Foreword

Myron J. (“Jack”) Smith Jr. has earned a well-deserved reputation as the foremost bibliographer of his generation. Over the past quarter century, he has published over 60 volumes of annotated bibliographical studies that have been widely used by scholars in a variety of fields, especially business, military, pro sports, and aeronautical history.

Like other writers, I have leaned heavily on Professor Smith’s books in my own work. His fine volumes, *The Airline Bibliography: The Salem College Guide to Sources in English* (2 vols., 1985–1986) proved indispensable when I was editing the airline industry volume for *The Encyclopedia of American Business History and Biography* (Facts on File, 1992). His bibliography will be joined shortly by an updated guide, also from Scarecrow Press.

Smith, who along with other authors joined me in contributing articles to *The Airline Industry*, has also been responsible for a number of pictorial histories. His *Passenger Airliners of the United States*, covering the years from 1926–2000, is now in its fourth edition.

Smith’s latest project is his most ambitious effort to date and combines a love of information gathering with concise narrative. He has

compiled detailed operational and statistical profiles of more than 6,000 commercial air transport companies over the 91 years from 1909 into 2000. The research required for such a compilation can only be described as staggering. I have no doubts whatsoever that generations of aeronautical, business, and military historians will use this work as a fundamental reference tool. It will save researchers enormous amounts of time and effort to have the basic information on airlines so readily at hand.

Jack Smith has made an enormous contribution to scholarship. His indefatigable effort and unsurpassed skill in assembling *The Airline Encyclopedia, 1909-2000*, are deeply appreciated by all whose own works have or will rest upon this foundational endeavor.

William M. Leary
E. Merton Coulter Professor of History
University of Georgia

Acknowledgments

Many individuals, associations, airlines, libraries, and aircraft manufacturers were contacted or visited in the process of assembling this encyclopedia, work on which began over a decade ago at approximately the same time as my *The Airline Bibliography: The Salem College Guide to Sources in English*. Indeed, citations, press releases, and photographs for both works were initially obtained simultaneously. Following completion of the publications guide, this project has occupied much of the author's time ever since.

Almost everyone contacted over the years has responded in a gracious manner. For example, over two hundred airlines (several, such as Aeromech Airlines and the first Pan American World Airways, being no longer extant) provided information and photographs—many of them several times. All of the major fixed- and rotary-wing trade associations have also contributed facts and figures, while aircraft manufacturers have offered technical insight and photographs.

The growth in corporate information provided via the World Wide Web since 1995 has been, as noted, of immeasurable value. The development of e-mail has made correspondence regarding this project much simpler than has been the case for any of my other 66 books; a message to and from England, for example, which used to take weeks, now takes hours.

For their advice, assistance, or encouragement in the formulation, research, and completion of this endeavor, the following individuals and libraries are particularly and gratefully, if not alphabetically, acknowledged. Those organizations (extant or not) that provided photographs are acknowledged in the picture captions. This recognition of contributors does not, of course, necessarily translate into their endorsement, as any errors (and it is not possible for there not to be a few in a solo work as large as this one) remain the responsibility of the author alone.

If not specifically renamed below, I have recalled all of those people acknowledged in *TAB*, as well as in the four editions of my *Passenger Airlines of the United States*. This includes a huge cast of airline PR folks consulted earlier during this work's formative years, but who have now retired or moved on.

Mr. John Wegg, editor-in-chief, *Airways Magazine*
Mr. Nicholas A. Veronico, former managing editor, *Airliners Magazine*
Mr. Graham Warwick, North American editor, *Flight International*
Dr. R. E. G. Davies, curator of air transport for the Aeronautics Department, National Air and Space Museum, Washington, D.C.
Mr. Ian Harbison, editor, *Regional Airline World Magazine*

Special appreciation is reserved for Ms. Lisa Henderson Ray, research and statistics editor, and Mr. James P. Woolsey, recently retired senior editor and associate publisher, *Air Transport World*. Their long-standing support and assistance has been invaluable to the compilation of this, as well as earlier works.

I am also grateful to Mr. Jon Proctor, editor-in-chief of *Airliners*, who has provided many key insights and much data.

Dr. Norman Horrocks of Dalhousie University, Halifax, Nova Scotia, formerly editorial VP of Scarecrow Press, was instrumental in launching this project and has been a tower of aid and support. His successor at Scarecrow, Ms. Shirley Lambert, and her staff have given

every assistance and encouragement. Their collective patience with the growth of this project should be the stuff of publishing legends. The assistance, support, and encouragement brought to the conclusion of this project by production editor Kellie Hagan and copyeditor Bethany Easter has been a priceless joy.

Mr. Charles Tunstall, assistant professor of library science and public services at Tate Library, Tusculum College, provided interlibrary loan service.

Finally, a wave from the cockpit to Dr. Bill Leary, History Department, University of Georgia, for his splendid foreword.

Introduction

BACKGROUND AND SCOPE

In the beginning, aviation as a means of transport, especially for passengers, was considered wildly impractical. Critics and cynics derided the few who speculated positively on the concept and even Orville Wright was once heard to describe the chances of transatlantic flight as “a bare possibility.” As we all know, the developments of technology, stimulus from private plus national and international governmental sources, and the inspiration of some gifted individuals have brought, indeed wrought, a revolution in this aspect of world trade.

When it began nine decades ago, commercial air transport was little more than an experimental dream; for passengers, freight, mail, and express, the principal mode of delivery was by ground or water. The airlines¹ grew in response to their ability to provide speed of delivery for any or all type of person or goods. In many places such as the United States, air shipment of goods, i.e., mail, came before purposeful transport of people. Still, by the mid- to late 1920s, passenger air transport was a goal for carriers around the world. As the cowboy philosopher Will Rogers put it during the early 1930s, “if your time is worth anything, travel by air. If not, you might as well walk!”

In the period between the wars, substantial growth in passenger transport occurred. However, the business—often portrayed as romantic—remained primarily a subsidized service for the rich or those needing rapid delivery of high-priority goods or mail. Airport and air traffic control was primitive; crashes were common and usually every bit the center of media (newspaper) attention then as now. Still, demand for the air transport of passengers alone (excluding mail or cargo) rose gradually. It grew from a few thousand in the years just before and after World War I to 18.2 million in 1946, the first year in which the International Civil Aviation Organization (ICAO), an arm of the United Nations, reported world figures.

Following the Second World War, to which almost all of the world's airlines contributed support and from which nearly all benefited in terms of financial, operational, or technical advancement, the air transport industry blossomed in a burst of innovative activity. New concepts of delivery were put into practice, increasingly more-sophisticated equipment came on line, and government assistance, support, and regulation grew on both the national and international level. Marketing personnel worked overtime to make flying seem ever more glamorous for everyone.

As a result, the 1946 ICAO passenger figure had more than doubled by 1951 to 39.9 million and by 1956 had risen to 78 million. Commercial domestic and international flight achieved extraordinary expansion everywhere. By the end of the 1950s, airplanes, led by the introduction of jetliners, had largely replaced the ocean liner as the prime mode of transoceanic passenger transport. Over the next three decades, air travel within some geographical areas, such as the United States, had replaced large segments of public ground passenger transport for trips over a few hundred miles. The one hundred million (108 million) mark in passenger boardings was achieved in 1960 and hit 891 million in 1985.

Still, the industry since the 1960s, particularly in the U.S., has been subject to a period of almost-regular economic boom and bust, usually in parallel with fiscal recessions. Particularly difficult years were

1969–1974 (marked by excessive capacity), 1980–1982 (fallout from deregulation), and 1990–1994 (remembered for its overcapacity, value-conscious passengers, and erosion of airline balance sheets). Many airlines failed in these hard times, just as they had earlier in the Great Depression or in the late 1940s. Deregulation has taken a heavy toll; of all the scheduled U.S. passenger-service airlines that started up in the 14 years from 1978 to 1992, only two remained in existence as late as 1996.

The Asian economic crisis, which began on 1997 and lasted for several years, brought hardship and difficulties for carriers in that part of the world. Meanwhile, privatization in Canada and Europe has rewarded some scheduled airlines (Lufthansa, British Airways, and Air France), brought ruin to others (e.g., Canadian Airlines and over 100 start-ups in Russia), and spawned low-cost carriers that have sometimes been very successful (e.g., EasyJet, WestJet) and sometimes not (e.g., Debonair). The number of charter airlines has steadily declined during these years as that industry has consolidated.

Despite severe recessions, innovations in technology, administration, marketing, cooperation, and deregulation, as well as the end of colonial empires (including the Soviet Union), have propelled this progress along and increased demand for it. In 1997, 1,479,012,000 travelers flew worldwide. That figure in 1998 is 1,586,051,000. According to preliminary 1998 ICAO figures, total traffic thus remains level with a 1 percent increase, a sharp slowdown from the average 7 percent increase over the previous five years. The trend continued in 1999 as preliminary ICAO numbers dipped to 1,581,814,000.²

Today, still due largely to the speed it offers, commercial aviation is a major world industry. ICAO reported operating revenues of \$291 billion for 1997 and operating income, or profits, of \$16.3 billion for its represented states. The revenue line climbed to \$298.5 billion in 1998, with operating income up to \$16.5 billion. Net gain for the year totaled \$9.5 billion. Although revenues advanced by 3.7% in 1999 to \$306.5 billion, operating expenses led by fuel costs, soared 5.2% to \$294 billion. The operating profit fell to \$12.5 billion.

In 1997, the International Air Transport Association (IATA) also reported significant gain, showing earnings of \$5 billion for its members from their strictly international services, a figure down slightly from the all-time record of \$5.2 billion in earnings reported in 1995, but up from the \$3 billion of 1996. The final result after interest in 1998 totaled \$3.1 billion, but dropped significantly in 1999 to just \$1.9 billion.

Much of the income here celebrated remains dependent upon passenger revenues; airplanes simply cannot deliver bulk cargo in sufficiently profitable quantity as to replace railroads, trucks, barges, or super-tankers. Despite the best efforts of a number of all-cargo airlines over the years, only a few companies have been able to make a success of the air freight business. Still, post, express, and time-sensitive cargo provides important income for those (largely regional or niche) freighters that survive, as well as for the diversified or passenger companies, scheduled and unscheduled alike, that haul cargo to supplement income.³

As this book is completed, all doubt concerning the value of domestic and international air commerce has long since been removed. Having

grown and largely matured, the miracle of airborne mobility continues to receive its greatest tribute in this fact: millions of people around the globe simply use it daily and take it for granted. Like numerous of his other prophetic observations, Will Rogers' air transport assertion, right years ago, is still correct today.

Although there is some debate as to which was the world's first effective commercial airline, we have chosen to assign that honor to both DELAG (Die Deutsche Luftschiffahrt-Aktiengesellschaft, GmbH.) and the St. Petersburg-Tampa Airboat Line. Both contributed significant "firsts" to air transport history during the century's second decade, though each flew different kinds of equipment.⁴

Formed by Count Ferdinand von Zeppelin on November 16, 1909, DELAG's lighter-than-air ships carried over 34,000 passengers without injury between the major German cities between 1910 and November 1913. Briefly reborn in 1919, the company relaunched dirigible service between Friedrichshafen and Berlin on August 24, only to be shut down by the Allied Control Commission on December 1. In 103 flights between these dates, the lone airship *Bodensee* transported 2,400 passengers and 66,140 pounds of cargo.

Meanwhile, the Florida-based St. Petersburg-Tampa Airboat Line, which began four months of service on January 1, 1914, was the first scheduled airline to employ heavier-than-air planes. In addition, Paul Flanders' pioneering and also accident-free operation maintained the premier regularly scheduled freight/passenger service over a defined route, under an official (if local) government subsidy contract. Further attempts to provide these levels of service, dirigible or airplane, would not occur again until after the First World War. From 1919 on, airline growth and progress has been, if at first faltering, nevertheless, relentless.

As those companies now extant continue to grow, it was difficult for this author to quit an almost-daily effort to provide coverage. But then, an old story came to mind. Years ago, one Martial wrote to a friend concerning a volume then being prepared. It was suggested by the book's author that the tome be enlarged and more information included. The learned man replied that writer must call a halt, "otherwise, dear Avitus, there will be no book."

Given the time lag in the availability of traffic, financial, and other statistical or even operational data, 1999 is the last year for which detailed information was plentiful for operators worldwide. Most of the statistical information that would be available for inclusion was thus in the writer's computer by August 1, 2000. As certain events of importance occurring during the following first two quarters plus, including the launch of several new airlines (and failure of others), became known, they were reported. Following Martial's ancient advice, the cut-off date for coverage is the end of October 2000, with only the most important data added during the editing/indexing phase in the months thereafter.

The progress of events and developments must, as the result of our cut-off date, be left suspended. Numerous questions concerning specific carriers remain to be settled. Even as this work is being edited, several more new entrants are poised for takeoff here and abroad while others are on death's door and may fold—or, like a few others, find it possible to revive.

Will VASP Brazilian Airlines—Viacao Aerea Sao Paulo, S.A. and other South American carriers in a similar financial position—survive in the short-run? Will the airlines of the Caribbean be able to better coordinate their activities? Can equity partners be found for companies Eastern European flag carriers like MALEV Hungarian Airlines, Rt.? Will U.S. discount or niche carriers, like Vanguard Airlines or the fourth National Airlines, survive? Will there be additional consolidation among U.S. majors? How many Chinese and Russian airlines will merge and which ones will disappear or change their names? How will the further integration of Western Europe's in-house charter carriers proceed? North of the U.S. border, how will domestic Canadian competition flourish with the enlargement of Canada 3000 to say nothing of the merger of the Air Canada Connection partners into the super Air Canada Regional, Inc. What will the airlines scene be like in India or Indonesia in the next five years?

A whole list of additional queries just as germane (but based more on technical change, politics, economics and fuel distribution, or management on a wider scale) also need review. For example, will the continuing fuel-price crisis take a larger toll among the world's airlines? What will be the final impact of the coming of the regional jet on airline operations? Will additional airport capacity be forthcoming and will the "hub and spoke" concept continue? Will customer complaints concerning poor ground and cabin service, airliner seat size, and lost baggage be more successfully addressed in this century than it was in the one just concluded? What will be the additional impact of computers on operations and service? Will airline unions grow or decline in importance? Can ATC and other flight delay problems around the world, especially in the United States and Western Europe, be resolved in a manner satisfactory to passengers, governments, and airlines alike? How will changes in frequent flyer programs impact customers or airline yields? Can safety in the skies be improved as dramatically in northwest Asia or Africa as it has been in, say, Russia? Will the world's airlines continue to bind themselves together into alliances like Star or One World or combines like Grupo TACA?

PURPOSE AND ARRANGEMENT

The purpose of this book is not to retell, in overview and analysis, the story of the world's air transport industry. This has been done by others more adequately in their full-length studies.⁵ Brief biographies of airline companies have, in the past, appeared in aviation directories, either stand-alone books or insertions in magazines, such as the annual directory in *Flight International*. They have also appeared in corporation guides, such as Moody's *Transportation Manual* or the various Hoover handbooks.

This is, however, the first guide written to specifically provide detailed historical and in-depth year by year operational and statistical profiles for a significant number of the commercial air transport concerns extant worldwide during the past 90 years.

Thousands of flying concerns have been in operation through the last nine decades; regretfully, many more than we are able to cover. The majority of these have quickly come and gone, usually stimulated by some grand opportunity. For example, a huge number of surplus aircraft and trained airmen became available after the Second World War and were joined together in a hoped-for air transport revolution. The Civil Aeronautics Board (CAB) once estimated that 3,600 U.S. carriers were established in the three years after World War II. There were 30 private charter carriers in France in 1946 and *Flight* listed 70 independent companies flying in Britain in April 1949. All of these were mostly one-man operations that quickly died.

Rotary-wing airlines and air charter operations were growth innovations of the 1950s and 1960s. Only a few helicopter airlines currently exist, although many others provide lift in support of such commercial enterprises as the offshore energy industry and forestry. In some countries, civil helicopter operators are contracted to act as coast guard search-and-rescue units. Charter companies have had a tremendous failure rate; although many continue to be formed, many have also failed. The same is true of commuter airlines (now known as the regional airlines), which grew out of the air taxi industry in these years. Most of those surviving are now affiliated with larger, scheduled carriers, either as partners or as outright fully owned subsidiaries.

Another period of intense growth came in the late 1970s and 1980s, with airline deregulation, privatization, and liberalization. In the United States, following the Airline Deregulation Act of 1978, new entrants, many offering huge fare discounts to passengers, multiplied; in the fierce competition that followed, many of these also perished. Other regions have also seen similar growth; easyJet, Ltd. in the United Kingdom and Azzur Air, S.p.A. in Italy are recent examples.

Among the 6,100-plus companies that we do examine are pioneers such as DELAG and the St. Petersburg-Tampa Airboat Line. Also included are such defunct historic lines as North Central Airlines, Hunting-Clan Air Transport, Ltd., East African Airways Corporation, Pan American World Airways (1), or Canadian Pacific Air Lines, Ltd. In addition, we review

the stories, often in considerable detail, of contemporary major and regional passenger carriers, large and small, scheduled and unscheduled, around the world. Examples include American Airlines, Japan Air Lines Company, Ltd. (2), Mexicana Airlines, S.A. de C.V., Transaero Airlines, Britannia Airways, Ltd., Iraqi Airways, and SA Express (Pty.), Ltd.

Major freight lines such as FedEx and Nippon Cargo Airlines, Ltd. are included. Rotary-wing airlines such as New York Helicopter Corporation, or helicopter companies that provide on- or offshore passenger charters, carry cargo, save lives, fight fires, or harvest timber, such as Bristow Helicopters, Ltd. or Erickson Air Crane are listed as well. A number of passenger-oriented general aviation or executive transport concerns are also included. Even small, often short-lived charter operators based on fixed base operators (FBO) are noted as data permits.

Very few airline types are specifically excluded. Military air transport divisions, such as Military Airlift Command, or covert operations with no civil cover, like Air America, are generally not included. However, space is given to a few military units in foreign countries specifically tasked to transport civilians, such as TAME (Transportes Aereos Nacionales Ecuatorianos) operated by the Ecuadorian Air Force. Due to their number, dedicated air ambulance operators are excluded as are most, though not all, of the smaller helicopter and fixed-wing tour, crop-dusting, or bush operators.

Entries within *The Airline Encyclopedia, 1909-1999* are arranged alphabetically, from A to Z. Data enhancing the company profiles varies, being more complex for those larger concerns still viable at the time the work was finished. Corporate information for the very new is often spotty, sometimes consisting only of city/country location and start-up date. In addition to available traffic and financial information provided, every effort has been made to include information on the following points:

- Aircraft, routes, and services operated
- Associated personnel, both company and celebrity
- Alliances, pool, and interline services records
- Accidents and incidents
- Terrorism and in-flight crime
- Government service in war and peace, including covert operations
- Major sporting or political occasions (e.g., Olympic Games or political conventions)
- Natural disasters, such as hurricanes or earthquakes
- Literary or film references or production involvement
- Unusual anecdotes believed by the writer to have historical interest
- Literally thousands of different classes of service and special promotions have been offered over the years, some for only short periods of time; those believed to be of historical or other interest are noted, including many of those given specific names.

A primary consideration for an operator's inclusion here was the identification of a beginning date. To claim a company was active in a given decade (say the 1930s or 1950s) is too vague a reference to obtain a slot for the concern herein because it would prove very difficult, if not impossible, to build a start to finish chronological corporate biography. I am aware that critics will argue that a number of carriers have thus been omitted which deserved inclusion. If they will assist me in obtaining correct information, new profiles will be constructed for the next edition.

If a company is known to have ceased trading before the completion of this compilation, the airline is noted by its name, nationality, and date of operation. If an airline is still flying (or believed to be, without evidence to the contrary in hand), the directory data is much more extensive. For those carriers, we offer not only name, but, as available, address, telephone and fax numbers, Internet website addresses, two-letter IATA or three-letter ICAO codes, and year founded. Traffic and financial data, taken from government, international organization, industry, and regulatory reports are also provided as available.

Every effort has been made to properly identify aircraft employed by the various carriers. However, with all the selling, trading, and leasing of airliners over the years, this is a nearly impossible goal. Rather than provide generic model numbers (e.g., All Nippon Airways Company, Ltd. Boeing 747-400), we have attempted to be correct (e.g., ANA Boe-

ing 747-481). Where we have failed to be exactly correct (which can happen particularly with the advent of large-scale aircraft leasing), we assume the fault and await assistance from readers.

No effort is made to provide complete fleet lists; such data would require too much space and is available elsewhere in print and on the World Wide Web. I have been particularly impressed with the Herculean efforts made by William "Bill" Harris, who has given us a huge *Commercial Jet Aircraft Census* (<http://www.bird.ch/bharris>). This site allows one to choose census lists from Airbus, Boeing, McDonnell Douglas, or Lockheed; it also allows its users to review the latest "Jet Airliner Status Report," an updated "Jet Airliner Total Losses" list; or to review Harris's database by "Airline 2- & 3-Letter Codes."

A similar, though smaller undertaking is the online compilation of *Aeromoe's U.S. Airline Fleets* (<http://www.geocities.com/~aeromoe/airlines.html>).

In addition, Luxembourg native Marc Schaeffer has published a very helpful homepage that not only provides remarkably full coverage for the de Havilland Comet, but also provides significant detail for those who would keep up with jetliner acquisitions and disposals. Among the subpages available are listings for all Boeing jet orders/backlogs since 1955, orders/backlogs for all jet aircraft orders (regardless of manufacturer) since 1997, a census of the latest order cancellations, and a census of the latest leased jetliners. It is hoped that the helpful, current *Marc Schaeffer's Homepage* (<http://www.geocities.com/CapeCanaveral/Lab/8803>) will be maintained for years to come.

The names, official and otherwise, assigned to aircraft by manufacturers or operators are often given. The author is aware that this is a reference quagmire in that these names are changed often, may be used more than once, and are not an accurate tool for identification. Like the names of specific services, they are, however, colorful and, in the case of certain earlier airlines, such as Imperial Airways, Ltd., and even some modern lines, such as the second Pan American World Airways, add spice to the tale and are therefore employed as known.

For the most part, company portraits are presented under the most recent airline name, as well as predecessor identity. For example, today's British Airways traces its heritage back through British Overseas Airways Corporation (BOAC), British European Airways Corporation (BEA), the first British Airways and Imperial Airways, Ltd. to several small companies merged in 1924. There are a few cases (and BA is one of them) where the name has changed slightly, usually by virtue of privatization; in those cases, identified in the text, the previous name may be retained for the sake of consistency and orderly profile completion. Where there have been more than one company with the same name, these are entered chronologically and identified by number, e.g., Japan Air Lines Company, Ltd. (1) and Japan Air Lines Company, Ltd. (2).

Each profile receives individual chronological coverage. Company cross-referencing is provided throughout the text and within entries, where names of other covered carriers are shown in bold type in the same manner as specific years, e.g., 1997. As a textual aid, italics are employed for book and motion picture names, and names of specific aircraft. To save space, airlines are sometimes referred to within their profiles by abbreviations.

Appendixes

This work contains two appendixes: a list of Acronyms and Abbreviations used in this book, and a list of Research Sources pertaining to the airline industry. The abbreviations include international and governmental organizations and institutions, airline codes, airports, and measurements. The descriptive list of sources includes bibliographies, newspapers and journals, indices, handbook, book publishers, and Internet websites dealing with all aspects of the airline industry.

Indexes

Two indexes are included: Regional Index of Carriers, and Name and Subject Index. The Regional Index lists airlines profiled by nation. Be-

ginning with Africa and the Mideast, it proceeds to Asia and Oceania, moves on to Europe (including the CIS), then South America, and concludes with an accounting of the carriers of Canada and the United States.

The master Name and Subject Index is keyed to airlines and is designed to allow detailed entry into the “who” and “what” of the encyclopedia.

Serving as something of a “who’s who” or “who was who” of the airline scene, the Name and Subject Index covers individuals mentioned in the profiles. Among these are airline founders, chairmen, presidents, directors, vice presidents, and chief pilots. Other diverse personnel noted include transport ministers and other government officials (not excluding prime ministers, presidents, and dictators); aviation industry, union, association, and trade executives and representatives; sports, entertainment, and media celebrities; financiers, investors, and consultants; military, police, and intelligence officers; criminals, terrorists, and skyjackers; and average passengers.

The subject portion of the Name and Subject Index provides extensive coverage of such topics as skyjacking and fatal crashes. Information can also be found on other such relevant areas as: international incidents; bad landings/nonfatal ditchings; engine/propeller failures; turbulence and general weather related problems; near-misses; unusual in-flight events; crimes; ground fires and other difficulties; wars, crises, evacuations; hurricanes and floods; motion pictures and novels based on or depicting actual airlines; “firsts”; “records”; provinces and states of Canadian and U.S. based airlines; strikes/job related events; aircraft launch customers; named services; and manufacturing, legal and judicial, financial, government, and travel agencies sponsoring or otherwise involved in or with the airline industry.

While every effort has been made to ensure currency, a problem particularly difficult with some carriers beginning in the period 1999–2000, it is freely admitted that, for a lone-eagle author, the process of remaining up-to-date on a project this large and with its many entries developed into an art akin to that practiced by the circus plate-juggler. It is probable that a few dishes may have been dropped, particularly with regard to the dates of airline failures, and it is expected that critics and reviewers will gladly point these out.

NOTES

1. According to the U.S. Civil Aeronautics Board’s 1977 *Glossary of Air Transportation Terms*—a work that has outlived its issuing agency in

usefulness—an “airline” is a commonly used corporate name for what the law formally calls an “air carrier,” a term derived from the time when, in fact, the airlines were only regarded as mail carriers. Both terms are often interchangeably employed.

2. Early traffic figures are from ICAO reports. The 1997 data is taken from 673 airlines surveyed for the “World Airline Report 1997,” *Air Transport World* 35 (July 1998): 82. 1998 figures are provided for 696 airlines included in the “World Airline Report, 1998,” *Air Transport World* 36 (July 1999): 88. During these and other years, many hundreds of additional air taxi, unscheduled operators, and general aviation concerns not covered by the industry’s trade journal could yield another million plus passengers. The preliminary 1998 ICAO assessment comes from its December 23, 1998, PIO 15/98, available at <http://www.icao.org/icao/en/nr/pio9815.htm>.

3. “World Airline Report 1997,” *Air Transport World* 35 (July 1998): 57–58 and ICAO PIO 07/99, available at <http://www.icao.org/icao/en/nr/pio0799.htm>. Again, as with traffic figures, many small, corporate, or unscheduled operations are not included. Remarks concerning ground and water transport are based upon data provided in the 3d ed. of John J. Coyle, Edward J. Bardi, and Joseph L. Cavinato’s *Transportation*, published by West in 1990.

4. See the entries in Michael Taylor and David Mondey’s *The Guinness Book of Aircraft Records, Facts, and Feats* (New York: Canopy Books, 1992), 29–30, 33, 92.

5. Beginning with R. E. G. Davies’ definitive *A History of the World’s Airlines* originally authored in 1960 and reprinted (New York: AMS Press, 1983). Davies has also penned histories of airlines in the United States, Asia, and South America, as well as pictorial reviews of a number of noted companies. Of particular value as a complement for Davies and covering another geographical region is Ben R. Guttery’s *Encyclopedia of African Airlines* (Jefferson, N.C.: McFarland & Co., 1998). Of course, no airline encyclopedia would be complete without a nod toward John Stroud’s classic *Annals of British and Commonwealth Air Transport, 1919–1960* (London: Putnam, 1960).

Company Profiles A–Z

A & M AVIATION: Clow International Airport, Plainfield, Illinois United States; Year Founded 1992. A. E. James establishes A & M at Plainfield, Illinois, in 1992. Charter and contract service flights are undertaken and continued with a fleet of 9 Cessna 172 Skyhawks, 2 Cessna Cutlasses, 2 Cessna 182 Skylanes, 1 Cessna 310, 1 Cessna 421, and 1 Cessna 402.

A-B-C AIRLINES: United States (1965–1966). A-B-C is organized at Ontario, California, in early 1965 to enter the state's busy commuter market. Employing Piper and Beech lightplanes, revenue services commence on March 31 linking the company's base with Fullerton and Los Angeles.

Unable to generate sufficient traffic to continue, the little entrant stops flying in 1966.

A SORIANO AVIATION: A Soriano Hangar, Andrews Ave., Pasay City, Metro Manila, 1300, Philippines, Phone 63 (2) 831-4207; Fax 63 (2) 833-3853; Year Founded 1996. This third-level operation is set up at Manila in 1996 to offer interisland-scheduled services. Capt. Ben Hur D Gomez is placed in charge and he begins and continues revenue flights with a fleet that comprises one each Beech CATPASS 200 (Super King Air 200 derivative), Dornier 228-200, and de Havilland Canada DHC-6-300 Twin Otter.

AAA AIR ENTERPRISES: United States, (1980–1985). Triple-A is established at Omaha, Nebraska, in 1980 to offer scheduled all-cargo services to regional destinations with a fleet of 3 Piper PA-31-310 Navajos, 5 Piper PA-32 Cherokee Sixes, and 1 Cessna 404 Titan. In 1981, the first full year of service, a total of 2.05 million FTKs are flown.

Operations continue apace in 1982–1985. On April 1 of the latter year, the company is sold to Aurora, Colorado-based **Mid-Continent Airlines**.

AAPSA (COMPANIA DE AVIACION AERONAVES DE PERU, S.A.). See AERONAVES DEL PERU, S.A.

AAT AIRLINES. See AIR SUNSHINE

AAXICO AIRLINES: United States (1945–1965). Howard Korth founds the irregular carrier American Air Export and Import Company at Miami in late 1945 to undertake all-cargo service, initially with a pair of Douglas C-47s (military DC-3s). Flights are undertaken throughout south Florida, the Caribbean, and Central America. The company, beginning in 1946, also serves as a parts and maintenance broker for Douglas aircraft under the name Aaxico Sales.

With help to the pilot via radio instructions from the USN base, a baby is born aboard an AAXICO aircraft on January 12, 1947; two days later, the child is named Aaxico and is given a lifetime pass.

No more life-or-death events occur during the first decade of operation; however, on at least one occasion, a single DC-3 is chartered to

carry the entire group of Miss America Pageant contestants to Atlantic City. Fittingly, the plane employed is temporarily named *The Miss America Special*. Following the acquisition of three Curtiss C-46 Commandos, the two Douglas transports are withdrawn.

Following the 1955 revocation of the permit of **U.S. Airlines**, Korth elects to take over the failed carrier's scheduled business.

A DC-3 freighter with two crew is lost at Pensacola on April 2; there are no survivors.

Employing Curtiss C-46s, the carrier undertakes scheduled services from New York to Atlanta, beginning on November 15, 1956 and changes its name on December 31.

All manner of common haulage is accomplished in 1957. A 12-year-old C-46F is purchased from **Slick Airways** on September 9.

The fleet in 1958 comprises a total of 37 aircraft, including 1 Douglas DC-4, 1 DC-6A, and 35 C-46s. In February, one of the latter is leased to California Airfreight.

While en route from San Francisco to Los Angeles on January 13, 1959, the California Airfreight C-46F with two crew crashes into 9,046-ft. high Panther Peak in Sequoia National Park. There are no survivors.

On July 1, the company gives up scheduled operations, which are not really paying off, after the CAB refuses to grant it a scheduled operating certificate as a result of a finding in the Irregular Air Carrier case.

A C-46A freighter with two crew is lost at Abilene's Dyess AFB on September 2; both pilots are killed.

Nonscheduled flights, too, prove an uncertain economic burden. Still, AAXICO successfully undertakes numerous MATS contract flights between domestic U.S. military facilities.

A C-46 crashes at Mobile, Alabama, on March 23, 1960, with both crewmen injured. On June 30, company officials sign the papers necessary to become a Logair contractor, servicing the U.S. military with its two dozen Curtiss freighters. It also begins to add over the next year a total of eight more DC-6As; as these arrive, upwards of 15 Commandos are leased to **Capitol Airways**, later **Capitol International Airways**. Pending a fitness examination, the FAA suspends Aaxico's operating certificate on December 20, 1961.

After finding the company no longer offers civilian service, the CAB terminates its civil freighting permit on October 9, 1962. On the other hand, the company is granted interim authority as a Supplemental Carrier. This will be followed by interim authorization for overseas charter work, awarded on April 1, 1963.

While taxiing at Sheppard AFB, Texas, on July 30–31, a C-46F hits an unmarked obstruction in a poorly lit ramp area and crashes.

A C-46F with two crew loses an engine near Great Falls, Montana, on August 14 and crashes 35 mi. ENE of Malmstrom AFB, Montana, while attempting to land (one dead).

Another C-46 is lost while attempting to make a single-engine landing at Las Vegas at September 23.

Chairman Korth soldiers on for the military in 1964. Another Commando is lost on January 1 when its landing gear collapses following the plane's touchdown at Hill AFB, Utah; injuries are slight. On May 1, the

DOD announces that, beginning in 1966, it will not contract with carriers that do not earn at least 30% of their income from certified commercial operations. As a direct result of this declaration, merger discussions begin in November with **Saturn Airways**.

While on a military contract cargo flight on April 23, 1965, Flight 1422A, a DC-6A with five crew, crashes into Mt. Rainier; there are no survivors.

Completing an all-cargo service from Tinker AFB at Oklahoma City on May 10, Flight 1416B, a DC-6A with three crew, hits trees while on final approach to Whiteman AFB, Missouri, and crashes; there are no survivors.

On November 1, following negotiations, founder Korth takes control of **Saturn Airways**, merging his operation into that supplemental while retaining its name in order to meet the DOD requirement. Aaxico Sales continues.

AB AIRLINES, LTD.: United Kingdom, (1993–1999). The new charter carrier Air Bristol, Ltd. is established at Filton Airport, Bristol, on February 8, 1993, but does not receive its operator's license until October 23. Chairman/CEO Brian Beal appoints cofounder Tony Auld as managing director, with Capt. Michael Bridge as chief pilot.

While the carrier awaits the outcome of a public enquiry, required as part of the licensing process, a workforce of 16 is assembled and the new entrant acquires two British Aerospace (BAC) 1-11-510EDs.

The jetliners are employed on licensing day to inaugurate a daily "Airbridge" shuttle service, on behalf of **British Airways, Ltd. (2)**, between Bristol and Toulouse. Passengers are primarily British Aerospace personnel en route to the Airbus Industrie headquarters.

Plans are made to launch scheduled services before the end of 1994 and, during the year, the company acquires two more 111s. Due to delay, charters only are flown through year's end, together with the Bristol-Toulouse shuttle. Over 70 European cities are visited as the company transports orchestras, football (soccer) teams, corporate customers, and rock bands.

Ownership is reformed in early 1995 as the Air Bristol Group is created, which permits continuation of Air Bristol as a trade name and formation of the new AB Airlines, Ltd. A new route is stretched from London (STN) to Belfast.

On December 7, under the trade name **AB Shannon**, the company inaugurates scheduled return services from London (LGW) to Shannon. The company's four BACs haul 81,258 passengers.

The workforce stands at 65 in 1996. As the result of increased competition on the Belfast route, it is discontinued in April. Passenger boardings for AB Airlines nearly double, surging to 144,884; group figures approach 250,000. Although operating revenues reach \$17.3 million, there is a \$1.3-million loss.

The airline population climbs to 90 in 1997. Daily roundtrips from London (LGW) to Lisbon commence on May 1. Orders are placed in December for eight Boeing Next Generation 737-700s. The request is valued at £250 million (\$400 million).

Service is inaugurated in December from London (LGW) to Berlin (Schoenefeld Airport), the latter route taken over from **Deutsche Lufthansa, A.G.** and **British Airways, Ltd. (2)** who had both dropped it earlier. At the end of the year, AB is the fifth largest operator of international flights from Gatwick Airport.

Customer bookings increase 43.4% to 177,000 and revenues jump 9.2% to \$18.8 million. A £2.2-million (\$3.5-million) loss is suffered.

Arrangements are completed during the first quarter of 1998 to replace one BAC with a pair of chartered B-737-300s. On April 23, an IPO of 35.6% of equity is floated on the London Stock Exchange. When the company goes public, £8.3 million (\$14 million) is raised to help fund the development of new and existing routes and to purchase aircraft. The company is now valued at £25 million.

On May 1, a new code-sharing agreement begins with **Aer Lingus Irish Airlines, Ltd.** The two partners link their frequent flyer programs and offer dual-designator service over two new AB Airlines return routes from Birmingham and London (LGW) to Shannon.

The first chartered B-737-33A arrives at London (LGW) on May 24. On May 27, Boeing Commercial Airplane Group confirms AB's order for six Next Generation B-737-700s, the first ordered by any U.K. airline.

In mid-June, a code-sharing agreement is signed with **Debonair Airways, Ltd.** Beginning on July 9, the two will share designators on AB's services from London (LGW) to Berlin, Lisbon, and Nice.

Delay is experienced during the summer when Ansett Worldwide Aviation Services is unable to deliver a pair of chartered B-737-300s on schedule. The service alterations involved will cost the carrier £1.9 million and forces AB to take legal action against the lessor.

It is reported on September 18 that the company, in anticipation of the Gatwick Airport slot selection committee meeting in October, has applied for slots to operate twice-daily B-767 service to New York (JFK) and Chicago (ORD) beginning the following March. If the goal is accomplished, the small regional will have taken a quantum leap into the major leagues of air transport. The company is also seeking to partner with a large European airline on routes to the Continent.

From this highpoint, things begin to slip later in the month. On September 25, **Virgin Express, Ltd.** announces creation of a Shannon-based subsidiary to be known as **Virgin Express (Ireland), Ltd.**

Tickets go on sale for the new operator at the introductory one-way price of £17 for twice-daily service between Shannon and London (STN).

On October 15, Chairman Beal accuses Richard Branson, Virgin Group chairman, of "doing a British Airways." Beal, who appeals the Virgin move to the European Commission, is concerned that it may be forced to pull out of services between the West of Ireland Airport and Stansted, and accuses his fellow airline boss of doing "exactly what Virgin accuses British Airways of."

As the result of new route startup costs and the aircraft delay, the carrier, for its first six months, suffers an operating loss of £2.6 million, against a £744,000 deficit in the same period a year earlier. Figures reported on October 30 show that the company has plunged £4.5 million into the red and by November 20, the carrier will show a £10.8-million operating loss on sales of £17.2 million.

The new **Virgin Express (Ireland), Ltd.** base is commissioned at Shannon on December 15, with B-737-300 services starting the next day.

Passenger boardings increase 72.3% to 305,000, while 11 million FTKs are also operated. Despite these positive traffic figures, the company suffers an operating loss of £10.6 million (\$17.4 million).

At the beginning of January 1999, AB launches U.S.-style Internet ticket auctions, the first of their kind in Europe. Bargains are to be held by passengers who have two days to spend at their destination. Among the first winners are an elderly who bid £12 and win two tickets to Shannon.

Also during the month, flights from London (STN) to Lisbon are terminated and the B-737-300 displaced is wet-leased to **Debonair Airways, Ltd.** for the next nine months. Although the thrice-daily roundtrips between London (LGW) and Shannon are maintained, the frequencies to Shannon from London (STN) and Birmingham are scrubbed.

A third B-737-300 is accepted at London (STN) from lessor Boullion Aviation on May 7. In severe financial distress, AB is now forced to streamline its operation or begin insolvency proceedings.

After securing a £500,000 down payment, AB, on May 21, concludes the sale to **Virgin Atlantic Airways, Ltd.** for £2 million of its seven weekly takeoff and seven weekly London (LGW) landing slots previously employed for services to Shannon (Ireland) and Nice (France).

The funding is a stopgap and is insufficient to resolve AB's upcoming capital problems. As a result, negotiations are begun with a third unnamed party concerning the airline's order for six Next Generation B-737-700s. The carrier's executives would be pleased to either sell the planes to the partner and lease them back or to sell to it its right to purchase and take delivery of the Boeings. If the talks fail, AB will cancel the request and attempt to obtain a refund on a portion of its deposits. As the press puts it when the matter is reported on May 25, the company is now in "very difficult trading conditions."

Over the next two months, AB plans a rights issue, designed to raise £2.2 million and suffers a setback when it must be cancelled. Pending

clarification of its financial status, trading in AB shares, which have gone as high as 95p and as low as 9p, is suspended on July 29.

On August 3, the carrier is placed into administrative receivership by the British High Court of Justice. Although its staff is paid and its routes are flown, the court-appointed joint administrators, Peter Copp and Geoff Kinlan from BDO Stoy Hayward, are required to find a buyer. If the company cannot be sold, it will be ordered liquidated. AB is the first of the new generation British no-frills carriers to fail.

Scheduled service from London (LGW) to Nice and Shannon is discontinued late in the month, although three "Baby Boeings" remain out on lease. The company's AOC and Operating License are suspended, though not revoked.

When no new owners step forward, the company is liquidated in October. AB is the first of the new generation British no-frills carriers to fail.

AB SHANNON, LTD. See **AB AIRLINES, LTD.**

ABA AIR, A.S.: Prague, Czech Republic, Year Founded 1997. ABA is established at Prague in early spring 1997 to offer scheduled and charter services to domestic locations. President Petr Bold launches flights with a single Let L-410.

ABA SWEDISH AIRLINES (AKTIEBOLAGET AEROTRANSPORT, A.B.): Sweden (1924–1951). Destined to become the largest of the prewar Scandinavian national airlines, ABA is formed at Stockholm by Adrian and Carl Florman on March 27, 1924. In cooperation with the Finnish pioneer **Aero O/Y**, shareholding is acquired by Junkers Flugzeugwerke, A.G., which provides a pair of F-13s on May 5. The new entrant launches Junkers F-13 passenger service from Stockholm to Helsinki on June 2.

The fleet is upgraded in early 1925 by the addition of four Junkers G.23s (license-built in Sweden by AB Flygindustrie), which are christened *Gotaland*, *Svealand*, *Skane*, and *Noorland*. The first of these trimotors, indeed, the first three-engine, all-metal monoplane in the world to enter commercial service, is delivered in May. It is employed to inaugurate operations to Malmo, Hamburg, Copenhagen, and Amsterdam on May 15 as part of a Scandinavia–London through service in cooperation with **Imperial Airways, Ltd.** As others of the type, which will serve as inspiration for the famous Ju-52/3m, become available, they fly to such destinations as Copenhagen and Berlin.

The single Junkers G-24 *Uppland*, convertible from wheels to floats, is received in 1926; it is used between Stockholm and Helsinki as a floatplane, and as a landplane on the route from Malmo to Amsterdam, via Hamburg. In 1927, a pair of Junkers W.33s and two W.34s are also acquired.

On June 18–19, 1928, an F-13, piloted by Bernard Liljelberg, flies from Stockholm to London (Croydon Airport), via Malmo, Hamburg, and Amsterdam, on the first experimental night airmail flight in Europe; the service is flown regularly in August and September.

ABA continues to emphasize international operations during the remainder of the prewar years.

ABA and **Aero O/Y** introduce the marketing name **Scandinavian Air Express** in 1930 to cover their Stockholm–Helsinki operations, the northern portion of which is flown by Aero O/Y. Joint summer night-airmail services are also inaugurated, Stockholm–Helsinki–Amsterdam.

The Fokker F-XII *Varmland* is delivered in early 1932 and begins operations on two routes out of Malmo—to Amsterdam and Berlin. The G-23 *Svealand* is lost on a night-airmail flight in August. During the fall of 1933, orders are placed for a pair of Northrop Deltas.

The first of the advanced American aircraft, the Delta 1C, is delivered in April 1934. Christened *Halland*, it is employed to undertake mail services from Stockholm to Paris. On the first flight, the aircraft completes its service in a record 4 hrs. 40 min., at an average speed of 198 mph. The second Delta, the 1E, arrives in mid-June; christened *Smland*, it enters regional mail service.

Less than a month later, on July 6, rudder flutter causes the *Smland* to crash at Almhut, in Smland; the two crew members success-

fully bail out. The Fokker F-VIII *Jamtland* is received in October and is placed into service on the Malmo to Gothenburg route. Plans to enter the Halland in the England–Australia MacRobertson Race during the month fall through and the Delta 1C is, instead, placed into regular scheduled passenger service from Malmo and Copenhagen to Gothenburg and Hanover.

In March 1935, a four-engine Fokker F-XXII is received; christened *Lappland*; it is placed in service on a route from Malmo to Amsterdam. After 1,218 flight hours, the *Lappland* is lost in a Malmo crash in June 1936 (one dead).

With the opening of the new Bromma Airport in early July, the **Scandinavian Air Express** services, flown in cooperation with **Aero O/Y** between Helsinki and Malmo are now extended to Stockholm.

A night airmail service is run London–Stockholm after July 27, in cooperation with **British Airways, Ltd. (1)**; ABA operates the Hanover–Stockholm sector, employing a Junkers Ju-86 equipped with U.S.-made Pratt & Whitney Hornet engines.

In January and April 1937, the carrier sells two of its Junkers Ju-52/3ms to **British Airways, Ltd. (1)**. In May, the Northrop Delta 1C *Halland* is sold to the famous English aviatrix Mrs. Beryl Markham. ABA, in July, becomes the second airline in Europe after **KLM Royal Dutch Airlines, N.V.** to take delivery of a Douglas DC-3, which is christened *Ornen (Eagle)*. Capt. K. G. Lindner employs the Douglas on August 17 to inaugurate Stockholm–London, via Amsterdam, **Scandinavian Air Express** service.

In March 1938, the carrier receives the Junkers Ju-86 *Svalan (The Swallow)*, which is placed into service on a night-airmail service between Stockholm and Hanover via Malmo. Later in the year, representatives from the governments of Sweden, Norway, and Denmark and their national airlines agree to pursue the idea of joint Bergen–New York flying boat service in cooperation with **Pan American Airways (PAA)**.

During 1939, a route is extended to Moscow. When war erupts in September, the carrier's fleet comprises 5 Junkers Ju-52/3ms, 2 Junkers W.33s, and 3 DC-3s. Shortly thereafter, the carrier obtains a Fokker F-XXII from **KLM Royal Dutch Airlines, N.V.** and a used F-VIII from **British Airways, Ltd. (1)**. A fourth DC-3 is acquired in November and is christened *Gladden*. Passenger boardings for the year will exceed 40,000.

The Douglas DC-2 *Haan* is purchased from **KLM (Royal Dutch Airlines, N.V.)** on January 13, 1940. Shortly thereafter, the American-built transport is acquired by Count Carl-Gustav von Rosen, who presents it as a gift to the Finnish Red Cross. The German invasions of Norway and Denmark in April cause the Swedish government to refuse ABA a subsidy to support any deal with **Pan American Airways (PAA)** and delays proposals for joint cooperation. The company's fifth DC-3, the *Gripen*, arrives on May 16.

The carrier is successful in providing neutral service to Allied and Axis countries alike early in the war. With five DC-3s now on hand, all clearly marked with the word "Sweden" in large letters on the sides of their fuselages, the company maintains flights to both Berlin and Moscow. In late June 1941 when Germany invades Russia, the Moscow service is suspended. The Berlin frequencies are maintained.

On March 27, 1942 direct Stockholm–Aberdeen (Dyce Airport) DC-3 courier services are initiated and proceed apace until June 21–22 when Luftwaffe night fighters down a pair of Douglas transports. The flights are resumed on August 15 and continue. Also in August, the old Fokker F-VIII *Jamtland*, which has flown 5,350 hours with ABA, is sold to the Royal Swedish Air Force.

When Marcus Wallenburg founds **Svensk Interkontinental Lufttrafik, A.B. (SILA)** at Stockholm on June 9, 1943, he has an agreement from ABA to concentrate on domestic and regional service, leaving long-haul flights to the new enterprise.

Tragedy strikes the U.K. courier service again during the year's second half. En route from Scotland to Stockholm on August 27, the DC-3 *Gladden*, with four crew and three passengers, is shot down; the *Gripen*, with four crew and 11 passengers, shares the same fate over Hallö, Sweden, on October 22, although in this instance there are two survivors.

Flights between the Sweden and the U.K. are now suspended. Representing the unborn consortium **SAS (Scandinavian Airlines System)**, Per Norlin orders 7, later 10, Douglas DC-4s on November 27.

In 1944, nine interned Boeing B-17 bombers are taken in hand and converted to civil status; it is tacitly agreed that the planes would eventually be given to and paid for equally by the three state airlines. Only the Swedish line is immediately able to claim it's three. Meanwhile, on January 17, German permission is received to resume Sweden-U.K. safe conduct flights. Service from Stockholm to Prestwick resumes on March 7, but is suspended on April 18. On April 25, Germany bars Stockholm-Copenhagen flights.

On June 20, **Deutsche Lufthansa, A.G. (DLH)** takes over ABA's continental traffic in order to prevent leaks by aircrews or passengers concerning Allied bombing damage in the Reich or the mood of the German people. In October, the Scottish courier terminus is switched to Prestwick in order to accommodate the converted B-17s now employed.

Stockholm-Helsinki service stops on March 5, 1945. Meanwhile, Berlin services continue until just before the German capitulation in May. Thereafter, the postponed negotiations between the three Scandinavian carriers and governments for the actual establishment of a joint consortium begin anew. On December 6, a converted B-17 crashes near Straegnaes (six dead).

Wearing ABA colors, the first Douglas DC-4 from the group ordered three years earlier arrives on May 1, 1946 and is christened *Nordan*. On July 31, the **SAS (Scandinavian Airlines System)** is formally established with Carl Florman signing the consortium constitution on behalf of ABA and Marcus Wallenberg for SILA. Capital shareholding in the new organization is divided by ratio between the companies with the ABA/SILA combined portion representing 3/7. The agreement establishes **Overseas SAS (Scandinavian Airlines System)** for operation of international flights; however, each partner will initially continue to provide domestic services.

Wearing large prints of the flags of the consortium nations, the Overseas SAS DC-4 *Nordan*, on September 16, inaugurates transatlantic roundtrips from Stockholm/Copenhagen to New York via Prestwick and Gander.

In 1947, route agreements for Swedish regional services are reached between ABA and SILA.

A DC-3F with five crew aboard crashes at Bulltofta Airport, Sweden, on August 9 (one dead). On October 26, a DC-4 with eight crew and 36 passengers, crashes on Mt. Hymettus, Greece, while on initial approach to Athens; there are no survivors.

Early in 1948, the company becomes the launch customer for the SAAB 90A-2 Scandia with an order for ten. On April 18, the regional operations of ABA and its two partners are combined into a European Division of **SAS (Scandinavian Airlines System)** and on July 1, ABA and SILA are fully amalgamated under the former's name. On the same date, the old Fokker F-XII *Varmland* is finally sold, to Svensk Flygtjanst, which loses it in a hangar fire in December.

On February 8, 1951, in a move made retroactive to October 1, 1950, the Overseas and European divisions are merged in a final consortium agreement. **SAS (Scandinavian Airlines System)** becomes the flag carrier of Denmark, Norway, and Sweden with the partner airlines now becoming the nonflying national holding companies.

ABACO AIR, LTD.: P. O. Box AB, Marsh Harbour International Airport, Abaco, 20492, Bahamas; Phone (242) 367-2266; Fax (242) 367-3256; <http://www.oil.net/abacoair>; Year Founded 1975. Abaco is established at Marsh Harbour, on the island of Abaco, in 1975, to offer charter services to the rest of the Bahamas, the Turks and Caico Islands, and to Florida. Revenue flights begin and continue with one (later three) Aero Commander 580 and a Britten-Norman BN-2 Islander. By 2000, the little company is the longest-continuing charter operator in the nation.

ABACUS AIR, GmbH.: Germany (1983-1985). Organized at Frankfurt in 1983, Abacus undertakes weekday-only scheduled flights from

Cologne to Amsterdam and Hanover with a Fairchild-Swearingen Metro II. The company also owns a Cessna Citation executive jet with which it undertakes passenger charters for industry. Unable to achieve viability, the carrier shuts down in 1985.

ABAKAN AVIA: Abakan Airport 8, Abakan, Krasnoyarsk Region, 662608, Russia; Phone 7 (39172) 50 722; Fax 7 (39172) 56-408; Code ABG; Year Founded 1993. This Russian start-up carrier is established at Abakan Airport in 1993 to offer regional services. Nikolay Z. Baranov is named managing director and he launches scheduled revenue flights with a mixed fleet that includes 1 each Antonov An-24, Ilyushin Il-76, Let L-410, Tupolev Tu-154B, and 2 Mil helicopters. **Khakasia Airlines**, founded at the same time, becomes an associate.

Operations continue apace in 1994 as the fleet is increased to include 11 more An-24s, 3 additional Il-76s, 11 more L-410s, 3 additional Tupolevs, 5 Mil Mi-8s, and 12 Mi-2s. Traffic figures are, again, not reported.

A Let 410UVP with 2 crew and 17 passengers, fails its takeoff from Krasnoyarsk on January 20, 1995, clipping some trees and crashing into a field (3 dead).

Flights continue without further incident in 1996-2000. During these years the company comes to concentrate on all-cargo operations. The Russian currency crisis late in the decade requires Abakan to reduce its fleet to just 3 Il-76Ts and 1 Tu-154B.

ABAKANSKOE AVIAPREDPRIATIE (ABAKAN AIR ENTERPRISE): Russia (1994-1997). A competitor to *Abakan Avia* is established at Abakan Airport in late 1994. Operations commence over a domestic route network with an unspecified number of Antonov An-24s, Tupolev Tu-154Bs, and Let L-410s.

Under the leadership of Director General B. M. Kochetov, flights continue in 1995-1997, during which years the fleet is increased to 5 An-24s, 2 Let 410s, 6 Tu-154Bs, plus 5 Mil Mi-8 and 10 Mi-2 helicopters. During the latter year, the company is renamed **Khakasia Airlines**.

ABC COMMUTER AIRWAYS, B.V. See ALM (ANTILLEAN AIRLINES, N.V.)

ABELAG AVIATION, S.A.: Building 28, Brussels National Airport B-1930, Belgium; Phone 32 2720; Fax 32 2721; Code AAB; Year Founded 1964. Originally established at Brussels as an FBO and light charter operation in 1964, Abelag becomes a member of the J.E.T. Europe air taxi marketing group in 1982. Andre Ganshof van der Meersch is named chairman-president. With an initial fleet comprising 2 Gates Learjet 35A Century 3s, 1 Gates Learjet 24D, 1 Cessna 441 Conquest, 1 Cessna 421, 1 Cessna 310, and 1 Cessna 210, the company undertakes passenger charters from the capital's National Airport and other airfields throughout the country.

The fleet is enhanced in 1983-1986 with the addition of 1 more Cessna 441, 1 Cessna 206, 1 Cessna 182, and 4 Cessna 150s.

Services continue throughout the remainder of the decade and, by 1999, the Brussels-based fleet includes 2 Cessna 500 Citation Is, 1 Cessna 441, 1 Dassault Falcon 50, 3 Learjet 35As, and 1 Learjet 24D.

A newly opened base (1996) with several transit executive jets is also maintained at Luxembourg.

ABERDEEN AIRWAYS, LTD. (1): United Kingdom (1934-1937). While building an airport to service Aberdeen, Scotland, Eric L. Gandar-Dower elects to build an airline as well; with £29,000 capital, he registers Aberdeen Airways, Ltd. at Edinburgh on January 2, 1934. Two de Havilland DH 84 Dragons are purchased; the one christened *Aberdonian* is lost in a Dyce crash on July 13.

On July 28, Gandar-Dower's Dyce Airport is opened and on September 10 his airline, employing a Short Scion purchased in July, launches its inaugural (demonstration) flight to Glasgow (Renfrew Airport). Beginning next day, daily Aberdeen-Glasgow (Renfrew) Scion service is

offered and the fleet is improved by the addition of a DH 84 Dragon; winter forces a service cut to twice weekly.

During the year, Gandar-Dower publishes his recollections of a flight from London to Madras, India, in a single-engine DH Puss Moth, *Amateur Adventure* (London: Rivch & Cowan).

Orkney Island Dragon flights are launched from Aberdeen on May 27, 1935, via Wick and Thurso to Orkney. Connecting with **North Eastern Airways, Ltd.** at the Scottish capital, Aberdeen Airways starts Aberdeen–Edinburgh service on June 11. The Orkney service is suspended on November 8. Gandar-Dower must invest considerable time and resources to offset determined new opposition to his carrier from the railroads, which temporarily force **North Eastern Airways, Ltd.** to stand down.

Thurso–Orkney operations are resumed on December 16. The Orkney service is extended to Shetland with a DH 89A Dragon Rapide flown by Capt. Eric Starling on June 2, 1936 and on November 2, the connection with North Eastern is reestablished when that carrier returns to service.

In March 1937, the carrier changes its name to **Allied Airways (Gandar Dower), Ltd.**

ABERDEEN AIRWAYS, LTD. (2): United Kingdom (1989–1992). Employing the name of Eric Gandar-Dower's historic airline of the 1930s, Scottish investors, using the assets of recently failed **Air Ecosse, Ltd.**, establish AAL-2 at Dyce in 1989. Managing Director Jim Bicker obtains a fleet comprising 2 Cessna 404 Titans, 4 Grumman G-159 Gulfstream Is, and 2 British Aerospace (HS) BAe 748-2As, the latter chartered from **Dan Air/Dan Air Services, Ltd.** Flights are inaugurated linking Edinburgh, Manchester, and the East Midlands. A total of 24,000 passengers are flown by year's end.

Airline employment in 1990 stands at 457, but economic difficulties cause a downturn that leads to bankruptcy. Through the year's first half, 21,495 passengers are transported.

In early January 1991, former **Royal Jordanian Airways** CEO Ali Ghandour and Jean Pierre Rozan, chairman of **Air Provence, S.A.**, combine to acquire the airline, which is then moved to East Midlands under the chairmanship of John Callaghan. Aberdeen emerges from bankruptcy in September. The fleet of the 75-employee carrier now includes 3 Gulfstream Is, 1 BAe (HS) 748-1A, and 2 BAe (HS) 748-2As. Passenger boardings increase to 24,356.

Scheduled service is inaugurated in May 1992 linking East Midlands with Edinburgh and Aberdeen. However, with its finances in shambles, Chairman Callaghan resigns in June when he is unable to reestablish the airline's profitability in hard economic circumstances. The second Aberdeen Airways is forced to close in November.

ABILENE AERO-LUBBOCK AERO: 2850 Airport Blvd., Abilene, Texas 79602, United States, Phone (915) 677-2601; Fax (915) 675-5432; <http://www.abileneaero.com>; Year Founded 1968. Abilene Aero is started by Ollie Higgins and Kent Waddell as a four-person FBO partnership at Butterfield Trail Airport near Abilene, Texas, in 1968. Almost immediately, the concern establishes an Abilene Aero Charter division and begins operating lightplane executive and small group passenger and express services. After three years of negotiations, the city of Abilene allows the concern to construct new facilities at Municipal Airport; these open for business on March 1, 1971. The company also becomes a Cessna sales and service center.

Chaparral Airlines is organized in August 1975 as the scheduled airline division; John Stevens is named president and is assigned to oversee 11 employees. The new commuter inaugurates scheduled Piper PA-31-310 Navajo (with two aircraft) service to Austin on September 15, 1976.

Also during the year, Abilene leases facilities at Sweetwater Airport where it operates a subsidiary FBO, Sweetwater Aero, for three years.

The Abilene facility is significantly increased during the early 1980s and, in 1985, the company reports \$5 million in sales.

Chaparral Airlines is purchased for \$5.7 million in cash by Dallas (DFW)-based **Metro Airlines** in August 1987. Abilene returns to charter and flight training air services.

The Texas Air Center facility is purchased in 1990 and, after extensive remodeling, begins operating as Lubbock Aero. In May 1992, the two FBOs are linked under their present name.

Joe Crawford is in charge of flight activities for the concern in 1998–2000 and oversees the on-demand operations of 1 each Beech Super King Air 200, King Air 100, Beech 58 Baron, Cessna 414A, and Beech A36 Bonanza.

ABITIBI HELICOPTERS, LTD.: P.O. Box 188, 341 Route 111, La Sarre, Quebec J9Z 2X5, Canada; Phone (819) 333-4047; Fax (819) 333-9894; Year Founded 1980. Abitibi is set up at La Sarre in 1980 to provide passenger and cargo charter flights and air ambulance services. By 2000, President Bertrand Perron employs and workforce of 80 and has revenues of C\$10 million per year. His fleet comprises 13 Eurocopter Astars, 1 each Bell 205 and Bell 207, 3 Bell 206B JetRangers, and 4 Bell 206L LongRangers.

ABLE AMERICAN JETS: 15707 Fairchild Drive, Hangar 6, St. Petersburg-Clearwater International Airport, Clearwater, Florida 34622, United States; Phone (813) 530-0091; Fax (813) 530-7787; <http://members.aol.com/ablejet/index.html>; <http://www.tenncom.com/ablejet>; Year Founded 1987. AA is set up at Clearwater, Florida, in 1987 to offer executive passenger charters; certification is received for flights throughout the U.S. and to Canada, Mexico, Europe, Central and South America, and the Caribbean.

Over the next decade, hubs are also established at Fort Pierce and Orlando in Florida, Nashville, Tennessee, and Manassas, Virginia. The workforce in 2000 includes 11 full-time and 4 part-time pilots.

The company flies 1 Learjet 25 from St. Petersburg/Clearwater and 1 each Learjet 25, Beech Super King Air 300, Piper PA-23 Aztec, and PA-31-310 Navajo from St. Lucie County International Airport at Fort Pierce. At Orlando, the company stations 1 each Beech Super King Air 200, Cessna 414 Chancellor, and Rockwell Aero Commander 500 while a Learjet 25 is based at Nashville and a Learjet 24 stands by at Manassas, Virginia.

ABOITIZ AIR: General Aviation Area, Manila Domestic Airport, Pasay City, Metro Manila, 1300, Philippines; Phone 63 (2) 831-1803; Fax 63 (2) 831-3978; Code BOI; Year Founded 1988. A subsidiary of the Manila-based Aboitiz Transport System, Aboitiz Air is formed on January 28, 1988 to provide all-cargo, scheduled services from the General Aviation Area of Manila Domestic Airport. Chairman Jon Ramon Aboitiz's carrier comes to possess a fleet comprising 2 Beech Twin Bonanzas, 1 Beech Super King Air 200, 2 Nihon YS-11Fs, and 2 Lockheed C-130A Hercules freighters.

Scheduled services are initiated late in the year to these destinations: Bacolod, Bukidnon, Butuan, Cebu, Cagayan de Oro, Cotabato, Davao, Dumaguete, Iligan, Iloilo, Ormoc, Ozamis, Roxas, Tacloban, Tagbilaran, and Zamboanga. Ad hoc regional charters are also undertaken. Over the next five years, two more Hercules are acquired; however, one is placed out of service in 1992, when two NAMC YS-11A-600s become available.

In 1993–1994, President Endika M. Aboitiz oversees a workforce of 353. The fleet in 1995 includes 2 Hercules cargo planes (1 out of service) and 6 YS-11As. The latter are employed on 24-hour Aboitiz Express services. One of the latter is withdrawn in 1996. Instead, the company leases all of the cargo space available in the bellies of the DC-9s operated by new entrant **Cebu Pacific Air**.

In August 1997, a joint-marketing agreement is signed with **Cebu Pacific Air** for domestic cargo operations. Flights continue apace in 1998.

Early in 1999, the company leases its YS-11As to **Asian Spirit**, which will employ them to open a new hub at Cebu on July 1. Although Aboitiz continues to utilize the cargo spaces, the Japanese-made turboprops now offer Asian Spirit passenger flights from Cebu to Naga, Cagayan de Oro, Tagbilaran, Butuan, Dipolog, Bacolod, and Catclan.

ABSIL AIR SERVICES (PTY.), LTD.: South Africa (1993–1996). Absil is established at Johannesburg in 1993 to provide domestic and regional charter passenger and executive services. Revenue flights commence with 1 de Havilland Canada DHC-6-300 Twin Otter and 1 Grumman G-159 Gulfstream I. Neither traffic or financial reports are available and the carrier escapes international notice after 1996.

ABU DHABI AIR SERVICES, LTD. See EMIRATES AIR SERVICES, LTD.

ABU DHABI AVIATION, LTD. See ABU DHABI HELICOPTERS, LTD. (2)

ABU DHABI HELICOPTERS, LTD.: P.O. Box 2723, Abu Dhabi, United Arab Emirates; Phone 971 (2) 449100; Fax 971 (2) 449081; Code AXU1; Year Founded 1976. This rotary-wing airline is formed on January 1, 1976; ownership is divided between public shareholders (70%) and the U.A.E. government (30%). Under the patronage of HH Sheikh Zayed bin Sultan Al Nahyan, president of UAE and ruler of Abu Dhabi, and HH Sheikh Khalifa bin Zayed Al Nahyan, Abu Dhabi's crown prince, the new concern will replace a contract operated by **Bristow Helicopters, Ltd.** since the establishment of the U.A.E. in 1971.

Equipped with a pair of Bell 206B JetRangers, the carrier undertakes international and domestic charter and contract passenger and cargo services from Al Bateen military airfield, near Abu Dhabi City, beginning in September. A luxurious, airline-like terminal will be built at this facility.

By 1982, the fleet is increased to include 7 JetRangers and 26 Bell 212s. During the year, the company is reformed by royal decree into a registered joint stock company, with shareholding divided between the government (30%) and the public (70%). In 1983, the company reports the operation of 39,000 flying hours by its helicopters.

Over the next decade, the company's traffic (a significant portion of which relates to the nation's Persian Gulf oil industry) skyrockets above 400,000 enplanements per year.

During the Iran–Iraq War, ADH is the largest supplier of helicopter support for the news media covering the conflict; the Associated Press, Cable News Network (CNN), and the American Broadcasting Company (ABC) are among company customers. At the same time, ADH helicopters also evacuate crews from tankers damaged in attacks by Iranian or Iraqi patrol boats or missiles.

In 1985, the company is authorized to fly both rotary- and fixed-wing aircraft. A \$6-million, three-year expansion of Abu Dhabi's facilities at Bateen Airport is begun; the project includes the construction of a new terminal, new offices, maintenance facilities, and a large hangar.

General Manager Sheik Ali Bin Saeed Al Shamsi's fleet has grown by 1991 to comprise 31 helicopters, including 26 Bell 212s and 5 Bell 206B JetRangers. Late in the year, the company receives its first fixed-wing contract, from one of the country's largest oil concerns. A total of 47 pilots and 58 mechanics are on the payroll at year's end.

On March 5, 1992, the company receives an award marking the completion of 400,000 hours flown by its Bell helicopters. With two de Havilland Canada DHC-6-300 Twin Otters leased from BAC Aircraft and a DHC-7-102, **Abu Dhabi Aviation, Ltd.** is formed during the year as a subsidiary to provide the fixed-wing oil industry support occasioned by the previous year's contract, plus other received.

Operations Manager George Tucker oversees the ordering of a Fokker F.27 in 1993 in place of the DASH-7. The purchase will not go through.

Domestic operations continue apace in 1994, at which time the fleet mix of new General Manager Mohamed Ibrahim al Mazroui and Operations Manager J. D. Railton includes 5 Bell 206B JetRangers, 26 Bell 212s, 2 Bell 412s, 2 DHC-6-300s, and the DASH-7.

Emirates Air Services, Ltd. is purchased in April and merged with the carrier's fixed-wing division in 1995. Abu Dhabi gains access to the large EAS base at Abu Dhabi International Airport, together with another DASH-7, 2 Twin Otters, and 1 Britten-Norman BN-2A Islander.

A pair of DHC-8s is acquired in 1996 to enhance oil field charters. They replace the DASH-7s.

By 1997–1998, the helicopter complement features 5 JetRangers, 5 Bell 412s, 23 Bell 212s, and 1 Kamov Ka-32, while the fixed-wing fleet numbers 2 (later 1) DHC-6-300s and 2 DHC-8-102s.

During the latter year, the company's rotary-wing fleet transports a monthly average of 4,700 passengers and 435 tons of freight from off-shore locations through Bateen Airport, while more than 11,300 passengers move between offshore locations.

Airline employment numbers 167 at the beginning of 1999. Planes are made to occupy a new state-of-the-art terminal at Abu Dhabi International Airport during September.

ABV AIRWAYS: Russia (1991–1994). ABV is established at Moscow in 1991, initially to provide charter passenger and cargo flights within Russia and to other countries in the C.I.S. With A. Avrutski as general director, revenue flights are inaugurated with aircraft leased from **Aeroflot Russian International Airlines (ARIA)**.

In 1992, regularly scheduled services are inaugurated linking Moscow and St. Petersburg. Avrutski's 1993 fleet includes 3 Tupolev Tu-134s and 4 Tu-154s. New scheduled frequencies are initiated to Khabarovsk, Kiev, Tblisi, and Kishinev. Flights cease in 1994.

ACADEMY AIRLINES: P.O. Box 693, Griffin, Georgia 30224, United States; Phone (770) 227-2000; Fax (770) 229-8991; Year Founded 1980. Robert McSwiggan founds Academy at Griffin, Georgia, in 1980, to operate all-cargo services from Griffin and Williamson to regional and local destinations under FAR 135 certification. Flights begin with a fleet that includes 4 Beech Barons, 2 Beech 18s, 3 Douglas DC-3s, and 1 DC-4.

Operations continue apace over the next 20 years. One DC-3s is still active at the start of the new millennium.

ACASA (AEROVIAS CARIARI, S.A.): Costa Rica (1968–1975). A gentleman named Cariari forms this commuter at Limon in 1968. Employing a Douglas DC-3, service is inaugurated to Rio Frio, Guapiles, and other area towns. During the early 1970s, the fleet grows to comprise 3 Douglas transports, 2 Beech 18s, and 1 Convair CV-240. In 1976, the company is taken over by **AVE (Aerovias del Valle, Ltda)**.

ACCESSAIR: Ruan Center 2, 601 Locust Street, Suite 330, Des Moines, Iowa 50304, United States; Phone (515) 247-2209; Fax (515) 247-2216; <http://www.accessair.com>; Code ACCA; Year Founded 1998. AccessAir is established at Moline, Illinois, in the fall of 1998 to offer scheduled discount passenger service to New York (LGA) from the heart of the Midwest. Roger Ferguson is president/CEO and he and a group of 230 employees, from an operational headquarters at Des Moines, Iowa, acquire a pair of Boeing 737-230As (first flown by **Deutsche Lufthansa, A.G.**) and begin the process of winning regulatory approvals from the FAA and DOT.

Financial support is provided by business interests in Illinois and Iowa. An attempt to gain support from companies in Colorado Springs, who lost heavily as a result of the transfer and demise of locally based **Western Pacific Airlines (Westpac)**, fails.

On January 29, 1999, the company issues a press release detailing the new entrant's schedule and price structure for the beginning of service, including introductory fares. The company website announces plans to shortly add service to Colorado Springs and Sioux City. **Northwest Airlines** indicates that it will match the new prices.

AccessAir now reaches an agreement with **United Airlines** and **Trans World Airlines (TWA)** under which the startup can exchange passengers and tickets with those carriers if it overbooks.

With FAA support, the certification process is completed on February 1. Following a ceremony, the inaugural service departs Des Moines, Iowa, on February 3 and flies to Moline, where another ribbon-cutting ceremony is held. At 6 p.m., the flight continues on to New York.

The first return service from the "Big Apple" to Moline and Des Moines occurs next day. Also on February 4, daily roundtrip flights commence from Des Moines to Los Angeles (LAX). Introductory \$99 one-way fares remain in place until March 4.

Claiming that it has removed its introductory fare, AccessAir complains to the DOT that Northwest has not increased prices and is maintaining them below competitive levels. It is, they suggest, engaged in predatory pricing. Also on March 5, **Delta Air Lines** and **Trans World Airlines (TWA)** begin to offer \$198 roundtrip fares on the Des Moines to Los Angeles route, matching AccessAir and Northwest.

Northwest responds on March 16, claiming that AccessAir has never discontinued the introductory fare and that it is still available. Northwest is, therefore, only maintaining a level playing field and has not set its fares below competitive level.

AccessAir again petitions the government for relief, seeking "fairness in the marketplace." It joins with several other small start-ups in holding a high-profile press conference in Washington, D.C., on March 26 concerning the competition issue. Coordinated by Edward Faberman, executive director of the Air Carrier Association of America, the trade group asks DOT and Congress to end the monopoly of terminal gates and other airport facilities by large airlines.

On April 14, AccessAir widens its complaint against the majors, asking the DOT, as well as the attorney general of Iowa, to investigate the alleged predatory behavior of TWA, Delta, and Northwest Airlines.

President/CEO Ferguson announces at the end of the month that his concern has leased two more B-737-200As from Pegasus Aviation and that they will arrive in Des Moines within a month or in early June at the latest. On May 5, it is announced that the company will begin stopping at Colorado Springs within 30 days.

On June 1, the carrier operates its first flight to Colorado Springs, from New York, stopping in Des Moines first. The new Colorado service continues on to Los Angeles.

Although flights continue during the remainder of the year, the new entrant runs into severe economic difficulty. When other carriers lower prices to compete, those initially flying on AccessAir desert in droves to the older airlines. As a result, the company is forced to cancel flights and suspend routes, angering many of those loyalists who remain. A change of leadership from president Ferguson to Rich Musal and a \$1 million loan from Polk County cannot stem a pending disaster.

On November 29, the airline shuts down and enters Chapter XI bankruptcy; its leaders vow to fly again within 30 days to avoid the risk of losing government certification. Some income is earned when a B-737-200A is chartered to fly the Carolina Hurricanes to their National Hockey League games.

On December 11, Milwaukee-based **Midwest Express Airlines** offers to take over and expand the carrier's New York route; three days later, San Francisco-based Pegasus Aviation goes to court asking for repossession of its two B-737-200As.

Arrangements are completed on December 18 for a \$1 million loan from the State of Iowa; Des Moines-based Ruan, Inc., one of the original airline investors, guarantees the arrangement. Indicating that Ruan would have too much control over the carrier, the U.S. bankruptcy judge rejects the loan plan on December 21; two days later, after the proposal is changed to satisfy his objections, the judge approves.

Enplanements for the year total 14,000. Estimated losses total \$30 million, with debts to unsecured creditors reaching \$11 million to 13 million.

Presidential candidate George W. Bush and the U.S. Marshalls Service charter the AccessAir jets during the first week of January 2000; the former needs a plane to ferry media and the latter to haul prisoners. The income provided barely covers the \$500,000-a-month Pegasus leases and does not, even when added to the state loan, provide sufficient income to allow a resumption of passenger service.

On January 22, company officials, having completed plans for roundtrips to Chicago (MDW) and a service agreement with **Midwest Express Airlines**, seek another \$6.5 million, in unguaranteed loans,

from the state. The chairman of the Iowa House Appropriations Committee quashes the idea five days later.

On February 3, airline leaders approach Polk County, the City of Des Moines, and the Iowa Dept. of Economic Development asking them to back the \$6.5 million request; otherwise, they warn, these investors could lose what they have already shared. Gov. Tom Visack indicates on February 5 that his administration will not buck the House and grant AccessAir a loan. The same day, Pegasus Aviation gains return of its Boeings.

Claiming that the Pegasus lease fee is far above market average, the airline voluntarily returns the two chartered Boeings on February 7.

Midwest Express Airlines, via Sen. Tom Harkin, comes forward on February 18 and offers to start flying to New York on June 1 if AccessAir is no longer viable. A federal attorney, on February 26, files a motion asking the bankruptcy court to order the airline's liquidation. On March 3, the FAA yanks the carrier's Des Moines-New York route authority and, by mutual agreement, president Musal resigns.

After a month in limbo, John Ruan 3rd, CEO of Ruan, Inc. who personally does not want to see AccessAir fold and higher local air fares return, steps forward on April 11 and, through his corporation, pumps \$900,000 into the moribund concern. Meanwhile, the business leader and his associates work on a new plan to present to the bankruptcy court. It is envisioned that the hometown airline, with Ruan as chairman, will become something of a "virtual airline," employing outside concerns to perform many operations. A management company will be hired to provide direction.

On May 20, the corporation agrees to provide the \$13 million the airline now says it needs to resume flying and, on May 24, the carrier receives court permission to borrow another \$500,000.

The government attorney withdraws his February 26 motion on June 2, clearing the way for AccessAir's revival. Still, on June 12, **Midwest Express Airlines** begins Des Moines-to-New York flights anyway. Unable to find a management concern willing to come in without first acquiring the airline's federal operating permit, the leadership portion of the "virtual" idea is shelved on June 22 and two employees are named as top management. Company training director and former Iowa Air National Guard 132nd Fighter Wing CO Donald Armington is appointed chief administrative officer while ops director Steve Wilson becomes COO.

On August 12, a revised operating plan is presented to the U.S. bankruptcy court under which the Ruan companies will own 85% of AccessAir. Although the \$20 million in investments made by such Des Moines area companies as MidAmerican Energy, Pioneer, Farm Bureau Life Insurance, the Principal Financial Group, AmerUs Group, and Ruan are gone, the plan calls for large creditors, including suppliers and some government agencies, to be repaid about 8 to 15 cents for each dollar of debt.

Six days later, chairman Ruan informs the *Des Moines Register* that regular passenger service to Chicago (MDW) should be resumed by the "new" AccessAir in mid-September. If all goes well, flights to Phoenix and Los Angeles will be offered in October, with Cedar Rapids coming on line in November. A community "kickoff," a public relations rollout, is held for local businessmen, politicians and the media on August 24.

During late summer and early fall, a contract is entered into with **American Trans Air** under which the Indianapolis-based major will provide ticketing and other services and reliable links to other cities, such as New York, Indianapolis, and Philadelphia, from its Chicago (MDW) hub. During the same time, the staff is rebuilt to 100.

On October 18, chairman Ruan announces that AccessAir will resume scheduled daily roundtrips to Chicago (MDW) on November 15. Offering introductory \$79 one way and \$158 roundtrip fares, Ruan asks the community for its support. Two days later, the *Des Moines Register*, which has provided excellent ongoing coverage of the carrier's travails, issues a ringing editorial endorsement: "Worth a second chance!"

Unhappily, the rebirth will fail and AccessAir will shut down on February 27, 2001.

ACE AERIAL SERVICE: 1571 South State St., Ukiah, California 95482, United States; Phone (707) 462-4527; Year Founded 1967. Max E. Hartley establishes AAS at Ukiah in 1967 to serve as an FBO, with attached charter service and flight school. Thirty-three years later, the small company continues to operate nonscheduled flights employing 1 Bellanca Citabria, 2 Cessna 150s, 1 C-182, and several Pipers, including a PA-31-350 Navajo Chieftain. Revenues reach \$200,000 per year.

ACE FREIGHTERS (AVIATION CHARTER ENTERPRISES, LTD.): United Kingdom (1962–1966). Formed as a charter operator in September 1962, Aviation Charter Enterprises, Ltd., operating under the marketing title ACE Freighters, begins revenue service on March 1, 1964 with a Lockheed L-749A charter flight from London (LGW) to the Mideast. During the summer, two Douglas DC-4Fs are acquired to fly Ministry of Defence contracts to the Middle and Far East. In November, the carrier purchases all four of **South African Airways (Pty.), Ltd.**'s L-749As; however, only one can be made airworthy enough to gain certification.

During 1965, two additional L-749As are purchased from **Britannia Airways, Ltd.** with a third leased, and these enter service with the other two to such destinations as Malta, Cyprus, Aden, El Adem, and Singapore. On March 8, 1966, a damaged Constellation makes a successful belly landing at Aden, but it is quickly repaired. During the spring the two DC-4s are withdrawn. Additional charters are flown; however, they are insufficient in number and return to prevent cessation of operations on September 14.

ACE-TRANSVALAIR, S.A.: France (1988–1993). Organized at Rungis Cedex in 1988, A-T initiates passenger and cargo charters around the nation with a fleet that comprises 1 Beech King Air 90A, 1 Cessna 421B, 2 Cessna Citation IIs, 3 Fairchild Hiller FH-227Bs, 2 Fokker F-27Js, and 1 Douglas DC-3.

Services are maintained into the 1990s, but when the company encounters stiff financial reversals in 1992, it cannot recover and closes down in 1993.

ACERCA S.A.: Venezuela (1992–1993). Acerca is established at Caracas in 1992 to offer passenger charters to regional destinations. Revenue operations commence with a single Douglas DC-9-31. Unfortunately, the carrier is unable to achieve viability in a year of recession and must shut its doors before its first birthday.

ACES COLOMBIA (AEROLINEAS CENTRALES DE COLOMBIA, S.A.): Calle 49, No. 50-21 Piso 34, Edificio del Cafe, Medellin 6503, Colombia; Phone (57-4) 251-7500; (57-4) 511-4111; Fax (57-4) 251-1677; (54-4) 251-3473; <http://www.acescolombia.com>; Code VX; Year Founded 1971. Alvaro Arango and members of the Coulson family form ACES at Manizales in August 1971. The shareholders will later be known as the Federacion Cafeteros (United Coffee Growers Cooperative). After acquisition of 3 Saunders ST-27s and 1 de Havilland DH 114 Heron (painted in an all-red livery), the operator begins regularly scheduled return flight services to Medellin and Bogota on February 1, 1972.

One Fokker-Fairchild FH-227A is acquired in 1974 and 3 de Havilland Canada DHC-6-200 Twin Otters join the fleet in September 1975. The livery is now changed to white and orange and the company transports a total of 100,000 passengers on the year.

Operations continue apace in 1976. Just after landing at Medellin after a February 29 domestic service, a lone gunman seizes a Saunders ST-27, but releases the 15 passengers. The crew is held hostage as a demand is made for \$300,000. Police attack the aircraft and kill the pirate.

On July 12, 1977, an FH-227B is purchased from the American carrier **Ozark Airlines**.

In 1978, the second level route network includes stops at not only Bogota and Medellin, but Cali, Quibdo, Turbo, Apartado, Chigorodo,

Monteria, Buenaventura, Guapi, and Ibagne. Light charters are carried out with a new Cessna 206. Expansion continues apace through the end of the decade and into the 1980s, with 17 additional DHC-6-300s and 2 more FH-227Bs acquired during the period.

Additional destinations added include: Acandi, Arboletes, Armenia, Bahia Solano, Barrancabermeja, Barranquilla, Bucaramanga, Cargana, Cartagena, Caucasia, Condoto, Cucuta, El Bagre, Ipiales, Montelibano, Nare, Necocli, Nuqui, Ocana, Otu, Pereira, Puerto Berrio, San Jose del Guaviare, Tolu, Tumaco, Urrao, Villavicencio, and Yopai.

Having been found unsatisfactory, the FH-227s are removed in 1979, with one passing to the Swedish airline **Malmö, A.B.** Airline employment in 1980 totals 800 and the fleet comprises 16 DHC-6s and 2 Boeing 727-25s, the latter chartered from **Eastern Air Lines**. The new jetliners help customer bookings jump to 432,000.

A third trijet arrives from Eastern in 1981. A DHC-6-300 with 2 crew and 11 passengers crashes into a hill at Sanantero on December 18; there are no survivors.

Passenger boardings this year are 782,173.

A DHC-6-300 with 2 crew and 20 passengers crashes into a mountain near Quetame on November 30, 1982; there are no survivors.

Enplanements this year reach are 1,259,938.

In 1983, three more Canadian turboprops are added, but passenger bookings slip to 1,041,214.

Reflecting the continuing downturn, the staff is cut 0.4% in 1984 to 772. B-727-25 flights are started to Miami (MIA). Cargo traffic declines by the same percentage as workers, 0.4%, to 2.48 million FTKs, while passenger boardings plunge 12% to 929,656.

A DHC-6-300 with 2 crew and 21 passengers crashes into the mountains at Cerro el Plateado, Colombia, on January 23, 1985; there are no survivors.

Another DHC-6-300 is set afire during a riot that grips El Bagre, Colombia, on February 27.

On October 27, 4 gunmen take over a Twin Otter with 20 passengers en route from El Bagre to Medellin and commit robbery; the de Havilland is then diverted to Amalfi, from whence the bandits flee.

En route from Bogota on April 27, 1986, a DHC-6-300, with 2 crew and 11 passengers, crashes into an 8,500-ft. mountain 8 mi. from Tame; there are no survivors.

In 1987, charters are inaugurated to the Caribbean islands. The last Saunders ST-27 is retired during the latter year and is replaced with a pair of Fokker-Fairchild F-27Js.

By 1988, enplanements total 1,116,162 and the net profit is \$626,000. Company employment stands at 875 in 1989 and the fleet now includes 3 B-727-100s (1 each Dash-25, Dash-27, and Dash-46), 11 Twin Otters, and 2 F-27Js.

Costa Rican officials seize the hijacker of the B-727-25 and his 4 accomplices at San Jose Airport on January 31 after the pirates had doused 1 of the plane's 118 passenger with gasoline and threatened to set the Boeing afire.

Passenger boardings swell 5.3% to 1,178,629 and freight rises 15.5% to 57.15 million FTKs. Revenues are up 42% to \$33.1 million and costs are low enough to allow an operating profit of \$2.87 million and a net gain of \$768,000.

In 1990, the carrier is operating some 4,640 flights each month to 41 Colombian destinations from its main hubs at Cali, Bogota, Medellin, and Miami. Orders are placed for four Avions de Transport Regional ATR42-320s.

In 1991, the company owns 1 B-727-25 and 9 DHC-6-300s; the remainder of the fleet is leased: 1 each B-727-27 and B-727-46, 1 Avions de Transport Regional ATR42-320, 2 F-27Js, and 2 leased DHC-6-300s.

Just after it is deplaned at Otu, Colombia, on February 18, guerrillas seize an empty DHC-6-300 and set it afire.

During the year, Colombian President Cesar Gaviria, a champion of free markets, permits domestic airline liberalization. The national civil aviation department, AeroCivil, approves new airlines and awards new

routes, while dropping its policing of ticket prices. Consequently, ACES begins to grow.

Enplanements total 850,247 through September; additionally, 21.66 million FTKs are flown during the same period.

Two more chartered ATR42-300s arrive in 1992, along with 2 B-727-C3s and 8 DHC-6-300s, allowing sale of the B-727-25. International service begins on July 1 and daily flights are started between Bogota and Medellin to Miami. Two more ATR42-320s arrive during the fall. Although traffic figures are not available, the company reports a \$1.7-million operating surplus on revenues of \$54.9 million.

In 1993, President Jorge Restrepo oversees a workforce of 1,025 and his fleet includes 1 each leased B-727-27, B-727-46, B-727-2A1A, and B-727-227A, 2 B-727-C3s, 3 ATR42-320s, and 10 DHC-6-300s. The fourth ATR42-320 arrives in July and replaces Twin Otters on routes from Bogota to Pereira and Monteria and from Medellin to Cucuta.

Other destinations also visited include: Acandi, Apartado, Bahia Solano, Barrancabermeja, Barranquilla, Cali, Capurgana, Cartagena, Cauca, Chigordo, El Bagre, Manizales, Miami, Nare, Necocli, Ocana, Otu, Puerta Berrio, Quibdo, San Andres Island, Turbo, and Urrao.

Late in the year, 34-year-old Juan Emilio Posada, who holds an MBA from Pace University in New York, is named president/CEO.

Enplanements are reported for the first six months and show passenger boardings of 623,505. Freight traffic is 5.3 million FTKs.

Airline employment is increased to 1,125 in 1994. The chartered fleet is expanded by the addition of a B-727-35 and a B-727-277A. The company joins the "Latin Pass" frequent flyer program and ACES is appointed a mail carrier by the government.

Although the government of new President Ernesto Samper is more conservative, it cannot put the liberalization genie back in the bottle. Domestic airlines, including ACES, continues to add capacity, start new routes, and cut fares or engage in fare wars.

Enplanements for the year total 1,246,464 and there are profits: \$40.07 million (operating) and \$3.1 million (net).

The workforce grows by 7.6% in 1995 to 1,645. ACES is the first domestic airline to pull back from the competitive forces unleashed by liberalization, if only slightly, by dropping two unprofitable routes at the insistence of President Posada.

By year's end, the carrier operates 180 daily departures—more than any other Colombian airline—and accounts for 18% of all passenger traffic.

The company's 24 aircraft transport a total of 1,780,662 passengers, a 0.5% increase. Cargo traffic falls 4.8% to 59.58 million FTKs. Revenues inch up 1.4% to \$122.67 million while costs can only manage a 0.9% boost, to \$81.65 million. Consequently, operating gain advances to \$41.01 million. Net profit is cut in half to \$1.42 million. The figures for operating gain are later adjusted downward to \$1.49 million.

The number of workers is increased by 9.7% in 1996 to 1,804 and orders are outstanding for 8 Airbus Industrie A320s. In January, a B-737-C3 is leased for 38 months from CIT Group.

In February, Flight 500, a company B-727, one of seven jetliners stacked up in the corridor above Bimini on approach to Miami (MIA), receives instructions from ATC to remain level at 26,000 feet. Instead the pilot, having misunderstood instructions, turns right and descends into the path of an oncoming USN P-3 Orion below. ATC quickly radios the offending pilot and a midair disaster is averted by just four miles (40 seconds).

Just after takeoff from Medellin on November 30, Flight 148, a DHC-6-300 with 2 crew and 13 passengers, makes a left turn near Padre Amaya mountain in order that the captain might view his farm; the aircraft stalls and crashes into the mountain while trying to clear it (14 dead).

Customer bookings soar 14.2% to 2,122,558, while 90.97 million FTKs are operated, a 4.6% increase. Operating income surges 38.8% to \$170.28 million and expenses are up only 35.4% to \$164.11 million. Operating profit jumps to \$6.16 million and a \$3.62-million net gain is reported.

In January 1997, an order is placed for 4 Airbus Industrie A320-233s, with options taken on 4 more.

In March, it is announced that the company's owners Federacion Cafeteros (54%), Flota Mercante Grancolombiana, S.A. (44%), and others will seek to increase the company's capital base by selling 30% of the carrier's stock.

A code-sharing agreement is signed with **Mexicana Airlines, S.A.** in May covering cargo and passenger service on a route from Colombia to Santiago. A dramatic new livery is introduced on the company's B-727-277A.

On October 3, a code-share pact is entered into with **Air France**.

Also during the month, dual-designator service begins with **Continental Airlines** over return routes from Bogota and Quito to Houston and Newark.

The company becomes the first Airbus operator in Colombia on November 22 when it accepts delivery of the first two of four A320-233s it has on order. The jetliners arrive from France painted in the company's new color scheme. At year's end, the Federacion Cafeteros places ACES up for sale.

Enplanements this year total 1,547,220. Revenues increase by 18.9% to \$147 million. Unhappily, the net gain slides to \$3.1 million.

During January-February 1998, as international investor interest in Colombia declines in the face of its poor economy, company officials elect to reduce from 30% to 20% the equity stake it will sell to foreigners. The share sale is completed at the end of March with 19% being taken by **Continental Airlines**.

Passenger boardings increase 3.6% to 1.6 million, while cargo traffic jumps 30.4% to 8,000 FTKs. Revenues total \$160 million.

Airline employment in 1999 stands at 1,999. Late in the year, the U.S. FAA recertifies Colombia's airline safety. Meanwhile, the company has now become the second largest in the country, with a 24.9% domestic market share. Passenger boardings accelerate 7.9% to 2,121,000 and operating revenues jump 15.8% to \$155,319,000.

Airline employment stands at 1,800 at the beginning of 2000, a 10% decline over the past 12 months.

During the first quarter, the signature of Colombian painter/sculptor Fernando Botero is painted on the fuselage of an A320-233 christened *Medellin Ciudad de Botero*.

As a result of Colombia's recertification, the U.S. and Colombian regulatory agencies, in late spring, agree to an increase in the number of flights between the two nations. In June, ACES is allocated seven frequencies, four of which will begin this year and three in 2001.

Two Avions de Transport Aerien ATR42-520s join the fleet on June 7 and are assigned to the routes connecting Bogota with Armenia, Manizales, and Pereira. By September, 3 ATR72-212s, previously operated by **Continental Express**, have also been acquired.

A letter of intent is signed with **Delta Air Lines** on October 5 under which the two carriers will explore joint cooperation and code-sharing.

ACM AIR CHARTER, GmbH: Baden Airport, Hangar D415, Rheinmuenster, D-77836, Germany; Phone 49 7229 30220; Fax 49 7229 302211; Year Founded 1993. Certified to offer both worldwide and domestic passenger charters, ACM is set up at Baden Airport in 1993. Executive and small group flights are duly continued into 2000 with 2 Cessna 650 Citation IIIs and 1 Beech Super King Air 200.

ACM AVIATION: 1475 Airport Blvd., San Jose, California 95110, United States; Phone (408) 286-3832; Fax (408) 286-1629; Year Founded 1981. ACM is set up at San Jose in 1981 to offer worldwide executive passenger charters. Operations begin from the company's facility at the southeast corner of the airfield and grow in success over the next 16 years.

In 1998-2000, charter coordinator Mark Williams is able to book customers onto a large fleet, which includes 2 Learjet 60s and Canadair 601 Challengers plus 1 each Dassault Falcon 900B, Cessna 650 Citation III, C-501 Citation I/SP, Learjet 36A Century III, and Beech Super King Air 350.

ACORI (AERO COSTA RICA, S.A.): Costa Rica (1992–1997). ACORI is established at San Jose by former employees of **LACSA (Lineas Aereas Costarricenses, S.A.)** in 1992 to offer regional scheduled services. Hernan Gomez is named executive president and he acquires two, leased Boeing 727-227As. Revenue flights commence in May linking the company's base with Miami.

Operations continue in 1993 and 2 B-737-2L9As are chartered in 1994 to replace the trijets, which have proven to be too large. During these years, Calixto Chaves becomes president and the workforce is increased to 120.

In the spring of 1995, the subsidiary **Halisa Air, S.A.** is formed to operate between Ft. Lauderdale, Florida, and Port au Prince, Haiti, a destination from which a UN embargo against travel has recently been lifted. The parent provides a subleased B-737-2L9A painted in HA colors and markings. Sales total \$25 million per year.

Flights continue in 1996–1997. Unable to maintain economic viability, the carrier shuts its doors in November of the latter year.

ACS OF CANADA. See **AIR CHARTER SYSTEMS, LTD.**

ACSA (AEROCARGO S.A. de C.V.): Mexico (1950–1977). Capt. Carlos Cervantes Perez forms this all-cargo carrier at La Paz in 1950 to fly fish from La Paz to California, via Tijuana. Services begin with a converted Douglas B-18 bomber and a Curtiss C-46. Additionally, passengers are flown to Bahia Tortugas and Isla de Cedros.

These operations are maintained during the 1950s with little change except for the addition of more Commando transports. In 1959, upon the collapse of **Tigres Voladores**, ACSA takes over that line's special service of transporting home those Mexicans deported from the U.S.

In 1963, the company flies nearly 2,000 tons of fish. A Lockheed L-188AF is acquired late in the 1960s and service is started from Tijuana via Ensenada/La Paz to Merida, the longest route in the country. Later, in 1967, the Lockheed is replaced by a DC-6A. Operations cease in 1977.

ACTION AIRLINES: P.O. Box 117, East Haddam, Connecticut 06423, United States; Phone (860) 448-1646; Fax (868) 446-0130, Code XQ; Year Founded 1979. John A. Rutledge forms Action at Groton/New London Airport in Connecticut in 1979 to offer on-demand and seasonal air taxi flights to Block Island, Fisher's Island, East Hampton, and Atlantic City. The fleet comprises 1 Piper PA-34 Seneca, 3 PA-32 Cherokee Sixes, 1 PA-31-350 Navajo Chieftain, and 1 PA-28 Cherokee.

Operations continue into the 1980s and, in 1984, year-round, daily, scheduled frequencies are initiated to Fisher's Island. Little heralded, services are maintained throughout the remainder of the decade. In 1990–1991, the fleet comprises 3 Navajo Chieftains and 3 Senecas.

Two years later, in 1993, there are 4 Navajo Chieftains, 2 Senecas, and 2 Cherokee Sixes. Flights continue to link the company's base with East Hampton, L.I. and New York (LGA). President Rutledge withdraws the Cherokee Sixes in 1994.

Operations continue apace in 1995–1998. During the latter year, President Rutledge's concern flies 3 Navajo Chieftains, 3 Senecas, 1 Cherokee Six, and 1 Cessna 172. It is understood that flights continue without change thereafter; exact information is, however, unavailable.

ACTION AVIATION, LTD.: Box 5898, Whitehorse, Yukon Territories, Y1A 5L6, Canada; Phone (403) 633-3343; Fax (403) 667-4765; Year Founded 1990. Action is established at Whitehorse in 1990 to operate charter passenger and cargo flights into bush locations throughout the Yukon Territories. Employing de Havilland Canada DHC-3 Otters and Cessna 180/185 aircraft, the company will link its main facility with satellite bases developed over the next 10 years at Atlin, Bunwash, Mayo, Ross River, and Watson Lake.

ACTIVE AERO GROUP: 2064 D Street, East Side, Willow Run Airport, Belleville, Michigan, 48111, United States; Phone (313) 483-

9430; Fax (313) 483-1023; <http://www.activeaero.com>; Year Founded 1979. AAC is established at Willow Run Airport in 1979 to offer charter and contract cargo shipments throughout the U.S. and Canada. Revenue operations, primarily involving the transport of automobile parts, commence with a fleet of Beech 18s and Cessna 310s.

Over the next three decades, Active grows and prospers; among its special activities is the transport of hazardous materials. It occasionally suffers losses. For example: on April 21, 1986, a Cessna 310 crashes at Lincoln, Rhode Island, killing its pilot; on February 18, 1987, a Beech 18 stalls on takeoff from Quincy, Illinois, and crashes, killing its two-man crew; and on March 9, 1989, another Beech 18, which has not been de-iced, crashes while taking off from Covington, Kentucky, killing its pilot.

Early in the 1990s, the company enters into a period of significant growth, adding jet equipment. By 1998, the carrier's fleet includes 25 DC-8-50Fs, 7 DC-8-62Fs, 7 DC-9-15Fs, and 15 Falcon 20s. It is understood that flights continue without change thereafter; exact information is, however, unavailable.

AD ASTRA AERO, A.G.: Switzerland (1919–1931). In April, June, and September 1919, three Swiss air transport companies are founded to offer sight-seeing and charter flights; these are, respectively: Zurich-based **Aero-Gesellschaft Comte., Mittelholzer and Co.**; **Avion Tourisme S.A.** of Geneva; and the Zurich concern of **Frick & Co.** Equipment employed includes Macchi M.3s and Kondor E-IIAs. On December 15, Frick & Co. is reformed and renamed Ad Astra Aero, S.A.; it is capitalized at SFr 300,000.

Ad Astra's board of directors authorizes the carrier to assemble a fleet and to purchase its competitors in 1920. A contract is signed with Claudius Dornier for delivery of his all-metal G-1 monoplane flying boat. Aero-Gesellschaft Comte., Mittelholzer and Co. is, in February, the first of the other airlines to be acquired, followed by Avion Tourisme S.A. in April. Following a publicity tour to Sweden and Holland, the advanced G-1, seen as a threat, is broken up on April 25 by order of the Allied Control Commission.

Meanwhile, the amalgamated Swiss carrier, based at Zurich and now formally known as Swiss Air Transport Company Ad Astra Aero, Avion Tourisme, Ltd., is capitalized at SFr 600,000. Walter Mittelholzer is appointed general manager and he builds a fleet that comprises two Dornier Komets, a Dornier C-II Dephine, and the first of four Junkers F-13s, the *Drossel*. In 4,699 flights made during this first year of operations, the carrier's seven pilots transport 7,384 passengers.

Operations continue apace during 1921 as the fleet is enlarged by the addition of 7 Macchi-Nieuports, 3 German LVGs, and 5 Savoia flying boats.

On June 1, 1922 the *Drossel* inaugurates the company's first scheduled international service with a flight from Geneva to Zurich via Nuremberg. Meanwhile, as competition has stiffens between the German airline combines **Deutsche Aero Lloyd, A.G. (DAL)** and **Junkers Luftverkehr, A.G.** the latter reaches out to locate domestic and foreign members for a countering confederation.

On May 14, 1923, the **Trans-Europa Union** is formed; simultaneously, Junkers assumes a 50% interest in Ad Astra Aero, bringing it into the group. Three more F-13s are provided and named *Specht*, *Dohie*, and *Star*. The next day, the carrier's Nuremberg stop is transferred to Munich, allowing connection with express trains and the Austrian airline **Osterreichische Luftverkehrs, A.G. (OLAG)**.

Participation in Junker's integrated route system continues during the next several years with the fleet upgraded by the addition of 4 Junkers G.23s in 1925. When, on January 6, 1926, DAL and Junkers Luftverkehr merge to form **Deutsche Luft Hansa, A.G. (DLH)**, Ad Astra Aero continues independent of German control. Flying a company Komet Merkur, Walter Mittelholzer makes a 100-hour flying time aerial survey flight Zurich–Cape Town between December 7, 1926 and February 21, 1927.

During the remainder of the decade, competition and some coordination is maintained with **Basler Luftverkehrs, A.G. (Balair)**. In 1928–1929, Ad Astra, in cooperation with **Deutsche Luft Hansa, A.G.**

(DLH), undertakes joint but economically unsuccessful operations from Zurich to Berlin, Frankfurt, and Munich. This is the first European "express service" and, operated in 5 hours with a Dornier Merkur, it is, at 425 miles, the longest nonstop route in Europe at the time. Several financially successful charters are undertaken with newly acquired Fokker F-VII/3ms.

During 1930, the last year of full operation, approximately 5,000 passengers are carried. Having operated at a deficit every year since 1920, Ad Astra General Manager Mittelholzer is able to successfully negotiate a union with his Balair counterpart and friend, Balz Zimmerman. On March 21, 1931, Ad Astra and Balair are merged to create **Swissair, A.G. (Swiss Air Transport)**.

ADA AIR (ADALBANAIR): Hoxhe Vokrri 4, Tirana, Albania; Phone 355 (42) 33421; Fax 355 (42) 32589; Code ZY; Year Founded 1992. Adalbanair is established at Tirana on February 3, 1992 as an Albanian-state operation funded entirely by French investors. A single Embraer EMB-110P2 Bandeirante is purchased and employed to inaugurate revenue flights to Bari in the fall. A second Brazilian turboprop is acquired at year's end and is assigned to provide charter services.

In 1993, general director Marie Annick Bonmarin oversees a workforce of 22 as one Bandeirante is withdrawn. Services are enhanced during 1994 by the introduction of a Fokker F.27 Friendship.

Flights continue in 1995–2000. In these years, Ilir Zeka becomes director general and the Fokker is withdrawn in favor of leased Russian-made equipment: 3 Tupolev Tu-134s and 2 Yakovlev Yak-40s, the latter chartered from **Hemus Air** in Bulgaria.

International service is maintained from Tirana to Bari, Corfu, Athens, and Skopje.

ADASTRA AIRWAYS (PTY.), LTD.: Australia (1934–1957). Adastra is formed at Sydney on February 5, 1934. Equipped with a de Havilland DH 80 Puss Moth and a DH 83 Fox Moth, it inaugurates two subsidized and two unsubsidized frequencies each week via the southern New South Wales coastal communities, Sydney-Bega, on February 15. As a result of the European war, the company suspends operations in early 1940.

Services are resumed along the coast following World War II and draw little attention until June 24, 1957, when a Lockheed Hudson, converted to civil Model 14 standard, crashes while on approach to Horn Island, off Queensland (six dead). The company folds shortly thereafter.

ADC AIRLINES (AVIATION DEVELOPMENT COMPANY, LTD.): 84 Opebi Road, P.O. Box 6392, Ikeja, Lagos, Nigeria; Phone 234 (1) 496-5750; Fax 234 (1) 497-0086; Code ADK; Year Founded 1984. The Aviation Development Company is founded at Lagos in 1984 to prepare the way for a new airline to offer regional and international charter and inclusive-tour flights. That carrier is formed in 1987 and is named ADC Airlines.

Late in the decade, arrangements are completed with GPA Group in Ireland for the lease of several jetliners. These include 2 British Aerospace BAe (BAC) 1-11-203Aes, 1 BAe (BAC) 1-11-414EG (all 3 were first flown by **Braniff International Airways**), and 1 Lockheed L-1011 TriStar 1, all of which are delivered between December 1990 and April 1991.

Revenue flights commence from Lagos to the domestic destinations of Benin City, Calabar, Enugu, Jos, Kaduna, Kano, Owerri, and Port Harcourt.

During the spring of 1992, ADC becomes the first local service airline to have its shares traded on the Nigerian Stock Exchange.

Three chartered Douglas DC-9-31s, first flown by **Eastern Air Lines**, are acquired in October and enter service over additional routes in West Africa. Regional destinations served now include Accra, Banjul, Conakry, Freetown, and Monrovia.

Although traffic figures are not available, it is reported that the airline records a profit of \$496,000 on revenues of \$7.1 million.

Operations continue apace in 1993. Unable to acquire European routes from **Nigeria Airways, Ltd.**, the company now uses the traffic rights of foreign countries to supplement earnings and obtain foreign exchange. The company joins in the formation of **ADC Liberia** and earns a \$2.8-million profit.

The 49% stake in the Liberian airline allows the Nigerian independent to lease it one of its DC-9-31s in early 1994 and participate in a code-sharing agreement on twice-weekly flights from Lagos to Monrovia, on to Freetown and Banjul and from Conakry in Guinea and Lagos.

In March, the fleet of Chairman/CEO Capt. Augustine I. Okon and Managing Director Capt. Mfon E. Udom is upgraded by the addition of a Boeing 707-338C Stratoliner freighter. Previously operated by **Burlington Air Express**, it is now repainted at Shannon in the company's new blue and red livery, complete with a feather logo. It takes over the Lagos to London (LHR), via Ostend, all-cargo service previously operated with Stratoliners chartered for short periods.

Just after landing long at Monrovia following an August 18 service from Freetown, a DC-9-31, with 11 crew and 74 passengers, overruns the runway and slides down a 20-ft. embankment into a ditch, catching fire. All aboard are safely evacuated without injuries before the Douglas is burnt out.

The fleet grows again in 1995 as 3 B-727-231s, first flown by **Trans World Airlines (TWA)**, arrive from Texas.

While landing at Monrovia on July 26 after a service from Accra and Lagos, a DC-9-31 with 9 crew and 82 passengers, suffers the collapse of its main landing gear; the plane skids to a stop 1,600-ft. beyond its touchdown point. There are no fatalities.

An Avions de Transport Regional ATR42-320 is delivered in December.

While on initial approach to Lagos on a November 7, 1996, service from Port Harcourt, Flight 086, a B-727-231 with 9 crew and 134 passengers, is told by ATC to delay its descent in order to allow an ELF Petroleum bizjet to pass below it. Meanwhile, a Triax aircraft, en route from Lagos to Enugu, is also in the area, flying without ATC contact. After ATC grants permission for the ADC trijet to descend, the aircraft's TCAS alarm sounds and, to avoid a head-on collision with the Triax plane, quick evasive action is taken. During the maneuver, the Boeing rolls excessively and the pilot loses control. Within 16 sec., the jetliner's speed increases from 280 kt. to the speed of sound and it plunges into a jungle near Imota, Nigeria, and disintegrates. There are no survivors.

In January 1997, company executives join those from **Bellview Airlines, Ltd.** and plan a unilateral fare hike of 200% on domestic routes. They are forced to abandon this plan after the aviation ministry threatens to ground their aircraft if they implement the tariff increases.

In February, officials from ADC and Bellview again propose a gigantic fare increase of 100%; it is approved by the government and instituted on March 17.

Just after landing at Calabar on a July 29 service from Lagos, a BAC 1-11-203AE, with 6 crew and 49 passengers, overshoots the runway and continues 1,500 m. into the scrub area beyond, where it stops with an engine on fire (1 dead).

ADC resumes its weekly Saturday flight service to the Liberian capital of Monrovia on August 30, four years after the flight was stopped because of the closing of Robertsville International Airport due to the civil war.

Simon Tumba reports in the November issue of *Airline Business* that the airline industry in Nigeria is on the verge of collapse, with only 10 aircraft from 8 carriers left to provide domestic services for 90 million people.

By the year's tenth month, ADC has only one operational B-727-231, while **Kabo Air** has two. **Bellview Airlines** can fly only one DC-9. **Nigeria Airways, Ltd.** and several small operators fly the remaining six. All call upon the government to politically and financially guarantee a restructuring of the industry.

Flights continue in 1998–1999. During these years, airline employment reaches 474 and the operational fleet is grown to include 1 each B-7-7-320C, BAC 1-11-414EG, and 2 B-727-231s.

The Federal High Court of Nigeria orders the airline, on July 6, 2000, to pay \$361,000 to the relatives of two crewmen lost in the crash of their aircraft on November 7, 1996.

ADC LIBERIA (AVIATION DEVELOPMENT COMPANY-LIBERIA, INC.): Liberia (1993–1996). ADC Liberia is established at Monrovia in 1993 with private money, including a 49% investment from **ADC Airlines, Ltd.** A Douglas DC-9-31 is subleased from the Nigerian minority partner, with whom a code-sharing agreement is also signed.

Revenue services are inaugurated linking the capital twice weekly with Lagos, Freetown, and Banjul and with Conakry in Guinea. Civil war leads to a suspension of service.

ADDISON AVIATION SERVICES: 4584 Claire Chennault Drive, Addison Airport, Dallas, Texas 75248, United States; Phone (972) 248-1707; Fax (972) 380-2344; Year Founded 1988. Kenneth Donaldson sets up AAS at Addison Airport in 1988 to offer all-cargo charters throughout the U.S., Canada, Mexico, the Caribbean, and South America.

Over the next decade, hubs are established at Tijuana, Denver, and El Paso. In 2000, Donaldson operates 1 Dassault Falcon 20 from Tijuana and another Falcon (along with 6 Learjet 25s) from Denver. One Learjet 25 is based at El Paso while, from the home base at Addison Airport, another Learjet freighter, a Dash-24B, is flown, together with 3 Falcon 20s.

ADELAIDE AIRWAYS (PTY.), LTD.: Australia (1935–1936). The Orient Steam Navigation Company and Adelaide Steamship Company jointly form Adelaide on November 29, 1935 to fly the mail to various points outside the South Australian capital.

Employing a Shorts Scion, twice-weekly service is started from Adelaide to Mount Gambier and Melbourne; on November 30, a Monospar ST.25, christened *Boyana*, begins twice-weekly flights from Adelaide to Port Lincoln. The *Boyana* undertakes a twice-weekly frequency from Adelaide to Broken Hill on November 19. By year's end the fleet comprises 2 Shorts Scions, the *Boyana*, and 2 de Havilland DH 89 Dragon Rapides, the *Monana* and *Moongana*.

Flights from Adelaide to Kangaroo Island begin on February 17, 1936. On July 1, the carrier is one of four merged to form **ANA (Australian National Airlines [Pty.], Ltd.)**. It is allowed, however, to retain its previous identity for a brief amalgamation period. Simultaneously, the carrier takes over the services and assets of **West Australian Airways (Pty.), Ltd.** The Adelaide–Broken Hill route started in 1935 is extended to Melbourne on August 3 and the carrier is officially and finally merged into ANA on November 2.

ADEN AIRWAYS, LTD.: Aden/South Yemen (1949–1968). To assume responsibility for the local Red Sea areas previously served from Cairo, **British Overseas Airways Corporation (BOAC)** forms this wholly owned subsidiary on March 7, 1949, capitalizing it at £225,000. With British-registered Douglas DC-3s acquired from the parent, Aden inaugurates service on October 1 to Mukalla, Addis Ababa, and Nairobi.

In January 1950, Aden is allocated its own registration prefix and the carrier receives six DC-3s; on February 1, these are employed to start routes to Asmara, Khartoum, Hargeisa, Mogadishu, Djibouti, Riyan, Mukeiras, Port Sudan, and Cairo. On March 3, a group of U.S. tourists is stranded at Luxor during a company dispute with Egypt.

Aden–Bahrain flights begin on April 25, 1951 and weekly Aden–Qatn/Church service is started during the summer. In late August, the Bahrain route is cancelled so as to avoid duplication with **Cyprus Airways, Ltd.** Two Avro Ansons are added to the fleet in 1952 and, when **British Overseas Airways Corporation (BOAC)** begins London–Aden Hermes IV services on February 4, 1953, Aden Airways is contracted to fly the Cairo–Aden sector with its DC-3s.

Aden–Ataq DC-3 flights are launched during the summer of 1955. In 1956, several additional routes are opened from Aden to Nisab (Febru-

ary 19), Randha and Riyan (February 20), Beihan (February 21), and Diredawa (April 30). The Cairo service is suspended on November 1 due to the crisis in the Suez.

Weekly DC-3 operations begin in 1957 to Lodar and Mukefras (June 6), Hargeisa, Mogadishu, and Mombasa (September 22), and Salalah, Sharjah and Bahrain (September 27). The Addis Ababa route is closed on June 7 and the Nairobi service is suspended on September 22. Aden–Mahfid weekly DC-3 flights commence on April 15, 1959.

The first of 3 ex-**British Overseas Airways Corporation (BOAC)** Canadair C-4 Argonauts delivered on the year arrives in Aden on February 18, 1960 and is placed on the weekly Bahrain service on February 28. Orders are placed for 3 Hawker Siddeley HS 748s on April 26. The second C-4 Argonaut is delivered on April 30 (the same day DC-3 service is suspended to Nairobi) and is placed on the Cairo route on May 2. Argonaut service to Nairobi begins on May 4 and the third C-4 Argonaut is received on July 15.

The previously flown routes are maintained and frequencies now expanded as the 3 HS 748s enter service. An agreement for pooled services with **East African Airways Corporation (EAAC)** is signed during the fourth quarter of 1961.

Having purchased a set number of seats and cargo space, EAAC Comets begin stopping at Aden in early January 1962. The route between Nairobi and Aden is offered four times a week: once each by EAAC Comet and Canadair and twice by Aden's own C-4 Argonauts.

During April 1963, planning starts for a pooled service, with **East African Airways Corporation (EAAC)** and **Air India, Ltd.**, from East Africa to India. Details are worked out and an agreement between the three companies is signed on August 14, taking effect on September 1.

Three Vickers Viscount 760s, previously leased to **Malayan Airways, Ltd.**, are transferred to AA in September. Argonaut flights begin to Cairo and Mombasa during 1964–1965.

On November 22, 1966, a DC-3, with 3 crew and 27 passengers, en route from Meifah to Aden, suddenly disintegrates at 6,000 feet and crashes 130 miles east of Aden; there are no survivors. Investigators will later determine that the disaster has been caused by an explosive charge smuggled onto the plane in hand luggage.

An Argonaut is blown up at Aden, presumably by Arab terrorists, later the same day. After 18 years of operation, the carrier, now involved in internal strife and with increasing labor costs, suspends operations on June 30, 1967. In 1968, Aden becomes the People's Republic of Yemen and the **British Overseas Airways Corporation (BOAC)** connection is terminated.

ADES (AEROLINEAS DEL ESTE, S.A.): Colombia (1990–1995). With a base at Aeropuerto Vanguardia, Villavicencio, ADES is formed in 1990 to provide scheduled passenger and cargo services to small towns nearby. Charter and contract service flights are also undertaken by President Hugo Rodriguez Munoz's company with a fleet that grows to comprise 5 Cessna 208 Caravan Is, 1 Douglas C-47B (military DC-3), and 1 Curtiss C-46F Commando.

En route on a nonscheduled service from Villavicencio on May 15, 1991, the C-47B, with 3 crew and 11 passengers, crashes at La Poyatta; there is one survivor.

Flights continue apace in 1992–1994; however, by 1994, the Caravans have been replaced by 5 Cessna 206s.

While on initial approach to Cerro San Jeronimo on an all-cargo service from Mitu on May 9, 1995, the C-46F, with 4 crew and 5 passengers, crashes into a hill in bad weather; there are no survivors.

Without heavy equipment and facing crash-related lawsuits, the company ceases operations shortly thereafter.

ADIRONDACK AIRLINES: United States (1991). This small regional is established at Glens Falls, New York, in late spring 1991. After a Piper PA-31-350 Navajo Chieftain is obtained, the company begins flying a route in June linking its base with Newark to the south and Rutland, Vermont, to the north. It has not, however, bothered to seek the ap-

appropriate government or airport certifications and is soon in deep trouble. Operations cease in December.

ADLAIR AVIATION, LTD.: Box 2046; Yellowknife, Northwest Territories X1A 2R3, Canada; Phone (403) 873-5161; Fax (403) 873-8475. Adlair is set up at Yellowknife in 1983 to offer charter flights throughout the central Arctic area of the nation, originally from a base at Cambridge. Revenue services commence with 1 each Beech King Air 100 and de Havilland DHC-3 Otter.

Nonscheduled operations continue apace for the next thirteen years. In late 1996, Adlair, under the direction of President/General Manager Paul Lasench, begins to offer scheduled commuter frequencies with a DHC-6-200.

It is understood that flight continue without change during the remainder of the decade; exact information is, however, unavailable.

ADMAS AIR SERVICE, S.C.: Ethiopia (1975–1995). When the government of Ethiopia nationalizes the country's lightplane operations in May 1975, Admas emerges as the single entity for light charters (executive and tourist), survey and agricultural work, and government and contract services. The fleet comes to comprise some 20 aircraft of mixed types, including Cessna, Pipers, and Aero Commanders.

Airline employment during the 1980s hovers around 90. Operations are severely interrupted by the civil war at decade's end. Once the fighting ends, services resume and, in 1993, Operations Manager Armide Merid oversees the work of 1 Aero Commander 600, 1 Pilatus Porter, and 2 Piper PA-23 Aztecs.

Flights are terminated at the end of 1994 and the company is turned over to **Ethiopian Airlines, S.C.** in early 1995.

ADRIA AERO LLOYD, S.p.A. See ALA LITTORIA, S.p.A.; SOCIETA AREA MEDITERRANEA, S.p.A.:

ADRIA AIRWAYS (ADRIA AVIOPROMET)(1): Yugoslavia (1961–1968). This carrier is formed by the Yugoslav government in March 1961 to provide charter and inclusive-tour services. Flight operations begin in March 1962 with 4 ex-KLM (Royal Dutch Airlines, N.V.) Douglas DC-6Bs purchased with a grant from the government of Slovenia. In 1963–1967, destinations are developed throughout the Middle East, Southern Europe, and North Africa. In 1968, the airline is reorganized and made part of the Interexport trading organization and renamed **Inex Adria Airways (Inex Adria Aviopromet)**. Orders are placed for jet equipment.

ADRIA AIRWAYS (ADRIA AVIOPROMET) (2): Kuzmiceva 7, Ljubljana 1000, Slovenia; Phone 386 (61) 133 4336; Fax 386 (61) 323 356; <http://www.adria.si>; Code JP; Year Founded 1986. In May 1986, Adria is separated from the Interexport trading organization and returns to its original name and private business. President Janez Kocijancic's fleet now includes 4 McDonnell Douglas MD-82s, 1 MD-81, 2 Douglas DC-9-51s, 2 DC-9-32s, and 2 de Havilland Canada DHC-7-102s. During the year employment climbs by 13.1% to 749.

Enplanements jump 14.5% to 1,450,413 as freight traffic rises 19.5% to 3.6 million FTKs. Revenues climb 21.9% to \$98.6 million as expenses move upward only 13.3% to \$85.7 million. Operating profit swells to \$12.9 million and net gain is up to \$2.78 million.

Airline employment rises 12% in 1987 to 839. Bimonthly Belgrade to Tel Aviv flights begin on December 1.

Although passenger boardings climb 19.6% to 1,733,594, cargo plunges 43.9% to 2.02 million FTKs. Revenues ascend 17.4% to \$115.8 million, expenses grow 11.8% to \$95.9 million, and the operating profit is \$19.9 million. A net \$9.4-million profit is earned.

The workforce is increased another 10.8% in 1988 to 930 and the fleet is increased by the addition of another DC-9-32. Orders are placed for 5 Airbus Industrie A320-231s.

Customer bookings fall 18.5% to 1,412,700 and freight is down by 39% to 1.22 million FTKs.

The payroll grows by 4.2% in 1989 to 922 as the first A320-231 joins the fleet in May and enters service on behalf of the company's main tour operators. It is the first of its type to be equipped with IAE V2500 engines. In celebration, the airline adopts a new corporate logo and livery.

A joint venture is entered into with **Air France** in June on a route from Ljubljana to Paris. During the fall, a DC-9-32 is leased to **ZAS Airline of Egypt, S.A.E.**, which employs it to fly charters between Aswan and Abu Simbel during the winter holiday season.

Passenger boardings decline another 14.7% to 1,204,966 while freight drops 29.1% to 868,000 FTKs. Revenues total \$123.3 million and profits of \$27.65 million (operating) and \$1.8 million (net) are generated.

Company employment grows a slight 1% in 1990 to 931 as two more A320-231s join the fleet, which now also includes 4 MD-82s, 1 MD-81, 3 DC-9-32s, 1 DC-9-33CF, and 2 DASH-7-102s.

Customer bookings rally and grow by 21.4% to 1,462,619 while freight increases 50% to 1.3 million FTKs. Although revenues climb 3% to \$134.7 million, expenses skyrocket 41.2%, leaving an operating loss of \$10.97 million and a net loss of \$14.2 million.

The payroll is cut 5.7% in 1991 to 878 and the fleet now includes: 3 A320-231s, 2 of which are placed into storage; 2 out-of-service DHC-7-102s; 2 DC-9-32s; 1 out-of-service DC-9-33CF; 1 MD-81; 4 MD-82s; and 1 Gates Learjet 35A. The outbreak of the June civil war in Slovenia is disastrous. An estimated \$100 million in damages are incurred in July when a pair of Yugoslav Air Force fighter planes attack the company base at Ljubljana Airport. Damaged, to one degree or another, are 1 each A320, DC-9, 2 DASH-7s, the hangar, operations building, storage facilities, and technical base.

The carrier virtually collapses during the summer. On October 25, the Federal Secretariat of Transport and Communications of the Yugoslav federal government orders Adria grounded and its license suspended because of the civil war. Company officials claim that the move is politically motivated and is designed to close down "the national carrier of an independent country," Slovenia.

Passenger boardings prior to cessation are down 52.3% to 697,053 while freight falls 6.6% to 1.21 million FTKs. Revenues decline 35.5% to \$86.9 million and with expenses higher, a \$29-million operating loss is suffered.

The workforce grows 2.5% in 1992 to 900 as the carrier is officially designated the national "Airline of Slovenia." On January 16, its license to fly is restored by the new government and operations resume.

The Yugoslav civil war continues to adversely impact the airline as its customer bookings plunge 52% to 333,228. Freight traffic does, however, grow 13% to 1.88 million FTKs. Expenses exceed income and there are losses: \$24.05 million (operating) and \$55.31 million (net).

In 1993, the new president, Peter Grasek, oversees an employee population of 693, down 5.6% from the previous year. The fleet now includes 3 Airbus Industrie A320-231s that are leased to **Cretan Airlines, S.A.** in Greece, 4 MD-82s, 2 each DC-9-32s and DHC-7-102s, and 1 each DC-9-33CF, MD-81, and Learjet 35A. From its base at Ljubljana, the company undertakes scheduled passenger and cargo flights to London, Manchester, Moscow, Paris, Rome, Skopje, Split, Tirana, Vienna, and Zurich.

Some charter flights are also undertaken and, in October, the company begins code-sharing with **Deutsche Lufthansa, A.G.** on the route from its base to Frankfurt.

Passenger boardings increase by 29.4% to 431,143 while freight skyrockets 94.4% to 3.7 million FTKs. Revenues swell 32.9% to \$90 million, but expenses are up 16.2% to \$107.25 million. Still, the operating loss is cut to \$16.58 million and the net loss declines to \$32.62 million.

The workforce is cut another 1.4% in 1994 to 683. During the year, new routes are extended from Ljubljana to Copenhagen and from Tirana to Istanbul. Plans are made to begin, during the next 12 months, flights from Ljubljana to Prague and Barcelona.

Customer bookings accelerate 17.2% to 505,399 while cargo declines 4.8% to 3.54 million FTKs. With expenses down 0.2%, but revenues up 9.2% to \$99 million, Adria is able to reduce its operating loss to \$7.96 million and its net downturn to \$9.09 million.

Fourteen employees are hired in **1995**, an increase of 2.1% in the personnel staff. New flights begin as planned from Ljubljana to Prague and Barcelona, as well as to Amsterdam. In December, an agreement is signed with **Deutsche Lufthansa, A.G.** that provides for joint ground handling, shared passenger lounges, and code-sharing on services from Ljubljana to Munich.

Passenger boardings move ahead by 8.5% to 547,511 while freight recovers, growing by 3% to 3.65 million FTKs. Operating revenues inch up 2.5% to \$101.52 million, but costs are also higher, by 1.2%, to \$108.19 million. The operating loss is shrunk to \$6.67 million and the net loss falls to \$7.83 million.

The workforce is cut back by 7.9% in **1996** to 642 and the fleet now includes the 3 A320-231s, 2 each DHC-7-102s and DC-9-32s, and 1 Learjet 35. Flights begin to Tel Aviv.

Although enplanements soar 8.5% to 594,148, cargo traffic is level at 3.64 million FTKs. Unfortunately there are losses yet again: \$6.1 million (operating) and \$12.6 million (net).

Airline employment falls another 8.3% in **1997** to 593. A pair of Canadair CRJ-200LRs is purchased in February, while an option on a third is also taken. The value of the two firm orders is \$43 million.

Several new routes are introduced and these help passenger boardings to climb 5.7% to 628,565. Freight is down again, dipping 5.6% to 3.57 million FTKs. Revenues dip 1.4% to \$93.98 million, but expenses also decline, falling 7.8% to \$93.5 million. Although the operating profit is just \$471,674, there is a \$1.4-million net gain.

The firmly ordered Canadairs are delivered in January and February **1998**. The option is also taken up at this time and the third CRJ-200LR arrives in November.

Enplanements for the year accelerate 10% to 693,000, but cargo traffic falls another 3% to 3.45 million FTKs. Revenues of \$110.8 million are generated and a \$3.3-million net profit is posted.

A NATO bombing campaign is undertaken against Yugoslavia, beginning on March 24, **1999**, in an effort to force that government to change its policies toward the ethnic Albanians in the province of Kosovo. While Operation Allied Force continues, Adria is unable to operate to Belgrade or, initially, into Bosnia.

With the beginning of the summer schedule on March 28, flights to London and Paris become daily, while frequencies to Amsterdam and Copenhagen become thrice weekly. A bus service, operated on a route from Brnik Airport to Ljubljana and back, is upgraded the same day.

At an April 12 Ljubljana news conference, CEO Grasek tells reporters that the continuing Kosovo crisis has depressed the airline's income by \$51,000 per day. An expected decision on whether or not to purchase a fourth Canadair CRJ-200LR from Bombardier must consequently be postponed until June 1.

Flights to Sarajevo resume on April 19, while on April 24, a new weekly roundtrip route is opened to Dublin. Wednesday roundtrips commence on May 12 from Ljubljana to Kristianstad, in southern Sweden.

The weekly service to Tel Aviv becomes twice weekly on June 30 through the addition of a Saturday seasonal roundtrip, which will continue to be offered through September 29.

A CRJ200LR is chartered from **Air Littoral, S.A.** in July for use until a follow-on order for another Canadair can be placed in late September.

Service from Ljubljana to Tirana, halted during the Kosovo crisis, is resumed at the end of October.

During the year, customer bookings accelerate 12.6% to 780,000 and freight climbs 20.2% to 4.15 million FTKs. Revenues are up 3% to \$99.53 million, while costs slide 1.1% to \$94.48 million. The operating gain surges to \$5.05 million and there is a \$71,000 net profit.

Airline employment stands at 578 at the start of **2000**, a 1.2% decline. Following a two-year route suspension, A320-231 roundtrips are resumed on May 26 between Ljubljana and Rome.

When **British Airways, Ltd. (2)** withdraws from its London to Ljubljana route in October, Adria is left as the sole carrier flying to the Slovenian capital from the U.K.

ADRIA AVIOPROMET. See **ADRIA AIRWAYS (1); ADRIA AIRWAYS (2)**

ADSA (AEROLINEAS DOMINICANAS, S.A.): Dominican Republic, (1974–1982). ADSA is formed at Santo Domingo on February 24, **1974**. Having acquired a pair of Martin 4-0-4s and a Douglas DC-3, it undertakes passenger and cargo charter services, beginning in August, to local and regional destinations in the Caribbean and Central America. Scheduled flights are also initiated between Santiago and San Juan, Puerto Rico. The company changes its name to **Dominair (Aerolineas Dominicanas, S.A.)** in **1981**.

ADSA (AEROVIAS DARIENITAS, S.A.): Panama (1960–1990). This air taxi operation is formed at Panama City in **1960** to offer charter and on demand flights with several two small Cessnas.

During the late **1960s**, the company acquires a Douglas DC-3 and begins scheduled third-level passenger services throughout the provinces of Darien and San Blas in the eastern part of the nation.

The commuter's network grows during the **1970s** and **1980s** to include the following destinations served from Panama City's Paitill Airport: Achutupo, Caledonia, Carti, Corazon de Jesus, El Porvenir, El Real, Garachine, Jacque, La Palma, Mamitupo, Mulatupo, Nargana, Playton Chico, Puerto Obaldia, Rio Alzucar, Rio Sidras, Rio Tigre, Sambu, San Ignacio de Tupile, Santa Fe, Tubuala, Ustupo, and Yavisa.

During these years, the fleet is altered; the DC-3 is replaced by 3 Britten-Norman BN-2 Islanders. Operations cease with the American invasion in early **1990**.

ADT AVIATION, LTD. See **AIR HANSON, LTD.**

ADVANCE AIR CHARTER, LTD.: Canada (1993–1995). AAC is set up at Calgary in Alberta in **1993** to offer worldwide passenger and inclusive-tour charters. Revenue services commence and continue with 1 each leased Douglas DC-8-52 and DC-8-62.

The company, which does not hold rights to the U.S., makes four flights in May **1994** from Honolulu to Kwajalein and Majuro on behalf of **Air Marshall Islands**. On October 15 the carrier is fined \$4,000 by the U.S. DOT; in response, the Canadian line pleads that its flights were made on behalf of a certified carrier. DOT maintains the fine, but promises to drop half of it if no further violations are recorded during the next 12 months. Traffic does not live up to expectations and the DC-8-52 is withdrawn at year's end.

The company does not get a chance to prove itself to the American regulators because it shuts down in **1995**.

ADVANCED AIRLINES (PTY.), LTD. See **AVDEV AIRLINES OF AUSTRALIA (PTY.), LTD.**

ADVANTAGE AIRLINES: United States (1992). Advantage is established at Portland, Oregon, in the spring of **1992** as a nonaligned division of **Rocky Mountain Helicopters**, one of the nation's largest providers of aviation support services and a specialist in rotary-wing emergency air medical transport. Employing reconditioned Fairchild Metro IIIs, the independent, under the direction of Vice President/General Manager Michael Lowry, launches five roundtrips daily between Portland and Eugene on May 18, along with four roundtrips daily between Portland and Medford and Portland and Pasco.

As a result of the airline fare wars, the company is unable to achieve economic viability and—less than six months after services are begun—it is forced to shut its doors.

AE COLOMBIA (AEROLINEAS ESPECIALES DE COLOMBIA, S.A.): Colombia (1980–1985). AE Colombia is established at Bogota in 1980 to provide passenger and cargo charter services from the capital. The initial fleet comprises 1 Piper PA-31-350 Navajo Chieftain, 1 Beech King Air 90, 2 Beech 18s, 1 Cessna 185, and 2 Cessna 180s. Shortly after its founding, the third-level carrier receives government support to introduce scheduled services for the Llanos del Yari region and the islands of Providencia and San Andres.

Traffic does not generate sufficient revenues to exceed expenses and the airline stops flying in 1985.

AEBAL (AEROLINEAS DE BALEARES, S.A.): Spanair, S.A., Aeropuerto de Palma, Apdo 50086/07000, Palma de Mallorca, Spain; Phone (971) 745020; Fax (971) 492557; <http://www.spanair.com>; Code JK; Year Founded 2000. AeBal is established at Palma de Mallorca in April 2000 to provide regional services on behalf of its parent, Spanair, S.A. Originally, several names are considered for the enterprise, including Spanair Link and Air Balaer. Gerardo Diaz is appointed president and orders are placed with Boeing for 3 717-200s.

The first 2 717-2CMs are received on June 22 and 29. Christened *Formentor* and *Espalmador*, they are employed, using the Spanair code, to launch revenue services on July 4. Competing directly with the BAe ATP turboprops operated by **Canarias Regional, S.A.'s** "Air Europa Express" and the Fokker 50 Iberia Regional service of **Air Nostrum, S.A.**, the Boeings fly thrice-daily roundtrips from Palma to Menorca and to Ibiza and twice-daily from Palma to both Balencia and Alicante.

The third B-717-2CM arrives on August 4.

AECA AIRLINES. See **AEROSERVICIOS ECUATORIANOS, S.A.**

AEGEAN AVIATION, S.A.: 572 Vouliagmenis Ave., Athens, 16451, Greece; Phone 01 996 81 81; Fax 01 995 75 98; <http://server.traveling.gr/aegean-aviation>; Year Founded 1977. Aegean Aviation is originally established as an FBO at Athens Airport in 1977, with charter flights occasionally operated. On February 17, 1992, Aegean becomes the first independent Greek airline to be issued an air operator's license by the Ministry of Transport.

By 1998, Aegean has been purchased into the TH. Vassilakis Group of companies, led by Theodoros Vassilakis. Capitalization exceeds \$6.5 million.

Executive passenger and express services are a major component of the director Nick Kovfovdakis's company's business. A total of eight full-time and four part-time pilots are on staff and the fleet includes 1 each Learjet 55 Longhorn, Learjet 35A Century 3, and Piper PA-31-350 Navajo Chieftain.

In addition to the operation of flight services (including medical air charter), the company continues to operate the only specialized fixed-wing business and general aviation maintenance unit in Greece.

At the end of February 1999, Aegean places an order for two Avro RJ100s while simultaneously dispatching several pilots to the U.K. for training. The planes are required to launch scheduled flights in the recently deregulated Greek market.

A third RJ100 is requested on April 7. The first two jetliners arrive on April 30, with the third expected in September.

Beginning in June, scheduled service is launched from Athens to Thessalonika, Heraklion, Corfu, Chania, and Rhodes.

Following receipt of a third AVRO RJ100 in September, an order is placed for a fourth, to be delivered before year's end.

In December, the carrier absorbs competing **Air Greece, S.A.**, creating the largest privately owned airline in Greece, and the second largest after **Olympic Airways, S.A.** The Minoan Lines, previously Air Greece's majority owner, is now a minority 28% shareholder in the surviving line.

Integration of Air Greece continues into 2000. Although the unprofitable Air Greece routes to Germany are dropped, the combined 10-plane fleet still operates 62 daily services to 12 destinations. Much of the first quarter is taken up in the preparation of a corporate strategic plan.

An order is placed in March for 2 more AVRO RJ100s to supplement the 4 already in service, while a concentrated effort is made to sell 2 former Air Greece Fokker 100s. Air Greece is fully integrated by the end of May.

The 2 AVROs ordered in March are on hand by July, bringing the total for the type to 6.

AEOL: Russia (1993–1994). Aeol is formed at Moscow in 1993 to offer charter all-cargo services to other nations in the CIS as well as Europe. P. P. Stepin is named general director and revenue flights commence with a single Ilyushin Il-76. Operations continue for less than a year.

AER AIRLINES (AEROTRANSPORTES ENTRE RIOS, S.A.): Argentina (1962–1982). AER Airlines is formed at Buenos Aires in 1962 to offer all-cargo charter services with a pair of Canadair CL-44Ds. During the next decade, flights, which come to emphasize the transport of livestock, are undertaken from Ezeiza Airport to Lima, Panama, Miami, New York, Montevideo, Asuncion, São Paulo, Rio de Janeiro, and Caracas. A former **KLM (Royal Dutch Airlines, N.V.)** Lockheed L-749 freighter, along with 1 Curtiss C-46 Commando, are obtained in 1964; before the decade's end, 4 L-1049s also arrive.

A third swing-tail, Canadian-built freighter joins the fleet in 1973 and a total of 34 million FTKs are flown in 1974. The high cost of fuel forces cancellation of services to Europe and Africa and temporary withdrawal of the new Canadair received just the year before. The Commando is also retired.

Airline employment in 1975 stands at 120. Cargo accelerates 15% to 40 million FTKs. Consequently, plans are made to resume operations to the markets suspended in 1974 and an order is placed for a Douglas DC-8-63CF.

A Canadair CC-106 with 5 crew and 5 passengers fails its takeoff from Miami on September 27, overruns the runway, and crashes into the west bank of a canal 960-ft. away (6 dead).

Services continue apace in 1976–1981 and in 1982 Chairman Carlos Martinez Guerrero's company is merged into **TAR (Transporte Aereos Rioplatense, S.A.)**.

AER ARANN (KILROE AIR IRELAND, LTD.): Connemara Airport, Caislean, Connemara, County Galway, Ireland; Phone 353 (91) 593 034; Fax 353 (91) 593 238; <http://www.aerarann.ie>; Code RE; Year Founded 1970. Former captain of **Aer Lingus Irish Airlines, Ltd.** Bill Wallace convinces a group of local Oranmore businessmen to form the charter/commuter operation Aer Arann in 1970, with him as CEO/chief pilot. Flying the company's single Britten-Norman BN-2 Islander, Wallace initiates revenue services in July linking Shannon with the Aran islands of Inishmore and Inishmaan. Later, the company changes its base of operations from Oranmore to Galway.

Regular service is started from Dublin to the Channel Islands in 1973 as the fleet is improved by the addition of three more BN-2s. In September 1974, thrice-weekly service is initiated to Glasgow. Two of the four Islanders are damaged in accidents in Ireland in October 1975 and the company temporarily ceases operations. However, resumption of commuter services to the Aran Islands is soon thereafter resumed, along with regional charters.

In 1976–1977, Col. Charles Blair, accompanied by his wife, actress Maureen O'Hara, employs his famous **Antilles Air Boats** Short S-25 Sandringham flying boat *Southern Cross* on summer-only flights among the Aran islands. In 1978–1987, the regional's scheduled frequencies are maintained and charters are flown to as many as 31 different destinations in Britain and Europe. General Manager Christopher Ryan's fleet is upgraded to include 2 Islanders and 1 Embraer EMB-110. During these years, the company becomes an associate of the U.K. commuter carrier **Air Kilroe, Ltd.**

David P. Browne is named general manager in 1988 and the Ban-deirante is withdrawn, to be replaced in 1989 with a Piper PA-23 Aztec. Operations continue apace in 1990–1992.

In 1993, President Timothy Kilroe, who is also CEO of **Air Kilroe, Ltd.**, oversees an Irish workforce of 20 and a fleet that includes 2 Islanders and the Piper PA-23 Aztec. Services are maintained in 1994–1997 and destinations visited from the base at Connemara Airport continue to include Inishmore, Inishmaan, and Inisheer. The Aztec is withdrawn.

Early in 1998, a contract is signed with the board of Donegal Airport Company to provide, with the assistance of **Aer Lingus Irish Airlines, Ltd.**, EU essential Air Service flights to and from Donegal. A British Aerospace BAe Jetstream 31 is leased from Manchester-based **Air Kilroe, Ltd.** and is employed to inaugurate the new service, Aer Arann Express, on March 2. General Manager Bob Laird's division is subsequently established as a free-standing subsidiary.

Over the next two years, the main line continues to operate Islander flights to Serves Aran.

AER ARAN EXPRESS, LTD.: International House, Dublin, Ireland; Phone 353 (1) 814 5240; Fax 353 (1) 814 5250; http://www.aerarann.ie; Code RE; Year Founded 1998. Early in 1998, a contract is signed by **Aer Arann: Kilroe Air Ireland, Ltd.** with the board of Donegal Airport Company to provide, with the assistance of **Aer Lingus Irish Airlines, Ltd.**, EU essential Air Service flights to and from Donegal. A British Aerospace BAe Jetstream 31 is leased from Manchester-based **Air Kilroe, Ltd.** and is employed to inaugurate the new service on March 2.

GM Bob Laird's division is subsequently established as a free-standing subsidiary, with headquarters at Dublin. In addition to scheduled services to Donegal and Sligo, the carrier also undertakes replacement flights for **Manx Airlines, Ltd.** (2).

A Shorts 330 is employed to launch expanded services on July 1, 2000. On August 15, the company seeks funding to operate routes from Dublin to both Kerry and Galway when they are given up by **Aer Lingus Irish Airlines, Ltd.** in January. A Shorts 360-300 is leased from **Flying Enterprise, A.B.** on August 20.

As planning for expanded services from Dublin continue, arrangements are completed on September 18 for the purchase of two ex-**Continental Express** ATR42-320s.

The twice-weekly route between Dublin and Sheffield City, abandoned by **British Regional Airlines, Ltd.**, is taken over on October 30.

AER KAVANGO (PTY.), LTD.: Botswana (1994–1995). Anthony Baker establishes this third-level operation at Maun in 1994 to provide scheduled passenger and cargo flights to local destinations. Revenue flights begin with a fleet comprised of 3 Cessna 206s, 1 Cessna 210, and 2 Pilatus Britten-Norman PBN-2 Islanders. Operations cease in 1995.

AER LINGUS COMMUTER (AERLINTE EIREANN TIO-RANTA, LTD.): P.O. Box 180, Dublin Airport, County Dublin, Ireland; Phone (353) 1-705-33-60; Fax (353) 1-705-64-95; http://www.aerlingus.ir; Code EI; Year Founded 1983. Under the direction of Projects Manager Garry Cullen (who will become Aer Lingus Group CEO in 1998), Aer Lingus Commuter is established in May 1983 as an experimental division of the national flag line **Aer Lingus Irish Airlines, Ltd.** Equipped with two Shorts 360s, the new entrant inaugurates scheduled Ireland–U.K. service from a hub at Dublin. It also flies to local Irish destinations. Two more 360s are delivered in 1984, followed by a fifth in 1985. E. C. Murphy is appointed CEO in July.

Flights to Bristol, Edinburgh, and the East Midlands continue in 1986. In 1987 the 50-employee carrier adds Jersey and Rennes as destinations. The fleet's 5 Shorts 360s and 1 Shorts 330 transport a total of 195,000 passengers.

In 1988, Ray Wilson is named chief executive and Liverpool, Leeds, Cork, and Ronaldsway join the route network. In October, orders are placed for a pair of Fokker 50s. Enplanements total 195,000. Service to Sligo and Shannon is opened in 1989 and the fleet is enhanced in March by the addition of the first Fokker F-50.

Three more F-50s and a sixth Shorts 360 arrive in 1990 as the company begins flying to Kerry and Waterford. Two 360s are withdrawn in the fall and returned to their lessor, **Maersk Air, A.S.**

In early 1991, the Shorts are replaced by 2 more Fokker F-50s. The fleet now includes 6 F-50s and 1 out-of-service Shorts 360. Orders are placed in January for 4 SAAB 340Bs, which arrive, beginning with the *St. Eithne*, and enter service during June and August. They will be employed to develop the carrier's traditionally thin routes from Dublin to the U.K. destinations of Bristol and East Midlands.

The last Shorts is withdrawn at the beginning of October. In the seven years that the carrier has employed this type, the Shorts have transported 1.5-million passengers.

In 1992, Conor McCarthy becomes CEO and his fleet is enhanced with two more SAAB 340Bs. Airline employment reaches 220 and new service is initiated to Brussels. McCarthy's fleet in 1993 includes 4 SAABs and 6 Fokker 50s. U.K. destinations served by the regional include Bristol, Bradford, East Midlands, Edinburgh, Glasgow, Leeds, Newcastle, and Birmingham. Brussels and Dusseldorf are also visited. Henceforth, financial and traffic figures are reported with those of its parent, Aer Lingus Group.

Eithne McManus becomes CEO in 1994, by which time the company's SAABs have well-developed domestic services in Ireland, serving Galway, Kerry County, Shannon and Sligo in the west and Cork in the south. Routes are also operated to the U.K. communities of Birmingham, Edinburgh, Glasgow, Leeds/Bradford, Manchester, Newcastle, Bristol, and East Midlands. On weekends, daily direct service is offered from Cork to Manchester.

To keep pace with the parent's enhanced transatlantic services built around introduction into service of A330-301s, the feeder begins to heavily promote its Dublin hub. Passengers en route to America are encouraged to forsake London and, traveling from an airport in the western half of the U.K., come to Ireland on a Fokker or SAAB flight timed to coincide with Airbus departures. Late in the year, plans are made to replace the Swedish-made turboprops the following year with larger aircraft and the British Aerospace BAe 146-300 is selected. The year's marketing strategy appears to work, as enplanements increase dramatically, reaching 500,000 on the year for the first time.

The fleet at the beginning of 1995 includes 4 SAAB 340s and 6 Fokker 50s. On behalf of its subsidiary, **Aer Lingus Irish Airlines, Ltd.** announces the lease of 3 BAe 146-300s from Asset Management Organization on April 3. The first of the regional jets enters service on April 23 from Dublin to Manchester and Birmingham.

The two remaining jetliners are delivered between May and June and, during the latter month, enter service on routes from Dublin to Glasgow, Bristol, and Edinburgh, as well as the network that reaches from Dublin to Cork and Shannon. The SAABs are now removed. A total of 26,000 scheduled departures are made during the year and enplanements reach 1,150,000.

During the spring of 1996, a fourth BAe 146-300 is leased for five years and enters service on the company's regional routes.

Customer bookings accelerate to 1,241,080 made in 25,538 scheduled departures.

Destinations visited in 1997 include Amsterdam, Belfast, Birmingham, Bristol, Brussels, Copenhagen, Cork, Dublin, Dusseldorf, Edinburgh, Frankfurt, Galway, Glasgow, Kerry County, Knock, London (LHR and STN), Manchester, Newcastle, Paris, Rome (Fiumicino), Shannon, and Zurich.

On July 15, a new Ir £2-million departures facility is opened at Dublin Airport that caters exclusively to commuter customers. The new area, with its 16 check-in desks, is being developed in order that the Aer Lingus parent may employ the old central terminal building as a dedicated boarding area. A new departure lounge and eight new boarding gates will be added during the remainder of the year and in early 1998.

The fiftieth anniversaries of service to Glasgow and London are celebrated on July 19 and August 1, respectively. The company now provides over 600 weekly departures.

Enplanements for the year reach 1,475,541 on 26,998 scheduled departures.

Service continues in 1998. Seamus Kearney is now CEO and his fleet includes 2 BAe 146-200s, 5 BAe 146-300s, and 7 Fokker 50s. Late in the year, arrangements are completed for the lease of another BAe 146-200 on a temporary basis from **Flightline, Ltd.**

Formerly operated by **Jersey European Airways, Ltd.**, a sixth BAe 146-300 is delivered to the carrier in March 1999. The new acquisition is employed to expand capacity on regional services to the U.K. where jet demand is high.

Leases on three other Dash-300s already in service are extended.

The **Flightline, Ltd.** BAe 146-200 is returned in mid-month and, repainted in Team Lufthansa colors, begins operating replacement services for **Lufthansa CityLine, GmbH.** between London and Dusseldorf.

Four-times-weekday (reduced on weekends) BAe 146-300 return service from Dublin to London (LCY) begins on November 1. The new flights compete with those offered by **CityJet, Ltd.**

The carrier's 2 BAe 146-200s are retired on July 10, 2000. They are replaced by 2 BAe 146-300s purchased from **KLMuk, Ltd.**

AER LINGUS IRISH AIRLINES, LTD.: Head Office Block, P.O. Box 180, Dublin Airport, Ireland; Phone 353 (1) 705-222; Fax 353 (1) 705-3832; <http://www.aerlingus.ie>; Code EIR; Year Founded 1936. As an interim measure until a government holding company can be formed, **Blackpool and West Coast Air Services, Ltd.**, an associate of the London-based air taxi/charter operator **Olley Air Services, Ltd.**, puts forward the capital necessary to form Aer Lingus Teoranta or ALT. (Air Fleets, Ltd.). The word "Lingus," a word that does not exist in Gaelic, is a corruption for commercial purposes of "Loingias." The prospective Irish national carrier is registered as a private company at Dublin on May 22, 1936. **Blackpool and West Coast Air Services, Ltd.** provides a de Havilland DH 84, which is christened *Iolar* (*Eagle*). Daily flights commence on May 27 from Dublin's Baldonnel Airport to Whitchurch Airport at Bristol with the *Iolar* (*Eagle*), piloted by O. E. Armstrong. The same day, **Blackpool and West Coast Air Services, Ltd.** launches a frequency from Liverpool to Dublin via the Isle of Man under the marketing title "Irish Sea Airways." Thrice-weekly Dublin-Isle of Man Dragon service starts on May 30.

During the high summer, a DH 86B is acquired and, on September 14, the *Eire*, as it is known, extends the Bristol daily route to London (Croydon Airport); the *Iolar* begins Dublin-Liverpool via Isle of Man daily service the same day. The Liverpool operation ceases on October 24. A total of 892 passengers are carried during the first six months of revenue service.

On April 5, 1937, the government holding company Aer Rianta Teoranta is formed at Dublin. Capitalized at Ir £500,000, it is authorized to operate international services. With mail and in continued cooperation with **Blackpool and West Coast Air Services, Ltd.** as **Irish Seas Airways, Ltd.**, the new DH 89A *Iolar II* inaugurates Isle of Man seasonal service on May 14. Frequencies on the Dublin-Liverpool route are increased to thrice daily while two roundtrips are offered to London, one via Bristol. During the year, Aer Lingus Teoranta becomes known simply as Aer Lingus to most passengers.

The Isle of Man flights halt for the winter on September 4 while, also in September, the British **Irish Seas Airways, Ltd.** partner **Blackpool and West Coast Air Services, Ltd.** is purchased and merged into **Isle of Man Air Services, Ltd.** On November 2, the British **Irish Seas Airways, Ltd.** portion of the operation is reformed as a separate company and named **West Coast Air Services, Ltd.** Enplanements for the first full year are 2,908.

In February 1938, the first Aer Lingus aircraft, *Iolar*, is acquired by the British company **Great Western and Southern Airlines, Ltd.** On June 4, seasonal Dublin-Isle of Man services are resumed and continue until September 19. Bookings nearly double, up to 3,810.

Aer Lingus services are suspended briefly on the outbreak of war, September 3, 1939, but DH 86 Dublin-Liverpool flights resume on Oc-

tober 28. When they do, railroad schedules initially permit one-day journeys from Dublin to London. The fleet is strengthened during the year by the addition of two Lockheed L-14s and orders are placed for two Douglas DC-3s. Despite the service halt, boardings accelerate to 5,002.

On January 19, 1940, company headquarters and flight operations are transferred from Baldonnel aerodrome to Dublin's new Collinstown Airport. Flights from Dublin to Liverpool are suspended between month's end and the middle of February and, when they resume, the British terminus is changed to Manchester. With insufficient need existing, a Dragon Rapide is sold while a DH 86B is damaged in a hard landing in March.

The first Douglas DC-3 is delivered on April 20. Assembled by Fokker technicians at Duerne airfield, Antwerp, and flown in via London it is christened *St. Senan*. After crew familiarization, the new Douglas is placed in service on the Liverpool route on May 7. The second DC-3 cannot be provided to Fokker for assembly when Holland is overrun three days later so is, instead, sold to **Pan American Airways (PAA)**. The Lockheeds are now withdrawn and sold to an Australian source.

Meanwhile, the **Irish Seas Airways, Ltd.** operation is allowed to continue as **West Coast Air Services, Ltd.** and becomes a member of the wartime British domestic air service coordinating body, Allied Airways Joint Committee. The Liverpool terminus is transferred to Manchester on August 3. The year's enplanements are 5,507.

As the German assault on Great Britain intensifies, London service during late 1940 and all of 1941 becomes and remains sporadic. In addition, the *St. Senan* is slightly damaged while landing at Barton airfield, near Manchester, on April 19. The Douglas is dismantled and shipped back to Ireland by sea. Although the original *Iolar* is shot down by German fighters off the southwest coast of England near the Scilly Islands, the DH 86B damaged the previous March is returned to service in October. Bookings in the 12 months dip to 5,297.

Dublin-Shannon operations are conducted between August 12 and October 30, helping 1942 enplanements climb to 6,168. Meanwhile, on November 16, the English terminus is switched from Manchester back to Liverpool. In 1943, bookings grow to 6,537. On April 14, 1944, the British government halts the carrier's U.K. service as a pre-Normandy invasion security measure; service is resumed on September 8. As a result of the service suspension, boardings drop to 5,601 for the year.

The DC-3 London route is reopened on November 9, 1945 and, in cooperation with **West Coast Air Services, Ltd.**, London (Croydon)-Dublin Avro XIX flights begin on December 3. Also in December, the first three female flight attendants report for duty and the first of nine more DC-3s to arrive in the next six months begin to join the fleet. Bookings skyrocket to 21,630.

On April 5, 1946, a bilateral air agreement is reached between the Republic of Ireland and the United Kingdom, giving the carrier exclusivity over England-Eire service. The same day, the carrier's shareholding is reorganized: the Irish government acquires 60% control (via Aer Rianta Teoranta), with **British European Airways Corporation (BEA)** and **British Overseas Airways Corporation (BOAC)** holding 30% and 10% respectively. The DC-3 Shannon service, operated briefly in 1942, is restarted on May 8.

Dublin-Paris DC-3 operations commence on June 17.

The first DC-3, *St. Senan* (acquired in 1940) with 4 crew and 15 passengers, is destroyed in a forced landing at Tullyglass, County Clare, on June 18; there are no fatalities.

Bought out, **West Coast Air Services, Ltd.** on June 29 formally turns over all operations to Aer Lingus, which on July 1 takes over all scheduled Ireland-U.K. service (4 DC-3 frequencies to London and 5 frequencies to Liverpool, 3 DH 86 and 2 DC-3). The London terminus is switched from Croydon Airport to Northolt Airport on October 1 and, later in the month, seven Vickers Vikings are ordered.

Enplanements for the year are 76,304. On revenues of Ir £377,345, expenses are Ir £516,821, leaving an operating loss of Ir £139,476.

The year 1947 begins with an international move. On February 26, **Aerlinite Eireann Teoranta (Irish International Airlines, Ltd.)** is formed to operate North Atlantic services; orders are placed for five

Lockheed L-749As at Ir £250,000 per aircraft. The *St. Ronan*, first of seven Vickers-Armstrong Vikings to arrive during the year, is delivered on June 4 and is employed to inaugurate new Dublin–Amsterdam, via Manchester, service on July 9. It is followed by the *St. Senan* on June 12. New DC-3 routes are extended to Belfast/Glasgow (July 29), to London (August 1), and to Brussels (August 8).

The first three L-749As (*St. Brendan*, *St. Patrick*, and *St. Bridget*) are delivered on September 17 (having flown across the Atlantic in formation) and are placed on the newly opened London–Rome through services on November 2 and 12, respectively. The three Constellations are placed on the Dublin–London route on November 3. Despite successful route-proving flights, the decision of the Irish government to reject the carrier's international license application results in the withdrawal of the Constellations (now five in number) on December 16; plans for the launch of New York services on *St. Patrick's Day* next are cancelled.

Bookings for the year are 156,532. Revenues accelerate to Ir £892,314 but expenses skyrocket to Ir £1,504,746, leaving an operating loss of Ir £612,432.

Unable to participate on the international scene, the five parked Aerlinte Eireann L-749As are sold for a profit of Ir £65,000 each (Ir £1,575,000 total) to **British Overseas Airways Corporation (BOAC)** in February 1948; still, the year's boardings grow to 156,349. Two Airspeed AS.65 Consuls are placed in service in April, but are both found unsatisfactory and are sold within a year. The last of the Constellations to be delivered to the British state carrier is the *St. Patrick*, which is transferred on June 15 and the Vikings, also having been unsatisfactory, are removed, beginning with the *St. Senan*, which is passed to the Egyptian carrier **Misrair, S.A.E.** on November 18.

Bookings are 160,892 and although traffic falls, the operating loss does as well, down to minus Ir £163,070.

Daily Birmingham DC-3 flights are inaugurated in May 1949 and Jersey operations are launched in June; enplanements rise to 199,023. This year's operating loss is only Ir £29,313. Low-cost DC-3 "Starflight" services are begun on the London route on June 13, 1950 and help to achieve carriage of 221,542 passengers on the year.

Dublin–Manchester night-airmail service is launched on March 12–13, 1951 and thrice-weekly DC-3 operations to Liverpool, Birmingham, and Glasgow begin in October. In December, Aer Lingus becomes the second airline in the world to order the Vickers Viscount turboprop, committing itself to four V-707s.

Enplanements reach 269,220. On revenues of Ir £1,302,052, expenses are Ir £1,292,032, leaving the carrier with its first operating profit, Ir £10,020.

The Irish line's first fatal accident occurs on January 10, 1952 when the DC-3 *St. Kevin*, with 3 crew and 20 passengers, crashes into 2,860-ft. Moel (Mount) Siabod, Wales, in bad weather; there are no survivors.

Aer Lingus launches Dublin–Edinburgh/Cardiff DC-3 services on April 22 and June 13, respectively. A fleet of Bristol 170 Mk. 1 freighters is acquired during the summer, at about the same time **British European Airways Corporation (BEA)** acquires the 10% shareholding of **British Overseas Airways Corporation (BOAC)**.

With an Irish government license finally in hand, Aerlinte Eireann reaches an agreement in November with **Seaboard and Western Airlines** for the chartering of DC-4s and Lockheed L-1049Cs with which to start transatlantic operations. A total of 289,380 passengers are transported.

A DC-3, with 3 crew and 22 passengers, suffers double engine failure due to fuel exhaustion and makes a forced landing at Spennall, U.K., on January 1, 1953; although the aircraft must be written off, there are no fatalities.

Unhappily, permission for Aerlinte Eireann to land in the U.S. is delayed by the American CAB, which will not grant permission for more than two years; the Irish carrier's international service to North America is set back another five years. Bookings, nevertheless, push upward to 300,859.

The year 1954 is the year of the Viscount. The carrier's first two Vickers V-707s (*St. Patrick* and *St. Brigid*) are delivered on March 5; the airline becomes the world's third to offer turboprop flights when the two are

placed in service on the London route on April 11. On May 14, DC-3 Dinard–Lourdes service is inaugurated; service to the holy site, with aircraft equipped for stretchers, soon proves very popular. A DC-3 with 24 aboard crash-lands safely on Guernsey Island on September 18.

Enplanements this year are 342,765. The Lourdes route is extended to Barcelona on May 24 and 1955 boardings jump to 402,225.

Orders are placed in March 1956 for 3 (later 7) Viscount 808s and, in June, orders are offered for 5 (later 7) Fokker F.27-100s. The ALT/BEA bilateral is revised on September 1 with the British carrier reducing its shareholding to 10% (and receiving Dublin access in April 1957) while granting the Irish airline Fifth Freedom rights to cross Britain on certain routes to the Continent. Bookings for the year accelerate to 457,609 and the largest operating profit of the decade (Ir £158,548) is earned.

The first three V-808s (*Gall*, *Charles Montagu Doughty*, and *St. Patrick*) are received in late March 1957. V-808 London, Amsterdam, and Dusseldorf service begins on April 14, followed on April 15 by a Brussels–Frankfurt am Main route. The company's three-millionth passenger is carried on May 2, and on May 25 Viscounts are placed on the Lourdes–Barcelona run. On June 27, the big turboprops begin flights to Zurich and Rome. Despite this expansion, bookings dip to 441,363.

In January 1958, the American CAB finally grants permission for U.S. flights tied to the launch of transatlantic economy fares approved by IATA and two L-1049Hs are leased from **Seaboard and Western Airlines**.

With a VIP run on April 24, Aerlinte Eireann is at last able to inaugurate transatlantic operations as the *Padraig* (*St. Patrick*) begins thrice-weekly Dublin/Shannon to New York/Boston roundtrip service.

The inaugural flight, seen off by Prime Minister Eamonn DeValera, is not without incident as the chartered Super Constellation, with New York Mayor Robert Wagner, his wife, and other VIPs, has engine trouble and must make an emergency landing at Gander, Newfoundland, delaying the Dublin arrival until April 27. The return flight arrives at New York City on April 28 with Wagner welcoming Irish Deputy Prime Minister LeMass and Dublin Lord Mayor Carroll. Speeches and parades mark the occasion.

With the start of regularly scheduled, 10–13-hr., thrice-weekly roundtrips to North America on April 28, the services of Aer Lingus and Aerlinte Eireann are integrated under the common marketing name of Aer Lingus-Irish International Airlines, Ltd.; however, separate financial records are maintained. The transatlantic service is offered daily beginning in June and, in October, Boston is added as a stop.

The world's first Dutch-built Fokker F.27-100s (as opposed to the slightly earlier models built by Fairchild under license in the U.S.) *Fionntan* (*St. Fintan*) and *Fearghal* (*St. Fergal*) are delivered on November 19. Aer Lingus becomes the first European operator of the soon-to-be popular turboprop when the two begin Glasgow–Liverpool service on December 15. The year's boardings rebound from 1957 and jump to 500,574.

Irish International orders three Boeing B-707-048 jetliners on March 11, 1959. The Viscount 808 route to Dusseldorf is extended to Copenhagen on April 14 and the Lourdes service is extended to Lisbon on June 4. Meanwhile, on May 15 and in cooperation with **Silver City Airways, Ltd.**, DC-3 flights to Blackpool are started. Enplanements this year climb to 552,723.

The title Aer Lingus-Irish International Airlines, Ltd. comes into use by both carriers on January 1, 1960. Company pilots strike between March 15 and 28. On May 31, daily Shannon–Liverpool Viscount 808 operations are inaugurated, while twice-weekly DC-3 flights to Cherbourg begin on June 3. Aerlinte Eireann on November 18 takes delivery of its first B-707-048 *Padraig* (*St. Patrick*), during a month in which the five-millionth transatlantic passenger is boarded. Following a blessing from the Archbishop of Seattle, the *Padraig* is taken to Tucson, Arizona, for crew training.

The Gander–Shannon leg of the *Padraig's* December 1 New York proving flight is made in a record 3 hrs. 9 min. The *Padraig* launches scheduled flights on December 14 from Dublin and Shannon to Boston. Passengers aboard Ireland's premier all-jet flights receive either "Golden Shamrock" (first class) or "Silver Shamrock" (economy class) service.

Regular Shannon/Dublin–New York Boeing service is launched on April 14, **1961** and during the 12 months, scheduled service is inaugurated to Cork, Dublin, London, Bristol, Cardiff, Birmingham, Paris, Lourdes, Barcelona, and Jersey. All three Constellations are returned to **Seaboard and Western Airlines** and the fleet now includes 3 B-707-048s (*Padraig*, plus *Brighid* and *Breandan*), 7 Viscount 808s, 7 Fokker F.27-100s, and 5 DC-3s. During the fourth quarter, **BKS Air Transport, Ltd.** suspends its vehicle ferry service from Liverpool to Dublin, requiring the Irish government to step in and ask Aer Lingus to take it over.

In **1962**, the combined Aer Lingus and Aerlinte Eireann fleet includes one more Viscount and one less Boeing. A Ir £700,000 order is placed with Aviation Traders, Ltd. in August for the conversion of two Douglas DC-4s into ATL-98 Carvairs. Modifications commence in September. During the year, the government refuses to allow the carrier to purchase three Sud-Est Caravelle jetliners.

On January 9, **1963**, the B-707-48 *St. Patrick* is chartered to fly to Melbourne with Australian passengers stranded at Malta by the damaged cruise ship *Canberra*. The first ATL-98 Carvair, the *St. Aibhe* (*St. Albert*), is delivered to the company on March 14 and begins a few weeks of proving flights and crew training. Dublin–Bristol car ferry service is launched five times per week in early April. The second ATL-98 Carvair, the *St. Jariath* (*St. Jarlath*), arrives on April 29.

Three others follow the initial vehicle ferry route: thirteen-per-week Dublin–Liverpool (May 8), four-per-week Cork–Bristol (May 12), and two-per-week Dublin–Cherbourg (June 15). Meanwhile, on May 3, orders are placed for BAC 1-11-208s, which will be promoted as Shamrock Jets.

Meanwhile, on May 23, a Viscount 808 loses a door during a flight over the North Sea, but is able to land safely. During their first season of operations, the two Carvairs fly 4,324 vehicles and 12,532 passengers. Traffic is so good that a third ATL-98 is requested at year's end, while the first two are returned to their British builder during the winter for modifications that will allow the transport of racing horses.

The third Carvair, the *St. Senan*, is added to the fleet on April 23, **1964**. Combined freight and passenger services are launched from Dublin to Liverpool and Glasgow, while a night-airmail frequency is initiated from Manchester to Dublin. The first B-707-348, *St. Lorcan O'Tauthall*, is delivered to Dublin on June 10 as orders are made for four British Aircraft Corporation BAC-1-11-208ALs. The new Boeing is soon in transatlantic service.

ALT and Aerlinte Eireann, working under the common marketing name of Aer Lingus-Irish International Airlines, Ltd., fly 1,065,000 passengers over European and North Atlantic routes with a fleet of 24 passenger aircraft. With the Carvairs now taking over all cargo work, including the transport of 5,101 cars, the last two DC-3s are phased out. The Aer Lingus employee population stands at 4,192 and revenues of US \$42,804,000 are earned.

Aerlinte Eireann employs 490 people in **1965** and flies 137,156 passengers over the North Atlantic in its fleet of four B-707-348s. ALT receives the first of four BAC-1-11-208ALs in May; christened *St. Mel*, it enters service on the Dublin–Paris via Cork route on June 3.

The following month, new service is started to Manchester from Cork and Shannon. With the introduction of sea ferries on the Irish Sea, the number of ATL-98 vehicle ferry flights is reduced.

The B-720B *St. Brendan* is leased to **Braniff International Airways** for a year; while serving with the U.S. carrier, it will wear its upper fuselage painted in lemon yellow with its horizontals, wing, and engines left in bare metal finish.

In January **1966**, the *St. Mel* flies the Glasgow Celtic soccer team Prestwick–Tbilisi, via Copenhagen and Moscow. Also during the year, the F.27s are retired and are replaced by seven Viscount 803s purchased from **KLM (Royal Dutch Airlines, N.V.)**.

On May 9, an order is placed for two Boeing 737s. On the same day, twice-weekly service is inaugurated to Montreal and Chicago. The last Carvair cargo run is undertaken between Dublin and Liverpool/Manchester–Dublin on October 31, after which the company's ATL-98s

are placed into storage. When Renfrew Airport is closed, operations are transferred to the new Glasgow Airport.

The carrier joins with **LOT Polish Airlines** on January 22, **1967** to announce weekly roundtrip service from Poland to North America; Irish International will fly the transatlantic leg, connecting with LOT at Shannon. Also in January a new route is started from Dublin to Brussels/Munich. On May 29, Dublin–Madrid Viscount flights begin. The uneconomical Carvair service is ended and the three aircraft are sold.

Orders are now placed for two Boeing 747-100s, receipt is taken of two more B-707-348Cs and 201,163 travelers are flown over the transatlantic routes during the year.

A Vickers Viscount 803 *Oscar Fox*, with three crew, on a June 22 training flight from Dublin, suddenly enters into a vertical dive from low altitude and crashes 2 mi. N of Ashbourne; there are no survivors.

Having suffered a flare-out in bad weather while on final approach to Bristol from a Dublin service on September 21, a Vickers Viscount 808, with 4 crew and 17 passengers, makes a wheels-up landing; there are no fatalities but the plane must be written off from damages sustained.

Also in 1967, the 15 ViscounTS and 4 BAC-1-11-208ALs of ALT transport 1,128,454 passengers to and from European destinations.

1968 sees ALT and Aerlinte Eireann, the components of Aer Lingus-Irish International Airlines, Ltd., integrated. Also, on January 10, the three stored ATL-98 Carvairs are sold to **Eastern Provincial Airways, Ltd.** for CS\$500,000.

Flight 712, the Vickers Viscount 803 *St. Phelim*, en route from Cork to London and piloted by Capt. Barney O'Beirne, mysteriously crashes into the Irish Sea on March 24 with 4 crew and 57 passengers, 1.7 nm. off Tuskar Rock and 80 km. from the Wexford Coast. There are no survivors. Over the next 30 years, a variety of theories will be floated to explain the tragedy, most involving the possibility that the aircraft was struck by a missile or drone involved in British Ministry of Defence tests. The controversial accident is described by Dermot Walsh in his *Tragedy at Tuskar Rock* (Dublin, Ireland: Mercier Press, 1983).

Later in the spring, a \$4.6-million contract is signed for a new IBM computer and related communications systems. **Irish Helicopters, Ltd.** is formed as a wholly owned subsidiary, offering charter services from bases in Cork and Dublin.

New offices are opened in New York, Amsterdam, and Johannesburg, and new services are inaugurated Belfast–New York and Shannon–Dusseldorf. A B-707-348, wearing company livery and **Luxair, S.A.** stickers, is leased to the South African charter operator **Trek Airways (Pty.), Ltd.** for a year and enters service from Johannesburg on October 22.

Total emplanements rise to 1,340,349 and revenues reach \$57.69 million.

The ASTRAL computerized reservations system comes online at Dublin in early **1969**. In April, the amalgamated Irish International Airlines leases a B-707-348C to **Trans-Caribbean Airlines** and its first new B-737-248, which is christened *St. Albert*, arrives; four more 737-248s will be delivered, one-per-month from September to December. Meanwhile, on May 25, new services are announced from Shannon to Chicago. The first B-747-148 is delivered on December 15, **1970**; christened *Padriag* (*St. Patrick*), it spends the remainder of the year on training duties. Meanwhile, the carrier's other 28 airplanes fly 1,521,420 passengers.

The second B-747-148 arrives on March 18, **1971** and is named *St. Colmcille*. On April 1, the *St. Patrick* opens Dublin/Shannon–New York Jumbojet service. Effective April 19, Shannon–Dublin flights are suspended for financial reasons; however, Dublin–Shannon flights commence in May.

En route from New York to Shannon on July 16, a B-747-148 is forced to make an emergency landing at Boston because of a bomb hoax; one J. Berry is arrested by police next day for allegedly threatening to blow up the Jumbojet unless he is paid a \$50,000 ransom.

The tragedy of civil unrest in Ulster has a depressing effect on traffic. International passenger boardings drop 8% and domestic 9%, with total emplanements dipping to 1,409,000.

Revenues and emplanements drop even further in **1972**. Although the workforce remains at 5,567, bookings are down 8% to 1,296,280.

A Jumbojet takes Irish Prime Minister Lynch to New York on January 4, 1973 for a five-day visit to the U.S. and discussions with President Richard M. Nixon on trade matters, including Dublin landing rights. The number of employees increases to 5,662. With the carrier enjoying renewed profitability, CEO Michael Daragan retires. Passenger boardings rise 7% to 1,359,280 and freight traffic climbs 8%.

David M. Kennedy becomes CEO on January 1, 1974. Emphasis is now switched from North Atlantic operations to European service, and the carrier begins operating under the marketing name **Aer Lingus Irish Airlines, Ltd.** One B-747-148 is leased to **Air Siam, Ltd.** and one, partially, to **East African Airways Corporation**. Dublin–Geneva service is started on April 1.

Passenger enplanements dip 4% as the Jumbojets are removed, but freight traffic rises 2%. Airline employment reaches 5,859.

The workforce in 1975 totals 5,775 as Dublin–Liverpool–London coach/air service is inaugurated. To provide contract services to other carriers, the subsidiary **Guinness Peat Aviation** is established while the aircraft maintenance/component overhaul division of Aviation Traders (Engineering), Ltd., is acquired and renamed Airmotive Ireland, Ltd. New diversified interests include a second golf course at Foxhills in England and part ownership in the Dunfey Hotels group. A special tour is undertaken from New York and Boston to Ireland and Rome on October 12 to coincide with the canonization of Blessed Oliver Plunkett.

Passenger boardings rise 3% to 1,339,000, but freight is down a significant 22% to 67.6 million FTKs.

A total of 38 employees are laid off in 1976 or not replaced and, on April 1, a B-747-148 is chartered to **British Airways, Ltd. (2)**. A ninth B-737-200 is delivered and new passenger service is inaugurated on the following routes: Dublin–Geneva–Milan; Cork–Shannon–Dusseldorf; Shannon–Paris; and Shannon–Dublin–Frankfurt. B-707-348B/C freighter service begins on the New York–Boston–Shannon–London route.

During the year, senior pilot Aidan A. Quigley publishes his memoirs, *A Place in the Sky: The Story of an Irish Airline* (Cork: Mercier Press); he will follow the book up with a second title, *Green Is My Sky* (Dublin: Avoca Publications, 1983).

Passenger boardings for the year climb 6% to 1,892,000 and cargo traffic accelerates 8%.

Enplanements drop significantly in 1977, to 1,502,120, but rebound by 6% in 1978 to 1,598,000 as the two leased B-747s return to service. A strike by clerical workers on March 15 of the latter year disrupts the company's flights. A B-747-148 is chartered to **British Caledonian Airways, Ltd. (BCAL)** on October 28.

With the delivery of a third Jumbojet, a B-747-44 purchased second hand from **Deutsche Lufthansa, A.G.** on January 5, 1979 and christened *Ciaran (St. Kieran)*, the Irish carrier's fleet at decade's end also includes 3 B-707-348B/Cs, 13 B-737-248s, and the 4 BAC-1-11-208ALs first acquired in 1965.

The Jumbojet out on lease to **British Caledonian Airways, Ltd. (BCAL)** is returned in February. It will be employed on September 29 to bring Pope John Paul II from Rome to Dublin; three days later it flies the pontiff from Shannon to Boston.

Cargo traffic for the year climbs 15% and passenger boardings are up 12% to 1,783,000.

The workforce in 1980 stands at 6,949. Ireland to Chicago service is discontinued on November 1. The deepening world recession brings a traffic decline as bookings fall 8% to 1,636,000. Freight traffic is down to 86.98 million FTKs causing the three B-707-348B/C freighters to be sold.

The employee population falls 3.2% in 1981 to 6,676. Airmotive, Ltd., Ireland's new engine overhaul facility at Dublin, is opened and "Executive-Class" B-737-248 service is introduced. The company's hostelry subsidiary Dunfey's, Ltd. purchases two U.S.-owned Irish hotels.

A defrocked Trappist monk, Laurence James Downey, showing bottles of gasoline, commandeers Flight 164, a B-737-248 with 118 passengers en route from Dublin to London, on May 2 and diverts it to Le Touquet, France. There, French antiterrorist police, who covertly board the Boeing, take the pirate into custody.

Also in May, the B-747-148 out on charter to **British Airways, Ltd. (2)** is returned. Passenger enplanements are up 11.4% to 2,399,000, but cargo is down again, by 3%, to 85.53 million FTKs.

In 1982 the roller-coaster world economy forces a dip in the number of travelers carried, down to 2,379,906.

The workforce is reduced 5.3% in 1983 to 6,238. The local service division **Aer Lingus Commuter, Ltd.** is formed and, outfitted with four Shorts 360s, begins flights across the Irish Sea to the U.K.

The sad traffic figures continue to roll in as passenger boardings decline 7% to 2,224,968. Freight is, however, a bright spot, increasing 20% to 91.56 million FTKs. The first financial figures become available; on the year, an operating loss of \$13.7 million and a net loss of \$1.7 million, respectively, are recorded.

The payroll is cut another 5% in 1984, to 5,800. Future CEO Gary Cullen is seconded to **LIAT (1974), Ltd.**, where he will spend the next three years as commercial manager.

Enplanements continue to fall, dipping 6.2% to 2,212,963. Cargo figures are not released. Revenues for the state carrier are \$457 million; operating and net profits of \$20 and \$8.5 million, respectively, are recorded.

Employment falls another 1.7% in 1985 to 5,700. Two boys from Dublin reported missing on August 18 turn up at New York (JFK) and tell police that they stowed away on an **Air India, Ltd.** flight from their home city; they are returned aboard the next Aer Lingus return frequency.

The steep decline in passenger boardings slows significantly, off only 0.48% to 1,829,000. Freight, however, drops 16.86%. On total revenues of \$322.7 million, a \$5.9-million operating profit is realized.

The carrier marks its fiftieth birthday in 1986.

On final approach to East Midlands Airport on a January 31 service from Dublin, a Shorts 360-100, with 2 crew and 33 passengers, suffers a roll to the left and collides with power lines and trees before coming to a stop 3.5 km. short of the runway; there are no fatalities.

A general decline in North Atlantic traffic damages business to a point where it is not reported. Still, two domestic routes are inaugurated and orders are placed for a pair of B-737-348s.

The Irish minister for transport and tourism, James Mitchell, commissions a study concerning *Financing Operations for the Aer Lingus Group*.

The year's overall enplanements rise dramatically, to 2,224,402, and there are profits: \$11.43 million (operating) and \$16.59 million (net).

Airline employment in 1987 stands at 5,500 and the Aviation Traders (Engineering), Ltd. subsidiary is sold to Cambridge, England-based Qualitair Engineering, Ltd. When **Royal Jordanian Airlines** withdraws its management contract from **Sierra Leone Airlines**, that African flag carrier must suspend operations. In September, the government, unable to locate another nation willing to assume a management contract for its air service, contracts with Aer Lingus to provide international flights from Freetown on its behalf.

The two B-737-348s join the fleet in December and enter service on the Dublin to London route, over which competition with new entrant **Ryanair, Ltd.** has intensified.

Customer bookings jump 12% to 2,527,729 while cargo ascends 4% to 83.7 million FTKs. Again gains are reported: \$6.98 million (operating) and \$16.3 million (net).

The workforce is decreased by 12.7% in 1988 to 4,800. Orders are placed for 4 B-737-548s and 2 B-737-448s and, at the end of March, service is initiated from a new Manchester hub to Copenhagen, Hamburg, Zurich, and Milan and between Dublin and London (STN).

President/CEO David Kennedy retires in May and Assistant CEO-Commercial Cathal Mullan is named his successor, effective in November.

The carrier's 39-unit Omni Hotels Group in North America is sold in July to World International, Ltd. and The Wharf, Ltd. of Hong Kong for \$135 million.

Enplanements grow by 32.4% to 3,346,403 while freight jumps 22.8% to 102.81 million FTKs. Revenues ascend 9.4% to \$422 and with costs down, operating income surges to \$ 17.95 million. Net gain is

\$30.45 million. Aer Lingus Group earns profits of \$55.72 million (operating) and \$52.9 million (net).

The payroll grows by 24.4% in 1989 to 5,970 and the fleet now includes 27 jetliners: 4 BAC-1-11-200s, 2 B-737-348s, 3 B-747-100s, and 14 B-737-200s. A joint overnight cargo service begins in March in co-operation with **Deutsche Lufthansa, A.G.**; employing German B-737Fs, flights are undertaken between Frankfurt and Birmingham, England. Also in March, a Lockheed L-1011-50 is leased from **American Trans Air**; the plane wears ATA colors only slightly modified (white shamrock on green background) on the tail above the center engine and Irish titles.

In April, following an eight-year absence, the Irish carrier resumes flights to Chicago, its third U.S. gateway city. During the month, it also wins a \$3-million contract to overhaul a **Qantas Airways (Pty.), Ltd.** Jumbojet, a project that will require seven weeks.

In a June speech, CEO Mullan criticizes the high cost of maintaining services between Dublin and London. The first of four B-737-448s arrives in September; the remaining three will be delivered by the end of the year.

The B-747-44 *Ciaran* (St. Kieran), painted in full **LanChile Airlines (Linea Aerea Nacioanl Chile, S.A.)** colors, is leased to the Santiago-based flag carrier on December 1. For the high summer season in South America, the Jumbojet is placed on the services from Santiago to Miami and New York and to Los Angeles.

Passenger boardings leap upward 21% to 4,037,956 and freight rises 15% to 118.57 million FTKs. Aer Lingus Group sees its revenues accelerate 17% to \$846 million and its expenses jump 17.5% to \$781.6 million. Operating income is \$18.7 million and net gain reaches \$36.09 million.

Company employment is increased by 9.8% in 1990 to 6,556. Construction begins in January on a new \$52-million maintenance hangar at the Dublin base. The *Ciaran* (St. Kieran) returns from Santiago on March 5.

TEAM Aer Lingus is organized as a new subsidiary to manage and operate the facility. To cut costs, on November 27 the company announces a yearlong deferral of its planned startup of Dublin-Los Angeles service. The first B-737-548 arrives in December, at which time the carrier becomes the first owner/operator of all three new versions of the "Baby Boeing."

Customer bookings are up only 5%, to 4,260,000, but cargo jumps 9% to 128.7 million FTKs. A \$31.52-million net gain is registered atop a \$14.43-million operating net.

The payroll is cut 10% in 1991 to 5,900 and the fleet now includes: 1 B-737-248, 2 B-737-281s, 1 B-737-2E1A, 1 leased B-737-2S3A, 2 each B-737-248As and B-737-248Cs, 1 B-737-248A/C, 2 B-737-348s, 5 B-737-448, 5 B-737-548s, 1 B-747-130, 2 B-747-148s, and 2 B-767-3Y0ERs, which are leased to **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**. In January, 4 SAAB 340Bs are ordered for the commuter subsidiary.

Prime Minister Charles Haughey cuts the ribbon to open the new \$60-million TEAM Aer Lingus Dublin maintenance hangar in May. Weekly service begins in early August from Cork to Amsterdam. Later in the month, the two B-747-148s are sold to Global Aircraft Leasing (of the Cayman Islands) for \$38 million and are then chartered back for five years.

Recession and the Persian Gulf crisis forces passenger traffic down 1.2% to 4,019,600. Freight falls 10.1% to 115 million FTKs. There is a net loss of \$64.4 million.

A sixth B-737-448 and three B-747-548s are acquired in 1992. In January, an agreement is announced with new **Byelorussian Airlines** under which the two carriers will operate a joint service from Minsk to New York via Shannon; the Irish airline will fly the Ireland to North America segment. The Aeromexico lease ends; one B-767-3Y0ER is withdrawn and the second is chartered to **Air Aruba**. In March, the competition directorate of the European Economic Commission fines the carrier for its refusal to grant reciprocal ticketing rights to **British Midland Airways, Ltd.** on the Dublin-London route.

TEAM Aer Lingus opens a \$9.3-million B-747 maintenance hangar and stores facility at Dublin in July. As fiscal difficulties worsen, the carrier suspends services to Paris and Amsterdam via Manchester in the fall, as well as its route from Dublin to London (LGW). When the Irish government of Prime Minister Albert Reynolds collapses in November, pressures to privatize the carrier subside.

After ten years on the board of directors (two five-year terms), Desmond Traynor now resigns.

A block-space agreement is signed with **Sabena Belgian World Airlines, S.A.** for space aboard Belgian aircraft flying between Dublin and Brussels.

Customer bookings inch up 1.8% to 4,344,544 while cargo drops 4.8% to 110.2 million FTKs. Recession smashes into the carrier for a second straight year, forcing another huge financial loss exceeding \$60 million.

In 1993, facing the questionable survival of his company in light of recession and government indifference, CEO Cathal Mullan resigns in March. Chairman Bernard Cahill, elevated to the position of executive chairman, wins permission to restructure the airline. The search now begins for a partner to work with the company's maintenance arm, TEAM Aer Lingus.

During the same month, an interline traffic agreement is signed with **Air Ukraine** and enables the two carriers to sell tickets on each other's services; this pact is followed by two others covering sales on computerized reservations systems and sales representation.

Chairman Cahill and the new CEO for passenger services, Peter Owen, oversee an employee population of 6,556 and a leased fleet that includes 10 B-737-548s, 6 B-737-448s, 2 each B-747-148s, B-767-3Y0ERs, B-737-248Cs, B-737-348s, and B-737-248As, and 1 B-737-248CA. Owned is a B-747-130, and owned but out of service are 1 each B-737-248, B-737-281, B-737-2E1A.

Destinations from Dublin include Amsterdam, Birmingham, Boston, Bristol, Brussels, Copenhagen, Cork, Connaught, Dusseldorf, East Midlands, Edinburgh, Frankfurt, Glasgow, Jersey, Kerry County, Knock, Leeds/Bradford, London (LHR), Madrid, Manchester, Milan, Newcastle, New York, Paris, Rome, Shannon, Sligo, and Zurich. From Cork, green-liveried aircraft fly to Amsterdam, Dublin, London, Manchester, Paris, and Rennes, and from Shannon they reach Boston, Dublin, Dusseldorf, London, New York, and Paris. From Manchester, frequencies are stretched to Cork, Copenhagen, and Zurich.

In April, a B-737-548 is leased from International Lease Finance Corporation; it is the one hundredth "Baby Boeing" delivered to ILFC. CEO-Passenger Services Peter Owen is named overall CEO at a May press conference, with Lawrence Stanley as director of subsidiaries. Chairman Cahill also reports that Donal Downing, CEO-airline services and a 34-year veteran, will retire at the end of July.

A survival plan for the struggling, state-owned carrier entitled "Strategy for the Future" is approved by the government on July 7. It calls for the elimination of 1,500 jobs, sale of the company's Copthorne hotel chain, elimination of the Shannon stop on the New York run, and a government infusion of Ir £250 million (US \$260 million) to ease the \$750-million debt. This Air Companies Act also changes the ancient coexistence of the operating subsidiaries.

Aer Lingus Group now holds the share of two operating airline companies, Aer Lingus (intra-European services) and Aer Lingus Shannon (the former Aerlinte Eireann, the restructured transatlantic flying arm), plus various nonflying subsidiaries. Gilbey's of Ireland CEO Gary McGann now becomes Aer Lingus Group chief executive with Bernie Cahill remaining executive chairman. Gary Cullen, a 25-year company veteran, becomes operations director and general manager for cargo.

Aer Lingus unions are strongly opposed and on October 10 they are told that the carrier will take whatever measures are necessary if accommodation is not reached on the vital cost cuts by October 31. Also in October, the company contracts with **Hunting Cargo Airlines, Ltd.** to operate some of its European freighter services.

On November 26, workers approve the radical revamping program and on December 21, the European Union approves the government's

plan to pump Ir £175 million, or some \$248 million, into the ailing airline. A series of stringent conditions for the aid's use are applied, including no further government aid, no fleet expansion, and the creation of separate subsidiaries for specific purposes.

The package will be challenged in court by low-fare competitor **Ryanair, Ltd.**

During the year, an alliance is entered into with **British Airways, Ltd. (2)** covering general sales agency, cargo cooperation, and connections onto Aer Lingus flights to Dublin. Passenger and cargo numbers are not immediately revealed, although it is known that revenue passenger miles are down by 6.1% to 4.3 billion. Revenues total \$715 million and expenses are \$793.7 million. As a result, the operating loss is \$75.2 million and the net loss is \$17.2 million.

In early 1994, the company receives the European Union-approved government subsidy of \$260 million to tide it over while Chairman Cahill launches his restructuring plan. In response to Aer Lingus pressure in March, the Dublin government lifts its longstanding rule that all flights to and from Dublin must also stop at Shannon. Consequently, on April 9 nonstop Dublin to New York flights begin, with an elimination of the previous—almost historic—Shannon stop.

The first plank in the platform of the future is placement onto its transatlantic routes on May 16 of the first of three, leased Airbus Industrie A330-301s, the *St. Flannan*. The jetliner is the first of its type by any carrier to inaugurate service on that route. Upgraded in-flight services for "Premier-Class" and standard-class passengers, as well as revised ticketing facilities are also put into place.

The three remaining Jumbojets are withdrawn from service by the end of summer. The company also begins to promote Dublin over Shannon as a faster and more convenient hub alternative to London for passengers traveling from the U.K. to Boston and New York and transatlantic departures are timed with services of the feeding subsidiary, **Aer Lingus Commuter, Ltd.** After an initial negative vote by its 1,300 members in early October, the craft workers' union two weeks later votes to accept the Labour Court's compromise ruling; in return for leaner work rules and less pay, TEAM Aer Lingus promises to recall 500 laid off workers as soon as business improves.

An era ends when the last two B-737-248As and single B-737-248CA are withdrawn. In November, the EU reviews its 1993 decision and agrees to a capacity increase on U.K. routes (excluding those to London) to 3.8-million seats. Late in the year, plans are announced by Aer Lingus Group to privatize its **Irish Helicopters, Ltd.** subsidiary through its sale.

Enplanements drop further this year, down to 3,949,578, and financial figures released for the group show revenues of \$2.36 billion. Although the airline shows an operating gain of \$52.52 million, it takes a huge \$194.34-million net loss.

The workforce stands at 5,900 in 1995 as business does in fact begin to improve. As a result of new emphasis on Dublin, the number of passengers employing the "Premier Class" service to New York grows 52% in a year. It is announced on April 3 that three British Aerospace BAe 146-300s have been requested from Asset Management Organization; the chartered BAes arrive in mid-May and June and are turned over to **Aer Lingus Commuter (Aerlinite Eireann Tioranta, Ltd.)**.

On July 28, **Bristow Helicopters, Ltd.** of the U.K. takes a 51% stake in **Irish Helicopters, Ltd.** while **Petroleum Helicopters** of Louisiana purchases the remaining 49% interest, the maximum allowed for foreign ownership under EU rules. The combined price is \$8 million. The rotary-wing carrier is allowed to retain its identity and current management team.

A controversial government bailout program is started for Aer Lingus Group. Meanwhile, the company accepts a loss in gross revenue when it sells its Cophorne hotel chain. In October, the Irish line, employing its own aircraft, begins to code-share over the route from Dublin to Amsterdam.

Passenger boardings jump 11.5% to 4,462,800 while freight climbs 4.8% to 107.07 million FTKs. Operating revenues advance by 4.5% to \$1.11 billion and costs are \$1.04 billion. As a result, the operating profit swells to \$68.55 million, later adjusted downward to \$65 mil-

lion, and a net gain of \$23.74 million is posted, a huge turn around from the previous year's loss.

The government infusion into Aer Lingus Group continues in 1996. On February 14, a new color scheme is unveiled for company aircraft. Fuselage bottoms to the windowline are white, a green cheatline covers the windowline, and fuselage tops are a light blue. The color of the tail shamrock changes from white to green.

In March, the **Caledonian Airways, Ltd.** L-1011-100 *Loch Fyne* is leased for the summer. The Lockheed is given Aer Lingus titles and has its tail painted kelly green with a light green shamrock; however, the remainder of the fuselage retains its navy blue bottom and white top.

A third U.S. gateway is added when service is begun to Chicago. A code-sharing program is started with **Delta Air Lines** in May that provides daily flights from New York (JFK) to Dublin and Shannon. Enplanements climb 6% to 4.8 million and revenues top \$1.23 billion. With expenses of \$1.16 billion, the operating profit grows to \$67.6 million and net gain nearly triples to \$65.8 million.

Airline employment is increased by 7.8% in 1997 to 5,510. At the beginning of the year, director of operations Garry Cullen is named the airline's COO over 59 other applicants.

The *Loch Fyne* is again leased in March for the summer. At the same time, a B-737-548 is chartered to **Nordeste Linhas Aereas Regionais, S.A.** of Brazil. A fourth U.S. gateway is opened at Newark (EWR) at the beginning of the summer season in March. The seasonal destination is programmed to become year-round later.

Also at this time, the company introduces a "Discover Ireland" program that allows tourists to visit and stay in selected Ireland, U.K., and European cities to which it flies.

To offset service lost to Ireland as the result of the abrupt cancellation of a code-sharing pact between **Continental Airlines** and **World Airways**, the *Loch Fyne* inaugurates six-times-a-week, summer-only return service on May 15 between Shannon and Newark (EWR), New Jersey.

Also in May, a block-seat arrangement is made with **Finnair O/Y** for flights from Dublin–Stockholm–Helsinki. During the spring and summer, a search is undertaken for a major (read U.S.) code-sharing partner.

A330-301 transatlantic operations are increased to 56 flights per week on July 1. Also in July, the airline enters into new contract negotiations with its critical unions.

The fiftieth anniversary of Dublin to Glasgow service is celebrated on July 29. Two days later, the fiftieth anniversary of Shannon to London service is also celebrated. All customers traveling those routes on those days receive commemorative gifts.

In August, after a highly competitive series of presentations by several firms, Aer Lingus chooses the advertising agency Irish International to create its new brand promotions.

Two-for-one fares are offered on flights to Dublin from Chicago, Boston, and New York between November 15 and December 14.

Also in November, orders are placed with Airbus Industrie for a pair of A310-200s powered by CFM56 engines for delivery in early 1999.

Customer bookings jump 10.9% to 5,270,000, while cargo does almost twice as well, rising 19.6% to 122 million FTKs. Revenues total Ir £802.3 million and pretax profits jump 10% to Ir £65.5 million. However, costs associated with the troubled TEAM Aer Lingus maintenance operation leave the carrier with a Ir £65.2-million net loss.

It is announced on February 10, 1998, that this year's "Discover Ireland" program for summer vacationers will be expanded and made more flexible. Arrangements are completed with **World Airways** for the wet lease of a McDonnell Douglas MD-11 to supplement the Irish carrier's fleet during the upcoming summer season.

"Premier Service" business class thrice-weekly A330-301 return flights commence from Dublin and Shannon to Newark (EWR) on March 1. The service, first introduced on a summer-only basis in 1997, is now year-round. A pair of BAe 146-200s, previously operated by **Atlantic Southeast Airlines**, is leased from BAe AMJ later in March.

A now-personalized and bitter industrial action between baggage handlers and the management of **Ryanair, Ltd.** reaches its zenith. Service,

Industrial, Professional and Technical Union (SIPTU) members at Ryanair, Aer Lingus, and **CityJet, Ltd.**—thousands of workers in total—vote not to cross the picket lines of Ryanair baggage handlers. The action forces the cancellation of almost all flights by Irish carriers on March 7 and the closure of the Dublin Airport.

Ironically, by March 8 many Ryanair services are operating smoothly, while the state carrier, from whence most of the supporting demonstrators originate, is practically shut down. Thousands of passengers are inconvenienced and the conflict is covered extensively by the electronic media. After five hours of tense emergency talks at government buildings led by the prime minister and other top government officials, as well as opposition politicians and trade union leaders, both **Ryanair, Ltd.** CEO O'Leary and the SIPTU agree to a five-point formula that will ensure an orderly resumption of work.

"Appearances," the company's first new corporate advertising campaign, is launched on March 17, St. Patrick's Day, with 60-sec. TV spots on RTE 1, Network 2, UTV, and Channel 4. Over the next two years, Ir £2.2 million is spent on production and media to complete the campaign. Also on St. Patrick's Day, the airline takes the opportunity to introduce new male and female flight crew and cabin crew uniforms.

With the beginning of the summer season, flights from Belfast to New York are increased from three each week to four. Additional capacity allows the company to offer 120,000 seats to the U.S. this year at one-way prices ranging from Ir £319 (New York/Boston) to Ir £449 (West Coast).

Frequencies on the A330-301 roundtrip service to Newark (EWR) become daily in early April.

It is reported by *The Irish Times* on April 17 that since the Dublin Airport disruption of March 7-8, Aer Lingus has received over 1,000 claims and expects to pay in excess of Ir £1 million to settle them.

The fortieth anniversary of New York service is celebrated on April 28; Chairman Cahill describes the inaugural flight as a "groundbreaking."

On May 1, a new code-sharing agreement begins with **AB Airlines, Ltd.** The two partners link their frequent flyer programs and promise to offer dual-designator service over two new **AB Airlines, Ltd.** return routes from Birmingham and London (LGW) to Shannon.

The MD-11 operated by **World Airways** in Aer Lingus livery simultaneously enters service, operating return passenger service between New York (JFK) and Shannon six times per week, with flights extended to Belfast.

The first of two A321-211s to be chartered from ILFC arrives at Dublin on May 11 and is christened *St. Fergus*. The same day it is announced that a \$700-million deal has been completed with Airbus Industrie in which the state carrier will lease and buy 11 more aircraft over the next 5 years. The new equipment will replace B-737s on the Dublin to London (LHR) route.

Airline Chairman Cahill is named executive chairman of Aer Lingus Group on May 21, succeeding Group CEO McGann who has become a senior manager with the Jefferson Smurfit Group.

On May 22, the carrier introduces daily return service from Boston to Birmingham, England, via Shannon. The company now offers 200 daily flights to 30 cities in the U.S., Ireland, Britain, and Europe. The dual-designator agreement with **AB Airlines, Ltd.** takes also takes effect on May 22 with AB aircraft flying to and from Shannon.

As the result of a due diligence process begun by Denmark's FLS Industries, A.S. for the purchase of the airline's maintenance arm, TEAM Aer Lingus, the company during the month offers to buy out the job guarantees of TEAM's 1,500 workers. The workers vote not to accept and FLS halts its takeover activities.

Delta Air Lines begins nonstop block-seat, dual-designator return service with Aer Lingus between Newark and Shannon on June 1, employing the Irish line's A330-301s. During the month, airline officials stress that they can no longer afford to operate TEAM Aer Lingus and, unless a purchaser is found, the unit will be shut down.

Voting a second time on July 6, TEAM Aer Lingus workers overwhelmingly agree to allow the airline to purchase their job guarantees for a collective Ir £54.6 million (\$77.7 million). Within weeks, FLS will complete its Ir £25-million acquisition.

The number of A330-301 roundtrip flights to Chicago is doubled on July 14 to six-per-week.

Effective July 19, customers purchasing transatlantic tickets with their American Express cards are awarded a free onward ticket from Ireland to 17 cities in Europe, which may be visited between September 15 and November 15.

It is announced on September 1 that, effective June 1999, the company will fly thrice-weekly roundtrips between Dublin and Los Angeles.

On September 8, the Irish Cabinet gives the airline permission to seek a strategic airline partner. Deputy Prime Minister Mary Harney meets with airline executives the next day to discuss possible future developments and their schedule.

The challenge by **Ryanair, Ltd.** to the 1993 state-aid package is lost in mid-September when the European Court of First Instance rules that Aer Lingus has in fact adhered to all of the conditions laid down for receipt of the \$259 million in assistance. Receipt of the ruling allows the Irish government to authorize the carrier to being a search for a U.S. alliance partner.

On August 31, the carrier announces that it has ordered an A330-202 which, beginning in June 1999, will be employed to open a fifth U.S. gateway—Los Angeles. The addition will increase Aer Lingus's transatlantic capacity by another 20%. The A330 request is part of an Ir £250-million (\$350-million) order that also includes 6 A321s and 6 A320s.

Aer Lingus Group Executive Chairman Cahill on September 25 announces the promotion of COO Cullen to CEO, effective October 1.

On November 9, the contract with **World Airways** for the wet-leased MD-11 is renewed. The wide-body will continue its transatlantic passenger services through the holiday season and into January, as well as between May and October 1999. At the same time, a B-737-448 is chartered to **Ryan International Airlines**; Ryan will operate the aircraft for Trans Global Tours on winter season package tour vacation flights from Minneapolis (MSP) to Florida and Las Vegas.

In December, the airline reports to the government that it has spoken with every major U.S. carrier, including **Trans World Airlines (TWA)**, as part of its search for a strategic partner.

Customer bookings accelerate 9.9% to 5.5 million, while freight traffic rises 6.2% to 129.65 million FTKs. Turnover climbs 12.4% to Ir £901 million (\$1.2 billion) and pretax profits jump 13.7% to Ir £52.4 million (\$75.13 million).

In addition to the MD-11, the fleet in 1999 includes 5 A330-301s and 2 A321-211s, along with 2 B-737-248As, 6 B-737-448s, and 10 B-737-548s. Four more A321-211s will be received from ILFC by the end of the year.

Not convinced that Flight 712, the *St. Phelim*, was lost through aircraft failure back in March 1968, Ms. Mary O'Rourke, the republic's public enterprise minister, reopens the case of the disaster with British Ambassador Dame Veronica Sutherland on January 12.

Ralph Riegel of the *Irish Independent* surveys the on-going fare war between Aer Lingus and **Ryanair, Ltd.** on March 15. With existing fares already as low as Ir £9.99 one-way from Dublin to London or Ir £129 for a return for two to Paris, both airlines are preparing to step up their campaigns by fall as they undertake a fleet upgrade worth a combined Ir £715 million (\$1 billion).

The two carriers are preparing to complete contracts with rival manufacturers Boeing and Airbus, which are, themselves, engaged in a price war covering the 38 new jetliners the 2 Irish airlines will be receiving. Having already taken delivery of the four new ILFC Airbuses, the carrier awaits the larger A330 and the start of U.S. West Coast flights.

While on the second leg of a March 30 A330-301 service from Shannon to Chicago (ORD) via Dublin Irishman James Connors becomes verbally abusive because of a delay in bringing the service cart. After threatening crew and passengers and suggesting he will open the aircraft's doors, the captain orders the man handcuffed at the rear of the plane. After the Airbus arrives at Chicago, Connors is arrested and taken before a federal magistrate the next day.

At a Dublin press conference called on April 15 to report the previous year's economic returns, Chairman Cahill informs reporters that Aer

Lingus will deliver a report to the government by month's end that will suggest which of several possible strategic partners the carrier may choose. After conversations with **United Airlines**, **Trans World Airlines (TWA)**, **Delta Air Lines**, and other major carriers, discussions have also been held with representatives from all four of the world's big airline alliances.

The Irish Times reports on April 23 that the Irish public enterprises minister, Ms. Mary O'Rourke, has expressed reservations concerning particularly the equity proposals of **American Airlines** and **British Airways, Ltd. (2)**.

CEO Cullen and Strategic Director Larry Stanley, representing the considered opinion of the airline's management, ask the Aer Lingus board on the morning of April 29 to join the "OneWorld" airline alliance, headed by **British Airways, Ltd. (2)** and **American Airlines**. Both the U.K. and U.S. majors, with whom Aer Lingus will have direct marketing agreements, have agreed to sponsor the Irish line's membership in the multi-airline grouping. The board accepts this recommendation, which is passed along to Ms. O'Rourke, public enterprise minister.

The Irish Times, in reporting the move later in the day, indicates that one or both of the major alliance partners may take a small equity stake (5% to 10%) valued at approximately Ir £60 million, with company employees also gaining shares. Completion of the alliance arrangement will clear the way for a public offering of Aer Lingus stock which, in turn, would raise the funds needed for future growth and expansion.

British Airways, Ltd. (2), reacting for "OneWorld" to the Irish line's announcement, expresses its pleasure, but notes that definitive arrangements must still be completed both with itself and **American Airlines** before entrance into the multi-airline group can be accomplished.

On April 30, the *Irish Independent* reveals that Ms. O'Rourke gave her preliminary approval to the strategic alliance plan the previous evening, as had a group of the airline's unions. The latter also express fear that Aer Lingus management is placing too much emphasis on getting partners who are willing to purchase shareholding. The airline staff, which already has a 5% stake, largely wishes to remain state-employed.

A spokesperson for Ms. O'Rourke indicates that a government decision will be officially announced within six weeks to two months. The New York-based investment firm Solomon Smith Barney acts as auditor for the proceedings. If, as expected, approval is provided, Aer Lingus officials will finalize the "OneWorld" contract.

It is announced in London later in the day that, given developments, Aer Lingus and **Delta Air Lines**, a member of the Star Alliance (a "OneWorld" rival), are ending their code-sharing relationship.

World Airline News reports on May 7 that the Irish government has put out indications that it may, in fact, go ahead and fully privatize the airline, rather than remaining an equity shareholder.

On May 14, having been unable to recover from the loss of its London (LHR) ground handling contract with **Deutsche Lufthansa, A.G.** to **British Midland Airways, Ltd.** a year earlier, Aer Lingus announces that it has placed its entire handling unit at the British aerodrome up for sale. The sell-off impacts all 1,000 Aer Lingus workers at Heathrow Airport, including baggage handlers, check-in staff, and engineers.

The chartered A330-202 is delivered in mid-May; christened *Mella/St. Mella*, it is employed to inaugurate thrice-weekly nonstop service from Los Angeles to Dublin and on to Shannon return service on May 28.

On July 22, Minister of Public Enterprise O'Rourke informs CEO Cullen that the carrier has won clearance to join "'OneWorld'." On the other hand, she also notes that the Irish government is ruling out sale of an equity stake in Aer Lingus to the alliance partners. Instead, the funding gaps anticipated over the next year or so will probably be offset by an initial public offering.

At the beginning of the winter holiday schedule at the end of October, the company charts the B-737-448 *St. Caimin* to **Ryan International Airlines** of the U.S., which operates it on behalf of Apple Vacations. The Baby Boeing wears the Irish line's colors, with Apple Vacation titles (Ryan is not visibly mentioned).

Alliance agreements are signed with **British Airways, Ltd. (2)** and **American Airlines** on November 25 and the carrier officially files papers to join "OneWorld" on December 2. The run up toward privatization, which has continued this year, results in a new and welcome December 14 government floating announcement.

Overall customer bookings accelerate 13% to 6,528,000 while cargo rises 6% to 137.99 million FTKs. The following September 27 the airline reveals that sales for the year have risen to 1.13 billion euros. Higher fuel prices and competition from low-cost airlines conversely force profits to fall 30% to 51.9 million euros.

Airline employment at the beginning of 2000 stands at 6,133, a 9.1% boost over the previous 12 months. All operations in London are transferred in January from Gatwick Airport to Stansted.

After 35 years with the carrier, Aer Lingus Group CEO Gary Cullen suddenly resigns on February 9 for personal reasons. Chairman Cahill reluctantly accepts Cullen's withdrawal, names deputy CEO Lawrence Stanley as interim chief, and begins the search for a new leader.

Not quite a formal alliance partner, Aer Lingus begins code-sharing with **British Airways, Ltd. (2)** on March 15 as part of the wider program that will include reciprocal frequent flyer programs, passenger lounges, and smoother passenger transitions. New direct service to Munich and Stockholm commences on March 23.

With the start of the summer season on March 26, an MD-11, operated under an ACMI contract with **World Airways**, again flies from Shannon to New York (JFK) six times a week. Five-times-a-week B-737-548 roundtrips are simultaneously launched from Dublin to Stockholm and Munich.

Also, the carrier's EI code is added to **CityFlyer Express, Ltd.** flights between London (LGW) and Dublin and on **British Airways, Ltd. (2)** services from London (LHR) to Berlin, Bologna, Budapest, Copenhagen, Munich, Nice, Prague, Venice, and Vienna.

Employing one of the Swiss carrier's MD-83s, Aer Lingus also begins to code-share on daily **Crossair, Ltd.** return flights between Zurich and Dublin.

Also on March 26, the EI code is placed on **CityFlyer Express, Ltd.** flights from London (LGW) and Dublin and on **British Airways, Ltd. (2)** frequencies from London (LHR) and Berlin, Bologna, Copenhagen, Munich, Nice, Vienna, and Venice.

With its Apple Vacations titles painted out, the *St. Caimin* returns to Ireland via Goose Bay at the beginning of May. The second A330-202 arrives on May 12 and is christened *St. Laurence O'Toole*; it will enable the carrier to boost to daily its Los Angeles service.

The Irish flag carrier becomes a full "OneWorld" member on May 31.

Its delivery long delayed, the first of 4 A320-214s arrives on June 22 and is christened *St. Schira*.

On July 4, Minister O'Rourke announces that her department has commissioned an independent study of the controversial 1968 Viscount accident near Tuskar Rock. For some time it has been alleged that key maintenance records missing earlier have been located and covered-up.

Following his July 5 appointment, Michael Foley, President/CEO of Heineken USA, becomes group CEO on September 1.

The company's sixth U.S. gateway is inaugurated on September 6 with thrice-weekly A330-202 roundtrip flights from Shannon and Dublin to Baltimore (BWI).

Aer Lingus pilots, represented by the Irish Airline Pilots Association, refuse to work overtime on their days off, beginning in early October, unless they collectively receive pay parity with other "OneWorld" flyers; the company indicates it cannot afford the higher rates. This exchange marks a new beginning of significant labor unrest for the airline.

For the first time in 22 years, an industrial action causes the carrier to cancel some services; over 200 flights must be scrubbed on October 16 as the result of a 2-hour strike by the airline's baggage handlers.

The company is completely shut down on October 17 when members of IMPACT, the union representing the cabin crews, walk off the job. Over 200 flights must be cancelled and more than 20,000 passengers are affected. The next day, Aer Lingus managers agree to meet with union officials to discuss outstanding issues.

On November 19, the clerical workers' union, SIPTU, warns that it will stage a four-hour work stoppage on October 27. Increased pressure is applied when Public Enterprise Minister Mary O'Rourke indicates that the company's privatization plans cannot proceed until all Aer Lingus industrial disputes are resolved.

When the 4,000 SIPTU members go out at Dublin, Cork, and Shannon on October 27, 35 of the carrier's 260 flights must be cancelled, including almost all domestic service and its 14 flights to London (LHR/LGW/LCY), Manchester, Edinburgh, and Birmingham. Many others are delayed. The union's leaders simultaneously announce that a 24-hr. strike will be staged on November 3. It will follow a 24-hr. strike planned by catering staff for November 2.

AER LINGUS IRISH AIRLINES, P.L.C. See **AER LINGUS IRISH AIRLINES, LTD.**

AER LINGUS SHANNON. See **AER LINGUS IRISH AIRLINES, LTD.**

AER TURAS TEORANTA (IRISH CARGO AIRLINES, LTD.): Corballis Park, Dublin Airport, Ireland; Phone 353 (1) 844-4691; Fax 353 (1) 844-6049; Code ATT; Year Founded 1963. Following the summer 1962's joyriding flights offered at Dublin Airport by the owners of a de Havilland DH 89A Dragon Rapide, it is decided to begin formal charter operations. Among the first operations undertaken is the September 1963 carriage of members of the Irish Society of Aviation Enthusiasts to Belfast. Ad hoc operations cease in September 1964. During the winter the company is reorganized and in January 1965 the DC-3 is replaced by a retired **Air France** DC-4, christened *Romeo Sierra*. Passenger and freight charters resume in June.

To make up for the July loss of a Vickers Viscount, **Cambrian Airways, Ltd.** contracts with Aer Turas for use of its DC-4. This, plus a newly purchased ex-military C-54 and crew, complete the British carrier's chartered and scheduled flights out of Cardiff and Liverpool during the remainder of the year and the next.

This contract exposes the Irish carrier to potential customers who provide additional business when it purchases two Bristol 170 Freighters, christened *Papa Charlie* and *Papa Mike*, in 1966. These undertake a variety of charters, including livestock and racehorses, and flights are completed as far off as Copenhagen, Rome, and Singapore. Another ex-military C-54, christened *Monarch of Munster*, is added in December.

During 1967-1968, the Bristols are employed to transport cargo, under contract to **Aer Lingus Irish Airlines, Ltd.**, to London (LHR), Manchester, Birmingham, Bristol, and Liverpool.

While on final approach to Dublin on a cargo service from Prestwick on June 12 of the former year, Flight 612, the Bristol 170 Mk. 31E *Papa Mike* with two crew, bounces several times on touchdown and attempts to go around. While banking, the left wing hits an apartment building, causing the aircraft to crash; there are no survivors.

The fleet is upgraded in early 1969 when four DC-7CFs are acquired from **KLM (Royal Dutch Airlines, N.V.)**. Two of the Douglas freighters are immediately resold; however, two, christened *City of Dublin* and *City of Limerick*, are placed in service from Shannon flying racehorses and other cargo to destinations in the U.K., Italy, France, and Ireland. Two C-54s are sold during the year. In 1970, DC-7CF all-cargo charters are flown to New York and Caracas. The *City of Limerick* is sold in April followed by the *City of Dublin* in August 1971.

The aging Bristol 170 *Papa Charlie* is sold to the small French airline **Transportes Aeriens Reunis, S.A.** in 1972. An Argosy freighter, *The Consortium*, is leased from **Transair, Ltd.** to fly thoroughbred charters Ireland-France during the summer; unsatisfactory, the aircraft is returned to its Canadian owner in September. Another DC-7CF is acquired in November; it, too, is christened *City of Limerick*. The company DC-4 flies UN relief flights in India and Pakistan under charter to the High Commissioner for Refugees in 1973.

The main gear tires of the DC-7CF *City of Limerick*, with 5 crew and 6 passengers, burst upon landing at London (CTN) on March 3, 1974,

forcing the plane to overrun the runway and plunge down a bank, coming to rest on soft ground. There are no fatalities, but the aircraft is wrecked.

To replace the DC-7CF, the carrier in April leases a Bristol Britannia 307F from **Monarch Airlines, Ltd.**; christened *City of Dublin*, it enters service on May 29. During the remainder of the year, the Bristol flies livestock and cargo charters from Dublin to destinations in the U.K., Italy, Africa, Chile.

During 1975, the Britannia and DC-4 fly numerous "tramp" charter operations in Europe, the Middle East, and Africa; the company fleet is upgraded in September by the addition of an ex-RAF Britannia 253F, christened *City of Cork*.

Operations continue apace in 1976-1979. Planning to initiate return cargo services from Lisbon to Luanda in 1978, the new Portuguese carrier Eurafric, S.A. is unable to begin services. The Bristol Britannia 235 that it had acquired for operations is, instead, leased to Aer Turas.

In 1980, the state carrier **Aer Lingus Irish Airlines, Ltd.** purchases 54% shareholding and, in 1982, a Douglas DC-8-63CF is leased from **Car-golux Airlines International, S.A.** It is purchased from the Luxembourg-based freight operator in 1984, the same year **Aer Lingus Irish Airlines, Ltd.** increases to 75%. At the same time, the carrier enters into a long-term contract with **Saudia (Saudi Arabian Airlines)** and begins flying that company's all-cargo service with its DC-8-63CF from Riyadh, Jeddah, and Dharan to Brussels, Addis Ababa, and Khartoum.

Meanwhile, airline employment grows to 50 and the fleet is improved; the DC-4 and DC-7s are retired and replaced with a Canadair CL-44D-4, which is committed to the needs of **Aer Lingus Irish Airlines, Ltd.** In January 1986, the former CL-44D-4 is exchanged for another of the same type.

Operations continue with little change in 1987-1988 as special emphasis is placed upon the transport of livestock. Destinations throughout Europe and the Middle East are served, with the occasional flight to Asia, Africa, or North America.

By 1989, the fleet includes the CL-44D-4, which is sold to **Heavylift Cargo Airlines, Ltd.** in May, and the DC-8-63CF. The Eurafric, S.A. Britannia is withdrawn.

In 1990, the original DC-8-63CF remains dedicated to **Saudia (Saudi Arabian Airlines)**, but two new DC-8-63Fs are acquired. This arrangement is maintained in 1991-1992. In 1993, Chairman B. Wheatley and President/CEO P. J. Cousins oversee a workforce of 70.

The company is sold in a management buy-out during 1994 and J. J. Harnett becomes the new chairman; President/CEO P. J. Cousins remains in office. One of the DC-8-63CFs is sold to Miami-based Aerolease late in the year and is then passed to **Air Transport International**. Ad hoc scheduled cargo flights continue to be made in 1995-1996, largely on behalf of **Saudia (Saudi Arabian Airlines)**.

The fleet is increased in early 1997 by the addition of a Lockheed L-1011-385-1 TriStar 1. In late March, it is chartered for the summer to **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Painted in the full livery of the Spanish major, the Irish aircraft is the first of its type to fly with Iberia and enters charter service from Madrid to the Canary Islands.

Freight service, with an emphasis on livestock transport, continues in 1998-1999. The Lockheed TriStar is chartered to **Air Scandic, Ltd.** during the summer of the latter year.

AEREA TESEO, S.p.A.: Italy (1947-1948). The Societa Aeronautica Italiana forms this carrier at Florence on June 2, 1947. Employing ex-military Douglas C-47s upgraded to DC-3 civil standard, the company stretches two routes from Florence: to Catania via Rome and to Milan via Bologna. A service is also opened between Rome and Madrid via Barcelona.

As is the case for several other postwar Italian independents, Aerea Teso is not successful. Early in 1948, it is taken over by a competitor, **Salpanavi, S.p.A.**

AERIAL TOURS, LTD. See **DOUGLAS AIRWAYS, LTD.**

AERIAL TRAFFIC COMPANY, A.G. See AERO ASSOCIATION LUCERNE

AERIAL TRANSIT COMPANY: United States (1984–1994). ATC is established by Charles A. Lawson at Miami (MIA) in late 1984 to provide scheduled all-cargo services to destinations in the southeast U.S. and Latin America, especially Mexico and Central America.

Outfitted with 1 Curtiss C-46A and 3 Douglas DC-6As, the 38-employee company begins revenue services in early 1985. A total of 7.3 million FTKs are flown by late December. Revenues total \$2.49 million, costs are held to \$2.42 million, and operating income of \$66,000 is achieved. Net gain is an identical \$66,000.

Three workers are dismissed in 1986; however, cargo climbs 10.8% to 8.13 million FTKs. Revenues ascend 3.1% to \$2.57 million, expenses jump 7.3% to \$2.6 million, and the operating loss is \$31,980. Net profit, on the other hand, rises to \$140,447.

Two new employees are hired in 1987 and the fleet is increased by the addition of two DC-6BFs, which replace the Curtiss Commandos. Freight swells by 10.3% to 8.97 million FTKs. Although revenues advance by 13.2% to \$2.9 million, costs, up 16.4% to \$3.03 million, again exceed income. The operating loss accelerates to \$121,314.

The payroll increases by 24.3% in 1988 to 46 and the fleet now includes 3 DC-6As and 2 DC-6BFs.

Cargo advances by 37.4% to 11.3 million FTKs. Revenues increase 50.2% to \$4.369 million, but expenses climb 44.2% to exactly the same figure. There is neither operating nor net gain or loss.

Another DC-6B joins the fleet in 1989 and helps to push freight traffic up by 14.1% to 12.89 million FTKs. Revenues climb 24.1% to \$5.42 million, but costs jump 33.1% to \$5.81 million. The resulting losses, both operating and net, are \$395,000 each.

The 80-employee company has a dismal 1990. While climbing away from Guatemala City on May 4 a DC-6BF with 3 crew loses power and crashes; all aboard the freighter are killed, along with 16 people on the ground.

Cargo falls 18.6% to 11.23 million FTKs.

The workforce is cut by 42.5% in 1991 to 46 and 1 DC-6B is withdrawn. Freight traffic is down again, by 51.1%, to 5.21 million FTKs.

Recession cuts deeply into the Miami-based cargo operator's 1992 business. Cargo plunges 34.9% to 3.38 million FTKs. Although revenues total \$6.47 million, expenses lead to losses: \$275,909 (operating) and \$335,539 (net).

The two-plane airline suffers a horrific 1993 as freight free falls downward 73.8% to only 887,680 FTKs. It releases no figures and goes out of business in 1994.

AERIAL TRANSPORT COMPANY OF SIAM, LTD.: Thailand (1930–1941). After nine years of successful pioneering domestic flights by the Royal Aeronautical Air Service of the Siam Army, the monarch of Siam orders creation of a civil national airline and release of the military for defense matters.

After consultations with a series of experts (including several from KLM (Royal Dutch Airlines, N.V.), which agrees to make a stop at Bangkok), and former U.S. Assistant Postmaster General Otto Praeger, the minister of finance forms the Aerial Transport Company of Siam, Ltd. at Bangkok on July 7, 1930. The government's fiscal department controls the new, largely paper, company for a year until it can be taken over by officials from the office of HRH Prince Purachatra, Minister of Commerce and Communications, on July 13, 1931.

Equipped with four de Havilland DH 80A Puss Moths, ATCS inaugurates twice-weekly revenue services on August 24 from the railhead at Nakhon Rachasima north of Bangkok over the previous routes of the Army service. Stops include Roi-Et, Ubon Rachasima, Khonkaen, Udorn, and Nong Khai.

Services continue to grow during the next decade. Working in cooperation with the nation's railways, the small airline suffers only one fatal accident, the loss of a Puss Moth with all aboard on June 22, 1933.

The aircraft is replaced with a Fairchild Model 24 cabin plane, which foreshadows the arrival of six Fairchild Model 24Js in late 1938 into early 1939.

The new American-made aircraft inaugurate flights over three new routes during the company's final three years. These include service from Surat Thani to the future tourist center, the island of Phuket, as well as flights from Khon Kaen to Vientiane in Laos and from Nakhon Sawan to Chiangmai via Tak.

When Japan militarily invades Southeast Asia after December 7, 1941, ATCS ends. In just over nine years of operations, the carrier has transported a total of 700 passengers, 18,000 kg. of freight, and 130,000 kg. of mail.

AERIE AIRLINES: United States (1971–1979). Aerie is established by Clyde Cook at Clarksville, Tennessee, in the spring of 1971 to provide scheduled daily roundtrips to Nashville and Chattanooga. Employing first 1 and then 2 Beech 18s, revenue frequencies are inaugurated in August, with passengers largely consisting of soldiers of the 101st Airborne Division stationed at nearby Ft. Campbell, Kentucky.

Services continue apace over the next three years, during which period the company initiates roundtrip frequencies to Cincinnati, Bowling Green, Louisville, and Paris, Tennessee.

For lack of traffic, the Paris, Bowling Green, and Cincinnati stops are deleted in 1974, the same year the commuter's headquarters are transferred to Nashville. With the introduction of Cessna 402Cs later in the year, the route network is expanded to Louisville and Owensboro, Kentucky, and to Evansville, Indiana.

A major growth of services occurs in 1975 as flights are initiated to Knoxville and the Tri-Cities and the Evansville stop is extended to St. Louis. To handle this growth the fleet is increased by the addition of a C-310 and a Douglas DC-3.

During the Bicentennial celebrations late in the year and through 1976, the Douglas transport is heavily marketed, with emphasis placed on nostalgia flights. The route between Nashville and Knoxville is particularly successful as Aerie records its greatest successes.

The company continues operations, but increasingly faces losses as frequent changes in its timetable confuse would-be passengers and other costs mount. In July 1978, Tennessee Airways begins flying, using Embraer EMB-110 Bandeirante turboprops in direct and immediately successful competition. Under these circumstances, Aerie cannot survive and is forced to close its doors in early 1979.

AERIS, S.A.: Aeroport de Toulouse Blagnac, 1-BP 44, Blagnac, F-31702, France; Phone 33 (5) 61 16 76 00; Fax 33 (5) 61 16 76 99; Code SH; Year Founded 2000. Rising fuel prices, falling traffic, and bad weather negatively impact the finances of Air Toulouse International, S.A. The replacement services previously operated for other airlines are dropped as the airline concentrates exclusively on holiday charters. With 51% backing from French investors Charles-Henri Rossignol and Jean-Francois Felix, together with a 49% stake by the U.S. fund investor DSP Partners, the 20-year-old airline is reformed in January 2000 and renamed. Charles Rossignol becomes managing director; however, Francois Hersen is retained as president.

Employing a pair of wet-leased Boeing 737-336Es in new colors, which replace its single Dash-200, the reformed carrier now performs charters and subcharters for other European operators. A B-737-3Y0, previously operated by Air Holland (Charter), B.V., is delivered in early March.

AERLINTE EIREANN. See AER LINGUS IRISH AIRLINES, LTD.

AERMEDITERRANEA (LINEE AEREE MEDITERRANEE, S.p.A.): Italy (1981–1985). Organized at Rome on March 20, 1981 to take over the routes of failed Itavia (Aerolinee Itavia S.p.A.), this subsidiary of Alitalia (Linee Aeree Italiani, S.p.A.) is owned by the Italian government through its flag line, Aero Trasporti Italiani, S.p.A.

(ATI) (97%) and private interests (3%). The fleet comprises 8 Douglas DC-9-32s transferred over from **Alitalia (Linee Aeree Italiani, S.p.A.)**. On July 1, the new entrant inaugurates scheduled passenger over a route from Rome to Lamezia Terme. Additionally, the company undertakes tour and inclusive-tour charters to various destinations in North Africa, Europe, and the Middle East. Passenger boardings for the first six months total 185,195.

Airline employment in 1982 stands at 380. Additional scheduled destinations now served include Alghero, Bologna, Catania, Milan, Naples, Palermo, Pisa, and Rome. Passenger enplanements jump to 571,968. Bookings climb again in 1983, up to 701,136, as the employee population rises by six workers.

The workforce is cut 1.5% in 1984 to 382. The company receives U.S. permission to launch passenger charter flights to America's East Coast. Late in the year, plans are announced to merge Aeromediterranea into **Aero Transporti Italiani, S.p.A. (ATI)**.

Customer bookings for the year, meanwhile, accelerate 4.5% to 947,000, while freight bounces upward by 12.6% to 1.97 million FTKs. The amalgamation is completed in 1985.

AERO, LTD.: United States (1919–1922). Organized at New York City on July 26, 1919, Aero, Ltd. begins passenger charter flights to Atlantic City in August, employing a pair of war surplus, Aeromarine 50 flying boats. At a September sale of surplus USN equipment, Aero, Ltd. purchases 5 Curtiss HS-2Ls. Bids are placed on 10 more. A number of pilots are recruited, including George Gay, Harry Rogers, Sidney Schroeder, George Cobb, S. A. "Al" Cheesman, and C. A. "Duke" Schiller, who will become famous later, along with Cheesman, as one of Canada's best-known bush flyers.

Following ratification of the 18th Amendment and the introduction of nationwide Prohibition, Aero's operations are transferred to Miami in January 1920. From there, the navy and grey-colored HS-2Ls reportedly make some 40 flights, transporting passengers to liquor-legal Havana and Nassau, in the first regularly scheduled, postwar North American air service.

During the summer, the HS-2Ls are transferred to New York City to fly nonscheduled charters to Atlantic City, Newport, and other New England destinations in competition with the new air transport division of the Aeromarine Plane & Motor Corporation. As is the case with **America Trans-Oceanic Company (A.T.O)** and its successors, **PBA (Provincetown-Boston Airline)** and **Naples Airlines** 35 years later, the winter-south/summer-north schedule becomes a pattern. When the first traffic figures are released in October, they show the transport of 4,500 revenue passengers.

Aero, Ltd. continues service in 1921–1922. In late March 1922, an HS-2L en route to Bimini from Miami crashes; five passengers are killed and the resulting adverse publicity forces the charter operator to cease operations.

AERO AFRICAINE (COMPAGNIE AERO AFRICAINE, S.A.): Algeria (1945–1952). A subsidiary of Societe Africaine des Transportes Tropicaux (SATT), a surface transport group formed in 1933 to link the Mediterranean to French Equatorial Africa by road and rail over the Sahara Desert, Aero Africaine is formed at Algiers in the summer of 1945.

Employing a fleet of 9 war-surplus Lockheed Lodestars, the carrier undertakes weekly services in Algeria, together with 6 monthly roundtrips from that city to the capitals of French West Africa and French Equatorial Africa. The operation is continued until 1952.

AERO AIR: 2050 N.E. 25th Ave, Hillsboro, Oregon 97124, United States; Phone (503) 640-3711; Fax (503) 681-6514; Year Founded 1935. Aero Air is the FBO at Portland–Hillsboro Airport established in 1935. During the next 62 years, the company also undertakes passenger and cargo flights with land-based and amphibious aircraft and helicopters. By 2000, the fleet includes 1 each Grumman G-1159A Gulfstream III, Dassault Falcon 10, Grumman G-21 Goose, and Eurocopter AS-355F Twinstar.

AERO AMIGO. See **AERO FELIZ, S.A.**

AERO ANDES, S.A.: Lavalle 548, SF B, Buenos Aires, 1047, Argentina; Phone 54 (1) 478-1955; Fax 54 (1) 372-8097; Year Founded 1997. AA is established by Cesar Fabre at Buenos Aires in 1997 to offer domestic and regional passenger services. Revenue flights begin and continue with a single Let L-410UVP.

