million and even though costs are down by 73.3%, they still total \$26.54 million. The operating loss “improves” to minus \$4.72 million and there is a net profit of \$3.94 million.

Parent company MGM Grand, Inc. will shut the company down during the first week of January 1995 and sell it to drag race king Conrad Kalitta. Kalitta, owner of the Ypsilanti, Michigan-based **American International Airways** (3), wants the aircraft to fulfill existing charter contracts. The carrier’s last charter is, however, completed as two DC-8-62s transport the American Museum of Natural History’s 125th Anniversary Around-the-World Expedition, a 33-day trek flown from New York (JFK) via France, Tanzania, Madagascar, Myanmar, Mongolia, Borneo, Papua New Guinea, Rarotonga, Easter Island, Brazil, and Cuba.

MHS AVIATION SDN. BHD.: Malaysia (1996–1998). The helicopter operating division of **Malaysian Helicopter Service, Sdn. Bhd.** is split off from its parent in early 1996 into a stand-alone company. Ma’som Mahadi is chief operating officer of this concern, which includes eight Sikorsky S-61Ns, two S-76As, six S-76Cs, four Eurocopter AS-332L Super Pumas, and two each SA-360Js, AS-355F2s, Bell 412Ps, and Bell 412SPs. Offshore support remains the company’s principal business.

On January 15, 1997, it is announced that MHS Aviation will be sold at mid-year to DRIR Equities for \$31.7 million.

Rotary-wing work continues apace during the remainder of the decade. In addition to offshore support missions, helicopters are also chartered for executive, passenger, and cargo flights and power line inspections.

In February 1998, a Super Puma is passed to **Lloyd Helicopters (Pty.), Ltd.** under a lease-purchase contract. Later in the year, the operator is renamed **Naluri BHD.**

MI AVIA: 2 Sokolnicheski Val, Moscow, 107113, Russia; Year Founded 1993. In 1993, the Mil helicopter design bureau at Moscow is allowed to establish an air transport division in order to earn hard currency to support the establishment. Under the direction of CEO V. Tolbushkin, ad hoc charter work, including executive and passenger, cargo, energy and agricultural support, is launched with 2 each Mi-10Ks and Mi-17s, plus 5 Mi-26s.

Helicopter work continues during the remainder of the decade and into the new millennium.

MIAMI AIR CHARTER (1): United States (1966–1968). MAC is set up at Miami (MIA) in late fall 1966 to offer international passenger and inclusive-tour charter services. The former **Pan American World Airways** (1) Boeing 377 Stratocruiser *Clipper Romance of the Skies* is purchased from the manufacturer in January 1967 and placed into service.

The nonscheduled supplemental is unable to maintain its short-lived viability and files for bankruptcy in April 1968. The B-377 is repossessed and scrapped.

MIAMI AIR CHARTER (2). See **NATIONS AIR**

MIAMI AIR INTERNATIONAL: 5000 North West 36th St., Suite 307, P.O. Box 660880, Miami, Florida 33266, United States; Phone (305) 876-3600; Phone (305) 871-2003; <http://www.miami-air.com>; Code GL; Year Founded 1990. Founded at the south Florida namesake city in August 1990, Miami Air is held by D. R. Fischer, G. A. Lyall, and J. R. Kommeyer.

Following nearly a year in start-up and certification, the new private company is outfitted with a pair of leased Boeing 727-225As formerly operated by **Eastern Air Lines**, the first of which is delivered in September 1991 and christened *Lois*.

Charter and inclusive-tour flights begin on October 15 with an inaugural flight to Havana. After contracting with several cruise lines for connecting service, flights are started to San Juan on December 1 and from the Puerto Rico metropolis to New York and Chicago.

Although traffic figures for the fourth quarter are not reported, the company publicizes its excellent financial returns. On revenues of \$1.38 million, profits of \$127,605 (operating) and \$97,605 (net) are generated.

Airline employment stands at 60 in 1992 as a third B-727-225A is chartered. For the period from the New Hampshire primary through the fall election, one of the trijets is chartered by the Democratic National Committee to serve as the campaign plane for candidate Bill Clinton.

The other two aircraft continue to operate on behalf of what will become Miami's standard clientele: collegiate and professional sports teams and their fans, bands, boosters and/or alumni; cruise lines; incentive groups; and entertainers, such as Billy Joel and The Rolling Stones. In the years ahead, the U.S. government will become the largest customer, employing the carrier's fleet to haul soldiers and forest firefighters.

A total of 206,000 passengers are flown during the first full year as revenues ascend to \$21.4 million. Profits are generated: \$924,278 (operating) and \$704,009 million (net).

The fleet is increased in 1993 by the lease of a B-727-231A.

Customer bookings leap ahead by 41.3% to 291,000 and revenues rise 46.6% to \$31.35 million. Expenses increase by 44% to \$29.46, allowing operating profit to double to \$1.88 million. Net profit surges to \$2.09 million.

Airline employment is increased by 24.7% in 1994 to 177 as a 4th B-727-225A is put into service.

Passenger boardings swell 6.7% to 310,346. Revenues move ahead by 23.1% to \$38.58 million, while expenses increase 21.7% to \$35.86 million. Consequently, there is a \$2.72-million operating profit and net gain reaches up to \$3.03 million.

The workforce grows by 52.5% in 1995 to 270 and 1 more B-727-225A joins the fleet. The team enters into the sports charter business, providing lift to the Carolina Panthers NFL professional football team and Florida Marlins MLB professional baseball team under contract.

Still, enplanements decline 12.5% to 272,000. Revenues exceed costs and there are profits again: \$3.55 million (operating) and \$3.93 million (net).

There are no changes in either the employee population or fleet in 1996. One of the B-727-225As wears the logo of the NFL Carolina Panthers on one side and the MLB Marlins on the other while the single B-727-231A has the Marlins logo painted on both sides of its fuselage.

Customer bookings slide 3.1% to 313,000 even as operating income skyrockets 78.4% to \$67.25 million. Expenses jump 90.3% to \$64.97 million and leave a \$2.27-million operating profit. A \$2.43 million net gain is posted.

Operations continue apace for the 60-employee company in 1997. On March 31, the company is fined \$20,000 by the DOT for violations of its reporting rules. Of the amount, \$10,000 is due by September 2; the other half will be forgiven in a year if the carrier commits no further violations.

During the last week of the year, two B-727-225As are chartered to haul University of Tennessee fans to Miami, where their football team will play—and unhappily lose to—the University of Nebraska in the Orange Bowl on January 2.

Passenger boardings climb to 363,000 while operating revenues ascend 7.6% to \$72.34 million. Expenses jump 9.5% to \$71.2 million, and allow an operating profit of \$1.13 million. The previous year's large net gain is reduced to \$517,000.

Flights continue in 1998. During the last week of the year, a B-727-225A is again chartered to transport University of Tennessee fans to a bowl game.

During the 12 months, customer bookings move ahead by 2.1% to 429,000. Revenues total \$82 million and a \$3-million operating profit is generated.

Following the Volunteers victory over Florida State University in the Tostitos Fiesta Bowl on January 4, 1999, the Miami Air trijet with 8 crew returns to Sky Harbor Airport to pick up 170 passengers for a return flight to Nashville on January 5. Just after takeoff, a passenger notices an open cargo door. When this is brought to the attention of the crew, the captain declares an emergency and immediately dumps fuel. The plane quickly lands back at its point of origin. No injuries are reported and only minor damage is found. Properly secured, the return flight is made, slightly late.

Passenger boardings inch up 1.6% during the year to 436,000. Operating revenues rise 4.4% to \$85.67 million, while expenses are up 7.1% to \$83.62 million. The operating profit falls to \$2.05 million, while net gain drops to \$871,000. Still, the company stands in need of a capital infusion to tide it over the usually lean summer charter period.

The workforce totals 425 at the beginning of 2000, a 21.4% increase over the previous 12 months. Beginning in January, a B-727-225A is chartered by the presidential primary campaign of Republican candidate George W. Bush. As had been the case with presidential challenger Bill Clinton in 1992, the trijet forces all Secret Service agents and reporters to share just 75 seats. Vice President Gore has rented a DC-9-31 from **Spirit Airlines**.

Two new Next Generation B-737-81Qs are now delivered, one each on February 6 and May 24, respectively.

On July 14, the company sells an 82% controlling interest to a group of Houston investors, including the freight forwarder Eagle Global Logistics (23%), for \$20 million. In announcing the arrangement, Miami President Ross Fischer, who retains a 10% stake while other managers hold 8%, indicates that his B-727s will be converted into cargo planes, while Next Generation B-737-800s are leased to handle passenger services. It is anticipated that the 450-person workforce will be increased.

Arrangements are also completed on July 14 for the lease of two Next Generation B-737-81Qs and a Dash-8Q8 from **Sabre Airways, Ltd.** of the U.K., soon to be named **Excel Airways, Ltd.** The first two will enter service in November and December, with a third arriving the following summer. Meanwhile, two Next Generation B-737-800s are chartered from CIT Aerospace for delivery in April and May. The subsidiary **Quest Cargo International** is simultaneously established by the carrier, along with Eagle Global Logistics, to operate the B-727s, which are now being converted into freighters.

Previously employed by Gov. Bush during the primary season, the B-727-225A is repainted on August 3 with special red and blue stripes over its white fuselage with large "Bush-Cheney" titles. It is to be used in the post-Republican National Convention campaign period in the fall.

Having developed hydraulic problems, a B-727-225A transporting the University of New Mexico football team to Lubbock for its opening game, is forced to make an emergency landing at Albuquerque on August 25. The game must be rescheduled.

On September 3, Republican candidate Bush transfers to a **North American Airlines' B-757-28A** that has been given temporary "Bush-Cheney" titles. The previously employed Miami Air B-727-225A is turned over to vice presidential candidate Dick Cheney, who has been making his appearances aboard a crowded Gulfstream IV executive jet.

Loisita, the first B-727-225A to be converted into a freighter for **Quest Cargo International**, rolls out of the shop on September 8. At the end of October, Eagle Global Logistics enters into a new strategic all-cargo alliance with **LanChile Airlines, S.A.**, as well as the freight

lines it controls—**Fast Air Chile, S.A., MasAir (Aerotransportes Mas de Cargo, S.A. de C.V.),** and **Florida West International Airways.**

Even as the debate over the vote in Florida continues, the “Bush-Cheney” plane comes off its Republican Party lease on November 17. Although the red-and-blue striped livery remains on the B-727-225A, the names of the GOP standard bearers are now replaced with Miami Air titles. After minor modification by Boeing, the first **Sabre Airways, Ltd.** Next Generation B-737-81Q is received on November 21. Wearing the basic red-tail Sabre color scheme with Miami Air titles, the new aircraft begins required FAA proving flights on November 27.

When **Planet Airways** is unable to receive its second B-727-225A as scheduled on December 1, it leases the former “Bush-Cheney” B-727-200A. Three days later, the premier Sabre Next Generation B-737-81Q enters revenue services on the carrier’s aggressive winter charter schedule.

The second **Sabre Airways, Ltd.** Next Generation B-737-81Q arrives on December 18.

MIAMI AIRLINES: United States (1946–1961). This irregular carrier is established at its Florida namesake city in **1946** to operate Douglas DC-3 passenger charters northward and to the Caribbean. Late in **1948**, three passenger-configured Curtiss C-46 Commandos are leased from the USAF.

A Curtiss C-46F with 4 crew and 52 passengers is lost at Elizabeth, New Jersey, on December 16, 1951; there are no survivors.

With little fanfare, MA continues flying during the remainder of the decade. There is one more fatal accident when a DC-3 with 3 crew and 22 passengers is lost 7 mi. E of Selleck, Washington, on April 14, **1953** (7 dead).

Two more Commandos and two Lockheed L-749 Constellations are purchased between **1959–1960**; however, the company encounters severe financial difficulties and shuts down in **1961**.

MIAMI-KEY WEST AIRWAYS: United States (1937–1938). Organized at Miami in early **1937** to employ Consolidated Commodore flying boats to Key West, this over-water operator begins revenue services in March. Operations continue for 18 months until the company, without a mail contract or sufficient traffic, ceases operations in July **1938**.

MIAMI VALLEY AVIATION: 1707 Run Way, Middletown, Ohio 45042, United States; Phone (513) 422-5050; Fax (513) 422-1494; Year Founded 1990. MVA is set up by Terry Hogan at Middletown, Ohio, in **1990** to provide domestic cargo charters under FAR Part 135 certification rules. By **2000**, the company is operating 5 Douglas DC-3s, 3 Beech 18s, 3 Learjets, and 5 Piper Aztecs.

MIAT-AIR MONGOL: Buyant-Ukhaa 43, Ulaanbaatar, 210734, Mongolia; Phone 976 (1) 21804; Fax 976 (1) 79226; <http://www.miat.com.mn>; Code OM; Year Founded 1956. With assistance from and modeled upon **Aeroflot Soviet Airlines**, MIAT (Mongolyn Irgeniy Agaaryn Teever), also known as Mongolflot, or Mongolian Civil Air Transport, is formed at Ulan Bator in early **1956**. Equipped with such Russian aircraft as the Lisunov Li-2s—Soviet-made Douglas DC-3s—and Antonov An-24s flown by Aeroflot crews under contract, the new entrant begins domestic operations on July 7, initially linking its base with Ikurk. Additionally, agricultural and air ambulance operations are also undertaken with Antonov An-2s, which will remain in service over the next four decades.

A year or so later, international flights are launched to Irkutsk and Peking. At the time of the Soviet-Chinese border incidents in **1967–1970**, service to and from the Chinese capital is withdrawn.

Services as outlined continue to 17-plus cities in the nation’s 18 provinces and Irkutsk throughout the 1970s. In **1978**, Chairman Lt. Gen. B. Tsog’s fleet comprises 6 Antonov An-24s, 3 Ilyushin Il-14s, and various smaller aircraft (An-2, Yak-12s) and Mil Mi-4 helicopters. During the early **1980s**, the fleet is increased by the addition of 11 more An-24s.

A decade after its suspension, service is restored to Peking in July **1986** and started to Moscow and Sofia. Enplanements are reported in the West during **1987** and total 726,000; in addition, 14,000 tons of cargo are flown. In **1988**, Managing Director Lhagvasurenghyn Lihagvaa has 20 An-24s on the line, together with An-2 multipurpose transports. A Boeing 727-181 is obtained in **1989** from **Korean Airlines/Korean Air (KAL)**.

Two An-26s and a Tupolev Tu-154B jetliner is acquired in **1990**. The company now begins a series of charter flights between Ulan Bator and Japan.

Darjaglyn Surenhorloo is named managing director in **1992** and eight An-24s are withdrawn. Lack of fuel forces a suspension of internal flights as of July 1.

In **1993**, the fleet includes 9 An-24s, 4 An-26s, 1 An-30, 1 Boeing 727-181, 1 Tu-154B and a number of smaller aircraft and helicopters.

While en route from Ulan Bator on April 23, an An-26 with 6 crew and 16 passengers crashes in bad weather near Zavnah; there are no survivors.

Also during the spring, a donated B-727-281 is received from **Korean Airlines/Korean Air (KAL)**. Rights over the nation for the South Korean flag carrier are provided in return. Service during the year and into **1994** is provided over an extensive domestic network and to Beijing, Moscow, Irkutsk, and Sofia.

President Surenhorloo withdraws the B-727-181, which has completed a total of 201 charter flights between Mongolia and Japan.

The B-727s are placed into service in **1995** over the company’s routes to Irkutsk and Beijing.

While on approach to Moron after a September 21 service from Ulan Bator, an An-24RV with 6 crew and 37 passengers, descends too soon and collides with a mountain at Choho Geologloh Uul (42 dead). During the year, the carrier continues to compile an impressive list of interline agreements with foreign carriers; the total will reach 40 within 5 years.

Having won authority from the Japanese Ministry of Transport, MIAT, on April 27, **1996**, begins scheduled weekly roundtrips between Ulan Bator and Osaka (KIX). Nyamdavaa G. is now managing director.

While coming in for a landing at Mandalgobi from Ulan Bator on June 10, **1997**, a Harbin Y-12 II with 2 crew and 10 passengers is caught in windshear at a height of 30 meters. The force slams the plane into the ground (7 dead). Enplanements for the year total 272,000.

Destinations visited in **1998** include Beijing, Berlin, Hohhot, Irkutsk, Istanbul, Moscow, Novosibirsk, Osaka, Seoul, Sofia, and Ulan Bator.

Just after takeoff from Erdenet on May 26, a Harbin Y-12 II with 2 crew and 26 passengers, crashes and there are no survivors. The Harbin had been designed as a 19-passenger turboprop.

As part of the government’s plan to sell off a number of state-owned industries, plans are announced in **1999** for the privatization of the carrier a year hence. Although the route network is not enhanced, the fleet is significantly upgraded by the addition of a B-727-281A. The B-737-181 is withdrawn and used for spare parts, while an order is placed for an Airbus Industrie A310-300.

Even though international passenger traffic has risen to 98,000, overall customer bookings for the year are just 224,000. Revenues reach \$40 million and, despite a \$2-million loss on the domestic network, there is still a \$1.5-million net gain.

In addition to a code-shared service to Seoul with **Korean Air (Korean Airlines-KAL)**, at the beginning of **2000** MIAT operates twice-weekly B-737-281 roundtrips from Ulan Bator to Berlin and Moscow and four-times-a-week return service to Beijing and Osaka (summer only), plus twice-weekly An-24 roundtrips to Irkutsk, Russia, and Hohhot, China. Domestic service is provided to 22 local airports, only 3 of which have paved runways.

On June 1 of the latter year, employing a chartered B-727-281A until an Airbus A310-300 can be made available, the carrier adds a second weekly return service from Ulan Bator to Berlin (Tegel), making a technical stop at Novosibirsk. An air service agreement is signed between

Mongolia and Vietnam on July 1. At this point, as the leased A310-304 arrives, the company's fleet includes the 2 trijets, plus 9 An-24s, 3 An-26s, 6 An-2s, and 3 Mil Mi-9 helicopters. MIAT is the largest An-24 operator outside of Russia.

Plans to complete privatization are shelved following the parliamentary election victory of the Mongolian People's Revolutionary Party. The new government indicates early on that it will delay the sell-offs proposed by its predecessor.

Chartered to the UN, an Mi-8 with 23 souls aboard will crash into the mountains of Machin County, Uvs Province, about 600 mi. NW of Ulan Bator, on January 14, 2001; 14 people will survive.

MIATCHKOVSKOE AVIATION ENTERPRISE. *See MY-ACHKOVSKOE AP*

MICHIGAN AIR EXPRESS: United States (1930–1931). MAE is formed at Grand Rapids, Michigan, in the spring of 1930 to operate a scheduled passenger service to Petoskey in cooperation with **Kohler Aviation Corporation**. The company is equipped with a Travel Air 6000 and inaugurates flights in May.

Operations cease in February 1931.

MICHIGAN AIRWAYS: United States (1982–1989). Founded at Emmet County Airport at Harbor Springs, Michigan, and originally known as Emmet County Aviation, a charter and FBO operation, this third-level operator is purchased by James van Sickle and Robert James Smith in April 1982, reformed, transferred to Pellston, and renamed. Although passenger charters are continued, regularly scheduled passenger flights are inaugurated in May linking the carrier's base with Mackinac Island. Piper PA-23 Aztecs and PA-32 Cherokee Sixs are employed.

Operations continue apace over the next seven years, during which time the fleet is expanded by the addition of several de Havilland Canada DHC-6 Twin Otters and a new route is stretched from Alpena to Detroit via East Tawas and Saginaw.

On July 1, 1989, the company is sold to James C. Bailey and Bruce Barda and is renamed **Drummond Island Air**.

MICHIGAN TRADE WINDS: United States (1968). MTW is set up at Lansing Airport in Michigan in the late spring of 1968 to offer a daily scheduled shuttle service to Detroit City Airport. Employing a Cessna 402, the company duly inaugurates revenue frequencies, but these can only be maintained over the summer.

MID AIRWAYS, S.A.: France (1994–1995). With shareholding divided between them 63% and 25%, respectively, J. Pierre Houdin and J. Pierre Moello establish MA at Maugulo in early September 1994. The pair recruits a workforce of 13 and lease 1 Fokker F.28-1000 with which to launch regional and holiday passenger charters on November 29.

Unable to achieve economic viability, the company folds within a year.

MID-ATLANTIC FREIGHT, INC.: P.O. Box 35408, Greensboro, North Carolina, 27425, United States; Phone (910) 668-7474; Fax (918) 668-3906; <http://www.atlantic-aero.com>; Year Founded 1990; Code MDC; Year Founded 1990. Mid-Atlantic is founded by Don S. Goodwin at Greensboro, North Carolina, on January 1, 1990, to offer scheduled all-freight services throughout the eastern and central U.S. The company is an outgrowth of the charter division of Atlantic Aero, which has been successfully engaged in the overnight express business during the previous four years. Many contracts are signed with package express concerns and revenue operations commence on February 1.

In 1993, President Goodwin oversees a workforce of 45 and a fleet of 5 Cessna 208 Caravan Is, 19 C-208 Super Cargomasters, and 2 Dornier 228-202s. A private concern, Mid-Atlantic chooses not to reveal its annual traffic and financial statistics.

Five additional Caravan Is are ordered in 1987 and 10 more in early 1988. Operations continue apace during the remainder of the decade and into the 1990s. In 1993, President Goodwin oversees a workforce of 45 and operates a fleet that includes 5 Cessna 208As, 19 Cessna 208Bs, and 3 leased Dornier 228-202s, 2 of which are out of service. One Cessna 208A is withdrawn in 1994 and replaced by a 208B.

Operations continue apace in 1995–2000 and by the latter year the fleet includes 25 Cessna 208Bs.

MID COAST AIRWAYS: United States (1960–1968). Mid-Coast is established at Rockland, Maine, in February 1960 to provide on-demand air taxi flights to Boston. Piper PA-31-310 Navajo roundtrips are duly inaugurated and are maintained until May 1968, when company officials elect to inaugurate scheduled services. In June, Mid-Coast is renamed **Downeast Airlines**.

MID-CONTINENT AIR EXPRESS: United States (1929–1931). With the financial backing of **Western Air Express (WAE)**, Mid-Continent is incorporated under Delaware laws on June 19, 1929. Employing 13 Fokker Model 8 Super Universals, the company inaugurates revenue services from a base at Denver down to El Paso (a WAE connection) via Pueblo, Las Vegas, Santa Fe, Albuquerque (another WAE connection). In December, a service is initiated from Pueblo to Dodge City, Wichita, and Kansas City. The fleet at year's end comprises the original 8 Super Universals.

Two Boeing 40B-4s join the fleet in March 1930 and in May the Pueblo route is extended nonstop to Amarillo, another WAE stop. The final expansion occurs in August as the Amarillo terminus is stretched via Wichita Falls to Dallas, also a WAE terminus.

On September 27, 1931, the carrier is taken over by its backer and is officially dissolved on December 16.

MID-CONTINENT AIR LINES: United States (1938–1952). **Hanford Air Lines** is renamed in August 1938. During the next six years, it maintains its route network linking the upper midwest with Tulsa, Oklahoma. The fleet in 1939 comprises 5 Lockheed L-10 Electras. These help to carrier to record its first profit in December.

The first three production L-18 Lodestars are delivered between March 30 and August 7, 1940 and are placed into service on August 17. Destinations now visited from Minneapolis (MSP) and Minot, North Dakota, include Kansas City, St. Louis, and Tulsa.

Bookings for the year total 35,634.

Following the outbreak of war in December 1941, Mid-Continent modifies the North American B-25B Mitchell bombers employed in the Halsey-Doolittle raid on Tokyo in April 1942 and settles into the provision of flight training programs through 1945. Plans are announced for a merger with **American Airlines**, but the CAB does not approve the move.

The route network on January 1, 1946 covers 2,522 unduplicated miles. Destinations visited from the Kansas City base include Minneapolis-St. Paul, Omaha, Des Moines, St. Louis, Tulsa, Muskogee, Fort Smith, Texarkana, Shreveport, and New Orleans. Applications are made to the CAB for a new route linking Minot, North Dakota, with Regina, Saskatchewan, Canada.

Operations continue apace in 1947 and Mid-Continent expands its routes late in the decade. Omaha and Kansas City to St. Louis service begins on January 26, 1948. During the first quarter, three Douglas DC-3s are acquired from **Northwest Airlines**.

Flights commence in 1949 to New Orleans and Houston. An attempt to acquire **Parks Air Service** is blocked by the CAB. Simultaneously, it proposes to inaugurate Convair CV-240 service in early 1950. In July of that year, the carrier is awarded a CAB local service certificate for certain of its routes.

While climbing away from Tulsa on February 27, 1951, a CV-240 with 4 crew and 30 passengers suffers the loss of its right engine, strikes trees, and slides to the ground; although the aircraft is destroyed, there are no fatalities.

A DC-3 with 4 crew and 21 passengers, misses its approach to the municipal airport at Sioux City, Iowa, during a snowstorm on March 2. It stalls, crashes, and catches fire (16 dead).

A new three-phase expansion plan is announced in mid-December, but comes to naught. Plagued throughout its history by poor traffic and a weak route system of only 26 cities, the company allows itself to be taken over by **Braniff International Airways** on August 15, 1952.

MID-CONTINENT AIRLINES (1): United States (1964–1965). This Mid-Continent is formed as a third-level carrier at Morris, Illinois, in late fall 1964. Equipped with a de Havilland DH 104 Dove and a Beech 18, the company begins scheduled passenger and cargo flights to Chicago, International Falls, and Winnipeg on December 18. Services over this route are only maintained for a year.

MID CONTINENT AIRLINES (2): United States (1969–1970). Just as short-lived as its Illinois predecessor, MC-2 is set up at Memphis, Tennessee, in 1969 to provide scheduled daily passenger shuttles to what will become a total of 21 regional destinations. Employing Cessna 402s, the commuter initially inaugurates revenue frequencies to Blytheville, Jonesboro, Dyersburg, Union City, and Paducah. Overextended, the company folds in 1970.

MID-CONTINENT AIRLINES (3): United States (1972–1974). Mid-Continent Bellanca Sales, an aircraft dealer at Duncan, Oklahoma, establishes a scheduled air taxi service in 1972. Employing not Bellancas but Piper lightplanes, the company inaugurates revenue passenger and cargo flights linking its base with Altus, Lawton, Norman, Oklahoma City, and Dallas.

Operations continue apace until 1974.

MID CONTINENT AIRLINES (4): United States (1980–1982). MC-4 is founded at Dubuque (Iowa) in June 1980. Employing a fleet of Embraer EMB-110 Bandeirantes, the carrier inaugurates scheduled third-level passenger flights to Des Moines via Cedar Rapids on August 1.

The route network is expanded into Illinois and enplanements in 1981, the first complete year of service, total 17,860. Early in 1982, the company is reformed and its corporate identity changed to **American Central Airlines**.

MID-CONTINENT AIRLINES (5): United States (1985–1989). The fifth Mid-Continent is established at Aurora, Colorado, in February 1985 to offer scheduled passenger and cargo commuter flights. In April, following the acquisition of the fleet and route network of **AAA Air Enterprises**, a hub is established at Omaha, Nebraska. S. J. Gillette is president and destinations visited by his two Embraer EMB-110 Bandeirantes include Norfolk, Columbus, and Grand Isle, Nebraska, Kansas City, Missouri, and Yankton, South Dakota.

Andrew Stumpf becomes president in 1987 and in May the company begins operations from Kansas City as a “Braniff Express” commuter affiliate of **Braniff, Inc.** The 65-employee small regional transports a total of 36,000 passengers in its expanded fleet of 4 Bandeirantes. Orders are placed for 12 Fairchild Metro IIIs. The year’s financial losses are \$300,000 (operating) and \$442,470 (net).

In 1988, the fleet is increased by the addition of three Metro IIIs.

Customer bookings skyrocket 151.4% to 44,000 and revenues balloon 209.1% to \$3.4 million. Expenses rise 162.3% to \$3.7 million and cause an operating loss of \$300,000. The net loss “improves” to \$267,240.

Operations continue apace in 1989. A fare war is started with neighboring **GP Express** and is all but won when its own fiscal situation and that of its code-sharing partner forces it to cease operations on September 28. On October 16, flights resume to seven destinations. **Braniff, Inc.** files for Chapter XI bankruptcy on November 24 and stops flying.

MC-5 now only has the resources to operate into early December and then, on December 7, it must also shut its doors. Statistics for the doomed airline are duly reported for the year’s first six months.

Passenger boardings of 46,691 are up 110.7% over the same period a year earlier. During the same period, a \$1.3-million operating loss is suffered.

MID HUDSON AIRLINES: United States (1951–1966). Theodore “Ted” Lafko establishes the FBO Mid-Hudson at Poughkeepsie, New York, in 1951. In addition to fueling, servicing, and other airport operations, the company, over the next decade, undertakes Part 135 Beech 18 charter operations to New York’s Idlewild Airport and other upstate destinations.

During the 1960s, Lafko’s on-demand fleet is increased by the addition of an Aero Commander 560 and six Cessna 172s. Scheduled air taxi flights replace the nonscheduled services on the Poughkeepsie to New York City run.

Founder Lafko sells his concern to General Foods Corporation executive Kingsley G. Morse on June 1, 1966 for \$40,000. A month later, Morse begins his own operations under the name **Command Airways**.

MID-OHIO AVIATION: United States (1991–1996). Ned Parks sets up MOA in 1991 as the FBO/charter operation at the Wayne County Airport, Smithville, only a few miles from the author’s home town of Wooster. By 1994, Parks oversees the work of three full-time and three part-time pilots, who fly 1 each Beech Super King Air 200 and Piper PA-31-350 Navajo Chieftain.

Flights cease in 1996.

MID-PACIFIC AIR CARGO (MPAC): United States (1988–1995). Financially distressed **Mid-Pacific Airlines**, owned by KOA Holdings, ceases operations on January 19, 1988. Although it files for bankruptcy, it continues to operate all-cargo services stateside with a fleet of Nihon YS-11As.

Later in the year, a new base is established at West Lafayette, Indiana, and permission is sought from the DOT to inaugurate passenger and charter flights throughout the Midwest and to Hawaii. The DOT counters with cargo-only authority, which is accepted. A plan to change the company’s name to Phoenix Airlines is abandoned when the first aircraft painted with the new titles is involved in an accident. The company is subsequently renamed MPAC.

This privately owned all-cargo carrier is reformed at Indianapolis in January 1989. Mark P. Leininger is named CEO with Jeffrey A. Lehman as general manager. Employing six NAMC YS-11As, the freighter begins both scheduled and charter flights to New York, Buffalo, Norfolk, Newark, Rochester, Syracuse, and Bermuda.

While on final approach to Purdue University Airport at West Lafayette from a March 15 service from Terre Haute, a YS-11A-300F with two crew suddenly pitches down in a deep descent and collides with a dirt hill 500 ft. short of the runway; there are no survivors. Ice is later found on the horizontal stabilizer leading edge.

The airline recovers from the disaster and continues services into the 1990s. Mid-Pacific Air Cargo (MPAC) YS-11A all-cargo services are operated throughout the Midwest on behalf of larger express carriers and various other concerns. In 1992, a British Aerospace (BAe) 146-300QT is acquired from **TNT Worldwide Express** and operates freight flights on behalf of that patron between New York and Bermuda.

Airline employment in 1993–1994 totals 75. The company, out of the passenger business for almost a decade, ceases operations in 1995.

MID-PACIFIC AIRLINES: United States (1979–1995). Formed at Honolulu on August 31, 1979 by former **Hawaiian Airlines** executives John Higgins, Ed Nielsen, and Nolan Kramer as the airline operating subsidiary of Mid-Pacific Air Corporation, this new low-cost competitor enters the Hawaiian interisland market on March 15, 1981 with a single Japanese-made NAMC YS-11A. Expansion is delayed as the result of landing-slot allotment problems; however, two more YS-11As are delivered in summer and fall and enter service. Arthur Lewis now becomes chairman.

An intense competition begins with **Hawaiian Airlines** and **Aloha Airlines**, who refer to their new competitor as "Mud Pack."

Still, Hawaii's latest entrant transports 383,417 passengers on the year. Expenses involved in start-up and in waging the interisland fare war bring a net loss of \$1.14 million.

Airline employment in 1982 stands at 300. At the first of the year, three additional NAMCs are purchased from the Japanese carrier **TOA Domestic Airlines Company, Ltd.** Employing a Boeing 707 Stratoliner leased from **Arrow Air**, the company inaugurates Mid-Pacific Arrow roundtrips between Honolulu and Pago Pago, American Samoa, on October 1.

The publicly owned commuter advances to the ranks of the large regionals, when its passenger traffic skyrockets 114.5% to 822,717 customers (including fully 10% of **Aloha Airlines'** market share). Indeed, MPA ranks first among U.S. large regionals in terms of passenger boardings and is becoming a serious threat not only to **Aloha Airlines**, but to the island state's senior carrier, **Hawaiian Airlines**.

A net profit of \$537,962 is achieved on revenues of \$21.4 million.

In 1983, the company is rerated as a National carrier, receiving its Type 401 certificate from the government. Three more YS-11As are added as the airline begins carrying mail under a contract with the U.S. Post Office. By the end of December, the carrier blankets three Hawaiian Islands from Honolulu with 130 flights each day.

The two-millionth (cumulative) passenger is transported as customer bookings surge by 51.7% to 1,247,900 and revenues skyrocket 67.5% to \$35.8 million, sufficient to bring in a net profit of \$2.65 million.

Airline employment is 700 in 1984. The fleet now comprises 22 Nihon YS-11As; of these, 15 are employed on scheduled services and 7 are dedicated to charter and contract service operations. Mid-Pacific Air Corporation is set up as a Delaware company on April 5 and on August 4, MPA becomes its principal subsidiary. Orders are placed for two Fokker jetliners and four YS-11As are leased in the fall to the new **Fort Worth Airlines** and two to the California start-up **Far West Airlines**. When Far West fails on December 13, the two turboprops are reclaimed.

As fare wars plague the islands, scheduled passenger traffic, despite 130 daily interisland flights, rises only 7.2% to 1,331,000 passengers flown. Revenues increase 3.3% to \$36.43 million, but expenses involved in competition jump 19.6% to \$36.4 million and cause the operating profit to plunge to \$30,000. Net gain disappears altogether and even though the company controls 20% of its market, it is replaced by a net loss of \$31,189.

To employ excess capacity, the company, in January 1985, initiates interisland Mid-Pacific Air Cargo (MPAC) all-cargo services with several spare YS-11As. Early in February, MPA, with two aircraft idle on the mainland because of **Far West Airlines'** bankruptcy, begins limited deep-discount passenger services to the U.S. West Coast with regular charter flights connecting Las Vegas with the Grand Canyon, Burbank, and Orange County, Los Angeles.

In April, Chairman Arthur Lewis resigns and is succeeded by Jack Y. H. Leong. The following month scheduled Orange County to Las Vegas flights commence. Traffic increases for a period due to the strike at **United Airlines**.

In July, MPA receives two new \$13 million per copy Fokker F.28-4000 "UltraJets" from Holland and upon the failure of **Fort Worth Airlines** in September, the four YS-11As are repossessed and assigned to the Las Vegas service.

Passenger boardings rise a slight 1.9% to 1,364,000. Financial problems are encountered as a result of the West Coast expansion and an operating loss of \$5.7 million is suffered.

As a result of the financial difficulties encountered the previous year, the 705-employee MPA is forced to seek a buyer during the first quarter of 1986. Meanwhile, the California operations of the Honolulu-based commuter cease in March after losing \$1.2 million. Oscar Tang's KOA Holdings, which also owns Kampgrounds of America, steps forward and offers a complicated stock exchange proposition designed to provide an infusion of badly needed cash into the ailing carrier. John Higgins becomes

chairman, with former **World Airways** President Donald L. Beck as president/CEO.

Customer bookings for the year decline 5.7% to 1,286,895. There is an \$8.6-million net loss—adjusted upward to \$12.6 million in a later audit—on revenues of \$64.3 million.

While undergoing tests near West Lafayette, Indiana, on January 13, 1987, a YS-11A-213 with three crew loses engine power and must make a forced belly landing in a field. Although the turboprop is badly damaged, there are no fatalities.

President Beck's 22 other Nihon YS-11As and 2 F.28-4000s maintain scheduled flights between Honolulu, Kahului, Hilo, Kona Lihue, and Hoolehua. Owner Oscar Tang loans his airline \$4 million and \$25 million of its long-term debt is restructured.

During takeoff from Honolulu on April 10, the No. 1 engine of a YS-11A with 43 passengers catches fire. The pilot aborts the takeoff and turns onto a taxiway, where an emergency evacuation is ordered. During the process, four people are injured, one seriously.

New Vice President-Marketing Franco Mancassola unveils a new "Little Guy" advertising campaign that in commercials simply says, "cheep." These changes come too late and the fiscal situation continues to deteriorate; in October, 100 employees must be laid off. In December, overtures seeking investment are made to **Northwest Airlines** and **Continental Airlines**, plus three Japanese companies; none are interested.

Enplanements fall another 18.8% to 1,045,373 and the financial loss, even following another \$2 million Tang injection, is still \$6.1 million.

The jetliners are withdrawn in mid-January 1988 just before the financially depleted large regional, unable to find additional capital or win concessions from its creditors, declares Chapter XI bankruptcy on January 19 and ceases all passenger operations following the arrival of a YS-11A at Honolulu from Maui. Although cargo flights continue until February 3, 700 of the 850 employees are immediately laid off because Mid-Pacific cannot meet its payroll. In four years, the company has rolled up \$29 million in losses.

Later in the year, a new base is established at West Lafayette, Indiana, and permission is sought from the DOT to inaugurate passenger and charter flights throughout the Midwest and to Hawaii. DOT counters with cargo-only authority, which is accepted. A plan to change the company's name to Phoenix Airlines is abandoned when the first aircraft painted with the new titles is involved in an accident. The company is subsequently renamed **Mid-Pacific Air Cargo**.

MID SOUTH AVIATION ALLIANCE CORPORATION: 2451 Democrat Road, Suite 100, Memphis, Tennessee 38118, United States; Phone (901) 396-7318 Fax (901) 396-2831; Year Founded 1995. Mid-South is established at Memphis in 1995 to provide aircraft management and charter flights, including nonscheduled executive and cargo flights. Over the next three years, operations are conducted throughout the U.S., Canada, and the Caribbean.

By 2000, Angie Duneheew coordinates the work of 6 pilots and schedules a fleet that includes 1 each Cessna 650 Citation III, Mitsubishi MU-300 Diamond IA, Beech King Air 90, Beech 58 Baron, and Beech A36 Bonanza.

MID SOUTH COMMUTER AIRLINES: United States (1980–1984). In late 1980, New Bern, North Carolina-based **Resort Commuter Airlines (1)**, the airline operating division of Resort Air Service, is renamed. The fleet includes 1 Embraer EMB-110 Bandeirantes, 3 Piper PA-31-350 Navajo Chieftains, 2 PA-31-310 Navajos, and 1 Beech B-55 Baron. Services are maintained to Washington, D.C. (DCA and IAD), Raleigh/Durham, Danville, Richmond, Charlotte, Pinehurst, Rocky Mount, and Newport News.

Enplanements for the year total 16,000.

Business surges for the North Carolina commuter in 1981. Passenger boardings skyrocket 246.8% to 39,563 and require the purchase of 2 additional EMB-110s to help handle the load. Revenues increase to \$2.4

million and expenses are held to a point where a \$267,868 operating profit can be realized.

Customer bookings jump 12.5% in 1982 to 45,000. Revenues advance to \$2.77 million and expenses are held to \$2.59 million. Consequently, profits are made: \$188,000 (operating) and \$20,000 (net).

A Shorts 330 is acquired in early 1983, but in midyear the company is sold to Lynchburg-based **Air Virginia**. The integration process continues through the remainder of the year as enplanements advance to 58,000. Early in 1984, MSCA disappears into its new parent.

MID-WEST AIR LINES: United States (1933–1952). Organized in 1933 as the **Iowa Airplane Company**, this little-known midwestern charter carrier changes its name in 1949 to better reflect its locale. Employing single-engined Cessna equipment, Mid-West launches scheduled services between Omaha and Minneapolis-St. Paul on November 29. This service, which is billed as “the world’s shortest air line,” is maintained and in November 1951 the airline is acquired by the Purdue Research Institute. Operations cease on May 16, 1952.

MIDDLE EAST AIRLINES, S.A.L. (1): Lebanon (1945–1963). Lebanese interests put up the capital to form this carrier in September 1945. Regularly scheduled de Havilland DH 89A passenger flights begin on November 20 over a Beirut–Nicosia route. DH 89A service to Baghdad is inaugurated on February 15, 1946; on June 14, the British-made biplanes are replaced by Douglas DC-3s. **Pan American Airways (PAA)** acquires a 36% interest in the operator.

The U.S.-made transports expand the company’s route network during the remainder of the year and in 1947. The war in Palestine in 1948 closes the company’s stations at Haifa and Lydda.

During 1949–1954, the Pan Am supplies pilots and three more DC-3s. This allows upgrading and increases in Middle East routes and frequencies. A marketing agreement is also signed with **Air France** during July 1949, with the French flag carrier taking a 28% minority stake. In addition to the original 1945 markets, MEA-1 now serves Damascus, Haifa, Lydda, Cairo, and Baghdad.

In January 1955, Pan Am’s association is terminated, with the American carrier’s interest being purchased by the Intra Bank of Beirut. In February, however, the airline becomes a **British Overseas Airways Corporation (BOAC)** subsidiary. On June 10, the ex-BOAC Handley Pages HP-81 *Hermes 4 Hestia*, now operated by **Skyways, Ltd.**, is leased, along with her sister the *Honor*. In September, two Vickers Viscount 732s are leased under a two-year contract from **Hunting-Clan Air Transport, Ltd.** On October 2, the first is delivered; it enters service on a Beirut–Rome route via Athens on November 1.

Under British tutelage, the airline adds additional Viscount 754Ds during 1957–1959 and service is extended to a variety of new points in North Africa, the Middle East, and southern Europe.

On October 3, 1957, a Viscount en route from Beirut to Kuwait crashes into the sea just after takeoff from Beirut (31 dead).

En route from Beirut on September 29, 1958, an Avro 685 York C.1 freighter with five crew is lost in the Mediterranean; there are no survivors.

A de Havilland DH 106 Comet 4B is leased from **British Overseas Airways Corporation (BOAC)** on October 1, 1960 and enters service on October 30. Also in October, the HP-81 *Hestia* is leased by its owner to **Bahamas Airways, Ltd.** The carrier’s first owned Comet 4C is delivered on December 19.

Comet 4C service is inaugurated to London on January 6, 1961. On August 16, BOAC’s holding is terminated. The MASCO hangars and workshops are purchased from BOAC and a computer center is opened.

Sheikh Najib Alamuddin campaigns for an amalgamation of all Lebanese airlines into a single national carrier during 1962. On February 1, 1963, near Ankara, a Viscount with 14 aboard collides with a Turkish military transport carrying 87; there are no survivors from either aircraft and 97 others are killed on the ground.

In March 1963, MEA-1 enters into a joint agreement with **Lebanese International Airlines, S.A.L.** and **Air Liban, S.A.L.**; the associates

operate under joint schedules and merge the operations of their Comets, Viscounts, and Air Liban’s two Sud SE-210 Caravelles VINs. Enplanements for the year total 303,821.

MIDDLE EAST AIRLINES, S.A.L. (2): Airport Blvd., P.O. Box 206, Beirut, Lebanon; Phone 961 (1) 629 125; Fax 961 (1) 629 260; <http://www.mea.com.lb>; Code ME; Year Founded 1963. In 1964, MEA-2’s first full year of operation, airline employment is 3,166. An SE-210 Caravelle VIN with 49 aboard, crashes while landing at Dhahran, Saudi Arabia, on April 17; there are no survivors. In November, a third replacement SE-210 is delivered and a month later, former Executive Vice President Asad Nasr becomes general manager.

Passenger boardings rise 20% to 379,776. Freight traffic grows by 23% and revenues of \$30.1 million are earned.

The workforce grows to 3,206 in 1965. **Air Liban, S.A.L.** is fully merged into the carrier, which now takes the name Middle East Airlines Airliban, S.A.L. Majority ownership (62.5%) is vested in the Lebanese private Intra Bank/Investment Company, with **Air France** having a 28.5% share. Comet 4C service is inaugurated to Zurich in September and the number of flights to Aden, Cairo, and London is increased. Three Douglas DC-8-61s are ordered and by year’s end, the fleet comprises 3 Caravelle VINs, 4 Comet 4Cs, 2 DC-3s, 1 DC-4, and 3 Viscount 754Ds.

Passenger boardings jump 12% to 427,446.

The two DC-3s and single DC-4 are discarded in 1966. The B-720-060B *Queen of Sheba* is leased from **Ethiopian Airlines, S.C.** for 22 months on January 1. Although the company’s largest shareholder, the Intra Bank/Investment Company, collapses, enplanements climb to 456,000.

The employee population in 1967 stands at 3,285. A Comet 4 is leased from **British Overseas Airways Corporation (BOAC)** and in April a Vickers Standard VC10 is leased from **Ghana Airways Corporation**. A VC10, a B-720-060B, and two Concorde are ordered, although the latter will never be delivered.

The B-720B *Queen of Sheba* is returned to **Ethiopian Airlines, S.C.** in October. On November, she is replaced on the MEA register by the B-720-060B *The Blue Nile*.

As a result of the Six-Day War and attendant political difficulties, passenger boardings decline, primarily on short-haul routes, to 403,732; however, freight is up by 19.3%. Overall revenues accelerate 15.4%.

In 1968, the workforce slips to 3,565. In addition to the aircraft chartered the year before, the company maintains a fleet of 4 Comet 4Cs, 3 SE-210 Caravelle VINs, and 3 Vickers Viscount 754Ds.

The Blue Nile is hit by lighting while landing at Beirut on January 9; although the aircraft must be written off, there are no fatalities.

In response to a Palestinian hijacking of an **El Al Israel Airline, Ltd.** plane in October, two Israeli helicopters filled with commandos under the command of Rafael Eytan, attack Beirut airport after dark on December 28. The force destroys or damages beyond repair a B-707-3B4C, three DH 106 Comet 4Cs, two SE-219 Caravelle VINs (plus five others from Arab nations and the Ghanaian VC10) in minutes. Within 24 hours, the staff returns to work and operations are restarted with six Convair CV-990As leased from **American Airlines**.

On the year, freight grows 48% and passenger bookings advance 16% to 469,415. Revenues are \$47 million, and a 10th consecutive net profit is recorded—before the tragedy of December’s raid.

In April 1969, privately owned **Lebanese International Airlines, S.A.L.** is purchased and merged while a Standard VC10 (the prototype aircraft) is leased from **Laker Airways, Ltd.**

Arrangements are completed with **American Airlines** for the lease and purchase of a fleet of nine Convair CV-990A Coronados that have become surplus to the American major. All are delivered between June and December.

The year’s systemwide enplanements soar to 545,272.

The workforce in 1970 drops 1.2% to 3,797. By spring, the Convairs, labeled “Cedar Jets,” are operating most of MEA-2’s services from

Beirut to such destinations as Amman, Ankara, Cairo, Copenhagen, Frankfurt, Geneva, Istanbul, Milan, Paris, Vienna, and Zurich.

The fleet is reorganized later in the year; under a new arrangement with **American Airlines**, the leased Convairs will be returned and replaced with nine B-720-023Bs (B-720Bs). Simultaneously, one Comet 4C and one SE-210 are sold.

Cargo accelerates 30.6% and passenger traffic grows 15.1% to 642,252.

Three additional B-720-023Bs (B-720Bs) and three B-707-323Cs, all formerly operated by **American Airlines**, enter service in 1971. Unduplicated route mileage in the Middle East, West Africa, Europe, and the Indian subcontinent now totals 40,000.

In November, joint venture flights commence with **Nigeria Airways, Ltd.** on routes from Beirut to Lagos and Kano.

Bookings this year rise to 776,000.

Capitalization is increased in 1972 with 50,000 of the new shares sold to the carrier's 4,430 employees. A fleet standardization program is begun: on hand are 3 B-707-323Cs, 12 B-720-023Bs (B-720Bs), 1 Comet 4C, and 1 SE-210 Caravelle VIN. The last of the Convairs is returned to **American Airlines** by February.

Operations to Istanbul are resumed and service to Muscat is introduced; frequencies are also increased on several European routes.

Passenger boardings rise 5% to 817,000.

The workforce in 1973 totals 4,502 and 4 additional B-720-023Bs enter service. A decision in principle is reached by company officials for operations to several East European nations; flights will be conducted in pool with the airlines of the nations concerned. On August 11, the company Caravelle, chartered by **Iraqi Airways** and en route from Beirut to Baghdad, is forced by fighter planes to land at an Israeli military airfield where it is hoped to capture members of the Palestine Liberation Organization (PLO). An official of the Tel Aviv government must admit, however, that the wrong plane has been intercepted. The gambit is condemned at the UN.

Drunk and determined to "show Israelis that not all Arabs are enemies of Israel," M. el-Toumi, a Libyan passenger who claims no affiliation with any guerrilla group, seizes a B-720-023B with 100 passengers en route from Beirut to Benghazi on August 17 and forces it to land at Lydda Airport. Israeli security police board the aircraft and arrest the pirate. Upon examination, he will be judged insane and will be sent to a mental institution.

Enplanements grow 8.1% to 883,177 and freight traffic jumps 19.3%.

In 1974, routes are extended to Tripoli and Yerevan, Soviet Armenia. Orders are placed for three B-747-2B4Bs as three ex-**Western Airlines** B-720-047Bs are added.

Passenger bookings jump 21% to pass the million-mark for the first time—1,158,841. A total of 47,671,000 FTKs are operated. On revenues of \$186 million, a net \$15.7-million profit is recorded.

The workforce in 1975 is 5,500. In January, the carrier receives the 1974 "Technology Management Award" from *Air Transport World* magazine.

The first B-747-2B4B combi is delivered on May 30, followed on June 20 by a second. Also in June, a code-sharing agreement is signed with **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** covering a Beirut-Madrid route.

The new wide-bodies enter service on July 1, flying from Beirut to London and destinations along the Persian Gulf and are joined by a third Dash-2B4BC, delivered on August 20. MEA-2 is the first airline in the region to fly Jumbojets.

Cargo rises 3%, but due to the nation's strife, passenger traffic dips 1.2% to 1,075,900. A \$5.8-million loss is suffered, only the third negative income reported in the carrier's combined 30-year history.

The workforce decreases by 17% in 1976 to 4,530. On January 1, Flight 438, a B-720B with 15 crew and 66 passengers en route from Beirut to Muscat via Dubai disintegrates at 37,000 ft. and crashes into the desert 40 km. NW of Al Qaysumah, Saudi Arabia. There are no survivors of this terrorist act that will later be confirmed as having been caused by a bomb explosion in the forward baggage compartment.

When Beirut Airport comes under rocket and cannon attack on June 27, a taxiing B-720-023B, which has just deplaned its passengers, is hit and destroyed; one flight crew member is killed and two others injured.

Civil disturbances force the carrier to operate charter and contract service flights for six months, beginning in July, from temporary bases at Paris (ORY) and London in an effort to defray mounting expenses.

Beirut airport is closed for 168 days. During this period, company engineers construct a single sideband radio that provides two-way communications with crews stranded outside Lebanon. Late in the year, MEA-2 is able to return to Beirut and restart scheduled operations, but must put its Jumbojets up for charter. Aviation fuel is so scarce that company aircraft often must be sent to Athens to fill up; upon their return to Beirut, fuel is siphoned from their tanks to other jetliners.

Passenger boardings plummet by 67.5%.

On June 1, 1977, two B-747-2B4BCs are leased to **Saudia (Saudi Arabian Airlines)**. Wheelchair-bound Nasser Ali Abu Khaled hijacks a B-707-323C with 112 aboard en route from Beirut to Baghdad on June 5 and diverts it to Kuwait, where officials take him into custody. The pirate will be released, on humanitarian grounds, on August 28 and deported to Lebanon.

Enplanements this year climb back up 1,642,000 as the carrier begins to recover from the 1975-1976 civil war.

The employee population is up 9.8% in 1978 to 4,898. New seats are installed in the B-707-323Cs and service is resumed to Kano, Lagos, and Monrovia. New chairman/president Asaad Nasr's fleet now comprises 1 B-747-2B4BC in use (with 2 still with **Saudia: Saudi Arabian Airlines**), 3 B-707-323Cs, and 14 B-720Bs. A team is established to study replacements for the 17 older aircraft.

Freight falls 4.5% and passenger traffic dips 7.6% to 932,853.

En route from Beirut to Amman on January 16, 1979, a B-707-323C with 73 passengers is taken over by 6 pistol-waving skyjackers, who demand that the aircraft be diverted to Cyprus, in order that they might have a press conference at which to demand the release of a religious leader. Cyprus denies permission to land; however, once the pirates agree to return to Lebanon, they are allowed to have their media event—and then surrender.

Several routes are realigned and Chairman/President Nasr assembles a completely new management team to provide strong leadership. A new IBM 370/115 computer is turned on at the Beirut headquarters.

Passenger bookings soar 11.5% to 1,040,476 and cargo grows 7.7%.

Airline employment is increased by 6.3% in 1980 to 5,450 while the fleet includes 22 aircraft in January.

On January 18, an unidentified Lebanese teenager hijacks a B-720-023B with 80 aboard en route from Beirut to Cyprus, demanding to be taken to Iran to ask Ayatollah Ruhollah Khomeini to intercede with the Libyans to find Imam Musa Sadr, the missing Shiite leader. He is talked into returning to Beirut, where he is allowed to hold a press conference before surrendering.

On January 28, with the same goal of applying pressure on the search for Sadr, another religious fanatic with his wife and four children in tow captures a B-720B en route from Beirut to Baghdad. Upon arrival in Iraq, arrangements are made to allow the man to read a speech before he gives up to police.

En route from Lebanon to Bahrain on May 23, a B-720-023B is forced to make an emergency landing in Amman following a bomb threat; no bomb is found. Orders are placed later in the year for five Airbus Industrie A310s and Tunis is added to the route system. An automated passenger handling and reservation system is turned on at Beirut.

Freight advances 3.5% to 36.44 million FTKs and passenger boardings grow a slight 0.02%. Revenues of \$247 million are generated.

The employee population grows by 1.9% in 1981 to 5,553. Construction begins at Beirut on the carrier's Jumbojet hangars.

Having arrived at Beirut from Libya on an August 31 scheduled service, a B-720-023B, which has deplaned its passengers and crew and been towed to a static position, is extensively damaged when a bomb explodes aboard. Although the aircraft must be written off, there are no fatalities.

Two B-707-3B4Cs enter service, but the renewed civil disturbance impacts heavily upon traffic: cargo falls 7.9% to 33.55 million FTKs and passenger boardings drop 11.1% to 937,000. Still, a net 5.4-million profit is reported.

Another traumatic year is suffered in **1982** as the result of domestic strife and the Israeli invasion. At Beirut International Airport, Israeli warplanes destroy six B-707-323Cs/720Bs on the ground and damage two others. Scheduled operations from Beirut are halted for 115 days, although some service is operated from Europe to Larnaca, allowing connecting water transport to Lebanon. The carrier operates charter and contract service flights from temporary facilities at Paris as it did in 1976. Salim Salaam is now CEO.

Overall passenger bookings decline 32.3% to 634,919 and cargo falls 25.9% to 24.87 million FTKs. Revenues drop to \$198 million, expenses soar to \$228 million, and a net \$15.2-million loss is taken.

Strife continues at Beirut in **1983**, forcing further major service interruptions. The two B-747-2B4BCs leased to **Saudia (Saudi Arabian Airlines)** are returned early in the first quarter; on March 3, service is inaugurated from Lebanon to New York (JFK) via Paris. The company is able to reach a compromise with Lloyd's of London on August 19 to preserve its war-risk insurance, which is due to expire by day's end. In return for continuing coverage, the British underwriters insist that MEA's three Jumbojets not remain at Beirut.

Enplanements for the year reach 795,961.

As a result of particularly hard fighting in **1984**, Beirut International Airport is shut down for another 154 days, forcing MEA-2 to suspend all but a few charter flights between February 6 and July 9. The shut-down costs the airline an estimated \$46 million. When the airport is reopened, the first MEA-2 aircraft lands one hour after the runways are certified safe.

En route from Abu Dhabi to Beirut on July 21, a B-707-323C with 146 passengers is hijacked by a lone pirate with a Molotov cocktail, who demands to return to the point of origin. Nearly out of fuel, the captain persuades the man to allow the plane to land in Lebanon. In exchange, the skyjacker is allowed to hold a public news conference—and then he surrenders.

The Jumbojet service to the U.S. ends and the three B-747-2B4BCs are sold to the Irish leasing firm Guinness Peat and leased back. "Soft" loans are received from several local banks. In November, a commercial agreement is signed with **Deutsche Lufthansa, A.G.**

Among the passengers deplaning at Dubai on December 4 after a flight from Beirut are a group of terrorists that MEA security has failed to detect. The pirates board a **Kuwait Airways Corporation** aircraft that they take over, killing two Americans before the aircraft is reclaimed.

Passenger boardings for the year are only 387,000.

The carrier begins to rebuild in **1985**, despite a 2.6% drop in the employee population to 4,843. The fleet now includes 3 B-747-2B4BCs, 8 B-707-3B4C and B-707-323B/Cs, and 6 B-720Bs; the 3 Jumbojets are subleased to **British Airways, Ltd. (2)**. Routes suspended during the height of the 1982–1984 fighting are restarted with the B-707s and B-720Bs.

A disgruntled airport guard demanding promotion seizes Flight 203, a B-747-047B with 104 passengers, for five hours on February 22, forcing it to fly back and forth twice between Beirut and Cyprus. The incident results in the death of one passenger who is sucked out of the open door as the plane takes off on its first run and ends with the hijacker disappearing, apparently into a Beirut shantytown.

En route from Beirut to Jeddah on April 1, a B-707-323C with 76 passengers is captured by a lone assailant claiming to have a gun and a bomb. Shouting demands that the government of Lebanon provide financial assistance to the anti-Israel guerrillas operating in the southern part of the country, the pirate is eventually calmed down and persuaded to allow the Stratoliner to land at its destination. There he gives up and is taken in hand by Saudi police.

On June 12, in retaliation for the destruction of an **Alia (Royal Jordanian Airlines)** airliner by Shiite extremists earlier in the day, a Pales-

tinian hijacks a B-707-323C that has just arrived at Larnaca from Beirut with 86 aboard. All of the passengers are allowed to leave and authorities grant the gunman's request to be flown to Amman, where he is arrested. A B-747-133, formerly flown by **Air Canada, Ltd.**, is leased on June 24 for the summer season; it will be returned in September.

Members of the transport workers union at New York (JFK), meanwhile, refuse to service a B-747-2B4BC that arrives on June 26, with the union's leader announcing that his people do not work "for the convenience of terrorists." In response to the hijacking of a **Trans World Airlines (TWA)** B-727-231A, Flight 847, President Ronald Reagan orders an end to the company's two weekly Jumbojet services to the U.S. as of July 1. In August, MEA flies a TWA crew into Beirut to retrieve the Boeing.

Two B-720-047Bs are lost on the ground at Beirut on August 21.

Despite these incidents, cargo traffic for the year skyrockets 63.8% to 33.03 million FTKs and passenger boardings jump 24.2% to 510,000.

Given the previous year's unrest, the fortieth birthday is actually celebrated in February **1986**. As a result of the company's perceived role in the previous year's hijacking of **Trans World Airlines (TWA)** Flight 847 as well as Lebanon's acquiescence in the kidnapping of American citizens, MEA's services to the U.S. remain suspended by the U.S. government. Still, another former **Air Canada, Ltd.** B-747 Jumbojet, a Dash-121, is leased on May 30 for use during the summer and is returned in September.

Just after the 126 passengers have deplaned, a B-707-323C is destroyed by shelling at Beirut on January 8, **1987**.

A B-747-2B4BC is now leased to **Air France**, which subleases it to **Air Inter, S.A.** Civil strife forces Beirut International Airport to shut down for another 107 days after February 1.

Although operations are almost normal during **1988**, the Christian militia of Gen. Michel Aoun blockades Beirut International Airport for six months between February and September **1989**. When services resume in October, MEA is able to halt its daily losses of \$150,000.

During the remainder of the year and into the **1990s**, Chairman/President Abdul Hamid Pakhoury and Managing Director Yousef Lehoud are able to restart or expand services to Abidjan, Abu Dhabi, Accra, Aden, Amman, Amsterdam, Athens, Baghdad, Bahrain, Berlin, Brussels, Cairo, Copenhagen, Damascus, Dhahran, Doha, Dubai, Frankfurt, Freetown, Geneva, Istanbul, Jeddah, Kano, Khartoum, Kuwait, Lagos, Larnaca, London, Madrid, Milan, Muscat, Nice, Paris, Riyadh, Rome, Tripoli, Tunis, and Zurich.

Although plans for the acquisition of three B-757-200s are announced in May **1990**, following the end of the civil war, Iraq's invasion of Kuwait in August and the subsequent Mideast conflict forces the carrier to cancel this option. The devaluation of the Lebanese pound now turns the airline's capital, worth \$50 million before the civil war, into a mere \$100,000.

Enplanements for the year total 727,844 and a \$24.26-million loss is suffered.

The last four operational B-720-047Bs/-023Bs are officially retired in **1991**. A B-720B is sold to the Irish carrier **Omega Air, Ltd.** in January. When peace in Lebanon is restored, it is recorded that, in the years since the civil war began, 40 employees have died in the company's service. It will also be later noted that the Muslim militias have forced the company to hire a large number of their partisans, many of whom are unqualified, leading to excessive personnel costs.

In March, a commercial agreement is signed with **Ghana Airways, Ltd.** Bookings this year decline to 645,911; however, the bottom line figure is improved as only an \$8.83-million loss is taken.

In April **1992**, the **KLM (Royal Dutch Airlines, N.V.)** Airbus Industrie A310-203s *Jan Steen* and *Frans Hals* are leased for a three-year period. Flights are initiated to Singapore on June 4 and are extended to Sydney on December 15.

The new route assists overall reservations to rise to 701,805. On the negative side, the loss skyrockets to \$99.2 million.

In **1993**, airline employment stands at 4,399 and the fleet includes the chartered Airbuses plus 3 each B-747-2B4BCs, B-707-323Cs, 2

B-707-3B4Cs, and 1 each A310-304 leased from **Deutsche Lufthansa, A.G.**, and B-707-323B. MEA is now the world's largest B-707 operator.

A new recovery plan is unveiled and is approved by shareholder **Air France**. It fails to take off and the company now encounters stiffer competition from 20 foreign companies that have resumed flights to Beirut that were suspended during the civil war.

A new market is opened at Colombo in November following the October signing of a code-sharing agreement with **Air Lanka, Ltd.**

Also during the year, MEA introduces its Butterfly program, an annual internship for approximately 700 Mideast college students.

Passenger boardings swell to 791,700 and the loss totals \$20.79 million.

Operations continue apace in **1994**. In deep financial trouble, Chairman Pakhoury reports that the carrier must increase its capitalization by \$100 million over the next three years if it is to survive. Two recent management studies are completed and show the company to be overstaffed by 1,200 employees.

Two B-720-047Bs not yet sold are returned to service in June to supplement the B-707s on non-European routes; one of the impressed aircraft, its airframe time exhausted, is permanently retired in October. Plans are made to celebrate the company's fiftieth anniversary.

Bookings for the year climb to 816,148 and the airline, which has not made a profit in this decade, suffers another disappointing financial downturn, to \$53.49 million.

The workforce is cut by 1.2% in **1995** to 4,128 and the last 2 B-720Bs are phased out. All three B-747-2B4BCs are wet-leased to **Garuda Indonesia** in May for the Hadj season.

A half-century of service is celebrated, while several older routes to Freetown, Khartoum, Tunis, and Madrid are curtailed during the fourth quarter. After years of political squabbles among Lebanon's top decision-makers over a change in the airline's management, Khaled Salaam is appointed by the board in September to the posts of chairman/president.

The two B-720Bs are finally sold, in December, to Pratt & Whitney Canada and two B-747-2B4BCs are leased to **Philippine Air Lines (PAL)** on December 15. The company's first South American route is inaugurated on December 27, weekly by B-747-2B4BC to São Paulo, Brazil, via Abidjan.

Enplanements increase by 2.1% to 769,763 and cargo is ahead by a full 10% to 43 million FTKs. Despite these positive traffic reports, losses are posted: \$38.21 million (operating) and \$34.77 million (net).

The number of employees is reduced another 5% in **1996** to 3,921 and 3 A310-304s enter service; orders are outstanding, with ILFC for 2 A320-232s and 2 A321-231s.

A block-space agreement is inaugurated with **Malaysia Airways, Ltd. (MAS)** in January. The pact covers flights between Beirut and Dubai, Kuala Lumpur, and on to Sydney, Australia. Also during the month, first-class service is replaced with a new SuperClub product on short- and medium-haul routes. In February, an A310-203 is chartered from ILFC for 14 months.

The first dual-designator service to Kuala Lumpur is operated on February 4. The next day, flights commence to Bucharest. In April, a commercial arrangement is signed with **Air Afrique, S.A.** for code-sharing on frequencies from Abidjan to São Paulo, Brazil.

Also during April, Israel bombs Lebanon for 17 days, shattering the nation's, and the airline's, plans to attract tourists. A 12% increase in passengers for the year evaporates and it will later be reported that the attacks have cost MEA approximately \$12 million in lost revenues.

On July 25, Chairman Salaam announces that the carrier will receive a \$100-million capital infusion from the Lebanese central bank, which will be employed to retire the company's debts, which are mostly owed to government-controlled entities. Following the first tranche in October, another \$125 million will be made available, which will allow MEA-2 to embark on a rehabilitation plan to modernize its fleet and restructure operations.

In a ruling by the three-judge U.S. Court of Appeals for the Second Circuit, MEA-2 is found guilty, as a signatory to various interline agree-

ments, for not protecting "all air travelers from unreasonable risk of foreseeable harm caused by terrorists and/or hijackers." This suit, filed against the airline holding it liable for the death of two Americans in the terrorist hijacking at Kuwait on December 4, 1984, sets a precedent in U.S. law that airlines carrying terrorists may be held responsible for their later actions, even if they occur on another carrier.

Customer bookings this year slide 0.6% to 789,485, but 46.27 million FTKs are operated, a 7.6% increase. Operating revenues are off 5.9% to \$252.8 million, but costs are down only 1.8% to \$301.5 million. The operating loss deepens to \$48.7 million and the net loss is \$56.7 million.

The employee population is increased by 22.4% in **1997** to 4,800. Pilots, flight attendants, and ground personnel, seeking a pay raise, stage a 24-hour strike on January 21, forcing the carrier to cancel 15 flights. Activity at Beirut is also disrupted by the work stoppage as five foreign airlines, to which MEA provides ground services, are also forced to cancel their flights into the Lebanese capital. Chairman Salaam rejects the wage demands and calls the job action "illegal."

During early February, the company adopts a new color scheme that coincides with the delivery of its first A320-232. Service starts to Bombay.

In March, the government of Lebanon doubles its stake, acquiring 99% of all company shares. Aviation consultants from Germany and France are brought in to assist in reorganization.

The company now determines it a wiser policy to lease its aircraft instead of purchasing them and begins seeking buyers for 11 older Boeings. On May 1 agreement is reached, via the good offices of Fortis Aviation, for the carrier to sell its three B-747-2B4BCs to **American International Airways (3)** for \$60 million. The last A320-232 and both A321-231s arrive in May. The three Jumbojets will be delivered in September.

U.S. Secretary of State Madeline Albright visits Beirut on September 15; the occasion leads to a lifting of the U.S. government travel ban to Lebanon. The first U.S. dignitary to return is former U.S. ambassador John Kelly, who arrives the next day aboard Flight 218, the A321-232 service from Frankfurt.

In November and December, the government looks into Beirut media charges that senior company officials have taken \$5 million in kickbacks in connection with the order for the new Airbus A321s.

At the end of the year, the company is purchased by the Lebanese Central Bank (99.7%).

Enplanements for the year total 940,000 and a large \$87.43-million operating loss is suffered, blamed in part on its lease of three Airbus jetliners at a price \$7.7 million above what it had expected to pay.

With 4,800 employees, MEA-2, at the beginning of **1998**, is still Lebanon's single largest employer. In January, the new owners inject \$190 million in new capital and appoint a new board, which includes former **Air France** Chairman Christian Blanc. Mohamad A. el-Hout, who has overseen the MEA account at the Lebanese Central Bank, is named chairman/CEO and he is given a mandate to institute a new strategy that will provide recovery.

Chairman el-Hout delivers his four-point recovery plan on April 1. At the top of the list is an overhaul of the route network. Long-haul services will be abandoned and the company will concentrate on providing flights to 20 destinations in the Mideast and in Europe.

During the first week of May, the first route cut is a weekly service from Beirut to Sydney, Australia, while roundtrips are started to Bombay. Over the next several months, flights will be withdrawn from Accra, Bahrain, Berlin, Brussels, Bucharest, Copenhagen, and Kano.

To handle his new route system, el-Hout decides to operate an all-Airbus fleet and to dispose of his Boeing 747s and B-707s. In protest, company pilots stage a one-day strike on July 16.

Efforts are also begun to find a strategic marketing and code-share partner. Although the carrier maintains close working relationships with both **American Airlines** and **Virgin Atlantic Airways, Ltd.**, the first choice is **Air France**, with which flag line negotiations are undertaken.

The company also hopes to expand into various subsidiary operations, such as catering and aircraft handling. A significant example is the

creation at this point by the company (66%) and Aerospatiale's overhaul affiliate Sogerma (34%) of a joint maintenance company, known as Masco, at Beirut International Airport. The new concern takes over the maintenance activities of the airline. At the same time, a \$600-million passenger terminal is completed at Beirut International Airport.

Scheduled to begin in the new year, a major commercial agreement is signed with **Air France** on September 3. Flights to São Paulo, the last of the company's eight long-haul destinations, end in September.

An agreement is signed between Lebanon and Iran on October 22 under which MEA-2 will begin service to Tehran early in 1999. The pact also contains a provision for later discussions in which Iranian airlines might begin flying to Beirut.

During the year, costs are cut 28.2% to \$167.9 million. The year's loss is \$42.26 million, an improvement, but still far from profitability. It is reported by the airline that, since 1989, the government has invested over \$250 million into the airline.

The fleet in early 1999 is reduced to just 9 aircraft and in other cost-cutting moves, maintenance work is outsourced and many foreign offices are closed.

It is announced in Beirut on February 15 that under the dual-designator pact signed with **Air France** the previous September 3, the two companies will offer 19 weekly joint services between Paris and Lebanon beginning on June 1.

The Beirut *Daily Star* reports on March 2 that MEA has complained to the government of Lebanon that **KLM Royal Dutch Airlines, N.V.** has been allowed to fly too many services into the capital city, thereby causing MEA-2's losses to deepen.

Chairman el-Hout seeks to downsize his workforce by 50% as unions for MEA pilots, flight attendants, and ground staff continue to fight retrenchment. On March 18, the *Daily Star* reports that the airline's staff has threatened to initiate a sit-down strike if the government moves forward with a restructuring plan that causes job losses. At this point, the national transport ministry reports that it is paying \$6 million per month to keep MEA flying.

Following a 20-year suspension in service caused by the Lebanese civil war, MEA-2, on May 17, resumes twice-weekly roundtrip service to Tehran.

MEA's campaign to terminate the government's "open skies" aviation policy fails miserably as Lebanese Transport and Public Works Minister Najib Mikati increases the number of flights by foreign airlines authorized to fly into Beirut by 12% during the summer. Although local travel agencies are pleased, Chairman al-Hout indicates that he cannot compete and that all of the work by the airline's dedicated personnel to keep the airline flying "will end up in failure."

Flights continue in 2000. On June 12, arrangements are completed to sell six stored B-707 Stratofreighters to **Air Gulf Falcon**.

MEA joins in a dual-designator pact with **Malaysia Airlines, Ltd. (MAS)** on June 13. The code-sharing agreement with MAS begins on June 16, with MAS placing its designator on MEA services from Beirut to Sydney via Kuala Lumpur, while MEA puts its code on MAS flights from Kuala Lumpur to Beirut.

MIDDLE STATES AIRLINES: United States (1929). Formed at Akron, Ohio, in the spring of 1929, MSA's owners order a pair of Lockheed Model 5 Vegas and in June launch scheduled passenger flights to Detroit via Cleveland and Toledo. En route to Akron on its August 11 delivery flight, the company's second Vega, piloted by Orville Stephens with two passengers, crashes at Clovis, New Mexico (three dead).

Just after takeoff from Pittsburgh on August 12, pilot Harry Smith is killed when he crashes the other Vega into telephone wires. Without aircraft and with insufficient funds to obtain replacements, operations cease in September.

MIDFLY INTERNATIONAL AIRWAYS, A.S.: Denmark (1985–1989). Midfly is organized at Skjern in 1985 to offer air ambulance and air taxi flights, plus passenger and cargo charters. A branch office is es-

tablished at Kolind. Managing Director Bent Larsen's initial fleet comprises 1 each Cessna 421, Cessna 414, Piper Seneca, and Fairchild-Swearingen Metro II. Following 18 months of nonscheduled operations, Midfly acquires a Metro III with which to inaugurate scheduled services to Copenhagen and Aberdeen in late 1987.

Privately owned Midfly expands its regional services in the spring of 1988 with a pair of Fairchild Metro IIIs. Flights begin to Rotterdam and an order is placed for a SAAB 340A. Traffic and financial figures are not released.

Operations continue apace in 1989; however, the carrier encounters financial difficulties and in September is forced to sell out to rival Copenhagen operator **Business Flight, A.S.**

MIDLAND AIR CARGO, LTD.: United Kingdom (1970–1973). Lord Trefgarne and the Marquis of Headfort form this nonscheduled cargo carrier at Coventry Airport in the fall of 1970. During the first week of October, a Bristol 170 Mk. 32 is purchased from **British Air Ferries, Ltd.**; christened *Viceroy*, it begins revenue services on October 19. Among the destinations flown are Cologne and Dusseldorf from Birmingham on behalf of the Ford Motor Company. A second Bristol Freighter is purchased in November.

In the spring of 1971, the company's Freighter is employed to fly ad hoc produce charters to the British Midlands from Jersey and Guernsey. **British Air Ferries, Ltd.**'s last two Bristol 170 Mk. 32s are acquired in March; however, only one is placed in service. This *City of Edinburgh* joins the *Viceroy* in mounting long-distance charters to the Channel Islands, Germany, Ireland, and the Netherlands.

These services continue into 1972. During July's national dock strike, the company's two Bristols are employed to fly produce and other cargoes into Britain from the Continent. C. J. O. Trimble and R. J. Height purchase the carrier in the fall, but during the winter the company encounters financial difficulties and is forced to cease operations on March 1, 1973.

MIDLAND AIR EXPRESS: United States (1931–1932). Midland is established at Kansas City, Missouri, in the summer of 1931 to offer scheduled, multistop passenger flights across 595 miles to Cheyenne, Wyoming, in association with **Braniff Airways**. Equipped with 2 Lockheed Model 5 Vegas, the carrier inaugurates 4-hour flights on August 1 and is able to maintain service until closing a year later.

MIDLAND AND SCOTTISH AIR FERRIES, LTD.: United Kingdom (1933–1934). Bus company owner John Sword registers this subsidiary on March 10, 1933; a fleet of de Havilland DH 84 Dragons is assembled. Plans are made to offer the first air service to the islands west of Scotland and across the North Channel to Belfast in Ulster. On May 8, the company begins operations by providing an ambulance flight from Islay to Glasgow (Renfrew).

On June 1, thrice-weekly DH 84 flights are initiated from Glasgow (Renfrew)–Islay via Campbeltown; simultaneously, twice-daily Glasgow (Renfrew)–Belfast via Campbeltown flights are also started. Employing a new Avro Ten (license-made Fokker F-VIIb/3m), the company begins thrice-weekly Liverpool–Dublin summer service. The Islay and Dublin frequencies are suspended for the winter on September 30.

Between February 19 and March 2, 1934 and in association with Redditch Garages, Ltd., Liverpool–Birmingham and London (Heston)–Birmingham flights are offered to the British Industries Fair by the company's Airspeed Ferry. At Glasgow, Prime Minister Ramsay MacDonald christens the fleet's new Avro 642 *Marchioness of Londonderry* on April 6. The aircraft is then employed to fly the leader on the first of two new routes opened that day, Glasgow (Renfrew)–London via Liverpool; the second route is London–Belfast via Liverpool.

On April 9, two additional new services are added: London (Romford)–Glasgow (Renfrew) via Birmingham and Liverpool and Liverpool–Belfast via Isle of Man. The railway barons now claim in court that owner John Sword is in conflict of interest, as his former motor bus

operation, **Scottish Motor Traction, Ltd.**, was associated with the railroads. On July 14, Sword, under pressure, relinquishes his London (Stapleford)—Belfast via Liverpool and Isle of Man service, as well as the suspension of the Glasgow—Campbeltown—Islay route on September 30. The airline now permanently suspends operations.

MIDNIGHT EXPRESS: United States (1983–1988). ME is founded at Atlanta in **1983** to provide regional charter cargo and contract service flights. Operations commence with a single Piper PA-34 Seneca. During the next four years, as operations are undertaken for a variety of concerns, including **DHL Corporation** and **UPS (United Parcel Service)** and other air freight forwarders, the fleet is increased to include 4 Embraer EMB-110 Bandeirantes, 3 Beech 99s, 10 Cessna 402s, and 3 Shorts 330s. Midnight claims that it is the first all-cargo commuter to operate the Embraer and Shorts exclusively in cargo configuration.

In **1987**, ME serves 46 cities. In August, the first of three cargo-configured Dornier 228-221Cs is placed into service, the first of its type to be operated by an all-cargo commuter.

Airline employment is increased 66.7% to 130 and a total of 3.8 million FTKs are flown, a boost of 31.5% over the previous year.

Overexpanded, the company ceases operations in **1988**.

MIDSTATE AIRLINES: United States (1946–1989). Roy and Lois Shwery found the FBO Marshfield Aviation at Marshfield, Wisconsin, in **1946**, pumping gas, making repairs, and operating the usual charters for most of the next two decades. The two establish a Midstate Air Commuter division of their company on February 17, **1964**, registering it as Midstate Airways.

With 1 Beech 18, the new carrier flies to Chicago via Milwaukee on a route left void by **North Central Airlines** and transports 2,710 passengers during its first year. As traffic increases, the company purchases 4 Beech 99s and by **1975** enplanements are 54,786.

Airline employment in **1976** stands at 81, as orders are placed for three Swearingen Metro IIs. Customer bookings jump 21% to 65,221.

In **1977**, Midstate obtains its Swearingen Metro IIs. In addition, a new terminal and general office facility, under completion for two years, is opened at the Marshfield base. The corporate identity is now changed to Midstate Airlines.

Enplanements for the year total 74,958.

Midstate adds five more Metro IIs, opens service to Detroit, and enjoys steady growth in **1978**. Passenger boardings are up 11% to 83,571.

The workforce is decreased by 2.5% in **1979** to 115. Customer bookings accelerate 3.4% to 86,451, but freight is off by 27.4% to 345,000 pounds.

The employee population is increased by 25% in **1980** to 125. In June, Midstate becomes a wholly owned subsidiary of the Sentry [Insurance] Corporation. John W. Joanis is named chairman with Bryce Appleton as president. Company assets rise from \$5.8 million to \$20 million overnight.

Upheavals associated with the ownership change result in a 24% drop in enplanements to 65,410 and revenues of only \$3.4 million. Nevertheless, President Appleton orders a new color scheme, a new logo, and six more Metros as the last 99s are retired.

Shifting its headquarters to Stevens Point in **1981**, Midstate enjoys another exciting—and much more profitable—year. The employee population rises 104.9% to 250 and the fleet is doubled by the addition of 2 Metro IIAs and 4 Metro IIIs. Six new cities are added to the route network: Cedar Rapids, Indianapolis, Minneapolis, Kansas City, La Crosse, and Wausau.

Passenger boardings jump a spectacular 84.2% to 120,494 and revenues hit \$7.76 million.

During **1982**, a new \$2-million maintenance and headquarters facility is completed at the Stevens Point base.

Customer bookings jump again, this time by 66% to 200,020. A total of 191,000 pounds of freight are also transported.

The payroll grows 16.7% in **1983** to 280 and the fleet includes 8 Fairchild-Swearingen Metro IIIs and 4 Metro IIs. Flights are initiated to

Green Bay and Dayton, bringing the total number of cities served to 14 in 8 states.

Passenger traffic this year increases by 13.5% to 227,022 passengers flown and cargo is up 17.1% to 223,000 pounds. Revenues advance by 25% to \$18 million and as a result, the Wisconsin-based company moves into the CAB category of large regional.

The payroll is boosted by 48.2% in **1984** to 415 and the fleet includes 12 Metros. Orders are placed for 10 Fokker F.27s (8 firm, 2 options), the first 2 of which are delivered before the end of the summer. The company is certified as an FAR 121 carrier by the FAA, allowing further expansion.

On June 15, new services are opened from Stevens Point to Milwaukee and Rhinelander in Wisconsin and Muskegon and Traverse City in Michigan; nonstop La Crosse to Milwaukee flights commence the same day. The company relocates its flight operations in Chicago during July to the \$130-million Delta flight center at O'Hare International Airport.

Growth continues at Midstate as the number of customers flown rises another 22.1% to 277,193 and cargo accelerates 29% to 286,000 pounds. Revenues shoot upward by 32% to \$23.9 million.

Airline employment grows 3.6% in **1985** to 431 and the fleet is improved by the addition of 4 additional F.27s, bringing the fleet to 6, plus 8 Fairchild Metro IIIs and 4 Metro IIs. In July, a frequent flyer program is initiated providing 1 free ticket in exchange for proof-of-purchase of 20 one-way or 10 roundtrip fares.

Passenger boardings jump 25.3% to 347,585 and freight ascends 31% to 376,000 pounds. Revenues climb 28.2% to \$30.1 million, but costs rise quickly and cause an operating loss of \$1.39 million and a net downturn of \$701,386.

President Bryce Appleton purchases the carrier in **1986** and downsizes it by eliminating all aircraft except the eight Metro IIIs, to which he adds two more. Unprofitable services are also suspended. In May, the carrier leases five Fokker Friendships to the new small regional **Chicago Air**, which inaugurates services from Chicago (MDW) as a "Midway Connection" partner of the national carrier **Midway Airlines (1)**. The new entrant runs into financial problems early on, and in an effort to protect both the airline and his lease, Appleton accepts a **Chicago Air** invitation to assume control in October. The new subsidiary continues a heavy loss of money and stops flying at the end of December.

Meanwhile, beginning on October 26, Midstate shifts its focus from Chicago to Milwaukee, increasing its service there from 12 to 34 daily flights. As part of its reorientation, Midstate sells 43 slots at Chicago (ORD) to **Simmons Airlines**, leasing a few back until its move into Milwaukee is completed.

CEO Appleton's cutbacks and changes cause customer bookings to fall 35.9% to 222,844.

In **1987**, the fleet contains 6 Fokkers. With **Chicago Air** all but out of business in January—it will file for Chapter XI bankruptcy in February—Midstate assumes its "Midway Connection" code-sharing arrangement. Downsizing of the company continues and it now falls from large regional designation to small. Still, service is initiated to Chicago's downtown Meigs Field from Indianapolis.

Passenger boardings plunge 45.3% to 121,966. A total of 16,000 pounds of freight are also hauled.

Midstate collapses completely in **1988** as enplanements plunge to just 15,217 by November, the last month for which figures are provided. Not seeing any way out of bankruptcy, the one-time large regional, which has altered its fleet to just 2 leased Fairchild Metro IIIs, suspends operations on January 19, **1989**. The Metros are returned to lessor Sentry Insurance and the operating certificate is voluntarily surrendered to the FAA.

MIDSTATE AVIATION CORPORATION: United States (1964–1965). MAC begins scheduled Cessna lightplane local services from Chicago's Meigs Field on September 16, **1964**. The operation cannot be maintained for more than half a year.

MIDWAY AIRLINES (1): United States (1976–1991). MA-1 holds a special place in U.S. commercial airline history. Organized at Chicago in October 1976 by former **Hughes Airwest** Chief Operating Officer Irving T. Tague, with the assistance of Kenneth Carlson and William B. Owens, authority is sought from the CAB to operate scheduled passenger services from under-utilized Midway Airport on Chicago's South Side. The company, incorporated under Delaware law, will be the last certified by the CAB before deregulation. David Hinson becomes chairman and venture capitalists supply \$5.7 million in start-up capital over the next two-and-a-half years.

When it begins flying in 1979, President Gordon Linkon's airline receives recognition as the first all-jet airline ("new entrant") to be created as a direct result of the Airline Deregulation Act signed into law by President Jimmy Carter in October 1978. Low-fare service on the model introduced by **Southwest Airlines** is launched by the 243-employee company on November 1 with three leased Douglas DC-9-14s, first operated by **Trans World Airlines (TWA)**, from a base at Chicago (MDW) to Cleveland, Detroit, and Kansas City. The aircraft are painted in rainbow colors.

On November 5, as a sales promotion, the company offers one-day-only flights from Chicago to Kansas City for 37 cents, Cleveland for 33 cents, and Detroit for 27 cents; return flights are at the normal rates of \$37, \$33, and \$27 respectively. Advertisements to the people of Chicago brag: "Kiss O'Hare Good-bye!"

By year's end, the company has boarded 60,000 passengers. Initial revenues total \$2 million, expenses are \$2.5 million, and thus a not-unexpected operating loss of \$500,000 is achieved.

The employee population in 1980 is 450. The large regional adds five more DC-9-15s, all used. It flies 461,945 travelers and, as expected in a time of fierce competition, operating expenses (\$29.44 million) exceed revenues (\$24.96 million) and the carrier suffers a \$3.62-million operating loss. The net loss is \$5.1 million.

The financial picture brightens considerably for the 750-employee airline in 1981, despite the PATCO air traffic controllers' strike. Midway Airport is not immediately affected by the job action, although, in the fall, the FAA does require that it face the same ATC restrictions as those at O'Hare.

The company's growing fleet of 9 DC-9-15s and 3 DC-9-31s are able to help the low-fare passenger traffic rise to 748,000 passengers carried. The route network is stretched to a total of 14 markets. Revenues accelerate 58.6% to \$73.92 million and even though costs skyrocket 128.2%, they are held to \$65.1 million, leaving the first profits: \$8.82 million (operating) and \$7.55 million (net).

The payroll grows 25% in 1982 to 825 and the fleet is increased through the addition of four DC-9-31s. As the result of the PATCO air traffic controller's strike, service from Chicago to Omaha is suspended because of FAA flight limitations. Additionally, recession and stiff competition cause a change in management. When founder Tague departs, a new team takes over, headed by former **Federal Express** President Arthur C. Bass as chairman, along with ex-**New York Air** President Neal F. Meehan. With the large carriers, led by **American Airlines**, matching Midway's discount fares, President Bass and his associates quickly shift tactics.

Emphasizing the business-class approach, they inaugurate Midway Metrolink, which features wider seats and better food at prices 20% below the majors. Midway will call itself the first business-class airline. Plans are made to give the company a complete image overhaul, including new logo, livery, and uniforms, while Chicago (MDW) terminal will get a new look, with upgraded departure lounges, some of which will be equipped with phones and desks for transiting business passengers.

To fund the changes, a "war chest" is raised in two public offerings. One is a sale of 1.5 million shares of common stock that produces \$15.45 million, while the other, the sale of 8.5% convertible subordinated debentures, brings in \$14.6 million.

The three-year-old airline passes the million passenger mark in boardings for the first time (1,098,337) and eight more DC-9s are acquired to

feed the Midway hub. Operating income advances 28.09% to \$94.69 million and expenses are held to \$90.22 million. Consequently, profits are again generated: \$4.46 million (operating) and \$346,000 (net).

In 1983, the fleet is increased by three DC-9s. Midway Metrolink service is expanded to five additional cities, including New York. In an effort to find out what business people desire in the way of airline service, Midway begins a nationwide advertising campaign on May 6 urging readers to "create your own airline" and offer suggestions.

In June, Midway begins a promotion in Chicago, St. Louis, and Minneapolis (MSP) offering a free trip to every business passenger who brings along a coworker. Many of the upgrades reviewed for implementation are now put in place, beginning in July at New York (LGA).

Passenger boardings increase by 9% to 1,197,217 and revenues of \$103.98 million are earned, up 9.6%. Costs, however, jump 28.2% to \$115.65 million. After two years of profits, losses are suffered: \$11.67 million (operating) and \$15.01 million (net).

The 1,900-employee Midway stretches for a reversal of its slide in 1984, but in retrospect, it may have bitten off too much. First, it begins acquisition of the remnants of the bankrupt **Air Florida** for \$5 million and 200,000 shares of common stock. On October 15, after winning permission in court, the prize is restarted over many of its old routes. Seven Boeing 737-2T4As are employed in this single-class service and the name of the once-large carrier is changed to Midway Express. Operated as a separate carrier, it operates several **Air Florida** routes from Florida to the Great Lakes and from Miami to St. Croix and St. Thomas. The parent also attempts to launch a helicopter airline, **Metrolink**, at the Midway hub.

The fleet now includes 2 McDonnell Douglas DC-9-80s (MD-80s), 8 DC-8-31s, 7 ex-**Air Florida** B-737-2T4As (dedicated to the Midway Express operation), and 15 DC-9-15s. Metrolink business-class service continues to be popular.

Enplanements rise to 1,500,000, including 111,853 boardings contributed by Midway Express. Although revenues rise 43.4% to \$149.13 million, the above-cited achievements prove very costly. Expenses jump 39.5% to \$161.37 million, including the \$6.6-million start-up of Midway Express and the \$1.7-million abortive Metrolink. The operating loss worsens to \$12.24 million and a \$21.96-million net loss is incurred.

Airline employment in 1985 stands at 1,467. Nonstop Midway Metrolink business-class service is inaugurated on February 15 between White Plains, New York, and Washington, D.C. (DCA). Early in the spring, the top management of the carrier is changed again, largely because the Midway Metrolink has proven unprofitable. David Hinson, one of Midway's original investors, is invited to act as both president and board chairman, succeeding Chairman Bass and President Meehan. He returns to Midway's no-frills roots, offering both Metromiser low-fares and Metroclub/Metroclass business flights. The **Air Florida** acquisition is completed on July 24.

In an effort to curb losses, both routes and frequencies are cut in the nine-state service region. Suspensions include the routes from Chicago (MDW) to Milwaukee, White Plains, and Topeka as well as from Detroit to Washington, D.C. (DCA). Frequencies to five other markets are cut; however, that from National Airport to White Plains is increased. The fleet is further strengthened by the acquisition of three more DC-9-31s and the deletion of one ex-**Air Florida** B-737-2T4A.

Midway Aircraft Engineering Company, a new subsidiary now created to perform contract maintenance and overhaul work, is based at a Miami hangar acquired from **Air Florida**. In the fall, flights begin to Indianapolis and Fort Myers and acquisition of the last of **Air Florida's** assets is concluded on October 15.

A new red on white aircraft livery is adopted when the two services, Midway Express and Midway Metrolink, are combined. A DC-9-31 returns to Detroit (DTT) shortly after takeoff on November 6 when it is beset by violent vibrations apparently caused by a loose or stuck wing flap; no injuries are reported.

In order to promote the company with Chicago-area travel agents, the first annual "Taste of Midway" appreciation dinner and exhibit is held

in December. Passenger boardings for the year increase 48.5% to 2,233,514. Revenues at the twelfth largest national carrier ascend by 21.5% to \$181.18 million. Costs climb 12.3% to \$181.13 million and an operating profit of \$52,000 is generated. The net loss is cut to \$3.6 million.

Airline employment rises 15% in **1986** to 1,687. With emphasis on vacation and leisure travel, the company now serves 22 destinations. Plans are made during the spring to increase Chicago (MDW) feed via an affiliation with the newly founded small regional **Chicago Air**. This "Midway Connection" service begins in May. In the fall, a \$20-million public offering is made to provide the capital for a year of expansions.

During October, fiscal difficulties at **Chicago Air** force **Midstate Airlines**, from which CA is leasing its Fokker F27s, to step in and assume control. When **Chicago Air** stops flying in December, Midstate takes over the "Midway Connection" service.

Customer bookings swell by 22% to 2,719,269 and revenues increase by 35.2% to a record \$261.36 million. Expenses are up 30% to \$250.27 million and allow an operating profit of \$11.08 million. A net \$9.03-million profit is earned, the best economic performance since start-up.

The workforce increases by 45.8% in **1987** to 2,460 as the airline's recovery continues apace. Thrice-daily nonstop B-737-2T4A service is inaugurated in January from Denver to Chicago (MDW). Former "Midway Connection" affiliate **Chicago Air** goes bankrupt in February while in May, Chicago to Omaha service, suspended in 1982, is resumed. The small regional **Fischer Brothers Aviation** is purchased on May 26 for approximately \$2.5 million and reformed at Springfield, Illinois, as **Midway Commuter**, providing service with 6 Dornier 228-201s to 11 midwestern destinations. Henceforth, its traffic totals will usually be reflected within its parent's. Also in June, four-times-per-day DC-9-15 flights commence from Chicago to Des Moines.

In July, Jeffrey Erickson is appointed president/CEO. **Midway Commuter** is given four additional Dorniers during the fourth quarter and in November four-times-per-day DC-9-31 frequencies are initiated from Chicago (MDW) to Columbus. Chicago to Nassau B-737-2T4A flights begin on December 18.

Passenger boardings accelerate 26.2% to 3,432,343 and revenues jump 32.7% to \$346.93 million. Expenses are up 29.1% to \$323.16 million and the operating profit climbs to \$23.77 million. The net \$18.84-million profit is a new record.

Airline employment jumps another 21.8% in **1988** to 2,997. Orders are placed for nine McDonnell Douglas MD-87s and two MD-82s; the first of the former arrives just before year's end. A B-737-2T4A, en route from Tampa to Chicago on February 28, makes an unscheduled landing at Gainesville because of smoke in the cockpit from an electrical problem.

The national now experiences intense competition at Chicago (MDW) and begins to enter several new markets; however, competition and lower earnings will make the new routes unprofitable. The current one-stop service from Chicago (MDW) to Boston via Cleveland is replaced on April 3 with four daily nonstop flights. In May, the company initiates shuttle service to Minneapolis (MSP) from Chicago with an increase from 10 to 12 roundtrips per day.

DC-9-31 frequencies begin in September from Chicago to Sarasota, Jacksonville, and Memphis, with one, two, and three daily roundtrips, respectively, to the three markets. In November, daily B-737-2T4A service is started from Chicago to St. Petersburg.

Customer bookings advance by 25% to 4,690,581 and revenues rise 11.84 million to \$388 million. Costs climb 15.89%, but still only reach \$374.5 million. As a result, the operating profit is \$13.49 million, a \$10-million drop from the previous year. Net income falls by two-thirds to \$6.54 million.

The employee population grows by 13.4% in **1989** to 3,400 and the fleet now includes 5 B-737-2T4As, 3 B-737-2A5As, 9 DC-9-15s, and 19 DC-9-31s. Orders remain outstanding for 6 MD-87s and 2 MD-82s.

At the end of February, the carrier completes installation of GTE Seatback Airfones aboard every aircraft in its fleet. Following a two-

year policy of cautious expansion from the Chicago (MDW) hub, the airline is ready to embark on a more ambitious course. Early in the year, it orders 74 new jets from McDonnell Douglas at a cost of \$2 billion.

A marketing agreement is concluded with **Canadian Airlines International, Ltd.** in March; the arrangement gives the U.S. national access to Canada and CAI routes to 51 more American destinations via Midway's network. The first of three MD-87s to be received this year enters service on May 1 from Chicago to a new Los Angeles-Orange County market with thrice-daily roundtrips. During May, the **Midway Commuter** Dornier 228-201 service to Milwaukee is replaced with five-times-per-weekday DC-9-15 frequencies provided by the parent.

A fourth daily Chicago to Los Angeles roundtrip is started in July. In order to make the company a more attractive connector partner for CAI, Midway introduces first-class service in September. Also in September, Midway purchases a \$210-million package of assets from financially troubled **Eastern Air Lines** that includes gates and facilities at Philadelphia, routes from Philadelphia to Toronto and Montreal, and 16 DC-9-31s. To help cover the acquisition cost, the DC-9s are sold and leased back. At the same time, the carrier adopts a natural metal color scheme.

USAir, the primary operator at Philadelphia, had made a bid that was questioned by the DOT and withdrawn. At Chairman Hinson's direction, Philadelphia now becomes the national's second, eastern hub, the costs of which are all written off during the fourth quarter; the new base is officially opened on November 15, with flights scheduled to Florida. Also in November, daily service begins from Boston to Hartford to Philadelphia and from Philadelphia to Albany.

An additional daily roundtrip is added on December 15 from Philadelphia to Miami, Tampa, and West Palm Beach and thrice-daily roundtrips start from Philadelphia to Rochester. This year's "Taste of Midway," staged for travel agents at the company's Chicago maintenance hangar, is staffed by 400 company volunteers, costs \$150,000, and results in the consumption of 50,000 servings of food, 7 barrels of wine, and 35 barrels of beer.

Two MD-88s are chartered from Polaris Leasing on December 21.

The year's passenger boardings climb 11.5% to 5,230,127. Revenues advance a nice 19.34% to \$463.04 million, but costs increase 27.25% to \$475.57 million, producing an operating loss of \$13.53 million. From a \$6-million-plus net profit the previous year, the company now suffers a net loss of \$21.68 million. Still, at decade's end, Midway and **America West Airlines** stand as the only surviving airlines of any size that were started as a direct result of the Airline Deregulation Act.

Airline employment increases 67.6% in **1990** to 5,700 and the fleet includes 34 DC-9-31s, 5 B-737-2T4As, 3 B-737-2A5As, and 3 B-737-2K9As leased from **Bavaria Fluggesellschaft, GmbH**. Additionally, 9 DC-9-15s, 9 MD-80s, and 8 MD-87s are also flown while 6 MD-87s remain on order.

Six daily DC-9-31 roundtrips begin on January 15 from Philadelphia to Boston and Toronto, with thrice-daily service to Albany, Buffalo, Hartford, and Springfield. At this point, the carrier offers 39 daily Douglas departures from Philadelphia to 13 cities. Early in the year, **Air New Zealand, Ltd.** joins the company's Flyers First frequent flyer program, which now offers a unique award: one hour of flight time in its B-737 simulator.

In May and June, twice-daily roundtrips commence from Savannah, Georgia, to Chicago and Philadelphia, along with thrice-daily nonstop service from Philadelphia to Columbus. One roundtrip flight is added in July between Chicago and Cleveland, Minneapolis (MSP), and Los Angeles. Following Iraq's August 2 invasion of Kuwait and the jump in fuel prices, Midway goes into a financial tailspin. As the carrier continues to add services, the public does not see this downturn. For example, Canadian Pacific Hotels and Resorts join the Flyers First frequent flyer program.

In September, one roundtrip is launched daily from Chicago to Omaha and Phoenix. Five-times-per-day DC-9-31 roundtrips, halted in 1984, are resumed from Chicago to St. Louis on October 1. Also in October, daily roundtrip MD-87 Philadelphia-Las Vegas flights

commence, along with daily Philadelphia to New Orleans DC-9-31 non-stops.

Overexpanded and with too much capacity, Chairman/CEO Hinson's administration begins downsizing. Fourteen slots at New York (LGA) and Washington, D.C. (DCA) are sold to **American Airlines**, also in October, but are leased back for an interim period.

The \$100-million Philadelphia hub is sold to **USAir**, which has wanted it all along, for \$67.5 million as the airline retreats to Chicago. There, in December, in a cash-saving move, payments on all leases and loans are suspended even as daily nonstop roundtrips are begun from Chicago to Louisville.

Customer bookings increase 36.4% to 7,135,906 and revenues ascend 32.78% to \$614.8 million. Unhappily, costs swell 46.74% to \$699.33 million and leave an operating loss of \$84.53 million. The net loss skyrockets to \$139.21 million, a figure that exceeds the operating revenues of the two smallest nationals, **MarkAir** and **Midwest Express**.

Daily roundtrip service begins on January 8, 1991, from Chicago Midway to Hartford and Springfield, Connecticut. Also in January, one nonstop roundtrip per day is added from Chicago to Cleveland, Las Vegas, Orlando, Phoenix, Sarasota, and Tampa, while in February, nonstop flights begin from Philadelphia to Las Vegas, with continuing service to Los Angeles. The Chicago to Omaha frequencies are increased in March from three daily flights to four.

The pressures of expansion combined with the effects of recession, the Gulf War, the steep rise in oil prices, and the expensive Philadelphia hub cause losses to mount and on March 25, the deregulation-born national declares Chapter XI bankruptcy. Shortly afterwards, the carrier secures \$40 million in debtor-in-possession financing from Chicago's Continental Bank. While continuing to downsize, the airline maintains its full, 53-destination schedule.

A DC-9-31 with 100 aboard is forced to make an emergency landing at Nashville on April 22 after losing cabin pressure.

On June 1, service from Chicago to Louisville is upgraded from commuter aircraft to DC-9-31s. On August 7, the Federal District Court in Atlanta converts an antitrust lawsuit against Midway and nine other airlines into a class-action suit that could benefit many consumers and cost the carriers millions of dollars. The antitrust suit charges that this company and the others conspired to keep ticket prices high at 23 hub airports.

On August 29, seven miles from Cleveland, the flight crew of a DC-9-31 has been assigned the wrong radio frequency and is unable to communicate with controllers. Pilots on the DC-9 view a **British Airways, Ltd. (2)** DC-10-30 en route from Toronto to Chicago and out of proper voice communication with controllers, coming at them head-on. The U.S. aircraft is able to take evasive action and save the 277 passengers on both jetliners.

A DC-9-31 comes within 1,000 feet of colliding with a **Southwest Airlines B-737-2H4A** over Chicago (MDW) on October 4.

Later in the fall, merger negotiations are undertaken with **Northwest Airlines**, during which process the Minneapolis-based major acquires 18 gates at Chicago (MDW).

Unable to cover the costs of a takeover, **Northwest Airlines** withdraws from the process and its merger agreement on November 12, forcing Midway to cease operations the next day.

During the 11 months of its final year, the national's enplanements decline 33.6% to 4,322,000, but freight skyrockets 70.3% to 16.2 million FTKs. Although revenues are down 18.8% to \$250.81 million, expenses drop 17.5% to \$282.15 million and guarantee a \$31.33-million operating loss. The net failure deepens to \$37.09 million. The carrier, unable to resume operations, is now liquidated.

MIDWAY AIRLINES (2): 300 West Morgan Street, Suite 1200, Durham, North Carolina 27701, United States; Phone (919) 956-4800; Fax (919) 956-4801; <http://www.midwayair.com>; Code JL; Year Founded 1993. A second Midway Airlines is born at Chicago (MDW) in the fall of 1993 when the owners of **Jet Express** purchase the

name of the failed carrier in order to rename their own. All 150 of the first employees are former **Midway Airlines (1)** workers. Outfitted with the first two leased Fokker 100s from an order for eight, the carrier launches six-times-per-day roundtrip deep discount service over a single route to New York (LGA) on November 15 catering to business travelers.

Among the amenities offered are leather seats, hot towels, and breath mints. A frequent flyer program giving one free roundtrip for every 10,000 miles flown is announced; up to 50,000 miles credit is given for miles earned under the Flyers First program of **Midway Airlines (1)**. By the end of December, a total of 16,000 passengers are carried.

Service is expanded on January 17, 1994 with daily nonstop roundtrips added from Chicago (MDW) to Denver and Philadelphia, as well as such service from New York (LGA) to Denver and from Philadelphia to Denver. In the spring, six more Fokker 100s are chartered and the route network is expanded to Dallas (DFW). Code-sharing discussions are held with **Midway Connector**.

In August, the Chicago-based investment limited partnership Zell and Chilmark Fund spends \$25 million to acquire 90% controlling interest, at which point Jerry Jacobs becomes chairman and John Selvaggio is appointed president/CEO. Both men are former **American Airlines** executives brought up in the Robert Crandall school of management. Arrangements are made with the major for a variety of contract services, including heavy maintenance, reservations, training, and ramp and gate services at New York.

Late in the year, plans are made to open a hub at Raleigh/Durham during the following March and replace the withdrawing **American Airlines**. Arrangements are made with **Chicago Express Airlines** for its transfer as well, allowing it to provide commuter feed when the operation is in full swing during the spring. Orders are placed for two (later three) Airbus Industrie A320-231s from the Japanese leasing concerns ORIX Corporation and Kawasaki, plus additional Fokker 100s.

For the first full year, enplanements total 362,000. Revenues are \$31.51 million and expenses are \$52.92 million. As a result, there is an operating loss of \$21.4 million and a net loss of \$21.67 million.

The fleet in 1995 includes 12 leased Fokker 100s. Twice-daily roundtrips are added on January 15 from Chicago (MDW) to Orlando and Tampa. At the same time, EasyTickets, a 20-pack book of flight coupons, is made available for \$1,900. The coupons are good for a year and can be employed on flights to any of the cities served by Midway.

On March 2, agreement is reached with **American Airlines** on the provision of joint airport slot sharing, advertising, and promotions. Additionally, the two companies link their computerized reservations system and frequent flyer programs. Midway now officially subleases seven Raleigh/Durham gates from AA, which also underwrites Midway's terminal leases and provides Fokker maintenance and pilot training.

On March 2, Midway launches some 22 daily departures to Boston, New York (JFK), Washington, D.C. (DCA), Tampa, Orlando, West Palm Beach, and Chicago (MDW).

Transfer of the company hub to the nearly empty Concourse C at Raleigh/Durham is started on April 8. The first A320-231s are introduced on June 4; they will eventually be found to be too large and be replaced with smaller aircraft.

With **American Airlines** all but withdrawn from its former North Carolina base on June 15, Midway takes over five more gates and inaugurates frequencies to Hartford, MacArthur International Airport in New York, Philadelphia, and Fort Lauderdale.

Corporate headquarters are moved to North Carolina from Chicago between August 3-15. Other destinations visited grow to include Boston, Providence, Newburgh, New York, Newark, Fort Myers, Jacksonville, San Juan, Las Vegas, and Cancún, Mexico. All five A320-231s are in service by December as the carrier now offers 128 daily services from its new southern home.

The shift from Chicago appears successful as enplanements for the year skyrocket 241.4% to 1,235,000. Income slightly exceeds costs and there is a \$71,000 operating gain. There is also a \$116,000 net loss.

The employee population numbers 880 in 1996 and will reach 1,400 by summer. Between February and April, the four A320-231s chartered from ORIX Corporation are returned as an effort is made to increase Fokker 100 utilization. Two of the European-built aircraft are turned over to **America West Airlines** and are flown under contract by Midway crews. The remaining Airbus continues the services to Las Vegas and Cancún; however, flights to Fort Myers, Jacksonville, and San Juan are terminated. Departures from Raleigh/Durham reach 60 per day by July.

Customer bookings surge 37.8% to 1,702,514 and revenues of \$179.01 million are earned. Unhappily, expenses of \$182.04 million are incurred, leaving a \$3.03-million operating loss. The previous year's net loss deepens to \$7.49 million.

The workforce grows by 6.7% in 1997 to 779. North Carolina software company owner James Goodnight heads an investment team that injects \$20 million in new capital into the carrier beginning in February. The infusion allows the carrier to restructure its debt and to begin saving \$12 million per year in various costs, especially interest payments.

World Technology Systems President Kent Elsbree begins to make major decisions even as former **Continental Airlines** CEO Robert R. Ferguson III is named president. The airline continues to also be known as **Jet Express**.

To promote its new daily Fokker 100 service from Raleigh/Durham to Atlanta that begins on September 29, customers flying the route on the inaugural day pay only \$3 for their one-way ticket.

On October 1, a \$207-million order is placed with Bombardier Regional Aircraft for 10 Canadair CRJ-200ERs. Deliveries commence in November and will continue through December 1998.

An initial public offering of 4.2 million shares of common stock is made on December 4. Gross proceeds of \$65 million are raised and will be employed to help pay for the new Canadair regional jets. The value of company stock will climb 17% by April 1.

Passenger boardings for the year fall 4.8% to 1,660,140, while freight plunges 22.8% to 222,000 FTKs. Operating revenues climb 3.4% to \$186.16 million, while expenses total \$171.04 million. The previous year's operating loss is turned into a \$15.11-million operating profit, while the net loss becomes a \$24.89-million net gain.

The first CRJ-200ER, in Midway's yellow and white livery, enters service on January 7, 1998. Flights from Raleigh/Durham to Orlando simultaneously go from three to four (three Fokker 100, one CRJ-200ER), while those from the North Carolina hub to Boston are similarly increased.

Also during the month, the National Mediation Board (NMB) certifies the choice of the company's pilots for representation by ALPA. In February, company flight attendants vote not to join the Association of Flight Attendants (AFA).

With three new Canadairs now available, thrice-daily CRJ-200ER nonstop roundtrips commence on March 23 between Raleigh/Durham and Jacksonville, Florida. The company's thrice-daily roundtrips between Raleigh/Durham and Philadelphia are increased to four times a day, all flown by Canadairs.

With four CRJ-200ERs on hand by April 1, CRJ services are increased from Raleigh/Durham on April 6. The number of daily nonstops grows to four at Fort Lauderdale and Newark and five in Philadelphia.

As the result of the new competition between **USAirways'** Metrojet division and **Southwest Airlines (2)** elsewhere, Midway continues to enjoy a spectacular piece of good fortune—neither of the giant discount operators have as yet eyed a move into the carrier's Research Triangle hub at Raleigh/Durham.

With the arrival of CRJ No. 5, Midway, on June 14, inaugurates a daily roundtrip jet service between Raleigh/Durham and both Charleston and Myrtle Beach, South Carolina. The next day, thrice-daily roundtrips begin from Raleigh/Durham to Columbus, Ohio, and a sixth daily roundtrip is added from the North Carolina hub to Boston.

At the beginning of August, Midway operates 104 daily nonstop flights between 16 destinations in 9 eastern states and its hub at

Raleigh/Durham. On August 26, many of these in the southeast are cancelled or delayed in the face of Hurricane Bonnie. Except for an unusually high number of reservations, service returns to normal the next day.

Two more CRJs arrive in late summer and early fall. On October 1, one of these is employed to initiate thrice-daily nonstop return service between Raleigh/Durham and Indianapolis. The NMB rules on October 30 that the flight attendants February vote to join AFA is invalid due to interference in the process by the airline. A new election is ordered.

Two more CRJs are delivered in October and November and enter service.

A \$64-million order is placed with Bombardier Aerospace on December 8 for three more CRJ-200ERs. The contract represents the conversion of three existing options to firm orders, with deliveries scheduled for December 1999 and February and March 2000.

New jet service is announced on December 16. With the delivery of the 11th CRJ, the carrier will, on February 8, initiate daily nonstop roundtrips from Raleigh/Durham to New Orleans and Columbia, South Carolina. Additionally, it will offer one more jet service daily from the North Carolina hub to Charleston, South Carolina: Hartford, Connecticut, Newark, New Jersey, and Newburgh, New York.

A successful vote by the company's flight attendants to join AFA results in Midway's filing a complaint against the union on December 23 charging it with making false claims during the campaign. The NMB will investigate the charge in the new year.

Simultaneously, the carrier announces that it will launch its Raleigh/Durham to New Orleans roundtrips on February 4, four days earlier than announced, in order to provide lift for travelers wanting to participate in Mardi Gras.

Passenger boardings climb 31.84% to 1,995,117, while freight traffic accelerates 32.24% to 293,000 FTKs. Revenues for the year increase by 13.5% to \$211.43 million and expenses are up 8.3% to \$185.3 million. This happy balance provides a \$26.1-million operating profit, up 73% over 1997. Net gain jumps 79% to \$15.9 million.

At the beginning of 1999, plans are made to retire two Fokker 100s and the A320.

With the delivery of the 11th CRJ, the carrier, as scheduled, initiates daily nonstop roundtrips from Raleigh/Durham to New Orleans and Columbia on February 4. Additionally, it offers one more jet service daily from the North Carolina hub to Charleston, Hartford, Newark, and Newburgh.

The next day, the NMB dismisses the airline management's challenge to the company's flight attendants' election to become members of the AFA.

Late in the third quarter, two of the three Fokker 100s are placed by Cabot Aviation with **Gill Airways, Ltd.** in Newcastle, England.

A follow-on, \$65-million order is placed with Bombardier Aerospace on April 12 for three more CRJ-200ERs.

Midway joins with **UPS (United Parcel Service)** on May 15 to co-host a fund-raising event at Raleigh/Durham on behalf of the 1999 Special Olympics World Summer Games and the North Carolina Special Olympics team. Outside the UPS Cargo terminal, teams of 8 workers from each carrier test their strength in pulling a 30,000-pound CRJ-200ER in a first annual "Plane Pull."

In an event timed to coincide with the Paris Air Show, President/CEO Ferguson announces an order on June 14 for 15 Next Generation B-737-700s, with 10 options. He also notes that two additional B-737-700s will be chartered from GE Capital Aviation Services, with the first scheduled for December delivery.

Thrice-daily nonstop CRJ-200ER roundtrips are inaugurated on August 6 between Raleigh/Durham and Memphis.

Four-times-a-day CRJ200ER roundtrips are inaugurated on August 20 from Raleigh/Durham to Columbus, Jacksonville, and Indianapolis. Thrice-daily CRJ200ER return flights begin on October 15 from Raleigh/Durham to Louisville.

James Goodnight and John Sall, already owners of 47.4% of the company's stock, offer to purchase the carrier outright in November for \$8 a

share or \$36 million. The arrangement, which would see Midway merged into a company owned by Goodnight and Sall, is contingent upon the board's retaining former **Continental Airlines** CEO Robert Ferguson as CEO.

A chartered Next Generation B-737-76N is delivered by GECAS on December 14 as the first in an eventual nine-plane order. During the month, the investment banking firm of Morgan Stanley Dean Winter is appointed to evaluate the Goodnight-Sall merger proposal.

