While continuing to operate in bankruptcy, the carrier increases its customer bookings by 117.8% to 252,353 and its freight traffic by 48.1% to 8.7 million FTKs. Revenues jump 43.5% to \$16.2 million and expenses are kept low enough to allow an operating profit of \$64,130. A net loss of \$404,000 is suffered.

Airline employment is increased by 23.1% in 1988 to 160 and a fourth DC-19-14 joins the fleet.

The **Continental Airlines** contract is concluded on January 15; the major, seeking smaller aircraft, turns to **Britt Airways** for a shuttle service.

A reorganization plan is filed with the federal bankruptcy court in February and merger discussions are held with another bankrupt large regional, **Royale Airlines**.

Renewed emphasis is placed on long-haul charters; however, both passenger and freight traffic decay. Enplanements drop 18.7% to 205,000 and cargo is off by 83.5% to 1.44 million FTKs. Revenues improve by 23.2% to \$20 million and allow operating income of \$506,000. A net \$19,000 profit is earned.

The workforce grows 37.5% in 1989 to 220.

On January 31, **Royale Airlines** grounds its turboprops, but continues to operate thrice-daily Shreveport to New Orleans flights with a Douglas DC-9-14 wet-leased from Emerald. The rental fee charged by Emerald allows it to gain control of **Royale Airlines**; however, the federal bankruptcy court now steps in and orders the 19-year-old regional liquidated. Emerald regains its Douglas jetliner and continues the New Orleans service under its own name. It also provides scheduled services throughout Louisiana.

At this point, Emerald begins discussions with **Southern Jersey Airlines** about a joint merger that will result in a new charter carrier to be known as Atlantic City Express.

Twice-weekly service commences in August from Orlando to New Orleans and to Patrick Henry, Virginia. The New Orleans service is halted in November, but twice-weekly nonstop charter flights are continued, beginning in October, from the Crescent City to both Atlantic City and Orlando.

Passenger boardings recover and move ahead by 40% to 19,663. Revenues move along by 10.7% to \$22.13 million, but expenses are double that percentage, 10.8%, to \$23.54 million. As a result, there is an operating loss of \$1.4 million and net downturn of \$1.85 million.

All five DC-9-14s are back in service during 1990.

The Atlantic City Express plan collapses and the carrier continues flights to the New Jersey gambling mecca under its own banner, transporting a total of 153,000 passengers.

One DC-9-14 is turned over to Intercredit Corporation in May.

The company enters Chapter VII liquidation and its assets, including its all-important operating certificate, is purchased by Jeffrey Chodorow and Arthur Cohen, who have plans to start a new Braniff. Emerald charters are operated throughout the remainder of the year and into the next.

Charter operations are shut down in May 1991, at which time the company's certificates are officially transferred to the new ownership, which relabels the enterprise **Braniff International Airlines**.

EMERALD AIRWAYS, LTD. (1): United Kingdom (1965–1967). Warwick Jamieson and Walter M. Scott form this airline in January 1965; initial capitalization is £10,000. With a de Havilland DH 114 Heron 1B leased from Executive Air Engineering, Ltd., the carrier inaugurates nonscheduled service from the Ulster airfield at Eglinton on September 3.

When a second leased Heron arrives, scheduled Belfast to Prestwick flights commence on October 25, followed by Shannon–Prestwick services three days later. Difficulty in servicing Herons and obtaining ordered Shorts Skyvans leads to an absence of charter work.

In May and June 1966, two additional Herons are leased; the four aircraft are fully employed during the national seaman's strike.

The airline's two Heron 2s are sold in July and the first Shorts SC.7 Skyvan is delivered in August, followed by a second in October. Meanwhile, thrice-weekly Eglinton–Glasgow (Renfrew) operations commence on September 23, with an extension to Belfast.

Having grown too small, the Skyvans are sold in December. Simultaneously, the Irish carrier **Hibernian Airlines, Ltd.** obtains a 50% interest and replaces the Shorts with its own two DC-3s. The first Douglas transport service is flown Belfast–Glasgow via Eglinton on December 10.

In May 1967, another DC-3 is leased from **Skyways Coach-Air, Ltd.**, followed by a fourth, leased from **Air Gregory, Ltd.** in June; the former is returned at the end of May.

In October, patron **Hibernian Airlines, Ltd.** is forced by financial difficulties to cease flying. Emerald is able to continue only two months longer, being placed into liquidation on December 31.

EMERALD AIRWAYS, LTD. (2): South Terminal, Speke Hall Avenue, Liverpool Airport, Merseyside, England, L24 1YW, United Kingdom; Phone 44 (151) 448-0844; Fax 44 (151) 448-0549; http://www.avnet.co.uk/pprune/Public_html/Emerald.html; Code G3; Year Founded 1992. Andrew S. and his wife Hilary J. Janes incorporate their Speke Airport-based Janes Aviation on June 16, 1992. Andrew remains managing director with Hilary as a director and Mike O'Brien as operations director. Capt. David Wilmott is chief pilot.

Employing a fleet of British Aerospace (HS) 748s, six of which were purchased from the assets of **Dan Air/Dan Air Services, Ltd.** just two weeks earlier, the company undertakes scheduled and charter cargo and passenger services. The backbone of the service is the newspaper deliveries with which Janes entered business back in 1987. A contract on behalf of the Newspaper Publishing Association and another on behalf of News International requires the carrier to transport 30 tons of journalism nightly. The papers are printed in Liverpool, Manchester, and Bolton (Lancashire), from whence they are flown to Liverpool and hence to Dublin, Belfast, and the Isle of Man.

On behalf of its original customer, Lynx Express Delivery Network, a division of the National Freight Corporation, overnight courier flights are made from Coventry to Birmingham and Liverpool. A **DHL Express Worldwide** courier contract allows the BAes to fly roundtrip from Speke Airport, the Isle of Man, while an arrangement with ICS sees roundtrips nightly to Belfast and the same service with Parceline is operated to Dublin.

The company's third major source of income is the Royal Mail. On behalf of the British Post Office, letters and small packages are flown nightly from Leeds and Bradford to Liverpool and from Liverpool to London (STN). On behalf of Datapost, flights are carried out from Liverpool to the Isle of Man.

On its own behalf, Emerald Airways Cargo flies weeknight cargo shipments between Liverpool, the Isle of Man, Edinburgh, Coventry, and Aberdeen. It also accepts ad hoc sub-service contracts on behalf of **Air U.K., Ltd., Brymon Airways, Ltd., Maersk Air, A.S.**, as well as the manufacturers Nissan, British Aerospace, Mercedes, and Volkswagen.

Operations continue apace in 1993–1995 and seven more BAe 748s are acquired. Passenger charters are intensified, but cargo remains the key to company success. In 1994–1995, the carrier receives Royal Mail silver awards for on-time deliveries. In addition, the company begins a program of allowing its aircraft to be painted in the color schemes of corporate customers; the practice, first developed by **Western Pacific Airlines** in the U.S., allows Emerald to receive new liveries paid for by others. The newspaper syndicates and Royal Mail prefer their own identities be so displayed.

Operating revenues in 1995 total £7.6 million; a £650,000 net profit is generated.

Airline employment stands at 100 in 1996 and the fleet includes 14 HS 748s, both Series 1 and Series 2 models.

Twice-daily scheduled passenger service is inaugurated on April 29 from Liverpool to the Isle of Man. The new frequencies prove so popular that a third daily flight is introduced just two months later.

Beginning in July, new technology allows U.K. newspapers to be printed in Ireland; as a result, Emerald's 30-tons-per-night delivery contract is cut to just 12 tons.

Enplanements total 42,000 and 3.08 million FTKs are operated. The workforce is cut by 40% in 1997 to 60. Customer bookings increase to 81,000 and 2.69 million FTKs are operated.

Only 150 feet into its takeoff from London (STN) on March 31, 1998, a BAe 748 suffers a fire in its right engine. The pilot, 61-year-old Capt. John Hackett, immediately sets the plane back down on the runway, which it proceeds to overshoot, coming to rest 300 ft. from a perimeter fence. The 4 crew and 40 passengers, including 18 members of the

Leeds United soccer team, are quickly evacuated and only 2 minor injuries are reported.

During the 12 months, passenger boardings slide 2.5% to 79,000. Freight traffic accelerates by 32.8% to 3.57 million FTKs.

Airline employment stands at 178 in 1999 and the fleet includes 16 BAe 748s. Freight traffic accelerates 34.1% on the year to 4,794,000 FTKs.

The workforce at the beginning of 2000 totals 178. The nosegear of a BAe (HS) 748 collapses as it is lining up on the runway for takeoff from Dublin on April 28. Although neither crew nor cargo is hurt, the badly damaged aircraft must be written off.

EMERY AIR FREIGHT: United States (1946–1989). Former naval officer John C. Emery incorporates **Emery Air Freight** under Delaware laws on April 23, 1946. Under his direction, and that of his son and successor, John C. Emery Jr., the carrier survives the postwar freight rate wars and industry downturns to become one of America's best-known air cargo transportation concerns.

During the late 1940s through the 1970s, the company expands across the country—and to Europe on June 1, 1956—primarily by chartering unused cargo space aboard the commercial airliners of such majors as **Eastern Air Lines** and **Trans World Airlines (TWA)**.

By 1978, the Wilton, Connecticut-based company, the leading domestic air freight forwarder, is maintaining 16 divisions: 8 in the U.S., 1 in Canada, and 7 abroad.

By 1980, the company's long-term debt and capital lease obligation totals \$6.4 million.

Emery, always strong in ground transport, adds a full-fledged airline in 1981 when it acquires a fleet of 24 Boeing 727-100Cs. A \$50-million cargo distribution center is now opened at Dayton that allows the company to begin overnight small package express service in direct competition with **Airborne Express** and **Federal Express**.

Shipments rise to seven million (up 4.2%) and system poundage to 382.8 million is transported. Emery Air Freight reports overall operating revenues of \$399 million, which leave profits of \$29 million (operating) and \$18.7 million (net). Still, long-term debt is now \$130.1 million.

New overnight services are introduced from Dayton in 1982 as the move to become a full air cargo system is completed.

During those 12 months, Emery is able to fly about 90% of its 6.8 million shipments on its own freighters, which come to include not only the original 727s but 5 Douglas DC-8Fs and 21 smaller aircraft (Convair CV-600s, Beech 18s, and Douglas DC-3s). Most of the rest is contracted out to operations such as **Rosenbalm Aviation**, the Detroit-based all-cargo charter operator, and **Orion Air**.

Tonnage, however, is down 5.7% to 361 million, matching the 3% drop in total shipments. On revenues of \$581.7 million, a downturn in net profits to \$10.2 million is also experienced. Bank debt is \$99 million.

Emery's workforce grows 2.1% in 1983 to 4,900.

In January, the company receives the "Cargo Development Award" from *Air Transport World* magazine.

Like many other cargo airlines, Emery now comes roaring back from recession. To handle the increasing aerial and ground tonnage, the Dayton center is expanded, and three each of DC-8Fs and B-727-100Cs are added to the fleet. A variety of new marketing approaches are introduced, including urgent letter, same day, and international door-to-door services.

The first of two trips to the equity market over the next year are made; a total of 2.5 million shares of common stock will be sold in these offerings, bringing in \$46.2 million.

In the fall, company engineers find a way to insert a ninth cargo container aboard the B-727-100s—the equivalent, fleet-wide, of adding three more Boeing "three-holers."