AERO ASAHI, LTD. See **ASAHI AIR LINES COMPANY, LTD.**

AERO ASIA INTERNATIONAL, LTD.: 43-J, Block-6, PECHS, Karachi, 75400, Pakistan, Phone 92 (21) 435 980; Fax 92 (21) 455 569; http://www.aeroasia.net; Code E4; Year Founded 1993. With financial backing from the textile-trading-chemical concern Tabani Corporation, Ltd., AAIL is established at Karachi on May 6, 1993 to offer both passenger and cargo scheduled services. Former **Pakistan International Airlines Corporation (PIA)** executive Ashfaq A. Jan is appointed CEO and is provided with 4 Rombac (BAC) 1-11-561RCs wet-leased from **Tarom (Transporturile Aeriene Romane, S.A.)**. Revenue operations commence on May 6 and link the company's base twice daily with Faisalabad, Islamabad, Lahore, Multan, and Peshawar. Traffic and financial figures are not available.

The fleet is increased to 6 BACs in 1994, along with a Boeing 707-320C, also chartered from **Tarom (Transporturile Aeriene Romane, S.A.)**. Flight deck crews consist of 35 Romanian captains and 15 Pakistani first officers, with all cabin crews Pakistani. By government decree, a money-losing service is initiated to Pasni, a small community on the Arabian Sea in Sindh Province. At year's end, plans are made for a courier service, which will be introduced as "Aero Asia Express." Neither traffic nor financial results are released for the first complete year; however, fiscal losses are reportedly sustained.

Overnight BAC 1-11 "Aero Asia Express" services are inaugurated in June 1995 between all of the nation's major cities. In preparation for future services into the Central Asian republics of the former Soviet Union, a BAC 1-11 undertakes a proving flight on August 22 between Karachi and Bishkek, capital of Kyrgyzstan.

Dedicated "Aero Asia Express" services commence in February 1996 between Lahore and Islamabad and passenger services are inaugurated from Karachi-Multan onto Lahore.

Destinations visited in 1997–2000 include Bishkek, Multan, Lahore, Faisalabad, Islamabad, Pasni, and Peshawar. The largest private airline in Pakistan becomes a member of the SABRE computerized reservations system's global seat distribution system on August 1 of the former year.

The company now operates 26 daily flights to 7 destinations in Pakistan as well as Dubai.

AERO ASSOCIATION LUCERNE: Switzerland (1910–1914). AAL, established at its namesake city on February 10, 1910, is the next-oldest airline in the world, after the German airship company **Deutsche Luftschiffahrt Aktien Gesellschaft (DELAG)**. Itself not an operator, AAL, wishing to contribute to the stimulation of the local tourist trade, signs a contract with the French Societe Aeronautique Astra (SAA), based at Billancourt and Paris, for the provision of services in Switzerland by its subsidiary **Compagnie Generale Transaerienne, S.A., (CGT)**. Capitalization is acquired through a public float, with the municipality of Lucerne taking 250 shares.

On March 14, construction is begun on an airship hangar on the left bank of Lake Lucerne at Tribschennmoos, which is completed and turned over to AAL on July 14. Meanwhile, a nonrigid airship is designed by SAA Director Henri Kapferer and built for AAL by the Paris-based balloon manufacturer Surcouf; christened *Ville de Pau*, it is test flown on April 2. Once the maiden voyage is finished, the vessel is disassembled and shipped by rail to Switzerland; it is named *Ville de Lucerne* in ceremonies on June 21.

Pre-inaugural ceremonies occur before the Tribschennmoos hangar on the morning of July 24. Following speeches and the world premier

performance of a new march, *Propeller Klange: Luzerner Luftschiff-Marsch*, the *Ville de Lucerne*, under the command of Henri Kapferer, lifts off for a 24-minute flight. Daily pleasure trips and excursions are flown under the command of CGT Chief Pilot Maurice Herbster over the lake until the middle of August, when the airship's envelope becomes too weak to permit service with any loads.

Repaired with a new envelope from Paris, the *Ville de Lucerne* resumes operations on September 23. A week later, on September 30, the airship flies the 50-km. distance to Zurich in the first link between the two cities. AAL's first season ends on October 9. Despite the late summer downtime, the company is able to mount 66 flights in 30 days, transporting a total of 235 passengers.

AAL and the SAA sign a new operating contract in early 1911. Although enhanced services are envisioned, they will not occur. Still, the *Ville de Lucerne* begins its summer flying season on June 21, making a total of 41 flights before its envelope again fails on July 17. While the airship awaits repairs, Herbster undertakes 42 flight-seeing trips, employing one each Wright and Farman biplanes launched from the hangar entrance. The summer season ends in September without the *Ville de Lucerne* having resumed operations.

Early in 1912, AAL also signs a contract with the **Aerial Traffic Company, A.G.** of Berlin, Germany, to operate a summer airship service employing Maj. August von Parseval's semirigid PL VI. Equipped with a special electrical illumination system. It allows electrical displays to be shown on its envelope, somewhat in the manner of a modern Goodyear blimp. Because the Bavarian officer's airship will not be available until late August, AAL and SAA again offer airplane flights. Capt. Herbster's Farman and Wright biplanes are supplemented by a Voisin service offered by the Mulhausen-based company **Aviatik**.

From August 26 until September 25, the PL VI makes 24 flights in 21 days, carrying 160 passengers over 870 km. The planes of CGT and the Aviatik Company transport an additional 250 flight-seers in 93 trips.

With the increasing availability of fixed-wing aircraft and fiscal downturn in the airship service, AAL turns completely to aircraft to operate its 1913 season. Planes from both CGT and the **Aviatik Company** are again in operation over Lake Lucerne, with the highlight being an unsuccessful series of attempts to get a large Voisin floatplane, the *Icarus*, airborne. Meanwhile, the empty airship hangar is engaged by other local organizations. During the July–September period, a total of 250 flights are made, carrying 406 tourists.

The final season of 1914 begins on July 5 with a large air show. The outbreak of the First World War in August causes the company to cease flight operations immediately. In five years of service, the company, via its subcontractors, has flown a total of 883 passengers on flights almost evenly divided between airships (441) and aircraft (442). Still, the AAL remains alive on paper. Officers now rent out their hangar annually to the defense department until it is sold for SFr 10,000 on April 30, 1921.

With a settlement of SFr 126,709 upon its creditors, the AAL closes its doors on February 16, 1922; final liquidation of the last assets occurs on January 11, 1923.

AERO B VENEZUELA, S.A.: Venezuela (1976–1983). The charter carrier Aero B is formed at Caracas on April 29, 1976. Two Convair CV-340s are purchased from **AVENSA (Aerovias Venezolanas, S.A.)** in October 1977, allowing the airline to inaugurate nonscheduled all-cargo and passenger flights within Venezuela and the surrounding region on April 20, 1978.

In 1979–1981 the Convairs are replaced by 4 DC-6A freighters and 2 DC-6B passenger aircraft. Rising fuel costs and a lack of traffic in a sluggish national and international economy forces Aero B to cease flying in early 1983.

AERO BELAU: Palau (1980–1986). To provide scheduled commuter flights for citizens of Palau in the western Caroline Islands, AB is formed at Koror in the summer of 1982. The initial fleet comprises a

single Cessna 207 and daily revenue services are inaugurated on October 1 to Angaur via Peleliu.

Orders are placed for a Britten-Norman BN-2 Islander and in 1983–1984, flights are undertaken to Kayangel, Melekeok, and Ngeremlengui. Unable to retain its viability for lack of traffic, the carrier is forced to shut its doors in 1986.

AERO BENGAL, LTD.: Dhaka, Bangladesh; Year Founded 1995. Privately held AB is established at Dhaka in July 1995 to offer non-scheduled services to local destinations. It has the distinct honor of being the first private airline founded in Bangladesh.

Flights commence during the summer with a pair of Chinese-made Harbin Y-12s.

Service continues in 1996–1999, although the company during the latter year begins to fade in the face of competition from the nation's two newer airlines, **Air Parabat, Ltd.** and **GMB Airlines, Ltd.**

AERO CALIFORNIA SERVICIOS AEREOS, S.A. de C.V.: Apartado Postal 555, Hidalgo 316, La Paz, Baja California Sur, 23000, Mexico; Phone 52 (112) 26-655; Fax 52 (112) 539-93; Code JR; Year Founded 1982. Originally established in 1960 as a nonscheduled air taxi concern by the Arechiga family employing Beech 18s, Aero California is reorganized at La Paz in the Baja California peninsula in June 1982 to provide scheduled flights to destinations in western Mexico. Equipped with a fleet comprising 1 Aero Commander, 1 Convair CV-340, 4 Douglas DC-3s, 1 Beech 18, 1 Cessna 402, 2 Cessna 206s, and miscellaneous other Cessna single-engine types, the carrier inaugurates flights linking its base with the following stops: Cabo San Lucas, Guadalajara, Guaymas, Hermosillo, Loreto, Los Mochis, Mulege, Santa Rosalita, and Tijuana.

Operations continue apace in 1983–1985. While on initial approach to Los Mochis on a service from Villa Constitucion on January 29, 1986, a DC-3 with 3 crew and 18 passengers, goes below minimum altitude and is required to go aground. The crew attempts to land in fog at Las Lomitas, a small, unused private airport, but crashes in the process. There are no survivors.

Painted in a colorful new livery, the first Douglas DC-9-15 is added in 1988, replacing a DC-3, and Tucson becomes a market in 1989.

By 1990, General Manager Raul Arechiga Espinoza has acquired 3 additional DC-9-15s. A national carrier in 1991, Aero California, S.A. flies 10 DC-9-15s from Mexico City to points in northwest Mexico. It also begins a penetration of the North American market, flying travelers from Phoenix, San Diego, and Los Angeles to the resorts at La Paz, Mazatlan, and Puerto Vallarta.

The Convair and DC-3s are retired in 1992 and, in 1993, the 4 Dash-14s and 6 Dash-15s are all leased; no flight equipment is owned directly. GM Espinoza oversees a workforce that totals 916 as both scheduled and charter flights are continued.

Two chartered DC-9-32s are acquired in 1994. At the end of April, the company joins with several other regionals and **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)** in a merger of support services designed to make the carriers more competitive with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and **Mexicana Airlines, S.A. de C.V.** Under the arrangement, the carriers share reservation systems, maintenance facilities, ticketing, airport facilities, hangars, and work crews.

The last Cessna and Beech 18 are retired in 1995. Services continue apace with a fleet of 11 DC-9-14/15s and 5 DC-9-32s as the decade draws to a close. Destinations visited include Aguascalientes, Ciudad Juárez, Ciudad Obregón, Ciudad Victoria, Colima, Culiacán, Guadalajara, Hermosillo, Loretto, Los Angeles, Los Mochis, La Paz, Manzanillo, Matamoros, Mazatlán, Mexico City, Monterrey, Puebla, San Diego, Torreón, Tijuana, and Tucson.

In 1996–1997, airline employment stands at 1,800 and the company undertakes 120 daily flights to 25 domestic points, plus Los Angeles, Dallas, Tucson, and Fort Worth.

The carrier begins code-sharing with **American Airlines** on January 5, 1998. The AA code is placed on Aero California transborder flights from Los Angeles to Culiacán, Durango, Hermosillo, La Paz, and Torreón and from Tucson to Hermosillo.

Dual-designator flights with **American Airlines** expanded on April 20. The U.S. major places its code on the Mexican line's flights from Los Angeles to Loretto, Tijuana, and Manzanillo. Aero California continues to seek government approval to place its "JR" code on American services from Mexico to U.S. gateways and beyond.

Service is maintained in 1999–2000.

AERO CARDAL AIR SERVICES, LTDA.: Avienda Jose Arrieta 7808, Correo Central, Casilla 9630, La Reima, Santiago, Chile; Phone 56 (2) 279-3535; Fax 56 (2) 279-4272; <http://www.turismochile.cl/aerocardal>; Code CD; Year Founded 1989. Alex Casasepere founds ACASL at Santiago in 1989 to offer nonscheduled charter services tailored to the requirements of customers, many of whom are executives. Ricardo Espinosa is named operations director and a staff of 25 is recruited. The fixed- and rotary-wing fleet will come to include 1 each Cessna Citation II, Cessna Conquest II, Fairchild Dornier 228-200, Bell 206 Long-Ranger, and Messerschmit Boelkow BO-105.

Revenue flights begin and continue throughout Chile and to destinations in both South and North America in an effort to satisfy an increasing Chilean demand for air transportation to domestic destinations not visited by scheduled airlines. Over the next six years, the company flies a wide variety of passengers, from ambassadors and government representatives to officials and senior executives of such corporations as Exxon, BHP, Shell, and the American Oil Company.

In addition to passenger transport, the company also operates air ambulance flights, geology explorations, topographic surveys, and aerial photography. Employing a Boelkow BO-105 helicopter, it also assists the electric industry in hanging power lines.

The fixed-wing fleet in 1998–2000 includes 1 each Cessna 550 Citation II, a C-441 Conquest, a Dornier 228-100, and a Piper PA-34 Seneca.

AERO CARGA, S.A. de C.V.: Mexico (1950–1975). Aero Carga is established at Aeropuerto El Cipres at Ensenada, Mexico, in 1950 to fly all-cargo services to and from Mexico City on a partially scheduled basis. Revenue flights commence with a pair of Curtiss C-46 Commando freighters. Another Commando will be added during the next decade.

Operations continue without significant change until 1967, when the company transfers its base to Tijuana and adds roundtrip passenger services to Mérida with a pair of Douglas DC-6s. Cargo work ceases in 1969 with the sale of the Commandos. Flights continue until 1975.

AERO CARIBBEAN OF CUBA: Calle 23, No. 113, Vedado, Havana, Cuba; Phone 53 (7) 337-096; Fax 53 (7) 335-016; <http://www.cubaweb.cu/aerocari/haerocai.html>; Code CR; Year Founded 1985. This government-controlled company is formed late in 1985 to offer international charter services. The initial fleet comprises 1 Douglas DC-8-53, 1 Bristol Britannia 318, and 1 Antonov An-26. Services expand during the remainder of the decade and both domestic and South American destinations are serviced.

By the early 1990s, the fleet of President Ing Jorge Falcon's Havana-based carrier has been expanded to include 6 An-26s, 4 Ilyushin Il-18Ds, 3 Douglas DC-3s (the only 3 operational U.S. aircraft on the island), and 3 Yakovlev Yak 40s.

Operating a chess players' charter from Havana to Puerto Plata on November 15, 1992, an Il-18D with 6 crew and 28 passengers, fails to follow ATC orders for a missed approach and crashes into a mountain near Puerto Plata at the 1,845-ft. level and explodes; there are no survivors.

En route from Havana to Baradero on December 29, an An-26 with 53 passengers is diverted to Miami. There, all but five of the aircraft's occupants seek political asylum. The five and their aircraft are allowed to return to Cuba next day.

The number of aircraft is cutback due to both the world and Cuban recessions and in 1993, President Julian Alvarez Infiesta's fleet comprises 4 An-26s, 3 DC-3s, and 1 Yak-40. The fleet is increased in 1994 by the addition of 2 Yak 40s and 3 Ilyushin Il-18s.

Services continue in 1995–1998. On October 19 of the latter year, a new weekly roundtrip service is inaugurated between Havana and Guatemala City.

More foreign tourists ride the aging Russian equipment as the new millennium begins.

AERO CHACO (LINEAS AEREAS CHAQUENAS, S.A.): Argentina (1958–1986). Aero Chaco is founded at Resistencia, in Chaco Province, in late 1958. Capitalization is provided by the Aero Club of Chaco and the provincial government, with the latter eventually holding 99% of all shares. The initial fleet comprises 2 de Havilland Canada DHC-2 Beavers, which are used for demonstration flights to local destinations during the remainder of the year.

In early 1959, preparations for scheduled services are undertaken, including the acquisition of 3 DHC-6-100 Twin Otters. Revenue flights begin in on September 18 over a route to Presidencia Roque Saenz Pena. By year's end, the third-level operation has qualified for a subsidy from the national government.

During the 1960s and 1970s, services are maintained linking the base with Psadas, Ighazu, Santa Fe, Cordoba, Salta, Jujuy, La Roja, San Juan, and Mendoza.

Although financial backing is now also provided by the state governments of Santa Fe, Misiones, and Formosa, there are few operational or equipment changes (save the 1968 addition of 3 de Havilland Canada DHC-6-100 Twin Otters) until 1978 when a pair of Fairchild Hiller FH-227Bs are purchased in Brazil and the Twin Otters are sold to the Argentine Air Force.

In 1981, General Manager Ing. Jose Antonio Dimarco's airline employs 140 workers. Enplanements total 16,656. Increased costs (led by fuel) and fluctuating traffic levels, together with the costs of preparations to expand into 16 states of northern Argentina, cause significant financial distress beginning in 1982. In that year, passenger bookings fall to only 9,423.

By the time revived boarding totals (13,750) for 1983 can be announced, deterioration has set in, as demonstrated by a suspension of services to Jujuy and San Juan in 1984. Early in 1985, the carrier is renamed **ALFA (Aerolinea Federal Argentina, S.A.)**.

AERO CHARTA DARTA, S.A.: Aeroport de Paris, Le Bourget, France; Phone 33 (01) 48 62 54 54; Fax 33 (01) 48 62 41 43; <http://www.w3i.com/eng/transport/avion/DARTA.htm>; <http://altern.com/darta>; Year Founded 1971. ACD is established at Paris (LBG) in 1971 to provide executive and small group passenger series for French and foreign companies, travel and transport professionals, press and television bureaus, VIPs, and tourists.

Services begin from Toussus Le Noble Airport in 1983 and Lognes–Emerainville Airport in 1990. By 1998–2000, the Learjet operator also offers services from Toulouse.

AERO CHARTER: 18369 Edison Ave., Suite 100, Chesterfield, Missouri 63005, United States; Phone (314) 537-0005; Fax (314) 537-9291; <http://www.aerocharter.com>; Year Founded 1965. Aero Charter is established at Spirit of St. Louis Airport in 1965 to offer local ad hoc charters in the St. Louis area. Over the next 35 years, the company becomes a significant executive and small group operator and, by 2000, it employs 10 full-time and five part-time pilots. The company houses 2 each North American NA-265-65 Sabreliners and Beech 58 Barons, plus 1 each Beech Super King Air 200 and Piper PA-31-350 Navajo Chief-tain at its Missouri facility. It also bases 1 Sabreliner at Detroit (DTT) and 2 others at Cleveland Hopkins Airport.

AERO CHARTER, LTD. See BKS AIR TRANSPORT, LTD.

AERO CHASQUI, S.A.: Peru (1989–1991). AC is established at Lima in 1989 to offer domestic third-level services with 1 each Pilatus-Britten-Norman PBN-2T Islander and CASA C-212-200 Aviocar. Successful on the local level, the airline leases 1 each Boeing 727-27 and B-727-162 in 1990, employing them to inaugurate regional flights.

This expansion, unfortunately, occurs during a time of recession and as a result, the company is unable to generate traffic and income sufficient to continue beyond July 1991.

AERO COACH AVIATION INTERNATIONAL: United States (1981–1992). ACAI is founded at Ft. Lauderdale, Florida, in May 1981 to offer charter flights to West Palm Beach and to Georgetown in the Bahamas. Cessna 402 service begins in the fall. Three Embraer EMB-110 Bandeirantes are acquired in late 1982 and are employed to inaugurate regularly scheduled third-level frequencies in early 1983. New daily roundtrip destinations added include Gainesville and Miami, Florida, and North Eleuthers and Treasure Cay in the Bahamas.

Passenger enplanements for the year are 45,059.

Operations continue apace in 1984, and in 1985 the 60-employee small regional enplaners a total of 45,267 passengers. During these two years, frequencies are initiated to Bimini and Marsh Harbour.

By 1986, President T. P. Cartier's company has replaced its Brazilian-made commuter liners with a total of 9 Cessna 402s. Passenger boardings jump 25% to 60,356. Twelve additional Cessna 402s are purchased throughout 1987, bringing the fleet total to 23. Customer bookings increase 69.7% to 102,451.

Airline employment stands at 60 in 1988 as a 24th Cessna 402 is acquired. Passenger boardings balloon 24.8% to 127,878.

The workforce is increased by 150% in 1989 to 150 and the number of Cessna 402s grows to 33.

Despite these preparations, customer bookings advance only 1.7% to 130,092.

There is no change in either the number of workers or aircraft in 1990; however, passenger boardings, due largely to recession, plunge by 9% to 105,318.

Two Cessna 402s are withdrawn in 1991 as prelude to the company's collapse in 1992.

AERO COMMUTER AIRLINES: United States (1967–1969). Established at Long Beach, California, in the fall of 1967, ACA orders 8 de Havilland DHC-6-100 Twin Otters. It is quickly acquired by San Diego-based Westgate-California Corporation, which, in December, also takes over the assets of **Catalina Air Lines**, formerly **Avalon Air Transport**, and **Los Angeles Airways**. With the first of the Canadian turboprops, the carrier inaugurates scheduled services in December linking its base with Los Angeles and Catalina Island.

The following year, 1968, the route network grows to include stops at Burbank, Bakersfield, Palmdale, Apple Valley, Palm Springs, Fullerton, Santa Ana, Oceanside, and San Diego. The remainder of the Twin Otters enter service. Meanwhile negotiations are conducted throughout the year with **Skymark**, **Cable Commuter**, and **Golden West** which, in March 1969, merge to form the nation's largest third-level operation, **Golden West Airlines**.

AERO CONDOR, S.A.: Juan de Arona 781, San Isidro, Lima 27, Peru; Phone 51 (14) 425663; Fax 51 (14) 429487; <http://www.ascinsa.com/AEROCONDOR>; Code P2; Year Founded 1975. AC is formed at Lima in early 1975 to offer domestic passenger and charter flights. A fleet is established which includes 1 Beech King Air 90, 1 Beech B80 Queen Air, and such single-engine equipment as 2 Britten-Norman BN-2A Islanders, 1 Cessna 402C, 4 Cessna 172s, and 1 Piper PA-23 Aztec. Nonscheduled services are begun on September 10 to Puerto Maldonado, Nazca, Cuzco, Ica and other towns.

Services are maintained throughout the remainder of the decade and during the 1980s. Airline employment exceeds 80 workers and passenger boardings average 20,000 per year. The fleet is upgraded by the addition of 3 more King Airs. The company during this decade becomes well known for offering sight-seeing flights over Peru's famous Nazca lines.

President Carlos Palacin acquires 2 Fairchild Metro IIIs for his fleet in 1992. Flights continue in 1993–1995, with a third Metro III arriving during the latter year.

A Cessna 208 Caravan I is purchased in 1996. Service is maintained without incident in 1997–1998.

During February 1999, a code-sharing arrangement is entered into with **Aeroflot Russian International Airlines (ARIA)**. Under its terms, the company is able to provide its customers with twice-weekly return flights from Lima to Havana aboard the Russian carrier's Il-96s.

AERO CONTINENTE, S.A.: Avenue Jose Pardo 651, Lima 18, Peru; Phone 51 (14) 242-4260; Fax 51 (14) 444-5014; <http://www.aerocontinente.com.pe>; Code N6; Year Founded 1992. AC is established by Fernando Zevallos Gonzales at Tarapoto City on January 4, 1992 to offer nonscheduled passenger charters for companies dedicated to energy exploration in the northeast zone of the country, particularly Occidental Petroleum Corporation of Peru. Revenue flights commence on May 25 with a single leased Boeing 737-204. Business is sufficient to allow the carrier to purchase a B-737-281 in 1993.

A significant fleet expansion occurs in 1994; added by lease are 3 B-727-22s and 1 B-727-51 and, by purchase, 1 B-737-222 and B-737-247. Routes and services are expanded accordingly, with scheduled flights begun under the direction of President Fernando Zevallos.

Another B-747-247 is leased in 1995. A Fokker F.27 is also acquired for domestic charters. During the year the government of Peru, convinced that the U.S. all-cargo airline **Fine Air** is involved in arms smuggling, bans it from making future flights into Lima. The move will have an impact on AC several years hence.

In 1996, a Fokker F.28-1000 Fellowship is purchased and 3 Boeings are leased to the Argentine charter operator **Dinar Lineas Aereas, S.A.** These include the B-727-22, the B-737-281, and 1 of the B-737-247s.

Having received intelligence that the airline has been operating its aircraft with "unsafe engines," the U.S. Embassy in Lima prohibits all U.S. mission personnel from flying the airline as of August 23. Peruvian Transport Minister Elsa Carrera informs the media that the decision is "temporary" and that all engines in the fleet will be overhauled within 15–20 days, according to guidelines of the U.S. FAA.

Operations continue apace in 1997. Plans are made to lease a Lockheed L-1011 TriStar 1 are shelved after the Lima government, which is in the process of granting permission for the inauguration of daily U.S. flight, refuses to approve the airline's use of the wide-body jetliner. Although that larger aircraft is not acquired, the company, during the spring of 1998, introduces a new color scheme. All of its 1996 safety concerns have, by now, been addressed.

Following the signing of a new bilateral air agreement between Peru and the U.S., Aero Continente, in July 1998, is designated the nation's second international airline when it is given authority to operate daily B-727-22 return service between Lima and Miami. President Gonzales had originally sought 21 weekly frequencies and appeals the grant of only seven from new Transport Minister Antonio Paucar Carbajal. Meanwhile, noting that the B-727s on hand cannot fly nonstop to Florida and require a refueling visit to another Latin country, probably Panama, the airline delays.

A new color scheme is introduced, but it cannot hide yet another problem: the fact that Peru has been listed by the U.S. FAA as a Category I country in terms of safety concerns. At this point, rather than attempt to gain approval to compete with its own narrow-bodies, Aero Continente seeks an alliance with a U.S. carrier. **Continental Airlines**, which lost to **Delta Air Lines** in the race for a partnership with **AeroPeru (Empresa Transporte de Aereos de Peru, S.A.)**, is the most likely candidate, but neither airline ever confirms talking to the other.

Meanwhile, during the summer, **Fine Air** moves to block the application by AC for U.S. authority to operate from Lima to Miami, asking that the U.S. DOT deny service until Peru allows Fine to resume services suspended earlier over the arms shipments. Even though the U.S. Drug Enforcement Agency is no longer investigating, Fine also revives allegations of drug trafficking by AC's former

owner, Fernando Zevallos Gonzales. The Peruvian line hires an attorney in Washington, D.C., to press its requests, which remain on hold at DOT through the end of the year.

Following the economic collapse of **AeroPeru (Empresa Transportes de Aereos de Peru, S.A.)** on March 10, 1999, AC becomes the nation's largest remaining airline. It is reported in the next day's issue of Lima's *El Comercio* that ticket prices at the now leading national carrier have doubled overnight.

When AeroPeru halts its domestic services on March 14, Aero Continente takes over the flag carrier's more important domestic routes, including that to Peru's top tourist destination of Cuzco.

Following the June 5 decision of **Continental Airlines** not to take an equity stake in AeroPeru, the Peruvian government, on June 25, grants permission for Aero Continente, the nation's largest remaining domestic airline, to fly routes to the U.S., Brazil, Chile, Argentina, Venezuela, Mexico, Ecuador, and Panama.

The FAA in Washington grants special exemption authority, but demands that all flights by Peruvian carriers into the U.S. henceforth be made in wet-leased aircraft only. Although Lima protests that the requirement is illegal under the 1998 bilateral, it remains in place; the American regulators do, however, promise a new safety inspection. For its part, Aero Continente demands that the U.S. justify its wet-lease order; it receives no response.

Employing a Boeing 757-28A wet-leased from **Air 2000, Ltd.**, the carrier initiates daily roundtrips from Lima to Miami on November 17; the aircraft, which appears in the basic colors of the charter carrier with Aero Continente titles, has been chartered through April.

Plans by the FAA to return to Peru for a review of the country's safety improvements are put on hold in the spring of 2000 as Peru holds a controversial presidential election. The results draw international protest and the U.S. State Department threatens sanctions.

The **Air 2000, Ltd.** B-757-28A is returned on April 29 and is replaced on the Miami-Panama City route with a **Falcon Air Express** B-727-200.

Continuing concern over the technical fitness of Peru's airlines heightens and perhaps explains why Aero Continente has, by June, still not received a response to its 1999 request. An attempt to register via its new Aero Continente Chile, S.A. (Chile is a Category I country) subsidiary is initially rebuffed by the FAA. After returning the **Falcon Air Express** Boeing, the airline, on July 1, suspends its U.S. service. The controversy over the election continues throughout the summer, leading to the resignation of the nation's president on September 16.

In something of a surprise, the U.S. Department of Transportation, on October 6, authorizes the Chilean subsidiary to operate the desired Miami flights.

AERO CONTINENTE CHILE, S.A.: Marchant Pereira 357, Santiago, Chile; Phone 204 2424; Fax 209 2358; Code C7; Year Founded 1999. This subsidiary of **Aero Continente, S.A.** is established at Santiago in the fourth quarter of 1999 to offer domestic scheduled passenger services. Ownership is divided between local groups (51%) and the Peruvian airline (49%), which provides three Boeing 737-201As.

Revenue services commence on May 18, 2000, over routes to Arica, Iquique, and Antofagasta. During this time, Aero Continente, which is banned from flying into the U.S. due to Peru's Category II safety rating, attempts to register itself in the U.S. under its subsidiary's name. The effort is rebuffed by the U.S. Federal Aviation Administration and a B-737-300 acquired for the route is unemployed.

In June, flights are started from Santiago to Concepcion and plans are announced for the initiation of service to Antofagasta.

The U.S. Department of Transportation on October 16 grants the company permission to operate into Miami. Santiago-Miami B-767-219ER return service is launched on November 17.

AERO CONTRACTORS OF NIGERIA, LTD.: Murtaia Mohammed Airport, PMB 21090, Ikeja, Lagos, Nigeria; Phone 234 (1) 901 400; Fax 234 (1) 467-1973; Code NU; Year Founded 1959. An affiliate of the Dutch operator **Schreiner Airways, B.V.** (which holds 97% of all common shares), ACofN is established at Lagos in 1959 to provided

nonscheduled passenger and charter freight operations, as well as contract service flights, throughout the nation (primarily in support of National Petroleum) and West Africa. W. Van Houtert is general manager and revenue flights commence to 16 destinations with 6 Piper PA-23 Aztecs.

Cornelius Reichgeld becomes general manager in 1965, during which year the company also becomes the nation's Beech and de Havilland dealer.

The fleet is thereby enhanced by the addition of 1 DH 104 Dove I, a Dornier Do 28A-1, 3 de Havilland Canada DHC-3 Otters (which are assigned to antismuggling patrols on behalf of the government), and 1 DHC-2 Beaver.

Daily scheduled passenger and cargo services begin toward the end of the year and into 1966 from Lagos to Warri and Port Harcourt. ACofN is now the only scheduled operator in the country other than the state airline **Nigeria Airways, Ltd.**

Early in 1967, a contract is received from **Nigeria Airways, Ltd.** to operate a thrice-daily return service over the Lagos to Port Harcourt route ACofN had opened earlier. Unhappily, before this route can be started, Nigeria rebels briefly seize five of the company's aircraft.

The fleet that eventually begins the flag carrier's replacement service comes to comprise not only the Aztecs, Dornier, Dove, and Beaver operated earlier, but 3 DHC-6-300 Twin Otters.

Flights continue throughout the 1970s and, by the middle of the 1980s, the company is operating 4 de Havilland Canada DHC-6-100 Twin Otters, 2 Piper PA-31-310 Navajos, 2 British Aerospace BAe (HS) 125 executive jets, 1 Beech King Air 90, and 10 Aerospatiale Alouette III and Dauphin helicopters. Most of these are leased from Schreiner.

Operations continue apace over the remainder of the decade. In 1989 the rotary-wing fleet includes 4 each Aerospatiale SA-316B Alouette IIIs and SA-365N Dauphin 2s, the latter leased from Schreiner; 2 SA-365Cs, also chartered from the Dutch operator; and 2 each SA-319B Alouette IIIs and SA-355F Ecureuil 2s devoted exclusively to National Petroleum. The fixed-wing flight equipment comprises 4 BAe (HS) 125s (1 of which is chartered exclusively by National Petroleum), 6 DHC-6-300s, and 1 leased Dornier 228-200.

Three more Twin Otters are leased in 1990, along with a Dornier 228-100. Following a successful 1991, the 4 SA-316Bs are withdrawn in 1992, as 1 more DHC-6-300 is acquired. A fifth Dauphin 2 is purchased in 1993. During these years, Oteri Holdings acquires shareholding and Chief Michael Olorogun Ibru becomes general manager.

The workforce totals 300 in 1994 and the fleet now includes 3 BAe (HS) 125s, 10 Twin Otters, 10 Eurocopter Dauphins, and 1 Fokker F.27 Friendship. Coming in from Lagos on a contract flight for Shell Development Company on September 13, a Twin Otter with 5 passengers crashes at Abuja Airport; there are 2 fatalities.

The fleet is increased in 1995 by the addition of another BAe (HS) 125; however, the Fokker and 3 Twin Otters are withdrawn, along with 2 Dauphins, which are replaced by a pair of Eurocopter AS-355F Ecureuil IIs.

One more Twin Otter is acquired in 1996-1997, along with a DHC-8-102. As they have been since the beginning of the decade, these Canadian-built aircraft are leased from **Schreiner Airways, B.V.**

The carrier's emphasis continues to be oil industry support and third-party aircraft operations, although daily roundtrip de Havilland frequencies are continued from Lagos to Warri and Port Harcourt.

Arriving from Port Harcourt on February 1 of the former year, a Twin Otter with 14 passengers is destroyed by a bad landing at Warri; there are no fatalities.

Flights continue in 1998-2000 and airline employment reaches 408. The fleet now includes 1 each DHC-8-102, DHC-8-311, 8 DHC-6-300s, 2 AS-355Fs, 10 AS-365N2s, and a Hawker 800 bizjet. Scheduled flights continue to be operated to Warri and Port Harcourt.

AERO COSTA RICA, S.A. See ACORI (AERO COSTA RICA, S.A.)

AERO COSTA SOL, S.A.: Aeropuerto Juan Santamaria, Hangar 2 Aljuela, 782-4050, Costa Rica; Phone (506) 441-1444; Fax (506) 441-2671; Year Founded 1996. Alvaro Xamora Herrera sets up ACS at

Aljuela in 1996 to offer scheduled third-level domestic services. Revenue flights commence and continue with a single Let L-410UVP Turbolet.

AERO COZUMEL, S.A. de C.V.: Apartado Postal 322, Aeropuerto International Cozumel, Quintana Roo, 77600, Mexico; Phone 52 (987) 20503; Fax 52 (987) 20877; <http://www.aerocaribe.com.mx>; Code AZ; Year Founded 1978. Fernando Barbachano, onetime **Aeromaya, S.A. de C.V.** partner, and Nassin Joaquin Ibarra found this third-level carrier at Isla Cozumel, in the state of Quintana Roo, during the summer of 1978. Equipped with 3 Britten-Norman BN-2 Islanders and 3 BN-2A Trislanders, the company begins scheduled high-frequency service on November 20, linking the Isla de Cozumel with the Caribbean coastal towns of Cancún, Playa del Carmen, Chichen Itza, Tulum, and Ciudad Chetumal.

By 1984 Barbachano has retired and Ibarra is managing director; the fleet has been altered to include 4 Trislanders, 1 Islander, and 1 Fokker F.27 Friendship. Daily shuttle flights are made between Cozumel and Cancún/Playa del Carmen; Chichen Itza and Tulum are now charter destinations. Service is started to Havana in 1987; the fleet this year comprises 3 Trislanders and the Friendship.

Service is conducted without incident in 1988. A chartered Britten-Norman BN-2A Trislander with 2 crew and 17 passengers makes a forced landing at Chichen Itza on May 5, 1989 (6 dead).

In 1990, newly privatized **Mexicana Airlines, S.A. de C.V.** acquires all of the commuter's shares in order to strengthen its coverage in the southeastern part of the country. As a result, Managing Director Nassim Joaquin Ibarra's carrier joins the **Mexicana Airlines, S.A. de C.V.** commuter network "Mexicana Inter."

In 1992–1993, AC sells one Trislander and acquires another F.27. The employee population during the latter year stands at 90. Two more Friendships arrive in 1994 and services continue apace in 1995–1996. During the latter year, **Mexicana Airlines, S.A. de C.V.** and its "Mexicana Inter" interests are purchased by the holding company CINTRA, S.A. de C.V., which also owns **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**.

Jaime Tamariz becomes managing director in 1997. In 1998–2000, AC continues its close link with fellow "Mexicana Inter" partner **Aerovias Caribe, S.A. de C.V. (Aerocaribe)**. Between them, they cover 15 cities in the Mayan World area and a total of 28 destinations. The two companies also share a homepage on the World Wide Web.

AERO-DIENST, GmbH: Flughafenstr 100, Nuremberg 10, D-90411, Germany; Phone 49 (411) 520 120; Fax 49 (411) 520 1216; Year Founded 1968. This privately owned executive charter operation, based at Nuremberg, begins lightplane operations on September 1, 1966. International passenger and cargo charters are also undertaken. In 1982, the carrier joins the JET Europe air taxi marketing group and by mid-decade, airline employment reaches 100. The fleet in 1984 comprises 4 Gates Learjet 55s, 4 Gates Learjet 35As, 2 Bell 222 helicopters and 1 Bell 206L LongRanger.

Bernhard Jokilschke is managing director in 1986 and company services are maintained through the remainder of the decade and into the 1990s. During these years, the carrier also becomes a Bell helicopter maintenance and sales operator and, by 1994, Managing Director Peter Czech is also flying a significant number of Bell 206B JetRangers. Executive charters continue to be flown through the remainder of the decade with a fleet of 5 Learjet 35As, 2 Learjet 55s, and 2 Learjet 60s.

AERO-DYNE AIRLINES: United States (1965–1985). Aero-Dyne is set up at Renton, Washington, in 1965 to offer passenger and cargo charters and contract service flights throughout the U.S. and Canada. General freight and hazardous materials become a specialization. Additionally, other diversified operations are undertaken, ranging from flight training to aircraft maintenance to aerial agricultural application of seeds and weed-killers.

The fleet grows in the 1970s to include both small aircraft, such as Cessna 150Fs, and large aircraft, such as a Convair CV-580 and Douglas DC-3s. During the early 1980s, two additional DC-3s are acquired,

along with a DC-6. Due to over expansion, the company is unable to finance its activities and is forced to cease operating in 1985.

AERO ESLAVA, S.A. de C.V.: Mexico (1992–1994). Aero Eslava, a longtime maintenance and overhaul concern at Mexico City Airport, establishes a flight division in 1992 to provide passenger charter flights to holiday destinations. Revenue operations begin and continue with 1 each Fokker F.27 Friendship and British Aerospace (Vickers) Viscount 745D.

While descending during a positioning flight from Puebla to Mexico City on July 27, the Vickers Viscount 745D with 4 crew crashes into a mountain 30 km. E of its destination; there are no survivors.

Although flights continue in 1993, the company, unable to maintain economic viability with just the Fokker, is forced to shut down in 1994.

AERO-EXPRESS R.T.: Hungary (1923–1924). Local Budapest interests, supported by a Junkers Flugzeugwerke, A.G. representative, forms this carrier on January 1, 1923, equipping it with two F-13s christened *Ente* and *Strauss*. Meanwhile, as competition stiffens with **Deutscher Aero Lloyd, A.G., Junkers Luftverkehr, A.G.** reaches out to locate members for a countering confederation. On May 14, the Trans-Europa Union is formed; simultaneously, Junkers assumes a financial interest in Aero-Express, bringing it into the group.

The aircraft are employed in June to begin pleasure flights from the Hungarian capital to Lake Balaton. On July 15, service is opened Budapest–Vienna, where it can connect with an Austrian Junkers affiliate, **Oesterreichische Luftverkehrs, A.G. (OLAG)**.

The carrier ceases operations in 1924 when the Hungarian government grants exclusive national rights to the new state carrier **Malert**.

AERO ESPRESSO ITALIANA, S.p.A. (AEI). See SOCIETA ANONIMA AERO ESPRESSO ITALIAN, S.p.A. (AEI)

AERO FELIZ, S.A. de C.V. Mexico (1990–1991). Aero Feliz, originally known as **Aero Amigo**, is set up at Mexico City in the spring of 1990 to operate scheduled passenger and cargo services to regional destinations. A single leased B-737-281, first delivered to **All Nippon Airways Company, Ltd.**, is acquired; christened *Vicente Guerrero*, it is employed to inaugurate daily revenue frequencies during the summer. The traffic generated during the fall is insufficient to justify operations far into 1991.

AERO FIESTA MEXICANA, S.A. de C.V.: Mexico (1994–1995). AFM is established at Mexico City late in 1994 to operate regional passenger charters. Operations commence with a single leased Boeing 737-275, formerly operated by **Inter-America, S.A.**, over routes to Acapulco, Cancún, and Puerto Vallarta. Unable to achieve viability, the company folds the following year.

AERO FRANCE INTERNATIONAL, S.A.: France (1990–1995). AFI is established at Paris in 1990 to offer regional passenger charter services with a pair of Aerospatiale (Sud) Caravelle XBs leased from Europe Aero Service. One Caravelle is withdrawn in 1991. Operations continue apace in 1992–1994, but cease in 1995.

AERO FREIGHT: El Paso International Airport, El Paso, Texas 79925, United States; Phone (915) 772-3273; Fax (915) 772-9243; Year Founded 1979. AF is set up at El Paso in 1979 to offer both passenger and cargo charters. Over the next 20 years, people will be flown all over North America; however, cargo is originally transported in the Texas–Northern Mexico area.

By 1998–2000, the company employs two full-time and two part-time pilots. It bases 1 Douglas DC-3 freighter at El Paso, along with 1 each Learjet 25 and Piper PA-31-350 Navajo Chieftain.

AERO GERAL, LTDA.: Brazil (1942–1953). Founded to provide services in the Amazon region, AG is formed at Manaus on February 10, 1942. Authorized to inaugurate scheduled services, the new entrant is unable to find a suitable aircraft; the only plane available is a Monocoupe 90A. Consequently, after flying a few charters, AG closes down in 1944.

The moribund operation is purchased and reorganized by F. A. McLaren and a partner in January 1947; unable to compete with **Panair do Brazil, S.A.** in the Amazon area, McLaren receives permission to transfer his carrier up to Natal. Simultaneously, a route permit is received for a scheduled coastal route. Five ex-military Consolidated PBV-5A Catalinas are purchased, and are employed in March to initiate flights from Rio de Janeiro–Natal. The route is stretched to Santos in May.

The Rio–Santos route is flown without significant fanfare over the next four years; the fleet is upgraded by the addition of 2 Douglas DC-3s and 1 Curtiss C-46 Commando freighter. Tragedy strikes on June 2, 1951, when a Catalina is lost in a crash with all aboard.

Unable to continue profitably thereafter, AG is purchased by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** in May 1952, and subsequently absorbed into the larger carrier in July 1953.

AERO GUADALAJARA, S.A. de C.V.: Mexico (1991–1994). Established at Guadalajara by two families in the ground express/trucking business during the spring of 1991, AG inaugurates regional scheduled passenger services with a pair of Grumman G-159 Gulfstream IIs. Destinations initially visited include Monterrey, Tampico, Puerto Vallarta, and San Luis de Potosi.

In 1993, the company withdraws from scheduled services to offer only charters. Like the previous schedule, these, too, are unprofitable and the company shuts its doors in 1994.

AERO INTERNATIONAL AIRLINES: United States (1982–1984). In late 1982, Homestead, Florida-based **Bahamas Caribbean Airlines** is reformed and takes this name. Equipped with 1 each Britten-Norman BN-2A Trislander, BN-2 Islander, Beech 18, and Piper PA-34 Seneca, and 2 Cessna 402s, the company continues to provide on-demand air taxi services, linking its base with Ft. Lauderdale, Miami, Marathon, Marco Island, Freeport, and Bimini. Additional destinations served include Orlando, Tampa, Ft. Pierce, and Titusville.

Operations continue apace in 1983 and, in late 1984, the small regional, having elected to inaugurate scheduled services, is renamed **Air South (3)**.

AERO KUZNETSK NOVOKUZNETSK AIRLINE: Russia (1952–1999). A child of the West Siberian Regional Air Traffic Department, this carrier traces its heritage back to the Novokuznetsky United Air Traffic Unit established in 1952. In 1991, the aerial unit is renamed Novokuznetskoe Avia State Enterprise and, in 1993, the current title is chosen.

Anatoli V. Postnikov is CEO, with Boris I. Kalintsev as general director. One of hundreds of airlines to become independent after the collapse of **Aeroflot Soviet Airlines**, this company, based at Novokuznetsk Airport, employs a total of 1,442, including 300 aircrew. A fleet is assembled that includes 9 Tupolov Tu-154B/Ms, 5 Antonov An-24s, 5 An-26s, 9 Mil Mi-2 helicopters, and 10 Mi-8s.

Scheduled services are undertaken to the domestic points of Anapa, Krasnodar, Moscow, Soshi, St. Petersburg, Novosibirsk, and Nishnevartovsk. International flights are made to Ankara, Antalya, Athens, Burgas, Barcelona, Fujairah, Istanbul, Larnaca, Malaga, Seoul, and Sharjah. Charters are also operated.

Traffic figures are released to the West for the first time in 1994 and show enplanements of 305,447. Passenger boardings inch up 0.7% in 1995 to 307,600 while freight rises 6.7% to 9.6 million FTKs.

Flights continue in 1996–1999; the fleet now includes 5 each An-24s and An-26s, 10 Mil Mi-8s, and 9 each Mil Mi-2s and Tu-154Bs. Principal destinations served are Istanbul, Krasnodar, Moscow, and Novosibirsk. During the spring of 1999, the carrier, unable to cover its bills, is forced into bankruptcy and must surrender most of its leased aircraft. One of Western Siberia's last independent airlines, Aero Kuznetsk cannot be reorganized or salvaged and is sold on September 17 to cover its debts.

AERO LEASING GENEVE, S.A. (ALG): P.O. Box 310, Geneva Airport, Geneva, CH-1215, Switzerland; Phone 22-717-0000; Fax 22-717-0100; Code FP; Year Founded 1966. ALG is organized at Geneva Airport as a privately owned aircraft leasing operation in 1966.

In 1968, the company begins lightplane passenger and cargo charters around the country. By the end of the decade, the 75-employee carrier possesses a fleet comprising 3 Dassault Falcon 20s, 2 Gates Learjet 55s, 1 Gates Learjet 35, 1 Gates Learjet 24, and 3 Piper PA-31T Cheyennes.

Traffic growth is steady; for example, 7,489 passengers are carried in 1980 and 8,477 in 1982. In the latter year, ALG becomes a member of the JET Europe executive aircraft-marketing consortium.

Air ambulance, air taxi, and charter operations continue in 1983–1985. Traffic figures are no longer provided. In 1986, Managing Director Ernest Saxer's company has increased the number of its Dassaults to 4, by adding a Falcon 10.

Operations continue throughout the remainder of the 1980s and into the 1990s. By 1998–2000, Managing Director Saxer's fleet includes 2 Douglas DC-9s, 3 Falcon 900s and Falcon 50s, 7 Falcon 20s, 4 Falcon 10s, 1 Learjet 55, 2 Learjet 36s, 6 Learjet 35s, 2 Learjet 31s, 2 Canadair Challenger 601s, 2 Cessna Citation IIs, 3 Yakovlev Yak-40s, and 1 Beech King Air 100.

AERO LEASING ITALIANA, S.p.A. (ALI): Via Gregorio Allegri 20, I-00198, Italy; Year Founded 1982. Organized at Ciampino Airport in Rome in 1982, ALI operates executive jet charter flights as a member of the JET Europe air taxi marketing consortium. President G. Giovannetti and General Manager E. Pulidori possess a fleet that comprises 2 Dassault Falcon 20s and 1 Gates Learjet 35.

Air ambulance and air taxi work continues apace over the next 18 years.

AERO LEASING UKRAINE: Kiev-Borispol Airport, Kiev, 252135, Ukraine; Phone 044-216-26-71; Fax 044-216-26-78; Year Founded 1989. ALU is founded at Kiev in 1989 as a subsidiary of the German executive charter operator **Aeroleasing Deutschland, GmbH**. Alexander Gerkin is appointed station manager and begins and continues flights with a single Dassault 20 leased from the parent.

Flights continue over the next decade, by which time Director Gerkin's fleet has been doubled to 2 Falcon 20s.

AERO LICHT: Russia (1991–1995). One of a number of new, privately owned airlines, AL is established at Moscow in 1991 as a joint venture between **Aeroflot Russian International Airlines (ARIA)** and Israeli businessman Yaacov Nimrodi to provide a vehicle dedicated to the transport of Jewish immigrants to Tel Aviv.

Flights continue in 1992–1994 with 15 Ilyushin Il-86s leased from the Russian carrier, but cease in 1995.

AERO LLOYD, S.A.: Chile (1991–1995). Francisco Bartolu forms this passenger charter and air taxi service at Antofagasta in 1991. Revenue operations commence and continue with 1 Cessna 337 and 2 Piper PA-31-310 Navajos. By 1994, 3 more Navajos have been acquired, 1 of which is a PA-31-350 Navajo Chieftain. The company folds in late 1995 as a result of the world airline recession.

AERO LLOYD FLUGREISEN, GmbH. & CO.: Lessingstrasse 7-9, Postfach 2029, Oberurser, D-61440, Germany; Phone 49 (6171) 641-1; Fax 49 (6171) 641 129; <http://www.aerolloyd.de>; Code YP; Year Founded 1980. Privately owned ALF is established at Frankfurt on December 20, 1980 as successor to another concern of the same name, founded in 1979, which went out of business for mysterious reasons on December 5.

After assembling a fleet of 3 Sud-Est SE-210 Caravelle XRs, the company inaugurates passenger charter flights on April 1, 1981. Specializing in tour operations on behalf of travel organizations, including the Air Travel Market, ALF undertakes services to Europe, North Africa, and the Middle East with a fleet that in May 1982 also receives 3 Douglas DC-9-32s.

Operations continue apace in 1983–1985 and passenger enplanements average 300,000 per year. A McDonnell Douglas MD-83 is acquired in March 1986, with another arriving in 1987. Orders are placed for 5 MD-83s and 4 MD-87s. On October 31, 1988, the carrier begins offering

low-cost scheduled domestic services in competition with **Deutsche Lufthansa, A.G.** Major shareholding is held by Air Charter Market (52.25%) and Jan Klimitz (42.7%); orders are placed for MD-11s.

The 457-employee operator owns or leases a fleet of 11 aircraft in **1989**: 3 Caravelles, 3 MD-83s, 3 DC-9-32s, and 2 MD-87s. Munich to London (LGW) scheduled flights begin on December 1.

Overall enplanements for the year total 1.35 million, including 44,000 scheduled.

The workforce in **1990** totals 740 and work begins on a \$10.7-million headquarters building at Oberursel, near Frankfurt. Construction is also started on a new maintenance hangar at Munich 2 Airport.

Full-year scheduled figures show that a total of 231,147 passengers are transported.

Airline employment stands at 650 in **1991** and the fleet now includes 3 leased DC-9-32s, 6 owned and 7 leased MD-83s, and 4 MD-87s. Paris and Zurich join the scheduled network. Scheduled passenger boardings climb 15.3% to 266,605. Income exceeds expenses and the operating profit is \$149.94 million. There is a \$9.87-million net loss.

The workforce grows by 4.9% in **1992** to 886. In March, Senior General Manager Reinhard Kipke's Aero Lloyd is taken over by **Deutsche Lufthansa, A.G.** The new subsidiary suspends its last scheduled route, Frankfurt to Berlin, in April and returns to charter work.

Destinations visited from Berlin, Dusseldorf, Frankfurt, Hamburg are primarily the Mediterranean and Canary Island holiday resorts. Overall enplanements slide 5.2% to 1,143,699 and revenues decline 6.4% to \$341.14 million. Expenses fall 11.7% to \$189.53 million and the operating surplus totals \$151.6 million. The net gain is \$1.63 million.

In **1993**, Senior General Manager Kipke and General Manager Walter Schneider oversee a workforce of 950. The lease on the DC-9-32s is allowed to expire late in the year; however, an Avions de Transport Regional ATR42-300 is provided.

A total of 2,239,200 passengers are flown on the year and a \$7-million loss is suffered.

Airline employment decreases to 850 in **1994** and the fleet now includes 2 MD-82s leased from **Adria Airways**, 13 chartered MD-83s, 2 of which are subleased to the Mexican airline **Allegro Air, S.A.**, and 4 owned MD-87s.

Passenger boardings swell 17.4% to 2.7 million and revenues increase 13% to \$610 million. A net \$5-million profit is reported.

There is no change in the workforce during **1995**, the fifteenth anniversary year. Orders remain outstanding for 6 A320-232s and 7 A321-100s.

Customer bookings total 1,245,000 and revenues are \$431.8 million. A net gain of \$4.1 million is posted.

The workforce remains at 850 in **1996** and the owned fleet comprises 6 MD-83s and 1 MD-87; operated under charter are 6 MD-87s and 2 each MD-82s and MD-87s. The first A320-232 arrives in January wearing the carrier's new color scheme. The 1994 subleases to or from **Adria** and **Allegro** remain in place. Enplanements jump 5.9% to 1,319,400.

With the addition of 5 more A320-232s, all of the MD-87s are retired in **1997**. Thirty minutes into a service from Munich to Cairo on November 4, the left engine of an MD-83 catches fire; on-board equipment extinguishes the blaze and the aircraft makes a safe emergency landing back at its point of origin.

Also in November, the company unveils a "logojet" MD-83, painted in the sponsored-style first pioneered by the U.S. carrier **Western Pacific Airlines (Westpac)**. The inaugural unit serves as a flying billboard for Trigema, with titles proclaiming the carrier "Deutschlands grosster T-shirts- und Tennis-Bekleidungs-Hersteller" (Germany's largest manufacturer of T-shirts and tennis wear).

Passenger boardings this year skyrocket 108.9% to 2,756,000.

Airline employment grows by 28% to 1,340 in **1998**.

Taking off from Frankfurt for Palma de Mallorca on September 2, an MD-83 suffers an explosion of the tires on its left main landing gear, rubber from which is ingested in the left engine, which is subsequently put out of commission. A safe emergency landing is made and no injuries are reported.

Customer bookings dip 1.5% to 2.71 million.

A cooperative agreement is signed between ALF and **Arkia Israel Airlines, Ltd.** on January 24, **1999**, under which the two will jointly market charter flights and lease aircraft. The partnership is the first for Arkia with a European airline.

With the beginning of the summer holiday season at the end of March **2000**, new charters to Rome are started from Berlin, Dusseldorf, Hanover, and Munich. Frequencies to Tel Aviv are also doubled.

AERO LLOYD WARSCHAU, S.A.: Poland (1922–1925). During the summer of **1922**, Lloyd Ostflug, GmbH. CEO Gotthard Sachsenberg and Danziger Luftpost, GmbH. chief Erich Milch undertake further efforts to expand eastward. In Poland, the two enter into discussions with the Fanto and Polnaft oil companies, which agree to participate in the formation at Danzig of a Polish airline, Aero Lloyd Warschau, S.A.

Under terms of the July pact, the oil companies will provide fuel, Junkers Flugzeugwerke, A.G. will supply F-13s, and Danziger Luftpost will provide ground support and operational management. The new Polish company signs a contract for the eventual purchase of 14 F-13s. Revenue services commence in September over a route from Danzig to Warsaw and L'viv.

The company's route system is expanded during the summer of **1923** from Warsaw to Kraków and Poznan. Operations continue apace until March **1925** when the Polish government takes over the company, renaming it **Polska Linea Aerolot, S.A.**

AERO-MITLA, S.A. de C.V.: 4/a Martire de Tacubaya, 401 Oaxaca, Oaxaca, 68000, Mexico; Phone 52 (91) 951591; Year Founded 1996. Ricardo Yanez and Jorge Arturo Yanez Torres set up Aero-Mitla at Oaxaca in **1966** to provide regularly scheduled all-cargo services to domestic destinations. Revenue flights begin and continue with a single Douglas DC-3.

AERO NIGER, S.A.: Niger (1961–1966). H. F. Baffert establishes this air taxi concern at Niamey in **1961** to provide services throughout the newly independent country. A base is also set up at Zinder and revenue flights begin with 2 Jodel D.140 Mousquetaires.

The state-owned airline **Air Niger, S.A.** takes over the company in **1966**.

AERO-NORD, A.S. See INTERNORD, A.B.

AERO O/Y: Finland (1923–1947). Having received promises of technical support from the German aircraft builder Junkers Flugzeugwerke, A.G., Consul Bruno Otto Lucander (CEO of the Estonian carrier **Aeronaut, A.S.**) and associates sign a charter establishing Aero O/Y on September 12, **1923**. The company is registered on October 9 and at shareholders' meeting on November 1, the decision is taken to appoint Lucander as general manager and to begin operations. Additional startup capital is pledged on December 12.

The carrier's first aircraft, a Junkers F-13 with interchangeable skis and floats, is delivered on March 14, **1924**. Service is inaugurated on March 20—a mail flight from Helsinki to Tallinn.

In cooperation with the new operator **ABA Swedish Airlines, A.B.**, a route is extended from Helsinki to Stockholm on June 2. The first Finnish pilot, Gunnar Lihr, is hired during the summer, bringing airline employment to seven. A total of 269 passengers are carried on the year.

During the summer of **1925**, technical support from Junkers is lost following formation of the German airline **Deutsche Luft Hansa, A.G. (DLH)**. During the year, 833 sight-seeing, charter flights are made.

With a government loan, a float-equipped Junkers G-24 is purchased; delivered on June 4, **1926**, it is placed in summer-only service on the Stockholm frequency. The loan is actually a subsidy, which will be continued annually thereafter.

Aero O/Y joins the International Air Traffic Association (forerunner of today's IATA) in **1927**. During the spring, CEO Lucander and several

journalists make the company's first around-Finland flight. The Turku-Ruissalo air harbor is opened in May and Turku-Stockholm service is begun.

In June 1928 Gunnar Lihr, flying the F-13, rescues a crewman from the Italian airship *Italia*, downed north of Spitzbergen.

The company introduces summer season charters from Stockholm to Mariehamn on the Åland Islands. Also during the summer, the carrier begins night-airmail flights. During these nocturnal services, all Finnish post, including letters, postcards, and postal orders, are initially flown by air without special charge.

Pilot Lihr locates the wrecked Norwegian ship *Bratvaag* in 1929. Founder Lucander dies in August and is succeeded by Gunnar Stihle. Finnish investors buy out the last remaining Junkers interest in the company. By year's end, the fleet includes 4 F-13s and 1 G-24.

Aero O/Y and **ABA Swedish Airlines, A.B.** introduce the marketing name "Scandinavian Air Express" in 1930 to cover their Stockholm-Helsinki operations, the northern portion of which is flown by Aero O/Y. Joint summer night-airmail services are also inaugurated, Stockholm-Helsinki-Amsterdam.

The first of five ordered Junkers Ju-52/3ms is delivered in late spring 1932 and is placed on the Helsinki-Stockholm route on July 1. The other 4 are delivered over the next 10 years. The G-24 is retired in 1935 and in September of that year, Finland's first civil airport, Turku-Artukainen, is opened.

With the opening of the new Bromma Airport in early July 1936, the "Scandinavian Air Express" services, flown in cooperation with **Aero O/Y**, between Helsinki and Malmö are now extended on to Stockholm. The last Junkers F-13 Helsinki-Stockholm seaplane service is flown on December 15, as Aero O/Y's operations are transferred to newly finished Helsinki Malmi Airport.

The first of two DeHavilland DH 89A Dragon Rapides is received in early 1937, allowing the offering of domestic service. On May 1, these British aircraft open routes from Helsinki to Vilpuri and Tampere.

The second DH 89A is delivered in 1938 and the Vilpuri route is extended to Imatra and the Tampere segment to Vassa.

During the summer, same-day "Arctic Air Express" service is introduced over a route from Helsinki to Petsamo, via Tampere, Vaasa, Oulu, and Kemi.

The Tallinn international route is lengthened, via Riga and Kaunas, to Berlin. Two Focke-Wulf FW-200 Condors are ordered in October for delivery the following autumn.

In the spring of 1939, the northern domestic route is extended to Oulu and Kemi. In October, all Finnish civil aviation is subjected to military control. Upon the outbreak of the Winter War on November 30, the Finnish Air Force takes over Aero O/Y's two DH 89As. The Ju-52/3ms are transferred from Helsinki to Bassa in December, and service to Stockholm is maintained. Delivery of the FW-200s is cancelled and the carrier is forced to withdraw from transatlantic negotiations with the other Scandinavian countries.

With the war with Russia over in 1940, Helsinki service to Tallinn is restarted on April 2 and to Stockholm on April 3.

A "Lapland Express" is begun on June 2 over a route Helsinki-Tampere, Vassa, Kokkola, Oulu, Kemi, Rovaniemi, Sodankylä, and Petsamo. A Soviet fighter plane near Kar, Estonia, shoots down a Ju-52/3m with nine passengers on June 20; there are no survivors.

Mariehamn is added to that network in October.

During the last week of March 1941, 2 Douglas DC-2s, which had belonged to the Czech carrier **CLS Czechoslovak Airlines**, are obtained from **Deutsche Lufthansa, A.G. (DLH)**; these are delivered in April and, christened *Voima* and *Sisu*, enter service on June 1.

The Russo-Finnish Continuation War erupts on June 25. Once again, Aero O/Y's fleet is subjected to military control; operations are shifted from Helsinki and Turku to Pori. At some point during the year, the airline receives the former **Deutsche Lufthansa, A.G. (DLH)** Junkers Ju-52/3m *Th. Schopwinkel*.

In 1942-1943, flights continue over essential routes to Rovaniemi, Stockholm, and Berlin. The last of the 5 ordered Ju-52/3ms is delivered

during the former year, while the *Voima* and *Sisu* are taken over by the Finnish Air Force. The Continuation War ends on September 19, 1944.

With Malmi Airport under jurisdiction of the Allied Control Commission (ACC), the carrier's surviving aircraft are transferred to Hyvinkää. Service from Hyvinkää-Stockholm, via Turku and Mariehamn, is launched in January 1945. This service is banned by the ACC on March 2 and Aero O/Y is required to stand down. Domestic operations resume on August 13, but Managing Director Stahle is forced to resign in December.

Domestic flights continue in 1946 under the leadership of Acting Managing Directors C. J. Ehrnrooth and Uolevi Raade. The government acquires 70% majority of the company's stock, leaving the remaining 30% in private hands. The state purchases 8 war surplus Douglas C-47s, 5 of which are converted to civil DC-3 standard by Fokker in the Netherlands. The first DC-3 arrives at Helsinki on October 19.

In January 1947, the 7 additional DC-3s purchased by the Ministry of Communications and Public Works the previous year are received; all have been converted to civil standard. These begin domestic flights in May, the same month the airline's administration is reorganized and the name **Finnish Air Lines O/Y** replaces the pioneering Aero O/Y.

AERO PACIFICO, S.A. de C.V.: Mexico (1989-1992). AP is organized at La Paz in 1989 to fly all-cargo services around the region employing a single Boeing C-97G Stratofreighter. The dramatic increase in fuel costs following Iraq's August 1990 invasion of Kuwait puts the one-plane operation out of business.

The Stratofreighter is repainted at Tucson, Arizona, in October 1992, but the company suspends operations in December.

AERO PORTUGUESA (SOCIEDADE AERO PORTUGUEZA, S.A.): Portugal (1934-1953). This carrier is formed at Lisbon in June 1934 with controlling interest taken and assistance provided by **Air France**. With chartered French aircraft, a service is opened to Tangier on October 20. A pair of Wibault 283.T12s are acquired from the French state airline at decade's end and employed to stretch the Tangier leg to Casablanca.

By 1942, only one Wibault remains in flying condition and, there being no spare parts available from France, operations are suspended. In the spring of 1943, the French surrender one-half of their shares to a Lisbon shipping company, allowing the carrier to become Portuguese controlled. Thrice-weekly flights to Casablanca resume on January 12, 1944 with a new Lockheed Lodestar; after V-E Day, the Tangier route is resumed.

There is no further expansion and the airline slides downhill toward its April 1953 shutdown.

AERO REPUBLICA, S.A.: CRA-10, No. 27-51, Ofc 303, Terminal Aereo Simon de Bolívar Apto Eldorado, Bogotá DC, Colombia; Phone 57 (1) 342-7221; Fax 57 (1) 283-1680; Code P5; Year Founded 1992. During 1991, Colombian President Cesar Gaviria, a champion of free markets, permits domestic airline liberalization. The national civil aviation department, AeroCivil, approves new airlines and awards new routes, while dropping its policing of ticket prices.

Founded at Bogotá on November 23, 1992, AR's major shareholder is the Promotora de Inversiones Superior, S.A. Alfonso Avila is named president/CEO, with Juan Manuel Pulido as vice president-operations. Unlike its established rivals, the start-up will have the cost advantage of operating without trade unions.

The new entrant, the nation's first new airline in a quarter century, inaugurates scheduled domestic passenger and cargo services on June 19, 1993, with a single leased Boeing 727-46, first delivered to **Japan Air Lines Company, Ltd. (2)**. Leticia joins the route network in October.

Traffic figures are released for only the second and third quarters and show enplanements of 61,397 and a total of 1.1 million FTKs are flown.

Although the new government of President Ernesto Samper is more conservative in 1994, it cannot put the liberalization genie back in the bottle. Domestic airlines, including ACES Colombia, continue to add capacity, start new routes, and cut fares or engage in fare wars.

AR adds flights to Aruba and seeks traffic rights to Orlando.

The carrier is able to expand in **1995–1999**, becoming Colombia's third largest domestic carrier. Its workforce grows to 186 and the fleet includes 2 Boeing trimotors, 5 Douglas DC-9-32s, and 3 DC-9-31s. A second hub is established at Cali and destinations visited from it and Bogota include Aruba, Barranquilla, Cartagena, La Habana, Leticia, Medellin, Monteria, San Andres, and Santa Marta. Traffic and financial figures are not available.

Late in 1999, the U.S. FAA recertifies Colombia's airline safety. Enplanements total 749,000 and 2.32 million FTKs are operated.

As a result of the recertification, the U.S. and Colombian regulatory agencies, in late spring of **2000**, agree to an increase in the number of flights between the two nations. In June, Aero Republica is granted rights to operate its first international route, promptly beginning return charters, four to five per week, to Orlando.

AERO RETARDANT. *See* **PACIFIC ALASKA AIRLINES**

AERO SAFARI, S.A. de C.V.: Mexico (1961–1966). Captain Roberto Fierro forms AS at Cozumel in **1961** to begin offering Beech single-engine service for tourists from that town to Mujeres, plus destinations in Quintana Roo and Yucatan.

Local competitor Aero Taxi purchases and merges Aero Safari in early 1965; once integrated under the latter's name, new owner Fernando Barbachano's little airline begins scheduled services on October 24, flying from Cozumel to Tulum, Isla Mujeres, and Chetumal.

Permission to fly a regularly scheduled route from Merida to Tuxpan is obtained from the government in August **1966**, at which point Barbachano leases a Hawker Siddeley HS 748 from **COPA (Compania Panamena de Aviacion, S.A.)** of Panama.

In September, the Mexican government approves of an exchange of equipment and services between Aero Safari and Manuel Gomez Mendez's newly incorporated **Servicio Aereo Gomez Mendez, S.A. de C.V.** Finding themselves compatible, Barbachano and Gomez Mendez fly to London, conduct negotiations, and then combine their operations on November 1 into a new carrier, **Aeromaya, S.A. de C.V.**

AERO SAHARA, S.A.: France (1950–1962). With bases at Tunis and Algiers, AS is established in France in **1950** to provide charter service in support of the French energy industry. Revenue flights commence with 2 de Havilland DH-89A Dragon Rapides and 4 Norduyn Norsemen.

Flights taking petroleum workers into North Africa continue during the remainder of the decade. During these years, the fleet is increased by the addition of 1 Vickers Viking I and 1 DH-114 Heron 1B.

In the late **1950s**, the company becomes a Dornier distributor. In the process, it assigns to its in-house operation 5 Dornier 27As. Service continues until the independence of Algeria in **1962**.

AERO SANTA, S.A.: Apartado 1429, Lima, 100, Peru; Phone 51 (14) 469 756; Fax 51 (14) 469 428; Code UJ; Year Founded 1994. As is established at Lima in January **1994** to provide regional and domestic charters. Traffic figures are reported through September and show bookings of 205,728. The company barely survives its first anniversary.

Achieving a measure of viability in **1995–1996**, the company begins to expand and adds 1 each B-737-200A and B-727-200A. Traffic figures are provided for the first quarter of **1997** and show enplanements of 50,316. Flights continue into the new millennium.

AERO SERVICE, S.A.: Avenue Amilcar Cabral, BP 1115, Brazzaville, Republic of the Congo; Phone 242 (83) 06 65; Fax 242 (83) 09 47; Code BF; Year Founded 1962. As is established at Brazzaville in **1962** as the air transport department of a frozen food company. Charter services to regional and domestic destinations commence in **1964** and continue apace through the late **1980s** and into the **1990s**.

By **1993–1994**, the onetime division has been reformed into the airline subsidiary of TAG Light Aviation. C. H. Grisbaum is president and

employs a workforce of 52. His fleet comprises 2 CASA C-212-DF722s, 1 C-212-CB13, 2 Cessna 402s, and 1 each Cessna 182, Cessna 206U, Cessna 172, Grumman G2, and Swearingen SA-227AC Metro.

From bases at Brazzaville and Pointe Noire, scheduled and ad hoc passenger and charter flights are offered to Dolisie, Nkayi, Impfondo, Ouessou, Makabana, Owando, Libreville, Zanaga, Port Gentil, Kinshasa, Nuanda, Cabinda, Luanda, and Soyo.

Operations continue apace in **1995–2000**, during which years, the fleet is enhanced by the addition of a single, leased Aero International (Regional) ATR42-320.

AERO SERVICIOS-TRANS CARIBBEAN AIRLINES, S.A.: Honduras (1958–1986). Aero Servicios is formed at Tegucigalpa in **1958**. Equipped with a fleet that comes to comprise a total of 2 Piper Aztecs, 1 Piper Apache, 2 Cessna 190s, and 1 Cessna 185, the 10-man carrier undertakes and continues charter work throughout the nation and to nearby countries.

Flights continue in **1959–1993**, during which years the company also operates a Convair CV-440. Services are suspended in December of the latter year.

AERO SOUTHWEST: United States (1975). As is set up at Altus, Oklahoma, in **1975** to provide scheduled air taxi flights to Oklahoma City. Although Cessna 206 roundtrips are duly inaugurated, they cannot be maintained beyond year's end.

AERO TAXI (1): 6028 Cessna Dr., Rockford, Illinois 61109, United States; Phone (815) 963-4444; Fax (815) 963-8885; Year Founded 1969. The FBO Aero Taxi is established by Bruce Swisher at Rockford, Illinois, **1969**; ad hoc cargo charters are also flown throughout North America. Over the next 30 years, Swisher will employ five full-time and six part-time pilots. In **2000**, it bases 2 Dassault Falcon 20s and 2 Mitsubishi Mu-2s at Rockford. It also keeps 1 Beech 18H at the Illinois facility while 1 Beech 18S is stationed at Huntsville, Alabama.

AERO TAXI (2): 110 Old Churchman's Road, New Castle, Delaware 19720, United States; Phone (302) 328-3430; Fax (302) 328-5615; Year Founded 1988. FBO Aero Taxi is set up at New Castle County Airport in **1988** and, over the next decade, also offers a significant variety of both passenger and cargo charters. By **2000**, President Dirk Dinkeloo employs six full-time and five part-time pilots. At the Delaware base are stationed 2 each IAI-1124 Westwind Is and Cessna 310s, along with 1 each Cessna 310R, Beech 18, and Beech 35 Bonanza. Another C-310R passenger aircraft is also maintained at Williamsport-Lycoming County Airport in Pennsylvania.

AERO TAXI (3). *See* **AERO SAFARI, S.A. de C.V.**

AERO TAXI DEL VIZCAINO, S.A. de C.V.: Mexico (1993–1996). This new Mexican third-level carrier is established in **1993** to provide regional passenger and cargo flights. Revenue operations commence and continue with a single leased Fairchild-Swearingen Metro II. Operations continue into **1996**.

AERO TAXI JACAREPAGUA, LTDA.: Av. Ayton Senna, 2541 Aeroporto de Jacarepagua, Barra da Tijura, RJ, 22775-000, Brazil; Phone 55 (21) 325-5301; Fax 55 (21) 325-5301; Year Founded 1996. Patrick M. M. Valansi, David G. M. Hetzei, and Clodoaldo Da Silva Santos set up ATJ at Barra da Tijura in **1996** to offer regularly scheduled, third-level passenger services to domestic destinations. Revenue flights begin and continue with a single Embraer EMB-110 Bandeirante.

AERO TAXIS (COMPANHIA AERO TAXIS, S.A.): Angola (1961–1966). Aero Taxis is set up at Luanda in 1961 to provide on-demand passenger and air cargo services throughout the country with 2 Stinson Voyagers.

The company proves so successful that it is able to increase its fleet and services during the remaining five years of its existence. Acquired

are 1 de Havilland Canada DHC-3 Otter (that is soon sold) plus 1 Piper PA-23 Aztec (christened *Lt. Col. Carloto Castro*) and 2 PA-24 Comanches (*Dembos* and *Uige*).

AERO TONALA, S.A. de C.V.: Mexico (1993–1995). During the late spring of 1993, the air taxi operator Aero Tonalá is contracted by the travel group Magnicharters to offer regional passenger charters on its behalf. In hopes of expanding its presence into the national airline scene, Aero Tonalá leases a Boeing 727-230, first flown by **Deutsche Lufthansa, A.G.**, as an upgrade to its fleet, which already owns 1 Gates Learjet 25D, 1 Learjet 35A, and 1 Fairchild-Swearingen Metro II.

The Boeing commences tour flights to various historic sites and regional cities in August. Unable to achieve airline viability, the company must halt these services in January 1994 and return its big jetliner to its lessor. Operations with the smaller planes continue into 1995 when the company shuts down.

AERO TRADES WESTERN, LTD.: Canada (1974–1984). ATW is established at Winnipeg's airport in 1974 to offer both charter and scheduled services. In addition to a fleet of ex-Canadian Forces Douglas C-47s (military DC-3s), the company offers scheduled flights with a de Havilland Canada DHC-6 Twin Otter. The first commercially appointed DC-3 arrives in 1976. In 1978, the DHC and DC-3 are sold when a Convair CV-640 is purchased from **Pacific Western Airlines, Ltd.** The fleet is simultaneously enhanced by the addition of a DC-4.

The four-engine Douglas transport is lost in a crash at Thompson on June 1, 1979 and it is replaced by another aircraft; two more DC-4s purchased in 1980 are dedicated to all-cargo service. One of these is written off following an accident on December 2, 1981. The CV-640 is sold to **Worldways Canada, Ltd.** in 1983. At this point, the carrier is in significant financial difficulty as the result of a recession-caused traffic downturn. Unable to revive, it agrees to be taken over by Warton, Ontario-based **Soundair, Ltd.**, later **Soundair Express, Ltd.**, in late 1984.

AERO TRANS COLOMBIA DE CARGO: United States (1993–1994). ATCC is established at Miami in 1993 to provide all-cargo services to Bogotá. Revenue operations commence with a single Douglas DC-8-54F, but end within a year.

AERO TRANSPORT, S.A.: France (1922). This short-lived airline is formed at Paris in early 1920. Equipped with Sopwith biplanes and working with the Swiss Ecole-Aéro, it inaugurates every-five-days service between Paris and Geneva on July 1. Operations cease following the summer season.

AERO TRANSPORT FLUGBETRIEBSGESELLSCHAFT, GmbH.: Austria (1962–1964). ATF is established at Vienna in the early spring of 1962 to offer air holiday charter and inclusive-tour flights to destinations throughout Europe. A Lockheed L-049 Constellation is purchased from **Trans World Airlines (TWA)** and employed to launch nonscheduled services during the early summer.

At the beginning of 1963, an L-749A is purchased from **Skyways, Ltd.** along with another L-749A previously operated by the huge U.S. **Transocean Air Lines (TAL)**. In late fall, following the close of the summer tourist season, the Constellations are again allowed to fly worldwide charters. In November, one of the aircraft is impounded at Djibouti, French Somaliland, after French authorities find it is transporting arms for Yemeni Royalists fighting Egypt.

Although the Lockheed held in Africa is eventually released, difficulties continue to plague the carrier, most of a financial nature. Just after the holiday season begins in 1964, one of the L-749As is impounded at Vienna's Schwechat Airport to cover corporate debt. Unable to raise funds enough to free its plane or to continue, ATF folds.

AERO TRANSPORTES. See ATSA (LINEAS TRANSCONTINENTALES DE AERO-TRANSPORTES, S.A.)

AERO TRANSPORTI ITALIANI, S.p.A. (ATI LINEE AEREE NAZIONALI): Italy (1963–1994). Organized at Naples on December 13, 1963 as successor to **Societal Aerea Mediterranea, S.p.A.** and as a domestic subsidiary of **Alitalia, S.p.A.**, the new entrant undertakes scheduled services on June 3, 1964 with a fleet of 3 Fokker F.27-200 Friendships. Emphasis is placed on an increase of air transport frequencies to the Mediterranean islands and southern mainland area and, in July 1966, flights also commence to Libya on behalf of **Libyan Arab Airlines**.

While approaching Reggio de Calabria from Rome on May 25, 1969, an F.27-600 with 5 crew and 31 passengers strikes a wall at the edge of the South Agata River that causes the aircraft to crash (1 dead).

The first DC-9-32 joins the fleet on July 24.

As a result of the addition of jetliners, services are expanded and, in 1970–1971, the company is operating a scheduled "Aerobus" service linking 30 cities. Additionally, and with aircraft from the parent, the company undertakes inclusive-tour charters to destinations in North Africa and Europe.

The carrier's Fokkers are involved in two fatal accidents during 1972. En route from Rome with 3 crew and 15 passengers on April 16, an F.27-200 crashes at Amaseno during a thunderstorm; there are no survivors.

On October 6, an F.27-200 en route from Trieste to Bari with 3 crew and 7 passengers, is hijacked by one of the customers, who demands L200 million in ransom and a flight to Cairo. The aircraft returns to Trieste, where the other passengers are released and the crew escapes. Police open fire on the aircraft and upon storming it early the next morning find the young pirate dead.

En route from Naples to Bari on October 20, an F.27-200 with 3 crew and 24 passengers, crashes into a hill at Poggiorsini; there are no survivors.

By 1977, Chairman Carlo Bernini's company employs 1,550 workers and owns a fleet comprising 16 Douglas DC-9-32s and 5 F.27s. Enplanements are 2,488,082.

Passenger boardings decline by 2.9% in 1978 to 2,417,962 and freight traffic is down by 6.2% to 5.5 million FTKs.

The workforce in 1979 totals 1,669. While en route from Milan to Cagliari on September 14, a DC-9-32 on landing approach with 4 crew and 27 passengers, crashes into a 2,000-ft. mountain near Sarroch, Sardinia; there are no survivors.

The decline in traffic continues as customer bookings fall 13.3% to 2,096,583 and cargo drops 30% to 3.8 million FTKs.

Employment is increased by 19.3% in 1980 to 1,991. Enplanements rebound 6.3% to 2,228,000 while freight declines another 6.8% to 3.09 million FTKs.

The workforce is reduced by 3.1% in 1981 to 1,929. In March, ATI and **Alitalia, S.p.A.** form a new domestic airline, **Aeromediterranea, S.p.A.**, with the former taking a minority interest. Enplanements total 2,794,583, a boost of 25.4%, while cargo rises 13% to 4 million FTKs.

In 1982–1983, the fleet is increased to 21 DC-9-32s. Destinations now scheduled include: Alghero, Ancona, Bari, Bergamo, Bologna, Brindisi, Cagliari, Catania, Genoa, Lampedusa, Milan, Naples, Palermo, Pantelleria, Pescara, Pisa, Reggio Calabria, Rome, Trapani, Trieste, Turin, and Venice. Bookings increase by 10.7% to 3,050,000 in 1982, while cargo climbs 5.6% to 4.3 million FTKs. In 1983, passenger boardings increase 3.4% to 3,200,288 as freight jumps 8.3% to 4,604. At the close of these two years, the workforce numbers 2,000.

In 1984, the 2,000-employee company enjoys a 2.4% spurt in passenger boardings to 3,276,937 as cargo accelerates 14.8% to 1.41 billion FTKs. ATI is merged with **Aeromediterranea, S.p.A.** under the ATI banner in the late summer of 1985. Twelve DC-9-30s are transferred to the enlarged domestic airline from **Alitalia, S.p.A.**, while orders are placed for a fleet of Avions de Transport Regional ATR42-312s. The older networks of the two companies are combined, while a number of domestic routes are also turned over by the major.

Passenger boardings jump 30.7% to 4,284,000; however, the workforce is actually decreased by 3.8% to 1,924.

The workforce grows by 14.4% in **1986** as the carrier flies as a subsidiary of **Alitalia, S.p.A.**

Customer bookings rise 3.3% to 4,584,976 and freight bounces upward by 13.3% to 8.75 million FTKs.

Airline employment is increased again in **1987**, up 7.5% to 2,365.

Routes served now include Florence–Milan and Rome, Bologna to Milan and Naples, and Turin to Zurich, the latter on behalf of **Alitalia, S.p.A.**

En route from Milan on October 15, an ATR42-312 with 3 crew and 34 passengers begins to roll violently and the pilot loses control. The turboprop crashes into 700-m.-high Mount Crezzo and there are no survivors. Icing is suspected as a cause of the disaster.

Passenger boardings climb 11.3% to 5,103,534 while cargo moves along a positive 8.2% to 9.47 million FTKs.

The fleet in **1988** includes 17 DC-9-30s, 12 MD-82s, 6 ATR42s, and 4 leased DC-9-32s. Orders are outstanding for 11 more ATR42-312s. Customer bookings increase by 4.8% to 5,347,264; however, cargo is down by 4.8% to 8.07 million FTKs.

Nicola Quarta is chairman in **1989**, with Gaetano Galia as managing director. Three additional ATR42-312s arrive as operations continue apace.

Traffic figures are only available for the first four months of **1990**. These show that a total of 1,995,885 passengers and 3.27 million FTKs are flown. As additional jetliners are received, plans are made to withdraw the ATR42-312s.

Atitech, S.p.A. is established on December 4 and on December 12 the subsidiary **Avianova, S.p.A.** takes over **Aliblu, S.p.A.** Total income reaches 8.18 million lire.

Fleet revitalization in **1991** shows an equipment list of 1 ATR42-312, 9 leased DC-9-32s, 13 MD-82s, and 13 owned and 2 leased MD-83s. A 6% minority interest is taken in Alisurance, S.R.L. The last turboprop is withdrawn in **1992** as 10 more MD-83s are delivered. Minority 41% shareholding in Atitech, S.p.A. is sold to **Alitalia, S.p.A.**

In **1993**, Managing Director Galia oversees a workforce of 2,900. One DC-9-32 is removed as the number of leased MD-83s is increased by 12. From Alghero, flights are made to Genoa, Pisa, and Turin; from Florence, to Naples and Rome; from Trapani to Pantelleria and Palermo; from Pantelleria to Palermo; from Genoa to Naples and Catania. Other destinations include Bari, Cagliari, Milan, and Venice. Enplanements total 4.9 million.

Scheduled and charter operations continue apace in **1994** as the number of MD-80s reaches 39, along with 11 DC-9-32s. Operations cease before year's end.

AERO TRANSPORTS ERNOUL, S.A.: France (1919–1922). A small pioneer, ATE is formed at Toulouse during the summer of **1919**. Toward the end of the year, it stretches two routes from its base: to Bordeaux via Agen and to Montpellier via Narbonne and Beziers.

The enterprise cannot be maintained beyond **1922**.

AERO TROPICAL, S.A.: Angola (1994–1996). AT is set up at Luanda by Adao Campos in **1994** to provide regional all-cargo services. Revenue flights commence with one each Antonov An-12B and An-32B, both leased from Moldavia.

Destinations visited during the remainder of the year and **1995** include Benguela, Cabinda, Kuito, Luena, Menongue, Namibe, and N'Giva.

The An-12B with eight passengers crashes at Lucapa on February 27, **1996**; there are no survivors. The company closes its doors by spring.

AERO T.Z. (AERO-KOMUNIKACJA POWIETRZNA, S.A.): Poland (1925–1929). In the spring of **1925**, the Poznan-based Association of Polish Airmen purchases several Farman F-70s and establishes its own airline, Aero T.Z. Initial service is launched during the summer from the carrier's base to Warsaw via Lodz. This route is subsequently extended to Brno, Czechoslovakia.

On January 1, **1929**, the government takes control of Aero T.Z. and its rival, **Aerolot, S.A.**, and consolidates the two into the state carrier **LOT Polish Airlines, S.A.**

AERO UNION. See **DEUTSCHER AERO LLOYD A.G.**

AERO UNION: Chico Municipal Airport, Chico, California, United States; Phone 1 (916) 896-3014; Fax 1 (916) 896-3099; http://www.aerounion.com; Code XAU1 Year Founded 1959. AU is established at Chico, California, in **1959** to undertake contract and charter freight and aerial tanker services for forest fire control. Operations commence with Douglas DC-4s.

Flights continue apace throughout the **1960s–1970s** and by **1985** the fleet includes 8 DC-4s and a Boeing 377 Stratocruiser, plus light aircraft.

Largely unheralded, President Dale Newton's airline employs a workforce of 150 in **1994** and flies 7 DC-4s, 2 Piper PA-32 Cherokees, and a number of former military aircraft, including 12 Lockheed PV2 Neptunes and 5 P-3 Orions. Operations continue.

Flights continue in **1995–1998**. During these years, Victor E. Alvistur becomes president.

Airline employment stands at 200 at the beginning of **1999**. The fleet now includes 2 DC-4s, 4 PV2s, 7 P-3s, 2 Piper PA-32-300 Cherokee Sixes, and 1 each PA-23 Aztec and PA-39 Twin Comanche.

AERO URUGUAY, S.A.: Uruguay (1977–1991). The Luxembourg-based all-cargo airline **Cargolux Airlines International, S.A.** joins with Montevideo businessmen led by the former director of civil aviation, Colonel Atilio Bonelli (who becomes chairman), to create this ad hoc and split-charter operation at the Uruguayan capital in **1977**. Employing a leased Canadair CL-44D, the 24-man carrier, operated by Cargolux under a three-year management contract, inaugurates flights from Carrasco Airport to San Juan on November 12.

During the first half of **1978**, a Boeing 707-331C is purchased used from the American carrier **Trans World Airlines (TWA)**. On October 9, the owned aircraft is employed to initiate international cargo charters to European, Caribbean, South American and North American destinations. A Douglas DC-8-63CF is acquired within a year of startup as an increased variety of cargos are flown to a larger number of destinations in **1979–1981**. In June **1982**, the carrier is forced to suspend operations.

Aero Uruguay, S.A. remains dormant until **1986** when it resumes flying a chartered DC-8-55F. Following the bankruptcy of **ARCO (Aerolineas Colonia, S.A.)** in the spring of **1987**, the company purchases a former **Horizon Air** Fokker Fairchild F-27A Friendship, which is employed in the Colonia–Buenos Aires passenger market.

At the end of the decade, the Douglas freighter is replaced with 2 leased Boeings, 1 707-321C, and 1 707-351C. Unable to make a profit for a second time, the company suspends operations for good late in **1991**.

AERO VIRGIN ISLANDS: United States (1977–1991). AVI is formed by Joseph Cranston at St. Thomas, U.S. Virgin Islands, early in the first quarter of **1977** to offer scheduled passenger, mail, and charter services to San Juan, St. Croix, and St. Thomas. Ownership is divided between private interests (92%), public interests (6%), and the government (2%). A fleet of 5 Douglas DC-3s is assembled, 3 by lease from **Air BVI, Ltd.**, and President Reuben B. Wheatley's carrier inaugurates daily roundtrip flights on March 4.

As the result of fuel mismanagement, both engines of a DC-3 quit 12 mi. off Luquilla, Puerto Rico, on January 2, **1978**; the plane is ditched (and lost), but there are no fatalities.

Operations continue apace and without significant change or incident during the remainder of the decade and into the 1980s.

Enplanements by **1983** total 79,000, but dip to 76,154 in **1984**.

A major expansion is undertaken in **1985** as the payroll grows 80.4% to 101 and the fleet adds another DC-3. Passenger boardings jump 51.7% to 157,667. Airline employment grows an additional 39.5% in **1986** to 113 as customer bookings rise 3.7% to 158,104.

The workforce is increased by 7.1% in **1987** to 121 and orders are placed for 3 Martin 4-0-4s. Although service to St. Croix is dropped at year's end, enplanements for the year rise to 167,000. In **1988–1989**, the fleet is upgraded by the addition of a Martin 4-0-4. A number of aircraft

are destroyed or damaged when Hurricane Hugo wrecks the company base on September 17 of the latter year. Services must be cut back in 1990 and, when combined with the effects of recession, the move will prove fatal. The carrier is forced to shut its doors in 1991.

AERO VOLGA CONCERN: Russia (1992–2000). Based at Samara, some 700 km. SE of Moscow, AVC is split off from **Aeroflot Soviet Airlines** in 1992 to serve as the enlarged parent operating company for 11 small former Aeroflot departments in the region and surrounding districts of Saratov, Nizhni Novgorod, Ulyanovsk, Penza, Orenburg, Tchevashiya, Mordoviya, and Mari-el. Under the leadership of Director General Boris Komonov, Samara's airport, Kurumoch, is upgraded for international flights; previously, all services had to operate through an approved gateway—Moscow, Kiev, or Tashkent.

Revenue operations are continued over the combined previous routes with a large cast-off Soviet fleet of more than 130 aircraft—plus a number of helicopters—including 20 Tupolev Tu-154s, 20 Tu-134s, 15 Yakovlev Yak-42s, 10 Yak-40s, 50 Antonov An-24s, 10 Let 410s, and about 10 Ilyushin Il-76 freighters. The average age of this fleet is about 75% of design life. AVC handles about 8% of all Russian traffic for the year; charter business increases with a total of 2,837 flights, in addition to 2,810 business charters. Enplanements for the year total 4,817,218.

From this point on, the situation darkens. Fuel prices grow by 172% in 1993, overhaul costs by 60%, and other costs by 30% or more. Although fares are increased by 24%, the hike covers just 60% of the avgas bill. As the year ends, frequencies are cut nearly in half.

Passenger boardings during the 12 months decline by 34.5% to 3,581,610, while freight traffic is off 28.1% to 542 million FTKs.

Traffic continues to decline in 1994 and, consequently, the fleet is rationalized; many aircraft are parked. Director General Komonov operates 11 Tu-154/154Ms, 4 Il-76s, 2 Yak-42s, and an undisclosed number of Tu-134s and Yak-40s. The company, without success, begins to actively seek business partners or joint ventures for commercial services. Customer bookings fall 28.9% during the year to 2,547,000, while cargo slides 12.4% to 475 million FTKs.

Flights continue in 1995–1998, during which years Alexandr F. Kozlov becomes director general and the fleet is reduced to just 4 Tu-154Ms, 1 Yak-40, and 1 Yak-42. Destinations visited during the latter year include Bologna, Brussels, Cologne, Dresden, Dusseldorf, Florence, Frankfurt, Gothenburg, Graz, Hamburg, Hanover, Innsbruck, Klagenfurt, Kosice, Leipzig, Linz, Munich, Nuremberg, Oslo, Paris, Salzburg, Stuttgart, Venice, Vienna, and Zurich.

Under the leadership of new Director General Victor Tchomov, AVC enters into merger discussions with cross-town competitor **Samara Airlines (Samara Avialinii)** during 1999. Although government objections are raised, they are overcome by October 21. The final union of the two airlines under the **Samara Airlines (Samara Avialinii)** name occurs on February 14, 2000. Samara gains 2 Tu-154Ms from a once-huge fleet and all AVC employees retain their jobs.

AERO ZAMBIA, LTD.: Zambia 1994–2000. After the demise of the then-national airline **Zambia Airways Corporation**, AZL is established at Lusaka on May 21, 1994 to provide scheduled international and regional passenger and cargo services. F. David Tokoph is appointed chairman and managing director. Domestic and regional routes are applied for and a B-737-222 is leased from the El Paso, Texas, firm of Aviation Consultants.

On December 3, ZAC is liquidated and its entire 1,200-person staff is dismissed. The government does not step in to cover the carrier's \$100-million debt. Rather, it nominates AZL as the new flag carrier and assigns to it all of the defunct airline's rights. AZL accepts the challenge and hires its own staff of 170.

Flights from Lusaka to Ndola commence on March 27, 1995. AZL is the first Zambian private concern to operate an in-country commercial flight since the nationalization of the country's air transport industry a quarter of a century before.

Although neither traffic nor financial data will be released for this year or for the next two, the carrier continues to grow. Marketing and code-sharing alliances are formed with **Air France**, **Air Seychelles**, **Air Namibia**, **Air Malawi**, **Air Tanzania**, **Air Zimbabwe**, **British Airways, Ltd.** (2), **Egyptair, S.A.E.**, **Ghana Airways**, **Inter Air**, **Kenya Airways**, **KLM (Royal Dutch Airlines)**, **Lesotho Airways**, **South African Airways (Pty.) Ltd.**, **Qantas Airways (Pty.) Ltd.**, **Virgin Atlantic Airways, Ltd.**, and **Yanda Airlines**.

Employment is increased to a total of 170 and 1 more B-737-202C and B-727-25F are leased. Service is undertaken to all domestic points, as well as Dar es Salaam, Nairobi, Harare, Johannesburg, Dubai, Luanda, Kinshasa, Bujumbura, Gaborone, and Kilgali, although flights to the last three places ceases in 1997. Plans are made to lease wide-body aircraft and inaugurate new services to Entebbe and London as soon as the route applications are approved.

In late May, a standoff arises between the company and **Kenya Airways** over flight schedules and landing rights between the two countries. On June 8, Zambian President Chiluba meets with a Kenyan government delegation led by Transport and Communications Minister Wilson Ayah and thereafter orders a lifting of suspensions imposed upon Kenya flights to Lusaka in exchange for a similar lift of a ban on his airline's flights to Nairobi.

Pointing out that **Kenya Airways** has not, however, acted in good faith with AZL to find a more equitable mode of sharing passenger traffic, Zambian Transport Minister Suresh Desai and AZL Managing Director Yowondewossen Mengishu announce on June 11 that differences have not been resolved nor landing rights reinstated.

A code-sharing agreement is reached with **Air Zimbabwe Corporation** on September 13; under its terms, the Harare-based flag carrier will introduce a fifth weekly flight to London on November 1, via Lusaka.

Flights continue in 1998. A company B-727-25F is destroyed on the ground at Asmara on June 5 when Ethiopian forces attack Yohannes IV Airport.

Thousands of dollars disappear from company coffers in early October. Two employees who have fled the company are alleged to have taken upwards of \$150,000.

Because South Africa has removed certain authorizations for service into the airspace of war-torn Angola, **TAAG Angola Airlines, S.A.** begins flying a B-707-382C in full AZL colors and logo on thrice-weekly all-cargo roundtrips from Luanda to Johannesburg.

During the fall, the company's winter schedule is published on the World Wide Web. Effective November 1, AZL flies thrice weekly to Johannesburg, Harare, and Gaborone plus twice weekly to Nairobi. Return flights to Ndola are made four times a week.

Airline employment stands at 250 at the beginning of 1999. Although Mr. Tokoph remains chairman, he is now joined by joint Managing Directors Yowondewossen Mengishu and Alessandro Sangué.

When the **TAAG Angola Airlines, S.A.** subterfuge is discovered on February 9, AZL requests that the pirated livery be removed. Also during February, AZL itself is accused of operating illegal flights in Angola through a subsidiary named Greco.

On March 5, Communications and Transport Minister David Saviye suspends the airline's operating permit for alleged flaws in its operational conduct. A list of possible illegalities is provided, including charges that the carrier may have brought unregistered aircraft into Zambia wearing the company's livery. The matter is turned over to a special tribunal, which will hold an inquiry into the situation. Chairman/Managing Director Tokoph denies Saviye's assertions, claiming them to arise from a desire on the part of the government to put his private operation out of business.

Charges and countercharges continue. On April 8, the *Times of Zambia* reports that the South African Civil Aviation Authority is conducting an inquiry into the airline's activities. If it is found to have broken regulations as minister Saviye has indicated, its authority to land in South Africa will be terminated.

The matter remains under review. Later in the month, AZL loses the right to operate the Johannesburg to Lusaka route on Fridays. The airline

petitions a court that grants an injunction against the transfer of the service to **South African Airways (Pty.), Ltd.** The injunction is later dissolved, but AZL is granted another stay of execution. This time SAA challenges and, on April 27, again according to the *Times of Zambia*, Zambian Supreme Court Judge Weston Muzyamba rules on the matter in chambers. The stay would no longer remain in place and the entire case will be heard *inter-parte* at a later date.

AEROAMERICA: United States (1974–1982). This third-level operator is organized at Seattle in 1974 to offer scheduled intrastate passenger and cargo services to Spokane. In addition, President A. Joel Eisenberg's company also establishes a base at West Berlin's Tegel Airport from which to additionally undertake long-range contract service and freight charters to destinations in the Middle East and Africa and inclusive-tour passenger charters to Turkey, the Canary Islands, and Ireland. Revenue operations commence with a fleet of 3 Boeing 707-320s and 7 B-720-27s, the latter previously operated by **Braniff International Airways**.

By 1978, the carrier's workforce totals 280 and the fleet comprises 4 707-320s, 8 B-720-27s, and 1 Aero Commander. Scheduled authority is received in August, and is employed to initiate new services from Seattle, east to Spokane and west to Honolulu.

The FAA finds the company in violation of assorted regulations, primarily commercial, during 1979 and withdraws first its scheduled authority and then all operating permission.

Unable to operate, the company's certification is withdrawn by the government in June 1980. In October, a group headed by Michael Falconer purchases the carrier and the B-707-320s are all withdrawn.

In the summer of 1981, the company is reorganized and all flight equipment but one B-720-27 is withdrawn. In June, the aircraft is rented by a television studio and repainted, on one side only, to resemble Air Force One for the movie *Jacqueline Bouvier Kennedy*, starring Jaclyn Smith.

Operating from Boeing Field in Seattle, Aeroamerica relaunches passenger charter flights in October, this time only as far as Reno, Nevada, on behalf of an Ohio-based travel club. Although government certification is regained, the new approach fails and the company shuts its doors in early 1982.

AEROANDINA (LINEA AEREA ANDINA, S.A.): Chile (1979–1982). Aeroandina is formed at Santiago in the fall of 1979. After obtaining a single Convair CV-600, the new third-level entrant begins flying to Concepcion and La Serena in January 1980. This service is maintained through the 1981, being upgraded in the fall of that year with a Douglas DC-9-14 leased from the Spanish charter carrier **Spantax S.A. (Transportes Aereos)**.

Unable to remain economically viable in the face of higher fuel prices and a world recession, the company is liquidated in 1982.

AEROBRAZIL CARGO (AEROBRAZIL SERVICIOS AEREOS, S.A.). See **TRANSBRASIL AIRLINES, S.A. (LINHAS AEREAS)**

AEROCANCUN (AERONAUTICA DE CANCUN, S.A. de C.V.): Ave. Kukulkan 29, Esq Cemzontie, Zona Hotelera, Cancun (Quintano Roo), 77500, Mexico; Phone 52 (988) 32475; Fax 52 (988) 32588; Code RE; Year Founded 1989. Aerocancun is formed in October 1989 to offer international charter flights. Orders are placed for 4 new Airbus Industrie A310-324s. A McDonnell Douglas MD-83, its fuselage painted all white and its tail green, is leased and employed in the late spring of 1990 to inaugurate revenue services from Cancun to Washington, D.C., Philadelphia, New York, Detroit, Cincinnati, Bangor, Columbus, and Baltimore.

The fleet is enhanced by the delivery of 2 more chartered MD-83s in 1991, which allow the initiation of new routes to the cities of São Paulo, Saint Martin, Basel, Frankfurt, and Cologne. In August, nonstop MD-83 service is opened to Oakland, California, from Cancun, Cozumel, Puerto Valarta, and Cabo San Lucas. When the company applies to the U.S. DOT for additional charter rights, the authorization is opposed by **Key**

Airlines and American Trans Air, which charge that Aerocancun, in violation of the U.S.–Mexico air agreement, is actually a Spanish concern owned by Madrid-based Oasis International Group, S.A. The first A310-324 arrives in November and is employed to begin charter work to and from European cities.

In 1992, another MD-83 is leased, even as the second A310-324 is delivered in April. The challenge to the company's charter rights in the U.S. is dismissed by DOT later in the year. Destinations visited in 1993 now include Calgary, Toronto, Basel, Cologne, Frankfurt, Baltimore, Bangor, Columbus, Denver, Detroit, Cincinnati, New York, Oakland, Philadelphia, Washington, Saint Martin, São Paulo, and Buenos Aires. The final 2 A310-324s are delivered in January and May, respectively, allowing return of the MD-83s.

Enplanements for the year total 241,200.

Airline employment is boosted by 66.9% in 1994 to 174 as an A300-622R joins the fleet. New routes are inaugurated to Frankfurt, São Paulo, and Buenos Aires and plans are made to inaugurate services to Spain, Austria, France, and the Dominican Republic.

Customer bookings decline 20.6% to 200,000.

Flights continue in 1995–2000, during which years the workforce at President Javier Maranon's carrier is increased to 215. Continuing poor traffic returns cancel plans for European services and all but one of the A310-324s plus the MD-83 are returned in favor of a chartered Douglas DC-10-30.

AEROCARIBE, S.A. de C.V. See **AEROVIAS CARIBE, S.A. de C.V.**

AEROCESAR (AEROVIAS DEL CESAR, S.A.): Colombia (1968–1985). Dr. Alfonso Sanchez Lopez founds the air taxi **TAC (Transportes Aereos del Cesar, S.A.)** at Valledupar, in El Cesar Province, in 1968 to provide nonscheduled passenger and cargo flights to small surrounding towns.

In 1970, the company purchases a Fokker F-27A license built in Maryland by Fairchild, from **Aloha Airlines** and also inaugurates scheduled service from Valledupar to Bogota.

Operations continue apace in 1971. Flight 772, the F-27A with 4 crew and 15 passengers, disappears on February 5, 1972 while on a service from Bogota to Valledupar. The wreckage is found three days later and there are no survivors.

Douglas DC-3s take over the service in 1973–1974. During the latter year, 3 more F-27As join the fleet.

Following reorganization in 1975, the major stockholders are Lopez, Gustavo de Greiff, Orlando Cote, and Alvaro Araujo. The carrier's name is changed and new livery is adopted. In addition, two Vickers Viscount 837s, purchased from **Austrian Airlines, A.G.**, are placed in service as scheduled flights are inaugurated to Barranquilla and Medellin.

Having come on the market, 3 Sud-Est Caravelle VIRs previously operated by **Aviacion y Comercio, S.A. (AVIACO)** are ordered, the first of which arrives in October 1976. By 1977–1979, airline employment totals 144 and the fleet includes 3 Caravelles, 2 Viscounts, and 3 F-27As. A stop at Maicao has also been added to the route network.

Just after takeoff from Riohacha, Guajira, on December 21, 1980, on the continuation of a service from Rio Hacha to Medellin, a Caravelle VIR, with 7 crew and 63 passengers, crashes 25 km. S of its point of origin; there are no survivors. The crash investigation will reveal the explosion of a substance, believed to be nitroglycerine, in the plane's rear lavatory and the loss of hydraulic control. No person or group is ever charged with a crime.

In 1981–1982, the route network is increased by the addition of services to Armenia, Cali, Cucuta, El Banco, and Villavicencio. Simultaneously, increased fuel prices and the world economic recession conspire, along with heavy domestic competition, to lower traffic and bring financial loss. Flight operations are suspended in the spring of 1983.

The carrier is reorganized in 1984. The fleet is altered to comprise only 3 Fokker F-27As and services are restarted; however, the comeback is unsuccessful and the airline declares final bankruptcy in 1985.

AEROCHAGO AIRLINES, S.A.: Zona de Carga, Aeropuerto Internacional Americas, Santo Domingo, Dominican Republic; Phone 1 (809) 549-0709; Fax 1 (809) 549-0708; Code G3; Year Founded 1973. Aerotours Dominicana, S.A. is established at Santo Domingo in 1973. Equipped with a Lockheed L-1049H Super Constellation, the operator undertakes nonscheduled passenger flights to destinations in Mexico, Central America, and nations in the Caribbean.

The company is reorganized and renamed in 1983. The product emphasis now changes to all-cargo and contract services. During the remainder of the decade, the fleet is altered, first by the addition of 1 Lockheed L-749A Constellation formerly operated by **Trans World Airlines (TWA)**, and then by the acquisition of 1 Convair CV-240, 1 Douglas DC-6A, and 1 DC-7CF. At this point, the company is the last revenue operator of both the early and late model Constellation.

Operations continue apace into the 1990s.

A Lockheed C-121J Super Constellation freighter with five crew is destroyed in a landing accident at Santo Domingo on June 13, 1990. Service is maintained without incident in 1991.

Just after takeoff from Ft. Lauderdale on November 6, 1992, on an all-cargo service to Dania Beach, the No. 4 engine of a DC-7CF with 3 crew and 2 passengers, fails; the aircraft is ditched 140 m. offshore and is lost, although all aboard are rescued.

In 1993, General Manager Jacques Cohen's fleet includes 1 CV-600, 1 DC-6A, and 1 replacement DC-7CF. In addition to Caribbean cargo charters, the company also undertakes services on behalf of the Mexican airline **Aeromar (Transportes Aeromar S.A. de C.V.)**.

Following the failure of its No. 4 engine on takeoff, the DC-7CF with 3 crew runs off the runway at Santo Domingo; although the freighter is badly damaged, there are no fatalities.

Flights continued during the remainder of the decade. Pedro Rodriguez becomes general manager following his predecessor's election as president. Airline employment reaches 225 and a number of flights are subcontracted out to **Agro Air International Dominicana**.

AEROCHILE, S.A.: Chile (1996). AeroChile is established at Santiago in the spring of 1996 to offer scheduled passenger services from the capital city to Arica. A Boeing 737-222, first flown by **United Airlines**, is acquired and service is inaugurated in early June. Unable to achieve viability, the company shuts down again by the end of July.

AEROCOMBI, S.A. See HELISWISS, LTD.

AEROCONDOR (AEROVIAS CONDOR DE COLOMBIA, LTDA.): Colombia (1955–1978). Former **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** pilots led by Louis Donado and Juan Millon found **Aerovias Condor de Colombia, S.A.** at Barranquilla on February 3, 1955. After assembling a fleet of Curtiss C-46s, all-cargo service is inaugurated to Bogota on October 7.

Freight-only flights are also inaugurated to the Colombian cities of Cali, Medellin, Cartagena, and Pereira during 1956–1959 and Douglas DC-4s are added to the fleet late in the latter year.

DC-4 passenger frequencies are inaugurated over the carrier's major routes on January 12, 1960. The four-engine Douglas transports also undertake charter services, on behalf of the energy industry, to San Juan, Miami, San Antonio, and New Orleans. In 1962, a service is opened to San Andres.

Having obtained 2 DC-6Bs and traffic rights from the U.S. and Colombia governments, thrice-weekly all-cargo operations are started to Miami in February 1963 from Barranquilla, Medellin, and Bogota. When **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** purchases the failed **SAM (Sociedad Aeronautica de Medellin, S.A.)** in September, **Aerovias Condor, S.A.** mounts an unsuccessful challenge to the takeover.

Passengers are carried on the Miami run, beginning in 1964; new routes are opened in 1965 to Curacao, Aruba, and to Miami via San Andres.

Local services in northeast Colombia are assumed in 1966 following the collapse of **Taxader (Taxi Aereo de Santander, S.A.)**, but these are soon passed on to an air taxi operator as the decision is taken to concentrate on trunk and Miami services.

On April 29, an order is placed for a BAC 1-11-400, the first for the British short-haul jet placed by a South American carrier. Despite positive reports on the aircraft by company pilots, Aerocondor will allow the order to lapse and the plane will never be delivered.

Coming in from Miami, a chartered L-1649A with 7 crew and 52 passengers, crashes while on final approach to Bogota on December 18 (17 dead).

The landing gear of a C-46D, with three crew aboard, collapses while the aircraft is on its takeoff roll from Bogota on March 4, 1967; although the aircraft must later be written off, there are no fatalities.

En route from Barranquilla to Bogota on May 29, a DC-4 with 22 passengers is subjected to an explosion in its rear fuselage, which results in a large hole. No injuries are reported and the aircraft is able to land safely at its destination. It will later be determined that the blast has been caused by a time bomb.

On August 6, a DC-4, with 78 aboard and en route from Barranquilla to the island of San Andres, is hijacked by 4 Colombians and an Ecuadorian who force it to land in Havana. There the pirates seek asylum after drawing media attention to a Marxist Latin American solidarity conference being hosted in the Cuban capital. The Cubans release the aircraft and its passengers, protect the hijackers, and bill Aerocondor for landing fees and aircraft maintenance. The company pays the bill on August 21 in order to "keep good relations."

A major marketing campaign is undertaken in 1969 to herald the arrival of the year's first Lockheed L-188A, the former *Flagship Cincinnati*, purchased from **American Airlines**. The turboprop, sporting the carrier's new livery, is delivered in April and placed into service on the Miami route on May 1.

On May 15 on a domestic flight from Barranquilla to San Andres Island, a gunman forces a DC-4 with 47 passengers to divert to Cuba.

The last piston engine DC-6B is retired in late 1970 as the fifth L-188A, the former **American Airlines Flagship Cincinnati**, is placed in service. A competitive battle now rages with **SAM Colombia Airlines, S.A.**, a reformed subsidiary of **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**.

By January 1971, 5 L-188As are in service. Enplanements for the year total 265,780.

The workforce reaches 718 in 1972. The fleet now comprises 4 C-46s, 5 Electras, and 1 Beech Twin Bonanza; it is significantly strengthened by the arrival of the company's first jetliner, a Boeing 720B, purchased from **American Airlines**. During the year, the airline, in a marketing move, shortens its name to **Aerocondor** and adopts a new logo and livery that features a stylized orange bird figure. An understanding is also arrived at with **SAM Colombia Airlines, S.A.** for schedule coordination so as to avoid cutthroat competition. Freight traffic is up 10% and passenger boardings rise 3% to 274,800.

In 1973, a new route is opened between Miami and the Colombian island of San Andres.

Just after takeoff from Bogota on August 27, an L-188A, with 6 crew and 36 passengers, smashes into El Cable hill; there are no survivors.

Operations continue apace in 1974. A Canadair CC-106 freighter with five crew strikes a pine tree while taking off from Medellin on February 22, 1975 and, completely losing control, crashes into a mountain 1200 m. from the airport; there are no survivors.

On July 10, just after takeoff from Bogota for a flight to Barranquilla, an L-188AF with four crew veers right and then sinks back, landing on top of a parked **Aerocosta International, S.A.** DC-6F on the ground. Both aircraft catch fire and are destroyed, with two men on the Lockheed killed.

Two L-188As are sold to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, one each in November and December.

Enplanements for the latter year reach 327,666.

Airline employment is increased by 13% in 1976 to 1,100. Another L-188AF joins the fleet, along with 2 Boeing 707-123Fs, reconfigured from aircraft first flown by **American Airlines**. New service is inaugurated from Miami to Port au Prince. The passenger models of the Electra are all sold to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** by the end of the year and the last remaining Commandos are retired.

Passenger boardings increase 28% to 455,092 and freight traffic skyrockets 122% to 76.9 million FTKs.

Faced with increased competition and rising financial difficulties in 1977, the carrier's traffic shrinks and its financial resources begin to decline. Still, it maintains scheduled passenger and cargo services between Bogota and Barranquilla, Medellin, Cali, Cartagena, San Andres, Pereira, Aruba, Curacao, Santo Domingo, and Miami. President Saul Pertuz Jimeno's workforce grows by 200 and the fleet now includes 2 Boeing 707-123Fs, 1 B-707-120B, 2 B-720Bs, 2 L-188As, and 1 L-188AF freighter.

The company now becomes the first in South America to order the Airbus Industrie A300B4, which is received in December.

Overextended and unprofitable, Aerocondor soldiers on in 1978–1979, even though its Airbus flagship is repossessed by its manufacturer at the end of the 1979. Now the biggest airline in Colombia after **AVIANCA**, Aerocondor is able to stay in the air until June 1981, when it suddenly collapses. In Miami and throughout Colombia, all company aircraft and assets are immediately seized for payment of debts.

AEROCONDOR TRANSPORTE AEREOS, S.A. See ATA (AEROCONDOR TRANSPORTE AEREOS, S.A.)

AEROCOR (AEROLINEAS CORDILLERA, S.A.): Chile (1980–1988). Aerocor is organized at Coyhaique in 1980 to provide local passenger and cargo services in southern Chile along the border with Argentina. Equipped with a Douglas DC-3 and an Australian-made GAF Nomad N-22, the third-level operator undertakes flights to Puerto Aisen, Balmaceda, Chile Chico, Cochrane, Niriguao, Rio Cisnes and other small communities in Aisen province.

In mid-decade, another DC-3 and a Piper Navajo are added to the fleet. Unable to remain viable in an increasingly sluggish economy, the company stops flying in 1988.

AEROCOSTA INTERNATIONAL, LTDA.: Colombia (1966–1976). This all-freight carrier is formed at Barranquilla in 1966. Scheduled services are initiated in June 1967 to the major Colombian cities of Bogota, Cartagena, Cali, and Medellin, as well as Margarita Island, Aruba, and Panama in the Caribbean plus Miami. An exceptionally large propeller fleet is assembled, comprising 6 Douglas DC-6As, 4 Curtiss C-46s, 4 Lockheed L-188 Electras, and 1 DC-7F.

The U.S. CAB grants the company a foreign air carrier permit in February 1969. The certificate allows Aerocosta to undertake scheduled roundtrip flights two months later between Barranquilla, San Andres, and Miami. During the summer, a route is opened from San Andres to Panama City. A DC-6B is purchased in 1970 for use as a freighter on the U.S. and Panamanian sectors.

By 1971, Aerocosta has changed the emphasis of its nonpassenger business. Having taken a 40% stake in the flower-growing concern Floramerica, S.A., the carrier eliminates haulage of many more traditional charter items in favor of transporting large shipments of fresh flowers north.

The last C-46 is withdrawn in 1975. Just after takeoff from Bogota for a flight to Barranquilla on July 10, an L-188AF of **Aerocondor (Aerovias Condor de Colombia, Ltda.)** with four crew veers right and then sinks back, landing on top of a parked Aerocosta International DC-6F on the ground. Both aircraft catch fire and are destroyed, with two men on the Lockheed killed.

Against significant competition, the overextended carrier suffers terminal financial reversal and must shut down in 1976.

AERODINOS, S.A.: Bolivia (1992–1994). Aerodinos is established at La Paz in 1992 to offer charter passenger and cargo flights, air taxi, and some express services. Revenue operations commence with a pair of Fairchild Metro IIIs. Recession forces deletion of one aircraft in 1993 and operations cease in 1994.

AERODYNAMICS: 6544 Highland Road, Waterford, Michigan 48327, United States; Phone (248) 666-3500; Fax (248) 666-5382; Year Founded 1959. Aerodynamics is established in 1959 as a full-service FBO in Michigan at the Pontiac Airport. During the following decades, the company constructs four large hangars west of the control tower and also undertakes worldwide FAR Part 135 charters.

Airline employment stands at 22 in 2000 and the fleet based at Oakland–Pontiac Airport includes 2 Beech 400A Beechjets and 1 each Grumman G-1159 Gulfstream II, G-1159A Gulfstream III, Mitsubishi Mu-300 Diamond IA, Beech Super King Air 200, Beech Super King Air 300, and Swearingen SW-227TT Merlin 300. Additionally, an Mu-300 Diamond IA is stationed at Rochester, New York.

AEROEL AIRWAYS, LTD.: P.O. Box 40, Ben Gurion International Airport, Tel Aviv, 70100, Israel; Phone 972 (3) 5362 580; Fax 972 (3) 5362 331; <http://www.aeroelairways.co.il>; Code ROL; Year Founded 1992. Chim Nir, Comecina-J. P. Rozan, Michael Weinstein, Rephael Harlev Alliances, and El Al Israel Airlines, Ltd. combine to register this regional and international passenger carrier in November 1992. Shareholder Harlev is appointed chairman, with investor Weinstein as president/CEO.

Employing two Bombardier DHC-8-311s and 3 Grumman Gulfstream Is, the company inaugurates services to Israeli and other Mideast destinations in September 1993.

Orders are placed for two Boeing 737-200s as flights continue in 1994–1997. Enplanements reach 20,000 by 1997. Two B-737-258As become available from El Al and are employed in early 1998 to inaugurate charters to Greece, Cyprus, and Turkey. Enplanements for the year total 55,000.

Airline employment at the beginning of 1999 stands at 86, a 166.7% increase over the previous year.

AEROEXO (TRANSPORTES AEREOS EJECUTIVOS, S.A. de C.V.): P.O. Box 473, Ave. Humberto Lobo No. 660, Col del Valle, San Nicholas Garza Garcia, 66220, Mexico; Phone 53 (83) 389-300; Fax 53 (83) 338-1889; Code SX; Year Founded 1992. Aero Ejecutivos is founded as the airline division of an executive jet/air taxi operation at Monterrey in 1992 to provide charter passenger and cargo flights, as well as executive services, to domestic and regional destinations. Revenue operations commence with 3 Boeing 727-225s, 2 B-727-21s, and 1 B-727-25.

Business is good and encourages the addition of further leased capacity in 1993: 8 B-727-276As, formerly flown by **Ansett Australia (Pty.), Ltd.**, and 2 B-727-235s. The marketing name is changed to Aeroexo.

During 1994, President Ing Humberto Lobo's growing regional purchases **AVIASCA (Consorcio Aviacsa, S.A. de C.V.)**, but allows it to continue operating as a separate company.

During a climb from Dallas (DFW) on April 3, 1995, a fire warning sounds for the No. 1 engine of a B-727-276A. An emergency is declared and the plane returns and makes a one-engine-out landing. During the evacuation that follows, 2 of the 160 persons aboard receive slight injuries.

Flights continue in 1996–1998, during which years the fleet is reformed to include 3 B-727-225s, 2 B-727-235s, and 1 B-727-25. Principal markets are now Mexico City, Guadalajara, Tijuana, and Monterrey. Enplanements during the latter year total 97,000.

Airline employment at the beginning of 1999 stands at 350. Customer bookings fall to 68,000.

AEROEXPRESO BOGOTA, LTDA.: Apdo. Aereo 6781, Bogota, Colombia; Phone (571) 211-8100; Fax (571) 212-8952; Year Founded 1978. Aeroexpreso is established at Bogota in 1978 and of-

fers fixed- and rotary-wing passenger and cargo charters, as well as flight training, construction support, survey, external load, and energy exploration flights.

Twenty-two years later, in 2000, President James G. Leaver oversees a workforce of 40 and enjoys annual revenues of \$18 million. His fleet comprises 2 Beech Super King Air 200s, 1 Learjet 35A, 7 Bell 212s, and 4 Eurocopter BO-105CBSS.

AEROEXPRESS JOINT STOCK COMPANY: Hungary (1922–1926). AJSC is set up at Budapest in late 1922. Outfitted with 2 float-equipped Junkers F-13s, the company begins revenue flights early in 1923 flying from the Danube River to Vienna. Summer-season flights continue until 1926.

AEROEXPRESSCRUISE. See AVIA EXPRESS CRUISE

AEROEXPRESSO DE LA FRONTERA, LTDA.: Bucarmanga, Colombia; Year Founded 1994. Aeroexpresso is organized at Bucarmanga in 1994 to offer all-cargo and express services. Revenue flights commence with 1 Cessna 208 Caravan I and 2 Cessna 208B Caravan IIs. Operations continue without change in 1995–1998.

AEROEXUTIVOS, S.A.: Brazil (1994). This new air taxi service is established at Guarulhos Airport at São Paulo in February 1994. Equipped with a pair of Cessna Citations, the company begins flying to destinations within 600-km. of its base. A joint marketing agreement is signed with VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.) in March. Under its terms, the small operator provides feed to the major at Guarulhos. No further information is available.

AEROFLEX CORPORATION: United States (1958–1968). Aeroflex is created at Andover, New Jersey, in late fall 1958 to provide daily passenger air shuttle flights to New York (LGA). Beech 18 round-trips commence on December 2 and are maintained for a decade.

AEROFLOT-DON: Sholokova Prospekti 272, Rostov-on-Don, 344009, Russia; Phone 7 (8632) 52 50; Fax 7 (8632) 52 05 67; Code D9; Year Founded 2000. Aeroflot Russian International Airlines (ARIA) purchases a 51% majority stake in Donavia (Donskie Avialinii) on July 26, 2000, and renames the carrier. Pavel Douznikov remains director general of the 2,100-employee company, which operates a fleet of 5 Antonov An-12s, 8 Tupolev Tu-134As, and 15 Tu-154Bs. Under the new partnership, the two carriers engage in code-sharing, as well as joint maintenance, ground handling, and service activities.

Aeroflot-Don continues to offer scheduled passenger and charter services, as well as Mideast charters. Destinations visited include Dubai, Dusseldorf, Ekaterinburg, Irkutsk, Istanbul, Khabarovsk, Krasnoyarsk, Larnaca, Moscow, Omsk, Rostov, St. Petersburg, Tashkent, Tel Aviv, Tyumen, Vladivostok, and Yerevan.

AEROFLOT-PERM: Aeroport Boishoe Savino, Perm, 614078, Russia; Phone 7 (3422) 284 325; Fax 7 (3422) 274 492; Code 9D; Year Founded 2000. On October 1, 2000, executives of Aeroflot Russian International Airlines (ARIA) announce the creation of a new airline, Aeroflot-Perm, which incorporates Perm State Air Enterprise: Permskoe Gosudartsvennoe A/P. Under the new partnership, the two carriers engage in code-sharing, as well as joint maintenance, ground-handling, and service activities.

The reformed 1,000-employee carrier continues to operate a fleet that includes three Antonov An-24Bs, three An-26s, four Tupolev Tu-134As, five Tu-154Bs, one Tu-204-100, and a Yakovlev Yak-40. Aeroflot-Perm flies the regional services from Perm previously flown by both companies. Scheduled destinations include: Adler/Sochi, Anapa, Antalya, Baku, Bourgas, Chisinau, Ekaterinburg, Frankfurt, Krasnodar, Larnaca, Mineralnye Vody, Moscow, Samara, St. Petersburg, Tashkent, Varna, and Yerevan.

AEROFLOT RUSSIAN INTERNATIONAL AIRLINES (ARIA): 37a Leningradsky Prospekt, Building 9, Moscow, 125167, Russia; Phone 7 (095) 155 66 41; Fax 7 (095) 155 66 47; <http://www.aeroflot.ru>; <http://www.aeroflot.org>; <http://aeroflot.russianet.ru>; <http://www.seanet.com/bazar/aeroflot/aeroflot.html>; Code SU; Year Founded 1992. Prior to the breakup of the U.S.S.R., commercial aviation is controlled by the Ministry of Civil Aviation (MCA), which acts as the head office of the 34 units of Aeroflot Soviet Airlines. Each unit has its own operational and technical staff, with almost all of the commercial workers staffed in a division called the International Commercial Division of Civil Aviation, the MKU. Its staff of about 600 is minute when compared to the 600,000-plus that work in the divisions of Aeroflot.

In early 1992, the Interrepublic Aviation Committee (Mezhgosudoiakhrenniy Avitsionniy Komitet or MAK) of the Commonwealth of Independent States (CIS), under Dr. Tatiana Anodina, begins to dismantle Aeroflot Soviet Airlines, now officially known as PKO Aeroflot Soviet Airlines.

En route from Agdam to Shusha on January 28, a Mil Mi-8 helicopter with 47 passengers is hit by a surface-to-air guided missile, explodes, and crashes 10 km. S of Stepanakert, Azerbaijan. There are no survivors. The disaster results in the highest death toll ever recorded in a commercial rotary-wing accident.

Through February, the former monolithic carrier is split into 69 independent operators from CIS's independent republics. Additionally, some of these are reformed former Soviet directorates, which are now semi-autonomous divisions and will be covered separately: Arkhangelski Avia Konzern; Baikalavia Bashkir Airlines; Central Regions Civil Aviation Department; Domodedovo; Far East Aviation Corporation; Government Air Services; Kaliningrad Aviation Division; Kazair; Kirgistan Airlines; Komiavia; Krasnoyarskavia; Magadan Avia Konzern; West Air Department; Orbi-Gerogian Airlines; Siberian Airlines; Southern Airlines; Tartarstan Airlines; Tyumenaviatrans; Urals Civil Aviation Department; Vnukovskie Avialinii; and Yakutaviatrans. Information will prove difficult to obtain in some cases and when the government in 1994 enacts a new tax on passenger numbers, many carriers will simply stop reporting their traffic figures, leaving any such numbers mere estimates. Many of these names will disappear over the next five years.

The international commercial department, or MKU, with its 600-person staff from the old Aeroflot is attached to the international division of Aeroflot, formerly called the Central Department of International Air Services (CUMVS). The two units are joined in Aeroflot PKO, which controls Aeroflot Russian International Airways and the granting of international licenses on behalf of the Russian central government.

These international airline assets and the old Aeroflot international commercial directorate are merged at Moscow's Sheremetyevo Airport in February and renamed Aeroflot Russian International Airlines (ARIA); the charter subdivisions, Moscow Airways, Gold Star Airways, and Russky Vityaz are included and they will be the focus under this heading. Also received are the superseded international division's aircraft, engines and spares, 20,000-person staff, ground facilities, ticket offices, a number of hotels, and other operations. The 12 members of the CIS, together with the republics of Latvia and Estonia, agree to pay fixed fees to the reformed carrier to maintain their international flights.

The brand name of Aeroflot Soviet Airlines is transformed into ARIA. The Russian government also transfers all of the former's rights and obligations to Aeroflot RIA, which became its legal successor with regard to all intergovernmental bilateral agreements on air transport services signed by the Russian Federation and the former USSR, and those signed by Aeroflot with foreign airlines. Aeroflot RIA becomes the only officially designated flag carrier of the Russian Federation and this designation will receive international recognition in a special memorandum signed with IATA at the end of the year.

The company is headed by a board led by the old directorate's chief, Vladimir V. Potapov, and Vladimir M. Tikhonov, once in charge of the Central Department's International Commercial Division. Other members

of the board include Dr. Anodina, representatives of the CIS states and the city of Moscow, and officials from the State Committee for Foreign Relations of the Russian Republic and the Air Transport Department of the Russian Republic's Ministry of Transportation.

There are, initially, three subsidiary flight organizations. Moscow Airways, a passenger charter operation, is outfitted with Ilyushin Il-76s, and Gold Star Airways is given Tupolev Tu-154s with instructions to visit those locations their type frequented in the days of the old directorate. Russky Vityaz is an all-cargo effort, into which is concentrated all Il-76s. These so-called "sister companies" will not be successful and will be submerged within the major during the next year. One other concern, **Rossiia Air Company**, is established to provide government VIP flights; its fleet will include the presidential jetliner.

An Mi-26 with 50 passengers is shot down over Kelbadzhar, Armenia, on March 3 by Azeri rebels (14 dead).

An An-30 with 5 crew and 5 passengers crashes near Yakutia, Russia, on March 22; there are no survivors.

A Moscow-Bombay-Harare route is opened on March 25. Just after takeoff from Stepanakert, Azerbaijan, on a scheduled service to Yerevan, Armenia, on March 27, a Yak-40 with 3 crew and 30 passengers is hit by a surface-to-air missile. Although 10 people are injured, the aircraft is able to make a safe emergency landing back at its point of origin.

Direct Moscow-Anchorage-San Francisco Ilyushin Il-62M flights commence on March 29 and on the same day a weekly service is inaugurated from Tokyo (NRT) to Madrid (continuing to Copenhagen) via Moscow.

Weekly frequencies commence on May 1 between Moscow and San Francisco via Anchorage, while Moscow to Chicago via Shannon service begins on May 15.

Having arrived at Moscow's Vnukovo Airport on June 8 on a service from Groany and continuing to Turkey, a Tu-154B-2 is subjected to a hijack attempt by a lone man armed with a gun. Before he can solidify his hold over the aircraft, he is killed by a security guard.

A Tu-154B-1 is destroyed in a ground accident at Bratsk, Russia, on June 19; there are no fatalities.

In early July, the new era in Russian commercial aviation is fully demonstrated when the first of 5 ordered Airbus Industrie A310-308s are delivered, painted in the carrier's new livery.

An An-12 with 34 passengers crashes near Nakhichevan, Azerbaijan, on July 14 and catches fire (29 dead).

A Tu-154B with 8 crew and 16 passengers fails its takeoff from Tbilisi on July 20, overruns the runway, crashes into a localizer building, overturns, and descends into a ravine; all aboard are killed, along with 4 people on the ground.

Later in the month, a marketing agreement is signed with **Challenge Air Cargo**; under its terms, the two airlines agree to feed each other's routes between Europe and Latin America, via Miami.

Hong Kong from Moscow direct A310-308 service begins on August 15. On August 27, a Tu-154M coming in from Mineralni Vody with 82 aboard, crashes while on its landing approach to Ivanovo; there are no survivors. Also on August 27, an Il-76 is destroyed in a ground incident at Kabul.

An An-24B with 4 crew and 46 passengers fails its takeoff from Guryev, Kazakhstan, on September 2; the plane comes around for an emergency landing, but descends too quickly and after touchdown slides 418 m. on half-retracted landing gear; although the aircraft is destroyed, there are no fatalities.

Another Tu-154M, chartered by the International Red Cross, flies 68 injured Bosnian refugees from Banj to London (STN) on September 15; they are deplaned and taken for medical treatment.

While on a test flight from Kiev on October 13, an An-124-100 with nine crew crashes into a forest (eight dead).

Late in the month, a third A310-308 is delivered; christened *Tchajkovsky*, it is the first to display the carrier's new double-headed eagle logo.

An Il-62M is destroyed on the ground at Moscow's Domodedovo Airport on October 16. On October 30, an Antonov An-8 freighter crashes 2 km. from Chita, in southern Siberia; the five crew and nine passengers

are killed and the cargo of three automobiles and two tons of fish and canned goods is destroyed.

An An-22A with 33 passengers crashes near Tver on November 11; there are no survivors.

Also in late fall, a control tower in Rostov-on-Don in southern Russia goes dark because the airport has not paid its electricity bill. Several planes circle above—including an aircraft carrying President Boris Yeltsin. Catastrophe is averted when a high-ranking security aide reportedly orders the power restored.

ARIA is fully privatized as of December 1. The airline, exclusively Russian, now demands that the carriers of the other republics in the CIS remove the name of Aeroflot from their new carriers.

The Il-96-300 is certified on December 29.

Overall passenger boardings for the year plunge 51.3% to 62,627,000 (all but 2.62 million being domestic) and freight declines 35.8% to 2.35 billion FTKs. Still, the company's annual report will claim the successful completion of 45,318 international flights and an after-tax profit of \$120 million.

In 1993, chairman Potapov oversees a workforce of 14,076, up 6.6% over the previous year. The fleet now includes 4 A310-308s, 28 Il-62Ms, 19 Il-86s and the same number of Il-76s, 23 Tupolev Tu-154Ms, 4 Tu-154Bs, 3 Tu-154Cs and 8 Tu-134A-3s. Smaller types are also flown, bringing the fleet total to 117, excluding over 4,500 helicopters and specialized lightplanes.

Orders are outstanding for Boeing 767-300ERs, an A310-308, Tu-204s, and Il-96-300s.

The hammer-and-sickle livery of the "old" Aeroflot remains, as company officials are unable to agree upon new coloring. Operating for 60 years as the Soviet Civil Aviation Ministry (CMUVS), Aeroflot is now, finally, recognized by the U.S. government as a business and not a foreign mission of the Communist government.

Also during the month, the Russian government issues a decree ordering that all of the airports owned by ARIA are to be privatized and upgraded.

On February 20, armed with hand grenades, an Azerbaijani man accompanied by his family hijacks a Tu-154 with 80 aboard in an effort to fly them to the U.S. Proceeding via Tallinn, Estonia, the jetliner arrives in Stockholm, where the man surrenders.

Also in February, the carrier joins with the Olympia-Reisen travel agency to market twice-weekly charter flights from Hanover, Germany, to Alma-Ata, in Kazakhstan. In March, scheduled service is inaugurated from St. Petersburg to London (STN).

In addition to domestic services, both charter and scheduled, the company also visits these foreign destinations from Moscow: Abu Dhabi, Accra, Addis Ababa, Aden, Algiers, Amman, Amsterdam, Anchorage, Ankara, Antananarivo, Athens, Baghdad, Bamako, Bangkok, Barcelona, Basel, Beijing, Beirut, Belgrade, Bombay, Bratislava, Brazzaville, Brussels, Bucharest, Budapest, Buenos Aires, Bujumbura, Cairo, Calcutta, Casablanca, Chicago, Cologne/Bonn, Colombo, Conakry, Copenhagen, Cotonou, Dakar, Damascus, Dar es Salaam, Delhi, Djibouti, Douala, Dresden, Dubai, Dublin, Dusseldorf, Frankfurt, Entebbe/Kampala, Karachi, Kathmandu, Kiev, Kigali, Kingston, Kuala Lumpur, Kuwait, Larnaca, Leipzig, Lima, Lisbon, Lome, London, Luanda, Lusaka, Luxembourg, Lyublyna, Madrid, Malta, Managua, Marseilles, Mexico City, Miami, Milan, Montevideo, Montreal, Munich, Nagoya, Nairobi, New York, Oslo, Ouagadougou, Paris, Phnom Penh, Prague, Rio de Janeiro, Rome, Sal, Saloniki, San Francisco, Sana'a, Santiago, Seoul, Shanghai, Shannon, Sharjah, Singapore, Sofia, Stockholm, Tehran, Tel Aviv, Tokyo, Tripoli, Tunis, Ulan Bator, Venice, Vienna, Vientiane, Warsaw, Washington, Zagreb, and Zurich.

From Kiev, Aeroflot flies to Frankfurt, Milan, and New York; it operates from Khabarovsk to San Francisco, from Magadan to Anchorage, and from Irkutsk to Niigata, Shenian, and Ulan Bator. New passenger routes are introduced from Moscow to Sydney, Panama City, Barbados, and Johannesburg while new all-cargo frequencies begin to Beijing, Dubai, and Sharjah.

Service becomes notoriously bad and corrupt while safety questions arise. Mechanical breakdowns become common and fuel shortages ground hundreds of flights. Still, Vitaly Rzhevski's Ulyanovsk-based VAU GA, Higher College of Training for Civil Aviation, remains a model of efficiency. The government now requires that the facility, which had become largely a conversion school for pilots as well as a training base for engineers, technicians, and ATC controllers, undertake all civil aviation training for the nation.

In the first of two aerial operations of the week (the second will involve **Air Ukraine**), the Odessa-based Schlepper gang, having received \$5,000 per head, contracts with the carrier (also in need of hard currency) on April 6 to transport a planeload of Asian refugees into Germany. Next day, a Tu-154 arrives at Frankfurt Airport and deplanes 123 Indians and Pakistanis who immediately demand sanctuary.

A company Mi-8, transporting the 13-person "Transsiberian" expedition from Nadym in west Siberia, crashes on the coast of the Chukchi Sea near the Arctic Circle on May 12; 10 people aboard are killed, including 2 French journalists and a Swiss.

The first 2 of 6 ordered Il-96-300s are received from the production factory in Voronezh (VASO) during the spring and are briefly placed into service as Flight 315 on the Moscow-New York (JFK) service in June. Enthusiastic Aeroflot crews will help the new Il-96-300 type overcome its initial problems.

In July, riot police must be called to Vnukovo Airport at Moscow to disperse some 350 angry passengers who have been waiting four days for a flight. Financial director Vladimir Tikhonov is appointed managing director in July; however, appointment of the tough manager must be reversed when the staff at Sheremetyevo Airport threatens to strike as a result.

While landing at Grozny after a December 25 service from Moscow, the nosegear of a Tu-154B-1 with 7 crew and 165 passengers, collapses; although the aircraft is damaged there are no fatalities.

On December 26, a chartered Antonov An-26 cargo plane, illegally carrying passengers, crashes in fog at the Armenian city of Gyumiei and explodes (35 dead). Examiners later report that two poorly secured automobiles filled with loaded gasoline cans, together with the carry-on gas cans of passengers, are responsible for the dive and blast. Political problems and increased ticket prices cause domestic enplanements to drop to 40 million.

Statistics for the year show total deaths in company accidents five times greater than in 1987. International customer bookings recover, however, from their free fall and accelerate by 19.3% to 3,111,530. Cargo traffic swells 15.2% to 1.65 billion FTKs. Profits are reported up by a full 20% to \$171 million.

The workforce totals 14,838 in 1994. A Tu-154, with 124 aboard, crashes at Irkutsk on January 3; there are no survivors and 1 additional person is killed on the ground. Pilot error is again cited when examiners report that the plane's captain had ignored warnings about his power plants, only to have an engine catch fire in midair causing the accident.

Just after takeoff from Voronezh on a January 19 all-cargo service, an An-22 with 7 crew and 3 passengers, suffers control difficulties and must make a forced landing, through trees, near the village of Antonovo (7 dead).

Late in January, service is inaugurated to Jerusalem's Atarot Airport; under pressure from the Arab League, the new frequency is halted on February 1. Two weeks later, an Il-62M is grounded at Harare, Zimbabwe, after **Air Zimbabwe Corporation** refuses to provide it with any services until \$1 million in backdated airport fees is paid. The money is received on February 21 and the airliner is returned empty to Russia.

While practicing touch-and-go landings at Delhi on March 8, the B-737-2U4 of **Sahara India Airlines, Ltd.** crashes into a parked Ilyushin Il-86 being prepared for departure to Moscow, killing all four of the private Indian carrier's crew plus four people on the ground.

The airline is forced to halt some nonstop flights to the U.S. on March 15 after American authorities ban its new Ilyushin Il-96-300 jetliners pending the fitting of anticollision devices required for operation in the U.S.

Flight 593, an A310-308 piloted by Capt. Yaroslav Kudrinski en route from Moscow to Hong Kong, crashes into a remote Siberian forest near Novokuznetsk (2,000 mi. E of Moscow) on March 23 with its nose slightly up and wings level, killing all 75 aboard, including 23 foreigners.

A total of five major air transport accidents are suffered by the airline during the first quarter, 50% of all scheduled air transport crashes worldwide. Also in March, a new alliance with Cyprus Airways, Ltd. allows for twice-weekly service on a route from Moscow to Larnaca.

On April 5, Russian aviation officials, working with experts from the U.S. NTSB, report that cockpit recordings recovered from the "black boxes" show that the pilot of the fatal March 23 flight was teaching his children how to fly. One or more youngsters in the pilot's seat accidentally disengaged the automatic controls and sent the jet into its fatal and unrecoverable dive from 33,000 feet.

With permission achieved from Japan's Ministry of Transport, an Aeroflot An-24 in mid-month launches twice-weekly service between Yujino-Sakhalinsk on Sakhalin Island and Hakodate on Hokkaido Island. On April 18, the International Airline Passengers Association begins advising its members not to fly on Russian carriers; through month's end, 195 people have been killed in Aeroflot accidents and crashes since January 1.

While preparing to land at Arkhangelsk on May 4, the crew of a Tu-134, with 62 aboard, discovers, when their landing gear only partially extends, that hydraulic fluid has been lost. To make up the difference, Capt. Georg Yelisayev directs that the remaining supply of lemonade from the galley be poured into the system, enabling the plane to make a safe emergency landing; although the Tupolev runs off the runway when its undercarriage collapses, no injuries are reported.

Some 50 Russian airline pilots picket the Russian parliament on May 16 on the eve of a threatened strike to protest deteriorating work conditions and unenforced safety regulations. The flyers carry banners reading: "Russian Passengers, You are the Most Courageous in the World!" On May 18, the pilots suspend their threatened strike action, promising to resume negotiations with the government.

On June 1, employing the Il-96M prototype, the company inaugurates twice-weekly nonstop passenger and cargo roundtrips from Moscow to Seattle. Three Il-76s are chartered by the United Nations and, on June 22, begin flying helicopters and vehicles to Bangui, capital of the Central African Republic, in support of the international body's intervention in the Rwanda crisis.

A pair of B-767-3Y0ERs are delivered on June 30 under lease from GE Capital Aviation Services and, later in the summer, becomes the first Russian airline company to use the craft, putting them into service on its routes to the East and West Coasts of the U.S.

On June 20, it is announced that the government will sell off up to 49% shareholding to its employees during the weeks ahead. Current workers and retired Aeroflot personnel will each be allowed to purchase up to 42 shares at 1,700 rubles (85 cents) each; a total of 1,071,333 shares will be offered and an analysis shows that 49% of the airline is worth only \$926,000! As an added twist, workers will be required to pay for at least half of their investment with privatization vouchers, which will have to be employed before the nationwide voucher program ends on July 1.

Gennady Zaitsev becomes chairman, with Oleg Kachanov as deputy chairman on July 1. Formerly financial director, Vladimir Tikhonov is again appointed managing director on July 1, succeeding Vladimir Potapov. In mid-month, a pool agreement is entered into with **LOT Polish Airlines, S.A.** covering flights from Moscow to Warsaw.

Daily Tu-154M or Tu-134 service is inaugurated on July 25 from Sheremetyevo-1 Airport at Moscow to Riga, Vilnius, and Kiev and thrice-weekly roundtrips commence from the same point of origin to Tallin and Baku.

Growing concerns over Russian air safety lead the U.S. State Department, during the last week of July, to ban all but "absolutely necessary" travel on Russian carriers.

Service to the breakaway republic of Chechnya is suspended on August 8.

On September 6, Georgian security forces defuse a bomb placed aboard a company aircraft due to fly from Tbilisi to Moscow. Former Georgian Defense Minister Georgi Karkarashvili's name appears on the passenger manifest.

While flying between Baku and Perm on September 15, a Tu-134 with 50 passengers is captured by 3 gunmen, who demand that the aircraft be diverted to Norway. The pirates surrender to police when the aircraft lands at Oslo.

En route from Krasnoyarsk to Tura on September 26, a Yak-40 crashes outside Vanavara, inside the autonomous region of Evenki in central Siberia (26 dead).

When an Il-62M transporting Special Envoy Vitaly Churkin lands at Belgrade's Surcin Airport on October 6, it is the first aircraft in two years to be permitted to complete an international flight to the capital of the shrunken Yugoslavia.

On October 17, a joint Russian-American report is issued that states that safety standards on Russian airlines will soon fail to meet international standards unless the Moscow government takes swift action to retrain personnel and improve its supervision. As the report demonstrates that carriers authorized to fly internationally meet higher standards, the U.S. travel ban on Aeroflot is lifted.

Eight days later, on October 25, a lone hijacker armed with a grenade takes 16 people hostage aboard an airliner in the southern republic of Dagestan; after the captives escape next day, commandos storm the plane and the pirate commits suicide. Meanwhile, on October 28, a would-be hijacker is taken in hand at Moscow airport. Two air disasters occur on the same day, October 30. En route from Sakhalin to Yermolino in the Kaluga region, an An-12 with 21 passengers crashes while preparing to land at Ust-Ilimsk in central Siberia for refueling; there are no survivors. Attempting to make an emergency landing near Batagay in northern Siberia the same morning, an An-2, with 14 aboard, crashes (5 dead).

An Il-96-300 makes the aircraft type's first flight to Rio de Janeiro on November 3. It will replace the Il-62M on the route. In its first U.S. visit, the Il-96-300 prototype arrives at Washington, D.C.'s Andrews AFB on November 6 with a Russian trade delegation. The Il-96-300 has suffered reliability difficulties with its PS-90A engines during the past two years; persistence of the Aeroflot team and those from Ilyushin and Perm Motors will eliminate shortcomings that have resulted in the new aircraft's daily utilization averaging only four hours per day.

During the year, the international division begins to fly trial domestic routes and plans to open an international hub at Shannon in Ireland in the new year. Negotiations with the Irish government to that end are underway.

A company Tu-134A is hijacked to Tallinn, Estonia, on November 24; the air pirate, Vladimir Bashko, releases his 61 hostages and surrenders to police.

Passenger boardings remain level at 3.1 million and freight traffic declines by 12.3% to 1.45 billion FTKs. A net \$160-million profit is reported.

A total of 13,362 workers is employed in 1995, a 5.3% increase, and the fleet now includes 4 leased A310-308s and 2 B-767-3Y0ERs plus 112 Russian types, including Il-62Ms, Il-76s, Il-86s, Il-96s, Tu-134As, Tu-154B/Ms, an a Tu-204 chartered from Orel Avia. Two A310-324s and a DC-10-30F will be leased during the year.

The international division undertakes its initial regularly scheduled domestic services during the first quarter. In mid-March, Managing Director Tikhonov publicly warns his government against allowing foreign companies, specifically **Deutsche Lufthansa, A.G.** and **British Airways, Ltd. (2)**, to begin competition on Russian domestic routes, noting that competition with them on international routes is already having a negative impact on the company's balance sheets. He also criticizes joint ventures made earlier with foreign carriers, including the leasing of Western aircraft and the plan to reengineer the Il-86 with Western engines.

Several new directors are appointed late in the first quarter; among them is Oleg Syromolotov, deputy head of the FSK, successor agency to the KGB. It will remain to be seen if the FSK will have the same covert relationship with the airline that its predecessor had.

Also in March, nonstop B-767-3Y0ER roundtrips are started between Moscow and New York (JFK). In April, service is started from Khabarovsk to Aomori and from Vladivostok to Toyama.

Under a pact signed with the Irish government and Aer Rianta on January 12, work begins in May on a new transit terminal at Shannon, Ireland. The project assumes that several Il-62s will be permanently held in the new terminal to support ARIA's international flights. At the same time, Shannon becomes a company hub from which passengers brought into Ireland by other CIS carriers are offered onward connections to destinations in the Western Hemisphere.

Also during May, a cargo-only Tu-204C makes its first commercial flight from Moscow to Bangkok. The type will soon complete its tests with Aeroflot and be returned to its manufacturer that will, in turn, lease the aircraft to **Vnukovo Airlines**.

Meanwhile, service is also launched from St. Petersburg to Pafos.

A cooperative pact is signed between ARIA and **Belavia (Belarusian Airlines)** at the beginning of June. It is designed to allow the establishment of common rates for air transport services and the use of tickets for transit flights acquired in either Russia or Belarus. Within a month, Aeroflot offices in Russia will act as Belavia agents, selling tickets on flights of the new partner. Also during June, commercial flights commence from Moscow to Nitsa.

A strategic agreement is signed with **Vnukovskie Avialinii** in mid-June that provides for cooperation and coordination of commercial policy. Aeroflot will be able to employ VA's aircraft while Vnukovskie will be able to interline passengers on to Aeroflot international services.

Being unable to maintain a pair of A310-324s that it has leased, **Sakhalinskiye Avia Trassy** transfers them to ARIA toward the end of the month; as part of the transfer, ARIA agrees to employ the aircraft on flights to Yakutsk, a capital of the Sakha republic (formerly Yakutia).

En route from Athens to Moscow on July 5, the pilot of a Tu-154M with 104 passengers is informed by ATC that a bomb threat has been received; the aircraft makes an emergency landing at Salonika, but no explosives are found.

In mid-month, 20 Il-76TDs are sent back to the Ilyushin aviation complex to receive new PS-90 engines that are designed to allow 12-15% fuel-savings. The first modernized aircraft is completed in August.

Airline management's earlier concern and admonishment is not well received; however, the appointment of former Soviet Air Force Commander-in-Chief Marshal Yevgeny Shaposhnikov as ARIA's new managing director on October 14 proves more of a surprise than the displacement of the incumbent Tikhonov. The action occurs as the administration of President Yeltsin restructures ARIA's corporate structure, dissolving the board of governors and replacing it with a new governing body with representatives from seven state agencies. Nikolai Glushkov, a business associate of tycoon Boris Berezovsky, is named deputy managing director and chief financial officer.

Through his role as presidential representative at Rosvooruzhenie, Russia's state-owned arms dealer, the new managing director, who was briefly military commander of the CIS before transferring into Yeltsin's security council as secretary in 1993, is the only one of the original board members to survive the purge.

One week after taking office, Marshal Shaposhnikov promises a shake-up that should bring benefits to passengers using Sheremetyevo-2 Airport. Two new routes are announced: Moscow-St. Petersburg and Moscow-Novosibirsk, two of the most competitive within Russia. Both routes will fly out of Sheremetyevo, saving transit passengers the exhausting and inadequately served trek to Vnukovo Airport on the other side of Moscow.

Also during October, service is inaugurated from Moscow to Shannon via Bratislava and from Ulan Ude to Ulan Bator. Simultaneously, all-cargo DC-10-30F flights are launched from Moscow to Seoul and from Seoul to Moscow via Frankfurt.

Just after landing at Rostov-on-Don on October 31 after an all-cargo service from Ulyanovsk, an Il-76TD with nine crew and two passengers, overruns the runway by 360 m.; there are no injuries reported.

Employing Il-62Ms, ARIA launches twice-weekly roundtrips on November 1 between Moscow and Lima, Peru, via Miami.

A Tu-154 with 97 aboard disappears on December 7 during a flight from Sakhalin Island and Khabarovsk on the mainland. Its wreckage is discovered by a helicopter pilot in the mountains near the Pacific coast on December 18; there are no survivors. Meanwhile, on December 9, a Tu-154 encounters engine problems while coming into Moscow's Sheremetyevo-2 Airport after a flight from Paris; the aircraft is diverted to Sheremetyevo-1 and lands without incident.

Also in December, a strategic alliance is entered into with **Mexicana Airlines, S.A.** that will allow Aeroflot passengers to transfer onto Mexican flights to Mexico, Colombia, and countries in Central America.

In addition, Il-62M roundtrip service is started from Moscow to Novosibirsk, while flights are also begun from Moscow to St. Petersburg and from Khabarovsk to Alma Ata.

Customer bookings jump 16.2% to 3.47 million while cargo is up by 6.7% to 503 million FTKs. ARIA is now responsible for 60% of international air service provided by all of Russia's air companies.

Airline employment is decreased by 5.1% in 1996 to 15,000 and the fleet now includes 9 big Western jetliners: 4 A310-308s, 2 A310-324s, 2 B-767-3Y0ERs, and 1 DC-10-30F. Two Antonov An-124-100 Ruslan freighters are leased from the Moscow-based cargo airline Ayaks Cargo Airlines, which does not have a license to operate them. Aeroflot will provide the crews. The company now operates 40 weekly departures to destinations in the CIS and Baltic states, as well as its other world markets.

Following an early January visit by Prime Minister Viktor Chernomyrdin, it is announced in Washington, D.C. that the Import-Export Bank will lend Russia \$1-billion dollars. This will finance 80 Pratt & Whitney engines and Rockwell Collins avionics suites needed for completion of the Ilyushin IL-96M, 10 of which would be leased by the builder to ARIA. In addition to repayment terms, the loan agreement also allows banks to repossess the jetliners if Aeroflot defaults on any of its outstanding U.S. loans.

A bomb explodes in front of the Aeroflot office at Istanbul on April 29-30. The attack is in retaliation for the previous week's death of Chechen independence leader Dzhokhar Dudayev in a Russian air raid. Agreement is reached with a European consortium on May 11 for the lease of 4 A310-308s; the 183-seat chartered transports arrive at Moscow in June.

Meanwhile, in May, Managing Director Marshal Shaposhnikov, at the urging of his deputy, Glushkov, sends orders to the heads of the airline's 153 foreign offices ordering them to turn over 80% of their foreign currency income to Andava, S.A. The two-year-old Lausanne, Switzerland-based financial concern will now serve as the airline's foreign treasury center, performing the functions earlier handled by Aeroflot's Center for International Payments, and receiving a 3.125% commission on all funds handled for the carrier. As Paul Klebnikov will report in his March 22, 1999, *Forbes* article, "The Day They Raided Aeroflot," Berezovsky and Glushkov between them own 71% of Andava, with Andre & Cie holding a 21% stake. The Andava relationship is published nowhere in the airline's reports or releases for stockholders.

About this time, Aeroflot signs a contract with another Berezovsky, Glushkov, and Andre & Cie concern, Forus Services, S.A., also headquartered in Lausanne. Forus will act as a financial consultant and serve as an intermediary with Western banks. It also assists in the establishment of the Obedinenny Bank—this Moscow financial institution becomes Aeroflot's domestic repository.

Andava now also signs a contract with a Moscow-based subsidiary, Finansovaya Obedinennaya Kompaniya (United Finance Corporation) to pay some of the carrier's foreign invoices via Grangeland Holdings, Ltd., another financial concern held by unknown shareholders with no physical address or telephone number, just a Dublin, Ireland, post office box. Under this arrangement, Grangeland's payments are considered loans (30% annual \$ interest) to United Finance, which passes this cost back to Aeroflot (65% annual R interest). At the end of these transactions, Aeroflot's annual interest rate is 90% in dollar terms.

The Andava-Grangeland business practice is one of many similar commercial arrangements established across the nation that cause the Russian Central Bank to attempt enforcement of stringent rules on the repatriation of foreign exchange revenues. On July 5, the bankers demur when Aeroflot applies for a license that would exempt it from these rules it is already secretly violating.

Yuri Tishechkin, a passenger who is also a thief with \$6,000 in his pockets, delays a Moscow-bound B-767-3Y0ER on the ground at New York (JFK) for four hours on July 16. When he finally surrenders, no bomb is found and he is taken off the plane to be charged with grand larceny. Next day, an anonymous caller reports that another Russian airliner has been targeted. Police, FBI agents, and airport security search the aircraft, but find no explosives.

Also in July, an arrangement is made with **Transaero Airlines**, which will provide for code-sharing, flight-schedule coordination, and joint fleet planning. At the same time, new engine maintenance and repair facilities are opened at Sheremetyevo-1 Airport at Moscow.

During the summer, Birmingham, England-based air cargo broker Aviation Consultants, Ltd. arranges for the Ruslan freighters to operate eight outsize flights on its behalf.

While on final approach to Turin on an October 8 flight from Moscow, Flight 9981, an An-124-100 with 23 crew and leased by Ajax for the purpose of obtaining a shipment of Ferrari automobiles to fly on to Sharjah and Brunei, is unable to complete its landing. The giant aircraft attempts to go around in light rain, but instead strikes trees and houses in the village of San Francesco al Camp, N of the runway, before crashing. Two crewmen are killed, along with two people on the ground.

Beginning in late October, Il-62s on the thrice-weekly Moscow to Washington service are replaced by larger A310-324s. During November, firm orders are placed for 20 Il-96Ms.

In November, only one weekly service is flown, but with the beginning of the winter schedule in December, the number is boosted back up to two.

Following the publication of Paul Klebnikov's article "Godfather of the Kremlin?" in the December 30 issue of *Forbes*, the reporter and the magazine are both sued for libel in London by the story's subject, Mr. Berezovsky.

Enplanements surge 32.1% to 4,128,660 and 487.14 million FTKs are operated, a 6.7% increase. Although a \$58.8-million operating loss is suffered, there is a net profit of \$55.5 million. It will later be reported that the United Finance Corporation has paid \$139 million of the airline's bills this year and that Aeroflot has actually lost \$82 million.

The workforce is cut another 0.4% in 1997 to 14,315. Early in the year, a code-sharing agreement is signed with **Aerolineas Argentinas, S.A.** covering service over a route from Buenos Aires-Moscow-Buenos Aires. On January 15, a marketing alliance is signed with **Continental Airlines**, under which the state-owned Russian carrier guarantees the sale of half of the seats on a code-sharing service for five years.

On February 19, the carrier signs a \$9-million contract with Norway's largest fish exporter, Hallvard Leroy, A.S., to transport \$2.5-million worth of salmon over the next year from the Russian Far East to Japan. Delivery time using ARIA planes will be cut from 3-5 days to 18 hrs.

In March, the company becomes a public joint stock (public limited) company; although the government retains 51% majority shareholding, 49% is sold to employees. Russian President Boris Yeltsin appoints his son-in-law, Valery Okulov, 44, to be acting managing director of the national carrier. A former Aeroflot navigator and the husband of Yeltsin's eldest daughter, Yelena, Okulov was previously first deputy to the outgoing Aeroflot chief and was in charge of the carrier's operations management and organization department. It will later be suggested that the idea for Okulov's appointment has come from the family friend, financier Berezovsky. At the same time, Gennady Zaitsev, director of the Russian Federal Aviation Service, is re-elected chairman of a nine-member board of directors.

A new Russian Air Code is enacted on April 1; it contains definitions of "state aviation" and "civil aviation," without dividing either aircraft

or operators under the latter term according to the types of service offered. Consequently, business carriers, scheduled carriers, and charter airlines will all receive the same treatment under the law.

The agreement with **LOT Polish Airlines, S.A.** is upgraded in April and provides for code-sharing over a route from St. Petersburg to Warsaw. That same month, concerned with the growing activity within Russia of foreign airlines, ARIA announces a program to strengthen its position in the nation's various regions. It will begin with flights into Nizhni Novgorod, where **Deutsche Lufthansa, A.G.** has recently begun service.

On May 1, a \$440-million order is placed with Boeing for 10 B-737-4M0s to be delivered beginning in April 1998. The thirtieth anniversary of the carrier's Flight Attendant Service is now celebrated. Since the changeover from Soviet control, the quality of the airline's 25,000 flight attendants has improved dramatically. The profession is no longer predominantly female and even married couples are trained into the service.

Also during May, the Russian Central Bank, which has been stalling, issues a license exempting the airline from the financial institution's stringent rules on foreign exchange revenue repatriation.

Acting Managing Director Okulov is elected permanent managing director on May 30.

Thrice-weekly Tu-154M return service is inaugurated on June 1 from Moscow to the ancient city of Chimkent, in Kazakhstan.

It is reported in the *St. Petersburg Times* on June 16 that the value of company stock has risen from \$30 on December 31 to \$112 on June 1; the carrier's market value has jumped from \$63 million to \$350 million. Analysts are unable to determine whether investors are coming to appreciate an undervalued company or if a mystery investor is attempting to take over the national flag carrier. In an interview with the paper, CEO Okulov indicates that he is attempting to stop employees from selling off their 49% stake in the carrier, although 14% to 15% has already been turned over to outside speculators.

Thrice-weekly Tu-134A return service is launched on June 17 from Sheremetyevo-1 Airport at Moscow to Dnepropetrovsk; the city is the third in the Ukraine to be visited after Kiev and Simferopol. A310-324 charters from Moscow to Toronto commence on June 20.

Beginning on June 22 and continuing through July 6, passengers are offered Aeroflot roundtrip tickets to any destination in the world, excluding Russia and the CIS, for \$222. During the promotion period, 3,623 of the inexpensive tickets are sold, with the most popular destinations being Bangkok, Hanoi, Dusseldorf, Frankfurt, and Rio de Janeiro.

On June 28, it is announced that ARIA is preparing to sell a 10% stake on the American market to raise funds for fleet renewal. Simultaneously, it also lobbies the Moscow government to keep protectionist air rights restrictions in place, which is directly opposed to the "open skies" approach of the U.S. government.

At the beginning of July, Aeroflot flies to 13 destinations in Russia, former Soviet republics grouped in the CIS and the Baltic states.

A second weekly Tu-154M return service is introduced on July 1 between Moscow and Tehran. The same day, DC-10-30F all-cargo flights are started from Luxembourg to Tokyo, via Moscow; the return service from Tokyo stops at Moscow before proceeding on to Frankfurt and then repositioning to Luxembourg.

Also on July 1, the carrier, which has long held a worldwide reputation for its poor food and service, initiates its first Western multimedia advertising campaign; adopting the humorous approach, it chooses for itself the image of a flying elephant.

The solid and steady gray beast will be employed in an effort to convince the flying public that the former uncaring, monopolistic carrier has become a friendly, safe, speedy, reliable, and modern airline. The elephant campaign, which includes television commercials filmed in London and shown around Europe and Russia, uses the slogan "Lyogok na Pod'yom" ("Fast to Take Off") and also includes the unveiling of Aeroflot's first frequent flyer program and a \$222 ticket-to-anywhere promotion.

On July 6, the \$222 ticket promotion is extended to Germany until October 25, while a new \$300 roundtrip fare is offered from Novosibirsk to German cities.

Russian customs officials at Sheremetyevo-1 seize two kilograms of cocaine from a Croatian citizen who arrived on a July 11 service from Frankfurt; the man is detained for trial.

An earlier agreement to purchase 50 Tu-214s, 15 Tu-330s, and 20 Tu-334s from the KAPO Gorbunova aviation enterprise (Kazan, Tartarstan, Russia) is spurned on July 12 when ARIA refuses to sign the formal contract. The airline considers the Tu-214s offered to it to be of low quality and too expensive. It also lets it be known that it has lost interest in the Tu-330/-334s, as yet not tested. The Tatar government had taken a \$534-million loan from the Menatep Bank in Moscow to finance production of 30 Tu-214s and their engines for the carrier, which had agreed to take them and pay for them in installments through 2005. All is not lost as KAPO and ARIA set up a working group to come up with a new arrangement.

On July 19, Russia and the airline celebrate the sixtieth anniversary of the nonstop flight of Comrade Gromov's ANT-25 from Moscow to San Jacinto, California.

On the same day, and continuing through September 18, Thursday-only roundtrips are launched from Moscow to Dubai, via Istanbul. The service is primarily for the benefit of Russian citizens flying to the Turkish capital, as well as Arab tourists coming to Russia from Dubai.

Three class II-62M roundtrips from Sheremetyevo-1 are inaugurated on July 29 to Vladivostok, the Far Eastern port city.

Also during July, the carrier launches scheduled Tu-154 flights from Moscow to Arkhangelsk and Murmansk in the Russian Arctic. It is later noted that, through the first six months of the year, \$82 million of Aeroflot's foreign invoices have been paid via the United Finance Corporation and Grangeland Holdings, Ltd.

After nine years of repair, Runway #1 at Sheremetyevo-1 Airport at Moscow is reopened toward the end of the month. Costing R 250 million, the new runway replaces one that had been in service for 25 years. It is the only runway in Russia capable of accommodating any type of aircraft around the clock, regardless of weather.

During the summer, dual-designator flights are begun with **MALEV Hungarian Airlines, Rt.** over routes from Moscow to Budapest.

Having for some time suffered a poor return on the twice-weekly route from Moscow to Phnom Penh, the company seizes the chance to end it on August 1 when fighting breaks out in Cambodia between forces loyal to different political parties.

Flights from Petropavlovsk to Moscow commence on August 2. Twice-weekly Tu-154 roundtrips commence on August 4 between Moscow and Kaliningrad. They are also started between Moscow and Murmansk, with both Tu-134As and Tu-154Ms.

On August 15, the airline begins flying four times a week between Moscow and Tallinn, the capital of Estonia, operating Tupolev Tu-134 jets belonging to private Estonian carrier **Estonian Air, A.S.** Regular passenger service from Moscow to Petropavlovsk-Kamchatskiy in the Russian Far East and from Moscow to Kaliningrad, the Russian enclave on the Baltic Sea, begins in late August.

The new code-sharing pact with **Continental Airlines** takes effect on August 30 when the American carrier launches daily DC-10-30ER flights from Newark to Sheremetyevo-1 Airport at Moscow. The 4,668-mile nonstop trip requires 10 hrs. 30 min. flying time. Employing tickets purchased in Russia, passengers may connect to 157 U.S. cities served by Continental.

Company aircraft are depicted in the action-comedy movie *Jackie Chan's First Strike*. The Golden Harvest/New Line Cinema film, in which the carrier has its name in the credits, is the first significant Western entertainment film for which the "new" Aeroflot provides assistance.

Daily roundtrip Tu-154M flights commence on September 1 between Moscow and Rostov-on-Don.

Despite a 1993 air transport agreement between Russia and the U.S., Russian civil aviation officials disallow joint flights between **United Airlines** and **Deutsche Lufthansa, A.G.** to Moscow, and disapprove

United's application to use a recently established air route over the territory of the Russian Far East. In retaliation, the American major petitions the U.S. DOT on September 9 to ban Aeroflot landings in Washington, D.C., Chicago, and San Francisco. Aeroflot's service to Los Angeles is curtailed.

Just after takeoff from New Delhi for the continuation of a September 10 service from Singapore to Moscow, the crew of an A310-324 reports technical problems; the Airbus makes an emergency landing at Indira Gandhi International Airport and no injuries are reported.

The company celebrates 35 years of operations in Ghana with a brief ceremony at the Kotoka International Airport in Accra on September 12 following the arrival of the Il-18 with the same crew (with the exception of the captain) that had made the original flight on September 11, 1962. Russian and Ghana officials offer remarks and each member of the crew is presented with a carved wooden map of the country.

The value of company stock, which has hovered between \$140 and \$150 per share this summer, reach \$146 a share and begin to gather value, shooting upward from this day.

Also on September 12, a five-year agreement is signed with GE Capital Aviation Services for the lease of a pair of A310-324s previously employed by Dutch and Spanish charter operators.

The company and **Sakhalinskiye Avia Trassy** jointly agree on September 13 that ARIA will stop its use of the two A310s leased earlier and will return them to the Sakha republic.

On September 15, the Aeroflot's managing director joins with Director Mark Veron from **Air France** in signing a strategic alliance agreement at Moscow. The two airlines will coordinate services through their Moscow and Paris hubs and begin code-sharing. Aeroflot views the pact as a way to improve its chances in the growing competition being waged with **Deutsche Lufthansa, A.G.**

Under terms of the new pact with **Air France**, ARIA, on September 17, begins weekly roundtrip, Il-76TD, all-cargo services from Moscow to Paris.

When the acquisition of 17 new Il-96Ms is delayed, the company, on September 19, enters into an agreement with ILFC for the charter of a pair of B-777-2Q8s. To operate them, 16 Russian flight crews are dispatched to Seattle for preparation.

The airline also enters into discussions with Tupolev and the Kazan Aircraft Production factory concerning the possible purchase of three dozen Tu-214s.

In an effort to compete with ARIA, **Vnukovo Airlines**, on September 25, increases the number of its daily departures from Moscow to fifteen.

Late in the month, the carrier signs an agreement with Inkombank aimed at improving the management of the airline's financial resources. The pact will also provide Aeroflot access to the company's resources as the commercial bank invests in the carrier's projects.

On October 1, ARIA's economics director, Igor Desyatnichenko, holds a press conference to review flight equipment developments. For the first time, the media learns of the B-777 order, which is confirmed along with the earlier requests for Il-96Ms, A310s, and B-737s. The company, he confirms, continues to fly 12-13 of its Il-62Ms on long-haul services within the CIS.

Since September, the value of company stock has shot up 26% to close at \$184 per share on October 6. A few more dollars will be earned before the following year's financial crisis and recession assault the entire Russian economy.

Also in October, the new executive passenger charter subsidiary Aeroflot Plus begins revenue service with a pair of refurbished Tu-134As. A total of 490 weekly flights are offered when the winter schedule is published this month.

When the winter schedule begins on October 26, frequencies are increased on flights to Prague, Rome, Geneva, Milan, Kiev, Berlin, Baku, San Francisco, Havana, and Tokyo. The carrier also launches new frequencies to Arkhangelsk, Rostov-on-Don, Murmansk, Bryansk, Dnepropetrovsk, Petropavlovsk-Kamchatskiy, Vladivostok, Kaliningrad, and Chimgent.

Nonstop weekly Il-96 roundtrips are simultaneously resumed from Moscow to Los Angeles; the flight to California requires 12 hrs. 55 min. and is timed to connect with Aeroflot flights from Yerevan and Kiev.

Two chartered A310-324s enter service late in the month. One is employed to inaugurate weekly service on October 30 from Moscow to Johannesburg via Tunis.

Starting on December 22, Aeroflot offers free flights to Moscow from ten Russian cities for passengers connecting with international Aeroflot flights out of the capital. The cities involved are St. Petersburg, Arkhangelsk, Murmansk, Kaliningrad, Rostov-on-Don, Bryansk, Petropavlovsk, Vladivostok, Khabarovsk, and Novosibirsk.

Customer bookings climb 2.4% to 3,904,165 and cargo traffic inches up 1.1% to 545.3 million FTKs. Operating revenues jump 9.8% to \$1.4 billion while expenses rise 1.4% to \$1.35 billion. This year there is an operating profit (\$47 million) and a \$34.4-million net gain (later adjusted downward to \$12 million). It will be reported in the spring of 1999 that there has been, in fact, a loss of \$93 million.

At the beginning of 1998, ARIA is the 23rd largest airline in the world in terms of fleet size. Its deputy managing director, Nikolai Glushkov, now voluntarily resigns. Meanwhile, the workforce stands at approximately 14,000, down 500 staff positions, predominantly older employees pensioned off under a special allocation from the Aeroflot-Garant retirement fund.

During the last week of January, arrangements are completed with ILFC for the seven-year charter of two new B-777-2Q8 IGWs. Upon their arrival, the world's largest twin-jets will replace B-767-3Y0ERs and A310-300s on intercontinental flights. Company officials anticipate that the aircraft will give it a competitive edge against both **Delta Air Lines** and **British Airways, Ltd. (2)**, which employ B-767s on their Moscow services. The new aircraft will receive contract maintenance support from Lufthansa Technik, A.G.

Delayed due to lack of equipment, ARIA launches its new service from Moscow to Nizhni Novgorod on April 9, the seventy-fifth anniversary of Russian civil aviation.

On March 10, a suspected short circuit causes a fire aboard an Il-62 that is being prepared for its departure from Vladivostok to Seattle. The passengers, including Governor Yevgeny Nazdratenko, will make their flight when the airline is repaired next day.

During the first quarter, Russian Federal Aviation Service Director General/Aeroflot Chairman Zaitsev places the finishing touches upon an ambitious \$750-million plan to modernize the nation's commercial aviation. The blueprint, announced just prior to March 23 when President Yeltsin dismisses his entire cabinet, contains a number of progressive points.

The nation's 315 airlines will be integrated into 5-8 national carriers, the number of regional airlines will be cut to 24, and some 65 small local airlines will be allowed to continue. The regional and local service companies will be required to perform "social" flights to unprofitable points.

Zaitsev's document also indicates that the monopolistic relationships between airlines and airports will end and that the number of federally supported aerodromes will be reduced; all will become joint stock (limited) carriers within a year. Finally, the civil fleet will be upgraded; leases will be employed by those unable to purchase Western-built transports.

The new summer schedule is unveiled on March 24 and the number of weekly services is increased to 672, 500 of which begin or end in Moscow. Frequencies are increased to Prague, Rome, Milan, Lisbon, and Brussels and a new route is inaugurated to Omsk.

The Il-96T, a cargo version of the Il-96-300 passenger plane, is certified on March 31. ARIA will receive three of the type.

At the end of April, service is started to the Russian cities of Anapa, Sochi, and Krasnodar.

The first 2 of 6 new, chartered B-737-4M0s arrives in May. It is delivered in a new color scheme, the eleventh applied to a fleet unit in the past six years. The new livery, which will be painted on the new

B-737/777s as they are delivered, is based on the winning idea chosen from submissions by ten Russian artists; the winning idea comes from the wife of one of the airline's directors.

A company official in Angola is released from prison on bail on May 29 after being held for 26 days on charges of illegal currency manipulations. The executive's counsel indicates that the Aeroflot man had been "framed" by Russian government officials for pursuing a claim against a security company after the airline's local office was raided at the beginning of the month.

Also during the spring, Aeroflot approaches Andre & Cie, part owners of Andava, S.A., seeking an increase in a syndicated \$17-million loan received earlier in order that the airline might resolve a cash flow problem.

The first B-777-2Q8 IGW is delivered on June 23 and flies to Moscow, where it arrives next day with a cargo of medical supplies for local hospitals. The new ship enters daily service on the carrier's Moscow-New York route at the beginning of July. The only one of its type in service in Russia, the wide-body also flies from Moscow to London twice weekly.

Following the failure of the airline to make progress payments, Perm Motors stops work on its engine repair contract with ARIA at the beginning of July. It is reported on July 20 that half of the debt has been paid and that the two concerns are working together to draft a new agreement.

Weekly roundtrip passenger service is inaugurated between Moscow and Amman in early August. At this point, the company has 7 Il-96-300s in service.

A joint commission led by U.S. Vice President Albert Gore and Russian Prime Minister Viktor Chernomyrdin on August 17 announces that the U.S. Export-Import Bank will provide two-thirds of the \$1.5 funding that Aeroflot requires for the purchase of 20 Il-96s from the Voronezh Aviation Plant. The Russian government will guarantee the arrangement.

Russian air transport, like other elements of the economy, encounters rocky times after the government devalues the ruble in mid-August. Airlines begin to fix their own rates, pegging tariffs to both rubles and U.S. dollars. On August 26, ARIA fixes its domestic rates at R 6.26/\$ and its international ticket prices at R 8.253/\$, even though the official Central Bank exchange rate is R 7.86/\$. ARIA begins to trim its hard currency spending by revising its in-flight meals, replacing imported foods with Russian-made or prepared foods.

Daily Tu-154 service is inaugurated on September 6 from Samara, in the Volga region, to Berlin via Moscow's Sheremetyevo-2 Airport.

Also on September 6, Aeroflot officially informs **Transaero Airlines** of the termination of their agreement for joint commercial activities, effective October 6, and on mutual financial claims on December 6.

Simultaneously, a **Cathay Pacific Airways (Pty.), Ltd.** A340-342 with 260 passengers and en route from Zurich to Hong Kong, narrowly avoids a midair collision with the inaugural Tu-154 Berlin passenger liner over Samara. Turbulence eddies in the wake of the Tupolev jolt the Airbus, causing its onboard warning system to sound. ATC on the ground does not inform the Hong Kong crew that the Tu-154 is close; however, its commander later radios an apology. Cathay officials report the incident in writing to both Russian and Hong Kong aviation authorities.

Facing the press on September 10, Managing Director Olukov refuses to confirm or deny the midair incident. He does, however, note that safety conditions for the first eight months of the year in Russian civil aviation, particularly for ARIA, are much better than in the previous three years "in all objective parameters."

At the same time, Olukov reports that the national carrier has set up a seven-person crisis committee, which has been charged with generating measures to keep the carrier efficient and financially stable amid Russia's economic crisis. Other responsibilities of the group will include: revision of ARIA's arrangements with banks, suppliers, and other airlines; planning changed or enhanced services to Scandinavia, Japan, India, and the U.K.; the launching of additional charter services; public relations, especially with passengers; and the establishment of measures to hold the company together as a corporation and to provide social protections for its employees.

Circumstances with the Russian economy having made operations there unprofitable, **Alaska Airlines**, also on September 10, suspends its weekly winter service to Magadan, Khabarovsk, Vladivostok, Petropavlovsk, and Yuzhno-Sakhalinsk.

The country's economic crisis continues to worsen in September, with the ruble now trading at more than 16 to the dollar, up from August. As a result, ARIA is now forced to sharply increase its economy-class fares on many busy domestic routes, although in dollars many are now cheaper than before the crisis. Examples of the increase from Moscow are: to Bryansk (115 rubles to 260); to Nizhniy Novgorod (230 to 435); and to Yekaterinburg (from 730 to 1,150).

On September 14, Aeroflot goes to court in Moscow to file a claim against **Transaero Airlines** for R 4.6 million, following it up a week later with another R 4.6-million claim (for maintenance and service charges) and a request that Transaero's bank accounts be frozen. Transaero replies with a countersuit seeking R 15.2 million.

Analysts picture the court claims as an attempt by financial magnate Boris Berezovsky to take control of Transaero and, with the help of key executives at Aeroflot alleged to be loyal to him, to merge the two airlines into a supercarrier. Behind-the-scenes opposition from Managing Director Okulov now begins to simmer.

The Russian Federal Aviation Service reports at the end of September that, for the period since the beginning of the fiscal crisis in August, the number of citizens traveling domestically in Russia has dropped 30%, while the number of those traveling abroad has fallen by 70%. There is also a 40% drop in the number of incoming tourists.

Despite the crisis, a successful meeting is held with 25 Western bankers and creditors at the beginning of October. The airline is successful in securing enough credit facilities to cover lease payments and thereby avoid any need to return aircraft or alter the fleet renewal program.

The second B-777-2Q8 IGW arrives on October 12; the next day it begins thrice-weekly return service from Moscow to Beijing, as well as four-per-week flights to and from London. Plans are announced to operate long-haul charters with the new plane to Bangkok during the winter holiday season.

Also during the month, the company completes installation of a \$1.1-million Unisys Customer Loyalty System (CLS). This computer application allows ARIA to establish and maintain a tailored frequent flyer program.

The itinerary of the winter schedule on October 25 reflects the country's worsening economic crisis. In order to cut costs, the company reduces the number of its weekly flights from 700 to 525 and begins to reduce the number of countries served from 85 to 73.

Scheduled service is suspended to Rio de Janeiro, São Paulo, Buenos Aires, Johannesburg, Lagos, Mauritius, and Jakarta. A weekly service is added from Moscow to Lima via Havana, while service is restored between Moscow and Nairobi. Flights are added on the Moscow-Dhaka route and new services are started from Moscow to Karachi via Dubai, along with thrice-daily nonstop roundtrips between Moscow and Istanbul.

The company's two B-777-2Q8 IGWs are assigned to fly the company's daily nonstop routes from Moscow to New York, Beijing, and Bangkok. Meanwhile, B-767-3Y0ERs replace Il-96-300s on the nonstop Moscow to Los Angeles service. There is no change in the number of scheduled flights to Russian and former Soviet destinations.

Weekly nonstop return service is launched on October 26 linking Yuzhno and Vladivostok with Anchorage, Alaska.

On October 29, in an effort to win passengers, Aeroflot begins offering special \$260 roundtrip tickets to and from the U.S.; customers must, however, agree to randomly selected departure dates.

On November 1, it is announced that a planned 5% stock issue at the end of the year must be postponed because of unfavorable conditions in the world's stock markets.

After landing at Anchorage on November 11 following a service from New York (JFK), Flight 221, an **Asiana Airlines** B-747-48EC with 18 crew and 220 passengers, begins to taxi over an icy ramp area towards

its gate. As the plane reaches N-6 and begins to turn left, it continues straight ahead, with the nosewheels sliding sideways. The left, outboard engine of the Jumbojet strikes the left wingtip of ARIA Flight 853, an Ilyushin Il-62M with a crew of 11 and a contract cleaner aboard preparing for departure to San Francisco. The Boeing's left wingtip then strikes the Ilyushin's vertical stabilizer. Except for a sprained wrist claimed by the cleaner, no other injuries are reported. The captain of the Korean 747 immediately orders all four engines shut down and the passengers are disembarked using air stairs. Immediately after the collision, the Russian crew and cleaner, after turning off all power, also exit their aircraft.

Excluding the December 16–January 17 Christmas period, Aeroflot, on November 17, reduces business class fares by 30% through March 31.

On December 1, the Moscow court makes a ruling in the suits brought by Aeroflot and **Transaero Airlines** against one another. As a balance of the mutual claims, Aeroflot is directed to pay Transaero R 3 million (\$176,000).

The Aeroflot Tour Group Company is established in Moscow on December 18 by six major Russian travel concerns: Akademservis, Inna-Tour, Interpuls, Lanta Tour, BegemOT, and Talisman Travel. As part of the arrangement, the airline agrees to grant the new concern reduced fares on flights that it operates.

While in Amman late in the month for discussions with Lebanese officials concerning the inauguration of additional frequencies to Beirut, Africa/Mideast Division Director Yuri Vasilenko is approached by executives of **Iraqi Airways** seeking a renewal of flights by their carrier between Baghdad and Russia. Support is sought for a lifting of the UN air embargo.

It is announced at the end of the year that, in response to Russia's economic crisis, Aeroflot has shut down 25% of its 700 routes, including unprofitable flights to airports in Latin America, Africa, and even Dublin. On the other hand, the daily utilization rate per operable Il-96-300 is increased to 14.6 hrs. This remarkable improvement in the mechanical fortunes of the new aircraft type results in 6 of Aeroflot's 7 Il-96-300s being on hand for service every day.

Passenger boardings during the 12 months advance 14% to 4.45 million, even as freight traffic drops 6.3% to 507.9 million FTKs. A total of 84,600 tons of mail and cargo are transported, a 12,000-ton decline. A net profit of \$15.3 million is reported.

ARIA is the fourth largest airline in the world at the beginning of 1999. Two more B-737-4M0s are delivered on January 6, and enter service next day on the airline's routes from Moscow to Munich, London, and Rome. The 2 little Boeings bring to 23 the number of foreign-made aircraft in Aeroflot's fleet, one-fifth of the total.

On January 14, Russian President Boris Yeltsin decrees that Vladimir Potyomkin and Vladimir Tasun will receive Orders of Honor for their contributions to the development of Russian civil aviation. The former is an advisor to Aeroflot's managing director while the latter heads the Federal Aviation Service's West Siberian territorial department.

It will be revealed within two weeks that Russian prosecutors from the office of Prosecutor General Yuri Skuratov, on January 18, have begun a criminal investigation into exchange control infringements and abuse of influence by "a number of Aeroflot officials."

As the result of Russia's ongoing economic crisis, the U.S. Export-Import Bank on January 26 delays its organization of the financing pledged to Aeroflot in August for Il-96 funding and, according to a statement from the National Reserve Bank in Moscow, halts organizing funding. The U.S. institution has not refused to continue, but has suspended its aid because the Russian government, which will guarantee the arrangement, has had major problems of late in meeting its obligation to foreign creditors. Contacts between the National Reserve Bank and the U.S. Export-Import Bank leave no doubt that the agreement will only go forward if ongoing negotiations with the International Monetary Fund are successful.

Thrice-weekly Tu-154M roundtrips commence on January 18 between Moscow and Nizhnevartovsk. A similar service from Moscow to Krasnoyarsk will begin on January 31.

In response to a request from the International Red Cross and the Red Crescent Society, an Il-76TD on January 25 transports 42 tons of hu-

manitarian relief medical supplies over 9,000 km. from Bilund, Denmark, to P'yongyang. Over the next week, company Ilyushins will deliver four additional shipments to the capital of North Korea.

When alleged problems are found in their cargo department by internal auditors, Managing Director Okulov suspends two senior executives on February 3. The men are not only held partially responsible for the downturn in 1998 freight traffic, but are also accused of illegal activities. On top of this, they are also supposedly connected to LoboVAZ, the principal business vehicle of billionaire tycoon and Yeltsin family friend Berezovsky.

The Financial Times reports on February 4 that the company has undertaken a wide-ranging restructuring of its management committee, cutting its membership down from 20 to 15. At the same time, the post of director general is created; as first deputy managing director, the new officer will insure vertical control over daily operational activities. In addition, the director general will oversee cash flow and the company's 1,500-plus sales agents.

In addition, it will end its relationship with Andava, S.A., a concern that has handled the airline's foreign hard-currency earnings since 1996 and is linked to Mr. Berezovsky and Aeroflot-Tour, a package holiday company also alleged to have ties to Berezovsky.

For the second straight day, Russian prosecutors under Nikolai Volkov, accompanied by elite commandos in fatigues and ski masks, search offices and seize documents not only at the airline, but at companies linked to Aeroflot that have had dealings with Berezovsky or his former Aeroflot contacts. Principal among these is the NFQ advertising and publishing company that prints Aeroflot's in-flight magazine.

The Associated Press will report a few days later that the crackdown has allegedly been ordered by Russian Prime Minister Yevgeny Primakov. Prosecutors will inform reporter Paul Klebnikov that they are checking into the murky airline-financier relationship for evidence of tax evasion, fraud, and embezzlement. In a statement put out late in the day, Berezovsky denies any association with the sacked executives or Andava, S.A.

Managing Director Okulov reveals figures for the previous year's passenger and cargo traffic (see above) on February 8 and notes that, despite the country's financial crisis, the airline has generated an unspecified "small but definite profit."

Just after landing at Moscow on February 10, the tail of the **ARIA Rossiya Air Company** Il-96 returning President Yeltsin from the funeral of King Hussein at Amman, Jordan, strikes the wing of the **Alitalia, S.p.A.** MD-80, which has just brought Italian Prime Minister Massimo D'Alema to the Russian capital for talks. No injuries are reported aboard either aircraft, although the Italian plane sustains a cracked fuselage and is thus damaged to a point where a replacement aircraft will be sent.

On February 12, a memorandum of agreement is signed with **British Airways, Ltd. (2)** concerning the establishment of a strategic commercial alliance. The document, reflecting negotiations carried out in secret since the fall of the previous year, paves the way for the creation of specific marketing and other cooperative measures.

In an article published by *The New York Times* during the day, reporter Celestine Bohlen tells of the growing conflict between Prime Minister Primakov and financier Berezovsky that has now sucked in Aeroflot's managing director, Okulov. To add to the story, details of audio recordings, recently published by the *Moskovsky Komsomolets*, suggest that Berezovsky is a modern-day Rasputin, who not only influences the Yeltsin family but has for sometime been attempting to arrange a behind-the-scenes merger of both Aeroflot and **Transaero Airlines**.

The article reveals that, as a result of the airline maneuvering, Managing Director Okulov himself has "declared open war" on his onetime benefactor and begins the battle by terminating the two Berezovsky-associated executives. Other opening shots include the restructuring of the management committee and disassociation from the Swiss-based Andava concern—which is said to be diverting funds rather than consolidating them—and Aeroflot-Tour.

After an investigation determines that **Rossiia Air Company's** ground services had improperly directed Italian Prime Minister

D'Alema's transport on February 8, Prime Minister Primakov on February 18 personally fires that division's manager, Vladimir Kachnov.

Okulov holds a press conference on February 15 to discuss improvements in ARIA's fleet and management. He notes that negotiations for the acquisition of Tu-204/214s and Il-114 have been postponed, while the U.S. Export-Import Bank has informed him of its intention to withdraw from the Il-96M/T program. The only Il-96T so far completed has been tested, Okulov reveals, but has been returned to the factory for modifications. Delivery of the first operational aircraft for ARIA trials has been postponed until at least the end of the year.

Also during February, a code-sharing arrangement is entered into with **Aero Condor, S.A.** Under its terms, the company is able to provide the Peruvian line's customers with twice-weekly Il-96 return flights from Lima to Havana.

A man arriving at Sheremetyevo Airport on the company's March 8 service from Peru runs afoul of Russian customs. He is found to have in his possession a total of 3 monkeys, 1 parrot, and 28 lizards. Another 5 monkeys, 1 parrot, and 1 lizard died en route.

On March 13, Blue Bell, Pennsylvania-based Unisys Corporation and ARIA announce an agreement under which the Russian airline is employing the Unisys Customer Loyalty System as the core of its first frequent flyer program, "Bonus." Alexander Filippov, program director, informs the press that possession of a first-class loyalty program is another important step in the company's quest to become a major modern airline.

On March 21, in an effort to offset a downturn in domestic passenger boardings, Sales Manager Nikolai Ivanenko begins a series of meetings with foreign officials in Moscow designed to help increase foreign tourists. The first conference, attended by the ambassador of Thailand, is designed to boost load factors on the company's flights from Moscow and Vladivostok to Bangkok.

As the European diplomatic situation with regard to the Yugoslav question darkens, Prime Minister Primakov is en route to the U.S. on March 23 for discussions with President Clinton on other matters. Just after refueling in Iceland, the prime minister learns from Vice President Gore that NATO will begin a military campaign against Serbian military targets to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo. The Russian leader orders his **Rossiia Air Company** Il-96M to return to Moscow.

On March 24, in anticipation of air strikes by NATO countries, Aeroflot halts all scheduled service into Belgrade and redirects this service to Budapest. In making the announcement, a spokesman indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo begins. NATO also closes Bosnian airspace, halting flights to Sarajevo, Mostar, and Banja Luka for three weeks.

The Russian Prosecutor General's Office informs reporters on March 26 that Aeroflot offices have been searched again earlier in the day as part of the government's probe of the airline's foreign contracts. Aeroflot refuses to say whether prosecutors have seized any documents.

ARIA goes over to its summer schedule on March 28, at which point it offers flights to 150 cities in 79 countries around the world. Next day, an Aeroflot aircraft carries former Prime Minister Yegor Gaidar and two other former high-level Russian government executives on an unofficial diplomatic mission to Belgrade; they are only able to see lower-ranking Yugoslav officials.

At the direction of President Yeltsin and accompanied by Foreign Minister Igor Ivano, Defense Minister Igor Sergeyev, and other top-level delegates, Prime Minister Primakov, aboard a **Rossiia Air Company** Il-96, flies to Belgrade on March 30 for discussions with Yugoslav President Slobodan Milosevic. There is some hope that Russia, a traditional Serbian ally, might be able to bring a resolution of the Kosovo crisis. Six hours later, the Russians return home, their peace mission a failure.

Service to Belgrade remains halted on March 31 and for the duration of the NATO's Operation Allied Force bombing campaign. Flights to south-central and southeastern Europe experience delays of 30–60 minutes due to airspace closure.

Aeroflot reports on April 1 that it has lost \$300,000 in revenues because of the Kosovo crisis. The losses have come from frequent delays caused by military traffic in the Mediterranean and Balkans areas as well as by the suspension of all flights to Yugoslavia and some services to Macedonia and Croatia.

New weekly B-767-3Y0ER roundtrips begin on April 2 from St. Petersburg to San Francisco. Four days later, B-767-3Y0ER Tuesday return flights commence from St. Petersburg to Tokyo (NRT).

Saturday-only A310-324 roundtrip service begins on April 3 from Moscow to Kathmandu, Nepal.

On April 4, Russian prosecutors communicate with the office of Swiss federal prosecutor Carla del Ponte and ask for assistance in determining the connection of financier Berezovsky to the Swiss concern Andava as well as a legal review of Andava activities.

The Russian Prosecutor General's Office issues a warrant on April 5 for the arrest of Aeroflot's former deputy managing director, Gloschkov. When asked about the man by the press, Managing Director Okulov indicates that he "has no knowledge of his current whereabouts."

Early in the month, after weeks of power struggles between Prime Minister Primakov and financier Berezovsky, an arrest warrant is issued by Prosecutor General Skuratov for the latter, who is at his residence in the French Alps on business. The extraordinary measure is justified on the basis that Berezovsky has refused to answer several subpoenas in recent months or to testify concerning a suspected Swiss company he has established that has illegally transferred \$250 million in hard currency earnings from Aeroflot.

The matter becomes even more confusing when, at approximately the same time, President Yeltsin issues an order suspending Skuratov on moral grounds after the release of a videotape showing a man bearing a strong likeness to Skuratov having sex with two women identified as prostitutes. Investigators begin to look into the story behind the tapes and, meanwhile, Skuratov, who portrays himself as a fearless anticorruption crusader, is locked out of his office.

During the second week of April, financier Berezovsky indicates that he will return to face the charges against him and thus Deputy Prosecutor General Mikhail Katyshev, running the investigation as Skuratov battles Yeltsin for his political life, cancels the warrant. Berezovsky returns to Moscow from Nice on April 18 prepared to testify the next day.

Avoiding a session with Katyshev's prosecutors, Berezovsky checks into Moscow's Central Clinical Hospital on April 19. Investigators, led by Nikolai Volkov, indicate that they will wait for the financier's condition to improve before proceeding with their questioning.

Itar-Tass reports on April 22 that the former deputy managing director, Glushkov, sought on an April 5 warrant, is in Israel. It is also learned that Glushkov's lawyer, Anatoly Kucherena, has not, as in the Berezovsky case, pressed investigators to have the warrant cancelled.

Also on April 22, the Federation Council, the upper house of parliament that has the ultimate authority over Prosecutor General Skuratov's fate, refuses to approve Yeltsin's dismissal order. Next day, the Russian president continues his efforts to oust Skuratov, who in turn makes plans to appeal to the court system concerning Yeltsin's continued obstruction. Simultaneously, the Federation Council appoints a panel to look into the prosecutor's charges of high-level corruption involving Berezovsky and the Swiss company Mabetex, which is charged with making kickbacks to others besides those involved in the Aeroflot query.

Financier Berezovsky leaves his hospital room on April 26 to answer prosecutors' questions. He is allowed to go free several hours later after signing a pledge that he will not depart Moscow. According to his lawyer, Genri Reznik, Berezovsky, although pleading his innocence is simultaneously and officially charged with money laundering, unlawful entrepreneurship, and engagement in private business activities while in government service (he had recently resigned as executive secretary of the CIS).

The last of 10 B-737-4M0s is received under lease on April 30.

On May 1, twice-weekly service is resumed between Moscow and São Paulo while daily roundtrips commence between Moscow and Ekaterinburg in the Urals.

As part of his airline's continuing effort to find domestic partners and to develop its presence in the Russian Far East, Managing Director Okulov travels to Khabarovsk on May 7. There, a strategic agreement is signed with the managing director of **DAK Far Eastern Aviation (Khabarovsk United Air Detachment-Dalavia)**, Pavel Sevastyanov. Under terms of the arrangement, the two will soon begin to jointly operate their fleet and ground facilities, create a common pool of spare parts, jointly stockpile kerosene fuel, and jointly train both flight and ground personnel.

Prime Minister Primakov is dismissed on May 10, as the Russian duma begins to debate impeachment charges against President Yeltsin. Next day, Nikolai Volkov of the Public Prosecutor's Office cancels an outstanding warrant for the former deputy managing director, Glushkov, who has agreed through his attorney to return to Moscow for questioning concerning his role in the Aeroflot financial scandal.

An additional B-767-3Y0ER roundtrip is added on May 28 between Moscow and New York (JFK), which is routed via St. Petersburg. The new stop brings to 20 the number of weekly ARIA flights serving St. Petersburg.

Moscow to Belgrade flights resume on July 14 four times a week employing a Tu-154M. This resumption of a previously suspended route is delayed two days as Hungarian aviation officials are late in providing the necessary authority.

Weekly direct service is resumed on July 15 between Moscow and Skopje.

Investigator Nikolai Volkov travels to Zurich on August 30 to meet with Swiss prosecutor del Ponte for a review of the checks into Andava activities made in the period after April.

On October 16, Russian investigators accuse Berezovsky and Glushkov and ex-Aeroflot official, now **Vnukovo Airlines** CEO, Alexander Krasnenker, of taking \$400 million of the airline's profits and \$200 million in air traffic fees, which are hidden in Swiss companies and then laundered.

Weekly A310-324 roundtrips are started on November 5 from Washington, D.C. (IAD) to the company's mini-hub at Shannon, Ireland. Chief Investigator Volkov, on November 8, drops his case against Berezovsky, but continues his probe of Glushkov and **Vnukovo Airlines** CEO Krasnenker.

A code-sharing agreement is signed with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** on November 19. Under its terms, the Russian line is able to place its designator on Cubana flights into Latin America.

The carrier joins the Cargo Network Services, also in November, and begins to use the IATA operation's CASS airline freight billing system.

After months of negotiation, Aeroflot, on December 1, signs an agreement with Ilyushin Finance for the delivery of 6 Il-96-300s, beginning in 2001. With four new B-767-36NERS added during the year, the company has added only two domestic destinations (Moscow to Samara and to Nizhnevartovsk).

Passenger bookings rise 3.5% during the year to 4.6 million, or 21.5% of all Russian traffic; unhappily, they fall by 8% on international routes. Although Airbus and Boeing aircraft make up 22.4% of the fleet, they account for 56.7% of the carrier's total aerial work.

Revenues plunge 15.2% to \$1.190 billion, with costs up to \$1.191 billion. There is a \$1.7-million operating loss, but a net gain of \$1.1 million. Market capitalization is approximately \$215 million or just a third of its 1997 market peak.

Airline employment stands at 14,050 at the beginning of 2000, a tiny 0.2% increase over the past 12 months. Among the world's top 25 airlines at the beginning of the new millennium, Aeroflot has the 24th largest fleet.

As 2000 begins, the effort to root out corruption and inefficiency continues. In order to establish transparent cash flow management, the carrier's global banking business is now awarded to Chase Manhattan Corp.

A comprehensive agreement is signed with **Belavia (Belorussian Airlines)** on January 26. Under its terms, the two carriers will undertake return code-sharing passenger flights from Russia to Belarus and from

Belarus to Siberia, the Mideast, and Southeast Asia via Moscow, as well as on Aeroflot cargo services to Belorussian cities. The two also plan to establish joint hubs at Moscow and Minsk.

A code-sharing agreement is signed with **Airzena Georgian Airlines** on February 1 allowing for joint service over the Moscow-Tbilisi route, as well as combined maintenance and service activities. A strategic compact is also signed with **BAL Bashkiri Airlines** on February 25 covering joint flights and services.

Daily B-737-4M0 nonstop roundtrips begin on March 1 between Moscow and Ufa.

Aeroflot sponsored air carrier consolidation continues as a new strategic alliance is signed with **Air Kazakhstan** Group on March 15 and with **Armenian Airlines** on March 17. All four of these first-quarter deals are similar to the Belavia arrangement of January 26.

After Spanish charter operators claim that they are not given equal rights in operating tour flights into Russia, the Spanish government, on March 31, bans Russian flights, including those by ARIA. A number of Russian passengers are thus stranded at Tenerife. Representatives from both countries will review and resolve matters in Madrid on April 12. Meanwhile, Aeroflot is permitted to send an Il-86 on April 2 to retrieve its Tenerife customers.

During the first week of April, the Russian and Bulgarian governments sign an air traffic agreement; although **Balkan Bulgarian Airlines** and Aeroflot will continue to operate scheduled flights between principal cities, the Moscow-based charter operator, **Avia Express Cruise**, will be allowed to launch scheduled flights to the Bulgarian holiday resorts. Service to Miami and Jakarta is discontinued on April 26.

Having shown little interest in increasing the number of its frequencies to Bulgaria under terms of the new Russo-Bulgarian air traffic agreement signed three weeks earlier, Aeroflot gives way on April 29 to the charter operator **Avia Express Cruise**. AEC now launches its first scheduled frequencies, thrice-weekly flights from Moscow to the Bulgarian holiday resorts of Varna and Burgas.

With the assistance of the U.S.-based McKinsey & Co. consultants hired the previous October, new deputy CEO for finance Alexander Zurabov, quietly appointed the previous summer, is able to unveil a new corporate strategic plan on May 1. The plan, which is to be implemented over the next two to three years, includes increased profitability, optimized resources via internal restructuring, fleet and route rationalization, additional domestic code-sharing, and an end of its lingering Soviet image—including the long-dead boast of being able to fly to every corner of the globe. Arrangements are announced for entry by 2003 into the new "SkyTeam" alliance being built by **Air France** and **Delta Air Lines** as well as a design for a new international terminal at Moscow—Sheremetyevo 3, which is needed as part of the group's joining requirement. Construction groundbreaking for the \$300-million project is scheduled for February.

The plan starts with the beginning of the summer timetable, which features 450 scheduled weekly flights, 50 fewer than in 1998. Although service to Jakarta and Miami has been withdrawn, a new Il-96 service from Moscow to Shanghai is introduced. Domestic flights begin from Moscow to Ufa, Kav Min Vody, and Perm.

Nickolai Shipil replaces Yuri Lengaro as DG of the **VIP Rossiya Air Company** on May 17.

Under a new dual-designator pact with **Perm State Air Enterprise**, also known as Perm Airlines, Aeroflot launches daily return service on June 7 from Moscow to Perm.

On June 24, the board of directors meets to clarify whether the government of President Vladimir V. Putin will support CEO Okulov or media and oil oligarch Boris Berezovsky, who has once again moved into the picture by nominating new board candidates. Leaders of the airline's trade unions also seek the CEO's replacement. Okulov, who has two more years on his contract, is triumphant, being reelected director general. Transport Minister Sergei Frank is reelected chairman and new members include CFO Zurabov and for the first time, a foreigner, Unifund manager and U.S. citizen David Herne, who represents overseas shareholders.

The next day, the airline complains to IATA that the U.S. is breaking international law by banning smoking on all flights into and out of America. At the same time, the carrier's trade union leaders go to court seeking to overturn the board's decision not to consider Okulov's replacement.

In early July, the case against Berezovsky is reinstated and he is once more examined by prosecutors about the possible \$600-million embezzlement. Protesting President Putin's tactics against himself and other moguls, such as media baron Vladimir Gusinsky, Berezovsky, in a final break with the new Russian leadership, resigns his seat in the Duma at mid-month, forfeiting the immunity the post had provided.

Weekly Il-62 roundtrips commence on July 17 from Irkutsk to Shenyang, China.

Pricewaterhouse Coopers, hired for an audit by the Lausanne-based Forus Services, reports on July 25 that it has found no evidence of a Berezovsky-led funneling of funds into the Swiss company. The next day, a 51% stake is purchased in **Donavia (Donskie Avialinii)**, which is renamed **Aeroflot-Don**.

Delhi-Moscow service is suspended by **Air India, Ltd.** on August 1; a week later, it signs a code-sharing agreement with ARIA, which will market 75 blocked seats for the carrier on each of three weekly dual designator flights it operates to India.

On August 10, the government, in a further effort to reform the Russian civil aviation system and more tightly integrate it with the remainder of the nation's transport system, renames the Federal Service of Air Transport (FSVT) the State Service of Civil Aviation (GSGA). Amidst media speculation that Aeroflot is behind the appointment, Aleksandr Neradko, the FSVT safety department head, is named to succeed Vladimir Andreyev as the new agency director. Neradko indicates that the GSGA will exercise stricter control over airline safety and passenger service, but will maintain deregulation, except in predatory practice cases.

In mid-August, Chief Prosecutor Volkov is dismissed after sending an unauthorized invitation to a Swiss prosecutor to bring more documents to Moscow in the Berezovsky embezzlement matter.

The draft 2001 budget received by the Duma on August 31 indicates that the government will reduce further (but by no specified amount) its Aeroflot holdings.

Thrice-weekly Tu-154 roundtrips start on September 4 between Moscow and Chelyabinsk.

On September 12, Aeroflot announces that it had flown 613,900 passengers in August, a new single month post-Soviet record, with seat occupancy jumping to 74.8%, a 10-year high. Deputy Director General Nikolai Kuznetsov also reports that passenger boardings since January are up 8.5%, cargo is ahead by 22.4%, and operating revenues are up 16% to \$700 million. Still, it is recognized that privatization may not come anytime soon.

Two days later the airline opens negotiations with Iraq concerning the resumption of service to Baghdad in October, authorized by President Putin the previous month. The UN, U.S., and U.K. maintain that such flights would be a violation of the sanctions on Iraq imposed after the Gulf War.

On September 28, weekly Tu-154M charter service is opened between Moscow and Tel Aviv.

A memorandum of agreement is signed by CEO Okulov with **Iraqi Airways** President Maamoon Muhetdin on October 1 calling for the restoration of air service to Baghdad at an unspecified future date. At the same time, it is announced that a new airline, Aeroflot-Perm, will be created; incorporating **Perm State Air Enterprise (Permskoe Gosudartstvennoe A/P)**, the new carrier will operate the regional services from Perm previously flown by both companies.

On October 4, the board of directors approves a global depository receipts (GDR) issue on 20% of the airline; the move is viewed as a way to increase the liquidity of Aeroflot's shares by having them listed on foreign stock exchanges. The initial listing on the London Stock Exchange is to occur by the end of the year.

It is announced on October 7 that the company office at Nairobi, Kenya, closed in December 1998, will be reopened by year's end in order to explore the East African regional market.

Company officials meet at Moscow with representatives of **Air France** on October 12-13 to discuss future alliance possibilities. Judging by the success of the talks, it is anticipated that negotiations for an entry by Aeroflot into the "SkyTeam" alliance will be completed by 2003 as hoped.

Unsuccessful in his attempt to influence the airline's direction and still under a cloud, Boris Berezovsky is again questioned at the prosecutor general's office in Moscow on October 17; the hour-long conversation reveals nothing new and the businessman leaves dismissing the continuing probe as a political witch-hunt. Two days later, the Moscow regional court postpones until December 8 a further hearing on a suit seeking the director general's replacement, which was brought by trade union leaders against the board in June.

In anticipation of competition from smaller private carriers over the Moscow to Murmansk route, the company announces on October 20 that, as of the end of March, it will replace the Tupolevs employed on that service with Boeing 737-4M0s. Seven days later, executives, led by Director General Okulov, hold a news conference to promote the new winter schedule, which will offer 535 weekly flights and boost profits during the first quarter by an anticipated \$32 million.

A **Rossiya Air Company** Tu-154M en route from Moscow to Ankara on October 28 carrying Prime Minister Mikhail Kasyanov, is forced to make an emergency landing at the Turkish capital after an onboard fire alarm is activated.

At the beginning of the winter schedule on October 29, A310-324s replace Il-62s on the Moscow-Vladivostok route and B-767-3Y0ers on the Moscow-Toronto route, which now includes Montreal. Direct service to Lisbon and São Paulo is cancelled and the number of charter flights is increased from 1999's 234 to 500-600.

To help improve its market share against **Transaero Airlines**, Aeroflot, on October 30, replaces the Tu-154Ms employed on the Moscow to Nizhnevartovsk route with B-737-4M0s. The next day, the company's first office is opened at Nizhnevartovsk.

Also on November 1, Deputy Prosecutor General Vladimir Kolmogorov informs *Itar-Tass* that new documents he has received from Switzerland indicate that Berezovsky and Krasnenker are guilty of funneling hundreds of millions of dollars in Aeroflot profits to Swiss firms. Both men, along with media mogul Vladimir Gusinsky, wanted in a separate matter, are ordered to turn themselves in for questioning later in the month.

In accordance with a memorandum of agreement signed the previous month in Moscow, Aeroflot opens a representative office in Baghdad on November 15; **Iraqi Airways** simultaneously opens a similar office in the Russian capital.

Service from Moscow to Bahrain is resumed in December.

AEROFLOT PLUS. See AEROFLOT RUSSIAN INTERNATIONAL AIRLINES (ARIA)

AEROFLOT SOVIET AIRLINES (GRAZDANSKI VOZDUSHNIY FLOT): U.S.S.R. (1932-1992). As the result of resolutions made at the 17th Congress of the All-Soviet Communist Party in early 1932, it is decided that the existing state carrier should be reorganized, expanded, and upgraded. On February 25, all Russian civil aviation comes under the control of the Chief Directorate of the Civil Air Fleet or Glavnoe Upravlenie Grazhdanskogo Vozdushnogo Flota. On March 25, the previous state airline, **Dobroflot**, is renamed Airline Administration Aeroflot or Upravlenie Vozdushnykh Soobshchenii Aeroflot, but it becomes known popularly by its trading name, **Aeroflot Soviet Airlines**.

Dobroflot Director General B. I. Baranov continues in office for the remainder of the year. Previous routes and services are maintained. The Soviet-German international service, **Deutsche-Russische Luft-**

verkehrs, A.G. (Dereluft) is not affected; however, Aeroflot now becomes the Russian partner in that particular multinational enterprise. In the Far East north of Vladivostok during these 12 months, a multi-stop network is finished, linking Khabarovsk with Okha on Sakhalin Island. Late in the year, the airline requests a large number of Tupolev ANT-6s, known in their military version as the TB-3 bomber, as well as the civil G-2.

Flying a Kalinin K-5, A. I. Petrov flies the Tbilisi-Moscow route non-stop in one day for the first time on June 25, 1933. Piloted by A. S. Demchenko, the first of five new Savoia S-55P flying boats acquired for the Far Eastern division, departs Saesto Calende, Italy, for Sevastopol and will fly via Brindisi, Athens, Constantinople, and Odessa. The company fails to fulfill its goals as laid out by the First Five-Year Plan. Consequently, in July, a Political Directorate is established (under N. S. Berezin), alongside the geographical subdivisions. I. S. Unshlikht now succeeds B. I. Baranov as director general.

On August 1, scheduled one-day Moscow to Tbilisi K-5 service begins. Inspired by the Lockheed Orion, the first three Neman KhAI-1s are delivered later in the month and in September. During September, the Red Air Force finally agrees to allow the airline six G-2s, the civil version of the TB-3 bomber. Having reached Vladivostok from Sevastopol via Khabarovsk, Demchenko's new S-55P makes a proving flight, between September 26 and October 16, from Vladivostok to Petropavlovsk, via Sakhalin.

On December 15, a Kalinin K-5 completes the airline's transcontinental route, having flown from Irkutsk along the Trans-Siberian Railroad to Vladivostok, making thirteen stops along the way. Also, in the Far East during the year, five new Italian-made Savoia-Marchetti S-55P flying boats are placed in service. These begin weeklong summer multi-stop flights north around the Sea of Okhotsk from Khabarovsk to Petropavlovsk. Meanwhile, Aeroflot is also given responsibility for agricultural and survey work, as well as air transport. During the year, 61 Kalinin K-5s enter service, bringing the total in Aeroflot service to 131.

Progress in the latter area is rapid and by the close of 1934 routes encompass the width and breadth of the Soviet Union, although those to the east still primarily follow the transcontinental railway. Several examples of the Kharkov Aviation Institute's KhAI-1 are reportedly placed into service on a Moscow to Tbilisi express service.

The trading organization Amtorg purchases two Consolidated Model 17AF Fleetsters from **Pacific-Alaska Airways**, a subsidiary of **Pan American Airways (PAA)** on February 22 for use in a search for the wrecked icebreaker *Chelyuskin*. Repainted in **Aviaarktika** colors, the two are turned over to pilots M. T. Slepnev and S. A. Levanevsky at Nome on March 24. En route to Siberia on March 29, the latter pilot crashes his aircraft at Kolyuchin Bay. Slepnev's aircraft departs Nome on April 2 and is able to participate in the rescue mission.

On September 7, a special Central Asia unit is established under A. E. Golovanov and is equipped with three Tupolev ANT-6/G-2s; the first two of the refurbished ex-military TB-3 bombers arrives at Ashkhabad from Moscow ten days later, followed by the third at month's end. During the fourth quarter, the three planes haul 1,000 passengers and 1,400 tons of cargo. Their type is one of the first in Aeroflot service to employ female flight attendants.

The Laville ZIG-1 prototype of a twin-engine, low-wing monoplane transport designed by Frenchman Andre Laville is initially test flown at Moscow in the spring of 1935. On August 6, the first DC-2 is delivered, via the trading organization Amtorg, for evaluation and designer Boris Lisunov is sent to study for two years at the Douglas Aircraft Company plant in Santa Monica, California. An ANT-9, on August 31, opens the first Aeroflot international route to the West on a return service to Prague.

One of the five Savoia S-55Ps operating in the Far East is written off following a September crash. In the fall, I. F. Tkachev succeeds I. S. Unshlikht as director general and, in October, it is reported that the carrier has 90 of its principal airliner, the Kalinin K-5, in service, along with 48 Tupolev ANT-9s, 8 new Neman KhAI-1s and 95 Putilov Stal'-2s; 5 G-2s

are also in use in Siberia, Central Asia, and Transcaucasia. The ZIG-1 prototype is lost in a November 29 Moscow test (five dead); a second prototype will be more successful. During the year, the VAU GA, Higher College of Training for Civil Aviation, is established at Bataisk.

A total of 111,000 passengers and 11,000 tons of mail/freight are transported on the year.

By 1936, Aeroflot's administrative structure has grown to include 12 regional districts across the country: Azov-Black Sea, Caucasus, Central Asia, East Siberia, Far East, Moscow, North, Trans-Caucasus, Ukraine, Ural, Volga, and West Siberia. The new VAU GA is now transferred to Minerainie Voda.

Completed in February, the only Tupolev ANT-37bis (DB-2B) is turned over to the airline and christened *Rodina*. The DC-2 acquired the previous year makes several demonstration flights over Moscow on May 6; it is then dispatched on a roundtrip proving flight to Tbilisi and back. Upon its return, the American transport, together with two ANT-9s, open a new Moscow-Prague route on May 31. Also in May, regular Neman KhAI-1 service begins over the route from Moscow to Simferopol.

A Moscow-Minsk K-5 connection is opened on July 7. The first Antonov ANT-35 (PS-35) makes its maiden flight on August 26 and in September undertakes a record-breaking Moscow-Leningrad-Moscow flight in 3 hrs. 38 min. Meanwhile, on August 31, a new Moscow to Prague route is begun followed by a service to Sofia. During the year, a small number of Zavod Imenya Gorkova ZIG-1s or PS-89s are introduced on a route from Moscow to Simferopol, via Kharkov. The first Douglas DC-3 is delivered, via Cherbourg, during the last week of November.

The partners agree in early 1937 that the **Deutsche-Russische Luftverkehrs, A.G. (Dereluft)** arrangement should end; however, negotiations with **Deutsche Lufthansa, A.G.** (the German partner) are delayed. Aeroflot's DC-2 is chartered by the joint carrier during the first quarter and three Consolidated Model 28-2 Catalina flying boats are ordered from the U.S. on February 28. Although the paperwork is not finished, **Deutsche-Russische Luftverkehrs, A.G. (Deruluft)** concludes its operations on March 31 and a direct Aeroflot multistop service to Berlin is now opened.

Piloting a K-5, A. Mureev flies from Leningrad to Moscow on May 5 in a record 3 hrs. 35 min. Another DC-3, one of 11 completed units to be acquired by August, arrives at Stockholm on June 27 and, on July 1, it joins two Antonov ANT-35s in launching regularly scheduled service on a new Moscow to Stockholm, via Riga, route. The Scandinavian service is reciprocal with **ABA Swedish Airlines, A.B.** On July 4, three newly converted G-2s (military TB-3s transformed to 14-passenger civil transports) enter service on a route from Moscow to Tashkent. Fifteen days later, an Administration for International Routes is set up.

The carrier's only DC-2 is lost in a crash in Romania on August 6. Following the August 12 disappearance of the Tupolev DB-A flown by Soviet airmen Levanevsky and Levchenko during their polar flight to the U.S., Amtorg, the Russian trading organization, purchases an available Consolidated Model 28-1 Catalina on August 18 to assist in a search. Christened *Guba*, the plane makes several search flights before being dismantled and shipped to New York by rail for transport to Leningrad by sea.

Later in the year, a "flying doctor" service of sorts is established as Aeroflot assumes responsibility for undertaking all air ambulance and medical supply work. The first of seven ZIG-1 (PS-89) 12-passenger transports is accepted and enters regularly scheduled service over the route from Moscow to Simferopol on October 20. In the same month, designer Andrei N. Tupolev is arrested and becomes a "non-person." Consequently, his initials are removed from all of his designs and replaced with those of the State Aircraft Plant or Aircraft Production Company (Passazhirskii Samolet), with the ANT-9 transport, for example, quickly reborn as the PS-9 and the ANT-35 as the PS-35.

Built to Soviet specification as a pattern aircraft for license manufacture, the Martin M-156 (PS-30) Clipper is test flown in November. A slightly larger sister to the flying boats employed by **Pan American Airways (PAA)**, the aircraft is flown to New York at year's end. During the

year, the company transports a total of 211,000 passengers, 36,000 tons of freight, and 9,000 tons of mail.

Vasily S. Molokov succeeds L. F. Tkachev as director general in 1938. Disassembled, the Martin 156 flying boat is shipped to Russia on the S. S. *Southlure*, which departs New York on January 20. Parts for two more Clippers are also supplied. The four Catalinas arrive early in the year, assembled, and provided to **Aviaarktika** in the north under the designation MP-7. A license is now received that allows manufacture of the Douglas DC-3 in Russia under the name PS-84 and, during the spring, a ZIG-1 (PS-89), piloted by S. Fokanov, makes a roundtrip flight across 11 Soviet republics.

Service is inaugurated to Cluj and Bucharest (Romania) and, on August 18, Director General Molokov, speaking at an "Aviation Day" meeting at Moscow, remarks on the previous year's accomplishments. The next day, August 19, a PS-35 makes a forced landing near Stockholm. During the summer, a Polikarpov PR-5 and a ZIG-1 (PS-89) conduct a proving flight from Moscow to Irkutsk and back.

A third assembled DC-3 joins the earlier unit and the PS-35s on the Moscow-Riga-Stockholm frequency beginning in September. Moscow-Kiev PS-35 flights commence on November 16 and, late in the month, service is launched from Kiev to Mineral'nye Vody, via Rostov-on-Don. The Stockholm route is closed in December and the PS-35s are withdrawn from it.

In 1939, Aeroflot starts a new route to Sofia (Bulgaria) while the first PS-84 is test flown near Moscow in January-February. When the Stockholm route is reopened in May, two U.S.-made DC-3s are employed. Others of the thirteen American units to be received during the year fly from Moscow to Tbilisi, Ashabad, and Alma Ata and three are designated to launch a new route from Moscow to Baku, via Stalingrad. Five PS-35s commence service from Moscow to Simferopol during the spring. Since 1934, the number of civil TB-3s, known as G-2s, in company service has increased to 72, with many being employed as freighters.

As a result of the August Russo-German nonaggression pact, Soviet Red Army forces roll into Poland on September 17. Two **LOT Polish Airlines, S.A.** Lockheed Model 10A Electras are captured and turned over to Aeroflot. Later, on December 6, a joint air service is started with the Chinese; named **Hamiata (Sino-Soviet Aviation Corporation)** after its principal destinations, the line hosts flights between Alma Ata (now Almaty, Kazakhstan) and Hami, via Urumchi. Also during the month, a number of special units are created to support the Red Air Force in the Winter War with Finland. In the past four years, the number of Kalinin K-5s available has been reduced from 90 to just 33; however, 45 ANT-9s (PS-9s) remain on strength and three PS-30 Martin Clippers are on strength in the Far East.

Indigenously built PS-84s begin to supplant the ANT-9 in commercial service during 1940. On January 8, one makes a proving flight over the former Deruluft route to Berlin; regular flights over the route commence on January 21. In cooperation with **ABA Swedish Airlines, A.B.**, flights begin to Moscow from Stockholm, via Riga and Velikie Luki and, on March 14, a DC-3 proving flight is made from Moscow to Sofia.

On May 6, the giant, six-engine ANT-20bis (PS-124) is placed into service on a route from Moscow to Mineral'nye Vody while, next day, scheduled Kalinin K-5 flights commence from Kiev to Lvov in occupied Poland. PS-35s are assigned to the Lvov service on May 15 and to a new route from Moscow to Odessa. By July, five DC-3s are employed on the Stockholm-Moscow service.

Flown by A. Ovechkin and N. Derkunsy, a PS-30 Martin Clipper on July 8 inaugurates a new route from Khabarovsk to Petropavlovsk. Meanwhile, a single, small amphibian, the Schavrov Sch-7, is introduced to service communities along the Volga River between Saratov and Astrakhan. When Estonia is invaded in September, two Junkers Ju-52/3ms and a Lockheed Model 14H Super Electra are taken over; Latvia yields two de Havilland DH 89 Dragon Rapides, which also enter service.

The new Baltic directorate is established on October 29 and an MP-7 Catalina is provided to the Irkutsk directorate in December. The fleet

now includes 26 DC-3/PS-84s, but only 1 PS-30 Martin Clipper is still available.

A total of 359,000 passengers and 45,000 tons of mail/freight are transported on the year over the airline's 90,906-mile unduplicated route system. The work of the carrier's pilots is detailed in the Mosfilm motion picture *Workdays*.

The Moscow-Stockholm route is not closed for this winter and, in January 1941, a sixth DC-3/PS-84 is assigned to the joint service with **ABA Swedish Airlines, A.B.** The **Deutsche-Russische Luftverkehrs, A.G. (Dereluft)** partnership is formally terminated on March 22. Germany invades on June 21 and all air routes west of Moscow are suspended, although those in the east continue. A DC-3/PS-84 from Stockholm is the last airliner to officially fly into Russian airspace this day. The airline is now placed directly under the People's Commissariat for Defense and the Commander of the Red Army. Ever after, its organizational structure will be rigidly militaristic.

Between June 23-27, Aeroflot Soviet Airlines is divided into six Aviation Groups for Special Purposes (Aviagruppy Osobogo Naznacheniya-AGON GVF) based at Moscow, Kiev, Kharkov, Baltic, Belorussia, and the Southwest. Polar hero/Director General Molokov is made a major general and is placed in charge of military air transport. From Aeroflot are created air units, subordinate units, and detachments that are gradually entered into the organization of the Front air forces.

At the same time, Bykovo, Baltic, Black Sea, and Northern AGONs are set up to support the Soviet Navy. The VAU GA, Higher College of Training for Civil Aviation is evacuated from Mineral'nye Vody to Tashkent and is assigned to train military pilots.

On July 9, all AGON airline personnel are drafted into the military. Later, on July 27, a Moscow AGON PS-84 is attacked by German Me-109s while evacuating wounded from the front. As the plane spins out of control, flight engineer I. S. Bulkin is able to assume control from his comatose pilot and bring the heavily damaged plane to a safe landing. The 30 PS-84s of the Moscow AGON are ordered, as of September 20, to commence a regular supply run into besieged Leningrad.

On September 22, an Aeroflot unit drops paratroops behind enemy lines in cooperation with the Black Sea Fleet air force as part of a counterattack against German troops besieging Odessa. The Leningrad airlift begins on October 10 and is strongly resisted by the Luftwaffe. En route from the city five days later with a group of 38 women and children, the PS-84 piloted by I. N. Ovsyannikov is one of 12 intercepted by Nazi Messerschmitts. Ovsyannikov is wounded and his plane badly damaged; however, the hero flyer is able to land his burning aircraft on the shore of Lake Ladoga where most of its passengers escape.

Also in October, the Moscow AGON formed from Aeroflot and units of the Long-Range Bomber Force bring arms and men in from the regions of Teykovo and Yaroslavl. In three days, some 5,500 men and thirteen tons of supplies are delivered in support of the Bryansk Front, mostly by 30 PS-84s.

In 1941, during the fall-winter Battle of Moscow, the aircraft of Aeroflot fly 32,730 sorties in direct support of Russian forces, including the transport of 49,822 troops and 1,365 tons of supplies. In the Far East, the five Savoia-Marchetti S-55Ps are retired from the Petropavlovsk service. During the fall, many factories are moved from Moscow to a line behind the Ural Mountains. Among these is the Passazhirskii Samolet Plant No. 84, which is relocated to Tashkent, where the Aviation Production Company will be named in honor of V. P. Ckalov and through 1945, will turn out a staggering 6,157 DC-3/PS-84s.

Between October 10 and December 25, the Moscow AGON flies 6,235 tons of supplies into besieged Leningrad and evacuates 50,000 people, including 13,208 wounded soldiers. Having been formed six months earlier, a North Caucasian AGON, to which all remaining Kalinin K-5s have been assigned, is responsible in November for the evacuation of over 1,000 wounded from Rostov-on-Don. It is recorded on December 31 that, since the outbreak of war, Aeroflot has lost 67 of its 177 PS-84s, including 42 to direct Luftwaffe action. In addition, the two Baltic-directorate Ju-52/3ms are destroyed.

All commercial services are suspended in **1942**, except for the Siberian route and the Arctic services of **Aviaarktika**. In the Far East, the last PS-30 Martin Clipper completes almost two years of service on a route from Vladivostok to Petropavlovsk, via Khabarovsk.

On January 3-4, those Aeroflot units attached to the Western Front are assigned to drop paratroops behind enemy lines near Medyn. The first PS-84 is delivered from the Lisunov factory (which had been moved to Tashkent the previous autumn) on January 7. From January 18 to 31, some 3,600 paratroops are placed behind German lines in the Moscow area and during February, the entire 4th Parachute Corps, some 10,000 soldiers, are dropped in the enemy's rear.

F. A. Astakhov now succeeds Vasily S. Molokov as director general and, later in the year, the Aeroflot elements in the Red Air Force are formed into two official units: the First Transport Aviation Group and the Special Communications Aviation Group. Beginning in May, all Aeroflot aircraft not painted in national livery and markings are so colored. Between June 21 and July 1, the airline makes 229 relief flights into the beleaguered Crimean city of Sevastopol at night; 218 tons of supplies are brought in and 2,162 persons, including 1,542 wounded, are removed. Also in July, the MP-7 Catalina, known as the *Guba* before its transfer to the Red Navy, is shot down by a German U-boat at Novaya Zemlya.

During the defensive phase of the Battle of Stalingrad beginning in August, air groups of Aeroflot and some AFLRO units transport military personnel, materiel, ammunition, and food to the ground troops and evacuate the wounded to the rear. In September, in honor of its production supervisor, the Soviet government orders all of its PS-84s (DC-3s) redesignated Lisunov Li-2s. In November, it is reported that, since July 1941, Aeroflot-manned Po-2s have rescued 580,000 individuals from the areas overrun by German troops, including 150,000 wounded soldiers. In the same period, Aeroflot units have flown 58,000 sorties in support of partisans, including 4,645 that involve landing behind enemy lines. During 1942 alone, the onetime civilian carrier transports more than 38,000 men and 6,400 tons of supplies.

At the end of February **1943**, it is announced that, during the Battle of Stalingrad, Aeroflot units had flown more than 46,000 sorties, carrying out over 31,000 soldiers and delivering 2,587 tons of military cargo. The Soviet official history of the air war reports that hundreds of flyers, engineers, navigators, and mechanics were given orders and medals as a result. Fifteen Polikarpov Po-2-equipped Aeroflot units are now created; known as Detached Aviation Regiments, these perform air ambulance and communications directly in support of frontline divisions. During the year, the first of 700 Douglas C-47s (military DC-3s) are received from Alaska via the Lend Lease Act and, as PS-84s, are assigned to a newly formed First Detached Aviation Division for service on the Central Front. They are joined by upwards of 80 Junkers Ju-52/3ms captured and repaired following the Battle of Stalingrad. During the year, Aeroflot units transport more than 390,000 men to the Fronts and to the partisans and more than 29,000 tons of varied cargo. For courage displayed in battle, the 2nd, 6th, and 7th Air Regiments are created guards units.

In the Far East during **1944**, three Consolidated Catalina flying boats (license built as the GST MP-7) are placed in service, allowing withdrawal of the SP-30. Meanwhile, the Aeroflot-manned units of the Red Air Force continue their operations in the West. During January-February, the transport air regiments of Aeroflot operating in the Leningrad area are able to deliver 278 tons of equipment and 383 personnel to the partisans, while evacuating 740 men, including 592 seriously wounded guerrillas. Later in the spring, during the battle for the Karelian Isthmus, the 40th and 52nd Transport Regiments are able to complete 5,700 sorties, transport 6,100 soldiers, a large tonnage of supplies, and evacuate 2,503 wounded.

Meanwhile, during the White Russian operation conducted between July 5 and August 29, Aeroflot transport regiments fly 35,000 sorties and carry in excess of 43,000 men. The First Transport Aviation Group becomes the 10th Guards Aviation Division, one of six frontline transport groups created since 1942 to be transformed into

Guards Aviation Divisions. On November 5, scheduled services are resumed to Bucharest and Sofia.

On March 6, **1945**, the carrier reestablishes the prewar **LOT Polish Airlines**, equipping it with Li-2s. An Li-2, piloted by A. Taimetov, gains the honor of being the Soviet aircraft chosen to fly the German surrender documents to Moscow on May 9. Following this V-E Day flight, Aeroflot statisticians report that, since 1941, the airline has transported 2.3-million passengers (including 330,000 wounded) and 400,000 tons of supplies in 4.5-million hours of flight time. In terms just of support to partisans operating in the German rear, Aeroflot units have made more than 109,000 sorties, including 13,000 that ended in landings on airfields and landing strips held by guerrilla units. Over 17,000 tons of ammunition, guns, food, radio transmitters, medicine, mail, etc. are flown in and 83,000 people, mostly wounded, are evacuated.