Passenger boardings this year rise 3.4% to 2,063,000. Revenues are up 3.1% to \$217.94 million, while expenses jump 8.6% to \$201.23 million. The operating profit falls to \$16.71 million, while the net gain is down to \$9.35 million.

Airline employment at the beginning of 2000 stands at 1,303, a 40.9% increase over the previous 12 months. The second Next Generation B-737-76N is turned over to the company on January 19. Having failed to come to terms with the Midway board over the value of stock not owned, stakeholders Goodnight and Sall withdraw their unsolicited takeover bid as the month ends.

The two new Next Generation B-737-76Ns enter service on February 10 from Raleigh/Durham to Fort Lauderdale and Orlando. In late February, Steven Westberg is elevated to executive vice president/general manager.

The company announces on March 10 that it is exercising an option to terminate the leases on four Fokker 100s during the first half of 2001 rather than in the winter of 2003–2004 as originally scheduled. The next day, the company and its ALPA-represented pilots reach tentative agreement on a new four-year contract, effective April 1 upon ratification. Pay raises and work rule changes are included in the new pact.

Thrice-daily nonstop Fokker 100 return service is inaugurated on May 22 from Raleigh to Buffalo.

With the decision taken to privatize the 99.37% of shares held by the Central Bank in MEA, the International Finance Corporation (IFC), the executive arm of the World Bank, is retained on July 17 to act as lead advisor in the divestment. An exact timetable is not provided at this time, as the first goal will be to locate a strategic partner.

Arrangements are completed on July 21 for the lease of three Next Generation B-737-7BXs; the first will arrive in November, with the other two coming in October and November 2001. Midway grosses \$34 million from a shareholders' rights offering that expires on July 26. The airline is to issue 6.6 million shares, raising the number of these outstanding and issued stock certificates to 15.2 million.

On August 8, new daily CRJ200ER roundtrips are initiated from Raleigh/Durham to Norfolk. These supplement four daily flights offered by partner **Corporate Airlines**. Three additional daily roundtrips, for a total of nine, are added on August 31 between Raleigh/Durham and New York (LGA).

To celebrate the success of the route, a special \$9 one-way fare is offered over it on Labor Day, September 4. The third Next Generation B-737, a Dash-7BX, is delivered on November 29.

It is confirmed on October 12 that two more Next Generation B-737-7BXs will be leased, arriving in January and June 2001. At the same time, it is noted that the Fokker 100s will be gone by 2002 and that Midway will not purchase its 14 remaining options for CRJ200ERs. Another Next Generation B-737-7BX is received on October 19.

Twice-daily Next Generation B-737-7BX return frequencies are launched on November 7 between Raleigh/Durham and San Jose, California, using the fourth new NGB-737-7BX. Two more Next Generation B-737-7BXs are now received, one each on November 21 and November 29.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights.

On December 4, the FAA holds an action to distribute the available takeoff and landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. Midway receives 15 of the new positions.

Daily roundtrip service is inaugurated on December 15 between Raleigh/Durham and Pittsburgh. It is operated by the carrier's sixth new Next Generation B-737-7BX.

Four-times-a-day CRJ200ER roundtrips are inaugurated on December 14 between Raleigh/Durham and Pittsburgh. All of the proceeds from the first flight are donated to Toys for Tots, along with a number of unwrapped new toys donated by invited passengers. Twice-weekly Next Generation B-737-7BX seasonal service, continuing through March 31, is started on December 19 from Raleigh/Durham to Steamboat Springs, Colorado.

Following two days of intensive negotiations under auspices of the National Mediation Board, a tentative agreement is reached on December 22 between the company and the International Association of Machinists and Aerospace Workers.

MIDWAY COMMUTER: United States (1987–1992). The small regional **Fischer Brothers Aviation**, based at Galion, Ohio, is purchased by the Chicago-based national carrier **Midway Airlines (1)** on May 26, 1987 for approximately \$2.5 million and is reformed at Springfield, Illinois, as Midway Commuter, outfitted with 6 Dornier 228-201s. Several weeks later, on June 15, the company begins operations and joins with **Chicago Airlines** and **Iowa Airways** to form the "Midway Connection" feeder agreement.

In July, services are launched to Chicago (MDW) from Grand Rapids, Traverse City, Green Bay, Madison, Peoria, and Springfield. Five-times-per-day Dornier frequencies commence in October from Chicago to Bloomington, Illinois.

Enplanements for the partial year of service total 85,000.

During 1988, President Richard Pfennig's carrier takes delivery of 10 more Dornier 228s and Dash-202s. "Midway Connection" flights are started to Lansing and Fort Wayne five times daily in May, while in October nonstop daily service is initiated to Lafayette, Indiana.

The ex-Buckeye airline transports 433,000 passengers on the year.

The fleet grows to 21 Dorniers in 1989 as a \$240-million order is placed with the turboprops' manufacturer for 33 Dornier 328s, plus 40 options. To meet capacity requirements until the American launch customer's aircraft can be built, Dornier agrees to provide 15 Embraer EMB-120 Brasílias under lease.

A total of 548,962 passengers are flown on the year.

The first Dornier-supplied Brasília enters service with the 501-employee regional in May 1990. In November, one roundtrip flight is added from Chicago to Green Bay, Madison, Moline, and Springfield and two from Chicago to Milwaukee.

Passenger boardings for the year rise 18.2% to 649,067.

EMB-120 service is launched in January 1991 from Chicago to Toledo's Express Airport. Five-times-per-day nonstop Brasília frequencies are initiated in February from Chicago to Louisville. During the spring, the **Midway Airlines (1)** parent files for Chapter XI bankruptcy. Still, as it works to emerge, its 128-employee subsidiary maintains a full schedule until November 13 when, together with the larger carrier, it ceases operations. Prior to shutdown, the former Buckeye commuter transports 538,554 passengers, a decline of 17.1% from the previous year.

Hopes are raised for the creation of a separate airline at the beginning of 1992, but when President Dick Pfennig has his company's assets separated from parent **Midway Airlines (1)** by a bankruptcy court, they are not realized. The company is liquidated in April under Chapter VII of the federal bankruptcy law. President Pfennig moves on to become president of **Jetstream International Airlines** and the outstanding orders to Dornier are cancelled.

MIDWAY CONNECTION: United States (1993–1994). In the fall of 1993, Will Davis's Gary, Indiana-based **Direct Air**, which is providing

MarkAir Direct feeder service on behalf of Anchorage-based **MarkAir**, is acquired by the Chicago investment consortium, Midway Connection Group, created by Northern Star Companies of Lansing, Michigan. An order is placed for 14 Fairchild Metro 23s with which to replace Direct Air's fleet of Beech 1900s and CATPASS 1300s.

Renamed and with a fleet upgraded to include 2 Beech 1900s and 5 CATPASS 1300s, MC undertakes services from Chicago (MDW) on November 1. The first Metro 23 arrives later in the month.

Under both its Direct Air and Midway monikers, the small regional transports a total of 50,000 passengers on the year.

Early in 1994, code-sharing discussions are initiated with **Midway Airlines (2)**. They lead nowhere and MC shuts down. The MC moniker will later be assumed by **Great Lakes Aviation**.

MIDWAY EXPRESS. See **AIR FLORIDA; GREAT LAKES AVIATION; MIDWAY AIRLINES (1)**

MIDWEST AIR CHARTER: Davies County Airport, RR 3, Sugarland Road, Washington, Indiana 47501, United States; Phone (812) 254-2678; Fax (812) 254-2645; Year Founded 1996. Midwest is established by Ben Markley at Washington, Indiana, in 1996 to provide nonscheduled passenger and cargo charters. Revenue flights begin and continue with a single Swearingen Metro.

MIDWEST AIRLINES, S.A.E.: Cairo International Airport, Cairo, Egypt; Year Founded 1999. MA is established by the Lakah Group at Cairo in April 1999 to offer passenger charters throughout the Mideast, Africa, and Europe.

With white fuselages, blue billboard titles, and red tails and nacelles sporting gold fleur-de-leis, two ex-**Air Afrique, S.A. (2) (Societe Aeriennne Africane Multinationale, S.A.)** Airbus Industrie A310-304s are leased from Credit Lyonnais and begin revenue services in late May.

Flights continue in 2000. On May 9, firm orders are placed for a pair of Airbus A320-200s, with options taken on two others. Deliveries are scheduled to begin in 2002.

MIDWEST AIRWAYS (1): United States (1928–1929). MA-1 is formed at Waterloo, Iowa, in the fall of 1928 to offer scheduled passenger service to Des Moines. Two Ryan B-1 Broughams are acquired and revenue flights commence on November 12. Services cease following the stock market crash in October 1929.

MIDWEST AIRWAYS (2): United States (1953–1965). MA-2 is established by Edward "Eddie" Lunken at Cincinnati in 1953 to operate scheduled air taxi flights from his Lunken Field airport at Cincinnati. Employing a Lockheed Model 10 Electra, Lunken offers daily revenue flights to Columbus, Cleveland, and Detroit, as well as Traverse City, Charlevoix, and Harbor Spring.

Operations cease 22 years later in 1965.

MIDWEST AIRWAYS (3): United States (1969–1973). The third Midwest Airways is set up at Milwaukee in 1969 to provide daily scheduled passenger and cargo roundtrips to local destinations, plus Chicago. Beech 18 and Cessna 411 services are duly inaugurated, but cannot be maintained beyond 1973.

MIDWEST AVIATION (1): United States (1966–1980). The first Midwest Aviation is established at Jamesville, Wisconsin, in the first week of January 1966 to provide scheduled passenger and air cargo flights to Chicago. Operations commence with a Beech 18 on January 19. Low-key service continues apace for the next 13 years; the principal business becomes the delivery of Federal Reserve checks.

The only event to attract media attention during these years is tragic. On October 4, 1973, pilot John Fair is killed while landing his Beech 18 at Chicago's Meigs Field.

Following passage of the Airline Deregulation Act in 1978, Midwest enters into a contract with **Airborne Freight Corporation** to deliver the freight forwarder's small packages and time sensitive shipments to midwestern and eastern destinations. The following year, the carrier begins additional service to the West Coast under its new name of **Midwest Charter Express**.

In April 1980, Midwest is purchased by Airborne, which changes the acquisition's name to **Airborne Express** and begins to purchase additional aircraft with which to upgrade its fleet.

MIDWEST AVIATION (2): Ryan Field, Marshall Municipal Airport, Marshall, Minnesota 56258, United States; Phone (507) 532-3164; Fax (507) 532-5881; Year Founded 1962. Ray Johnson founds MA-2 as the FBO at Marshall, Minnesota, in 1962. The concern also offers on-demand charter flights as well as scheduled passenger service linking the company's base with Minneapolis (MSP). Operations are undertaken with Piper PA-23 Aztecs and continue without significant change for 13 years.

In January 1976, the company is merged with New Ulm, Minnesota-based **Air New Ulm** to operate as **Lake State Airlines**. Employing Piper PA-31-310 Navajos, the joint operator provides services to all previously visited points, as well as Dubuque and Sioux Falls in Iowa.

Following the collapse of the LSA union in October 1981, Midwest is able to emerge from the wreckage and resume independent operations, which will continue throughout the remainder of the decade and into the next.

In 1993–1994, President Johnson oversees a workforce of 12. His route network from Marshall to Minneapolis, Dubuque, and Sioux Falls is maintained with 2 Piper PA-31-350 Navajo Chieftains and the Piper Aztec. Flights continue in 1995–2000, during which years an additional Chieftain and a PA-32R Saratoga SP are also placed into service.

MIDWEST CHARTER EXPRESS. See **MIDWEST AVIATION (1)**

MIDWEST COMMUTER AIRLINES: United States (1967–1974). MCA is established at Indianapolis in late spring 1967 to offer scheduled passenger and cargo services to Chicago's Meigs Field via South Bend. Employing one each Piper PA-31-310 Navajo and Beech 99, the new commuter inaugurates daily roundtrips on June 20.

Operations continue apace during the remainder of the decade and into the next. Unable to maintain viability in a time of recession and huge fuel costs, Midwest is forced to shut its doors in late 1974. Its assets will be purchased by **Skystream Airlines** the following May.

MIDWEST EXPRESS AIRLINES (MIDEX): 6744 South Howell Ave., Oak Creek, Wisconsin 53154, United States; Phone (414) 570-4000; Fax (414) 570-0199; <http://www.midwest-express.com>; Code YX; Year Founded 1984. This subsidiary of K-C Aviation, itself a subsidiary of Kimberly-Clark, Inc., is organized in 1981 at Appleton, Wisconsin, near company headquarters, to serve as a corporate carrier. Timothy Hoeksema, president of K-C since 1977, is named president/CEO of the airline as well. Employing a Hawker Siddeley HS 125, shuttle flights are inaugurated to Fulton County Airport, Atlanta.

The British-built corporate jetliner is replaced by a \$2.7 million Douglas DC-9-14 in April 1983. Four-times-per-week direct Appleton–Atlanta flights now alternate with thrice-weekly service via Memphis. An application is filed with the CAB for the inauguration of public scheduled services and the petition is granted in November. Meanwhile, a separate shuttle service is opened to Chicago (ORD) with a Convair CV-580.

A total of 14,700 shuttle passengers are flown on the year.

The nonunion workforce in 1984 totals 100 and the fleet includes 1 DC-9-14 and 2 CV-580s. The Chicago operation ends in early spring and the Convairs are withdrawn. Two more DC-9-14s are purchased for \$3.3 and 3.5 million, respectively, in March and April. A roundtrip proving flight is made on April 29 from Milwaukee to Boston.

Revenue operations are inaugurated on June 11 and scheduled service is provided on routes to Wisconsin, Illinois, Massachusetts, Texas, and New York. The parent advances the new entrant a line of credit as well as spare parts and operating funds—it even markets the schedule on the sides of its tissue boxes.

Enplanements for the year total 23,000 and start-up costs bring losses of \$2.1 million (operating) and \$1.1 million (net) on revenues of \$5 million.

During its initial climb away from Milwaukee on September 6, 1985 on a service to Atlanta, Flight 105, a DC-9-14 with 4 crew and 27 passengers, suffers an uncontained engine failure. The aircraft continues to climb to 700 ft., then rolls over to the right and plunges into a nearby woods, bursting into flame; there are no survivors. Peter Garrison reviews the accident in his "Crew Miscue," (*Flying* 104 (August 1987): 22+).

Despite the adverse publicity surrounding the tragedy, passenger boardings overall for the year skyrocket an almost unbelievable 309% to 95,000. Revenues ascend 150.8% to \$15.9 million, but despite an operating loss of \$3.5 million, there is a net gain of \$1.8 million.

The 210-employee small regional enjoys another fine year in 1986. Winter season charters are undertaken from Wisconsin to Florida. Customer bookings skyrocket another 96% to 184,515 and the fleet becomes all-jet, growing to 5 DC-9-14s.

Airline employment is increased by 44.6% in 1987 to 295 as 2 more DC-9-14s join the fleet. Seasonal scheduled service is begun in December linking Milwaukee with Tampa and Fort Lauderdale.

Passenger boardings increase 55.2% to 286,437 and freight is up by 12.5% to 584,051 FTKs. Revenues total \$44.2 million and low costs allow an operating profit of \$5.28 million and net gain of \$3.2 million.

The workforce grows another 62.7% in 1988 to 480 and the fleet now includes 6 DC-9-14s, 2 DC-9-15s, and 3 DC-9-32s. Orders are placed for 2 McDonnell Douglas MD-88s.

In June, as part of a five-year, \$120 million expansion of service, the company launches thrice-daily nonstop Milwaukee to Detroit roundtrip service and the only nonstop frequencies between Milwaukee, Philadelphia, and Newark. In addition, the number of flights from Milwaukee to Atlanta and Dallas (DFW) is increased.

Operations continue apace during the summer and fall. In December, twice-daily nonstops are initiated from Milwaukee to Denver via Grand Rapids, while frequencies from the Wisconsin hub to Newark and Philadelphia become twice daily. Seasonal service to Tampa and Fort Lauderdale is resumed.

During the year, a 60,000-sq.-ft., state-of-the-art aircraft maintenance facility is opened at Milwaukee. Largely unnoticed during the year is the appointment of Tanya Cunningham to the right seat of a DC-9-32; she is the company's first female pilot.

Customer bookings swell again, up by 40.4% to 402,084. Cargo ascends 31% to 1.72 million FTKs. Revenues zoom upward by 38.9% to \$61.36 million, expenses rise 42.9% to \$55.62 million, and the operating profit is \$5.74 million. Net profit increases to \$3.76 million.

Employment continues to rise in 1989, climbing 53.3% to 736. The carrier begins operations from Grand Rapids in January, with direct DC-9-32 flights from Milwaukee to Denver. During the first quarter, an agreement is negotiated with Farmington, New Mexico-based **Mesa Airlines** for a code-sharing relationship.

Twice-daily roundtrip DC-9-32 flights commence on April 2 from Grand Rapids to Newark. In accordance with the terms of the commuter deal, Mesa's new subsidiary, **Skyway Airlines**, paints three Beech 1900s in Midwest Express Connection colors. Services are inaugurated on behalf of the Wisconsin-based large regional on April 17 from Milwaukee to destinations in 4 states; the routes will be profitable within 90 days.

An interline marketing agreement is signed with **Flugfölag Islands, H.F. (2)/Icelandair** in July that offers discount fares to Midwest passengers connecting to the island-based airline for travel to Iceland and Luxembourg. Originally intended for **Wardair Canada, Ltd.**, two Mc-

Donnell Douglas MD-88s are leased from Polaris in November and December.

Overall passenger boardings accelerate 53.1% to 615,404 and freight climbs 22.1% to 2,110,000 pounds. Revenues shoot up 49.7% to \$91.87 million, costs move ahead by 51.7% to \$84.39 million, and operating income grows to \$7.47 million. Net profit improves to \$4.81 million.

Airline employment grows to 950 in 1990 and the two MD-88s enter service in January. Daily nonstop and roundtrip service is begun in February between Milwaukee and Los Angeles and San Francisco, along with direct service to San Diego. A third nonstop Milwaukee-Newark service is started in October, along with a third weekday nonstop from Milwaukee to Philadelphia and a second from Milwaukee to Los Angeles.

During the company's final year as a large regional, it enjoys a 23% boost in customer bookings to 754,032. Revenues advance 36.96% to \$125.82 million, expenses rise 43.07% to \$120.75 million, and operating income slips to \$5.07 million. The net profit is cut in half to \$2.96 million.

The workforce is reduced by 10.5% in 1991 to 850 and the fleet remains the same. In January, the carrier is reclassified to national status by the DOT.

Passenger boardings inch upward by 2.6% to 789,000 and freight skyrockets 64.3% to 5.83 million FTKs. Revenues dip 0.45% to \$125.26 million and expenses jump 3.27% to \$124.69 million. Operating income plunges to \$567,847 and net slides to \$102,832.

Company employment is increased by 19.1% in 1992 to 1,093 and the fleet includes 6 DC-9-14s, 2 DC-9-15s, 6 DC-9-32s, and 2 MD-88s. Frequencies are increased on routes to New York and Denver and seasonal services are added to Miami and Fort Myers. It will be reported that the publicity-shy company earns half a million dollars during the summer fare wars, and does not lower ticket prices to make the gain.

Executives from new entrant **Kiwi International Air Lines**, based at Newark, seek counsel prior to start-up.

Customer bookings bounce upward by 5.2% to 808,025 while revenues ascend 6.9% to \$133.9 million. Costs move up only 3.2% to \$129.85 million, leaving operating income to increase up to \$4.09 million. Net gain surges to \$2.01 million and Midwest is one of the year's only two profitable domestic carriers.

In 1993, President Hoeksema oversees a workforce of 1,092, a 0.6% increase, while the fleet grows by 3 DC-9-32s. Twice-daily DC-9-14 service is inaugurated between Milwaukee and Cleveland and Columbus during the spring, supplemented by daily **Skyway Airlines** turbo-prop flights.

Destinations now served from the company hub include Appleton, Atlanta, Boston, Dallas (DFW), Denver, Fort Lauderdale (seasonal), Fort Myers (seasonal), Grand Rapids, Kansas City, Los Angeles, Madison, Miami (seasonal), New York, Philadelphia, San Diego, San Francisco, Tampa (seasonal), and Washington, D.C. Later in the year, a new market is entered at Las Vegas.

The code-sharing alliance with **Mesa Airlines** is terminated by the Texas-based megaregional.

Passenger boardings shoot up by 18% to 952,490 and freight rises 3.9% to 7.22 million FTKs. Revenues accelerate 23.2% to \$165.05 million, expenses ascend only 14.9% to \$149.15 million, and the operating profit nearly quadruples to \$15.89 million. Net gain reaches \$8.67 million.

Airline employment is increased by 23.9% in 1994 to 1,334. **Skyway Airlines** assumes the routes formerly operated by **Mesa Airlines** and begins flying as the Midwest Express Connection on February 7 with a fleet of 13 Beech 1900Ds.

Three additional DC-9-31s are acquired from the German airline **Aero Lloyd Flugreisen, GmbH & Co.**; repainted as the first aircraft to introduce the company's new color scheme, they enter service during the spring.

In May, a small "focal point" operating base and hub is opened at Omaha, where 100 employees will be stationed, new planes will be maintained, and from which nonstop flights to Los Angeles, Las Vegas,

San Diego, Milwaukee, Newark, and Washington, D.C. (DCA) will be initiated.

It is announced in September that, for the second year in a row, the airline will provide full-season charter service for the Indiana Pacers of the National Basketball Association (NBA). The year's one-millionth passenger boarding occurs on December 3.

Customer bookings shoot up 22.6% to 1,317,130 while cargo jumps 19.1% to 8.61 million. Revenues swell 11.8% to \$184.49 million and expenses surge 17.8% to \$175.75 million. Pretax profit slides to \$6.73 million while the net profit dips to \$5.81 million.

The workforce stands at 1,411 in 1995, a 7% increase. The new Omaha hub is declared profitable at the end of March. The **Continental Airlines** CALite division pulls out of Milwaukee, leaving the carrier as the dominant airline in the Wisconsin market.

The company completes an initial public stock offering on September 22, with Kimberly-Clark retaining a 20% stake. The initial public offering distributes 4.5 million shares of common stock to the public. Thereafter, company shares are traded on the New York Stock Exchange under the ticker symbol MEH.

Enplanements swell 20% to 1,400,618 and operating revenues jump 27.3% to \$259.15 million. Costs accelerate only 18.4% to \$227.78 million and allow profits to triple; operating gain reaches \$31.37 million and a \$19.12-million net profit is posted.

The employee population is increased 12.8% in 1996 to 1,624 and 2DC-9s enter service during the spring. On March 26, the Hilton Hotels frequent flyer program, the only loyalty plan that allows travelers to exchange hotel points for airline miles and vice versa, adds the company to its roster of airline exchange partners.

Weekday nonstop service begins on May 1 between Las Vegas and Madison, Wisconsin; westbound flights originate in Milwaukee. That evening, nonstop moonlight flights commence between Los Angeles and Milwaukee. Passengers receive free champagne and snacks, plus amenities such as blankets and hot towels.

Former parent Kimberly-Clark divests itself of its final 20% interest (1.16 million shares) on May 8. For the second year in a row, readers of *Conde Nast Traveler* magazine rate the company the No. 1 U.S. airline.

Passenger boardings accelerate 6.3% to 1,489,057 and cargo climbs 3.9% as 7,000 FTKs are operated. Revenues for Midwest Express Holdings, which also includes **Skyway Airlines**, jump 17.6% to \$304.74 million. Expenses grow 18.7% to \$270.38 million. Both bottom line figures swell as an operating profit of \$34.35 million is reported, along with net gain of \$21.75 million.

The employee population jumps 17.4% in 1997 to 1,889. Markets served include Appleton, Atlanta, Boston, Dallas (DFW), Detroit, Fort Lauderdale, Grand Rapids, Indianapolis, Lansing, Los Angeles, Madison, Milwaukee, Minneapolis (MSP), New York, Philadelphia, Phoenix, San Francisco, Tampa, and Washington, D.C.

In January, the company receives the annual "Passenger Service Award" for 1996 from *Air Transport World* magazine. Three more aircraft join the fleet this year. Year-round frequencies are initiated between Milwaukee and Orlando during the spring.

On May 1, twice-daily nonstop roundtrips commence between Kansas City and New York (LGA). In addition to the nonstop service, the carrier will continue to offer three direct flights from Kansas City to New York (LGA) on weekdays.

Simultaneously, the company upgrades its current twice-daily connecting service from Kansas City to Toronto via Milwaukee through the addition of two nonstops from Kansas City to the Canadian metropolis.

A letter of intent is signed with **Japan Air System, Ltd.** in October via Dolphin Trade & Finance, Ltd. for the purchase of eight MD-81s. Deliveries to Midwest will begin in December and continue through 1999.

In November, the company announces plans to build a 70,000-sq.-ft. hangar in order to double its hangar space.

Electronic ticketing is introduced before the end of the year and a 32,000-sq.-ft. addition to the Midwest Express Maintenance Center at Milwaukee Airport is completed for a total of 92,320-sq.-ft.

Passenger boardings rise 10.8% to 1,649,885 while freight rises 3% to 9.25 million FTKs. Operating revenues at Midwest Express Holdings jump 14.5% to \$309.91 million, while expenses rise 13.7% to \$272.11 million. The operating profit climbs to \$37.79 million, while the net gain reaches \$24.22 million.

The workforce in 1998 is increased to 2,133. On February 5, a major code-sharing agreement is entered into with AMR Eagle, whose four operating companies will be merged into one **American Eagle Airlines** in May-July. The agreement will come into effect at midyear at Los Angeles and Dallas (DFW). Company passengers at Los Angeles will be able to connect with Eagle flights to Bakersfield, Carlsbad, Fresno, Monterey, Palm Springs, San Diego, San Luis Obispo, and Santa Barbara. From Dallas (DFW), connections will be available to 32 more communities in the south and southwest.

Robert S. Bahlman becomes senior vice president/chief financial officer/treasurer on March 5, the same day Carol Shomicka becomes senior vice president-corporate development.

Services from Milwaukee to Chicago (MDW) end on March 31.

By spring, five more MD-81s have been delivered. As a result, beginning on April 20, the carrier improves its service between Milwaukee and Los Angeles, offering twice-daily nonstop service on weekdays and Sundays and daily on Saturdays. The change eliminates stops in San Diego on the morning flight and at Las Vegas on the night flight.

To replace the current Milwaukee to Las Vegas service, which is nonstop in one direction and one-stop in the other, Midwest simultaneously drops San Diego from its schedule while launching six-times-a-week nonstops between the Wisconsin and Nevada cities.

Also on April 20, seasonal one-stop daily roundtrips are resumed between Milwaukee and San Francisco.

New six-times-a-day DC-9-32 roundtrips are inaugurated on May 4 between Milwaukee and Hartford, Connecticut; four are nonstop and two have one stop in Philadelphia. Simultaneously, the number of daily flights between Milwaukee and Philadelphia is increased from seven to eight.

Midwest Express Holdings Chairman Hoeksema announces on July 8 that it will become U.S. launch customer for the Fairchild Dornier 328JET, a new regional jet configuration of the aircraft manufacturer's 328 turboprop. Five firm orders are placed for the aircraft, with an option to purchase 10 more; the first machines will be delivered to **Skyway Airlines** beginning in March 1999.

Four-times-weekday DC-9-32 return service is introduced on August 2 between Milwaukee and Raleigh/Durham. The next day, daily frequencies between Milwaukee and Toronto are increased from 8 to 10. Sporting a new interior design, the first of eight MD-81/82/88s (an MD-82) is delivered during the month; two more will follow in the fall.

Company management and representatives of the local ALPA chapter sit down during August to negotiate their first contract; progress will be slow.

On September 13, four-times-weekday DC-9-32 roundtrips begin from Kansas City to Raleigh/Durham.

Nonstop weekend roundtrip DC-9-32 flights commence on December 5 between Omaha and Orlando. Midwest Express becomes the only airline to offer nonstop service in the Omaha-Orlando market.

The popular winter seasonal service to Phoenix becomes year-round on December 1 as Midwest initiates twice-daily roundtrips from Milwaukee employing one of the new MD-82s. The same day, two other MD-80s replace the smaller DC-9s and allow greater capacity on the existing routes to New York (LGA) and Washington, D.C. (DCA).

On December 19, seasonal service (through April 19) is launched from Milwaukee to Fort Lauderdale, Fort Myers, and Tampa.

Customer bookings accelerate 13.19% on the year to 1,871,227, but cargo traffic drops 14.64% to 7.55 million FTKs. Revenues advance 12.9% to \$388.87 million and with operating expenses up 8.9% to \$333.21 million, there is a \$55.65-million operating profit. Net gain climbs to \$35.86 million.

Airline employment is increased 12.9% to 2,133 by the beginning of 1999. While descending toward Philadelphia on a January 15 service

from Milwaukee, Flight 150, a DC-9-32 with 5 crew and 55 passengers, encounters turbulence over Lancaster, Pennsylvania; one flight attendant receives serious ankle injuries.

After six months of discussions, company pilots, disappointed with the offers made so far by management, request on February 11 that a federal mediator be assigned to facilitate additional incentive to the stalled talks.

Seasonal Milwaukee to San Francisco weekday roundtrips begin on April 19, with a new Saturday service added as of April 24. Electronic ticketing begins on April 29 for those U.S. travel agencies equipped with the Amadeus reservations system. The same day, it is announced that the company's flight attendants have voted to join AFA.

During the month, Christopher D. White becomes vice president-safety and regulatory compliance while Michael W. Mooney becomes vice president-planning and pricing.

Per a March 1 announcement, the company undertakes a major expansion of services on May 10. New DC-9-32 roundtrips are offered from Milwaukee to San Antonio via Kansas City four times a day.

The DC-9 becomes available when a larger MD-80 upgrades the current four-times-a-day nonstops between Kansas City and New York (LGA).

In addition, a third weekday roundtrip is started between Milwaukee and Toronto and two nonstops are launched from Kansas City to Milwaukee. The one-stop service between Milwaukee and Hartford is upgraded to a nonstop.

On June 1, a third weekday roundtrip is initiated between Milwaukee and Denver to help meet summer travel demand. Due to a pilot shortage, Midwest Express announces on June 30 that it will cancel 28 of its weekly 950 flights (about 3% of its schedule) in August, September, and October.

While backing his truck into position at Milwaukee on July 2, the driver of a lavatory truck accidentally depresses his accelerator instead of his brake and rams into a DC-9-32 being serviced, causing significant damage. No injuries are reported to the driver or the nine people aboard the Douglas.

It is announced on August 3 that the airline is acquiring four MD-80s from SAS (Scandinavian Airlines System) in a deal to be concluded between September 2000 and November 2001. The first aircraft should be delivered within a year.

Four-times-a-day roundtrip service is inaugurated on September 1 between Milwaukee and Washington, D.C. (DCA). Three of the frequencies will include a stop at Kansas City.

On December 11, Midwest offers to take over and expand the New York route of Iowa-based AccessAir, which has just declared bankruptcy. Seasonal return service is resumed on December 18 from Milwaukee to Fort Lauderdale, Fort Myers, and Tampa.

Customer bookings this year jump 17.2% to 2,192,000, while cargo climbs 21.2% to 9.15 million FTKs. Revenues advance 15.6% to \$406.12 million, while expenses are up 16.2% to \$347.28 million. The operating profit totals \$58.84 million.

Airline employment at the beginning of 2000 stands at 2,648, a 38.6% increase over the previous 12 months. The fleet now includes 2 DC-9-15s, 6 DC-9-14s, and 16 DC-9-32s.

Service between Kansas City and Raleigh/Durham is discontinued on January 3. Four new DC-9-32s roundtrips are started on February 7 from Kansas City to Washington, D.C. (IAD); two are operated daily except Saturdays and two on weekdays only. Just in case its pilots strike over the weekend, the company, on February 11, takes the precaution of cancelling 15 flights scheduled for late Friday and early Saturday.

The company, via Senator Tom Harkin, comes forward on February 18 and offers to start flying to New York on June 1 if AccessAir is no longer viable.

Company flyers do not engage in a job action; instead, they overwhelmingly ratify, in March, the first collective bargaining agreement between the airline and the Air Line Pilots Association.

The code-sharing agreement between the American Eagle subsidiary Business Express (BEX) and Midwest is deepened in May. Under terms

of the enhanced arrangement, the Milwaukee-based carrier will share its designator on 15 Eagle flights from Boston to cities in the Northeast, Virginia, and Canada beginning during the year's third quarter.

On June 15, Midwest begins twice-daily Des Moines–New York (LGA) via Indianapolis return flights.

Midwest is named fifth best-managed company among non-state-owned national-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

Four-times-daily Business Express (BEX) ERJ-135 roundtrips, code-shared with Midwest, begin on July 17 from Boston to Toronto. Four-times-daily ERJ-135 roundtrips, code-shared with and flown by Business Express (BEX), begin on July 17 from Boston to Toronto.

On September 8, the company announces that it will open a new hub at Kansas City. Not only will new regional services be offered by affiliated Skyway Airlines, but new nonstop main line flights will be offered as well, beginning as early as October 29.

While backing out after pushing back from the terminal at New York (LGA) on September 15, a ProAir Boeing 737-400 impacts a parked Midwest Express MD-80. The tails of both aircraft are damaged forcing both companies to cancel flights.

On October 1, twice-daily roundtrips are inaugurated from Indianapolis to Boston. The new Kansas City hub opens on October 29; Midwest and Skyway between them offer 22 daily departures from their No. 3 base to 11 destinations.

Midwest, on November 2, signs a letter of intent with Air Midwest. Under its terms, the Milwaukee-based airline will enter a code-sharing agreement with the Mesa Air Group "USAirways Express" subsidiary that will provide passengers with connecting service between Kansas City and 14 Midwest communities beginning during the first quarter of 2001.

It is announced on November 29 that the company will terminate service to Indianapolis on January 6.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights.

On December 4, the FAA holds an action to distribute the available takeoff and landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. Midwest receives eight of the new positions.

On December 15, Midwest Express announces that it will launch thrice-weekday roundtrips between Kansas City and Atlanta beginning on March 5. Daily winter seasonal return service, offered through April 22, begins on December 16 from Milwaukee to Fort Lauderdale, Fort Myers, and Tampa.

Although revenues for the year climb 7.3% to \$480 million, costs surge 22.3% to \$473.1 million. The operating gain plunges 88.7% to \$6.9 million, while only a tiny \$514,000 net profit is realized.

MIDWEST EXPRESS CONNECTION. See AIR MIDWEST; SKYWAYS AIRLINES

MILAIR (PTY.), LTD.: Australia (1991–1992). Peter Miller forms Milair at Main Beach, Gold Coast, Queensland, in 1991 to offer passenger and cargo flights employing 1 Beech 58 Baron, 2 Cessna 310s, 1 Cessna 402, and 1 Piper PA-31-350 Navajo Chieftain. Operations cease within a year.

MILLARDAIR, LTD.: Canada (1954–1998). Trans Canada Air Lines, Ltd. pilot Carl Millard establishes his own FBO, Carl Millard, Ltd., at Mississauga, Ontario, in 1954. With the help of his son, Wayne, Millard transfers his base to Toronto's large airport in 1963 and changes the name of his concern to Millardair. Carl begins the transport of

automobile parts using a single DC-3, while Wayne operates a Beech 18 on similar charters. Service continues apace during the remainder of the decade.

Three more DC-3s are acquired in **1970–1971** and are employed to operate passenger services during the period of the Canadian airline strike of 1972. Also in **1972**, the first of eight all-cargo Douglas C-54E Skymasters (military version of the DC-4) arrive. Company employment at the end of the **1970s** stands at 25 and the fleet includes 10 DC-3s, 8 C-54Es, 4 Beech 18s, 1 Cessna Citation, and 1 Piper PA-31-310 Navajo.

The fleet is altered during the **1980s**. Gone are five DC-3s, exchanged for C-117s (military version of the large Super DC-3) and a C-54E. Flights are started to locations in South America and the Caribbean.

Being unable to obtain required take-off and landing slots at Toronto during the spring of **1990**, Millardair suspends its heavy cargo operations on May 31. The decision is made to sell off the Skymasters and to operate smaller aircraft. Over the next eight years, the company sells off its remaining twin-engine Douglas and Beech equipment, and maintains only the Citation and Navajo for executive charters and flight training.

The company's hangar at Toronto International Airport is leased to **Canada 3000, Ltd.** in **1998** as Millardair stops flying.

MILLENNIUM JET: 16225 Vanowen St, Suite 200, Van Nuys, California 91406, United States; Phone (818) 786-2001; Fax (818) 786-2002; Year Founded 1997. Millennium is set up at Van Nuys, California, in **1997** to provide executive and small group passenger charters throughout the western U.S. and Mexico. Two pilots are hired and flights commence with a single Learjet 24B.

Operations continue in **1998–2000**.

MILLER AIR TRANSPORTERS: United States (1977–1983). Miller Air Transporters is established at Jackson, Mississippi, in **1977** to provide scheduled passenger and cargo flights throughout six states of the old Confederacy: Alabama, Mississippi, Georgia, Florida, Tennessee, and Louisiana. President Dennis M. Miller's company commences scheduled revenue services in June and his five Cessna 402Cs link the company's base with Columbus, Greenwood, Laurel, Hattisburg, Oxford, Tupelo, Memphis, Atlanta, New Orleans, Birmingham, and Destin, Florida. FTKs operated in **1978** total 2.67 million, a 24% increase. They climb another 4.5% in **1979** to 2.78 million, but fall back to 2.35 million in **1980**. Cargo recovers by 3% in **1981**, rising to 2.42 million FTKs.

After transporting 323,291 pounds of freight in six months, Miller suspends scheduled service in July **1982**. After a period of dormancy, the company is renamed **Flight Line** in **1983**.

MILLER AIRLINES: United States (1964–1969). The FBO Miller Airmotive, operating at Reed City, Michigan, creates this scheduled air taxi division in late fall **1964**. Employing 1 Beech 18 and 1 Cessna 402, it inaugurates daily roundtrip frequencies on December 2, linking its base with Grand Rapids and Chicago's Meigs Field.

Operations continue apace until **1969**.

MILLER AVIATION: Binghamton Regional Airport, Johnson City, New York, 13790, United States; Phone (607) 770-1093; Fax (607) 770-0632; Year Founded 1975. Miller is established in **1975** as the FBO at Binghamton Regional Airport in western New York. The company over the next 20 years also undertakes a wide variety of executive and small group passenger charters.

By **2000**, Doug Chamberlain schedules aircraft at four different airports. From Binghamton, Miller flies 1 each British Aerospace BAe (HS) 125-700 Hawker, Cessna 550 Citation II, and Learjet 35A Century III, plus 2 Cessna 441 Conquest II turboprops and a piston-engined C-730 Crusader.

Another Citation II is based at Syracuse, a third is stationed at Teterboro, New Jersey, while 1 each Hawker, Learjet 55 Longhorn, and a second Century III are flown from White Plains, New York.

MILLION AIR: United States (1983–1997). Juan B. Million establishes this all-cargo carrier at Miami in **1983** to operate contract and charter services to destinations within the U.S., the Caribbean, and South America. Once operating authority is received and a fleet of 1 Douglas DC-7CF and 2 Canadair CL-44Ds is assembled, Million inaugurates services to Colombia in July **1984**. The privately owned airline does not choose to release either traffic or financial data as its operations continue apace during **1985–1986**.

The 31-employee company files a petition with the DOT in **1987** seeking authority to inaugurate scheduled cargo flights to Central and South America. These services are duly launched with one each chartered Boeing 707-323C and B-707-355C.

Statistics are initially released showing that the company has flown a total of 158.9 million FTKs on the year. Revenues reach \$4.4 million, but expenses are high and big losses are suffered: \$207,000 (operating) and \$249,000 (net).

Although the traffic picture deteriorates in **1988**, the bottom line improves significantly. Cargo plunges 47.6% to 8.33 million FTKs and revenues drop 41.2% to \$2.58 million. Still, costs are low enough to allow an \$8,000 operating profit and net gain of \$7,000.

Given a new livery, one B-707-323C, the *Vanessa*, remains in service during **1989**, but is able to greatly increase cargo traffic as 30.97 million FTKs are flown. Income exceeds costs and profits of \$134,790 (operating) and \$104,959 (net) are generated.

The 32-employee company returns its B-707-355C to service during **1990** and leases a B-707-331C from **Florida West Airlines**.

As a result, freight increases 64.5% to 50.96 million FTKs. Revenues jump 69% to \$10.96 million, but expenses climb 77.9% to \$11.3 million. Consequently, a \$336,577 operating loss is suffered, along with a net loss of \$444,592.

The workforce is cut by 19.4% in **1991** to 25, the B-707-331C is returned, and the B-707-355C is replaced by a B-707-321C.

Still, the two-plane cargo operator is able to increase its freight traffic by 6.1% to 544.06 million FTKs. Revenues skyrocket 93.3% to \$14 million, expenses are \$13.72 million, and operating income totals \$283,187. There is a net profit of \$255,147.

Operations continue apace in **1992**. Airline employment is still 25 and the fleet includes only 1 Boeing 707-321C and 1 B-707-323C.

Cargo increases another 38.3% to 74.77 million FTKs, but revenues decrease to \$12.4 million. Profits slip to \$156,299 (operating) and \$130,524 (net).

Company employment skyrockets 120% in **1993** to 55 and the fleet is doubled to 4 aircraft, including 1 leased B-707-321C, 1 chartered B-707-369C, 1 leased B-707-323C, and 1 Douglas DC-8-54F leased from **American International Airways (3)**.

Freight jumps 8.6% to 81.17 million FTKs and revenues slide ahead by 4.6% to \$12.94 million. Expenses fall 2.1% to \$11.96 million and allow operating income to climb up to \$973,000. Net gain hits \$943,892.

The workforce is cut a drastic 54.5% in **1994** to 25 as cargo declines by 19.3% to 65.53 million FTKs. Revenues jump 24.7% to \$15.85 million as expenses increase 30% to \$15.18 million. There is a decline in operating income to \$674,000, while net profit slides to \$710,000.

The workforce is increased dramatically in **1995** to 175. After landing at Guatemala City on April 28 on a flight from Miami, a DC-8-54F with three crew skids off the end of a wet runway and collides with approach lights and the perimeter fence before plunging down a steep incline into a residential area. Although none of the crew are badly injured, six people are killed on the ground and the aircraft is destroyed by a post-crash fire.

The carrier's 7 aircraft operate 119.62 million freight FTKs, a giant 67.9% growth. Costs exceed revenues and there are losses: \$15,000 operating and \$54,000 (net).

There is no change in the employee population during **1996**. On approach to Miami on February 22, a B-707-323C freighter loses all hydraulic fluid after its main gear is down. Unable to manually lower the nose gear, the aircraft lands in this condition and is severely damaged; none of the four crewmen aboard are badly hurt.

On October 22, just after takeoff from Manta, Ecuador, some 390 miles SE of Quito, Miami-bound Flight 406, a B-707-323C with three crew and one passenger, bursts into flames, clips the top of a church tower, and crashes. The entire neighborhood surrounding the crash site is set afire and 34 people die, including all 3 of the Boeing's crewmen, with another 50 injured.

In the aftermath, the company, on October 29, voluntarily stops flying in order to make equipment and personnel available to FAA and NTSB investigators, who assist the Direccion General de Aviacion Civil with its post-crash review.

Cargo traffic rises 13% to 135.13 million FTKs, but operating income falls 9.3% to \$17.01 million. Expenses also decline, dropping 11.1% to \$16.69 million. The previous year's losses now become gain as equal \$319,000 operating and net profits are reported.

The company's operating certificate is suspended early in 1997 and the concern is dormant through July. It then shuts its doors.

MILLION AIR INTERLINK: Teterboro Airport, 485 Industrial Ave., Teterboro, New Jersey 07608, United States; Phone (201) 288-5040; Fax (201) 288-4430; <http://www.millionair.com>; Year Founded 1984. Million Air is not really an airline. Instead, during the 16 years since its 1984 founding, it has developed into the largest independent FBO chain in the world, with facilities throughout the U.S. and at Toronto, Canada. This concern is listed here because one of its many services since 1985 has been the provision of lightplane charter and flight training services from its many locations.

In 2000, Million Air franchises are located at Stratford, Connecticut, Chicago (MDW), Cincinnati, Cleveland, Columbus, Oklahoma City, Owensboro, Palm Springs, Pontiac, Provo, Dallas (Addison Airport), Evansville, Hartford, Houston (HOU), La Quinta, Long Beach, Richmond, Salt Lake City, San Antonio, St. Louis, St. Paul, Teterboro, Long Island (Republic Airport), Monterey, Nassau, New Orleans, Topeka, Toronto, and Van Nuys.

MILLIONAIR CHARTER (PTY.), LTD.: P.O. Box 6119, Rivonia, Johannesburg, 2128, South Africa; Phone 27 (11) 390 2710; Fax 27 (11) 390 2715; <http://www.millionair.co.za>; Code MACT; Year Founded 1994. Exclusive Air Charter (Pty.), Ltd., owned by its Managing Director Kenneth Geldenhuis, sells its licenses to Phoenix Airways in 1994, while Gary van der Merwe, owner of Million Air Aviation, purchases a 50% stake in the charter operation. Exclusive is transferred to the Million Air Group facility at Lanseria Airport and is renamed.

In the fall of 1995, former Managing Director Geldenhuis purchases the Million Air Group's stake and once again becomes the lone shareholder in the company he had founded as Exclusive back in 1986. In December, MAC enters into an agreement with **Zimbabwe Express Airlines, Ltd.** to lease a B-727-23.

Public passenger charters for tourist groups, incentive programs, product launches, and companies, as well as regional airline replacement flights begin in early 1996. John J. Botha is named general manager and he begins revenue services with the Boeing 727-23. Charters are operated to a variety of destinations with Cessna 404 Titans, a Beech Super King Air 200, and several helicopters. Branch offices are opened at Johannesburg and Cape Town.

In 1997-1998, the company leases 2 more B-727-100s and operates scheduled and charter flights for and on behalf of 11 different African airlines, such as **South African Airways (Pty.), Ltd., Kenya Airways, Ltd., and LAM Mozambique Airlines, S.A.**

Flights continue in 1999. In February, it is announced that the company will launch an initial public offering on the Johannesburg Stock Exchange during the second quarter; it makes its debut on April 8. Majority shareholding (65.7%) in the company continues to be held by its management. As the company had earlier issued its shares by way of a private placing to raise capital for aircraft payments, no capital is raised by the listing.

The company adopts a new corporate image and livery on August 1, 2000. The DC-9-32 is now repainted.

On October 4, a company Cessna 402C transports the body of an African man known as "El Negro" from Johannesburg International Airport to Botswana. It was stolen by 2 Frenchmen 170 years earlier and placed on display in Europe, where it remained until arrangements were completed in 1997 for its return.

MILNE BAY AIR (PTY), LTD.: Papua New Guinea (1992-1994). Originally established as a charter operator in the resource development industry, John R. Wild's concern is reformed into a scheduled airline in September 1992, with Simon D. Wild as managing director. Revenue operations are undertaken with a fleet that includes 1 Dornier 228-200, 2 de Havilland Canada DHC-6-200 Twin Otters, 1 DHC-6-300, 3 Beech King Air 100s, and 1 Cessna 550 Citation II.

During the spring of 1993, the company takes over part of the route network abandoned upon the failure of **Talair (Tourist Airlines of Niugini, Ltd.)**.

A Dornier 328-100 is ordered for 1994 delivery. From its base at Port Moresby, services are offered to Alotau, Amazon Bay, Balimo, Baimuru, Cape Vogel, Daru, Fane, Hagen, Ihu, Kerema, Kikori, Kiunga, Kuri, Lae, Louisa, Mendi Mt. Misima, Porgera, Tabubil, Tari, Tufi, Vivgani, Wanigela, and Safia. During the year President Wild's 250-employee company is renamed **MBA Airlines of Papua New Guinea (Pty.), Ltd.**

MINDANAO EXPRESS: 4th Floor, Cargohaus Building, MIA Road, NAIA Complex, Parahaque, Manila, The Philippines; Phone 63 (2) 832 1541; Fax 63 (2) 831 0059; <http://www.mindanao.com/mindanao-express>; Year Founded 1996. A subsidiary of the **Federal Express (FedEx)** feeder Corporate Air, ME is set up by CA chairman Alberto D. Lina during the summer of 1996 to offer third-level commuter flights between Manila and Cebu. Nightly express flights will also be offered. Employing a fleet of two each Beech 99s and Beech 1900Cs, the new regional launches revenue services on September 14, following a ceremony during which Philippine President Fidel V. Ramos christens one of the Airliners.

On February 17, 1997, Chairman Lina announces that the carrier is moving its base of operations to the General Santos City Airport to support an aggressive expansion program. With the beginning of the summer schedule at the end of March, return flights are started from General Santos to Cagayan de Oro, from Zamboanga to General Santos, Cagayan de Oro via Cotabato or Cotabato, and from Davao to Cagayan de Oro via General Santos. Four more Beech 1900Cs are now acquired.

A code-sharing pact is signed with **Sabah Air (Penerbangan Sabah Sdn Bhd.)** and under its terms, Mindanao Express inaugurates twice-weekly roundtrips between Zamboanga and Sandakan, Malaysia on May 1. Sabah handles ground support on the Malaysian end and is allowed to sell blocks of seats on the Philippine airliners.

Twice-weekly roundtrips commence on March 31, 1998 between Cebu and Tandag via Surigao. On October 28, weekly flights are started from Cebu to Pagadian City. On November 3, twice-weekly return frequencies from Cebu to Kalibo and Tacloban. New roundtrips are started on December 21 twice weekly from Cebu to Butuan and thrice weekly to Dipolog.

Service is continued during the next two years. Scheduled destinations visited in the spring of 2000 include not only Cebu, but also Butuan, Cagayan de Oro, Cotabato, Dipolog, Davao, General Santos, Kalibo, Pagadan, Sandakan, Tacloban, Tandag, Tawi-Tawi, and Zamboanga.

MINERAL COUNTY AIRLINES: United States (1963-1967). With subsidy from a casino, this commuter is established at Long Beach, California, during the summer of 1963 to fly scheduled passenger services to the site of the gambling hall in Hawthorne, Nevada, via Burbank. De Havilland DH 104 Dove and DH 114 Heron revenue flights commence in August, with the British-made airliners being supplemented by Douglas DC-3s in 1964.

Operations continue apace in **1965–1968**. En route from Hawthorne, Nevada, to Burbank, California, on February 18, **1969**, Flight 708, a DC-3 with 3 crew and 32 passengers crashes into the eastern slope of Mount Whitney at 11,770 ft. There are no survivors. The company, itself, is also a fatality, shutting down within weeks of the tragedy.

MINERVA AIRLINES, S.p.A.: Via Lannoni 5, Catanzaro, Calabria, I-98100, Italy; Phone 39 (961) 724 028; Fax 39 (961) 725 759; <http://www.minerva-airlines.it>; Code Q2; Year Founded 1995. Minerva is set up at Calabria, Italy, in December **1995** to offer regional and domestic charters. Orders are placed for a pair of Fairchild Dornier 328-110s.

Following delivery of the turboprops during August **1996**, holiday and tour flights are inaugurated on September 1, beginning with non-scheduled frequencies to Milan. Scheduled services are launched late in the fourth quarter to Naples, Trieste, Bari, and Palermo. Enplanements for the 4 months of the year operated total 23,425.

In **1997**, a number of replacement flights are operated on behalf of **Alitalia, S.p.A.** Two more 328-110s join the fleet and passenger boardings accelerate to 188,884.

In April **1998**, Minerva, operating its 7 Dornier 328-100s on 19 Italian domestic routes, becomes a franchise partner of **Alitalia, S.p.A.**, reporting to **Alitalia Express, S.p.A.** Simultaneously, **Azzura Air, S.p.A.** ends its code-sharing pact with **Debonair, Ltd.** and also becomes a franchise partner.

Both airlines, in the manner of "British Airways Express," paint their aircraft in Alitalia colors, with Alitalia interiors. Alitalia uniforms are provided and check-in and ticket counters receive Alitalia branding; indeed, even the supplies used in in-flight meal services come from the Italian major.

Bookings for the year surge to 320,000.

Coming in from Rome on a February 25, **1999** service due to continue on to Trieste, Flight 1553, a Dornier 328-110 with 4 crew and 27 passengers, touches down briefly on the runway at Genoa before crashing into the sea at the end of the 9,925-ft. pavement. Four people are killed and 20 others injured. Bruce Johnson will report in the March 3 issue of *The Weekly Telegraph* that many more would have died except for the bravery of Marco Sulis, 15, a member of a Sardinian swimming team, who opens one of the exits under water. It is through this door that most of the survivors escape.

Enplanements for the year decline to 213,000.

Daily roundtrip service is inaugurated on March 26, **2000** from Bari to Trieste.

MINERVE (COMPAGNIE FRANCAISE DE TRANSPORTS AERIENS, S.A.): France (1975–1992). This privately owned French charter operator is established at Paris by former **Air Cameroon** CEO Rene Fernand Meyer in June **1975** to undertake holiday and inclusive-tour flights to various destinations in France and from Paris, Brussels, and Basel to North Africa and the Mideast. President/General Manager Meyer's 50-employee company, named after the Roman goddess of learning, acquires a Sud-Est SE-210 Caravelle VIR from **Sterling Airways, Ltd.** and inaugurates charter services in November between Paris and Athens.

An SE-210 Caravelle VIR and two Caravelle VINs are added in **1976–1977**; however, late in the decade, one Caravelle VIN is replaced by a Caravelle XR. Government authority to operate either larger equipment or to more distant markets, such as the Caribbean, is twice refused.

In late **1980**, the French government agrees to allow Minerve the use of larger aircraft. A Douglas DC-8-53 is purchased from **Japan Air Lines Company, Ltd.** (2) and arrives at Paris in March **1981**. The following month it commences nonscheduled service to Dakar, Barbados, Mombasa, Lima, and Pointe-à-Pitre. Flights to the Guadeloupe market, on behalf of the tour operator Nouvelles Frontieres, must be routed through Brussels.

Enplanements for the year reach 255,000.

These flights continue in **1982** as a second DC-8-53 arrives from JAL. When the flight crews of both **Air France** and **Air Inter** go out on strike twice, Minerve is one of the French independents that responds to a government plea for assistance in maintaining schedules. At the same time, Meyer's carrier agrees to take over the operating certificate of the failed freight airline **Air Fret, S.A.**, as well as its maintenance hangar in the southern city of Nîmes.

In light of its assistance to the French government the previous year, the company receives authority in early **1983** to undertake transatlantic charters to the U.S. Arrangements are made with **Alitalia, S.p.A.** for the purchase of additional aircraft, including two DC-8-61s, a DC-8-62CF, a DC-8-73, and a DC-8-73CF. The CFs are placed on the cargo routes previously operated by Air Fret.

The DC-8-73 inaugurates a new route to Reunion in **1984** while the DC-8-61s inaugurate flights from Paris to New York, San Francisco, and Los Angeles.

Enplanements for the year total 342,720.

Operations by the 205-employee carrier continue apace in **1985**, with emphasis on flights to North and South America, as well as contract maintenance and overhaul work at the Toulouse facility. The fleet now includes 1 DC-8-73, 2 DC-8-53s, 2 DC-8-61s, 2 Caravelle XRs, 1 DC-8-73CF, and 1 DC-8-62F.

Customer bookings fall 7.1% to 320,000, but revenues climb 5.3% to \$40 million.

Employment increases 95.1% in **1986** to 400 as the number of revenue passenger kilometers (RPKs) flown accelerates 24.6% to 1.46 million. Breaking the **UTA (French Airlines, S.A.)** monopoly on Tahiti, Minerve commences charters to Papeete in August via San Francisco. In the fall, orders are placed for two (later six) McDonnell Douglas MD-83s.

The workforce is increased a further 13.3% in **1987** to 453 as RPKs advance by 25.3% to 1.84 billion. The Canadian subsidiary **Minerve Canada, Ltd.** is established and a DC-8-61 is leased to it. The subsidiary **Jet Alsace, S.A.** is formed to acquire the license of grounded Point Air of Basel and the fleet is increased, significantly, by the arrival on December 8 of a leased Boeing 747-283B, formerly flown by **SAS (Scandinavian Airlines System)**.

The fleet in **1988** includes 6 DC-8-62/73s, 2 Caravelle XRs, and 1 B-747-283B. The first two MD-83s are delivered in April and when placed into service, introduce the carrier's new stylish color scheme and the Minerve tail logo. The Jumbojet enters service on flights from Paris to Reunion and also to Pointe-à-Pitre. Two MD-11s are ordered in September after Airbus Industrie turns down a company request to participate as a launch customer for the A340.

Enplanements total 750,000.

Operations continue apace in **1989** and while awaiting delivery of the MD-11s, the first of three chartered DC-10-30s enters service in April.

Airline employment in **1990** stands at 711. The fleet comprises 1 B-747-283B, 1 DC-8-62CF, 1 DC-8-73, 1 DC-8-73CF, 5 McDonnell Douglas MD-83s, and 1 DC-10-30. The carrier begins to offer direct flights from New York (JFK) to Martinique and Guadeloupe on January 27. In the spring, as recession begins to impact the charter market, the new member of IATA sells 50% shareholding to Club Mediterranée.

Passenger boardings for the year climb to 896,600.

As part of the restructuring of France's airlines, Minerve is granted permission in **1991** to inaugurate scheduled services, beginning on May 7, from Nice to Paris (ORY) and London and from Paris (ORY) to Barcelona. Other destinations now introduced include flights from the French capital to Papeete via Los Angeles and to Bangkok and Ho Chi Minh City via California. Also during the spring, weekly roundtrip DC-10-30 frequencies are begun from Paris to Havana on behalf of **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**.

When Club Mediterranée acquires majority control of Club Aquarius and its subsidiary airline, **Air Liberte, S.A.**, plans are made to merge the two transport arms. Although the prospect is announced and two

MD-83s are even painted in joint titles, the merger does not occur, primarily because Club Med reduces its interest. At this point, minority shareholder (20%) Credit Lyonnais is able to have one of its executives named Minerve president, easing out founder Meyer. Credit Lyonnais and its Saga banking group now cause Minerve to buy out the financially troubled **Air Outre Mer, S.A.**

On January 1, 1992, the two airlines are combined to form **AOM French Airlines, S.A.**

MINERVE CANADA, LTD.: Canada (1987–1992). The French independent **Minerve (Compagnie Francaise de Transportes Aeriens, S.A.)** establishes this Canadian subsidiary at Montreal during the summer of 1987. Equipped with a single hush-kitted Douglas DC-8-61 leased from the parent, the airline begins passenger charter flights linking its base and Quebec City with destinations in the Caribbean, Mexico, and Florida during the winter.

A second DC-8-61 is acquired in the spring of 1988 and joins its predecessor in inaugurating inclusive tours to France during the summer.

The winter schedule resumes in the fall and in February 1989, bi-weekly flights are inaugurated from Toronto to the Azores. Operations continue apace in 1990–1991, but cease when **Air Outre Mere, S.A.** and Minerve merge on January 1, 1992 to form **AOM French Airlines, S.A.**

MINILINER, S.p.A.: P.O. Box 21, Orio al Serio, 24050, Italy; Phone 39 (03) 531 6865; Fax 39 (03) 531 8224; Code MSA; Year Founded 1981. This small operator is established in October 1981 to provide a system of express parcel delivery into small airports in Italy. Ad hoc passenger and cargo charters and air ambulance service will also be flown.

When revenue flights commence in the spring of 1982, MiniLiner is the first Italian carrier to offer overnight small package deliveries. Service, employing small aircraft, is continued during the remainder of the decade and through the next. In September 1988, MiniLiner signs a long-term contract to fly on behalf of the U.S. small-package pioneer **Federal Express (FedEx)**.

The fleet at the beginning of 2000 includes 1 each Fokker F.27-400F and F.27-500F.

MINISTIC AIR, LTD.: P.O. Box 42008, Winnipeg, Manitoba R3J 3X7, Canada; Phone (204) 832-8550; Fax (204) 889-4731; Code MNS; Year Founded 1996. Ministic is set up at Winnipeg in 1996 to provide scheduled and charter passenger and cargo services over the area from the U.S. border north. George Brotherston is managing director and he begins revenue flights with a fleet that includes 4 Cessna 206s, 2 Piper PA-31-350 Navajo Chieftains, 1 Aero Commander 500, 2 Dornier 228-202s, 1 Aero Turbo Commander 690, and 1 Beech King Air 100.

Two Beech 1900Ds are acquired before the end of the decade.

MINRY AIR ENTERPRISE: Mimi Aeroport, Yakutia, Sakha Yukutiya, 678170, Russia; Phone 7 (41136) 20197; Fax 7 (41136) 23192; Year Founded 1996. Late in 1996, **Diamond Russia Sakha-Mirny Aviation Enterprise (Almaz Rossiya Sakha-Mirinskoe AP)** is renamed. Nikolai N. Tereschenko remains director general and domestic operations are continued with a fleet that includes 10 Antonov An-24s, 14 An-2s, 4 An-26s, 3 Ilyushin Il-76TDs, 27 Mil Mi-8/17s, and 3 Mi-26s.

Flights continue during the remainder of the decade.

MINSK FLIGHT DETACHMENT NO. 1: Smolevichski Regional Airport, Minsk, 222210, Belarus; Phone 375 (0232) 51 45 53; Fax 375 (0232) 51 14 07; Year Founded 1994. A unit of **Belavia Belarussian Airlines**, this carrier is set up at Minsk in 1994 to provide domestic and regional passenger charter services. Vasili I. Ernakov is appointed CEO and he begins revenue flights with 12 Tupolev Tu-154B/Ms leased from the parent.

MINSKAVIA-MINSK FLIGHT DETACHMENT NO. 2: Korotkevicha Str. 9, Minsk, 222210, Belarus; Phone 375 (0172) 250674; Fax 375 (0172) 253725; Code 4M; Year Founded 1994. A unit of **Belavia Belarussian Airlines**, this carrier is established at Minsk in 1994 to provide domestic and regional charter services, with emphasis on cargo and local service passenger markets. Vasili K. Radkevich is named CEO and he begins revenue flights with 6 Antonov An-24s plus 4 each An-26s and Yakovlev Yak-40s.

Service is maintained in 1995–1999, during which years a number of long-haul charters are also operated to Zaire and Guinea. Aerial work is undertaken with a fleet of 10 Kamov Ka-26 helicopters.

A total of 380 workers are employed at the beginning of 2000.

MIROW AIR SERVICE. See ALASKA AIRLINES

MISR AIRWORK, LTD. See AIRWORK, LTD.

MISR OVERSEAS AIRWAYS, LTD.: Egypt (1985–1989). Originally established at Cairo in 1985 as **Air Lease Egypt, Ltd.**, this privately owned carrier undertakes passenger and cargo charters and contract service flights to destinations throughout the Arab world, North Africa, and southern Europe. Operations are conducted until 1989 with 3 leased Boeing 707-366Cs previously operated by **EgyptAir, S.A.E.**

MISRAIR, S.A.E. (1): Egypt (1949–1958). Although the government of Egypt had taken majority control at the beginning of World War II, the entire capital of the **Airwork, Ltd.** subsidiary Misr-Airwork, Ltd. is acquired by the Egyptian government in 1949 and is renamed.

Vickers Viking Mk. 1Bs, together with such smaller aircraft as Beech C-45s, and de Havilland DH 89 Dragon Rapides, are also acquired from the U.K. operator and maintained to continue the previous services. Jerusalem to Cairo flights commence on November 25, 1950.

In March 1951, orders are placed for three Vickers Viscount 700s. In October, five Sud-Est SE-161 Languedocs are purchased from **Air France**. These take over the Viking routes from Cairo to Geneva, Tehran, and Khartoum. While approaching Tehran Airport on December 22, a Languedoc with 22 aboard crashes; there are no survivors and among the victims is U.S. Technical Cooperation Administrator Henry G. Bennett.

The Egyptian-Italian joint venture airline **SAIDE (Services Aeriens Internationaux d'Egypte, S.A.O.)** is taken over on December 1, 1952. A number of Douglas DC-3s are received and these replace the Beechcraft and de Havillands on domestic services.

Several regional routes are now started to neighboring Arab states with Vickers 634 Viking Mk. 1Bs. One of these fails its takeoff from Cairo and crashes near Almaza Airport on December 15, 1953 (six dead).

Flights continue apace, but another accident occurs in 1954. A Vickers 634 Viking 1B and three of its four-person crew are lost in an accident at Cairo's Almaza Airport on September 15.

The first two Viscount 700s are received in December 1955 and enter service on March 16, 1956. Part of the carrier's fleet is lost during the Suez Crisis and a Vickers Viking 739 is lost in a ground accident at Almaza Airport, Cairo, on October 1.

In February 1958, following the political merger of Egypt and Syria, Misrair is renamed **United Arab Airlines**.

MISRAIR, S.A.E. (2): Egypt (1964–1968). In late 1964, **United Arab Airlines (UAA)** executives begin planning for the establishment of a second Misrair at Cairo in the summer of 1965. Misrair, S.A.E. (2) will take over and operate domestic and regional services. The General Arab Air Transport Organization, which owns UAA (as well as the Karnak Travel and Tourist Corporation and the airline's hotel division, General Aviation Services), seconds over many UAA personnel and places the new entrant under the command of Air Marshal Gamal Afifi.

Afifi and his top officials are at first uncertain as to which flight equipment Misrair-2 will employ. The four Vickers Viscount 739s

available from UAA are considered to be too large and the available Douglas DC-3s and DC-6Bs are too antiquated. A turboprop comparison is made between the Fokker F.27, Handley Page Herald, the Hawker Siddeley HS-748, and the Antonov An-24. Although the HS-748 is most desirable, it is very expensive and must be paid for in hard currency.

The Soviet Union, quite friendly with Egypt and Syria at this point, now steps forward with a good price and easy payment terms (including payment in Egyptian funds) and late in the year an order is placed for seven An-24s.

In order to familiarize crews with the Antonov, a unit is leased from **Aeroflot Soviet Airlines** during the spring of **1965**. The first owned An-24 arrives at the beginning of June, followed by three more during the next two months. During this period, Chairman Afifi is succeeded by Gen. Mohammad N. Hashad. Daily service begins on August 1 from Cairo to Luxor, continuing on to Aswan as necessary.

The Aeroflot An-24 is returned later in the year as the last three owned An-24s arrive. The Cairo to Luxor route is increased to four-times-a-day frequency, with three services continuing on to Aswan. Additionally, roundtrips are inaugurated from Cairo to Nicosia, Alexandria, Port Said, and El'Arish, as well as from Alexandria to Athens.

Misrair-2 is an expensive operation in both equipment and operating costs. Two An-24s are lost in accidents. The first is written off after a bad landing at Aswan on February 2, **1966**. On March 19, a second Russian turboprop with 30 passengers crashes near Cairo; there are no survivors.

During its entire life, this carrier does not generate sufficient income to cover its expenses. The financial drain continues throughout the remainder of **1967** and into **1968**. On January 1 of the latter year, it is announced that Misrair-2 will be shut down on June 1. Its personnel and aircraft are amalgamated into **United Arab Airlines (UAA)**.

MISSION AIRLINES: United States (1981–1982). Established at El Cajon, California, in the spring of **1981**, Mission begins regularly scheduled third-level passenger flights to San Diego and Los Angeles with a fleet of Piper PA-31-350 Navajo Chieftains, PA-31-310 Navajos, and PA-34 Senecas. ATC problems caused by the summer PATCO air traffic controllers' strike make it impossible for the new entrant to earn sufficient income to continue. As a result, operations cease in early **1982**.

MISSISSIPPI VALLEY AIRLINES (MVA): United States (1969–1985). **Gateway Aviation** of La Crosse, Wisconsin, is reformed in September **1969** to fly commuter service in the central Midwest. Revenue operations, initially under the name Mississippi Valley Airways, are inaugurated on October 30 over a Minneapolis–Chicago via Winona and La Crosse route formerly flown by **North Central Airlines**. The initial fleet is all de Havilland DHC-6-100 Twin Otter.

A DHC-6-200 with two crew and four passengers is destroyed as the result of a bad landing at La Crosse on November 9, **1970**; there are no fatalities.

Operations continue apace in **1971–1973** and by **1974** enplanements are 39,786. During the latter year, the routes of **Air Iowa** are purchased and merged and the company receives its final moniker.

Airline employment in **1975** stands at 45. During the year, the carrier trades in its Twin Otters for a fleet of 3 Beech 99s and 1 Swearingen Metro II. The higher speeds of these aircraft allow frequencies to be increased. Late in the year, CAB-approved replacement service is started to Clinton, Iowa, on behalf of **Ozark Air Lines**.

Still, passenger boardings decline 4.7%, to 37,914.

Freight traffic accelerates 34.4% in **1976** while customer bookings jump 39.5% to 52,890.

Enplanements in **1977** are level at 52,658, although growth is anticipated and an order is placed for six Shorts 330s. Chairman/CEO John J. Louis Jr.'s "Mud Valley," as pilots sometimes call the airline, begins a period of rapid growth following the signing of the Airline Deregulation Act in October **1978**. Routes are stretched to Cedar Rapids, Des Moines, Omaha, Moline, and Milwaukee. Passenger boardings jump 32.1% to 79,025.

Enplanements skyrocket during **1979** to 152,000, a 92.6% improvement; freight does even better, rising a spectacular 217.9% to 1.28 million FTKs.

The employee population grows by a whopping 62.5% in **1980** to 325 and the fleet includes 6 Shorts 330s and 7 Beech 99s. Orders are placed for four Fokker F.27-500 Friendships. At Chicago (ORD), the company is able to move into the **Eastern Air Lines** terminal.

Destinations visited now include Burlington, Ottumwa, Cedar Rapids, Clinton, Des Moines, Dubuque, Kansas City, Minneapolis (MSP), Omaha, Moline, and the Quad Cities, Illinois.

The Moline, Illinois-based carrier records a 69.1% increase in passenger boardings to 257,180 and a 7.5% improvement in freight traffic.

Arthur G. Hailand Jr. becomes board chairman/CEO in January **1981**, succeeding John J. Louis Jr., who becomes U.S. ambassador to England. Also in January, the first Fokker F.27-500 enters service and the company receives the 1980 "Regional Airline of the Year" award from *Air Transport World* magazine.

During the spring, flights begin to Madison, Wisconsin; Burl W. McLaughlin becomes president in May. A new group of investors infuses the carrier with needed equity capital. A new relationship is entered into with **United Airlines**, whereby MVA leases space at the major's Chicago terminal and cohosts its Apollo reservations system.

The fleet is upgraded as four 99s are retired in favor of three additional Shorts 330s and the first Fokker F.27-500. Orders are placed for two additional 330s and a 360 for 1983 delivery.

Despite the severe impact of the August PATCO air traffic controllers' strike and subsequent ATC restrictions upon its operations, the airline is able to achieve a 37.2% booking rise to 352,784. Freight, on the other hand, is a disaster, having plunged 60% to 297,151 pounds. The year's net financial loss is \$2.34 million.

The company base is transferred to Moline, Illinois, in **1982**. As the three remaining Dutch-built turboprops come on line, passenger boardings rise again, up by 43.9% to 507,656. Despite the recession, net profits recover and climb to \$1.16 million.

In **1983**, the company goes public, selling its stock for the first time and thus placing its financial picture out in the open. The Shorts aircraft requested in 1981 are delivered.

This year, passenger traffic accelerates by 15.9% as 588,373 passengers are carried. Cargo recovers, bounding upward by 42.8% to 775,529 pounds. Operating revenues of \$35.7 million (up 19.4%) are earned and expenses are held to a 20% gain at \$31.8 million. The operating profit is \$3.9 million and net gain is \$2.8 million, a profit that comes largely from the sale of tax benefits.

MVA, which has been flying routes into Illinois, Minnesota, Wisconsin, Iowa, Nebraska, and Missouri, enjoys a significant jump in enplanements during **1984**, up 27.7% to 751,346. Freight, on the other hand, falls 43.3% to 439,000 pounds. Revenues, meanwhile, climb 28.9% to \$45.98 million and costs accelerate 32.7% to 42.19 million. Although the operating profit declines slightly to \$3.79 million, net profit, not aided by a repeat of 1983's benefit tax, shrinks 81% to \$535,000.

After a study of the toughening competitive aspects of the industry, company officials join those from **Air Wisconsin** on January 28, **1985** to announce that the two companies will merge under the latter's banner on May 17. To accomplish the merger, each share of MVA common stock will be converted into 0.4621 share of Air Wisconsin common stock.

Prior to the marriage, MVA, the nation's eighth largest regional, transports a total of 214,677 passengers, a 7.1% boost over the same period a year earlier.

MISTRAL AIR, S.p.A.: Palazzina 131, Aeroporto Ciampino, Ciampino, Rome, I-00040, Italy; Phone 39 (6) 793 40614; Fax 39 (6) 793 40517; Code MS; Year Founded 1989. Mistral is established at Rome in **1989** to offer both executive passenger and all-cargo services, the latter on behalf of large corporations and other freight operators such

as **TNT Worldwide Express**. Revenue operations commence with 1 TNT-dedicated British Aerospace BAe 146-200QT, 2 Grumman G-159 Gulfstream Is, and 1 each Cessna 500 Citation I and 550 Citation II. Traffic and financial data for the privately owned carrier are not released.

The Gulfstreams are removed in **1990** and a BAe 146-300QT is acquired for the TNT service in **1992**.

In **1993**, Chairman/President Carlo Pedersoli and Managing Director Werner Romanello oversee a workforce of 35. The Citation I is removed and destinations served from Rome in the TNT service include Nuremberg, Cologne, and Genoa.

During **1994**, airline employment is increased to 50. A BAe 146-300 configured for passengers is leased from Asset Management Organization in the spring and is employed to inaugurate charter flights for travelers from Rome's Ciampino Airport to destinations in the Mediterranean and Central Europe.

The passenger charter operation is not a success and the BAe 146-300 is returned to AMO in **1995**. Thereafter, the company operates primarily freight services for **TNT Worldwide Express** with the two BAes acquired at the beginning of the decade. Destinations visited include Bari, Basel, Bologna, Cagliari, Cologne, Forti, Genoa, Nuremberg, and Palermo.

On March 1, **1999**, new four-times-a-week BAe 146-200QT return cargo service is inaugurated from Turin to Frankfurt, Lieges, and Hanover.

By **2000**, Managing Director Romanello has become chairman/president, with Guiseppi Napoli as managing director. The fleet has also been enhanced through the addition of 1 Fokker F.27-600F.

Beginning in late October, the carrier restructures its business around a new freight hub at Bologna. From that point, all-cargo return services are operated to Palermo via Naples and Cagliari and to Reggio Calabria via Bari and Catania.

MISTRI AIRWAYS, LTD.: India (1946–1947). Mistri is established at Bombay in the spring of **1946** to provide passenger and cargo services with a fleet of 17 Noorduyn Norsemen built in Canada. In addition to charters, the company opens a scheduled route to Calcutta via Nagpur on September 29. The company undergoes a complete corporate upgrade in January **1947**, becoming **Indian Overseas Airlines, Ltd.**

MK AIRLINES, LTD.: Landhurst, Hartfield, East Sussex, England, TN7 4DL, United Kingdom; Phone 44 (1892) 770 011; Fax 44 (1892) 770 022; <http://www.dircon.co.uk/cfalton/mk.html>; Code 7G; Year Founded 1990. This all-cargo operation is formed at London (LGW) in April **1990**, taking over Ghana-based **Cargo d'Or, Ltd.**, which is operated as a subsidiary, and Nigeria's **Flash Airlines, Ltd.** Privately owned and registered in Ghana, the company employs J. G. Davenport as chairman and Capt. Michael C. Kruger as managing director. During the next 10 months, preparations are undertaken for the beginning of scheduled services to Central and West Africa.

A DC-8-55F Jet Trader is leased in the winter of **1991** and employed to inaugurate flights in February to Kano, Lagos, Nigeria, Accra, Ghana, and Zimbabwe. European exports to Africa on behalf of the Swiss freight forwarder Panalpina and fruit exports into the U.K. are the major cargos.

A DC-8-54F is chartered in early **1992**. The new aircraft, with five crew, is destroyed in a crash near Kano on February 15; there are no fatalities. The aircraft is replaced by a DC-8-55F.

In **1993**, airline employment is 25 and the fleet comprises 2 owned and 1 leased DC-8-55Fs. Ad hoc charters to Iceland as well as European destinations are now flown and marketing alliances are put into place with **Air Malawi, Ltd.**, **Air Namibia, Ltd.**, **Flugfelag Island/Icelandair H.F.**, and **British Airways, Ltd. (2)**.

The **Cargo d'Or, Ltd.** subsidiary is renamed MK Airlines Ghana, Ltd. in **1994**. Other affiliates now formed are MK Airlines (Pty.), Ltd. in Zimbabwe and MK Flugfelagid, H.F. in Iceland. Units of the DC-8F cargo fleet will be distributed amount the flying operations, under the

administration of the central office maintained in London (LGW), which also handles technical, operational, financial, and leasing services. Despite these different ownership structures, the entities are combined in their financial reports and are operated out of the London head office in an arrangement not unlike that of **DAS Air Cargo, Ltd.** of Uganda.

A fourth DC-8-55F joins the fleet in **1995**. African destinations now visited include Congo, Egypt, Kenya, Malawi, Namibia, Nigeria, South Africa, and Zimbabwe.

Flights continue in **1996–1997**, during which years two DC-8-62Fs are dedicated for use by the Icelandic subsidiary; the main line fleet is enhanced by the addition of another DC-8-62F and a DC-8-54F. Worldwide services are now offered from hubs at Luxembourg, Ostend, Nairobi, Harare, Accra, and London (STN). The Accra hub now supports a growing number of services on behalf of Panalpina, as well as various African exporters.

While landing at Port Harcourt on December 17 of the former year after an all-cargo service from Luxembourg, a DC-8-55F with four crew touches down 250 m. short of the runway. The plane hits approach lights, climbs up onto the runway, and then runs off its left side, suffering the collapse of its nose landing gear. Although the Douglas is badly damaged, there are no fatalities.

Flights continue in **1998**. In October, an ex-**Arrow Air** DC-8-63F is chartered from International Air Leases to operate on behalf of the Philippine concern CLA Air Transport. The narrow-body, with an all-white fuselage decorated with CLA's logo and titles (the logo is repeated on the all-white tail), begins daily revenue flights around the Far East on November 1. In December, a three-year ACMI contract is signed with **Atlas Air**.

The combined companies, for the year as a whole, have assets of \$24.4 million, including \$14.3 million in current assets. On revenues of \$60,607,677, a net gain of \$1,174,221 is realized.

The fleet at the start of **1999** includes 4 DC-8-55Fs and 2 DC-8-62Fs, the latter 2 registered to MK Flugfelagid, H.F. During the spring, an application is filed with the DOT for a Foreign Air Carrier certificate to operate weekly all-cargo return service between Ghana and the U.S., with Fifth Freedom rights to load and unload cargo in Europe. The authority is opposed by several U.S. forwarders and cargo airlines. After negotiations are completed, the carrier, in June, refuses to complete the sale of its MK Flugfelagid, H.F. subsidiary to **Atlas Air**, claiming that it will not accept the restrictions on its Ghana-U.S. business that Atlas and others have proposed.

Wearing the company's new color scheme, a chartered B-747-246F, previously flown by **Southern Air Transport**, enters service at the end of July, flying between Africa and Europe.

Nine months into its three-year ACMI lease with **Atlas Air**, MK, in August, terminates the contract, formally turning the two onetime partners into adversaries. The differences between the two concerns are picked up by the media, which relays the Atlas claim that ownership of MK is murky at best and that it is, in fact, a European airline posing as an African carrier. Atlas, meanwhile, files papers with the DOT seeking to block the Ghana-U.S. authority MK has requested, pointing out that MK's claim to be an African carrier is a facade designed hide its English origins.

Despite these and other objections from several parties, a Foreign Air Carrier permit to operate all-cargo service between Ghana and the U.S. is approved for MK by the DOT, albeit with a restriction that MK must secure permission each time it desires to pick up cargo at "technical" stops between Ghana and the U.S.

A total of 105 workers are employed at the beginning of **2000**. The fleet now includes 4 DC-8-55Fs, 1 DC-8-54F, and 3 DC-8-62Fs. A leased B-747-244BF enters service at the beginning of the year; it will be regularly contracted to operate cargo service northward on behalf of **South African Airways (Pty.), Ltd.** The company continues to rent its entire capacity from Western Europe to Africa to forwarder Panalpina.

A new division of the inactive MK Flugfelagid, H. F. subsidiary is now formed at Keflavik in February. **Icelandic MD Airlines, H.F.** will

be based at Stockholm and operate passenger charters on behalf of the Swish tour operator Traffic Europa, A.B.

An emergency service begins with **Martinair Cargo, N.V.** on March 20 in a collaborative effort to get badly needed relief supplies from Europe to flood-ravaged Mozambique. Supplies arrive at Nairobi aboard one of the Dutch line's MD-11Fs, where they are put aboard MK Airlines DC-8-55F services for Beira and Maputo.

Following the signing of an "open skies" aviation agreement between the governments of the U.S. and Ghana, MK Airlines is given blanket authority to operate to the U.S. It does not, however, have Seventh Freedom authority to operate over the Atlantic without first originating in Ghana.

MK FLUGFELAGID, H.F. *See* **MK AIRLINES, LTD.**

MMABATHO AIR SERVICES (PTY.), LTD.: South Africa (1979–1985). **Mafikeng Air Service (Pty.), Ltd.** is reorganized and renamed at Mafikeng Airport on July 20, 1979. Mmabatho Air is designated flag carrier for the South African black "homeland" of Bophuthatswana, which is located within the borders of the Republic of South Africa. Ownership is divided between the homeland government (70%) and private interests (30%).

Start-up of charter, scheduled, and government contract service is delayed until June 1981. Operations are then undertaken in cooperation with **Magnum Airlines (Pty.), Ltd.** The initial fleet comes to comprise 2 Embraer EMB-110P Bandeirantes, 1 Piper PA-31-310 Navajo Chieftain, 1 Piper Navajo, and 1 Cessna Citation executive jet. Scheduled services between Mafikeng and Johannesburg continue and in 1985 the carrier is renamed **Bop Air (Pty.), Ltd.**

MMM AERO SERVICE, S.A.: Zaire (1981–1985). MMM is set up at Kinshasa in 1981 to undertake domestic passenger and cargo turboprop services. Revenue flights commence with one each Vickers Viscount 750 and Handley Page HPR-7 Herald. Virtually unknown outside of Zaire, this small concern continues operations in 1982–1984.

On September 11 of the latter year, the Herald, with 40 passengers, is lost in a crash at its base; there are no survivors. Unable to recover, the company is out of business at the beginning of 1985.

MNG AIRLINES CARGO, A.O.: Istanbul Ataturk Airport, Yesilkoy Cad, no. 9, Istanbul, 34810, Turkey; Phone 90 (212) 663-8350; Fax 90 (212) 663-8349; <http://www.mngaircargo.com>; Code MB; Year Founded 1997. MNG is set up at Istanbul in 1997 to operate nonscheduled all-cargo services throughout Europe, the Mediterranean, and into the CIS. Revenue flights begin on November 1 and continue with a single Airbus Industrie A300B4-203F.

The only all-cargo carrier and thus the flag carrier freighter airline in Turkey, MNG operates scheduled and charter flights to Frankfurt, London (CTN), Paris, Milan, Moscow, Dubai, Baku, Tbilisi, and Almaty. MNG also offers scheduled surface connections to other points in Turkey, such as Ankara and Izmir. Interline arrangements are made with other airlines in order that shipments can be made on a single AirWay-Bill to points all over the globe.

Flights continue in 1998. A hub is set up at Liege, Belgium, and is employed to launch a weekly roundtrip all-cargo service to Moncton, New Brunswick, in Canada, during the fall. A company milestone is achieved on November 19 when, under contract to C-S Aviation Services, the Airbus freighter completes the company's first service from Liege via London (CTN) and Bangor, Maine, into New York (JFK).

NATO countries find it necessary to unite and commence a military campaign against Serbian military targets to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independ-

ent Kosovo. *Operation Allied Force*, the NATO bombing attack on targets in Serbia and Kosovo, begins on March 24, 1999.

As the aerial operation continues, Serbian forces drive ethnic Albanians from Kosovo into Albania and Macedonia, creating a humanitarian crisis. Although opposed to the campaign and a traditional foe of fellow-NATO member Turkey, on March 31, Greece grants permission for Turkey to begin a humanitarian airlift to Tirana. This is the first time Greece has ever opened its airspace to Turkish cargo planes.

Three MNG and **THY Turkish Airlines, A.O.** freighters transport 36 tons of food and medicine from the Red Crescent organization to Albania. Additional aircraft fly missions daily thereafter for the duration of the conflict.

Service is maintained in 2000. The carrier's fourth A300B4-203F is unveiled on April 28 wearing a special color scheme in honor of the Swiss air freight forwarder Danzas.

An A300B4-203F all-cargo roundtrip service on behalf of United Parcel Service (UPS) is begun between Hong Kong and Singapore in October. Also during October, another A300B4-203F, wearing a bright yellow and black color scheme, begins flying for Danzas.

On November 3, an A300F4-203 is acquired; it had previously been flown by **South African Airways (Pty.), Ltd.** An A300B4-203F begins an ACMI contract on behalf of **Mandala Airlines** on December 22.

MODERN AIR TRANSPORT (MAT): United States (1946–1975). MAT is incorporated as an irregular carrier at Hempstead, Long Island, in mid-1946 to fly domestic charter and cargo flights. Revenue operations duly commence employing Douglas DC-3s and beginning in 1953, two Curtiss C-46 Commandos. Two more Curtiss transports arrive in 1956. Several Martin 2-0-2s join the fleet later in the decade and the four C-46s have all been withdrawn by 1962.

Little more is heard from this "quiet" Douglas and Martin operator until 1964. During that year, the carrier's workforce totals 70 employees and its fleet includes 5 aircraft, all Lockheed L-049 Constellations purchased from the assets of **Capital Airlines** back in 1961. Revenues are \$1.06 million.

In 1965, Modern is one of 10 supplemental carriers receiving permanent certification from the CAB. Its domestic authorization will allow services to be operated anywhere between Canada and Mexico.

Revenues climb to \$2.16 million and expenses are \$1.8 million, leaving a net profit of \$254,811.

An attractive acquisition target, MAT is acquired by Gulf American Land Corporation in 1966 and its headquarters are transferred to Miami, Florida. GALC has plans to use the company's aircraft to transport prospective customers to its land development areas in Florida and Arizona.

On September 30, the supplemental receives CAB authority to operate to both Mexico and Canada.

Revenues for the year total \$4.4 million and a \$30,597 profit is announced.

On January 1, 1967, Modern purchases five Convair CV-990A Coronados from **American Airlines**, three of which are delivered during the year and placed into service. Various types of charter and tour long-haul flights are now undertaken as the workforce grows to 213.

On April 10, a CV-990A is leased to **Air France** for the summer. The cost of operating the new jetliners is so high that Modern attempts—unsuccessfully, as it turns out—to cancel the delivery of the last two aircraft.

A total of 362,540 passengers are carried during the year. Revenues jump to \$9,579,239, but losses are heavy: \$2,987,128 (operating) and \$3,616,796 (net).

Two more CV-990s arrive from **American Airlines** in the spring of 1968 at which time the employee population numbers 275. A complete operations and maintenance base is established at West Berlin's Tegel Airport and from that German city charter flights are inaugurated to 17 Mediterranean and European destinations.

The year's highlight is completion of the world's first commercial transpolar flight, including the first commercial landing, by the CV-990A *Polar Zyrd I*, on the ice runway at McMurdo Sound, Antarctica. The same aircraft is the first from a U.S. charter airline to visit the Soviet Union; unhappily, Moscow's airport does not have a ground power unit capable of handling a Coronado and the return flight is delayed three days while a unit is brought in from Tegel Airport.

In addition, employing two CV-990As wet-leased to the Canadian airline, transatlantic flights are started between Canada and Europe on behalf of **Nordair, Ltd.**

Despite all of this activity, customer bookings slide to 295,185. Revenues jump 20% to \$11,514,020 and the losses shrink, down to minus \$1,273,000 (operating) and \$2,405,000 (net).

In early 1969, the company passes to the holding company, General Acceptance Corporation. A CV-990A is sold to the Spanish cargo charter airline **Spantax, S.A.** while, in December, another is purchased from **Alaska Airlines**.

Enplanements are 329,168. Revenues total \$14,121,713. Losses are significant: \$983,100 (operating) and \$1,847,896 (net).

The employee population in 1970 numbers 307. The Canadian government revokes the company's Canada-Europe rights operated for two years on behalf of **Nordair, Ltd.** This apparent disaster is averted by initiation of new charters to Mexico and additional military CAM operations.

Although a second pole-to-pole charter is flown, it is overshadowed by a single Father's Day flight in June. Officially marketed as a "Get Away from Miami Flight," the Coronado departure features three West German showgirls dressed in slight costumes with transparent bodices. Although the flight quite naturally garners worldwide press attention, this *Busenvogel* (Bosombird) service will not be repeated.

A CV-990A with eight crew and chartered by Asti Mexican Tours, overshoots the runway while landing at Acapulco on August 8; there are no fatalities, but all aboard are injured to one degree or another.

A replacement aircraft is acquired from **American Airlines** and the Miami-based overhaul facility, American Airmotive, is purchased.

The year's passenger boardings increase a slight 1.37% to 338,810 and revenues, due largely to the Canadian cancellation, are down by \$323,000 to \$13,799,007. Losses are again taken, but are down somewhat: \$664,098 (operating) and \$879,544 (net).

Two CV-990As are purchased from **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** in January and February 1971. In March, Modern becomes the first U.S. supplemental to operate scheduled services when it opens twice-daily frequencies from West Berlin to Saarbrücken. Indeed, a change in the General Acceptance Corporation board of directors leads to a transfer of all flight operations to Tegel Airport.

Enplanements for the year are not reported, nor are losses; however, both now head downward from black to red.

In 1972, the employee population numbers 297. U.S. markets are now abandoned almost entirely as major concentration is placed on expanding European operations from an enlarged West Berlin base.

The sixth largest U.S. supplemental boards a total of 399,000 passengers on the year. Revenues are \$15.6 million, but expenses swell to \$18.08 million. Consequently, deficits continue to be posted: \$2.42 million (operating) and \$4.14 million (net).

In 1973, markets are again realigned as Modern becomes the smallest supplemental. Five of the company's DC-8s continue to operate in Europe; however, three are soon shifted back to America as the company reinstates limited U.S. operations. At the end of the year, General Acceptance Corporation files for Chapter XI bankruptcy protection and the land development charters, long a source of guaranteed income for the airline, end.

Customer bookings incline upward by 23.1% to 491,000 and cargo is carried for the first time, a total of 13,000 FTKs are flown. Expenses remain out of hand, climbing to \$26.93 million on total revenues of \$25.06 million. The operating loss is \$1.86 million and the net loss, while improved, is still \$3.22 million.

The indecisive and bankrupt owners close down the carrier's German operations at the end of the year. Modern's enplanements drop 17.3% in 1974 to 406,000, while freight is off by 46.2% as only 7,000 FTKs are flown. Income declines again, down to \$24.61 million; expenses, however, shoot up again, to \$28.79 million. The operating loss is \$4.17 million while a net loss of \$8.98 million is the highest in the industry and will prove fatal.

Unable to maintain its viability, Modern begins to fade. In July 1975, a CV-990A is sold to the Denver travel club **Ports of Call**. The carrier's pilots strike on September 1 in a contract dispute that sees two aircraft abandoned by them, one each at New York (JFK) and Chicago (ORD).

At this point, the General Acceptance Corporation board of directors publicly announces that it can offer Modern no further support and thus the airline suspends services. The CAB grounds Modern on October 6 and it surrenders its operating authority the same day.

Seattle investor Eugene Horbach receives CAB permission to purchase the company's assets in March 1977. Later in the year, these are transferred into a new Modern Airways, which does not become operational.

MODERN TRANSPORT (WOLVERHAMPTON), LTD. See **DON EVERALL (AVIATION), LTD.**

MODILUFT: India (1993-1998). Modiluft is established at New Delhi on March 18, 1993. Following an unsuccessful approach to GE Capital, a joint venture is formed between **Deutsche Lufthansa, A.G.** and S. K. Modi's Modi industrial group subsidiary **MD Express**. Satish Kumar is named chairman and the company is outfitted with 3 Boeing 737-230As chartered from the German flag carrier, which also trains all of the new entrant's personnel under terms of its technical agreement.

Revenue services are inaugurated on May 2, linking the airline's base with Bangalore, Bombay, Cochin, Hyderabad, and Jammu. In August, the two firms agree to form a joint ground-handling company. Operations continue apace during the remainder of the year.

A third B-737-230A arrives under lease from **Deutsche Lufthansa, A.G.** in 1994 and service is flown from a main base at New Delhi to 14 cities: Ahmedabad, Amritsar, Bangalore, Bombay, Calcutta, Cochin, Goa, Jaipur, Jammu, Khajurabo, Pune, Srinagar, Udaipur, and Varanasi. Revenues for the year total \$31.8 million, allowing a net \$3.3-million profit. Traffic figures are not offered.

A fourth B-737-23A is ordered from Germany in 1995 and the company's technical cooperation agreement with **Deutsche Lufthansa, A.G.** is renewed. Simulator training for company pilots continues to be carried out at the German major's Frankfurt Training Center.

Late in December, the owners of **NEPC Airlines, Ltd.** attempt a hostile takeover. An open offer is made to acquire a 48% stake through the purchase of 300 million shares. The maneuver will not, in the end, be successful, largely due to the shaky status of NEPC and its subsidiary **NEPC Skyline, Ltd.**

The joint-venture airline faces collapse in May 1996 when **Deutsche Lufthansa, A.G.** pulls out and accuses its partner, India's Modi business group, of withholding DM 33 million (\$20.62 million) in dues and fees for aircraft leases, maintenance, and the training of pilots and cabin crews. Chairman Kumar holds a press conference in New Delhi to deny the charges.

The company actually fails in September, forcing its German partner to commence a long legal battle for the recovery of the three chartered Boeings. During October, a number of pilots quit. While operating a single B-737, the company seeks \$100 million in additional financing.

In November, Modiluft countersues, claiming the German carrier owes it \$140 million in damages for loss of reputation and credibility. It also maintains that it has a valid claim on three of the chartered aircraft.

In January 1997, the company allows its operating license to lapse. In April, the Bombay High Court hands back the disputed Modiluft planes

to the German airline, but DLH fails to take the jets out of India because of another case pending in the Supreme Court. On August 20, **Deutsche Lufthansa, A.G.** and Modiluft announce a comprehensive settlement plan that resolves outstanding issues that have been the subject of litigation between the two organizations. A Modi group spokesman suggests the move will lead to an early relaunch of the joint-venture airline. Indeed, after a year of legal wrangling, DLH in mid-September will receive back the three Boeing aircraft it had leased to Modiluft, as well as a \$5-million damages award, which will be paid in six tranches beginning in the year 2000.

Meanwhile, Modiluft, which has become a possible takeover target for **NEPC Airlines, Ltd.**, makes plans to resume services in February with several B-737s leased through Fortis Aviation. To assist in the resumption of operations, a management contract is signed in November with Speedwings, a subsidiary of **British Airways, Ltd. (2)**.

Despite the best-laid plans, the company remains grounded in 1998. However, its scrip, languishing below Rs 3, continues to be traded on the Bombay Stock Exchange. Although the Delhi High Court passes a winding-up order, it is withheld when, late in the year, reports begin to circulate that the company will resume flights and thereby discharge its debts.

On March 19, 1999, founder Modi informs the press that the rumors concerning a possible relaunch are true. Modi has entered into an agreement with the Vancouver-based Verus Group, headed by nonresident Indian Ajmai Khan, to refund the airline and put it back into the air as Royal Airways, Ltd.

It is anticipated that the Verus Group will raise C\$17.5 million to pay off the old debts and another C\$17.5 in equity, hopefully by June 30, so as to allow operations to resume by the end of June. News of the possible restart helps company shares on the Bombay Stock Exchange to jump to Rs 12.50 each.

Meanwhile, during the first two quarters of the year, numerous companies have continued to petition the Delhi High Court for satisfaction of their claims. In addition, Air UK Leasing, Ltd. charges that Modiluft did not deposit 63 crore with the Indian customs department that it had collected from its passengers as inland air travel tax.

These debt cases are adjourned from time to time. The metropolitan magistrate examining the inland tax charge accepts the police report and simply acquits the accused. Air UK Leasing, Ltd. takes its charges to the High Court.

On April 23, Chairman Modi is directed to file an affidavit with the court officially explaining any plans to restart the carrier or for raising money to pay its debts. Additionally, he is directed to disclose all personal assets held by himself or in the name of his family members. When this move becomes public, analysts suggest that the Supreme Court may, as it has in a few earlier instances, actually be preparing to remove corporate protections and seek to attach the personal assets of the carrier's owner and directors.

Summoned to appear before the High Court on May 14 in the matter of the inland tax, Chairman Modi sends word, through his attorneys, that he cannot be present due to a previously planned foreign trip. On May 21, Justice D. K. Jain severely admonishes Modi's failure to appear and directs him to present his person before the judges on May 24. In addition, the court reverses the metropolitan magistrate's order regarding the criminal case of tax evasion and orders that proceedings against Modiluft continue in accordance with the Indian penal code.

Little more is heard about the defunct airline during the remainder of the year.

In August 2000, the media reports that, despite huge debts, Modiluft hopes to resume operations by October. The Indian Civil Aviation Ministry has, however, demanded that the company first pay off its unpaid fuel and landing fee bills.

It is revealed on September 4 that Modiluft has secured a \$22.5-million loan from the Allied Boston Bank via a new equity partner Royal Holdings Services. Funding will be used to pay off debt and secure a fleet of leased Boeing 737-400s. According to critics, the SK Modi-

promoted airline continues to owe \$19 million to the leasing concern Air UK, Ltd., \$12 million to **Deutsche Lufthansa, A.G.**, and \$25 million to the three energy firms—Indian Oil, Hindustan Petroleum, and Bharat Petroleum. New CEO Rex Lezard, in an interview with *The Times of India* on September 20 admits debt, but does not agree with these numbers.

Despite debate over debt servicing, the reborn enterprise, which has been renamed **Royal Airways, Ltd.**, is now operating according to a business plan proposed in August by the **British Airways, Ltd. (2)** consulting subsidiary Speedwing. Plans call for the acquisition of five Next Generation Boeing 737-700s and the resumption of business from Delhi as a passenger airline. A staff of 1,000 is planned.

On October 2, progress toward relaunch is halted when the Directorate of Civil Aviation, at the request of the Indian customs bureau, places a hold on the certification process due to unpaid taxes.

The Hindustan Times, in late November, strongly suggests that the U.S.-backed company **Royal Airways, Ltd.** may be flying in mid-January 2001.

MOHAWK AIRLINES (1): United States (1953–1972). Founded in 1948 as **Robinson Airlines**, Mohawk is the product of a January 1, 1953 change in corporate image. The workforce at this point totals 354. Lynn Smith, a youngster from the Onondaga Reservation, now becomes the company's mascot, "Li'l Moh." Smith, who will appear at promotional events and be featured in the carrier's publications in full ceremonial garb, is the only "living trademark" in the airline business.

The nine Robinson Douglas DC-3s are rechristened in honor of Indian tribes and a famous Native American leader: *Air Chief Iroquois*, *Air Chief Delaware*, *Air Chief Algonquin*, *Air Chief Tuscarora*, *Air Chief Onondaga*, *Air Chief Niagara*, *Air Chief Seneca*, *Air Chief Cayuga*, and *Air Chief Techumseh*. Unique among named airliners, the identities of the planes are not painted on their noses, but rather on their tails.

Vice President-Operations Robert E. Peach becomes president/CEO in 1954. The fleet is increased by the addition of the Douglas transport *Air Chief Mohican*. Mohawk now increases the traffic on its intrastate New York routes significantly, particularly as a result of taking over the assets and network (including Boston) of bankrupt **E. W. Wiggins Airways**. An important schedule is inaugurated on April 17 from Ithaca to Boston via Pittsfield, Springfield, and Worcester.

On June 7, Mohawk enters the record book for another reason, as it chooses to launch the first—and, as it turns out, only—scheduled helicopter operation by a U.S. local service air transport company. The Sikorsky S-55 flights between the Catskills and Newark Airport continue until September 30, when a lack of city-center heliports dictates cessation. Revenues for the year total \$3.6 million.

To accommodate an upward trend in conventional traffic, the Utica-based carrier introduces three Convair CV-240s (*Air Chief Oneida*, *Air Chief Nanticoke*, and *Air Chief Seneca*) on July 1, 1955, becoming the first American local service carrier to offer service with a pressurized airliner. All three of the Convairs had previously been operated by the Chinese carrier, **Civil Air Transport**. Two more CV-240s are leased from **Northeast Airlines** in December.

The carrier now receives permanent certification from the CAB and carries almost 250,000 passengers. Revenues exceed \$3 million and a \$160,000 profit is recorded.

In 1956, the CAB awards Mohawk routes to Erie and Detroit and Oneida County agrees to build a new hangar and office facilities for the carrier at Utica.

On June 15, 1957, operations are started from Ogdensburg, New York. Having acquired five additional CV-240s and retired several DC-3s, the number of flights from Newark is increased on June 21. In direct competition with **American Airlines**, a new service is introduced from Syracuse to New York City (Newark) on June 21. Simultaneously, company headquarters are transferred from Ithaca to Utica's Oneida County Airport.

On December 22, Ruth Carol Taylor is hired as a stewardess, the first African-American woman so employed on a U.S. scheduled airline. The

appointment is covered by both *The New York Times* and *The New York Daily Mirror*. Her employment ends on April 1, 1958 when, in accordance with then-standard industry rules, she resigns to wed a Trinidad cricket player.

As the company's commuter network north and northwest of Manhattan attracts more sophisticated travelers, the airline finds itself in need of newer aircraft to upgrade its image and to maintain its market grasp. Orders are placed for Convair 440s while the new Utica base is also opened. Painted in the company's new black-and-gold color scheme, the first CV-440, *Air Chief Blackfoot*, arrives in December.

Relabeled "Cosmopolitans," the CV-240s are joined in 1959 by four more CV-440s (*Air Chief Joseph Brant*, *Air Chief Shenandoah*, *Air Chief Red Jacket*, *Air Chief Hiawatha*), which arrive by August; the first local service carrier to operate the type, the company's CV-440s introduce Golden Cosmopolitan Service. Flights are initiated from Windsor Locks, Connecticut, to 12 eastern cities on December 1.

Three CV-240s are sold on January 28, 1960. A CV-440 with 27 aboard skids while landing at Utica, New York, on February 19, and is badly damaged; only minor injuries are reported. Between March 17 and 30, company stewardesses, supported by the pilots, strike for higher wages. The fleet is grounded during this period.

To make the DC-3 service more appealing, two units are repainted and given "Steamboat Gothic" markings that announce a males-only Gas Light Service. Inside, the passenger cabins are redone in Victorian motif, complete with red velvet curtains, carriage lamps, and Currier and Ives prints. Travelers are greeted by stewardesses dressed in Naughty Nineties costumes and plied with free beer, cheese, and pretzels and allowed to purchase 5¢ cigars. Prior to beginning the special service on October 10, the company bows to protests of sexual discrimination and defines "family parlors" in the front of the planes, in the areas previously assigned to first-class. The slightly clad flight attendants will spend most of their time in the rear, handing out cold brews and stogies. The initial Gas Light Service return route is operated by Flights 1890 and 1891 from Buffalo to Boston via Rochester and Syracuse.

Enplanements for the year total 576,000.

In response to the success of the initial Gas Light Service, Mohawk, in early 1961, expands it. Eastbound Flights 1892 and westbound Flight 1893 are added from Syracuse to Boston via Hartford, Springfield, Albany, and Utica. The increase requires that a third DC-3 be dedicated to the operation. Weekend Gas Light Service flights are added from Newark to Ogdensburg via Watertown.

Mohawk now makes several other significant moves to beat the competition. In April, three former **American Airlines** CV-240s are acquired and christened *Air Chief Seneca*, *Air Chief Chippewa*, and *Air Chief Cayuga*. The names have been appropriated from the DC-3s employed on Gas Light Service. Four more Cosmopolitans will be acquired before the end of the year.

Routes to eight communities in eastern Vermont and New York are taken over from **Eastern Air Lines** in September, along with the former **Colonial Airlines** route from New York City to Albany. Mohawk agrees to purchase Eastern's Martin 4-0-4 fleet, including nine machines to be delivered before the end of this year and six the next.

A CV-240 with 16 aboard crashes while landing at Windsor Locks, Connecticut, on October 16; the pilots have forgotten to extend the landing gear. Also during October, a Univac computerized central reservations office is organized in Manhattan to handle calls from 12 major cities. In the same month, plans to end the popular Gas Light Service are temporarily shelved. The 23,000 mostly male passengers who have frequented the special product during the year have consumed a mountain of food: 2,000 lb. of pretzels, 1,000 lbs. of cheese, and 31,700 cans of beer. In addition, 17,600 5-cent cigars are purchased.

When the Manhattan computer system is in full operation in early 1962, Mohawk is the first feeder airline to offer a systemwide Telepak communications and reservation system. Three CV-440s are purchased from **KLM (Royal Dutch Airlines, N.V.)**.

Despite earlier CAB opposition to the Convair upgrade (expressed via subsidy cuts), President Peach, realizing the need to continue fleet improvement if he is to compete, places a \$17-million order on July 24 for four (later seven) British-made BAC One-Eleven 204AF jetliners. Gas Light Service flights end just after Labor Day in early September.

The British order brings Mohawk a letter of warning in December from CAB Chairman Alan Boyd who, speaking on behalf of the board, sees "substantial financial risk" if the order is completed and suggests that the company could lose its federal subsidy if it persists.

Chairman Peach responds to Mr. Boyd in January 1963, suggesting that the new aircraft will reduce the carrier's need for subsidy and that they are being privately financed. With CAB approval, scheduled service is inaugurated to Toronto.

On July 2, a Martin 4-0-4 with 3 crew and 40 passengers crashes on takeoff from Rochester during a severe thunderstorm (7 dead). One of the survivors, Allen J. Breslau, relieves the accident in his *The Time of My Death* (New York: E.P. Dutton, 1977).

Enplanements for the year total 1,134,000 and revenues are \$26.4 million.

Airline employment in 1964 stands at 1,720 and the fleet includes 34 aircraft. A Martin 4-0-4 with 44 aboard crashes during a March 1 landing at Broome County Airport, New York, when the pilot mistakenly retracts his landing gear; no injuries are reported. A fifth BAC 1-11-204AF is ordered on March 31. A new executive office building is opened at Utica Airport.

In October, the carrier, in exchange for 6 Convairliners, trades 14 Martin 4-0-4s to St. Louis-based **Ozark Air Lines**. The transaction is a lease-purchase arrangement by both parties.

Also during the fall, President Peach accepts an invitation to address a dinner of the Newcomen Society of North America in New York City. As is the Society's custom, his remarks are published as a small pamphlet, *Four-Seaters to Fan Jets: The Story of Mohawk Airlines*.

Orders worth \$70 million are also placed for 18 Fairchild Hiller FH-227s. A new \$1.5-million executive office building is occupied at Oneida County Airport and service is initiated to Pittsburgh.

Passenger boardings jump 19% to 1.4 million. A total of 375,000 passengers are boarded in the New York City metropolitan market making Mohawk the 7th largest airline in the Big Apple. Overall revenues advance 12% to \$30 million and expenses rise only 6.7%, leaving a net profit of \$1,386,000.

The workforce in 1965 ascends to 1,941. A passenger is injured when a CV-440 with 13 aboard must take evasive action on January 18 to avoid a midair collision near Bradley, Connecticut.

On February 19, orders are placed for two more BAC 1-11-204AFs. Another midair collision is avoided in similar dramatic fashion on February 22 near New York (JFK); this time a stewardess aboard the CV-240 is the only 1 of 47 hurt.

A fire starts in the cargo hold of a CV-440 taxiing for takeoff from Albany on March 25; all 43 aboard are safely evacuated.

The first of five British-made BAC 1-11-204AF jetliners to be delivered on the year arrives on May 15; in ceremonies at Westchester County Airport, it is christened *New York* by CEO Peach. A second BAC, *Ohio*, is delivered on June 6.

Mohawk, the largest of the local service airlines, introduces its new jetliners on July 15, making it the first of its airline class to enter the jet age. It is also the first company to operate its British-made jets over an exclusively short-haul network. The initial BAC 1-11-204AF route is operated from Cleveland to White Plains via Binghamton, Elmira, Corning, Buffalo, Rochester, Syracuse, and Utica.

During the summer, company pilots familiarize themselves with Fokker operations using an F.27F leased from the Champion Spark Plug Company. Two additional BACs are ordered and on September 1, the nosegear of one of the new jets collapses as the aircraft, with 31 aboard, lands at Utica.

The first Fairchild Hiller FH-227A Vista Prop Jet is delivered on September 30; christened *City of Albany*, it is placed into service on routes

in upper New York State. The FH-227s *City of Elmira*, *City of Syracuse*, *City of Glens Falls*, and *City of Watertown* also arrive during the summer, the latter unit a "B" model. They are followed by the *City of Plattsburgh*, *City of Ithaca*, *City of Saranac Lake* and *City of Massena* between on October 29 and December 13. The *City of Ogdensburg* is the first FH-227B to be received since June, arriving on Christmas Eve. Meanwhile, by year's end, the BAC 1-11-204AFs *Pennsylvania*, *Massachusetts*, and *Michigan* have all entered service.

Passenger bookings accelerate by 20% to a record 1,622,037. The boarding figures are also the highest among the U.S. regionals. The net profit for the year skyrockets 118% to \$1,217,025.

The company suffers fiscally in January 1966 when a blizzard shuts down the Northeast for a week. During the year, the company trades all but one of its Convairs to Fairchild as partial payment for the Vista Prop Jets; the one is returned to General Dynamics. The company's BAC 1-11-204AFs are challenged on their New York City to Syracuse route in March by **American Airlines**, which introduces its own British-made One-Eleven Astrojet airliners.

Having concluded an arrangement with Fairchild to return its first five FH-227As for up-engined B models, Mohawk removes the *City of Elmira* on May 3. Mohawk introduces the BAC 1-11-204AFs *Discover America*, *Ontario*, *Connecticut*, *Vermont*, and *New Jersey* by July.

During the summer, hundreds of reservations for connecting flights on **American Airlines**, **United Air Lines**, **National Airlines**, **Eastern Air Lines**, and **Trans World Airlines (TWA)** are cancelled when those carriers are struck by their unions. Partially in response, a \$25 Weekends Unlimited fare is introduced, allowing low-cost travel systemwide all-day Saturday until 6 p.m. Indeed, customers are challenged to fly to as many company destinations as they can within 48 hours.

Unresolved pension issues cause IAM mechanics to strike the airline beginning on December 18. Management personnel attempt to keep 75% of the fleet in the air. Revenues for the year are \$41,085,855, but a net loss is suffered.

The FH-227B *City of Burlington* arrives on January 14, 1967. The continuing mechanics strike is finally settled on January 31 and has cost 133 mechanics their jobs. A newly upgraded headquarters facility is opened at Utica; it features the new Edwin A. Link Training Center, housing the first flight simulator operated by a local service airline. Detroit-Boston weeknight passenger-cargo service is initiated on February 1. Two weeks later, on February 14, flights begin to seven more upstate New York cities plus Cleveland.

The FH-227B *City of Erie* is placed into service on February 18, followed by the *City of Utica* on March 23, the *City of Worcester* on April 6, the *City of Jamestown* on April 20, the *City of Keene* on May 2, and the upgraded *City of Albany* on May 25. The original *City of Albany* is returned on May 27. BAC jetliner flights are, meanwhile, inaugurated to Montreal for the Expo 67 World's Fair.

Not long after takeoff from Elmira, New York, for a June 23 service to Washington, D.C. (DCA), Flight 40, the BAC 111-204AF *Discover America* with 4 crew and 30 passengers, suffers an in-flight fire that causes the tail to separate from the aircraft. There are no survivors from the crash 1 mi. E of Blossburg, Pennsylvania.

The original FH-227 *City of Syracuse* is returned on September 14 as is the *City of Glens Falls* on October 26. The last two FH-227Bs arrive during the fall, the *City of Syracuse* on October 26 and the *City of Watertown* on November 21. The original *City of Watertown* is withdrawn on December 4.

The employee population swells during the year to 2,175 and the fleet now includes 10 BAC 1-11-204AFs, 4 CV-440s, and 18 FH-227Bs. Orders are placed for 3 Boeing 727-200s. Enplanements total 2,038,419. Revenues advance 7.7% to \$44,259,181, but another net loss is accepted: \$274,734.

A strike disrupts operations beginning in January 1968. Supervisory personnel keep jet aircraft flying, but the last eight CV-240s cannot be manned and thus are withdrawn. The reduced schedule remains in effect until May 1 when the job action ends. The \$70-million equipment order

of 1964 is nearly completed with the delivery of seven of the last eight new BAC 1-11-204AFs: *Quebec*, *Rhode Island*, *New Hampshire*, *New Jersey* (the original is renamed *Robert E. Peach*), *District of Columbia*, *Dominion of Canada*, and *Captain Joe Donnelly*.

Mohawk now acts to increase its feed by providing certain interline services to **Northern Airways** in New England.

The employee population numbers 2,450 during the year and the fleet includes 34 aircraft. Passenger boardings jump 15.6% to 2,355,176 and freight traffic is up by 50%. Revenues accelerate 18.5% to \$52,443,728, but a huge \$3.3-million net loss is suffered.

Airline employment in 1969 is 2,490. An IBM 360/65 reservations system comes on line in January. In February, Mohawk receives FAA approval for the evaluation of an area navigation system. Top management is now reshuffled as President Peach becomes board chairman/CEO and Russell Stephenson is elected president.