Orders are placed for five DC-8-73s to replace an equal number of earlier DC-8-33F models grounded at year's end by noise restrictions.

The company now transports 440 million pounds of freight (up 22%) and 8.4 million shipments (up 23%). Long-term debt is cut to \$87.8 mil-

lion and bank debt falls to \$15 million. Revenues total \$691 million. The recovery is highlighted on the bottom line of the ledger, where a record net profit of \$25 million is pencilled in on top of an operating profit of \$54.95 million.

Employment rises further in 1984, climbing 9.7% to 6,800 as all of the 1983 marks are now surpassed. Five new DC-8-73s replace the older Douglas freighters grounded at the end of the previous year. The idle aircraft undergo "quiet nacelle" modification that will allow them to be reintegrated late in the year.

Work begins on a \$20-million expansion of the Dayton sorting center.

Total shipments number 10.1 million (up 21%), poundage hauled rises 20% to 530 million, and seven more DC-8Fs are acquired for changeover. Revenues shoot up 18.4% to \$817.78 million and costs climb by an equal percentage to \$753.49 million. The operating profit ascends to \$64.29 million and a net profit of \$31.88 million is banked.

In May 1985, Emery inaugurates daily European roundtrip air cargo and air courier service, flying a DC-8-71, from Dayton to Amsterdam via New York, with continuation to Manchester, England, as a hub is established at Maastricht.

Beginning in July, the carrier launches rotary-wing document pickups at the World Trade Center and 34th Street Heliports in Manhattan, with the helicopters flying on to John F. Kennedy International Airport for distribution to couriers.

The city of Dayton issues \$30 million in bonds to cover the cost of expanding Emery's hub at the local airport. Meanwhile, the carrier invests \$25 million for hush kits to quiet the engines of 10 DC-8-63s. In addition, it sells and then leases back 12 freighters. The move grants \$31.4 million in pretax deferred gains that can be amortized to income annually for the life of the lease.

The number of individual packages transported grows by 13% to 13.4 million; however, as more envelopes and lightweight shipments increase, aggregate poundage falls.

A strike, beginning in December, affects operations at New York (JFK).

A total of 567 million pounds of cargo is hauled and revenues advance 5.4% to \$844.07 million. Costs rise 11.1% to \$819.69 million and a \$24.37-million operating profit is made. Net gain falls to \$16.23 million.

Airline employment declines 4.1% in 1986 to 7,100. The year is one of strike, slow business growth, and strong competition. The former, at New York, is settled in early March. Still, by September, automation work is completed on the first sort operation and 1.1 million square feet of ramp space is added to the Dayton hub in an \$18-million expansion.

Aggregate poundage ascends by 8% to 613.3 million as the number of individual shipments rises 4% to 13.9 million. Revenues advance only 1.3% to \$887.5 million, while expenses grow 6.6% to \$906.4 million. The operating loss is \$10.47 million and the net loss is \$5.44 million.

In February 1987, Emery and the Teamsters agree to extend the latter's contract through the following year.

When unprofitable **Purolator Courier** is put up for sale during the first quarter, Emery is able to fend off rival bidders and acquire the competitor for \$310 million in cash and assumed debt. Plans are made to return PC's leased fleet of eight DC-9-15Fs and four B-727-100QCs to operate the services of both through the Dayton hub, and to employ Purolator's large ground distribution system.

Having lost the first U.S. Postal Service hub contract to **Evergreen International Airlines**, the company sells the new 400,000-sq.-ft. Indianapolis hub and sort center in September to **Federal Express**.

On September 21, Emery begins using Purolator and its own aircraft in a combined flight schedule operating from the Dayton hub directly to 164 cities.

In late October, the company announces a refinancing of the debt incurred in the Purolator takeover. The new arrangement includes the creation of an employee stock ownership plan that recoups a \$45-million surplus in pension plan assets. Emery now sells 2.9 million shares to its employee stock ownership plan for \$15 million. Additionally, \$95 million worth of surplus assets, including many directly received as a result of the merger, are sold.

Once the refinancing package is in place, stockholders give final approval to the merger, under which Purolator becomes a separate, wholly owned subsidiary during its integration period.

Chairman/CEO Emery retires and is succeeded by Xerox Corporation Executive Vice President William F. Souders.

In November, the corporation enters into an agreement with an affiliate of Bessemer Securities Corp. to sell to it the ex-Purolator subsidiary Stant, Inc. for \$53 million and assumption of the debt associated with the auto parts manufacturer.

Late in the month and into December, the carrier sells and leases back 10 B-727-22Cs and 10 B-727-51Cs for a net gain of \$85.6 million.

The Purolator acquisition helps the shipment total to skyrocket 300% to 13.8 million while tonnage increases to 684 million pounds, an 11.5% boost. Revenues balloon 37.6% to \$1.22 billion, second only to those of **Federal Express** among U.S. cargo carriers. Expenses caused by stiff competition and merger costs rise 40.6% to \$1.26 billion and leave an operating loss of \$41.04 million and a net loss of \$47.66 million.

Operating out of Dayton, the Emery fleet in 1988 includes 10 DC-8-63AFs, 7 DC-8-73Fs, 2 DC-8-54Fs, 8 DC-9-15Fs, 35 B-727-100QCs, 1 Convair CV-580, 1 Falcon 20, and 1 DC-3.

A restructuring is completed in January that includes the sale of \$108 million in bonds for the company by Drexel Burnham Lambert and the establishment of a three-year revolving line of credit. The latter is provided by Security Pacific Business Credit (SPBC), with the participation of Westinghouse Credit Corporation (WCC).

In February, Towers Financial Corporation purchases 5% shareholding. The combined company is renamed Emery & Purolator, Worldwide Courier and Cargo and Denis M. McCarthy becomes president/chief operating officer.

All aircraft are repainted in new livery. The board of directors in March rejects a call from Towers to dismiss Chairman Souders and replace him with former **Federal Express** President Arthur Bass.

During the same month, the Los Angeles cargo facility and real estate is sold for a pretax gain of \$4.8 million.

In June, three DC-8-62AFs are sold and leased back for a gain of \$31.5 million while in July, the accounting division office at Scranton, Pennsylvania, is mortgaged, bringing in another \$6.8 million.

Service is disrupted during the difficult Purolator integration and traffic figures are not reported.

Despite its various financial maneuverings, the carrier is unable to meet its August obligation to pay a \$22.7-million loan back to Salomon Bros. Holding Company or \$15.2 million on secured bank obligations.

The freighter is given an extension. Among the most difficult problems faced is an unexpected inability to handle Purolator's envelope delivery system. Meanwhile, former **Federal Express** President Arthur Bass and a group of supporters mount a takeover effort, which is both costly to Emery and, eventually, unsuccessful.

Rather than see the air cargo airline go bankrupt, the overdue bank loans of August are extended by their creditors in October and November. During the latter month, a new financial restructuring is accomplished. The package, announced on November 18, is provided by SPBC, with participation by WCC, and includes a new \$108-million bond issue to refinance City of Dayton bonds and a \$100-\$125 million revolving line of credit, some of which must be employed to repay the August bank loans.

Although revenues of \$1.27 billion are earned, the net loss deepens to \$50.2 million.

In April 1989, the company agrees to a \$247-million takeover by Consolidated Freightways, Inc., parent of the smaller competitor **CF AirFreight**. Donald Berger, president of the latter, takes over from Chairman/CEO Souders and the new acquisition is renamed **Emery Worldwide: A CF Company**.

EMERY WORLDWIDE (A CF COMPANY): One Lagoon Drive, Redwood City, California 94065, United States; Phone (415) 596-9600; Fax (415) 596-9611; <http://www.emeryworld.com>; Code EB;

Year Founded 1989. Struggling financially after its acquisition of **Purolator Courier**, **Emery Air Freight** becomes the target of a \$247-million takeover in April 1989 by Consolidated Freightways, Inc., parent of a smaller competitor, **CF AirFreight**. President Donald Berger of the latter succeeds Emery's Chairman/CEO William F. Souders and the process of integration begins in May under the present title. At the same time, the enlarged carrier is able to win away from **Evergreen International Airlines** a two-year contract for express mail with had been held with the U.S. Postal Service.

One of **CF AirFreight's** contract carriers, **Air Train**, is acquired at this time to become the subsidiary **Emery Worldwide Airlines** and employed for the remainder of the year to service the U.S. Postal Service contract. This subsidiary will be integrated during the next year and, at the conclusion of the arrangement, the CF headquarters is transferred to Dayton from Indianapolis.

The amalgamated fleet now includes 98 aircraft: 38 B-727-100Cs, 24 DC-8Fs, 8 DC-9-15Fs, and 15 miscellaneous.

The CF Airfreight facility at Indianapolis is, however, chosen to act as hub for the company's contract with the U.S. Postal Service. On August 21, six-times-per-week night Express Mail services are operated from the Indiana city, where incoming packages are sorted and sent out again. Daily service begins in October from the Dayton hub to Chattanooga, Tennessee.

Although traffic figures for the year are not provided, it is reported that the new cargo carrier earns revenues of \$1.2 billion, but costs lead to an operating loss of \$97.4 million and net loss of \$50.2 million.

The fleet in 1990 includes 6 B-727-27Fs, 10 each B-727-22Cs and B-727-51Cs, 2 B-727-151Cs, and 1 each B-727-76F, B-727-30C, B-727-77C, B-727-82C, B-727-134C, and B-727-172C, plus 8 DC-9-15RC/Fs, 7 each DC-8-63CFs and DC-8-73CFs, 5 DC-8-63Fs, 4 DC-8-62Fs and 2 each DC-8-54Fs. A significant number of these are operated under contract by either **Ryan International Airlines** or **Rosenbaum Aviation**.

Costs far exceed income and the freight operator suffers a \$128-million loss.

In January 1991, daily CV-580 flights start from Seattle to Calgary and Edmonton. Services are extended to the U.S.S.R. in February as an agreement is signed with the Moscow-based air freight forwarder Inservice VVO SVT to serve as the cargo carrier's exclusive Russian agent.

The same month, former **CF AirFreight** President Roger W. Curry is appointed president/CEO.

A DC-9-15RC with two crew fails its takeoff from Cleveland on February 17 and crashes; there are no survivors.

In October, daily DC-8-54F service is launched from Dayton to Harrisburg. Also in the month, the city of Indianapolis is notified that, since the company has had its U.S. Postal Service contract renewed, it has been chosen as site for a new Eagle Network Hub.

Late in the year, a joint service contract is signed with **DHL Worldwide Express** to provide, on its behalf, daily DC-8-73CF flights from New York to Brussels.

The loss figure is cut to minus \$83.6 million and, as was the case the previous year, no traffic figures are available.

Company employment stands at 1,015 in 1992 and the fleet now includes 54 aircraft: 15 B-727-100Cs, 15 DC-8-73Fs, 11 DC-8-63Fs, 4 DC-8-54Fs, 4 Convair CV-640s, 2 DC-8-62Fs, and 1 each Cessna 208 Caravan Is, Shorts SC-7 Skyvans, and de Havilland Canada DHC-5 Caribou.

While retaining its own nighttime Express Mail flights from Indianapolis, Emery Worldwide protests the award of a \$1-billion U.S. Postal Service operator contract to **Kitty Hawk Airways**.