Partial domestic commercial service is resumed late in the year. The VAU GA, Higher College of Training for Civil Aviation, is tasked with training the pilots required to fly Li-2s for Aeroflot's regional departments.

Hereafter, Aeroflot, widely regarded in the West as a civilian airline, will, in fact, retain its military links. Most of its personnel will hold reserve or former military status, its director general will be a marshal in the Soviet Air Force, and most of its transports will continue to be designed and configured for military as well as civil purposes. In time of crisis, the entire fleet will be instantly at the disposal of the military.

Meanwhile, beginning in August, scheduled services are resumed to Prague, Warsaw, Vienna, and Berlin. Douglas DC-3s, Junkers Ju-52/3ms, and support are provided allowing the reformation of **CSA Czechoslovak Airlines** on September 14. Late in the year, the first of five fifty-fifty partnerships are entered into with the governments involved to reconstruct national airlines. The first such company established is **TARS** in Romania, set up as successor to the prewar **Lares**.

Under the fourth Five-Year Plan in **1946**, Aeroflot is directed to reconstruct and to restore and then expand its pre-1941 network to 108,740 unduplicated miles, initially with Li-2s. A fleet of 15 Lend-Lease Douglas C-47s (Li-2s) and 3 captured Ju-52/3ms is turned over to the airline at Yakutsk by the Red Air Force and on March 1 is formed into the all-freight 14th Cargo Aircraft Group for use in support of further Siberian development. Scheduled flights are undertaken to Belgrade and Budapest.

On March 29, **Maszvoiet** is established at Budapest with Soviet technicians and Li-2s as successor to the prewar **Malert**. Air Marshal Fastakov announces Aeroflot's expansion and modernization program at an April 8 civil aviation conference held at Moscow. **Malert** services begin on October 15 with Russian-supplied Li-2s and Po-2s.

Li-2 Moscow-Helsinki service is launched on November 25. The joint-stock **Justa** is set up at Belgrade (Yugoslavia) late in the year as successor to the prewar **Aeropot**.

An Li-2 with 24 passengers is lost near Meshed, Iran, on December 4.

An additional joint partnership, B.V.S., is established at Sofia (Bulgaria) in early **1947** as successor to the prewar **Aeropot**. G. G. Baidukov succeeds F. A. Astakhov as director general. Employing Li-2s, service begins in April; the same month, Justa undertakes Li-2 operations. B.V.S. commences domestic flights on June 29 with Soviet supplied Li-2s and Ju-52/3ms. The first Soviet postwar transport, the Ilyushin Il-12, enters limited Aeroflot service during the summer.

The Yugoslav-Soviet split in **1948** ends Aeroflot technical advice and partnership in Marshal Tito's nation; however, the Communist coup in Czechoslovakia places Soviet aeronautical technicians into **CSA Czechoslovak Airlines**. Full-scale Il-12 services commence in late spring, beginning with a flight from Moscow to Tashkent on May 25. On September 23, the carrier begins ice reconnaissance flights as well as responsibility for forest-fire patrol and fire-fighting ("water-bombing") operations. The Antonov An-2 biplane enters Aeroflot service late in the year and it remains in Russian service as this book goes to press.

G. F. Baidukov is succeeded by S. F. Zhavaronkov as director general in **1949**. Large numbers of An-2s now begin to join the fleet, serving as

a light transport, agricultural and meteorological workhorse, air ambulance, forest fire patrol, and water-bomber aircraft. An-2 support for the fishing industry also begins with over-water school reporting.

Some 200 Il-12s are now in service. Soviet domestic and East Block routes and frequencies are now expanded dramatically as new equipment becomes available. The VAU GA, Higher College of Training for Civil Aviation, is transferred from Tashkent to Ulyanovsk.

During 1950, the route network is stretched to 186,720 miles. Il-12s now make the nine-stop Moscow to Vladivostok run in 33 hrs. A total of 1.6-million passengers and 181,500 tons of mail/freight are transported. Additionally, 8.5-million acres of agricultural lands receive attention.

Operations continue apace in 1951. On March 26, 1952, it is reported that over 70 are killed when an Il-12 from Odessa collides with a military transport after landing at Tula Airport in the nation's worst postwar air disaster to date.

In February 1953, Joseph Stalin, who has personally approved all major transport aircraft designs for decades, is shown the plans for the Tu-104 jetliner by Academician Tupolev; the adaptation of the Tu-16 Badger bomber will be the last aircraft approved by the Soviet dictator prior to his death.

En route to the Soviet Union from Lushun, China, on July 27, an Il-12 with 6 crew and 15 passengers is, unexplainably, located flying in an easterly direction, 35 mi. NE of Kanggye, North Korea, by patrolling USAF F-86 Sabres. Believing the airliner to be a transport "assigned to Communist Air Forces in China," the fighters make one firing pass, causing the engines to burst into flame. The Ilyushin explodes and disintegrates, falling to earth in pieces. There are no survivors.

Mil Mi-1s, the first Soviet helicopters, join the fleet in May 1954 and are assigned to agricultural and air ambulance duties. On September 5, an agreement is signed with SAS (Scandinavian Airlines System) and Air France for Moscow to Stockholm and Moscow to Paris services. The Ilyushin Il-14P enters service on November 30, and thereafter is employed to inaugurate services to Stockholm and Paris.

Two fatal crashes are suffered during the last three days of the year; one near Moscow on December 29 (45 dead) and one following a take-off failure from Irkutsk on December 31 (17 dead).

Il-14 flights to Peking (now Beijing) commence on January 1, 1955. Kiev to Tirana flights are started on February 1. The Tupolev Tu-104G *Krasnyi Shapochka* (Little Red Riding Hood) is flown in the Tushino Aviation Day event on July 3 by test pilot Yu. Alaskeyev; meanwhile, Aeroflot Capt. A. K. Starikov begins training flight crews for the new jetliner. The *Little Red Riding Hood* is, in fact, a demilitarized Tu-16G operated as *Grazhdanskiy/Civil*. En route from Stalingrad to Moscow on August 6, an Il-12, with 25 aboard, including a ten-woman Norwegian parliamentary delegation, crashes while landing at Voronezh, Ukraine; next day, the Russian government apologizes to Norway and offers to pay indemnities. On August 15 service is inaugurated to the central Asian city of Karaganda.

A Moscow to Vienna Il-14 frequency begins on September 10. In exchange for a Helsinki-Moscow route for Finnair, Aeroflot is able to launch thrice-weekly flights to Finland on November 15. During the fall-winter season, Il-12 flight time on the Moscow-Irkutsk, via Sverdlovsk/Novosibirsk, is cut to 24 hrs. 35 min.

Designed to provide pilots with turbojet operating experience, the Il-20 (a civil version of the Il-28 bomber) is introduced by Aeroflot in February 1956. Employed to fly matrices from Moscow to Novosibirsk, via Sverdlovsk, it will allow newspapers to be published in those cities at the same time as those in the nation's capital. The first Russian passenger jetliner, the Tupolev Tu-104, flies a VIP Moscow to London (LHR) service on March 22. On August 24, the carrier signs an agreement with Pan American World Airways (1) whereby each company will honor the other's passenger tickets and cargo documents.

Only the second in the world to enter regular airline service (after the de Havilland Comet), the Tu-104 begins scheduled Moscow-Irkutsk, via Omsk, operations on September 15. This, the world's first sustained (short-haul) jetliner service, requires seven hours to complete the route

instead of the 17 hrs. 50 min. previously needed by the carrier's Il-14s. On October 12, Prague becomes the first foreign capital to be regularly served by Tu-104, followed by Peking in December. Meanwhile, beginning on October 18, one of the new jetliners flies from Moscow to Rangoon, via Tashkent and New Delhi.

P. F. Shigarev succeeds S. F. Zhavaronkov as director general in early 1957. Piloted by Ya. I. Vernikov and V. P. Vazin, the first An-10 Ukraina turboprop, a stretch of the twin-engine, piston-powered An-8, makes its maiden flight on March 7. Moscow-Sverdlovsk-Novosibirsk Tu-104 service is inaugurated on June 12. The second forthcoming new Aeroflot airliner of the year is initially test flown on July 4, the four-engine Ilyushin Il-18 turboprop piloted by V. K. Kokkinski.

Inbound from Riga to Copenhagen in dense fog on August 14, an Il-14P with 5 crew and 18 passengers, crashes into a factory chimney at Copenhagen, Denmark, and spins into the harbor; there are no survivors.

The first Tu-104A is unveiled on September 4 when a unit, transporting a group of Soviet delegates to a UN session, arrives at Wrightstown/McGuire AFB, New York, following a 21 hr. 54 min. flight from Moscow, via Goose Bay. On September 14, the foreign minister and his staff arrive at New York aboard a Tu-104A, following an 18 hr. 30 min.-flight from Moscow, via Goose Bay. A Moscow-Petropavlovsk-Kamchatskiy Tu-104A proving flight is undertaken on October 24.

An Il-14P with 5 crew and 16 passengers must be written off following a bad landing at Helsinki on December 3; there are no fatalities. On December 7, Tu-104s open regularly scheduled service to Copenhagen.

The Irkutsk service is stretched to Khabarovsk in January 1958.

En route from Moscow to Peking (now Beijing) on February 19, a Tu-104G runs out of fuel and crashes 1,500 m. short of the runway at Sovosteevka; there is no information on casualties.

The first Tu-114A arrives at Tokyo (HAD) in a demonstration flight on April 12. Tu-104 service from Moscow to Brussels, via East Berlin, begins on June 2, followed by inaugural flights via the East German capital to Amsterdam on July 26 and Paris on August 1. Seventeen days later, Moscow-Tashkent-New Delhi Tu-104 flights are started.

A Tu-104A with 64 passengers crashes near Chita in a thunderstorm on August 25; there are no survivors.

The pilot of a Tu-104A with 79 passengers loses control of his jetliner at 10,000 meters over Kanash, Chuvashskaya A.S.S.R., on an October 17 flight from Omsk and crashes; there are no survivors. This is the first fatal accident reported concerning the Soviet jetliner; indeed, the Russians are quiet on the subject and all information reported on the accident comes from the Communist Chinese, who note that 16 of their citizens from a cultural mission are among the dead.

The Mil Mi-4 becomes the first helicopter to enter scheduled service in the U.S.S.R. beginning on November 13, flying a Simferopol-Yalta route. A Tu-104 arrives in Cairo on December 4 to inaugurate twice-weekly services to Moscow, via Tirana, next day.

Direct Tu-104 service Moscow-Vladivostok begins on January 8, 1959 followed by Tu-104A flights from the Soviet capital to P'yongyang, North Korea, via Irkutsk and Chita, on March 3. Ye now succeed P. F. Shigarev as director general F. Loginov.

Regularly scheduled Adler-Sochi Mi-4 rotary wing flights begin on April 1, followed by flights linking Adler Airport to Gagra, Khosta, Lazarevskaya, and Gelendzhik. The Tu-104B enters domestic service on April 15 over the Moscow-Leningrad sector. The Il-18 turboprop is first introduced on the Moscow-Alma Ata and Moscow-Adler/Sochi routes on April 20, following by two days the introduction of the new Tu-104B on a direct Moscow-Leningrad frequency.

On May 15, two new domestic services are inaugurated: Moscow-Kiev and Moscow-Petropavlovsk-Kamchatskiy. The following day, Moscow to London, via Copenhagen, Tu-104A flights begin. On May 17, a new Antonov An-10 conducts a proving flight from Kiev to Moscow, Tbilisi, Adler, Kharkov, and Kiev. On May 21, a long Leningrad-Sverdlovsk-Novosibirsk-Irkutsk-Vladivostok Tu-104 frequency is introduced. The same day, a Tu-114 flies 4,200 miles non-stop from Moscow to Khabarovsk.

A new Tu-114 turboprop, the largest commercial airliner of its day, makes a proving flight from Moscow to Tirana on June 2. Irkutsk-Yakutsk Tu-104 service is launched on June 15 while, simultaneously, Alma Ata to Rostov, via Tashkent and Baku, Il-18 flights. Later in the month, An-10 turboprops begin cargo services in the Ukraine, the Arctic, and in western Siberia. On June 28, a Tu-114 undertakes an 11-hr. 6-min. proving flight from Moscow to New York nonstop.

Il-18s initiate two new routes on July 1: Moscow-Ashkhabad and Tashkent-Adler/Sochi, via Baku. Tu-104Bs begin flying from Moscow to Kiev on July 7. A Tu-114 flies from New York City to Moscow nonstop on July 14 in a record 9 hrs. 48 min. On July 22, an An-10 begins regularly scheduled operations over a route from Moscow to Adler; a second An-10 simultaneously launches flights from Kiev to Simferopol.

Moscow-Khabarovsk, via Sverdlovsk and Novosibirsk, Tu-104 flights commence on August 1; the next day Il-18s first begin flying from Moscow-Frunze. Premier Nikita Khrushchev and his party fly the Tu-114 prototype to New York (IDL) in September, making the 5,611 mile journey from Moscow in 11 hrs. 5 min.

On October 12, Tu-104s are withdrawn from the Moscow to London route for the winter and are replaced with Il-18s. Premier Khrushchev and other Soviet VIPs inspect the carrier's new rotary-wing unit at the Kremlin on November 12.

An Antonov An-10 with 40 passengers is lost on approach to Lvov in the Ukraine on November 16; there are no survivors.

As the first passenger, Khrushchev inaugurates Mi-4 shuttle flights from Vnukovo Airport to the Kremlin on November 17. An Il-14 with 29 aboard disappears on December 13 while en route from Tashkent to Kabul; wreckage will later be found on a mountain and there are no survivors. An An-10 makes a proving flight to New York on December 24.

On January 3, 1960, *Aviaarkitika* is renamed **Polyarnaya Aviatsiya (Polar Aviation)**. Moscow-Bucharest-Sofia Il-18 flights begin two days later followed by Il-18 service to Krasnoyarsk and Yakutsk on January 6. On January 20, the search for the Il-14 lost en route to Kabul in December is officially abandoned.

An improved An-10A enters service on February 1 on a flight from Moscow to Rostov. Three days later, Aeroflot assumes all functions of Polyarnaya Aviatsiya. On February 20, Tu-104B flights are initiated between Moscow and Simferopol. On February 20, Moscow-Krasnoyarsk service begins. An Antonov An-10 with 32 passengers crashes while on approach to Lvov on February 26; there are no survivors.

On March 2, the turboprops initiate service from Moscow to Dushanbe; the same day, Mi-4s begin a helicopter shuttle between Baku and the oil drilling sites on Neftune Kamne island offshore. Another Tu-114 proving flight is made on March 10, Moscow-Khabarovsk and return.

Four new Il-18 routes are opened in April: to Prague and Cairo (April 1), to Kiev and Vienna (April 10), and to Norilsk (April 12). Meanwhile, An-10s, transferred to the north earlier, commence all-cargo services on behalf of the Aeroflot division, formerly **Polyarnaya Aviatsiya**.

An Il-18 crashes while on final approach to Sverdlovsk on April 27; there is no information on casualties.

On June 1, the turboprops start flying to Riga from Moscow. Simultaneously, the number of Moscow-Leningrad daily frequencies is increased to 15. Mi-4 helicopter flights begin to link Moscow Central Air Terminal and Sheremetyevo Airport on July 20.

An Il-18B, with 8 crew and 27 passengers, suffers an in-flight fire that forces it to crash near Kiev on August 17; there are no survivors.

While transporting 46 passengers including Uganda National Party Secretary Kale and his party from Cairo to Moscow to witness the Francis Gary Powers trial, another Il-18 crashes near Moscow on August 21; there are no survivors.

The same day, a couple attempts to take over a domestic flight, but are thwarted when wounded members of the crew are able to overpower them.

Also during August, An-10s inaugurate a Great Circle route from Moscow to Khabarovsk, via Syktyvkar, Noril'sk, and Yakutsk.

A Tu-104A with three crew crashes while on approach to Ust-Orda on October 21; there are no survivors.

Mi-4s begin connecting Bykovo and Ynukovo Airports with themselves and with Moscow on November 1. Il-18s replace Tu-104s on the London route on November 1.

On December 20, a Moscow-Tiksi-Magadan Il-18 proving flight is flown. An Il-18 is lost after failing its takeoff from Ul'yanovsk on December 28; there is no other information.

At year's end, Aeroflot retains its rank as the world's largest single-unit airline (**United Air Lines** in the U.S. is the largest non-state company) as enplanements total 13 million.

Moscow-Tiksi-Magadan scheduled Il-18 flights commence on January 10, 1961. A Tu-104A overshoots the runway on landing at Vladivostok on February 1; although the aircraft must be written off, there are no fatalities.

Il-18P turboprop service from Leningrad to Krasnoyarsk started on February 3.

Following double engine failure, a fully loaded Tu-104B crashes while making an emergency landing on frozen water on March 13; five persons are reported killed.

A Tu-114 with 170 passengers makes a final proving flight from Moscow to Khabarovsk on March 17. Also in March, Antonov An-10s are in service between Moscow and Dnepropetrovsk, Donetsk, Chisinau, Kharkov, Krasnodar, Kuibyshev, Lwow, Mineral'nyye Vody, Norilsk, Odessa, Rostov, Syktyvkar, and Zaparozhe and from Khabarovsk to Magadan.

Moscow to Kabul service is resumed on April 3. Regular Tu-114 service on the Moscow-Khabarovsk route begins on April 24. Also in April, Irkutsk to Yakutsk An-10 flights begin. On May 15, two new services are inaugurated from Moscow: to Kuybyshev and to Mineral'nyye.

In June, Minsk to Leningrad An-10 services start. During the summer, Il-18s open three new services: Moscow to Yerevan (July 1), Karaganda east and west to Alma Ata and Moscow (August 15), and Moscow-Anadyr (August 17).

A Tu-104B with 85 passengers strikes an approach light in heavy rain during its final approach to Odessa on July 10 and crashes (1 dead).

Later in the month, scheduled Mil Mi-4P helicopter flights begin in the Crimea and between all of Moscow's airports, including the newest at Domodedovo.

On August 10, newly delivered Mi-6s begin operations in Turkmenistan. A Tu-104A is destroyed as the result of a heavy landing at Tashkent on September 17; no injuries or fatalities are reported.

An airline pilot foils three Armenian hijackers over Armenia on October 15, killing one and capturing the other two; after a trial, the two surviving would-be pirates will be executed in June 1962.

A Tu-104B strikes an antenna while on initial approach to Vladivostok on November 2; an engine fails, causing the pilot to carry out an emergency landing in a field. No deaths are reported.

An-10 Kiev to Minsk flights begin in November followed by frequencies in early December from Novosibirsk to Sochi.

Rates are cut by 15% on some routes as of December 1. On December 25, ten days after departing Moscow, a specially equipped Il-18 and an An-12 becomes the first airliners to land in Antarctica, arriving at the Soviet research station Mirnyy, via Tashkent, New Delhi, Rangoon, Jakarta, Darwin, Sydney, Christchurch, and McMurdo (the U.S. Antarctic station).

Having appealed for assistance in reintegration of the breakaway province of Katanga first to the UN, President Patrice Lumumba of the Democratic Republic of the Congo now turns to the Soviet Union. Moscow dispatches 10-15 Ilyushin Il-14s, with their Aeroflot titles painted over in favor of hastily applied Congolese markings.

These join five DC-3s requisitioned from **Air Congo** in transporting 1,000 Congolese National Army troops on December 31 to Luluabourg, capital of Kasai province, from where they are trucked toward Katanga, where their drive is halted by rebel forces.

The Congolese civil war will intensify during the remainder of the year and into 1962, particularly after the death of Lumumba.

On January 11, **1962** a Moscow-Adler proving flight is made by the new Tupolev Tu-124. An An-10A with 13 passengers fails its takeoff from Batataevka, Ukraine, on January 27; there are no survivors. On January 31, a Tu-104A initiates service from Moscow to Jakarta, via Tashkent, New Delhi, and Rangoon.

A Tu-114 proving flight is made Moscow-Vladavostok on February 2. The same day, after a 32,800-mile roundtrip, the Antarctica-flown Il-18D and An-12 return to Moscow. The last new Il-14 service is introduced by a stretched Il-14M (M = Modifikatsiya) over a route from Syktyvkar to Sverdlovsk on February 28. Moscow-East Berlin flights by Tu-104As begin on April 4. Later in the month, the first production Antonov An-24 is delivered to the Ukrainian Directorate base at Kiev.

Il-18 Moscow-Astrakhan flights begin on May 3. Il-18s begin flying from Moscow to Leninabad and Semipalatinsk on May 15, followed by introduction of a service from Krasnoyarsk to Adler/Sochi on June 2. When an engine fails, a Tu-104B with five crew crashes into a mountain near Sofia, Bulgaria, on June 4; there are no survivors.

On June 11, Mi-4 helicopters begin a scheduled service between Lvov and Truskavets. An An-10A is lost under unknown circumstances near Sochi, Russia, on June 27.

Two days before the end of the month, multistop Moscow-Khartoum Il-18 frequencies are opened. After the crew loses control, a Tu-104A with 84 passengers crashes near Krasnoyarsk on June 30; there are no survivors.

An Il-14M with 14 passengers crashes near Tashkent on July 7; there are no survivors.

On July 22, a Tu-114 returns to Moscow after a flight to Havana, via Guinea, in preparation for regular Moscow-Havana service. Six days later, a Moscow to Paris flight is delayed as Italian Dr. Meloni is returned to Moscow following his refusal to surrender photographs taken aboard his airliner.

An An-24 fails its takeoff from Ternopol, Ukraine, on July 29; there is no information on casualties.

All-cargo An-24 Kiev-Nikolayev-Kherson flights also begin in July followed by a passenger proving flight from Kiev to Krasnodar in September.

Suffering severe post-takeoff vibration, a Tu-104A with 86 passengers crashes near Khabarovsk on September 2; there are no survivors. On September 5, Moscow-Kemerovo Il-18 service begins, followed by Moscow-Accra, via Belgrade, Rabat, and Conakry Il-18 flights on September 11.

The first scheduled flight by a turbofan-powered airliner is made on October 2 by a Tu-124 over the route Moscow-Tallin (Estonia).

While on a maintenance test flight from Moscow's Sheremetyevo Airport on October 25, a Tu-104B with ten crew crashes; there are no survivors.

An-24s begin regularly scheduled service on October 31 with a flight from Kiev to Kherson. In November-December, three new Tu-104 domestic routes are opened: Ul'yanovsk (November 10); Gorky (December 1); and Vilnyus (December 25).

On January 1, **1963**, three additional internal routes are started by Tu-124s: Moscow-Mineralnyye Vody, Moscow-Stavropol, and Rostov-Simferopol. Regularly scheduled weekly Tu-114 flights commence on January 7 from Moscow to Havana, via Murmansk. A reduction in capacity will be required on the new over-water service until an intermediate stop in Africa can be set up. On January 18, Moscow-Chelyabinsk Il-18 service is initiated.

Aeroflot inaugurates its first long-haul, over-water service on February 7-8 as a Tu-114 flies 5,328 miles Moscow-Havana, via Murmansk.

An An-10 is lost at Syktyvkar, Russia, on February 8; ten people are reported killed. Three new Il-18 services are introduced in February, two in April, and three in May: Yerevan to Tashkent (February 6); Moscow to Arkhangelsk (February 25); Leningrad to Arkhangelsk and Murmansk (February 27); Chelyabinsk to Adler/Sochi (April 2); Riga to Gorky and Sverdlovsk (April 5); Riga to Novosibirsk (May 14); Moscow to Ulan Bator (May 20); and Moscow to Damascus (May 23).

New Delhi from Moscow Tu-114 frequencies begin on March 25, replacing those previously offered by Tu-104s and Il-18s. An An-12 is lost during takeoff from Magadan on April 2, while an Il-18 is lost at Kazan two days later; casualty reports are not provided for either loss.

A Tu-104B stalls while on approach to Leningrad on May 18 and crashes; there is no information on deaths or injuries. Moscow-Stockholm Tu-104 flights begin during late spring. On June 27, Moscow to Conakry (Guinea) Tu-114 service is inaugurated and then stretched across the Atlantic to Havana.

Having arrived from Moscow on July 13 en route to Peking, a Tu-104B with 32 passengers crashes short of the runway while on final approach to an intermediate stop at Irkutsk; there are no survivors. A Tu-104 crashes near Irkutsk on July 15 while en route from Peking to Albania (7 dead).

Il-18s initiate new Moscow-Bamako flights on August 12 followed by Moscow to Gudauta service on August 15. On August 16, Moscow-Kazan Tu-124 service is inaugurated.

When its undercarriage fails to retract following takeoff from Tallin on August 21, a Tu-104B with 7 crew and 45 passengers must, because of fog, divert to Leningrad. As the jetliner approaches, an engine quits 13 mi. out from the airport; the second fails shortly thereafter. The pilot consequently ditches the Tupolev in the 300 m.-wide River Neva. Everyone remains aboard as the floating aircraft is towed ashore and no injuries are reported.

In September, the An-24 begins operations on a Moscow-Voronezh/Saratov route. The carrier, on October 7, signs a reciprocal service agreement with **Pakistan International Airlines Corporation (PIA)**, which becomes the first foreign line to be given landing rights in Moscow and permission to continue its flights through the U.S.S.R. to other countries. Tu-124s open two new foreign services on November 2, to Helsinki and Stockholm. A Moscow-Karachi preservice flight is made on November 20.

On December 1, nonstop Moscow-Chelyabinsk Tu-104 service is inaugurated; the same day An-24s are placed on the Moscow-Saratov run and Il-18s begin flying from Moscow to Gorky and Murmansk. Moscow-Karachi flights begin on December 5. On December 7, Il-18 service is launched from Moscow to Tselinograd. An An-10 is lost under unknown circumstances at Kirensk, Russia, the same day.

The Mil Mi-8 transport helicopter enters commercial service during the year.

On January 21, **1964**, Kuybyshev-Krasnodar Tu-124 flights begin. Moscow-Cheboksary An-24 service starts on February 5 followed by Moscow-Belgrade-Algiers Il-18 service on February 21. On March 14, Il-18s undertake their first flights from Moscow to Colombo (Ceylon), via Tashkent and Karachi. Moscow-Warsaw Tu-124 service is launched on April 1. Tunis is served from Moscow beginning on May 8. Tu-104s begin flying to Kutaisi from Moscow on May 15, the same day five new Il-18 routes are opened: Moscow-Yuzhno-Sakhalinsk; Leningrad-Yuzhno-Sakhalinsk; Moscow-Blagovesh-Chensk; Moscow-Gudauta; and Moscow-Zaporozhye.

A Tu-104B overshoots the runway on its second attempt to land in heavy rain at Novosibirsk on June 9; there is no information on casualties.

Three new An-24 frequencies are inaugurated from Moscow on June 10: to Gudauta, to Kursk, and to Tula. Five days later, a new Moscow to Vladivostok, via Petropavlovsk and Kamchatskiy, Tu-104 service is initiated. Il-18 Moscow-Sukhumi flights commence on July 1 followed by turboprop services from Moscow to Damascus and Baghdad (July 16) and from Moscow to Nicosia (July 21).

An Il-18 is destroyed as the result of a bad landing at Magadan on August 3; there is no information on possible casualties. On August 24, Moscow to Makhachkala An-24 frequencies are opened.

During the summer, Antonov An-2s offer daily flights from Moscow to Bryansk, Kasimov, Novomoskovsk, and Tula and twice daily to Vladimir.

An Il-18B is lost near Yuzhno-Sakhalinsk on September 2; no further details are available.

An-24 services are also launched from Krasnoyarsk to Kyzyl (September 6) and Moscow to Grozny, via Voronezh, Volgograd, and Elista (October 28). An Il-18B with 4 crew and 29 passengers crashes into Mt. Avala, Yugoslavia, on October 19; there are no survivors.

On November 1, Moscow-Tehran service is inaugurated. Tu-104B flights from Moscow to Ulyanovsk, via Sukhumi and Moscow, are started on November 15, the same day Tu-124 frequencies are begun from Moscow to Adler/Sochi and Moscow to Minsk and Il-18 service is introduced to Volgograd from Moscow. On November 16, Il-18 Tashkent-Nukus flights begin while Moscow-Nukus service begins on December 1.

The STOL-capable An-14A enters domestic service during 1965. On January 7, Frankfurt to Moscow reciprocal service is agreed upon, but its initiation is delayed when the U.S. exercises its prerogative against it under terms of the 1956 treaty on West German sovereignty. A Tu-114 bound for Havana with 66 aboard makes an emergency landing at New York (JFK) on January 15 after running low on fuel. The plane is refueled and resumes its journey after the U.S. State Department provides clearances and three USAF officers go aboard to act as navigational aides. The three Americans are feted in Havana by the Swiss ambassador before returning to the U.S. on January 17.

In February, Moscow-Belgrade Tu-124 flights commence. On February 16, Il-18 Moscow-Perm frequencies are started followed by frequencies from Frunze to Krasnoyarsk on March 1. Meanwhile, on February 22, the first Antonov An-22 cargo aircraft, powered by 12 turboprop engines, makes its maiden flight. The next day, February 23, a reciprocal service agreement is signed with **Alitalia, S.p.A.**; Rome to Moscow flights begin two days later.

A Tu-104 with 25 passengers fails its takeoff from Kuybyshev on March 8 and crashes; there are no survivors. Brazzaville becomes an announced destination on March 17. An An-24 crashes on final approach to Hanty-Manssyensk, Russia, on March 20; there is no information on casualties.

On April 15, the Ukraine Directorate inaugurates the first Tu-104D service over a route from Moscow to Odessa. Moscow-Rome, via Zagreb, flights begin on April 20. The last Il-12 passenger route, Zaporozhye-Moscow, via Kharkov and Simferopol, route is closed in May.

Moscow-Donetsk service begins on May 15. On May 21, Moscow-Petrozavodsk Tu-124 frequencies are opened. Two new Ilyushin turboprop routes are started in June: Arkhangelsk-Kiev-Odessa (June 1) and Moscow-Beirut (June 28). During the summer, Tu-104Ds begin flying from Odessa from Leningrad while Tu-104Bs launch Kiev to Prague flights. The Konakry Tu-114 route is stretched down to Accra on August 19.

A Chita to Moscow Tu-104 frequency is opened on October 12. On October 27, the Berlin, or "Six-Pool," Agreement is signed by Poland, Czechoslovakia, Rumania, Hungary, Bulgaria, East Germany pledging mutual support and dependence upon Soviet equipment.

A Tu-104B with 34 passengers is lost at Murmansk on November 11; there are no survivors.

Late in the year, a 13-month old experimental Mi-4 airmail service between the main post office in central Moscow and the outlying airports is discontinued. Enplanements of 36 million are reported for the year.

An-12 freighter operations commence in February 1966. The first Il-62 proving flight, Moscow to Khabarovsk, is made on February 2. While taking off from Moscow's Sheremetyevo Airport on February 17 on Aeroflot's inaugural flight to Brazzaville in the Congo, an Il-114B with 13 crew and 8 passengers, collides with a snowbank and catches fire; there are no survivors.

Tu-104 Leningrad-London direct flights commence on April 7.

Moscow-Tokyo Tu-114 proving flight is made on August 11. Later in the month, three men attempt to hijack a domestic service, wounding a passenger in the process, before being overwhelmed by the flight crew. The aircraft makes a safe emergency landing at Batumi, Georgia.

An Il-18 fails its takeoff from Archangelsk on August 27; there are no details announced on casualties.

The first of five Yakovlev Yak-40 trijets makes its maiden flight on October 21 and, on November 4, Tu-114s inaugurate an 11½-hr. 4,568-mile Moscow-Montreal service, via Murmansk. The flights to Canada are made under a reciprocal agreement with **Air Canada, Ltd.** During fall-winter, Moscow-Tashkent Tu-114 flight service is launched.

An Il-18 fails its takeoff from Alma Ata on November 22; there is no information on casualties. An An-24 crashes on December 30 while going around after a missed landing at Liepaya, Latvia; there is no information on casualties.

Passenger boardings for the year rise to 48 million.

Company airliners, as of January 5, 1967, alter the Moscow-New Delhi route so as to avoid flying over the People's Republic of China. An An-12 fails its takeoff from Novosibirsk on January 14 and crashes; there are no details on casualties.

On January 20, the governments of the Soviet Union and Japan sign an agreement under which **Japan Air Lines Company, Ltd. (2)** will be allowed to fly to various European destinations via Moscow. The deal requires the use of Soviet aircraft and cockpit crews.

Seven days later, the airline receives permission to fly over Scandinavia, in return for Moscow's allowing **SAS (Scandinavian Airlines System)** to fly over Siberia.

On March 1, Il-62 Moscow to Khabarovsk all-cargo service is launched. An An-12 crashes on takeoff from Salekhard, Russia, on March 3; no other information is available. Moscow to Novosibirsk and Khabarovsk Il-62 passenger flights begin on March 10.

An Il-18B is lost under unknown circumstances at Domodedovo Airport at Moscow on April 6.

In cooperation with **Japan Air Lines Company, Ltd. (2)**, a joint, 4,563-mile "Great Circle" route Moscow-Tokyo, via Siberia, Tu-114 return service is inaugurated on April 17. Aeroflot flight crew pilot the aircraft while JAL cabin crew service passengers. The Tupolevs employed wear JAL's tsuru (crane) logo and name on their lower forward fuselages.

An An-12 is lost at Blagoveschensk on June 4 under unknown circumstances. Twice-weekly Moscow-Montreal flights are undertaken in June and July for Expo '67 tourists.

A Moscow-Montreal Il-62 proving flight is undertaken on July 11 and is followed by nonstop Moscow-Tashkent Il-62 frequencies on July 14. On July 31, Moscow-Zurich Tu-104A service is inaugurated, via Warsaw.

Regularly-scheduled Moscow-Stockholm flights begin on September 12 with the new Tu-134. Two days later, Moscow-Vienna, via Kiev, Tu-134 frequencies are opened. On September 15, the new Il-62 enters regularly scheduled, long-haul service on a 9-hrs. 50-min., 6,000-mile transatlantic run to Montreal via Shannon and Gander. The flight cuts an hour and a half off normally scheduled time. Next day, Tu-134s begin flying to Warsaw from Moscow. The first Yak-40 enters service on September 30.

On October 2, direct Moscow-Warsaw Tu-134 service is inaugurated. Il-62s begin flying to Rome (October 9) and Paris (October 14) and replace Tu-104s and Il-18s on New Delhi flights as of October 17.

An Il-18B hits a mountain and crashes near Sverdlovsk on November 16 (130 dead) and December 18 is launch day for direct Moscow-Zurich Tu-134 flights. An An-24B crashes 350-m. short of the runway while landing at Voronezh on December 31; there is no information on casualties.

During the year, Mi-2 helicopters are received for passenger, agricultural, and air ambulance flights. Enplanements of 55 million for the year are claimed.

The Aeroflot Service Department is established during the year and is made responsible for training flight attendants and others involved in passenger services. The quality of its graduates will become the stuff of legend over the next 30 years.

The first sustained service from Moscow to East African destinations are undertaken on January 1, 1968 as weekly Il-62 Moscow-Mogadishu/Dar es Salaam flights begin.

An An-24B is lost at Olyomkinsk, Russia, on January 6, followed by an Il-18B on final approach to Karaganda, Kazakhstan, on January 9; there is no further information on either accident.

Weekly service is inaugurated from Moscow to the UAR and Yemen on January 15. An An-12 crash-lands at Magansk, Russia, on January 29.

Two more planes are lost within a week in February. An An-24 with two crew hits a building while landing at Baghdad and crashes on February 19. On February 24, an Il-18 fails its takeoff from Donetsk. Just five days later, another Il-18D goes down, 160 km. from Bratsk, while, on March 7, a Tu-104 crashes on takeoff from Volgograd (one dead).

Leningrad to Amsterdam, via Stockholm, Tu-104A service is launched on April 3; the next day, Tu-104Bs begin flying from Leningrad to London, via Copenhagen.

An Il-18 is lost on a training flight from Domodedovo Airport at Moscow on April 22.

In cooperation with **Air France**, regularly scheduled and reciprocal Leningrad-Paris flights begin on May 15. Moscow-Ankara flights begin on May 20. A large number of frequencies are added from Leningrad to Prague in June.

A Moscow-Cairo-Aden route is opened on July 4. Regularly scheduled Il-62 Moscow-New York, via Shannon/Gander, service is inaugurated on July 15.

An An-12 is lost at Mirny on August 8; no other details are available.

Also during August, the carrier covertly fly KGB agents into Prague to make preparations for the Warsaw Pact occupation of Czechoslovakia on August 21, ending the reform program of that nation's government.

On September 30, the short-haul Yak-40 joins the fleet.

An An-24 is lost at Mery, Uzbekistan, on October 6. Il-62 service to Alma Ata is started on October 17. An Il-18 is lost near Krasnoyarsk on October 20. Dakar becomes a destination from Moscow on October 31.

An An-12 crashes while on approach to Lensk, Russia, on November 2. On November 21, direct Moscow-Bratislava service is begun. The Tu-144 SST makes its maiden flight on December 31, two months ahead of the Anglo-French Concorde.

A total of 62-million passengers are carried to 47 countries during the year.

Antonov An-26s join the fleet beginning in **1969**. An An-24V fails its takeoff from Alma Ata on March 24; there is no information on casualties.

Moscow-Oslo flights begin on April 1, followed next day by the inauguration of services to Entebbe, via Cairo.

A Tu-104B is destroyed as the result of a bad landing at Irkutsk on April 28. A Moscow-Tashkent-New Delhi-Singapore route is opened on May 24.

On June 1, Il-62s succeed Tu-114s on the joint service with **Japan Air Lines Company, Ltd. (2)**. Two days later, on Flight 3794—an Il-14 en route from Leningrad to Tallin—there is an attempted hijacking by two armed men and a woman. Although shots are fired toward the cockpit, the crew is able to land at their destination, at which point the bandits shoot it out with police. One pirate is killed, while the man and woman are eventually taken in hand and given prison terms of 11 years for the man and 13 for the woman.

An An-12 is destroyed as the result of a bad landing at Mirny on June 25.

An An-24 fails its takeoff from Preobazhenka, Ukraine, on August 3; there are no other details on this accident. An An-12 crashes 13 km. from Novosibirsk on August 12; again, there is no crash information.

En route from the Black Sea resort area to Moscow on August 26, an Il-18D with 112 aboard crashes and burns at Vnukovo Airport, Moscow (16 dead).

An Il-18 is destroyed as the result of a bad landing at Yakutsk, Russia, on September 10; there is no other information. Two days later, an An-10 is destroyed in a bad landing at Mirny, while on September 13, an An-24V crashes while on final approach to Nizhnevartovsk, Russia.

On November 1, Aeroflot inaugurates its premier service into Central Africa, Moscow to Bangui. An An-12 is lost in an accident 15 km. from Anderma, Russia, on November 13. An An-12 crashes 13 km. from Khantanga on December 6.

Boris P. Bugaev becomes Minister of U.S.S.R. Civil Aviation and director general in **1970**.

An An-24 with 34 passengers crashes into a hill 40 km. from Batagai, Russia, on January 28; there are no survivors. The next day, a Tu-104 with 11 passengers crashes while on approach to the airport at Murmansk; again, there are no survivors.

An Il-18 with 92 passengers strikes a mountain 32 km. from Samarkand, Uzbekistan, on February 6; there are no survivors. An An-12V is destroyed when it lands short of the runway at Beryzovo on February 26; there are no fatalities.

In cooperation with **Japan Air Lines Company, Ltd. (2)**, 14 hr. 40 min. Paris-Moscow-Tokyo "Great Circle" flights begin on March 29. The service is the first Aeroflot-JAL pooled service to be operated employing the Japanese line's aircraft (DC-8-62s) and flight crews, with Aeroflot cabin crew, as well as Il-62s with Japanese cabin crews.

Istanbul and Amman are served from Moscow for the first time beginning on April 1. Also on April 1, an An-24V with 45 passengers crashes at Novosibirsk after colliding with a weather balloon.

A Moscow-Cairo-Aden-Nairobi route is opened next day. Tu-104 flights begin to Geneva from Moscow, via Warsaw, on April 3; simultaneously, multistop flights result in the initiation of Moscow-Kuala Lumpur service.

While on a training flight from Chisinau, Moldova, on May 15, an An-10 with 11 passengers loses control and crashes; there are no survivors.

Following the same arrangement as that instituted on March 29, twice-weekly London-Moscow-Tokyo service is inaugurated on June 2.

An Il-18 fails its takeoff from Samarkand, Uzbekistan, on June 5 and crashes; there is no information regarding casualties.

Having departed Reykjavik on July 18 for a flight from Moscow to Peru with relief supplies on July 18, an An-22 with 8 crew and 15 passengers disappears over the North Atlantic between Keflavik and Halifax, N.S. Nothing more of its fate is known.

Moscow to Tripoli direct flights begin on July 31.

An An-10A suffers an in-flight fire and crash-lands at Chisinau, Moldova, on August 8 (one dead). An Il-18 is destroyed as the result of a bad landing at Yuzkno-Sakhalinsk on August 23; there is no information on casualties.

Control is lost of a Tu-124 with 37 passengers and it crashes near Dnepropetrovsk, Ukraine, on September 2; there are no survivors. The next day, a Yakovlev Yak-40 with 22 passengers makes a forced landing 70 km. from Leningrad; this time, there are no fatalities.

In the fall, the improved Tu-134A is delivered. An An-12B fails its takeoff from Kammeniy Cape, Russia, on October 1 and crashes (8 dead).

Service is started to Vientiane from Moscow, via Bombay, also on October 1, followed by Moscow to Hanoi flights on October 15, via Tashkent, either Karachi or New Delhi, and Calcutta.

On October 15, armed with rifles and grenades, Proinas Branzikas and his 14-year-old son, both Soviet Lithuanians, hijack an An-24V with 51 passengers on a domestic flight from Batumi to Sochi. They force it to land at Trebizond, Turkey, after killing stewardess N. Kurchenko and seriously wounding the pilot and copilot. Both pirates seek political asylum, which is denied, and both spend two years in prison before being granted entrance visas to the U.S.

An Il-18B is destroyed by a bad landing at Simferopol, Ukraine, on October 16; there is no information on possible casualties.

Following the first successful skyjacking of a Soviet passenger airliner to a foreign country, Turkey allows all but four persons (the pilots and hijackers) to return to Russia aboard a second specially dispatched Aeroflot aircraft on October 17. A fresh flight crew returns the stolen plane undamaged.

Soviet students N. Ginlov and V. Pozdeyev hijack a Let-200 Morave with 4 aboard and en route from Kerch to Krasnodar. After blindfolding and trussing the pilot, the two manage to land the craft in Sinop, Turkey, on October 27. The pirates of the second successful Aeroflot aerial abduction within two weeks seek political asylum.

En route from Vilnius to Palanga on November 13, an Il-14 is subjected to a takeover attempt by a drunken married couple, who are quickly overpowered by the plane's other passengers. The two are tried

and given harsh sentences; the husband is sentenced to death and his wife to three years. As a result of world media and political pressure, the death sentence will be commuted to 15 years in the Gulag.

On November 21 a Turkish court rules that the two Soviet students held at Sinop have committed a political offense and not a crime and rules that they may not be extradited back to the U.S.S.R. This judgement will be ignored and the two will be returned; tried, they will receive prison terms of 10 and 12 years, respectively.

On December 11, ten new routes are opened to the central Asian republic of Kazakhstan. With its engines on fire, an An-22 freighter with 17 crew attempts to make an emergency landing at Panargh, Pakistan, on December 19, but crashes; there are no survivors.

An Il-18 with 3 crew and 90 passengers crashes on takeoff from Leningrad on December 31; again, there are no survivors. A total of 75-million passengers are carried during the year, three times more than **United Air Lines**, the world's second largest carrier.

Enplanements total 77.9 million in 1971. Service is believed to be maintained to some 3,500 communities within the U.S.S.R. plus major overseas cities on a route network of at last 350,000 unduplicated miles.

En route from Leningrad to Erivan on January 8, an Il-18 crashes during its takeoff from Smolny Airport (90 dead). An An-12B crashes while on final approach to Surgut, Russia, on January 22 (13 dead).

An An-24B is lost during a training flight from Moscow on March 31; there is no information on casualties. On the same day, an An-10 with 64 passengers, crashes while on approach to the airport at Boroshilovgrad, Ukraine; this time there are no survivors.

A Tu-134 overshoots the runway while landing at Moscow on April 10; there is no information on any casualties.

Also in April, and continuing through November, a joint venture route is opened with **KLM (Royal Dutch Airlines, N.V.)** from Moscow to Amsterdam, via Zurich. The weekly service is flown by four Soviet Il-62Ms wearing small KLM titles below the main Aeroflot titles on their fuselages in much the same fashion as the joint markings shared with **Japan Air Lines Company, Ltd. (2)**.

An An-12B is destroyed as the result of a bad landing at Batagai, Russia, on May 25; there is no information on any casualties.

A new joint return cargo service is opened with **Japan Air Lines Company, Ltd. (2)** on May 28 between Khabarovsk and Tokyo. The Soviet carrier initially flies its Tu-134s from the Russian Far Eastern provincial capital to Tokyo while JAL operates Boeing 727-46Fs from Japan to Russia. Again, the aircraft involved wear joint markings.

An An-24B crashes at Ulan Ude, Russia, on June 1; there is no information on any casualties. Passengers are able to fly the Japan route after June 2.

A Tu-104B with 97 aboard crashes at Irkutsk on July 25; there are no survivors. A Yak-40 is destroyed at Moskva-Bykova on July 28; there is no information on casualties. Next day, a chartered An-12V with seven crew is destroyed when it overshoots the runway at Calcutta during a rainstorm; there are, however, no fatalities.

On August 11, a Tu-104 fails its takeoff from Irkutsk Airport on a domestic flight and crashes (97 dead).

A Tu-104B with 2 crew and 18 passengers fails its takeoff from Moscow on October 10 and crashes; there are no survivors. Two days later, an An-10 is destroyed as the result of a bad landing at Chisinau, Moldova.

On November 2, Moscow-Bangkok service is launched.

The middle week of November is operationally disastrous. On November 11, an An-24V with 47 passengers crashes while attempting to go around at Vinnistira, Ukraine; there are no survivors. Two days later, another An-24 strikes a cable while on approach to Kerch, Ukraine, and crashes (5 dead). On November 15, an An-24RV with 4 crew and 18 passengers, crashes while on approach to Bucharest; this time there are no fatalities.

An An-24 with 57 passengers crashes while on approach to Saratov on December 1; there are no survivors. The first Let L-410s begin joining the fleet late in the year as partial replacement for aging An-2 "Annuchiks."

Flights to Frankfurt, from Moscow via East Berlin, begin on February 4, 1972. On February 9, the new Tu-154 enters service on a Moscow-Minrealnye Vady route.

An An-12B overruns the runway while landing at Vorkuta on February 16. An An-24 crashes on approach to Lipetsk on February 22; there is no information concerning casualties. Another An-24 crashes on approach to Mineralnye Vodny on February 27; again, there is no additional information.

During a fifth landing attempt at Omsk on March 19, a Tu-104B crashes short of the runway; there is no information regarding any casualties. Copenhagen is added as a destination on the joint "Great Circle" route service with **Japan Air Lines Company, Ltd. (2)** as of April 3.

A Yak-40 with 18 passengers crashes while on approach to Bratsk on May 4; there are no survivors.

An An-10 with 108 passengers crashes while on approach to Kharkov, Ukraine, on June 18; there are no survivors. The disaster will lead to the retirement of the An-10 type.

An Il-18D crashes in heavy fog while landing at Archangelsk on August 26; there is no information concerning possible casualties. Four days later, another Il-18D with 101 passengers suffers an in-flight fire and crashes in flames at Magnitogorsk; there are no survivors.

On September 4, 100 travelers on a Tehran-London-New York flight are stranded in Moscow by Aeroflot because of overbooking; they are denied permission by the airline to shift to other carriers, although flights depart with empty seats.

En route to Moscow on October 2, an Il-18B with 108 passengers crashes near Sochi; there are no survivors.

On October 13, in the worst Aeroflot air disaster to date and the second tragedy within two weeks, an Il-62 with 10 crew and 163 passengers, leased for an Intourist charter from Paris to Moscow, crashes in heavy rain three miles from Moscow's Sheremetyevo Airport during its third landing attempt; there are no survivors.

An An-24B crashes while on final approach to Kursk on November 4.

The same day, Il-62 service is inaugurated to Santiago de Chile, via Rabat, Havana, and Lima.

An An-12 crashes while on final approach to Vorkuta, Russia, on November 21.

Passenger boardings for the year climb 5% to 82 million while freight traffic is up by 5.2%.

An An-24B crashes 90 km. from Perm on January 21, 1973; there are no other details.

The carrier opens an office on New York's 5th Avenue on February 4.

An An-12 is destroyed as the result of a bad landing at Anderma, Russia, on February 17. On February 19, a Tu-154 with 13 crew and 87 passengers coming into Prague from Moscow, mysteriously crashes 467 m. short of the runway (66 dead). Wind shear is initially suspected as the accident cause; however, examination of the wreckage will reveal a jammed stabilizer.

On February 24, an Il-18B with 79 passengers spins out of control and crashes near Leninabad, Tajikistan; there are no survivors. Four days later, a Yak-40 with 32 passengers falls back on the runway during takeoff from Semipalatinsk, Kazakhstan, and crashes; there are no survivors.

Direct Moscow-Leipzig service is inaugurated on April 1. The same day, after numerous requests by nonsmokers, Aeroflot bans smoking on all flights of less than three hours duration.

On April 23, having attempted and failed to divert a Tu-104 with 80 passengers en route from Leningrad to Moscow to Stockholm, a hijacker determines that the pilot is, in fact, landing at another Leningrad airport. He sets off an explosive device that kills him and the plane's flight engineer. The copilot is able to safely land the aircraft, which had been rocked by the blast at an altitude of 500 ft.

A Tu-154 crashes after its spoiler activates on takeoff from Moscow on May 7; there are no fatalities. An Il-18B with 61 passengers crashes near Semipalatinsk, Kazakhstan, on May 11; there are no survivors.

En route from Moscow to Chita, RSFSR, on May 18, a would-be hijacker triggers the world's first air catastrophe resulting from a

skyjacking as a result either of a gun battle with security guards or the explosion of the pirate's bomb. At an altitude of 30,000-ft., a Tu-104A with 81 passengers is ripped apart and crashes in southern Siberia; there are no survivors and among the victims is a Major General Seroshtan.

Moscow-Zagreb flights begin on May 31 and a new Moscow-Athens frequency follows on June 2.

While on a demonstration flight at the Paris Air Show on June 3, a Tu-144 SST, piloted by Capt. Mikhail Kozlov and with five other crew, makes a low pass over Runway 6 of Le Bourget Airport and then enters a steep climb. During the climb the left canard-wing separates, strikes the wing and punctures the fuel tank. The SST crashes in flames into the village of Goussainville, killing all aboard, plus eight people on the ground.

Kiev-Marseilles Tu-154 flights commence on June 7, the same day Moscow to Milan, via Zagreb service begins. Khabarovsk-Nilgata flights begin on June 15.

A Tu-134A with 7 crew and 77 passengers, fails its takeoff from Amman on June 30 for a flight to Beirut and crashes into a house; two on the aircraft are killed as are seven people on the ground.

En route from Moscow to Hanoi, via Tashkent, on July 8, an Il-18 is subjected to a hijacking attempt by a man claiming to have a bomb and demanding that the intermediate stop be eliminated. Hiding in a lavatory, the man is tricked into believing that the plane has flown to Afghanistan for refueling. Once the plane is on the ground, he emerges only to find police waiting for him—in Tashkent. Arrested and removed, the man will be examined, found mentally deficient, and sent to a psychiatric institution.

A Tu-124 with engine problems fails its takeoff from Kuybishev, Russia, on July 9 and crashes (two dead).

On July 26, an obviously demented passenger rushes into the cockpit of an Il-24, en route from Vilnius to Palanga, and hits the pilot over the head with a heavy screwdriver, demanding to be flown to Sweden. Quickly overpowered by other crew members, he, like the man at Tashkent earlier in the month, will also end up in a mental facility.

The elevator of a Yak-40 locks just after its takeoff from Archangelsk on August 8, causing the aircraft to crash (one dead). Due to engine problems, an An-24 with 64 passengers fails its takeoff from Baku, Azerbaijan, on August 18 and crashes (56 dead).

A Tu-104B with 108 passengers fails its climb away from Sverdlovsk on September 30 and crashes; there are no survivors.

An An-12 with ten passengers strikes a hill while going around at Magadan on October 2; there are no survivors.

When the Yom Kippur War drags into a conflict of attrition after October 9, 20 company An-22s and Il-76s are dispatched from the Ukraine to Cairo with munitions and AAA missiles.

Coming in on final approach from Tbilisi on October 13, a Tu-104B with 28 passengers crashes at Domodedovo Airport, Moscow; there are no survivors.

En route from Moscow to Bryansk on November 2, Flight 19, a Yak-40 with 30 passengers is captured by four armed men, who wound the flight engineer and a passenger during the takeover. The aircraft lands at Moscow's Vnukovo Airport to pick up a \$500,000 ransom demanded by the quartet, where they are surprised by security police who storm the plane. One assailant is mortally wounded, another commits suicide, and the other two are captured.

A Tu-124 overruns the runway while landing at Kazan on November 20; there are no fatalities.

The wing of a Tu-104B with 72 passengers touches the ground during the plane's landing at Moscow's Domodedovo Airport on December 7, causing the jetliner to crash short of the runway (13 dead).

A Tu-124 with 51 passengers mysteriously falls 18,000 ft. into the ground near Vilnius on December 16; there are no survivors.

A Yak-40 is destroyed as the result of a heavy landing at Yerevan, Armenia, on December 21; there is no report on casualties. A Tu-124 with 17 passengers fails its climb away from Lvov, Ukraine, on December 23 and crashes; there is no information concerning any casualties.

Also during the month, 29 An-12s transport cargo in connection with the UN airlift to the Mideast.

All An-10s are retired by the end of the year; they are either sold or scrapped, except one preserved near Leningrad. A decree is now issued requiring that the VAU GA, Higher College of Training for Civil Aviation, become the center for flight training for all Comecon countries.

Bookings rise 7.3% to 87,986,000.

An An-24 with 24 passengers crashes while on final approach to Mukachevo, Ukraine, on January 6, 1974; there are no survivors.

Another An-24 with four crew crash-lands two km. from Rostov while on its January 25 final approach; there are no survivors.

The first nonstop flight between Moscow and Peking is made on February 4. During the same month, following a night in Moscow's Lefortovo prison, dissident author Alexander Solzhenitsyn is taken to the airport, placed into first-class seating aboard a Tu-134A, and sent to Frankfurt, where he will begin his banishment.

Flying via Shannon and Gander, Il-62 Moscow-Washington, D.C. flights commence on April 5. The same day, Frankfurt becomes a destination on the joint "Great Circle" route service operated with **Japan Air Lines Company, Ltd. (2)**.

An engine fire causes a Yak-40 to crash just after takeoff from Kazan, Russia, on April 9; there is no information concerning possible casualties. A suspected bird strike causes an Il-18D with 115 passengers to lose power on its No. 4 engine about 15 m. off the ground following takeoff from Tashkent on April 24; the aircraft crashes (1 dead).

While climbing away from Leningrad on April 27, an Il-18B with 10 crew and 108 passengers suffers an in-flight fire and crashes two miles from the end of the runway; there are no survivors.

An An-12V, which has caught fire in-flight, makes an emergency landing at Polar Station SP-22 in northern Russia on May 1 and catches fire before the landing roll is completed (one dead).

A Yak-40 crashes after an aborted takeoff from Rostov on May 2 (one dead). An Il-18 crashes while landing at Ivano, Ukraine, on May 9; there is no information concerning possible casualties.

Moscow-Hamburg, via East Berlin, service is inaugurated on May 16. A Yak-40 crashes on approach to Kiev on May 23 (29 dead).

Moscow to Ljubijana flights commence on June 20. The improved Il-62M enters service on the Havana and Washington, D.C. runs later in the year; however, service to Santiago de Chile is suspended following the overthrow of the Marxist Allende government.

While on final approach to Enisseysk, Russia, on October 18, an An-12B crashes 2 km. short of the runway (one dead).

Ndjamena from Cairo and Moscow becomes a destination in November. A Tu-104B overruns the runway while landing at Chita, Russia, on November 5; no injuries are reported.

A locked elevator causes a Yak-40 to overshoot the runway while on takeoff from Bukhara, Russia, on December 14 (seven dead).

An An-2 crashes near Sam Neua, Laos, on January 16, 1975; all 12 aboard are killed.

A Yak-40 rotates at a too-low speed and crashes upon takeoff from Zaporozhye, Ukraine, on January 28; there is no information on casualties.

An Il-18D crashes near Voronezh on March 6; there are no other details. An An-24 crashes while on final approach to Poltava, Ukraine, on April 28; there are no other details.

During the spring, a new blue and white livery is unveiled; an An-12B flying the weekly all-cargo service from Moscow to Paris is the first to display it. Moscow to Luxembourg, via East Berlin, flights commence on July 2.

While going around at Batumi, Georgia, on July 15, a Yak-40 with 41 passengers crashes into a mountain; there are no survivors.

A Yak-40 with 23 passengers crash-lands at Krasnovodsk, Turkmenistan in bad weather on August 15; there is no information concerning any possible casualties.

A Tu-104B is destroyed as the result of a heavy landing at Novosibirsk on August 30; there is no information concerning possible injuries or deaths.

Twice-monthly service is started from Murmansk to Longyearbyen, the world's most northerly public airport in Spitzbergen (Norway), on September 10.

An engine of a Yak-40, on approach to Kirov on October 6, suddenly catches fire, causing the plane to crash; there is no information on casualties.

A Yak-40 with 6 passengers crashes into a building while on final approach to Novogrod on October 22; all aboard are killed, plus five people in the building.

Moscow to Bamako, Mali, service is started on November 7.

While on descent for Sukhumi, Georgia, on November 17, an An-24 with 38 passengers strikes a hill 62 km. from the runway; there are no survivors.

An An-24 with 19 passengers strikes a hill near Kharkov on November 20; there are no survivors.

A new Tu-144 launches the world's first SST all-cargo service, Moscow-Alma Ata, on December 26.

A Tu-124 with 4 crew and 83 passengers explodes in midair just after takeoff from Moscow's Vnukovo Airport for Brest on January 3, 1976, and crashes into houses near the aerodrome; there are no survivors.

An An-24 crashes while on approach to Rshevka, Russia, on January 13; there is no information concerning casualties.

While on a scheduled January 26 domestic service, an assailant, attempting to flee the U.S.S.R. to avoid punishment for a crime spree, takes over Flight 614, an Il-62, using signal rockets as his weapons. Demanding to be flown out of the country, the plot is thwarted when the pilot, instead, lands at Moscow, where the pirate is taken in hand by police. Tried, the man receives a ten-year prison sentence.

During a training flight on January 31 an Il-18B with six crew crashes at Frunze, Krgyzstan; there are no survivors.

A Tu-104A with 24 passengers fails its takeoff from Irkutsk on February 9 and crashes; there are no survivors.

While on approach to Yerevan, Armenia, on March 5, an Il-18D with 11 crew and 109 passengers suffers pressurization failure and crashes; all aboard are killed, plus 7 other persons on the ground.

An An-24V is destroyed at Saratov, Russia, on March 10 as the result of a heavy landing and runway overrun; there is no information regarding possible casualties.

Moscow-Dakar-Bissau flights begin on April 4. Joint **Japan Air Lines Company, Ltd. (2)**-Aeroflot Moscow to Tokyo Tu-114 trans-Siberian service is inaugurated on April 17. Next day, Luanda becomes a destination from Moscow.

An An-24V with 52 passengers crashes at Chernigov, Ukraine, on May 15; there are no survivors.

A Tu-154A with 4 crew and 42 passengers strikes high ground while climbing away from Malabo, Guinea, on June 1; there are no survivors. Service to Shannon (Ireland) via Stockholm begins in May with Moscow-Larnaka flights beginning on June 18.

Giant Ilyushin Il-76T freighters begin to join the fleet during the summer. Moscow, via Zagreb, to Madrid flights are inaugurated on July 16. Overloaded by 5 tons, a Tu-104A fails its takeoff from Chita, Russia, on July 17 and crashes; there are no fatalities.

On July 27, a U.S. federal grand jury indicts the airline for offering illegal rebates to travel agents of approximately 50% on its tickets sold for Paris to Washington flights; as the tickets were not sold in America, General Manager Stanislav Gordievsky claims the indictment is invalid.

An An-24B crashes short of the runway at Guryev, Kazakhstan, on August 13; there is no information concerning any possible casualties.

Another An-24 with 52 passengers collides in midair near Sochi on September 6 with a Yak-40 with 38 passengers; both aircraft crash and there are no survivors.

An Il-18B crashes while landing in bad weather at Tashkent, Uzbekistan, on October 30; there is no information concerning any possible casualties. In October, orderly retirement of the Tu-114 begins.

With inbound traffic diverted due to severe weather, a Tu-104B with 5 crew and 67 passengers still takes off from Moscow's Sheremetyevo

Airport on November 28; the jetliner fails its climb and crashes 18 mi. from the end of the runway. There are no survivors.

A Moscow-Tunis-Casablanca route is opened on December 2.

Out of fuel, a Yak-40 crashes near Armavir, Russia, on December 7; there is no information concerning any possible casualties.

While on a December 16 training flight, a Yak-40 with five crew enters into a spin and crashes at Zaporozhye, Ukraine; there are no survivors.

An An-24B with 55 passengers crashes in fog near Kiev on December 17 (48 dead). Later in the day, a Yak-40 with 7 passengers fails its initial climb away from Ust-Kut, Russia, and crashes into a tree line; there are no survivors.

While orbiting at 1,000-ft. to burn up fuel after an engine failure and before making an emergency-landing attempt at Alma Ata on January 13, 1977, a Tu-104A with 96 passengers from Novosibirsk explodes in midair; there are no survivors.

Cargo and mail Tu-114 SST flights commence on February 2 between Moscow and Khabarovsk. Coming in from Tashkent on February 15, an Il-18B with 77 passengers aborts its landing at Mineralnyye Vody and crashes near the airport; there are no survivors.

A Yak-40 with 27 passengers crashes near Zhadanov, Russia, in fog on March 30 (8 dead).

Without explanation, service to Kinshasa from Moscow is cancelled on April 1. Service to Munich, via East Berlin, from Moscow begins on April 3, followed by flights to Dubrovnik and Sal Island beginning two days later. Later in the month, Kano is served from Moscow and Cairo.

Vasily Sosnovsky commandeers an An-24 with 23 while on a May 26 domestic flight from Riga to Daugavpils, and diverts it to Stockholm, where he seeks political asylum. The man who has completed the first successful hijacking of a Soviet airliner since 1970 will, in fact, later tried by a Swedish court and sentenced to 4½ years in prison.

On May 27, after a flight from Moscow and Frankfurt, an Il-62 with 9 crew and 61 passengers rips through a row of plantation power lines, catches fire, and crashes 1/2 mile from Havana Airport while attempting to make an emergency landing. There are two survivors aboard the aircraft, but one person is also killed on the ground.

On June 9, the Havana route is stretched westward to Mexico City. En route from Tallin to Kaliningrad on June 17, a Yak-40 is skyjacked by a single assailant, claiming to have a liquid explosive; the aircraft is diverted to Ventspils, Latvia, where the man is overpowered and arrested. Also in June, Aeroflot orders 200 new 120-seat Yakovlev Yak-42s.

At mid-year, the VAU GA, Higher College of Training for Civil Aviation, is enlarged with a new technical base. It is also tasked with training engineers, technicians, and ATC controllers.

Aleksandr Zagirnyak and Gennadi Sekuzhko, using only an unworkable grenade, hijack a Tu-134 with 72 aboard during a July 10 domestic flight from Petrozavodsk to Leningrad. They force the pilots to fly to Helsinki, where seven hostages are released with a request for a smaller plane to take the pirates to Sweden. The hijackers surrender to police the next day, after the last three of their hostages escape by simply walking off the plane. The skyjackers will be extradited back to the U.S.S.R. where they will be tried and given prison terms of eight and 15 years, respectively.

An An-24 with 7 passengers crashes at sea off Kirovograd, Ukraine, on July 8 (6 dead). A Moscow-Cairo-Aden-Antananarivo route is opened on July 12. Direct Moscow-Addis Ababa flights begin on July 20.

Moscow-Alma Ata nonstop Tu-144D SST passenger flights begin on November 1; a full load of 140 passengers is carried over the 2,190-mile route in 1 hr., 55 min. Five of the next six flights over the route will have to be cancelled. Antonov An-32s begin to join the fleet during the year, while An-72s enter service in December.

An Il-18 with 109 aboard skids off the snow-covered runway at Belgrade Airport during its takeoff for Moscow on December 3; no injuries are reported.

An An-24 with 17 passengers crashes at Tarko-Saley, Russia, on December 9; there are no survivors.

The Il-76T enters Moscow-Tokyo all-cargo service on April 5, 1978.

A Yak-40 stalls on takeoff from Aldan, Russia, on April 8 and crashes; there is no information on possible casualties.

Flying from Palanga to Tallinn on April 9, a Yak-40 is subjected to a hijack attempt by a lone assailant, who spills gasoline in the passenger cabin and threatens to set it off with his pistol unless he is flown to Sweden. The plane diverts to Pyarnu, Estonia, where the skyjacker is overpowered. Upon examination, he will be found mentally unstable and will be sent to a psychiatric facility.

While en route from Ashkhabad to Mineral'nyye Vody on May 1, a lone gunman attempts to take over an Il-18, but is shot dead by the copilot.

A Tu-154B with 134 passengers crashes at Pochinok, Russia, on May 19 (4 dead).

On May 23, a Tu-144D, attempting an emergency landing because of an in-flight fire, crashes near Ramenskoye and all SST Moscow-Alma Ata passenger operations are halted on June 1 after 51 flights. For the Soviets, there will be no more supersonic operations. En route from Moscow to Hanoi on June 16, an Il-62 overshoots the runway during its scheduled landing at Bombay; no injuries are reported. During the summer, all international passenger aircraft have the word's "Official Olympic Airline" painted above their windowlines.

A Yak-40 makes a belly landing at Tbilisi, Georgia, on October 2; there are no fatalities. Another Yak-40 with 38 passengers suffers an engine failure upon takeoff from Sverdlovsk on October 7 and crashes; there are no survivors.

An An-24V with 26 passengers crashes into the Gulf of Sivash, Ukraine, on October 23; there are no survivors.

Flying between Leningrad and Murmansk on October 31, a Tu-134 is taken over by a lone gunman, who threatens to blow it up unless he is flown to Norway. The Tupolev, instead, lands at Petrozavodsk, where the skyjacker is arrested. The man will be tried and given a six-year prison sentence.

On November 9, an armed passenger fires shots into the cockpit of an An-24 he has just entered, while it is on a scheduled flight from Krasnodar to Baku; although the flight engineer is wounded, the crew manages to lock the pirate into the baggage compartment, where he commits suicide.

Next day, another man, claiming to have an explosive device, hijacks an An-24 as it flies between Kharkov and Sukhumi and demands to be flown to Turkey. The aircraft, instead, puts down at Batumi, Georgia, where the assailant is captured. Upon conviction, the perpetrator is sentenced to prison for eight years.

Would-be hijacker E. M. Makhayev is shot and killed by Soviet guards while trying to pirate an An-24 during a domestic flight near the Turkey-Iran border on November 15.

An An-26 fails its takeoff from Cherskiy, Russia, on December 9 and crashes (five dead). An An-24 crashes while making a single-engine approach to Samarkand, Uzbekistan, on December 19 (five dead).

A total of 97.8-million passengers (95.4% domestic) are carried, 14.5% of the entire passenger air transport in the world.

Following the failure of its No. 1 engine, an Il-14 with seven passengers crashes at Moldezhnaya, Antarctica, on January 2, 1979 (three dead).

An An-24B with 13 passengers crashes near Minsk, Belorussia, on January 15; there are no survivors. Three days later, a Let L-410M with three aboard crashes near Belogrod, Russia; again, there are no survivors.

En route from Oslo to Moscow, via Stockholm, on February 27, a Tu-154 with 60 passengers is taken over by two men and two women, armed with a Molotov cocktail. The pirates are overpowered by their fellow passengers and security guards just before the jetliner lands at its Swedish intermediate stop. Turned over to local police, the quartet will be tried and sentenced to prison terms ranging from 18 to 36 months.

The world's largest airline suffers four accidents within nine days in mid-March, at least two of which are fatal. On the 17th, a Tu-104B with 90 passengers fails its climb away from Moscow's Vnukovo Airport for Odessa and crashes; there are no survivors. A Yak-40 crashes at Chardzhov, Turkmeinistan, on March 20 after entering into the wake tur-

bulence caused by a Mil Mi-6 helicopter; there is no information on casualties, if any. On March 22, a Tu-134 undershoots the runway while landing at Liepaya, Latvia (four dead); an An-26 crashes while on approach to Baykity, Russia, on March 25, with no more details on the accident.

On April 1, Leningrad-Gdansk service is started. Also on the first day of the month, Flight 546, a Yak-40 with 40 passengers and en route from Odessa to Kutaisi, via Simferopol, is hijacked just after takeoff from its intermediate stop. The two assailants demand that the jetliner fly to Turkey, but, being unarmed, the men are quickly overpowered. They will be tried and given prison terms of five and seven years, respectively. Later in April, Kinshasa becomes a Moscow-started destination.

An Il-18D crashes after an aborted takeoff from Sochi-Adler on May 10; there is no information concerning any possible casualties.

Because of a brake failure, a Tu-134A overruns the runway at Ufa after landing on May 19 and catches fire; there are no fatalities.

While practicing touch-and-goes at Tumen, Russia, on May 31, a Tu-134A crashes when its landing gear collapses; there are no serious injuries.

A Moscow-Tashkent-New Delhi-Calcutta-Rangoon-Ho Chi Minh City route is opened on June 1. An agreement is signed between the U.S.S.R. Ministry of Aviation and Aer Rianta, Ltd., the airport authority at Shannon, Ireland, in July; under terms of the arrangement, the airport will build oil tanks and store fuel oil for use by Aeroflot on its long-haul, transatlantic services.

While on approach to Leningrad on August 3, a L-410M with 14 passengers suffers an engine failure and crashes; there are no survivors.

Two Tu-134As, one with 84 passengers and the other with 94, collide in midair near Donetsk, Ukraine, on August 11 and crash; there are no survivors from either jetliner. Among the victims are players and officials of an entire soccer team.

An An-12V with 16 passengers crashes into a forest at Enniseysk, Russia, on August 23 (11 dead). The pilot of a Tu-124 with 63 passengers loses control after an inadvertent flap extension at 27,000-ft. and his aircraft crashes on August 31; there are no survivors.

An An-24 with 43 passengers crashes at Anderma, Russia, on September 3 (40 dead).

On September 24, the Il-86 begins service on the Moscow-Mineralnye Vody route. The Hanoi route is stretched to Phnom Penh on October 12.

A fire aboard the merchant ship *Olyenok* off Denmark on October 30 results in the destruction of one each crated An-2 and Il-14.

Il-62 service to Kingston (Jamaica) from Moscow, via Shannon and Havana begins on November 5. Three passengers aboard a Yak-40 are killed when the plane crashes while on approach to Volgoda on November 16.

Aeroflot aircraft covertly fly KGB agents into Kabul to help make preparations for a Russian incursion. In December, the airline provides lift for the Soviet invasion of Afghanistan. Roughly half of the carrier's domestic schedule is temporarily cancelled as the aircraft are employed to fly military troops to Kabul. Following the initiation of the Afghan invasion, the U.S. withdraws Aeroflot authority to land in New York. Retirement of the Tu-104, Tu-114, and Tu-124 fleet is completed during the year.

Enplanements are up to 101,931,000.

In support of the Russian advance into Afghanistan, Aeroflot, in early 1980, opens an air bridge roundtrip service between Tashkent and Kabul. Il-76s fly in all of the capital city's supplies, dropping flares upon their approach to ward off AAA or surface-to-air missiles. **Pan American World Airways (1)** crews that service Aeroflot airliners at New York (JFK) walk off their jobs for six hours after the arrival of Soviet ambassador Anatoly Dobrynin on January 18 to protest the Soviet invasion of Afghanistan. The walkout, ironically, has no impact on Aeroflot, but does delay several Pan Am flights.

An Aeroflot flight to Moscow is delayed over two hours at Washington, D.C. (IAD) on January 22 when Teamsters Union workers refuse to process passengers and baggage in another protest of the Afghan invasion. On January 29, Aeroflot cancels its Moscow-Washington flight for

lack of passengers. The next day, the FBI announces that an investigation has found that tampering was responsible for a loss of radar data about an Aeroflot jetliner bringing ambassador Dobrynin to New York two weeks earlier. During that time, the PATCO union had announced its objections to providing guidance to either Soviet or Iranian carriers.

Because unionized baggage handlers and other ground service personnel at New York refuse to service Aeroflot aircraft, the New York Port Authority instructs an Il-62 with 78 aboard, to divert to Washington, D.C. (IAD) on February 3; the aircraft ignores these instructions and lands at New York (JFK) anyway. The plane's passengers are detained for an hour before instructions from Secretary of State Cyrus Vance allows them to be processed.

Next day, the NYPA reports that it has an agreement with Aeroflot and the U.S. State Department under which the airline will suspend all of its New York flights until Pan Am can arrange for baggage handling and other basic services. Despite the agreement with the NYPA, an Il-62 with 145 aboard, including 122 athletes and others headed for the Lake Placid Winter Olympics, lands at JFK on February 10. NYPA director Cesar B. Pattarini orders the craft quarantined until the State Department orders its release an hour and 41 minutes later at which point it is allowed to takeoff for Washington-Dulles.

Retirement of the Il-18 fleet now begins in accordance with the directives contained in a new five-year economic plan for the state carrier. A specially equipped Il-18D, flying via a new African route of Aden and Maputo, arrives at the Soviet Antarctic research station Molodezhnaya on February 13 after a four-day flight. On February 16, the U.S. State Department reports the inking of another agreement under which the Soviet airline will avoid New York.

Three days later, the Antarctica Il-18D returns to Moscow, via Maputo, Djibouti, Cairo, and Odessa, arriving on February 23, the same day on which the NYPA gives a Soviet jetliner with 48 diplomats aboard, special permission to land in New York. Thereafter Il-18D flights to Soviet South Pole outposts will be made annually.

A Tu-154A is destroyed as the result of a bad landing at Orenburg, Russia, on March 1.

En route from Baku to Yerevan on March 20, Flight 6647, a Tu-134 with 60 passengers is taken over by a lone assailant, who demands to be flown to Turkey. The pirate is overwhelmed by his fellow passengers and, when the aircraft arrives at its destination, is turned over to local police. Given a trial, the perpetrator will be sentenced to eight years in prison.

An An-24B crashes on takeoff from Krasny, Russia, on April 14 (two dead). Another An-24B crashes on takeoff from Moscow's Bykova Airport on April 18; there is no further information on the accident.

Moscow-Douala flights begin on May 6. Suffering from an in-flight fire that has broken out just after takeoff from Moscow's Vnukovo Airport on June 2, an An-22 returns to the airport and makes a safe crash landing without gear or flaps; no injuries are reported.

An Il-18 crashes near Moscow on June 6 after suffering an engine fire; no other details are available on this accident. A Yak-40 with 29 passengers crashes in the mountains while on approach to Dushanbe, Tajikistan, on June 12; there are no survivors. The Havana service is extended southwest to Managua on June 22.

With a dedicated fuel storage facility ready at Shannon to dispense avgas, the first Aeroflot flight to use the new allocation arrives at the Irish airport on July 3.

Wind shear forces a Tu-154B-2 with 163 passengers to crash at Alma Ata, Kazakhstan, on July 7; there are no survivors. This is the second worst accident in Soviet civil aviation history to date.

The engines of a Yak-40 flameout on approach to Archangelsk on July 18 and the plane crash-lands; there are no fatalities.

A Tu-154B-2 is destroyed as the result of a heavy landing at Chita on August 8; there are no fatalities.

Automated air traffic control systems are now introduced at Rostov, Pulkovo, and Moscow, along with new passenger terminals at Moscow, Rostov, Yerevan, Frunze, and Tallinn. In connection with the Olympic

Games, the carrier makes certain that a large number of modern amenities are installed at the nation's major new international terminal, Moscow's Sheremetyevo II.

During the fall, the Yak 42 begins operations between Moscow, Krasnodar, and Nalchinsk and on September 23, an air traffic controller is dismissed at New York (JFK) for the radar data tampering incident in January. A new Five-Year Plan is introduced with emphasis on fleet modernization; additional Il-86s, Il-76s, Yak 42s, An-28s, and Let L-410s are ordered.

An An-12V with 6 passengers strikes a hill near Kabul on October 28; there are no survivors.

The Ukraine Liberation Front claims responsibility for fire bombing Aeroflot offices at Luxembourg on November 12 and, also in November, new Yak-42s join the fleet, initiating scheduled flights to Kostroma from Moscow and Helsinki from Leningrad.

On December 26, Il-86 Moscow-Tashkent service is inaugurated. Next day, two Cuban passengers attempt to flee an Aeroflot airliner during a stopover in Lisbon; one is dragged back aboard by crew members, but the other, identified as Julian Garcia Alonso, is granted a 4-day visa by Portuguese authorities as his request for asylum is analyzed. Freight traffic accelerates 6.4% and passenger boardings rise 1.8% to 103.8 million.

A Tu-134A is destroyed on landing at Sochi on January 6, 1981, due to the failure of its brakes and subsequent crash; there are no fatalities.

A Tu-104 with 73 passengers crashes 20 km. N of Leningrad on its February 7 takeoff; there are no survivors from the last recorded Tu-104 accident. Among the victims are several high-ranking Soviet Navy officers.

Iosif Mendelevich, who attempted to hijack an airliner ten years before, is freed from a Soviet labor camp on February 18 and flown to Israel.

An An-24RT crashes while on final approach to Kursk on March 8; there is no information concerning any possible casualties.

Service to Freetown, via Dakar, from Moscow begins on April 6 and is stretched to Monrovia on April 20.

A Tu-154A is destroyed as the result of a bad landing at Bratsk on June 13; there are no fatalities. Due to overheated brakes, a Tu-134A crashes while landing at Simferopol on June 28; there is no information concerning possible injuries or deaths.

With about 20 of the type on hand, most of which have been employed on internal services, Aeroflot launches the first Il-86 international flights, from Moscow to East Berlin, on July 3.

An An-24 with 32 passengers collides in midair over Zavitsinsk, Russia, on August 24, with a Soviet Air Force Tu-16; 31 people aboard the airliner die.

A Yak-40 with 33 passengers collides with an Mi-8 helicopter over Zheleznogorsk, Russia, on September 18; there are no survivors.

A Tu-154B-2 with 167 passengers crashes at Norilsk on November 16 (99 dead).

On November 19, the carrier reports that striking Canadian air traffic controllers are responsible for two Aeroflot flights making unauthorized diversions to Washington, D.C. over a southern New England route a week earlier. Jay Tuck, in his *High-Tech Espionage: How the KGB Smuggles NATO's Strategic Secrets to Moscow* (St. Martin's Press, 1987) will contend that the November 8 overflights were purposeful aerial reconnaissance missions over the Groton naval base and General Dynamics Triton submarine-building shipyards in Connecticut that were designed to appear accidental.

An An-26 lands short of the runway at Enniseysk, Russia, on December 23 (two dead).

As a result of the declaration of martial law in Poland, President Reagan terminates Aeroflot landing rights in New York and Washington, D.C. on December 30. Bookings for the year jump to 108 million.

An L-410M with 18 passengers crashes into a hill near Gelendzhik, Russia, on January 7, 1982; there are no survivors.

Suffering from fuel exhaustion, a Yak-40 with three crew makes a belly landing at Shevchenko, Kazakhstan, on January 16; there are no fatalities.

An An-12 with seven passengers crashes at Urengoy, Russia, on April 24; there are no fatalities.

Malta is the year's first new destination, reached directly from Moscow, while a Moscow-Cairo-Aden-Bujumbura route is opened on May 28.

A Yak-40 with 35 passengers overruns the runway while landing at Dnepropetrovsk, Ukraine, on May 31; there are no fatalities.

A Yak-42 with 8 crew and 124 passengers suffers a structural failure and crashes at Mozyr, Belorussia, on June 28; there are no survivors.

En route from Murmansk to Leningrad on July 3, Flight 8690, a Tu-154 with 60 aboard, is taken over by a passenger, who has sent to the cockpit a note demanding a 250,000-ruble ransom. He is taken in hand by security guards and arrested.

While on its initial climb away from Moscow's Sheremetyevo Airport on July 6, Flight 411, an Il-62M with 8 crew and 82 passengers, suffers an uncontained engine failure and crashes 10 km. W of the runway; there are no survivors.

The world's largest airline loses three airliners in one day on August 14. While taking off from Sukhumi, Georgia, an L-410M collides with a Tu-134A; both aircraft are damaged beyond repair and 11 passengers are killed on the Let. An in-flight fire causes a Yak-40 to crash at Kazan (4 dead).

A Yak-40 with 34 passengers crashes in bad weather at Zeya, Russia, on August 29 (3 dead).

An Il-62M with 11 crew and 66 passengers fails to stop after landing at Luxembourg on September 29, swerves to the right, strikes a building, and continues over a ravine (14 dead).

While flying from Novosibirsk to Odessa on November 7, an An-24 is captured by three air pirates, injuring the flight engineer and a passenger during the takeover. The aircraft is diverted to Turkey, where the perpetrators seek political asylum. Tried by a Turkish court, they are sent to prison for terms ranging in length from eight to nine years.

An An-24 makes a forced landing at Sakanskoe, Ukraine, on December 16. An An-26 with 16 passengers crashes on takeoff from Rostov on December 23; there are no survivors.

The first huge Antonov An-124-100 Condor freighter is test flown on December 26.

Enplanements for the year total 107,977,800.

Moscow-Dakar-Buenos Aires Il-62 service is started on February 1, 1983.

An L-410M with six passengers crashes into a hill at Poty, Georgia, on March 29; there are no survivors.

An An-26 overruns the runway while landing at Minsk, Belorussia, on April 14; there are no fatalities.

En route from Nalchik on April 19, a Yak-40 with 4 crew and 17 passengers becomes disoriented in clouds and crashes into a mountain at Leninakan, Armenia; there are no survivors.

The fuel storage contract between the U.S.S.R. Ministry of Aviation and the Irish airport authority Aer Rianta is renewed in May. The partners agree on a barter system that will allow authorities at Shannon to sell some of the Soviet fuel to other airlines, paying in the hard currency Moscow so badly needs.

Flight 2113, a Tu-134A en route from Moscow to Tallinn on July 12, is taken over by two men who show an alleged bomb (which is, in fact, a disguised tape recorder) and threaten to blow up the plane if they are not flown out of the country. The pilot, instead, covertly puts down at a military airfield, where soldiers kill one pirate and wound the other.

Overloaded, a Yak-40 fails takeoff from Omsukchan, Russia, on August 25 and overruns the end of the runway; there are no fatalities, although the aircraft is damaged.

A Tu-134A with 90 passengers strikes a mountain while on approach to Alma Ata on August 30; there are no survivors.

Following the Soviet destruction of **Korean Airlines/Korean Air (KAL)** Flight 007 on September 1, all Aeroflot offices in the U.S. are closed. Aeroflot also loses its landing privileges at Montreal for 60 days, beginning on September 6; certain stranded Soviet citizens in Halifax, N.S., are allowed a one-flight exception.

Travelers from around the world line up at ticket offices in Moscow on September 15 in search of new routes home as western restrictions on flights in and out of the Soviet Union go into full effect. Aeroflot begins to refuse to honor tickets issued by U.S. airlines and suggests it may extend its action to other carriers boycotting Russia.

The same day, the governors of New York and New Jersey announce that the Il-62, carrying foreign minister Andrei A. Gromyko and other Soviet delegates to the opening of the United Nations session, will be denied landing authorizations at either New York (JFK) or Newark (EWR) airports.

An L-410M overruns the runway at Kransk, Russia, on October 19; no injuries are reported.

Among the first nations to act after the downing of KAL 007, Canada announces on November 5 that it will not extend its 60-day ban on Aeroflot flights.

A group of seven Georgians (including three women) hijack Flight 6833, a Tu-134A en route from Tbilisi to Batumi on November 18, and attempt to divert it toward Turkey. A gun battle erupts in which the flight engineer, a stewardess, and two passengers are killed, together with two hijackers. A third commits suicide before the plane can be landed back at Tbilisi. The four remaining pirates, who have been captured and secured, are turned over to police; they will be tried and executed.

An An-24 with 49 passengers crashes in bad weather at Lenhukonskoye, Russia, on December 24 (44 dead).

Cargo traffic accelerates 8.4% during the year to 2.64 billion FTKs and passenger boardings jump 1.2% to 109,483,000.

On January 15, 1984, Zaire suspends landing rights for Aeroflot after a January 11 bomb explodes in Kinshasa Airport. Minister Boris P. Bugayev charges, on February 25, that the U.S. and its allies are waging a "war" against Aeroflot through sanctions and other provocations, including President Reagan's landing ban.

An An-24 crashes while landing at Izhevsk, Russia, on January 28 (four dead).

An An-12 is shot down by rebels at Cuenca Sul, Angola, on February 11.

On April 13, in an incident similar to that of November 8, 1981, a Tu-134, en route from Bucharest to Marseilles, despite radio calls from ATC, strays off its flight plan to fly in restricted airspace over the French naval base at Toulon. There, a nuclear submarine is under repair and the aircraft carrier *Foch* is receiving a secret NATO navigation system. When French diplomats complain, the Soviets write the diversion off to "bad luck" on Friday the 13th.

An L-410M is damaged beyond repair on landing at Chulman, Russia, on July 4; there are no fatalities. An An-26 overruns the runway while landing at Krasnoselkap, Russia, on July 24; there are no fatalities.

En route from Karachi to Tashkent on August 5, an An-12BP with 9 crew and 15 passengers loses all power in a hailstorm and crashes near Nawabshah, Pakistan; there are no survivors.

After landing at Omsk following a service from Krasnodar on October 11, a Tu-154B-1 with 175 passengers collides with a snowplow and explodes; all four workers on the ground are killed, along with 174 people on the jetliner.

On October 15, an Il-86 with 279 passengers en route from Tashkent to Moscow is forced to make an emergency landing in Aktyubinsk because of a structural failure in its wing.

A L-410M crashes near Kostroma, Russia, on December 4 (ten dead).

A Tu-154B-2 with 110 passengers suffers an engine fire during takeoff from Krasnoyarsk on December 23 and crashes; there are no survivors. The first two upgraded Tu-154Ms are delivered to the fleet on December 24.

A Let 410UVP makes a forced landing 76 km. from Astrakhan, Russia, on December 29; there are no fatalities.

Passenger traffic grows 2.8%, translating into 112.6-million people flown; freight climbs 3.9% to 2.75 billion FTKs. Total revenues are reported for the first time: \$617 million.

The fleet in 1985 is believed to comprise some 2,566 aircraft, including 75 Il-18s, 70 Il-62s, 100 Il-62Ms, 50 Il-76s, 75 Il-86s, 350 Tu-134s,

400 Tu-154s, 150 An-12s, 500 An-24s, 100 An-26s, 40 An-30s, 500 Yak 40s, 50 Yak 42s, and 400 L-410s, plus helicopters.

A Tu-134A with 80 aboard fails its takeoff from Minsk, Belorussia, for a service to Leningrad on February 1 and crashes; there is no information concerning any possible casualties.

A Tu-134A with 71 passengers and a Soviet Air Force An-26 with a crew of eight collide in midair over Lvov, Ukraine, on May 3; both aircraft crash and there are no survivors from either.

While en route from Karshi to Leningrad, via Ufa, a Tu-154B-2 with 9 crew and 191 passengers crashes near Uch-Kuduk, Uzbekistan, on July 10; there are no survivors. The tragedy is one of the few airline disasters reported by *Pravda* during the Soviet years.

Also in July, Vitaly Rzhnevski is named director of the VAV GA, Higher College of Training for Civil Aviation.

Piloted by Vladimir Terski and Alexander Galunenko, an An-124-100, on July 26, becomes the world's champion aerial lifter when it hauls to 35,269 ft. a payload of 377,474 pounds or 53% more than the maximum weight record then held by the USAF Lockheed C-5 Galaxy.

A Yak-40 with 4 crew and 10 passengers hits a mountain near Kutayissi, Georgia, just after takeoff on October 11; there are no survivors. A Let 410M crashes at Ust'Maya, Russia on October 14; there is no information concerning possible casualties.

Few details are immediately released by either Soviet or Chinese sources when an An-24 with 44 passengers en route from Yakutsk to Irkutsk, is hijacked to Gannan, Manchuria, by its copilot on December 19. Two days later, China reports that the plane, its crew members (minus the copilot), and all of the passengers have returned to the U.S.S.R. It will be learned, years later, that the perpetrator is tried by a Chinese court and sentenced to eight years in prison.

In terms of the number of passengers flown and fleet size, Aeroflot continues to rank first among world airlines; it is second in terms of freight hauled. The number of employees or detailed financial data has never been made known, nor have most operations and achievements. Many failures and accidents continue to be shrouded in secrecy.

Passenger boardings for the year advance 2.5% to 112,484,000 (3.5-million international) and freight is up 2.7% to 2.81 billion FTKs.

The workforce stands at 500,000 in 1986 and the first Antonov An-124-100 Condor, the world's second largest aircraft, enters service in January.

An An-26 crashes near Saransk, Russia, on February 6 (six dead).

Between February 18 and March 4, a specially equipped Ilyushin Il-76TD flies to and from the Russian scientific stations at Novolazarevskaya and Molodezhnaya in the Antarctic.

Fuel exhaustion causes an Il-14 with 6 aboard to crash 150 mi. from Mirny, Antarctica, on February 28; there are no survivors.

While on initial approach to Bugulma, Russia, on March 2, an An-24 with 4 crew and 34 passengers suffers the loss of its No. 1 engine, which causes the aircraft to crash; there are no survivors.

A Yak-40 crashes at Kazan on April 18; there is no information concerning any possible casualties.

Beginning on April 26, the day of the disaster, Aeroflot Mi-6 and Mi-8 helicopters, plus An-24s, fly inspection missions over the area affected by radiation from the nuclear accident at Chernobyl, Ukraine.

Four-times-per-week Il-62 and Il-62M New York and Washington, D.C. service to Moscow is resumed on April 27. The same day, Aeroflot Mi-8s, flown by pilots trained for fire fighting, begin precision bulk form chemical drops over the Chernobyl reactor area in an effort to halt flames and keep contaminated dirt from spreading.

Heavy-lift Mi-6s drop sand, lead, and boron on the cracked reactor. Debris, smoke, and the reactor chimney all pose hazards for the pilots; they, in turn, are assisted by ground controllers, who help them time their approach paths and instruct crews on exactly when to drop their loads. The Mi-6s are unable to hover and loads are dropped at speeds of 60 km/h; with only seconds to complete their missions, these Aeroflot missions achieve only a 50% success rate.

Still, until Soviet Air Force Mi-26s are able to take over the task in strength on May 3, the Aeroflot craft provide the initial defense. Thereafter, a process is developed that allows the civil pilots to drop their loads in support of the principal military effort. Through May 13, when the helicopter blitz is concluded, only one machine is lost when it is hit by the swinging arm of a crane and crashes, killing its entire crew. Many other crews are contaminated and all of the helicopters involved, civil and military, will be destroyed and buried. A total of 5,000 tons of chemicals are dropped on the nuclear plant during the two weeks.

A Yak-40 with five crew is lost on a test flight near Hanty, Russia, on May 17 after engine repairs; there are no survivors. A Tu-154B-2 is destroyed as the result of a bad landing at Moscow's Sheremetyevo Airport on May 21; there are no fatalities.

Engine vibration and insufficient thrust causes the pilot of a Tu-134A with 5 other crew and 53 passengers to abort takeoff from Penza on June 22; the aircraft rolls off the end of the runway (1 dead).

When baggage in the rear cargo hold ignites during a scheduled July 7 service, a Tu-134A with 8 crew and 86 passengers makes a forced landing into a forest near Syktyvkar, Russia (54 dead).

It is revealed during the summer that a Tu-134A has crashed (60 dead) because its captain has attempted to land with paper taped across his window to show his skill; the pilot is sentenced to 15 years in prison. It is not certain whether the July 7 tragedy is the subject of the report.

Following a bloody crime spree by three armed gunmen at Ufa on September 20 during which two policemen are killed, two proceed to the airport and capture a Tu-134A, which has stopped at this intermediate point during a scheduled service from Kiev to Nizhnevartovsk. Two passengers are killed during the takeover; the aircraft is quickly surrounded by police. After 12 hours of discussions, one assailant is taken in hand and one is killed by police. The third gunman, who had not participated in the hijack attempt, is also jailed. Although the fate of the two skyjackers is not known, Soviet justice in such cases has previously been severe.

A new New York office is opened in early October. Coming in from a service from Yekaterinburg on October 20, a Tu-134A with 7 crew and 87 passengers makes a very hard landing at Kuybyshev and bounces, leaving the runway and breaking up before catching fire (70 dead).

A Yak-40 crashes while on final approach to Moscow on December 7; there is no information concerning any possible casualties.

While on final approach in fog to Berlin's Schoenefeld Airport after a flight from Minsk on December 12, a Tu-134A with 9 crew and 73 passengers crashes in woods near the aerodrome (70 dead). Among the victims are members of a school group.

An L-410UVP crashes at Chernenko, Russia, on December 31; there is no information concerning any possible casualties.

Customer bookings rise 3.1% to 115,727,000 and cargo is level with the previous year.

Caught in the wake vortex of the Il-76 taking off ahead of it on January 6, 1987, a Yak-40 with 4 crew and 5 passengers banks sharply to the left just after takeoff from Tashkent, strikes the ground, and breaks up, catching fire; there are no survivors.

Another Yak-40 fails its takeoff from Leningrad on January 25; there is no information concerning any possible casualties.

An An-26 fails its initial climb away from Khost, Afghanistan, on February 9 and crashes; all 36 aboard are killed.

While on descent toward Alma Ata, Kazakhstan, on March 6, an An-26 freighter with 9 crew, strikes a mountain 56 km. from its destination; there are no survivors.

En route from Moscow to Havana on March 19, an Il-62 skids off the runway as it lands at Gander, Newfoundland; no injuries are reported. The very same day, two Il-86s encounter dense fog while landing at the same point; both touch down, depart, and touch down again and, although no one aboard either plane is hurt, both sustain sufficient damage to ground them.

In April, Il-86s are introduced on the thrice-weekly Moscow to Singapore, via Delhi/Bombay, route.

Wearing Aeroflot livery, an Antonov An-124-100, the world's largest civilian transport, makes a closed-circuit, 12,524-mile, 25 hr., 30 min. record-breaking circumnavigation of the country May 6-7.

An An-26 crashes at Khandyga, Russia, on May 23; there is no information concerning any possible casualties.

An. N. Volkov succeeds Boris P. Bugaev as director general during the spring.

A Yak-40 with 5 crew and 24 passengers overruns the runway while landing at Berdiansk, Ukraine, in heavy rain on June 19. The aircraft strikes obstacles and catches fire (8 dead).

Moscow, via East Berlin and London, to Manchester service begins on July 26.

En route from Minsk to Rostov on September 13, a Tu-134 is subjected to a hijack attempt by a lone assailant. When the aircraft lands at its destination, which the pirate believes is somewhere else, he is taken in hand by security police. Upon examination, he will be found mentally unstable and will be sent to a psychiatric facility.

A Let 410MU crashes upon takeoff from Yakutsk-Magan, Russia, on September 24; there is no information concerning any possible casualties.

During the early fall, the relationship between the U.S.S.R. Ministry of Aviation and the Irish airport authority Aer Rianta is deepened when the Soviets contract to have Aeroflot aircraft repainted and refurbished at a special facility the Irish agree to construct.

A Let 410UVP is damaged beyond repair as the result of a bad landing at Saratov on October 18.

Enplanements climb 2.2% to 118,305,000 (114.75-million passengers are booked on domestic flights) and freight zooms upward by 6.7% to 2.82 billion FTKs.

In the final year before the national political storm, the airline of the Soviet Union cuts its workforce by 20% in 1988, to 400,000. During January, an effort is sought to gain permission to fly from Moscow to São Paulo, via Paris.

Against regulations, the copilot of a Tu-154B-1 with 5 other crew and 137 passengers is given the opportunity to land this flight at Krasnovodsk on January 18; the aircraft lands heavily and breaks up (11 dead).

While on initial climb away from Nizhnevartovsk on January 24, a chartered Yak-40 with 4 crew and 27 passengers loses power, stalls, collides with several obstacles, and breaks up (27 dead).

A Tu-134 with 51 aboard crashes on landing at Surgut on February 27; there are no survivors.

At Irkutsk on March 8, a woman and seven of her ten sons board Flight 3739, a Tu-154B-2 that is scheduled to fly, via Kugan, to Leningrad with 77 other passengers. They remove weapons hidden in their musical instrument cases and demand to be flown to London. Soviet troops storm the plane and five pirates die in the shoot-out, along with three passengers and a flight attendant. A total of 35 others are wounded. The surviving participants in this "family hijacking" will be sentenced to long prison terms.

A passenger aboard Flight 38422, a Tu-134 en route from Frunze to Moscow on March 30, sends a note to the cockpit demanding that the aircraft be diverted to Istanbul. When confronted, the man claims the note is a "joke," but security police, who arrest the prankster when the aircraft arrives at its destination, does not view the incident that way.

While on descent to Bagdadin in bad weather from an April 19 flight from Muyu, a Let 410UVP with 2 crew and 15 passengers crashes into a hill near its destination; there are no survivors.

Direct Moscow-New York flights commence on May 14. In June, the Irish paint hangar opens at Shannon and Aeroflot begins to have its Tu-154s and Il-62s repainted there on a regular basis.

An An-24 is lost at Khabarovsk on July 8; there is no additional information concerning the accident.

At this point, the International Commercial Division of Civil Aviation is established to liberalize the company's domestic operation. Financial independence is given to the carrier's 30+ regional branches, which are

largely spun off with their own aircraft and the freedom to expand on their own as best as they can.

While on final approach to Irkutsk on an August 18 service from Kirensk, a Let L-410MU with 2 crew and 2 passengers descends into trees on the slope of a 700-m. mountain; the plane breaks up, catches fire, and there are no survivors.

A Tu-154B-2 with 10 crew and 158 passengers is destroyed as the result of a bad landing at Aleppo, Syria, on September 24; there are no fatalities.

Redesigned from the Il-86, the first Il-96-300 makes its maiden flight on September 28; Aeroflot has placed an order for 60 of the giant airliners, including those intended for Western service, which will be powered by Pratt and Whitney engines.

While on initial approach to Batagai on an all-cargo service from Tiksi on the night of October 4, an An-12BP with six crew deviates from its track and crashes into a mountain; there are no survivors.

It is announced in November that the carrier has chosen SITA's Gabriel computer reservation system for the handling of its worldwide passenger reservations and the same firms Loadstar system for passenger check-in, seat allocation, and boarding pass printing at Moscow's Sheremetyevo Airport. During the same month, the French government rejects a protest from Aeroflot over the creation of **Euroberlin France, S.A.**, which the Russians see as an illegal attempt by **Air France** and its partner, **Deutsche Lufthansa, A.G.**, to allow the West German's access to the air corridors linking West Germany with Berlin via East Germany.

After being held hostage at Ordzhonikidze for 24 hours, a busload of Soviet school children are released by their kidnappers on December 2 and are given a ransom of two-million rubles and a flight to Israel aboard a company Il-76T. Next day, the hijackers are returned to Russia aboard two Aeroflot planes, escorted by a team of 19 investigators and doctors sent to Israel to effect their return. The men will be tried and given prison terms of 18 or 19 years.

A Let 410UVP with 2 crew and 8 passengers crashes while on final approach to Kodinsk, Russia, on December 7 (6 dead).

A chartered Il-76T with 9 crew and 69 passengers crashes near Leninakan, Armenia, on December 11; there are no survivors.

The world's largest airliner, the An-225 Mirya, makes its maiden flight on December 21.

Aeroflot now visits approximately 3,500 domestic stations, along with 126 destinations in 98 foreign countries. The carrier's 2,442 aircraft transport 124.2-million passengers during the year, a 5% overall increase; of that total, 3,815,000 (3.2% of the total) fly on international services.

This one airline alone carries almost 12% of the world's air travelers. Despite this impressive fact, the difficulty in obtaining tickets is so severe that at least 15-million passengers must be turned away. Cargo is down by 3.8% to 2.72 billion FTKs and a net profit of 2.5 billion rubles (\$4 billion U.S.) is reported.

In 1989, the world's largest airline employs 400,000 workers and operates a fleet of 2,442 aircraft.

An An-12V is lost at Sverdlovsk on January 13; there is no additional information on the accident.

Designed for medium-haul service, the premier Tupolev Tu-204-100 makes its maiden flight on January 2. It is announced, on January 17, that the carrier will join with Marriott Corporation in a joint venture to supply about 10,000 meals-per-day to Aeroflot passengers.

Later in the month, the megacarrier signs a joint venture agreement with the French Accor group, owner of Novotel, to build a large hotel near Moscow's Sheremetyevo Airport; with completion scheduled for 1991, shareholding is divided between Aeroflot (66.5%), Accor (13.5%), and banks (20%).

En route from Arkhangelsk to Odessa on January 20, a Tu-134 is captured by a lone assailant, who demands to be taken to Bucharest. When the aircraft arrives at its original destination, the pirate is detained.

The next day, an An-24, preparing for a service to Kiev, is taken over on the ground at Ivano-Frankovsk, Ukraine, by a lone gunman

displaying a bottle of gasoline and a cigarette lighter. The would-be pirate is captured by police, but upon examination, the man is found to be mentally unstable and is dispatched to a psychiatric facility.

While en route from Astrakhan to Baku on March 30, a Tu-134 is hijacked by a lone assailant, who claims to have an explosive and who demands to be flown to either Pakistan or Nepal. The aircraft visits neither, instead landing at its scheduled destination, where the pirate is taken in hand by security personnel.

Also in March, Boris Y. Paniokov, first deputy minister of civil aviation, reports at a Moscow press conference that Aeroflot had 16 accidents the previous year, resulting in 85 deaths.

In April-May, a new alliance is signed with **Deutsche Lufthansa, A.G.** providing for cooperation on the expansion of Moscow's Sheremetyevo Airport.

The number of Moscow-New York frequencies is increased from five- to eight-per-week, beginning on June 15; also in June, the company begins a series of charter flights from Hokkaido and the south Sakhalin Island city of Juzhno to allow Japanese to pay respect to deceased family members.

In early July, in cooperation with **Austrian Airlines, A.G.** and **All-Nippon Airways Company, Ltd. (ANA)**, joint twice-weekly service, employing the Austrian A310-324, is inaugurated from Vienna to Tokyo, via Moscow.

On July 19, while on an ice observation flight from Cape Schmidt over the Eastern Siberian Sea, the left wing of an An-26 with 6 crew and 4 passengers strikes coastal cliffs, causing the aircraft to crash on Talovrow Island; there are no survivors.

Alma Ata-Urumchi flights begin in August. An L-410UVP is damaged beyond repair in a forced landing near Labinsk, Russia, on August 28; there are no fatalities.

A hydraulics failure causes a Yak-40 to make a forced wheels-up landing at Manas, Russia, on September 2; there are no fatalities.

Also in September, employing Il-76Ts and in cooperation with **Pan American World Airways (1)**, joint all-cargo service is started from New York to Moscow, via Shannon and Amsterdam.

An An-32 is lost at Chernigovsk, Ukraine, on October 1 (nine dead). An An-24 with 51 passengers is lost at Stepanogorsk, Russia, on October 4; there are no fatalities.

The second fatal accident of the month occurs on October 18 when a chartered Il-76MD with 57 passengers crashes into the Caspian Sea; there are no survivors.

While on an October 20 all-cargo service from Ul'yanovsk, an Il-76TD with 10 crew and 15 passengers descends below minimum altitude and crashes into a mountain near Leninakan, Armenia; there are no survivors.

The flights begun in August-September are followed by the start of service from Khabarovsk to Harbin on October 29. Also in October, the company offers first- and business-class passengers complimentary limousine transfer service between Sheremetyevo Airport and the Ukraine Hotel in downtown Moscow, where the first night's stay is also free. In addition, a free roundtrip ticket is offered to either Leningrad or Kiev for first-time passengers in those fare structures.

As the Lithuanian division begins its efforts to secede from the united Aeroflot, plans are made to streamline the pioneer's infrastructure by carving off certain divisions that will form independent regional carriers along the model established by **CAAC (The General Administration of Civil Aviation of China)**. In addition, efforts are made to establish cooperative operational and marketing agreements with Western airlines, including **Pan American World Airways (1)**.

The first use of the giant An-124-100 cargo aircraft in North America begins during the second week of November. Two Aeroflot-owned aircraft, retained by the Canadair Aerospace Group and flown by Antonov Design Bureau pilots, begin flying A330/340 components from Montreal's Mirabel International Airport to Aerospatiale's St. Nazaire facility in France.

The string of fatal crashes continues with haze and snow the cause of a well-documented fatal accident on November 21. On final approach to

Sovietsky on a service from Perm, an An-24 with 6 crew and 36 passengers veers to the right and strikes the ground to the right of the runway (34 dead).

Later in the year, a new Moscow-Shanghai route is opened, continuing on to Seoul. During December, a letter of intent is signed covering the purchase of five A310-300s, with options on five more.

Although 18-million potential customers are turned away, the huge operator still manages to increase its enplanements by 5.6% to 132,051,000. Freight traffic dips a slight 0.2% to 2.76 billion FTKs. The company reports to IATA that its international service has brought in \$1.9 billion in revenues. There is an operating profit of \$594.2 million and a net gain of \$19.4 million.

First deputy civil aviation minister Paniokov succeeds A. N. Volkov as director general in early 1990.

En route from Tyumen to Ufa on January 13, a Tu-134A with 6 crew and 65 passengers suffers the in-flight failure of both engines; a forced landing is made in a Ural mountains field 3 km. from Pervouralsk, Russia (27 dead).

On January 24, actual orders are placed for five Airbus Industrie A310-300s for delivery beginning late the following year; Aeroflot is launch customer for the 361,600 maximum-gross-takeoff-weight version. The world's largest airline now embarks on major route expansion and, also in January, weekly Moscow-Tel Aviv flights begin, in cooperation with **El Al Israel Airlines, Ltd.**

On March 26, Moscow-Zagreb-Barcelona flights begin. While on initial approach to Kabul on a March 27 service from Kokand, an Il-76MD with 9 crew and 2 passengers is warned off the landing by ATC; although the aircraft withdraws its flaps and gear, the approach continues, at which point the plane stalls and crashes. There are no survivors.

New frequencies to Cologne, via East Berlin, are launched on March 30. Also during the spring, weekly Il-76 roundtrip all-cargo services begin from London (STN) to Vladivostok.

In April and in accordance with the previous year's alliance, a joint company is established with **Deutsche Lufthansa, A.G.** for the expansion and modernization of Moscow's Sheremetyevo 1 Airport. In addition, **Deutsche Lufthansa, A.G.** signs a contract to maintain Aeroflot's A310-300s after their delivery.

Later in the month, an interline agreement is signed with **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** and, as a result, the Soviet carrier begins to link Lima with Havana, with connections to Moscow. Also in May, joint return flights begin with **Garuda Indonesia** aboard Russian airliners flying between Jakarta and Moscow. During June-August the company will be plagued by hijackers.

While landing at Ken Keyak, Kazakhstan, after a service from Krasnodar on June 2, an An-24 with 4 crew and 29 passengers bounces hard three times; after the third bounce, the nosewheel breaks off and the aircraft overruns the runway by 83 m., catching fire. All aboard are safely evacuated.

A Tu-154 with 121 aboard and en route from Minsk to Murmansk is hijacked on June 6 by teenager Dimitri Semyonov. Carrying a fake grenade and speaking of his displeasure concerning life in the Soviet Union, he forces the craft to land at an airport north of Stockholm where he surrenders to Swedish authorities.

While on final approach to Kabul on June 12 an Il-76MD with ten crew is hit by a Stinger AA missile; two engines are shut down and the aircraft makes a forced belly landing on an unpaved runway. The decision, although undoubtedly correct, to land in such a fashion kills everyone aboard.

A Russian-speaking hijacker forces a Tu-154, flying from Tallinn to Lvov, to land in Helsinki on June 19 when he threatens the crew with what they believe to be a bomb. This pirate is returned to the U.S.S.R., where he will be tried and sentenced to jail for four years.

Murmansk-Rovaniemi service is started on June 25. Employing a fake grenade, a passenger skyjacks a Tu-154 en route from Lvov to Leningrad on June 30, forcing it to divert to Stockholm. He will later

be extradited back to the U.S.S.R., where he will be tried and sent to prison for three years.

Also on June 30, while landing at Yakutsk following a service from Moscow, an Il-62M with 10 crew and 99 passengers overruns the runway; the pilot had accidentally set the No. 1 and No. 4 engines for take-off thrust instead of reverse. There are no fatalities.

En route from Leningrad to Lvov on July 5, a Tu-154 is hijacked to Sweden by a lone pirate seeking to avoid the military draft. He will be tried and sentenced to four years in a Swedish prison. Five days later, another Tu-154 is taken over just after its departure from Leningrad for Murmansk. The perpetrator is overpowered by the crew and returns to its point of origin, where he is turned over to police. After his trial, the man will be sent to prison for eight years.

Semyonov, the teenaged hijacker, is extradited back to Moscow on July 17 and is the first hijacker ever returned to the Soviet Union from Sweden. He will be tried and given a four-year prison term.

On July 28, another teen, threatening the occupants with what he claims is a vial of poison gas, takes over a Tu-154 flying between Krasnodar and Krasnoyarsk. The aircraft lands at Orenburg, where the young man's vial is found to be a fake and he is captured.

As the result of a premature descent, a Yak-40 en route from Yerevan with 3 crew and 43 passengers strikes a cloud-covered 2,520 m.-hill 22 km. from Stepanakert, Azerbaijan, on August 1; there are no survivors.

The wreck of an An-24 carrying 30 people from Armenia is found in the disputed territory of Nagorno-Karabakh on August 2; there are no survivors. The same day, Kuwait is invaded by Iraq.

Eleven Soviet convicts overpower their three guards on a Tu-154's scheduled service from Neryungri to Yakutsk on August 19 and divert the captured airliner to Karachi, where they surrender to Pakistani security forces.

In one of the first major East-West joint aviation ventures, the Swiss freight operator **Metro Cargo, A.G.** is established at Lugano in August. Private Swiss investors associated with Metropolitan Aviation, also based at Lugano, join with the Siberian directorate of Aeroflot to provide international cargo charters.

Mario Calmai is named chairman with Shimon Lahav as managing director; they begin revenue services employing eight Ilyushin Il-76s and an Antonov An-12 contributed by the Soviets. Operational services for the new entrant are provided by Zurich-based **Jet Aviation Business Jets, A.G.** under a contract that requires Metro to pay for each flight in advance.

While landing at Pavlodar, Kazakhstan, on September 9, a Yak 40 with 4 crew and 18 passengers strikes another aircraft; although both planes are damaged, there are no fatalities.

While on final approach to Sverdlovsk on September 14, a Yak-42D with 4 crew and 124 passengers strikes a line of trees 1,700 m. short of the runway and breaks up (4 dead).

An **Air Foyle, Ltd.** Antonov An-124-100 makes eight contract flights from Kuwait during September, evacuating 3,600 Bangladeshis. In October, a fuel shortage in Havana causes the carrier to briefly consider moving its Latin American hub to Miami.

On October 8, Aeroflot enters into ultimately unsuccessful discussions with **Eastern Air Lines** concerning the possible purchase or lease of thirteen Eastern wide-bodies for \$150 million.

An An-8 freighter with 4 crew and 6 passengers crashes while on final approach to Novosibirsk on October 10 (9 dead). A Let 410UVP crashes while landing at Odessa on October 12; there is no information on any possible casualties.

Discussions are begun with **British Airways, Ltd. (2)** on October 13 concerning the possible creation of a joint-venture international airline to be known as **Air Russia**.

An An-26 crashes at Nyurba, Russia, on November 2; there is no information on any possible casualties.

En route to Prague on November 17 a Tu-154M with six crew suffers an in-flight fire and must make a forced landing near Velichovsky; although the freighter is damaged beyond repair, there are no fatalities.

The nosegear of a Tu-154B-1 with 171 passengers fails during take-off from Kutayissi, Georgia, on November 20; a safe emergency landing is executed at the point of origin.

Having landed too far down the runway at Yakutsk, Siberia, on November 21, an Il-62 with 10 crew and 99 passengers is unable to stop before running off the runway and into a ravine, breaking off its wings and undercarriage. Although the aircraft is damaged beyond repair, no deaths or serious injuries are reported.

Following a tailwind landing at Diskon, Russia, on November 30, a Yak-40 with 4 crew and 31 passengers overruns the runway and falls into a gully; although the aircraft is damaged beyond repair, there are no fatalities.

Also in November, Il-86 service is opened from a second gateway to the U.S.; weekly roundtrip flights to New York are now also offered from Leningrad's Pulkovo International Airport.

An An-26 is destroyed as the result of a bad landing at Ufa on December 3. There is no information regarding any possible casualties.

An An-24B with 4 crew and 39 passengers is damaged beyond repair as the result of a hard landing at Shakhtyorsk, Russia, on December 14; there are no fatalities.

Late in the year, marketing agreements are signed with **Finnair O/Y** and **Austrian Airlines, A.G.** The latter provides for code-sharing on the Vienna-St. Petersburg route.

Passenger boardings for the year increase 4.2% to 137,741,700, but freight actually declines by 3.1% to 2.67 billion FTKs.

Alexander A. Larin succeeds Boris Ye. Paniokov as director general in early 1991. A fourth weekly Il-86 frequency is inaugurated on January 7 between Moscow and New York; simultaneously, cargo service to the "Big Apple" begins with a dedicated Il-76 freighter.

On January 21, Bulgarian police overpower the hijacker of an Il-62 with 159 aboard after Turkey denies it permission to land, thereby requiring it to make an emergency landing at Burgas.

On March 3, a lone hijacker takes over an An-24 on the ground at Leningrad; unable to get the pilot to fly him to Sweden, the man releases all of his hostages and then pulls the pin on the grenade he is holding, committing suicide.

While on a domestic service to Kaliningrad on March 28, a Tu-134 is subjected to a takeover attempt by a lone assailant, who is unarmed. The flight crew immediately captures the perpetrator, ties him up, and puts him into the baggage compartment, where he will remain until the aircraft lands and he can be turned over to police.

Moscow-Gothenburg flights begin on March 31 and Kathmandu becomes a Moscow destination on April 5. Moscow-Shanghai direct service begins in mid-April and, flying via Gander, Il-62Ms inaugurate Moscow-Miami service on April 28, the same day on which they launch twice-weekly flights from Washington to Moscow, via Shannon.

Three assailants take over a Tu-154 on the ground at Barnaul on April 29; it is flown to Moscow's Domodedovo Airport, where the trio is arrested as it steps off the aircraft.

Before it opens service to the Soviet Far East, **Alaska Airlines**, in April, begins to train thirteen Aeroflot ticket agents in customer service at Seattle-Tacoma International Airport. The Soviets will graduate at the end of May and return to Magadan and Khabarovsk, where they will serve Alaska customers during their summer visits.

The first Aeroflot service to a U.S. West Coast city begins on May 19, when an Il-62M lands at San Francisco from Khabarovsk, having flown via Anchorage. Operations of the joint Swiss-Soviet carrier **Metro Cargo, A.G.** have continued without incident until May. During the month, Metro Cargo delays its payments to **Jet Aviation Business Jets, A.G.**, as well as its aircraft lease payments to Aeroflot.

A Tu-154B-1 with 6 crew and 172 passengers lands hard at Leningrad on May 23 following a service from Sukhumi; the right landing gear collapses and the aircraft breaks up. Thirteen aboard the jetliner are killed, along with two people on the ground.

At the beginning of June, the Soviets, owed \$7 million, request that the authorities in Canton Ticino freeze Metro Cargo's bank accounts.

Unfunded, Metro Cargo suspends operations, while a criminal investigation is simultaneously launched. **Alaska Airlines** now begins thrice-weekly service to Magadan and Khabarovsk.

With Metro Cargo finished, the Soviets turn to **Jet Aviation Business Jets, A.G.** to establish another joint operation, Jet Air Cargo, A.G., which will lease and employ, briefly, three Il-76s.

Murmansk-Kirkenes flights begin on June 4.

An An-24 with ten passengers fails its climb away from St. Petersburg on June 26 and crashes into the Gulf of Finland; there are no survivors.

On July 1, the company joins with the Ministry of Civil Aviation and the Ilyushin design bureau to purchase 100 G.E./Sneema CFM-56-5 engines for 22 Il-86s; the deal is worth \$750 million. It is now reported that, during the past five years, Aeroflot has added 121 new routes, primarily to the Far North, the Far East and the Tyumen region in Siberia, where much of Soviet oil is extracted. Considerable fuel, in short supply, is used to serve these routes, and as a result Aeroflot was forced to cut back on more profitable freight traffic.

Later in the year, Leningrad to New York and Kiev to New York flights begin. Additional new destinations visited from Moscow include Barcelona, Basel, Miami, Venice, Nagoya, Montevideo. Service is started linking Khabarovsk with Irkusk (Niigat) and Kiev with Milan, New York, and Irkusk (Shenian). A number of unprofitable routes to Africa and Southeast Asia are dropped.

An L-410UVP is lost on takeoff from Polina on August 21; there is no information concerning any possible fatalities. Six days later another L-410UVP is lost 42 km. from Guriev, Kazakhstan. Again, there are no casualty figures.

A cooperative agreement is signed with **Air France** during August. Under its terms, the two flag carriers agree to collaborate on the establishment of a commissariat, as well as the construction and operation of a cargo facility at Leningrad's Pulkowo Airport. The French will work to boost Aeroflot's operations out of Kiev, and the two will together build and operate international-class hotels at Leningrad and Moscow.

A coup against the central government fails during the month; although it has no impact on Aeroflot Soviet Airlines or flight operations into the nation, it will help lead to the disintegration of the country and its airline. During the last week of August, the Aviation Leasing Group delivers a Douglas DC-8-61 to the carrier's Armenian regional department, which has plans to open weekly roundtrip flights from Yerevan to New York, via Shannon.

An all-cargo interline agreement is signed with **USAir** and comes into effect on September 23. A similar arrangement is made with **Delta Air Lines** providing for block space and code-sharing on the route from Moscow to New York.

An An-12BP with 16 passengers crashes at Khatanga, Russia, also on September 23 (1 dead).

A Yak 40 with 4 crew and 30 passengers crashes into a mountainous area 12 nm. from Makhachkala, Russia, on November 7; there are no survivors.

Nationalists from the Chechen-Ingush region hijack a plane to Ankara, Turkey on November 9, and later to Grozny, the region's capital, to protest the Russian crackdown on the autonomous region.

As the U.S.S.R. falls apart, representatives from the 15 republics meet to discuss a variety of problems and one result is the establishment of the Interrepublic Aviation Committee (Mezhgosudoiavrenniy Avitsionniy Komitet or MAK), under Dr. Tatiana Anodina.

The airline releases a devastating self-critique on December 19, which paints a picture of worsening safety and shortages. During the year, there are 252 deaths resulting from three dozen crashes (most, as before, unreported in the West) and 40% of the fleet remains grounded for lack of fuel or spare parts. The accident rate is up from the 27 of 1990 (194 dead). The breakup of the Soviet Union also has a devastating impact upon traffic figures, which are only reported through September. These show customer bookings down 6.3% to 99,910,700 and cargo off by 7.8% to 1.92 billion FTKs.

On November 15, AEVT Aeroflot, the Association of the Air Transport Exploiters, which is made up of air transport companies, takes over some international operations.

An An-12 with 6 crew and 14 passengers crashes at Anderma, Russia, in bad weather on November 16; there are no survivors.

While on final approach to Bugulma, Russia, on a service from Nizhnevartovsk on November 26, an An-24 with 4 crew and 37 passengers attempts to go around after a missed landing. The aircraft crashes 800 m. short of the runway as the result of stabilizer icing and there are no survivors.

The short-lived body AEVT is replaced in December by PKO Aeroflot Soviet Airlines. PKO, which means production and commercial organization, is made up of representatives from several Soviet ministries with civil aviation interests and meets under the auspices of the airline's International Commercial Division or MKU.

Employing an Il-76 under lease, the trading company WTL International begins scheduled weekly air cargo service in January 1992 between Moscow's Sheremetyevo Airport and New York (JFK). On January 1, prices in Russia are deregulated and company fares rise anywhere from 300% to 2,400%.

Early in the year, the CIS begins to dismantle Aeroflot, the international unit of which is now renamed **Aeroflot Russian International Airlines (ARIA)** and flies under licenses held by the Central Department for International Air Services (CUMVS). A variety of government-owned and private carriers are born, including several formed from former Aeroflot district divisions as independent operators in the CIS independent republics. The MAK, with responsibility for licensure, certifies 69 airlines for operation, including 33 separate and largely autonomous Aeroflot divisions.

AEROGAL, S.A. See **AEROLINEAS GALAPAGOS, S.A.**

AEROGAVIOTA: Avenida 47, No. 2814. Reparto Koltzy, Havana, Cuba; Phone 53 (7) 81-3068; Fax 53 (7) 33-2621; Code GTV; Year Founded 1994. The state-owned Aerogaviota is established at Havana in 1994 to offer regional and domestic passenger and cargo charters. Revenue flights begin, and continue, with a fleet that comes to comprise 13 Antonov An-26s, 8 An-26Bs, 1 An-30, and 4 Yakovlev Yak-40s.

AEROGENESIS AVIATION: 659 Eden Road, Mason, Michigan 48854, United States; Phone (800) 669-7305; Fax (517) 676-4863; Year Founded 1990. Aerogenesis is established in 1990 to offer passenger charters from four Michigan airports. By 2000, the company employs ten full-time and three part-time pilots. One each Beech King Air 90 and Beech Super King Air 200 are flown from Alpena County Regional Airport and a Beech King Air 90 is flown from Jackson County-Reynolds Field.

At Lansing, the company maintains one each Super King Air 200, Beech 58 Baron, Beech A36 Bonanza, and Piper PA-31-350 Navajo Chieftain. The smallest element of the fleet, a Super King Air 200, is stationed at Oakland-Pontiac Airport.

AEROGLOBO, S.A.: Poland (1991-1996). Aeroglobo is established at Warsaw in 1991 to offer charter and cargo flights to destinations throughout Eastern Europe. Revenue flights commence with a fleet made up of 4 Let L-410UVPs and 3 PZL-Mielec An-28s (Antonov aircraft built under license in Poland). Operations continue into 1996.

AEROGOLFO, S.A.: Colombia (1994-1996). Aeroglofo is set up at Bogota in 1994 to offer regional and domestic passenger charters. Revenue operations commence with 1 each Convair CV-580, Aerospatiale (Sud-Est) SE-210 Caravelle XB3, and 1 Caravelle XB1R. By 1996, the fleet is reduced to just the Caravelle XB3.

AEROGULF SERVICES, LTD.: Box 10586, Dubai International Airport, Dubai, United Arab Emirates; Phone 971 (4) 823157;

Fax 971 (4) 823028; Year Founded 1977. ASL is established in the UAE in 1977 to provide offshore helicopter passenger and contract service flights, as well as internal service and international flights. Operations commence with two Bell 206B JetRangers. All aircraft are, and will continue to be, maintained in prefabricated structures at Dubai's international airport.

Operations continue apace over the remainder of the decade and into the 1980s. Contracts for offshore assistance are accepted from Dubai Petroleum Company, Crescent Petroleum Company, and Dubai Gas Company. During the Iran-Iraq War in mid-decade, company BO-105s fly in harm's way. Under fire from Iranian gunboats, they evacuate a gas complex and, during July-August 1987, over 1,000 tanker landings are accomplished, during which 1,800 crewmen are evacuated.

By 1988, General Manager John Kirk's fleet includes 5 JetRangers, 3 MBB BO-105s, and 3 Bell 212s. Services continue with little change into the 1990s and a total of 24 pilots are on staff in 1992-1996. During 1997-2000, the fleet includes 5 JetRangers, 3 Bell 212s, and 3 BO-105s as had been in service a decade earlier.

AEROKIZNETSK. See **AERO KUZNETSK NOVOKUZNETSK AIRLINE**

AEROLATIN (AEROLINEAS LATINAS, S.A.): Centro Comercial Ciudad Tamanaco, 1a Etapa 3er Piso, #315, Caracas, Venezuela; Phone 58 (2) 959-1884; Fax 58 (2) 993-6378; Code LT; Year Founded 1989. This all-cargo airline is established at Caracas on September 28, 1989; shareholders include Maria Engina Martinez Capriles (67%) and the French carrier **Euralair International Airlines, S.A.** (32%). Santiago Mesta is named president/CEO. A fleet is assembled comprising 1 Boeing 707-315F and 1 B-727-100F. Weekly flights are undertaken to four destinations in the U.S., two in Mexico, two in Brazil, three in Europe, and two in Canada. Panama, Nicaragua, Trinidad, and Cuba are also visited weekly.

Operations continue apace in 1990-1992, although flights to Miami are withdrawn. In 1993, chief shareholder Capriles is CEO/president with Mesta as finance officer. The fleet now includes 2 B-727-200s, 2 B-727-100Fs, and 1 Douglas DC-8-54F. From Caracas, weekly flights are made from Caracas to Trinidad, Cuba, Nicaragua, Panama, Mexico City, Europe, and Canada. More frequencies are offered from Caracas to Rio de Janeiro and Iguazu Falls while replacement services are provided for other carriers in Central and South America.

Employing the B-727-100 leased from new entrant Aricsa Jet Cargo, S.A., also of Caracas, service is resumed to Miami in 1994.

Although it is understood that flights continue without change during the remainder of the decade, exact information is, however, unavailable.

AEROLEASING DEUTSCHLAND, GmbH.: Flughafen Hamburg, Hamburg, D-26501, Germany; Year Founded 1965. Aeroleasing is originally set up at Hamburg in 1965 as an executive passenger and charter operation. Thirty-five years later, the company is a worldwide concern with bases on two continents. The carrier's subsidiaries include Aeroleasing Ukraine at Kiev, **Jet Leasing Belgium, NV** at Brussels, and **Aeroleasing Far East (Pty.), Ltd.** at Singapore. The German operator also maintains bases at Berlin's Tempelhof Airport, as well as Geneva, Switzerland.

The European fleet now includes 4 each Dassault Falcon 50s and Learjet 35A Century 3s, 2 each Falcon 20s and Falcon 10s, and 1 each Dassault 900B, Learjet 31, Learjet 36, Learjet 55 Longhorn, Yakovlev Yak-40, and Canadair Challenger 601.

AEROLEASING FAR EAST (PTY.), LTD.: Singapore Seletar Airport, Singapore, Year Founded 1989. This subsidiary of **Aeroleasing Deutschland, GmbH.** is set up at Singapore in 1989, originally as an FBO. Mr. Yip is managing director; he begins and continues an executive passenger service throughout Southeast Asia with a Learjet 35A chartered from the parent.

AEROLIFT INTERNATIONAL (PTY.), LTD.: 19 Keppel Road, Jit Poh Building 11-05, Singapore 208, Singapore; Phone 65 225 7871; Fax 65 225 7687; Year Founded 1990. AI is established at Singapore in August 1990 to provide rotary-wing support to energy development in the jungles of Papua New Guinea. Patrick Lloyd is appointed managing director and revenue services are under begun under contract to Chevron Oil, Mobil Oil, BP, and Shell Oil with a pair of Russian-made Kamov Ka-32s chartered from **Aeroflot Soviet Airlines**.

In January 1991, the AI fleet is expanded by the addition of three more loaned Kamovs and a Mil 26. In April, four more Ka-32s are leased, entering service on behalf of Amoco Oil in Myanmar (Burma). While the Soviet helicopters provide heavy lift, workers are transported to and from worksites by Bell 212s.

During the remainder of the year, the company flies a total of 6,000 hours.

Operations continue apace with little fanfare in 1992-1994. The fleet includes 1 each Bell 212, Bell 206L LongRanger, Bell 206B JetRanger, 4 Ka-32s, and 3 Mi-26s.

In 1995-2000, General Director Dick Anderson's fleet is increased by the addition of 3 Bell 212s, 5 LongRangers, 3 JetRangers, and 7 Ka-32s.

AEROLIFT PHILIPPINES: 4th Floor, Jaka II Building, 150 Legaspi Village, Makato, Metro Manila, Philippines; Phone 63 (2) 843-4605; Fax 63 (2) 819-0385; Code LFT; Year Founded 1982. Created by Capt. Benjamin Solis in 1982 to provide interisland charter services to seldom-visited destinations, the air taxi Aerolift Philippines is reformed at Manila in August 1988 to offer scheduled commuter flights. The reform is made possible by a government ruling that overturns the forced 1974 nationalization of **Philippine Air Lines (PAL)**.

Capitalization is increased to six-million Philippine pesos (PP 6 million) in September as the Cebu Beechcraft dealer Miguel Campos acquires a 30% stake. A new Beech 1900 is promptly ordered. The new aircraft arrives in mid-December and allows the first scheduled revenue flight to be completed on Christmas Eve, between Cebu's Luhag Airport and Manila.

Managing Director Solis' fleet at the beginning of 1989 comprises 2 de Havilland Canada DHC-6-300s, 1 Dornier 228-212, 2 Pilatus-Britten-Norman BN-2 Islanders, and 1 Beech 1900C. The government grants the new entrant authority on August 10 to visit two dozen domestic points from Manila. Shares are now sold to the U.S.-venture capital company Hambrecht & Quist.

Plans are laid in 1990 for the acquisition of a Boeing 737-200C with which to begin domestic flights; however, financing proves difficult.

While on its initial climb away from Manila on May 18, the Beech 1900C with 2 crew and 19 passengers suffers an engine failure and crashes into a residential area; all aboard the turboprop are killed, along with four people on the ground.

Also in May, nonscheduled passenger flights commence from Manila and Cebu to Hong Kong, Malaysia, Singapore, and Japan. The inaugural fleet, meanwhile, transports a total of 80,000 charter passengers in 1991.

After a lengthy court battle, the third-level carrier receives government approval in early 1992 to offer scheduled services. These frequencies are introduced linking the Manila base with Boracay, Busuanga, and El Nido. Enplanements total 17,822, a major disappointment.

The workforce is cut 42% in 1993 to 29 and the fleet comprises just 1 Twin Otter and 1 Beech King Air 90. Passenger boardings decline 35.5% to 13,153. Revenues plunge 27% to \$1.04 million and with costs high, there are losses: \$183,406 (operating) and \$190,925 (net).

A pair of Fokker F27-500 Friendships is acquired by Managing Director Solis in 1994. Flights continue during the remainder of the decade.

AEROLIK AIRLINE: Ulitsa Yunatov 18, Moscow, 125083, Russia; Phone 7 (095) 214 8828; Fax 7 (095) 212-1037; Code AKR; Year Founded 1994. Aerolik is established at Moscow in 1994 to provide domestic charter operations. Alexander A. Leonev is appointed general director and revenue operations begin with a single Yakovlev Yak-40.

Flights continue during **1995–2000**, during which years the fleet is increased by the addition of 2 more Yak-40s, 1 Ilyushin Il-18, and 1 Tupolev Tu-154M.

AEROLINEAS ABAROA, LTDA.: Bolivia (1962–1972). AA is founded at La Paz in **1962** to operate nonscheduled all-cargo services around the country. A lightplane and Douglas DC-3 fleet is employed to begin revenue services.

En route from Caranavi to La Paz on December 8, **1964**, a chartered DC-3 with 4 crew and 13 passengers suddenly disintegrates and crashes near Tripuani in the Andes Mountains at an altitude of 14,000 ft. Investigators will suggest that the cause of the tragedy is an explosion of a “criminal origin,” and although a suicide-for-insurance plot is suspected, no one is ever indicted.

The fleet is augmented with 2 Curtiss C-46 Commandos in October **1966**, which are employed through November **1968**. The carrier shuts down during the energy crisis in **1972**.

AEROLINEAS AMANCER, S.A. de C.V.: Calle C. Hangar 6; Toluca Airport; Toluca, 50200, Mexico; Phone 52 (72) 731 220; Fax 52 (72) 172 885; Year Founded 1990. Certified to fly executive charters from Central America to Canada, Amancer is established at Toluca Airport in **1990**. Ten years later, flights are still undertaken with a single Learjet 24.

AEROLINEAS ARGENTINAS, S.A.: Bouchard 547, 1106 Buenos Aires, Argentina; Phone (54-1) 317-300; Fax (54-1) 317-3596; http://www.aerolineas.com.ar; Code AR; Year Founded 1949. This new state corporation is formed on May 3, **1949** at Buenos Aires. A division of the Ministry of Transport, which has provided capitalization, Aerolineas Argentinas is a merger of four independents: **Aeroposta Argentina, S.A.**; **ALFA (Aviacion del Litoral Fluvial Argentino, S.A.)**; **FAMA (Flota Aerea Mercante Argentina, S.A.)**; and **ZONDA (Zonas Oeste y Norte de Aerolineas, S.A.)**. Routes, aircraft, and personnel of the merger partners are amalgamated, if not integrated, during the remainder of the year, with the unified carrier appearing in December.

Integration efforts continue in **1950**. Ten ex-FAMA (**Flota Aerea Mercante Argentina, S.A.**) Douglas DC-4s join the fleet along with 6 DC-6s; the latter begin service to New York on March 21.

A DC-3 must be written off following an accident at Buenos Aires' Pistarini Airport on June 12; there are no fatalities.

A DC-6 begins a New York to Buenos Aires via Trinidad proving flight on September 13. The four-ship fleet of new Convair CV-240s ordered by **ZONDA (Zonas Oeste y Norte de Aerlineas, S.A.)** is also delivered in September. Christened *Yapeyu*, *Uspallata*, *San Lorenzo*, and *Chacabuco*, they are placed on routes to Santiago de Chile, Cordoba, and Mendoza.

The route network is fully integrated as of December 7. Three Avro Yorks ordered by merger partner **FAMA (Flota Aerea Mercante Argentina, S.A.)** are received late in the year; undesired, they are returned to their British manufacturer. Other aircraft obtained from merger partners during the year include: 33 DC-3s (2 ALFA, 6 FAMA, 17 ZONDA, and 5 Aeroposta Argentina); 4 former-ALFA S.25 Sandringhams; 1 former ALFA Beech 18S, and 1 ex-FAMA Cessna UC-78A. Two DC-6s are received from **United Air Lines** and an S.25 Sandringham is purchased from **SAS (Scandinavian Airlines System)**.

The ex-ZONDA DC-3 *Puntano* with 5 crew and 13 passengers and en route from Mar del Plata to Buenos Aires, crashes near Cobo on December 30 (17 dead).

During the year the carrier's Andean condor emblem is designed by Rodolfo Pena.

The former **Aeroposta Argentina, S.A.** DC-3 *Yagan* with 4 crew and 16 passengers fails its climb from Rio Grande on a March 26, **1951**, service to Ushuaia and crashes; 11 people aboard the aircraft are killed, along with two on the ground.

A DC-3 crashes at Jujuy, Argentina, on June 3; although the plane must be written off, there are no fatalities.

Two Shorts S.25 Sunderland 5s, the *Uruguay* and *Rio de la Plata*, join the five S.25s already in the fleet in maintaining flying boat service to Montevideo.

In April **1952**, the carrier's administration is transferred to the National Transportation Corporation, which is charged with running all of the nation's air, rail, and road communications. A month later, Aerolineas Argentinas joins IATA.

In cooperation with Bolivia's **LAB (Lloyd Aereo Boliviano, S.A.)**, DC-4 flights begin to Santa Cruz in early **1953**.

An ex-FAMA C-54A with 7 crew and 34 passengers is lost 12 miles north of the city while on initial approach to Cordova on June 17; although the aircraft is damaged beyond repair, there are no fatalities.

As the result of an improper initial approach, the former **Aeroposta Argentina, S.A.** DC-3 *Quilmas* with 4 crew and 21 passengers strikes a mountain near Sierra del Vilgo, in La Rioja Province, on April 23, **1954**; there are no survivors.

On June 26, the government launches an investigation of the carrier's management, seeking proof of fraud allegations.

While on a scheduled service from Cordoba on October 16, a CV-240 with 5 crew and 32 passengers is caught in a storm and suffers uncontained loss of altitude from 600 m. up. Although the aircraft is destroyed when it strikes the ground SSW of Capilla del Senor, there are no fatalities.

In April **1955**, DC-6 service is inaugurated to La Paz. While climbing away from Rio Chaco, Argentina, on May 20, the former **ZONDA (Zonas Oeste y Norte de Aerolineas Argentinas, S.A.)** DC-3 *Coya*, a freighter with 4 crew and 1 passenger, suffers propeller failure, loses height and crashes; although the aircraft must be written off, there are no fatalities.

The Peron dictatorship ends on September 16.

A government decree on July 12, **1956** ends the carrier's monopoly over national air transport. Having descended below the MDA, the former **ZONDA (Zonas Oeste y Norte de Aerolineas Argentinas, S.A.)** DC-3 *Ibabe* with 4 crew and 14 passengers crashes and burns near Rio Cuarto four days later; there are no survivors.

A new government decree in **1957** defines the manner of state airline control.

On January 11, a DC-4 with 33 aboard crashes shortly after takeoff from Buenos Aires (12 dead). Another DC-4 crashes near Bolivar, southwest of Buenos Aires, on August 12 (62 dead) and the third four-engine Douglas of the year, which once belonged to **United Air Lines**, crashes 25 km. SE of Bolivar on December 8 (62 dead). A Short Sandringham flying boat with eight aboard fails its takeoff from Buenos Aires on December 31 and crashes; there are no survivors.

Following the installation of the democratically elected government administration of Dr. A. Frondisi in February **1958**, the carrier's entire leadership is forced to resign in May, at which point Col. Guiraldes becomes president. Orders are placed for six de Havilland DH 106 Comet 4s.

A DC-6 with 6 crew and 16 passengers is lost off Ilha Grande Beach, Brazil, on June 10; there are no fatalities.

Late in the year, Guiraldes is succeeded by Brig. Gen. Miguel Moragues. Orders are placed for 10 Fairchild F-27s; the request will be cancelled within two years because financing does not materialize.

The first jetliner for Aerolineas Argentinas, a Comet 4, is delivered on March 2, **1959**; christened *Las Tree Marias*, it is employed to open South America's first indigenous commercial jet service on April 16 from Buenos Aires to Santiago de Chile and on to New York. An unnamed ex-FAMA (**Flota Aerea Mercante Argentina, S.A.**) DC-3 with 4 crew and 6 passengers is lost in a crash on May 15 following its takeoff from Mar del Plata; there are no survivors.

Four days later, a Comet 4 inaugurates the first regularly scheduled turbojet airliner service from South America to the U.K., flying from Buenos Aires to London. As additional Comet 4s are received, they

commence frequencies on June 7 from Buenos Aires to Rome, Frankfurt, and Paris, via Rio de Janeiro, Recife, and Port of Spain.

The ex-ZONDA (**Zonas Oeste y Norte de Aerolineas Argentinas, S.A.**) DC-3 *Tierra del Fuego* with 3 crew and 7 passengers is lost at Santiago del Estado, Argentina, on July 24; there are no fatalities.

Diverted to Asuncion, the Comet 4 *Lucero del Alba* with 6 crew and 44 passengers and en route from Buenos Aires to New York, crashes on August 26 during its final approach (2 dead).

On September 4, New York to Buenos Aires flights are cut from three to two weekly as a result of the Asuncion disaster.

Having lost hydraulic fluid, a CV-240 with 6 crew and 26 passengers must make an emergency landing in a vineyard near Mendoza, Argentina, on December 12; there are no fatalities.

All flights are cancelled between January 27 and February 5, 1960, because of a workers' slowdown.

As the result of a bad landing at Ezeiza Airport, Buenos Aires, after a training flight on February 20, the DH 106 Comet 4 *Cruz del Sur* must be written off; none of its six-person crew are fatalities.

Buenos Aires to New York service is temporarily curtailed on March 3. On March 10, all flights are again halted, as pilots strike to protest the punishment of six colleagues accused of safety violations.

As the result of a violent storm, a DC-6 with 6 crew and 25 passengers and en route from Asuncion to Buenos Aires, explodes in midair and crashes 12 km. ENE of Salto (Uruguay) on September 7; there are no survivors.

On September 30, the carrier cancels its Havana stops on the New York to Buenos Aires runs now fully restored. In terms of passenger kilometers flown during the year, the carrier now ranks as the largest airline in Latin America.

An operating permit for New York is received from the U.S. CAB in January 1961. On March 16, orders are placed for nine Avro (later Hawker Siddeley, then British Aerospace or BAe) 748s, followed by an August request for three (later four) Sud-Est SE-210 Caravelle VINs. Meanwhile, on June 9, the carrier is struck after suspending 5,600 workers for their continuing slowdowns.

On July 19, a DC-6 with 7 crew and 60 passengers crashes near Azul; there are no survivors.

The DH 106 Comet 4 *Arco Iris* with 12 crew and 40 passengers crashes 4 mi. from Viracopos Airport, São Paulo, on November 23 just after takeoff for New York. Again there are no survivors. The public outcry and political repercussions within Argentina over these accidents forces President Moraguez to resign.

The first Avro 748, the second production unit, is delivered in January 1962; christened *Ciudad de Bahia Blanca*, it begins Pointe del Estes-Bahia Blanca service on April 2. AA thus gains the distinction of introducing the "Budgie," as it will be nicknamed, into commercial service. Meanwhile, the first Caravelle VIN is received in March; named *Aldebaran*, it launches flights from Buenos Aires to San Carlos de Basiloche on April 1. The company promotes both new aircraft types in new print and television advertising; however, the addition of the presence is criticized by the Association Argentina de Aeronavegantes, the flight attendants union.

All Avro 748s are ordered flown at low altitude on September 2, pending a probe into the death of stewardess Olga Gomez, who fell to her death when the plane door blew off on August 30 flight hours earlier a second 748 also lost its door. During a September 4 test flight to attempt to isolate the problem, an Avro technician nearly falls from his aircraft when its door locking system fails.

Airline and manufacturing representatives order the entire Avro fleet grounded on September 7 and the Convairs, awaiting sale, are returned to duty. The political difficulties that now ensue between airline officials and government bureaucrats attempting to place blame reach a point where, on October 16, CEO Moragues is dismissed. Having been modified, the Avro 748s are gradually returned to service after November 1.

The last Short S.25s are retired at year's end, the CV-240s are sold to the Paraguayan Air Force, and the first Comet 4C is delivered and named *President Kennedy*.

The fleet in 1963 now comprises 14 DC-3s, 6 DC-4s, 3 DC-6s, 3 Comet 4s, 4 Hawker Siddeley HS 748s (Avro having become the Avro Whitworth Division of Hawker Siddeley), and 3 SE-210s. A dispute with IATA leads to the carrier's resignation from that international body on June 7.

Flight 527/03, an SE-210 Caravelle VIN with 7 crew and 63 passengers crashes while on final approach to Cordoba on July 3; there are no fatalities.

A DC-3 with 3 crew and 27 passengers crashes near Zarate on January 9, 1964 (28 dead). A Comet 4C is received in May, the same month the CAB grants traffic rights to Miami. Brig. Gen. Guillermo Zinny (Ret.) becomes chairman in June. Enplanements for the year total 717,661.

Airline employment in 1965 is 5,921. The 40-aircraft fleet is altered as 5 DC-3s are replaced by 8 HS 748s. On February 5, orders are placed for 4 Boeing 707-387Bs. Comet 4 service to Miami via Lima begins in April. On October 6, the company rejoins IATA. Passenger boardings rise 1.3% to 727,113.

A government change in June 1966 brings another shift in the carrier's administration, this one headed by Brig. Gen. Arnaldo Tesselhoff (Ret.).

On September 28, to publicize Argentina's long-standing claim to the Islas Malvinas (Falkland Islands), 18 Argentine nationalists hijack the DC-4 *Benjamin Matienzo* (which had been delivered new to **Santa Fe Skyways** of the U.S. 20 years earlier as the *Sky Chief Pueblo*) en route from Buenos Aires to Rio Gallegos. The hijackers force the pilot to fly to Stanley to hand out propaganda leaflets. The whole group will be extradited back to Argentina and its members will receive prison terms ranging from three to five years.

The first B-707-387B is delivered in November and is placed in service on the New York run on December 15.

On August 8, 1967, a B-707-387B, operated jointly with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, inaugurates 6,462-mile nonstop service from Buenos Aires to Madrid, the world's longest nonstop scheduled frequency. The B-707-387Bs take over the long-haul routes to Europe and eliminate the Dakar stop; the Comet 4s are transferred to regional service. In December, two Nihon YS-11As are put on the holiday routes from Buenos Aires to Mar de Plata and Punta del Este.

The CAB is approached, in 1968, for a West Coast route. Once it is granted, B-707-387B service to Los Angeles, via Lima, Bogota, and Mexico City, begins in April 1969. Tokyo flights are inaugurated on June 15.

An HS-748-B1 with 4 crew and 35 passengers is destroyed as the result of a bad landing at Bahia Blanca on July 15; there are no fatalities.

While on domestic flights on October 8, a company aircraft and a **Cruzeiro do Sul, S.A.** airliner are both hijacked to Havana. Four armed men capture the Aerolineas Argentinas B-707-387B with 67 passengers during a domestic service from Belem to Manaus.

While on night approach to the airport at La Pampa on November 27, a HS-748-1A with 4 crew and 24 passengers lands 3 km. short of the runway, skids 200 m., strikes a fence, and comes to rest in a wheat paddock; there are no fatalities.

Orders are placed in 1970 for six B-737-287s. An HS-748-1A with 4 crew and 33 passengers suddenly turns over and dives into the ground 35 km. S of Corrientes on February 4 at a speed of 400 km/hr.; there are no survivors.

A man and a pregnant woman force a Comet 4 with 68 passengers and en route from Cordoba to Tucuman, to fly to Cuba on March 24. Technical problems cause a stop at Lima and the flight is not concluded until next day.

En route from Salta to Buenos Aires on July 28, a new B-737-287 with 32 passengers is taken over by a hijacker armed with two pistols, who allows the plane to stop at Cordoba on its way to Cuba to drop off half of the passengers. In the air again, the "Baby Boeing" encounters a snowstorm over the Andes and must return to Cordoba. There the pirate surrenders to police.

An Hs-748-1A is destroyed as the result of a bad landing at Sarmiento, Argentina, on December 19; there are no fatalities.

A new government brings yet another shift in air transport policy in 1971, by which year all of the DC-3s, DC-4s, and DC-6s have been withdrawn. Six more B-737-287Bs are requested. Gen. Roberto M. Levinston, suspected organizer of an ill-fated Argentine coup, hijacks a B-707-387B on October 10 and attempts to force the aircraft crew to fly it to a military base where rebel forces hope to mass in resistance; Levinston never gets off the ground.

Buenos Aires-Lima-Los Angeles flights commence on May 19, 1972. As the B-737-287Bs enter service, the turboprops are retired.

In partnership with **South African Airways (Pty.), Ltd.**, a Rio de Janeiro to Johannesburg weekly roundtrip service begins on November 6.

On December 1, an arrangement is reached between the state carrier and **Austral Airlines (Austral Lineas Aereas, S.A.)** concerning the division and pooling of efforts on the domestic scene.

Again in cooperation with **South African Airways (Pty.), Ltd.**, twice-monthly Rio de Janeiro to Cape Town service is begun on April 2, 1973. On May 6, nonstop flights begin to Miami. Claiming to be a member of the People's Revolutionary Army, B. J. Mazor commandeers a B-737-287B with 74 passengers during a July 4 domestic flight, and orders it to fly to Havana, via Santiago de Chile, Lima, and Panama City. The little Boeing arrives home on July 7. The various stops are made not only for fuel, but to give the Argentine government opportunities (which it will not take) to meet the pirate's demand that it provide \$250,000 to Argentine medical agencies.

En route from Buenos Aires to Salta on October 20, a B-737-287B with 49 passengers is captured by four pirates, who divert it to Cuba, landing first at Yacuiba, Bolivia. Most of the passengers are allowed to deplane at Yacuiba and, after promise of free passage to Cuba, the hijackers free the rest and surrender on October 22.

When Juan Peron returns from exile, the carrier, in December, receives another new management team, with Juan Carlos Pellegrini as director general and Gen. Cesar Murelio Guasco as president. The workforce is now 7,136. Enplanements are up 2% to 1.35 million, but a net loss of \$7.3 million is suffered.

The all-jet fleet achieved in 1974 includes 8 B-707-387Bs, 12 B-737-287Bs, 5 HS 748s, and 3 Fokker F.28-1000s. Orders are now placed for B-747-287Bs. A Jumbojet is leased from **Pan American World Airways (1)** and employed to inaugurate nine-flights-per-week New York to Buenos Aires roundtrip service in late spring, followed by a weekly frequency to Madrid introduced during the summer, as the longest nonstop scheduled service in the world. The total number of trips between New York and the Argentine capital increases from 16- to 19-per-week. Revenue passenger kilometers increase 35.3% and a \$135,000 profit is posted.

In January 1975, orders are placed for two more B-747-287Bs and three more F.28-1000s replace the five HS-748s. Service is started to Caracas in April. A new marketing effort is undertaken, including the introduction of new aircraft livery and cabin interiors and hostess uniforms. Plans are made to introduce another Jumbojet, formerly flown by **Delta Air Lines**, and leased from Boeing.

Domestic and international flights are cancelled on September 1 because of a strike by flight and ground crews. The strike leads to cancellation of plans to charter the ex-**Delta Air Lines** B-747-132, which is sent to **China Airlines, Ltd.** instead.

Just after service is reintroduced, guerrillas hijack a B-737-287B on October 5 en route from Buenos Aires to Corrientes, and fly it first to Formosa, where the passengers are released. The little Boeing is then ordered to a remote airfield at Rafaela, hundreds of miles south of the capital, where the pirates escape.

An F.28-1000 with 4 crew and 56 passengers crashes while on final approach to Concordia on November 15; no fatalities are reported.

An ordered B-747-287B is placed into storage at Seattle for a year.

The workforce in 1976 is 8,219. One more F.28-1000 is placed in service and the first owned B-747-287B is delivered on December 16.

A total of 2,117,000 passengers are carried on the year and the number of freight FTKs flown is 94.61 million.

Jumbojet flights from Buenos Aires to Madrid, Rome, and Frankfurt start on January 5, 1977. A B-707-387B with 61 aboard, stalls at 200-feet just after takeoff from New York (JFK) on January 14; the jetliner is able to recover and does not crash. An additional B-747-287B is received later in the year as orders are placed for B-727-287s, the first of which enters revenue service in December.

Three B-727-287s are received in 1978 (the last in December) as bookings climb to 2,250,000. The fleet in 1979 includes 4 B-747-287Bs, 8 B-707-387B/Cs, 13 B-737-287Bs, and 4 B-727-287s plus 3 F.28-1000s. The three new Jumbojets enter service on January 13 and on October 11 and 26, respectively; one of these machines is the four hundredth Jumbojet delivered.

At New York (JFK) on May 11, flight dispatchers, clerical workers, and passenger service agents, all members of the Transport Workers Union of America, go out on strike. The job action continues until October 5, when it is settled by a mediated agreement.

Passenger boardings for the year jump 24.6% to 3 million.

The company's 30th anniversary is celebrated in 1980. The fleet is increased by the addition of 1 F.28-4000 and 4 B-727-287s. While en route from Mar del Plata to Buenos Aires on June 30, a B-737-287B with 60 passengers is taken over by a lone gunman, who demands a ransom and a flight to Mexico. After the plane lands at its intended destination, the captain is able to talk the perpetrator into surrendering.

In September, a B-747SP-27 is acquired from **Braniff International Airways**. It is followed into service on November 18 by another B-747-287B.

On February 25, 1981, a B-707-387B with 58 passengers narrowly misses hitting one of the towers of the World Trade Center while flying 1,500 feet lower than its assigned altitude toward New York (JFK). Disaster is averted by a quick warning from ATC to the plane's pilot, Capt. Jorge Fernandez.

B-707-387B charter flights across Antarctica from Buenos Aires to Auckland, N.Z. begin in April, followed by regularly scheduled Jumbojet service on September 6. At Auckland, Aerolineas Argentinas passengers are able to connect with **Qantas Airways (Pty.), Ltd.** flights to Sydney.

Having turned to avoid other traffic, an L-749A freighter with 3 crew and 2 passengers strikes the sea while on final approach to St. Thomas on October 26 (3 dead).

Another B-747-287B is, meanwhile, acquired on August 21 and bookings increase to 3.7 million.

Airline employment in 1982 is 9,835 and a seventh B-747-287B is delivered on January 23. Upon the outbreak of the Falklands/Malvinas Islands war in April, the services to New Zealand are suspended and Buenos Aires to London flights are cancelled.

Traffic begins a slide ending with a total for the year of 3,066,000 bookings. A total of 214.85 million FTKs are operated. Despite downturn, the sixth consecutive profitable year is recorded.

The workforce in 1983 is down by only thirteen. The carrier's fortunes change radically as a result of the effects of the Malvinas conflict, indebtedness, runaway national inflation, and the world recession. In July, a Jumbojet is leased to **The Flying Tiger Line**. In December, Dr. Horacio Domingorena becomes chairman with Osvaldo Gimenez as general manager.

Passenger boardings rise 2.8% to 3,150,000 and 162.05 million FTKs are flown. The operating profit of the previous six years turns into a loss of \$74 million.

The employee population is increased 4.9% in 1984 to 10,303 and routes are opened to Panama and Punta Arenas and Antofagasta (Chile). The B-727-287 Bogota route is extended to Miami and one B-747-287C is leased to **The Flying Tiger Line**. On the domestic scene, a second hub is opened 400 miles northwest of Buenos Aires at Cordoba.

A bomb is found aboard a B-747-287B on June 8, just hours before the former president, Isabel Martinez de Peron, is scheduled to board it in Buenos Aires for her return to Spain; Peron departs on a different

aircraft. "Executive-Class" business-class service is introduced in August in the upper deck of its Jumbojets.

Passenger boardings jump 18% to 3,821,000. The operating profit is \$1.6 million, but the net loss is \$71.1 million.

The workforce is cut 0.3% in 1985 to 10,276. One B-707-387C is retired. Although cargo traffic is up 5.8% to 175.2 million FTKs, boardings dip 8.1% to 3,512,000. Revenues jump 32.8% to \$540.7 million and expenses 37.6% to \$558 million; the losses are \$17.2 million (operating) and \$9.7 million (net).

A B-707-387C freighter with 4 crew and 1 passenger, overruns the runway while landing at Buenos Aires on January 27, 1986, and collides with a hill 200 m. beyond it; there are no fatalities.

Ground handling joint ventures are signed with **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)** and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)** in early spring; the former calls for joint operations on the Montevideo-Buenos Aires shuttle.

The carrier suffers a difficult 26-day pilot strike in midyear and, consequently, enplanements slide to 3,391,070. For the year, airline-related activities lose \$126 million, despite \$85 million in government subsidies.

Airline employment in 1987 stands at 10,323. Weekly B-747-287B Buenos Aires to Auckland, N.Z. transpolar flights are resumed on July 18 and, during the fall, two short pilot strikes, totaling 36 hours, advertise a demand for higher wages.

In December, an agreement is signed with the government to reduce the airline's operational shortfall by 50%. International services to Montreal, Panama, and Amsterdam are cancelled.

Passenger boardings for the year climb 13.1% to 3,902,266. On revenues of \$600 million, a total of \$9 million is lost.

Airline employment is increased a slight 0.9% in 1988 to 10,372 and the fleet now includes 1 B-707-387C, 12 B-737s, 7 B-727s, 1 B-747SP-27, 1 F.28-4000, and 3 F.28-1000s. As part of its attempt to play a larger role in the world air transport business, **SAS (Scandinavian Airlines System)** makes an effort in March-April to acquire 49% shareholding in the Argentine flag carrier.

As part of the "pre-contract," the Stockholm-based major and Aerolineas Argentinas agree to conduct a feasibility study while awaiting the approval of the government. In exchange for assuming the airline's debt, Argentina would immediately receive cash for 20% interest, with an option to purchase up to 36% more within three years. SAS would receive seats on the board of directors and, under contract, provide general administrative and operational support.

After landing at Ushuaia following a September 26 service from Rio Grande, a B-737-287 with 6 crew and 56 passengers veers off the runway, ripping off its engines and collapsing its landing gear before sliding down a slope into water 2 m. deep. Although the aircraft is damaged beyond repair, there are no fatalities.

It is announced, also in September, that, since 1986, the company has lost \$1 million to an employee theft ring that has sold B-727/737 spare parts.

In December, President Eduardo Gonzalez del Solar opens talks with **Alitalia, S.p.A.** concerning the possibility of the Italian flag carrier joining the bid of **SAS (Scandinavian Airlines System)** to acquire shareholding; simultaneously, the government submits the Scandinavian proposal to the Argentine congress for approval. Customer bookings decline 4.1% to 3,705,713; however, cargo moves ahead by 2.2% to 185.7 million FTKs.

Company employment is level in 1989. The partnership initiative with the Scandinavians will be derailed by Argentine political events in January; rather than suffer a legislative defeat, the government, in the person of Public Works Minister Rodolfo Terrango, cancels the proposed arrangement.

During the summer, the company begins to significantly increase the amount of third party maintenance work it undertakes for foreign airlines. In August, a second weekly frequency is started from Buenos Aires to New York. The Auckland service is extended to Sydney in September; on return from Australia, the flight path is direct to Buenos Aires.

Later in the month, an operating/marketing and cooperative agreement is signed with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**. Under terms of the pact, the two promise to avoid fare wars, offer to expand the earlier agreement covering each others' ground handling needs in their countries, and to undertake joint flight-service training and market-development activities.

Beginning December 8, the carrier offers six weekly departures each from New York and Miami to Buenos Aires, along with four weekly flights from Los Angeles. The polar service is doubled to two weekly flights as of December 12. The amount of third party maintenance work completed this year increases 26% to \$13.2 million. Among the airline's customers are **Air France, S.A.**; **Austral Airlines (Austral Lineas Aereas, S.A.)**; **Eastern Air Lines**, **Ecuadoriana Airlines, S.A.**; **Swissair, A.G.**; **KLM (Royal Dutch Airlines, N.V.)**; and **Pluna (Primera Uruguayas de Navegacion Aerea, S.A.)**.

Passenger boardings fall another 2.8% to 3,603,401. Freight climbs again, by 7.1%, to 198.89 million FTKs. Revenues total \$719 million.

The number of employees is increased by 3.4% in 1990 to 10,726 and the fleet now includes 34 aircraft.

An F.28-4000 with 5 crew and 85 passengers lands fast on a slick runway at Villa Gesell on January 5 after a service from Buenos Aires; the jetliner overruns the runway by 90 m, ending up in a muddy field. In the process, the nosegear collapses and a part of the wing, together with the right main landing gear, is sheared off; the plane catches fire and is burnt out. No fatalities are reported.

The company's only B-747SP-27 is sold to **Air Mauritius, S.A.** in January and regains the B-747-287C out on lease to **The Flying Tiger Line**.

Plans are made in February for partial privatization and a valuation of assets is set at \$623 million, of which 85% will be sold to private investors, 10% to employees, and 5% will be retained. Scheduled service to London is also resumed during the month; as Argentina and the U.K. still do not have diplomatic relations, the twice-weekly roundtrips are operated under temporary agreements.

On April 30, the company begins receiving privatization bids, promising to name a winner on June 28. In May-June, the country's economic condition forces the company to slash fares on some routes as much as 50%. During the latter month, the Mexican government grants the carrier fifth freedom rights between Lima and Mexico City on its current service from Buenos Aires to Los Angeles and removes equipment and capacity restrictions.

The equity announcement is, however, delayed for two weeks on July 1 as two of the four bidders request additional time to better prepare and present their offers. At this point, groups led by **American Airlines**, **Alitalia, S.p.A.**, and **KLM (Royal Dutch Airlines, N.V.)** withdraw, claiming insufficient time to complete their bids. Just before the winning bid is announced, a federal judge upholds a challenge to the privatization that appears to derail the process; however, the Argentine Supreme Court rules that the sale can go through.

The government agrees on July 19 to sell majority 85% shareholding to a consortium headed by the Spanish airline **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** for an estimated \$260 million in cash and \$2.01 billion in debt paper; a down payment of \$220 million is required. The government retains a 5% interest, 10% are sold to employees, and the other partners are local Argentine businessmen and **Cielos del Sur**, the holding company that oversees **Austral Airlines (Austral Lineas Aereas, S.A.)**. As work begins on the transfer, there are significant changes in the owner's share participation.

First, Credit Suisse pulls out of its pledge to lend the partners \$54 million, reportedly because terms of the loan are not met. Consequently, **Cielos del Sur** is forced to contribute six of its jetliners as collateral in that amount. Control of the financially distressed state carrier is allowed to pass to the Iberian group on November 22.

Amadeo Rivas, an official of **Cielos del Sur**, is named president, with **Aviacion y Comercio, S.A. (Aviaco)** President Manuel Esteve as executive vice president/CEO. Also in November, a comprehensive market-

ing agreement and joint frequent flyer plan is established with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

Customer bookings continue to decline throughout the year, falling 8.2% to 3,306,919, while cargo drops 1.8% to 195.32 million FTKs.

The fleet in 1991 includes 1 each B-707-387B and B-707-321C, 7 B-727-287As, 1 B-727-2M7A, 4 B-737-287s, 5 B-737-287As, 6 B-747-283B/Cs, 1 leased B-747-283B/C, and 3 Fokker F.28-1000s. Orders are placed for 4, later 6, McDonnell Douglas MD-88s. The Spanish-led coalition is unable to pay \$260 million in cash and \$2 billion in foreign-debt paper due in February, having so far retired only 60% of the required foreign debt and put forward no cash. Iberia works throughout the first and second quarters to secure funding to support the takeover.

By May, the carrier has increased its shareholding to 30% by paying the government \$142.5 million in foreign debt title in addition to the funds paid the previous year. In addition, the Spanish group pledges to retire \$800 million in debt title in May and another \$800 million in June; in return for which, the Argentines agree to also turn over 70% majority interest in the domestic carrier **Austral Airlines (Austral Lineas Aereas, S.A.)**.

A joint strategic plan for the two Argentine airlines is designed during the summer. By fall, the shareholders are **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** (30%), Spanish banks (19%), Argentina (43%), and private Argentine investors (8%). Through June, enplanements total 1,389,662. A new arrangement is reached with the Iberian group in August; the formula calls for a reduction in the amount of foreign debt that the Spanish must retire; however, \$171 million is added to AA's balance sheet. The particulars are completed in September.

The employee population in 1992 stands at 7,000 as the first four MD-88s and a leased MD-83 are delivered and the B-707-321C is withdrawn.

A B-747-287B with 336 aboard, comes into Los Angeles on February 20 from Buenos Aires, via Lima, Peru. After arriving, it is found that 65 aboard have cholera, possibly contracted in Peru where it is rampant. One passenger dies and three must be hospitalized as a result of the disease. Accusations as to cause between Argentina and Peru result in the carrier's halting service to Lima between March and May.

During the spring, maintenance problems lead to widespread delays. Statistics are released for the first six months and show passenger boardings up 25.7% to 1,870,339. Freight during the same period declines 14.7% to 80.92 million FTKs.

A major new problem erupts in July when the government and company employees refuse to sign off on the first financial statement presented by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Argentine legislators charge the group with asset stripping, bad management, and fraud, leading police to raid the airline's headquarters in search of incriminating evidence. In an effort to end the controversy, a new shareholding agreement (effective October 1) is signed in August between the Argentine government and the Iberian-led consortium; it includes the reinstatement of 775 redundant employees. The privatization is the first in Argentine history.

While taking off from San Luis on a November 20 service to Cordoba, a tire on the right main landing gear of a B-737-287C with 6 crew and 107 passengers explodes. The pilot elects to abort, but cannot control the aircraft, which runs off the right side of the runway, careens into a ditch, and catches fire. All aboard are safely evacuated; however, the Boeing is burnt out.

Effective by December, the Iberian arrangement calls for the government to increase its shareholding from 5% to 33% by purchasing 28% of the stake held by private Argentine investors.

Widespread industrial disputes occur during December. Pilots refuse to takeoff on several occasions, claiming that proper maintenance has not been performed on their aircraft. Domestic and international flights are both affected.

Revenues for the year as a whole total \$919.2 million, but expenses are more and cause losses: \$33.3 million (operating) and \$190.4 million (net). The political furor caused by the losses continues.

In 1993, President Riva oversees a workforce of 7,000 and a fleet that includes 1 B-707-387B, 7 B-727-287As, 1 B-727-2M7A, 4 B-737-287s, 5 B-737-287As, 1 B-737-387C, 6 B-747-287Bs, 3 F.28-1000s, and 1 MD-83, which is leased to **Austral Airlines (Austral Lineas Aereas, S.A.)**. Three of the Boeing tri-motors are leased from **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

International routes visited from Buenos Aires include: Madrid, Rome, Zurich, Frankfurt, Paris, London, Los Angeles, Mexico City, Miami, New York, Montreal, Toronto, Rio de Janeiro, São Paulo, Montevideo, Caracas, Lima, Santiago, Guayaquil, Bogota, Porto Alegre, Florianopolis, Punta del Este, Auckland, and Sydney. A full network of unprofitable domestic routes is maintained, but consideration is given to dropping the Miami hub. A code-sharing and freight cooperation pact is initiated with **LADECO Chilean Airlines, S.A.** covering the Santiago-Buenos Aires-Miami route.

After leading the company through the troubled **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** takeover, President Riva resigns in May; he is succeeded by local citizen and Iberian appointee Manuel Moran. The Spanish flag carrier also seconds marketing, finance, commercial, and maintenance directors to the company and assists Aerolineas Argentinas to join the Amadeus computer reservation system (CRS). A new strategic plan is developed with special attention paid to route rationalization.

During the summer, the fleet is increased by the addition of 6 MD-88s and 1 B-747-2L5B leased from **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)**. In October, **VIASA (Venezuelan International Airways, S.A.)** becomes the carrier's exclusive general sales agent in Colombia. During the same month, the company completes a \$172-million public offering of 5.21% certificates of participation in its 12-year notes; the sale, guaranteed by the U.S. Export-Import Bank, will be applied to the purchase of new aircraft.

Customer bookings through November are off another 10.9% to 3,056,908, but cargo climbs 8.6% to 159.7 million FTKs. Late in the month, the government rejects an Iberian request for a contribution of \$215 million to a \$500-million capital pool it is assembling for the reinvigoration of the carrier.

Airline employment is boosted 27.1% in 1994 to 8,900, with a total of 38 Iberian managers now working at Aerolineas Argentinas headquarters. Early in January, the Argentine government is approached by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, which seeks a contribution for a \$500 capital injection planned for the revitalization of the airline. Argentine leaders refuse the request, specifying in February that it will, however, allow private and foreign investors to acquire a majority stake in the carrier without altering its flag-carrier status.

The Spanish flag carrier reaches an apparent agreement with Argentina and the Spanish banks in early March, under which the foreign partners unilaterally begin to inject the \$500 million in capital and increase their shareholding to 85%. Further, state-owned capital would be transferred as payment for a \$700-million debt Aerolineas Argentinas owes **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. At the same time, a comprehensive marketing alliance is signed and a joint frequent flyer plan is developed.

Unhappily, the pact appears to unravel when the government grants domestic trunk-route rights to small local carriers, hedging on legal and political guarantees that the state carrier would retain its flag carrier status. Even though the Argentine pilots' union makes a \$110-million pledge to acquire the government's 28% stake, the Madrid-based major rejects the agreement. Meanwhile, **VIASA (Venezuelan International Airways, S.A.)** begins to code-share with the company on the route from Buenos Aires to Caracas.

The company begins to drop the most unprofitable of its local services while arrangements are made with **Delta Air Lines** in the spring to acquire three A310-324s for use on routes to the U.S. The off-again, on-again arrangement with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** is on again twice in April. A lower court challenge to the

first renewed agreement is overturned by a higher court. The second time accord is reached, the deal is enhanced by the abolition, at the request of the Spaniards, of the Argentine Air Force's profitable monopoly on ground-handling at the country's airports.

Traffic is reported through June and shows passenger boardings up 24% to 1,964,695, while freight is ahead by 26.9% to 103.01 million FTKs.

Overhauled by **Air France** at its facility at Paris (ORY), the first A310-324 is delivered in August. In September, Argentina and the U.S. sign a memorandum of consultation ending a capacity and traffic rights disagreement. Under its terms, the company is granted rights into San Juan.

During the month, it also begins flying its A310-324s from nonstop Buenos Aires' Ezeiza Airport to New York (JFK). The 5,000 nm. service is the longest flown by any carrier operating the A310.

In February 1995, a block-space arrangement is reached with **Malaysia Airlines (MAS)** covering flights from Buenos Aires to Kuala Lumpur, Johannesburg, and Cape Town. Enplanements through May total 1,628,598.

In a further effort to win European Union approval for a state bailout, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces, during the last week of November, that it is planning to sell its entire 83% stake in Aerolineas Argentinas. It is hoped that most of the company would be sold to a consortium of American banks; however, any sale would have no effect on the operating and marketing alliances in place between the two national carriers.

In December, twice-weekly, block-seat, code-sharing flights begin with **Ansett Australia (Pty.), Ltd.** on the Australian carrier's trans-Tasman service from Sydney to Auckland aboard an Ansett B-747-377; the flights are planned to connect with the Argentine major's flights to and from Buenos Aires.

The workforce stands at 7,000 in 1996. A contract is entered into with **AV Atlantic** in March. The Argentine major establishes a small hub at Miami (MIA) and the U.S. carrier agrees to base there a B-727-23, painted in modified Aerolineas Argentinas colors, to provide alternate-day connecting flights to New York (JFK), Montreal (YUL), Toronto, Mexico City, Punta Cana, and St. Martin. Flights commence on April 15.

Again, figures are reported for the first five months; during this period, the company's 33 aircraft transport a total of 1,732,551, a 6% increase. Cargo declines 3% as 74.62 million FTKs are operated.

On July 1, a code-sharing agreement is signed with **National Airlines, S.A.** of Chile. Under the pact, passengers will be able to cross the two airlines' networks on one ticket and with just one check-in. Additionally, the companies will jointly promote products and services, institute tariff agreements, cooperate in aircraft maintenance, and begin common catering services.

Later in the year, the company agrees to code-share with **TAM-Mercosur (Transportes Aereos del Mercosur, S.A.)** on TAM's daily Buenos Aires-Asuncion services; 50% of the seats on every flight are reserved for AA.

Revenues this year reach \$1.03 billion, but costs climb to \$1.09 billion. There is an operating loss of \$63.9 million and a net downturn of \$66 million.

The employee population is reduced by 25.9% in 1997 to 5,184. Electronic ticketing is introduced in January in a number of markets served from Buenos Aires. Early in the year, a code-sharing agreement is signed with **Aeroflot Russian International Airlines (ARIA)** covering flights from Buenos Aires to Moscow to Buenos Aires.

Andes Holding, S.A., the parent of **Austral Airlines, S.A.** and Aerolineas Argentinas, which is held by Bankers Trust, Teneo, and Merrill Lynch, announces in February that it will consider offering for sale its total shareholding in both airlines (an 89% stake in the former and a 63.5% stake in the latter). Although no official announcement is made, **VASP Brazilian Airlines (Viacao Aerea São Paulo, S.A.)** quietly places a \$300-million bid.

EU Joint Aviation Authority is received on March 11 to repair at Ezeiza Airport in Argentina the engines and components of European flag airlines. Aerolineas Argentinas becomes the first Latin American based company to provide such services.

A wide-ranging, new strategic partnership between **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and **American Airlines** is tentatively concluded at the end of July. Under its terms, AMR Corp. would acquire a 10% stake in Iberia's owner, SEPI, which also controls Aerolineas Argentinas and **Austral, S.A.** and Andes Holdings, which owns Interinvest, the holding company for the two Argentine airlines. It will also lead an effort to find additional investors who will purchase up to 35% additional Interinvest shareholding from Andes. In addition, Iberia and American will begin to share codes on flights from Spain to the U.S. and link their frequent flyer programs.

In South America, **American Airlines** establishes reciprocal frequent flyer arrangements with both Aerolineas Argentinas and **Austral, S.A.** and code-shares on certain of their internal routes. Meanwhile, the U.S. major's almost-partner **British Airways, Ltd. (2)** and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent-flyer program linkage and code-sharing on routes between Madrid and London.

Significant opposition quickly materializes from **Continental Airlines** and **United Airlines**, which fear not only an AA-BA linkup, but also the potential domination of Latin American routes by the Dallas-based megacARRIER.

"Latin Liberation," an article by John Waggoner, in the online edition of *Air Cargo World*, reports that, in September, the cargo of a company freighter is seized at Ezeiza Airport in Buenos Aires. In something of a mistake, the 85-ton cargo of rifle parts, though legally exported, are pulled over because they are en route from Brazil to Venezuela, via Argentina—a mysterious roundabout trip. The mystery is soon resolved; Aerolineas Argentinas, having won the freight contract over **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, has elected to make a stop in Argentina. Customs officials, however, had not forgotten a similar triangular shipment made the previous year through Venezuela to Ecuador, which was illegal.

Electronic ticketing is further promoted during the fall and is advertised by a B-737-287 that wears the phone number for the service in billboard-sized titles on both sides of its fuselage.

On October 15, ATC in Bariloche mistakenly and simultaneously authorizes a company B-737-287A to land while a USAF C-5 Galaxy, carrying equipment and personnel in support of President Clinton's visit, is taking off. The two jets come within 1,600 feet of colliding.

On November 4, the cargo division of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** deploys four extra freighters to the Netherlands, boosting its total to ten, from Madrid in an effort to defeat the road blockade established by French truckers at the borders. In a normal week, Iberia operates six freighter flights from Madrid to Maastricht Aachen Airport. Two of these are operated by Aerolineas Argentinas and are routed, via Madrid, on to Buenos Aires.

Also in November, the unprofitable Buenos Aires to Los Angeles return service is suspended for 180 days. Aerolineas Argentinas places increased emphasis on its flights to Miami and New York, where its passengers can connect with new partner **American Airlines**. In December, AMR, the parent of **American Airlines**, executes the formal agreements with SEPI and Andes Holdings, subject to approval by the U.S. Justice Department.

Passenger boardings for the year slide 2.4% to 793,000, while cargo climbs 18.4% to 103.77 million FTKs. Revenues total \$998.2 million, but expenses are \$1 billion; consequently, there is an operating loss of \$5.8 million, which is still an improvement on the previous year. Additionally, a small \$2.8-million net profit is earned.

At the beginning of 1998, the fleet includes 32 aircraft, of which 50% are Stage III certified; this number includes 16 B-737, 7 B-747-200s, 2 A310s, and 7 MD-80s.

In January, AMR Corporation, parent of **American Airlines**, signs a final agreement to purchase 8.5% of the Argentine flag line through a 10% buy-in to the holding company Interinvest.

During the first quarter, two B-747-287Bs receive special World Cup decals and the slogan "Aerolineas, Mas Argentina Que Nunca" (Aerolineas, More Argentina Than Ever) printed along the fuselage cheatline.

The company in April negotiates a wide-ranging strategic alliance with **Qantas Airways (Pty.), Ltd.** The pact will include dual-designator flights from South America to Australia.

A new five-year business plan, dependent upon the **American Airlines** stockholding, is unveiled in June. It includes a \$2-billion investment in regional jets and an increase in the number of nonstop frequencies to Europe.

The U.S. Department of Justice (DOJ) clears the AMR investment in Andes Holding on July 8. The flight schedule is altered, also at the beginning of the month, to include new international services. Daily nonstop B-747-287B roundtrips are launched from Buenos Aires to New York. Four weekly direct A310-324 return flights are started from Buenos Aires to Caracas, while three to Caracas, via Bogota, are also launched.

Four-times-a-week roundtrips are resumed from Buenos Aires to Mexico City, while the schedule to Madrid now includes daily service from Buenos Aires, via San Pablo, plus four weekly nonstops to the Spanish capital.

On September 24, it is reported that a shareholder vote to confirm the new ownership structure has been postponed "for administrative reasons" until October 24. At that point, the arrangement receives assent.

AMR completes its purchase of a 10% stake in Interinvest on November 3 and thereby gains 8.5% ownership of Aerolineas Argentinas and 9% of its regional affiliate **Austral Airlines, S.A.** Although U.S. DOJ regulators rule that neither **American Airlines** nor its parent may take any direct control over either carrier, that matter is mooted when Aerolineas Argentinas appoints its new management team.

American's former managing director for Argentina, Diego J. Cousino, becomes CEO, with its former managing director of international planning, C. David Cush, as COO. The two quickly replace most of the carrier's senior management, which had been put in place by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

A \$120-million, ten-year contract for its information technology functions is signed by the airline on November 17 with the SABRE Group. The contract also calls for the SABRE group to provide specialized information technology services to **Austral Airlines, S.A.**

Just before Christmas, an order is placed for 12 Airbus A340s, including six A340-600s for delivery beginning in 2002. Plans are announced for the retirement of the airline's B-747-287Bs over the next four years. A new business plan is unveiled, which will allow Aerolineas Argentinas to fly new routes to Europe, Australia and New Zealand, and provide additional domestic service in the Mercosur region with regional jets.

Passenger boardings during the 12 months drop 2.6% to 4.11 million. On the plus side, freight traffic accelerates 12% to 215.56 million FTKs.

By the beginning of 1999, airline employment has been reduced by 5.2% to 4,913. An MD-88 is damaged beyond repair in a Buenos Aires hangar fire on February 24.

Taking a leaf from the commuter airline book of its U.S. partner, Aerolineas Argentinas sets up its own regional affiliate on March 15. Employing British Aerospace BAe Jetstream 32EPs, the new **AeroVIP, S.A.** launches *Aerolineas Argentina Express* flights from Cordoba.

La Nacion reports on April 21 that the carrier has completed a \$1.7-billion investment in the lease of the 12 A340s and that it has contracted with CTO-Auckland to relaunch the company logo. The Spanish government holding company SEPI (Sociedad Estatal de Participaciones Industriales) continues to seek buyers for the 80% stake in the Interinvest concern Andes Holdings. Airline officials await the \$200-million capital injection slated for June, while making plans to phase down the **Austral Airlines, S.A.** tradename to internal flights.

Xavier de Irala, of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, informs reporters during a May 7 news conference that his company has no objection to the possibility that **LanChile Airlines (Linea Aerea Nacioanl Chile, S.A.)** may purchase a stake in Aerolineas Argentinas or that **American Airlines** may seek to increase its shareholding. Indeed, conversations are underway to determine if collaboration with the Chilean line in this regard might be arranged.

COO Cush reviews future plans in the May 12 issue of *Flight International*. The company will complete a \$200-million recapitalization by the end of the month in order that its parent, Interinvest, can be sold off in June and that Aerolineas Argentinas might merge with its sister, **Austral Airlines, S.A.** in July. There are, apparently, some problems in coming together with the second part of the package and so the amalgamation of the two carriers will be delayed from 60 to 90 days.

On May 19, the Argentine government postpones August talks with the U.S. on a new aviation trade agreement in order to accommodate the schedules of its officials involved. The move disappoints the U.S. Department of State, which lets it be known that the code-sharing pact between Aerolineas Argentinas and **American Airlines** will not be approved without a new liberal aviation agreement.

A pair of leased ex-**Philippine Airlines (PAL)** A340-313s arrive in early June, making Aerolineas Argentinas the first Latin operator of the long-range type. Under terms of a three-way code-sharing agreement signed with Aerolineas and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**, **South African Airways (Pty.), Ltd.** introduces twice-weekly nonstop roundtrips on July 8 between Johannesburg and São Paulo. Also in July, four former **Philippine Airlines** A340-242s are chartered from Airbus Industrie.

A new phased "Open Skies" agreement is signed by Argentina and the U.S. in September. It is clearly noted by the Argentine government that, for it to take effect on schedule a year hence, **American Airlines**, per its original investment agreement, must successfully restructure its 10% ownership of the flag carrier by December 31. No new owners have been found by year's end and ownership remains unchanged. On other matters of reorganization, AA, despite improvements in systems and fleet and the absorption of **Austral Lineas Aereas, S.A.**, has also largely struck out. The concerned new government of Pres. Fernando de la Rúa takes office in December.

Overall, passenger boardings during the 12 months fall 5.1% to 3,979,000 and freight plunges 11.2% to 214,433,000 FTKs. It will be reported that the carrier has lost \$125 million net on a \$1 billion turnover. The company debt now stands at \$874 million.

The thrice-weekly A340-242 roundtrip service between Buenos Aires and Rome is doubled to six weekly return flights on January 2, 2000.

As the result of the failure to locate new investors, SEPI, the Spanish holding company, agrees in February to take over total management of Aerolineas and to continue its funding via the subsidiary Interinvest. Aerolineas arranges to implement a SEPI-created rescue and restructuring plan. Although AMR, like Iberia, will retain its 10% stake, David Cush, the executive seconded to Aerolineas as COO, is replaced by an Argentinian and is now recalled to **American Airlines**, where he becomes VP-int'l planning and alliances.

New Infrastructure Minister Nicolas Gallo announces on February 3 that Argentina will delay implementation of the "Open Skies" pact with the U.S. unless capital restructuring of Aerolineas has been completed. In March-April, the Argentine pilots' union APLA undertakes negotiations with the Inter American Development Plan on its own efforts to secure sufficient funding for a 51% buyout. The organization, meanwhile, voices its strong opposition to any implementation of the "Open Skies" agreement.

On May 15, the Argentine Transport Ministry confirms that 32 company aircraft have been grounded by the courts over unpaid tax bills.

Drafts of the SEPI restructuring plan circulate in Argentina during late May and early June. The document envisions an airline of six divisions controlled by a new holding company, Grupo Aereo Argentino.

Additionally, an RIF of 20%–25% (1,500 jobs) through early and incentive retirements will be required plus 20% wage cuts and a \$650 million injection of new capital: \$240.8 from SEPI, \$32.5 million from the Argentine government, \$65.3 million from company employees, \$55.2 million from **American Airlines**, and \$256.2 million from Merrill Lynch and Bankers Trust.

These measures are widely attacked as “unfair” by the nation’s president, Fernando de la Rúa, other members of his government, and numerous unions (including all seven of the airline groups), who also fault **Iberia Spanish Airlines (2): Lineas Aereas de Espana, S.A.** for earlier alleged mismanagement contributing to the company’s \$900 million debt. SEPI warns on June 26 that, unless the plan is approved, the airline will be bankrupt in a month.

Daily flights between Buenos Aires and Bogota are suspended on July 1.

Despite the spat of negativity, company shareholders approve the SEPI plan at the end of July. Unions, if not pacified, are victorious at the political level when the national Congress legislates a seat for them on the airline’s board of directors.

SEPI agrees on July 31 to loan Aerolineas \$208.5 million to keep it afloat until the airline’s stockholders can meet on September 15.

Employing an A340-242, the company inaugurates new thrice weekly roundtrips on September 2 between Buenos Aires and Los Angeles, via Lima.

Still attempting to save jobs and avoid paycuts, members of the Association of Technical Aeronautical Personnel offer to purchase the airline on September 5.

On October 13, SEPI and the government of Argentina reach an accord on future financing for the carrier and its **Austral Lineas Aereas, S.A.** subsidiary. The Spanish holding company agrees to invest another \$650 million while Argentine authorities pledge to provide whatever amount is required to maintain the nation’s 5% stake. On the other hand, significant additional cost-cutting remains to be implemented and three of the carriers’ six employee unions, fearing job cuts/salary reductions, are already on record as being against the terms of this bailout.

AEROLINEAS ARGENTINAS EXPRESS. *See* **AEROVIP, S.A.**

AEROLINEAS BONANZA, S.A. de C.V. *See* **AEROVIAS CARIBE, S.A. de C.V.**

AEROLINEAS CARGUERAS, S.A.: Aeropuerto Eldorado, Entrada Catam Int 26, Bogota, Colombia; Phone 57 (1) 413-5007; Fax 57 (1) 413-5183; Code VS; Year Founded 1995. **Aerovias Especiales de Carga, S.A.** is renamed in 1995; however, its business continues as before. Under the direction of General Manager Juan C. Ospina, the workforce grows to 20 and the fleet comprises 2 Boeing 727Fs and 1 Convair CV-580.

In 1998–2000, the company undertakes scheduled and ad hoc cargo charters to points around the globe, including Athens, Boston, Hong Kong, Johannesburg, London (LHR and LGW), Los Angeles, Manchester (England), Miami, New York (JFK), Newark (EWR), Orlando, San Francisco, Tokyo, and Washington, D.C. (IAD).

AEROLINEAS CARRERAS TRANSPORTES AEREOS, S.A.: Argentina (1959–1968). Buenos Aires-based Aerolineas Carreras is established by Jose M. Carreras in 1959 to offer nonscheduled, all-cargo services, initially with a single Curtiss C-46 Commando. During the next five years, the fleet is increased by the addition of four more Commandos.

In the fall of 1963, the company is awarded a foreign air operator’s certificate by the U.S. CAB and acquires a Lockheed L-749A Constellation. Beginning in July 1964, the Connie begins scheduled flights to Miami and these are maintained until the four-engine transport is impounded at Montevideo, Uruguay, in April 1967. Curtiss cargo services are maintained until Carreras goes out of business the following year.

AEROLINEAS CENTRALES DE COLOMBIA, S.A. *See* **ACES COLOMBIA (AEROLINEAS CENTRALES DE COLOMBIA, S.A.)**

AEROLINEAS CONDOR, S.A.: Ecuador (1978–1985). This third-level carrier is formed at Simon Bolivar Airport at Guayaquil on January 3, 1978. A year is spent in obtaining sufficient backing and choosing a fleet, which comes to comprise 1 Fokker F.27, 1 Cessna 402, and 1 Cessna 337. Regularly scheduled services are inaugurated on March 12, 1979, linking Guayaquil and Ambato with Loja and also with Quito and Tulcan in the north.

In 1981, a de Havilland Canada DHC-4 Caribou is acquired for contract freight services. Increased fuel prices and the world economic recession when combined with competition by other Ecuadorian airlines leads to several years of economic losses for the carrier; as a result, it is forced to shut down in 1985.

AEROLINEAS CUAHONTE, S.A. de C.V.: Mexico (1992–1995). AC is established at Aeropuerto de Uruapan in 1992 to offer scheduled third-level services to small destinations in Michoacan state. Revenue flights commence and continue with a fleet consisting of 2 Cessna 402s, 1 Cessna 206, and 1 Cessna 210. A Fairchild Swearingen Metro II is acquired in 1993.

While trying to land at Uruapan in bad weather on June 13, 1994, the Metro II with 2 crew and 7 passengers strikes high ground and explodes; there are no survivors.

Unable to maintain viability after the accident, the small operator closes down in 1995.

AEROLINEAS DE LA FRONTERA S.A. de C.V.: Mexico (1961–1968). This small third-level carrier is formed at Ciudad Acuna in 1961 as **Aerovias Hidalgo, S.A. de C.V.** Single-engine service is flown in the states of Hidalgo, Puebla, and Veracruz; the company changes its name about 1963. Operations cease in 1968.

AEROLINEAS DEL ESTE, S.A.: Colombia (1992–1994). ADE is established at Medellin in 1992 to provide nonscheduled passenger and cargo charters throughout the country. Revenue operations commence and continue with five Cessna 206s and a Douglas DC-3. Unable to maintain viability, the company folds two years later.

AEROLINEAS DEL PACIFICO, S.A. de C.V.: Mexico (1962–1985). Founded at La Paz in Baja California, on December 12, 1962, this commuter begins scheduled service with a Douglas DC-3 across the Sea of Cortés to Los Mochis early in 1963. In the mid-1960s, the carrier acquires a second DC-3.

The company is forced by poor financial returns to suspend scheduled service in 1970. During the next eight years, the company is revived and regular flights are now also inaugurated to Chihuahua and Sinaloa.

By 1978, General Manager Casas Bernard’s company employs 30 workers. The economic downturn of the early 1980s and rising fuel bills once again force the airline to drop scheduled operations in 1982; charter and contract service flights are thereafter maintained throughout the nation until operations cease in 1985.

AEROLINEAS ESPECIALES DE COLOMBIA, S.A. *See* **AE COLOMBIA, S.A.**

AEROLINEAS GALAPAGOS, S.A.: P.O. Box 17-01-2444, Quito, Ecuador; Phone 593 (2) 441-950; Fax 593 (2) 430-487; Year Founded 1992. A new entrant, Aerolineas Galapagos or Aerogal, also known to North American passengers as **Galapagos Airlines**, is formed at Quito in late 1992 to provide scheduled passenger and cargo flights to the Galapagos Islands. Carlos Serrano is named general manager and a fleet of 3 Dornier 228-212s is assembled.

Revenue flight operations commence early in 1993 and a pair of Fokker F-27Fs are acquired in 1994–1996.

Following a too fast landing at Chachoan, Ecuador, on October 28, 1997, an FH-227D with eight passengers attempts a go-around, but stalls and flies into a ravine. There are no fatalities.

A replacement Fairchild-Hiller FH-227D is acquired in early 1998. Service is maintained in 1999–2000.

AEROLINEAS INI Y COMPANIA, S.A.: Argentina (1957–1964). A new international airline is founded at Buenos Aires in 1957; prominent Argentine industrialist Jose Ini, after whom the carrier is named, holds 73% majority ownership. After nearly three years of waiting and preparation, during which a fleet of Douglas DC-4s is assembled and American permits are obtained, the carrier is able to start flying to the U.S. To compete with **Pan American-Grace Airways (PANAGRA)** and other carriers scrambling for market share in western South America, it is decided that the operation will feature a deep discount fare structure.

The initial DC-4 service to Miami occurs in January 1960, via Santiago de Chile, Antofagasta, Lima, Guayaquil, and Panama. On July 1, company policy is changed; Aerolineas Ini joins the IATA and begins to honor its code of internationally agreed upon tariffs.

During the summer, the fleet is upgraded by the addition of new DC-6s and in September, the route network is revised: Cordoba is added and Santiago de Chile and Guayaquil are dropped. Services are maintained over the single route through 1963.

Unable to successfully compete with **Aerolineas Argentinas, S.A.**, **Pan American-Grace Airways (PANAGRA)** or other aggressive carriers working a finite market, Aerolineas Ini continues to lose money (\$300,000 in 1963). The company suspends operations during the summer of 1964, turns its Florida route over to the nation's flag line, and on November 23 resigns from IATA and closes down.

AEROLINEAS INTERNACIONALES, S.A. de C.V.: Blvd. Vincente Buerro, No. 46, Col Lomas de la Selva, Cuernavaca, Morelos, 62270, Mexico; Phone 52 (5) 543-1223; Fax 52 (5) 536-1549; <http://www.iwm.com.mx/aerint.html>; Code N2; Year Founded 1994. AI is established at Mexico City in the spring of 1994 to operate regional scheduled passenger service. A pair of B-727-23s formerly operated by **American Airlines** and now painted in a green and silver livery are obtained and flights commence on May 26 linking the company's base with Guadalajara, Tijuana, Hermosillo, and Cuernavaca. Charters are also undertaken to Cancún and Acapulco.

A B-727-223 and 3 B-727-223As are purchased during the fall.

Services continue apace in 1995 and in 1996 a Douglas DC-9-14 is acquired. Destinations visited in 1997–2000 include Acapulco, Cuernavaca, Culiacan, Guadalajara, Hermosillo, Monterrey, Reynosa, and Tijuana.

AEROLINEAS LEON, S.A. See AEROLINEAS REPUBLICA, S.A.

AEROLINEAS LITORAL, S.A. de C.V. See AEROLITORAL (SERVICIOS AEREOS LITORAL, S.A. de C.V.)

AEROLINEAS MEDELLIN, S.A.: Colombia (1976–1979). Gilberto Villa Olarte forms this all-cargo carrier at Medellin in 1976 to take over the failed **Aerotabo (Transportes Aereos de Bolivar, S.A.)**. Three unmodified, ex-military Douglas C-54s are acquired and scheduled services are undertaken linking Medellin with Bogota and other Colombian cities.

The increase in aviation fuel prices and increased competition from larger carriers conspire against Olarte's specialized operation and the carrier stops flying within three years of its startup.

AEROLINEAS MEXICANAS, S.A. de C.V.: Mexico (1955–1960). Following **Aeronaves de Mexico, S.A. de C.V.**'s 1955 integration of **Aerovias Reforma, S.A. de C.V.**, Ruben Ruiz Alcantara, with his fuel bills paid by a \$2,000 investment by U.S. citizens, forms this carrier to

operate Reforma's routes. On May 12, 1956 even before the carrier can fly its first service, **Aeronaves de Mexico, S.A. de C.V.**, at government assistance, purchases majority control of the operation for its low-fare potential.

An immediate loan of 4.5-million pesos is provided, along with ten Aeronaves pilots to fly two ex-Reforma DC-3s now also transferred. During the summer, the initial flights commence to Zihuatanejo and in December, a no-frills, discount frequency is inaugurated from Mexico City, via San Luis Potosi, to the U.S. border town of Piedras Negras.

A DC-4 is acquired in autumn 1957 and on April 28, 1958, it is employed to launch "Fiesta Flight" low fare service directly from the capital city to Matamoros. The fleet is increased to 2 DC-4s and 5 DC-3s in 1959 and in order to concentrate fully on the Matamoros route, Piedras Negras flights are suspended in late 1960. During the summer, the company undertakes a major, 10,000-hour DC-3 overhaul, the first completed in Mexico. In September, **Aeronaves de Mexico, S.A. de C.V.** purchases total control, paying Ruben Alcantara an additional 2-million pesos.

AEROLINEAS MUNDO, S.A. See AMSA (AEROLINEAS MUNDO, S.A.)

AEROLINEAS NACIONALES, S.A.: Costa Rica (1958–1959). Formed in association with the Mexican operator **Tigres Voladores, S.A. de C.V.** in early 1958, AN will operate passenger and cargo services within Costa Rica and throughout the Caribbean for a year with a fleet of 4 Curtiss C-46 Commandoes.

A Curtiss C-46D with two crew is forced down by rebels 35 miles from Havana on March 30; although the aircraft is damaged beyond repair, there are no fatalities.

En route from San Jose on June 1, 1959, a C-46 with 50 passengers is attacked by Nicaraguan Air Force fighters and shot down; there are no survivors. Another C-46A is lost at La Sabena, Costa Rica, on July 10; there are no descriptive details.

When Tigres is shut down later in the year, so too is Aerolineas Nacionales.

AEROLINEAS REGIONAL DE CENTRO, S.A. See ASERCA (AEROLINEAS REGIONAL DE CENTRO, S.A.)

AEROLINEAS REPUBLICA, S.A. de C.V.: Mexico (1980–1985). This third-level carrier is formed as **Aerolineas Leon, S.A. de C.V.** at Mexico City on July 1, 1980. The remainder of the year is taken up with organization and the purchase of a fleet that comprises 2 Convair CV-440s, 1 CV-340, and 1 Cessna 402.

Regularly scheduled commuter flights commence in early 1981 over three routes from the capital city to Morelia-Uruapan-Lazaro Cardenas; Puerto Escondido-Oaxaca; and Saltillo. Charter services are also undertaken.

Orders are placed in 1982 for two Convair CV-580s. Rising fuel costs and weak traffic in a poor economy cause Chairman Arnoldo Murillo's carrier, now renamed Aerolineas Republica, S.A., to deteriorate, both in service and income.

By 1983, the fleet comprises only the 2 CV-440s and the CV-580 order is shelved. Unable to maintain viability in the face of financial losses, the airline shuts its doors in 1985.

AEROLINEAS SUD PACIFICO. See **SERVICIOS AEREOS DE MICHOACAN**

AEROLINEAS TAO, S.A.: Colombia (1962–1974). Taxi Aereo Opita, S.A. is reformed at Neiva in 1962 and renamed. It begins scheduled lightplane passenger and cargo revenue services to domestic destinations. Flights commence with several ex-military Douglas C-47Ds, roughly converted to DC-3 civil standard.

A C-47D with 5 crew and 25 passengers crashes near Boqueron, Colombia, on November 8, 1965; there are no survivors.

Unheralded flight operations continue until 1968 when the company introduces a pair of Vickers Viscount 785D turboprops, retired by **Alitalia, S.p.A.** the previous year. Two more Dash-785Ds arrive from Italy in 1969, but one is held out of service for spare parts.

Following a nonfatal 1971 accident, a new wing is fitted to the damaged Viscount.

On July 18, 1972, Flight 511, a Viscount 785D with 51 passengers en route from San Andres Island to Bogota via Cartagena, is nearly destroyed when a berserk passenger storms into the cockpit and shoots both the pilot and copilot. Although the gunman is overpowered by other crew members and passengers, the captain is killed. Bleeding badly, the first pilot is able to make a safe emergency landing at the intermediate stop, where the assailant is handed over to police.

En route from Neiva to Bogota on August 25, one of the British-built turboprops with 30 passengers is commandeered by four gunmen, who order it flown to Cuba.

A Vickers Viscount 785D is destroyed as the result of a bad landing at Bogota on June 7, 1973; there are no fatalities.

Following the in-flight detachment of the left tailplane and elevator, Flight 514, another Viscount 785D with 6 crew and 38 passengers en route from Bucaramanga to Cucuta on June 8, 1974, crashes at Monte San Isidoro; there are no survivors.

The company is shut down and the two surviving Vickers are placed into storage at Bogota.

An attempt is made to relaunch the carrier in 1975–1976, but is unsuccessful.

AEROLINEAS URUGUAYAS, S.A.: Aeropuerto Internacional de Carrasco, Terminal de Carga, Of 1, Canelones, Uruguay; Phone 598 (2) 614 833; Fax 598 (2) 202 298; Code AUO; Year Founded 1990. Set up at Montevideo in 1990, AU inaugurates scheduled, third-level passenger and cargo services to various Uruguayan destinations as well as those across the Rio de la Plata in Argentina. Long-haul freight charters and contract services are also flown, including a regular, but non-scheduled, all-cargo flight from its Montevideo base to Miami, via Asuncion with a single B-707-331C.

The Stratofreighter operates a number of flights between Montevideo and Frankfurt in 1991 under contract to **Lufthansa Cargo Airlines, Ltd.** The Florida route is suspended in 1992 in light of poor financial return.

In 1993, the fleet of President Roberto Meyer's airline comprises 1 Fokker F-27J Friendship and 1 Boeing 707-331C. One Fairchild Hiller FH-227B is acquired in 1994. Business begins to improve late in the 1994.

As the world airline economy improves in 1995, the carrier is given an oral exemption by the Uruguayan government and is allowed to renew its expired long-haul certificate. Irregular frequencies to Asuncion and Miami resume and additional ad hoc charters are also undertaken. Operations continue apace during the remainder of the decade.

AEROLINEAS VEGAS, S.A. de C.V.: Mexico (1952–1969). Gustavo Rodriguez Vega forms a nonscheduled carrier at Puebla in 1952 and receives the multistop route concession from that town to the Pacific coast once held by **LAGOSA (Lineas Aereas Guerrero-Oaxaca, S.A. de C.V.)**. In 1953, a scheduled passenger route is also obtained allowing service from Acapulco to Oaxaca. All of these services are flown by unconverted ex-military C-39s (DC-2s) and C-47s (DC-3s).

The Oaxaca route is extended to Puebla in 1955 and with Acapulco forms a triangle that is now marketed as an "El Suriano" ("The Man from the South") frequency.

During the late 1950's, the Acapulco route is extended down to Merida and most of the former **LAGOSA (Lineas Aereas Guerrero-Oaxaca, S.A. de C.V.)** stops (long nicknamed "the chicken route") are dropped. The Vegas operation continues with little change through the 1960s.

State-owned **Aeronaves de Mexico, S.A. de C.V.** forms an affiliate, "Aeronaves Alimentadoras" ("Feeder Airline"), in 1968 to take charge of Mexico's third-level airline situation. Unable to compete, an unwilling Gustavo Vega sells his carrier to the government in the spring of 1969.

AEROLINEE ITAVIA, S.p.A.: Italy (1958–1981). Formed at Rome in April 1958, this carrier inaugurates services in July 1959. Flights are suspended in 1961, but are resumed in May 1962 following company reorganization. Aldo Davenzani becomes major shareholder in 1965 and assumes the role of both chairman and president.

Scheduled passenger services are continued throughout the remainder of the decade and through the 1970s. Destinations visited from Rome and Bologna in 1978–1979 include Crotone, Milan, Turin, Catania, Palermo, Treviso, Cagliari, Pisa, Bergamo, and Lamezia. Additionally, Milan is linked with Ancona and Pescara.

Passenger and cargo charters are also flown and come to account for a third of the carrier's business. The Aerolinee Itavia fleet comprises 1 Douglas DC-9-50, 2 DC-9-10s, 5 Fokker F.28s, and 1 Cessna 402. Rising expenses (led by increased fuel prices) and world recession, lead to the company's failure in 1981.

AEROLIT AIR COMPANY (AEROLIT AVIAKOMPANIYA): Russia (1993–1995). Aerolit is founded at St. Petersburg in 1993 to offer general charter cargo services. V. M. Kostylev is named general director and he begins revenue operations with a fleet of 5 Antonov An-32s. Two An-32s are withdrawn in 1994 and operations cease in 1995.

AEROLITORAL (SERVICIOS AEROS LITORAL, S.A. de C.V.): Carretera Miguel Aleman Km 22, 8, Apodaca (Nuevo Leon), 66600, Mexico; Phone 52 (83) 861 584; Fax 52 (83) 386 2235; http://www.aerolitoral.com; Code 2Z; Year Founded 1989. Filipo D'Plana founds **Aerolineas Litoral (Servicios Aereos Litoral S.A. de C.V.)**, better known as Litoral, at Santo Domingo in the Dominican Republic in August 1989. Although company headquarters are on the island, the fleet, which comes to comprise 1 Curtiss C-46 Commando and 2 Lockheed L-1049G freighters, is based at Vera Cruz, Mexico. All-cargo flights are now undertaken to Nuevo Laredo, Tampico, Minatitlan, and Villahermosa.

Company headquarters are moved to Vera Cruz in early 1990 from where Litoral flies forth to provide regional services with a fleet of 4 NAMC YS-11As. On December 1, the company is purchased from D'Plana by **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and becomes the subsidiary **Aerolitoral, S.A. de C.V.** Juan A. Gonzales is named president.

During the first full year of passenger service, the company transports a total of 61,601 passengers and earns revenues of \$4.88 million. An \$859,441 operating profit is generated.

Airline employment is decreased 23.3% in 1991 to 92. The Curtiss and Lockheed freighters are sold and replaced with a fleet of 10 Fairchild Metro IIIs and, for cargo, 1 of the Nihon YS-11Aa. Aeromexico (2) purchases majority interest in April and, using the major's flight numbers, its only commuter inaugurates regional services early in the year from Monterrey–Tampico, Tampico–Vera Cruz, Vera Cruz–Minatitlan/Posa Rica, Minatitlan–Villahermosa, and Villahermosa–Ciudad del Carmen. During the remainder of the year, orders are placed, via the new parent, for 18 Metro 23s.

In 1992–1993, services are started from Monterrey to Aguascalientes, Leon, San Antonio, and Torrejon. Although two more Japanese-made

Nihons are purchased, they are later taken out of service. During **1994**, President Gonzalez's fleet includes 10 Metroliners, 1 Metro 23, and 3 YS-11As and airline employment stands at 130.

Flights continue in **1995–1996**. Enplanements in the latter year total 750,000. During the summer of **1997**, six SAAB 340Bs are ordered. The first two are delivered in mid-December. Passenger boardings increase to 793,000.

The four additional SAAB 340Bs are added in **1998**. In October, daily roundtrip service is inaugurated from Chihuahua to Dallas (DFW) in Texas.

Also during the fourth quarter, a new collective bargaining agreement is successfully negotiated with the carrier's pilots.

During early **1999**, the company, now one of Mexico's largest regional carriers, expands its coverage to Mexican resorts by operating from Guadalajara to Acapulco and from Leon and Aguascalientes to Puerto Vallarta. In addition, a second daily roundtrip is launched from Chihuahua to Dallas (DFW).

The airline's president, Carlos Trevino, is on hand on July 20 when daily flights are inaugurated from Dallas (DFW) to Piedras Negras, with continuing service to Torreon.

Another SAAB 340B is added to the fleet during the first quarter of **2000**. Three Metros are withdrawn.

AEROLLOYD IGUASSU, S.A.: Brazil (1933–1939). The German-oriented firm of Mate Leao founds this small subsidiary at the Parana state capital of Curitiba in early **1933**. After obtaining two Klemm Kl-31As, the company receives its government permit on June 30 and almost a month later, on July 20, inaugurates four-times-per-week flights to São Paulo. A Klemm is lost in a December crash.

Three Stinson SR Reliants are now obtained from the U.S. and route expansion occurs into the state of Santa Catarina, first to Joinville in **1934** and then Florianopolis in **1935**.

The early third-level operation is never economically viable and, as a result, it is sold to **VASP Brazilian Airlines (Viacao Aerea São Paulo, S.A.)** on October 28, **1939**.

AEROLOT, S.A.: Poland (1925–1929). On May 9, **1925**, local Polish interests purchase control of the Warsaw-based **Aero Lloyd Warschau, S.A.**, a Junkers affiliate formed in 1922. Employing 14 F-13s purchased by the predecessor organization, the new owners, officially known as Polska Linia Aerolot, S.A., having reformed their prize, maintains the previous routes, while adding additional domestic stops.

In **1927**, a Junkers G-23W floatplane is acquired and used to launch Puch to Copenhagen flights. Simultaneously, a new route is begun from Warsaw to Vienna, via either Krakow or Katowice. Pilots strike for higher wages on July 4, **1928**. On January 1, **1929**, the government takes control of Aerolot and its rival, **Aero T.Z., S.A.**, and consolidates them into the state carrier **LOT Polish Airlines, S.A.**

AEROLYON, S.A.: BP 138, Lyon-Satolas, Lyon, F-69124, France; Phone 33 (4) 722 27300; Fax 33 (4) 722 27310; Code 4Q; Year Founded 1996. Aerolyon is founded by Nouvelles Frontiers in the late fall of **1996** to offer scheduled long-haul passenger services. Chicon is named managing director and is provided with a workforce of 110 and a Douglas DC-10-30. In alliance with **Corsair, S.A.**, the aircraft launches return service on December 13 from Lyon, Marseilles, Nantes, and Toulouse to Pointe-a-Pitre, in the French West Indies, and St. Denis de la Reunion.

During **1997–1999** a second DC-10-30 is also employed. A total of 200,000 passengers are carried in the latter year.

AEROMAR AIRLINES (TRANSPORTES AEROMAR, S.A. de C.V.): Terminal de Aviacion General, Hangar 7, Zona "E", Col Federal, Mexico DF, 15620, Mexico; Phone 52 (5) 627 0205; Fax 52 (5) 758 1303; <http://www.aeromar-air.com>; Code VW; Year Founded 1987. This third-level independent carrier is formed by a group of private investors at Toluca Airport, west of Mexico City, in January **1987**.

The Grupo Aeromar, S.A. de C.V. holding company includes as its major shareholders Dr. Zvi Katz Kenner, Marcos Katz Halpern, seven members of the Autrey-Maza family, and Asistencia Empresarial Especializada, S.A., a subsidiary of the nation's largest television company, Televisa. Juan Ignacio Steta is general director.

An Avions de Transport Regional ATR42-320 is leased and a code-sharing arrangement is negotiated with **Aeromexico (1) (Aeronaves de Mexico, S.A. de C.V.)**. Scheduled passenger/cargo revenue flights commence in November from Toluca (45 miles west of Mexico City) to Acapulco.

When Aeromexico (1) goes bankrupt in April **1988** and ceases operations temporarily, the national government requests Aeromar to step in and keep up regional flights under its new integrated air service program, "Esquema Rector del Sistema Nacional de Transporte Aereo." The base of operations is transferred to Mexico City, two more ATR42-320s are acquired, and flights commence from Mexico City to Ciudad Victoria, Colimas, Lazaro Gardenas, Morelia, Poza Rica, Salinas Cruz, and Urvapan.

In February **1989**, the Ministry of Communications and Transportation allows the carrier to increase its fares, which, like those offered by other regionals, has been kept artificially low since startup of the new federal air service program. In April, the company moves its maintenance facility to Mexico City from Toluca.

Operations continue apace in **1990**, the year in which the Mexican airline industry is deregulated. Although many cut-rate competitors spring up, they quickly fail for lack of capitalization or poor service.

In April **1991**, the company's route network is restructured to concentrate on a network of "hub and spoke" routes from Mexico City. The fleet now includes 5 ATR42-320s, 1 of which is leased to **Trans States Airlines** in the U.S. The company in August becomes only the third Mexican airline, after the nation's two majors, to obtain a repair station certificate from the U.S. FAA. In September, a second hub is established at Guadalajara.

A code-sharing agreement is signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** in April **1992**. International service begins in December with the inauguration of scheduled roundtrips from San Luis Potosi to San Antonio, Texas. By **1993**, airline employment is 300 and President Juan Ignacio Steta's fleet has been increased by the addition of another ATR42-320; two earlier machines are leased out to **Executive Air Charter**. A code-sharing pact is signed with **Mexicana Airlines, S.A. de C.V.** in July.

In **1994**, the company becomes a launch customer for the ATR42-500, ordering two, with three options. In addition, two more ATR42-320s are leased from **TAT European Airlines, S.A.** A code-sharing agreement is reached with **United Airlines** in June, linking the American major's flights from Chicago and Denver with Aeromar's route from San Antonio to San Luis Potosi.

The regional becomes the American major's General Sales Agent (GSA) in central and northern Mexico, with new joint-sales offices opened at San Luis Potosi and Monterrey. In December, the Mexican peso is devalued; Aeromar is able to absorb losses and continue to build market share.

In January **1995**, company management institutes a new cost-cutting plan. At the same time, new routes are started from Mexico City to Huatulco and Manzanillo.

The economic crisis set off by the peso devaluation deepens in March as load factors plunge to just 30%. Rather than lay off employees under a plan that would see up to half the staff laid off, the company is able to convince its workers to accept a plan to take 20% pay cuts.

Meanwhile, flights are suspended on three unprofitable routes. In August, the financial picture brightens as one ATR is sold and leased back, thereby generating additional operating cash. Two ATR42-520s are delivered in November and the dual-designator pact with **United Airlines** is expanded to cover the regional's entire Mexican network.

As a result of a significant come-back during the second half of the year, all staff are returned to full salary at the end of December and even given a 10% bonus.

Enplanements total 290,034.

The workforce is increased by 3.8% in **1996** to 545 and the fleet now includes 6 ATR42-320s and 2 ATR42-520s. The latter enter service during the first quarter as new or expanded services are introduced. Twice-weekly flights commence from Puerto Vallarta to San Antonio, while five-times-per-week frequencies begin to the Alamo from Guadalajara and service to San Antonio from Monterrey becomes daily. A connection via Mexico City is dropped on one new daily direct service from Monterrey to Puebla.

Customer bookings soar 22.4% to 373,754 and revenues reach \$36.26. With expenses of \$30.82 million, there is an operating gain of \$5.44 million.

The company celebrates its tenth anniversary throughout **1997**. The fleet is increased by the addition of 2 ATR42-310s. At the end of the year, a \$90-million order is placed for 2 additional ATR42-520s, with options taken on 4 more. Plans are announced for the initiation of four-times-per-day roundtrips from Mexico City to Puebla. Enplanements total 452,364.

Flights continue apace in **1998**. Customer boardings accelerate 10% to 506,000.

The ATR42-520s are delivered during the first half of **1999**. The new aircraft are employed during the summer to launch the first-ever daily roundtrips to San Cristobal de las Casas, in the mountains of the southern state of Chiapas. On September 1, service begins to Zacatecas, followed by Comitán at year's end.

Passenger bookings accelerate 8.6% to 549,000 while cargo traffic jumps 11.4% to 904,000 FTKs.

Airline employment stands at 700 at the beginning of **2000**, a 14.8% increase during the previous 12 months.

Negotiations are undertaken with Ernesto Martens during the summer and, by early September, agreement has nearly been reached under which the Autrey family would sell a 10%–20% stake for a figure in excess of \$12 million.

AEROMAR INTERNATIONAL, C. por A.: Virgilio Diaz Ordóñez No. 7, Urbanización Fernandez, Aeropuerto Internacional Las Américas, Santo Domingo, Dominican Republic; Code BQ; Year Founded 1962. Raymundo Polanco at Santo Domingo establishes Aeromar in **1962** as an airfreight forwarder and all-cargo carrier. Revenue flights to Miami, San Juan, and St. Thomas commence with a fleet which, by **1968**, comprises 9 Curtiss C-46 Commandos. Although the Curtiss fleet shrinks to 4 by **1972**, it is increased to 6 by **1973**.

While climbing away from the Dominican Republic on April 25, a C-46 with four crew loses its right engine and ditches into the Bay of Boca; although the aircraft sinks, there are no fatalities.

Unable to earn profits in face of the world energy crisis, the company suspends operations in **1974**.

The company is revitalized during the late **1970s** and equipped with a fleet comprising 2 Douglas DC-8-54Fs, 1 DC-8-33F, and 2 Boeing 720s. In addition to charter and contract service flights, the company undertakes scheduled freight flights from the capital's international airport to Port au Prince, Haiti, Miami, and New York.

In **1983**, the airline seeks permission of the American government to launch scheduled passenger and cargo flights to its U.S. destinations. Unable to realize this goal, the airline operation is liquidated in the midst of political difficulties in **1987**. Airfreight forwarding activities are, however, maintained.

Although consideration is given to the reestablishment of flight operations in the early **1990s**, these plans evaporate in **1993** when the U.S. FAA bans all airlines of the Dominican Republic from landing in the U.S. due to safety concerns. Thereafter, Aeromar contracts its services with other cargo airlines, including the Miami-based **Fine Air**. By the middle of the decade, the company, under President Jaime Polanco, has become the largest airfreight forwarder located between the Dominican Republic and the U.S.

Under contract to Aeromar and en route to Santo Domingo with 40 tons of fabric for Dockers and Slates brand men's pants, Flight

101A, a **Fine Air** DC-8-61 with three crew and a security guard on board, crashes just after takeoff into an empty lot a quarter of a mile W of Miami (MIA) on August 7, **1997**. Wreckage smashes into a warehouse and retail complex; there are no survivors. In addition, a motorist, Renato Alvarez, is killed.

On August 14, the *Miami Herald* runs an exposé in which several former Aeromar employees complain that Aeromar workers had routinely overloaded or incorrectly loaded Fine's airplanes, while former Fine workers claim that airline keeps two sets of books and prepares false manifests. Both companies deny the charges.

NTSB investigators will focus their probe of the crash on the manner in which Aeromar employees loaded and secured the 16 cargo pallets placed aboard the aircraft.

Enplanements for the year total 452,364.

Employing a fleet of B-727-200As, Aeromar inaugurates scheduled passenger services in **1998** from Santo Domingo to Miami. The number of passenger flights per week reaches 11 by fall, together with seven cargo services.

In September, Hurricane Georges devastates the Dominican Republic and other points in the Caribbean. Aeromar quickly becomes an active participant in the Dominican relief effort, carrying tons of supplies to residents of the stricken nation.

Famed Seattle Mariners shortstop and Dominican resident Alex Rodriguez headlines a special Flight 201 for relief donors from Miami to Santo Domingo on December 12. Personnel riding the charity flight will also attend the "Dominican Republic Hurricane Relief Concert starring Gloria Estefan."

Passenger boardings accelerate 10.1% to 506,000. Freight traffic jumps 12.1% to 81.09 million FTKs.

Airline employment at the beginning of **1999** stands at 610.

As a result of its involvement in the 1997 crash of a **Fine Air Services** DC-8 at Miami, Aeromar is linked with the U.S. carrier in filed lawsuits pursued during the year. During the legal proceedings that follow, prosecutors point out that Aeromar, a company half owned by Fine, is no longer a real airline because it has no employees, and conducts no day-to-day business. Fine, it is charged, charters its own aircraft and flight crews to its own partnership.

On March 27, **2000**, Aeromar and Fine accept a guilty plea agreement to five charges of obstruction in connection with the disaster. Fine and Aeromar are the first airlines to be tried and convicted of criminal charges stemming from a fatal air crash.

The two are collectively fined \$5 million, \$1.5 million of which will be paid by Aeromar; despite earlier history, Aeromar is prohibited from calling itself an airline.

On April 17, **Allegro Air: Lineas Aereas de Allegro, S.A. de C.V.** begins flying one of its recently hushkitted all-white Boeing 727-200As from Santo Domingo to Miami on behalf of Aeromar. Under court requirement, the carrier erases its titles from the leased Allegro Air trijet on June 12; the Aeromar logo is left on the plane's tail.

With approval from the U.S. Attorney's office in Miami, Aeromar and Fine install compliance officers in August to monitor a court-mandated safety program.

AEROMARINE AIRWAYS: United States (1920–1924). Having established his Aeromarine Plane & Motor Corporation at Raritan Bay, Keyport, New Jersey, to build USN training planes during World War I, New York Cadillac dealer Inglis M. Uppercue is hard pressed to find business for his 16-building factory after the November 1918 Armistice. Convinced that a major commercial market for civilian aircraft can be developed, Uppercue, in late 1919, begins to convert surplus Felixstowe/Curtiss F-5L flying boats into Curtiss Type 75 Aeromarine Cruisers, the nation's first production passenger planes or "flying limousines."

Unable to find airline customers for his aircraft during a time of recession, Uppercue forms a subsidiary air transport division, the Aeromarine Sightseeing & Navigation Company, in the spring of **1920**, to offer demonstrations. The first aircraft is christened *Santa Maria* at the

Columbia Yacht Club by New Jersey's Governor Edward I. Edwards on June 22; it is rumored that the executive uses a bottle of real champagne for the ceremony, an illegal commodity under Prohibition. Those aircraft that Uppercue will employ in his commercial operations will be painted white with black markings; later, all will have their tails finished in black and gives the planes their collective nickname of "the black-tailed fleet."

During the summer, the Type 75-equipped charter operator provides nonscheduled, but regular, services between New York City and the holiday destinations of Newport, Southampton, and Atlantic City. In October, Aeromarine purchases financially distressed **Florida West Indies Airways** of Key West, holder of the nation's premier foreign airmail contract (FAM-1).

The new subsidiary division is named Aeromarine West Indies Airways; Inglis Uppercue is chairman with Albert Tilt named president. Plans are made to honor the U.S. Post Office's original route concession. A pair of Type 75s, the *Santa Marine* and the *Pinta*, are dispatched from New York to Key West on October 23. These begin twice-daily return mail flights, timed to coincide with train arrivals and departures, to Havana on November 1. Among the pilots is former naval aviator Edwin C. Musick, who will later gain fame with **Pan American Airways (PAA)**. The flyers hold their own inaugural ceremony before departure, breaking small bottles (of spirits?) held against the bows with small hammers in order not to damage the fragile wooden hulls.

This service, which requires 2.5 hrs. flying time each way, is initially offered for a six-month period. During this time, the carrier is renamed Aeromarine Airways and Charles F. Redden is named president. Four more Type 75s, including the *Columbus*, *Nina*, *Mendoza*, and *Ponce de Leon*, join the two already committed; however, the *Nina* is torn loose from her moorings during a Havana storm and destroyed. She will be replaced by the *Balboa*. In an unsuccessful communications experiment designed to get around the problem of not carrying heavy and unreliable radios, carrier pidgeons are released from in-flight aircraft; most do not reach their destinations.

Charters are flown to a variety of local destinations, including the British island of Bimini, West Palm Beach, and Miami. Many of these are covert rum-running liquor flights organized by pilot Musick and company mechanic Johnny Donohue. In the half-year, a total of 1,100 passengers (at \$75 per head) and 171-plus tons of mail are carried.

On May 1, 1921, at the close of the winter tourist season, Aeromarine concludes its Florida operations, drops the second part of its name to become simply Aeromarine Airways, returns its mail contract, and places four aircraft into storage until next season. One, the *Santa Maria*, flown by Capt. Musick, undertakes a sensational 7,000-mile, multistop demonstration flight beginning on May 9 from Key West to New York and on to Toronto, Buffalo, Detroit, Chicago, New Orleans, and back to Key West, plus a variety of stops in between. Demonstration flights are provided at each stop; at Chicago, Musick's ship participates in the city's Pageant of Progress. Passengers, while flying 2,000 feet above the Windy City, are able to view the silent film *Howdy Chicago!* Meanwhile, newly converted Curtiss HS-2Ls become available and are placed into service flying charters from New York to Atlantic City and New England destinations.

A second promotional tour is undertaken, beginning on July 7, by Durston G. Richardson in the HS-2L *Biltmore*. Departing New York north along the Hudson River, he flies a 7,490-mile, 102-hour (flying time) Great Lakes circumnavigation, landing along the way at over 100 stops bordering Lakes George, Champlain, Ontario, Erie, Huron, and Michigan. His tour completed without incident, Richardson arrives back at New York City on September 21, where he receives the Glidden Trophy for establishing a new distance record for seaplanes. Meanwhile, Capt. Musick, flying in the New York-New Jersey area, recruits his friend Bert R. J. "Fish" Hassell to join him in secret night rum-running flights.

In his autobiography, *Fish Hassell: A Viking with Wings* (Bend, Ore.: Maverick Publications, 1987), the recruit admits his pleasure that "Aeromarine and Musick wanted a good pilot for the job."

Next day, the Aeromarine Type 75 *Santa Maria* inaugurates semi-monthly, two-day *High-Ball Express* flights from New York to Havana via Atlantic City, Beaufort, South Carolina, Miami, and Key West; the 19-hr., \$250 service covers 1,521 miles. At the close of the summer season on October 27, which also marks the end of the first year's service, Aeromarine officials report that company aircraft have flown over 95,000 miles in 12 months, carrying 6,814 passengers without injury.

In late October, the Type 75 and HS-2L fleet is reassembled in south Florida for a second tourist season, flying from Miami and Key West. The service is offered bimonthly on an irregular basis. Regularly scheduled daily Key West-Havana and Miami-Nassau services—the former over the still-subsidized route pioneered by **Florida-West Indies Airways**—are initiated on November 1. The former route covers 105 miles one way and requires two hours plus a tariff of \$50 per head (a \$25 tariff reduction from the previous season); the latter is a new service, flown over 185 miles in three hours at \$85 per person or \$150 roundtrip. The company's advertising reads: "Breakfast in Miami, Lunch in Nassau, and Dinner at Miami—All in the Same Day." Charters and covert rum-running flights are again undertaken. When the winter season ends on May 1, 1922, company books show that a total of 2,399 passengers have been carried in 755 flights.

Prior to the start of the 1922 summer season, the airline is divided into three geographically based divisions. The Southern Division is charged with providing transport to Havana, Bimini, and Nassau, plus charters. Following the conclusion of the tourist season on May 1, the Southern Division goes into hiatus while its carrier's Type 75s are transferred to Cleveland, where a new Great Lakes Division is established.

The New York or Eastern Division will undertake the regularly scheduled services to Atlantic City and those down to Florida during the winter tourist season, as well as flights into New England and various charter operations. A carnival and air show is staged at New York City to inaugurate this year's summer season. Local and foreign civil and military dignitaries are on hand to witness the cruiser *Mendoza* make a record-breaking (if entirely unsafe) flight during which 27 passengers are flown aboard the 14-seat seaplane. In early June, two-day "HighBall Express" flights commence from Manhattan to Havana, via intermediate stops. Through September, the New York unit makes 807 flights and hauls 2,380 customers.

Beginning on June 17 from the Cleveland lakefront, the Curtisses of the Great Lakes Division undertake "90 Minute Line" roundtrip flights across Lake Erie to Detroit. The service nickname is chosen as a reflection of the 90 minutes required to transverse the unsubsidized 95 miles between cities, each passenger paying \$25 one way. The daily offering proves so successful that a second daily frequency is laid on. Charters are also undertaken and, upon demand, flights are occasionally arranged from New York to Detroit, via Albany, Montreal, Buffalo, and Cleveland. The most noteworthy of these occurs on August 22 when the new cruiser *Buckeye*, piloted by Capt. Musick, transports a Ford Model-T automobile to Cleveland from the "Motor City."

In the three inaugural months of operation ending on September 17, the Ohio-based unit carries 1,839 passengers and 2,574 pounds of freight, including the car. The initial work of the Great Lakes Division is completed on October 1, at which point it becomes inactive and its aircraft are transferred down to Florida, from whence winter offshore flights are resumed under jurisdiction of the Southern Division.

Having obtained a renewal of the Key West-Havana mail contract, operations by the Florida unit resume in an atmosphere of optimism. In November, President Uppercue is able to announce that his pioneer carrier has transported a total of 20,000 passengers since its startup without a single mishap. Bookings continue to be successfully recruited through the Christmas-New Year's season. Disaster strikes in early 1923. On January 13, the Type 75 *Columbus* is forced down by engine failure 20 miles from Havana. Four of the seven passengers awaiting rescue atop the hull, including two children, are swept overboard by high waves and lost. Later in the month, a severe storm pounds Havana harbor, sinking the Type 75 *Ponce de Leon*. Neither

flying boat is replaced as costs rise above traffic or subsidy-generated income. Adverse publicity hurts bookings.

Owner Uppercue continues to support Aeromarine Airways and the Eastern and Great Lakes Divisions reopen summer services. Traffic figures in the east are weak and the New York Division is closed down in mid-July. The Great Lakes operation proves quite popular with passengers however, and it is retained; a total of 5,000 customers are safely flown by the time that unit stops operating in the fall. Still, the airline is financially draining upon its manufacturing parent, which has failed to neither sell a single converted flying boat nor receive significant business from the government. Unable to accept additional losses, the Southern and Eastern Divisions cease operations in December.

On January 17, 1924, Aeromarine Airways is sold for an undisclosed amount to the Florida Railroad and Steamship Company, owned by Barron G. Collier and Associates. An effort is made to relaunch the enterprise; new capital is found and the company name is changed to Aeromarine Airways Corporation of New Jersey. Planned well before the takeover, the new owners enjoy the positive press generated by the *Morro Castle II*, the first metal-hulled flying boat designed and built in the U.S. In what will be remembered as the first practical passenger-carrying commercial flight between the U.S. and Puerto Rico, the all-metal flying boat departs New York for San Juan on January 16. It arrives at San Juan on March 4 via the "Highball Express" route, extended from Florida with stops in Cuba and Santo Domingo. During the remainder of March, the *Morro Castle II* retraces its stops back to New York.