The 18th and last 1-11-204AF, the final BAC Dash-200 built, is received on May 17 and christened *Illinois*.

By midyear, the Convair fleet is completely retired and three more BAC 1-11s are acquired, Dash-215AUs purchased from **Aloha Airlines** (two of which are named, *Minnesota* and *Discover America*). Service is now provided to 87 cities east of the Mississippi.

While on initial approach to Glen Falls on a November 19 service from Albany, Flight 411, the FH-227B *City of Burlington* with 3 crew and 11 passengers, strikes trees on Pilot Knob Mountain 9 nm. N out in the Adirondack Mountains near Lake George, hits a rock cliff, and slides 38 ft., becoming wedged between some trees. Fire breaks out and the inaccessibility of the crash site delays rescue operations until November 21, at which time it is confirmed that there are no survivors.

Bookings for the year total 2.6 million. As a result of equipment costs and stiff competition, the carrier suffers a \$4.7-million loss on revenues of \$64.1 million.

The employee population in 1970 is 2,465, a 2.15% increase. Chairman/CEO Peach steps down early in the year due to illness, although he remains a member of the board. The fleet comprises 23 BAC 1-11-200s and 17 FH-227Bs. Service is inaugurated to Minneapolis (MSP), five other nonstop routes are started, and five services in New England are taken over from **Northeast Airlines**. The new Horizon Hotel in Utica is opened.

Three BAC 1-11-203AEs are leased from **Braniff International Airways** in September and arrive wearing the company's new "Buckskin" color scheme. The renamed *Robert E. Peach* is also given the new livery. Most of the FH-227Bs now also receive a slight livery change; Vista Prop Jet titles are removed and all names are shortened. The *City of Glens Falls* is now just *Glens Falls*.

As the new decade begins, local service carriers begin to encounter stiffer competition from trunk lines and many cannot survive the fight. Taking a leaf from the book authored by **Allegheny Airlines**, the company now elects to begin a feeder network. "Mohawk Commuter" services to smaller communities begins under contract with **Northern Airways**, **Command Airways**, and **Executive Airlines (1)**.

This new arrangement draws the ire of the ALPA chapter at Mohawk, which has grown to become the third largest of the nation's regional airlines. Without a contract, it now seeks job protections that the carrier cannot guarantee. Consequently, a strike begins on November 12. The job action forces the carrier to halt operations and lay off its remaining 2,500 employees. Although binding arbitration is agreed to by both sides in December, the negotiation process does not immediately commence.

Customer booking figures for the year consequently drop 13.3% to 2.26 million. Freight traffic, however, does grow by 13.6%. Revenues decline to \$61.52 million and additional losses are suffered: \$4.11 million (operating) and \$9.35 million (net).

In January 1971, company executives are able to gain membership for Mohawk in the Airline Mutual Aid Pact, an arrangement under which struck carriers are able to gain some measure of profits from a fund into which all have contributed. The membership nets the company \$65,000 for the year's first month.

The pilot strike ends in a mediated agreement on March 19, by which time Mohawk has been pushed to the brink of collapse. Despite the initiation of new services to Chicago and nonstop from Washington, D.C. and Baltimore to Buffalo, huge losses are piled atop those suffered during the previous two years. So weakened that there is no hope of recovery, the airline has only two choices: fail or sell out. Merger discussions are begun with **Allegheny Airlines (1)**, the country's largest local service carrier.

A vote on an Allegheny merger is scheduled by the Mohawk board for April 5. In order to avoid participation in the decision, Director Peach leaves the room; the board, nevertheless, elects to turn the company over to Allegheny. On April 14, five days after approval is received from the CAB and the same day company pilots ratify their new contract, Peach resigns from the Mohawk board. The same day, an agreement of merger with **Allegheny Airlines (1)** is announced to the public.

Under terms of the union, Allegheny issues 704,000 common shares, 744,000 common stock purchase warrants, and 274,000 shares of convertible preferred stock to trade to holders of Mohawk shares and subordinated debt. Receipt of required government approvals for the merger and assimilation of the carrier will require up to a year. Ex-chairman Peach dies by his own hand on April 20.

Ex-con H. von George, 45, brandishing a pistol, takes stewardess Eileen McAllister hostage and hijacks Flight 452, an FH-227B with 45 other passengers en route from Albany to New York, on January 26, 1972. The turboprop is forced to land at Westchester County Airport at White Plains, where 48 passengers are allowed to deplane. After threatening to blow up the turboprop, von George next demands and receives parachutes for himself and McAllister and a \$200,000 ransom and orders the pilot to take off for Poughkeepsie. Just after the plane lands at Dutchess County Airport early on January 27, the pirate is given a getaway car. After placing McAllister in the front passenger's seat, von George climbs behind the steering wheel—and is immediately shot dead by an FBI agent's single shotgun blast. Eileen McAllister is safe and her 10 hours of terror are over.

While on final approach to Albany County Airport on March 3, Flight 405, the FH-227B *City of Keene* with 3 crew and 45 passengers strikes a house 3.5 mi. short of the runway and crashes; 16 from the aircraft are killed along with 1 person on the ground.

Flight 437 from Washington, D.C. to Utica on the evening of April 11 is the company's final service; the FH-227B completing the flight circles the field before landing. When the books are closed, it shows the airline is not losing money, but has, in fact, gained \$12 million for its new owners since the previous April. **Allegheny Airlines (1)** has not had to spend a dime on taking over this latest acquisition.

MOHAWK AIRLINES (2): United States (1989–1993). Robert Peach Jr., son of the longtime president/CEO of **Mohawk Airlines (1)**, and John Barkett, with investment from Robert's brother John, establish the holding company Horizon Air, Inc. at Syracuse in early 1989. Peach employs the new entity to acquire **Catskill Airways** in the spring. The new owner at first plans to name his prize **Mohawk Airlines (2)** after his father's company. **USAir**, the renamed **Allegheny Airlines (1)** that had purchased **Mohawk Airlines (1)** in 1971, files an objection.

At this point, the Catskill subsidiary is labeled **Manhattan Air** and is shifted to a Syracuse hub. Service is introduced to Martha's Vineyard and Nantucket from Islip, New York, and New Bedford, Massachusetts, on June 24. **USAir** now agrees to Peach's moniker request and **Manhattan Air** becomes the second Mohawk, launching service in July with a fleet of seven Beech 99s. A \$27-million order is placed for seven Beech 1900Cs. Simultaneously, Mohawk Air Express small package flights are started between Oriskany, New York, and Boston, Hartford, Newark, Syracuse, Utica, and Islip.

By year's end, the 135-employee small regional has enplaned 37,678 passengers.

The first Beech 1900C is delivered in late January 1990 and enters service on February 17, replacing **Presidential Airways** on a new serv-

ice to Washington, D.C. (IAD). By March, Mohawk is operating 110 daily departures to 16 markets in 7 states, with emphasis on Boston, New York, and Hartford. The second Beech 1900C arrives in late spring.

Following Iraq's August 2 invasion of Kuwait and the dramatic increase in the cost of aviation fuel, Mohawk Airlines (2) enters a financial tailspin. Traffic and financial figures are not released; however, it can be seen in retrospect that all is not well.

The fleet in 1991 is reduced to 1 Beech 99 and during the summer, the small regional files for Chapter XI bankruptcy. While under court protection, additional equipment is sought. Enplanements for the year total 78,325.

President Peach oversees a workforce of 125 in 1992. The fleet comprises 4 Beech 1900s and 3 Beech 99s. Inspectors from the FAA discover FAR maintenance violations and on June 5 issue an emergency order pulling the carrier's license to fly. The Federal District Court at Syracuse refuses on June 16 to block the carrier's grounding.

President Peach resigns in the spring of 1993 and is succeeded by Chief Financial Officer Kim Champney. Although Mohawk Airlines (2) is able to win recertification on June 25 to commence scheduled operations, it does not have the resources to restart and is liquidated.

MOJAVE AIRLINES: United States (1983–1984). C & M Airlines of Inyokern, California, is reformed in 1983 and renamed after new owners purchase its certificate. Employing Cessna 402s and a Cessna 414, it undertakes an Essential Air Service (EAS) contract linking its base with Palmdale and Lancaster.

Unable to turn a profit, the third-level operator declares bankruptcy in early 1984. It is subsequently reformed as **Indian Wells Airlines**.

MOLDAVIAN AIRLINES: Kishinev Airport, Kishinev, 277026, Moldavia; Phone 373 (2) 529 365; Fax 373 (2) 525 064; <http://www.mdv.md>; Code 2M; Year Founded 1994. The flag carrier of the Republic of Moldova is established at the capital city of Chisinau on July 26, 1994. It is also the first private airline in the country. Founder Nikolai Petrov is president/CEO and he recruits a workforce of 80. Two each former **Aeroflot Soviet Airlines** Yakovlev Yak-40s and Yak-42Ds are acquired and revenue twice-daily return flights commence on August 19 between the capital and Moscow.

Services continue apace during the remainder of the decade; scheduled destinations visited include Antalya, Berlin, Budapest, Milan, Moscow, Prague, and Rostov-on-Don. The subsidiary regional carrier **Carpatair** is established in March 1999 and is outfitted with one of the former Soviet Yak-40s. At the same time, the carrier enters into a marketing and code-sharing agreement with the new Bucharest-based regional carrier **Veg Air, S.A.**, which launches scheduled flights on March 15 to Budapest, Timisoara, and Venice.

In November, the company becomes a joint Swiss-Moldovan company and shareholding is now divided between SAGroup, **MALEV Hungarian Airlines, Rt.**, **Tarom Romanian Airlines, S.A.**, Moldova Agroindbank, and the energy and financial groups LUKOIL and ASCOM.

Airline employment totals 155 at the beginning of 2000 and the fleet now comprises 2 Yak-42Ds, 1 Tupolev Tu-134A, and 1 SAAB 340B turboprop.

SAAB 340B frequencies between Chisinau and Budapest become twice daily at the end of March. At the same time, a new Frequent Flyer 2000 loyalty program is introduced.

The Moscow terminus is switched to Domodedovo Airport on October 1. A month later, the company begins to offer its Moscow passengers free transport from the airport to the Domodedovskaya and Kashirskaya underground stations. Jetway service onto the Tu-134A is introduced at Domodedovo on November 3.

MOLOKAI AVIATION: United States (1969–1972). This Hawaiian carrier is established by Timmy Cooke in late spring 1969 to offer scheduled passenger and cargo flight-seeing services. Employing a

Piper PA-23 Aztec, Cooke inaugurates flights on June 12 and continues them until he goes out of business in 1971.

MOLONEY AVIATION (PTY.), LTD.: Terminal Building, Essendon Airport, Melbourne, Victoria, 3041, Australia; Phone 61 (3) 9379 2122; Fax 61 (3) 9374 2086; <http://www.anzacc.com/moloney.htm>; Year Founded 1972. Maurice G. Moloney establishes this nonscheduled airline at Essendon Airport in 1972 to serve the Australian tourism and air charter industry. Flight-seeing and air tours commence around the local countryside. In 1975, Moloney becomes the first all-weather air safari operator in the nation.

Service continues apace during the remainder of the decade and into the 1980s. The company's most famous service is introduced in 1983, the Penguin Express air package tour to Philip Island. At that point, customers may witness an attraction called the "Fairly Penguin Parade."

Time Saver Tours are launched in 1987, including 50-min. flights to Victoria's magnificent Great Ocean Road. Landing at Peterborough, at the mouth of the Curdies River, passengers on this package are taken to see such wonders as the Coast National Park and a rock formation known as the "Twelve Apostles."

During the next decade, Moloney also begins to offer tours to the west of Melbourne, including air-ground trips into the Grampians National Park via the town of Stawell. Additionally, customized tours are made available, as well as flight training in a Cessna 172 and outings covering a combination of sites.

By 2000, Managing Director Moloney oversees a workforce of 8 and operates a fleet comprising 2 each Piper PA 34 Senecas and de Havilland DH 104 Dove 1s and 1 each Aero Commander 500S, Cessna 310, and Cessna 172.

MONARCH AIR LINES: United States (1946–1950). Organized in early 1946, Monarch is the third of America's new postwar local service carriers. Certified on March 28, it begins Douglas DC-3 services on November 27. Eventually, Monarch will fly routes linking Albuquerque–Salt Lake City–Denver, with intermediate stops.

In December 1949, it acquires **Challenger Airlines** and in April 1950 merges with rival **Arizona Airways**. The enlarged company is renamed **Frontier Airlines (1)** on June 1.

MONARCH AIR SERVICE: United States (1950–1951). Miami-based MAS is formed during the summer of 1950 to perform all-cargo contract charters throughout the eastern U.S. and into the Caribbean. Revenue operations commence with a single Curtiss C-46D Commando in November.

The C-46D with 3 crew and 45 passengers must abort its takeoff from Chicago (MDW) for Newark on January 4, 1951; although the aircraft is damaged beyond repair, there are no fatalities.

After the Curtiss crash, the company is unable to resume flying.

MONARCH AIRLINES: United States (1986–1987). This small niche regional is established in early 1986 at Grand Junction, Colorado, to provide scheduled services to the ski resort communities of Aspen and Gunnison. Operations commence in the fall with a single de Havilland Canada DHC-6-300 Twin Otter.

Unable to achieve economic viability, the company ceases operations in March 1987.

MONARCH AIRLINES, LTD.: London Luton Airport, Luton, Bedfordshire, England, LU2 9NU, United Kingdom; Phone 44 (1582) 400 000; Fax 44 (1582) 411 000; <http://www.monarch-airlines.com>; Code ZB; Year Founded 1967. William H. "Bill" Hodgson and Donald Peacock, directors of **British Eagle Airways, Ltd.**, establish Airline Engineering, Ltd. in January 1967 to provide aircraft maintenance for Britain's independent airlines.

Shortly thereafter, the gentlemen are approached by Cosmos Tours, which requires additional seating capacity for the 1968 summer season.

As a result of negotiations between the engineering concern and the package tour operator, Monarch Airlines is set up on June 1 to provide charter and inclusive-tour flights into southern Europe and the Mediterranean. Peacock is chairman, with Hodgson as managing director. The engineering firm is renamed Monarch Aircraft Engineering, Ltd. and remains in business.

With ideal connections from road and rail transport, London's Luton Airport is chosen as the new airline's base of operations. Orders are placed for new aircraft and a terminal is established at Tottenham Court Road, London.

On March 15, 1968, one of the two Bristol Britannia 312s purchased from **Caledonian Airways, Ltd.** is painted in a yellow and black livery with a distinctive crown logo and undertakes a proving flight to Rome and back. The inaugural tour flight, London (CTN) to Madrid, is made on April 5. Two more Britannias are added in September in December.

Enplanements by year's end total 119,000.

Two additional Britannia 312s join the fleet in 1969 as holiday service is offered to vacation points in Spain, France, Italy, Switzerland, and Yugoslavia.

Bookings reach 263,368.

Airline employment is 450 in 1970. The fleet now consists of 7 Britannia 312s. Destinations continue to be primarily in the Mediterranean. Under contract to Clarksons Holidays, new vacation services are offered from Manchester to Rotterdam and Paris. During the year, several different types of jetliners are evaluated as Monarch looks forward to jet services.

Freight traffic rises 13% while passenger boardings accelerate 11% to 295,918.

Monarch's Britannia fleet expands the carrier's route network significantly in 1971. Trooping flights are started, under contract to the Ministry of Defence, for soldiers needing lift to Australia. Between May and July, Hadj pilgrim flights are undertaken on behalf of **Ghana Airways Corporation** from West Africa to Mecca in Saudi Arabia.

Having completed an arrangement to purchase several surplus aircraft from **Northwest Airlines**, the carrier receives its first jetliner, a Boeing 720-51B, from the American carrier on September 15 and on December 13 it enters an inclusive-tour charter service from London (CTN) to Tunis.

Enplanements this year total 428,490.

Two more B-720-51Bs are acquired from **Northwest Airlines** in February and April 1972, respectively. Four Britannia 312s are withdrawn in May.

The work force now totals 297. Freight traffic climbs 16% and passenger bookings jump 19% to 529,000.

During 1973, several replacement services are flown on behalf of **British Overseas Airways Corporation (BOAC)** and a Britannia 307 is purchased in October.

A fourth B-720-51B is leased from **Maersk Air, A.S.** in March 1974; on June 14 it is employed to launch five months of transatlantic charters from Birmingham to Vancouver by way of Toronto. Meanwhile, in May, the Britannia 307 purchased in 1973 is sold along with a Britannia 312.

In August, several B720-015B replacement flights are made to the Middle East on behalf of **Iraqi Airways**. When Clarksons Holidays fails during the same month, Monarch now places orders for BAC 1-11-500s to win that company's customers. The last Britannia 312 passenger service is flown on December 18; thereafter the aircraft is withdrawn.

Three BAC 1-11-518s are received in February, March, and December 1975. The first begins inclusive-tour flights on March 19, Teesside–Munich. Bristol service accommodating Clarkson passengers also commences in March along with flights from Birmingham started in April.

The next-to-last Britannia still in the fleet is donated to the Duxford Aviation Society for a museum, part of the Imperial War Museum network.

The B-720-51Bs also enjoy a full schedule during the year. In November, a B-720B is leased from **British Caledonian Airways, Ltd. (BCAL)** to replace the **Maersk Air, A.S.** unit now returned. At the same time, the BAC 1-11-509 *Isle of Eriskay* is also chartered from BCAL.

The last Britannia 308F remains in service until the end of the year, but is sold to **African Safari Airways, Ltd.** in January 1976. One of the BAC 1-11-518s is chartered to **Cyprus Airways, Ltd.** The year's tourist season is not unlike those of previous summers; into 1977, service for groups is expanded to additional destinations in southern Europe, the Middle East, and North Africa. Orders are placed for Boeing 707-320Cs and the *Isle of Eriskay* is purchased outright.

In 1978, the Boeing 707-320Cs are placed in service and orders are placed for two B-737-200s.

Dan-Air/Dan-Air Services, Ltd. Managing Director Alan Snudden becomes managing director in 1979 as William Hodgson and Donald Peacock step down. Monarch is the third airline, behind **Eastern Air Lines** and **British Airways, Ltd. (2)**, to place orders for the B-757-200, requesting three with the E-4 version of the Rolls Royce RB211-535 engine. Original executives Hodgson and Peacock retire at year's end.

Beginning on October 1, 1980, the B-737-2T7s join the fleet and by 1982 the jetliners have brought passenger boardings of 1,170,000. Also in 1982, James Rainbow becomes managing director of Monarch Aircraft Engineering, Ltd. The B-737-2T7s are based in West Berlin and undertake holiday flights to 17 Mediterranean destinations.

The first B-757-2T7 is delivered on March 26, 1983; Monarch is the first charter airline in the world to buy the new twinjet. The company is now flying to 75 destinations from the U.K. to points in Europe, the Mideast, North Africa, and the Caribbean.

Passenger enplanements total 1.6 million.

The last two B-757-2T7s enter service in 1984 and the earlier aircraft are put up for sale. In 1985, Monarch expands its charter and inclusive-tour business to include flights from most of the larger British airports, except London (LHR). The BAC 1-11s are sold to **British Island Airways, Ltd.** and a new \$3-million maintenance hangar is opened at the London (CTN) base.

During 1986, the fleet comprises six B-737-2T7s and four B-757-2T7s and beginning on July 5, scheduled B-737-2T7 return service is started from London (CTN) to Mahon. Monarch is the sole British carrier on the route and the inaugural marks the first scheduled jet service out of Luton Airport.

A total of 3.67-million revenue passenger kilometers (RPKs) are flown, a 20.1% increase.

The fleet in 1987 includes 8 B-757-2T7/2T7ERs, 4 B-737-33As, and 2 B-737-2T7s. Five-times-per-week roundtrip B-757-200ER long-haul flights begin to the U.S. on April 30 between London (CTN) and Orlando.

Enplanements for the 1,200-employee carrier total 2,468,000.

Following the outbreak of the Australian domestic airline pilots' strike on August 24, 1988, two B-757-200s, complete with crews, are wet-leased by **Australian Airlines (Pty.), Ltd.** for a six-month period.

Passenger boardings for the 1,400-employee British charter operator fall by 8.8% to 2,250,800.

Company employment is decreased by 3.3% in 1989 to 1,074 and the fleet now includes 2 A300B4-203s, plus 2 on order, 6 B-737-3Y0s, including 5 leased to **Euroberlin France, S.A.**, 4 B-737-33As all leased to **Euroberlin France, S.A.**, 5 B-757-2T7s, including 2 leased to **Condor Flugdienst, GmbH.**, 3 B-757-2T7ERs, and 1 leased Dash-28AER.

Orders are placed for three B-737-3T7ERs. Chairman/Managing Director Snudden is created a CBE by Queen Elizabeth in the year's Birthday Honours.

The route network is significantly expanded; new destinations include Acapulco, Bangkok, Mombassa, Nassau, Orlando, Penang, and Rio de Janeiro. During the fall, a new £6-million state-of-the-art B-757 flight simulator is opened at London (LTN). The technology will train not only Monarch pilots, but also flyers from many other companies under contract.

Customer bookings recover and increase by 10% to 2,482,600.

The fleet in 1990 includes 6 leased B-737-3Y0s, 4 chartered B-737-33As, 5 leased B-757-2T7s, 3 B-757-2T7ERs, and 1 B-757-28AER. The first of four ordered A300B4-605Rs arrives in March and is placed into service the following month over routes to the Mediterranean.

Simultaneously, a new £6-million B-757 simulator is opened at a new £1-million facility at Luton Airport. The building also contains offices, classrooms, and a £600,000 cabin training simulator.

Chairman/Managing Director Snudden dies suddenly in May at age 59. He is succeeded by Donald D. McAngus.

A second large Airbus will be received later in the year. Enplanements reach 2,272,663.

In 1991, two A300B4-605Rs are acquired. Daniel L. Bernstein is appointed joint managing director in January.

Passenger boardings descend 12.7% to 2,016,560. Freight, on the other hand, skyrockets 233.8% to 2.87 million FTKs.

Airline employment stands at 1,234 in 1992 and the fleet now includes 5 each A320-212s and B-757-2T7s, 3 each B-737-33As and B-757-2T7ERs, 4 A300-605Rs, and 1 chartered B-757-28AER.

Customer bookings skyrocket 41.3% to 3,187,280 and cargo climbs another 22.5% to 5.21 million FTKs.

In 1993, Managing Directors Bernstein and McAngus oversee a workforce of 2,000, up 62.1% over the previous year. Charter flights continue to be flown from London (CTN) to the Caribbean, Europe, East Africa, Egypt, Asia, and Florida while scheduled services are provided from the same city to Alicante, Malaga, Minorca, and Tenerife.

During the summer, substantial bookings are acquired from Airtours International. The twenty-fifth anniversary is celebrated throughout the year.

Passenger boardings accelerate 18.5% to 4.1 million.

The fleet in 1994 is expanded by the addition of two more A320-212s and a fourth B-757-2T7ER. Scheduled service is initiated to Palma in May. A contract is signed with an unnamed U.S. tour operator to fly charters from America to Africa and the Seychelles.

Customer bookings swell 17.1% to 4,803,000.

The workforce stands at 2,000 in 1995. One each B-737-3Y0QC and B-737-33AQC are leased to **Aeropostale, S.A. (2)**. To provide additional lift during the summer holiday season, a Lockheed L-1011-1 TriStar is wet-leased from **Air Atlanta Icelandic, H.F.** Following the demise of **Zambia Airways Corporation** during the summer, that carrier's DC-10-30, *Nkwazi*, is purchased, repainted, and placed into service.

For the fall vacation schedule, a B-757-2T7ER is painted in a special blue and white livery and is given titles denoting a company contract with Renaissance Cruises. The aircraft is employed to fly travelers from Newark (EWR) to London (LGW) and then on to holiday destinations at or near Athens, Nairobi, and the Seychelles Islands. Meanwhile, another B-757-2T7ER is chartered to the Argentine nonscheduled operator **Dinar Lineas Aereas, S.A.**

Despite this activity, enplanements this year dip a slight 0.1% to 4,800,300.

Two hundred new workers are hired in 1996, a 10% increase. Two A320-212s are subleased to the Canadian charter operator **Skyservice, Ltd.**, a B-737-3Y0QC remains subleased to **Aeropostale, S.A. (2)**, and a B-757-2T7 is subleased to **Air Holland Charter, B.V.**

The Icelandic TriStar is leased for the summer season once more and the last B-737-2T7 is sold during the year. Monarch Aircraft Engineering adds a new hangar at Manchester, supplementing facilities at Luton Airport.

The company's 21 aircraft transport a total of 4,889,400 passengers, a growth rate of 2.1%.

The workforce is slashed by 30.9% in 1997 to 1,521. The fleet now includes 4 A300B4-605Rs and 3 B-757-2T7ERs. Also operated under charter are 7 A320-212s, 4 B-757-2T7s, and 1 each B-737-3Y0, B-737-3Y0QC, DC-10-30 and, during the summer, L-1011-1. The previous year's subleases are continued and a scheduled route to Gibraltar opens in May.

Scheduled destinations visited from London (CTN and LGW) include Alicante, Gibraltar, Malaga, Menorca, Tenerife, and Palma. Charters continue to be flown to points in Africa, Asia and the Pacific, the Caribbean, Africa, the U.S., India, and Europe.

During July, orders are placed for two A330-200s and two A321-231s, with the start of deliveries promised for March 1999.

Customer bookings inch up 0.5% to 4,924,000 as freight traffic plunges 77.1% to 21.52 million FTKs.

On May 21, 1998, an MD-11 is wet-leased from **World Airways**. Painted in Monarch colors, the aircraft will fly five weekly roundtrips between London (CTN) and Orlando and weekly between Manchester and Las Vegas until November 1. During the year, airline employment is boosted 17.1% to 1,781.

Passenger boardings dip a slight 0.8% to 4.88 million.

During the first week of January 1999, Monarch receives the first of five AERIS FX units from the airline entertainment systems concern Transdigital Communications. Just as scheduled, the first A330-243 arrives on March 26. Monarch is the first U.K. airline to employ the long-range Airbus in revenue service. The premier A321-231 follows on March 31.

New Monarch Premium Cabin service is introduced aboard the A330 when it enters service at the beginning of April.

During the year, the company's flight simulator business is sold to Flight Safety-Boeing, which continues to provide electronic training at the Luton Airport location.

Passenger boardings this year rise 5.3% to 4,817,000, while cargo traffic falls 38.2% to 6.29 million FTKs.

Airline employment at the beginning of 2000 stands at 2,400, a 34.8% increase over the previous 12 months.

A B-757-2T7 is wet-leased to **Dinar Lineas Aereas, S.A.** on January 4. The Boeing, in Monarch colors with Dinar titles, will operate on behalf of the Argentine carrier through the end of March. The contract, upon expiration, is extended.

Upon completion of the Hadj, an L-1011 is wet-leased from **Air Atlanta Icelandic, H. F.** on April 12 for six months. A leased A320-231 is delivered on April 19.

At the beginning of June, the AEEU, Britain's largest engineering trade union, signs an agreement with Monarch covering its 1,200 cabin crew. Jonathan Crick is elevated to the newly created position of commercial director on June 19, gaining a seat on the board of directors.

On July 28, orders are placed for five additional A321-231s for delivery during the second half of 2002.

An A320-212 is subchartered to **Skyservice Airlines, Ltd.** in October for the Canadian line's winter holiday schedule. It is delivered in Monarch colors with Skyservice titles.

The July A320 order is confirmed on November 23.

MONARCH AIRLINES (AUSTRALIA) (PTY.), LTD.: Australia (1991–1994). MAL is established at Sydney in early 1991 to operate scheduled third-level passenger and cargo flights with 1 Cessna 441 and 3 Piper PA-31-350 Navajo Chieftains. Late in the year, another commuter, **Southern Airlines (Pty.), Ltd.**, is purchased. Operations have been concluded by 1994.

MONGOLIAN CIVIL AIR TRANSPORT. See **MIAT-AIR MONGOL**

MONGOLYN IRGENIY AGARYN TEEVER. See **MIAT-AIR MONGOL**

MONMOUTH AIRWAYS: United States (1968–1979). The Castanea Corporation sells its third-level carrier, **Piper Twinair**, to Charles Robertson in 1968. The company is reformed and renamed in honor of its Monmouth County (New Jersey) Airport base. Employing a fleet of Beech 99s and Piper PA-31-310 Navajos, Robertson's commuter maintains daily roundtrips to New York (JFK), although a feeder arrangement with **Trans World Airlines (TWA)** will soon end.

Operations continue apace during the remainder of the decade and into the 1970s and during these years services are extended to Wilkes-

Barre, Pennsylvania, and Washington, D.C. (DCA). On October 24, 1971, a Beech 99 with two crew and six passengers is involved in an accident at Allentown–Bethlehem–Easton Airport in Pennsylvania (four dead).

Taking a leaf from the operations book of John Van Arsdale's **Provincetown-Boston Airline (PBA)**, President Robertson, in 1973, establishes a Florida division, doing business as **Vero Monmouth Airlines**, at Vero Beach on the Atlantic coast. Employing aircraft transferred from New Jersey, VMA undertakes to link its base with Tampa, Miami, Melbourne, and Orlando. This Dixie gambit is not successful and **Vero Monmouth Airlines** is closed down in late 1975.

Only northern operations are conducted between 1976 and 1979. During the latter year, the company is purchased and reformed into **Ocean Airways**.

MONTAIR AVIATION, INC.: 7673 Garfield Drive, Delta, British Columbia, V4C 4E6, Canada; Phone (604) 946-6688; Fax (604) 946-6508; Year Founded 1992; <http://www.montair.com>. Montair is set up at Boundary Bay Airport at Delta, south of Vancouver, in 1992 to provide scheduled and charter services and flight training.

The company owns its own passenger terminal and training facility. Charters are offered for companies and individuals, while scenic air tours for tourists become a specialty. Daily scheduled service is provided linking the company's base with Pitt Meadows Airport and Vancouver International Airport.

The fleet in 1997–2000 includes 2 Cessna 172s, 2 Piper PA-31-350 Navajo Chieftains, and 2 PA-34 Senecas.

Scheduled daily commuter service is introduced to the central British Columbia communities of Fairmont, Creston, 108 Mile House, Grand Forks, and Invermere.

MONTANA AUSTRIA (MONTANA FLUGBETRIEB, GmbH.): Austria (1975–1981). Capt. Jorg Stockl forms MA in late 1975 to offer the first intercontinental passenger charter and inclusive-tour flights operated by a private Austrian airline from Vienna in many years. Government bureaucracy and opposition from **Austrian Airlines, A.G.** results in a start-up delay of nearly a year.

Employing a pair of Boeing 707-138Bs previously operated by **Qantas Airways, Ltd.**, Montana Austria launches revenue services in November 1976 by executing the first return charter service between the nation's capital and Bangkok, Thailand.

During the next four years, a third Stratoliner is acquired and charters are undertaken on behalf of various clients, often to out-of-the-way destinations seldom visited by other scheduled or nonscheduled operators. Subcharters and replacement flights are often operated on behalf of better-known carriers. Price wars and recession lead company executives to accept a number of contracts of a dubious nature. In May 1981, one of these starts a string of events that will cause the airline's failure.

In May, U.S. government officials catch a Montana Austria B-707 loaded with illegal weapons at Houston. The plane is impounded and the company is heavily fined. Before the airline's leadership can get together the financing necessary to retrieve their aircraft, Austrian aviation officials in Vienna begin the process of withdrawing Montana's operating certificate. In late June, the German lessors of the carrier's Boeings call in all overdue payments and court bailiffs attach Montana's business accounts early in July. Out of resources and fighting legal battles against both government and financial opponents, Montana stops flying in mid-July. Over 2,000 customers are stranded at New York and in several European cities.

MONTANA DEVELOPMENT AND AIR TRANSPORT COMPANY: United States (1930). Established at Missoula in the summer of 1930, MD & ATC is equipped with a single Lockheed Model 5 Vega, which is employed to inaugurate scheduled passenger service to Kalispell in July. Without a mail contract, the little carrier is unable to generate sufficient revenue traffic to operate beyond November.

MONTAUK CARIBBEAN AIRWAYS: United States (1963–1984). MCA is founded at Montauk, Long Island, in the spring of 1963 to offer scheduled passenger air taxi flights to New York (LGA and JFK) and to the islands of Long Island Sound. Daily roundtrip, Cessna lightplane revenue flights commence on July 14. During the next decade, summer seasonal services are introduced to Boston.

In the 1970s, the carrier establishes a Florida division, **Ocean Reef Airways**, which provides flights linking the Ocean Reef Club at Key Largo with Miami. Chairman Robert O. King's carrier operates a mixed fleet that comes to include 1 each de Havilland Canada DHC-6-100 Twin Otter, Piper PA-31-350 Navajo Chieftain, Piper PA-31-310 Navajo, Beech 58 Baron and Bell 206B JetRanger helicopter.

In 1984, the carrier is reformed and renamed **Long Island Airlines**.

MONTENEGRO AIRLINES: Beogradska 10, Podgorica 81000, Montenegro, Yugoslavia; Phone 381 (81) 622 648; Fax 381 (81) 623 762; <http://www.montenegroairlines.com>; Code MGX; Year Founded 1994. This new flag carrier is set up by the government of Montenegro in 1994; the state holds 51% shareholding with the remainder split among various private investors. Dr. Dejan Radonjic is named director general. It will take several years for the concern to launch operations and revenue flights finally commence in April 1997 with a single Fokker F.28-4000 Fellowship. Destinations visited include Bari, Milan, Skopje, Frankfurt, and Zurich.

Early in May 1998, the company agrees to establish air links into Bosnia. A second F.28-4000 is acquired and on June 1 weekly service is started from Podgorica and Tivat to Sarajevo and Banja Luka.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, Montenegro Airlines, on March 24, 1999, halts all service into Belgrade as Yugoslav airspace is closed. A spokesman, in making the announcement, indicates that the situation will be evaluated further; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade, as well as to Sarajevo, Mostar, Zagreb, Split, Skopje, Tirana, Ljubljana, Timisoara, and Sofia remains halted on March 25–31 and for much of the duration of the NATO bombing campaign.

Although the fighting requires that Montenegro Airlines be grounded, the company is able to generate some income by operating a number of refugee flights on behalf of the UN Human Rights Commissioner and International Organization for Migration. Additional relief flights north into Western Europe will also be completed in the days ahead until Operation Allied Force is concluded on June 11. At the end of the month, a former **KLM UK, Ltd.** Fokker 100 is chartered from the Transasian Air Group.

A ban against flights into the European Union is finally lifted on October 11. A second Fokker 100 arrives from the Transasian Air Group in late November. It, too, had last been flown by KLM's U.K. subsidiary.

Arrangements are completed on July 10, 2000 for the charter of yet another Fokker 100 previously operated by **KLM UK, Ltd.** Christened *Sveti Petar Cetinjski*, it replaces an F.28-4000 and flies from Podgorica to Budapest, Ljubljana, Zurich, Frankfurt, and Rome.

Hosted by **JAT Yugoslav Airlines** CEO Mihajlo Vujinovic, a "meeting of the scheduled airlines of Southeast Europe" is held at Belgrade in mid-December to consider possible joint cooperation. In attendance are representatives of **MALEV Hungarian Airlines, Rt., Croatia Airlines, Air Bosna, S.A., Air Srpska, S.A., Monenegro, Macedonian Airlines, and Adria Airways (Adria Aviopromet) (2).** Due to an unplanned management change, **TAROM Romanian Air Transport (Transporturile Aeriene Romane, S.A.)** is unable to participate, but expresses interest in joint activities.

Of the eight airlines participating in the conclave, six express interest in joint commercial operations, four in joint technical and maintenance activities, and five in joint training exercises. To study and discuss mat-

ters further, three working committees are established: commercial, chaired by a representative from **Adria Airways (Adria Aviopromet) (2)**; technical, chaired by a **MALEV** representative; and training, chaired by a representative from **JAT Yugoslav Airlines**.

MONTGOMERY AVIATION CORPORATION: United States (1969–1970). MAC, the FBO at Montgomery, Alabama, elects to introduce scheduled daily roundtrip shuttle services to Tuscaloosa, Birmingham, and Jackson in 1969. Beech 18 revenue frequencies are duly inaugurated, but cannot be maintained beyond 1970.

MONTREAL AIR LEASING, LTD. See **QUEBECAIR, LTD.**

MONTERRAT AIRWAYS, LTD. See **MAS (MONSERRAT AVIATION SERVICES, LTD.)**

MORAINE AIRWAYS: United States (1971–1973). Jimmie D'Amato sets up Moraine Airways at Waukesha, Wisconsin, in the late fall of 1971 to provide scheduled daily passenger and cargo roundtrips to Fond du Lac and Chicago (ORD). Regular de Havilland Canada DHC-6-100 Twin Otter flights are inaugurated on December 20.

Early in 1972, The Leasing Corporation of Boston, Massachusetts, purchases the carrier, keeping it in business until January 9, 1973.

MOREFLY, A.S.: Alesund Apt. Vigra, N-6040, Norway; Phone 47 7018 3500; Fax 47 7018 3771; Year Founded 1955. A. S. Morefly is established at Alesund in 1955 to offer charter services to Vigra and other coastal destinations. A decade later, in 1966, the company begins helicopter flights by placing a Bell 47 into domestic service. The nation's first Bell 206B JetRanger is acquired in 1967. Both American machines are employed in passenger air taxi operations. Operations continue apace during the remainder of the decade and through the 1970s.

The company places its first Aerospatiale AS-350 into service in 1979. The company continues to emphasize onshore domestic operations during the 1980s, including agricultural services, emergency medical services (EMS), power plant service, sight-seeing, and other similar activities. These are further supported by the addition of two Bell 205As and a Bell 214B.

In late 1985, General Manager Per Erik Dalen obtains two Cessna 441s that are employed to undertake air ambulance and air taxi flights, passenger and cargo charters, and scheduled flights to Aberdeen, Scotland. Two years later, in 1987, an AS-365N Dauphin is acquired specifically for a new EMS contract.

In 1988, a three-year plan is developed to upgrade the company in order to acquire offshore support contracts. Two Beech Super King Air 200s are also acquired. An AS-332L Super Puma is leased from **Bristow Helicopters, Ltd.** in 1989 and is placed into service on a search and rescue contract acquired from the Norwegian government.

When, late in 1990, the company's principal shareholder becomes ill, his portfolio is put up for sale. As a result, a 44.5% interest is taken in Morefly, the nation's second oldest helicopter operator, by **Helikopter Service, A.S.**, the nation's oldest. An option is also taken for the purchase of additional shareholding within the next four years and **Helikopter Service, A.S.** President Christian Brinch becomes the Morefly chairman. During the year, cost cutting measures are undertaken, including the shrinking of the fixed-wing fleet to 1 of each owned aircraft type.

Airline employment in 1991 stands at 90 (10 pilots) and the fleet is increased during the spring by 2 owned AS-332L Super Pumas. On August 1, the new aircraft begin operating a five-year offshore support contract for Statoil from Bergen. Upwards of 24 flights per day are offered to the Gulifaks, Statfjord, and Veslefrikk platforms. Revenues for the year total Nkr 90 million (\$13.9 million).

The fleet in 1992 includes not only the 3 Super Pumas, but 1 Dauphin, 4 AS-350s, 2 Bell 205As, and 1 Bell 214B. When **Helikopter Service, A.S.** receives a five-year government contract in May 1993 to provide

emergency medical services, those services are launched by helicopters flown by Morefly and **Lufttransport, A.S.** from bases at Tromsø, Bronnoysund, and Vigra.

Flights continue in **1994** and Managing Director Per Erik Dalen's fleet includes 1 Bell 214B and 2 each Eurocopter AS-350Bs, AS-350B1s, AS-332Ls, SA-365Ns, and Bell 205s.

Operations continue apace in **1995–1999**, and, by the latter year the fleet includes 3 AS-350B and SA-365Ns, plus 2 each AS-332Ls and Bell 205As.

MORGAN AIRLINES. *See* **CAH (COMPANIA AEREO HONDURENO, S.A.)**

MORLAIE AIRLINES (PTY.), LTD.: Australia (1928–1930). Following the shutdown of his **Bulolo Goldfields Aeroplane Service (Pty.), Ltd.** in late **1928**, bush pilot Raymond "Battlin'" Parer, in partnership with P. J. Macdonald, forms Morale Airlines (Pty.), Ltd. Arriving at Port Moresby in his carry-over Bristol Fighter, Parer takes delivery at Port Moresby of a DH 9C before year's end. Engaging pilot Charlie Pratt, the two aviators take the de Havilland to Lae in a route proving flight, the first over the Owen Stanley Range.

An unsubsidized, high-fare service is inaugurated from Port Moresby over the mountains to Lae in early **1929**. The Bristol Fighter is wrecked in a Wau landing accident just three months after Morale's start-up. On June 28, Parer undertakes a record number of six roundtrips from Lae to Wau. On-demand services are maintained and allow sufficient funds for the purchase of a second DH-9C.

During **1930**, Sir Hubert Murray, Papua's lieutenant governor, is offered a joyride over Port Moresby; Parer's aircraft crashes while on takeoff, however, the unhurt and not displeased official believes the wreck a publicity stunt. Flights continue with the lone DH-9C, but the company ceases late in the year following a raucous disagreement between the partners.

MORNINGSTAR AIR EXPRESS, LTD.: Edmonton City Centre Airport, Box 14, 29 Airport Road, Edmonton, Alberta, T5G 0W6, Canada; Phone (780) 453-3022; Fax (780) 453-6057; http://www.maei.ca; Code ME; Year Founded 1970. This concern is originally founded as the FBO Brooker Wheaton Aviation, Ltd. at Edmonton by its founders Dr. Bev Brooker and Don Wheaton Sr. in the summer of **1970**. During the Alberta oil boom of the 1970s, the new concern not only serves as the local Cessna dealer and maintenance center but services the aircraft of others as well. It also flies piston-engine, on-demand air taxi services to local destinations. Late in the decade, 1 each Gates Learjet 36 and Hawker Siddeley HS-125 bizjets are acquired.

During the early **1980s**, the small Cessna division is divested as the company expands further into the executive charter area. Also during these years, partner Wheaton becomes the sole owner. Courier services are added as the decade progresses and the fleet is enhanced by the addition of three Fairchild Swearingen Metro IIs, a Canadair 601 Challenger, and several Beech King Air 100s.

In July **1990**, the concern acquires a contract to operate a pair of Boeing 727-22Fs on nationwide flights for **Federal Express (FedEx)**. A Fokker F.27-100 Friendship freighter is also obtained in November **1991**, again to operate cargo services on behalf of FedEx.

The company is jointly purchased by Don Wheaton Jr. and Kim Ward in January **1992** and is renamed with its present name. Operations continue apace during the remainder of century. Morningside continues to fly primarily under contract to **Federal Express (FedEx)**, while taking on a number of independent freight charters of its own.

Airline employment at the beginning of **2000** stands at 100. The fleet now includes 2 B-727-22Fs and 1 each B-727-25F and B-727-116C. In addition, the carrier flies 3 Fairchild Swearingen Metro IIs, 1 of which is leased out, as well as 2 Cessna 208 Caravan Is and 1 each de Havilland Canada DHC-6-300 and Fokker F.27-100 Friendship.

MORRIS AIR SERVICE: United States (1989–1993). June Morris, who had established her own business and government-oriented travel agency at Salt Lake City in 1970, begins to offer vacation packages in **1989**. To accommodate these opportunities and transport purchasers to regional and international destinations, the businesswoman founds MAS with her son Richard Frendt.

During the next three years, flights, which eventually number in excess of 300 per week, are undertaken for Morris to Los Angeles, Hawaii, Las Vegas, and Mexico's vacation destinations under contract by **Ryan International Airlines**, **American Trans Air**, and **Sierra Pacific Airlines**.

Morris and Frendt begin to offer some of their own revenue services in **1992** with 1 leased Boeing 737-3Q8 and 1 B-737-3T5.

Having selected Spokane as one of five finalists for a new heavy maintenance base, **Alaska Airlines** officials express displeasure with that city on May 8 when new entrant Morris Air Service begins daily nonstop roundtrips to that point from Seattle. **Alaska Airlines** and its **Horizon Air** affiliate, which had dominated the air corridor between Washington's two largest cities and charged roundtrip fares of \$190 to \$380 per trip, are forced to match the \$78 tariff of MAS.

In nondirect competition with **Alaska Airlines**, Morris, on June 1 and under the direction of new President David Needleman, launches daily Seattle–San Jose flights, along with twice-daily Seattle to Spokane roundtrips.

Coming as a result of a complaint from **Alaska Airlines**, the company is fined \$200,000 by the DOT for marketing that holds that the Morris charter flights begun in June are scheduled, when they are actually provided under contract by **Ryan International Airlines**.

During the Thanksgiving holiday, inner city youths are hired to check baggage. Traffic and financial statistics are not made available by the privately owned carrier.

Mrs. Morris, the only female CEO in the jet airline business, increases employment at her company in **1993** to 1,891 and her fleet is upgraded by the addition of 4 B-737-3A4s, 4 B-737-3G7s, 4 B-737-3Q8s, 1 B-737-3TO, 5 B-737-3T5s, 1 B-737-3YO, and 2 B-737-317s. Twelve of the aircraft are leased from ILFC. Scheduled low-fare operations, modeled on those of **Southwest Airlines**, are now undertaken to such destinations as Orange County, California, Portland, Oregon, and Seattle and Spokane.

After the fledgling makes a strong protest of situation, the DOJ begins an investigation on October 8 to determine whether **Delta Air Lines** commission agreements with Salt Lake City area travel agents and a threat to withhold them gives the major an unfair advantage over Morris's upstart operation. On November 18, low-fare routes are started from Tucson to several California cities and Las Vegas. With 60% of its travelers booking directly through the airline, Morris is able to introduce ticketless flying, based upon a confirmation number, in December.

A total of 3,446,535 passengers are flown on the year and revenues total \$229.2 million. Profits are made: \$9.9 million (operating) and \$4.47 million (net). On December 31, in a \$130-million exchange of stock, Morris Air is acquired by **Southwest Airlines (2)**. Arrangements call for amalgamation to be completed within a year as the six owned "Baby Boeings" are transferred to the new parent.

In the spring of **1994**, Southwest begins visiting Morris' former markets.

MORRIS AIR TRANSPORT: United States (1970–1971). MAT is set up at Morristown, New Jersey, in **1970** to provide daily roundtrip shuttle service to New York (LGA). Although Britten-Norman BN-2 Islander roundtrips are duly inaugurated, they cannot be maintained beyond **1971**.

MORTON AIR SERVICES, LTD.: United Kingdom (1945–1968). London Aircraft Production chief test pilot T. W. Morton forms MASL in May **1945**, but must wait until the wartime ban on civil flying is lifted on January 1, **1946** before starting revenue operations. Two de Havilland

DH 89As are purchased and one begins the company's operations on January 18 by flying a charter from London (Croydon) to Zurich.

Another Dragon Rapide is purchased in April and the fleet is increased by the addition of four Airspeed AS.65 Consuls delivered in May, July, September, and December. All of these are busy with charters during the summer, flying between London (Croydon), the Channel Islands, and various Continental destinations.

Two more AS.65s are purchased in January 1947 and these join the other Morton Consuls in participation in the British civil aviation response to a French railroad strike in June. Numerous flights are made to Switzerland to bring back over 150 stranded tourists.

Summer charters are flown as in 1946 and in November an office is opened at Speke Airport in Liverpool.

Two more Dragon Rapides are acquired in 1948, the first in March. The same month, Morton obtains a de Havilland DH 104 Dove I, which is placed in service on the 24th, followed by a second in May. These early Doves, among the first of their type flown in the U.K., prove unsatisfactory and are quickly sold to **Skyways, Ltd.** in June. In July, four Consuls are sent to Beirut under nine-month charter to the UN Palestine Commission. Middle East flights begin on July 24.

An office is opened in Bristol on April 22, 1949, the day before the Mideast UN charter ends and the four Consuls return from Beirut. In May, a used Dove 1 is purchased from **Hunting Air Travel, Ltd.** Short- and long-range charters throughout England and the Continent continue during the summer as in previous years. In June, the ex-Hunting Dove is transferred to Yangon to fly charters on behalf of Burma Oil Company. A Percival P.34 Proctor 1 is added in December.

The company's first scheduled service is offered during the summer of 1950 over a route from Whitchurch to Jersey and Guernsey. During the year, three DH-89As are sold and two more Dove Is are added, one of which is sent to Karachi to begin flying charters on behalf of Pakistan Petroleum Company in October. An AS.65 is destroyed in a nonfatal Guernsey crash.

Several new scheduled frequencies, obtained under associate agreements with **British European Airways Corporation (BEA)**, are offered in 1951: London (Croydon)–Ostend, Le Zoute, and Innsbruck and Bristol to Jersey, Guernsey, Isle of Wight, and Isle of Man. Some 6,000 passengers are flown on these scheduled routes during the year. A Dragon Rapide is sold in May 1952 and on June 14 an AS.65 is destroyed when it crashes into the English Channel (six dead). Meanwhile, scheduled services and charters are flown as before.

Oiley Air Service, Ltd. is purchased in late February 1953, but continues operations under its own name, including summer flights from London (Croydon) to the Channel Islands in tandem with Morton. At the same time, an agreement is reached with **Cambrian Airways, Ltd.** whereby the two carriers will not compete on similar West Country routes. A new Bristol–Paris service obtained by Morton is now transferred to Cambrian, which also receives most of Oiley's aircraft.

Two more Doves are purchased during the year, one in April and one in July. Scheduled services are opened for the summer from London (Croydon) to the Channel Islands and Le Touquet by Morton aircraft while Oiley, employing Morton aircraft, also flies to Jersey and Guernsey as well as Deauville. Morton transports a total of 12,228 passengers. Two more AS.65s are acquired in October.

Between them, the two carriers fly 26,600 passengers in 1954 over the routes of 1953, of which 14,000+ are Morton's. A Consul is withdrawn during the year while three more Doves are purchased. Charter and scheduled services and the fleet continue unchanged in 1955.

On October 1, 1956, twice-daily, year-round London (Croydon)–Rotterdam scheduled service is inaugurated. Two more Consuls are sold during the year. The arrival of a new Dragon Rapide in July 1957 is overshadowed by the introduction of the carrier's first DH-114 Heron 1B the same month. The new aircraft is placed on both the Rotterdam and Channel Island services.

Weekly London (Croydon)–Brawdy flights begin in 1958, the same year in which Morton is purchased by the Airwork group, which allows

it to continue to operate under its own identity. Another Heron 1B is added in January 1959, allowing the Brawdy route to become twice weekly. In April, Swansea is added as an optional stop on this service, beginning on June 2. When Croydon Airport is closed on September 30, Morton transfers operations over to London (LGW). The last two Airspeed Consuls are sold in October.

During 1960, Airwork's Viscounts assume much of Morton's scheduled service, especially the flights to the Channel Islands. On July 1, the company becomes a part of **British United Airways, Ltd.**, but still retains its separate identity. Two Dragon Rapides are sold in September. On October 31, the Yangon-based Dove is lost in a crash at Chittagong. Another Heron 1B is added in May 1961 and enters service on May 20. Operations to the Channel Islands are strongly resumed in June as well as flights to Le Touquet in June.

During 1962, three DC-3s are transferred to Morton from BUA and are employed for cargo charters. Meanwhile, a number of ex-**Jersey Airlines, Ltd.** routes are also transferred over. Morton carries a total of 14,726 passengers on its scheduled and charter services during 1963. During 1964, Morton opens interisland services between Jersey, Guernsey, and Alderney as well as flights to the Channel Islands from London (LGW) and Southampton and Swansea from London (LGW) and Exeter. Four Heron 2s are acquired in August and a Heron 1B is sold in December.

In 1965, Southend–Billund twice-weekly livestock flights are made along with a daily frequency to Antwerp. Two Heron 1Bs are added in March and two DC-3s in November. Female pilot Yvonne Sintes joins the company to fly the Douglas transports. The new Herons fly Jersey–Plymouth services in 1966, replacing a route formerly operated by **Jersey Airlines, Ltd.** One each Dove and Heron 1B are sold. During 1967, scheduled services continue as before as two more Doves are sold. **Aurigny Air Services, Ltd.** assumes the Alderney route in early 1968. In May, Chairman Morton resigns as his carrier is absorbed into **British United (Island) Airways, Ltd.**

MOSCOW AIRLINES (AEROFLOT-MOSCOW AIRLINES): Russia (1993–1995). MA is established at Sheremetyevo-1 Airport in the summer of 1993 to offer charter passenger and cargo services in association with **Aeroflot Russian International Airlines (ARIA)**; V. Kastrin is appointed general director. A fleet of 2 Ilyushin Il-62s, 1 Il-76, 1 Tupolev Tu-154, and 2 Antonov An-32s is assembled and revenue flights begin in September. During the year's remaining months, a total of 14,270 passengers and 5 million FTKs of freight are flown.

Operations continue apace in 1994 and enplanements climb to 45,600. Flights cease in 1995.

MOSTRANSNAZ AIRLINES COMPANY: Gazpromovod Town, Moscow Area, Leninski Region, 142770, Russia; Phone 7 (095) 336-6700; Fax 7 (095) 336-6522; Code OC; Year Founded 1993. MA is set up by the Gazprom Group of investors in 1993 to offer domestic and regional all-cargo charters, VIP transport, and aerial contract work. Valeri Pfefer is named director general and he begins revenue flights with 3 Let L-410UVPs, 1 Ilyushin Il-76TD, 1 Antonov An-12, 14 Kamov Ka-26s and 1 Mil Mi-8.

Services continue apace in 1994–1999, during which years the Il-76TD is leased to other carriers.

By 2000, Director General Anatoly T. Balandin oversees a workforce of 480 employees and flights are conducted by 1 Antonov An-2, 2 Yak 40s, 2 Let L-410s, 31 Kamov Ka-26s, and 1 Mil Mi-8.

MOUNT COOK AIR SERVICES, LTD.: New Zealand (1953–1969). Returning from service in the Royal New Zealand Air Force, Henry ("Harry") Wigley joins with Straun Robertson in 1953 to form **Mount Cook Air Services, Ltd.** at Tasman to provide sight-seeing, animal control, and crop-dusting services. Wigley is the son of national tourism pioneer Rodolph Wigley, who had organized two aerial tour companies before World War II. Robertson serves as general manager and chief pilot for the company's two Auster J1s.

Services are maintained in 1954 and on September 22, 1955, Wigley and pilot Alan McWhirter make the first landing on the Tasman Glacier in a ski-equipped Auster. A retractable aircraft ski is developed that permits operations from dry and snow surfaces on the same trip and becomes a major factor in the carrier's growing success.

Plans are made in 1956 to undertake scheduled service from Christchurch to Mount Cook and Queensland and a Douglas DC-3 is purchased from the **New Zealand National Airways Corporation, Ltd. (NZNAC)** for the purpose. Unfortunately, adequate facilities do not exist at Mount Cook, Queenstown, TeAnau, and Manupouri and start-up is delayed while modernization is undertaken. In September, a second ski-equipped Auster enters service.

Two additional Austers (J5s) are purchased for the fleet in 1957. In November, three Austers provide the support necessary to film the motion picture *Cinerama South Seas Adventure*, which eventually results in U.S. tourists seeking air tours through the mountains of Mount Cook National Park.

Orders are placed in 1958 for two ski-equipped Cessna 185s, which are placed in service during March 1959, leading to the retirement of all but one Auster. Tourist flights to the glaciers in the Westland and Mount Cook area accelerate dramatically in 1960. The company begins an open-ended maintenance arrangement with NZNAC.

After three years of airport improvement, scheduled DC-3 service is inaugurated Christchurch–Mount Cook–Queensland on November 6, 1961. Another Douglas transport is acquired in 1962 and with the other company aircraft is painted in a soon-to-be familiar blue and white livery, complete with a lily emblem.

In 1964, books reveal that since 1959, the Cessna 185s have flown 8,000 passengers to the Mount Cook glacier areas. Harry Wigley publishes a book of recollections in 1965, *Skyplane Adventure* (Wellington: A.H. & A.W. Reed).

The first six-seater Cessna 185 is purchased in 1966. Grumman G-44 Widgeons and Gannet Super Widgeons are added to the fleet in 1967–1968. A competing carrier, **Tourist Air Travel, Ltd.**, is taken over in 1969 and merged. At this point, the little airline changes its name to **Mount Cook Airlines, Ltd.** and moves its headquarters to Christchurch.

MOUNT COOK AIRLINES, LTD.: 47 Riocarton Road, P.O. Box 4644, Christchurch, New Zealand; Phone 64 (3) 348-2099; Fax 64 (3) 343-8159; Code NM; Year Founded 1969. Having taken over competing carrier **New Zealand Tourist Air Travel, Ltd.**, **Mount Cook Air Services, Ltd.** changes its name to **Mount Cook Airlines, Ltd.** in 1969 and moves its headquarters to Christchurch, where **Air New Zealand, Ltd.** takes an 11% minority interest. The company fleet now includes 3 Grumman G-44A Widgeons, 3 Gannet Super Widgeons, 2 DC-3s, and several de Havilland DH 89A Dragon Rapides and Cessna 185s. Most of the Widgeon operation remains centered on the old NZTAT base at Auckland, on the North Island.

A maintenance contract entered into with **New Zealand National Airways Corporation (NZNAC)** in 1960 ends as the subsidiary Southland Aircraft Engineering is formed to perform the E & M Task. Orders are placed for 2 Hawker Siddeley HS 748s and 6 Britten-Norman BN-2 Islanders.

The two HS 748s are delivered, one each in 1970–1971, and are placed in service Christchurch–Rotorua and Mount Cook–Rotorua. On Christmas Eve of the former year, a G-44A, chartered by Television New Zealand News to shoot tape of a ship afire in Waitemata Harbour, suddenly dives into the sea during a steep turn (four dead).

During the latter year, Managing Director Capt. Fred Ladd, with Ross Annabell, publish a book of memoirs, *A Shower of Spray and We're Away!* (Wellington: A.H. & A.W. Reed), with attention to the Widgeon amphibious operations.

The first two Islanders are also received. On October 19, 1972, a Grumman G-21 Goose joins the Widgeon fleet based at Auckland, as three more BN-2s fly into Christchurch. The NZNAC license for serv-

ice on the Christchurch–Rotorua–Auckland route is acquired in 1973. A third HS 748 joins the fleet in September, together with a de Havilland Canada DHC-6.

As the result of a wheels-down landing on Half Moon Bay on Stewart Island on January 1, 1974, a Super Widgeon capsizes; after all aboard are rescued the aircraft sinks. A second purchased Goose is lost in October before it can be delivered. Passenger demand accelerates, particularly on the Queenstown–Dunedin and Queenstown–TeAnau and Milford routes. The final Islander is delivered. NZNAC acquires 15% shareholding. Enplanements for the year total 121,914.

The employee population in 1975 stands at 50. The DHC-6 is sold in April and that portion of the fleet providing scheduled service now includes 3 HS 748s and 1 DC-3. The company repurchases its original ski-equipped Auster and Managing Director Wigley lands it on the Tasman Glacier as part of the celebration of the first landing there 20 years earlier. Late in the year, the MCA board elects to discontinue amphibious services.

Freight traffic is down 4.3% and passenger boardings dip 4.2% to 117,000. The year's loss is NZ\$36,120.

In January 1976, Henry Wigley is knighted. Widgeon operations cease at the end of April and the amphibian division at Auckland is sold to **Sea Bee Air, Ltd.** The proceeds are employed to purchase a fourth HS 748, which joins the fleet in October.

Customer bookings accelerate 10% to 103,100 and freight skyrockets 43% to 135,900 FTKs.

Following extensive airport modification, HS 748 service is inaugurated to Kerikeri in 1977. Float-equipped Cessna 185s begin sight-seeing trips from Lake Te Anau.

A total of 129,744 passengers are carried systemwide.

The workforce in 1978 totals 251. Following tests, the carrier's four BN-2s are found unsuitable for glacier landings.

Freight drops 23.1%, but passenger boardings accelerate 9.9% to 144,323.

Two BN-2s are sold in 1979 as a fifth HS 748, purchased from **Air Pacific, Ltd.**, is placed in service. On October 2, the cumulative total of passengers flown on glacier ski-trips reaches the 500,000 mark.

Passenger bookings for the year advance 16.2% to 167,300 and cargo skyrockets 32.7%.

A Bell 206B JetRanger is placed on the glacier lift in 1980 as three newer BN-2s join the fleet. Freight falls 7.2% to 172,000 pounds and passenger traffic dips 2.7% with 162,700 passengers flown.

One BN-2 is replaced in 1981 by a Fokker F.27-500.

Passenger boardings at Chairman R. W. Steele's carrier dip again, down 4.8% to 154,900; freight drops 15.8% to 144,000 pounds.

The employee population in 1982 is 174. The F.27-500 and one more BN-2 are replaced by two Pilatus Turbo Porters and a Piper PA-31-350 Navajo Chieftain; one HS 748 is leased out.

The world economic recession brings a third year of traffic reversal; passenger bookings slip 6.9% to 114,200, and cargo is off 2.4% to 141,000 FTKs.

The workforce is increased 5.5% in 1983 to 152 and an HS-748 is leased from the Canadian company **Calm Air, Ltd.**

Passenger boardings soar 21.1% to 172,035 and 1.38 million FTKs are hauled, a major increase. Revenues total US\$12.9 million and allow a US\$1.8 million profit.

Deregulation of the New Zealand airline industry brings several takeover attempts in 1984. By spring, these efforts result in **Air New Zealand, Ltd.** increasing its 11% share to 30% and the acquisition of a 35% interest in the new Mount Cook Group by Dominion Breweries. Business begins to pick up in late winter, allowing the leased HS 748 to be recalled and a sixth purchased. Also joining the fleet's HS 748s, 13 Cessna 185s, 2 Turbo Porters, and 1 Navajo Chieftain is a new DHC-6.

Airline employment grows 15.8% to 176. Passenger boardings soar 23.1% to 221,092, but cargo falls 15.9% to 860,000 pounds.

The workforce is increased 2.5% in 1985 to 176. Late in the year, 77% controlling interest is taken in Mount Cook Group by **Air New**

Zealand, Ltd., which allows the carrier to continue operations under its current identity.

Passenger boardings rise again, up 6.6% to 235,665. The bottom, however, falls out of the company's freight operation, which drops 88.8% to 96,000 pounds.

Third-level carrier's customer bookings climb in **1986**, rising 0.8% to 237,558. Cargo revives, accelerating 17.1% to 112,000 FTKs.

Passenger boardings climb 26.4% in **1987** to 300,222, but cargo is down 14.9% to 96,000 FTKs. Enplanements decline to 271,560 in **1988** and the carrier suffers a NZ\$1.65 million net loss.

The workforce is increased 4% in **1989** to 289 and the fleet includes 6 BAe (HS) 748.B2s, 3 Islanders, 1 Chieftain, 1 Twin Otter, 12 Cessna 185s, and 2 Turbo Porters. In November, **Air New Zealand, Ltd.** establishes a regional and commuter feeder system, Air New Zealand Link, modeled upon that sponsored by **Delta Air Lines** in the U.S. Mount Cook becomes the flagship carrier in the new operation.

Despite a continuing decline in tourism, Mount Cook is able, via its new feeder role, to increase its passenger boardings by 27% to 372,000 and earn an after-tax profit of NZ\$227,000.

Operations continue apace in **1990**, with the company adopting a new policy of not disclosing either traffic or financial data, leaving it to the flag carrier to include those figures within its own.

In **1991**, the fleet includes 1 DHC-6-300, 1 Fokker F.27-100 leased from **Air New Zealand, Ltd.**, and 6 BAe (HS) 748-B2s. New routes are inaugurated from Christchurch to Palmerston North and from Wellington to Hamilton.

Operations are maintained with little change in **1992-1993**. Chairman N. M. T. Geary and General Manager P. J. Clark oversee a workforce of 300 and purchase 1 new Piper PA-31-350 Navajo Chieftain.

A seventh BAe (HS) 748-B2 joins the fleet in **1994** and with its sisters and the leased Fokker F.27-100, continues to fly tourists to Mount Cook and other South Island destinations. Meanwhile glacier flights continue to be provided by three Turbo Porters and eight Cessna 185s. Plans are made to replace the BAes with Avions de Transport Aerien ATR72s.

Despite New Zealand government displeasure with France concerning nuclear testing in the Pacific, the company, in July **1995**, proceeds with orders for seven ATR72-212s. Painted in Air New Zealand Link livery, the first of the large turboprops is delivered in October and enters service from Invercargill to Christchurch. The others will follow in the fourth quarter. Meanwhile, the BAes is leased to **Euroair Transport, Ltd.** in the U.K. The new aircraft are employed on tourist routes and as backup capacity on **Air New Zealand, Ltd.** trunk routes.

Mount Cook Airline's last commercial BAe (HS) 748 flight leaves Wellington for Christchurch on February 12, **1996**. The 748s, which have served on the carrier's major tourism routes since 1968, are all now retired, together with the Fokker.

Flights continue without fanfare in **1997-1998**. On April 6 of the latter year, **Air New Zealand, Ltd.** sells the light aircraft operations and coach touring businesses of this subsidiary to Tourism Holdings, Ltd. It does, however, retain ownership of both Mount Cook Airlines and Freedom Air, as well as the ski areas at Mount Hutt, Coronet Peak, and The Remarkables. The previous commercial routes are largely maintained and operated as Air New Zealand Link services.

Beginning on January 18, **1999**, the company initiates four daily Air New Zealand Link ATR72-212 roundtrips between Palmerston North and Auckland. The carrier also undertakes additional evening Palmerston North to Christchurch ATR72-212 Air New Zealand Link roundtrips.

The first of seven new ATR72-520s is delivered in October. The remainder will arrive between November and February and will replace the seven ATR72-210s currently employed on the carrier's domestic network.

Following delivery of the last of seven ATR72-520s in February **2000**, orders are placed on April 22 for an eighth.

MOUNT LAURIER AVIATION, LTD. See **NORDAIR, LTD.**

MOUNTAIN AIR. See **MOUNTAIN AIR OF NEW MEXICO**

MOUNTAIN AIR, LTD.: P.O. Box 27, Mount Ruapehu, New Zealand; Phone 64 (7) 892-2812; Fax 64 (7) 892-2703; <http://www.mountainair.co.nz>; Year Founded **1980**. James Aviation, Ltd. helicopter division chief pilot Keith McKenzie and his wife Robyn form Commercial Helicopters, Ltd. in **1980** to take over the Taumarunui operation from Auckland-based James. For the next nine years, McKenzie operates a single helicopter on air transport charters and aerial work contracts throughout the central North Island, as well as in other areas of New Zealand requiring rotary-wing lift.

Mountain Air is created in **1989** as Commercial's fixed-wing division. Scenic lightplane flights are operated over the Tongariro National Park from Chateau, Turangi, and Flat Hills in the Mangaweka area. Scheduled service is inaugurated in April **1997** from Auckland to Turangi and Mount Ruapehu, primarily to meet the needs for skiers to the Ruapehu District ski areas. Thrice-daily roundtrips are initiated in September **1998** from a newly formed Auckland base to Great Barrier Island.

In **1999-2000**, Director General McKenzie oversees the work of nine pilots, who fly two each Britten-Norman BN-2 Islanders and Piper PA-23 Aztecs on scheduled flights and one each Cessna 172 and C-206 on charters. Helicopter service is maintained with a Hughes 500D.

MOUNTAIN AIR CARGO (MAC): P.O. Box 488, Denver, North Carolina 28037, United States; Phone (704) 464-8741; Fax (704) 465-5281; <http://www.mtaircargo.com>; Code MTN; Year Founded **1975**. MAC is founded by David and Walter Clark at Denver, North Carolina, in **1975** to provide charter and contract air cargo services. Most company business comes from contract express flights undertaken by Chairman David and President Walter's concern on behalf of such giants as **Purolator Courier**, **UPS (United Parcel Service)**, and **Federal Express**. Operations continue apace during the remainder of the decade and the fleet grows to include 17 Beech 18s. Maintenance facilities are set up at Little Mountain, North Carolina, Iron Mountain, Michigan, and Parkersburg, West Virginia.

On November 17, **1980**, ownership is taken over by Roy Hagerty's Air Transportation Holding Company (Air T), which also controls the commuter carrier **Sunbird Airlines**, and placed under control of a new holding company, Atlanta Express Airline Corporation, which is incorporated in Delaware. Sunbird's eight Beech 99s will now occasionally be leased.

A total of 12.18 million FTKs of freight are operated by Chairman Clark's freight line in **1981**. The workforce in **1982** stands at 101, a decline of 22.3%. Cargo increases 6.9% to 17.64 million pounds.

In late **1983**, the company is further subdivided as a new **Mountain Air Commuter** section is established to offer regularly scheduled passenger flights between Washington, D.C. and Baltimore. Daily roundtrip revenue flights are inaugurated with a Cessna 404 Titan. Meanwhile, the fleet grows to also comprise 8 Beech 99s, 6 de Havilland DHC-6 Twin Otters, 3 Hamilton Westwind IIIs, 10 Beech 18s, and 3 Cessna 402s. Both scheduled and nonscheduled operations continue apace.

Just after landing at Franklin, Pennsylvania, at dawn on November 8, a Beech 18S veers off the runway and is substantially damaged when it goes over an embankment. The pilot is not injured.

On the year, the carrier hauls 18.41-million pounds of freight, a drop of 20.6%.

After several years of freight declines, poundage increases by 10.4% in **1984** to 22.16 million.

The fleet in **1985** includes 1 Cessna 402, 3 Westwind IIIs, 7 Beech 99s, 5 Twin Otters, and 8 Beech 18s.

In March, the first of seven Cessna 208 Caravan Is are received for operation under contract to **Federal Express**.

While en route from State College, Pennsylvania, to Pittsburgh on the night of October 11, a DHC-6-200 freighter collides with rising terrain

at a height of 1,250 ft. near Homer City. The pilot is killed and the Twin Otter is destroyed, with its wreckage scattered over 375 ft.

Cargo climbs again, by 13.2% to 25,097,000 pounds.

The workforce is increased 5.3% in **1986** to 79. The **Mountain Air Commuter** experiment is deemed a failure and is ended. On the other hand, a wholly owned subsidiary, **CSA Air**, is formed at Iron Mountain, Michigan, to undertake services in the Midwest.

Freight improves further, gaining by 20.6% to 30,274,000 pounds.

Six new employees are hired in **1987**, but cargo drops by 14.8% to 25.79 million pounds.

The fleet of the 85-employee carrier in **1988** includes 15 Twin Otters, 7 Beech 99s, 27 Cessna 208 Caravan Is, 1 Cessna 402, 3 Shorts 330-200s, and 1 Fokker F.27.

While on final approach to Charlotte after a ferry flight from Erie, Pennsylvania, on January 19, a DHC-6-200 descends below its glide path, strikes a tree, and hits the ground short of the runway; although the Twin Otter must be written off, its pilot walks away.

Traffic recovers and increases by 76.7% to 45,573,000 pounds.

The payroll is increased by 17.6% in **1989** to 100 and the fleet is reduced to 44 aircraft. Cargo dips 3.3% to 44,081,000 pounds.

The workforce increases 45% in **1990** to 145 and 2 more Friendships are acquired. All independent shareholding in the **CSA Air** subsidiary is transferred to Air Transportation Holdings Co.

Freight traffic, however, continues to decline, dropping almost a third, 32.9%, to 56,866,000 pounds.

The employee population is cut by 18.6% in **1991** as the fleet is radically altered. Retained are two Beech 99s and three Shorts 330-200s, to which is added a CASA C-212-200 Aviocar. Concentrated efforts are made to purchase additional F.27F freighters. MAC and **CSA Air** become exclusive servants of **Federal Express**.

Traffic stops falling and recovers, growing by 12.6% to 64,827,000 pounds.

Operations continue apace in **1992**; however, no statistics are reported. In **1993**, President William H. Simpson oversees a workforce of 189 and a fleet of 23 Fokker F.27s, 54 Cessna 208 Caravan Is, and 2 Shorts 330s.

A total of 85,655,488 pounds of freight are flown.

The workforce is reduced to 180 in **1994** and cargo increases slightly to 85,766,000 pounds. The company's 29 planes haul 90.2 million pounds of freight in **1995**, a 5.2% upturn.

The employee population stands at 300 in **1996**. The fleet now includes 1 CASA C-212 Aviocar, 54 Cessna 208s, 22 Friendships, and 2 Shorts 330s.

Cargo traffic slides 2.3% to 81,249,000 pounds of freight flown.

Early in **1997**, the freighter's parent, Air Transportation Holding, Inc., announces plans to merge with Piedmont Holding Co., which operates six general aviation concerns in North Carolina and Virginia.

A total of 83.6 million pounds of cargo are transported on the year, a 3% increase over 1996.

Flights continue apace in **1998**. During the 12 months, freight traffic is level at 83,685,948 pounds.

By the beginning of **1999**, airline employment has been increased by 7.1% to 300. The fleet now comprises 45 Cessna 208s, 22 Friendships, and 2 Shorts 330s. These are operated during the remainder of the year, and in **2000**, throughout the eastern half of the U.S., Canada, and the Caribbean Islands.

MOUNTAIN AIR COMMUTER. See MOUNTAIN AIR CARGO

MOUNTAIN AIR EXPRESS (1): United States (1996–1998). With its headquarters at Colorado Springs, MAX is established at Denver in early August **1996** as a regional subsidiary of **Western Pacific Airlines (Westpac)**. The new regional is owned and financed by Westpac and private investors; Western Pacific Chairman/CEO Ed Beauvais holds the same post with this carrier, with Thomas McClain as president. Orders are placed for 12 Fairchild Dornier 328-120s, 2 of which arrive by De-

cember 1. The aircraft are painted in a snow-white livery with titles and a huge, stylized "X" on their tails.

Plans call for scheduled feeder services to six Colorado ski destinations to commence three days later. Unhappily, FAA certification of the new entrant is delayed and in the interim until December 15, service is provided under contract by **United Airlines**.

When company flights do begin, they are conducted to the airports at communities close to six major ski resorts: Aspen (Snowmass), Durango-La Plata County Airport (Purgatory), Eagle (Vail), Gunnison (Crested Butte), Hayden (Steamboat Springs), and Montrose (Telluride). Within 3 days, MAX is operating 25 daily roundtrips from Colorado Springs.

Two more 328-120s arrive early in **1997** and the schedule is increased upward to 50 flights per day for the remainder of the winter season. Flights to Santa Fe are inaugurated at the end of the first quarter following the arrival of the fifth Dornier.

On June 29, this Westpac subsidiary follows its parent's move to the new Denver International Airport. The number of weekday frequencies from Colorado Springs is reduced to 19 while those at DIA total 29.

During July, the company unveils a Dornier 328-120 "logoprop" that has been given a color scheme publicizing the Frontier Days celebration of Cheyenne, Wyoming. In the style of Westpac's "logojets," an image of a cowboy riding a bucking bull adorns the aircraft's tail.

By August 1, Westpac and MAX together are offering 70 weekday departures from Denver International Airport to 26 markets. Following the failure of a planned merger between Westpac and **Frontier Airlines (2)** at the end of September, the former declares Chapter XI bankruptcy on October 5.

Westpac continues to operate while reorganizing. All jet service to Colorado Springs is eliminated, replaced by five additional daily Dornier 328 flights between the old hub and the new Denver consolidation point.

MAX itself declares bankruptcy in November. A group of investors, MAX Acquisition Group, steps forward at month's end and begins to pump \$2 million into the carrier to keep it from shutting down. It will prove fortuitous that, at year's end, **United Airlines** cancels its contract with **United Express (Mesa Air Group)** for operations out of Denver and Colorado Springs.

A total of 159,948 passengers are flown during the year.

As **1998** begins, airline employment at failing MAX stands at 300 and the company, to keep its certificate valid, flies one flight daily from Denver to four other communities, including Colorado Springs. MAX assets continue to dwindle; the city of Colorado Springs alone is owed \$104,000 for landing fees. By the end of January, the company has only \$11,000 in cash on hand and a hearing is scheduled for March 5 before U.S. Bankruptcy Court Judge Sidney Brooks on March 5 concerning liquidation.

In need of additional capacity to take over the routes United has cancelled with Mesa, "United Express" operator **Air Wisconsin** steps in on February 23 and purchases MAX. Pledging to retain the carrier's workers, **Air Wisconsin** pays MAX Acquisition Group \$1.5 million. President McClain agrees to stay on during the transition period.

With the transaction completed, Air Wisconsin begins to retrain MAX pilots and repaints the four Dorniers in "United Express" colors. New routes are added to additional cities in Colorado and Wyoming and the entire company is flying as "United Express" by April 20. Orders are placed for six additional Dorniers, four of which join the fleet June 10, when the transition to **Air Wisconsin** is completed.

MOUNTAIN AIR EXPRESS (2): 3250 Airflite Way, Long Beach, California 90807, United States; Phone (562) 869-4128; <http://www.mountainairexpress.com>; Year Founded 1998. MAX-2 is established at Long Beach in late **1998** to operate executive and small group passenger charters, including many on behalf of Mountain Air Tours. Revenue flights begin with a fleet of 1 each Merlin 11B, Cessna 401, C-402, C-421, and Piper PA-31-350 Navajo Chieftain. When flights demand

larger capacity or longer range, the company is able to acquire the use of a Fairchild Metro III and Cessna Citation bizjets. From Long Beach, Fresno, and San Jose, Mountain Air Tours organizes flights to Mammoth Lakes, Grand Canyon, Reno, Catalina, and South Lake Tahoe.

MOUNTAIN AIR OF NEW MEXICO: United States (1974–1975). Also known simply at Mountain Air, MANM is set up at Santa Fe in **1974** to provide Cessna 402 services to Albuquerque and Denver via Taos. Revenue operations do not last a year.

MOUNTAIN AIRWAYS: United States (1969–1970). MA is established at Saugerties, New York, in **1969** to provide daily air taxi shuttles from Kingston to New York (JFK) via Newburgh. Although Britten-Norman BN-2 Islander roundtrips are duly inaugurated, they cannot be maintained beyond **1970**.

MOUNTAIN AVIATION: Jeffco Airport, Lafayette, Colorado 80026, United States; Phone (303) 877-4282; Fax (303) 666-6090; Year Founded 1993. MA is set up in **1993** to provide local and regional executive and small group passenger charters. Six pilots are hired and revenue flights commence with a fleet that comprises 1 each Cessna 550 Citation II bizjet, Beech Super King Air 200, King Air 90, C-441 Conquest II, C-340, and C-T310.

MOUNTAIN BIRD. See SALMON AIR

MOUNTAIN HOME AIR SERVICE: United States (1978–1980). MHAS is established at Mountain Home, Arkansas, by Thomas L. Fleming during the summer of **1978**. Employing a Beech B-58 Baron, Fleming inaugurates scheduled air taxi service in August, linking his base with Memphis via Bartlesville. Daily roundtrips are maintained until August **1980**, when the company is reformed and named **Arkansas Traveler Airlines**.

MOUNTAIN WEST AIRLINES (1): United States (1977–1978). The first MWA is set up by Jim Perry at Aspen, Colorado, in the first week of January **1977** to provide scheduled passenger flights to Grand Junction and Vail. Revenue flights, mostly for those seeking skiing holidays, begin on January 15 with 1 each Cessna 206 and Cessna 340, plus 1 Douglas DC-3. Early in **1978**, the company name is changed to **Bonanza Airlines**.

MOUNTAIN WEST AIRLINES (2): United States (1978–1982). Letha Ellis organizes MWA-2 at Boise, Idaho, in September **1978**. After acquiring a pair of Embraer EMB-110 Bandeirantes during the fourth quarter, his company inaugurates scheduled passenger commuter flights to Pocatello, Idaho Falls, Sun Valley, and Salt Lake City.

Unable to generate sufficient traffic or revenue to overcome costs involved with start-up, to say nothing of inflation, high fuel bills, and recession, MWA-2 is forced to close in **1982**.

MOUNTAIN WEST AIRLINES (3): United States (1985). A third MWA is established at Denver in the summer of **1985** to provide scheduled and charter flights with 1 Cessna 402, 1 Piper PA-31-350 Navajo Chieftain, and 2 leased Convair CV-440s. Revenue flights begin in late September over a route to Laramie, Wyoming. A total of 3,500 passengers are transported during the fourth quarter, but unable to continue, the carrier ceases operation in December.

MOUNTAIN WEST AIRLINES (4): United States (1994–1997). In the spring of **1994**, Mesa Airlines is reorganized into Mesa Air Group, with five operating divisions, including this new unit. MWA-4 is made up from Albuquerque-based Mesa Airlines, with 8 Beech 1900s, Phoenix and Columbus-hubbed "America West Express," with 16 Beech 1900s and 3 Embraer EMB-120 Brasilias, and Los Angeles-based Westair Commuter Airlines, doing business as "United Express," with

27 Beech 1900s, 9 Brasilias, and 6 de Havilland Canada DHC-8s. MAG Vice President Michael Lewis is placed in charge of MWA-4.

Operations continue apace over previously flown routes and orders are placed for the DHC-8Q-400, for which the company is launch customer. Enplanements for the year total 3,011,729.

Airline employment stands at 1,390 in **1995**. A new code-sharing "United Express" agreement negotiated with **United Airlines** the previous October comes into effect during the first quarter, covering the next decade. Also as part of the deal, 12 MAG DHC-8-300s are traded for 25 smaller, hot-and-high DHC-8-200s better suited to the thinner Colorado air. A \$226-million order is placed for the turboprops with deliveries scheduled to start the following February.

During the year, the America West 10-year code-sharing contract is also renegotiated. The route network grows to 73 U.S. cities served from hubs at Albuquerque, Columbus, Denver, Los Angeles, and Phoenix. Traffic figures are incorporated with those from MAG.

Painted in "United Express" livery, the first DHC-8-200 arrives at the company's Denver base in February **1996**. The hot-and-high aircraft is placed into service throughout the company's Rocky Mountain network.

MWA-4's resources are significantly strained during the spring and summer by delays in delivery of additional Dash 8-200s, the resignation of 38 pilots, and the loss of Essential Air Service (EAS) funding.

During July, the carrier terminates Beech 1900C services between Denver and the Kansas communities of Lamar and Goodlands. In addition, daily flights between Denver and Fort Collins are cut from eight to five; from Denver to Pueblo from five to three; and from Denver to Alamosa from three to two.

By the end of the year, MWA-4 is the largest MAG division. Officials report, independently of the parent, that the section has transported a total of 4,134,872 passengers during the year, a 24.5% increase.

During the first week of January **1997**, MAG is again reorganized. The operating divisions Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced by four new units: "America West Express," "Independent," "United Express," and "USAirways Express." Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**. Mountain West will continue as the "United Express" unit.

MOUNTAINWEST AVIATION. See SIERRA PACIFIC AIRLINES (3)

MOZAMBIQUE AIRLINES. See LAM LINHAS AREAS DE MOCAMBIQUE

MTM AVIATION, GmbH: P.O. Box 231855, Munich, D-85327, Germany; Phone 49 (89) 978 520; Fax 49 (89) 970 181; Year Founded 1980. MTM is established at Munich Airport in **1980** to provide domestic, regional, and worldwide executive and passenger charters, plus air ambulance flights. Operations continue apace over the next 20 years and by **2000** the company employs 20 pilots and flies from 3 bases.

Two Learjet 55 Longhorns are flown from Munich, along with one each Canadair 600 Challenger, Beech Super King Air 200, and King Air 90. Another Longhorn is stationed at Frankfurt and a fourth at Cologne.

MUK AIR, A.S.: Copenhagen Airport South, Dragoer, DK-2791, Denmark; Phone 45 3282 0000; Fax 45 3282 0078; http://www.muk-air.dk; Code ZR; Year Founded 1979. Privately operated Muk Air Taxi is established by former **Cimber Air, A.S.** pilot Knut Lindau as an air taxi service at Farum in early **1979**. Employing 1 Cessna 402 and 1 Piper PA-31-310 Navajo, Managing Director Lindau's carrier begins unscheduled flights in July, with special emphasis on the daily delivery of the *Det Fri Aktuelt* newspaper from Copenhagen to Jyllands-Posten. In later years, the newspaper service is extended to Aarhus, Aalborg, Karup, and Billund.

Late in **1981**, it is decided to undertake scheduled services and the fleet is expanded by the addition of three Piper PA-31-350 Navajo

Chieftains and a Beech 99. Beginning in spring **1982**, the Beech is used to offer scheduled weekday international flights connecting Aalborg with the southern Norwegian city of Kristianstad. Also in 1982, an agreement is concluded with the national post office for the transport of mail between Copenhagen and Ronne. The post office contract will later see the company making nightly roundtrips to Aalborg, Billund, and Aarhus, with an average of 22.7 tons of mail delivered every 24 hrs.

The workforce totals 10 in **1984**. A Partenavia P-68B is added in **1986**, but this is traded in on an Embraer EMB-110 Bandeirante in **1987**. In **1988**, the corporate image is upgraded and name is changed to reflect the airline's increased interest in scheduled operations. Another Bandeirante is added in place of the Beech 99 and a Navajo Chieftain. New markets entered include Goteborg and Copenhagen.

In **1989**, a third Bandeirante joins the fleet, along with three Fairchild-Swearingen Metro IIs and a Fokker F.27s. Scheduled flights are initiated to Ronneby and Ronne.

Just after takeoff from Ornskoldsvik, Sweden, on January 21, power is lost to the No. 1 engine of a Swearingen Metro with 2 crew and 15 passengers. The crew returns to the point of origin for an emergency landing, but touches down 30 m. left of the runway. Although the plane must be written off as a result of the ensuing wreck, there are no fatalities.

The destroyed Metroliner is replaced in **1990** with a Shorts 330. Service is launched to Oslo and Aberdeen.

A second Shorts 330 is purchased in **1991** and is used to begin flights to Stavanger and Trondheim. Airline employment declines by 2.3% to 83 while enplanements total 20,000.

The fleet in **1992** includes 1 each Embraer EMB-110P1 Bandeirante and Swearingen Metro and 2 EMB-110P2s and Shorts 330s. Flights to Bremen commence.

Service is begun to Newcastle and Leeds/Bradford in **1993**.

Airline employment stands at 85 and enplanements total 19,646.

President Lindau adds five more employees to his workforce in **1994** and replaces his Metro with a Shorts 360. Additionally, the company name is shortened to Muk Air, A.S.

New scheduled routes are inaugurated from Copenhagen to Kaunas and Palanga and, as a result, passenger boardings accelerate 23.8% to 25,781.

The fleet is significantly increased in **1995** and comes to include 4 Embraer EMB-110 Bandeirantes, 1 Shorts 330, 2 Shorts 360s, and 1 leased British Aerospace BAe Jetstream 31. Enplanements reach 33,009.

Airline employment is reduced 18.2% in **1996** to 90 and customer bookings increase 37.8% to 53,069.

Destinations visited in **1997–1998** include Aalborg, Aarhus, Bomholm, Bremen, Cologne, Kristianstad, Leipzig, Oslo, Skovde, and Trollhattan. Passenger boardings during the former year swell 12.5% to 59,705; they will increase by 29% in 1998, reaching 65,000.

Airline employment by the beginning of **1999** has been increased by 22.2% to 110. Passenger and express and mail services are continued during the remainder of the year and into the new millennium, with neither incident nor headline.

MULTITRANSORTE AEREO, C.A.: Base Francisco de Miranda-Aeroclub, Hangar 1, Fila D, Caracas, 1060, Venezuela; Phone 58 (2) 92 72 74; Fax 58 (2) 99 36 121; Year Founded 1982. Formed to offer fleet management and Western Hemisphere passenger charter flights, General Manager Carlos Llorente Maldonado's company grows rapidly after its founding in **1982**.

By **2000**, Maldonado oversees the scheduling of a large fleet that includes 6 Grumman 690B Turbo Commanders, 2 each British Aerospace BAe (HS) 125-400F Hawks and Cessna 550 Citation IIs, and 1 each Beech 400A Beechjet, Beech Super King Air 200, Super King Air 300, and Swearingen Merlin.

MUNZ NORTHERN AIRLINES: United States (1938–1983). Founded by Bill Munz at Nome on July 4, **1938** as **Northern Airways**,

the air transport division of his FBO, this charter operation undertakes its first flight to Taylor later in the month. Employing light aircraft, Munz provides a variety of nonscheduled passenger and cargo flights to Seward Peninsula, Norton Sound, Yukon Delta, and St. Lawrence Island destinations over the next quarter-century. The corporate identity is changed to MNA in **1962**.

The decision is taken to offer scheduled commuter flights in early **1965** and these third-level services commence on March 1. Aircraft types dedicated to the new service include Aero Commander 680s, Cessna 206s, Aermacchi AL60s, and Stinson SR-9CMs.

Destinations visited regularly over the next decade include the bush communities of Shishmaref, Kotzebue, Gambell, Savoonga, Brevig Mission, Port Clarence, Tin City, Teller, Stebbins, Wales, Elim, Alakunuk, Kotlik, Emmonak, Bethel, Selawik, Koyuk, Kivalina, Ambler, Shungnak, Kiana, Kobuk, Cape Lisburne, Noorvik, Point Hope, and Buckland.

During the early **1970s**, the carrier enters into a subcontract arrangement with **Wien Alaska Airlines**. The first of an order for 10 Britten-Norman BN-2 Islanders is received in **1972** and is christened *Kiana*.

By **1976**, airline employment is 24 and the fleet includes 3 Britten-Norman BN-2 Islanders, 3 Aero Commander 680s, 2 Cessna 206s, and 1 Dornier Do-28-D-1.

Enplanements total 6,000 and 32,000 FTKs are operated.

Enplanements in **1977** total 11,460, a 91% boost resulting from the company's entry into new subcontracts with **Alaska Airlines** and **Great Northern Airlines**. Operating income is \$1.7 million from which a \$140,000 net profit is realized.

The number of employees is increased by 48.5% in **1978** to 49. Following President Carter's signing of the Airline Deregulation Act in October, several new routes are started from St. Mary's.

Passenger boardings skyrocket by 103.3% to 44,041 and freight traffic is also up 29.7% to 583,000 FTKs. Revenues jump 70.6% to \$2.9 million and expenses are up by 70% to \$2.55 million. Operating profit accelerates 75% to \$350,000 and net income increases by 61.1% to \$225,000.

The workforce is cut by 28.6% in **1979** to 25. The reduction in force is a direct result of a traffic decline caused by withdrawal from a subcontract previously flown on behalf of **Wien Air Alaska**.

Customer bookings decline by 13.6% to 38,219, while freight is off by 8.3% to 7.57 million FTKs. Revenues are level with the previous year, but expenses jump 12.5% to \$2.89 million. The operating profit declines by 84.6% to \$55,000 and a \$179,000 net loss must be accepted.

The fleet in **1980** includes 6 Britten-Norman BN-2 Islanders, 2 Aero Commander 680s, and 1 Dornier Do-28. The company withdraws from its subcontracts with larger airlines and reverts to air taxi status.

Consequently, enplanements plunge 80% to 7,754 and cargo falls 69.8% to 2.3 million FTKs.

The fleet of the 25-employee carrier in **1981** comprises 10 Britten-Norman BN-2 Islanders, 2 Dornier Do-28 Sky Servants, and 4 Aero Commander 680s.

Delinquent in filing its traffic reports with the CAB after September, Munz's final records reveal that enplanements for the year are 9,300.

The recession greatly impacts the company's passenger traffic during the next two years.

Customer bookings drop 30.8% to 6,414 in **1982**. Cargo, on the other hand, is a bright spot, accelerating 37.8% to 3.1 million FTKs. On revenues of \$2.4 million and expenses of \$1.8 million, profits are earned: \$547,000 (operating) and \$168,000 (net).

Enplanements plunge 50% in **1983** to 3,000. Unable to fiscally continue in the face of such figures in a time of economic downturn, Munz agrees late in the year to its takeover by and merger into Unalakleet-based **Ryan Air**.

MURMANSK AIRLINES (MURMANSK AVIATION COMPANY): Murmansk Airport, Murmansk, 184364, Russia; Phone 7 (8152) 583405; Fax 7 (8152) 566855; Code MNK; Year Founded

1992. A 1992-reformed division of **Aeroflot Soviet Airlines**, Murmanskoe GAP, under the leadership of Director General Yuri I. Solodilov, maintains scheduled passenger and cargo services over trunk and regional routes out of the north Russia city, famous during World War II as a destination for Allied North Atlantic convoys.

Murmanskoe is the first ex-Aeroflot unit to purchase an aircraft employing bank loans rather than waiting for the government to redistribute airliners from the old Soviet airline. By **1994**, the company's fleet includes a mix of Antonov An-2s, Tupolev Tu-154Ms, and helicopters, including Mil Mi-2s and Mi-8s and Kaman Ka-32s.

Flights continue in **1995–1997**, with a fixed-wing equipment complement of 4 Tu-154Ms, 3 An-2s, and many helicopters: 12 Mi-2s, 9 Ka-32s, and 4 Mi-8s. Unable to maintain its economic viability, the company is declared bankrupt by the government late in the year. Majority (60%) shareholding is now taken by the Russian Aviation Consortium.

Director General Sikidukiv remains in charge of the renamed enterprise and service is continued. On May 12, **1998**, one of the Tu-154Ms makes a safe emergency landing at Murmansk Airport after experiencing engine troubles. Although traffic figures are not provided, it will later be noted that the company has lost \$80 million on the year.

Destinations visited on a scheduled basis at the beginning of **1999** include Anapa, Krasnodar, Moscow, and St. Petersburg. On September 16, the airline, which now flies four Tu-154Ms, is placed up for sale; it is hoped that its sale will raise \$3 million. During the fall, the fleet dwindles to 3 Tu-154Ms, 4 An-2s, 4 Mi-8s, and 7 Mi-2s.

On December 28, a 50% stake in Murmansk Airlines is sold to the RAO Norilsk Nickel subsidiary Severonikel—created especially to acquire the airline's assets—for \$5.1 million. It is understood that the energy concern has outbid a \$5-million tender from Baltinvestovskiy backed by **Pulkovo Airlines** and a \$3-million offer from **Atlant Soyuz**.

At the beginning of **2000**, Severonikel and its regional government partner establish the joint concern Murmansk Aviation Company to operate the airline as a subsidiary under the acting leadership of Alexander Tarantov. One of the Tu-154Ms is almost immediately sold, for \$2.5 million.

On March 10, the Russian media report by that the carrier's entire fleet has been grounded. It is also noted that negotiations are underway that would have **Pulkovo Airlines** step in and take over the concern from its new owners. Murmansk's new owners and Pulkovo are, however, unable to come to an arrangement and discussions end.

Over the next several months, Murmansk flounders. During the summer, negotiations are conducted between the carrier and **Sibaviatrans** concerning possible help from that airline in resolving Murmansk's dismal operating situation. The talks come to nothing because **Sibaviatrans** is not interested in purchasing the expensive Tupolevs, wanting only to lease the Antonov biplanes and a number of helicopters. The company's Web site soon shows most of the helicopter fleet up for sale, as well as both Tupolevs (one for \$2.1 million and the other for \$2.2 million).

Sibaviatrans now opens an office at Murmansk and begins to operate its own return service from that point to Moscow. Executives on the scene now also avail themselves of opportunities to further assess Murmansk Aviation's small fleet. Although inter- and intra-regional flights continue, they remain unprofitable.

A large number of flight crew, discharged at the time of the takeover, write to President Vladimir Putin and Duma Chairman Gennady Seleznev on October 11 openly complaining about and detailing the airline's poor state of affairs. Although this gambit has no effect, some movement is noticed in November when **Sibaviatrans** reenters the story.

In mid-November, Murmansk and **Sibaviatrans** conclude a strategic partnership. Under its terms, **Sibaviatrans** leases three An-2s, all of the Mi-8s (only one of which is serviceable), and two Mi-2s, agreeing to overhaul the grounded helicopters. These are employed by **Sibaviatrans** to operate Murmansk Airlines' routes.

Despite this revival of fortune, the bankrupt carrier now finds itself with a Rbs 14.5-million tax bill from the Russian federal government. In late

December, CEO Tarantov flies to Moscow where he will attempt to obtain additional financing from the carrier's creditors committee. He also opens negotiations with the federal tax authorities in an effort to reduce Murmansk's liability, the exact amount of which is disputed. If he is successful in his various rounds of talks, Norilsk Nickel and other investors and creditors, to say nothing of the taxmen, will, hopefully, be repaid.

MURMANSK CHIEF AVIATION ENTERPRISE (MURMANSKOE GAP). See **MURMANSK AIRLINES**

MURRAY AIR (MURRAY AVIATION): 835 Willow Run Airport, Ypsilanti, Michigan 48198, United States; Phone (313) 484-4800; Fax (313) 484-4875; <http://www.murray-aviation.com>; Code MU; Year Founded 1985. MU is established by brothers Preston and Mark Murray at Willow Run Airport, Ypsilanti, Michigan, in October 1985 to provide international and domestic passenger charter services to all U.S. cities, as well as communities in Mexico and Canada.

Chairman/President Mark Murray inaugurates nonscheduled supplemental services with a single Mitsubishi Mu-2 in December 1986.

Operations continue apace during the remainder of the decade. With newer technology than the Douglas DC-3 available, the brothers choose to upgrade their flight equipment in 1989. The first of several CASA C-212-200 Aviocars are added into the 1990s and the company also comes to concentrate heavily on express and all-cargo services. Much of the company's business will shift to "just-in-time" deliveries, most in support of the automobile industry.

By 1997, the Murrays oversee a workforce of 60 and a fleet that includes 1 Beech King Air 90, 6 CASA C-212-200 Aviocars, and 2 Mu-2s. One CASA freighter and a Mitsubishi Mu-2B also transport cargo from their base at Detroit City Airport.

The largest CASA operator in North America in 1998–2000, MU adds two more King Air 90s and removes an Mu-2. Two DC-8-63Fs join the fleet on March 13 of the latter year. They are operated under FAR Part 125 regulations on behalf of Pentastar.

MURRAY AIR (PTY.), LTD.: Australia (1984–1990). MAL is established at Melbourne in 1984 to provide passenger and cargo charters to regional destinations. Employing a pair of Douglas DC-3s, revenue services are duly inaugurated and are maintained until 1990.

MURRAY VALLEY AIRLINES (PTY.), LTD.: Australia (1982–1986). Upon the 1982 failure of **Countrywide Airlines (Pty.), Ltd.**, of which it had earlier been a merger partner, MVA, based at Mildura, Victoria, is reborn. Equipped with a fleet that comes to include 2 Shorts 360s, 1 Shorts 330, 1 Embraer EMB-110P1 Bandeirante, and 2 Cessna 402s, the commuter inaugurates scheduled daily or weekday passenger flights linking its base with Adelaide, Renmark, Mt. Gambier, Melbourne, and Broken Hill.

Services continue apace until October 31, 1986 when, unable to maintain its economic viability, MVA collapses.

MUSE AIR: United States (1980–1986). Former **Southwest Airlines (2)** President/CEO Marion Lamar Muse founds Muse Air Corporation on October 27, 1980. The veteran official assumes the chairmanship, leaving his son Michael to be president/CEO.

On April 30, 1981, a public stock offering raises the sum of \$35.3 million, which allows the ordering of five aircraft. Even before the first flight, the new entrant makes history by announcing on June 25 that it will introduce the industry's first "no smoking" policy. It is also noted that only first-class flights will be offered, complete with leather-covered seats.

With a pair of McDonnell Douglas DC-9-80s (MD-81s) leased from their manufacturer, Muse (which certain pundits have labeled "Revenge Air") inaugurates single-class flights between Dallas (DAL) and Houston (HOU) on July 15 in direct competition with **Southwest Airlines (2)** in a new Texas airline fare war.

Despite the PATCO air traffic controllers' strike during August and subsequent ATC restrictions, the carrier flies 177,782 passengers on its long route by year's end. The strike and start-up costs bring a net loss of \$3.96 million.

Airline employment in 1982 stands at 440. The airline acquires two more MD-80s in January and on May 16, launches service between Midland and Odessa and Tulsa, following this with an extension from Houston to Los Angeles on October 1.

Muse, which meanwhile has added another pair of MD-82s, flies 863,940 passengers during its first complete year and earns revenues of \$33 million.

Although expenses climb to \$37 million and an operating loss of \$4.7 million is taken, a net profit of \$11.5 million is posted, an unusual feat for a new air transport firm in the era of deregulation. This accomplishment is made understandable when one considers income from the sale of tax benefits on four MD-80s.

The million-mark in annual enplanements is passed by the 740-employee Muse in 1983.

Muse boards 66.5% more customers (1,438,700) than it did a year earlier. Revenues rise 120.6% to \$72.92 million and costs climb 80.8% to \$68.31 million. Although the carrier generates gross income of \$4.61 million, it suffers a net loss of \$1.96 million.

Disaster via overexpansion nearly overcomes the carrier in 1984, even though enplanements rise by 37.6% to 1,979,651. New routes are opened to New Orleans, Las Vegas, San Jose, and Ontario, California, three more MD-82s are added, and the carrier advances into the ranks of the nation's national airlines. The routes to Ontario and Lubbock are later discontinued. Lamar Muse departs in May, promoting Michael to the chairmanship; he, in turn, brings in former Southwest Airlines (1) executive Samuel Coats as chief operating officer.

On the year, Muse's expenses rise 54% and it takes an operating loss of \$3.3 million and a net loss of \$17 million on revenues of \$101.9 million. In December, bankruptcy is avoided through an arrangement with Dallas financier Hal Simmons; as a condition, the senior Muse is required to take over the company from his son, who is forced to resign his posts.

At the beginning of 1985, founder Muse orders the schedule revamped and service started to the Lower Rio Grande Valley. An order for four MD-80s is cancelled, as eight less-expensive-to-operate DC-9-51s are purchased abroad. On March 11, Muse negotiates a sale of itself to rival Southwest Airlines (2), although, by terms of the sale, it will become a wholly owned subsidiary and allowed to retain its previous identity.

The Muse Airlines acquisition is consummated on June 25; Southwest Airlines (2) pays \$40 million in cash and \$20 million in stock for its rival. Following stockholder approvals at both carriers, application is made to the government for approval. Chairman Muse orders additional innovations, including a reduction of the number of business-class seats, a shift of routes to longer segments, an end to the no-smoking policy, and a realignment of schedules and fares with those of Southwest Airlines (2). Meanwhile, the DOJ advises the DOT that the possibility for monopoly in certain Texas markets exists if the merger is completed.

Customer bookings for the year jump 19.7% to 2,743,866. Revenues jump 29.4% to \$278.1 million, costs rise 17.4% to \$123.55 million, and the operating profit grows to \$8.29 million. The net loss improves to minus \$8.73 million. In February 1986, Muse is renamed TranStar.

MUSIC CITY AIRWAYS. See GULF AIR

MUSTIQUE AIRWAYS, LTD.: Box 1232, Box 1232, E. T. Joshua Airport, Kingston, St. Vincent and the Grenadines; Phone (784) 456-4580; Fax (784) 456-4586; <http://www.caribisles.com/mustique-air>; Code Q4; Year Founded 1979. French businessman Michel Seydoux, owner of Paris-registered Groupe MSC, has the inspiration for an interisland airline while building a house on the island of Mustique in 1978. On June 21, 1979, he establishes MAL on the British island of St.

Vincent, in the Windward Islands, incorporating it under the Company's Act of St. Vincent and the Grenadines. Employing a single Britten-Norman BN-2 Islander, the small charter operation begins flying to such local destinations as Barbados, Grenada, Union Island, Canouan Island, and Bequia Island. As an increasing number of daily international flights are made into Barbados, Mustique establishes offices and a check-in counter at Grantley Adams International Airport.

Former Tropic Air (Tropical Air Services, Ltd.) executive Jonathan Palmer and his wife Marnie join the company in 1981, the former as pilot/manager. Operations under Seydoux and Palmer continue apace over the next 13 years. A subsidiary, Grenadine Tours, Ltd., is set up at Barbados to offer travelers shared charter services. A new \$1.5-million hangar complex is opened at St. Vincent's E. T. Joshua Airport in 1988 and by 1993 enplanements, mostly by tourists, reach 80,000 per year.

By 1994, Johnathan Palmer is chairman/managing director and the major shareholder. His fleet now includes 5 Islanders, 1 Cessna 402C, and 1 Beech 58 Baron. Airline employment stands at 55 in 1995 as one more Islander is acquired in early in the year.

Operations continue apace in 1996-1999, during which period the fleet is increased by one Baron and a homepage is opened on the World Wide Web.

With bookings handled by general sales agents in Canada, Germany, the U.K., and the U.S. or through Barbados-based Grenadine Tours, Mustique, in 2000, continues to link Barbados, Grenada, and St. Vincent with the Grenadines, Union Island, Mustique, Canouan Island, and Bequia Island.

MUTUAL AIRCRAFT CORPORATION: United States (1928-1929). MAC is founded at Los Angeles in the spring of 1928 to offer scheduled passenger services to Oakland. Four Ryan B-1 Broughams are acquired and flights commence in June. A total of 2,350 travelers are carried during the year.

Operations cease in 1929 following the October stock market crash.

MUTUAL AVIATION: United States (1945-1948). Mutual is one of many all-freight charter carriers established by returning servicemen in late 1945. The company employs a war-surplus Douglas C-47 to undertake services between New York and Buffalo, which cease in 1948.

MYACHKOVO AVIA ENTERPRISE (MYACHKOVSKOE AP): P.O. Box 50, Myachkovo Airport, Liubertsi, Moscow Region, 140000, Russia; Phone 7 (095) 552-3525; Fax 7 (095) 552-2216; Year Founded 1994. The aerial work division of Bykkovo, the aerial mapping service based near Moscow, Myachkovo is encouraged in 1994 to establish a charter operation, to generate currency to replace lost state funding. Under the leadership of Yuri V. Tsibin, ad hoc flights commence with a fleet that includes 20 Antonov An-2s and 35 An-30s, plus a large helicopter fleet of 25 each Mil Mi-2s and Mi-8s. Survey, energy support, air ambulance, air taxi, communications, and cargo are among the types of services provided.

Flights continue in 1995-2000, during which years the fleet is rationalized downward to include 10 An-30s, 1 An-26, 4 Mi-8/17s, and 2 Mi-2s.

MYANMAR AIRWAYS, LTD.: No. 104 Strand Road, P.O. Box 1246, Yangon, Myanmar; Phone 95 (1) 84 566; Fax 95 (1) 89 583; Code UB; Year Founded 1989. Burma Airways, Ltd. is renamed on April 1, 1989. The previous routes of Managing Director Capt. Khin Soe's carrier are maintained and include stops linking Yangon with Akyab, Bhamo, Heho, Kalemmyo, Kawthuang, Kengtung, Kyaukpyu, Kahmti, Lashio, Loikaw, Mandalay, Mergui, Mong Sat, Moulmein, Myitkyina, Nyaung U, Putao, Sandoway, and Tavoy. The fleet comprises 2 Fokker F.28-4000s, 1 F.28-1000, and 6 F.27-600s. Two Aerospatiale SA-330J Puma helicopters are also available.

En route from Mergui to Yangon on October 6, an F.28-4000 with 85 passengers is taken over by 2 teenaged boys, who divert the aircraft to an air force base in Thailand and there seek political asylum.

Enplanements for the year total 308,000.

Operations continue apace in **1990** as passenger boardings climb to 406,000. In **1991**, the fleet includes the 2 Pumas, 1 F.27-500, 5 F.27-600s, 1 F.28-1000, and 2 F.28-4000s. In **1992**, airline employment is 1,073 and Jakarta is added on services to Bangkok, Hong Kong, and Singapore.

In **1993**, the workforce stands at 1,100 and the fleet includes 4 F.27-600s, 2 each F.28-4000s and Aerospatiale Pumas, and 1 F.28-1000. In the spring, a new international subsidiary, **Myanmar International Airways, Ltd.**, is formed to handle the carrier's foreign operations in cooperation with **Royal Brunei Airlines**.

Capt. Thura U. Win Myint is appointed managing director in **1994** and oversees both the domestic and international operations. In early **1995**, the company begins to coordinate services with the Yangon-based charter operator **Air Mandalay (Pty.), Ltd.**

Flights continue in **1996-1997** and the fleet now includes 2 Eurocopter SA-330J Puma helicopters, as well as 1 Fokker F.27-400, 6 F.27-600s, 1 F.28-1000, and 2 F.28-4000s.

While landing at Mergui in a rainstorm on July 24 of the former year following a service from Yangon, an F.27-600 with 5 crew and 44 passengers undershoots the runway by 800ft., runs over an unfinished runway extension, and plunges into a 25-ft.-wide ditch (8 dead).

Also during these years, many of the country's 60 small airstrips are upgraded, a new international airport is under construction at Mandalay, and plans are put in place to extend the airfields in Tachilek, Kawthaung, Pagan, and Ngapoli. Work begins on a large new international airport at Yangon, scheduled to be completed in the year **2002**.

Destinations visited in this period and in **1998** include Bangkok, Dawe, Dhaka, Heho, Hong Kong, Kalembo, Kengtung, Kyaukpyu, Lashio, Loikaw, Mandalay, Maulmyine, Mong Hsan, Myeik, Myitkyina, Nyaung-U, Putao, Singapore, Sittwe, Tachilek, and Thandwe.

On August 25, en route from Yangon to Tachilek, 350 mi. N on the Thai border, Flight 635, an F.27-600 with 3 crew and 39 passengers, crashes into Payakha Mountain near Manibagi in monsoon conditions; there are no survivors.

MYANMAR INTERNATIONAL AIRWAYS, LTD.: No. 123 Sule Pagoda Road, Kyauktada Tsp., Yangon, Myanmar; Phone 95 (1) 84 566; Fax 95 (1) 89 583; <http://www.mai-airline.com>; Code UB; Year Founded 1993. MIA is established at Yangon in the spring of **1993** as a subsidiary of Brunei's Baiduri Group-backed, Singapore-based Hyghsonic Enterprise (60%) and **Myanmar Airways, Ltd.** (40%), which will continue to largely operate domestic services. Outfitted with a single Boeing 757-2M6ER leased from **Royal Brunei Airlines**, the company, in cooperation with the Brunei flag carrier, undertakes scheduled regional services in May to Bangkok, Singapore, and Hong Kong.

While landing at Kawthaung on October 6 after a service from Yangon, an F.27-600 with 4 crew and 41 passengers, overruns the runway and comes to rest 250 ft. further on against the banks of a stream; although the aircraft is damaged, there are no fatalities.

Capt. Thura U. Win Myint is appointed managing director of both the domestic and international operations in **1994**. During the fall, the RBA Boeing is replaced by a B-737-4H6 chartered from **Malaysian Airlines, Ltd. (MAS)**. In December, it is employed to implement a block-space agreement with MAS on services from Yangon to Kuala Lumpur.

Flights continue apace in **1995**. Routes are stretched to Dhaka, Kunming, and Jakarta. On September 25, **1996**, an interline agreement is reached with **Japan Air Lines Company, Ltd. (2)**. Under its terms, a total of 21 of 29 weekly JAL flights between Bangkok and Japan will connect with MAI services to Yangon.

Additional destinations added in **1997** include Manila, Penang, and Taipei. Yield is significantly impacted by the Asian economic crisis during the second half of the year.

Economic problems continue to plague the carrier in **1998**, even as Yangon's political isolation deepens. Service to Dhaka, Kunming, and Jakarta is discontinued, leaving Bangkok, Hong Kong, Kuala Lumpur,

and Singapore as the only routes. Hyghsonic Enterprises informs its Myanmar partner that it wants to pull out of its arrangement.

During the early fall, negotiations are begun between **Myanmar Airways, Ltd.** and Taiwan-based **EVA Airways Company, Ltd.** concerning a possible equity stake of as large as 50% plus management control. In October, a team is dispatched to Yangon from Taipei to carry out due diligence and in November, as the studies continue, EVA makes a provisional proposal to acquire the Hyghsonic Enterprises shares.

Having completed its studies and reviewed all possibilities, EVA, during the first week of January **1999**, drops its planned buy into MAI. The airline will now continue operations as before, seeking new arrangements and funding as it can.

Under terms of a new code-sharing agreement, the carrier, together with **Air Macao Company, Ltd.**, launches thrice-weekly roundtrips between Macao and Yangon on March 13.

Service with the two B-737-4H6s leased from **Malaysia Airlines, Ltd.** continues into the new millennium without headline or incident. It is reported in December **2000** that Singapore-based Regionair has won a 15-year management contract after purchasing a 49% equity stake.

MYRTLE BEACH JET EXPRESS. See GREAT AMERICAN AIRWAYS; SUN PACIFIC INTERNATIONAL.

NAB (NAVEGACAO AEREA BRASILEIRA, S.A.): Brazil (1940-1961). NAB is incorporated at Rio de Janeiro on February 28, **1940**. The remainder of the year is spent in building airports at Lapa and Petrolina and in obtaining two Beech 18s, which arrive crated on a ship on January 2, **1941**. With the twin-engine American-made transports assembled, the new entrant inaugurates service on March 28 over a route to Recife via Belo Horizonte, Bom Jesus de Lapa, and Petrolina.

An official concession is won from the government on May 5, over a month after revenue flights had begun. During the summer, a Beech 17 Staggerwing and a Fairchild F-24 are received and placed in service. An unsustainable Rio to Recife coastal route is launched on September 6. Two months later, on November 4, the Brazilian government, then phasing out **Syndicato Condor, S.A.** and in need of additional airline capacity in the face of war, provides an initial per-kilometer subsidy of 5.5 milreis.

A special government credit of 1.797-million milreis is granted to NAB on May 21, **1942**. The funds are employed by the carrier to purchase two Lockheed L-18 Lodestars and Stinson SR-9E Reliant. Another six million milreis is provided on August 11. With the new aircraft, the Recife segment is stretched during the remainder of the year and in **1943** to Belem and from Belem it is directed south to Teresino, Lapa, Belo Horizonte, and Rio de Janeiro.

On July 29, **1944**, the government provides another subsidy, eight million cruzeiros, on condition that three more Lodestars are acquired and a set mileage per year is flown. Although five L-18s come on line, maintenance and other conditions are such that only two are ever available at any given time. On March 24, **1945** an easy repayment government loan of 25 million cruzeiros is obtained.