This year Emery elects to quit the express envelope business to concentrate on heavy freight, parcels, and packages and industry-specific divisions are formed to serve the following segments of the economy: aerospace, automotive, construction, government, perishable goods, pharmaceutical, textile, and trade shows and conventions.

The contract with **DHL Worldwide Express** takes effect in March. Under its terms, they share space on DHL's daily DC-8-73CF service

from New York to Brussels, flown on the Emery aircraft leased the previous year. A separate agreement allows Saturday service from New York to Brussels and Manchester while a third pact permits DHL to provide Emery with intra-European contract airlift via Brussels, thereby permitting Emery to end its European hub and feeder aircraft operation based on Maastricht.

In October, the company's Russian agent-partner, Inservice Air-Freight, assists Emery in opening an improved air cargo consolidation service at Moscow's Sheremetyevo Airport; the operation employs Inservice AirFreight's facility, the first privately operated bonded warehouse facility ever constructed at the airport.

Also during the fall, the new \$64-million Eagle Network Hub is opened at Indianapolis and its new buildings and sorting centers are first utilized during the Christmas rush.

A total of 825.2 million FTKs are transported during the year and as a result, revenues slide 11.8% to \$1.15 billion. Although expenses are still higher, the operating loss is cut to \$32.7 million.

The fleet is reduced to 38 aircraft in 1993, including 29 DC-8s, 4 B-727-100Cs, and 5 DC-9Fs.

A three-year contract is received in January allowing the airline to serve as primary air freight carrier for the Chrysler Corporation's North American vehicle assembly and manufacturing operations.

The **Kitty Hawk Airways** case is settled in early April with the North Carolina-based Convair operator losing its contract, but receiving \$18.5 million for its trouble. Emery, meanwhile, is awarded a new 10-year, \$880-million contract on April 25 by the U.S. Postal Service for the transport of Express Mail and Priority Mail, effective seven months hence.

On July 1, Emery arranges with **Ryan International Airlines** to operate its new U.S. mail award under a subcontract. Ryan, which has carried mail for Emery for nearly four years under an earlier subcontract, will, as a result of this new deal, be able to create 30 more jobs in Wichita by year's end.

A hush-kitted DC-8-73F is employed, also in July, to inaugurate early morning air freight deliveries into Boston.

Two contracts are won with Volvo GM Heavy Truck Corp. in September. One will have the airline serve as primary carrier for the transport of cargo between the company's two major facilities in Dublin, Virginia, and Orville, Ohio; the other is for two-day service between points on the carrier's U.S.-Canada network.

The U.S. Postal Service's new logo is introduced in October, painted on the tail of an Emery B-727-51C.

Later in the fall, a three-year agreement is signed with RENFE, the state-owned national Spanish railroad, to provide international shipments to and from Spain.

By December, Flight Dynamics has completed installation of its Heads-Up Guidance System on 17 of the company's trijets.

Freight climbs 7.4% to 933.81 million FTKs, 25th highest among all the world's airlines. Revenues slide to \$1.3 billion, expenses are \$1.28 billion, and a \$16.59-million operating profit is generated, the first since 1985.

Emery begins to execute its multimillion-dollar postal contract (ANET-93) on January 1, 1994. Good for 10 years, the arrangement will pay \$880 million into company coffers.

Although another B-727-51C painted in the new color scheme of the USPS arrives, the application of the new livery to other aircraft slows, as the expense becomes politically sensitive. Still, the process will be completed over the next year.

In addition, capacity on the North American air freight network is increased by 25% through the addition of three DC-8-71CFs. A three-year contract is received in March from AT&T to fly the communication corporation's air freight shipments throughout North America.

Six more DC-8-71CFs are chartered in April, giving Emery the second-largest Douglas freighter fleet in the air cargo industry after **UPS (United Parcel Service)**.

Later in that month, Emery is selected by United Technologies as the prime contractor for its North American air cargo shipments.

On August 2, this unit of Consolidated Freightways, Inc. is named Chrysler Corporation's primary air freight carrier and receives a 3-year, multimillion dollar contract.

David I. Beatson becomes president/CEO in September and an agreement is reached with **United Airlines** on December 15 for the purchase of six B-727-223Fs, all of which will be operated by **Express One International** under contract.

Cargo increases 32.5% to 1.23 billion FTKs and revenues swell 24.5% to \$1.56 billion. Expenses rise 23.8% to \$1.49 billion and allow a huge pretax profit of \$77.61 million.

The workforce stands at 6,700 in 1995.

Cargo code-sharing begins on **Swissair, A.G.** flights from Basel to Chicago. In July, the carrier initiates Emery Expedite, a 24-hr. 365-days-a-year urgent door-to-door freight service. Gold Priority, a program which offers guaranteed next-day, airport-to-airport delivery, is also initiated.

During the fourth quarter, the company receives a five-year multimillion-dollar contract extension from Volvo GM Heavy Truck Corp. to continue "expedited overnight and second-day delivery service" of shipments up to 2,500 pounds, largely in support of the assembly plants in Virginia and Ohio.

Traffic accelerates by 10.3% as 1.36 billion FTKs are operated. Although there is a \$15.6-million operating profit, there is a net \$4.28-million loss.

The airline employs 1,100 in 1996 and a contract is signed with **Cus-tom Air Transport** under which that carrier will fly packages on behalf of Emery from points in the Midwest and Northeast to Florida.

The airline's parent, Consolidated Freightways, now spins off its surface transport division, CF Motor Freight, into a new publicly owned company, and is itself reformed under a new name, CNF Transportation. Emery becomes a CFN subsidiary, but this subsidiary is completed under the 1989 title.

In October, the company receives a six-year contract from Dade International, S.A. for the management and operation of a dedicated European distribution center at Anderlecht, Belgium, for its in-vitro diagnostic products.

Cargo grows by 3.2% to 1.4 billion FTKs. Operating income drops 28.1% to \$213.08 million while costs fall 32.5% to \$189.43 million. The difference leaves a positive balance sheet that shows an operating gain of \$23.65 million and a net profit of \$15.56 million.

Former **Polar Air Cargo** Vice President Operations Kent T. Scott is named vice president/chief operating officer in April 1997, succeeding the retiring Willard Scherrer.

During the spring, the 1,100-employee carrier wet-leases three Lockheed L-1011-200F freighters from **American International Airways**. Emery wishes to compare them in service with three DC-10Fs that it is chartering from another concern.

When company pilots vote in July to choose a union, 223 of 348 eligible flyers cast their votes for ALPA.

In what the media portrays as one of the last great labor-management clashes of this century, 200,000 members of the Teamsters strike **UPS (United Parcel Service)** on August 4 and the job action is supported by company pilots. Management flyers and contract aircraft are only able to provide a trickle of service. During the shutdown, Emery Worldwide attempts to accommodate those customers sending packages in excess of 5 pounds. However, UPS's major competitors, **Federal Express** and **DHL Worldwide Express** refuse most new business (the latter takes new international business), but do accept packages left in drop-off boxes.

Talks between the Teamsters and UPS resume on August 7 and the job action is resolved a little over a week later. Emery is able to keep some of the business generated during the walkout and which was transported on the wet-leased TriStars.

On August 20, the carrier receives a \$5-million, one-year contract from sports product manufacturer Nike. Under terms of the agreement, the carrier will move finished apparel, footwear, and athletic equipment via air freight from origin factories in India, Singapore, Bangladesh,

Sri Lanka, the Philippines, and Malaysia to Nike's distribution centers or directly to customers in Europe, North America, and South America.

Late in the month, the carrier, in anticipation of significant growth in the new year, arranges leases for four L-1011Fs. Three aircraft are chartered from **American International Airways (3)** and the fourth from **Arrow Air**. Upon receipt, the wide-bodies will be employed on company routes to Dallas, Los Angeles, San Jose, and Portland.

During the fall, a \$1.7-billion, 58-month contract is received from the U.S. Postal Service for the establishment and operation of a separate and exclusive Priority Mail sorting and transport network, including air transfers, on the U.S. East Coast. The DC-10Fs arrive in November and are employed as extra capacity for the transport of Christmas packages.

By year's end, Emery serves more than 200,000 customers through a network of 590 service centers and agent locations throughout North America and in more than 95 countries worldwide. A total of 1.41 billion FTKs are operated this year, a slight 0.6% increase. Operating revenues jump 22.8% to \$261.61 million, while expenses climb 17.4% to \$222.38 million. The operating gain increases to \$39.23 million and a \$25.33-million net profit is posted.

At the beginning of **1998**, Emery provides services to 229 countries through a network of more than 600 service centers and agent locations around the world. It is now the 23rd largest airline in terms of freight carried. The fleet now includes 7 B-727-100Fs, 18 B-727-200Fs, 4 DC-8-54Fs, 9 DC-8-62Fs, 10 DC-8-63Fs, and 16 DC-8-71F/73Fs.

On July 1, Emery announces that it will add five DC-10Fs over the next two years, all leased from Pacific Aviation Holding Co. (Pegasus Capital Corp.) of San Francisco. The first will enter Emery's fleet before the end of the year, with all five operating from the North American Sortation Center at Dayton by the fall of 2000.

Gold Priority service is introduced on August 24 between Miami and the Mexican communities of Chihuahua, Guadalajara, Mexico City, and Monterrey.

With volume increases of over 400,000 pounds each month, Emery is able to successfully handle volume surges in military traffic from the Defense Distribution Depot (DDSP) in Susquehanna, Pennsylvania, to Germany. The company, over the five-month period of military action in Bosnia, is able to get needed goods to Europe in less than 32 hours. Stateside during the year, Emery will handle over 800,000 pounds every month for the DDSP, with a 96% on-time performance record.

On December 8, **Air Canada, Ltd.** re-endorses Emery Worldwide as its primary carrier to move the airline's engine parts and maintenance materials between the U.S. and Canada. Under the new three-year contract, which also applies to the "Air Canada Connector" carriers, Emery will continue to transport shipments from Air Canada's 2,500 suppliers in the U.S. to its facilities in Canada and from its Canadian depots to its 42 stations throughout the U.S.

Cargo traffic during the 12 months dips 0.7% to 1.4 billion FTKs. Revenues skyrocket 420.4% to \$1.36 billion, while expenses are up 520.5% to \$1.37 billion. There is an \$18.36-million operating loss and a net loss of \$34.26 million.

A new Guaranteed Service Program is unveiled in January **1999**. It is designed to provide the transportation industry with the most comprehensive service guarantees for business-to-business heavy cargo shipments within the U.S., Canada, and Puerto Rico.

An agreement in principle is signed on March 8, under which Emery Worldwide will acquire the air freight and ocean freight business of Walsh Western International, Ltd., which has been Emery's exclusive partner in Ireland since 1995.

On March 9, a disaster is narrowly avoided at Indianapolis when, on final approach, the pilot of a company freighter suffers a heart attack. He is able to get the aircraft safely on the ground, some 50 ft. off the runway. Rushed to hospital, the aviator dies.

Two B-747-200Fs join the fleet on April 6 and are used to improve air cargo efficiency for the carrier's Guaranteed Service Program in heavy-volume lanes for its North American customers. One aircraft services companies in southern California through Los Angeles while the other

serves companies in the southeast U.S. and Puerto Rico. The East Coast Jumbojet is routed through Raleigh, North Carolina, and San Juan.