Meanwhile, no sustained passenger service results from the Collier acquisition and, without warning, airmail subsidies are withdrawn by both the U.S. and Cuban governments. The pioneer's story ends on May 1 with the final scheduled flight from Miami to Nassau. Over 30,000 passengers have been flown over a million passenger-miles with only one fatal accident in three-and-a-half years and, for awhile at least, Aeromarine is the largest civil flying boat operator in the world. Interestingly enough, its pilots may also have been among the best anywhere: if any of them involved in the illegal rum-running activities had been caught, the entire company might have been forfeit.

AEROMARITIME, S.A.: France (1935–1944). With the purpose of providing air transport between West Africa and Equatorial Africa, the shipping concern Compagnie des Chargeurs Reunis, S.A. organizes this carrier in spring 1935. Francis Fabre is named chairman of the new airline.

On July 7, a Caudron Pelican is employed to inaugurate service over a route between Cotonou (Dahomey) and the Niger Territory town of Niamey. As soon as two Caudron Goelands become available, they replace the Pelican. In need of amphibious aircraft, an order is sent to the U.S. for three Sikorsky S-43s.

The premier Sikorsky is sent crated to Marseilles by ship, arriving on July 8, 1936. It is assembled at the southern French city, tested, and then flown down to Dakar. Entering service in late December, it inaugurates same-day, 650-km. roundtrip service from Dakar to Conakry. Two additional S-43s are ordered at year's end.

The Cotonou leg is stretched to Dakar on March 1, 1937, via Konakry, Monrovia, and Abidjan. On May 17, with the second two Sikorsky S-43s on hand, the Dakar stop is stretched down to Pointe Noire with stops en route at Takoradi, Douala, and Libreville.

The fourth Sikorsky is delivered in December.

The last S-43 arrives in March 1939. In September, the Governor of Sierra Leone arranges for the carrier to fly mail from Freetown to Dakar for movement on to Europe via **Air France**. The beginning of World War II effectively ends the company's pioneering work.

On February 24, 1944, the Free French government's **Reseau Aerien Militaire Francais** and **Lignes Aeriens Militaires** are joined with Aeromaritime and placed under the centralized authority of **Directions des Transports Aeriens**. The West African operator will not reemerge as an independent.

AEROMARITIME INTERNATIONAL (COMPAGNIE AEROMARITIME D'AFFRETEMENT, S.A.): France (1966–1991). Aeromaritime is organized in 1966 as a subsidiary of **UTA French Airlines, S.A.** to operate passenger and charter flights. Revenue services commence in 1967 employing Douglas DC-6s, DC-8s, and Sud-Est SE-210 Caravelles leased from the parent.

In January 1971, Aeromaritime obtains a contract with the European Airbus consortium to operate its two Aero Spacelines AS-201 Super Guppys (converted outsized Boeing 377 Stratocruisers) in the transport of A300B and Concorde components between various assembly plants.

Services continue over the next seven years and in 1978, President Antonie Veil's company employs ten workers. In 1980–1986, a total of four Super Guppys are offering "Airbus Skylink" flights between factories in France, West Germany, Spain, and the U.K. Plans are now made for the eventual operation of regular passenger group charters.

Late in the 1980s, the company begins to emphasize and undertake passenger charters and inclusive-tour flights to European destinations, many on behalf of Nouvelles Frontiers. As a result, the company begins to assemble its own fleet and in 1988, it comprises 6 Boeing 737-300s, 1 B-747-200, 2 B-767-200ERs, and 1 Douglas DC-10-30. Operations begin to Reunion and the Antilles during the year and enplanements reach 334,000.

Operations continue apace in 1989–1990 and the fleet includes 6 Boeing 737-300s, 1 B-737-400, 1 B-747-200, 1 B-747-300, and 2 B-767-200ERs. A total of 431 employees work at President M. Boutbien's carrier. Unable to maintain viability, the carrier ceases operations in 1991.

AEROMAS, S.A.: Belgium (1946–1949). Aeromas is established in 1946 at Leopoldville in the Congo as a subsidiary of the Belgian owned trucking company Messageries Automobiles du Sankuru, S.A. Non-scheduled revenue services are provided throughout the colony over the next three years with a fleet of 3 Caudron C-440 Goelands and 2 de Havilland DH 82 Tiger Moths.

When **Sabena Belgian World Airlines, S.A.** is, by government decree, given exclusive rights to operate all services to and within the Congo on April 6, 1949, MAS grounds its aerial division.

AEROMAYA, S.A. de C.V.: Mexico (1966–1969). In September 1966, the Mexican government authorizes Fernando Barbachano's **Aero Safari, S.A. de C.V.** and Manuel Gomez Mendez's **Servicio Aereo Gomez Mendez, S.A. de C.V.** to interchange services and equipment at Tuxpan. Finding themselves compatible, the two owners fly to London, conduct negotiations, and on November 1 announce the amalgamation of their two airlines into one, Aeromaya, S.A.

The two partners serve as co-general managers, with Gomez Mendez concentrating on operations and Barbachano dealing with promotions, finance, and government relations; the combined company boasts a fleet of 4 Douglas DC-3s and 2 Hawker Siddeley HS 748s. On December 12, HS 748 service is inaugurated, via Tuxpan, from Mexico City to Merida. DC-3 Mexico City–Guanajuato–Guadalajara flights commence on December 20.

Barbachano and Gomez Mendez negotiate a route exchange with state-owned **Aeronaves de Mexico, S.A. de C.V.** CEO Jorge Perez y Bouras in May 1967. As a result, Aeromaya obtains access to Acapulco in exchange for its route into Merida. On June 1, the company is struck by its unions in a job action that will last four months.

Despite this setback, the process of building a trunk line continues in 1968 as Barbachano and Gomez Mendez attempt to peel concessions away from Mexicana Airlines and other independent carriers. During the year, the company is incorporated; however, the state airline now forms "Aeronaves Alimentadoras" ("Feeder Airline") to break the upstart.

On October 6, an armed woman with two children in tow hijacks an HS 748 with 17 aboard during a domestic flight from the island of Cozumel to Merida, and forces it to fly to Cuba; the plane returns later in the day.

Early in 1969, the entire company route network west of Mexico City (excepting the single Mexico City–Tuxpan service) is suspended as traf-

fic downturns and financial difficulties begin to pile up. Aeromaya ceases flying on May 10 and enters receivership; its aircraft are all grounded by government order. Aeronaves Alimentadoras and another **Aeronaves de Mexico, S.A. de C.V.** associate, **SAE (Servicios Aereos Especiales, S.A. de C.V.)**, now carve up the former competitor's concessions.

AEROMECH AIRLINES: United States (1964–1983). Having operated a small FBO at Morgantown Airport since 1947, Angelo C. Koukoulis moves his family to Clarksburg, West Virginia, in 1951 to open a larger aviation enterprise, Aeromech. Aside from aircraft services, sales, and flight training, charter and air taxi flights become an important segment of his business. Koukoulis acquires a Cessna 310 in 1959 to service local corporate airlift requirements. In 1964, when the runway at Clarksburg Airport is temporarily closed for repairs (thereby forcing curtailment of flights by the larger planes of **Lake Central Airlines**), Aeromech provides regularly scheduled Cessna service to Pittsburgh, Pa. Three years later, in 1968, with **Lake Central Airlines** failing to meet community air transport needs, Koukoulis resumes full-scale regular, albeit nonscheduled, service.

Aeromech Airlines, as the company flight division becomes known, joins the Allegheny Commuter network in November 1971, simultaneously receiving the first of six Beech 99s it will acquire over the next half-dozen years. Scheduled passenger and freight services are now provided not only to and from Pittsburgh, but to Morgantown, Charleston, Parkersburg, and Elkins, West Virginia, plus Washington, D.C. (DCA). Operations continue apace in 1972–1973 and by 1974 enplanements are 89,380.

Airline employment is 75 in 1975 and the fleet now includes 4 Beech 99s. The carrier is awarded the U.S. mail contract for the Charleston–Pittsburgh via Parkersburg/Clarksburg route. New corporate identification is now unveiled, including a new logo, and increased advertising and marketing activities are begun. During the year, Aeromech enters into a unique degree-granting cooperative aviation program with nearby Salem College.

Passenger boardings jump 18% to 109,000.

The workforce is increased 18% in 1976 to 99. Scheduled service is launched from Beckley and Bluefield, West Virginia, to Pittsburgh, via Clarksburg and Morgantown. A truck fleet is acquired as supplement to the carrier's airfreight business. A new flight dispatch department is created and a computerized reservation system is installed. Customer bookings accelerate 7% to 116,540 and cargo is up by 24% to 1.94 million FTKs.

By 1977, the company's fleet has grown to 5 Beech 99s and Akron-Canton has been added to the route network. Carriage of the 500,000th passenger (cumulative) is celebrated in June.

Enplanements this year total 136,354.

The number of employees is increased by 20.4% in 1978 to 130.

Following passage of the Airline Deregulation Act in 1978, the privately held commuter, like many other small regionals, embarks on an ambitious, often hectic, expansion program designed to fill service gaps and take advantage of opportunities created by the federal legislation.

Sizeable increases in schedule frequencies to the company's nine markets are ordered as Aeromech replaces Allegheny on the Clarksburg–Morgantown–Washington route. The sixth Beech 99 is acquired as are two de Havilland Canada DHC-6 Twin Otters. Passenger bookings accelerate 6.8% to 145,648, as the 750,000 customer (cumulative) is enplaned. Freight traffic grows faster, rising 30% to 790,000 FTKs.

When Allegheny withdraws from Morgantown and Clarksburg in 1979, Aeromech becomes the sole scheduled airline to connect those two stations with Pittsburgh. Orders are placed for six British Aerospace BAe Jetstream 31s (which will not be delivered) and a novel self-ticketing facility is opened at Greater Pittsburgh Airport.

Traffic this year rises 9.5% to 159,000 and further plans are made to modernize the fleet.

The year 1980 is a banner one for the Clarksburg-based small regional as it departs from the Allegheny system, electing to fly under its own name as an independent operator. Withdrawal from the commuter pact

means that Aeromech is formed to provide all of the services formerly delivered by the union, including reservations, market planning, station handling, and accounting.

The Koukoulis family airline becomes the tenth tenant carrier at Greater Pittsburgh Airport and inaugurates operations on the following routes: Akron/Canton–Pittsburgh; Parkersburg/Marietta–Pittsburgh; and Bluefield/Princeton, West Virginia–Roanoke. Airline employment reaches 190. As far as many are concerned, however, the highlight of the year is in the area of fleet replacement.

After beginning the disposal of its Beech 99s and having leased its Twin Otters to **Air Illinois**, Aeromech, with certain inducements from the manufacturer, becomes the American launch customer for the new 19-passenger Brazilian commuter, the Embraer EMB-110P1 Bandeirante, five of which are initially placed on the line. Author Smith and Gary S. McAllister of the Salem College Aviation program are among those given complimentary introductory flights aboard the new turboprops.

Passenger boardings jump 16% to 185,585 and the company transports its one-millionth passenger; cargo is off by 34% to 495,638 pounds.

In 1981, the workforce grows to 240 and five more Bandeirantes are delivered to Koukoulis, who also places orders for six successor aircraft, the EMB-120 Brasilia. Three new cities—Columbus, Ohio, Greensboro, North Carolina, and Huntington, West Virginia—are added to the route system. Unhappily, the PATCO air traffic controllers' strike has a dramatic and negative impact on Aeromech as the FAA curbs traffic into Pittsburgh and Washington (two of Aeromech's most vital destinations) during the fall and causes costly restrictions on company operations. Despite cash flow problems, overall passenger traffic for the year on 71 daily flights increases 3% to 191,148; freight climbs 5.7% to 524,000 pounds.

The Brasilia order is cancelled in 1982 as the problems of 1981 force the carrier to stand pat with its fleet of 10 EMB-110Ps and 5 Beech 99s. Seemingly undismayed, management boosts the payroll 15% to 238 employees and launches services on four new routes: Akron/Canton–Columbus; Cincinnati–Pittsburgh; Harrisburg–Pittsburgh; and Baltimore (BWI)–Pittsburgh.

Passenger traffic at 191,964 passengers boarded remains virtually level (0.4% gain); however, cargo accelerates a welcome 25.6% to 658,000 pounds.

Aeromech never fully recovers from the effects of the 1981 PATCO job action and despite its route expansions in that year and in 1982, costs rise and traffic falls off. During the first nine months of 1983, Angelo Koukoulis seeks ways to save his life's work while sadly watching passenger boardings fall off 15% to 125,223. Finally, on October 1, it is announced that the Mountain State's only indigenous scheduled carrier will merge with Cleveland-based **Wright Airlines** to create a 21-city route system across eight states.

At this point, a number of pilots must find other positions. Among them is Capt. Stuart Updike Jr., who, in August 1997, will receive the Airline Pilot Association's Presidential Citation for Outstanding Service.

AEROMEGA, LTD.: Hangar One, Stapleford Aerodrome, Stapleford Tawney, Essex, England, RM4 1RL, United Kingdom; Phone 1708-688361; Fax 1708-688566; Year Founded 1979. Aeromega is set up at Stapleford in 1979 to provide passenger taxi/charter flights, aerial surveying and photography, and maintenance/overhaul.

By 2000, Managing Director Christopher D. Pemberton oversees a workforce and his company generates £1.9 million annually. The fleet includes 4 Aerospatiale AS-355Fs, 1 Bell 206B JetRanger, and 3 Bell 206L LongRangers.

AEROMEXEXPRESS, S.A. de C.V.: Ave Texcoco s/n, Esq. Tahel, Mexico City, DF, 15620, Mexico; Phone 52 (5) 237 0266; Fax 52 (5) 237 0232; Code QQ; Year Founded 1994. Established on January 13, 1994 as the cargo subsidiary of **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, this autonomous airline begins operations on June 9, employing one each leased Boeing 727-2K5F and B-727-2Q6F. Javier

Elizalde Valdez is named president and general manager and he will recruit a workforce that reaches 1,195.

Operations continue apace over many of the parent's routes without change in **1995–1996**. During these years, however, the company opens its own cargo terminal and warehouses, as well as four branch offices in Mexico City. Directly or indirectly, it comes to provide services from 40 terminals in Mexico, 19 in the U.S., 2 in Europe, 3 in Central America, and 10 in South America.

During takeoff from Dallas-Fort Worth International Airport on March 10, **1997** on a flight to Mexico City, the carrier's B-727-2K5F loses its No. 3 main wheel; the plane makes a safe emergency landing back at its point of origin and none of the four crewmen aboard are injured.

In September, labor problems with the company's Mexican pilots for a curtailment in cargo flights to all five U.S. destinations, as well as many Latin points.

Service is resumed in early February **1998**. The company begins to rebuild its U.S. presence, flying first to Los Angeles and then to Miami, Chicago, and Dallas. During the third quarter, B-727F all-cargo flights between Mexico City and Dallas (DFW) are doubled to twice weekly.

During the year, the company opens new destinations in the Far East and becomes the main carrier of asparagus from Peru to the Orient.

Flights continue in **1999–2000**.

AEROMEXICO (1) (AERONAVES DE MEXICO, S.A. de C.V.): Mexico (1972–1988). On January 1, **1972**, *Aeronaves de Mexico, S.A. de C.V.* adopts the new marketing name Aeromexico and introduces new red and black aircraft livery. The fleet at this point comprises 2 leased Douglas DC-8-63s, 4 DC-8-51s, 10 DC-9-10s, 5 Hawker Siddeley HS 748s, and 8 de Havilland Canada DHC-6s. Airline employment stands at 4,326.

During the year, impressive per diem aircraft utilization figures are recorded: 12.25 hrs. for the DC-8-63s; 10.23 hrs. for the DC-8-51s, and 9.44 hrs. for the DC-9-10s. Although orders are placed for two DC-10-30s in June, the government temporarily blocks the requisition. Passenger boardings rise 19.64% to 1,844,000, and freight traffic increases 23.46%.

The employee population in **1973** numbers 4,975. The DC-10-30 orders are allowed, as well as requests for DC-9-30s. In the spring, HS 748/DHC-6 service is begun to the Cancún/Ixtapa resort areas.

On initial approach to Puerto Vallarta from Houston on June 20, a DC-9-15 with 5 crew and 22 passengers crashes 32 km. SE of the runway; there are no survivors.

A total of 1,941,072 passengers are carried on the year while cargo traffic is level.

The employee population in **1974** is 4,975. The first DC-9-30 is received in February and begins service on March 1. On April 1, the first DC-10-30 is delivered; christened *Ciudad de Mexico*, it begins service on the Mexico City–Madrid route on May 1. The second DC-10-30 also arrives and is placed on the Acapulco/Mexico City to New York run on June 1.

Passenger boardings increase 25.8% to 2,616,000, while freight is up a slight 1.9%.

The fleet in **1975** now includes 2 DC-10-30s, 2 DC-8-63s, 5 DC-8-51s, 6 DC-9-30s, 10 DC-9-10s, 8 DHC-6s, and 3 HS 748s. In August, DC-9-10s replace HS 748s/DHC-6s in providing service from Miami, Houston, and Mexico City to Cancún and Ixtapa. In September, during a Mexican government protest against the excesses of the tottering Franco regime in Spain, Madrid service is suspended. The Philadelphia stop is withdrawn from the New York route late in the year. Passenger bookings advance 23.6% to 3,233,775, while cargo climbs 28.9%.

The workforce in **1976** is now 6,613. One additional DC-9-30 is delivered as an order is placed for another DC-10-30. A route is started to Buenos Aires, via Bogota/Lima, and service is resumed to Madrid.

A DC-9-15 overruns the runway after landing at Leon, Mexico, on September 2; no injuries are reported.

Freight is up 10.7% and passenger traffic climbs 13%, resulting in the carriage of 3,652,819 passengers.

Following the change in national government, Pedro Vasquez Colmenareas in January **1977** succeeds Raymundo Cano as director general. As an economy measure, the DC-10-30 is withdrawn from the New York service and is placed, instead, on the Mexico City to Guadalajara/Tijuana routes; the wide-body is replaced on June 24 by DC-8-51s offering "Margarita Service." DC-9-10 service is launched in July to San Jose del Cabo/Manzanillo in Baja California as one additional DC-9-30 joins the fleet.

A strike by airline ground workers halts services on November 7 and, as a result, bookings fall to 3,566,230.

Airline employment is reduced 2.5% in **1978** to 6,503. Unduplicated route mileage is now 55,071. The fleet now includes 2 DC-10-30s, 5 DC-9-51s, 7 DC-9-30s, and 9 DC-9-10/15s.

While en route from Torreon to Mexico City on May 16, a DC-9-10 is subjected to a rather weak hijacking effort. Two men hand a stewardess a note claiming that they have explosives and are demanding "social justice" for themselves. When the jetliner lands at its destination, police are called aboard and the men accompany them off the plane without incident.

During the summer, the DC-10-30 is restored to the New York route; European frequencies are increased to five-per-week, but the Buenos Aires route is withdrawn.

Passenger enplanements increase 11% to 4,007,000, while freight climbs 19.7%.

Ship One, the first DC-8-21, is leased from F.B. Ayer in March **1979**. On September 24, orders are placed for two DC-10-15s. On Christmas Day, the first nonstop direct service is inaugurated from Mexico City/Guadalajara to Los Angeles. A DC-10-30 and its occupants are lost in a crash at Luxembourg on November 11. Passenger boardings jump 15% to 4,607,183, and cargo drops 1.2%.

Airline employment is reduced by 1.7% in **1980** to 6,656. On January 2, special three-month extra-low fares are initiated on the new Los Angeles direct route. Nominated as a candidate for governor of the State of Oaxaca, Director General Colmenareas is now succeeded by Enrique M. Loaeza Tovar. Orders are placed for 8 DC-9-80s.

Freight rebounds, up 3%, while passenger bookings accelerate 12.1% to 5,168,968. Profits are reported: \$26 million (operating) and \$21.4 million (net).

The fleet is increased in **1981** through the addition of 2 DC-10-15s and 3 DC-9-80s. A DC-9-32 with 6 crew and 60 passengers makes a hard landing at Chihuahua on July 27, bounces up and then strikes the ground, breaking the fuselage, which catches on fire (30 dead).

Due to decompression, a DC-9-32 with 6 crew and 18 passengers is forced to make an emergency descent over Sierra de Guerro on November 8 and crashes into a mountain slope near Mexico City; there are no survivors.

Maintenance bases are decentralized during the year. Passenger boardings grow 7.2% to 5,538,514, but cargo dips 3.1% to 57 million FTKs. Total revenues are up 12.5% to \$443 million, but expenses, especially fuel costs, jump 19.8% to \$440.5 million; the operating profit is down to \$2.5 million and a net loss of \$25 million is suffered.

As the world and national recession deepens and brings inflation and peso devaluation, the outgoing Lopez Portillo government in **1982** attempts to nationalize the competing *Mexicana Airlines, S.A. de C.V.* After taking 54% of its stock, on July 29 it appoints Aeromexico President Tovar as director general of a combined carrier. Integration and coordination proves extremely difficult.

The new Miguel de la Madrid government scraps the merger plan in December and Tovar returns to Aeromexico. One more DC-9-80 is placed in service during the year and the Ayer-leased DC-8-21 is withdrawn.

Freight is off 8.7% and enplanements are down to 5,455,584. Both operating and net losses are reported.

The employee population in **1983** is reduced 0.9% to 10,703. On-board services are improved and first-class service is introduced on international flights.

En route from Mexico City to Miami via Merida on June 24, a DC-9-30 with 60 passengers is subjected to a takeover attempt by an assailant

demanding a flight to Havana. While the Douglas is on the ground refueling at Merida, a police officer disguised as a mechanic is able to gain access to the aircraft and captures the pirate.

Passenger boardings climb 8.8% to 5,981,957, but cargo declines another 1.3% to 50.8 million FTKs. On revenues of \$276 million, an operating profit of \$20.4 million is reported; however, a net \$18-million loss is taken. The first Aeromexico will never again have a profitable year.

The workforce is increased 4.9% in 1984 to 10,803. The fleet now comprises 3 DC-10-30s, 2 DC-10-15s, 5 DC-8-51s, 7 DC-9-80s, 17 DC-9-30s, and 8 DC-9-10s.

While on approach to Los Angeles (LAX) on January 10, a DC-9-30 with 32 passengers encounters wake turbulence from a **Trans World Airlines (TWA)** Lockheed L-1011 TriStar 1 which is six miles ahead; four Aeromexico passengers receive minor injuries.

While en route from Mexico City to Miami on July 24, a DC-8-51 with 144 passengers encounters clear air turbulence at a point 50 miles W of Key West; nine persons are injured, one seriously.

Passenger boardings rise 3.6% to 6,194,900 and freight soars 29.7% to 70.95 million FTKs.

Airline employment in 1985 stands at 11,578, a 1% dip. The last ordered DC-9-80s are placed in service. Cargo climbs 24.4% to 88.29 million FTKs and passenger boardings increase 7.2% to 6,644,000.

The payroll grows by 7% in 1986 as the carrier adds three DC-8-62s and retires a DC-9-51. Orders remain outstanding for two McDonnell Douglas MD-82s. Service is started to Atlanta and Montreal during the spring-summer.

While on initial approach to Los Angeles (LAX) from Tijuana on August 31, Flight 498, a DC-9-32 with 6 crew and 58 passengers collides with a Piper Archer with three aboard. In addition to the 67 deaths on the two aircraft, another 12 people are killed when the airliner plunges into a quiet residential neighborhood, destroying ten houses and damaging seven more. The disaster is reviewed by Peter Garrison in his "L.A. Danger Zone: Was the Collision between the Archer and DC-9 Inevitable?" in *Flying*, CXIII (November 1986), 90-94.

Customer bookings for the year fall 8.9% to 6,053,000 and freight declines by 17.5% to 72.89 million FTKs. Revenues are \$241.12 million, costs are \$275.38 million, and the operating loss is \$34.26 million. The net loss is even worse: \$38.1 million. The employee population continues to rise in 1987, by 7.2% to 12,524. Fleet modernization continues as 1 DC-8-51 is withdrawn and plans are made to dispose of the 3 remaining DC-8-51s and 8 DC-9-15s.

Passengers aboard a DC-10-30, en route from Mexico City to New York on January 23, but which cannot land because of snow, unsuccessfully insist on being allowed to remain in the U.S. when the plane makes a refueling stop in Houston en route back to the Mexican capital.

A number of longstanding, but unprofitable, routes are closed, including those to Panama City, Caracas, and Bogota. Severe currency fluctuations continue to have a significant impact and plans are made to sell eight DC-9-15s and five DC-8-51s and dismiss 165 pilots.

Passenger boardings drop again, down 4.1% to 5,802,939, but cargo rallies, and moves ahead by 5.7% to 77 million FTKs. Revenues advance to \$274.7 million, but expenses are again high and there are losses: \$7.37 million (operating) and \$47.7 million (net).

En route from Tijuana to Mexico City on January 4, 1988, Flight 179, a DC-9-32 with 119 passengers is taken over by a lone assailant claiming to have explosives and demanding to be flown to Brownsville, Texas. The man surrenders as the aircraft refuels at Monterrey; he will commit suicide while in police custody.

The fiscal situation at Aeromexico is critical during the first quarter. The pilots' union, ASPA, makes an unsuccessful bid to purchase 100% shareholding, but receives no response from the government. SNTTAM, the union for the ground workers, at first proposes to work overtime at no pay if the aircraft are not sold; however, the airline proceeds with its plans.

With Mexican law prohibiting a company from selling its assets during a strike, SNTTAM begins a job action on April 12. Three days later, the carrier declares bankruptcy, a state confirmed by a judge on April 18. The government orders the airline closed. The company will be re-

formed by bureaucratic action in the fall and renamed **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**.

AEROMEXICO (2) (AEROVIAS DE MEXICO, S.A. de C.V.): Paseo de la Reforma 445, Col Cuauhtemac, Mexico City, DF 06500, Mexico; Phone (52-5) 327-4000; <http://www.wotw.com/aeromexico>; <http://www.imparcial.com.mx/publicidad/aeromex/aeromexico.htm>; Code AM; Year Founded 1988. Following a four-day strike by ground personnel in mid-April 1988, the "old" **Aeromexico (1) (Aeronaves de Mexico, S.A. de C.V.)**, shuts down and declares bankruptcy. The government orders it closed in May. In the fall, after several months planning, a "new" Aeromexico (2), Aerovias de Mexico, S.A. de C.V., is born of bureaucratic action. Ownership of this holding company, with the privatized Aeromexico the principal subsidiary, is divided between Icaro Transportes Group (55%), the Mexican ALPA (25%), and the Banconer Bank (20%), which together invest some \$193.8 million.

All but 424 pilots from the previous entity are rehired (two dozen of those fired are able to sign on with **Singapore Airlines, Ltd.**); however, only 3,600 employees (a small percentage of the previous total) are reemployed. Services are resumed on October 1 over former routes to 31 Mexican and U.S. destinations, with an all-McDonnell Douglas fleet of 15 DC-9-32s, 8 MD-82s, 3 DC-10-30s, and 2 DC-10-15s. All of these aircraft are purchased from the assets of the previous Aeromexico, which are then sold and chartered back from a leasing firm. A total of 876,437 passengers and 915,000 FTKs of freight are flown during the fourth quarter.

Company employment grows 24.6% in 1989 to 4,683 and 3 MD-88s join the fleet. Made possible by a recent \$3.5-billion U.S. government loan, the government of Mexico allows 65% privatization; the shareholding being taken by a consortium of Mexican companies. Services are inaugurated to Madrid and Paris, thrice weekly, via Miami. A third DC-10-30 arrives in November and, in December, a DC-9-82 arriving at Los Angeles is the first jetliner to publicly display the company's new red and dark blue livery.

Passenger boardings skyrocket to 4,348,318 and freight climbs to 6.14 million FTKs. Revenues total \$366 million and costs allow an operating profit of \$4.6 million and net gain of \$2.6 million.

The employee population is increased by 18% in 1990 to 5,524 as, in March, a contract is signed with Polaris for the ten-year lease of up to ten MD-88s, the first five of which soon enter service. Also in March, 50% shareholding is acquired in the telecommunications company, SERTEL. A contract is signed with IBM for an upgrade of the carrier's CRS while a technical support agreement is signed with **Deutsche Lufthansa, A.G.** By fall, a total of 140 flights are made each day. On December 1, the Vera Cruz-based regional **Aerolineas Litoral, S.A. de C.V.** is purchased and moved to Monterrey to feed the major from American destinations under the name **Aerolitoral (Servicios Aereos Litoral, S.A. de C.V.)**. On behalf of its new subsidiary, Aeromexico (2) orders nine Fairchild Metro IIIs.

Meanwhile, the year's customer bookings jump 26% to 5,478,604 and cargo climbs an almost unbelievable 368.8% to 28.91 million FTKs. Revenues ascend 46% to \$567.5 million, but expenses are higher. As a result, there is an operating loss of \$1.9 million and net gain slides to \$800,000.

The payroll grows 17.4% in 1991 to 6,484 and the leased fleet now includes 2 B-767-284ERs, 2 B-767-283ERs, 15 DC-9-32s, 10 each MD-82s and MD-88s, 2 DC-10-15s, and 4 DC-10-30s.

In February, a \$100-million order is placed with Fairchild for 27 Metro IIIs and Metro 23s to be delivered through 1993. Upon receipt, they will be turned over to **Aerolitoral (Servicios Aereos Litoral, S.A. de C.V.)**. In March, a \$1.2 billion order is placed for ten B-757s and eight B-767s, the first Boeing order received from the carrier.

The last of ten MD-88s is delivered in June. The government deregulates the Mexican airline industry in July, a move that allows the carrier to initiate services to Rome, Frankfurt, Tampico, and Veracruz.

In August, daily nonstop flights begin from Mexico City and Cancún to New Orleans. A frequency is stretched from New Orleans in October to Merida, in the Yucatan.

Impressive figures are reported in November: a dispatch rate of 97%, a 60% increase in sales, and departures of 220 flights each day, 60 out of Mexico City. Passenger boardings ascend 13.6% to a record 6,225,481 while freight skyrockets 99.9% to 57.79 million FTKs. Revenues climb 21.1% to \$690.6 million, but expenses are higher and the operating loss is \$500,000. There is a \$1-million net profit.

The employee population is increased a slight 0.2% in 1992 to 6,500 as the number of MD-82s grows to 12, plus the addition of two each MD-83s and MD-87s, one DC-9-32, two DC-9-31s, and one B-767-3Y0ER. On June 1, the carrier enters into a code-sharing agreement with Phoenix-based **America West Airlines**. The pact will permit frequent flyer partnerships between the two airlines and code-sharing on the route from Mexico City to Phoenix.

A cost-cutting program is announced in September; designed to save \$3 million, it aims to reduce fuel, leasing, labor, and maintenance costs. Simultaneously, plans are noted for an expansion of charter flights into the U.S. and Canada and a lease is signed with ILFC for the charter of six B-757s, beginning the next spring. The parent Aerovias de Mexico holding company establishes Universidad de Aerovias, a corporate university; the first of its kind in Latin America, it provides training for airline and travel agency personnel.

Customer bookings jump 15.3% to 7,177,021 while cargo rises an equal 15% to 66.47 million FTKs. Revenues jump 22.5% to \$1.02 billion; however, expenses force an \$18.5-million operating loss. A net loss of \$52.3 million, the first since the 1988 rebirth, is attributed to a capacity glut. Parent Aeronaves de Mexico also has a downturn, suffering an operating loss of \$22.7 million and a net loss of \$56.6 million.

In 1993, Chairman/CEO Gerardo de Prevoisin Legorereta's company continues an effort to rationalize its fleet and fares. The carrier joins with longtime competitor **Mexicana Airlines, S.A. de C.V.** on February 17 to announce an agreement on the strengthening of previous alliances, but no merger; the boards of the two pledge cooperation in the areas of maintenance, purchasing, training, and cargo. Ten days later, on February 26, a majority 54.7% stake is acquired in Mexicana. The shares are acquired from the Falcon Corporation for \$110 million in stock and cash.

A strategic marketing alliance is signed with **Air France** on March 28. Under its terms, the two companies agree to increase the number of nonstop flights between the capital cities of their nations and to join in joint marketing, cargo, and ground handling activities. The Mexican airline is allowed to relocate its operations from Paris' older airport (ORY) to its newest (CDG).

When the first two of six newly leased B-757-2Q8s are received in April, they are provided to the charter subsidiary **AeroMextour, S.A. de C.V.**; parent Aeromexico now changes that operating name to **Aeromonterrey, S.A. de C.V. (2)**. Charter flights will continue, as before, between North American cities and Mexico's resort communities.

Also in April, the company begins to expand deeper into South America by purchasing 47% near-majority shareholding in **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** for \$54 million. Its winning bid is shared with the Peruvian government, which retains a 20% stake; private Peruvian investors hold 23% and employees are allowed a 10% interest.

Aeromexico (2), Mexicana, and AeroPeru now form the "Alas de America" alliance, which calls for joint FFP, training, marketing, advertising, scheduling, and cargo. Joint ground-handling pacts are made and Aeromexico (2) begins code-sharing with AeroPeru over a route from Mexico City to São Paulo via Lima.

In May, the Mexican government approves the alliance under which a 55% interest is acquired in Mexicana. Markets now served include: Acapulco, Albuquerque, Agusalientes, Buenos Aires, Cancún, Chihuahua, Ciudad Juarez, Ciudad Obregon, Culiacan, Durango, Frankfurt, Guadalajara, Guaymas, Hermosillo, Houston, Istapa, La Paz, Larado, Leon-Guanajuato, Los Angeles, Los Mochis, Madrid, Manzanillo, Matamoros, Mazatland, McAllen, Merida, Mexico City, Miami, Monclova, Monterrey, Morelia, New Orleans, New York (JFK), Oaxaca, Paris (ORY), Puerto Vallarta, Queretaro, San Antonio, San Diego, San

Louis Potosi, Tampico, Tapachula, Tijuana, Torrem, Tucson, Urtapan, Vera Cruz, and Villahermosa.

A tentative agreement is signed with the pilots' union in June. On August 3, preliminary agreement is reached with **Delta Air Lines** for implementation of a strategic alliance; under its terms, the two majors will share flight information, CRS data, frequent flyer programs, training, maintenance, and passenger bookings, as well as coordinate vacation programs and schedules.

On September 10, Augusto Bojorquez, president of the Mexican Association of Travel Agents (Asociacion Mexicana de Agencias de Viajes), files a complaint with the Secretaria de Comunicaciones y Transporte charging that Aeromexico (2) and Mexicana are putting pressure on his members to give preference to those airlines when issuing tickets or selling promotional packages. There is great concern among members of the travel and hotel community, as well as other airline competitors, that the two large carriers will gain a monopoly over the Mexican domestic airline market.

Also in September, AeroMexico (2) begins to code-share with Mexicana on routes from Miami to Mexico City, Cancún, and Merida and from Mexico City to Huatulco and Acapulco.

A similar agreement will be signed with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**. The official one-year labor contract is signed with the company's pilots in October, giving them a 7.5% salary increase. Initiated two years earlier, the company's new frequent flyer program, the first in Mexico, now has 410,000 members.

Passenger boardings for the year rise 6.3% to 7,628,925 while freight does three times better, accelerating by 18.5% to 78.77 million FTKs. Revenues total \$1.09 billion, but expenses are \$1.1 billion. As a result, the operating loss is \$10.52 million and the operating loss is \$38.62 million. Consolidated revenues for the parent holding company jump 71.5% to \$1.9 billion, but costs exceed this income to produce an operating loss of \$47.7 million. The net loss is \$80.3 million.

The workforce stands at 6,500 in 1994 as the company enters into a joint frequent flyer plan with AeroPeru in January. Two B-757-23As belonging to **Aeromonterrey, S.A. de C.V. (2)** are now leased to the Peruvian carrier.

Alleging that the company has violated a collective-bargaining contract, members of the pilots union Asociacion Sindical de Pilotos Aviadores vote in late February to stage a strike at the end of March.

At the beginning of the second quarter, Aeromexico enters into a code-sharing/frequent flyer program agreement with **Japan Air Lines Company, Ltd. (2)** for the Mexico City to Tokyo (NRT) route.

At the end of April, several small regionals join with **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)** in a merger of support services designed to make the carriers more competitive with Aeromexico and Mexicana. Under the arrangement, the carriers share reservation systems, maintenance facilities, ticketing, airport facilities, hangars, and work crews. An enhanced code-sharing and frequent flyer program partnership with **Delta Air Lines** is announced on June 24.

Financial losses remain heavy, with the carrier losing \$44 million in the second quarter alone, and the airline is late with its aircraft lease payments. Chairman Geraldo de Provisin Legorereta resigns on September 5 and is succeeded by Jose Luis Lamosas Portilla, an insurance executive and member of the board of directors. Later in the month, the AeroMextour charter subsidiary is closed down.

The significant alliance with **Delta Air Lines** begins in September. Under its terms, the Mexican line is able to enjoy code-sharing and block-space on flights from Mexico City to six U.S. destinations: from Dallas (DFW) to Ixtapa; from Los Angeles to four Mexican destinations; from Cancún to Dallas (DFW) and Atlanta; and code-sharing on Delta flights beyond Delta's Atlanta, Dallas (DFW), and Los Angeles hubs. In addition, intra-Mexican code-shares are offered through Mexico City to five points.

It is reported in October that, after emptying his office and purging his computer files, former CEO de Prevoisin has left Mexico and, at the same time, it is acknowledged that an additional \$50 million in company

liabilities have been uncovered and cannot be paid. As creditors and lenders make plans to take over the airline, Mexico issues an arrest warrant for the talented and once highly regarded local entrepreneur.

AeroMexExpress, S.A. de C.V. begins operating subsidiary all-cargo services in November. The enticing messages put forth in company advertising are largely disregarded in December as the nation, plagued by assassination, a rebellion in the state of Chiapas, and a shaky economy, devalues its peso.

Customer bookings increase 12% this year to 8,524,218, while cargo slides 1% to 77.99 million FTKs. Revenues total \$814 million, expenses are \$789 million, and the operating profit is \$4 million. Write-offs of investments in Mexicana and Aeroperu together with huge exchange losses from peso devaluation and alleged fraud by its former CEO leave the airline with a gigantic \$453-million net loss.

Airline employment in 1995 stands at 5,355, a 9.8% decline, while the fleet is reduced by 2 MD-82s and 3 DC-10s. The company and Mexicana are now run by a consortium of banks, while the nation slides into a severe six-month recession, having a horrendous impact upon traffic levels. It is revealed early in August that former Chairman de Provisin Legorereta, who has been formally accused in court of embezzling \$72 million, further contributed to his company's decline the previous year by making an \$8-million donation to the country's ruling political party.

On August 14, the government approves the financial revamping plans put forward for Aeromexico (2) and Mexicana, with the provision that the group of banks controlling the two companies be split up within three years. After a jury trial confirms that its ATC system was at fault for the 1986 Cerritos, California, disaster, the U.S. FAA is ordered on October 7 to pay \$3 million to the family of Aeromexico pilot Arturo Prom, killed in the crash.

A comprehensive code-sharing agreement is signed with **Air France** on November 28 that provides for more flights and easier connections between Mexico City and Paris than were possible under the 1993 accord. In addition, a terminal will be shared at Paris (CDG).

A major modernization is undertaken on the company's reservations and automations systems in December through a ten-year contract with EDS. The outside firm will not only manage and operate billing, inventory control, airport documentation, automatic ticket printing, various reports, and reservations, but will implement a new reservations system, to be called Aztec 2000.

During the year, marketing agreements are also signed with **Delta Air Lines**, **Japan Air Lines Company, Ltd. (2)**, **British Airways, Ltd. (2)**, and **America West Airlines**.

Enplanements fall 18.4% to 6,790,753, but cargo jumps 13.2% to 87.51 million FTKs. Operating revenues inch up 0.8% to \$814.04 million and costs drop by 3.7% to \$789.98 million. Operating gains climb to \$24.05 million and the giant net loss is cut to \$22.78 million.

The workforce is increased by 3% in 1996 to 5,518. On March 18, the "Alas de America" strategic agreement with Mexicana is expanded as the Mexican airline begins dual-designator flights from Lima to Buenos Aires and from Santiago to Bogota.

The fiscal picture soon begins to brighten as the possibility of effective restructuring approaches reality; recently appointed CEO Fernando Flores and the board of directors are able to negotiate new loans and other financial agreements.

The arrangements will be handled by a new financial corporation, CINTRA, S.A. de C.V., led by banker Ernesto Martens, who has been retained by several banks to put a new package together. Government approval for CINTRA's restructuring approach receives government approval on June 4.

On June 28, CINTRA, S.A. de C.V. offers to exchange Series A CINTRA shares for those of Aeromexico (2); as a result, CINTRA receives 99.95% of the carrier's outstanding share capital. In essence, the nation's banks trade \$1 billion for most of the carrier's equity. A new management concern Servicios Corporativos CINTRA is established to oversee changes. On October 22, Aeromexico (2) will cease to be a publicly traded company in Mexico.

Customer bookings this year inch up 1% to 6,855,947, but freight drops 2.1% to 85.65 million FTKs. Revenues total \$839.4 million and costs are kept at \$778.1 million. Consequently, there is an operating gain of \$61.3 million and a net profit of \$303 million.

In February 1997, the carrier begins code-sharing with **United Airlines** on flights between Mexico City and Miami.

The "World Partners" relationship with **Delta Air Lines** is expanded in mid-March with additional dual-designator flights from Guadalajara and Mexico City to Los Angeles. The American major now begins to code-share on Aeromexico flights five times per week from Cancún to Atlanta and four times per week from Cancún to Dallas (DFW).

The Delta pact is expanded further in April, with additional services from Leon to Los Angeles, Cancún to New York, and Puerto Vallarta to Los Angeles.

A marketing agreement is signed with **Swissair, A.G.** on August 6. Under the arrangement, the two majors will, beginning in ten days, share codes on a new daily Swissair roundtrip service from Zurich to Mexico City, via New York (JFK).

At the beginning of the winter schedule in October, Atlanta is visited on the westbound leg of the Swissair code-share.

Passenger boardings for the year accelerate 9.7% to 7,520,095, while freight rises 5.4% to 90.30 FTKs. Revenues this year total \$1.12 billion, while costs are at \$1 billion. The operating profit accelerates to \$114.7 million, while net gain falls to \$95.4 million.

The fleet at the beginning of 1998 includes 59 aircraft, of which 71.2% are Stage III certified; this number includes 17 DC-9-32s, 6 B-757-2Q8s, 4 B-767s, 1 DC-10-30, and 31 MD-80s. The workforce totals 6,101.

Two new nonstop weekly roundtrips are introduced in January from Mexico City to São Paulo.

The code-sharing agreement with **Air France** first signed in 1992 is renewed on February 10; the extension will take effect on April 1. Over the next two months, the number of weekly dual-designator services between Paris and Mexico City will be increased from 10 to 12 and later to 14, or twice daily.

Also in February, an agreement is concluded with ILFC for the 77-month charter of a B-767-3Q8ER, which will be delivered in November.

On March 10, plans are announced for an expanded five-year strategic marketing agreement with **Delta Air Lines**; the new pact will include code-sharing on additional flights between Mexico and the U.S.

Twice-weekly DC-9-32 return flights from Cancún to Dallas (DFW) begin on April 1.

Early in the second quarter, the carrier receives a leased B-767-3Y0ER that is christened *El Espiritu del 88* in honor of the company's tenth anniversary. It is placed into service on routes from Mexico City to Santiago de Chile.

Unhappy with their wages and working conditions, 1,033 members of the Asociacion Sindical de Sobrecargos de Aviacion de Mexico, or ASSA (Association of Flight Attendants), go on strike on May 31. The next day, acting under a "requisita" (government seizure of property) clause of the national constitution, Mexican President Ernesto Zedillo orders the government to take over control of the airline, requiring the flight attendants to return to work, and reopens negotiations. Many remain out and the company's 300 nonunionized flight attendants are unable to fill the breach, leaving planes to depart with fewer cabin-crew members.

Progress is made on salary-increase issues (the union wants 19% more; the airline has been offering 18%), but working conditions and benefits remain a major obstacle to a settlement.

Meanwhile, the new marketing phrase "Expect It" is utilized during the first week of the month as the capstone to a new advertising campaign designed to combat the Latin stereotype of *mañana*, by stressing the airline's on-time performance.

Daily nonstop MD-80 return service is started on July 1 between Guadalajara and Ciudad Juarez.

Under the March pact, dual-designator service begins with **Delta Air Lines** on September 1 aboard Aeromexico's thrice-daily MD-82 roundtrips between Monterrey and Atlanta.

Although the ASSA strike is settled, the AFA files a formal petition with the U.S. National Administrative Office, under terms of the North American Agreement on Labor Cooperation, accusing the Mexican government of deliberately, and in violation of law, intervening in a strike by the unionized Aeromexico flight attendants. The complaint is accepted in mid-month and filed as NAO Submission 9801.

The carrier's tenth anniversary is officially celebrated on October 2.

The carrier's existing code-share service with **Delta Air Lines**, connecting Atlanta and Cancún, is increased on October 25 from four-times-a-week to daily, nonstop flights on Aeromexico's B-757-2Q8s. Twice-daily dual-designator service with **Delta Air Lines** between Dallas (DFW) and Cancún is introduced on November 17.

The leased B-767-3Q8ER arrives in December.

Enplanements for the year are up 3.8% to 7,816,000, while FTKs rise an equal percentage, to 93.81 million. Sales of P 22.21 billion (\$2.38 billion) are generated by the CINTRA parent holding company.

Expenses are such as to allow profits of \$140.14 million (operating) and \$43.98 million (net).

Airline employment stands at 6,467 at the beginning of 1999, an increase of 17.2%. The fleet includes 63 aircraft, 5 more than in the previous year.

All flights between Mexico and the U.S. become nonsmoking on January 15.

The Peruvian business daily *El Comercio* reports on January 20 that both **Delta Air Lines** and Aeromexico (2) have decided against investing in a restructuring of AeroPeru. The plan will require a capital injection of \$10 million within the next ten days to keep the Peruvian line's operations going without interruption. The two North American majors end the consortium they had established to operate AeroPeru and begin an effort to unload their shares.

In a major development announced on February 12, **American Airlines** signs a letter of intention with AeroPeru that will allow it to acquire a major stake in the airline. The U.S. major begins due diligence to establish AeroPeru's financial situation preparatory to determining actual shareholding. AeroPeru's current shareholders, CINTRA of Mexico (35%) and **Delta Air Lines** (35%) will, if the arrangement proceeds, divest themselves of their shares.

On February 16, Mexico's Federal Competition Commission (CFC) begins an investigation of the airline holding company CINTRA after a pilots' union accuses its president, Ernesto Martens, of favoring growth in one of the company's airlines to the detriment of the others via the transfer of shares, routes, and aircraft. The flyers describe the practice as a "predatory action." The claim is followed by an unflattering CFC report describing CINTRA's first three years.

Two days later, on February 18, trading of the shares in CINTRA is suspended on the Mexican Stock Exchange. The action comes in the wake of a CINTRA request that the government investigate an unauthorized release of its 1998 earnings figures to the media.

The Mexican government announces on February 24 that it is postponing any decision on whether or not to break-up CINTRA. The case must be studied further by the CFC.

The Ministry of Transport and Communications (SCT) weighs into the CINTRA controversy on March 8. Deputy Transport Minister Aaron Dychter informs Reuters, Ltd. that SCT wishes CINTRA to be maintained as a "whole company," though "not necessarily a monopoly," in order that it might compete with larger foreign air carriers. Dychter also points out that SCT has received few complaints about CINTRA's alleged monopolistic practices from its smaller domestic competitors.

Having completed its review of AeroPeru's finances, **American Airlines** informs the airline on March 8 that it will not, after all, take an equity stake or provide fresh capital. The news is catastrophic as the airline, caught by increased regional competition amidst a regional financial crisis, is left without sufficient cash to continue paying for fuel and other services.

Although a handover to Indecopi, a government agency that handles bankruptcies, does not occur as suggested, AeroPeru, on March 10, does

cease international operations, but indicates it will continue domestic flights until March 14. While on a tour in the north of the country, Peru's president, Alberto Fujimori, indicates that his government may help re-float the flagship airline and inject capital into it, but only if AeroPeru can reach a deal to reschedule its debts.

As the crisis unfolds, neither CINTRA nor **Delta Air Lines**, which continue as shareholders, offer comment. An ultimately unsuccessful effort will also be made by AeroPeru to recruit **Continental Airlines** as an equity partner. Meanwhile, on March 11, the president of AeroPeru informs Dow Jones that, during the 60 days it is down, international air tickets already purchased will be honored by **Delta Air Lines**.

When AeroPeru halts its domestic services on March 14, **Aero Continente, S.A.** takes over the flag carrier's more important domestic routes, including that to Peru's top tourist destination of Cuzco.

It is reported in the March 15 edition of the Mexican publication *El Financiero* that Peruvian authorities have begun an investigation into a possible case of criminal corruption against two former ministers and other functionaries of the Fujimoro government. According to Mexican sources, these people have misused the funds generated by the privatization of AeroPeru in such a fashion as to have cost Aeromexico \$72 million.

With the beginning of the summer schedule on March 28, an MD-87 is employed to replace the MD-82 previously employed on the dual-designator service with **Delta Air Lines** between Monterrey and Atlanta.

It is reported by *InfoLatina, S.A. de C.V.* on March 30 that CINTRA has announced its intention to condone part of the AeroPeru debt.

The MD-83 employed on a daily return service between Mexico City and Los Angeles is replaced with a B-757-2Q8, while MD-82s replace DC-9-32s on the company's thrice-daily roundtrips between Guadalajara and Monterrey. A second daily MD-82 roundtrip is added between Mexico City and Tijuana while a 13th MD-80 return service is launched from Mexico City to Monterrey.

On April 1, Aeromexico becomes the first Latin American airline to introduce international electronic ticketing. The service becomes available to passengers traveling from Mexico City to Atlanta, Dallas (DFW), Houston, Los Angeles, Miami, New Orleans, New York (JFK), Orlando, Phoenix, and San Diego.

Arriving at Mexico City from Paris on April 13, the B-767-3Q8ER, piloted by Capt. German Lanoy and with 121 passengers completes the carrier's one-millionth flight.

CINTRA, the holding company for Aeromexico and Mexicana, announces on April 26 that it will be investing approximately \$76 million in hush kits for its Boeing 727 fleet, in order that its units may continue flying into the U.S.

Also, the parent begins to negotiate with four U.S. banks for a \$140-million bridge loan to cover a \$134-million June loan payment to Mexico's export development bank, Bancomext, and the financial group Grupo Financiero Inbursa.

CINTA and the union representing flight attendants at both Aeromexico (2) and Mexicana reach agreement on May 19. The 1,500 workers will receive a 17.5% salary increase and a 4.5% benefits package boost, retroactive to May 1.

Guillermo Turincio, CINTRA CFO, informs Reuters, Ltd. on May 20 that, despite a negative report from the Federal Competition Commission, the holding company will receive government approval for its existence during a special meeting of the government economic cabinet in June.

The ruling does not come without a fight. On June 21, Federal Competition Commission head Fernando Sanchez Ugarte strongly criticizes CINTRA and again urges the government, on antitrust grounds, to separate Aeromexico (2) and **Mexicana Airlines, S.A. de C.V.**

Also during the sixth month, the company revises its aircraft livery, this time showing more bare metal fuselage skin and a lower cheatline. The first jetliner to receive the new color scheme is a B-757-23A.

Charged with embezzling millions of dollars from the airline, former chairman Gerardo de Prevosin is extradited back to Mexico from

Switzerland in September to stand trial. As the year ends, delivery is taken on a B-757-2J9 previously owned by **Far Eastern Air Transport Corporation**.

Customer bookings accelerate 11% to 8,672,000, but freight dips 3% to 90.9 million FTKs.

The 6,431 members of the workforce reporting on January 1, 2000 represent a slight 0.4% staff increase made during the previous 12 months. Weekend MD-87 roundtrips between Cozumel and Atlanta, code-shared with **Delta Air Lines**, are inaugurated on January 8.

On March 9, Delta also begins to code-share on the carrier's twice-weekly B-757-2J9 return service from Mexico City to Chicago (ORD). The carrier and **Air France** begin code-sharing on March 25 between Cancun and Miami and between Monterrey and Atlanta.

On April 20, daily MD-88 roundtrips are launched from Guaymas and La Paz, Mexico, to Los Angeles. On April 23, **Delta Air Lines** begins to code-share on Aeromexico's new twice-weekly MD-88 service from Los Angeles to La Paz, via Guaymas. Seasonal (through June 20) MD-87 charters begin on April 27 from Mexico City to Orlando.

Negotiations between the company and its flight attendants union continue throughout the spring. Having reached an impasse, the cabin workers declare a strike on June 1. The Mexican government, in turn, seizes the paralyzed carrier. Talks begin again as the attendants return to their jobs and a special government-appointed administrator oversees the contract talks.

Las Vegas becomes the company's 11th scheduled destination later in the day when MD-87 roundtrips commence from Hermosillo.

In mid-month, both sides in the flight attendant dispute reach an accord which nets the union members a 12% wage increase plus other increased benefits. On June 15, four-times-a-day roundtrips are inaugurated between Merida and Atlanta.

A year after **Air France** and **Delta Air Lines** announce plans to create a global alliance, the new group, which also includes Aeromexico and **Korean Airlines**, is officially named *SkyTeam* in July. Together, the partners offer 6,402 daily flights to 451 cities in 98 nations.

Delta Air Lines starts or renews its code-share on August 1, placing its DL designator on AM flights from Mexico City to Ciudad Obregon, Durango, Los Mochis, Torreon, and Acapulco.

On August 15, the carrier's AM designator is placed on **Air France** flights from Paris to Lyon, Nice, and Toulouse. The company also code-shares with **Comair** and **Atlantic Southeast Airlines** on their new September 1 services from DFW and Atlanta to Mexico City, Puebla, and Monterrey. Code-sharing with **Delta Air Lines**, Aeromexico also begins two new MD-87 roundtrips to Atlanta from Mexico City and one new return service from Puebla to DFW.

MD-82 roundtrips, also shared with the Atlanta-based U.S. major, are initiated from Merida to Atlanta on October 2, four times a day.

On October 3, the Federal antitrust agency rules that Aeromexico and **Mexicana Airlines, S.A. de C.V.** must be fully separated prior to their planned sale, a move which will break up their holding company, CINTRA, which itself can then be sold. Next day, Gustavo Castillo, head of the corporate asset division of Mexico's deposit insurance agency IPAB which owns 51% of CINTRA, indicates that both airlines will be put on the market early in 2001.

Just arrived from Mexico City, Flight 250, a DC-9-31 with five crew and 83 passengers, skids off the end of the runway while landing at Reynosa on October 6 in rain caused by Tropical Storm Keith. The plane crashes through several houses before it ends up in a canal with the fuselage split into several pieces; no one aboard is killed, though five are hospitalized. Six people walking along the canal are, however, hit and killed.

Weekend-only MD-82 roundtrips are launched on October 8 from Acapulco to Atlanta, via Monterrey.

The company's unionized employees, and those from **Mexicana Airlines, S.A. de C.V.** (23,000 strong), reject on October 9 the proposal that CINTRA be broken up and sold, thereby privatizing both airlines. To prevent a crippling strike, the airline, on October 13, grants its ground workers a 12% pay increase.

AEROMEXTOUR, S.A. de C.V. See **AEROMONTERREY, S.A. de C.V. (2)**

AEROMINAS, S.A. See **AEROVIAS LAS MINAS, S.A.**

AEROMONTERREY, S.A. de C.V. (1): Mexico (1991–1994). This new entrant is created at Garza Garcia, Nuevo Leon in the spring of 1991 to offer regional services as a member of the **Mexicana Airlines, S.A. de C.V.** commuter network *Mexicana Inter*. Managing Director Jaime Valenzuel's fleet comprises 4 Fokker F.27 Friendships and these provide feed, beginning on July 1, to the major at Monterrey. Competition with the **Aeromexico (2)** (**Aerovias de Mexico, S.A. de C.V.**) affiliate **Aerolitoral (Servicios Aereos Litoral, S.A. de C.V.)** continues in 1992.

Airline employment in 1993 stands at 150. Approval is received during the spring of 1994 for the lease of two B-757-23As with which to operate charters to the U.S. The aircraft were originally intended for the **Aeromexico (2)** (**Aerovias de Mexico, S.A. de C.V.**) subsidiary **AeroMextour, S.A. de C.V.** When **Aeromexico (2)** (**Aerovias de Mexico, S.A. de C.V.**) takes control of **Mexicana Airlines, S.A. de C.V.** at the end of the year, Aeromonterrey, S.A. de C.V. (1) is closed down and its assets are transferred to **Aerovias Caribe, S.A. de C.V.**

AEROMONTERREY, S.A. de C.V. (2). See **AEROMEXICO (2)** (**AEROVIAS DE MEXICO, S.A. de C.V.**)

AEROMORELOS, S.A. de C.V.: Dr. Gustavo Gomez Azacarante 200-6; Col Lomas de la Selva, Cuernavaca, Morelos, 62270, Mexico; Phone 52 (73) 172310; Fax 52 (73) 172320; Code MRL; Year Founded 1995. Carlos Ruiz Venegas sets up Aeromorelos at Morelos in 1995 to offer regularly scheduled domestic passenger services. Revenue flights begin and continue with a single Fokker F.27 Friendship.

AEROMOST: Russia (1994–1996). Aeromost is established at Moscow in 1994 to offer ad hoc all-cargo charter services to Europe and the CIS. P. O. Stepin is appointed general manager and he inaugurates flights with a single Ilyushin Il-76. Operations cease in 1996.

AERON INTERNATIONAL AIRWAYS: United States (1983–1989). AI is established at Newburgh, New York, in late 1983 to offer all-cargo charter and contract service flights throughout North America. Employing two Canadair CL-44Ds, the 45-employee carrier inaugurates scheduled services in early 1984. By late December, Aeron has operated a total of 10.14 million FTKs. After receipt of a third Canadair CL-44D, this figure jumps 44.4% in 1985 to 18.25 million FTKs.

Airline employment rises 50% in 1986 to 60 as company headquarters are moved from the old Fairchild Aircraft manufacturing plant to Hagerstown in Maryland. Now able to perform its own maintenance, the freighter adds a fourth swing-tail CL-44D and enjoys a 21.1% traffic increase to 26.82 million FTKs.

Cargo declines a slight 0.2% in 1987 to 26.06 million FTKs.

The Old Line carrier has a terrible 1988. Traffic plunges by 82.5% to 4.57 million FTKs and revenues are but \$2.25 million. An operating loss of \$1.2 million is suffered along with a net downturn of \$1.08 million. Unable to sustain these losses, the carrier shuts down in early 1989.

AERONAUT, A.S.: Estonia (1921–1928). With assistance from Denmark and Sweden, the German carrier **Lloyd Luftverkehr Sablatnig, GmbH.**, together with **Dansk Luftexpress, S.A.**, forms the carrier **Latvijas Gaisa Satikmes, A.S.** on July 21, 1921 to provide transport across the Gulf of Finland. The first service is undertaken with a fleet of 5 Sablatnig P-IIIs during the summer of 1922.

When **Deutscher Aero Lloyd, A.G.** is formed in February 1923, control of the carrier is purchased by **Junkers Luftverkehr, A.G.** The new owner equips the carrier with three F-13s, christened *Schwan*, *Biene*, and *Steinschatzter*. Subsidized services to Ternaui and Dorpat are now offered.

As competition stiffens with **Deutscher Aero Lloyd, A.G.**, Junkers Luftverkehr reaches out to locate members for a countering confederation. On October 22, **1923**, the Ost-Europa Union is formed; simultaneously, Junkers assumes an interest in **Aeronaut, A.S.**, bringing it into the group. Company official Bruno Otto Lucander becomes CEO.

This arrangement allows passengers to fly a member of the Junkers line from Berlin to Reval. When **Deutsche Luft Hansa, A.G. (DLH)** is formed on January 6, **1926**, the former Ost-Europa Union member continues independently; it finally ceases operations in **1928**.

AERONAUTICAL SERVICES: United States (1973–1992). Daniel Weber establishes AS in **1973** to offer charter passenger and freight services, initially with a single Cessna 206. The company's principal business soon becomes the servicing of a countywide contract with United Parcel Service (UPS). Operations grow as flights are provided between Friday Harbor and destinations on Stuart Island, San Juan Island, Decatur Island, Blakely Island, Shaw Island, and Lopez Island, as well as Bayview Airport, near Burlington, Washington.

The fleet is increased over the next decade to also include 1 Cessna 207 and 3 de Havilland Canada DHC-3 Otters. In **1986**, UPS invites Weber to fulfill a contract between Long Beach, California, and Catalina Island. A branch is quickly established in southern California and **Catalina Flying Boats** is purchased as the operational subsidiary; Beech 18s undertake the service.

Operations continue apace until October 2, **1992**. On this date, President Weber, flying a Beech Bonanza with three passengers suffers engine failure and crashes shortly after takeoff from Bayview Airport; there are no survivors. The company is liquidated shortly thereafter.

AERONAVALE, S.A.: France (1921–1926). In early **1921**, this operator is born to provide flights between southern France and French North Africa, via Corsica. Donnet Denhaut amphibious aircraft are obtained, but the route, beginning at Antibes, cannot be stretched beyond Ajaccio.

Air Union takes over the airline in **1926**.

AERONAVES ALIMENTADORAS. See AEROMEXICO (1) (AERONAVES DE MEXICO, S.A. de C.V.)

AERONAVES DE MEXICO, S.A. de C.V.: Mexico (1934–1971). Ramon and Manuel Gonzalez, employing a mixed fleet that includes 1 Verville 104C, 1 Fokker Model 8 Super Universal, 1 Ryan B-1 Brougham, and 3 Bellanca CH-200 Pacemakers, begin operating an experimental Mexico City–Acapulco route and receive a government permit for their company on May 15, **1934**.

During the summer, industrialist Antonio Diaz Lombardo purchases majority control. A Stinson SR Reliant is purchased and (flown by Lloyd P. Clavenger) is employed to inaugurate scheduled Mexico City–Acapulco service on September 14. The carrier is officially incorporated on November 7, being capitalized at 120,000 pesos.

Flights continue without change or incident in **1935–1936**. When the Mexican government seizes four Boeing 247Ds en route to Spanish republican forces in March **1937**, the Seattle-built aircraft are immediately put up for sale to help satisfy the loyalists' war debts. The airliners are acquired by Capt. Juan Jose Sixto del Rio, who in turn sells them to CMA.

The fleet is expanded in 1938 by only one aircraft, a Beech 17R Staggerwing; passenger traffic increases, but only the original route is flown. Through the Combustibles concern, Lombardo, on September 12, **1940** (effective on September 18), sells 40% interest in the carrier to **Pan American Airways (PAA)**, which raises capitalization to 500,000 pesos and has Carlos Ramos named general manager.

Transportes Aereos del Pacifico, S.A. de C.V. (founded in 1935), with its coastal routes and fleet (including one Sikorsky S-38), is purchased in **1941** and merged. On September 30, two Pan Am-supplied Boeing 247Ds begin daily service on the Mexico City–Acapulco route.

Three WACO cabin biplanes join the fleet in **1942** and following the death of Enrique Zarate, **Servicios Aereos Zarate, S.A. de C.V.**

(founded in 1935), its routes and equipment, are acquired and renamed **Aeronaves de Michoacan, S.A. de C.V.**

Taxi Aereo de Oaxaca, S.A. de C.V. (founded in 1938) is taken over in **1943**; an experimental route is opened from Mexico City to Nautla. The fleet is enlarged in **1944** through the addition of 8 Avro Anson IVs/Vs, several of which are transferred to the Aeronaves de Michoacan subsidiary. Later in the year, a Vera Cruz–Puerto Mexico route is acquired along with its operator, **Lineas Aereas Jesus Sarabia, S.A. de C.V.** (founded in 1933).

A Boeing 247D is transferred to the **Aeronaves de Michoacan, S.A. de C.V.** subsidiary in **1945**. Although the Mexico City–Vera Cruz service is maintained, the permits for the feeder routes of the former **Lineas Aereas Jesus Sarabia, S.A. de C.V.** are allowed to lapse. A Douglas C-39 (military DC-2) converted to civil standard joins the main fleet in the spring of **1946**. On June 26, capitalization is raised to 2.25-million pesos. The first of eight ordered DC-3s are delivered in September and is placed in service on the Mexico City–Acapulco route.

The Mexico City–Vera Cruz feeder service is dropped early in **1947** as a northern route is extended to Nogales, via Tepic and the Pacific coast. The last of eight new DC-3s enters service in **1948** while the first of three ordered DC-4s joins the fleet in November **1949**. Guadalajara is added to the coastal network in **1950**, although direct service from Mexico City is prohibited.

Mexican President Miguel Aleman seeks to undermine the **Pan American World Airways (1)** influence in **1951**, works to increase government holding in AM at the expense of the American carrier, and seeks to create a government-owned national airline capable of offering both domestic and international service.

A purchasing group headed by President Aleman buys **Lineas Aereas Mexicanas, S.A. de C.V.** (founded in 1934) from its American owner, **United Air Lines**, on July 22, **1952** for \$1.23 million. Mexican interests acquire 60% controlling interest in AM and the routes of the two carriers and their schedules are now integrated. The fleet includes a variety of aircraft, including B-247Ds, DC-3s, and DC-4s. Also controlled are the routes in the north central part of the country. Aleman's term as Mexican president ends.

The AM/LAMSA merger is completed on July 17, **1953** when the group, headed by ex-president Aleman, acquires another 19% interest in the former, thereby reducing **Pan American World Airway's** shareholding to a distinctly minor 21%. Carlos Ramos is named general manager of the amalgamated carrier. Another airline, **Aerovias Reforma, S.A. de C.V.** (founded in 1945), is purchased and merged on October 16.

The AR merger is completed early in **1954**; the fleet of 12 DC-3s and routes in northwest Mexico are added to Aeronave's growing network. A DC-3 with 3 crew and 15 passengers crashes into Friars Peak, in the Salinas Mountains on March 26, after being waved off from a Monterey landing because of a dust storm; there are no survivors.

The succeeding government dismisses Aleman's plan for a state-owned airline and emphasis is now placed on improving the larger airline's domestic service. To this end, four pressurized Convair CV-340s are purchased; christened *Ciudad de Mexico*, *Ciudad de Puerto de Acapulco*, *Ciudad de Guadalajara*, and *Ciudad de Tijuana*, they are placed in service over the main routes as DC-3 replacements and DC-4 supplements.

Route consolidation ensues in **1955**, along with increased cooperation with the larger carrier, **Mexicana Airlines, S.A. de C.V.** At government instigation, majority control is taken in the smaller **Aerolineas Mexicanas, S.A. de C.V.** (founded in 1955) on May 12, **1956** for its low-fare route potential; in December, the wholly owned subsidiary opens a Mexico City–Piedras Negras route with DC-3s.

To compete with new **Mexicana Airlines, S.A. de C.V.** DC-7Cs, the carrier leases two Lockheed L-049s in the spring of **1957** for its Tijuana route. On May 31, orders are placed for two British-made Bristol Britannia 302s. Under a new Mexico-U.S. bilateral air agreement, AM, on June 15, receives routes to New York and Washington, D.C. and five days later obtains CAB certification for service to the two American destinations.

In September, the carrier receives its first British turboprop, which is christened *Tenochtitlan* (it is also known later as either *Acapulco* or *Montezuma*). L-049 service is inaugurated to New York on December 16 with the Britannia 302 being placed on the route two days later. The second Britannia 302 is received at month's end and is named *Tzinzuntzan*.

L-049/Britannia 302 service to Washington, D.C. starts in January 1958. Negotiations (eventually unfruitful) are begun in March for the purchase of **Aerovias Guest, S.A. de C.V.** (founded in 1946). The **Aerolineas Mexicanas, S.A. de C.V.** subsidiary inaugurates low-fare DC-4 "Fiesta Flights" from Mexico City to Matamoros via San Luis Potosi on April 28. The subsidiary, its routes and fleet of six DC-3s, will be fully purchased (for two-million pesos) in September, but will also be allowed to retain its separate identity.

The main fleet is now enlarged by four L-749s, formerly flown by **Air India, Ltd.** One of these with 7 crew and 38 passengers is lost 16 kilometers east of Guadalajara on June 2; there are no survivors.

The second Britannia 302 is leased to **Mexicana Airlines, S.A. de C.V.**, allowing the competitor to start a Mexico City to Los Angeles route on November 21. Five days later, **Pan American World Airways (1)** shareholding is reduced again, down to 11%. The L-049s are both retired at year's end.

A strike paralyzes the carrier in January 1959, forcing cancellation of merger talks with **Aerovias Guest, S.A. de C.V.** The government moves to save the airline, purchasing all capital stock (via National Financiers, S.A.) in April and taking official ownership on July 28. Ing. Jorge Perez y Bouras is named director general of the nationalized company and capitalization is increased by 100-million pesos.

As DC-4, CV-340, and L-749 replacements, 12 DC-6s are now purchased from **Aerovias Guest, S.A. de C.V.** minority owner **SAS (Scandinavian Airlines System)**; an order is placed for a DC-8-21 in July.

Following a three-week transitional training course for Mexican pilots at Bromma Airport, Stockholm, the first six DC-6s arrive at Mexico City in December. At the same time, the carrier's old logo is replaced with a new Aztec Eagle Warrior, the image of which begins to appear on both sides of the forward fuselage and the tails of all aircraft.

The first DC-6 is commissioned in a ceremony at Acapulco on January 16, 1960, presided over by Mexican transport secretary Walter C. Buchanan. Three more DC-6s arrive in March and, in July, the type initiates flights from Mexico City to Tucson, via Guadalajara, Culiacan, Ciudad Obregon, and Hermosillo.

The Douglas jetliner, originally scheduled for acquisition by **Eastern Air Lines**, is delivered on November 15 and is christened *20 de Noviembre*. During the year, the DC-6s enter service and replacement is begun for the DC-4s, CV-340s, and L-749s.

DC-8-21 services from Mexico City to New York begin on January 18, 1961. While taking off from Idlewild in a snowstorm for the return flight the next day, Flight 401, the Douglas jetliner with 9 crew and 97 passengers, aborts and careens off its runway. It explodes in a swamp (5 dead) and before coming to rest the plane hits a car on a nearby road, severely injuring a woman driver.

In February, the carrier joins in an equipment consortium with **Aerovias Guest, S.A. de C.V.** and **Mexicana Airlines, S.A. de C.V.** and, in March, three additional DC-6s join the fleet. In May, **SAS (Scandinavian Airlines System)** pulls out of **Aerovias Guest, S.A. de C.V.** and that airline's route system is now absorbed by AM. Routes are also opened to Tucson, via Hermosillo, on June 30 and San Antonio, via Mazatlan, Monterrey, and Torreón. Seven DC-8-51s are ordered in the fall.

The route network of the bankrupt **Lineas Aereas del Pacifico, S.A. de C.V.** is acquired in February 1962. In April, service is begun to Montreal with a leased **Sabena (Belgian World Airlines, S.A.)** Boeing 707-329B. Routes are opened to Los Angeles from La Paz in June and Tijuana in September.

Meanwhile, in August, Nacional Financiers S.A. purchases 87.8% of the stock of **Aerovias Guest, S.A. de C.V.**, merging the acquisition and taking over its routes. The seven DC-8-51s are received during the year

and six are named: *Chapultepec*, *Tenochtitlan*, *Chapultepec*, *Puebla*, *Jalisco*, and *Guanajuato*.

In late winter 1963, DC-8-51 service is launched to Panama, Bogota, Miami, and Caracas over the old **Aerovias Guest, S.A. de C.V.** routes, followed by Paris and Madrid in April. DC-6 flights commence in July from Mexico City to Los Angeles, via Acapulco and La Paz.

A route dispute with **Mexicana Airlines, S.A. de C.V.** is settled by the government on August 14; the carrier owned by the state has its Tijuana service continued, but is forced out of San Antonio.

On April 23, 1964, orders are placed for two U.S. SSTs, which will never be built. Bogota and Guatemala service is withdrawn in the spring, but Miami is added in June as a stop on the European routes. The American CAB, which had granted that right, also awards Fifth Freedom rights to pick up European-bound passengers at that Florida city.

On July 27, Canada recognizes the transfer of the old **Aerovias Guest, S.A. de C.V.** route to Windsor and allows Toronto to join the carrier's network. Nonstop Mexico City to Tijuana DC-6 flights start on August 14, followed in September by nonstop DC-6 service from Mexico City to Ciudad Juarez. Another U.S. grant, for Detroit, is given in late fall and DC-8-51 service to the "Motor City" begins on December 17.

The employee population in 1965 stands at 2,929. The fleet now comprises 2 DC-3s in C-47 configuration, 10 DC-3s, 11 DC-6s, 3 DC-8-51s, and 2 Britannia 302s. One of the Bristol Britannia 302s with 9 crew and 73 passengers is destroyed at Tijuana on July 9 as the result of a bad landing; there are no fatalities.

On November 6, 3,000 workers strike the company; the government names an official to intervene and maintain operations. On November 20, orders are placed for DC-9-10s. Enplanements for the year total 847,164.

On April 1, 1966, the Madrid route is extended to Rome and, on May 6, the Tucson route is stretched to Phoenix. During the year, two DC-8-51s are lost in one each fatal and nonfatal crashes. The first goes down 15 mi. from Acapulco on August 13 during a training flight, killing its six-man crew.

All 10 crew and 99 passengers are safe as the second makes a forced landing into Lake Texcoco, near Mexico City, toward the end of a December 14 flight from New York. Also in December and as the result of a route exchange with newly formed **Aeromaya, S.A. de C.V.**, a frequency is opened to Merida.

During December, four DC-6s are withdrawn and passed to **SAESA (Servicios Aereos Especiales, S.A. de C.V.)**.

Three propeller airliners are lost in nonfatal crashes in 1967. In April, a pooling arrangement is entered into with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**; the deal will lead to the consolidation of the daily Mexico City-Madrid service. The first DC-9-10s are delivered at Tijuana on May 29.

Having lost an engine on takeoff from La Paz on June 12, a DC-3 with four crew attempts to return to the airport, but crashes instead into a residential area; three aboard the aircraft are killed along with two people on the ground.

The DC-6 *Chimalpopoca* operates the carrier's last piston-engine service on March 4, 1968.

On October 28, "Aeronaves Alimentadoras" or "Feeder Airlines" is created to bring stability to the nation's third level routes; one-third interest is taken by AM, Nacional Aerea, and private sources. Employing a fleet of 8 Piper PA-31-310 Navajos and 2 de Havilland Canada DHC-6-100s, the new operation begins service on November 19.

In a pool arrangement with the Venezuelan carrier **VIASA (Venezolana Internacional de Aviacion, S.A.)**, service is resumed to Panama and Caracas on March 31, 1969; the Madrid route is extended from Miami to Paris on April 2. The routes of **Aeromaya, S.A. de C.V.** west of Mexico City are acquired by the newly created AM associate Aeronaves Alimentadoras in April, becoming the **Aeronaves del Sur** division; the same month, a route is opened Tijuana-Merida, via Ciudad Juarez and Monterrey.

Following the total collapse of **Aeromaya, S.A. de C.V.** on May 10, the remainder of its network is acquired by the associate **SAESA (Servicios**

Aereos Especiales, S.A. de C.V.) on May 22. Meanwhile, a number of small third-level carriers and their routes are absorbed by "Aeronaves Alimentadoras," including not only Aeronaves del Sur, but **Aerolineas del Pacifico** (which becomes Aeronaves del Oeste); **Aerovias Rojas (Aeronaves del Centro)**; and through a transfer of certain of the national's routes, Aeronaves del Este. Following the acquisition of **Aerolineas Vegas, S.A. de C.V.** (founded in 1952), direct Los Angeles to Cozumel via Acapulco/Oaxaca/Merida flights begin on August 5.

In January 1970, the feeder **Aeronaves del Oeste** is split, creating Aeronaves del Norte; a month later, the independent Aeronaves del Mayab, S.A. de C.V. is added to the "Aeronaves Alimentadoras" compact. The Merida-Tijuana route is extended to Los Angeles in April and **SAESA (Servicios Aereos Especiales, S.A. de C.V.)** is merged.

En route from Acapulco on July 25, a DC-9-10 with 27 passengers is hijacked by four men, armed with pistols and bombs, and forced to fly to Cuba. Philadelphia becomes an occasional stop on the New York route in late fall.

When the carrier is unable to sell the four DC-6s that had been returned with SAESA, they are turned over, during the fall, to the Fuerza Aerea Mexicana (Mexican Air Force) for use as military transports.

In February-March 1971, three DC-8-63s are leased from **Trans-International Airlines**. The Mexico City to New York frequency becomes daily on August 1. Severe financial losses incurred by the "Aeronaves Alimentadoras" system lead to the resignation of director general Jorge Perez y Bouras on September 7; he is succeeded by Ing. Raymun do Cano, who sets out to establish a new corporate image.

"Aeronaves Alimentadoras" is now disbanded and enplanements for the year total 1,481,838. On January 1, 1972, the carrier adopts the new marketing name **Aeromexico (1) (Aeronaves de Mexico, S.A. de C.V.)** and introduces new red and black aircraft livery.

AERONAVES DE MICHOCAN, S.A. de C.V.: Mexico (1948-1951). In association with Antonio Diaz Lombardo, Carlos Cortez is allowed in 1948 to take over those routes of the former **Servicios Aereos Zarate, S.A. de C.V.** not desired by its new owner **Aeronaves de Mexico, S.A.** Employing Avro Ansons, Cortez's operation, registered as **Aerovias Michoacan-Guerrero, S.A. de C.V.**, flies to various destinations in the two states identified in its title. Late in the year, the company acquires Zarate's three Boeing 247Ds and is renamed **Aeronaves de Michoacan, S.A. de C.V.**, a title employed by **Servicios Aereos Zarate, S.A. de C.V.** in its last days.

Just after purchasing a DC-3 from **Aeronaves de Mexico, S.A. de C.V.** in October 1949, Cortez is killed in an automobile crash. When his brother and widow find themselves unable to successfully run the company, they sell it to **Lineas Aereas Picho, S.A. de C.V.** in 1951.

AERONAVES DE PUERTO RICO: United States (1982-1983). APR is established at San Juan in the fall of 1982 to offer scheduled services linking its base and Aguadilla with New York. A Boeing 707 is acquired and revenue flights commence in December. Operations are suddenly suspended in February 1983 as the company, unable to generate traffic during a recession, cannot meet its obligations.

AERONAVES DEL CENTRO, S.A.: Avenida Francisco de Miranda, Edificio Tecoteca, PH-Terraza, Los Palos Grandes, Caracas 1062, Venezuela; Code AG; Year Founded 1980. This third-level carrier is formed at Valencia in early 1980 to offer commuter frequencies in the northern part of the nation. A fleet of three Shorts 330s is assembled and daily or near-daily scheduled services begin during the summer. These link Valencia with Maracaibo, Barquisimeto, Maracay, Barcelona, Puerto Ordaz, Valledel la Pascua, Caracas, and the vacation island of Margarite.

One Shorts 330 is withdrawn in 1985 and is replaced by a Fokker F.28 jetliner in 1987. The carrier encounters significant financial difficulties at the end of the decade and, by 1993-1994, only one Shorts 330 remains in service. That situation remains unchanged during the remainder of the decade.

AERONAVES DEL PERU, S.A.: Jr Jose Calvez 711, Lima 18, 1429, Peru; Phone 51 (14) 476 488; Fax 51 (14) 479 558; Code XX; Year Founded 1965. When APSA (**Compania de Aviacion Aeronaves de Peru, S.A.**) is organized at Lima in November 1965, it is not immediately licensed for scheduled operations. Following a four-year wait, during which time it elects, while flying charter services with three Douglas DC-6s, to be known by its marketing name of Aeronaves del Peru (AP), the carrier is designated by the government in 1969 as an all-cargo carrier suitable for the route to the U.S.

A Douglas DC-7CF is acquired and charter flights to Miami are started in early 1970. In June, AP receives the green light for scheduled service to Miami when the U.S. CAB grants it a foreign air carrier permit.

The company is reorganized in 1971, with the Zanetti family purchasing 58.8% majority shareholding. Shortly thereafter, twice-weekly flights commence from Lima to Miami via Iquitos and Pucallpa. Two Canadair CL-44s join the Douglas freighter in 1975.

AP maintains its international route over the next decade; although frequencies change, the all-cargo services offered do not. Profits grow and the fleet is upgraded by introduction of 2 Douglas jet freighters, 1 DC-8-43F purchased from **Alitalia, S.p.A.** in 1978, and 1 DC-8-33F.

Operations continue apace in 1979, but in 1980, both Jet Traders are lost.

En route from Lima to Mexico City on August 1, the DC-8-43F with seven crew crashes into a mountain at Cerro Lilio, Mexico (three dead). The DC-8-33F with four crew crashes into the jungle while on final approach to Iquitos on September 12; there are no survivors.

Leased units and the original propeller equipment is flown in 1981. In April 1982, the carrier pays \$4 million to purchase 59% control of financially troubled pioneer carrier **Faucett Peruvian Airlines, S.A.** The lost Italian airliner is replaced by a DC-8-61. A DC-8-55F is acquired in 1983. Without a current bilateral agreement, operations between the U.S. and Peru are suspended between 1984 and 1987. A total of 20.14 million FTKs of freight are flown during the latter year, partially with the help of the DC-8-54F *Santa Elena* placed into service during the fourth quarter.

Following the resumption of services in 1988, the employee population of President Alfredo Zanetti's specialized airline grows to 150 and the fleet is upgraded by the addition of two more DC-8-55Fs. Despite all of the positive news, cargo drops 11.9% to 18 million FTKs.

Traffic is down again in 1989 as freight declines by a whopping 58.8% to 8.67 million FTKs.

Operations continue apace in 1990-1991. The DC-8-54F is withdrawn from service in 1992 and is replaced by a pair of leased Boeing 707-351Cs Stratoliners formerly operated by **Northwest Airlines**. Statistics are released for the first eight months of the year and show a total of 13.01 million FTKs of freight flown.

In 1993, President Alfredo Zanetti oversees a workforce of 65 and continues to provide regularly scheduled international all-cargo flights from Lima to Miami, with occasional stops at Iquitos. With business beginning to improve in 1994, a DC-8-61F is acquired. The fleet is rationalized in 1995 as the Stratoliners are parked at Lima.

Airline employment does not change during 1996-2000; however, the Boeings are returned to service.

AERONAVES OAXACA, S.A. See LAUMSA (LINEAS AEREAS MEXICANAS UNIDAS, S.A.)

AERONEFTEKHIM A.K.: Russia (1994-1996). Another new, small independent airline established in 1994, General Director R. K. Idiatulin's Aeroneftekhim begins general domestic charter flights from Ulitsa Kommunisticheskaya UFA with a single Yakovlev Yak-40. Flights cease in 1996.

AERONICA (AEROLINEAS NICARAGUENSES, S.A.): P.O. Box 3688, Contiguo Aeroport International, Managua, Nicaragua; Phone 505 (2) 664 226; Fax 505 (2) 660 083; Code RL; Year Founded

1981. On August 31, **1981**, **Lanica (Lineas Aereas de Nicaragua, S.A.)** ceases operations upon demand of the Sandanista government's Ministry of Transportation, which declares the company legally bankrupt. The government, with assets confiscated from **Lanica (Lineas Aereas de Nicaragua, S.A.)**, establishes Aeronika on November 26; among the aircraft taken over are a Douglas DC-6B, a DC-6BF, two Boeing 727-76s, and a B-727-25 just purchased from **Eastern Air Lines** on August 28 and delivered on September 2.

These, together with a second DC-6BF, a second DC-6B, the DC-3 *Pancasan*, and three Curtiss C-46s (*The Prinzipolka*, *The Wanki*, and *The Kukra Hill*), are all painted white and then wrapped in a rainbow scheme of green, blue, red, orange, and light blue. Aeronika, "the Rainbow Airline," begins international service to Mexico City on the last day of November.

On December 12, a bomb damages Flight 527, the B-727-25, which is on the ground at Mexico City, preparing to continue a scheduled service with 117 persons to San Salvador from Managua. Three crew aboard and three baggage handlers just outside the aircraft are injured.

Another B-727-25 is acquired under a long term lease from **Eastern Air Lines** on December 28, allowing a resumption of service on December 30; the same day, flights are also started to San Jose and Panama City.

Despite the U.S.-backed Contra war, in January **1982** the CAB grants Aeronika permission to begin flying into Miami from Managua. Meanwhile, in response to an outstanding appeal for international aid by the national government, a B-720B is donated to the airline by **Olympic Airways, S.A.** of Greece on February 25. With the B-727-25 damaged at Mexico City now repaired and returned to service as the *Xolotian (Lake Managua)*, the unit leased from **Eastern Air Lines** is returned on March 2. The Boeing 720B initiates the Florida service.

While on a May 10 domestic service, a C-46 with two crew is taken over by two armed men, who order the aircraft diverted to Limon, Costa Rica, where they seek and receive political asylum. The Curtiss is released.

A pair of Casa C-212-200 Aviocars (one of which is later named *Rana Kay*) are delivered in March and May **1983**, respectively, and are employed to enhance domestic services. Before the unnamed unit can receive its moniker, it is lost in a Managua accident on June 29. Its wreckage is simply piled next to a Sandino Airport maintenance hanger.

Also in June, and in direct reply to Nicaragua's expulsion of three U.S. diplomats, the U.S. CAB, acting in response to a request from the Department of State, revokes the company's charter rights to America. Six Los Angeles-Managua charters are also cancelled. The C-46 *Wanki* is sold on September 13.

Late in **1984**, orders are placed for two Fokker F.27-100s. At this point, the Sandanista-Contra war places a severe strain on Aeronika.

Unfavorable weather and failure of the crew to ensure proper function of an auxiliary ferry fuel system bring about the crash of the first F.27-100, en route from Holland to Nicaragua with five crew, 150 nm. W of Kulusuk, Greenland, on April 20, **1985** (two dead).

Financing promised for the second aircraft does not materialize and it is later sold in Sudan. The same month, a DC-6BF is withdrawn from service.

As a result of an executive order from President Ronald Reagan, the airline loses its Managua to Miami scheduled service on May 7 and, along with it, some 40% of its revenues. Additionally, a U.S. embargo creates a spare parts problem for the carrier's fleet that will force the company to turn to Cuba and the Soviet bloc for airline support.

Operations continue on a limited domestic and regional basis during **1986**. While on the ground at Managua on June 6, preparing for a service to El Salvador, Flight 726, the B-727-25, is taken over by a lone gunman. He will hold the crew and passengers hostage until talked into surrendering by police.

Service is maintained in **1987**. During the year only two international routes are operated: to Mexico City via San Salvador, and to Panama City via San Jose.

On December 21, the No. 3 engine of a DC-6BF en route from Managua with six crew suddenly separates from the wing as the No. 4 engine catches fire; the fire is extinguished and the aircraft attempts to return to its point of origin. Despite the jettisoning of the cargo, the aircraft must ditch in a river, where it sinks. There are no fatalities and Contra surface-to-air missiles are blamed for the loss.

The C-46s *The Prinzipolka* and *The Kukra Hill* are withdrawn from service in **1988**. En route from Panama City to Managua, the last DC-6BF crashes near Puerto Limon on May 24 (six dead). With the B-720B out of service, the fleet now begins to be upgraded by the addition of Soviet equipment. The first of two Antonov An-26s subleased from the government (which had received four from Moscow) is delivered on September 18.

Boardings for the year total 87,000.

As the result of the continuing U.S. embargo, the government in early **1989** turns to the Soviet Union for additional civil equipment and now purchases two Antonov An-32 turboprops. The second leased An-26s is received on February 3. The first An-32 is delivered in March, with the second following on April 15. The two are christened *Pan Casan* and *Zinica*, respectively, and are assigned to both domestic passenger/cargo services and the route to Panama.

On June 20, the B-720B is traded in on a **Cyprus Airways, Ltd.** B-707-123B, which is overhauled and painted at the Copesa facility in Costa Rica. The Soviets present a 142-seat Tupolev Tu-154M to President Daniel Ortega on December 21 for use as a presidential aircraft; Ortega, who continues to fly aboard on chartered **Interflug DDR Airlines** Ilyushin Il-62s, turns the aircraft over to Aeronika, which christens it *The Momotombo*. Late in the month, the plane's **Aeroflot Soviet Airlines** crew flies the new jetliner to Mexico City where its Nicaraguan crews can be trained.

The Tu-154M is placed into service in **1990** along with the refurbished B-707-123B, which is christened *The Colcipoica*. A grass fire set by local campesinos near the airport on April 16 goes out of control and destroys one of the two leased An-26s. As the result of a letter of understanding, the carrier is able to resume limited scheduled service to the U.S. in September with five weekly flights between Managua City and Miami.

Recession and political change affect the carrier in **1991**, bringing retirement of the Ilyushin and remaining An-26.

During the replenishment of oxygen supplies aboard a B-727-25 on the ground at Managua on November 10, one of the canisters, which is leaking, ignites, causing an explosion that destroys the trijet and kills the two crewmen aboard.

The fleet in **1992** comprises 1 Douglas DC-6B, 1 DC-3, 1 CASA C-212-200, and the 2 An-32s. Airline employment at President/General Manager Julio Rocha's flag carrier stands at 450 in **1993**. Services are provided from Managua to Mexico City, San Salvador, San Jose, Panama City, and Miami.

When Aerovias las Americas, S.A. is set-up at Panama City in **1994** to provide regional passenger and cargo charters, it begins revenue flights with two An-32s leased from Aeronika.

Operations continue apace in **1995**. In **1996-1999**, the company operates one each Tu-154M, two An-32s (still on lease), and the CASA C-212-200.

AERONIKA AIRLINE: Russia (1994-1996). Aeronika is established at Kaluga in the Kaluzhekoi Region in **1994** to offer domestic charter services. A. V. Semdyanov is appointed general director and he begins revenue flights with an all-Antonov fleet of An-12s, -24s, and -26s.

While on final approach in bad weather to Ust Ilmsk on an October 29 all-cargo service from Yushno, an An-12BP with 7 crew and 16 passengers stalls and crashes 2,100 m. short of the runway; there are no survivors.

Flights continue in **1995**, but cease in **1996**.

AERONOR-CHILE (AERO NORTE-SUR, S.A.): Chile (1977–1988). This third-level operator is founded by COPESA (Consortio Periodístico de Chile, S.A.) at Santiago in September 1977 to provide regular services into the northern part of the nation. German Pico Dominguez is named chairman and president. After assembling a fleet of three previously employed Fairchild F-27As, the new entrant first begins scheduled cargo service to Copiapo, via La Serena and Vallenar in March 1978.

An F-27A freighter with 3 crew and 2 passengers fails its takeoff from Iquique on April 20, 1979, sliding 750 m. down the runway; although the aircraft is badly damaged, there are no serious injuries.

By 1981, the fleet of General Manager Oscar Erlandsen's 70-man airline has been upgraded by the addition of 3 Fairchild Hiller FH-227Js and 1 Piper PA-31-310 Navajo. Scheduled daily and weekly passenger flights are undertaken from the capital to La Serena, El Salvador, Antofagasta, Calama, Iquique, and Arica.

While on final approach to La Serena after a service from Santiago on December 9, 1982, Flight 304, an F-27A with 4 crew and 42 passengers, suddenly banks right and slams into the ground 2,000 m. short of the runway, bursting into flame; there are no survivors. The tragedy will be blamed on a total loss of power to the left engine.

Service deteriorates during the mid-1980s and Calama, El Salvador, and the Copiapo cargo runs are dropped. One FH-227J is withdrawn, to be replaced by a Rockwell Commander 680. Unable to remain profitable in an increasingly less-prosperous economy, Dominguez's carrier is closed down in November 1988.

AERONORTE (EMPRESA DE TRANSPORTES AEREOS NORTE DO BRASIL, S.A.): Brazil (1949–1961). The feeder airline Aeronorte is set up at São Luis, in Maranhao State, in the fall of 1949, receiving government permission to startup services on December 30. Most of 1950 is taken up with organization and the creation of a fleet, which eventually comes to comprise 3 British-made Percival Princes and 3 Lockheed Model 10A Electras, the latter purchased from VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.). Scheduled flights begin in December; destinations in the northeast part of the country include Salvador, Recife, Fortaleza, Carolina, and Belem.

In 1951, a Beech Bonanza is purchased and a Junkers Ju-52/3m is leased from VASP Brazilian Airlines (Viacao Aerea São Paulo, S.A.); services continue through 1952 (when a Lockheed Model 12A is acquired from Aerovias Brasil, S.A.) and into 1953, with crashes claiming most of the fleet. During the latter year, Aeronorte is purchased by Aerovias Brasil, S.A., which allows its new subsidiary to operate under its previous identity.

Also in 1953, the first of ten Douglas DC-3s join the fleet as well as six leased, French-made Nord 1203 Norecrin II four-seaters.

When Aerovias Brasil, S.A. is purchased by REAL, S.A. on September 10, 1954, Aeronorte is taken over as well, but is allowed to retain its identity and operate as a consortium partner until REAL, S.A. is acquired by VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.) in 1961. Only four new aircraft are acquired during these years, all Curtiss C-46As obtained in 1957.

AEROPE, S.A.: Aerodrome de Pontoise, Boissy L'Aillerie, 95650, France; Phone 33 (1) 30 32 60 72; Fax 33 (1) 30 32 18 60; Year Founded 1988. Aerope is set up as the FBO at Pontoise Airport in 1988. Over the next twelve years the company also undertakes a significant amount of passenger charter work employing a mixed fleet that comes to comprise 1 each Beech King Air 90, Super King Air 200, and Cessna 335, plus 1 each Eurocopter AS-350 Astar and Bell 206B JetRanger.

AEROPELICAN AIR SERVICES (PTY.), LTD.: P.O. Box 226, 864-872 Pacific Highway, Belmont, New South Wales, 2280, Australia; Phone 61 (49) 450 988; Fax 61 (49) 458 824; Code AN; Year Founded 1971. Aeropelican Intercity Commuter Air Service (Pty.), Ltd. is formed at Belmont, New South Wales, in May 1971. Equipped with four

de Havilland Canada DHC-6-120 Twin Otters, the new commuter begins daily, high frequency passenger flights between Belmont/South Newcastle and Sydney. The single-route is maintained (charters are also available) for a decade. The highlight of the 1970s is the introduction into service on December 16, 1975 of the first production GAF Nomad N.22.

In July 1980, Masling Aviation and Engineering, Ltd. assume 80% majority shareholding and the carrier adopts its present name. By 1981, a total of six Twin Otters are in service and passenger boardings reach 107,589. Company traffic figures hover between 80,000 and 100,000 for the remainder of the decade. Additional destinations added include Mascot.

Traffic and financial figures become available in 1991 and show that, in 1990, the company has hauled 83,990 passengers and 90,383 pounds of cargo. Revenues total \$A 5.51 million, expenses are \$A 4.24 million, and the net profit is \$A 1.26 million.

General manager Trevor England's fleet is reduced to 4 DHC-6-300 Twin Otters in 1991 and these maintain the same route as that started 20 years earlier, flying 81 frequencies each week. Enplanements total 84,000 as revenue climbs \$A 400,000 to \$A 5.91 million. Costs swell to \$A 1.62 million and net gain reaches \$A 1.62 million.

Passenger boardings climb 4.4% in 1992 to 86,864. Revenues slip to \$A 5.83 million and expenses advance to \$A 4.53 million. Net gain falls to \$A 1.3 million. Airline employment in 1993 stands at 40–45 and General Manager England's carrier is flying four DHC-6-320 Twin Otters. The company is now a subsidiary of TNT Australia & News Corporation, Ltd. Enplanements total 90,385.

In 1994, traffic figures are up again, climbing 3.9% to 94,054.

The workforce in 1995 is exactly 43 and the fleet remains unchanged. Unhappily, as a result of increasing competition, the Newcastle-based regional suffers a traffic decline, with bookings down by 9.8% to 83,000.

Three employees are either laid off or retire in 1996, a 4.8% decline.

Enplanements move ahead by 3.3% to 83,556. The workforce is increased by 5% in 1997 to 42, while passenger boardings inch up 1.7% to 85,034.

Flights continue without significant change in 1998. Customer bookings advance 3.5% to 88,000.

By the start of 1999, the workforce has been reduced by 4.8% to 40.

AEROPERLAS (AEROLINEAS PACIFICO-ATLANTICO, S.A.): P.O. Box 6-3596, El Dorado, Panama City, Panama; Phone (507) 263-5363; Fax (507) 223-0606; <http://www.tacaregional.com/aeroperlas>; Code WL; Year Founded 1970. Founded as AeroPerlas (Aerolineas Islas de las Perlas, S.A.) at Panama City in 1970 to offer flights to the western part of the nation, government-owned AeroPerlas begins scheduled DC-3 passenger service from the "downtown" Paitilla Airport to Bocas del Toro, David, and especially to the resorts on Contadora island.

By 1979, the Douglas transport has been replaced by a fleet comprising 2 Britten-Norman BN-2 and 3 de Havilland Canada DHC-6. In 1981, one Islander is sold and replaced by a fourth Twin Otter. The employee population is 92 and a total of 178,543 passengers are transported; boardings reach 187,101 in 1982.

The last BN-2 is replaced in 1984 and destinations in 1985–1986 include: Bocas del Toro, Changuinola, Colon, Contadora Island, David, and San Miguel.

The carrier is sold to its president, Raul Espinosa, in 1987, who, in turn, names Raul Artas as general manager. Airline employment by decade's end rises to 70 and the fleet comprises 2 Twin Otters and 1 new Embraer EMB-110P.

Operations continue apace in 1988–1992, though not without one fatal accident. While climbing away from Panama City on April 18, 1990, a DHC-6-200 with 3 crew and 19 passengers suffers the loss of the No. 2 engine; the turboprop is unable to recover and descends into the sea (20 dead).

In 1993, the workforce stands at 70 as two DHC-6-300s and a Swearingen Merlin IIB are acquired. Markets served include Bocas del Toro,

Changuinola, Contadora, Colon, David, Paitila Airport at Panama City, San Miguel, and Tocumen. In 1994, a Beech 99 is leased from the Canadian regional **Ken Borek Air, Ltd.**

Operations continue apace in 1995. During the summer of 1996, the carrier purchases four Shorts 360-300s from AMR Eagle. The aircraft had previously been operated by **Executive Airlines** in Puerto Rico and South Florida. Payment is made in the form of a stock transfer; AMR Eagle, the commuter subsidiary of **American Airlines**, now gains a 20% equity interest in the airline. AeroPerlas also takes over its local competitor Alas Chiricana (Compania Alas Chiricana, S.A.).

The workforce stands at 270 in 1997, as George F. Novey becomes chairman/president, with Eduardo Stagg as general manager/COO. Three additional **Executive Airlines** Shorts 360-300s enter service and service is initiated to Bahia Pinas, Chitre, El Real, Garachine, Jaque, La Palma, Sambu, and Santiago. Flights continue in 1998 and into 1999.

While en route from Panama City to Puerto Obaldia on March 17, 2000, a DHC-6-300 with two crew and eight passengers, crashes into the mountains 12.5 nm. from its destination; there are no survivors.

Those aboard another Twin Otter are more fortunate on September 6 when the aircraft crashes while landing at Rio Sidra in Panama following a service from Albrook. Although no injuries are reported, the aircraft must be written off.

AEROPERU (EMPRESA DE TRANSPORTES AEREOS DE PERU, S.A.): Peru (1973–2000). This national flag carrier is formed by the Andean state on May 22, 1973 to absorb the Air Force's existing **SATCO (Servicio Aereo de Transportes Comerciales)** and to assume the services previously provided by **Aerolineas Peruanas, S.A.**, which had ceased trading in 1971. Domestic flights, with three ex-SATCO Fokker F.28-1000s and two F.27-600s, begin on July 28.

In May 1974, a Boeing 727-22 is purchased from **United Airlines**, allowing the startup of nonstop service from Lima to Cuzeo, Arequipa, Chiclayo, and Iquitos. Two DC-8-51s, leased from **VIASA (Venezolana Internacional de Aviacion, S.A.)** and **Air Jamaica, Ltd.** begin charter services to the U.S. (previously approved for SATCO). On July 26, U.S. rights are granted for scheduled operations to Miami and Los Angeles. A third DC-8-51 is obtained on charter from **KLM (Royal Dutch Airlines, N.V.)** and routes are opened to Buenos Aires, Santiago de Chile, and Guayaquil on July 29 and are extended to Miami on September 16.

On February 1, 1975, in an effort to increase bookings for its airline, the Peruvian military government orders **Braniff International Airways** to reduce its flights from Lima to Miami by 50%. Following the successful resolution of the diplomatic flap with Washington that results over these reciprocal Lima rights, AeroPeru is authorized to launch additional DC-8-51 services to the U.S. Through flights begin on October 4 from Rio de Janeiro and São Paulo to Los Angeles via Lima and Mexico City.

Another B-727-22 is acquired in 1976. Employing the DC-8-43 *San Martin de Porres*, the carrier joins its rival, **Aviacion Aeronaves de Peru, S.A.** (founded in 1965) in operating an all-cargo service. Orders are placed in 1977 for two Lockheed L-1011 TriStars and enplanements total 814,644.

A B-727-130 is purchased from Deutsche Lufthansa, A.G. early in 1978. Originally owned by **Pacific Southwest Airlines (PSA)** and converted for over-water use, an L-1011 TriStar is leased to the carrier by Lockheed in late November; it is employed to inaugurate Lima to New York service via Miami on December 15.

President Frank Tweddle now oversees a workforce of 1,440 and a fleet that includes not only the Lockheed, but 3 DC-8-50s, 1 each B-727-22 and B-727-130, 3 Fokker F.28-1000s, and 2 F.27-600s.

Passenger boardings for the year dip 2.6% to 794,828, but freight traffic jumps 16.7%. A second TriStar is placed in service in 1979. Passenger bookings climb 18.6% to 941,900 and freight increases by 21.1%.

Lockheed service continues in 1980, but traffic remains level. Panama service is withdrawn and Miami frequencies are decreased. In terms of passenger kilometers flown, AeroPeru now ranks as the twelfth

largest airline in Latin America. The carrier is privatized on July 24, 1981. Service is withdrawn from São Paul and Rio de Janeiro, and bookings are down to 924,000. Increased fuel prices and the world economic downturn result in a \$16.2-million net loss.

The employee population in 1982 stands at 1,489. Unable to maintain the TriStar service in the face of accelerating costs, the Lockheeds are returned to their manufacturer, leaving the New York service to be maintained with four DC-8-62s chartered from **Alitalia, S.p.A.** and **SAS (Scandinavian Airlines System)**.

Services are reopened to São Paul and Rio de Janeiro, and Miami frequencies are increased.

Passenger boardings dip 2% to 906,014; cargo is also down 8.7% to 47.14 million FTKs. Revenues drop 4.2% to \$51.9 million, but expenses are down 22.2% to \$33.2 million; profits are \$18.7 million (operating) and \$17.6 million (net).

The workforce is increased 13.3% in 1983 to 1,687. The fleet now includes 4 DC-8-62s, 3 B-727-22s, 3 F.28-1000s, and 2 F.27-600s. International flights are inaugurated from Talara and Arequipa and Lima to Panama service is resumed.

Passenger boardings rise 4.5% to 946,528 and cargo is up by 10% to 110 million FTKs.

Airline employment decreases 12.6% in 1984 to 1,474. One more B-727-22 is added to the fleet. Normal direct Lima to New York and Miami service is suspended in May, pending resolution of U.S.–Peru traffic discussions; to maintain linkage, AeroPeru initiates service to Kingston, with **Air Jamaica, Ltd. (2)** providing connecting flights to Miami.

Passenger boardings dip 1.7% to 930,100, but freight climbs a slight 0.3% to 109.98 million FTKs. Revenues are \$78.6 million, but the operating loss is \$4 million.

The employee population is cut another 16.4% in 1985 to 1,681. The fleet includes 4 DC-8-62s, 3 B-727-22s, and 3 F.28s; service to America remains suspended.

Passenger boardings decline another 2.6% to 906,228 and cargo is off 8.6% to 100.48 million FTKs. Revenues drop 11.8% to \$77.5 million, but expenses fall 22.4% to \$71.4 million, providing an operating profit of \$5.4 million. Another net loss is suffered, but, as in the years 1983–1984, the exact amount is not disclosed.

The payroll decline is reversed in 1986 as the number of workers increases by 16.4% to 1,957. Service to the U.S. remains suspended for most of the year; however, on December 16, the U.S. and Peru sign a new bilateral air agreement, which calls for the resumption of multistop Lima to Miami service.

Customer bookings grow by 23.6% to 1,119,917 and freight jumps 26% to 126.57 million FTKs.

Despite a good 1987, the employee population is cut 28.5% to 1,400. After a two-year bilateral dispute between the U.S. and Peru is settled, the company is allowed to resume flights to America.

Six-times-per-week nonstop Lima to Miami DC-8-62 flights are restarted on June 12.

Passenger boardings jump 23% to 1,377,289 and cargo climbs 16.3% to 147.18 million FTKs.

The payroll grows 3.6% in 1988 to 2,088 and the fleet now includes 10 aircraft: 3 B-727-22s, 5 DC-8-62s, and 2 Fokker F.28-1000s.

On October 25, just 44 seconds after takeoff from Juliaca, in the Peruvian Andes, an F.28-1000, Flight 771 en route to Arequipa with 4 crew and 65 passengers, explodes in midair and impacts terrain 2,500 m. beyond the end of the runway (12 dead).

Company pilots now claim that the nation's failing economy is causing the government to starve the airline; safety becomes a public concern.

Customer bookings drop by 11.8% to 1,179,887 and cargo does worse, falling by 15.3% to 13.61 million FTKs. Revenues drop 19.2% to \$95 million and costs are up, guaranteeing an operating loss of \$2.35 million and net downturn of \$7.27 million.

Company employment falls 19.2% in 1989 as the flag carrier suffers another difficult year. Carlos Morales Andrade is appointed president, but finds that half of the fleet's ten aircraft are grounded for lack of spare

parts and maintenance. It is necessary to lease a B-767-204 from U.K.-based **Britannia Airways, Ltd.** between January 31 and May 15.

The airline is now out of cash, owes \$9 million to the Peruvian government, and suffers from a lack of direction. In an effort to resume a growth pattern, the airline cuts the number of its outside maintenance contracts from 11 to 3 and is able to have its fleet back in full operation by July.

Still, passenger boardings this year decline 28.1% to 848,073. Freight, however, rallies, climbing by 10.7% to 15.07 million FTKs. The workforce in 1990 stands at 1,687. In March, the company begins negotiations for the replacement of its aging fleet and, in April, an interline agreement is signed with **Aeroflot Soviet Airlines**, which begins to connect Lima to Havana, with continuation to Moscow.

Company pilots stage a four-day strike in May, claiming that nine of the ten aircraft are unsafe due to poor maintenance; the job action strands 2,300 passengers and ends when the government threatens to replace the strikers with military flyers. During the summer, a DC-8-63 is acquired from Aerolease.

Through August, enplanements are up 23.7% to 663,596. Freight resumes its downward thrust, falling 3.5% to 9.33 million FTKs.

The payroll grows by 18.6% in 1991 to 2,000 and the fleet now includes 1 each B-727-29, B-727-30C, and B-727-193, 3 DC-8-62s (one is out of service), 1 leased DC-8-63, and 4 owned and 1 chartered McDonnell Douglas MD-83s.

In mid-December, the U.S. DOT approves a joint service to Miami flown by this carrier in cooperation with **Faucett Peruvian Airlines, S.A.** Recession strikes hard at the Peruvian carrier.

Passenger boardings for the year as a whole decline 25.2% to 674,976 while cargo drops 8% to 12.63 million FTKs.

The carrier continues to suffer in 1992 and is forced to reduce its workforce by 40% to 1,199. The MD-83s are withdrawn in favor of two Fokker F.28-1000s. Statistics are only released for the first five months of the recessionary year and show customer bookings down 25% to 202,297 over the same period a year earlier. Cargo is off by 12.2% to 3.97 million FTKs. Rival **Faucett Peruvian Airlines, S.A.**, together with the Naviera Santa shipping line, purchase 70% shareholding in December for \$41 million.

In January 1993, the Peruvian government declares the Faucett purchase null and void because the winning bid does not meet certain unspecified requirements.

A new sale is held in April and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, seeking to expand deeper into South America, acquires 47% near-majority shareholding in the Peruvian airline for \$54 million. The new owner shares its prize with private Peruvian investors (23%), airline employees (10%), and the government, which retains 20% shareholding. Together with **Mexicana Airlines, S.A. de C.V.**, which it also controls, Aeromexico (2) and its two partners now form the "Alas de America" alliance that will provide for code-sharing flights, as well as joint FFP, training, marketing, cargo, scheduling, advertising, and ground-handling. The agreement now allows Aeromexico (2) to begin code-sharing flights on a route from Mexico City to São Paulo via Lima.

CEO/General Manager Jean-Marie Sertillanger oversees a workforce of 2,000. A DC-10-15, *Senior de Sipan*, and two B-727-264As from the Mexicana fleet are transferred to AeroPeru, allowing it to resume services in July.

Domestic markets served from Lima include Arequipa, Chyiclayo, Cuzco, Iquitos, Juliaca, Puerto Maldonado, Quito, Piura Tacna, and Trujillo. International flights are made to Bogota, Buenos Aires, Caracas, Guayaquil, La Paz, Mexico City, Panama City, Rio de Janeiro, Santa Cruz, Santiago Comodoro, and São Paulo. In September, the company begins code-sharing flights with Mexicana over a route from Cancún to Buenos Aires via Lima. In return, the two share codes on certain internal flights within Mexico and Peru.

AeroPeru signs a joint frequent flyer plan pact with Aeromexico (2) in January 1994. During the first quarter, seven more aircraft are chartered, including two DC-10-15s and two B-757-23As from Mexicana and one each B-727-2B7A and B-727-217A leased from Polaris Aircraft Ser-

vices. Operations continue to be coordinated with the Mexicans, who are faced with a series of fiscal and operational problems at the end of the year, culminating with devaluation of their country's peso in December.

The workforce stands at 1,100 in 1995. With Mexico in a severe recession during the first half of the year, new initiatives involving AeroPeru are put off. Aeromexico (2) flounders as two CEOs come and go. Through August, the company's ten jetliners transport a total of 733,230 passengers. In November, U.S. FAA officials point out that the country's civil aviation agency does not comply with the safety standards established by ICAO.

The fiscal situation for the carrier begins to improve somewhat at the beginning of 1996 as its Mexican owners find a way to handle their own major financial problems and the possibility of effective restructuring approaches reality. Recently appointed joint Chairman/CEO Fernando Flores and the board of directors are able to negotiate new loans and other financial agreements that will capitalize the airlines' outstanding debts.

On March 18, the "Alas de America" strategic agreement with Mexicana is expanded as the Mexican airline begins dual-designator flights from Lima to Buenos Aires and from Santiago to Bogota.

The financial arrangements, meanwhile, will be handled by a new financial corporation, CINTRA, S.A. de C.V., led by banker Ernesto Martens, who has been retained by several banks to put a new package together. Government approval for the CINTRA's restructuring approach receives Mexican government approval on June 4.

On June 28, CINTRA, S.A. de C.V. offers to exchange Series A CINTRA shares for those of the airlines, including AeroPeru; as a result, CINTRA receives 99.95% of the carrier's outstanding share capital. In essence, Mexico's banks trade \$1 billion for most of the carriers' equity. A new management concern Servicios Corporativos CINTRA is established to oversee changes.

Just after takeoff from Lima on an October 2 service to Santiago, Flight 603, a B-757-23A with 9 crew and 61 passengers plunges into the Pacific Ocean off Pasamayo, some 45 mi. WNW of the aerodrome, killing all aboard. The Peruvian Navy locates the wreckage in deep water on October 14. NBC News reports on November 5 that the crash has been attributed to maintenance workers, who mistakenly left tape-and-paper covers on the plane's three left-side static ports (sensors) to protect them while they washed and polished the plane. Safety experts from the U.S. NTSB, who have also investigated the crash evidence, reinforce this view on November 15.

A new code-sharing agreement is signed with **Pan American World Airways (2)** in December that provides for code-sharing on flights from Lima to New York (JFK) via Miami.

A marketing agreement is entered into during January 1997 with **TAM-Mercosur (Transportes Aereos del Mercosur, S.A.)**. Under its terms, the two will offer dual-designator flights between Lima and Asuncion.

Following a bidding match with **Continental Airlines, Delta Air Lines** is able, on March 10, to acquire a 35% stake in the airline.

Additionally, the two sign a memorandum of understanding under which the two will enter into a ten-year marketing agreement. Delta will also be represented on the AeroPeru board of directors.

Flights continue during the remainder of the year and into the next.

Having been taken into custody for alleged negligence in their maintenance work that led to the crash of Flight 603 in 1996, five maintenance workers are put on trial. On January 20, 1998, four are declared innocent; one is convicted and sentenced to two years in prison.

On September 1 the government suspends more than 250 international flights operated by AeroPeru because of the airline's failure to operate them.

Late in the year, the company enters into a code-sharing agreement with **Servivensa, S.A.** for joint operations over the route from Caracas to Lima. The Venezuelan airline provides a B-737-2D3A painted in a dark blue, white, and aqua livery with titles for both companies. The "Alianza Andinas" ("Andes Alliance") is one of the shortest dual-designator pacts in history. Following its conclusion in December, the Boeing is returned to Servivensa.

Enplanements during the year total 1.2 million.

The Peruvian business daily *El Comercio* reports on January 20, 1999, that both **Delta Air Lines** and Aeromexico (2) have decided against investing in a restructuring of AeroPeru. The plan requires a capital injection of \$10 million within the next ten days to guarantee uninterrupted operations on the Peruvian line. The two North American majors end the consortium they had established to operate AeroPeru and begin an effort to unload their shares.

In a major development announced on February 12, **American Airlines** signs a letter of intent with AeroPeru that will allow it to acquire a major stake in the airline. The U.S. major begins due diligence to establish AeroPeru's financial situation preparatory to determining actual shareholding. AeroPeru's current shareholders, CINTRA of Mexico (35%) and **Delta Air Lines** (35%) will, if the arrangement proceeds, divest themselves of their shares.

Having completed its review of AeroPeru's finances, **American Airlines** informs the airline on March 8 that it will not, after all, take an equity stake or provide fresh capital. The news is catastrophic as the airline, caught by increased regional competition amidst a regional financial crisis, is left without sufficient cash to continue paying for fuel and other services.

Unions, representing the carrier's 1,500 employees, hold rallies on March 9, but are unable to prevent an announcement by company officials in late afternoon that Peru's oldest carrier will shut down for 60 days. It is noted at a press conference that the closing will be temporary, in order to allow the airline to refinance its \$174-million debt. It is further reported that AeroPeru is close to restructuring \$90 million of this debt with foreign investors.

Union representatives at a separate news conference indicate that they, too, have a plan to refinance the company's debts, but provide no details. In the confusion of events, another source, identified only as being from within the airline, indicates that at 12:01 a.m. on March 10, AeroPeru will be turned over to Indecopi, a government agency that handles bankruptcies. Its \$50-million in assets would be employed to pay outstanding debts and, hopefully, the government would find a way to restart AeroPeru's operations at a later date.

Although the handover does not occur as suggested, AeroPeru, on March 10, does cease international operations and files for bankruptcy. It also indicates it will continue domestic flights until March 14. While on a tour in the north of the country, Peru's president, Alberto Fujimori, indicates that his government may help refloat the flagship airline and inject capital into it, but only if AeroPeru can reach a deal to reschedule its debts.

As the crisis unfolds, neither CINTRA nor **Delta Air Lines**, which continue as shareholders, offer comment. On March 11, the president of AeroPeru informs Dow Jones that, during the 60 days it is down, international air tickets already purchased will be honored by Delta Air Lines.

When AeroPeru halts its domestic services on March 14, **Aero Continente, S.A.** takes over the flag carrier's more important domestic routes, including that to Peru's top tourist destination of Cuzco.

It is reported in the March 15 edition of the Mexican publication *El Financiero* that Peruvian authorities have begun an investigation into a possible case of criminal corruption against two former ministers and other functionaries of the Fujimori government. According to Mexican sources, these people have misused the funds generated by the privatization of AeroPeru in such a fashion as to have cost Aeromexico (2) \$72 million.

El Comercio reports on March 17 that the airline has been able to reschedule as much as \$100 million of its \$174-million debt. It is reported by *InfoLatina, S.A. de C.V.* on March 30 that CINTRA has announced its *intention to condone* part of the AeroPeru debt.

Lawyers for the company on April 21 file a bankruptcy petition with the U.S. Bankruptcy Court for the Southern District of Florida at Miami in order to protect AeroPeru's assets in the U.S. The lawyers begin to collect all U.S. receivables for the airline, which continues

its discussions with investors and is close to restructuring more than half of its debt.

On May 1, the Peruvian Indecopi officially declares AeroPeru to be insolvent and calls a May 17 debt-holder's meeting, at which time a decision will be taken on restructuring the airline or selling its assets. It is simultaneously announced that the Mexican CINTRA group has agreed to forgive all or part of the \$54 million in debts that it is owed.

Chairman Jaan Albrecht informs reporters at the International Airline CEO Conference at Key Biscayne, Florida, on May 3 that his carrier may be forced into liquidation on May 17 if it is unable to present a viable business plan and equity arrangements as demanded by President Fujimori. The Peruvian government is under pressure to grant operating permits to other companies to fly its routes and, in that event, there will be no AeroPeru revival.

On May 11, *El Comercio* notes that the carrier has completed negotiations with **Continental Airlines** on a plan in which the U.S. company will take a 49% stake in exchange for a significant equity investment. As part of the arrangement, however, Continental asks the Peruvian government to grant it exclusive rights to AeroPeru's long-haul routes. It is simultaneously reported that AeroPeru has reduced its debts from \$174 million to \$70 million.

The next day, it is reported by *Gestión* that the debt is actually down to \$40 million. Given the possible Continental interest, President Fujimori now extends his May 17 deadline for the submission of a reorganization plan to June 1.

The restructuring concept is officially presented on schedule and lays out the manner in which AeroPeru will process its \$174-million debt. It is also noted that the fine points of a compact with **Continental Airlines** have nearly been worked out.

President Roberto Abusada is very relieved to announce the final details of his airline's restructuring plan at a press conference on June 2. Under the new agreement, **Continental Airlines**, which is just about to complete its due diligence, tentatively promises to assume a 49%, \$30-million equity stake. Creditors take on 30% of the shares, with the remainder split between employees (5%) and an independent institution set up by the Peruvian government (16%). Domestic service is to be resumed on June 22, with international flights re-starting in September.

The whole restructuring plan comes unglued on June 17 when **Continental Airlines** informs President Fujimori and AeroPeru officials that, having completed its survey, it, like **American Airlines**, is abandoning its interest.

The creditor's committee of the defunct carrier formally votes in August to liquidate the airline. Some of its international routes have already been assigned to **Aero Continente, S.A.** Minority shareholders are able, however, to win a stay and are allowed to prepare one last emergency restructuring plan.

The last-ditch reorganizational concept is presented to the creditors in January 2000, but is rejected. The original AeroPeru is finally thereafter liquidated.

It is reported in the December 2000 issue of *Airways* that a reorganized AeroPeru, using the marketing titles of La Linea Aerea de Bandera, has leased a pair of B-737-200s and is preparing to resume domestic services.

AEROPESCA (AEROVIAS DE LA PESCA Y COLONIZACION DEL SURESTE COLOMBIANO, S.A.): Colombia (1960–1982). Aeropesca is formed at Bogota on October 14, 1960 as a specialized freight charter operation. Employing Consolidated PBY-5A Catalinas, the company hauls fish from the Amazon River town of Leticia, at the very southern tip of the country, to the nation's capital. It also flies various charters on demand.

A Curtiss C-46 Commando is placed into service in July 1964, the first of some nine machines the company will operate (usually between one and four at a time). Catalina flights, meanwhile, continue and on November 4, 1965, a PBY-5A with six aboard disappears over the southeastern part of the country.

While on a flight from Bogota on July 11, 1966, a C-46D with eight crew goes missing in the area of Cero el Planchon; there are no survivors.

Service continues with but one further incident in 1967–1970.

An overloaded C-46D with three crew fails its takeoff from Bogota on February 13, 1969, and makes a forced landing a mile beyond the runway; although the aircraft must be written off due to damages, there are no fatalities.

In September 1971, after having purchased several Vickers Viscount 745s, the carrier initiates scheduled services from Bogota to Popayan and Pasto in the south. These destinations are quickly followed by the addition of flights to Cali, Medellin, Cucuta, and Barranquilla.

Over the next seven years, the fleet of CEO Mario Sarmiento Boada's company comes to comprise 5 Viscounts and 2 C-46s. Additional passenger and cargo stops are added at Neiva and Ipiales.

The most exciting incident occurs on January 21, 1974, when Jore Raimundo Tapia Canon hijacks a Viscount en route from Pasto to Popayan with 43 passengers and orders it to Cuba via Cali and Barranquilla. At Cali, 22 passengers are allowed to deplane.

Flights continue in 1975–1978. On August 14 of the latter year, a C-46F with 3 crew and 15 passengers crashes into a mountain at Tota in bad weather; there are no survivors.

Passenger traffic builds steadily throughout 1979–1981, reaching 74,193, without incident, during 1981 year. Two events stand out in 1981: En route from Florencia to Neiva on August 27, a Vickers Viscount 745D with 6 crew and 44 passengers crashes into Mt. Santa Elena; there are no survivors. On October 21, two men and two women hijack a C-46F to Colombia's Guajira Peninsula; negotiations for the release of five company employees taken captive will take a month.

En route from Villavicencio to Bogota in stormy weather on March 26, 1982, a Vickers Viscount 745D with 6 crew and 21 passengers crashes into a 7,700-ft. mountain near Queate; there are no survivors.

Bookings slip to 51,124 as the carrier, planning expansion, is reorganized in December and changes its name to **Intercontinental de Aviacion, S.A. (Intercontinental Colombia)**.

AEROPESCA (SERVICIOS AEREOS AEROPESCA, S.A.): Chile (1991–1996). Aeropesca is established by Francisco Guzman at Iquique in 1991 to offer passenger and cargo charters and air taxi flights on a regional basis. Revenue services commence and continue with 14 Cessna 337s, 1 Piper PA-31-310 Navajo, and 2 Grumman Gulfstream 500s. Raul Zarate Moreno is president in 1994. Operations cease in 1996.

AEROPONIENTE (AEROVIAS DE PONIENTE, S.A. de C.V.): Mexico (1994–1996). In 1994, Aeroponiente begins regional third-level service from the city of its namesake with a fleet of ten Fairchild Metro III/23s. Unable to attain economic viability, the company shuts down within two years.

AEROPORIKE METAPHORE ELLADOS, S.A. See TAE GREEK NATIONAL AIRLINES, S.A.

AEROPOSTA, S.A.: Argentina (1992–1994). Aeroposta is established at Buenos Aires in the summer 1992 to provide all-cargo charter flights and contract services to destinations both domestic and international. The name is chosen specifically out of respect for the 1949 **Aerolineas Argentinas, S.A.** merger partner. Revenue operations from Buenos Aires to Miami commence in October with one each leased Boeing 747-121C and B-747-122C, previously flown by **Pan American World Airways (1)**, plus an owned Fairchild Hiller FH-227B. The recessionary year is not a good time to begin nonscheduled services in South America and the company suffers large, but undisclosed, losses.

In April 1993, General Electric Credit Corporation ends its lease for the Jumbojets; the B-747-121C is sent to Nigeria for a month to operate Hadj flights on behalf of **Kabo Air, Ltd.** Local operations are maintained with the American-made turboprop.

Upon its return from Africa in June, the B-747-121 returns on lease from GECC; once the *Clipper Juan T. Trippe*, it is now named *Juan T.*

Trippe. Unhappily, the Jumbojet is, within weeks, retained at Miami when a fuel company places a \$279,887.16-lien on the aircraft for unpaid bills. GECC eventually settles the account, reclaims the aircraft, and sends it to Portland, Oregon, and later to San Bernardino International Airport (formerly Norton AFB) California, for storage.

Once again, Aeroposta is reduced to operating just a Fairchild turboprop. Insufficient revenues can be generated and the operator folds at the end of 1994.

AEROPOSTA ARGENTINA, S.A.: Argentina (1927–1949). AA is formed at Buenos Aires on September 5, 1927 as a subsidiary of the famed French international mail line **Aeropostale (1) (Compagnie Generale Aeropostale, S.A.)**. Board members include both French and Argentine officials and famed French pilot Paul Vachet is made director general. The Argentine carrier takes up all of 1928 with preparations for service. On September 14, the government of Paraguay provides a mail contract.

Flying a Latecoere 25 provided by **Aeropostale (1) (Compagnie Generale Aeropostale, S.A.)**, Vachet inaugurates AA's twice-weekly scheduled service to Asuncion on January 13, 1929 via Monte Cuceros and Posadas. Following the route proving flights of another famed Aeropostale pilot, Antoine de Saint Exupéry, the Argentine subsidiary is able to launch regularly scheduled flights on November 1 from Bahia Blanca to Comodore Rivadavia, via San Antonio Oeste and Trelew.

Following additional exploratory flights, Saint Exupéry, flying a new Latecoere 28 with **Aeropostale (1) (Compagnie Generale Aeropostale, S.A.)** President Marcel Bouilloux-Lafont as passenger, opens regular AA service from Comodore Rivadavia south to Rio Gallegos on April 2, 1930, via Puerto Deseado, San Julian, and Santa Cruz. Six more Late 25s and a Potez 25A.2 are transferred to the subsidiary from its parent during the remainder of the year.

Aeropostale (1) (Compagnie Generale Aeropostale, S.A.) is forced into liquidation in France on March 31, 1931, leaving its South American subsidiaries without the company's support. On April 17, the Asuncion service is suspended. Without income, AA "rents" its assets to the national government on September 29, which renames its temporary acquisition Aeroposta Nacional. Under direction of the Post Office, the Bahia Blanca–Rio Gallegos route is kept open as of October 2.

The Post Office operation ends on March 31, 1932; during its service time, a total of 208 passengers in addition to mail, are transported. On May 31, the government, in cooperation with the French department handling the liquidation of Aeropostale, reactivates the onetime junior airline partner as a private commercial company, AA.

A special fuel allowance together with a temporary monthly subsidy is provided from June 1 to December 31; meanwhile, Rio Gallegos flights continue much as before. On March 24, 1933, the government grants the carrier an exclusive ten-year route concession and a monthly 180,000-peso subsidy.

The Patagonian operation continues in 1934 and 1935; in November of the latter year, the route is initially, although not regularly, extended from Rio Gallegos to Rio Grande, the main town on the island of Tierra del Fuego. During the year, 7 ex-Aeropostale Latecoere 28s are delivered.

All French interest in the carrier are purchased from **Air France** in 1936 and it becomes a fully Argentine company. A Poetz 29-2 is obtained at the same time. During the year Dr. Ernesto Pueyrredon takes a personal interest in the airline and on February 1, 1937 the commercial conglomerate bearing his name purchases the airline, allowing him to become president.

The government subsidy is continued and on October 14, AA begins to receive five Junkers Ju-52/3ms, courtesy of a cooperative arrangement with **Deutsche Lufthansa, A.G. (DLH)**. These now allow full, regularly scheduled service on the Patagonian run (even as far south as Rio Grande) and transfer of the northern terminus of that route from Bahia Blanca to Quilmes, a Buenos Aires suburb, where international connections can be made.

Services are maintained in **1938–1945** with little change. In February of the latter year, the operations of **Servicio Aereo Territorial de Santa Cruz, S.A.** are taken over.

On April 12, **1946**, the Argentine government decides to create a number of airline mixed-stock companies and, later in the year, an ex-USAFAF UC-78 joins the fleet.

On February 13, **1947**, AA is reorganized for the fifth time in its history, becoming a joint-stock company (20% government ownership, 80% Pueyrredon). Meanwhile during the month, the first of six Douglas DC-3s are delivered. The government now allocates regional airline routes within the country in an effort to coordinate air transport operations; spheres of influence are created and Aeroposta receives Zones I and II (roughly the southern half of the country below a line gradually descending southwest to the Chilean border from Buenos Aires).

Two new routes are opened on May 15: Buenos Aires to Bariloche/Esquel; on Tierra del Fuego, the southernmost terminus is transferred to Ushuaia from Rio Grande. Additionally, the carrier is granted international traffic rights to serve the Chilean cities of Pilmaitiquen and Punta Arenas.

The DC-3 order is finished in **1948** and on May 3, **1949**, following the government's decision to create a single state airline, the company is one of four airlines merged to form **Aerolineas Argentinas, S.A.**

AEROPOSTAL AIRLINES, S.A. See LAV VENEZUELAN AIRLINES (LINEA AEROPOSTAL VENEZOLANA, S.A.)

AEROPOSTALE (1) (COMPAGNIE GENERALE AEROPOSTALE, S.A.): France (1918–1931). No exact date for this company's registration has been found; however, its history can be traced to December 25, **1918**. On that date, Pierre-George Latecoere flies as a passenger on a proving flight from Toulouse to Barcelona via Perpignan in a Salmson 2-A.2 piloted by M. Cornement.

On March 19, **1919**, M. Lemitre, piloting a Brueguet 14 with Latecoere as passenger, flies Toulouse–Barcelona–Alicante and on March 20 the flight is continued Malaga–Rabat–Casablanca. With them the two men carry a signed contract authorizing the establishment of an airmail service between France and North Africa. The men return to Toulouse prepared to promote the Societe des Lignes Aeriennes Latecoere.

On September 1, the airmail operation is inaugurated by Didier Daurer, who flies several mail sacks to Rabat (Morocco) via Alicante, Malaga, and Tangier in a Brueguet 14. By October, six aircraft are flying regularly scheduled service, although equipment failures make successful route completions somewhat sporadic. Additional fall flights are laid on from Alicante–Algiers/Oran.

In April **1920**, service is extended to Casablanca. "The Line"—as Latecoere's enterprise has become known—is renamed Compagnie Generale d'Enterprises Aeronautiques, S.A. (CGEA) on April 21, **1921**; however, the earlier nickname will be unofficially retained for several additional years.

The company is officially incorporated on April 11, **1922**. The mail route is extended via Casablanca–Oran (by way of Rabat and Fez) connection on October 4. In October, Pelletier d'Oley flies his Brueguet 14 nonstop on several stages Paris–Casablanca and Casablanca–Tunis.

In May **1923**, pilots make an extensive route proving flight between Casablanca and Dakar. The fleet at year's end is made up of 79 Breguet 14s. In early **1924**, Toulouse to Oran via Alicante and Marseilles to Perpignan services are inaugurated. In November, Latecoere dispatches a team to Rio de Janeiro comprised of two board members plus pilots and mechanics and three Breguet 14s. These are to plan and prove the company's provision of air transport to South America.

The company's chief pilot, Paul Vachet, leads all three Breguet 14s on a Rio to Buenos Aires mail/newspaper proving flight; two of the three aircraft complete the six-stop mission within 36 hours on January 14–16. Vachet leads his two surviving aircraft on a pioneering three-stop Buenos Aires–Recife test on February 5 and a roundtrip Buenos Aires–Recife–Buenos Aires exploration on March 6–8.

In the spring of **1925**, the Brazilian government grants permission for a CGEA airmail service. Meanwhile, regular Casablanca to Dakar service is inaugurated on June 2 via Agadir, Cap Juby, Villa Cisneros, Port Etienne, and St. Louis. Among the aircraft employed are ten Latecoere 15 trimotors and a number of single-engine Latecoere 17s, based at Toulouse and Casablanca. In

Rio de Janeiro on December 3, Pierre Latecoere meets French industrialist Marcel Bouilloux-Lafont, who begins to invest in "The Line." In addition to Latecoere types, the fleet now owns at least 106 Breguet 14s, making the carrier one of the largest airlines in the world.

During **1926**, two pilots, Erafle and Gourp, are forced down in the Sahara and killed by Tuareg tribesmen. Late in the year, Antonine de Saint Exupéry is employed to fly the Toulouse–Casablanca route. By this time, the company's fleet includes the single Latecoere 21 flying boat, employed on the Marseilles–Algiers segment.

In January **1927**, Latecoere, Bouilloux-Lafont, and Argentine aviator Vincente Almonacid win a mail concession from Argentine President Alvear. During the spring, Saint Exupéry is employed as manager of the Cape Juby post, on the Rio de Oro coast; he will enjoy great success in calming the natives and winning their support for CGEA. On March 9, the Brazilian government formally agrees to a company mail service. Bouilloux-Lafont spends FF 30 million to purchase control of CGEA on April 11; Latecoere retires to Toulouse to build the land planes and flying boats he will sell his former carrier.

The new owner renames the carrier **Aeropostale** on April 30, invests \$1.5 million in development, and sends personnel, aircraft, etc., to Brazil. Details of the mail contract are negotiated with Argentina in June and in September the subsidiary **Aeroposta Argentina, S.A.** is created. On November 14, chief pilot Jean Mermoz inaugurates a coastal mail route from Natal–Buenos Aires. By year's end, 25 one-way mail flights (including four passengers) are completed.

By early **1928**, the company is prepared to undertake expanded operations; the fleet now includes 2 Breguet 14 mail planes, 2 Latecoere 17s, and 9 Latecoere 25 mail/passenger aircraft. Employing six leased, ex-French Navy destroyers (one of which is named *Air France III*), Paris–Buenos Aires flight service begins on March 1, with the ships carrying the mail over the Central Atlantic, Dakar–Natal. The Brazilian government reconfirms the Aeropostale concession on March 7, making annual renewals henceforth.

From April 16, Jean Mermoz begins night flights from Rio de Janeiro and Buenos Aires and on April 28, he flies a Latecoere 26 nonstop from Rio de Janeiro to Buenos Aires. Later in the year, mail contracts are negotiated with Chile and Paraguay and subsidiary airlines created. Eight Latecoere 32 flying boats begin taking over the Marseilles to Algiers service. During the year, the General Post Office, which has been subsidizing the transport of British airmail via "The Line," makes its highest annual payment: £28,000.

Flying a Latecoere 25, the subsidiary's chief pilot Paul Vachet, on January 13, **1929** inaugurates twice-weekly flights from Buenos Aires via Monte Caseros/Posadas to Asuncion, Paraguay. On February 28, Jean Mermoz and two passengers in a Latecoere 25, mount a trans-Andean proving flight from Buenos Aires–Santiago via Mendoza. A mail contract is signed with Venezuela on July 3 and Paul Vachet, flying a Latecoere 26, spends the remainder of the year surveying internal routes.

On July 15, Mermoz, flying a new Potez 25, inaugurates the weekly Buenos Aires to Santiago mail service. Meanwhile, in early summer, writer-pilot Saint Exupéry is assigned to Argentina and personally undertakes the exploration of possible new routes from Bahia Blanca into Patagonia, almost as far south as the Straits of Magellan. On November 29, four-stop service is launched from Bahia Blanca to Comodoro Rivadavia. A mail contract with Venezuela is also obtained during the year and a subsidiary airline created.

Early in **1930**, a proving flight is made from Santiago to La Paz, Bolivia. Simultaneously, scheduled weekly services are opened in Venezuela; flights are made from Caracas (Maracay)–Maracaibo and Caracas (Maracay)–Ciudad Bolivar/Guasipati/Tumeremo. On February 14, the

Brazilian subsidiary Companhia Aeropostal Brasileira, S.A. is formed. On April 2, flying a new Latecoere 28-3, Saint Exupéry extends the Argentine route, with three intermediate stops, from Comodore Rivadavia to Rio Gallegos, the southernmost scheduled destination in the world; his only passenger is Aeropostale (1) President Bouilloux-Lafont.

Piloted by Jean Mermoz and Jen Dabry, with mechanic Gimie, the new Latecoere Late 28-3, christened *Comte de la Vaulx*, departs St. Louis, Senegal on May 12, landing at Natal 21 hrs. 15 min. later. Mail that had left Paris on May 11 is thus successfully delivered to Buenos Aires by May 14—only four days time. Toward the end of the year, four specially designed mail ships replace the ex-destroyers. Mail contracts are acquired from Peru and Bolivia; subsidiary companies are built in those two countries, allowing a Potez 25 connection from Arica, Chile to La Paz on October 2, via Tacna, Peru.

On January 9, 1931, the Venezuela service is extended from Ciudad Bolivar to Trinidad. The French government now refuses to renew Aeropostale's subsidy and an overextended Bouilloux-Lafont declares bankruptcy on March 31. At that point, "The Line" is the world's largest airline with operations in nine South American countries. A caretaker commission is appointed to maintain the mail service. In South America, service between Buenos Aires and Asuncion is suspended on April 17, from Arica to La Paz in May and from Buenos Aires to Santiago in June.

During the remainder of the year and for most of two thereafter, the once proud carrier decays, accepting rents and joint ownership arrangements from and with its South American subsidiaries. In 1931, Saint Exupéry's nonfiction novel *Vol de Nuit (Night Flight)* is published to critical acclaim. The book, together with two later tales, *Wind, Sand and Stars* (1939) and *Flight to Arras* (1942), will be published as a combined work, *Airman's Odyssey*, by the New York firm of Reynal & Hitchcock in 1942. The American motion picture studio MGM purchases the film rights to *Night Flight*.

The highlight of this period is a January 13–14 1933 transatlantic flight from St. Louis (Senegal) to Natal (Brazil) made in 14 hrs. 27 min. by the Couzinet 70 *Arc-en-Ciel (Rainbow)*, piloted by Jean Mermoz. MGM's screen version of *Night Flight* appears, starring John Barrymore and Clark Gable. The film, like the book, is well received. In 1994, Stacy Schiff will publish what many consider to be the definitive biography of the flying author, *Saint Exupéry* (New York: Knopf), while also providing much insight into Aeropostale's operations.

On August 30, the remnants of Aeropostale (1) are absorbed the newly created SCELA, immediate predecessor of **Air France**.

AEROPOSTALE (2) (L'AEROPOSTALE/ SOCIETE DE EXPLOITATION AEROPOSTALE, S.A.): BP 10454, Roissy-Charles de Gaulle International Airport, F-95708, France; Phone 33 (1) 43 62 1400; Fax 33 (1) 48 62 80; Year Founded 1990. Originally constituted in 1987 as the **Interceil Service, S.A.**, this Group **Air France** all-cargo carrier is reformed at Paris (CDG) in 1990 to operate on behalf of the French post office system. Christened in honor of the pioneer-era carrier, ownership is divided between **Air France**, **Air Inter**, Sofipost, and **TAT European Airlines, S.A.**

Martin Vial is appointed chairman/CEO and revenue operations are undertaken with a fleet that includes 6 shared Boeing 737-200Fs, 6 B-737-300Fs, and 1 B-737-300, plus 15 Fokker F.27-500s previously leased by **Air France** for operation in support of La Poste air-mail requirements.

The Fokkers are removed in 1991 as the first former **Aeromaritime/UTA, S.A.** B-737-300QC "quick change" jetliners enter service. After midnight each night, after performing its passenger service on behalf of **Air Inter**, **TAT European Airlines, S.A.**, or **Air France**, a plane, in a 20-min. task, is converted into a freighter by removing the seats. On behalf of La Poste, up to 18 tons of mail and journals/newspapers are loaded and, before dawn, flown from Paris to mail depots at Toulouse, Marseilles, Bordeaux, Mulhouse, Lyon, Nantes, and Strasbourg.

Night-airmail and daytime-passenger flights continue apace in 1992–1994 and daytime-passenger charters are introduced. The fleet is altered

to include 10 chartered B-737-200QCs, 3 B-737-300QCs, and 5 B-737-300s. La Poste, late in the year, also introduces all-cargo TGV high-speed trains to carry mail.

Enplanements total 1.04 million and a total of 96,000 metric tons of mail is flown.

Chairman Vial undertakes an aggressive plan to increase business during 1995. A B-737-3Y0QC and a B-737-33AQC are leased from **Monarch Airlines, Ltd.** and two B-727-200Fs are delivered in early May. By the end of the third quarter, all of its aircraft are equipped with the Avaero Stage 3 noise compliance kits that will allow them to continue operating 48 flights per night into Paris from around the country. Despite competition from the three dedicated TGV trains, the company's operation is largely responsible for the ability of La Poste to guarantee next-day delivery of first-class mail.

Passenger boardings climb to 1.3 million and mail to 105,000 metric tons.

In 1996, the company operates a fleet of 15 B-737-300QCs, 4 B-737-200s, and 2 B-727-200s. During the night, the company operates 16 domestic mail routes; during the day, its QC "Baby Boeings" offer services on behalf of **Air Inter Europe, S.A.** Plans are announced in late June for the acquisition of additional freight aircraft. During the fall, a code-sharing agreement is signed with **TNT Express Worldwide** under which Aeropostale contracts to transport freight nightly from Paris to Cologne.

Enplanements for the year total 1.35 million and 117-million metric tons of mail and cargo are transported.

In 1997, La Poste remains the carrier's largest single customer, while the postal service's Chronopost subsidiary is also accommodated. Every night, Aeropostale's planes flying from Paris to regional airports deliver 600,000 newspapers, 15,000 small packages, and 6-million first-class letters.

During the first half year, on-time performance is improved by 97.6%, furthering the postal service's goal of next-day mail delivery throughout France. Discussions are begun with the postal services of neighboring companies concerning partnership alliances.

Revenues total \$183 million while a \$580,000 net profit is enjoyed.

During the spring of 1998, plans are announced for the acquisition of 3 A300B4F all-cargo aircraft, with which to replace its B-727Fs, plus 4 cargo-configured Avions de Transport Regional ATR72s.

Revenues dip to \$182 million, while net gain falls to \$133 million.

The first two ATR72-202s, previously operated by **Trans Asia Airways, Ltd.**, are delivered during the summer of 1999 and initiate freighter services from Paris (CDG). Two Airbus freighters are in service by September, with a third wet-leased from **Channel Express (Air Services), Ltd.** Meanwhile, planning has been undertaken for a possible combination of the freight express requirements of La Post and **Air France Cargo**. Still Air France continues to provide over 150 pilots to operate the joint venture's 15 B-737-300QCs.

At a January 2000 news conference, **Air France** officials indicate that they will gradually pull out of their 50% stake in Aeropostale (2). Reaction by the other 50% stakeholder, Sofipost, a subsidiary of the French post office La Poste, is to dismantle the operation altogether; in September, La Poste will sign a comprehensive cooperative agreement with **Federal Express**.

It is announced on June 13 that the major has purchased full equity in Aeropostale (2) and will soon merge it into its own cargo operation. In early July, the entire B-737 fleet must be grounded after cracks are discovered in a cargo door of one ship during a routine maintenance check.

To help cover commitments, a British Aerospace Bae 146-200QC is wet-leased from **Air Jet, S.A.** On September 22, two B-737-3H6Fs, previously flown by **Malaysia Airlines, Ltd. (MAS)** are chartered from Aviacargo Leasing.

On December 1, **Air France** relinquishes its 50% stake to Sofipost, a subsidiary of the French state mail service, La Poste. Although, for historic reasons, if no other, the major retains rights to the old Aeropostale brand, it turns over the company headquarters and all of the dedicated aircraft to the new **Europe Air Post, S.A.**

AEROPUT (DRUSTRO ZA VAZDUSNI SAOBRAĆAJ): Yugoslavia (1927–1941). With government backing, Aeroput is formed at Belgrade in May 1927. Having acquired four French-guilt Poetz 29s, it inaugurates service on February 15, 1928 over a route from the capital to Zagreb. Two years later, in 1930, and after agreement is reached with the Greek authorities, a route is stretched to Salonika.

In 1931, when the carrier begins flying to Vienna, its fleet comprises 5 aircraft, including 2 Fokker F-VIIs. During the remainder of the 1930s, Aeroput concentrates upon the provision of domestic frequencies and does not extend any additional foreign service. In these years, the fleet is upgraded through the purchase of a wide mix of foreign equipment.

Only one indigenous aircraft is employed, the Mitrovich M.M.S.3, designed by the carrier's technical director Milenko Mitrovich in 1936. Largely unknown, the aircraft has only 66 flight hours in its logbook when it is withdrawn in 1938. In 1939, the flight equipment inventory includes: 2 Caudron C-448s Goelands from France, 2 de Havilland DH 89A Dragon Rapides and 2 Spartan Cruisers from England, and 4 Lockheed Model 10 Electras from America.

All operations cease following the German invasion in May 1941.

AEROQUETZAL, S.A.: Guatemala (1990–1993). Aeroquetzal is formed at Guatemala City in 1990 to provide scheduled, regional passenger, and cargo services, particularly in connection with archaeological sites. Revenue flights to Flores and other destinations commence with a Convair CV-580, which is replaced by year's end with a Douglas DC-9-15.

Unable to maintain viability during a difficult, recessionary 1992, the company is forced to shut down in the spring of 1993.

AEROREGIONAL, S.A.: Chile (1987–1994). Aeroregional is established at Puerto Montt in the fall 1987 to provide third-level passenger and cargo flights around the country. Outfitted with a fleet of 2 Fokker F-27Fs, 2 Cessna 402s, and 1 each Cessna 206 and 421, revenue operations commence late in the year. A total of 27,125 passengers are transported in 1988, along with 186,000 FTKs.

The small regional enjoys a pleasant 1989 as its passenger boardings climb by 8.7% to 29,492. Through April of 1990, customer bookings are off 18.7% to 9,933. Although operations continue apace in 1991–1992, no statistics are released.

In 1993, General Manager Patricia Eliot's fleet includes the 2 Fokker F-27Fs, 1 Cessna 206, 1 Cessna 421, and 2 Cessna 402s.

Flights cease in 1994.

AEROREPUBLICA COLOMBIA, S.A.: CRA 10, No. 27-51, Ofc. 303, Bogotá, Colombia; Phone 57 (1) 342-7221; Fax 57 (1) 283-1680; Code P5; Year Founded 1993. Owned by the Promotora de Inversiones Superior, Aerorepublica Colombia is established at Bogotá in 1993 and is the first new airline to be formed in the nation in 25 years. Alfonso Avila Velanda is named CEO and his concern is outfitted with a fleet that includes 5 Douglas DC-9-32s, 2 DC-9-31s and 2 Boeing 727-46s. Scheduled service is inaugurated linking the cities of Bogotá, Barranquilla, Buenos Aires, Cali, Caracas, Leticia, Lima, Medellín, Panama City, Quito, and San Jose.

In 1997, plans are announced for the start of services to the U.S., but these have yet to begin.

At beginning of the new millennium, Colombia's third largest airline has increased its Douglas fleet to 8 and employs 186 workers.

AEROSANTA, S.A.: Chile (1987–1990). Aerosanta provides scheduled air taxi flights in the Santiago de Chile area beginning in late 1987. A total of 3,782 passengers are transported during 1988, the first full year. Operations cease in 1990.

AEROSERVICE KAZAKHSTAN AVIAKOMPANIA: Algabassakaya 2A, Alma-Ata, Almaty, Kazakhstan; Phone 7 (3272) 366 926; Fax 7 (3272) 529 345; Code AV; Year Founded 1991. Aeroservice is es-

tablished in 1991 to offer domestic all-cargo and express charters. Sabit Makhanov is appointed director general and he begins revenue services with a mixed fleet of Antonov An-2s and Kamov KA-26s.

Flights continue in 1992–1998, during which years the company extends its route network. The fleet is altered to include 6 Tupolev Tu-134As, 5 each An-12s and Tu-154Ms, 3 Ilyushin Il-76Ds, and 1 Yakovlev Yak-42.

Destinations visited include Arauca, Armenia, Aruba, Barranquilla, Bogota, Bucaramanga, Buenos Aires, Cali, Cartagena, Cucuta, Curacao, Frankfurt, Havana, Lima, London (LHR), Los Angeles, Madrid, Manizales, Medellín, Mexico City, Miami, Montego Bay, Newark (EWR), New York (JFK), Pasto, Pereira, Popayan, Rio de Janeiro, San Andres Island, Santa Marta, Santiago, São Paulo, Tumaco, and Valledupar.

The Russian currency fiasco and rising fuel prices have a devastating impact on the company. By 1999–2000 its fleet has been reduced to just 1 An-26B and 2 Tu-154Bs.

AEROSERVICIO PARRAGUE, LTDA.: Aeropuerto Los Cerillos, Casilla 86, Santiago, Chile; Phone 2 557 2904; Fax 2 557 2904; Year Founded 1959. R. Parrague establishes his company at Santiago in 1959 to offer general passenger and cargo services. Revenue operations commence with a single Consolidated PBY-5A Catalina.

A second Catalina is acquired in 1960 and the company continues to offer air taxi and charter flights, including frequent trips to Easter Island and Tahiti.

The first PBY is converted into a water bomber in 1970 as the carrier elects to enter the infant Chilean aerial forest fire-fighting business. During the remainder of the decade and beyond, the company acquires two more Catalina waterbombers, at which point forest fire control becomes the carrier's principal enterprise.

Still, charter work is continued. Passengers are flown with one each Cessna 182 and C-152, as well as a Eurocopter BO-105 helicopter. Cargo is transported aboard a Douglas C-47B.

By 2000, Parrague's company employs 15 workers and enjoys annual sales of \$700,000.

AEROSERVICIOS CARABOBO, S.A. See ASERCA (AEROLINEAS REGIONAL DE CENTRO, S.A.)

AEROSERVICIOS ECUATORIANOS, S.A. (AECA AIRLINES, S.A.): Apartado 4113, Guayaquil, Ecuador; Code 2A; Year Founded 1980. AECA is formed as a charter carrier at Guayaquil in December 1980. Equipped with a Douglas DC-8-55F, a Canadair CL-44D, and four Cessna single-engine lightplanes, the company inaugurates international and domestic passenger and cargo charters in early 1981. In mid-year, multistop Douglas freighter operations link Guayaquil/Quito with Miami. Services remain unchanged.

Just after landing at Quito from Miami on September 18, 1984, the four-man crew of Flight 767-103, a DC-8-55F, are visited aboard their aircraft by members of the Ecuadorean Federation of Aircrews, who wish to discuss a pending strike. Following departure of the delegation and after consultation with management, the four elect not to participate in the job action and to depart for Guayaquil, their next stop, as quickly as possible. To hasten departure, the aircraft is towed to runway, with the engines started during the tow; pre-takeoff checks are not carried out and a 0.05deg horizontal stabilizer nose-up is thus undetected.

The aircraft barely makes it off the runway before descending, hitting the wooden structure of the ILS aerial and crashing into houses, destroying 25. All aboard the freighter are killed, along with 49 other persons on the ground.

Unable to maintain its viability on the international scene, AECA sells its DC-8 and CL-44 in 1988 and concentrates on short-range local operations surrounding the capital city. Contract services are also undertaken by President Alfredo Franco del Monaco's fleet, which by 1993 comprises 2 Cessna 402s, 1 Cessna 310, and 1 Douglas DC-3.

With the economic situation improved in late **1994**, the company elects to reenter the Florida freight market and places into service 1 Boeing 707-321B, 1 B-707-321C, and 1 B-727-23F, the latter leased.

Flights continue in **1995–2000**, although the DC-3 is withdrawn.

AEROSIERRA DE DURANGO, S.A. de C.V.: Mexico (1990–1993). Founded at Durango in **1990**, President Fernando Nunez's carrier offers scheduled passenger and cargo services to surrounding states as well as various small stops in Durango state. Charters and contract services are also undertaken with a fleet comprising four Japanese-made NAAC YS-11-100s.

Unable to maintain its viability, the carrier is forced to cease flying in early **1993**.

AEROSMITH AVIATION: 500 Sally Ride Dr., Concord, California, 94520, United States, Phone (510) 686-6060; Fax (510) 686-6517; Year Founded 1991. Aerosmith is set up by its president, Michael A. Smith, at Buchanan Field in Concord, California, **1991**, to offer passenger charters, which the company is certified to fly anywhere from Alaska to Central America. Operations continue with 1 Beech Super King Air 200 and 2 King Air 90s.

AEROSTAR: United States (1979–1984). Aerostar is organized at New Orleans in July **1979** as a subsidiary of the tour promoter, Professional Travel. Flight operations do not begin immediately. Early in **1981**, three Boeing 727-100s are acquired and employed to commence passenger charters from Atlanta on June 19 to such destinations as Las Vegas and Mexico.

A total of 132,000 passengers are transported by December 31. Revenues total \$2.27 million while expenses are held to \$1.87 million. Profits, unusual in a startup operation, are generated: \$401,000 (operating) and \$171,000 net.

During **1982**, the first full year, the nonscheduled operation is unable to generate as many bookings for the entire year than it had during its first six months. After only two years in operation, the company declares bankruptcy in July **1983**; however, it continues flying until its three Boeings are repossessed in September.

Early in **1984**, after new owners take over, operations are resumed, again with a single B-727-100. In May, Aerostar is purchased again, this time by Atlanta-based Flight International Group, which plans to establish its own charter business. For several months, while the latter awaits government approval for a merger, Aerostar is able to continue to offer charters under its own name. Late in the year, with DOT approval, Aerostar is renamed **Flight International Airlines**.

AEROSUCRE COLOMBIA (AEROSUCRE, S.A.): Terminal de Carga, Aeropuerto Ernesto Cortissoz, Barranquilla, AA23, Colombia; Phone 57 (58) 423 002; Fax 57 (58) 471 635; Code KR; Year Founded 1975. Captain Jorge Juan Carlos Solano Recio sets up this all-freight airline at Barranquilla in early **1975**. Employing a fleet of unmodified, ex-military freighters, including 4 Curtiss C-46s, 1 Douglas C-47 and 1 C-54, regularly scheduled services are inaugurated to Bogota and San Andres Island as well as Curacao and Aruba in the Netherlands Antilles.

A DC-6 is also leased for several months during **1976**.

En route to Aruba on September 24, a C-46D disappears; although no wreckage is ever found, it is presumed that the freighter and its two crew members have crashed at sea.

During the remainder of the decade and into the **1980s**, routes are opened to four additional domestic destinations: Cali, Cartagena, Medellin, and Pereira. The employee population grows to 65 and all of the previously owned American freighters are replaced by 2 Handley Page Dart-Herald 401s in **1981**. The former **British Air Ferries, Ltd.** turboprops are followed into service during **1982** by a pair of Sud-Est SE-210 Caravelle XIRs acquired from a Spanish operator.

Flights continue in **1983–1986**. There are two hull losses during these years.

En route from Barranquilla to Bogota on March 13, 1984, a C-46A with 4 crew and 2 passengers is forced by control problems to return to its point of origin, where it crashes on the runway while landing (4 dead).

As the result of "elevator stiffness," the takeoff of an SE 210 Caravelle XIR from Arauca is aborted on November 27, 1986; the aircraft runs off the end of the runway and over a drainage ditch. Although the French-made freighter must be written off, there are no fatalities.

Flights continue without incident in **1987–1988**.

Just after takeoff from Barranquilla on April 26, **1989**, an SE-210 Caravelle XIR freighter with five crew loses height and crashes into a row of houses; all aboard are killed, along with two people on the ground.

The second fatal crash of the year occurs on November 5 when a Dart Herald 401 freighter with 3 crew and 3 passengers crashes into a mountainside in dark and heavy rain near Chaparral, Colombia; again, there are no survivors.

The previous routes and services are maintained, frequencies are increased, and new routes are opened to additional Caribbean destinations during **1990**. Worldwide charters are also flown and transport of freight is increased by the addition of two DC-6BFs.

While holding in the Malambo area on June 20, **1991**, awaiting a weather change after a service from Barranquilla, one of the DC-6BFs with 18 passengers runs out of fuel and crashes (2 dead).

The main landing gear of an SE-210 Caravelle XIR collapses during takeoff on August 9, causing the jet freighter to veer off the runway and crash; although the aircraft must be written off, there are no fatalities.

In **1992–1998**, the fleet, earlier reduced by 1 Dart-Herald, comprises, in addition to the Caravelles, 1 Boeing 727-21, B-727-59, and B-727-23F, all 3 of which have been purchased from **AVIANCA Colombia Airlines, S.A.** The company mission remains unchanged. Cargo traffic during the latter year totals 29.57 million FTKs. That figure nearly doubles in **1999** as 43.88 million FTKs are operated. Airline employment stands at 257 as the new millennium begins.

AEROSUN INTERNATIONAL AIRLINES: United States (1981–1983). On November 15, **1981**, Clearwater, Florida-based **Red Carpet Flying Service, dba Red Carpet Airlines** is renamed. In addition to charter flights, the reborn operator inaugurates scheduled passenger and cargo services linking its base with Key West and with Grand Cayman and Cayman Brac in the Cayman Islands. Daily roundtrip operations, undertaken with a fleet comprising 1 Douglas DC-3 and 2 Convair CV-440 Metropolitans, continue until a downturn in traffic and financial difficulties caused by the recession force closure in early **1983**.

AEROSUR BOLIVIANO (COMPANIA BOLIVIANA DE AERO PRIVADO, S.A.): Calle Colon Esq Av Irala, Santa Cruz, Santa Cruz de la Sierra, 3104, Bolivia; Phone 591 (3) 364 446; Fax 591 (3) 365 246; Code 5L; Year Founded 1992. A third-level carrier founded at Santa Cruz de la Sierra in April **1992**, President Carlos Gonzalez-Weise's regional scheduled company takes advantage of national airline deregulation by combining several charter operations. It begins to offer regularly advertised domestic frequencies on August 24 with a fleet of 8 Fairchild-Swearingen Metro IIIs. Aerosur receives two, leased British Aerospace BAe 146-100s late in the year.

Eight-times-per-day scheduled services are inaugurated in January **1993** from Santa Cruz de la Sierra to Cochabamba and La Paz. The fleet is increased during the year by the addition of a Let 410 and another Metro III.

Markets served grow to include: Camiri, Cobija, Cochabamba, Concepcion, Guayaramerin, La Paz, La Pedrera, Magdalena, Potosi, Puerto Suarez, Riberalta, San Borja, San Ignacio de Velasco, San Joaquin, San Javier, San Jose, Santa Ana, Santa Cruz Viru Viru, Sucre, Tarija, Trinidad, and Yacuiba.

At year's end and into January **1994**, the company acquires two Fairchild Metro 23s and three more Let 410s. The new U.S.-made aircraft and their predecessors now begin hub-and-spoke flights from Santa

Cruz. Employing a newly leased B-727-214 formerly operated by **Pan American World Airways (1)**, international operations are launched during June to destinations in Argentina, Chile, and Brazil. Enplanements for the year reach 550,000.

Operations continue apace in **1995**. During the year, the company becomes the first in its region to introduce first- and business-class services on domestic flights. In September **1996**, three former **Skywest Airlines** Metro IIIs are purchased from the aircraft manufacturer Embraer.

Oscar Alcocer is president in **1997-1999** and his workforce totals 398. Two more Boeing trimotors are acquired and annual revenues exceed \$24 million.

Enplanements reach 347,000 in **1999** and 665,000 FTKs are operated. The workforce of the country's largest domestic operator stands at 430 at the beginning of **2000**.

A perceived threat to the carrier's viability by new entrant **TAM-Bolivia, S.A.**, 49% owned by the Brazilian carrier and given a Bolivian government operating permit in May 2000, brings a strike by the AeroSur unions in June. In late July, as the TAM carrier prepares to launch Fokker 100 domestic services in August, the government opens a review of the nation's airline situation. Suggestions are made that the two carriers merge or that an unspecified amount of AeroSur stock be sold to TAM-Bolivia.

AEROSVIT AIRLINES: 58A Shevchenko Blvd., Kiev, Ukraine; Phone (044) 246-5070; Fax (044) 246-5073; http://www.aerosvit.com; Code VV; Year Founded 1994. Aerosvit is founded at Kiev during the first quarter of **1994** to offer charter service to Mediterranean destinations. Employing an Antonov An-24 and a Tupolev Tu-154, flights are started from the city's Boryspil International Airport in April to Tel Aviv, Odessa, Thessaloniki, and Athens.

A dry-leased Boeing 737-2Q8A is acquired in October and is employed to introduce thrice-weekly roundtrips to Tel Aviv; a single non-stop roundtrip to Moscow also begins.

Between April and July **1995**, weekly charters are launched from Simferopol to Gannover. In August, weekly flights begin from Kiev to Almaty, along with twice-weekly roundtrips to Ashgabad and Riga. Regularly scheduled flights from Kiev to Tel Aviv and to Thessaloniki via Odessa commence in December, along with connecting flights Dnipropetrovsk-Kiev-Tel Aviv.

Weekly flights begin in February **1996** from Dnipropetrovsk to Tel Aviv, along with connecting flights Donetsk-Kiev-Tel Aviv. Frequencies from Kiev to Riga are boosted to three in March, while weekly B-737-2Q8A roundtrips are introduced in April from Kiev to Ekaterinburg. Tu-154 return service is started in May from Simferopol to Tel Aviv. A second leased B-737-2Q8A is now acquired.

An-24 roundtrips are launched in February **1997** from Kiev to Kharkov, followed by An-24 return flights from Kiev to Lviv in March. The number of weekly roundtrips from Kiev to Tel Aviv is increased to four in April. In May, Kiev-Simferopol and Simferopol to Moscow return service is started, along with daily B-737-2Q8A roundtrips between Kiev and Moscow.

Under terms of a new code-sharing agreement with **Olympic Airways, S.A.**, a flight from Kiev to Heraklion in Greece begins in June, while in July twice-weekly return flights are undertaken from Kiev to Malta and Ekaterinburg. Boeing 737-2Q8A roundtrip service from Simferopol to Tel Aviv commences in October.

The number of B-737-2Q8A return flights from Kiev to Heraklion is boosted to two per week in August **1998**, while roundtrips from Kiev to Tel Aviv are boosted to five per week. In the three years since 1996, the company has transported 420,000 passengers.

An owned B-737-2Q8A is acquired during the first quarter of **1999** and inaugurates the company's new weekly return service from Kiev to Hurgada.

In May, thrice-weekly return flights from Kiev to St. Petersburg are introduced as is four-times-a-week roundtrips from Kiev to Budapest, the latter a dual-designator service with **Malev Hungarian Airlines**.

Also during the month, new weekly roundtrips are introduced between Kiev and Antalia, while frequencies from Kiev to Lyiv are boosted to six per week and to Larnaca to four per week.

Under a code-sharing agreement with **Air Baltic Corporation, S.A.**, weekly roundtrips are launched in June from Kiev to Stockholm via Riga. The number of weekly roundtrips from Simferopol to Tel Aviv jump to two in July.

Enplanements for the year total 200,000.

One of the leased B-737-2Q8As is returned in February **2000** and replaced with a B-737-3Q8A. Code-sharing agreements are signed with **Balkan Bulgarian Airlines** and **Aeroflot Russian International Airlines (ARIA)**. Under terms of the pact, new twice-weekly return service is started from Kiev to Sofia in April.

Also during the spring, the number of weekly roundtrips between Kiev and Moscow are increased, via the Aeroflot pact, to 12, while weekly return services from Kiev to Budapest grows to 10.

In addition to 20 destinations in 13 nations and within the Ukraine, the company plans the introduction of regular direct flights during the summer to Helsinki.

A code-sharing agreement is signed with **Estonian Air, A.S.** on October 1 under which the two will jointly sell tickets for the Tallin to Kiev route that Estonian Air B-737-5Q8s fly thrice weekly.

AEROSWEET AIRLINES: 58-A Schevchenko Blvd., Kiev, 252032, Ukraine; Phone 380 (44) 220 1614; Fax 380 (44) 221 8707; http://www.aerosweet.com; Code VV; Year Founded 1994. Aerosweet is established at Kiev in **1994** to provide scheduled international services from the Ukraine to destinations in the Middle East, Eastern Mediterranean, Central Asia, the Baltic region, and the CIS. The company name is a combination of aero and a play on the Ukrainian word "swit," which means "world."

Shareholding is divided between local investors and an Israeli company, Caspi Aviation, Ltd. Revenue flights commence with a pair of Boeing 737-200s. They wear the national colors of pale blue and yellow.

Flights continue in **1995-1996**. During these years, the company joins IATA. From Kiev, it regularly flies to Tel Aviv, Larnaca, Athens, Thessaloniki, Ekaterinbourg, Riga, Almaty, Akmol, Ashkabat, Lvov, Kharkov, and Simferopol.

Tel Aviv is also served from Odessa and Simferopol, while frequencies are also offered to Moscow from the second-named point.

Charter flights to Heraklion (Crete) and Malta begin in the spring of **1997**. Simultaneously, twice-weekly roundtrip service is inaugurated from Kiev to St. Petersburg, via Moscow. The new route is flown in direct competition with St. Petersburg-based **Aviation Enterprise Pulkovo (Pulkovo Airlines)**.

Frequencies must be cut back somewhat during the summer as one B-737-200 must be taken off line. A third "Baby Boeing" is received in October and, on November 1, all flights become nonsmoking.

Due to engine problems, Flight 241, a B-737-200A with 8 crew and 62 passengers and en route from Kiev to Thessaloniki, stops at Odessa on December 17 to change planes. When all are aboard, the Yak-42 departs south and, because of heavy traffic, is put into a holding pattern near Salonika. At this point, the aircraft disappears. A massive search is undertaken, during which a Greek Air Force C-130 Hercules with five crew, crashes, killing all aboard. Wreckage from the Russian aircraft is found on December 20 near Mount Olympus and there are no survivors.

Enplanements for the year total 157,423.

Flights continue without fanfare in **1998**. Passenger boardings drop 8.1% to 135,000.

A total of 145,000 passenger are carried in **1999**, while 548,000 FTKs are also operated. Two B-737s, one each Dash-35B and Dash-3Q8, are leased during the year.

During the first quarter of **2000**, the number of B-737-200 weekly roundtrip frequencies from Kiev to Moscow are increased from seven to 10.

On August 9, a Greek court orders Lvov Airlines to pay \$1.6 million to the relatives to two people killed in December 1997 when the Yak-42 they had chartered to Aerosweet crashed on approach to Thessaloniki.

Aerosweet takes delivery of its first Boeing 737-300 on September 1.

AEROTABO (TRANSPORTES AEREOS DE BOLIVAR, S.A.). See **AEROLINEAS MEDELLIN, S.A.**

AEROTACA AEROTAXI CASANARE (AEROTRANSPORTES CASANARE, LTDA.): **Aeropuerto El Dorado, Entrada 1, Bogota, Colombia; Phone 57 (1) 413 9884; Fax 57 (1) 413 5256; Code AT; Year Founded 1965.** Aerotaca is established by the Urdaneta family at Bogota in early 1965 to serve as an FBO and maintenance concern. A charter/air taxi division is also established to provide on-demand passenger and freight services. Flight operations are started and continued with lightplanes as well as several de Havilland Canada DHC Twin Otters.

While descending to Vereda el Salitre on a service from El Yopal on June 11, 1989, a DHC-6-300 with 2 crew and 20 passengers crashes into a hill (6 dead). Nonscheduled flights are maintained without further incident in 1990–1991.

A scheduled airline division is created in 1992 in order that regularly offered commuter services might be provided. The company enterprise continues to be operated under the chairmanship of Antonio Urdaneta.

Revenue operations by General Manager Alejandro Salamanca's third-level airline commence with the three leased de Havilland Canada DHC-6-300 Twin Otters previously employed for charters. Markets served include Arauca, Cimitarra, El Yopal, Malaga, Sabana de Torres, Santa Posa, Sogamoso, Tame, and Villanueva.

En route from Bogota to Bucaramanga on May 16, a Twin Otter with 16 passengers is taken over by armed hijackers, who kill three security guards and toss their bodies out of a door. The aircraft is forced to land at Fortul, where the remaining passengers are released. The Canadian-built turboprop then takes off—and vanishes.

In 1993, airline employment stands at 128 and the fleet is increased by the addition of 1 each Beech King Air 90 and Fairchild Hiller FH-227D.

While on approach to El Yopal on a June 6 all-cargo service from Bogota, a DHC-6-300 with two crew smashes into a 3,000-ft, cloud-covered hill 5 km. from the runway; there are no survivors.

One Twin Otter is withdrawn in 1994 as a Cessna 206 is received and an Embraer EMB-120 Brasilia is ordered. A new route is stretched to Yutamena and Mauricio Hoyas becomes the new general manager.

Operations continue apace in 1995–1998. During these years, Rafael Urdaneta becomes general manager, the workforce grows to 135, and hubs are opened at Bucaramanga and El Yopal. Additional destinations visited include Monterrey, Orocué, Puerto Berrio, Saravena, Velasquez, and San Jose del Guaviare.

The Brasilia is not received, being replaced instead with a leased SAAB 340B first flown by **Aer Lingus Commuter, Ltd.**, the regional subsidiary of **Aer Lingus Irish Airlines, Ltd.**

While en route from Bucaramanga to Malaga on April 8, 1999, a DHC-6-300 with 2 crew and 3 passengers crashes into a fog-shrouded La Caida hill near its destination; there are no survivors.

Two Beech 1900Cs are leased from Raytheon Aircraft Company during the first week of January 2000. Upon delivery, they are employed on regional services to Colombian cities.

AEROTAL COLOMBIA (AEROLINEAS TERRITORIALES DE COLOMBIA, S.A.): Colombia (1971–1983). **TAL (Taxi Aereo Lianero, S.A.)** is formed at Bogota in 1971 to offer nonscheduled DC-3 passenger and freight service to various nearby towns. The company is reorganized in 1975, changes its name to Aerotal Colombia, and initiates scheduled passenger services with its fleet of two DC-3s and a newly received DC-4. Orders are now placed for jetliners as major expansion begins.

A fleet of 4 Sud-Est Caravelle VIRs is purchased from **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** and is employed in 1976–1979 to inaugurate trunk service between all of Colombia's major cities from its base at Villavicencio. Three are delivered in 1977 and the fourth in 1978; they join a fleet which also includes 1 DC-4, 2 DC-3s, 2 Cessna 206s, and 1 Pilatus Porter.

A Sud-Est SE-210 Caravelle VIR with 6 crew and 51 passengers suffers the loss of its hydraulic systems soon after takeoff from Bogota on July 20, 1979. The aircraft is able to return to its point of origin and make a successful emergency landing, during which it leaves the runway and comes to a stop in a canal. Although the aircraft must be written off, there are no fatalities.

While being tested at Bogota on January 24, 1980, a DC-3 with four crew suffers engine failure and crashes; there are no survivors.

Later in the spring, a Boeing 707-331C is purchased from **Trans World Airlines (TWA)** and is employed to begin all-cargo freight services to Miami and the Caribbean.

The Stratofreighter with 3 crew and 1 passenger encounters heavy rain while on final approach to Bogota on December 20 and crashes, catching fire; all aboard safely evacuate.

By 1981, the route network includes stops at Barranquilla, Bogota, Bucaramanga, Cali, Cartagena, Cucuta, Medellin, Pasto, Pereira, San Andres Island, and Santa Marta.

The fleet is revised in 1982 as the Caravelles are replaced by three Boeing 727-021s; another B-707-331C freighter is also acquired.

On January 7, a lone assailant takes over a B-727-021 en route from Santa Marta to Barranquilla, and orders the release from prison of his brother, convicted of hijacking four years earlier. The man is captured by his fellow passengers and, when the plane arrives at his destination, is handed over to police. Tried, he is sentenced to prison and joins his brother.

Before the changeover is completed, M-19 guerrillas hijack a Caravelle with 128 aboard on January 27 and force it to fly to Cali, where they release 47 hostages. The plane then crashes into an army truck during its attempted takeoff and the pirates threaten to blow up their captives and the damaged aircraft if not given another. After exchanging the remaining hostages for an escape plane next morning, the guerrillas fly to Cuba via the Colombian resort island of San Andres aboard a corporate jet.

A DC-3 with 22 aboard crashes near Quetame, Colombia, during a rainstorm on December 1; there are no survivors.

Increased fuel prices and the world economic recession having conspired to lower traffic and financial rewards since 1979, the carrier is forced to suspend flight operations and declare bankruptcy in 1983.

Although plans are made to reorganize and attempt to resume services in 1984, they do not come to fruition. In the aftermath of the bankruptcy and subsequent litigation, several aircraft are simply left to rot on the runway of the former company base.

AEROTAXI STOCK LEASING COMPANY: 9 Pilot Street, St. Petersburg, 196210, Russia; Phone 7 (812) 178275; Fax 7 (812) 1272771; Year Founded 1996. ASLC is established by Anatoli A. Khvostovski at St. Petersburg in 1996 to offer executive and small group passenger charters. Revenue flights begin and continue with a single Yakovlev Yak-40D.

AEROTAXI SUD, S.p.A. See **SAGITTAIR, S.p.A.**

AEROTEC AIRWAYS, GmbH. & CO., K.G.: Flughafen, Friedensstrasse 113, Rothenburg, D-02929, Germany; Phone 49 35891 45600; Fax 49 35891 45839; Year Founded 1996. Aerotec is set up at Rothenburg in 1996 as the European dealer for the Czech aircraft manufacturer LET. Four Let 410s are delivered and are employed to operate regional flights within Germany, including executive and freight services. Also flown are one each Beech King Air 90 and a Piper PA-34 Seneca II. A Cessna 550 Citation II is, meanwhile, stationed at Saar-

brucken Airport to operate charters from that point as well. Flights continue **1997–2000**.

AEROTOURS DOMINICANA, S.A. *See* **AEROCHAGO AIRLINES, S.A.**

AEROTRANSIT: United States (1979–1980). Aerotransit is set up at Beverly, Massachusetts, in **1979** to provide daily air taxi shuttle flights to New York (LGA). Although Beech B-80 Queenaire roundtrips are duly inaugurated, fuel costs and recession force the airline out of business in **1980**.

AEROTRON, S.A. de C.V.: General Aviation, Puerto Vallarta International Airport, Puerto Vallarta, Mexico; Phone 52 (322) 1 19 21; Fax 52 (322) 1 17 93; <http://www.hypermex.com/htmlads/artn.htm>; Year Founded 1990. Aerotron is set up as an FBO and charter operation by Enrique Tron at Aeropuerto Internacional, Puerto Vallarta, in **1990**. Tron arranges that Eduardo Legopreta become chairman as he remains president.

Fourteen employees are recruited, and a Learjet 35A is purchased. A total of 1,440 passengers are transported on the year and revenues are \$327,524. The net loss is \$257,424.

Passenger boardings decline to 940 in **1991**; however, revenues jump to \$1.55 million and produce a \$789,907 net profit. The reverse occurs in **1992** as customer bookings rise to 1,200 and revenues are cut in half to \$758,662. There is a net \$41,338 loss. The fleet in **1993** includes 1 each Learjet 35A, Learjet 25D, Fairchild-Swearingen Metro II, and 1 Boeing 727-230, which is leased. Service is maintained during the remainder of the decade.

AEROTUY, C.A. (LINEA TURISTICA AEROTUY): Boulevard Sabana Grande, Ed G Sabana, Caracas 1010A, Venezuela; Phone 1 (814) 329-5301; Fax 1 (814) 328-5306; <http://www.tuy.com/aerotuy.htm>; Code TU; Year Founded 1990. Aerotuy is established at Caracas in **1990** to offer nonscheduled, third-level international, domestic, and regional services. Peter Bottome is named president and he begins revenue services with 4 Dornier 228-212s and 6 de Havilland Canada DHC-6-300 Twin Otters. Destinations visited in **1991–1993** from Caracas and Porlamar include Canaima, Kavac, Los Roques, Maturin, Grenada, and Tobago; charters are flown to national parks in Venezuela. Operations continue in **1994** with a fleet now made up of 7 Dorniers.

The fleet is significantly altered in **1995–1999**. Gone are the Twin Otters and 3 Dorniers, replaced by 3 DHC-7s, 1 Beech 1900, and 4 Cessna 208 Caravan Is.

AEROVIAS, S.A. (1): Brazil (1944–1949). Aerovias is formed in Minas Gerais State in late **1944**. Most of **1945** is spent searching out a fleet, which comes to comprise 1 each Stinson SM-8 Junior and Stinson SR-8 Reliant, as well as a 12-year-old Fiat G-2 trimotor. The latter, the only one of its type in existence, is purchased from **Varig Brazilian Airline (Viacao Aerea Rio-Grandeuse, S.A.)**, which had obtained it from **Avio Linee Italiane, S.p.A.** three years earlier. Services to local destinations begin in November.

Service is maintained during **1946–1949** and the fleet is upgraded by the addition of 2 Douglas DC-2s and 2 C-39s (military DC-2s); however, traffic revenues are insufficient to overcome debt and by the latter year the situation is so grave that the airline is forced to stop flying.

AEROVIAS, S.A. (2): Guatemala (1977–1993). Aerovias is established at Guatemala City's Aeropuerto La Aurora in the fall of **1977** to offer scheduled and charter all-cargo service. Employing a Piper PA-31-310 Navajo, President Arturo Pellecer's 60-man airline inaugurates flights to Flores, Belize, and the Mexican community of Chetunul.

The first of a fleet of three Handley Page 200 Dart Heralds is received in **1984**. The Heralds are followed into service in **1985** by a leased Sud-Est SE-210 Caravelle III.

Just after takeoff from Guatemala City on January 18, **1986**, the chartered Caravelle III with 6 crew and 81 passengers crashes into a hill 5 mi. from Flores; there are no survivors.

Services are maintained through the remainder of the decade and in **1989** the fleet includes 3 Heralds and 1 Douglas DC-6A. Permission is sought to inaugurate passenger and cargo flights to Houston, Miami, and Los Angeles with a wet-leased Boeing 707-320C.

While American authority is awaited in **1990**, Herald operations continue. A Lockheed L-188C Electra, first flown by **Garuda Indonesia**, is acquired from **Transafrik, S.A.** in **1991** as turboprop combi flights to Miami are initiated.

Two of the Heralds go out of service in **1992** and are replaced with a Boeing 727-76. In **1993**, President Arturo Pellecer's fleet also includes another Piper Navajo and a Beech 80. In deep financial difficulty, however, the carrier must shut down toward year's end.

AEROVIAS AMAZONAS, S.A.: Peru (1961–1965). Founded at Bogota in April **1961** to offer international charter service, this operator purchases three Curtiss C-46 Commandos. Flights are started late in the year along a single route stretching from Iquitos to Miami via Quito, Bogota, and Panama City. The usual cargos are tropical fish and exotic fauna.

The fleet begins to grow to a total of seven Commandos (not all operated simultaneously), but the company is forced by poor economic return and stiff competition to cease flying in **1965**, only four years after startup.

AEROVIAS ARGENTINAS, S.A. *See* **TACA (TRANSPORTES AEREOS CENTRO AMERICANOS, S.A.)**

AEROVIAS AZTECA, S.A. de C.V.: Mexico (1944–1945). Mexico's second attempt at an all-cargo airline is formed in Mexico City in late **1944**; ownership is 58% American and 42% Mexican. With two Budd Conestogas, the carrier initiates weekly multistop service in March **1945** from the capital up to Mexicali.

There is insufficient demand for this service, however, and the company ceases flying before the end of the year.

AEROVIAS BRASIL. *See* **EMPRESA DE TRANSPORTES AEROVIAS BRASIL, S.A.**

AEROVIAS CARIARI, S.A.: Costa Rica (1968–1979). AC is set up at Limon in **1968** to provide domestic passenger service to San Jose and other points employing a pair of Douglas DC-3s. Operations continue for another decade, during which years the fleet is increased with the addition of a single Convair CV-440.

AEROVIAS CARIBE, S.A. de C.V.: Coba Ave. No. 5, Local B1, Plaza America, Cancún, Quintana Roo, 77500, Mexico; Phone 52 (98) 842-000; Fax 52 (98) 841-364; <http://www.aerocaribe.com.mx>; Code QA; Year Founded 1973. Set up at Mexico City in **1973**, this second-level airline is initially and briefly known as **Aerolineas Bonanza, S.A. de C.V.** Equipped with 1 Convair CV-440 and 2 CV-340s, the carrier initiates international flights to Guatemala and Belize as well as domestic services to the Yucatan peninsula cities of Chichen, Itza, Tulum, Villahermosa, Cozumel Island, and Isla Mujeres.

In **1974**, the base is moved to Cancún, which is rapidly developing into a top-ranked resort community. The company name is changed and

services are maintained throughout the **1970s**. It is during this period that the company also becomes known as Aerocaribe.

In **1981** an Embraer EMB-110P1 is added to the fleet. During the **1982–1983**, the company continues to fly scheduled passenger services between resort, archaeological, and commercial points throughout the state of Yucatan and into the territory of Quintana Roo. As a result of traffic dips, the fleet is downsized in **1984** to comprise 1 CV-440, 1 CV-340, and the Bandeirante.

Regional services are started late in the decade and, by **1988**, General Manager Jaime Valenzuela Tamariz has sold the EMB-110 and replaced it with (in addition to the Convairs) 2 Fokker F-27F/Js and 2 Fairchild Hiller FH-227B/Ds. Airline employment, meanwhile, grows to 345.

The Convairs are sold in **1989–1990**. On August 23, 1990 the company is purchased by **Mexicana Airlines, S.A. de C.V.** It is assigned to the commuter network “Mexicana Inter” with the task of feeding the major at Cancún. Four more Fokkers, two additional FH-227s, and a pair of Pilatus-Britten-Norman BN-2A Trislanders are acquired by President Raul Arechiga Espinoza during **1991–1992**.

In **1993**, General Manager Tamariz oversees a workforce of 200. Markets served include Acapulco, Cancún, Chetumal, Cozumel, Flores, Huatulco, Merida, Minatitlan, Oaxaca, Puerto Escondido, Tuxtla Gutierrez, Vera Cruz, and Villahermosa.

A Douglas DC-9-15F is put into service during **1994** linking Cancún with Merida, Villahermosa, Tuxtla Guierrez, and Oaxaca.

Flights continue in **1995–1996**. During these years, the company becomes closely affiliated with **Aero Cozumel, S.A. de C.V.**

Also in 1996, **Mexicana Airlines, S.A. de C.V.** and its “Mexicana Inter” interests are purchased by the holding company CINTRA, S.A. de C.V., which also owns **Aeromexico (2) (Aerovías de Mexico, S.A. de C.V.)**.

A major expansion of services occurs on October 29, **1997**. New routes are started to the Chiapas cities of Tuxtla Gutierrez, San Cristobal de las Casas, and Palenque, as well as Mexico City and the Guatemalan community of Tikal.

In **1998**, the carrier places orders with British Aerospace Asset Management for the charter of five BAe Jetstream 32EPs with which to replace its FH-227s. The company will be the first in Mexico to operate the British-made turboprop.

At the end of the year, the company is accused of cancelling 463 scheduled flights in the State of Chiapas during the previous 12 months, causing economic loss to the local economy.

On January 28, **1999**, Aerocaribe, in an open letter to the state government published by the media, denies the cancellation claims.

Aerovías Caribe continues its close link with fellow “Mexicana Inter” partner **Aero Cozumel, S.A. de C.V.** The two companies share a homepage on the World Wide Web.

The four BAe Jetstream 32EPs are in service by the end of the first quarter.

In November, twice-daily nonstop roundtrips are started from Cancún to Chetumal. A specialist in providing lift for Mayan World visitors, the company transports over 500,000 passengers on the year.

Daily nonstop roundtrips begin on February 3, **2000**, from Cancún to San Pedro, Honduras, providing a link to Copan, the archaeological jewel of Honduras.

While enroute from Tuxtla Gutierrez to Villahermosa via Ocosingo on July 7, Flight 7831, a BAe Jetstream 32EP with 2 crew and 17 passengers, encounters bad weather and changes course; the plane crashes into mountainous terrain 37 mi. SE of its final destination and there are no survivors.

New service is launched in July from Guadalajara to Oaxaca, Acapulco, and Havana, the latter via Cancún. Monterrey to Havana via Cancún frequencies also begin.

DC-9 roundtrips are inaugurated on November 1 between Monterrey and Cancún and, beginning on November 15, between Guadalajara and Cancún.

AEROVIAS CENTRALES, S.A. de C.V.: Mexico (1932–1935). Following the February 9, **1932** failure of the late Theodore Hull’s **CAT (Corporacion de Aeronautica de Transportes, S.A. de C.V.)**, **Pan American Airways (PAA)** moves on February 26 to establish a subsidiary, Aerovías Centrales, with which to acquire, operate, and build upon CAT’s assets. A fleet of 4 Fokker F-10As and 2 Fairchild 71s is provided. Dismissing the central portion of the newly acquired network, Juan Trippe’s operation concentrates on the Pacific coast, while retaining the Torreón–Durango–Mazatlan segments; Ford 5-ATs are introduced on November 12.

In March **1933**, a five-stop coastal route is opened Mazatlan–Ciudad Obregon; this run is extended, via Hermosillo, to Nogales in mid-year. The only Northrop Delta 1B is delivered on August 20 and enters Pacific Coast service.

To meet competition from Walter Varig’s **LAO (Lineas Aereas Occidentales, S.A. de C.V.)**, Aerovías Centrales, in April **1934**, employs the first of five P.A.A.-supplied Lockheed Model 10Cs to open Los Angeles–Mexico City same-day service. The American carrier also delivers a Consolidated Fleetster; however, the original Northrop Delta 1B is lost in a fire on May 5.

When LAO goes out of business in January **1935**, P.A.A. quickly acquires its Tapachula route. Refusing to bow to a government rule that all airlines operating as Mexican must have Mexican flight crews, P.A.A. dissolves Aerovías Centrales on December 18, selling its fleet to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**.

AEROVIAS COLOMBIANAS, S.A. See **ARCA COLOMBIA (AEROVIAS COLOMBIANAS, S.A.)**

AEROVIAS CONDOR, S.A.: Bolivia (1958–1966). Condor is set up as a La Paz-based air taxi in **1958**, flying passengers and freight to local destinations with a Cessna 182. In 1960, the company purchases a Curtiss C-46 Commando with which to undertake nonscheduled, all-cargo flights on behalf of energy concerns.

During the spring of **1966**, the company leases its big plane to **LAB (Lloyd Aero Boliviano, S.A.)**. The aircraft is lost in a crash during August and, as a result of this catastrophe, the company goes out of business in September.

AEROVIAS CONDOR DE COLOMBIA, LTDA. See **AEROCONDOR (AEROVIAS CONDOR DE COLOMBIA, LTDA.)**

AEROVIAS CONTRERAS, S.A. de C.V.: Mexico (1947–1955). Tijuana import-export businessman Manuel Contreras sets up this airline in **1947** to concentrate on the dual business of hauling passengers and cargo in and north of Baja California. Employing an ex-U.S. Army Air Forces C-46A Commando christened *Ensenada*, a local route is begun to Ensenada, Mexicali, and San Felipe. The following year another Curtiss is acquired and the route network is stretched to La Paz.

From **1950**, passenger traffic shrinks and is finally passed to **Aeronaves de Mexico, S.A. de C.V.**; cargo traffic, however, rises during the Korean War period (especially in the transport of fish from La Paz to California, via Tijuana).

While on approach to San Diego on August 18, **1953**, the *Ensenada* with two crew crashes into the mountains E of the city; there are no survivors.

Following the disaster, business declines to a point where the company ceases operations in **1955**.

AEROVIAS DAP, S.A.: Casilla 406, Punta Arenas, Chile; Phone 56 (61) 22 33 40; Fax 56 (61) 22 16 93; Code X8; Year Founded 1980. Members of the Pevcevic family, including father Andres and sons Domingo Andres and Alexander, desiring air service into Puntas Arenas, form Aerovías DAP on November 1, **1980**; the DAP initials stand for principal shareholder Domingo Andres, although his father and younger brother are shareholders. When **Brymon Airways, Ltd.** of the U.K.

elects not to take delivery of a de Havilland Canada DHC-6-300, it is sold to the Pevcevic and is employed to begin scheduled service a week later, still in Brymon colors, to Puerto Williams.

Frequencies in **1981–1983** are three per week during the October to March summer season and weekly during winter; on November 8, twice-daily flights are offered across the Magellan Straits to Porvenir. In addition to the scheduled frequencies, charters are undertaken to the oil drilling centers of Cerro Sombrero, Punta Catalina, and Posesion on behalf of the Chilean national oil corporation ENAP (Empresa Nacional de Petroles).

An international service is inaugurated to Rio Gallegos in October **1984** and a Piper PA-31-310 Navajo is purchased from the Chilean Navy in September **1985**. Because of an exorbitant insurance rate, the Rio Gallegos route is suspended in February **1986**. The fleet is upgraded during the year to include 1 DHC-6-300, 2 Cessna 402Cs, and 2 Beech King Air 90s.

Scheduled third-level passenger, cargo and mail service to the region surrounding the base at Punta Arenas is maintained in **1987**, along with passenger and cargo charters and contract services flights. A total of 22,074 passengers are transported in this the first year in which traffic figures are reported. Customer bookings decline by 33% in **1988** to 16,597. Passenger boardings recover somewhat in **1989**, increasing by 2.5% to 17,010.

Traffic resumes its downward journey in **1990**, falling 12.5% to 14,870 passengers flown. Statistics are only reported for the first eight months of **1991**, but these show customer bookings up 14.5% to 11,089 while cargo rises 50% to 12,000 FTKs.

The fleet in **1992** includes 1 each Beech King Air 90, King Air 100, and DHC-6-300. Passenger boardings increase by 14.7% to 20,252 while freight figures are not shared. During the first nine months of **1993**, customer bookings decline by 9% to 14,056.

Airline employment is increased by 25% in **1994** to 40 as passenger traffic improves. Again, through September, bookings rise 14.8% to 20,147.

Timed to begin with the southern hemisphere summer season, starting in October **1995**, DAP runs services on the busy route between Punta Arenas and Santiago, the Chilean capital with a single B-727-23 leased from CS Aviation in New York.

Toward year's end, an agreement is signed with **British Airways, Ltd. (2)** that provides that passengers and cargo moving between the UK and the Falkland Islands can travel with BA from London to Santiago, and connect there for the twice-weekly DAP flight to Fort William via Punta Arenas.

The carrier's eight aircraft transport a total of 27,670 passengers—a dramatic 21.1% increase.

Problems begin in April **1996** when DAP starts to encounter difficulties in matching revenues with monthly operating lease costs. This situation is not helped by the relatively high fuel costs associated with flying the 727 on the three-hour journey between Punta Arenas and Santiago. In addition, the other airlines flying between Santiago and Punta Arenas begin a price war, although they will eventually have to pay antidumping fines after DAP successfully takes them to court.

Still, overall customer bookings skyrocket this year, climbing 76.7% to 48,878.

The fleet of President Domingo Andres Pivcevic in **1997** includes 2 leased Boeing 727-23s, plus an owned fleet of 1 each DHC-6-300s, Beech King Air 100, and Beech King Air 90, plus 3 Eurocopter AS-355F Ecureuil IIs.

The B-727-23 leasing contract comes up and there are two options—to renew for a couple of years or exercise the termination clause. At the beginning of the low season at the end of March, the Boeings are returned.

DAP pulls out of the Santiago to Punta Arenas market on April 1; however, the two Boeings will be chartered again and the carrier will return when the new high season begins in October.

Passenger boardings fall 5.5% to 46,212.

Partial year enplanements are reported in **1999**. At the beginning of **2000** there are 40 employees.

AEROVIAS DARIENTAS, S.A. See ADSA (AEROVIAS DARIENTAS, S.A.)

AEROVIAS DE GUATEMALA, S.A.: Guatemala (1940–1945). Aerovias de Guatemala, S.A. is formed by **Pan American Airways (PAA)** at Guatemala City on October 11, **1940** for the express purpose of competing with Lowell Yerex's subsidiary **Compania Nacional TACA de Guatemala, S.A.** The American major subscribes 40% of the capitalization and Alfred Denby, the American owner of the nation's largest meat packing business, is appointed general manager. A Lockheed L-14 and two Ford 5-ATs are delivered, allowing service to start on November 7.

The largely one-sided competition ends on January 1, **1941** when the Guatemalan dictator withdraws Yerex's route certificates. **Pan American Airways (PAA)** turns over the Ford Tri-Motor 5-AT-74 in May for use as a chicle freighter.

On April 15, **1942**, following a change in government and Denby's replacement and withdrawal (actually, an escape) to the U.S., PAA shareholding is reduced to 20%. During the summer, two Douglas DC-2s are placed in service. On November 30, **1945**, the company is sold to the new state airline **AVIATECA (Compania Guatemalteca de Aviacion, S.A.)**.

AEROVIAS DE INTEGRACION REGIONAL, S.A. See AIRES (AEROVIAS DE INTEGRACION REGIONAL, S.A.)

AEROVIAS DE MEXICO, S.A. de C.V. See AEROMEXICO (2) (AEROVIAS DE MEXICO, S.A. de C.V.)

AEROVIAS DEL CENTRO, S.A. de C.V.: Mexico (1962–1969). This third level operator is organized at Izucar de Matamoros in the state of Puebla in **1962** and offers single-engine service to various small destinations within that state, as well as in the states of Oaxaca and Guerrero. Financial difficulties force the company to cease flying in **1969**.

AEROVIAS DEL SUR, S.A. de C.V.: Mexico (1959–1969). Formed at Mexico City in **1959**, this commuter offers Piper service from the capital to the towns of Ciudad Altamirano, Arcelia, and Morelia. Economic difficulties in the late **1960s** bring an end to operations in **1969**.

AEROVIAS ECUATORIANAS, S.A. See AREA (AEROVIAS ECUATORIANAS, S.A.)

AEROVIAS ESPECIALES DE CARGA, S.A. (AVESCA COLOMBIA): Colombia (1990–1995). This special cargo airline is established at Bogota in **1990** to provide charter and contract service flights to local and regional destinations. Revenue operations commence with a single Convair CV-580, followed by a second in **1991**.

The carrier enters the jet freighter age in **1992** with the introduction of one each Boeing 727-25 and B-727-41. The Convairs are retired in **1993** and are succeeded by a B-727-95. The company is renamed Aero-lineas Cargueras, S.A. in **1995**.

AEROVIAS GUEST, S.A. de C.V.: Mexico (1946–1962). Created at Mexico City on June 25, **1946** to offer transatlantic services to Europe, Aerovias Guest, S.A. is capitalized at 5-million pesos; although Mexican citizens hold 63% shareholding, the largest single investor is American financier Winston Guest, after whom the company is named.

A Douglas DC-4 is acquired in the fall of **1947** and, on January 8, **1948**, service is inaugurated Mexico City to Madrid via Miami (service stop only), Bermuda, the Azores, and Lisbon. Seven more DC-4s

are delivered throughout the year and three Lockheed L-749 Constellations are ordered. The first of the latter arrives on July 1 and, seven days later, is employed to fly Mexican competitors to the London Olympic Games.

Proving impossible to resolve the U.S.–Mexico bilateral impasse, Guest is unable to acquire its remaining Lockheeds. After only four months of operation, the first L-749 is sold to **Air France** in January 1949. Separate route certification is also received allowing flights to and from Miami, which are marketed as “Route of the Sun” frequencies. An additional DC-4 is acquired in 1950.

With the Madrid run proving unprofitable, the number of flights to the Spanish capital are reduced during the summer of 1951 and suspended altogether at year’s end; however, the Miami services become successful discount frequencies. Mexico City–Panama City direct flights begin in October 1954.

Meanwhile, the low-fare Miami operation has proven so viable as to require additional capacity; two ex-USAF Fairchild C-82A Packet freighters are obtained and, on November 10, 1955, the DC-4s are replaced by two Lockheed L-749s purchased from **Qantas Empire Airways (Pty.), Ltd.** These are employed to get around the difficulties caused by lack of a U.S.–Mexican bilateral by opening a route from Mexico City to Windsor, Ontario (just across the border from Detroit).

A DC-4 with 5 crew and 20 passengers en route from Panama to Mexico City on November 15, 1956, crashes near Salina Grande, Nicaragua; there are no survivors.

Flights are now started to Caracas, Panama, and Guatemala; however, the unprofitable Windsor route is suspended on September 13, 1957. The fleet is now enhanced by the addition of two ex-military Fairchild C-82A freighters. The Panama City service is extended to Caracas in April 1958.

SAS (Scandinavian Airlines System) purchases 42% shareholding in Aerovias Guest on February 20, 1959, effectively taking control. The Nordic major provides three DC-6s, which open service from Mexico City to Paris, flying via Miami, Bermuda, Santa Maria in the Azores, Lisbon, and Madrid, the latter point representing a restart of service to the Spanish capital.

A DC-4 crashes while en route to Hermosillo on April 17 (26 dead); USN rescuers find the wreck on a beach near Bahio do Kino and among the victims is a baby born during the flight. The Mexican independent’s fleet is strengthened by the transfer of three Douglas DC-6s and these reinstate flights to Madrid (with a route extension on to Paris) on April 18.

In May 1960, the L-749s step up the number of weekly Miami flights to 11 while 3 L-1049Gs, underemployed by **Thai Airways, Ltd.**, are acquired and employed to upgrade transatlantic and Central American frequencies to thrice weekly.

Following an agreement with **Mexicana Airlines, S.A. de C.V.**, two **SAS (Scandinavian Airlines System)** wet-leased de Havilland DH 106 Comet 4s are introduced on the Madrid/Paris services on March 1, 1961. Two months later, having spent Skr 70 million in two years, the Scandinavians prepare to withdraw. In August 1962, Nacional Financiera purchases 87.8% shareholding and turns the carrier over to **Aeronaves de Mexico, S.A. de C.V.** for absorption into the state airline.

AEROVIAS HALCON, S.A. (1): Argentina (1958–1961). The first Aerovias Halcon is established at Buenos Aires in the late summer of 1958 to operate all-cargo services to Miami. Irregularly scheduled flights commence in October with a single Curtiss C-46 Commando and continue until 1961.

AEROVIAS HALCON, S.A. (2): Argentina (1964–1970). Originally formed as Transportes Aereos Mirleni, S.A. at Buenos Aires in the spring of 1961, this Argentine carrier inaugurates Curtiss C-46 Commando all-cargo services beginning in June. A Douglas DC-4 is acquired in 1962.

The onetime owners of **Aerovias Halcon, S.A. (1)** purchase control of the company in March 1964 and rename it. At this point, Halcon begins flying southward from Buenos Aires to destinations in Patagonia. A second Curtiss is acquired early in the following year, allowing the inauguration of scheduled services. Gradually over the next three years, a network of 21 markets is established; it will be flown until the carrier shuts its doors in 1970.

AEROVIAS HIDALGO. See **AEROLINEAS DE LA FRONTERA, S.A. de C.V.**

AEROVIAS INTERNACIONALES DE MEXICO, S.A. See **AEROVIAS REFORMA, S.A.**

AEROVIAS LAS AMERICANS, S.A.: Panama City Panama; Year Founded 1994. Aerovias las Americans, S.A. is set-up at Panama City in 1994 to provide regional passenger and cargo charters. Revenue flights commence with two Antonov An-32s leased from **Aeronica (Aerolineas Nicaraguenses, S.A.)**. Operations continue apace in 1995–1998, with a third An-32 acquired by the latter year.

AEROVIAS LAS MINAS, S.A.: P.O. Box 687, Cochabamba, Bolivia; Year Founded 1964. This charter and contract services carrier, sometimes also known as Aerominas, is formed at Cochabamba in 1964 to offer domestic and regional flights. Abraham Prada Luizaga is named general manager. Services are begun with a 30-man workforce and a fleet of 3 Curtiss C-46s.

During the next quarter century, ad hoc cargo flights are continued with a series of some 14 Commandos—replaced as they are lost—and several Douglas DC-6As, which are also often superseded. For example, when a C-46A with three crew crashes at Trinidad, Bolivia, on October 19, 1975, killing all aboard, the plane and crew are replaced by 1976.

In 1977, a C-118A (a military DC-6A) with three crew, is destroyed on the ground at La China on October 6 by an engine fire; all three men are able to escape. There is no information on when or if the carrier has ceased operations.

AEROVIAS MICHOACAN-GUERRERO, S.A. de C.V. See **AERONAVES DE MICHOACAN. S.A. de C.V.**

AEROVIAS NACIONAL DE COSTA RICA, S.A. See **TACA (TRANSPORTES AEREOS CENTRO AMERICANOS, S.A.)**

AEROVIAS NACIONALES, S.A. (MACAYA): Costa Rica (1934–1940). After returning home from the U.S. on October 5, 1933 with a new Curtiss Robin christened *Espiritu Tico*, Roman Macaya, enjoying the backing of Guanacaste province, founds AN-Macaya on January 20, 1934. Although unable to win government subsidy, Macaya begins flying regularly scheduled services out of San Juan on July 3 using the Robin and a new Curtiss Kingbird. Later in the year, the company takes delivery of a Stinson Model U, purchased from William Randolph Hearst.

On May 30, 1935, Macaya and Eric Murray, CEO of rival **ENTA (Empresa Nacional de Transportes Aereos, S.A.)**, agree to rationalize their services, avoiding unnecessary route duplication and offering a unified fare structure. AN-Macaya, in 1936–1937, is flying to a variety of destinations, including Tempisque, Santa Cruz, Liberia, Nicoya, Puntarenas, Ciudad Quesada, San Ramon, San Jose, Limon, San Isidro de el General, Buenos Aires, and Puerto Cortes.

The *Espiritu Tico*, leased to **EDAC (Empresa de Aerotransportes Costarricenses, S.A.)**, is destroyed in a crash on September 7 of the former year. In addition to the Model U, the fleet grows to also include a number of Travel Air 6000s.

During **1938–1939**, the large domestic network is maintained. The Ford Tri-Motor 5-AT-19 is purchased from **Mulzer Flying Services** of Columbus, Ohio, in March of the latter year. It is followed by a second Tri-Motor, the Ford 5-AT-78, which arrives on October 1; purchased from the Phillips Petroleum Company for \$5,000, it is remembered for its outsized and nonstandard balloon tires. In these years, Eric Murray and Roman Macaya lay plans to sell out to Lowell Yerex's Honduran carrier **TACA (Transportes Aereos Centros Americanos, S.A.)**, which begins flying into San Jose on October 20 of the latter year.

The first outward step is taken on January 16, **1940** when **ENTA (Empresa Nacional de Transportes Aereos, S.A.)** and AN-Macaya are merged into **Aerovias Nacionales de Costa Rica, S.A.**

On June 20, the government cancels the airmail contracts held by the Murray/Macaya operation, but on October 20, **TACA (Transportes Aereos Centro Americanos, S.A.)** absorbs the newly amalgamated carrier as **Compania Nacional TACA de Costa Rica, S.A.** and receives the government mail subsidies formerly held by the two independents.

AEROVIAS OAXAQUENAS, S.A. de C.V.: Armenta y Lopez 209, 68000, Oaxaca, Mexico; Phone 52 (95) 63833; Fax 52 (95) 63824; Year Founded 1990. Established at Oaxaca in **1990**, Oaxaquenas undertakes scheduled passenger and cargo services to regional south Mexican destinations, including the capital of Mexico City. President Carlos Hampshire's fleet begins with a Fokker F-27A/F leased from the American carrier **Airlift International**.

Over the next ten years, it grows to also comprise two Douglas DC-3s and a Cessna 310.

AEROVIAS PARAGUAYAS, S.A. See **TACA (TRANSPORTES AEREOS CENTRO AMERICANOS, S.A.)**

AEROVIAS Q, S.A.: Cuba (1945–1961). Aerovias Q is established at Havana on September 28, **1945**; however, it will require almost a year before operations can commence. During this period, a Douglas DC-3 is purchased and eventually, in September **1946**, nonscheduled flights commence to the holiday location of Nuevo Girona, on the Isle of Pines.

With the addition of several more DC-3s and the first of a fleet of Curtiss C-46 Commandos (which will eventually number eight, though not all flown simultaneously), service is inaugurated to Key West, Florida, on February 24, **1947**. It is followed by the introduction of flights to Merida and Veracruz on July 1, **1949**.

The Mexican flights end in **1951**; however, service to West Palm Beach, Florida, begins on June 1, **1952**.

Operations between Cuba and Florida and to the Isle of Pines continue throughout the remainder of the decade even as a DC-4 joins the fleet. When Fidel Castro takes over the country in January **1959**, international services are suspended.

En route from Havana to the Island of Pines on April 16, a C-46 with 22 passengers is taken over by three hijackers, who force it to divert to Miami.

The company continues to fly in **1960**. En route from Havana to the Island of Pines on October 29, a C-46 with 38 passengers is commandeered

by nine men. There is gunplay during which a security guard is killed and three others are wounded before the plane is diverted to Key West.

While on a December 8 domestic service, five people attempt to take over another Commando. This time, another gun battle erupts, which leaves one person dead and four wounded. A successful crash landing is made at Cienfuegos.

On June 27, **1961**, plans are announced to hand over the airline's routes and remaining aircraft (four C-46s and the DC-4) to **Empresa Consolidada Cubana de Aviacion**. This does not immediately occur before another bloody act of piracy. En route from Havana to the Island of Pines on August 9, the pilot and two other persons are shot to death aboard a C-46 and six others are wounded during an attempted hijacking; the copilot crash-lands the Commando near its point of origin.

AEROVIAS QUISQUEYANA, C. por A.: Dominican Republic (1962–1980). **Aerovias Nacional Quisqueyana, C. por A.** is formed as a subsidiary by Basna Air Services at Santo Domingo in **1962** to offer all-cargo charter services with two Douglas DC-3s and a Lockheed L-049 Constellation. At the instance of **Dominicana (Compania Dominicana de Aviacion, S.A.)**, the state carrier, the word "Nacional" is removed from the company title on August 13, **1963**.

Two Curtiss C-46 Commandos are acquired in **1964** and two L-1049Cs are added to the fleet in **1967**. A Boeing 707-320, purchased from **JAT Yugoslav Airlines**, is employed during the late **1960s**.

On January 26, **1971**, a lone gunman attempts to take over a Super Constellation with 74 passengers en route from Santo Domingo to San Juan, but is overpowered by the crew and turned over to police upon the L-1049C's landing.

Cargo charters are flown around the Caribbean during the **1970s**; although plans to operate all-cargo flights to Miami are not realized. Scheduled passenger services are also operated from Santo Domingo to San Juan, P.R. employing a leased Martin 4-0-4.

In **1979** the L-049 is sold to TRADO for spare parts. Increased fuel prices and the adverse impact of the world financial situation upon smaller operators conspire to force the airline out of business in **1980**.

AEROVIAS RAMALES COLOMBIANAS. See **AVIANCA COLOMBIAN AIRLINES (AEROVIAS NACIONALES DE COLOMBIA, S.A.)**

AEROVIAS REFORMA, S.A. de C.V.: Mexico (1946–1955). Ricardo "Rico" Pani, owner of Mexico City's Reforma Hotel, founds **Aerovias Internacionales de Mexico, S.A. de C.V.** in 1945. Equipped with several DC-3s, the new entrant initiates services from Guadalajara to Ensenada, in Baja California. Early in **1946**, the carrier is renamed **Aerovias Reforma, S.A.** and throughout the year it begins receiving the first of thirteen Douglas DC-3s.

A year later, in January **1947**, the northern end of the route is extended up to Tijuana. With both his airline and hotel businesses experiencing financial difficulties, Pani sells the former to Carlos Oriani, owner of **GPA (Golfo y Pacifico Aerotransportes, S.A. de C.V.)**, on February 7. Oriani's first action is to add an Avro Anson 12 purchased from the U.K.'s RAF.

In **1948**, Oriani also purchases Carlos Panini's **Servicios Aereos Panini, S.A. de C.V.** for 1.5-million pesos. The three airlines, with their important route certificates, are now merged into one under the **Aerovias Reforma** banner, with Golfo Managing Director Ruben Ruiz Alcantara named managing director of the enlarged operation. The fleet now comprises DC-3s, DC-2s, Boeing 247Ds, and a single Avro Anson IV.

Service is maintained over the northwest Mexican network until October 16, **1953**, when the company is sold to **Aeronaves de Mexico, S.A. de C.V.** It is fully integrated in **1955**.

AEROVIAS SUD AMERICANA. See **ASA (AEROVIAS SUD AMERICANA, INC.)**

AEROVIAS VENEZOLANAS, S.A. See **AVENSA (AEROVIAS VENEZOLANAS, S.A.)**

AEROVIAS VENEZUELA EUROPA, S.A. See **THE FLYING TIGER LINE**

AEROVIP, S.A.: Ricardo Rojas, Buenos Aires, 1001, Argentina; Phone 54 (11) 43 6954; Fax 54 (11) 43 7080; Year Founded 1999. AeroVIP, S.A. is established at Cordoba on March 15, 1999 as the premier "Aerolineas Argentinas Express" carrier. Employing 3 British Aerospace BAe Jetstream 32EPs, it undertakes regional flights on behalf of the major beginning on June 23.

During the next 18 months, a second hub is set up at Buenos Aires Ezeiza International Airport and 3 more Jetstreams join the fleet.

AESA AIRLINES (AEROLINEAS EL SALVADOR, S.A.): El Salvador (1982–1988). AESA is set up at San Salvador on March 4, 1960, to offer scheduled all-cargo flights to Miami. Shareholding is divided between LANICA (45%) and local investors (55%). Under the direction of LANICA General Manager E. S. Moreira, weekly nonscheduled service to the south Florida airport begins in August with a single Curtiss C-46 Commando. The northbound cargo comprises frozen shrimp; general merchandise is flown south. A foreign air carrier certificate, good for three years, is acquired from the U.S. CAB in May 1961 and regularly scheduled flights to Florida, along with international charters, now commence.

The C-46 is lost in a crash during takeoff in Miami on February 13, 1965, but is replaced with several DC-6Bs, including one acquired as late as 1975. These aircraft take over not only the Florida service, but provide ad hoc international freighter charters.

Two DC-6Bs remain in service in the early 1980s and, in 1983, the CAB approves company plans to offer passenger flights to Miami.

The award is part of a process of continuous U.S. government recertification.

Low-key flights continue until the middle of 1988. A DC-6BF with two crew fails its initial climb away from Miami on June 29 and crashes; although the wreck must be written off, there are no fatalities. Within weeks, the company shuts its doors.

AFFRETAIR (PTY.), LTD. (1): Southern Rhodesia (1965–1979). Formed at Salisbury in 1965, Affretair (1) provides ad hoc and contract passenger and cargo charter flights to and from African points and to Europe with 2 former **Pan American World Airways (1)** Douglas DC-7CFs and 1 de Havilland DH-114 Heron 1B. During 1972, a DC-8-55F Jet Trader, christened *Situtunga*, is acquired.

Due to its Rhodesian government connection, the carrier comes under United Nations sanctions in 1973, but, due to covert assistance from the outside, is able to fly on. A second DC-8-55F, the *Captain Jack Malloch* is purchased from **Air Gabon Cargo, S.A.** in 1975; a Canadair CL-44D is also acquired.

British Minister of State Lord Goronywy-Roberts, in a complaint to the UN in 1976, charges nine nations with breaking the sanctions against the Rhodesian airline and reports that, since 1973, the U.K. has made three representations about the airline to the UN commission charged with implementing the world body's sanctions. The *Situtunga* is leased to **Air Gabon Cargo, S.A.** in 1977.

The British protest is largely ignored until early December 1978 when an example is made of the American carrier **United Airlines**. Charged with having covertly trained the Rhodesian airline's air crews since 1974 in violation of UN and U.S. sanctions against Rhodesia, the major pleads guilty and pays a \$10,000 fine. More importantly for Affretair (1), United is forced to stop its assistance.

Following the "Lancaster House Conference" of 1979 in which Rhodesia is declared a republic and becomes Zimbabwe, the outlaw carrier is forced to cease operations.

AFFRETAIR (PTY.), LTD. (2): P.O. Box 655, Harare International Airport, Harare, Zimbabwe; Phone 263 (5) 575 000; Fax 263 (5) 575 011; <http://www.sunshinecity.net/affretair>; Code ZL; Year Founded 1980. In-country assets of **Air Gabon Cargo, S.A.** and those of defunct **Affretair, Ltd. (1)** are acquired by the newly independent government of Zimbabwe in 1980. These are reformed at Harare as Affretair, Ltd. (2), the all-cargo subsidiary of **Air Zimbabwe, Ltd.** With the Douglas DC-8-55Fs *Situtunga* and *Captain Jack Malloch* available, regularly appointed charter and contract services flights are undertaken by the carrier to a variety of European destinations, including Basel and Amsterdam.

On February 18, 1982, the former **Affretair, Ltd. (1)** Canadair CL-44D is lost in an accident at Harare.

Operations continue apace during the remainder of the decade. In November 1987, twice-weekly DC-8-55F service is initiated between Harare and Amsterdam via Libreville; one flight also stops at Johannesburg. Revenues total \$28 million and allow a \$500,000 profit. At decade's end, this service is halted.

Weekly service from Harare to Amsterdam (Schiphol Airport) is resumed in November 1990. In September 1991, Managing Director Godfrey T. Manhambara's 265-employee company inaugurates Douglas DC-3 all-cargo flights to and from neighboring countries, feeding its European jet route. The airline transports a total of 55.27 million FTKs of freight, an 8.9% boost over the previous year.

It is announced in January 1992 that the company will be merged with **Air Zimbabwe, Ltd.**, but the takeover does not occur. The first new turboprop fleet addition is made when a leased DC-8-71F is acquired from GPA Group, Ltd. in June. Scheduled flights are introduced.

Routes operated include Harare to Johannesburg; Harare to London (LGW) via Kano and Amsterdam; London (LGW) to Harare via Kano/Lagos and Lilongwe; and London (LGW) to Harare via Cairo and Dar es Salaam.

Airline employment stands at 250 in 1993. In February, Airbridge International, Inc. is appointed as the company's commercial representative in Canada and the U.S.

Freight traffic for the year jumps 44.5% to 75.8 million FTKs.

The fleet in 1994 includes 1 DC-8-71F and 2 DC-8-55Fs. The company begins to play a larger role in the transport-end of the nation's horticultural industry, providing lift to Europe for a variety of products, most especially including fresh flowers.

During 1995, the carrier continues to actively engage in airfreight forwarding and its all-cargo business becomes largely charter. Weekly service is maintained from Harare to Singapore, and to Gaborone, Dar es Salaam, Cairo, Kano, and Lagos. Four-times-per-week the Jet Traders fly to London via Amsterdam; twice-weekly return flights to Zimbabwe stop at Lusaka or Lilongwe.

The DC-8-71F is withdrawn in early 1996. Just after landing at Harare on January 28 on an all-cargo service from Johannesburg, the DC-8-55F *Situtunga* with five crew overruns the wet runway and suffers the collapse of its nose landing gear. No injuries are reported.

To assist horticultural producers to maintain the desired cold chain and quality, the company builds a state-of-the-art coldroom facility at Harare; the capacity of the new facility is 100 tons.

In 1997, the carrier's remaining DC-8-55F, the *Captain Jack Malloch*, visits markets at Amsterdam, Cairo, Dar es Salaam, Johannesburg, Kano, Lagos, Lilongwe, and London (LGW). In September, a strategic alliance is signed with **DHL Worldwide Express**.

Flights continue in 1998–1999. The company operates on behalf of DHL employing Boeing 727F leased from the express operator on services thrice weekly to Lusaka, twice weekly to Lilongwe, daily except Saturday, to Johannesburg, and weekly to Luanda. A DC-8-73F is employed to fly roundtrips between Harare and Brussels five times a week.

Airline employment grows to 282 at the start of 2000. Although service is maintained, the political uncertainty within the nation during the first half of the year, coupled with fuel shortages, leads to significant fiscal difficulties.

AFISA (AEROFLETES INTERNATIONALES, S.A.): Panama (1966–1972). AFISA is set up at Panama City in 1966 to operate all-cargo charters to Miami. Following receipt of a foreign air carrier permit from the U.S. CAB, revenue flights commence with a pair of Curtiss C-46 Commandos. One more Curtiss is acquired during the next two years.

Flights continue apace into the early 1970s and the fleet is increased by the addition of a Douglas DC-6 and a Lockheed L-1049H Super Constellation, as well as several more Curtiss freighters. The company is grounded in November 1972 when both its Panamanian and U.S. operating certificates are withdrawn.

AFRICA CHARTER AIRLINES (PTY.), LTD.: P.O. Box 2720, Wilro Park, 1731, South Africa; Phone 27 (11) 764-3082; Fax 27 (11) 768-0236; <http://www.iweb.co.za/africa>; Year Founded 1997. ACA is established at Johannesburg in 1997 to offer passenger and small group charters to local and international destinations. Products offered include corporate and incentive getaways, family holidays, flight-seeing, and trips to sport training camps. All-cargo services are flown, along with specialized group charters. The fleet includes 1 each Learjet 35, Boeing 727-100, British Aerospace BAe (HS) 748, 1 Aero International (Regional) ATR42-320, and 1 Douglas DC-3.

AFRICAN AIR CHARTER, S.A.: Zaire (1976–1996). AAC is formed at Kinshasa in 1976 to operate all-cargo services throughout the continent. The initial fleet comprises 1 Boeing 707-320C and 1 Douglas DC-6A. A variety of destinations is visited during the next two decades and the fleet is altered during the 1980s to include 1 each Aerospatiale (Sud-Est) SE-210 Caravelle VIN, Douglas DC-8-53F freighter, 1 DC-6, 1 DC-4, 1 DC-3, and a number of helicopters.

A number of Russian-made aircraft are leased during these years, including 1 each Antonov An-32, An-26, and An-2, plus Mil helicopters.

On April 21, 1988, the DC-3 freighter with two crew fails its takeoff from Quelimane, Mozambique, and crashes; there are no survivors. It will be suggested that aircraft may have been shot down.

The rotary-wing aircraft also suffer a number of crashes between this year and 1990, causing helicopter services to be suspended during the latter year. The company's Caravelle is placed out of service in 1990.

CEO Jean-Claude Adriaansen obtains two B-720Bs in 1991, at which time the Douglas freighter is withdrawn. Cargo is now flown by the B-707-320C as operations continue.

While landing on an airstrip at Mogadishu lighted only by the headlights of some trucks stationed at the end of the runway, a leased An-32 with 6 crew and 7 passengers veers to the left and crashes on July 3, 1992 (1 dead).

On April 1, 1995, the An-2, while positioning for a service, crashes, killing its pilot.

A wet-leased Antonov An-32 freighter crashes into a crowded market in the center of Kinshasa on January 8, 1996, killing 298 people, mostly women and children. Four of the five Russian crew members of the plane survive and an angry crowd attempts to lynch them, before they are rescued and taken into custody by police. A judicial inquiry is started by the state prosecutor's office to determine the cause of the crash, which will be laid to overloading.

In April, the U.S. government charts the carrier's two inactive Russian helicopters to open a regular shuttle service to fly foreigners being evacuated from neighboring Liberia. The service in Sierra Leone, between Lundi Airport and Freetown, is ended in late June because of safety concerns over the helicopters.

African Air Charter becomes a victim of the crash and of the nation's civil war.

AFRICAN AIRLINES INTERNATIONAL, LTD.: P.O. Box 74772, Nairobi, Kenya; Phone 254 (2) 501 319; Fax 254 (2) 506 101; Code AI; Year Founded 1987. African Express Airways, Ltd. is set up at Mombassa in 1986 to offer tourist flights from London, Munich, Milan, and Zurich. Before services can be inaugurated, this competitor for

African Safari Airways, Ltd., owned by pilots and engineers from Kenya, Tanzania, and Uganda, is renamed in 1987. Capt. Musa Hassan Bulhan continues as CEO and 2 Boeing 707 Stratoliners are acquired by his 65-employee concern.

One is the leased former **Pan American World Airways (1)** B-707-321B *Clipper Western Continent*, while the second is the owned B-707-330B christened *Mandera*. Nonscheduled passenger and charter services are undertaken linking European destinations with holiday locations in East Africa.

Operations continue apace in 1988–1989 and in 1990 the B-707-321C freighter *Garissa* is chartered from Accra-based Continental Cargo & Trade Services, which begins a regular all-cargo service from Kenya to Belgium.

In 1991–1994, CEO Capt. Bulhan oversees a workforce of 42 and four Stratoliners, including the newly arrived B-707-330B *Isiolo*, acquired from **Seagreen Air Transport, Ltd.** During the latter year, the *Garissa* is leased to **Royal Jordanian Airline** for six months. In addition to Europe, visits are made to Berbera/Hargeisa, Entebbe, Jeddah, Kano, Kigali, Mogadishu, Nairobi, Sharjah, Tehran, and Zanzibar.

When the *Garissa* returns from Amman in January 1995, it is overhauled and, during the process, is converted into a freighter and renamed *Tayma*. Thereafter, that aircraft is based in Belgium. One of its principal services is a weekly roundtrip from Ostend to Keflavik in an exchange of Kenyan vegetables for fresh salmon.

The fleet in 1996 is unchanged, although the unnamed former PAWA-1 B-707-321B is out of service. Early in the year, company headquarters are transferred to Jomo Kenyatta Airport at Nairobi.

A B-707-351C is acquired in 1997 and the company now provides services to Europe, as well as Djibouti, Entebbe, Jeddah, Kano, Kigale, Kinshasa, Lagos, Mogadishu, Sharjah, and Tehran.

The company becomes a pawn in the international sanctions movement against Burundian strongman Major Pierre Buyoya, implemented by several African states the previous July. On July 17, the latest company Boeing flies from Nairobi to Bujumbura, over Tanzania. In accordance with the multinational sanctions agreement, the foreign ministry in Dar es Salaam consequently bans the company from any further flights to Burundi through Tanzanian airspace.

AAI next seeks permission to fly a route from Nairobi to Bukavu in the Democratic Republic of the Congo, via Tanzania. The very first flight is made not to Bukavu, but back to Bujumbura. When they learn of this duplicity, furious officials in Tanzania ban the company from their nation's skies altogether on September 6. On September 11, Kenyan President Moi, in a speech at Amagoro in Teso District, requests that the carrier make no further sanction-busting flights into Burundi.

A birthday party is provided for the 30-year-old *Tayma* on November 14.

Flights continue in 1998–2000, during which time airline employment reaches 160. The *Tayma* soldiers on as the airline's sole aircraft.

AFRICAN CARGO AIRWAYS, LTD.: Kenya (1973–1981). ACA is formed in 1973 as the all-cargo subsidiary of **African Safari Airways, Ltd.** M. A. Jackson is named managing director and initial airline employment is 32. A Bristol Britannia 300F freighter is obtained and revenue flight operations are undertaken to various destinations in Africa, Europe, and the Middle East beginning in April 1974.

The freight business is not ultimately profitable and the subsidiary is placed into receivership in 1981.

AFRICAN EXPRESS AIRWAYS, LTD. See AFRICAN AIRLINES INTERNATIONAL, LTD.

AFRICAN INTERNATIONAL AIRWAYS, LTD.: P.O. Box 2117, Mbabane, Swaziland; Phone 44 (1293) 544 706; Fax 44 (1293) 615 800; Code AI; Year Founded 1985. An all-cargo operation, AIA is formed at Mbabane in August 1985. Shareholding is divided between Intavia, Ltd. (which receives a management contract), UK Airline Management Support, and P. J. M. Corbin. During the remainder of the

decade, branch offices are established at Crawley, Sussex, in the UK and in Kempton Park, South Africa.

The company operates a single Douglas DC-8-54F on replacement cargo services for **Alitalia, S.p.A.**; it is sold to **Flash Airlines, Ltd.** in Nigeria during 1987. A replacement DC-8-54F is acquired the same year.

After obtaining a second leased DC-8-54F from **Connie Kalitta Services** in May 1990, Managing Director T. M. Longmore's concern begins long-haul revenue services to European, African, and Middle Eastern destinations.

An office is opened in London in 1991 and B. J. Keay and A. J. Stocks are sent to manage it.

A third chartered DC-8-54F is placed into service during 1992 followed by a DC-8-55F in 1994. International charters continue as the 40-employee company comes to specialize in the provision of supplemental contract capacity to scheduled carriers, with emphasis on the Italian flag carrier **Alitalia, S.p.A.**

The DC-8-55F is withdrawn in 1995 and, in 1996, a Boeing 707-330C is chartered from **Seagreen Air Transport, Ltd.** Operations continue in 1997-2000. During these years, the Stratofreighter is withdrawn and flights are conducted with the DC-8-54F and DC-8-55F.

AFRICAN JOINT AIR SERVICE, LTD. See **ALLIANCE AIR, LTD.**

AFRICAN SAFARI AIRWAYS, LTD. P.O. Box 81443, Mombasa, Kenya; Phone 254 (11) 485 522; Fax 254 (11) 485 909; Code QS; Year Founded 1967. Affiliated with African Tourist Development Company and African Safari Lodges, ASI is formed at Nairobi in December 1967. A main office is opened in Basel, Switzerland. Equipped with Bristol Britannia turboprop equipment, the carrier inaugurates its inclusive-tour services with a flight from Zurich to Mombasa.

Additional holiday safari packages are undertaken from Europe to the game parks of East Africa beginning in 1968. In an effort to cash in on freight possibilities, an all-cargo subsidiary, **African Cargo Airways, Ltd.**, is established in 1973. Passenger charters to East Africa are maintained throughout the 1970s.

In 1978, Managing Director C. Mboijana's 50-employee carrier obtains its first jetliner, a Douglas DC-8-33, from **KLM (Royal Dutch Airlines, N.V.)**. The all-cargo operation stops in 1981. During the early 1980s, ASI becomes affiliated with the African Safari Club, a travel agency formed in 1982 that markets holiday packages to Africa and the Seychelles. It also enters into an affiliation with **Seychelles International Airways, Ltd.**, which also flies tour group jet charters on behalf of African Safari Club with a DC-8-63.

The company acquires a DC-8-63 on March 24. Little known except by tourists, the nonscheduled operation continues apace throughout the remainder of the decade. When **Seychelles International Airways, Ltd.** fails in July 1986, ASI purchases one of its DC-8-63s.

In 1988-1989, plans are made to replace the Douglas transports early in the 1990s. They are, however, retained.

In 1990, General Manager K. J. Rudin's company is flying two DC-8-63s between Kenya and Basel, Switzerland.

Air Starline, Ltd. is established at Basel in November as a privately owned subsidiary and Frederick Hofer is named managing director of the new worldwide charter airline. A workforce of 60 is recruited and revenue operations commence with a single Douglas DC-8-63H. The Douglas displays an all-white paint scheme with ASA titles and a tail painted in a zebra pattern. Flights by both companies continue apace in 1991-1992.

A DC-10-30 is leased from **KLM (Royal Dutch Airlines, N.V.)** and joins the **Air Starline, Ltd.** fleet late in the latter year. In January 1993, the subsidiary carrier is folded into its parent; however, certain services continue to be offered under the Air Starline marketing name.

The Air Starline DC-8-63H is sold to **Airborne Express** in January 1994. The Douglas wide-body is retained during the remainder of the

year and into 2000. It continues to offer roundtrip charters to Kenya from Basel, Berlin, Dusseldorf, Frankfurt, Milan, Munich, Vienna, and Zurich.

AFRICAN WEST AIR, S.A.: Senegal (1993-1994). AWA is established at Dakar in the summer of 1993 to offer international charter flights linking the company's base with Amsterdam, Lisbon, and Rio de Janeiro. Managing director J. P. Piedade begins revenue operations with a single Boeing 757-27B leased from **Air Holland Charter, N.V.** Services cease in 1994.

AFRICARGO AIRLINES (PTY.), LTD. See **TRANSOCEANIC AIRWAYS (PTY.), LTD.**

AFRIMEX, LTD.: Nigeria (1993-1994). Formed at Lagos in late 1993 to take over declining **Belair**, Afrimex acquires the former's order for a Dornier 328-100, adding it to its own request for three of the German manufacturers Do 228-110 turboprops. The merger is completed in March 1994. Thereafter, information on the carrier is unavailable, although charters may continue to be offered.