Two Douglas DC-3s are purchased from the factory in May **1946** and a route linking Rio de Janeiro-São Paulo-Recife-Belem is opened. A third Douglas transport is acquired in early **1947**.

By March **1948**, the carrier has, however, used up all of its loans and grants, made little profit, and encountered such severe financial difficulty that it must suspend services. Unable to reorganize, NAB declares bankruptcy on August 17. The government takes over the airline, pays off the debts, and restarts the carrier, giving it one DC-3 and a little route network connecting Rio de Janeiro with Montes Claros, Governador Valadares, and Vitoria.

Services are initially maintained, but begin to decline in **1949-1950**; while landing at Rio de Janeiro on June 6, **1951**, a DC-3 is lost in a crash (two dead). The service decline continues in **1952-1953** and only two of the four original routes are flown by **1954-1956**. Two Curtiss C-46s are purchased in July **1957** and in November, the company is reorganized.

Ownership is sold to Dilvo Perez for 60 million cruzeiros in July **1958**. Perez immediately moves to boost his acquisition by purchasing 10 DC-3s from **Panair do Brazil, S.A.** and concluding an operations agreement with the larger airline. In return for its unloved and formerly poorly serviced feeder routes around Rio de Janeiro, **Panair do Brazil, S.A.** and the government allow NAB a trunk route running from the major city up to Belem via Receife.

Service over the new system begins in **1959**, the same year NAB acquires nine more C-46s.

During **1960**, the company gambles on making a profit from deep discount, low-amenities Coach Service flights with fares at less than 50% of those then offered for in-country economy tariffs.

A C-46A with five crew crashes into a hill while on initial approach to Ramsey AFB, Puerto Rico, on May 3; there are no survivors.

Coach Service is followed in early **1961** by a Coach Cargo service in cooperation with **ETR (Exmar Transportes Rápidos, S.A.)**. Losing far more money than it could reasonably expect to make, NAB is in deep financial difficulty by summer. On October 24, it is purchased by **Loide Aero Nacional**.

NACIONAL. See **TAP (TRANSPORTES AEREOS NACIONAL, S.A.)**

NAD AL-SHARQ INTERNATIONAL AIRLINES: Sharjah International Airport, Sharjah, United Arab Emirates; Year Founded **2000**. Nad al-Sharq International is set up at Sharjah in early November **2000** for the purpose of operating scheduled services from the UAE and Dubai to Iraq. A B-727-200A is acquired and thrice-weekly roundtrips from Sharjah and weekly return flights are set to begin on November 22.

NADYM STATE AIR ENTERPRISE (NADIMSKOE GOSUDARSTVENNOE AVIAPREDPRIVATIE): Nadym Airport, Tyumen, Tyumenskaya, Oblast, 626711, Russia; Phone 7 (34595) 40493; Fax 7 (34595) 44602; Code NDM2; Year Founded **1993**. This former **Aeroflot Soviet Airlines** rotary-wing unit is privatized in **1993** under the leadership of General Director Nikolai M. Rozhkov. Revenue services commence and continue with a fleet that includes an unspecified number of Mil Mi-8 and Mi-17 helicopters.

Flights continue in **1994–2000**, during which years the company is reformed to offer domestic all-cargo services in addition to aerial contract work. The fleet now includes 5 Antonov An-2s, 3 An-74s, 1 Yakovlev Yak-40, and 28 Mi-8/17s.

NAGANAGANI CARGO (NAGANAGANAI COMPAGNIE NATIONALE): Burkina Faso (**1984–1993**). This carrier is formed at Ouagadougou in **1984** to offer charter passenger and cargo services throughout Africa and on to Europe. Chairman Alain Yoda's fleet comprises 1 Boeing 707-321B, 1 B-707-329C, and 1 B-707-336C. Flights continue to various destinations during the remainder of the decade and the marketing title is changed to Naganagani Cargo.

Business continues apace in **1990–1991** and the fleet in the recession year of **1992** is reduced to only the B-707-336C.

Operations cease in **1993**.

NAGASAKI AIRWAYS COMPANY, LTD.: Japan (1960–2001). Founded at its namesake city on June 12, **1960**, this small charter operation, owned by Nagasaki Prefecture, operates nonscheduled lightplane services to local destinations on Kyushu, as well as the resort island of Fukue, for the next quarter-century. On December 1, **1967**, majority shareholding passes to **All-Nippon Airways Company, Ltd. (ANA)**

In **1985**, the company is reformed into a small commuter airline under the leadership of Managing Director Toshio Onizuka. Scheduled revenue services to local destinations commence with a 2 Australian-made Government Aircraft Factory GAF N.22A Nomads and 1 Cessna 402. Orders are placed for 5 Pilatus-Britten-Norman PBN-2 Islanders.

The first two Islanders arrive in March and July **1986**, respectively, and one Nomad is replaced. A total of 47,000 passengers are flown over the company's scheduled commuter network during the first full year.

The remaining three Islanders are placed into service during **1987–1990** and all now wear the carrier's wide blue and yellow stripes upon their white fuselages. The remaining Nomad and the Cessna 402 are removed. Operations continue apace thereafter.

Late in **1995**, a PBN-2 crash-lands in a mountain during bad weather; no injuries are reported, but the plane is a total loss.

Along with a new unit, the company acquires a replacement PBN-2 Islander during the first quarter of **1996**.

Flights continue during the remainder of the decade and into the new millennium. During these years, all five Islanders are in service.

On January 14, **2000**, a firm order is placed for a de Havilland Canada DHC 8-Q200; when it is delivered early in **2001**, the turboprop will operate on the routes from Iki to Fukuoka and Nagasaki. A request is made on November 1 for a second DHC 8-Q200, which will be delivered in late 2001 and placed into service on the route from Iki to Nagasaki and to Fukuoka.

Early in 2001, this carrier is renamed **Oriental Air Bridge Company, Ltd.**

NAKA NIHON AIR LINES COMPANY, LTD.: Japan (1953–1988). Naka Nihon Air Service Company, Ltd. is formed at Nagoya on May 4, **1953** to provide lightplane and rotary-wing charter and air taxi services throughout the local region. Employing Grumman G-21 Goose amphibians and helicopters, the company's new airline division, Naka Nihon Air Lines, Ltd. (Naka Nihon Koku, or Central Japan Airlines Company, Ltd.), inaugurates scheduled services Nagoya–Shima–Kushimoto on July 15, **1962**. Two years later, on January 25, **1965**, the company's air transport division is purchased by and merged into **All-Nippon Airways Company, Ltd. (ANA)**, which has been financially supporting this operation for some time.

After the sale, Naka Nihon Air Service Company, Ltd. expands its nonscheduled services and within 25 years is a major fixed- and rotary-wing operator. The fleet comes to comprise a large number of Cessna twins and Bell helicopters. Airline employment reaches 430 plus before services cease in early **1988**.

NAKA NIHON AIRLINE SERVICE COMPANY, LTD.: c/o Nagoya Airport, Toyoyama-Cho, Nishikasugai-Gun, Aichi Prefecture, 480-02, Japan; Phone 81 (568) 285405; Fax 81 (568) 285415; http://www.nals.co.jp; Year Founded 1988. The Nagoya Railroad and **All-Nippon Airways Company, Ltd. (ANA)** resurrect the memory of the once-independent Naka Nihon Air Service Company, Ltd. while forming this new regional charter carrier on May 12, **1988**.

Twice-daily commuter operations with a single Fokker 50 begin on April 23, **1991** over a route from Nagoya to Toyama and daily from Nagoya to Yonago. An additional route from Nagoya to Takamatsu begins in September.

Airline employment at President Kiyoshi Hayakawa's new entrant stands at 54 in **1992** and the fleet comprises 1 Fokker 50 and 1 F.27-600. A second Fokker 50 arrives in August.

Operations continue in **1993–1994**. A third Fokker 50 is delivered in December **1995**.

Service is maintained in **1996** as the workforce grows to 95. Enplanements total 165,605 and \$25 million in operating revenues are reported.

President Hayakawa's 3 Fokker 50s transport 184,008 passengers in **1997**, an increase of 10.3%. Service is maintained in **1998**, during which year passenger boardings accelerate to 380,000. At the beginning of **1999**, airline employment stands at 106. That number grows to 163 by the start of **2000**.

NALURI BHD.: No. 4 Lorong 19/1A, Off Jalan 19/1, Section 19, Petaling Jaya, Selangor Darul Ehsan, 46300, Malaysia; Phone 60 (3)

756 1177; Fax 60 (3) 755 3823; Year Founded 1998. MHS Aviation Sdn. Bhd. is renamed by new owners DIR Equities in late 1998. Off-shore support remains the company's principal business and operations are continued with a fleet that includes 8 Sikorsky S-61Ns, 2 S-76As, 6 S-76Cs, 4 Eurocopter AS-332L Super Pumas, and 2 each AS-360Js, AS-355F2s, Bell 412Ps, and Bell 412SPs.

A Super Puma remains on charter to **Lloyd Helicopters (Pty.), Ltd.**

NAMAKWALAND AIR SERVICES (PTY), LTD.: South Africa (1960–1984). Joseph Jowell forms this commuter at Springbok in 1960 as the air transport division of his Jowell's Garage & Transport (Pty.), Ltd., a unit in the Trencor Group. Initially operating as an air taxi, passenger, and cargo operator, Jowell's concern inaugurates Beech Bonanza flights from Springbok to Cape Town via Vanrhynsdorp. Enplanements for the year total 451.

During 1965–1969, Namakwaland extends flights into the area north of Bitterfontein in Namaqualand and a decade later the carrier launches scheduled flights between Cape Town, Kleinsee, and Springbok, as well as Upington, Springbok, and Kleinsee.

Passenger boardings total 1,066 in the former year, but by the end of the decade, total 2,400.

During the 1970s and early 1980s, the fleet comes to comprise 2 Piper PA-31-350 Navajo Chieftains, 3 PA-31 Navajos, 3 Piper PA-23 Aztecs, 1 Cessna 310, and 1 Beech 55 Baron. Destinations added include Aggeneya, Ai Ais, Alexander Bay, Calvinia, Karasburg, Kimberley, Koginnaas, Loeriesfontein, Prieska, and Vredendai.

In 1983, the last full year of service, Niel Jowell, son of the founder, is chairman, with Deon Bignaut as managing director. A feeder route from Cape Town to Upington is operated on behalf of **South African Airways (Pty.), Ltd.**

Unable to maintain viability in the face of world recession and economic boycott, the company ceases operations in 1984. In February 1985, its assets are acquired by **National Airlines (Pty.), Ltd.**

NAMIB AIR (PTY), LTD.: South West Africa/Namibia (1962–1991). Anton Lombard establishes NAL at Walvis Bay in December 1962. At the beginning of 1963, Lombard applies to the government of South Africa, which controls South West Africa, for authority to operate scheduled service, but this will not be granted.

Initially employing a Piper PA-28 Cherokee Six, Lombard begins nonscheduled services to Luderitz, Alexander Bay, and other local destinations. During the next three years, the fleet is increased by the addition of two PA-23 Aztecs and a PA-30 Twin Comanche.

In 1966, Lombard is bought out by **Suidwes Lugdiens (Pty.), Ltd.** and will spend the next 12 years operating as a subsidiary of the larger Windhoek-based carrier.

On December 1, 1978, **Suidwes Lugdiens (Pty.), Ltd.**, which four years earlier had become a subsidiary of the shipping concern Safmarine (Pty.), Ltd., is reorganized and renamed Namib Air (Pty.), Ltd.

Scheduled operations continue to link the Windhoek base with Halalai, Okaukuejo, Grootfontein, Tsumeb as well as Cape Town via Swakopmund, Walvis Bay, Luderitz, and Alexander Bay. Two CV-580s are employed to operate a charter route from the northern part of the country to Alexander Bay on behalf of the Consolidated Diamond Mines.

The Cape Town service is usually subcontracted to **Air Cape (Pty.), Ltd.** By decade's end, the fleet comprises 2 Convair CV-580s, 1 Douglas DC-3, 1 Cessna 402, 1 Piper PA-31-350 Navajo Chieftain, 4 Cessna 310s, and 2 Cessna 210s. In October 1980, the Walvis Bay to Cape Town route is turned over, in its entirety, to **Air Cape (Pty.), Ltd.** A CV-580 is leased to Air Cape to fly the route.

During the 1980s, the company expands both its route system and fleet. Services are opened to Harare, Keetmanshoop, Luanda, Luderitz, Lusaka, Maun, Mpacha (Katima Mulilo), Rundu, Oranjemund, Oshakati, Swakopmund, Tsumeb, and Victoria Falls.

Two Beech 1900Cs, christened *Caprivi* and *Kalahari*, are purchased in 1987. Leaving the Cessnas and Pipers to operate scheduled services,

the new turboprops join the last CV-580 and DC-3 in operating over the four principal roundtrip scheduled routes: Katimo Mulilo to Johannesburg (twice-weekly); Windhoek to Upington via Keetmanshoop (thrice-weekly); Windhoek to Katimo Mulilo via Tsumeb, Oshakati, and Rundu (four-times-a-week); and Windhoek to Luderitz via Walvis Bay and Swakopmund (six-times-a-week).

In 1988, the state corporation TransNamib (Pty.), Ltd. purchases the entire shareholding and makes the carrier the national airline of the new provisional government of Namibia. The company turns to **South African Airways (Pty.), Ltd.** and requests the lease of a B-737.

The B-737-244 arrives in early 1989 under a wet-lease from **South African Airways (Pty.), Ltd.** and is employed on August 6 to begin a new service from the nominated national capital, Windhoek, to Durban and Cape Town. A third Beech 1900C enters service in October.

In 1990, the company's last full year under this name, the fleet comprises 3 Beech 1900Cs, the leased Boeing 737-244, and 1 Convair CV-580.

Former **Air Botswana (Pty.), Ltd.** General Manager D. Keith Petch is appointed general manager in January and national independence is finally achieved on March 21. The B-737-244 is returned to Johannesburg as the company purchases its own "Baby Boeing," a Dash-2A5A, which is christened *Ondekaremba*. On April 1, the B-747SP-44 *Soutpansberg* is leased from SAA.

In late spring, a new route is opened to Harare, Zimbabwe, while local and regional flights commence from Rundu to Victoria Falls via Katimo Mulilo, from Windhoek to Lusaka, and from Windhoek to Tsumeb.

An agreement is simultaneously reached with **Deutsche Lufthansa, A.G.** for the joint operation of the Jumbojet from Windhoek to Frankfurt. Twice-weekly flights to Munich commence on April 24.

On October 28, 1991, the carrier's name is changed to **Air Namibia, Ltd.**

NAMIBIA COMMERCIAL AVIATION (PTY), LTD.: Windhoek International Airport, Windhoek, Namibia; Year Founded 1992. After six years of air taxi work with his Hire & Fly, Ltd., former **South African Airways (Pty.), Ltd.** executive Christopher Schutte changes his company's name in 1992.

While passenger flight-seeing trips and air taxi services continue to be offered, Schutte in September purchases a pair of Douglas DC-6Bs formerly operated by the Zambian Air Force, plus 40 tons of spare parts. The first is flown to Windhoek in October and reworked into a freighter. In December, it begins contract cargo flights into Angola from a base at Rundu.

The Angola airlift ends in January 1993, at which point the giant airliner is parked until a decision can be taken on its future use. In 1994, it is decided that demand for NCA passenger charters and replacement services for scheduled carriers will be sufficient to justify restoration. The second DC-6B arrives at Windhoek from Lusaka in September and it, too, drawing upon the purchased stockpile of spare parts, begins its refurbishment.

Restored and repainted in NCA's blue and white livery, the first DC-6B is christened *Fish Eagle*, after the country's national bird, and enters revenue service (marketed as Classic Air Travel) on March 20, 1995.

In addition to enhanced passenger charters, the *Fish Eagle*, during the remainder of the year and in the next two, operates a joint weekly scheduled return service from Windhoek and Victoria Falls on behalf of **Air Namibia, Ltd.** and **Air Zimbabwe Corporation.**

On October 1, 1997, the lovingly restored second DC-6B, named *Bat-uleur* after another local bird, begins service.

Flights continue into the new millennium. It is reported by *AirlinersOnline.Com* on August 7, 2000, that the DC-6B *Fish Eagle* has been sold to Red Bull Aviation of Salzburg. The aircraft is taken to Europe, wearing NCA colors with small Red Bull titles by the nose and rear passenger door. Over the winter, the pistonliner will be refurbished and then will fly the European air show circuit.

NANJING AIRLINES COMPANY, LTD.: 238 Zhuijiang Road, Nanjing, 210016, China; Phone 86 (25) 460-2629; Fax 86 (25) 339-4461; Code 3W; Year Founded 1994. NA is established by Dajiaochang Airport, Nanjing, in July 1994 as a joint venture between the city's local government and **China Northwest Airlines Company, Ltd.** Jiang Heping is appointed president and secures a fleet of 3 Xian Y-7-100s. These commence revenue flights during the fall to Nanchang and Wuhan.

The fleet is increased in 1995 through the addition of a British Aerospace BAe 146-100. The first traffic figures are reported in 1996 and show enplanements of 290,000. Destinations visited in 1997–2000 include Nanchang and Wuhan.

NANTUCKET AIRLINES: Barnstable Municipal Airport, East Ramp, Hyannis, Massachusetts 02601, United States; Phone (508) 790-3122; Fax (508) 778-1870; <http://www.nantucketairlines.com>; Year Founded 1987. Founded by Charles Harris at Barnstable Municipal Airport at Hyannis, Massachusetts, in the spring of 1987, Nantucket Airlines begins scheduled high-frequency Cessna 402 roundtrip passenger air services to Nantucket and Martha's Vineyard in June. Operations continue apace in 1988 as the fleet grows to 4 Cessna 402s and by 1989, enplanements total 96,904.

In 1990, the 27-employee small regional adds a Piper Aztec. Passenger boardings jump 6.7% to 103,426. In 1991, customer bookings swell 6.5% to 110,163. A fifth Cessna 402 is purchased in 1992 as enplanements ascend 7.7% to 118,664.

In 1993, the company employs 30 workers and operates a fleet for 4 Cessna 402s. Passenger boardings climb 5.3% to 124,924. In 1994, the company's route system and other resources are joined with those of **Cape Air**, although both airlines initially retain their independence.

During the next six years, Nantucket's identity is made parallel with that of Cape Air and its administration are moved to Cape Air's headquarters.

NAPLES AIRLINES: United States (1957–1988). In February 1957, John Van Arsdale Sr., founder and owner of **Provincetown-Boston Airline (PBA)**, travels around Florida seeking carriers with similar seasonal problems with whom he might ally. J. L. "Joe" Brown's **Naples Air Service**, based at the Gulf coast namesake community, is the solution and in November the two proprietors reach an agreement for joint service. For the winter season, beginning on December 15 and continuing through April 15, the two small companies will lease planes, trade personnel among themselves, and coordinate their activities in the manner of **Aeromarine Airlines** 40 years before.

Scheduled flights from Naples to Miami under the name Naples Airlines commence on December 15. On April 15, Brown, his planes and pilots, migrate to Massachusetts to supplement the Van Arsdale summer operation. When the city of Naples refuses to renew the Naples Airlines airport lease in 1959, **Provincetown-Boston Airline (PBA)** takes over the lease and in the process, Naples Airlines.

Provincetown-Boston Airline (PBA) becomes a dual-market airline on January 1, 1960, when it begins to operate its new acquisition as a subsidiary southern division with John E. Zate as general manager.

On December 15, 1961, the Naples–Miami roundtrip route becomes year-round and, in 1962, **Provincetown-Boston Airline (PBA)** constructs a new terminal at Naples Airport.

Equipment introduced and employed by the joint operation over the next quarter-century includes a Lockheed Model 10A Electra, Piper PA-23 Aztecs, Douglas DC-3s, Cessna 402s, Martin 4-0-4s, and Embraer EMB-110P1 Bandeirantes. These aircraft, dispatched according to load size, link the company's base with Ocean Reef, Naples, Miami, Marco Island, Marathon, Fort Myers, Tampa, Sarasota, Jacksonville, Punta Gorda, and West Palm Beach.

NA is sold to **PEOPLExpress** in May 1986, along with its parent. All three are, in turn, taken over by Texas Air Corporation in April 1987. Naples is reformed at this time, becoming the southern division of **Bar Harbor Airlines**, another once-independent TAC subsidiary. As such, it remains in business until September 6, 1988.

NASHVILLE EAGLE: United States (1987–1991). NE is established on December 30, 1987 when the new AMR Eagle Corp. purchases that division of **Air Midwest** operated from the Tennessee capital under an American Eagle code-sharing partnership. The arrangement, the first of four that will provide **American Airlines** with owned commuter subsidiaries, includes the acquisition of 11 Fairchild-Swearingen Metro IIs.

The new name and operations begin on January 1, 1988 over the former **Air Midwest** routes to 16 cities. Two weeks later, another American Eagle partner, Raleigh/Durham-based **AVAir**, declares bankruptcy and stops operating. AMR Corporation provides a cash transfusion and NE acquires \$3 million of the failed carrier's \$9.1 million in assets.

Also assumed are leases on **AVAir's** 14 Metro IIIs and 4 Metro IIs. NE is able to begin flying the **AVAir** routes to 19 markets on February 3 while flights to Louisville commence on March 6.

The "new" airline flies a total of 594,100 passengers on the year.

Operations continue apace in 1989 as the fleet grows to include 15 Metro IIs, 14 Metro IIIs, and 20 Jetstream 31s. AMR Eagle now places orders for 50 SAAB 340Bs, with 15 slated for this subsidiary, 8 to be based at Nashville and 7 at Raleigh/Durham.

On the year, passenger boardings rise 8.7% to 645,611.

NE begins flying to **American Airlines'** new Miami hub early in 1990. In March, the first SAAB 340B is placed into service.

Customer bookings skyrocket 7.09% to 1,103,897.

It is announced on April 1, 1991 that effective June 1, **Command Airlines** will be merged with NE to form **Flagship Airlines**. On April 9, an expanded facility is opened at Concourse D, Nashville, where the number of gates is increased from 4 to 16. The upgrade allows the carrier to offer 80 daily flights to 22 destinations.

NASKE AIR, GmbH: Head Office, Nachtweide 95, Magdeburg, D-39124, Germany; Phone 49 (391) 25 99 855; Fax 49 (391) 25 99 875; Code HC; Year Founded 1992. NA is established at Graunschweig in 1992 to offer passenger and cargo charters to regional destinations. Flights commence with 1 each Fairchild Metro III and Dassault Falcon 20.

Flights continue in 1993–1999, during which years scheduled service is introduced to Hanover, Uferske Hradista, and Vienna.

NATAL AVIATION (PTY.), LTD.: South Africa (1958–1963). NA is established at Durban in 1958 to provide flight training and on-demand charters. Revenue flights begin and continue with a fleet that comes to comprise 1 each Piper PA-22 Tripacer, PA-24 Comanche, 2 PA-15 Vagabonds, and 1 Aero Commander 500A. The concern is purchased by **National Airways (Pty.), Ltd.** in the fall of 1963.

NATIONAIR CANADA, LTD.: Canada (1984–1993). Montreal-based Nolisair International forms NCL as a charter and inclusive-tour operation at Mirabel Airport in the summer of 1984. Founder Robert Obadia is president/CEO. Other shareholders include Bombardier Aerospace Chairman Laurent Beaudoin, his wife, and Montreal developer Maurice Pinsonnault.

Two Douglas DC-8-61s are acquired via **Global International Airlines** from Kansas City businessman Farhad Azima and are employed to inaugurate holiday flights in December to Rio de Janeiro, Acapulco, Montego Bay, Nassau, and Barbados.

When the original shareholders in NCL withdraw early in 1985, the Montreal-based carrier's President/CEO Obadia is forced to obtain C\$1 million in financing to keep his charter operation alive. Reports in the April 1, 1993 issue of *Frank Magazine* claim that the necessary funds come from Farhad Azima.

A DC-8-62 is purchased from **Swissair, A.G.** in July 1985, the same month one of the Dash-61s is leased to **Air Jamaica, Ltd.** for operation of its Toronto–Montego Bay and Kingston weekday scheduled service. A second **Swissair, A.G.** DC-8-62 is received in August and the **Air Jamaica, Ltd.** aircraft is returned on September 9. When the fall tourist season begins, new destinations visited from Montreal, Quebec City, Toronto, and Ottawa include Recife, Venezuela, and Maragita Island.

A DC-8-55F is placed in weekly Toronto–Vancouver service in May 1986, the same month in which a third ex-**Capitol International Airlines** DC-8-61 joins the fleet. Also in May, weekly flights begin from Vancouver to Manchester and Prestwick. Toronto–New Delhi tour flights begin in the summer in addition to charters from Hamilton to London (LGW). Two **Quebecair, Ltd.** DC-8-63s are acquired in September, along with that carrier's charter operations. Just after the winter tourist season begins in November, the DC-8-55F is sold to **Aero Uruguay, S.A.**

Scheduled service is introduced on March 5, 1987, when thrice-weekly flights begin from Montreal to Brussels. The following month, a regularly scheduled Toronto to Recife frequency is inaugurated with Vancouver and Winnipeg to London (LGW) starting in May. A new scheduled service from Toronto to New Delhi is cancelled just after start-up in June due to India–Canada bilateral difficulties.

During the summer, Toronto–Montreal replacement flights are flown on behalf of **El Al Israel Airlines** and weekly charters are undertaken from Toronto to Vancouver, Calgary, and Edmonton and from Montreal to Vancouver. New points visited during the winter tour season include Cartagena, Curaçao, San Jose, Acapulco, Puerto Vallarta, and Tenerife.

Two leased DC-8-61s arrive in January 1988, one of which is returned in May. Work is begun on a C\$13.5-million maintenance center at Mirabel Airport during the summer. At the same time, scheduled Hamilton to London flights begin and Toronto–Edmonton and Vancouver charters are resumed. Hamilton largely replaces Toronto as a departure point during the winter tourist season.

The fleet in 1989 comprises 4 DC-8-61s, 2 DC-8-62s, and 2 DC-8-63s. Two Boeing 747-1D1s are delivered in January and February 1990. During the summer, charters are undertaken from Montreal to Los Angeles and resumed from that Quebec city to Vancouver. After the charter operator **Odyssey International, Ltd.** declares bankruptcy, its assets are purchased and merged by Nationair.

In 1991, a new B-747-129C is received and immediately leased, together with one of the B-747-1D1s, to **Garuda Indonesian Airways**. Another Jumbojet, a Dash-257B, is also delivered. On July 11, a DC-8-61 piloted by Capt. William Allan is leased by the Nigerian company, Holdtrade. With 261 Muslim pilgrims and a crew of 14 Canadians aboard, the plane crashes in flames while trying to make an emergency return landing shortly after takeoff from Jeddah, Saudi Arabia. There are no survivors of the 10th worst commercial aviation disaster to date. Nationair receives C\$8 million in insurance to help cover the loss.

Later in the year, a B-757-236 is acquired on lease from **Caledonian Airways, Ltd.** while two B-757-28As are also chartered. During the fall, merger negotiations are held with competing **Intair, Ltd.** When these break down in November, **Intair, Ltd.** ceases operations.

After months of labor dispute, the company, on November 19, locks out its union flight attendants and pursers. Replacement workers are hired.

In December, scheduled service is inaugurated to Caracas.

In 1992, a third B-757-28A is leased and replaces the DC-8-63 and one of the DC-8-62s, which are deleted. The labor dispute, which will become the longest in Canadian airline history, continues.

Revenues total C\$250 million; however, losses leave debts of C\$70 million.

Owner/President Robert Obadia's 1,300-employee company faces difficulty in 1993. Early in the year, the fleet is expanded by the lease of a B-747-128 from **Air France**, a B-747-212B chartered to **Garuda Indonesia**, and two leased B-757-236s. Nationair initially maintains scheduled and charter passenger and cargo services to destinations in Europe, South America, and the Caribbean. Scheduled flights, particularly to domestic points, are, however, proving too expensive to continue and so are abandoned during the first quarter.

After a number of weeks of increasing uncertainty as to the airline's continuing viability, the National Transportation Agency (NTA) in Ottawa orders the carrier grounded on March 15, leaving hundreds of passengers stranded at airports around the world as creditors seize aircraft. In the meantime, the dispute with the flight attendants is finally settled.

On March 22, Nationair, with liabilities of C\$88 million (\$70 million), files for bankruptcy protection from its 1,000 creditors. Ironically, this is the first day back at work for the flight attendants and pursers who had won back their spots after months of job action.

Also at this point, the company's liability insurance policy expires and, as a result, the NTA suspends Nationair's operating license on March 31. The charter operator is given 21 days to obtain new coverage or lose its license for good.

At the end of March, owner Obadia fails to meet the company payroll and on April 1 a number of major Canadian travel agencies announce that they will no longer sell vacation packages based on Nationair lift. A new insurance policy is not obtained and the company's authority is revoked on April 26.

Eventually, Obadia will face fraud charges in connection with the demise of his airline. Unlike the director of the Australian carrier **Compass Airlines (Pty.), Ltd. (1)**, who will go on trial over the failure of that enterprise under similar circumstances, Obadia will escape prosecution by fleeing to South America.

NATIONAL AIR (1): United States (1982–1994). NA-1 is founded at Riverside, California, in 1982 as an all-cargo carrier. Employing a pair of CASA C-212 outfitted as freighters, operations are started to a number of intrastate destinations.

In 1993, general manager Gordon Long oversees eight employees. Flights cease in 1994.

NATIONAL AIR (2): United States (1983–1984). Established at Newport, Rhode Island, in 1983, NA-2 employs 2 each CASA C-212 Aviocars and Piper PA-31-310 Navajos to operate scheduled passenger and cargo services linking the company base with Boston, Providence, New York (JFK and LGA), and Islip, Long Island.

Operations are suspended on September 30, 1984 and the company becomes a subsidiary of CASA's U.S. distributor.

NATIONAL AIR CHARTER: Jalan Suryopranoto 11G, Jakarta, Pusat, Indonesia; Phone 62 37 1117; Fax 62 380 4709; Year Founded 1968. NAC is established by its one-name founder, Bambang, at Jakarta in 1968 to fly interisland passenger and cargo charter services. The initial fleet comprises 3 Douglas DC-3s, together with Cessnas. During the 1970s and 1980s, operations continue apace and the fleet grows to include, on occasion, leased Fokker F.27s and Nihon YS-11As. A Boeing 707 chartered from the Indonesian Air Force is also employed.

The company is purchased by businessman Richard "Dicky" Turner in 1987 and following the government's 1989 pledge to relax its severe aircraft import restrictions, orders are placed for a pair of British Aerospace BAe 146-100s. The first BAe arrives at Singapore's Selat Airport in July 1990; however, at this point, the Sekretariat Negara, headed by President Suharto, refuses to issue import permits.

Operations with the one BAe and three Douglas transports continue apace in 1991–1997.

During the second half of the latter year, Indonesia suffers a severe financial crisis. This situation continues into 1998, leading to President Suharto's May 21 resignation. The fate of the airline is in doubt as the new government moves to restore the nation's stricken economy.

The company manages to avoid closing and continues to fly into the new millennium without incident or headline.

NATIONAL AIR CHARTERS, S.A.: Zambia (1974–1994). Formed in 1974 as a subsidiary of **Zambia Airways**, NAC operates passenger and cargo charters for 20 years between Africa and Europe. A highlight is the November 1985 acquisition of two Boeing 707-320C freighters. By October 1986, the company is operating two scheduled flights weekly from Lusaka to London. The first is flown via Brazzaville, Nairobi, and Jeddah; the second via Luanda, Nairobi, Jeddah, and Amsterdam.

In 1992, General Manager Stafford C. Mudiyo's 115-employee company maintains thrice-weekly flights between Europe and Lusaka, two

from Amsterdam and one from London (LHR). The fleet late this year and into 1993 comprises 2 Boeing 757-200PFs. The company shuts down with its parent at the end of 1994.

NATIONAL AIR LINES JOINT VENTURE (PTY.), LTD. See **NATIONAL AIR LINES (PTY.), LTD.**

NATIONAL AIR SERVICE, LTD.: King Abdulaziz International Airport, Jeddah, 21455, Saudi Arabia; Phone 966 (2) 652-0001; Fax 966 (2) 651-8926; Year Founded 1999. NAS is established at Jeddah in 1999 to provide executive and small group passenger charters around the country and throughout the Mideast. Revenue flights begin and continue with 1 Dassault Falcon 200 and 2 each Gulfstream G-1159C Gulfstreams Ivs and Raytheon HS-125-800XP Hawkers.

NATIONAL AIR TRANSPORT (NAT): United States (1925–1932). On May 21, 1925, former *Wall Street Journal* financial editor Clement M. Keys joins with airline investor Carl B. Fritsche and Col. Paul Henderson, the former head of the U.S. Post Office Air Mail Service, to form NAT. It is the first American company set up solely as an express airline. An effort is made to involve Henry and Edsel Ford, but to no avail. Hoping to open service from New York to Chicago, the company is incorporated under Delaware laws with initial shareholding of \$2 million. Headquarters are established at Chicago.

Hudson Motor Car Company official Howard E. Coffin is named board chairman, Keys becomes chairman of the board's executive committee with Fritsche as secretary; Col. Henderson becomes general manager. The first board action is to authorize total capitalization of \$10 million. With the government sponsored route to Chicago unavailable, a bid for Contract Air Mail (CAM) Route No. 3, Chicago–Kansas City–Dallas is won on November 7. The next step is to find equipment and pilots. Orders are placed for 10 Curtiss Carrier Pigeons and a de Havilland DH 4M; eight ex-Army pilots are hired.

Initial service over the 995-mile route begins on May 12, 1926, with intermediate stops at Moline, St. Joseph, Wichita, Ponca City, and Oklahoma City. The second Ford Tri-Motor, 4-AT-2, is received on November 2 and on November 14, a contract is signed with the American Railway Express Company committing the carrier to the transport of air express packages over CAM-3.

In March 1927, NAT is awarded CAM-17, the "Graveyard Run" from New York via the Alleghenies to Chicago. In April, another contract is signed with American Railway Express covering this new route. Ten Douglas M-3 and nine M-4 mail planes are purchased and delivered in June, having been diverted from a group originally intended for the Post Office. The same month, eight Travel Air 5000s are acquired. Nine more pilots are hired, all from the Post Office Air Mail Service. In order of experience, 3 have over 4,000 hours in the air: Lawrence H. Garrison (5000+), Warren D. Williams (4,336), and William C. Hopson (4,043).

Employed at first to fly mail, the high-wing Travel Air cabin monoplanes begin flying passengers Chicago to Dallas in the fall. Meanwhile, following the termination of U.S. Air Mail Service flights on the New York–Chicago route on August 31, NAT steps in with its mailplanes (most M-3s have since been upgraded to M-4s) on September 1. Under the eye of a rifle-armed guard and with an American Railway Express agent on hand to make certain all forms are properly filled out, the first package is loaded—a 10-gallon stetson hat for Will Rogers. The 723-mile route to Illinois is flown from New York (actually, Hadley Field in New Jersey) with a stop at Cleveland and is considered the first air express flight made in the U.S.

Passengers are rarely flown and when they are, are given parachutes, helmets, and goggles, charged \$200, and allowed a seat atop the mail sacks in the forward cockpit. For those flying west, a connection is available at Chicago with **Boeing Air Transport's** San Francisco service. The inaugural flight signifies that the transcontinental mail route is no longer a government enterprise. On his first trip from Cleveland to

Chicago, pilot Edward Axberg is killed when his M-4 is forced down in a storm at Corunna, Indiana, on November 29–30.

The company flies over a million miles on the year and transports 173,000 pounds of mail over the New York–Chicago route in the last quarter, which exceeds the 110,000 pounds carried during the whole year between Chicago and Dallas. By year's end, both routes are part of the system known as "lighted airways."

On February 1, 1928, multistop and daily Travel Air 5000 passenger flights are inaugurated from Chicago to Kansas City at \$62.50 per person one way. By this time, the New York–Chicago route is down to 9 hours flying time while the Chicago–Dallas run is less than 15 hours. On February 1–2, the carrier begins flying a 12-and-a-half hour night mail service from Chicago to Dallas. Board member Keys forms the air-rail **Transcontinental Air Transport (TAT)** on May 28; NAT General Manager Paul Henderson becomes vice president-operations of that carrier as well.

A feeder route is stretched from Cleveland to Detroit on June 4 via Toledo and from Ponca City to Tulsa. On June 22, pilot Wayne Neville is killed when his M-4 crashes at Lebo, Kansas, during a storm. On July 4, a radiator leak forces Samuel J. Samson to land his Curtiss Carrier Pigeon at Ottawa, Kansas; the pilot escapes when the plane crashes.

Operations continue apace and orders are placed for 5 Ford 5-ATs and 14 new Curtiss Falcons. Due to the heavy demand for mail service, passenger flights on CAM-3 are discontinued on October 1. Paul Collins escapes the crash landing of his Douglas M-4 in a storm a Brookeville, Pennsylvania, on November 18. Caught in the same storm over Polk, Pennsylvania, on November 18–19, the M-4 flown by William Hopson crashes; Hopson is killed but an express package containing \$500,000 worth of diamonds is recovered. On November 25, Thanksgiving Day, the company's most experienced pilot, Lawrence Garrison, is killed when, having made a crash landing in a snowstorm alongside the Pennsylvania Railroad tracks at Bristolville, Ohio, his plane catches fire with him trapped inside.

The first Ford and first Falcon are delivered in mid-December. Lost in clouds a mile over Thompsonville, Connecticut, on December 17, pilot Jack Webster parachutes to safety from his M-4. On December 20, a 50-mph gale forces pilot Leo J. McGinn to crash into a barn at Huron, Ohio; the plane, pilot, mail and barn are destroyed in the ensuing fire. The tragedy is the carrier's fourth fatal accident since January. During the year, the company flies a total of 1,256 passengers (almost all over the Chicago–Dallas route) plus 1.12 million pounds of mail and 72,830 pounds of express over 2.13 million miles.

The remainder of the Fords are received in January 1929 and all enter service on the New York to Chicago run carrying extra large mail shipments and not passengers. On January 20, a Travel Air 5000 mailplane is caught in a snowstorm near Davenport, Iowa; the pilot parachutes safely and the plane crashes. Expensive to operate over CAM-17, the Fords are all sold to **Transcontinental Air Transport (TAT)** in March and April and replaced by the remaining Curtiss Falcons, delivery of which is completed in June. Meanwhile, on March 22, pilot S. J. Sampson leaps from his M-4 in heavy fog outside Cleveland. The same day, while en route to Chicago from Kansas City, the engine of Paul Kaniut's Curtiss Falcon catches fire; the pilot jumps and 400 pounds of mail are lost.

On June 29, Earl Rockwood escapes the crash of his Pitcairn PA-5 at Skiatook, Oklahoma. In New Jersey, NAT transfers its operation from Hadley Field to Newark Airport on September 8. On November 6–7, pilot Thomas Nelson bails out when his Boeing 95 catches fire over Ringtown, Pennsylvania. Jack Webster escapes from his M-4 when it crashes onto Rattlesnake Mountain, Pennsylvania, in a storm on November 9. The year's only fatality is not quick. Due at Cleveland just after 2 a.m. on December 2, pilot Thomas Nelson is found near the wreckage of his Douglas M-3 outside Chagrin Falls, Ohio, on December 5, dead of exposure.

Late in the year, orders are placed for Curtiss Condor I passenger aircraft. For the year, no passengers are flown, but 2.02 million pounds of

mail and 75,607 pounds of air express are carried over 2.64 million miles (1.27 million night miles).

On March 15, 1930, nine aircraft are destroyed when the former government airmail service hangar at Hadley Field, New Jersey, is destroyed in a fire; among the victims is an NAT Pitcairn PA-5 employed to shuttle mail to Newark. On March 31, United Aircraft and Transport Corporation purchases a one-third interest in NAT via a stock exchange avenue. Thereafter, United and Keys' North American Aviation Corporation financing group engage in a board room battle for control of the airline.

On April 10, United acquires an additional 70,000 shares. Following additional maneuvers, including the sale of 300,000 additional shares to North American Aviation Corporation, United obtains 57% majority shareholding on April 17. The officers and directors of United and NAT meet on April 23 to work out details of the takeover.

Encountering dense fog near Clearfield, Pennsylvania, on April 26, pilot Henry Brown is forced to bail out of his Boeing 95.

The United takeover is completed on May 7, giving United the capability to offer transcontinental service, but initially, only so far as Chicago. En route to Chicago from New York on July 2, an M-4 hits telephone wires near Middleburg, Indiana, and crashes; the pilot escapes serious injury.

NAT and another United subsidiary, **Stout Air Services**, are merged on August 31, giving the former the aircraft (including Ford Tri-Motors 5-AT-26, 5-AT-51, 5-AT-52, 5-AT-53, and 5-AT-70) and personnel with which to gradually open its Chicago–New York half of the first cross-country system. Stout is paid \$175,000 for his goodwill and consultation.

The engine of a Boeing 95 fails over Warren, Ohio, on September 21, causing the plane to crash; the pilot escapes. The new Ford 5-AT-73 is acquired on September 29 and on September 30 passenger service is initiated from Chicago to Cleveland. The ex-Ford test aircraft 5-AT-81, 5-AT-80, 5-AT-86, and 5-AT-87 are purchased on October 4 and 20, and November 26 and 28 and on December 1 they introduce customers on the Cleveland–New York segment. All remaining Douglas M-3s and M-4s are phased out during the fourth quarter. Ford 5-AT-96 is acquired on December 30.

Operations continue apace in 1931. On April 1, the NAT and Boeing Air Transport divisions combine operations under the marketing name "United Air Lines" to offer the first day and night airmail and passenger service from coast to coast. The westbound multistop flights require 31 hrs. 18 mins. and the eastbound 27 hrs. 39 min. A total of 18 stewardesses are now assigned to the transport aircraft.

An ice buildup claims a Boeing 95 on May 24, forcing it to crash into Nittany Mountain at Bellefonte, Pennsylvania (one dead). En route to Cleveland from Chicago on April 29, the Ford 5-AT-81 with 10 aboard and 2 engines out, crashes at Elyria, Ohio; the flight crew is injured. On July 1, the marketing title "United Air Lines" is made official as United Aircraft's four divisions are combined into the "World's Largest Air Transport System."

NATIONAL AIR TRANSPORT, LTD.: Canada (1932–1933). Established in the spring of 1932, the Canadian NAT begins scheduled flights from Toronto to Buffalo, New York, on May 23. There connections are made with **Marta Lines** for services on to New York City. The operation ceases in September 1933.

NATIONAL AIRLINES (1): United States (1934–1980). In late March 1934, in the wake of the "Airmail Scandal" and the abortive attempt by the U.S. Army Air Corps to fly the mails, the Post Office rebids all of the mail routes cancelled by President Franklin Delano Roosevelt in February. At this time, George T. "Ted" Baker, proprietor of the largely unsuccessful, five-year old Chicago-based National Airlines Taxi System, seeks, together with short-term business partner Donald Franklin, to win Air Mail Route no. 31, a short run from St. Petersburg to Daytona Beach segment. The paper carrier **Gulf Airlines** is outbid by

4¢ per pound and the two Midwesterners now have a prize thousands of miles from their home. A second route sought, between Cleveland and Nashville, is not achieved.

During the summer, the air taxi operation is transferred to Florida and is renamed National Airlines System. Revenue services are inaugurated on October 15 over AM-31 from Daytona Beach to St. Petersburg via Orlando, Lakeland, and Tampa, with the two Ryan B-5 Broughams flown down from Illinois. A Butler Blackhawk, used during Prohibition, is left behind to close out the last of the Chicago business.

An unnamed, but reportedly attractive, woman, becomes the airline's first passenger on Saturday October 21, paying her fare with a single \$100 bill. Unable to make change, owner Baker instructs pilot David Amos, his first Florida employee, to fly her to Daytona Beach and get change there. Amos must stay the weekend and cannot return until after the banks open on Monday.

A third Brougham is acquired and employed to extend service to Jacksonville, beginning on November 19, where passengers can connect with the major north-south route operated by **Eastern Air Lines**.

Early in 1935, the small-scale new entrant is making only about \$50 per trip carrying the mail and is anxious to increase its revenues by adding passenger service. It now acquires two Stinson SM-6000Bs and a Model U Tri-Motor, purchased with borrowed money. These replace the Ryans and begin to offer passenger, mail, and express flights.

Enplanements reach 193 total by the end of March and, for the first complete year, total 400.

Flights between Fort Myers and Sarasota begin in 1936. Baker's enterprise now attracts the attention of Eddie Rickenbacker's **Eastern Air Lines**; the two companies and their leaders will develop one of commercial aviation's greatest rivalries and, between these two CEOs, one of the most bitter.

In need of additional capitalization, Baker begins to court the stockholders of Gulf Airlines early in 1937. His initial inquiries are spurned; however, the Gulf board becomes more receptive following their rival's acquisition of the airmail contract for the route between St. Petersburg and Miami.

An agreement is reached to create a Gulf National Airlines and on July 8, the two carriers are reformed, incorporated under the laws of the State of Florida, and renamed, at Baker's order, National Airlines, Inc. The Gulf word is ignored. The Jacksonville–Daytona Beach service is now suspended in favor of the start up of flights from St. Petersburg to Miami via Sarasota, Bradenton, and Fort Myers. Two months later, it places an order for its first new aircraft, Lockheed Model 10 Electras, and the first of these to arrive is employed to inaugurate passenger service over the Miami route.

On May 28, 1938, the U.S. Post Office awards the company the mail contract for AM-39 from Jacksonville to New Orleans via Tallahassee and Mobile. Two more Electras (one from **Northwest Airlines**) and another, used Stinson Tri-Motor arrive. Services along the new route commence in October and provide connections to 10 Florida cities. The last Ryan monoplane is removed during the year.

Following an unsuccessful bid by the City of Miami, Jacksonville becomes the carrier's major hub and company headquarters are moved to that city in 1939. During the year, Chairman Baker rejects a merger proposal from **Eastern Air Lines** and is, in turn, rebuffed when he offers the same arrangement to **Delta Air Lines'** C. E. Woolman. It is at this time that a new marketing slogan is born. When, in a fit of pique, EAL President Rickenbacker refers to Baker and his people as "nothing but a bunch of pirates," the National leader responds by making his company "The Route of the Buccaneers" and emblazoning "The Buccaneer Route" above the windows of all National aircraft.

There are no mishaps on the new Buccaneer Route until September 9, 1940, when an Electra makes a wheels-up landing at Jacksonville; no injuries are reported. Nonstop service is initiated from Miami to both Tampa and St. Petersburg. The company's first large new aircraft are purchased during the year, when an order is placed for 14 Lockheed Model 18 Lodestars. The first of these machines begin to enter service

on the Gulf Coast and Florida routes, but are not competitive with EAL's Douglas DC-3s. The last SM-6000 Tri-Motor is now retired.

A total of 34,846 passengers are flown in **1941**, during which year the company has the dubious honor of taking in the smallest revenues from operations in the U.S. airline industry. On December 9, two days after the Japanese attack on Pearl Harbor, President Baker agrees to an ALPA-inspired contract with his pilots. By **1942**, the fleet includes two Electras and three Model 18 Lodestars. On March 14, permission is sought from the CAB to commence service to Havana from Tampa, Miami, and Key West.

On February 19, **1944**, after eight years of Buccaneer service, the CAB awards National a route between Jacksonville and New York City. Key West joins the route network in March. On June 7, a Lodestar proving flight is made over the new pathway. A stock offering is completed the next day. The only major U.S. airline never to fly a Douglas DC-2 or DC-3, the carrier at this time still possesses a fleet of two Electras and three Lockheed Model 18s.

Miami to New York (LGA) service is opened on October 1; President Baker is greeted coming off the plane by Mayor La Guardia and now signs the first airline lease for space at Idlewild Airport, which is still under construction. Encouraged by the new authority to consider growth, Baker places orders for war surplus Douglas C-54s on October 25, to be financed through the Reconstruction Finance Corporation.

The company leases a Lockheed Lodestar to San Juan-based **Caribbean-Atlantic Airlines (Caribair)** in April **1945**, while simultaneously (and unsuccessfully) proposing to expand its own Atlantic and Gulf coast route network into the Caribbean through the company's purchase. Charleston, South Carolina, and Philadelphia are added as stops on the New York route on July 1.

When, on its third attempt to land in bad weather on September 13, a Lodestar is looped, Chairman Baker personally fires the aircraft's pilot. ALPA files a grievance. A Lockheed L-18 misses the airfield and plunges into a lake at Lakeland, Florida, on October 6 (two dead). A Lodestar, with 16 aboard, is forced to make a crash landing in the Banana River, Florida, on October 12; no serious injuries are reported. Service to Norfolk, Virginia, starts on December 1.

Converted to DC-4 civil standard, the company's first four-engine Douglas transport is delivered on February 10, **1946**. It is employed four days later to commence six-hour, nonstop, over-water Great Circle Route service from Miami to Newark (replacing La Guardia Airport as the New York terminus)—in direct competition with **Eastern Air Lines**. The flight, which reduces flying time from five to four hours, is the first postwar DC-4 service, the first commercial four-engine flight between Miami and New York, and the first scheduled nonstop commercial flight between the two communities.

Miami now becomes the headquarters for the "Route of the Buccaneer." On May 22, the CAB awards the carrier a route from Miami and Tampa to Havana, while, in mid-June, corporate headquarters are transferred to Miami (MIA), where a new maintenance base, begun the year before, is now completed. On July 15, Savannah stops are initiated. The company's premier international service from Miami and Tampa to Havana is inaugurated on December 15. The next day, Newark to Havana via Miami or Tampa flights are started.

On March 2, **1947**, the company announces plans to add 46 DC-4s to its Newark-Jacksonville-New Orleans service. As the route rivalry with **Eastern Air Lines** intensifies, National takes delivery of the first of eight DC-6 Buccaneer 400s on June 4 and introduces it on the Newark run on July 1, offering six daily frequencies. **Eastern Air Lines** counters with the Lockheed L-649 Constellation.

As a result of accidents at other airlines, in November, all of the DC-6s in service in the U.S. are temporarily grounded. Still, profits are made as both the Florida and Cuba routes begin to bring tourists attracted by superior cabin and food services.

Company members of the IAM strike the company in January **1948** over aircraft loading and salary concerns. When, after 18 months, the ALPA grievance filed on behalf of the pilot fired back in September

1945 has not been resolved, the airline's pilots strike on February 3, joining members of the IAM on picket lines.

On February 19, the company is granted authority to challenge **Eastern Air Lines** in the Washington-New York corridor, with flights beginning on February 25. At the end of the first quarter, three Curtiss C-46F Commando freighters are leased from the USAF and are placed into service on daily all-cargo flights between Idlewild Airport in New York and Havana via Miami.

National's greatest effort is now placed into attempts to resolve its first major pilot job action (supported as the flyers are by ALPA), the longest such strike in airline history to that date. The struggle is very bitter; one pilot instructor will be murdered. Although full service is restored with replacement pilots by June, company cash reserves begin to fail. Striking pilots retaliate not only with the normal ground picketing, but with air picketing over key markets, by distributing matchbooks imprinted with "Don't Fly National," and with demonstrations from sailboats in Biscayne Bay.

Simultaneously, the carrier and its larger EAL rival square off in a corporate battle for control of **Colonial Airlines**. Perhaps the most interesting noncorporate event of the year is a fistfight. On August 4, passengers D. Cordova and B. Santano battle aboard a crowded San Juan to New York DC-4 flight. Upon landing, the two are arrested under U.S. admiralty laws for federal crime on the high seas and charged with interfering with the plane's navigation and resisting the crew.

To avoid an adverse scheduled CAB certificate hearing (the only one of its kind in history that is referred to as the Docket 3500 case) based on the company's alleged poor finances and a finding of unfair labor practices, Baker settles the labor dispute on November 24. He credits the settlement decision to his conversion by Dr. Frank Buchman's "Moral Rearmament" crusade and not pressures generated by the reelection campaign of President Harry S. Truman, a friend of ALPA leader David Behncke.

On March 30, **1949**, a four-way agreement is inked between **Pan American-Grace Airways (PANAGRA)**, **Pan American Airways (PAA)**, W.R. Grace, and National. Under its terms, subject to CAB approval, National would increase its share issue, with PAA taking 30% and Grace 18%. Additionally, a one-plane American flag line route would be established from New York to Buenos Aires via Miami and Panama.

This pact not only helps Chairman Baker to fend off the CAB and a takeover bid by Juan Trippe, but also provides an interchange agreement with the leading American airlines on the Caribbean and South American scene.

New York to Havana via Miami inclusive-tour flights begin on June 18. Beginning on July 9, the company offers a Miami to Havana package flight with the return by ship. Rebounding from the fiscal downturn of the previous year, National shows the first of two straight years of profits.

In **1950**, NA-1 becomes the first East Coast operator to offer low-cost day and night coach service. On February 9, Coach Club flights are initiated from New York to Miami via Washington, D.C. At this time, the company slogan is changed from its previous pirate theme to "Airline of the Stars"; among those receiving early red carpet treatment (actually laid on passageways from terminals to planes) is Senator Joseph McCarthy.

An equipment exchange is started with **Capital Airlines** on the Miami run beginning on March 8; three days later, weekend tour flights are offered to Miami from New York with leased **Pan American World Airways (1)** Constellations. The company joins with four banks on April 15 to establish a plan for vacations on credit.

A summer vacation program, designed to make Miami a year-round tourist attraction, is started; dubbed "A Millionaire's Vacation on a Piggy Bank Budget," the plan is promoted by thousands of free piggy banks given away to prospective travelers by travel agents.

At the beginning of December, National terminates the interlocking four-party agreement with **Pan American Airways (PAA)**, **Pan**

American-Grace Airways (PANAGRA), and W. R. Grace & Co., cancelling the stock options held by PAA and Grace to purchase unissued National stock.

While landing on an icy runway at Philadelphia on January 14, 1951, Flight 83, a DC-4 with 3 crew and 25 passengers, skids and crashes (7 dead); stewardess M. F. Housley saves 10 passengers, but dies trying to save a trapped child.

Impressed with the record-breaking Toronto–Chicago–New York–Toronto flight of the Avro Canada C-102 prototype on January 21, the airline signs a letter of intent to purchase four of the \$500,000 Jetliners, with options for six others. When the Canadian government shortly thereafter mandates that the manufacturer stop its civil work, the order is cancelled.

On March 16, a one-plane interchange service links the company's service to Miami with the Washington, D.C. route west to Pittsburgh, Cleveland, and Detroit flown by **Capital Airlines**. Never prosecuted, the CAB's Docket 3500 case is formally dismissed, also in March.

A three-way interchange begins with **Delta Air Lines** and **American Airlines** on May 1; from the West Coast, an AA aircraft arrives at Dallas, where they are transferred to a Delta plane that flies them on to a meeting with National at New Orleans.

The airline now gains the responsibilities of an international airline as the CAB grants it a route to Havana. National's merger discussions with **Colonial Airlines** proceed to the point where the latter's board of directors recommends the takeover to stockholders, only to learn that competing **Eastern Air Lines** has quietly purchased 21% shareholding, sufficient to defeat the merger.

On May 4, NA-1 joins with New York's Industrial Bank of Commerce to offer loans for vacation trips. W. R. Grace & Co. sells its share in National on July 21 and on August 12, daylight coach flights are begun from New York to Miami. Package tours over the same route are extended, on September 20, to December 15. The fleet now includes 28 aircraft (8 DC-6s, 6 DC-4s, 11 L-18s, and 2 C-46Fs) and net profit improves to \$2.5 million.

National is taken off government mail subsidy on January 1, 1952, and during the year, merger talks will also fail with both **Northwest Airlines** and **Northeast Airlines**. National begins five-hour nonstop coach service between New York and Miami on February 2.

Minutes after taking off from Newark on February 11, a Miami-bound DC-6—the one that had inaugurated company DC-6 service—with 4 crew and 59 passengers, suffers a No. 3 propeller reversal and a No. 4 propeller feathering failure just after takeoff. It crashes into an apartment building at Elizabeth, New Jersey (33 dead). Four of the dead from this third crash of the new Douglas type in two months are apartment tenants.

In late March, **Colonial Airlines** President Branch T. Dykes recommends that his carrier merge with **Eastern Air Lines**; in hearings before the same government regulators in October, Baker's attorneys successfully oppose the competitor's takeover. Meanwhile, low-cost summer tours are offered between Memorial Day and Labor Day from New York to Panama, Jamaica, San Juan, and Mexico City. A DC-4 safely lands on two wheels at Norfolk, Virginia, on August 3. During the year, the first of nine DC-6Bs are acquired.

Nonstop frequencies are initiated on January 1, 1953, from New York (Idlewild Airport) to Havana. A DC-6 with 5 crew and 41 passengers disappears into the Gulf of Mexico, 35 km. SE of Mobile, Alabama, on February 14; the wreckage is found the next day and there are no survivors.

The first of 12 new Convair 340 Cosmopolitans is delivered on September 9. In October, the company vastly assists in the growth of Southern Pines, North Carolina-based **Resort Airlines** by selling it three DC-4s with which to augment its fleet of Curtiss C-46s.

With the beginning of the winter schedule, the interchange with **Capital Airlines** is extended to the Capital cities of Milwaukee and Minneapolis (MSP).

In the New York–Florida competition, National now introduces Douglas DC-7 service in an effort to overcome the success of **Eastern Air**

Lines' Lockheed Constellations. On November 20, a new Douglas travels from Santa Monica, California, to Miami in a record 5 hrs. 50 min. delivery flight. Seven days later, it makes a Miami to New York test flight in 3 hrs. 10 min.

The company initiates rotary-wing service on December 10 from Miami Beach to Tropical Park Racetrack employing a Sikorsky S-55. Regularly scheduled 3 1/2-hour Miami to New York roundtrip service is inaugurated with DC-7s on December 14 and on Christmas Eve the carrier sets a one-day company record of 1,197 passengers boarded. During the year, the fleet is also increased by the addition of eight DC-6Bs.

Beginning on February 1, 1954, National offers scheduled S-55 helicopter service from Miami (MIA) to West Palm Beach via McArthur Causeway, Bal Harbour, Hollywood, Fort Lauderdale, Boca Raton, and Delray Beach. It is the first such intercity helicopter service offered by a major U.S. airline. A 1/2-fare family plan for helicopter flights throughout south Florida is unveiled on March 15. The experiment in support of a helicopter airline does not last out the year. From the time of the inaugural landing when the helicopter is given a ticket for illegal parking through the noise complaints of residents and the lack of traffic (read also financial) support, the service is doomed.

Meanwhile, pilot Capt. Charles H. Ruby, a militant striker five years earlier, is brought into management as chief pilot and New York to Miami DC-7 tourist services commence on May 19.

Two men are hurt on July 1 when the nosewheel of a DC-6 collapses at Idlewild Airport. Newark to Orlando coach flights begin on July 17 and, after sometime earlier having switched its route from New York to Havana via Jacksonville and Miami, the C-46F all-cargo service is ended. A New York to St. Petersburg run is initiated on December 15.

By January of 1955, the National versus Eastern battle for control of **Colonial Airlines** appears to be drifting in favor of the latter due to its willingness to pay \$7.1 million more than President Baker's \$2.5-million bid.

On August 4, the airline joins with **Pan American World Airways (1)** and **Pan American-Grace Airways (Panagra)** in an equipment exchange agreement for one-plane New York–Miami–Latin America service, thus ending the CAB's "Balboa" case. The joint Latin America service with the two pioneers begins on August 15 via the South American west coast.

Still there are some defeats. In the face of growing competition from **Northwest Airlines** in late fall, the interchange service with **Capital Airlines** is withdrawn from Milwaukee, Minneapolis (MSP), Detroit, and Cleveland. The only points the two companies jointly serve north of Washington, D.C. are Buffalo and Pittsburgh.

A contract is signed with Lockheed on December 9 for the purchase of 12 (later 14) turboprop L-188 Electras, with 23 options (which will not be exercised).

Daily nonstop Miami–Havana coach service begins on December 10. Also during the year, a \$36-million order is placed for six DC-8-21s.

The Electra order is announced to the press on January 3, 1956. National thus becomes the first airline to purchase the L-188, beating the **American Airlines** request by six full days.

On June 1, **Eastern Air Lines** wins control of **Colonial Airlines**. A month later, on July 1, the first of six new Convair CV-440 Metropolitans is placed into service on National's New York–Miami run. The company is partially shut down in August by a dispute with its pilots; rival **Eastern Air Lines** is able to add eight daily New York–Miami flights to take up the slack.

The New York–Florida route battle intensifies in September when a newcomer, **Northeast Airlines**, enters the arena. Orders are placed for four Lockheed L-1049H Super Constellations and Boston and Providence to Miami flights are inaugurated on December 15. Flights are also inaugurated from Houston to New Orleans and Tampa.

In 1957, maintenance workers begin painting the motto "Airline of the Stars" on aircraft fuselages. Ticket, reservations, and operations personnel go out on strike between September 23 and October 24.

On March 20, 1958, a DC-7 with 58 aboard narrowly averts a midair collision with a company CV-440 over New York City. The four Super

Constellations are delivered in September and October and launch Imperial Club Coach service. The airline scores its greatest coup on December 10, when, with two Boeing 707-121s leased from **Pan American World Airways (1)**, it inaugurates U.S. domestic jetliner service with thrice-daily Jet Star Service flights between New York and Miami. Comedian Bob Hope is among the first group of passengers transported as Capt. Roger Whitaker pilots *Clipper America*, Jet Star Flight One, south at 9:25 a.m.

Five days later, a Boeing jets between New York and Miami in a record 2 hrs. 34 min. Juan Trippe and George Baker now also exchange 400,000 shares of stock with the former given an option to purchase another 200,000 shares. The owned fleet at year's end comprises 12 DC-6Bs, 8 DC-7s, 4 Lockheed L-1049 Constellations, 10 Lodestars, and 18 Convairs.

The interchange agreement with **Capital Airlines** is terminated on December 14.

The first of 14 new Lockheed L-188A Electras is delivered on April 1, 1959 and begins direct Jet Prop Electra return service on the New York to Miami route on April 26. It having earlier been decided not to employ jetliners during the summer, the leased PAWA-1 units are returned on May 15.

During the year, the last L-18 Lodestar is retired. For the second year in a row, National, in October, acquires Stratoliners under charter from PAWA-1; this time, six planes are employed. Eight-times-per-day New York-Miami jetliner flights begin on November 1.

On November 16, Flight 967, a DC-7B with 6 crew and 36 passengers en route from Miami via Tampa suddenly plunges into the Gulf of Mexico 107 mi. ESE of its New Orleans destination; there are no survivors. With the wreckage in waters over 200 ft. deep, it is impossible for CAB investigators to determine the cause of the disaster.

Speculation concerning sabotage and an insurance swindle will begin two months later when a naturopathic doctor, Robert Vernon Spears, arrives alive in Arizona, telling his wife that he had given his seat on Flight 967 to another gentleman. Although fingers will point to Dr. Spears until his death in 1969, no proof of wrongdoing on his part is ever produced.

Fidel Castro's successful Cuban revolution now brings an end to the company's only international route and the cost of starting jetliner service brings a \$7.2-million loss on the year.

In 1960, the company serves not only New York and Florida, but Louisiana, Texas, California, and Nevada as well.

En route from New York to Miami with 5 crew and 29 passengers on January 6, Flight 967, a DC-6B, explodes in midair 18,000 ft. over Bolivia, North Carolina, and crashes into a field 1.5 mi. from the town with no survivors. On January 15, it is learned that passenger Julian A. Frank, an attorney whose body has been located at a distance from the main crash scene, had recently insured himself for \$887,500. Two days later, investigators report metal fragments found in Frank's body indicate he had set off a dynamite bomb near his seat, a fact confirmed by the CAB on February 24.

C. Cyrus Merrill publishes a compendium of information on the case in *The Death of a DC-6B: A Textbook of Selected Legal Evidence from the Julian Frank Case* (Brooklyn, N.Y.: Central Book Co., 1968, 1972) after Brad Williams examines the event in his *Flight 967* (New York: William Morrow, 1963).

Meanwhile, the first DC-8-21 is accepted on February 7; later christened *Kathleen*, it begins Miami to New York (Idlewild Airport) service on February 18. Philadelphia-Miami DC-8-21 service begins on March 16.

On April 1, bomber Frank's wife takes a job as a model. The Pan Am Stratoliner lease ends on April 24.

Under the interchange agreement with **Pan American-Grace Airways (PANAGRA)** and **Pan American World Airways (1)**, the company, beginning on May 2, operates the Miami to New York segment of the joint service from South America to Idlewild Airport employing the new PANAGRA DC-8-31.

On June 1, Occidental Life Insurance Company holds that passenger Frank's January death is a suicide and his policy void.

In late spring, two of the L-1049H Super Constellations are converted into pure freighters and are employed to open all-cargo service from Miami to Philadelphia and New York's Idlewild Airport. On July 2, the number of Miami and Tampa to Havana flights is cut. Nonstop Philadelphia to Jacksonville DC-8-21 flights commence on August 30. All of the CV-340s are phased out during the year and by December 31 three DC-8-21s have been delivered, with the remainder of the order cancelled.

National is one of seven airlines struck by the Flight Engineers International Association (FEIA) on February 18, 1961. President Kennedy ends the job action six days later by naming a fact-finding commission under Professor Nathan Feinsinger. As the result of CAB route awards, National, having won the southern route, becomes a transcontinental carrier in March; Electra service will be inaugurated from Miami to Los Angeles and San Diego via Houston. On March 11, L-188A flights commence from Houston to San Francisco via Las Vegas. Service to Havana is, meanwhile, indefinitely suspended.

An L-188A is badly damaged at New Orleans on April 11 as the result of its inability to halt its landing roll on a slick runway and the subsequent crash.

On May 1, a passenger on a Miami to Key West flight forces the pilot to fly to Havana; the CV-440, pilot, crew, and seven other passengers are allowed to return to Miami. Fourteen years later, the pirate will be captured when he returns to Miami. Since he cannot be tried under air piracy laws because there were none on the books at the time he made the first successful U.S. skyjacking, the man will be convicted of kidnapping and sentenced to a prison term of 20 years.

Orders worth \$39.8 million are placed for seven DC-8-51s during the summer.

On November 15, Flight 429, a DC-6B with 5 crew and 25 passengers, begins takeoff without clearance and collides with a **Northeast Airlines** Viscount at Boston; 15 aboard are injured, but there are no fatalities.

Also in November, President Baker surrenders his office to his nephew, Robert Weiland; the founder's control is retained through the corporate chairmanship. Late in the year, the remaining two-passenger L-1049H Super Constellations become freighters and are employed to add Tampa, Orlando, West Palm Beach, Los Angeles, and Houston to the company's all-cargo network.

The first DC-8-51 is delivered on February 23, 1962, four months behind schedule and just about the time an unsuccessful bid is made to sell the company to **Continental Airlines**. The four L-1049H Super Constellations are retired, beginning during the first quarter. Finally, on April 26, after years of crisis survival and up-and-down fortunes, owner Baker sells NA-1 to former **Frontier Airlines (1)** owner Lewis B. "Bud" Maytag Jr., heir to the Maytag Appliance Corporation fortune, for \$6.5 million. Maytag had resigned from Frontier in March.

Maytag replaces Baker as chairman, president, and CEO, ending the era the founder had started three decades earlier. The same year, recently retired chief pilot Charles H. Ruby is elected ALPA president. Dudley Swim, of Carmel, California, is elected chairman of the executive board on September 12.

A DC-8-51, later named *Carolyn*, is delivered on October 23, and is followed into service by three L-188As purchased from **American Airlines** in November. Chairman Maytag introduces a fleet rationalization program and by mid-December all piston-engine aircraft (minus four DC-7Bs employed in South America) have been retired.

The crew of an L-188A freighter fails to extend the plane's landing gear prior to landing at Miami on May 15, 1963; none of the three men is hurt in the ensuing crash.

Late in the second quarter, four DC-8-32s are purchased from **Northwest Airlines**. The first is delivered on September 15, followed by two more, one each on October 14 and 27.

During the fall, Chairman Maytag accepts an invitation to address the Newcomen Society at a dinner in New York City; as is the Society's cus-

tom, Maytag's remarks are published as a small pamphlet, *Palmetto-Hopper: The History of National Airlines, Inc.*

While visiting Vienna on November 4, founder George T. Baker dies of a heart attack.

Enplanements for the year total 2,080,378.

Airline employment in 1964 stands at 4,669 and the fleet includes 34 aircraft. That number is cut by four during the first quarter as the L-1049Hs, retired two years earlier, are sold to Montreal-based **Nordair, Ltd.** The Airline of the Stars advertising logo on company aircraft is replaced with the new "Coast to Coast to Coast" theme; a red and blue stylized "N" replaces the star on tails, although the original red and blue fuselage colors are maintained.

The last of four DC-8-32s purchased from **Northwest Airlines** the previous year arrives on June 30, but is involved in an accident while trying to find a place to park at New York's international airport. The first of 13 B-727-35s is delivered on October 23 and when it enters service on November 1, National becomes the first exclusively jet-powered airline in the U.S.

Passenger boardings jump 20.3% to 2,610,260. Revenues accelerate 12.3% to \$111.1 million, allowing the company a record net profit of \$7.86 million, 21.6% greater than the year before.

The workforce in 1965 grows to 5,409. Ten B-727-35s are added during the year bringing the fleet total to 40; 3 more of the type are ordered. Jetliner service is launched to Sarasota, Bradenton, Norfolk, Orlando, and Fort Myers. The CAB is petitioned for authority to fly to Nassau, San Juan, Jamaica, and Panama. A \$6 million promotion and advertising program is unveiled aimed at increasing ridership to Florida, the Caribbean, and the Bahamas.

Just after takeoff from San Francisco on June 9, the No. 1 engine of a DC-8-32 with 78 aboard catches fire; the jetliner is able to make a safe emergency landing back at its starting point. A \$3-million expansion and improvement program is started at Miami (MIA) and ground is broken for a new terminal building at John F. Kennedy Airport in New York.

On October 26, Cuban exile L. Medina Perez is subdued after threatening to kill the crew of Flight 209 and blow up the L-188A en route to Key West from Miami unless he is taken to Cuba to rescue his family. Although Perez is indicted, he will later be acquitted of all charges on the grounds of mental incompetence.

On November 17, Ted Robinson, 16, tries to hijack Flight 30, a B-727-35, shortly after its takeoff from New Orleans for the continuation of a Los Angeles to Melbourne, Florida, flight. The youth tries to shoot NASA official Christopher Kraft and fires six shots through the plane's floor. After he is subdued by passenger Edward C. Haake, the pirate states that he had wanted to fly the plane to Havana "to free Cuban political refugees." He will be convicted of assault and sent to a juvenile facility.

The No. 1 engine of a B-727-35 with 60 aboard disintegrates on the plane's takeoff from Tampa on December 7; a safe emergency landing is made.

Bookings increase 29% during the 12 months to 3,398,323 and cargo tonnage is up by 24.2%. Revenues climb 26% to \$166 million and profits jump 65% to \$18.41 million.

In early 1966, orders are placed for 25 B-727-235s and 1 DC-8-61. On June 24, a federal court at Miami acquits Cuban exile Perez of his attempt to hijack a company airliner. Beginning on July 8, National is one of 5 airlines shut down for 43 days because of a job action launched by the IAM. The combined effect is to halt 60% of U.S. passenger service and 70% of airmail operations.

After several weeks of negotiations, President Lyndon B. Johnson announces a strike settlement on national television on July 29. On August 1, the IAM membership votes 2 1/2 to 1 to reject the proposed settlement. Talks resume and on August 15 tentative agreement is reached on a new three-year contract. The membership votes to ratify the contract by a 2-1 margin, thus ending the longest and costliest strike in U.S. commercial aviation history to date.

Enplanements are 3,897,600 and revenues are \$205.69 million.

The employee population in 1967 stands at 6,694. The fleet now includes 44 aircraft: 13 B-727-35s, 13 DC-8s, 1 DC-8-61, and 17 Lockheed Electras. The total does not include two B-727-172QCs leased during the day, beginning on October 23, from **Airlift International**. The first of three B-727-235s to be delivered by year's end arrives on December 13 and enters service a week later on December 20.

Passenger boardings accelerate 30.4% to 5.6 million and a total of 33.3 million freight ton-miles are flown. Revenues top the \$200-million mark for the first time at \$211 million, a jump of 25.6%.

The employee population in 1968 numbers 7,514. The first of the L-188As are withdrawn from service in January.

On March 12, San Francisco-originating Flight 28, a DC-8 with 7 crew and 51 passengers en route from Tampa to Miami, is hijacked and forced to land in Havana by two gunmen, who disembark there with a hostage. The plane is allowed to return to Miami and the "hostage" is identified as an associate of the hijackers, who apparently lost his nerve as the plane was preparing to land.

Following the completion of Flight 221 from Boston to Miami via Newark, Jacksonville, Daytona Beach, Orlando, Tampa, and Fort Myers, on April 21, the last turboprop L-188A is retired and National becomes the first all-jet major U.S. airline.

Flight 1064, a B-727-35 with 64 passengers en route from Los Angeles to Miami on July 17, is hijacked just after takeoff from Houston. The pilot is able to talk the armed Cuban hijacker, who is heard to mutter that "Fidel ordered me back," into landing at New Orleans for refueling. After arrival at Havana, the passengers are driven to Veradero, where they are allowed to fly back to the U.S. aboard an aircraft chartered by the U.S. Department of State. The crew is able to fly out the trijet from Jose Marti Airport.

Also in July, the last unit of the 25-strong B-727-235 fleet is delivered. When additional DC-8 arrivals are factored in, the fleet total rises to 53 airplanes.

Plans are now announced for further expansion of the Miami facilities and ground is broken for a \$45-million headquarters and maintenance base. Construction continues on the new \$30-million terminal at Kennedy Airport.

On November 4, a self-styled Black Nationalist freedom fighter hijacks Flight 186, a B-727-235 with 65 passengers, just after takeoff from New Orleans (an intermediate stop on a service from Houston to Miami) and forces it to fly to Cuba. In a new twist, the passenger adds robbery to his crime by requiring that a stewardess collect all of the passengers' valuables in a sack. Upon landing, the pirate is taken in hand by Cuban police and the stolen items are all returned. The crew is allowed return the Douglas to the U.S. as a special plane is sent to Havana to pick up the 57 passengers.

On December 3, Cuban exile Eduardo Canteras hijacks Flight 1439, a DC-8-21 with 21 passengers en route to Miami from New York and orders it to Havana, after a refueling stop at Key West. The passengers return to Miami on a chartered flight four days later, while the crew returns the jetliner.

Five days later, on December 6, actor Marlon Brando is removed from a B-727-235 at Los Angeles after asking a stewardess if the flight was bound for Cuba.

During the year, the red and blue colors of the livery are replaced by a new color scheme combining orange and grapefruit yellow. New stewardess uniforms are also available in either color, with lime green added later. A new logo, officially known as the "Sun God," but unofficially as the "National Sunburst," is also unveiled. These changes are part of the "Instant Florida" campaign that coincides with facility expansion at Miami and are accompanied by a "Watch Us Shine" advertising campaign featuring a give-away LP album of songs concerning National destinations.

Customer bookings jump 13% to 4,981,398 and 44.88 million freight ton-miles are flown. On record revenues of \$248,652,000, net income is \$21 million, the second highest earnings yield in company history.

The fleet in 1969 comprises 21 Boeing 727-235s, 13 B-727-35s, 3 DC-8-21s, 4 DC-8-32s, 6 DC-8-51s, 2 DC-8-54Fs leased from **Airlift**

International, and 2 DC-8-61s. Orders worth \$160 million are placed for 9 DC-10-11s.

Another strike begins on January 17 when machinists walk off their jobs. On January 24, Flight 414, a B-727-35 with 47 passengers en route from Key West to Miami is forced to fly to Havana by a young USN deserter threatening a stewardess with a knife.

Four days later, two men, claiming to be fugitives from the California Institute for Men, seize Flight 64, a DC-8-61 with 32 passengers en route from Los Angeles to Miami, just after an intermediate stop at New Orleans and divert it to Cuba.

A few hours later, Flight 121, another DC-8-61 with 113 passengers en route from Philadelphia to Miami is taken over by 3 armed men and ordered to Cuba. Like the plane earlier in the day, this one will also be allowed to return to Florida without passengers, who go back on a chartered jet. Incidentally, one of the pirates will be captured in Cleveland, Ohio, in 1975 and receive a five-year suspended prison sentence. His partners are not so lucky; when they return in 1978, they each get seven years.

Establishing something of a record for diverted flights south in a month, National suffers another skyjacking on January 31. This time, Flight 44, a DC-8-61 en route from San Francisco to Tampa with 63 passengers is taken over by an armed gunman who orders the plane to Havana. He will be extradited to California from Yugoslavia in 1976, tried, and sent to prison for 15 years.

On February 3, M. A. Peparo and his 18-year-old girlfriend Terry Fitzgerald, armed with a knife and an aerosol can of insecticide, are seized at Miami after unsuccessfully attempting to force Flight 11, a B-737-235, coming in on a flight from New York, to proceed to Havana. The sweethearts will be tried on the lesser charge of interfering with an aircrew and sent to jail for 19 months.

On February 5, a "grubby-looking" gunman, as witnesses later describe him, forces Flight 97, a B-727-235 with 26 passengers en route from New York to Miami to fly to Cuba, robbing the passengers en route. Before they return to Miami later in the day, Cuban authorities return the stolen money and items to the passengers. When the pirate returns to the U.S. in 1981, he is tried and given a five-year probation.

En route to Miami from New York on May 5, two armed Canadians force Flight 91, a B-727-235 with 75 passengers, to Cuba. Ten years later, both men will return to Canada, where one will receive a six-month prison term for a bombing committed before the piracy. Ottawa will deny U.S. requests for extradition.

The new \$30-million terminal is occupied at New York's John F. Kennedy Airport during the summer. On August 30, Flight 183, a B-727-235 with 55 passengers en route from Miami to Houston, is diverted to Havana just after takeoff from an intermediate stop at New Orleans by a Cuban, accompanied by his wife and three children.

Flight 411, a B-737-235 with 60 passengers, is commandeered by a lone gunman while on a domestic service from Charleston, South Carolina, to Miami on September 24 and ordered flown to Havana. Believing all has been forgotten, the pirate will return to the U.S. as part of the Cuban boatlift in 1980. Found out during processing, he will be tried and sentenced to a five-year prison term.

New nonstop DC-8-51 service is inaugurated on October 1 from Atlanta to San Francisco. On October 9, the final airliner of the year to be skyjacked is Flight 42, a DC-8-61 with 70 passengers en route from Los Angeles to Miami; the hijacker is a homesick Cuban exile.

Late in the year, National is granted the first Miami-London route, but cannot immediately service it. Still, enplanements are 4,573,800 and a \$15-million net profit is reported on revenues of \$260.40 million.

The employee population in 1970 is 7,830 and the fleet includes 53 aircraft: 38 B-727s and 15 DC-8s. Having worked without a contract since the previous spring, 3,500 ground workers (clerical, general office, and station workers), members of the Air Line Employees Association (ALEA), strike for higher wages on January 29; these labor difficulties force Maytag's carrier to completely shut down. The joint day and night B-727-172QC arrangement with **Airlift International** ends in April.

On May 5, the ALEA strike becomes the longest work stoppage in the history of the U.S. domestic airline industry. On May 18, 115 days after its start, the job action ends when the carrier agrees to a mediated settlement providing a 33% pay increase over the next 3 years. The agreement is ratified on May 26.

En route from San Francisco to Miami via New Orleans and Tampa on July 1, Flight 28, a DC-8-61 with 39 passengers, is captured just after takeoff from New Orleans and diverted to Havana. Four passengers, all U.S. servicemen, are allegedly beaten by Cuban authorities.

Some \$34 million worth of new facilities are occupied at Miami during the summer, including a \$15.4-million hangar. The first of two B-747-135s arrives on September 8 and the company becomes a *Jumbotjet* operator on October 2, flying its newly delivered aircraft, christened *Jacquelyn*, nonstop between New York (JFK) and Miami. The *Jacquelyn* is the first regularly scheduled B-747 to utilize Miami.

The second B-747-135, *Linda*, arrives on October 20; it, too, is painted in a yellow and orange livery with the Sun King symbol of Florida on its tail. It enters service on October 25 between Miami and Los Angeles.

On October 30, a Miami to San Francisco via Tampa and New Orleans, DC-8-61 service, Flight 43 operating with 58 passengers is taken over by an armed man, accompanied by his wife and 5 children, and diverted to Havana.

A \$17-million IBM computerized reservations system, Res-A Vision, is turned on at Miami before year's end.

As might be expected, the ALEA strike has a catastrophic impact upon the year's traffic and financial results. Customer bookings drop 38.6% to 3.3 million and freight traffic is off 36%. Revenues decline 29% to \$192 million and expenses of \$203 million bring a \$6-million net loss.

Flight 36, a DC-8-61 with 96 passengers and en route from Los Angeles to Miami on January 3, 1971, is captured by two pistol-waving couples, one of which has four children in tow; the aircraft is diverted to Cuba. Both couples leave Cuba in 1975, with one pair traveling to San Juan and the other to Chicago. Both are caught and both men will receive 20-year prison terms; charges against the mother with children will be dropped, however, the other woman will receive a sentence of five years.

T. K. Marston, a 16-year-old, brandishes a pistol and takes over Flight 745, a B-727-235 with 46 passengers, at Mobile, Alabama, on March 8 as it prepares to depart for New Orleans. After forcing the plane to Miami, the lad is taken into custody by the FBI, but is released into his father's custody. He will be sent to a juvenile correctional facility.

Daily B-747-135 summer-only, nonstop roundtrips commence on June 15 between Miami (MIA) and London (LHR); National has now become America's third transatlantic carrier.

En route from Miami to Jacksonville on July 24, Flight 183, a DC-8-61 with 83 passengers, is taken over by an air pirate who shoots a stewardess and a passenger in the process of diverting the Douglas to Havana.

On September 3, National is offered a merger by **Northwest Airlines**, itself having almost acquired **Northeast Airlines** seven months earlier.

A major \$9.5-million marketing and advertising campaign, still discussed years after its end, the purposefully double entendre "Fly Me-Fly National" theme, is begun in October under the direction of Public Relations Vice President Robin Matell. The November 15 issue of *Time* carries a story on a part of the reaction generated, including a photo of demonstrators picketing a company ticket office in New York City.

Following receipt of the first DC-10-11, christened *Barbara*, in November, National now becomes the third U.S. airline to inaugurate Douglas wide-body service, placing its initial machine into operation on the New York to Miami, Palm Beach, and Tampa run on December 15. The three DC-10-11s that will join it are christened *Dorothy*, *Frances*, and *Phyllis*.

Also in December, stockholders of both National and **Northwest Airlines** approve the merger of the two companies; the CAB hearing examiner will recommend against the amalgamation and it will not occur.

Enplanements for the year total 5,297,032 and a net loss of \$4 million is suffered.

The airline population in **1972** totals 7,608. En route from Miami to Los Angeles on January 4, a B-747-135 encounters heavy turbulence near Lake Charles, Louisiana, that injures 25 passengers; the Jumbojet is able to land safely at Los Angeles (LAX).

Chairman Swim dies at his Carmel home on January 31; he is succeeded by owner Maytag on February 11.

New York City National Organization of Women (NOW) members now begin to picket and demonstrate against the carrier's "Fly Me" advertisements. The proposed merger with **Northwest Airlines** is terminated early in the spring and shortly after this process collapses, National orders seven additional DC-10-11s.

Brandishing a pistol, 14-year-old E. M. McKee Jr., nearly 15, attempts to hijack Flight 67, a B-727-35 at Tampa on March 7 and force it to fly to Sweden. He is overpowered by a sky marshal and arrested. Criminal charges against the lad will later be dismissed.

On April 30, NOW begins an even more-determined campaign to halt the airline's "sexist attack against women," noting that the carrier's ads, which depict stewardesses encouraging male travelers to "Fly Me," could be changed to depict male pilots or copilots offering women similar invitations. The controversy continues to keep National's name in the news, a not altogether undesired result. M. S. Green and L. Tesfa commander Flight 496, a B-727-35 with 120 passengers en route from Philadelphia to New York on July 12, forcing it to return to Philadelphia, where a demand is made for a \$600,000 ransom and three parachutes. After receiving \$501,600, the two require the pilot to fly to Houston where, having chosen not to bail out, they surrender to FBI agents next morning. Both will be tried and will receive prison terms of 50 and 60 years, respectively.

An unidentified man, claiming to possess nitroglycerin, is subdued by airline ticket agents and federal sky marshals at New York (JFK) on October 31 during his unsuccessful attempt to hijack a DC-10-11 to Greece. At year's end, nine Douglas wide-bodies are in service with orders outstanding for nine others.

The DC-8-51 *Carolyn* is leased to **Air Jamaica, Ltd.** in late December.

The year's passenger boardings jump 19.4% to 6,572,000 and freight traffic climbs by 9.6%. Revenues improve to \$367,348,000 and expenses are contained at \$324,000,000, allowing a turnaround on the bottom line. Operating profit is \$43.34 million and net profit is \$9.18 million.

The workforce in **1973** is 7,997. During the year and for the next several, a number of older aircraft have the names of show business people and stars painted just aft of their flight deck windows, complete with stars. As additional DC-10-11s join the fleet, the Jumbojets and DC-8-21s are removed.

On November 3, 39,000 feet over Albuquerque, New Mexico, passenger G. F. Gardener is sucked through the window of a DC-10-11 after an engine explodes, ripping a hole in the fuselage and causing the window to blow out as a result of decompression.

The company announces on December 4 that it will cancel daily roundtrip service between Miami and London during five days late in the month in order to conserve fuel. The DC-8-51 *Carolyn* is purchased by **Air Jamaica, Ltd.** on December 15.

For the year, freight traffic is up by 12.7% and customer bookings grow 4.4% to 6,863,000. On revenues of \$413.84 million, expenses are \$363.27. The operating profit accelerates to \$50.67 and the net gain advances to \$20.62 million.

Only six new employees are hired in **1974**. Eight tires of a DC-8-51 with 107 aboard blow out during its landing at Boston on March 22; no injuries are reported.

A shotgun-armed assailant boards an unoccupied B-727-235 parked at Sarasota, Florida, on March 30, shouting his demands to be flown elsewhere. The only other person on the aircraft is a maintenance man, who adroitly disarms the would-be pirate and turns him over to police. Tried, the failed perpetrator receives a 15-year prison term.

The July 1 flight of a DC-10-11 from Miami to Los Angeles with 191 aboard is almost a tragedy; a wing engine cowling comes loose and smashes into the wing while also disabling the plane's tail engine. A safe emergency landing is made at Tampa.

Beginning on July 15, the company is subjected to another of the periodic job actions that have hurt it so often during its history. This time, mechanical and related stores workers, members of the IAM, shut the company down for three-and-a-half months. A mutual agreement between the parties is finally reached on October 12 and the new contract is ratified on November 1.

Meanwhile, on August 15, the women of NOW award National its "horrible mention" award for the carrier's latest ad: "We really move our tail for you!" Beginning on November 5, the airline offers free alcoholic beverages to passengers, regardless of ticket class, on its New York to Miami and Fort Lauderdale flights.

The strike forces enplanements to decline 29.9% to 4,815,000 and cargo is off by 35%. On revenues of \$376.91 million, expenses are \$329 million. Operating income falls to \$47.81 million, but the net profit jumps to \$21.34 million.

The workforce in **1975** is 7,100. In a case similar to that of the previous March, a lone assailant, armed with a rifle, gains access to an unoccupied B-727-235 at Pensacola on January 3 and, for whatever reason, loudly draws attention to himself. His antics are noticed by two airplane cleaners, who disarm the man and hand him over to security agents. While awaiting trial, the man commits suicide.

In the spring, National unveils No Frills Service whereby customers may purchase certain seats on wide-body aircraft in advance at greatly reduced fares. Simultaneously, the company seeks permission from the CAB to open new transatlantic markets at Paris, Amsterdam, Frankfurt, Luxembourg, Madrid, Zurich, Athens, Rome, and Tel Aviv. The two B-747-135s are sold to **Northwest Airlines** in May and two more DC-10-11s join the fleet in June.

An unidentified man, who apparently sets a fire in the washroom of Flight 1601, a DC-10-11 en route from New York to Miami on July 15, dies in the hospital the next day from burns received. The aircraft had diverted to Jacksonville to seek early assistance, but it is too late.

When the last DC-8-61 is retired, the company's fleet modernization and standardization program is completed. New flight attendant uniforms are introduced, but have no impact when flight attendants begin a job action on August 31. By year's end, multiyear agreements are held with all but one of the company's unions (the striking flight attendants) and hopes for stability mingle with Christmas spirit.

Passenger boardings decline 12% to 4,249,931 and freight is down another 22.7%. Expenses of \$335.75 million are submerged into overall revenues of \$358.17 million, leaving an operating profit of \$22.42 million. The \$10.59-million net gain is boosted to \$21 million by receipt of assistance from the industry's mutual aid program for struck carriers.

A total of 459 employees are hired in **1976**, an increase of 6.5% and Chairman/President/CEO Maytag elects to turn over the presidency to Executive Vice President E. F. Dolansky, retaining the titles of chairman/CEO. The 127-day walkout by flight attendants ends on January 6 after their union accepts a 46-month contract. New in-flight beverage and meal services are introduced, including coach-class champagne.

Customer bookings accelerate 29.9% to 5,534,958 while cargo skyrockets 65% to 92 million FTKs. Operating income races upward to \$439.11 million while expenses are held to \$435.78 million. This happy imbalance results in an operating profit of \$3.33 million and net gain of \$3.51 million.

A Galveston oilman is bound over by a federal grand jury on February 10, **1977**, on the complaint of two flight attendants, who accuse him of repeatedly slapping them on the buttocks during a London-Miami flight; he is fined \$500 on February 12 and placed on six-months probation.

On June 22, the company becomes the first airline to offer nonstop DC-10-30 flights between Miami and Paris and is the only U.S. flag carrier to serve the French capital from the South. During the year, the

carrier's DC-10-11s are also given the names of famous show business personalities. The names are carried in the form of an autograph with a cartoon outlining the celebrities' heads.

A DC-10-11 with 60 aboard slides off the runway and into the mud during its landing at New Orleans on July 10; no injuries are reported.

Enplanements total 6,142,000. On revenues of \$541.47 million, a \$6.42-million profit is generated.

Airline employment is increased 3.8% in 1978 to 8,200. Chairman/CEO Maytag and President Dolansky now operate a fleet comprising 4 DC-10-30s, 11 DC-10-11s, 25 B-727-235s, and 13 B-727-35s.

During a Miami-Newark flight on January 27 with 111 aboard, a B-727-235 experiences loss of power in all 3 of its engines simultaneously. After coasting for 150 miles, the crew is able to restart the engines and make a precautionary unscheduled landing at Jacksonville. On April 1, the company announces the forthcoming inauguration of 15 weekly services to Europe.

The first transatlantic nonstop is inaugurated on May 1 from Miami to Frankfurt, followed by new Miami to Amsterdam frequencies on May 4.

While on approach to Pensacola on May 8, Flight 193, the B-727-235 *Donna* with 6 crew and 52 passengers, suddenly crashes into Escambia Bay, 3 nm. short of the runway. The plane sinks in 12 ft. of water (3 dead).

The first nonstop flights to Europe from Tampa and New Orleans begin on July 2.

Frequencies are increased from Houston as the Texas city becomes a National minihub. The NTSB will, on November 11, blame the flight crew for the May 8 tragedy and all three men (pilot, copilot, and flight engineer) are dismissed.

Albany, New York, janitor Gerald Casey is arraigned at Charleston, South Carolina, on December 14 for attempting to hijack Flight 97, a B-727-235 with 54 other passengers en route from New York to Miami, to Cuba; Casey declares the incident a "joke." A judge will give him five years of probation during which to reconsider his sense of humor.

Also in December, nonstop flights commence from New York (JFK) to Amsterdam. As the difficulties and challenges of deregulation hit U.S. air transport firms, some carriers adapt while others falter and appear ripe for takeover. National, in financial trouble for years, is among the latter group. Throughout the year, it is embroiled in activities related to merger bids from **Eastern Air Lines**, **Texas International Airlines**, **Air Florida**, and **Pan American World Airways (1)**.

Still, the 12 months are among the best in a long time as traffic rises 12.1% to 6.98 million passengers flown and routes are opened to Frankfurt and Amsterdam, thereby doubling the route network to 40,000 unduplicated miles. Revenues increase 17.5% to \$636.4 million and net income skyrockets 185% to \$18.3 million.

Airline employment is increased by 2.4% in 1979 to 8,400 and the fleet includes 13 B-737-35s, 24 B-737-235s, 11 DC-10-11s, and 5 DC-10-30s. The celebrity aircraft livery theme is abandoned.

Two new domestic routes are begun from Houston during the spring: nonstop to Seattle (along with Seattle-Los Angeles) on April 1 and to Orlando and New Orleans on May 1. A DC-10-30, bound for Amsterdam on May 31 with 237 aboard, loses power in its port engine shortly after takeoff from New York (JFK); a safe return landing is, however, made.

With an offer of \$50 per share, **Pan American World Airways (1)** wins the contest for National on June 1, as stockholders approve the merger. At the same time, Juan Trippe's major publishes a pamphlet on the matter, *The Case for Merger: Pan Am/National, a Selection of Editorial Comments*.

Subject to presidential approval, the CAB approves the takeover on July 10, minus the Miami-London (LHR) route that **Pan American World Airways (1)** would later obtain on its own. The government also allows a settlement with **Texas International Airlines**, which would raise the airline's final price to a hefty \$350 million.

The last international route is started, also in July, with nonstop flights from Miami to Zurich. Six B-727-51s are purchased from **Northeast**

Airlines, with the first arriving at Miami on October 7. President Carter gives final approval for the **Pan American World Airways (1)** merger on December 22.

Largely as a result of the DC-10 grounding that follows in the wake of the May Chicago **American Airlines** disaster, National's passenger boardings drop 5.6% to 6,596,000; cargo is down 3.8%. Revenues rise 8.9% to \$693 million, but soaring expenses (assisted significantly by radically higher fuel costs) allow only a \$3.9-million net profit.

A 10-month integration program is begun by **Pan American World Airways (1)** on January 7, 1980. Nine passengers are hurt on July 4 as a B-727-235 encounters air turbulence on a flight from Miami to New York.

Two unidentified hijackers divert Flight 872, a DC-10-30 with 223 aboard en route from Miami to San Juan, to Havana on August 14. The pair will receive Cuban prison terms of four and five years, respectively.

Although full integration with **Pan American World Airways (1)** takes much additional time, the actual consolidation, sought by Juan Trippe's famous pioneer primarily for National's domestic route network, is accomplished by October 26.

In 1983, **Overseas National Airways (2)** purchases rights to the National Airlines name from **Pan American World Airways (1)**. There is an unofficial Web site about National Airlines at <http://www.national-sundowners.com/history>.

NATIONAL AIRLINES (2): United States (1983-1987). In December 1983, **Overseas National Airways (2)**, based at New York and Jeddah, in Saudi Arabia, dormant between 1978 and 1982 and having lost its operating certificate, is reformed and renamed, being given the corporate identity of **National Airlines (1)**, which is purchased from **Pan American World Airways (1)**.

In addition to extensive overseas charter and contract service flights undertaken from its Mideast base, National also maintains regular tour operations in 1984, flying charters from New York to destinations such as London, Paris, Rome, and Athens in Europe, plus the Caribbean, and Asia.

Not flexible enough to meet the carrier's requirements, the **Air Afrique, S.A.** B-747-2S4F Jumbojet *Lome* is withdrawn on March 1 and leased to National; the same day, the American company subleases the plane to **Saudia (Saudi Arabian Airlines)**. On August 1, the sublease ends and the *Lome* is sold to **Korean Airlines/Korean Air (KAL)**.

The fleet at the end of the year comprises 2 owned Boeing 747-273Cs acquired from **World Airways** in November, 1 former **Alitalia, S.p.A.** B-747-243B chartered on December 1 from its manufacturer, 1 Douglas DC-8-71, 6 DC-8-63CFs, 1 DC-8-61, 5 DC-8-55s, and 1 Boeing 737-200.

In addition to the operation of its own aircraft, the company, with the success of the *Lome* transaction, increasingly serves as a leasing service for other airlines that require temporary capacity. Among the jetliners available for charter are 10 B-727-200s, 3 DC-8-63s, 2 DC-9-80s (MD-80s), 1 B-747-133, and 4 B-747-123s. The MD-80s, for example, are leased to the Italian carrier **Alisarda, S.p.A.** during the winter. The B-747-133 is returned in October.

Enplanements for the year total 396,812.

Operations continue apace in 1985, with the leased B-747-243B returned in February and one of the chartered B-747-123s returned in May. Indeed, all of the remaining Jumbojets, except one, are retired between September and November, with one of the B-747-273Cs sold to **Korean Airlines/Korean Air (KAL)**. Flights are halted in December.

Passenger boardings for the year decline by 17.4% to 338,000.

Caught in recession, the carrier struggles in 1986. The last B-747-273C is sold to **Evergreen International Airlines** in March, requiring the airline to limp along with its smaller airliners. In May, it files for bankruptcy and is liquidated by December. In February 1987, the DOT revokes the inactive carrier's operating certificate.

NATIONAL AIRLINES (3). See **PRIVATE JET EXPEDITIONS**

NATIONAL AIRLINES (4): P.O. Box 19359, Las Vegas, Nevada 89132, United States; Phone (702) 944-2800; <http://www.nationalairlines.com>; Code N7; Year Founded 1995. America West Airlines cofounder Michael J. Conway establishes NA-4 as New Airline, Inc. at Las Vegas, Nevada, in April 1995. Conway, who is chairman, president, and CEO, is able to arrange \$2.8 million in financing from initial stock purchases by management and several corporations. Other officers include Senior Vice President/Chief Financial Officer Raymond T. Nakano, Senior Vice President-strategic Planning Mark Suman, and Director of economic Analysis Beverly E. Rouse.

Planning for the inauguration of services from Las Vegas moves forward over the next three years, together with the carrier's applications to the DOT and FAA for operating authority. In need of an official name, the historic moniker of National Airlines is chosen in February 1998 after the right to employ it is acquired from the assets of bankrupt **Pan American World Airlines (2)**.

On July 30, National is able to announce the completion of \$50 million in private placement equity funding. As a result, the company's principal shareholders become Rio Hotel & Casino and Harrah's Entertainment (both of which have contributed \$15 million) plus Wexford Management LLC (which has put in \$7 million). Considerations for a regional linkup with **Chautauqua Airlines**, owned by Wexford, are made. Another \$13 million is acquired from the private sector.

As the year ends, arrangements are made for facilities in the new Concourse D at McCarran International Airport. A new frequent flyer program is designed, staff, including Vice President-Operations James Carr, are hired, and marketing plans are drawn up.

A portion of the new capital is also employed to order four Boeing 757-200s. The first of the new aircraft is a Dash-236 previously operated by **Istair Istanbul Airlines, A.O.** Wearing an all-white livery with National Airlines titles and a script ribbon "N" on the navy blue tail and engine nacelles, is delivered on February 12, 1999. A B-757-256, flown earlier by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, and a onetime **Britannia Airways, Ltd.** B-757-204 are expected in late spring and summer.

Also during February, National receives its initial Certificate of Public Convenience and Necessity from the DOT. National has the distinction of being the first start-up certified under the government's new Air Transport Oversight System (ATOS), which had been developed in the wake of the **ValuJet Airlines** crash in 1996 to increase the level of safety in the certification process. Indeed, National has lost several months from its beginning by serving as a test bed for the process, one which has also cost it about \$3 million out-of-pocket.

With increased progress indicated toward the receipt of FAA operating approval, National begins taking reservations on April 19 for a service launch in late May.

In a grand Las Vegas ceremony on May 20, Chairman Conway, surrounded by company employees, FAA representatives present the airline's Air Carrier Operating Certificate. Following remarks by airline, airport, and community officials, the B-757-236 inaugurates the company's first scheduled service at 8:30 a.m. local time as Flight 601 from McCarran to Los Angeles (LAX). Chairman Conway and his three cofounders are aboard as it departs under a traditional arched water cannon salute from two airport firetrucks. An hour later, the B-757-256 launches flights to Chicago (MDW). Four daily nonstop roundtrips from Las Vegas to Los Angeles (LAX) and twice-daily nonstop roundtrips to Chicago (MDW) are now begun. Thrice-daily service to New York (JFK) begins on June 14, followed by the introduction of twice-daily flights to San Francisco on June 24.

Five more B-757-200s arrive during June and early August. Consequently, twice-daily nonstop B-757-236 roundtrips are introduced on August 25 between Las Vegas and Dallas (DFW), while a third daily nonstop roundtrip is added between Las Vegas and San Francisco and a fourth daily nonstop roundtrip between Las Vegas and New York (JFK).

Customer bookings this year total 345,000. Although revenues reach \$24.18 million, expenses of \$48.96 million leave an operating loss of \$24.78 million. There is also a net loss of \$24.31 million.

The workforce totals 856 at the beginning of 2000. The B-757 fleet now includes 8 Dash-236s, 2 each Dash-256s, Dash-28A, Dash-23As, and 1 Dash-2T7. Twice-daily B-757-236 nonstop return service is inaugurated on January 27 from Las Vegas to Miami.

Previously operated by **Air Holland, N.V.**, a chartered B-757-204 is delivered on April 10. Meanwhile, two more B-757-200s are chartered from GECAS on June 20 for delivery in January.

Virgin Atlantic Airways, Ltd. launches twice-weekly B-747-4Q8 roundtrips on June 8 between London (LGW) and Las Vegas. During the inaugural flight, which is three-fourths full, Virgin Chairman Sir Richard Branson announces that he has obtained a code-sharing, feeder agreement with National Airlines (4). The new partnership pays off more quickly than anticipated as it falls to the U.S. carrier to reposition the big Boeing for its return to England. Branson's invited guests and fare-paying passengers had drunk the Jumbojet dry before its Nevada landing.

An order is placed on June 26 for eight more B-757-200s that will be delivered by GECAS between late 2001 and 2002. B-656-204 twice-daily roundtrips are inaugurated on July 13 between Las Vegas and Newark.

Armed hijacker Aaron Amartei Commey forces his way into the cockpit of Flight 19, a B-727-200 preparing for departure to Las Vegas on July 27. While the 22-year-old pirate and the flight crew are engaged, flight attendants hustle all of the passengers safely off the plane. The hijacker surrenders in the small hours of July 28 after police negotiators persuade him to vacate the aircraft.

It is announced on August 25 that new service will be started from Las Vegas to Chicago (ORD) on January 25. At the end of September, company employees reject an organizing offer from the International Association of Machinists.

B-757-200 daily roundtrips begin on October 26 from Las Vegas to Washington, D.C. (DCA).

Blaming its poor financial situation on rising fuel costs and its own failure to hedge its fuel position, the carrier, on December 6, files for Chapter XI bankruptcy protection. It reports assets of \$103 million and liabilities of \$119 million. Services are continued without interruption as the carrier seeks new financing.

NATIONAL AIRLINES (PTY.), LTD.: P.O. Box 18016, Rand Airport, Johannesburg 1419, South Africa; Phone 27 (11) 827-9333; Fax 27 (11) 824-2678; <http://www.nac.co.za>; Code YJ; Year Founded 1983. National Airways Corporation, a subsidiary of the Lonhro Group, acquires control of **Wing Airways, Ltd.** in February 1983, and the name is changed. Graeme Conlyn remains chairman and Beech King Air 100 and Super King Air 200 services from Johannesburg continue to link cities along a route from Lanseria to Kuruman and Aggeneys and Lanseria to Ulco, Lime Acres, and Postmasburg.

Operations continue apace in 1984 and in February 1985 the carrier acquires the assets of Springbok-based **Namakwaland Air Services (Pty.), Ltd.** begun a quarter century earlier by the late Joseph Jowell. National is reorganized, with Graeme Conlyn and NAS chief Deon Blignaut becoming joint managing directors. During the remainder of the year and into 1986, aviation services are enlarged to Namagualand and to the northwestern Cape areas. Among the communities served are Aggeneys, Alexander Bay, Springbok, Cape Town, and Kleinsee.

In 1987, Blignaut and Conlyn manage a fleet comprising 1 each Beech King Air 100 and Super King Air 200. Conlyn becomes sole managing director in 1988.

In 1990, the commuter is reorganized as National Airlines Joint Venture and corporate headquarters are moved to Johannesburg. Jean H. Du Plessis is named general manager with G. Conlyn remaining as managing director. The fleet is upgraded by the replacement of the King Air 100 by 3 Super King Air 200s, 1 Piper PA-31-310 Navajo, and 2 Piper PA-31-350 Navajo Chieftains.

The Navajo and one Navajo Chieftain are withdrawn in 1991 and a fourth Super King Air 200 is acquired in 1992. Operations continue and

in 1994 the fleet includes only 2 Super King Air 200s and 2 Navajo Chieftains.

Service is continued in 1995–1999, but by the beginning of the latter year, the fleet has been reduced to one each de Havilland Canada DHC-6-300 and Learjet 45. Ripe for takeover, the company is purchased by **Safair (Pty.), Ltd.** in July. With backing from the new owners, frequencies are enhanced with a fleet of 5 Beech 1900Cs and 3 Beech 1900Ds.

NATIONAL AIRLINES, S.A.: Chile (1992–1999). National Airlines is established at Santiago in August 1992 to offer scheduled domestic passenger and cargo services between the capital and such local destinations as Arica and Antofagasta. Shareholding is divided between Uauy Holding and Musiet Holding. Operations are started on December 27 with 2 Boeing 737-204As leased from **Britannia Airways, Ltd.**

Operations continue apace in 1993 as a third B-737-204A is acquired. To compete with **LADECO Chilean Airlines, S.A.** and **LanChile Airlines, S.A.**, National's fares are kept at a level 35% below those two older carriers.

In 1994, President Fernando Uauy and Vice President-Commercial Carlos Musiet oversee a workforce of 290. A comprehensive marketing alliance is signed with **United Airlines** in September. Under its terms, which include code-sharing and frequent flyer mileage benefits, the national is able to improve its services between its Chilean destinations and to provide direct feed for United's flights from Santiago to Miami.

Through November, enplanements total 232,347 while 3.84 million FTKs are flown. Revenues total \$21.74 million, while expenses are \$20.69 million. Consequently, there is an operating profit of \$1.04 million.

The workforce is radically reduced in 1995 to just 180. Four-times-a-week service to Tacna and Arequipa begins in mid-October, with service to Lima begun at year's end.

Enplanements jump 20.2% to 311,468, but cargo dives 31.5% to 2.83 million FTKs.

On July 1, 1996, a code-sharing agreement is signed with **Aerolineas Argentinas, S.A.** Under the pact, passengers will be able to cross the two airlines' networks on one ticket and with just one check-in. The companies will also jointly promote products and services, institute tariff agreements, cooperate in aircraft maintenance, and begin common catering services.

Although freight traffic continues its plunge, dropping 4.5% to 2.7 million FTKs, customer bookings increase 41.1% to 439,535. The workforce is boosted 61.1% to 290 to help handle the increase.

Domestic destinations visited in 1997 include Antofagasta, Arica, Concepcion, Ioaque, Puerto Monti, Punta Arenas, and Temuco. A code-sharing agreement is entered into with **Aerosur, S.A.**, from which National leases a B-727-23.

On March 21, the chartered jetliner is employed to inaugurate dual-designator flights from Arica and Iquique to Santa Cruz. Seven-times-a-week roundtrips commence on April 1 between Santiago and Lima, Peru.

Avant Airlines, S.A., which will be taken over by the transportation corporation Tur Bus, becomes a competitor in June. During the summer, daily flights are begun from Santiago to Buenos Aires. On September 26, thrice-weekly roundtrip service is inaugurated from Santiago to Miami.

Passenger boardings increase 52% to 668,010 while freight skyrockets 71.5% to 4.63 million FTKs.

During the first quarter of 1998, the carrier is purchased by Santiago-based **Avant Airlines, S.A.** for an undisclosed price. Plans are announced for the two carriers to compete with **LADECO Chilean Airlines, S.A.** and **LanChile Airlines, S.A.** in an effort to capture a quarter of the nation's domestic passenger market.

By July, National enjoys a 12.1% market share and Avant 14.1%. As of July 1, the decision is taken to concentrate domestic operations with one airline and long-haul flights with another. On July 6, National turns over its local service operations to **Avant Airlines, S.A.** and begins to

concentrate on international services. Avant is now expected to maintain the combined 26.3% domestic market share of both airlines. This arrangement lasts six months until National is merged into its parent in January 1999.

NATIONAL AIRWAYS: United States (1933–1937). With initial capitalization of \$10,000, NA is formed in early 1933 at New York by ex-**The New York, Philadelphia and Washington Airway (Ludington Airline)** employees Paul Collins and Eugene Vidal. With support is from New York businessman Sam J. Solomon and famed aviatrix Amelia Earhart, two Stinson SM-6000B Tri-Motors are purchased from Ludington.

A contract is arranged with Laurence Whittemore of the then-dormant **Boston-Maine Airways** to operate his former route to Bangor, Maine, via Portland and Waterville. Revenue flight services commence on August 11. Additionally, Collins contracts with newly formed **Central Vermont Airways**, owned by the Canadian National Railroad, to fly its routes from Boston to Montpelier, beginning on October 27. Soon the two airlines are operated as one coordinated enterprise.

Two extensions are added on February 7, 1934—Manchester is added as a stop and the Montpelier destination is stretched to Burlington. The "Air Mail Scandal" and associated investigations do not interrupt operations. Service to Montreal, which makes the company an international airline, is launched on March 20. In early June, National undertakes to fly the mail from Boston to Bangor and Burlington. As of October 22, flights to Montreal must be halted for winter, but beginning in the summer of 1935, flights are offered between Bangor and Bar Harbor.

This arrangement is continued with little change over the next three years. On April 8, 1936, a Stinson 6000 crashes while taking off from Burlington (one dead). Having determined that newer flight equipment is essential, the railroad owners order two new Lockheed Model 10A Electras for National.

When Collins cannot come up with the money to pay for the Electras, the railroad interests buy out National Airlines' partners on March 1, 1937 and continue operations as **Boston-Maine/Central Vermont Airways**, the marketing title employed since 1934.

NATIONAL AIRWAYS (PTY.), LTD.: South Africa (1958–1970). NAL is founded at Johannesburg's Baragwanath Airport in 1958 by Dick Dunn and Stan Cohen to transport newspapers, passengers, and miscellaneous cargo to Cape Town and Port Elizabeth. Over the next five years, Dunn and Cohen actively seek to enlarge their concern by purchasing five other small nonscheduled operators: **OFS Air Services (Pty.), Ltd.**, **Pretoria Flying Service (Pty.), Ltd.**, **Transvaal Air Charters (Pty.), Ltd.**, **Aero Sales (Pty.), Ltd.**, and **Swazi Air, Ltd. (1)**. Some of these will be operated as subsidiaries.

Durban-based **Natal Aviation (Pty.), Ltd.** is acquired in 1963. At this point, the company, renamed **National Airways Corporation**, is large enough to become a takeover target and the automotive dealer Fisher & Simmons (Pty.), Ltd. acquires the company before the end of the year, but leaves Dick Dunn in as chairman, with Jack Andrew as general director.

Early in 1964, Chairman Dunn resumes the carrier's expansion, purchasing Southern Aviation (Pty.), Ltd., Bechuanaland Air Safaris, and half interest in Skywork (Rhodesia), Ltd. Also assumed is Skywork's interest in **Rhodesia Air Service, Ltd.** Requiring more space, the company is transferred from Baragwanath to Rand Airport at Germiston.

As a result of all this growth, the NAC fleet by mid-decade is quite large: 3 Cessna 310s, 1 C-150, 2 C-170s, 4 C-172s, 1 C-180, 1 C-182, 1 C-210A, 3 Navion Rangemasters, 4 Piper PA-11 Colts, 2 PA-23 Aztecs, 3 PA-23 Apaches, 1 PA-24 Comanche, 1 PA-30 Twin Comanche, 3 Beech Bonanzas, 1 Beech Travelair, 3 Mooneys, 5 Aero Commander 500s, and 1 Hughes 269A.

Employing a pair of Aero Commanders, the company takes over a **South African Airways (Pty.), Ltd.** service on March 20, 1965, which delivers printing mats for Sunday newspapers from Johannesburg to Cape

Town. Editions of the *Sunday Times*, *Sunday Express*, *Dagsbreek*, and *Sondagstem* are run off by the presses of the *Cape Times* and *Bie Burger*.

The carrier's new subsidiary, **Swazi Air, Ltd. (2)**, begins services from Matsapa on September 27. In October, the company also begins to fly copies of the *Evening Post* to Port Elizabeth, East London, and Grahamstown.

Newspaper, air taxi, and charter services are continued in 1966 and in May 1967 a flight school is started at Rand Airport, to which an Aero Commander is dedicated. The Port Elizabeth division is sold to Mel Templer and Theale Stewart in 1968, who operate it briefly as the independent NAC Eastern Cape (Pty.), Ltd.

By 1969, the fleet has been increased by the addition of 2 Douglas DC-3s and 1 Aero Commander 500B.

Just after takeoff from Germiston on October 6, 1970, a DC-3 with a pilot and 10 passengers suffers the loss of its No. 1 engine. The crew attempts to return to their point of origin, but the plane crashes two km. from the Rand Airport (three dead).

At the end of the year, NAC is sold to **Protea Airways (Pty.), Ltd.**

NATIONAL CAPITAL AIRWAYS. See COLGAN AIR

NATIONAL CHARTER NETWORK: Vladivostok Airport, Vladivostok, Russia; Phone 7 (4) 232-97339; Fax 7 (4) 232-228010; Year Founded 1986. Vladivostok Aviation is established as the FBO at Vladivostok Airport at Artem in 1986; Vladimir Saybel is president. Following the breakup of the Soviet Union in 1991, the company elects to establish the National Charter Network to provide executive charter passenger and air express services, air taxi, and cargo flights to various destinations in the CIS and across the Bering Sea to the United States.