The first of five former **Continental Airlines** DC-10-10s, converted into DC-10Fs, arrives at San Jose from Dayton on April 28. Following a christening ceremony presided over by CNF Transportation, Inc., President Gregory Quesnel, the wide-body freighter is assigned to the Guaranteed Service Program. It will operate daily return service between Dayton and San Jose to serve manufacturers in the Silicon Valley region.

At the beginning of May, the flight deck and first class passenger cabin of a B-747-136 retired by **British Airways, Ltd. (2)** in 1998 is moved overland under the coordination of the company's Global Project Management group from Roswell, New Mexico, to the Hiller Aviation Museum in San Carlos, California. The move is funded by retired **The Flying Tigers Line** pilot Al Silver. The massive 15,000-lb. section unit will be displayed adjacent to the two-story exhibit building and will open later in the year.

As a direct result of its sterling support for the DDSP the previous year, Emery, on May 4, is awarded the 1998 "Quality Award" by the U.S. Military Traffic Management Command. During the Commercial Aviation Report Air Cargo Symposium at Washington, D.C. on May 18, Chief Operating Officer Scott informs the press that it is his hope to be able to announce an order before year's end for a new aircraft type with which to replace Emery's aging DC-8s. Four DC-8-60Fs will be retired by December.

On May 26, the electronics contract manufacturer Manufacturers' Services, Ltd. of Concord, Massachusetts, signs an agreement with Emery under which the carrier guarantees on-time delivery in the U.S., Canada, and Puerto Rico for all MSL domestic air shipments over 15 pounds. Emery will handle the contract under its Guaranteed Service Program.

Valued at more than \$1 million per year, a "Dealer Direct" contract is received from Porsche, A.G. of Germany on June 29 under which Emery will handle door-to-door delivery of between 80 and 100 automotive-related shipments every day.

In September, Emery introduces a second-day, time-definitive delivery service for heavy shipments traveling between business centers in 20 European countries. The new service is also available for its more traditional short hops in Western Europe.

At the beginning of December, the "Golden Priority Plus" service, with its delivery guarantee to North America for packages shipped from South Korea, Hong Kong, Taiwan, and Thailand, is expanded. A "Golden Priority Express Plug" guaranteed delivery service to Japan and South Korea from Los Angeles is added.

At the end of the year, the company's one-year contract with **ICC International Cargo Charters Canada, Ltd.**, doing business as CCC Canada, Ltd., is renewed.

Cargo traffic accelerates 12.1% to 1.57 billion FTKs. Revenues plunge 29.6% to \$958.42 million, while expenses drop 31.5% to \$944.92 million. The previous year's operating loss is turned into a \$35.24-million gain; the net loss "improves" to \$10.5 million.

Company employment at the beginning of **2000** stands at 4,940, a 0.2% decrease over the previous 12 months. Among the world's top 25 airlines, Emery ranks 25th in FTKs. The main line fleet comprises 5 DC-10-10Fs, 3 DC-10-30Fs, 2 DC-8-54Fs, 11 DC-8-71Fs, 6 DC-8-62Fs, 6 DC-8-63Fs, and 16 DC-8-73Fs. The majority of the company's Boeing 727F fleet is now leased to **Ryan International Airlines**. On its behalf, Ryan now operates a major U.S. Postal Service contract employing 5 Dash-51Cs, 1 Dash-51C, 5 Dash-22Cs, 1 each Dash-134C, Dash-76C, Dash-77C, Dash-82C, and 3 Dash-223Fs, all in USPS livery. In Emery Worldwide livery, Ryan flies 4 Dash-21Cs, 8 Dash-222Fs, and 3 Dash-225Fs.

Gold Priority Plus service for Shanghai shipments is added in January.

Just 45 seconds after takeoff from Mather Field, Sacramento, for Dayton on February 16, Flight 17, a DC-8-71F with three crew reports load balance trouble and attempts to return to its point of origin for an emergency landing. The freighter goes out of control and crashes into an au-

tomobile salvage yard 1 mi. E of the airport, exploding and setting fire to 100–200 cars. Debris cuts a swath a .25 mi. long and 250 yds. wide. There are no survivors.

A tripartite signing ceremony is held in New Delhi in March on a pair of new cargo agreements. In one, Emery acquires 80% of the daily cargo capacity of **Indian Airlines, Ltd.** between Madras and Singapore. The other, between Swisscargo and Emery, permits Emery to book belly space aboard **Sabena Belgian World Airlines, S.A.** passenger flights and **Swissair, A.G.**'s dedicated thrice-weekly DC-10-30F freighter service to Africa and beyond from Basel.

Two DC-10-30Fs, once flown by **Laker Airways, Ltd.** and **Leisure International Airlines** are leased from GECAS on May 2 for later delivery. Also during May, an ACMI contract is signed with **Express.Net Airlines** for the operation of two of its three Airbus A300B4-203Fs on Emery's behalf from Dayton to Phoenix and Minneapolis (MSP).

On June 23, *AirlinersOnline.com* reports that the carrier has retired its two DC-8-54Fs. The first chartered DC-10-30F, delivered new to **British Caledonian Airways, Ltd. (BCAL)** years earlier and recently converted into a cargo plane by the Italian firm Aeronavali, arrives at the end of the month.

After 27 months of negotiations, contract talks between the company and its ALPA-represented pilots reach the state of impasse by July 25. As it has been elsewhere in the industry this summer, strike-talk is heard.

Scheduled to last just four days, a new round of contract negotiations between pilots and management get under way on August 8. On August 11, GECAS supplies a DC-8F under a four-year contract.

A new four-year pact between the airline and its pilots is ratified by the latter on September 21. Late in the month, Chutta Ratnathicam becomes CEO, succeeding the retiring Roger Piazza. Ratnathicam had departed Emery in 1997 to become chief financial officer of its parent corporation, CNF, Inc. A good month is finished with news that, after a long dispute, the U.S. Postal Service has agreed to pay \$102.1 million in money owed under an earlier Priority Mail contract, which the two sides terminated on January 7.

DC-10-30F return cargo service is initiated on October 1 between Dayton and Los Angeles. Also in October, the company signs a three-year forwarding contract with the British Defence Transport and Movements Agency, its first defense-related agreement with any arm of the U.K. government. In South America, an office is opened at Antofagasta to serve the mining region of northern Chile.

The company suffers a \$5.8-million third quarter operating loss, which is blamed on a onetime, after-tax loss of \$7 million for the termination of leases on several maintenance-plagued freighters.

In December, an 80,000-sq.-ft. service center is opened near the Toronto Airport.

EMERY WORLDWIDE AIRLINES. *See* EMERY WORLDWIDE

EMIRATES AIR SERVICES, LTD.: **United Arab Emirates (1976–1994).** Mohammed Bin Massood and Sons of Abu Dhabi form this wholly owned charter carrier in April 1976. Originally known as **Abu Dhabi Air Services**, the company undertakes both passenger and cargo flights throughout the Gulf region. It is the first domestic fixed-wing operator to be granted a license by the U.A.E.

While descending through clouds from 15,000-ft. on an October 4 ferry flight, a DC-7CF with four crew crashes into Mt. Kenya in Kenya; there are no survivors.

The fleet is increased over the next four years to include 3 de Havilland Canada DHC-6-200 Twin Otters and 1 DHC-7-102.

By 1980, enplanements are 70,198 and 5.21 million FTKs are operated.

Over the next 12 years, President Abdullah Massood, assisted by Managing Director C. O. Miller, assemble a fleet that comes to comprises the single de Havilland Canada DHC-7-102, a pair of DHC-6-200 Twin Otters, a Pilatus-Britten-Norman Islander, and a Weatherly 201.

Types operated are not limited to these owned units as a variety of others, including Gulfstream IIs, British Aerospace BAe 125-800s, Cessna 500 Citation Is, and even Lockheed C-130 Hercules freighters, are flown on behalf of their owners.

The company also establishes an aircraft maintenance division that gains a substantial reputation throughout the Mideast. During the Gulf crisis of 1990–1991, the EAS reputation for quality and on-time maintenance performance wins the company contracts from the U.S. Army, USAF, and Lockheed-Marietta.

Airline employment in 1992 stands at 70.

Emirates Express flights are inaugurated five times per day from Abu Dhabi to Dubai in May with a pair of leased British Aerospace BAe (HS) 748-B2s. This new service is halted at the end of January 1993 and, citing competition from nationalized organizations, the company itself closes its doors on February 28.

This action is shortly reversed and operations, minus the BAe (HS) 748-B2s, continue largely without change over the next year.

In April 1994, EAS is sold to **Abu Dhabi Helicopters, Ltd.** that will enjoy the benefits of the company's maintenance leadership while merging its flight operations with its own new fixed-wing division.

EMIRATES AIRLINES, LTD.: **Airline Centre, Rame Roundabout, P.O. Box 686, Dubai, United Arab Emirates; Phone 971 (4) 228 151; Fax 971 (4) 238 817; <http://www.emiratesairline.com>; Code EK; Year Founded 1985.** Dissatisfied with the services and returns provided by **Gulf Air Company, Ltd.**, the Dubai ruler unexpectedly orders creation of a new carrier in 1985 and provides \$10 million in initial capitalization. While retaining his previous position as Dubai National Air Travel Agency (DNATA) chief, Maurice Flanagan, a 25-year veteran of **British Overseas Airways Corporation (BOAC)** and **British Airways, Ltd.** (2) is named managing director. Indeed, many of the airline's 1,000-member staff will be loaned from DNATA or work for it and the airline as well.

A one-year management and support contract is entered into with **Pakistan International Airlines Corporation** for the lease of an Airbus Industrie A300B4-203 and one Boeing 737-340, plus Pakistani flight and ground crews. Service is begun to Bombay, New Delhi, and Karachi on October 25.

Service is inaugurated to Cairo, Colombo, and Dhak in the spring of 1986.

A B-727-100 from the ruler's personal fleet is refurbished by HAECO in Hong Kong and joins the fleet. In November, the carrier orders its first purchased aircraft, two A310-304s, for delivery during the following July and August. The same month, weekly B-737-340 service is started to Dhaka. During the fall, an order is placed for an A300-605R.

Enplanements for the first full year total 287,762 while 17.25 million FTKs are also flown. Revenues total \$63.1 million and with costs held down there is an operating profit of \$3.26 million.

Airline employment increases 88.4% in 1987 to 878 as two A310-304s join the fleet in July, one to replace a leased B-737-340, along with an A300B4-203, which is leased from **Pakistan International Airlines Corporation (PIA)** when delivery of the A300B4-605R is delayed.

The company's major new route of the spring is from Dubai to Bombay and, in July, service is inaugurated to the company's first European destinations: Frankfurt and London (LGW).

As an aside, the duty-free shopping complex at Dubai, reputed to have the world's lowest prices, sells over 258,000 flasks of perfume, 12,100 cameras, 55,570 watches, and 189 million cigarettes to travelers.

Passenger boardings accelerate 63.9% to 471,491 and freight sky-rockets 112.2% to 36.6 million FTKs.

The workforce grows a further 13.1% in 1988 to 993 and the fleet now includes 2 A310-304s, 1 A300B4-605R, 1 A300B4-203, and 2 B727s, one each Dash-2M7A and Dash-264A.

Frequencies are initiated to Khartoum and Nairobi and the one-millionth passenger is boarded on July 6.