AFS AIRLINES: United States (1981-1984). Arcata Flying Service is established at Arcata, California, in the fall of 1981 to offer scheduled passenger and cargo commuter services in California and Oregon. A fleet of 4 Piper PA-31-310 Navajos is assembled and revenue operations commence on December 7 linking Eureka/Arcata with Oakland, Portland, Redding, and Sacramento. Another Golden State third level casualty of recession, AFS stops flying in mid-1984.

AGDERFLY, A.S.: Norway (1990-1991). Agderfly is established at Oslo in 1990 to fly charters and a single scheduled route. Revenue flights begin with a single Dornier 228-201.

Unable to achieve and maintain traffic or economic viability in a time of recession, the small operator closes down and files for bankruptcy in December 1991.

AGENCE ET MESSENGERS AERIENNES DU ZAIRE, S.A.: Zaire (1969-1978). AMAZ is set up in late 1969 to provide air taxi and charter flights and to take over a number of routes previously operated by **Cogear, S.A.**

In 1970 the owned fleet includes 3 Britten-Norman BN-2 Islanders, 1 DC-3, and 1 Piper PA-23 Aztec. In addition, 2 Aztecs, 1 DC-3, 6 Beech C-45s, 1 de Havilland DH 114 Heron, and 3 PA-25 Pawnees are operated under charter.

Authority is received to inaugurate scheduled services to points not generally served or served well by Air Zaire, S.A. Among the destinations visited are Kinshasa, Lubumbashi, Kananga, and Goma.

As frequencies are increased during the remainder of the decade, the fleet is increased by the addition of 1 Hawker Siddeley HS-125 bizjet, 1 DC-3, 4 DC-4s, and 2 Bristol Britannia 253s.

Service is suspended in 1978 and not restarted.

AGRAFLUG. See **INTERFLUG DDR AIRLINES, mGH.**

AGRO AIR INTERNATIONAL (AGRO MARKETING): United States (1975-1992). When in the early 1970s South Florida produce grower and broker Jacob Frank "Sonny" Fine tires of moving his produce by commercial airlines from Latin American growing fields to the U.S., he acquires a used DC-8F to transport it on his own. Having decided that there is more money to be made in moving vegetables than growing them, he abandons the international agriculture growing business in 1975 and establishes Agro Marketing, later Agro Air International, at Pompano Beach to lease aircraft to produce brokers and foreign cargo companies. The affiliated Agro Air Associates will later be established to handle aircraft maintenance.

As reported by associate and personal pilot Richard Smith in the *Miami Herald* on August 12, 1997, over the next decade, Fine grows his airline by purchasing inexpensive (\$250,000) old DC-8 cargo planes. These do not meet federal noise abatement standards or other points, so Fine repairs them and puts "hush kits" on them, and sells or, more commonly, wet-leases them for a profit.

Indeed, it will later be charged that, on numerous occasions, Agro not only charters its aircraft and crews to South American cargo operations, but also makes their clients' business decisions as a kind of shadow management. Under these arrangements (which amount to the registration of U.S.-owned aircraft in foreign countries), all the leasing airlines need do to collect income is lend the use of their licenses. Fine also undertakes cargo contract service flights with aircraft of his own.

During the early 1980s, son Barry, a graduate of the University of Florida law school, joins his father's business. In 1985, the fleet includes 1 Douglas DC-8-33F and 2 Boeing KC-97G Stratofreighters. During these years and later, Agro is subject to FAA investigations. The government is concerned that the company's leasing arrangements with several Latin American airlines amount to a skirting of U.S. regulations for the establishment, maintenance, and, most importantly, safety inspection of charter operations.

In July 1987, one of the KC-97Gs, transporting a load of prize jumping horses for a Mexican equestrian team, crashes just after take-off from Mexico City Airport onto a busy highway. A total of 54 people are killed, along with all the horses. Investigators will later report that the over-loaded aircraft was employing the wrong grade of fuel. It will also note that loading documents have been filled out in Miami even before the consignment is received in Mexico. The company's questionable leasing practices with South American carriers end after this tragedy.

In 1988–1990, the fleet is increased to 4 DC-8Fs. Meanwhile, in 1989, the Fines purchase Portland Meadows racetrack in Oregon. After two losing seasons, they declare it bankrupt in 1991.

Also in 1991, the company refuses to testify before a U.S. Congressional committee investigating the charter industry. The Fines protest that their concern is not an airline and does not control foreign carriers. Still, the DOT develops information that Agro is improperly providing freighter crews to third parties. Agro agrees to pay a \$100,000 fine and halt the practice.

In 1992, the Fines sell Agro Air International to Dominican-based interests. In its place, they establish a new carrier, **Fine Air**.

AGRO AIR INTERNATIONAL DOMINICANA: P.O. Box 524236, Miami, Florida 33152, United States; Phone 1 (305) 942-4910; Fax 1 (305) 871-3379; Year Founded 1992. Agro Air is established in 1992, with headquarters in Santo Domingo and principal base at Miami, to operate all-cargo charters between the two cities and to other ad hoc destinations in the Caribbean and South America. It is successor organization to **Agro Air International**, which has been sold by J. Frank Fine who has transferred his interests to Miami and started **Fine Air**.

Revenue operations commence and continue with a fleet that includes 1 Boeing 720, 2 Douglas DC-8-54Fs, and 2 ex-USAF Boeing KC-97G Stratofreighters.

Flights continue during the remainder of the decade. During these years, the company completely renews its fleet, replacing its previous aircraft with 1 Lockheed L-1011 TriStar 500F and 3 DC-8-60Fs. Customers include **Aerochago Airlines, S.A., ALAS de Transport Internacional, S.A.,** and **BWIA West Indies Airways, Ltd.**

AGROLET: Czechoslovakia (1951–1969). Agrolet is established at Prague's Ruzyně Airport in 1951 as an associate of the state carrier **CSA (Czechoslovak Airlines)**. Aerial agricultural work is inaugurated with Antonov An-2s and other small aircraft on behalf of farmers throughout the nation.

After expanding through a number of organizational changes over the next 15 years, Agrolet transfers its base of operations to Ivanka Airport in Bratislava in 1965. Operations continue for this hub until July 1, 1969, when the carrier is reformed into the independent **SlovAir**.

AGSA (AVIACION GENERAL, S.A.): Panama (1948–1961). This air taxi is formed at Santiago in 1948 to offer on-demand and charter flights to destinations inland of that town. Employing Piper aircraft, the company also contracts to transport native Indian laborers from San Blas coastal villages to Colon.

Operations remain unchanged until they cease in 1961.

AIA (ARISTA INTERNATIONAL AIRLINES). See **ARISTA INTERNATIONAL AIRLINES**

AIGLE AZUR, S.A. See **SOCIETE AIGLE AZUR, S.A.**

AIGLE AZUR EXTREME ORIENT AIRLINES, S.A.: France/Vietnam (1954–1974). A subsidiary of the French independent airline **Societe Aigle Azur, S.A. (SAA)**, AAEO is established at Saigon in late 1954 to support the air transport requirements of the new Republic of Vietnam (South Vietnam) government. The carrier is equipped with three former **Trans World Airlines (TWA)** Boeing 307 Stratoliners, *Navajo*, *Apache*, and *Cherokee*, the first two also being subleased to **Air Laos, S.A.**, which SAA had helped to form with aid from **Air France**. AAEO also receives the use of several Curtiss C-46 Commandos and Douglas DC-3s from the Moroccan division of SAA.

For the remainder of the year and over the next five, the old Boeings provide troop transport flights in support of the Saigon government's requirements in the Indochina conflict with its northern neighbor.

In 1955, SAA is acquired by and merged into **Union Aeromarine de Transport, S.A.**; however, its Vietnamese offspring retains its independence. During 1955–1956, AAEO's Stratoliners fly a variety of charters throughout the southeastern Asia region on behalf of the company while maintaining its **Air Laos, S.A.** service.

The former **Pan American World Airways (1)** B-307 *Clipper Rainbow* is purchased from **AREA (Aerovias Ecuatorianas, S.A.)** on March 19, 1957. Late in 1959, much of the business of AAEO is completed and most of the Stratoliners are sold to another French independent, **Air-nautic Airlines, S.A.**

A chartered B-307 with 4 crew and 28 passengers fails its climb from Tan Son Nhut Airport at Saigon on May 22, 1961; although the historic airliner must be written off, there are no fatalities.

In 1964, Airnautic Airlines, S.A. becomes committed to the International Control Commission's **Compagnie Internationale de Transports Civils Aeriens** and the Boeing 307s launch a decade of dangerous service flying diplomatic/government passengers 18-times-per-week between the war-torn capitals of North and South Vietnam, Cambodia, and Laos.

The ex-*Clipper Rainbow* is lost at Saigon on August 1, 1966 while attempting a three-engine landing. Following the Indochina cease-fire on January 23, 1973, the work of the CITC gradually winds down. When the CITC contract is completed in mid-1974, the old aircraft are placed with the charter operator **Royal Air Laos, S.A.**

AIGLE AZUR TRANSPORT AERIENS (COMPAGNIE DE TRANSPORT AERIENS, S.A.): Aeroport de Paris Pontoise-BP 24, Cergy Pontoise CEDEX, F-95301, France; Phone 33 (1) 30 31 30 51; Fax 33 (1) 30 32 28 28; Code Z1; Year Founded 1987. Paris-based **Lucas Aigle Azur, S.A.** is reorganized and renamed in 1987. Previous emphasis on air ambulance, air taxi, and air charter operations is replaced by a new attention to scheduled regional services. Managing director Jean Denis' fleet remains the same; 4 Beech Super King Air 200s, 1 Beech King Air 90, and 1 Embraer EMB-110 Bandeirante continue to ply back and forth between Deauville and London (LGW) while air taxi

flights run between Paris (ORY) and Carcassonne. Operations continue apace in **1988–1989**.

Two Dassault Falcon 20s and a SAAB 340A join the fleet in **1990** to support new scheduled services to Pontoise. Rouen joins the route system and two Super King Air 200s are withdrawn in **1991**. In **1992**, Sylvain Chevanne is named managing director. In **1993**, another Dassault is acquired, a Falcon 10, along with a second EMB-110; the 340A is leased to **Industrie Air Charter, S.A.**

Chairman Jean Denis and Managing Director Chevanne oversee a workforce of 35 in **1994** and a fleet that includes 1 each SAAB 340A, EMB-110P1 Bandeirante, and EMB-110P2, plus 2 each Dassault Falcon 20s and Beech King Air 200s.

The EMB-110P2 is withdrawn in the spring of **1995** and a Boeing 737-229A is acquired in its place. The jetliner is almost immediately leased to **Corse Air International (Corsair), S.A.**, which is owned by the tour operator Nouvelles Frontières, S.A.

Sylvania Chevanne becomes managing director in **1996** and operations continue apace in **1997–2000**. During these years, the original “Baby Boeing” also flies for Westair, S.A., while a B-737-2K5A is also acquired.

AIR ACTIVITIES: United States (1955–1958). AA is set up by Duane Strand at Fargo, North Dakota, in **1955** to provide scheduled passenger and cargo air taxi flights to Minot via Bismarck. Aero Commander 500B services are maintained until the company goes out of business in **1958**.

AIR AFFAIRES AFRIQUE, S.A.: BP 1325, Douala, Cameroon; Phone (237) 422 977; Fax (237) 429 903; Code 6R; Year Founded 1978. Founded at Douala in **1978**, Chairman Byron Byron-Exaroos and General Manager Joseph Barla Ekwe’s new entrant provides charter and contract services in Cameroon, Chad, and Gabon. The initial fleet comprises 1 Cessna 310, 2 Cessna 402s, and 2 Cessna 404s.

By the end of the **1980s**, the company has received an air transport license, which allows it to begin regularly scheduled services.

The Cessna 310 is withdrawn in **1990** and is replaced by an Aerospatiale (Nord) 262. Although traffic figures are not provided, company officials note that \$3.2 million in revenues are earned and provide a \$50,000 net profit.

An Aerospatiale SN-601 Corvette is acquired in **1991**, during which year a \$50,000 loss is suffered on revenues of \$3.3 million. The same revenue figure is reported in **1992**.

Flights continue apace in **1993–2000**, during which years the Corvette, C-310, and one C-402 are retired and employment reaches 75. In addition, a Bombardier DHC-8-311 is employed to operate scheduled and charter domestic and regional services on behalf of **Cameroon Airlines, S.A.**

AIR AFFAIRES GABON, S.A.: BP 3962, Libreville, Gabon; Phone 241 732513; Fax 241 734995; Code AG; Year Founded 1975. Private interests (55%) and the government (45%) form this carrier at Libreville on January 1, **1975**. After assembling a fleet of lightplanes, passenger and cargo charters are undertaken throughout the country beginning in late spring. Within three years, the fleet has been increased by the addition of 3 Fairchild F.27 Friendships, 1 Transall C-160, 1 de Havilland Canada DHC-6-100 Twin Otter, 2 Beech King Air 90s, 7 Beech 55 Barons, and 4 Beech B80 Queen Airs.

During the remainder of the decade and into the **1980s**, the 90-employee company begins nonscheduled regional services. In the mid-**1980s**, the fleet is remodeled; gone are the Fokkers, replaced by 2 Embraer EMB-110 Bandeirantes, 1 Gates Learjet 35A, 1 Hawker Siddeley HS 125, and 3 Aerospatiale SA-315 Lama helicopters.

Scheduled services are added linking the capital with Franceville and other local destinations. By **1988**, General Manager Denis Bompard’s fleet comprises 10 Beech King Air 200s, 2 Bandeirantes, 2 Beech 99s, and 4 Beech Barons.

R. Bellanger becomes managing director in **1990**. The fleet is reduced as 8 King Airs are sold in **1991–1992**. The flight equipment mix in **1993–1994** includes 2 Barons, 1 Bandeirante, and 2 King Air 90s.

Operations continue apace in **1995–2000**, but again the fleet is changed. Gone are the Barons and 1 King Air 90, replaced by 1 King Air 100 and 1 British Aerospace BAe (HS) 125-800 Hawker executive jet.

AIRAFRIQUE, S.A. (1): France (1937–1941). On September 1, **1937**, the government-sponsored **Regie Air Afrique (RAF)** is upgraded by merging into it **Compagnie Transafricaine d’Aviation, S.A.** (founded in 1934) and **Lignes Aeriennes Nord-Africaines, S.A.**, which had been formed by Colonel Genain in 1932 to fly Algiers–Oran; Genain is named managing director of the new AA-1. The new entity receives a total corporate makeover, with new livery, uniforms, appointments, and a winged griffin logo

Employing the aircraft of the merger partners (including a Farman 190, two Poetz 56s, and seven Caudron Goelands), the new company flies their combined multistop routes from Algiers to Madagascar. At Madagascar it assumes the Elisabethville to Tananarive segment via Broken Hill, Tete, Queilimane, Mozambique, and Maintirano, including the over-water route of the new domestic-only **Service de L’Aeronautique Civile, S.A.**, formerly **Regie Malgache, S.A.** (founded 1934).

Links to Marseilles and Paris are also maintained, together with routes to Oran and Tunis; Gao via El Golea and Aoulef; from Gao to Dakar via Timbuctou, Mopti, Segou, and Bamako; from Gao to Niamey and Cotonou; from Gao to Bangui via Zinder, Fort Lamy, and Fort Archambault; from Bangui to Elisabethville via Lisala, Bumba, Basoko, Stanleyville, Kindu, Kabolo, and Bukama; and from Bangui to Pointe-Noire via Coquilhatville and Brazzaville.

In **1938**, new Bloch 220s (the *Scorpion*, *Sirius*, *Ville de Paris*, and *Ville de Tananarive*) are placed in service over the long route. During the summer, the Poetz 661 *Ville de Bamako* undergoes 100 hours of endurance testing over the route from Algiers to Tananarive.

Flights continue apace in **1939**, but not without cost. The *Scorpion* and *Sirius* are lost in accidents in January and February, respectively. Orders are placed for six each Lockheed L-14s and L-18s, with the former delivered one per month beginning in December. The order for the L-18s is not filled because of World War II, which had started in September.

Following the German blitz into France in May **1940**, the service is disrupted; after the June armistice, the *Ville de Bamako* is used as a liaison aircraft.

On February 21, **1941**, the Vichy government creates a new state-sponsored airline, **Reseau Aerien Francais**. The remaining assets of **Air France**, together with those of **Air Bleu, S.A.** and AA-1 are taken over and merged, the three carriers thus disappearing from the list of world airlines. Ironically, **Reseau Aerien Francais** is taken over by **Deutsche Luft Hansa, A.G. (DLH)** in late **1942**.

AIR AFRIQUE (2) (SOCIETE AERIENNE AFRICAINE MULTINATIONALE, S.A.): BP 3927, 3 Avenue Joseph Anoma, Abidjan 01, Ivory Coast; Phone 225 20 30 00; Fax 225 20 30 05; http://www.airafrique-airlines.com; Code RK; Year Founded 1961. At the first conference of newly independent Francophone states at Abidjan on October 26, 1960, President Felix Houphouet Boigny of the Ivory Coast recommends creation of a consortium airline, to be guided by the major French airlines. The idea catches on with all of the participants except Ghana, Guinea, and Mali, which have chosen the Soviet Union to help them create their national airlines.

After approximately three months of negotiations, Benin, Burkina Faso/Upper Volta, Central African Republic, Ivory Coast, Niger, Mauritania, Senegal, Togo, plus Gabon and Cameroon, agree to come together and contribute 6% of the FFfr 500-million capitalization necessary for startup. **Air France** and **Union Aeromarine de Transport, S.A. (UAT)**, set up the private company Societe Pour le Developpement du

Transport Aerien en Afrique (Sodetraf), as their tool in the new enterprise, which will finance its own 34% stake.

The private and national contributors establish a Survey Committee at Dakar on January 20 and charge it with writing a corporate constitution and ironing out financial, operational, and support details, which is completed by February 4. This unique multinational carrier, which has been modeled on the consortium concept pioneered by **SAS (Scandinavian Airlines System)**, is officially established through a treaty signed at Yaounde, Cameroon, on March 28, 1961.

The company holds its first board meeting at Abidjan on June 26. Cheikh Fal, formerly transport minister of Senegal, is named the first chairman and president, while a senior UTA official is named deputy president/COO. Approval of the company constitution quickly follows.

A formal compact is signed with Sodetraf on July 13; the arrangement brings in the necessary support from **Air France** and **Union Aeromarine de Transport, S.A. (UAT)**, which are already undertaking domestic and regional services in the formerly French states of equatorial and West Africa.

Four DC-4s (brought to civil standard from military C-54As) from the former and two DC-6s (which are conducting these flights) from the latter are immediately leased and repainted. Actually, repainting is too ambitious a term. In what will become a usual practice for some years, stickers bearing AA-2 titles are simply applied on the fuselage sides of the leased aircraft.

After August 1, the Douglas transports continue their previous services under the AA-2 code. The DC-6s also fly from Dakar to Chad.

Air France is also contracted to provide ground handling at Paris and agrees to a management contract with the African airline and to oversee the joint management of a freight return pool on its African network.

On October 16, the carrier begins international services from Dakar, Abidjan, Brazzaville, Port Etienne, and Douala to Paris via Bordeaux and Marseilles, employing a Lockheed L-1649A Starliner and several L-1049Cs leased from **Air France** and an L-749A Constellation chartered from **Royal Air Maroc, S.A.**

Three days later, flights are inaugurated from Paris and Nice to Douala, Libreville, and Port-Gentil.

The first jet service is inaugurated on January 5, 1962 with a pair of DC-8-33s chartered from **Union Aeromarine de Transport, S.A. (UAT)**. The roundtrip route chosen is from Paris to Brazzaville via Marseilles and Douala. Two more L-1649As are chartered from **Air France** on April 18, replacing the L-1049Cs.

On June 1, the company joins IATA. With 80% financing arranged by the U.S. Import-Export Bank, a \$15-million order is placed in December for two Douglas DC-8-53s, to be delivered in 1963 and 1964.

Cheikh Fal's contract is renewed on January 4, 1963. During the first and into the second quarters, routes and frequencies are expanded; Bordeaux, Lyons, Marseilles, Nice, Geneva, Zurich, Rome, and Las Palmas join the network.

On May 5, a DC-6B with 7 crew and 48 passengers en route to Nigeria, crashes halfway up the side of 13,000-foot Mount Cameroon, near Doala; there are no survivors. The young carrier, at the beginning of the month, sponsors its first Hadj charter services to Mecca for Muslim pilgrims.

The two Starliners, leased the previous year and most recently employed on the Hadj, are returned to **Air France** on May 28 and June 7, respectively.

The first DC-8-53 is delivered at Long Beach in October and is christened *Abidjan*; its initial flight takes it via Washington, D.C., to its namesake city. After a welcoming ceremony, the aircraft is sent to the **UTA French Airlines, S.A.** shops at Paris (ORY) for an interior makeover. Once this upgrade is completed, the jetliner enters service on November 1 over the route from the French capital to the Ivory Coast.

Ownership is simultaneously revised. The member national governments acquire 72% interest, with Sodetraf holding the remaining 28%. An alliance is signed between AA-2 and **Air France**, under which the

two agree to coordinate schedules and offer joint through-fares, as well as undertake a joint catering venture in Dakar and Abidjan.

At the same time, the ground handling contract is revised to ensure greater African participation, while the airline and **UTA French Airlines, S.A.** turn over all interest in the Douglas propeller aircraft previously operated under lease. The stickers are now removed and full company colors are applied to them.

The fleet on January 1, 1964 comprises 1 owned DC-8-53, DC-3, 3 DC-4s, 4 DC-6s, plus the 2 chartered DC-8-33s. The second DC-8-53 arrives on January 12 and is named *Brazzaville*; it enters service from its namesake community to Marseilles beginning on January 25.

Traffic rights to Tel Aviv, Israel, are received on April 20; permission is received four days later from the U.S. CAB for service to New York from six member states.

In addition, a compact is entered into with **Ghana Airways, Ltd.**, flag carrier of a nonmember state. Under its terms, the multinational airline will be able to inaugurate services into Robertsfield and Freetown. **Ghana Airways, Ltd.** is able to launch its own route from Dakar to Accra via Robertsfield, Freetown, Conakry, and Bathurst.

After a two-year lease, the **Royal Air Maroc** L-749A is returned at year's end. Revenues for the year total \$42 million.

Togo seeks admission to the consortium in 1965, which it receives on a provisional basis for three years. Orders are placed for two Sud-Est SE-210 Caravelle XIRs.

Robertsfield becomes a stop, on April 1, on the service from Dakar to Paris via Geneva.

Pan American World Airways (1) begins weekly roundtrip service on April 18 from New York City to Douala, Abidjan, Cotonou, Robertsfield, and Dakar under a "blocked space" pact with AA-2. Under this arrangement, the African company is given the right to reserve 35-45 seats and a portion of the cargo and mail space on each PAWA-1 flight. Pan Am employs a B-707-321C that it has, briefly, named *Clipper Antelope of Africa*.

With air cargo carried in passenger plane bellies contributing significant income, a DC-8F, which may be entirely dedicated to freight service, is requested in July. Another DC-8 passenger plane is also ordered. By the end of the year, all of the consortium capitals, except Nouakchott and Bangui, have jet service.

A total of 278,692 passengers are carried on the year and revenues increase 7.1% to \$45 million.

The DC-8F enters service in 1966 as the company begins to withdraw its DC-6s. At this point, AA-2 takes over the **Air France** and **UTA French Airlines, S.A.** maintenance facilities at Dakar, Douala, and Abidjan. The consortium carrier now handles all but the most difficult maintenance tasks for itself and, under contract, for several other African airlines and air forces as well.

A pair of DC-4s is sold in 1967 to help pay for the two Caravelles, the first of which makes its maiden flight on April 21. Both of the new machines are delivered to this launch customer during the summer.

SE-210 Caravelle XIR service is inaugurated from Dakar on August 5. Destinations visited by the twin-engine French jetliners include Abidjan, Accra, Bamako, Bangui, Bobo Dioulasso, Brazzaville, Casablanca, Conakry, Cotonou, Douala, Freetown, Lagos, Las Palmas, Lome, Niamey, Nouakchott, and Ouagadougou.

Enplanements total 295,487.

Togo formally joins the consortium on January 1, 1968, and purchases a 6% stake from Sodetraf. With the arrival of the third DC-8, a Dash-33 christened *Dakar*, the two DC-8-33s leased from **Air France** are returned. An even larger Douglas transport, a DC-8-63CF, is ordered, along with a pair of Japanese-made turboprops.

Passenger bookings for the year reach 306,000 and accelerate to 341,119 in 1969.

As part of a new plan to diversify into the booming tourism market, the airline, on March 12, 1970, purchases majority control (51%) of the Societe de Developpement Hotelier & Touristique en Afrique de l'Ouest, S.A. A pair of Nihon NAMC YS-11As is acquired for

regional/domestic services from Japan and, in December, the DC-8-63CF is delivered and christened *Ndjamena*.

Freight traffic rises 9.3% while passenger traffic jumps 12% to 387,635.

Routes in 1971 now extend to France, Italy, and Switzerland. In January, the DC-8-63CF, flying from Dakar, launches the carrier's first New York service with an owned aircraft, flying weekly from Abidjan.

One of the last DC-4s, a freighter with two crew and a passenger, lands two-and-a-half miles short of the runway at Fort Archambault on February 28; although the aircraft must be written off, there are no fatalities.

Almost a decade old, the consortium begins to suffer from some dissension during the year. Dissatisfied that few from his country are in top AA-2 management positions or that Douala, the most heavily visited capital, does not host corporate headquarters, Cameroon President Ahmadou Ahidjo announces in March that his country will pull out of the consortium. Ahidjo sponsors the creation of his nation's own carrier, **Cameroon Airlines, S.A.** on July 26.

Following suit, Central African Republic President Jean Bedel Bokassa also announces that his country will quit AA-2 and set up an Air Centrafrique; this threat does not, however, materialize.

Cameroon, on the other hand, proceeds to withdraw from the consortium in September; ironically, the archives of its national library at Douala contain the only formal, deposited copy of the AA-2 start-up treaty. The remaining partners rearrange the consortium's shareholding; each state assumes a 6.54% stake, while the Sodetraf shareholding drops further (28%).

A third SE-210 Caravelle XIR is delivered as orders are placed for two DC-10-30s and two DC-8-55Fs. The remaining DC-6s and DC-4s are retired.

The employee population in 1972 stands at 3,453. The fleet now comprises 1 DC-3, 1 DC-8-33, 2 DC-8-53s, 1 DC-8-55F, 2 DC-8-63s, 2 YS-11As, and 3 SE-210s. The YS-11As are withdrawn early in the year and are sold to **Air Ivoire (Societe Ivoirienne de Transport Aeriens, S.A.)**.

Following the examples of the Central African Republic and Cameroon, Chad, in February, also threatens to quit the airline group, claiming that it should receive better treatment. The threat turns out to be a bluff, as Chad remains. Later in the year, one of the DC-8-55Fs enters service.

Passenger boardings this year soar 20.6% to 445,000.

The workforce stands at 3,646 in 1973. AA-2 comes on line with the **Air France** Alpha 3 computer reservation system (CRS) at the beginning of the year.

The first wide-body, a DC-10-30 christened *Libreville*, is delivered on February 28; on March 13, the big Douglas begins thrice-weekly roundtrips from Abidjan to Paris, with stops, depending on service, at Cotonou, Dakar, Nouakchott, Niamey, Bangui, Brazzaville, Fort Lamy, Bordeaux, and Marseilles.

Later in the month, DC-8-63CF service is inaugurated from Abidjan to Paris via Cotonou, Dakar, Fort Lamy, Bordeaux, and Marseilles. During the fourth quarter, an SE-210 Caravelle XR is purchased from **Alia Royal Jordanian Airlines**.

Enplanements, due largely to the energy crisis, fall to 353,430.

In January 1974, Acoussou Koffi succeeds retiring Cheikf Fal as chairman and president. Airline employment is now 3,886 as another DC-8-55F is delivered and the Alia Caravelle enters service.

For improved communications purposes, the Abidjan head office is linked directly to Paris by satellite hookup, along with Rome and Geneva.

Passenger boardings climb 4.2% to 369,000 and freight grows 30.3%.

The workforce is increased to 4,160 in 1975. Routes are extended from Gabon to Italy and a third DC-8-55F joins the fleet. A second DC-10-20, the *Cotonou*, is received in June, but is immediately leased to **Thai Airways International, Ltd. (THAI)** for a year.

Freight traffic is up 8.7% and passenger bookings surge 11% to 429,000.

The employee population jumps 11% in 1976 to 4,551. Having returned from Thailand in May, the DC-10-30 *Cotonou* is placed in service in June. Passenger traffic climbs 10.2% to 472,826 and cargo traffic rises 10.6%.

Gabon departs the consortium in 1977, requiring another fiscal reorganization. A third DC-10-30 is ordered as customer boardings swell to 487,800.

President Acoussou Koffi and his assistants place orders in 1978 for a Boeing 747-200 freighter and three Airbus Industrie A300B2 passenger airliners. Freight is up 4.5% and passenger boardings grow 10% to 542,000.

Capitalization stands at FFfr 5.8 million in 1979 and will be increased by FFfr 2 million annually hereafter. Passenger bookings grow 10.3% to 597,678, but freight drops 1.1%.

One aircraft is sold in 1980, reducing the fleet to 12 aircraft. A B-747-2S4F is delivered on October 3; christened *Lome*, the two-tone green and white Jumbojet begins roundtrip all-cargo operations from Abidjan to Paris in November.

Freight traffic increases 9.2% to 200.14 million FTKs, while enplanements advance 5.6% to 631,000.

Airline employment in 1981 stands at 5,161. The third DC-10-30, christened *Niamey*, and the three A300B2s all enter service. The management structure is revised to provide for three African deputy presidents; A. Ddiaye, F. Konate, and E. Ebouka-Babackas fill the slot previously held by a **UTA French Airlines, S.A.** executive.

Passenger boardings climb 6.2% to 699,945 and freight traffic advances by 9.9% to 220 million FTKs.

Bookings dip to 697,132 in 1982 as the downturn in world economic fortunes and rises in price are felt. Income totals FFfr 102.8 million and allows a FFfr 68.6-million profit, a 19.2% increase over the previous year.

The traffic downturn continues in 1983, forcing the sale of the three SE-210s and the two DC-8-63s. Capitalization now stands at FFfr 13.8 million and two B-727-2H9s are leased, long term, from **JAT (Yugoslav Airlines)** as replacements for the sold units. Auxence Ickonge is named chairman/president designate in October.

Passenger boardings this year remain level at 697,661.

Airline employment stands at 5,238 in 1984. Not flexible enough to meet the carrier's requirements, the B-747-2S4F Jumbojet *Lome* is withdrawn on March 1 and leased to **National Airlines**; the same day, the American company subleases the plane to **Saudia (Saudi Arabian Airlines)**. On August 1, the *Lome* is sold to **Korean Airlines/Korean Air, Ltd. (KAL)**.

Passenger traffic declines another 0.8% during the year to 692,000 and a net loss of \$860,000 is suffered.

The workforce is reduced 1.9% in 1985 to 5,619 and the fleet is standardized to 1 DC-8-55F, 3 DC-10-30s, and 2 B-727-2H9s. The inactive B-747-2S4F remains grounded. To overcome a shortage of available Douglas wide-body pilots and flight engineers available to it, the carrier, in late spring, recruits crews from **JAT (Yugoslav Airlines)**, while leasing one of its DC-10-30s to the Yugoslav carrier. Abidjan-New York via Dakar, DC-10-30 frequencies are stepped up to two per week, beginning on June 25. Services are also offered to 22 African nations as well as Bordeaux, Nice, Paris, Geneva, Zurich, Rome, Las Palmas, and Jeddah.

Chairman/CEO Koffi is succeeded on July 1 by Auxence Ickonga. In October, in cooperation with **Ethiopian Airlines, S.C.** and employing that carrier's B-767-260, service from Addis Ababa to Abidjan is increased from two flights each week to four. Later in the month, Koudjoulou Dogo, a citizen of Togo, is named the new director general.

Passenger boardings recover after three years of decline, rising 9.4% to 757,323; freight accelerates 4.5% to 191.34 million FTKs.

Early in 1986, the staff is cut by a further 10%, or 500 workers. Business-class service is introduced and a massive worldwide sales

promotion campaign begins. In late spring, company officials undertake negotiations with airline officials from Guinea and Mali, who are anxious to have the multinational take over the long-haul flights of both **Air Guinee, S.A.** and **Air Mali, S.A.** In August, a B-707F is acquired. In addition, two more B-727-2H9s are leased from **JAT (Yugoslav Airlines)**.

In light of the huge debt collectively owed the airline by a number of member governments, the company statutes are modified by the French and African shareholders in December to allow greater flexibility in meeting competition in the Africa-Europe market. Enplanements for the year total 70,863.

The Boeing tri-motor contract with **JAT (Yugoslav Airlines)** is terminated in February 1987. During the spring, new technical facilities are dedicated at Dakar's Yoff Airport; these enable the carrier to gradually become less dependent upon **UTA French Airlines** for technical support. As of April, the carrier is owed over \$100 million by the French-speaking African nations that constitute its main shareholders; neither Chad nor Mauritania has made contributions in a decade. Still, the company is able to acquire a B-737-33A, under lease from **Aeromaritime International, S.A.**, with which to replace the Yugoslav units.

Lebanese terrorist Hussein Ali Mohammed Hariri seizes Flight 56, a DC-10-30 with 163 passengers and en route from Brazzaville in the Congo via Rome to Paris on July 24. He diverts it to Geneva, where he demands the release of two brothers held in West Germany for the 1985 murder of US Navy Petty Officer Robert Stethem aboard TWA Flight 847. On the tarmac at Cointrin Airport, the gunman kills a French passenger and critically wounds a steward before the cabin crew is able to overwhelm and subdue him. An emergency evacuation is ordered, during which 30 passengers are injured. Hariri will be tried and given a life sentence.

As of September 1, the carrier is owed \$42.3 million for the year by its African government stockholders and has bank overdrafts in excess of \$18.3 million. The 4,990-employee consortium airline transports, through November, a total of 64,421 passengers, a boost of 10% over the same period a year earlier.

In January 1988, AA-2 reconsiders its decision to extend its New York route on to Montreal in accordance with recently authorized rights granted by the Canadian government.

In August, the company signs an agreement with **Atlanta Icelandic Airlines, H.F.** for the wet lease of its B-707-320 for use on the African carrier's annual Hadj flights from various west- and central African countries.

Chairman/President Ickonga resigns in October and, in November, the French government's Caisse Central de Cooperation Economique, an agency that provides aid to foreign governments and institutions, asks its director, Yves Roland-Billecort, through a personal appeal from the French Prime Minister, to take over supervision of the airline's management. Pierre Arnaud and Jean-Pierre Vizzanova are named deputy presidents.

The French government now agrees to provide the funds necessary to keep AA-2 going, subject to the effective implementation of a program Roland-Billecort will develop.

The carrier's enplanements for the year are level; freight, however, declines by 2.2% to 14.6 million FTKs. The company reports a profit of 14.4 billion French African francs.

The fleet in 1989 includes 3 A300B4-203s, 3 DC-10-30s, 1 B-737-33A, 1 B-707F, and 1 DC-8-63F. As of January, on-time performance is just 28%. In March, when Roland-Billecort and his management team takes office (letting go all but two members of the carrier's top management, all Africans), it is announced that AA-2 will receive an initial \$12 million from the French government, under a program aimed at stabilizing the multinational's financial situation.

In exchange, it is required that the multinational agree to lay off up to 2,000 employees. In addition, the member nations agree to reduce the traffic rights of foreign airlines into their countries in an effort to

increase market share for the consortium company. At least one country, Italy, reacts severely; it temporarily prohibits the airline from flying into Rome.

The **Atlanta Icelandic Airlines, H.F.** wet-leased B-707-320 begins the transport of Hadj pilgrims in May. Passengers are picked up from and returned to Bamako in Mali, Nouakchott in Mauritania, Conakry in Guinea, Abidjan in Ivory Coast, Libreville in Gabon, and Brazzaville in the Congo.

When the cost-cutting program is implemented in June, 1,600 of the carrier's 5,600 employees are laid off. As part of the reorganization, the number of airline departments is reduced from 50 to 29 and the number of sections from 181 to 50.

The technical base at Brazzaville, Congo, is closed in July and in August it is announced that the company will receive French government aid funds of \$83 million, in addition to \$31 million in loans. There are four major components in this financing program: a \$94-million direct subsidy; a \$35-million decade-long loan at 1% interest; \$37 million through bank credit rescheduling; and a \$35-million long-term loan.

At the same time, Roland-Billecort's team cuts off credit to member governments for tickets and transport documents and embarks on a campaign to increase capitalization from \$49 million to \$84 million. Funds are made available to member governments to subscribe to the campaign.

During the fall, service is started to Agadez, Niger. Under pressure from the Congo government, the Brazzaville base closure is halted in November. A series of low-fare charters are offered to Paris in early December for those wishing to shop for Christmas.

For the year, a profit of 366.6 million French African francs (\$1.3 million) is generated, down significantly from the previous year.

In addition to the reduction of competition from foreign airlines, AA-2 in 1990 elects to increase its capacity and then to fill it with effective marketing and promotion. During the winter season, seats are increased by 40.6% through the process of increasing frequencies and taking a long-term lease on a Lockheed L-1011 TriStar 1 from **American Trans-Air** and a B-737-300 from **Aeromaritime International, S.A.** A B-707-3K1C is also chartered from **TAROM (Transporturile Aeriene Romane, S.A.)**. The three DC-10-30s receive new interiors by Concorde decorator Guatier Delaye and service is launched to Brussels. An office is opened at New York and frequencies to that destination are increased during the summer.

In August-September, capitalization is increased from 5.8 trillion French-African francs to 13.8 trillion. The French Sodegraf company does not participate in the increase, so its interest in the multinational slips from 28% to 21.01%. By fall, on-time performance has risen to 66% and weekly flights commence on December 10, linking Bamako and Abidjan with Lyon in France. The profit drops to \$580,000.

In 1991, airline employment is 4,500; of these, Senegal and Ivory Coast supply 800 each, followed by Benin and Burkina Faso with about 400 each, and the remainder coming from the Central African Republic and Mauritania. Following the conclusion of Operation Desert Storm, service to Jeddah and Rome is resumed in the spring. The fleet now includes 3 A300B4s, 1 B-707-3K1C Stratoliner wet-leased from **TAROM (Transporturile Aeriene Romane, S.A.)**, and 3 DC-10-30s. Orders are outstanding for 3 A310-304s; however, the first is delivered under charter in June.

During the first nine months of the year, a total of 868,156 passengers and 12.39 million FTKs of freight is flown. In October, a marketing alliance is signed with **Swissair, A.G.**, which provides for code-sharing on the route from Abidjan to Zurich via Dakar and Geneva. Also during the month, the Romanian Stratoliner begins flying all-cargo services from Dakar to Ostend.

Plans are made for a new charter subsidiary, "Air Afrique Charter." For the year, a total of 133 roundtrip charters are flown, which provide \$10 million in revenues. Still, income barely exceeds expenses and allows an operating profit of just \$727,000.

The payroll is cut a slight 0.2% at President/Director General Roland-Billecort's multinational carrier in **1992** to 4,210 and the fleet is increased in January by the addition of 2 leased A310-304s, another **TAROM (Transportuile Aeriens Romane, S.A.)** B-707-3K1C, and 1 Antonov An-12 freighter chartered from **Balkan Bulgarian Airlines**.

A multinational negotiation committee is established to work out bilateral agreements between the consortium and other countries. In April, **Air Ivoire (Societe Ivoirienne de Transport Aeriens, S.A.)** launches a weekly Fokker 100 replacement service, on behalf of AA-2, from Abidjan to Togo and the Congo.

The A300B4s are sold at mid-year and, in August, it is announced that, as a result of an increase in capitalization by two African international banks and a French financing institute, the stake of the 11 national governments holding shares will be reduced from 79% to 52% interest.

In October, new weekly routes are opened to Johannesburg from Brazzaville and Kinshasa. A marketing alliance is entered into with **South African Airways (Pty.), Ltd.** in November; under its terms, the two companies agree to code-share the route from Abidjan to Johannesburg via Brazzaville. During the year, Mali joins the consortium.

Customer bookings for the year as a whole accelerate 9.9% to 712,923, but cargo falls 3.4% to 167.82 million FTKs. Revenues inch up 1.6% to \$486.3 million and expenses rise 1.5% to \$486.28 million. The resulting operating surplus is \$1.01 million.

Airline employment is increased by 16.4% in **1993** to 4,900 and the fleet now includes 3 A300B4-203s, 4 A310-304s, 2 B-707-3K1Cs leased from **TAROM (Transportuile Aeriens Romane, S.A.)**, the Balkan An-12, 1 Fokker 100 leased from **Air Ivoire, S.A.**; and 3 DC-10-30s. One of the latter is chartered out to **AOM French Airlines, S.A.**, which subleases it to **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**

While landing at Abidjan on January 15 after a service from Cotonou, Flight 153, one of the Romanian B-707-3K1C freighters with six crew, undershoots the runway and its main landing gear collapses; although the Stratofreighter is damaged beyond repair, there are no fatalities.

In cooperation with **South African Airways (Pty.), Ltd.**, the new route is opened to Johannesburg during the first quarter; Nice joins the European network at the same time. Civil unrest in Togo and Congo proves costly, as do political difficulties in Mali and Niger, along with the closing of the southern tourist area of Senegal.

Late in the year, the member nations (Benin, Burkina Faso, Central African Republic, Chad, Congo, Ivory Coast, Mali, Mauritania, Niger, Senegal, and Togo) pledge to join the government of France in beginning a FFr 361-million (\$62-million) restructuring.

Passenger boardings inch up 0.8% to 718,952 while freight does much better, climbing 6.7% to 171.2 million FTKs. The year's operating loss is \$29 million and the net downturn is \$13 million.

In February **1994**, a marketing agreement is signed with **Gambia Airways, Ltd.**; under its terms, "block space" and code-sharing will take place on the Banjul-London route. The multimillion restructuring of the company's finances also begins during the first quarter. Under its terms, each of the 11 owner governments will subscribe FFr 10 million and France will provide FFr 8 million plus 90 million from that government's Development Agency. The French government will guarantee loans covering 80% of the member states' contribution. Private investors will contribute an additional FFr 153 million.

Despite the recapitalization, the devaluation of the CFA franc during the year doubles the airline's costs.

In early June, service is inaugurated from Accra to London (LGW) via Abidjan. At mid-year, the heads of the member states renew Roland-Billecort's contracts for another five years. When the Central African Republic's franc currency is devalued by 50%, the carrier's debt burden significantly increases.

Arrangements are completed with ILFC in December for the charter of two A300B4-605Rs, which will be delivered during the following

spring. Also during December, **DHL Worldwide Express** purchases a board seat and a 3% stake for \$3 million.

Enplanements total 792,244 and revenues for the year jump 13% to \$440 million; however, expenses accelerate 15.6% to \$450.56 million. Still, there is a \$10.56-million operating loss and a net loss of \$3.64 million.

The workforce stands at 4,330 in **1995**. In March, the company begins a code-sharing service with **TAP Air Portugal, S.A.** over a route from Lisbon to Abidjan. Also in March, the first A300-600R is received; the second arrives in April.

Unprofitable routes to several European cities are closed, including London, Marseilles, Geneva, and Nice. The first A300-600R is received and replaces DC-10-30s on higher-density routes.

A memorandum of understanding is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** in April that calls for joint planning for future services. In December, an agreement is signed with **Air Algerie, S.A.** concerning long-term planning for a joint-venture project.

While landing on the wet runway at N'Djamena, Chad, after an all-cargo service from Paris on August 17, the second Romanian B-707-3K1C, with six crew, overruns the runway and suffers the collapse of its left main landing gear. There are no fatalities.

Two additional Stratoliner freighters are leased from **DAS Air Cargo, Ltd.** for two years.

The multinational carrier enjoys a good traffic year as bookings climb 7.3% to 854,632 and freight jumps 8.4% to 174.3 million FTKs.

The fleet in **1996** includes 6 chartered A310-304s, 3 A300B4-203s, 2 A300B4-605Rs, 2 DC-10-30s (1 of which is chartered in January to **AOM French Airlines, S.A.**), 2 B-707-3K1Cs leased from **TAROM (Transportuile Aeriens Romane, S.A.)**, 1 B-737-2Q5CA chartered from **Lina Congo (Lignes Nationales Aeriennes Congolaises, S.A.)** and 2 B-707-320Cs leased from **DAS Air Cargo, Ltd.**

In April, the airline begins to code-share with **Middle East Airlines (2), S.A.L.** on a route from Abidjan to São Paulo.

Having been unable to reshape the company's sad financial history, Managing Director Roland-Billecort is replaced (officially, on a temporary basis) in June by Pierre Arnaud and Yves Boudot. The search begins for a new chairman.

Unhappily, the African management of the company makes disparaging remarks concerning AA-2's links to France, its non-African shareholders, and most particularly concerning Roland-Billecort. When he learns of these comments, **Air France** Chairman Christian Blanc abruptly decides that his carrier should distance itself from the Africans.

At the end of the year, in the wake of terrorist activities, the company stops flying to Paris for security reasons. Instead, it redirects its French service to Lyons.

Enplanements total 827,500 and 50,000 metric tons of cargo are transported. Although operating revenues total \$398 million, a net \$35-million loss must be reported, atop an operating downturn of \$39.1 million.

Early in **1997**, a plan is put forward (delayed as it turns out) to sell (and lease back) the entire aircraft fleet to a special-interest company established by all of the members plus the Dakar-based Asecna African Flight Safety Association.

In ceremonies at Niamey, Niger, on February 18, former **Air Mauritius, Ltd.** Chairman/Managing Director Sir Harry K. Tirvengadam becomes managing director of AA-2.

Flight 816, a B-737-242C with 116 passengers, aborts its takeoff from Douala on August 3 following the explosion of a main landing gear tire; the aircraft skids off the runway into the bush and is engulfed in smoke. All aboard are safely evacuated before the little Boeing is burnt out.

The civil war in the Congo Republic has an impact on carrier traffic during the four months of its duration.

In September, representatives of the 11 consortium member nations seek an appointment in Paris to ask for French government aid to help

with the consortium carrier's finances. No invitation is forthcoming. Frequencies to Malabo and Abu Dhabi are inaugurated in October.

A B-737-3Q8, subleased from **TEA-Basel, Ltd.**, is delivered in December; the same month, a fourth, weekly roundtrip begins to New York (JFK).

Enplanements total 938,232. It is also reported that there are losses of \$21.78 million (operating) and \$10.99 million (net).

Airline employment in 1998 stands at 4,159. During the spring, new service is initiated from Abidjan to Casablanca. Unable to come up with payments, the financially distressed carrier has its four A310-304s seized by their lessors during the first week of July. The action forces AA-2 executives to feverishly cobble together a workable flight schedule that can be accommodated with its now significantly smaller fleet. They also meet with bankers in an effort to gain the financing required to reclaim the aircraft.

Conflict resumes in the Democratic Republic of the Congo during the summer, again impacting traffic. Meanwhile, the company's major creditors—Credit Lyonnais, Dresden Bank, and Midland Bank—make plans to sell the repossessed aircraft as the airline has been unable to obtain the funding necessary to continue their charter. A special fund established by AA-2 for the purpose falls short by \$1.7 million as five of the 11 member states fail to make a contribution.

During a ministerial-level meeting at Bamako, Mali, in August, a call for help is made to the French government for assistance in helping to keep AA-2 from foundering. Finally, in mid-September, the French government agrees to see the representatives who had sought an appointment to discuss possible aid the previous year.

Discussions are held with **Air France** concerning a strategic marketing alliance. On October 1, Credit Lyonnais underwriters allegedly give the airline's executives an October 15 deadline to clear debts around a \$50-million loan before it can begin to discuss restructuring of the principal, estimated debt of \$305 million. AA-2 denies this assertion on October 6, claiming that it hopes for a political solution to its financial crisis.

At the time of the Credit Lyonnais deadline, the carrier's current national owners, which hold 70.4% shareholding, agree to cut that figure down to 51% by expanded privatization. The creditors arrange a Paris court hearing on March 3 of the next year, where repayment of debt arrears owned on four Airbus airliners will be demanded.

Faced with the very real possibility that AA-2 may go under, thereby opening its routes to competition from non-African international air carriers, **Air France** decides that the Pan-African airline's situation requires a more active presence. Although it does not plan an immediate equity presence, the November issue of *Airline Business* in its cover story reports that the French flag carrier will now manage AA-2.

Passenger boardings accelerate 5.8% to 996,000, but freight traffic falls 11.5% to 148,768 FTKs. Revenues climb 0.3% to \$431.87 million while costs fall 8.5% to \$413.56 million. There is an operating profit of \$18.11 million and a net gain of \$16.51 million.

Managing Director Tirvengadam resigns for health reasons on January 29, 1999.

Although maligned in some circles, Sir Henry had been able to institute tight cost controls, while increasing the use of the fleet so as to boost income.

In anticipation of the March 3 court date in Paris with Credit Lyonnais, transport and finance ministers from the 11 Francophone countries of Africa that hold stakes in AA-2 meet at Abidjan, Ivory Coast, on February 27 to discuss the airline's future. Although they put off until a second meeting at Abidjan on March 30 the selection of a new managing director, they do agree on new ways of finding cash for a debt rescue and for the establishment of another concern to manage the debt.

AA-2 will sell its shareholding in the Montreal-based, international telephone company, SITA, and in Abidjan Catering. The proceeds will then be lent to the member states and used by them as funding with

which to assist in making payment for the establishment of a separate company. The \$11.5-million stake will allow the new concern to takeover the multinational airline's debt and to lease out the four Airbus aircraft, the purchase of which has put AA-2 into most of its debt.

In addition, the member states will ask the multinational air safety agency ASECNA at its March 10 Gabon meeting to make a sizeable contribution that will get the debt-handling company off the ground.

At Abidjan, the ministers also discuss ground handling in member states, which is currently contracted to AA-2. No decisions concerning that agenda item are reached.

During the last week of February, announcements are made that frequencies will be increased from Abidjan to New York (JFK) and from Abidjan to Johannesburg just as soon as new leased B-767-300ERs are acquired.

The court hearing organized by Credit Lyonnais and the airline's other creditors duly opens on March 3, but is adjourned after opening arguments are completed a day later.

Ministers from the 11 Francophone African countries that own shares in the airline meet at Ouagadougou, Burkina Faso, in mid-April and name the Senegalese protege of former CEO Roland-Billecort, Pape Sow Thiam, the new Managing Director. Many of the company's workers, who detested the **Air France** official, are displeased and the appointment is vehemently denounced by Bamba Bakary, secretary general of the AA-2 workers union, in a speech at Abidjan on April 17.

Two of the four A310-304s are leased by Credit Lyonnais in May to Cairo-based **Midwest Airlines, S.A.E.**

Also in May, due to an intensification in the sporadic conflict near Brazzaville (Congo Republic) between government forces and those led by former prime minister Bernard Kolelas, the carrier suspends its thrice-weekly flights into Maya-Maya Airport. Instead, it increases service to Pointe-Noire, the country's southern business capital.

Calm is sufficiently restored by July 29 to permit a weekly service to be operated to Brazzaville from Paris via Cotonou, Benin.

The sublease of a B-767-3Q8ER chartered from **Air Europe, S.p.A.** is extended on November 4.

In March 2000, a cooperative agreement is signed with **Air Gabon, S.A.**, **Cameroon Airlines, S.A.**, and **Air Madagascar, S.A.** Under its terms, the four will provide joint handling, coordinate schedules, and purchase common equipment.

Two A330-223s are leased from ILFC during the first quarter; until they arrive, the carrier leases a B-767-35HER from **Air Europe, S.p.A.**

It is reported at the end of June that the fiscally stressed carrier has accepted in principle an offer of additional assistance from **Air France**. The company's stake in **Air Mauritanie (2) (Societe d'Economic Mixte Air Mauritanie, S.A.)** is increased from 20% to 32% on July 1.

Wearing a new blue and white livery, the first A330-200 is received from ILFC on October 2. Service from Abidjan to Lisbon ends on October 29.

AIR ALBA, LTD.: See **HIGHLAND AIRWAYS, LTD. (2)**

AIR ALBATROSS, LTD.: **New Zealand (1981–1986).** Established to seek rights to a subsidized Chatham Island air link, AAL is formed at Wellington in the summer of 1981. A fleet comprising two Swearingen Metro IIs and two Cessna 402s is assembled and forty employees are hired. When the government delays its support decision, the company elects to implement other available routes, beginning service on November 9 to Nelson.

A total of 641 passengers are carried in the first month.

Providing regularly scheduled flights over Cook Strait to both Nelson and Blenheim in 1982–1983, the carrier sees its traffic double from 16,903 to 31,204. A frequency to Auckland is initiated in March 1984.

Unable to maintain its viability in the increasingly competitive and expensive New Zealand air transport skies of **1985–1986**, the carrier is forced to shut its doors late in 1986.

AIR ALBERTA, LTD.: Canada (1985–1986). Air Alberta is established at Edmonton Municipal Airport in the summer of **1985**. Two Embraer EMB-110P-1s are acquired and revenue services are inaugurated in October linking the company's base with Calgary via Red Deer. After only five months of service, the carrier stops flying on February 3, **1986**.

AIR ALFA HAVYOLLARI VE TIC A.S.: Turkey (1992–2000). Air Alfa is established at Istanbul in **1992** to operate domestic charter services. Revenue operations commence with one each Airbus Industrie A300B4 and Boeing 737-230, both of which are leased.

Operations continue apace in **1993–1996**. During these years, a pallet deal is signed with **KLM Royal Dutch Airlines, N.V.** that provides for service from Amsterdam to Istanbul and Izmir.

While on the ground at Istanbul on May 17, 1996, the cabin of the A300B4 catches fire, causing the plane to be totally burnt out.

During the summer of **1997**, a pair of Airbus A321-131s, previously operated by **BWIA International Airlines, Ltd.**, is leased and enters service on European holiday routes.

Destinations now include Amsterdam, Ankara, Antalya, Basel, Düsseldorf, Frankfurt, Hamburg, Izmir, Munich, and Zurich.

In January **1998**, an A320-131 is chartered from ILFC for five years. With Hasim Bayram as chairman, service is quietly maintained in **1999** and until July 1, **2000**, when the carrier is renamed **Alfa Airlines, A.S.**

AIR ALGERIE (SOCIETE NATIONALE DE TRANSPORT ET DE TRAVAIL AERIEN, S.A.): 1 Place Maurice Audin, Algiers, Algeria; Phone 213 (3) 644 822; Fax 213 (3) 610 553; Code AH; Year Founded 1946. **Compagnie Generale de Transport Aerien, S.A. (CGTA)** is formed late in **1946** to provide nonscheduled service from Algeria to destinations in France. Nonscheduled flight operations are inaugurated in **1947**. Within three years, the fleet includes 11 Douglas C-47s/DC-3s and scheduled services are inaugurated linking Algiers with Basel, Bône, Geneva, Marseilles, Paris, Philippeville, and Toulouse.

A C-47A with three crew is lost at Paris (ORY) on December 12.

Several Breguet Deux Ponts 761s are evaluated during the early **1950s** for possible use as cargo aircraft. In the spring of **1952** the fleet is increased through the addition of three Sud-Ouest SO-30P Bretnages.

Compagnie Air Transport, S.A. (founded 1947) is acquired in April **1953** and the amalgamated carrier is renamed Air Algerie (2) (**Compagnie Generale de Transport Aeriens, S.A.**) on May 22. Ownership remains private and comprises a number of different shareholders, including the shipping lines **Compagnie Generale Transatlantique, S.A.** and **Compagnie de Navigation de Mixte, S.A.**, which hold 98% of the stock between them.

In **1954–1958**, routes and frequencies are increased within Algeria and to Paris, Marseilles, and Toulouse. The government of France divides the French-scheduled, cross-Mediterranean route segments between **Air France** (54%) and Air Algerie, with the latter holding a virtual monopoly on Algerian domestic service now dramatically improved. Additionally, seasonal charters are operated from Algiers to Ajaccio in Corsica, as well as to Clermont, Montpellier, and Perpignan.

During these years, the fleet includes 2 chartered Lockheed L-749A Constellations, 6 DC-4s leased from **Air France**, 3 DC-3s, and 3 Nord 2501 Noratlas. Orders are placed for 5 Sud Est SE-210 Caravelles.

An L-749A fails its takeoff from Algiers on December 17 of the latter year and must make a forced landing; although the plane is destroyed, there are no fatalities.

The former **KLM (Royal Dutch Airlines, N.V.) DC-4 Limburg** is purchased on June 22, **1959**. Four additional DC-4s are acquired and the carrier's first jetliner, an SE-210 Caravelle III, is delivered in late December.

Algeria–Paris SE-210 daily return services are inaugurated on January 12, **1960**. As more jetliners arrive, the number of routes is increased, including, in March, a twice-weekly service from Bône to Paris. At the beginning of the second quarter, Caravelle service is inaugurated, four-times-a-week, from Oran to Paris, while the Algiers–Paris service is upgraded to 13 weekly roundtrips.

On May 19, a Caravelle III arriving from North Africa with 37 aboard collides with a Stampe biplane near Paris (ORY). The jetliner lands safely with one fatality; the small craft's pilot and passenger are killed instantly.

Two more Caravelle Is are in service by summer, allowing the DC-4s to become freighters. Although the other two requested jetliners will be accepted, both will be quickly sold.

Services are extended to additional North African and European destinations in the decade after **1961** as the airline becomes Algeria's flag carrier following the country's independence from France in early 1962. Ownership is redistributed three times during these years. Initially, the Algerian government takes a 20% stake, leaving the previous shipping company owners with 52%. Additional owners are Delegation Nationale (20%), **Air France** (28%), and others (2%).

On April 26, **1962**, OAS terrorists blow up an L-749A leased from **Air France** in its hangar at Maison Blanche Airport, Algiers. There are no casualties.

In March **1963**, the government share is boosted to 51% as additional shareholding is purchased from the shipping concerns. Khelifa Laroussi is managing director and airline employment reaches 1,300.

A DC-3 is lost at Hassi Messaoud under unknown circumstances on May 22.

The last L-749A is returned to Paris at the end of the year.

An Ilyushin Il-18 is purchased from the Soviet Union in April **1964**.

A C-54A is lost at Dar el Beida, Algeria, on June 11, **1965**; there are no fatalities.

Four Convair CV-440s are purchased from **Deutsche Lufthansa, A.G.** in **1966**.

On April 11, **1967**, the onetime **KLM (Royal Dutch Airlines, N.V.) DC-4 Limburg** with 6 crew and 33 passengers, crashes while landing at Tamanrasset, in the Sahara, during a domestic flight; there are no survivors.

Additional destinations visited during the 1960s include the Balearic Islands, Bulgaria, Egypt, Germany, Italy, Ivory Coast, Spain, Switzerland, the U.S.S.R., and Yugoslavia. A significant number of charters are also operated (20% of all services are nonscheduled in 1968).

The CV-440s acquired in 1966 are converted into CV-640s during **1968**.

In **1969**, shareholding is divided between the Algerian government (83%) and **Air France** (17%).

En route to Paris on July 26, an SE-210 Caravelle VIN with 7 crew and 30 passengers suffers a fire in an electrical compartment. The aircraft crashes in flames while trying to execute an emergency landing at Biskra, Algeria (33 dead).

En route from Paris to Hassi Messaoud with 37 aboard, including 30 oil technicians, a chartered Caravelle III crashes in the desert on July 26, **1970**, 200 mi. S of Algiers near Biskra (35 dead).

En route from Annaba to Algiers on August 30, a CV-640 is taken over by three armed Algerian men and ordered to fly to Albania. A refueling stop is made at Cagliari, Sardinia, where the passengers are allowed to deplane. Albanian officials refuse landing permission and the turboprop is finally permitted to alight at Belgrade, Yugoslavia, where the pirates receive political asylum.

In **1971**, the route network expands into the Middle East. The fleet now includes 5 Caravelles, 3 Convair CV-640s, and several DC-3s.

The Algerian government takes full fiscal control of the carrier in **1972**. It is renamed **Air Algerie (Societe Nationale de Transporte et de Travail Aerien, S.A.)**. The fleet is strengthened by the delivery of two Boeing 727-2D6As (christened *Hoggar* and *Tassili*) and a pair of 737-2D6As (unnamed). Late in the year, the orderly retirement of the

SE-210s begins as they are replaced on international routes by the new Boeings.

An SE-210 Caravelle III is damaged beyond repair as the result of a bad landing at Alger-Houari Boumediene, Algeria, on September 23, 1973; there are no fatalities.

Ait Messaoudene now becomes managing director and enplanements for the year total 982,737.

Airline employment reaches 3,400 in 1974. The small carrier Societe de Travail Aerien, S.A. is taken over and merged. The fleet now includes 6 B-727-2D6As (including the newly received *Lalla Khedidja*, *Djebel Amour*, *Mont du Ksall*, and *Mont du Tessala*), 3 SE-210s, 4 CV-640s, and 5 Nord 262s. A DC-8-63CF is wet-leased from **World Airways** in April and is employed to fly Muslim pilgrims on Hadj pilgrimage flights to Saudi Arabia.

Four Airbus Industrie A300B2s are leased and placed in service to help handle increased passenger demand. Late in the year, new services begin to Dakar and Nouadhibou (Mauritania).

Bookings rise 18% to pass the one million mark for the first time (1,197,045), including 735,185 on international routes.

The workforce in 1975 totals 4,617 and the fleet is increased by the addition of four B-737-2D6As, which are christened *Atlas Saharien*, *Oasis*, *Saoura*, and *Monts des Ouleds Neils*.

World Airways aircraft are again wet-leased for Hadj flights; this year, the Algerian supplemental carrier employs its new B-747-273 on the service.

The carrier joins the **Air France** Alpha 3 computer reservations system. New routes are opened to Karachi and to Oran and Lyon. Customer bookings accelerate 17.9% to 1,689,333 while a total of 134.3 million FTKs of cargo are transported.

A CV-640 is written off at Djanet on May 2, 1976. During the remainder of the year and through 1979, scheduled passenger and cargo flights are undertaken in Africa, the Middle East, and to 13 European destinations. Airline employment at Director General Mohamed Bouzada's carrier stands at 4,500 in the latter year. The fleet now includes 6 Boeing 727-2D6As, 10 B-737-2D6/2D6As, 3 B-737-2D6CAs, 4 Convair CV-640s, 5 Nord 262s, and 15 Beech B80 Queen Airls. There are losses.

A CV-640 is lost under unknown circumstances at Djanet on May 2, 1976 and written off.

Having descended too low while on initial approach to Bechar, Algeria, on January 24, 1979, a Nord 262A with 3 crew and 20 passengers crashes 15 km. from the runway (14 dead).

During 1980-1983, the fleet grows to include 16 B-737-2D6/2D6As, 11 B-727-2D6As, and 2 A310-203s, plus 3 Lockheed L-100-30 Hercules freighters. An all-cargo division is established in 1981. The Hercules transports are assigned to it and undertake scheduled flights to and between Algiers, Oran, Constantine, and Annaba.

In these years, the company twice experiments with the use of **Jumbojets**. On October 3 of the former year, a B-747-130 is leased from **Aer Lingus Irish Airlines, Ltd.**; still in the green colors of the Irish carrier, it is placed into service in December but is returned in March 1980.

At this point, a B-747-273C is chartered from **World Airways** and, for a year it flies in the North African carrier's bright red and white livery. Passenger boardings average 1.8 million per year.

In 1984, scheduled passenger and cargo services are provided to North and West Africa, the Middle East, and 13 European destinations. The subsidiary **Lignes Interieures Algeriennes/Inter Air Services** is formed to provide scheduled domestic flights with a fleet of nine Fokker F.27-400Ms, supplemented by the parent's Boeings. Enplanements in 1985 total 2,246,000 and cargo is up 45.61%.

Operations continue apace in 1986-1987. During February of the latter year, the company is able to terminate its contract with the French company Sogerma and begin its own A310 maintenance.

El Hadj Haroussine becomes CEO in January 1988 and, in June, two A310-203s are leased from **Libyan Arab Airlines**. These wide-bodies

not only operate on the annual Hadj flights to Mecca, but also offer scheduled services from Algiers to Paris, Jeddah, Cairo, and Damascus.

Based on CPARS 2, the company's computerized reservations system, CASBAH (Computerized Algerian System for Booking Aviation and Hotels), is hooked up in August.

Enplanements for the year reach 3,624,534, revenues total \$106.7 million, and an \$11.7-million net loss is suffered.

Airline employment is increased 0.7% in 1989 to 8,863 and the fleet includes 14 B-737-2D6/2D6As, 11 B-727-2D6As, 2 A310-203s, 8 F.27-400Ms, 2 B-737-2D6CAs, and 3 L-382Gs, with the latter five employed as freighters. Orders are placed for 3 B-767-3D6s.

On August 1, an L-382G with four crew is damaged beyond repair while making an emergency landing at Tamanrasset, near the Hoggar Mountains in the central Sahara; there are no fatalities.

Passenger boardings jump 6% to 3,862,270 and freight is level.

Work begins in the spring of 1990 on a four-year, \$90-million technical base at Algiers. The first of three B-767-3D6As is delivered in June; it commences four-times-per-day return services between Algiers and Paris (ORY).

Two Algerian army deserters, protesting against a government effort to limit fundamentalist Muslim activity in Tunisia, hijack a B-727-2D6A with 46 passengers and 6 crew en route from Ghardaria to Algiers on December 28, and hold their captives hostage at Annaba for two days before surrendering.

In 1991, Director General Haroussine el Hadj oversees a workforce of 8,900 and operates a fleet of 42 aircraft to 34 destinations. The fleet is reduced by two Hercules freighters.

Protesting election results, a lone assailant takes over a company B-737-2D6A while it is on a March 31 domestic service from Bechar to Algiers; having made his statement, the perpetrator surrenders when the little Boeing arrives at its destination.

An F.27-400M with 20 passengers makes a hard landing at In Guezam on July 25, causing the nosegear to collapse; there are no injuries reported.

In November, it is reported that the company will suffer a loss of \$46 million for the year and, consequently, the airline's top management is dismissed by the government.

A total of 3,088,292 passengers are transported, along with 22.86 million FTKs of freight.

The fleet in 1992 includes 4 A310-203s, 1 of which is chartered from and assigned to provide scheduled flights for **Libyan Arab Airlines** and 2 of which are in storage; 2 B-727-2D6s; 9 B-727-2D6As; 10 B-737-2D6As; 3 each B-737-2T4As, B-737-2D6CAs, and B-767-3D6s; 8 F.27-400Ms, 1 of which is out of service; and 2 L-382Gs.

The route network now includes 60 destinations throughout Europe, the Mideast, and Africa.

Customer bookings ascend 4.91% to 3,551,101, but cargo declines 16.9% to 20.23 million FTKs.

The workforce is chopped a substantial 30.3% at Director General Chakib Belleili's carrier in 1993 to 6,200. A second chartered A310-203 is dedicated to providing service for **Libyan Arab Airlines**. In addition to offering frequencies to 24 destinations throughout North and West Africa, the company also flies to France, Belgium, Spain, Italy, Greece, Austria, the U.K., Germany, Egypt, Switzerland, the CIS, the Czech Republic, Bulgaria, and the Middle East.

Operating statistics are provided through October and show that passenger boardings are down 8.4% to 2,800,172. Conversely, freight moves ahead by 5.6% to 17.42 million FTKs.

The workforce is increased by 43.5% in 1994 to 8,900. On February 28, three Algerian police officers hijack a B-727-2D6A with 131 aboard to southern Spain. In November, the company signs a £3.5-million contract with the Oxford Air Training School of the U.K. for the *ab initio* training of its pilots.

An F.27-400M, en route from Algiers to Ouargla on November 13, is taken over by three assailants, who order the aircraft to fly to Majorca, Spain. There the perpetrators surrender, seeking political asylum.

On December 21, en route from Amsterdam to Coventry where it will pick up its cargo, Flight 702P, the B-737-2D6C *Oasis* with five crew, is diverted to East Midlands Airport due to bad weather. While on approach to the second point, the little Boeing descends below minimum altitude, strikes an electricity pylon in dense fog, hits the roofs of two houses on the "Middle Ride," rolls and crashes into trees at Willenhall Wood, 2.5 mi. from the aerodrome. All five aboard are killed, including a British veterinarian and an agriculture ministry civil servant.

Following the recent decision of British ferry companies not to transport live cattle after lobbying by animal rights campaigners, the plane had been chartered by a British company, Phoenix Aviation, to transport livestock to the Continent.

Traffic is up as enplanements increase by 15.5% to 2.95 million while freight rises 40% to 22.05 million FTKs. Revenues for the year total \$402.65 million, but operating expenses reach \$412.63 million. Consequently, a \$9.97-million operating loss is suffered.

There is no change in the number of employees working for Air Algerie in 1995. However, as the result of the previous December hijacking of an **Air France** jetliner by Algerian terrorists, the company is banned from operations at Paris (CDG). In April, an agreement is reached with **Air Afrique, S.A.** to begin discussions on planned joint ventures.

The ban on Paris service takes effect on June 1.

The year's results are mixed: passenger boardings jump 7.3% to 3,616,692, but freight is down 24.2% to 9,758,000 million FTKs.

The workforce is increased by 4.3% in 1996 to 9,286 and the fleet now includes 3 B-767-3D6s, 4 A310-203s, including 2 leased from the Libyans, 9 B-727-2D6As, 2 B-727-2D6s, 10 B-737-2D6As, 3 B-737-2T4As, 2 B-737-2D6CAs, 8 F.27-400Ms, 1 of which is out of service, and 2 Lockheed L-382G Hercules freighters. Two of the Airbuses are leased to **Royal Jordanian Airlines**.

Engine problems force a B-737-2D6C with 6 crew and 100 passengers to abort takeoff from Tiencen on an August 2 service to Algiers. The little Boeing overruns the runway by 40 m. and loses its nose gear; there are no fatalities.

Enplanements dip 1.7% to 3,215,237 and cargo plunges 22.4% to 14.82 million FTKs.

Airline employment falls by 5.2% in 1997 to 8,800. Early in the year, an alliance is initiated with **Royal Air Maroc** that will cover joint purchasing and long-haul services. The company begins joint insurance purchasing with **Tunisair, S.A.**

On April 25, the carrier is allowed to re-open its ticket and check-in counter at Paris (CDG) and resume flight operations to and from it. The move brings protests from several international carriers, including **British Airways, Ltd. (2)**.

The British major, whose check-in counter is next to the Algerians, requests a transfer to Orly Airport and goes to court to obtain its wish. Hearings are recessed on April 30.

On May 7, the legal battle over BA's request to move to Orly Airport to get away from the Air Algerie's check-in counter is resumed before a French high court. BA continues to argue that Air Algerie's security is insufficient, while French authorities continue to refuse the airport transfer request.

To help cover a rise in fuel prices, international fares are increased by 30% on October 10.

Traffic figures are reported through October and show passenger boardings up a slight 0.7% to 2,928,000 while freight inches up 3.8% to 13.89 million FTKs.

In early July 1998, a \$460-million order is placed with Boeing for ten Next Generation B-737s, including seven Dash-800s and three Dash-600s.

Company employees stage a job action on October 5, forcing the cancellation of most domestic and international flights from Algiers Airport. The carrier's pilots, technicians, and airport workers are concerned over unconfirmed company plans to restructure and reduce the 9,000-member workforce by a third. The strike continues, and striking staff

cause 40 planes to be grounded on October 12 after the airline fails to begin scheduled negotiations.

Under a government rule that service organizations must perform to 30% capacity during labor disputes, the airline is allowed by its striking staff to operate 14 flights on October 14. Pressure has been placed on the union. The job action is concluded on October 28 without resolution; however, management does acknowledge existence of restructuring possibilities.

Management and labor are unable to reach any accommodation during the next six weeks and so, on December 6, the airline staff goes on strike again, this time indefinitely. All of the carrier's planes are grounded.

Passenger boardings slide 3.9% to 1.88 million, while freight traffic accelerates 11.1% to 9.49 million FTKs.

Just after landing at Constantine's Ain el Bey Airport after a February 1, 1999, service from Paris (CDG), a B-737-2D6A with 99 passengers, skids off the pavement and overturns. Although the aircraft is damaged beyond repair, no casualties are reported.

Striking air traffic controllers shut down Houari Boumedienne International Airport at Algiers between March 9 and March 13.

A B-737-4Q8 is subleased from **Pegasus Airlines, A.O.** in February 2000 to operate European and regional services.

A pair of Beech 1900Ds are acquired at the beginning of April for use on domestic routes while a **Royal Brunei Airlines** B-767-33AER is subchartered for long-haul international services.

Twice-weekly B-737-4Q8 return service is inaugurated on May 18 from Algiers to Milan.

The company's first new B-737-8Q8 is received on August 3.

Having received approval from the U N Sanctions Committee, the company, at the beginning of October, flies 10 tons of humanitarian aid—food, medical, and education supplies—to Baghdad, Iraq.

AIR ALLIANCE, INC.: Canada (1988–1999). A joint venture between **Air Canada, Ltd.** (75%) and the Deluce family, owners of **Air Ontario, Inc.** (25%), AAI is established at Sainte-Foy's Jean-Lesage International Airport in January 1988 to provide third-level commuter feed for the major in Quebec. Employing three de Havilland Canada DHC-8-102s chartered from **Air Ontario, Inc.** and painted in the major's red, white, and grey livery, new President/CEO Gilles Fillaireault's carrier begins scheduled "Air Canada Connector" passenger service on March 27. Flights originate from Montreal (YUL) to Quebec City and Ottawa, to Ottawa direct, and to Saguenay and Bagotville. In June, Montreal is the terminus for a new service to Rouyn, Val d'Or, and Sept Iles.

In addition to the lease of a fourth **Air Ontario, Inc.** Dash-8, the company receives its first owned DHC-8-102 in January 1989. Together, the two inaugurate flights from Montreal (Mirabel) to Quebec City and allow the addition of Wabush to the route system.

In June, twice-weekday DHC-8 nonstop schedules are introduced from Montreal (Mirabel) to Boston.

By March 31, 1990, the carrier has nine DHC-8-102s in service. Eight are leased, including five from **Air Ontario, Inc.**, one from **Air Manitoba, Ltd.**, and one from **AirBC, Ltd.**

Enplanements for the year total 459,759. With income exceeding costs, profits are generated: C\$6.2 million (operating) and C\$3.6 million (net).

Company employment is increased by 28.4% in 1991 to 321 as three more owned machines are acquired, allowing the return of the **AirBC, Ltd.** aircraft; the number leased from **Air Ontario, Inc.** is increased by two. In January, a commercial agreement, including joint fares and scheduling, is signed with **Air Creebec, Ltd.** under which the latter will feed **Air Atlantic, Ltd.**'s Val d'Or hub. International services are inaugurated from Montreal to Boston and from Toronto to Hartford.

Passenger boardings jump 9.1% to 505,785 and revenues ascend 22.9% to C\$59.6 million. The operating profit grows to C\$8.2 million and net gain reaches C\$4.3 million.

Ten of the fifteen DHC-8-102s in the fleet are leased in **1992**, including nine from **Air Ontario, Inc.** and one from **Air Manitoba, Ltd.** Flights are started by the "Air Canada Connector" partner from Quebec City to Newark. Traffic and financial data is now ordinarily consolidated into and reported with that of **Air Canada, Ltd.**

One DHC-8-102 is withdrawn in **1993**. Airline employment stands at 300 and among the 14 destinations served are Boston, New York, and Montreal. Enplanements for the year total 338,490.

President/CEO Robert Perrault's fleet in early **1994** includes 10 DHC-8-102s, 7 of which are leased—1 from **Air Manitoba, Ltd.**, 1 from **Air Nova, Inc.**, and 4 from **Air Ontario, Inc.**

As the result of **Air Canada, Ltd.**'s January corporate makeover, AAI spends the remainder of the year having the color schemes of its aircraft changed to match.

Overall bookings during the 12 months swell to 376,041.

Another DHC-8-102 joins the fleet in **1995** and the route network is extended to Philadelphia and Hartford. Scheduled departures reach 33,795 and enplanements for the year total 348,506.

The "Air Canada Connector" partner places a US\$25-million order for five Beech 1900Ds, plus five options, in March **1996**. Three of the new turboprops enter service between June and September. Scheduled departures are 36,000 and customer bookings accelerate to 365,000.

The remainder of the Beech order is received in **1997**. Destinations visited now include Bagotville, Baie Comeau, Gaspe, Hartford, Mont Joli, Newark (EWR), Ottawa, Port Menier, Sept-Iles, Toronto, Val D'Or, and Wabush.

On January 10, the company's pilots join their 900 colleagues from the other "Air Canada Connector" carriers in a strike over merged seniority lists. The company operates with replacement workers and charter aircraft, but many flights must be cancelled.

The job action ends on March 1 following a marathon 24-hr. negotiating session in a downtown Quebec City hotel. It is decided to leave it to the Canada Labor Relations Board to decide whether Air Canada is to be considered a common employer of both regional and **Air Canada, Ltd.** pilots.

On March 11, after months of negotiation, the company's pilots ratify a new 4-year contract with **Air Canada, Ltd.** Initially tentative, the pact, providing increased benefits and income, is approved by 88% of the eligible flyers voting in a special election.

Pilots for the four "Air Canada Connector" airlines begin to return to work on March 10.

As a result of the job action, passenger boardings plunge 19.5% to 294,000 and 220,000 FTKs are operated.

Airline employment stands at 325 in **1998** and the fleet includes 6 DHC-8-102s and 5 Beech 1900Ds.

On June 19, **Air Canada, Ltd.** places this regional partner up for sale. No interested parties will ever be found.

When pilots strike **Air Canada, Ltd.** on September 2, AAI continues flying. It does, however, add two extra daily return flights to the three already operated between Montreal and Ottawa.

Two days later company pilots vote by a large majority against undertaking any initiative with the potential to buy their airline.

Executives from AAI and **Air Nova, Inc.** jointly announce on November 12 that the two carriers will consolidate both operations into one new **Air Nova, Inc.** early in 1999. The company will be based in Halifax and Quebec City and will initially continue independent branding. The consolidated DHC-8-100 and BAe 146 service will operate under the brand name Air Nova, while the Beech 1900D service will retain the AAI name; independent liveries based on the aircraft types will be maintained for recognition purposes. The companies will work diligently together over the next few months toward full implementation of the merger; in the interim, there will be no immediate changes in the services provided by either.

Affected union pilots from both carriers begin to negotiate simultaneously with management from AAI and **Air Nova, Inc.** concerning new contracts.

The new agreements between the pilots and management at both AAI and **Air Nova, Inc.** are ratified on February 26, **1999**.

The consolidation with **Air Nova, Inc.** is officially completed on March 12. Hoping to gain greater flexibility and productivity in terms of fleet utilization, the enlarged **Air Nova, Inc.** projects 1999 revenues of almost C \$300 million. Schedule improvements for customers throughout Atlantic Canada and Quebec are implemented on April 5.

AIR ALMA, LTD.: P.O. Box 577, 100 St. Joseph Alma, Quebec G8B 5W1, Canada; Phone (418) 668-30466; Fax (418) 668-7711; <http://www.airalma.com>; Code 4L; Year; Founded 1959. Metropolitan Air Services, Ltd. is established at Alma, Quebec (230 miles north of Montreal) in late **1959** by a group of businessmen, led by Roland Simard, to offer an outfitting service for hunters and fishermen and, occasionally, to rent planes for chartered flights. Renamed Alma Flying Service, Ltd. in **1960**, the company begins flight operations with a pair of Found FBA-2C floatplanes.

The market expands so quickly that two other aircraft are acquired in **1962–1963** to help meet demand. A helicopter division, Lake St. John Helicopters, Ltd., is created in **1968**.

During the remainder of the decade and into the **1970s**, flights are undertaken with 1 Piper PA-31-310 Navajo, 1 de Havilland DHC-2 Beaver, and 1 each Bell 205 and Bell 206L LongRanger. In **1972**, the company is renamed **Alma Air Service, Ltd.** The company base is linked with Robertval and Montreal on weekdays and, on weekends, charter work continues.

Chairman Simard, in **1980**, is able to gain board support for the creation of an airline to offer scheduled return service from Alma to Montreal (YUL). With a route permit from the Canadian Transport Ministry, a Cessna 404 Titan is acquired and revenue flights commence.

With Jacques Simard as general manager, the fleet, in **1981**, is upgraded by the addition of a second Titan. The following year scheduled service is initiated to the Lac St-Jean-Saguenay region of Quebec and traffic is assured through the remainder of the decade by a growing forestry and aluminum industry, as well as continuing charters.

The first Embraer EMB-110P Bandeirante is acquired in **1987** as scheduled links are opened to Robertval; 2 more of the type are acquired and the fleet in **1989** includes 3 Bandeirantes, 2 Titans, 1 Navajo, 2 Bell LongRangers, 1 Fairchild Hiller FH-1100, and 1 Found Bros. FBA-2C floatplane.

The carrier's markets in **1990** include Quebec City, Montreal, Alma, Robertval, and Saguenay. The recession of the early 1990s briefly makes a victim of this company, which shuts its doors for reorganization in early **1991**. Reorganized and refinanced, Air Alma becomes a member of the **Canadian Airlines International, Ltd.** "Canadian Partner" commuter network.

In June **1992**, the Simard airline replaces **InterCanadian Airlines, Ltd.** twice-daily service between Montreal and Chibougamau; in **1993**, the company adds a Learjet 24A for executive flights.

Service continues apace in **1994**, the first year for which traffic figures are available. Enplanements for the 12 months total 14,447, but a C\$30,000 operating loss is suffered. There is, however, a C\$100,000 net gain.

Airline employment is increased by 9.1% in **1995** to 30 to help take care of the inauguration of new services to Montreal via Charlevoix.

Passenger boardings accelerate 14.9% to 17,011 and operating revenues jump 23.3% to C\$3.7 million. Costs climb 20.7% to C\$3.5 million, leaving welcome profits of C\$200,000 (operating) and C\$100,000 (net).

The workforce is more than doubled in **1996**, reaching 75 employees. The fleet now includes 3 Bandeirantes, 1 Navajo, 1 Titan, and 1 Learjet 24A. The rotary-wing division operates 1 LongRanger, 1 Bell 222, and 1 Bell 412. Enplanements reach 20,000.

Even though the carrier opens a website on the Internet, specific information concerning it becomes more difficult to obtain. The website reveals that, in **1997**, ticket counters are maintained at Alma, Montreal, Bagotville, and Chibougamau-Chapais.

In June 1998, a base is opened at the Chute Des Passes Airport in order to increase air service to that point from Alma and Montreal. Service is quietly maintained in 1999.

After several months of study, executives from Air Alma, **PropAir, Inc.**, and **Air Satellite, Inc.** approach Quebec Finance Minister Bernard Landry on October 25, 2000 and request \$84 million to help them merge into a larger regional. If the arrangement can be concluded, the new airline, to be named Air Quebec, Inc., will form a credible alternative to **Air Nova, Inc.**, the **Air Canada, Ltd.** regional feeder that enjoys the majority of local market share.

AIR ALPES, LTD.: Aéroport de Sion, Sion, CH01951, Switzerland; Year Founded 1996. Air Alpes is established by its CEO, Philippe Horowicz, at Sion in February 1996 to offer European charter services. In July, the company orders an Aero International (Regional) ATR42-320.

The first of its type to be certified in Switzerland, the ATR42-320 is delivered in April 1997. It is employed to inaugurate nonscheduled service during May to Gerona, Ibiza, Palermo, Tunis, and other Mediterranean holiday destinations. With the advent of the winter season, the aircraft is shifted north to fly skiers into the Valais Valley.

AIR ALPES, S.A.: France (1961–1980). Air Alpes is organized in 1961 to offer air taxi flights to small airports in the French Alpine region. After eight years of ad hoc lightplane operations, the company begins scheduled operations in 1969.

A Beech 99 is destroyed as the result of a bad landing at Chambéry, France, on January 15, 1970; there are no fatalities.

Over the next decade, Air Alpes forms a large network of regularly scheduled domestic stops within France and Corsica. A number of scheduled replacement frequencies are also flown on behalf of **Air France**. In addition, international flights are undertaken to Dusseldorf from Grenoble and Metz and to London from Nancy and Colmar.

Operations continue apace during the early 1970s with a fleet that grows to include 5 Aerospatiale SN-601 Corvettes, 8 Beech 99s, 2 de Havilland Canada DHC-6 Twin Otters, and 1 Cessna 441. The former, placed into service in September 1974, are the first of their type to see airline service. The small commuters **Air Champagne-Ardenne, S.A.** and **Air Limousin, S.A.** are purchased and merged in 1975. Enplanements for the year are 204,541.

Airline employment in 1976 stands at 261. In cooperation with three other regionals, Paris operations are grouped into a new entity, Trans Air Regions. Meanwhile, the carrier becomes general sales agent in France (outside Paris) for **Pan American World Airways (1)**, **AVIANCA Colombian Airlines (Aerovías Colombianas, Ltda.)**, and the Inter-Continental Hotel chain.

A number of unprofitable routes are suspended and seven aircraft are withdrawn and put up for sale: 2 Corvettes, 2 Beech 99s, 2 Twin Otters, and the Cessna. They are partially replaced by a newly received Fokker F.27. The entire fleet receives new livery. Orders are placed for 4 DHC-7s. Passenger boardings jump 10.9% to 229,563.

In 1977, majority ownership is acquired by local chambers of commerce (30%), the Ziegler family (20%), private interests (10%), and the Saudi-backed financial group TAG-International (38%).

In 1978, Chairman Charles James' carrier employs 260 workers and Managing Director Philippe Boyer's fleet comprises 4 Fokker F.27s, 3 Aerospatiale SN-61 Corvettes, 6 Beech 99s, and 4 de Havilland DHC-6 Twin Otters.

A Beech 99 is lost at Clermont on February 16; no other details concerning the accident are available.

In 1979, the carrier is acquired by the large independent **TAT (Touraine Air Transport, S.A.)**, which allows it to operate as a subsidiary under its old name.

The workforce in 1980 totals 207 and the fleet includes 1 Fokker F.28, 2 F.27-600s, 3 Fairchild Hiller FH-227Bs, 5 Beech 99s, and 2 de Havilland

land Canada DHC-6 Twin Otters. Enplanements total 259,000 and operating income reaches \$109 million. With expenses of \$114.5 million, the carrier suffers a \$5.5-million operating loss and operations cease.

AIR ALPS, GmbH. See AIR ENGIADINA, LTD.

AIR ALSACE, S.A.: France (1962–1980). Organized at Aerodrome de Colmar-Houssen by local businessmen and their chamber of commerce in 1962, Air Alsace undertakes 12 years of air taxi services. Scheduled services begin in June 1974 and over the next four years grow over a significant route network. In addition to domestic destinations, aircraft also fly regional services from Colmar, Strasbourg, Belfort, and Mulhouse. Replacement services are also offered on behalf of **Air France** and are initiated from Strasbourg to Rome, Brussels, Amsterdam, and Cologne, as well as from Lille to Strasbourg, Milan, and London (LHR).

In January 1975, the commuter **Air Vosges, S.A.** is purchased and merged. President Jean Risser now has a workforce of 117 in 1976–1977 and his fleet comprises 3 VFW 614s, 1 Nord 262, 4 Aerospatiale SN-601 Corvettes, 1 Piper PA-31-310 Navajo, 4 Piper Aztecs, and 1 Cessna 310. Enplanements in the latter year total 85,960.

Airline employment grows by 9.6% in 1978 to 126. A Fokker F.28 is acquired in early spring and employed in April to inaugurate replacement flights for **Air France** from Strasbourg to London (LHW) and Milan. Passenger boardings jump 38.6% to 140,000.

The number of workers is increased by 5% in 1979 to 127. Orders are placed for two more F.28s and two F.27s. Summer service is inaugurated to Toulon, on the Cote d'Azur. Customer bookings decline 6.4% to 132,000. The first F.27 is delivered in April 1980, and later in the year the company is taken over by the large independent **TAT (Touraine Air Transport, S.A.)**.

AIR AMBULANCE CARE: St. Petersburg-Clearwater Airport Clearwater, Florida 33762, United States; Phone (813) 530-7972; Fax (813) 530-9136; Year Founded 1983. AAC is established at St. Petersburg-Clearwater Airport in 1983 to provide fixed-wing international transport for critically ill patients. Under the leadership of its medical director, Dr. Kenneth Kreye, this unique operator continues to make life-saving flights into 2000, employing during one each specially-equipped Learjet 24, Learjet 25, and Cessna 414 Chancellor.

AIR AMERICA (1): United States (1979–1990). Air Specialties is formed at Dearborn, Michigan, in 1979 to offer charter passenger flights to various destinations from Detroit (DTT). Permission is sought from the CAB.

Although worldwide charter authority is received from the government in early 1982, the company remains a concept for a number of years to come. During the first several years of the 1980s, company officials propose to operate scheduled flights. Startup plans are announced and discussions of destinations to be served with Boeing 727s or McDonnell Douglas DC-10s range from Orlando and New York to Mexico and the Bahamas.

Early in 1984, the CAB charges Air Specialties with the promotion of scheduled services for which it holds no authority. Later in the year, the regulatory body, in one of its last actions, recommends that the paper airline not receive scheduled rights. In addition, it urges cancellation of its unexercised charter rights.

During the changeover of responsibility for U.S. commercial aviation from the CAB to the DOT, the Air America controversy temporarily disappears. Plans continue to be announced and postponed and company headquarters are transferred to Los Angeles (Marina de Rey). There the corporate identity is changed to Total Air. It is suggested that operations might begin during the fourth quarter.

With two chartered Lockheed L-1011 TriStar 1s, Total Air inaugurates passenger tour flights in October to destinations throughout the

U.S., Canada, and the Caribbean, carrying a total of 49,000 passengers. The flying life of the company is considerably shorter than the startup period; financially unable to continue, it shuts down in early 1985.

Having failed to start and continue for better than seven years, the carrier becomes target in early 1986 of a DOT effort to revoke its certificate. However, before that move can be realized, Total Air is purchased by an investment group headed by Zev Melamid and is again renamed. Intentionally or not taking the name of the onetime CIA proprietary airline, this Air America, which has since acquired three leased Lockheed L-1011 TriStar 1s from International Air Leases, finally begins flying charters from U.S. mainland cities to Hawaii. A total of 398,610 passengers are transported on the year.

With services to world destinations as well as Mexico and Las Vegas now operated regularly, the large regional enplanes a total of 515,000 travelers in 1987, a 22.6% increase. Freight, which is also flown, increases 182.6% to 1.75 million FTKs. Revenues advance to \$57.2 million, but expenses are higher. As a result, Air America suffers losses of \$3.5 million (operating) and \$24,000 (net).

Passenger boardings are down 20.6% in 1988 to 409,000, even though the company has added a fourth TriStar and inaugurated scheduled services from Los Angeles to Honolulu. Revenues, too, are down, by 0.5%, to \$56.91 million. Expenses decline 2.6% to \$59.12 million and produce an operating loss of \$2.23 million. The net loss is \$2.78 million.

In January 1989, the company is purchased by a newly formed California holding company, Aerion Transport Services. The Los Angeles-based carrier now begins weekly scheduled through-plane L-1011 service from California to Hawaii and American Samoa. The company again seeks Chapter XI protection in October. Customer bookings fall another 13.4% to 354,152. The new owners, unwilling to take a financial bath, close the carrier down at the end of December, with the last flights completed on January 9, 1990.

Yet another investment group, this one headed by **Rosenbaum Aviation** founder William Rosenbaum, steps forward to purchase the carrier in February. Before the transaction can be completed, the FAA's enforcement division reports the company guilty of various maintenance and safety violations. Consequently, its certificate is retired in March.

AIR AMERICA (2). See **SOUTHEAST SKYWAYS; WINGS OF ALASKA**

AIR AMERICA JET CHARTER: 9000 Randolph St., Houston, Texas 77061, United States; Phone (713) 640-2900; Fax (713) 640-2193; Year Founded 1981. AAJC is set up at Houston in 1981, to operate executive, express, and ambulance services from Texas to Mexico and Colombia. Flights continue for the next 16 years, and, by 2000, operations director Dan Jacobs oversees the work of 11 full-time and six part-time pilots. Owned are one each Learjet 25 and Piper Pa-31-350 Navajo Chieftain.

AIR ANATOLIA, A.S.: Florya Cad, Ozgen Sok, No. 6 Senlikkoy, Istanbul 34810, Turkey; Phone 90 (212) 624-0757; Fax 90 (212) 624-241; http://www.airanatolia.com.tr; Code TD; Year Founded 1996. Air Anatolia is established as an international passenger charter carrier at Istanbul in 1996. Founder/Chairman Mehmet Hasancebi names Abdulkadir Kolot as his managing director and together the two acquire a fleet of two, later three, Airbus Industrie A300B4s. Revenue flights are inaugurated to and from Amsterdam, Maastricht, Eindhoven, Dusseldorf, Munich, and Berlin.

Flights are offered during the remainder of the year and into 1997. The company also provides subservice and subcharter operations for other airlines.

There is a change in ownership in February 1998, at which point airline employment is increased from 120 to 270. A McDonnell Douglas MD-88 is acquired in November.

The fleet at the beginning of 1999 includes 1 A300B2-1C, 1 MD-88, and 3 A300B4-200s. A second MD-88 enters service in April.

Flights continue in 2000 and the fleet is enhanced during the spring and summer by the addition of a pair of Boeing 737-4Q8s chartered for five years from IFLC.

AIR AND SEA CHARTER: 3250 Airflite Way, Long Beach, California 90807, United States; Phone (310) 378-1411; Fax (310) 378-2111; Year Founded 1996. Air & Sea is established at Long Beach Daugherty Field in 1996 to offer passenger charters throughout the Western U.S., Mexico, and Canada. Flights are undertaken with a single Learjet 35A.

AIR ANDAMAN, LTD.: 87 Nailert Building, 4th Floor, Sukhumvit Road, Bangkok 10110, Thailand; Phone (662) 251 4905; Fax (662) 655 2378; http://www.airandaman.com; Year Founded 2000. Air Andaman is established by a group of Thai businessmen at Phuket in the summer of 2000 to offer scheduled third-level service linking that city with holiday points in the southern peninsula. Real estate and leisure industry executive Atichart Athakravisunthorn is named president, with former airline official Pratheep Boonprasom and Airport Authority of Thailand specialist Banchar Patrasuwan as vice presidents.

Boonprasom is given the task of finding aircraft. Initially, attempts are made to wet-lease a pair of British Aerospace Jetstream 32EPs from BAe Systems' Australian division, but these efforts fail. A Brisbane source for Fairchild Metro IIIs also turns up dry. A U.S. broker is reached concerning an Embraer EMB-120 Brasilia, but arrangements also cannot be completed. Negotiations are renewed on the Jetstreams and they are secured in mid-October.

On October 28, ten daily return flights are launched from Phuket to Krabi, 3 to Nakorn Si Thammarat, and 2 to Ranong and Chumporn. Additionally, thrice-weekly roundtrips are also inaugurated to the Myanmar capital of Yangon.

AIR ANGLIA, LTD.: United Kingdom (1970-1980). Air Anglia, Ltd. is created by James Crampton and L. G. "Orville" Wright at Norwich Airport, Norfolk, on August 1, 1970 following the merger of three air taxi operations, **RigAir, Ltd., Anglian Air Charter, Ltd., and Norfolk Airways, Ltd.** Financial backing is provided by the Norwich Union Insurance Group (25%), while Crampton and Wright hold 37.5% shareholding each.

The initial fleet comprises 1 Auster J5G Autocar, 3 Cessnas, 3 Piper PA-23 Aztecs, and RigAir's ex-military Douglas C-47 (military DC-3). In December, a Britten-Norman BN-2 Islander is added; it launches the company's first scheduled service with a route from Norwich-Edinburgh/Aberdeen.

Two more ex-military C-47s and two Piper PA30 Twin Comanches are acquired in 1971 and on June 29, a second scheduled operation is undertaken by the Islander and Aztecs from Norwich-Liverpool and Manchester. Daily C-47 flights Norwich-Amsterdam begin on December 6. Another C-47 is added. During the winter, the Douglas transports are employed to fly the Norwich soccer team and its supporters on weekend charters to various U.K. cities. Enplanements since startup total 23,000.

In association with **Intra Airways, Ltd.**, thrice-weekly Norwich-Jersey via Cambridge, service is started on May 10, 1972. During May, a Fokker F.27-200 is acquired by lease from its manufacturer; christened *Phil*, it is placed in service on the Amsterdam route and is the first of its type to serve with any U.K. airline. During the summer, weekend Norwich-Rotterdam flights are offered while Teesside/Newcastle are added as stops on the Aberdeen route. Aztec/Twin Comanche connecting flights are also provided Cambridge-Norwich. *Phil* is transferred to the Norwich-Aberdeen route on September 6. At the end of summer due to financial and seasonal considerations, services to

Jersey, Liverpool, and Manchester are suspended. A Fokker F.27-400 is leased from its manufacturer in December and the year's passenger traffic accelerates to 48,000.

The second Friendship, christened *Bess*, is introduced in April 1973, allowing retirement of two C-47s. The remaining two Douglas transports are booked for oil industry charter work, cargo flights to Amsterdam, and in scheduled flights to Jersey, which are now no longer flown in association with **Intra Airways, Ltd.**, which has acquired a Cambridge-Jersey route. F.27 Hull-Norwich-Jersey scheduled passenger operations begin on April 21. By summer, the carrier's route network has been extended throughout eastern and southern England and on to Stavanger and Amsterdam. Bookings reach 75,000.

Two more Fokkers are added in May-June 1974, bringing the company's fleet total to 4 Fokker F.27s, 2 Douglas DC-3s, and 3 Piper PA-23s. In June, a new service is launched from Aberdeen-Norwich via Edinburgh/Leeds. Piper Aztec twice-daily Norwich-Birmingham service is initiated on November 11. A total of 100,000 passengers are boarded and the workforce grows to 189.

The employee population reaches 350 in 1975. A Handley Page Herald 214 is leased from **British Midland Airways, Ltd.** in March and employed to launch Hull-Jersey service on April 19. Meanwhile, twice-daily weekday Edinburgh-Amsterdam flights begin on April 1; on April 7, F.27 Hull-Amsterdam operations commence from the new airport at Humberside. Late in the month, a long F.27 Aberdeen-Jersey route is inaugurated.

The two C-47s remain busy flying cargo during the summer, but are sold in October-November. Twice-weekly Norwich to Stavanger service begins on October 27 as Jersey summer service is suspended. In early November, two used Piper PA-31-310 Navajos are acquired and placed on the Norwich-Birmingham route. An Armstrong-Whitworth Argosy 102 freighter is leased from Field Aircraft Services on December 6.

Passenger boardings rise 97.3% to 197,000. During the year one more F.27 and 3 more PA-23s are acquired.

A route is extended from Leeds to Amsterdam in 1976 and the company becomes the first Fellowship operator in the U.K. when Fokker's F.28-1000 prototype enters service. Enplanements jump 92% to 250,000.

Airline employment rises to 450. Edinburgh to Paris plus Norwich to London (LHW) service is inaugurated in 1977.

The carrier becomes a subsidiary of British Air Transport Holdings in October 1978; the giant holding company takes 85% shareholding, leaving Crampton and Wright with 5% each. The F.28-1000 is returned to its manufacturer in July 1979. In August of 1980, Air Anglia is one of four small regionals merged to form **Air U.K., Ltd.**

AIR ANGUILLA: Box 2547, Cyril E. King Airport, St. Thomas, Virgin Islands 00801, United States; Phone (340) 776-5789; Fax (340) 777-8585; <http://www.air-anguilla.com>; Year Founded 1976. Despite being named in honor of a British Virgin Island destination, AA is founded at St. Thomas, U.S. Virgin Islands, in the spring of 1976 to offer scheduled passenger and cargo flights linking its base with Anguilla, St. Kitts, St. Martin, and Beef Island, the latter at Tortola, British Virgin Islands. Daily roundtrip revenue services commence on May 15.

Operations continue apace during the next decade, during which time the fleet comes to comprise 1 Britten-Norman BN-2 Islander and 1 Piper PA-23 Aztec and employment reaches 10.

President Robert Franklin's fleet in 1985-1987 grows to include not only the Islander and Aztec, but also a de Havilland Canada DHC-6-200. A second DHC-6-200 is added in 1991 and, in 1992, a second Islander is acquired.

Flights continue in 1993-2000. During these years, the route network grows to 19 Caribbean destinations. The Twin Otters are replaced with a pair of Cessna 402s.

AIR ANGUILLA, LTD.: Anguilla (1992-1995). AAL is formed at Anguilla in the Leeward Islands in 1992 to offer scheduled interisland flights. CEO Gilles Filiatreault and President Restormel Franklin's fleet

includes one each Pilatus Britten-Norman PBN-2 Islander and de Havilland Canada DHC-6-300 Twin Otter.

Operations continue apace and by the end of 1994, the company has acquired one more Islander and another Twin Otter. Still, business is such that the carrier fails in 1995.

AIR ANTARES, S.A.: 44A Ficusului, Sector 1, Bucharest, 70544, Romania; Phone 40 (1) 665-7181; Fax 40 (1) 312-8563; Code TF; Year Founded 1991. Air Antares is established at Bucharest in 1991 to provide domestic passenger charter services. A workforce of 25 is recruited by Managing Director Simion Dascalu and two Beech 1900Cs are acquired. Revenue flights commence to Cluj, Constanza, Oradea, and Timisorara.

During 1994, one of the Airliners is replaced with a Beech 1900D; a Pilatus-Britten-Norman PBN-2 Islander is also acquired.

Scheduled services begin in March 1995 and continue to the four previous nonscheduled destinations.

AIR ANTILLES, S.A.: French West Indies (1954-1978). Antilles Air Services, S.A. is established as an air taxi operation at Aeroport du Raizet, Abymes, Pointe-a-Pitre on Guadeloupe in 1954. Scheduled Cessna services are inaugurated in 1957 from Basse Terre to the island of Marie Galante. As traffic demands increase, the fleet is upgraded through the addition of two Douglas DC-3s.

The company is renamed Air Antilles, S.A. in 1964. The workforce totals 15 and enplanements are 6,860. In 1965, the workforce totals 15. A Beech 18 is acquired, bringing the fleet total to three aircraft. Passenger boardings skyrocket by 70% to 22,866.

The workforce remains unchanged, and in 1967 bookings (level the previous year) decline slightly to 22,540. Passenger boardings climb 13% in 1968 to 25,785. Operations continue apace during the remainder of the decade and into the next, growing slowly.

The fleet in 1973 includes 2 DC-3s and 1 Piper PA-23 Apache. Enplanements are 78,000. The employee population in 1974 is 23. Passenger boardings increase by 2.5% to 80,000 while FTKs flown grows by 29% to 5.72 million.

During 1975-1976, airline employment grows to 30 and a Britten-Norman BN-2 Islander are acquired. Flights from Basse Terre to Fort de France and St. Barthelemy are launched on July 26, 1977. Resulting economic reversals cause the carrier to cease flying in March 1978.

AIR AQUITAINE, S.A.: France (1991-1992). Air Aquitaine is founded at Limoges in 1991 to offer scheduled commuter services to destinations in southern France. President Pierre Berruyer's fleet begins revenue flights with two Beech King Air 90s. Operations continue less than a year.

AIR ARCHIPELA, S.A.: BP 6019, Faaa International Airport, Paapeete, French Polynesia; Phone 689 81 30 30; Fax 689 86 42 69; Code RHL; Year Founded 1995. In 1995, a charter subsidiary of **Air Moorea, S.A.** is set up by that company's chairman, Marcel Galenon, on Tahiti to offer on-demand flights to all destinations in French Polynesia. Francois Martin is named managing director of the new concern and is given a workforce of six and one each Cessna 441 Conquest and Beech Super King Air 200. Flights continue into the new millennium.

AIR ARKANSAS: United States (1976-1977). Air Arkansas is formed at Eldorado in the late fall of 1976 to provide scheduled passenger and cargo services. Employing a Cessna 402 and a Beech Turbo 18, the commuter inaugurates daily roundtrips on November 1, linking its base with Shreveport via Little Rock. Unable to achieve economic viability, Air Arkansas, which also trades as **Arkansas Airlines**, shuts its doors in April 1977.

AIR ARUBA, N.V.: Aruba (1986-2000). Created in September 1986 as the ground-handling agent at Reina Beatrix International Airport

by a group of private investors, with support from the Aruban government, this company begins planning in **1987** for the inauguration of scheduled regional flights to Curacao and Bonaire the following year. **Air Holland, N.V.** now acquires an interest and signs a technical and managerial contract.

The company is completely privatized in April **1988**, four months before its first service. Employing a fleet of three Japanese-made NAMC YS-11A turboprops, Air Aruba, B.V. inaugurates thrice-daily flights between the "ABC" islands of Aruba, Bonaire, and Curacao beginning on August 18. Service is opened in November to Valencia, Venezuela; St. Martin, and Santo Domingo. Frequencies are initiated to Maracaibo and Las Piedras in Venezuela and to Santo Domingo in the Dominican Republic in **1989**.

In cooperation with **Air Holland, N.V.**, the new national airline acquires a Boeing 757-23A under sublease from **Inter European Airways, S.A.** in April **1990** and uses it to launch scheduled daily nonstop service to Miami and, in June, to the Brazilian city of São Paulo. In July, the company acquires two Embraer EMB-120 Brasílias to replace the YS-11As and upgrade its regional service.

On December 1, a B-737-3M8 is leased from **Trans-European Airways, S.A.** to replace the B-757 Miami service, and the B-757-23A begins nonstop five-times-per-week service to Newark, thus gaining for its passengers access to New York City, an important commercial center. A second "Baby Boeing" 737 begins jet flights the same day between Aruba, Caracas, and St. Martin.

In January **1991**, thrice-weekly B-737-3M8 service is started from Aruba to Santo Domingo. Later in the month, five-times-per-week Aruba to Newark flights begin, along with daily service to Miami. A B-767-3Y0ER, leased from **Air Holland, N.V.**, arrives in the spring and on May 2 is employed to launch Aruba to Amsterdam flights, which continue to Cologne.

Beginning in May and continuing through December 13, the airline offers free airfare, food, and lodging to children traveling with their parents from the U.S. to the islands. When **Air Holland, N.V.** fails in the fall, the relationship between the two companies is ended; the Dutch Boeing is replaced by a B-767-204ER chartered from the U.K. independent, **Britannia Airways, Ltd.**

In mid-January **1992**, the British wide-body is employed to inaugurate scheduled service between Aruba and São Paulo/Buenos Aires. During the spring, the reservation office is expanded and reservation equipment is upgraded; an office is opened in Amsterdam.

Chairman A. R. Arenda and members of his 250-man staff, including President C. O. Yrausquin, continue to lease a mixed fleet comprising 1 Boeing B-757-23A, 1 B-767-204ER, 1 McDonnell Douglas MD-83, 2 MD-88s, 1 Embraer EMB-120 Brasília, and 4 NAMC YS-11A freighters. Destinations visited now include Newark, São Paulo, Miami, Bonaire, Curacao, Caracas, Medellin, and Bogota.

On October 11, the company converts from Corda to Shares (System One) for its reservations system. During the year, the Boeing 737s are replaced by leased McDonnell Douglas twin-jets. All of this expansion requires new investment in computerized reservations, marketing, and other infrastructure.

In May **1993**, the Aruban government assumes majority ownership, taking over control of the carrier's restructuring and refinancing. The B-757-23A and B-767-204ER are replaced with a single leased B-727 and a DC-9-31 chartered from International Airlines Support Group. Nonstop flights to Baltimore (BWI) commence on November 6. Enplanements this year total 289,815.

Only the Brasília, the DC-9-31, two MD-88s, and one YS-11A freighter remain in service during **1994**. In November, a strategic alliance is signed with **KLM (Royal Dutch Airlines, N.V.)**; the deal calls for joint flights between Aruba and Amsterdam and planning for the extension of cooperation in other areas. Passenger boardings swell 10.2% to 322,733.

Airline employment stands at 250 in **1995**. Orders are placed for two MD-83s and a Douglas DC-9-32 is acquired. Markets visited in-

clude Bonaire, Curacao, Brazil, Venezuela, Colombia, plus the U.S. communities of Miami, Tampa, Baltimore, and Newark. In May, a code-sharing agreement is signed with **USAir**. At this point, the company begins to concentrate on service to the U.S., abandoning its previous emphasis on Europe.

Code-sharing arrangements are also entered into with **Surinam Airways** and with **AVIANCA (Aerovias Nacionales de Colombia, S.A.)** and **SAM (Sociedad Aeronautica de Medellin, S.A.)**. The company's four aircraft transport a total of 418,576 passengers during the year, a significant increase of 29.7%.

The workforce is increased to 370 in **1996** and the fleet now includes 2 MD-88s, 1 MD-83, and 1 DC-9-32.

Flying on behalf of Hamilton-Miller, twice-weekly DC-9-51 charters are flown to Aruba from Detroit (DTT) via Pittsburgh.

Twice-weekly DC-9-51 roundtrips commence on June 15 between Aruba and Houston. Employing a leased B-727-200A, the company operates a summer charter service from Atlanta on behalf of Vacation Express.

During the year, the company—by sheer bad luck—loses six engines to foreign object damage; repair costs will run to \$2 million. The invoice so depletes the airline's cash reserves that its fuel supplier imposes credit limits, thereby increasing the carrier's avgas bills. Customer bookings inch up 0.6% to 421,035.

The employee population is slashed by 19% in **1997** to 300. Having continued to lose money since the state infusion four years earlier, in February the Aruban government must choose between two options: 1) shut down the airline and turn its business over to the leading foreign carrier serving Aruba, **American Airlines**; or 2) bring in new management and capital. The latter path is chosen. Former Exxon executive Henri Coffi is appointed president/CEO and is given a mandate to rebuild the carrier. At the same time, it is recognized that the parliament must authorize \$10–\$12 million in basic equity funding.

The investment leaves Air Aruba 90% government-owned; the remaining 10% stake is held by 45 private shareholders. In November, the decision is taken to halt services to São Paulo/Buenos Aires, due to intense competition from various charter operators.

In search of engines for the MD-83s, the company agrees to lease several from **American Airlines**. These are duly delivered to Miami and installed in a company jetliner. When Air Aruba is late with funds for the PW JT8D-200s, they are ordered returned in April; one of the MD-83s in town from service is seized, stripped of its engines, and parked. Lesson learned, Air Aruba rapidly makes arrangements to come forward with the necessary financing.

While en route from Aruba to Newark (EWR) on July 9, an MD-88 is diverted to Baltimore (BWI) in order that police might board the aircraft and keep passengers, angered by their long wait to board, from getting into the cockpit to voice their complaints to the pilot.

Despite his best efforts, the new CEO is unable to remedy the chaos he finds and resigns at the end of the year. Passenger boardings fall 6.7% to 392,722.

During the first quarter of **1998**, a new plan is put in place for partial privatization under the direction of a task force appointed by the government. In June, bids are received from four interested parties.

It is announced on June 29 that the tender process for the privatization of Air Aruba has been successfully completed. The task force charged with overseeing the AA privatization unanimously decides to recommend the tender of **ASERCA (Aerolineas Regional de Centro, C.A.)** to the government and Parliament of Aruba just as soon as approval can be obtained from Air Aruba's shareholders. That action is completed on July 9.

ASERCA Chairman Simeon Garcia now becomes president of Air Aruba, N.V. A strategic marketing agreement between the airline and its new partner is signed with **Continental Airlines** on September 18. The pact will lead to code-sharing on CA flights between the U.S. and Venezuela and on ASERCA flights to domestic Venezuelan destinations beyond Caracas. It will also allow CA to code-share on CA services from

Houston to Aruba and on Air Aruba flights from Aruba and New York/Newark, Miami and Tampa. Customers will be able to earn CA "One-Pass" frequent flyer miles aboard flights of either of the Latin carriers.

On October 28, the Air Aruba Reprivatization Task Force announces the formal and final closing on the participation and restructuring agreement between Air Aruba, the Legal Entity Aruba, and ASERCA Group. ASERCA Group is now officially the largest shareholder in Air Aruba with a 70% stake. Within days, the financial restructuring of the airline and the work of the Task Force are completed and the airline is able to continue operating on its own financial strength.

ASERCA Group leases a pair of Boeing MD-90-30s from Hwa-Hsia Leasing, Ltd. of Taiwan on November 19. Retained by ASERCA for use in Latin America, it is the first new aircraft delivered to a Venezuelan airline in more than a decade. The other is subleased to Air Aruba, which will employ it on its North American routes. A third MD-90-30, which is also slated for Air Aruba, will be delivered before the beginning of 1999.

MD-90-30 flights are inaugurated on December 10 from Caracas, Venezuela, to Miami via Aruba, and from Aruba to Newark direct. On December 31, MD-90-30 roundtrips are started from Aruba to Philadelphia via Baltimore (BWI).

Customer bookings this year fall 34.9% to 256,000.

By the start of 1999, airline employment has been reduced by 16.7% to 250. Weekend MD-90-30 flights from Aruba to Newark start on July 1. The year's customer bookings surge 44.3% to 369,000.

Daily roundtrips to Ft. Lauderdale and Orlando are launched on July 1, 2000.

Without a code-sharing agreement with a major carrier, Air Aruba is unable to compete with the large U.S. airlines flying into the Caribbean. Increasing costs force the return of 3 MD-90-30s to their owners.

Unable to maintain its viability after its MD-88 is withdrawn for required maintenance, the airline, already in severe fiscal difficulty, is shut down on October 23 after the Aruba government withdraws its operating certificate. The U.S. FAA also revokes the carrier's 402 authority to fly to the U.S.

AIR ASIA SDN. BHD.: Level 6, Wisma HICOM, No. 2, Jaian U1/8, Off Persaran Kerjaya, Shah Alam, 40000, Malaysia; Phone (03) 202 7999; Fax (03) 202 7997; <http://www.airasia.com>; Code AK; Year Founded 1993. AASB is established on December 20, 1993 as a joint venture between Hicom Heavy Industries Bhd. (85%) and Mofaz Air Sqn. Bhd. (15%) to complement the national carrier Malaysia Airlines, Ltd. on thin routes. The concern is delayed for three years in its plans to start flying.

With a staff of 165, AASB finally inaugurates nonscheduled regional passenger charters in October 1996 with a single Boeing 737-3Y0. Destinations visited include Kuala Lumpur, Selangor, Perak, Penang, Kelantan, Kedah, Sabah, Sarawak, and Terengganu. Meanwhile, the short-lived subsidiary **Pacific Eagle Airways**, begins flying on November 17.

A leased B737-36N enters service in January 1997. **Pacific Eagle** folds during the spring. Permission is sought—and denied—from the government in 1998 to operate international services from Abdul Aziz Airport at Kuala Lumpur.

Airline employment stands at 210 at the beginning of 1999. Between mid-February and April, a pair of **World Airways** MD-11s is wet-leased to fly Hadj pilgrims between Kuala Lumpur and Jeddah, Saudi Arabia.

For the 2000 Hadj season, Air Asia wet-leases 3 Boeing 747-212s from **Tower Air**. The arrangement is over by the time Tower stops all scheduled service on May 1.

AIR ASIATIC, LTD.: India (1990–1991). Air Asiatic is established as a large air taxi at Madras in late 1990. Employing a single leased Boeing 737-222, the company inaugurates daily service to Bombay (now Mumbai) in January 1991 and four-times-per-week service from Bombay to Cochin.

As service proceeds, the airline comes to disagree with International Air Leases over the terms of its B-737 charter while Chairman Dr. K. C. G.

Verhese and Vice Chairman Thomas George fight over control of the company. Unable to achieve viability under these circumstances, the carrier fails in August, after having transported a total of 40,000 passengers.

AIR ASIE, S.A.: France (1929–1931). During the years from 1921 to 1925, the French military in Indochina, under the direction of Commandant Glaize, begins efforts to establish an air transport system. On January 10 of the former year, an aircraft transports the colonial governor on a demonstration flight from Hanoi to Saigon, taking a small load of mail back on the return. Thereafter, a number of landing fields are prepared at some 60 locations.

The roots of Air Asie, S.A. is set up in 1926 as small plane mail operations are undertaken by the military from the Cambodian town of Kratie over to Savannakhet in Laos. Irregular services continue. In December, the Societe Indochinoise d'Etudes d'Aviation Commerciale et Postale (SIEACP) is set up at Saigon under Glaize to begin planning a commercial air service.

Planning without flights continues for the next 18 months. On July 1, 1928, SIEACP is reformed into the Societe d'Etudes et d'Enterprises Aeriennes en Indochine et en Extreme Orient (SEAIE). Unlike the previous planning organization, SEAIE now receives significant support from French concerns, including Societe d'Aviation Louis Breguet, Banque Franco-Chinoise, Compagnie des Messageries Maritimes, Banque de l'Indochine, and Compagnie du Canal de Suez.

These organizations make it possible for SEAIE to make two proving flights from Nha Trang to Hanoi via Tourane, in mid-June 1929. In September, SEAIE is reformed into an operational enterprise under the name Air Asie, S.A. Equipped with a pair of Potez 32s and given an official French government mail contract, the new carrier inaugurates flights in December between Saigon and Bangkok.

The fleet is improved in 1930 by the addition of 2 more Potez 32s and 1 Liore et Olivier LeO 198. On January 1, 1931, the company is taken over by **Air Orient, S.A.**

AIR ASSOCIATES, INC.: United States (1972). Set up to provide scheduled passenger and cargo commuter flights, Air Associates inaugurates services on February 25, 1972. The company's Cessna light-planes fly roundtrips between the company's base at Wichita, Kansas, and Springfield, Missouri, via Parsons and Joplin. Unable to comply with government regulations, the little carrier's operating certificate is revoked by the FAA on December 24.

AIR ATLANTA: United States (1981–1987). Founded by Oppenheimer & Co. Vice President Michael R. Hollis in May 1981, this new business-oriented entrant gains CAB operating authority a year later. Capitalization is provided by Equitable Life Assurance Co., Aetna Life Insurance Co., and the country's largest minority-owned insurance concern, North Carolina Mutual Life Insurance Company; Hollis is CEO and five former United Airlines Boeing 727-122s are acquired.

The five Boeings launch nonstop service on February 1, 1984 on routes from Atlanta to Memphis and New York. Company schedules to New York (JFK) which, under a code-sharing agreement, connect with those of **Pan American World Airways (1)** become known as "Air Atlanta/Pan Am Express." Other markets served include Miami, begun in April, and during the winter ski season, Gunnison, Colorado. The privately held carrier, the first airline largely owned by African Americans, refuses to make its traffic figures public.

The fleet in 1985 comprises eight B-727-122s. An agreement is signed with **Delta Air Lines** in March for full joint ticketing and baggage handling. Early in April, freight service is added and later that month, a new route is opened to New York (LGA).

Operations continue apace in 1986, but, by summer, losses total an estimated \$35 million. The CSX Corporation steps forward to provide the funding necessary to sustain operations and to charter a pair of B-727-222s. Twice-daily nonstop service from Atlanta to Washington, D.C. (DCA) begins in October. In November, thrice-daily roundtrip flights

are inaugurated from Atlanta to New Orleans and twice-daily roundtrips start to Detroit. One B-727-122 is withdrawn and Air Atlanta by December offers first-class service at coach fares to nine eastern cities; major competitors answer with "super coach fares." Although passenger boarding figures are not released, it is known that 470-million revenue passenger miles are flown during the year.

In January 1987, Chairman Michael Hollis is introduced to Robert P. Ritereiser, E. F. Hutton president, by comedian Bill Cosby; subsequently, Hutton loans the niche carrier \$3.5 million. New frequencies are introduced to Atlanta in April; however, President/COO Harry A. Kimbriel Jr. simultaneously resigns.

Two last-ditch initiatives are now undertaken to save the failing company. **KLM (Royal Dutch Airlines, N.V.)**, a partner of **Northwest Airlines**, agrees to acquire a 25% stake if another carrier will do the same; none do. A plan is conceived to save funds and re-equip by selling the B-727-122s to **Federal Express** for freighters and thereafter acquire smaller B-737s. This scheme is also not realized.

Due to low overall passenger loads and the carrier's inability to arrange further capitalization, operations end in a Chapter XI bankruptcy filing on April 3, 1987.

AIR ATLANTA ICELANDIC, H.F.: Atlanta House, P.O. Box 80, 270 Mosfellsbaer, Iceland; Phone 354 (1) 667 700; Fax 354 (1) 667 766; <http://www.atlanta.is>; Code CC; Year Founded 1991. In financial difficulty, **Atlanta Icelandic Airlines, H.F.** is reformed in the fall of 1991 and renamed. Reborn at Mosfellsbaer under the direction of the owner/managing director, Capt. Arngrimur Johannsson, and Chairman Thora Johannsson, the carrier resumes all-cargo services to its previous north European destinations, as well as the capital namesake in the U.S. state of Georgia. The privately owned AAI fleet is enhanced and now includes 1 leased Boeing 737-291A, 1 each B-737-205C and B-737-210C that are employed as freighters, and 1 Lockheed L-1011 TriStar 1, which is quickly leased to **Kabo Air, Ltd.** of Nigeria.

In April 1992, a B-737-222 is wet-leased to **Lao Aviation**. Between June and September, company aircraft are chartered to operate airlift flights from Nigeria and France to Yugoslavia on behalf of the United Nations. In December, the B-737-291A and B-737-205C are subleased to **Bouraq Indonesian Airlines**.

In 1993, the Johannssons oversee a workforce of 309. A sales office is opened at Hamburg in March and in April three chartered B-747-1D1s are acquired, the first of their type to be registered in Iceland. They are immediately subleased to **Saudia (Saudi Arabian Airlines)** for use on Hadj pilgrimage flights.

In May, the company enters Iceland's charter market by signing a contract with Samvinnuferdir Travel, the country's largest independent tour operator. Passenger charters are now inaugurated and destinations visited will include Akureyri, Alicante, Cologne, Dublin, Frankfurt, Hamburg, Linz, Munich, Palma de Mallorca, Reykjavik, and Stuttgart.

Wet-leased scheduled flights are continued by the B-737-210C on behalf of **German Cargo Airlines, GmbH**. A new company facility is opened at London (LHW) in July. Certification is received from the U.S. FAA in October; charters to the U.S. will now be allowed.

The fleet is revised in 1994 to include 1 each L-1011-100 TriStar 1, B-737-210C, B-737-291A, B-737-2X6AC, and 3 chartered B-747-1D1s. Two of the latter are subleased for Hadj charters in April to the Nigerian operator **Kabo Air, Ltd.** The TriStar, B-737-291A, and B-737-2X6AC are leased to **Tunisair, S.A.** in May for scheduled passenger flights. The B-737-291A is returned in July and is sent out on sublease to **Qatar Airways, Ltd.**

The B-737-230C is chartered from **Lufthansa Cargo Airlines, A.G.** in 1995. The B-747-1D1 not on sublease to **Saudia (Saudi Arabian Airlines)** for this year's Hadj is replaced by one each B-747-123 and B-747-133. The B-737-291A is wet-leased to **Istanbul Airlines, A.O.** in May.

Two former **Cathay Pacific Airways (Pty.), Ltd.** Lockheed L-1011-1 TriStars are acquired under charter, one of which is leased to **Monarch**

Airlines, Ltd. for that carrier's summer inclusive tour operations. The second is employed in June to inaugurate the first scheduled passenger services to Berlin from Keflavik. Jumbojet charters on behalf of Samvinnuferdir Travel begin in October from Keflavik to Nassau.

The leased TriStar fleet is dramatically increased in 1996, growing to 7 aircraft, including 5 L-1011-1s and 1 each L-1011-50 and L-101-100. In addition, a B-747-236B is also chartered. An L-1011-1 is subleased to the new Swedish charter operator **Blue Scandinavia, A.B.** and a B-737-266A is chartered in January to **Air Philippines (2)**.

Arrangements for this year's wet lease of Jumbojets for Hadj flights is made with **Air India, Ltd.**, which inaugurates charters from the subcontinent to Jeddah in April. In May, the company begins flying inclusive tours on behalf of the U.K. tour operator Gold Crest.

The company's most unusual charter occurs in June. A wedding party (bride and groom, family, relatives, friends, the pastor, and a band) leases a TriStar that takes its group aloft over the Arctic Circle where the ceremony, witnessed by the jetliner's crew, takes place.

The carrier's B-747-1D1, B-737-291A, and two TriStar 1s are leased to **Olympic Airways, S. A.** in September to fly eligible voters of all parties back to Greece for parliamentary elections. Having returned from this service, the Jumbojet and TriStars are leased to **Saudi Arabian Airlines** in December. The contract will be renewed the following year.

In January 1997, a major contract is signed with **Saudi Arabian Airlines**. Under its terms, the Icelandic operator wet-leases four B-747s painted in Saudi colors to the Jeddah-based international operator and stations 300 personnel at the Saudi carrier's base to provide support.

Hadj flights on behalf of **Saudi Arabian Airlines** and **Air India, Ltd.** begin in April. The new British charter operator **Peach Air, Ltd.** wet-leases a pair of L-1011-1s with which to launch operations in May.

A TriStar is chartered to the Egyptian government in June to operate that country's Teachers Movement. During the summer, teachers from the provinces are flown to Cairo for their annual vacation. The Saudi contract ends in August; the B-747s and most of the support personnel return to Iceland.

When **Blue Scandinavia, A.B.** ends TriStar operations on October 31, its AAI aircraft is returned. Principal destinations now visited include Cologne, Jeddah, Keflavik, London, Manchester, and Subic Bay.

On November 3, an ACMI contract is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** under which the Icelandic line will operate twelve roundtrip charters from Madrid to Tenerife during the winter holiday season.

On behalf of the Swedish lottery game "Bingo-lotto," the airline, employing one of its TriStars, flies 350 lucky winners on an around-the-world tour during November.

Flights continue in 1998, as do wet-lease operations. On February 18, two retired L-1011-100s are purchased from **Trans World Airlines (TWA)**. One will be used for spare parts; its engines are transferred to Abu Dhabi where they are exchanged for those aboard the second plane, which is checked at the Abu Dhabi Aviation maintenance facility. The new aircraft is in service by May.

On October 23, the U.K. CAA orders a suspension of the company's British operating permit as it investigates charges that AAI is using an out-of-service B-747 for spare parts—uninspected spare parts. Following discussions with the Civil Aviation Administration of Iceland, the CAA agrees to lift the ban on October 28 after an agreement is reached for inspection of the parts before their installation.

On behalf of the Swedish lottery game "Bingo-lotto," the airline, employing one of its TriStars, again flies 350 lucky winners on an around-the-world tour during November.

At the end of the year, arrangements are completed with **Caledonian Airways, Ltd.**, under which the British tour operator will wet-lease four L-1011s during the 1999 summer season (May 1–October 31).

Just after the annual Hadj charters are completed, Magnus G. Thorstenn becomes CEO in April. Also during the month, 2 B-747-267Cs are chartered from **Cathay Pacific Airways (Pty.), Ltd.** They are joined by the 4 Caledonian TriStars.

An Icelandic bank purchases a 20% equity stake in the airline during September and planning begins for a public float of the company at the end of the next year.

During the fourth quarter, the last B-737 is sold; simultaneously, the fleet, now all wide-body, acquires 3 B-737-300s.

The largest Hadj operation in company history is carried out in February–April 2000. Operating on behalf of **Saudi Arabian Airlines, Air India, Ltd.**, and **Air Afrique, S.A.**, 12 company Jumbojets transport Muslim pilgrims to Mecca from India, Pakistan, Indonesia, and various African countries and then take them home. Nearly 1,000 of the airline's personnel are dedicated to the project.

Upon completion of the Hadj, an L-1011 is wet-leased on April 12 for six months to **Monarch Airlines, Ltd.**

As the year continues, additional capacity is leased to **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, **THY Turkish Airlines (Turk Hava Yollari, A.O.)**, and made available to fly tourists for Samvinn Travel Iceland and the U.K.-based Excel Travel, Ltd.

AIR ATLANTIC: United States (1976). Air Atlantic is established at Danvers, Massachusetts, in 1976 to provide scheduled air taxi services to regional destinations. Employing a pair of Beech B-80 Queenaires, daily roundtrips are inaugurated linking Boston with Manchester, New Hampshire, to the north and Syracuse, New York, via Utica, to the west. Frequencies are maintained for only a few months.

AIR ATLANTIC, LTD.: Canada (1985–1998). As his St. John's, Newfoundland-based **Sealand Helicopter, Ltd.** operation begun a decade earlier continues, that company's CEO, Craig Dobbin, late in 1985, forms the new regional carrier AAL to succeed **Air Maritime, Ltd.**, which has been acquired by **Canadian Pacific Airlines, Ltd. (CPAL)** as the result of its purchase of **Eastern Provincial Airways, Ltd. (EPA)**. Shareholders include CPAL (20%), businessman Neil Cohoon, senior manager of the new carrier, and Dobbin himself, who also acts as CEO/chairman. Former EPA chairman and president, Keith Miller, is appointed president of the new Canadian Pacific [commuter] Partner and although the service base will remain at Sealand's St. John's facilities, a new operating base is established at Halifax.

Two de Havilland Canada DHC-7s are acquired and are employed on February 28, 1986 to inaugurate scheduled passenger service from Halifax to Moncton, Fredericton, St. John, and Charlottetown and from St. John's to Deer Lake and Stephenville. Orders are now placed for four (later additional) DHC-8-102s.

In May, a third Dash 7 is purchased and flights begin to Sydney and Charlottetown from Halifax, followed by frequencies to Moncton and Iles de Madeleine in July. Once all these routes are in operation, **Air Maritime, Ltd.** is completely absorbed. The first DHC-8-102 is delivered in August and enters service on the Newfoundland runs. Halifax–Yarmouth flights begin in October, along with a Moncton–Charlottetown connection.

The CPA involvement is initially cloudy in December as the major is acquired by **Pacific Western Airways, Ltd. (PWA)**; however, the commuter soldiers on as a commuter partner of the new **Canadian Airlines International, Ltd.** It will feed passengers to the major at Halifax, St. John's, and Montreal under the leadership of Dobbin and new president Neal J. Jackman. A second Dash 8 also arrives in December.

A third DHC-8-102 is received in January 1987 and a fourth in February, the same month in which a Dash 7 is sold to **Time Air, Ltd.** The route network now comprises 11 locations in the Atlantic provinces and the Magdalen Islands in the Gulf of St. Lawrence. The first international service is started in August from St. John's to Boston. Another DHC-7 is sold, to **Markair**, in September and a fifth DHC-8-102 is delivered in December. Enplanements total 200,000.

The final DHC-7 is sold to **Rocky Mountain Airways** in January 1988. Four more DHC-8-102s are delivered during the year, one each in March, June, October, and November. The Canadian Airlines partner boards 350,000 passengers during the year.

Airline employment is increased a whopping 59.3% in 1989 to 470. Another DHC-8-102 arrives in January allowing initiation, in February, of services from Quebec City to Halifax and St. John. Delivery of the 11th Dash 8-102 in March allows the company to begin scheduled frequencies to the Maine cities of Bangor and Portland. Four additional DHC-8-102s arrive during the year's three remaining quarters and orders are placed for three British Aerospace BAe 146-200s. Passenger boardings leap upward by 33.3% to 500,000.

In 1990, the fleet comprises 15 DHC-8-102s. Orders are placed with British Aerospace Assets Management-Jets for 3 BAe 146-200s and 2 DHC-8-301s. Two of the former arrive during late spring and are placed into service, beginning in June–July, to Gander, Stephenville, Charlottetown, Halifax, Montreal, Moncton, and Ottawa. Although the three BAe jetliners are in service (under lease) in 1991, the company reports neither traffic nor financial progress, a bad sign in a recessionary year. The three British-made jetliners do, however, enter service.

Economic difficulties cause the company to cancel its order for DHC-8-301s in 1992 and to reduce its DHC-8-108 fleet by two. Airline employment in 1993 stands at 512. Canadian destinations visited include Churchill Falls, Deer Lake, Gander, Goose Bay, St. John's, Stephenville, Wabush/Labrador City, Halifax, Sydney, Charlottetown, Prince Edward Island, Chatham, Charlo, Fredericton, Moncton, Saint John, Iles de la Madeleine, Montreal, Quebec City, Ottawa. International flights are also made to Boston, Massachusetts.

Early in 1994, Chairman/CEO Craig L. Dobbin and President/COO Albert Chappell place orders for ten British Aerospace BAe Jetstream 41s even as the BAe 146-200s are, at least temporarily, withdrawn. Unable to continue due to fiscal difficulties, the Canadian Partner files for bankruptcy reorganization in May, continuing to operate as efforts are made to reform and refinance.

The reorganized company, beginning at the end of March 1995, adds five J-41s to its fleet as it replaces its Dash-8-102s. The BAe 146-200s are returned to service in July and are employed to begin replacing **Canadian Airlines International, Ltd.** B-737s on the route from Halifax to St. John's, which the major now turns over to its affiliate. Traffic figures are, again, not available this year.

The diversified Halifax-based IMP Group International, Ltd. acquires the carrier on February 21, 1996, along with the last of the CAI flights in and out of St. John's. Kenneth C. Rowe is now chairman/CEO.

Other destinations now visited include Boston, Charlottetown, Catham, Churchill, Deer Lake, Fredericton, Gander, Goose Bay, Halifax, Moncton, Montreal, Ottawa, Quebec City, Stephenville, Wabush, and Yarmouth.

On October 30, AAL files a petition with the U.S. DOT asking it to defer issuance of authority to the startup **Air Atlantic Dominicana, C. por A.** because of a dispute over the new entrant's trade name. Both sides file statements and, on November 26, the DOT decides that there is insufficient conflict between the two names to block issuance of a foreign air transport certificate.

Enplanements reach 600,000.

Five more J-41s are acquired in early 1997. During the first week of April, the three BAe 146-200s, under lease since 1990, are purchased for C\$21 million from British Aerospace Assets Management-Jets, together with a C\$2-million package of spare parts.

Service continues apace at the beginning of 1998. On August 27, it is announced that the carrier will terminate its commercial agreement with **Canadian Airlines International, Ltd.** on October 24 and cease all scheduled flight operations. Only half of the carrier's 118 pilots will be taken on by **Inter-Canadian Airlines, Ltd.**, which will assume the carrier's routes next day. After that date, IMP Group International, Ltd., which owns the airline, maintains the company's operating certificate and studies the viability of undertaking nonscheduled flights over the winter season.

When AAL shuts its doors after its last flight on Saturday October 24, Chairman/CEO Rowe places a letter in the major newspapers of Atlantic Canada thanking employees and customers and wishing Inter-Canadian

success. Two weeks later, IMP Group will purchase **Air 500, Ltd.**, a charter operation based at Toronto.

AIR ATLANTIC, S.A.: San Diego No. 13, Portal 1-2A, Gran Canaria, E-35200, Spain; Phone 34 (92) 868-0190; Fax 34 (92) 868-3365; <http://www.airatlantic.com>; Code RCU; Year Founded 1994. The company is set up at Bilbao in 1994 to provide charter cargo and express service. Revenue flights commence with a pair of Cessna 406 Caravan IIs.

Operations continue apace in 1995. In July 1996, a new Fairchild Metro 23 is delivered and immediately begins service from a base at Gran Canaria. Flights continue in 1997-2000, during which years the fleet also receives a Fairchild Dornier Metro III.

AIR ATLANTIC AIRLINES: United States (1978-1982). A division of Penn's Cave Aviation, Russell E. Schleiden's FBO at Centre Hall, Pennsylvania, this commuter operation is established at Philadelphia in the spring of 1978 to fly scheduled daily roundtrip passenger services to State College, Altoona, and Pittsburgh and scheduled freight services to Pittsburgh and Baltimore.

President and founder Schleiden assembles a fleet of 5 Piper PA-31-350 Navajo Chieftains, 2 Cessna 402s, and 3 Piper PA-34 Senecas. These inaugurate revenue frequencies on May 1. Operations continue throughout the remainder of the decade, and into the next. The company cannot survive the higher fuel costs and cash flow difficulties caused by ATC problems resulting from the summer 1981 PATCO air traffic controller's strike. Operations stop on January 9, 1982.

AIR ATLANTIC DOMINICA, C. por A.: 27 de Febrero Esq., Tiradentes Apto.205, Plaza Merengue, Santo Domingo, Dominican Republic; Code LU; Year Founded 1996. AAD is established at Santo Domingo in September 1996 to provide charter and scheduled international air transportation of persons, property, and mail from the Dominican Republic to New York, Miami, Panama, Caracas, Lisbon, Madrid, Paris, Rome, Frankfurt, London, Havana, San Juan, and the Netherlands Antilles. A fleet of Boeing 727-200Fs is acquired and permission to begin service to the U.S. is sought.

On October 30, the **Canadian Airlines International, Ltd.** affiliate **Air Atlantic, Ltd.** files a petition with the U.S. DOT asking it not to grant authority to AAD because it is not legally entitled to use the trade name "Air Atlantic." The DOT invites both sides to provide briefings on the issue and, on November 21, rules in favor of the new entrant, granting it authority to operate from Santo Domingo to San Juan, Miami, and New York (JFK) on both a scheduled and charter basis.

Revenue flights duly commence and continue.

AIR ATLANTIC URUGUAY, S.A.: Rio Branco 1358, Montevideo, Of 804, Uruguay; Phone 598 (2) 928 529; Fax 598 (2) 928 530; Year Founded 1997. AAU is set up at Montevideo in 1997 to offer non-scheduled charters to domestic and regional destinations. Revenue operations commence with a pair of Fokker F.27 Friendships.

AIR ATLANTIQUE, LTD.: Coventry Airport, Coventry, England, CV8 3AZ, United Kingdom; Phone 44 (1203) 307 566; Fax 44 (1203) 639 037; Code NL; Year Founded 1969. Originally founded in 1969, this carrier is folded into Chairman Michael Collett's **Atlantic Air Transport, Ltd.** in 1993 as its passenger airline division. Faced with the problem of too many confusing units, Collett, in March 1998, announces a new corporate realignment.

The previous all-cargo and passenger units will be immediately combined into **Atlantic Airlines, Ltd.** At the same time, all non-airline activities will operate under the Air Atlantique moniker. The most visible of these activities is Air Atlantique Historic Flight, formed the year before. The company's Douglas DC-3s, together with a Scottish Aviation Twin Pioneer, are its major flight equipment, while special services, air-show appearances, and historic preservation activities are its specialty.

AIR ATLANTIQUE, S.A.: France (1991-1996). Jacques Mosse establishes Air Atlantique, S.A. at the Aerodrome de la Rochelle-Laheu in 1991 to offer regional passenger and cargo services. Revenue flights commence and continue with a fleet that includes 1 Beech King Air 200, 1 Beech King Air 90, 3 Embraer EMB-110P2 Bandeirantes, and 1 Piper PA-31-350 Navajo Chieftain. Orders are placed for an Avions de Transport Regional ATR42-300, which enters service in 1992.

Through September 1993, enplanements total 10,062. Plans are made in 1994 for the acquisition of a Beech 1900D the following year, with which to open a new scheduled route from La Rochelle to Toulouse via Poitiers; however, a second ATR42-300 will be received instead. Operations cease in 1996.

AIR ATLANTIS, S.A.: Portugal (1985-1994). To take advantage of the world's discovery of Portugal as a holiday destination, Air Atlantis is formed in early 1985 as the wholly owned charter subsidiary of **TAP-Air Portugal, S.A.** Employing three Boeing 727-200s and two B-727-100s leased from the parent, the carrier inaugurates operations on June 1. The company undertakes a full schedule of year-round tour and other passenger charters to destinations in Belgium, Austria, the Canary Islands, Holland, Italy, Ireland, the U.K., Spain, Scandinavia, Switzerland, France, Germany, and the North African cities of Tunis and Cairo. Ad hoc charters are also undertaken.

Enplanements for the year total 524,211.

Passenger boardings leap upward by 48% in 1986 to 550,641 as revenues of \$56.86 million are generated. Replacement of the B-727s with B-737-200s begins in 1987. Enplanements for the year decline to 527,528.

Although the employee population grows by 11.1% in 1988 to 200, customer bookings decline another 8.1% to 488,000. Revenues total \$59.3 million and profits of \$3.6 million (operating) and \$2.5 million (net) are generated.

Airline employment is increased by 3% in 1989 to 240 and the fleet now includes 1 B-737-3K2, 3 B-737-230As, and 3 B-727-200s. Orders are outstanding for 2 more B-737-3K9s, shares are acquired in 3 Portuguese tour operators, and a new catering firm is set up.

Passenger boardings grow 12.9% to 551,338.

President Manuel Norton's workforce grows 46.7% to 352 and his B-737-2K9s, leased from **Bavaria Fluggesellschaft, GmbH.** are, in turn, subleased to **South African Airways (Pty.), Ltd.** for a year. Customer bookings inch up 0.7% to 555,285.

The payroll is cut 30.4% in 1991 to 245 and the fleet now includes 2 B-737-2K9As leased from **Bavaria Fluggesellschaft, GmbH.**, 1 B-737-230A, 1 B-737-3K2 leased from **Transavia Airlines, N.V.**, and 3 B-737-3K9s leased from **Bavaria Fluggesellschaft, GmbH.** Orders are outstanding for 3 B-737-3Q8s. Charter service begins to Tunis and Cairo.

Passenger boardings jump 5.1% to 583,502.

Airline employment is increased a substantial 42.9% in 1992 to 350 and another Dash-300 chartered from the same German carrier is obtained.

Customer bookings through September are up 28.1% to 618,000.

In 1993, President Norton oversees a workforce of 350 and a fleet of 3 B-737-200s and 5 B-737-300s, with a sixth Dash-300 on order. Over 40 cities are now regularly visited in the U.K., Ireland, Austria, Germany, Switzerland, Belgium, France, Holland, Italy, Finland, Scandinavia, Tunis, Cairo, Turkey, and Morocco and from these, customers are taken to Portugal's main resort areas.

Unfortunately, the company, in providing these services, accumulates exceptionally heavy losses. As a result, it is absorbed into its parent company during 1994.

AIR ATLAS (COMPAGNIE CHERIFIENNE DE L'AIR, S.A.): France (1946-1953). Air Atlas is formed at Rabat on October 9, 1946, to offer services from Morocco to Algeria and southern France. With a fleet of ten former Luftwaffe Junkers Ju-52 trimotors, revenue flights commence in November to Algiers, Oran, Perpignan, Toulouse, and

Valencia. From Perpignan, a railroad connection to Paris allows through service to the French capital to be completed in under a day.

The fleet is increased in **1947** by the addition of five Nord NC-702 Martinets. The company encounters financial problems late in the year, which are largely solved by the sale of an equity stake to **Air France**.

The French flag carrier provides Atlas with six Douglas DC-3s in **1948**. These replace the Junkers and most of the Martinets. Through the remainder of the year and in **1949** service is offered over two principal routes: Tangier to Perpignan via Rabat, Meknes, Fez, Oujda, and Oran; and from Agadir to Algiers via Marrakech, Casablanca, and Rabat.

In mid-**1950**, the French government grants authority for Air Atlas to provide both domestic services within Morocco and to continue its flights to Algeria and France. Banking on this pledge, orders are placed for three Bloch 161 Languedocs.

In cooperation with **Air France**, Languedoc service from Casablanca to Marseilles and Bordeaux commence in **1951**. DC-3 domestic destinations include Agadir, Casablanca, Fez, Marrakech, Meknes, Oujda, Rabat, and Tangier.

Flights continue in **1952** but, on June 28, **1953**, Atlas joins with **Air Maroc (Societe Avia Maroc Ligne Aerienne, S.A.)** to form **Air Maroc (Compagnie Cheriffienne de Transport Aeriens, S.A.)**.

AIR ATONABEE, LTD.: Canada (1971–1984). Founded at Peterborough, Ontario, as **Otonabee Airways, Ltd.** in **1971**, this small charter operator begins third-level commuter scheduled flights between Toronto Island Airport and Montreal via Peterborough and Kingston, in **1975**.

Following the failure of the Saunders aircraft manufacturing concern, Otonabee purchases it, together with all available ST-27s and ST-28s (stretched de Havilland DH 104 Doves with Pratt & Whitney of Canada PT-6 turboprop engines), with an idea, never realized, to reopen production. The new aircraft outfit the fleet. Flights to Kingston end late in the decade and the carrier, now operating as **Otonabee Airways/Air Atonabee**, inserts Ottawa into its route system.

The corporate image is changed in **1979** by new businessman/owner Joe Csumrik, at which time **Air Atonabee, Ltd.** becomes the operating title and two routes are legitimized: Toronto Island–Ottawa via Peterborough and Toronto Island–Montreal (YUL). A few of the latter flights also stop at Peterborough on demand. The commuter steadily loses money in **1980–1983** and is put up for sale, together with its most valuable asset, a license to operate from Toronto Island Airport.

In March **1984**, the ailing carrier is purchased by former **Nordair, Ltd./Quebecair, Ltd.** Vice President Victor Pappalardo. Its headquarters are moved to Toronto and the corporate image is changed once more; livery and logos are introduced for an operation henceforth to be known as **City Express, Ltd.**

AIR AUSTRAL, S.A. (LA COMPAGNIE FRANCAISE DE L'OCEAN INDIEN): Aerogare de Gilot, P.O. Box 611, St. Denis, F-97473, Reunion; Phone 262 931 010; Fax 262 292 895; <http://www.air-austral.com>; Code UU; Year Founded 1990. The former **Air France** subsidiary **Air Reunion, S.A.** is renamed **Air Austral** on October 26, **1990**. The French flag carrier still retains 34% minority interest, with Sematira (Reunion Regional and General Councils) having 34%, and miscellaneous shareholders 32%.

In addition to the predecessor's fleet of 1 Piper PA-31-310 Navajo, 1 British Aerospace BAe (HS) 748-B2, and 1 Fokker F.28-1000C, leased from TAT (**French Regional Airlines, S.A.**), Chairman R. Cagourgue and President Gerard Etheve's 65-employee carrier is provided with 1 Avions de Transport Regional ATR42-300 and 1 Boeing 737-53A.

It now maintains scheduled regional passenger services linking St. Denis with Tamstave (Madagascar) and Dzaoudzi (Comores Islands). Charter flights and inclusive-tour services are also undertaken and, in November, a marketing agreement with **Air Madagascar (Societe National Malagache de Transports, S.A.)** is inaugurated. Under its terms, the two agree to code-share on the route from St. Denis to Tamstave and on joint passenger and freight handling.

Enplanements total 20,033. Expenses exceed income and losses are suffered: \$625,000 (operating) and \$865,000 (net).

Company employment is increased by 9.2% in **1991** to 71 as service is started from Reunion to Johannesburg, Nairobi, Noroni, and Najunga. The government completes improvements to the runway at Pamandzi Airport at Mayotte.

Passenger boardings climb 24.6% to 26,570 and freight traffic is up 18.5% to 526,000 FTKs. Revenues rise 26.8% to \$14.7 million. Although the operating loss grows to \$650,000, a net \$1.1-million profit is generated.

Service is launched from Mayotte to Nairobi in **1992**. Passenger boardings climb to 53,350 and revenues swell to FM116,000. Expenses reach FM114,000.

Operations continue in **1993** as Chairman/CEO Etheve oversees an employee population of 65 and services linking Reunion with Antananarivo, Comores, Dzaoudzi, Johannesburg, and Maurice; Toamasina in Madagascar with Dzaoudzi and Mahajanga; and Dzaoudzi with Mahajanga and Nairobi. In November, a full code-sharing arrangement is entered into with **Air Madagascar (Societe National Malagache de Transports, S.A.)**; under its terms, the two carriers agree to code-share on routes from Antananarivo to Reunion, Singapore, and Mauritius.

Under its own flag, the company in **1994** begins service from Reunion to Mauritius. Cooperation begins with **Air Mauritius, Ltd.**

In December, a purchased B-737-33A is placed into service and the F.28-1000C is returned.

Enplanements for the year total 160,000 and there are profits: \$69,000 operating and \$1.48 million net.

The workforce is increased by 16.1% in **1995** to 130 and a second B-737-33A joins the fleet during the first quarter. It is employed to inaugurate flights from St. Denis to Mauritius, Johannesburg, Nairobi, and the Madagascar community of Antananarivo.

Seychelles is added in October as a point on a new Mayotte–Reunion–Seychelles–Mayotte–Reunion route.

Traffic grows; passenger boardings increase by 15.9% to 214,400, while freight increases 21.8% to 990,000 FTKs. Flying in the face of the industry depression of the early 1990s, Air Austral is again profitable, as it has been every year since its formation.

Revenues increase 16.9% to \$39.3 million, while expenses climb 13.6% to \$38,122,000. The operating profit jumps to \$1,178,000 while net gain reaches \$1,997,000.

In April **1996**, the carrier begins pooling flights with **Air Mauritius, Ltd.**, **Air Madagascar (Societe National Malagache de Transports, S.A.)**, and **Air France** on flights from Reunion to Mauritius and Antananarivo. President Etheve becomes chairman of the supervisory board, with Paul Verges named president.

A third B-737-300 joins the fleet in **1997**; this unit is a Quick Change (QC) model. Flights commence from Reunion to Harare via Moroni. Service is inaugurated in December **1998** between St. Pierre, in the south of Reunion Island, and Mauritius. Capitalization now stands at FFr 10.8 million.

Airline employment in **1999** stands at 200.

Ordered the previous December, a new ATR72-520 is received on August 1, **2000** and enters service over routes from Pierrefonds to Mauritius and Madagascar.

The weekly roundtrip service between Reunion Island and Harare, Zimbabwe, is suspended on September 19.

AIR AUSTRIA. See **AUSTRIAN AIRLINES (OSTERREICHISCHE LUFTVERKEHRS A.G.)**

AIR BAFFIN, LTD.: Canada (1989–1996). Air Baffin is established by President Jeff Mahoney at Iqaluit, Northwest Territories, in **1989** to provide charter and bush flights. The only local carrier in the eastern Arctic, it is also the only to be entirely owned by the Inuit. Three years later, in May **1992**, scheduled service is inaugurated linking the company's base with Broughton Island, Cape Dorset, and Pangnirtung.

In 1993, Mahoney oversees a workforce of 14 and a fleet that includes 1 each Piper PA-31-310 Navajo, PA-31-350 Navajo Chieftain, Cessna 337 Skymaster, and Cessna 206 Stationair. A second Chieftain is acquired in 1994. Operations continue apace in 1995 and in late 1996 the carrier is renamed **Air Nunavut, Ltd.**

AIR BAHAMA, LTD.: Bahamas (1968–1982). English financier Norman Ricketts establishes **Air Bahama (International), Ltd.** at Nassau on July 22, 1968. Employing a leased Boeing 707, the company inaugurates discount transatlantic flights to Luxembourg. As the result of an October 1968 agreement with Hekla Holdings, Ltd., a subsidiary of **Loftheidir, H.F./Icelandic Airlines**, the company is taken over by the Icelandic airline in August 1969 and renamed **International Air Bahama, Ltd.**

Sigurður Helgasson is named CEO and two Douglas DC-8-63s are painted in new livery and sent to Nassau. Services are now offered in conjunction with the new owner's already well-known, low cost route from Luxembourg to New York via Iceland. Airline employment in 1976 is 67; during the year the name is changed to **Air Bahama, Ltd.** Flights cease in 1982.

AIR BAHIA: United States (1979–1980). Air Bahia is set up at San Diego, California, in the summer of 1979 to provide scheduled passenger and cargo services. Employing a Piper PA-31-310 Navajo and Britten-Norman BN-2 Islander, the commuter launches revenue flights on August 18 linking its base with Los Angeles, El Centro, and destinations in Baja California, some of which are visited as charters.

Operations continue apace until the carrier goes out of business on December 14, 1980.

AIR BALTIC CORPORATION, S.A.: Riga Airport, Kalku 15, Riga, LV-1050, Latvia; Phone 371 (7) 207 069; Fax 371 (7) 207 369; <http://www.airbaltic.lv>; Code BT; Year Founded 1995. Following the failures of **Baltic International Airlines** and **Latavio**, the national government in July 1995 elects to back a new flag carrier. ABC is established at Riga on August 29, with shareholding provided by the Latvian state (51%), **SAS (Scandinavian Airlines System)** (29%), Swedfund (6.2%), IO: The Investment Fund for Central and Eastern Europe (6.2%), and **Baltic International USA** (8.02%). Initial share capital of \$12 million is available from these partners, together with an additional \$14 million from Latvian and Nordic investment banks.

Recently retired SAS Executive Vice President/COO Kjell Fredheim is named president/CEO and recruits a workforce of 187. SAS seconds Katalina Forsman over from Stockholm to act as the carrier's SVP/CFO. Plans to operate either a fleet of two Boeing 727s (leased from **Baltic International USA**) or four former SAS Douglas DC-9-21s fall through. Instead, a dry-leased SAAB 340 is found and a British Aerospace BAe 146-200 is wet-leased from **Manx Airlines, Ltd. (2) (Manx Airlines Europe, Ltd.).**

Daily revenue flights (some flown dual-designator with SAS) commence on October 1 to from Riga to Copenhagen to Frankfurt to Riga to London (LHW) to Copenhagen to Riga. A number of these flights are made in cooperation with SAS.

The company's inability to settle outstanding claims by **Aeroflot Russian International Airline** prevents it from gaining traffic rights to Moscow. Orders are placed for three Avro RJ70s, all of which have previously been flown by **Business Express, Ltd.**

Airline employment stands at 190 in 1996. The first Avro RJ70 is received in January and is christened *Vidzeme*. It is followed by two more during the first quarter. The three replace the BAe. Minsk, Stockholm, Tallin, Vilnius, and Warsaw join the route network, along with an SAS dual-designator service from Riga to Copenhagen and Geneva. Enplanements total 104,849.

Enplanements for the first full year of service total 106,341.

The workforce is increased by 11.2% during 1997 to 208. The company now operates a SAAB 340 and three Avro RJ70s from Riga to

Copenhagen, Frankfurt, Helsinki, Kiev, London, Minsk, Moscow, Stockholm, St. Petersburg, Tallinn, Vilnius, and Warsaw.

Several services are operated in cooperation with **SAS (Scandinavian Airlines System)** and **Deutsche Lufthansa, A.G.**

Passenger boardings increase 30.8% to 151,515.

Flights continue apace in 1998. On May 19, a code-sharing agreement is signed with **Lithuanian Airlines, A.S.**

President/CEO Fredheim departs to establish **Britannia Airways, A.B.** in Sweden as its first managing director.

Customer bookings accelerate 16.4% to 176,000.

By the start of 1999, airline employment has been increased by 32.7% to 276.

Baltic International USA sells its 8.02% stake in ABC to **SAS (Scandinavian Airlines System)** on January 18, for \$2,144,333.

Dual-designator roundtrip flights with **Aerosvit Airlines** commence in June from Stockholm to Kiev via Riga.

With the approval SAS, Senior Vice President-Marketing Kristian Kircheiner succeeds Rudi Schwab as president/CEO on August 13. Ten days later it is announced that Latvian competition authorities are investigating Air Baltic and **Transaero Airlines** over a price-fixing scheme.

On December 1, the Latvian government announces that it will sell a minority stake and thereby privatize ABC.

Passenger bookings rise 10.3% to 194,000 and 342,000 FTKs are operated. Although operating revenues of \$14 million are generated, costs and other incidentals force a \$3-million net loss.

The workforce stands at 276 as 2000 begins. To stem an anticipated \$1.2-million loss for the year, unprofitable routes from Riga to Minsk, Warsaw, Prague, and Moscow are closed during the summer.

As part of the airline's integration into the SAS network, **SAS (Scandinavian Airlines System)**, at the beginning of the winter schedule on October 29, cancels its own Stockholm to Riga service and turns the route over to Air Baltic. It now becomes the only carrier flying directly between the two cities and to meet demand, frequencies are increased from 78 to 94 every week.

AIR BANGUI (COMPAGNIE CENTREE AFRICAINE, S.A.): Central African Republic (1966–1981). Air Bangui is established by the government at Bangui in the spring of 1966 to offer charter operations in the former French colony, which had received its independence in 1960. In the fall, the company is reformed, with **Air Afrique, S.A.** and **UTA (French Airlines, S.A.)** both taking minority shareholding. The latter also is given a management contract.

The new owners outfit the line with a Douglas DC-3, which is employed in October to launch scheduled services from Bangui to Berberati. Flights to Bambari, Birao, and Bouar also begin before year's end.

A Beech 58 Baron is acquired in July 1967 and is used to start new services from Bangui to Bangassou and to Bakouma. Enplanements by the end of 1968 total 4,206.

Service continues apace in 1969–1971. During the latter year, the government, displeased with its service from **Air Afrique, S.A.**, threatens to withdraw from the multinational airline consortium. While negotiations are undertaken, plans are made to upgrade Air Bangui into a flag carrier and, toward that end, a DC-4 is purchased.

Although the nation is able to reach agreement with **Air Afrique, S.A.** and does not withdraw, it does use its DC-4 and DC-3 to operate expanded services. Destinations visited during the 1970s include Bakouma, Bambari, Bangassou, Bangui, Birao, Bouar, Bria, Carnot, Gounda, Kawadja, Koumbala, M'Boki, Ndele, Ouadda, Ouanda Djalle, Rafat, and Zemba. Toward the end of the decade, the fleet is enhanced by the delivery of an **Aérospatiale (Sud Est) SE-210 Caravelle III**.

Unable to continue in the face of the world energy crisis, the company shuts its doors in early 1981.

AIR BEEF (PTY.), LTD. See **ANA (AUSTRALIAN NATIONAL AIRLINES, [PTY.], LTD.); ANSETT AIRLINES OF AUSTRALIA (PTY.), LTD.**

AIR BELFAST, LTD.: United Kingdom (1995–1996). In an attempt to gain advantage from the peace initiative in Northern Ireland, Air Belfast, Ltd. is established at Filton Airport, Bristol, England, on February 22, 1995. Brian Beal is appointed managing director and is provided with a pair of British Aerospace (BAC) 1-11-200s. These commence five weekday roundtrips linking London (STN) with Belfast on March 1; only two fares are available: \$107.64 one way and \$109.20 return.

The 70-worker carrier is unable to achieve viability and shuts its doors in March 1996.

AIR BELGIUM INTERNATIONAL, S.A.: Belgium (1979–2000). Organized at Brussels on May 3, 1979, this privately owned charter carrier is initially known as **Abelag Airways, S.A.**; revenue flights commence in June with a pair of Boeing 737-200s. The corporate identity, livery, logo, and name are changed to Air Belgium International, S.A. in 1980. Sun International, S.A. remains the major shareholder.

Over the next decade, the company, specializing in international tour group services, operates flights between Brussels and the holiday areas of southern Europe, especially those in France, Yugoslavia, Italy, Greece, and Spain; the Mediterranean; North Africa; the Canary Islands; and Madeira. In addition, a night Brussels–Madrid night cargo charter service is maintained on behalf of DHL.

A new B-737-46B joins the fleet in 1988, followed by a B-757-23AER in 1989.

In 1990, Chairman R. Vanmoerkerke and General Manager Johan Dekker oversee a workforce of 55, which operates a Boeing 737-46B and a B-757-23AER.

Enplanements total 385,400. Revenues total BFr 1.42 million and there is a net loss of BFr 60,000.

Air Belgium International initiates scheduled services on November 26, 1991 over a route to Palma. To handle increased capacity, a B-737-4Q8 is leased.

Passenger boardings reach 420,000, including 30,000 on scheduled flights. Revenues move to BFr 1.73 million and net gain is BFr 87,000.

The workforce is increased by 58.2% in 1992 to 87. Miami and Punta Cana are added to the carrier's list of tour destinations while scheduled flights are started to Alicante, Faro, Funchal, Malaga, Las Palmas, and Tenerife.

Enplanements rise 26.6% to 436,700 (50,000 scheduled), but revenues slip to BFr 1.37 million. Net profit is down to BFr 84,000.

Chairman Vanmoerkerke and General Manager Dekker oversee a workforce of 55 in 1993, down 36.8%. Ft. Lauderdale, Florida, and Bangor, Maine, are added as destinations.

Passenger boardings plunge by 54.2% to 200,000. Customer bookings decline again during 1994, falling by 13.5% to 173,100.

Enjoying its part of the upswing in the fortune of the world's airlines in 1995, this company increases its staff to 100. Enplanements increase by 6.3% to 425,000 and revenues grow 4% to \$42.9 million.

A B-737-3Q8QC is acquired at the beginning of the 1996 summer schedule. In the fall, it is leased to **European Air Transport, S.A.** for the winter. The B-757-23AER enters a long-term lease with **Sunway Airlines, A.B.** of Sweden. Heavy, although initially undisclosed losses, are suffered and, at years end, Sun International seeks a buyer for its 65% stake.

Passenger boardings are cut in half, dropping to 209,935. There is an operating profit of just \$700,000 and a net loss of \$700,000.

The workforce stands at 93 in 1997. The publicly offered majority stake is acquired by U.K.-based **Airtours International, Ltd.** Managers are appointed by the new owners and company aircraft are repainted in Airtours colors.

Customer bookings inch up 1.3% to 212,700. Although revenues are down 2.9% to \$33.4 million, expenses plunge 7.9% to \$31.1 million. The operating profit jumps to \$2.3 million and there is a net gain of \$600,000.

In 1998, the carrier's Boeings, sporting new livery, visit Ajaccio, Alicante, Almeria, Antalya, Araxos, Arrecife, Athens, Brindisi, Catania, Corfu, Djerba, Faro, Fuerteventura, Gerona, Heraklion, Ibiza,

Izmir, Las Palmas, Malaga, Monastir, Oibia, Palma de Mallorca, Reus, Tenerife, and Volos.

West European Leisure Group, a subsidiary of Airtours, the British organization that owns **Airtours International, Ltd.**, acquires the Sobelair 35% stake on April 23, 1999.

Flights continue apace during the remainder of the year. Two Airbus Industrie A320-211s arrive under lease from the new parent.

During the spring of 2000, officials at **Airtours International Airlines, Ltd.** reach the conclusion that, given the highly price-competitive package tour business in Northwest Europe, this subsidiary will not be profitable.

In July, it is announced that the company will be shut down on November 1. Much of the carrier's business had come from the tour operator Sun Air, which is itself in fiscal difficulty. Air Belgium's management team in Brussels unsuccessfully attempts a buyout as a closure alternative.

One of the company's 2 A320-211s operates its last service, from Alicante to Brussels, on October 15. It is ferried to Manchester, England, the next day; there it will be readied for its transfer to **Premiair, A.S.** The second aircraft completes a similar flight at month's end and is likewise sent to Premiair. Leased for a decade, the lone B-737-46B is returned.

As scheduled, Air Belgium shuts down on November 1.

AIR BENIN (SOCIETE NATIONALE DES TRANSPORTS AERIENS DU BENIN, S.A.): Benin (1978–1982). Air Benin is established at Cotonou in April 1978. The initiation of revenue services is delayed almost a year while the proper personnel and aircraft (a Fokker F.27 and a de Havilland Canada DHC-6 Twin Otter) are obtained. Scheduled flights commence in March 1979 linking the capital with Djougou, Kandi, Natitingou, Parakou, and Save. Enplanements for 1980, the first full year of service, total 3,458.

Recession-related and fuel cost expenses play havoc with the carrier in 1981. Passenger boardings fall 28.8% to 2,685 while freight traffic is down a huge 90.3% to 12,000 FTKs. As a result, the workforce must be slashed 11.9% to 37. In April 1982, the government merges **ENB (Escadrière Nationale du Benin)** and Air Benin to form **TAB (Transports Aériens du Benin)**.

AIR BERLIN. *see* **AIR FLORIDA**

AIR BERLIN, GmbH. & CO. LUFTVERKEHRS, K.G.: Flughafen Tegel, 1000 Berlin 51, D-13406, Germany; Phone 49 (30) 4101 2781; Fax 49 (30) 413 2003; <http://www.airberlin.com>; Code AB; Year Founded 1978. No relation to the Air Berlin commuter acquired by Air Florida. Air Berlin USA is organized at Tegel Airport, West Berlin, on July 11, 1978 as a wholly owned subsidiary of Leico, an Oregon-based land and timber concern. Employing a U.S.-registered Boeing 707-331B first flown by **Trans World Airlines (TWA)**, the carrier begins inclusive-tour charter flights on behalf of German tour operators in April 1979.

On October 22, 1980, company officials elect to attempt scheduled service, offering return passenger flights from Berlin to Orlando via Brussels. The experiment ceases in October 1983. At this point, the B-707-320B is traded in for a B-737-200.

During the remainder of the decade, Air Berlin performs strictly as a charter operator, flying from Berlin to holiday areas in western and southern Europe, the Canary Islands, and North Africa.

In 1990, Chairman Leonard Lundgren and President/General Manager Kim Lundgren possess a fleet comprising 1 each leased B-737-4K5 and B-737-4Y0. On October 3, Germany is reunited.

Operations continue apace in 1991 and, as the result of German reunification, Air Berlin becomes a completely German company, no longer restricted to Berlin-only departures.

In 1992, a second B-737-4Y0 is delivered under charter and orders are placed for two B-737-46Js. To help promote the city's bid for the 2000 Summer Olympic Games, the aircraft receive "Berlin 2000" titles and a decal of the city's smiling bear logo.

In **1993**, the workforce stands at 90. The leased fleet includes 3 B-737-4Y0s and 1 each B-737-4K5 and B-737-46J. When Berlin loses its Olympic bid to Australia, the smiling bear logo on one jetliner is, before its removal, worn for a brief time with a frown.

Enplanements for the year total just under 500,000.

The fleet is increased in **1994** by 1 B-737-46J. Passenger boardings skyrocket 109.5% to 1,047,600.

Another, though less spectacular, traffic year is enjoyed in **1995** as customer bookings accelerate 9.6% to 1,147,700. The staff is increased by a whopping 125% to 190.

The workforce is increased 19.7% in **1996** to 228 in order to help the company accommodate increased growth.

Enplanements soar 20.8% to 1,450,000 and revenues climb 18.9% to \$296 million.

Airline employment grows another 17.5% in **1997** to 350. Passenger boardings accelerate 17.2% to 1,650,000.

Options for two B-737-800s are converted into firm orders in June **1998**, while options are taken on two more. The deal is worth \$425 million and provides for initial deliveries early in 2000.

Late in the year, a shuttle service is established to transport vacationers from Berlin to Mallorca. In addition, a homepage is opened on the World Wide Web.

Customer bookings climb 21.8% to 2.01 million.

By the start of **1999**, airline employment has been increased by 34.3% to 470 and the company's results for the year are nothing less than spectacular. Customer bookings increase 50% to 3,000,000. Revenues jump 39.5% to \$308 million.

The workforce during the previous 12 months has grown by 112.8% and stands at 1,000 as **2000** begins. During the first quarter, a B-737-8Q8 is subleased from Sabre Airways, Ltd.

AIR BEST DE PUERTO RICO: United States (1971–1973). Air Best de Puerto Rico is established at Isla Verde, San Juan, Puerto Rico, in **1971** to provide scheduled air taxi services to St. Thomas, in the American Virgin Islands. Daily Britten-Norman BN-2 Islander roundtrips are duly inaugurated and are sustained into **1973**.

AIR BISSAU (TRANSPORTES AEREOS DA GUINE BISSAU, S.A.): Baixa Postal 111, Aeroporto Osvaldo Vieira, Bissau, Guinea-Bissau; Phone 245 201 277; Fax 245 251 536; Code YZ; Year Founded 1995. The national airline of Guinea-Bissau, **LIA (Linhas Aereas da Guinea-Bissau, S.A.)**, receives a corporate makeover in **1995**. Capt. Eduardo Pinto Lopes remains as managing director and continues to oversee a workforce of 110.

Scheduled domestic passenger and cargo services continue to be provided by a fleet of 1 each Dornier 228-200, British Aerospace BAe (HS) 748-B2, and Fokker F.27-100 Friendship.

In **1996–2000**, the company joins with **TACV (Transportes Aereos de Cabo Verde, S.A.)** to provide joint services employing the partner's equipment. Under this arrangement, the two fly weekly roundtrips from Bissau to Lisbon, employing TACV's Boeing 757-2Q8. Similarly, weekly roundtrips are offered from Bissau to Dakar, employing TACV's Aero International (Regional) ATR42-320.

AIR BLEU, S.A.: France (1935–1946). Air Bleu is formed at Paris in **1935** to provide quick feed of mail from **Air France** flights to regional distribution points. With Caudron Simmonds, the domestic letter/express service is initiated from Le Bourget to the regional capitals of Pau, Perpignan, Grenoble, and Nice (with stops along each route).

This arrangement is maintained with 14 French-built aircraft until February 21, **1941**, when Vichy officials, in the process of downsizing **Air France**, rename the carrier **Reseau Postal**, and place it under the new **Reseau Aerien Francais**.

Following V-E Day in **1945**, the Reseau Postal function is joined with several other airline operations on June 26 in the **Reseau des Lignes Aeriennes Francaises**. On January 1, **1946**, RLAF is reborn as **Societe Nationale Air France**.

AIR BOSNA, S.A.: Cemalasa 6/III, Sarajevo, 71000, Bosnia and Herzegovina; Phone 71 667953; Fax 71 650794; http://www.air-bosna.ba; Code JA; Year Founded 1994. Despite wartime conditions, Air Bosna is established as a public enterprise company on May 15, **1994**; shareholding is divided between the government of the Republic of Bosnia and Herzegovina (51%) and Energoinvest Holding-Energoinvest (49%). The new national airline is registered at Sarajevo on August 12 under terms of a ruling of the High Court.

Prof. Dr. Sefkija Cekic is appointed president of the management board, with Omer Kulic as managing director and Mustafa Eminovic as commercial manager. A small staff is appointed and revenue flights, emphasizing business service only, is launched with a single Cessna 512 Citation II.

During the next four years, land is acquired at Sarajevo Airport, where offices and three hangars are located. Various equipment and transport assets for handling aircraft, passengers, luggage, and cargo are acquired and a staff of 111 is employed.

The fleet is enhanced by the addition of a Yakovlev Yak-42D and the company begins to participate in the Amadeus and Galileo computerized reservations systems. When the Yak-42D arrives from Istanbul on August 15, **1996**, it has the honor of completing the first scheduled service into Sarajevo in four years.

Unable to diplomatically persuade the government of Yugoslavia to change its policy toward the ethnic Albanians in its Kosovo province, NATO closes Balkan airspace and launches a bombing campaign, Operation Allied Force, on March 24, **1999**. Grounded for a month, Air Bosna is not able to resume flights until April 24; it will report a \$317,000 loss for the period.

Once it is able to recommence operations, the airline makes rapid progress. An Avions de Transport Aerien ATR42-520 is acquired and code-sharing agreements are signed with **Malev Hungarian Airlines, Croatia Airlines, Austrian Airlines, A.G., Adria Airways (Adria Aviopromet) (2), and THY Turkish Airlines (Turk Hava Yollari, A.O.)**. Dual designator discussions also occur with **Finnair, O/Y and KLM (Royal Dutch Airlines, N.V.)**.

During the year, 62,689 passengers are transported to 10 regional destinations.

On February 1, **2000**, Managing Director Kulic places firm orders (with two options) with Airbus Industrie for a pair of A319-100s. The small jetliners will assist the flag carrier in further development of its European route network, where emphasis will be placed on serving those cities hosting the highest number of refugees.

Yak-42D Sunday-only roundtrips are started on June 18 between Sarajevo and Oslo.

AIR BOTNIA O/Y: P1, 168, Vantaa, RN-01531, Finland; Phone 358 (9) 870 2530; Fax 358 (9) 822 491; http://www.scandinavian-airlines.com; Code KF; Year Founded 1988. Air Botnia is organized at Vantaa in **1988** with Heikki Pakari as managing director. A fleet comprising 1 Cessna 402C and 2 Embraer EMB-110P1 Bandeirantes is assembled and third-level scheduled revenue flights begin to Helsinki, Ivalo, Jyväskylä, Oulu, Rovaniemi, Seinäjoki, Sodankylä, and Ylivieska.

Operations continue apace in **1989–1992**. During the fall of the latter year, a new British Aerospace BAe Jetstream 31 is ordered.

The new Jetstream 31 is delivered under lease in April **1993**; it will become the first of its type to be operated in Finland. Based at Jyväskylä, it flies to Helsinki, Ivalo, Mikkeli, Oulu, and Rovaniemi.

Managing Director Hannu Rapanen's fleet is altered in **1994** to include 2 Bandeirantes, the Jetstream 31, and 2 newly added Jetstream 32EPs. An EMB-110P1A is added in **1995**.

Heikki Jolula becomes chairman in **1996**, with Karl Hohti as Managing Director. Orders are placed for another Jetstream 32 and a Boeing 737-400. Destinations now visited include Enonfjeld, Jyväskylä, Kuopio, Lappeenranta, Mikkeli, Oulu, Pori, Rovaniemi, Savonlinna, Seinäjoki, Sodankylä, Tampere, Tuku, Vaasa, and Varkaus.

Enplanements for the year total 107,800.

Airline employment in 1997 stands at 50. During the spring, a former **American Eagle** Jetstream 32EP is acquired under charter.

Under terms of an agreement signed in the spring, Managing Director Hohti retires on October 15 and is succeeded by **Britannia Airways, A.B.** Managing Director Kjell Fredheim, who had once served as executive vice president/COO of SAS.

Enplanements for the year total 117,120.

Airline employment stands at 45 in 1998 and the fleet now includes 5 BAe Jetstream 32EPs and 4 SAAB 340s.

All of the airline's shares are purchased by **SAS (Scandinavian Airlines System)** in January.

During the spring, a decision is taken to upgrade the fleet and to replace the turboprops with jetliners. Arrangements are completed for the charter of three Fokker F.28-4000s from **SAS (Scandinavian Airlines System)**, with the first, *Paijanne*, entering service in April.

Customer bookings during the 12 months fall 11.2% to 96,000.

By the beginning of 1999, the company workforce has been cut back 10% to 45.

The company now changes its profile from that of a small domestic airline into a growing Nordic regional. Flights from Helsinki to Vaasa, Kuopio, Mikkeli, and Lappeenranta are suspended on October 31; on November 1, new twice-daily return service is inaugurated from Turku, Finland, to Copenhagen and thrice daily from Oulu, Finland, to Stockholm. Capacity for the new operations is provided by the addition of 5 more Fokker F.28-4000s and 5 SAAB 340s.

Customer bookings during the 12 months skyrocket 99.8% to 192,000.

Airline employment at the beginning of 2000 is 150, a spectacular 233.3% increase. Thrice-weekly F.28-4000 roundtrips begin on May 1 from Helsinki to London (STN) via Bergen.

Svenneric Persson is named president/CEO in July and on September 29 orders are placed for 5 AVRO RJ85s, with which to replace the ex-SAS F.28-4000s in the new year.

The seasonal Bergen to London (STN) service becomes twice-daily on October 29.

AIR BOTSWANA CORPORATION, LTD.: Head Office Building, Sir Seretse Khama Airport, P.O. Box 92, Gaborone, Botswana; Phone 267 352 812; Fax 267 375 408; Code BP; Year Founded 1972. To succeed **Botswana National Airways** (1966–1969) and **Botswana Airways Corp.** (1970–1971), this carrier is formed at Gaborone by presidential decree on July 2, 1972. The government-backed Botswana Development Corp., the major controlling interest, enters into a long-term contract with South Africa-based (but Botswana registered) Air Services Botswana (Pty.), Ltd., to operate aircraft on its behalf. Flight operations commence on August 1 with a single leased Fokker F.27 Friendship.

Between 1973–1980, international service is flown over a route Gaborone–Manzini, Johannesburg, and Salisbury while domestic services are provided to Selebi Phikwe, Mann, and Francistown. Chairman R. C. Stephens and Managing Director S. G. Choppin build a fleet comprising one Vickers Viscount 754, a Hawker Siddeley HS 748, and a Douglas DC-3.

After eight years, Air Services Botswana (Pty.), Ltd. for financial reasons, elects not to renew its operational contract. The Botswana Development Corp., on July 1, 1981, enters into a six-year services/management contract with **British Airways, Ltd. (2)**. Flight services with two F.27s leased from Air Botswana Holdings (the carrier's new parent company) begin anew in October.

Charles Pollock becomes general manager on January 1, 1982 and a maintenance contract is entered into with South African-based **Safair Freighters (Pty.), Ltd.**

Enplanements for the year total 46,734. Financial losses are suffered: \$365,326 (operating) and \$426,670 (net).

The employee population is increased 7.3% in 1983 to 133. **Air Botswana Cargo, Ltd.** is formed as a subsidiary to offer long-haul freight charter services with a leased Lockheed L-100-30 Hercules freighter. When **South African Airways (Pty.), Ltd.** withdraws from

the Johannesburg to Gaborone route, **Air Botswana (Pty.), Ltd.** increases its roundtrip frequencies to the Cape city to 17 per week.

Passenger bookings accelerate 7.6% during the 12 months to 50,262, while freight traffic grows 47.4% to 115,000 FTKs. Although revenues are up by 20.1% to \$4.9 million, expenses rise faster, by 23.3%, to \$5.5 million. Consequently, red ink flows again in the form of a \$513,595 operating loss and a net \$581,006 downturn.

Late in 1984, a new Dornier 228-200 joins the fleet; it is flown and maintained under contract with Gaborone-based Kalahart Air Services. A contract is also arranged with **Okavango Air Services** to provide Cessna 402 flights over light and taxi routes on demand. The workforce grows to 131 and bookings reach 54,554.

Weekly frequencies to Johannesburg are increased to 17 during 1985. Other destinations visited from Gaborone include Francistown, Harare, Lusaka, Manzini, Maseru, Maun, Selebi-Phikwe, and Victoria Falls.

During the spring of 1986, negotiations are held with officials of **British Caledonian Airways, Ltd. (BCAL)** aimed at having the British operator undertake long-haul flights from Gaborone and London as well as between the Botswana capital and certain regional African destinations.

As a result, **Air Botswana (Pty.), Ltd.** establishes a blocked-space arrangement for the Lusaka-Gaborone sector of the British airline's London-Lusaka-Gaborone route, one which will be maintained when BCAL is taken over by **British Airways, Ltd. (2)**. In November, retired **SAS (Scandinavian Airlines System)** executive Juney Dillenbeck is appointed general manager, succeeding Charles Pollock, who returns to **British Airways, Ltd. (2)**.

Enplanements total 23,265 and an operating loss of \$1 million is suffered.

The employee population grows by a whopping 53.3% in 1987 to 230 and the fleet now includes 2 F.27s and 1 Dornier 228-100. Orders are placed for 3 Avions de Transport Regional ATR42-300s. In February, **Air Botswana (Pty.), Ltd.** ends its contract for Fokker maintenance in South Africa, transferring its maintenance to **Kalahari Air Services & Charters (Pty.), Ltd.** in Gaborone.

Passenger boardings for the year jump 5.3% to 49,500 and revenues advance to \$10.3 million. Costs, however, swell 34.9% to \$10.9 million. The operating loss swells to \$1.6 million and the net loss is \$2.9 million. During the past five years, the company has lost a total of \$3 million.

The workforce is increased again in 1988, by 34.6% to 284 and the fleet is temporarily increased when an F.27 is leased from **Lesotho Airways, Ltd.** and a BAe (BAC) 1-11-524 is chartered from **Air Malawi, Ltd.** With financial losses high, the company is taken over by the government of Botswana on April 1 and A. V. Lionjanga becomes chairman; at the same time, the government begins an investment of \$50 million in equity and loan finance. The first of three ordered ATR42-320s arrives in July, followed by a second in October. Late in the year, an order is placed for a British Aerospace BAe 146-100.

Customer bookings drop 4% to 57,718, but cargo increase 40.7% to 121,000 FTKs. Revenues decline by 4.7% to \$14.1 million and expenses fall 13% to \$14.3 million. The operating loss is \$225,000 and the net downturn is by \$2 million.

Airline employment rises 17.3% in 1989 to 333. Meanwhile, in May, General Manager D. Keith Petch retires and is succeeded by Deputy General Manager Brian Pocock, a former executive of **Air Malawi, Ltd.** A number of collaborative and joint venture arrangements are now made with other African carriers for improved regional services. Of the most immediate importance is a cooperative program with **Air Zimbabwe, Ltd.** that will allow for the BAe's maintenance in Harare.

At the same time, operational activities are transferred to Gaborone. The BAe 146-100 arrives in November and enters service in December, introducing the company's first business-class seating on a joint-venture route with **Air Zimbabwe, Ltd.** between Gaborone and Harare, five times a week.

Other flights now operated by the company's turboprops include a twice-weekly route from Maun to Johannesburg, a twice-weekly service from Gaborone to Nairobi, a twice-weekly run from Maun to Victoria Falls, and weekly flights to Manzini and Maseru.

Simultaneously, the Dornier 228-100 is turned over to Gaborone-based **Kalahari Air Services & Charters (Pty.), Ltd.**, which crews and maintains it on behalf of Air Botswana (Pty.), Ltd. and flies it almost exclusively for an organization that is building a soda-ash factory in the northeastern part of the country.

Passenger boardings bound upward 40.8% to 82,141 and freight skyrockets 105.6% to 368,000 FTKs. Revenues drop to \$9.57 million, expenses are \$10.3 million, and the operating loss is \$705,978. A \$1.6-million net loss is suffered.

Company employment is increased by 24.6% in 1990 to 415. Former General Manager Petch becomes general manager of **Namib Air, Ltd.** in January.

In an effort to keep its less-traveled routes alive, the carrier creates the subsidiary Southern Links, also in January, in order to take over its existing joint ventures with neighboring regionals and to establish new ones, as well as to take advantage of nonscheduled opportunities.

The following month, the carrier puts its F.27s up for sale and cancels its order for a third ATR42-302, electing to request a second BAe 146-100 instead. The BAC 1-11-524 is returned to **Air Malawi, Ltd.** and, beginning in March, the company introduces a wide range of domestic promotional fares, including special rates for youth and senior citizens.

During the spring and in cooperation with **TAAG Angola Airlines, Air Botswana (Pty.), Ltd.** signs an agreement with **UTA French Airlines, S.A.** concerning the transport of cargo over the Luanda-Gaborone sector of the European company's new Paris-Luanda-Gaborone route.

At the same time, the cooperative agreement with **Air Zimbabwe, Ltd.** is expanded to include operations, such as the undertaking of domestic flights on behalf of the northeastern neighbor. In addition, a cooperative agreement is signed with **LAM Mozambique Airlines**; the Air Botswana (Pty.), Ltd. BAe 146 flies certain LAM domestic services and is based at Maputo one day each weekend.

Customer bookings continue their upward path, by 23.3%, to 101,255 and 3.07 million FTKs are also flown. Revenues ascend 23.5% to \$18.9 million, and expenses are lower, causing an operating profit of \$153,357. The net loss jumps to \$1.7 million.

The payroll climbs again in 1991, by 9.4%, to 454 and the second BAe 146-100 is acquired in January. In March, a weekly service is inaugurated from Gaborone to Windhoek, Namibia, while twice-weekly flights commence from Gaborone to Dar es Salaam, one of which is flown via Lilongwe, Malawi. A number of marketing alliances are established with other African carriers and, in December, the carrier moves from its downtown Gaborone headquarters to new purpose-built offices at Sir Seretse Khama Airport.

Passenger boardings this year rise 7.5% to 109,113 and freight is up by a whopping 189.6% to 8.69 million FTKs. Revenues increase 11% to \$18 million, but expenses shoot up 18.8% and bring an operating loss of \$1.1 million.

The workforce is sliced by 3.3% in 1992 to 439 and the fleet now includes 2 BAe 146-100s, 2 ATR42-320s, and 1 Dornier 228-100. General Manager Brian Pocock continues building alliances that he hopes can be combined into a network that can provide joint long-haul services.

Under an arrangement with **Uganda Airlines, Ltd.**, the carrier inaugurates twice-weekly service in April from Gaborone to Entebbe via Nairobi; the Nairobi to Entebbe sector is operated on behalf of UA. On behalf of **LAM (Linha Aerea de Mocambique, S.A.)**, Air Botswana operates weekend domestic services in Mozambique.

Customer bookings accelerate 8.7% to 111,166 and cargo jumps 31.5% to 560,000 FTKs. Revenues swell to \$22.8 million and allow an operating profit of \$2.4 million. The net loss is \$2.3 million.

As the financial picture further darkens later in 1993, the fleet is altered. Gone by September are the BAe 146-100s and Dornier, replaced by one each Embraer EMB-110P1 Bandeirante and BAe Jetstream 31.

The workforce now stands at 360 and the routes to Dar es Salaam and Lilongwe are suspended. Service is continued, however, linking Gaborone with Harare, Johannesburg, Lusaka, Manzini, Nairobi, Victoria Falls, and Windhoek. Traffic figures are not provided.

The workforce totals 420 in 1994 and a third ATR42-300 is ordered. Having held the post on an acting basis since June, Joshua B. Galeforolwe succeeds Capt. Pocock as managing director in September. The Southern Links subsidiary, an unsuccessful experiment, is folded back into the parent. Enplanements for the year total 100,519, while FTKs are 479,000.

A BAe 146-100 is returned to service in 1995 as customer bookings rise to a total of 22,465.

Airline employment stands at 360 in 1996 and the fleet now includes the 2 ATR42-320s and 1 BAe 146-100. Routes are initiated to the Okavango Delta, Chober National Park, and Victoria Falls from Johannesburg and Gaborone. Flight frequencies to Maun and Kasane is increased. Enplanements dip 1.7% to 22,090.

There is no change in the workforce during 1997. It is reported in March that losses taken during the 1993-1996 period are being trimmed. Renewed emphasis is placed upon customer services. In September, the BAe 146-100 is leased via Fortis Aviation, to **Air Zimbabwe, Ltd.** It is replaced with a third ATR42-320.

Passenger boardings are reported through November and show an increase of 12.2% to 107,932.

Destinations visited from Gaborone in 1998 include Francistown, Harare, Johannesburg, Luanda, Lusaka, Maputo, Maseru, Maun, Nairobi, Victoria Falls, and Windhoek. Customer bookings for the 12 months accelerate 14.5% to 124,000.

The workforce at the beginning of 1999 totals 300.

A catastrophic suicide puts the airline at least temporarily out of business on October 11. Having been grounded for medical reasons, a disgruntled company captain, Chris Phatswe, sneaks aboard one of the ATR42-320s at Gaborone early on the morning in question and takes off without authorization. Informing ATC that he is going to kill himself, the man flies over the airport for two hours, performs a pair of loops, and then makes a 200-kn. dive into the concern's other two ATR42-320s, parked together on the apron. All three planes and the pilot are destroyed in the resulting explosion and fire.

The company's BAe 146-100, which had been returned from lease to **Air Zimbabwe, Ltd.**, and which is grounded with technical problems, is put up for sale in the early fall.

Employing three replacement ATR42-520s delivered on December 10, Air Botswana is able to resume its disrupted operations three days later with five daily roundtrips between Gaborone and Johannesburg. Toward month's end, new weekly return flights are started to Francistown and Maun.

An agreement is signed with **Kenya Airways, Ltd.** on January 26, 2000, calling for the resumption of service between Gaborone and Nairobi within several months. In March, thrice-weekly Fokker F.27F cargo flights are launched from Gaborone to Johannesburg.

A contract is signed with International Finance Corporation in April; under its terms, this arm of the World Bank will help the airline prepare for privatization. The first step is preparation of a strategic options report.

During the last two weeks of May, 6 of the company's 13 pilots resign over safety concerns, with a 7th fired for incompetence; additional flyers are sought from Ethiopia and Zimbabwe.

Chairperson Mmapula Modise, in the company's annual report released in July, has the pleasure of informing her government superiors that the insurance proceeds received from the October tragedy are actually responsible for over 70% of the net profit during the accounting year. Had the accident not occurred, the net profit, on a P 90-million turnover, would have been P 23.89 million instead of the P68.7 million banked.

In August, an ATR72-212, previously operated by **Continental Express**, is leased from its manufacturer.

AIR BRAS D'OR, LTD.: Canada (1986-1987). Established at Sydney, Nova Scotia, during the summer of 1986, this third level commuter is an associate of **Air Dale, Ltd.** Obtaining a pair of de Havilland Canada DHC-6 Twin Otters, the carrier inaugurates scheduled services on September 22, linking its base with Digby, Port Hawkesbury, Halifax, Fredericton, St. Leonard, Charlo, and Charlottetown.

The Port Hawkesbury stop is suspended in February 1987 as the company encounters financial reversal. So significant does the flow of red ink become that Air Bras d'Or, Ltd. is forced out of business on July 17.

AIR BRAZEAU, LTD. See QUEBEC AVIATION, LTD.

AIR BRAZIL, S.A.: Brazil (1991). Following the government's partial liberalization of the national airline industry, Air Brazil is established at Rio de Janeiro in April 1991. Majority ownership is held by **Lider Taxi Aereo, S.A.** in partnership with São Paulo-based TNT SAVA, S.A., a **TNT Worldwide Express** unit. A fleet of 3 British Aerospace BAe 146-200s is assembled.

Hoping to become the first carrier to place jetliners on the "Air Bridge" to São Paulo, the company is unable to get them into operation before competitors **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**, **VASP Brazilian Airlines (Viacao Aerea Sao Paul, S.A.)**, and **Transbrasil, S.A. (Linhae Aereae)**, which had been operating Lockheed L-188A Electras.

Still, the company inaugurates its eight daily roundtrips over the route on July 20. **Lider Taxi Aereo, S.A.**, seeing that the new entrant's one potential advantage has been lost, abandons its new entrant in December, returning the BAes to their manufacturer.

AIR BREMEN, GmbH.: Germany (1989–1990). AB is formed at Bremen Airport in the spring of 1989 to offer regional commuter service. Former **KLM (Royal Dutch Airlines, N.V.)** executive Augustinus Boots is named managing director and his initial fleet comprises two, later four, SAAB 340As. Scheduled services are inaugurated from Bremen to London (STN), Paris, Copenhagen, Vienna, Osnabruck, Brussels, and Amsterdam. A total of 25,000 passengers are flown on the year.

During the first six months of 1990, discussions are held with the Dutch flag carrier concerning a possible capital investment and cooperative agreement. The negotiations fail in early July when **KLM (Royal Dutch Airlines, N.V.)** elects to take shareholding in the larger French regional **Air Littoral, S.A.** and an effort to interest **Hapag Lloyd** is also unsuccessful. A code-sharing agreement is signed with **American Airlines** in early August and provides for the connection of the U.S. major's flights from Chicago and New York with AB's service to Brussels.

AA's first code-sharing agreement with a European carrier comes too late to help AB achieve fiscal viability. Faced by higher fuel bills in the wake of the Mideast crisis, the City of Bremen and Sweden's Salenia refuse, on August 22, to provide the capital necessary to keep the airline going.

Adolph Horn is appointed receiver and the regional is forced to close in October after a \$10-million rescue plan, involving a subsidiary of the former East German carrier **Interflug DDR Airlines**, collapses.

AIR BRETAGNE SERVICE, S.A.: France (1990–1991). Organized at Bais in 1990, this small commuter names Joseph Jeuland as general manager and assembles a fleet comprising 2 Beech King Air 100s and 1 Piper Cheyenne II. Revenue services are launched to regional destinations; however, insufficient return is earned to justify continuance and the service ceases in 1991.

AIR BRIDGE CARRIERS, LTD. (ABC): United Kingdom (1972–1992). Armstrong-Whitworth Argosy 102 lessor Field Aircraft Services founds this charter subsidiary in August 1972 in order to find employment for the three Argosys left idle upon the collapse of **Sagittair, Ltd.** The three freighters return to service when ABC is created by the Hunting Group in November and transport flowers and produce between East Midlands Airport and the islands of Jersey and Guernsey.

One Argosy is sold in April 1974, being replaced by a Vickers Viscount 808. Freight charters are mounted to Scotland and Europe, including Zagreb.

The Viscount is converted to "combi" status in February 1975 and undertakes Lydd-Beauvais replacement service for **Dan-Air/Dan-Air**

Services, Ltd.'s coach-air operation. A major contract is initiated with Rolls Royce to fly engine parts to and from Germany and Italy. During 1976–1978, Managing Director J. D. Capstick's carrier has a 50-employee workforce and a fleet comprising 3 Argosy 102s, 1 Vickers Vanguard V953C Merchantman, and 2 Handley Page Herald.

During the next 15 years, the Argosy fleet is reduced, first to two machines, and then none; however, the company flotilla is increased by the addition of six Merchantmen freighters. Additional destinations are found in Europe, Africa, and the Middle East and the company becomes a subsidiary of Hunting Associated Industries. The employee population averages 130 and some 20,000 tons of freight are transported annually.

An AW-650 Argosy 102 with two crew, is damaged beyond repair as the result of the collapse of the right main landing gear during the freighter's Belfast landing on April 17, 1982; there are no injuries.

During the late 1980s, the carrier begins to emphasize European carriage and comes to restrict its operations to 15 Continental destinations in 10 countries. The company now becomes an EC pioneer in the delivery of overnight express parcels, accepting contracts from both **Federal Express** and **United Parcel Service (UPS)**.

The 6 Merchantmen increase freight traffic during the first nine months of 1988 by 48.3% to 12.8 million FTKs. A Lockheed L-188C is leased from a U.S. concern late in the year for use as a freighter.

The workforce is increased by 50% in 1989 to 180. The fleet, too, is changed. Half of the Merchantmen are withdrawn and are replaced by a combination of 6 Lockheed L-188C Electras and 1 Boeing 737-200QC, the company's first jetliner. Traffic is level at 12.98 million FTKs.

Company employment is cut 11.1% in 1990 to 160. Cargo tumbles 12.6% to 11.34 million FTKs, due largely to the uncertain political situation following Iraq's August invasion of Kuwait.

Operations continue apace in 1991 and in 1992 Chairman G. H. Williams and Managing Director M. P. Timpson employ 185 workers.

In September, the company is renamed **Hunting Cargo Airlines, Ltd.**

AIR BRISTOL, LTD. See AB AIRLINES, LTD.

AIR BROUSSE, S.A.: Belgian Congo/Congo (1955–1967). Privately owned Air Brousse is established at Leopoldville in March 1955 to provide charter and scheduled services, including feeder flights on behalf of **Sabena Belgian World Airlines, S.A.**

Revenue flights commence to a number of points, including Lulua-bourg, employing a fleet that includes 4 Piper PA-23 Aztecs, 2 PA-23 Apaches, 7 Beech 18s, and 5 de Havilland DH 89A Dragon Rapides.

Services continue apace until June 30, 1967, when the concern is taken over by **Air Congo, S.A. (2)**.

AIR BURKINA, S.A.: Avenue Loudun, Siege Social, P.O. Box 1459, Ouagadougou, 307676, Burkina Faso; Phone 226 30 6144; Fax 226 30 6144; Code 2J; Year Founded 1985. The state airline **Air Volta, S.A.** is renamed **Air Burkina, S.A.** in 1985 to better honor the name of its nation, Burkina Faso, known before its 1984 independence as Upper Volta. The predecessor carrier's Fokker F.28-4000, de Havilland Canada DHC-6 Twin Otter, and Embraer EMB-110P2 Bandeirante are pressed into service on the old regional and domestic routes.

In need of less capacity, the Fellowship jetliner is traded to Fokker in May for an F.27 Friendship. Domestic destinations visited include Bobo Dioulasso, Dori, Sebba, Gorom, Diapaga, Bogande, Fada, and Pama. The Fokker links the capital of Ouagadougou with Abidjan, Bouake, Cotonou, Lome, Niamey, and Bamako.

Little change is seen in Managing Director H. Kere's operation until October 8, 1988. That day a DHC-6-300 fails its takeoff from Dori; although the Twin Otter is badly damaged in the subsequent forced landing, there are no fatalities.

In 1989, Managing Director Kere is replaced by Bintou Sanogoh. Flights to Accra cease. Sanogoh is succeeded by Paul Antoine Ganem-tore in 1990, who retires the Twin Otter.

Kere is back in charge by 1993 and his fleet includes the F.27 and Bandeirante. A domestic route is flown from Ouagadougou to Bobo

Dioulasso and international destinations include Cotonou and Lome, Brazzaville, Bamako, and the Ivory Coast cities of Abidjan and Bouake.

A Fokker F.28-4000 is reacquired in **1994** and operations continue in **1995–1998**. During these years, Mathieu K. Bouda becomes Managing Director and airline employment reaches 75. The fleet now comprises the Fokker Fellowship, the Bandeirante, and a de Havilland Canada DHC-6-300 Twin Otter.

A delegation led by Parliamentary Minister Cyrille Goungounke is aboard the F.28-4000 when it resumes twice-weekly flights to Accra on February 26, **1999**.

It is reported in early 2000 that Air Continental, S.A., which has continued its low-key, nearly invisible Ivory Coast service over the past two years, has been given an ex-Burkina Faso air force Nord 262C with which to operate between Ougadougou and Bobo Dioulasso on behalf of Air Burkina.

AIR BURUNDI (SOCIETE DE TRANSPORT AERIEN DU BURUNDI, S.A.): BP 2460, 40 Ave. du Commerce, Bujumbura, Burundi; Phone 257 (2) 224 609; Fax 257 (2) 23 452; Code PBU; Year Founded 1971. Created at Bujumbura in April **1971**, this state carrier is initially known as **Societe de Transport Aerien du Burundi, S.A. (STAB)**. Revenue services are started over a route to Gitega in early summer employing two Douglas DC-3s. The present title is adopted in June **1975**.

During the remainder of the decade, the carrier maintains its growing domestic network and undertakes agricultural flights. In **1978**, the carrier obtains a Sud SE-210 Caravelle III wet-leased from **Air Afrique, S.A.**, which is employed to inaugurate scheduled passenger services to Kigoma and Kalemie.

In the **1980s**, the fleet is increased by the addition of two de Havilland Canada DHC-6-300 Twin Otters. The international services are dropped; however, the Canadian turboprops are able to maintain twice-weekly flights to Kigali (Rwanda). In July, **1986**, Lt. Col. Libere Nahimana is named CEO. In **1988**, Managing Director G. Mugabo's Twin Otters also begin service to Kalemie and Kirundo. A Cessna 210 is acquired in **1989**.

Operations continue apace in **1990–1991** and in **1992**, the fleet includes 1 each Beech 1900C and Caravelle III, plus 2 DHC-6-300s, 1 of which is leased to Zaire's **Virunga Air Charter, S.A.** Destinations now visited from Bujumbura include Goma, Kalemie, Harare, Kigoma, Kigali, Lusaka, Kilimanjaro, and Nairobi. The French-made jetliner is withdrawn in **1993–1994**, with new President Kagari Cyprien and Managing Director Isaac Gafuero now overseeing a workforce of 87.

Operations continue without change in **1995**. In a July **1996** coup d'état by Maj. Pierre Buyoya, regional African nations place an economic and transportation embargo on the country. The allied measure effectively grounds the airline. During the remainder of the year and in **1997–1998**, transport at all levels in Burundi is paralyzed. A shortage of imported goods develops and exports dry up.

With political pressure easing, the leaders of East Africa lift their embargo of Burundi on January 25, **1999**. On February 1, Air Burundi is permitted to resume flights to Rwanda, Kenya, and Uganda with its Beech 1900C.

AIR BUSINESS, A.S.: Denmark (1980–1988). Organized at Esbjerg Airport as a division of Alkair, S.A., Air Business undertakes scheduled, international passenger commuter flights over routes to Stavanger and Thisted. In the spring of **1983**, the carrier is acquired by **Maersk Air, A.S.**, which operates it as a subsidiary.

In **1984–1985**, the carrier's two Shorts 360s and single Embraer EMB-110 Bandeirante also undertake replacement flights for its parent to Aarhus and certain Danish cities.

A third Shorts 360 joins Managing Director Jan Goffredsen's fleet in **1986**. Services are maintained in **1987** and in **1988** the company is reformed as **Maersk Commuter, I.S.**

AIR BVI (AIR BRITISH VIRGIN ISLANDS, LTD.): British Virgin Islands (1971–1995). Air British Virgin Islands, Ltd. is founded at

Beef Island Airport, Tortola, in June **1971** as the national airline of the British Virgin Islands. Equipped with four Britten-Norman BN-2 Islanders, the company, following six months of charter operations, begins scheduled flights from Beef Island Airport in July **1972**.

Services are undertaken to Virgin Gorda, San Juan, St. Croix, and Antigua. The fleet is increased in **1975** by the addition of 4 Douglas DC-3s. Shareholding is reorganized in **1976** and the marketing name is changed to Air BVI; ownership is taken by local businessmen, a charitable trust (Air BVI Trust), and company employees.

During **1977–1985**, the fleet is upgraded by the addition of another DC-3, 1 de Havilland Canada DHC-6, and 1 Hawker Siddeley HS 748, the latter chartered from **Dan-Air/Dan-Air Services, Ltd.** Airline employment grows to 90 and additional destinations include St. Martin and St. Kitts.

In **1986–1991**, the workforce grows to 120. Additional stops are made at Dominica, Anguilla, and La Romans. CEO Elihu Rhymer's fleet is upgraded to comprise 3 British Aerospace BAe (HS) 748-B2s (2 of which are leased from **Dan-Air/Dan-Air Services, Ltd.** and the third acquired from **Air Malawi, Ltd.**) and 3 Islanders.

Having great difficulty in maintaining viability in a time of recession, the company reduces its fleet in **1992** to 1 BAe (HS) 748-B2 and leases 1 Shorts 330. In **1993**, President Rhymer oversees a workforce of 120. The fleet is now increased by the addition of 3 Pilatus Britten-Norman PBN-2 Islanders.

The Shorts 330 with 3 crew and 27 passengers, aborts its takeoff from Tortola on May 6 and overruns the runway into the ocean; there are no fatalities, but the turboprop is lost.

The expansion is overly optimistic and poor traffic forces withdrawal in **1994** of one of the new Islanders added the previous year. Flights cease in June **1995**.

AIR CAIRO, S.A.E.: Export Centre, Cairo International Airport, Helipolis, Cairo, Egypt; Phone 20 (2) 267 1456; Fax 20 (2) 267 0683; Year Founded 1997. Ibrahim Kamei establishes Air Cairo in **1997** to provide lift for holiday passengers visiting Egypt from Europe, Asia, and Africa. Revenue flights begin, and continue, with a fleet that includes 2 Tu-204-120s and 1 Tu-204-120C. The first airline outside of Russia to introduce the new Tupolev jetliners, the carrier may better known for its airplanes than its tours.

AIR CALEDONIE (SOCIETE CALEDONIENNE DE TRANSPORTS AERIENS, S.A.): BP 212, Aerodrome de Magenta, Noumea, 98-800, New Caledonia; Phone 687 25 23 39; Fax 687 25 03 00; http://www.air-caledonie.nc; Code TY; Year Founded 1955. With a base at Noumea's Aerodrome de Magenta, **Societe Caledonienne de Transports Aeriens, S.A.** is renamed Air Caledonie in **1968**. Reorganized, shareholding is divided between local government (76.3%) and private interests (23.7%). The fleet is upgraded to include Cessna 310s and Britten-Norman BN-2 Islanders. Scheduled services are maintained, linking Noumea with Mueo Kone, Koumac, Belep, Houailou, and Touhu in New Caledonia and Mare, Tiga, and Lifu in the Loyalty Islands.

During the early **1970s**, the fleet is upgraded to include de Havilland Canada DHC-6-300 Twin Otters and the airline also undertakes a regularly scheduled shuttle on behalf of **UTA French Airlines, S.A.** between the islands of Wallis and Futuna. Enplanements in **1973** are 80,754.

Airline employment in **1974** stands at 95 and the fleet comprises 3 Twin Otters and 3 Britten-Norman BN-2A Trislanders. Passenger boardings accelerate 4% to 84,119 while freight traffic is level at 151,000 FTKs.

Three more employees are hired in **1975** and a new terminal is opened at New Caledonia's Magenta Airport. The twentieth anniversary is celebrated in September and, as a result, the carrier's half-dozen planes all receive new livery. Passenger bookings jump 6% to 87,331.

The employee population is reduced by 4.1% in **1976** to 93. Several unprofitable routes are abandoned as passenger boardings rise 9% to 99,368. Freight grows 5% to 1.36 million FTKs.

A fourth Twin Otter is acquired in 1977. Operations continue apace during the remainder of the decade and into the early 1980s, with traffic growing steadily.

Enplanements total 119,956 in 1981 and climb each of the following two years: 1982, 133,511 and 1983, 135,299. Following the creation of **Air Caledonie International, S.A.** during the latter year, the company begins to concentrate exclusively on domestic flights.

One of the Islanders is replaced in 1984 by two more Twin Otters as orders are placed for two Aerospatiale-Aeritalia ATR42s. Enplanements in 1985 total 129,000.

The workforce totals 115 in 1986 and the fleet includes 3 DHC-6-300 Twin Otters. The first ATR42-300 is placed into service during the year, as orders remain outstanding for a second. Passenger boardings jump 11% to 145,000.

Enplanements in 1987 dip to 139,958. Although the company enjoys net income of \$1.3 million, there is an operating loss of \$1.36 million.

Airline employment is increased by 7.4% in 1988 to 130 and the fleet now includes 2 ATR42-300s and 3 Twin Otters.

Passenger boardings swell 15.1% to 164,850 and cargo is up by 2.2% to 163,148 FTKs. Revenues ascend 28.7% to \$7.6 million and an operating profit of \$261,546 is generated. There is, however, a \$279,700 net loss.

Customer bookings dip in 1989 to 160,000 as financial difficulties arise.

In 1990, Managing Director Christian Liaudel's fleet comprises the same 2 European turboprops and 3 Canadian-built Twin Otters. Orders are placed for 2 Dornier 228-202s. Enplanements climb to 200,000. Although an operating loss of \$2 million is suffered, there is a net profit of \$19,454.

The workforce is increased by 1.5% in 1991 to 208 as the Dorniers are delivered.

Passenger boardings rise 5.9% to 244,733 and freight climbs 8.6% to 3.46 million FTKs. Revenues fall 5.8% to \$18.5 million and with costs higher, losses are suffered: \$4.9 million (operating) and \$5.5 million (net).

The last two Twin Otters are replaced in 1992 and the fleet now includes 2 ATR42-300s, 1 of which is leased, and 2 Dornier 228-202s. Orders are outstanding for a Dornier 328.

In 1993, Chairman Guy Mennesson oversees a workforce of 194. Destinations visited from Magenta include Belep Island, Isle of Pines, Kone, Koumac, Lifou, Mare, Ouvea, Tiga, and Touho.

The first Dornier 328-100 enters service in 1994, along with a third ATR42-300. Flights continue without change in 1995-1997.

Service is maintained in 1998-1999. Enplanements in the former year total 280,000, a 0.6% increase over 1997. Freight traffic inches up 1% to 4.16 million FTKs. On revenues of \$26.89 million, a \$282,000 operating profit is gained. There is also a \$468,000 net profit.

Passenger boardings accelerate by 4.6% in 1999 to 293,000 while cargo rises 5.7% to 4.39 million FTKs. Revenues of \$22.15 million are generated and costs are \$22.09 million. Although the operating profit falls to \$57 million, the previous year's net loss is turned into a \$185-million net gain.

AIR CALEDONIE INTERNATIONAL, S.A. (ACI): New Caledonia (1983-1997). ACI is formed at Noumea, New Caledonia, on September 1, 1983 to provide scheduled, regional passenger and cargo service between the South Pacific islands of New Caledonia, Vanuatu, Fiji, Wallis, and Futuna, as well as Australia. Shareholding is split between public (34%) and private (66%) interests. Fifty employees are hired and the initial fleet comprises a single leased Boeing 727-200, although arrangements are made to lease a **Qantas Airways (Pty.), Ltd.** B-747 on occasion. A scheduled frequency is opened on December 2, Noumea to Melbourne.

During 1984, the fleet is enhanced by the addition of 1 Britten-Norman BN-2 Islander, 4 de Havilland Canada DHC-6-300 Twin Otters, and 1 Cessna 310P, all of which are committed to short-haul services.

Enplanements for the first full year of service total 133,905. Profit totals are \$163,331 (operating) and \$72,866 (net). Passenger boardings dip 2.4% in 1985 to 130,767 and freight drops by 2% to 149,000 FTKs. Rev-

enues jump 12.7% to \$6.58 million as expenses grow 12.3% to \$6.37 million. The operating profit is \$207,290 while the net profit is \$407,290.

Air Caledonie International employment stands at 85 in 1987 as customer bookings accelerate 20.2% to 52,083. Managing Director Dany Famin's carrier adds 23 personnel in 1988, plus a number of destinations, including Auckland, Sydney, Brisbane, Port Vila, Nadi, and Papeete. The Boeing trijet is replaced by a leased B-737-33A.

Passenger boardings rise 22% to 62,120 and freight climbs 6.6% to 322,000 FTKs. Revenues jump 25.5% to \$11.2 million.

Airline employment is increased by 25% in 1989 to 135. Bookings through September are up to 55,234 while freight moves to 91,000 FTKs. A \$1.28-million net loss is suffered.

The workforce grows another 17.3% in 1990 to 149 as new Managing Director Alain Ballereau oversees inauguration of a new scheduled service to Melbourne. A de Havilland Canada DHC-6-300 Twin Otter is also acquired.

Passenger boardings for the entire year jump 14.1% to 106,420. Revenues of \$19.8 million exceed expenses and allow operating income of \$4.06 million and a net profit of \$274,400.

The payroll climbs another 2.7% in 1991 to 153. Although customer bookings slide 1.6% to 99,782, revenues increase 17.3% to \$23.2 million. Costs are not kept down and, as a result, there is an operating loss of \$704,000. A net profit of \$639,310 is earned.

One more employee is hired in 1992 as operations continue with the Twin Otter and leased B-737-33A.

Passenger boardings ascend 2.1% to 101,915 while freight falls 4.9% to 846,000 FTKs. Revenues inch up 1.6% to \$23.6 million and the operating loss is \$751,000. The net profit dips to \$549,000.

In 1993, Managing Director Ballereau oversees a workforce of 159, up 1.9% over the previous year. Markets visited from Noumea include Auckland, Brisbane, Melbourne, Sydney, Port Vila, Nadi, Wallis Island, and Papeete.

Customer bookings climb 3.9% to 86,536 while cargo ascends 2.5% to 1.53 million FTKs. Revenues slip up by 3.7% to \$24.4 million. The operating loss increases to \$780,290 while there is a small net profit of \$19,467.

The employee population is increased by 6.9% in 1994 to 170, but the fleet is unchanged.

Passenger boardings dip 0.1% to 86,033, but freight is up a strong 9.8% to 1.68 million FTKs. Revenues also slide 0.1% to \$24.4 million, but expenses increase by 3.2% to \$25.98 million. Consequently, the operating loss is \$1.58 million; however, a net \$173,270 profit is reported.

The workforce grows by another 20.6% in 1995 to 205. The worldwide recovery being enjoyed by the airline industry makes its way to Noumea and this carrier shows renewed growth.

Customer bookings accelerate 24.2% to 106,817 while cargo skyrockets 192.8% to 4,931,000 FTKs.

Airline employment is reduced 7.8% in 1996 to 189. Using its own aircraft, Air Caledonie International inaugurates a code-sharing service with **Air Pacific** in July over a route from Nan to Papeete. The carrier's two aircraft transport a total 110,685, a 3.6% increase. Additionally, 3.52 million FTKs are operated, a drop of 28.6%.

On January 1, 1997, the carrier completely changes its identity, becoming **Aircalin, S.A.**

AIR CALIFORNIA: United States (1965-1981). Launched in mid-December 1965 by a group of investors led by Bill Myers and William L. Pereira, Air California is granted a California operating certificate in September 1966. A fleet of 4 Lockheed L-188As is purchased from **American Airlines** and is employed by the intrastate to begin five daily return trips between Orange County Airport (Los Angeles) and San Francisco beginning on January 16, 1967.

Frequencies are increased to seven per day on April 1 and the fleet is enhanced by the addition of 2 leased Douglas DC-9-30 jetliners. Routes are expanded to Oakland and San Jose on October 23.

Enplanements for the year total 300,000.

On June 11, 1968, the carrier is granted a new route from Ontario to Oakland. The DC-9s are now replaced by the first of six ordered Boeing 737-293s. During the fall, the four Electras are sold to an aircraft leasing concern and then chartered back into service.

A new frequency is opened on December 3 to San Jose and Oakland from Burbank.

With 600,758 passenger boardings during the year, the airline becomes one of the quickest startups in pre-deregulation U.S. commercial aviation history. However, startup and expansion costs result in a \$1-million loss on revenues of \$6.65 million.

The fleet in 1969 reaches 6 B-737-293s and the withdrawal of the Electras begins in March.

Although the company challenges **Pacific Southwest Airlines (PSA)** only on the routes from Burbank to San Jose and Oakland, a bitter fare war is fought with the intrastate rival. California's population boom encourages the rivalry.

Passenger traffic and revenues continue upward; customer bookings total 831,690.

The employee population grows 10% during 1970 to 500 and the fleet includes 7 aircraft.

In January, **Pacific Southwest Airlines (PSA)** moves to take over Air California. Following five months of hearings before the public utilities commission, PSA declares its merger attempt a failure and withdraws.

Westgate-California Corporation obtains controlling financial interest in June. Also during the month, an L-188C, first operated by **Northwest Airlines**, is dry-leased for charter work, principally on behalf of the San Diego Padres major league baseball team.

Customer bookings decline 4.3% to 799,702, but 237,403 freight ton-miles are flown, an increase of 8.2%.

Westgate-California refinances the carrier in 1971 and enplanements grow to 856,653.

The employee population in 1972 numbers 558. When Westgate-California moves to take over **Pacific Southwest Airlines (PSA)**, the DOJ halts the effort by threatening to file an antitrust suit against the corporation.

Passenger boardings jump 20.9% to 1,083,000 and 550,000 freight ton-miles are flown, a remarkable 40.8% gain. As a result of this activity, the company records its first real profit, a trend that will continue for eight years.

Three new employees are hired in 1973. In order to allow more students to visit more sites, a special fare "Students Unlimited" service is inaugurated. New routes are opened from San Diego to San Jose and from Ontario to Sacramento. By December, the intrastate is number one in the latter market in terms of passengers boarded.

Customer bookings accelerate 19.9% to 1,307,000 while the number of freight ton-miles flown rise a remarkable 109.7% to 854,000. The net profit exceeds \$2 million.

The workforce is 620 in 1974 and the fleet includes 7 B-737-293s and 1 L-188C. Frederick R. Davis, named vice president of marketing, immediately undertakes a new advertising campaign promoting the company as the "easiest" method of getting anywhere in the Golden State. The maintenance base is transferred across the bay from San Francisco to Oakland and new corporate headquarters are occupied at Orange County Airport.

Destinations now visited include San Diego, Palm Springs, Ontario, Monterey, Fresno, San Jose, San Francisco, Oakland, and Sacramento. Late in the year, a B-737-293 is leased to **Aloha Airlines**.

Still an intrastate operation, Air California originates 1.4-million enplanements, an increase of 10.4%. Cargo traffic is up a minor 1% as 945,000 FTKs are flown.

Seventy-eight new employees are hired in 1975. In the face of competition from larger carriers, AC continues to make headway. Service to Lake Tahoe, undertaken exclusively by turboprops, is initiated in February. Frequencies to Monterey are also started during the first quarter. The fleet is increased by the addition of another B-737-293 and a Lockheed L-188A Electra, which is dedicated to the Lake Tahoe route.

Passenger bookings accelerate 9.8% to 1,584,000 and 1.37 million FTKs are flown, a rise of 45.9%.

The workforce is increased 12.3% in 1976 to 784. The **Qantas Airways (Pty.), Ltd.** L-188Cs *Pacific Electra* and *Pacific Explorer* are acquired in June and August, respectively, and frequencies to Lake Tahoe are increased. Computerized ticketing is achieved by the intrastate.

Customer bookings jump 22.8% to 1,844,894 while cargo is up by 20% to 818,064 FTKs.

Permanent state certification for Lake Tahoe is granted to President Robert W. Clifford's carrier early in 1977. The fleet grows to include 10 B-737-293s, plus the 4 L-188A/Cs. Westgate-California acquires full ownership in October.

Enplanements for the year are 2,214,030.

The number of employees grows by 12.2% in 1978 to 1,150. Following passage of the Airline Deregulation Act, the intrastate extends operations to Reno; service to the Nevada community allows the carrier break into the ranks of the interstates.

Traffic increases 9% to 2,433,420 passengers carried, while cargo accelerates 11% to 4.2-million ton kilometers.

The workforce is boosted 26.1% in 1979 to 1,450. The fleet's last three Electras are phased out and sold to **Mandala Airlines**, making it an all-jet airline, and orders are placed for four McDonnell Douglas DC-9-80s (MD-80s). CAB certification is received and interline agreements are completed with all major U.S. carriers. A scheduled interstate route is inaugurated to Las Vegas in November.

Passenger boardings rise 20.1% to 2,920,000. Revenues total \$98.11 million and expenses are \$96.85 million. The happy imbalance results in an operating profit of \$1.26 million and net gain of \$1.34 million.

The employee population is boosted 27.3% in 1980 to 2,100. Frequencies to Portland, Oregon, are started in March and passenger charters are started to Mexico. Joseph R. O'Gorman is named vice president of operations and the first two MD-80s are delivered during the fall. Following adoption of the CAB's new classification scheme, Air California is re-rated as a national carrier, based upon its income.

Passenger traffic accelerates by 4.8% to 2,997,000. Revenues jump 61.89% to \$158.83 million while costs climb only to \$146.66 million. Consequently, a \$2.13-million operating profit is realized, along with a \$9.88-million net profit.

The number of workers is increased by 4.8% in 1981 to 2,200.

Flight 336, a B-737-293 with 5 crew and 105 passengers, is destroyed as the result of a bad landing at John Wayne Orange County Airport, Santa Ana, on February 17 following a flight from San Jose; there are no fatalities.

A bidding war with **Air Florida** for control of the carrier is resolved in May when William Lyon and George L. Argyros purchase the company from Westgate-California Corporation for \$61.5 million. The new owners immediately change the name of their prize to **AirCal** and adopt a new corporate identification program.

AIR CALYPSO, LTD.: Barbados (1973-1977). The former **Barbados Intercontinental Airways, Ltd.**, largest charter airline in the Caribbean, is reformed in 1973 and renamed. The workforce totals 51 and the fleet includes just 2 aircraft, both Convair CV-440 Metropolitans. Orders are placed for a pair of Soviet-built Yakalov Yak-40s. Charters continue to be offered to destinations in South America and a new series of one-day Inclusive-Tour Charters (ITCs) are opened to various Caribbean vacation resorts. In all, 22,000 passengers are flown.

In 1974, the company takes delivery of the two Yak-40 airliners and begins scheduled interisland service. Construction of a large maintenance facility is also begun. Operations cease in 1977.

AIR CALYPSO, S.A.: Aeroport du Raizel, Abymes, Guadeloupe, F-97139, French West Indies; Phone 590 89 27 91; Fax 590 93 73 14; <http://www.air-calypso.gp>; Code KLY; Year Founded 1997. Air Calypso is established at Guadeloupe in the fall of 1997 to offer regularly scheduled passenger services from its Pointe-à-Pitre base to Martinique

and St. Martin. Simon Hayot is named general manager; he recruits a staff of 84, acquires a pair of Shorts 360-300s, and launches flights on December 9.

Service, including various charters, is maintained into the new millennium.

AIR CAMBODGE, S.A.: Cambodia (1970–1975). Renamed Air Cambodge, S.A. after the fall of Prince Sihanouk and the monarchy in March 1970, the former **Royal Air Cambodge, S.A. (1)** now provides often-intermittent flights. The fleet at the end of the year includes several Douglas DC-3s, 1 DC-4, 1 DC-6, 1 DC-6B, 1 Convair CV-440, 1 Britten Norman BN-2 Islander, 1 Ilyushin Il-14 received as a gift from China the previous year, and most important of all, 1 Sud Est SE-210 Caravelle III jetliner.

Pride of the mixed-fleet, the Caravelle III is destroyed on the ground at Phnom Penh on January 22, 1971 during a guerrilla attack. It will be replaced with a similar unit, which is employed to restart services to Bangkok suspended a decade earlier. On October 2, 1972, a DC-3 is hit by mortar fire at Kampot (nine dead).

En route from Svay Rieng to Phnom Penh on May 19, 1973, a DC-3 with two crew and nine passengers is hit by ground fire shortly after departure from its point of origin and crashes 130 km. SE of its destination. There are no survivors.

A CV-440 is destroyed in a rocket attack on Phnom Penh Airport on June 10.

With a fleet of 12 aircraft, including 3 DC-4s, several DC-3s, 1 Convair CV-440, and 1 Sud-Est SE-210 Caravelle III, many of which are leased from **China Airlines, Ltd. (CAL)** and the Singapore-based **Southeast Asia Air Transport (SEAAT)**, Air Cambodge, S.A. transports 134,850 passengers during the year, a high water total in annual enplanements. A significant amount of freight is also hauled, some of it by an ATL-98 Carvair acquired via an SEAAT lease from **Ansett Airlines of Australia (Pty.), Ltd.** during the spring.

Airline employment in 1974 is 350. The ravages of political uprisings devastate traffic. Aircraft flying from Phnom Penh are employed to visit such outlying communities as Kompong Chhnang, Battambang, or Khompong Thom. These flights allow fresh food to enter the isolated capital city while permitting rice, much of it arriving as foreign aid from America, to be distributed to the country's outposts.

On June 24, the Carvair crashes while taking off from Battambang (19 dead). An extreme left-wing Communist faction, the Khmer Rouge, now enters the Second Indochina War, turning the fighting in Cambodia into a particularly vicious civil war.

En route from Phnom Penh to Hong Kong on November 28, a DC-4 freighter with three crew is shot down near An Loc, 100 km. N of Saigon; there are no survivors.

Passenger boardings decline 55% to 87,000. Still, with 9.98 million FTKs flown, freight traffic is up by a full 16%.

The problems of war and continuing Communist successes make operations considerably more difficult for the airline as 1975 begins. Khmer Rouge gunners begin an intensive shelling of the capital city on January 1, destroying several company DC-3s on the ground. On January 15, a CV-440, descending to Phnom Penh, is hit by a "friendly fire" 105-mm. howitzer shell; although the Metropolitan is able to land safely, a young girl is dead and 19 other passenger are injured.

Following the defeat and overthrow of the government by the Khmer Rouge in April, the carrier ceases operations altogether. Several of its aircraft are abandoned, including the wrecked Carvair.

AIR CAMELOT, LTD.: United Kingdom (1986–1987). Bristol-based **Aviation West, Ltd.** changes its name to Air Camelot, Ltd. late in 1986. Early in 1987, Managing Director G. S. Mimms changes his fleet to an all-Trislander operation as his Aerospatiale helicopters and Pilatus-Britten-Norman BN-2 Islander are traded in for three more Pilatus-Britten-Norman BN IIIs.

Services continue to the previous destinations of Alderney, Bournemouth, Cherbourg, and Exeter; however, the summer season does

not prove sufficiently lucrative to cover mounting expenses and as a result, the small third-level carrier is forced to stop trading late in the year.

AIR CAMEROON (SOCIETE ANONYME DES AVIONS MEYER ET COMPAGNIE, S.A.): Cameroon (1953–1971). Cameroon is established by Meyer & Company, S.A. at Douala in July 1953 as successor organization to the earlier **Regie Air Cameroun, S.A.** Douglas DC-3 cargo and charter operations are undertaken over the next two years within the former French Cameroons and to adjacent nations. Two Curtiss C-46 Commandos are acquired from **Air Maroc, S.A.** in 1955 and are employed on the company's all-cargo routes to Yaounde and Fort Lamy, the latter point in Chad. Flights continue without significant fanfare during the remainder of the decade.

The fleet is increased during the first half of the 1960s in order to provide for the initiation of scheduled services; a C-46 arrives in 1960, a DC-4 in 1961, a DC-3 and a replacement DC-4 in 1964, and another DC-4 in 1965. Scheduled thrice-weekly DC-4 services link Douala with Yaounde and Fort Lamy, while the DC-3 handles flights to eight domestic points.

Three aircraft are also lost during this period. A C-46F is lost at Bangui, Cameroon, on April 27, 1961; no other details are available. The new DC-4 with four crew and one passenger fails its initial climb from Douala on June 13 of the same year and crashes; there are no survivors. A C-46A with three crew and one passenger is lost at Garoua on February 3, 1965; again, there are no survivors.

Following the 1965 loss in an accident of one Curtiss freighter, a second is withdrawn in 1966.

In 1967–1969, freight and passenger services continue and a Lockheed L-1049 is acquired. The Constellation and several DC-4s now undertake flights to the Central African Republic, Chad, the Congo Republic, Gabon, Spanish Guinea, and Zaire. The last C-46 is withdrawn in 1970.

When Cameroon withdraws from **Air Afrique, S.A.** and announces plans to establish its own **Cameroon Airlines, S.A.**, the government, in March 1971, also dissolves Air Cameroon, in order to pass its routes and assets along to the new entity.

AIR CANADA, LTD.: P.O. Box 14000, St. Laurent, Montreal, Quebec H4Y 1H4, Canada; Phone (514) 422-5000; Fax (514) 422-5893; <http://www.aircanada.ca>; Code AC; Year Founded 1964. In 1964, Bill C-2 passes the Canadian Parliament authorizing the state-owned carrier to drop its previous title, **Trans-Canada Air Lines, Ltd.**, in favor of the present name, effective next January 1. Reasoning behind the change centers on the need for a more proper reflection of the nation's bilingual nature, as well as the growth of the company into a major international airline.

The wings of a Vickers Viscount 757 with 3 crew and 41 passengers, are damaged as the result of the loss of power in two engines while landing at Toronto on June 13; there are no injuries reported.

Meanwhile, delivery is taken of the 15th and 16th Douglas DC-8-43s and an earlier order for DC-9s is expanded from six to eight. Four Vickers Viscount 724s are sold, two to **Air Inter, S.A.** The workforce totals 11,670 and some employees sport new uniforms designed by Michel Robichaud.

A record 4,189,349 passengers are carried 3.15 billion passenger miles. Freight traffic climbs 29%, with express gaining 17% and mail 14%. Revenues total C\$213.9 million and the net profit is C\$1.4 million.

The changeover to the new name, Air Canada, Ltd., plus accompanying introduction of new livery, logo, uniforms, etc. is completed in January 1965. Airline employment is now 12,709 and the 78-aircraft fleet comprises 16 DC-8-43s, 23 Vickers Vikings 952s, and 39 Viscount 757s, with orders outstanding for 2 DC-8-53s, 4 DC-8-61s, 6 DC-9-15s, and 12 DC-9-32s.

A third Viscount 724 is sold to **Air Inter, S.A.** and daily nonstop DC-8-43 service is inaugurated from Montreal to Paris and Dusseldorf. Routes are also extended from Toronto to Freeport/Grand Bahama Island and from Halifax to Bermuda.

Passenger boardings jump 13% to 4,750,000 and cargo rises 36%, with mail up 10% and express 27%. Total revenues grow 13% to C\$250 million.