By 2000, President Saybel oversees a workforce that includes 10 full-time and eight part-time pilots and a mixed fleet of Russian- and U.S.-manufactured aircraft. From the Vladivostok facility, NCN operates 11 Yakovlev Yak-40s, 2 each Antonov An-28s, Tupolev Tu-154s, Yak-40ERs, and Ilyushin Il-76s, plus 1 Beech 18. A base is established at Seattle, Washington, where 1 each Cessna 550 Citation III and Learjet 35A Century III undertake passenger-only flights.

NATIONAL COMMUTER, LTD.: United Kingdom (1988–1990). Privately owned NCL is organized by Navigations, plc, at Southend in the fall of 1988 to operate regional services to the Channel Islands with 3 Shorts 330s. Traffic and financial figures are not released. Early in 1989, the carrier acquires a Shorts 360-300 and two Embraer EMB-110P Bandeirantes and opens scheduled flights to Brussels in cooperation with **Sabena Belgian World Airlines, S.A.**

Operations continue apace until October 20, when the company's parent enters Administration, the equivalent of Chapter XI bankruptcy in the U.S. Several other carriers maintain the company's schedule on its behalf and several, including **Region Airways, Ltd.** and **British Air Ferries, Ltd.**, attempt to purchase it.

The commuter operates through July 1990, at which time its assets are finally sold to **Region Airways, Ltd.** Prior to its dissolution, a total of 5,732 passengers are flown on the year.

NATIONAL COMMUTER AIRLINES: United States (1982–1983). Established at Miami in January 1982, NCA begins scheduled intrastate passenger services in May as part of the **Air Florida** commuter network, linking its base with Sarasota and Tampa.

Employing Aerospatiale Nord 262 and Mohawk 198 turboprops, the carrier continues daily roundtrips until September 3, 1983 when, in the wake of **Air Florida's** failure, it suspends business. Plans to resume flights in January 1984 are not realized.

NATIONAL EXECUTIVE AIRLINES: United States (1983–1991). NEA is formed at Las Vegas in 1983 to offer charter services plus sight-seeing flights over the Grand Canyon with a fleet of 4 Piper PA-31-350 Navajo Chieftains.

Operations continue with little change until 1989, except that the fleet is increased to 11 aircraft, including Cessna 402s. During the summer, scheduled services are introduced from the gambling capital to the canyon and back.

The company closes its doors in the recession year of 1991.

NATIONAL EXECUTIVE FLIGHT SERVICE: United States (1959–1967). Joseph C. Whitney establishes NEFS at Boston, Massachusetts, in 1959 to provide scheduled passenger and cargo services to Martha's Vineyard, Nantucket, and Hyannis. Employing 2 Aero Commander 500s and 3 Piper PA-24 Commanches, Whitney inaugurates daily scheduled roundtrips on June 20, 1960, supplementing those offered by **Northeast Airlines**. Operations continue apace in 1961–1963.

Taking a leaf from the book of John Van Arsdale's **Provincetown-Boston Airline (PBA)**, President Whitney establishes a Florida division at Sarasota late in 1964. Employing a Piper PA-32 Cherokee Six and a Beech 99, NEFS inaugurates seasonal roundtrip services on December 15 to Tampa and other south Florida holiday destinations.

Services continue to be provided both north and south throughout 1965–1966. The first de Havilland DH 104 Dove is placed into service during the latter year, replacing **Northeast Airlines** on routes to certain of the smaller communities in Maine. On January 1, 1967, the company is reformed and renamed **Executive Airlines**.

NATIONAL FLIGHT SERVICES: Toledo Express Airport, 10971 E. Airport Service Road, Swanton, Ohio 43558, United States; Phone (419) 865-2311; Fax (419) 867-4234; Year Founded 1992. NFS is set up at Toledo Express Airport in 1992 to undertake fleet management for local corporations and to offer executive and small group passenger charters throughout the Western Hemisphere. Flights begin and continue with a pair of North American Sabreliner bizjets.

NATIONAL FLORIDA AIRLINES: United States (1982–1983). NFA is founded at Daytona Beach in the spring of 1982 to provide scheduled third-level passenger services in association with **Republic Airlines** with a fleet of de Havilland DHC-6-100 Twin Otters, Piper PA-31-310 Navajo Chieftains, and Fairchild-Swearingen Metro IIs.

Daily roundtrip revenue feeder flights are undertaken linking the company's base with Fort Lauderdale, Walton Beach, Miami, Orlando, and Tampa. Caught up in recession and unable to recover start-up costs, the new entrant ceases operations in December 1983.

NATIONAL HELICOPTER CORPORATION: Republic Airport, CS 9100, Farmingdale, New York 11735, United States; Phone (516) 756-9355; Fax (516) 756-2694; <http://www.natheli.rotor.com>; Year Founded 1968. NHC is established in 1968 to provide private and corporate charters, flight-seeing trips over New York City, courier and airport transfers, aerial photography, and aerial applications in agriculture. Revenue flights continue for the next 30 years.

By 2000, Operations Manager Andrew Ladouceur oversees the work of 20 pilots and schedules the company's 2 Bell 206L LongRangers, Bell 206B JetRanger, and Eurocopter AS-355F Twinstar.

NATIONAL JET ITALIA, S.p.A.: Via Corona Boreale 86, Rome, 00054, Italy; Phone (06) 6587 41; Fax (06) 6587 452; <http://www.british-airways.com>; Year Founded 2000. After a long gestation period begun early the previous year, arrangements are finally completed in the spring of 2000 between the Australian regional carrier **National Jet System (Pty), Ltd.** and **British Airways, Ltd. (2)** for the inauguration of a new BA franchise carrier, **National Jet Italia, S.p.A.** Shareholding in the new enterprise is divided between BA (1%), British Aerospace Systems (20%), and Magtibay, N.V., a Dutch holding company (70%); Sergio Bille is appointed CEO. Additionally, five former **UNI Airways Corporation, Ltd.** British Aerospace 146-300s acquired earlier are brought up to standard and painted in modified BA colors.

Employing the first available BAe, National Jet Italia, S.p.A. begins flying twice-daily roundtrips between Rome and Palermo on July 11. A second aircraft is delivered on July 16 and enters service on the route the next day, doubling frequencies to four per day. The 146-300s employed are configured for two classes, Club Europe (business) and Euro Traveler (economy). Service from Rome to Catania is promised for later in the year.

With the arrival of the fourth BAe 146-300 on October 19, return frequencies between Rome and Palermo are now offered eight times weekly. Four-times-daily BAe 146-300 return flights from Rome to Catania commence on October 29. In late November, a pair of Boeing 737-300s, one each Dash-3S3 and Dash-3Q8 in full BA colors are wet-leased from **British World Airlines, Ltd.**

Arrangements are announced on December 4 for the initiation of twice-daily roundtrips from Rome to Athens beginning on January 1. The flights will be made with a pair of wet-leased **British World Airlines, Ltd.** Boeing 737s, one each Dash-3S3 and Dash-3Q8. The same aircraft will launch daily return service from Rome to Verona on February 1.

NATIONAL JET SYSTEMS (PTY.), LTD.: Level 9, Southgate House, 435 King William Street, Adelaide, South Australia, 5000, Australia; Phone 61 (8) 8304 5600; Fax 61 (8) 8304 5850; http://www.nationaljet.com.au; Code NC; Year Founded 1989. Established at Adelaide Airport under Managing Director Warren Seymour, National Jet is created in 1989 to operate charter services to domestic destinations. Principle shareholders are Jet Systems and Aedion Investments.

During the spring of 1990, a scheduled airline division is created to fly Australian Airlink services for **Australian Airlines (Pty.), Ltd.** Equipped with a fleet comprising 3 British Aerospace BAe 146-100s, 1 BAe 146-200QC, 1 Boeing 727-77C, and 1 Embraer EMB-110P1, the commuter begins services on July 1 between Brisbane and Mount Isa, Proserpine, and Canberra. Several light aircraft are also available, including an Israeli Aircraft Industries 1124A Westwind II and a Piper PA-31-350 Navajo Chieftain. Services continue in 1991.

On January 9, 1992, founder Seymour sells a 50% stake in his concern to **Lloyd Helicopters (Pty.), Ltd.** The fleet is now revised; gone is the Boeing and in its place is another BAe 146-100 and a BAe 146-300QT. The latter is operated, beginning in December, for Australian Air Express on behalf of the Australian Post Office. AAE is formed by a merger of Australian Airlines Express and Australia Post Office Courier. **Australian Airlines (Pty.), Ltd.** is purchased into **Qantas Airways (Pty.), Ltd.** and National Jet now becomes its subsidiary.

In 1993, the fleet includes 4 BAe 146-100s and 1 each BAe 146-200QC, 146-300QT, 125-800B, de Havilland Canada DHC-8-103, and Westwind II. Flights continue over the same routes.

Four additional BAe 146-100s arrive in 1994, along with a second DHC-8-103. Managing Director Warren Seymour's feeder service is renamed Qantas Airlink and additional destinations now served include Alice Springs, Ayers Rock, Broome, Cairns, Darwin, Kalgoorlie, Karratha, Mackay, Perth, and Rockhampton.

A five-year lease extension for the BAe 146-200QC is signed during the first quarter of 1995. The BAe 146-300QT charter is resigned in April for three more years. Routes are opened, beginning in May, from Adelaide to Geraldton, MacArthur River, and Townsville. Two more DHC-8-103s join the fleet. In November, the decision is taken to return the BAe 146-200QC to Asset Management Organization, which will lease it to **Air Jet, S.A.** The aircraft is replaced by a BAe 146-100 pure-passenger model, chartered for six years.

In January 1996, NJS becomes Australian launch customer for the Avro RJ70. At the same time, one more DHC-8-103 enters service. The Avro is entered by year's end, and is placed on the carrier's contract service from Perth to Telfer operated on behalf of a mining concern. At the same time, a leased BAe Jetstream 41 is also acquired for contract work. By year's end, airline employment stands at 800.

When merger discussions between **Qantas Airways (Pty.), Ltd.** and the management of **Ansett New Zealand, Ltd.** break down during the summer of 1997, the Australian major gives consideration of moving Nation's BAe 146 fleet to New Zealand and entering the Kiwi domestic market directly.

Late in December 1998, NJS offers Ir£3.5 million (\$3.7 million) over a seven-week period for a 60% stake in **CityJet, Ltd.** Plans are made to revamp the financially challenged Irish airline into a holding company in which a 40% interest would be owned by CityJet shareholders.

The NJS proposal also envisions the elimination of several routes from Dublin, including those to London (CTY) and East Midlands, and the reduction of the staff from 350 to 250.

On February 24, 1999, CityJet's board of director's, at the recommendation of senior management, rejects the offer, even though NJS has already paid a part of the purchase price.

In addition to the downsizing, concern exists that the arrangement will be blocked by European Union regulations prohibiting non-EU nations from holding majority shareholding in EU airlines.

Chris Jasper and Paul Phelan report in the March 10 issue of *Flight International* ("Alleged Rule Bending Stymies BA Plans to Start Italian Airline") that the aborted package is part of a complicated secret enterprise between NJS, CityJet, and **British Airways, Ltd. (2)** to gain an existing air operator's certificate. This would allow the launching of a BA franchise airline in Italy with five former **UNI Airways Corporation, Ltd.** BAe 146-300s that NJS would lease from Global Air Australia (Pty.), Ltd.

The plans for an Italian subsidiary have not, however, fallen through and are, in fact, only slightly set back. In June, NJS executives travel to Taiwan to complete preparations for delivery of the BAes from **UNI Airways Corporation, Ltd.**, while flight and cabin crew are permitted to fly aboard **CityJet, Ltd.** aircraft in order to familiarize themselves with European service requirements.

Particularly attracted by the NJS contract held with the Australian Customs Service for maritime surveillance services, FR Aviation, Ltd. steps forward in December and purchases the carrier for A\$62 million. The UNI BAe 146-300s arrive in England at the end of the year and are stored by the manufacturer at Woodford until NJS can complete preparations for the launch of its Italian subsidiary.

Passenger boardings this year rise 5.5% to 25,000.

At the beginning of 2000, NJS operates 12 BAe 146s (5 each Dash-100s and Dash-200s and 2 Dash-300s) on Qantas Airlink services. Destinations visited include Adelaide, Alice Springs, Brisbane, Broome, Cairns, Canberra, Darwin, Gove, Kalgoorlie, Karratha, Mackay, Paraburdoo, Port Headland, Proserpine, Rockhampton, Tom Price, and Yulara. The Surveillance Australia wholly owned subsidiary continues to operate 13 aircraft, including DHC Dash-8-200 MPA and Cessna Reims F406s fitted with various kinds of sensors.

Government approval for the FR Aviation, Ltd. takeover is received in February. During the spring, arrangements are completed with **British Airways, Ltd. (2)** for the inauguration of the new Italian airline as the BA franchise carrier **National Jet Italia, S.p.A.** Additionally, the former UNI British Aerospace 146-300s are brought up to standard and painted in modified BA colors.

At the end of March, cofounder Rob Sherrard is appointed deputy CEO/chief operating officer of Virgin Australia, soon to be renamed **Virgin Blue, Ltd.**

National Jet Italia, S. p.A. begins flying four times daily between Rome and Palermo on July 11. The 146-300s employed are configured for two classes, Club Europe (business) and Euro Traveler (economy). Service from Rome to Catania is promised for later in the year.

NATIONAL JETS: 3485 SW 9th Ave., Fort Lauderdale, Florida, 33315, United States; Phone (954) 359-9900; Fax (954) 359-9500; Year Founded 1972. The executive charter operator National Jets is originally established as an FBO at Fort Lauderdale, Florida, in 1972. Employing a fleet of 4 Gates Learjet 25s and 2 Cessna 402s, the non-

scheduled carrier undertakes flights, beginning in **1980**, to both domestic and international destinations. All-cargo and air ambulance flights will be added and a base set up at Phoenix.

Operations continue and in **2000** Thomas E. Boy is CEO and 10 pilots are employed. The fleet now includes 2 Learjet 35As, 1 Learjet 25D, 1 C-402B, and 1 Beech 18T freighter. A Learjet 25D is stationed at Phoenix, Arizona.

NATIONAL PARKS AIRWAYS: United States (1928–1937). After winning the Salt Lake City–Great Falls Contract Air Mail Route No. 26 (CAM-26) from the Post Office on December 30, 1927, Alfred Frank establishes an airmail transport company at Salt Lake City on March 2, **1928**. Frank and his associates pledge \$200,000 initial capitalization (later raised to \$1.5 million), name the carrier National Parks Airways, and assign the contract to the airline on April 6. Following the completion of a new hanger, the partners purchase three new Fokker Model 8 Super Universals and two, later three, Stearman C3Bs.

After prepositioning the Fokkers at each end of the route, National Parks opens north-south and south-north mail and passenger service on August 1, flying via Ogden, Pocatello, Idaho Falls, Butte, and Helena. The Stearmans fly only mail. A newly received fourth Super Universal crashes while landing at Pocatello, Idaho, on September 4 (one dead). Another Stearman C3B joins the fleet on October 13. Two additional Stearman C3Bs are acquired in **1930** and orders are placed for two Boeing 40B-4s, which are delivered on November 4, **1931**.

Idaho Falls becomes a flag stop in **1932**. An effort to obtain a subsidized route extension from Butte to Missoula and Billings is turned down by Postmaster General Walter F. Brown, who grants a Billings extension to **Northwest Airlines**. During the summer of **1933**, extensions are made from Butte to Livingston and from Great Falls to Havre. A Super Universal crashes at Pauline, Idaho, on November 28.

On February 9, **1934**, all mail contracts are cancelled by the Post Office in wake of the perceived “Air Mail Scandal.” The U.S. Army Air Corps is ordered to fly the mail and a Senate committee holds hearings at which Frank is a star witness. During the six weeks of controversy, National Parks stops flying its Great Falls–Salt Lake City route.

With the military option a failure, the Post Office rebids the mail contracts at the end of March and opens the bids at the end of April. Meanwhile, in strict fulfillment of bidding requirements prohibiting applications from previous carriers, the company name is changed on December 1 to **Salt Lake City–Great Falls Airline (Formerly National Parks Airways, Operated by Alfred Frank)**. A new contract is awarded to Mr. Frank on May 7, which he now sublets back to NPA. This move allows him to resume service on May 15.

During the fall, both Stearman mailplanes are sold, as orders are placed for new Boeing 247Ds. The company’s first modern airliner, a Boeing 247, enters service on November 1, having been leased from **United Air Lines**.

Two Boeing 247Ds arrive from **United Air Lines** in the final week of **1935**. During the summer of **1936**, it is decided that scenic visits to Yellowstone National Park will help increase revenues. To that end, an airstrip is built at West Yellowstone and a Boeing 80A-1 is leased from **United Air Lines** with which to begin hauling customers on August 1. The service is suspended in the fall. A Boeing 40B-4 is destroyed in a crash on December 31; no injuries are reported.

On June 25, **1937**, Alfred Frank purchases Ford Tri-Motor 5-AT-70 from **Braniff Airways** and has it modified for sight-seeing flights over the park. These are barely underway before the company, deep in financial difficulty for over a year, is sold to **Western Air Lines** on August 1.

NATIONAL SKYWAY FREIGHT CORPORATION. See **THE FLYING TIGER LINE**

NATIONS AIR EXPRESS: United States (1987–2000). NAE is established in Miami in **1987** as Miami Air Charter (2), but does not begin operations. CEO Mark McDonald’s company is renamed in **1994** and a

base is established at Atlanta. Three Boeing 737-247s, painted in a patriot motif, are leasing from **Viscount Air Services**. The remainder of the year is spent in preparing a marketing strategy featuring one-way fares with no advance-booking requirements and otherwise getting set to launch services the following March to Gulfport, Mississippi, four cities in Florida, and from Philadelphia to Pittsburgh and Boston.

Ticketless scheduled service is inaugurated on March 26, **1995**, between Pittsburgh, Philadelphia, and Boston. The frequencies are offered five times daily on weekdays and four times daily on weekends. In response to the company’s \$59 Philadelphia–Pittsburgh fare, **USAir** quickly counters with a \$53 tariff and matches the upstart on four of its own 16 daily frequencies from Pittsburgh to Boston.

In early April, Nations Air introduces its “Multi-Flyer” program; passengers are able to purchase in advance up to 10 legs between any city and employ them as desired. A Myrtle Beach, South Carolina, stop is added during the spring. After failing to meet FAA guidelines on crew training, the company suspends operations on July 15. The next day, it hires contract carriers to fly its routes.

On August 14, **USAir** Group informs the SEC that the DOJ is examining charges of predatory pricing in certain cities made against it by Nations Air and **Valujet Airlines**. The charges will be dismissed.

Enplanements total 82,000 and with costs far exceeding operating income there are large losses: \$8.67 million (operating) and an equal \$8.67 million (net).

In the wake of the May 11, **1996**, **Valujet Airlines** disaster in Florida, NAE elects to suspend its scheduled services during the third week of the month and to concentrate on charter work.

Financial results are reported through June and show revenues of \$5.86 million. With expenses of \$7.71 million, the loss picture actually improves; an operating loss of \$1.84 million is posted, along with a net loss of \$1.87 million.

During the fall, a wet-lease agreement is signed with **Pan American World Airways (2)** under which NAE operates its B-727-231 on replacement flights in Pan Am livery and under the name *Clipper Goodwill*.

Passenger boardings for the year skyrocket 50.7% to 205,000.

On February 6, **1997**, two New Jersey Air National Guard F-16s from the 177th Fighter Wing based at Atlantic City are flying in a practice area some 70 miles out in the Atlantic Ocean south of New York (JFK). One of the fighters attempts to swoop in unobserved to investigate a company B-737-247 en route to New York from San Juan. This approach to within 1,000 feet below and behind sets off the jetliner’s computerized anticollision alarms and the emergency evasion action taken by the captain to avoid the fighter planes throws three passengers to the floor of the Boeing. No one is hurt aboard the civilian aircraft and the fighter pilot breaks off, rejoins his wingman, and returns to base.

During the next four days, F-16s elsewhere will also make unauthorized interceptions of aircraft from **American Airlines**, **Northwest Airlines**, and **Flagship Airlines**. The intercepts will bring a series of investigations by the USAF, FAA, and NTSB.

When Pan Am takes over **Carnival Air Lines** and gains access to its fleet, the B-727-231 is returned.

Service continues without incident for the remainder of the year. Customer bookings fall 32.3% to 109,000.

On May 26, **1998**, a contract is signed with the wholesale travel company Casino Airlink to provide scheduled roundtrip jet service for its casino vacation packages to Gulfport, Mississippi. The agreement takes effect on June 10, the day after **Reno Air** stops flying to the Gulf Coast. Nations Air now dedicates 2 B-737-200s to offer a total of 14 weekly departures: three each from Atlanta and Orlando, two from Fort Lauderdale, and six from Tampa/St. Petersburg. This gambling arrangement is insufficient to permit continued economic viability and the carrier is forced into Chapter XI bankruptcy protection in October.

Passenger boardings during the 12 months plunge another 72.5% to 42,000. Cargo traffic is down 78.8% to 10,000 FTKs.

The first quarter of **1999** is taken up with devising a reorganization plan to be presented to the bankruptcy court. The document is duly filed

on April 19 and declares that the company will be rescued by a group of investors, led by David Fink and his Guilford Transportation Industries, which had rescued **Pan American World Airways (2)** the previous year.

Ten days later, Pan American announces plans to acquire Nations Air and use its aircraft to undertake its own forthcoming scheduled services. The arrangement is never consummated. Nations Air Express stops flying on September 1. Customer bookings for the three quarters plunge 86% to 21,000. The company's certificate authority is now suspended by the DOT.

At the beginning of **2000**, President McDonald's workforce stands at 140 and his fleet has been reduced to just a single B-737-247. The DOT's Office of Aviation Analysis warns Nations Air on May 19 that the company's authority will be permanently withdrawn if it does not return to operation by September. When it does not, the AOC is revoked on September 11.

NATIONWIDE AIR CHARTER (PTY.), LTD.: Hangar No. 10, Lanseria Airport, Lanseria 1748, South Africa; Phone 27 (11) 701-3330; Fax 27 (11) 701-3243; <http://www.nationwideair.co.za>; Code CE; Year Founded 1996. Late in **1996**, Managing Director Vernon Bricknell's **Care Air (Pty.), Ltd.** is renamed. The second largest BAC operator in the world, NAC's fleet includes 3 British Aerospace (BAC) 1-11-537GFs, 4 Beech Super King Air 200Cs, and 1 each BAC 1-11-531FS, 1-11-518FG, 1-11-509EW, and 1-11-409AYF.

A code-sharing agreement is signed with **Sabena Belgian World Airlines, S.A.** on March 28, **1997**, and the carrier paints its planes in a modified version of its new partner's livery. The pact allows the airline's passengers access to the Belgian major's frequent flyer program and the marketing expertise of its **Swissair, A.G.** partner.

In September, a B-727-231A is purchased from **Trans World Airlines (TWA)** via Fortis Aviation.

Flights continue in **1998**. During the fourth quarter, a BAC 1-11-500 is painted as a logo-jet, with a depiction of "The Right Whale." Christened *Cetacea*, the aircraft emphasizes the airline's service to the community of George, off the coast of which right whales breed.

Nationwide joins with **Sun Air (Pty.), Ltd.** and **Comair (Pty.), Ltd.** during January **1999** in lodging a complaint with the South African Competition Board (SACB). The three allege that **South African Airways (Pty.), Ltd.** has so reduced prices and increased capacity on a number of domestic routes as to be engaged in predatory pricing violations. Some SAA fares on the routes between Johannesburg and Durban are less expensive than those for motor coaches. The board indicates that it will undertake an investigation over the next few months. When made aware of the Competition Board complaint, officials from SAA indicate that they will contest the claims.

A former **Deutsche Lufthansa, A.G.** B-737-230A is acquired, also in January.

South African Airways (Pty.), Ltd. (SAA) and its affiliates continue their fare war with **Comair (Pty.), Ltd.**, backed by **British Airways, Ltd. (2)**, Nationwide Air, supported by **Sabena Belgian World Airlines, S.A.**, and **Sun Air (Pty.), Ltd.** By mid-summer, the independents have still not heard from the SACB.

On August 1, **SA Airlink (Pty.), Ltd.** CEO Rodger Foster, who is also serving as chairman of the Airlines' Association of South Africa, warns that the market is hopelessly overtraded and suggests that one or more of the smaller players will soon fail. Loss-making **Sun Air (Pty.), Ltd.** is purchased by SAA on August 13 and shut down 72 hours later. In announcing the closure, SAA CEO Coleman Andrews indicates that it should not take the independents more than two weeks to absorb Sun Air's 10% market share. He also notes that its removal from the playing field should help the survivors to become more viable and to compete more robustly with each other.

A total of 700 workers are employed at the beginning of **2000**. The company continues to operate 3 Boeing 727s, 1 each Dash-95, Dash-231A, and Dash-116F, and 1 B-737-230A. A total of five BAC 1-11s will

be withdrawn this year. A second B-737-230A is delivered during July and is placed into service on the Cape Town-Johannesburg trunk route.

Wearing the red, green and white livery of the Sultanate of Oman, the B-727-231A is wet-leased to **Oman Air** between July and September to operate daily services from Muscat to Dubai, Jeddah, Pershawar, Karachi, and Madras. Occasional flights are also made to Bombay. The 6-month engagement involves supplying not only the aircraft with its flight deck crew, but also a full complement of 15 cabin crew and the establishment of an engineering support base. A total of 28 Nationwide personnel are based at Muscat to support the contract.

Also during the summer, Chairman Bricknell, via his new Web site, apologizes to the traveling public for the necessity to add fuel surcharges to ticket prices. On the plus side, the Nationwide Exclusive on-line reservations system is simultaneously introduced. The new B-737-230A is also employed to operate a special flight for Daimler Chrysler and several charters for Bafana Bafana, a trade mission to Mozambique.

The first scheduled flights to Livingstone, Zambia, are completed during the long weekend of September 22-25. A number of additional flights to that point are operated over the next several months as the airline builds up to the introduction of four-times-a-week roundtrips on April 1.

With the introduction of a new winter schedule on October 2, the company unveils its Business Class, Economy Price promotion designed to allow passengers to judge for themselves which carrier offers the "best value-for-money seat" on South African domestic service. Flights between Johannesburg and Cape Town are now offered five times a day.

On November 6, the company makes a formal complaint to government regulators concerning alleged predatory pricing policies on domestic routes by **South African Airways (Pty.), Ltd.** and **SA Express Airlines (Pty.), S.A.** They are alleged to be contravening the SA Competitions Act by failing to raise their customer tariffs, even though rising fuel costs have increased their costs.

Having been forewarned that **Sabena Belgian World Airlines, S.A.** will withdraw service to Johannesburg at the end of March, Nationwide is now forced to find a new code-sharing partner. In mid-November, a strategic marketing agreement is signed with **Virgin Atlantic Airways, Ltd. Virgin**, which operates daily service between London (LHR) and Johannesburg and twice-weekly roundtrips to Cape Town, places its code on Nationwide flights between Johannesburg, Cape Town, and Durban. Nationwide begins to repaint its aircraft in modified Virgin colors and participates in Virgin's frequent flyer program.

Nationwide is allowed to plead its case against SAA before the South African Competition Tribunal on December 13. Noting that it lost R 2.5 million in October, the airline indicates that, without relief in the form of equal ticket pricing, it will soon go bankrupt. It asks that both SAA and SA Express be required to increase their fares.

Sabena Belgian World Airlines, S.A. notes on December 15 that it will actually halt service to Johannesburg on January 29, three months earlier than previously reported. The route closure will also end the company's code-sharing arrangement with Nationwide. As if the Sabena news isn't bad enough, the Competition Tribunal rules against Nationwide on December 22.

NATIONWIDE AIR TRANSPORT SERVICE: United States (1945-1950). NATS is organized at Miami Springs, Florida, in **1945** as a nonscheduled aircraft specializing in short- and medium-haul airborne funerals. Once a casket is loaded behind a partition at the front of one of the company's war-surplus Douglas C-47s and the mourners are seated in the back, the aircraft takes off for its destination. En route, a memorial service is held aloft. On the ground at the appointed destination, additional services may occur.

A C-47 with 3 crew and 30 passengers is involved in an accident at Carmel, California, on January 5, **1947** (4 dead).

This ultimate in niche operations continues until **1950** when the company is purchased by and merged into **Resort Airlines**. During these years, there is one fatal tragedy.

NATIONWIDE AIRLINES (PTY.), LTD. See **NATIONWIDE AIR CHARTER (PTY.), LTD.**

NATIONWIDE AIRLINES SOUTHEAST. See **AIR SOUTH (1)**

NATIONWIDE AIRLINES SOUTHEAST: United States (1967–1968). NAS is established at Atlanta in 1967 to provide scheduled air taxi flights into Atlanta from surrounding communities. Employing Beech B-80 Queenaires, the company duly inaugurates frequencies linking its base with Albany, Augusta, Birmingham, Charlotte, and Greenville. These are maintained into 1968.

NATIONWIDE AVIATION (PTY.), LTD.: Australia (1973–1987). Formed at New Plymouth in 1973, Charles J. Haywood's small non-scheduled carrier provides charter and contract services throughout New Zealand for six years. In September 1979, the company inaugurates a scheduled service to Auckland. The route is maintained into the new decade and in late 1981, the fleet comprises 1 each Piper PA-23 Aztec, Piper PA-32 Cherokee Six, and Piper Aerostar 600.

Midway through the 1980s, the company acquires a Piper PA-31-350 Navajo Chieftain. Unable to maintain economic viability, the single-segment company is forced to cease operations in 1987.

NAYSA (NAVEGACION Y SERVICIOS AEREOS CANARIOS, S.A.): Spain (1988–1995). The air taxi NAYSA is organized at Las Palmas, Gran Canaria, Canary Islands in 1988. In 1989, permission is sought to offer scheduled island services plus flights to Morocco and Mauritania. After a year of charter work, the company is allowed to post its schedules in early 1991. Managing Director Miguel L. Ramon's inaugural scheduled fleet comprises 1 Piper PA-31-350 Navajo Chieftain and 2 Beech Super King Air 200s.

Operations continue until the company, unable to maintain economic viability, goes out of business in 1995.

NEALCO AIR SERVICES, LTD.: P.O. Box 544, Port of Spain, Trinidad and Tobago; Year Founded 1984. Nealco is formed at Port of Spain, Trinidad, in 1984, as the corporate air wing of the Neal & Massy Group. In addition to executive air flights, the carrier also offers public, nonscheduled charter flights within Trinidad and Tobago and to destinations in northern South America and to Florida. The fleet varies, but usually comprises Beech lightplanes (King Airs, Barons, etc.) and at least one helicopter, e.g., Bell 206B JetRanger.

Services are maintained without headline or incident during the remainder of the decade, through the 1990s, and into the new millennium.

NEAR EAST AIR TRANSPORT, LTD.: Israel (1949–1950). Alaska Airlines owner James Wooten and the Israeli Joint Distribution Committee establish this charter carrier in January 1949. In association with El Al Israel Airlines, the airline, employing Alaska Airlines DC-4s and El Al C-46s, begins airlifting Yemenite Jews to Israel in Operation Magic Carpet. When the mission is completed in September 1950, 50,000 Jews from Yemen and southern Arabia have been transported and the charter airline ceases operations.

NEBA (NORTH EAST BOLIVIA AIRWAYS, LTDA.): Bolivia (1982–1991). NEBA sets up shop at Cochabamba airfield in 1982 to operate domestic ad hoc all-cargo services. Freight is flown aboard 1 each Convair CV-440 and Curtiss C-46 Commando.

While attempting to make an emergency landing at its base field on May 11, 1990, the Convair crashes and is lost, together with its crew. The company soldiers on with its old Curtiss for another year.

NEBO AIR COMPANY (NEBO AVIAKOMPANIYA): Russia (1994–1996). NAC is established at Khabarovsk in 1994 to offer long-haul passenger charters. A. Isaev is appointed general manager and he launches flights with an unspecified number of Ilyushin Il-62s and Tupolev Tu-154B/Ms.

Although flights continue in 1995, the carrier is unable to achieve economic viability and shuts down in early 1996.

NECON AIR, LTD.: P.O. Box 10038, Kathmandu, Nepal; Phone 977 (1) 473 860; Fax 977 (1) 471 679; <http://www.neconair.com>; Code 3Z; Year Founded 1992. NAL is established as a public limited company at Kathmandu on April 24, 1992 to provide regional services, both scheduled and nonscheduled, primarily in support to tourists. Shareholding is divided between Anoop S. J. B. Rana, D. Rajbhandari, R. Shrestma, M. B. Shrestma, B. K. Shrestma, M. Joshi, and D. R. Korala. Rana is appointed chairman/CEO of the group and a workforce eventually totalling 180 is recruited.

The initial fleet comprises a pair of British Aerospace (HS) 748-1As, known locally as Avros. Scheduled domestic passenger and charter flights commence on September 14 over a route from Kathmandu to Biratnagar.

A third Avro (HS) 748, a 2B, arrives in 1993 as frequencies on the Kathmandu–Biratnagar service are increased to thrice daily. Statistics for the first 10 months of operation show that 50,000 passengers have been carried and a profit of Rs 5 million (\$90,000) is generated.

One BAe is withdrawn during 1994 in favor of a Cessna 208 Caravan I. Domestic service continues to a variety of destinations in Nepal, including a second important hub at Pakhara at the base of the Himalaya Mountains.

Customer bookings accelerate to 123,000 in 1995. Airline employment in 1996 reaches 180. Just after landing at Pokhara, Nepal, on November 6, 1997, an Avro (HS) 748-1A runs off the runway and collides with a engine-less Nepal Airways, Ltd. HS-748 parked on the grass. No injuries are reported.

On August 3, 1998, Necon becomes the first private airline in the country to launch international services. Flights are undertaken to Dhaka in Bangladesh and Bagdogra, Calcutta, Gorakhpur, Lucknow, and Patna in India. Enplanements for the year exceed 100,000.

Authorized share capital of Necon at the beginning of 1999 is Rs 600 million.

Just after takeoff from Jumla, 312 mi. NW of Kathmandu for Nepalgunj in west Nepal on January 17, the Cessna 208 with 2 pilots and 10 passengers, catches fire and crashes; 5 aboard are killed and 7 badly injured.

While en route from Pokhara to Kathmandu on September 5, Flight 128, the Avro (HS) 748-2B with 5 crew and 10 passengers collides with a Nepal Telecommunications Corporation tower 25 km. W of its destination and crashes into woods below; there are no survivors.

Airline employment exceeds 400 at the beginning of 2000. The company's acquires by lease on March 10 an Avions de Transport Aerien ATR42-320. It is employed to inaugurate new services to Varanasi, India, at the end of the month.

On August 18, arrangements are completed with the manufacturer for the lease of an ATR42-520. The company celebrates its eighth anniversary on September 14 and introduces its Necon Premier frequent flyer program on October 2.

NEFTYUGANSK AIR ENTERPRISE: Neftyugansk Airport, Tyumen Region, 626430, Russia; Phone 7 (34612) 29756; Fax 7 (34612) 29756; Year Founded 1998. The large helicopter operation Neftyugansk United Air Detachment is reformed into a joint stock company in 1998. Marat Sabitov, Vatcheslav Abramov, and Viktor Temochenke are the principal owners; Viktor Pimoshenko, CEO of the previous entity, remains in charge. The previous rotary-wing work continues, while charters to points throughout the CIS and Europe are undertaken with 1 each Tupolev Tu-134 and Tu-134A.

Service is maintained into the new millennium.

NEFTYUGANSK UNITED AIR DETACHMENT: Russia (1994–1998). State-owned NUAD is established in 1994 to provide rotary-wing support to the Russian oil and gas industry. Viktor Pimoshenko is

CEO and he begins operations with a huge helicopter fleet that includes 31 Mil Mi-8s, 20 Mi-2s, and 5 Kamov Ka-32s. In addition to energy support, the company's helicopters also engage in charter flights, forest fire patrol and fighting, air ambulance, and search and rescue.

In 1998, the company is reorganized into the joint stock company **Neftyugansk Air Enterprise**.

NELSON AIRLINES: United States (1976–1978). Nelson Aviation, Inc., the FBO at Alcoa, Tennessee, elects to establish a scheduled airline division in 1976. Employing a pair of Cessna 402s, the new commuter duly inaugurates daily roundtrips linking its base with Tri-Cities Airport, Nashville, Chattanooga, and back to Knoxville. Operations continue apace until 1978.

NEPAL AIR CHARTER, LTD. *See* **EVEREST AIR, LTD.**

NEPAL AIRWAYS, LTD.: P.O. Box 11, Hattisar, Kathmandu, Nepal; Phone 977 (1) 412 388; Fax 977 (1) 416 574; Code 7E; Year Founded 1993. NAL is founded at Kathmandu in late spring 1993 to provide regional scheduled services. Revenue flights commence in July with 4 Harbin Yu-12 Is and 1 British Aerospace (HS) 748-2B.

During the spring of 1994, the carrier leases two new Russian-made Mil Mi-8AMT helicopters for three years from the Belgian broker and operator **Skytech Helicopter Service, S.A.** The two are delivered to Kathmandu by an Antonov An-124 under lease to **Heavylift Airlines, Ltd.** and enter service on September 15. With Skytech maintenance and training support, the Mi-8s undertake not only high-altitude passenger transport, but construction work and food-transport missions as well.

Later in the year, the fixed-wing fleet is increased by the addition of a second 748, while one of the Harbins becomes a pure freighter.

Service continues apace in 1995–1998. Destinations visited during these years include Bhairawa, Biratnagar, Nepalganj, and Pokhara.

Just after landing at Pokhara, Nepal, on November 6, 1997, a **Necon Air, Ltd.** HS 748-1A runs off the runway and collides with an engine-less NAL HS-748 parked on the grass. No injuries are reported.

Helicopter operations continue in the years thereafter.

NEPAL EVEREST AIR, LTD. *See* **EVEREST AIR, LTD.**

NEPC AIRLINES, LTD.: India (1993–1999). NEPC is established at Madras by NEPC Micon, Ltd. in the spring of 1993 and is the first private Indian airline to apply for a license and earn scheduled carrier status. With a workforce of 758, Executive Director Tirupathi Kumar also acquires a fleet of 5 Fokker F.27-500s from Ansett Worldwide and 1 Beech King Air 90C.

Revenue flights commence on March 30, 1994 to destinations in the western state of Tamil Nadu. Over the next 9 months, a total of 128,877 passengers are boarded.

During the first quarter of 1995, the company opens a private airfield at Tirunelveli and begins construction on new hangar facilities there, which will open in October. Four additional used F.27-500s are also added.

By spring, the number of destinations served in the south and west of the country has grown to 45.

The former **Damania Airways, Ltd.** is taken over in May and becomes a subsidiary that operates under the name **Skyline NEPC, Ltd.** Both will fly as divisions of NEPC India, Ltd.

The new corporate arrangement, which includes both a 4.5% equity investment in Damania and an assumption of liabilities, will be investigated by the Securities and Exchange Board of India, as the stake taken is less than the mandatory 5% acquisition required.

On September 1, the company enters into an interline agreement with **Swissair, A.G.** Under terms of the arrangement, the Swiss flag carrier will maintain the NEPC fleet and train its personnel, while the Indian company becomes the Swissair agent in India. Two new Fokker 50s join the fleet during the fall.

Enplanements total 432,671.

The fleet in 1996 includes 9 Friendships and 1 King Air. A management contract is signed during the spring to operate **UP Air, Ltd.** With its sister **Skyline NEPC, Ltd.**, NEPC Airlines is the second largest domestic airline in India after **Indian Airlines, Ltd.**

Destinations visited include Agatti, Ahmedabad, Bangalore, Balgaum, Bhopal, Bhubaneswar, Bombay, Chennai, Cochin, Combatores, Delhi, Hubli, Hyderabad, Indore, Jaipur, Jamnagar, Jodhpur, Handla, Kanpur, Lakshwadeep, Madras, Madurai, Patna, Pune, Rajamundry, Salem, Tiruchi, Trivandrum, Vjayawada, Visakhapatnam, and Vizag.

Daily roundtrips are introduced on November 1 from Chennai to Tuticorin.

Passenger boardings dip 4.5% to 414,040 and revenues reach \$41.6 million.

In January 1997, the Director General of Civil Aviation orders that NEPC reduce its operations over its trunk routes. The government claims that NEPC has failed to provide sufficient services on required subsistence routes in the nation's northeast.

Additionally, it is claimed that the company, together with its **Skyline NEPC, Ltd.** subsidiary, owe some \$4 million to the government in internal passenger taxes collected but not turned over. To press the issue, customs officials seize an F.27-500.

Still, the carrier and its sister make various expansion plans. In March, permission is received from the government of India for the importation of eight more B-737-200s, four of which will be passed to **Skyline NEPC, Ltd.**

In May, it is announced that the company will sell four of its five F.27-500s for \$16 million and borrow money to purchase modern Boeing or Airbus jetliners.

Consideration is given to the acquisition of fellow-independent **Archana Airways, Ltd.** as well as struggling **Modiluft**. The Indian Securities and Exchange Commission investigates the carrier's dramatic takeover of **Damania Airways, Ltd.**

Instead, executives, faced with a severe cash crunch and unavailability of new aircraft, elect to emphasize **Skyline NEPC, Ltd.** and close the doors of this carrier, planning to merge its assets into Skyline at the end of the year. The fiscal situation is, however, worse than originally imagined. NEPC Group does not have the funds to make its aircraft lease payments, pay its pilots salaries, or undertake maintenance checks. Both airlines stop flying during the first week of July.

At the end of July, the company is able to cobble together a significant loan from several financial institutions. In early August, the decision to close NEPC is reversed. Both companies are now downsized and restructured, with the staff reduced in strength from 2,700 to 2000. Salaries are also cut.

On September 15, NEPC is reborn. Flight operations, in South India, employing the five Fokkers that have not been sold, are restarted on October 1. Meanwhile, **Skyline NEPC, Ltd.** flies the trunk routes.

Service continues in 1998. In 1999, however, NEPC Airlines is merged into **Skyline NEPC, Ltd.**

NERIYUNGRI SAKHA AIRLINE: Russia (1993–1996). NSA is founded in 1993 at Neryungri in the north central Asian Republic of Sakha Yukutiya of the new CIS, to provide worldwide all-cargo charter services. Revenue flights commence with an Ilyushin Il-76TD, plus an unspecified number of Antonov An-12s and -24s.

Operations continue until 1996.

NERIYUNGRI STATE AIR ENTERPRISE: Russia (1993–1998). NSAE is founded in 1993 at Neryungri in the Republic of Sakha Yukutiya of the new CIS, as the national flag carrier. V. A. Ganchuk is appointed general director and he begins international and regional passenger flights with a fleet of 4 Tupolev Tu-154Bs.

Although schedules are maintained over most of the next four years, the company is unable to survive the Russian currency crisis of 1998 and shuts down before the end of that year.

NETHERLINES, B.V.: The Netherlands (1984–1991). Leen P. Jansson sells his construction concern and begins this regional airline late in 1984; four BAe Jetstream 31s are acquired. Picking up routes from **Luxair, S.A.** and **NLM Cityhopper, B.V.**, revenue flight operations begin on January 8, 1985 from Amsterdam Schipol Airport to nine points in Holland, England, Austria, Luxembourg, France, and West Germany. A fifth Jetstream 31 is delivered in December.

Start-up costs bring a loss of \$1.2 million during the first full year of operations.

Another Jetstream 31 is delivered in the spring of 1986, making the carrier the largest operator of the plane outside of the U.S. In April, Eindhoven–Vienna flights begin. Destinations now visited include Amsterdam, Birmingham, Cologne, Enschede, Groningen, London (CTN), Luxembourg, Munster, and Strasbourg.

Flights to Southampton begin in 1987, with Henk Roos becomes managing director in November. When, in April 1988, management of the company is taken over by the **KLM (Royal Dutch Airline, N.V.)** subsidiary **NLM Cityhopper, B.V.**, A. J. Leyer is appointed managing director. The fleet is now altered by the replacement of two Jetstream 31s with six new SAAB 340As.

Replacement service on behalf of the major is inaugurated to Malmö, Sweden, in July 1989. In April 1991, the two subsidiaries are combined into **KLM CityHopper, B.V.**

NEVADA AIR LINES: United States (1929–1930). Set up at Reno by famed aviator Roscoe Turner in the spring of 1929, NAL is equipped with 4 Lockheed Model 5 Vegas that are employed to inaugurate scheduled, multistop passenger service to Los Angeles on May 1. Without a mail contract, the carrier is unable to generate sufficient revenue traffic to continue operations beyond February 1930.

NEVADA AIRLINES: United States (1971–1980). NA is established at Las Vegas in 1971 to offer scheduled third-level passenger and cargo flights; officers include a number of former **Scenic Airlines** officials. Revenue services are inaugurated on January 1 to Reno via Tonopah and to Hawthorne. Sight-seeing flights are also conducted to the Grand Canyon. Initial frequencies are provided with a pair of Cessna 402s and a Douglas DC-3.

Operations continue apace in 1972–1977, during which years the company adds Carson City to its route network and another Douglas transport and a Martin 4-0-4 to its fleet.

The company transports 39,064 passengers in 1978.

In 1979, two more Cessna 402s and two additional Douglas transports are acquired.

On November 16, Flight 2504, a chartered Martin 4-0-4, loses power in one of its two engines and collides with terrain 753 ft. past the end of the runway, just after takeoff from Grand Canyon, Arizona. The 3 crew and 41 passengers are safely evacuated before a post-impact fire destroys the aircraft.

Unable to overcome concerns raised during a FAA safety check following the accident, the carrier is forced to fold its wings in June 1980.

NEVIS EXPRESS, LTD.: Newcastle Airport, Charlestown, Saint Kitts and Nevis; Phone (869) 469-9755; Fax (869) 469-9751; <http://www.nevisexpress.com>; Code D4; Year Founded 1993. NE is set up at Nevis, in the Leeward Islands, late in December 1993 by former Alaskan bush pilot Allen Haddadi. A Pilatus Britten-Norman PBN-2 is acquired and christened *Express One*. It is employed to inaugurate an air bridge shuttle to nearby Saint Kitts.

In addition to President/CEO Haddadi, airline employment in 1994–1997 stands at 10, including 3 additional pilots, 2 engineers, and 6 customer service agents.

The number of daily frequencies between the 2 islands is increased to 14 with the addition of another Islander, *Express Two*. In addition, scheduled service is started to St. Martin in the Dutch Antilles and charters are flown to the Dominican Republic and Trinidad and Tobago.

To take advantage of the growing traffic at St. Martin, a de Havilland Canada DHC-6-300 is leased in October of the latter year. Shortly thereafter, the government of the Dutch Antilles withdraws the company's landing rights. Negotiations between the governments involved are now undertaken as the DHC is returned.

Service is maintained without incident or headline in 1998–1999. The effort to gain reentry into St. Martin is unsuccessful; however, day charters are subsequently initiated to that point, as well as St. Barth. Frequencies on the Nevis to St. Kitts Islander shuttle are increased to 14 per day and it becomes possible to make reservations on the company's Web site.

When **Carib Aviation, Ltd.** raises its roundtrip ticket prices to Antigua to \$170 on February 16, 2000, members of the Barbuda Council are outraged. Not inclined to listen to that concern's protest that it must adjust its rates in light of six years of losses, the Council holds an emergency meeting and moves to travel to Nevis to enter into discussions with Nevis Express concerning the possibility of its offering a service.

Following negotiations, Nevis agrees to offer a shuttle service between Antigua and Barbuda and in July makes a proposal. On August 2, Council Chairman Arthur Nibbs petitions the central government asking that it react favorably to the Nevis proposition. The response, if any, is unknown.

NEW ACS, S.A.: BP 5371, Kinshasa, 10, Congo, Democratic Republic II, Sky Air Services, London, England, United Kingdom; Phone 44 (181) 961-0932; Fax 44 (181) 961-0956; Code DF; Year Founded 1996. Late in 1996, as civil war embroils Zaire, **Air Charter Service, S.A.** is reformed, renamed, and based at Dar es Salaam, Tanzania, with an office in London. Tshimbombo Mukuna remains chairman, but his fleet, which operates regional and domestic passenger and cargo charters, is reduced to 1 Boeing 727-30 and 2 Lockheed L-188A Electras.

Flights continue from Dar es Salaam to Kinshasa, Djibouti, Kigoma, Kilimanjaro, Mwanza, and Zanzibar.

NEW CENTRAL AVIATION COMPANY, LTD. (SHIN CHUO KOKU): 3177 Handa-cho, Ryugasaki-shi, Ibaraki, 301, Japan; Phone 81 (297) 621 271; Fax 81 (297) 621 275; Code NCA; Year Founded 1980. New Central is formed at Ryugasaki-shi, Ibaraki, in 1980 to offer regional services. President Haruo Wakabayashi's initial fleet comprises 3 Pilatus-Britten-Norman BN-2 Islanders and 1 GAF Nomad N-22B. Scheduled service is offered between Chofu Airport and Niihima, Kozushima, Oshima, and Hachjojima.

A second Nomad is acquired in 1992, by which time the Islander fleet has been doubled in number to six. Operations continue apace in 1993–1998, during which years the fleet is enhanced by the addition of three Fokker 50s. The Nomads, due to flight restrictions, are withdrawn.

The large Fokker turboprops are withdrawn in 1999 and at the beginning of 2000, the fleet includes 5 Islanders and a single Dornier 228-212.

NEW ENGLAND AIR EXPRESS: United States (1950). NEAE is set up at Boston in early 1950 to operate irregular all-cargo charters throughout the U.S. and to Alaska. Two Curtiss C-46 Commandos are acquired with which to begin revenue flights; unable to achieve economic viability, the company shuts its doors before the end of the year.

NEW ENGLAND AIRLINES: 56 Airport Road, State Airport, Westerly, Rhode Island 02891, United States; Phone (401) 596-2460; Fax (401) 596-7366; <http://www.block-island.com/nea>; Code EJ; Year Founded 1970. William Bendokas and his wife Lois found "Block Island's Resident Airline" at the State Airport at Westerly, Rhode Island, on August 12, 1970. Employing 2 Britten-Norman BN-2 Islanders and 1 Piper PA-23 Aztec, the Bendokas inaugurates scheduled daily passenger and cargo services in January 1971 linking their base with Providence and Block Island. Operations, including individually tailored charter flights, continue apace during the remainder of the decade and into the 1980s.

In 1985, the three-stop carrier employs 15. There is no change in the route network during the remainder of the decade or in the 1990s. A BN-2 with eight aboard disappears into the Atlantic Ocean on November 28, 1989, during a night flight from Block Island.

By 1993–1994, President Bendokas employs 15. His fleet is expanded to include not only the 2 Islanders, but 2 PA-28 Cherokees and 2 PA-32 Cherokee Sixes as well. Operations continue apace in 1995 and in 1996 the fleet is altered to include 1 each Piper PA-23 Aztec and Cessna 206. Enplanements total 21,983.

Passenger boardings accelerate 17.5% in 1997 to 25,833.

FAR Part 135 flights continue without incident or headline through 1998 and in 1999, until September 5. On that same date, approximately 200 ft. into its takeoff from Westerly, Rhode Island, for a scheduled commuter flight to Block Island, a Piper PA-32-260 Cherokee Six with a pilot and four passengers, suffers engine failure and crashes 200 ft. beyond the end of the runway. The pilot and two passengers are killed.

Higher fuel costs and adverse publicity associated with the September accident cause passenger boardings for the year to fall 2.8% to 23,000.

NEW ENGLAND AIRWAYS (PTY.), LTD. (1): Australia (1931–1936). NEAL-1 is formed at Brisbane in early 1931 as a division of the New England Motor Company, a bus company, to offer service across the Queensland border to the New South Wales town of Lismore. Employing a Ryan monoplane and a de Havilland DH 80A Puss Moth, the company begins operations on March 1. Following the shutdown of ANA (Australian National Airways [Pty.], Ltd.) on June 31, NEAL-1 acquires the pioneer's Avro 10s and extends its own Lismore destination to Sydney on July 17.

The Queensland–New South Wales route is maintained in 1932–1933. In late 1934, the company obtains a contract to participate in providing connecting mail flights as part of the start up of a regular England–Australia mail route. The first connecting flight is made on December 21 when the Avro 10 *City of Grafton*, flown by Capt. Keith Virtue, obtains the incoming mail sacks at Narromine from a **Butler Air Transport (Pty.), Ltd.** DH 84 Dragon and flies them to Sydney. In early December, the routes, Codock aircraft, and other assets of **Northern Airways (Pty.), Ltd.** are purchased. Sydney–Newcastle flights begin over the former Northern route on December 24.

On January 28, 1935, Avro 10s initiate a Brisbane–Toowoomba and Townsville daily frequencies. Late in the year, British Pacific Trust, Ltd. forms **Airlines of Australia (Pty.), Ltd.** to acquire NEAL-1. Meanwhile, on December 11, the Sydney–Newcastle service is suspended. On July 6, 1936, **Airlines of Australia (Pty.), Ltd.** buys the aircraft, 1,200-mile coastal route, and New England's other assets; the Brisbane–Toowoomba daily service is suspended the same day.

NEW ENGLAND AIRWAYS (PTY.), LTD. (2): Australia (1947–1980). NEAL-2 is formed at Sydney early in 1947. Equipped with several de Havilland DH 89A Dragon Rapides, it inaugurates scheduled flights to small stops north of the New South Wales capital city. In 1949, the carrier is taken over by **Butler Air Transport (Pty.), Ltd.**, but continues its commuter efforts much as it will later after Butler is acquired by Ansett Transport Industries, Ltd.

In 1980, the carrier is merged with **Air Eastland (Pty.), Ltd.** to form **East Coast Commuter Airlines (Pty.), Ltd.**

NEW ENGLAND & WESTERN AIR TRANSPORTATION COMPANY: United States (1930). Organized at Springfield, Massachusetts, in the spring of 1930, this long-titled commuter opens scheduled passenger flights to Boston, New York, and Albany in May. Without a mail contract, the company is unable to generate sufficient revenue traffic to operate beyond November.

Although acceptable social practice for its time, the carrier's most notable innovation might not be seen as such today: during that summer, it hires Afro-American men to work as "airborne Pullman porters."

NEW ENGLAND COMMUTER: United States (1971). NEC is set up at Manchester, New Hampshire, early in 1971 to provide scheduled daily air taxi flights to Newark via Lawrence, Massachusetts. Although Cessna 402 roundtrips are duly inaugurated, they cannot be maintained beyond early fall.

NEW GUINEA GOLD NO LIABILITY. See **GUINEA AIRWAYS (PTY.), LTD.**

NEW HAVEN AIRWAYS. See **NEWAIR**

NEW JAPAN DOMESTIC AIRLINE, LTD. (SHIN NIHON KOKUNAI KOKU): Japan (1979–1989). NJDAL is established at Tokyo in 1979 to provide passenger and charter services, as well as various agricultural applications. Flights continue apace over the next decade and the fleet grows to include 5 Bell 206B JetRangers. Revenues in 1988 total ¥ 700 million.

In mid-October 1989, the company is acquired by the courier business Sagawa-Kyubin Group and is renamed **Sagawa Helicopter Express**. The purchase price is ¥ 4.5 billion and includes the helicopter fleet and facilities in Tokyo Heliport.

NEW JERSEY AIRWAYS: United States (1979–1980). NJA is set up at East Orange, New Jersey, in the spring of 1979 to provide scheduled passenger and cargo services between Atlantic City, Newark, and Trenton.

Daily Britten-Norman BN-2 Islander roundtrips are inaugurated on June 1 and are maintained until the company is merged into **Merrimack Airlines** in 1980.

NEW YORK AIR (1): United States (1980–1987). NYA-1 is founded at New York (LGA) by officers of the holding company Texas Air Corporation (TAC); among its directors are Frank Lorenzo and Alfred Kahn, father of airline deregulation. With Neal F. Meehan as president, this nonunion subsidiary is organized in September 1980 to provide low-cost shuttle service between New York (Newark) and Washington, D.C., where gates at National Airport are leased from **American Airlines**, hopefully before **PEOPLEExpress** can get off the ground.

Six DC-9-30s are provided by TAC and are painted in a bright red livery with large apples ("Love the Big Apple") on their tail fins. Plans are made to inaugurate services on December 14 and fares are set and advertised which, depending upon departure time, were either \$29 or \$49. The media campaign is specifically aimed at the **Eastern Air Lines** Air Shuttle, which is labeled a "cattle car" operation; in contrast, NYA-1 will provide its morning passengers with fresh bagels.

ALPA files suit to block start-up and the launch date passes; however, the federal court soon waives its temporary restraining order. A new inaugural date is set for December 19 and following a disruption in ceremonies caused by noisy pro-union demonstrators, the first flight lifts off from Newark (EWR) in direct competition with the **Eastern Air Lines** flight to Washington, D.C. (DCA).

New York–Boston and Boston–Washington via New York flights are added by year's end and a total of 13,000 passengers are flown in 7 Douglas transports by December 31.

Flights from New York to Washington, D.C. (DCA) and from New York to Boston are advertised on television beginning on January 22, 1981; a total of 36,676 passengers are flown on the New York to Washington run in January, the first full month of shuttle frequencies. Daily

Washington, D.C. to Boston and New York to Boston discount flights commence on February 14 and, as of February 27, the number of New York to Washington flights must be increased to four a day to meet demand. Cleveland joins the route network on April 9.

An interline agreement with **United Airlines** is now abruptly cancelled without reason. Additionally, the Chicago-based major demands the right to approve the national's New York (LGA) schedules as a condition of continued ground support.

A new roundtrip is initiated on July 1 between La Guardia and Louisville. The first people in line at Kentucky to offer a "love poem" to the carrier are offered the opportunity to purchase one-way tickets to New York for 49¢ or roundtrips for \$9.

Newark to Washington, D.C. service begins on July 5. Here again, a special promotion is offered; the first 1,000 people who can give a written answer as to why New Jersey is a better place to live than anywhere else are offered 29¢ roundtrip fares.

In addition to the new Ohio stop, Newark to Cincinnati and Boston to Baltimore (BWI) and Orlando flights are now also inaugurated. As additional city-pair routes are launched and three more DC-9-30s (Dash-32s from **Swissair, A.G.**) are acquired, the low-fare carrier remains very much the focus of ALPA opposition.

On August 3, a DC-9-30 nearly collides with an **Air Canada, Ltd.** jetliner over New Jersey; the FAA denies that the near miss is linked to the PATCO air traffic controllers' strike.

On September 24, Richard M. Kippen, the millionth passenger (cumulative) to board, is awarded \$1 million worth of free flights. Also in September, low-fare nonstop La Guardia to Detroit flights commence. A month later, bookings on the new route begin a sudden plunge after their location is changed in the **American Airlines** SABRE reservations system.

Three pieces of luggage from a DC-9-30 fall onto the roofs of two buildings at the Sherwin-Williams Company industrial complex and nearby backyard at Newark on October 5; no injuries are reported, but two suitcases, lost for whatever reason, are not recovered. The New York to Boston service is suspended on December 1.

Still, passenger boardings for the year reach 1.56 million. Expenses outrun \$64.2 million of income and the carrier finishes its first full year with a \$11.6-million net loss.

In January 1982, the New York to Detroit route is terminated. In early spring, the carrier opens its 12th city pairing and its 13th DC-9-30 is acquired. When former **Continental Airlines** and former CAB official Michael E. Levine is installed as chairman, President Meehan transfers to **Midway Airlines**. In July, Levine, now also acting as president, complains of the **American Airlines** reservations tactics to DOJ.

Customer bookings advance 11.3% to 1,739,000. Despite an infusion of \$25.5 million in working capital from TAC during the fourth quarter, costs continue to outstrip receipts. Although revenues jump 48.45% to \$95.41 million, expenses increase to \$107.78. The operating loss climbs to \$12.38 million, while a net loss of \$23.3 million is experienced.

The workforce is increased a dramatic 79.1% in 1983 to 1,300; the fleet now includes 15 DC-9-30s and 2 DC-9-80s (MD-80s). Orders remain outstanding for three MD-80s. Three new cities are added to the route network and one of these, Raleigh/Durham, becomes the new secondary hub.

The no-frills strategy is dropped in May in an effort to attract additional travelers.

Passenger boardings rise 21% to 2,103,681. Revenues rise 35.8% to \$129.5 million and costs are kept low enough to allow NYA-1's first profit, \$4.5 million net.

The payroll grows a scant 0.3% in 1984 to 1,304 and the fleet now comprises 15 DC-9-30s and 4 new DC-9-80s (MD-80s). Services are discontinued to Knoxville, Savannah, Greenville, and Cleveland. Having encountered difficulty with Frank Lorenzo over his upscaled service strategy, Mike Levine resigns early in the year and becomes a teacher at the University of Southern California; Lawrence Twill becomes president/CEO.

On July 25, all travel restrictions are removed from the company's pricing structure and it begins to offer only two fares, peak and off-peak, depending upon the time of day traveled. Alfred Kahn now also resigns from the board of directors.

On September 3, **United Airlines** Flight 827 is maneuvering prior to takeoff from Washington, D.C. (DCA) for a service to New York (LGA). The B-727-22 with 81 passengers is struck in the trailing edge of its right wing by the left wing tip of NYA-1 Flight 306, a DC-9-32 awaiting takeoff for the same destination. The United aircraft is damaged, but no one aboard either service is injured.

Beginning on September 4, the carrier expands its route system to New Orleans, begins daily service between Newark and Boston, and adds nonstop flights from New York to Orlando and Detroit.

Traffic increases 42.6% as 2,994,600 passengers are carried, but the increase does not translate into profits because of a disastrous fourth quarter. Although revenues jump 35.9% to \$176.01 million, expenses total \$176.65 million. The operating loss is \$635,000, but a net loss of \$6.8 million is suffered.

Employment is increased by a whopping 63.9% in 1985 to 2,459. Route changes occur in early spring as the carrier drops Raleigh/Durham and adds Tampa and Rochester. When President Twill resigns in March, Executive Vice President/Chief Operating Officer Robert Gallaway assumes his duties, but not his title. Four jet flights per day are started on April 30 from Washington, D.C. to Westchester County Airport. Moving southward, the company now opens a new terminal at Washington, D.C. (IAD), which quickly becomes a larger hub than that at La Guardia; daily departures from this Virginia center reach 60-per-day.

A DC-9-30 strikes and kills two deer at Washington, D.C. (IAD) on July 22, but completes its landing safely, with no injuries reported. The first B-737-300 is placed into service during October and six more are delivered by year's end. Meanwhile, on November 15, NYA-1 affiliates with Manassas, Virginia-based **Colgan Airways**, the latter changing its livery to reflect its feeder role for the larger company at Dulles International Airport.

During the year, Sen. James Abourezk files a suit against the airline charging false imprisonment and kidnapping. A 3-hr. runway hold at Washington, D.C. eliminates the need for his trip to New York, but the airline refuses to allow him to deplane. The case will be decided in the airline's favor in July 1990—three years after the company has gone out of business. Also during the year, Linda Smith is appointed the company's first female pilot.

Customer bookings increase 54% to 3,475,000 (including a million-plus on the air shuttle) and create profits of \$8.98 million (operating) and \$1.84 million (net).

Airline employment falls dramatically in 1986, down 39% to 1,500. Flights between Washington, D.C. and West Palm Beach are inaugurated on January 15. The same day, a multimillion-dollar advertising campaign is launched, aimed directly against Eastern, in an effort to capture half of the profitable Washington to New York to Boston shuttle market. By summer, air shuttle frequencies over the northeast corridor total 15 roundtrip flights per day.

Under DOT pressure (and as part of the price it must pay to acquire **Eastern Air Lines**), TAC enters into an agreement with **Pan American World Airways (1)** in August that will allow the latter to launch an air shuttle operation in competition with that of EAL. As part of the arrangement, NYA-1 is required to cut its service into New York (LGA) to 5 round trips per day for the next 18 months. In September, the company begins offering hourly services to the north and south from Newark instead of La Guardia, with the number of daily roundtrips to Boston doubled from 15 to 30.

While continuing to expand its Dulles hub, the TAC subsidiary increases the number of its enplanements by 35.5% to 4,720,000. This achievement is made largely without the services of **Colgan Airways**, which is purchased by **Presidential Airways**. Revenues advance 24.5% to \$227.01 million and expenses rise 5.2% to \$231.84 million. The

operating loss is \$4.83 million; however, a net \$44.49-million profit is reported.

En route from Newark to Washington, D.C. (IAD) on January 10, 1987, Flight 681, a DC-9-32 with 50 passengers, is taken over by a man who threatens to set it ablaze. After the aircraft lands at its destination, the pirate meekly surrenders.

When the decision is taken in early in the year to increase the size of **Continental Airlines** by integrating newly purchased **PEOPLExpress**, it is deemed expedient to also fold in NYA-1. Both carriers thus disappear on February 1.

NEW YORK AIR (2): United States (1981–1982). Not to be confused with the nonunion carrier established by Texas Air Corporation, NYA-2 is established at Farmingdale in January 1981 from the assets of the reformed **Starflight International Airlines**. Employing a Cessna 402 and an Embraer EMB-110P1 Bandeirante, the carrier duly inaugurates daily roundtrip scheduled passenger services to New York (LGA) and from that airfield to Nantucket and Martha's Vineyard.

Operations continue apace in 1982 and the fleet is increased by the addition of a de Havilland Canada DHC-6-200 Twin Otter and a Cessna 404 Titan. In October, the company is retitled **Trans-East International Airlines**.

NEW YORK AIR CHARTER: Republic Airport, Farmingdale, New York 11783, United States; Phone (516) 783-7138; Fax (516) 783-7179; <http://www.htp.com/nyairch/welcome.html>; Year Founded 1993. NYAC is set up at Farmingdale in 1993 to provide executive and small group passenger charters throughout the Northeast. Revenue flights begin and continue with a single Piper PA-31-350 Navajo Chieftain.

NEW YORK AIR CONNECTION. *See* **COLGAN AIRWAYS; GULL AIR**

NEW YORK AIRWAYS (1): United States (1930–1931). Originally established as **Southern Air Lines** on July 8, 1927, the carrier is one of the merger partners involved in the creation of what would become **Pan American Airways (PAA)**. Dormant from 1928, the subsidiary is revived and renamed in the spring of 1930. Equipped with a Fokker F-10 and a Sikorsky S-38B, it inaugurates scheduled flights from Long Island's North Beach Airfield to Atlantic City on June 1. On July 15, the Atlantic City terminus is extended down to Washington, D.C. via Baltimore with the flying boat. The Ford Tri-Motor 4-AT-64 is placed into service in August.

On July 15, 1931, NYA-1 is sold to **Eastern Air Transport** that will use the carrier's Atlantic City gateway as an important stop on its expanding route to Florida.

NEW YORK AIRWAYS (2): United States (1949–1979). NYA-2 is organized in August 1949 and offers charter flights from New York (LGA). During early 1951, President J. O. Senior Jr.'s company applies to the CAB for certification as the nation's third scheduled helicopter carrier. On December 5, the CAB approves the carrier's application to provide scheduled rotary-wing service between La Guardia, Idlewild, and Newark Airports and promises to provide it with a five-year permit if it is financially viable for six months. It will not only survive but will eventually become the largest and one of the longest-lived U.S. helicopter airlines.

On March 13, 1952, the CAB formally certifies NYA-2 for service in the New York metropolitan area for the next five years; however, there are no immediate flights due to a lack of appropriate aircraft. When equipped with Sikorsky S-55s, the company is given a contract to operate a mail route between New York City's three major airports, an operation begun on October 15.

The first passenger-configured S-55s are delivered on January 16, 1953 and two days later the carrier signs a contract with Air Cargo, Inc.

to transfer freight between Idlewild, La Guardia, and Newark Airports. Night mail and cargo operations begin on February 16 and on March 30 it is announced that NYA will begin New York to Connecticut inter-airport return service on July 1.

A ferry demonstration is held on June 17 between Idlewild, La Guardia, and Newark Airports and on July 1 New York Airways begins the transport of passengers, becoming the first American scheduled helicopter operator to do so. After only a few weeks, the service proves so successful that potential customers must be placed on stand-by.

SAS (Scandinavian Airlines System) signs a contract with the company on August 25 for the transport of its passengers between the New York area airports. The rotary-wing operator receives a huge public relations boost on October 1 when Cardinal Francis J. Spellman uses an S-55 to taxi from the Harlem River to Idlewild Airport. An S-55 flies the Idlewild–Newark route on December 11 in a record 11 min., almost half the regular flying time. Ten days later, on December 21, **KLM (Royal Dutch Airlines, N.V.)** also signs a contract to provide shuttle services between the three regional airports for its connecting passengers.

La Guardia to Newark fares are cut to \$10 on March 3, 1954. On July 31 the CAB agrees to provide subsidies, but rules that they must be kept reasonable in their amount. New York to Trenton to New Brunswick flights start on August 4 and on August 30 night flights are launched between the three New York airports. Day and night frequencies are initiated on September 2 to Bridgeport, Connecticut, while on October 10, Stamford, Connecticut, joins the route network.

A contract is signed with Railway Express on October 26 for an expansion of helicopter services to Pearl River, New York, partly to rush polio and rabies serums from Lederle Labs to the New York airports. The same day, passenger and freight flights are opened to New Brunswick, New Jersey. On November 11, frequencies are initiated from Westchester County Airport to La Guardia and three days later, on December 5, Railway Express announces a new service to link Passaic and Patterson, New Jersey. Scheduled La Guardia to Rutherford flights commence on December 7.

Service between Westchester County Airport and all of the New York area newspapers is increased on February 15, 1955. A CAB-approved contract is signed with **Northwest Airlines** on February 18 to provide the trunk line's passengers with free service between the New York airports and Westchester County Airport. Idlewild–La Guardia–Newark shuttle service is increased on April 25 to 31 flights daily. The next day, Teterboro Airport becomes a destination. On October 2, a contract is signed with **Pan American World Airways (1)** for the provision of free or cut-rate inter-airport connecting flights for its passengers.

A record 3,720 passengers are carried in May 1956 and frequencies are increased on June 4. New S-58s are acquired and publicly demonstrated on August 4. A ticket office is opened at Stamford, Connecticut, on September 12 and S-58 flights commence on October 6. Two NYA flights are halted on October 26 because of the return to Eastern Standard Time. On December 5, an S-58 with four passengers inaugurates service from La Guardia Airport. The New York area airports are linked to downtown Manhattan via a new heliport on the banks of the Hudson River at West 30th Street.

The 100,000th passenger (cumulative) is transported and the two millionth revenue passenger mile is flown on June 27, 1957. On August 1, NYA begins using pontoon-equipped S-58s on flights to and from the West 30th Street heliport. An S-58 demonstrates the feasibility of air commuting on Long Island at the October 11 MacArthur Airport air show.

The CAB agrees on May 7, 1958 to guarantee 90% of a \$1-million loan obtained by the carrier to improve services. New York Airways introduces the 15-passenger, twin-rotor Vertol 44B, the first civilian helicopter to have an airliner-type cabin, into service on May 28. Sightseeing trips over New York City are initially offered on August 24. As has been the case every winter, bad weather disrupts the company schedule late in the year; indeed, nearly 25% of all flights must be cancelled.

On January 27, 1959, NYA-2 applies to the CAB for permanent certification while the Decca-type navigation system is adopted on

February 22 for all company helicopters. President Cummings hails the CAB's August 31 proposal to grant the company a permanent certificate. All Vertol 44Bs are grounded on September 12 for inspection after a cooling fan failure in one machine.

Enplanements for the year reach 120,000.

On January 15, 1960, as Boeing takes over Vertol, orders are placed for 10 twin-turbine powered Model 107s to replace piston-engine types. The certificate for the New York area routes is renewed on March 19 and summer sight-seeing tours begin again on June 7. On October 25, the company asks CAB approval to temporarily shift its operations from the West 30th Street heliport to the Wall Street Heliport at Pier B.

On July 23, 1961, the company contracts with Lear, Inc., for the installation of automatic flight control systems into its new Vertol 107s; the first of the improved Model 107s is delivered on September 26. Beginning this year, the U.S. Congress comes to question the value of subsidized helicopter service and votes a limitation. Consequently, on October 31, the CAB announces that it will divide equally between NYA, **Los Angeles Airways**, and **Chicago Helicopter Airways** the \$6-million FY 1963 subsidy voted by Congress. NYA protests the regulator's plan to cut its subsidy \$623,000 to give the other two lines equal shares.

As a result of the subsidy loss, New York Airways is forced to drop two routes in early 1962. The first of five new Vertol 107s commences scheduled flights services on June 28 and stewardess service begins on company helicopters as of July 1. On July 16, after its engine fails, a Boeing Vertol 107 with 22 aboard lands safely in upper New York Bay and is towed to shore. Four days later, on July 20, U.S. representative Hugh Carey begins a campaign with the FAA and CAB to ban the carrier from flying over densely populated Brooklyn, stating it is unsafe and noisy.

On August 27, another Boeing Vertol 107 with 28 aboard also suffers engine failure and safely lands on the East River; it is towed over to the Brooklyn Navy Yard for repairs. The next day, Rep. Carey asks a total ban on company flights over land. The carrier reports on October 24 that noise from the 107s will be greatly reduced when their present rotor shafts are replaced by stronger ones.

San Francisco-Oakland Airlines (SFO-1), having petitioned the CAB for a permanent, unsubsidized operating certificate, argues in its hearings before the CAB in the spring of 1963 that government support is not necessary for a helicopter line to be successful. In its arguments, company officials cite NYA-2 as a prime example of waste and inefficiency, calling it the country's most expensive helicopter carrier. True or not, the charges will lead to an eventual end of Congressional funding support for all of the rotary-wing airlines.

Pan American World Airways (1) agrees on July 11 to purchase and lease two craft to NYA, which in turn agrees to operate a service between the proposed heliport atop the Pan Am Building and the major's Idlewild Airport terminal. On October 8, Congress trims the subsidy payments to be made to the nation's three helicopter carriers. Just after takeoff for Newark from Idlewild on October 14, a Boeing Vertol 107 crashes and burns (six dead). The company suspends operations on October 17 pending the outcome of a CAB report on its first fatal accident; it is delivered six days later and blames a transmission shaft failure for the tragedy. Idlewild-Newark services resume on November 5.

Enplanements for the year reach 246,737, but a \$227,890 loss is suffered, including the loss of \$56,486 in government subsidy.

Airline employment in 1964 stands at 269 and the fleet includes 6 helicopters. The U.S. Senate, on August 6, rejects a proposal from Senator William Proxmire to cut \$4.3 million from federal subsidies to the nation's three rotary-wing airlines. A Vertol 107 is badly damaged as the result of a September 6 landing accident during a training flight at the international airport.

During heated local debate on the value of a service from the Pan Am Building, NYA-2 testifies on October 7 that it plans to operate a minimum of 90 flights a day from the heliport if it becomes available.

The company now receives backing from both **Pan American World Airways (1)** and Sikorsky, the former financing two more 107s and the

latter providing three new S-61Ns. Work is now completed on the Pan Am Building, which is provided a midtown Manhattan rooftop heliport adjacent to Grand Central Station. Commuter flights are initiated from local airports to a helipad atop the New York Port Authority Building at the World's Fair. Late in the year, the carrier becomes the first scheduled helicopter line to be granted full IFR certification by the FAA.

Passenger boardings climb 3.6% to 255,951. Revenues are up a significant 17.5% to \$2,628,601 and the loss is cut to \$189,950.

The workforce is increased in 1965 to 345. In the test of his budget message to Congress on January 25, President Lyndon B. Johnson proposes an end to all federal subsidies for the helicopter airlines effective in January 1968. On March 3, NYA-2 107s and S-61Ns inaugurate demonstration flights from New York (JFK) to a helipad on the roof of Manhattan's Pan Am Building, 800 feet over midtown. A U.S. Senate committee restores \$942,000 in federal subsidies for the lines cut by the House of Representatives on April 25.

On May 30, in response to Congress' moves to cut subsidy before the president's 1968 deadline, NYA borrows \$1.2 million from **Pan American World Airways (1)** and \$400,000 from **Trans World Airlines (TWA)**, plus private investors. Following receipt of three more Boeing Vertol 107s, regularly scheduled seven-minute commuter flights begin during the early summer. In spite of these successes, Congress ends subsidies to certified helicopter airlines in June.

Rather than see the New York operation closed down, the CAB, on June 25, allows an exemption to **Trans World Airlines (TWA)** and **Pan American World Airways (1)**. It allows the two majors to not only consummate the loan negotiated in May, but to also purchase 40% of New York Airways' stock, which provides for break-even needs plus interest on debt. In return, service is extended to the former's passenger ramps at the metropolitan airports. It is simultaneously revealed that stockholders R. G. Goslet and J. H. Whitney have already lent the carrier \$165,000. The service between Manhattan and the **Trans World Airlines (TWA)** terminals at John F. Kennedy International Airport and La Guardia Airport commences on June 29.

On November 5, the New York City Marine and Aviation Department grants NYA a one-year license to operate from atop the Pan Am Building. The carrier announces, on December 19, a schedule of 35 daily flights to the Pan Am terminal at JFK. The Pan Am Building heliport is officially opened in ceremonies on December 21; Governor Nelson Rockefeller, Mayor Robert Wagner, and Juan Trippe participate while Vice President Hubert Humphrey, in a phone message from Minneapolis, gives the signal to turn on the lights. Cardinal Spellman is among the day's first passengers as direct scheduled flights start between the midtown skyscraper and JFK.

Also during the year, permission is received from the FAA for en route and terminal scheduled operations under IFR conditions. Additionally, an application for permanent certification is pending with the CAB and former Tuskegee airman Perry Young is hired; he is one of the first African-American pilots taken on by a scheduled rotary-wing carrier. Meanwhile, passenger boardings climb 20% to 306,461, a figure that will fluctuate up and down during the remainder of the decade.

On January 3, 1966, the Transport Workers Union threatens to extend a New York City strike to 21 airlines using the regional airports if the city attempts to increase the service by NYA-2. Seven women picket on May 3 to protest the noise coming from the Pan Am heliport; they are counter-picketed by 10 NYA employees. In an effort to cut the noise, Mayor John Lindsey proposes on May 12—and NYA-2 agrees—to cut night and Sunday morning operations from the Pan Am Building. City authorities on December 1 authorize another year of service from the Pan Am Building.

During the year, NYA-2 achieves the highest load factor for any of the scheduled postwar American helicopter airlines, 65%; unhappily, it also finds itself needing to have a break-even load factor of 225%—an impossible feat.

In 1967, the employee population is 307 and the fleet includes 7 helicopters. Service is begun on March 2 from the Pan Am Building and

New York (JFK) to Teterboro. Late in the year, representatives of Sikorsky recommend the sale of the carrier's Boeing Vertols to **Columbia Helicopters**.

NYA-2 transports a total of 538,000 passengers and flies 8,000 freight ton-miles on the year, an industry record.

The workforce numbers 252 in 1968. Pan Am and NYA-2 dispute the subsidy amount contained in the new contract to be signed for operations from the Pan Am Building and the helicopter carrier halts operations from that location on February 15.

On March 5, the company reaches an accord with **Trans World Airlines (TWA)** to continue connecting service between the Wall Street heliport and the local airports. Ten days later, the New York City Planning Commission approves the plans for a heliport at East 61st Street and East River submitted by **Pan American World Airways (1)**, thus overriding opposition from Rockefeller University and New York Hospital.

Trans World Airlines (TWA) ends its subsidy to NYA-2 on April 25, citing the rotary-wing carrier's failure to obtain \$1 million in additional financing. NYA-2 pledges to continue service between the three local airports and the Wall Street heliport. A new contract is signed between the company and **Pan American World Airways (1)** and **Trans World Airlines (TWA)** on May 2 and service is resumed or expanded between the Wall Street area and JFK and La Guardia.

On August 3, the CAB authorizes NYA-2 to resume service from the Pan Am Building by approving control of the operation by **Pan American World Airways (1)** and **Trans World Airlines (TWA)**; it is announced that the service will resume in mid-September.

Plans to restore service from the skyscraper are placed in doubt on August 21 as **Pan American World Airways (1)** postpones its commitment to buy a fleet of S-61s. The Sikorsky craft had failed to meet its contract requirement of FAA certification for operation from the building. Consequently, only three of the Boeing Vertol 107s are now sold to **Columbia Helicopters**.

The year's customer bookings drop to 408,000. Revenues are \$5.25 million.

Fifty-seven employees are laid off in 1969. Despite an offer of \$200,000 per year to keep its operations at the **Trans World Airlines (TWA)** terminal, NYA-2, on February 8, agrees to shift its JFK and La Guardia operations to the **American Airlines** terminals under a new 10-year contract.

The FAA grounds two Boeing Vertol 107s on July 1 because of an engine failure to one; modifications are ordered made on the General Electric CT-58 turbine engines.

An S-61 with 13 aboard crashes at New York (JFK) on July 15 as it lifts off on a shuttle flight to Newark (three dead). Negotiations continue with **Pan American World Airways (1)** for resumption of service from the Pan Am Building. The major agrees on August 29 to increase its subsidy investment by up to \$260,000 and to advance the funds necessary to purchase three new S-61s.

On October 19, **Pan American World Airways (1)** receives a one-year permit to take over and operate the heliport at 61st Street and East River.

On November 19, NYA-2 asks CAB permission to suspend service on December 3 because its Boeing Vertol 107s are too expensive to operate; the line pledges to resume operations using a different type of craft. On December 12, the owners of the Pan Am Building report progress in negotiations to resume service from atop their skyscraper.

Enplanements are off 50% during the 12 months to 251,253 and a \$3.3-million loss is suffered.

To save the carrier, Warren A. Fucigna is appointed vice president/general manager early in 1970. In February, two Sikorsky S-61 Mk.2s are acquired and employed to start every-half-hour shuttle flights between Kennedy, La Guardia, and Newark Airports on March 3. The operation brings a turn in fortune, as a third backup Sikorsky is obtained in April. Plans to resume flights from the Pan Am Building are not pushed forward.

Passenger boardings jump 6% to 267,290 and a \$700,000 net profit is earned.

The four remaining Boeing Vertol 107s are sold to **Columbia Helicopters** in 1971. Two de Havilland Canada DHC-6-100 Twin Otters are placed into service on operations between the three New York Airports.

Enplanements for the year swell to 332,112, but skyrocketing expenses force a \$234,749 loss.

The 200-employee company enjoys its best year in 1972. With aircraft reliability now at 99%, the load factor is a healthy 48%.

Customer bookings jump 11.2% and reach a peak of 374,000. Perhaps even more pleasing to its stockholders and backers is a \$98,755 net profit—the first and only one NYA-2 will ever earn.

Operations continue apace in 1973, but enplanements decline to 367,699. The workforce is reduced to 187 in 1974 and the carrier's 4 Sikorsky S-61s fly 7% fewer passenger (343,644).

There are no changes in the workforce during 1975. The company's four helicopters continue to operate between Manhattan, Morristown, New Jersey, and New York's three major airports. Unhappily, passenger boardings decline 18.2% to 281,199. Freight is also level at 3,000 FTKs.

The employee population is increased by 11.8% in 1976 to 209. **Trans World Airlines (TWA)** sells 16% of its shareholding to John Hay Whitney.

Customer bookings accelerate 1.8% to 285,491. The same amount of cargo is hauled this year as last.

Services to the Pan Am Building rooftop heliport are resumed in January 1977. With fares of \$15, the company is able to operate 100 daily, 5-8-minute flights to Kennedy and Newark Airports. These continue with some success until May 17. Atop the Pan Am Building that day, an S-61L landing gear fails, forcing the aircraft to roll and snap off its main rotor blades; four people are killed on the roof and one on the street by falling debris. Flights are thereafter briefly suspended for lack of passengers. Enplanements for the year total 266,159.

In 1978, President Fucigna oversees a workforce of 185, which supports and operates three Sikorsky S-61Ls. Passenger boardings accelerate 5.8% to 282,546. The airport to downtown shuttle continues until April 1979, when another S-61L crash, this one at Newark Airport on the 18th, forces the company to cease operations and declare bankruptcy.

NEW YORK-ASBURY PARK AIR LINE: United States (1929).

This short-haul commuter is established at New York City in the summer of 1929 to offer scheduled passenger flights to Asbury Park. Employing Bellanca CH-300 cabin monoplanes, the carrier inaugurates flights in July. Services stop at the end of September.

NEW YORK HELICOPTER CORPORATION: Republic Airport, Hangar B, CX9100, Farmington, New York 11735, United States; Phone (613) 777-3733; Fax (613) 777-5876; <http://www.nyhelicopter.com>; Code HD; Year Founded 1980.

Organized as a wholly owned subsidiary of Island Helicopter Corporation in August 1980, New York Helicopter, "The Airline to the Airlines," inaugurates Aerospatiale SA-360C nine-passenger Dauphin helicopter flights on January 6, 1981. This marks the beginning of the first regularly scheduled helicopter service in the area since the demise of **New York Airways (2)** in April 1979.

Original points served by President Reed Phillips' 70-employee company include New York (JFK and LGA), Newark (EWR), and the East 34th Street Heliport. Company helicopters are banned from overflying Manhattan, with the exception of a single designated east-west corridor across the island's middle above Central Park.

The shuttle's seven French-built helicopters transport 41,000 passengers in 1981. Employing a combination of full fares and interline supported tariffs, over 50 daily flights are offered.

In 1982, following the introduction of 2 Sikorsky S-58ETs, traffic climbs 128.4% to 91,681. Cargo accelerates a spectacular 115.4% to 34,000 pounds.

Airline employment in 1983 stands at 110 and passenger boardings rise 38.4% to 126,848.

Twenty new hires are made in **1984** as service is extended the World Trade Center and Garden City, Long Island. A subsidiary of **Island Helicopter Corporation**, itself a part of Transleisure Corporation, which also owns National Helicopter Corporation, the East 34th St. Heliport FBO, New York Helicopter is not affected when the parent company files for Chapter XI bankruptcy in April.

Customer bookings swell to 130,000 during the year.

By early **1985**, the helicopter carrier enjoys joint fare arrangements with 54 domestic and international airlines. The fleet now includes 3 S-58ETs and 7 SA-360Cs.

Enplanements are down to 123,875, but cargo is up to 67,000 pounds.

In October **1986**, the company inaugurates hourly flights to and from the **Eastern Air Lines** Air Shuttle terminal at La Guardia Airport, linking it with the 34th St. Heliport in Manhattan.

Although service is also continued between New York's 3 major airports, traffic is down once more for the 120-employee rotary-wing operator as bookings plunge 31.6% to 84,673 and freight drops 74.4% to 17,000 pounds.

The bad news continues in **1987** as enplanements decline another 43.2% to 48,753. The bottom falls out of the company's freight haulage as poundage drops by 93.5% to just 1,000. Operations continue during the remainder of the decade and although not reported, the airline enjoys a competition with **Trump Air**, outliving the helicopter carrier of real estate tycoon Donald Trump.

As U.S. forces assemble overseas in *Operation Desert Shield*, a response to Iraq's August 2, **1990** invasion of Kuwait, passenger bookings, responding to a threat of terrorism, go into a steep decline. In October, a scheduled roundtrip service is introduced between the East 34th Street Heliport and the terminal of **Continental Airlines** at Newark. Although the year's record book shows 33,500 passengers accommodated, traffic all but disappears in January **1991**, forcing abandonment of the New Jersey airport service in March. On the year, less than 20,000 passengers are flown.

During **1992**, scheduled rotary-wing flights continue to be operated the 24 km. from the East 34th Street Heliport to New York (JFK).

Airline employment is 160 and enplanements climb to 22,760.

In the years that follow, President Michael D'Amato's fleet comprises 4 Sikorsky S-58Ts, 2 Bell 206B JetRangers, 5 Bell 206L LongRangers, 1 Eurocopter A-Star 350, and an Aerospatiale TwinStar. The only sustained scheduled helicopter airline remaining in the U.S., it offers 13 weekday flights between JFK and Manhattan and 10 on weekends.

A brief news item in the August 18, **1997** issue of *Travel Weekly* reads simply: "N.Y. Closes Island Helicopters." Parent Transleisure now attempts to keep New York Helicopter Corporation alive.

Service is maintained without headline or incident in **1998–2000**. An on-demand 7 a.m. to 8 p.m. weekday airport shuttle continues to be offered to and between Republic Airport, JFK, La Guardia, Newark International, the East 34th Street Heliport, and the Wall Street Heliport (the latter two points in New York City). Reservations for these services are required two hours in advance of flights and may be made by phone or e-mail.

Additionally, a new service is introduced between New York City's heliports and the Hamptons. Made via reservations, up to three passengers may Share-a-Ride on Thursdays and Fridays to East Hampton Airport (\$525 per person), West Hampton Airport (\$500), or Dune Road Heliport at South Hampton (\$500).

NEW YORK-NEWPORT AIR SERVICE: United States (1922–1923). NYNAS is established at New York in late spring **1922** to offer a fast and comfortable mode of transport to the Rhode Island's vacation city, Newport. Equipped with three four-passenger Loening 23L Air Yachts, the company inaugurates service during the summer, charging \$30 per head for the commuter flight. The service is well patronized by New York businessmen who enjoy reaching their summer homes in 1 1/2-hour Friday night flights.

A second season starts well in June **1923**, but ends tragically on July 20. An Air Yacht, piloted by H. H. Thorburn with two passengers,

crashes while landing in Newport Harbor and flips over. H. Carey Morgan, a member of a prominent family, is injured and dies of blood poisoning four days later. The adverse publicity and subsequent legal actions cause the carrier to shut its doors.

NEW YORK, PHILADELPHIA AND WASHINGTON AIRWAY (THE LUDINGTON LINE): United States (1930–1933). In the spring of **1930**, former **Transcontinental Air Transport (TAT)** officials Paul F. Collins and Eugene L. Vidal (father of novelist Gore Vidal), who have developed the idea of a Washington to Philadelphia to New York air shuttle, approach wealthy Philadelphia financier and airline enthusiast C. Townsend Ludington for backing. Ludington, whose name will serve as the organization's alternative title and who, with his brother Nicholas, had founded the Camden Airport in 1937 and operated **Cape Cod Airway** the previous summer, readily agrees to contribute \$250,000.

The New York, Philadelphia and Washington Airway, which will operate solely as a passenger carrier, is organized in early summer with Collins as general manager and Vidal as vice president-management. Six Stinson SM-6000 10-passenger Tri-Motors are ordered. Following delivery of the first three, they are employed to inaugurate service between New York (Newark Airport) and Washington, D.C. via Philadelphia (Camden Airport) and Baltimore on September 1. One-way fares are \$14.70—roundtrip costs \$23.75.

Through a program of rigorous cost control that companies 60 years later might envy, Collins seeks to reduce the average of airline operating costs from approximately \$1.20 per hour to just 40¢. Among his requirements: trimotor taxiing on one engine instead of three; use of expensive fuel only for takeoff, with automobile gasoline employed for cruising; and the sale of advertising wherever possible in the Stinsons' passenger cabins. Later in September, three more of the economical Stinsons are placed into service, allowing the carrier to offer 10 roundtrips per day between 8 a.m. and 7 p.m.

Meanwhile, Vice President-Management Vidal undertakes an advertising campaign designed to emphasize the advantages of these passengers-only flights. "Every Hour on the Hour, Your Watch is Your Timetable" becomes the marketing jingle. In cooperation with the Pennsylvania Railroad, the airline is allowed to sell tickets in the railway's stations up and down the line. Vidal places a series of 24 huge billboards along the railroad's New York–Washington corridor promoting the carrier. Each bears a picture of a Stinson and the phrase: "If you'd flown Ludington, you'd have been there!"

Two more trimotors are acquired in October and these are employed to offer vacation charter flights to Atlantic City. An affiliated company, **Dixie Flying Services**, begins flying from Greensboro, North Carolina, to Washington on November 6. A stop is added at Trenton on November 24 and a total of 15,000 passengers are carried by the end of the month. A profit of \$8,073 is recorded for the year, probably the first ever earned by a U.S. airline devoted exclusively to the transport of customers without mail subsidy. Indeed, several sources claim the Ludington Line is the first unsubsidized airline in history to ever make a profit.

In the spring of **1931**, Ludington and Vidal apply to the U.S. Post Office for an airmail contract (and subsidy), knowing that if their quest is fruitful, mail and express, when added to the popularity of the passenger service, will make the company an even larger success. Unfortunately for the carrier, its plans do not mesh with those of the government which, in the person of Postmaster Walter F. Brown, spurns the Ludington bid in July in favor of **Eastern Air Transport (EAT)**, even though EAT's bid is three times more. Eastern now also offers competition, employing its new Curtiss Condor Is.

Ludington counters when, on September 16, it places a 175-mph Lockheed Model 9 Orion into service, reducing its flight time between New York and Washington to 68 minutes. En route to Washington from Newark on November 5, the Orion, piloted by Floyd Cox with four passengers, crashes short of the field at Camden (five dead).

Operations are maintained, nevertheless, into **1932**. In May, the affiliate **Dixie Flying Service** ceases operations. The same month, the

carrier acquires three Consolidated Model 17A Fleetsters. Revenue flight operations stop at year's end. During the previous 24 months, Ludington transported 124,000 passengers.

On January 23, 1933, multistop flights are inaugurated to Nashville via Roanoke and Knoxville, but given the company's declining financial base, cannot be maintained. On February 15, **Eastern Air Transport (EAT)** purchases the company and merges it within two weeks. Although the company disappears, seven of its Stinson SM-6000s and SM-6000Bs are repainted and kept in service for Eastern over the western routes. Collins and Vidal move on and Ludington, in the purchase price, recovers his original investment.

The story of how Ludington lost its 1931 mail bid is covered by Hearst reporter Fulton Lewis later in the spring and as a result, becomes a significant exhibit when the U.S. Senate Special Committee on Investigation of the Air Mail and Ocean Mail Contracts (Black Committee) begins hearings on September 28. Ludington retains his interest in aviation, turning to the manufacturing side; Vidal becomes chief of the Department of Commerce's Bureau of Air Commerce and later, a director of **Northeast Airlines**; Collins remains in the airline business and in 1983 publishes his memoirs, *Tales of an Old Air-Faring Man* (Stevens Point, Wisc.: Foundation Press). EAT, soon renamed **Eastern Air Lines**, resumes the air shuttle concept 28 years after taking over this pioneer.

NEW YORK, RIO AND BUENOS AIRES LINE (NYRBA): United States (1929–1930). World War I ace and onetime Latin American salesman for Bill Boeing and Pratt & Whitney, Ralph A. O'Neill establishes NYRBA at New York City (registering it in Delaware) on March 17, 1929 to offer scheduled air services to and from Argentina via the east coast of Latin America. Back on February 27, President O'Neill received the Argentine mail contract and now receives financial backing from a variety of U.S. industrialists, including James Rand, F. C. Munson, Lewis Pierson, William B. Mayo, and John K. Montgomery. The latter had established the original **Pan American Airways (PAA)** consumed by the Aviation Corporation of the Americas the year before.

Initial capitalization totals \$8.5 million. One other noted investor is Reuben Fleet, owner of Consolidated Aircraft, who pledges to provide a fleet of 6 Model 16 Commodore flying boats (the order is later enlarged to 14). Six Ford 5-ATs are ordered in May and speeded along to delivery by Mayo, a Ford official/director.

Having persuaded another friend, U.S. Naval Aviation Chief Adm. William A. Moffett, to defer taking delivery of the first S-38, the type's prototype is purchased by O'Neill from Igor Sikorsky in early June and christened *Washington* with a bottle of (illegal) New York champagne on June 9. It is employed by O'Neill and copilot L. C. Sullivan to undertake a survey flight from the 79th St. boat dock on the Hudson River at New York City to Buenos Aires between June 11 and July 13. At each stop, the president arranges for base or landing facilities, including establishment of Aeroporito Santos Dumont at Rio de Janeiro. Among the passengers on this flight, in addition to O'Neill's secretary and future wife Jane Galbraith and his sister Priscilla, is noted explorer Richard Haliburton, who elects to remain behind following a refueling stop at the Devils Island penal colony in French Guiana.

The Ford 4-AT-11 is purchased from the **New York Safety Airways** on June 12. Christened *Rio de la Plata*, it will be followed into service by the new 5-AT-55 *Santiago* on June 26, which makes a proving and demonstration flight across the Andes Mountains on August 1.

The S-38 *Washington* inaugurates the company's first scheduled service on August 21 from the Brazilian capital across the River Plate to Montevideo, the capital of Uruguay. By now, the company's two Fords, two S-38Bs, and two Lockheed Air Expresses have reached Argentina, and the *Santiago* is employed on September 1 to open mail and passenger service from Buenos Aires to Santiago de Chile. The 7 hr. 15 min. flight—made possible by discovery of a pass that avoids the highest peaks—marks initiation the first transcontinental air route in South America and the beginning of twice-weekly, trans-Andean service. On

September 28, a second S-38, the *Montevideo*, arrives at Buenos Aires and is placed on the trans-River Plate service.

During the fall, government mail contracts are received from Uruguay, Argentina, and Chile. O'Neill receives Argentine permission to establish coastal bases on October 15 and on November 22, a concession to set up a subsidiary to operate solely in the country. Meanwhile, Mrs. Herbert Hoover christens the first Commodore flying boat, the *Buenos Aires*, at the Anacostia Navy Yard on October 2. With its fuselage painted in a cream color and its wings in coral, the new ship enters service on November 10. The same day, the second Commodore, fresh off the production line and reassembled inside of Madison Square Garden, is christened at a huge air show by Mrs. James J. "Jimmy" Walker, wife of the mayor of New York City. The name chosen is *Rio de Janeiro* and the brew employed in the ceremony is bootleg champagne. Crowds are then allowed to tour the largest aircraft at the exposition.

On November 27, Buenos Aires–Yacuiba, Bolivia, 5-AT flights begin. In Brazil on October 29, Ralph O'Neill establishes, at Brazilian insistence, a subsidiary to operate coastal and interior routes, **NYRBA do Brazil, S.A.** Four S-38Bs and the Lockheed Air Express floatplane *Maraca* are assigned to this partner. On November 29, a new route is launched from Buenos Aires to Yacuiba. The next day, S-38 service is started from Buenos Aires to the resort area of Mar del Plata. Meanwhile, a series of coastal bases are established, including one at Rio de Janeiro.

On December 4, William P. McCracken, former Assistant Secretary of Commerce for Aeronautics, becomes NYRBA's board chairman. A Buenos Aires–Rio de Janeiro S-38 frequency is initiated on December 23. The company is now organized into eight geographical divisions, each with its own personnel, shops, and assigned aircraft. In fact, only the southern division is fully operational, with a fleet comprising a Lockheed Air Express and four S-38Bs (the *Porto Alegre*, *Bahia*, *Per-nambuco*, and *Sao Luiz*), three Fords, and the single Commodore *Buenos Aires*. Cash on hand totals \$662,000 against net current obligations of \$168,000.

The **NYRBA do Brazil, S.A.** subsidiary receives its government operating permits on January 24, 1930. Flights from Rio de Janeiro to Buenos Aires commence on February 7. Having built a number of bases and readied two more S-38Bs and two additional cream and coral-liveried Commodores, NYRBA inaugurates weekly Buenos Aires to Miami scheduled service on February 19. O'Neill persuades the city fathers of Miami to allow the conversion of the Dinner Key area into a flying boat base. Until a permanent facility can be built, a houseboat, purchased by O'Neill in Cuba and towed up, is employed as temporary headquarters.

The Commodore *Rio de Janeiro*, with O'Neill and Sullivan at the controls, flies up to Porto Alegre. From there it acquires a load of mail that is flown to Santiago de Cuba by six S-38s working in relays and making stops at Florianopolis, Paranaguá, and Santos. At Santos, the S-38 *Tampa* is damaged so the mails must be quickly—and hazardously—forwarded by motor car and launch. The route is continued to Rio de Janeiro, Campos, Vitoria, Salvador, Maceio, Recife, Natal, Fortaleza, Belem, Montenegro, Paramaribo, Georgetown, Port of Spain, St. Lucia, Antigua, St. Thomas, San Juan, Santo Domingo, and Port au Prince. At Santiago de Cuba, the Commodore *Cuba*, again with O'Neill and Sullivan on the flight deck, takes over and arrives at Miami's Dinner Key via Camagay and Havana on February 25. There, the 800 pounds of Argentine mail, the first ever air-mail from South America, is seized by U.S. postal authorities, who point out that O'Neill does not have a U.S. mail contract, and place it aboard aircraft of **Eastern Air Transport** for the run up to New York.

Regularly scheduled, daylight-only, eight-day, Miami–Argentina multistop services begin the next day. The southbound aircraft leaves at the same time as the northbound and at each overnight stop, pilots turn over their passengers and mail to new crews. There are only a few mishaps.

In one such accident, a Commodore piloted by Robin McGlohn catches fire in midair when a fuel line ruptures while on a flight down

the coast of South America. McGlohn lands the flying boat, taxis the burning plane up to a river bank, and supervises the exit of its passengers through a rear hatch. The fire is, meanwhile, extinguished and the plane is salvaged. Later, Capt. Herman E. Swell lands a crippled Commodore with 18 passengers in a Cuban sugar cane field; no injuries are reported and the aircraft is disassembled, trucked to Santiago de Cuba, repaired, and put back into service.

Despite the technical success of the service, the carrier must either increase traffic or obtain a U.S. postal subsidy to survive the tremendous costs of its operation. Even in normal times, early passenger flight is expensive and only an insufficient number of travelers can be found in the face of world recession. The other alternative would appear to be U.S. government mail contract. While NYRBA lawyers argued for such a concession, covert, and occasionally overt, predatory moves are made against O'Neill's enterprise by **Pan American Airways (PAA)**, then seeking to become the dominant airline in South America.

When **Pan American Airways (PAA)** sympathizers in the Argentine government demand that NYRBA deliver the Miami mail in seven days instead of eight, O'Neill counters by employing swift Consolidated Model 17 Fleetster floatplanes along the Brazilian coast. Juan Trippe's company, holding the U.S. FAM routes as far south as Paramaribo in Dutch Guiana, now attempts, with considerable success, to block NYRBA flights across the Caribbean islands to Miami. When, acting under company nonassistance orders, NYRBA ground personnel refuse to assist the crew of a downed Pan Am survey aircraft at Lake Montenegro between Cayenne and Belem, relations between the two airline pioneers become tense. The Ford 4-AT-11 *Rio de la Plata* is destroyed in a March 2 crash at Cordoba, Argentina. The 5-AT-55 *Santiago* is badly damaged at Buenos Aires on April 8.

As the situation in the field deteriorates, Chairman McCracken begins a covert, and later overt, association with Juan Trippe of **Pan American Airways (PAA)**. The two, without much difficulty, convince Postmaster Walter Fogler Brown that PAA/NYRBA competition will be costly for the Post Office. They obtain the official's agreement not to award a foreign air mail route contract for the east coast of South America to any company other than **Pan American Airways (PAA)**. Brown, perhaps less openly than in his required "shotgun marriage" of **Western Air Express** to **Transcontinental Air Transport (TAT)**, for his part lets it be known that a merger of the two companies is all but mandatory to insure the award of the contract.

Although most flights out of Buenos Aires are booked, some with waiting lists, passenger revenues are small and the company faces lack of support from its own government. Despite the fact that it has raised some \$6 million in investments since its incorporation (\$1.4 million since January), NYRBA on May 31 has only \$16,000 cash available against current obligations of \$99,000. Unable to continue against the active opposition of **Pan American Airways (PAA)**, the carrier now has only two options—sell out or go bankrupt.

On June 1, merger discussions are started between Trippe and NYRBA's principal banker, Lewis Pierson. On July 1, President O'Neill reports that a total of 5,685 passengers have been flown since the first of the year. Rather than lose their entire investment, the board of directors, on August 19, votes to sell the operation to the Aviation Corporation of the Americas in a stock exchange worth \$2 million. On September 15, NYRBA is handed over to Juan Trippe, along with its subsidiary and its fleet of S-38s, Commodores, Fords, and Fleetsters.

At the time of its amalgamation, NYRBA has a long line of commercial aviation "firsts" to its credit. It is the first airline to connect North and South America with express, mail, and passenger services; the first to establish an 80-hour-per-month flying limit for its pilots; the first to prohibit its flight crews from drinking alcohol a day before duty; the first to establish air-ground communications; and the first to regularly fly mail and passengers across the Andes.

Most NYRBA personnel are hired by Juan Trippe's organization. An embittered O'Neill, who, after establishing an efficient organization, excellent bases, and well-negotiated Latin mail contracts, has seen his

dream quashed, refuses a **Pan American Airways (PAA)** vice presidency and quits aviation. Years later, he will pen his autobiography, *A Dream of Eagles* (Boston: Houghton, Mifflin, 1973).

NEW ZEALAND AERO TRANSPORT COMPANY, LTD.: New Zealand (1920–1922). Pioneer tourism executive Rudolph Wigley forms the **New Zealand Aero Transport Company, Ltd.** at Timaru in early 1920, equipping it with four government-surplus Avro 504Ks and three de Havilland DH 9s. On May 20, an Avro 504K, piloted by Enan Dickson, with Wigley and R. L. Banks as passengers, makes a Christchurch–Fairlie proving flight.

With the goal of catering to tourism in the lower half of the South Island with a service from Timaru to Mount Cook and the glacier region, the carrier is officially incorporated in August, with NZ£50,000 capital. Leonard Isitt and Tom Wilkes successfully fly a DH 9 over 14,200-ft. Mount Cook on September 12.

Bert Mercer, Maurice Buckley, Phil Fowler, Sidney Mallard, and Bill Parks are employed as the carrier's first paid pilots in early 1921. The initial DH 9 service is flown Invercargill–Stewart Island by Mercer and Buckley on January 12 via Foveaux Strait. In the longest flight yet made in New Zealand and with Wigley as passenger, Phil Fowler and Bert Mercer, in two stops on October 24, fly a DH 9 from Invercargill–Auckland via Timaru in 8 hrs. 53 min.

The largest company of its kind in the nation, NZATC is unable to attract sufficient traffic to offset growing overhead expenses and is forced to cease trading in 1922.

NEW ZEALAND AIR CHARTER, LTD.: New Zealand (1990–1994). M. D. Brown establishes NZAC at Ardmore Airfield, Ardmore, in 1990 to offer passenger and cargo charter flights and sight-seeing tours. Revenue operations commence and continue with a fleet that includes 6 Grumman AAICs, 2 Cessna 152s, 2 Cessna 172s, and 1 Partenavia P-68B.

Operations continue in 1991–1994.

NEW ZEALAND NATIONAL AIRWAYS CORPORATION, LTD. (NZNAC): New Zealand (1945–1978). In accordance with the 1945 New Zealand National Airways Act, the nation's three major domestic carriers, **Union Airways, Ltd.**, **Air Travel, Ltd.**, and **Cook Strait Airways, Ltd.** are purchased and merged on December 7 into the NZNAC. The first chairman is Sir Leonard Isitt and initial capitalization is NZ£1.2 million.

Auckland–Kaikōa service via Whangara and Kaikōke are started in January 1946. With seven aircraft types, flights are also begun during the year to 14 other domestic points and toward the year's end, responsibility is assumed for operations to a number of mandated territories.

Two Shorts S.25 Hythes (Sunderland IIIs) are acquired and christened *Mataatua* and *Takituma*; these take over the RNZAF Auckland–Fiji service on November 1, 1947. The same day, Douglas DC-3s begin flying from Auckland to Norfolk Island, Fiji, Tonga, Western Samoa, and the Cook Islands. The former **Union Airways of New Zealand, Ltd.** Lockheed Model 10A *Kahu* is lost in a crash into Tauranga Harbor on April 19, 1948. During the July–December quarters, DC-3s initiate service Auckland–Wellington via Rotorua and Hamilton. Lockheed L-18 flights begin in the Cook Strait area and an all-cargo DC-3 operation is launched from Auckland to Dunedin, Christchurch, and Wellington.

There are two more crashes during these months. En route from Palmerston North to Hamilton on October 24, a DC-3 with 13 aboard crashes atop Mount Ruapehu; there are no survivors. The Electra named *Kaka* crashes into Mt. Ruapehu on November 23 and, again, no one walks away.

The one-millionth passenger (cumulative) is boarded on January 16, 1949. The year's enplanements total 204,000. Employing seven DC-3 freighters, a Cook Strait air-rail service is begun in 1950, only to be suspended in May 1951. Bookings for the two years are, respectively: 1951—230,000, and 1952—298,977.

With the exception of the S.25s and DC-3s, all earlier aircraft types, e.g., Lockheed L-10s, Lockheed L-18s, and de Havilland DH 89As, are retired in **1952** in favor of DC-3s and DH 114 Herons. Bookings soar to 305,155.

Wellington to Blenheim and Nelson DH 114 services are kicked off on March 22, **1953**. Boardings advance to 360,434.

As the result of fuel exhaustion, a DC-3 with 2 crew and 26 passengers, suffers engine failure during a May 22, **1954** scheduled service and must make a forced landing, hitting a house, at Paraparaumu, New Zealand. All aboard the aircraft are safe, but three people are killed on the ground.

The year's bookings swell to 379,079.

In November **1955**, the Auckland–Norfolk Island route is transferred to **Tasman Empire Airways, Ltd. (TEAL)**; the *Mataatua* and *Takituma* are retired. Enplanements are 412,907. Orders are placed in **1956** for Vickers Viscount 807s. Boardings rise to 469,616.

The first Viscount 807 is delivered to Auckland on December 31, **1957**. Passenger traffic climbs to 496,160 travelers carried.

The new Viscount 807, christened *City of Wellington*, enters service on February 3, **1958**, inaugurating a new and direct Auckland–Christchurch service. Enplanements for the year are 529,567.

In **1959**, orders are placed for 8 Fokker F.27-100s. Bookings rise to 614,038.

The first F.27-100 is delivered to Wellington on December 12, **1960** and is christened *Kuaka*; it is employed on December 22 to inaugurate flights Christchurch–Auckland and Wellington and Auckland–Wellington direct. The year's enplanements are 697,760.

NZNAC's fleet in **1961** comprises 4 Viscount 807s, 6 Fokker F.27-100s, 2 DH 114a, and 26 DC-3s. The last 2 F.27-100s are delivered in **1962**.

While en route from Auckland to Tauranga on July 3, **1963**, a DC-3 with 3 crew and 20 passengers crashes into Mt. Ngatamahinerua; there are no survivors.

The year's enplanements are 1,162,074.

An undisclosed net loss is suffered. Airline employment in **1964** is 2,223. The carrier pays airways and airport charges exceeding 9% of its operating revenues—the highest for any domestic airline anywhere in the world.

Passenger boardings rise 6% to 1,237,100 and revenues of NZ\$15.1 million are earned.

The workforce totals 2,494 in **1965**. The fleet now includes 16 DC-3s, 9 F.27-100s, and 4 Viscount 807s. Plans are made to replace the Douglas transports.

Passenger boardings decline to 922,346.

Four DC-3s are retired in **1966** as two additional F.27-100s join the fleet along with a fifth Viscount 807. Bookings rebound to 1,042,000.

The employee population in **1967** is 2,659. Orders are placed for three Boeing 737-219s and two additional F.27-100s arrive. The DC-3s are being phased out as the Fokkers take over their routes. Enplanements swell to 1,167,906.

A total of 141 new employees are hired in **1968**. The first three B-737-219s are delivered in September and October and join the five Viscount 807s in linking the nation's four major cities. The company's 13 Fokkers are rescheduled to secondary routes and the 10 remaining DC-3s are restricted to feeder roles from small airports. Boardings accelerate to 1,202,000. Revenues of NZ\$22.6 million are earned.

Airline employment in **1969** is 2,802. Enplanements total 1,403,648. The workforce is increased by 147 people in **1970**.

Passenger boardings grow 6% to 1,493,242, and freight traffic is up 15%.

Two additional Boeing 737-219s join the fleet during **1971–1972** and 9 of the last 10 DC-3s are retired. Traffic figures are not available. In the fall of the latter year, the carrier acquires **Safe Air Freight Express, Ltd.**, together with its two Hawker Siddeley Argosy 222s and five Bristol 170s.

In an effort to help promote tourism to New Zealand, the carrier in **1973** takes a 15% interest in Mount Cook and Southern Lakes Tourist

Company, Ltd. Two F.27-500s are purchased, two more B-737-200s, including an ex-**Pacific Southwest Airlines** Dash-214, are placed in service, and the last DC-3 is sold. The employee population is now 7,997.

Freight traffic balloons by 25% and customer bookings accelerate 18.8% to 1,908,000. A net NZ\$1.1-million profit is reported.

Airline employment in **1974** is 3,156. At the first of the year, the carrier's initial F.27-100 is sold to **Gibraltar Airlines, Ltd. (2)**; it departs New Zealand almost 16 years to the day after its arrival.

Passenger boardings rise 11.6% to 2,128,000, and cargo is up 18%.

The workforce in **1975** is increased to 3,650. Two additional B-737-219s are placed in service and two F.27-500s are ordered.

Freight accelerates 11% and enplanements jump 2.8% to 2,188,000.

The employee population rises 1.8% in **1976** to 3,610. Plans are made for a computerized reservations system. Cargo climbs 16%, but passenger boardings dip 1.8% to 2,149,353.

The Carina reservations system becomes operational on April 27, **1977**. Two F.27-500s join the fleet.

Passenger bookings reach 3,207,471, and a \$NZ 3-million profit is earned.

NZNAC is taken over by and merged into **Air New Zealand, Ltd.**, on April 1, **1978**, the amalgamated carrier retaining the latter's name.

NEW ZEALAND TRANSPORT AND TRAVEL, LTD. (NZTAT):

New Zealand (1955–1967). Unhappy with the direction of his company, **Amphibious Airways, Ltd.** board member Harry English and several colleagues depart from the Invercargill-based charter carrier in January **1955** and establish a new company, NZTAT, at Auckland. Former **Fiji Airways, Ltd. (2)** chief pilot Fred Ladd is appointed general manager/chief pilot with English's new entrant.

A Grumman G-44A Widgeon is acquired and overhauled by **Tasman Empire Airways, Ltd. (TEAL)**; it is employed to inaugurate flights on June 19 to communities on Hauraki Gulf and provide scenic tour and charter services to any requested destination, including Great Barrier Island.