During the summer, frequencies to Cairo are increased from four to six per week, from two to four to Amman, from three to five to

Colombo, and from once to twice weekly to Dhaka. A new route is inaugurated in August from Dubai to Damascus and, in September, the airline signs on with the Amadeus computerized reservations system.

Customer bookings jump 33.9% to 631,128 and cargo increases 70.2% to 62.28 million FTKs.

There is no change in 1989 in either workforce or fleet. Passenger boardings surge 15.5% to 729,000 and freight climbs 25.8% to 78 million FTKs. Revenues are \$165.1 million. The operating profit is \$12.4 million and net earnings total 14.1 million dirhams (\$3.8 million).

In February 1990, Emirates contracts with Unisys to set up the Airline Revenue Enhancement System (ARE); the system goes into operation during the spring.

On June 1, A300-605ER flights begin from Dubai to the company's premier Far Eastern destinations of Bangkok, Singapore, and Manila. The route to Manila is flown via Bangkok while that to Singapore is operated via Colombo, Sri Lanka.

This expansion is to be followed by the initiation of service to Paris, Rome, and Zurich in August and to Manchester on September 1; however, the Iraqi invasion of Kuwait forces cancellation of these plans.

Customer bookings increase another 25.5% to 914,935 while cargo jumps 29.5% to 100.79 million FTKs. Revenues reach \$190.3 million, the operating gain is \$20.5 million, and net income reaches \$9.1 million.

The workforce is reduced 9% in 1991 to 1,287 and the fleet now includes 3 A300-605Rs, 2 A310-304s, and 1 each B-727-2K5A, B-727-2M7A, and B-727-264A. Orders are outstanding for one A300-605R, three A310-304s, and three, later five, A310-308s.

During the entire Gulf crisis since the previous August, Emirates is the only airline serving the area not to cancel a single flight.

A \$64-million loan is obtained from U.A.E. banks and is employed to purchase the fourth A300-600R, which is delivered in June.

Flights begin to the Far East with frequencies to Bangkok, Manila, and Hong Kong.

Enplanements decline to 813,919 and freight falls to 92.74 million FTKs. Revenues are \$280.3 million, the operating profit is \$25.8 million, and net gain totals \$6.4 million.

The upward growth in employment is resumed by 9.9% in 1992 to 1,414.

New services are started to Jakarta and Paris in July and to Rome and Zurich in August; Manchester becomes a destination on September 1.

Through the first seven months during which statistics are provided, passenger boardings skyrocket 121.5% to 863,492 while freight jumps a huge 128.3% to 101.2 million FTKs. The operating profit is \$47.1 million and net earnings now total 67.5 million dirhams (\$18.4 million).

In 1993, Chairman Sheikh Ahmed bin Saeed Al-Maktoum and President Abdullah Massood increase their workforce to 2,000 and acquire one more A300-605R, one A310-304, and five A310-308s.

In January, the company receives the 1992 "Passenger Service Award" from *Air Transport World* magazine.

Orders are placed for seven B-777-21Hs for delivery between March 1996 and May 1997. New markets are initiated at Doha and Muscat in January.

A code-sharing alliance is entered into with **Cyprus Airways, Ltd.** in March. Under its terms and employing Cyprus' A320-231s, joint weekly, block-space roundtrip services are inaugurated from Larnaca to Dubai. As part of the deal, the two begin to code-share on the Dubai to Nicosia route.

The Dubai to Muscat route previously served exclusively by **Gulf Air** becomes part of the company's network in June.

Destinations now also visited also include Abu Dhabi, Amman, Bangkok, Beirut, Bombay, Cairo, Colombo, Damascus, Delhi, Dhaka, Dharhan, Frankfurt, Hong Kong, Istanbul, Jakarta, Jeddah, Karachi, Kuwait, London (LHR), Male (Maldives), Manila, Manchester, Paris, Riyadh, Rome, Shiraz, Singapore, Tehran, and Zurich.

First-class service is introduced on September 1 on six of the carrier's weekly return flights to Delhi; on October 26, two additional roundtrips to Bombay are also undertaken.

During November, the company signs an agreement with **United Airlines** by which the two will work together to attract more high-paying business travelers flying between the Persian Gulf and the U.S. More specifically, the arrangement provides for code-sharing and block-space payments on Emirates flights between Dubai and London (LHR).

Traffic figures through November are published. Customer bookings increase 55% to 1,732,934 and cargo grows 82.9% to 249.79 million FTKs. Revenues increase to \$497.8 million and with costs down an operating surplus of \$34.8 million is generated. The net gain is 10.6 million dirhams (\$2.9 million).

During 1994, the employee population swells 12.2% to 3,973 and the company begins to consolidate its routes to the Far East, Mideast, and Europe, adding flights to Doha, London (LGW), Nice, and Larnaca.

Fax capability is made available aboard an A310-308 in July, the first installation of such service aboard an Airbus aircraft.

During the same month, a joint agreement covering freight operations is signed with **KLM (Royal Dutch Airlines, N.V.)** Under its terms, the two airlines plan to make use of each other's cargo networks and distribution centers in order to extend their freight possibilities. Also under the pact, a weekly, roundtrip freighter service is inaugurated on August 10 between Dubai and Amsterdam's Schiphol Airport. An **Atlas Air B-747F** is wet-leased to provide the lift.

In October, twice-weekly flights begin to Larnaca, Cyprus, from Dubai, replacing the code-sharing agreement with **Cyprus Airways, Ltd.** on the route.

During the fall, plans are made to introduce frequencies to Johannesburg and Ho Chi Minh City during the new year.

Passenger boardings rise 18.4% to 2,197,068 while freight increases by 23.2% to 342.6 million FTKs. Revenues swell 19% to \$649.3 million; the operating profit is \$46.41 million and net gain reaches \$23.06 million.

The workforce grows again in 1995, rising 11.2% to 4,417.

New routes are opened to Nairobi, Hanoi, and Ho Chi Minh City.

On June 3, the carrier begins twice-weekly A310-308 roundtrips from Dubai to Johannesburg via Moroni in the Comores Islands. The Dubai to Amsterdam joint service with **KLM (Royal Dutch Airlines, N.V.)** becomes twice weekly. The company now also offers two daily flights from Dubai to London (LHR), a daily service to and from London (LGW), and five flights each week to Manchester.

A scheduled A310-308 service to Johannesburg via Moroni on September 28 is not permitted to land and pick up 104 South African tourists visiting the Comores under a vacation package from World Leisure Holidays. The service continues to South Africa without them. These and other vacationers are stranded while a group of armed mercenaries, led by Frenchman Robert Denard, attempt to take over the Comores, previously a French colony.

Enplanements accelerate 12.8% to 2,480,436 and cargo jumps 17.7% to 426.55 million FTKs. Operating income is up 12.8% to \$743.66 million and costs climb 13.5% to \$695.17 million. Operating gain reaches \$48.48 million and a net \$21.89-million profit, down slightly, is recorded.

Airline employment stands at 2,000 in 1996.

Three B-777-21Hs are placed into service on June 24, while four B-777-21H IGWs (the IGW stands for "increased gross weight") remain on order. The three initial machines fly nonstop routes to London, Jeddah, Karachi, and Bangkok and one-stops to Manila and Hong Kong. Frequencies are increased on numerous routes.

New markets are inaugurated by July 1 at Melbourne, Athens, Kuala Lumpur, and San'a. When Vietnam refuses to allow the carrier beyond-rights to Singapore, Emirates drops services to Ho Chi Minh City.

The company becomes launch customer for the A330-200 with an order to Toulouse for 16 jetliners that will replace the entire existing Airbus fleet between 1999 and 2002.

Customer bookings jump 15.7% to 2,867,744 and 511.34 million freight FTKs are operated, a 25.9% increase. Operating revenues total \$764.32 million while operating costs are \$742.29 million. As a result,

the operating profit is \$62.02 million and a net \$22.02-million gain is reported, up slightly from 1995.

The employee population is increased by 7.1% in 1997 to 5,393.

In January, a \$65-million Emirates Group Training College is opened at Dubai. The facility boasts both B-777 and Airbus simulators, a cabin-crew evacuation trainer, classrooms and auditorium, and engineering workshops.

In February, a \$2-billion order is placed for 16 A330s. A \$500-million order is simultaneously placed with Rolls Royce for Trent 700 engines with which to power them. The first B-777-21H IGW arrives from Seattle on April 13, following a nonstop 7,405-nm. trip accomplished in 15 hrs. 3 min.

A code-sharing and block-space agreement begins with **South African Airways (Pty.), Ltd.** in June and covers five Emirates and one SAA return flight every week between Dubai and Johannesburg. At the same time, the first B-777-21H IGW, after a month of workup, enters service on a route to Melbourne via Singapore.

By July 1, the company has five B-777-21Hs and two B-777-21H IGWs in service.

Designed to strengthen the old commercial road that once connected the Sahara with the Chukkas region, Emirates, on July 2, inaugurates thrice-weekly services to Baku, the capital city of Azerbaijan. Also during the month, the IGWs are placed on a route from Dubai-Colombo-Singapore four times per week; the new Singapore service is extended on to Jakarta thrice weekly.

An option for two of seven additional B-777-21H IGWs is exercised in August, with the machines scheduled to join the fleet during the fall of 1998. A third B-777-21H IGW arrives by September and is employed in October to commence service to Dar es Salaam, capital of Tanzania. Also during the fall, a new 1.3-million-sq.-ft. Emirates Technical Center is opened.

In November, a code-sharing pact is entered into with **Qantas Airways (Pty.), Ltd.** covering thrice-weekly flights between Dubai and Melbourne made with Emirates B-777-21H IGWs.

Passenger boardings accelerate 24.2% to 3,555,552 while freight surges 30.6% to 712.72 million FTKs. Operating revenues reach \$763.81 million, while expenses are \$718.72 million. The company enjoys a \$45.09-million operating profit and a net gain of \$22 million.

Airline employment stands at 4,978 in 1998 and the fleet, all of which is Stage III certified, includes 22 airplanes: 7 B-777s, 6 A300-605Rs, and 9 A310s, 7 Dash-308s and 2 Dash-304s.

Emirates receives 1998 "Airline of the Year" honors in January at the OAG Global Awards presentation.

On March 30, an available 40% stake in **Air Lanka, Ltd.** is purchased by Emirates for \$70 million. Under terms of the equity sale, the government of Sri Lanka will hold 51% majority control and the remaining 9% is distributed among the airline's employees. The Arab carrier's funding passes to Air Lanka in two tranches, beginning with \$45 million up front on signing day.

Management of the carrier passes to Emirates under a 10-year contract when the arrangement is finalized in May.

Beginning on July 1 and continuing through August 31, Emirates offers free stopovers in Dubai to passengers traveling to various international points from Nairobi, Kenya. The package includes two-night hotel accommodation and a complimentary tour of the area.

Later in the summer, Emirates inaugurates daily return flights to Malta.

During the last week of August, the company, under a new contract, transfers its *ab initio* airline pilot training from the British Aerospace Flying College at Prestwick, Scotland, to the School of Aviation Sciences, Western Michigan University, Kalamazoo.

The company, during the Farnborough Air Show at London in September, announces a \$2.4-billion order for six A340-500s for delivery in 2002.

The carrier announces on October 20 that it will inaugurate nonstop return service in January from Dubai to the Pakistan cities of Islamabad and Lahore.

On October 25, code-sharing begins with **Thai Airways International, Ltd. (THAI)** on all passenger and cargo flights.