Following the conclusion of a new bilateral air agreement between Canada and the U.S. in 1966, DC-8-43 services are inaugurated to Miami from Montreal and Toronto. The first six DC-9-32s are placed in service to destinations throughout the Prairies, in the Atlantic Provinces, and in April (beginning with the first aircraft received in March), from Montreal to New York. On November 1, the carrier becomes the first in North America to launch routine scheduled service to Moscow. The route is flown from Montreal via Copenhagen.

Three days later, **Aeroflot Soviet Airlines** begins a reciprocal Moscow–Montreal Tupolev Tu-114 service. Seeking the same 30% wage increase given to Montreal stevedores the previous spring, IAM members strike the carrier on November 15, shutting the company down. Agreement is reached on November 25 giving the members a 20% salary increase over 2½ years. During the year, a Vanguard 952 is converted into a Cargoliner or 952(F) (minus a freight door) by the expedient of removing its seats.

A total of 4,951,440 passengers are carried on the year.

The workforce is increased to 15,823 in 1967. Delivery position is taken for four Anglo-French Concorde and six U.S. SSTs, none of which will ever be delivered. However, six more DC-9-32s arrive.

On March 27, a new Canadian air policy is promulgated. Internationally, AC is designated to service the U.K., West/North/South Europe, the U.S. and Caribbean; domestically, **CP Air, Ltd.**, which has also received international routes, is allowed to increase to 25% of transcontinental capacity, thus creating a two main-line operation.

A DC-8-54F, with three crew, during a May 19 a training flight, crashes at Uplands, Ontario, near Ottawa; there are no survivors. Four DC-8-61s are placed in service, beginning on September 13, launching Toronto–Los Angeles flights.

Passenger boardings soar 25% to 6,348,000 and cargo is up 15%; mail alone grows by 11%.

The employee population grows in 1968 to 16,656. The carrier now serves 61 destinations and operates 15 daily transcontinental flights. Veteran 20-year President/CEO Gordon McGregor retires on May 31 and the first DC-8-53 joins the fleet on August 13, followed by two more on August 30 and October 16, respectively. Meanwhile, delivery is taken on 19 DC-9-32s. Phaseout is ordered for the Vanguards and Viscounts and orders are placed for 3 Boeing 747-133s for 1971 delivery.

En route from Moncton, New Brunswick, to Toronto on September 11, a Viscount 724 is hijacked to Montreal by a U.S. citizen seeking political asylum. The man will be arrested by the RCMP, tried, and sent to prison. Upon his release from jail in 1971, he will be deported to the U.S., where he will again be arrested, tried, and sent to prison—this time for a Texas bank robbery committed a month before his Canadian assault and for which the statute of limitations has yet to expire.

Three DC-9-14s are withdrawn and sold to **Southern Airways and Trans-Texas Airlines**. Joining with the Jamaican government, AC forms **Air Jamaica, Ltd.**, takes a 27% interest, and provides managerial and technical assistance.

Deputy Transport Minister John R. Baldwin succeeds the legendary McGregor as president on December 15, the same day Yves Pratte is named chairman/CEO. Also in December, the company becomes the first non-U.S. airline to order the Lockheed TriStar 1, placing an order with the British concern Air Holdings, Ltd. for 10 L-1011s, plus nine options. Deliveries are scheduled to begin in 1972.

Passenger bookings accelerate 10% to 6,468,856 and freight skyrocket 42%. Revenues total C\$358.94 million.

New cargo terminals are completed at London and Winnipeg in 1969 and the Toronto terminal is doubled in size. A total of 13 Vickers Vanguard 952s are withdrawn during the year while the first of 13 DC-8-63s arrives at Montreal on February 16.

Having returned to Sept Iles Airport on April 7 with a fire in No. 2 engine, control of a Vickers Viscount 757 with 4 crew and 17 passengers is lost during the evacuation phase when the brakes fail (1 dead).

Also in April, **Air Jamaica, Ltd.** begins service to New York and Miami, employing two former AC DC-9-32s purchased in March. During the month, new uniforms designed by Leo Chavalier of Montreal are introduced.

The IAM chapter strikes between April 20 and May 19 and, on July 12, the carrier grants a 15% raise in wages in benefits for its stewardesses and pursers. A new computerized reservation system, RE-SERVE II, is switched on at Montreal and Toronto later in the year.

Enplanements during the 12 months total 6,329,250, down from 1968.

The workforce in 1970 stands at 17,447. On May 1, in cooperation with **CSA (Czechoslovak Airlines)**, service is inaugurated to Prague, the carrier's eleventh European gateway.

Having returned to the air after a heavy landing at Toronto on July 5—during which the No. 4 engine is torn away from its mounting—a DC-8-63 with 9 crew and 100 passengers suffers the loss of its right wing while attempting to go around. A result of a possible fuel tank explosion, the aircraft crashes in flames into a nearby field; there are no survivors.

Orderly retirement of the Vanguards and Viscounts continues. Internally, two new branches are established at the head office, and a series of regional administrative and sales centers are established systemwide. North Atlantic schedules are boosted from 59 to 70.

Passenger traffic jumps 13% as 7,275,000 passengers are flown; cargo climbs 24.6%. A net loss of C\$1 million is suffered.

The first of five ordered B-747-133s to be delivered during the year arrives on February 11, 1971; it is followed by the receipt of a second on March 18. The inaugural Jumbojet is placed into service on the Vancouver–Toronto service in April, while the second begins flying Toronto–London routes in June. The third B-747-133 arrives on June 24 and in July flights commence from Montreal to Frankfurt via Toronto and Paris; it is aboard this service that the carrier shows its first in-flight 16-mm. motion pictures.

Although options for the Concorde remain alive, the last Vanguard 952 passenger service is completed in October. Eight more of those types are withdrawn during the year.

On November 12, an IRA gunman named Peter J. Cini, brandishing a pistol and dynamite, hijacks Flight 812, a DC-8-53 en route from Vancouver to Montreal with 153 passengers. He forces it to land in Great Falls, Montana, and Calgary, Alberta, after demanding safe passage to Ireland and C\$1.5 million in ransom. Cini is paid an undisclosed amount (later acknowledged to be approximately C\$50,000) and given a requested parachute. As Cini dons the chute for an announced exit out of a side door, the plane's pilot using the butt of a fire ax knocks him unconscious. Seriously injured, the pirate is turned over to police after the Douglas lands at Calgary.

Cini will be tried and given a life prison sentence. Although unsuccessful, he is, ironically, the first to attempt a parachute robbery from a jetliner, beating the infamous "D. B. Cooper" to that distinction by ten days.

The second skyjacking within two weeks occurs on November 24 when a gunman kidnaps a stewardess and takes her aboard Flight 807, a DC-8-63 that is preparing to depart Frankfurt for Montreal. The hijacker demands the release of the Czech prisoners who had captured a Slov Air flight on June 8 and diverted it to West Germany. While threatening to detonate an explosive device, the pirate is shot and killed by a police marksman.

The airline is subjected to another skyjacking on Boxing Day, December 26. A lone gunman who has boarded at Thunder Bay takes over Flight 932, a DC-9-32 with 89 other passengers and en route to Toronto, and orders it to Cuba.

Enplanements accelerate to 7,436,000 and a net C\$1.666-million profit is announced.

Airline employment is increased in 1972 to 18,259 and the route network now includes some 78,000 unduplicated miles. The fleet includes 3 Jumbojets, 38 DC-8s, and 47 DC-9s, 1 of latter newly converted into a freighter. An arrangement is made with **Continental Airlines** for the purchase of 8 DC-9-15s. The first of these are now received

and on April 30 are used to inaugurate "Rapidair" shuttle service, with up to 50 daily frequencies, between Montreal and Toronto. The last Vanguard 952(F), employed as a Cargoliner freighter, is withdrawn in May.

During the summer, a multitiered "Explore Canada" fare is introduced to encourage travel within the nation. In July, the Concorde operations are cancelled. During the year, one-third interest is taken in **Wardair Canada, Ltd.** and services of RESERVEC II are leased to **Pacific Western Airlines, Ltd.**

V. Widars hijacks a DC-8-61 at Frankfurt Airport on November 24 and holds a stewardess hostage aboard for 24 hours before being fatally shot by a West German police sniper.

Passenger bookings climb to 8,359,000 (up 12%) and a net C\$8.6-million profit is earned.

Airline employment in 1973 exceeds 20,000. The first of six L-1011 TriStar 1s to be delivered on the year arrives at Toronto on January 14; it is introduced into revenue service on March 15 on the Toronto-Vancouver route. As the others become available, they begin flying to Edmonton, Calgary, Winnipeg, Montreal, Halifax, and St. John's. Two others, owned by the leasing firm Haas-Turner, will be shared with **Eastern Air Lines** for five years, flying for the American carrier in winter and the Canadian during the summer.

Orders are placed for five B-727-233s and four DC-9-32s. Two more B-747-133s are delivered on May 13 and 13, respectively, and machinists stage a strike at Vancouver, Edmonton and Calgary between June 5 and 19.

Flight 890, a DC-8-53 being prepared for a service to Zurich, catches fire while refueling at Toronto on June 21 and is destroyed; two maintenance workers are injured.

The decision is now taken to abandon certain secondary European markets and to concentrate on the gateways. Late in the year, Transport Minister Jean Marchand reveals a new air policy dividing world air routes between AC and **CP Air, Ltd.** AC receives rights to Colombia, Venezuela, and the three former Guianas in South America; all of Africa, save Morocco, Tunisia, and Algeria; North, Central, and Eastern Europe, save Holland; and Lebanon, India, China, and Pakistan.

Meanwhile, Prime Minister Trudeau's government concludes a major new bilateral agreement with the U.S. that opens up 15 American destinations. President John Baldwin retires on December 15 and is succeeded by Ralph T. Vaughan. The in-flight *en Route* magazine is started during the year.

Passenger bookings accelerate 22% to a record 10.3 million, but the profit falls to C\$6.1 million, due largely to increased fuel costs.

The workforce rises to 21,216 in 1974. In April, the last Viscount 757 is retired. A fifth B-747-133, four L-1011-1s, five B-727-233s, and four DC-9-32s are delivered, the latter two types being placed on the Toronto-Montreal "Rapidair" route. Also in April, the carrier provides the manpower and management to launch a two-year STOL demonstration service, "Air Transit," linking Montreal and Ottawa with de Havilland DHC-6s. The cost of the operation is paid by a C\$20-million Ministry of Transport grant.

Meanwhile, new routes are opened to Munich and to two U.S. destinations: Edmonton/Calgary-San Francisco and Quebec City, Calgary, and Winnipeg-New York. C\$10-million worth of computer equipment is purchased from Honeywell, Ltd. on June 18 and on August 1 the carrier designated the 2nd and 4th cabins aboard its wide-bodied jetliners exclusively for nonsmokers. Nearly 50% of the seats aboard its DC-8-s, DC-9s, and soon-to-be-delivered B-727-233s are already banned to smokers. In the fall, three DC-8-43s are leased to **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**; in addition, training contracts are signed with the Cuban carrier.

In something of a footnote to the year, designer Chavalier again outfits carrier employees with new uniforms.

Although freight traffic is off 2%, enplanements during the 12 months increase 8% to 10,515,000.

The workforce is cut to 10,589 in 1975 and nine new B-727-233s are deployed throughout the year. The first Jumbojet "Combi" and the 250th

B-747 constructed, a Dash-233C, is delivered on March 7 and, in April, the carrier's first new non-U.S./Europe routes in five years are opened to Guadeloupe and Martinique. Additionally, Prince Edward Island and Dallas (DFW) are added to the route network. The airline's on-time performance is now the best in North America. Daily service is initiated from Toronto to Dallas (DFW) and Houston on July 1. Internally, the carrier's management faces a spring-fall parliamentary inquiry over its business practices.

The first DC-8, a Dash 43, is sold on October 1; its purchaser is the U.S. FAA, which will employ it for destruction tests. Chairman/CEO Yves Pratte resigns on November 27 amid charges that the carrier offered Lebanese cabinet minister Souren Khanamerian C\$500,000 annually in free first-class travel for his help in obtaining landing rights at Beirut; he is succeeded, on an interim basis, by CNR Chairman Pierre Taschereau on December 1. On December 8, the parliamentary report, clearing the company of charges of illegality, is tabled in the House of Commons.

Cargo for the year dips 2.6% and passenger bookings fall 1.2% to 10,394,000. Revenues total C\$957.2 million and expenses are C\$917.9 million, leaving a C\$39.3-million operating profit, but a C\$13.1-million net loss.

Airline employment in 1976 is reduced another 2% to 20,556. President Vaughan quits early in the year. On February 16, Claude I. Taylor becomes president/CEO. Meanwhile, the all-jet fleet now includes 6 Jumbojets, 12 Lockheed L-1011-1s, 14 B-727-233s, 8 DC-9-15s, 44 DC-9-32s, 1 DC-9-32F, 8 DC-8-43s, 2 DC-8-53s, 6 DC-8-54s, 7 DC-8-61s, and 12 DC-8-63s.

While on lease with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**, a DC-8-43 is lost in a midair collision while on a training flight. In April, in addition to leasing DC-8s to **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**, services are begun to Havana; routes are also opened Calgary-Chicago and Toronto-Boston. The successful "Air Transit" STOL experiment ends on April 30 while "Night Coach Excursion" fares are initiated on flights to Florida and Freeport in May.

A nine-day pilots' walkout ends on June 29, following the government's decision to re-examine its proposal to require the use of the French language by air traffic controllers at Quebec City Airport. A simultaneous ten-day air traffic controllers (ATC) strike shuts down operations.

On October 29, Transport Minister Otto Lang introduces Bill C-17, the Air Canada Act, into Parliament. Also in October, another DC-8-43 on lease to **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** is destroyed, this one in a landing accident. Acting Chairman Taschereau is confirmed permanently in his post in December.

Freight increases 6%, but passenger boardings fall again, down 0.3% to 10.3 million. Revenues exceed C\$1 billion for the first time, but a third straight year of financial deficit is also recorded.

Bill C-17 becomes law in 1977. It removes the carrier from Canadian National Railroad jurisdiction and allows the formation of a holding company for purposes of diversification. The changeover is the high-light of the fortieth anniversary year.

A DC-9-32F is sold to **Southern Airways** and four DC-9-15s are sold to **Air Florida**. Additionally, four DC-8-41s are sold or leased, including one to **Air Jamaica, Ltd.** and one to **Air Ceylon, Ltd.** along with a DC-8-42. Three L-1011 TriStar 1s are converted to L-1011-100 status. When **Air Ceylon, Ltd.** runs into fiscal problems in the fall, its Douglas is returned.

A total of 12,263,304 passengers are carried and a net profit of C\$17.2 million is posted.

The employee population is increased 2.5% in 1978 to 20,900. The number of L-1011s is reduced to 10 (7 Dash-1s and 3 Dash-100s), DC-9-15s to 3, and DC-9-32s to 43 as an ex-**United Airlines** B-727QC is added. Orders remain outstanding for 1 B-747-233C, 13 B-727-233s, and 2 B-727QCs.

In February, the carrier is reorganized and recapitalized under terms of the Air Canada Act of 1977, now receiving assent. All of the capital

stock is repatriated from the former parent company, the Canadian National Railway Co. and is vested in the Canadian government.

A number of low-cost domestic-incentive fares and several cargo service innovations are successfully introduced and, during the year, Chairman Taschereau retires and is succeeded by Bryce Mackasey. A B-747-133 with 301 aboard, makes an emergency landing at London (LHR) on April 26 after an engine fire. A small package service, Airvelope, is introduced by the B-727QC in May to 17 cities.

Following a blown tire while on takeoff from Toronto on June 26, Flight 189, a DC-9-32 with 5 crew and 102 passengers, aborts its departure, but overruns the runway and comes to rest in a ravine (2 dead).

In July, 84% controlling interest is taken in the regional **Nordair, Ltd.** Union and government opposition prevents a full merger and the new acquisition will be operated as a subsidiary until its sale in 1984. A B-747-133 with 370 aboard, including the Duke of Edinburgh, finally departs for the U.K. from Vancouver on August 13 after mechanical problems cause two takeoff attempts to be aborted.

The company reaches a settlement with its machinists on September 4, ending a ten-day job action. During the fall, a practice of chartering DC-8-63s for Hadj flights to Saudi Arabia begins.

A one-day shutdown during the summer has no impact upon passenger boardings, which accelerate 2.3% to 12,552,000, or cargo, that jumps 11.4%. Total unduplicated route mileage is now 87,191. Revenues climb 11.4% to C\$1.137 billion and expenses are C\$1.064 billion, allowing an operating profit of C\$72.7 million and a net profit of C\$40.9 million.

Pierre Taschereau comes out of retirement early in 1979 to again assume the company's chairmanship; a second B-747-233C is delivered on January 31. Two ex-**United Airlines** B-727QCs are delivered in the spring and, together with the plane delivered in 1978, are dedicated to a new small-package express "Courier Service." An interchange agreement is made with **Federal Express** for linkage of the two companies' express services at Chicago, and later Vancouver, Winnipeg, and Toronto. Meanwhile, the second B-747-233C joins the fleet.

A ten-year, C\$3.5-billion fleet renewal program is launched with orders for 12 B-767-233s and 9 L-1011-500s. Service also begins to New York's La Guardia Airport (in addition to JFK), and routes are inaugurated from Edmonton/Winnipeg-Chicago; from Montreal-Los Angeles; and from Toronto-San Francisco. In twice-weekly round trips, AC DC-8-63s transport Vietnamese refugees to Canada, flying from Kuala Lumpur to Edmonton/Montreal via Tokyo and Vancouver.

En route to Yarmouth from Boston on September 17, a DC-9-32 with 5 crew and 37 passengers loses its rear door and tail cone; it returns safely to Boston. Inspections, occasioned by a U.S. FAA alert bulletin, will reveal bulkhead cracks on 33 of 119 DC-9-32s in service.

During the year, senior pilot Capt. George Lothian publishes his recollections of three decades service to AC and TCA, *Flight Deck: Memories of an Airline Pilot* (Toronto: McGraw Hill Ryerson).

Freight jumps 15.6% and passenger boardings balloon 14.6% to 12,618,834. Revenues explode upward by 20.6% to C\$1.9 billion and a record C\$65.9-million net profit is achieved.

Six B-727-233s are placed in service during 1980 and the first DC-8-63 is converted to freighter status in March. Vietnamese refugee flights continue and a new charter service to Reno for gamblers is started. Other new charter destinations initiated include Luton, Prestwick, London, Birmingham, Manchester, Newcastle, Frankfurt, Cardiff, and Belfast.

As the result of engines idling too slowly, a B-747-233C with 403 aboard loses power in three of the engines while preparing to land at Toronto on June 8; the landing is, however, made safely and without injury to anyone. DC-8-54F Toronto-Caracas cargo flights are undertaken on behalf of General Motors throughout the year and, by August 15, the entire DC-8-40 and -53 fleet has been withdrawn.

In September-November, two DC-8-63s are leased to **Royal Air Maroc** for Hadj pilgrimage flights while an L-1011-100 is chartered for two years to **Air Lanka, Ltd.** About the same time, the last three DC-9-15s are sold to **Air Florida**. During the year, 11-million hot meals and snacks are served on company flights.

Although freight is off 3.5%, passenger bookings increase a slight 1.6% to 13 million. Revenues are up 19.5% to C\$2 billion, but expenses, led by increased fuel costs, jump 21.6% to C\$1.8 billion. The operating profit drops 10.9% to C\$75.6 million and the net profit falls to C\$48.8 million.

Rene Amyot becomes chairman in early 1981. The 6 L-1011-500s plus 3 more B-727-233s join the fleet. "Connoisseur Class" is initiated for business passengers, while the major new charter program is expanded, destinations for which include Los Angeles, Ft. Lauderdale, Honolulu, Las Vegas, Cancun, Ixtapa, St. Lucia, and San Juan.

A "no frills" B-747-233 service is inaugurated from Vancouver to Toronto. Computer and maintenance facilities at Winnipeg are upgraded and a variety of corporate cost-cutting and energy-conservation measures are adopted.

A jetliner captain reports a near miss with a **New York Air** passenger plane over New York on August 3; the U.S. FAA denies the incident is linked to the PATCO air traffic controllers' strike.

A Jumbojet is chartered to **Royal Air Maroc** for September-November Hadj flights and, in October, three B-727QCs are sold to **Interstate Airlines**. A DC-9-32 is sold to **Pacific Southwest Airlines (PSA)** in November and an L-1011-100 is leased to **Air Lanka, Ltd.** on December 31.

Cargo grows 3.5% on the year, but passenger enplanements dip 4.6% to 12.5 million. Revenues decline 11.1% to C\$1.88 billion and expenses spurt 13.4%, leaving an operating profit of C\$56 million and a net profit of C\$32 million.

Airline employment is cut 3.1% in 1982 to 22,612. The effects of the world economic recession are still felt. In January, the company receives the 1981 "Technology Management Award" from *Air Transport World* magazine.

The center wing fuel tank explodes aboard a DC-9-32 that is undergoing maintenance at Montreal on June 2; although the plane is destroyed, there are no personnel injuries.

"Connoisseur Class" is now available on most domestic and international flights. During the year, five DC-8-54Fs and three DC-8-61s are sold, and two DC-8-63s are converted to Dash-73CFs. The first two B-767-233s are delivered late in the fall while the L-1011-100 leased to **Air Lanka, Ltd.** is returned at year's end.

Passenger boardings fall 9.5% to 11,362,000 and freight is off by 4.8%. Revenues drop 9.6% to C\$1.6 billion while expenses grow 6.9% to C\$1.9 billion. The operating loss is C\$20.1 million and the net loss (the first since 1976) is C\$25.4 million (which would have been C\$49 million, except for a fuel credit and a revision in aircraft depreciation schedules).

The workforce is reduced another 7.3% in 1983 to 21,600 as stringent cost-reduction measures are increased in severity. On February 14, the first two B-767-233s are introduced on the transcontinental routes; four additional "mini-jumbos" are received during the rest of the year and are placed in service to other North American destinations. Internationally, service is resumed to Dusseldorf.

A B-747-133 is leased to the California-based operator **Air National**, which employs it to operate summer-schedule passenger charters to Europe. The remaining passenger-configured DC-8s are retired and the DC-8-63s employed as freighters are reengineered into Dash-73CFs with CFM56 engines. The reengineering work is started in-house at Montreal (YUL).

During the spring, an interline agreement is reached with **United Airlines** for the connection of small package services at Chicago. On May 12, a DC-9-32, on its second landing attempt, skids off a snow-covered runway at Regina; there are no injuries. Also in May, a two-year period of aircraft interior refurbishing is completed aboard the DC-9 fleet.

As the result of a faulty restroom motor that starts a fire at the rear of the aircraft, the cabin and cockpit of Flight 797, a DC-9-32 with 5 crew and 41 passengers and en route to Toronto from Dallas (DFW) on June 2, fills with smoke. The aircraft also suffers electrical failures that knock out critical navigation instruments. Captain Donald Cameron and Copilot/first officer Claude Ouimet are guided to an emergency crash landing at Greater Cincinnati Airport at Covington, Kentucky by traffic

controller Gregory Karam. An emergency landing is made on Runway 27L, but the airport fire services are unable to put out the fire, which guts the fuselage and kills (primarily by smoke inhalation) 23 passengers before they can be evacuated; among the victims is George Curtis Mathis Jr., chairman of the Curtis Mathis Corporation.

Another DC-9-32 with 72 aboard lands safely at Hamilton, Bermuda, on June 12, after crew members put out a fire in a lavatory towel bin. One man is treated for smoke inhalation and, after interrogation, is charged with starting the fire.

On July 23, as the result of two mistakes in figuring the fuel supply of the airline's first aircraft to use metric measurements, Flight 174, a B-767-233, runs out of gas 150 miles east of Winnipeg; a glide is made to a safe emergency landing at RCAF Gimli, Manitoba. The incident will be told in 1989 by William and Marilyn M. Hoffer in their *Freefall* (New York: St. Martin's Press) and, with certain liberties, in the 1995 William Devane motion picture *Falling from the Sky: Flight 174*.

Also in mid-year, Chairman Amyot is succeeded on an interim basis by Geno F. Francolini.

On September 9, a DC-8-61 is leased to the Syrian Government for use by **Syrian Arab Airlines**, prior to its transfer to Ireland's Guinness Peat Aviation for sale back to the Syrians. Upon their attempted departure for Ireland on September 12, the plane is seized and not returned to AC until November 28. At that point, the Canadians put the aircraft into storage. Also in September, a DC-9-32 overshoots the end of the runway at Rouyn-Noranda; simultaneously, a contract is signed with **Alaska Airlines** for the overhaul of 12 B-727s.

Flight 965, a Lockheed L-1011 with 161 passengers, hits severe air turbulence while flying over South Carolina on November 24 and suddenly drops 500 feet; 27 people aboard are injured, none seriously. Also in November, corporate headquarters are moved into the new Place Air Canada in Montreal. The **Air National** Jumbojet is returned during the month; it will be put up for sale the following spring.

A yearlong campaign is completed during the third quarter to consolidate the reservations/sales facilities at New York, Chicago, Los Angeles, and Miami into one at the former location. The last two World War II pilots, Gordon Jones and Michael Furgala, retire in December and, operating under the 75-min. rule, B-767-233 over-water flights commence from Toronto to Bermuda. Also during the year, a DC-9-32 is sold to **Pacific Southwest Airlines (PSA)**.

Passenger traffic for the year falls another 7.9% as 10,500,000 passengers are flown; cargo is up 9.5% to 638 million FTKs. Revenues dip 0.3% to C\$1.792 billion, but expenses drop 2.6% to C\$1.777 billion, allowing an operating profit of C\$22.1 million. The net C\$2.8-million profit represents a C\$28-million turnaround from 1982.

The employee population is increased 1.2% in 1984 to 21,847. In January, the New York City destination is shifted to LGA from JFK. Six additional B-767-233s (including two ERs equipped for over-water flight) join the fleet, completing the renewal program begun in 1979. The carrier sells 13 aircraft—six DC-8-54Fs, four DC-8-61s, two B-727-233s, and a B-747-133.

In March, a contract is signed with Cammacorp to reengine DC-8s. Vigorous new marketing campaigns, including a frequent flyer program, are undertaken as service is extended to Munich and Geneva and plans are laid for expansion into the Far East.

New summer charter destinations include Rome, Venice, Lisbon, Shannon, Belfast, Dublin, Amsterdam, Belgrade, Zagreb, and Malaga. Unduplicated miles in the global route network now total 195,367. On June 1, President/CEO Taylor becomes the first full-time employee ever elevated to the chairmanship of the company; Pierre J. Jeannot succeeds him as president.

In July, **Nordair, Ltd.** is sold to Innocan, Inc. During the summer B-767-233s are introduced on the nonstop daily flights between New York (LGA) and Vancouver via Calgary route.

Two DC-8-61s fly Montreal-Toronto "Rapidair" flights in July–September, replacing the DC-9-32s and B-727-233s chartered by opposing political parties during the federal election campaign.

In September, an AC L-1011-500 flies Pope John Paul II back to Rome following his Canadian visit and two L-1011-1s are leased to **Gulf Air, Ltd.** for three years. During October–November, Air Canada Cargo Express, which has been serving London and Frankfurt for two years, switches its hub to Brussels.

In December, a DC-8-63 awaiting reengining is sold to **LAP (Lineas Aereas Paraguayas, S.A.)**. During the year, one of the carrier's original Lockheed Model 10A Electras is reacquired; it will be restored to airworthy condition. The "Aeroplan" frequent flyer incentive plan is activated.

Passenger boardings jump 7.6% to 11,312,000, and freight climbs 11.4%. Revenues advance 8.8% to C\$1.84 billion as expenses grow only 8.2%. Operating income rises to C\$30.6 million and the net profit increases sevenfold to C\$20.1 million.

The workforce grows 1.3% in 1985 to 22,134. On January 1, a new management structure becomes effective. Gone are the six geographic regions, replaced by only two—Canada and International. The deregulation of the Canadian airline industry still leads to low passenger growth and, even worse, overcapacity. Management now begins to prepare for privatization. L-1011-500 service is launched from Toronto to Bombay (now Mumbai) and Singapore via London, on April 15 with Toronto–St. Louis following later. Flights to Houston and Cleveland cease. Six reengineed DC-8-73s are placed on all-cargo routes; an increased emphasis upon freight operations results in the carrier leasing two B-707-320s and two DC-8Fs. A B-727-233 is sold to **Federal Express** and a B-747-133 is sold to **National Airlines**.

Two B-767-233s are leased from Citibank for a 15-year period and frequencies on the nonstop Toronto–Vancouver and Toronto–Winnipeg B-767-233 routes are increased to five per day. Meanwhile, under the 120-min. rule, transatlantic B-767-233ER flights commence in May from Halifax to London. Late in the year, B-747 charters are initiated to Honolulu, Port-au-Prince, and St. Lucia.

A three-week work stoppage by passenger agents in May and a six-week flight attendant strike in August–September are damaging and when combined with the effects of deregulation cause passenger boardings to dip 0.8% to 11,222,000.

Unaffected, freight climbs 6.7%, thanks largely to express mail and the new Dash-73s. Revenues grow 8.9% to C\$1.95 billion, but expenses accelerate 10.7% to cut the operating profit to C\$1.15 million; the net profit of 1984 this year becomes a C\$14.8-million loss. Still, the carrier retains its ranking in the top 25 of all world airlines. It is 22nd in terms of passengers carried, 15th in fleet size, and 13th in freight carried, total number of employees, and operating revenue.

A hiring freeze is continued in 1986 as legislation designed to liberalize government regulation of the transportation sector does not succeed in Parliament. Still, management will spend the year preparing for the eventuality.

In January, airborne air-to-ground telephones are introduced aboard the B-767-233s. At the same time, all-cargo service is launched from Brussels to Bombay via Bahrain. The company is designated to receive the 1985 "Passenger Service Award" from *Air Transport World* magazine.

"Executive Class" is introduced on the same aircraft types in February and on March 12 the last three DC-8-63s are sold. In April, B-767-233 service begins to Manchester (England), bringing the carrier's total of world destinations to 63.

Meanwhile, on March 11, three Aerospatiale AS-350B Ecureuil helicopters of the Ranger Helicopter Division of **Maple Leaf Helicopters Canada, Ltd.** begin 34-per-day connecting flights between AC's gates at Pearson International Airport and the downtown Toronto heliport at Cherry Beach.

In June, the airline is reorganized once more, for the third time in six years. In essence, the corporate structure is divided into two parts: the airline and all ancillary activities, e.g., computer services, subsidiaries, investments, etc. The major assumes 49% interest in **Air Nova, Inc.** in July.

In August, a marketing agreement is concluded with the U.S. carrier **Pacific Southwest Airlines (PSA)** (swallowed by **USAir** in December),

calling for the coordination of schedules to Los Angeles and San Francisco. Similar plans are also established with **Cathay Pacific Airways (Pty.), Ltd.**, **Air New Zealand, Ltd.**, and **Malev** of Hungary. Simultaneously, a DC-8-73 cargo route is opened from Brussels to San Francisco via Toronto, as a seventh DC-8F is acquired.

In September, the Bangkok cargo route is extended to Singapore and the uneconomical Toronto-Dallas (DFW) service is suspended. In the fall, three B-727-233s are sold to **Federal Express** and negotiations are begun for the lease of three B-747-233Cs. The weekly Edmonton-Ottawa direct B-727-233 service is dropped and the airline announces its intention to suspend the transborder Yarmouth/St. John's-Boston frequency. During the fall, the flag carrier elects to emulate another American trend by forming a code-sharing commuter network, "Air Canada Connector".

In October, the carrier purchases majority control of both **Air Ontario, Inc.** and **Austin Airways, Ltd.** In November-December, newly formed **Air Nova, Inc.** and Vancouver-based **AirBC, Ltd.** are also acquired. It will eventually become common practice to incorporate the traffic and financial results of these subsidiaries with those of the parent. In November, the company begins refurbishing 26 B-727-233s in order to extend its "Executive Class" service to additional North American routes. Winter services are initiated by the B-747-233Cs from Toronto-Puerto Plata (Dominican Republic) and by L-1011-500s from Montreal-Santo Domingo; both operations are weekly. During the year, two L-1011-1s are leased to **Air Lanka, Ltd.**

Passenger bookings rise a slight 1% in these 12 months to 11.3 million while, largely as a result of the success of the "Express Air Canada Cargo Service," freight rises 8.8% to 848 million FTKs. Revenues rise 4% to C\$2.2 billion, expenses are up only 1.4%, and the operating profit is a record C\$101 million. Net gain reaches C\$32 million.

An eighth DC-8-73F is acquired just after New Year's 1987. Twenty of the remaining 35 DC-9s are sold to Citibank for \$200 and then leased back for eight to ten years. The income is used to order four B-767-233ERs. In January, the carrier assumes 75% shareholding in **Air Ontario, Inc.** while, in early February, it takes 85% control of **AirBC, Ltd.**

On February 18, the line becomes the first Canadian carrier to provide scheduled service to Thailand when it begins DC-8-73F all-cargo roundtrip flights from Toronto to Bangkok via Brussels and Dubai. All but 25% shareholding is taken in **Air Alliance, Inc.** on March 18.

The fiftieth anniversary is celebrated in April. Also in April, the flag line launches twice-weekly L-1011-500 service to Vienna, its 64th destination via Frankfurt. A four-month experiment is launched on April 25 banning all smoking on flights out of the New York area to Toronto/Montreal as well as on half of the services from Vancouver to Calgary/Edmonton. Thrice-daily nonstop flights begin from Newark to Toronto in May.

Seasonal nonstop Newark to Calgary service starts on June 21. Unable to generate sufficient traffic, the airport-downtown **Maple Leaf Helicopters Canada, Ltd.** connecting service is discontinued on June 27. The carrier joins with **Canadian Airlines International, Ltd.**, also in June, to merge their respective computer reservation systems and form Gemini Group Automated Distribution Systems. At the same time, the airline takes 65% control in Express Messenger Systems and Northern Express Messenger Systems.

A B-747-238B is purchased from **Qantas Airways (Pty.), Ltd.** on July 14 and Gelco Express, Ltd., a subsidiary of Gelco Corporation, is purchased in August. On September 5, it is reported that a survey shows 96% support for the no-smoking ban. A redivision of global responsibilities with **Canadian Airlines, Ltd.** occurs during the fall. Henceforth, AC has rights to Asia, the Middle East, Africa, the Caribbean and Venezuela, northern (except Russia and Scandinavia) and southern Europe.

In one of the strangest reasons given for a hijacking yet, James Barrett Drake takes over a B-767-233ER (which has just deplaned its passengers following a scheduled service from Toronto) at San Francisco for three hours on November 7 in order, he says, to win FBI protection

from the Mafia. Upon examination, it is determined that Drake is mentally unstable and is sent to a psychiatric facility.

A strike by machinist union members (8,000 of the carrier's total workforce) shuts the carrier down from November 28 to mid-December. Following the work stoppage, the winter charter season begins with flights to England, Scotland, France, and Ireland. The strike causes overall passenger traffic for the year to fall slightly, by 2.7% to 11,000,000 passengers. Freight, however, avoids a negative report, growing a slight 0.7% to 854 million FTKs. Revenues ascend 8.5% to C\$2.5 billion, expenses rise 9.7% to C\$2.4 billion, and the operating profit drops to C\$83 million. Net profit, on the other hand, climbs to C\$37 million.

The Canadian airline industry is largely deregulated early in 1988, at the same time a 75% interest is taken in the newly established commuter airline **Air Alliance, Inc.** The workforce is increased by 5.1% to 22,638 and a C\$1.5-billion order is now placed for 34 Airbus Industrie A320s to replace the B-727-233 fleet. On January 11, the former **Qantas Airways (Pty.), Ltd.** B-747-238C *Sale* is purchased.

During the first quarter, "Nutricuisine" in-flight meal service is added for health-conscious business-class travelers. On April 12, the government announces the airline's privatization plan; a total of 45% shareholding is to be sold. The report results in a political furor throughout the nation, with some critics accusing Prime Minister Brian Mulroney of selling "the family silver," and others scoring the plan because the state will still retain majority control. On May 30, 90% interest is taken in **Northwest Territorial Airways, Ltd. (NWT Air, Ltd.)**.

Beginning in June and during the summer months, weekly nonstop flights are operated from Newark to Halifax and Calgary. Starting in July and running through September 3, the airline operates daily nonstop service between Chicago and Calgary, complementing the existing one-stop route flown via Winnipeg. Approval of the company's sale is given by the House of Commons in the Canada Business Corporation Act, also in July.

The Air Canada Public Participation Act comes into effect on August 16, providing for a public offering of company stock. The airline, on August 25, stops flying under the provisions of the Air Canada Act, 1977, but continues pursuant to articles of continuation in the Canada Business Corporation Act.

Also during August, a new livery is adopted and three B-747-433s are ordered for 1990-1991 delivery. In addition to the daily Chicago-Calgary via Winnipeg service, nonstop Chicago to Calgary flights are initiated.

AC begins its first scheduled service to South America in September with twice-weekly frequencies from Toronto and Montreal to Caracas, Venezuela. Simultaneously, a fourth nonstop flight is added from Chicago to Toronto. At the same time, the famous maple leaf logo is enlarged, a burgundy stripe is added to the side of aircraft alongside the previous red stripe, and the words "Air Canada" begins to appear in lower case.

Despite the heated earlier debate, the company's first private offering, C\$8 per share, is completed on October 13. The highly successful action distributes 30.8 million common shares and brings in C\$234 million. Three weekly roundtrip frequencies are inaugurated on October 31 from Toronto and Montreal to Lisbon and Madrid. Also in October, the popular "Nutricuisine" in-flight meal service is extended to also include first-class ticket holders.

In October-November, one DC-8-63AF is sold to **Evergreen International Airlines** and another is delivered to **Airborne Express**. A blocked space agreement is signed with **Royal Jordanian Airlines** in November under which the Mideast carrier allocates seats to the Canadian airline on its new twice-weekly service from Amman to Montreal. Service to Santo Domingo ceases on December 16.

Passenger boardings climb 8.2% on the year to 11,900,000 and freight rises 3.4% to 883 thousand FTKs. Revenues advance 9.4% to C\$2.9 billion and with expenses held in check, the operating profit is a record C\$98 million. Net gain reaches C\$80.6 million.

Airline employment grows by 2.5% in 1989 to 23,211 and the fleet now includes 2 B-747-233BCs, 1 B-747-238C, 3 B-747-133s, 8 L-1011-1/100s, 6 L-1011-500s, 4 B-767-233ERs, 17 B-767-233s, 33 B-727-233s, 36 DC-9-30s, and 6 DC-8-73Fs. Orders are outstanding for 3 B-767-233ERs, 3 B-747-433s, and 38 A320s.

A new "customer care" service improvement strategy is implemented in January and, in cooperation with the City of Montreal's "Big on Life" tourist promotion packages, the airline introduces a C\$171 roundtrip Chicago-Montreal fare. In addition, members of the Aeroplan frequent flyer program are, through February 28, awarded quadruple mileage on all nonstop and direct flights between Toronto-Ottawa-Montreal, Winnipeg-Calgary-Edmonton-Vancouver, and between Toronto/Montreal and London. Plan members also begin to receive mileage points when they stay at Radisson hotels in the U.S. and Caribbean.

During February, an eight-year unsecured, floating rate \$400-million credit facility is obtained in Europe from a financing syndicate lead by the Bank of Montreal Capital Markets, Ltd.; proceeds will be employed to help finance new aircraft purchases. A Toronto to Nice service begins on March 17 and, also in March, the overnight division of Gelco Express, Ltd. and certain other assets are sold to Purolator Courier, Ltd. in exchange for 22% equity in Purolator.

On April 3, twice-daily Newark to Montreal DC-9-30 flights start. Thrice-weekly B-767-233ER service is inaugurated from Toronto to Zagreb, Yugoslavia via Zurich, in May. Simultaneously, twice-weekly L-1011-500 flights commence from Toronto to Birmingham, England via either Glasgow or Manchester. Revamped "Executive Class" business-class service is now introduced on the transatlantic routes. Later in the month, L-1011-500 twice-weekly scheduled service is inaugurated from Toronto/Montreal to Athens.

C\$60.5 million is raised in late spring through a private placement via Citicorp (Switzerland), of 100 million SFr 5% notes. For four months, beginning on June 19, increased summer service is added from Newark and Boston to Toronto and Halifax or Calgary, while a third frequency is laid on to Athens. Also in June, late night deep discount nonstop roundtrips are offered daily (except Tuesday and Wednesday) between Toronto and San Francisco.

Between July 1 and September 3, a 60% discount "summer seat sale" is offered on certain flights from Los Angeles to Calgary. All shareholding in Guinness Peat Aviation Group (336,424 shares) is sold for C\$218.8 million following completion of the carrier's full privatization on July 19. A second public offering, of C\$12 per share, is simultaneously made of the Government of Canada's 57% common shareholding. Upon its completion, the company is transformed into a public corporation from its former crown corporation status. (Although the "Ltd." of the airline's title is now dropped in official literature and correspondence, it is retained here for consistency and cross-referencing.)

Also in July, "Executive Class" is launched on the company's daily B-727-233 frequencies from Chicago to Winnipeg, Calgary, and Vancouver; the upgraded business-class service includes better meals and complimentary wine and liquor.

In August-September, the company begins to offer its senior citizen discount program to U.S. citizens as well as Canadian. Daily L-1011-500 flights are inaugurated to Ft. Lauderdale from Montreal/Toronto in October; however, on October 27, the thrice-weekly Newark to Halifax flights are cut back to two. Two days later, the airline also begins six-times-per-week, all-economy flights over the routes.

Early in November, Finnair O/Y joins the carrier's "Aeroplan" frequent flyer program; AC passengers employing the Nordic carrier are able to win frequent flyer miles from North America to Helsinki. In November, weekly frequencies are introduced to the company's first scheduled South American country, Venezuela. Weekly nonstops are flown between Toronto and Caracas and between Toronto and Porlamar, Margarita Island. Further, daily weekend service is initiated from Newark to Toronto, complementing the twice-daily weekday frequencies; a fourth daily nonstop is added from Newark to Toronto.

Customer bookings rise 2% this year to 13,616,109 and cargo climbs 1.1% to 782.5 million FTKs. Revenues ascend 7.3% to C\$3.1 billion, but costs drop the operating profit to C\$92 million. Based largely on the income derived from the GPA Group sale, the net profit reaches a record C\$125.2 million.

The payroll is cut 0.6% in 1990 to 23,109 and the fleet now includes 106 jetliners. In terms of employment and fleet size, the corporation now ranks 19th largest in the world. In January, the state carrier sells 37% of its interest (326,000 shares) in GPA Group for C\$212 million (C\$650 per share), for an after-tax profit of C\$111 million. A total of 554,000 shares or 9.3% interest, worth C\$360 million, are retained, making the Canadian airline the third largest investor in the Irish leasing firm.

"Chicago Class" service is introduced during February for roundtrip travel between Toronto and Chicago (ORD). A blocked-space agreement is signed with Air Jamaica, Ltd. in March under the terms of which the Canadian carrier agrees to operate all scheduled roundtrip services between Canada and Montego Bay/Kingston and the Jamaican airline agrees to purchase a predetermined number of seats aboard those flights.

The year is very bumpy, despite the introduction of a new A320-200 and "Executive Class" "flex-meals." In April, the "Nutricuisine" in-flight meal program is expanded for business-class passengers. In June, weekly flights are inaugurated from Toronto to Dusseldorf, from Vancouver to London, and from Halifax to Glasgow, as well as 15-times-per-week service from Toronto to London and twice-weekly visits from Winnipeg/Ottawa to London.

Also during the second quarter, a quantity of drugs is found at London (LHR) following the departure of an AC flight. When the aircraft in question next returns, it is seized by the British Customs and Excise office and declared forfeit; a C\$90,000 fine must be paid to secure its release and a lawsuit is filed.

A code-sharing agreement is inaugurated with Cathay Pacific Airways (Pty.), Ltd. on July 1 under which the Hong Kong company purchases blocks of seats on the Canadian line's flights between Vancouver and Toronto, thereby extending its route from Hong Kong into eastern Canada. B-727-233 "Executive Class" service is introduced on one of the carrier's four daily Toronto-Newark roundtrips.

Later in the month, the carrier announces that it will sell its eight L-1011-100s before year's end and its six L-1011-500s over the next several years. President/CEO Pierre Jeannot resigns unexpectedly at month's end, leaving Chairman Claude Taylor to occupy those offices while a search is made for a new leader.

Early in August, construction begins on a new C\$67-million training center at Montreal (YUL). The lawsuit in the U.K. is settled in favor of the government; the Court of Appeal rules that customs agents may seize any vehicle employed to carry drugs even if the carrier is unaware of their presence.

Following Iraq's August invasion of Kuwait, and as a result of the deepening recession, AC begins to restructure in October. Cost reduction measures include the lay off of 2,900 employees, fewer departures, relocation of headquarters to Dorval Airport and sale of the former downtown Montreal location, sale of the EnRoute credit card operation as well as three B-747-433s and a DC-8F. In addition, services are suspended to Athens, Geneva, Lisbon, Madrid, Singapore, and Bombay. Meanwhile, all flights between North America and Europe, as of October 1, are smoke-free while smoking, cut 25%, is allowed only on the London-Singapore via Bombay, route. The last L-1011-100 is withdrawn from service in November and placed into storage at Marana, Arizona.

En route from Montreal (YUL), to London (LHR) on December 11, an L-1011-500 over Manchester, England, suffers a localized rupture of its rear pressure bulkhead as the result of fatigue cracks; although there is cabin depressurization and emergency descent, no injuries are reported and the aircraft lands without incident.

The 51% investment in Air Nova, Inc. held by Atlantis Investments is purchased, also in December. Late in the month, a comprehensive alliance is signed with Air New Zealand, Ltd., providing for joint

marketing, code-sharing, and frequent flyer plan coordination on 15 weekly flights between Canada and New Zealand and Fiji.

Passenger boardings for the year dip 1.7% to 11.8 million, but freight is up 8.4% to 942 million FTKs. Revenues climb 8% to C\$3.4 billion and the operating loss worsens to C\$9.5 million. The net loss is C\$64.2 million. In terms of passengers, freight, and revenues, AC now ranks 21st, 24th, and 14th in the world, respectively.

Company employment is cut 10.9% in 1991 to 20,593 and the carrier begins to send its displaced L-1011 TriStars to the Arizona desert for storage until they can be sold or scrapped. In early January, the carrier becomes the first smoke-free international airline. The remaining 51% shareholding in **Air Nova, Inc.** is acquired on January 25 (for C\$12), with the prize now undertaking "Air Canada Connector" services.

Beginning in March and continuing through August 31, special fares are offered for spouses of passengers flying full-fare economy class. To mark the fiftieth anniversary of New York service on May 10, the carrier flies its restored Lockheed Model 10A Electra from Toronto to New York (LGA); along as honored passenger is the flight attendant on the 1941 inaugural flight, Georgia Ingram Jackson.

A code-sharing agreement is signed with **Air India, Ltd.** and, consequently, twice-weekly flights begin on June 1 from Toronto to Bombay via London and Delhi. During the summer, three B-747-433Cs, which the airline has been attempting unsuccessfully to sell, are delivered. Place Air Canada is sold to Hydro-Quebec and Regional Airline Holdings is established.

In September, an agreement in principle is signed for the creation of a strategic alliance with **USAir**; the pact would cover operational, marketing, investment, and technical activities. At the same time, a code-sharing agreement is also signed with **Sabena Belgian World Airlines, S.A.**; under its terms, the Canadian carrier purchases blocks of seats on the Belgian line's thrice-weekly nonstop roundtrips between Brussels and Montreal and allows its passengers to win frequent flyer miles.

In October, a fifth nonstop Chicago to New York frequency is opened. Due to continuing losses, the government postpones open-skies talks with the U.S.; these will not be completed for another three years. The search for a new president/CEO continues throughout the year; however, in November, **Finnair O/Y** drops out of the airline's frequent flyer program.

The company also parks eight L-1011s and continues its efforts to sell the three newly delivered Dash-433C Jumbojets. The decision is also taken to move out of the Montreal headquarters and transfer operations to offices at the Air Canada Technical Base at Dorval (YUL).

On November 22, the company takes over the remaining shares of Northern Express Messenger Systems, Ltd. in exchange for a reduction of 27% in its interest in Express Messenger Systems, effective back to September 1. On December 30, AC exchanges its 100% interest in Northern Express Messenger Systems, Ltd. for class-B preferred shares in the new Dynamex Express, into which NEMS has been merged.

The world recession attacks the carrier, forcing customer bookings down 16.1% to 9.9 million. Freight traffic descends by 14.9% to 801.5 million FTKs. Revenues drop 9.4% to C\$3.06 billion, expenses decline 4% to C\$3.18 billion, and the operating loss is C\$169 million. Net profit falls by C\$184 million.

The workforce is cut 5.6% in 1992 to 19,448. "Executive Class" business-class service is introduced during February on all flights between Canada and the U.S. regardless of aircraft type. Hollis L. Harris, pushed out of **Continental Airlines** the previous fall, is appointed vice chairman, president, and CEO in the early spring and, on April 30, Executive Vice President/COO Leo Desrochers takes early retirement. At the same time, the company is reorganized; five senior management positions are eliminated and six new divisions are created. To save C\$20 million, it is announced that 250 management positions and 100 administrative/technical support slots will be eliminated by July.

In an effort to fly its way out of the previous year's downturn, the company boosts the number of North American frequencies while starting new services to Brussels, Lyon, and Berlin. Fifth Freedom rights are

gained to Nice via London (LHR). Also in April, two more marketing alliances are created, one each with **Finnair O/Y** and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. The former provides for block space flights on the Toronto to Helsinki route while the latter offers code-sharing on services from Toronto and Montreal to Madrid.

The three unsold B-747-433s are now placed into service on the routes to London/Paris and to Los Angeles and a daily Jumbojet service is initiated from London to western Canada. In addition to the employee RIF, the carrier begins to negotiate 5% across-the-board salary/benefit cuts with all of its unions. Interested in purchasing the international routes of competing **Canadian Airlines International, Ltd.**, AC protests discussions held between that carrier and **American Airlines**.

An alliance is sealed with **Air France** on September 24 designed to increase the number of flights between the two countries and to extend each other's global reach. Under its terms, the two will coordinate schedules, code-share, share terminals at Paris (CDG) and Toronto, join frequent flyer programs, and offer each other reciprocal ground handling at destinations at Paris, Toronto, and points where only one serves.

In late October, it is announced that the former **Trans-Canada Airlines, Ltd.** and PWA Corp., parent of **Canadian Airlines International, Ltd.**, will merge. Under the "premerger" deal, which remains subject to shareholder, government, and regulatory approval, a holding company will be created in which shareholders of both companies will receive one common share of stock for each share held in the predecessor firms, with AC stockholders owning 60% and PWA 40%. A board will be created consisting of an equal number of directors from each airline and it is hoped that merger-related layoffs can be kept below 6,000. At the same time, delivery of four B-767-333ERs is delayed by a year.

A strategic code-sharing alliance is formed with **United Airlines**, effective October 25, to provide interconnections for passengers between such U.S. gateways as Denver, San Francisco, and Los Angeles, and such Canadian cities as Montreal, Toronto, Winnipeg, and Calgary. The agreement also includes joint participation in each carrier's frequent flyer programs, joint marketing, cargo, and tour programs, and, where possible, joint scheduling.

A similar deal is entered into with **Swissair, A.G.** during the month that allows joint frequent flyer participation, exchange of flight attendants, schedule coordination, and code-sharing on flights from Montreal to Zurich and Geneva/Vancouver and Calgary to Zurich during the summer, and Toronto to Zurich.

Concerned over the size of the debt load it might be assuming, the carrier announces on November 5 that its board has rejected management's effort to merge **Canadian Airlines International, Ltd.** Also in November, an agreement is signed between the Canadian carrier, the U.S. investment group Air Partners I.P., and **Continental Airlines**. Under its terms, majority control of the American major will be purchased for \$310 million in debt securities and \$140 million in equity. Naturally, a marketing alliance is part of the new partnership.

In late December, onetime almost-partner **Canadian Airlines International, Ltd.** files a C\$1-billion suit against AC, charging it with trying to put it out of business with predatory pricing. Simultaneously, 14 items are now offered duty-free on the one-hour flights from New York to Toronto or Montreal.

Customer bookings, despite a fare war with U.S. carriers on the North Atlantic, are level at 9.9 million. Cargo slips 3.1% to 776.72 million FTKs. Revenues plunge to C\$2.61 billion, but expenses are higher and cause losses: C\$109.8 million (operating) and C\$343.9 million (net).

Airline employment is decreased 7.4% in 1993 to 18,000. Claude I. Taylor becomes honorary board chairman in January; the real chairmanship passes to CEO Harris. In the spring, five DC-8-73s are sold to **DHL Airways**, the U.S. division of **DHL Worldwide Express**. In mid-April, the report of continuing first quarter losses brings a management shakeup; released are CFO John Rickets and Vice President-Human Resources J. C. Tennant, while Vice President of Operations C. H. Simpson takes early retirement. Formerly Vice President of Marketing Jean-Jacques Bourgeault is appointed Executive Vice President/COO.

On April 22, a government regulator, adopts the company's position and refuses to allow **Canadian Airlines International, Ltd.** to walk away from its Gemini CRS partnership and join the **American Airlines** SABRE system. Six days later, the joint acquisition with Air Partners allows **Continental Airlines** to emerge from bankruptcy. Under terms of the takeover, the Canadian airline is allowed to own 28.7% of the major's stock on an undiluted basis, but, to comply with U.S. law, it is required to have voting control of only 24.3%. The Canadian carrier completes investment of C\$107 (US\$85) million for this holding. Deliveries to the American cargo carrier's Cincinnati hub will begin in September.

At the same time, the flag carrier makes a major offer to **Canadian Airlines International, Ltd.**, which is rejected. If the arrangement had been completed, it would have provided the rival with a cash infusion of C\$200 million (\$150.9 million) and an assumption of C\$800 million (\$603.6 million) in debt and lease obligations in exchange for CAI's international routes and eight jetliners, leaving the rival a domestic-only company. In August, orders are placed with Bombardier Regional Aircraft for two dozen Canadair CRJ100s, with 24 options.

In June, a new B-767-333ER is wet-leased to **Polynesian Airlines, Ltd.**

Meanwhile, the carrier continues an aggressive cost containment program and completes its investment and comprehensive marketing arrangement with **Continental Airlines**. The alliance will bring about connections for AC passengers through Continental's hubs at Cleveland, Newark, and Houston, reciprocal ground-handling, general sales services, maintenance cooperation, joint purchasing, inventory sharing, and participation in frequent flyer programs.

Also in September, an agreement is signed with **Korean Airlines/Korean Air (KAL)** providing for code-sharing and freight block space on flights from Toronto to Vancouver and Seoul. New routes are initiated to New Delhi and Houston and orders are placed for six A340-300s, to be employed on future Pacific services.

The Canadian Supreme Court denies the airline, and its CRS partners, permission to appeal a July Federal Appeals Court ruling that the permits the Canadian Competition Tribunal (CCT) authority to release **Canadian Airlines International, Ltd.** from its Gemini hosting agreement. The CCT orders dissolution of Gemini, effective within a year.

As the result of surveys showing that 70% of its passengers still believe the company is owned by the government, the airline introduces a new corporate image on December 1, using its aircraft to illustrate the privatization. Beginning with a B-747-133, the new aircraft color scheme comprises a white fuselage with bold titles and, most strikingly, an evergreen tail so dark as to be almost black adorned with a shaded, realistic maple leaf.

A December stock sale nets C\$250 million (\$188 million). Meditated talks with PWA Corp. to end the Gemini issue end in impasse and a second AC takeover offer to **Canadian Airlines International, Ltd.** is also rejected. The Montreal-based major now joins Gemini and Covia in appealing the CCT's November ruling to the Federal Appeals Court.

Passenger boardings for the year drop another 4% to 9.5 million and freight figures are not revealed. Revenues increase by 3% to C\$2.72 billion, costs decline 3.4% to C\$2.66 billion, and an operating profit of C\$54.6 million is generated. The net loss is cut to C\$231.4 million.

The workforce is increased by 2.3% in 1994 to 18,422. On January 16, AC drops its opposition to **Canadian Airline International, Ltd.**'s withdrawal from the Gemini CRS as part of its own effort to reach an accommodation with **American Airlines**. Meanwhile, it joins with Gemini, Covia, and PWA Corporation in negotiations aimed at ending their business differences. The government of Canada now designates AC as its flag line to the new Kansai International Airport in Japan, set to open on September 4.

Beginning in late January, the entire fleet is given the new paint scheme as a part of regular paint maintenance programs; tails of aircraft are painted in an evergreen shade as backing for a large natural-looking maple leaf. "Air Canada Connector" partners will also change their color schemes.

AC, Covia, and Gemini sign a settlement agreement with PWA Corp. in February that will allow **Canadian Airlines International, Ltd.** and AMR Corp. to join forces two months hence. The last DC-8-73F flight is completed from London to Toronto on March 29, as AC becomes the last of the original DC-8 operators to retire the Douglas jetliner.

In March, the Gemini Partnership is taken over completely and plans are made to form a new corporate structure to replace it. The Brussels Air Canada Cargo Express hub is closed. Having discovered a need for additional capacity for the summer schedule, the carrier, in something of a surprise, recalls three L-1011 TriStars from Arizona and, upgraded and painted in the new livery, they re-enter service.

The last of five DC-8-73s is delivered to the Cincinnati hub of **DHL Airways** in April. During the same month, a subsidiary of IBM Canada, Ltd., Advantis Canada, takes over the computer and telecommunications network formerly operated by the carrier and Gemini CRS. The IBM unit will host AC's international reservations systems and deliver all information systems requirements. A new company, Galileo Canada, Inc. is formed as a subsidiary of the airline to take over Gemini's CRS business.

A B-767-333ER, wet-leased to **Polynesian Airlines, Ltd.**, is returned on April 15; an operational success, the wide-body, at \$2-million-per-month, is too expensive for the small carrier to operate.

During the second week of May, Chairman Harris signs a letter of intent to lease 25 A319s, beginning in December 1996; the arrangement will make the Canadian flag carrier the largest operator of Airbus equipment in North America. The manufacturer, meanwhile, agrees to arrange 100% third-party financing of the deal off the airline's balance sheet.

Employing **Korean Airlines/Korean Air (KAL)** aircraft under terms of the alliance signed the previous September, flights to Seoul (the carrier's first transpacific market) begins from Toronto via Vancouver in May. The newly implemented pact also allows the two airlines to exchange seats and cargo pallets on flights between the two nations. Over a four-month period beginning later in the month, first and business-classes are combined into premium "Executive First" service.

The A319 contract is signed on June 10. Also in June, an alliance is signed with **British Midland Airways, Ltd.** that provides for code-sharing flights from Halifax, Montreal, Ottawa, St. Johns, Toronto, Vancouver, and Winnipeg through London (LHR) to Belfast, Edinburgh, Teeside, Leeds/Bradford, and Glasgow.

The Gemini CRS partnership with **Canadian Airlines International, Ltd.** is dissolved on July 1 and replaced by a new one with Galileo Canada. Summer seasonal frequencies are undertaken from Vancouver to Calgary, Glasgow, and Paris and in September, regularly scheduled operations commence to Osaka (KIX) from Toronto via Vancouver. Advantis Canada becomes operational on July 29. Deliveries of the Canadair CRJ100 Regional Jet begin in September and will continue at the rate of one per month.

In October, the company establishes a general sales agency in Canada for **ANA (All Nippon Airways Company, Ltd.)**. Discussions between the two companies will continue, aimed at the development of a strategic alliance that will include code-sharing, joint marketing, and reciprocal frequent flyer club participation.

Employing the first pair of 24 Canadair CRJ100s to be delivered, the company inaugurates four-times-per-weekday nonstop roundtrips between Ottawa and Newark in November.

In December, Transport Canada rules that AC will not be allowed to serve Hong Kong as a "second carrier." Arrangements are completed during the month for the three-year charter of two A340-313s from ILFC to be delivered in June.

During the year, the company takes over the remaining 25% interest in **Air Ontario, Inc., Air Alliance, Inc.**, and Wingco Leasing; the package price is C\$25 million.

Customer bookings swell by 4% to 9.9 million, while revenues jump 11.8% to C\$2.85 billion. Expenses rise only 2.2% to C\$2.68 billion and allow a pretax gain of C\$173.24 million. A net C\$91.5 million is earned.

Employment grows by 6.2% in 1995 to 19,559 and the fleet is increased by the acquisition of 3 B-767-333ERs and 12 CRJ100s.

On February 10, 600 employees picket Prime Minister Jean Chretien to protest Transport Canada's December refusal to allow their company "second carrier" status to serve Hong Kong.

Under a new bilateral "open skies" agreement signed between Ottawa and Washington in February, on March 10 AC and **Canadian Airlines International, Ltd.** are allocated a total of 24 new landing slots at New York (LGA) and Chicago (ORD) by Transport Canada. A total of 32 new routes into the U.S. will be started.

The same day as the U.S. decision is announced, the government agency also reverses its December "second carrier" decision and establishes new criteria for such airline designations on international routes. AC now becomes eligible to start Hong Kong flights even as **Canadian Airlines International, Ltd.** receives authority for other Asian destinations, plus Germany.

Called in by CALPA to settle a dispute, a Canadian Dept. of Labor arbitrator rules that the 250 most junior company pilots should be merged into the list of pilots maintained for AC's five regional subsidiaries. This ruling, together with introduction of the Canadair Regional Jet that has occasioned it, will have a dramatic political impact on politics within the pilots' union.

Thrice-daily CRJ100 nonstop roundtrips commence on May 1 between Ottawa and Washington, D.C. (IAD). The company, which has previously only been offering charter flights to Ft. Lauderdale-Hollywood International Airport, inaugurates scheduled nonstops on June 3 from Toronto to that Florida destination four times per week.

On June 19, thrice-daily CRJ100 nonstop roundtrips commence from Montreal to Washington, D.C. (DCA) and five-times-per-day CRJ100 nonstop roundtrips commence to the same destination from Toronto.

The first of two orders for eight Airbus Industrie A340-313s join the fleet under charter from ILFC and, on June 20, the company undertakes its first flights to the Middle East with the initiation of twice-weekly Toronto to Tel Aviv B-767-333ER roundtrips. Flights employing the A340-313s are also inaugurated to Hong Kong.

On June 26, it is announced that the carrier will add eight more daily flights to the U.S. as part of its expanding alliance with **Continental Airlines**. Such nonstop Continental routes as Vancouver to Newark and Houston will seamlessly open to the Canadian carrier's passengers while AC will provide 26 daily flights to Continental.

On September 29, all warrants held AC for future purchase of **Continental Airlines** common stock are purchased by the American major for US\$50.5 million, giving the Canadian carrier a significant third quarter gain. The warrant sale does not affect the northern airline's ownership of 18.5% of Continental's outstanding stock or its voting rights stake of 23.8%.

The carrier now becomes indirectly involved in a major political uproar. On November 18, the Canadian Justice Department asks Swiss authorities for information to support allegations of "criminal activities" carried out by former Prime Minister Brian Mulroney, who has allegedly received illegal payments for putting pressure on the AC board in 1988 to purchase Airbus equipment. Mulroney unequivocally denies all charges of impropriety on November 19 as his lawyer prepares to file a C\$37-million suit against the government of Prime Minister Chretien and the RCMP.

Also during the month, and in cooperation with **Cathay Pacific Airways (Pty.), Ltd.**, which supplies the aircraft, regularly scheduled return cargo service is inaugurated between Hong Kong and Toronto, with a technical stop at Anchorage.

During the last week of November, company pilots vote to depart the Canadian ALPA and form their own Air Canada Pilots Association in final reaction to the March pilot list arbitration.

To celebrate its status as the official carrier of the new Toronto Raptors NBA professional basketball team, the company unveils an A320-211 on December 4 painted in a special color scheme in honor of the organization.

Also in December, a company B-747-433C inaugurates thrice-weekly nonstop, roundtrip passenger frequencies between Toronto and Hong

Kong. Former winter charter routes to the warmer parts of the U.S. become scheduled; included are routes from Halifax to Orlando; Montreal to West Palm Beach and Miami; Toronto to Orlando, West Palm Beach, Ft. Lauderdale, Tampa, Miami and Las Vegas; Winnipeg to Orlando; and from Vancouver to Maui and Honolulu.

On December 29, Flight 837, a B-747-433C with 191 passengers and en route to Seoul from Vancouver and Hong Kong, is denied permission to enter South Korean air space and is escorted out of it by KAF jet fighters. The Jumbojet flies to Japan where it is determined that an electronic ATC flight plan filing error has caused the incident.

Also during December, the company's 1,700 pilots, dissatisfied with the manner in which the Canadian ALPA has handled the matter of merging seniority lists between the major and its regional subsidiaries, vote 75-25 to quit the union and form an in-house bargaining unit of their own.

Passenger boardings accelerate 9.1% to 10.8 million while freight is up 11.7% to 1.03 billion FTKs. Revenues jump 12% to C\$2.29 billion and expenses are up 8.8% to C\$2.3 billion. Operating profit grows to C\$200.75 million; however, there is a large C\$142.13-million net loss, later adjusted into a C\$45.26-million gain.

Airline employment stands at 19,868 in 1996, a 2% increase. Nonstop daily return service is inaugurated on January 8 between Toronto and Philadelphia. In addition, the company inaugurates A340-313 roundtrips from Vancouver to Osaka. A new wardrobe is introduced for 16,000 employees on January 29. A press release notes that the new clothing has required the following from 20 different Canadian manufacturers: 485,600 ft. of fabric, 500,000 buttons, 119,700 zippers, and 108,780 AC maple-leaf emblems.

A total of 17 CRJ100s are in service by the first week of February and, during the month, the type is employed to inaugurate new roundtrip frequencies from Toronto to Nashville and Raleigh/Durham. A state-of-the-art business center is opened at Toronto on February 15.

Robert A. Milton becomes Executive Vice President/COO on March 6.

Matched wherever possible by **Canadian Airlines International, Ltd.**, AC expands its "Rapidair" and other shuttle services at the beginning of the summer schedule on March 7. From Toronto, 44 daily "Rapidair" flights are undertaken to Montreal, with another 17 flown from Montreal to Toronto's Island Airport; also from Toronto, 32 "Rapidair" frequencies are undertaken to Ottawa along with 14 non-"Rapidair" flights. At the same time, 29 daily "Rapidair" frequencies are inaugurated between Calgary and Vancouver; a total of 30 non-"Rapidair" flights are made from Calgary to Edmonton and seven from Edmonton to Vancouver.

A code-sharing alliance is signed with **Deutsche Lufthansa, A.G.** on March 22, in which the two national airlines will also share airport lounges and frequent flyer programs and code-share on 84 flights each week across the North Atlantic and on DLH flights through Frankfurt to other German destinations.

During the month, a fourth weekly nonstop flight begins from Toronto to Hong Kong. At month's end, the carrier begins to code-share on **Swissair, A.G.**-operated flights from Montreal to Zurich, complementing its own flights from Toronto to Zurich.

Ticketless travel is extended across Western Canada on April 1. The carrier on April 22 begins to reduce down to 4% the 24% stake in **Continental Airlines** purchased in 1993. The sale will bring a gain of C\$94 million. Ticketless travel is introduced in Ontario on April 23.

A new management team takes office on May 14 as Chairman/CEO Hollis Harris retires and is succeeded as CEO by Lamar Durrett. The first company flight into the new Vancouver Airport international terminal building is completed on the same day. Ticketless travel is extended coast-to-coast on May 7. A new call center is opened in New Brunswick on May 23 while a state-of-the-art business center and new lounges are opened at Vancouver Airport on May 31.

Also during the month, 13 new nonstop frequencies, representing a total of 134 new weekly scheduled flights, are inaugurated from Canada to the U.S.; the aircraft employed include CRJ100s, DC-9s, A320s, and B-767s. Routes flown include Vancouver to Denver, Los Angeles, and

San Francisco; Calgary to Denver and Houston; and Toronto to Washington, D.C. (IAD), Denver, Las Vegas, Orlando, Ft. Myers, Ft. Lauderdale, and West Palm Beach; and Montreal to Orlando.

When the summer European travel season begins on June 1, AC introduces new nonstop B-767-333ER weekday frequencies from Toronto to Frankfurt and Zurich, from Toronto to Manchester, and thrice-weekly from Montreal to Brussels, the only service from Canada to Belgium. In total, 121 weekly roundtrips are offered—a 15% increase over the previous summer.

The same day, Canadair CRJ100s enter service on the company's 17 daily Calgary to Edmonton "Rapidair" roundtrip services. Frequencies on the Toronto-Nashville route are increased on June 7.

Transatlantic service under the new German accord commences on June 15. Also during the month, twice-daily CRJ100 roundtrips commence from Toronto to Kansas City. The marketing alliance with **All Nippon Airways Company, Ltd.** is extended on June 25. Next day, a state-of-the-art business center and rooftop lounge are opened at Montreal (YUL).

When the newest CRJ100 arrives and is placed into service on the Edmonton-Calgary "Rapidair" service, it sports the image of a female runner and special "Go Canada" and "Go Atlanta" subtitles under the window-lines of the forward fuselage on one side and "On Y Va Canada" and "Canada" titles, plus a male runner, on the other side.

On July 1, COO Milton notes that, since the start of the "open skies" accord with the U.S. 18 months earlier, 33 new routes have been opened south of the border with only three unprofitable. The new services have been so successful that the company has been forced to put off the retirement of 15 DC-9s.

John F. Fraser is elected chairman on July 10. Two days later, the carrier begins code-sharing with **Deutsche Lufthansa, A.G.** on flights from Toronto, Calgary, and Vancouver to Athens and Prague. Following the conclusion of the Atlanta Olympics on July 19, the carrier paints one of its B-767-233s with a likeness of Gold Medal winner Donovan Bailey, giving it a gold stripe and titles that read "Flying With the Best/A La Hauteur Des Meilleurs."

Code-sharing flights commence with **All Nippon Airways Company, Ltd.** on August 1 over a route from Vancouver to Osaka (KIX). The last of two dozen Canadair CRJ100s enters service during the summer.

Customers are on September 3 are offered free accommodations at more than 350 European Countryside Hotels. During the last week of September, the carrier begins overhauling its Executive Class seating on its A320s.

Building upon the arrangements both companies already have with **Deutsche Lufthansa, A.G.** and **United Airlines**, the company signs a strategic partnership agreement with **SAS (Scandinavian Airlines System)** on October 1. Under terms of the pact, which will take effect next April, the two agree to code-share flights, coordinate schedules, passenger, and ground services, and link their frequent flyer programs.

The new fall scheduled is introduced on September 30. Highlights include the addition of daily nonstops from Edmonton to Ottawa; an increase from three to four weekly flights from Vancouver to Maui; an increase from two to three daily roundtrips from Toronto to Houston; an increase from four to five daily Montreal to Boston roundtrips; and the introduction of DC-9s on the four-times-per-day Toronto to Philadelphia service.

Nonstop roundtrips from Edmonton and Calgary to London are increased from two to four each week and from 13 to 15 each week between Toronto and London. Three new weekly nonstops commence between Toronto and Manchester, while frequencies between St. Johns and London grow from four each week to five.

Four new weekly roundtrips are initiated from Vancouver, Calgary, and Toronto to Frankfurt, all flown dual-designator by **Deutsche Lufthansa, A.G.** A340-313 flights from Toronto to Tel Aviv are increased from two to three per week while frequencies from Vancouver to Hong Kong grow by two flights each week with one more roundtrip added between Vancouver and Osaka.

Nonstop daily roundtrips from Toronto to Raleigh-Durham, N.C. commence on November 18. During the summer and fall, the major handles contract negotiations with the Canadian ALPA on behalf of its four principal "Air Canada Connector" partners. Unhappily, discussions break down on December 4. The first of 35 A319-114s is delivered on December 11; AC will become the first North American airline to operate the type. Nonstop RJ100s are introduced to Dallas (DFW) on December 19.

Enplanements inch up 2.6% to 12.6 million and these figures also represent a 9% boost in the passenger traffic of the "Air Canada Connector" partners. Operating income advances 8.3% to C\$3.56 billion and expenses jump 10.2% to C\$3.4 billion. Operating gain drops to C\$150.5 million, but the after-tax profit surges to C\$108.77 million (later adjusted down to C\$104.3 million).

The workforce grows by 6.5% in 1997 to 21,200. AC places its premier A319-114s into service on January 1 over its routes from Toronto to New York (LGA) and Boston. On January 2, CALPA warns that pilots flying 700 daily "Air Canada Connector" flights to 70 destinations in Canada and the U.S. will strike on January 10 if there is no new labor agreement.

Former Prime Minister Mulroney reaches an out-of-court settlement on January 5, the eve of an unprecedented trial on libel charges against the government. Charging that his reputation has been permanently damaged by the previous year's bribery charges, the ex-leader, who has maintained his innocence in the face of intense media attention, receives C\$36.5 million. In addition, the next day he receives the formal public apologies of the Canadian Government and the RCMP.

On January 10, the 900 "Air Canada Connector" pilots join in a strike over merged seniority lists. The company operates with replacement workers and charter aircraft, but many flights must be cancelled.

Also during the first quarter, the company's fleet of Canadair Regional Jets is expanded to 26, following the quick order and receipt of two new aircraft.

The job action by the "Air Canada Connector" pilots ends on March 1 following a marathon 24-hr. negotiating session in a downtown Quebec City hotel. It is decided to leave it to Canada Labor Relations Board to decide whether AC is to be considered a common employer of both regional and AC pilots.

Twice-daily A319-114 nonstop roundtrips to Dallas (DFW) from Toronto commence on March 3.

After weeks of negotiation, the "Air Canada Connector" regional pilots, between March 9 and 11, ratify a new 4-year contract with AC. Initially tentative, the pact, providing increased benefits and income, will be approved by 88% of the eligible flyers voting in a special election.

Pilots for the four "Air Canada Connector" airlines begin to return to work on March 10, although flight attendants at **Air Ontario, Inc.** remain on strike. The strike has cost the major approximately C\$16 million.

Nonstop roundtrips begin daily to Charlotte, North Carolina, on April 5 and a new preclearance pact is signed between the U.S. and Canada on April 9, the same day in which the company wins a contract to maintain the A320 fleet of **America West Airlines** at Winnipeg.

On April 14, a new Internet-based reservation product is unveiled.

The company's summer schedule is announced on April 23. Immediate features include thrice-daily CRJ100 roundtrips from Winnipeg to Thunder Bay and 10-times-per-day, each way departures from Vancouver and Toronto for Toronto and Vancouver. Nonstop A319-114 Toronto-Seattle daily roundtrips begin on April 24.

Also during the month, the company begins a review of its entire regional airline arrangement and determines to put Yellowknife-based **Northwest Territorial Airways/NWT Air** up for sale, even though it had not been affected by the strike. The examination is prompted not only by the pilots' action but also by the entrance onto the scene of the new discount carriers **Vistajet, Ltd.** and **Greyhound Air, Ltd.**

Daily A319-114 roundtrips from Toronto to Phoenix begin on May 5. This is the first and only scheduled nonstop service between Eastern Canada and the southwestern U.S. city.

With considerable fanfare on May 14, AC joins with its marketing partners **Deutsche Lufthansa, A.G., SAS (Scandinavian Airlines System), Thai Airways International, Ltd. (THAI), and United Airlines** in an enhanced joint venture marketing partnership to be called "Star Alliance." The new consortium, seen in some quarters as a counter to the proposed **British Airways, Ltd. (2)-American Airlines** arrangement, will stitch together the operational and marketing efforts of all five airlines.

Employees of the five will be able to share ticket offices and airport services, purchase supplies jointly, and contribute to joint promotional and advertising campaigns to be handled by the New York firm of Young & Rubicam Advertising, which is given a \$25-million budget to publicize unified efforts. Travelers on any of the carriers will be able to accumulate and cash in frequent flyer mileage from any of the five. **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)** will join the group in October.

While company leaders are celebrating the new alliance in a grand Frankfurt ceremony, aircraft from two of the partners are involved in a minor ground collision at London (LHR). An AC B-747-433 and a **United Airlines** B-777-222 scrape wings while both are taxiing to a holding point prior to takeoff. Both aircraft are inspected and although the 777 sustains significant damage, the Canadian Jumbojet, which has only superficial and easily repairable damage to one of its winglets, is cleared to depart for Toronto three hours later.

The company on May 20 announces its intention to sell Galileo Canada. Seven days later on May 28 a short-term deal is signed with **Cathay Pacific Airways (Pty.), Ltd.** Under terms of the arrangement, the Hong-Kong based major will wet-lease an AC A340-313 for a few flights at the end of May and beginning of June as its own A340 fleet is being modified. The wet lease commences with Cathay's May 29 return service from Toronto to Hong Kong. The last wet-leased flight is operated on June 4.

Two new nonstop roundtrips are introduced on June 14 between Vancouver and Zurich. Service from Vancouver to Seoul is increased on June 15 to four per week while four new B-767-333ER nonstops, flown in cooperation with **Deutsche Lufthansa, A.G.**, commence the same day between Vancouver and Frankfurt. The number of nonstop roundtrips to Tel Aviv from Toronto is increased from four to five per week as of June 16, while twice-weekly roundtrips simultaneously commence from Montreal to Frankfurt via Halifax. A new weekly nonstop roundtrip is launched on June 17 from Calgary to Seoul, while new thrice-weekly services from Toronto to Osaka (KIX) begin the same day. The latter is the first transpacific nonstop service from Toronto.

The subsidiary **NWT Air, Ltd.** is sold to **First Air, Ltd.** on June 19. The number of Montreal to California links is boosted on June 27 with the start of new nonstop Saturday and Sunday service to San Francisco. Weekend roundtrip nonstops commence on June 28 between San Francisco and Montreal.

Beginning on July 15, U.S.-bound company passengers from Ottawa Airport are able to clear U.S. Customs and Immigration there before boarding their flights. Three days later, the company sponsors the Montreal Dragon Boat Race Festival. Galileo International is sold on July 30 for C\$44 million.

During the month, a pair of DC-9-32s is sold to the Philippine operator **Cebu Pacific Air**. As part of the purchase price, AC agrees to paint the aircraft in a colorful yellow-and-white livery, completed with palm tree decals.

On August 1, orders worth US\$1.4 billion are placed with Airbus Industrie for eight A330s/A340s. Options are placed on 20 A330/A340s, including 5 A340-500/600s. When deliveries are completed in August 2000, the new planes will replace six B-757s and two leased A340s.

Company employees reach out to Manitoba flood victims on August 22 and volunteer to rebuild a community center. At about the same time, the carrier joins with "Star Alliance" partner **SAS (Scan-**

dinavian Airlines System) in expanding their relationship; eight Canadian cities are now linked to two each in Norway, Denmark, and Sweden.

On August 26, the carrier takes delivery of its 14th A319-114. In honor of the carrier's sixtieth anniversary (which will be celebrated on September 1), the "baby bus" arrives on August 26 wearing the original **Trans-Canada Airways, Ltd.** livery, plus a small display of logos worn over the years.

A Cyber Ticket Office is opened on the Internet on September 5. Early on the morning of September 12, an agreement is reached with the failing London, Ontario-based **Vistajet, Ltd.** to take on its previously ticketed passengers; the pact clears the way for the start-up to cease operations a minute before midnight.

Thrice-daily A319-114 services to Dallas (DFW) morning, noon, and night begin on September 29 as a month of sixtieth-anniversary celebrations come to a close.

The company code-shares on **Air New Zealand, Ltd.** flights, beginning on October 8, from Auckland via Honolulu to Vancouver and from Auckland via Honolulu and Los Angeles to Toronto.

CRJ100 service begins from Toronto to Cleveland on October 20, seven times per day. The company announces its new winter schedule on October 26; it features 250 more flights per week than a year earlier, an overall capacity increase of 10.7 per cent.

The domestic highlight in introduction of a new on-the-hour daily shuttle service from Toronto to Ottawa.

A second daily frequency to Phoenix begins on October 27 while Toronto to Pittsburgh Canadair RJ roundtrips are simultaneously introduced, four-times-daily. The carrier and **Air New Zealand, Ltd.** extend their partnership on October 30 and launch a reciprocal frequent flyer program. At the same time, the leases on the two chartered A340-313s are extended through June 2000.

On November 1, **Continental Airlines** moves out of AC's Terminal 2 in Toronto, making room for "Star Alliance" partner, **United Airlines**. Simultaneously, AC transfers from Continental's Newark terminal to United's.

Four-times-per-day CRJ100 frequencies begin to and from Cincinnati on November 10. Thrice-daily Canadair RJ nonstops from Toronto to Milwaukee begin on November 17. The next day AC and Ingle Health launch Snowbird Travel Insurance. On November 24, the company repays its fuel tax rebates and reinstates its income tax losses.

Also during the month, orders are placed for five A330-300s and three A340-300s. The former will be powered by \$450-million worth of Rolls-Royce Trent 700 engines.

Fast Track service is introduced at Vancouver on December 2. It is announced on December 3 that readers of Business Traveler International have chosen AC as the "Best Airline for Travel to Canada".

On December 9, AC launches a DM 2000-million Eurobond via an international syndicate of banks led by Bayerische Landesbank of Munich. With a seven-year maturity, the bonds will be traded publicly on the Frankfurt and Munich exchanges.

While on approach to Fredericton, New Brunswick, on a December 16 service from Toronto, Flight 646, a CRJ100ER with 3 crew and 39 passengers, loses power and makes a forced landing, veers off the runway and speeds across a field until it collides with trees. Although there are no fatalities, 35 passengers are taken to the hospital, from which 27 are soon released with minor injuries.

In honor of the 1998 Winter Olympics in Japan, a company A340-313 is given Nagano '98 subtitles and the image of a downhill skier; it is placed on routes from Toronto to the Far East at year's end.

Customer bookings ascend 7.6% to 14 million, while cargo jumps 14.3% to 895 million FTKs. All of the company's fiscal documents reveal new financial records. Operating revenues rise 14% to C\$3.9 billion, while expenses are up 12% to C\$3.54 billion. The operating profit reaches C\$257.6 million and a C\$298.8-million net gain is celebrated.

At the beginning of 1998, AC is the 14th largest airline in the world in terms of net profit, 15th in fleet size, 17th in number of employees,

18th in operating profit, 20th in operating income, and 23rd in passenger boardings.

The fleet at the beginning of the year includes 151, of which 84.8% are Stage III certified; this number includes 23 DC-9s, 9 B-747s, 29 B-767s, 23 A319s, 34 A320s, 8 A340s, and 25 CRJs.

Help is offered on January 13 to Quebec and Ontario ice storm victims and their families.

The carrier joins with "Star Alliance" partners **United Airlines** and **Deutsche Lufthansa, A.G.** in early February to announce that the three will set up a joint venture, "Airliance," to trade aircraft parts. On February 25, the carrier announces that it will begin the first non-stop transcontinental scheduled service between Atlantic Canada and Alberta.

On March 27, while taxiing for takeoff from Chicago (ORD) to Winnipeg with 5 crew and 27 passengers, Flight 833's DC-9-32 engine ignition switch catches fire in the cockpit. The blaze is immediately extinguished and no injuries are reported during the subsequent emergency evacuation.

The carrier's contract with the Air Canada Pilots Association expires on April 1. Negotiations for a new agreement continue.

Also this day, the company offers seven weekly flights between Halifax and London (LHR), including two nonstops and five one-stops via St. John's. A340-313s and B-767-333ERs are employed.

On April 3, having cleared AC Flight 703, an A319-114, to takeoff from Runway 31 of New York (LGA) and **USAirways** Flight 920, a DC-9-30, to land on R-22, ATC realizes the Airbus might not have sufficient time to clear the intersection of R-22. The **USAirways** Douglas is directed to execute a go around and the AC Airbus is directed to turn right. The Canadian jetliner rejects the ATC direction and maintains its heading, while the U.S. plane banks left to avoid it, flying under and behind the A319. Flight 703 proceeds on course while Flight 920 circles and lands. The **USAirways** captain estimates that his aircraft had flown within 75-ft. horizontally and 85-ft. vertically of the AC plane; ATC puts the separation at just 20-ft. The near miss is not revealed to the public until June.

The daily A319-114 route, from Calgary to St. Johns via Halifax, is opened on April 5. Also at the beginning of the second quarter, a **Sky-service, Ltd.** B-727-231 begins wet-lease operations on behalf of Sport Hawk International Airlines, a new Canadian charter concern, which has won a contract to fly the Toronto Raptors, the local NBA team previously flown by AC.

B-767-333ER nonstops are begun from Ottawa to London on Saturdays and Sundays beginning on April 10.

In a holdover rule from the time it was a crown corporation, AC continues to be required to provide bilingual service on flights to and from Montreal, Moncton, and Ottawa. In mid-April, commissioner Victor Goldbloom, head of the Office of Official Languages, files suit against the major and its affiliates after the agency received 24 complaints, primarily against **Air Ontario, Inc.**, that flight attendants on the three routes fail to serve passengers in both official languages. AC, which treats its regionals as separate entities, refuses to acknowledge the complaints, referring them to its subsidiaries.

The carrier announces on April 16 that its customers are now required to remain buckled in whenever they are seated from takeoff through landing. The new seatbelt rule is the first for an airline in Canada.

As the "Star Alliance" nears its first anniversary, a B-767-333ER is painted in the livery of all partners. Beginning on May 1, the wide-body is employed to initiate nonstop, daily dual-designator service, with **Deutsche Lufthansa, A.G.**, between Montreal and Frankfurt. The German airline sells seats on the flight as part of a block-seat purchase arrangement.

The B-767-333ER nonstop weekend roundtrip service from Ottawa to London is increased to three times per week on May 3 and will become daily on June 1. Twice-weekly B-767-333ER roundtrips are launched between Montreal and Tel Aviv on May 19. The new Israel service complements that offered from Toronto five times a week.

Beginning on May 23, the company and **Finnair O/Y** renew their bi-weekly code-share service from Toronto to Helsinki. Also in May, an A340-313 arrives under charter from ILFC.

An application by the carrier and **Air China International Corporation** to code-share over routes from Canada to China is rejected by Canada Transport Agency during the last week of May. CTA, some years earlier, had designated China as a single-market country and assigned Canadian service to it to **Canadian Airlines International, Ltd.**

Flights to and from India are suspended on June 1. Also during June, a seven-year lease agreement is concluded with ILFC for the use of an A340-3Q8 beginning in February 1999.

Twice-weekly nonstop B-767-333ER roundtrips commence on June 5 between Halifax and Frankfurt. As with the weekly flights from both Montreal, these are dual-designator services operated with **Deutsche Lufthansa, A.G.**

On June 17, an "Air Canada Connector" contract, effective in September, is signed with North Bay, Ontario-based **Voyageur Airways, Ltd.** The pact will allow expansion of the company commuter network into new markets in southern Ontario and the northeast U.S.

A new Maple Leaf lounge is opened at Calgary on June 22; space is provided to offer 85 customers a Xerox Business Center and a bistro area.

A block-seat code-sharing pact with **Royal Jordanian Airlines** takes effect on July 2. The Canadian company purchases space on the Jordanian company's four weekly roundtrips between London (LHR) and Amman, while Royal Jordanian sells seats on AC flights from Heathrow to Montreal and Toronto.

Daily nonstop A319-114 return service is launched on July 13 between Toronto and San Jose, California, the only such service between the two cities. On August 13, the carrier and its regional subsidiary **AirBC, Ltd.** unveil a realignment of their operations within western Canada. By the judicious reworking of schedules, the major will be able to save C\$50 million annually, while transferring two A320-211s, one A319-114, and five CRJs to more profitable segments of the route network.

Negotiations between the carrier and the Air Canada Pilots Association end without resolution on August 18. Although the company remains open to the restart of discussions, members of union Chairman Jean-Marc Belanger's group begin to openly discuss a job action.

On August 26, the Minister of Labor informs representatives from both the pilots group and the airline that they are released from the federal government's conciliation process. Having agreed to retain an outside mediator, former Judge George Adams, both sides in the labor dispute resume negotiations on August 27 with the aim of a settlement or a strike by midnight on September 1. In order to minimize inconvenience to customers in the event of a pilot job action, the carrier now begins to waive change fees on all tickets purchased for travel between September 2-6.

Discussions between management and labor continue on August 28 and, for the first time, both sides meet face-to-face in the presence of mediator Adams. Uniformed pilots carrying placards, meanwhile, undertake informational picketing of the airports at Montreal, Toronto, Winnipeg, and Vancouver.

Talks between management and labor are broken off late on the evening of September 1 without a negotiated settlement. Consequently, at 12:01 a.m. September 2, the carrier is grounded as its 2,100 pilots begin their job action, the first in the 61-year history of Air Canada. The AC pilots association has a C\$1.2-billion strike fund in cash and lines of credit with which to weather the situation. The company's four regional airline affiliates are not affected by the strike; all four continue to fly their scheduled routes, adjusting to meet traveler demand on their routes.

As is the case with the **Northwest Airlines** strike in the U.S., a number of other carriers provide accommodation for displaced AC passengers. Chief among these is **Canadian Airlines International, Ltd.**, **Canadian Regional Airlines, Ltd.**, and CAI's domestic partners, as well as **United Airlines** and **Delta Air Lines**. All accept AC tickets, space-permitting, and without penalty or service charge. In addition, CAI responds to the increase in passenger and cargo demand by adding

flights wherever possible, including the eastern and western triangle cities and flights from Toronto to both Halifax and Vancouver.

By September 3, a quarter of the company's fleet—41 aircraft—is parked at airports outside of the country, including 20 in the U.S., 2 in Japan, and 19 in Europe, primarily at Manchester and London. Layoff notices are sent to 14,000 employees (60% of the workforce). Customer call centers at Toronto, Montreal, and Tampa remain open and service agents at airports remain on duty. Per-day losses are expected to total somewhere between C\$13 million and C\$19 million.

In an effort to rescue people stranded by the pilots' strike, AC wet-leases aircraft from **Royal Aviation, Ltd., First Air, Ltd., Skyservice, Ltd., and Corsair, S.A.** to move people over the next week. Corsair, the French charter line, provides a B-747-206B to fly the important Paris-Canada flights. In addition, a DC-10-30F is wet-leased from **Gemini Air Cargo** in the U.S. to provide freight charters to London and Frankfurt on September 5–7 on behalf of its key freight forwarder supporters.

In the Caribbean during the job action, **British West Indies Airways, Ltd. (2) (BWIA)**, and **American Airlines**, among others, accept AC tickets on a space-available basis for Canadian nationals and other visitors stranded in Trinidad and on other regional islands.

Contract negotiations between management and the pilots unions resume on September 8. The pilots continue to seek a 12% pay raise over two years; AC offers a 9% boost.

Late on the evening of September 10, the two sides in the job action come to a tentative agreement on the 9% figure; the ratification process begins next day.

With the strike over and the pact agreed upon, the carrier resumes service at mid-day on September 14 with over 150 flights, primarily to domestic and transborder destinations. Service is phased on over the next three days, with 300 flights on September 15 and the full schedule of 650 daily services restored by September 17.

With sufficient Beech 1900Ds on hand and a new marketing name chosen, **Air Connexion, Voyager Airways, Ltd.**, on behalf of AC, prepares to inaugurate nonstop roundtrips on September 20. The first city pair selected for visits is Toronto and Syracuse, with four daily nonstop roundtrips offered during the week and three nonstop roundtrips on both Saturday and Sunday. Unhappily, the new service is cancelled before it is started.

An arrangement for the inauguration of dual-designator service with **Air New Zealand, Ltd.** within a week is signed at Montreal on October 2. Future plans are made for daily service between Toronto and Auckland via Los Angeles and Honolulu.

Twice-daily nonstop CRJ100ER roundtrips begin on October 5 between Montreal and Washington, D.C. (IAD). These new frequencies complement the thrice-daily nonstop roundtrips currently offered between Montreal and Washington, D.C. (DCA). The same day, the western route realignment with **AirBC, Ltd.** takes effect.

Having suspended operations into India for four months, flights to New Delhi from Vancouver via London commence four-times-a-week on October 5. Connections are available to major destinations in Canada, including Toronto, Montreal, Ottawa, Edmonton, and Calgary.

The carrier, together with **United Airlines**, announces plans on October 6 to expand their code-share alliance in stages throughout the month of October, thereby resulting in the placement of the Canadian major's "AC" code on more than 600 UA flights throughout the United Airlines domestic system. The action is the largest single expansion made by United with one of its alliance partners.

Thrice-weekly dual-designator service is inaugurated with **Air New Zealand, Ltd.** on October 8 over a shared route from Vancouver to Auckland via Honolulu. The Canadian major flies the Vancouver to Honolulu leg with its B-767-333ER while Air New Zealand handles the Honolulu to Auckland segment with a B-767-319ER. Each airline sells seats on the other carrier on a code-share basis and both airlines offer customers one-stop check-in, baggage ticketing, and a bypass of U.S. customs and immigration checks.

Also on October 8, the first phase of the enhanced UA-AC alliance takes place on flights out of **United Airlines'** Denver hub.

The flight attendants' union begins negotiations with management on October 21 concerning a new contract.

The second phase of the enhanced UA-AC alliance takes place on flights out of Chicago (ORD) on October 22.

Daily nonstop DC-9-32 roundtrips begin on October 26 between Toronto and New Orleans. AC is the first airline to offer scheduled flights between the two cities. Simultaneously, thrice-daily nonstop CRJ roundtrips commence between Ottawa and New York (LGA).

The third phase of the enhanced UA-AC alliance takes place on flights out of United Airlines' hubs at Los Angeles and San Francisco on October 29.

Also during the month, the company's three B-747-133s are retired; their airframes are sold to **Evergreen International Airlines** and their engines to Pratt & Whitney.

The number of daily CRJ roundtrips between Newark and Ottawa are reduced from four to three on November 2. Still, these flights complement the three new return flights recently introduced from Ottawa to New York (LGA) and gives the company six daily nonstop roundtrips into the New York area from the Canadian capital.

While en route from Toronto to Phoenix on November 24, the flight crew of an A320-211 with 105 passengers smells fumes in the cabin. An emergency is declared and the Airbus returns to Toronto, where it lands without incident or injury. It will be determined that the fumes causing the non-event were caused by traces of oil in an air conditioning unit.

On December 8, the carrier reendorses **Emery Worldwide** as its primary carrier to move the airline's engine parts and maintenance materials between the U.S. and Canada. Under the new three-year contract, which also applies to the "Air Canada Connector" carriers, Emery will continue to transport shipments from AC's 2,500 suppliers in the U.S. to its facilities in Canada and from its Canadian depots to its 42 stations throughout the U.S.

The next day, ticketless travel is introduced on company routes from North America to London (LHR).

In a joint announcement on December 16, AC and **SAS (Scandinavian Airlines System)** reveal that they will commence nonstop dual-designator air service five times a week between Toronto and Copenhagen. Flights on the new route—the only scheduled, nonstop service linking Canada and Scandinavia—will be operated by AC B-767-233ERs.

A memorandum of understanding is signed with **Singapore Airlines, Ltd.** on December 22 for the creation of a strategic alliance. Although arrangements will not be completed until March, it is anticipated that the pact will cover code-share services, frequent flyer programs, network and schedule development, through check-in, reciprocal use of airport lounges, joint promotions and marketing.

Passenger boardings this year increase by 5.7% overall to 14.8 million, but cargo traffic is down 7% to 1.21 billion FTKs.

As a result of unfavorable currency fluctuations, bad weather, and the strike, AC's revenues are down 0.7% to C\$4 billion. Expenses are up 3.7% to C\$3.91 billion and there is a C\$97-million operating profit. Still, a net loss of C\$11 million must be reported.

Severe winter storms and heavy snows disrupt air services at Toronto between January 2 and January 6, 1999; many customers are inconvenienced and the airline is forced to waive change fees on discount tickets for travel booked out of that airport during the storm-related disruption.

On January 4, following an assessment of the Canada-Taiwan market carried out during the fall, Transport Minister David Collenette names AC as the nation's second air carrier to Taipei.

Another horrific winter storm assaults Toronto on the evening of January 14, forcing the airline and many others to cancel departures. Additional manpower is laid on at Montreal, Calgary, and Vancouver to accommodate customer inquiries. Blizzard conditions continue at Toronto the next day forcing many carriers to cancel departures. The situation returns to normal by January 17.

On January 25, AC receives the 1998 "Passenger Service Award" from *Air Transport World* magazine. Anticipating a softening of demand

in the Indian market, the carrier announces on January 28 that it will suspend service to New Delhi, India, between June 1 and September 30.

On February 6, Flight 754, an A320-211 with 6 crew and 89 passengers en route from San Francisco to Toronto, and **Federal Express (FedEx)** Flight 1020, a FedEx DC-10-30F with 3 crew en route from Newark to Oakland, sustain no damage or injuries while surviving a near miss 40 mi. N of Lincoln, Nebraska. The aircraft come within one-mile horizontal and 600-ft. vertical of each other.

A leased A340-3Q8 enters service in February. It is confirmed in mid-month that the company is in discussion with Calgary-based **WestJet Airlines, Ltd.** concerning a non-equity strategic commercial agreement, which may include code-sharing.

Electronic ticketing service is expanded on February 23 to include Bermuda.

On February 27, as it is on its takeoff roll from Calgary to Vancouver, Flight 185, an A319-114 with 112 passengers, is ordered at the last minute by ATC to abort its takeoff in order to avoid a collision with a small plane taking off from another runway without clearance. The AC jetliner is able to halt 1.5 km. from the intersection of the second runway without incident. It requires an hour for the aircraft brakes to cool down and for a safety inspection to be made, after which the Airbus departs for British Columbia.

The threat of another major Toronto snowstorm on the morning of March 3 causes the airline to cancel 45 of its 130 scheduled short-haul departures from Pearson International Airport. "Rapidair" frequencies from Montreal to Ottawa are maintained, but at a reduced number.

On March 15, the carrier and **Royal Jordanian Airlines** announce plans to extend their successful dual designator service between Canada and Amman from March 28 until October 30.

The new service with **Royal Jordanian Airlines** begins as advertised on March 28 and features five flights a week from Toronto and Montreal to Amman via London (LHR). Under the agreement, AC offers customers originating from Canada economy class seats on Royal Jordanian flights from London (LHR) to Amman. Conversely, Royal Jordanian customers have access to "Hospitality Class" seats on AC flights from London (LHR) to Montreal and Toronto. Coordinated schedules ensure fast, convenient, same-terminal connections at Heathrow Airport.

Just after takeoff from Shanghai on April 15 with 68 tons of cargo on a service to Seoul, a **Korean Airlines/Korean Air (KAL)** MD-11F with three crew grazes a building and crashes into a construction site 10 km. SW of its point of departure. All aboard the aircraft are killed, along with five people on the ground; 30 others on the ground are injured. The media, in covering the accident, notes that, including 269 who died when KAL 007 was shot down in 1983, more than 700 people have died in KAL crashes during the past two decades.

On April 16, **Delta Air Lines** suspends its code-sharing agreement with KAL and immediately contacts its customers booked on KAL-operated flights to assist them in making alternative travel arrangements. The suspension will remain in effect until Delta has completed a thorough review of KAL operations. AC follows suit.

Also on April 16, representative for the airline's Canadian-based customer service and sales agents, the Canadian Auto Workers, ratifies a three-year pact with the airline.

On April 19, following an announcement by Jamaican Finance Minister Omar Davies that taxes on diesel, gasoline, and fuels would be increased by 30%, demonstrations on the island flare up and rage into full-scale civil unrest. AC, joined by **British Airways, Ltd. (2)**, **BWIA (British West Indies Airways, Ltd.) (2)**, and **American Airlines**, are forced to cancel services to Jamaica on April 20. Calm is restored on Jamaica on April 21, following three-days of deadly protest, arson attacks, and clashes between demonstrators and police that leave seven dead. AC resumes its services to Kingston next day.

In cooperation with "Star Alliance" partner **SAS (Scandinavian Airlines System)**, five-times-a-week dual-designator service is inaugurated on May 1 between Toronto and Copenhagen. The flights are operated by the Canadian line's B-767-233ERs.

A comprehensive code-sharing alliance is entered into with **Mexicana Airlines, S.A. de C.V.** on April 29 and is formalized on May 3. The frequent flyer programs of the two majors are quickly linked.

President/CEO Durrett informs shareholders at the airline's annual meeting on May 5 that profits are disappointing. To help cut costs, the company will defer delivery of two A330s and park nine of its DC-9s. Service to Denver, Chicago, and Washington, D.C., will be increased.

At the conclusion of the annual meeting, CEO Durrett reports that talks will shortly be resumed with **WestJet Airlines, Ltd.** concerning a cost-cutting, code-sharing strategic alliance. *The Edmonton Journal* reports on May 6 that the major is "keen to ink" a deal in order to help it begin to make money on short-haul routes in the western part of the nation, money previously lost to WestJet's low-cost service.

The board of directors announces new executive appointments on May 12. Former President/CEO Durrett becomes vice chairman/CEO, while former Executive Vice President/COO Robert A. Milton becomes president/COO.

On May 13, under terms of the new code-sharing agreement with Mexicana, AC and its Mexican partner begin code-sharing on Toronto and Montreal services, thereby linking AC's network to Mexicana's hub in Mexico City.

Daily nonstop A319-114 roundtrips from Calgary to Chicago (ORD) begin on May 17. The new flights are offered as code-shares with **United Airlines**.

The company's multimillion-dollar contract with Goodyear Tire & Rubber for the outfitting of its 157-plane fleet with aviation tires is extended on May 20 to the year 2003.

On May 21 AC begins offering its customers the option of electronic ticketing on flights to and from Frankfurt.

The Council for Business and the Arts in Canada on May 26 names Chairman Fraser as the 1999 recipient of its Edmond C. Bovey Award for leadership in support of the arts.

On June 2, AC launches nonstop services, on a dual-designator basis, to Mexico City three times per week on **Mexicana Airlines, S.A. de C.V.**-operated nonstops between both Toronto and Montreal and Mexico City.

Dual-designator service is inaugurated with **SAS (Scandinavian Airlines System)** on June 10, five-times-a-week from Canada to Helsinki via Copenhagen. Beginning on June 15, Air Canada's code is placed on the daily flights of **Deutsche Lufthansa, A.G.** between Frankfurt and Bucharest.

Daily nonstop A319-114 return service is started on June 22 from Toronto to San Diego. Air Canada is now the only carrier offering daily nonstop service between the southern California city and eastern Canada.

The same day, contract talks between the carrier and the airline division of the Canadian Union of Public Employees, which represents its 5,100 flight attendants, break off, just three days after resuming. A July 7 strike date is set.

Canadian Airlines, Ltd. CEO Kevin Benson informs his company's annual meeting at Calgary on June 29 that their carrier has been in discussions, requested by the government, with Air Canada concerning the possibility of dividing the two carrier's weak domestic routes rather than competing over them. Although no agreements are reached, discussions are scheduled to resume in October.

Beginning on July 1, Air Canada and **Mexicana Airlines, S.A. de C.V.** further expand their pact. Air Canada places its code upon Mexicana-operated flights to and from Guadalajara, Cancun, Acapulco, and Puerto Vallarta, while Mexicana code-shares on Air Canada-operated services to and from Winnipeg, Quebec City, Vancouver, and Calgary.

Also on July 1, the Canadian Labor minister appoints two mediators to help negotiators from Air Canada and its flight attendants reach an accord. Talks resume as the airline begins to post information on its website for passengers who may be inconvenienced in the event of a job action.

Key issues in the contract dispute continue to involve pension benefits and health/safety concerns, rather than wages. No resolution can be

found and, on July 5, flight attendants are polled and vote by 89.2% to reject the carrier's latest offer.

The continuing threat of a strike causes many Air Canada passengers to rebook flights, change to other airlines, or cancel their travel plans. Just minutes before the strike deadline passes, the parties agree on a new three-year contract that avoids a systemwide shutdown.

In July, following a C\$17.8-million second quarter loss (C\$124 million for the first half), **Canadian Airlines, Ltd.** announces plans to cut passenger capacity by 7%, using smaller aircraft rather than DC-10s in a number of markets. Although voices are raised for government assistance, ministers in Ottawa make it known that none will be forthcoming.

Daily nonstop A319-114 roundtrips commence on August 3 between Ottawa and Washington, D.C. (DCA)

It announced on August 6 that CEO Durrett will retire on August 31. President/COO Milton will succeed him as CEO. Milton will be the third executive from the U.S. state of Georgia, after Hollis and Durrett, to lead the Canadian flag carrier.

Other possibilities now surface to keep **Canadian Airlines, Ltd.** aloft. At a news conference on August 13, Transport Minister David Collette and Industry Minister John Manley announce an Order-in-Council, pursuant to Section 47 of the Canada Transportation Act. The edict will relax competition rules for 90 days in order to allow CP and Air Canada to discuss a possible corporate restructuring plan. Over the next several days the outcome of such a plan is speculated in the press to range from domestic route sharing, to a takeover of CP international routes by Air Canada, to a full-blown merger with the Montreal-based major, the survivor.

On August 23, Air Canada, which simultaneously hires external financial advisors, offers to purchase CP's profitable international routes, along with certain associated assets and liabilities, and to offer CP passengers code-sharing opportunities on its international routes. The arrangement guarantees transfer of CP personnel associated with international operations, liquidity, and continued maintenance of company headquarters at Calgary. Competition on domestic routes would be maintained. The exact monetary terms are kept confidential. Canadian rejects the bid within hours of its receipt, fearing that its acceptance would reduce it to a domestic-only airline.

The stakes are raised once again on August 24. After some days of speculation in the Canadian press, Gerald Schwartz, CEO of Toronto-based Onex Corporation (a buy-out specialist who also operates Lantic Sugar, Ltd. and the airline-catering company Sky Chefs), comes forward with an ambitious plan to purchase and merge both airlines. Indeed, an accommodation is quickly gained with and approved by **Canadian Airlines, Ltd.**, under which Onex would purchase it.

Under the Onex scheme, valued at C\$5.7 billion (US\$3.81 billion), a new concern, AirCo, would be created. Shareholders in **Canadian Airlines, Ltd.** are to be paid C\$2 cash or 0.2424 common share of AirCo for each of their common stock. Stockholders in Air Canada, when given the chance, will be offered C\$8.25 cash or one AirCo share for each of their common stocks. Retaining the name Air Canada, the enlarged Canadian operator would retain headquarters in Montreal.

For its part, Onex, according to Schwartz, will invest C\$1.2 billion in AirCo. Of this amount, the corporation will invest C\$475 million, including C\$225 million financed by a loan from AMR Corporation, parent of **American Airlines**, while AMR itself will put in C\$275 million in AirCo equity and convertible debt. In addition, both concerns will join together in investing a further C\$250 million in AirCo debts and warrants. When the paperwork is finished, Onex will own a 31% stake, AMR 14.9%, and public shareholders a majority of 54%. Key to this venture will be a shift of the reformed Air Canada away from its membership in the "Star Alliance" and into the AA-dominated "OneWorld" international grouping. AA would also provide computerized reservation and accounting systems for the single carrier. Efficiencies would be gained by the elimination of 5,000 jobs, as well as such other cost-cutting measures as route consolidations.

The offer is to be sent to both airlines by certified mail within two weeks and will expire on November 8, at which time it is anticipated that Air Canada will have held a stockholders meeting to vote on the proposal.

The Onex bid, viewed as "unsolicited" and "below-market" in value, is not welcome at Air Canada, which officially says so in a press release on August 27. Meanwhile, Air Canada President/CEO Robert Milton, in a message to employees also on August 24, indicates that other bids and counter-offers may be expected. Initial responses from shareholders and analysts are surprise and caution.

Figuratively speaking, the stadium is filled in anticipation when the contest, on August 25, begins to take on the trappings of the first international alliance duel. Speaking on behalf of the "Star Alliance," **Deutsche Lufthansa, A.G.** announces that the grouping will do everything reasonable to maintain the presence of Air Canada "in the team for the sake of our customers and fair competition."

At midday on August 26, the three airlines involved plus Onex agree on one point: they will exercise a vow of silence until their business is completed.

On August 31, the Air Canada board of directors adopts and announces a shareholder rights plan, which is designed to give the carrier time, beyond November 8, to consider alternatives. Under the plan's "poison pill" provisions, should any bidder not approved by the company board attempt a takeover (by purchasing more than 10% of Air Canada's common stock), shareholders will receive one share of new stock for each one they already own, thereby diluting the bidder's airline stake. The directors also call for a special shareholders meeting on January 7 to consider proposals, a move immediately protested by Onex, which files suit in court to force a meeting on or before November 8.

Analysts immediately express concern that the Air Canada move will delay a buyout long enough for **Canadian Airlines, Ltd.** to go bankrupt, at which point there will be nothing left of Onex Corporation to merge. The present Air Canada will remain intact, and CP assets, particularly long-haul routes, will be available for purchase. Both national political parties, the ruling Liberal and the opposition Reform, now enter the picture, debating the merits of extending the 90-day waiver of competition rules.

Self-service bilingual check-in kiosks are introduced in the "Rapid-Air" departure lounges at Toronto and Ottawa on September 1.

The Canadian Transport Ministry indicates, on September 2, that it will not grant an extension of the 90-day limit. Simultaneously, the leadership of the IAM indicates that its 18,500 members at the two major airlines and airline service companies will stage an illegal strike on September 27 unless Ottawa guarantees no jobs will be lost in an Onex deal.

On September 11, the carrier begins code-sharing on **Mexicana Airlines, S.A. de C.V.** flights from Mexico City to Guadalajara, Cancún, Ixtapa, and Puerto Vallarta and from Los Angeles to Guadalajara.

A new code-sharing agreement with **Comair** that begins on October 7 allows connections for passengers traveling to 18 U.S. cities. On October 18, daily CRJ roundtrips are launched from Halifax to Washington, D.C. (IAD).

A Quebec court rules on November 6, on a case filed by Air Canada, that the hostile takeover bid by Onex Corporation, which is supported by **Canadian Airlines, Ltd.** and **American Airlines**, violates the 10% individual limit rule on Air Canada share ownership. The stipulation had originally been written into Air Canada's 1988 privatization document to guarantee diverse ownership. Having been proven wrong in the assumption that the government would quickly change the provision, Onex Chairman Schwartz is forced to end his acquisition attempt.

Air Canada now makes a C\$92-million offer to take over Canadian, but this move is resisted by Canadian CEO Kevin Benson, who is receiving credits from **American Airlines**, which really does not want to lose its "OneWorld" partner. Analysts, including Transport Minister Collette, now predict that Canadian will soon be acquired by its rival and planning for Canada's post-merger skies begins.

In a vivid demonstration of the ability of the "Star Alliance" to make a difference in local communities, Air Canada and SAS (**Scandinavian**

Airlines System) sign a 14-month agreement later in November. Under this pact, AC will complete C\$10 million in cabin reconfiguration work on SAS's B-767-300 fleet in its Canadian shops.

With continuing support and assistance from the other "Star Alliance" carriers, especially financial help from **Deutsche Lufthansa, A.G.** and **United Airlines**, Air Canada has put together its own \$760-million recapitalization plan for company stockholders and makes a successful C\$92-million (\$63-million) counteroffer for Canadian. The drama reaches a high point on December 4 when the **Canadian Airlines, Ltd.** board of directors accept the Air Canada tender.

On December 23, Canadian stockholders agree to sell their outstanding shares; the same day, an agreement is facilitated with **American Airlines** under which the Dallas-based major will sell its Canadian shares to AC for \$59 million.

Customer bookings this year climb 2.7% to 15,200,000 and cargo rises 3.6% to 1.25 billion FTKs. Operating revenues jump 9.7% to \$4.48 billion, while costs are up only 3.8% to \$4.13 billion. The operating profit more than doubles to \$346.21 million as the previous year's strike-induced net loss becomes a \$146.6-million gain.

Airline employment stands at 22,991 at the start of 2000, a 0.7% increase. Among the world's top 25 airlines at the beginning of the new millennium, AC is 23rd in passengers, 19th in operating revenues and number of employees, 15th in operating profit and fleet size, and 22nd in net gain.

Acquisition of the **American Airlines** and **Canadian Airlines, Ltd.** shares by Air Canada occurs on January 4. Having gained control of Canadian, the work of actually integrating it while overseeing the restructuring of its huge debt now begins.

Also on the table is the question of affiliated regional airlines. With the previous year's consolidation of **Air Nova** and **Air Alliance** having proven successful, a review of the additional opportunities to be derived from a further consolidation with **Air Ontario** and **AirBC, Ltd.** has been undertaken. On January 20, it is announced that the process of consolidating **Air Nova**, **Air Ontario**, and **AirBC, Ltd.** would begin immediately under the leadership of former **Air Nova** CEO Joseph Randall. It is anticipated that the integration process, which will be facilitated by representatives of the three lines, will require a number of months. In the interim, the three will continue operations under their original names. The federal Competition Bureau simultaneously orders the sale of the **Canadian Airlines, Ltd.** subsidiary **Canadian Regional Airlines, Ltd.**, but grants permission for its integration into the Air Canada commuter network if it is not sold by August 30.

In a joint ceremony at Toronto on February 9, 60 AC and CAI employees roll out the first Canadian jetliner to be painted in modified AC colors. The reliveried B-767-375ER wears Canadian titles, with the famous goose logo shown in smaller format behind the titles.

Seconded over from Air Canada, its executive vice president, Paul Brotto, succeeds Kevin Benson as **Canadian Airlines, Ltd.** chief operating officer on February 29; Benson remains a Canadian board member. The new AC executive vice president, effective April 1, is Calin Rovinescu, the Montreal lawyer who helped win the crucial November 6 court ruling.

On March 14, **American Airlines** confirms that it has received word that **Canadian Airlines, Ltd.** will depart the "OneWorld" alliance on June 1. Air Canada, its new owner as of December, is a member of the rival "Star Alliance."

With Transport Ministry authority, AC, beginning on April 2, is able to operate its own jetliner over the previous Canadian routes from Toronto and Vancouver to Mexico City. Simultaneously, the frequency from Toronto to São Paulo becomes daily. Transborder frequencies from Montreal to Miami, Ottawa to Chicago (ORD), Toronto to San Francisco, and Winnipeg to Chicago (ORD) are all increased.

On April 3, new daily A319-114 roundtrips are started from Montreal to Denver, while frequencies from Toronto to Las Vegas become daily. Simultaneously, a daily roundtrip is introduced from Toronto to Victoria and the carrier begins to code-share on **Canadian Airlines, Ltd.** flights

from Edmonton to Los Angeles and Montreal. Domestic frequencies are boosted on routes from Vancouver to both Regina and Saskatoon.

By April 15, Canadian has reached agreement with 90% of its aircraft creditors concerning the restructuring of its debt towards aircraft leases. The Canadian reorganization plan receives internal approval on April 21 and is forwarded to an Alberta court for approval on April 24.

Introduced on April 2, the A340-313 code-shared flights with **All Nippon Airways Company, Ltd. (ANA)** between Toronto and Tokyo (NRT) become daily on April 25.

Daily frequencies from Toronto to Hong Kong via Vancouver begin on May 1 and thereby double twice weekly the existing service to Hong Kong from Vancouver. Daily direct nonstop flights from Toronto to Hong Kong begin next day.

AC and Canadian announce on May 19 that the two will end their code-sharing arrangements with **American Airlines** on or before October 1. Canadian and American had been partners for a decade. Only five days later, Air Canada signs a code-sharing pact with **Delta Air Lines** that will come into effect on October 29. Despite Delta's membership in the **Air France**-led "SkyTrek" alliance, the new arrangement will not impact Air Canada's "Star Alliance" tie.

June 5 is a busy day as Canadian departs Terminal 3 at Toronto and begins to consolidate with AC into Terminals 1 and 2. Simultaneously, the AC Toronto to Milan route becomes daily year-round as does the route from Vancouver to Mexico City.

The same day, AC launches daily block-seat, code-sharing flights with **Deutsche Lufthansa, A.G.** between Toronto and Munich with its B-767-233ERs. It also initiates new dual designator A319-114 or CRJ service with **United Airlines** from Vancouver to Denver and Washington, D.C. (IAD), from Montreal to Philadelphia, and from Toronto to Austin and Ontario, California.

A new daily roundtrip is launched between Halifax and Vancouver and domestic frequencies are increased from Winnipeg to Halifax, Montreal, and Ottawa and from Toronto to Moncton, Regina, St. John's, and Saskatoon. Hourly service is boosted to 15 daily roundtrips between Toronto and Calgary and to 17 daily roundtrips between Toronto and Vancouver.

On June 19, daily A319-114 return flights are inaugurated between Toronto and Kelowna, British Columbia. Daily B-767-233ER roundtrips begin the next day between Toronto and Amsterdam.

Contract talks between Air Canada and the 2,200-member Air Canada Pilots Association continue during the spring and into summer. On June 26, 95% of the flyers vote in favor of a strike.

The Vancouver-Seoul service becomes daily on July 1 and new daily service from Toronto to Sydney via Honolulu begins on July 3. One of the aircraft chosen to operate the route is the repainted B-767-375ER unveiled on February 9, the use of which symbolically allows a continuation of the merger partner's 51 years of Australian service. The same day, new daily B-767-233ER roundtrips start from Toronto to Amsterdam.

Financial restructuring of Canadian is completed on July 4, on which date CEO Milton announces the reorganization of Air Canada into five main divisions. In anticipation of the completion of the two airlines' integration at the end of the year, the pair jointly indicates the next day that the Canadian Plus loyalty program will be merged into Air Canada's Aeroplan on January 1.

Canadian Airlines, Ltd., on July 7, becomes an indirect, but wholly owned subsidiary. At this point, AC is actually permitted to place Canadian's **Canadian Regional Airlines, Ltd.** subsidiary up for sale.

In its annual ranking published in the July 24 issue, *Aviation Week & Space Technology* names Air Canada the "best managed major airline in North America." Halifax lawyer Bruce Outhouse is named by the government on July 25 to mediate the pilot dispute. Due to a shortage of pilots, 49 flights must be cancelled on July 30-31.

As is the case with many U.S. carriers, Air Canada has suffered a huge number of delays and other problems this year that have led to a downturn in perceived service and an increase in passenger complaints. CEO Milton addresses these concerns at the beginning of August,

promising a complete turnabout in 180 days. Improvements will come through changes at several airports, particularly Toronto, and the addition of 2,000 employees. It is also hoped that the pilot situation will be resolved shortly.

After weeks of negotiation, talks between the airline and the ACPA pilot's union are broken off on August 18; the threat of a job action over the Labor Day holiday becomes a real possibility.

During the month, the three regionals, **AirBC, Ltd.**, **Air Nova**, and **Air Ontario** take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary. Having failed to find a buyer, Air Canada is permitted to take over **Canadian Regional Airlines, Ltd.** on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

An important foreign blessing of the majors' merger is received on August 31. The British Competition Commission, ruling in response to complaints from other airlines (including **Air France** and Canadian's former "OneWorld" partner **British Airways, Ltd.**) approves the takeover and agrees to allow Air Canada to retain all of its important London (LHR) landing slots.

The threat of a pilot strike is averted on September 1 when a mediator's recommendations on a new four-year contract are accepted. However, Air Canada is still left with the troublesome duty of integrating its pilot seniority list with the 1,200 ALPA-represented pilots at Canadian Airlines, Ltd. Weak performance forces cancellation of the new Toronto–Ontario, California route a week later.

On September 10, **CanJet Airlines, Ltd.** Chairman Kenneth Rowe files a complaint with the federal Competition Bureau alleging that Air Canada, is engaged in predatory pricing tactics against CanJet on the five new Eastern Canada routes it had initiated on September 5.

The federal Competition Bureau on October 17 orders Air Canada to stop selling special discount fares on the five CanJet routes in Eastern Canada—Halifax to Ottawa, St. John's, and Montreal and Windsor to Ottawa and Toronto. Commissioner of Competition Konrad von Finckenstein issues the temporary, but renewable, order on the grounds that CanJet would otherwise "likely be eliminated" from the routes. The first of its kind issued by the Bureau since Parliament amended the Competition Act earlier in the year, the order allows Bureau officials time to examine CanJet's charges. Air Canada immediately challenges the ruling.

Company pilots approve their new contract on September 28, eliminating any possibility of strike.

Technical problems prevent conversion of **Canadian Airlines, Ltd.** to the Air Canada reservations system as scheduled on October 1; the use of two different systems continues to cause problems for passengers.

When the winter schedule, coordinated with **Canadian Airlines, Ltd.**, begins on October 29, the two add new B-737-375ER roundtrips from Vancouver to New York (JFK); also added are increased frequencies from Halifax–St. John's–London and Toronto–Rome. Nine additional domestic nonstop services begin next day, while flights are boosted from Halifax to both Newark and Washington, D.C. (IAD). Additionally, the AC A319-114 daily return route between Toronto and Phoenix is doubled.

The code-sharing arrangement now also begins with **Delta Air Lines**; the two share designators on each other's transborder flights from Canadian points to the U.S. hubs at Atlanta, Cincinnati, Dallas (DFW), and Salt Lake City.

Another strategic pact also takes effect, this one with **Singapore Airlines, Ltd.** Under its terms, AC places its code on the Asian line's daily return service from Singapore to London (LHR) and on its thrice-weekly roundtrips from Singapore to Copenhagen.

Daily nonstop A319-114 return flights from Vancouver to New York (JFK) begins on October 30; it will be code-shared with **United Airlines** starting on November 9.

New B-737-375ER flights, coordinated with **Canadian Airlines, Ltd.**, begin on November 21 from Vancouver to Shanghai and on December 10 from Calgary to Honolulu.

AIR CANADA CONNECTOR. See **AIR ALLIANCE, INC.**; **AIRBC, LTD.**; **AIR NOVA, INC.**; **AIR ONTARIO, INC.**; **AIR SATELLITE, LTD.**; **AIR TORONTO, LTD.**; **NWT AIR (NORTH-WEST TERRITORIAL AIRWAYS, LTD.)**; **VOYAGEUR AIRWAYS, LTD.**

AIR CAPE (PTY.), LTD.: South Africa (1962–1988). Having determined that his corporate aircraft was under utilized, Clifford Harris obtains a charter license from the South African government on August 10, 1962. **Air Cape (Pty.), Ltd.** is now formed at Malan Airport, Cape Town, as the airline operating subsidiary of Clifford Harris Engineering Group.

Maintenance and air taxi work is undertaken as the company initiates on-demand flights on February 9, 1963. The inaugural fleet includes 1 Beech Bonanza and 1 Beech 50 Twin Bonanza, with 1 Beech 58 Baron added before year's end.

Permission sought earlier to operate charters to and along the West Coast are denied by the government in 1964. Still, a Cessna 210 and de Havilland DH 104 Dove 1 are acquired. The charter business steadily improves and, in 1965, the fleet is further enhanced through the delivery of a Cessna 310, a Piper PA-310 Twin Comanche, and most importantly, a Douglas DC-3. P. E. Stableford becomes general manager at the end of the year.

Scheduled service is initiated in 1967–1968, some of it in replacement of **South African Airways (Pty.), Ltd. (SAA)** flights. The fleet grows through the addition of 1 Beech 99, 2 PA-28 Cherokee, 1 PA-32 Cherokee Six, and 1 Cessna 172.

Employing first the Beech 99 on a thrice-weekly basis and then, as ridership improves, five more DC-3s, scheduled roundtrip passenger and cargo services are, in pool with SAA, flown six times a week along an eastern coastal route that links Cape Town with Oudtshoorn, George, Plettenberg Bay, Grahamstown, Queenstown, Port Elizabeth, Walvis Bay, and East London.

These charter, scheduled, and contract service operations continue until March 31, 1969, when responsibility for the independent's activities is assumed by **South African Airways (Pty.), Ltd.** During 1970, South African Marine Corporation (Pty.), Ltd. (Safmarine) assumes a 50% stake. J. Lourens becomes general manager in 1971.

Flights continue in 1972–1974 as daily roundtrips commence from Port Elizabeth and Bloemfontein and from Cape Town to Beaufort West.

A Hawker Siddeley HS 748 is purchased from the French airline **Rousseau Aviation, S.A.** in early 1975. S.A. Marine Corporation (Pty.), Ltd. purchases complete control in 1977.

In 1978, Chairman D. W. Thorpe's company possesses three of the Douglas transports and the HS 748. Airline employment is 80.

A Walvis Bay to Cape Town service is subcontracted from **Namib Air (Pty.), Ltd.**, and in October 1980, the route is acquired in its entirety, along with a leased (later purchased) Convair CV-580 with which to operate it. The Convair replaces one DC-3, and a Britten-Norman BN-2 Islander.

In 1982, the company takes over the former **Namib Air (Pty.), Ltd.** service linking Alexander Bay and Cape Town with Walvis Bay in Namibia. At the same time, the company employs a Partenavia Observer 87 on behalf of the South African Coast Guard.

During the next five years, and despite the appointment of Jonathan Hemp as general manager, service begins to deteriorate in the face of world isolation and domestic unrest. By 1987, General Manager Hemp's carrier has replaced its DC-3s and Convair with a Swearingen Merlin IV and a Partenavia P-68B. The company is purchased by the government-owned **Safair Freighters (Pty.), Ltd.** in August 1988 and absorbed.

AIR CAPITOL, S.p.A.: Italy (1991–1993). Air Capitol is established at Rome in the spring of 1991 to offer scheduled commuter service to

Cuneo. Giuseppe Cillapaco is named chairman, with Eugenio Ainnella as president. A fleet of 3 Aero Commander 690Bs and 1 Cessna 414 is assembled and revenue services begin during the summer.

Enplanements in 1992, the first full year of service, total 2,437. In great financial difficulty and unable to achieve economic viability, the new entrant closes its doors in 1993.

AIR CARAIBES, S.A. (1) (CARAIBES AIR TRANSPORT): French West Indies (1987–1999). Originally established as an air taxi at Aeroport de Fort de France, Martinique, in 1987, CEO Jean-Paul Dubeuil's concern will grow to offer eastern Caribbean scheduled passenger flights as well. By the time the company shuts down in 1999, it is operating 1 each Britten-Norman BN-2 Islander, Cessna 208B Grand Caravan, and de Havilland Canada DHC-6-300. Three Dornier 228-212s are also operated.

AIR CARAIBES, S.A. (2): Aeroport du Raizet, Immeuble Le Caducet, Abymes, 97139, Guadeloupe, French West Indies; Phone 05 96 51 17 27; <http://www.air-caraibbes-charter.com>; Code TX; Year Founded 2000. In order to create a larger carrier in fact as well as an alliance, the small airlines of the French Caribbean, which had been flying the Antilles under the umbrella of Caraibenne des Transports Aeriens, are merged into SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe) during July 2000.

The surviving partner, controlled by 70% majority owner Groupe Dubreuil—which had previously owned the French carrier **Regional Airlines, S.A.**—is then renamed **Air Caraibes, S.A. (2)**. The SATA fleet is enhanced by the addition of the former **Air Saint Martin, S.A.** Dornier 228-202 and Beech 1900D, the **Air Martinique, S.A.** ATR42-320s and Dornier 228-202s, and the **Air Saint Barthelemy, S.A.** 228-201 and de Havilland Canada DHC-6-300. The enlarged airline maintains the local service routes of three previous independents. It also retains the **Islands-flug, H.F.** B-737-200A, previously chartered for Caraibenne des Transports Aeriens, and employs it to operate daily roundtrips from Fort-de-France and Pointe-à-Pitre to Miami via Port-au-Prince, Haiti.

During August, arrangements are completed for the lease of 2 Embraer ERJ-145 Express Jets from **Regional Airlines, S.A.**, with the first due to arrive in December. The following month, a former SATA ATR72-200 becomes the first company aircraft to show the merged line's new livery.

AIR CARAIBES EXPLOITATIONS, S.A.: French West Indies (1987–2000). Based at Aeroport de Raizet at Abymes and capitalized at FFfr 0.3 million, Air Caraibes is founded in 1987 to provide scheduled flights in the Guadeloupe island region. President Simon Hayot's third-level operation begins service in mid-year with a fleet comprising 2 Cessna 208 Caravan Is, 1 de Havilland Canada DHC-6-300, and 2 Beech Super King Air 200s. Scheduled routes are operated on behalf of **Air Guadeloupe, S.A.** from Pointe à Pitre to Les Saintes and La Desirade; many ad hoc charters are also flown.

Operations continue apace during the remainder of the decade and into the 1990s. A pair of Cessna 208 Caravan Is and two Pilatus Britten-Norman PBN-2 Islanders are acquired in 1991–1992 and, in 1993–1994 the fleet is increased by the addition of 2 Dornier 228-202s and 1 leased 228-201. Flights continue without change during the remainder of the decade.

In order to create a larger carrier, the small airlines of the French Caribbean, including this unit, are merged into **SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe)** during July 2000. The surviving partner is then renamed **Air Caraibes, S.A.(2)**.

AIR CARGO, LTD.: P.O. Box 89, Lilongwe, Malawi; Phone 760311; Fax 760198; Year Founded 1991. Registered in January 1991, this all-cargo subsidiary of **Air Malawi, Ltd.** initiates services to Africa with a fleet made up of 1 Douglas DC-8-55F and 1 DC-8-54F. Chairman J. Davenport and CEO M. C. Kruger employ 25 workers. Regional destinations visited from Lilongwe include Kano, Lagos, Accra, and Harare.

In January 1993, weekly international roundtrips commence from Lilongwe to London (LGW) and Amsterdam. It is understood that services continue without change during the remainder of the decade; exact information is, however, unavailable.

AIR CARGO CARRIERS: 4984 South Howell Ave., Milwaukee, Wisconsin 53207, United States; Phone (414) 482-1711; Fax (414) 482-2038; <http://www.aircar.com>; Code UN; Year Founded 1986. ACC is founded in Milwaukee in 1986 to offer replacement cargo services for major carriers to non-trunk population centers in Canada, the U.S., and the Caribbean. President James Germek's begins revenue services with 4 Shorts SC-7 Skyvans.

The first Shorts 330-100 is acquired in 1990 and by 1994, the airline, which has established its own central maintenance facility at Milwaukee, employs 22 people.

Beginning in 1995, larger Shorts 360-300 freighters are acquired and the company expands rapidly to become, by 2000, the largest owner and operator of Shorts aircraft in the world. The fleet now includes 7 330-100s and 3 360-300s, all of which have been converted from passenger configuration to cargo with expanded cargo doors and strengthened floors.

The company also positions itself to become a provider of a full range of services to other Shorts operators. A large spares inventory is maintained and pilot and mechanic training is provided both for ACC's own personnel and under contract to others.

AIR CARGO EGYPT (INTERNATIONAL AIR CARGO CORPORATION, LTD.): Egypt (1977–1985). Registered in Cairo in April 1977, this all-freight carrier is equipped with a single Boeing 707-320C and begins revenue service in July. Cargo charter and contract service flights are undertaken between Egypt, North Africa, Europe, the Middle East, and Asia. Business deteriorates during the world recession in the early to mid 1980s, forcing the company to stop flying in 1985.

AIR CARGO ENTERPRISES: United States (1979–1984). Harry T. Show Jr. forms ACE at McAllen, Texas, in 1979 to operate scheduled all-cargo services to Honolulu with two Douglas DC-4Fs. A total of 31,316 freight FTKs are operated by December 31. The four-engine piston-powered freighters increase their cargo haulage in 1980 to 33,818 FTKs, a 7.8% gain.

Operations continue apace until 1984 when the company shuts its doors.

AIR CARGO EXPRESS (1): Ft. Wayne International Airport, 11142 W. Perimeter Road, Fort Wayne, Indiana 46809, United States; Phone (219) 747-1963; Fax (219) 747-1967; Year Founded 1983. ACX is set up at Fort Wayne in 1983 to provide all-cargo charters and high-priority express flights throughout North and Central America. Operations continue and, by 2000, the company is operating three Learjet 24 freighters, plus one each Beech 18 and Mitsubishi Mu-2.

AIR CARGO EXPRESS (2). See TATONDUK AIR SERVICE

AIR CARGO TRANSPORT CORPORATION: United States (1945–1948). Established at Newark, New Jersey, in late 1945, ACTC is one of many all-cargo carriers created by World War II veterans. Employing war-surplus Curtiss C-46s, the company undertakes ad hoc transcontinental charters for two years before closing down in 1948.

AIR CARIBBEAN: United States (1975–1979). Owned by Old South Air Service, AC is founded at Isla Verde, San Juan, Puerto Rico, in the late fall of 1975 to offer daily roundtrip scheduled services to St. Thomas in the U.S. Virgin Islands. Operations begin in December with a fleet of 5 Douglas DC-3s and during 1976, a comprehensive schedule of over 70 flights each day is developed, with Aguadilla, Mayaguez, and Ponce also served as destinations.

Enplanements reach 82,908 in 1977. The carrier's 10 DC-3s assist passenger boardings in accelerating a whopping 63.1% in 1978 to 195,226. Rising fuel prices and economic downturn force the third-level carrier to shut its doors in 1979.

AIR CARIBBEAN, LTD.: Trinidad and Tobago (1991–2000). ACL is established at Port-of-Spain on November 26, 1991 to provide scheduled passenger services between Trinidad and Tobago and to offer charters across the southern Caribbean region. Ownership is equally divided between Medishi Investments and Luxsam Holdings, but revenue operations do not immediately begin.

Captain Erik Mowser is appointed managing director and, early in 1993, he recruits a workforce of 120 and orders a fleet of 2 NAMC YS-11A-500s and 1 YS-11A-600 freighter, all of which are quickly modified at Hamilton Aircraft, Tucson, Arizona, and are delivered in July. Revenue operations commence on August 8 over an "air bridge" route from Trinidad to Tobago.

Fifteen new employees are hired in 1994 as a fourth Japanese-made turboprop is placed into service. Late in the year, a marketing agreement, effective the following spring, is signed with **British West Indies Airways, Ltd. (2) (BWIA)**.

In 1995–1996, Capt. Mowser remains as managing director, with Leslie "Lucky" Samaroo as executive chairman and CFO. Following the privatization of BWIA in February of the former year, its Vice President-Marketing/sales Nelson Tom Yew is recruited to Air Caribbean to serve as general manager.

The company continues its shuttle service, as well as ad hoc charters to Grenada, Barbados, St. Vincent, and St. Lucia. Two more YS-11A-500s join the fleet.

In March 1997, a homepage is opened on the World Wide Web.

Twice-daily roundtrip turboprop service is introduced during July from Barbados to Port of Spain and Georgetown.

On December 3, **LIAT (1974), Ltd.** takes over the twice-daily "air bridge" roundtrip service between Trinidad and Tobago previously operated by **British West Indies Airways, Ltd. (2) (BWIA)**. The move is contested in court by ACL, the designated "air bridge" carrier.

With the expansion of the company's schedule in early 1998, orders are placed for three Boeing 737-200As. The first of these enters service on August 11, replacing the turboprop service from Barbados to Port of Spain.

It is simultaneously reported that, in the five years of "air bridge" service between Trinidad and Tobago, the airline has moved nearly two million passengers with a 90% on-time performance factor.

On June 18, Justice Fyrd Hosein grants the ACL request and orders **LIAT (1974), Ltd.** to halt flights on behalf of **British West Indies Airways, Ltd. (2) (BWIA)** over the Trinidad to Tobago "air bridge." BWIA and LIAT, in turn, appeal Hosein's decision to the court of appeals. On July 1, that high court overturns Judge Hosein's finding and permits BWIA and LIAT to return to the "air bridge" effective August 31.

On August 20, ACL Executive Chairman Samaroo and General Manager Nelson Tom Yew meet in a "peace conference" at the Red House at Port-of-Spain with **British West Indies Airways, Ltd. (2) (BWIA)** Chairman Lawrence Duprey and CEO Conrad Aleong. The session, brokered by TT Works and Transport Minister Senator Sadiq Baksh, is designed to create an atmosphere under which previous operational differences between the two carriers might be resolved. During the meeting, Baksh expresses a hope that BWIA will fly more services over the "air bridge" while ACL might be designated a national air carrier, which will allow it to expand its regional and international activities.

During the last weekend in August, the carrier operates its first jet charters; the B-737-2H4A transports over 100 representatives of the West Indies Biscuit Company from Barbados to Port-of-Spain and members of the Trinidad Cement Sports Club from Port-of-Spain to Bridgetown.

A new B-737-2H4A route is inaugurated on September 1 between Port-of-Spain and Georgetown. The new jet service complements the

current turboprop flights, increasing to two the number of daily roundtrips between the two points.

The YS-11A-500 route system is expanded into the wider Caribbean, with new stops added in Venezuela and Guyana.

Hurricane Georges wreaks havoc on Antigua and St. Kitts. On September 26, two YS-11A-500s, loaded with relief supplies (primarily medical equipment and medicine) undertake a "mercy flight" to the two destinations.

A second daily B-737-2H4A roundtrip is started on September 28 between Port-of-Spain and Georgetown.

Two more B-737-200As arrive in November. At this point, daily scheduled jetliner flights are initiated to Grenada and St. Lucia, while frequencies to Guyana and Barbados are increased.

The government of Trinidad and Tobago grants ACL national carrier status on December 16 and authorizes it to apply to any government it wishes (so long as a bilateral air agreement with it is in place) for authority to undertake air service operations.

As part of the celebration surrounding the company's status elevation, Chairman Samaroo informs reporters from *The Broad Street Journal* that ACL expects to begin twice-daily roundtrips to Miami by February and Caracas by March. It is hoped that, by July, the company will also be flying to Jamaica and Suriname with B-737-200As and New York with a larger B-757-200s or B-767-200s.

In his end-of-the-year message covered by *The Trinidad Express* on December 30, ACL's chairman indicates that employment will be increased by 75 workers to 300 during 1999 and that a "modern international computerized reservations system incorporating the latest technology" will be in place by April. The turboprop fleet will be retired and replaced with B-737s on Caribbean routes while a B-757-200 will be obtained with which to launch flights to New York (JFK) and Toronto by July.

During January and February 1999, ACL presses ahead with its expansion plans, including installation of the new computerized reservations system. Preparations are underway for the receipt of two more leased B-737-200As and a recruiting campaign has begun for the employment of cockpit and cabin crews. Inauguration of flights to Miami (MIA) is pushed back first to April and then to May.

Following acceptance by the Guyanese carrier of an offer by local interest to take equity control of **Guyana Airways Corporation, ACL**, on March 1, withdraws its privatization bid. The Trinidad carrier now begins to place specific media advertisements seeking pilots.

As a result of confusion over a schedule change, 12 people are left behind on May 9 when a B-737-2T5A departs Trinidad for Barbados. All are provided free accommodations and are able to fly out the next day. The *Trinidad Express* reports the incident on May 11 and notes General Manager Yew's denial that the stranded customers were badly treated.

General Manager Yew resigns on June 30 and, on July 14, is reappointed a general manager at **British West Indies Airways, Ltd. (2) (BWIA)**.

Chairman Samaroo takes on the general manager's duties and the remainder of the year is spent in planning for a new route to Miami, which will, hopefully, be inaugurated shortly after the beginning of the millennium. With financing from First Citizens Bank, orders are placed for a pair of refurbished Boeing 737-200As; upwards of \$10 million is also committed to meet U.S. Federal Aviation Administration requirements.

The carrier receives U.S. DOT authorization for Florida service on January 13, 2000. Four-times-a-week, low-cost roundtrips are launched on January 26, with daily flights beginning on February 2. Special fares for Carnival are introduced on February 14.

Due to expire on March 8, the carrier's Trinidad-Tobago "airbridge" license is renewed on February 26. Despite competition from **British West Indies Airways, Ltd. (2) (BWIA)**, the company continues to maintain an 80% exclusivity arrangement for market share.

Twice-daily return service to Miami starts on March 31.

Amid dismissed rumors that the new route is not paying, Chairman Samaroo announces on July 6 that, in order to fund fleet and route

expansion, a 49% stake is now available for sale. Not only is the equity stake not taken up, but the company now also finds itself, silently, in great financial distress. After it is unable to honor a TT\$100-million (US\$15.87-million) debt to the First Citizens Bank of Trinidad on October 23, it is placed into receivership. Flights are suspended as a bank official takes possession and 350 employees are suddenly put out of work. That executive, Victor Herde, informs the laid off employees on October 30 that the airline also owes their pension fund TT\$1.2 million (US\$190,440).

By November 6, several Trinidad and Tobago government agencies are conducting investigations into the causes of the debacle.

AIR CARIBE INTERNATIONAL: United States (1983–1991). ACI is set up at San Juan, Puerto Rico, in 1983 to offer scheduled passenger and cargo flights linking its base with the Virgin Islands and Dominica. President Robert Murray assembles a fleet of Piper PA-23 Aztecs that are employed to inaugurate nonstop weekday flights to Cane Field Airport in Dominica plus the Virgin Island destinations of St. Thomas and St. Croix.

Operations continue apace during 1984–1987. The company is reorganized in 1988 and flies from San Juan's Luis Munoz Marin Airport with four newly acquired Piper PA-31-310 Navajos. While seeking a major code-sharing partner, the small regional transports a total of 6,000 passengers on the year.

Operations continue apace in 1989–1990, but the company is unable to survive recession and folds in 1991.

AIR CAROLINA: United States (1977–1980). AC is established by William E. Smith at Florence, South Carolina, in 1977 to succeed **Florence Airlines** and to provide scheduled commuter service to Hickory, Charlotte, and Augusta employing a mixed fleet of Pipers (4 PA-31-310 Navajos, 1 PA-31-350 Navajo Chieftain, 1 PA-34 Seneca, and 1 PA-23 Aztec) plus 1 Britten-Norman BN-2 Islander. Bookings for the first year are 20,969. They will increase by 21.5% in 1978 to 26,711. Freight, on the other hand, will drop a full 50% to 31,590 pounds carried.

The workforce is increased by 9.5% in 1979 to 46. The fleet now includes 2 Navajo Chieftains, 1 Navajo, and the Islander. Passenger boardings jump 10.9% to 30,000, while freight declines another 13.6% to 27,000 pounds. The company is purchased by and merged into **Atlantis Airlines** in September 1980.

AIR CARRIERS, LTD.: Southern Rhodesia (1946–1960). Coleman Myers establishes AC at Salisbury in 1946 to provide passenger charters, primarily for those wishing to visit Victoria Falls and other bush destinations. Employing a mix of British and U.S. lightplanes, the company visits Bulawayo, Livingstone, and Lusaka, while flying tourists over the falls and areas of big game population.

On behalf of the government of Bechuanaland, a weekly scheduled service is offered from Bulawayo and Mgamiland. A subsidiary, Bechuanaland Protectorate Air Service, Ltd. is formed to operate this route under contract.

The company's aerial capacity is significantly increased in 1956 by the addition of several Piper PA-23 Apaches. Operations continue apace until December 1960, when Air Carriers is merged with several other small companies to form **United Air Carriers, Ltd.**

AIR CASTLE: 501 Santa Monica Blvd., Suite 703, Santa Monica, California 90401, United States; Phone (800) 354-4481; Fax (310) 899-5259; Year Founded 1982. Air Castle is set up as an FBO at Santa Monica Municipal Airport in 1982. Over the next 15 years, it also moves into the local and transcontinental executive passenger charter business.

In 2000, the company has one each IAI 1124 Westwind I, Canadair CL-600 Challenger, Cessna 500 Citation I, and Piper PA-34 Seneca II at Santa Monica. Further north in the Golden State, the company also flies a Challenger from San Francisco. Air Castle also bases a Challenger and a Westwind in New Jersey.

AIR CATALINA. See CATALINA SEAPLANES (1)

AIR CAVREL, LTD.: Manston Airport, Ramsgate, Kent, England CT12 5BL, United Kingdom; Phone 44 (0) 1843 822884; Fax 44 (0) 1843 822433; Code ACL; Year Founded 1997. Air Cavrel is established by Richard R. Le Lion at Manston in late 1997 to offer international and regional cargo services. Christopher D. Leach of parent Air Charter Service is chairman, with Le Lion as managing director. A workforce of eight is recruited and a pair of Shorts 330-200s is acquired. Revenue flights commence in early 1998 and continue.

AIR CENTER HELICOPTERS: #40 Sub Base, Suite 203, St. Thomas, Virgin Islands 00802, United States; Phone (809) 775-7335 Fax (809) 774-7133; Year Founded 1986. Air Center is set up at St. Thomas in 1986 to provide rotary-wing passenger charters around the Virgin Islands and Puerto Rico. Flights continue over the next decade, and by 2000 the company is operating two Bell 206B JetRangers, a 206L LongRanger, and a Bell 412. Air Center has also expanded to the U.S. mainland, where it bases one each LongRanger and Bell 412 at Fort Worth.

AIR CENTRAL (1): United States (1972–1973). AC-1 is established at Minneapolis (MSP) during the first quarter of 1972 to fly scheduled passenger and cargo services to Detroit Lakes via Park Rapids. Cessna lightplane revenue flights commence in March, but due to the energy crisis, cannot be maintained beyond 1973.

AIR CENTRAL (2): United States (1978–1979). The second Air Central is set up at Enid, Oklahoma, in 1978 to provide scheduled passenger and cargo services to the two major airports at Dallas, Texas (DFW and DAL). Employing a Piper PA-31-310 Navajo, the company inaugurates daily roundtrips via Oklahoma City, Tulsa, and Amarillo, in June.

Unable to maintain economic viability, the commuter suspends scheduled flights in 1979. It is purchased by **Trans-Central Airlines** in June 1980 and merged.

AIR CENTRAL (3): United States (1979–1980). AC-3 is established at Harlingen, Texas, in 1979 to operate regularly scheduled passenger and cargo services to such other Lone Star cities as San Antonio, Corpus Christi, and McAllen. An all-Cessna fleet is assembled, including a number of -207s, -310Rs, and -402s.

In early 1980, service is extended to Laredo and down to Monterey, Mexico. Late in the year, the carrier is reformed into **Trans-Central Airlines**.

AIR CENTRAL, LTD.: New Zealand (1974–1982). J. W. Gardiner forms ACL at Napier in the spring of 1974 to offer charter and non-scheduled services to destinations on both the North and South Islands. Scheduled services are undertaken in August from Napier to Gisborne, Hamilton, Tauranga, Rotorua, Auckland, Taupo, New Plymouth, and Palmerston North. Airline employment grows to 20 and the fleet comprises 3 Cessna 402s and 2 Japanese-built Mitsubishi MU-2Bs.

Unable to absorb the losses caused by increased fuel prices in the early 1980s, the carrier ceases operations in the fall of 1982. A number of its former routes are acquired by **Eagle Airways, Ltd.**

AIR CESS, LTD.: P.O. Box 26595, Sharjah, United Arab Emirates; Phone 971 (6) 581 413; Fax 971 (6) 229 204; Code ACS; Year Founded 1994. Air Cess is established at Monrovia, Liberia, in 1994 to provide cargo services throughout Africa and the Mideast. Operations commence late in the year and continue in 1995 with a fleet that includes 4 Antonov An-12s and 1 each An-24T, An-24RV, Ilyushin Il-18D, and Boeing 707-323C.

Aircraft livery features an all white fuselage with Air Cess titles below the cockpit while two stylized SSs are painted on each side of a light blue tail.

Late in **1996**, the company is transferred to the United Arab Emirates where President Ronald De Smet and General Manager Viktor Butt operate the Il-18D, three An-12s, and two An-24s.

Operations continue apace in **1997–2000**, during which years General Manager Butt takes over ownership of the company. His smartly liveried aircraft can now often be found transferring cargo into Africa and the Commonwealth of Independent States from Sharjah in the United Arab Emirates.

AIR CEYLON, LTD. (ACL): Sri Lanka (1948–1978). During August **1948**, the former British crown colony of Ceylon is granted dominion status. Consequently, in August, **Ceylon Airways, Ltd.** is renamed ACL; however, it continues as the marketing name for the Air Transport Branch of the government's Directorate of Civil Aviation.

Revenue flights around the island and to southern India are provided by four Douglas DC-3s acquired from **Air India, Ltd.** They are named *Viharamaha Devi*, *Sita Devi*, *Sri Lanka Devi* and *Sunethra Devi*. Service is inaugurated to Bombay (now Mumbai), Karachi, and Trincomalee. One of the DC-3s transports significant Buddhist relics to Burma (now Myanmar) where they are placed on display.

In early **1949**, the government initiates a contract with Ivan Holyman's **ANA (Australian National Airlines [Pty.], Ltd.)** to fly Colombo to London and Singapore services. Australian W. W. Doyale becomes ACL's board chairman while ANA's Capt. Peter Gibbes moves to Colombo to become the carrier's operations manager.

Christened *Ratmadana* and *Laxapana*, two leased DC-4s painted in AC livery are delivered and offer flights from Colombo to Trichinopoly and from Colombo to Bombay and Karachi. The orders placed for two Lockheed L-749A Constellations are cancelled.

The DC-3 *Sunethra Devi* is involved in a landing accident at Trichinopoly in December; damages to the aircraft are so bad as to require that the aircraft be written off.

The two chartered ANA DC-4s commence London to Sydney flights on January 28, **1950** via Rome, Lydda (Tel Aviv), Karachi, Bombay, Colombo, Singapore, and Jakarta. ANA also undertakes to train Singapore aircrew. On May 1, **1951**, ACL is reformed and official incorporated; the Ceylonese government assumes 51% shareholding and ANA 49%. A de Havilland DH 89A Dragon Rapide is acquired during the fall and inaugurates domestic flights from Colombo to Trincomalee via Minneriya and Amparai.

Due to financial difficulties and technologically advanced—and unanswerable—competition from **British Overseas Airways Corporation (BOAC)** and **Trans World Airlines (TWA)**, services to London and Sydney are suspended in October **1953**. Other flights continue through **1954** and **1955** and, in November of the latter year, the shareholding for failing ANA is purchased by **KLM (Royal Dutch Airlines, N.V.)**. Several KLM officials now join the ACL board as the ANA members depart.

On February 11, **1956**, a Lockheed L-749A is wet-leased from the Dutch flag line and christened *Mahadevi*. Flown by a Dutch crew, but painted in ACL livery, the Constellation inaugurates weekly Colombo–Amsterdam *Sapphire* service on February 17 via Bombay, Karachi, Bahrain, Cairo, Rome, and London. The *Mahadevi* begins weekly Colombo to Bangkok flights on April 26.

The Colombo to Bangkok route is suspended on April 18, **1957** and replaced with a weekly L-749A frequency to Singapore. Four-times-per-week Colombo–Ampari/Jaffna DC-3 services are started on November 1. In November **1958**, the *Mahadevi* is returned to the Dutch and is replaced by a leased Dutch L-1049G, the *Isotoop*. **KLM (Royal Dutch Airlines, N.V.)** reduces its stake in ACL to 24% in January **1959**. The Super Constellation is given Sinhalese registration during the same month and is christened *Soma Devi*.

On November 1, **1960** a Lockheed L-188 Electra, acquired via the Dutch airline, replaces the Super Constellation on the Colombo–Amsterdam *Sapphire* run and is the carrier's first turboprop airliner. Operations continue apace in **1961**.

The relationship with **KLM (Royal Dutch Airlines, N.V.)** ends on March 30, **1962**, when ACL signs a technical and commercial contract with **British Overseas Airways Corporation (BOAC)**. The Dutch Electra returns to Amsterdam and the Singapore routes are flown under charter by the British line's de Havilland Comet 4s.

The route is from Katunayake Airport at Colombo to London via Karachi, Cairo, and Rome, and to Singapore via Kuala Lumpur.

The jetliners are not, however, painted in ACL colors, but wear peel-off AC stickers, which can be removed as each aircraft is required for BOAC services. The crews of the wet-leased Comet 4s do include one Ceylonese stewardess each.

In August, a pool agreement is signed with **Indian Airlines Corporation (IAC)** for joint operational services to regional destinations; IAC promises to provide maintenance and support services. Domestic routes are expanded in **1963** as service is started to Batticaloa, Amparai, and Anuradhapura. A DC-3 survey flight is conducted to and from the Maldiv Islands.

In **1964**, the carrier reduces fares on its domestic routes, thereby generating a substantial traffic boost. A Hawker Siddeley HS 748 is received during October and placed into IAC joint-service on November 7 over routes from Colombo to Bombay and Madras. Extensions to other Oriental destinations are considered by management. The workforce totals 244 and enplanements are 42,000.

A Nord 262 turboprop is ordered in **1965** and a year later, in **1966**, the workforce totals 584 and enplanements are 71,223.

A Nord 262A is delivered from France in **1967** and replaces the DC-3 *Viharamaha Devi* on domestic routes. Almost from its first revenue flight, the Turbomeca Bastan engines of the French turboprop proves unreliable. An order is placed for a Hawker Siddeley Trident 1E and arrangements are made for **Pakistan International Airlines Corporation (PIA)** to maintain it at Karachi.

The fleet now comprises the Nord, plus two DC-3s and the HS 748. Passenger boardings accelerate 13.2% to 82,053 while revenues are reported to be up a full 10%.

A total of 87,068 passengers are originated in **1968** as airline employment reaches 596. The company's first jetliner, the Trident 1E, is received on July 19, **1969**. The following month it is used in association with BOAC to develop tourist flights connecting its base with Madras, Bombay, New Delhi, Karachi, Bangkok, and Singapore. During the year, a new headquarters is occupied at Katunayake Airport and the Nord 262 is sold. Enplanements for the year total 78,474.

The workforce in **1970** is 676. A new board of management is seated, headed by Chairman Sam H. Silva with members V. Karalasingham and I. P. C. Mendis. In November, the carrier announces its decision to terminate its commercial relationship with **British Overseas Airways Corporation (BOAC)** and to enter into a new affiliation with **UTA French Airlines, S.A.**

Passenger boardings this year climb 25% to 104,631 and freight is level.

The BOAC commercial pact is officially terminated on March 31, **1971**, although technical arrangements continue. The British line's contract allows it to put wet-leased Vickers Armstrong VC10s onto ACL's trunk routes. In April during an insurrection by armed Sinhalese youth, the government requisitions the Trident 1E to fly in munitions from Cairo and Singapore.

The new commercial pact with **UTA French Airlines, S.A.** begins on September 27.

Employing a Douglas DC-8-33 painted in ACL colors, UTA on April 6, **1972**, inaugurates service on behalf of AC on its own new route Paris to Jakarta via Colombo, begun the previous November 1. Although the cockpit crew is French, the aircraft utilizes a completely Sri Lankan cabin crew.

On May 22, Ceylon becomes the Democratic Socialist Republic of Sri Lanka.

Operations continue apace in **1973–1974**. A used Canadian Avro 748 is purchased in **1975**.

In February 1976, an agreement is signed with **UTA French Airlines, S.A.** under which ACL will come to own the Douglas jetliner. When it arrives at Colombo's Katunayake Airport, the aircraft has been flown for the first time by an all ACL crew; principals involved include Capt. George Ferdinand and First Officer K. Don Freeman.

On March 20, the Trident 1E charter route from Colombo to the Persian Gulf destination of Sharjah becomes regularly scheduled. The remaining DC-3s are now given to the Air Force, while the French Douglas jetliner is actually turned over on September 30.

On October 30, ACL agrees to take over operation of failing **Air Siam, Ltd.**'s DC-10-30 services to Europe, using the Douglas wide-body it had leased from **KLM (Royal Dutch Airlines, N.V.)**. The Air Force's Padwan "Paddy" Mendis is named chairman on December 15. The British, Indian, and French relationships are ended.

When **KLM (Royal Dutch Airlines, N.V.)** repossesses its DC-10-30 from **Air Siam, Ltd.** on January 17, 1977, the ACL arrangement ends and **Air Siam, Ltd.** is permanently grounded. In February, ACL leases a Boeing 720B from the U.S. and a DC-8-41 from **Air Canada, Ltd.**

A new service to Paris is inaugurated in July, but traffic is insufficient to justify continuing it beyond September. Meanwhile, as the Tamil Eelam separatist struggle begins in August, Capt. Ferdinand takes a planeload of refugees aboard the DC-8-33 and flies them from Colombo to Palaly Airport, Kankasanturai (Jaffna).

The Canadian charter is terminated and, on December 7, all services to Europe are suspended. The B-720B is also returned and the DC-8-33 is temporarily impounded in Europe for nonpayment of fuel bills. In November, the government contracts with **British Airways, Ltd. (2)** to operate a Vickers VC10, leased from **Gulf Air**, over a route from Colombo to London.

At the beginning of 1978, the Trident 1E continues flying from Colombo to Bombay and Madras, while the two Avro 748s continue domestic services.

The government now undertakes an investigation into charges of corruption at the airline and places blame for deficiencies upon Chairman Mendis. To succeed ACL, which ceases trading at government request on March 31, and to spur tourism, President J. R. Jayawaidene specifically orders the creation of a national airline.

Without official status, ACL will be allowed to operate its Trident and Avros until the new entity actually begins services during the fourth quarter of the following year.

While the pilot and first officer are inspecting their HS 748-2A on the ground at Colombo on September 7, a loud explosion rips through the center of the fuselage causing a fire that destroys the aircraft. No injuries are reported to the two men going through the pre-departure checklist, but the aircraft is completely destroyed. Terrorism is suspected.

With seven-year tax free status, **Air Lanka, Ltd.** is formed at Colombo on January 10, 1979 by combining the assets of **Sri Lanka Airways, Ltd.** and **Sri Lanka International, Ltd.**, which had been formed the previous January and had begun operations in April.

AIR CHAMPAGNE-ARDENNES, S.A. See **AIR ALPES, S.A.**

AIR CHANGAN. See **CHANGAN AIRLINES.**

AIR CHAPARRAL: United States (1980–1983). Organized at Reno in 1980, AC begins scheduled commuter services on August 4 to Las Vegas, Winnemucca, Elko, Ely, and Tonopah with a fleet of 5 Fairchild Swearingen Metro IIs and 20 Cessna 402s. In October, the company purchases California-based **Inland Empire Airlines** and its four Metro IIs, operating them henceforth as a subsidiary.

On March 31, 1981, during the amalgamation process with IEA, AC drops its Nevada passenger services, preferring to work its subsidiary's California routes to Burbank, Fresno, Los Angeles, Ontario, Sacramento, San Francisco, Visalia, and Merced while offering all-cargo flights to the Nevada towns of Reno, Winnemucca, Hawthorne,

Tonopah, and Las Vegas. Passenger boardings for the year total 53,320 and orders are placed for two SAAB-Fairchild SF340s.

Even though the SF340s are not delivered, operations continue apace in 1982, although cash flow and traffic difficulties bring substantial financial reversal. Early in 1983, the company files for Chapter XI bankruptcy; the **Inland Empire Airlines** subsidiary maintains California flights until mid-year.

AIR CHARTER (SOCIETE AERIENNE FRANCAISE D'AFFRETEMENT, S.A.): France (1966–1998). Organized at Paris on February 7, 1966 as a wholly owned subsidiary of **Air France**, SAFA (IATA Code SF) is commissioned to provide charter- and inclusive-tour services. Operations to European and Mediterranean holiday destinations are started in July with Sud-Est SE-210 Caravelles chartered from the parent. In 1970, the carrier is renamed Air Charter International, S.A. and two years later, in 1972, the first B-727-100 is acquired. Eight years later, in 1978, President Pierre Labadje's fleet comprises 2 Boeing 727-200s and 6 Caravelle XBs. **Air Inter, S.A.** is now allowed to take 20% shareholding.

During the remainder of the decade and into the 1980s, traffic for the 33-employee company increases steadily. A total of 700,300 are flown in 1981, 860,000 in 1982, and 963,000 in 1983. During the latter year, the airline, already flying to points throughout Europe, the Middle East, North Africa, and the Canary Islands, begins transatlantic group charter flights from Paris to New York City using Boeing 747s leased from **Air France**.

ACI's fleet in 1984 comprises 4 Boeing 727-200s. Five Caravelle XBs are leased along with three Boeing 737-200s. A total of 1.8 million passengers are transported during the year. The company name is now changed to Air Charter, S.A. During the next decade, the number of French departure points increases to 35 and the main destinations become Canada, Egypt, Tunisia, Turkey, and the U.S.

Another B-737-200 leased jetliner is acquired in 1985; however, bookings remain level. Enplanements for the 41-employee carrier total 1,777,600. Significant holiday competition in Aegean and Mediterranean markets causes customer bookings to drop 11.1% in 1986 to 1.6 million.

The fleet in 1987 comprises 5 B-727-200s and 1 B-737-200; during the year, 2 more B-727-200s are purchased from **Air France**. Passenger boardings recover to rise 12.5% to 1.8 million and pretax profits climb by 50% to \$10.4 million.

Airline employment grows by 6.8% in 1988 to 47 and the fleet is increased by the addition of another A300B4 and, during the spring, by two more B-737-200s. Camille Allaz is named president and director general in May.

While on a low pass along the runway at Basel-Mulhouse Airport on June 26, Flight 296C, an **Air France** A320-111 with 6 crew and 130 passengers, as a demonstration on behalf of the Mulhouse Flying Club, fails its initial climb. Upon reaching an altitude of 100 feet, the brand new Airbus descends into trees at the end of the runway, continues into a forest, and catches fire (3 dead).

Customer bookings pass the two-million mark in annual boardings (2,030,000) and revenues advance 13.6% to \$250 million. In addition to its own operations, the company continues to fly a B-747 Jumbojet and three A300B4s on behalf of its **Air France/Air Inter** owners.

Operations continue apace in 1989–1990 and, in 1991, Chairman Rodolphe Frantz and President Philippe Hache have 53 employees and operate a mixed fleet of owned and leased aircraft. These include 2 A300B4s, 1 each B-727-214 and B-727-228, 2 each leased B-727-228As and B-727-2X3s, 3 B-737-2A1s leased from **Euralair**, 1 B-737-2K5, 1 B-737-2L9A, and B-737-2Q8, all chartered from **Europe Aero Service, S.A.**, and 1 each B-737-2S3A, B-737-228A, B-737-2A9C, B-737-210C, B-737-4B3 leased from **Air France**, and B-737-53A chartered from Europe Aero Service.

Holiday flights continue in 1992 and in 1993 Chairman Jean-Jacques Ravey oversees a workforce of 53. Principal destinations visited from

some 35 French airports continue to be Egypt, Greece, Israel, Italy, Morocco, Senegal, Spain, Tunisia, Turkey, and the U.S. The fleet in 1994 includes 3 each A320-211s chartered from **Air France**, in addition to 2 each leased A300B4-203s, B-727-2X3As and B-737-2K5As, plus 1 each B-737-2Q8A, B-737-228A, and B-737-53A.

The older "Baby Boeings" are replaced in 1995-1997 with three A320-212s (including one leased from **Air France**). Otherwise, charter flights to the Mediterranean, Europe, and North Africa continue as before.

Early in 1998, an A320-212 is leased to Land Rover, Ltd.; painted in a basic white livery with a blue title and given titles noting the company's new Freelander vehicle, the plane undertakes a European promotional tour.

With this subsidiary unable to generate profit in the face of low-cost competition, parent **Air France** announces in February that Air Charter will be closed down within two months. Two of the competing airlines, **AOM French Airlines, S.A.** and **STAR Europe, S.A.**, begin to make arrangements to take over the bulk of its business.

AIR CHARTER, LTD./CHANNEL AIR SERVICE, LTD.: United Kingdom (1947-1963). Freddie Laker forms this new airline at Croyden in January 1947. Employing a de Havilland DH 84 and a DH 89A, he launches passenger and cargo charters in March. Simultaneously, the Bovingdon-based maintenance organization, Aviation Traders, Ltd., is started. The Air Charter fleet is increased by 1 additional DH 89A and 2 Miles M.65 Geminis by year's end.

In 1948-1949, Aviation Traders acquires, refurbishes, and resells a variety of war surplus aircraft, including the BOAC fleet of 12 Handley Page Haltons. The latter are leased to **Bond Air Services, Ltd.** for operations during the Berlin Airlift. Following the airlift, Aviation Traders is moved to Southend. Meanwhile, a general depression in charter circles forces Air Charter, Ltd. to cease flying in 1950; the Dragon Rapides and Geminis are withdrawn and sold.

Early in 1951, Aviation Traders acquires **Surrey Flying Services, Ltd.** and its Avro 685 York; the new subsidiary restarts passenger/freight charters in May. During the year, the fleet is increased by two Yorks, christened *New Era* and *New Venture*, and an Avro 688 Tudor. In November, a second carrier, Blackbushe-based **Fairflight, Ltd.**, is purchased, together with its two Tudors and one Avro Lincoln. Fairflight's Berlin-Hamburg cargo route is assumed.

An Avro 685 York I with three crew and seven passengers is lost near Hamburg on March 11, 1952; although the plane must be written off, there are no fatalities.

In July, **Surrey Flying Services, Ltd.** and Fairflight, Ltd. are merged under the Air Charter banner, with the restarted former operation based at Stansted. By September, the carrier's internal German services have multiplied and it is flying four daily roundtrip flights England-West Berlin. The Avro 685 York *New Era* is destroyed in a Hamburg crash on March 3; on November 27, the York *New Venture* is lost in a crash at Lyneham.

A Bristol 170 Mk. 31 is placed in service in February 1953. A significant number of Tudors are acquired throughout the year and converted by Aviation Traders to Superfreighter status.

On February 4, 1954, a second Bristol 170 Mk. 31 joins the fleet, followed ten days later by the first Avro Superfreighter, which begins service Stansted-Hamburg. As additional Avros become available, they are employed to launch overseas contract flights on behalf of the Ministry of Defence, plus "Colonial Coach" commercial service to Idris/Lagos. Irregular Southend-Calais Bristol 170 car ferry flights begin on September 1.

The first Douglas DC-4, actually an ex-military C-54, christened *Atlanta*, arrives at Southend in February 1955. The first Bristol 170 Mk. 32 joins the fleet in March; christened *Valiant*, it will be joined by another, the *Vigilant*, in early April, at which time a ferry division is organized. On April 14, regularly scheduled Southend-Calais Bristol 170 vehicle and passenger services commence; the route is extended to Ostend on October 17. Another ex-military C-54 is acquired in December and named *Jason*.

Cross-channel, German, worldwide contract and *Colonial Coach* services are maintained in 1956. In August, DC-4s commence a troop-carrying contract Southend-Cyprus. The car ferry route is extended to Rotterdam on October 1, as a coach air service; passengers take a bus from London to Soundend, fly Southend-Ostend, and take a bus from Ostend into Brussels. During the year, a total of 8,500 cars are flown Southend-Calais. Two more Bristol 170 Mk. 32 freighters, the *Venture* and *Valour*, join the fleet in December.

On June 6, 1957, the carrier enters into a joint Southend-Ostend car ferry service with **Sabena Belgian World Airlines, S.A.**, employing Air Charter's Bristol Freighters, including the new Mk. 32s *Viceroy* and *Versatile*. Frequencies on the route are boosted from 6 per day in June to 12 per day in July. Cargo services to West Berlin end; however, Ministry of Defence Tudor flights to Australia and the Far East continue.

A newly received Bristol Britannia 307 departs Stansted on February 5, 1958 on the first leg of a 26,180-mile, multistop charter flight around the world via Australia; the aircraft joins a second Britannia 307 in beginning troop-carrying flights from Stansted on a regular basis on September 12. Meanwhile, the Bristol Mk. 31 *Vanguard* is converted to Mk. 32 status in March and assigned to the ferry service. A total of 13,000 vehicles and 63,727 passengers are flown over the Southend-Calais/Ostend routes during the year. Towards Christmas, merger talks begin with rival **Airwork, Ltd.**

Air Charter becomes an **Airwork, Ltd.** subsidiary on January 1, 1959 as Laker joins the latter's board of directors while retaining his Air Charter managing directorship. Although the new partner is allowed to operate under its previous name, its crews and ground staff are rationalized. On January 27, the Avro 688 Super Trader *El Alamein* with six crew fails its takeoff from Brindisi on January 27 and crashes (two dead). The disaster leads to plans for the retirement of the entire Tudor fleet.

Also in January, Laker meets with A. C. Leftley, chief designer at Aviation Traders, Ltd., and asks him to create a new car ferry freighter with which to replace the Bristols.

In February, the Air Charter vehicle ferry division at Southend is reorganized into a new subsidiary airline, **Channel Air Bridge, Ltd.**, to which the Bristol 170 Mk. 31s and Mk. 32s are all transferred. A DC-4 and a Mk. 32 Bristol commence new no-passport vehicle/passenger flights Southend-Calais on March 10. DC-4s begin to replace Tudors on the Australian service on April 16.

The *Zephyr*, another Super Trader with 12 crew, flies into Mt. Suphan, Turkey, on April 23; there are no survivors.

Meanwhile, a second Britannia 307 is received in late March and is placed in service to Lisbon on May 27.

Simultaneously, Channel Air Bridge, Ltd. applies to the ATLB to begin operating vehicle-ferry flights from Southend to Bremen, Dijon, Dusseldorf, Lyon, Strasbourg, Tours, and Paris (LBG). On June 16, a Tudor 4B arrives at Stansted from Lisbon on the world's last commercial flight by this aircraft type, which is thereafter retired. At year's end, the fleet includes 2 Bristol Britannia 307s, 3 DC-4s, 2 Bristol 170 Mk. 31s and 8 Mk. 32s.

A final ex-military C-54 is added to the fleet in March 1960. On July 1, Air Charter, Ltd. becomes part of **British United Airways, Ltd. (BUA)**; Laker becomes managing director of the new carrier. Channel Air Bridge, Ltd. is allowed to continue operations under its own identity. In October, an old C-54 is turned over to Aviation Traders, Ltd. for conversion into the first of ten extended vehicle ferries.

The first Aviation Traders ATL-98 Carvair ("car-via-air"), a heavily-modified DC-4 with a long, bulbous forward fuselage and side-swinging nose that can accommodate 22 passengers aft and 5 automobiles forward, is rolled out at Southend Airport on June 17, 1961 and makes its maiden flight later in the day. An extensive 156-hr. test schedule is now undertaken.

The first ATL-98 Carvair is turned over to Channel Air Bridge, Ltd. on February 16 and, in ceremonies, is christened *Golden Gate Bridge* by the wife of the Swiss ambassador to the U.K. Employing this first of 21 units, Channel Air Bridge inaugurates its first charter, free for

VIPs, later that day on a route from Southend to Ostend. Revenue flights commence next day when a cargo of new automobiles is flown to Malaga, Spain. Scheduled Carvair services are launched on March 1 over a route to Rotterdam.

In 1963, BUA sells its **Channel Air Bridge, Ltd.** subsidiary and its fleet and its new owners merge it with **Silver City Airways, Ltd.** to form **British United Air Ferries, Ltd.**

AIR CHARTER (CHRISTCHURCH), LTD.: New Zealand (1992–1993). Peter Maguire establishes this small charter operation at Christchurch in 1992. Passenger and cargo revenue flights, both fixed- and rotary-wing, commence with a fleet that includes 1 Cessna 172, 1 Piper PA-32 Cherokee Six, 1 Robinson R.22, 1 McDonnell Douglas MD-500, and 1 Bell 206.

No information is available after 1993.

AIR CHARTER (SCOTLAND), LTD.: United Kingdom (1965–1985). Air Charter (Scotland), Ltd. is founded at Glasgow in October 1965 by former **Assistair, Ltd.** managing director and chief pilot, Geoffrey Rosenbloom. A Piper PA-23 Aztec is acquired and employed to launch on-demand charter flights in support of the oil industry to such Scottish towns as Aberdeen, Newcastle, Edinburgh, and Sumburgh as well as several Scandinavian destinations.

The fixed-wing fleet (mostly Piper Aztecs) of competing **Burnthills Aviation, Ltd.** is acquired in April 1983, by which time Rosenbloom's operation has become heavily involved in such ancillary FBO activities as sales, ground handling/support, and engineering.

The fleet grows to include 4 Piper PA-31-350 Navajo Chieftains and 3 Aztecs and destinations for charters move beyond the U.K. to Europe and the Middle East. Operations cease in 1985.

AIR CHARTER BOTSWANA (PTY.), LTD.: Box 41276, Gaborone, Botswana; Phone 351804; Fax 312015; Year Founded 1984. Also known as Kalahari Air Services & Charters (Pty.), Ltd., ACB is set up as an FBO at Gaborone in 1984. In addition to maintenance and flight training activities, J. T. Morrison's concern also provides executive and small group passenger charters employing a Cessna 206 and two Beech 58 Barons. Service continues apace in 1985–1986.

In February 1987, **Air Botswana (Pty.), Ltd.** ends its contract for Fokker maintenance in South Africa, transferring its maintenance to KAS&C. at Gaborone.

Pleased with its KAS&C relationship, **Air Botswana (Pty.), Ltd.** turns over its Dornier 228-100 to the small operator in 1989, which crews and maintains it on behalf of the flag carrier and flies it almost exclusively for an organization that is building a soda-ash factory in the northeastern part of the country.

The Dornier is operated on behalf of **Air Botswana (Pty.), Ltd.** until 1993, when it is returned. Thereafter, KAS&C concentrates on its core maintenance and charter business, the latter under the marketing name Air Charter Botswana (Pty.), Ltd. The fleet is increased over the next five years to include 4 Barons, 1 Cessna 210, 2 Piper PA-31-350 Navajo Chieftains, and 1 Beech Super King Air 200.

N. M. Fitzgerald is managing director in 1997 and a turnover of P 6 million is reported. It is understood that flights continue without change during the remainder of the decade; exact information is, however, not available.

AIR CHARTER ONE: 3980 Airport Road, P.O. Box 11, Boca Raton, Florida 33431, United States; Phone (561) 750-6200; Fax (561) 750-6111; Year Founded 1995. This independent charter operator is set up at Boca Raton, Florida, in 1995 to operate passenger flights to destinations in the Caribbean, Florida and the Southern U.S., and Mexico.

Operations continue during the remainder of the decade with 1 each Piper PA-31-350 Navajo Chieftain and a PA-34 Seneca.

AIR CHARTER SERVICE, S.A.: Zaire (1980–1996). Kinshasa-based **Air Charter Service, S.A.** is established in 1980 to provide do-

mestic and international charter services. The initial fleet comprises 2 British-made Trident 3Bs purchased from **British Airways, Ltd.** (2); 2 more are acquired from the same source in 1985. In 1986, 3 Vickers Viscount 808Cs are acquired from **Scibe Airlift**. Flights are expanded throughout the continent during the decade and early 1990s.

In 1992, Managing Director Tshimbombo Makuna's 250-employee carrier operates one Boeing 707-420, three B-720Fs, two Viscount 808Cs, and a Viscount 757C. One B-720B is removed in 1993–1994 and the fleet is increased by the addition of 1 B-707-320F, 1 B-727-41, 1 B-727-46, and 3 Lockheed L-188ACs. An office is opened in London under Syed Nagvi.

The fleet in 1995 includes 2 Electras, 2 Viscount 808Cs, and 1 each Viscount 757, B-707-123B, B-707-321F (now out of service), B-707-366C, B-720-22, B-727-41, B-727-46 (out of service), and B-727-214, which is leased out to **Puntavia** at Djibouti.

Civil war embroils the country in 1996. During the year, the active fleet is reduced to include the 2 Electras, 3 Viscounts, 1 B-707-123B, 1 B-720-22, 1 B-727-30 (which replaces the earlier Dash-41 and Dash-46), and the B-727-214. Towards year's end, the concern becomes **New ACS, S.A.**

AIR CHARTER SERVICES: United States (1968–1969). ACS is set up at Riverside, California, during the summer of 1968 to offer scheduled passenger and cargo flights to small local destinations. Beech Bonanza revenue flights commence on September 23, but do not last a year.

AIR CHARTER SYSTEMS, LTD.: 780 Magenta Blvd., Farnham, Quebec J2N 1B8, Canada; Phone (514) 293-3656; Fax (514) 293-5169; Code EF; Year Founded 1986. ACS of Canada is established at Quebec's Mirabel Airport in June 1986 to offer worldwide cargo charter flights. Operating under the name World Wide Air Charter Transport System, the company's three executives, Edward C. C. Peagram, Richard Mullarkey, and William Shufflebotham, obtain a Douglas DC-8-55F with which to inaugurate revenue services in late November.

A second DC-8-55F is received in January 1987. Together, the two operate a variety of ad hoc nonscheduled freight services from Canada to points all over the globe. Especially sought are contracts for transport of goods from seasonal markets and livestock shipments. In addition, many shipments are flown as subcontract work; for example, in December 1988, a cargo flight is operated from Montreal to Saudi Arabia via Malta, on behalf of **Saudia (Saudi Arabian Airlines)**.

A third DC-8-55F is delivered to the carrier in September 1989. The first Douglas freighter is sold to Connie Kalitta's **American International Airways** in late 1992 with the second delivered to the same company early in 1993.

Operations continue with the remaining aircraft and 60 workers are employed in 1994. The last owned Douglas freighter is sold to **MK Air Cargo, Ltd.** of the U.K. in 1995 as President Peagram's company elects to continue its ad hoc all-cargo business in 1996–2000 with leased aircraft.

During these years, Peagram becomes chairman, with Paul Gobeil as president. Airline employment grows to 181 and among the destinations most commonly served are Vancouver, Los Angeles, Hong Kong, and Ho Chi Minh City.

AIR CHARTERS: 150 Fred Wehran Dr., Teterboro, New Jersey 07608, United States; Phone (201) 288-9000; Fax (201) 288-2749; Year Founded 1981. This independent charter operation is established at Teterboro Airport in 1981 to operate on-demand passenger flights from Canada to Central America. By 2000, the company employs 12 full-time and six part-time pilots and operates one each Learjet 35A, Learjet 25, Beech King Air 100, King Air 90, and Beech 58 Baron.

AIR CHATHAMS, LTD.: P.O. Box 52, Chatham Islands, 8030, New Zealand; Phone 64 (3) 306-0209; Fax 64 (3) 305-0208; Code CV; Year Founded 1986. Air Chathams is set up by Craig P. Emery at Karewa Airport in the Chatham Islands, 400 miles off the east coast

of New Guinea, in **1986**, with the closest additional inhabited locale being Pitt Island 12 miles further inland. CEO Emery, who is also chief pilot, undertakes services with a Cessna 206 Stationair linking Pitt and Chatham.

The company grows over the next decade until, by **1995**, its fleet includes 1 Beech B-80 Queen Air, 1 Beech 99, and 1 Fairchild Metro III. With the Queen Air committed to the Pitt Island run, the larger aircraft fly twice-weekly roundtrips to Christchurch and three times per week to Wellington, the latter route being increased to five times per week during the summer. In December, a Convair CV-580 is purchased in Canada.

The new Convair arrives in New Zealand in May **1996** after refurbishment at **Kelowna Flightcraft, Ltd.** in British Columbia.

Following workup and pilot training, the CV-580 enters service on September 1 flying the Chatham to Wellington service. Operations continue apace.

In early **1997**, the carrier begins accepting charter and tour bookings for December 31, 1999.

Service is maintained without change into the new millennium.

AIR CHICO: United States (1980–1982). Dennis Heckerson founds AC at Chico, California, in the late spring of **1980** to offer scheduled passenger and cargo services with one each Beech 95 Travelair and Cessna 441. Revenue flights commence on June 2 linking the company's base with Redding, San Francisco, and San Jose.

Operations continue apace until the effects of the **1981** PATCO air traffic controllers' strike forces the company into fiscal problems that lead to its termination in early **1982**.

AIR CHILE. See **ALA (SOCIEDAD DE TRANSPORTES AEREOS, S.A.)**

AIR CHINA INTERNATIONAL CORPORATION: P.O. Box 644, Capital International Airport, Beijing 100621, China; Phone (86-10) 463-4672; <http://www.airchina.com>; Code CA; Year Founded 1988. On July 1, **1988**, the Chinese government's decides to form the operating divisions of **CAAC (The General Administration of Civil Aviation of China)** into separate airlines. The international line, or Beijing Division, based at Beijing's Capital International Airport, is renamed Air China International Corporation—later just Air China—on July 4 and capitalized at \$234 million.

Veteran pilot and the division's chief administrator, Xu Bai Ling, is appointed president and CEO. Previous services are maintained with a fleet that includes 4 Antonov An-24s, 4 Xian Y-7s (license-built An-24s), 3 B-747-2J6Cs, 1 B-747-2J6F, 4 Tridents, 4 B-747SPs, 4 B-767-2J6ERs, 3 B-737-2T4As, 2 B-737-33As, 6 B-707-3J6Cs, and 4 British Aerospace BAe 146-100s. Orders are outstanding for 2 B-737-300s, 15 McDonnell Douglas MD-82s, 3 B-757-200s, and 3 B-747-400s.

The carrier's weekly Beijing to Moscow B-767-2J6C service is extended in August to Stockholm; a reciprocal service is initiated by **SAS (Scandinavian Airlines System)**.

Traffic figures are not released. Profits for the year total \$12.5 million, which is exactly the same amount as that earned by all divisions of the parent a year earlier.

In June **1989**, the carrier joins with **Deutsche Lufthansa, A.G.** to sign a 15-year agreement for the creation of the joint venture company, Ameco-Beijing. Based on CAAC's former Soviet maintenance operation, Aircraft Maintenance and Engineering Corporation, it is to develop a maintenance and overhaul base at the Chinese capital for engines and airframes; ownership is divided 60-40 in favor of the Chinese partners. The Chinese provide their large, but outdated, maintenance complex at Beijing, stocks of spare parts, and 3,750 employees; the German flag carrier invests \$37.6 million.

B-707-3J6C service between Lhasa and Nepal is suspended in November. En route from Beijing to New York on December 16, Flight 981, a B-747-2J6C with 223 passengers, is hijacked by a dissident. After South Korea rejects a request for landing, the plane is allowed to

divert to the southern Japanese city of Fukuoka, where the pirate falls—or is pushed—from the aircraft doorway when it opens. Japanese authorities promise to extradite the man back to China as soon as he recovers from his extensive injuries.

Enplanements for the first full year of separate operation total 1,860,661 (613,422 international) and a \$106-million net profit is generated.

The 3 B-747-4J6Cs arrive in early **1990** and join a fleet which, during the year, will come to comprise the 3 B-747-2J6Cs, 4 B-747SPs, 6 B-767-2J6ERs, 3 B-737-2T4As, 2 B-737-33As, 5 B-707-3J6Cs, 4 BAe 146-100s, 4 An-24s, and 4 Y-7s.

Flights to Katmandu, Nepal, are resumed in March.

A HS 121 Trident 2E with 5 crew and 102 passengers lands far down the Guilin Airport runway while landing on March 22 and slides off into soft ground; there are no fatalities.

The Chinese dissident, who had pirated a Jumbojet to Fukuoka the previous December 16, is returned to Beijing on April 1.

The first wide-body pure freighter, a B-747-2J6F, is delivered in late October. During the fall, the carrier brings in many of the foreign travelers arriving to view the Asian Games. In November, a joint cargo service is launched with **Deutsche Lufthansa, A.G.** over a route from Beijing to Frankfurt via Dubai.

Employment in **1991** stands at 6,000, including 691 cockpit crew members. Operations continue apace following the January inauguration of weekly service from Beijing and Shanghai to Los Angeles and San Francisco. Plans are made in May to turn over the Shanghai to L.A. route to **China Eastern Airlines Company, Ltd.** Flights to Bucharest begin in the summer; later, it will be reported by CAAC that almost 12% of ACIC's flights for the year's first half have been delayed, with 44% of those late starts caused by human error.

During August, two new routes are inaugurated that include fifth freedom segments: Beijing to Osaka via Shanghai and Beijing to Jakarta via Xiamen. The Indonesian service is suspended in September due to visa difficulties between China and Indonesia, but is resumed within the month. Also in October, weekly roundtrips begin between Beijing and Cairo via Dubai.

Late in the year, a new \$56-million training center is occupied at Beijing; much of the training program to be conducted there will be supervised by personnel under contract from **Singapore Airlines, Ltd.** Revenues for the year are \$554 million and allow a \$115-million profit.

The first of three B-747-4J6s is delivered in March **1992**. Orders are placed for a variety of aircraft; two more Y-7s and a B-737-33A are added late in the year. During the first quarter, a new Unisys 2200/633 mainframe is installed at the main Beijing computer facility, allowing significant improvement in the airline's computer reservation system. On April 1, ACIC joins with China International Travel Service to form the joint venture charter subsidiary **China Tourism Airline Company**. With initial capitalization of \$4.5 million, the new company's ownership is divided between the international airline (60%) and the government's CITS (40%).

Equipped with two, leased BAe 146-100s, domestic passenger flights to the grottos in Gansu Province and Shanxi are inaugurated. Also in April, a "block space" agreement is signed with **Finnair O/Y** covering a route from Beijing to Helsinki. Located some 20 km. from Beijing, the carrier's new \$7.4-million air cargo center is occupied in May.

In June, ACIC inaugurates weekly B-767-2J6ER service from Beijing to Vienna via Karachi. Cairo and Madrid also join the route network, as does Copenhagen. Frequencies to London, Paris, and Rome are increased.

As of July 1, the carrier operates a network comprising 37 destinations in 27 countries, in addition to Hong Kong service from Beijing, Dalian, and Tianjin. The company averages 110 international departures each week.

Also maintained is a domestic network, inherited from CAAC, that includes 50 destinations and 308 weekly flights. During the year, frequencies will be added linking Tianjin to Shenzhen, Fuzhou, and Xian.

A new hub is built at the former community and the carrier's two B-737-33As are based there.

At an August luncheon in New York cosponsored by the airline and the Bankers Trust Company, President Xu Bai Ling signs a major financing agreement with a syndicate of 15 international banks for fleet expansion. In addition to BTC, lead managers in the pact also include Bank of Tokyo, Banque Nationale Paris, Dresdner Bank, Westdeutsche Landsbank, and Bank of China Trust and Consultancy Company.

The following month, Ameco, the three-year-old joint venture aircraft maintenance company operated with **Deutsche Lufthansa, A.G.** reports a \$20.9-million profit, a 100% increase over the previous year. The airline's overall net profit is \$100 million.

In **1993**, the workforce is 8,620 and the fleet includes 4 BAe 146-100s, 2 B-707-3J6Cs, 3 B-737-2T4As, 3 B-737-33As, 11 B-737-3J6s, 3 B-747-2J6BCs, 1 B-747-2J6F, 3 B-747-4J6s, 3 B-747-4J6Cs, 3 B-747SP-J6s, 1 B-74SP-27, 6 B-767-2J6ERs, 2 B-767-3J6s, 2 Lockheed L-382G Hercules freighters, 3 Y-7s, and 3 Y-7-100s.

All of the Jumbojets are outfitted with Inmarsat satellite terminals and five withdrawn Stratoliners are shifted to the Tianjin hub; the remaining two are employed only as freighters. From a hub at Hohhot, Mongolia, the company continues to operate a pair of Antonov An-24s and nine Y-5 utility/agricultural aircraft.

A frequency is established linking the capital with Copenhagen. During the year, the carrier is one of the three ex-CAAC divisions (along with **China Eastern Airlines Company, Ltd.** and **China Southern Airlines Company, Ltd.**) granted the status of independent "aviation group." In addition to reporting its own statistics, the airline is now allowed to acquire its own aircraft and to shape its finances, including authority to float shares on the new Chinese stock exchanges.

En route to Beijing from Jakarta with 142 aboard on August 10, a B-767-2J6ER is hijacked to Taiwan by wool vendor Shi Yuebo, who surrenders after the plane lands in Taipei. The plane is returned to the mainland and the pirate is given political asylum in the form of a nine-year prison term.

In September, **Evergreen International Airline** complains to the U.S. DOT that the Chinese airline has threatened its Chinese customers with retaliatory actions if they ship with the American carrier; in October, the DOT terminates ACIC's all-cargo operating rights to the U.S.

Also in October, a \$65.5-million wide-body aircraft hangar is opened by the Sino-German subsidiary Ameco. German investment in Ameco now stands at \$178 million and is **Deutsche Lufthansa, A.G.**'s largest foreign investment. Another Jumbojet is hijacked to Taipei on November 8 by 26-year-old Wang Zhuihua. During the year, cargo services are started to Los Angeles and Copenhagen.

Yin-Wen Long, former director of the East China division of CAAC, becomes the airline's new president in February **1994**. A contract is signed with **Deutsche Lufthansa, A.G.** on March 30 for the training of 76 former Chinese Air Force pilots as commercial B-737 pilots in classes to be held at the German airline's U.S. flying school. The first ex-military flyers arrive at the Phoenix, Arizona-based facility in April for the special 4½-month program. Operations continue apace for the remainder of the year as the workforce reaches 14,000 passengers. Two branches are now administered in Tianjin and Inner Mongolia and, in addition to the head office, regional offices are maintained in Shanghai, Guangzhou, Shenzhen, Xiamen, Dalian, and Xian. Although traffic figures are not provided, revenue results are happily reported.

The registered capital is 1.5-billion RMB, general assets total 13.9 billion RMB, and revenues reach \$1.04 billion. With operating expenses of only \$732.89 million, the carrier generates an operating profit of \$315.28 million and a net gain of \$36.05 million.

The fleet in **1995** includes a mix of American, British, Russian, and Chinese aircraft. Among the owned units are 10 B-737-3J6s, 4 each B-747-4J6s and BAe 146-100s, 3 each B-737-33A, B-747-2J6BCs, B-747SP-J6s, Xian Y-7s, and Y-7100s, and 2 B-747SP-J6s, 1 each B-747-2J6BC, An-24B and An-24RV. Chartered equipment includes 4 B-737-3J6s and B-767-2J6ERs, 1 B-737-33A, 3 B-747-4J6Cs and

B-767-3J6s, 2 B-747-2J6BCs, B-767-2J6ERs, and B-747SPJ6s, as well as 1 B-747-2J6F, B-747SP-27, and B-747-4J6.

A series of strategic alliance and marketing arrangements are entered into this year. In January, the carrier agrees to share revenues with **Korean Airlines/Korean Air (KAL)** on a return service from Beijing to Seoul. Simultaneously, the same kind of pact is signed with Asiana Airlines for services between Beijing and Seoul plus Pusan.

During the summer, the airline begins to cooperate with **Austrian Airlines, A.G.** on a service from Vienna to Beijing, plus two extensions from Beijing to Shanghai. ACIC in July is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

Enplanements for the year total 6,475,731. There is no financial data available.

Airline employment stands at 14,000 in **1996**. At the end of January, officials from **CAAC (The General Administration of Civil Aviation of China)**, inform the Orient Airline Association that it will not support the applications for membership of its three largest airlines, ACIC, **China Southern Airlines Company, Ltd.**, and **China Eastern Airlines Company, Ltd.** Rather, they insist that **China National Aviation Co. (CNAC-2)** be the first admitted.

On April 26, an alliance is signed with **Northwest Airlines** under which both will steer passengers to the other's flights. The pact, the first between a PRC airline and a major foreign carrier, will also include joint airport facilities, ground handling, and linkage of frequent flyer programs.

ACIC Executive Vice President Wang Jiwu joins Consul General Huang Dongbi at Detroit (DTT) on May 1 for ceremonies marking the inauguration of thrice-weekly **Northwest Airlines** B-747 nonstop roundtrips from Detroit to Beijing. The frequencies are the first to be flown directly from the mainland of the U.S. to China.

The carrier has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport (30 miles west of Hong Kong) on November 5-10. In December, a \$510-million order is placed with Boeing for three B-747-4J6s.

Passenger boardings move ahead by 3.4% to 6,678,765 and cargo moves up 4.8% to 767.62 million FTKs. Revenues total \$1.37 billion and there is a net profit of \$32.1 million.

The workforce is boosted 17.9% during **1997** to 16,500. During the first week of January, a \$383-million order is placed with Boeing for two B-747-4J6Cs. On January 29, a B-747-4J6C skids off the runway at New York (JFK) as it is taxiing shortly after touchdown; no injuries are reported.

At a Beijing signing ceremony during the last week of March attended by U.S. Vice President Al Gore and Chinese Premier Li Peng, ACIC officially requisitions five B-777-4J6s valued at \$685 million.

Plans are made to initiate a direct service from Hong Kong to London in mid-July following the Chinese takeover of the British crown colony.

Although customer bookings dip 2.2% to 6,533,932, FTKs jump 20.6% to 925.86 million. Financial data is not available.

President Yin-Wen Long's fleet at the beginning of **1998** includes 53 all-Stage III aircraft: 18 B-737-3J6s, 8 older B-747-2J6/3J6s, 10 B-747-4J6s, 10 B-767-2J6/3J6ERs, 3 Airbus A340-313Xs, and 4 BAe 146s.

On May 22, the carrier expands its alliance with **Northwest Airlines** to include the American major's associates **Continental Airlines**, **America West Airlines**, and **Alaska Airlines**. All four will link their frequent flyer programs, coordinate schedules, offer joint marketing and maintenance where appropriate, share lounges, and plan for code-sharing. ACIC now introduces its "Air China Club" frequent flyer program, modeled on that of **Northwest Airlines**.

An application by the carrier and **Air Canada, Ltd.** to code-share over routes from China to Canada is rejected by Canada Transport Agency during the last week of May. CTA, some years earlier, had designated China as a single-market country and assigned Canadian service to **Canadian Airlines International, Ltd.**

While en route from Beijing to Kunming on October 28, Flight 905, a B-737-3J6 with 104 passengers, is hijacked to Taiwan by its pilot, Yuan Bin, who also brings over his wife Xu Mei. The skyjacking is the 13th diversion of a PRC airliner to Taiwan completed since April 1993 and the first to involve a crew member. The skyjacking is regarded as an embarrassment for the government of Taiwan, which is attempting to improve its relations with Beijing. Premier Vincent Siew, and prosecutors consequently indicate that the pair will be given harsh prison sentences; however, they will not be returned to the PRC.

The *Wenhui Daily* reports on November 12, in an article digested by Reuters, Ltd. for the Internet, that 24 passengers on the unscheduled October 28 flight to Taipei have written to ACIC demanding compensation. Although the little Boeing had been returned to Shanghai the same day, the upset passengers claim that the company did not send representatives out to the airport to assist them after the plane's landing. ACIC, the letter reads, "should have consoled customers to reduce the damage to the airline's reputation after the hijacking. Instead, it placed priority on investigating an internal problem." Whether the two dozen signatories receive any money is unknown.

Passenger boardings this year total 6.37 million, while 1.18 billion FTKs are operated.

Early in January 1999, ACIC, which has lost upwards of \$25 million the previous year, receives a new president, succeeding the retiring Yin Wen Long. **China Eastern Airlines Company, Ltd.** Chairman/CEO Wang Lian, once vice minister of the CAAC, receives the prestigious post.

In a joint service with ACIC, **Lufthansa Cargo, A.G.**, on January 15, inaugurates weekly roundtrip all-cargo flights between Frankfurt and Shanghai employing one of its MD-11Fs. These direct freight flights are upgraded to twice weekly in March.

The CEOs of **KLM (Royal Dutch Airlines, N.V.)**, **Northwest Airlines**, and **Alitalia, S.p.A.** meet with ACIC officials in Beijing on February 23 to discuss bringing the Chinese carrier into their global alliance.

The Xinhua News Agency reports on February 24 that ACIC leads the world with a safe flying record that stretches back 44 years.

In an effort to build customer loyalty, the "Air China Club" frequent flyer program is extended to domestic flights, beginning on March 18.

Just after landing at Chicago (ORD) early on the morning of April 2, after a service from New York (JFK), Flight 9018, a company B-747-4J6C freighter with eight crew, exits its runway onto a taxiway, but makes a wrong turn, ending up back on the runway. At the same time, Flight 36, a **Korean Airlines/Korean Air (KAL) B-747-4B5** with 22 crew and 357 passengers, is rolling down the same runway toward take-off for Seoul. The Korean jetliner lifts up and passes over the nose of the Chinese 747, missing it by just under 50-ft.

Several Hong Kong morning newspapers report on July 9 that PRC officials may force the merger of Air China International with **China Southern Airlines Company, Ltd.** The report had first been carried in the British industry magazine *Flight International*. The confusion causes the Hong Kong stock exchange to temporarily suspend trading in CSA shares. Later in the day, the restructuring office of **CAAC (The General Administration of Civil Aviation of China)** issues a statement denying plans to forcibly amalgamate the two companies.

Following up on the *Flight International* and local newspaper reports, executives at China Southern confirm on July 13 that preliminary discussions have been held with **Air China International Corporation** concerning a possible merger or partnership sometime in the future. Analysts suggest a merger might be difficult.

In August ceremonies at Renton, Washington, the company takes delivery of the first of 11 B-737-8J6s. During the fall, CAAC executive, aviation media types, and various airline employees join in a wide-ranging, but ultimately empty discussion, concerning the possible merger of Air China with **China Southern Airlines Company, Ltd.** *Flight International* reports on October 13 that the discussions have broken down due to CSA concern over the financial shape of Air China.

Overall passenger boardings climb 4% to 6.63 million as cargo traffic accelerates 38.2% to 1.64 billion FTKs. The booking figure is third in China behind CSA and **China Eastern Airlines Company, Ltd.**

Airline employment in 2000 is up an impressive 80% to 15,000.

Among the world's top 25 airlines at the beginning of the new millennium, Air China is 23rd in terms of FTKs. It now visits 89 destinations, including 49 in China and 7 in Europe. More importantly, it is the only major Chinese airline with a perfect safety record, having reported no accidents since 1955.

On March 9, the U.S. Export-Import Bank approves a \$365-million financing package under which ACI will enter into a contract with Boeing for the purchase of 1 B-747-4J6, 2 B-777-2J6s, and 2 B-737-8J6s to be delivered between April and June.

Flights from Beijing to Pusan are resumed on March 27. On April 11, the carrier begins to code-share on the twice-weekly flights from Detroit to Shanghai made by **Northwest Airlines**.

During the spring, the carrier further attempts to rationalize its fleet, which still has too many large aircraft. Two B-747s are sold and a fifth is converted into a freighter; a B-737-8J6 is added in April and plans are announced for the purchase of 15 additional medium-sized jetliners over the next 5 years.

Twice-weekly B-747-4J6 roundtrips begin on July 6 from Beijing to Auckland via Shanghai and Sydney.

In response to a fatal June 22 **Xian Airlines Y-7-100C** crash, the CAAC delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around Air China International, **China Eastern Airlines Company, Ltd.**, and **China Southern Airlines Company, Ltd.**

Merger discussions with **China Southern Airlines Company, Ltd.**, broken off earlier, have been resumed and quietly concluded during the year. However, it is reported on October 2 that a merger proposal submitted by the two to the CAAC has been rejected on the grounds that the resultant carrier would be too large.

A new code-sharing agreement is signed with **Deutsche Lufthansa, A.G.** on October 9; it becomes effective 20 days later on the routes from Shanghai and Beijing to Frankfurt. Air China is also able to place its designator on DLH flights beyond Frankfurt to Hamburg, Berlin, and Munich.

On October 18, the business daily *Handelsblatt* reports that the carrier and DLH have fallen out over their aircraft maintenance joint venture, Ameco. The disagreement centers around long-term expansion strategy, with the Chinese said to be less interested in growth in services to foreign carriers and more concerned with the upkeep of its own fleet.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Air China, increase fares on November 5.

AIR CITY, A.G.: Switzerland (1990-1991). Air City is established at Lugano in 1990 to provide holiday and inclusive tour flights to Mediterranean and European resort destinations. Ownership is divided between Metropolitan Aviation (77%) and private investors. A workforce of 20 is recruited and flights begin with a pair of Aerospaiale (Sud Est) SE-210 Caravelle VIRs.

The company has had the misfortune of starting up during the Gulf crisis, which not only limits its winter destinations but also imposes extremely high fuel costs. As a result, the company is unable to achieve economic viability and is forced to shut its doors in May 1991.

AIR CLUB INTERNATIONAL, LTD.: 11905 Cargo Road A-3, Suite 205, Montreal International Airport, Mirabel, Quebec J7N 1H1, Canada; Phone (514) 476-3555; Fax (514) 476-0504; Code HB; Year Founded 1993. ACI is established at Montreal in May of 1993 to offer long-haul passenger and inclusive-tour charters. Startup capital of C\$8 million is provided by a mix of 20 private investors, financial concerns, and tour operators.

Guy Dulude is chairman, with Claude Levesque as president/CEO and a workforce of 185 is recruited. A Boeing 747-212B is acquired

from **Nationair, Ltd.** along with a former **Delta Air Lines** Airbus Industrie A310-324. The latter is employed on June 17, 1994, to commence revenue services, with a charter from Quebec's principal city to Toulouse, France.

During the remainder of the summer and fall, hubs are also established at Calgary, Toronto, and Vancouver and, from them, flights are added to Paris, Nice, and Bordeaux, Acapulco, Amsterdam, Athens, Barcelona, Belfast, Brussels, Cardiff, Ft. Lauderdale, Frankfurt, Glasgow, Honolulu, London, Lyon, Manchester, Margarita, Marseilles, Nantes, Newcastle, Port-au-Prince, Puerto Plata, Puerto Vallarta, Tel Aviv, Toulouse, Varadero, Vienna, and Venice.

Another ex-**Delta Air Lines** A310-324 is chartered and plans are made to acquire a third. Enplanements total 200,000.

Airline employment grows to 350 during the remainder of the decade the fleet is increased by the addition of another Jumbojet and 3 more A310-324s.

AIR COLORADO: United States (1980–1982). Air Colorado is formed by Donald Pearce and Robert Friedman at Englewood, Colorado, on March 1, 1980. Known initially as **Tamarac Aviation**, this third-level operator commences operations with a Cessna 414 and a Cessna 206, providing a link between Aspen and Grand Junction. In July, the corporate identity is changed to Air Colorado.

Significant financial reversal is suffered following the 1981 PATCO air traffic controllers' strike and subsequent ATC restrictions, forcing the company into bankruptcy early in 1982.

AIR COLUMBUS (TRANSPORTE AEREO NAO REGULAR, S.A.): Portugal (1989–1994). Air Columbus, Portugal's first independent airline, is established at Aeroporto do Funchal, Madeira, Portugal, in the early fall of 1989 to offer passenger charters. With Rifaat Morsi as president, ownership is divided between Portuguese hotel/tour companies and the Danish charter carrier **Sterling Airways, A.S.** The latter not only provides financial backing, but operational support as well. A Sterling Boeing 737-33A is chartered and employed to begin revenue services in October.

Destinations visited from Lisbon, Funchal (Madeira), and Faro include Austria, France, Ireland, Spain, Switzerland, and the U.K. A second B-737-33A is also obtained from **Sterling Airways, A.S.** and, during the winter charter season, flies between Madeira to Boston, New York, and Toronto. A mix of Portuguese and Scandinavian flight and cabin crews operate the flights.

The most important customers for the airline are German and charter flights to the holiday locations are undertaken from Munich, Nuremberg, and Stuttgart. A chartered B-727-2J4 arrives in the summer of 1990 and an engineering base is established at Funchal. In 1991, orders are placed for three more B-737-300s and two B-757-200s. Operations continue apace in 1992; however, the collapse of **Sterling Airways, A.S.** in 1993 creates a pall.

The fleet of Chairman Henrique Abrantes and Managing Director Capt. Ole Nor-Jensen in 1994 includes a pair of leased B-737-33As and flights continue without much change. As the result of murky circumstances involving fraud, the company is forced to shut its doors in December.

AIR COMMERCE, LTD.: United Kingdom (1934–1950). ACL is formed by British and Foreign Aviation, Ltd. on December 1, 1934; initial shareholding is £1,000. Flight operations do not, however, commence until 1938 when a de Havilland DH 89A Dragon Rapide is acquired and employed to initiate scheduled service over a route from Liverpool to the Isle of Man via London (Croydon)/Belfast.

A de Havilland DH 90 Dragon Fly is added to the fleet in May 1939; however, after the carrier suspends operations on September 3 (following the declaration of war on Germany and the suspension of U.K. civil flying), it is sold in March 1940. A second available Dragon Rapide is purchased in November.

Following V-E Day in May 1945, the company resumes revenue service. On January 1, 1946 its original DH 89A is lost in a crash in County

Down. The company is purchased by **Olley Air Services, Ltd.** in December, but is allowed to continue operating under its previous identity.

Upon the activation of **British European Airways Corporation (BEA)** on February 1, 1947, ACL is one of several small independents whose scheduled routes are taken over by the new state carrier. Employing Olley aircraft, the carrier remains alive as a charter operation until 1950.

AIR COMMUTER, LTD.: United Kingdom (1969–1984). This small charter operator is formed at Coventry in late 1969. Equipped with a single de Havilland DH 104 Dove 1, AC begins an executive charter for Richard, Johnson and Nephew, Ltd. in January 1970. Late in the year, the company undertakes executive flights for Tyler Aviation from the latter's base at Norwich. During the next two years, ad hoc charters are undertaken from Coventry to various destinations both within the U.K. and in northern France and Holland.

The company's fleet is enhanced by delivery of a Piper PA-34 Seneca, in November 1973, which is employed to mount air taxi flights into the British Midlands. The Dove is sold during 1974.

Later in the decade, the company is granted a scheduled route from Coventry to Paris, which is flown daily with a purchased Hawker Siddeley HS 748. In May 1984, the carrier is renamed **Venture Airways, Ltd.**; however, world economic conditions force the operator to cease flying late in the year.

AIR COMMUTER AIRLINES (1): United States (1967–1968). Established by Arthur King and F. Jerome Tone at Cleveland's Burke Lakefront Airport in late spring 1967, ACA-1 is equipped with a single de Havilland Canada DHC-6-100 Twin Otter and four Cessna 402s. These begin scheduled third-level flights on June 28 linking the company's base with Columbus, Dayton, Findlay, and Lima. During the remainder of the year and into the next, three more Twin Otters join the fleet, allowing the number of flights to be increased to 200 per day.

Early in 1968, passenger flights begin across Lake Erie to Detroit (DET). Also, a scheduled night cargo service is inaugurated from Cleveland to Detroit, Columbus, Dayton, Findlay, Lima, and Youngstown. On March 4, the carrier is taken over by competing **Wright Airlines**.

AIR COMMUTER AIRLINES (2): United States (1968–1970). ACA-2 is set up by Norman Anderson at Grand Island, Nebraska, in the early fall of 1968 to provide scheduled daily roundtrips to and from Omaha. Employing Piper lightplanes, Anderson initiates revenue flights on October 4 and is able to maintain them until 1970.

AIR COMMUTING: United States (1947–1948). Air Commuting, Inc. is established at New York City in the spring of 1947 to provide air taxi services from Manhattan to a number of points on Long Island. A Grumman G-73 Mallard is acquired and services are inaugurated on June 9.

Operations continue apace during the remainder of the year and into 1948. The little amphibious carrier cannot, however, achieve economic viability and is forced to shut down on June 30 after only 230 hrs. of flight. The Mallard is sold to Texaco, Inc.

AIR COMORES, S.A. (1): Comoros (1963–1974). AC-1 is formed at Moroni in 1963 to fly nonscheduled interisland charters in the French colony. Revenue flights commence between the four islands with one each Piper Apache and Piper Aztec.

Two de Havilland DH 114 Heron 1Bs are acquired from **UTA (French Airlines, S.A.)** in 1966 and are employed to significantly enhance services. Leadership is provided by CEO Yves le Bret, who also arranges the acquisition of two Douglas DC-3s and two DC-4s.

During the remainder of the year and in 1967, Moroni is linked to Anjouan, Dzaoudzi, Grande Comore, Mayotte, and Moheli. A twice-weekly service is also inaugurated to Dar es Salaam.

A DH-114 Heron 1B with a pilot and 15 passengers bounces upon landing at Moroni on January 27, 1968, lifts off again and plunges first into rocks and then into the sea; there are no survivors.

Service continues without incident thereafter, with the fleet enhanced by the acquisition of two Nord 262s. The first AC-1 shuts its doors in 1974 as the Comoro Islands prepare to receive their independence from France.

AIR COMORES, S.A. (2) (SOCIETE NATIONALE DES TRANSPORTS AERIENS, S.A.): Comoros (1975–1995). Upon the nation's independence, this new entrant takes over the private carrier on July 6, 1975. Ownership is held by **Air France** (51%) and the Comoros government (49%), with A. A. Pigeat as managing director. With a fleet of 4 Douglas DC-4s provided by the French flag line, scheduled passenger and cargo services are undertaken linking the island capital with the archipelago cities of Anjouan, Dzaoudzi, and Moheli. International flights are started to Dar es Salaam, Mombasa, Antananarivo, and Majunga. The **Air France** shares are purchased by the government in April 1977.

The carrier is downsized somewhat during the remainder of the decade. Most of the international service is withdrawn and the DC-4s are replaced with a single Fokker F.27-200. Flights do continue to Majunga in the Malagasy Republic.

Airline employment at General Manager Djamaï Eddine Ahmed's company in the middle 1980s is approximately 75 and passenger enplanements average some 25,000 per year.

A significant capacity increase occurs in 1985 as a Boeing 737-244A is wet-leased from **South African Airways (Pty.), Ltd.** The "Baby Boeing," repainted in AC-2 colors, is used to operate services to Cape Town, Zanzibar, Mombasa from Moheli.

In mid-1986, the carrier begins participation under contract in the **Air France** Alpha 3 computerized reservations system. Three DC-4s are again briefly operated late in the decade.

Operations continue apace in the 1990s and the DC-4s become permanent equipment. In a time of recession, the leased B-737-244A proves to offer too much lift and is returned to South Africa in 1992. In 1993, General Manager Ahmed oversees a workforce of 85 and a fleet of 3 DC-4s and 1 Fokker F.27-400. Services continue to be operated to Anjouan, Dzaoudzi, and Moheli in the Comoro Archipelago.

By 1994–1995, AC-2 is laboring under significant debt and a growing inability to generate sufficient income to make necessary payments. The carrier stops flying in September of the latter year and is liquidated by November.

AIR CONGO, S.A. (1): Belgian Congo (1945–1949). AC-1 is formed in 1945 as a small bush operator and the air operating division of the trucking firm Chemins de Fer du Congo Supérieur aux Grands Lacs Africains, S.A., based at Albertville in the western part of the country.

Between 1945 and 1947, it provides on-demand services to various destinations in the Belgian colony. On April 6 of the latter year, the light-planes previously employed are supplemented with a pair of Avro XIXs.

Two de Havilland DH 104 Doves are acquired in February 1948. In April, these, together with the Avros, launch scheduled services. Destinations visited once or twice a week include Kabalo, Kongolo, Kasongo, Kindu, Stanleyville, Buta, Costermansville, Goma, Elisabethville, Mitwaba, and Manono.

When **Sabena Belgian World Airlines, S.A.** is granted exclusive rights to all scheduled transport in the Congo in April 1949, it also takes over AC-1, its routes and assets, running it as the subsidiary **Compagnie Congolaise de Transports Aériens, S.A.** until June 1961.

AIR CONGO, S.A. (2): Congo (1961–1971). With assistance from **JAT (Yugoslav Airlines)**, begun the previous August 10, and with a protocol agreement with **Sabena Belgian World Airlines, S.A.** signed in January 1961, AC-2 is reborn on June 6 as the national airline of the democratic Congo. The airline is officially reconstituted and incorporated on June 28, with ownership divided between the Congo government (65%), **Sobelair, S.A.** (5%), **Air Brousse, S.A.** (5%), and **Sabena** (30%).

AC-2 begins operations on June 29, receiving authority to operate all of the nation's domestic and international services. The Belgian flag line

is now able to halt the internal services in the now-independent nation that had been provided by its subsidiary, **Compagnie Congolaise de Transports Aériens, S.A.** It now begins a six-year contract to training the new entrant's personnel.

On September 17, one of the **Starways, Ltd.** DC-4s, which had been leased to **Sabena Belgian World Airlines, S.A.** in the spring, is destroyed on the ground at Kamina Airport, Congo, by Katangan fighter aircraft. The other is now turned over to AC-2.

Having first appealed to the UN for assistance in the reintegration of the break-away province of Katanga, President Patrice Lumumba now turns to the Soviet Union. Moscow dispatches 10–15 Ilyushin Il-14s, with their **Aeroflot Soviet Airlines** titles painted over in favor of hastily applied Congolese markings. These join five DC-3s requisitioned from AC-2 in transporting 1,000 Congolese National Army troops on December 31 to Luluabourg, capital of Kasai province, from where they are trucked toward Katanga, where their drive is halted by rebel forces.

The Congolese civil war will intensify during the remainder of the year and into 1962, particularly after the death of Lumumba.

The first jet service occurs almost a year later as a B-707-329 leased from the Belgian flag carrier begins flights from Leopoldville to Brussels in March 1963. During the remainder of the year, negotiations are carried out for the implementation of joint services with other airlines.

In January 1964, an agreement is signed with **UTA French Airlines, S.A.** Under its terms, the French carrier operates a joint DC-8 service with AC-2 over a route from Leopoldville to Paris via Douala. In June, the chartered Sabena Boeing adds a stop at Paris on its weekly service from Leopoldville to Brussels.

Feeder routes are expanded in October with the addition of four Beech 58 Barons. At the beginning of November, joint service is launched with **Zambia Airways, S.A.** over a return route from Elisabethville to Ndola. The Congolese fly the service on Fridays and the Zambians on Thursdays. While taking off from Stanleyville on November 30, a chartered DC-4 with 15 passengers is hit by rebel bullets and crashes (7 dead).

Including 16 on charter, the company by 1965 is operating a total of 46 aircraft: 1 leased B-707-329, 15 Beech 18s, 2 Curtiss C-46s, 11 Douglas DC-3s, 9 DC-4s, 3 DC-6s, and 5 Pipers. Orders are outstanding for another Beech and another Boeing jetliner. Enplanements for the year total 303,917.

After years in an acrimonious relationship, **Sabena Belgian World Airlines, S.A.** and AC-2 abruptly end their relationship in 1966 as the result of a political coup in the Congo late in 1965. Most of Sabena's property and funds in the Congo are seized and its landing rights at Elisabethville, now Lubumbashi, are cancelled.

Ownership is now divided between the Congolese government (70%), the Institut National Sécurité Sociale (8%), and other local interests (22%).

The Sabena interest is cancelled as is the year remaining on the training contract; only the shared Brussels service remains. H. Sangara becomes president and places a £3-million order for two Sud Est SE-210 Caravelle IIRs.

Airline employment stands at 3,357 at the beginning of 1967. On May 12, a British Aircraft Corporation BAC 111-320L is leased from **Laker Airways, Ltd.** for a year. The weekly Brussels service, shared with **Sabena Belgian World Airlines, S.A.** for years, ends in June, with the BAC and a DC-6 now providing regional links to Burundi, Uganda, Kenya, Angola, and Nigeria. The joint venture with **Zambia Airways, Ltd.** is maintained.

In addition to long-haul services, AC-2 also maintains a 26-point domestic network with DC-3s and DC-4s, while Beech 18s fly to 27 small and bush communities. To improve these services, the company now places an order with Fokker for 10 F.27-600 turboprops.

The first Caravelle is delivered in October and, at the beginning of November, enters service with the BAC and DC-6 on regional routes. Destinations visited by the trio from Kinshasa include Lagos, Fort-Lamy, Bangui, Dar es Salaam, Entebbe, Nairobi, Lusaka, and Goma. The DC-6 also flies twice weekly between Kinshasa and Lubumbashi.

A DC-8-33, leased from **Braniff International Airways**, is delivered on November 25; in a new livery, it prominently flies the company's European services four times a week from Lubumbashi and Kinshasa to Brussels and either Paris or Rome.

Operations continue apace in 1968 as the Laker BAC is returned. A DC-3 is lost at N'Djili on August 18.

In 1969, the company enters into a joint venture with **Pan American World Airways (1)**, which provides management and fleet support. Fourteen personnel, including new Director General Francis J. Swayze, are posted to AC-2 to serve under President Lumumba.

A leased C-46 with 3 crew and 42 passengers crashes into the Congo River while circling for a landing at Kinshasa on April 16; there are no survivors.

A DC-3 is lost under unknown circumstances on February 15, 1970. Shortly thereafter, 2 DC-8-33s are leased from Pan Am, replacing the earlier aircraft. The fleet now also includes 1 Caravelle IIR, 3 DC-6s, 8 DC-4s, 7 DC-3s, and 8 F.27-600s.

Following creation of the republic of Zaire in October 1971, the airline becomes **Air Zaire, S.A.**

AIR CONGO (BRAZZAVILLE), S.A.: Congo (1961–1965). **Compagnie Congolaise de Transports Aeriens, S.A.** is reformed at Point-Noire, becoming the major, if privately owned, carrier of the newly democratic Congo on June 28, 1961 under the name Air Congo. **UTA French Airlines, S.A.** holds 30% minority shareholding and provides management and technical support.

Several routes formerly operated by **Air Afrique, S.A.** are acquired in 1963 and the company's two Douglas DC-3 transports and a DC-4 now fly a triangle-shaped route network from Brazzaville to Point-Noire to the Gabonese city of Moanda. To avoid continuing confusion with **Air Congo (2)**, the company is reformed, with new capitalization, on March 16, 1964, and renamed.

The government buys out the French share in 1965 and provides a new corporate identity for its national carrier, renaming it **Lina Congo (Lignes Nationales Aeriennes Congolaise, S.A.)** in order to avoid lingering misidentification with **Air Congo (2)**.

AIR CONNEXION. See **AIR CANADA, LTD.; VOYAGEUR AIRWAYS, LTD.**

AIR CONTINENTAL, S.A. See **AIR IVOIRE, S.A.**

AIR CONTRACTORS, LTD.: United Kingdom (1946–1949). RAF Group Captain P. H. Maxwell founds this ad hoc charter company at Woodley aerodrome on May 15, 1946. Holding a freight contract with the Miles Aircraft Company, Maxwell is provided with the prototype Miles M.57 Aerovan 1 with which to launch his business. Five M.57 Aerovan 2s are acquired throughout the remainder of the year and one is lost in a crash at Copenhagen on October 29. Meanwhile, cargo charters are flown to various destinations in the U.K. and Europe.

A second Aerovan 2 is lost in a crash at Cherbourg on January 12, 1947; however, it is replaced during the month by the company's first Douglas DC-3, actually an ex-military C-47A. The airline now moves to larger Blackbushe aerodrome. Aircraft additions through the year include two Aerovan 4s, a Bristol 170 Mk. 31 freighter, two more C-47As, and a Miles M.65 Gemini 1A.

Operations include livestock flights to Europe, Africa, and the Middle East, the transfer of 150 British tourists from Paris to Blackbushe (June 14–15) during a French rail strike, and participation in the India-Pakistan refugee exchange. During the latter duty, the company's three Dakotas are all engaged, flying 6,000 people over 105,000 miles.

Early in 1948, the base of operations is transferred again, this time to Bovingdon. Livestock and produce charters are undertaken. The company is one of the first British independents to participate, beginning on August 4, in the Berlin airlift. All three C-47s are committed, flying 1,376 tons in 386 sorties, before their withdrawal on November 10.

The end of the German flights sees hard times befall the company and by December, the remaining fleet has been sold off, with most of the heavy units going to **Skyways, Ltd.** The few remaining Aerovan 2s are unable to generate sufficient business and the carrier is forced to cease trading in January 1949.

AIR CONTRACTORS (IRELAND), LTD.: The Plaza, New Street Swords, Dublin, Ireland; Phone 353 (0) 1 812 1900; Fax 353 (0) 1 812 1919; <http://www.aircontractors.com>; Code AG; Year Founded 1998. In order to concentrate on its oil and defense business, Hunting, PLC, in late June 1998 sells its subsidiary airline Hunting Cargo Airlines, Ltd. to a consortium consisting of **Safair (Pty.), Ltd.** and **Compagnie Maritime Belge, S.A.** for \$14.7 million. The new owners, led by Chairman Ludvig Criel and CEO High Flynn, transfer the airline to Ireland and register it under this new name. Hunting, meanwhile, negotiates the separate sale of its 5 remaining L-188CFs.

With a fleet of 8 hush-kitted Boeing 727-200s and 5 Airbus Industrie A300B4-203Fs, the reborn carrier resumes flying shortly before Christmas. Over the next three years, it undertakes regular and ad hoc charters throughout Europe and the Modest, with emphasis on the transport of overnight parcels under contract to **United Parcel Service (UPS)** and **Federal Express (FedEx)**.

AIR CORBIERE, LTD.: United Kingdom (1991–1993). Organized at Coventry in early 1991 as part of the Atlantic Group, this passenger-carrying regional assembles a leased fleet comprising 1 Fairchild Metro III, 1 Cessna 402C, and 2 Cessna 406 Caravan IIs. Daily revenue services are undertaken in June linking Coventry and Gloucester and Jersey and Guernsey.

A year later, in June 1992, Chairman Michael J. H. Collett and Managing Director W. J. Foden employ 24 workers. Daily flights begin between Swansea, Jersey, and Guernsey. Twice-daily Jersey, Guernsey, and Liverpool operations commence in July.

Passenger traffic at **Air Atlantique, Ltd.**'s sister carrier does not measure up to expectations and, with it unable to maintain viability, Chairman Collett shuts the airline down in April 1993 and returns its aircraft to their lessor. Air Atlantique is now broken into two subsidiaries: **Atlantic Airways, Ltd.** and **Atlantic Cargo, Ltd.** Activities of both are covered under the entry for **Atlantic Air Transport, Ltd.**

AIR CORTEZ (AIR CORTEZ INTERNATIONAL): United States (1976–1987). William Schlick and P. S. Promotions form Air Cortez at Ontario, California, in late 1976. After assembling a fleet of 2 Beech 18s, 1 Cessna 414, and 2 Cessna 182s, the third-level entrant undertakes regularly scheduled passenger/express flights to Las Vegas on January 1, 1977. Additionally, scheduled service is also initiated to the Mexican cities of Guaymas, Mulege, and Loreto and charter flights are made to various destinations in Baja California.

Operations continue apace in 1978–1979. In 1980–1981, the fleet comprises 3 Beech 18s and 2 Cessna 402s. Orders are placed for 3 Fokker F-27As. Beginning in April 1982, the carrier inaugurates scheduled flights from Las Vegas to Arizona's Grand Canyon with the first Fokker F-27A, newly received.

In 1983, the company receives two more Fokkers, but in early 1984, suspends its scheduled international services from Ontario and San Diego to Guaymas, Mulege, and Loreto to concentrate on expanding its network into the U.S. southwest.

In 1985–1986, additional frequencies and destinations are opened and the fleet is upgraded by the addition of two more F-27As; the smaller Beeches and Cessnas are now retired. Operations cease in 1987, due largely to financial difficulties brought on by overexpansion.

AIR COURIERS, LTD.: United Kingdom (1938–1967). P. W. Griffith forms ACL as a FBO at London (Croydon) in 1938; however, operations are suspended upon the outbreak of war in September 1939. After V-E Day in 1945, the company resumes its prewar operations,

adding a charter division in late **1947**. Equipped with a fleet comprising 2 Percival Proctor 1s, 1 Proctor 3, 1 Short Scion Junior, and 1 de Havilland DH 89A Dragon Rapide, Griffith's enterprise starts ad hoc passenger/cargo flights, sight-seeing, and aerial photography charters from March **1948**.

During the next 12 years, ACL continues its on demand operations, especially in summers, while the parent firm rebuilds aircraft, overhauls engines, etc. When Croydon is closed in **1959**, the company is moved to Biggin Hill, where the three remaining Dragon Rapides are sold in **1960**.

In April **1961**, a Piper PA-23 Apache 160 is acquired to resume charter flights to smaller U.K. airports. ACL is purchased by and merged into **Transglobe Airways, Ltd.** in July **1967**.

AIR CREEBEC, LTD.: P.O. Box 430, 101-7th St., Val d'Or, Quebec J9P 4P4, Canada; Phone (819) 825-8355; Fax (819) 825-0885; http://111.aircreebec.ca; Code YN; Year Founded 1981. Late in **1981**, William ("Chief Billy") Diamond, leader of the Cree Indians, founds ACL, in association with **Austin Airways, Ltd.**, employing C\$225 million in funds supplied by the Quebec government, which has recently negotiated permission from the Crees for the construction of a hydro-electric project near the James Bay.

Routes in the western part of Quebec province are turned over by **Austin Airways, Ltd.** in the spring of **1982** and Douglas DC-3 service is started on July 5 linking Val d'Or, Matagami, Rupert House, Eastmain, Paint Hills, Fort George, and Great Whale Lake. Two de Havilland DHC-6-200s, in the company's orange, yellow, and black livery are acquired later in the year.

During **1983-1985**, the fleet is increased by the addition of 1 Hawker Siddeley HS 748 and 1 de Havilland Canada DHC-6-300. Airline employment grows to 23 and the route network features eight stops. During the latter, Diamond's people take over the ACL interest and assume 100% control.

In August **1986**, another DHC-6-300 is ordered. Applications are made in the fall for the inauguration of services to Sanikiluaq, Rouryn, Noranda, and Quebec City. Two HS 748s are purchased from **Austin Airways, Ltd.** in **1987**. In **1988**, as part of a major expansion, 4 more join the fleet from **Air Ontario, Inc.**, along with 2 Beech 99s, in the C\$16-million acquisition of that carrier's routes to smaller communities in the northern part of the province.

During a fifth attempt to land in bad weather at Waskaganish on December 3, an HS 748-2A freighter with three crew crashes short of the runway; although the aircraft is damaged beyond repair, there are no fatalities.

Enplanements for the year total 30,000 and revenues of C\$8 million are generated.

General Manager James A. Morrison's fleet in **1989** comprises 2 HS 748s, 2 Cessna 402s, and 1 DHC-6-300. Destinations visited now include La Grande, Matagami, Eastmain, Wemindji, Chisasibi, Chibougamau, Nemiscau, Rupert House, Timmins, Kapuskasing, Moosonee, Peawanuk, Attawapistat, Ft. Albany, Pickle Lake, and Kaschechewan.

The DHC-6-300 is replaced in early **1990** by a DHC-8-100 while 6 more HS 748s join the fleet, together with 2 Beech King Air 200s. In December, commercial agreements, including joint fares and scheduling, are signed with **Air Alliance, Inc.** and **Air Ontario, Inc.**

A second DHC-8-100 is received in **1991**. Plans are made to expand the route system deeper into the Quebec side of Hudson Bay. Meanwhile, the commercial agreements with **Air Alliance, Inc.** and **Air Ontario, Inc.** are implemented, with ACL providing feeder service to the former's hub at Val d'Or and the latter's at Timmins.

Just after takeoff from Quebec City Airport on November 29, the right engines of an HS 748-2A with 3 crew and 32 passengers explodes; the aircraft makes a successful forced landing at Riviere au Saumon and there are no fatalities.

Destinations served in **1992** from the Val d'Or hub include Great Whale, Kaschechewan, Port Albany, Attawapistat, Peawanuk, Kapuskasing, Timmins, Rupert House, Nemiscau, Chibougamau, Chisasibi, Wemindji, East-

main, Matagami, La Grande, Montreal, and Moosonee. A DHC-8-300 is ordered and, in anticipation of its arrival, a DHC-8-100 is withdrawn.

In **1993**, President Albert Diamond and General Manager David Bertrand oversee a workforce of 166. The fleet in **1994** includes 6 BAe (HS) 748-2As, and 1 each 748-2, DHC-8-314, DHC-8-101, and Beech Super King Air 200. Orders are placed for a pair of Beech 1900Ds. The Beech 1900Ds are introduced in early **1995** and are the first of their type operated in Canada. Service to 20 points is maintained in **1996**.

To replace air service lost with the closure of **Norontair, Ltd.** in **1995**, the Ontario Northland Transportation Commission on July 1, **1997** provides C\$150,000 per year for two years to nine northeastern communities in the province. The funds will be employed by the cities to fund replacement flights. ACL receives C\$450,000 from Hearst, Kapuskasing, and Timmins to link those communities with Quebec City. Flights commence in mid-month and continue, along with other services, into **2000**.