Although recession slows growth, business becomes successful at the beginning of the **1960s**, allowing purchase of a second Widgeon. On August 1, **1961**, **Amphibious Airways, Ltd.**, together with its two Widgeons, is purchased and merged. Ladd directs that one of the new Widgeons move to Auckland, leaving one to service charter routes to Stewart Island and destinations in the Fjordland and Southland regions of the South Island.

In the next year, NZTAT moves into the Westland region of South Island and takes over **Ritchie Air Service, Ltd.** and **Southern Scenic Air Services, Ltd.** and its subsidiary, **West Coast Airways, Ltd.** These **1962** acquisitions also include the addition of several small landplanes.

General Manager Ladd is knighted by the Queen at Wellington on February 12, **1963**. The next day, Capt. Ladd, MBE, flies Prince Philip from Nelson to Blenheim.

Also in the north, a fifth G-44A arrives in July, followed by a sixth in July **1964**. In **1965–1966**, the engines of all-company Widgeons are upgraded in rotation with Continental Lycomings, turning the planes into Super Widgeons.

On March 31, **1967**, Capt. Ladd resigns to concentrate on the development of local helicopter services and, given a vacuum in leadership, **Mount Cook Airlines, Ltd.** steps in and purchases NZTAT.

NEWAIR: United States (1978–1985). Louis Pellegrino and the brothers Frank and Donald Santacrose establish the FBO/air charter operation New Haven Airways at New Haven, Connecticut, in 1962. Over the next 16 years, the company becomes a major nonscheduled operator, flying passenger charters to New York and Boston with a fleet that comes to include 4 Piper PA-31-350 Navajo Chieftains.

After the airlines are deregulated in October **1978**, a subsidiary airline division, NewAir Flight, is formed to provide five-times-per-day scheduled commuter service within the state and on to Newark with the Pipers, which are borrowed from the charter operation. It will never earn

a profit and will eventually be acquired by its chief rival, **Pilgrim Airlines**.

When **Ransome Airlines** pulls out of New Haven in **1979**, NewAir Flight applies to the CAB for permission to fly two dormant nonstop **Eastern Air Lines** routes that will link its base with Washington, D.C. (DCA). Permission is granted. At the same time, when Ransome leaves Philadelphia, NewAir Flight launches Chieftain service to that city as well.

Enplanements are 11,738. The pattern for financial problems begins early on as the new entrant suffers a net loss of \$83,000 for its first full year.

On the bright side, however, NewAir, as President Donald Santacrose's carrier is retitled on July 18, **1980**, begins service to Baltimore (BWI) via Islip and to Sullivan County and the Catskills.

As a result, the carrier, with its fleet of 4 Navajo Chieftains, experiences a remarkable 273% increase in passenger boardings (30,849) over 1979. The net loss, however, accelerates to \$46,000.

The 69-employee carrier begins flights to New York (JFK and LGA) during **1981**. The service to La Guardia, La Guardia Express, is offered five times daily, beginning with a week of introductory 75-cent, one-way fares.

Traffic rises 65% as 47,207 passengers are transported. Unhappily, expenses of \$2.5 million overwhelm revenues of \$2.3 million, leaving a \$248,842 operating loss and a major \$344,467 net loss is experienced.

The workforce is increased by 24.4% in **1982** to 102. NewAir becomes an all-turboprop airline as two Embraer EMB-110 Bandeirantes and three de Havilland Canada DHC-6-200 Twin Otters are acquired to succeed the Chieftains. All but one of the company's aircraft are also employed on New Haven Airways charters and are painted with the FBO's titles.

A second Connecticut origination point is opened at the Groton-New London Airport. From this hub, 16 flights are operated each day to New York (La Guardia) via New Haven. As a result of the PATCO air traffic controllers' strike, service to Newark dwindles as landing restrictions increase; it will be closed down entirely by year's end.

On the financial front, a plan to reorganize and "go public" must also be delayed because of the PATCO action; \$185,000 spent in preparation for the stock offering is lost. Higher interest rates meanwhile bring an across-the-board 10% salary cut. The company is able to successfully return to Wall Street in December. It sells 715,000 shares of common stock that brings in \$3.2 million and that is employed to pay off short-term debt, join the PARS computerized reservations system of **Trans World Airlines (TWA)**, and restore the pay cut.

Enplanements increase 56.6% to 74,113 and revenues climb to \$4.1 million, a 42.2% boost. As expenses continue to rise, the net loss for the year registers \$548,000.

Forty-six new employees are hired in **1983**. An unusual public relations stunt on May 18 marks the introduction of the carrier's latest aircraft. Before an assemblage of dignitaries and guests at the Tweed-New Haven Airport, the drawstring on a huge, polka-dotted replica of a pair of shorts is pulled to reveal NewAir's new Shorts 360, painted in NewAir livery. They will be put on line for the benefit of the city and neighboring Connecticut communities.

A route is restarted to Newark on June 1. On June 28, a section of the Connecticut Turnpike Bridge over the Mianus River collapses, cutting off the primary ground route between New Haven and the New York airports. This disaster—or piece of good fortune, depending upon perspective—allows the airline to double its boardings almost overnight. Even after the bridge is repaired, speed restrictions and other delays assist the company in maintaining a high traffic level.

By year's end, the company operates 460 weekly flights from New Haven to New York's three airports, Baltimore (BWI), Washington, D.C. (DCA), Philadelphia, Groton-New London Airport, Sullivan County and the Catskills, and Long Island's MacArthur Airport.

Passenger boardings increase 68% to 124,570 while revenues rise 32.2% to \$8.7 million. Unfortunately, skyrocketing costs apparently

cannot be controlled during a time of recession and stiff competition, but the net loss taken is reduced to \$179,000.

Chairman Pellegrino's small regional has a climactic **1984**. Despite a 14.6% traffic rise to 142,696, the carrier records yet another huge loss, \$548,000. Company officials know that, after suffering losses of \$1,748,467 in six years, the end has come. The only alternatives are merger or bankruptcy.

The merger route is chosen and on February 19, **1985**, the air transport division of NewAir is taken over by rival **Pilgrim Airlines**. The yet profitable NewAir FBO remains a separate entity, retains one Bandeirante for its charter business, and acquires a 20% interest in the enlarged **Pilgrim Airlines**.

NEWAIR AIR SERVICE, A.S.: Billund Lufthavn, Billund, DK-7190, Denmark; Phone 45 7535 3377; Fax 45 7535 3277; Code WA; Year Founded 1990. NewAir is organized at Dragoer in **1990** to provide scheduled commuter flights to Esbjerg and Humberside. Managing Director Per Arpe's inaugural fleet comprises just one used Handley Page HP-137 Jetstream 1. Revenue flights to the U.K. begin in March and before the year is out, the fleet receives three more HP Jetstreams, a Cessna 402C, and a Piper PA-31-310 Navajo.

The fleet in **1991** includes 4 HP-137s and 1 leased Swearingen SA226 Metro. The Cessna and Piper are withdrawn along with two Jetstream 31s in **1992** in favor of a Fairchild Hiller FH-227B and a Fairchild-Swearingen Metroliner.

Services continue in **1993–1999**. During these years, the fleet is revised to include 2 FH-227Bs, 1 Fokker F.27-500, and 2 British Aerospace BAe Jetstream 31s. The FH-227Bs are replaced late in this period with a pair of Fokker 50s.

Four-times-a-week roundtrips from Geneva and Zurich to Pristina on behalf of the new **Air Kosova** are begun on July 3, **2000** with a Fokker 50 wet-leased from Newair. Another Newair Fokker 50 is acquired on July 21. Nonstop roundtrips from Pristina to Munich are launched on August 15.

The contract with **Air Kosova** is unhappily concluded on September 28 when Newair, which has not received its leasing fees, withdraws its aircraft.

NEWFOUNDLAND AIRWAYS, LTD.: Canada (1948–1983). NA is set up at Gander in **1948** to operate floatplane charter services to local Newfoundland destinations. The mail and freight is also flown to northern Newfoundland and Labrador. Over the next three-and-a-half decades, the company's de Havilland Canada DHC-2 Beavers are joined in service by the associate FBO, Labrador Aviation Services.

In **1983**, Roger Pike's Provincial Investments, Inc. purchased the company and it is renamed **Air Labrador, Ltd.**

NEWFOUNDLAND-LABRADOR AIR TRANSPORT, LTD.: Canada (1961–1998). Based at Corner Brook, Newfoundland, NLAT is established in **1961** to offer charter passenger and cargo and contract service flights linking the company's base with destinations in Labrador. Operations commence with a fleet of small aircraft, including de Havilland Canada DHC-2 Beavers and DHC-3 Otters.

Over the next two decades, nonscheduled operations are undertaken throughout eastern Canada. In **1985**, the fleet includes not only DHC equipment, but also a Piper PA-31-310 Navajo, several Cessna 185s, and a Grumman Widgeon. In **1987**, the amphibian is replaced by a Beech 99.

Revenues in **1990** total \$1.5 million. During **1991**, the Beech is replaced by a DHC-2, a DHC-2 Turbo Beaver, and a Cessna 402C. Income increases to \$1.6 million in **1992**. In **1993**, President Pierre Meagher oversees a workforce of 25. Company revenues jump to \$1.8 million.

Flights continue, and in **1997** the fleet includes 2 Beavers, 2 Turbo Beavers, and 1 Piper PA-31T. The Cessna 402 and a Britten-Norman BN-2 Islander flown the previous year are removed.

The company shuts its doors in **1998**.

NEWMAN'S AIR, LTD.: New Zealand (1985–1986). This regional carrier is formed in January 1985 by the Newmans Group, a leading travel agency, and Kenneth MacDonald is named chief executive. With two de Havilland Canada DHC-7s, twice-daily scheduled service from Auckland and Christchurch is begun on February 12 to the tourist centers of Rotorua on the North Island and Mount Cook and Queenstown on the South Island. Service to Wellington and Christchurch begins in February.

In June 1986, in a move protested by **Air New Zealand, Ltd.**, the Australian conglomerate Ansett Transport Industries takes control of the carrier. The Dash 7s are traded in for two DHC-8-200s, which are delivered on December 15 and enter service.

NEWPORT AIR PARK: United States (1964–1981). NAP is established at Newport, Rhode Island, in the late fall of 1964 to provide scheduled air taxi services to Providence and to New York (LGA). Daily roundtrip revenue frequencies are inaugurated with a Rockwell Aero Commander on December 12.

Operations continue apace over the next 16 years and the fleet is increased by the addition of a number of Cessna lightplanes.

NEWQUAY AIR, LTD.: United Kingdom (1993–1995). G. Hitchen and N. Gough establish NAL at the airport at Newquay in March 1993. Nonscheduled passenger flights commence in May to surrounding domestic points with a single Piper PA-31-350. Flights continue in 1994, but in the summer of 1995, the company is transferred to Plymouth City Airport and is renamed Air South West, Ltd.

NEYA A/K: Russia (1994–1996). Neya is established as a long-haul passenger charter airline at Moscow late in 1994. K. B. Galai is appointed general director and he begins revenue flights with a single Ilyushin Il-86. Flights continue until early 1996.

NFD (LUFTVERKEHRS, A.G.) See **NFD (NURNBERGER FLUGDIENST, GmbH.)**

NFD (NURNBERGER FLUGDIENST, GmbH.): Germany (1974–1993). Organized by Hans Rudolf Wohri at Nuremberg in 1974, NFD (Nurnberger Flugdienst, GmbH.) begins charter flights in 1975 to regional destinations. In 1980, it is decided to inaugurate commuter operations; employing a Fairchild-Swearingen Metro II, services are initiated to Paris. A total of 10,200 passengers are transported in 1981, 32,000 in 1982, and 50,300 in 1983.

During 1984–1985, the workforce totals 40 and the fleet comprises 7 Metro IIIs and 1 Beech Super King Air 200. Destinations served include Paris (CDG), Amsterdam, and Milan. Domestic flights are also undertaken on behalf of **Deutsche Luftverkehrsgesellschaft, GmbH. (DLT).**

President Manfred Moeschel's carrier acquires a Dornier 228-201 in early 1986 and adds Frankfurt, Hanover, Munster, and Osnabruck to its route network. A number of other, ultimately unsatisfactory route experiments are attempted. In December, a Fairchild Merlin IV is acquired.

Passenger boardings jump 20.4% to 137,248.

An Avions de Transport Regional ATR42-200 is purchased in the spring of 1987 and is employed to inaugurate new services to Copenhagen, Lyon, Brussels, and Geneva. Closer relations are developed with **Air France** and **KLM (Royal Dutch Airlines, N.V.)**. At the same time, a new in-flight magazine, developed in cooperation with **Crossair, Ltd.**, is introduced. Enplanements for the year total 184,300.

In January 1988, the company gains full access to the computerized reservations system of **Deutsche Lufthansa, A.G.**

While near Mulheim and en route from Hanover to Dusseldorf on February 8, a Metro III with 2 crew and 19 passengers is hit by lightning, which destroys the aircraft's electrical system. In the uncontrolled descent that follows, the turboprop first loses its right wing and then disintegrates. There are no survivors.

Later in the year, a second ATR42 and two more Metroliners are acquired. Hof becomes a destination.

Three more ATR42s join the fleet in 1989 and new stops added include Dusseldorf, Munich, Stockholm, and Vienna. The nation's largest independent regional is partially acquired (40% for £4.2 million, cash) by International Leisure Group, parent of **Air Europe, Ltd.**, to operate "Air Europe Express" flights on its behalf. It now receives its first jetliner, a Boeing 757-200, and brings a new centralized reservations system on line.

In 1990, the Metroliner fleet is reduced to 5 as 4 ATR42-320s and 1 British Aerospace BAe 146-200QT, operated on behalf of **TNT (Transport Aerien Transregional, S.A.)**, are obtained.

Two Boeing 757-236s (leased from **Air Europe, Ltd.**) are returned to their lessor. Several new gateways are added, including Marseilles, Milan, Prague, Leipzig, and Munich. Additionally, daily ATR42 flights begin from Frankfurt to Erfurt in December. Enplanements total 292,490.

The Boeings are withdrawn in 1991 in favor of four ATR72-210s; the Metro III component is reduced to only three machines. Following the collapse of the International Leisure Group on March 8, Chairman Hans Rudolf Wohri buys back the 40% shareholding held in his carrier by ILG; his interest is now 61% with the Karstadt warehouse organization holding 26%. His carrier is now reorganized and the corporate image is changed to reflect a name change to **NFD (Luftverkehrs, A.G.)**.

Two additional ATR72s are acquired in 1992. Enplanements for the final year of independence total 627,629 and 3.2 million FTKs are flown. On January 1, 1993, the carrier is merged with **RFG Regionalflug, GmbH.** to form **Eurowings NFD + RFG, GmbH.**

NICA (NICARAGUENSE DE AVIATION, S.A.): P.O. Box 6018, Managua, Nicaragua; Phone 505 (2) 631 929; Fax 505 (2) 63 188; http://www.flylatinamerica.com/acc_nica.html; Code 6Y; Year Founded 1992. Nica is established in Nicaragua in the spring of 1992 to operate domestic and regional scheduled service formerly provided by the failed **AERONICA (Aerolineas Nicaraguenses, S.A.)**. Ownership is divided between the government and **TACA International Airlines, S.A.** (49%). The TACA arrangement also includes joint purchasing, fleet rationalization, and cooperation in such support services as maintenance, catering, marketing, and ground handling. NICA thus becomes a member of the growing Central American airline consortium TACA Group.

Operations commence on July 10 with a single leased Boeing 737-2T5A over a route to Miami.

A total of 25,444 passengers are carried during the next 6 months and revenues of \$4.63 million are earned.

Operations continue apace in 1993 as passenger boardings more than double to 64,327. Revenues swell to \$10.91 million.

On September 2, 1994, the U.S. FAA announces the previously unpublished results of a safety survey made on 30 nations. Only two Central American nations meet U.S. safety standards. Nicaragua is not among them and, hence, Nica is no longer allowed to fly to the U.S.

Enplanements for the year are cut in half to 33,948.

Airline employment stands at 130 in 1995. The U.S. reservations centers of the TACA Group members are consolidated in a single El Salvador facility.

Through October, passenger boardings are up 11.5% to 38,359 while cargo rises 29.3% to 7.29 million FTKs.

In 1996, a B-737-2T5A is subleased from **TACA International Airlines, S.A.** Via TACA, Nica is drawn into discussions with **American Airlines** concerning a possible future alliance. By the end of the year, TACA Group operates an impressive international route network that includes 14 destinations in Central America, 12 in South America, 3 in Mexico, and 8 in the U.S.

The code-sharing agreement between AA and TACA Group is signed during the spring of 1997. During the fall, a number of company aircraft are repainted in a new TACA Group livery that features a white fuselage and a blue tail with a red vertical slash over which appears a logo consisting of five golden macaws, which represent the group members.

In November, TACA Group begins service to Santo Domingo. Thrice-daily service to Dallas (DFW) from San Salvador, San Jose, and Guatemala City begins in December.

Domestic destinations visited in **1998** include Bluefields, Corn Island, and Puerto Cabezas, while regional markets include Panama City, San Jose, San Pedro Sula, San Salvador, Tegucigalpa and, later, Miami.

Flights continue in **1999–2000**. Airline employment at the beginning of the latter year totals 164.

NICHOLAS SKYWAYS (PTY.), LTD.: Australia (1961–1994). L. G. Nicholas forms this small regional at Moorabin Airport, at Mentone, Victoria, in **1961** to offer largely nonscheduled bush flights to surrounding destinations. Operations continue quietly for the next 30 years.

Although L. G. remains chairman in **1991**, H. J. Nicholas is president/CEO. The family's 7-employee company operates a fleet of 1 Beech 58 Baron, 2 Cessna 310s, and 1 Cessna 172. Revenues for the year total A\$277,500, growing to A\$300,000 in **1992**. Business ceases in **1994**.

NICKLE BELT AIRWAYS, LTD. See **AUSTIN AIRWAYS, LTD.**

NIEMEYER AVIATION: United States (1979–1980). Donald Niemeyer establishes this small carrier in late **1979** as the airline division of his Kentland, Indiana-based FBO. Employing a Grumman AA5B Tiger, an aircraft type little used by commuter and air taxi carriers, Niemeyer inaugurates scheduled daily passenger services linking his base with Valparaiso, Indianapolis, Chicago, and Kankakee.

Frequencies are maintained only into January **1980**.

NIGERAVIA, S.A.: BP 10454, Niamey, Niger; Year Founded 1994. Abdou M. Gorge's 40-employee **Transniger Aviation, S.A.** is reformed and renamed in **1994**. Scheduled passenger and cargo services are continued over domestic and regional routes, employing a fleet of 1 each Britten-Norman BN-2A Islander, Fokker F.27 Friendship, Pipaer PA-23 Aztec, and 2 Cessna 185s.

NIGERIA AIRWAYS, LTD.: P.O. Box 1024, Airways House, Murtata Muhammed Airport, Ileja, Lagos, Nigeria; Phone 234 (1) 900810; Fax 234 (1) 961574; Code WT; Year Founded 1958. Early in **1958**, preparations are made to split **West African Airways Corporation (WAAC)** into two parts to satisfy the needs of the colony and Ghana, the former Gold Coast that had gained its independence on March 6, 1957. In June, that part of the carrier not separated as **Ghana Airways, Ltd.** is renamed **West African Airways Corporation (Nigeria), Ltd.**

When WAAC ceases to exist in its old form on September 30, the trading name Nigeria Airways, Ltd. is applied to WAAC (Nigeria) and ownership is divided between the Nigerian government (51%), Elder-Dempster Lines, Ltd. (32 2/3%) and **British Overseas Airways Corporation (BOAC)** (16 1/3%).

A 15-year agreement is reached with the British flag carrier under which BOAC will charter aircraft to the African carrier and revenues earned on the Nigeria–U.K. route will be pooled. A fleet of Douglas DC-3s is assembled, allowing Nigeria Airways, Ltd. to begin serving, on October 1, the internal routes flown by the old WAAC. Additionally, a joint service with Ghana Airways, Ltd. is operated to Dakar.

A wet-leased Boeing 377 Stratocruiser launches return London to Lagos service, also in October.

Enplanements for WAAC/WAAC (Nigeria), Ltd. this year are 72,763.

The BOAC aircraft contract is modified slightly, on April 16, **1959**, in that a Bristol Britannia 102 replaces the Stratocruiser as the equipment used on the Lagos–London service. It should be noted that, between 1958 and 1961, the Stratocruisers and Britannias employed on the international services are various individual units instead of dedicated aircraft. Domestic schedules and frequencies are increased.

Bookings, however, are down to 57,866, due largely to the independence movement.

Nigerian independence arrives on October 1, **1960**. Passenger boardings for the year reach 82,429.

The new government of Nigeria assumes full ownership of the airline in March **1961** and establishes it as the national carrier, appointing Chief J. O. Fadahunsi as chairman. The fleet now includes 7 DC-3s and 1 wet-leased Britannia 102, with orders outstanding for 4 DH 114s and 2 Piper PA-23 Aztecs.

In August, the BOAC agreement is again modified, providing for the lease of a pair of Vickers VC10s. The following month, firm orders are placed for five Fokker F.27-200s, with two options.

The Herons and Aztecs are received in **1962** and placed into service, with the latter flying over local routes out of Kano. In collaboration with **British Overseas Airways Corporation (BOAC)**, Comet 4 services to London begins on April 1.

Chief I. O. Dafe becomes chairman at the beginning of **1963**, with T. D. Kumar as general manager. The first Fokker F.27-200 arrives in January and is christened *Dr. Nnamdi Azikiwe*. The first black crew, including Capt. R. E. Hayes and copilot R. Orimoloye, performs the inaugural Friendship service on March 19 from Lagos to Kaduna.

The last Fokker, *Chief Samuel Akintola*, arrives on May 9, by which time the other F.27-200s, including *Alhaji Sir Abubakar Tafawa Balewa*, *Dr. M.L. Okpara*, and *Alhaji Sir Ahmadu Bello*, are also visiting Abidjan, Accra, Bathurst, Dakar, Freetown, and Robertsfield. A new eight-year arrangement is entered into with BOAC, also in May.

F.27-200s begin to replace DC-3s, beginning in June, on routes to the Congo, Gambia, Ghana, the Ivory Coast, Liberia, Sierra Leone, and Senegal. The Aztecs are also withdrawn from scheduled services during the second quarter, and are assigned to operate passenger and cargo charters.

One DC-3C continues to operate an all-cargo route from Kano to Lagos, while a second flies a weekly roundtrip milk run from Kano to Accra via Cotonou and Lome. An £800,000 Lagos maintenance center is dedicated by Nigerian President Nnamdi Azikiwe on December 13.

During the early spring of **1964**, a new pool agreement is signed with **Ghana Airways, Ltd.** Under its terms, Nigeria Airways and its partner are able to launch new weekly frequencies on April 1 from Accra to Kano, to Addis Ababa via Kano and Khartoum, and to Beirut via Cairo. The arrangement also provides one other rather unique feature. Nigeria Airways F.27-200s operate cabotage flights on Ghana's internal routes, while Ghana Airways Viscount 838s fly from Accra to Lagos for the benefit of both operators.

General Manager Kumar dies in June. He is succeeded on an interim basis by Lionel "Buddy" Messenger.

The U.S. CAB approves Nigeria Airways in September for service to New York. As Nigeria possesses no aircraft capable of transatlantic service, the company enters into a block-space agreement with **Pan American World Airways (1)**. The deal allows Nigeria Airways, which has guaranteed the American pioneer that it will sell or pay for 10 seats per weekly frequency, to sign a pool agreement with **Ghana Airways, Ltd.** that will help market the service throughout West Africa.

The first westbound B-707-321B flight departs Lagos for New York (JFK) on October 18 via Accra, Robertsfield, and Dakar; the first service from the U.S. back to Lagos occurs on October 23.

Acting General Manager Messenger is succeeded by J. D. Reichel in early **1965**. Civil war and poor management appointments (often political or religious) during the next six years will create administrative chaos. During these years, operations are maintained under wartime conditions.

A VC10, leased in full Nigerian livery from **British Overseas Airways Corporation (BOAC)**, begins weekly return service between Lagos and London in January **1966**. The fleet now includes 5 F.27-200s, 6 DC-3s, and 2 Aztecs.

Having gone without pay for several weeks, the carrier's pilots strike during January **1967**, forcing the airline to suspend most of its domestic schedule.

Also at home, the government-owned airline halts service to the secessionist eastern region of Biafra on April 5; on April 23, five rebels take over an F.27-200, with 29 passengers en route from Benin City to

Lagos, and force it to land at Enugu, the eastern regional capital. At month's end, the company introduces new anti-hijacking security measures.

In May, two B-707 Stratoliners are leased from foreign airlines to inaugurate annual Hadj flights to Jeddah.

To counter a rebel airlift organized by mercenary Capt. Hank Wharton, which will operate four Lockheed L-1049Gs Super Constellations in coordination with the Rhodesian charter line **Air Trans Africa (Pty.), Ltd.**, the Nigerian government, beginning in June, takes over six Nigerian Airways DC-3s for use as bombers. Using small bombs, these fly nightly from Benin City to attack the Connies attempting to land at Uli, which had become the major secessionist airfield after the capture of the airports at Enugu and Port Harcourt. During the airlift, the Lockheeds are able to complete several supply flights each week, each bringing the mercenary pilots £10,000 in combat pay.

Upon the return in July of the captured VC10, its lease is terminated by BOAC. Nigeria Airways reports at the end of the month that the leased Stratoliners have flown a total of 8,000 Hadj pilgrims this year.

The battle at night between the rebel-supported Super Constellations and the Dakota airliners continues into 1968. The Nigerians acquire five more DC-3s from **Sabena Belgian World Airlines, S.A.**, while the rebels are reinforced by four more L-1049Gs. One of these crashes early in the year and a second is sabotaged at Bissau, Portuguese Guinea, before it can fly in with a load of Fouga Magister jet trainers for the Biafran air force. The airlift ends in mid-February and thereafter, several of the mercenaries' L-1049Gs are impounded when they make refueling stops at Malta. Another Super Constellation, chartered by the Red Cross, crashes at Uli on July 1 (four dead). On September 28, a DC-4 with 57 aboard crashes between Lagos and Port Harcourt; there are no survivors.

All three L-1049Hs owned by **Nordair, Ltd.** are leased to Canairielief, sponsored by the Presbyterian Church of Canada, and begin flying aid shipments into Uli, Biafra, early in 1969. On August 3, one of the Canadian Super Constellations crashes while landing at Uli.

One leased and one purchased **British Overseas Airways Corporation (BOAC)** Vickers VC10s, meanwhile, continue to provide long-haul service for Nigeria Airways. In addition to the London service, the VC10s also operate from Lagos and Kano to Frankfurt via Leopoldville, Madrid, and Rome.

On initial approach to Lagos on November 20 from London, Flight 925, the owned VC10 with 11 crew and 76 passengers and just 2 months into its service life, sinks below its normal path and strikes a row of trees 8 nm. from the runway; the plane crashes and catches fire from which no one aboard survives.

Nigerian fighter planes strafe and destroy a second **Nordair, Ltd.** L-1049H at Uli Airport on December 7.

Biafra, which has had its life prolonged by the outsider's airlift, finally surrenders in January 1970. Also during the month, Birger Groenlund becomes managing director and oversees a workforce of 2,200.

The B-707-379C and B-707-360C Stratoliners of **Ethiopian Airlines, S.C.** are both chartered in June. The former will return to Addis Ababa within 13 months, but the latter will be operated by the West African carrier until 1973. A B-737-248A is wet-leased from **Aer Lingus Irish Airlines, Ltd.** in October.

While taking off from Jos, Nigeria, on April 4, 1971, an F.27-200 with 3 crew and 38 passengers, swerves off the right side of the runway and into a mound of gravel; although the aircraft is badly damaged, there are no fatalities.

Nigeria Airways' second owned jetliner, a Boeing 707-3F9C, arrives on May 17 and the airline's present official title is adopted five days later. In November, joint venture flights commence with **Middle East Airlines, S.A.L.** over routes from Kano and Lagos to Beirut.

European destinations visited in 1972 include Frankfurt, Madrid, and Rome and the route network is nearly 7,000 unduplicated miles. The domestic fleet includes 7 F.27-200s, 5 DC-3s, and 2 Aztecs. Three F.28-1000s are acquired in May.

One of the new F.28-1000s runs off the runway after landing at Port Harcourt on September 19; there are no fatalities in the accident, but the aircraft is damaged beyond repair.

As a replacement, the airline, in October, introduces the world's first operational F.28-2000. A management contract is signed with **Trans World Airlines (TWA)** on October 21, but will not be implemented.

Two B-707-3F9Cs are delivered in February 1973, allowing the **Ethiopian Airlines, S.C.** B-707-360C to be returned. Flights continue apace in 1974, but a wage dispute with pilots grounds the airline's domestic operations for a time after May 12, 1975.

A third B-707-3F9C is delivered at the end of September 1976. It replaces the VC10 transatlantic schedule on October 14. Shortly thereafter, two B-727-2F9s are received, together with a DC-10-30.

During 1977, routes are opened to Paris and Zurich in Europe and to New York. In Africa, routes are maintained to Abidjan, Accra, Banjul, Conakry, Dakar, Douala, Freetown, Lome, and Monrovia, while new ones are opened to Kinshasa, Libreville, Nairobi, and Niamey, plus 19 local stops.

An F.27-200 with 4 crew and 19 passengers is destroyed as the result of a bad landing at Sokoto on April 25; there are no fatalities.

When the annual Hadj season opens in May, the new DC-10-30, configured for all-economy-class service, is able to deliver 300 pilgrims at a time on every return flight between Kano and Jeddah.

Chairman J. A. Orshi's carrier employs 4,493 workers in 1978. While on initial approach to Kano on March 1, an F.28-1000 with 5 crew and 11 passengers collides 2 km. from the end of the runway with a 2-man Nigerian Air Force MIG 21U, which is performing touch-and-goes; all aboard both aircraft are killed.

In 1979, the government entrusts the carrier's management to **KLM (Royal Dutch Airlines, N.V.)**; the Dutch carrier takes over the administration and trains personnel under contract.

Scheduled service is launched to Jeddah in 1980 as seven leased B-737-200s and four owned B-737-2F9As join the fleet, along with a second owned DC-10-30.

Enplanements reach 1,699,660.

The KLM contract ends in 1981. The fleet now comprises 3 B-707-3F9Cs, 8 F.28-1000/2000s, 7 leased B-737-200s, plus 4 B-737-2F9As, 6 B-727-2F9As, and 3 DC-10-30s, 1 of which is leased from **Philippine Airlines (PAL)**.

Freight traffic skyrockets 76% to 15.6 million FTKs and passenger boardings jump 27.4% to 2,341,129.

A B-747-283B is wet-leased from **SAS (Scandinavian Airline System)** on March 31, 1982; painted in the company's green and white livery with its flying elephant logo on the tail, the Jumbojet assumes the service from Lagos to London via Kano. The aircraft is returned on June 1 and is replaced by two more of the same type two days later. Competition from charter carriers **Intercontinental Airlines, Kabo Air, Ltd.**, and **Okada Air, Ltd.** offering lower fares on the more heavily traveled routes outside the country begin to have a serious impact.

Despite the introduction of a new Jumbojet route from Lagos to New York, passenger bookings fall to 2,138,000 as a result of the world economic situation.

Jan Smit becomes managing director at the beginning of 1983. Orders are placed with Airbus Industrie for four A310-222s, but financing is uncertain. The F.27-200s are now replaced by B-737s, including three more owned B-737-2F9As delivered by spring.

While on final approach to Enugu on November 28, an F.28-2000 with 6 crew and 66 passengers, suddenly noses down and collides with the terrain 18 nm. short of the runway (53 dead).

Still, enplanements recover, growing to 2,223,117 on 28,627 scheduled departures.

A military coup in 1984 brings a new government and a management shakeup at the state airline. Nigerian Air Force Group Captain Bernard Banfa is appointed managing director and many of the KLM-trained personnel are dismissed. After its last service on March 5, a B-747-283B is returned to **SAS (Scandinavian Airlines System)**.

Late in the year after the government agrees to provide funds, the first two A310-222s are delivered; only one receives a name, *River Ethiope*, but both are assigned to African routes. The second Scandinavian Jumbojet is returned.

Passenger bookings for the year drop to 2,070,000; of the 450,000 international bookings, most come from Nigerian citizens paying in Nigerian funds.

The largest airline in Black Africa receives its second pair of A310-222s, *Rima River* and *Lekki Peninsula*, in January 1985. The B-727-2F9As and F.28-1000/2000s are put up for sale and the number of B-737s is reduced to the seven owned Dash-2F9As, including three wet-leased to **Air Tara**.

A310-222 service is launched in April to Ehugu, Kaduna, Kano, Maiduguri, and Port Harcourt.

During the summer, a cargo terminal is completed at Lagos' Murtala Muhammed (formerly Ikeja) Airport. Passenger boardings dip as the government gives the company low priority and barely provides for its essential needs, ignoring its ability to earn foreign currency.

The situation deteriorates badly in 1986, despite the May appointment of Anthony Ehije Okpere as managing director. The government is forced to expend nearly \$96 million to keep its national carrier afloat during the year.

On July 24, a B-747-283BC is re-leased from **SAS (Scandinavian Airline System)**; christened *Spirit of Courage*, it reintroduces routes to London and New York.

While practicing touch-and-go landings at Ilorin on January 10, 1987, a DC-10-30 with nine crew overshoots the runway, crashes, and catches fire; although the wide-body must be written off, there are no fatalities.

Also during the first quarter, the carrier divides its international and domestic operations, flying the latter under the name **Air Nigeria, Ltd.** A DC-10-30 and an A310-222 are transferred to the new operation.

By April, the carrier's cumulative debt is an almost unbelievable \$116 billion. In September, the International Monetary Fund recommends the airline's privatization to the Nigerian government.

The company goes bankrupt and it lays off a third of its staff during the fourth quarter; international operations are now reduced as three A310-222s are under repair leaving only the one leased Boeing Jumbojet, an A310-222, and a DC-10-30 to carry the international and regional load. Unpaid for certain services, **Air India, Ltd.** attaches the A310-222 at Lagos, forcing payment of a bond several weeks later to secure its release. Nigeria begins legal action against the Asian major and suspends its operations to Lagos. The year's deficit is \$87 million and payments are stopped on foreign loans contracted prior to the current year.

Although plans are made to purchase seven Avions de Transport Regional ATR42s early in 1988, the company's continuing financial difficulties force the idea to be suspended. A \$350,000 deposit on the turbo-props must be forfeited.

Cost-cutting measures are put in place; the staff is cut and a number of unprofitable local and regional routes, including those to Cotonou, Dakar, Kinshasa, and Nairobi, are ended or transferred to **Okada Air, Ltd.** Okada does not want the unprofitable routes and sues to prevent their acquisition.

Meanwhile, relations with the French aircraft industry sour as the carrier is unable to meet its obligations to Airbus Industrie and Sogerma concerning the purchase and technical support of its A310 fleet. On June 30, the Scandinavian Jumbojet lease ends and the *Spirit of Courage* returns to Sweden.

A B-737-2F9A with 132 passengers makes a bad landing at Port Harcourt on October 15; although the aircraft is damaged, no serious injuries are reported.

At the end of the year, Nigerian President Gen. Ibrahim Babangida appoints a presidential task force under Air Vice Marshal Abdullah D. Bello to "straighten out Nigeria Airways."

Enplanements for the year total 994,072 (216,693 international) and freight traffic allows is up by 3.6% to 17.8 million FTKs. Accumulated losses through December 31 total the equivalent of \$250 million.

In April 1989, Nigeria begins to increase frequencies on the greatly reduced Lagos to London service and to maintain flights on to New York. Several of the unprofitable routes suspended the previous year are restarted, including those to Cotonou, Dakar, Kinshasa, and Nairobi.

In July, the airline is able to acquire, through loans from the Equator Bank, the last DC-10-30 to come off the production line; the aircraft is also the last to officially bear the famous "DC" designation first employed for the Douglas DC-1 in 1933. In order to resume flights to Lagos in November, the airline, in October, drops its legal action against **Air India, Ltd.** and waives the bond that had secured the French-made airliner's release.

By order of French courts, two A310-222s are seized in 1990 for default of payment. Also, the ATR42 order is cancelled. Following a change in the long-standing relationship with **KLM (Royal Dutch Airlines, N.V.)**, DC-10-30 technical support is now provided by **Sabena Belgian World Airlines, S.A.**

Statistics, available only for the first quarter, show enplanements up 9.2% (200,000) over the same period a year earlier. Freight, on the other hand, skyrockets 126.5% to 7 million FTKs. The Nigerian government's presidential task force introduces a new management structure with Air Vice Marshal Bello now managing director.

Airline employment stands at 6,600 in 1991 and the fleet now includes 4 A310-222s, 2 of which are out of service, 3 B-707-3F9Cs, 2 of which are out of service in France, 7 B-737-2F9As, and 1 owned and 1 leased DC-10-30. An order is outstanding for a McDonnell Douglas MD-11. The B-707-3F9C *Olumo Rock* continues to handle the carrier's all-freight contracts.

As the result of refinancing and improved relations between the airline and the Toulouse-based manufacturer of its jetliners, France releases the two A310-222s.

Traffic figures are reported for only one quarter and show bookings up 11.4% to 256,006 and cargo up 6.4% to 5.23 million FTKs.

Following dissolution of the presidential task force in April, former Information Minister Prince Tony Momoh is appointed the carrier's new chairman in May, with Capt. Mohammed Joji as managing director.

Two tires aboard Flight 2120, a DC-8-61 with 14 crew and 247 passengers leased from **Nationair Canada, Ltd.** en route on a Hadj flight from Jeddah to Sokoto on July 11, burst and catch fire. The fire spreads to the aircraft, which crashes and burns during an attempted emergency landing back at the point of origin. There are no survivors.

In August, it is reported that the airline is deep in debt to the three European airlines that provide its technical support: **Aer Lingus Irish Airlines, Ltd.** (\$7 million), **KLM (Royal Dutch Airlines, N.V.)** (\$3 million), and **Sabena (Belgian World Airlines, S.A.)** (\$11 million).

Passenger bookings for the first six months of 1992, which are all of the traffic statistics publicized this year, are up 29.5% to 350,371.

Still in deep financial trouble, 32% of the schedule is dropped, with service withdrawn to Conakry, Freetown, and Robertsfield. Nine aircraft are grounded.

Plans are announced in July for the company's privatization. Under the schedule, 80% of the company will be split between foreign and domestic investors, with the remaining 20% staying in government possession.

Financial difficulties continue for the carrier in 1993. By now the workforce has been cut to 4,516 and a number of unprofitable routes remain suspended. The fleet comprises 4 A310-222s, 2 of which are out of service in France, 7 B-737-2F9As, 1 of which is out of service, with another held in Brazil by **VARIG Brazilian Airlines (Viacao Area de Rio Grandense, S.A.)** due to nonpayment of a \$2.7-million account, and 1 owned and 1 chartered DC-10-30.

A chartered B-707F is withdrawn, even as the government advances the carrier almost \$70 million to settle maintenance invoices from European creditors. A large domestic network is maintained linking all 19 states. International flights are undertaken from Lagos to London, Rome, Amsterdam, New York, and Jeddah, from Kano to Amsterdam, London, Rome, and Jeddah, and from Port Harcourt to London.

In July, Managing Director Capt. Joji becomes chairman and is succeeded by Engineering Director Andrew Agom.

On October 25, an A310-222 with 153 aboard is hijacked by 4 pirates who demand to be flown to Frankfurt. The aircraft is forced to fly to neighboring Niger, where all but 59 hostages are released. Negotiations are undertaken with government authorities, during which the pirates demand democracy in Nigeria before they will surrender. Given that impossibility, security police storm the aircraft on October 28, capturing the lot. In the hail of gunfire, a crew member is killed.

Cost-cutting and route reduction activities continue apace in 1994. The Brazilians continue to hold the company's "Baby Boeing" while a payment dispute with **Sabena Belgian World Airlines, S.A.** in July holds up D-checks due at Brussels on a pair of A310-222s.

An A310-222 is seized at London (LHR) during the month for non-payment over the past year of £100,000 in landing fees and other costs; the British release the Airbus as soon as Nigeria pledges to pay the bill.

While en route from Jeddah on December 19, the B-707-3F9C *Olumo Rock*, with five crew, suffers smoke in its cabin. Having declared an emergency, the Stratofreighter is unable to make an emergency landing and crashes into marshland near Hadejia Town, Nigeria (three dead).

Operations at the financially strapped company limp along in 1995 as the company is banned from flying to the U.S. and U.K. Markets now visited include Abidjan, Abuja, Accra, Amsterdam, Calabar, Conakry, Cotonou, Douala, Enugu, Jeddah, Jos, Kaduna, Kano, Libreville, Lome, Makurdi, Port Harcourt, Rome, Sokoto, and Yola.

As a result of its continued poor showing, the airline is shaken up again during September, as the government replaces the entire management team. Although Capt. Joji retains his chairmanship, Group Capt. Peter N. Gana is appointed the new managing director. At the same time, Aviation Minister Air Commander Nsisak Edouk notes that the Nigeria Airports Authority and Federal Civil Aviation Authority will also merge.

Flight 357, a B-737-2F9A with 8 crew and 129 passengers departs Yola on November 13 on a service to Lagos via Jos and Kaduna. While landing at the intermediate stop at Kaduna, the little Boeing overruns the runway into dry grass, which catches fire. The aircraft is engulfed in flames and 9 passengers are killed before they can evacuate.

In 1996, the carrier reduces unprofitable services and cuts back on its workforce. In addition to its 4 A310-222s (those held in France having since been released), the fleet continues to operate B-737-2F9As on its domestic 12-point network.

One of the B-737-2F9As suffers a serious engine fire just after take-off from Kano on March 12; although no casualties are reported from the aborted flight, the Boeing is heavily damaged.

Flights are also undertaken to regional destinations, plus Jeddah, London (LHR), and Rome. Service to Amsterdam is suspended.

Services are continued in 1997 with just four aircraft. Application is made to the aviation departments of both the U.S. and U.K. for authority to mount a resumption of services. The British government lifts its ban.

In March, the government imposes a doubling of domestic airline fares in an effort to provide additional income without more state subsidy. Also in March, Air Commodore Peter Gana is succeeded as managing director by Operations Director Alhaji Jani Ibrahim.

Cooperation begins with **Cameroon Airlines, S.A.** on that carrier's service to Paris. In addition, plans are discussed with **Ghana Airways, Ltd.** concerning possible code-sharing on a Harare to Johannesburg service and for joint operations to New York once the U.S. ban is lifted.

Following the grounding of an unairworthy Nigerian-registered freighter at London (LHR) on May 15, the British Department of Transport bars Nigerian-registered aircraft from visiting the U.K. again until safety problems are resolved. The ban is imposed one day before Nigeria Airways is due to resume passenger flights to London.

In retaliation, the government of Nigeria requires that **British Airways, Ltd. (2)** halt its daily B-747-136 flights to Lagos and its thrice-weekly DC-10-30 service to Kano. The British line flies Nigeria-bound passengers to Accra in Ghana, from which they are able to make arrangement for air charter or ground transport into Nigeria.

Nigeria Airways has other problems, particularly a lack of capacity. As a result, **Bellview Airlines, Ltd.** begins twice-weekly contract replacement services on its behalf on June 20 from Lagos to Nairobi. Also on behalf of Nigeria Airways, a DC-10-30 is briefly chartered by **Bellview Airlines, Ltd.** to operate weekly roundtrip flights to Rio de Janeiro.

Nigeria Airways officials meet with their counterparts from **Virgin Atlantic Airways, Ltd.** on September 29 to explore the possibility of joint operations between Lagos and London. Britain has banned Nigerian operations into the U.K. because of safety concerns.

Simon Tumba reports in the November issue of *Airline Business* that the airline industry in Nigeria is on the verge of collapse, with only 10 aircraft from 8 carriers left to provide domestic services for 90 million people.

By October, **ADC Airlines, Ltd.** has only one operational B-727, while **Kabo Air, Ltd.** has two. **Bellview Airlines, Ltd.** can fly only one DC-9, with Nigeria Airways, Ltd. and several small operators fly the remaining six. All call upon the government to politically and financially guarantee a restructuring of the industry.

The government promises to end Nigeria Airways' international monopoly and accept applications from those wishing to fly to foreign points as a way of gaining hard currency. For example, **Bellview Airlines, Ltd.** is granted rights to Nairobi, Rio de Janeiro, and Bombay—but has no aircraft with which to visit those points. The Bellview DC-9-32 does, however, begin multistop replacement service to Bombay in November.

Having concluded a code-sharing agreement with **Bellview Airlines, Ltd.**, dual-designator service commences to Amsterdam in April 1998 employing a Nigeria Airways Airbus. It will now be reported that 172 million naira is lost on the joint, if short-lived, service.

After years of military rule and an annulled 1993 election, a free national election is held in Nigeria on February 27, 1999, with retired General Olusegun Obasanjo the victor. A return to democracy and representative government begins apace. Dr. (Mrs.) Kema Chikwe will become the new aviation minister.

Still hurting from the company's treatment by BA and U.K. regulators over service from Lagos to London, officials of Nigeria Airways on March 15, according to an article by Tony Egbulefu in *The News*, have entered into a new, and controversial, pact with **Virgin Atlantic Airways, Ltd.** Under terms of a memorandum of understanding signed between the two carriers (based on several years of discussions) and due to take effect in late April, a phased-in four-part arrangement between the companies lasting 15 years will eventually see profits—and losses—shared on a fifty-fifty basis. Virgin will use its good offices to help Nigeria in the employment of third parties to achieve resolution of its foreign debt problem. The document also calls for immediate termination of Nigeria's partnership with **British Airways, Ltd. (2)** and a replacement of BA's codes with its own on all of Nigeria's services, including the lucrative routes from Lagos to Johannesburg, Amman, and Dubai. Legal penalties for abrogation of the BA pact are significant.

Vice Admiral Okhai Akhigbe, the chief of the general staff, challenges Chris Aligbe, Nigeria Airways director of corporate information, on behalf of the National Association of Aircraft Pilots and Engineers. Aligbe informs the admiral and the press that no agreement, pact, or joint venture "has been contemplated or signed with Virgin Atlantic Airways." The denial leads to speculation that the new arrangement will be scrubbed. In fact, it is only suspended, as negotiations are reopened.

The company goes temporarily out of business on April 5 when its B-737-2F9A taxis into the airline's hangar in Ikeja, Lagos, for routine maintenance checks. The *Tempo* reviews the status of the fleet in print two days later. A B-737 marked 5N-AUB and a DC-10-30 marked 5N-ANN are both grounded in Jakarta, Indonesia, where they have been seized. The DC-10-30 4W KLM rots in Amsterdam, while the B0707s 5N ABK and 5N AND are grounded at the Irish cities of Dublin and Shannon, respectively. The A310-222 5N AUG, grounded in Brussels, has been sold by the Alhaji Jani Ibrahim-led management for \$500,000. Four other B-737s and three A310-222s remain grounded in Lagos.

Speculation is renewed during the second week of April that a strategic agreement will soon be signed with **Virgin Atlantic Airways, Ltd.** The airline's two major unions—pilots and the National Union of Air Transport Employees (NUATE)—oppose the pact. The workers see deterioration at the national airline and criticize its recent expenditure of N\$30 million to purchase properties in Marwa Gardens and a large number of new automobiles for managers. Pilots and flight attendants are upset by Clause 4.7 in the joint-venture agreement that forbids the use of Nigerian deck and cabin crew members.

Placard-carrying NUATE members picket Airways House on April 13 protesting the VAA development. The union members fear the loss of jobs should the British airline takeover management of their carrier.

Capt. Mohammed Joji, general secretary of the Airways Operators of Nigeria, sends a strongly worded five-page document to the national government on April 27 protesting the proposed commercial agreement between Nigeria Airways and **Virgin Atlantic Airways, Ltd.** The document warns the country's leaders not to allow Nigeria to be turned into a battlefield by VAA and competing **British Airways, Ltd. (2)**.

On the last day of the month, Lagos lawyer Femi Falana files suit at the Federal High Court on behalf of all of the dissatisfied parties seeking to have the agreement declared "illegal, unconstitutional, null and void" and to obtain a perpetual injunction to restrain Nigeria Airways from signing the document "in any manner whatsoever."

Reviewing the situation for the Lagos-based *The Times* on May 1, reporter Tunde Ojodun writes: "As things stand, NAL cannot unilaterally terminate the BA agreement without dire legal consequences. Neither can it sign the pact with Virgin without dire and financial results." The proposed commercial agreement has now become the media circus it was never meant to be.

The controversies surrounding the grounded fleet, salary arrears, possible inflated and fraudulent payments, and the **Virgin Atlantic Airways, Ltd.** compact will lead to a management change at the airline. Capt. Ibrahim is succeeded as managing director by Edmund Abayomi Jones.

As part of the partnership alliance with **British Airways, Ltd. (2)**, a new joint service between London (LHR) and Lagos begins on December 1. BA supplies a B-747-236B wearing a computer-generated "green wave" livery, pilots, and several of the cabin crew; a number of Nigerian flight attendants also serve. A six-year ban on flights to the U.S. due to lax security measures at Lagos Airport is listed during the month.

Enplanements on the year's 3,464 scheduled departures total 109,214. That passenger figure represents a 95% reduction from the 2 million annual boarding high point back in 1983; the departure figure is down 88% from the 28,627 of 1983.

Airline employment at the beginning of 2000 stands at 2,595. In keeping with the new government's efforts to root out corruption in state enterprises, a six-member Judicial Commission of Inquiry is established under Justice Obiora Bwazota (Ret.) in February to look into the activities of Nigeria Airways, Ltd. between 1980 and 1999.

Also during the first quarter, Nigeria Airways opens discussions with **Air France, British Airways, Ltd. (2), KLM (Royal Dutch Airlines, N.V.), Ghana Airways, Ltd., Deutsche Lufthansa, A.G., and Swissair, A.G.** in its search to find a partner willing to join it in flights to the U.S. A decision will be recommended to Aviation Minister Chikwe by a facilitation committee under the chairmanship of Engineer Zakari Haruna.

For the summer season that begins at the end of March, Nigeria makes a number of increases to its weekly domestic schedule from Lagos. Flights boosted include those to Port Harcourt (2 to 6), Abuja (10 to 16), Yola (2 to 3), Kaduna (2 to 3), Maiduguri (3 to 4), Yola (2 to 3), and Kano (2 to 3). Flights to Calabar and Sokoto will be flown weekly.

The Justice Obiora Bwazota Judicial Commission of Inquiry (JOB-JCI) begins public hearings at Abuja in April with plans to take evidence from some 60 witnesses, including onetime Minister of Transport and Aviation Lt. Gen. Jeremiah Useni (Ret.) and the airline's former managing director, Maj. Gen. Olu Bajowa (Ret.). Later plans call for another 65 witnesses to be examined in Lagos hearings.

Turning over hundreds of documents, former Director of Finance Mrs. Abosede Olutayo Oluwe testifies twice before the Commission at the end of April. Citing dates and instances during her tenure, she reports that in 17 years, the company may have lost 423 million naira due to improper bookkeeping and another 200 million naira through misappropriation. In 1997 alone she reports, approximately 180 million naira was paid out to various creditors without vouchers, with another 361 million naira paid to outstations with no receipts kept.

In testimony at the beginning of May, former Managing Director Air Commodore Peter Gana (Ret.) reveals that a number of staff had colluded with an insurance company, both in Nigeria and abroad, to swindle the airline through inflated insurance premiums. In 1996, for example, Nigeria Airways paid 22 million naira in premiums, a 20% increase over the 2% figure paid earlier.

Former Managing Director Ibrahim gives testimony before the Commission in mid-May. Among his more startling revelations is the story of the woman "Nita" employed by the carrier as a sales agent in New York during his days as operations director. It was her practice for some years to charge customers 150–200 naira above the posted airfare for every ticket sold on the New York to London route and pocket the difference. When Aviation Minister Tony Graham-Douglas canceled her contract, the woman, apparently highly connected in the Nigerian government, sued the airline. The case, according to Ibrahim, was later withdrawn and settled out of court after Nigerian Airways agreed to pay damages.

The onetime managing director confirms earlier reports that the Fidelity and Insurance Brokers concern had, indeed, clandestinely won the insurance accounts of NAL and thereafter tripled the premium price.

A two-day strike by airport workers protesting higher petroleum prices begins on June 8, forcing cancellation of all company services from Lagos Airport. The deadline for proposals for a joint venture between Lagos and New York closes on June 30.

In June, the carrier enters into discussions with the new **Albark Airlines, Ltd.** concerning the possibility of joint service to New York, once the U.S. FAA gives clearance. Clearance for a resumption of service to the U.S. is received from Washington, D. C. the following month.

AirlinersOnline.Com reports on July 12 that the airline is down to just three aircraft in operating condition and that the Nigerian government has received a consultant's recommendation that the company be liquidated. DC-10-30 twice-weekly return service to Dubai is resumed on July 16 after the wide-body's engines have been refurbished.

On July 21, Nigerian Aviation Minister Chikwe announces that the flag carrier will join with **South African Airways (Pty.), Ltd.** on the launch of flights to New York (JFK) on August 15. SAA has won the bid over **Ghana Airways, Ltd.** by also agreeing to help the Nigerians refurbish their grounded B-737-200 fleet.

On August 8, the carrier formally signs a contract with **South African Airways (Pty.), Ltd.** under which it agrees to resume New York service on behalf of the Lagos-based flag carrier. Under the pact, SAA will provide a Jumbojet with seating for 330 passengers, out of which 109 are assigned to the Nigerians.

Under contract, a SAA B-747-344 undertakes a promotional flight, code-shared with **Delta Air Lines**, on behalf of Nigeria Airways on August 15 between Lagos and New York (JFK). Aboard are SAA Chairman Behki Sibiyi and President/CEO Coleman Andrews; Engineer Zakari Haruna, representing the Nigerian Minister of Aviation; Nigeria Airways CEO Edmund Abayomi Jones; chairmen of the Nigerian House and Senate aviation committees; seven journalists; and a full complement of executives from the two airlines, plus travel agents. Five more such roundtrips will be operated by the end of October.

The JOB-JCI resumes its public hearings at Court Four of the Ikeja High Court at Lagos on August 23. Among the 65 people giving testimony are Sen. Jim Nwobodo; the chief executives of NAL Insurance, Nicon Insurance Corporation, Alliance and General Insurance, and Fidelity and Insurance Brokers; former Aviation Ministers Capt. Benoi Briggs and RAdm. Patrick Koshoni (Ret.); former Managing Director

Ibrahim; Director General of the Bureau of Public Enterprises Alhaji Mohammed El-Rufai; and the Nigeria Airways general managers at Jeddah, Maiduguri, and Jos.

Following a four-year interruption, a Nigerian Airways DC-10-30 resumes weekly Lagos to London (LHR) return service on September 5 in association with **British Airways, Ltd. (2)**. The B-747 committed to the joint venture between the two airlines is now withdrawn and replaced with a B-777-236ER.

The next day, tempers flare at the JOBJCI hearings when former Managing Director Ibrahim deflects a question as to how a huge sum of 405 million naira was paid out by NAL between April and June 1999 with vouchers raised for just 22 million naira of that amount. He also refuses to justify his failure to change acquisition procedures at the NAL engineering division, even after it was revealed that its director and his deputies were acquiring, storing, using, and losing aircraft parts without any records. The director, he suggests, was incompetent but forthright; without experience, he was simply unable to cope with the management of people possibly engaged in outright fraud.

Upon hearing these comments and deeming them inadequate, Chairman Justice Nwazota faces the former airline leader and bluntly, according to the September 7 issue of the Lagos *Vanguard Daily*, informs him: "Alhaji Jani, by now, you should know that the game is up! All these lapses we have been pointing your attention to were robust avenues for perpetration of big time fraud."

It is not Ibrahim, however, who is indicated for wrongdoing, but his predecessor, Air Commodore Gana (Ret.) On September 25, the JOBJCI accuses the former managing director of wrecking NAL to the tune of 4.5 billion naira during his 18-month tenure in 1995–1997. Found particularly unacceptable were his failed or grossly inflated contract awards to banks and aircraft repair companies, for which he had blamed deputies during his testimony. Asked to comment on this damnation of his stewardship, Gana informs the Lagos *This Day* simply: "I did my best."

British Airways, Ltd. (2) Chairman Lord Marshall visits Nigeria on October 26 to discuss future partnership activities between his carrier and NAL. On October 27, the joint-venture document with BA is renewed for another year; two days later, BA places a B-777-236 on its London to Lagos.

For the New York charter frequencies due to be turned into thrice-weekly scheduled roundtrips on October 31, SAA has painted a Jumbojet in a special joint color scheme. Before the service can be launched, however, there is a dispute over the number of seats Nigeria Airways will be allowed to sell under the August agreement. The impasse forces the start-up to be put on hold.

On November 5, arrangements are completed for the charter of a DC-10-30 from **Ghana Airways, Ltd.** for the period from late December into April. The timeframe will cover Christian and Muslim pilgrimages to the Mideast for Christmas and Hadj observances.

The process of privatization is reported on November 10. The government is prepared to sell off 90% of the carrier, including 10% to workers, 20% to interested Nigerians, 20% to institutional investors, and 40% to foreign investors, including airlines. It is further noted that **British Airways, Ltd. (2)**, **KLM (Royal Dutch Airlines, N.V.)**, **Singapore Airlines, Ltd.**, **Virgin Atlantic Airways, Ltd.**, and **South African Airways (Pty.), Ltd.** have all expressed an interest in placing bids.

Nigerian Aviation Minister Chikwe personally works to make certain that the arrangement with the South Africans does not collapse; after diplomatic intervention, the dispute with **South African Airways (Pty.), Ltd.** is settled on November 11. The same day, it is reported that the joint flights to the U.S. will takeoff in December; they will not, in fact, begin until February 21.

A B-727-2H9A is wet-leased from **JAT Yugoslav Airlines** on November 13. The dispute with **South African Airways (Pty.), Ltd.** is settled on the same day.

Reuters, Ltd. reports on November 16 that the Nigerian Civil Aviation Authority has removed more than 450 unsafe aircraft from the national

register of licensed planes. Most, including 10 previously operated by Nigeria Airways, were abandoned at various airports in different, but acute, states of disrepair. The Nigeria Airways aircraft include five B-737-2F9As and five A310-222s.

Recommendations of a World Bank-sponsored study of the airline by the International Finance Corporation are accepted in December, including the replacement of Nigeria Airways with a new national flag carrier. The government, after reviewing the report, indicates that it will move forward with its current privatization plans seeking tenders for a "clean slate" new entrant. If all goes as scheduled, the process of finding new ownership will be completed by June, at which point all licenses, aircraft, staff, and facilities will be turned over to a new national airline, probably with a new moniker.

The report will be released to the News Agency of Nigeria on February 28 and show the airline to be technically insolvent with a trade debt of \$67 million.

NIGERIAN AIR SERVICES, LTD.: Nigeria (1946–1947). NASL is set up at Lagos in 1946 under order of the West African colonial government. A contract is entered into with **British Overseas Airways Corporation (BOAC)** to provide twice-weekly Douglas DC-3 roundtrips linking the capital city with Jos, Kano, and Port Harcourt.

The newly formed **West African Airways Corporation** assumes authority for the Lagos to Kano service in October 1947. When its contract ends in December, BOAC turns over responsibility for the Jos and Port Harcourt routes as well.

NIGHT EXPRESS (LUFTVERKEHRSGESELLSCHAFT, mbH.): Building 511, Room 3056, Frankfurt Airport, Frankfurt, D-60549, Germany; Phone 49 (0) 69 690 45751; Fax 49 (0) 69 690 22101; <http://www.london-luton.com/cargo/nightexpress/nexpress.htm>; Code EXT; Year Founded 1984. Night Express, sister carrier to **Night Express, Ltd.**, is founded at Frankfurt in 1984 to provide express services to a number of domestic destinations. Revenue operations, coordinated with the British company, are started and continued by one each Beech 99 and Beech King Air 90.

The King Air is withdrawn in 1993 and in 1994 is replaced by another Beech 99. "just-in-time" charter flights are now introduced.

Revenue flights continue in 1995–1998. During these years, a Cessna 208 Caravan I is acquired and the companies also operate nightly cargo flights (except Saturdays) on their "home" route Frankfurt–London (CTN)–Frankfurt.

Airline employment at the beginning of 2000 totals 12, 10 of whom are flightcrew.

NIGHT EXPRESS, LTD.: Hangar 129, Room 14, Prince Way, London Luton Airport, Luton, England, LU2 9PD, United Kingdom; Phone 44 (0) 1582 738585; Fax 44 (0) 1582 738588; <http://www.london-luton.com/cargo/nightexpress/nexpress.htm>; Year Founded 1984. Night Express, Ltd., sister carrier to **Night Express (Luftverkehrsgesellschaft, mbH.)**, is established at London's Luton Airport in 1984 to operate scheduled and contract freight flights from England into Northwest Europe. Regular nightly express cargo flights, closely coordinated with the German partner, are made to Dublin, Brussels, and Frankfurt with a Piper PA-31-350 Navajo Chieftain and two Beech 99s.

"Just-in-time" cargo charters are introduced during the early 1990s and the fleet is increased by the addition of a Cessna 208 Caravan I. Nightly cargo flights (except Saturdays) continue on the two carrier's "home" route of London (CTN)–Frankfurt–London (CTN).

NIHON KINKYORI AIRWAYS COMPANY, LTD. (NKK) (JAPANESE SHORTHHAUL AIRWAYS COMPANY, LTD.): Japan (1974–1987). The Japanese Shorthaul Airways Company, Ltd. is founded at Tokyo in 1974 to provide scheduled commuter services to destinations in northern, central, and southwestern Japan. Shareholders include **Japan Air**

Lines Company, Ltd., All-Nippon Airways Company, Ltd. (ANA), and Toa Domestic Airlines, Ltd. The fleet grows to include 8 Nihon YS-11As, 2 de Havilland Canada DHC-6-300 Twin Otters, and by 1982, a single Boeing 737-200. Destinations, many of which are replacement flights for ANA, include Fukue, Fukuoka, Hakodate, Iki, Kagoshima, Miyake Jima, Monbetsu, Nagasaki, Nemuro, Nakashibetsu, Okushiri, Oshima, Rashiri, Rebun, Sapporo, Tokyo, and Wakkanai.

Enplanements in 1982 (fiscal year ending on March 31, 1983) total 798,000.

While on final approach to Sapporo on March 11, 1983, a YS-11A-208 with 6 crew and 47 passengers lands 100 m. short of the runway in 40-cm. deep snow, breaking up; there are no fatalities.

Passenger boardings for the year climb to 926,620.

Passenger boardings average just over a million by the middle 1980s. The fleet is upgraded by the addition of three B-727-200s and in April 1987, the carrier is renamed **Air Nippon Company, Ltd.**

NIHON KOKU KABUSHIKI KAISHA (NKKK). See **JAPAN AIR TRANSPORT COMPANY, LTD.**

NIHON KOKU YUSO KABUSHIKI KAISHA (NKYKK). See **JAPAN AIR TRANSPORT COMPANY, LTD.**

NIHON SANGYO AIRWAYS, LTD. (JAPAN INDUSTRY AERO SERVICE, LTD.): Japan (1983–1987). Founded at Osaka on December 25, 1967, Japan Industry Aero Service, Ltd. commences nonscheduled flights on April 1, 1968. From Yao Airport, the company builds up a nationwide network of passenger and cargo charter and contract service destinations.

By the end of the 1970s, the fleet comprises 13 Cessna 172s, 5 Cessna 150s, 1 Cessna 206, 1 Cessna 207, and 1 Beech Bonanza. Early in 1983, the 70-employee firm elects to begin scheduled passenger commuter service linking its base with Nanki Shirahama on the island of Honshu. Two Cessna 402s are acquired to undertake the route, which is maintained until 1987.

NIHON SANGYO KOKU COMPANY, LTD. See **NIHON SANGYO AIRWAYS, LTD. (JAPAN INDUSTRY AERO SERVICE, LTD.)**

NIHON YURAN HIKO (JAPAN SIGHTSEEING FLYING COMPANY, LTD.). See **FUJITA AIRLINES COMPANY, LTD.**

NIKOLAEVSK-NA-AMUR AIR ENTERPRISE: Russia (1992–2001). The former **Aeroflot Soviet Airlines** Nikolavsk-na-Amure division is reformed into a joint stock company in 1992. Under the direction of Comdr. Valeri Domatov, the company restarts scheduled and charter domestic passenger and cargo flights around its region with a fleet of 9 Let L-410s and 4 Yakovlev Yak-40s.

Service is silently maintained over the remainder of the decade and into the new millennium. During these years, the fleet is changed to include 6 L-410UVPs, 2 L-410-UVP-Es, and the 4 Yak-40s.

This carrier will be merged into Dalavia on April 1, 2001. On May 4, the two will be joined with Vostok Airlines, effective August 1, to form **Khabarovskavia**.

NILE DELTA AIR SERVICE, LTD.: Egypt (1976–1986). NDAS is established at Cairo in 1976 as an affiliate of the French rotary-wing operator **Heli-Union, S.A.** Two Douglas DC-3s are acquired and beginning in the spring of 1977, are employed to fly passenger and contract cargo services in support of the national energy industry.

One of the two DC-3s with seven passengers crashes into the Mediterranean on November 5, 1978; there are no survivors. It is replaced with a Fokker F.27-100.

Operations continue apace thereafter and without incident until the carrier shuts its doors in 1986.

NILE VALLEY AVIATION, LTD.: Egypt (1977–1987). The first indigenous Egyptian concern to be licensed to offer air transport during the past 20 years, NVA is set up at Cairo in 1977. For the next 10 years, the company offers charter passenger and contract service flights with 4 Partenavia P.68s.

NIPPON CARGO AIRLINES COMPANY, LTD. (NCA): 14F Shiroyama JT Mori Building, 4-3-1 Toranomon, Minato-ku, Tokyo, 105, Japan; Phone 81 (3) 5401 4500; Fax 81 (3) 5401 4807; <http://www.ananet.or.jp/nca>; Code KZ; Year Founded 1978. Once known as **Nippon Air Cargo Company, Ltd.**, NCA is formed at Tokyo on September 21, 1978. Ownership is divided between **All-Nippon Airways Company, Ltd. (ANA)** and four shipping lines: Kawasaki Kisen Kaisha (K Lines), Mitsui OSK Lines, Nippon Yusen Kabushiki Kaisha (NYK Line), and Yamashita-Shinnihon Steamship Company (YS Lines). One-time Ministry of Transport head and YS Lines Chairman Takeo Hori becomes chairman, with Hisayoshi Terai as executive vice president. An application for scheduled all-cargo certification is made to the government on November 16.

Action on the requested permits is not forthcoming until early in the 1980s, when the cargo carrier wins backing from the Keidandren, a group of important Japanese economic associations. This confederation pushes the airline's case.

Japanese government permits are finally awarded in August 1983 and in November, much to the chagrin of **Japan Air Lines Company, Ltd. (2)**, NCA is designated the nation's second cargo carrier to the U.S.

After these political successes, the all-cargo enterprise applies to the U.S. CAB in early 1984 for scheduled authority to operate freighter flights to the U.S. At this point, the company becomes the flash point for bilateral government-to-government air negotiations, later known as "open skies," which, even after initial resolution, will flare again just over a decade later. The first of two \$100 million (each) Boeing 747-281F freighters ordered for transpacific service is acquired from a leasing firm on December 13. Without U.S. permission in hand, it must be parked.

ANA supplies the second cargo-hauler on February 28, 1985; it, too, is parked at Tokyo (NRT) incurring daily maintenance costs.

After marathon talks, studies, presentations, and representations, by bureaus, airlines, organizations, and individuals, an agreement is finally signed between the U.S. and Japan on May 1. Disputes between the corporate parties are settled and both nations are, by terms of the pact, allowed to nominate up to three new carriers to fly the Pacific. In addition to **Japan Air Lines Company, Ltd. (2)**, the Japanese government appoints ANA and Nippon Cargo to join in the over-ocean competition.

Six-times-per-week scheduled services to open from Tokyo (NRT) to New York (JFK) via San Francisco on May 8. A third B-747-281F arrives on October 15.

Beginning on April 1, 1986, the company is allowed to increase its frequencies each year by a percentage equal to the percentage increase in total air cargo traffic between Japan and America in the preceding calendar year. Thus, early in the year, services over the New York route grow to eight per week.

In October 1987, company officials report that 537 million FTKs have been flown since January, up 61.8% from a year earlier. Weekly B-747-281F scheduled return services are inaugurated on October 5 between Tokyo (NRT) and Singapore. Over the next seven years, the carrier adds additional destinations to its route network, including Amsterdam, Anchorage, Bangkok, Chicago, Hong Kong, Los Angeles, Milan, Nagoya, and Seoul. Occasional charters are also flown.

The 481-employee continues to operate apace in 1988, with a fleet doubled in number to two owned and two chartered B-747-281Fs, with the arrival of the fourth Jumbojet freighter on January 27. Weekly B-747-281F flights are inaugurated in cooperation with **KLM (Royal Dutch Airlines, N.V.)** from Tokyo to Amsterdam on June 7.

The company makes history in the fall when it delivers the first ever approved-before-arrival customs releases on a U.S.-bound international

shipment to an airfreight broker and bonded warehouse 10 hours before the actual cargo arrives. Developed by the Port Authority of New York and New Jersey, the automated system is known as Air Cargo Fast Flow.

Weekly all-cargo service is inaugurated in November 1989 between Tokyo and Bangkok.

Traffic figures are released for the first 9 months of the year and show that cargo has risen 18.3% over the same period a year earlier, to 619.56 million FTKs.

Company employment is increased by 10.6% in 1990 to 532. All-cargo services from Tokyo to Bangkok are initiated in January and a new air cargo terminal is completed at Chicago in the fall. Four-times-per-week Tokyo (NRT) to Chicago (ORD) freight flights commence in October and a fifth B-747-281F joins the fleet in November. Los Angeles is added to the route network from Tokyo to New York via San Francisco in December.

For the year, freight traffic climbs to 773.57 million FTKs. Income exceeds expenses and there are profits: \$11.16 million (operating) and \$17.7 million (net).

Company employment is increased by 5.3% in 1991 to 576 and the fleet now includes 2 owned and 3 leased B-747-281Fs. Employing the newest Jumbo freighter, the company begins thrice-weekly all-cargo service in March from Tokyo to Chicago. A thrice-weekly Los Angeles to Tokyo all-cargo route is opened in May, along with one from San Francisco. When the last B-747-281F is delivered in December, it marks the end of Boeing's 21-year production run of Dash-200s, of which 393 are built.

Cargo accelerates 4.5% to 985 million FTKs. Revenues increase 16.3% to \$349.8 million; however, with costs up, operating profit declines to \$4.88 million. Net profit plunges all the way to \$180,000.

In 1992, Chairman Takeo Hori's employee population is increased by 15.1% to 665 and his fleet now includes 6 B-747-281Fs, 4 of which are leased.

Statistics are provided during the first 7 months and show freight traffic up a minor 0.1% to 604.54 million FTKs.

The payroll grows by 1.9% in 1993 to 678 and in January a twice-weekly joint freight operation with **Alitalia, S.p.A.** commences over a route from Tokyo (NRT) via Amsterdam to Milan.

Cargo increases a welcome 14.8% to 1.27 billion FTKs. A net loss of \$681.1 million comes on top of an operating gain of \$43.8 million.

The loss leads to a new cost-cutting program, introduced in February 1994, designed to save upwards of \$22.9 million per year. Under its terms, aircraft-lease-rate reductions are to be negotiated, some aircraft will be retired, and cooperation with ANA will be increased. During the year, the workforce is reduced by 5.4% to 615; however, a joint agreement is initiated with **KLM (Royal Dutch Airlines, N.V.)** that provides for joint freight operation over a route from Tokyo (NRT) to Amsterdam.

A new warehouse is opened at New York (JFK) and twice-weekly return cargo flights begin from Tokyo (NRT) and Osaka (KIX) to Kuala Lumpur in October. Both new services also visit Bangkok and Singapore. Work is begun on a new Los Angeles cargo facility.

Freight traffic rises 12.6% to 1.45 billion ton kilometers and revenues accelerate 6.9% to \$394.3 million. Although a \$60.5-million operating profit is reported, there is a net downturn of \$48.5 million.

Airline employment grows by 8.9% during 1995 to 670. The Los Angeles (LAX) facility is completed and cargo carriage increased to 1.57 billion FTKs.

Up one year and down the next, the workforce is reduced by 25.2% in 1996 to 501 and the fleet now includes 6 B-747-281Fs, 4 of which are leased, plus 1 B-747SR-81F.

In February, a basic agreement is reached with **UPS (United Parcel Service)** concerning distribution possibilities. As NCA works with cargo and UPS with parcels, their operations do not directly cross. However, NCA will, under the agreement, be able to employ the UPS U.S. domestic trucking network to provide a direct delivery service.

After several years of sometimes-bitter negotiations between Japan and the U.S., a new cargo agreement is signed between the governments

of those two nations on April 16. Under its terms, NCA is allowed 18 additional weekly frequencies to the U.S. as well as 3 new destinations.

Designed to help them both fill capacity on eastbound transpacific freighters, Nippon and **Northwest Airlines** sign an interline agreement on June 1. Under its terms, each carrier, which now operates two weekly B-747-281F flights between Osaka (KIX) and Chicago (ORD), will have access to the other's two flights on the same routes. The arrangement is similar to an earlier interline agreement that the two have between Tokyo (NRT) and the airports in Seoul, Taipei, and Singapore.

An agreement is also reached with **KLM (Royal Dutch Airlines, N.V.)** during the first week of June for a joint-cargo B-747Fs service between Osaka and Chicago. In October, six-times-a-week code-sharing flights commence from Osaka via Taipei to Los Angeles with **UPS (United Parcel Service)**. UPS had been awarded the route in April at the conclusion of bilateral talks between Japan and the U.S. Nippon is guaranteed four maindeck pallet positions on the UPS B-767-34AFER.

A total of 1.61 billion FTKs are operated, a 3.5% increase. Revenues total \$489.8 million.

Destinations visited in 1997 include Amsterdam, Anchorage, Bangkok, Chicago, Hong Kong, Los Angeles, Milan, Nagoya, New York, San Francisco, Seoul, and Singapore. Flights to Manila begin in early March.

During the spring, the carrier begins to transport large volumes of salmon from Chile to Japan, even though Nippon does not serve the South American country. The fish are brought to Los Angeles (LAX) by **Lan Chile Airlines, S.A.** and **Fast Air Chile, S.A.** and transshipped.

An eighth B-747F joins the fleet during the summer.

A third B-747-281F roundtrip is begun on September 12 between Osaka and Kuala Lumpur. A total of 1.81 billion FTKs are flown on the year and income is boosted to \$528.1 million.

At the beginning of 1998, Nippon Cargo is the 19th largest airline in the world, in terms of freight carried. The fleet now includes 1 each B-747-100SRF and B-747-200SF plus 6 B-747-200Fs. Cargo traffic accelerates by 5.7% this year, with 1.96 billion FTKs operated.

Airline employment stands at 630 at the beginning of 1999. Freight traffic for the year jumps 12.9% to 2,215,933,000 FTKs.

Among the world's top 25 airlines in 2000, Nippon Cargo ranks 17th in FTKs. The B-747 fleet now includes 1 each Dash 3D3BF and Dash-81BF and 7 Dash-281Fs.

NIPPON KOKU YUSO KENKYUJO (NKYK) (JAPAN AIR TRANSPORT RESEARCH INSTITUTE): Japan (1922-1938).

Japan's first airline of substance is founded by Choichi Inouye at Sakai City, near Osaka, on June 4, 1922. With capitalization of ¥ 500,000 provided by the Itoh Flying School and interested investors, the new concern purchases 10 ex-Imperial Navy Yokosho (Aichi) AB-4 floatplanes. On November 15, the company inaugurates the nation's first regular air service from Sakai City to the Shikoku island community of Tokushima, by way of Wakayama on Honshu. The fare is ¥ 5 one-way. The Japanese government, wishing a successful experiment, commits to an ¥ 8,000 annual subsidy.

During the spring of 1923, a weekly roundtrip route is extended via Tokushima to Imabari. Demand is such that frequencies are increased to thrice weekly. During the first full year of service, which is celebrated on June 4, it can only be shown that a total of 27 passengers have been flown and just over 1,000 kilograms of cargo transported. Most customers have been wealthy citizens seeking easy transport to holiday destinations along the northern coast of Shikoku.

Despite earthquakes and typhoons (the one on March 25, 1925 destroys the company's Sakai City hangar), services will continue and expand. Once the hangar is rebuilt, frequencies between Osaka and Imabari become daily on May 20. In early May 1926, a new route is started to Oita on the island of Kyushu with a Supermarine Southampton flying boat imported from the U.K.

Two float-equipped Junkers F-13s are imported from Germany in January 1928 and will be employed in July to inaugurate the company's

first regularly scheduled services. Flights to Matsuyama commence in 1929.

The fleet is increased through the 1930s and comes to include not only the Southampton and Junkers, but 10 Hansa Brandenburgs, a Savio Marchetti S.62, and various Aichi products. Service is inaugurated to Shirahama and Beppu in 1937.

NISHI NIHON AIRWAYS COMPANY, LTD.: Ohnishi Building 4-7-11, Tenjin, Chuo-ku, Fukuoka, 810, Japan; Phone 81 (92) 761-6257; Fax 81 (92) 711-7628; Year Founded 1954. Nishi Nihon is established at Fukuoka in 1954 to offer charter and contract service flights with a mixed fixed-wing and rotary-wing fleet. By 1985, the company operates 2 Cessna 206 Stationaires and several Kawasaki Bell 47Gs, Aerospatiale AS-350 Ecureuils, and an AS-360C Dauphin.

The nonscheduled concern continues to grow over the next 15 years. In 2000, a total of 17 full-time pilots are employed. The helicopter fleet now includes 5 AS-350B Ecureuils, 1 Dauphin, 2 Bell 204s, 4 Bell 206B JetRangers, 4 Kawasaki Bell 47Gs, 4 Aerospatiale SA-315 Lamas, and 6 Hughes HU-369HS. A Cessna 172 Skyhawk and two Cessna TU-206A Turbo Stationaires are also flown.

NITLYN AIRWAYS: United States (1979–1980). NA is set up at Shirley, New York, in 1979 to offer scheduled air taxi flights to Westhampton and New York (JFK). Although daily Piper PA-31-350 Navajo Chieftain roundtrips are duly inaugurated, they cannot be maintained beyond 1980.

NITTO AVIATION COMPANY, LTD.: Japan (1952–1964). Nitto is formed by Tadashi Fujimoto at Osaka on July 4, 1952 to provide air taxi and charter services over regional routes with small aircraft. Backing is provided by the Sankei newspaper. Two years later, on December 23, 1954, and with backing from Japan Air Lines Company, Ltd. (2), the carrier commences scheduled de Havilland Canada DHC-3 Otter services to Nagoya and various destinations on Shikoku Island. Operations continue apace in 1955–1958.

Late in 1959 and early in 1960, two Grumman G-73 Mallards are purchased from General Motors. In June, scheduled service is started to Kushimoto and Shima, connecting to Nagoya.

A third Mallard follows these into service during 1961, followed by two more in 1962. Plans are made to initiate Convair CV-240 services to Kochi from Osaka and Nagoya. Two crashes will defeat that goal, even though an airliner is acquired and painted in company livery.

An Otter goes down at Awaji-Oshima in May 1963 (nine dead). One of the Mallards is wrecked near Osaka on February 18, 1964; there are no survivors. On April 25, almost a decade after its founding, Nitto is one of three companies merged to form Japan Domestic Airlines Company, Ltd.

NIZHEGORAD AIR LINES (NIZHEGORODSKY AK). See NIZHEGORAD AIRLINES (NIZHEGORODSKIIE AVIALINII)

NIZHEGORAD AIRLINES (NIZHEGORODSKIIE AVIALINII): Nizhni Novgorod Airport, Nizhni Novgorod, Privolzhsky Zone, 603056, Russia; Phone 7 (8312) 541 141; Fax 7 (8312) 547 122; Code NGL; Year Founded 1994. With shareholding divided between the state (38%), employees (40%), and private investors (22%), Nizhegorad is established at Nizhni Novgorod Airport in 1994 to offer regional and domestic scheduled and charter services. Commander Nikolai Moshkov oversees the flights of 29 Antonov An-2s, 5 An-24Bs, 1 An-26, 6 Tupolev Tu-134s, and 8 Tu-154A/Bs. Enplanements total 262,338.

There is no change in the fleet during 1995. Passenger boardings inch up 0.2% to 262,900 but freight traffic declines by 26% to 2.42 million FTKs.

Although flights continue 1996–1998, business suffers a downturn, due largely to the Russian currency crisis that begins in August of the latter year. By the end of this period, only nine aircraft remain opera-

tional. The company declares bankruptcy on February 21, 1999. Three days later, receivers are appointed for the concern, which begins court ordered restructuring. During the spring, two An-24Bs are leased to Royal Phnom Penh Airways Company, Ltd., which is being established by Prince Norodom Chakrapong. A complement of Russian pilots and flight engineers from the carrier are seconded to the new Cambodian carrier.

NGL continues flights with three An-24Bs, while attempting to reorganize.

Airline employment stands at 870 at the beginning of 2000. Two routes are operated, one each to Moscow and St. Petersburg, and an An-24B is chartered from Saransk State Aviation Enterprise.

On March 17, the media reports that despite government support, the airline faces total collapse. Flights continue into the spring and summer, without further headline. Russian newspapers reveal on August 22 that efforts to create a debt-restructuring package between the airline and its creditors have begun, but by August 31 there has been no final action. The company is able to conclude a restructuring agreement on September 7 and narrowly escapes closing down after an eleventh hour agreement with creditors.

On December 1, the airline's trade union informs federal authorities in the Nizhni Novgorod region that they will be going on strike in 4 days unless their 100 pilots and mechanics are paid salary arrears and are given a 200% wage boost. A committee of management, union, and employees is formed to review employee demands.

Last minute talks between labor and management result in a temporary agreement between the parties on December 5, just minutes before the first flight of the day would have been cancelled by a job action. The carrier agrees to give its staff a 40% wage increase. Other differences concerning working conditions that have come to light will need to be talked through before the arrival of the new strike date, January 15.

On December 20, the company joins with BAL Bashkiri Airlines (Bashkirskie Avialinii Aviakompaniya), Samara Airlines (Samara Avialinii), and Saravia (Saranskiye Avialinii) to form a joint marketing agreement designed to keep open the air routes in the Volga Federal District. The plan is similar to one announced in Moscow earlier in the month by Domodedovo Airlines, Chelai-Chelyabinsk Airlines (Chelyabinsk Chief Aviation Enterprise), Kras Air (Krasnoyarsk Avialinii), and Avia Express Cruise. Details concerning possible joint schedules, tariff adjustments, and fleet combinations are not provided to the media.

NIZHIVARTOVSK UNITED AIR DETACHMENT (NIZHIVARTOVSKII OAO): Nizhnivartovsk Airport, Nizhnivartovsk, 626440, Russia; Phone 7 (3466) 34480; Year Founded 1994. Established at Nizhnivartovsk Airport in 1994, NUAD launches nonscheduled, often ad hoc, charter passenger and cargo flights, air taxi, air ambulance, energy and communications support, and agricultural work under the leadership of General Director Comdr. Vladimir G. Pysenok. The fleet includes an unspecified number of fixed-wing Antonov An-2 biplanes, plus a large rotary-wing fleet of Mil Mi-6s, Mil Mi-8s, and Mil Mi-26s, as well as Kaman Ka-32s.

Flights continue in 1995–2000, during which years the fleet is rationalized to include 4 An-2s, 34 Mi-8s, 4 Mi-6s, and 3 Mi-26s.

NIZHNY NOVGOROD AIRLINES. See NIZHEGORAD AIRLINES (NIZHEGORODSKIIE AVIALINII)

NLM CITYHOPPER (NEDERLANDSE LUCHTVAART MAATSCHAPPIJ, B.V.): Netherlands (1966–1988). NLM Cityhopper is organized at Amsterdam's Schiphol Airport in early 1966 as NLM Dutch Airlines, B.V., a wholly owned subsidiary of the state carrier KLM (Royal Dutch Airlines, N.V.), to take over domestic services. Employing Fokker F.27s leased from the Dutch Air Force, the carrier inaugurates scheduled operations on August 29 linking the company's base with Enschede, Groningen, Eindhoven, and Maastricht.

By 1973, the fleet includes 6 Fokkers and enplanements are 130,950. In 1974, the company inaugurates regional flights with a service between Eindhoven and Hamburg. The employee population numbers 8 and passenger boardings increase to 150,000. Service to Rotterdam is added in 1975.

In 1976, the company name is changed to NLM Cityhopper, B.V. and the first 2 Fokker F.28 jetliners are acquired, joining the fleet's 6 F.27s. International destinations visited in 1978–1979 include Bremen, Dusseldorf, Antwerp, Brussels, Birmingham, the Channel Islands, London (LHR and LGW), and Paris (CDG). President Henk S. Jonker oversees a workforce of 85 as 2 more F.28s arrive and orders are placed for 3 F.27-500s. Enplanements during the latter year total 382,000.

Flights continue without incident in 1980. En route to Eindhoven on the first leg of a flight to Hamburg from Rotterdam on October 6, 1981, Flight 431, an F.28-4000 with 4 crew and 13 passengers, is caught in a tornado. The force of the winds cause the right wing to separate and the plane crashes near Moerdijk; there are no survivors.

During 1982–1984, NLM undertakes replacement services for KLM and adds markets at Belfast, Dusseldorf, East Berlin, and Stuttgart. Passenger boardings average 400,000 per year and the fleet is increased by 2 F.28s and an F.27.

In 1985–1986, Managing Director A. J. Leyer's fleet comprises 4 F.27-200s, 3 F.27-500s, and 4 F.28-4000s. Enplanements reach 408,401 in 1987.

In April 1988, the 250-employee company is required to take over the management of financially troubled **Netherlines, B.V.** as the first stage of a merger.

Passenger boardings increase by 11.3% over the previous year to 460,429; however, freight is down by 1.8% to 369,000 FTKs.

In 1989, the 2 carriers are operated as the 250-employee NLM Cityhopper/Netherlines and Leyer acquires 8 SAAB SF340s.

Customer bookings rise 0.8% to 477,820.

In April 1991, the integration of the two airlines is completed under the name **KLM Cityhopper, B.V.**

NOBLE AIR, A.S.: Turkey (1989–1992). A Turkish-British joint venture, Noble Air is established at Istanbul in January 1989 to operate charter and inclusive-tour passenger flights on behalf of the U.K. travel agency Noble. Two Boeing 727-228s, previously operated by **Air France**, are leased from SGB Overseas Leasing; the first to arrive is christened *Vatan*. With the beginning of the summer holiday season, the trijets transport Noble's customers from the U.K. to Turkish seacoast vacation sites.

By the end of the first quarter of 1990, President Asil Nadir's fleet has been enlarged through the addition of two more B-727-230s and a B-737-231, all chartered from **Deutsche Lufthansa, A.G.** These aircraft are now employed to expand the company's market to Turkey and Cyprus from Frankfurt, Dusseldorf, and Hamburg, as well as from the U.K.

Service continues in 1991, during which one of the B-737-228s is subchartered to **Istanbul Airlines, A.S.** for the summer season. In November, scheduled Turkish domestic frequencies are initiated linking the carrier's base with Antalya and Ankara.

Airline employment totals 250 at the beginning of 1992. Intense market competition, recession, and rising costs now force the carrier toward the financial brink. Although cost-cutting measures are put into place, they do not generate the revenue needed to carry on. The company suspends operations in October rather than attempt to begin the winter holiday schedule and leases its remaining two Boeings to **Istanbul Airlines, A.S.**

Efforts are made to locate sufficient new capital with which to resume flying at the beginning of the European summer schedule at the end of March 1993. When these funds are not forthcoming, Noble Air is liquidated.

NOLINOR AVIATION, INC.: 10105 Ave. Ryan, Dorval, Quebec H9P 1A2, Canada; Phone (514) 631-0018; Fax (514) 631-0027;

<http://www.nolinor.com>; **Year Founded 1992.** Nolinor is initially established in 1992 at Montreal's Dorval to offer nonscheduled services for hunting and fishing outfitters in Schefferville. During the next 8 years, the carrier, which operates 3 Convair CV-580s, branches out into the provision of public charters for both passengers and freight.

In June 1999, Transport Canada grants permission for the company to assume the maintenance of its own aircraft, allowing the small carrier to eliminate delays related to subcontracting out the work. In the months thereafter into the new millennium, Nolinor aggressively seeks long-term passenger and cargo contracts.

NOMADS AIR TRAVEL CLUB: 10100 Middlebelt Road, Romulus, Michigan, 48174, United States; Phone (734) 941-4043; <http://www.waynecounty.com/airport>; **Year Founded 1965.** Former judge Joseph Gillis and General Motors pilot Joseph Benich establish their own self-contained air travel group at Detroit (DTT) in August 1965 and begin to sell memberships. After 200 people have signed up for what will be registered as a nonprofit travel club under FAA FAR Part 123, Gillis and Benich purchase a former **Eastern Air Lines** Douglas DC-7B for \$93,000. The plane and a volunteer crew are prepared to join President/Captain Benich in time to offer an inaugural flight to Fort Lauderdale on December 31.

With destinations established annually by a special committee and paid for by those taking the flights, the club continues to operate the Douglas until June 1971, when it is replaced by a former **Qantas Airways (Pty.), Ltd.** Lockheed L-188C Electra, the Pacific Enterprise, purchased in April for \$400,000. During this time, a special facility for the group is established at Detroit Metropolitan.

The turboprop is joined in the fall of 1975 by the company's first pure-jet, a Convair CV-990A first flown by **American Airlines**. Repainted in the club's blue and white color scheme, the Coronado undertakes its first inclusive tour on Thanksgiving weekend from Detroit to Eleuthera and back. The two-plane fleet operates until October 1979 when, in the midst of the world energy crisis, the expensive CV-990 is grounded.

In 1980, members of the NATC, booked on a commercial jetliner, become the first large American tour group to visit the Peoples' Republic of China. The Electra is joined by another jetliner in 1981, a former **Transair Sweden, A.B.** B-727-30C first flown by **Deutsche Lufthansa, A.G.** It is christened as the *Clubhouse*.

During the remainder of the decade, upwards of 70 flights are offered per year. Most are to domestic or North American destinations, although occasional overseas trips are offered and booked on regularly scheduled airlines. In 1985, the company celebrates its twentieth anniversary by chartering five special Detroit to London flights aboard a **British Airways, Ltd. (2)** Concorde. The club's Electra is now sold to an Indonesian airline and is destroyed by fire after a belly landing at Medan on November 30. Also during the decade, James Hinga becomes the Nomads second president. The former Sweidsh trijet soldiers on alone.

In 1991, Nomads upgrades their flight equipment, replacing the ex-Transair Boeing with a B-727-221A first flown by **Pan American World Airways (1)**. The first-class section is removed and the number of seats is reduced from 176 to 145 to give passengers more room. The plane's captain and three mechanics are put on the club payroll; all other personnel are volunteers.

The last independent example of numerous air travel clubs with their own aircraft that were at one time popular in the U.S., the club flourishes during the remainder of the decade. Operating from its own Nomads World Terminal office and hangar facility, the concern not only operates tours, but also during downtime lends the aircraft to the airport for emergency drills and their facilities to important functions of the FAA, the U.S. Agriculture Department, U.S. Customs, and the U.S. Weather Bureau.

A total of 12,000 members with a median age of 60 are enrolled by 1999. Most of the membership resides within 100 miles of Detroit (DTT) in southeastern Michigan, southwestern Ontario, and northern

Ohio. First-year dues of \$400 are paid by single members or \$800 for a family; thereafter, dues are \$120 a year no matter whether single or family. President James Heckman's organization flies a total of 77 trips during the year.

It is reported on March 17, 2000 that the club's B-727-221A has received quieter engines to meet FAA Stage III noise requirements. The reengined aircraft is now nicknamed *Super 27 Clubhouse*. Special activities are planned this year in celebration of the group's 35th anniversary. These include three special charters to Paris (CDG) on May 21–23 aboard an **Air France** Concorde. These SST flights into Detroit (DTT) are the first since the Nomads charters of 1985 and will be among the last nonscheduled flights by the aircraft type prior to the July 25 **Air France** disaster that grounds all Concorde. Participants return to New York aboard the ocean liner *Queen Elizabeth II* and are flown back to Detroit by the *Super 27 Clubhouse*.

NOMAN, S.p.A.: Italy (1995–1996). The former **Fortune Aviation, S.p.A.** is renamed in early January 1995 in order that it might launch nonscheduled passenger flights to regional destinations. General Manager Giulio La Starza's concern commences revenue charter service on January 2 from Trieste with a fleet comprising 2 Douglas DC-9-15RCs and 1 Dassault Falcon 10, plus 1 each leased Cessna 500 Citation I and Augusta A109A.

Having noticed the early success of **Air One, S.p.A.**, begun the previous November following Italy's deregulation of its domestic airline industry, company officials in January 1996 elect to start their own deep-discount services in competition with both Air One and the national flag carrier **Alitalia, S.p.A.** Two Douglas DC-9-15RCs are leased and launch frequencies from Rome's Ciampino Airport to Milan, where it has won 12 coveted slots at that city's congested Linate Airport. Unhappily, load factors never exceed 35% and the carrier is only able to capture 4% of the Rome market.

In the fall, an arrangement is concluded with **Air One, S.p.A.** to lease the airline operation for three years, with an option to purchase. Noman is combined with **Aliadriatica, S.p.A.** to become the airline operating unit of **Air One, S.p.A.**; frequencies begin with newly liveried aircraft during November. The Air One compact is completed in December, at which point Noman turns over its operating permit, 2 Douglas transports, the 12 Milan slots, and a maintenance company, Italian Technics, S.p.A. Only the Falcon 10 will be retained for charter work.

NOON & PEARCE AIR CHARTERS, LTD.: Kenya (1946–1955). A. M. T. Noon and S. N. Pearce established this charter operation at Nairobi in 1946; a base will also be set up at Dar es Salaam. A variety of light aircraft are employed, the largest being a de Havilland DH 89A Dragon Rapide.

Bookings total 949 in 1947 and a \$34,831 profit is reported.

Unscheduled flights between the bases and to small communities and bush destinations continue throughout the remainder of the decade and into the early 1950s. Upwards of 15 lightplanes are employed and bookings average 1,000 per year.

When **Airwork, Ltd.** departs East Africa in 1953 after failing to find profit in aerial agricultural work, it turns over its Piper J3 Super Cubs and Avro Ansons to Noon & Pearce. The Nairobi-based carrier establishes its own spraying unit, which proves so successful that in 1955, the company quits the passenger charter business to engage in aerial applications on a full-time basis.

NOORD WESTE LUGDIENS (PTY.), LTD.: South Africa (1963–1965). J. T. Nel and V. L. Steyn establish this small FBO at Calvinia in the spring of 1963; in addition to the usual "gas station" functions, the company also operates a flight school and offers charters. Having acquired 1 each Cessna 172 and Piper PA-18 Super Cub, Noord Weste inaugurates air taxi service to Johannesburg in May.

Revenue flights continue until the spring of 1965, when the company shuts its doors.

NOOSA AIRLINES (PTY.), LTD.: Australia (1970–1984). Maryborough, Queensland, truck dealer Bevan Whitaker forms a smallplane charter operation, Whitaker (Pty.), Ltd. in 1970. After building an airport at Noosa and creating a new airline division, Noosa Airlines, Ltd., Whitaker begins scheduled services to the **Ansett Airlines of Australia (Pty.), Ltd.** terminal at Brisbane in 1975. During the remainder of the decade, services are expanded and come to link Brisbane with Harvey Bay, Maryborough, Maroochydore, and Noosa.

Five years later in 1980, Whitaker forms **Sunstate Airlines (Pty.), Ltd.** at Brisbane to feed passengers to **Trans-Australian Airlines (Pty.), Ltd.** from local destinations. The fleet, meanwhile, grows to include 4 Britten-Norman BN-2 Islanders, 1 Beech B-55 Baron, 1 Piper PA-32 Cherokee Six, and 1 Cessna 172.

During the next three years, operations of the two carriers are coordinated. Late in 1983, the process of integrating the two carriers begins and Noosa is fully absorbed into **Sunstate Airlines (Pty.), Ltd.** on January 1, 1984.

NOR CAL AVIATION: United States (1968–1979). Nor Cal is set up at Redding, California, in the fall of 1968 as a subsidiary of Shasta Flight Service to fly mail services. Employing Piper PA-31-310 Navajos and Cessna 402s, the carrier inaugurates scheduled flights on October 28, linking its base with Sacramento, Chicago, and Red Bluff.

During the next decade, scheduled passenger and cargo services are added and the route network is expanded to include service not only to the previous mail-only points, but to destinations in the San Francisco Bay area, Lake Tahoe, and Reno, Nevada. Operations cease in January 1979.

NOR EAST COMMUTER AIRLINES: United States (1977–1981). Joseph C. Whitney, who had organized **Executive Airlines** in 1960 and **Air New England** in 1970, founds Nor East at New Bedford Municipal Airport, Massachusetts, in 1977 to offer daily scheduled passenger and cargo roundtrips to Boston, Hyannis, Nantucket, and Martha's Vineyard.

With 12 employees and 4 Cessna 402Bs, the infant commuter is able to generate a total of 32,032 enplanements during 1978, the first full year of business.

Rapidly rising fuel prices and competition in the wake of President Carter's signing of the Airline Deregulation Act the previous October bring a dramatic downturn in 1979. Passenger boardings decline by 23.2% to 26,000 and force the layoff of 6 employees. The company is unable to survive the PATCO air traffic controllers' strike and recession of 1981 and shuts down.

NOR FLY CHARTER, A.S.: Norway (1977–1981). Nor Fly is organized at Honefoss in 1977 to offer passenger and cargo charters to destinations in Scandinavia and northern Europe. The workforce totals 27 and the fleet includes 4 Convair CV-440 Metropolitans. Operations continue apace during 1978–1979 as two of the CV-440s are replaced by CV-580s. Enplanements in the latter year total 33,000 and a profit of \$140,000 is banked.

Airline employment is increased to 30 in 1980. Passenger boardings jump 9.4% to 35,000 while freight traffic climbs 28.6% to 1.5 million FTKs. Although revenues are up by 32% to \$3.7 million, expenses are up by 43.6% to \$3.82 million. The operating loss is \$120,000. Operations cease in 1981.

NORCANAIR, LTD.: United States (1965–1987). Norcanair, Ltd., a contraction of North Canada Air, is formed at Prince Albert, Saskatchewan, in January 1965. Two months later, in March, Prince Albert-based **Saskair, Ltd.**, the airline formed by the provincial government of Saskatchewan in 1947, is purchased, reformed and integrated. The major route, flown by a Douglas DC-3 first acquired by **Saskair, Ltd.** in 1957, lies between Prince Albert and Regina via Saskatoon. Charter and fire-suppression operations are also undertaken.

Airline employment is 86 and with the addition of 1 de Havilland Canada DHC-3 Otter and 2 Beech 18s, the fleet grows to comprise 20 aircraft.

The year's bookings total 12,669 and a total of 1,974 tons of freight is carried.

The fleet is significantly upgraded in the early 1970s. In addition to a Bristol Mk. 31 Freighter acquired in 1970, the company adds another DC-3 in 1972, two Fokker F.27s in 1973, and another in 1974. In 1975, yet another Fokker arrives, followed by a fifth in 1977. Scheduled destinations now visited include La Ronge, Stony Rapids, Uranium City, Cluff Lake, and Willaston Lake.

The Bristol Freighter and a DC-3 are sold in 1978. Airline employment is now 200. Service is started to Buffalo Narrows, Collins Bay, and the North Dakota city of Minot. President J. B. Lloyd's fleet now comprises 5 Fokker F.27s, 3 DC-3s, 4 Consolidated PB-Y-5A Cansos, 4 Piper PA-23 Aztecs, 3 de Havilland Canada DHC-3 Otters, 5 DHC-2 Beavers, and 4 Cessna 185s.

During 1979–1980, 2 DC-3s, 4 Cansos, 1 Otter, and the Aztecs are replaced by a Piper PA-31-310 Navajo while another Twin Otter is delivered during the former year. An F.27 is sold to **Swedair** in 1981 and a second goes to **Horizon Air** in 1982, while a Japanese-made Nihon YS-11 is leased to replace them. The second Twin Otter is sold in 1983.

An Embraer EMB-110P1 Bandeirante is purchased during the summer of 1984 and employed to open a new service from North Battleford to Lloydminster and Edmonton. Owned by Albert Ethier, the Saskatoon-based charter carrier **Highline Airways, Ltd.** purchases Norcanair in March. In November, the two companies are merged under the Norcanair name, with Highline contributing two ex-**Air Algerie, S.A.** Convair CV-640s to the operation. Also contributed are nonscheduled routes throughout Saskatchewan, featuring such charters as the winter 1984–1985 ski tours to Cranbrook.

On May 31, 1985, Saskatoon and Regina to Minneapolis scheduled flights are inaugurated with three leased CV-580s. The last DC-3 is sold during the summer and an F.27 is withdrawn late in the year. Two Fokker F.28-1000s are purchased from the Italian carrier **Unifly, S.A.** with the first delivered in December.

It is placed into service to Minneapolis and Edmonton in January 1986. In the spring, **Canadian Pacific Air Lines, Ltd. (CPAL)** acquires a 25% interest; the frequency of the Minneapolis jetliner service is increased to daily in July. On October 26, the premier Fokker jetliner, finally joined by the second, begins flying thrice daily from Saskatoon and Regina to Calgary as the company becomes a CPAL Canadian Partner.

During the year, flights are provided to the Vancouver Expo and regular charter services are initiated to the uranium mining sites in northern Saskatchewan.

Enplanements for the year total 100,000 and revenues reach approximately C\$10 million.

As 1987 begins, the company's F.27s maintain flights linking Saskatoon with Edmonton via Lloydminster as well as a route north from Saskatoon to La Ronge, Stony Rapids, Fond du Lac, and Uranium City. The last major route expansion occurs on February 26, when daily roundtrip flights begin from Saskatoon to Winnipeg via Regina.

On March 16, Norcanair is purchased by Lethbridge-based **Time Air, Ltd.**, itself 46% owned by the new **Canadian Airlines International, Ltd.** All company flights are completely merged by April 26, by which point the Embraer, Convairs, and Fokkers have all been turned over.

NORCANAIR, LTD. (2): Canada (1991–1993). Former **Norcanair, Ltd. (1)** chairman and Saskatchewan entrepreneur Albert Ethier, architect of the **Time Air, Ltd.** acquisition three years earlier, resurrects the Norcanair moniker during the spring of 1991. Convair CV-640 charter and scheduled passenger operations are inaugurated with a single machine on June 10 to regional destinations, including the north-south intra-Saskatchewan route abandoned by **Time Air, Ltd.** in 1990.

Between June and August, a British Aerospace BAe (HS) 748-2B2 is leased from **Air Creebec, Ltd.** It is placed into service over a weekday

route from Saskatoon to Prince Albert, La Ronge, Stony Rapids, Fond du Lac, and Uranium City.

Operations continue apace in 1992 as the airline's single Convair is joined by a Fokker Fairchild F-27J. Operations cease in 1993.

NORD AFRICA AVIAZIONE, S.p.A. See **ALA LITTORIA, S.p.A.**

NORDAIR, LTD.: Canada (1956–1987). On November 27, 1956, Roberval-based **Boreal Airways, Ltd.**, which had been established by Francois Ross in May 1947, is reformed and adopts as its new corporate identity the title Nordair, *nord* being the French word for "north."

Simultaneously, company headquarters are transferred to Montreal and although contract work continues (especially on the Canadian radar defense lines), services are opened to La Tuque, Roberval, and Chibougamau. The initial fleet comprises 2 Douglas DC-3s, 1 Curtiss C-46 Commando, 1 Noorduyn Norseman V, and an ex-military Noorduyn UC-64, plus 3 de Havilland Canada DHC-2 Beavers and 1 Cessna 180.

In January 1957, the company is authorized to begin expansion outside of Quebec Province. A Beech 18S, a Consolidated PB-Y-5A Canso, and a second Norseman V are acquired in April and are employed to inaugurate twice-weekly service from Montreal to Frobisher Bay (Baffin Island) via Roberval and Fort Chimo on May 24. The Beechcraft is also employed to undertake ice patrol flights under contract to the national government. A Republic RC-3 joins the fleet in July.

Another Canso is acquired in June 1958 and orders are now placed for DC-4s. Another DC-3 is acquired in early February 1959; with it, the Frobisher Bay route is extended via Roberval and Fort Chimo to Great Whale and Hopes Advance Bay on February 27. The first DC-4 is delivered in March along with another Canso. Quebec City to Lake St. John flights commence on April 1, followed on June 23 by a further stretch of the Frobisher run to Cape Dyer and Resolute Bay. The Noorduyn Norseman V and UC-64 are sold in October.

In April 1960, the heavy transport division and scheduled routes of St. Jovite-based **Wheeler Airlines, Ltd.** are purchased, together with its three DC-4s and four C-46s, leaving Wheeler to concentrate on charter flights under the name **Wheeler Airlines (1960), Ltd.**

The newly acquired routes, including the contract Distant Early Warning (DEW) Line resupply services, are maintained, St. Jovite–Montreal–Val d'Or–Great Whale. The same month, the Cessna 180, two DHC-2s, and a second, recently acquired Norseman V are disposed of to **Wheeler Airlines (1960), Ltd.** Later in the year, the Sarnia–Windsor and London routes of **Sarnia Airlines, Ltd.** are also taken over.

The fleet in 1961 comprises 5 Douglas DC-4s, 8 DC-3s, 5 Curtiss C-46A/Cs, and 6 Consolidated PB-Y-5A Cansos. A Seaway Service is initiated during the summer with three DC-3s received in June; the linkage connects Montreal with Windsor via Kingston, Oshawa, Hamilton, London, and Sarnia.

A Curtiss C-46C with two crew and seven passengers crash-lands at Scapa Lake on August 9; although the Commando must be written off, there are no fatalities.

Two Handley Page Herald 200s are acquired in February and March 1962; however, both are passed on to other airlines in November when the Seaway Service is ended, one to **Maritime Central Airways, Ltd. (MCA)** and one to **Eastern Provincial Airways, Ltd. (EPA)**. Meanwhile, during the summer, flights begin to Resolute Bay with a pair of DC-3s obtained in May and July respectively.

Another C-46 is purchased in March 1963, followed by two Cessna 310Cs in June. The carrier is excluded from the September arrangement whereby MCA, which owns significant stock, is purchased by EPA. Simultaneously, it sells the last UC-64 and two PB-Y-5As. The following month, the carrier receives a DC-6A that it will employ on charter services.

A DC-7C is acquired in April 1964 and the first of five Lockheed L-1049Hs join the fleet in August (on lease from **Montreal Air Services, Ltd.**), allowing the inauguration of inclusive-tour charter flights to Europe and Jamaica; four were previously operated by the

Miami-based carrier **National Airlines**. A DC-3 is sold in November and in December, following the sale of the DC-6A and DC-7C, four more Lockheeds arrive from **National Airlines**. The Cessna 310Cs are sold in September and October **1965**; however, an Aero Commander 560 is received in December.

In **1966**, orders are placed for three Boeing 737-2E1s. In March, a C-46A is sold to **Channel Airlift, Ltd.**, with a second sold to that carrier in May.

En route from Montreal on June 20, a C-46E with two crew disappears over Chutes des Passes, Lake Peribonca, Northwest Territories; wreckage is found three days later and there are no survivors.

The Curtiss is replaced by another C-46A, which is delivered in September. During the year, a Super H Constellation is leased to **Eastern Provincial Airways, Ltd. (EPA)**.

Requests are made to **Modern Air Transport** in **1967** for the wet-lease of CV-990A Coronados.

Two more C-46As arrive in May. A chartered C-46T with two crew and two passengers lands 4,500-ft. short of the runway at Cape Dyer in whiteout conditions on May 15; the plane is destroyed and all aboard are killed.

The ice patrol contract first received in 1957 is lost to **Kenting Aviation, Ltd.**

Not including Super Constellation charters, the carrier's 3 DC-4s and 4 DC-3s carry 54,729 scheduled passengers over 43.3 million revenue passenger miles.

Four CV-990As are received in February **1968**, but only two enter service, these with **Modern Air Transport** crews on the Montreal-Europe charter routes. Still, their employment gives the company the honor of becoming the first Canadian regional airline to offer jet transatlantic flights.

The same month, the company's Aero Commander 560 is sold. Orders are now placed for three Fairchild Hiller FH-227Bs (stretched American-made Fokker Fairchild F-27s). In February, April, and May, three DC-3s are withdrawn, with a DC-4 following them out of service in July and a C-46A in September.

Their charter work completed, the CV-990As are returned to their owner in October.

The first Boeing B-737-2E1 is delivered in November, joining a fleet that still comprises 4 C-46s, 3 DC-4s, 4 DC-3s, and 4 L-1049Hs. The little Boeing is equipped with the first gravel runway kit, a C\$1-million conversion designed to help prevent the kicking up of ground debris into vulnerable areas.

In December, the Boeing jetliner replaces DC-4s on the Frobisher Bay route.

The workforce stands at 380 in **1969**. In January, the Constellations are all leased to the relief agency Canairelief, sponsored by the Presbyterian Church of Canada, which will employ them to fly food and medical supplies to Biafra, the breakaway province of the African nation of Nigeria. Weekly return flights between Montreal and Resolution Bay, Cornwallis Island, are announced on March 19 and will be the world's first scheduled jet services within the Arctic circle.

In April, the subsidiary **Nordair (Arctic), Ltd.** is formed to operate feeder routes out of Frobisher with a de Havilland DHC-6-300 Twin Otter and a Short SC-7 Skyvan. The Frobisher route is extended to Resolute Bay in early spring. Pending delivery of its ordered aircraft, three B-737-222s are leased from **United Airlines**. One is received in May, but is immediately leased to EPA. The other two are delivered in June to launch the Arctic jetliner service. On August 3, a Canairelief L-1049H crashes while landing at Uli, the last airfield held by the Biafran rebels.

The Canadian government now announces a new regional airline policy and route division; Nordair is assigned responsibility for scheduled services in eastern and southern Ontario, western Quebec, and contiguous Arctic areas. During the remainder of the year, a C-46 and two DC-4s are retired as interest in the charter and tour business wanes. On December 17, strafing at Uli destroys a second Canairelief L-1049.

Enplanements total 55,224 scheduled passengers.

Airline employment is increased by five in **1970**. A C-46A is sold in February. In May, the two United Boeings are returned to that American airline and EPA returns its leased jetliner to Nordair. Simultaneously, a third aircraft, a B-737-242C, is acquired and another is ordered.

A five-year contract is signed with the Canadian Department of Supply and Services for ice reconnaissance patrols. A DC-3 is sold to **Northern Wings, Ltd.** in December. Fares are raised 7.5% for northern services and 11% for southern. Deception Bay flights commence in July.

Passenger boardings skyrocket 61.4% to 143,067 and freight traffic is up 18.5%.

Montreal-Ottawa service begins in April **1971** and another Boeing 737-242C arrives in May. A hangar fire at Hall Beach, Northwest Territories, destroys a C-46A on June 30.

The first of three FH-227Bs is delivered in August and begins to take over the DEW Line lateral supply flights. The first international scheduled route, Montreal-Pittsburgh, Pennsylvania, is opened in September. Two specially equipped Lockheed L-188C Electras are acquired and begin flying the government-contracted ice patrol from bases at Frobisher, Inuvik, Summerside, and Gander. Bookings dip to 110,400.

The employee population in **1972** stands at 621. Two more FH-227Bs and a DC-3 are delivered and are employed to reopen the Seaway Service. An L-188CF freighter is purchased from the American carrier **Northwest Airlines** on March 21. With the addition of Windsor to the southern scheduled network in May, the carrier now serves the longest north-south route in Canada—2,840 miles Windsor to Resolute Bay.

In August, flights begin from Montreal to the James Bay Development Project in northwest Quebec. The fleet now comprises 3 B-737-200s, 6 DC-3s, 1 DC-4, 3 C-46s, 1 DHC-6-300, 1 Grumman Turbo-Mallard, 3 L-188s, 3 FH-227s, and 2 PB-5A Cansos. A C-46A is lost at Lake Randall, Quebec, on December 20.

Passenger boardings accelerate 20% to 138,000 and cargo is up 3.1%. A C \$763,000 profit is reported.

A DC-3 is badly damaged on February 6, **1973**, when it is hit by a truck at Montreal.

A fourth B-737, a Dash-212, is delivered in March as one DC-3 and the last DHC-2 Beaver, the two Cansos, and final DC-4 are retired. On an application given the Canadian green light the previous year, the Danes approve the start-up of Frobisher Bay-Sondre Stromfjoid scheduled service.

Enplanements soar to 342,760 and a C\$2.2-million profit is earned.

The workforce is increased to 914 in **1974**. Leaving the main fleet all-jet, the final four C-46As and a DC-3s are retired. B-737-212 Montreal-Hall Beach, Melville Peninsula, service is launched during the summer. A DC-8-61CF, purchased from **Evergreen International Airlines**, is placed in service in early November on charter flights from Toronto-Cuba and Montreal-London.

Passenger bookings increase 24% to 451,000 and cargo is up 13%.

Forty-seven new employees are hired in **1975** as another B-737-242 joins the fleet. A DC-3 is badly damaged in a fire at La Grande on November 15. At the end of the year, the L-188CF is put into storage.

Passenger traffic accelerates a modest 2% as 463,636 passengers are flown; freight climbs 6%. A net profit of C \$1.31 million is posted.