Weekly B-777-21H IGW roundtrips to Kuala Lumpur begin on December 2.

This year's customer bookings jump 14.1% to 4.05 million, while freight traffic rises 11.9% to 797.51 million FTKs. Revenues accelerate 24.2% to \$1.11 billion, while costs climb 20.3% to \$1 billion. The operating profit is \$109.33 million, while the net gain climbs to \$71.37 million.

In January 1999, Emirates receives "Airline of the Year" honors, for the second year in a row, at the OAG Global Awards ceremony at Washington, D.C.

On February 9, Chairman Sheikh Al-Maktoum indicates that planning has begun for nonstop roundtrips from Dubai to North America, beginning in 2002. Emirates also expresses a desire to begin competition to and within Australia should the country adopt an "open skies" aviation policy.

Libya and Dubai sign a memorandum of understanding on February 25 that will allow **Jamahiriya Libyan Arab Airlines** and Emirates Airlines to schedule flights between the two countries. Libya, however, remains under UN embargo.

On March 1, a 12-year, \$157.5-million bank loan is arranged that permits the carrier to order another pair of A330-243s. The first of 24 new aircraft to be delivered over the next several years is an A330-243 that arrives on March 10. It will be placed on a new route between Dubai and Manchester, England.

The British Broadcasting Corporation reports, on April 23, that Emirates and **Iraqi Airways** are holding discussions aimed at creating a package holiday product for Shi'ite pilgrims wishing to visit the holy sites in the southern cities of Kerbala and Najaf. Although UN sanctions against Iraq prevent tourists from flying into the area, it will be possible for them to travel on the existing ferry service between Dubai and southern Iraq.

The daily *Gulf News* reports on May 7 that the carrier is negotiating for membership in the transnational "OneWorld" airline alliance.

With the beginning of the summer schedule, the number of weekly roundtrips from Dubai to Beirut is doubled from 5 to 10.

Officials from Emirates Airlines meet with their counterparts from **Gulf Air Company G.S.C., Kuwait Airways Corporation, Oman Airways, Qatar Airways, and Saudi Arabian Airlines** at Kuwait City on May 15 to plan a united body to compete against the growing number of major world airline alliances. The CEOs, who also agree to meet quarterly, discuss ways to coordinate and develop additional revenues, cut expenses, and invest jointly in support services.

The company announces on May 17 that it will launch nonstop roundtrip service on November 1 from Dubai to Munich, six days a week. On January 1, the flights will become daily.

Acting under terms of the rehabilitation plan of **Philippine Airlines (PAL)**, the government of the Philippines on May 21 begins to withdraw operating permits from certain other airlines on routes from Manila to destinations at Hong Kong, Manila, Taipei, and the Far East. Emirates Airlines is the first given notice that, effective June 1, its authority to operate roundtrips from Manila to Hong Kong has been withdrawn.

On June 16, the company agrees to lease an ILFC B-777-31H, to be delivered before the end of the year, thus becoming the first airline in the world to operate all three members of the B-777 family of airliners.

A block-seat, code-sharing agreement is signed with **Philippine Air Lines (PAL)** on August 20. Effective September 1, the Manila-based concern will return to Dubai (15 months after being forced to suspend service to that point) when it resells seats on each of Emirates three weekly nonstops between Manila and Dubai.

At the end of October, Emirates adds its first service to Scandinavia when it code-shares on the Dubai to Stockholm segment of a new thrice-weekly service from Colombo to Stockholm offered by **SriLankan Airlines, Ltd.**

Six-times-a-week B-777-21H return service is inaugurated on November 1 between Dubai and Munich.

The first of three B-777-31Hs is delivered on November 15 wearing a newly revised color scheme that features large billboard titles. The aircraft is the first Dash 300 Triple Seven delivered to any Mideast airline. The second Dash-31H arrives on December 23. The new jetliners join three Dash-21Hs and six Dash-21HERs already in the fleet. Meanwhile, the last of six A330-243s to be acquired since March 10 is delivered on December 15.

Passenger boardings jump 11.9% to 4,541,000 while cargo traffic surges 24.7% to 994.83 million FTKs. Revenues ascend 15.1% to \$1.35 billion, while expenses are up 16.3% to \$1.24 billion. Although the operating profit slides to \$111.4 million, net gain advances to \$87.1 million.

Airline employment stands at 6,524 at the beginning of 2000, a 15.4% increase over the previous 12 months. The fleet now includes 6 A330-324s, 7 A310-308s, 1 A310-304, 3 A300-605Rs, 3 B-777-21Hs, 6 B-777-21HERs, and 2 B-777-31Hs.

The Dubai-Munich route is operated once every 24 hrs. as of New Year's Day. The B-777-21H service from Dubai to Bangkok, continuing on to Hong Kong, becomes daily on January 4. The thrice-weekly return service from Dubai to Johannesburg via the Comoros ends on January 15 and is replaced with daily nonstop direct Airbus roundtrips between Dubai and Johannesburg. Six-times-a-week A300B4 return service is inaugurated on January 26 from Dubai to Bahrain; the route will be served twice daily from March 26.

Meanwhile, four more A330-324s are delivered between January 24 and March 23. Emirates is named recipient of the 1999 "Air Cargo Development" award by *Air Transport World* magazine in February.

Thrice-weekly A330-243 roundtrips are inaugurated on March 26 from Dubai to Sydney via Singapore. These services complement the link from Dubai to Melbourne, operated via Singapore since 1997. The next day, thrice-weekly A330-243 return service is started from Dubai to Entebbe via Nairobi. On March 28, a code-sharing agreement is signed with **Philippine Airlines**.

By the end of March, Emirates has operated 65 Hadj flights on the Dubai-Saudi Arabia route this year, transporting some 35,000 pilgrims.

Thrice-weekly A330-243 roundtrips are inaugurated from Dubai to Milan on April 1; as the services are routed via Rome, they have the effect of increasing service to the Eternal City from three times a week to six. Having found it unprofitable to conduct business in Azerbaijan, the company halts its Baku service on April 29.

On May 1, it is announced that orders will be placed for five A3XXs for delivery in 2006 and 2007, plus five options. A frequent flyer program, Skywards, is debuted on May 29.

It is reported in early July that Emirates will increase its stake in **Sri Lankan Airlines, Ltd.** from 26% to 40% by the end of the year.

Arrangements are completed with **Air Transat, Ltd.** on July 11 for the purchase of the Mideast airline's six A310-304s/-308s. When the Airbuses begin to arrive in Canada during December, they will start to replace an aging TriStar fleet.

A large equipment order is signed on July 25. Contracted for delivery later in the decade are six B-777-31Hs and by a memorandum of understanding, seven A3XXs (two cargo and five passenger planes).

Four-times-a-week return service is initiated on September 1 from Dubai to Chennai (Madras), India.

Under terms of the dual-designator pact signed with **Philippine Airlines** in March, the two companies launch code-sharing flights, also on September 1, thrice weekly between Dubai and Manila. The third B-777-31H is delivered on September 26.

On October 5, the United Arab Emirates become the first of the wealthy Gulf Arab monarchies to join in the growing chorus protesting 10 years of sanctions against Iraq. Without waiting for clearance from the UN sanctions committee, a B-777-21H is dispatched to Baghdad, transporting 30 tons of medical supplies and an official delegation led by the UAE health minister, including a team of specialist doctors. The decision to send the UAE plane has been made personally by President Sheikh Zaid bin-Sultan al-Nahayan, who, ironically, is in the U.S. (a

leading nation supporting the processing of Iraq flights via the UN) recovering from heart transplant surgery.

The year's fifth A330-243 is delivered on October 27, followed by a sixth on November 30. It is announced on December 4 that the company will inaugurate daily A330-243 roundtrips on March 25 between Dubai and Dusseldorf.

Emirates and **Deutsche BA Luftfahrtgesellschaft, GmbH**, sign and begin a code-sharing pact on December 15. The German line is able to sell tickets for the Mideast carrier's return services from Dubai to Munich while Emirates is able to place its designator on Deutsche BA flights from Munich to Berlin, Cologne, and Dusseldorf. Another A330-243 arrives during the day.

Daily A330-243 roundtrips are introduced on December 18 between Dubai and Birmingham, England. The last of eight A330-243s received this year is delivered on December 21. At the end of the year, Emirates begins operating its first B-747 freighter, a Dash-47UF under an ACMI contract with **Atlas Air**.

Customer bookings this year accelerate 20.9% to 5.48 million, while cargo traffic is up 29.5% to 1.28 billion FTKs.

EMMET COUNTY AVIATION: United States (1980-1982). ECA is set up at Harbor Springs, Michigan, in the spring of 1980 to provide seasonal scheduled passenger services to Pellston and Mackinac Island. Piper 185 and Cessna 206 flights commence in May and are continued throughout the summer. The company flies again in 1981, but in April 1982 is taken over by **Michigan Airways**.

EMPIRE AIR LINES: United States (1944-1952). Founded by Burton "Burt" Zimmerly as **Zimmerly Air Lines**, this local service carrier launches Cessna lightplane operations on the Boise-Lewiston route on April 1, 1944.

The company acquires three Boeing 247Ds from **Canadian Pacific Air Lines, Ltd.** on July 28, 1945.

The carrier is renamed **Empire Air Lines** on March 1, 1946, and the CAB certifies the company on May 22, agreeing to do so again in July 1949. Meanwhile, flights begin on September 28 over a route from Pocatello to Coeur d'Alene via Boise.

CPAL's last 2 B-247Ds are acquired and, by the end of 1947, the 5 have flown a total of 3.5 million incident-free miles.

Following the purchase of a Douglas DC-3 in March 1948, Empire extends routes from Boise to Seattle, Spokane, and Portland. Late in the month, with spares hard to come by, the company elects to retire its Boeings.

The six-year-old is taken over by **West Coast Airlines** on August 4, 1952.

EMPIRE AIRLINES (1): United States (1977-1995). Melvin E. Spelde forms **Empire Airways** as an FBO at Coeur d'Alene, Idaho, in 1977 and undertakes nonscheduled and contract service charter passenger and cargo services to local and regional U.S. and Canadian destinations.

Late in 1983, Spelde creates a commuter airline division under this name to provide scheduled daily passenger and cargo flights from Coeur d'Alene to Boise, beginning on January 1, 1984. During the next decade, the Empire Airways division will maintain charter services.

During the late 1980s, the fleet grows to include 2 Fairchild F-27s, 6 Fokker F.27-600s, an F.27-500, 2 Fairchild-Swearingen Metro IIs, and 32 Cessna 208 Caravan Is. During the summers, Beech 99As are leased to transport firefighters to and from forest blazes under contract to the U.S. Forest Service.

By 1988, enplanements are 11,798 and profits are \$456,329 (operating) and \$296,774 (net).

In 1989, the 150-employee airline owns a fleet of 2 F.27-600s, 3 leased Metro IIIs, and 1 each Cessna 421 and 172.

Passenger boardings accelerate by 40% to 19,663 and freight is up by 47.3% to 74,000 pounds. Revenues jump 44.9% to \$10.4 million,

expenses rise 48.9% to \$9.97 million, and the operating profit falls to \$393,939. Net gain climbs to \$315,536.

Airline employment is increased 40.8% in 1990 to 145 as nonstop flights are inaugurated from Coeur d'Alene to Seattle.