AIR CRUISES: United States (1928-1932). AC is set up at Detroit, Michigan, in the spring of **1928** to provide passenger and express flights to Chicago and Cleveland via intermediate stops. The company's aircraft, the Ford Tri-Motor 4-AT-21, is delivered on June 22 and, with pilot Perry Hunter at the controls, enters revenue service.

While landing at Chicago on November 2, **1929**, the Tri-Motor crashes; although no one is injured, minor damages are sustained to the aircraft. Operations continue until May 29, **1931**, when the Ford is sold to **Belle Fourche Air Lines** of Belle Fourche, South Dakota. That airline cannot succeed in a time of recession and, on June 17, **1932**, returns its Tri-Motor to AC, which in turn fails shortly thereafter.

AIR CRUISING AUSTRALIA (PTY.), LTD.: 405 Ross Smith Ave., Kingston Smith Airport, Mascot, New South Wales 2020, Australia; Phone 61 (2) 9693 2233; Fax 61 (2) 9669 6064; http://www.broflo.com.au/aca.html; Year Founded 1994. Based at Mascot, Australia, **Charter Cruise Air, Ltd.** is renamed in **1994**. Managing Director G. Garrett's 20-employee firm continues to provide scheduled flights and air cruises to various points in Australia with one each Fokker F.27-100 and F.27-500.

In December, the F.27-100 is leased to **Air Niugini (Pty.), Ltd.**

Operations continue apace in **1995-2000**. During these years, the F.27-500 is replaced with a British Aerospace BAe Jetstream 31.

AIR DABIA, S.A.: The Gambia (1996-1999). Established at Banjul in **1996**, AD begins, and continues, both scheduled and charter passenger and cargo services. The fleet within two years comprises 2 Boeing 727-200s, 1 B-747-100, 3 Fokker F.27-100s, 2 F.28-1000s, and 1 British Aerospace BAe 125-700 executive jet.

On July 15, **1999**, the Gambian government grounds the company's Boeings because the company owes \$5 million in unpaid landing charges at Banjul Airport.

AIR DALE, LTD.: Canada (1974-1995). Established by Robert Dale at Sault Ste. Marie in **1974**, ADL is equipped with an ex-Millardair, Ltd. Douglas DC-3, which is employed to inaugurate revenue charter services, both passenger and cargo. Another DC-3 joins the fleet in **1976**, followed by a C-117 (ex-USN DC-3) in **1982**. An air ambulance service is initiated under contract to the Ontario provincial government.

Early in the **1980s**, the carrier, employing five leased DHC-6-300s, begins flying replacement services for Norontair, Ltd. These connect the company base with Kirkland Lake, Earlton, North Bay, Chapleau, Sudbury, Timmins, Elliot Lake, Thunder Bay, Terrace Bay, Geraldton, Hom-payne, and Wawa.

In October **1984**, **Norontair, Ltd.** receives the world's first production-model DHC-8-101; christened *Py Davoud*, it is leased to ADL and employed to fly replacement flights to Elliot Lake, Sudbury, Timmins, and Kapuskasing. A second DHC-8-101 is delivered in January **1985**; named *Jim C. Bell*, it, too, is chartered to ADL.

The *Py Davoud* is seriously damaged when it lands short of the Sault Ste. Marie Airport runway on February 2, 1986. The associated carrier **Air Bras d'Or, Ltd.** begins operations on September 22. The *Py Davoud* is repaired and returned to service in 1987. Following the sale of the two DHC-8s to **Air Ontario, Inc.**, the company continues to fly three DHC-6s for **Norontair, Ltd.** The associate **Air Bras d'Or, Ltd.** ceases operations on July 17.

President Peter Dymant's fleet in 1988–1991 comprises 2 DC-3s plus 4 DHC-6-300s and another 2 DHC-8-100s leased from Norontair. Daily service continues to be provided to 21 northern Ontario communities with some 1,000 passengers boarded per year.

A fourth leased DHC-6-300 is received in 1992. Airline employment in 1993 totals 60. Two of the leased Twin Otters are withdrawn. In 1994, ADL flies five DHC-6-300s and one each DHC-8-101 and DHC-8-102. Operations cease in 1995.

AIR DIRECT AIRWAYS: Boire Field, 125 Perimeter Road 4E, Nashua, New Hampshire 03063, United States; Phone 603-882-5606; <http://www.air-direct-airways.com>; Year Founded 1990. Air Direct is established at Tew-Mac Airport at Tewksbury, Massachusetts, in June 1990 to provide on-demand charter service throughout New England and upstate New York. Certified by the FAA in May 1991, the company transfers to Nashua when Tew-Mac is closed.

In addition to on-demand service with Piper Aztecs, the company provides aircraft maintenance and operates an FAA-approved flight and ground school. The company is recertified in 1997 and operations continue without incident thereafter.

AIR DISPATCH, LTD.: United Kingdom (1934–1940). Air Dispatch, Ltd., is formed at London on July 9, 1934 to operate as “**Inner Circle Airlines**.” Initial capitalization is a nominal £100 and the managing director is the Hon. Mrs. Victor Bruce. Employing two de Havilland DH 84 Dragons and an Avro 642, the company operates a daily passenger/freight service from London (Croydon)–Paris during July–September 1935 as well as weekend flights from London (Croydon) to Le Touquet.

During the summer of 1936, regularly scheduled weekday services are offered from London (Croydon)–Plymouth via Portsmouth, Bournemouth, and Tourquay; the Plymouth stop is operated only on weekends. **Commercial Air Hire, Ltd.** is acquired and in November, services are initiated from London–Plymouth via the resort areas of the south coast. Neither routes nor services change significantly over the next three years.

On September 3, 1939, war is declared on Germany and all civil flying ceases. Although a unit in the government's 1939 National Air Communications, the company elects not to participate in the state-run domestic route coordinating board (**Associated Airways Joint Committee**) formed on May 5, 1940 and ceases trading.

AIR DJIBOUTI, S.A. (RED SEA AIRLINES): P.O. Box 505, Rue Marchand, Djibouti City, Djibouti; Phone 253 (35) 67 23; Fax 253 (35) 67 34; Code DY; Year Founded 1963. B. Astroud, a Madagascar air taxi/ambulance operator, forms this company in April 1963 to provide nonscheduled charter flights in what is known as French Somaliland. Service to Dikhil, Obock, and Tadjoura begins a year later in April 1964 with two Beech 18s and one each de Havilland DH 89A Dragon Rapide and Bristol 170 Mk. 21.

A Douglas DC-3 is acquired at the beginning of 1965 and is employed to launch regional flights from Dire Dawa to Aden, Addis Ababa, and Taiz. These routes prove so successful that Astroud purchases five more DC-3s from **Middle East Airlines, S.A.L. (1)** in 1966.

In 1967, airline employment totals 80 and the fleet comprises 6 Douglas DC-3s, 1 Beech 18, and 1 Beech 23. Enplanements are 12,580.

Operations continue apace in 1968–1969. Having lost both of its engines after flying into a flock of cranes on July 23 of the latter year, a DC-3 with two crew and two passengers crash-lands nine miles W. of

Khor Ambadu, Djibouti, on July 23; there are no fatalities. In 1970, the company acquires a DC-6.

In July 1971, French-backed **Air Somali, S.A.** purchases majority control of the company from its founder, but following reorganization, the carrier emerges still with the AD title. In 1972, service is started to Asmara and Hargeisa.

A “Red Sea Day” tourism package is sold from the company's Paris office during 1973 and helps to boost overall passenger traffic by 12% to 24,000. Airline employment at this point stands at 181.

With the addition of a second DC-6 in 1974, the fleet now totals 2 of that type and 2 DC-3s, plus 1 Piper PA-32 Cherokee. Flights begin to Mogadishu. Enplanements total 17,700.

The workforce is doubled in 1975 to 294. Services are halted to Sana'a and Nairobi. The DC-6s and DC-3s are withdrawn and replaced by two de Havilland Canada DHC-6-200 Twin Otters and a Piper PA-32. Customer bookings accelerate 41% to 30,000, but cargo is off by 24%.

The employee population grows by 2% in 1976 to 300. Passenger traffic increases by 40% as 41,826 passengers are transported.

Following the independence of Somaliland on June 27, 1977, shareholding is reorganized. Ownership is divided between the Djibouti government (36.3%), **Air France** (32.29%), and Compagnie des Messageries Maritimes (11.14%); banks and private interests, including founder Astroud, retain or obtain the remaining shares. The French flag carrier is awarded a management and support contract and assigns Guy Bertruc to act as director general for Chairman Mohamed Djama Elabe's new state airline.

Scheduled passenger and freight services are maintained over a previously flown domestic network while international flights serve Aden, Taiz, Hodeidah, and Hargelas. In association with **Air France** and employing French aircraft, flights are also undertaken to Addis Ababa, Jeddah, and Cairo.

On October 17, two gunmen push their way aboard a company Twin Otter at Tadjoura and open fire; the pilot and a passenger are killed and several other customers are hurt before the shooters flee.

Airline employment in 1978 stands at 375 and the fleet consists of 2 Twin Otters and 1 Piper Cherokee Six.

In 1980, the ownership pattern is changed again. This time the government assumes 90.41% control with Air France retaining just an 8.02% interest (and its management contract) and private interests reduced to only 1.57%.

Transavia Holland, N.V. now begins to fly one of its B-737-200s on behalf of the carrier under contract. The jetliner is leased in 1981 and is employed on the **Air France** joint service. New routes, in addition to those regional international flights previously made, are opened to Paris, Rome, Dire Dawa, Doha, Hargeisa, Nairobi, and Sana'a.

Dahir Issa becomes DG in 1982 as the company descends into bankruptcy. Issa is fired and replaced by Hassan Gouled Aptidon. A B-727-200 is acquired at the beginning of 1983, but is sold to a Florida concern a year later. The company emerges, just barely, from bankruptcy at this point.

In 1985, a second B-737-200 is chartered, this one a Dash-229A from **Sobclair, N.V. (Societe Belge de Transports par Air, S.A.)**. On August 17, 1986, two South Yemeni jet fighters intercept a B-737-200 over the Red Sea and force it to land in southern Yemen, where security forces search it for opponents of the regime. After this embarrassing incident, Chairman Elabe resigns. He is succeeded by A. R. Awaleh, who brings in T. Issa as director general. Marc Jaunatre will shortly thereafter arrive from France to succeed Issa.

There are no further incidents in 1987–1988 and, during these years, several de Havilland Canada DHC-8-301s are acquired to operate domestic and some regional services. A Douglas DC-9-32 is leased from **JAT (Yugoslav Airlines)** for the period. Employment during the latter year stands at 154.

After ten years of experience under **Air France** tutelage, AD obtains its own B-737-200 in 1989. Marc Jaunatre replaces the last French director general, Paul Botbol. In January 1990, the carrier again declares

bankruptcy. At this point, the B-737-200, which is owned, is replaced by a Douglas DC-9-32 leased from **JAT (Yugoslav Airlines)**.

Due to losses, reported by nonofficial sources as \$11 million, the carrier ceases operations in April 1991. The Sobelair B-737-229A is returned and other assets are liquidated.

Plans are announced in June 1998 for a relaunch of the airline; employing a leased Airbus Industrie A310-200, the initial service is flown from Djibouti to Paris in July.

Following the outbreak of civil war in the Congo on August 2, business plans between **Air Zimbabwe Corporation** and **Uganda Airlines Corporation (UAC)** become strained. In September, the former demands the return of an aircraft it has been leasing to the latter. At this point, a new joint service the two are planning to operate from Harare to Dubai is put on hold.

Faced with loss of a needed route, UAC executives meet with executives from the reborn AD. The two sides agree that they will launch joint flights, employing the A310-200, from Entebbe to Dubai early in 1999.

At the same time, Air Djibouti operates scheduled flights to Addis Ababa, Asmara, Cairo, Dar es Salaam, Jeddah, Johannesburg, Karachi, Khartoum, Mogadishu, Mombasa, Muscat, Nairobi, Rome, and Taiz.

The airline operates invisibly at the opening of the new millennium. On May 10, 2000, the Transport Ministry of Somalia, for security reasons, bans the company from flying into its country after Djibouti aircraft have allegedly made unauthorized and clandestine visits to remote airfields.

AIR DOLOMITI, S.p.A.: Via Aquileia 45, Aeroporto de Trieste, Ronchi dei Legionari, I-34077, Italy; Phone 39 (481) 477 711; Fax 39 (481) 474 540; <http://www.airdolomiti.it>; Code EN; Year Founded 1991. This small regional is formed at Trieste in January 1989. Orders are placed in early 1990 for three de Havilland Canada DHC-8-100s; however, in August, the order is switched to three Dash 8-300s. The first arrives on September, but the startup of operations is delayed by the Mideast situation.

It is late January 1991 when President Alcide Leali's first DHC-8-300 begins service between Trieste and Genoa. The second Canadian-made turboprop arrives in March and inaugurates AD's flights from Trieste to Venice and Turin while the third aircraft is delivered in June and begins flying to Geneva.

A total of 25,000 passengers are transported and revenues are \$4.86 million.

Airline employment stands at 50 in 1992. Flights begin in November from Verona to Budapest, Munich, Prague, and Florence. Customer bookings climb to 68,329.

In 1993, the workforce is unchanged; however, the new hub at Verona continues to be strengthened. Passenger boardings swell 58% to 97,633.

During the spring of 1994, AD becomes the European launch customer for the Avions de Propulsion Regional ATR42-520. Two of the advanced turboprops are ordered, along with four, later five, ATR42-320s. Wearing a new color scheme, these five enter service later in the year, replacing the Canadian-made turboprops. Customer bookings swell 35.1% to 132,000 and a total of 54.8 million FTKs are flown.

Airline employment stands at 90 in 1995. The first ATR42-520 joins the fleet during the spring. Enplanements are reported through April and show an increased of 46% over the same time a year earlier, a total of 52,000 passengers.

The workforce is unchanged in 1996. Under a marketing alliance with **Deutsche Lufthansa, A.G.**, the regional operates Lufthansa Partner services not only within Italy, but to Basel, Munich, and Barcelona as well. Meanwhile, the second ATR42-520 is delivered at the end of October and a new hub is established at Munich. A code-sharing agreement is also entered into with **Crossair, Ltd.** and joint flights are inaugurated from Basel to Rome.

Customer bookings ascend 13% to 282,000 and revenues bounce upward 29% to \$44 million. Revenues of \$8.8 million are earned and a net \$764,705 profit is reported, the airline's first net gain ever.

Airline employment is increased by 28.4% in 1997 to 253. During the first quarter, the alliance with **Deutsche Lufthansa, A.G.** is deepened to where nearly 90% of company services will be operated as Team Lufthansa. Destinations visited include Barcelona, Basel, Cagliari, Genoa, Munich, Olbia, Parma, Rome, Trieste, Turin, Venice, and Verona.

On April 1, the German and Italian partners inaugurate daily return frequencies from Genoa to Paris; these are followed, on April 30, with daily service to the French capital from Verona.

By July 1, the compact with the German major accounts for 137 of the regional's 156 daily departures and two of every three passengers carried. The same day, AD orders three ATR72-210s and an ATR42-520 from Aero International (Regional).

The latter arrives in mid-August wearing the sponsored yellow and black "logoprop" livery of the Italian fashion house Fendi. Lucky flight attendants aboard the turboprop wear Fendi separates.

Passenger boardings increase 30.7% to 379,395 while revenues are boosted 33.9% to \$64.99 million. Expenses climb 28.7% to \$62.3 million. The operating profit jumps to \$2.69 million while a \$2.61-million net profit is celebrated.

Flights continue apace in 1998. During the year, seven special "Settimocielo" in-flight events are organized to celebrate special dates and anniversaries, local traditions, and new routes in line with the carrier's dedication to promoting Italian style and taste in Europe.

"All the Eggs of Easter" is the first "Settimocielo" event celebrated between April 7-13. It is followed by "The Marches: From the Apennines to the Sea" in June; "Capri: A Settimocielo Island" in July; and "San Daniele Festival" in August.

"Relaxed Flying Seminars" are offered for people anxious or worried about air travel. The first occurs in Verona on September 26-27, followed by a second session, in Trieste, on October 24-25.

AD unveils its homepage on the World Wide Web in October, the same month in which the fifth Settimocielo event, "Elixir of Vinegar," occurs. "The Magic of the Dolomites" is the Settimocielo event for November and is followed by "It's Christmas" in December.

Customer bookings jump 47.9% to 548,000, while revenues jump to \$88 million.

By the beginning of 1999, airline employment has been boosted 20.9% to 306.

During September, a 26% stake in the carrier is sold to **Deutsche Lufthansa**.

A pair of Fokker 100s are wet-leased from **Alpi Eagles, S.p.A.** in October and are put on the routes from Venice, Turin, and Verona to Munich, Paris, and Barcelona. Additionally, the domestic fleet is increased through the addition of 2 ATR42-520s and 2 ATR72-520s. Daily Fokker roundtrips start on October 31 between Venice and Dusseldorf.

Overall customer boardings are up a welcome 28.5% to 581,000, while revenues advance by 18% to \$94.89 million.

The workforce at the start of 2000 totals 332, an 8.4% increase over the past year. A new corporate identity is unveiled during the first quarter; aircraft are now painted in a more formal blue and gray color scheme.

Fokker 100 return service from Pisa to Zurich begins on March 31.

A fifth ATR72-520 arrives on May 5; it is the 600th of its type manufactured. Daily ATR42-520 return service starts on May 15 from Trieste to Bergamo. The next day, a firm order is sent to Bombardier Aerospace for 3 Canadair CRJ200LRs to be delivered at the end of the year.

As the carrier continues to provide Team Lufthansa service, it requires additional capacity. Three additional ATR42-520s are ordered in June for delivery in the fourth quarter. Also in June, seasonal service is started from Trieste to Olbia and Tortoli that runs through September.

AIR EAST: United States (1970-1974). B. F. McKinney establishes AE at Johnstown, Pennsylvania, during the summer of 1970 and accepts an Allegheny Commuter contract to provide scheduled daily roundtrips to Pittsburgh and Altoona. Employing a Beech 99 and a de Havilland DH 104 Dove, the commuter inaugurates revenue flights on October 25.

Services continue apace throughout the remainder of the year and **1971–1973**.

While on final approach to Johnstown after a January 6, **1974**, flight from Pittsburgh, a Beech 99A with 2 crew and 15 passengers crashes short of the Cambria County Airport runway (12 dead). Fallout from the disaster results in the company's sale to Clark Aviation and the cessation of operations in April.

AIR EAST AFRICA, LTD.: P.O. Box 24406, Nairobi, Kenya; Phone 254 (2) 216745; Fax 254 (2) 716191; <http://www.globalaid.co.uk>; Year Founded 1993. Former Kenya Airways, Ltd. Managing Director Joseph Nyagah establishes AEA at Nairobi Airport in the summer of 1993. The former CEO sees a need for all-cargo services when **Lufthansa Cargo Airlines, A.G. (LCA)** halts its operations to various nearby regional capitals and elects to only fly in and out of Nairobi.

Employing a B-727-230F chartered from **Deutsche Lufthansa, A.G.**, the new all-cargo carrier inaugurates service for LCA in September. Former **Kenya Airways, Ltd.** Captain Chris Kariuki is appointed operations and technical director early in **1994**, while Brendan Donohoe, who had been seconded to **Kenya Airways, Ltd.** by **Aer Lingus Irish Airlines, Ltd.**, joins as chief financial officer.

During these years and in **1995–2000**, the company's trijet is busy not only on behalf of LCA, but also operates a number of charters for other customers. These include the Kenyan government, the United Nations (for which it becomes a major operator to the airport at strife-torn Kigali, Rwanda), and on behalf of private companies. The transport of goods from Sharjah and Dubai to Kenya becomes an important source of income.

To support its aerial operations, AEA also constructs storage and other facilities on a two-acre plot at Nairobi Airport's cargo center. An Israeli security concern provides protection not only for the Boeing, but for transit cargo as well.

AIR EAST AIRLINES: United States (1979–1980). William Blamey and Edward Davis set up Air East Airlines at Westfield, Massachusetts, in **1979** to provide daily passenger and cargo services to New York (LGA) via Hartford, Connecticut. Although Piper PA-31-350 Navajo Chieftain services are inaugurated in September, recession and high fuel costs force the new operator out of business in **1980**.

AIR EASTLAND, LTD. See **EAST COAST COMMUTER AIRLINES, LTD.**

AIR ECOSSE, LTD.: United Kingdom (1977–1988). **Fairflight Charters, Ltd.** associate AEL is formed at Aberdeen, Scotland, in June **1977** to provide ad hoc air charters in support of the North Sea oil industry. Scheduled commuter services begin on July 1, **1979** with a fleet of Embraer EMB-110P1 Bandeirantes. Destinations include Aberdeen, Carlisle, Dundee, East Midlands, Edinburgh, Glasgow, Isle of Man, London (LHR), Manchester, Prestwick, and Wick.

Next day, the company joins the Royal Mail program known as "Spokes from Speke," flying two Bandeirantes each night from Edinburgh and Glasgow to the sorting hub at Liverpool (Speke Airport) and back to the two Scottish cities for distribution.

Enplanements advance steadily, reaching 51,653 in **1981** and 64,000 in **1982**.

Just after landing at Flotta on a service from Aberdeen on April 20, **1983**, wind lifts the left wing of a DHC-6-300 with 2 crew and 10 passengers. When in reaction the right wing touches the ground, the plane cartwheels off the runway and through a fence, coming to rest with both wings detached; there are no fatalities.

Enplanements for the year climb to 74,243.

The fleet is upgraded in **1984** by the gradual retirement of several Bandeirantes in favor of five Shorts 330/360 equipment. One of the two new Shorts 360s received is employed to service a Datapost contract from the Royal Mail Postal Service. Painted in the RMPS's scarlet and gold livery, the aircraft makes overnight delivery of urgent express

packages within the U.K. and to the Continent. In late fall, service to Belfast, Dublin, and Liverpool is suspended.

Chairman Michael Butler's company adds extensive air ambulance, cargo, and charter operations in **1985**; his fleet now comprises 2 EMB-110Ps, 4 Shorts 330s, and 2 Shorts 360s. The fleet is radically altered in **1986** as the Bandeirantes and 360s are withdrawn and a fifth Shorts 330 is purchased.

A significant decline in passenger traffic, caused by a decline in lift requirements from the North Sea oil industry, triggers such a drop in traffic and income that, by spring **1987**, AEL is forced to suspend flights and seek protection from the courts. A bankruptcy judge appoints a new interim administration to oversee reorganization.

In **1988**, the 330s are retired in favor of three Dornier 228-200s. The reorganization process, however, fails and the company shuts its doors. It will be reborn in **1989** as **Aberdeen Airways, Ltd.**

AIR ENGIADINA, LTD.: Flugplatzstr 11, Berne Airport, Bern-Belp, CH-3123, Switzerland; Phone 41 (319) 960-1211; Fax 41 (319) 960-1217; <http://www.klmalps.ch>; Code RQ; Year Founded 1987. Organized at Samedan/St. Moritz in the Engiadina region of Switzerland with SFr 4 million shareholding during the first quarter of **1987**, this small regional is outfitted with a single British Aerospace BAe Jetstream 31. Scheduled services linking its base with Zurich commence on April 22. Flights connecting Zurich with Erfurt commence in January **1988** and, by **1989**, the single Jetstream 31 has generated sufficient business to require President Dr. W. J. Zinsli to open a route from Zurich to Eindhoven.

Although a Mitsubishi Mu-2B-60 Marquise is placed on line during the first weeks of **1990**, the company encounters regulatory problems with Swiss aviation authorities. Also in significant financial difficulty, the little operator stops flying at the end of January. A new investor, Zurich-based charter and air taxi Air Material, A.G., takes over and under direction of its president, Dietmar Leitgeb, who becomes managing director, invests SFr 1.5 million and resumes the Zurich–Eindhoven route.

Jetstream 31 flights continue apace in **1991** and orders are placed for two Dornier 328-110s.

In May **1992**, frequencies are initiated from Berne to Munich. Introduction of the new service brings corporate recapitalization, up from SFr 0.5 million to SFr 4.8 million. A Dornier 228-200 is leased from Lugano-based **Sunshine Aviation** and is employed to begin a twice-weekly route from Zurich to Erfurt, capital of the state of Thuringia in the former East Germany. Simultaneously, an order is placed for a Dornier 328. At year's end, frequencies on the routes to Munich and Eindhoven are doubled. Enplanements total 13,651.

In **1993**, the company employs a workforce of 17 and possesses a fleet comprising 1 British Aerospace BAe Jetstream 31, 1 Dornier 228-200, and 1 Mitsubishi Mu-2B-60. Destinations visited include Zurich, Antwerp, Eindhoven, and in the winter season, St. Moritz. Service from Zurich to Brno, Czech Republic, is introduced on September 9, followed by flights to Erfurt in the former German Democratic Republic.

On October 21, the first production Dornier 328-110 is turned over in ceremonies at the Oberpfaffenhofen plant of Deutsche Aerospace. Ten days later, on October 31, Jetstream 31 flights commence, linking Berne with Vienna in the first-ever air link between the Swiss and Austrian capitals. Following the delivery flight to Berne, the new SFr 13-million Dornier 328-110, the company's largest single investment to date, enters service in December linking that Swiss city daily with Munich and Vienna. Enplanements total 21,000, but expansion costs bring a loss of SFr 470,000.

The employee population is increased to 40—a whopping 185.7%—in **1994**, as a second Dornier 328-110 enters service over a new route from Bern to Amsterdam and London (LCY). Share capital is boosted by another SFr 2.4 million. Late in the year, the company merges with **Sunshine Aviation**, with the combined carrier operating under the AEL name. Plans are made for the acquisition of a third German turboprop, which will be employed during the new year to launch scheduled passenger services to Frankfurt and London (LCY).

Passenger boardings increase 147.5% to 40,586.

Operations continue apace in **1995**. With the beginning of the summer schedule in late March, frequencies are introduced from Berne to Frankfurt and frequencies are increased on the route to Amsterdam and London. Charters from Switzerland to Elba are instituted for several months, beginning in May, and a fourth Dornier 328-110 arrives on October 27. Enplanements for the year more than double, rising to 84,204.

The workforce stands at 100 in **1996** and the owned fleet now includes 1 Jetstream 31 and 4 Dornier 328-110s. Two additional leased Dorniers enter service in the fall (allowing removal of the Jetstream 31) and two remain on order.

Enplanements ascend to 104,208 and profits show an increase: \$2.7 million (operating) and \$10,000 (net).

Airline employment is increased by 21.6% in **1997** to 124 and share capital is now SFr 16.2 million. Several new routes are introduced.

Passenger boardings to accelerate 26.7% to 133,000. Although operating revenues increase by 18.2% to \$26 million, expenses leap ahead by 37.8% to \$26.6 million. Consequently, the previous year's operating gain is turned into a \$600,000 loss. There is a net loss of \$800,000.

Destinations visited in **1998** include Amsterdam, Berne, Brno, Dublin, Eindhoven, Elba, Frankfurt, London, Manchester, Munich, Reus, Vienna, and Zurich.

On April 23, daily roundtrips begin between Berne and Dusseldorf Express Airport, along with thrice-weekly frequencies from Berne to Dublin. Saturday roundtrips commence on May 16 from Zurich to the Italian island of Pantelleria, along with additional daily frequencies to Manchester and Munich.

Saturday roundtrips start on May 23 between Berne and Montpellier, while frequencies between Berne and Geneva are increased.

At the end of the year, Managing Director Leitgeb founds a new subsidiary, **Air Alps, GmbH.**, at Innsbruck. Ownership in the new regional is shared between Leitgeb (51%) and AEL (49%). Plans are made to begin revenue flights with a pair of Fairchild Dornier 328-110s.

Customer bookings accelerate 7.6% to 144,000.

By the beginning of **1999**, airline employment has been cut by 11.3% to 110.

During April, a new marketing agreement is entered into by AEL and Air Alps, GmbH. with **KLM (Royal Dutch Airlines, N.V.)**. Under its terms, the two small companies, with their six Dorniers, become part of the Dutch major's global route network. Together, the two are renamed **KLM Alps, GmbH.** and repaint their aircraft in a modified version of the major's light blue and white livery. Small individual company titles are worn on the port side of aircraft fuselages, below the silver cheat-lines forward.

On May 1, KLM Alps, GmbH. inaugurates thrice-daily roundtrips between Bern, Innsbruck, Salzburg, and Amsterdam. The new concern replaces **Tyrolean Airways, A.G.** on the service.

On September 16, **Northwest Airlines** begins to code-share on company roundtrips from Bern to Amsterdam.

The year's customer bookings plunge 11.6% to 127,000.

The workforce at the start of **2000** totals 140, a 27.2% boost over the previous 12 months.

On March 26, frequencies on the new Dornier 328-110 route from Geneva to Venice via Milan are boosted from four every week to six. **Crossair, Ltd.** now begins to code-share on the company's twice-daily Dornier 328-110 return flights from Geneva to Toulouse and Marseilles.

By May 22, the entire Air Engiadina fleet has been repainted in KLM Alps, GmbH. colors. Five days later, seasonal 328-100 roundtrips are started to Klagenfurt from Cologne, Hamburg, and Munich.

A new Fairchild Dornier 328-110 is received in Air Engiadina livery on July 18.

Having previously ordered 3 Fairchild 428JEs, KLM Alps, GmbH. officials are disappointed in mid-August when the manufacturer, citing high costs, indicates that it will not build the jetliner. Airline officials indicate that they will wait until 2001 before making a decision on another type.

AIR ENTERPRISES: United States (1966–1967). Established at Huntington, West Virginia, in early **1966**, Air Enterprises, owned by O. M. Pierce, steps forward to operate as a third-level associate of Cleveland-based **TAG Airlines**. Employing a Piper PA-23 Aztec, the carrier inaugurates daily roundtrip scheduled flights to Columbus, Ohio, via Portsmouth, on February 10.

When TAG Airlines suspends services over a number of routes in the early fall of **1967**, Air Enterprises elects to alter its affiliation and strike out as an independent. On October 3, the company is reformed and renamed **Tyme Airlines**.

AIR ENTERPRISES, LTD.: United Kingdom (1947–1953). The three Carr brothers, Henry, Arthur, and Francis, join Thomas Hudson in forming this independent at London (Croydon) on April 25, **1947**. Employing an Airspeed AS.65 Consul and a Percival Proctor 1, revenue charter services are initiated in May. In December, a second Consul and a de Havilland DH 89A Dragon Rapide, christened *The Shanklin Flyer*, are acquired.

In the spring of **1948**, the company is named a domestic associate of **British European Airways Corporation (BEA)** and with additional Dragon Rapides, begins flying London–Southampton–Sandown summer operations in July–September. These summer services are also flown during **1949** and **1950**. In **1951**, scheduled services are inaugurated over the Isle of Man route from London as well as over a new route to Jersey.

Services continue apace in **1952**. The DH 89A *Ventnor Flyer* is destroyed in a crash on the Isle of Islay on April 19. In October, a Percival P.50 Prince is added to fly on behalf of Standard Motor Company; this aircraft is badly damaged in a forced landing on February 6, **1953**. A final summer season is flown with four Airspeed Consuls, the last Dragon Rapide (the company's first DH 89A of 1947) having been sold in April. At the season's conclusion, the company is shut down.

AIR ERITREA, S.A.: Eritrea (1993–1994). The new national flag carrier of Eritrea is established as Asmara in May **1993**. Operations commence and continue with a single Boeing 707-320C. As a result of political problems, the company fails within a year.

AIR ESPANA, S.A. See **AIR EUROPA, S.A.**

AIR EUROPA, S.A.: Gran Via Asima 23, Palma de Mallorca, Balears, 07009, Spain; Phone 34 (71) 17 81 11; Fax 34 (71) 17 81 86; <http://www.air-europa.com>; Code UX; Year Founded 1986. Organized at Palma de Mallorca in June **1986** as **Air Espana, S.A.**, initial ownership of this Spanish charter operator is divided between two Spanish banks, including the Bank of Bilbao, (75%) and the Spanish tour operator Iberiojet (25%). The line specializes in inclusive-tour flights between north and west Europe and the resort locations of the Canary and Balearic Islands.

Operations commence on November 21 with five leased B-737-3Q8s, and the first service is flown from London (LGW) to the company base at Palma de Mallorca.

Although boarding figures are not released, it is reported that a total of 951.5-million revenue passenger kilometers are flown in **1987**.

The workforce is increased a huge 90.8% in **1988** to 702 and the fleet includes 4 B-757-236s and 5 B-737-3Q8s, with 8 additional B-757-236s on order.

Weekly B-757-236 flights commence to New York, helping passenger boardings to skyrocket 177.8% to 1,953,277. Revenues of \$92.2 million produce operating income of \$12.1 million and net gain of \$4.6 million.

The payroll grows another 18.8% in **1989** to 830 as two more B-737-3Q8s join the fleet. Early in January, the carrier becomes a partner in the Airlines of Europe group when **Air Europe, Ltd.** purchases 33% shareholding for £500,000. B-757-236 frequencies to New York are increased

to four-per-week as new routes are stretched to the Dominican Republic and Cancún. Working with members of the Airlines of Europe group, flights are initiated to Scandinavia via Germany and Italy.

Customer bookings continue to march upward, by 17.2%, to 2,288,592 and revenues reach \$176.5 million, a 73% increase. Operating income moves down to \$2.5 million and net profit is \$3.2 million.

Company employment is cut 8.6% in 1990 to 759. Flights begin to Bangkok and Brazil.

Due largely to the terrorism scare that occurs in the wake of Iraq's August invasion of Kuwait, passenger boardings fall 11.8% to 2,020,000. Revenues, on the other hand, increase by 57.1% to \$269.3 million. Expenses also rally and there is an \$8.6-million operating loss. Net profit falls all the way to \$377,918.

The payroll in 1991 grows to 830 and the all-leased fleet now includes 2 B-737-3L9s, 1 each B-737-3S3 and B-737-375, 3 B-737-3Y0s, and 4 B-757-236s. Flights begin from Madrid and Barcelona to Delhi and Varadero. Following the collapse of the International Leisure Group (ILG) in March, additional banks and a number of tour operators, led by Juan Jose Hidalgo, purchase its 25% shareholding; Hidalgo becomes the airline's new chairman.

Customer bookings increase 5.8% to 2,138,362, but revenues fall 8.6% to \$207.5 million. Still, expenses are down and a \$4.85-million operating profit is earned. The net profit is \$2.24 million.

The workforce is increased by 14.3% in 1992 to 641 and one more B-737-3Y0 is acquired. Chairman Hidalgo and the bank consortium rearrange shareholding, acquiring 73% ownership; the remaining 27% is taken by the private Spanish travel company Politours, S.A. Scheduled service continues along with long-haul ad hoc charters to New York, Santo Domingo, Salvador de Bahia, Istanbul, Halifax, Havana, Cancún, Delhi, Cairo, and Bangkok.

Enplanements swell 12% to 2,326,365 and revenues recover to rise 14% to \$249.99 million. Expenses advance 15.9% to \$247.07 million, leaving an operating surplus of \$2.92 million. Net gain is cut in half to \$1.08 million.

In 1993, Chairman Hidalgo and Director General Jose Perez Lopez are employing 790 workers and possess a fleet comprising 7 Boeing 737-300s and 4 B-757-236ERs. Shareholding changes again, with 92% of the company's equity passing to the Hidalgo family, with the remainder held by private investor Gil Herminio.

Scheduled services begin on November 1, including a flight from Madrid to the Canary Islands.

The employee population is increased to 850 in 1994 and the leased fleet now includes 4 each B-757-236s and B-737-3Y0s, 2 each B-737-3L9s, B-737-3Q8s, and B-737-4Q8s, plus 1 each B-737-375 and B-737-4Y0. Shuttle flights between Madrid and Barcelona begin on January 31 and, in cooperation with the French airline **Euralair, S.A.**, four-times-per-day Madrid to Paris roundtrip service is inaugurated in November. Also during this month, scheduled domestic routes are initiated from Madrid to Bilbao and Alicante.

A total of 3,436,000 passengers are flown on inclusive-tours.

Forty-nine new employees are hired in 1995, a huge 85% increase that brings the workforce total to 899. Passenger boardings jump 25.8% to 4,323,000. Profits are generated: \$16 million (operating) and \$10 million (net).

Now often more commonly known as "Air Espana," this company's workforce is reduced by 6.1% in 1996 to 1,820. In February, the Viajes Falcon travel agency and the tour operator Travelplan, which are both subsidiaries of the Hidalgo family enterprise, begin to act as the airline's exclusive operators.

On October 1, a 50% stake is taken in the new Tenerife-based **Canarias Regional, S.A.**, the company's first franchise partner. Under terms of the agreement, CR's British Aerospace BAe ATPs, in modified Air Europa livery, begin flying deep-discount "Air Europa Express" services in November between Palma, Mallorca, and Madrid.

Enplanements accelerate 26.7% to 5,478,000 and revenues shoot up 36.5% to \$550,000. With expenses of \$535 million, the operating profit

declines by a million dollars to \$15 million. Net profit, however, grows by \$3 million to \$13 million.

Airline employment is increased by 22.3% in 1997 to 2,225. The company now offers scheduled services from Madrid to seven domestic locations.

It also offers charters from Spain, Great Britain, Scandinavia, and other points in western Europe to the Canary Islands, Mallorca, Bangkok, Cancún, Delhi, Halifax, Havana, New York, and Santo Domingo.

Following complaints from a consumers' group and local authorities in the Balearic and Canary Islands, the Spanish government, on April 28, begins a price-fixing investigation of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and two of its rivals. Antitrust authorities in the Ministry of Finance begin to review an arrangement between the flag carrier and **Spanair, S.A.** and Air Europa, which has seen them end a yearlong price war while increasing fares an almost equal 10% on all Spanish domestic routes and dropping promotional fares.

The Spanish pilots union, SEPLA, concerned that modernization and cost-cutting plans afoot at Spain's airlines might badly impact its members, stage a one-hour strike at the end of October as a symbolic protest again them.

Subject to government approval, a code-sharing agreement is signed with **Trans World Airlines (TWA)** in November. When its terms come into effect in early 1998, Air Europa will add its code to TWA flights from Madrid and Barcelona to New York (JFK) and allow the major to place its code on its services to Palma and Malaga from Madrid and Barcelona. The two companies will also link their frequent flyer programs, coordinate marketing, and offer one-stop check-in.

En route to Bodo, Norway, on December 17, a company B-737-4Y0 is mistakenly vectored by ATC to the same 35,000-ft. flight level near Trondheim as an **SAS (Scandinavian Airlines System)** MD-82 en route from Tromso to Oslo; the near miss that occurs is safely resolved.

Passenger boardings jump 15.9% to 6,339,651.

A franchise agreement, similar to those signed by **British Airways, Ltd. (2)** and **Deutsche Lufthansa, A.G.** with smaller regional carriers, is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** in January 1998. Under terms of the arrangement, Iberia will take over 11 of the carrier's 34 aircraft (also employing their crews) and operate them under wet-leases out of Air Europa's Spanish airport slots.

A mechanical delay at Tenerife on February 10 causes a B-737-4Q8 flight to arrive at Aberdeen, Scotland, at 10:10 p.m. local time, just 50 min. before the airport is due to close under a controversial curfew. The little Boeing is speedily refueled and 148 passengers for the return flight, most of who have been waiting since that morning, are boarded. The plane takes off at 10:55 p.m.

During the spring, the company designates two of its B-737-3Y0s as "logo jets" in the manner of the defunct **Western Pacific Airlines (Westpac)**. One promotes the Andalusia tourist area including Costa del Sol, while the other promotes Volare Martini, with the famous Martini man painted behind the wing.

A code-sharing agreement is also signed with **Trans World Airlines (TWA)**.

In May, a B-737-4Q8 arrives under a four-year charter from ILFC.

Repainted in Iberia livery, two wet-leased Air Europa B-767-3Y0s enter service in May over the flag carrier's routes from Madrid to Chicago, San Jose (Costa Rica), and Rio de Janeiro.

The British Broadcasting Corporation (BBC) will report early the following year that, according to data compiled by the Air Transport Users Council, 30.79% of the flights made by the charter airline during the summer are more than an hour late. The number of late services is the highest for any European nonscheduled airline, with an average delay of 57.54 min.

In response to strong demand from the British market, the company, with the beginning of its winter schedule in October, inaugurates roundtrips between Madrid (Barajas Airport) and London (STN) on Mondays, Wednesdays, Fridays, and Sundays.

Customer bookings plunge 23.6% to 4.89 million.

By the beginning of 1999, airline employment has been cut back 10.7% to 1,802.

When the Air Transport Users Council's report on the previous summer's on-time performance is released on February 19, Air Europa, unlike **Britannia Airways, Ltd.**, refuses to acknowledge that the information is correct.

When **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces in late April that it will soon be cutting scheduled flights in an effort to relieve congestion at Spanish airports, Air Europa, on April 26 announces that it has no intention to do so. Rather, it will proceed with its expansion plans.

The Palma-London (LGW) route operated by **Futura International Airways, S.A.** is taken over on October 31.

In honor of the millennium, the carrier, on December 16, unveils a new corporate image and livery.

Subject to appeal, the carrier, together with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and **Spanair, S.A.** are fined a total of \$865,000, also in December, by the Tribunal de Defensa de la Competencia. Spain's fair-competition agency has found the three guilty of collusion in the termination of a 1997 price war.

Overall customer bookings this year jump 15.8% to 7.4 million while operating revenues are up 2.6% to \$463.11 million.

The workforce stands at 1,920 as 2000 begins, a 6.5% increase.

A B-737-3Y0 is returned during the first quarter; it will be repainted and leased to **Aeris, S.A.** The first aircraft to wear the new company color scheme unveiled in December is a Next Generation B-737-85P, delivered on April 13. Also during April, the carrier quietly joins the Northwest/KLM-sponsored "Wings" alliance.

Saturday roundtrips begin on April 29 from Zurich to Alicante, Palma de Mallorca, and Santiago de Compostels and from Geneva to Ibiza and Palma de Mallorca.

Mainline pilots vote on May 5 not to fly for **Canarias Regional, S.A.**, which provides "Air Europa Express" services. The last of the Next Generation B-737-85Ps arrives on May 14.

The new B-767-3Q8ER leased from ILFC arrives at Palma de Mallorca on May 23 also wearing the revised livery. On May 31, it transports Real Madrid C.F. soccer fans to Paris where their heroes will play Valencia C.F. in the Champions League final—the first time two Spanish teams have been involved in the big game.

Alitalia, S.p.A. begins to code-share on company Spanish routes on September 6. Late in the month, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** makes a bid to takeover Air Europa. Arrangements for the merger are completed, subject to government approval, on October 6. The Spanish newspaper *El Pais* reports on October 26 that Sociedad Estatal de Participaciones Industriales, Iberia's majority owner, has yet to approve the amalgamation and, even assuming it does, the final outcome will depend on the Spanish and EU antitrust authorities.

Officials from Air Europa and Iberia publicly confirm the merger talks on November 4, noting that they have set a 45-day limit on negotiations.

AIR EUROPA EXPRESS. See **CANARIAS REGIONAL AIR, S.A.**

AIR EUROPE, LTD.: United Kingdom (1978–1991). Created to provide international package tour jet flights to Mediterranean holiday locations, AEL is formed by Harry Goodman on July 18, 1978 as a subsidiary of his travel-oriented holding company, Intasun Leisure Group, Ltd. It is initially known as **Inter-European Airways, Ltd.** Renamed in early 1979, Air Europe, Ltd. acquires three Japanese-financed Boeing 737-2S3s. Charter flights commence from the London (LGW) base on May 4.

On the year, the new carrier flies 322,000 travelers. Revenues total \$16.5 million and expenses are \$12.5 million; the operating profit is \$4 million and the net profit is \$2.4 million.

The workforce is increased by 50% in 1980 to 282 and two more B-737-200s are delivered. Emphasis is placed on the development of traffic from Manchester and other British regional points. An aircraft

cross-leasing arrangement is entered into with **Air Florida** and the carrier becomes the first British airline authorized to transport mail on inclusive-tour charter flights.

Enplanements are more than doubled with 708,000 transported aboard five B-737-2S3s; the increase is actually 119.9%. Revenues of \$52 million are earned and expenses of \$42.1 million incurred; the operating and net profits are, respectively, \$9.9 million and \$7.4 million.

The employee population grows by 15% in 1981 to 324 and an additional B-737-2S3 is acquired. New markets are entered in the Mediterranean and a line engineering organization is established at Gatwick Airport.

Passenger boardings surge 42%, passing the 1-million mark in annual bookings for the first time (1,018,000); two-and-a-half tons of cargo are also transported.

The workforce grows to 425 in 1982 as yet another B-737-2S3 joins the fleet. Enplanements rise 24% to 1,264,000.

By 1983, airline employment has reached 500. On April 6, the company takes delivery of its first B-757-236, becoming one of the first charter carriers to receive the advanced single-aisle Boeing; it is immediately leased to **British Airways, Ltd. (2)**. The year's passenger total is 1,446,000, a 14% increase.

A second B-757-236 is placed in service in 1984. British government approval is received to launch scheduled flights to Spain and other southern European destinations. With a downturn in the charter market, arrangements are made to sell three of the small Boeings to Guinness Peat Aviation, Ltd.

With the addition of a third B-757-236 in 1985, the three B-737-2S3s are sold. In addition to its 32 charter destinations around the Mediterranean as far east as Israel, the company inaugurates scheduled service to Palma, on the Spanish island of Majorca, during May. In September, \$100 million in orders are placed for four 737-300s and scheduled flights commence from London (LGW) to Gibraltar on November 1.

Air Europa, S.A., a new Spanish charter operator, sells 25% of its stock to AEL in June 1986.

In November, a B-737-3S3 is leased from the ILFC for delivery six months later; the five-year package will cost the carrier \$15 million. Permission is sought to begin operations from London (LGW) during the following November.

Enplanement figures for the year are not released.

In 1987, the workforce is increased to 750. In February, orders are placed with ILFC for 10 additional jetliners, 5 B-757s and 5 B-737-400s, several of which are to be supplied to **Air Europa, S.A.**

In May, the carrier receives authority to operate scheduled services to Brussels, Paris, Frankfurt, Amsterdam, Munich, Geneva, and Copenhagen. Scheduled flights begin to Paris and Brussels in June, following delivery in May of the B-737-3S3, and from Manchester.

Further European scheduled services are put on hold in September as the result of an announcement from **British Airways, Ltd. (2)** that it will be taking over its largest independent competitor, **British Caledonian Airways, Ltd. (BCAL)**. It is initially believed in corporate headquarters that BA will so dominate the gates at London (LGW and LHR) that AE will be unable to compete.

Also in September, Air Europe enters into a lease agreement with Qualitair Aviation, Ltd., at London (STN), for the utilization of the latter's new \$34-million aircraft maintenance facility.

Twenty-five members of the company's management team now purchase all shares of the airline's ordinary back from its London City investors for \$265 million. Convertible shares are held by several financial institutions, including General Assurance and Bankers Trust and Legal.

Although boarding numbers are again withheld, it is noted that a total of 3.37-billion revenue passenger kilometers are flown, a 54.9% increase.

The workforce is increased by 66.7% in 1988 to 1,200 and the fleet now includes 9 B-757-236s, 12 B-737-3S3s, and 4 leased B-737-3S3s. Chairman Goodman's carrier inaugurates scheduled service on

the London to Paris route during March. In protest of mandated high airfares on the route, the airline begins a promotion refunding \$25 on every \$150 ticket purchased.

Orders are placed in April for 8 B-737-4S3s, 20 B-757-236s, and 7 Fokker 100s. In November, business-class service is introduced, along with a new corporate identity, which features new aircraft liveries.

In December, in anticipation of a single European market in 1992, the carrier's owners, International Leisure Group, form a Dutch-based pan-European holding company, Airlines of Europe. Plans are made to link up a number of airlines in different countries under a common Air Europe moniker.

A total of 1.5-million charter and 500,000 scheduled passengers are flown on the year as revenues jump to \$390 million. The operating profit is \$22 million.

The payroll balloons 57.9% in 1989 to 1,806 as the first four Fokker 100s enter service. Early in January, Airlines of Europe reaches agreement with **Air Europa, S.A.**, which now joins the ILG consortium; ownership in the Spanish airline is divided between the Bank of Bilbao (49%), the Spanish tour operator Iberiojet (26%), and AEL (25%).

A \$1.8-billion order is placed in February for six Rolls Royce powered McDonnell Douglas MD-11s. In April, flights commence from London (LGW) to Malta, with frequencies reaching four roundtrips each week in May and daily in July. Meanwhile, in May, weekly roundtrips are introduced to Malta from Manchester.

In July, the company joins the Galileo computer reservations system (CRS). Five additional new markets are also entered from London (LGW): Stockholm, Copenhagen, Oslo, Rome, and Dusseldorf while flights also begin to Malta from Manchester. Employing a B-747-200 leased from **Tower Air**, charters are undertaken to North America, the Indian Ocean region, and the Far East. When **KLM (Royal Dutch Airlines, N.V.)** cancels its Fokker 100 order, AEL, which has 11 of its own awaiting delivery, is able to obtain four early from the ALM leasing group. Fokker agrees to provide the pilots for the six-month start-up period and, thus, AEL initiates Fokker 100 service over its European route network on December 4.

Passenger boardings for the year leap upward by 30.9% to 3,537,734 while freight climbs 42.5% to 535.23 million FTKs. The Air Leisure Group, of which AEL is the key Airlines of Europe group subsidiary, reports revenues of \$1.16 billion and an operating profit of \$56.8 million.

Company employment is increased by 18.6% in 1990 to 2,142 and the fleet includes 6 B-757-236s and 12 B-737-3S3/4S3s. A total of 150 scheduled departures each week are flown from Gatwick Airport, with 4 more from Manchester. In June, the European Commission rules that **Deutsche Lufthansa, A.G.** should abandon its tactics designed to discourage the carrier's low fares on its London-Munich route. The first owned Fokker 100 arrives in October and the carrier now claims to be the U.K.'s second largest scheduled carrier.

Customer bookings for the year ascend 4.6% to 3,700,000 (including two million vacations).

Blaming the Gulf war, high interest rates, recession, its own debt load, and the collapse of Omni Holdings, its largest shareholder, the International Leisure Group and flagship airline suddenly suspends service on March 8, 1991 and files for bankruptcy, citing net liabilities of £300 million (\$555 million) and contingent liabilities, primarily for booked vacations, of £250 million (\$460 million). Upwards of 25,000 U.K. passengers are stranded; however, all are returned by other airlines under a £63-million (\$116-million) bond previously posted by ILG with the Tour Operators Study Group. Of the 10,000 scheduled service passengers, only those who paid with credit cards can avoid becoming unsecured creditors.

The Italian member of the Air Europe group, **Air Europe, S.p.A.**, attempts to purchase the enterprise and keep it going, but is unsuccessful. An unofficial homepage can be found on the World Wide Web at http://our.world.compuserve.com/homepages/martin_andrews/ae.htm.

AIR EUROPE, S.p.A.: Via Carlo No. 3, Gallarate, Varese, 21013, Italy; Phone 39 (331) 772 111; Fax 39 (331) 713 801; <http://www.>

aireurope.it; Code PE; Year Founded 1989. Organized at Gallarate on December 15, 1989 as a unit in the Airlines of Europe group of the International Leisure Group, the company is also known as **Air Europe Italy**. Major shareholding is held by **Air Europe, Ltd.** (33%) and three Italian investors (66%), the Fiat Group, Carlo Scognamiglio, and Lupo Rattazzi. The latter is appointed chairman and the new pan-European airline receives its first Boeing 757-236ER. It undertakes inclusive-tour charter flights on behalf of Alpitour—Italy's largest tour operator—to destinations in north, south, and west Europe, the Canary and Balearic Islands, and North Africa, just in time for the winter charter season.

Chairman Rattazzi and Managing Director Antonello Isabella oversee a workforce of 250 in 1990 and obtain a second B-757-236ER. Enplanements for the first full year of operations total 200,000 and revenues are 92 billion lire.

When the International Leisure Group and its British linchpin in the Airlines of Europe consortium, **Air Europe, Ltd.**, fail in March 1991, the Italian member is not only strong enough to survive on its own, but makes an effort (unsuccessfully) to acquire the British airline and keep it going.

The Italian concern continues with strong minority ownership by The Netherlands-based holding company Tegel and, in October, enters into a variety of agreements with **Alitalia, S.p.A.** Company aircraft begin to fly wet-lease replacement on the flag carrier's route from Milan to Mauritius via Rome. In addition, the company agrees to provide temporary capacity and to pool various insurance policies and fuel acquisition arrangements.

This year's passenger boardings climb slightly to 208,137. Revenues increase to 160 billion lire.

Two B-767-35HERs are acquired in 1992 as customer bookings decline 5.6% to 197,100. Revenues jump to 205 billion lire.

In 1993, Managing Director Isabella oversees a workforce of 300 and a leased fleet of 2 B-757-236ERs and 1 B-767-330ER. Passenger boardings climb 15.9% to 228,500.

Unhappily, the company suffers a traffic downturn in 1994 as customer bookings fall 20.2% to 182,400.

The workforce is increased by 53.3% in 1995 to 460 as the Italian operator turns its traffic picture completely around. Another B-767, a Dash-352ER, is received under a six-year charter from ILFC, during July.

Passenger boardings skyrocket 208.7% to 563,000. The Italian charter carrier enjoys another good year in 1996 as enplanements jump 32.3% to 744,700.

Airline employment grows 12.2% in 1997 to 511. A leased B-767-3Q8ER arrives from ILFC in May. Scheduled service is inaugurated on December 18 between Milan and Havana.

Passenger boardings increase 6.7% to 794,400. Revenues decline to \$230 million while the operating profit improves to \$16.16 million. A \$199,000 net profit is reported.

Scheduled frequencies are initiated in January 1998 from Milan to Mauritius. Plans are made to undertake scheduled flights to Baku, Katmandu, and Mogadishu. In May, arrangements are completed with ILFC for the charter of two B-777-2Q8s for a decade; the aircraft will be delivered in July and October 1999.

During the summer, a route concession application is filed with the U.S. DOT for service between Rome and the U.S. Plans are also announced for the inauguration of a scheduled domestic network during the second quarter of 1999 linking Milan with six destinations in southern Italy.

In late October, service is started to Havana and Montego Bay.

After some negotiation, SAirGroup, parent of **Swissair, A.G.**, takes the maximum permitted stake in the company on November 1 through the purchase of 49.9% of the Dutch-based holding company Tegel.

Customer bookings accelerate 13.7% to 890,000 even as revenues drop 2.2% to \$224.65 million. Expenses dip 0.9% to \$211.78 million and leave an operating profit of \$12.86 million. Net gain climbs to \$438,000.

Airline employment stands at 627 at the beginning of **1999**, a 19.4% increase.

Plans are now announced by SAirGroup for the creation of a large European Leisure Group, which will include not only **LTU International Airways, GmbH**, but the **Swissair, A.G.** subsidiary **Balair/CTA**; **Sabena Belgian World Airline, S.A.**'s subsidiary **Sobelair, S.A.**; **Crossair, Ltd.**; **Air Europe**; and **Volare, S.p.A.** The new arrangement, under the direction of project leader Stefan Helsing, is designed to be part of an integrated network built around the already existing "Atlantic Excellence" and "QualiFlyer" alliances.

Plans are now advanced for the initiation of scheduled competition within Italy with **Alitalia, S.p.A.**, **Air One, S.p.A.**, and **Meridiana, S.p.A.** Five used A320s are acquired and are employed to launch return flights on May 15 from Milan to Catania, Naples.

At **Swissair, A.G.** urging, **Air Europe** becomes the tenth member of the "QualiFlyer" group on May 20.

Arrangements are completed with ILFC in June for the lease of two B-777-2Q8s. The first is delivered in ceremonies at Everett, Washington, on July 21. Following workup, the new aircraft, the first of its type to be operated by an Italian airline, will be employed on routes to Cuba, Mexico, the Dominican Republic, Mauritius, and Male.

The carrier's first transatlantic service is inaugurated on June 19 with six-times-per-week B-767-3Q8ER roundtrips to New York (JFK) from both Venice and Pisa.

On October 25, the company's second B-777-2Q8 becomes the first of its type to touch down at St. Martin; it has replaced the carrier's B-767-352ERs on the weekly roundtrip from Milan. The sublease of a B-767-3Q8ER out on charter to **Air Afrique, S.A. (2)** is extended on November 4.

Bologna to Havana service is discontinued on December 10.

Passenger boardings inch up 1.1% during the year to 900,000 as revenues of \$211.6 million are generated.

Airline employment is 829 as **2000** begins, an increase of 32.2% over the previous 12 months. A code-sharing agreement is signed with **Air Mauritius, Ltd.** on March 10 for flights between Mauritius and both Rome and Milan. For its part, AE assigns a B-777-2Q8 to this new schedule.

Employing both a B-767-3Q8ER and a B-777-2Q8, the company begins dual designator service with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** on April 6 from Rome to Cayo Largo, Havana, and Santiago de Cuba and on April 22 from Milan to the same three destinations.

Just after takeoff from Catania on an April 26 service to Milan, an A320-214 with 141 passengers aboard passes into a cloud of burning ash from erupting Mt. Etna; a resultant cracked cockpit window requires an immediate emergency landing back at Catania.

On July 12, a merger agreement is signed with **Volare Airlines, S.p.A.** Plans are made to merge the carriers at a Venice hub into an (as yet) unnamed airline under the umbrella of the Volare Group, which is 49.9% owned by SAirGroup.

A code-sharing agreement is signed with **Deutsche Lufthansa, A.G.** on October 6; effective October 29, it covers all Air One domestic flights and the DLH routes from Germany to Rome.

AIR EUROPE EXPRESS, LTD.: United Kingdom (1988–1991). International Leisure Group, Ltd. acquires both **Guernsey Airlines, Ltd.** and **Connectair, Ltd.** in **1988**, merging them to form Air Europe Express, Ltd., one of its Airlines of Europe group, in February **1989**. Bradley W. Burgess is named managing director and the new entrant is outfitted with two Shorts 330s and two Shorts 360s. The previous **Connectair, Ltd.** routes are undertaken linking London (LGW) with Antwerp, Rotterdam, Manchester, and Dusseldorf. Four Fokker 100s previously scheduled for delivery to **KLM (Royal Dutch Airlines, N.V.)** are acquired in November and are placed on the European routes as of December 4.

Enplanements for the year total 212,100.

The 330s are removed in **1990** and replaced by five more Shorts 360s. The Channel Islands of Guernsey and Jersey are now added to the route network.

The regional is integrated into **Air Europe, Ltd.** just before its demise in March **1991**. Newly created **Euroworld Airways, Ltd.** negotiates purchase of the regional's assets and hires many of its personnel.

AIR EUROPE ITALY. See **AIR EUROPE, S.p.A.**

AIR EUROPE SCANDINAVIA, A.S.: Norway (1989–1991). **Norway Airlines, A.S.** is taken over by the International Leisure Group in **1989**, becoming one of its Airlines of Europe subsidiaries under this new moniker. Operations are undertaken with a pair of leased Boeing 737-3S3s. When ILG and **Air Europe, Ltd.** collapse in March **1991**, this company follows suit.

AIR EVASION (AIRE D'EVASIONS, S.A.): France (1993–1994). The charter operator Air Evasion is established in early **1993** to provide nonscheduled passenger flights and inclusive-tours to destinations in both Europe and North America. Operations commence at the end of February with a single Douglas DC-8-73 formerly operated by **AOM French Airlines, S.A.** Unable to achieve viability the company fails in early **1994**.

AIR EXCELLENCE (PTY.), LTD.: P.O. Box 81768, Doornpoon, 0017, South Africa; Phone 27 12 547 2996; Fax 27 82 892 3007; http://www.tip.co.za/airexcellence; Year Founded 1978. Originally established as Lowveld Helicopters (Pty.), Ltd. at Nelspruit in Mpumalanga in **1978**, Air Excellence (Pty.), Ltd. is reformed in **1989**, renamed, and transferred to Johannesburg. Over the next decade, the company continues to offer executive and VIP transport, but now also begins to concentrate on the tourist trade. Managing Director Sean B. McMurray oversees a nine-person workforce and enjoys revenues of R 6 million. His fleet comprises 4 Bell 206B JetRangers, 2 Bell 206L LongRangers, and 2 Beech King Air 100s.

AIR EXEC: United States (1973–1975). Air Exec is established at Ocean City, Maryland, in **1973** to provide scheduled passenger services linking the resort city to Washington's National Airport, Philadelphia, and Baltimore. Although daily de Havilland DHC-6-200 Twin Otter roundtrips are duly inaugurated, they are only sustained for two years.

AIR EXECUTIVE AIRLINES: United States (1968–1969). Equipped with a Beech B-80 Queenaire, AEA inaugurates scheduled air taxi flights in **1968** linking its St. Louis base with small communities in Illinois, Indiana, and Ohio. Operations cease in **1969**.

AIR EXECUTIVE NORWAY-BUSY BEE, A.S.: Norway (1972–1980). Oslo-based **Busy Bee Air Services, A.S.**, the charter subsidiary of **Braathens SAFE, A.S.** is reorganized in **1972** and receives the upgraded title of Air Executive Norway-Busy Bee, A.S. Managing Director Hans A. Grotterad employs a small workforce of 30–35 and operates a fleet of 3 Fokker F.27s and 3 Shorts 330s.

Flights around northern Europe as well as contract service flights for the Norwegian Armed Forces are continued until **1980** when the carrier is renamed **Busy Bee of Norway, A.S.**

AIR EXEL, S.A.: France (1990–1992). Organized at Paris (ORY) Airport in early **1990**, Air Exel, S.A. is one of several European regional airlines created by a consortium made up of Esquelle Holdings, Alpha-lines, and AeroLeasing. The remainder of the year is taken up with acquiring a fleet of four Embraer EMB-120 Brasílias.

As the result of a partnership agreement with the Chambre de Commerce et d'Industrie de Drome Ardeche, the company launches thrice-weekday Brasilia roundtrips over a single Orly-Valence route in January **1991**. By year's end, a total of 25,000 passengers are flown.

Unable to achieve economic viability in a time of recession, the carrier gives up its Valence route and shuts down on January 31, **1992**.

AIR EXEL BELGIUM, S.A.: Belgium (1989–1991). Esquelle Holdings, Alphalines, and AeroLeasing form a consortium in early **1989** to establish four European regional airlines. With 26% shareholding subscribed by **Trans-European Airways, S.A.**, Air Exel (Belgium) is set up at Liege in the spring and immediately orders two SAAB 340BQCs. Paul Dewandre is appointed managing director and plans are made to inaugurate revenue services in October; these are delayed when aircraft delivery dates slip.

With the first 340BQC in hand by late June **1990**, Air Excel Belgium is able to inaugurate flights to Paris in July. The second turboprop arrives later in the year. An Embraer EMB-120 Brasilia arrives in **1991**, along with intensive competition from the state carrier **Sabena (Belgian World Airlines, S.A.)**. In need of recapitalization following the collapse of **Trans-European Airways, S.A.** in November, the original partners reduce their stake, leaving 55% ownership uncovered. Unable to find additional investment, the regional shuts its doors in mid-December.

AIR EXEL COMMUTER, C.V.: The Netherlands (1992–1998). The two-year-old Dutch commuter **Air Exel Netherlands, C.V.** is renamed in July **1992**. In **1993**, managing director Roberto Stinga employs 35 workers and operates two Embraer EMB-120 Brasilias. In October, routes are opened to Paris, Berlin, and Munich. Other destinations visited from the company's base at Maastricht Airport include London (STN) and Amsterdam.

Service continues in **1994** and enplanements in **1995** total 80,477. There are profits: \$1.46 million (operating) and \$978,000 (net).

The workforce is increased by 17.1% in 1996 to 41 and passenger boardings soar 16.5% to 96,379. Revenues ascend 8.6% to \$9.88 million while expenses grow 10.8% to \$7.24 million. The operating gain increases to \$1.88 million and net gain reaches \$1.57 million.

Late in **1996**, orders are placed with Aero International (Regional) for three ATR42-320s.

All three of the new ATRs are delivered in March **1997**. They are employed to initiate new frequencies from Maastricht to Amsterdam and from Eindhoven to Paris (CDG) and London (LHR). At the same time, a company EMB-120 Brasilia is the first aircraft from a member carrier to display the new livery of the European Regional Airline Association.

Later in the spring, new service is launched to Hamburg. Airline employment at year's end totals 75.

As part of the parent's move to integrate the services of its feeders, the company is renamed **KLM Exel, C.V.** in January **1998**.

AIR EXEL FRANCE, S.A.: France (1989–1992). Air Exel (France) is one of four European regional airlines established in the spring of **1989** by a consortium made up of Esquelle Holdings, Alphalines, and AeroLeasing. Formed at Aeroport Lyons Satolas to undertake scheduled daily commuter flights to Paris with a fleet of two Embraer EMB-120 Brasilias, the partner is the first to inaugurate services. Later in the year, flights are also undertaken from Lyon to Liege/Luxembourg, from Lille to Milan/Geneva, and from Paris to Liege.

General Manager Jean Luc Nugues adds a third Brasilia in **1990**, but is succeeded in his post in **1991** by Jean Charles Bemberg. On January 1, **1992**, the company is joined with **Airlec, S.A.** and **Air Vendee, S.A.**, to form **Regional Airlines, S.A.**

AIR EXEL GERMANY, GmbH.: Germany (1989–1992). One of several European regional airlines established in the spring of **1989** by a consortium of Esquelle Holdings, Alphalines, and AeroLeasing, AEG begins service as a medevac contractor operating a Piper Cheyenne. Operations cease in **1992**.

AIR EXEL NETHERLANDS, C.V.: Netherlands (1990–1992). Organized at Maastricht Airport on May 1, **1990**, Air Exel Netherlands is the last of several European regional airlines to be created by a consor-

tium made up of Esquelle Holdings, Alphalines, and AeroLeasing. Chairman Roberto Stinga, with 49% minority shareholding, acquires an Embraer EMB-120 Brasilia, which is employed to inaugurate service between its base and Amsterdam (Schiphol) in June **1991**. A second Brasilia is acquired late in the year.

Three-times-per-day flights are started to London (STN) on February 10, **1992**. During the month, three more Brasilias are acquired from the assets of failed **Air Exel, S.A.** Later, the Maastricht–Amsterdam frequency is increased from four to six daily roundtrips. In July, the carrier is renamed **Air Exel Commuter, C.V.**

AIR EXEL U.K.: United Kingdom (1989–1992). AEUK is one of several European regional airlines to be formed in the spring of **1989** by a consortium made up of Esquelle Holdings, AeroLeasing, and Alphalines; Charles Bemberg is named president. Following the receipt of two Embraer EMB-120 Brasilias, more than a year will elapse before services are inaugurated as the new entrant tries—and fails—to win rights to serve Rotterdam and Antwerp.

Flights finally commence on January 17, **1991** from London (CTN) to Brussels, with Edinburgh following in February. Initially, these are charter rather than scheduled as emphasis is placed upon on-demand services. Scheduled flights commence in February with a Brasilia dry-leased from **Luxair, S.A.** In March, the downturn in the economy leads to the cancellation of plans for a service to Paris.

Operations cease in **1992**.

AIR EXPRESS (PTY.), LTD.: Australia (1952–1980). This all-cargo airline is formed at Melbourne in **1952** as a subsidiary of Air Express (Holdings), Pty., Ltd. Services are undertaken throughout the nation, with emphasis on flights to Tasmania, employing Bristol Freighters. Repair, overhaul, and maintenance work is also provided to other small carriers.

A Bristol 170 Mk. 21E with two crew aboard crashes 6 km. off Cape Paterson (Australia) on May 10, **1975**; there are no survivors.

In **1978**, Chairman W. S. Astling's fleet comprises 2 Douglas DC-4s and 2 Bristol 170 Mk. 31s. The company is unable to survive the great oil crisis of **1979** and folds in **1980**.

AIR EXPRESS CORPORATION: United States (1932–1933). Philip H. Philbin establishes AEC at Denver in the fall of **1932** to offer fast, transcontinental air express service employing Lockheed Orions specially converted into freighters. Service is inaugurated in December.

The company flies through the first quarter of **1933**, becoming not only a pioneer in air cargo, but among the first airlines attempting to fly live lobsters from New York to California. When the carrier folds as a victim of the depression at the end of March, its multistop daily coast-to-coast flights average some 17 hours.

AIR EXPRESS I NORRKOPING, A.B.: Sweden (1996–2000). AEIN is set up by principle shareholder Thomas Sjo at Norrkoping, Sweden in early **1996** to operate domestic third-level passenger and cargo services. Managing Director Barbro Holmquist's initial fleet comprises 2 Beech King Air 200s, 1 King Air 300, and 2 Embraer EMB-120 Bandeirantes. Orders are placed for a pair of Beech 1900Ds during the summer and, until the new aircraft can be delivered in the fall, a leased C Model is operated. It will be retained.

The fleet is altered in **1997**. All of the King Airs and Bandeirantes are withdrawn and services are provided by the three Beech 1900Ds.

Destinations visited in **1998** include Stockholm, Visby Linkoping, Goteborg, Helsingfors, and Riga. On October 2, **Skyways, A.B.** purchases the company from Thomas Sjo, intending to maintain the Air Express identity and expand its route network so as to more effectively feed the new parent at Stockholm. Enplanements for the year total 45,000 and operating income of SKr 55 million is generated.

Flights continue in **1999** with the Skyway acquisition process completed on May 12. Further route integration continues during the remainder of the year and into the new millennium.

One October 1, 2000, Air Express is combined with **Highland Air, A.B.** and **Airborne of Sweden, A.B.** to form Hultsfred-based **Skyways Regional, A.B.**

AIR EXPRESS INTERNATIONAL AIRLINES: United States (1979–1980). AEIA is founded in the spring of 1979 as a wholly owned subsidiary of the freight shipment firm Air Express International Corporation. All-cargo revenue services commence with three Canadair CL-44Ds on April 23 to such U.S. and European destinations as Atlanta, Chicago, Dallas (DFW), New York (JFK), Orlando, London (STN), and Manchester.

Freight traffic in 1983 totals 11.54 million FTKs. That amount grows by 17.9% in 1984 to 14.06 million. In 1985, cargo traffic falls 13.4% to 19.5 million FTKs.

During these years, domestic flights are handled by Lockheed L-188Fs and those to the U.K. by Canadair CL-44Ds. Weekday operations continue and the fleet is upgraded with Boeing 737-100 freighters. Unable to weather a growing recession, the company shuts its doors in 1988.

AIR FACILITIES (PTY.), LTD.: Albury Airport, P.O. Box 675, Albury, New South Wales, 2640, Australia; Code FZ; Year Founded 1995. Privately held Air Facilities is established at Albury in late 1995 to provide third-level service to Canberra. Operations begin and continue with a fleet that grows to include 3 Piper PA-31-350 Navajo Chieftains and 1 Cessna 310.

AIR FAISAL, LTD.: United Kingdom (1976–1979). AF is established at London (CTN) to provide all-cargo services to the Mideast and India. Employing a single Bristol Britannia 253F previously operated by the RAF, the company undertakes flights to Bombay, Calcutta, and New Delhi prior to its closure.

AIR FECTEAU, LTD. See QUEBECAIR, LTD.

AIR FERRIES: United States (1930–1933). With Vern Gorst as a director, Air Ferries is established at Alameda, California, by Joseph J. Tynan Jr. on February 1, 1930 to fly passengers across San Francisco Bay to Vallejo and Oakland. Equipped with three Loeing C-2 Air Yachts purchased from Gorst, Loening Aeronautical Engineering Corporation's West Coast distributor, the shuttle operation begins scheduled service on February 11.

Per his amphibian sales contract, Gorst operates the company for its first 45 days and when it is operating efficiently, turns it over to Tynan. The six-minute flights (with two-minute turnarounds) reach a frequency of 38 every day each way and net a total of 60,000 bookings (at \$1.50) during the next 11 months. Since July, AF has flown 9,700 passengers and 2.5 tons of air express across the Bay.

There has been only one accident. On June 1, a Loening hits a tugboat during takeoff from Oakland and crashes into the Bay; one of six passengers is seriously injured. On December 31, the company ceases operations for the winter. Flights resume in the spring of 1931 and continue.

In March 1932, another aviation entrepreneur, Walter T. Varney, owner of **Varney Speed Lines Air Service**, purchases the carrier, which by now has reduced its frequencies to two dozen per day. Varney replaces the Loenings with three Sikorsky S-39s and reduces fares to \$1 while offering limousine service to connecting points. Services continue until the failure of Varney's landplane operation in the summer of 1933.

AIR FERRY, LTD.: United Kingdom (1962–1968). Former **Air Kruse, Ltd.** owner Hugh Kennard, in association with Leroy Tours, establishes AFL as an inclusive-tour charter operation at Manston Airport in July 1962. Leroy Tours owner Lewis Leroy is named chairman while Kennard becomes managing director.

Two Vickers Viking 610s and an ex-military Douglas C-54 are delivered in February 1963 and employed to begin holiday flights beginning on March 30. Group charters are flown to some 20 European destina-

tions during the summer, while a scheduled service is offered to Le Touquet/Ostend. When the first season ends on October 20, records show 120,000 enplanements in seven months.

The fleet is increased by the addition of 3 more Vikings and 2 more C-47s (converted like the first to civil DC-4 standard) and these reopen tour flying in April 1964. In October, the company is purchased by Air Holdings and Kennard departs.

During 1965, AFL begins flying vehicle ferry service to Le Touquet with leased Bristol 170 freighters. In the last three days of December, two Aviation Traders, Ltd. ATL-98 Carvairs are chartered from **British United Air Ferries, Ltd.** and, together with two DC-4s, are used to ferry supplies from Dar-es-Salaam in Tanzania to Lusaka in Zambia after Rhodesia unilaterally declares its independence. Two Douglas DC-6As are purchased from BUAFL at this time.

The BUAFL Carvairs are returned in March and June 1966, at which time AFL's inclusive-tour services resume along with freight flights to Germany flown on behalf of **British European Airways Corporation (BEA)**. BEA reclaims the German operations in 1967 and the company returns to inclusive-tour work.

The year is a physical and fiscal disaster as two DC-4s are lost; the first is destroyed at Frankfurt on January 21 while the second hits Mount Canigou in the Pyrennes near Perpignan on June 3, killing all 88 aboard. Another C-54B is leased from Lloyd International in late June.

In January 1968, two Vickers Viscount 812s are leased from **Channel Airways, Ltd.** and join the DC-4s in a new inclusive-tour season beginning in March. This is the final season as Air Holdings closes down the carrier on October 31, returning the Viscounts, selling off all other aircraft, and transferring all tour responsibilities to **British United Airways, Ltd.**

AIR FIJI, LTD.: 185 Victoria Parade, Suva, Fiji; Phone (679) 315 055; Fax (679) 300 771; <http://www.airfiji.net>; <http://www.pacificislands.com/airlines/fiji.html>; Code PC; Year Founded 1995. Kelton Investment reforms **Fiji Air, Ltd.** in February 1995, giving it an entirely new corporate makeover. The fleet, which comprises 2 each de Havilland Canada DHC-6-300 Twin Otters and Embraer EMB-110 Bandeirantes plus 1 each Beech 58 Baron, Harbin Y-12, and Pilatus-Britten-Norman PBN-2 Islander, is given an entirely new livery.

By 1998–1999, airline employment at Fiji's largest domestic carrier stands at 150. During these years, the fleet is increased by the addition of two more Y-12s and Islanders and another Bandeirante.

Fifteen destinations are visited from bases at Suva and Nadi, including Bureta, Kandarua, Lakeba, Levuka, Malololai, Tavenuni, and Vanuabalavu.

While en route from Suva to Nadi on July 24 of the latter year, Flight 121, an EMB-110, with 2 crew and 15 passengers, crashes into a mountainside; there are no survivors.

By the spring of 2000, the lost Bandeirante has been replaced with an EMB-120 Brasilia. That aircraft launches a thrice-weekly service to Tonga on May 1.

Political problems in the islands dramatically impact tourism during the summer. Rebel gunmen seize two pilots from their aircraft on the ground at Savusavu Airport on July 27; the village chief of Naibalabale intervenes and obtains their release next day.

AIR 500, LTD.: Person International Airport, 2450 Derry Road East, Hangar 7, Mississauga, Ontario L5S 1B2, Canada; Phone (905) 673-0800; Fax (905) 673-1657; <http://www.innotech-execaire.com>; Year Founded 1986. Air 500 is established at Toronto in January 1986 to provide executive and small group passenger charters throughout eastern Canada and the U.S., as well as to the Caribbean. Over the next 12 years, the largely corporate operator will come to employ 20 workers and fly a mixed fleet of bizjet and turboprop aircraft. A 3,150-sq.-ft. hangar will be constructed at company headquarters at the Toronto aerodrome.

Diversified Halifax-based IMP Group International, Ltd., less than two weeks after shutting down its unprofitable **Air Atlantic, Ltd.**

regional airline subsidiary, purchases Air 500 on November 6, **1998**. IMP President/CEO Stephen Plummer indicates that the company might be expected to grow during the year ahead.

Although it is unknown as to exactly what that growth becomes, the IMP Group does not remain inactive for long. To take advantage of new air transport possibilities occasioned by the official bankruptcy of **InterCanadian, Ltd.**, as well as the **Air Canada, Ltd.** takeover of **Canadian Airlines, Ltd.**, it announces plans in February **2000** to begin a competing low-fare jet passenger service. Shortly thereafter **CanJet Airlines, Ltd.** takes to the skies.

AIR FLEETS INTERNATIONAL: United States (1980). AFI is set up at New York in early **1980** to operate domestic and international passenger charters. A Douglas DC-8-31 is leased from **Overseas National Airlines** and is employed, beginning in March, to offer tour flights to Orlando, Freeport (Bahamas), and Tel Aviv. Having neglected to pay its insurance premiums, the carrier is grounded on July 22. It will not restart.

AIR FLORIDA: United States (1971-1984). Air Florida, founded by Eli Timoner, begins operations in September **1971** as a scheduled, intrastate carrier. A pair of Boeing 707-321s is purchased from **Pan American World Airways (1)** and revenue operations commence on September 28, **1972**, as AF begins thrice-daily, roundtrip, low-cost flights from Miami to Orlando to St. Petersburg. At year's end, the company employs 74 and has boarded 27,000 passengers.

Gainesville becomes a destination in **1973**. A fleet of three Lockheed L-188C Electras is purchased from **Northwest Airlines** on March 13 to replace the gas-guzzling Stratoliners.

Operations continue apace in **1974-1975**.

New routes are started to Jacksonville and Tallahassee in **1976**. Despite the addition of a leased B-727-100, competition from **Eastern Air Lines** and **National Airlines** proves severe. Passenger boardings total 191,600, but losses for the year come to \$2.1 million.

The fleet is altered once again in **1977** as the Electras are replaced by 2 Convair CV-440s and 4 Douglas DC-3s. In July, leadership is transferred to former **Braniff International Airways** chairman, C. Edward Acker, who becomes chairman/CEO. Founder Eli Timoner continues on as treasurer.

The financially weak airline is resuscitated via a \$2-million transfusion by Cincinnati investor Carl Lindner. Orders are placed for five DC-9-15s from **Air Canada, Ltd.** and four Boeing 737-222s, from **Braniff International Airways**, which begin delivery in the fall. Withdrawal of the Electras is completed by August.

During the winter season, which begins in October, the first of the newly delivered DC-9-15s is leased to **Cayman Airways, Ltd.**

Enplanement totals fall to 176,314. On income of \$4.74 million, a net \$2.61-million loss is taken.

The Miami-based intrastate airline, newly recapitalized, begins a meteoric rise in **1978**, the year of the Airline Deregulation Act and of the firm's first profit. Airline employment is increased by 50.4% to 630. It now rapidly adopts a green and blue livery, acquires its first two Boeing 737-222s, and launches interstate (to Washington, D.C.) and international (the Bahamas) service.

The DC-9-15 with Cayman Airways, Ltd. is returned in March and four more Douglas DC-9-15s arrive in late fall. In December, Air Florida takes over the Key West-based commuter **Air Sunshine** and initiates DC-9-15 flights, with the first of eight units received from **Air Canada, Ltd.**, over its Florida Key routes. As the result of this acquisition and other moves, the number of stops on the route network jump from 6 to 17.

Passenger boardings skyrocket 78% during the 12 months to 635,943. Revenues balloon 255.8% to \$16.88 million and expenses are \$16.56 million. This slight imbalance results in an operating profit of \$313,000 and net gain of \$132,000.

The workforce is significantly increased in **1979**, this time by 106% to 1,127. The newly certified carrier withdraws its Convairs and DC-3s

and adds two more jetliners. A rapid and orderly expansion into new markets begins: to St. Croix in January; to Marsh Harbour and Treasure Cay, plus Philadelphia, in February; to New York City in April; to Toledo in June; to Houston and the Turks and Caicos Islands in July.

In November, plans are announced to begin charters from a number of European cities to Miami next year. Air Florida also acquires the commuter **Air Berlin** and even makes an offer to take over local service carrier, **Piedmont Airlines**. Customer bookings jump a spectacular 102.1% to 1,285,000.

Revenues skyrocket 255.7% to \$60.04 million and expenses are held to \$56.08 million. The operating profit is \$3.96 million, leaving a net profit of \$3.38 million, a 1,462.9% boost. The new income will be employed to negotiate a loan from the InterFirst Bank of Dallas, to order B-737-222s, and to acquire shareholding in **Piedmont Airlines**.

Air Florida, in **1980**, increases its reach across the Atlantic and southward. An FAA aircraft purchase guarantee initially established to assist small airlines allows Chairman Acker the \$82 million necessary to further expand his fleet (primarily by lease) by 18 ex-**United Airlines** B-737-222s, 3 DC-9-15s, and a former **Fuglelag Islands (2)-Icelandair** DC-10-30, which is received on March 28.

On April 9, the company wins CAB approval to launch U.S. to Europe service and it thereafter originates over 100 DC-10-30 charter flights, beginning on May 1, to Miami from the European cities of London, Zurich, Amsterdam, Dublin, Manchester, Brussels, and Paris.

A \$17-million contract is signed with Arthur Frommer International on May 27 to provide charter programs from New York to the Caribbean and South America. As a result, new service is opened to additional Caribbean cities and Central American destinations, including Montego Bay and Kingston, Port-au-Prince, San Pedro Sula, Tegucigalpa, Puerto Plata, Santo Domingo.

Another innovation of the year is the establishment of a limited code-sharing Air Florida Commuter network, in which contracted commuters provide feed to certain hubs, primarily in Florida. The first former **United Airlines** B-737-222, previously known as the *City of Raleigh-Durham*, is delivered on July 28.

On August 10 a hijacker carrying a box containing a bar of soap that he passes off as a bomb, commandeers Flight 4, a B-737-222 with 34 aboard and en route from Miami to Key West, and diverts it to Havana.

Seven Cubans hijack Flight 707, a B-737-222 with 74 aboard on August 13 and, by threatening to ignite a bottle of gasoline smuggled aboard, force it to fly to Havana. All are sent to prison in Cuba.

The third hijacking attempt in a week fails on August 17 when three Cuban refugees, with gasoline-filled bottles concealed in their clothing, are seized by FBI agents at Miami as they are about to board a B-737-222 flight from Miami to Key West.

A chartered DC-3, with 34 aboard, crashes into the Atlantic Ocean off Freeport, Bahamas, on September 14; there are no survivors. On September 22, Air Florida signs a \$140-million, four-year contract with the British tour operator Intasun, Ltd., to provide 13 weekly roundtrips between the U.K. and the Sunshine State. Charters to Shannon, Ireland, also begin.

With a 75-min. FAA exemption, the carrier begins B-737-222 flights in December from New York (JFK) to Rock Sound and Freeport in the Bahamas and Puerto Plata, Dominican Republic.

Customer bookings for the year accelerate 55.6% to 1,839,000. Revenues ascend 156% to \$114.3 million; profits are \$5.1 million (operating) and \$667,000 (net), the latter a 110% boost.

The employee population increases 47.9% in **1981** to 2,656 as the fast pace of progress continues. Additional flights are added to the new markets of Boston, Chicago, Costa Rica, El Salvador, London, Amsterdam, Newark, and Shannon. En route from New York to Miami on March 17, a DC-9-15 is diverted to Charleston, South Carolina, because of a passenger's bomb threat; no bomb is found and the hoaxer is arrested. Westchester County, New York, to Chicago B-727-222 flights begin on April 27. In May, another public stock offering is made that nets \$40 million.

Original investor Lindner now sells out, making a significant profit. The fleet now comprises 30 leased aircraft, with 11 on order. However, despite low fares, nonunion labor, and various investments, it begins to suffer financial difficulties as costs increase. B-737-222 flights commence from White Plains, New York, to Bermuda on June 18. Also in June, as interest rates climb toward 20%, Air Florida finds itself badly leveraged; its debt stands at \$188 million, which is 3.7 times the \$50 million in available equity.

The company announces, on September 17, its plans to eliminate service to Houston, Dallas (DFW), Savannah, and Charleston, South Carolina, as it increases flights to the northeast in an attempt to meet "demands" caused by the PATCO air traffic controllers' strike. A DC-10-30 is involved in an accident at Miami (MIA) on September 22. Also in September, Chairman Acker shocks the company by departing for the chairmanship of equally troubled **Pan American World Airways (1)**. Eli Timoner becomes both chairman and president, assuming complete control and ordering certain cutbacks.

The following month, Acker dumps 450,000 Air Florida shares, earning \$4,387,500. Others in the market follow during the year's last quarter, which contains a glimpse of the future as losses begin to pile up. A DC-9-15 is leased to the California-based charter operator **Air National**, which employs it to fly cargo for Purolator Courier under contract.

Enplanements for the year rise 47% to a total of 1,714,000 while freight traffic is up by a spectacular 508.2% to 4.63 million FTKs. A \$12.07-million operating loss is reported, due largely to a loss of traffic occasioned by the PATCO air traffic controllers' strike and subsequent ATC restrictions, on revenues of \$302.96 million; the net loss is \$4.12 million.

The workforce is reduced by 30.8% in 1982 to 1,800 as the company's tailspin gathers speed; much of the year, almost from the start, is one of disaster and internal retrenchment. It begins well enough with a novel marketing campaign, begun on January 11, to offer S & H Green Stamps on its intrastate routes between 11 Florida cities. The good start ends two days later.

On January 13, Flight 90, en route to Ft. Lauderdale begins its initial climb from Washington, D.C. (DCA). The B-737-222, once known as **United Airlines' City of Raleigh-Durham**, with 5 crew and 74 passengers is already 1 hr. 45 min. late due to heavy snowfall. The ice-covered aircraft reaches an altitude of 200-300 feet. There it stalls and begins to descend, striking the 14th St. Bridge and 7 automobiles crossing it. While breaking apart, the plane tears away 41 ft. of the bridge wall and 97 ft. of railing and plunges into the frigid Potomac River. Seventy-four are killed, not including four in vehicles on the bridge and Arland D. Williams, who dies attempting to save crash victims. Media accessibility to the disaster scene brings significant adverse publicity.

On February 2 boatlift veteran and homesick Cuban Sergio Ortega Rojas hijacks Flight 710, a B-737-222 with 77 aboard en route from Miami to Key West, to Havana, where he is taken into custody. Rojas will receive a 12-year Cuban prison term.

Another Cuban, Jesus Villa Munoz fires on two Miami (MIA) gate agents and police after he unsuccessfully attempts to board a Key West-scheduled B-737-222 in a February 16 skyjacking attempt; he is disarmed and arrested.

Pushing ahead in an effort to get past the fallout from the first two months, the company undertakes a number of charter programs throughout Europe and new services from Miami to Scandinavia and Guatemala. **American Airlines** VPO Donald J. Lloyd-Jones is recruited in June to become the carrier's new president/COO. In July, following Chairman Timoner's stroke, he is named CEO as well.

A B-737-222 with 12 aboard is hijacked to Cuba on July 22 by two men during a flight from Miami to Key West. Cost-cutting measures are now required to be placed into high gear. The fleet is downsized: 5 leased B-737-222s are returned and orders for 5 others are cancelled. The following aircraft are withdrawn and sold: 5 B-727-222s, 6 B-737-222s, 1 B-737-122, and 3 DC-10-30s. Five more B-737-222s and a Douglas DC-10-30 are obtained, with orders outstanding for 3 B-757-222s.

Customer bookings, which do reflect something of a recovery late in the year, plunge 14.6% to 2,384,472. Cargo, however, increases 50% to 6.95 million FTKs. What money is made comes primarily from freight and charter boardings and not scheduled service. Revenues drop 7% to \$281.77 million, but expenses jump to \$315.24 million. Losses continue to mount. The operating loss skyrockets to \$33.48 million while the net loss advances to a staggering \$93.4 million.

The struggling national manages to cut its financial losses significantly in 1983. A DC-9-15 is leased to the Boston-based sports charter operator **All Star Airlines** in March while, in the spring, the ill Eli Timoner resigns his chairmanship. Additionally, the route system is restructured. Services to London and Amsterdam are eliminated, the last DC-10-30 is sold and, in Europe, remaining services are subcontracted to wet-lease operators, such as **Rich International Airways**.

In Florida, a major market, the company, emphasizing its Miami hub, employs its B-737-222s to inaugurate flights to the Virgin Islands, as well as to Cleveland, Columbus, Detroit, Indianapolis, and Chicago (MDW).

En route from Ft. Lauderdale to Tampa on July 7, a B-737-222 with 47 passengers is hijacked to Cuba by a man who displays an explosive device that he has taken out of his athletic bag.

The short segment intrastate routes are all turned over to Air Florida Commuter partners. Former Chairman C. Edward Acker and his **Pan American World Airways (1)** officials launch a fare war in late spring, one that soon has an effect. In the fall, 10 of 27 jetliners are removed from service, although orders are retained for three B-757-222s, which will never be delivered.

A B-727-222 leaving Chicago (MDW) on November 25 is forced to turn around and land after a sea gull is sucked into one of its engines, shutting it down; no injuries are reported. A second DC-9-15 is chartered to **All Star Airlines** during the month.

Passenger boardings fall again this year, by 22.2%, to 1,854,279. Revenues are off by the same percentage, 22.59%, to \$218.12 million, but costs, even though down 27.23%, are still \$229.41 million. The operating loss "improves" to \$11.28 million and the net loss is cut in half to \$39.22 million. These figures show that cost cutting will not be enough to save the carrier.

Airline employment in 1984 stands at 1,200 and 10 B-737-222s fly to 35 destinations. The battle to keep Air Florida aloft is lost, however, when continuing financial reversals and creditors force it to declare bankruptcy on July 3. Although a plan is floated that will have the company taken over by **Northeastern International Airlines**, the ruined carrier's assets are eventually purchased by **Midway Airlines (1)**, which puts the B-737-222s back into limited operation on October 15 under the name **Midway Express**.

On March 13, 1985, the 14th Street Bridge in Washington, D.C. is officially dedicated as the Arland D. Williams Memorial Bridge in honor of the man who sacrificed his life saving victims of the 1982 disaster. Later in the spring, **Midway Airlines (1)** receives DOT approval to complete the purchase of remaining assets by the July 1 deadline set by the U.S. Bankruptcy Court. On July 24, these are duly received in exchange for \$5 million and 200,000 shares of common stock.

AIR FOYLE, LTD.: Halcyon House, London Luton Airport, Luton, Bedfordshire, England LU2 9LU, United Kingdom; Phone 44 (1582) 419 792; Fax 44 (1582) 480 958; <http://www.airfoyle.co.uk>; Code GS; Year Founded 1978. AFL is organized at London (CTN) by onetime bookseller and tax advisor W. R. C. "Chris" Foyle in 1978 to undertake charter and air tour flights throughout western Europe. Initial equipment consists of a Piper PA-31-310 Navajo and a Piper PA-23 Aztec. The company operates primarily light operations

and night express flights until formation of the multinational **TNT Express Worldwide** in 1989.

AFL is contracted by TNT to operate two British Aerospace BAe 146-200QTs on night freight services as its U.K. associate. Third party charters are allowed during daylight hours and on weekends. Meanwhile, an associate company, Air Foyle Executive, Ltd. (AFEL) is formed to operate the carrier's lightplanes. Authority is sought for the inauguration of scheduled services and the carrier becomes the general sales agent (GSA) in Europe, North America, and the Gulf region for the Kiev-based Antonov Design Bureau.

In September 1990, the company signs a five-year agreement with the Kiev-based Antonov Design Bureau and begins to operate three wet-leased An-124-100 Ruslan freighters on worldwide services requiring heavy or outsize loads. The first two Russian aircraft, wet-leased with Soviet crews, enter service during the month as Canada and the U.S. grant joint permissions to both the Russian manufacturer and the British cargo line.

One An-124-100 undertakes emergency relief work between Amman and Dakar. The other undertakes eight relief flights from Amman evacuating 3,600 Bangladeshis who had escaped Kuwait. In addition, a charter agreement is signed with **Cargolux Airlines International, S.A.** for weekly Antonov all-cargo flights between Luxembourg and Singapore. After three trial flights, regular flights commence on September 22. Meanwhile, **TNT Express Worldwide** increases its contract, requiring acquisition of another BAe 146-200QT and two BAe 146-300QTs. Through the month, an An-124-100, in eight flights on behalf of **Aeroflot Soviet Airlines**, evacuates 3,600 Bangladeshis from Kuwait.

Chairman/Managing Director Foyle employs a workforce of 135 in 1991 and operates a fleet which, in addition to the Antonovs, comes to comprise 4 BAe-146-300QTs, 3 BAe-146-200QTs, 1 Lockheed L-100-30 Hercules, 1 Beech Super King Air 200, 1 BAe Jetstream 31, 1 Piper PA-31-350 Navajo Chieftain, and 1 Bell 206B JetRanger helicopter. A record air cargo movement is made January 10-14 when an An-124-100 Ruslan transports three 53-ton transformers from Barcelona to Noumea, New Caledonia.

During the spring, three An-124-100s operate charter flights to the Persian Gulf and Asia on behalf of **Cargolux Airlines International, S.A.**

By December, approximately 30 charters employing An-124-100s have been flown from the U.S., including 19 from Chicago to Kuwait.

Destinations visited under **TNT Express Worldwide** contract in 1992 include Prestwick, Liverpool, Cologne, Birmingham, Belfast, London (STN), Genoa, Billund, Oslo, Gothenburg, and Stockholm. In the spring, an An-124-100 flies a 40-ton tracked mine clearance vehicle on a 16-ton trailer to Namibia, from whence it will complete its journey to southern Angola. During early summer, the U.S. FAA discovers that civil certification has not been issued for the An-124-100 and orders a suspension of the type's flights to the U.S.

With certification issues resolved with the FAA on October 13, the giant transport is cleared to resume transatlantic flights. In November, an An-124-100 flies a mission in support of the USAF, transporting Lorol Space and Range Systems' Transportable Vehicle Checkout Facility (TVCF) from California to the Seychelles Islands.

Two more An-124-100s are placed into service in 1993. A Boeing 737-300 is leased and employed to begin passenger flights on behalf of the U.K. tour operator Sunseeker Leisure, Ltd. Meanwhile, the AFEL flies only the Jetstream 31 and is soon folded into a new subsidiary, Air Foyle Charter Airlines, Ltd. (AFCAL), established to operate the Sunseeker Leisure, Ltd. flights. AFL becomes worldwide GSA for the Antonov Design Bureau in early September, at which time it also begins to operate An-12 and An-22 freighters.

Also, on September 22, an An-124-100 Ruslan flies the heaviest single load ever transported by air. Operated from Dusseldorf to New Delhi on behalf of the Power Generation Group of Siemens, A.G., the record-shattering cargo comprises a 124-ton power plant generator core secured to a specially built 11.2-ton skid. Due to the huge weight, the transport must make six refueling stops while en route over the 5,600-mi. course.

In December, an Ilyushin Il-76 is acquired to meet the requirements of a new contract with Oil Spill Response for permanent oil spill standby. Routes now flown include Edinburgh to Cologne via Liverpool, Belfast-Cologne via Birmingham, Cologne to Nuremberg, and Leeds/Bradford and Manchester to Mediterranean holiday destinations.

Chairman Foyle oversees a workforce of 135 in 1994. Early in the year, the company agrees to fly a pair of Airbus Industrie A320-200s on behalf of the tour operator AirWorld, Ltd.

A new, yearlong contract is received in January from Oil Spill Response, Ltd. to provide a global rapid response air transport and oil-spill spraying service; it takes effect in March. A Lockheed L-100-30 will be chartered from **Southern Air Transport** to carry a dispersant delivery system.

The reigning World Rally Championship team Toyota Team Europe's race cars and support vehicles are flown from Cologne to Nairobi, Kenya, to participate in the year's 3,000-km. event.

In August, for the first time ever, a rail locomotive is airlifted across the Atlantic. An An-124-100, operating under contract to the GM Locomotive Group, flies a 230,000-lb. diesel-electric engine from the assembly factory at London, Ontario, to Dublin, where it is turned over to Irish Rail. In the same shipment is 37 tons of metal bridging equipment. At the time, the cargo represents a record weight for a commercial air movement. As of late fall, the Ruslans have been flown 8,000 hours and company has transported 4,000 tons of oversized cargo.

Following the collapse of **Ambassador Airways, Ltd.** on November 29, AFCAL establishes a new subsidiary, **Sabre Airways, Ltd.**, which flies under the parent's certificate and takes over the deceased airline's charter contracts. Flights commence on December 17 with two B-737-204As.

During 1995, the company's six An-124-100s operate 2,000 flying hours and haul a total of 7,600 tons of outsize cargo. During the first quarter, one of the giant freighters transports a pair of 25-ton electric-train bodies from Melbourne to Zurich.

The subsidiary Air Foyle (Ireland), Ltd. (AFIL) is established to pursue passenger aircraft related activities in the Irish market.

In December, **Sabre Airways, Ltd.** applies for its own license and certificate. The mission of providing wet-leased and management-package assistance continues.

The workforce, including that of **Sabre Airways, Ltd.**, totals 135 in 1996 and the fleet of the freighter and its subsidiaries includes 5 An-124-100s leased from Antonov plus an owned force of 2 BAe 146-200QTs, 6 BAe 146-300QTs, and 1 Beech Super King Air 200.

The BAes and King Air fly passenger charters during the day with the former operated at night on behalf of **TNT Express Worldwide**. Destinations visited on behalf of TNT include Barcelona, Basel, Belfast, Bergamo, Billund, Birmingham, Bologna, Brussels, Budapest, Copenhagen, Dublin, Edinburgh, Geneva, Gothenburg, Helsinki, Leipzig, Lisbon, Liverpool, London (STN), Lyons, Madrid, Nuremberg, Oslo, Rome, Stockholm, Vienna, and Zaragoza.

On February 10, the carrier's Oil Spill Response, Ltd. subsidiary contracts with **Southern Air Transport** to provide assistance in dispersing oil slicks up to 12 miles long off the Welsh coast. The slicks have been caused from the loss of an estimated 19-million gallons of light crude oil leaked from a stranded tanker. An SAT L-100-30 on February 11-12 flies three missions spraying dispersant on slicks off Milford Haven and across Carmarthen Bay in SW Wales.

Once **Sabre Airways, Ltd.** has its own certificate, AFCAL begins operating in support of the new low-fare carrier **easyJet, Ltd.**

Daylight enplanements total 459,000 and cargo hauled, by day and night, more than triples to 27.39 million FTKs.

Operations, including the **easyJet, Ltd.** contract, continue apace in 1997. On April 12, AFCAL signs a five-year pact with the Swedish startup **Air Scandic, A.B.** As French truck drivers prepare to barricade roadways on November 2 and strike over wages, vegetable exporters in the Alicante region of Spain contract with AFL to fly produce to Britain aboard two An-124-100s. The French road blockade is lifted on November 5.

A series of four charter flights each month is initiated by AFL during November on behalf of General Electric. Each flight transports GE engines destined for new Boeing 777s from Wilmington, Delaware, to the airframe builder's plant at Seattle. The trips, if undertaken by road, would require six days, but are accomplished by the Antonovs in just five hours.

In December, an An-124-100 airlifts a 132-ton Siemen's manufactured steam turbine from Germany to Santiago, Chile, on behalf of Siemen's Power Plant Division; the unit, the second heaviest single piece ever transported by air, is destined for a major Chilean power plant project.

Passenger boardings total 818,334. Cargo figures are not available.

In January 1998, AFCAL signs a contract with **Color Air, A.S.**, a Norwegian startup airline owned by the Oslo-based ferryboat operator Color Line, which had once held **Norway Airlines, A.S.**

During the month, an An-124-100, under contract to **Virgin Atlantic Airways, Ltd. (VAA)**, transports the *Global Challenger* balloon of entrepreneur Richard Branson from northwest Algeria back to London (CTN) following its aborted first attempt to break its flight record due to technical problems.

In May, the company begins to operate a pair of Airbus A300s on behalf **Air Scandic, A.B.** Flown for several prominent U.K. tour operators to European destinations, these are the first wide-bodies flown by AFCAL.

Meanwhile, AFCAL appoints former **Norway Airlines, A.S.** executive Morton Anderson as **Color Air, A.S.'s** president and through him will manage the launch of the new operator. A workforce is recruited and two Boeing 737-3Q8s, previously operated by **TACA International Airlines, S.A.**, are chartered from ILFC. Revenue flights commence during August, linking the company's base with Alesund, Bergen, Stavanger, and Trondheim.

From September 23 through October 15, an An-124-100 hauls relief supplies for the victims of Hurricane Georges. Operating on behalf of the air charter broker Diplomat Freight Services (which is under contract to the U.S. Federal Emergency Management Administration-FEMA), it makes over 50 flights from the U.S. to Puerto Rico. Averaging over 70 tons per flight (3,500 tons total), the giant aircraft transports: 31 potable water ice trucks, utility trucks for power generation, refrigeration units, telecommunication units, water purification systems, and vast quantities of drinking water and ice.

On December 2, an An-124-100 again transports the VAA *Global Challenger* balloon, this time from RAF Manston to Marrakech, Morocco. From that point, on December 18, Branson, U.S. millionaire and former balloon-record competitor Steve Fossett, and Swede Per Lindstrand again attempt to achieve aviation's last great achievement—to make the first nonstop round-the-world flight in a balloon. Unfortunately, this quest must be abandoned on Christmas Day, a little more than halfway through, when the balloon comes down off Honolulu. The three aeronauts are rescued by USCG helicopters.

Customer booking figures are unavailable for this year, but freight traffic of 17.31 million FTKs is reported.

By the beginning of 1999, airline employment has been increased by 11.1% to 150. The company continues to operate eight BAe 146-200QTs and Dash-300QTs on behalf of TNT, Ltd. On February 9, an An-124-100 flies a USN Mk. V Fast Patrol Boat, with two "Humvee" trucks and ancillary equipment from Seoul to San Diego.

At the beginning of April, an arrangement is discussed with Dublin-based **CityJet, Ltd.** under which the British carrier would assume controlling interest for an equity investment in excess of \$6.8 million. No plans are announced for the integration of services, despite the fact that the Irish line is also a BAe 146 operator, flying seven Dash-200s on passenger services.

Acting via AFIL, AFL, on May 17, formalizes its deal with **CityJet, Ltd.** In exchange for a £4-million (£Ir 8-million) investment, the British carrier acquires a 50.01 majority stake. AFL Chairman Chris Foyle becomes the Irish line's new chairman, while CityJet's founder/CEO Patrick Byrne retains his post.

In addition, **Air France** invests £2 million as a convertible loan. The French major's contribution will result in CityJet becoming the newest upgraded "Air France Express" carrier. As a number of its aircraft are repainted, CityJet will expand its commuter services from Dublin to Paris, London (CTN), Florence, Nice, Toulouse, Madrid, and Strasbourg to a point where these flights account for half of the company's business.

A former Sales Director at **Laker Airways, Ltd.**, John Jones is named Air Foyle Group Managing Director on August 2.

A key managerial associate of Sir Freddie Laker, John Jones is named group managing director on August 2; the move frees the owner and executive director, Foyle, to concentrate on strategic and development concerns.

It is confirmed in October that the company's outsized cargo joint venture with Antonov Design Bureau will be expanded with the addition of 2 An-124s previously operated by **Aeroflot Russian International Airlines (ARIA)**. The joint venture between the two airlines is to be renamed Antonov Airlines.

Competition introduced by **Aer Lingus Irish Airlines, Ltd.** over the Dublin-London (LCY) route in November causes a severe loss of market share for **CityJet, Ltd.** With costs mounting and expenses for expansion pending, Air Foyle, on December 19, elects to sell its stake in the Irish airline. Although **Air France** maintains its interest, it does not plan to take the tendered shares.

Passenger boardings in the charter division skyrocket 89% during the year to 344,000. Cargo, on the other hand, slips 0.4% to 19.11 million FTKs.

The improved cooperative arrangement with the Russian design bureau, which has by now been renamed Antonov Airlines, takes effect in early 2000.

Although **Air France** had maintained that it had no plan to take the tendered shares, the 33% minority owner assumes the **CityJet, Ltd.** stake on February 17. The French promise to keep their prize Irish owned and licensed even as seven of its eight aircraft operate "Air France Express" flights from Paris (CDG).

Also during February, the company begins to transfer its entire BAe 146QT fleet and 55 pilots to TNT Airways. The entire process will be completed by early June.

In support of the humanitarian relief effort in the African nation, a company An-124-100 on March 3 transports 4 RAF Super Puma helicopters from RAF Brize Norton to Mozambique.

In mid-April, a pair of Antonov Ruslans transport 140 tons of support equipment for Nepalese troops assigned to the UN peacekeeping effort in East Timor. The Russian giants are the first of their type and the largest aircraft ever to visit Kathmandu.

A number of British troops are deployed by passenger aircraft in early May to restore political stability in Sierra Leone. Two An-124-100s are chartered by the RAF to transport 100 tons each of vehicles and equipment to Dakar, Senegal, from whence they will be moved to support them.

Working from Air Foyle's base, sales representatives mount an extensive campaign during the fourth quarter to expand Antonov Airlines representation in Asia. New general sales partners are found in South Korea, Singapore, Taiwan, Thailand, and the Philippines.

AIR FRANCE (COMPAGNIE NATIONALE AIR FRANCE, S.A.): 45 Rue du Paris, F-75757 Roissy CDG Cedex, France; Phone (33-1-41) 56-78-00; <http://www.airfrance.fr>; <http://www.acaf.bvrp.fr>; <http://www.traxon.com/afr.htm>; Code AF; Year Founded 1933. On May 17, 1933, the pioneer carriers **Air Orient, S.A.**; **Air Union, S.A.** (formed in 1923 through the merger of **Compagnie des Grand Express**

Aeriens, S.A., and the **Compagnie des Messageries Aeriennes, S.A.**, both founded in 1919); and **CIDNA—Compagnie Internationale de Navigation Aerienne, S.A.** (created in 1925 to succeed **CFRNA—Compagnie Franco-Roumaine de Navigation Aerienne, S.A.** and **SGTA—Societe Generale de Transport Aerien, S.A.**, a 1925 offshoot of **Lignes Aeriennes Farman, S.A.**) combine to form **SCELA (Societe Centrale pour l'Exploitation de Lignes Aeriennes, S.A.)**. The new body negotiates with the French government for the creation of a national airline system.

On August 30, with government backing, SCELA purchases the assets of **Aeropostale (Compagnie Generale Aeropostale, S.A.)** (including 38 Latecoere 25s and 41 Latecoere 26s) and the two are combined to form AF. The SCELA partner companies hold 74.8% of the shares of the new airline, the French government 25%, and private interests the 0.02% remaining. On September 1, Ernest Rhoume is appointed chairman and the Paris-based administration (a Secretariat General plus Operations, Engineering/Maintenance, Sales, and Finance divisions) comes to life.

The new carrier inherits 259 aircraft (of 35 different types) of which 172 are single-wing. Built for the South Atlantic service and piloted by Lucien Bossoutrot, the new Bleriot 5190 *Santos Dumont* makes its maiden flight at Caudebec en Caux on August 11. The first eight-passenger Dewoitine D-332 long-range trimotor is delivered in September and is christened *Emeraude*.

AF officially takes over the assets and routes of the SCELA members in October, the same month that three new Wibault 282.T12s, *Le Fougueux*, *L'Intrepide*, and *La Voile d'Or* are introduced on the Paris-London Le Rayon d'Or ("Golden Ray") service by the twin-engine Liore et Olivier LEO 213 biplanes. When flown by these new tri-motors, the service is known as *La Voile d'Or* ("The Golden Clipper"). Additionally, the previous **Air Orient, S.A.** multistop service from Marseilles to Damascus and Baghdad and on to Saigon by way of Bangkok is continued.

In early December, the *Emeraude* is exhibited at London (Croydon) and visits Malmö, Algiers, and Dakar. On December 22, with Maurice Nogues as pilot, the *Emeraude* departs Paris for Saigon, reaching the Indochinese city on December 28 after 48 hrs. flight time. On December 31, the Latecoere Late 300 *Croix du Sud*, flown by Capitaine de Corvette Bonnot, takes off from Berre lake and makes the first service flight to St. Louis, Senegal, covering the 2,286-mile distance nonstop in 23 hrs., 6 min.

On January 3, 1934, *Croix du Sud* makes the first flight by its type across the South Atlantic from Saint Louis, Senegal to Natal, Brazil. While returning from a multistop flight to Saigon the same night, the new Dewoitine 332 *Emeraude* crashes in a snowstorm in the Morvan mountains (14 dead).

On March 20, an airliner crashes near London (Croydon) and a woman passenger is injured. AF continues to operate a few of the South American services pioneered by **Aeropostale (1)**. An enlarged version of the Short Calcutta flying boat, the first 20-passenger Breguet 530 *Saigon* enters service in early May over the carrier's Marseilles-Tunis route. Mermoz places the modified Couzinet 71 *Arc-en-Ciel* into regular, but low-frequency transatlantic service on May 28.

On May 31, an LEO 213 crashes into a pylon at London (Croydon) and is destroyed. During the year, one LEO 213 is reconfigured as a freighter and another nine are transferred to the Armée de l'Air.

On July 24, working alternately, the Late 300 *Croix du Sud* and the Couzinet 71 *Arc-en-Ciel* begin monthly South Atlantic mail flights in coordination with the four specially designed mail ships once owned by **Aeropostale (1)**. Work is begun on fleet standardization as 10 Wibault 282.T12s are received, together with a pair of Breguet 393Ts, which are used on the Toulouse-Casablanca run. Rationalization and reordering of the route network begins; however, due to the superiority of the rail system in France, emphasis is placed on international service with internal sectors remaining a series of stopping points on the way to foreign destinations.

During the year, these are increasingly serviced by ten newly delivered trimotor Wibault-Penhoet 283s, which are christened *Le Mer-*

veilleux, *L'Invulnérable*, *Le Conquerant*, *L'Aventureux*, *L'Ambitieux*, *Le Vengeur*, *L'Intrigant*, *Le Glorieux*, *L'Imbattable*, and *L'Infatigable*. In addition, 12 Liore et Olivier H 242-1s are received and are placed into service on three routes from Marseilles: to Algiers via Alcudia; to Tunis via Ajaccio; and to Beirut via Athens and Tripoli. On November 27, the Bleriot 5190 flying boat *Santos-Dumont* makes its first ocean crossing from Dakar to Natal, reducing the time on the Toulouse to Buenos Aires route to just 3 days 20 hrs.

The new Breguet 530 Saigon-class flying boats *Algerie* and *Tunisie* (license-built Short Calcuttas) begin transmediterranean service on January 2, 1935. Sixteen days later, the new six-engine Latecoere Late 521 flying boat *Lieutenant de Vaisseau-Paris* makes her first flight from Biscarosse; her type has the capacity to transport upwards of 30 passengers transatlantic and 70 across the Mediterranean. Night freight service is started Paris-London on March 31/April 1; flying a Farman F-306 on this initial service, noted pilot Robert Bajac crashes in bad weather near Rouen and is killed.

During the spring, three Dewoitine 333s are received; christened *Antares*, *Cassiopee*, and *Altair*; they are placed into mail service on the Toulouse-Dakar segment of the South American route on May 17. In June, 11 new Poetz 62s enter service. Christened *Ibis*, *Flamant*, *La Seducisante*, *Martinet*, *Ramier*, *Gypaete*, *Courlis*, *Cigogne*, *Cormoran*, and *Albatros*, they are assigned to the routes from Paris to Rome, Marseilles, and Madrid. Paris-Marseilles-Rome routes are flown by newly delivered Liore et Olivier LEO 242s.

Late in the year, 11 upgraded Poetz 62-1s are accepted and christened *La Fidele*, *La Tapageuse*, *Falcon*, *L'Etourdie*, *Flamant*, *L'Entrepreneante*, *Alcyon*, *Magoary*, *Heron*, and *Pluvier* and three 62s are modified to 62-1 standard. A mail plane crashes at Istres Field on November 12 (three dead).

On December 8, the government's new Latecoere 521 flying boat *Lieutenant de Vaisseau Paris* is loaned to AF and begins its maiden flight from Biscarosse to North America, via Dakar, Natal, and Martinique.

The *Lieutenant de Vaisseau Paris* is sunk in a hurricane at Pensacola, Florida, on January 4, 1936; it will be salvaged and returned to France for rebuilding. With the three supplemental Latecoere Late 301 flying boats *Ville de Buenos Aires*, *Ville de Rio de Janeiro*, and *Ville de Santiago du Chile* in hand, a regular Toulouse-Santiago airmail route is opened on January 5, as the carrier announces an end to the mid-ocean mail ship service. In January, passenger service starts on the Casablanca-Dakar route.

The Bleriot 5190 *Santos-Dumont* is lost over the South Atlantic on February 10, as is the Late 301 *Ville de Buenos Aires*. In the spring, Potez 62-1 service is inaugurated to Stockholm, Oslo, and Copenhagen. During the first quarter, AF leases a Douglas DC-2 from the Centre d'Essais de Material Aerienne and will employ the American made, Fokker-assembled transport during the remainder of the year on round-trip flight trials from Paris to Algiers.

The West African affiliate **Compagnie des Chargeurs Reunis, S.A.** is established at Dakar in April to provide scheduled services along the West African coast to Casablanca. It will be equipped with Sikorsky S-43s. On May 7, two Poetz 62.1s begin frequencies over the Buenos Aires-Santiago route in South America. The one-hundredth Toulouse-Santiago flight is completed on July 21. The Dewoitine D-338 prototype is accepted and placed in service on the Paris-Marseilles-Cannes route during the summer; orders are placed for ten more of the type. A mail plane crashes in fog near Toulouse on August 3 (three dead).

Designed for the South Atlantic, the first Farman F.2200 landplane, the *Ville de Montevideo*, is placed in service on October 5; it will be followed by another, the *Ville de Mendoza*, at year's end. The Late 300 *Croix du Sud*, and Jean Mermoz, its famous pilot now on his 24th crossing, are lost over the South Atlantic on December 7. The outbreak of the Spanish Civil War forces cancellation of flights to points in Spain and, also during the year, the Liore et Olivier H 242-1 *Ville de Nice* is lost in an accident off Algiers.

Only 22% of the company's income this year comes from sources other than subsidy.

Early in 1937, only three aircraft are available to maintain the South Atlantic route; however, two more Farman F.2200s, the *Ville de St. Louis* and the *Ville de Natal*, are added before year's end, together with five Bloch 220s, which are christened *Saintonge*, *Aunis*, *Auvergne*, *Guyenne*, and *Gascogne*. In March, orders are placed for five Liore et Olivier H 47 flying boats, later designated H 470s. After a five-year absence, Antoine de St. Exupéry returns as publicity official, flying to and lecturing at various European cities on behalf of the company.

In late summer, he proves a new route from Casablanca to Timbuktu over the Sahara. For service on the South Atlantic, AF and **Deutsche Lufthansa, A.G. (DLH)** now enter into pooling arrangements that will continue until August 1939. The elderly Fokker F-VIIbs are retired. Night airmail service is launched Paris–Toulouse/Marseilles and new Dewoitine D-338s are placed on the Paris–Dakar run.

Rebuilt, the Latecoere 521 *Lieutenant de Vaisseau Paris* returns to service at midyear. Piloted by Henri Guillaumet with five crew, it sets a seaplane record on October 25–26, flying the 3,586.1-mile Morocco to Brazil route nonstop. Before year's end, the flying boat will establish three more speed records with various loads and, with 39,771 pounds aboard, an altitude record of 6,591 feet.

On October 27, the Dewoitine D-333 *Antares* is lost between Dakar and Casablanca. The D-333 *Cassiopee* is placed into service between Buenos Aires and Natal. An airliner is lost near Schuttenhafen in Austria on December 27 (three dead). At year's end, it is reported that, after the U.K. and U.S., AF operates the most route mileage in the world—38,750.

Orders are placed in January 1938 for six Liore et Olivier H 246 flying boats. On February 9, the Liore et Olivier H 242-1 *Ville de Bone*, en route from Marseilles to Tunis, crashes upon takeoff from Etang de Berre, takes fire and sinks (ten dead). A mail plane crashes in the Pyrennes in bad weather on March 25 (eight dead). During late winter, the Bloch 220 is introduced on the Paris–Marseilles route; on March 27, the *Aunis*, a unit of this superior type, of which five more models are delivered by summer, begins Paris–London service. The initial flight requires but 51 minutes. Meanwhile, an experimental Paris–Hanoi Dewoitine D-338 proving flight in January opens the way for regularly scheduled service from Damascus to Hanoi. In March, the Dewoitine D-333 *Altair* also begins flying between Buenos Aires and Natal.

On June 1, the carrier begins the transport of mail on its regularly scheduled flights to London, Switzerland, and Germany. By June, ten D.338s have been delivered and, on July 4, AF announces that its Farman F.2220, *Ville de Dakar*, is making the company's three-hundredth crossing of the South Atlantic. On July 9, Paris–Jersey, via Dinard, summer services are inaugurated. Six days later, the Latecoere 521 *Lieutenant de Vaisseau Paris* visits the English port of Foynes. Company tests of the first Liore et Olivier H 470 *Atlantique 1* commence on July 23.

Also during the summer, the first Dewoitine D-338, *Clemence-Isaure*, is placed into service on the Paris to Cannes via Marseilles route. In the Far East, the Hanoi route is extended to Hong Kong on August 4 via Fort Bayard. Meanwhile, on August 9, employing Wibault Penhoet 283s, the carrier launches twice-weekly (each company) pooled service Dinard–Jersey with **Jersey Airways, Ltd.**

The *Lieutenant de Vaisseau Paris*, piloted by Henri Guillaumet and crew, makes a roundtrip flight from Biscarosse, north of Bordeaux, to Port Washington, New York, via Lisbon and Horta, Azores, between August 23–31. Some 32,000 passengers are transported over the Paris–London route during the year. By Christmas, all Potez 62s and Wibault 282s on the Amsterdam, Prague, Bucharest, Stockholm, and Zurich runs have been replaced by Bloch 220s, another six of which were delivered in the fall.

At the beginning of 1939, the fleet includes 23 D.338s, 17 Bloch 220s, 15 Wibault 283s, 12 LEO 242 Hydros, and 19 miscellaneous units.

In January, D.338s begin regular passenger/mail flights to Hong Kong. Five new Liore et Olivier H 246 flying boats are received and christened *Senegal*, *Mauritanie*, *Oranie*, *Algerie*, and *Tunisie*; they are placed into service during the spring on the Marseilles to Algiers route. In April, a second Late 521 flying boat, *Ville de Saint-Pierre*, joins the fleet.

Capt. Guillaumet's Late 521 *Lieutenant de Vaisseau Paris* makes another transatlantic flight to Port Washington, New York, on May 16–18; the westbound flight via Lisbon, Horta, and Bermuda, is made in 37 hrs. The flying boat returns to Biscarosse on May 23–25.

With war clouds gathering in Europe, the decision is taken not to forward the company's only Douglas DC-3 to Paris. When it is delivered on May 26, it is flown to Argentina. From June 7, the ship begins two years of service on the company's Buenos Aires to Santiago route via Mendoza.

Hourly Paris–London service begins on June 16 and, during the summer, the six-hundredth South Atlantic flight is made. D.338s are now flying Paris–Dakar and, in South America, Natal–Buenos Aires. By mid-year, the fleet has been reduced to 90 aircraft of 11 types, and the route network has been divided into four spheres: Continental, Mediterranean/Orient, Africa, and North/South America. On June 16, Bloch 220s inaugurate an hourly shuttle service, Paris–London; on July 1, the company starts a direct London–Cannes frequency, via Paris.

World War II erupts on September 3 and the Latecoere 521 *Lieutenant de Vaisseau Paris* and her new sister, the *Ville de Saint-Pierre*, are immediately taken over by the French Navy. At the same time, service to England is suspended. Late in the month, the first Bloch MB-161 Languedoc 33-passenger airliner makes its maiden flight; however, the war intervenes and the aircraft is not flown in commercial service for years. AF and **Imperial Airways, Ltd.** agree to a joint, twice-daily London–Paris/Paris–London service, which begins on October 11. The French service is initiated with D.338s.

All AF personnel, aircraft, and assets are placed at the disposal of the government. Prior to this point, subsidy this year represents 65% of the carrier's income.

The *Ville de Saint-Pierre* is returned to AF's Transatlantique division in March 1940. Service between Paris and London is indefinitely suspended on June 13 and, following the Franco–German armistice, AF headquarters are moved from Paris to Vichy and South American and Hong Kong flights are suspended. French Indochina is occupied by the Japanese.

Three planes are lost during the year. French AA gunners shot down a D.338 near Quistreham, Normandy, on June 20; the pilot is killed. Another D.338 is destroyed over the Gulf of Tonkin by JNAF fighter planes on July 7; there is no information concerning any possible casualties. An F-224 is lost over the Mediterranean on November 27, the apparent victim of Italian fighter planes.

The remnants of AF and three other smaller French independents controlled by Vichy are consolidated and renamed **Reseau Aerien Francaise (RAF)** on February 21, 1941. The 1933 agreement forming AF is officially cancelled on December 20. In South America, the company's lone DC-3 is taken over by the Argentina Aviation Command.

En route from Marseilles to Algiers on August 13, 1942, an LEO H-242 is attacked by Allied Northwest African Air Force Hurricane fighters 50 mi. off the Algerian coast. Badly shot up, the flying boat is able to land in Algiers harbor, but then sinks; four passengers die.

After the German occupation of Vichy France in November, **Deutsche Lufthansa, A.G. (DLH)** takes over the remaining routes, aircraft, and personnel of RAF, ending the transmediterranean service of the four surviving LEO H-242 flying boats. The Latecoere 631 flying boat makes its maiden flight on November 4.

Backed by the Free French, in early 1943 a breakaway unit of RAF in North Africa begins weekly Algiers–Dakar flights employing the Liore et Olivier H 246 flying boats *Mauritanie* and *Oranie*, which have escaped German capture, together with the surviving S-43s of **Compagnie des Chargeurs Reunis, S.A.** On April 19, the **Reseau Aerien Militaire Francais (RAMF)** is established in North Africa, while in Damascus the **Lignes Aeriens Militaire (LAM)** begins Dewoitine D-338 operations to Cairo and then to Algiers (connecting with RAMF), Khartoum, Tananarive, and Pointe Noire.

RAMF and LAM are placed under the control of the Free French **Directions des Transports Aeriens (DTA)** on February 24, 1944, "for the

duration plus six months." DTA is reorganized on June 22 and three divisions are established: from Algiers, Réseau Central links liberated portions of France with Dakar and Madagascar; from Dakar, Réseau Occidental handles the link to West and Equatorial Africa; and from Damascus, Réseau Oriental is charged with the routes to Madagascar and Tehran. When the Germans blow up the hangars at Etang de Berre in August, the Latecoere 521 and 522 flying boats are destroyed. The Réseau Métropolitain is opened at Paris on November 16 and limited service to London is restored.

On February 12, 1945, a new airline organization, **Reseau des Lignes Aeriennes Francais (RLAF)**, is established under the direct authority of the Air Ministry in the new French civil government.

The first of 28 Douglas C-47s (military DC-3s) are now received and placed in service. Weekly roundtrip service is inaugurated in February from Tananarive, Madagascar, to Mauritius via Reunion.

The French civil aviation industry is nationalized on June 26 and the operations of DTA are taken over by RLAF. Gen. Charles de Gaulle recruits former member of parliament and engineer Max Hymans to serve as managing director and administrative supervisor of the growing carrier.

A fleet of Junkers Ju-52/3ms is assembled; 28 airliners are ordered from Douglas and Lockheed and 95 from French manufacturers. An RLAF Ju-52/3m reopens regularly scheduled Paris-London (Croydon) service on October 22. The government announces that, effective December 31, RLAF will be abolished and control of the entire French civil air network will be entrusted to new Chairman Hymans' nationalized **Societe Nationale Air France**.

At year's end, the French join IATA. The fleet now includes 9 Dewoitine 338s, 13 Lockheeds, 5 Ju-52/3ms, 5 Bloch 221s, 2 Farman 2200s, 2 LEO 246s, 1 Amiot 354, 1 Wibault 282, 1 Potez 54, and 25 miscellaneous units.

In 1946, the first of 30 SNCASO SO-30s and 25 SNCASO SO-90s are delivered as are the first 12 of 40 SE-161 Languedocs. The fleet increases rapidly to 130 aircraft, including 9 surviving prewar Dewoitine D-338s and new Douglas DC-4s. Gen. Henri Ziegler, chief officer of the Free French AF in England in 1944, is named deputy general manager under Managing Director Henri Desbriueres. Work begins on the renewal of bilateral air agreements with foreign governments plus the signing of new instruments.

In April, the second SNCASE SE-161 Languedoc makes a proving flight to West Africa. A demonstration flight by another Languedoc is made to London (Northolt) on May 13-14 and later in the month trials are conducted with the aircraft over the Paris-Algiers route. Regularly scheduled Paris to Algiers SE-161 flights commence on May 28.

During the year, the Dewoitine D-338s operate the company's Paris to Nice route while four Lockheed L-049 Constellations, taken as interim capacity pending the later delivery of L-749s and L-749As, arrive at the beginning of June.

The arrival of a DC-4 at Rio de Janeiro from Dakar on June 17 marks the resumption of French service from Paris to South America. The first scheduled postwar AF transatlantic service is flown by an L-049 Paris-New York on June 24. Paris-New York DC-4 service is started on July 1.

Also in June and July, SE-161 Languedocs replaced AAC-1s (French-built Junkers Ju-52/3ms) on routes from Paris to Casablanca via Oran and Paris to Marseilles, respectively. An airliner crashes in the Wicklow Mountains, near Dublin, on August 13; 23 are hurt. The company suffers a horrific September.

A DC-3 with 5 crew and 17 passengers, crashes near Kjøge, Denmark, on September 3; there are no survivors. An So-30 crashes near Storehede, on Zealand Island, Denmark, on September 4 (23 dead). On September 5, an SE-161 crashes into a Paris factory yard (20 dead). A DC-3, with 5 crew and 26 passengers, fails its initial climb away from Le Bourget Airport at Paris on September 9 and crashes (19 dead).

By year's end, a European network has been reestablished, service has begun again over the South Atlantic to Buenos Aires, as well as to Saigon.

Early in 1947, ten Languedocs are upgraded with Pratt and Whitney powerplants. On February 1, a DC-3 with 5 crew and 11 passengers crashes in a storm 13 miles north of Lisbon during its initial approach (15 dead).

An L-049, en route from New York to Paris with 17 persons and peace treaty texts aboard, lands safely at Casablanca on February 20 after flying 600 miles with its two starboard engines stopped.

On March 3, the carrier resumes its prewar Far East route with Shanghai as its terminus. On March 14, a DC-3 with 5 crew and 18 passengers crashes near Grenoble; there are no survivors and the wreckage is not found until next day.

On April 18, the first L-749 is received and will be placed on the New York run during the summer.

Edinburgh to Paris flights begin on June 24 and transatlantic frequencies are increased to five-per-week on June 27. Three Latecoere 631s are received (only one is christened, the F-BANU *Guillaumet*) and enter service on July 26 over the Biscarosse-Port Etienne-Fort de France route. New York City to Paris sleeper service begins on September 8 and, late in the year, an alliance is signed with **Royal Air Maroc** providing for joint flights on the Paris to Casablanca route.

Also during the year, the company becomes a limited company, with shareholding divided between the government (70%), public institutions (28%), and private investors (2%). The huge state stake insures that the Ministers of Transport and Finance will dominate appointments to the airline's board and control its management. It also ensures that, although the airline will be expected to cover its expenses, the company will fly various routes (e.g., Indochina, Berlin) deemed to be in the public interest.

A DC-4 inbound from Brussels hits trees while landing at Paris on January 7, 1948 (15 dead). The DC-3s on the Le Bourget and London (Heathrow) route are replaced, on January 19, by SE-161 Languedocs.

A DC-4 with six crew fails takeoff from Kano, Nigeria, on April 10 (one dead). On April 29, under the command of Capt. Loubry, an L-749 makes the first commercial nonstop Paris to New York flight; SE-161 Paris to Barcelona flights begin on June 12.

On June 16, AF is established by law as a mixed economy company and the French national airline; its named is changed from Societe Nationale Air France to Compagnie Nationale Air France, S.A. Banks and private interests hold 30% shareholding with the French government owning the remainder. Majority ownership in the Lebanese carrier **Compagnie Generale de Transports, S.A.L.** is surrendered; however, the former subsidiary is given ex-AF Ju-52/3ms and a minority interest is maintained.

A DC-4 with 4 crew and 8 passengers is damaged beyond repair while landing at Orly Airport, Paris, on July 12; there are no fatalities.

On Bastille Day (July 14), the company's L-049 BAZQ makes the first passenger departure from New York's new Idlewild Airport. Prior to takeoff, the occasion is marked by speeches from a tricolor decorated platform festooned with flags and peopled by VIPs as well as children in traditional French costumes.

On August 1, a six-engine, 73-ton Latecoere 631, en route from Fort de France, Martinique to Port Etienne, West Africa, with 52 aboard, is reported missing. A search is begun employing, among other resources, seven USAF Boeing B-29 Superfortress bombers. A USCG vessel finds mid-ocean wreckage on August 6; there is, however, no sign of survivors and the search ends two days later.

New York City to Rome via Boston and Paris service is initiated on October 20. By employing interlined LANSAs and TACA planes to Caracas, the company is able to set a 37-hr. record for Bogota to Paris service as of December 19.

The French flag line's route network now stretches 188,000 km. and is the longest in the world. The employment rolls show 11,150 personnel at year's end.

In January 1949, the carrier is able to purchase an L-749 from the Mexican airline **Aerovias Guest, S.A.**, which has found it unprofitable after only four months. During the year, several surviving Bloch 220s

are converted to Bloch 221 standard and are employed on routes from Paris to Geneva, Zurich, and Strasbourg.

It is reported on July 1 that, during the last year and a half, the company has purchased \$6 million in spare parts for its American-made aircraft, \$1 million of which has been financed with money received from the U.S. Marshall Plan. This information follows the formulation of a plan from the French aircraft industry, put forward on June 1, for a spare parts program of its own.

On July 16, New York City to Lydda service is resumed. The **American Airlines** DC-4 *Flagship St. Paul* is purchased on August 30; since June, the state carrier has received eight other AA four-engine Douglas transports, including the *Flagship Dallas*, *Flagship Buffalo*, *Flagship Cleveland*, *Flagship San Antonio*, and *Flagship New Orleans*.

As a result of a troublesome undercarriage problem, AF begins to withdraw its SE-161 Languedocs in the fall.

A C-54A is destroyed at Karachi on October 20. On October 28, en route from Paris to New York City via the Azores, an L-749 with 11 crew and 37 passengers crashes into 3,500-ft. Mt. Algarvia on Sao Miguel Island, 60 mi. from Santa Maria in the Azores. Among the 59 casualties is former world middleweight boxing champion Marcel Cerdan.

A month later, on November 21, Paris-Australia Constellation service is begun. A C-54A with 5 crew and 33 passengers is lost while on final approach to St. Just Airport, France, on November 28 (five dead).

Four L-749s, including *Clipper Monarch of the Skies*, are acquired from **Pan American World Airways (1)** in December and a total of 17,000 passengers are carried on the North Atlantic routes during the year.

At the beginning of 1950, the fleet includes 4 L-049s, 15 L-749s, 33 DC-3s, 28 DC-4s, 3 de Havilland Dominies, 2 Junkers Ju-52/3ms, and 2 Consolidated-Vultee PBV-5A Catalinas.

Between January-February, all four L-049s are sold to **Transcontinental and Western Air Lines (TWA)**. A DC-3 with three crew aboard runs off the runway following its February 16 landing at Cadjehoun Airport at Cotonou, Benin; although the aircraft must be written off, there are no fatalities.

Also in the first quarter, three DC-4s are purchased from **Skyways, Ltd.** of the U.K. Also during the first quarter, the former **Pan American World Airways (1)** L-749s, with seating for just 16 in their cabins, introduce "The Parisian" deluxe sleeper service to New York.

On April 8, a new New York to Paris Constellation speed record is set of 11 hrs. 11 min. New York to Saigon L-749 flights begin on April 14, followed by the beginning of Paris to Milan Constellation service on May 13. The company establishes a Paris to New York L-749 speed record on May 23: 13 hrs. 50 min.

En route to Paris from Saigon on June 12-13, a DC-4 with 8 crew and 44 passengers crashes into the Persian Gulf while on final approach to Bahrain (42 dead). Two days later on June 14, another DC-4 with 8 crew and 45 passengers also goes down at Bahrain while on final approach (40 dead).

Amphibious operations are ended in the West Indies on July 1. While en route from Saigon to Vientiane on August 21, DC-3 crashes, but no one aboard is hurt. The company installs the first worldwide flight-insurance dispensing machine at New York (IDL) on November 2. Passenger bookings for the year rise to 775,000, including 21,000 on the transatlantic routes; 38 million FTKs are also operated.

En route from Douala, Cameroon, to Paris on February 3, 1951, a DC-4, with 6 crew and 23 passengers, crashes into Mt. Cameroun, near Douala; there are no survivors. On March 21, the American CAB grants the company a New York City to Martinique and Guadeloupe route as well as a Houston stop on its new New York to Mexico City service. An L-749 flies from Paris to Cairo on April 14 in a record 6 hrs. 48 min.

Despite inadequate financial support, the government, to stimulate the national aircraft industry, requires that the carrier purchase a number of planes from Breguet at a very high cost; the Air Ministry pledges participation in their depreciation costs. Chairman Hymans complains that this approach is inappropriate and is granted permission to order additional British and U.S. aircraft as well.

As the result of an in-flight structural failure, the pilot of a DC-3, with four other crew aboard, loses control and the aircraft crashes at Moisville on August 11; there are no survivors.

Reconfigured 44-passenger SE-161s are placed on the lesser services to Oran, Algiers, Tunis, Bone, and Constantine. **Air Vietnam, S.A.** is established on October 1, with AF providing support and holding one-third interest. The new Saigon-based carrier also signs a block-space code-sharing agreement for seats on one of AF's four weekly Constellation flights from Saigon to Paris.

Also in October, the French major becomes the first non-British operator to order the Vickers Viscount 700 turboprop, requesting a dozen V-708s.

Company employees stage a strike between December 20-31. The workers are displeased by a new plan from the Transport Minister that will result in the carrier's pilots being granted special status and relatively high wages.

Enplanements for the year total 982,553, of which North Atlantic bookings reach 24,000.

A Junkers Ju-52/3m with six aboard crashes while taking off from Andapa, Morocco, on January 1, 1952. Service is now started to Tokyo, via Saigon. An L-749 flies from Montreal to Paris on January 12 in a record 9 hrs. 43 min. On March 3, an SE-161 Languedoc, experiencing wing flap and engine failure, fails its takeoff from Nice-le-Var and crashes (38 dead); among the fatalities is Brooklyn ballerina Harriet Toby.

On April 7, another Languedoc is destroyed in a nonfatal crash at Paris (Le Bourget). En route from Frankfurt to West Berlin on April 29, a DC-4 is attacked over Koenigern by two Soviet MIG-15s. Two passengers and a steward are hurt, but the badly damaged aircraft is able to land safely at Berlin's Tempelhof Airport. Paris-New York-Mexico City L-749 service begins on April 30.

The last SE-161 frequency is flown on October 26; several of the withdrawn Languedocs are transferred to **Air Liban, S.A.L.** The company's new de Havilland Comet I jetliner makes the first nonstop Dakar to Paris flight on October 30; a month later, on November 30, it completes the first Paris to Tokyo roundtrip flight. Other new services introduced include Paris to Mexico City and Paris to Caracas and Bogota via Martinique. **Air Laos, S.A.** is established at Vientiane during the fourth quarter, with AF taking a minority stake (30%).

Although North Atlantic passenger traffic drops to 23,000, overall passenger boardings pass the million mark for the first time (1,740,707). The year's statistics show revenue passenger miles up 16% to 928.27 million and freight traffic advancing by 22%. In terms of unduplicated mileage, AF is now the world's biggest airline.

Six-stage Paris-Bogota L-749 service over the Central Atlantic begins on January 22, 1953. At this point, the government halts its subsidy of routes that the airline flies in competition with other French carriers.

The first of 12 ordered Breguet 763 Provences start flights over two routes from Lyons on March 16: to Marseilles and Algiers and to Marseilles and Tunis. Next day a DC-3 crashes at Tourane (eight dead).

A Ju-52/3m, with four aboard, fails its takeoff from Miandrivazo, Morocco, on April 10 and crashes; there are no survivors. On May 25, a Constellation en route to Paris with 34 aboard fails its takeoff from Amsterdam and crashes; all aboard the L-749 are safe, but two motorists on a nearby Dutch road are killed as the plane runs off the runway.

On an August 3 flight from Beirut, an L-749A with 8 crew and 34 passengers makes a forced landing in southwest Turkey, near the community of Yazihan (four dead). Paris to Beirut, via Rome, DeHavilland Comet I jetliner operations begin on August 26.

En route to Saigon from Paris on September 1, an L-749 with 9 crew and 33 passengers crashes into Mt. Cemet in the French Alps near Barcelonnette; there are no survivors and two people are killed on the ground. The crash site is hurriedly searched for secret documents, which are recovered in a diplomatic pouch.

On September 15, AF becomes the second airline (and the first non-British) to begin Vickers Viscount operations. Weekly nonstop

L-1049C Luxury Service flights are begun from New York to Paris on November 20.

A number of L-1049C Super Constellations join the fleet during the third and fourth quarters and are assigned to the transatlantic service; their sleeper flights to New York are now called "The Golden Parisian." The new Viscount 708s are employed on the regular Paris–London service, beginning on December 2 with the lunchtime Epicurean frequency. Late in the year, the carrier joins with other French airlines and aircraft manufacturers to form **Societe Auxiliare de Gerance et de Transports Aeriens (SAGETA)** to make certain that a regular aerial supply system is available to support the government's Indochina operations.

North Atlantic bookings skyrocket to 33,000. At year's end, the fleet includes 127 aircraft: 40 DC-3s, 25 DC-4s, 21 L-749s, 10 L-1049Cs, 18 SE-161s, 6 Viscounts 708s, 7 Breguet 763s, and 2 Comet IIs.

Comet I service is suspended on January 12, 1954. The next day, an L-1049C tops a day-old **Trans World Airlines (TWA)** Paris to New York record flight with one of its own: 9 hrs. 55 min. Daily New York to Mexico City Constellation service is started on January 19 while Paris–Mexico City L-749 flights begin on March 27. The same day, an L-1049C flies from Mexico City to New York City in a record 6 hrs. 29 min. Paris–Stockholm service begins in late spring.

Also during the spring, orders are placed for 14 L-1049Gs. As the result of a series of crashes by aircraft of other airlines, all of the company's de Havilland DH 106 Comet I jetliners are grounded in mid-April and withdrawn. Nonstop London–Marseilles DC-4 flights are started on May 21.

On August 3 en route from Paris to New York via Shannon, an L-1049C with 8 crew and 29 passengers—out of fuel after being diverted from New York and Boston—crashes and explodes at Preston City, Connecticut; all 37 aboard escape the fiery disaster, but nine are hospitalized. An L-1049C brushes wings with a **British European Airways Corporation (BEA)** Viking over Paris on August 11; both planes land safely, but the Paris airport controller on duty is held responsible for the near collision and fired.

An L-749A must be written off after an accident at Gander, Newfoundland, on August 25; there are no fatalities among the 9 crew and 58 passengers.

An agreement is signed with **Aeroflot Soviet Airlines** on September 5 permitting the startup of Moscow–Paris reciprocal service. Direct Paris to Boston L-1049C service begins on October 7. On November 24, with Premier Mendes-France onboard, an L-1049C flies New York to Paris in a record 9 hrs. 42 min. By month's end, most of the carrier's European routes are being flown by Viscount 708s. In December, the company has only 13 SE-161 Languedocs still on inventory. The year's North Atlantic boardings reach 34,000.

At the beginning of 1955, the fleet includes 18 L-749s, 38 DC-3s, 19 DC-4s, 7 Languedoc 161s, 17 Super Constellations, and 12 Viscounts.

The company's pilots stage a one-day strike on February 21 to protest cuts in the size of plane crews. Also in the first quarter, the former **Skyways, Ltd.** DC-4 *Sky Freedom* is sold to **Air Vietnam, S.A.** On May 27, the prototype of the Sud-Est SE-210 makes its maiden flight from Toulouse. Also during the first half, L-1049Cs introduce Eastern Epicurean service to the Far East.

On September 14, en route from Fort Lamy to Douala in the French Cameroons, a Latecoere 631 crashes at sea (16 dead). A DC-3 with three crew must be written off following a bad landing at Bordeaux on September 21; there are no fatalities.

A strike by ground and maintenance employees and radar and control tower personnel at Paris begins on November 11, limiting the use of Orly Airport to international flights only.

The strike spreads to Marignane Field at Marseilles on November 15 and, on December 22, the French Air Force takes over Orly activities. Despite the job shortage, on December 28 Chairman Hymans announces that his carrier has placed reservations for 24 Sud-Est Caravelle IIs and 10 Boeing 707s. The strike collapses on December 30 when the French government threatens to withhold December paychecks from all those who have not returned to work by next day.

Hidden behind these public activities is the conclusion during the year of the airline's very first marketing studies.

The year's passenger traffic on the transatlantic routes soars to 46,000; overall bookings reach 1.8 million. A total of 61 million FTKs are also operated.

On January 1, 1956, France reorganizes its overseas air network. AF retires from Australia, the South Pacific, and Africa, and those routes are turned over to the independents **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)** and **Compagnie Aeromarine de Transport, S.A. (UAT)**. Two days later, the strike of Paris airport ground personnel official ends.

A DC-3 with five crew is destroyed in a training accident at Nantes on January 24; there are no fatalities. A DC-3 freighter with three crew is lost near Lyons on January 28; there are no survivors.

On February 3, the company is the first to order the Sud-Est SE-210; 12 Caravelle IIs are requested. The ex-American Airlines DC-4 *Flagship Chicago* is purchased on March 5, while airport ground personnel at Paris strike for 24 hours on March 7; Orly's airline traffic is paralyzed. Another AA DC-4, an unnamed unit, is received on April 5.

In early May, the Sud-Est SE-210 Caravelle I prototype is turned over to a company crew for proving flights. On May 27, 15 company stewardesses arrive at New York to serve temporarily aboard **Allegheny Airlines (I)** aircraft in an effort to promote international travel.

Beginning on June 20, the SE-210 prototype is tested as a freighter over a route from Paris–Algiers designed to give crews operational experience before the start of passenger services. On October 3, a Caravelle test aircraft flies from Paris to Nice in a record 1 hr. 18 min. **Royal Air Cambodge, S.A.** is formed on October 15 to provide domestic and international Cambodian air services. AF takes a stake (34%) in the new carrier and also provides it with the DC-3s required to launch its initial services from Phnom Penh.

A Vickers Viscount 708 is lost on a training flight near Dannemois on December 12; all five crewmen aboard are killed.

Reports for the year show North Atlantic boardings reaching 59,000.

In 1957, the fleet totals 131 aircraft. On March 17, Syria bars all AF aircraft and closes the company's offices at Damascus. A DC-3 with 4 crew and 30 passengers fails its takeoff from Biskra, Algeria, on April 8 and crashes; there are no survivors.

A one-day strike by ground crews on April 18 forces the cancellation of all European flights and, on April 21, U.S. citizen J. R. Nash is blown from an L-1049C Super Constellation when a window in its pressurized cabin shatters over northern Iraq during a Tehran to Paris flight.

The first of ten L-1649A Super Constellations, the *Champlain*, makes its delivery flight from Los Angeles to Paris on July 9 in the record time of 17 hrs. 11 min. The use of L-1649As on the New York to Paris service is announced on July 26. One of the new Starliners flies New York to Athens nonstop on September 25.

On December 6, an L-1049G with six crew is lost in a ground accident due to icing at Orly Airport; there are no fatalities. Service to Algiers is suspended. During the year, AF and the new **Deutsche Lufthansa, A.G.** reenter the South Atlantic pooling arrangement ended in August 1939.

Royal Air Maroc is formed with the French flag line a 30% shareholder. **Air Vietnam, S.A.** leases several L-749s for its Saigon–Hong Kong service.

En route from Paris to Oran on December 19, a Languedoc with 95 passengers is rocked by a bomb blast in its forward lavatory. Although the explosion rips a large hole in the fuselage, the aircraft is able to make a safe landing at Lyon some 30 minutes later; no injuries are reported.

A total of 75,000 people are carried across the Atlantic and 449,334 passengers are carried systemwide.

Airline employment stands at 20,000 in 1958. On April 10, a new L-1649A launches the first French polar service from Paris to Tokyo via Anchorage, Alaska. The carrier is the second after **SAS (Scandinavian Airlines System)** to launch a Polar route. Next day, the company is one of four European carriers charged by **Pan American World Airways (I)**

with violating IATA rules by serving full meals disguised as sandwiches on economy flights.

Algiers service is resumed on May 22, but a DC-3 crashes near Moliere, Algeria, eight days later (15 dead). Paris to Moscow flights begin on August 3. Algerian rebels first threaten sabotage against AF and its Paris installations on August 27. Joseph Roos becomes managing director during the fall.

During the year, the Ministry of Transport creates the National School for Civil Aviation to insure the airline a supply of pilots from a source other than the military.

North Atlantic emplanements for the year grow to 91,000.

In 1959, routes are extended to Quito and Lima, via Bogota.

While going around during a training mission over Poitiers on January 8, a DC-3 with 6 crew and 2 passengers goes into the ground; although the aircraft must be written off, there are no fatalities.

On February 11, an L-1049G begins a Phnom Penh to Hong Kong service under wet lease to **Royal Air Cambodge, S.A.** A C-54A is lost under unknown circumstances near In-Salah, Algeria, on April 30.

The first production model SE-210 Caravelle I, the *Alsace*, is introduced on the Paris–Rome–Istanbul schedule on May 6. While preparing for its first roundtrip Paris to Rome flight on June 3, the *Alsace* has a mishap and must be replaced by a Constellation. Paris–London Caravelle service begins on July 27. The company's first B-707-328 Stratoliner is rolled out two days later at Boeing's Renton plant in Washington state.

On August 1, the carrier joins **Alitalia, S.p.A.** and **Deutsche Lufthansa, A.G.** in a pool agreement for services to the Far East. The first Boeing 707-328 Stratoliner is delivered on October 21 and is christened *Chateau de Versailles*. The long-haul fleet now also includes 15 L-749s, 22 L-1049Gs, and 10 L-1649As. North Atlantic boardings pass the 100,000 mark for the first time.

At the beginning of 1960, the fleet includes 11 L-749s, 31 DC-3s, 27 DC-4s, 21 Super Constellations, 8 Viscounts, 12 Breguet 763s, 24 Caravelles, 17 Stratoliners, and 10 L-1649As.

Daily Paris–New York B-707-328 service is inaugurated by the *Chateau de Versailles* on January 31; the frequency is increased to twice daily on February 18 and Mexico City service is offered as an extension of the route. Stewards and hostesses strike on February 20–21, forcing the carrier to cancel a number of flights.

Los Angeles and Chicago to Paris service is begun by the B-707-328 *Chateau de Chambord* on April 1. On April 27, the B-707-328 *Chateau de Chenonceaux* inaugurates flights from Chicago to Paris via Montreal.

On May 6, the carrier joins with **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)** to offer transpacific service to Tokyo via New Caledonia and Tahiti. Also in May, the first anniversary of Caravelle service is celebrated; during that premier year, the carrier's SE-210s have carried 282,000 passengers and orders are now placed for 33 more.

The stewards and hostesses strike again, between July 1 and 6. A blocked-seat pooled arrangement with **Japan Air Lines Company, Ltd. (2)** begins on August 12; under the agreement, a company B-707-328 flies weekly from Paris to Tokyo via the North Pole.

On August 29, an L-1049G from Paris, with 8 crew and 55 passengers, is lost at sea a mile off Dakar while attempting a landing in a rain storm; there are no survivors from the worst disaster in French aviation to date.

Another B-707-328, *Chateau de Compiègne*, is delivered on October 22. Company jet service is halted at Paris by a strike of the increasingly powerful navigators union from December 8 to 26. The job action is resolved in a complete victory for the navigators, who win a salary increase, changes in working conditions, and a pledge to increase by 25% their overall number.

Still, North Atlantic boardings total 154,000 out of 3,055,500 systemwide. A total of 99 million FTKs are operated. Revenues total FFr 1.25 billion, but costs create a FFr 61-million loss.

With support and transferred aircraft, AF and UAT, in cooperation with 11 newly independent French colonies, form the multinational carrier **Air Afrique, S.A.** in 1961, the constitution of which is based on the 1954 consortium agreement of the **SAS (Scandinavian Airlines System)**.

In January, a block-space code-sharing agreement aboard a company B-707-328 replaces the L-1049G previously offering a wet-lease Hong Kong service for **Royal Air Cambodge, S.A.** During the first quarter, an L-1049G is leased to **Tunis Air, S.A.** for a year.

Beginning on April 1, three L-749s are leased to **Air Inter, S.A.** for the five-month summer season. Managing Director Roos now succeeds Max Hymans as chairman.

On the night of May 10 en route from Brazzaville to Marseilles via Fort Lamy, Flight 406, an L-1649A with 9 crew and 69 passengers, suddenly disintegrates at an altitude of 20,000-ft. and crashes and burns in the Sahara Desert, some 30 mi. SW of Ghadamis, Libya. Investigators will conclude that the most probable cause of the loss is a nitro-cellulose explosive.

Tunisia, on July 24, closes El Aouina airfield to AF planes in reprisal for the French failure to evacuate Bizerte.

Flight 272, a B-707-328 with 15 crew and 26 passengers, fails its takeoff from Hamburg for a July 27 flight to Anchorage; although the Boeing must be written off, there are no fatalities.

Also in July, the company's route from Bamako Gao in the new nation of Mali, flown weekly with a DC-4, is turned over to **Air Mali (1) (Societe National Air Mali, S.A.)**.

Flight 2005, an SE-210 Caravelle III with 6 crew and 71 passengers, crashes in fog while on final approach to Rabat on September 12 following a flight from Paris (ORY); there are no survivors. Among the victims is Kuwaiti Prince Sakhri.

An L-1649A Starliner is leased to **Air Afrique, S.A.** in October and a B-707-328B on an Africa to South America flight is grounded at Rio de Janeiro, Brazil, on November 21 because of a dispute involving Capt. Golvao and other Portuguese political exiles aboard. As additional Boeing 707-328/-328Bs join the fleet, the 5 remaining L-1049Es are turned into freighters. North Atlantic enplanements pass 159,000 during these 12 months.

France to Algeria service is suspended on March 18, 1962 over a Secret Army Organization strike in Algeria. Two more Starliners are chartered to **Air Afrique, S.A.** on April 18. In the worst accident involving a single craft in aviation history to date, the *Chateau de Sully*, a chartered B-707-328 with 10 crew and 122 passengers, crashes and burns on takeoff from Paris (ORY) for Atlanta and Houston on June 3 (131 dead); among the victims are 124 members of the Atlanta Arts Association.

Three L-749s and three L-1049Gs are leased to **Air Inter, S.A.** for the summer tourist season.

Coming in from Paris in a storm, a B-707-328 with 10 crew and 102 passengers, crashes into a mountain near Pointe a Pitre, on the island of Guadeloupe, West Indies, on June 22; there are no survivors.

While on a training flight, a DC-3 with eight crew crashes near Coulommiers, France, on July 30 (five dead).

V. Boucard, a Haitian, is held at New York on July 31 for assaulting M. Santangelo during one of the company's flights from Paris that day; the arrest is made under a new U.S. law that allows the arrest of suspects on international flights bound for America. L-1049Gs introduce economy flights from Oujda, Morocco, to Toulouse/Paris under contract to **Royal Air Maroc. Chateau de Vincennes**, the first of an order for four B-707-328Bs, is delivered on December 15.

North Atlantic passenger traffic jumps to 195,000 during the year while systemwide, passenger boardings exceed 3.34 million.

On February 1, 1963, the French portfolio of international air traffic is redistributed; the private **UTA French Airlines, S.A.** receives the remaining AF routes to Africa (except Dakar) and the Pacific. An alliance is entered into with **Air Afrique, S.A. (2)** providing for schedule coordination and ground handling for that carrier at Paris, joint venture catering at Dakar and Abidjan, and through fares; a management contract is also signed.

During the year, the navigators' union negotiates a new pension arrangement. Additionally, over 1,000 employees return from Algeria, all of who receive financial assistance from the company in their search for billets.

A total of 2,806 Paris–New York flights are made and overall enplanements reach 3,455,253.

The workforce reaches 24,030 by 1964. Two additional B-707-328s are purchased and a B-707-328C is ordered for the 110-aircraft fleet. On February 7, the company becomes the ninth airline to reserve delivery positions for the yet-to-be-built Boeing supersonic transport (SST); although six slots are requested, none will ever be utilized. Additionally, a new Washington to Paris one-stop frequency is inaugurated and new Sud-Est SE-210 Caravelle IIIs are leased to **Air Inter, S.A.**

A DC-3 trainer is damaged beyond repair at Oran on September 26. Transatlantic traffic reaches a high of 216,061 as 3,003 Paris–New York flights are made. Systemwide, boardings climb 9.1% to 3,801,158.

The fleet by 1965 comprises 110 aircraft: 25 B-707-328/-328Bs, 41 SE-210s, 9 L-1049Gs, 26 DC-4s, 25 DC-3s, and 6 Breguet 763s.

On April 1, a pooling agreement is signed with **Alitalia, S.p.A.**, **Deutsche Lufthansa, A.G.**, and **Japan Air Lines Company, Ltd. (2)**. The arrangement provides for joint maintenance and technical support and is actually a preliminary pact to the larger ATLAS group accords signed later.

The Breguet 763s, now converted into Universal freighters, begin all-cargo service from Paris to London in mid-April. On April 26, company directors report that more than three-fourths of their crews suffer psychologically from rapid transitions through time zones on long distance flights. Of 312 personnel surveyed by the Aerospace Medical Association, 30% require at least three nights' sleep to recover from the effects of Paris to New York roundtrips. On September 1, pilots strike over the status of copilots.

Passenger boardings for the year top the four-million mark (4,083,583); a total of 153 million FTKs are also operated. Revenues total FFr 1.86 billion and a profit of FFr 34 million is generated.

Airline employment stands at 25,632 in 1966. The last nine L-1049Gs are withdrawn at the beginning of the year. On January 15, the carrier announces its first "Air Cruise," a 29-day trip to 29 cities in 11 nations, highlighted by gourmet meals en route. Also in January, Breguet Universal all-freight flights commence from Paris to Bristol.

To operate charter and inclusive-tour flights, the wholly owned subsidiary **Air Charter International, S.A.** is formed on February 7 as four additional B-707-328Bs are delivered, starting with the *Chateau de Dampierre*. An L-1649A Super Starliner is sold to the South African independent **Trek Airways (Pty.), Ltd.** in April.

SE-210s transferred from the parent allow Air Charter International, S.A. to begin revenue services in July. Weekly B-707-328 service is inaugurated on September 20 between Paris and Shanghai via Athens, Cairo, Karachi, and Phnom Penh.

Weekly roundtrip B-707-328B service is launched in November from Paris to Mauritius via Djibouti and Reunion. During the year, the company becomes the initial launch customer for the Fokker F.27-500.

Enplanements in the 12 months total some 4.53 million.

Three additional B-707-328s and five more SE-210s join the fleet in 1967, while an L-1049E freighter is leased to **Air Cameroun, S.A.** Chairman Roos is succeeded by Georges Galichon, while former Aeroport de Paris head Pierre-Donatien Cot, an engineer, becomes managing director.

A Convair CV-990A Coronado is leased for the summer on April 10 from the American supplemental carrier **Modern Air Transport**. On August 24, the airline begins to warn its women passengers that Madagascar inspects female arrivals at Tananarive for compliance with its new anti-miniskirt law. A management contract is signed with **Air Mauritius, Ltd.** in December and the two companies begin pooled return services between Paris and Mauritius.

Passenger boardings this year soar to 4,927,789.

The employee population is down by 30 as 1968 begins. AF and **South African Airways (Pty.), Ltd.** commence reciprocal Johannesburg–Paris Air Cargo service on January 20. South Vietnam bans company overflights on February 12 because the airline also serves Cambodia and the People's Republic of China.

Coming into Pointe-a-Pitre, Guadeloupe, on March 6 on a flight from Caracas, Flight 212, a B-707-328C with 11 crew and 52 passengers, ploughs into La Soufriere Mountain at the 3,937-ft. level; there are no survivors.

The first of four B-727-228Cs to be delivered on the year arrives on April 15 while Paris to Leningrad reciprocal service is opened on May 15 in cooperation with **Aeroflot Soviet Airlines**. The carrier resumes operations on June 6 after a nationwide strike shuts it down for three weeks.

Also in June, the first two Fokker F.27-500s are acquired and placed in service on La Poste's Postale de Nuit night-airmail routes; a fleet of 20 will eventually be operated on routes from Paris to Nantes, Lyon, Strasbourg, Mulhouse, Marseilles, Bordeaux, and Toulouse. The first B-727-228 begins operating over the Paris to London (LHR) route on June 27.

On September 11, an SE-210 catches fire and crashes into the Mediterranean off Nice (95 dead).

Due to the May riots and strikes in France, passenger boardings decline to 4,591,853; freight traffic, however, gains by 23%.

Ten additional B-727-228s are delivered in 1969. In March, the carrier joins with **Deutsche Lufthansa, A.G.**, **Alitalia, S.p.A.**, **Sabena Belgian World Airlines, S.A.**, and **UTA French Airlines, S.A.** to form the ATLAS support group. The company's specific role for the consortium is the maintenance of airframes.

A C-54A freighter with three crew fails its takeoff from Paris (ORY) on May 28 and comes to rest 600 m. beyond the runway. Although there are no injuries reported the aircraft is damaged beyond repair.

On August 1, the carrier is charged with violating the U.S. Federal Aviation Act by denying Afro-American James Turner the right to take part in a tour to Africa; the man's lawyers petition the CAB for redress.

Sources in Atlanta reveal that, on August 24, AF settles 62 local claims arising from the 1962 Paris air tragedy for \$5.22 million. Three days later, it is announced that the company has averted a stewardess strike by agreeing to let its hostesses fly until age 50; it will join with the union to establish a mixed committee to judge the "attractiveness" of older female attendants. A stop is added to the Paris–Tokyo service on September 15 near the Angkor Temple ruins in Cambodia.

The pilot of Flight 212, a B-707-328B with 21 crew and 31 passengers, loses control while climbing away from Caracas for Paris on December 4; the aircraft plunges into the sea from a height of 3,000-ft. and there are no survivors.

During the year, the computer reservation system Alpha 3 is turned on; it handles both reservations and check-in procedures.

Enplanements for the year are 5,561,492.

In April 1970, B-707-328 Paris–Tokyo service is begun over a trans-Siberian route, via Moscow. Two new B-747-128s are received on March 20 and 25, respectively, with the first being placed on the Paris–Montreal frequency on April 3.

Fifteen days later, a B-747-128, with 174 passengers en route from the Canadian city to France, is diverted to a safe landing at New York (JFK) after one of its engines catches fire over St. Jean, Quebec. Although there are no injuries, the U.S. FAA orders X-rays of all Jumbo-jets to check for turbine assembly misalignments.

A third B-747-128 arrives in May and a fashion show is presented on the carrier's first B-747-128 flight from New York to Paris on June 19.

Engine trouble on a B-747-128 strands hundreds of passengers bound for Paris from New York on July 2. After being forced to cancel three flights by the plane during the day, the carrier houses its guests at area hotels and seeks other transport for them. A fourth B-747-128 is delivered on July 14 and three more B-727-228s are also delivered during the rest of the year. A final piece of news is the opening of a new hangar, No. 7, at Paris (ORY).

Passenger boardings during the 12 months rise 8.4% to 6.1 million, with 355 million FTKs also operated. Revenues reach FFr 3.26 billion and profits of FFr 12 million are generated.

In terms of enplanements, the state line is now the 14th largest in the world; it is 11th in terms of freight, 6th in terms of employment (27,593), and has the 10th largest fleet (97 aircraft).

Routes are extended to Rangoon, Cologne, and Addis Ababa in 1971 and the fifth B-747-128 is delivered on March 16. The Alpha-3 Univac 1108 computer reservations system is upgraded to enable the booking of hotel guests. In addition, a fully automated, 250,000-ton capacity air cargo center is occupied at Paris (ORY).

Following the arrival of an airliner at Israel's Lod Airport on April 11, airport security personnel take into custody two beautiful girls in mini-skirts acting strangely; upon examination, their suitcases are found to be loaded with explosives being taken to international terrorists.

Beginning on April 25 and continuing through October, AF offers special, luxury "Renaissance" tours of Europe costing \$185 each day, exclusive of airfares. Meanwhile, in July, a management contract is signed with **Cameroon Airlines, S.A.**

A total of 6,249,931 passengers are carried for the year.

The workforce in 1972 stands at 28,790. Three additional B-747-128s are acquired between February 2 and March 1, allowing polar Paris-Los Angeles flights to be inaugurated. In May, **Air Charter International, S.A.** begins B-727-228 service with Boeings leased from the parent.

On May 31, three members of the *Sekigun* (Japanese Red Army) travel from Rome to Lod Airport in Israel aboard a company aircraft. Getting off the plane, they attack targets of opportunity in the terminal, killing 25 persons and wounding 70 others as part of a compact with Black September.

A consignment of diamonds valued at more than \$500,000 is stolen from a B-747-128 carrying them from Israel to Hong Kong on October 10. Ten days later, the Airbus Industrie A300B prototype, the first wide-bodied commercial airplane produced by the European aircraft industry and ordered by AF, makes its maiden flight.

En route from Guadeloupe to St. Martin, 12 passengers aboard a small aircraft chartered by the carrier are killed in a crash near the latter destination on Christmas Day.

During the year, a Cargo Division is created and passenger boardings jump 14.7% to 7,327,000.

Two more B-747-128s arrive on February 21, 1973 in a rare double jetliner delivery. B-747-128 Paris-Mexico City via Houston service is launched, as are reciprocal flights between Paris and Saigon in cooperation with **Air Vietnam, S.A.**

On August 10 the carrier joins with **UTA French Airlines, S.A.** to announce that passenger flights to Cambodia are suspended because of that nation's military situation. An F.27-500 freighter with three crew is destroyed as the result of a bad landing at Strasbourg on August 11; there are no fatalities.

A B-707-328 lands at Peking from Paris on September 8, initiating new scheduled services between both capitals. During the year, four Transall C-161 freighters are leased for five years from their Franco-German manufacturer and are placed in service on the Postale de Nuit night airmail routes. Boeing 707-328Cs inaugurate one of the world's longest air routes (10,774 miles) between Tokyo and Lima via Tahiti; the twice-weekly flights are the first to link Japan and South America.

On October 18, D. Cravenne, the 43-year-old wife of a Paris public relations director, hijacks a B-727-228 carrying 110 passengers during its flight from Paris to Nice. Cravenne had demanded that she be flown to Cairo and that all air traffic in France cease for 24 hrs. When Marseilles police move toward the plane, she opens fire and is fatally shot by French police.

The 11th B-747-128 arrives at Paris on December 21. The next day a French appeals court reverses a ruling against C. VERNY-Forrer, the airline's in-flight entertainment chief. VERNY-Forrer had been successfully sued by P. Valette for permitting the screening of the adult film *Benjamin* aboard a jetliner on which his ten-year old daughter was a passenger.

The workforce is reduced by 90 employees during the year and, despite a two-week French air traffic controllers strike and increasing fuel prices, freight is up 20% and passenger boardings rise 5% to 7,691,709.

Airline employment reaches 30,335 by 1974. On January 1, Gilbert Perol becomes president and two more B-747-128s are delivered, on February 8 and March 21, respectively.

Mechanics, cargo and dispatch workers walkout on January 9.

A brief strike by pilots and flight engineers beginning on April 10 forces cancellation of most of the line's scheduled flights.

In addition, fuel expenditures rise sharply during the month as a result of the previous year's Mideast oil action, but, due to IATA regulations, the company will not be able to revise its fare schedule before the end of the year.

The first three of six ordered Airbus Industrie A300B2-1Cs are delivered on May 11.

The American FAA investigates the refusal of Capt. Pierre Espece to make an emergency landing after his B-707-328B encounters heavy turbulence near O'Neill, Nebraska, on May 12, resulting in significant injuries to ten persons. Instead of landing at the nearest airport for medical assistance as U.S. law requires, Espece continues to Paris, his scheduled destination.

One of the new A300B2-1Cs offers the world's first Airbus revenue flight, Paris to London, on May 23. Five days later, the mechanics, cargo and dispatch workers who have been on strike since January return to work; negotiations between management and the IAM continue.

The three new twin-engine European-made Airbus wide-bodies enter regularly scheduled service on May 30 on the Paris-London/Algiers frequencies.

An unusual marketing demonstration of the new Anglo-French Concorde is made on June 17. At 8:22 a.m., one of the new SSTs, in AF colors, departs Boston for Paris; simultaneously, a B-747-128 leaves Paris for Boston. While the Jumbojet is en route, the Concorde crosses the Atlantic, arrives at Paris and takes 1 hr., 8 min. to refuel, and then returns to Boston, where it arrives 11 min. ahead of the Boeing.

An F.27-500 with three crew crashes 20 km. from Nantes on July 24 and catches fire; there are no survivors.

The 15th B-747 is received on October 4; a Dash-228F, it is placed into all-cargo Super Pelican service on the North Atlantic. Management and the IAM reach a mediated agreement on October 30.

Cargo frequencies are also increased to eight Middle East destinations: Tehran, Tel Aviv, Abu Dhabi, Dhahran, Riyadh, Beirut, Jeddah, and Baghdad. All international flights are now operated from the new Charles de Gaulle International Airport, including the just-inaugurated frequency from Paris to Washington, D.C., via Boston. The regional carrier **Air Alsace, S.A.** is asked to provide replacement services from Strasbourg to Rome, Brussels, Amsterdam, and Cologne as well as from Lille to Strasbourg, Milan, and London (LHR).

Cargo traffic climbs 14.5% this year, but passenger traffic dips 1.3% on the year to 7,593,000.

On January 1, 1975, Pierre Giraudet succeeds Georges Galichon as chairman. Concorde proving flights, employing the third production aircraft, resume on May 28 as the airline prepares to launch scheduled SST service. The 16th B-747-128 is received on March 13. As the result of two blown tires and a fire caused by the braking assembly rubbing the runway, a B-747-128 with 18 crew and 376 passengers aborts its take-off from Bombay (now Mumbai) on June 12. There are no injuries reported as all aboard are evacuated before the Jumbojet is burnt out.

The series of test Concorde flights launched in May is concluded on August 2; during the trials, a total of 124 flights are made, transporting 2,500 passengers.

During the summer, a marketing alliance is entered into with **Japan Air Lines Company, Ltd. (2)**. The arrangement will lead to joint cargo service from Paris to Tokyo (NRT) and four weekly code-sharing flights on JAL's route from Tokyo to Papeete.

On October 15, the carrier initiates the sale of seats on the first scheduled flight of the Concorde, to begin January next, between Paris and Rio de Janeiro; the cost of this provisional airfare is \$1,200 or 20% above the then-current first-class rate for a subsonic jetliner. A New York-Seychelles Island route is opened late in the year.

Boardings rebound, climbing 5.9% to 8,038,632 and freight traffic accelerates 15.8% to 753.32 million FTKs. Although revenues total FFfr 6.6 billion, there is a FFfr 354-million loss.

In cooperation with **British Airways, Ltd. (2)**, AF inaugurates the era of commercial supersonic aviation on January 21, 1976, by operating the first scheduled Concorde flight from Paris to Rio de Janeiro via Dakar. The Senegal refueling stop requires an hour and the entire trip takes 7 hrs. 25 min. The service is twice weekly and is followed in April with a weekly run from the French capital to Caracas.

Meanwhile, U.S. transportation secretary William T. Coleman announces on February 4 that the Anglo-French SST will be allowed to land at New York (JFK) four times per week and Washington, D.C. (IAD) twice weekly for a 16-month trial period.

As if in comparison, the B-707-328 *Chateau de Compiègne* is retired on March 31.

Thrice-weekly, nonstop B-747-128 Paris–Toronto flights begin on May 21. Thrice-weekly Paris–Washington, D.C. (IAD) Concorde service begins on May 24, just after President Valéry Giscard-d'Estaing has employed one of the SST's to make a state visit to Washington, D.C. The May 24 American visit is, in fact, quite spectacular as a company SST makes a joint landing with a ship from **British Airways, Ltd. (2)**. With the two supersonic transports parked nose-to-nose, American, British, and French officials in elaborate ceremonies make presentations and speeches referring to the Dulles events of the day, as well as the U.S. bicentennial.

Under reported at the time, a near tragedy occurs on Flight 54, an AF Concorde, as it departs Washington, D.C. (IAD) for Paris on June 14. In retrospect, the event will prove remarkably similar to the first fatal Concorde crash at Paris 21 years later.

As the SST is on its takeoff roll, ATC notices flame and smoke coming from the area of the left main landing gear. After liftoff, the aircraft, with warning bells sounding, makes a tower flyby where it is confirmed that the two left rear tires have burst and been destroyed. An emergency is declared and although the crew plans to divert to New York (JFK), hydraulic pressure falls and it proves impossible to retract the landing gear; at this point, the pilots receive confirmation that there is a hole in the wing and that they are trailing a vapor stream. Permission is received to return to Dulles International and, after dumping fuel for seven minutes, the speedy plane makes a successful emergency landing, with no injuries reported. An evacuation is carried out as fire trucks pour foam onto the fuselage and leaking engines. Foreign object damage to the No. 2 engine causes it to seize up when shut down and, upon further examination, it is found that 3 fuel tanks have been punctured a total of 13 times. A 3'-4' hole, made by wheel rim and tire pieces, is found in the top wing skin's removable panel above the left landing gear.

On June 27 after takeoff from Greece, Flight 139 en route from Tel Aviv to Paris via Athens is suddenly seized over the Mediterranean by two PFLA and two Bader Meinhof gang armed hijackers. Following a refueling stop at Benghazi, Libya, the A300B2-1C is thereafter diverted to Entebbe, Uganda, where it lands before dawn next day. The 256 passengers and 12 crew are taken to an old terminal building, where they are met by five terrorists who had arrived earlier. President Idi Amin's army provides additional security by surrounding the airfield. Thinking themselves safe, the terrorists open negotiations, demanding freedom for 53 comrades imprisoned in five nations in exchange for the lives of their captives. Over the next week, all but 103 Jewish hostages and the French crew are released.

Led by a B-707-358C disguised as President Amin's personal aircraft, four Lockheed C-130s, containing the antiterrorist Unit 269 led by Colonel Jonathan Netanyahu, brother of the future Prime Minister of Israel, depart Ophira in *Operation Thunderball* on July 2.

Flying below radar level down the Red Sea, the aircraft cross over Ethiopia and land at Entebbe in the dark. Surprise is complete. All of the terrorists are killed in the 53 min. operation, as are two hostages (a third, British lady, Mrs. Dora Bloch, who is in the hospital, is murdered by Ugandan soldiers), and 20 Ugandan soldiers. The only Israeli death is that of Col. Netanyahu himself, shot by a sniper. The hostages are flown out via Nairobi, Kenya, where the commandos force the local airport officials to provide fuel and assistance. Although several Ugandan MIG

fighters are destroyed in the operation, President Amin will allow AF to retrieve its airliner several weeks later.

Coming as it does on the eve of the U.S. Bicentennial, the exploit is widely heralded and results in the production of two made-for-television motion pictures during the following year: *Raid on Entebbe* and *Victory at Entebbe*. A number of books are also released, including Yestayahu Ben-Porat, Eitan Habert, and Zeev Schiff, *Entebbe Rescue* (New York: Dial Press, 1977); Max Hastings, *Yuri: Hero of Entebbe* (New York: Dial Press, 1979); Yehuda Ofer, *Operation Thunder—The Entebbe Raid: The Israelis' Own Story* (New York: Penguin Books, 1976); and William Stevenson, *90 Minutes at Entebbe, with Material by Uri Dan* (New York: Bantam Books, 1976).

A Caravelle III, with 21 passengers and preparing for departure to Bangkok, is captured on the ground at Ho Chi Minh City's Tan Son Nhut Airport on August 28 by a lone assailant with a grenade. After the others are released, police rush the plane; the unstable pirate drops his grenade, killing himself and damaging the airliner beyond economical repair.

Seven masked men come aboard a B-707-328 at Ajaccio on September 7 and set dynamite charges, which explode destroying the aircraft on the ground.

The second Jumbojet freighter, a B-747-228F, is received on October 13 and, when a joint announcement is made from London and Paris on November 2 confirming an end to Concorde production, airline executives have four aircraft in hand with three more awaiting delivery.

Overall, passenger boardings for the year increase 7.4% to 8,635,074 (cargo soars 26.4%) and AF is now second among world airlines in terms of passengers carried over international routes. The loss of \$34 million on the Concorde service, together with rising total expenses, results in an \$80-million net loss for the year. The government, meanwhile, delays its subsidy payments, thereby increasing the company's debts and financial charges.

A third Concorde is delivered and the fleet in 1977 comprises, in addition to the SSTs, 17 B-747s, 8 A300B2-1Cs, 27 B-707-328s, 20 B-727-228s, 1 B-737-228, and 28 SE-210s. All of these are now given new livery; as introduced on Concorde the previous year, the color schemes feature white fuselages with large blue titles and red, white, and blue flashes on tails.

For their introduction of Concorde the previous year, AF and **British Airways, Ltd. (2)** in January share the 1976 "Airline of the Year Award" from *Air Transport World* magazine. The first B-747-228B Combi (BC) is accepted on April 4 as a B-707-328, the *Chateau de Pan*, is sold to **Royal Air Maroc**.

A Concorde en route from Washington, D.C. to Paris with 71 aboard makes a nonscheduled stop at Halifax, Nova Scotia, on April 13 because of engine failure.

On August 12, Egyptian student Tarek el-Khatr hijacks a Cairo-bound A300B2-1C with 242 passengers just after takeoff from Paris and forces it to land in Brindisi, Italy. The pilot manages to push the pirate out of the cabin and into the arms of police as the aircraft is being refueled.

On September 22, President Jimmy Carter approves a Transportation Department decision to allow the Anglo-French Concorde to land at any U.S. airport upon agreement of local officials. The second B-747-228BC is received on September 30.

After months of noise-monitoring tests demonstrate that the SST can meet U.S. environmental requirements, daily Paris to New York Concorde flights commence on November 22. The inaugural day is every bit as spectacular as that at Washington, D.C. had been the year before. At 8:30 a.m., a company SST, whose 100 passengers had paid \$850 each, arrives simultaneously with a unit from **British Airways, Ltd. (2)**. As before, ceremonies and speeches for the media mark the occasion.

A strike by pilots and technicians ground the airline on November 27, except for its Concorde service. En route from New York to Paris on December 1, another Concorde develops engine trouble and is forced to make an emergency landing at Shannon. A 24-hour national strike on December 1 shuts the carrier down.

A second strike, seven days later, forces the airline to cancel 103 of its 165 scheduled flights. A Concorde is required to make an emergency landing at New York (JFK) on December 11 when one of its four engines fails. During the year, a management contract is signed with **Air Gabon, S.A.** A total of 9,255,225 passengers are carried. The French government now agrees to pay for losses caused by Concorde service, as well as the costs associated with the carrier's transfer from Orly Airport to Charles de Gaulle.

The workforce totals 32,383 in 1978. Engine problems continue for the Concorde. On January 9, a SST, en route from New York to Paris with 35 aboard, is forced by an engine oil leak to return to New York (JFK).

On January 26, a new relationship between the airline and the government is established by means of a management contract. Under terms of the renewable document, the airline is seen as an independent agency that must generate an annual profit. It is given the freedom to determine its long-term policies and to halt service on "artificial or unprofitable" routes that had previously been flown because they were in the "public interest."

At a cost of \$94 first-class and \$70 economy-class, the airline begins haute cuisine service between Houston and Mexico City on March 19.

On April 4, in accordance with a previous agreement, the carrier begins twice-weekly A300B2-1C flights from Paris to Moscow. These are the first flights into the Soviet Union made by a non-Russian manufactured wide-body jetliner. Also in April, an alliance is signed with **Malev Hungarian Airlines** providing for joint operations on the Paris-Budapest route. The first B-747-228BC joins the two B-747-228Fs in expanded air cargo service. On August 7, a B-747-228BC is received; it is followed by receipt of a third B-747-228F two days later.

Air Alsace, S.A. offers replacement service for the major from Strasbourg to Milan and London (LHR). AF enters the low-fare game on December 24 by offering New York to Paris roundtrip flights for \$360 in the off-season and \$389 in peak season.

Boardings pass the 10-million mark for the first time, up 8.5% to 10,115,000, and freight grows 13.3%. Total revenues exceed \$2.2 billion, and, despite a \$23 million loss for the Concorde service, a net profit of \$60 million is posted.

The carrier joins **British Airways, Ltd. (2)** in beginning service between Texas, Paris, and London on January 15, 1979, by way of Washington, D.C. The Texas-D.C. leg is flown subsonic by crews from **Braniff International Airways**, as the overall number of SST frequencies between Paris and Washington, D.C. is doubled to four. The inaugural flight is made in spectacular fashion. After a flight of 2 hrs. 17 min. at Mach 0.95, the American pilots bring an aircraft from each line onto the parallel runways of the Texas airport within 2 sec. of one another. Three weekly roundtrips occur thereafter.

In February, a joint-venture agreement is signed with **LOT Polish Airlines** under which the two companies agree to timetable coordination and revenue-sharing on their routes from Poland to France.

While taxiing on the ground at Frankfurt on March 12, the SE-210 Caravelle III *Dauphin* with 6 crew and 35 passengers collides with a fence and obstruction lights marking construction work, rupturing its right wing tank and losing fuel; all aboard are safely evacuated and there is no fire.

Another B-747-228BC is received on March 28; it will be followed by a B-747-228B on April 28.

Meanwhile, a B-747-128 suffers damage to its wing tip on April 5 after striking a light pole off the runway at New York. On May 15, a new low-cost, high-density Jumbojet service, Air France Vacances, is opened to the French West Indies. The experiment grows to include two dedicated B-747-128s and two A300B2-1Cs.

Service on the trans-Siberian route ends following the Soviet invasion of Afghanistan. Another B-747-228F enters service on September 18 and a Concorde, minutes after takeoff for Paris from New York on October 30, comes within 100 feet of a collision with USAF fighter planes flying in a loose formation at the wrong altitude off the southeast coast of New Jersey.

Bombs are exploded at the carrier's Rome office on December 24, causing damages, but no injuries. The Armenian Secret Army for the Liberation of Armenia claims responsibility.

The route network at year's end stretches 600,000 km. with visits made to 160 destinations.

Freight accelerates 13.4% during the year and passenger bookings rise 6.7% to 10,789,000. Total revenues of \$2.5 billion are earned, but as expenses grow, the net profit drops to \$50.3 million. Still, the latter figure is generated without large subsidy. At the same time, the company is able to finance most of its investments from its own revenues.

Airline employment in 1980 stands at 33,312. Three armed Lebanese are seized as they attempt to board a jetliner at Beirut on February 1. They reportedly plan to hijack the craft to draw attention to the disappearance of Libyan Shiite spiritual leader Imam Musa Sadr.

Two more B-747-228BCs arrive on February 29 and October 17, respectively. Meanwhile, an alliance is signed with **CSA Czechoslovak Airlines** in May providing for joint services on the Paris-Prague route. Unable to accommodate the request from AF and **British Airways, Ltd. (2)** for an increase in frequencies between Washington, D.C. and Dallas-Fort Worth during the upcoming summer season, **Braniff International Airways** on May 31 is forced to cancel its subsonic Concorde use.

A local French Army bomb disposal team is called to Le Raizet Airport at Pointe-a-Pitre, Guadeloupe, on September 17 to deactivate an explosive affixed by some unknown assailant to the hull of a company B-737-228. Unfortunately, something goes amiss during the operation and the bomb explodes, killing the ordnance specialist working on it. The aircraft is badly damaged by the blast.

Business-class service is inaugurated on the New York route on November 1, and is extended to other routes by December 31. Meanwhile, cabin personnel call a one-day strike on December 2 to protest the company's disciplinary action against 11 coworkers.

Despite deteriorating world economic conditions, boardings still increase 1.5% to 10.9 million, and freight traffic rises 4.9% to 1.56 billion FTKs. Operating revenues jump 19% to FFr 14.85 billion (\$2.98 billion), but expenses (led by soaring fuel prices) force the net profit down sharply to \$2.35 million. The impact of the 1979 oil price increases are less severe than those of 1973, primarily because the company is now spacing out its fuel contracts over many months and because it is able to adjust fares to compensate.

Reacting to overcapacity and mounting expenses, belt-tightening measures are adopted in 1981. Even the heavily unionized workforce is reduced, by 0.4%. The government announces on January 6 that it will cover 90% of the losses incurred by the carrier's Concorde operation over the next two years.

During departure from Washington, D.C. (IAD) for Paris on February 19, a left-hand tire on the main gear of a Concorde explodes; the flight, with one engine shut down because of damage-induced vibration, diverts safely to New York (JFK).

In March, the number of Paris to New York (JFK) SST frequencies is increased from 7 to 11 flights each week, 2 of which continue on to Washington, D.C. (IAD) and 2 to Mexico City. Yet another B-747-228BC is delivered on March 25 and the last SE-210 service is flown on March 28.

The last eight Caravelles are retired on April 1; five B-707-328s share the same fate later in the year, replaced by three A300B4-2Cs, a B-747F, a B-747-228C, and four B-727-228s. Business-class is substituted for first-class on European routes, and a new economy-class is introduced.

Plans to change to two-man cockpit crews in the new "Baby Boeings" bring a pilots' strike; implementation of the B-737 flight crew change is only slightly delayed.

On July 4, it is reported that the French government will compensate Israeli survivors held captive by Palestinian and other terrorists at Entebbe in 1976. Israeli Prime Minister Menachem Begin speaks at the Tel Aviv ceremony commemorating the fifth anniversary of the death of Lt. Col. Yehonathan Netanyahu in the rescue raid.

In a telephone call to the company's Beirut office on November 15, a woman states that Armenian extremists, seeking the release of Dmitri Giorgi from a French prison, will blow up an AF plane in flight; no such disaster occurs.

Freight grows 5% to 1.64 billion FTKs and enplanements are up 6% to 11,611,000. A net loss of \$67 million is reported on total revenues of \$2.9 billion.

Airline employment stands at 34,594 in **1982**, a 3.4% boost. Cost reduction measures continue.

An A300B4-2C, with 13 crew and 111 passengers, suffers an uncontained engine failure during the takeoff roll from Sana'a, Yemen, on March 17. The departure is aborted and although the aircraft is damaged, there are no fatalities.

Four Concorde routes are suspended: Rio de Janeiro-Caracas on April 1 and Washington, D.C.-Mexico City on November 1. Paris-Moscow-Tokyo trans-Siberian service is restarted on July 3. The last B-707-328 flight is made—Tunis-Paris—on October 28. A new route is opened to Recife on November 2 while, later in the month, the number of weekly Concorde frequencies from Paris to New York is reduced to seven.

The first of 12 B-737-228s ordered the previous year is delivered on December 15 and during the year five B-747-128s are withdrawn.

The weakening franc, the Falklands War, and the world recession cost the carrier. Passenger boardings grow only 0.1% to 11,607,000 and freight traffic is up only 2.8% to 1.69 billion FTKs. On total revenues of \$2.7 billion, an operating profit of \$20 million is earned; however, an overall net loss of \$120.5 million is suffered.

The workforce grows 0.2% to 34,652 in **1983**. The manager of the carrier's Baghdad office dies of injuries received on March 5 when a booby-trapped package explodes. Two days later, the Iraqi press agency reports that police dismantled a second bomb the same day at the offices of **Kuwait Airways, Ltd.**

Also in the spring, the Concorde visits Dublin for the first time, while the SST also launches the first of 30 charter flights to be flown by December. Meanwhile, the carrier takes the lead in mounting opposition to European airline liberalization. The last of 12 B-737-228s is delivered in June and one more B-747-128 is retired.

En route from Vienna to Paris on August 27, a B-727-228 with 119 passengers is commandeered by four Arabic-speaking Lebanese gunmen, who force it to land at Geneva and Sicily, where all but 20 passengers and 7 crew members are released. The aircraft arrives at Tehran on August 28, where the pirates demand that France cease its military aid to Chad, Iraq, and Lebanon and release Lebanese prisoners from French jails. Ten more hostages are released and negotiations continue. The deadline set by the gunmen expires on August 29 and a new one is set as talks continue. The next day, Iranian authorities block the takeoff of the jetliner after its hijackers pledge to blow it up in flight over Iraq. Unable to escape, the hijackers release their remaining captives and surrender to Iranian authorities.

Stringent cost controls and stabilized fuel prices contribute to a fiscal about-face during the year. Passenger boardings increase 0.9% to 11,715,000 and freight jumps 19% to 2.01 billion FTKs; a net \$11.2-million profit is reported.

The payroll is increased again in **1984**, up 1.7% to 35,232. On January 18, a suitcase explodes in the cargo bay of Jumbojet carrying 261 people on a flight from Pakistan to Paris. The Boeing aircraft is forced to return to Karachi for a safe emergency landing.

Also in January, the management contract with the French government is renewed.

On March 7, Algerian student Ali Chohra, claiming to have explosives, hijacks a B-737-228 with 68 aboard en route from Paris to Frankfurt. He orders it flown to Geneva where Swiss police, disguised as airport staff, overpower Chohra, who has made no demands, nearly five hours after the plane lands; all of the passengers and crew are freed in safety.

The first of three A310-200s (from a five-plane order) to be delivered on the year is placed in service in the spring, along with a seventh

B-747F. New routes are opened to Larnaca and from Marseilles-West Indies. In early July, Marceau Long becomes chairman.

On July 31 three hijackers seize a B-737-228 over Luxembourg with 64 aboard. En route from Frankfurt to Paris, they force its crew to fly to Tehran. The next day, the pirates threaten to start killing their hostages unless the French government frees five Iranians jailed in 1980 for an assassination attempt against former Iranian Prime Minister Shapu Bakhtiar. After making the threat, the hijackers release nine women and a child. On August 2, the remaining captives are taken off the little Boeing, which is blown up just before the pirates surrender. The passengers and crew return to Paris on August 3, amid speculation that the Iranian government may have assisted in the deed.

The number of Concorde passenger charters for the year is increased to 64.

Passenger boardings climb 2.9% to 12,050,000, and cargo jumps 14.8% to 2.41 billion FTKs. The French flag line now handles more freight than any other European airline, save **Aeroflot Soviet Airlines**. Total revenues accelerate 13.9% to \$2.4 billion, allowing a \$76-million net profit, a six-fold increase.

Employment climbs 1% in **1985** to 35,598, as recovery from the woes of the early '80s appears complete. Air France Vacances flights continue and Paris-Naples service is begun in September. A B-747-228BC with 273 passengers must be written off at Rio de Janeiro on December 2 after one of the engine reversers fails to operate. The plane veers off the runway while landing, but there are no casualties.

Bookings this year jump 8.9% to 12.5 million, and freight is up 3.6% to 2.5 billion FTKs. Total revenues rise 8.9% to FFr 30.40 billion (\$4.33 billion), leaving a net profit of FFr 729 million (\$112.9 million) (with Concorde showing a \$9.6-million profit). In terms of total freight carried on the year, AF ranks 4th among all world airlines. It is 19th in terms of passengers carried, 17th in fleet size, and 6th in total number of employees.

The payroll is reduced by 0.9% in **1986** to 35,269. Concorde's tenth anniversary is celebrated on January 21. In a decade of service, the company's SSTs have flown more than 600,000 passengers and operated over 47,000 flight hours. The fleet now comprises 7 SSTs, 24 B-747s, 17 A300B4-2Cs, 29 B-727-228s, 5 A310-200s, 6 B747Fs, and 13 B-737-228s.

A B-747-337 is acquired from **UTA French Airlines, S.A.** on March 28 and a sixth A310-200 is delivered in April, the same month nonstop Paris-Tokyo service begins. Miami and San Francisco become destinations and on July 1, the fortieth anniversary of the New York route is celebrated.

A Lyon service is launched in cooperation with **Austrian Airlines, A.G.** Two more B-737-228s are delivered, one each in August and September. On September 18, another B-747-228BC is ordered and is received in October, joining a B-747-228F received on October 29. At year's end, the Jumbojet received in March 1981 is retired and the French government renews its subsidy of Concorde operations.

Passenger boardings dip 3.6% to 12,045,000 while cargo is up by 11.2% to 2.67 billion FTKs. Revenues jump 4% to \$4.74 billion and the net profit falls to \$93.5 million.

There is only one change in employment during **1987** as former government official Jacques Friedmann is named chairman, succeeding Marceau Long who remains as honorary chairman. The route network grows by the addition of San Domingo as a destination.

When the company, through its new **Europair, S.A.** subsidiary, begins flying into the new London City Airport, it becomes the only airline to service all four airports of the U.K. capital. In April, a second weekly service is initiated from Paris to Tokyo over the trans-Siberian route, while Los Angeles to Tahiti service becomes twice weekly in late May. Also in May, the carrier unveils its Pelican computerized shipment tracking system at New York (JFK); the system keeps an eye on freight shipments between 12, and later 18, major world cities.

Roundtrip Jumbojet Paris to Boston service is inaugurated on June 4 and additional B-747-228B roundtrips are added on the present routes

between Paris and Washington, D.C., Miami, New York, Houston, San Francisco, Los Angeles, and Chicago. Nonstop B-747-228B weekend *Riviera Express* flights are flown from New York to Nice between June 6 and September 12.

Meanwhile, AF is also a founding member of the Amadeus computer reservations system, scheduled to become operational in two years. Orders are placed for 16 B-747-428s, which join a requested shopping list of 25 A320s, 7 A340s, an A310, a B-747-328C, and a B-747-228F; powered by CFM56-5 turbofans, the first A320-131 destined to this launch customer makes its inaugural flight in October.

Customer bookings recover to climb 11.4% to 13,421,000 while freight rises 9.7% to 3.05 billion FTKs. Revenues advance to \$5.2 billion and expenses allow a net profit of \$127.3 million.

The workforce is increased by 1.8% in 1988 to 35,894 and the fleet of Chairman Friedman now includes 7 Concorde, 26 B-747-228/328s, 8 B-747-228Fs, 16 A300B4-2Cs, 26 B-727-228s, 14 A310-200s, 16 B-737-228s, and 4 A320-111s.

In January, Philadelphia becomes the ninth U.S. destination served from Paris (CDG); simultaneously, the company joins with American Express to offer, through February 20, roundtrip transatlantic Concorde service to those passengers using an Amex card to purchase regular, first-class, subsonic roundtrips. The initial daily Paris to Philadelphia B-747-228B frequency is increased to twice daily in March. During the same month, weekly Paris to Santo Domingo flights commence, via Pointe à Pitre, Guadeloupe, and another B-747-228BC is placed into service.

Twice-weekly New York-Nice Jumbojet *Riviera Express* service is operated between April 16 and September 24. Meanwhile, also in April, Vice President-Commercial Jean-Didier Blanchet is appointed president when Henri Sauvan retires. Also this month a B-747-128 is leased to **Air Inter, S.A.** The new subsidiary, Sodexi, an international express cargo operation, is established. The first nonstop Paris to Tokyo service begins in May, bringing the total of weekly flights from France to Japan to nine. Joint cargo flights begin in cooperation with **Japan Air Lines Company, Ltd. (2)**. In the Caribbean, the company undertakes four-times-per-week direct frequencies from St. Martin to San Juan and daily service from San Juan to Pointe à Pitre.

While on low pass along the runway at Basel-Mulhouse Airport on June 26, Flight 296C, an A320-111 with 6 crew and 130 passengers, in a demonstration for **Air Charter International, S.A.** on behalf of the Mulhouse Flying Club, fails its initial climb. Upon reaching an altitude of 100-ft., the brand-new Airbus descends into trees at the end of the runway, continues into a forest, and catches fire (three dead).

On July 24, a Jumbojet with 275 aboard swerves off the runway at New Delhi and crashes into a field; no serious injuries are reported. Late in the summer, specially designed chairs for the mobility-impaired are installed aboard those Jumbojets linking Paris with nine U.S. cities. As a result of the Socialist victory in the summer elections, Chairman Jacques Friedman is replaced by Bernard Attali, a former chairman of the GAN state insurance corporation and a twin brother of one of President Francois Mitterrand's top assistants.

The subsidiary, **EuroBerlin France, S.A.**, is established with **Deutsche Lufthansa, A.G.** on September 9 to fly services into West Berlin. In order to get around Allied restrictions on West German operations into the divided city, 52% of the new airline is owned by the French flag carrier, which appoints its general manager for Germany, Jean Signoret, as general director of the new enterprise. Paris to Tehran flights resume in October and direct biweekly service from San Juan to Paris via Pointe-à-Pitre is introduced on November 4. Three days later, **EuroBerlin France, S.A.** inaugurates Boeing 737-338 services from Cologne, Bonn, Frankfurt, Munich, and Stuttgart to West Berlin's Tegel Airport. Also in November, daily flights begin from Paris to Belfast. These are followed in December by direct Jumbojet freighter service from Lyon and Mulhouse to New York.

Daily Paris-New York roundtrip Concorde flights continue and, during the year, a total of 269 special and charter supersonic flights are un-

dertaken. Ground workers go out on a strike that will last until early in the next year. Their dispute with the employer will cost AF \$62.5 million when 700 flights must be cancelled.

During the year, the company joins with the French postal authority to form the SODEXI express package delivery system. Together with **Deutsche Lufthansa, A.G.**, **SAS (Scandinavian Airlines System)**, and **Iberia Spanish Airlines (2) (Lignes Aereas de Espana, S.A.)**, AF begins to participate in the joint-venture Amadeus computer reservations system. At year's end, a profit-sharing plan is offered to the carrier's workers.

Passenger boardings increase 10.3% to 14,806,000 and freight jumps 7.2% to 3.16 billion FTKs. Revenues advance 8% to \$4.95 billion and allow a net profit of \$190.5 million.

The number of workers grows by 3.4% in 1989 to 37,122. As the year begins, the carrier is the nation's largest exporter of services and sixth largest overall exporter. A weekly B-747F flight is added in February between Paris and Houston. New York-Lyon direct B-747-338 flights commence in March, the same month in which a new cooperative agreement is signed between President Attali and **Air Inter, S.A.** CEO Pierre Eelsen. Under terms of the new pact, AF will operate domestic services within France on behalf of AI and AI will fly regional European routes on behalf of AF, including London (LGW), Madrid, Ibiza, Athens, and Rome, and closer technical cooperation will occur.

An agreement is signed with Smithsonian Institution on April 13 that provides for the donation of a Concorde within the next decade as some of the SSTs are retired. Also in April, Houston-Paris B-747F service is increased by the addition of five more flights each week, while a weekly nonstop B-747F frequency is opened from Lyon to Chicago.

In May, service is started twice weekly from New York to Lyon, via Paris, and B-747F flights commence from Paris to Newark. Also in May, a marketing alliance is signed with **Austrian Airlines, A.G.** providing for code-sharing flights on the routes from Paris and Nice to Vienna.

Twice-weekly *Riviera Express* service resumes in June and a marketing agreement is signed with **Adria Airways (2)** allowing code-sharing service on the route from Paris to Ljubljana. At the same time, weekly roundtrips begin between Paris and Palermo, with a second weekly service added for the July-September summer season. Simultaneously, a three month experimental smoking ban is put into effect on selected flights from Paris to Geneva, Milan, and London.

A unique, all-inclusive Bastille Day package, costing \$3,999 per person, is offered July 12-17, including New York-Paris roundtrip airfare. At this point, the overall route network covers 989,200 kilometers and serves 199 destinations in 79 nations.

En route from Paris to Algiers on August 23, an A300B4-2C with 100 passengers is captured by a lone assailant claiming to have a bomb. Denied clearance to land at three desirable cities, the hijacker allows the Airbus to complete its service to Algeria, where he surrenders.

In September, AF becomes a member of the **USAir Frequent Traveler Program**; members of the clubs of each airline are able to earn mileage credits from either company. During the same month, the experimental ban on smoking aboard flights from Paris to Geneva, Milan, and London becomes permanent.

On October 30, twice-weekly service is introduced from New York to Mulhouse via Lyon; simultaneously, weekly New York-Lille-Strasbourg flights commence. Paris to Newark passenger flights begin in November, along with twice-weekly flights from Paris to Dubrovnik and Ljubljana.

In November, the carrier assumes a 20% interest in a company established by **TAT European Airlines, S.A.** to lease Fokker 100s. Other markets entered during the year include Antalya, Bari, Courchevel, Kilimanjaro, Palermo, Bergen, and Innsbruck. During the fall, a far-reaching cooperative agreement is signed with **Deutsche Lufthansa, A.G.** covering a variety of marketing, training, and operational activities.

In December, **EuroBerlin France, S.A.**, the carrier jointly owned with **Deutsche Lufthansa, A.G.**, receives \$7.1 million in new capital from its French parent to provide the funds needed for development. At the same time, an interline-ticketing agreement is signed with London

City Airways, Ltd. covering the route to Paris from London's Dock Lands STOLport (LCY). At year's end, weekly B-737-228A flights are launched from Belem, Brazil to Cayenne, Fort-de-France, and Point-a-Pitre, allowing passengers en route to Paris to make connections from those points rather than Rio de Janeiro.

Customer bookings for the year climb 8.7% to 16,095,027 while cargo swells 3.9% to 3.27 billion FTKs. Net profit falls, due largely to the establishment of the new subsidiary, to \$116 million.

The employee population reaches 39,000 in 1990, ninth largest in the world, while the fleet of 113 aircraft is 18th in rank. A Concorde en route to Paris is forced to return to New York (JFK) on January 1 after suffering an engine failure at Mach 1.39; no injuries are reported. The New York-Lille-Strasbourg frequency becomes twice weekly on January 7.

Also in January, a 54.6% interest is taken in **UTA French Airlines, S.A.**, a move that also gives the state carrier control of the jointly held domestic carrier **Air Inter, S.A.** The two carriers join **Air Charter, S.A.**—the parent of all three—on January 12 as subsidiaries of the new Air France Groupe.

As one of the conditions of the takeover, a number of regional routes must be turned over to smaller French airlines, such as **Air Vendee, S.A.** and **Air Littoral, S.A.** Also in January, a second New York-Paris Concorde flight is added, four times per week, while daily subsonic service is inaugurated from Paris to Newark and Washington, D.C. In conjunction with American Express, a free Concorde upgrade is offered for first-class New York-Paris passengers who use the AE card to purchase their tickets.

A strategic marketing alliance is signed with the Italian flag carrier **Alitalia, S.p.A.** Also in February, the decision is taken to gradually merge **Air Inter, S.A.** and **UTA French Airlines, S.A.** into AF. Esterel and Ecole de Pilotage Amaury de la Grange, a piloting school, are purchased.

Late in the first quarter, a new leasing company, AF Partnairs Leasing, is established to finance aircraft for the flag carrier through sales and leaseback transactions. Shareholding is divided between AF (45%), the aircraft leasing company Partnairs (45%), Banque Nationale de Paris (6%), and Suez Group (4%). Also in March, weekly nonstop roundtrips are resumed between Nice and New York (JFK).

On April 9, AF increases its nonstop Tokyo-Paris service to daily, using B-747-428s. From April 15 through June (and again from September 15-December 15), New York to Paris Concorde service is increased to four times per week. The six-times-per-week flights from Los Angeles to Paris become daily on April 28; also in April, Paris-Chicago A310-300 flights become daily. Paris to Boston service is increased from two to four flights each week in May. It is announced that the carrier will spend \$65 million during the remainder of the year to enhance its business-class services with special Espace 2000 seats, new meal choices, and a renovated business-class lounge at New York (JFK).

Late in the month, Chairman Attali defends the carrier's takeover of **UTA French Airlines, S.A.** and **Air Inter, S.A.** against a charge by the European Commission alleging abuse by AF of its dominant market position in France. At the same time, as the result of a new four-year agreement between France and the government of the Philippines, daily service is inaugurated from Paris to Manila via New Delhi, Bangkok, and Hong Kong.

Beginning on June 8, thrice-weekly nonstop roundtrips are initiated between Paris (CDG) and Washington, D.C. (IAD). On June 23, Paris to Houston service is increased from five to six frequencies each week and one more Paris to Boston flight is added on June 27.

Also in June, a second weekly Nice to New York roundtrip is offered, on a route the airline announces has become year round, and AF and **UTA French Airlines, S.A.** commence joint fuel purchases. The company joins with **Air Inter, S.A.**, **TAT European Airlines, S.A.**, and **Intercontinental Service, S.A.** to crate **Aeropostale, S.A. (2)**. The major turns over to the new cargo line the 15 F.27-500s it has been operating on behalf of La Poste every night for the past 20 years.

Paris to Chicago flights become daily on July 3 as do those from Los Angeles to Paris. In August, B-747 service from New York and Nice be-

comes twice weekly, while twice-weekly A310-300 nonstops are added from Paris to Beirut, and two daily A310-300 nonstops begins from Paris to Washington, D.C. In September, weekly nonstop B-747-400 passenger flights are inaugurated from Paris to Beijing and weekly B-747F flights are briefly resumed from Paris to Kuwait.

Twice-weekly, all-cargo services, coordinated with **Cathay Pacific Airways (Pty.), Ltd.**, are opened in October from Paris to Hong Kong and weekly B-747F service begins from the French capital to Madras and Beijing. Following the net loss of \$31 million in the year's first half, the airline now introduces a severe cost-cutting program named Cap 93. Under its terms, 8% of the workforce (3,000) will be cut over the next two years. Among its points are transfer of some headquarters personnel to operations; a reduction in leasing of foreign aircraft; suspension of building work and computer applications deemed nonvital; postponement of ground investments not underway until 1991; a freeze on hiring (except for cockpit crews); dropping of unprofitable routes; and the hiring of a consulting firm to review costs and organization.

During the fall, the number of weekly Paris-Prague flights is increased from five to seven per week. Also in this period, the merger process with **UTA French Airlines, S.A.** and **Air Inter, S.A.** accelerates. The three airlines begin sharing aircraft, combine ticket-reservation operations, and begin route rationalization. For the present, the strongest of the three companies within any given country or on a particular route becomes responsible for the operations therein or thereon of all three. As an example, AF withdraws from **UTA French Airline, S.A.**'s Paris to San Francisco route.

In November, the European Commission approves of the acquisition of **UTA French Airlines, S.A.** and **Air Inter, S.A.**, but requires the flag carrier to divest itself of its 35% interest in **TAT European Airlines, S.A.** The French government agrees to give priority to non-AF airlines on any new international routes and to designate airlines not in the group to operate over busy domestic routes. Also in November, marketing and other alliances are signed with **Air Austral, S.A.**, **Air Seychelles, S.A.**, and **Air Madagascar, S.A.** The arrangement with Air Seychelles provides for a revenue pool on a joint Paris (CDG) to Mahe service operated with Air Seychelles, S.A. aircraft. The Air Madagascar, S.A. deal calls for the contract provision of passenger and freight handling, Jumbojet maintenance, and code-sharing on a single route from the French capital to the African island nation.

Weekly B-747-328 passenger frequencies to Hong Kong commence in December. Passenger boardings decline 2.3% to 15,731,131, again 18th best in the world, and freight actually climbs 4.8% to 3.43 billion FTKs. Only **Federal Express, Deutsche Lufthansa, A.G.**, and **Japan Air Lines Company, Ltd. (2)** flies more cargo than AF. It is on the financial side that the impact of war and recession is seen. Revenues slip 1.2% to \$5.8 billion, which is still eighth best in the world, but expenses bring an operating loss of \$128 million. The previous year's net gain turns into a \$149.6-million loss. Air France Groupe (**Air France, Air Inter, S.A.**, **UTA French Airlines, S.A.**) earns FFfr 34.43 billion (\$9.6 billion) in revenues and has a \$121.5-million net loss.

The payroll grows a slight 1.8% in 1991 to 39,700 and the fleet now includes 7 Concorde, 1 owned and 3 leased A300B2-1Cs, 2 leased and 9 owned A300B4-2Cs, 7 A310-203s, 4 A310-304s, 2 owned and 5 chartered A320-111s, 15 A320-211s, 5 B-727-228s, 9 B-727-228As, 7 owned and 11 chartered B-737-228As, 5 leased B-737-33As, 2 each chartered B-737-3B3s and B-737-4B3s, 7 owned and 6 leased B-747-128s, 2 leased B-747-228s, 5 owned and 5 chartered B-747-228B/Cs, 1 each B-747-2D3B and B-747-2B3F, 3 leased and 5 owned B-747-228Fs, 1 B-747-3B3C, 3 B-747-428s, 2 B-747-428Cs, 2 leased B-767-27EERs, 1 B-767-37EER, and 2 B-767-3Q8ERs. In addition, for operation of night mail services, 15 Fokker F.27-500s and 2 Transall C-160Ps are leased from and operated for the postal service. Orders are outstanding for 3 A320-211s, 7 A340-311s, 2 B-737-3B3s, 8 B-737-4B3s, 10 B-747-428s, 1 B-747-428C, and 5 B-747-428Fs.

In January, an alliance is signed with **Korean Airlines/Korean Air (KAL)** covering joint freight flights on the Paris-Seoul route. The cargo

operations of **Air Inter, S.A., UTA French Airlines, S.A., AF, and Air Charter, S.A.** are all integrated at the beginning of the year as the French government pledges to invest FFr 2 billion (\$328 million). In May, a new 18,000-sq.-ft. cargo facility is occupied at Miami (MIA).

In August, a FFr 1-billion (\$164-million) loan is negotiated with the Banque National de Paris; the BNP receives 10% shareholding. Later in the month, a cooperative agreement is signed with **Aeroflot Soviet Airlines** for collaboration on the establishment of a commissariat; building and operation of a cargo center for Pulkowo Airport (Leningrad); expansion of **Aeroflot Soviet Airlines** operations from Kiev; and construction and operation of international-class hotels at Moscow and Leningrad.

An alliance is signed with **Aeropostale (2)** in July providing for the sharing of aircraft that will fly AF passengers during the day and cargo at night. In August, the carrier holds negotiations with Banque Nationale de Paris concerning the financial institution's participation in a government-approved FFr 1-billion increase in the airline's capitalization.

The first of five B-737-528s to be delivered by year's end arrives in early September. In October, it is announced that **UTA French Airline, S.A.'s** routes will be merged and the downtown Paris headquarters will be sold for FFr 1.6 billion (\$290 million), with its offices relocated to Charles De Gaulle International Airport. A plan to acquire significant minority shareholding in **Sabena Belgian World Airlines, S.A.** is put on hold.

The U.S. State Department warns Americans on October 26 not to board AF Flight 140 from Paris to Amman or Flight 141 from Amman to Paris, as both make intermediate stops in Beirut, for which U.S. passports are not valid. Ground crews call a 24-hour strike on November 24 to protest a company plan that will cost up to 3,000 jobs. At New York (JFK) in December, AF becomes the first European airline to interface with the Automated Manifest Systems (AMS) of the U.S. Customs Service.

Customer bookings plunge 15.8% to 13,228,380 and cargo falls 5.5% to 3.24 billion FTKs. President Bernard Attali's carrier is only able to increase its revenues by 1.4% in this time of recession to \$10.3 billion. The operating loss is cut to \$37.79 million, but there is a net loss of \$127.3 million. Cumulative deficit is now FFr 4.4 billion (\$800 million).

The workforce is reduced by 2.5% in 1992 to 63,370 and it is announced in January that the company may acquire an interest in **CSA (Czechoslovak Airlines)** upon its privatization. In early March, an agreement is signed with Caisse des Depots and the European Bank for Reconstruction and Development under the terms of which each will take a 20% stake in CSA for some \$60 million. Replacing the services previously operated jointly with **Brymon European Airways, Ltd.,** Le Club-class flights with Avions de Transport Regional ATR42s are initiated on March 30 from Paris to London (LCY).

On April 5, the Belgian government approves plans, long on hold, for the French flag carrier to soon take a 37.5% interest in **Sabena Belgian World Airlines, S.A.** AF and its Belgian partners, led by Groupe Bruxelles Lambert, agree to pay BFr 6,000,000,000,000 (\$179.6 million) and place their shares into a newly formed holding company, two-thirds of which is owned by the airline. The deal is signed on April 21. Other provisions of the multifaceted agreement call for cooperation on sales and reservations, maintenance, information systems, and freight, as well as harmonization of African services and a block space deal on the Paris-Brussels service. Also in April, company officials meet with their counterparts from **British Airways, Ltd. (2)** plus British Aerospace and Aerospatiale, and U.K. and French government safety experts to find a permanent fix for problems with the rudder of Concorde.

Weekly scheduled services are inaugurated to Hanoi on May 1, via Bangkok and Ho Chi Minh City. Bordeaux, Nantes, and Strasbourg are linked to London (LGW) daily after the Paris-London (LGW) frequencies previously provided are suspended, along with flights from London (STN) and Aberdeen. Services are also reorganized to allow an increase in frequencies between Paris, Nice, and London (LHR). Also in May, plans are announced for the creation of a huge luxury hotel group through the combination of the Societe des Hotels Meridien, 57%

owned by the carrier, and Kempinski AG, in which **Deutsche Lufthansa, A.G.** holds 42.6% shareholding.

One weekly Paris to Houston flight is added in June, giving the megacARRIER daily nonstop service to the five U.S. destinations of Newark, Washington, Houston, Chicago, and Los Angeles, in addition to twice-daily flights from New York. The **Sabena Belgian World Airlines, S.A.** arrangement comes into effect and the Czech government approves the **CSA (Czechoslovak Airlines)** plan. At the end of the month, the company and **Deutsche Lufthansa, A.G.** back away from their previously announced plans to merge their hotel operations. The company begins joint flights from Paris to Zagreb and Split in an arrangement with **Croatia Airlines.**

Plans are finalized in early July for a 40% investment in **CSA (Czechoslovak Airlines)** and joint operations with it and **Sabena Belgian World Airlines, S.A.,** including pooled aircraft orders. Under the arrangement, recession-afflicted AF is able to transfer its surplus B-737 orders to the Czech carrier. Late in the month, three B-737-228As are sold to **Ariana Afghan Airlines** to replace two Yak-40s and a Tupolev Tu-154M destroyed in rebel attacks on Kabul Airport two months earlier. Difficulties in formation of the **Sabena Belgian World Airlines, S.A.** partnership are encountered in August when the EEC's competition office head, Sir Leon Brittan, demands that the proposed agreement should be viewed under continentwide merger regulations.

During the first week of September, the U.K.'s biggest-selling cognac, Martell, links up with the carrier for what parent Seagram claims is one of the drinks industry's biggest sales promotions. Through Christmas, two return tickets to France will be offered for the price of one to all who purchase certain bottles of the liquor.

A ground handling agreement is signed with **Air Canada, Ltd.** in September while an alliance is also made with the Canadian carrier providing for block space usage on the Paris to Montreal route during winter months. The arrangements are prelude to a comprehensive alliance under discussion.

On October 12-13, in cooperation with Concorde Spirit Tours, an SST flying as *Sunchaser One*, piloted by Captains Claude Delorme and Jean Boye, establishes a new westbound round-the-world record. The AF Concorde covers the 25,262.842-st.-mi. route from Lisbon to Lisbon in 32 hrs. 49 min. 03 sec. (23 hr. 10 min. in the air), stopping only at Santo Domingo, Acapulco, Honolulu, Guam, Bangkok, and Bahrain.

The first "Baby Boeing" is delivered to **Ariana Afghan Airlines** on October 18. It is also reported in October that the company has lost \$310 million during the year's first half. As a result, another 1,500 staff cuts are announced, bringing the total planned to more than 5,000 (10% of the workforce).

With guidance and assistance from the J. P. Morgan bank in London, **CSA (Czechoslovak Airlines)** is privatized in October, at which time it is announced that AF will lead a consortium that will acquire a 32.8% stake. Under a Memorandum of Understanding signed between the two carriers and subject to approval by the two governments, the French carrier will contribute \$6 million in cash and \$14 million in payments in kind assistance in catering, engineering, pilot training, and maintenance. The remainder of the \$60-million shareholding will be acquired by the London-based European Bank for Reconstruction and Development, headed by Chairman Attali's twin brother Jacques, and the Caisse des Depots et Consignations; each will expend \$20 million.

The remainder of the East European carrier, valued at \$150 million and the first to find a Western shareholder, is divided between the Czech government (49.28%), the leading Czech insurance company (4.5%), with local Czech communities holding the remainder. The new owners pledge the funding necessary to begin modernization of the Czech airline's aging fleet, while AF is also contracted to provide maintenance, pilot training, and other technical assistance.

The number of frequencies from London (LHR) to Prague are increased under AF sponsorship to 13 per week. At the beginning of November, a comprehensive strategic alliance is signed with **Air Canada, Ltd.** Under its terms, the two will employ joint schedules, joint frequent

flyer programs, joint cargo, marketing, and tour offerings, and a variety of other passenger-oriented programs. Integration of **UTA French Airlines, S.A.** is completed by December 29 and, earlier, the subsidiary **Tourisme France International** and **Visit France** merge, taking the latter's name and selling the airline a 60% interest.

Passenger boardings for the year recover and increase by 3.4% to 32,707,937. Freight inches up only 0.7%, to 3.97 billion FTKs. Revenues are elevated 6.1% to \$11.18 billion, but expenses grow 9.2% to \$11.47 billion. The operating loss increases to \$285.24 million and the net loss skyrockets to \$617.43 million.

In 1993, Chairman Attali and President Blanchet oversee a workforce of 39,956—one worker for every 340 passengers carried. Effective January 1, the carrier signs an agreement with Euro Disney becoming the Paris-based theme park's "preferred air carrier" for 12 European nations. In February, Coup de Coeur ("impulse") fares are unveiled for last minute sales while Eurochallenge fares are simultaneously offered at rates 10% to 27% below Le Club-class. The first four A340-211s and three A340-312s enter service and a cooperative agreement is signed with **Vietnam Airlines** in February. At the same time, the board calls on nongovernment shareholders and bond issues worth FFr 3 billion (\$545 million) to help pay for fleet expansion and modernization. A marketing agreement is signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on March 28. Under its terms, the carriers agree to increase the number of nonstop flights between their two capital cities and to engage in code-sharing and joint marketing, cargo, and ground handling.

Agreement with five cockpit and cabin crew unions is announced at month's end. The agreement includes work rules and staffing changes that will, hopefully, save the airline FFr 750 million (\$135 million) per year. The flag carrier issues FFr 1.5 billion (\$272 million) in interest-bearing convertible bonds, guaranteed by CDC-Participations, a subsidiary of the Caisse des Depots.

On March 28, the company turns over its Paris-Dublin service to **Air Inter, S.A.** On April 1, Ireland, the U.K., Germany, and Italy also receive Euro Disney preferred air transport attention. Also during the spring, a most unusual fee is earned. Having missed his 11 a.m. Concorde flight from Paris (CDG) to New York (JFK) on March 28, a Saudi sheik, with an entourage of 19, turns down the use of a Jumbojet. Instead, he promises the company \$20 million (in travelers' checks) if a second SST can depart across the Atlantic within two hours. The challenge is met—although the captain flies in civilian dress.

A conservative government is elected in May. At this point, AF becomes one of 21 public concerns placed on a list to be privatized as soon as it can be returned to profitability.

New passenger services are begun to Yaounde, Split, Taipei, and Maputo and a cargo route is stretched to Bangalore. The company's Parisian hub is officially unveiled with the opening of terminal 2C at Charles De Gaulle International Airport. The subsidiary Sotair merges with Chorus Tours on June 22 to form the new company Jet Tours, in which AF obtains a 58.5% interest.

An agreement is signed with **Continental Airlines** on July 27, effective November 1, under which the two companies will blend their schedules and share passenger check-ins, allowing greater convenience for passengers traveling across the Atlantic. The alliance with **Vietnam Airlines** takes effect in August; training of pilots, cabin crews, and mechanics from the Southeast Asian nation begins.

The previous year's fiscal decline and a first-half loss of FFr 3.8 billion (\$670.2 million) brings October implementation of Phase 2 of the Return to Profitability program unveiled on September 15. The package is designed to save the carrier \$927 million within two years. Among its features are proposed new union agreements designed to produce \$135 million in annual savings through the elimination of 4,000 jobs, reductions in capital spending, outside contracting, a continued wage freeze, and the abandonment of 30 unprofitable routes, as well as a "donation de capital" (government bailout) of FFr 5 billion (\$881.8 million).

Employees at Paris (CDG and ORY) strike on October 20 in protest of the company's retrenchment plans, causing the cancellation of ap-

proximately 500 flights. Within three days, the strikes turn violent as police are called in to disperse workers occupying airport runways; six people are injured. While the company reports \$36 million in lost business, French Prime Minister Edouard Balladur refuses to use further force against the strikers, fearing a wave of additional job actions and violence. On October 22, the government asks the carrier to open new talks with its workers, who are still striking violently.

The government's "irrevocable" cost-cutting plan is abruptly revoked on October 25 in the face of the continuing and crippling airport strikes by company employees. AF Chairman Bernard Attali immediately resigns and the national transport ministry, with approval of Premier Edouard Balladur, replaces him with the cigar-chomping Christian Blanc, former chief of RATP, the public transportation system of Paris; Rodolphe Frantz becomes the new president/CEO. The same day, the 21 pilots sent out to Vietnam along with three chartered A320-111s take over **Vietnam Airlines'** regional routes from Hanoi and Ho Chi Minh City.

The struggling flag carrier joins with Christian Dior on November 4 to promote a new tie-in, whereby those who purchase certain fragrances will be able to purchase two AF tickets for the price of one.

On November 15, the carrier reports that all flights, except the Concorde link with New York, have resumed and approach routine frequencies. After voicing doubts over the "commercial nature" of the transaction, the European Union begins, on November 10, an official probe into the infusion of \$255 million by the French state bank into the airline.

A new agreement is made between the airline, the government, and the unions on December 8, which provides for a workforce reduction of 2,100 to be achieved through early retirements and normal turnover.

While preparing to depart on an originating service from Nice on December 10, an A320-211 with 129 passengers is taken over by a lone gunman, who orders the aircraft to fly to Libya. Previously convicted for robbery, the pirate will be subdued by police, tried, convicted, and returned to prison.

Customer bookings for the year slide 1.4% to 14,374,215 and cargo drops 4% to 3.76 billion FTKs. The net loss is \$1.53 billion.

The abortive restructuring plan and strikes of the previous year lead to a new cost-cutting approach by Chairman Blanc. It is first communicated to the trade unions in January 1994 and is pitched in terms of matching the performance of **Deutsche Lufthansa, A.G.** within three years. During the month, a conflict erupts with the Czech government when AF seeks financial compensation from it, alleging that it overpaid to obtain the 19.1% stake in **CSA (Czechoslovak Airlines)**. George Veydovsky, CSA general director and AF representative on the CSA board, resigns as the government of the Czech Republic begins to seek an investor to buy out the Paris-based megacarrier, which does not want to sell.

While undergoing a maintenance check outside a hangar at Paris (CDG) on January 20, a six-month-old A340-211 catches fire and is destroyed. After a quarter-century of service, the last B-727-228 is retired at month's end.

On March 10, company unions are officially presented with a recovery plan, *Rebuilding Air France*. The document calls for 5,000 job cuts, but no outright layoffs, and is presented, with a cover letter from the chairman, to each of the 40,000 employees. Also envisioned is a three-year salary freeze, work-rules changes, the elimination of unprofitable routes and fleet elements, the introduction of new products and services, and a capital injection of \$3.4 billion from the French government, on condition that the plan is agreeable to labor.

The plan is not immediately acceptable as the leaders of eight of the company's 14 unions reject it without putting it to a vote of their members. Meanwhile, Airbus equipment is employed, beginning on March 27, over the previous B-727-228A route from Paris to London (LHR). The 19.1%, 52,000-share stake in **CSA (Czechoslovak Airlines)** is sold to the Czech banking group Konsolidacni Banka on March 28; the Saresco duty free stores are also divested. Although the two companies pledge to continue cooperation in some commercial, catering, airport handling, and computer services, the AF directors on the Czech board are withdrawn, along with assigned French executives and technicians.

The government faces new labor unrest when, on March 30–April 1, workers block Orly runways in protest of the proposed 5,000-job cut. Still, on April 11, the unionized employees, recognizing the seriousness of the situation, overwhelmingly approve (81%) Chairman Blanc's plan and thereby avert a crisis and allow the government to proceed with the first part of a rescue package worth \$3.4 billion. A DC-10-30 is leased during the month to the new Belgian charter operator **ChallengeAir, S.A.**

In May, the French-state carrier appeals to the European Court of Justice a historic two-part ruling by the EU Commission. In the first, France is required to open Paris (ORY) to European airlines flying in from London; part two requires the government to end **Air Inter, S.A.'s** monopoly on domestic routes out of Orly. The government approves a bill on May 25 to change the legal status of AF to allow it to offer shares of itself to its staff in return for voluntary pay cuts; officials announce that the measure will allow employees to purchase up to 20% interest.

On June 1, a major alliance, drawn up on May 18, is entered into with **Japan Air Lines Company, Ltd. (2)** Under its provisions, the two carriers will, in the fall, initiate daily, joint, nonstop weekly services between Paris (CDG) and Osaka (KIX), with reciprocal passenger handling in Paris and Osaka.

Just two years after services begin, the company suspends flights to Kuala Lumpur, Malaysia, at mid-month. Malaysian travelers seeking an AF service to Paris or other points must now travel to Singapore to make their connection.

Groupe Air France, S.A. is formed on July 24 as a holding company that will separate Air France from its airline subsidiaries; it will hold stakes in 103 companies, including the 37.5% of **Sabena Belgian World Airlines, S.A.**

During the last week of July, the EU commission approves the government's bailout, now, because of exchange rates, worth \$3.7 billion; the injection will be the largest financial rescue ever of a European state-owned industry and is worth \$88,000 per employee. Perhaps as the result of objections from competing airlines and the International Air Carrier Association, the Commission attaches stringent conditions: (1) the 1994 payment cannot exceed \$1.85 billion; two other injections in later periods will be allowed in 1995 and 1996 only if the recovery plan appears to be working; (2) funds may only be used on behalf of AF and none of its subsidiaries (e.g., **Air Inter, S.A.**) and may also not be employed to acquire stakes in other carriers; (3) until profitability is restored, the European route network may not be increased; (4) no predatory fare initiatives are allowed; (5) capacity may only be increased 2.7% per year; (6) all affiliates not tied to the core airline business, such as hotels, must be spun off; (7) by the end of 1996, the fleet must have been reduced from 166 to 146 aircraft; (8) the \$277.7-million capital injection granted earlier in the year by the state-owned Caisse de Depots et Consignations is ruled illegal, with reimbursement required; and (9) French government air transport policy toward other European carriers must be liberalized further.

The dual-designator service from Paris to Osaka originally scheduled to begin on September 4 must be postponed when negotiations over the use of Russian air space are not completed.

The first of several 24-day, round-the-world, private Concorde charters to be flown by year's end departs Paris (CDG) on September 10; for \$48,800, passengers make stops in Kenya, India, Hong Kong, China, Australia, and Hawaii. During the month, as part of the plan previously announced, the company decentralizes its flight operations into six route profit centers: Cargo, Europe, Asia/Pacific, the Americas, Africa/Mideast, and Antilles/Guiana/Indian Ocean.

Contending that the rescue package worth \$3.77 billion for AF would create a "huge distortion" of the European air market, seven European airlines and the British government vow on October 4 to take legal action to try and block the subsidy. Six carriers declare they will file a joint complaint with the European Court of Justice in Luxembourg while the British government announces plans for a separate action, as does **British Midland Airways, Ltd.**

In November, the code-sharing arrangement with **Aeromexico (2)** (**Aerovias de Mexico, S.A. de C.V.**) on the Paris to Mexico service is delayed. A no-equity agreement is reached with **LOT Polish Airlines, S.A.** for creation of a passenger and cargo cost-and-revenue sharing program.

In cooperation with **Japan Air Lines Company, Ltd. (2)**, daily non-stop roundtrips are finally inaugurated on December 6 between Paris (CDG) and Osaka (KIX). The service is operated thrice weekly by JAL B-747-446 and four times per week by the French line's A340-211s. Flight attendants from both carriers work on these new services.

Islamic fundamentalists, in one of the most vicious hijackings in years, hijack Flight 8969, an Airbus A300B2-1C, with 174 people aboard, at Algiers' Houari Boumedienne Airport on Christmas Eve. Demanding the release of jailed leaders, the four pirates execute three passengers—a Frenchman, a Vietnamese, and an Algerian policeman—and throw their bodies to the tarmac.

Following a 40-hour standoff, during which the hijackers release 65 passengers, but demand the plane be given a full load of fuel, the aircraft wins permission to fly to Marseilles Airport, 25 miles northwest of Marseilles. After another standoff during which two more hostages are released, French GIGN antiterrorist commandos storm the plane. In the 15-min. exchange that follows, all of the pirates are killed, while 13 passengers, three crew members, and nine special forces personnel are injured. The rescue operation is called one of the most successful in commercial aviation history.

Passenger boardings increase by 8.6% on the year to 15,616,150 while freight does twice as well, accelerating 17.5% to 4.425 billion FTKs. Revenues inch their way up by 1.8% to \$7.79 billion and the net loss "improves" to \$247.94 million.

In the wake of the hijacking incident in Marseilles in December, the government of France steps up its surveillance of Islamic groups during the first week of January 1995 and cancels AF flights to and from Algeria. On January 26, as part of its efforts to improve its financial position, the company cancels all orders and options for new aircraft (ten from Boeing and seven from Airbus).

Discussions begin with **American Airlines** in February concerning a possible strategic alliance. An upgraded regional business-class product, L'Espace Europe, is introduced on March 16 and a low-fare aft cabin business-class product, Tempo Challenge, is unveiled ten days later.

Services to a total of ten "low yield" destinations in the Mideast, Europe, Africa, and South America are discontinued in March. At the same time, frequencies from Tokyo to Tahiti for Japanese tourists are increased to twice weekly.