The employee population declines 5% in **1976** to 913. All three DHC-6-300s are sold to **Nordair (Arctic), Ltd.** in January. The final two DC-3s are sold, one in February and the other in July. In an effort to boost freight traffic, development of cargo service on the southern network is undertaken. The Turbo Mallard is sold in September. Service to a number of small Arctic settlements served from Frobisher Bay are turned over to **Bradley Air Services, Ltd.**

Passenger boardings, meanwhile, advance 25% to 580,000 and cargo accelerates, overall, 5%. This year's net profit is C \$1.24 million.

President Roland G. Lefrancois becomes vice chairman and is succeeded early in **1977** by Andre F. Lejotte. On March 31, an L-188C ice patrol aircraft parked at CFB Summerside is nearly destroyed when struck during a bad landing by an RCAF CL-28 Argus; there are no fatalities in the incident.

Scheduled services are now initiated from Montreal to Fort Chimo via Quebec City. An Electra purchased from **Reeve Aleutian Airlines** back in 1972 is sold to **Northwest Territory Air, Ltd.** in November. Enplanements are up to 686,000. Late in the year, Chairman James F. Tooley places the carrier up for sale.

After almost a year of repair by Van Nuys, California-based American Jet Industries, the badly damaged ice patrol Electra is rebuilt and returned to Nordair, Ltd. in February 1978 and re-registered.

Chairman Tooley and President/CEO Lizotte oversee a workforce of 875 and the fleet now comprises 2 Electras, 6 B-737-200s, and 3 Fairchild Hiller FH-227s. **Air Canada, Ltd.** receives approval to purchase the carrier's stock late in the first quarter and the Montreal-based flag line now takes a major (86.4%) interest. At the same time, Nordair is authorized to operate **Transair, Ltd.**'s former Toronto-Winnipeg route via Sault Ste. Marie, Thunder Bay, and Dryden. Also in the spring, B-737-242 flights commence from Frobisher to Resolute Bay.

Final approval for the state carrier's acquisition of Nordair is received on July 28; for political and economic reasons, it is decided that the new subsidiary will be allowed to retain its previous identity. Still, **Air Canada, Ltd.** asks its new partner to assume more inclusive-tour and passenger charter work. The first of two DC-8-52s is acquired in November, allowing transatlantic and Florida charter and inclusive-tour flights the desired new beginning.

Bookings climb to 687,000 during 12 months, but freight is down a slight 0.01%.

Following Transair, Ltd.'s merger into **Pacific Western Airlines, Ltd.**, major expansion occurs in 1979 as the scheduled Toronto-Winnipeg route of **Transair, Ltd.** is assumed by Nordair on February 1. With this new operation, plus expanded charter opportunities and the arrival of another DC-8-52 and four additional B-737-200Cs, passenger boardings skyrocket 64.3% to 1,129,000, passing the million mark in boardings per year for the first time, while freight grows by 1.8%, due largely to the addition of two purchased DC-8-61CFs.

The fleet in 1980 comprises 6 B-737-2E1s, 6 B-727-200Cs, 2 DC-8-61CFs, 2 DC-8-52s, 2 L-188s, and 3 FH-227Bs. The two DC-8-52s are withdrawn from service in April and placed up for sale. The Quebec government purchases 11% interest in the carrier.

Passenger bookings jump 15.6% to 1.2 million and cargo climbs 5.1%. Revenues advance 5.8% to C\$125 million and expenses are up 3.8% to C\$117 million. Operating profit soars 53.6% to C\$7.6 million and the net profit rises 33.6% to C\$2.7 million.

Traffic is virtually flat in 1981 as cargo remains unchanged and passenger boardings dip 0.06% to 1,218,000. The operating profit is C \$5.5 million and the net is C \$ 2 million.

The workforce is cut 1.9% in 1982 to 1,265. Jean E. Donville is named president early in the year. The only significant accident ever to occur to a jetliner in direct Nordair service is the collapse of a nosewheel during a Sault Ste. Marie landing in January. In May, B-737-242 charters are initiated from Halifax to Bermuda, followed by similar flights from Toronto to San Juan.

A five-month strike of ground personnel represented by the International Association of Machinists and Aerospace Workers (IAM) causes suspension of scheduled services over half of the network. This work stoppage, when coupled with generally depressed economic conditions, brings a sharp traffic drop and the first financial loss in 20 years. Two FH-227Bs are purchased from **TAT (Touraine Air Transport, S.A.)** in November.

Passenger boardings fall 34.6% to 767,722 and freight is off 4.7% to 23 million FTKs. Total revenues decline 11.4% to C\$101.6 million. Losses are C\$1.3 million (operating) and C\$1.97 million (net).

The workforce at President/CEO Doubille's company is increased 1.3% in 1983 to 1,285. Cost-saving measures are adopted, including the rationalization of frequencies on some routes. Still, the airline, employing two dedicated FH-227s, continues to win and execute an annual contract for the resupply of Arctic DEW Line bases.

The two DC-8-61CFs and two B-737-200Cs are sold, bringing a C\$3.1-million gain. The Florida charter program becomes more exten-

sive as innovative marketing schemes are undertaken to attract people to the carrier's standard airline operations.

A new corporate image is unveiled, tied in with the shift of the head office to Montreal's Mount-Royale suburb, including a new logo and new aircraft livery. The DC-8-52s are sold to Onyx in October. Also in October, the carrier begins operating a B-737-209 belonging to **Sabena Belgian World Airlines, S.A.** from Montreal to Detroit as an extension of the European carrier's Brussels-Montreal route. The arrangement will be renewed during every winter season through 1987.

Passenger boardings jump 25.1% to 961,000 and freight rises 13.6% to 22.1 million FTKs. Revenues accelerate 23.6% to C\$121.2 million and expenses climb 18.8% to C\$117.6 million, leaving a C\$3.5-million operating profit and a C\$3.9-million net profit, the latter due largely to the aircraft sale.

A plan is developed in 1984 to shift ownership away from **Air Canada, Ltd.** (86.4% shareholding) to a joint consortium that includes investment from Innocan and the employee group Participation Nordair. This arrangement is tentatively completed during the summer. During the same sunny months, extensive charter work is undertaken between cities in eastern Canada and Calgary, Edmonton, and Vancouver. Toronto to Charlottetown and St. John's charters also begin.

The carrier's FH-227Bs are assigned to participate in Rapidair Service flights linking Montreal with Chibougamau and with Ottawa, Toronto, and Pittsburgh. Late in the year, Montreal-St. Petersburg scheduled services are inaugurated. In October, a B-737-214 is leased from **Dan Air/Dan Air Services, Ltd.**

Passenger boardings jump 18.6% to 1,139,000 while cargo is up 7.7%. Operating revenues increase 16.4% to C\$129.4 million while expenses rise 15.8% to C\$125.5 million. Profits are C\$4.16 million (operating) and C\$1.8 million (net).

The employee population advances 1.7% in 1985 to 1,339. Twice-weekly nonstop flights are added on April 30 from Montreal to Orlando, complementing an already existing Montreal-Fort Lauderdale service. The **Dan Air/Dan Air Services, Ltd.** Boeing is returned in April and in May is replaced by another chartered for a year from **Britannia Airways, Ltd.** The employee-Innocan buyout scheme falls through and following takeover bids by **Quebecair, Ltd.** and the Quebec government, 60% control of the carrier (the employee-Innocan interest) is purchased for C\$17 million in November by **CP Air, Ltd.**

Because the Quebec government refuses to sell its interest, **CP Air, Ltd.** elects to operate its new subsidiary, at least for awhile, as an independent entity under its previous name. Participation in the Rapidair operation ends.

One more B-737-200C is placed in service as passenger bookings jump 21.9% to 1,387,830 and cargo grows 5.7% to 25.2 million FTKs.

Beginning in January 1986, Nordair flights are arranged to coincide with those of its majority owner and further integration of the two are listed in **CP Air, Ltd.** schedules. Joining with three private investors in February, the carrier (taking 35% interest) forms the Montreal-based, third-level **Nordair Metro, Ltd.** Equipped with four Convair CV-580s, the feeder begins service on March 31 from Montreal to Ottawa and Quebec City; flights from Montreal to Bagotville commence on April 14.

A major development occurs in July when the **Nordair Metro, Ltd.** investors purchase **Quebecair, Ltd.** (and its 22% interest in Nordair) from the Quebec government for C\$21 million, operating it under its own name as a scaled-down local service carrier and replacing some B-737-200 service with CV-580 runs. Having now come to hold upwards of 80% of Nordair, **Canadian Pacific Airlines, Ltd.** (**CP Air, Ltd.** renamed) moves to finish its integration.

In the fall, the subsidiary is transferred from **Air Canada, Ltd.**'s to CPA's reservations system. Following a bomb threat, a B-737-200C flight from Montreal to Toronto is forced to make an emergency landing at Ottawa on October 15.

Customer bookings for the year dip 1.9% to 938,494 and freight falls 12.2% to 19.8 million FTKs.

On January 27, 1987, Nordair ceases to exist. Nine B-737-200s are sold in January and a 10th in April.

NORDAIR METRO, LTD. See **NORDAIR, LTD.**

NORDAVIA FLUGGESELLSCHAFT, mbH.: Innocentiastrasse 32, Hamburg 13, D-20144, Germany; Phone (49) 40-44-00-40; Fax (49) 40-45-84-33; <http://www.nordavia.com>; Code NIA; Year Founded 1976. Helmut Heidemann forms Nordavia at Hamburg in 1976 to offer regional passenger and cargo air taxi services. Revenue flights commence and continue with a fleet of 2 Piper PA-31T Cheyennes and 1 Beech King Air 90.

Over the next two decades, the company expands its services to include not only regular charters, but VIP flights, ambulance service, and the transportation of animals as well.

The fleet in 1997 includes 1 each Beech King Air C90, Beech Super King Air 200, and Cessna Citation III.

At the beginning of 1999, Nordavia posts a homepage on the Internet's World Wide Web.

NORDESTE (NORDESTE LINHAS AEREAS REGIONAIS, S.A.): Avenida Dom Joao VI 259, 259 Britas, Salvador, Bahia, 400000, Brazil; Phone 55 (71) 244-7533; Fax 55 (71) 244-7770; <http://www.nordeste.com>; Code JH; Year Founded 1976. On November 12, 1975, the Brazilian government establishes the Sistema Integrado de Transportes Aereas Regional, a system calling for the formation of five regional airlines to provide third-level feeder service to outlying areas. A promise of subsidy is made, based on a 3% surcharge on tickets sold on trunk routes.

Nordeste is formed on June 9, 1976 as a joint venture between the government of the State of Bahia (67% interest) and **Transbrasil, S.A. (Linhas Aereas)** (33% interest) to provide scheduled services throughout the San Francisco Basin in the northeast of Brazil. Employing a fleet of 5 Brazilian-made Embraer EMB-110Cs and a Fokker F.27 based, respectively, at Salvador and Belo Horizonte, the new entrant inaugurates service on June 15 over several routes previously flown by Transbrasil—Salvador to Recife via Petrolina and Paulo Afonso and Salvador to Barreiras via Lapa.

An EMB-110C with two crew and four passengers crashes at Petrolina, on October 28 (two dead).

Another EMB-110C is lost at Bocaiuva, Brazil, on November 4, 1978; there are no other details concerning the accident.

The route network is expanded rapidly during the remainder of the decade and into the 1980s. Enplanements decline steadily during the first 4 years of the new decade, respectively totaling: 106,025; 94,353; 79,966; and 64,570.

By 1985, the carrier is providing scheduled passenger services to over 30 destinations in the following states: Bahia, Maranhao, Minas Gerais, Parai, Pernambuco, Piaui, Rio Grande do Norte, and São Paulo, as well as the Federal District of Brasilia. With the Friendship withdrawn, the Embraer fleet is increased to eight.

An EMB-110C freighter with two crew fails its takeoff from Vitoria da Conquista on October 9 and crashes two km. SE of the runway; both flyers are killed.

Passenger boardings decline to 62,444.

In March 1986, Brazil's Departamento de Aviacao Civil is forced to intervene to keep the airline from collapsing. At the time of the DAC takeover, it is discovered that, for the past several years, the airline's management has failed to file tax forms, balance company books, and has even embezzled airline funds. Additionally, it is found that maintenance records have not been kept.

Led by Marketing Manager Fernando Arajo, remaining company officials and government executives seek to restore the nation's northeastern regional. Meanwhile, Otto Lima, owner of an air taxi operation, puts

together a group of businessmen who seek to purchase the carrier and end up in court contesting ownership with the State of Bahia.

Customer bookings for the first 11 months of the year rebound by 40% to 79,551.

In 1987–1988, the route system is reduced to 26 stops and the fleet includes 8 EMB-110s. During the latter year, passenger boardings jump 16.2% to 111,932.

Airline employment in 1989 stands at 258. The fleet now includes 4 EMB-110Cs, 1 EMB-110E, 2 EMB-110Ps, 3 EMB-110P1s, and 1 each EMB-110P2 and EMB-110S1. Options are taken on 3 EMB-120 Brasilas.

Customer bookings increase 55.1% to 74,891 during the first 6 months, the time period for which statistics are publicized.

Airline employment stands at 258 in 1990 as the EMB-110E Bandeirante is withdrawn.

Data is again given for the first half and shows that passenger boardings are down 0.7% to 74,346.

The payroll grows by 16.3% in 1991 to 300. A \$23-million order is placed for three EMB-120 Brasilas as three more EMB-110P1s are acquired.

Enplanements are only reported for the first 9 months and show boardings down 9.4% to 108,448.

An EMB-110P1 with 3 crew and 12 passengers fails its initial climb away from Episepe on November 11, strikes electrical wires and the roof of a house, and crashes into a public square; all aboard the turboprop are killed, along with 2 other people on the ground.

While en route from Salvador on February 3, 1992, an EMB-110C with 2 crew and 10 passengers descends below minimum altitude in bad weather and crashes into cloud-shrouded Taquari Hill at Caitite; there are no survivors.

President Roberto Coelho's 300-employee carrier reports statistics for the first 9 months. These show customer bookings off by 55.9% to 47,821. During the year, orders are placed for 3 50-seat Fokker 50s. The first Brasilia, a leased unit, arrives in December.

By 1993, the fleet comprises 12 EMB-110s and the leased EMB-120. Destinations visited from Salvador includes 26 locations, mostly in northeastern Brazil: Aracaju, Barreiras, Belo Horizonte, Belmonte, Bom Jesus da Lapa, Brasilia, Caravelas, Fernando de Noronha, Governador Valadares, Guanambi, Itheus, Ipatinga, Maccio, Montes Claros, Natal, Porto Seguro, Recife, Rio de Janeiro, São Paulo, Teofilo Otoni, and Vitoria da Conquista.

The first owned Brasilia enters service in March and two more EMB-120s arrive later, one each in July and September.

Although two Brasilas are cut from the fleet in 1994, one more Bandeirante is added. Operations continue apace and arrangements are completed for the company's purchase, for \$7 million, by **Rio-Sul (Servicos Aereos Regionais, S.A.)**, which announces that it will absorb the commuter by the following March. It also agrees to take over the Fokker 50 order.

Traffic figures are reported for the first quarter and show passenger boardings of 24,917. Later, it is revealed that revenues for the year as a whole are \$13 million.

The decision to absorb Nordeste into Rio-Sul is not implemented and the regional continues to operate as a subsidiary after the announced March 1995 merger date. Two Fokker 50s are delivered in May and June.

Airline employment now stands at 300. Traffic figures are again reported only for the first quarter and show a 34.5% increase in customer bookings to 38,041. For the whole year, revenues skyrocket 166.7% to \$39.2 million, but a \$916,936 net loss is suffered.

There is no change in the workforce during 1996. Enplanements through June skyrocket 128.1% to 169,371.

Just after landing at Vitoria da Conquista, Brazil, on December 24, an EMB-120RT with 3 crew and 28 passengers veers off the side of the runway and collides with a light pole. There are no fatalities.

The fleet in 1997 includes 2 leased Fokker 50s, 3 chartered and 1 owned EMB-120s, and 7 Bandeirantes. The company's first jetliner, a

Boeing 737-548, arrives under lease from **Aer Lingus Irish Airlines, Ltd.**

From hubs at Belo-Horizonte and Salvador, the carrier visits the following markets in northeast Brazil: Aracaju, Barreiras, Belmonte, Born Jesus da Lapa, Brasilia, Caravelas, Fernando de Noronha, Governador Valadares, Guanambi, Ilheus, Ipatinga, Maceio, Montes Claros, Natal, Porto Seguro, Recife, Rio de Janeiro, São Paulo, Teofilo Otoni, and Virotia da Conquista.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Flights continue in **1998**. On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Service is maintained during **1999**. A B-737-5Y0, previously operated by **Air Pacific, Ltd.** is acquired on November 4 and joins the 2 B-737-53As, 6 Brasilias, and 3 Fokker 50s already in the fleet. Enplanements for the year total 359,802.

A total of 402 workers are employed at the beginning of **2000**. During June, a restructuring of **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**, begun in the first quarter, continues. A new holding company, FRB-Par, is created for the VARIG business group, with VPTA and VPSC becoming two of its three subsidiaries, with the original holding company, VARIG Brazil, named the third. The group's first charter organization, Rotatur, is incorporated, while the subsidiary carriers Nordeste and **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** are granted their independence from VARIG and are placed under the control of VPTA.

NORDIC AIRLINK, A.B.: Umea Flygplats, Umea, S-90422, Sweden; Phone 090 71 63 63; Fax 090 14 22 71; <http://www.nordicairline.se>; Year Founded 2000. Privately owned Nordic Airlink is established at Umea in late summer **2000** to operate scheduled return passenger services from Osterund to Lulea via Umea. Revenue flights duly commence in the fall with a single SAAB 340 leased from **Crossair, Ltd.**

At the end of the year, plans are made to replace the first Swiss SAAB with a second and to charter from Crossair a McDonnell Douglas MD-80 with which to operate long-haul charters.

NORDIC EAST AIRWAYS, A.B.: Sweden (1991–1997). Nordic is established at Stockholm (Arlanda Airport) in **1991** to provide charter and inclusive-tour flights to regional, North African, Mideast, and Mediterranean destinations. Managing Director Gunnar Ohlsson, who is also the principal shareholder, begins revenue operations with a single Douglas DC-9-41 leased from **SAS (Scandinavian Airlines System)**.

A McDonnell Douglas MD-82 is chartered from **SAS (Scandinavian Airlines System)** in **1992** followed by a Boeing 737-205 leased from **Braathens SAFE, A.S.** in **1993**.

Company aircraft are often wet-leased to other northern European airlines that are themselves in need of greater capacity during either the winter or summer holiday season. In June of the latter year, a 50% interest is taken in the new Greek charter carrier **Venus Airways, S.A.**

Nordic East begins scheduled regional flights in **1994** with a leased fleet that now comprises 1 each B-737-205, B-737-3Q8, B-737-3Y0, DC-9-41, and MD-83. A DC-8F is briefly chartered as the company unsuccessfully attempts to open all-cargo services from Stockholm to the Middle East.

During the summer, the decision is taken to become an all-Boeing operator and the DC-9 and MD-83 are withdrawn. A new B-737-4Y0 is leased and assigned during the summer to operate exclusively on behalf of **LTU International Airlines (Lufttransport Unternehmman, GmbH.)**. The company also operates replacement services on behalf of **Transwede Airways, A.B.**

Two former **Cathay Pacific Airways (Pty.), Ltd.** Lockheed L-1011-1 TriStars are leased in **1995**. These allow the company to expand the range of its charters, reaching the Spanish holiday islands of Palma de Mallorca and Tenerife.

The following year, **1996**, is a hard one for Swedish charter operators. **Air Operations of Europe, A.B.** fails and Nordic is forced to cut back, reducing its chartered fleet to 1 each TriStar, B-737-3Q8, and B-737-4Y0. Plans are made to change the corporate identity at the beginning of the new year.

NORDIC EUROPEAN AIRLINES INTERNATIONAL, A.B.: Sweden (1997–1998). Originally established at Arlanda Airport in 1991 as **Nordic East Airways, A.B.**, the company is renamed at the beginning of **1997**. President Carl-Johan Stahle employs a 300-person workforce and with the beginning of the European summer flying schedule at the end of March, scheduled and charter passenger services continued to domestic, regional, and international destinations. Flight equipment continues to consist of 1 each leased Boeing 737-3Q8, B-737-4Y0, and Lockheed L-1011 TriStar 1.

The holiday charter business is not profitable for Nordic European this year, despite its name change and a new effort to visit additional cities in Central Europe. Consequently, on February 19, **1998**, the company is forced to announce a curtailment of its operations. The schedule is significantly reduced and efforts are made to reorganize. Unhappily, company executives are unable to raise sufficient capital to keep going and on March 4, all flights end. The grounded airline is quickly liquidated.

NORDSJOFLY, A.S.: Norway (1975–1987). Organized at Avaldsnes in March **1975**, Nordsjofly is initially equipped with a fleet comprising 1 Beech King Air 100, 1 Piper PA-31-310 Navajo, 1 Navajo PA-31-350 Navajo Chieftain, and 1 Beech B-55 Baron. Scheduled services are inaugurated in June linking Haugesund with Stavanger and Farsund.

Services continue during the remainder of the decade and the fleet is enhanced by the addition of a Fairchild-Swearingen Metro II and a Beech 99.

The increase in fuel prices and the world recession combine in the early **1980s** to depress traffic to a point where, in **1983**, the company is taken over by **Norving, A.S.**, which continues its operation as a subsidiary.

By **1986**, General Manager Th Wegner Simonsen's fleet comprises 2 Beech 99s, 1 Piper Navajo Chieftain, 3 Navajos, and the Metroliner. The company is absorbed into its parent in **1987**.

NORDUFLUG H.F.: Iceland (1959–1974). Tryggvi Helgasson establishes Norduflug H.F. at Akureyri Airport on November 1, **1959**. Employing a small fleet of Piper Aztecs, the company undertakes air taxi, air ambulance, and passenger and cargo charters to various destinations around Iceland.

In the early **1960s**, a PA-31-310 Navajo is acquired and is employed to inaugurate weekly scheduled services to Grimsey and twice-weekly flights to Vopnafjordur. When the carrier is reformed on May 1, **1974**, **Flugfelag Islands, H.F. (2)/Icelandair** acquires 35% shareholding and the corporate name is changed to **Flugfelag Nordurlands, H.F.**

NORFOLK AIRWAYS, LTD.: United Kingdom (1950–1970). James G. Crampton and D. Burgess form NAL as a charter carrier at Swanton Morley Aerodrome in March **1950**. An American-made Fairchild F-24W is acquired and ad hoc services are initiated, although at year's end. Operations are conducted during the summers of the **1950s**, primarily with a fleet of Austers.

A Piper PA-23 Aztec is purchased in July **1962**, the same month in which the company is formally registered as an air carrier. Capitalized at £30,000, Crampton assumes the dual post of chairman/managing director. During the **1960s**, the company flies ad hoc contracts for a variety of concerns, including the Norwich Union Assurance group, as well as government aerial surveys.

Other light aircraft employed during the decade include 2 Cessnas, 1 Beech B-55 Baron, 1 Dove I leased for a year from **Cardinal Airways, Ltd.**, 1 Piper PA-30 Twin Comanche, and 3 additional Aztecs. A founding interest is taken in **Rig-Air, Ltd.** in November 1969 and in August 1970 Norfolk Airways, Ltd. joins that carrier and **Anglian Air Charter, Ltd.** in a merger that results in **Air Anglia, Ltd.**

NORFOLK ISLAND AIRWAYS (PTY.), LTD.: Australia (1973–1991). NIA is created at Brisbane in 1973 to fly a Beech B-55 Baron on nonscheduled charters over the 800 nm. to Norfolk Island. On August 1, 1975, the carrier is registered as a scheduled commuter airline. Employing a new Beech Super King Air 200, it inaugurates regularly scheduled flights to the island from the Queensland capital beginning on November 1.

A frequency to Lord Howe Island is started in 1976. Other destinations added during the remainder of the decade include Coolangatta, Newcastle, and Sydney. Charter opportunities are also flown.

In 1981, General Manager L. Friedman's 18-employee carrier possesses a fleet of 2 Super King Air 200s that fly a total of 6,405 passengers on the year. Boardings increase to 10,102 in 1982 but in the face of recession, fall back to 8,586 in 1983.

By 1987, M. S. Childs is general manager; the fleet this year comprises four Super King Air 200s and Cairns is added to the route network. A Gates Learjet 35 is acquired in 1988 as flights are started to Darwin.

Additional expansion occurs in 1989 as Alice Springs and Melbourne become company destinations. The fleet is upgraded by the addition of another Learjet and a de Havilland Canada DHC-8; two Super King Air 200s are withdrawn. The parent corporation, Norfolk Airlines Group, Ltd., now becomes a public company. This forward momentum collides with recession and higher fuel costs in 1990, bringing such severe financial difficulties that the carrier is forced to cease operations in March 1991.

NORFOLK JET EXPRESS (PTY.), LTD.: 97 Creek St., Brisbane, Queensland, 4000, Australia; Phone (07) 3221-6677; Code NC; Year Founded 1997. NJE is established at Brisbane during the first quarter of 1997 to operate scheduled return services from Norfolk Island to Sydney and Melbourne. Employing a single wet-leased Boeing 737-4L7, daily roundtrips are inaugurated in May between Brisbane and Sydney; weekly roundtrips to Melbourne are also started.

A code-sharing agreement is signed with **Qantas Airways (Pty.), Ltd.** in 1998 and the carrier begins to share an AVRO RJ70 with **Australian Airlink (Pty.), Ltd.**

John Carlos is general manager in 1999–2000 as the workforce grows to 15. Wet-leased aircraft, including a **Qantas Airways (Pty.), Ltd.** B-737-476, continue to be employed on the frequencies from Norfolk Island to the Australian mainland.

NORIISK AIRLINE: 7 Sevastopolskaya Str., Noriisk, Krasnoyarsk Region, 663310, Russia; Phone 7 (3832) 282 400; Code CZG; Year Founded 1992. The Aeroflot Soviet Airlines Noriisk division is reformed in 1992. Under the leadership of Comdr. Grigori Titar, the newly independent carrier continues its previous mission of providing support to the region's mining industry. Helicopter work and fixed-wing charters are launched with a fleet that will soon total 6 Antonov An-12s, 21 An-2s, 7 An-26s, 3 An-74s, 5 Mil Mi-6s, and 30 Mi-8s.

By 1999–2000, the propeller aircraft have been reduced in number to 6 An-12s, 6 An-26s, and 1 An-74.

NORIS DINAN AVIATION (PTY.), LTD.: 16 James Schofield Drive, P.O. Box 696, North Adelaide, South Australia, 5006, Australia; Phone 61 (08) 8234 4444; Fax 61 (08) 8234 4411; <http://camtech.com.au/nda>; Year Founded 1995. Noris Dinan is established at Adelaide Airport in May 1995 to provide a wide range of rotary-wing services to Adelaide and the South Australia region.

Employing a fleet of Bell 206B JetRangers, the company begins and continues to provide passenger charter flights, media helicopter services, mining surveys and sampling, geophysical surveys, transmission line and pipeline surveys and inspections, industrial lift capability (sling loads), banner- and flag-towing, and aerial surveys and photography.

NORMAN EDGAR (WESTERN AIRWAYS), LTD.: United Kingdom (1933–1938). Under contract to the chocolate makers J. S. Fry and Sons, Norman Edgar's de Havilland DH 80A Puss Moth, flown by W. N. L. Cope, launches express service from Somerdale (Somerset)-London (Heston) on September 13, 1932. On September 26, flying a DH 83 Fox Moth, pilot Cope initiates twice-daily Bristol-Cardiff trans-Bristol Channel passenger flights. After a year of ad hoc flight operations, Norman Edgar (Western Airways), Ltd., is officially registered on September 7, 1933; initial capitalization is £7,500.

Flying a new de Havilland DH 84 Dragon, pilot C. R. Cubitt begins summer service on May 17, 1934 by extending the Bristol route to Bournemouth; flights continue until September 30. New weekend on-demand DH 84 operations are begun on May 3, 1935 from Cardiff and Bristol to Paris via Le Touquet. Retaining the same board of directors, **Western Air Transport, Ltd.** is formed on December 12.

For the summer season, 14-times-per-day Cardiff to Weston-super-Mare flights are begun on May 31, 1936; frequency is reduced in October. Birmingham to Weston-super-Mare service is begun in July 1937.

A year later, on July 27, 1938, the Cardiff to Weston-super-Mare route is extended to Swansea. On October 2–3, a Cardiff to Weston-super-Mare frequency is offered at night—the first regularly scheduled British domestic night service. The Straight Corporation purchases control of the carrier on October 18, and it is renamed **Western Airways, Ltd.**

NOROESTE (AVIACION DEL NOROESTE, S.A. de C.V.): Mexico (1988–1996). Based at Hermosillo, Sonora, Noroeste is created in 1988 to provide scheduled, third-level passenger and cargo services throughout northwest Mexico. Operations commence with a single Fokker F.27 Friendship. Three Avions de Transport Regional ATR42-320s arrive in 1989–1990 to operate regional flights from the west coast to Monterrey.

Orders are placed in 1991 for two British Aerospace BAe Jetstream 31s, which, due to the recession, are not delivered. Still, the company becomes a Mexicana Inter commuter partner of **Mexicana Airlines, S.A. de C.V.** and begins to employ a Boeing 737-5Y0 leased from GPA Group.

In 1992, the company returns its Boeing and switches its affiliation to the nation's new third-largest airline, **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)**. President Rodolfo Rohde's fleet does grow by 1993 through the addition of another Fokker F.27.

TAESA purchases the company in 1994 and operates it as a subsidiary. Plans are made to provide Noroeste with two de Havilland Canada DHC-6-300 Twin Otters and two Dash-8-102s in place of the ATRs and the leased "Baby Boeing" is returned.

Operations now continue largely without change. President Rodolfo R. Ponce operates two ATRs in 1995, but the Canadian-made turboprops are not added. Markets visited include Culiacan, Mexicali, Ciudad, Durango, and Monterrey. Only one ATR42-320 is in service in 1996, the year in which the company shuts its doors.

NORONTAIR (ONTARIO NORTHLAND AIR SERVICES, LTD.): Canada (1971–1996). The government of Ontario forms this carrier early in 1971 to provide schedule services to 21 provincial communities. Contracts are let by the overseeing Ontario Northland Transportation Commission to selected independent operators for maintenance and operation of a consortium service.

A fleet of 9 de Havilland Canada DHC-6-300s is assembled at North Bay. The 4 private airlines receiving contracts—**Air Dale, Ltd.**, **Austin Airways, Ltd.**, **On Air, Ltd.**, **Bearskin Airlines, Ltd.**—begin revenue frequencies on October 18, providing connections to **Air Canada, Ltd.** and **Transair, Ltd.** flights.

During 1972–1980, daily services are flown to and between the following destinations: Atikokan, Chapleau, Cochrane, Dryden, Earlton, Elliott Lake, Fort Frances, Geraldton, Hornepayne, Kapuskasing, Kenora, Kirkland Lake, North Bay, Pickle Lake, Red Lake, Sault Ste. Marie, Sudbury, Terrace Bay, Thunder Bay, Timmins, and Wawa. A DHC-6-300 is destroyed by fire on the ground at Kenora on December 30, 1977.

With the world economic recession, traffic falls during the early 1980s; enplanements in those years are: 1981—113,570; 1982—98,321; 1983—85,987. Director D. M. Wallace and General Manager J. R. Kilgour oversee a workforce of 11.

As economic difficulties ease in 1984, the world's first production-model DHC-8-101 is delivered. Christened *Py Davoudit* is placed in service by **Air Dale, Ltd.** in October. A second DHC-8-101 follows in January 1985. Named *Jim C. Bell*, it is also turned over to **Air Dale, Ltd.** The *Py Davoud* lands short of the runway at Sault Ste. Marie on February 2, 1986; it is salvaged and repaired. The carrier is taken into the **Canadian Pacific Airlines, Ltd. (CPAL)** "Canadian Partner" commuter family in October when the major acquires a 30% interest.

Norontair is put up for sale in 1987. Returned to service in 1987, the *Py Davoud* helps the company chalk up some 100,000 enplanements on the year. It is sold with the *Jim C. Bell* to **Air Ontario, Inc.** in 1988. The same year, the Twin Otters are sold to the contractors for operation over the developed route network. A new mandate is now given Norontair to develop another system linking even smaller communities. The workforce now stands at 25 and the fleet includes 2 different DHC-8-101s, 6 other Twin Otters, and 1 Piper PA-31-350 Navajo Chieftain.

Passenger boardings accelerate 6.2% to 107,708.

Early in 1989, the route system is extended from Thunder Bay to Winnipeg. Customer bookings jump 5.6% to 102,260 and revenues climb 31.6% to C\$10 million.

Passenger boardings ascend to 110,218 in 1990 and revenues total C\$13.5 million.

The fleet in 1991 includes 5 Twin Otters, 2 DHC-8-101s, and 1 Chieftain. Customer bookings rise 2.6% to 109,000 and revenues slide to C\$11 million. Passenger boardings jump to 112,000 in 1992. Income is C\$12 million.

In 1993, President P. A. Dyment oversees 8 employees and contracts out a fleet of 6 DHC-6-300s, and 1 each DHC-8-101 and DHC-8-102, and 1 Piper PA-31-310 Navajo. Destinations served include: Kirkland Lake, Earlton, North Bay, Sudbarg, Sault Ste Marie, Chapleau, Elliot Lake, Gore Bay, Kapuskasing, Hearst, Hornepagne, Geraldton, Terrace Bay, Wawa, Thunder Bay, Winnipeg, Fort Frances, Aukikon, Dryden, Kenora, Red Lake, and Pickle Lake. The world airline depression has a significant impact on the company and no traffic or financial figures are released.

Services continue in 1994 as enplanements drop to 56,000, less than half of what they had been two years earlier. Operations continue to limp along through 1995, but, on March 29, 1996, the company shuts down and is offered for sale by the Ontario Northland Transportation Commission. Most of the aircraft are returned to Bombardier Aerospace for disposal; during the first quarter of 1997, four of the Twin Otters and both Dash 8s are sold to the Papua New Guinea airline **MBA (Pty.), Ltd.**

NORSK AIR, A.S.: Norway (1988–1992). Norsk Air, A.S. (sometimes spelled NorskAIR, A.S.) is organized at Sandefjord in early 1988 to offer scheduled services from its base at Skien with a fleet of 3 Embraer EMB-120 Brasília. Terje Rosjorde is named managing director. When the regional carrier **Norving, A.S.** ceases its scheduled services on February 1, Norsk is asked to move in and take over the routes. A fourth Brasília is received later in the year.

In 1989, a fifth EMB-120 joins the fleet and a total of 128,000 passengers are flown. In May 1990, the 110-employee carrier, now in deep financial difficulty, is purchased by **Wideroe's Flyveselskap, A.S.**, which operates it as a subsidiary under the name **Wideroe Norsk Air,**

A.S. Trygve Floeloe becomes the new managing director and the number of Brasília is reduced to three.

Enplanements slide to 121,710.

On October 28 1991, the line begins daily EMB-120 service from Kristianstad and Sanfjord to London (STN). The carrier's statistics are now consolidated with those of its parent, which, in 1992, chooses to rename it **Wideroe Norsk Air, A.S.** Asbjorn Utne becomes managing director.

NORSK HELIKOPTER, A.S.: P.O. Box 171, Sola, N-4050, Norway; Phone 47 (516) 45 600; Fax 47 (516) 46 699; Year Founded 1993. In December, the major U.K. rotary-wing operator **Bristow Helicopter, Ltd.**, with a 32% stake, joins with the shipping companies Leifhoegh and Andreas Ugland to establish a Norwegian joint-venture subsidiary, **United Helicopter, A.S.** The new entrant, under the direction of Managing Director Bjarne Sortland, will operate as Norsk Helikopter, A.S. in North Sea offshore helicopter support competition with the giant **Helikopter Service, A.S. (HS)**, Bristow's principal rival. United purchases a hangar in Stavanger at year's end, to which Bristow administrative and operational personnel, under contract, report.

During the first quarter of 1994, one each Bristow Eurocopter AS-332L Super Puma and Sikorsky S-61N are dispatched to Stavanger as the fleet of Norsk Helikopter. Unhappily, the subsidiary will be unable to win any of the major North Sea contracts awarded during much of the remainder of the year and will have to occupy itself with various heavy lift and other minor contracts.

In early fall, Norsk bids on a number of significant new oil support contracts, including a deal from Statoil worth \$113 million, one worth \$20 million from Saga Petroleum, and a third, for \$30 million, with Norsk Hydro. All are lost to rival HS and only one small Arco support contract can be had.

In December, the Bristow subsidiary is finally able to outmaneuver HS, winning the lion's share of two Phillips Petroleum contracts for shuttle services to and from the Ekofisk oil field in the Southern North Sea. Reportedly worth \$15 million per year and with a three-year option to extend, the arrangements will require Bristow to supply four more Super Pumas early in the new year.

These duly arrive and Norsk begins the transport of workers between Stavanger and Ekofisk on September 1, 1995.

By 1998, Managing Director Sortland's fleet includes 4 Super Pumas and several Sikorsky S-76Cs.

During the fall, Statoil, the state-owned oil company, awards **Helikopter Service, A.S.** a 10-year, \$230.5-million contract to fly support from Bergen with a Bell 214ST beginning in March 1999, along with 3 Eurocopter Super Puma Mk. 2s, also from Bergen, starting a year later. The Phillips Petroleum shuttle contract is lost in September.

In November, Norsk takes over 40% of the Statoil contract. The terms of the \$203.4- million, 5-year Norsk contract (with 5 years of options) will be for support flights from Stavanger.

Revenues for the year total Nkr 300 million (US\$34.4 million).

The Norsk Helikopter fleet at the beginning of 2000 includes 3 Super Pumas (1 AS-332L1 and 2 L2s) based at Stavanger, 3 L1s at Bergen, 1 L1 at Kristiansund, 2 L1s at Hammerfest, and 1 Sikorsky S-76C+ out on the Frigg Field platform of Elf Aquitaine Norge, A.S. Clients include Statoil, ExxonMobile, and Elf at Stavanger; Statoil at Bergen; Exxon-Mobile at Kristiansund; and Norsk Hydro, Agip, and Statoil at Hammerfest. Airline employment in June stands at 125, including 51 in flight operations.

NORSUR (COMPANIA ARGENTINA DE AERONAVEGACION, S.A.): Argentina (1958–1965). Norsur is formed at Buenos Aires in 1958 to offer third-level scheduled services in the northeast part of the nation. Equipped with 3 (later 8) Lockheed Model 18 Lodestars, the commuter begins operations late in the year to a variety of destinations, including Concordia, Monte Caseros, Paso de los Libres, Corrientes, Posadas, Resistencia, Parana, Rosario, and Santa Fe.

The carrier is duplicating services already provided by **Aerolineas Argentinas, S.A.** and **ALA (Aerotransportes Litoral Argentina, S.A.)** and is unable to maintain viability; it is forced to stop flying in **1965**.

NORTH ADRIA AVIATION: Aeroport Vrsar, Zagreb, Croatia; Phone 052 441 350; Fax 052 442 075; <http://www.istra.net/naa>; Year Founded 1990. This small operator is established at Zagreb in **1990**, primarily as an air taxi and general aviation concern.

Over the next ten years, the company provides a number of services, including taxi and scheduled commuter flights, all-cargo services, panorama and sight-seeing flights, and transport for skydivers. It also operates a flight school.

The fleet at the beginning of **2000** includes 2 Yak 40s, 6 Let L-410UVPs, 3 Cessna 172s, 2 Antonov An-2 biplanes, and 1 Cessna Citation II bizjet.

NORTH AFRICAN CARGO AIRLINES, S.A.: Colisee SAULA, Escaliers A, 4eme etage, El Manar II, Tunis, Tunisia; Phone 216 (1) 887 027; Fax 216 (1) 886 680; Code NAA; Year Founded 1993. NAA is set up by Adel Deghim at Tunis on April 27, **1993** to offer regional and domestic all-cargo charter services. Shareholding in the nation's first public-private partnership enterprise is divided between Chairman Deghim and various local interests (55%) and stakeholders in the U.K. (45%).

Operational start-up is delayed until October **1995** when the concern's 2 Antonov An-32Bs undertake flights to and from Monastir, Djerba, Tabarka, Tozeur, and Tunis and on to Europe and other North African nations. Services continue in **1996–2000**.

NORTH AIR (1): United States (1968–1971). The small regional North Air is established at Anchorage, Alaska, in the summer of **1968** to provide scheduled passenger and cargo flights to Kenai and Soldotna. Revenue services commence on October 24 with Beech Volpars (modified Beech 18s) and de Havilland Canada DHC-6-100 Twin Otters.

Operations continue apace until the commuter's failure in **1971**.

NORTH AIR (2): United States (1980–1981). Edward Majerie and Lloyd Gutowski set up the second North Air at Eveleth, Minnesota, in December **1980** to provide scheduled daily passenger and cargo roundtrips to Minneapolis. Although Cessna 402 flights duly begin, they cannot be maintained beyond January **1981**.

NORTH AMERICAN AIR CHARTER: Li MacArthur Airport, 90 Arrival Ave., Ronkonkoma, New York 11779, United States; Phone (516) 737-4430; Fax (516) 737-2093; <http://www.naac.com>; Year Founded 1993. This corporate carrier is established at Long Island's MacArthur Airport in **1993** to provide on-demand lift for business executives in the New York City area. Revenue operations begin and continue with 1 each Grumman G-1159C Gulfstream IV and British Aerospace BAe (HS) 125-700 Hawker.

NORTH AMERICAN AIRLINES (1): United States (1945–1957). Following the end of World War II, former servicemen found a large number of nonscheduled carriers in the U.S. with surplus transports. Among these companies is **Fireball Air Express**, started by Charles Sherman and Stanley D. Weiss in November **1945**. Employing Douglas DC-3s, this airline begins transcontinental all-cargo operations from its base at Long Beach, California, to New York, with intermediate stops.

In **1946**, the Sherman-Weiss venture is renamed **Standard Air Lines** and is granted a CAB certificate as a "Large Irregular Carrier." Passenger flights begin in **1947**, during which year Charles Sherman leaves the company. A year later, in December **1948**, the CAB rules that irregular carriers may make only eight roundtrip transcontinental flights each per month.

As the postwar travel explosion begins to fizzle in **1949**, Standard joins its Burbank-based rival **Oxnard Air Freight** (formerly **Viking Air**

Lines) in forming the North American Airlines Agency (NAA). This ticketing organization allows the two officially independent carriers to coordinate their cross-country flights, double the number of aircraft and flights available, and get around the CAB monthly restriction.

Other large irregulars, including **Twentieth Century Airlines**, **Trans-National Airlines**, **Trans-American Airways**, and **Hemisphere Air Transport**, join this consortium in January **1950**. The members pool their aggregate point-to-point route and 8-per-month roundtrip authorities granted by the CAB ruling of 1948, plus their 14 DC-3s and a DC-4, and inaugurate a coordinated transcontinental schedule at the cut-rate one-way figure of \$99, \$160 roundtrip.

Technically retaining their independence, the consortium members, with Weiss as CEO and coordinating activities via their ticketing organization, come to act as a single airline and are so perceived by both the public and other airlines and the CAB. Fares are kept low by reducing luxuries; indeed, NAA is the nation's first "no frills" airline. These combined services prove extremely popular with the public, but not the trunk lines or government regulators.

In **1951**, the combine introduces additional DC-4s. After purchasing the last DC-4 of **Delta Air Lines** on June 15, **1953**, NAA appeals to the CAB for new routes. In late **1954**, NAA agrees to purchase all of **Eastern Air Lines'** surplus DC-4s plus \$1 million worth of spare parts. It also reports passenger boardings of 194,000, a total higher than the combined total for the country's three smallest regular carriers.

Early in **1955**, the carrier acquires new DC-6Bs and on May 1 begins nonstop transcontinental flights, having already become an international operator on April 5 by starting DC-4 service from California to Tokyo via Honolulu. When **Eastern Air Lines** encounters difficulties in receiving the aircraft purchased to replace the DC-4s sold to NAA, President Weiss initiates the first sale-leaseback agreement in industry history and sells back the spare parts without profit.

Both competitors and the CAB remain extremely displeased by NAA's aggressive expansion. The former, claiming that NAA has violated the 1948 irregulars ruling, demands the grounding of the nontraditional operation. On July 1, the CAB revokes the group members' certificates and orders the combined airline to cease operations. While the matter is hotly argued by lawyers, the partners go on to fly 272,000 passengers on the year and to earn revenues of \$15 million. Meanwhile, the CAB, on November 15, creates a whole new class of "supplemental air carriers."

In January **1956**, the regulatory agency denies an NAA application requesting exemption from certification rules. During the spring, NAA, as the result of a suit by the airplane builder North American Aircraft Company, changes its name to **Trans-American Airlines** and amends a second, pending exemption request. In July, the CAB again rejects the carrier's approach. Once more, Weiss appeals.

The CAB denies Weiss' final bid in January **1957** and the matter is referred to the U.S. Supreme Court for settlement. Following a pro-CAB decision on April 23, the irregular is disbanded.

NORTH AMERICAN AIRLINES (2): United States (1970–1971). This international commuter is established at Windsor Locks, Connecticut, in **1970** to offer scheduled passenger and cargo services to Montreal. Although daily Beech 18 roundtrips are duly inaugurated, they must end in **1971** when **Pilgrim Airlines** acquires the rights to the Quebec route.

NORTH AMERICAN AIRLINES (3): United States (1981–1984). Established at Miami in 1978 as **Air Miami**, this small third-level carrier becomes known from its affiliation as **Air Florida Commuter**. Services continue apace until December **1981**, at which point the successful 105-employee carrier breaks with **Air Florida**, electing to operate as an independent.

On February 11, **1982**, the new **North American Airlines (2)**, employing its fleet of 4 CASA C-212-200s, 3 Cessna 402s, and 1 de Havilland DH 114 Heron begins daily roundtrip flights between Miami and

West Palm Beach, allowing passengers a connection with **Eastern Air Lines** flights into the Caribbean.

Other destinations now served include Fort Lauderdale, Sarasota, and Fort Myers. The carrier undergoes several ownership and management changes during the year and continues to resist publishing its statistics.

Scheduled daily roundtrips are inaugurated during **1983** between Fort Lauderdale and West Palm Beach and the Bahamian destinations of Freeport, Treasure Cay, Marsh Harbour, North Eleuthera, and Bimini. These routes are discontinued in **1984**, at which time the airline's Florida business becomes charter and contract service. Scheduled operations are refocused to the northeast for the provision of flights between Atlantic City and New York City (JFK and LGA).

This strategy to generate additional traffic fails, forcing the carrier to cease trading.

NORTH AMERICAN AIRLINES (4): Suite 250, Building 75, North Hangar Road, John F Kennedy International Airport, Jamaica, New York, 11430, United States; Phone (718) 656-2650; Fax (718) 995-3372; Code XG; Year Founded 1989. Daniel McKinnon, former chairman of the CAB, founds the fourth NAA at New York (JFK) in **1989** to act as an American feeder airline for the Israeli carrier **El Al Israel Airlines, Ltd.**

Employing a Boeing 757-23A leased from Ansett Worldwide Aviation Services, the company begins linking Dallas (DFW), Los Angeles, and Washington, D.C. with Tel Aviv-bound flights from New York in January **1990**. Charters are also operated to the Caribbean. During July, it is announced that **El Al Israel Airlines, Ltd.** will purchase 24.9% shareholding in a deal worth \$400,000.

By year's end, a total of 59,085 passengers have been flown and revenues of \$14 million generated. There is an operating profit of \$654,997, but a net loss of \$355,672.

FAA 120-min. extended range twin-engine operations (ETOPS) certification for the B-757-23A is received in January **1991** and the carrier continues its charter operations and feeder work on behalf of **El Al Israel Airlines, Ltd.** Nonscheduled flights to Mexico are now made on behalf of Club Med and unrealized plans are made to commence European charters.

In May, the company becomes the first U.S. airline to operate a B-757 under the 120-min. ETOPS rule; the historic charter flight is made to Brize Norton RAF base, near Oxford, England.

Passenger boardings decline 18.6% to 48,000, but revenues increase by 40.9% to \$16.18 million. Expenses ascend 9.1% to \$14.7 million and guarantee an operating profit of \$1.48 million. Net profit also climbs to \$1.48 million.

A leased McDonnell Douglas MD-83 is placed into service in **1992**. It allows the introduction of weekend charter operations from U.S. cities to certain of Club Med's Caribbean destinations plus the execution of military charters. The company, through its feed arrangement, also allows **El Al Israel Airlines, Ltd.** to commence Dallas (DFW) to Tel Aviv service on October 20. Passengers aboard a NAA flight at Dallas (DFW) are flown to New York (JFK) with Kosher catering and a Hebrew-speaking flight attendant en route. Upon landing, travelers transfer directly to an **El Al Israel Airlines, Ltd.** flight at an adjacent gate and continue on to Tel Aviv; the flight from Israel to Texas is conducted in reverse order.

Customer bookings ascend 18.8% to 57,000. Income exceeds costs and there are profits: \$891,000 (operating) and \$526,000 (net).

Airline employment is increased by 7.5% in **1993** to 100; however, the fleet is unchanged.

Passenger boardings slip 7% to 53,000. Revenues ascend 19.2% to \$24.9 million and expenses jump 21% to \$24.19 million. Operating income declines to \$701,052 and net profit drops to \$450,054.

The workforce is cut to 60 in **1994** and the leased fleet still includes one each leased B-757-23A and MD-83.

Traffic figures are only reported for a portion of the year and these show enplanements of 26,000. Revenues jump 5.7% to \$26.3 million and expenses rise 7.2% to \$25.93 million. The resulting operating surplus is down to \$369,000, while net gain drops to \$300,000.

Operations continue apace in **1995–1996**. A B-757-28AER is chartered and the carrier offers wet-lease services on behalf of not only **El Al Israel Airlines, Ltd.**, but other foreign carriers as well. In addition, the company bids on and wins a number of U.S. military charters.

Enplanements in the latter year total 148,890.

In October **1997**, the carrier contracts with the International Lease Finance Corporation (ILFC) for the seven-year charter of a B-737-800, beginning the following May.

Passenger boardings accelerate 11.9% to 169,000. Operating revenues climb 20.1% to \$53.3 million, and a net \$1-million profit is banked.

The B-737-8Q8 arrives in June **1998** and joins the company's other airline's in providing regularly scheduled subservice for El Al, as well as on charters under its own initiative into the Caribbean.

When its own B-757-28A is disabled on November 4, North American's B-757-28AER is wet-leased the next day to **Guyana Airways Corporation** to ensure continuity of its flights between New York and Guyana.

Late in the year, a former **Middle East Airlines, S.A.L. (2)** B-747-2B4BC is obtained for charter operations.

During the 12 months, customer bookings climb 15.4% to 195,000. Revenues rise 15.7% to \$59.36 million, while costs are up to \$57.68 million. The operating profit is \$1.68 million and there is a \$1.38-million net profit.

Early in **1999**, the Jumbojet is placed into service for the next two years on behalf of Malta-based North Atlantic Airways Cargo. The aircraft, crew, management, and insurance (ACMI) contract is similar to that employed by **Atlas Air** with **British Airways, Ltd. (2)**.

Nonstop Next Generation B-737-8Q8 Saturday roundtrips commence on June 26 from New York (JFK) to San Salvador. Twice-weekly B-757-28A return charters to Guyana from New York (JFK) commence on July 16.

Passenger boardings this year dip 4.6% to 186,000. Operating revenues climb 12.6% to \$66.87 million, while expenses rise 15.5% to \$66.21 million. Profits are down to \$257,000 (operating) and \$60,000 (net).

Airline employment at the beginning of **2000** stands at 275, a 77.4% increase over the previous 12 months.

AirlinersOnline.com reports on June 27 that arrangements have been completed by Dan McKinnon (51.1%) and **El Al Israel Airlines, Ltd.** (49.9%) for the sale of majority shareholding (75.1%) in NAA to LASV Enterprises, Inc.

The twice-weekly frequencies between New York (JFK) and Georgetown, Guyana, are increased to thrice weekly on July 3.

On September 3, Republican presidential candidate George Bush transfers to a North American B-757-28A that has been given temporary "Bush-Cheney" titles. The previously employed **Miami Air International** B-727-225A is turned over to vice presidential candidate Dick Cheney, who has been making his appearances aboard a crowded Gulfstream IV executive jet. The Dash-28A will be returned to NAA after the November election.

A B-757-28A still wearing its green tail, but with NAA titles, is leased from **JMC Airlines, Ltd.** and begins providing Caribbean charter flights in early November.

On a three-month trial basis beginning on December 22, Friday B-757-28A return charters are offered from New York (JFK) to Tobago.

NORTH ATLANTIC AIRWAYS (PTY.), LTD.: 7078 Halfway House, Johannesburg, 1685, South Africa; Phone 27 (11) 315 1267; Fax 27 (1) 315 1269; Code NAA; Year Founded 1998. NAA is established at Johannesburg in **1998** to provide both scheduled and charter all-cargo services to points around the world. Revenue flights commence employing a single Boeing 747-200F wet-leased from the American International Airways (3) division of **Kitty Hawk Air Cargo**.

The AIA unit is renamed **Kitty Hawk International Airlines** in February **1999**, only to later be sold off. The fate of the NAA Jumbojet is unknown.

NORTH CANADA AIR, LTD. See **NORCANAIR, LTD.**

NORTH CARIBOU AIR, LTD. See **NORTH CARIBOU FLYING SERVICE, LTD.**

NORTH CARIBOU FLYING SERVICES, LTD.: P.O. Box 6789, Fort St. John, British Columbia, V1J 4J2, Canada; Phone (250) 787-0311; Fax (250) 787-6086; <http://www.northcaribooair.com>; Code 5N; Year Founded 1958. Organized at Fort St. John, British Columbia, NCFS begins revenue services in 1958 flying passenger and cargo charters and contract services flights primarily to Edmonton, Alberta, but also to other western Canada destinations. The first aircraft employed are all single-engine lightplanes, including de Havilland Canada DHC-2 Beavers. During the 1960s and 1970s, the carrier comes to emphasize not only general charter operations, but support flights for oil and geological exploration concerns.

The first airliner acquired is a Convair CV-440, which is purchased in 1979 and employed to transport Edmonton's hockey and baseball teams. The fleet is considerably enlarged in 1980 with the arrival of a second Convair and two Douglas DC-3s. The Douglas transports inaugurate a scheduled network in 1981 linking Fort St. John with Hudson Hope, Chetwynd, Dawson Creek, Fort Nelson, and Grande Prairie.

A de Havilland Canada DHC-6-200 is purchased in 1982 and assigned to the scheduled services. These prove so successful that a Vickers Viscount 806 is added in 1983. The Twin Otter is replaced in 1984 by a Convair CV-640, formerly flown by Echo Bay Mines, Ltd. The Viscount, proving too expensive to operate, is sold to the U.K. carrier **Euroair Transport, Ltd.** in 1985.

Scheduled operations cease in 1986, at which time all three Convairs are sold. Charter and contract service flights continue with lightplanes and the DC-3s, one of which is painted green and used to transport British Columbia fire fighters during the summer of 1987. It is withdrawn in 1988. Operations continue apace during the remainder of the decade and into the 1990s.

In 1993, President Dan Wuthrich oversees a workforce of 20 and operates a fleet reduced in type size if not in number. Among the flight equipment now utilized are the DC-3, 2 DHC-6s, 1 Piper King Air 90, 1 Piper King Air 100, 1 Piper PA-31-350 Navajo Chieftain, 1 Pilatus-Britten-Norman PBN-2 Islander, and 1 Cessna 206.

Operations are continued in 1994-2000, primarily in support for oil and geological exploration companies. The employee population is increased by five; however, the fleet, by the latter year, is down to 2 King Airs and 2 Twin Otters.

NORTH CAY AIRWAYS: United States (1964-1976). Established at San Juan, Puerto Rico, in the early fall of 1964, North Cay is equipped with a Douglas DC-3, originally delivered to **United Air Lines** on January 3, 1937, and a Britten-Norman BN-2 Islander. These two aircraft are employed to inaugurate scheduled third-level passenger and cargo services from San Juan International and Isle Grande Airports on October 21.

Except for the addition of a Piper PA-32 Cherokee Six, operations continue with almost no change until 1973. Destinations visited during the decade include Aguadilla, St. Thomas, Mayaguez, Ponce, Culebra, Vieques, and St. Croix.

Late in the year, North Cay becomes a subsidiary of Airways Enterprises, Inc. The fleet is increased by the addition of 10 DC-3s and routes and frequencies are significantly increased. Unable to remain economically viable in the midst of this expansion, the company fails in 1976.

NORTH CENTRAL AIRLINES: United States (1952-1979). To celebrate its locale, **Wisconsin Central Airlines** changes its name to North Central Airlines on December 16, 1952. Arthur E. A. Mueller, majority owner, remains chairman with former Wisconsin State Aeronautics Commission Chairman Howard Morey as president/general manager.

Corporate headquarters are moved to Minneapolis/St. Paul's Wold-Chamberlain Field at year's end. Routes previously flown by the car-

rier's 8 Douglas DC-3s are maintained between cities in Wisconsin and to Chicago and Minneapolis. A net loss is incurred on the year's books.

A period of gradual growth is begun in 1953 and routes are opened to Detroit, Grand Rapids, and Lansing. Although passenger boardings are up, a second net loss is suffered. Acknowledging that it had been a mistake to let him resign in the fall of 1952, the board rehires Hal N. Carr as president on April 15, 1954; at age 33, Carr is the youngest airline president in America. Having received a 90-day grace period from creditors, Carr establishes his own management team and begins to turn the airline around. The interiors of the DC-3s are upgraded, the aircraft receive names, and the first female stewardesses are hired. The dispatch rate is improved, new financing is found, and the first company profit under the North Central Airlines name, \$80,222, is earned.

Acting through its Purdue Aeronautical Foundation, Purdue University of West Lafayette, Indiana, which had purchased nine DC-3s in an abortive attempt to create **Mid West Airlines** as its own carrier, now invests in NCA and begins to promote its merger with another regional local service operator, **Lake Central Airlines**.

Airline employment in 1955 stands at 900 and 2 more DC-3s are added to the fleet. New routes are opened from Chicago to Detroit via South Bend, Kalamazoo, Battle Creek, and Jackson. A "shuttle" service is introduced between Chicago and Milwaukee and in June the one millionth passenger (cumulative) is transported.

Receiving its permanent operating certificate from the CAB, the airline, which has boarded 430,445 passengers and posted a net gain of \$99,000, is labeled "America's Leading Local Airline."

The workforce totals 1,000 in 1956 and the fleet comprises 24 DC-3s. The route system covers 3,240 unduplicated miles and over 100 departures per day are offered.

Although 550,000 bookings are honored, net profit falls to just \$10,691.

Three more DC-3s are acquired in 1957; these Northliners' tails bear a logo consisting of a goose nicknamed *Howard* within a circle and stretch a route to Omaha from Grand Forks. North Central wins CAB authority to fly nonstop from Chicago to Duluth and Spencer. The two-millionth passenger (cumulative) is boarded in April as the company celebrates its tenth anniversary. Purdue's plan ends when the CAB rejects its application to combine NCA and **Lake Central Airlines**.

Enplanements for the year total 680,983.

As the result of a CAB ruling in 1958, the carrier is able to expand into such cities as Rapid City and Bismarck. The fleet of 32 DC-3s flies into 65 cities in 9 states. Employing a loan guarantee program authorized by Congress for local service carriers, North Central begins to modernize its fleet.

In 1959, five Convair CV-340s "Super Northliners," purchased from **Continental Air Lines**, are introduced, together with a new "feather" scheme livery, which is also applied to the Douglas transports. Hot meals are offered aboard the Convairliners and during the summer, a "Beer Service" is launched from Milwaukee. This route, with its complementary brews, will remain popular through 1967.

Passenger bookings jump to 957,751.

Traffic continues to grow; over a million passengers are carried for the first time in 1960, as the company inaugurates new services to 15 additional Michigan markets, as well as Cleveland. The company's first international route is opened from Duluth to Port Arthur and Fort William, Ontario. A DC-3 with 19 aboard is badly damaged in a crash landing at Madison, Wisconsin, on August 13; all 16 passengers and 3 crew are injured.

In competition with several trunk lines, North Central by 1961 holds over half of the Chicago-Milwaukee market. The government subsidy provided to the carrier, like that given all local service airlines, is now \$8 million per year. A DC-3 with 27 aboard is rammed by a truck at Chicago on April 17 and is badly damaged. In the late fall, Operation Cold Front is implemented and this winterization program allows increased dispatch reliability during cold winter months.

In route near Pierre, South Dakota, on October 24–25, **1962**, a CV-340 with 47 aboard runs into a flock of birds; the aircraft is badly damaged, but is able to land without major injury to anyone aboard.

The company receives an \$800,000 foreign aid contract from the Agency for International Development (AID) on August 28, **1963** to help modernize **LAB (Lloyd Aero Boliviano, S.A.)**.

Enplanements for the year total 1,117,707. Revenues are \$28,006,027 and yield a net profit of \$505,711.

Airline employment in **1964** stands at 2,018 and the fleet includes 42 aircraft. Applications are made to the CAB for nonstop services from Minneapolis/St. Paul to Milwaukee and Chicago and via intermediate stops from Omaha to St. Louis and Kansas City. In December, North Central becomes the first local service carrier to enplane its 10 millionth passenger.

Bookings for the year accelerate 11% to 1,255,850. Despite a 7% decline in government subsidy, overall revenues advance by 5.8% to a record \$29,730,389. A record net profit of \$617,359 is also announced.

The workforce in **1965** is increased to 2,171. This is the largest number of employees for any of the U.S. regionals. President/General Manager Carr is also named board chairman in March upon the death of his predecessor, Arthur Mueller. To settle Mueller's estate, an inside secondary stock offering is made, from which Carr emerges as the largest single shareholder. Restrictions on service between Chicago and Duluth are removed and CV-440 Northliner cargo service is inaugurated to 12 midwestern cities.

On April 26, DC-3 N21728 flown by Capt. Herbert Spletstoeser, one of the carrier's original pilots, is retired following its arrival at Chicago (ORD) on Flight 748 from Minneapolis. With 83,032 hrs. 52 min. flying time, *Northliner Winnebago* is, at this time, the highest-time aircraft in the history of aviation. Unable to part with the famous aircraft, President Carr has it refurbished as an executive transport.

Reservations and flight information services are improved when the company begins to share the Univac 490 computer system of **Eastern Air Lines**. The fleet now includes 45 aircraft, including 29 CV-440s, 6 of which are newly delivered. Orders are placed for 5 DC-9-31s at \$4 million each, with options on five others.

On September 14, a DC-3 with eight aboard strikes trees while landing at Stevens Point, Wisconsin; no one is hurt.

Passenger traffic accelerates 20% as 1,616,900 passengers are carried; freight is up by 37% and a \$1.1-million profit is reinvested.

Five additional DC-9-31s are requested in **1966**, with options on five others. The first Convairliners are taken in hand for the fitting of turbo-prop engines.

Enplanements for the year leap to 2,018,740; revenues total \$39,422,442.

The workforce in **1967** stands at 2,649 as the company's twentieth birthday is celebrated. As the demand for improved services increases, the company continues to seek a replacement for its aging fleet of DC-3s. North Central also works to upgrade its entire fleet of 28 CV-340s and CV-440s into CV-580 turboprops that are gradually introduced, beginning with the first two on April 1. The marketing campaign "The Jet-Smooth Skyways of North Central" heralds their arrival, as does their new color scheme.

During the spring and summer, three new \$4-million Douglas DC-9-31s are acquired; the first is delivered on July 28, also in new livery, and is placed into service on September 8.

Meanwhile, ground is broken in July for a new \$15-million base facilities complex at Minneapolis (MSP). During the fall, jetliner flights are offered from Chicago, Detroit, Milwaukee, and Minneapolis (MSP) to a variety of smaller communities, including Kalamazoo, Aberdeen, Rapid City, South Bend, Eau Claire, Duluth, La Crosse, Green Bay, Wausau, Marshfield, and Madison. Service is also started to Kansas City and Toronto.

As a result of \$62 million in financing for the equipment upgrade, seven more CV-580s and all three DC-9-31s are delivered by December.

A record 2,347,371 passengers are originated, a 14% increase, and as the anniversary year closes, it is reported that 16 million passengers

have been flown since 1947. Revenues jump 8% to \$42,850,480 and a net profit of \$1,520,124 is banked.

At the beginning of **1968**, North Central flies over a 7,000-mile route network that connects 90 cities in 11 midwestern states, plus Canada. Employing one of every type of aircraft flown, including a Lockheed Model 10A in **Wisconsin Central Airlines** colors, the company stages a massed "20th Anniversary Flight" over Minneapolis/St. Paul on February 24. Work on the company's new operations base at Minneapolis (MSP) nears completion.

The year is plagued by operational accidents. On June 24, a CV-580 with 19 aboard lands safely after demolishing a 2,000-foot television transmitter tower near the airport at Sioux Falls, South Dakota. Another CV-580 with 11 aboard collides with a Cessna 150 of Home Airmotive over southeast Wisconsin on August 4 and flies 20 miles to a safe landing, the little private plane and its three dead passengers imbedded in its fuselage.

While executing a go-around in bad weather and fog at Chicago (ORD) on December 27, the pilot of Flight 458, a CV-580 with 4 crew and 41 passengers, loses control. The aircraft crashes upside down into a hangar and 27 aboard the turboprop are killed in the company's first fatal accident, along with 1 person on the ground.

Passenger boardings swell 23% to 2,777,000 and cargo traffic climbs 34.4%. Revenues jump 29% to \$55,226,000, but profits decline.

In February **1969**, the new \$15-million operations base, including general offices, is occupied at Minneapolis (MSP) by 1,200 of the airlines total 3,100 employees. The final DC-3 flight is completed on February 8 from the Twin Cities to Mankato, Minnesota, and Chairman Carr appoints Bernard "Bud" Sweet president in April. Applications are filed with the CAB seeking permission to service 29 more cities in 11 new states plus Canada and the District of Columbia.

DC-9-31 flights commence to the new Central Wisconsin Airport, serving Wausau, Marshfield, Stevens Point, and Wisconsin Rapids. In addition, service authority is granted to Cincinnati, Columbus, Dayton, and four cities in the Upper Peninsula of Michigan. All of the DC-3s are now retired and replaced with 33 Convair 580s and 13 DC-9-31s, with 5 of the latter joining the fleet since spring.

The operations base is officially dedicated in October and in December new stewardess uniforms are introduced.

Enplanements total 3,150,000. Revenues are \$68.42 million and although a \$4.01-million operating profit is earned, a net loss of \$2.37 million is suffered, the first in 16 years.

The employee population in **1970** is 3,147. Two additional DC-9-31s and another CV-580 are placed into service.

On April 23, a lone assailant wielding a fake pistol commandeers a bus and demands to be driven to the airport at Pellston, Michigan. There he boards Flight 945, a DC-9-31 preparing for departure to Detroit, and attempts to take it over. The man is quickly overpowered by the crew and turned over to law enforcement officers. Upon examination, he will be judged mentally deficient and will be sent to a psychiatric facility.

Minneapolis (MSP) to Omaha nonstop service is started in June, along with a route from Milwaukee to Cincinnati via Columbus and Dayton. At the same time, authority is granted for the company's single most important extension, to New York. In September, a long-awaited long-haul DC-9-31 route is inaugurated between Milwaukee and New York (LGA).

Passenger boardings accelerate 16% to 3.75 million and freight ton-miles are up by 31% to 10.9 million. With revenues of \$91.9 million, the company posts \$2.18-million net profit—a company record. NCA is the only local service carrier besides **Allegheny Airlines (1)** to achieve positive earnings this year.

Operations continue apace in the twenty-fifth anniversary year of **1971**, as the company employs a special logo and opens the Northliner Museum at the airline's Minneapolis (MSP) headquarters.

Enplanements remain level at 3,714,340 and profits decline to a million dollars.

The workforce in 1972 is 3,200. Company officials approach the CAB for permission to fly nonstop from Detroit to Boston, Milwaukee to Denver, Detroit to Atlanta, and Cincinnati to Atlanta. During the spring and summer, three DC-9-50s are ordered, terminal facilities at several airports are improved, and the ESCORT reservations system is expanded.

On June 29, a CV-580 collides in midair over Lake Winnebago, near Appleton, Wisconsin, with an **Air Wisconsin** de Havilland Canada DHC-6 Twin Otter; there are no survivors from either aircraft.

During a 19-minute Chicago to Milwaukee flight on August 18, \$2 million worth of securities are stolen by either a passenger who gained access to them through a restroom or someone hiding in the baggage compartment. The Brinks Company immediately calls in the FBI and stops payment, but \$1 million of the loss is in negotiable bonds.

On December 20, North Central Flight 575, a DC-9-31 with 4 crew and 41 passengers is taking off in heavy fog from Runway 27L at Chicago (ORD). At the same time, **Delta Air Lines** Flight 954, a CV-880 with 7 crew and 81 passengers, is taxiing across Runway 27L. The two aircraft collide, snapping off the Delta plane's vertical stabilizer; 10 aboard the local service airliner are killed and lack of speedy medical aid immediately following the accident raises new issues about airport emergency readiness.

Passenger boardings jump 14% to 4,319,000 and a total of 7.94-million freight ton-miles are flown. Income climbs to \$118.33 million and expenses are held to \$105.97 million. Consequently, the operating profit is \$12.355 million and the net gain is \$7.53 million, the largest in the carrier's history to date.

Seventy-eight new employees are hired in 1973. Five DC-9-50s are ordered and three are delivered. In addition, automated ticketing is introduced at several terminals. An application is made to the CAB for permission to fly nonstop from Milwaukee to Philadelphia. It also asks that its present route segments be consolidated so as to allow greater scheduling flexibility.

Historically, the year's highlight occurs when NCA becomes the first U.S. local service carrier to have its stock listed on the New York Stock Exchange.

Customer bookings fall by 1.3% to 4,263,000, but cargo is up by 13.8%. Income is \$126.42 million and expenses total \$114.41 million. The operating profit is \$12 million and the net gain—the 19th in 20 years—is \$6.44 million, down largely because of the OPEC embargo and oil crisis.

Airline employment in 1974 is 3,364. This quiet carrier continues its profitable ways despite the general U.S. economic situation. In October, flights are added from Duluth and Superior to Winnipeg and the route network grows to 10,200 unduplicated miles.

Although freight is off by 0.9%, enplanements are up 6.6% to 4,546,000. Even though expenses are up 15.1% to \$133.49 million, total income climbs 18.4% to \$151.49 million. The operating profit is \$17.99 million and net income is \$8.2 million.

Profitable for 20 years, a cumulative net income of \$25.2 million over the past 5 years has made North Central the highest earning airline in the local service industry; indeed, \$7 million more valuable than second place **Frontier Airlines (1)**. If this news is not welcome enough, Chairman Carr and President/CEO Sweet proudly announce that their company is the first local service carrier to declare a dividend upon New York Stock Exchange listed shares.

Sixty-six new employees are hired in 1975. On May 28, chief pilot Louie Farrell turns over the former *Northliner Winnebago* to the Henry Ford Museum at Dearborn, Michigan. With 84,875 flight hours (9.5 years) that have covered 12 million miles with 260 million passengers, N21728 remains the second highest-time aircraft of its type in aviation history behind another ex-EAL machine, N136PB of **Provincetown-Boston Airline (PBA)**.

A new \$1.8-million DC-9 digital flight simulator is delivered in October and a CV-580 nearly collides with a lightplane over Janesville, Illinois, on December 8. Two DC-9-50s arrive, also in December, and on

December 5, Hal N. Carr turns over his CEO responsibilities to President Sweet.

At 4,581,000, passenger boardings set a new record, though technically they are off by .08%. Cargo traffic is down 9.8%. Income reaches the record level of \$163.58 million and there are \$156.36 million in hidden expenses. The operating profit is \$7.22 million and the 21st consecutive net profit is \$5.22 million.

Airline employment is increased by 4.6% in 1976 to 3,587. In January, the company receives the 1975 "Financial Management Award" from *Air Transport World* magazine.

Five DC-9-50s are delivered during the year, beginning on April 5, bringing the fleet total to 8, plus 20 DC-9-31s and 25 CV-580s.

Customer bookings accelerate 8.5% to a record 4,969,264 while freight does even better, up 13.7% to 13.4 million FTKs. Operating income is \$191.1 and expenses are held to \$177.07 million. The result of this happy imbalance is an operating profit of \$14.03 million and a record net gain of \$7.45 million.

New nonstop service is started between Detroit and Boston on January 3, 1977. During the year, three more DC-9-50s arrive.

Enplanements total 5,211,000. On revenues of \$227.62 million, a \$13.76-million net profit is banked.

Airline employment is boosted a full 25% in 1978 to 4,460. A DC-9-50 with 103 aboard narrowly misses a high-speed collision with a corporate jetliner on a New York (LGA) runway on June 23.

During takeoff from Kalamazoo on July 25, Flight 801, a CV-580 with 3 crew and 40 passengers, strikes a flock of birds, causing the propeller to autofeather and forcing the aircraft to turn left and crash into a cornfield. There are no fatalities.

Following passage of the Airline Deregulation Act, competition between the various U.S. domestic carriers greatly intensifies. Marketing shifts and equipment upgrades become commonplace throughout the U.S. air transport industry.

In the fourth quarter, North Central extends its routes to 11 new cities, including Baltimore, Syracuse, Philadelphia, Atlanta, Houston, Tucson, and five areas in Florida, thereby doubling its route network to 22,400 unduplicated miles. To meet demand, seven DC-9-50s are acquired.

The year's most dramatic incident occurs at Madison, Wisconsin, on November 23. After crashing through a perimeter fence with his automobile, a man, claiming to have a bomb hidden in a plastic trash bag, rushes aboard Flight 468, a DC-9-50 preparing for departure. The captain calls police, who show up shortly thereafter and take the man into custody. Not only does the man not have an explosive, but upon psychiatric examination, will be found to be mentally unstable and sent to an institution for treatment.

Passenger boardings increase 24.6% to 6,911,000, while freight is up by 13.3% to 16.42 million FTKs. Revenues jump upward 31% to \$299 million and expenses are held to \$263.74 million. For the 24th consecutive year, the company records a net profit, reporting a 61% boost to \$22.2 million.

Airline employment exceeds 4,000 in 1979. In an effort to increase prosperity in a cutthroat marketplace, North Central joins with **South-ern Airways** in agreeing to a merger which, with CAB approval, is consummated on July 1. The resulting airline, the 13th largest in the country, is christened **Republic Airlines**.

NORTH CENTRAL AIRWAYS: United States (1979). NCA is set up at Lincoln, Rhode Island, in spring 1979 to provide scheduled air taxi flights between Providence and Block Island. Although daily Piper PA-31-350 Navajo Chieftain roundtrips are duly inaugurated, they can only be maintained for a few months.

NORTH COAST AIR SERVICE, LTD.: Canada (1961–1987). With a base at Prince Rupert, NCAS is organized by J. N. Anderson in 1961 to provide passenger and cargo charter and contract service flights along the north coast of British Columbia and to the Queen Charlotte Islands. Lightplanes are initially employed, including Cessna and de Havilland

Canada DHC-2 Beaver floatplanes. The first twin-engine aircraft is a Douglas DC-3 acquired in 1970.

The Douglas is withdrawn in 1975 and replaced by a Beaver. Service continues apace in 1976 and into 1977. On September 29 of the latter year, engine problems cause a leased C-46C Commando with two crew to make a forced landing in trees 15 mi. SE of Thompson; both men escape injury, but the Curtiss must be written off.

In 1978, the company dramatically increases its services and capacities by introducing a Grumman G-73 Mallard amphibian and two Curtiss C-46 replacement freighters. Airline employment grows to 30. The larger aircraft are joined by a DHC-3 Otter in 1986. Recession causes the carrier to stop flying in 1987.

NORTH COAST AVIATION (PTY.), LTD.: P.O. Box 350, Lae, Papua New Guinea; Phone 675 422 525; Fax 675 422 866; Code N9; Year Founded 1994. North Coast is founded by B. S. Potts at Lae in 1994 to provide domestic charter and commuter services. Revenue flights commence with 3 Pilatus-Britten-Norman PBN-2 Islanders.

Flights continue in 1995–2000, during which years the fleet is increased by two Islanders and a pair of Cessna 402Cs.

NORTH CONTINENT AIRLINES: United States (1983–1991). NCA is established at Long Beach in 1983 as an all-cargo commuter airline. In addition to charter and contract flights, the company, employing two Hamilton Westwind IIIs (converted Beech 18s), inaugurates scheduled freight flights in southern and central California, Arizona, and New Mexico.

Operations continue apace during the remainder of the decade and into the 1990s as the fleet is enhanced by the addition of a de Havilland Canada DHC-6-100 Twin Otter (upgraded to Dash-200 standard) and a Beech 1900C. Destinations visited include Albuquerque, Burbank, Fresno, Los Angeles, San Francisco, San Jose, Phoenix, and Tucson.

Unable to survive the airline recession and higher fuel bills brought about because of the Gulf War, NCA closes its doors in early 1991.

NORTH CROSS AIRLINES, A.B.: Sweden (1990–1993). This new entrant is established at Helsingborg in late 1990 from the assets of failed **Liz-Air, A.B.** to provide scheduled commuter services to local destinations. Managing Director Andres Ericsson's inaugural fleet comprises 2 Dornier 228-200s.

Scheduled domestic operations commence in the spring of 1991 and by fall, traffic is sufficient to warrant acquisition of a third Dornier. During the spring of 1992, service is inaugurated to the Polish city of Gdansk. Unhappily, the fierce Swedish recession in the spring of 1993 forces the company, losing money, to shut down.

NORTH EAST BOLIVIAN AIRWAYS, LTDA.: Freighter Casilla 1740, Cochabamba, Bolivia; Phone (42) 29596; Fax (42) 29595; Code NBA; Year Founded 1970. NEBA is established at Cochabamba in 1970 as a nonscheduled all-cargo carrier. Thirty years later, in 2000, Edgar Rios Caoro is manager and the fleet includes 1 each Curtiss C-46C Commando and Convair CV-440-86 Metropolitan.

NORTH EASTERN AIRWAYS, LTD.: United Kingdom (1935–1947). Capitalized at £20,000 and with Lord Grimthorpe as chairman, this airline is registered at London on March 4, 1935. The initial fleet comprises Airspeed Envoys, which are employed to initiate London (Heston)–Newcastle flights on April 8 via Leeds. The Newcastle route is extended to Edinburgh on May 27.

The targeted victim of a railroad effort to eliminate the small independents by ending their participation in the railroad agent ticketing business, the company suspends operations in July. The assets are purchased by **Alp Airline, Ltd.**, which is planning a London (Croydon)–Switzerland service.

Following an 18-month hiatus, thrice-weekly Airspeed Envoy flights are opened from London (Croydon)–Perth on November 2, 1936, via

Doncaster, Yeadon, and Newcastle. Seven de Havilland DH 89As are acquired.

The Perth route is extended to Aberdeen on April 5, 1937, but will be withdrawn in the fall from lack of radio aids. Meanwhile, on July 1, two experimental proving services are started from Hull to Manchester via Doncaster and from Hull to Grimsby, with the former extended to Liverpool in September. Summer service from London (Croydon) to Knocke and Le Zoute is initiated on July 29 and ended on September 6.

The Liverpool–Doncaster route is closed in February 1938. In April, a Newcastle–Glasgow service is undertaken especially for those attending the Empire Exhibition at the Scottish capital. The frequency is changed in October for a Doncaster–Glasgow route via Edinburgh. On October 3, mail is added to a DH 89A route from Perth to London (Croydon) via Newcastle, Yeadon, and Doncaster, although it is only unloaded at Newcastle and London.

In accordance with the September 16 Air Navigation Order, the new Air Transport Licensing Board (ATLB) on October 21 grants the carrier route certification from London (Croydon)–Perth and Glasgow and from Hull–Doncaster and Grimsby.

The company joins IATA in 1939. On September 3, war is declared on Germany and all civil flying ceases. Company operations are suspended, but not resumed; the carrier is absorbed into **British European Airways Corporation (BEA)** on February 1, 1947.

NORTH EASTERN CARGO AIRLINES (SVGAL): 7 Reki Magdanski, Naberezhnaya Reki, Magadan, 685007, Russia; Phone 9 (41322) 24 336; Fax 9 (41322) 21 082; Code MGD; Year Founded 1993. NECA is founded at Magadan, near the Sea of Okhotsk in Siberia, in 1993 as a subsidiary of **Magadan Air Concern (Magadan Aviakoncern MAK)**. U. K. Braynev is named general manager and is provided with a fleet of 4 Ilyushin Il-76TDs and 4 Antonov An-12s. These are employed to initiate ad hoc all-cargo charter flights to domestic and international destinations. MAC is reformed into **Magadan Airlines (Magadanskie Avialinii)** in 1995.

Service is maintained during the remainder of the decade and into the new millennium. In this period, Vladimir Brainin becomes director general and his fleet is reduced by one each Il-76TD and An-12. An application is filed and approved for the operation of long-haul charters from Russia to the U.S. A hub is simultaneously opened at Manston, England, for short- and medium-haul flights into Western Europe and Russia, many of which are operated by An-12s under a contract with the cargo division of **British Airways, Ltd. (2)**. Several Il-76TD charters are flown from Magadan to Houston via Manston, transporting oil industry gear to Central Asian locations. Ilyushin flights between Manston and Sverdlovsk are also common.

NORTH FLYING, A.S.: Aalborg Lufthavn, Norresundby, DK-9400, Denmark; Phone 45 9817 3811; Fax 45 9817 9052; Code NFA; Year Founded 1990. Hanstholm-based North Flying A.S. names Holger Jorgensen as its premier managing director in 1990. An inaugural fleet is assembled comprising 1 Beech King Air 100, 1 Fairchild-Swearingen Metro II, and 2 Piper PA-31-310 Navajos. These are employed to inaugurate scheduled commuter flights to Aalborg, Stavanger, and Esbjerg.

Soren Ibent becomes managing director in 1992 and he alters the fleet by withdrawing the King Air and adding a second Metroliner.

The fleet in 1993–1994 grows to include the 2 Metroliners, the Navajo, and 1 each Partenavia PN-68, Cessna 340, and Cessna 337.

Flights continue in 1995–1999, during which years the company also flies a Pilatus-Britten-Norman PBN-2 Islander and an Aerospatiale Corvette SN-601. Scheduled services continue, along with such charter missions as crew transfer and express “just-in-time” flights.

NORTH JAPAN AIRLINES COMPANY, LTD. (KITA NIHON KABUSHIKI KAISHA): Japan (1953–1964). North Japan is formed by the local Hokkaido government and private investors at Sapporo on June 30, 1953 to provide air taxi and charter flights throughout

Hokkaido. With backing from **Japan Air Lines Company, Ltd. (2)** and leased Douglas DC-3s, the company begins scheduled services in July **1957** linking its base with Memanbetsu and Makashibetsu.

Among company highlights is the receipt in early **1959** of the former **Hawaiian Airlines** DC-3 *The Moanalua*, the American carrier's first Douglas transport placed into service in 1941. The new owners complain about patches on the new aircraft's fuselage, not immediately realizing that they cover bullet holes made by Japanese aircraft during their attack on Pearl Harbor.

In June, *The Moanalua* opens a new route from Sapporo to Wakkanai, the northernmost city in Japan.

A number of Convair CV-240s are purchased from the Sikiya Trading Company during late spring **1960** and enter service from Sapporo to Hakodate on August 1. During the fall, Convairliner service to Kushiro is launched.

Service from Hokkaido to Honshu begins on April 1, **1962** with a new route to Akita. The company receives a permanent certificate from the government on November 1. With inauguration of the summer **1963** schedule in March, the company offers frequencies from Sapporo to Tokyo via either Hachinohe or Hakodate and Akita.

As the result of several air accidents befalling the nation's smaller carriers, the Ministry of Transport in early **1964** elects to rationalize the regional airline industry. On April 15, North Japan is one of three small carriers merged to form **Japan Domestic Airlines Company, Ltd.**

NORTH PACIFIC AIRLINES (NPA): United States (1987–1990). In the spring of **1987**, the **United Airlines** "United Express" partner **WestAir Airlines** President Timothy Flynn announces the creation of a new feeder, North Pacific Airlines (NPA), which is based at Pasco, Washington. Outfitted with a pair of British Aerospace BAe Jetstream 31s, the new subsidiary, under the direction of President Craig Belmondo, inaugurates 12-times-a-day services to Portland, Oregon, in July.

In September **1988**, the parent company's holding firm, WestCom Holdings, is transformed into WestAir Holdings, with Flynn named chairman. In November, orders are placed by WestAir for two, later three, Embraer EMB-120 Brasilias for NPA.

Enplanements for the first full year of service total 363,206.

Airline employment in **1989** stands at 400 and the fleet now includes 17 Jetstream 31s. The first three EMB-120s join the fleet in January and February and Brasilia flights commence to Boise, Idaho, on March 1.

A total of 14 cities are served by spring, including Seattle, Wenatchee, Spokane, Portland, Eugene, Redmond, Bend, Medford, Pullman, Moscow, Lewiston, Clarkston, Kalispell, and Missoula.

A number of pilots are now hired from failing **San Juan Airlines** and on May 1, NPA takes over for the collapsed Port Angeles-based regional.

On October 22, the underbelly baggage compartment of a Jetstream 31 departing Redmond, Washington, hits a deer just as the aircraft is rotating; the aircraft returns immediately to the ramp and no injuries (except to the deer) are reported.

Icing is a major factor in the December 26 loss of "United Express" Flight 2415, a BAe Jetstream 31 with two crew and four passengers, which crashes 100-ft. short of the runway at Pasco-Tri Cities Airport after a service from Yakima. There are no survivors.

Traffic statistics for the year are not reported separately, but rather as part of the parent's report.

In March **1990**, just after daily roundtrips begin from San Francisco to Fresno, the San Francisco-based **WestAir Airlines** division is combined with the NPA unit, which flies "United Express" services out of Seattle, under the former's name, becoming the West Coast division of WestAir, itself now a national in size. **Atlantic Coast Airlines**, formed the previous year, remains the East Coast division. NPA President Belmondo transfers to Atlantic Coast as its vice president-customer services and sales.

NORTH QUEENSLAND AIRWAYS (PTY.), LTD.: Australia (1934–1938). T. H. McDonald founds his North Queensland Airways

(Pty.), Ltd. at Cairns in the early fall of **1934**. After obtaining a de Havilland DH 50 Moth and a DH 80A Puss Moth, McDonald initiates Cairns to Cooktown flights on October 22. Twice-weekly Cairns to Townsville service is started on June 30, **1935**.

A Cairns–Innisfail daily Puss Moth route is opened on June 1, **1936**. During the summer, DH 84 Dragons are obtained and these are used to inaugurate Cairns–Normanton service on September 1.

On April 7, **1937**, a weekly Cairns–Brisbane frequency is opened. Two new Dragon routes are opened in June: every two weeks to Portland Roads from Cairns on June 12 and under subsidy, the Normanton terminus is stretched to Burketown on June 15.

During the summer of **1938**, Cairns–Mount Isa and Normanton–Koolatah flights begin. The carrier is purchased by and merged into **Airlines of Australia (Pty.), Ltd.** on October 25.

NORTH SEA AERIAL AND GENERAL TRANSPORT, LTD.: United Kingdom (1919–1933). As an aeronautical branch of Blackburn Aeroplane and Motor Company, Ltd., North Sea Aerial Navigation Company is formed at Leeds on April 23, **1919**. Equipped with several of the parent's unsold and slightly converted *Kangaroo* reconnaissance-torpedo aircraft, North Sea inaugurates a commercial freight and express service from Soldiers' Field at Leeds' Roundhay Park to Gosport. Employing an Avro 504K, passenger flights are started in June over a route Scarborough–Hull–Harrogate; simultaneously, a daily express parcel operation is flown from Leeds to Scarborough.

In August, the long-nosed *Kangaroo* biplanes inaugurate service from Hull to London (Hounslow) via Leeds and also get in several charter flights from Hounslow to Amsterdam. During the September 30–October 5 British rail strike, company *Kangaroos* fly mail and passengers from Leeds to London (Hounslow). In October, Blackburn's enterprise is renamed North Sea Aerial and General Transport, Ltd.

Flying a *Kangaroo*, R. W. Kenworthy inaugurates a short-lived Leeds to Amsterdam via Lympe all-cargo service on March 6, **1920**. The service and the operator are both suspended on October 20 and remain shut down for over five years. The British colonial governments of Uganda and Kenya each subscribe £2,500 for the development of an experimental seaplane service from Khartoum–Kisumu, Lake Victoria, and Blackburn Aircraft resurrects its suspended airline subsidiary in November **1926**.

Employing Alan Cobham's famous DH 50J exploring aircraft *Pelican*, T. A. Gladstone attempts the first flight between the Nile at Khartoum and Lake Victoria on January 2, **1927**, only to crash upon takeoff. The RAF lends a Fairey IIID and Gladstone makes a successful proving flight the first week of February.

On February 15, a second flight, with mail, is made from Kisumu to Jinja; the Fairey IIID completes the run to Khartoum on February 15, where the RAF continues the mail to Cairo. The Fairey IIID crashes upon takeoff for the third test flight on March 13. The *Pelican* is repaired by October and Gladstone resumes flights from Khartoum to Kisumu.

On April 24, **1928**, the African enterprise is merged with Alan Cobham's aviation firm Alan Cobham Aviation, Ltd., to form **Cobham-Blackburn Air Lines, Ltd.**

Dormant for five years, Blackburn revives North Sea Aerial and General Transport, Ltd., in summer **1933** On July 1, in conjunction with East Yorkshire Motor Services, Ltd., a Blackburn Segrave and Fox Moth participate in a thrice-daily Humber ferry service (the air sector extends from Hedon to Waltham). Scheduled frequencies become nine per day on September 4, but are reduced to on-demand charter as of November 4. Flights end a year or so later.

NORTH SEA AIR TRANSPORT, LTD.: United Kingdom (1945–1967). Formed in November **1945** as a subsidiary of the Blackburn Aircraft Company and equipped with a Miles M.38 Messenger, NSAT is based at Hull's Brough Airport. Following resumption of civil aviation in the U.K. in January **1946**, the company soon begins flying ad hoc charters. A Percival P-28 Proctor 1 is provided in March, followed by a

de Havilland DH 89A in May. The Proctor 1 is lost in a crash at Zurich on September 17. Two more Dragon Rapides join the fleet in November.

The first of two Miles M.57 Aerovans to be delivered on the year arrives at Hull in mid-May 1947. It is placed in service immediately, but is lost on June 14 in a takeoff accident from London's Croydon Airport (one dead). Additional aircraft added to the fleet during the year include an Avro Anson I in July, an Avro 19 in October, and a second Aerovan, also in October. Ad hoc charters are flown to Continental destinations as well as several in Ireland, Scotland, and the Channel Islands.

Charter services remain approximately the same in 1948 and no aircraft are added to the fleet. The Avro 19 is lost in a crash at Port Erin on June 11. Destinations are more frequently visited but not changed significantly in 1949; however, the fleet is increased by the addition of a Percival Proctor 5, two DH 89As and a Lockheed 14 in October, and a Lockheed 12A in December.

A Dragon Rapide is sold in February 1950 and following the summer tourist season, the company elects to severely limit its charter business. By November 1951, all aircraft have been sold except for two DH 89As, one of which is sold in November 1952. The remaining Dragon Rapide, joined by a DH 104 Dove 1 in September 1958, is employed as Blackburn's communications aircraft.

NSAT remains on the books as an airline company and during the next 12 years even undertakes a few charter flights. The Dragon Rapide is sold in July 1965 and in March 1967 the Dove is withdrawn and the company is allowed to disappear.

NORTH SEA HELICOPTERS, B.V. See **KLM/ERA HELICOPTERS, B.V.**

NORTH SOUTH AIRLINES, LTD.: United Kingdom (1959–1962). **Overseas Air Transport, Ltd.** founder Lord Calthorpe forms this company at Leeds in March 1959 to provide ad hoc charters employing a leased de Havilland DH 114 Heron 1B just now returning from a lease to **Cambrian Airways, Ltd.** The company is officially registered on May 29 with capitalization of £10,000. Scheduled weekly Leeds to Bournemouth Heron 1B flights begin on June 6.

During the summer, ad hoc charters are flown to Channel Island and Continental destinations. On July 12, a scheduled route is opened from Leeds to Sandown via Leeds; it is followed on August 1 by service from Leeds–Exeter via Hurn. Scheduled services are suspended for the winter on September 26.

A Bristol 170 Mk. 21 Freighter is accepted in April 1960 (and immediately leased to **Air Condor**) along with another Heron 1B leased from OAT in May. Meanwhile, the previous year's scheduled routes are reopened in March. A significant number of ad hoc and inclusive-tour flights are made during the year, primarily by the two Herons.

In early 1961, the **Air Condor** lease is concluded and the Freighter is chartered to **BKS Air Transport, Ltd.** Scheduled services from Leeds to Bournemouth, Exeter, and Sandown are introduced in May. The **Overseas Air Transport, Ltd.** Heron 1Bs are returned to its successor company, **Mercury Airlines, Ltd.**, in June.

In July, the company leases a Heron 1B from **Gulf Aviation** and a Bristol 170 Mk. 21 Freighter from **Trans European Aviation**; the same month, a DC-3 is purchased and in August, one is briefly chartered from **British Westpoint Airlines, Ltd.** Scheduled and charter services are maintained as in 1960. The Bristol Freighter is returned in July and the Heron 1B in October at the conclusion of the summer tourist season. The company is purchased by McBean Tours at the end of the year.

In January 1962, North-South returns all of its scheduled licenses to the government, planning now to concentrate solely on the charter business. Before the summer season can be opened, however, creditors win suit for payment in Chancery Court and close the carrier down on March 12.

NORTH SOUTH AIRWAYS: 1954 Airport Road, Suite 200, Atlanta, Georgia, 30341, United States; Phone (770) 455-7575; Fax (770) 455-7550; <http://www.north-southairways.com>; Year Founded

2000. North South is established in June 2000 as follow-on to the May purchase by Atlanta-based International Airline Support Group (IASG) of a 16-year-old local concern known as Diamond Aviation. IASG, which has operated for 20 years as an aircraft leasing and spare parts concern, signs a contract with the Brazilian aircraft manufacturer Embraer under which the new cargo company becomes the launch customer for the new EMB-120CF freighter.

The first of as many as 20 of the new cargo planes is received on September 22, wearing a red stripe on an all-metal fuselage with red titles and logo. Under the leadership of IASG Vice President David Marcontell, who doubles as North South's vice president of operations, it is placed into regional service shortly thereafter. The contracts held by Diamond with **United Parcel Service (UPS)** and **Corporate Express** are maintained under the new entrant.

NORTH TAHOE AIRWAYS: United States (1963). NTA is set up at San Francisco in 1963 to provide scheduled commuter flights to Truckee. Operations last only a few months.

NORTH VANCOUVER AIR, LTD.: 5360 Airport Rd., South, Richmond, British Columbia, V7B 1B4, Canada; Phone (604) 278-1608; Fax (604) 278-2608; <http://www.northvanair.com>; Code VL; Year Founded 1994. This charter carrier is established in 1994 by Zoltan Kuun, Anthony Kuun, and Lise Villeneuve. Scheduled cargo flights on behalf of **UPS (United Parcel Service)** are started to Victoria in the spring of 1995. Scheduled service to Nelson and Creston in the Western Kootenays begins in April 1998.

At the beginning of 1999, the partners employ 32 workers and operate a fleet comprising 3 British Aerospace BAe Jetstream 31s, 4 Piper PA-31-350 Navajo Chieftains, and 2 Beech King Air 90s.

NORTH WEST AIR DEPARTMENT/ST. PETERSBURG: 39 Prospect Rimski Korsakova, St. Petersburg, 190068, Russia; Phone 7 (812) 114-1282; Fax 7 (812) 114-0924; Year Founded 1992. Following the breakup of the U.S.S.R., the longtime Leningrad detachment of **Aeroflot Soviet Airlines** is, like its base city namesake, reformed and renamed in August 1992. Although autonomous from **Aeroflot Russian International Airlines (ARIA)**, North West retains links to Aeroflot and employs V. A. Balakin as general manager. The ex-Aeroflot fleet includes 8 Antonov An-12s, 8 An-24s, 6 An-26s, 12 Ilyushin Il-86s, 26 Tupolev Tu-154B/Ms, 10 Tu-134s, 3 Tu-204s, and 3 Yakovlev Yak-40s. Orders are placed for 3 Tu-204s.

Revenue flights are inaugurated throughout Russia and to Amsterdam, Brussels, Copenhagen, Frankfurt, London (LGW), Luxembourg, Paris, Vienna, Zurich, and New York (JFK). Enplanements total 2,732,112.

The Russian economic situation brings significant traffic declines in 1993.

Passenger boardings plunge 45.2% to 1,881,620, while freight declines 28.3% to 361.4 million FTKs.

In 1994, one more Il-86 joins the fleet and General Manager Balakin sends five Tu-154s to Dimonite, Ltd., at Birmingham, England, where they become the first aircraft of an ex-Aeroflot division to have business-class interiors installed.

Upon their return, scheduled service is introduced to Paris, Amsterdam, and London (LGW). Plans are made, late in the year, to begin operations from Aeroflot's new hub at Shannon, Ireland.

On the year, customer bookings recover, rising 6.9% to 2,012,000. Cargo, however, continues to fall, dropping 12.5% to 315 million FTKs.

Flights continue in 1995–1999. During these years, the fleet grows to include 6 each Antonov An-24s and An-26s, 8 An-12s, 10 Tupolev Tu-134s, 3 Tu-204s, 13 Ilyushin Il-86s, 3 Yakovlev Yak-42s, and an unspecified number of Kamov Ka-32s and Mil Mi-8s.

NORTH WRIGHT AIR, LTD.: Canada (1994–1997). NWA is set up by Warren and Carolyn Wright at Norman Wells in 1994 to offer char-

ter passenger and cargo flights in the northern area of the country. Revenue flights commence with a fleet that includes 1 each Beech 99A, Beech King Air 90, Cessna 185, Cessna 337C, de Havilland Canada DHC-6-100 Twin Otter, Pilatus-Britten-Norman PBN-2 Islander, Piper PA-23-250 Aztec, and 2 Piper PA-31-350 Navajo Chieftains.

Operations continue apace in **1995–1996**, during which years a second Cessna 337C is acquired. Heavy emphasis is placed on the provision of transport to bush locations for hunters, hikers, and fisherman. Additionally, an Arctic Flight Training school is established.

The company is reformed in January **1997** and renamed **North Wright Airways, Ltd.** The original North Wright Air becomes the charter division and flies the Pipers, Cessnas, and Islander.

NORTH WRIGHT AIRWAYS, LTD.: Bag 2200, Norman Wells, Northwest Territories X0E 0V0, Canada; Phone (403) 587-2288; Fax (403) 587-2962; <http://www.north-wrightairways.com>; Code HW; Year Founded 1997. Warren and Carolyn Wright reform their **North Wright Air, Ltd.** in January **1997**, renaming it to emphasize its commuter airline activities. Scheduled revenue flights are initiated with 1 each Beech 99A, Cessna 208B Grand Caravan, and de Havilland Canada DHC-6-100 Twin Otter. A number of lightplanes previously employed are dispatched as part of the North Wright Air charter division. Satellite bases are set up in Deline and Fort Good Hope. Aircraft maintenance, expediting, and other services are provided at all company locations.

During the remainder of the year and in the next two, daily scheduled frequencies are undertaken to and between Yellowknife, Deline, Fort Norman, Norman Wells, Fort Good Hope, Colville Lake, and Inuvik. In addition, the company continues to operate an Arctic Flight Training School at Norman Wells.

Airline employment totals 30 at the beginning of **2000**. The combined fleet for both the scheduled and charter divisions includes 2 Beech 99s, 1 Britten-Norman BN-2 Islander, 2 Cessna 206s, 3 Cessna 207As, 1 Cessna 208B Grand Caravan, 2 Cessna 337s, 2 Twin Otters, 2 Helio Couriers, 3 Pilatus PC-6Ts, and 2 Piper PA-31-350 Navajo Chieftains.

Destinations visited include Colville Lake, Deline, Fort Good Hope, Inuvik, Fort Norman, What Ti, and Yellowknife.

NORTHCOAST EXECUTIVE AIRLINES: United States (1990–1991). Northcoast Executive is founded at Dayton, Ohio, in early **1990** by Calvin Humphrey and other former officials of **Jetstream International Airlines**. Employing a fleet of 3 Fairchild Metro IIIs, President Humphrey's small regional inaugurates scheduled services on March 7 between General Airport and Detroit City Airport and Flint. Four-times-a-weekday frequencies are opened in October from Dayton to Chicago (MDW) as the result of a new code-sharing agreement with **Midway Airlines**.

Although a fourth Metroliner is acquired in early **1991**, the company is unable to maintain its viability in the face of recession and the Gulf War and consequently shuts its doors on January 23. President Humphrey immediately signs on as vice president-aircraft sales with Fairchild Aircraft in San Antonio, Texas.

NORTHEAST AIRLINES (1): United States (1940–1972). Northeast Airlines is born on November 19, **1940** when the railroad owners of **Boston-Maine/Central-Vermont Airways**, in a preparatory move for a forthcoming public stock offering, elect to change their airline's corporate identity by adopting a new name, logo (the Happy Pilgrim), aircraft livery, and uniforms. The fleet comprises 2 Stinson SM-6000Bs and 4 Lockheed Model 10A Electras and many on the board, including Eugene Vidal, remain.

The inherited multistop route system, roughly in the shape of a "V," extends from Boston–Montreal in the west and Boston–Bangor in the east. In December, the Bangor terminus is extended to Moncton, New Brunswick.

Stock is, indeed, offered in January **1941** and helps to raise the capital necessary for new equipment. The company's first three Douglas

DC-3s are received in May while, simultaneously, both Stinsons are now withdrawn, with one sold in late June. The Douglas transports begin revenue flights on July 1. Following the Japanese attack on Pearl Harbor on December 7, the Bangor–Moncton route is suspended.

Two additional Lockheed Electras are purchased from **Braniff Airways** during the year. A total of 42,797 passengers are transported and the company, now the nation's 11th largest airline in terms of the number of passengers carried, wins the dubious honor of receiving, on a pound-mile basis, the highest mail subsidies in the U.S. airline industry.

To determine the feasibility of starting a scheduled North Atlantic ferry route to the U.K., on January 11, **1942**, Northeast's chief pilot Milton H. Anderson undertakes a survey flight. Employing an Army Air Transport Command (ATC) C-39 (a hybrid military DC-2 complete with a DC-3 tail and unofficial Northeast titles) with President Samuel J. Solomon serving as an airman, Anderson flies from Presque Isle in Maine to Gander, Newfoundland, via Gander, Moncton, Goose Bay, and Stephenville. This is the first sortie into this area since Charles Lindbergh's Jelling expedition in 1933, made on behalf of **Pan American Airways (PAA)**.

At the request of Air Transport Association of America (ATA) President Edgar Gorrell and the War Department, **American Airlines** executive M. P. "Rosie" Stallter is sent in January on a weeklong inspection tour of the U.S. Army Air Forces' Air Service Command bases in Pennsylvania, Ohio, Alabama, Utah, and California.

From this trip, Stallter and Gorrell devise and present the Army with a domestic, military-cargo service plan to be operated by the airlines under government contract. Under the plan, five geographical segments are created, each assigned to a specific carrier: **American Airlines** the East Coast, Northeast the Northeast, **Eastern Air Lines** the Southeast, **Northwest Airlines** the Pacific Northwest, and **Braniff Airways** the Southwest. On January 31, a contract is signed between the airline and the military for the operation of a scheduled route connecting these destinations.

The New England-based carrier becomes the first U.S. domestic airline to commence regularly scheduled overseas contract passenger and freight service for the ATC when flights to Labrador and Newfoundland begin on February 13, **1942**. The carrier is asked to trade its three DC-3s to **Transcontinental and Western Air Lines (TWA)** on April 16 and 22 for five DC-2s. No sooner are the DC-2s received than they are requisitioned, as C-32As, by the U.S. Army Air Forces (USAAF) and are promptly put back into service under contract to Northeast. Chief pilot Capt. Anderson is now USAAF Capt. Anderson.

On April 24, the Gander route is stretched to Narssarsuaq ("Blue West 1") on Greenland's east coast via Goose Bay by a C-53 Skytrooper (military DC-3 variant) overloaded by two tons. This move is followed by a route extension from Narssarsuaq to Sondre Stromfjord ("Blue West 8"), further north along the eastern coast of Greenland. In May, the carrier pushes its Atlantic route 750 miles further east to Reykjavik, Iceland, via Angmagssalik ("Blue West 2").

On June 2, two DC-3s are purchased from **American Airlines** for operation of the company's domestic routes. Nine days later, one of the carrier's Electras is transferred to the USAAF for operation as a UC-36A. On July 3, Northeast aircraft begin to regularly service Stornoway on the Outer Hebrides island of Lewis. The inaugural Douglas carries in a complete radio range station. The Stornoway destination is pushed to Prestwick, Scotland, shortly thereafter, giving the company a complete Boston–U.K. route network.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 contract carriers (also including **American Airlines**, **Braniff Airways**, **Chicago & Southern Air Lines**, **Pennsylvania Central Air Lines**, **Transcontinental and Western Air Lines**, and **United Airlines**), which are rushed to Presque Isle.

From Presque Isle, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland that will facilitate Operation Bolero, a mass bomber ferry from the U.S. to

England. Northeast is also contracted to provide local services within Iceland, ferrying troops needed to garrison the island nation.

On July 22, via the Treasury Department, the ex-**Transcontinental and Western Air Lines (TWA)** DC-2s are taken over by the government. Designated C-32As, they are given back to Northeast to operate under contract with an olive gray livery featuring the words "Northeast Airlines" on each fuselage side above the windows in the manner of the C-39 used back in January.

In an effort to find a shorter route from midwestern North America to Greenland, Northeast pilots now undertake a series of exploratory flights. The first departs Goose Bay for Frobisher Bay ("Crystal 2") via Fort Chimo ("Crystal 1") on November 1. Twenty days later, the "Crystal 2" terminus is pushed west to Churchill via Coral Harbor on Southampton Island. By flying east from Winnipeg, ferry and transport pilots might now head east via Coral Harbor and Frobisher Bay to "Blue West 8" on Greenland and hence to Prestwick.

The Airlines War Training Institute is established on August 11 under the direction of President Solomon. With its main headquarters at Washington, D.C. and a branch in New York, the body is an unincorporated association with representatives from 19 U.S. carriers. Its purpose is to provide communication between the airlines and the military, to assure training uniformity, and to prepare or upgrade manuals and textbooks.

On March 16, 1943, a route is extended due north from "Crystal 2" to a landing field on Baffin Island christened "Crystal 3." At that point, the runway, unavailable during the summer, is only available from fall through spring and consists of a strip right onto the frozen bay.

Company directors, having considered certain of the prospects of the coming postwar future, support President Solomon's application to the CAB, made the next day, for route authority to the capitals of Europe and for a helicopter route network covering New England.

To exchange personnel and provide supplies, company aircraft, between March 28 and April 9 make four roundtrips to Fort Ross on Somerset Island from Coral Harbor via Arctic Bay on Baffin Island. The first proving flight is piloted by Capt. Al Marsh with an all-volunteer crew. In the 13-day mission, 2,300 pounds of supplies are brought in and sick or hurt personnel are taken out for medical treatment.

On July 27, Solomon asks the CAB for two routes to Chicago. Solomon is informed that before the government will act, the railroads must divest themselves of ownership. After successfully assisting in the training of over 35,000 ground personnel and 12,000 flight crew (exclusive of pilots), the Airlines War Training Institute is disbanded on October 31.

On January 15, 1944, 90% shareholding in the company is sold to Floyd Odlum's Atlas Corporation; Mr. Odlum's wife, the famed aviatrix Jacqueline Cochran, is also given a seat on the revised board of trustees. President Solomon now also asks the CAB for permission to fly to New Orleans via Atlanta.

Contract aircraft continue their operations in Atlantic Canada, Labrador, and Iceland. In March, a C-47, piloted by Capt. Ray Remick, makes a daring flight from Goose Bay to the north coast of Labrador to save an ill Air Force cook. After touching down on the ice at Hebron Fjord, Remick's crew is able to load the airman and dig a pair of 5-ft.-wide, 500-ft.-long trenches that allow the aircraft to takeoff before its wheels, which have begun to gradually sink, become completely stuck.

Although the CAB refuses the company's request for European, Chicago, New Orleans, and helicopter services, it does, however, award the company a Boston to New York route on June 12 to be operated via Worcester, New Bedford, and Waterbury. Two days later, the first of two C-53s to be delivered by the USAAF during the year arrives; both will be converted to DC-3 civil standard.

Massachusetts-based **Mayflower Airlines**, a shuttle, is purchased in August; the arrangements are finalized on January 1, 1945. DC-3 service to New York is duly inaugurated and by December frequencies have been increased to 16 daily roundtrips. The service, however, does not prove profitable, largely because it is flown in competition with the stronger **American Airlines**, even after the addition of four more DC-3 conversions obtained through the Reconstruction Finance Corporation.

Orders are placed for DC-4s and applications are made with the CAB for certification of routes to Bermuda and New Orleans, neither of which will be allowed. At year's end, a plan is announced for a merger with **Pennsylvania-Central Airlines**; government regulators, however, will not permit that consolidation either. President Solomon quits to head up **California Eastern Airlines**; he is succeeded by Paul F. Collins.

The two ex-**American Airlines** DC-3s obtained in 1942 are sold to **Colonial Airlines** early in 1946, at which point the company's route network covers 1,053 unduplicated miles. Four more Douglas transports are acquired during the year. Two DC-4s, leased from **Pennsylvania-Central Airlines**, join the fleet during the first two weeks of May and are placed into service on the 185-mile Boston-New York run on May 13. A third is delivered at month's end. It is quickly discovered that these aircraft are not profitable on such a short haul, especially against the formidable competition of **American Airlines**, and new Convair CV-240s are requested.

Despite their lack of profitability, the three four-engine airliners are purchased in June 1947, along with another DC-3 from the Reconstruction Finance Corporation. Late in the year, George Gardner succeeds President Collins.

A DC-3 is sold to **Piedmont Airlines (1)** on February 21, 1948 and between February 25 and September 2, 1949, six new Convair CV-240s are delivered. A Convair CV-240 with 3 crew and 25 passengers is damaged beyond repair during a hard landing at Portland Airport, Maine, on August 11; there are no fatalities.

The DC-4s are withdrawn and sold by mid-1950.

A DC-3 with an engine afire crash-lands at South Weymouth, Massachusetts, on September 9, 1951; again, no injuries are reported. Also during the year, merger discussions with George Baker's **National Airlines** fall through and an application is put before the CAB seeking authority to operate from Boston to Miami via New York.

On January 14, 1952, the copilot of a CV-240 with 2 other crew and 33 passengers is flying the aircraft when he mistakes the glassy surface of Flushing Bay for his intended runway at New York (LGA) and goes into the water. All aboard escape serious injury and are rescued by the tugboat *Bill Endter*. The plane's captain will be held accountable for failure to monitor his lieutenant's approach.

On December 5, IAM mechanics, inspectors, and cleaners go on strike and within 3 days Northeast can offer only 10 flights per day. After the carrier agrees to arbitrate the workers' pay demands, the strike ends on December 20.

A propeller malfunction causes a Convairliner to speed off the runway at New York (LGA) on February 6, 1953—again without passenger fatality, although three aboard are hurt. Following the demise of **E. W. Wiggins Airways**, a number of New Hampshire routes plus one to Montreal via Montpelier are taken over. Curtiss C-46s join the fleet to work a number of all-cargo runs. During the past three years, five more DC-3s have been acquired.

In 1954–1955, two DC-3s and four CV-240s join the fleet and orders are placed for 10 DC-6Bs. On April 4 of the former year, all-cargo service is initiated throughout New England. On November 30 of the former year, Flight 792, a DC-3 with four crew and three passengers, is reported missing while on approach to Berlin, New Hampshire, following a service from Boston. The wreckage is found on Mt. Success, New Hampshire, the next day (two dead) and the five survivors are evacuated by helicopter.

A CV-240 is sold to **Mohawk Airlines (1)** in October of the latter year.

On January 17, 1956, a Convairliner makes a successful dead-in, poor-weather landing at New York (LGA), having suffered complete instrument and electrical failure and severe icing. The plane touches down with 5 min. of fuel left in its tanks.

The company has now completed a decade's provision of subsidized frequencies throughout the New England region. At this point, a Curtiss C-46, modified by the L. B. Smith Corporation of Miami into a 40-seat CW-20T, is leased and enters service between Boston and Montreal.

As the result of a CAB decision, Northeast is given a major new route, New York–Miami, on a “temporary basis” as of August 10. The carrier had been chosen for this third north-south flight path over **Delta Air Lines** and **Pan American World Airways (1)**. Competition with **Eastern Air Lines** and **National Airlines** on the thrice-daily roundtrip Florida run will, however, prove anything but easy. On December 3, company officials announce that, within a year, Northeast will begin flying a fleet of five Bristol Britannia 305 turboprops; unhappily, negotiations to finance the British turboprops cannot be completed and their delivery is placed in jeopardy. At Christmastime, a DC-6A is leased from **The Flying Tiger Line**.

Converted to passenger configuration, the big Douglas is employed to inaugurate Boston–New York–Miami service on January 9, **1957**. Beginning on January 16 and continuing through October 15, the 10 DC-6Bs requested in 1955 are delivered. All will operate as Sunliners on the Boston–New York–Miami route.

Meanwhile, Flight 823, **The Flying Tigers Line’s** DC-6A, just after takeoff from La Guardia in a heavy snowstorm with 6 crew and 95 passengers on February 1, is lost in a flaming crash at Rikers Island, New York (22 dead).

As reported in the February 2 issue of *The New York Times*, Rikers Island prisoners assist in rescuing the survivors and 106 will later have their prison sentences reduced for their efforts, with 11 others freed for their heroism. The surviving pilot Capt. Al Marsh, who had led a dangerous wartime mission in 1943, is found guilty of pilot error by government investigators and is required to resign. Alvin Moscow also relives the accident in his *Tiger on a Leash* (New York: G. P. Putnam, 1961).