Customer bookings jump 44.5% to 28,414. Two de Havilland Canada DHC-6-300 Twin Otters are acquired in 1991 as passenger boardings drop 27.6% to 20,570. Freight is also down, by 8.8%, to 72,370 pounds.

In late 1992, the company enters into a partnership with Vancouver-based Silver Wings Holidays to operate a pair of British Aerospace BAe 146-200s on inclusive-tour and other charters to cities in Canada and the Western U.S.

Customer bookings ascend 7.3% to 22,077, but cargo slips 0.3% to 72,127 pounds.

Early in 1993, President Spelde oversees a workforce of 133 and operates a fleet of 2 Metro IIAs, 3 DHC-6-300s, 2 F.27-600s, and 2 BAe 146-200s. In addition to worldwide contract services, scheduled flights are maintained in Hawaii and the western and midwestern states of Idaho, Illinois, Wisconsin, and Minnesota.

A six-month management contract is signed in October with the new Hawaiian interisland regional **Mahalo Air**.

In December, a separate Metro subsidiary, **Capitol Airlines**, is set up at Minneapolis (MSP) and launches scheduled flights to Chicago (MDW).

Passenger boardings skyrocket 83.4% to 40,402, but freight falls 20.3% to 57,000 pounds.

Airline employment is boosted to 200 in 1994 and a major contract is signed with **Federal Express** for the transport of cargo. As a result, the company withdraws its Twin Otters and BAe jetliners, acquiring in their place a fleet of 28 Cessna 208 Caravan Is.

With the company moving into the freight business, it is not surprising that customer bookings plunge 41.1% to 23,851 while cargo climbs 27.7% to 73,000 pounds.

The sudden impact of the changeover from an emphasis on passengers at Empire Airlines to cargo at **Empire Airways** is catastrophic and forces the scheduled passenger operation to shut its doors in June 1995. **Empire Airways**, the parent, continues to operate as an all-cargo **Federal Express** feeder.

EMPIRE AIRLINES (2): United States (1979–1986). In September 1979, **Oneida County Aviation**, based at Oneida County Airport near Utica, New York, changes its name to Empire Airlines in an effort to reflect for its nonlocal customers its New York State base. Services are maintained by Chairman/President Paul Quackenbush's carrier to Newark, Boston, New York City, Buffalo, Washington, D.C., and Albany with a fleet comprising 5 Fairchild-Swearingen Metro IIs and 2 Piper PA-31-350 Navajo Chieftains.

Later in the year, the CAB awards a certificate of public convenience and necessity, the first issued to a commuter airline following passage of the Airline Deregulation Act of 1978. Enplanements total 108,000 and a total of 71,000 pounds of freight are hauled. A \$53,000 operating profit is earned.

In 1980, the FAA grants Empire a Part 121 certificate, and on September 15—now a fully certified jet carrier—it introduces the first two of six ordered Fokker F.28-4000 Fellowships on its Syracuse–New York City run. In short order, the Utica-based company begins jetliner service to a variety of cities from Boston to Baltimore, including White Plains, Rochester, Hartford, Montreal, and Syracuse.

Enplanements for the year total 149,269, a major 63.9% boost; freight does even better, storming upward by 71.9% to 121,301 pounds. Revenues accelerate 105.5% to total \$9.82 million while expenses are up by exactly the same percentage, but fortunately, hit only \$9.69 million. All involved with the carrier are pleased to see the \$132,208 operating profit.

The employee population increases 39.3% in 1981 to 369 as the third F.28-4000 is placed into service. Orders are placed for five additional F.28s.

Frequencies are initiated from Rochester to Boston and New York City (JFK and LGA). In December, the firm goes public by selling 550,000 shares of common stock at a public offering. The move increases capitalization by \$4.5 million.

Enplanements soar 155.9% to 409,072, while freight traffic gains by 26.5% to 247,000 FTKs. Revenues skyrocket 145.1% to \$24.07 million and expenses increase 149.6% to \$22.86 million. A net profit of \$517,380 is reported on top of an operating income of \$1.21 million.

The payroll continues to be expanded in 1982, climbing 21.7% to 438.

Flight 141, a Piper PA-31-310 Navajo, is lost in an accident at Ithaca on January 5. Two additional F.28-4000s are delivered in April, with a sixth delivered in July. Meanwhile, Buffalo is added to system charts. Four Swearingen Metro IIs are retained for shorter routes.

As the result of a new interline agreement signed with **Pan American World Airways (1)** late in the year, the carrier switches its gate at New York (JFK) from that maintained by **Eastern Air Lines** to the World Port facilities of Pan Am.

The large regional's passenger boardings swell 36.9% to 562,763, while freight traffic skyrockets 268% to 89,000 pounds. Expenses rise 61.9% to \$37 million, overwhelming a 51.1% growth in revenues to \$36.4 million. As a result, a \$617,552 operating loss is taken. Still, a \$495,308 net profit is generated, the eighth such pretax gain in a row.

Remarkable progress continues for the large regional in 1983, reflected in a 25.7% boost in airline employment to 543.

The airline adds Binghamton and Elmira to its route system and, in partnership with Pan Am, launches "Empire/Pan Am Express" feeder service to New York (JFK) from Hartford, Connecticut, and the upstate New York cities of Buffalo, Syracuse, Rochester, Ithaca, and Utica. Simultaneously, the Syracuse hub is further strengthened and the fleet is increased to 10 F.28-4000s.

Passenger Christopher Bradshaw is arrested in Syracuse on September 21 after his Metro II lands safely. He had, for whatever reason, reached into the cockpit of the aircraft and shut off the fuel to one engine, sending the plane into a sharp drop. Charged with four counts of attempted murder, Bradshaw is ordered by a judge on September 22 to undergo a mental examination.

Customer bookings rise 28.3% to 701,068 and freight skyrockets 107.6% to 1.07 million FTKs. Operating income jumps 37.9% to \$50.18 million and costs are up 23% to \$45.52 million. Operating profit increases to \$4.66 million and the ninth consecutive net profit, \$2 million, is earned. Empires 9.3% operating margin is fourth highest among the 24 publicly owned U.S. airlines.

With revenues of \$76.9 million in 1984, Empire Airlines technically moves upward into the category of "National" carriers. Total revenue for the year is up 53.2% to \$76.89 million and costs are \$70.7 million. Operating gain totals \$6.18 million and a record after-tax profit of \$2.75 million is produced. With the help of five new Fokker F.28-4000s, passenger bookings balloon 51.2% to pass the million mark in annual boardings for the first time (1,084,000) and cargo skyrockets 106.9% to 88,000 FTKs.

The company, in January 1985, receives the 1984 "Regional Airline of the Year" award from *Air Transport World* magazine.

In April, Empire begins direct feed to the Boston gates of **British Airways, Ltd. (2)**; the restricted service includes special fares and one-step check-in. Twice-daily F.28-4000 nonstop flights begin on June 2 from Baltimore (BWI) to Montreal.

On July 11, President Quackenbush announces the transfer of corporate headquarters, maintenance, and reservations from Utica to the Syracuse hub.

The most significant event of the year is the company's October takeover by **Piedmont Airlines (1)**; it is acquired for about \$41 million or \$15 per share.

During its last full and independent year, the large regional boosts its passenger traffic by 20.9% as 1,310,000 passengers are boarded.

The integration of the national into the major receives DOT approval in early 1986. Meanwhile, to help meet traffic demand, two additional

F28-4000s are acquired in March and April. On May 1, the merger is finished and Empire is absorbed, losing its separate identity.

EMPIRE AIRWAYS: 2115 Government Way, Coeur d'Alene, Idaho 83814, United States; Phone (208) 667-5400; Fax (208) 667-8787; <http://www.empirecoo.com>; Code EM; Year Founded 1977. The FBO Empire Airways is established at Coeur d'Alene, Idaho, in 1977 by its owner Melvin E. Spelde, who also undertakes nonscheduled and contract passenger and cargo flights to local and regional destinations.

Late in 1983, Spelde creates a commuter division, **Empire Airlines (1)**, to provide scheduled passenger and cargo flights. These regular revenue services by "Idaho's Airline" commence on January 1, 1984, linking its base with Lewiston, Boise, and Seattle. Nonscheduled operations continue apace over the next 11 years.

Airline employment is boosted to 200 in 1994 and a major contract is signed with **Federal Express** for the transport of cargo. As a result, the company withdraws its Twin Otters and BAe jetliners, acquiring in their place a fleet of 28 Cessna 208 Caravan Is.

With the company moving into the freight business, it is not surprising that customer bookings at **Empire Airlines (1)** plunge 41.1% to 23,851 while cargo at Empire Airways climbs 27.7% to 73,000 pounds.

Just after takeoff from Flagstaff, Arizona, on January 11, 1995, a Cessna 208B freighter makes a shallow bank left and crashes into a line of trees near the end of the runway; the pilot is killed.

The sudden impact of the changeover from passenger emphasis to cargo is catastrophic and forces the passenger operation to shut its doors in June. Empire Airways, the parent, continues to operate as a **Federal Express** feeder.

The employee population stands at 140 in 1996 and the fleet, now operated exclusively on behalf of **Federal Express**, comprises 3 Cessna 208A Caravan Is, 32 Cessna 208B Caravan Is, 1 Fairchild F-27F, 2 Fokker F.27-500s, and 8 F.27-600s. A total of 72.26 million pounds of freight are transported, a decline of 7.6% from the previous year.

Service is continued in 1997 and cargo declines to 50.96 million pounds.

Late in 1998, Empire becomes the first **Federal Express** feeder to place a freighter version of the Shorts 360-300 into service. During these 12 months, freight flown increases by 6.3% to 54,377,972 pounds.

Flights continue without incident or headlines in 1999. Freight increases 3.2% to 56.17 million pounds.

A total of 160 workers are employed at the beginning of 2000, a 14.3% increase over the previous 12 months.

While en route on October 9 from Bellingham, Washington, on a **Federal Express (FedEx)** cargo service to Orcas Island Airport at Eastsound, Flight 665, a company Cessna 208B Caravan I encounters deteriorating weather. The single-engine turboprop goes into a steep nose-down attitude and is destroyed as it crashes in wooded terrain near the NE end of Lummi Island, killing its pilot.

EMPIRE AVIATION, LTD.: Murtala Muhammed Airport, Lagos, Nigeria; Year Founded 1999. With shareholding divided between **Arkia Israel Airlines, Ltd.** (30%), **Koor Industries, Ltd.** (30%), and local Nigerian investors (40%), Empire Aviation, Ltd. is set up at Lagos in early January 1999 under the direction of Arkia Executive Vice President Shlomo Hanael.

Outfitted with two of the three de Havilland Canada DHC-7-102s recently discarded by Arkia and obtained under lease, the new entrant inaugurates service at the end of the month from the Nigerian capital to Kano, Port Harcourt, Abuja, and Benin. It is hoped that the operation will be able to help fulfill a demand for air transport not being met by **Nigeria Airways, Ltd.**

Service is maintained during 2000.

EMPIRE STATE AIRLINES: United States (1964–1968). Empire State is founded at Syracuse in the spring of 1964 when its owner, the FBO Flight Service (founded in 1953), elects to offer scheduled passen-

ger and freight service to Binghamton via Ithaca and Elmira. Employing Beech 18s, the company begins daily roundtrip revenue flights on May 11, continuing them without change throughout 1965.