After a plan is announced concerning the forthcoming merger of the AF European Division and **Air Inter, S.A.**, unions at the latter carrier stage a series of costly strikes in April.

On May 4, officials at **Swissair, A.G.** announce the financial terms of a new arrangement their company has made with the Belgian government. In exchange for a significant investment in **Sabena Belgian World Airlines, S.A.**, Swissair will provide, as part of its package, a loan of \$140 million to the Belgian government, which will use the funds to pay back AF for its minority stake.

Having failed to convince union leaders that a merger would be in their interest, **Air Inter, S.A.** Chairman/CEO Michel Bernard resigns in mid-May; AF Chairman/CEO Christian Blanc succeeds him in an acting capacity.

A new accord is reached with Boeing on May 30. Under terms of the \$988-million deal, the French line reinstates the orders dropped in January and increases their number to 15, but requires that delivery not occur until sometime after 1999.

A Concorde landing at New York (JFK) on June 3 catches fire when a number of Canadian geese are sucked into its engines; no injuries to humans aboard are reported. It will require five days and \$9 million to make repairs and, as a result, the company files suit against the Port Authority of New York and New Jersey for recompense.

Also during June, a wide-ranging business cooperation agreement is signed with **Japan Air Lines Company, Ltd. (2)**. Under terms of the

pact, the two will link their frequent flyer award programs, establish traffic cooperation at Paris (CDG), and agree to begin joint daily flights between Osaka and Paris and four times per week from Tokyo and Noumea.

Flight attendants stage a strike on July 19–20 to protest proposed roster changes that will, as part of the airline's three-year productivity plan, lengthen their working hours. The job action forces AF to reduce its summer schedule by 30 per cent.

Concorde Flight 1995, nicknamed "Coors Light Silver Bullet Supersonic Express" after its sponsor, sets a new around-the-world speed record from New York to New York on August 15–16 of 31 hrs. 27 min. 49 sec. Total flying time for the 25,252-st. mi. route is 22 hrs. 39 min. 21 sec. with stops made at Toulouse, Dubai, Bangkok, Guam, Honolulu, and Acapulco.

With Air France Groupe E still in trouble, Chairman Blanc purges management of its remaining veterans. During the last week of August, President/CEO Rodolphe Frantz is dismissed by Blanc, who takes his place, while former Amaury advertising group executive Jean-Pierre Courcol is appointed CEO of **Air Inter, S.A.** Two other top executives are also appointed from outside the company: Vice President-Finance Patrice Durand from the Treasury Department and Vice President-Operations Marc Veron, an executive with the Thomson electronic group. Together with the chairman, these men form a strategic committee, which also includes former **United Airlines** Chairman/CEO Stephen Wolf, hired in 1994 as an advisor.

In an effort to obtain more income from the premium-priced business travel market, AF announces on September 11 a multiyear improvement program for its long-haul flights to the U.S. and Asia. The company's jetliners devoted to those services will be innovatively redesigned to feature first-class sections with individual semi-enclosed compartments with armchairs that can be converted into beds. These seats, built by Sicma Aero Seat, with development help from Renault and Dassault, are the highlight of the new long-haul version of the successful Tempo and L'Espace regional services introduced earlier.

As part of a continuing struggle between the company and its 6,482 flight attendants over the state-owned airline's plans to change their job status, the cabin workers, concerned that new rules will affect their salaries, stage a strike on September 27–28. The company's television commercials, showing blank screens, blame the job actions for causing the carrier economic difficulties. Negotiations for a revised contract with the cabin workers begin during the first week of October.

On October 1, the company enters into an interline agreement with Miami-based **Fine Air** to move cargo traffic between south Florida and Latin America and the Caribbean. Under terms of the arrangement, Fine will link up with the French flag carrier's weekly B-747-200F service to Miami and its daily A340-312 passenger flight.

Difficulties between the airline group's management and workers continue. During the first week of November, flight attendants walk off the job for three days, disrupting operations on every route.

When French Prime Minister Alain Juppe reshuffles his cabinet on November 7, CEO Blanc begins to report directly to him instead of to Transport Minister Bernard Pons, with whom the airline chief is in political disagreement. Meanwhile, the free trade policies of the nation's transport state secretary, Anne-Marie Idrac, continue to place heavy pressure on the carrier's management to restructure AF into a more efficient and modern operation.

Air Inter, S.A. pilots and flight engineers strike on November 10–12, grounding most of the company's aircraft. During those first two weeks, AF management offers a generous financial buyout to those flight attendants willing to quit; hopes are held that about 1,200 cabin crew can be bought out within a year and a half. When flight attendant union delegates refuse to accept the idea, the airline's leadership states that it will reduce flight attendant costs anyway, a statement not calculated to improve the company's deteriorating relationship with its employees.

A code-sharing agreement is signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on November 28 that will allow more flights

and easier connections between Paris and Mexico City, a joint frequent flyer partnership, and a shared terminal at Paris (CDG).

On December 1, a franchise agreement is signed with the Morlaix-based **Brit Air, S.A.** The regional carrier will repaint its aircraft in a modified version of the AF livery and will take over a number of additional feeder routes as part of the new "Air France-Air Inter Express" program. When that plan is established, **Regional Airlines, S.A., Air Littoral, S.A., Eurowings Luftverkehrs, A.G.** (Germany) and **CityJet, Ltd.** (Ireland) become code-sharing partners, agreeing in exchange for subsidy to repaint their aircraft and to fly medium- and low-density domestic or regional routes for the Air France Groupe.

The company workforce is reduced by 5.5% during the year to 39,700. Although passenger boardings drop 7.2% to 14,498,200, freight is up by 4.2% to 4.43 billion FTKs. Operating revenue totals FFr 39.14 billion (\$7.52 billion), but costs leave only a \$71.9-million operating profit. The restructuring provision pushes the net loss to FFr 2.95 billion (\$488.7 million).

Airline employment is 36,484 in 1996, an 8.1% decrease. Domestic deregulation is completed on January 1. Several independent operators, such as **Air Liberte, S.A.** and **AOM French Airlines, S.A.**, begin significant expansion in order to compete with **Air Inter, S.A.**

Capacity is cut to 135 aircraft, exclusive of Concorde. The former **Air Inter**, now an AF subsidiary, is reformed and renamed **Air France Europe** at the beginning of the year. Over the next 18 months of integration, the line will be known as **Air Inter Europe, S.A.**

A major winter storm severely impacts airline operations along the U.S. East Coast between January 7 and 11. An incoming AF flight must be diverted from New York (JFK) to Montreal (YUL); the empty Jumbojet is ferried to New York next day and returns to Paris with a full load on January 10.

Meanwhile on January 8, four frequencies from Paris to New York and six from New York to Paris must be scrubbed along with Concorde service. Next day, the carrier cancels a total of 12 flights from Paris to New York, Boston, Newark, and Washington, D.C. (IAD). Later, on January 9, when the aerodromes at New York and Newark begin to reopen, two flights are dispatched from Paris to the former and one to the latter.

At the beginning of February, AF is designated "The Official Airline of Fashion Week" and as such is the exclusive airline sponsor of a showing of men's and women's collections in New York.

In mid-February, **AOM French Airlines, S.A.** receives an order from the government's Transport Ministry to transfer its operations from the west terminal at Paris (ORY) to the outdated south terminal; the western facility is slated to be turned over to AF Groupe by the end of March. Air France Groupe begins a \$20-million expenditure to enhance the flow of connections at the Charles de Gaulle hub, arranging that schedules for some 400 regional and long-haul frequencies be concentrated on five daily peak periods.

Not only does AOM refuse the order, it files a complaint against the government with the European Union and publicly protests its treatment on the side of its aircraft. Along the fuselages of all 22 of its MD-83s and DC-10-30s is painted the phrase "Je Veux Rester a Orly Ouest!" which in translation reads "I want to stay at Orly West!" Within nine days of the order, the airline signs up 20,000 passengers in a consumer group to write letters protesting the action.

In a joint effort to cut costs and increase efficiency, the carrier and its pilot and flight engineer unions sign new labor accords during the second week of March, the first for the pilots' union, Syndicate National des Pilotes de Ligne (SNPL), since 1971. Under terms of the pacts, the workers will labor longer, but will receive no pay increase. The pilots of **Air France Europe, S.A.** do not participate in this pact.

At a cost of \$300,000 paid by PepsiCo, a Concorde is repainted in the soft drink's new electric blue, white, and red colors; the SST, with billboard-sized "Pepsi" markings on its forward fuselage, is unveiled on March 21.

The French DGAC civil aviation authority warns six US carriers on March 22 that it will cut their landing rights at French airports during the

summer in retaliation for U.S. restrictions on AF. As a result of this concern, U.S. and French air ministry officials meet at Paris during the final week of the month, agree to drop their mutual restrictions, and will allow scheduled summer operations by airlines from both nations to proceed.

Meanwhile, the crisis between the DGAC and **AOM French Airlines, S.A.** is resolved when the independent agrees, after receiving the "best gates," to transfer from Orly West to Orly South. Orly West terminal is now completely occupied by Air France Groupe.

Daily nonstop flights to Paris from eight American cities are allowed to begin on April 1. At the same time, the company increases its U.S. schedule by 250 roundtrips from Paris to New York, Houston, Washington, D.C., and Los Angeles. The company also begins to code-share with **LOT Polish Airlines, S.A.** on frequencies from Warsaw to Paris, Lyon, and Nice and from Krakow to Paris 14 times per week.

The "Pepsi" Concorde undertakes a ten-city European tour between April 1 and 9, spotlighting the soft drink maker's new brand colors. On April 10, the SST is returned to the shop and is repainted in traditional AF livery.

During April, a new terminal is opened at Paris (CDG); it will be heavily promoted as a hub for European connections to Asia. At the same time, two A340-211s and two A340-311s leased from **Sabena Belgian World Airlines, S.A.** are returned.

Air France Europe services continue with the previous fleet and all through the spring rumors persist that the unit will be merged into its parent. A duffel bag explodes as it is about to be loaded aboard a Paris-bound B-747-428 at Newark on May 14. Authorities close down part of the terminal for two hours only to learn that the explosion has been caused by a ruptured aerosol can.

On May 17, employing a surplus AF B-747-100, British and American aviation experts conduct security-hardening techniques at Bruntingthorpe, England, when they set off four bombs in the cargo hold of the Jumbojet. During the month, the company receives the last installment of the \$4-billion state bailout authorized two years earlier by the European Union.

At the beginning of June, the new high-speed railway Eurostar lowers its fares in an effort to compete with the airlines. On June 6, it starts a high-speed rail service, "Thalys," connecting Amsterdam, Brussels, and Paris. To date, Eurostar has cut 25% from AF's Paris-London business, while **British Midland Airways, Ltd.** is forced to end its service to Paris (ORY).

On June 11, the carrier joins with **Burlington Air Express (BAX)** to transport four classic Type D Jaguar racing cars from Los Angeles and Chicago to Coventry and then to LeMans to participate in special anniversary events surrounding the great automobile race. The cars will be returned to their owners at the end of the month.

Sponsored by the airline, along with **Japan Air Lines Co., Ltd. (2)**, **Korean Air (KAL)**, and **Deutsche Lufthansa, A.G.**, work begins on June 15 on a \$450-million t improvement project at New York (JFK). Also during this week, Chairman/CEO Blanc in a public speech notes that the carrier must be returned to profitability before it can be privatized.

On June 28, **Air France Europe** suffers a one-day strike by unions representing 75% of its workforce, which is concerned over persistent discussion of merger into AF. As a result, all flights are cancelled. AFE pilots also oppose a new wage-cutting proposal that will allow the merger of the airline's European operations with those of the parent company.

Having been unable to reshape the sad recent financial history of **Air Afrique, S.A.**, its Managing Director Yves Roland-Billecort, an AF executive, is replaced, officially on a temporary basis, in June by Pierre Arnaud and Yves Boudot. Unhappily, the African management of the company makes disparaging remarks concerning Air Afrique's links to France, its non-African shareholders, and most particularly concerning Roland-Billecort. When he learns of these comments, AF Chairman Blanc abruptly decides that his carrier should distance itself from the Africans.

In New York Federal Court on July 3, Raviv Laor enters suit against the carrier alleging that a steward had pulled him out of a B-747 lava-

tory during a Paris to New York flight after a faulty smoke alarm had reported him smoking.

Despite fierce union opposition, AF Chairman Blanc on July 4 officially introduces the long-anticipated plan to merge its international and regional carriers. He points out that this approach is necessary as preparations continue for liberalization of the European airline market in 1997. Again, workers strike, curtailing operations on July 5.

The next day, representatives of the union Force Ouvriere—the highest representative body of employees at AF that does not support the workers' job action—announce their support for Chairman Blanc's merger plan.

Despite the objections of rivals who claim the carrier will employ the funds received to reduce fares on European routes, AF is cleared by the European Union on July 24 to receive its final installation of state aid, an infusion of \$1 billion.

Also during the month, an agreement is signed with ILFC for the charter of two A340-311s for four years, with deliveries in March and May 1997.

Gunmen on August 14 rob a fully loaded company airliner at the end of the runway of the airport in Perpignan after it arrives on a flight from Paris. A B-747-428 encounters severe clear air turbulence over Burkina Faso on September 5 (one dead).

Air Liberte, S.A. is placed into receivership on September 26 and its chartered Douglas wide-bodies are returned to Finland. Given six months by the Creteil bankruptcy court to develop a workable reorganization plan, its chairman promises to write a recovery program by the end of October, at which time \$120 million in fiscal year losses must be reported.

Concerned over disorder in Tahiti tied to French nuclear tests, Japanese tourists cancel reservations throughout September. On October 1, the twice-weekly Tokyo-Tahiti roundtrips introduced just seven months earlier are cut back to weekly.

Following further exploration into **Air Liberte, S.A.**'s finances during the first week of October, the Creteil bankruptcy court determines that its fiscal situation is worse than was originally reported. Even though a number of unprofitable routes are now cut, the court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, AF expresses interest. Under EC restrictions against acquisition of other carriers during the time of its \$4-billion state bailout, it appears unlikely that the independent will join the major's stable.

Following two months of negotiations, the French flag carrier is able to achieve something of a first in the rapidly growing world of international airline alliances. On October 16, it signs major marketing and code-sharing agreements with both **Continental Airlines** and **Delta Air Lines**, effective the following year. The arrangements allow AF to tap into the huge U.S. travel market to feed its growing global market while the American carriers will have a ready-made group of French customers to carry within the U.S.

During October, **Jersey European Airways, Ltd.** becomes the first U.K.-based carrier to become an AF franchise partner. Two more BAe 146-100s, painted in "Air France Express" colors, are delivered to the British carrier and are employed to operate AF roundtrip routes from Toulouse to London (LHR). It also takes over the AF service from Lyon to London (LHR), which is upgraded to thrice daily.

Also in October, a general commercial agreement is signed with **Vietnam Airlines**.

The alliance with **Japan Air Lines Company, Ltd. (2)** is strengthened on November 1 when the two carriers link their frequent flyer programs. Plans are made to transfer JAL Paris services from Terminal One at Paris (CDG) to the AF facility at Terminal Two.

To offset rising fuel costs, the carrier raises its fares 5% on November 4. In the first of several advertising appearances he will make, defeated U.S. presidential candidate Robert Dole makes a television commercial

for AF that appears at the end of November. Dole donates his fee for the ad to a Washington, D.C., community center for the elderly. At the end of the third week, the company cancels orders with Boeing for eight B-737-500s and seven B-767-300ERs, replacing them with a \$1.5 billion request for ten B-777-200s. The company also seeks five A340-313Xs, with another five taken on option.

During the year, a B-747-2B3F is leased from **Arkia Israeli Airlines, Ltd.**

Enplanements soar 13.3% to 16,424,794 while 4.659 billion FTKs are operated, a 5.2% increase. Revenues increase 8.3% to \$7.45 billion and costs are up only 6.4% to \$7.24 billion. The operating loss increases to \$204.2 million and there is a \$36.8-million (FFr 210-million) net profit. Air France Groupe, as a whole, takes a \$43.1-million net loss.

In 1997, the workforce is increased by 6.3% of that growth coming after April 1. AF Chairman/CEO Blanc, in a January 3 talk before the French think tank Fondation Saint-Simon, announces that AF will have to cut costs by another 15% over the next three years in order to remain competitive with its European rivals. The reductions follow a three-year period during which 20% savings have been affected and company debt has dropped to \$2.5 billion.

Plans are announced on January 16 with **Japan Air Lines Company, Ltd. (2)** for the inauguration of dual-designator flights on April 1 between Tokyo, Paris, and Istanbul.

A letter of intent is signed with **Alitalia, S.p.A.** on February 3; its purpose is to set up a strategic alliance and to operate dual-designator flights between France and Italy. During the first quarter, the company begins joint service with **Balkan Bulgarian Airlines** over a route from Paris to Sofia. The following week, a French bankruptcy court approves the takeover of **Air Liberte, S.A.** by **British Airways, Ltd. (2)**.

Former AF Captain Michel Asseline, who had piloted the A320 that crashed at Mulhouse-Habsheim on June 26, 1988, is convicted of manslaughter by a French court on March 21 and sentenced to six months in prison. He appeals unsuccessfully.

Also during the third week of the month, Chairman Blanc's plan to impose a two-tier wage structure on the 450 cockpit crew members to be hired over the next three years meets with strike resistance from the French pilots' union, SNPL. A job action begins at month's end, with another scheduled for the last week of April.

The new dual-designator agreement is entered into with **Alitalia, S.p.A.** begins on April 1. On that date, code-sharing begins on frequencies from Bologna, Florence, Turin, and Venice to Paris and from Milan to Lyon and Rome to Lyon and Strasbourg. Simultaneously, AF and **Continental Airlines** move their Paris operations to the French major's terminal at Paris (CDG). The same day, Chairman/CEO Blanc is named an "Aerospace Laureate" by *Aviation Week and Space Technology*.

Air France Europe and AF are grouped together on April 1 and both are jointly operated under a management-lease that allows the parent to takeover the subsidiary's operation until complete absorption is completed in September. To protest the new lower wages and changes in the work rules, the AFE pilots' union immediately goes out on strike.

Also on April 1, the two-year-old franchise arrangement with **Britt Air, S.A.** is deepened. When the revised arrangement takes effect in October, the smaller company will, in effect, become the major's regional feeder arm at Paris (CDG). The same day, a daily code-share service begins with **Japan Air Lines Company, Ltd. (2)** over a route from Paris to Istanbul; the new frequency is timed to connect with the arrival and departure of JAL daily services.

Also on April 1, the European Commission permits AF to receive the final FFr 1-billion tranche of the state-aid package approved back in 1994. The EC, in releasing the funds, notes that the carrier's restructuring program appears to be making progress.

As part of its commercial agreement with AF, **Delta Air Lines**, on April 7, shifts its Paris service from Orly Airport to Charles de Gaulle International Airport. At the same time, the French line is added to its "SkyMiles" frequent flyer program. Members of the **Delta Air Lines** program flying first-class on AF will receive 150%

of actual mileage flown while business-class passengers will receive 125% of actual mileage flown.

By mid-month, the dual-designator arrangements entered into with **Continental Airlines** and **Delta Air Lines** the previous fall come into effect. **Continental Airlines** and AF plan to code-share on routes from New York (JFK), Newark, and Houston (IAH) to Paris (CDG) must be put on hold because a new bilateral air agreement between France and the U.S. has yet to be signed. In addition, their desire to coordinate schedules and offer joint mileage in their frequent flyer programs must also be put on hold. Schedule and frequent flyer coordination with Delta, including code-share on flights from Delta gateways to Paris, must also be shelved.

During the same month, a marketing agreement is comes into effect with **Alitalia, S.p.A.** and code-sharing starts on flights from Paris to Bologna, Florence, Turin, and Venice, from Lyon to Milan, and from Strasbourg to Lyon and Rome. The joint cost-and-revenue sharing plan with **LOT Polish Airlines, S.A.** is scrapped in April at LOT's request; it is replaced by a block-seat, code-sharing agreement.

At Houston (IAH) on April 20, an AF B-767-328ER, with an unspecified number of passengers and number one in sequence for takeoff at the runup area for runway 14L, reports to ATC that it is not ready to depart. **KLM (Royal Dutch Airlines, N.V.)** Flight 662, a B-747-306C, with 15 crew and 284 passengers, is cleared to taxi around the French aircraft and precede it in departure. During the maneuver, the right wing of the Dutch aircraft hits and slightly damages the left wing tip of the B-767. Both aircraft are returned to their respective gates and later released; both then takeoff without further incident.

April closes with two additional international compacts and an extension of an older one. A blocked-seat agreement is signed with **MALEV Hungarian Airlines** covering flights from Paris to Budapest while five-times-per-week joint freighter services begin with **Singapore Airlines**. Dual-designator services with **Japan Air Lines Co., Ltd. (2)** start between Paris (CDG) and Istanbul.

On May 1, the block-seat agreement with **LOT Polish Airlines, S.A.** takes effect. The airlines are enabled to resell 30 seats on each other's flights on new joint routes from Krakow to Paris and from Warsaw to Lyon and Nice. The roundtrip Warsaw-Paris route is increased from 14 to 28 weekly services.

Six European airlines, led by **British Airways, Ltd. (2)**, on May 6 launch a court challenge to AF's right to receive the FFr 20 billion (£2.12 billion) in state subsidy approved by the European Commission in 1994, the last tranche of which was paid in April. The case, filed by BA, **TAT European Airlines, S.A.**, **SAS (Scandinavian Airlines System)**, **KLM (Royal Dutch Airlines, N.V.)**, **Air U.K., Ltd.**, and **Euralair, S.A.**, will be heard by the European Court of First Instance at Luxembourg. The plaintiffs are also supported by the governments of the U.K., Denmark, Sweden, and Norway.

On May 7, eight years after an aircraft of AF merger-partner **UTA French Airlines, S.A.** is destroyed over Niger, French antiterrorism investigators led by Jean Louis Bruguiere have collected sufficient evidence to make a charge. A French court is asked to try six Libyan operatives in absentia for planting the fatal bomb; among the men is Col. Muammer el-Qaddafi's brother-in-law Abdallah Senoussi.

In May, six European airlines challenge the previous month's final EC-sanctioned tranche of state aid; the challenge to the company's right to receive the funding will be heard in the European Court of First Instance in Luxembourg and dismissed.

In protest against management's new two-tier wage scale for new hires, SNPL, the main AF pilots' union, goes out on strike on May 19; the protestors, along with those that have been out a month at **Air France Europe, S.A.**, return to the contract negotiations with management on May 23.

Also in May, a new block-space accord commences with **CSA Czech Airlines** over the route from Paris to Prague. Shortly to be of significant consequence to the airline is the June 1 election of a new Socialist government under the leadership of Prime Minister Lionel Jospin.

Capacity on the daily nonstop from Paris to Washington, D.C. (IAD) is increased for the summer by 50%; the same day, a B-747-428 is substituted for the usual A340-312. During the first week of the month, **Brit Air, S.A.** becomes the company's third franchise partner.

On June 30, **Federal Express** agents at Sylmar, California, discover that a shipment arriving from New York contains an undeclared oxygen generator, banned by the government unless properly packaged, following the **Valujet Airlines** disaster in May 1996. FedEx officials notify the FAA, which traces the canister back to a shipment coming into the country via AF. Five earlier violations of the widely publicized U.S. ban are also tied to the French flag carrier. In fact, on only two flights, over 900 generators have arrived, with the total for the other services unknown.

Also during June, AF begins to transfer additional services to Paris (CDG) in order to create additional slots at Paris (ORY) for **Air France Europe, S.A.** Discussions commence with **KLM (Royal Dutch Airlines, N.V.)** concerning a possible strategic alliance; the Dutch carrier also talks to **Alitalia, S.p.A.**

The decade-and-a-half-old arrangement with **Japan Air Lines Co., Ltd. (2)** is further expanded on July 1. Daily code-sharing is undertaken on daily flights from Osaka (KIX) to Paris (CDG) and on twice-weekly services from Paris (CDG) to Nagoya. Flights are performed by the French line's A340-312s.

Company workers, in support of striking **British Airways, Ltd. (2)** cabin crew, bring Paris (CDG) to a standstill on July 9, the first day of the job action. Also during the month, the French National Pilots Union requests that the U.S./Canada ALPA conduct an independent review to determine reasonableness of the cost-cutting demanded by the carrier under its new two-tier wage system.

At this point, the company enters into a strategic alliance with **Air India, Ltd.**, an arrangement that covers European services and will allow the financially strapped Asian line to pull out of Zurich and Amsterdam.

Under the leadership of the new chairman, Nashirudeen Mallam-Hasham, **Air Mauritius, Ltd.** now begins a campaign to federate the airlines of the Indian Ocean area. To this end, a protocol is signed in July with the airlines of Madagascar and the Seychelles, the Comoro government, and AF. The signature of **Air Austral** is momentarily expected.

On July 31, **Proteus Air System, S.A.** agrees to become the third "Air France Express" franchise partner. In exchange for subsidy and other assistance, the company's aircraft will be painted in modified AF livery and will undertake to fly certain medium- and low-density routes on behalf of Air France Groupe.

Air France Industries wins an \$80-million-per-year contract during the first week of August to maintain the eight A340s operated by **Virgin Atlantic Airways, Ltd.**

The initial dual designator Dornier 328 flights of **Proteus Air System, S.A.** commence on September 1, thrice daily between Paris (ORY) and Chambéry, Savoie. Although newly elected Prime Minister Jospin has initially evidenced a more pragmatic approach to economic affairs, his (Communist) Transport Minister Jean-Claude Gayssot absolutely refuses to consider any plan to privatize AF, including those put forward by Chairman Blanc. This view is confirmed in the daily *Humanité*.

At this point, Chairman Blanc makes an eleventh-hour effort—some will call it a personal gamble—to win support for privatization and his vision of a company able to stand as one of three major groups (**British Airways, American Airlines, Deutsche Lufthansa, A.G.**, and the "Star Alliance") of transatlantic airlines to survive into the next century.

On September 4, Jospin, Gayssot, Socialist Party spokesman Francois Hollande, and Blanc meet to work out a compromise consistent with the political and practical requirements of each leader. Although Gayssot recommends that the flag carrier undertake neither privatization nor status quo, he remains steadfastly opposed to the former possibility.

In an emotional two-hour meeting, Blanc reminds his colleagues that the previous government had pledged to the European Commission in 1994 that it would sell its controlling stake as a condition of its approval of the rescue plan and lists the various and overwhelming economic reasons for such a move. He then proposes an idea he calls *privatisation de*

gauche, which would see the sale of a major stake in AF to investors, as well as 20-30% to company flight and ground crews. This would satisfy a need for government involvement, reconciliation of the carrier's business-oriented, long-range course with government requirements, and the maintenance of "social values" in the company workforce.

Following the almost immediate rejection of this concept, Chairman Blanc threatens to resign. To avoid an unpleasant personal rift, Hollande suggests the outright sale of a 49% minority stake to be coupled with a government promise, demanded by Blanc, to fully privatize sometime in the future. No sooner has Blanc departed Matignon palace than the government issues a statement on the meeting, repeating its position that complete privatization is not on its agenda.

Having determined that his differences with the prime minister's government are irreparable, Chairman Blanc meets with his management team the next morning. He informs them that he will not formally resign, but will send word to the government that he will not stand as a candidate for the chairmanship of the newly united **Air France Europe-AF** scheduled for the following week. Prime Minister Jospin, who considered the chairman's resignation threat the previous day as nothing less than blackmail, accepts the retirement document that afternoon without a word of gratitude.

In September, representatives of the 11 consortium member nations holding a stake in **Air Afrique, S.A.** seek an appointment in Paris to ask for French government aid to help with the consortium carrier's finances. No invitation is forthcoming.

Air France Europe and AF are formally merged on September 12 when the government names a unified board of directors attuned to its political philosophy.

On September 15, the company president joins with his counterpart from **Aeroflot Russian International Airlines (ARIA)** in signing a strategic alliance agreement at Moscow. The two airlines will coordinate services through their Paris and Moscow hubs and begin code-sharing.

After stints as an assistant to the late President Francois Mitterand and to EU Research and Science Commissioner Edith Cresson, former **Air Inter, S.A.** President Jean-Cyril Spinetta, a supporter of Socialist economic policies, is appointed by the board as the new chairman/CEO of AF on September 18. His selection is approved by the cabinet of Prime Minister Jospin and he takes office on September 24. Spinetta is the sixth chief executive of the airline hired within the last 12 years.

On October 1 **Brit Air** begins flying 150 "Air France Express" flights per day on behalf of the major from Paris (CDG) to French regional airports. At about the same time, **Regional Airlines, S.A.** commences a block-seat agreement with the major on its flights to Stuttgart from Lyon and Nice.

The company begins code-sharing flights to Tunis in October with **Tunisair, S.A.** under an agreement that calls for coordination of freight, purchasing, information systems, maintenance, and frequent flyer programs. The same kind of deal is simultaneously struck with **Royal Air Marco** and code-sharing services are launched from Strasbourg and Lyon to Casablanca.

On October 3, a code-sharing pact is signed with the Colombian carrier **ACES (Aerolineas Centrales de Colombia, S.A.)**. The important relationship with **Continental Airlines** and **Delta Air Lines** still cannot be implemented; in a statement Transport Minister Gayssot stresses his absolute opposition to the U.S. "open skies" approach.

A new company advertising campaign begins on October 20. The theme, to be shown in press and television spots, will be "winning the hearts of the world." French cinema superstar Jeanne Moreau becomes the airline's spokesperson and the first television spot airs on October 24.

Late in the month a franchise agreement is entered into with the British carrier **Gill Air, Ltd.** Under its terms, one of the Aero International (Regional) ATR42-320s, painted in modified AF livery, will operate twice-daily "Air France Express" roundtrips from Newcastle to Paris (CDG).

During November, a contract is signed with ILFC for the charter of two A319-131s, which will be delivered in February and April 1999, respectively.

Also during the month, President Spinetta announces plans to turn the country's second largest airport, Lyon Satolas, into the company's "rear guard" secondary hub after Paris (CDG). The move will enhance service to Italy and also allow greater connection with the flights of **Brit Air, S.A.**

In honor of the twentieth anniversary of Concorde service to New York, on November 21 the carrier introduces a Concorde/L'Espace promotional fare under which passengers can fly roundtrip business-class to Paris for just \$6,000.

Just before Christmas, **KLM (Royal Dutch Airlines, N.V.)** and **Alitalia, S.p.A.** announce their intention to join in a comprehensive marketing arrangement in 1998. With Italian interest now focused on Amsterdam, AF and Alitalia elect to discontinue their agreement within ten months.

At the same time, company officials announce that a proposal is under active consideration to increase the number of daily Paris-New York Concorde frequencies.

Passenger traffic figures are not released; however, it is noted that, for the year, freight is up 4.3% to 5.01 billion FTKs. Revenues for Air France Groupe jump 9.2% to \$9.77 billion, while costs climb to \$9.37 billion. The operating profit is \$402.5 million and there is a net profit, the first since 1989, of \$301.07 million.

At the beginning of 1998, AF is the 5th largest airline in the world in terms of freight carried, 8th in operating income, 9th in employee number, 13th in both operating and net profit, and 14th in fleet size.

The fleet at the beginning of the year includes 198 aircraft, of which 77.3% are Stage III certified; this number includes: 39 B-737s, 6 Concorde, 30 older B-747s, 13 B-747-400s, 6 B-767s, 3 A300s, 10 A310s, 9 A319s, 57 A320s, 8 A321s, 12 A340s, and 5 Fokker 100s.

At the start of January, the company introduces its "Concorde Companion Fare," under which passengers traveling together are able to save approximately 50% off the second ticket. The cost of one-way flights between New York and Paris or Paris and New York are reduced from \$16,796 to \$12,597.

Service is restarted from Paris to Point Noire, on January 5.

During the last week of January, Asia-Pacific Managing Director Arthur Bullard announces that the company will transfer its Asian regional headquarters from Hong Kong to Bangkok.

The code-sharing agreement with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, first signed in 1992, is renewed on February 10; the extension will take effect on April 1. Over the next two months, the number of weekly dual-designator services between Paris and Mexico City will be increased from 10 to 12 and later to 14, or twice daily.

With the subsidiary **Air Charter, S.A.** unable to generate profit in the face of low-cost competition, parent AF announces in February that it will be closed down in November. One of the competing airlines, **AOM French Airlines, S.A.**, begins to make arrangements to take over the bulk of Air Charter's business.

At the end of February, Transport Minister Gayssot and Finance Minister Dominique Strauss-Kahn finalize a long-awaited plan to decrease the government's stake in the flag carrier from 97% to about 53%; the left-wing document refers to the "opening" of company capital, rather than "partial privatization."

On March 6, another memorandum of understanding is initialed with **Royal Air Maroc**. The pact provides for schedule coordination, harmonization of route networks, and mutual overhaul/maintenance assistance.

An agreement is reached with **Gemini Air Cargo** on March 8 under which Gemini will operate a trio of DC-10-30Fs for the French line, replacing the DC-8Fs that it had previously wet-leased from **Cargo Lion, S.A.**

In an effort to make certain that sufficient capacity is available in the wake of a threatened September 3 pilots' strike, **Air Canada, Ltd.** wet-leases a DC-10-30F from Gemini Air Cargo. It will provide freight charters to London and Frankfurt over the next week on behalf of its key freight forwarder supporters. When that aircraft is returned, it, too, is wet-leased to AF to supplement that carrier's 12 B-747F Jumbojet freighters.

At mid-month, the company begins to link Port au Prince with Miami on a thrice-weekly roundtrip schedule.

At a meeting in Paris, **Continental Airlines** Chairman/CEO Gordon Bethune and AF Chairman/CEO Spinetta reaffirm "a mutual commitment to the marketing alliance initiated in October 1996." Despite the absence of a U.S.-France bilateral agreement, the two will engage in all activities possible short of code-sharing. Both will also honor their partnerships with **Delta Air Lines**.

Also during the first quarter the company is designated the official airline of "France '98," the World Cup soccer matches to be held in France during June. In honor of the occasion, the carrier begins to decorate 16 units of its fleet with decals depicting players from participating countries. A goalkeeper is applied to the left side and a shooter to the right of 3 B-747-128s, 2 A340-311s, and 11 A320-211s. The first two aircraft are unveiled in a March 23 ceremony, with the one depicting U.S. players arriving making its maiden flight to New York five days later.

On March 29, company flights to or from the U.S. and Canada become nonsmoking; AF continues to offer smoking bars on its other routes.

The first of ten new B-777-228 IGWs is delivered on March 29 and flown to Paris on March 30. It is one of the first equipped with the Enhanced Ground Proximity Warning System (EGPWS) that Boeing is now adding to this type as standard equipment.

With the opening of the summer scheduled on April 1, thrice-weekly direct roundtrip flights are inaugurated from Paris to Shanghai. **China Eastern Airlines Company, Ltd.**, with which the French major has recently signed a marketing agreement, offers reciprocal flights.

A strategic alliance document is signed with **Air Mauritius, Ltd.** on April 3. The companies share codes on their five weekly roundtrips between Paris and Mauritius and begin to develop joint purchasing and airport handling activities.

A new "open skies" bilateral accord is signed between France and the U.S. on April 8. The arrangement will allow the company to strengthen its alliances with **Delta Air Lines** and **Continental Airlines**. The first of ten B-777-228 IGWs enters service between Paris and New York on April 9 and repainting of the 16 World Cup aircraft is completed the next day.

Success of the "Concorde Companion Fare" promotion leads the carrier, in April, to extend it through the remainder of the year.

Also during the month, the report commissioned from the U.S./Canada ALPA is issued; it demonstrates that the carrier's flyers receive less pay than their counterparts at **British Airways, Ltd. (2)**.

During the first week of May, the French SNPL union, which has reworked the ALPA figures, comes to a completely different conclusion concerning pilot wages. The SNPL report indicates that, taking profit sharing into account, AF pilots actually earn 15-21% more than their BA colleagues and a huge 41% more than cockpit crews at **Deutsche Lufthansa, A.G.**

AF executives point to the SNPL report as confirmation of an internal audit performed in 1997. They ask pilots to accept company demands for a mandatory 15% salary reduction in return for a 10% equity stake in the flag carrier, as well as a two-tier wage package for senior flyers and new hires. The U.S./Canada ALPA surprisingly supports the airline's request, while SNPL does not. Three of the carrier's unions respond to the airline's demand by staging a one-day strike.

While the union leaders scuffle with corporate leadership, long-haul pilots inaugurate twice-weekly roundtrips between Paris (CDG) and Shanghai on May 11.

In mid-May, joined by **Deutsche Lufthansa, A.G.**, **Japan Air Lines Company, Ltd. (2)**, and **Korean Air (Korean Airlines, Ltd.)**, the carrier begins a two-week move into the new \$434-million Terminal One at New York (JFK). Having jointly developed, financed, designed, and constructed the huge project, the four carriers will now operate it and sell space to other carriers.

The European Academy for Aviation Safety is opened at Toulouse during the last week of May. It is jointly sponsored by the carrier, **Deutsche Lufthansa, A.G.**, Airbus Industrie, Aero International (Regional), RAI-ENAC, and the College of Aeronautics, Cranfield (England) University.

Simultaneously, AF concludes an order for 16 A319s and 4 A321s to be delivered between 2000 and 2002.

Radically opposed to the company's salary-for-equity exchange demand, the pilots' union (SNPL) chairman, Jean-Charles Corbet, ends negotiations with Chairman Spinetta and Transport Minister Gayssot during the last week of May. The union votes to undertake a two-week strike beginning on June 1. Both the labor peace and the carrier's return to profitability and plans for partial privatization are stalled. A decision to acquire three more B-777-228 IGWs is postponed until June 30.

Of greater immediate concern is transport for the 64 World Cup matches, which open in ten French cities on June 10 and for which 2.5-million tickets have already been sold. AF is scheduled to transport an additional 120,000 passengers over its domestic network during the 33-day long contest. The company immediately suspends its high-profile advertising campaign, which uses the slogan "Winning the Heart of the World."

At the same time, arrangements are made with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)** to help fly soccer fans during the strike. AF aircraft already stationed in Brazil will fly customers for the next two days, after which passengers bound to the games on June 2-4 will fly VARIG.

By June 3, the third day of the strike, positions on both sides of the table have hardened, with Interior Minister Jean-Pierre Chevenement, in a radio interview, accusing the pilots of holding the World Cup hostage. Chairman Spinetta refuses a union call to ax the wage cuts and indicates his expectation that the government will not intervene to end the job action.

AF can now only guarantee approximately 17% of its long-haul flights and 30% of its medium- and short-haul flights from Paris Charles de Gaulle International Airport. The strike is reportedly costing FFfr 100 million each day.

Also during the day, subway and suburban train drivers join drivers on the national railway network in staging wildcat sympathy strikes.

As the strike continues into its second week, replacement and management pilots are able to maintain approximately 40% of the carrier's domestic schedule. Independent carriers and an efficient national rail (the drivers strikes are ineffective) and road system help to absorb traffic. Still, losses total \$17-million per day. Despite a plea from French President Jacques Chirac, who points out that the World Cup obligates Frenchmen to provide visitors with "perfect conditions," union leaders pledge that, should there be no resolution of their demands by the end of the two-week job action, the strike will be extended.

Leaders of the SNPL inform AF on June 8 that pilots would, despite the job action, be prepared to fly aircraft for free to pick up soccer fans who have been stranded abroad before the World Cup. The airline agreed to discuss this possibility, announcing that special flights could be sent abroad within 48 hours. The offer helps lead to a resumption of talks between the union and the airline.

After tense negotiations, a compromise accord is reached on June 10 between the airline and its pilots. The ten-day walkout, which ends just hours before the World Cup games begin in Paris, has cost AF FFfr 1 billion (\$166 million); it also loses a good deal of prestige, as heated debates in the national parliament fully demonstrate.

In exchange for a seven-year salary freeze, management agrees not to implement a two-tier wage scale, although, for the next five years, pilot trainees will receive less pay. The salary freeze is expected to save the airline \$80 million per year. AF also drops its mandatory demand that the pilots exchange 15% of their salary for a 10% equity stake in the carrier. Regular flights resume over the remainder of the week from a 25% strike-time low.

The U.S.-France bilateral accord reached on April 8 is formally signed on June 18 in a Paris ceremony by French Foreign Minister Hubert Vedrine and U.S. Secretaries Madeleine K. Albright (State) and Rodney E. Slater (Transportation).

The pact opens the way for new transatlantic code-sharing, full implementation of the carrier's pacts with **Continental Airlines** and **Delta Air Lines**, and additional frequencies.

Almost unnoticed in media circles during the day is the introduction of the carrier's first-class beds, L'Espace, on its long-haul route from Paris to Houston.

Continental Airlines and AF waste no time in implementing code-sharing under the new U.S.-France bilateral. On June 19, the two begin code-sharing on each other's transatlantic flights between Paris and Newark and Paris and Houston. Additionally, Continental shares its codes on AF flights beyond Paris to destinations in France, Germany, Belgium, Denmark, Sweden, Norway, Switzerland, Austria, and Finland. Likewise, AF applies its code to Continental domestic services from Newark and Houston to Cleveland, Dallas (DFW), San Antonio, Austin, Detroit, Philadelphia, Syracuse, Pittsburgh, Buffalo, Norfolk, Rochester, and Albuquerque.

Likewise on June 19, dual-designator service begins with **Delta Air Lines**. The Atlanta-based major applies its code to AF flights from Paris to New York (JFK), Chicago (ORD), Los Angeles, San Francisco, Washington, D.C. (IAD) and a new daily nonstop A310-304 roundtrip to Atlanta.

After a four-year absence occasioned as a cost-cutting measure, AF resumes daily nonstop roundtrips on June 19 between Paris (CDG) and Boston; the A310-304 service is operated as a dual-designator flight with **Delta Air Lines**.

Weekly B-747-228B roundtrips commence on June 21 between Paris (CDG) and Havana. Two days later, the European Commission confirms its 1994 approval of FFfr 20-billion (\$3.34 billion) in state-aid subsidies to the company.

A number of competitors rejoice on June 25 when the European Court of First Instance issues a ruling that the \$3 billion in government assistance provided to the airline in 1994 had been illegal because it was linked to a restructuring plan and gave AF an unfair advantage over its competitors. The judgement in the French case has no bearing on any other aid given by European governments to their airlines or on the EC's state-aid policy in general.

On July 1, the European Court of Justice nullifies the 1994 European Commission authorization for the injection of huge government bailout funding into the then-floundering AF. The EC ponders an appeal.

While en route from São Paulo to Paris on the month's first day, a B-777-228 IGW suffers an engine shutdown; the twin-engine wide-body makes a safe emergency landing on Portugal's Tenerife Island. No injuries are reported.

Also during the first week of the month, the carrier concludes a firm order for 20 additional A319/A321s, with 20 options, which will replace older B-737-200s.

Chairman from 1948-1954 and later founder and first managing director of Airbus Industrie, Henri Ziegler, 91, dies on July 23.

The same day, sources in Johannesburg erroneously inform the media that, due to the nation's high crime rate, the French major will halt flights to South Africa the following March. The rumors are denied; however, an AF spokesman indicates that the number of frequencies to Cape Town is under review.

The Concorde flies top designers, buyers, and other fashion industry professionals from Paris to New York on July 26 for the opening of the Spring '99 Men's Collection, which debut next day at the New York Public Library. A prominent sponsor of the event, the airline includes a model of the SST as well as various company signage and brochures.

During a ministerial-level meeting at Bamako, Mali, in August, a call for help is made to the French government for assistance in helping to keep **Air Afrique, S.A.** from foundering.

Tentatively scheduled for September, the company's partial privatization is postponed on August 27 until 1999. Losses caused by June's pilot strike are cited as the primary reason.

The carrier's twice-weekly service to Shanghai from Paris (CDG) is increased to thrice-weekly on September 1. Simultaneously, daily frequencies to Frankfurt are increased to seven and twice-weekly roundtrips are started to Havana.

On September 3, a major commercial alliance is signed with **Middle East Airlines, S.A.L. (2)**. The company, beginning on September 10, cosponsors a major "100 Years of Aviation" Champs Elysees exhibit with the Aero Club of France, the world's oldest federation of flying clubs.

Under terms of a dual-designator pact signed on August 10, the company begins code-sharing with **Korean Airlines/Korean Air (KAL)** over long-haul routes from Paris to Seoul (six times a week) and Seoul to Paris (four times a week) on September 16. The French major employs its A340-313Xs while KAL flies B-747-4B5s.

Finally, in mid-September, the French government agrees to see the representatives who had sought an aid-discussion appointment on behalf of **Air Afrique, S.A.** the previous year.

As a Paris-bound B-747 Jumbojet is returning to Tokyo (NRT) on September 22 to fix a mechanical problem, a fake air controller (male voice) suddenly orders the pilot to dump fuel. Then, as the plane approaches 12,460-ft. Mount Fuji, another command is given, this time to lower altitude to about 4,950-ft. The pilot, believing something is amiss, refuses to execute the orders and lands safely. The incident is reported to aviation authorities and will be kept secret until the following March.

On September 23, three small pilots' unions call for a 24-hour strike to emphasize their demand to be included in negotiations between management and the SNLF over any exchange of wages for shareholding.

A code-sharing agreement signed with **Austrian Airlines, A.G.** on August 5 takes effect on October 1. Under its terms, the two share their seven daily return flights between Paris and Vienna. In addition, AF places its codes on Austrian flights into Eastern Europe while the Austrian designator will be shown on French domestic routes.

On October 12, management pledges to sign a new contract with the SNLF before October 17.

All flights to Belgrade are cancelled due to the Kosovo crisis on October 14.

Also during the month, the number of roundtrip frequencies from Paris to Havana are doubled from one to two each week. On a more troubling note, competing **Swissair, A.G.** acquires a 44% stake in **Air Littoral, S.A.** and thereby a large presence in AF hub at Nice.

During October, **CityJet, Ltd.** enters into discussions with AF concerning the possibilities of becoming a full franchise. Negotiations are also held on the value of starting joint flights between London (LCY) and Paris (CDG) and Strasbourg.

Dubbed "Gare 1 Extra Large," a highly automated, \$68-million cargo facility—the largest and most advanced cargo terminal in Europe—is opened at Paris (CDG) on October 26; it is estimated that the new facility will handle 2.2-million pounds of freight each year.

On October 30, for the fourth year in a row, the company is named the official airline of the New York Women's Collection fashion show, which will take place between November 2–6.

Joint flights begin with **Delta Air Lines** on November 1 over a route from Paris to Johannesburg, South Africa.

On November 10, the Port Authority of New York and New Jersey and AF are able to settle what has become known as "The Geese Case." The suit, filed for recovery of damages caused to a Concorde flight in 1995, had contended that the airport authorities had failed to perform required "runway sweeps" to frighten the birds away before every takeoff or landing of an SST flight. The settlement is \$5.3 million.

Six unions representing the airline's 10,000 cabin crew members postpone a 48-hour strike over salaries and working conditions on November 11–12, but indicate that it will occur during the following week.

Beginning on November 12 and continuing for a week, AF transports 1,200 tons of Beaujolais Nouveau around the world, including 500 tons to Asia (450 tons to Japan alone) and 350 tons to the Americas. The deliveries will allow Beaujolais Nouveau enthusiasts to uncork their first bottles of the brilliant red vintage on November 19, the third Thursday of the month, as is the custom.

AF executives announce on November 13 that they will be able to assure 55% of long-haul and 60% of short- and medium-distance flights should the union's job action occur.

The cabin crew walkout occurs on November 17–18. The company is forced to cancel nearly half of its flights on the last day of the strike; many other services are delayed. A two-day pilots' walkout is threatened for the following week.

At a news conference in Paris to report fiscal results for the first six months, Chairman/President Spinetta informs journalists that his company will make a decision by the end of 1999 on whether to invite **Delta Air Lines** or **Continental Airlines** to join it in building a global alliance. On the matter of finances, it is noted that the company has suffered a 24% drop in its first-half profits to FFfr 1.34 billion (\$238 million).

Faced with the very real possibility that **Air Afrique, S.A.** may go under, thereby opening its routes to competition from non-African international air carriers, AF decides that the Pan-African airline's situation requires a more active presence. Although it does not plan an immediate equity presence, the November issue of *Airline Business* in its cover story reports that the French flag carrier will now manage Air Afrique.

On November 27, a company cargo plane transports, in three separate pieces, a 580-kg. Formula 1 racing car, made entirely of chocolate from Paris (CDG) to New York (JFK). Commissioned by Prost Grand Prix, the unusual vehicle was created by Pascal Guerreau using the original carbon molds of the "Gauloise Prost Peugeot AP01." The entity is exhibited at the Chocolate Show held through December 1. At the conclusion of the exhibit, AF returns the confection to Paris, where it is exhibited at the Espace Champerret for a week beginning on December 4.

Spinetta reconfirms his November comments concerning Delta and Continental in a December 15 interview with *La Tribune*. He also notes that the carrier's initial public offering (IPO) should occur in early 1999.

Just after takeoff from Lyon for Nantes on December 30, the rear left wheel of Flight 7863, a B-737-328 with 59 passengers, falls off; the pilot makes a safe emergency landing back at his point of origin and no injuries are reported.

Also during the month, the carrier is contracted by St. Louis, Missouri-based INTRAV for the use of a Concorde for an 18-day Millennium around-the-world tour to be flown from New York via Honolulu, Sydney, New Delhi, Kenya, and Cairo between December 24, 1999 and January 10, 2000. All but a few of the \$75,000 seats will be sold out within weeks.

Enplanements for the year climb 2.4% to 33.16 million, including 13-million passengers, making it Europe's largest domestic route system. Cargo traffic slides 7.1% to 4.59 billion FTKs. Revenues total FFfr 60.7 billion (\$9.68 billion) and there is a net gain of FFfr 1.87 billion (\$265.71 million). It will be announced the following June 3 that these figures must be revised downward; revenues are \$8.75 billion and net profit is \$239 million. The pilot strike and a loss by the cargo unit are the chief reasons for the rewrite.

On January 6, 1999, AF enters into a new partnership agreement with **SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe), Air Saint Martin, S.A., and Air Martinique, S.A.** designed to increase the major's market share in North America and to maintain French-flag air presence in the Caribbean region.

During the first quarter, the B-737-200A of **Islandsflug, H.F.** will be wet-leased to Caraibenne des Transportes Aeriens, the joint venture established to replace the French major on its Caribbean routes from Fort de France and Pointe-à-Pitre to Cayenne, Miami, and Port au Prince. The Icelandic Boeing will be returned as soon as the combine is able to secure a pair of B-737-300s.

Airline management and the unions representing ground personnel sign an accord on January 13, establishing a framework for a 35-hour workweek (a nationwide goal of Prime Minister Jospin). The pact will reduce the workweek from 39 hours without salary cuts and will create 4,000 additional jobs.

Demanding a bonus for working nights under the new 35-hour plan, workers at Paris (ORY) stage a surprise strike next day that forces the cancellation of 17 domestic flights. The job action is also extended to Paris (CDG), where somewhat fewer international services are scrubbed.

One of the last state-owned airlines, AF closes the "warm up stage" of an initial public float of 16.4% of its stock on January 25. The step has been taken to test interest in full privatization, from which it is hoped to raise FFr 4 billion. There is strong investor demand reflected in the pre-marketing stage and weakness in the airline sector.

Leaders of East Africa end their 2 1/2-year embargo of Burundi on January 26; AF, which has honored the sanctions since their imposition in July 1996, indicates that it will resume flights to Bujumbura in mid-February.

Also during the month, it is announced that discussions are underway with **TAM-Meridonais, S.A.**, the long-haul subsidiary of **TAM (Transportes Aereos Regionais, S.A.)**, aimed at the formulation of a strategic alliance.

It is announced on February 3 that AF and **Delta Air Lines** have jointly filed an application with the DOT that will allow them to extend their existing code-sharing agreement to Johannesburg, South Africa. With anticipated approval, the Atlanta-based major will place its code on the French line's daily A340-311 roundtrips to Johannesburg from Paris (CDG) on November 1. It is simultaneously noted that the two will grow their code-share pact to additional third countries in the near future.

Also on February 3, a lone gunman takes over a company Airbus A320-211 at Paris (CDG) as, with 82 passengers, it prepares for departure to Marseilles. After some hours of negotiation, the hijacker surrenders.

With advice, Finance Minister Strauss-Kahn's department prices AF on February 9 at 14.2 euros per share for institutions and 14 euros for individual investors in its initial offering of a 20.7% stake; the pricing values the whole airline at FFr 20.5 billion (\$3.54 billion).

Of the 184-million shares, the government, beginning with institutional investors (15.8 million shares) now begins a process of selling off the stocks in three tranches.

The initial offering is enthusiastically greeted and it is reported on February 10 that the institutional portion has been oversubscribed between 20 and 30 times, while small investors have oversubscribed 10 times. It is also noted that institutions have oversubscribed 41 times.

TAM-Meridonais, S.A. successfully completes its strategic discussions with AF on February 15, at which point a major marketing agreement is announced. Under its terms, the two international airlines will link their frequent flyer programs, coordinate scheduling and marketing, and code-share on routes between Brazil and France.

Once the initial sell-off is finished on February 22, another 13.5-million shares will be offered to the general public, with 3-million shares available to company employees.

For the third year in a row, the airline in early February is named "The Official Airline of Fashion Week" in New York City. In celebration, the airline hosts its first-ever retrospective exhibit of flight attendant uniforms, dating back 66 years, at Bryant Park between February 12 and 19. Entitled "Runway to the Runways" the exhibit features designs by leading French designers such as Nina Ricci, Christian Dior, Cristobal Balenciaga, and others.

While on descent into Montpellier on a service from Paris (ORY) on February 12, an A320-211 with 175 passengers lurches violently to the left to avoid a head-on collision with a glider carrying an instructor and pupil; both the jetliner and the glider land safely, with no injuries reported.

It is reported by the *London Sunday Times* on February 14 that the company is in talks with **Continental Airlines**, **Alitalia, S.p.A.**, **Delta Air Lines**, and **Northwest Airlines** concerning the possible creation of a global alliance to challenge the other two world airline pacts, OneWorld and Star Alliance.

It is announced in Beirut on February 15, that, under the dual-designator pact signed with **Middle East Airlines, S.A.L. (2)** the previous September 3, the two companies will offer 19 weekly joint services between Paris and Lebanon beginning on June 1.

The Italian news agency Ansa reports on February 21 that the carrier is in discussions with **KLM (Royal Dutch Airlines, N.V.)**, **Northwest Airlines**, and **Alitalia, S.p.A.** concerning the possibility of AF joining

their global alliance. Northwest and KLM are also alliance partners of **Continental Airlines**, which is one of two U.S. airlines seeking a partnership with Chairman Spinetta's line. None of the suggested participants will confirm the story.

AF shares soar on February 22 as the partial privatization of the airline reaches the Paris Bourse. Shares are first traded at 18 euros against a flotation price of 14-14.2 euros. Indeed, initial trading must be suspended for 15 minutes before a single deal can be concluded because heavy demand pushes the share value up by over 700%. The government, which has held back 1.97-million shares from the institutional tranche to keep up with demand from individual investors, now allows a sale to small investors of 21.96-million shares worth 307-million euros (\$1 = .9104 euro). When all is said and done, the French government will remain the majority shareholder, with 63.6%, but 22.6% of the stake will be held by institutions, small investors, and company employees.

Chairman Spinetta basks in the success of the day, informing radio interviewers that the day's fiscal activity is an "enormous popular success." He also takes the opportunity to reaffirm his intention to choose, before the end of the year, either **Delta Air Lines** or **Continental Airlines** as the carrier's major global alliance partner.

On February 23, breaking ranks with its partners, **Alitalia, S.p.A.** confirms that the carrier, along with **Northwest Airlines** and **KLM (Royal Dutch Airlines, N.V.)**, is at the "very beginning" of alliance talks with AF.

While on approach to Paris (ORY) after a March 2 service from Marseilles, an A320-211 with 6 crew and 76 passengers is seized by former Bologna, Italy, policeman Stevano Savorani (who claims to have explosives) and is ordered to divert to Paris (CDG). Safely on the ground and moved to a secure portion of the airport, the plane's doors open and all but six hostages are released as negotiations continue. Late in the day, Savorani frees the remainder of his hostages and surrenders to police, ending the standoff without any injuries.

Also on March 2, the world celebrates the thirtieth anniversary of the first flight of the French-built Concorde prototype, called 001, which made its maiden flight from the Aerospatiale airfield at Toulouse this day.

On March 3, in response to the vote of the European Parliament in February to have the EU crack down on U.S. airliners equipped with hush-kitted engine mufflers that are ineffective at controlling air pollution, the U.S. House of Representatives begins to debate a retaliatory bill of its own. Should the EU go ahead as planned and vote on March 28 to prohibit flights by the Stage 3 U.S. planes (as early as April 1), the bill, voted to the floor by the House Rules Committee, would authorize a ban on Concorde flights to the U.S.

Spokesmen from both AF and **British Airways, Ltd. (2)**, the only carriers operating the SST, deplore the action, calling Concorde "an inappropriate target for sanctions in a purely trade dispute." They also indicate their confidence that a diplomatic solution will be found.

AF and **LAV Venezuelan Airlines (Linea Aeropostal Venezolana, S.A.)** sign a strategic code-sharing agreement on March 3. In addition to coordinated connections at Paris (CDG) and Caracas, the two will initiate dual designator services in June.

Strong crosswinds force a B-737-528 to land horizontally across the runway at Biarritz on March 5; with the jetliner unable to move, passengers are evacuated by emergency chute. For the next several hours, flights into Biarritz must be diverted to Pau.

The second aircraft to be lost on the same day is a B-747-228C. Unable to extend the nose gear, the two-man crew lands at Madras, India, with the gear retracted. After putting down, a fire begins that consumes the airplane, even as the aviators escape without injury.

In cooperation with the Thailand-based ECPAT Association, the airline on March 15 launches a campaign to combat child prostitution, using videos on long-haul flights to remind travelers that sex with children is a crime. A company spokesman indicates that the effort is targeted at the growing number of "occasional sex tourists."

Under provisions of the Positive Comity provisions of the 1991 EU-U.S. Cooperative Agreement, the U.S. Department of Justice, also on March 15, presents a case before the European Commission accusing

the carrier of abuse of a dominant position. After an initial inquiry, the EU elects to open a formal procedure against AF, which is alleged to have discriminated against SABRE, the computerized reservations system owned by **American Airlines**, in favor of its own partially owned system, Amadeus.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, AF, on March 24, halts all scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, *Operation Allied Force*, the bombing attack on targets in Serbia and Kosovo, begins.

The company indicates, also on March 24, that, due to high maintenance costs, it may well phase out its Concorde in or after 2007. Reacting to the announcement, **British Airways, Ltd.** (2) states that it has no plans to curtail its SST services and suggests that it is ready to "welcome on board our Concorde" passengers from France who will not be able to fly on the AF aircraft if the report is accurate.

Service to Belgrade remains halted on March 25–31 and for the duration of the NATO bombing campaign. Flights to south-central and southeastern Europe experience delays of 30–60 minutes due to airspace closure.

On March 26, the European Commission announces that, on the basis of its initial inquiry, it has determined that AF has discriminated against SABRE, the computer reservations system owned by **American Airlines**, by favoring Amadeus, the system in which it is part owner. The Commission enters an objection to the fact that the French major provides Amadeus with more accurate information than that which is given to SABRE or other reservations system, thereby putting the latter at a competitive disadvantage. A procedure is started against the carrier for an abuse of a dominant position.

European transport ministers agree on March 28 to postpone by a month a proposed ban on old aircraft upgraded with noise mufflers in order to avoid a transatlantic trade dispute.

When the summer schedule begins on March 29, AF is able to feature a substantial capacity increase, which is made possible due to the opening of a third runway (two days hence) and completion of Terminal 2F at Paris (CDG). These new facilities alone boost the carrier's connections by 44% from medium-haul to long-haul flights. In order to maintain its lead in offering the largest number of frequencies per city served of any European airline, AF begins to add four long-haul and seven medium-haul aircraft to its fleet. Additionally, the fleet will be rationalized by winter through the withdrawal of all remaining B-747-100s and Fokker 100s, plus some of the B-737-200s.

Flight schedule changes, deletions, and additions are made around the globe. The number of weekly flights from Paris to Tokyo (NRT) are increased from 12 to 13, while service to Nagoya is suspended.

Due to Indonesia's prolonged economic crisis, the six-times-a-week roundtrip service from Paris (CDG) to Jakarta via Singapore is cut to thrice weekly, but new frequencies to China will begin in June. The company now runs nine weekly flights to India—five to Delhi and four to Bombay. Plans call for an increase of frequencies to 11 per week by winter—six to Delhi and five to Bombay.

Eighteen additional frequencies are laid on to U.S. destinations: Washington, D.C. (IAD) and Chicago (ORD) from 1 to 2; Miami, from 7 to 10; and Los Angeles, from 12 to 13. As a result of these new flights, plus the alliances with **Delta Air Lines** and **Continental Airlines**, the number of American gateways served climbs from 36 to 89, including 48 with Delta and 30 with Continental. In addition, the carrier's first B-777-228 IGW service to North America begins as its new "Triple 7" begins flying from Paris to Washington, D.C. (IAD).

Weekly flights from Paris (CDG) to Pointe-à-Pitre grow from 11 to 13 each week and from 10 to 13 for Fort-de-France. Service to Havana remains at twice weekly. Weekly nonstop roundtrips to Buenos Aires grow from five to six and those to Santiago from four to five.

Service to Africa also grows, with the schedule from Paris (CDG) to Lagos increased from six flights per week to daily and to Ouagadougou from four to five each week. Service is simultaneously withdrawn from Cape Town and Maputo as the carrier negotiates with a local airline to take up the slack under code-sharing. Flights to Agadir, Casablanca, Marrakesh, Rabat, Sfax, and Tunis are transferred from Orly West to CDG-2 in order to facilitate connections between North Africa and the rest of the AF network.

A fourth weekly service is added to Damascus, while flights to Abu Dhabi are increased from four times a week to daily. Daily nonstop service is now offered to Dubai, with the total number of flights operated to the Gulf States increased from seven each week to ten.

Additional dual-designator services into the U.K. are offered by "Air France Express" partners **Gill Air, Ltd.** and **Jersey European Airways, Ltd.** The main line boosts its own service to Newcastle from two to three each day, as well as growing its Manchester flights from four to five daily.

Daily Stockholm service is increased from three to four, as is that to Oslo, from two to three, Helsinki and Gothenburg, from one to two, and Billund, from two to three, the latter due to dual-designator flights with **Maersk Air, A.S.**

Daily nonstop roundtrips from Paris (CDG) to Frankfurt are increased from seven to eight and from Paris (CDG) to Dusseldorf and Stuttgart from five to six. A ninth daily nonstop roundtrip is laid on from Paris (CDG) to Geneva along with an eighth daily roundtrip to Amsterdam.

Service is resumed to Genoa with three daily roundtrips; daily flights to Rome are increased (6 to 7) as are those to Florence (3 to 5); to Venice (4 to 5); to Bologna (3 to 4); and to Milan (7 to 8). Daily frequencies to and from Naples are transferred from Charles de Gaulle to Orly Airport.

Daily roundtrips from Paris (CDG) to Madrid are increased (7 to 8), as are those to Lisbon (4 to 5), and to Oporto (2 to 3). Daily service is launched from Paris (ORY) to Malaga and Valencia.

La Navette shuttle flights are increased by the addition of two new services to Marseilles and one to Nice (27 and 17 daily flights, respectively). Two additional morning flights to and from Bordeaux effectively supplement the existing schedule, and greatly improve the frequency. Bordeaux is the fourth French city to benefit from La Navette shuttle service. A new morning flight from Strasbourg to Paris (ORY) is introduced, for a total of three prime time flights, while another flight is added to the Paris (ORY) to Pau service at the end of each afternoon, along with another to Corsica.

Direct transversal services continue to be improved, including the daily flights from Lille to Marseilles (3 to 4), to Toulouse (2 to 3), and to Bordeaux (1 to 2) plus those from Strasbourg to Toulouse and Bordeaux (2 to 3). The number of available connections at the Lyon hub is doubled by the introduction of a third bank of flights in mid-afternoon. New daily services are introduced from Lyon to Mulhouse, Pau, Biarritz, Lorient, Metz, Rodez, Bologna, Vienna, Hamburg, and Vienna.

The first of two A319-113s to be chartered from ILFC arrives on March 30; the second will be delivered in April. The March 30 aircraft is the one thousandth A320-family jetliner to be delivered. A340-311s begin to operate the twice-daily return service from Paris (CDG) to Atlanta on March 31.

The third runway becomes available at Paris (CDG) on April 1, allowing many additional passengers to be accommodated. At the same time, Satolas Airport at Lyons becomes the company's first regional hub. Many new European services are started from that point, including nonstop roundtrips to Vienna, Cologne, Hamburg, and Venice, while frequencies to Barcelona, Dusseldorf, Frankfurt, Rome, Stuttgart, and Munich are increased.

Service to Chicago (ORD) is doubled on April 12 as a B-767-328ER adds another daily roundtrip. The date reflects the forty-fifth anniversary of AF service to the "Windy City," and features both L'Espace business class and Tempo economy class seating.

The first AF B-777-228 IGW service to Tan Son Nhat Airport at Ho Chi Minh City, Vietnam, is completed on April 13. According to the

company's local representative in Vietnam, Michel Maury, who is quoted in the *Saigon Times Daily* on April 15, this seventh weekly roundtrip service represents the French line's commitment to a long-term business relationship with the nation. The "Triple 7s" now operate from Paris to Singapore and Ho Chi Minh City, with Singapore replacing Bangkok as the intermediate stop.

Company employees at Nice begin a strike on April 14 that disrupts service to the French Riviera.

At a meeting of the Swiss-American Chamber of Commerce on April 21, the CEO of **Swissair, A.G.** indicates that moves by **Delta Air Lines** to form a code-sharing alliance with AF have placed the status of its current dual-designator pact with Swissair in grave doubt.

On April 23, a fire damages the offices of AF, **Deutsche Lufthansa, A.G.**, **British Airways, Ltd. (2)**, **Japan Air Lines Company, Ltd. (2)**, and **Indian Airlines, Ltd.** in the cargo terminal at New Delhi's Indira Gandhi Airport.

During NATO's fiftieth anniversary celebration in Washington, D.C., on April 24, EU officials announce that, on April 29, ministers from the 15 member states will adopt the controversial "hush kit" restrictions against older aircraft, banning the addition of newly noise-modified aircraft to national aircraft registers from this point on. It also specifies that beginning in April 2002 it will prevent the use of any non-EU noise modified aircraft not operating in the EU in April 1999. All are aware that the U.S. Congress is still considering a ban on Concorde flights in retaliation and pledge to amend the law, which stands to destroy a potentially huge resale market for older Boeing jets, after further consultation with the U.S.

On April 26, orders are placed for 15 A318-100s, with options taken on another 10. Simultaneously, employees at Nice determine to continue their 12-day-old job action after talks with management have proven fruitless. Two days later, EU officials vote to grant a one-year delay in imposing an aircraft engine rule opposed by the U.S.

Also during the month, arrangements are completed with ILFC for the charter of two A340-300s, two A319-100s, and a B-777-200 IGW; the initial A340 will be delivered in December with the remainder of the order completed by April 2001.

Mark Belnick, executive vice president of Tyco International, is honored on May 5 as the one-millionth AF Concorde passenger. When the SST arrives at New York (JFK) from Paris (CDG), a cake-and-champagne reception for the passengers and company employees is held at the new Terminal One.

Also during the day, a traditional ribbon-cutting ceremony is held to inaugurate the company's new U.S. Reservations Center at Sunrise, Florida. With over 140 staff in six functional groups who are able to handle 200,000 calls per month in 16 languages, the facility is the carrier's second largest after the main facility in Paris.

A second daily B-777-228 IGW return service is launched on May 16 between Paris (CDG) and Washington, D.C. (IAD).

On May 17, acting via Air Foyle (Ireland), Ltd., **Air Foyle, Ltd.** formalizes its deal with **CityJet, Ltd.** In exchange for a £4-million (£1r 8-million) investment, the British carrier acquires a 50.01% majority stake. Air Foyle Chairman Chris Foyle becomes the Irish line's new chairman, with CityJet's founder/CEO Patrick Byrne retaining his post. AF, which has been discussing regional possibilities with the Irish company for eight months, invests £2 million as a convertible loan. The French major's contribution will result in CityJet becoming the newest upgraded "Air France Express" carrier. As an increasing number of its aircraft are repainted, CityJet will expand its commuter services from Dublin to Paris, London (CTN), Florence, Nice, Toulouse, Madrid, and Strasbourg to a point where these flights account for half of the company's business. The arrangement between **CityJet, Ltd.** and AF, called a "sweet deal," will be fully detailed in the financial pages of the May 21 issue of *The Irish Times*.

As a result of the KAL Shanghai crash in April, the latest in a string of mishaps to plague the South Korean flag carrier, AF, on May 18, requires that **Korean Airlines/Korean Air (KAL)** suspend its code-sharing pact with the Paris-based major for a year.

Talks between AF and **KLM (Royal Dutch Airlines, N.V.)** regarding the possibility of the French line joining the KLM/ **Northwest Airlines** Wings group continue; KLM CEO Leo van Wijk indicates on May 20 that the discussions are still in an exploratory stage.

Under terms of its code-sharing agreement with **Middle East Airlines, S.A.L. (2)**, the number of weekly flights between Paris (CDG) and Beirut are increased on June 1 from 1 to 19.

In a bid to become the top carrier operating between Europe and China, weekly return frequencies are increased from Paris (CDG) to Beijing on June 1 from five to six; they are simultaneously boosted to Shanghai, from two every week to three.

On June 17, the *Les Echos* business newspaper reports that Air France has chosen **Delta Air Lines** as its new U.S. strategic partner. The flag carrier offers no comment. The scoop is, however, confirmed on June 22 when both majors announce that they will align their passenger and cargo services as part of a long-term effort to forge another global airline alliance.

While in the final stages of takeoff from New York (JFK) on June 27, Flight 614, a **Flugfelag Islands, H.F. (2)**-**Icelandair** B-757-208ER, with 7 crew and 185 passengers, clears an Air France B-747F, which has just landed, turned, and crossed the runway in front of the departing passenger plane; no injuries are reported.

When a tire bursts aboard a B-747-228C on July 17, an emergency landing is requested by the pilot for Havana; he is able, however, to put the plane down safely, with no injuries reported.

The code-share pact with **Delta Air Lines** is expanded on July 30 to include a reciprocal airmail agreement. Under its terms, the U.S. company will extend the number of destinations it can reach on behalf of the U.S. Postal Service while Air France will be able to do likewise on behalf of the French Post Office.

The current three-city code-sharing agreement with **Tunis Air** is expanded on August 16 to include all French and Tunisian cities.

An over-and-back Concorde charter from Paris (CDG) visits Ft. Lauderdale on October 8-9.

Unions stage a strike on October 11-12 to protest proposals for implementation of the French government's mandated changes to a 35-hr. workweek; at least 9 U.S. services are cancelled.

As a result of the October 13 military coup in Pakistan, that day's service from Madras to Karachi is diverted to New Delhi.

In a major expansion, the company, at the start of its winter schedule on October 31, increases seating capacity by 9.1%. The boost is made possible by the replacement of the last remaining B-747-100s with 4 B-777-228s and 3 A340-311s. Simultaneously, Air France Cargo charts an A300B4F freighter from **HeavyLift Cargo Airlines, Ltd.**, which will be used to operate its African routes. A B-777-228 is placed on the Paris (CDG) to Shanghai route on November 4.

Delta Air Lines greatly expands its French code-share on December 1, placing its designator on AF European services from Paris (CDG) to Brussels, Zurich, Vienna, Geneva, and Basel. It also places its designator on AF flights from Paris (CDG) to Ouagadougou, Burkina Faso, and Abidjan.

A strike in December by refuelers, followed by violent winter storms across the Continent, have a decidedly negative impact on company earnings as the year ends. On December 26 alone, 80% of the rare and historic trees at Versailles are destroyed.

Overall passenger boardings this year, nevertheless, jump 11.6% to 37,028,000 while cargo rises 2.9% to 4,726,604,000 FTKs. Group revenues surge 13.4% to \$9,922,299,000 while costs are up 9.4% to \$9,577,291,000. The operating gain rises to \$345 million, as the net profit climbs \$100 million to \$340,173,000.

Among the world's top 25 airlines as the new millennium begins, Air France is 10th in passengers and operating income, 6th in FTKs, 8th in employee number, 12th in fleet size, 16th in operating profit, and 9th in net gain.

At a January 2000 news conference, Air France officials indicate that they will gradually pull out of their 50% stake in **Aeropostale**

L'Aeropostale/Societe de Exploitation Aeropostale, S.A. Reaction by the other 50% shareholder, Sofipost, a subsidiary of the French post office La Post, is not reported.

The last operational B-747-128 flies from Paris (CDG) to Bangkok on February 9; there it is turned over to new owners, who will turn the Jumbojet into a restaurant. On March 1, **Delta Air Lines** begins to code-share on AF flights from Paris (CDG) to Lisbon and Porto.

In a heartfelt and well-received effort supported by Air France, **Delta Air Lines**, Scott Company, the Georgia Forestry Association, and the American Forests conservation group, over 5,000 seedlings, including 100 taken from the grounds of homes of American presidents and other historic sites, are transported to Versailles and planted by French and American students on March 20. The trees have been flown over by Air France and the students by Delta.

For safety reasons, the carrier, on March 23, orders its pilots to cease speaking French and to use English when speaking with Paris (CDG) ATC; the order will be rescinded on April 5. The next day, a code-sharing agreement is signed with Grupo TACA. When it takes effect on April 9, AF will be able to place its code on TACA routes while TACA customers may connect to any of the 273 AF destinations in 85 countries via Miami.

The carrier and **Aeromexico (2), S.A. de C.V.** begin code-sharing on March 25 between Cancún and Miami and between Monterrey and Atlanta. Service to Nairobi, Kenya, ends the same day.

Daily nonstop A310-304 roundtrips are launched on March 26 between Paris (CDG) and Philadelphia. **Delta Air Lines** code-shares on the service as well as on the Dakar frequency and an increased number of AF flights from Paris (CDG) to Atlanta and Cincinnati and from Lyon to New York (JFK). Flights from Paris (CDG) are increased to Boston, Miami, Rio de Janeiro, Mumbai, Seoul, Shanghai, Havana, Ouagadougou, Nouakchott, Douala, Yaounde, and Beirut. Cities visited daily include São Paulo, Beijing, Delhi, Osaka (KIX).

The same day, AF begins to code-share on **Comair** flights to 31 U.S. domestic destinations. Frequencies from Paris (ORY) to Strasbourg and Nice are boosted and a new daily return service to Seville is opened. New thrice-daily roundtrips are launched from Paris (CDG) to Bergamo and increased to all Italian destinations, as well as to Madrid and Barcelona. From Lyon, service is boosted to Turin, Barcelona, Madrid, Munich, and Rome.

In a fresh AF color scheme, a recently retired B-747-128 is delivered for display on April 1 to the Musée de l'Air. On April 9, a comprehensive code-sharing agreement is implemented with Grupo TACA; Miami is the connecting point for the flights shared by these carriers.

A deal is struck with ILFC on April 23 for the lease of 3 B-777-2Q8s beginning a year hence. The next day, **Delta Air Lines** begins to code share on AF services between Paris (CDG) and Boston. B-767-328ER frequencies from Paris (CDG) to Boston are increased from 7 to 12 on April 24.

Also in April, a 1.15 million-sq.-ft. cargo facility is opened at Paris (CDG); the new facility can handle a million tons of freight each year.

Suspended in December 1998, the route from Paris (CDG) to Brazzaville, in the Democratic Republic of the Congo, is reopened on May 3.

In the midst of contract discussions with six unions, Air France is struck by its cabin crews on May 5-6, but is still able to maintain approximately 60% of its domestic and international schedules. The dispute concerns a demand for a reduction in the workweek, made possible under a new French law.

For a third time, the company sends specialists to Algeria on May 10 to check security conditions and the possibilities of resuming service. On May 15, **Delta Air Lines** begins to code-share on company flights from Paris (CDG) to Cincinnati.

With a pink color scheme and the Victoria's Secret trademark label framing its doorway, a Concorde, on April 16, flies VIPs from New York (JFK) to Nice, from whence they will travel to Cannes for the Cinema Against Aids 2000 benefit.

During the spring, the company becomes a launch customer for the new Airbus A318.

Delta Air Lines also places its "DL" code on AF flights between Paris (CDG) and Lome, Togo, beginning on June 1.

Further divestment comes in June as the carrier group notes that it will reduce its 25% stake in Amadeus Global Travel Distribution to 2.5%, thereby earning FFr 500 million.

On June 21, **Delta Air Lines** is allowed to place its "DL" code on the AF B-737 Kiev service.

Inbound on a July 6 service from Miami, a B-747-428 with 275 passengers suffers a complete radio breakdown, probably caused by a lightning strike. Officials at Paris (CDG) approach L'Armée de l'Air, which dispatches a Mirage 2000 fighter out to escort the silent Jumbojet in to a safe landing.

A year after Air France and **Delta Air Lines** announce plans to create a global alliance, the new group, which also includes **Aeromexico** and **Korean Airlines**, is officially named "SkyTeam" in July. Together, the partners offer 6,402 daily flights to 451 cities in 98 nations. Simultaneously, the French major pays 96 million euros to take a majority stake in **Brit Air (Brittany Air International, S.A.)** and increases its share in **Regional Airlines, S.A.** to just over 99%.

Captured on videotape and shown on TV around the world, an extraordinary disaster reminiscent of the 1986 loss of the space shuttle *Challenger* occurs on July 25. On that date, Concorde Flight 4590 with 9 crew and 100 passengers, including 96 German tourists headed for the MS *Deutschland* and a South American cruise, becomes the first Western SST to be lost in a fatal accident.

The disaster occurs while the charter to New York (JFK) sponsored by the Neustadt-based Peter Deilmann tour company, is taking off from Runway 26R at Paris (CDG). The aircraft, it is later reported, strikes a 40 cm.-long metal strip (perhaps left by **Continental Airlines** Flight 55, a DC-10-30 that had taken off four minutes earlier) on the concrete, after which a left-hand tire on the main landing gear explodes. As the aircraft is becoming airborne, a fire, probably fed by a leak in the fuel tank below the left wing, erupts and is reported to the crew by ATC. About 2,100 m. down the runway, the No. 2 engine loses power and stops; the No. 1 engine begins to lose power. Trailing flames and black smoke and having strayed to the left of Runway 26R, the SST becomes airborne. At this point, the sleek, dark, trailing flame is captured on film by Hungarian amateur photographer Andras Kisgergely, whose efforts are syndicated worldwide by Reuters, Ltd.

Capt. Christian Marty (incidentally, the first Frenchman to wind-surf across the Atlantic) and copilot Jean Marcot cannot retract the Concorde's landing gear. It is doubtful if they, or anyone aboard, realizes that the SST has passed near Flight 275, a company B-747-428 just arrived from Tokyo with French President Jacques Chirac aboard, which is awaiting ATC clearance to proceed to a Terminal 2 gate. Airborne for about a minute, the No. 1 engine fails, after which the Concorde banks to the left, loses control, and crashes into the Hotel-lisimo, next to a main highway and 3,300-ft. from the city of Gonesse, bursting into flames.

There are no survivors from the plane and four people on the ground are also killed. Among the Concorde victims were Andreas Schraner, his wife Maria, and their two children, representing three generations, and her father-in-law, Christian Eich, president of the BMW Museum in Munich. All remaining Air France Concordes are immediately grounded, although British SSTs will operate their twice-daily roundtrips to New York (JFK) for another two weeks.

An intense investigation of the wreckage of the SST (which had been featured in the motion picture *Concorde: Airport 79*) is undertaken by safety officials from France, the U.K., and the U.S., while the media and analysts speculate on the commercial future of the Concorde. With French and British experts unable to agree on new operating safety measures, the carrier announces on August 2 that its five remaining SSTs will remain grounded "until further notice."

Just after landing at Los Angeles following an August 3 service from Papeete, Tahiti, ground crew find a man in the main wheel well of Flight 71, a B-747-428. The stowaway is rushed to UCLA Medical

Center suffering from severe hypothermia and all involve wonder how he survived the flight.

Concorde staff, on August 4, request that management organize a special SST flight for employees to demonstrate that Concorde is a safe airliner; management denies the idea.

On August 15, **Aeromexico (2), S.A. de C.V.** begins to code-share on company flights from Paris to Lyon, Nice, and Toulouse.

With several days notice, the French DGAC and the U.K. CAA suspend the Concorde's airworthiness certificate on August 16, a day after **British Airways, Ltd. (2)** grounds its SST fleet.

Also on August 16, partner **Delta Air Lines** begins to code-share on Air France six-times-a-week return services from Paris (CDG) to Douala and continuing to Yaounde thrice weekly.

At the end of August, the carrier becomes one of the last in Europe to issue a total ban on in-flight smoking. The prohibition will take effect on November 1.

Signaling that it does not expect a resumption of Concorde service before April 2001 at the earliest, Air France, on September 5 announces that, starting on October 29, a new daily "upscale" A340-311 roundtrip will be initiated between Paris (CDG) and New York (JFK).

The head of the investment bank Lazard India reports on September 8 that AF and **Delta Air Lines** will make a joint bid for a 26% stake in **Air India, Ltd.** The anticipated sale process is to begun the week of September 11 by a formal invitation from the Indian government to potential bidders.

Stranded at New York (JFK) after the July 25 disaster, a company Concorde, the same ship involved in the 1979 near-disaster, is permitted to fly back to Paris (CDG), without passengers, on September 18. Many suggest, perhaps prematurely, that this is the last flight for a commercial SST.

On September 25, **Delta Air Lines** begins to code-share on the AF A310-304 service from Paris (CDG) to Nouakchott, Mauritania. Mindful of the SAirGroup plan to merge **Air Liberte, S.A., Air Littoral, S.A.,** and **AOM French Airlines, S.A.** into a single large company, Air France, now creates its own plan for a large regional. On September 27, the major calls upon the presidents of its subsidized partners **Flandre Air, S.A., Proteus Airlines, S.A.,** and **Regional Airlines, S.A.** to present a proposal for the merger of the three to their employees.

It is announced the next day that the carrier will sue **Continental Airlines** for allegedly causing the July 25 Concorde disaster; Continental maintains that there is insufficient evidence that a 17" metal strip, which supposedly fell off of one of its DC-10s, was involved in the accident.

Delta Air Lines, on September 29, begins dual-designator service aboard AF B-737-528s flying from Paris (CDG) to Moscow and St. Petersburg. The purchase of a 50.19% stake in **Brit Air, S.A.** is formally completed on October 10. Two days later company officials meet in Moscow with representatives from **Aeroflot International Russian Airlines (ARIA)** to discuss future alliance possibilities.

Flyers from four of the carrier's minority pilots' unions strike the carrier on October 20, forcing cancellation of 100 of 1,300 daily flights. Another 100 flights are cancelled the next day and on October 22. Only medium-haul services are affected.

The *London Sunday Times* reports, also on October 22, that "OneWorld" partner **British Airways, Ltd. (2)** has begun talks with **Air France** and **Delta Air Lines** concerning its possible membership in their "SkyTeam" alliance.

During an October 25 France-Inter radio interview, Paul-Louis Arslanian, head of the French Accident Investigation Bureau team investigating the July Concorde disaster, indicates that his technical detectives are certain that the crash was caused by a metal strip from a **Continental Airlines** DC-10 that was found on the runway.

Delta Air Lines also places its "DL" code on AF flights between Paris (CDG) and Budapest, Abu Dhabi, and Dubai, beginning on October 29. The same day, an increased number of daily A320-211 and B-737-228A roundtrips are offered between Lyon and Toulouse.

The daily "upscale" A340-311 roundtrips between Paris (CDG) and New York (JFK) is replaced by a B-777-228ER service on December 16.

AIR FRANCE EUROPE, S.A.: France (1996-1997). The former **Air Inter, S.A.**, now an **Air France** subsidiary, is reformed as a combination of the previous carrier and the major's medium-range European Division and renamed on January 1, 1996. The same day, domestic deregulation takes full effect. For the next 18 months, the company will operate under the name **Air Inter Europe, S.A.**

On April 1, 1997, the carrier and **Air France** are grouped together under a joint management structure created under a management-lease arrangement between the flag carrier and its subsidiary; Pascal de Izaquire is now AFE managing director.

Operations are split between the domestic hub at Orly Airport and the international airport of Paris, Roissy-Charles de Gaulle. La Navette shuttle service roundtrips continue to be offered 70-times-per-day between Paris (ORY) and Toulouse, Marseilles, and Nice.

With the decision taken not to continue the company as a separate operation, progress toward a September amalgamation of Air France Europe into its parent proceeds. For some time, however, AFE aircraft will continue to display **Air Inter, S.A.** and **Air Inter Europe, S.A.** livery.

Almost immediately upon reformation the AFE pilots' union goes out on strike to protest the new work-rule changes and lower pay scale now imposed. The pilots will continue their job action until May 23, when they elect to join their colleagues from parent **Air France** at the contract bargaining table with the flag carrier's management. Meanwhile, other wildcat job actions continue to disrupt operations.

Flights, however, continue to be operated, some by **Air France** crew employing A300B4-2Cs on wet lease. Given ATC congestion in Europe, and especially in Marseilles, an agreement is reached with the government aviation agency DGAC to allow La Navette landing priorities. At the same time, Air France transfers additional services to its international hub at Roissy-CDG, freeing up more slots for Air France Europe at Orly Airport.

AIR FRANCE EXPRESS. See AIR LITTORAL, S.A.; BRIT AIR, S.A.; CITYJET, LTD.; EUROWINGS LUFTVERKEHRS, A.G.; GILL AIR, LTD.; JERSEY EUROPEAN AIRLINES, LTD.; PROTEUS AIR SYSTEM, S.A.; REGIONAL AIRLINES, S.A.

AIR FRATER: Ft. Lauderdale Executive Airport, 5950 W. Oaklawn Park Blvd., Ft. Lauderdale, Florida 33313, United States; Phone (954) 385-0986; Fax (954) 385-9244; Year Founded 1997. With three full-time and four part-time pilots, this brand-new, on-demand operator begins flying from Ft. Lauderdale in early 1997. Under the direction of Vice President Kevin Frater, passenger charters are operated north as far as Canada and south through the Caribbean and Mexico with a single Learjet 25.

AIR FREIGHT, LTD. (1): United Kingdom (1946-1953). Air Freight, Ltd. is formed by H. R. Hughes, E. G. Nicol, and F. A. Dickson in late 1946 and registered as an all-cargo carrier on February 28, 1947. With two Handley Page Halifaxes obtained in January, the company undertakes long-haul ad hoc charters from its base at London (Bovingdon) to North Africa and the Orient, as well as France and Holland.

Early in 1948, the carrier is sold to **Eagle Aviation, Ltd.** and absorbed. In September 1952, Eagle owner Harold Bamburg elects to revive the Air Freight, Ltd. title and attach it to a new all-freight subsidiary, which is equipped with three Avro 685 York Is. The renewed carrier is purchased by the **Lancashire Aircraft Corporation, Ltd.** in July 1953 and its title is removed forever.

AIR FREIGHT, LTD. (2). See FAIRFLIGHT, LTD.

AIR FREIGHT EXPRESS: United States (1982-1985). Donald Luthi forms this all-cargo commuter at Minneapolis (MSP) in 1982 to offer scheduled flights to destinations in the upper Midwest. Employing a fleet of 5 Cessna 207s, the carrier undertakes service on behalf of such concerns as **Federal Express, Emery Worldwide, and UPS (United**

Parcel Service) to what will become a network of over 50 stops in Minnesota, Wisconsin, North and South Dakota, Wyoming, Colorado, and Illinois. A total of 2.12-million pounds of freight are transported.

That figure jumps 69% in **1983** to 6.86-million pounds. The fleet in **1984** includes 14 Cessna 207s and is employed, largely on behalf of **Federal Express**, to fly 9,284,348 pounds of cargo. Late in the year, Fedex informs Luthi that it will not renew its contract the following year.

Deprived of its major partner in **1985**, AFE departs the air transport business and becomes exclusively, a trucking company.

AIR FREIGHT NEW ZEALAND, LTD.: P.O. Box 1046, Milson Airport, Palmerston North, New Zealand; Phone 64 (6) 357-1149; Fax 64 (6) 358-2999; Code NZ; Year Founded 1989. AFNZ is formed by Freightways Group, Ltd. at Palmerston North in **1989** to provide scheduled all-cargo flights on behalf of another Freightways subsidiary, Parcel Express, Ltd. Employing two Convair CV-580s, Managing Director William D. Olsen's 35-person carrier ensures the night return contract flights, which are flown from Auckland to Palmerston North via Christchurch.

On July 31–August 1, one of the Convairs fails takeoff from Auckland and crashes, killing the three-man crew.

Operations continue apace in **1990–1992**. In **1993–1994**, Managing Director Olsen continues to oversee a 35-person workforce, which operates three Convair CV-580Fs on the same frequencies over the same routes as before.

A fourth CV-580F is acquired in **1995–2000**. During these years, airline employment falls to 29. Scheduled flights continue to Auckland and Christchurch.

AIR FRET, S.A.: France (1964–1980). Air Fret is organized at Paris in **1964** to provide passenger and cargo charter flights. Operations commence with a fleet of 1 Lockheed L-1049C Super Constellation and 3 L-1049Gs all purchased from the French flag carrier **Air France**. Revenue services are flown from Aeroport de Nîmes-Garone to destinations in Saudi Arabia, Iraq, Iran, the UAE, Yemen, North Africa and southern Europe. At the end of the decade, orders are placed for three Douglas DC-7BFs, which, by **1970**, have replaced all of the Connies except the L-1049C.

President R. Colin's 20-worker carrier later obtains a Boeing 707-120F, but rising expenses, world recession, and the Persian Gulf conflict in **1979–1980** conspire to force the company out of business in 1980.

AIR FURNESS, LTD.: United Kingdom (1986–1988). Established at Walney Airport in **1986**, Air Furness begins scheduled services to Manchester with a fleet comprising 1 Pilatus-Britten-Norman PBN-2B and 1 Piper PA-23. Managing Director David Thackeray adds a PBN-2A in **1987** as revenue flights are inaugurated to Isle of Man and Carlisle. Enplanements reach 4,000. All operations are halted in **1988** as debts far exceed income, forcing bankruptcy when new financing cannot be found.

AIR GABON (COMPAGNIE AERIENNE GABONAISE, S.A.): French Equatorial Africa/Gabon (1951–1968). Pierre Nicaise establishes AG-1 at Port-Gentil in French Equatorial Africa in **1951**. Principal shareholder Nicaise's charter operation commences domestic revenue services flying passenger and cargo to Libreville, Mayumba, Gamba, Tchibanga, and Lambarene. The latter outpost is, for many years, the home of Dr. Albert Schweitzer.

Over the next 18 years, flights are continued and the fleet grows to include 4 Beech 18s, 3 Cessna 185s, 2 C-180s, and 1 C-310, plus a number of helicopters. AG-1 also acquires a Britten Norman BN-2 Islander, one of the first of that type to be employed in West Africa.

Early in **1968**, the company is purchased by and merged into the rapidly expanding **Transgabon (Compagnie Aérienne Gabonaise, S.A.)**.

AIR GABON (COMPAGNIE NATIONALE AIR GABON, S.A.): BP 2206, Aeroport International Leon M'ba, Libreville, Gabon; Phone

241 730 027; Fax 241 731 156; <http://www.ana-aviation.com/airgabon>; Code GN; Year Founded 1977. Dissatisfied with its membership in the multinational consortium **Air Afrique, S.A.**, Gabon withdraws in December **1976**, determined to provide its own long-haul services. Meanwhile, the country's national airline, **Transgabon (Société Nationale Transgabon, S.A.)**, continues to operate domestic services.

In May **1977**, **Transgabon** is also designated the nation's long-haul operator. Air Gabon (Compagnie Nationale Air Gabon, S.A.) is now officially formed at Libreville around the nucleus of **Transgabon**. Ownership of the new entrant is split between the government (70%) and the French firm Sofpag (30%), in which **Air France** holds 29% interest.

In May, a Boeing 747-2B4BC is leased from **Middle East Airlines (2), S.A.L.**; with a green parrot painted on its tail, the Jumbojet inaugurates the company's roundtrip service to Paris in June, via Geneva, Marseilles, or Nice. Two Fokker F.28-2000s are delivered in July and are christened, *Port Gentil* and *Oyem*. They are followed into service by a Sud Est SE-210 Caravelle III.

The president of Gabon turns over his personal VIP-configured F.28-2000 transport to the company in **1978**. The MEA Jumbojet is returned in May as a new one is obtained under a lease-purchase arrangement from a French source. This Boeing 747-2Q2BC is delivered on October 5; christened *President Leon Mba*, it allows a resumption of long-haul services in December. Meanwhile, a B-737-2Q2CA, christened *Le Makokou*, is also taken into service. President S. Minko's company now employs 418 workers.

A DC-6B with three crew crashes under unknown circumstances 11 km. from Moanda on February 26, **1979**. There are no survivors.

The DC-4s and 2 remaining DC-6A/Bs are now replaced by 2 Vickers freighters, 1 V952F Cargoliner and 1 V-53F Merchantman, while the Caravelle is replaced by 1 B-727-228AC chartered from **Air France**.

The carrier enters a long period of financial reversals. Still, routes are extended from Libreville to Marseilles, Nice, Paris, Rome, 10 African states, and 26 domestic points.

In **1980–1981**, single-engine equipment is leased from private operators to provide service to small stops.

A CASA C-212 is leased in **1982** and enters service on those light domestic routes to airports unsuitable for the larger Fokkers. Passenger bookings for the year are 420,000.

The workforce in **1983** is 1,500. When the assets of the independent **Air Gabon Cargo, S.A.** are sold to **Air Zimbabwe Corporation**, the name of the formerly independent cargo carrier is assumed by this state carrier. Boardings reach 428,000.

With government financing and an Export-Import Bank loan, an L-100-30 Hercules freighter is ordered in **1984**. Passenger service is inaugurated to Cotonou (Benin), while in-house heavy maintenance of company aircraft is undertaken for the first time.

Fabian Essono-Owono becomes president in December **1985** and the Hercules is delivered late in the year as a replacement for the two Vanguards. The B-727-228AC is returned during the year.

Enplanements climb to 450,800, 323,000 of which are flown by the F.28-2000s over domestic routes, and profits are \$230,000.

In **1986**, capitalization is increased and ownership is now 80% Gabon and 20% Sofpag. When the civil Hercules enters service in January, the two Vanguard freighters are sold. The L-100-30 inaugurates all-cargo routes from Libreville to Bangui, Bata, Kinshasha, Luanda, and Malabo.

A Fokker 100 jetliner is ordered and the last payment is made on the B-747-2Q2B in December, allowing it to be transferred to Gabonese registry. A new domestic terminal is now opened at Libreville. Traffic figures are not released; however, an \$11-million loss is suffered.

Operations continue apace in **1987** as a new international terminal is opened at Libreville Airport. Austerity measures are introduced in September as the financial situation continues to worsen. Augustin Bous-samba is named chairman in November and the two Vickers freighters are sold to Paris-based Intercargo Service, S.A. Enplanements for the year reach 372,886. Losses of \$26.4 million (operating) and \$11.3 million (net) must be absorbed.

Airline employment is reduced by 2.4% in 1988 to 1,535. The fleet, elements of which are regularly leased out, includes 1 B-747-2Q2B, 1 B-737-2Q2CA, 3 F.28-2000s, and 1 L-100-30. In February, Francois Banga-Eboumi replaces Fabien Essono-Owono as president and the domestic and regional route system is reorganized. An agreement is signed with **Lina Congo, S.A.** in August for the initiation of a pooled service over the Pointe Noire-Libreville route; flights begin in the fall.

Passenger boardings fall 2.6% to 382,839, but freight is up by 10.5% to 27.2 million FTKs. Revenues retreat by 4.1% to \$111.9 million and expenses are down 12.8%. As a result, the operating loss "improves" to \$14.9 million and net loss to \$8.8 million.

The employee population is cut another 9.5% in 1989 to 1,391 and the fleet now includes 1 B-747-2Q2BC, 1 B-737-2Q2CA, 2 F.28-2000s, and 1 L-100-30, which is leased to the government of Angola in January.

Customer bookings increase 4.4% to 400,002, but cargo is off by 3% to 26.37 million FTKs. Revenues rise 5.3% to \$119.9 million while expenses fall 1.7%, allowing a cut in the operating loss to \$6.7 million. The net loss is \$5.7 million.

Beginning in February 1990, **Air Gabon, S.A.** becomes the first African airline to operate the Fokker 100. Leased from GPA Fokker 100, Ltd., the jetliner is configured for 12 first-class and 93 economy passengers. From this point on, traffic and financial figures are not available. Operations continue apace in 1991 and, in 1992, the fleet charts a B-737-228 and a B-727-228A from **Air France**.

In 1993-1994, Chairman Martin Bongo and President Mamadou Diop oversee a workforce of 1,383 and airline operations are provided by 2 F.28-2000s, 1 Fokker 100, 1 leased Avions de Transport Regional ATR72-202, 1 B-727-228 and 1 B-737-228A leased from **Air France**, 1 B-737-2Q2CA, 1 B-747-2Q2BC, and 1 L-382G Hercules.

Just after landing at Oyem following a December 8 service from Bitam, the ATR72-202 with 4 crew and 17 passengers, runs off the side of the runway, bounces over a ditch, and collides with a tree. Although the turboprop is damaged, there are no fatalities.

International destinations visited from Libreville during 1995-1998 include Paris, Marseilles, Nice, Geneva, Rome, Lagos, Pointe Noire, Kinshasa, Bangui, Dakar, Abidjan, Bamako, Cotonou, Lome, and Douala. New markets opened include Johannesburg, Malabo, Nairobi, and Sao Tome.

During these years, the Fokker 100 and ATR72-210 are withdrawn and a B-767-266ER is leased in 1996 for roundtrip flights to London. Enplanements average 480,000 per year, with losses suffered every 12 months. A net \$5.3-million profit is reported for 1998.

Fearing that it will collapse under its \$60-million debt, the airline's management, on March 29, 1999, seeks a bailout from the government of Gabon.

The capital infusion sought is not forthcoming. Economically unviable, the airline runs out of money and is forced to cancel its international and domestic schedule in March 2000 and stop flying. Plans to resume are, at this writing, unfulfilled and a newly signed cooperative agreement with **Cameroon Airlines, S.A.**, **Air Madagascar, S.A.**, and **Air Afrique, S.A.** remains dormant.

AIR GABON CARGO (COMPAGNIE GABONAISE D'AFFRETEMENTS AERIENS, S.A.): Gabon (1977-1983). **Air Gabon Cargo** is formed in the spring of 1977 at Salisbury, Rhodesia, to provide freight services to Europe. In order to avoid the United Nations sanctions that led to the suspension of **Affretair, Ltd.** (1) the previous year, this subsidiary of **Air Trans Africa, Ltd.** is registered in Libreville. Many former Affretair Caucasian staff members find work with this new entrant and the out-law airline's entire fleet is leased, including the Douglas DC-8-55Fs *Situntunga* and *Captain Jack Malloch*, a Canadair CL-44D, and two DC-7CFs. Flights continue even after 1979 when **Affretair, Ltd.** (1) is forced, by the creation of the new state of Zimbabwe, to shut its doors.

The company's assets (minus much of its staff) are acquired by **Air Zimbabwe, Ltd.** in 1983 and reformed as **Affretair, Ltd.** (2). The company name reverts to **Air Gabon, S.A.**

AIR GAMBIA, LTD.: Gambia (1991-1995). Founded at Freetown in March 1991, privately owned **Air Gambia, Ltd.** is owned by Gambian businessmen (51%) and by Desmond and Ulick McEvaddy, co-owners of Ireland's **Omega Air, Ltd.** Based at London (LGW), John O'Rourke serves as managing director with General Manager-West Africa John Rouse stationed at the Banjul office. Scheduled weekly intercontinental cargo and passenger services by the new company's single Boeing 707-323B Stratoliner begin to London in December from Freetown via Banjul.

In late 1992, a second weekly London frequency is started. Plans to inaugurate services to New York (JFK) are thwarted when the U.S. FAA, concerned over safety, rejects its rights application. The doubts are cleared up and, in June 1993, weekly flights begin from Freetown to New York with a second B-707, another Dash-323B once flown by **American Airlines**, via Banjul.

Determined to be unsafe, the original Stratoliner is withdrawn from the London route in July by order of the U.K.'s CAA. It is replaced, again briefly, by an Ilyushin Il-62 chartered from **Uzbekistan Airways**.

Fiscal and political difficulties occur in 1994, forcing the company to shut down in 1995.

AIR GASPEE, LTD.: Canada (1952-1982). **Trans-Gaspian Airlines, Ltd.** is formed in 1952 to offer charter and scheduled services in the Gaspé region as well as the Quebec North Shore area. Equipment over the next 30 years progresses from lightplanes and several DC-3s to a Hawker Siddeley HS 748 and a Beech 99.

Operations continue without incident for the next 21 years.

While on final approach to Rimouski on May 29, 1973, a DC-3 with three crew and a passenger hits a tree and crashes, catching fire; there are no survivors.

Services are maintained until 1982, when the company is merged into **Regionair, Ltd.**

AIR GEMINI: United States (1976-1978). Also known as **Gemini Airlines**, Air Gemini is established at Tacoma Airport in the summer of 1976 to provide scheduled intrastate services. Employing Cessna 207s, revenue flights commence in August linking the company's base with Seattle, Olympia, and Hoquiam.

Operations continue apace until the company goes out of business in 1978.

AIR GEORGIA: Georgia (1994-1999). Following the breakup of **Aeroflot Soviet Airlines**, AG is set up at Tbilisi in 1994 to operate scheduled flights throughout the new republic. Demuri Leladze is general director and he begins operations with a single Tupolev Tu-154B-2. A second Tu-154B-2 is acquired in 1996.

Flights continue in 1997-1998. During the fall of the latter year, the company posts a homepage on the Internet's World Wide Web.

On October 31, 1999, this carrier is merged with **Georgian Airlines** to create **Airzena Georgian Airlines**.

AIR GEORGIAN, LTD.: RR #2, Lake Simcoe Airport, Oro Station, Ontario L0L 2EQ, Canada; Phone (705) 487-2222; Fax (705) 487-2220; http://www.ontarioregional.com; Code GGN; Year Founded 1994. AGL is set up at Lake Simcoe Airport in 1994 as a division of the Georgian Aircraft Company. Paul Mulroney is president and he recruits a workforce of 55. Revenue flights commence with eight Cessna 208 Caravan Is.

All-cargo operations continue apace over the next five years. During these years, the company enters into a strategic alliance with **Canadian Airlines International, Ltd.** (later **Canadian Airlines, Ltd.**) to operate regional passenger services under the marketing name Ontario Regional Airlines, Ltd.

In addition to the Caravans, the fleet in 1999 includes 15 Beech 1900s and a 1900C. The workforce has grown to 175 since 1994.

Following the takeover of **Canadian Airlines, Ltd.** by **Air Canada, Ltd.** in January 2000 and the announcement by the latter at month's end

that it will consolidate its three regional airlines, Air Georgia enters into alliance discussions with **Air Ontario**. On February 9, Air Georgian enters into a pact with the large regional, under which it will continue its service in southern Ontario and expand flights into the northeastern U.S.

When this Air Alliance partnership begins on April 2, the company's fleet has been rationalized to include 11 Beech 1900Ds, all of which wear white fuselages, blue tails, and red Air Alliance titles. This is the type employed the next day to operate four daily roundtrips from Toronto to Dayton and three from Toronto to Albany. Thrice-daily return service from Toronto to Grand Rapids starts on April 10.

Thrice-daily roundtrips are introduced between Toronto and Louisville on May 1, Toronto and South Bend, Indiana, on May 8, Toronto and Akron and Canton on May 15, and Toronto and Manchester, New Hampshire, on August 21.

AIR GERMANICA, GmbH.: Germany (1995–1996). Late in 1994, a Bavarian tour operator makes plans to acquire the airline division of **Arcus Air Logistic, GmbH.** and rename it. When the transaction is completed on January 1, 1995, the company withdraws from scheduled service and offers only charters.

Air Germanica, GmbH. does not survive a year and, in 1996, Arcus returns to scheduled service under the name **Arcus Air Luftfahrtunternehmen, GmbH.**

AIR GHANA, LTD.: Ghana (1994–1997). Air Ghana is established at Accra in the spring of 1994 to operate all-cargo charters to destinations within Africa and Europe. Revenue flights commence in April with three Douglas DC-8Fs.

Proving impossible to achieve economic viability, the company shuts its doors in early 1997.

AIR GLACIERS, S.A.: CP 34, Sion, CH-1951, Switzerland; Phone 41 (27) 322-6464; Fax 41 (27) 322-6426; Code GB; Year Founded 1965. This small charter carrier is formed at Sion's Aeroport Civil in 1965 to provide passenger/cargo charter and contract flights, air ambulance service, and on-demand Sion–Geneva shuttles in the Pennine and Bernese Alps. With a workforce numbering less than 50, the operator flies three Pilatus PC-6 Turbo-Porters, two Cessna 206s, and a Piper PA-23 Aztec. All of these aircraft will be well maintained and remain in service for the next 30 years. Services continue apace with little change over the next 20 years.

In the middle 1980s, the company adds nine Aerospatiale Alouette helicopters. By the 1990s, Chairman M. Bruno Bagnoud oversees a workforce of 109 and a new base at Collombey. His fleet includes 11 Aerospatiale SA-315Bs, 6 SA-316Bs, 2 Beech King Air 90s, 2 Bell 206Bs JetRangers, 2 Cessna 206s, 3 Cessna 421s, 3 Pilatus PC-6/Bs, and a Piper Aztec.

Although the fixed-wing fleet remains unchanged, the rotary-wing fleet in 1994 includes just 8 SA-315Bs. There are, however, 16 SA-316Bs and 2 JetRangers.

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

AIR GLOBAL, S.A.: Av. Sucre, Torre Centro, Piso 20, Oficina 203, Los Dos Caminos, Caracas, Venezuela; Phone 58 (2) 283-8009; Fax 58 (2) 283-8866; <http://www.vdacon.com/iag/incontac.htm>; Year Founded 1997. Air Global is established at Caracas in 1997 to undertake passenger and cargo charters on behalf of various companies and private individuals. Additionally, the on-demand carrier also offers mapping and aerial photography flights, as well as aircraft management and flight-seeing.

Revenue operations begin and continue with a fleet that includes 7 aircraft, featuring Swearingen Merlin 3s, Beech King Air 100s, and 1 Beech 58 Baron.

AIR GREAT LAKES: United States (1981–1982). Joseph Vallee, owner and president of Chicago-based **Skytrain Airlines**, changes

the corporate identity of his commuter on September 15, 1981. Daily Piper PA-31-350 Navajo Chieftain frequencies are maintained, linking the company's base with Milwaukee, Minneapolis, South Bend, and Fort Wayne.

Recession and the effects of the PATCO air traffic controllers' strike combine to force the company out of business in May 1982.

AIR GREAT WALL: Jiangbei Airport, Chongqing, Sichuan, 618307, China; Phone 86 811 756138; Code G8; Year Founded 1992. The Civil Aviation Flying Institute of China establishes this carrier at Jiangbei Airport, Chongqing, Sichuan, on July 21, 1992. Huang Ming-shun is appointed president and recruits a workforce of 150. Revenue flights commence later in the year to Gungzhou, Shanghai, Shenzhen, and Wenzhou with a fleet of 1 Boeing 727-200, 3 each B-737-2T4As and Xian Y-7-100s, and 2 Tupolev Tu-154Ms.

Operations continue apace in 1993–1994 and, in 1995, enplanements total 62,800. Airline employment stands at 150 in 1996 and passenger boardings skyrocket 77.4% to 300,000. Service is maintained in 1997–1999.

During the latter year, the company enjoys enplanements of 230,000 and operates 647,000 FTKs.

The workforce stands at 150 at the beginning of the year 2000 and the 2 Tu-154Ms are retired during the spring.

In response to a fatal June 22, **Xian Airlines Y-7-100C** crash, CAAC delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around China Eastern, **Air China International Corporation**, and **China Southern Airlines Company, Ltd.**

During the last week of August, China Eastern takes a controlling 55% stake in Air Great Wall. Plans are announced to initially operate the company as a subsidiary, supplying it with funds to purchase 3 Next Generation B-737s.

AIR GREECE-AERODROMISIS, S.A.: Greece (1994–1999). Air Greece is organized under the leadership of its managing director, Manolis Tzakararakis, at Athens in early September 1994 to offer regional services. Revenue passenger flights commence on September 16 with a pair of Avions de Transport Regional ATR72-202s.

Operations continue apace in 1995, with bookings for the first full year reaching 121,000. Destinations visited in 1996 include domestic points, as well as Belgrade. In 1997, the carrier is in financial difficulty and is placed under government supervision.

Service is maintained in 1998 and into 1999; a homepage is opened on the Internet's World Wide Web. Flights to Belgrade cease on March 24 as NATO launches air attacks on Yugoslavia because of the situation in the province of Kosovo.

The carrier is taken over by **Aegean Airlines, S.A.** in December and merged into what has now become the largest privately owned airline in Greece.

AIR GUINEE (COMPAGNIE NATIONALE AIR GUINEE, S.A.): BP 12, Cote Police Judiciaire, Route du Niger, Conakry, Guinea; Phone 224 442907; Fax 224 412907; Code GI; Year Founded 1960. Following the March 1960 signing of an air assistance pact with the Soviet government, this carrier is formed at Conakry in October as a state corporation in October with Czech technical support and an Ilyushin

Il-18 turboprop wet-leased from **CSA (Czechoslovak Airlines)**. The Soviet Union will eventually sell the African carrier 2 Ilyushin Il-18s, 4 Antonov An-24s, and 2 An-12s. Scheduled services commence at year's end over two domestic routes from Conakry to Boke and Kankan.

Air Guinee is nationalized in April 1961. In cooperation with **Air France**, a service is inaugurated to Bamako, Mali. The Russian-made fleet is increased by the addition of 2 Il-18s, 5 Yakovlev Yak-18s, and 1 Mil Mi-24 helicopter. A concession to western success is made on December 7, when the carrier contracts with a Canadian school for the training of 20 young females as stewardesses and clerks.

During the first half of 1962, the carrier purchases 4 Antonov An-24Vs, 2 An-12s, and 1 Yakovlev Yak-40 jetliner from the Soviet Union. Il-18 service is launched northward on August 24 from Conakry to Dakar, Senegal. In December, AG signs a seven-year support and management contract with **Alaska Airlines**.

A small Alaskan contingent arrives at the beginning of 1963, along with a pair of Douglas DC-4s that have been purchased from the American carrier. An Il-18 service begins to Lagos on May 10, operated via Robertsfield, Abidjan, and Accra.

An arrangement with **Alaska Airlines** is cancelled on June 30; the entire \$700,000-debt owed to the American carrier is paid by the U.S. AID. The Czechs by this time have also withdrawn.

With expatriate French assistance, the company is able to limp along for the next 18 months on its own. DC-4s replace the Il-18s on the Lagos service. In 1965, a management and support contract is signed with **Pan American World Airways (1)**, also under AID auspices. Pan Am operatives, expert in assistance to foreign airlines, arrive in Conakry, along with a DC-4.

When Kwame Nkrumah is overthrown as president of Ghana in February 1966, he receives sanctuary in Guinea. At this point, Pan Am is forced out of the picture as the government, with Nkrumah's help, turns to the Soviets to once again assist their airline.

Diverted by bad weather to Casablanca while on a July 9, 1967, flight from Praha, an Il-18B with 102 passengers strikes a building with its wing while landing and crashes off the runway onto rough ground; although the aircraft must be written off, there are no fatalities.

Over the next ten years, scheduled passenger and cargo services are developed linking the capital of Conakry to Kankan, Boke, Faranah, Labe, Siguiri, Macenta, N'Zerekore, and Kissidougou. The Il-18s and DC-4s undertake international flights to Freetown, Monrovia, Bamako, and Dakar.

In 1978, Managing Director Elhadj Nfa Mousa Diane's company employs 361 workers. An Il-18D is purchased from the Yugoslav government early in the year. An Il-18D with 8 crew and 9 passengers crashes into the swamps near Conakry on September 3 while on approach to the airport (15 dead).

An An-24V is destroyed at Conakry on March 31, 1980; there are no other details concerning the accident.

Following the second Soviet departure, the U.S. AID once again contracts with **Pan American World Airways (1)** to supply Guinea's request for technical assistance. The fleet grows to include, by the early 1980s, 1 B-707-138B and 1 B-727-100, in addition to the Russian equipment. Domestic services are maintained and new routes are initiated to the regional destinations of Abidjan, Bissau, and Lagos.

In December 1984, an Airbus Industrie A300C4 is delivered, allowing the inauguration of passenger/cargo flights to Paris and Brussels in early 1985. The company is the seventh African airbus operator. During the summer of 1986, company officials negotiate with **Air Afrique, S.A.** for a contract under which the multinational will take over the company's long-haul services. The Airbus is withdrawn during 1987 as a de Havilland Canada DHC-7-102 is acquired.

The fleet in 1988 comprises 1 Yak 40, 4 Antonov An-24s and 2 An-12s from the Soviet Union, and the DHC-7-102. A Boeing 737-2R6C is acquired in 1990. One An-24 and both An-12s are withdrawn in 1992.

In 1993-1994, Managing Director Diane oversees a workforce of 400. Routes link Conakry with Lagos, Abidjan, Dakar, Bamako, Mon-

rovia, Freetown, Kankan, Boke, Faranah, Labe, Macenta, Siguiri, Kissidougou, and N'Zerkore. Services continue in 1995-1996, with the An-12s returned to service.

Mamadou Aliou Sanoh is managing director in 1997-2000 and he oversees a workforce of 400. The fleet now includes 2 An-24Rs, 4 An-12s, 1 An-26, 1 B-737-2R6C, and 1 DHC-7-102.

AIR GULF FALCON: United Arab Emirates (1999-2000). Sheikh Hamad Ali Jabour Al-Thani, a member of the royal family, a former pilot, and managing director of **Qatar Airways**, establishes this airline in 1999 as a subsidiary of the Doha-based Falcon Group. Headquartered at Sharjah International Airport Free Zone, the new concern provides aircraft on aircraft, crew, maintenance and insurance (ACMI) charters to other airlines for charters, VIP flights, and cargo services. It also flies direct VIP contracts and undertakes lift on behalf of the United Nations.

The fleet includes 6 Boeing 747-100/200/SP and 2 B-707-320CFs and a workforce of 300 is employed.

With permission from the UN, the company signs an ACMI contract with **Ariana Afghan Airlines Company, Ltd.** on February 4, 2000. Under its terms, the company's Jumbojets will transport 12,000 Afghan pilgrims to and from Mecca in two phases between February 9 and April 23. Wearing Ariana colors, the first Air Gulf Falcon transport delivers 127 Muslim pilgrims from Kandahar to Saudi Arabia on the morning of February 22.

The Boeings also fly 200,000 other Middle East and northwest Asia Hadj passengers during this period.

The fleet is significantly increased as the year wears on and, by the third quarter, 16 B-727-200As and B-737-200As have been acquired. An additional 12 aircraft, valued at \$400 million, are scheduled for delivery in 2001.

The company is renamed **Gulf Falcon** on November 6.

AIR GUYANE. See **GAT (GUYANE AIR TRANSPORT, S.A.)**

AIR HAITI, S.A.: Haiti (1969-1991). The Haitian all-freight airline is formed at Port-au-Prince in December 1969 initially as a charter carrier operating Curtiss C-46 Commandos. Following receipt of a five-year foreign air carrier license from the U.S. CAB, flights commence in October 1970 to San Juan, Miami, and other points in the Caribbean. A Douglas DC-6A is employed for a time during the remainder of the decade; however, the main fleet is made up of Curtiss C-46 Commandos.

Having suffered an engine fire, a C-46A with two crew makes an emergency landing at Nassau on May 20, 1976, during which the undercarriage collapses; although the aircraft is damaged beyond economical repair, no serious injuries are reported.

Permission is received in 1981 to operate international all-cargo jetliner flights to Miami and New York and a pair of Boeing 707-331Cs is leased with which to start them.

By 1984, one Boeing has been purchased, joining the fleet's two Commandos. Scheduled jetliner service is maintained to Miami and scheduled Commando service to San Juan; regular, but nonscheduled flights, are undertaken to New York (B-707-331C) and Santo Domingo (C-46).

The carrier ceases operations in 1991 in the midst of political upheaval.

AIR HAITI INTERNATIONAL, S.A.: Haiti (1961). With covert support from the American-based Airline Management and Investment Co., AHI is established at Port-au-Prince in March 1961 to operate as the nation's designated flag carrier to Miami, Puerto Rico, and the British West Indies. Although officials are unsuccessful in their efforts to obtain a foreign air carrier license to operate into the U.S., the company is able to start business in late spring with a Lockheed L-749A Constellation previously flown by **Eastern Air Lines**.

For an undisclosed reason (perhaps sabotage), the aircraft and its crew of five crashes into the Caribbean E of Puerto Rico on November 11 while on a flight from San Juan to Managua; there are no survivors.

With no assets and no flight equipment, the company is liquidated by year's end.

AIR HANSON, LTD.: Business Aviation Centre, Blackbushe Airport, Camberley, Surrey, England, GU17 9LG, United Kingdom; Phone 44 (1254) 890089; Fax 44 (1254) 890102; Year Founded 1976. This helicopter line is formed in 1976 by ex-Royal Navy helicopter pilots Colin Bates and Patrick J. R. McHaffey as a subsidiary of the industrial management company Hanson Trust, Ltd. to provide executive transport for corporate officials and clients.

In October 1982, AHL becomes the Bell Helicopter distributor for the U.K. and Irish Republic.

With an increased fleet of 2 Sikorsky S-76s, 2 Bell 206B JetRangers, and 2 Bell 206L LongRangers, the carrier in 1983 continues its executive mission while mixing in some charter work. Operations continue apace over the next decade, during which time the company becomes the U.K. distributor for Sikorsky Aircraft and McDonnell Douglas Helicopter Company.

Services continue during the remainder of the decade and into the 1990s. On July 1, 1990, the small Blackbushe-based fixed-wing air charter operator ADT Aviation, Ltd. is acquired. AHL will employ its license as the basis upon which it will fly its own Beech 400 bizjet charters, while simultaneously distributing Beech aircraft in the U.K. and Ireland.

While en route from its base at Blackbushe Airport to reposition in northern France for an August 14, 1992 charter, a Bell 206B JetRanger, piloted by Managing Director Bates, with his two sons and a friend aboard, crashes in Surrey, England. Bates and his youngest son are killed. Cofounder McHaffey assumes responsibility for the business.

On May 1, 1993, former P & O Aviation chief pilot David Sale is appointed Air Hanson chief pilot. The fleet at this point comprises 2 each Bell 206Bs, 206Ls, and 222s plus 12 Sikorsky S-76s.

During the first quarter of 1994, the carrier becomes European launch customer for the McDonnell Douglas Helicopter Systems (MDHS) MD Explorer, placing an order for four craft that will be delivered over the next two years. Employing a British-registered S-76A, the company, in May, inaugurates a joint venture charter service with **HeliFrance, S.A.** linking Battersea heliport with Issy-les-Moulineaux heliport in Paris.

Flights continue in 1995–1997. During these years, Air Hanson solidifies its activities around the maintenance, sales, and management of corporate turbine helicopters and fixed-wing aircraft, with franchises to sell and maintain the Beechcraft fixed-wing range and Sikorsky civilian helicopters.

By 1998, Operations Manager Brenda McCune oversees the work of 3 Sikorsky S-76s, 1 JetRanger, and 1 Beech 400A Beechjet executive aircraft. On September 4, Morristown, N.J.-based Lynton Group acquires 100% equity shareholding.

Service is maintained in 1999–2000.

AIR HAWAII (1): United States (1967–1970). Established at Honolulu in early fall 1967, AH-1, also known as **Jet-Air Hawaii**, acquires a fleet of de Havilland Canada DHC-6-100 Twin Otters. Revenue commuter services are started on October 11, linking the company's base with Molokai, Lanai, and Kaanapali.

Operations continue apace until the carrier goes out of business in 1970.

AIR HAWAII (2): United States (1977–1982). Bruce McKenzie forms AH-2 in April 1977 as a large, third-level carrier based at Honolulu. A fleet of Beech 18s and Cessna lightplanes is assembled. In addition to providing scheduled services from the state capital to Lihue, Princeville, Kaunakakai, and Kahului, the company, when it begins services in May, also flies sight-seeing tours throughout the islands.

Tropic Air (later **Air Molokai**) is taken over later in the year and **Island Pacific Air** in the first quarter of 1978. Operations continue apace in 1979.

In January 1980, **OK Air** (Oahu and Kauai Airlines) is purchased and merged; later in the year, **Tropic Air** regains its independence. President

Robert V. Franker's fleet now comprises 7 Cessna 404s and 2 Cessna 402s. In late 1981, an Australian-built GAF Nomad N-27A is acquired.

Recession and intense intrastate competition from other carriers causes the company to go out of business in 1982.

AIR HAWAII (3): United States (1985–1986). AH-3 is formed by **Hawaii Express** founder Michael Hartley at Honolulu in the fall of 1985 to offer discounted holiday tour and charter flights to California. Hartley resigns before flights can begin. Having purchased the operating certificate of dormant Air West International and employing a pair of leased Douglas DC-10-30s first flown by **Western Airlines**, the non-scheduled operator inaugurates \$298 roundtrips to Los Angeles on November 22. San Francisco becomes a destination just before Christmas.

Unable to earn sufficient revenues to remain viable during the bitter fare war its entrance onto the market engenders, the company collapses on February 19, 1986, leaving upwards of 10,000 passengers holding unredeemable \$1,200-vacation packages. Two weeks later it files for Chapter XI bankruptcy protection.

Many customers believe **Hawaiian Air** to be the same operator and it is several months before the state's senior carrier can clear up the confusion.

AIR-HI-O: Fayette County Airport, Washington Court House, Ohio 43160-9006, United States; Phone (614) 333-1800; Fax (614) 333-2080; Year Founded 1993. Air-Hi-O, a corporate play on the state's name, is established at Fayette County Airport, Washington Court House, Ohio, in 1993. Vice President Douglas Reno and Operations Director Pierre Doyon recruit two full- and two part-time pilots and inaugurate passenger and cargo charters with one each Cessna 208 Caravan I and Mitsubishi MU-2B.

Operations are flown without incident until the early fall of 1996. Just after takeoff from Chillicothe on September 28, the MU-2B loses power to its left engine. Although the pilot is able to make a safe single-engine landing back at the point of origin, the aircraft runs off the right side of the runway into a ditch, collapsing both the right main- and nose-gears.

Services continue into 2000, by which time the fleet has been doubled with the addition of a Beech King Air 100 and a replacement MU-2B. All but the King Air are now employed in an all-cargo configuration.

AIR HIBISCUS (PTY.), LTD.: Australia (1985–1987). Created at Coogee, New South Wales, in 1985, AHL provides scheduled third-level services out of Brisbane with a Piper PA-31-350 Navajo Chieftain. Unable to maintain viability, the commuter closes down in 1987.

AIR HOKKAIDO COMPANY, LTD.: 511 Takamatsu-ho, Hokkaido-shi, Hokkaido 042, Japan; Phone 138 593 707; Fax 138 593 766; Year Founded 1994. To accomplish labor savings and greater flexibility in flight frequencies, AHCL is established as a subsidiary of **Air Nippon, Ltd.** during the first week of May 1994. The object of the company is also to provide scheduled services to three remote islands from the large Japanese island of Hokkaido. Employing a pair of de Havilland Canada DHC-6-300 Twin Otters leased from its parent, AHCL inaugurates revenue frequencies during the summer.

President Hiroshi Kitamikado's concern continues operations over the next six years, with a variety of passenger charters also offered. Fiscal results are blended into those provided by **All Nippon Airways Company, Ltd.**

AIR HOLLAND, N.V.: Netherlands (1979–1991). Privately owned Air Holland, N.V. is established at Rotterdam in early 1979 by former **Transavia Holland, N.V.** president, John Block. Block had started his airline career as the first pilot with **Martinair Holland, N.V.**, and returns to the business as president/general director on behalf of a number of Dutch tour operators seeking a third alternative to **KLM (Royal Dutch Airlines, N.V.)** and **Martinair Holland, N.V.** A license request is made of the Netherlands government on August 31.

It requires six years and three hearings before the Administrative Court of Appeal before AH receives its government license on April 2, 1985 to undertake operations from the airport at its base as well as Maastricht. A B-727-200 is quickly leased from **Tunisair** and service is launched to holiday destinations in southern Europe, North Africa, the Mideast, and the Canary Islands on behalf of tour operators at Maastricht, Rotterdam, Amsterdam, and Eindhoven. A second ex-Tunisair B-727-200 enters service in May. A contract is signed with **British Airways, Ltd. (2)** to provide aircraft technical support at London (LHR).

Enplanements in 1986, the first full year of operation, reach 318,473 and profits hit \$2.44 million.

Airline employment in 1987 stands at 165, including 132 flight personnel. Capacity demands of the European inclusive-tour market force the carrier to shelve plans to inaugurate transatlantic charters to Boston and Toronto. A third B-727-200 is leased between May and December while Peter Crawford, seconded from BA to be vice president-technical, begins training a cadre of maintenance personnel at Amsterdam's Schiphol Airport.

As passenger boardings jump 23% to 413,250, orders are placed for three, later five, B-757-200s. Revenues increase 42.1% to \$80.5 million and expenses are low enough to allow a \$4.06-million operating profit. The net profit is \$2 million.

The 130-employee charter operator replaces its B-727s in 1988 with three new B-757-200s beginning with two delivered in March and the third delivered in May. Meanwhile, in late April, unlimited authority is sought from the government and, beginning in late summer, low frequency transatlantic charters to North America and the Caribbean begin. A 20% interest is taken in **Air Aruba, B.V.** and by year's end the company is serving 21 destinations on behalf of a dozen inclusive-tour operators.

The new aircraft, financed by a group of Dutch banks, help to insure that customer bookings leap upward by 20.4% to 497,000, which now equals 25% of the nation's nonscheduled holiday market. Revenues total \$52.2 million and operating income of \$5.76 million is generated.

The number of employees skyrockets by 81.4% in 1989 to 234 and, in January, a new surface transit hub is inaugurated at Paris (CDG). A fourth B-757-200 is chartered in April and work begins on a new 8,100-sq.-ft., \$17-million maintenance hangar at Schiphol Airport. In November, in cooperation with **Kenya Airways, Ltd.**, B-757-200 nonscheduled inclusive-tour flights for the winter season begin from Rotterdam to Mombasa via Cairo.

Passenger boardings jump another 21% to 500,000 and revenues climb 36.6% to \$55 million. The operating profit is \$8 million and net gain reaches \$5 million.

In April 1990, the company leases a B-757-200 to **Air Aruba, B.V.**, allowing that Caribbean carrier to inaugurate jetliner service to Miami and São Paulo. With the coming of recession and the unstable Mideast situation in the second half of the year, the carrier is forced to begin downsizing its capacity.

Two B-757-200s are leased to **Britannia Airways, Ltd.**, two are chartered to **Sterling Airways, A.S.**, and one just received is leased to **Condor Flugdienst, GmbH**. AH now operates only a B-767-204ER—leased from **Britannia Airways, Ltd.**—on its services, which include two new destinations, Colombo and Maldives. The B-757-200, out on charter to Air Aruba, is employed, beginning in December, to inaugurate services from Aruba to Newark (EWR).

Enplanements plunge to 277,000, but the carrier manages to generate a \$4.25-million net profit.

In May 1991, AH and Air Aruba launch a joint weekly B-767-204ER roundtrip service from Aruba to Amsterdam, continuing to Cologne. Unable to obtain additional financing, the company files for bankruptcy in the fall and officially goes out of business.

AIR HOLLAND CHARTER, B.V.: Poregwtcaan 67, 1117 PK Postbus 75116, Oude Meer, 75116, The Netherlands; Phone 31 (20) 316-4444; Fax 31 (20) 316-4445; Code GG; Year Founded 1991. The assets of Air Holland are reorganized on November 3, 1991 and reborn as

Air Holland Regional, B.V. Managing Director P. P. F. Langendijk's company now has a much more limited program of passenger charter and inclusive-tour destinations, primarily those in the Mediterranean and Canary Islands. Renewed services are initially provided with a single Boeing 757-23A.

In 1992, the carrier elects to expand its market and changes its corporate identity. The fleet is expanded to comprise 2 B-757-27Bs and 1 B-737-3L9; 1 B-737-400 is ordered.

Holiday stops now visited include Alicante, Ankara, Arrecife/Las Palmas, Athens, Calvi/Alghero, Corfu, Paro, Lisbon, Heraklion, Ithaca, Izmir, Kalamara, Karpathos, Kos, Malaga, Mitilini, Oporto, Palma, Rhodes, Samos, Tel Aviv, and Zakynthos. Again the company is forced, for financial reasons, to suspend flights.

Norwegian authorities rebuff a December 10 purchase offer for **Norway Airlines, A.S.**, because the potential Dutch owners have demanded, as part of their rescue package, that the 12 Norwegian Airlines weekly roundtrips from Oslo to London (LGW) be maintained.

In 1993, following another reorganization, President Langendijk oversees a workforce of 85. The fleet now includes 1 B-737-3L9 and 2 B-757-27Bs; the requested B-737-4YO is delivered in April. Charter flights resume to the Canary Islands and Mediterranean destinations and enplanements for the year total 500,000.

Late in 1994 the company joins with **El Al Israel Airlines, Ltd.** to establish the joint venture charter carrier **Starling Airlines, Ltd.**; the Dutch company holds 52% shareholding and Israelis hold the remainder. Plans are made to commence Mediterranean charters employing AHC's Boeings.

Airline employment stands at 200 in 1995 and 200,000 passengers are transported. A B-757-2T7 is chartered from **Monarch Airlines, Ltd.** in 1996.

The workforce in 1997 totals 300. The company continues to operate charters to the Mediterranean and Canary Islands, as well as to the Caribbean and, during the winter period, Alpine areas. On December 16, the company enters into merger discussions with the parent holding company of **Schreiner Airways, N.V.** Enplanements reach 815,000.

No merger occurs and operations continue apace in 1998–1999.

Facing continuing economic challenges, particularly in light of recent rising fuel prices and increasing leisure market competition, the carrier's future by the fall of the latter year is bleak. Feelers are put out in an effort to attract an equity buyer or merger partner and it is reported that **easyJet, Ltd.**, **El Al Israel Airlines, Ltd.**, Thomson Travel (parent of **Britannia Airways, Ltd.**), and **Schreiner Airways, A.S.** all show an interest. Unable to either firm up a partner or remain viable, the company goes into administration (similar to U.S. Chapter XI bankruptcy) and closes its doors at the beginning of November.

Instead of fading away, the company is purchased by the Dutch financial group LLPI in January 2000. Under new management, the airline is reorganized and refinanced during the remainder of the year's first half. Having reacquired the B-757-2T7, the airline resumes operations on June 30 and flies a charter from Brussels to Antalya, Turkey.

AIR HOLLAND REGIONAL, B.V. See **AIR HOLLAND CHARTER, B.V.**

AIR HONG KONG (PTY.), LTD.: 2nd Floor, Block 2, Tien Chu Centre, IE Mok Cheong Street, Kowloon, Hong Kong; Phone 852 (2) 761-8588; Fax 852 (2) 761-8586; <http://www.hkstar.com/~cchris/airkh.html>; Code LD; Year Founded 1986. AHK is incorporated in the Crown Colony in November 1986 to operate as an all-cargo charter carrier from Kai Tak International Airport. Macao businessman Dr. Stanley Ho is named chairman, with Pran N. Parashar as president.

Application for certification and route authority is made in early 1987 and is received in January 1988. A Boeing 707-323CF is purchased from **ZAS Airline of Egypt, Ltd.** and employed to launch charter flights on February 4. Destinations served include Sydney, Dhaka, Singapore, and London.

A total of 21.43 million FTKs are flown by year's end and revenues of \$6.16 million are generated. Although an operating profit of \$252,000 is earned, startup costs result in a \$1.1-million loss.

The workforce is increased by 46.7% in **1989** to 88 as a second Stratoliner freighter joins the fleet in May. A license is received from Hong Kong in February authorizing the airline to offer scheduled cargo flights to 14 destinations. In March, the company is authorized to fly scheduled cargo service to 15 European, Asian, and Pacific destinations, beginning with Manchester (England) in October. In early November, Chairman Ho announces plans to purchase a 50% stake in the airline and become majority owner.

Freight traffic skyrockets 161.2% to 62.56 million FTKs.

Company employment rockets forward another 52.5% in **1990** to 122. In January, Macao businessman Stanley Ho acquires 50% shareholding for \$19 million and a pledge to subscribe an additional \$26 million over the next two years; he is now the majority owner. Three months later, in April, the Hong Kong government licenses the carrier to launch four-times-per-week B-707F all-cargo flights to Ho Chi Minh City, with two via Hanoi. In June, plans are announced, and then abandoned, to lease six GPA Group DC-8-50Fs.

Cargo traffic swells 25.8% to 78.67 million FTKs.

The employee population is increased another 83.6% in **1991** to 213. In January, scheduled all-cargo flights begin to Nagoya. Two Boeing 747-132Fs, originally operated by the **Flying Tiger Line**, are purchased from **Federal Express** and a leased B-747-132F joins the fleet, dramatically increasing lift capacity.

In May, a company application to operate all-cargo flights to 80 cities is rejected by the Hong Kong ATLB. As a result of the new capacity, freight jumps tenfold to 224.13 million FTKs.

The last two B-707Fs are returned to lessors in September **1992** and rent reductions are received on the carrier's two Jumbos. Through the first ten months, cargo traffic accelerates to 303.6 million FTKs. The workforce is increased by 3.3% in **1993** to 220. Destinations served now include Dubai, UAE, Delhi, Singapore, Kuala Lumpur, Nagoya, Ho Chi Minh City, Manchester, and Brussels.

Figures are made public through September and show freight up 28.4% to 342.72 million FTKs.

The employee population is cut a huge 27.2% in **1994** to just 160.

On March 23, 75% majority control is purchased for HK\$200 million (\$26 million) from Shun Tak Holdings by **Cathay Pacific Airways (Pty.), Ltd.**, which operates the carrier as a subsidiary on the **Dragonair (Pty.), Ltd.** model.

In May, a management agreement is signed with Cathay providing the legal basis for the major's operation of its new subsidiary. A third chartered B-747-249F now enters service.

In late November, Cathay reports that, while freight ton kilometers are up 34.3% to 631.8 million, a substantial financial loss has been sustained.

Although the workforce remains the same in **1995**, the third Jumbojet freighter is returned in the face of a large business downturn. During the fourth quarter, three **VARIG Brazilian Airlines Viacao Aerea Rio-Grandeuse, S.A.** B-747-2L5Bs are purchased by **Cathay Pacific Airways (Pty.), Ltd.** and sent to Boeing's Wichita Division for conversion into freighters for AHK.

On the year, cargo is down by 22.1% to 528,926,000 FTKs.

Airline employment grows by 11.3% in **1996** to 178 and the first of the ex-VARIG freighters arrives from Kansas in May. The company's five aircraft operate 572.8 million FTKs, an 8.2% increase.

The workforce is increased by 5.7% in **1997** to 183. Flights continue without significant route change, even though all three of the former South American Jumbos are in service.

It is reported that cargo traffic for the year is up 37.7% to 769.24 million FTKs.

In **1998**, the company continues to provide all-cargo services from Hong Kong to Osaka, Manchester, Brussels, and Dubai on a schedule that is independent of that operated by the other freighters of **Cathay**

Pacific Airways (Pty.), Ltd. Cargo traffic accelerates by 8.5% to 834.31 million FTKs.

Airline employment at the beginning of **1999** remains 183. Cargo traffic drops 3.7% for the year to 803.09 million FTKs.

By the start of **2000**, the workforce has been cut by 2.2% to 179.

AIR HORNET: United States (1984–1985). Air Hornet is set up at Hemet, California, late in **1984** to offer scheduled Piper lightplane flights to Los Angeles, Bullhead City, and Lake Havasu City.

Early in **1985**, the company is reformed and renamed **Desert Airlines**.

AIR HUDIK (AIR HUDIKSVALL-FLYGBOLAGET I HUDIKSVALL, A.B.): Sweden (1982–1996). Organized at Hudiksvall, Air Hudik, A.B. undertakes scheduled weekday-only passenger commuter flights between its base, Arlanda Airport at Stockholm, and the coastal community of Soderhamn. Air taxi and charter flights are also made. Initial equipment comprises a Dornier 228-200 and a Beech Super King Air 200.

By **1986**, President Bjorn Rahmstrom and General Manager Rolf Blom have strengthened their fleet through the addition of a King Air 90. A Shorts 360 is acquired in December and is employed, beginning in January **1987**, to fly passengers from Hudiksvall to Stockholm by day and mail from Sundsvall to Stockholm by night. Services are inaugurated to Vasa and Umea in **1988**. Sundsvall joins the route network in **1989**.

In **1990**, the Dornier is withdrawn, along with the King Air 90, and is replaced by a second Shorts 360. As airline companies jockey for position in a soon-to-be deregulated industry, Air Hudik purchases control of **Swedewings, A.B.** in July. The Super King Air 200 is deleted in **1991** as General Manager Blom acquires two de Havilland Canada DHC-6-300 Twin Otters.

The Canadian turboprops are placed into storage in **1992** as recession hits Sweden. In **1993–1995**, flights are operated with three Shorts 360s, but operations cease in **1996**.

AIR HYANNIS: United States (1977–1982). FBO Hyannis Aviation, based at Barnstable Municipal Airport in Massachusetts, forms an airline operating division on May 17, **1977** to offer scheduled passenger services to Boston and Nantucket. President Thomas R. Gorman assembles a fleet of 3 Cessna 402s, 1 Piper PA-32R Cherokee Lance, 1 PA-32 Cherokee Six, and 1 Cessna 210 (some of which also undertake flight training and charters) with which to inaugurate commuter flights on July 13.

Daily roundtrip operations continue apace during **1978**, with enplanements for the first full year reaching 2,330. New local services are initiated in **1979** as the workforce is increased by 35% to 27. Passenger boardings skyrocket 233.3% to 10,000.

Operations continue apace in **1980**, but the PATCO air traffic controllers' strike of **1981** and general economic downturn causes financial problems so severe that the carrier must cease operations in **1982**.

AIR ICELAND, H.F. See FLUGFELAG ISLANDS, H.F. (3)

AIR IDAHO: United States (1974–1975). Founded at Twin Falls, Idaho, in **1974**, Air Idaho launches scheduled de Havilland DH 114 Heron commuter flights to Sun Valley and Salt Lake City. Unable to achieve viability, the company closes in **1975**.

AIR ILLINOIS: United States (1968–1985). Established at Carbon-dale, Illinois, in **1968**, this small commuter offers local scheduled service with a fleet of Piper PA-31-310 Navajos. Schedules and frequencies grow over the next decade and destinations served include St. Louis, Springfield, Cape Girardeau, and Chicago.

In **1977**, enplanements reach 112,000. In mid-December of that year, the airline division of the Natchez, Mississippi-based commuter **South Central Air Transport** is purchased and merged. As a result, the company finds itself operating a southern route system through Arkansas to New Orleans.

In 1978, the year of the Airline Deregulation Act, the network of President E. R. Dzendolet's carrier is enlarged to include stops at Mount Vernon and Quincy in Illinois, Memphis, Paducah, and Lincoln. The fleet now comprises 3 de Havilland Canada DHC-6 Twin Otters, and 3 Handley Page HP-37 Jetstreams. Orders are placed for 3 additional Jetstreams and 2 British Aerospace (HS) 748s.

Passenger traffic skyrockets 41.9% as 159,000 passengers are carried.

The workforce is increased by 16.5% in 1979 to 127, but the Jetstream order is cancelled. Bookings advance 17% to 186,000. The employee population grows by 31.9% in 1980 to 211. The fleet is joined by a British Aerospace BAe (HS) 748-B2 and all of the aircraft are now painted in a new gold and burgundy livery. Although passenger boardings decline 2.6% to 178,110, operating income accelerates 34.5% to \$8.93 million.

The workforce of President Roger Street's airline in 1981 stands at 211 as a second BAe (HS) 748-B2 and another DHC-6 are acquired. Service is started or restarted to Quincy, Illinois, and Burlington, Iowa. The **American Airlines** SABRE computer reservation system is adopted and in addition to a new livery and logo, the company becomes the official year-round airline of the Lake of the Ozarks Resort.

In an effort to expand out of its difficulties, the carrier, on December 1, purchases **Decatur Commuter Airlines**, the airline division of Decatur Aviation, together with its routes from Decatur to Chicago (ORD) and St. Louis, plus its fleet of two BAe Jetstream 31s.

Passenger bookings climb 5.7% to 182,870 and cargo accelerates 54.5% to 106,000 pounds. Revenues jump 25.9% to \$11.2 million.

Airline employment is reduced 4.1% to 203 in 1982. In March, the sixth and seventh Twin Otters are purchased and in April, new frequencies are inaugurated from Evansville to St. Louis, Memphis, Nashville, Chicago (ORD) and Paducah. The following month, a shift is completed to the **Eastern Air Lines** gates at both Chicago (ORD) and St. Louis.

Two BAe (BAC) 1-11-203s are acquired during the year from **Cascade Airways**, with the first launching nonstop service on July 15 from Chicago (ORD) to St. Louis and Springfield. The second British-made jetliner enters service in December.

Enplanements for the year increase 37.6% to 251,582. Revenues accelerate 36.4% to \$15.33 million. Profits total \$99,003 (operating) and \$261,247 (net).

Airline employment in 1983 stands at 235, a 15.8% boost. Destinations served now include Champaign/Urbana, Chicago, Springfield, Memphis, Paducah, Cape Girardeau, Columbia, St. Louis, Burlington, Cedar Rapids, and Waterloo.

New joint fares and an interline agreement are negotiated with **Trans World Airlines (TWA)**.

On October 11, Flight 701, a BAe (HS) 748-2A with 3 crew and 7 passengers, encounters serious electrical problems just after takeoff from Springfield. The flight is continued into a thunderstorm and, about 33 min. later while on initial approach to Carbondale, the turboprop loses power in its right generator and crashes near Pickneyville. There are no survivors.

On December 3, government safety inspectors are assigned to ride on each of the company's 120 or more daily flights. While company and federal officials probe the cause of the accident, the company, under threat of grounding, voluntarily shuts down on December 15. Two hundred employees are laid off the next day as a complete FAA safety investigation follows.

The year's bookings increase 2.3% to 262,465. Revenues drop 5.8% to \$14.8 million and costs force an operating loss of \$427,030. Net gain, however, climbs to \$2.7 million.

BAC 1-11-200 flights resume on January 14, 1984, after the FAA approves new flying and training rules. Air Illinois announces on March 5 that it can restore four turboprops to service after having completed ground-training requirements for six of its grounded aircraft.

Poor traffic, when added to the financial loss of the shutdown, cause the company to halt all flight operations on April 17 and to file for Chap-

ter XI bankruptcy reorganization in mid-May. Meanwhile, BAC 1-11-200 charter operations continue, with the British jetliners occasionally leased to Cleveland-based **Wright Airlines**.

Efforts are made in early 1985 to combine the company's aircraft, flight, and maintenance components with the staff and reservations system of **Atlantic Gulf Airlines**, another airline attempting to emerge from Chapter XI. After a letter of intent is signed with AGA's owners, United Resources, Atlantic Gulf wet-leases the last Air Illinois BAC 1-11-200. It is employed to operate charters to Providenciales, Grand Turk, and, on behalf of APA International Air, to Puerto Plata.

This gambit fails and the combined operation is sold again in early 1986. Flights continue until the carrier shuts down on September 1. The FAA revokes the Air Illinois operating certificate in late 1987.

In early 1988, a new carrier, **Oceanair**, is established as successor to Air Illinois/Atlantic Gulf Airlines and takes possession of the two BAC 1-11-200s from bankrupt AGA. An effort is made to overturn the revocation of the Air Illinois's authority, but this initiative also fails. **Oceanair** is unable to begin operations.

AIR INDIA, LTD.: **Air India Building, 218 Backbay Reclamation, Nariman Point, Bombay (Mumbai) 400 021, India; Phone (91-22) 202-4142; <http://www.airindia.com>; Code AI; Year Founded 1946.** **Tata Air Lines** becomes a public corporation on July 29, 1946 and is renamed **Air India, Ltd.** J. R. D. Tata is named managing director and initial capitalization is £3.75 million. During the year, services continue as before, except that Indian hostesses, trained by **Transcontinental and Western Airlines (TWA)**, are introduced on company Douglas DC-3s. The first of four Vickers Viking Mk. 1Bs—the carrier's first postwar commercial aircraft—is delivered on April 13, 1947.

Following the establishment of Pakistan on August 14, the airline's DC-3s participate in the evacuation of refugees.

A DC-3 is lost while landing at Jammu on November 13; although the aircraft must be written off, there are no fatalities. On December 27, a DC-3, with 4 crew and 19 passengers on the Pakistan airlift, fails its climb from Korangi Creek, Pakistan, and crashes; there are no survivors.

On February 3, 1948, three Lockheed L-749 Constellations are ordered. A Vickers 632 Viking 1B with 4 crew and 15 passengers is involved in a landing accident at Bombay on February 6; although the aircraft must be written off, there are no fatalities.

On March 8, Air India International, Ltd. (AI) is incorporated as the national flag carrier; issue capital is £5.25 million and ownership is split between Air India, Ltd. (51%), which will manage the enterprise as a holding company, and the government of India (49%). The first Constellation is delivered to Bombay (now Mumbai) on March 16 and is christened *Malabar Princess*. Wearing the Centaur symbol that will be displayed on all later aircraft, it is employed to inaugurate weekly Bombay to London service, via Cairo and Geneva, on June 8. The ship returns on June 11, thereby establishing a regular 24-hr. schedule.

The weekly London frequency is increased to three per fortnight on September 24 and twice weekly on November 1. Overseas-bound enplanements for the half year, June–December, total 2,690.

A Bombay–Ahmedabad DC-3 route is opened on March 24, 1949. A Vickers 632 Viking 1B with 3 crew and 22 passengers is involved in a landing accident at Marre on April 7; although the aircraft must be written off, there are no fatalities.

Daily Bombay–Calcutta via Nagpur DC-3 flights are operated in July–September and, on October 16, L-749 service to London is increased to thrice weekly. Overseas boardings total 7,980 during this year in which a ten-year license is received from the government.

In 1950, L-749 routes are extended to Aden and Nairobi (January 21), Rome (March 12), and later in the year, frequencies are increased on these routes while the London service becomes four per week. Domestically, Bombay to Delhi Viking Mk. 1B night service is started on March 1–2 and on April 1, Tiruchirappalli replaces Hyderabad on the

Bombay to Colombo run. Two new L-749As now join the fleet and service to Karachi is started on July 26.

A DC-3 crashes at Barrackpore, India, on September 26; there is no information on casualties.

En route from Bombay to London on November 3, a chartered L-749 with 48 aboard disappears near Geneva, Switzerland. The wreckage is sighted atop Mount Blanc two days later and there are no survivors. While attempting to reach the site on November 6-7, a rescuer is killed, leading to abandonment of the recovery effort.

As the result of a navigation error on December 14, a DC-3 with 4 crew and 17 passengers smashes into high ground in the Nilgiri Hills at Katagiri; there are no survivors.

Overseas bookings for the year jump to 12,267.

Paris is added as a stop on the London route on April 8, 1951.

The pilot of a DC-3 with 3 other crew and 23 passengers loses control of his aircraft while climbing out of Bangalore on September 15 and crashes (one dead).

Overseas bookings swell to 19,267 during the twelve months.

Delhi and Bombay to London via Cairo and Rome L-749 flights begin on December 2, 1952. With a DC-4 leased from **Airways of India, Ltd.**, AI launches fortnightly tourist-class service to Nairobi on December 7. Madurai is added to the DC-3 domestic network on December 10 as orders are placed for two L-1049Cs and three L-1049Es. Overseas enplanements accelerate to 21,000.

Dusseldorf is added as a stop on the London run on February 21, 1953. A DC-3 with 5 crew and 13 passengers stalls after takeoff from Palam Airport, Delhi, on May 9 and crashes; there are no survivors.

Ignoring the recommendation of the 1952 Air Transport Inquiry Committee, the government of Prime Minister Nehru elects to nationalize the entire industry, modeling it along the lines of Britain's **British Overseas Airways Corporation (BOAC)/British European Airways Corporation (BEA)** arrangement. The Air Corporation Act receives presidential assent on May 28.

On June 15, Air India International Corporation (AI) becomes the government-owned successor to Air India International, Ltd. On June 29, two de Havilland DH 106 Comet 3s are ordered, but as a result of the accidents involving Comet 1s, they will never be delivered.

Meanwhile, **Indian Airlines Corporation (IAC)**, with eight "lines" or divisions (from former independents) is established on June 15; the former **Air India, Ltd.**, becomes Line No. 6. (Local flight operations begin under this arrangement on August 1 and are covered under the entry for **Indian Airlines, Ltd.**) The overseas carrier transfers all but a few key trunk routes over to IAC.

Orders are placed with Lockheed on August 10 for five new Super Constellations. On October 3, AI initiates mixed-class operations and tourist class fares are introduced on the European routes. The same day, a proving flight is made from New Delhi to Kabul, Afghanistan. Enplanements for the year are 30,556.

The first L-1049C *Empress Nurjah*, later *Rani of Jhansi*, is delivered on April 26, 1954, arriving at Bombay on June 6; it begins service on the Bombay to London route on June 19. L-749 routes are extended to Singapore (July 16) and to Bangkok and Hong Kong (August 14). Orders are placed for five L-1049Gs and passenger traffic this year advances to 44,362 passengers flown.

On January 6, 1955, U.S. Secretary of State John Foster Dulles agrees to allow AI to purchase a Super Constellation, which will inaugurate services to Communist China.

En route with 22 passengers (including an 11-man Communist group) to the Asian-African Conference at Bandung, Indonesia, on April 11, the chartered L-749A *Kashmir Princess* with 8 crew and 11 passengers crashes into the South China Sea, near the Great Natuna Islands, 100 mi. N of Kuching, Sarawak (16 dead). It will be revealed that the aircraft is destroyed by time bombs planted in the starboard wheel well during the plane's Hong Kong servicing by one Chow Tse-Ming, who had allegedly been paid £37,500 by the Nationalist Chinese secret service. The

tragedy will be relived by A. S. Karnik in his *Kashmir Princess* (Bombay: Jaico, 1958).

Weekly Tokyo L-749 service begins on May 7. Frequencies on the L-1049C London route are increased to six per week on July 1. The next day, one of those frequencies becomes all first-class and takes the name *Flying Ranee*. The concept is developed by traffic manager S. K. (Bobby) Kooka, who introduces the "Little Maharajah" as a symbol of company service, together with a series of humorous helpful-hint booklets for passengers.

On July 4, the second L-1049C, *Rani of India*, begins a London service that features first time stops at Beirut and Zurich. As extensions of the London route, Bombay-Calcutta-Delhi-Bombay service commences on July 6. Bomber Chow Tse-Ming finds refuge on Taiwan in early September, just before his arrest by Hong Kong police. The Chinese Nationalists refuse to extradite the man. Three L-1049Gs are ordered in December as the year's passenger bookings reach 62,079.

The fleet in 1956 comprises 2 L-1049C and 3 L-1049Es. New routes are opened to Damascus (April 3), Prague (April 4), Darwin (technical stop) and Sydney (October 5), and Lhasa, Tibet (October 25). The first L-1049G, *Rani of Nilgiris*, is delivered on June 11 and three Rolls Royce-powered Boeing 707-437s are ordered in September. Service to Damascus, Beirut, and Cairo is rerouted via Basra on November 4 as a result of the Suez Crisis. Basra is abandoned in favor of Abadan and Istanbul (November 10) and then Beirut (December 25). Mid-east service returns nearly to normal by year's end. Bookings accelerate to 79,825.

L-1049Cs replace L-749s on the Tokyo service on January 10, 1957. Under terms of a contract with ICAO, **Trans World Airlines (TWA)** begins a company survey on February 16. Cairo service is resumed on April 3 and the London route is flown daily as of April 5. Two more L-1049Gs, the *Rani of Bijapur* and *Rani of Sagurai*, join the fleet. Enplanements soar to 88,312.

On January 4, 1958, a Jakarta stop is introduced on the Sydney run. L-1049Gs replace L-749s on the Nairobi service effective in February. In pool with **Aeroflot Soviet Airlines**, weekly Bombay and New Delhi to Tashkent and Moscow L-1049G service begins on August 14. A direct Jakarta service is launched on October 11 and, at year's end, the last three L-749s are traded back to Lockheed as payment on the Super Connies.

With DC-4s leased from **Seaboard and Western Airlines**, weekly all-cargo Bombay to London flights are kicked off on November 15. The year's enplanements drop to 83,868.

Kuala Lumpur becomes a stop on the Bombay-Sydney route in March 1959. The L-1049G *Rani of Nilgiris* with 7 crew and 39 passengers is wrecked in a bad landing at Bombay on July 19; there are no fatalities.

Damascus service is terminated on September 30. A tripartite pooling pact is signed with **British Overseas Airways Corporation (BOAC)** and **Qantas Empire Airways (Pty.), Ltd.** on December 4 for integrated services on the London-Sydney "Kangaroo" route. Earnings from the service will be divided 51% (BOAC), 28% (QEA), and 21% (AIIC). Bookings for the year skyrocket to 89,385.

Between January 7 and 16, 1960, the company's international pilots strike to protest the selection of nonguild pilots for jet training in the U.S. New York to London nonstop Super Constellation service is initiated on January 22 as AIIC becomes the first Asian airline to service the U.S. East Coast. The first Rolls Royce-powered B-707-437 is received in February and is christened *Annapurna*.

Her delivery flight from Seattle via London on February 20-21 also marks the first nonstop flight between London and Bombay. The jetliner's initial North American proving flight is made on April 7 and the *Annapurna* becomes the first Indian Stratoliner to enter regular service when, bearing the attention-getting logo of the "Little Maharajah," it begins the company's Bombay to London jetliner flights on April 19. Meanwhile, nine days earlier, Frankfurt replaces Dusseldorf as a connecting stop.

Twice-weekly London to New York service starts on May 14. North Atlantic boardings for the year, by this first third world airline to commence regularly scheduled passenger-carrying revenue flights over the Atlantic, are 12,000. Weekly Bombay-Kuwait via Karachi/Bahrain, L-1049G flights are inaugurated on October 4. Having given up the leased DC-4s, the carrier introduces L-1049Hs on the weekly U.K. cargo route on November 14, replacing the leased DC-4s. Two additional B-707-437s, *Nanda Devi* and *Everest*, join the fleet by year's end.

The B-707-437 *Kanchenjunga* is delivered in 1961, bringing the jetliner fleet to four. Other aircraft available include two L-1049Cs, three L-1049Es, two L-1049Gs, and two L-1049Hs. During the year, the L-1049Gs *Rani of Bijapur* and *Rani of Sagurai* are converted into freighters. Stratoliners are quickly dispatched to Tokyo (January 16) and Nairobi (May 4). Late in the year, arrangements are made to lease several de Havilland Comet 4s from BOAC. North Atlantic boardings climb to 15,000.

The Super Constellation fleet is reduced to 5 (the 2 Cs and 3 Es) in 1962. Employing chartered BOAC Comet 4s, AIIC inaugurates service from Madras to Singapore on April 5. On June 8, the carrier's name officially becomes Air India, the name originally chosen by J. R. D. Tata in 1946. Perth replaces Darwin as an Australian destination as of October 1. The year's North Atlantic bookings grow to 25,000.

Except for one L-1049G retained to fly Hadj pilgrims to Mecca, all of the Super Constellations, including the L-1049G and H freighters, are sold to the Indian Air Force in 1963; the royal sum of £3 million is paid for the lot of nine aircraft. A total of 167,242 passengers are carried systemwide. Revenues are \$52.26 million and a net \$4.9-million profit is earned.

Airline employment in 1964 is 6,703 and an agreement for pooled service is signed with **East African Airways Corporation** on April 1. The last L-1049G is delivered to the military during the spring and flights to Nadi, in the Fiji Islands, begin on August 3. On October 15, service is started from Bombay to London via Moscow.

In one of the most unusual incidents in the annals of civil aviation history, Australian Robert Spiers, who is stranded in London after failing to qualify for his country's Olympic team, ships himself COD to Perth on November 7 on an AI flight. After immigration authorities approve his unusual entry into the country, Spiers hitchhikes 1,800 miles home to Adelaide. On November 10, AI sends him a bill for \$970 in freight charges.

Passenger boardings rise 30% to 238,917. On revenues of \$56.2 million, a net profit of \$6.4 million is garnered, of which a \$539,000 bonus is paid to employees in recognition of the airline's success.

The AI terminal is opened at New York (JFK) in February 1965. A new headquarters building is started in Bombay. The fleet is now standardized with 8 B-707s (5 437s and 3 337Bs); 2 more are ordered. The installation of Distance Measuring Equipment is completed on all aircraft. Mobs attack the airline's offices at Jakarta, Indonesia, on September 15; service to the island nation is halted. A pooled service agreement is signed with **Japan Air Lines Company, Ltd.** (2) on October 1.

Bookings this year total 219,702 while freight rises a remarkable 154%. Revenues accelerate 104% to \$61.8 million.

On January 24, 1966, Flight 1101, en route from Beirut to Geneva on a leg of a long-haul service from Bombay to London, the company's first Stratoliner, *Annapoorna*, with 11 crew and 106 passengers, crashes into Mount Blanc, Switzerland; there are no survivors.

The airline's navigators go out on strike on March 22. On March 4, AI officials threaten to close down the carrier if the navigators do not end their strike within 24 hours or if pilots refuse to fly without them; the strike ends within 24 hours.

Reciprocal service to Indonesia is resumed on September 27. On October 12, the jetliner destroyed in January is replaced by a new B-707-337C, which is christened *Annapoorna* in honor of the lost Boeing. A total of 240,000 passengers are carried.

Orders are placed in 1967 for two B-747-100s. The fleet now includes 9 jetliners: 5 B-707-437s, 3 B-707-337Bs, and 1 B-707-337C, the latter delivered on February 12. The workforce totals 7,354.

Malaysian Airlines System, Ltd. (MAS) and **Air New Zealand, Ltd.** join the tripartite pooling agreement with **British Overseas Airways Corporation (BOAC)** and **Qantas Airways, Ltd.** on April 1. Twice-weekly service is inaugurated to Mauritius on August 15. Enplanements soar to 278,000.

Two additional B-707-337Bs join the fleet in 1968 while orders (never filled) are placed for two Anglo-French Concorde. A second B-707-337C is delivered during the summer and immediately begins flying to London (LHR). Service to Kuwait begins with Vickers VC10s leased from **British Overseas Airways Corporation (BOAC)**. The workforce totals 8,739.

Service via the EAAC pool is expanded on October 27 with services to Addis Ababa and Entebbe.

Passenger boardings increase 13% to 314,062, while freight is up 14.4%. Revenues total \$79.4 million.

Service to Amsterdam begins on April 1, 1969, followed by the initiation of frequencies to Dubai on July 2. The carrier's ten B-707s transport 353,100 travelers during the year as orders are placed for two additional Jumbos.

Passenger boardings climb 27.4% in 1970 to 486,363 while cargo advances 4.4%. On December 17, employees—who now number 9,696—end a one-day strike protesting the use of Indian Air Force pilots on domestic flights. Still, in terms of its workforce, AI is now the 22nd largest airline in the world. Meanwhile, scheduled service is inaugurated to Abu Dhabi (October 1) and Dhahran (November 4).

A B-707-437 with five crew fails its takeoff from Bombay for a January 23, 1971, training flight, and catches fire; although the aircraft must be written off, there are no fatalities.

The first two B-747-237Bs are delivered on March 22 and April 20, respectively; christened *Emperor Ashoka* and *Emperor Shahjehan*, they enter four-times-per-week service to London on May 24 and on to New York on May 31. The New York extension is a thrice-weekly operation. Amsterdam, Zurich, and Prague are taken off the schedule as of July 17.

Air India Charters, Ltd. is formed at Bombay as a wholly owned, non-IATA subsidiary on September 9; its first CEO is S. K. (Bobby) Kooka. With Boeing jetliners and personnel leased from the parent, the non-scheduled carrier undertakes international passenger flights and inclusive tours to European and Asian destinations. Many of the services are mainly ethnic charters to holy places, while others will fly expatriate laborers to Mideast work locations. Traffic and revenue statistics are to be reported with those of the parent concern. The carrier also offers special "theater flights" from the U.S. to Europe, with stops in London, Paris, Moscow, and Leningrad.

The workforce stands at 10,380 in 1972. B-707-437 service is started from Bombay to Dacca on February 4.

The *Emperor Rajendra Chola* and *Emperor Vikramaditya* arrive on March 28 and June 1, respectively. Like their predecessors, these Jumbos are also seen as palaces in the sky, complete with all main deck windows painted, with red surrounds, to look like Rajasthan-style arches.

Meanwhile, the ancient tripartite agreement with **British Overseas Airways Corporation (BOAC)** and **Qantas Airways, Ltd.** are terminated on April 1 and replaced with bilateral government-to-government air pacts. Flights into Osaka begin on November 2. Enplanements for the year total 484,000.

The entire fleet in 1973 totals 13 aircraft, including 4 B-737-237Bs. Under terms of its bilateral with the U.K., AI is allowed nine weekly flights over London, of which only two may go nonstop into Canada and to only a single U.S. destination. Passenger traffic rises 27.8% to 617,100 and cargo is up by 24.5%.

Airline employment is 10,694 in 1974. One B-707-437 is sold. Traffic patterns are rearranged to better reflect changing patterns in passenger loads. A second B-707-337C service to Australia is announced, as well as an increase to four-times-per-week frequency to Singapore.

A B-707-337C is converted to all-cargo configuration for the India-Middle East-England run.

Jozef Homolov is overpowered by the crew of a B-747-237B after he has commandeered the craft during a December 25 Bombay to New York flight and ordered the pilot to execute a sharp dive over Rome, Italy.

Meanwhile, a three-month pilot strike forces a traffic decline of 10% in freight and a 17% dip in passenger boardings, to 508,739. Effects of the world energy crisis cause a rare fiscal downturn.

Daily frequency is initiated on the Japan/Persian Gulf routes and a fifth B-747-237B, the *Emperor Akbar*, is delivered on December 23, 1975. Enplanements for the year are 595,816.

The workforce is increased by 4% in 1976 to 11,472. Contract services operated on behalf of **Indian Airlines Corporation** are discontinued on April 1. The fleet now includes 5 Jumbojets and 9 707s. Orders are placed for two additional B-747-237Bs and service is extended or restarted to the Seychelles, Accra, Lagos, Baghdad, and Amsterdam.

Passenger boardings are up 32.6% to 884,000 while freight grows 17.8%.

Chairman Tata announces his retirement in 1977, the last of the pioneer airmen heading the world's great airlines to do so. His story will be told by Murad Fyze, *Aircraft and Engine Perfect: The Story of J. R. D. Tata, Who Opened Up Skies for His Country* (New Delhi/New York: McGraw-Hill, 1991).

K. G. Appuswamy becomes managing director during the summer, taking over much of the chairman's daily burden. Service is resumed to Bangkok and one additional B-747-237B joins the fleet.

A total of 1,046,551 travelers are carried during these 12 months as the million mark in annual boardings is achieved for the first time.

Flight 855, the B-747-237B *Emperor Ashoka* with 23 crew and 190 passengers en route to the Middle East on January 1/2, 1978, explodes and crashes into the shallow water in the Arabian Sea two mi. off Bandra shortly after taking off from the airport at Bombay. There are no survivors from the accident caused by a faulty altitude director indicator.

Air Chief Marshal P. C. Lal becomes chairman at the end of January, retaining Managing Director Appusamy in his post. Two more Jumbojets, the *Emperor Chandragupta* and *Emperor Kanishka*, join the fleet on February 3 and June 30, respectively, while service from Trivandrum to Dubai commences in February.

Airline employment at the carrier is now 11,692 and the fleet comprises 7 B-747-237Bs, 3 B-707-320Bs, 2 B-707-320Cs, 4 B-707-420s, and 1 DC-8-63F. An additional Jumbojet Dash-200B is on order.

Passenger boardings grow only 2.1% to 1,069,000 while cargo is up an equally slow 2.9%.

Airline employment is increased by 7% in 1979 to 15,226 as two more B-747-237Bs, the *Emperor Krishna Deva Raya* and the *Samudra Gupta*, are placed in service on August 14 and December 21, respectively. The "Emperor" portion of Jumbojet names will now be dropped. Fares are kept high on routes to the Mideast, where Indian workers fly in increasing numbers in search of the many new jobs being opened for foreigners.

During the year, a committee of the Indian parliament launches an investigation; its findings will still be talked about 20 years later.

Freight accelerates 4.8% to 267.9 million FTKs, while boardings climb 5.8% to 1,166,159.

The workforce rises 3.4% in 1980 to 15,747. In January, B-747-237B service is launched to Japan; the tenth B-747-237B, *Mahendra Varman*, arrives on February 20. On April 3, Raghu Raj becomes chairman/managing director and, next day, the B-737-237B *Harsha Vardhana* arrives.

Two DC-8-55Fs are leased from **Cargolux Airlines International, S.A.** for use in freight operations to the U.S. and Europe and frequencies on the Japan route are increased to four per week by May. Dar-Es-Salaam and Lusaka are added to the network, via weekly B-707-437B frequencies.

Passenger boardings rise 17.2% to 1.37 million and cargo soars 26.5% to 321.6 million FTKs. Expenses of \$48.7 million are experienced on revenues of \$482.7 million, leaving an operating loss of \$4.99 million and a net loss of \$18.5 million.

The workforce is reduced by 2.9% in 1981 to 15,280. Flights to Sharjah begin in March and a route to Dar es Salaam, Lusaka, and Harare (formerly Salisbury), via the Seychelles, is opened in April.

Five senior airline aides are dismissed on May 1 after the discovery of an alleged plot to sabotage the plane scheduled to carry Prime Minister Indira Gandhi to Geneva. The control cables of her B-707-437B had been found partially cut.

The Indian Supreme Court, in an August 29 finding, rules that female flight attendants can work until age 45 and overturns a company regulation requiring retirement at age 35. Also overturned are rules requiring dismissal for pregnancy.

During a 20-hour gun battle following the collapse of a failed attempt to overthrow the government of the Seychelles at Victoria on November 27, mercenary colonel Mike Hoare and 44 Caucasian colleagues take over Flight 224. A B-707-437B with 79 passengers en route from Salisbury to Bombay, they force it to fly to Durban, South Africa, where security forces take the pirates in hand and transport them off to Johannesburg. Hoare will receive a 20-year prison term, seven lieutenants will receive terms of from one to five years, and the remainder receive six-month sentences.

Also during the year, a computerized reservation system goes into operation at Bombay, New Delhi, Calcutta, and Madras. A route is opened to Sharjah and a minority interest is taken in the new Indian regional carrier **Vayudoot, Ltd.** The fleet now includes 10 B-747-237Bs and 7 B-707-437Bs, plus 2 leased DC-8-55Fs. Passenger traffic soars 20.2% to 1,417,817, and freight jumps an equally healthy 20.1%. Operating revenues are \$617.8 million and expenses are \$617.4 million. Despite an operating profit of \$399,000, the net loss deepens to \$26 million.

The employee population grows by 6.5% in 1982 to 16,255. New service is started from Delhi to Birmingham, England, via Amritsar and Moscow, in January. Flights to Baghdad are resumed and a new route is opened to Montreal. Three former **Laker Airways, Ltd.** Airbus Industrie A300B4-203s, the company's first non-Boeing jetliners, join the fleet as the last B-707-337s begin withdrawal from service. In May, one of these inaugurates an over-water route from Madras to Kuala Lumpur.

On June 22, 19 are killed and dozens are hurt as a B-707-437B with 12 crew and 99 passengers crashes during its landing in a heavy Bombay rainstorm.

Former Chairman Tata is allowed to fly the carrier's original de Havilland DH 80 Puss Moth Karachi to Bombay route on October 15 as part of the fiftieth anniversary celebration. A300B4-203 flights commence late in the fourth quarter from Abu Dhabi to Trivandrum. Enplanements for the year total 1,738,990 and freight declines 0.2% to 356.78 million FTKs. On revenues of \$708 million, operating and net profits of \$64 million and \$36 million, respectively, are reported.

Airline employment is increased by 8.6% in 1983 to 17,900; all but one of the B-707-337Cs are now retired. Service to Sanas starts in April.

Passenger boardings climb 7.7% to 1,882,700 and freight accelerates 12.8% to 391.56 million FTKs. Profits are \$89.5 million (operational) and \$57.6 million (net) on total revenues of \$787.6 million.

The number of workers is cut by 6.7% in 1984 to 16,296. In January, an airline technical subcommittee, headed by founder J. R. D. Tata, recommends that the company purchase Boeing 767-200ERs. Going against this advice and expecting huge fuel savings, company managers, at the direction of the Ministry of Civil Aviation and with the agreement of founder Tata (who has changed his mind), place orders for six Airbus Industrie A310-304s. They have, however, taken the precaution of obtaining a performance guarantee on "fuel burn" from Airbus Industrie.

Passenger boardings for the year climb a slight 0.9% to 1,665,000.

The 17,636-employee carrier experiences its worst year to date in 1985. In February, a block space agreement is signed with **Zambia Airways, Ltd.** providing for code-sharing on the African carrier's route from Bombay to Lusaka.

A fifth spare engine (being taken back to India for repairs) is installed below the left wing of the B-747-237B *Kanishka* at Toronto on June 23, causing the plane to be 2 hours late for its departure, as Flight 182 with

22 crew and 307 passengers, to Europe. After an intermediate stop at Montreal, the Jumbojet continues toward London. The aircraft suddenly explodes in midair at 31,000 ft., suffering rapid decompression and break-up. The Boeing plunges into a 7,000-ft. trench in the Atlantic Ocean off Shannon and there are no survivors.

Salvage efforts and accident investigation will prove extremely difficult, but will produce sufficient evidence to allow examiners to determine the tragedy's cause. A bomb planted by Sikh terrorists is verified as the cause and the Jumbojet is the first of its type so destroyed.

Clark Blaise and Bharati Mukherjee detail the suspected bombing in *The Sorrow and the Terror: The Haunting Legacy of the Air India Tragedy* (New York: Viking, 1987), while Salim Jiwa also reviews the record in *The Death of Air India Flight 182* (London: Ian Allan, 1986). Seven years after the event, a suspected Sikh terrorist will be arrested in Bombay in connection with the massacre.

Two boys from Dublin, reported missing on August 18, turn up at New York (JFK) and tell police that they stowed away on an AI B-747-237B flight from Ireland; the two are returned home aboard the next departing **Aer Lingus Irish Airlines, Ltd.** flight.

Unrest at home leads to a 2.6% dip in passenger boardings to 1,764,000. Revenues are up 1.4% to \$672.3 million and expenses 3.4% to \$627.4 million; profits are \$44.9 million (operating) and \$52.3 million (net).

An agreement is signed with **Air Mauritius, Ltd.** in January 1986 that calls for rapid joint route development. Weekly A300B4-203 Trivandrum-Goa-Kuwait service begins in February while, in April, the carrier begins joint service with **Air Mauritius, Ltd.** over a route from Bombay to Mauritius.

A B-747-273C is leased from **Evergreen International Airlines** of the U.S. on May 18 and a B-747-212B is acquired from **Singapore Airlines, Ltd.** on May 22; it is christened *Himalaya*. Five Sikhs, who are said to have planned to blow up a B-747-237B flying out of New York, are arraigned in Montreal on June 1 on charges that they conspired to possess explosives with intent to injure. The first of six ordered A310-304s is delivered, also in June, entering service in July. Enplanements for the year total 1,763,004.

Airline employment in 1987 stands at 17,458 and the fleet includes 22 aircraft: 10 B-747-200s, 3 A300B4-203s, 6 A310-304s, and 3 leased cargo planes.

Indian security forces at New Delhi on January 16 stage a mock hijacking of a company plane by supposed Sikh extremists that is so realistic that, for several hours, unalarmed officials believe the takeover to be real. The incident spreads alarm and confusion throughout the country before the media is able to report the truth.

Orders are outstanding for two B-747-337Cs. **Singapore Airlines, Ltd.** sells a second-hand B-747-212B to the carrier on June 11 for a price estimated to be between \$45 and \$50 million; two other Jumbojets are ordered from their manufacturer.

In July, 37-year-old Rajan Jetley, former managing director of the Indian Tourism Development Corporation, becomes managing director under Chairman Ratan Tata, a relative of airline founder J. R. D. Tata. During the fall, an A310-322 belonging to **Nigeria Airways, Ltd.** is held at Lagos when the financially troubled African carrier is unable to make owed payments. The Airbus is released several weeks later when a security bond is purchased; Nigeria suspends flights to Lagos and begins a legal action against AI.

Meanwhile, a Jumbojet is chartered from **Middle East Airlines, S.A.L. (2)** to provide lift for Prime Minister Rajiv Gandhi's round-the-world trip. In October, the carrier's staff college at Bombay airport, one of the most respected training establishments in Asia, celebrates its twenty-fifth anniversary. Late in the year, an Ilyushin Il-62 is wet-leased from **Aeroflot Soviet Airlines** to fly service to Moscow.

Customer bookings rise 13.4% to 2,035,801 and cargo climbs 23.3% to 534.92 million FTKs.

The workforce is reduced by 1% in 1988 to 17,328 as the two B-747-337Cs arrive in the fall. An A300B4-203 with 135 aboard crashes and explodes near Ahmadabad, in central India, on October 18 (130 dead).

Enplanements total 2,123,957 and 521.4 million FTKs of freight are flown. Revenues reach \$738.2 million and with costs low, operating income of \$43.1 million is generated. The net profit is \$28.1 million.

Employment falls another 1% in 1989 to 17,293.

Service is initiated to Baghdad. In April, under terms of an agreement signed between the Indian and Lesotho governments, the carrier begins training flight deck crews and flight attendants for **Air Lesotho, Ltd.**

On October 15, a new corporate identity program is launched, including a complete redesign of jetliner interiors and introduction of new livery. With the new color scheme, each all-white aircraft fuselage receives a broad red stripe on its tail with the words Air India in English and Hindi printed above the windowline over the wing. Customer dislike for the new aircraft color scheme will be intense.

Wishing to resume flights to Lagos, **Nigeria Airways, Ltd.** in late October drops its legal action against AI and waives the bond that had allowed the release of its aircraft there two years earlier.

A marketing agreement is signed with **Gulf Air, Ltd.** in December that calls for joint route development. At the same time, a code-sharing route is initiated between Trivandrum and Muscat.

Passenger boardings inch upward a slight 0.2% to 2,167,303 and freight does better, gaining by 7.8% to 572.01 million FTKs. Revenues rise 6.2% to \$791.3 million and the operating profit climbs to \$58.6 million. Net gain drops to \$23.4 million.

Company employment inches upward by 0.9% in 1990 to 17,443. The company's first section 41 modification of a B-747-237 is completed in-house at Bombay in February, saving significant foreign exchange. The same month, the airline receives a ten-man U.S.S.R. delegation, which arrives from the Singapore air show aboard an Ilyushin Il-96 to demonstrate that aircraft's potential as a long-range transport.

Flights to Fujairah begin in March and, in April, it is decided to acquire two A310-304s, at \$120 million, in a Japanese cross-border leveraged lease.

Just after landing at Delhi on May 7 after a service from London (LHR), the No. 1 engine pylon of Flight 132, a B-747-237B with 20 crew and 195 passengers, fails, causing the engine to tilt nose down and sending hot exhaust gases up into the wing, which catches fire. All aboard are safely evacuated; however, the Jumbojet is damaged beyond repair.

In June, the company joins the frequent flyer program of **Trans World Airlines (TWA)**.

To help ease the capacity crunch at **Indian Airlines Corporation** after the grounding of its A320 fleet, the government, in July, orders AI to turn over to the domestic line its three A300B4-203s and orders additional Airbus aircraft for its flag carrier. At the same time, an agreement is signed with the government of Singapore that will allow AI to operate thrice-weekly, all-cargo services between the two nations.

Managing Director Rajan Jetley unexpectedly resigns on July 17 to accept a position with a Singapore-based multinational corporation; Finance Director Subhash Gupte is named interim managing director.

Following the Iraqi invasion of Kuwait on August 2, AI, together with **Indian Airlines Corporation**, becomes involved in the largest airlift of expatriates from the Gulf region. In just four weeks beginning on August 13, over 125,000 Indians, including a number on Hadj pilgrimage, are taken home from Amman, Jordan, in 488 flights. The massive airlift costs \$117.6 million, which the government promises to reimburse, and wins the airlines a citation in the *Guinness Book of World Records* for the "largest civilian evacuation."

The two A310-304s arrive during September, even as the airline is reporting the loss of \$444,176-per-day due to the stoppage of daily Kuwait service. In mid-month, the government announces that only government officials will serve on the carrier's board of directors.

A marketing agreement is signed with **Malaysia Airlines, Ltd. (MAS)** in December that provides for joint service on a route from New Delhi to Kuala Lumpur; the two carriers also agree to pool flights from Madras to Kuala Lumpur and Penang.

Customer bookings for the year rise 6.7% to 2,320,468, but cargo is down 0.3% to 570.06 million FTKs. Revenues advance 12.8% to \$895.1

million and expenses allow operating income of \$30.8 million. As the Gulf routes provide upwards of a third of the carrier's net income, officials estimate that the Kuwait affair will cause a net revenue loss of \$17.8 million.

It is also reported that, since none of the A310-304s have lived up to energy efficiency expectations, the carrier has received \$1.54 million in penalty payments from Airbus Industrie.

The fleet in 1991 includes 3 A300B4-203s, 6 owned and 2 leased A310-304s, 1 B-747-212B, 8 B-747-237Bs, and 1 owned and 1 chartered B-747-337Cs. Orders are placed for 4 B-747-437s.

When the Mideast war erupts on January 17, service is cut to all 48 of the airline's Gulf destinations; these frequencies provide 33% of AI's revenues and use 24% of its capacity. At the same time, a 25% cut in fuel supplies is ordered by the government, leading to cancellation of flights to Hong Kong and Australia, as well as the leased freighter services to New York and Europe. In late February, flights are resumed to a number of Mideast destinations.

A code-sharing agreement is signed with **Air Canada, Ltd.** and, as a result, on June 1 twice-weekly flights commence between Bombay and Toronto via Delhi and London. The government begins the process of privatizing the company, while continuing to hold a majority interest. During July, the government requires the carrier to absorb excess staff from the third-level carrier **Vayudoot, Ltd.** and an arrangement is worked out with Boeing for the ordering of four B-747-437s.

In October, the Civil Aviation Ministry reports to parliament that, despite countermeasures, AI continues to face a problem with rats on certain of its frequencies. During a month in late summer, flights to New York, Tokyo, and London must be delayed when rats are found before takeoff, while a flight from Muscat to Bombay returns after takeoff when passengers see the rodents—the plane is changed.

Becoming deputy managing director, Subhash Gupte, the acting chairman, is succeeded as chairman/managing director in November by Yogesh Deveshwar, a hotel executive.

On December 1, as the result of an anonymous telephone report that a Sikh employed by the airline's catering service has placed a bomb aboard a packed B-747-237B, an explosive device is found minutes before its scheduled departure from New Delhi for New York. The potential bomber is arrested the next day.

A month-long pilots' strike, the grounding of three A300B4-203s, and the withdrawal of B-747F service brings a 24% drop in capacity for December; however, the capacity cut is offset by a 34% increase in yield.

Passenger boardings for the year slide to 2.1 million, due largely to a pilot strike during May. Devaluation of the rupee is of material assistance to the balance sheet, which shows revenues up 14.4% to \$769.3 million. The operating profit is a record \$38.46 million.

Airline employment in 1992 stands at 17,425 and the fleet includes two dozen aircraft. During the first quarter, a \$20-million contract is signed with Landor Associates for an image change program, including \$1 million for the design of a new logo. During the same period, a leased B-747F is returned. A third of the fleet is repainted in the new livery and logo by April when the Landor contract is cancelled; aside from the cost, company officials have received many complaints over its decision to delete its famous centaur symbol and downplay the 40-year-old maharajah mascot. All aircraft will be repainted and new aircraft will be delivered in the maharajah style. During the same month and at the suggestion of the Civil Aviation Ministry, the airline announces a fleet renewal plan.

Plans are made with **Vayudoot, Ltd.** during early summer to initiate feeder services to hubs at Delta and Bombay, but are put on hold as the government considers airline privatization. New service is, however, started to Dhaka. In August, the carrier asks Airbus Industrie for \$1.5 million in compensation after corrosion damage in the pressure panels of four of its eight A310-304s causes the aircraft to be removed for lengthy repair. Government authorities arrest Sikh separatist Manjit Singh and charge him with committing the 1985 bombing of a Jumbojet off Ireland.

Customer bookings decline 22.8% to 1,681,000 and cargo drops 15.5% to 261.26 million FTKs. Although flight engineers strike, ground-

ing the fleet for a time, a decline in the value of the rupee in the fall, an increase in fares, and replacement of money-losing cargo routes operated with a leased B-747F bring \$107.5 million in net profits on revenues of \$833.8 million.

In 1993, Chairman/Managing Director Deveshwar oversees a work-force of 17,717. On February 27, a strike by all 80-plus flight engineers begins over the carrier's plans to eliminate their positions on the soon-to-be-received Dash-400 Jumbojets.

A new bilateral agreement is signed between India and the U.K. in March. Under its terms, all of the 20-year-old restrictions on AI's transatlantic service over London are removed. At the same time, terrorist bombers attack buildings in Bombay, including company headquarters where one employee is killed. Following Kenya's suspension of traffic rights from Nairobi to Johannesburg at month's end, plans to extend AI's A310-304 service to South Africa are put on hold.

The flight engineers strike continues, forcing the grounding of all current B-747s and A300B4-203s and the cancellation of numerous flights. Only the eight A310-304s remain in operation and the airline is reduced to announcing its schedule day-by-day in newspaper advertisements.

On April 3, the government establishes an industrial tribunal, led by Justice M. N. Roy, to examine the flight engineers' grievances; three days later, it issues an order to end the strike. The ban is defied and, by April 11, the job action has cost AI 500 million rupees or \$15.6 million. Agreeing to a government promise to investigate grievances and for each officer to receive a third stripe, the flight engineers end their strike on April 23.

New routes are inaugurated to Durban, Johannesburg, Jakarta, and Dar-es-Salaam. Other markets served also include Abu Dhabi, Ahmedabad, Bangkok, Bahrain, Bombay, Calcutta, Calicut, Delhi, Dhaka, Frankfurt, Geneva, Goa, Hong Kong, Hyderabad, Jeddah, Kuala Lumpur, Kuwait, London, Lusaka, Madras, Mauritius, Muscat, Nairobi, New York, Osaka, Paris, Rome, Singapore, Tashkent, Tokyo, Toronto, Trivandrum, and Zurich. The first of four ordered B-747-437s is placed into service during August.

J. R. D. Tata, former chairman and the doyen of Indian civil aviation, dies in Geneva on November 29 at the age of 89. Also in November, the company signs a block-seat agreement with **Ethiopian Airlines, S.C.** covering flights from Bombay to Beijing.

Passenger bookings rise to 2.1 million and revenues climb 6.1% to \$886.8 million. The new Boeings incur higher depreciation and interest charges than expected and reduce the net gain to \$64 million.

The employee population in 1994 is cut to 17,300. K. Padmanabhalah, former secretary of the Ministry of Urban Development, is appointed joint chairman of both AI and **Indian Airlines Corporation** in February; Capt. D. S. Mathur becomes AI's new managing director.

On March 1, the government of India converts the carrier into a public limited company and AI is renamed Air India, Ltd. Under the Air Corporation Ordinance giving it effect, all assets, liabilities, and functions of AI are vested in a public company. **Indian Airlines Corporation** is also converted. Although the two airlines share a joint chairman and common directors, the latter sit as two separate boards in making decisions for the state carriers.

Also in March, the new managing director is able to negotiate an understanding with the company's pilot and flight attendant unions. He will also put into place a strategy for cooperation between AI and **Indian Airlines, Ltd.** that will feature future joint frequent flyer programs, computerized reservations, and code-sharing on three domestic services from Delhi as well as international flights to Muscat, Dubai, and Abu Dhabi from Calcutta.

Padmanabhalah is appointed secretary of the Civil Aviation Ministry in April and is thus given authority over all of the nation's commercial aviation. Also in April, AI abandons its objections to a **Deutsche Lufthansa, A.G.** request for a 67% capacity increase to India in exchange for a fee to be paid for every passenger above an agreed level on routes from Frankfurt to Madras.

Traffic figures are only released for the first five months of the year. These show customer bookings up 13% to 865,694 and cargo increasing 66.6% to 177.34 million FTKs.

In June, Padmanabhalah is unexpectedly transferred from the Civil Aviation Ministry to head the Home Ministry; he retains his chairmanship of both state-owned airlines.

AI and **Indian Airlines, Ltd.** together sign an agreement in August with **American Airlines** in August for joint participation in the SABRE computerized reservations system. The Indian international carrier also holds discussions with the U.S. major concerning a strategic alliance.

An outbreak of pneumonia at Surat in mid-September causes a number of international flights to be cancelled after some foreign governments, notably those in the Gulf region, ban company service. Flight 805, a B-747-237B with 245 passengers, only learns of a ban by Saudi Arabia as it approaches Jeddah on a September 26 flight from Bombay; the Jumbojet is forced to return to India.

Although AI flights from Europe are allowed to land in Dubai to pick up passengers, by September 28, upwards of 16 of the airline's 26 aircraft are grounded, at a revenue loss of \$6 million per day.

Under diplomatic pressure, Sri Lanka, the Gulf nations, Saudi Arabia, Russia, Bangladesh, and Pakistan lift their embargo on the airline at the end of October. Meanwhile, a contract is let with **Southern Air Transport** under which the American cargo line begins flying freight on behalf of Air India Cargo. Employing two U.S. registered Douglas DC-8-73Fs in AIC livery (save the "S" on the tail), the airline transports pallets westward from Indian cities, via the Mideast, to Zurich, Brussels, and New York (JFK).

Russi Modi, ex-chairman of Tata Steel, accepts the dual chairmanship of AI and **Indian Airlines, Ltd.** in November. On December 4, the carrier increases its stake in **Air Mauritius, Ltd.** by 3.5% to 12% to help the Indian Ocean airline fund its fleet expansion program. Air Mauritius is the only foreign airline in which AI holds a stake. Its own revenues for the year total \$1,007,168,200.

There is no change in airline employment in 1995. On January 2, Bangalore becomes an online station. The national carrier introduces twice-weekly flights to the new station from Mumbai; although one is a purely domestic service, the other is a stop on route to Singapore.

A contract is signed with Boeing on January 19 for the purchase of two B-747-447s. The company seeks to increase its share of the growing international air traffic from India by buying more aircraft with which to increase its capacity. Added are four purchased B-747-447s, three leased A310-304s, and a pair of chartered Douglas DC-8Fs.

As the result of continuing unrest by company flight attendants, Managing Director Capt. Mathur is suddenly asked to resign on February 20 and turn his portfolio over to Ministry of Civil Aviation Joint Secretary Brijesh Kumar. Despite calls for his resignation by certain meddlesome members of parliament, Chairman Modi continues on.

To help strengthen the airline, the government removes a requirement that half of the carrier's \$47-million capital be considered as a loan on which 9% interest charges must be paid.

A pair of A310-324s, previously operated by **Delta Air Lines**, is put into service on behalf of the state carrier by the Belgian charter operator **Caribjet, S.A.** They wear AI livery and Caribjet registries. Later, two Lockheed L-1011-500s are chartered by **Caribjet, S.A.** from **TAP-Air Portugal, S.A.** and also begin flying on behalf of the New Delhi-based major.

In early July, the Comptroller/Auditor General of India issues a report critical of the company's 1984 decision to purchase A310-304s, noting that, because of poor fuel economy, they have contributed to the company's operating losses ever since.

In September, a block-seat arrangement is made with **SAS (Scandinavian Airlines System)**, covering service between Delhi and Copenhagen via Chicago.

On November 15, following the conclusion of a new bilateral agreement between India and the U.S., the carrier begins to code-share on flights with **United Airlines**. Segments of the American major's "Round

the World" services from New Delhi to Newark via London and New Delhi to Los Angeles via Hong Kong are covered.

In a move announced the previous month, the carrier, on November 25, unilaterally terminates an agreement that it had signed with the Indian Pilots Guild a year earlier. The pact had paid pilots for a minimum number of hours per month, whether they were flown or not, and had led other employee groups to make similar demands.

Also in November, **Kuwait Airways Corporation** comes to terms for joint service employing its aircraft over a route from Kuwait City to Trivandrum and on thrice-weekly flights to Madras.

The carrier begins code-sharing on December 15 on **United Airlines** flights from New Delhi to Washington, D.C. (IAD) and Chicago (ORD) via London.

Continuing industrial unrest, a drop in yields, and rising wages and other costs will hurt the bottom line. Traffic figures are reported through September and show progress; customer bookings are up by 22.5% to 2,030,341 while cargo climbs 27.2% to 422,220,000 FTKs. Operating revenues decline by 15.5% to \$991,500,000 while expenses are \$1,007,400,000. There is an operating loss of \$15.9 million and a net downturn of \$32 million.

Two more B-747-447s join the fleet in 1996.

A wage dispute between the company and its 500 maintenance engineers continues into February. The airline offers to triple salaries to Rs 75,000 (\$2,142) per month with increased productivity, but this is rejected as insufficient. On February 19, the engineers' union issues a work-to-rule directive to its membership, which, because of the delays involved, forces AI to cancel a number of flights.

During the first quarter, the **Caribjet, S.A.** contract for two TriStars is completed. Before the end of March, the maintenance engineers back away from their militant stand and move towards a strike—without explanation. In addition, the company postpones its decision on a new midcapacity, long-range aircraft until after the May general elections.

On April 1, the carrier enters into a code-sharing agreement with **United Airlines** on UAL services between Delhi and Washington, D.C. (IAD). Simultaneously, AI places its two-letter code on United flights between Delhi and Los Angeles.

To assist in the transport of Muslim Hadj travelers to Mecca, three B-747-100s are subleased in April from **Tower Air**. In addition, three more B-747-100s are subleased from **Air Atlanta Icelandic, H.F.**

Ananth Kumar is named civil aviation minister in the new government of Prime Minister Atal Behari Vajpayee following the May elections, with P. V. Jayakrishnan as civil aviation secretary.

After the government of the United Arab Emirates sets a deadline for expatriate workers without valid papers or permits to leave, the company, in a move reminiscent of the 1990 Kuwait evacuation, volunteers to come to the aid of India's worker-citizens. In 35 special flights (14 to Abu Dhabi and 21 to Dubai) and two dozen re-routed scheduled services, the carrier joins **Indian Airlines, Ltd.** and surface shipping in returning 37,430 citizens to Mumbai.

Twice-weekly B-747-447 service is inaugurated in November from New Delhi to Chicago via London. Weekly service is inaugurated on December 1 from Bangalore to Dubai.

Having failed to wrest control of the company or **Indian Airlines, Ltd.** from the government or to persuade either of the carriers to join forces in marketing, code-sharing, and fleet-planning, Chairman Russi Modi resigns on December 2. Meanwhile, auditors report that some \$40 million has been spent on ill-conceived promotional campaigns, with falling yields accelerating a downturn.

Passenger boardings for the full year accelerate 9% to 2.89 million and operating income reaches \$1 billion. Still, higher depreciation and interest charges associated with the introduction of the long-range Boeings bring a \$83.6-million net loss.

The employee population in 1997 is 18,421. By January, AI, for the first time in its history, is unable to pay its bills. The state-owned Indian Oil Corporation, to which the company owes \$21 million, stops credit to the national carrier and places it on a cash-up-front basis. To

help it during this crisis, AI seeks a short-term \$42.2-million loan from the State Bank of India.

In March, **Indian Airlines, Ltd.** Managing Director P. C. Sen is appointed joint chairman. He replaces Chairman Modi, who had resigned three months earlier, and walks into a flood of red ink. While he holds meetings to assess the situation, Managing Director Brijesh Kumar reassures employees that speculation on a financial crisis is "utter nonsense."

In an effort to slow the hemorrhage while still providing 142 Hadj charters to Saudi Arabia, the company, in April, institutes draconian service cuts, all but abandoning its European product and trimming elsewhere.

All six weekly B-747-447 frequencies terminating at Frankfurt are ended; the hub at that German city, built up over eight years, is closed down. Frankfurt becomes a transit stop on AI's twice-weekly service to Chicago while Paris, previously a terminator service operated thrice weekly, is also reduced to a transit stop on one of the London runs. Visits to Zurich are dropped altogether. Elsewhere, two each A310 services are withdrawn from Perth and Johannesburg while three weekly flights to Toronto are also abandoned.

On May 23, long-running negotiations for a commercial alliance are terminated between AI and **Singapore Airlines, Ltd.** AI had wanted to access destinations in the Far East and Asia via a code-share or block-space pact while Singapore, which already possesses a strong presence in those regions, had sought additional capacity on its flights into India.

Three **Tower Air** and three **Air Atlanta Icelandic, H.F.** B-747s are again chartered in May to assist with the provision of Hadj flights. In response to an offer from Chase Manhattan and Bankers Trust, in association with the State Bank of India, the carrier, during the month, seeks government permission to continue to raise funds abroad through securitization of future fund flows. The airline, which already earns \$150 million per year from U.S. operations and is allowed to keep its foreign earnings aboard, views the offer as a way to enhance its income.

A \$10-million first quarter profit is proudly announced at the end of June; unhappily, it will turn out that the amount is actually a \$10-million net loss.

A strategic alliance is entered into with **Air France** during July, one that provides for code-sharing on all of AI's European services. On August 1, Deputy Managing Director Michael Mascarenhas succeeds Brijesh Kumar as managing director; Mascarenhas has been with the airline for 30 years. It is he who must inform the board of directors concerning the first quarter financial picture and additional projections of even more losses to come.

During the fall, a new promotion is introduced for foreign tourists; any overseas passengers holding international tickets may avail themselves of unlimited travel on all AI domestic flights for just \$350 (U.S.).

On October 26, **Austrian Airlines, A.G.** inaugurates twice-weekly A310-324 roundtrips from Vienna to New Delhi, India under a block-seat, code-sharing agreement with AI. Under the accord, the Indian flag carrier will reserve 30 seats for its customers on each of the nonstop roundtrips.

As the result of its new pact with **Air France**, the carrier, in November, transfers its operations in France to Paris (CDG) in order to allow its passengers easier connections with the French line's European services.

On December 6, Flight 308, a B-747-447 piloted by Capt. O. P. Sikka, flies the 1,172-naut. km. distance from Mumbai to Delhi in a record 1 hr. 16 min., cutting almost 15 min. off the previous best time.

Late on the evening of December 31, a frantic traffic controller at Delhi is able to divert a midair collision between an AI and an **Indian Airlines, Ltd.** aircraft with 400 passengers. As both simultaneously approach from Bombay for a landing on the same runway, the two aircraft come within 900 feet of one another before one veers off. Director General of Civil Aviation H. S. Khola orders the seizure of the black boxes of both planes and an investigation into the near disaster.

Customer boardings accelerate 6.1% to 3,046,687 for the year, while cargo falls 11.9% to 392.33 million FTKs. The loss falls to \$78.4 million, but does not include, on the plus side, the sale of two B-747-200s for \$19.7 million.

At the beginning of **1998**, AI, with 18,421 workers, is the 21st largest airline in the world in terms of employee number. Civil aviation ministry data noted by Reuters, Ltd. correspondent Biman Mukherji on December 9 will show an employee-to-aircraft ratio of 859 to 1 (compared to, for example, **Singapore Airlines, Ltd.**'s 328 or **Deutsche Lufthansa, A.G.**'s 179).

The fleet at the beginning of the year includes 29 aircraft, all Stage III certified; this number includes 10 older B-747s, 6 B-747-447s, 3 A300B4-203s, and 10 A310s.

Also during January, following a review of their lack of profitability, routes to Australia, Canada, and South America are dropped, as are turnaround services to London. Single frequency stations, including Amsterdam, are shut down, as are such seasonal destinations as Zurich.

In February, a pair of B-747-337Cs is sold for \$25 million. Plans are made to sell the airline's three A300B4s and acquisition of a seventh B-747-447 is postponed.

Before the first quarter ends, new Managing Director Mascarenhas attempts to get the carrier's unions to forgo \$40-million worth of productivity-related incentive bonuses designed to insure on-time performance. He is unsuccessful.

At the same time, the board of directors, together with that from **Indian Airlines, Ltd.**, accepts the government's recommendation that the two carriers not merge, but operate independently under the control of a holding company.

In May, Director of Coordination J. N. Gogai is able to shape a productivity agreement with the company's maintenance and engineering workers that brings all M&E activities in house and saves several millions of dollars.

Led by former Civil Aviation Minister Natarajan and the film actress, Shabana Azmi, a group of women MPs protest to the Indian House of Commons AI's continuing discrimination against women. In particular, rules that require female flight attendants to retire at age 50, rather than age 60 as is the norm at **Indian Airlines, Ltd.** and the private carriers, are targeted. As reported in the June 12 issue of *The Hindustan Times*, the government, faced by the indignant women members, promises to "do its utmost" to get the rules changed.

On August 26, **Austrian Airlines, A.G.** takes delivery of the first A330-200, a Dash-224, to be received by any European airline. It will be flown to North American and Asian destinations. For example, the new plane introduces a third weekly roundtrip frequency on the block-seat, code-sharing service from Vienna to New Delhi flown with AI.

Also in August, India's Disinvestment Commission recommends a partial divestment (60%) of AI. When the government disinvests its equity, AI, unlike **Indian Airlines, Ltd.**, would be allowed to take a foreign airline on as an equity partner. The Commission also recommends a fiscal infusion to help the company overcome its debt and interest burden.

A code-sharing agreement is signed with **Singapore Airlines, Ltd.** in late September covering flights to Los Angeles from India beginning on October 1.

During the fall, a pair of A310-304s is chartered and with the beginning of the winter schedule in late October, is employed to break **Indian Airline, Ltd.**'s monopoly on services to the Gulf. The AI aircraft operate thrice-weekly roundtrips to Calicut in the southern province of Kerala.

Also during the fall, the consultant firm, A. F. Ferguson, is retained to review the operations and future possibilities of the airline and **Indian Airlines, Ltd.**

B-747-447 frequencies to Chicago are increased to six per week on October 28; three services are routed via London and three via Frankfurt. Simultaneously, Thursday A310-304 roundtrips are introduced from Bangalore to Jakarta, via Singapore.

As a result of the Asian economic crisis, capacity is now changed on the carrier's four weekly roundtrips to Tokyo, B-747-337Cs being substituted for B-747-447s on all of the frequencies (instead of the two with Dash-447s and two with Dash-337Cs previously flown). Also, A310-304s replace B-747-337s on the twice-weekly roundtrips operated to Osaka (KIX), via Hong Kong.

Managing Director Mascarenhas calls a news conference on November 2 to report on the airline's staffing and financial situation. Despite cost-cutting efforts over the past two years, the airline remains grossly overstaffed; with 770 employees per aircraft, excess labor remains the company's biggest problem. At the same time, the managing director notes that the airline requires no assistance to generate income on the operational front, but that nonoperational losses can be liquidated only with government financial infusion. Without government assistance, the airline will have no option but to "give away" a 40% equity stake to a private sector strategic partner.

The Times of India, which had covered Mascarenhas's news conference, reports additional information on November 6. Competition in the international sector and the rapid depreciation of the rupee during the Asian economic crisis is wreaking havoc on the airline's finances. Although yield is up 9%, costs have climbed 34% and the situation is expected to worsen. Additionally, the airline's interest burden has become so bad that it has been unable to afford loans from any banks this year and would be worse if a number of older aircraft had not been sold.

On December 7, following a recommendation based on the Ferguson Report, the boards of both state-run airlines move to form an apex body in the form of a holding company supported by a joint management group. Initially opposed to the concept, Chairman P. C. Sen supports the action. The move is completed without consultation with the Ministry of Civil Aviation or Civil Aviation Minister Kumar.

Under terms of this apex arrangement, the two airlines owned by the new holding company would be merged in a phased manner. Meanwhile, the two would continue to have day-to-day operational autonomy, but the apex board would give directions on matters of synergy, which would progressively unite them. Although all agree that such a linkup of the airlines into a larger carrier with a joint network would be helpful in the face of strong competition from the new private airlines, the scheme must still go to the Indian government for its approval.

Civil Aviation Minister Kumar is infuriated by the action—and the perceived snub—and is reported by the press to believe the move is a direct effort to derail the manner of the disinvestment process his agency has been promoting. Members of the Disinvestment Commission also support Kumar's position. That group suggests that creation of a holding company would worsen each carrier's financial position, that a holding company would be unable to tackle the surplus staff problem, and would slow rather than speed disinvestment. Kumar and the Commission must also enforce one other point that the boards have chosen to ignore, namely, that under Indian law foreign airlines are not allowed to take stakes in India's domestic carriers, public or private.

By December 11, Minister Kumar decides to reorganize the state airlines and wins Indian government Cabinet approval to do so. Rather than simply rejecting the holding company proposal and sending it back, Kumar dissolves the boards of AI and **Indian Airlines, Ltd.** and ends the practice of having a common chairman. There will now be two boards with two separate chairmen. To this end, Civil Aviation Secretary P. V. Jayakrishna becomes the new CEO of AI, while a joint secretary in the Civil Aviation Ministry, Anil Bajjal, takes over the leadership of **Indian Airlines, Ltd.** Plans for a single apex management board are shelved and Chairman Sen, who is also managing director of Indian Airlines, is sacked.

Also on December 11, a \$20-million contract is signed with **Tower Air**, which will provide four B-747s, under wet lease, to transport religious pilgrims during the Hadj for the years 1999–2001. Tower, which has been providing Jumbojets for Hadj flights since 1992, will begin the 1999 service in the middle of February and continue through the end of April.

Civil Aviation Secretary Jayakrishna, now also chairman of AI, informs the press on December 14 that the government plans to complete the disinvestment in AI and **Indian Airlines, Ltd.** by December 1999. Next day, it is reported that both airlines have completed the installation of airborne collision avoidance systems (ACAS) in their aircraft ahead of the December 31 deadline.

Flight 727, scheduled to depart for Dubai from Himachal Bhawan early on December 17, is repeatedly rescheduled until finally cancelled. Frustrated passengers besiege the AI office for two hours until the company agrees that another flight will depart the following day. On December 18, nearly 200 people show up for the scheduled 4 p.m. departure and, after check-in, are kept waiting until 11 p.m. without food or information. An hour before midnight, the passengers are boarded and fed; their flight finally departs for the Gulf at 1:20 a.m. December 19.

Since the board coup December 11, the airline's new leadership has worked with Minister Kumar to devise a strategic plan. Kumar tells the *Singapore Shipping Times* on December 31 that the company seeks a foreign partner. Any partnership, he notes, will not remain confined merely to the financial field, but will lead to a transfer of the carrier's management. The plan awaits permission from the cabinet of Prime Minister Vajpayee.

On December 23, Minister Kumar establishes nine subcommittees to study various areas where greater synergy might be found between AI and **Indian Airlines, Ltd.** The areas under review include information technology, scheduling, ground transfer, accommodation, engineering, fare rationalization, common general sales agent appointments, engineering, advertising and marketing, and ground handling.

Customer bookings during the 12 months accelerate 3% to 3.13 million, while cargo traffic inches up 1.2% to 397.08 million FTKs.

Following a reception attended by various VIPs, including Khursheed Alam Khan, governor of Karnataka, new direct B-747-447 twice-weekly return service is introduced on January 1, 1999, from Bangalore to London and New York (JFK) via Mumbai.

Simultaneously, thrice-weekly A310-304 roundtrips are started from Kozhikode to the Persian Gulf, two to Dubai and one to Abu Dhabi. These A310 frequencies are in addition to the 12 weekly services being operated by AI, with **Indian Airlines, Ltd.**, between Kozhikode and the Gulf since December 1993—four each to Dubai, Abu Dhabi, and Muscat.

Minister Kumar meets with AI Managing Director Mascarenhas and Indian Airlines, Ltd. Managing Director Anil Bajjal on January 12 to discover what progress has been made between the two. It is learned that joint bids will be let for ground handling of foreign airlines in India while a proposal is put forward for a joint fund to cover advertising costs at those stations where both airlines operate. Spare AI capacity might be employed by IA, while additional time will be required to come up with ideas concerning joint scheduling and fares. Plans are put in place to share spaces at various coastal stations.

Harold Hahn, South Asian general manager for **Deutsche Lufthansa, A.G.**, indicates on January 19 that his company is prepared to examine the prospects of assuming an equity stake in AI as soon as the Indian government publishes its guidelines for its disinvestment.

A B-747-437 escapes with minimal damage when it touches down short of the runway at Frankfurt on January 20; the event, however, seriously damages the runway's approach lights and ILS localizer antenna.

At the beginning of February, a new \$5-million PW4000 engine overhaul facility is opened at New Delhi.

In an effort to make its two carriers financially viable, the Indian government, on March 1, allocates a token amount to strengthen the equity base of AI and of **Indian Airlines, Ltd.** The decision, reflected in the 1999–2000 budget presented to parliament, comes after a committee, headed by Finance Secretary Vijay Kelkar, has made its recommendations.

On March 4, members of the Standing Committee on Transport and Tourism make a report to the upper house of parliament concerning its review of the two airlines. Citing continuing losses, the legislators recommend that both companies be merged. Until that process can occur, there should be joint operations of their fleets to avoid duplication. In addition, both carriers require financial restructuring, reduction in manpower, and a discontinuation of flights on loss-making routes.

Civil Aviation Minister Kumar informs the U.K. Transport Ministry on March 9 that India will consider increasing the number of flights between New Delhi and Great Britain if AI is given more landing slots at London (LHR).

Fiscal losses from the heavy fog in Delhi and cities in north India in December and January become known on March 16. Minister Kumar notes that AI and **Indian Airlines, Ltd.** have lost a combined R 98.4 million (\$2.33 million), with the latter company suffering the largest loss, R 65 million.

Closed in the previous year, the company's Los Angeles office is reopened on March 26.

In addition to a route reduction, the board, meeting at Mumbai on April 1, approves the sale of three of the five remaining B-747-200/300s. Meanwhile, as buyers are sought, first class in those Jumbojets is replaced with a two-class business and economy class arrangement. During the board meeting, the heads of the engine overhaul and engineering departments demonstrate public disagreement over the proposed merger of their departments. The board refers the issue to a "third party"—Hindustan Aeronautics, Ltd.—which will issue its own advisory report.

Chairman Jaykrishnan, after the conference, meets with representatives from the Indian Pilots Guild, Cabin Crew Association, Employees Guild, Flight Engineers Association, and Aircraft Engineers Association, concerning measures necessary to revive the airline.

The problems of the nation's airlines take a back seat when, on April 16, the Hindu-nationalist government of Prime Minister Vajpayee loses a vote of confidence in parliament and collapses.

On April 19, en route from Singapore to Mumbai via New Delhi, Flight 411, an A310-304 with 113 passengers, suddenly goes into a dive following the tripping of its autopilot. The pilot manages to bring the aircraft under control manually and makes an emergency landing at Chhatrapati Shivaji International Airport, but not before three crew members and a six-month old baby are injured.

On April 22, an effort by the Congress party, led by Sonia Gandhi, widow of former Prime Minister Rajiv Gandhi, fails to obtain the majority support necessary to form a new government. Elections loom.

The next day, Civil Aviation Secretary/Chairman Jaykrishnan and Finance Secretary Vijay Kelkar meet at New Delhi to draw up the modalities for disinvesting the government stake in AI. This is a preliminary step taken to sort out matters before the Civil Aviation Ministry prepares a cabinet note on the subject.

Pursuant to an April 1 board decision, AI, on May 1, stops flying to Frankfurt, Rome, and Manchester. The capacity withdrawn is applied to the Gulf sector.

Six days later, Minister Kumar informs the press that the government has granted permission for AI and **Indian Airlines, Ltd.** to quickly acquire new aircraft with which to expand their fleets. Following negotiations with Boeing and Airbus, an expert committee will choose types to be acquired and, hopefully within a week, make a written report to Kumar's department.

The Times of India reports on May 23 that the company has an equity base of Rs 154 crore and accumulated losses of Rs 1,200 crore. In the same pages, it is revealed that, over the past five years, the annual wage cost of labor has increased from Rs 475 crore to Rs 1,200 crore. From a 40% domestic market share 20 years earlier, the company's share of the Indian market has fallen to just 22%.

In an effort to win travelers through more personalized service, the company, on May 24, begins to give regional passengers a flavor of their homelands. Passengers on AI flights from Mumbai to Singapore via Hyderabad receive something of Andhra with Telugu cuisine and Telugu magazines. Those on the Mumbai to Singapore via Chennai service have access to Tamil newspapers and Tamilian food.

Service to the new Cochin Airport in Kerala begins on June 14.

In an effort to gain benefit from its unused frequencies between London and New Delhi, the carrier, in December, signs a code-sharing agreement with **Virgin Atlantic Airways, Ltd.** Under the arrangement, VAA will, in partnership, fly at least three of the frequencies. Similar arrangements are entered into with other long-haul airlines.

Customer bookings for the year are nearly level, inching up just 0.9% to 3.19 million passengers flown. Cargo traffic actually drops 3.7% to 803.09 million FTKs. A fifth straight year of loss is recorded on rev-

enues of \$1.02 billion, although the debt is down to \$18 million. There are those who point to fuel price increases and a \$23-million award by an arbitration panel in London to Caribjet for Air India's unilateral cancellation of a lease agreement as the principal factors preventing a profit.

Airline employment stands at 18,157 at the start of 2000, a 1.5% reduction from the previous year. Throughout the first quarter, it is widely reported that the carrier will soon be privatized. At the same time, a plan for fleet rationalization is discussed under which the company would limit itself to just two aircraft types, the Boeing 747-400 and the Airbus A310-300.

The on-again, off-again privatization process stumbles once more in early May. Civil Aviation Minister Sharad Yadav reports that, although part of the airline's equity will be unloaded, the government fully intends to retain majority shareholding, as well as the power to appoint the company's chairman. It is also made clear that foreign airline investment is not welcome. Minister Yadav's position is countermanded on May 27 by disinvestment Minister Arun Shourie, who announces that the flag carrier will, in fact, be privatized; 40% of government shareholding will be divested to a strategic partner with financial institutions and private investors taking 10% each. Foreign airlines will, indeed, be allowed to participate in the makeover, to a maximum 26% stake. At this point, both **Virgin Atlantic Airways, Ltd.** and **Air France** express interest in acquiring equity, a position strengthened in July when the Indian branch of Morgan Stanley Dean Witter is appointed privatization advisor and charged with preparation of a plan for a sell-off.

With a date of March 31, 2001 chosen for privatization, the government, during the summer, establishes a working council, the Centre, from the ministries of public enterprises, civil aviation, and disinvestment to work on the process with Managing Director Michael Mascarenhas. The latter provides information that an infusion of at least \$1.5 billion will be required to cure the carriers' ills.

Delhi-Moscow service is suspended on August 1; a week later, Air India signs a code-sharing agreement with **Aeroflot Russian International Airlines (ARIA)**, which will market 75 blocked seats for the carrier on each of the three weekly dual designator flights it operates to India.

Controversy erupts in early August over an Aviation Ministry push to install one of its former secretaries, R. C. Jain, as chairman, following the departure of current Secretary Chairman Gupta to the same post with the Defence Ministry.

On August 16, the carrier receives two bomb threats against its international frequencies on one day. The first against Flight 111 from Bombay to New York (JFK) and the other against Flight 112 from New York (JFK) to New Delhi; in both cases, passengers are evacuated, the aircraft are swept, and no explosives are found.

After weeks of speculation, **Jet Airways, Ltd.** issues a statement at the end of August indicating that it will not seek equity holding in the flag carrier. On the other hand, the 300-member Indian Pilots Guild enters the bidding process, hoping to prevent participation by foreign carriers.

The head of the investment bank Lazard India reports on September 8 that **Air France** and **Delta Air Lines** will make a joint bid for a 26% stake in Air India. The anticipated sale process is to begin the week of September 11 by a formal invitation from the Indian government to potential bidders.

By September 28, when government invitations for bids in the privatization of Air India are posted, **British Airways, Ltd. (2)** and the Indian conglomerate Tata, the airline's owner before its nationalization, are also preparing a tender. Before the bids are closed on November 10, it is anticipated that offers may also be received from **Deutsche Lufthansa, A.G.**, **Emirates Airlines**, and **Virgin Atlantic Airways, Ltd.**

After 15 years of investigation, Royal Canadian Mounted Police arrest Vancouver bank president Ripudaman Singh Malik and sawmill worker Ajaib Singh Bagri on October 28. Both men are charged with first-degree murder, attempted murder, and conspiracy in the June 23, 1985 bombing and destruction of Air India Flight 182 and an explosion of a bomb-laden suitcase being off-loaded from another Air India

service, at Tokyo (NRT) the same day, which kills two ground workers. A third man will be arrested on October 30.

The code-share arrangement with **Indian Airlines, Ltd.** for 12 joint weekly flights to Dubai, Muscat, and Abu Dhabi from Calicut ends on October 29; simultaneously, Air India, employing A310-304s, increases its own services to the four Gulf points from Calicut and Cochin.

Disinvestment Minister Shourie informs *The Times of India* on November 5 that, after the first round of bidding for the state carrier is completed on November 10, hoped for additional rounds will bring the best price. It is anticipated that these subsequent actions will require additional time.

Leased for three years, two A310-222s, previously operated by **Singapore International Airlines, Ltd.**, are delivered late in the fourth quarter.

AIR INDIA CHARTERS, LTD. See **AIR INDIA, LTD.**

AIR INDIA INTERNATIONAL AIRLINES, LTD. See **AIR INDIA, LTD.**

AIR INDIANA: United States (1979). AI is set up at Indianapolis in the early fall of 1979 to provide scheduled passenger and cargo flights to regional destinations. Employing a Douglas DC-3, the company inaugurates daily roundtrips on October 1, linking its base with St. Louis via Danville. Insufficient traffic is generated to maintain the service beyond December.

AIR INDIES: United States (1967–1973). This **Colony Airlines, Ltd.** subsidiary is established at Miami in the summer of 1967 to offer scenic flights to the Bahamian city of Nassau. Employing Beech 18s, revenue flights commence in September. During the next six years, the fleet is upgraded by the addition of Douglas DC-3s, de Havilland Canada DHC-6-100 Twin Otters, and Beech 99s.

Regularly scheduled roundtrip flights commence from San Juan to St. Thomas, St. Croix, Ponce, and Mayaguez. A victim of recession and higher fuel prices, the company ceases operations in 1973.

AIR INTER (LIGNES AERIENNES INTERIEURES, S.A.): France (1954–1996). **Air France** Chairman, Admiral Lebrand, in early 1954, rejects the French government's initial effort to establish a dedicated local service airline. Nevertheless, the unwanted carrier, Air Inter (IT), is formed by **Air France** and the government as the principal domestic airline of France on November 12.

Paris–Strasbourg service is inaugurated with chartered Douglas DC-3s on March 12, 1958. Failing to meet financial targets, the carrier is shut down in November and most of the next year is taken up with reorganization.

Leased DC-3s, displaying the company's new logo, relaunch flights on June 6, 1960 over a Paris–Toulouse route. With leased DC-3s, DC-6Bs, and Vickers Vikings and without ground support equipment, a reservations system, etc., IT begins sustained service over a Lille–Lyon–Nice route on September 19. During the next 3½ months, 17,000 people are carried.

Additional routes are extended outward from the Paris base, along with charter opportunities, in 1961 as three Lockheed L-749 Constellations are leased from **Air France** for the period April–October. A total of 91,000 passengers are transported during the 12 months and, at year's end, the first owned aircraft, five Vickers Viscounts 708s, are purchased from **Air France**. Boardings skyrocket in 1962, exceeding the 200,000 mark, and orders are placed for six Nord 262s. Much of this success is due to the capacity provided by a lease of three L-749s and three L-1049Gs from **Air France** for the summer tourist season.

The route network is now expanded rapidly in 1963 and some 400,000 travelers are accommodated.

A Vickers Viscount 708 with 4 crew and 16 passengers crashes 24 km. N of Lyons on August 12 while on initial approach; there are no survivors of the aircraft and one person is killed on the ground.

Orders are placed on December 5 for four Nord 262s.

The workforce stands at 492 in 1964 as the several Sud-Est SE-210 Caravelle IIIs are leased from **Air France** and placed into service during March on the route from Paris (ORY) to Marseilles. The first four production Nord 262s join the fleet, beginning on July 16. One of these is employed to initiate service Paris–Quimper on July 24. Airline employment is 492 and boardings rise to 525,000.

In 1965–1966, three Sud SE-210 Caravelles are ordered while a reservations system is put in place and local and regional offices are opened throughout the country. The Nord 262 fleet is increased and destinations now served by it includes Bordeaux, Brest, Clermont-Ferrand, Lille, Nantes, La Baule, Lyons, Paris, Nîmes, Perpignan, Toulouse, and Quimper.

An agreement is signed between **Air France** and the government in 1967 that makes IT a public company devoted exclusively to domestic service. Shareholding is divided between **Air France** (25%), SNCF French Railways (25%), **UTA French Airlines, S.A.** (14.7%), and other assorted private and local banks, airfreight forwarders, and government investors (35.3%). Robert Vergnaud is named president, with Rene Lapautre as director general. The first SE-210, leased from **Air France**, enters service in the spring, followed by the remaining two later in the year.

Three additional SE-210s are placed in service in 1968 along with seven Fokker F.27-500s. Several new domestic markets are opened during the year.

Some 20 min. after takeoff on July 3 while attempting to return with a fire in the rear of its cabin, an SE-210 Caravelle III, with 6 crew and 89 passengers, crashes into the sea off Nice; there are no survivors.

Airline employment grows to 1,880 and enplanements reach 7,727,951.

Three more F.27-500s are purchased in 1969. The carrier becomes the first in the world to employ the ATT landing system as a Caravelle III lands in dense fog at Paris (ORY) on January 9 following a flight from Lyon.

The fleet in 1970 comprises 4 SE-210s, 10 F.27-500s, 4 Nord 262s, and 14 Viscounts.

Airline employment in 1971 stands at 3,373.

An SE-210 Caravelle III is badly damaged in a ground fire at Paris (Orly Airport) on January 4. A Vickers Viscount 708 with two crew is damaged beyond repair during a training flight at Aulnat Airport on December 28; there are no injuries.

Service is launched from Paris (ORY) and a total of 2,619,425 passengers are carried.

Employment is increased 18% to 4,113 in 1972 as the first of 21 Caravelle IIIs and XIIs enter service.

A Vickers Viscount 724 with 5 crew and 63 passengers crashes into a mountain near the town of Clermont-Ferrand while on descent to Pic du Picon on October 27 (60 dead).

Passenger boardings soar 27.5% to 3,613,000 and cargo climbs an equal 17.9%.

Airline employment is 4,402 in 1973 and the fleet includes 10 Caravelles, 12 Viscounts, and 10 Fokkers. The last of 282 Aerospatiale (originally Sud-Est) SE-210s, a Caravelle XII, is delivered on March 16.

An F.27-500 freighter with three crew is destroyed as the result of a bad landing at Strasbourg on August 11; there are no fatalities.

On November 30, the carrier is ordered to limit its domestic schedule in an effort to save jet fuel. The growth rate is slowed by the French air traffic controllers strike; however, it is far from static.

Passenger bookings rise 7.1% to 3,869,523 while freight traffic is up 10.2%.

An explosion of undetermined but suspicious origin occurs in the forward landing gear compartment of an SE-210 Caravelle III, which has just arrived at Marseilles from Bastia on March 22, 1974; although there are no fatalities, the aircraft is badly damaged.

The first of ten Dassault-Breguet Mercure 100s is delivered on May 15; the only airline to operate this type, IT places it in service on June 4 on the Paris to Lyon route. Orderly Viscount retirements begin.

An F.27-500 with three crew crashes 20 km. from Nantes on July 24 and catches fire; there are no survivors.

Boardings accelerate 6% to 4.1 million, and freight climbs 5.4%.

The last of ten Mercures is received in **1975**. Enplanements grow 11.6% to 4,583,000 and are carried in a fleet that now includes the Mercures, 21 SE-210s, and 9 F.27-500s.

An F.27-500 is lost at Quimper on August 5 under unknown circumstances; there are no fatalities.

Company headquarters are transferred from downtown Paris to Paris (ORY) in **1976**. The first two A300B2-1Cs join the fleet on September 28 and are placed in service on November 29 over the Paris to Lyon and Marseilles routes. Bookings continue to march upward, accelerating 11.9% to 5,129,000, and cargo increases 24%. Airline employment stands at 4,510 and a net profit of FFr 16,000 is reported.

Two additional A300B2s are received in **1977** as an agreement is reached with **Air France** to halt charter operations in exchange for a 20% block of stock in the flag carrier's new nonscheduled enterprise, **Air Charter International, S.A.**, now in the planning stage. The fleet now includes 10 Mercures, 21 Caravelles, and 9 F.27-500s in addition to the A300B2s.

On September 30, armed with a grenade and pistol, Jacques Robert commandeers a Caravelle XII on a domestic flight from Paris (ORY) to Lyon after shooting and wounding flight attendant Annick Guillemot. Threatening to kill all of the passengers unless he is allowed to broadcast a political message, the pirate diverts his captives back to Paris. There, in a scuffle with fellow passengers, Robert drops his grenade, which explodes, killing one man and wounding two others. Police, meanwhile, board the plane and capture the hijacker, who will be tried and sentenced to 18 years in prison.

IT is shut down by a 24-hour national strike on December 1. Enplanements total 5,381,332.

In **1978**, the computer reservations system SIRENE is inaugurated. The carrier now receives 20% of the shareholding in the **Air France** subsidiary **Air Charter International, S.A.** President Vergnaud's company now employs 4,600 workers and owns a fleet comprising 4 A300B2-1Cs, 10 Mercure 100s, 5 Sud-Est SE-210 Caravelle XIIIs, 15 Caravelle IIIs, and 9 Fokker F.27-500s.

Passenger boardings are up 9.8% to 5,966,000 and cargo moves upward by 7.6%.

Orderly retirement of the Caravelle IIIs begins in **1979** as three more A300B2-1Cs are delivered. In order to attract new clients, discount fares are extended. Despite another French ATC strike, boardings climb 7.4% to 6.3 million and freight is up 10.9%.

The carrier's annual subsidy from the French government (received since 1967) is reduced in **1980** to a small sum for essential Corsican service. The workforce reflects this, being reduced by 26.6% to 3,902. The first phase of the SIRENE system comes on line. Enplanements skyrocket 21.6% to 7.7 million, but freight traffic remains level at 11.6 million FTKs.

Three additional A300B2-1Cs are placed in service in **1981** as passenger enplanements jump 11.9% to 8.6 million and freight grows 17.4% to 14.63 million FTKs. Marceau Long becomes president in July **1982**. Long France's largest domestic carrier, the airline can now claim the same honor for all of Europe.

Passenger boardings increase 6.9% to 9,240,000 and cargo accelerates 2.4% to 13.95 million FTKs. A net profit of \$4.6 million is earned.

The employee population increases 21.9% in **1983** to 6,300 and the final Caravelle III is retired in April. Late in the year, an order is placed for ten A320s. Enplanements accelerate 8.6% to 10,035,160, but cargo dips 2.3% to 13.62 million FTKs. On total revenues of \$560 million, a net \$2.3-million profit is realized.

The payroll increases a slight 0.8% in **1984** to 6,805. Pierre Eelsen becomes chairman and president in July, succeeding Marceau Long who becomes chairman/CEO of **Air France**. Three additional A300B2s are delivered while the Caravelle and Fokker fleet elements are reduced to 12 and 17 craft, respectively.

Boardings rise a dismal 2.6% to 10,295,000, and freight rebounds, up 9.5% to 14.92 million FTKs.

In **1985**, IT accepts an A300B4-2C and with a total of 14, remains the world's largest operator of this aircraft type.

Enplanements grow 3.7% to 10.6 million and freight climbs 3.8% to 493.48 million FTKs. In terms of passenger boardings, the carrier ranks 25th among all the airlines of the world. A net profit of \$8.7 million is recorded on total revenues of \$787 million.

Employment is up by 4.5% in **1986** to 7,396. Fifty-two air routes serve 30 French metropolitan airports with an average of 300 flights each day. IT is the West's largest domestic airline and has no competition except for **Air France**, with which it shares a route from Paris to Nice. Tied in with the one hundredth anniversary of the Statue of Liberty in New York harbor, the company unveils a \$185 "France Pass," which is good for unlimited travel to any point on its route network on any seven days within a one-month period. During the year, a B-747-123 is leased from **Cargolux Airlines International, S.A.**

Customer bookings jump 11.1% to 11,806,118 as cargo swells 19% to 19.36 million FTKs.

The number of airline workers is increased again in **1987**, up 8.7% to 8,041. Flights linking Paris to Marseilles, Bordeaux, Strasbourg, Toulouse, Nice, Lyon, Montpellier, Nantes, and Toulon account for 66% of the company's traffic. New products include "Famille a Deux" (two family members for the price of one) and an airline "Escape" travel card. Capacity is enhanced by the use of a B-747-2B4BC leased, via **Air France**, from **Middle East Airlines, S.A.L. (2)**.

Passenger boardings accelerate 8.5% to 12,804,283 while revenues move up to \$1.18 billion.

The payroll climbs by 9.5% in **1988** to 8,830 and the fleet now includes 11 Mercures, 12 Caravelles, 18 A300B2/4s, 4 A320-111s, and 1 B-747-128, the latter chartered from Air France. Orders remain outstanding for one more A300B4 and six A320-211s. F-GGEA, the first of the A320-211s, for which the carrier is a launch customer, enters service on June 8. Consequently, authority is received to inaugurate regional services and flights to Ibiza and Madrid.

Customer bookings jump 7.4% to 13,750,179 and cargo rises 16.6% to 30.87 million FTKs. Although revenues are up by 9.6% to \$1.18 billion, net income remains level at \$23.2 million.

The number of employees swells 13.8% in **1989** to 10,050. In March, President Pierre Eelsen signs an important agreement with **Air France** CEO Bernard Attali. Under its terms, AF will operate domestic services within France on behalf of AI while AI will fly to regional European destinations on behalf of AF, including London (Gatwick), Madrid, Ibiza, Athens, Rome, Lisbon, and Venice. Additionally, greater technical cooperation begins between the two carriers.

Passenger boardings increase by 14.1% on the year to 15,688,394 while freight does slightly better, growing by 14.6% to 31.38 million FTKs. Revenues rise 9.2% to \$1.28 billion. The operating profit is \$21 million and net gain reaches \$18 million.