En route from New Bedford to New York in heavy fog on September 15, a DC-3 with 3 crew and 21 passengers, crashes under unknown circumstances into a swamp just after takeoff from the Massachusetts community (12 dead).

Revenue flights are initiated to Washington, D.C., Philadelphia, and Tampa during the year. Because of problems in the U.K. with the type’s landing gear and engines, the Britannia order is deferred in October, the same month the CW-20T is returned to its Miami owners.

During June **1958**, an earlier order for 5 Bristol Britannia 305s is cancelled, but, in July, orders are placed for 10 Vickers Viscount 798Ds.

The first two British-made turboprops are received on August 8. They arrive wearing a paint scheme which features bold “NE” initials on their tails and “Viscount” titles. A CV-240 with 3 crew and 31 passengers strikes the ground in heavy fog 1,450 ft. short of the runway while on final approach to Nantucket, Massachusetts on August 15 (24 dead).

A third Viscount 789D is delivered on August 21, the same day upon which the first enters service on the Boston–New York segment.

Between September 3 and December 11, five additional Viscounts join the fleet. Meanwhile, five of the carrier’s 95 pilots fail a special-instrument flight proficiency examination given by the CAA on October 20; when all of the line’s chief pilots are tested, none fail. The success of the chief pilots halts discussion in some circles that the company has expanded too quickly and in an unsafe manner and should be grounded. CEO George Gardner, however, resigns over the matter and is succeeded by Robert Mudge. Although the New York–Miami route has produced good traffic during the year, the company loses over \$7 million.

The final two British turboprops arrive in January and February **1959**. Five CV-240s are sold between January and May, three going to **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)**. The carrier’s first major jetliner, a Boeing 707-331, is leased from **Trans World Airlines (TWA)** on December 17 and is employed to add fast capacity on the New York–Florida route at Christmas and New Years. The jetliner’s daily roundtrip schedule is integrated with TWA’s transatlantic service. Losses for the year again exceed \$7 million.

In May **1960**, Northeast’s board, \$10 million in debt, accepts a \$9-million loan from **Trans World Airlines (TWA)**, still led by Howard Hughes, which also makes arrangement for the carrier to obtain additional jets.

In November, six Convair CV-880s are leased from General Dynamics for four years; the first is received on November 30. It achieves a speed record on its delivery flight from San Diego to Boston of 4 hrs. 17 min. The second CV-880 arrives at Boston on December 5 after a flight just two minutes longer than that of the first aircraft.

With four of the six Convairs on hand, CV-880 SuperJet service is inaugurated on December 15 from Boston to Miami via Philadelphia. The DC-6Bs continue to offer thrice-daily New York–Miami roundtrips.

A DC-3 is sold to **Lake Central Airlines** on December 30. Despite addition of the new aircraft, the company’s ledgers continue to be written in red ink.

Despite over \$11.5 million in loans from the Hughes Tool Company, long-standing financial difficulties continue, particularly in the period after April 30, **1961** when **Eastern Air Lines** begins its no-reservation Boston–Washington shuttle service. The situation reaches a point where Shell Oil begins demanding cash-on-delivery for all fuel purchases.

The left main landing gear of a Viscount 789D collapses at Baltimore on September 4. Also in September, the Atlas Corporation, parent of the airline, turns down a joint proposal for the takeover of the carrier’s routes put forward by **Eastern Air Lines**, **National Airlines**, and **Mohawk Airlines (1)**. Had the deal been accepted, Northeast as an entity would have disappeared almost immediately.

A Viscount 789D with 8 crew and 37 passengers must be written off at Boston on November 15 after **National Airlines (1)** Flight 429, a DC-6B with 30 aboard, begins a non-cleared takeoff from Logan International Airport and strikes the Northeast plane; 15 aboard are injured.

Also in November, Hughes Tool Company (Toolco) agrees to provide additional assistance and the first of four CV-880s leased from Hughes Tool Company for five years enters service in December. Northeast’s competitors quickly petition the CAB asking that it step in and prohibit the Toolco aid package.

The B-707-331 leased from **Trans World Airlines (TWA)** is returned in February **1962**. A Viscount, with 27 aboard overshoots the runway while landing at New York (LGA) on April 27; no one is injured in the wreck that follows. The board of **Trans World Airlines (TWA)** approves the \$5-million acquisition of Northeast on May 8 and the CAB, contrary to the demands of Northeast’s competitors, approves the arrangement on June 19, provided that the Hughes arrangement is something less than a complete merger. Two additional Toolco CV-880s are leased to Northeast late in the year.

Still unable to keep up its payments, Northeast, in July **1963**, negotiates the involuntary return of its remaining Viscounts to Vickers (all except two, one of which is passed on to **Hawaiian Airlines** and the other to **Aloha Airlines**). At this point, Convair and GE also demand return of the CV-880s and two of the six are immediately withdrawn. Although Toolco provides two replacements, Northeast is unable to continue its payments on the four original aircraft, which will also be returned to their lessor, beginning in September.

In August, the CAB disallows the company’s “temporary” Florida route certificate. Filing a protest with the U.S. Court of Appeals at Boston, Northeast attorneys are able to obtain a temporary restraining order against the CAB order. This fortunate ruling will allow Northeast to continue flying south from New York during the profitable winter vacation season. Meanwhile, the airline’s leadership begins an intensive Washington, D.C. lobbying campaign, talking to every important New England representative from President Kennedy on down.

A petition concerning the CAB Florida route action also circulates through New England which, when completed, will contain over 250,000 signatures and be sent to Congress. The CAB and its Chairman Alan Boyd are unimpressed.

The Hughes Corporation, which now owns over 56% of the carrier’s stock, has provided it with \$11 million in loans and \$16 million in debt guarantees, pledges to cover no further debts. Additionally, the loss of its British turboprops forces Northeast to lease five DC-6Bs in September. These will be placed into an unequal competition against **Eastern Air Lines’** big-city commuter operation. The death of President

Kennedy at the end of November blunts much of whatever high-level executive influence the airline had hoped to gain from its D.C. lobbying effort.

Enplanements for the year total 1,356,735 and a net loss of \$10 million is suffered.

Airline employment in 1964 stands at 2,099. During the spring, **Eastern Air Lines** and **National Airlines (1)** step forward with an offer of \$15 million if it will voluntarily suspend its Florida operation. President Mudge and his directors obtain an injunction from Suffolk County, Massachusetts, Superior Court Judge Robert Sullivan that will prevent stockholders from even considering this idea.

In early April, the temporary restraining order runs out and Northeast, despite the continuation of legal proceedings, finally loses its Florida authority. Consequently, the carrier's Jacksonville and Tampa stations are discontinued. Toolco, in one of its final acts of assistance, engineers an arrangement under which four of its own CV-880s are transferred to Northeast, while all six of the Northeast CV-880s, which have been returned to Convair, are provided to **Trans World Airlines (TWA)**.

A DC-3 with 20 aboard fails its takeoff from Montpelier, Vermont, on April 10 and crashes; no serious injuries are reported. A DC-6B is damaged, but no one is hurt, when its landing gear collapses during a June 5 landing at New York (LGA); the wreck blocks the main runway for eight hours. Following almost frantic negotiations, Hughes Tool Company publishes a liquidation plan for the airline in October. Control of the carrier (55% shareholding) plus a \$23-million outstanding loan is passed to a one-man trustee, H. J. Hector.

Passenger boardings for the year gain by a slight 3.5% to 1,404,487. Revenues decline 2.8% to \$42,703,975. However, as operating expenses are reduced by 17%, the year's net loss is only \$2.8 million.

During the winter and spring, the situation for Northeast appears grim. However, for the second time in the decade, the company is saved when in June 1965, 87% of its capital stock (including the Hughes investment) is purchased by the Miami-based Storer Broadcasting Company. The purchase price for the 973,266 shares is \$6.30 per share or \$6,141,575.80. Storer also agrees that the company's debt will be converted into equity and an additional \$7 million in "working capital" will be invested. Storer Chairman George B. Storer serves notice to the CAB that he will not only fight to retain the Florida route, but will attempt to obtain additional authority as well. He will also seek to save the carrier by changing its old conservative image and making it more competitive.

To that end, on August 10, he joins new President Lewis Lyle in ordering 22 new aircraft—6, later 8, Boeing 727-95s, 6 B-727-295s, and 10 Douglas DC-9-31s—with a price tag of \$100 million-plus. Meanwhile, 2 B-727-95s are delivered late in the year, bringing the fleet total to 29, including 4 CV-880s. A case for permanent East Coast route certification is prepared for presentation to the CAB and a large-scale training program for ground and flight services is undertaken. To replace the DC-3s still operating in New England, seven Fairchild Hiller FH-227Cs are ordered in November.

The workforce now totals 2,341 and annual bookings jump 16.6% to 1,637,863. Revenues rise 12.9% to \$48.2 million and despite the Storer rescue, a \$205,569 loss is suffered.

American Airlines executive Forwood C. "Bud" Wiser Jr. succeeds Lewis Lyle as CEO in early 1966.

Between July 13 and December 23, the full order for seven Fairchild Hiller FH-227Cs is filled, with the first entering service in New England on July 13. During the summer, noted industrial designer Raymond Loewy creates for the company what will become the famous "Yellowbird" (yellow and white) aircraft livery. It will become common to all new aircraft acquisitions, beginning with the first B-727-95 when it is delivered in October. The last DC-3, N16060, is retired on December 16, following its last revenue service.

The year's enplanements total 1,986,372.

Leased for 15 months from DC-6B distributor F. B. Ayer, a former **American Airlines** Convair CV-990A, christened *Flagship Rita*, joins the fleet on January 20, 1967.

While en route from Philadelphia to Boston on February 24, a DC-6B with five crew and nine passengers, suffers explosive decompression over Holmdel, New Jersey, caused by the failure of a forward section of the fuselage near the cargo door. A 12-ft. section is blown out of the fuselage, which strikes the No. 3 engine, causing the propeller to break off. A safe emergency landing is made at New York (JFK) and no injuries are reported.

A week later, the FAA temporarily bans pressurized flights in DC-6Bs and DC-7s.

Following lengthy deliberations and receipt of another huge write-in petition from New England, the CAB, on March 2, grants Northeast a permanent Florida route certificate. Over the next two years, the company, which could not steal a long-haul certificate from the regulators during its first quarter century, will be given several. The first of 14 Douglas DC-9-31s arrives at the company's Boston center in May.

On September 15, Avis Rent-a-Car begins an in-flight rental service on the company's Boston-New York commuter flights. Also in September, the last of the leased DC-6Bs are withdrawn and are either returned to Ayer or sold to the Fairchild Hiller Corporation as partial payment on the FH-227Cs. The same month, the last five retired DC-3s are sold.

The first of 13 B-727-295s is delivered in early December and when placed in service on December 14 Miami-New York, it is the first B-727-200 to begin revenue operations anywhere.

On the year, passenger boardings jump 17.2% to 2,399,000 and freight traffic is up by 11.4%. Although \$78.6 million in revenues are earned, expenses reach \$83.3 million. The losses are \$83.3 million (operating) and \$6.5 million (net).

The employee population at the start of 1968 is 3,629 and the fleet includes 34 aircraft. The last two CV-880s are withdrawn during January and February. Also in February, a DC-6B is sold to **Olympic Airways, S.A.** By late spring, all of the DC-6Bs will be gone from the fleet, with at least two more delivered to the Greek flag carrier by Capt. E. C. "Ted" Roberts.

Nine B-727-295s will join the fleet this year as orders are placed on April 8 for six (later eight, half of which are options) Lockheed L-1011 TriStars. The CV-990A *Flagship Rita* is returned to its lessor on April 30.

Boston and New York to Nassau and Freeport flights begin on May 15 while Boston to Newark flights resume on September 27 after a 22-year lapse.

On October 25, Flight 946, an FH-227C with 3 crew and 39 passengers en route from Boston to Hanover, New Hampshire, crashes at Moose Mountain, near Lebanon, New Hampshire, and burns (32 dead); the aircraft is the only one of its type lost while in Northeast Airlines service.

Construction nears completion on a new computerized reservations system at Boston.

The already famed "Yellowbirds" originate 3,109,000 passengers during the year, an increase of 30%; cargo traffic skyrockets a spectacular 99.5%. Revenues total \$111,705,000.

Several new services are launched during late winter and spring 1969: Boston-Bermuda on March 14; Portland-Chicago via Manchester and Detroit on April 28; and Bangor-Chicago via Burlington and Cleveland on May 31. Four additional B-727-295s are delivered and two aircraft are hijacked to Cuba.

The first diversion occurs on May 26 when Flight 6, a B-727-295 en route from Miami to New York, is ordered to Havana by a trio of armed men. The craft and its 20 passengers return to Miami the same day. On May 31, a new route is started from Bangor to Chicago via Burlington and Cleveland.

Another trimotor jet, operating as Flight 43 with 52 aboard, is forced to Cuba on August 14 by two men, one armed with a pistol and the other a knife.

A new \$2-million computer center is completed at Boston and here the company's IBM 360/65 Minuteman reservations system and training facilities are installed and come on-line. In direct competition with

National Airlines, Northeast, on October 1, inaugurates B-727-95 multistop service from Miami across the Southern transcontinental route to Los Angeles. This 2,335-mi service is the company's longest.

Still, the year is poor for the carrier, which had nearly expired several times earlier. Rising costs dramatically outstrip revenues. Through the first three quarters, Northeast has lost \$6.7 million. Despite the initiation of new cost-cutting measures, the company appears doomed.

Beginning on November 11, **Northwest Airlines** mounts a major effort to acquire the carrier, offering \$50 million for the airline, its aircraft, and its route certificates. A month later, following receipt of CAB authority, the company transfers a number of small, unprofitable Northeastern routes to **Mohawk Airlines (1)** and **Air New England**.

Enplanements for the year are 2,964,480. On revenues of \$122.08 million, a net loss of \$28.84 million is suffered.

The employee population in 1970 numbers 3,727, down 19.4%. The fleet includes 41 aircraft: 21 B-727s, 14 DC-9-31s, and 6 FH-227Cs. Service is ended to the Maine cities of Auburn, Augusta, and Lewiston on March 31 and half of the Fairchild is mothballed. The remainder continue to fly to Keene, Lebanon, and New Bedford.

All arrangements for a merger with **Northwest Airlines** appear so agreeable that Northeast cancels its order for L-1011s. On December 31, the CAB, in giving its approval for the **Northwest Airlines** merger, excludes Northeast's recently won Southern transcontinental route from the deal.

The year's customer bookings are off by 15.8% to 2.56 million and freight ton-miles drop 11.5%. Revenues grow slightly to \$122.8 million and the loss improves to \$10 million in red ink.

Stung by the loss of a potentially prime route, **Northwest Airlines** withdraws its merger offer on March 10, 1971, but the offer is quickly replaced by one from **Delta Air Lines**. In May, both boards approve the arrangement and the appropriate applications are filed with the CAB. At the public hearing that follows, the marriage is opposed by **Eastern Air Lines**, which fears the integration of the two carriers' complementary route networks.

A DC-9-31 is involved in an accident at Martha's Vineyard on June 22.

Following a year of negotiations with the government over certain New England routes and the attempted entrance into the proceedings by **Eastern Air Lines**, the patience of both boards of directors is rewarded when President Nixon approves the merger on May 19, 1972. On July 16, a cardboard box containing 21 bottles made into Molotov cocktails is found by an employee on a company loading dock at New York (JFK) and are turned over to security. Northeast is merged into **Delta Air Lines** on August 1 and all 3,555 Northeast employees begin to wear new uniforms.

NORTHEAST AIRLINES (2): United States (1997-1998). Wayne Hazard establishes NE-2 at Baltimore/Washington International Airport in July 1997 to offer daily nonstop return passenger service to Cumberland, Maryland, and Allentown, Pennsylvania. Revenue flights, employing a single leased Beech 1900C, commence on September 1. With the addition of a second Beech 1900C, twice-daily roundtrips are inaugurated on October 1 to Hartford.

Unable to achieve economic viability, the company shuts down within a year.

NORTHEAST AIRLINES, LTD.: United Kingdom (1970-1976). Equipped with 2 Hawker Siddeley Trident 1Es, 1 Bristol Britannia 102, and 6 Vickers Viscount 806s, **BKS Air Transport, Ltd.** changes its name on November 1, 1970.

A major charter operator, Northeast flies inclusive-tour charters out of Newcastle during the 1971 season. Destinations, flown on behalf of such tour companies as Airway Holidays, Sunway Holidays, Horizon Holidays, and Visit Norway include Italy, Yugoslavia, Holland, and Norway. The last Britannia service is flown on December 31, London-Newcastle, after which the Bristol is withdrawn and scrapped.

Enplanements for the year total 619,476.

Airline employment in 1972 stands at 688. Similar operations are undertaken as in the previous year.

Passenger boardings ascend 14.2% to 722,000 and freight traffic jumps up by 21.6%.

The company, a member of the British Air Services group since 1967, joins the **British Airways, Ltd. (2)** group in July 1973. Although call signs and titles are retained, company aircraft are painted in BA livery. Northeast is allowed to continue its inclusive-tour work for most of the next three years. The workforce is now reported as a part of BA's, but individual traffic records are kept.

On the year, passenger boardings increase 10.8% to 800,000.

Operations continue apace in 1974, but on September 15, 1975, a Trident 1E is destroyed in a crash at Bilbao. On March 31, 1976, the carrier is designated a unit of BA's Regional Division and ceases all independent identification.

NORTHEAST AIRWAYS: 7 Airport Road, Morristown Airport, Morristown, New Jersey 07960, United States; Phone (973) 267-2450; Fax (973) 984-7646; Year Founded 1976. Northeast Airways is established as an FBO/charter operation at Morristown Airport in New Jersey in 1976. Fourteen years later, Vice President Cathy Brady oversees the work of 10 pilots. These fly regional and international passenger and express charters with a fleet that includes 2 Gates Learjet 35As and one each Beech Super King Air 200, Beech 90 King Air, and Cessna 402C.

NORTHEAST EXPRESS REGIONAL AIRLINES: United States (1989-1995). A subsidiary of **Bar Harbor Airlines**, Frenchville, Maine-based **Valley Airlines** is purchased, reformed, and renamed on September 18, 1989 by Allyn Caruso, founder of **Bar Harbor Airlines**. Northeast links its base with 12 other New England communities with a fleet of 3 owned and 2 leased Beech 99s. In December, founders Walt and Suki Fawcett sell out **Precision Airlines**, the other northeastern "Northwest Airlink" partner, to Northeast's Caruso, who will operate it as a separate affiliate.

Combined enplanements for the year total 24,267.

The 102-employee Northeast succeeds **Valley Airlines** on February 5, 1990 as the "Northwest Airlink" partner of **Northwest Airlines** at Boston. The fleet is altered to include 6 Fairchild Metro IIIs and six Beech 99s.

Passenger boardings quadruple to 100,618.

Company employment skyrockets 74.5% in 1991 to 185 and the fleet is increased by 8 Metro IIIs as 1 Beech 99 is withdrawn. Just before the Paris Air Show in July, President Caruso and a crew that includes **Aeroflot Soviet Airlines** Capt. Yacov Sabodin, depart Bangor, Maine, and fly a 15,000-mile circumnavigation of the world in commemoration of the historic 1931 flight of Wiley Post and Harold Gatty. A total of 32 records are broken during the 8 day, 20 hr. odyssey by the Metro III *Spirit of Partnership*.

Customer bookings for the year zoom upward a spectacular 124.8% to 226,778.

New routes started to Canada in spring 1992 and passenger boardings ascend 35.1% during the 12 months to 306,365.

In 1993, President Caruso oversees a workforce of 225 and a fleet of 22 Fairchild Metro IIIs and 2 Beech 99s. Orders are outstanding for three de Havilland Canada DHC-8s.

Destinations visited at the beginning of the year include Baltimore, Norfolk, Newark, Atlantic City, New York (JFK), Rochester, Boston, Nantucket, Manchester, Burlington, Portland, Augusta, Bangor, and Presque Isle. The Canadian communities of Charlottetown, Moncton, Fredericton, and Saint John are also served. New service is initiated from Boston to Montreal and Halifax.

Customer bookings decline 29.9% to 206,563.

Flights begin to Sydney, Nova Scotia, in early 1994. The workforce slides to only 82 workers after the carrier's "Northwest Airlink"

affiliation is lost during the summer. The code-sharing revocation is such a major catastrophe that the company stops flying scheduled services and files for Chapter XI bankruptcy protection. **Northwest Airlines** goes before the bankruptcy court to claim \$10 million in passenger revenues accumulated by Northeast and Precision since 1989 on "Northwest Airlink" commuter routes from Boston, which president Caruso has never turned over.

Charters are continued by Northeast and, for the year, a total of 130,703 travelers are flown.

Nonscheduled flights continue to be made in 1995 as founder Caruso plans to bring his company out of Chapter XI. On July 1, the bankruptcy court rules that he must turn over to **Northwest Airlines** the \$10 million in passenger revenues the major had claimed the previous summer. Unable to do so, Caruso liquidates both Northeast and Precision.

NORTHEASTERN AVIATION CORPORATION: 65-07 Fresh Meadow Lane, Fresh Meadows, New York 11365, United States; Phone (718) 961-4600; Fax (718) 961-2820; Year Founded 1977. National is established at Republic Airport at Farmingdale, New York, in 1977 to provide domestic and regional executive and small group passenger charters. Over the next 20 years, the company grows and international flights are started.

In 2000, NAC employs 7 pilots and operates 1 each Learjet 55 Longhorn, Learjet 24F, Beech Super King Air 200, Piper PA-31-310 Navajo, and PA-34 Seneca II.

NORTHEASTERN INTERNATIONAL AIRWAYS: United States (1980-1986). Founded by Northeastern Travel executive Robert Rutkowski at Fort Lauderdale, Florida, in March 1980, this new entrant receives CAB charter authority in December. While still largely on paper, the concern is purchased by Stephen L. Quinto in June 1981, who had founded **Sagittair, Ltd.** in England in 1968. Scheduled permission is received following resolution of the PATCO air traffic controllers' strike.

Employing two Douglas DC-8-52s leased from **Evergreen International Airlines**, the airline initiates low-fare, single-class service between Islip, Long Island (MacArthur Airport) and Fort Lauderdale on February 11, 1982. As the start-up year progresses, two more DC-8-52s are leased from Evergreen along with two Boeing 727-22s; the route network is expanded to include flights to the Sunshine State from Hartford and Boston.

During its first nine-and-a-half months, NIA flies 111,613 passengers.

Airline employment in 1983 is now 1,500 and the fleet includes the 2 leased DC-8-52s, plus 3 DC-8-62s and 4 Boeing 727-100s. From the beginning, NIA has no official color scheme for its aircraft and they are all painted in different livery.

It is reported in March that, during the first year of operations, the company has lost \$2 million on operating revenues of \$60 million.

New destinations visited include Oklahoma City, Los Angeles, Las Vegas, San Diego, Miami, Chicago (MDW), Fort Lauderdale, Islip, Orlando, Philadelphia, St. Petersburg, West Palm Beach, Tulsa, Kansas City, Little Rock, and New Orleans.

Growth continues apace as traffic rises a remarkable 350% to 504,534 passengers flown.

The payroll is boosted by 34% in 1984 to 792. The company succeeds **Pan American World Airways (1)** in January as the lessee of what was formerly the pioneer's terminal at Fort Lauderdale, Florida. Pioneer discounter Sir Freddie Laker is named to the board of directors in February.

The DC-8-52s are returned at the end of the first quarter due to noise restrictions at various airports. On April 1, Quinto's firm inaugurates service to Florida from New York (JFK) employing two (later four) leased Airbus Industrie A300B2s formerly operated by **Deutsche Lufthansa, A.G.**

It is now suggested that the concern take over the failing **Air Florida**. Nothing will come of the idea, largely because the privately held company is severely underfinanced. NIA begins intense service reductions

after October. Initial cutbacks also include the removal of the A300B2-1Cs and suspension of flights to Tulsa and Oklahoma City.

In November, an arrangement is made with **Braniff, Inc.** for the lease of 10 Braniff B-727-200s, but when the deal is rejected in a December 15 legal action, the company is forced to suspend services to five cities. Unable to fortify its winter schedules, Northeastern International cuts services to New York, Miami, Las Vegas, Los Angeles, and San Diego.

By December, the company has shrunk to 4 leased B-727-100s, 500 employees, and its original route. NIA will later claim that as the result of computerized reservations system manipulation by its rivals, hundreds of no-show reservations are encountered as Christmas weekend begins and that 85 passengers are stranded at Hartford on Christmas Eve when a Boeing does not show up for them.

Still, passenger boardings increase a remarkable 260% to 1.8 million and operating revenues of \$64.95 million are earned.

Having overstretched its resources and with no large holding company behind it, the carrier declares bankruptcy on January 8, 1985 and files for Chapter XI reorganization, listing assets of \$28 million and debts of \$48 million. The workforce is reduced to 200 and flights are resumed on January 25 to Chicago, St. Petersburg, and West Palm Beach. Bankruptcy Judge Sidney Weaver grounds the carrier on March 4 by ordering it to return its four chartered Boeings to the rental agency, Guinness Peat Aviation, after the Irish concern reports NIA's failure to pay \$1.3 million.

The carrier, however, is able to put together several single-aircraft, single-operation wet-leases with **Emerald Air** that allow it to operate a number of charters. Employing a B-727-222 leased from **United Airlines**, NIA initiates its own routes from Islip to Fort Lauderdale via Philadelphia. As a result of a fall fare war in the Florida market, the company shuts down again on November 5. In this dismal year, the company flies a total of 42,000 passengers—a decline of 98.5%.

A McDonnell Douglas MD-82 is leased from the Italian carrier **Alisarda, S.p.A.** between January and March 1986 to restart service. At this point, the FAA grounds NIA and requires that any carriers it should contract with for aircraft and crews undergo a route check before service begins. Although the Italian aircraft arrives, the operator is so financially strapped that it is unable to resume flights and has no option but to return the plane.

In early May, the bankruptcy court orders all remaining assets sold, allowing creditors 10¢ on a dollar of investment.

NORTHERN AERIAL MINERALS EXPLORATION, LTD.: Canada (1928-1930). Late in 1928, Capt. Harold A. "Doc" Oaks and his **Western Canada Airways, Ltd.** associates form this specialized carrier to fly prospectors into remote areas. Bases are established at Churchill, Baker Lake, and other locations. Employing a Loening C-2H cabin amphibian, T. M. "Pat" Reid undertakes the first aerial coastal circumnavigation of Hudson Bay during August.

In January 1929, Oaks and Reid, flying a Fokker Model 4 Universal and a Fairchild FC-2W, respectively, make the first commercial northern flights in winter between Sioux Lookout and Richmond Gulf on Hudson's Bay. Flying in via Longlac, Remi Lake, Moose Factory, and on up the east coast, they rescue a party of 13 trapped missionaries.

On the last day of the month, Reid and Jimmy Vance become the first pilots to reach Coppermine on the Arctic Coast in Coronation Gulf, flying in via Baker Lake, Beechey Lake, and Bathurst Inlet. In October, Reid participates in the search for Olaf Swenson's schooner *Nanuk*, stuck in the ice off Siberia's North Cape. Famed aviator Ben Eielson, lost during the search in November, is also sought.

The search, coordinated between flyers from Canada, the U.S., and Russia, ends in February 1930 when both the ship and the aviator's body are found. This subsidiary is closed down when WCA becomes a part of **Canadian Airways, Ltd.** late in the year.

NORTHERN AIR (PTY.), LTD.: Box 27, Maun, Botswana; Phone 660385; Fax 312015; Year Founded 1990. Northern Air is established as a subsidiary of Safari South (Pty.), Ltd. at Maun in 1990 to operate

charter services throughout Southern Africa, along with aerial photography and air ambulance flights. A subsidiary, Western Air (Pty.), Ltd., is set up at Gaborone. Ralph E. Langemann is named manager of operations and he recruits a workforce of 18.

Northern begins revenue operations with a fleet that includes 2 Cessna 206s, 1 C-208 Caravan I, 1 C-404 Titan, 1 Beech 58 Baron, and 2 Britten-Norman BN-2 Islanders. Western Air is provided 1 each C-206 and C-210.

Flights continue in 1991–1999, during which years, Northern's fleet is reduced to include 3 C-206s, 1 Cessna 404 Titan, and the Caravan I. On September 1, the Titan, with 12 customers aboard, crashes into terrain in Tanzania. There are no survivors.

NORTHERN AIR CARGO: 3900 West International Airport Road, Anchorage, Alaska 99502, United States; Phone (907) 243-3931; Fax (907) 249-5190; <http://www.nacargo.com>; Code NC; Year Founded 1956. Founded in 1956 by Robert G. "Bobby" Sholton and Maurice Carlson as Alaska's first and only scheduled all-cargo carrier, NAC begins operations from Anchorage to destinations throughout the territory, employing two Fairchild C-82 Flying Boxcars.

NAC undertakes flights over the next 13 years with a fleet of war-surplus Douglas C-47s linking the company base with Aniak, Bethel, Dillingham, Galena, Gambell, Iliamna, King Salmon, McGrath, Nome, St. George Island, St. Mary's, St. Paul Island, Savoonga, and Unalakleet. The Boxcars allow the company to specialize in the delivery of out-sized cargos, many made to destinations along the Distance Early Warning (DEW) Line.

Cargo feeder flights are also operated, in cooperation with local bush operators, from Galena, Unalakleet, McGrath, King Salmon, Aniak, Iliamna, and Dillingham. The company pioneers the bush delivery of out-sized cargo, such as vehicles and generators, to miners, settlements, and the DEW Line. In 1964, it provides emergency relief flights in the aftermath of the Good Friday Earthquake.

Previously flown by **Slick Airways**, the first Douglas DC-6A is purchased in September 1969; a former USAF C-118A is acquired from the Military Aircraft Storage and Disposition Center at Davis-Monthan AFB, Arizona, at the same time. Another, built for **Riddle Airlines** and later owned by Howard Hughes, arrives in 1973 with the remarkably low total of 9 hrs. 50 min. flight time recorded in its log.

The fleet by 1982 has grown to include 6 DC-6As, one DC-3, 1 de Havilland Canada DHC-6 Twin Otter and 2 twin-boom Fairchild C-82 Flying Boxcars. One of the former has been converted into a tanker, which is able to transport 4,500 gallons of fuel, while plans are made to replace the Boxcars.

Founder Sholton dies during the year and is succeeded by his wife Rita and president W. Edward Fisher.

The tanker in 1983 is employed to fly petroleum product from Fairbanks to the Dall Creek gold mine located close to the Arctic Circle. During the year, a total of 7.76 million FTKs are flown.

The fleet in 1984 includes 2 C-82s and 9 DC-6s. Flights are now scheduled to 23 Alaskan communities and operate 24 hours per day. The Boxcars are retired during the year, leaving the company the world's largest DC-6 operator. Cargo grows a slight 0.8% to 7.82 million FTKs.

Airline employment in 1985 stands at 75, including future president/CEO Marjorie McLaren, who comes aboard as chief financial officer. Freight accelerates again, up by almost half or 49.8%, to 18.42 million FTKs.

The two retired C-82s are replaced in 1986 by a DC-6B. The aircraft is famous for its swing-tail, a conversion carried out in April–July 1968 while the plane was in service with **Karair O/Y**.

Cargo rises to 21.03 million FTKs.

A well-traveled DC-6A/C is purchased from Carnegie Holdings of Edmonton, Canada, in 1987, along with a DC-6A/C operated during the past 12 years by Detroit-based **Zantop International Airlines**. Still, freight declines by 2.1% to 20.6 million FTKs. The losses total \$266,000 (operating) and \$156,000 (net).

The workforce increases by 35.2% in 1988 to 196 and the fleet includes 11 DC-6As and 1 DC-6B.

Freight climbs a welcome 18.9% to 26.75 million FTKs and revenues jump 22.2% to \$29.8 million. With costs held in line, operating income reaches \$6.2 million and net gain is \$8.7 million.

Airline employment rises 2% in 1989 to 200 and the fleet is enlarged by the addition of 2 DC-6STs. The company's 13 DC-6s now serve 12 distribution hubs in rural Alaska, feeding about 75 villages.

Despite this expansion, cargo traffic falls an unhealthy 35.5% to 15.07 million FTKs. On the other hand, revenues ascend 11.6% to \$33.2 million and there are profits: \$4.13 million (operating) and \$4.27 million (net).

There is no change in either employment or fleet during 1990. A Boeing 727-100F is leased during May and on August 1 begins a brief weekly cargo service from Anchorage to Khabarovsk, Russia via Magadan.

Freight descends again, this time by 7.5% to 14.63 million FTKs. And again, revenues rise, by 13.6%, to \$37.72 million. Expenses jump 14.6% to \$33.33 million and as a result, operating income inches up a quarter million dollars to \$4.39 million. The net gain slides up to \$4.63 million.

The workforce is increased by 10% in 1991 to 220 and the fleet now includes 15 DC-6s. In September, the Seattle to Anchorage all-cargo frequencies are increased to five per workweek.

Cargo traffic stops falling and grows by 12.1% to 16.4 million FTKs. Revenues dip 1% to \$37.35 million, expenses increase 5.5% to \$35.17 million, and the operating profit is cut in half, to \$2.17 million. Net income is also cut in half, to \$2.29 million.

Although traffic falls in 1992, profits are made. A total of 18 points in Alaska receive scheduled visits and occasional charters are made to the "lower 48."

During the first quarter, **Wilbur's Flight Operations** encounters problems in transporting its contracted mail shipments from Anchorage to King Salmon and Dillingham. Difficulties appear imminent and pilots start to apply to Northern, which begins to complete the Wilbur's Flight Operations mail deliveries. Wilbur's is shut down on April 4.

Cargo traffic declines 20.7% to 26.3 million FTKs and revenues total \$31.2 million. The operating profit grows to \$4.06 million and net income reaches skyward to \$4.2 million.

In 1993, airline employment stands at 190 and the fleet comprises 11 DC-6As, 2 DC-6STs, and 1 DC-6B. Mary Sholton Witte, daughter of owner/CEO Rita Sholton and a former executive at **Horizon Air**, becomes president. Much of the previous Wilbur's business is acquired, including key contracts with **Federal Express**, **United Parcel Service (UPS)**, and the U.S. Postal Service.

Freight increases by 5.9% to 29.54 million FTKs and revenues jump 13.9% to \$35.54 million. Expenses are up only 5.2% to \$28.56 million and allow an operating gain of \$7 million. Net profit surges to \$7.1 million.

The workforce is increased by 15.8% in 1994 to 220 as cargo jumps 12.5% to 10.92 million FTKs. Revenues advance by 20.2% to \$42.73 million, while costs climb 17.9% to \$33.67 million. The operating surplus thus increases to \$9.06 million, while net gain reaches \$9.27 million.

Sixteen employees are laid off in 1995, a 7.3% decrease in the workforce. NAC's DC-6As fly scheduled service into 20 communities and twice that number on unscheduled flights.

The 10 planes operate 20.82 million FTKs, a 23.1% growth. Operating income exceeds costs and there are profits, down somewhat from the previous year, of \$8.72 million (operating) and \$8.9 million (net).

The employee population grows 10.3% in 1996 to 225 as the first jet freighter, a Boeing 727-23F, is placed into service. It is almost immediately employed to ferry a consignment of oil-rig equipment from Dallas (DFW) to Prudhoe Bay.

While on final approach to Russian Mission after a July 20 all-cargo service from Emmonak, a DC-6A with three crew and a passenger suffers a fire in its No. 3 engine. The aircraft flies over the airport and

attempts to make a turn to come back, at which point those on the ground witness its right wing folding upward. The Douglas noses over and hits the ground short of the runway; there are no survivors.

The company headquarters building is renovated during the fall.

Cargo traffic slides 6.5% to 19.47 million FTKs. Revenues of \$31.38 million are generated and expenses are \$27.27 million. The operating gain falls to \$5.7 million and a net \$5.61-million profit is reported.

Mary Sholton is president in **1997** and the fleet now includes 1 B-727-23F, 11 DC-6As, 1 DC-6B tanker, and 1 DC-6BST swing-tail freighter.

The employee population is increased 2.3% to 225 but freight slides 2.5% to 18.99 million FTKs. Operating revenues advance 14.9% to \$39.47 million and expenses total \$34.36 million. The operating profit ascends to \$5.11 million, while a net \$5.1-million profit is recorded.

Flights continue in **1998**. Two more B-727Fs are acquired, one each Dash-46F and Dash-23F, at a bargain price of \$10 million; a load of spare parts is thrown in as part of the deal.

A new system, NACLINK, is introduced. It allows cargo to be forwarded to it from anywhere in the contiguous U.S. and delivered to any point in Alaska.

Cargo traffic drops another 2.5% to 25.15 million FTKs. Revenues rise 6.9% to \$42.18 million, while costs are held at \$39.58 million. The operating gain slides back to \$2.59 million, while net gain drops down to \$1.5 million.

By the beginning of **1999**, the workforce has been cut 2.2% to 220. Chief Financial Officer McLaren retires during the year, while in November, Edward Fisher director and former president, returns as CEO.

During the fourth quarter, the company enters into a joint venture with Kuukpik; Kuukpik and NAC quickly win a contract with ARCO Alaska for cargo service between its Alpine oil field and Deadhorse.

Cargo traffic falls 33.7% on the year to 16.67 million FTKs.

A total of 225 workers are employed at the beginning of **2000**, a 2.3% increase over the previous 12 months. Former Chief Financial Officer Marjorie McLaren is persuaded to become the company's president/CEO on July 20, allowing Fisher to become a full-time director once more.

NORTHERN AIR LINES: United States (1928). Organized at Minneapolis/St. Paul during the summer of **1928**, Northern begins passenger service on August 16, paralleling operations also being conducted by **Northwest Airways**. Routes flown extend from Chicago to Minneapolis/St. Paul, Minneapolis/St. Paul to Fargo, and Minneapolis/St. Paul to Duluth.

Planning to expand its system from Minneapolis out into the upper Midwest, the **Universal Aviation Corporation** purchases Northern on December 31 and turns it into a subsidiary division of its **Universal Air Lines System**.

NORTHERN AIR LINES, LTD.: United Kingdom (1924–1925). On behalf of the Air Ministry and Post Office, the **De Havilland Aircraft Company's** Aeroplane Hire Service (AHS) conducts a month-long series of real and practice airmail runs over a route from Plymouth–Belfast via Birmingham and Manchester. The first flight is in a DH 50 piloted by Alan Cobham on September 15, **1923**.

When **Imperial Airways, Ltd.** is formed on March 31, **1924**, the AHS is closed down in England; however, the experimental airmail service is revived as Northern Air Lines, Ltd. with AHS DH 50s from a Belfast base.

Regularly scheduled contract mail flights, together with newspapers, from Liverpool to Belfast are begun on April 30; weather allows Cobham to complete his Belfast–Liverpool run, but the DH 50 of V. N. Dickinson, en route to Belfast from Liverpool, must divert to Southport. Continued poor weather forces a suspension of service on June 2. Late in June, experimental DH 50 Glasgow–Belfast flights are started.

Weekday Glasgow–Belfast newspaper and mail flights are inaugurated by chief pilot R. H. McIntosh on March 17, **1925**. Employing a DH

50 and two DH 9Cs, the service is continued until June 8. A DH 50 mail and newspaper service is launched from Carlisle–Belfast on September 2; the flights cease around November 3.

Meanwhile, flying an AHS DH 50, Alan Cobham makes a 3,000-mile, 28-hr. (flying time) roundtrip proving flight from London (Croydon)–Tangier on September 19–20. Unprofitable, operations are not resumed and the company's assets are sold.

NORTHERN AIRLINES (1): United States (1968–1970). Northern is set up at St. Mary's, Ohio, in the early summer of **1968** to provide scheduled passenger and cargo services to regional destinations. Employing a Beech 18 and a de Havilland Canada DHC-6-100 Twin Otter, the new commuter inaugurates daily multistop roundtrips on July 30 linking its base with Dayton, Lima, Findlay, and Cleveland.

An additional Twin Otter is purchased in **1969** and is used to start a new route south to Nashville via Louisville and Bowling Green. Overextended and unable to maintain its economic viability, the company is forced to shut down on June 16, **1970**.

NORTHERN AIRLINES (2): United States (1981). NA-2 is set up at Martha's Vineyard, Massachusetts, in the spring of **1981** to provide scheduled air taxi services to Nantucket, New Bedford, and Newark. Although daily Piper PA-23 Aztec roundtrips are duly inaugurated, they can only be maintained for a few months.

NORTHERN AIRLINES (3): United States (1981–1982). Organized at Pierre, South Dakota, in the fall of **1981**, this new intrastate commuter inaugurates scheduled passenger and cargo services in November with 1 each Aerospatiale Nord 262, GAF Nomad N-22 and Piper PA-31-310 Navajo. Destinations visited include Minneapolis, Brookings, Huron, Mitchell, Sioux Falls, Lincoln, and Sioux City.

Following the crash of the Nord at Lincoln on February 5, **1982**, the company must declare bankruptcy; unable to recover, it is liquidated.

NORTHERN AIRLINES, LTD.: United Kingdom (1991–1992). Mike Howells sets up NAL in the late fall of **1991** at Walney Island Airfield, Barrow-in-Furness, Cumbria. Revenue passenger and cargo charter operations commence and continue from Manchester to Blackpool and Barrow with one each Pilatus-Britten-Norman PBN-2 Islander and PBN-2A Trislander. Services continue for another year.

NORTHERN AIRLINES (PTY.), LTD. See **CONNELLAN AIRWAYS (PTY.), LTD.**

NORTHERN AIR SERVICES. See **NORTHERN CONSOLIDATED AIRLINES**

NORTHERN AIR SERVICES, LTD.: Canada (1925). Former Ontario Paper Company, Ltd. and **Laurentide Air Services, Ltd.** chief pilot B. W. Broatch forms this short-lived, one-plane operation in **1925** to fly men and equipment from Haileybury and Rouyn to the gold fields of Quebec and Ontario. Employing a Curtiss HS-2L flying boat purchased from the assets of defunct Laurentide, NAS begins regularly scheduled airmail flights on June 27. An engine backfire in August causes not only the loss of the Curtiss but of the company as well.

In the short period of operation, Managing Director Broatch has flown 503 passengers, 1,030 pounds of mail, and a remarkable 11 tons of freight.

NORTHERN AIR TRANSPORT. See **WIEN AIR ALASKA**

NORTHERN AIRWAYS (1). See **NORTHERN CONSOLIDATED AIRLINES**

NORTHERN AIRWAYS (2). See **MUNZ NORTHERN AIRLINES**

NORTHERN AIRWAYS (3): United States (1956–1972). Based at Burlington, Vermont, a third Northern Airways is formed in **1956** as an FBO offering flight training and charters. During the next decade, non-scheduled Cessna and Piper lightplane and Douglas DC-3 passenger and cargo services are offered throughout New England.

In the summer of **1967**, a ticketing and ground support arrangement is entered into with **Mohawk Airlines**; in exchange for the assistance of the local service carrier, Northern agrees to provide commuter feed from remote destinations between upper New York State, Vermont, New Hampshire, and down through Massachusetts to Boston. Revenue services are inaugurated with de Havilland Canada DHC-6-100 Twin Otters and Piper lightplanes on September 11, initially to Lebanon, New Hampshire.

Operations continue apace during the remainder of the decade and into the **1970s**. In **1972**, the carrier is reformed and incorporated under the name **Air North**.

NORTHERN AIRWAYS (4): Sanford Regional Airport, Presidential 413 Hangar, Sanford, Maine 04073, United States; Phone (207) 324-9300; Fax (207) 324-9341; <http://www.biddleford.com/northern>; Year Founded 1973. This Northern Airways is founded at Sanford, Maine, in **1973** to provide executive and small group passenger charters throughout the Northeast.

Flights continue apace over the next quarter century and by **2000** the company employs six pilots and schedules flights from Canada to the Caribbean for its Cessna 550 Citation II and Beech King Air 90.

NORTHERN AIRWAYS (5): United States (1983–1985). The fifth Northern Airways is set up by Dave Ramhee and Orvis Kloster at Grand Forks, North Dakota, in late **1983**. Employing a Piper PA-31-310 Navajo, the small regional inaugurates scheduled daily commuter flights to Bismarck via Fargo, maintaining them as primarily a mail service until July 1, **1985**.

NORTHERN AIRWAYS, LTD.: United Kingdom (1934). Newcastle bus fleet owner George Nicholson forms this carrier on July 1. On the same day, a new de Havilland DH 84 Dragon, christened *Brentwood* and piloted by Ted Palmer, initiates daily Newcastle to Carlisle and Isle of Man service that continues (with fewer frequencies as the season progresses) until October 31. In the first 4 months of operation, 11,000 miles are flown, but only 182 passengers are transported.

NORTHERN AIRWAYS (PTY.), LTD.: Australia (1934). Northern Airways (Pty.), Ltd. is formed at Newcastle, New South Wales, in early June **1934** to fly a single route to Sydney. Employing Codock aircraft, the company begins flight operations on June 11.

In December, **New England Airways (Pty.), Ltd.** takes over the aircraft, route, and other assets.

NORTHERN AND SCOTTISH AIRWAYS, LTD.: United Kingdom (1934–1937). Former motor bus operator George Nicholson forms this carrier on November 21, **1934** to expand upon the lessons learned with his earlier **Northern Airways, Ltd.**, flying from Glasgow (Renfrew) to take over the western Scotland routes of failed **Midland and Scottish Air Ferries, Ltd.** Initial capitalization is £7,000 and Nicholson again names himself managing director.

On December 1, the *Brentwood* and another DH 84 initiates north-south London–Glasgow via Liverpool and Belfast, service, including carriage of mail under a contract formerly held by **Railway Air Services, Ltd.**

In January **1935**, the first ambulance charter is flown. Glasgow (Renfrew)–Campbeltown weekday frequencies begin on February 1, with an extension to Islay on alternate days; on March 15, the frequency is advanced to twice daily to both destinations. Thrice-weekly Glasgow (Renfrew)–Isle of Man DH 84 flights are initiated on May 17; the frequency is reduced to once daily on June 1 and twice daily on July 1.

Meanwhile, as Whitehall Securities begins planning for a large independent carrier, it purchases control of this small airline on May 23; capitalization is increased to £12,000 and George Nicholson is replaced as board chairman by J. de C. Ballardie. Following several proving flights to the Western Isles, Capt. David Barclay, flying a DH 84 in company with another of the airline's Dragons, initiates twice-weekly Glasgow (Renfrew)–Skye service on December 5.

The Skye route is extended to Askernish in South Uist on January 21, **1936**. The former mail contract of **Blackpool and West Coast Air Service, Ltd.** for the Isle of Man–Liverpool route is awarded to the carrier in February. The South Uist route is extended to North Uist on March 18. As part of a larger arrangement, a contract is undertaken on June 30 to fly certain local Irish Sea area route sectors for **British Airways, Ltd. (1)**; the major independent provides Northern and Scottish Airways with 4 DH 89As, 3 Spartan Cruiser IIs, and 1 Spartan Cruiser III.

The next day, it is announced that the company has become a wholly owned subsidiary of Whitehall Securities, as the BA managing director is appointed to the Northern and Scottish Airways board. Simultaneously, the former **British Airways, Ltd. (1)** Irish Sea area routes are started: two from Liverpool (to Glasgow via Belfast and to Glasgow via Blackpool and Isle of Man); two from Belfast (to Glasgow and to Isle of Man); and one from Isle of Man to Carlisle, while the Western Isle routes are started in opposite directions to be flown on alternate weekdays. Campbeltown is added as an on-demand stop on the Liverpool–Glasgow route as of October 4.

On January 6, **1937**, the company radio station at Sollas, North Uist, enters operation. **Railroad Air Services, Ltd.** takes over the Northern and Scottish Airways Liverpool–Glasgow via Blackpool, Isle of Man, and Belfast route on May 21. The Glasgow–Isle of Man service is resumed on June 1.

Unable to sustain service, half interest in the carrier is now acquired by the London, Midland and Scottish Railroad and its associated motor bus company, David MacBrayne, Ltd. It is merged with Edmund Fresson's **Highland Airways, Ltd.** (also owned by Whitehall Securities) to form **Scottish Airways, Ltd.** on August 12.

NORTHERN CONSOLIDATED AIRLINES: United States (1945–1968). Alaskan FBO operator Ray Peterson proves himself an adept salesman when, on November 16, **1945**, he convinces the owners of six small pioneer bush carriers to combine their operations under his presidency. The amalgamation of **Northern Air Services, H. Gillam Airlines, Walatka Air Services, Northern Airways (1), Jim Dodson Air Services, Bristol Bay Air Services, and Ray Peterson Flying Service** into Northern Consolidated Airlines receives CAB certification on December 1, **1947**.

Maintaining a variety of local service routes in the southwestern part of the Alaskan territory for a decade, Peterson's company flies a mixed fleet that includes Douglas DC-3s, Stinsons, Noorduyt Norsemen Vs, Cessna, and Consolidated PBV Catalinas.

On October 31, **1958**, Northern Consolidated takes delivery of the world's first Fokker Fairchild F-27B, modified by Fairchild in Maryland through the addition of a larger portside cargo door.

The Dutch-designed turboprop will be sold to **Wien Air Alaska** in **1959** and is replaced, on April 30, by another unit flown up from the Free State. The carrier participates in a major CAB-ordered feeder route redistribution after October 1, **1960**, receiving a network south of the Tanana and Yukon Rivers. A pilot fails to see an obstruction while landing and crashes his Cessna T-50 at Aklak on November 28; he and his passenger are both hurt.

A Cessna T-50, with three aboard, crashes during its takeoff from Alaknuk on June 30, **1961**; both passengers are hurt. Another T-50 with two aboard crashes at Nyac on February 15, **1962**, while attempting to land in a whiteout. The company, in December, becomes the first U.S. operator of the Swiss-built Pilatus PC-6A Porter.

In **1963**, Northern Consolidated receives the Anchorage–Naknek via Iliamna route formerly flown by **Pacific Northern Airlines**. While

making an emergency single-engine landing at Bethel on January 17, a Cessna T-50 with five aboard crashes; no injuries are reported. A fuel injection problem starves the engine of a PC-6A over Qinagak on August 23 causing it to crash-land; the pilot is slightly hurt.

Enplanements for the year total 31,656.

Airline employment in 1964 stands at 163 and the fleet includes 14 aircraft. When the great Alaska Earthquake hits in March, all of the planes are at distant airfields or in flight, thus none are damaged. Although company offices are slightly damaged, no personnel are hurt and no schedules are missed. A new building is shared at King Salmon with the Post Office. Two Grumman G-73 Mallards are acquired for the Bethel and King Salmon frequencies.

Passenger boardings climb 12.5% to 36,178.

Six new employees are hired in 1965. Because of frost on the wings, a Cessna 180 with two aboard stalls after takeoff from Bethel on December 20. The same day, a Goose, with nine aboard, suffers the same sort of incident when lifting off from the same destination.

Enplanements for the year advance to 39,672.

Customer bookings advance to 42,000 in 1966. For years, the routes of Northern Consolidated—and some of its competitors—are able to generate little traffic increase due to the number of air transport firms seeking the same business. In the late 1960s, several of these begin to seek merger partners, with Peterson among them. In January, Northern Consolidated becomes a public stock company and takes on 2,000 shareholders.

On March 15, 1967, Northern Consolidated announces its intention to join forces with longtime friendly rival **Wien Air Alaska**. The amalgamation will take place in a year following shareholder and government approval and in May the CAB grants the company a major new Anchorage–Fairbanks route. At year's end, the workforce totals 190 and the fleet includes 3 F-27Bs, 2 DHC-6s, and 1 Shorts SC-7. A total of 61,969 passengers are originated during the year.

With stockholder and CAB approval received, Northern Consolidated is merged into **Wien Air Alaska** on April 1, 1968.

NORTHERN EXECUTIVE AVIATION, LTD.: Hangar 522, Manchester Airport, Wilmslow, Cheshire, England, SK9 4LP, United Kingdom; Phone 44 (161) 436-6666; Fax 44 (161) 436-3450; Year Founded 1960. Northern Executive is set up by D. L. Antrobus as an FBO at Manchester Airport in 1960. In addition to the usual "gas station" activities, NEA also begins to offer air taxi, air ambulance, aerial photography, and cargo charters throughout the country. Ground and flight operations continue apace over the next quarter-century from bases at Manchester and at London (CTN). By 1986, the fleet includes 2 Cessna 421 Golden Eagles, 3 Piper PA-23 Aztecs, and 1 each PA-31-310 Navajo, PA-31-350 Navajo Chieftain, PA-30 Twin Comanche, and Gates Learjet 35A Century 3.

There is no change in service between 1987–1993 and by 2000 Operations Manager Gerry A. O'Neill oversees a workforce that includes eight full-time and two part-time pilots. Executive charters are now offered by two Learjet 35As stationed at Manchester and a third flying from London (CTN).

NORTHERN ILLINOIS COMMUTER AIRLINES: United States (1979–1980). NICA is set up at Plainfield, Illinois, in the summer of 1979 to provide scheduled passenger and cargo services linking its base with Chicago (ORD), plus Peoria, and Springfield. Beech 99 flights commence on August 1, but cannot be maintained beyond 1980.

NORTHERN ILLINOIS FLIGHT CENTER: 8407 Pyott Road, Lake in the Hills, Illinois 60102, United States; Phone (815) 455-7707; Fax (815) 455-0392; Year Founded 1979. NIFC is established in 1979 to provide executive and small group passenger charters serving the Chicago area airports, particularly Midway and O'Hare. Flights continue over the next two decades with other U.S. and Canadian destinations added.

By 2000, Chad Seedorf oversees the work of 8 pilots and schedules the company's two Cessna 550 Citation IIs, and 1 each C-501 Citation I, Beech Super King Air 300, King Air 100, and C-425 Conquest I.

NORTHERN MOUNTAIN AIRLINES, INC. See **NORTHERN MOUNTAIN HELICOPTERS, INC.**

NORTHERN MOUNTAIN AIRLINES, LTD. See **NORTHERN THUNDERBIRD AIR, LTD.**

NORTHERN MOUNTAIN HELICOPTERS, INC.: P.O. Box 368, Prince George, British Columbia V2L 4S2, Canada; Phone (250) 963-1200; Fax (250) 963-9015; <http://www.forestindustry.com/nmh>; Year Founded 1959. This Prince George-based company is originally established in 1959 as Northern Mountain Airlines. The first helicopter, a Bell 47G, is purchased in 1966.

During the remainder of the decade and into the 1970s, NMA is engaged in passenger and cargo charters, as well as agricultural work and spraying. In 1974, the company adopts the name Northern Mountain Helicopters, Inc.

Services continue apace during the remainder of the 1970s and throughout the 1980s. During these years, the company becomes involved in heli-logging projects throughout the north central region of British Columbia.

In the early 1990s, R. E. Coleman is managing director, with Fred Nelson as general manager. The fleet now includes 9 McDonnell Douglas MD-500s, 26 Bell 206B JetRangers, 6 Bell 205As, 5 Bell 212s, 2 Sikorsky S-58Ts, 4 Eurocopter AS-350Bs, and 1 Bell 206L LongRanger.

Two Sikorsky S-61s are acquired in the fall of 1996 and are employed to augment the lift capability in heli-logging of the two S-58Ts. The company is also able to provide overhaul and repair and maintains a C\$5-million stock of spare parts for that process.

Flights continue during the remainder of the decade. In 1997, a homepage is opened on the Internet's World Wide Web.

NORTHERN PACIFIC AIRLINES: United States (1982–1985). Ball Brothers Aviation, founded by George C. Ball, is renamed in 1982. Based at Anchorage, the company continues to operate a mixed fleet of military surplus Douglas C-47s and C-118s and Fairchild C-82 and C-199 Packets. Also available is a DC-6A first flown in 1953 by **The Flying Tiger Line** and purchased from Sis-Q Flying Service in 1980. The company hauls general cargo and fish.

Scheduled passenger and cargo flights are inaugurated in 1983 to McGrath, Mikolai, Soldotna, and Tatlina in south central Alaska. These revenue flights are undertaken by Beech B-80 Queen Airs, which also fly nonscheduled charters statewide.

In 1984, NPA, which owns the last surviving example in flying condition, retires its Pilgrim 100, first flown by **American Airlines** in the early 1930s.

Early in 1985, the carrier is purchased from its owners and plans are made to operate it as an all-cargo airline.

A Beech Queen Air with 9 aboard crashes into a 200-ft. ridge about 1.5 mi. SW of the airport at Soldotna on February 4; there are no survivors.

While taking off from Egegik, Alaska, on July 7, the C-118A with three crew hits a bump on the runway that causes it to go off the pavement, collide with an embankment, and catch fire; although the aircraft will be written off, there are no fatalities.

Before the company's expansion plans can advance, these accidents cause NPA to shut down in August.

NORTHERN THUNDERBIRD AIR, LTD.: 4245 Hangar Road, Prince George, British Columbia V2N 4M6, Canada; Phone (604) 963-9611; Fax (604) 963-8422; <http://www.netbistro.com/ntair/index.html>; Code NTA; Year Founded 1973. In order to both survive and expand, the lightplane operators **Northern Mountain Airlines**,

Ltd. and **Thunderbird Airlines, Ltd.** are merged in **1973**. Ownership is divided between public (67%) and private (33%) interests. Operations are resumed over an integrated route network linking the company base at Prince George with the British Columbia communities of Prince Rupert, Quesnel, Williams Lake, Kamloops, Penticton, and Kewlowna. Initial scheduled passenger and cargo services are inaugurated with a de Havilland Canada DHC-6-200 Twin Otter purchased by Thunderbird the previous year.

In **1974**, bases are established at Fort St. James and Mackenzie. Two more DHC-6-200s are acquired in **1975**, allowing initiation of flights to Smithers and Terrace.

One of the new DHC-6-200s with two crew and five passengers en route from Prince George, strikes the side of a ridge and crashes at Klua Tan Tan on September 30; there are no survivors. A Douglas DC-3 joins the fleet in **1976**.

On initial approach to Terrace on January 14, **1977**, a DHC-6-300 with three crew and nine passengers crashes into a hill; there are no survivors. Later in the year, two more DHC-6 Dash-300s are obtained as replacements for the destroyed machines.

The Douglas is sold to **Knight Air, Ltd.** in **1978** and a Twin Otter is also deleted.

The fourth DHC-6 is withdrawn in **1982**. In **1983**, the company agrees to provide services throughout British Columbia on behalf of **Pacific Western Airlines, Ltd.** These are flown with the remaining Twin Otter. Charter and freight services are maintained with 3 Beech 18s, 2 DHC-2 Beavers, 1 DHC-3 Otter, 2 Cessna 185s, 1 Cessna 206, and 1 Piper PA-23 Aztec.

The PWA flights cease in **1985** when the final DHC-6 is removed. Thereafter, operations become strictly cargo and contract service. Service is maintained over the next 15 years with a fleet that includes, at one point or another, 1 each Beech Super King Air 200, Cessna 206, Piper PA-31-310 Navajo, and Aero Commander 500.

Kurt Gladesdahl is president/CEO in **2000** and operates a fleet that comprises 1 each Beech 1900C, Beech Super King Air 200, and Cessna 208 Caravan I.

NORTHERN WINGS, LTD. See **QUEBECAIR, LTD.**

NORTHERN WINGS HELICOPTERS, LTD. See **QUEBECAIR, LTD.**

NORTHLAND AIR MANITOBA, LTD.: Canada (1983–1987). Founded in **1953** as **Ilford Riverton Airways, Ltd.**, this Winnipeg-based carrier is reformed in **1983** and renamed. Scheduled passenger and cargo flights are maintained to destinations in northern Manitoba and the Northwest Territories, the latter from a base at Churchill.

During this time, the number of employees grows to 100 and President/CEO Ken Bittle's fleet comes to include 5 British Aerospace BAe (HS) 748-B2s, 4 Curtiss C-46 Commandos, and 5 Douglas DC-3s or unmodified C-47Bs.

A C-47B freighter with two crew suffers the failure of its left wing while on approach to Pickle Lake on May 11, **1987**, and crashes out of control into nearby woods; there are no survivors.

Later in the year, the carrier is reformed as **Air Manitoba, Ltd.** and P. M. Lazarenko becomes chairman.

NORTHWARD AVIATION, LTD.: Canada (1965–1980). Northward is organized at Edmonton in **1965**. After amalgamating a group of charter and scheduled flights previously undertaken by **Pacific Western Airlines, Ltd.** in the Northwest Territories with the private air services of Bow Valley Industries and Sproule Projects, Norward begins charter operations, primarily with Douglas DC-3s, to the Northwest Territories and the Yukon.

A final Douglas transport and three de Havilland Canada DHC-6-200 Twin Otters are acquired between **1971** and **1973**, followed by a Fairchild Hiller FH-227J in **1975** and a Beech 99 in **1977**. By the latter

year, President E. J. Miller's 65-employee company owns a fleet of 1 Fairchild Hiller FH-227J, 3 Twin Otters, and 1 Beech 99.

In late **1978**, it is decided to begin the provision of scheduled services. By year's end, regularly scheduled frequencies are inaugurated to 24 communities. Charters continue to be offered from Yellowknife, Cambridge Bay, and Whitehorse.

In **1979**, the Fokker, Beechcraft, and a Twin Otter are withdrawn and replaced by four Saunders ST-27s (de Havilland DH 104 Doves with Pratt & Whitney of Canada PT-6 turboprop engines) leased from **Air Atonabee, Ltd.**

The expense of expansion in a time of steadily escalating fuel and other costs proves too much for the carrier and it ceases operations in **1980**.

NORTHWAY AVIATION, LTD.: P.O. Box 70, Ares, Manitoba R0C 0C0, Canada; Phone (204) 642-5631; Fax (204) 642-8160; http://www.northwayav.com; Code NAL; Year Founded 1964. Geiri and Anne Johnson found Northway at Arnes, Manitoba, in **1964**, to haul fishermen and trappers to bush locations with a single de Havilland Canada DHC-2 Beaver. During the next 16 years, passenger and cargo air taxi services are continued, along with charter and contract service flights to rural areas. A number of lodges and out-camps are established to facilitate this activity, a prime example being a fly-in lodge at Sasa-ginni-gak Lake.

Late in the period, six-days-a-week scheduled flights are launched to the communities of Bloodvein, Berens River, Poplar River, Little Grand Rapids, Winnipeg via Perimeter, and seasonally to Pauingassi. Ownership of the company passes through two more generations, finally coming to rest with Jim and Veronica Johnson.

In **1990**, enplanements total 9,500. These remain level in **1991**, but climb to 10,800 in **1992**. In **1993–1994**, the Johnson's oversee a workforce of 20 and operate a fleet comprising 1 Cessna 180, 1 Cessna 185, 2 Cessna 206s, 1 Cessna 207A, 1 Cessna 208, 1 de Havilland Canada DHC-2 Beaver, and 1 DHC-3 Otter.

During the early **1990s**, plans are made to relocate the carrier's wheel- and floatplane bases to reduce mileage to the destinations visited. A bay near Pine Dock on Lake Winnipeg is determined to be the only natural harbor left on the lake with potential and consequently, construction on a new base begins at that location in **1995**. Floating docks are installed along the shoreline to shelter the carrier's floatplanes inside a breakwater and by the spring of **1996** Northway is able to relocate its scheduled flights to the new location, named Biscuit Harbour. A restaurant and lounge open in June.

The first of three luxury accommodations open for business in January **1997**, followed by two more in September. The Harbourview Rooms and a meeting room in the main lodge building are unveiled in the spring of **1999**. Service, both scheduled and charter, continues in **2000** with a fleet that includes 1 each Cessna 180, C-185, C-206, C-207A, C-208 Caravan I, Piper PA-31-350 Navajo Chieftain, and DHC-2, plus two DHC-3 Otters.

NORTHWEST AIR SERVICE. See **GORST AIR TRANSPORT; HUBBARD AIR TRANSPORT**

NORTHWEST AIRLINES: 5101 Northwest Drive, St. Paul, Minnesota 55111, United States; Phone (612) 726-2331; Fax (612) 726-6599; http://www.nwa.com; Code NW; Year Founded 1934. Following the February cancellation of government airmail subsidies in the wake of the "Air Mail Scandal" and Black Committee hearings, routes are reassigned in March **1934**. In order to qualify, **Northwest Airways**

is reorganized under Minnesota law on April 16 and is renamed Northwest Airlines, Inc. The only identifiable change in the company's roundel logo is its name change reflected in the outer rim.

Founder Lewis I. Brittin, who had in fact resigned and been imprisoned earlier in the year as a result of a contempt of Congress charge growing out of the Senate proceedings, has been succeeded as vice president-general manager by Croil Hunter. Most of the previous routes and services are maintained; however, following the reassignment process, the company loses the Chicago-Fargo route. Despite the change in corporate identity, genealogy is maintained and today, following the absorption of **Western Airlines** into **Delta Air Lines**, Northwest is the oldest U.S. airline with a continuous name identification.

The carrier receives the prototype of the Lockheed Model 10A Electra on May 24, which is placed into trial service over the Chicago to Minneapolis/St. Paul route. By month's end, the ship has completed 45 roundtrips at an average speed of 192 mph. On August 1, two production Lockheed Model 10A Electras are received. A second Electra arrives from Lockheed on August 4, but on August 7, less than a week after its arrival, it is destroyed in a nonfatal takeoff crash at Milwaukee. A third Lockheed is received two days later and the two Model 10As on hand are employed on August 11 to initiate twice-daily, regularly scheduled roundtrips over the Minneapolis/St. Paul-Chicago route.

During the month, Ford 5-AT-58 is sold to **Northern Air Transport**. A fourth Electra joins the fleet on October 12, followed by a fifth on December 1. Also in December, a new Fargo to Seattle mail route is acquired and the original S-38 is sold to H. L. Plummer. At the close of the year, the carrier purchases **Hanford Tri-Cities Airlines'** AM-16 mail route from Chicago-Winnipeg via Fargo and Pembina, thus regaining the service lost in April. When, during the year, the company pays its pilots a flat monthly rate, conflict begins with the newly formed ALPA.

Enplanements by December 31 total 12,097.

Chicago-Seattle mail, passenger, and express flights commence in January 1935. Between February 8 and April 29, five more Model 10As are placed into service. Also in April, Ford 5-AT-48 is sold to Charles Babb. Two more Electras arrive on May 15 and 25 and later in the month, C. L. Plummer buys the second Sikorsky amphibian. The Ford 5-AT-42, the last of its type in inventory and in 1932-1933 one of the most injury-plagued, is sold to **KNILM (Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij, N.V.)** in the Dutch East Indies. At the same time, the carrier also disposes of a WACO, its Stearman C3B, and the first Orion 9D, which is passed to **Oil Field Airlines**.

During the spring, frequencies on the Chicago to Seattle route are two per day each way. Two are flown each day, each way between Chicago and Minneapolis/St. Paul and one between Fargo and Winnipeg. All services are undertaken by Lockheed Model 10A Electras. A 13th Electra arrives on June 4 and Charles Babb buys a Hamilton Metalplane in July. In August, the last two Orion 9Ds are sent to **Wyoming Air Service**. Through service to Winnipeg is approved on October 10, eliminating a Canadian-required transfer at Pembina.

Duponti Aviation buys two WACOs, one each in January and April 1936; meanwhile, two Stinson SR Reliants are acquired from **Wyoming Air Service** in February and the first Electra is sold to **Hanford Air Lines** in July. En route to Spokane from Missoula early on December 18, a Lockheed Model A mailplane becomes lost and crashes near Kellogg, Idaho (two dead).

Charles Babb purchases two more H-47s, one each in January and March 1937. Early in the year, Vice President/General Manager Hunter is named corporation president, the company's first operating officer to hold the title. The last Model 10A is acquired from North American Aviation in July. A Hamilton is sold to R. V. Clute in August and on September 12 and 25, respectively, the carrier receives the first two of eight ordered Lockheed Model 14H Super Electras, which the company advertises as Sky Zephyrs.

Chicago to Twin Cities Model 14H flights commence on October 18 as two more Sky Zephyrs are delivered the next day and on October 29. In early November, the Sky Zephyrs are placed on the Chicago to Seat-

tle route via Minneapolis/St. Paul. At the same time, another Electra is sold to **Hanford Air Lines** and on November 9, the fifth Model 14H is delivered. The last two Super Electras arrive on December 2 and 28, respectively.

On January 10, 1938, tail surface flutter causes a new Lockheed 14H to crash into Bridger Canyon near Bozeman, Montana (10 dead). Bureau of Air Commerce inspector A. D. Niemeyer, a surviving passenger of the flight, orders the company's Sky Zephyr fleet grounded until balanced rudder surfaces are installed. A Model 10A Electra is sold in January to the Charr Brothers, with another passing in February to **Boston & Maine Airways**. Two Super Electras arrive on May 5 and 7, respectively, and on May 14, Portland, Oregon, to Yakima, Washington, flights commence.

En route for delivery on May 16, a new Model 14H crashes a few miles from the Lockheed plant, killing several officials of both the manufacturer and the airline. A second in-service Model 14H is lost in a failed takeoff from Billings, Montana, on July 8 (one dead).

Another Sky Zephyr arrives on July 10 and the company announces on July 27 that it has pioneered the first practical aviation oxygen mask. **National Air Lines** purchases a Lockheed Model 10A in September.

A total of 21 million revenue passenger miles are flown this year and revenues exceed \$2 million.

A new Super Electra must be written off at Bozeman, Montana, on January 10, 1939. Some 500 feet up just after takeoff from Miles City, Montana, just three days later on January 13, the cockpit of a Lockheed Model 14H bursts into flame, causing the plane to crash (four dead). At this point, President Hunter and his airline colleagues decide to sell the entire Sky Zephyr fleet out of service over the next few months, replacing it with new Douglas DC-3As, all of which will arrive wearing a newly authorized and streamlined roundel logo.

When a blizzard closes down Chicago Municipal Airport for several days in February, the carrier recommissions an old Hamilton H-47 Metalplane. Equipped with skis, it provides the city's only link with the outside world for several days, flying airmail and express to Milwaukee. Service is resumed to Madison on March 6, the same day the carrier introduces its first female flight attendants.

Ordered as a result of a loan received from the Reconstruction Finance Corporation (RFC), the first three Douglas DC-3As join the fleet between April 22-28. The first is christened *City of Bismarck*. Additionally, the first two Sky Zephyrs are sold in April, one each to **Continental Air Lines** and one to Lowell Yerex's **TACA (Transportes Aereos Centro-Americanos, S.A.)**. One Model 14H is sold back to Lockheed in May along with another to TACA. Yerex purchases two more in June and one in July, while **Continental Air Lines** purchases one in June. That same month, three more DC-3As arrive, the last of the three being the second and final Douglas transport to receive a name, *City of Rochester*. One of the three Stinson SR Reliants is sold to H. D. Smith in August and the year's last new DC-3A arrives on September 1.

Later in the year, President Hunter approaches the CAB with an ambitious proposal for a "Dream Route" from Chicago to Calcutta via Seattle, Fairbanks, Siberia, and China. He even makes a survey flight to the Orient, after which he amends the original application to seek service only as far as Tokyo via Anchorage and the Aleutian Islands.

Simultaneously, it is suggested to the regulators that the company's Seattle to Chicago route should be made truly transcontinental by their approval of an extension from the Windy City to New York via Milwaukee and Detroit. The military and diplomatic atmosphere of the time, combined with the state of domestic competition and the CAB's own birth pangs, it comes as no surprise when none of Hunter's requests are approved.

Among the most important services to the industry provided by any airline during the year is a little-known series of tests using oxygen masks aboard a DC-3A for sustained high-altitude flight. Although ugly, the rubber nosebags do allow pilots to operate as high as 35,000 feet.

Flying over sparsely settled countryside, Northwest operates in 1940 what is, essentially, half of a fourth major east-west route—1,850 miles

from Chicago to Seattle, in addition to a service from Spokane to Portland. Charles Babb purchases three Lockheed Model 10A Electras in June; that month, a new DC-3 also arrives, followed by two more, one each on September 3 and November 29. Passenger boardings for the year are 136,797.

Northwest's common stock goes public on February 14, 1941 as equity financing is gained through a public offering. The company's fares per mile are America's lowest. A DC-3A is sold to the U.S. government on July 12.

While approaching the airport at Moorhead, Minnesota, on October 30, another Douglas transport goes out of control and crashes (14 dead). Airline employment stands at 881 and the fleet now comprises 4 Lockheed Model 10A Electras and 11 DC-3As.

A total of 149,212 passengers are boarded during the last year of peace and revenues from them exceed mail income for the first time.

Because of Northwest's experience flying northern routes, the U.S. government calls on the airline shortly after Pearl Harbor to begin building airfields and other facilities in Alaska. The company is also asked to set up and operate a military cargo route to Canada, Alaska, and the Aleutians. In December, the company's last Hamilton H-47 is sold to the Alaskan operation, **Reeve Airways**.

At the request of Air Transport Association of America President Edgar Gorrell and the War Department, **American Airlines** executive M. P. "Rosie" Stallter is sent in January 1942 on a weeklong inspection tour of the U.S. Army Air Forces' Air Service Command bases in Pennsylvania, Ohio, Alabama, Utah, and California.

From this trip, Stallter and Gorrell devise and present the Army with a domestic, military- cargo service plan to be operated by the airlines under government contract. Under the plan, five geographical segments are created, each assigned to a specific carrier: **American Airlines** the East Coast, **Northeast Airlines** the Northeast, **Eastern Air Lines** the Southeast, Northwest the Pacific Northwest, and **Braniff Airways** the Southwest.

On February 26, the Army's Air Transport Command signs a contract with the company for its participation in an airlift to Alaska. The first route-proving flight is made on March 2 and on March 29, Northwest starts regularly scheduled Flying Boxcar Line service from Minneapolis to Fairbanks (with intermediate stops, including Edmonton, Alberta), thus becoming the second domestic airline (after **Northeast Airlines**) to begin overseas operations. On May 13, a DC-3A crashes at Miles City, Montana (three dead). Also in May, four Model 10A Electras are sold to the U.S. Army Air Forces.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. The mobilization foreseen and promised by ATA President Edgar Gorrell at the beginning of the year is realized, as the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. Aircraft are now dispatched to Edmonton, Alberta, for participation in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Also in June, the military purchases three DC-3As. Two Fairchild F-24s are acquired on October 14 and 21, respectively. On December 19, the Minnesota Supreme Court rules that the company must pay back taxes to the state and to Ramsey County; the carrier appeals. As government commitments increase, service to several smaller cities is suspended. During the year, a bomber modification center is opened at St. Paul; another will follow at Vandalia, Ohio. Six thousand employees are hired for the Minnesota facility alone.

In a footnote on the year, 28-year-old Connie Walker begins flying as a stewardess on the Portland, Oregon, to Billings, Montana, route; she will retire 42 years later in 1990 as the nation's senior flight attendant.

By early 1943, three supply routes are in operation to Alaska. In addition, company personnel are involved in high-altitude experiments at the Mayo Clinic, in bomber modification and special testing work at St. Paul and Vandalia, and in research on the impact of weather on such operations as deicing and radio communications.

During the year, President Hunter again seeks an ambitious postwar Oriental route package from the CAB. From Nome he would fly to Peking via the Siberian cities of Markova and Yakutsk, plus Manchouli in Manchuria. From the Chinese capital, routes would be stretched to Calcutta via Chongqing and to Manila via Shanghai. The plan is almost immediately opposed by **Pan American Airways (PAA)**, which wants no Pacific competition. At home, the two Fairchild F-24s are sold in September and October after only a year of service. Stockholders, on December 1, approve increased capitalization.

Despite the growth in war operations in 1944, enough C-47s (military DC-3s) become available to allow some to be released to the airlines. The first of these to be available to Northwest are acquired on April 11. On May 16, the U.S. Supreme Court upholds the Minnesota tax on company property. Four more DC-3s are delivered in July and August.

With military C-46s and C-47s, the carrier's pilots fly more than 21 million miles on the Alaskan ferry, and four of them are awarded Air Medals by President Roosevelt. Meanwhile, on December 16, Northwest becomes America's fourth fully transcontinental carrier when the CAB awards it the authority from Minneapolis/St. Paul to New York City via Milwaukee and Detroit, first sought in 1939.

Between March and May 1945, five C-47s are leased from the U.S. government. After V-E Day in May, Northwest is asked to help in the re-deployment of U.S. servicemen from Europe for the final push against Japan. Employing its own, plus 14 military transports, the carrier operates a separate special air service to fly over 30,000 men from the East Coast to West Coast embarkation points. Service over the new transcontinental route begins on June 1 while three more C-47s arrive between August and November. The first two of many war-surplus Douglas C-54s are received on October 6 and 14, respectively; financed through the RFC, they will be converted to civil DC-4 standard.

A government "E" is received at war's end for the company's bomber modification projects. Over 3,000 Consolidated B-24s, Martin B-26 Marauders, and North American B-25 Mitchells have been outfitted at St. Paul alone, many with special equipment, including secret radar. Airline employment is now 10,439. On December 2, Northwest becomes the first certified carrier to link the Pacific Northwest with Hawaii; Brown & Bigelow sell the company a C-47, converted to civil DC-3 standard, on Christmas Eve. Two days later, three more former military C-54s are purchased.

The final C-47 leased from the U.S. government arrives in January 1946, while the last Stinson SR Reliant is sold to Max Conrad in February, just as three more C-54s are acquired from the RFC. One of these is christened *City of Spokane* and is the only named Northwest DC-4. Another C-54 arrives on March 9 and DC-4 flights from Minneapolis into New York (Newark) commence on March 31. Two more four-engine transports arrive in April and May. Members of the machinist union walk out between July 4 and 6.

The CAB takes the experience Northwest gained in the north during World War II into account when it seeks to open new Pacific routes following V-J Day. On August 1, the company is certified to fly a "Great Circle" route to the Orient and adopts the marketing title "Northwest Orient Airlines." Such a route is considerably shorter than the mid-ocean approach, because it is far north of the earth's equatorial bulge.

DC-4 flights begin from New York to the Pacific Northwest on August 2. Having been granted Foreign Air Mail Route 28 (FAM-28), Northwest makes its premier postwar scheduled civilian flight from Seattle to Anchorage (Elmendorf Field) on September 1. Three more C-54s are purchased on September 26, followed by three more on November 13. The first schedule bearing the new airline moniker "Northwest Orient Airlines" is also printed in November and a highly simplified new wings and roundel logo is introduced.

On January 2, **1947**, the carrier undertakes a survey flight over an "inside" route to Anchorage and Tokyo from Chicago and Minneapolis/St. Paul via Edmonton. The DC-4 *Trailblazer* arrives at Haneda Airport, Tokyo, on January 6. A second proving flight is made over the same route on February 16–17. A survey flight is completed from New York to Manila on February 25.

A Tokyo to Minneapolis route survey mission is finished on March 2. Employees and members of the press are given rides on April 10 in one of the prototype Martin 2-0-2s in Northwest colors. Jamestown and Aberdeen frequencies commence on April 27 and during the spring, President Hunter travels to Washington, D.C. to speak against the "chosen instrument" scheme being promoted before Congress by **Pan American Airways (PAA)** President Juan Trippe. Also in April, two more DC-4s are acquired.

The first Manila to New York test flight is completed on May 29.

On June 1, a C-54B with 4 crew and 37 passengers is lost while on final approach to Chicago Airport; although the aircraft must be written off, there are no fatalities.

DC-3 flights to Bozeman begin on June 21 and at month's end, a DC-4 is chartered from **Braniff Airways**. In preparation for the initiation of scheduled services to Japan, Northwest now becomes the first U.S. airline to hire Japanese workers.

Beginning on July 15, Northwest begins to extend FAM-28 to Manila. Bad weather at Elmendorf Field delays initiation of this Alaskan path to Manila, made with stops at Tokyo, Seoul, and Shanghai, for three days. This 39-hr. inaugural scheduled service is performed by the DC-4 *Manila*, which transports 24 passengers. Two records are simultaneously established, as Northwest becomes the first airline to operate regularly scheduled flights between the U.S. and Japan and the first to serve Seoul, Shanghai, and Manila from the U.S. via Japan.

The first Martin 2-0-2 is delivered on August 2 and the carrier joins with American Presidential Lines on August 19 to announce joint sea-air travel tour plans to Pacific areas. The second and third Martins arrive on September 4 and 22, respectively, and Okinawa is added to the Oriental market list on September 25. Between September 28 and November 12, six more Martin 2-0-2s arrive.

A permanent certificate for Great Falls service is issued by the CAB on November 12 and on November 15, the carrier becomes the first U.S. airline to operate a postwar twin-engine airliner when it introduces its Martin 2-0-2 six months before **American Airlines** can launch the Convair CV-240. The elation generated will be short-lived as the Martin will prove a disaster. Three more of the aircraft are now delivered, one on November 21 and two on December 23.

Northwest's aircraft livery begins to feature red-painted tails as of February **1948**. During the month, the carrier adopts a new corporate logo consisting of a circular field with an arrow pointing to the northwest heading on a compass.

On March 12, Flight 4422 with 6 crew is en route from Anchorage to New York (LGA); most of the 24 passengers are American President Line sailors returning from the delivery of a ship to Shanghai. The chartered C-54G crashes into the 8,000-ft. level of the remote 16,237-ft.-high Mount Sanford, Alaska; there are no survivors. The first to reach the wreck site will be retired USAF Majors Marc Millican and Kevin McGregor—on July 24, 1999.

An extension of the carrier's transcontinental grant is made on March 15, when a Milwaukee to Washington, D.C. via Detroit, Cleveland, and Pittsburgh service is approved. Also in March, the third DC-3 since January is sold to **Mid Continent Air Lines**. A DC-4 is acquired from **Matson Air Charter** in April.

New York to Minneapolis Martin 2-0-2 flights begin on August 20 and on August 29, M. and J. Freeburg, father and son, fly the same company aircraft as pilot and first officer. A new Martin 2-0-2, en route from Minneapolis to Chicago with 38 aboard, crashes into a bluff near Winona, Minnesota, on the Wisconsin bank of the Mississippi River, on August 30 (37 dead). When federal investigators determine that wing strut cracks have caused the accident, the entire Martin fleet is grounded pending modifications.

While on a ferry flight, a C-54A with five crew is lost 55 km. N of Edmonton, Alberta, on October 27 (two dead).

Acting on a plea from the U.S. Army, Northwest begins two emergency flights per week on November 18 to evacuate American dependents from Seoul to Seattle. Two more DC-4s arrive, also in November.

The company inaugurates the nation's first transcontinental all-coach flights on March 24, **1949**. With the communist victory in China, service to Shanghai is shut down on May 15. The first of 10 Boeing B-377 Stratocruisers join the fleet on June 22 and is christened *Minneapolis-St. Paul*. Between July 10 and November 18, eight more B-377s arrive and are named *Chicago*, *Manila*, *New York*, *Newark*, *Washington*, *Honolulu*, *Tokyo*, and *Alaska*.

New York to Hawaii B-377 flights begin on November 16 and on November 29, a Stratocruiser establishes a Seattle–New York record of 7 hrs. 8 min. On December 2, Northwest inaugurates regularly scheduled Boeing B-377 routes to Honolulu from Seattle, Tacoma and Portland, becoming the first U.S. airline certified to link Hawaii with the Pacific Northwest. The final B-377, *Orient Express*, is acquired on December 21.

Transpacific Stratocruiser operations are begun in January **1950**. These giant aircraft, extremely luxurious but expensive to operate, are introduced with a huge advertising campaign. Advertisements are taken in all the leading magazines and even airborne fashion shows are conducted by coeds from the University of Minnesota. On January 11, a B-377 flies from Minneapolis to New York City in a record 2 hrs. 38 min.

While on final approach to Minneapolis–St. Paul Airport on March 7, following a service from Winnipeg, a Martin 2-0-2 with 3 crew and 10 passengers, crashes into a house 3.8 mi. NW of the field. There are no survivors and two people are killed on the ground, including one man who dies of a heart attack.

Direct New York to Minneapolis Stratocruiser service begins on April 1 and the former fuel stop at Edmonton, Alberta, becomes a passenger destination on April 30. On June 3, the operator extends a route to the Chinese Nationalist island of Taiwan.

On June 23, en route to Minneapolis from New York, a DC-4 with 3 crew and 55 passengers crashes in a storm into Lake Michigan near South Haven, Michigan; there are no survivors in the worst U.S. air tragedy to date.

Also, beginning in June, the carrier leases short-term six DC-4s from **Trans World Airlines (TWA)**, **Delta Air Lines**, **Braniff Airways International**, and **National Airlines** for use on the upcoming Korean airlift.

Service to Seoul is suspended on July 25 as Northwest becomes the prime UN contractor in the Korean Airlift, dedicating nearly all of its DC-4 fleet to the service. Company aircraft ferry American soldiers in and out of South Korea, often from an airfield at Pusan.

On August 30, Seattle to Anchorage B-377 service is initiated and on October 11, a Stratocruiser flies from Honolulu to Seattle in a record 8 hrs. 2 min. A Martin 2-0-2 crashes at Almelund, near Minneapolis, on October 13 (five dead) while another must be written off on November 5 following an accident at Tucumcari, New Mexico. The third plane in a month is lost on November 7 when a Martin, en route from Helena to Butte with 22 aboard, crashes into a mountain peak near Butte, Montana; when the wreckage is found two days later, there are no survivors. All company Martins are now grounded for inspection. A U.S. to Seoul flight is added on November 13 and 10 days later, the Martins return to service.

A Martin 2-0-2 with three crew and seven passengers crashes in a snowstorm near Edwall, Washington, on January 16, **1951**; there are no survivors.

After two weeks of Washington discussions with Northwest officials concerning safety issues raised by the Martins, CAB Chairman Donald W. Nyrop and a team of Civil Aviation Authority (CAA) technical experts inspect the company's Minneapolis base in February. Hunter's operation is ordered to upgrade its pilot training and maintenance procedures. A DC-3 is sold to **Mid Continent Air Lines** on February 28.

In March, as an immediate investment in the government-required upgrade, the company voluntarily grounds its Martin 2-0-2s, which its pilots have indicated they no longer wish to fly. The decision is taken to sell off the beleaguered aircraft. Via a connecting service with **Hong Kong Airways, Ltd.**, Northwest inaugurates service to Hong Kong on March 19. From Tokyo, Northwest operates a DC-3, "UN-99," for UN observers taken to Allied positions in Korea and wounded soldiers returned to Japan.

In April, a DC-4 is purchased from **Los Angeles Air Service** and a second is leased from **Transocean Air Lines**. The five-millionth (cumulative) passenger is boarded on May 3 and the first DC-3 acquired since early 1946 arrives on May 22. A DC-4 is leased from **Pan American World Airways (1)** on July 1 and two are purchased from **California Central Air Lines (CCAL)**, one each on July 27 and August 16. Meanwhile, on August 15, four Martin 2-0-2s are sold, including two to **California Central Air Lines (CCAL)**. On August 26, Northwest reports that its average passenger flies 641 miles on a trip. Also during the month, the carrier agrees to acquire six DC-3s from **California Central Air Lines (CCAL)**.

During the year, President Hunter, hoping to improve Northwest's sagging finances, concludes a tentative merger agreement with James H. Carmichael, CEO of Pennsylvania-based **Capital Airlines**. When Hunter takes the plan before his board, it is rejected, due largely to the fear of a headquarters transfer to Pennsylvania. So distraught is the board that it makes Hunter its chairman and seeks a new president/CEO, settling in the fall upon Harold R. Harris, the onetime **Pan American-Grace Airways (Panagra)** manager and **American Overseas Airlines** president. Although the new man immediately orders four Super Constellations, he will, in fact, serve just over a year before resigning due to irreconcilable differences with the board.

Another DC-4 is chartered from **Transocean Air Lines** on September 6 and two of the **California Central Air Lines (CCAL)** aircraft arrive on September 8 and 27, respectively, followed by a third on October 8. On October 10, the company leases five of its Martin 2-0-2s to reborn **Japan Air Lines Company, Ltd. (2)**; as it remains illegal for Japanese pilots to fly aircraft, cabin crews are also hired from the Minnesota airline. At home the same day, Minneapolis to Washington, D.C. B-377 service is opened; Vice President and Mrs. Barkley are the first VIP passengers on the route after Mrs. Barkley christens the Stratocruiser *Washington*. Another Martin is sold to **California Central Air Lines (CCAL)** on October 23. Delivery is taken on the year's final DC-4 on November 11, a unit leased from **Transocean Air Lines**.

A B-377 with 65 aboard makes an emergency landing in Seattle on January 7, 1952; no injuries are reported. Twelve days later, on January 19, a chartered C-54E with 3 crew and 40 passengers crashes during its landing at Sandspit, British Columbia; there are no survivors.

Between April 14 and May 8, the last three Martin 2-0-2s are delivered to **Pioneer Air Lines**. Stratocruiser flights begin from the new Idlewild Airport in April and the last **California Central Air Lines (CCAL)** DC-3 is delivered on May 3.

On July 7, a B-377 flies from Tokyo to Seattle in a record 16 hrs. 11 min. A DC-4 is purchased from **Delta Air Lines** on August 5. Late in the year, even while President Harris' board relations deteriorate, certain board members approach the just-retired CAA Administrator/CAB Chairman Donald Nyrop about the company presidency, but he is not interested.

A Stratocruiser flies from Seattle to Chicago on January 29, 1953 in a record 5 hrs. 8 min. This aircraft type's Tokyo to Seattle mark improves to 15 hrs. 10 min. on February 15. While the airline awaits delivery on a new order for 24 DC-6s, four DC-6Bs are leased from **The Flying Tiger Line** on April 8 and the next day, a record Chicago-Seattle B-377 time of 6 hrs. 6 min. is recorded.

At the beginning of April, an interchange agreement begins with **Eastern Air Lines** over a route from Miami to Seattle via Chicago (MDW). An EAL Lockheed L-749A Constellation is employed on the route, with Northwest cockpit and cabin crews operating the service from Chicago to Seattle and back.

An order is placed on April 20 for six (later reduced to four) L-1049G Super Constellations.

A DC-4 is chartered for six months from **Los Angeles Air Service** in May and three more Douglas DC-6As are leased from **The Flying Tiger Line** between September 1-13. A Chicago-bound B-377 from Seattle crashes and burns at McChord AFB, Washington, on September 6; 29 aboard are hurt and 3 are safe as the copilot risks his own life to aid base police in rescuing survivors. Seattle-Portland flights begin on September 27, the same day that Northwest announces it will install emergency landing evacuation slides on all of its DC-4s and Stratocruisers.

A DC-4 is sold to **Japan Air Lines Company, Ltd. (2)** on October 24. The interchange arrangement with **Eastern Air Lines** is concluded six days later.

Flying C-54s and DC-4s since 1950, Northwest has completed 1,380 roundtrip Military Air Transport Service (MATS)-contracted transpacific crossings with no disruption of either its domestic or "Great Circle" schedule of commercial flights. In 13 million miles, the carrier flies over 40,000 troops and 6 million pounds of priority cargo. Revenues from the airlift, cargo, and passenger operations are \$66 million, while passenger boardings for the year are 1.1 million.

Another DC-6A is leased from **The Flying Tiger Line** on January 26, 1954 and a Stratocruiser turns in a Tokyo-Seattle flying record of 16 hrs. 48 min. on March 7. A DC-4 is chartered from **Braniff International Airways** on March 15; Tokyo to Seoul DC-4 flights commence on April 21. In June, three Northwest board members visit former CAB Chairman Nyrop at his Washington, D.C. office and ask him to again consider becoming president/CEO.

The first purchased DC-6A arrives on June 23, acquired from **Canadian Pacific Air Lines, Ltd.** On the last day of the month, the airline's facilities at Shemya AFB in the Aleutians are deactivated in favor of a new stop at Thombrough, Cold Bay, Alaska. For three months, August-October, a DC-4 is leased from **Eastern Air Lines**.

Following a two-month review, Donald Nyrop, the same man who had led the 1951 company review, accepts the post of president/CEO on September 27; he will be America's youngest major airline chief executive. Croil Hunter, who served as president before Harris, remains board chairman. Nyrop immediately sets to work to upgrade company finances and quickly negotiates an \$18-million line of bank credits. Cost-cutting measures are also taken, including one of Nyrop's long-term favorites, reduction in the number of vice presidents. He also sells two of the six undelivered Lockheed Constellations, replacing them with two DC-6Bs purchased from **Mexicana Airlines, S.A. de C.V.**, which will arrive on October 28 and December 3, respectively.

Meanwhile, the CAB, at President Eisenhower's direction, now awards the carrier a seven-year temporary permit for Tokyo service. Eisenhower and the regulators both believe Nyrop's service a duplication of that provided under subsidy by **Pan American World Airways (1)** and receipt of temporary, as opposed to permanent certification, brings a lawsuit from Northwest. Beginning on December 10, interchange flights to Miami are operated with **Eastern Air Lines**; the first L-1049G makes its maiden flight on December 17 and the first of 24 DC-6s join the fleet during the year. On December 22, Nationalist Chinese anti-aircraft test firing is apparently responsible for bursts near a DC-4 coming into Taipei from Tokyo. At month's end, a DC-4 is sold to **Great Lakes Air Lines**.

On January 1, 1955, the carrier becomes the first airline to operate without government subsidy on transpacific and U.S.-Alaska routes. Former President Harris's four Lockheed L-1049G Super Constellations are delivered beginning on January 22 and are placed on transpacific routes from Seattle and Tacoma to Manila via Anchorage, Tokyo, and Okinawa. First- and tourist-class flights to Honolulu from Seattle and Tacoma via Portland are also introduced.

In May, the first common stock dividend is issued since 1946. A program of fleet rationalization is begun as orders are placed for 10, later 14, DC-6Bs, the first of which arrives from the manufacturer on June 16, followed by a second on September 20. These are now placed on the

Manila run, leaving the Super Constellations to fly between Tokyo and Seoul.

While retaining the Stratocruisers, many of the smaller aircraft are withdrawn, including the infamous surviving Martins and most DC-3s. Northwest begins direct service between Chicago and New York via Detroit, on October 30.

An interchange service with **Eastern Air Lines** begins on December 15 between Minneapolis/St. Paul and Miami via Chicago. The service is initially operated by Northwest Stratocruisers during the winter and EAL Constellations during the summer season.

Another \$29.5-million line of credit is acquired and paid off and at year's end, President Nyrop declares Northwest to be "the only airline in the United States that doesn't owe a dime!" Dividend payments begin and will continue annually for many years.

By leasing Shemya from the government on January 1, 1956, Hunter's company becomes the first U.S. carrier to operate its own airport. The same day, it is announced that Northwest will centralize its maintenance operations at a new \$17.5-million base at Wold-Chamberlain Field. Maintenance facilities at Seattle and New York will be closed. Another DC-6A arrives new from its manufacturer on February 3.

Just after takeoff from Seattle for New York on April 2, Flight 100, the B-377 *Tokyo* with 6 crew and 32 passengers, develops engine cowl flap problems and ditches in Puget Sound 4.7 nm. offshore. The survivors are rescued by a U.S. Army amphibious vehicle 10 minutes after the landing. Although 5 passengers drown before they arrive, 3 soldiers will later receive medals for their work.

Two DC-4s are chartered from **Riddle Airlines** in early April and a second DC-6A arrives from **Canadian Pacific Air Lines, Ltd.** on April 19.

Originally flown by **Northwest Airways**, the reconditioned Ford AT-5-58 Tri-Motor is leased from **Johnson Flying Service** of Missoula, Montana, and undertakes a thirtieth anniversary 20-city New York to Seattle flight on October 10–18.

Capacity is increased during 1957 by the addition of eight DC-7Cs, the first of which arrives on February 28. Also in February, a DC-4 is sold to **Universal Air Lines**. DC-7Cs also join the fleet on April 8 and 27, respectively, and the three new machines are now placed into service on the Great Circle routes to the Orient. During the summer, the CAB finally grants permanent route certification to Tokyo. Four more DC-7Cs arrive between July 3 and August 30.

New York to Seattle via Chicago DC-7C flights commence on August 30; the next day, all four of the Constellations are sold to **LAV (Linea Aeropostal Venezolana, S.A.)**. Also in August, a DC-4 is sold to K. Herfurter. The year's final DC-7C is delivered on September 20 and first-class Imperial Service is introduced late in the year. The sixth and seventh new DC-6Bs delivered since January 19 arrive on October 5 and December 5, respectively, while two DC-4s are sold to the South African operator **Trek Airways (Pty.), Ltd.** on December 19.

In the first quarter of 1958, four more DC-7Cs are placed into service and in the spring, the "Regal Imperial Eagle" is adopted as the corporate logo.

Two more DC-7Cs arrive on April 1 and 18, respectively. On May 1, an order for 10 Lockheed L-188Cs is announced.

A DC-6B with 4 crew and 58 passengers is lost in a landing accident at Minneapolis (MSP) on August 28; there are no fatalities.

The company acquires its last DC-4 on October 1, leasing it from **Universal Air Lines** for two years. The same day, the last four DC-3s are sold to **Ozark Air Lines**.

The official L-188C order is signed on November 26; the \$2.4-million aircraft will be paid for, along with several DC-8s, with a newly arranged \$83-million financing package.

The fifth new DC-6B delivered since January 24 arrives on November 28. Direct service is inaugurated between Chicago and the metropolitan Florida markets of Miami and Tampa on December 6; at this point, the interchange agreement with **Eastern Air Lines** is terminated. The DC-7C order is completed between December 10 and 17 with the delivery of the final three units.

A DC-7C flies from Tokyo to Seattle on January 6, 1959 in a record 12 hrs. 43 min. and a DC-6B is leased from **Canadian Pacific Air Lines, Ltd.** for a year on May 14. First advertised on May 23, New York to Tokyo via Anchorage Polar Imperial Service is begun on June 1. The first of 10 Lockheed L-188C Electras to arrive during the year is delivered on July 19.

An unoccupied **Capital Airlines** DC-3 is wrecked on the ground at Pittsburgh on August 2 when it is hit by a Northwest B-377. The B-377 *Honolulu* is written off on August 14 following an accident at Minneapolis (MSP).

L-188C revenue flights commence on September 1 over routes from New York to Minneapolis via Milwaukee, New York to Seattle, and Chicago to Minneapolis. Northwest is the only Lockheed operator to fly the Electra on nonstop transcontinental service. Atlanta becomes a stop on the Chicago to Miami route on September 17.

Two Stratocruisers are retired on September 23 and October 26 respectively. Options are, meanwhile, requested of Lockheed on October 17 for 18 additional L-188Cs; the order will later be reduced to eight.

Late in the year, Chairman Nyrop files a brief with the CAB claiming that **Civil Air Transport (CAT)**, the CIA proprietary company operating passenger and cargo services to Hong Kong and Tokyo as a cover out of Taiwan, is competing with unfair government assistance. The regulators dismiss their former chairman's petition.

On January 1, 1960, frequencies are initiated to Fort Lauderdale, Florida and after a month-long trial, the playing of organ music is dropped from all flights on January 15.

While en route from Minneapolis to Miami via Chicago (MDW) on March 17, Flight 710, a new L-188C with 6 crew and 57 passengers explodes in midair over Tell City, Indiana, and crashes at Cannelton; there are no survivors. Among the victims is Chicago Superior Court Judge John A. Sharbaro. The disaster, similar in nature to the loss of **Braniff International Airways** Flight 542 the previous September 29, shakes confidence in the aircraft type.

The carrier's first Douglas DC-8-32 is received on May 18 and is placed into revenue service on July 8 over the route from New York's Idlewild Airport to Tokyo and Manila via Seattle and Anchorage. A second DC-8-32 arrives on July 3. Four Stratocruisers are retired between July 11–14. The company's four other new DC-8-31s will be assigned to the Asian network as received.

Having arrived at Okinawa on July 14 following a flight from New York via Seattle, Anchorage, Cold Bay, and Tokyo, a DC-7C with 7 crew and 51 passengers departs for Manila. Two hours into the service, the No. 2 engine fails, leading eventually to a forced ditching off Jimilog, Philippines, 67 nm. NE of Manila. Save one passenger, all aboard are rescued by USN aircraft 4–6 hours later.

Two days later, regularly scheduled DC-8-32 service is initiated between New York and Seattle. Also in July, the new maintenance and overhaul base at Wold-Chamberlain Field is occupied.

A third DC-8-32 is delivered on August 11 and Chicago to Tokyo via Anchorage flights commence on August 31. The last three Stratocruisers are traded to Lockheed between September 21–23 and the year's final DC-8-32 arrives on September 22.

The DC-8-32 fleet is grounded for two weeks during October as flight engineers strike for higher pay.

En route from Spokane to Missoula on October 28, a DC-4 with four crew and eight passengers crashes 32 km. W. of its destination; there are no survivors.

On the ground at Eau Claire, Wisconsin, on November 3, a USAF B-47 bomber collides with a company L-188 with 58 aboard; one Northwest passenger is badly hurt.

The fifth and final DC-8-32 is delivered on January 5, 1961 and a DC-6A is sold to the Norwegian operator **Braathens SAFE, A.S.** on January 20. New York to Seattle daily roundtrips resume on February 4.

The first of eight supplemental L-188Cs to arrive during the year is delivered on March 9. On March 16, the carrier places a \$36,772,000 order for 6 (later 17) Boeing 720-051B (B-720B) jetliners plus 6 options,

for domestic service. Six DC-4s are sold to Aircraft Holdings, Ltd. on April 15. The first of nine Boeing 720Bs to be delivered during the year arrives at Minneapolis/St. Paul on May 26. All eight additional L-188Cs are in service by the end of the second quarter.

B-720B service is inaugurated on July 1 from Chicago to Minneapolis and from Minneapolis to New York via Milwaukee. From July 1 to September 19, all of the remaining DC-6As are withdrawn and sold, including four to Lockheed and one each to **Zantop Airlines** and **World Airways**.

Meanwhile, on August 4, a B-720-051B encounters clear-air turbulence near Mason City, Iowa, that results in severe injury to one passenger. On August 21, two DC-6Bs are passed to **REAL (Redes Estaduias Areas, S.A.)**. Also during the month, four B-720-051Bs are leased to **Trans World Airlines (TWA)** for a year; TWA will employ the aircraft for interim jet lift as it awaits delivery of its B-707 Stratoliners.

On September 17, Flight 706, an L-188C with 5 crew and 32 passengers, strikes a high-tension line and crashes outside Chicago (ORD) just after takeoff for Florida; there are no survivors of this sixth fatal Electra accident in 31 months. An improperly installed aileron boost assembly will later be blamed for the tragedy.

The last of the year's new Boeing B-720-051Bs enters service on December 13 and two days later the company is able to announce that its B-720Bs are operating seven of the company's principal domestic routes.

Later in the month, the completed general office is occupied, bringing the carrier's entire main base under one roof. Employing a converted DC-7CF, New York to Tokyo all-cargo service is introduced. A total of eight DC-7Cs are returned to Douglas during the year.

Northwest originates wind shear forecasts in 1962 to ward off sudden changes in wind direction. A B-720-051B, with only nine aboard, undershoots the runway while landing at Fort Lauderdale on January 26 and crashes; no one is hurt. Service to Edmonton, Alberta is now suspended. A new corporate logo is unveiled: the outline of a 707 tail within a red circle reflects Northwest's new identity as jet operator.

On June 6, a DC-6B is sold to **Pacific Western Airlines, Ltd.**; it is followed by another unit that passes to **Air Vietnam, S.A.** on August 31. Four more B-720-051Bs are delivered during the remainder of the year, beginning on September 21. The first DC-8-32 to be sold is passed to **UTA French Airlines, S.A.** on October 3.

En route from Tacoma to Anchorage on a chartered October 22 MATS flight, a DC-7CF with 7 crew and 95 passengers develops engine trouble and is forced to ditch at sea near Biorka Island, Alaska. The aircraft remains afloat for 24 minutes, during which time all aboard are safely rescued.

With the retirement of the last piston-engine aircraft from regularly scheduled service, Northwest, in 1963, becomes the nation's first all-fan-jet operator. Indeed, the marketing and public relations departments label it "The Fan-jet Airline."

On February 12, Flight 705, a B-720-051B, with 8 crew and 35 passengers fails its climb away from Miami for a flight to Chicago (ORD) and crashes into the Everglades; there are no survivors.

Sterling Airways, A.S. purchases five DC-6Bs, the first two of which are turned over on May 22 and June 20, respectively. Meanwhile, an MATS-chartered DC-7CF with 6 crew and 95 servicemen and dependents disappears on June 3 during a flight from McChord AFB, Washington, to Elmendorf AFB, Alaska. The wreckage is found the next day 292 km. off Annette Island and there are no survivors.

The first of 41 new B-707-320s, two Dash-351Bs delivered on June 5 and 19, respectively, enter service on transpacific and long-haul domestic routes on July 1. During the remainder of the month and in August, the new Boeings initiate services from Seattle to Anchorage, from New York to Minneapolis via Detroit, and from New York to Minneapolis via Milwaukee.

Two more B-707-351Bs arrive on July 30 and September 9, respectively; they will be followed by the last unit of this type delivered on the year on October 13. Three DC-8-32s are sold to **National Airlines** between September 15 and October 14; eight days later, on October 22, a 14th B-720B is acquired from its manufacturer.

Enplanements for the year total 2,540,481. A net profit of \$10.5 million is earned on revenues of \$157.85 million.

Airline employment in 1964 stands at 6,671 and another B-720-051B arrives on January 23. A total of five DC-6Bs are phased out during the year, beginning on February 14; three more complete the **Sterling Airways, A.S.** order while one each goes to **Kar-Air O/Y** and **United Arab Air Lines**. A B-720-051B with 40 aboard is involved in a nonfatal accident at Miami on February 24 and on March 20, another B-720-051B with 41 aboard is caught in clear-air turbulence near Billings, Montana, and a stewardess and a passenger are seriously hurt.

The first three of 23 B-707-351Cs arrive on April 10 and 18 plus June 18, respectively. Meanwhile, an L-188 with 84 aboard crashes while landing at Cleveland on April 24; six passengers are badly injured. The last two B-720-051Bs are delivered in the month between June 26 and July 24. Meanwhile, **National Airlines (1)** purchases the company's last DC-8-32 on June 30.

In the year's second major B-720-051B turbulence incident, a Boeing with 92 aboard is caught near Minneapolis on September 7; once again, one stewardess and one passenger are seriously injured. The CAB grants authorization for several new routes, one of which from Cleveland to Chicago commences on October 5. The same day, company officials receive the first Flight Safety Foundation safety award for turbulence research.

As the result of increased aerial trade between America and the nations of the Pacific rim in the late 1950s to mid-1960s, Northwest receives a presidential "E" award for the development of export markets and its "Visit the U.S.A." promotion in Asia.

Between November 12 and December 23, the first 3 of an order for 30 (later 85) B-727-51s and later, B-727-251s, join the fleet.

Passenger boardings jump 27% to 3,480,110 and freight traffic climbs by 39.8%. Revenues are up a quarter, 25.4%, to \$211.6 million and net earnings are \$26.8 million.

The workforce in 1965 totals 7,580 and the first B-727-51 enters service on January 1. Beginning on January 15, the last four DC-6Bs are sold out of service; one goes to **Finnair O/Y** and three more to **United Arab Air Lines**. Several of the 49 aboard a B-720-051B are hurt when the jetliner hits turbulence near Chicago Heights, Illinois, on January 23. Three more B-727-51s arrive between February 11 and March 3. Cleveland to Philadelphia and Detroit to Philadelphia service is inaugurated on April 1.

Between April 22 and September 10, four more B-707-351Cs and three B-727-51s arrive. The CAB, in its famous Transpacific Case, now reexamines the entire route structure for American airlines operating over the Pacific. As a result of these investigations, new flight paths are awarded and much stronger competition between the carriers begins. Longtime board Chairman Hunter retires, but is named chairman emeritus and continues his company association. On September 24, a DC-7C is sold to **Transair Sweden, A.B.**

One more B-707-351C and five more B-727-51s are delivered between October 7 and December 17, with spare parts. The new B-727-51s are placed into domestic service and by year's end, the fleet includes 64 aircraft: 14 B-727-51s, 16 B-720-051Bs, 13 B-707-351B/Cs, 5 DC-7Cs, and 16 L-188Cs. Orders are outstanding for 12 B-727-51s and 7 B-707-351Cs. U.S.-Orient weekly roundtrips are increased to 16 per week in late December.

The company originates 4,731,610 passengers and its cargo-mail tonnage is up by 50%. Revenues swell to \$262 million.

One more B-707-351C arrives on January 8, 1966 and two DC-7Cs are sold to the Gulf Land Corporation on March 11 and 25. A total of two B-707-351Cs, one B-727-51, and four B-727-51Cs are delivered in the period between April 11 and June 24. Meanwhile, the first L-188C is sold on June 16, to **American Flyers Airline**.

On July 8, Northwest is one of five U.S. airlines struck by members of the International Association of Machinists and Aerospace Workers (IAM). The combined effect is to halt 60% of domestic passenger air service and 70% of airmail operations.

Through-plane service begins from Washington, D.C. and Cleveland to Asia on July 17, from Philadelphia, Detroit, and Minneapolis/St. Paul via Seattle. Following several weeks of negotiations, President Lyndon B. Johnson announces a settlement to the IAM strike on national television on July 29; however, the membership votes 2 1/2 to 1 on August 1 to reject the proposed contract.

Talks resume and on August 15 a tentative agreement is reached on a new three-year deal. The membership votes to ratify the contract by a 2-1 margin, thus ending the longest and costliest strike in U.S. commercial aviation history to date.

During the strike, two B-727-51Cs and two B-707-351Cs arrive. **American Flyers Airline** acquires a second L-188C on September 25; it will purchase a third on November 15 as Northwest begins to sell off its Electra fleet. Meanwhile, after a 17-year waiting period, Northwest is certified to serve Hong Kong as of October 1; flights commence two weeks later, on October 15.

Late in the year, a \$239-million order is placed for 10 Boeing 747s and 6 more B-707-351Cs. On December 16, the last of three B-727-51s and one more B-707-351C acquired since November 12 is delivered. Revenues for the year total \$305.51 million.

The workforce in 1967 is 10,257 and the last 2 B-727-51s are received on January 1 and 25, respectively. Meanwhile, **American Flyers Airline** acquires a fourth L-188C on January 24. A B-727-51C arrives on March 12, sandwiched between the last two B-707-351Cs delivered on March 18 and 21 and another Dash-51C that is received on March 28. Osaka becomes the latest Asian destination on April 1 and two more B-727-51Cs arrive on April 22 and May 27.

Flights to the Hawaiian community of Hilo begin on December 17 and a \$104-million order is sent to Boeing for 16 B-727-51s, 2 B-727-51Cs, and another B-707-351B.

Enplanements total 6,306,000. On record revenues of \$384,140,000, a record net profit of \$58,715,000 is posted.

In 1968, another \$106 million worth of aircraft and aircraft spare parts are received, including 10 B-707-351B/Cs, 2 B-727-51s, and 5 B-727-251s. With the initial orders, Northwest becomes launch customer for the DC-10-40. A new \$2-million hangar is opened at Cleveland and at Seattle and Anchorage, air freight facilities and flight kitchens begin operation.

Flight 714, a B-720-051B with 92 aboard en route from Chicago to Miami is hijacked by M. Velazquez-Fonseca on July 1 and is forced to land in Havana. The passengers return to Miami on a company DC-7C chartered by the U.S. Department of State. This hijacking, the latest of many undertaken to Cuba over the past decade, results in a new Cuban policy of not allowing large Western airliners to takeoff fully loaded for return flights.

The last three DC-7Cs are sold to **Aero International Airlines** on September 6.

A total of 6,929,600 passengers are originated and 180,363,672 freight ton-miles, an increase of 25%, are flown. Revenues advance 8.4% to a record \$416,289,742 and for the first time, Northwest leads the entire U.S. air transport industry in net profit.

A total of 14 DC-10-40s are ordered in January 1969 and during the year, three L-188Cs are sold.

An interchange agreement with **Pan American World Airways (1)** takes effect on June 1 and Northwest is able to begin service from Minneapolis/St. Paul to London (LGW) via Detroit (DTT). Both companies employ Boeing Stratoliner equipment and this is the first transatlantic operation for Northwest.

On July 26, the government of Burma charts a B-727-51 for a year, complete with three U.S. crews, to operate tourist flights to and within the country. San Francisco to Tokyo via Honolulu flights commence on August 1. Minneapolis (MSP) to Los Angeles and San Francisco flights begin on October 4.

A new corporate symbol featuring the stylized tail of a Northwest jet and "new look" livery are adopted the same day. A \$12-million expansion of the main base facilities is undertaken at Minneapolis (MSP) and 15 B-727-251s are delivered.

Enplanements total 2,932,800. Revenues total \$468.17 million, an all-time record to date. Profits are \$82.36 million (operating) and \$44.67 million (net).

The employee population in 1970 numbers 4,086 and the fleet includes 118 aircraft. Los Angeles to Tokyo via Honolulu flights are inaugurated on January 6 and two weeks later, on January 19, an L-188C is sold to **International Skyways**; a second will be delivered to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** on May 15. Meanwhile, on April 30, the company takes delivery of its first Boeing 747-151, placing it into service on its Chicago to Tokyo run on July 1; nine more will be delivered before Christmas, along with three additional B-727-251s.

Clerical and office workers and passenger service employees, members of the Railway and Airline Clerks Brotherhood, strike for higher wages on July 18 and Croil Hunter, longtime president and chairman of the board, dies on July 21.

Nonstop Chicago to Honolulu flights commence on September 1, the same day Northwest becomes the first to offer B-747-100 transpacific service from the four major gateways of Seattle, San Francisco, Los Angeles, and Honolulu.

The Tokyo Jumbojet route is stretched to Manila on December 1. The 160-day clerical workers strike, which has had an impact on both traffic and revenues, ends on December 14 after the union members ratify a new agreement containing pay raises.

On December 31, the CAB agrees to allow a merger with **Northeast Airlines**, but refuses to allow inclusion of Northeast's recently won Miami-New York route.