A Gates Learjet 24 is placed on the route as an experiment beginning on March 28, 1966. The aircraft is one of only a handful of its type ever employed by American commuter airlines. Learjet frequencies to New York (LGA) and Washington, D.C. (DCA) are flown in 1967.

In 1968, the CAB grants a Syracuse to Binghamton route to **Mohawk Airlines**, which had abandoned it earlier. The competition forces Empire State to shut its doors on July 13.

EMPRESA AEREA HALCON, S.A.: Aeroparque Jorge Newbery, Av R. Obligado s/n, Buenos Aires, Argentina; Phone (1) 771 7067; Fax (1) 777 4574; <http://www.eaereahalcon.com.ar>; Year Founded 1967. Halcon is established at Buenos Aires in 1967 to provide executive and small group passenger charters to destinations throughout the country that are not served by scheduled airlines. Revenue flights commence with a fleet of small Cessnas.

By 2000, the company operates one each Cessna Citation IV, Aero Commander 681, and Grumman G-1159 Gulfstream IV.

EMPRESA ANDORIENTE, S.A.: Peru (1960–1966). Empresa Andoriente is set up in Lima during November 1960 to serve as an ad hoc charter operator. After a fleet of ex-military Boeing B-17s (converted to civil standard) is assembled, nonscheduled flights to various Andean locations begin in the spring of 1961. The unprofitable airline stops flying in April 1965 and declares bankruptcy in February 1966.

EMPRESA DE AEROTRANSPORTES COSTARRICENSES, S.A. See EDAC (EMPRESA DE AEROTRANSPORTES COSTARRICENSES, S.A.)

EMPRESA DE TRANSPORTES AEREO BRASILEIRO, S.A. See EMPRESA DE TRANSPORTES AEROVIAS BRASIL, S.A.

EMPRESA DE TRANSPORTES AEROVIAS BRASIL, S.A.: Brazil (1942–1961). As one of the links in his South American airline empire, Lowell Yerex, CEO of **TACA (Transportes Aereos Centro Americanos, S.A.)**, creates Aerovias Brazil at Rio de Janeiro on August 26, 1942. Capitalization is divided between Yerex (42%), TACA Vice President Charles E. Matthews (18%), and Brazilians, Roberto and Oscar Taves (40%).

Two Lockheed Model 14 Super Electras are obtained from TACA and, under the unofficial marketing title **Brazilian International Airlines, S.A.**, the carrier begins all-cargo charter services to Miami in October via Uberaba, Goiania, Belem, Paramaribo, Port of Spain, and Ciudad Trujillo. Actual government authority for operations is received on December 29.

Despite the loss of a Super Electra in a February 13, 1943 crash at Lapa, Baia, freight services are maintained, often in cooperation with **NAB (Navegacao Aerea Brasileira, S.A.)**, with which it interchanges both services and equipment. Company headquarters are shifted from Rio to São Paulo in 1944 and new aircraft acquisitions include a pair of Fairchild 71s.

Late that year and into 1945, the fleet is upgraded by the addition of two Lockheed Model 12As and two ex-TACA (**Transportes Aereos Centros Americanos, S.A.**) Douglas DC-2s, which are employed to initiate domestic flights to the inland town of Carolina via Uberaba, Goia-

nia, Anapolis, São Jose de Tocantins, Peixe, Porte Nacional, Pious, Tocantinia, and Pedro Afonso, and then on to Belem.

In 1946, a fleet of 15 ex-military C-47s (converted to DC-3 civil standard) and 4 Curtiss C-46A Commandos is built up. Government route authority is granted in April for services along the Brazilian coastline from Porto Alegre to Belem as complement to the internal network established earlier. Because so many routes spoke out from their city, a group of São Paulo investors purchases all but 6% of the carrier from **TACA (Transportes Aereos Centros Americanos, S.A.)** on January 11, 1947.

The entire domestic route system is now integrated and on August 27 the U.S. CAB issues a permit allowing the previously flown Miami charter flights to become scheduled.

All-cargo flights are also undertaken to Manaus, but these are suspended in November 1948.

In December the carrier assumes grounded NAB's internal routes from Rio de Janeiro to Fortaleza via Belo Horizonte, Lapa, and Petrolina. The NAB spurs from Petrolina to Fortaleza, Parnaíba, and São Luis are also acquired, the latter two being flown via Teresino.

Unable to begin service, **Empresa de Transportes Aereo Brasileiro, S.A.** sells out to Aerovias Brazil in January 1949; among the assets are four more DC-3s. The carrier itself is purchased by the State of São Paulo on February 17, with ownership assigned to the Municipal Bank of São Paulo.

Following total reorganization on September 29, control is assigned, as an intermediate step prior to complete assemblage of a new board of directors, to the bankers, who immediately register the **Brazilian International Airlines, S.A.** moniker as an official alternate title for use on overseas operations.

A DC-3 with 4 crew and 11 passengers is caught in a violent thunderstorm and turbulence and suffers a massive in-flight structural failure that causes it to crash near Ilheus, Brazil, on May 30, 1950 (13 dead).

On August 11 of this transition year, three of six ordered SAAB 90A Scandias are received from Sweden in Aerovias Brazil livery.

The new board of directors takes office on November 3 and on December 21, the three Scandias are transferred to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**, where they join the other three delivered to that carrier earlier.

Three DC-4s are purchased in 1951, including a former **Chicago & Southern Airlines** unit now christened *General San Martin*. These are employed to inaugurate new international services from São Paulo to Buenos Aires and Montevideo. Freight services are enhanced by the delivery of four Curtiss C-46A Commandos.

In 1952, orders are placed for six Convair CV-340s. On October 14, a DC-3 crashes while landing at Porto Alegre (14 dead).

The feeder airline **Aeronorte (Empresa de Transportes Aereos Norte do Brasil, S.A.)** is purchased in 1953. This third-level carrier is, however, allowed to continue operation of its route system in the country's northeast area under its own name.

On May 24, 1954, Linneu Gomes, CEO of the expanding airline **REAL, S.A.**, enters into merger discussion with the Aerovias board. The first CV-340 is delivered on July 8 and on September 10, legal and financial arrangements are completed and Gomes acquires 87% majority shareholding.

In February 1955, Aerovias Brazil becomes a major component in the Consorcio REAL-Aerovias Brasil. This six-year marriage is reviewed under the entry for **REAL, S.A.**

In significant financial distress by early 1961, Gomes separates out Aerovias Brazil from his network on May 2 and sells it to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** in a desperate, but ultimately unsuccessful, effort to avoid bankruptcy. The giant airline quickly absorbs its newest acquisition.

EMPRESA DEAN, S.A. Honduras (1924-1934). Formed late in 1923 by the Tegucigalpa auto dealers Dean and Company, Empresa Dean, which would become the first airline in Central America, now hires an

American pilot named Mayes. The flyer had come to Honduras earlier in the year to start an air transport operation with Dr. T. C. Pounds, who held a government mail contract. The partnership did not take, freeing Mayes to offer his Lincoln Standard to Empresa Dean as its first airliner.

The pioneer inaugurates service in January 1924, flying between the capital and the coast, primarily on behalf of the United Fruit Company subsidiary, the Tela Railroad. When revolution breaks out in February, Mayes flies supplies into Tegucigalpa for foreigners and radio station personnel. Later, the successful revolutionaries take over the Lincoln and use it as an ad hoc bomber against government strongholds.

Empresa Dean continues into the early 1930s, providing local services with a mix of single engine aircraft, including a Bellanca CH-300, a Fokker, and a WACO. American Roy Gordon and Englishman Norman Scholes purchase the enterprise in 1931; C. N. Shelton is named chief pilot, with R. C. Forsblade as second pilot and head mechanic.

On April 24, 1934, the operation is taken over by **TACA (Transportes Aereos Centro Americanos, S.A.)**.

EMPRESA NACIONAL DE TRANSPORT E TRABALHO AEREO, S.A. See **TTA (EMPRESA NACIONAL DE TRANSPORT E TRABALHO AEREO, S.A.)**

EMPRESA TRANSPORTES AEREOS, S.A. See **ETA (EMPRESA TRANSPORTES AEREOS, S.A.)**

EMU AIRWAYS (PTY.), LTD.: 10 Cairns Avenue, Lockley, South Australia, 5032, Australia; Phone 61 (8) 823-43711; Fax 61 (8) 823-43747; <http://www.emuair.mtx.net>; Year Founded 1970. Originally founded as **Emu Air Charters (Pty.), Ltd.** in April 1970, the Lockley-based carrier receives permission in late 1973 to begin scheduled services. After reorganizing and choosing the name Emu Airways, the company's two Cessna 402Cs and one Piper PA-23 Aztec inaugurate flights in February 1974 from Adelaide to Pardana and America River, Kangaroo Island.

Services are maintained throughout the next two decades over the same route and with the same equipment and in 1994-1995 the carrier is scheduling twice-daily roundtrips to Adelaide with a pair of Cessna 402Cs. A desk is established at the General Aviation Terminal in Thomas Street at Adelaide International Airport.

One more Cessna 402C and a Piper PA-31-310 Navajo are acquired in 1996 as the carrier offers 30 weekly return services. A fourth Cessna 402C joins the fleet in 1997, along with another Navajo Chieftain. A homepage is opened on the World Wide Web in October 1998.

Flights continue in 1999 and customer bookings jump 9.3% to 41,000. The company purchases a Beech 1900C on September 4, 2000.

ENIMEX, A.S.: Pae st. 12, Tallin, EE-11414, Estonia; Phone 372 638-0028; Fax 372 221-4571; <http://www.enimex.ee>; Code ENI; Year Founded 1994. Enimex is established at Tallin on September 26, 1994 to operate domestic and regional all-cargo charters. Revenue flights begin with a single Antonov An-72.

During the next 4 years, 4 additional An-72s are acquired, as are 10 motor trucks for ground transport. Different kinds of goods and humanitarian services are provided from not only Estonia but from Belgium, England, Egypt, Germany, the CIS, and points in Africa.

Beginning in 1996 and continuing through 1998, Enimex performs regular charter flights effecting crew changes for the Estonian Shipping Company, A.S. The first regular return charters over the route from Tallinn to Istanbul also begin in 1996.

Beginning in January 1997 and in every year thereafter, the carrier provides lift in support of the annual Paris to Dakar automobile rally. Two An-72s are initially committed, with the number eventually rising to four.

Among the more interesting operations conducted during the remainder of the decade are transport over a Strasbourg to Baku route on behalf of the European Parliament; VIP service for the president of Estonia and

the Estonian ministry of foreign affairs; VIP flights for the president of the Republic of Sudan; services into Bosnia-Herzegovina on behalf of various humanitarian agencies and the UN; contract services for the U.S. embassies in Estonia and Croatia; and charters on behalf of the national football (soccer) teams from Finland, Estonia, Bosnia, and Latvia.

In April 1999, the company fleet is increased by the addition of an An-28. Later in the year, another An-72, the fifth, is placed into service. Enimex also operates 10 trucks on the roads of Western Europe, the Baltic States, and Russia.

ENSOR AIR: Czech Republic (1992–1994). Ensor Air is established at Prague's Airport Ruzyně in 1992 to offer charter and inclusive-tour flights to regional and Mediterranean destinations. Revenue operations begin and continue with a single Tupolev Tu-154B-2.

An Ilyushin Il-62M is acquired in 1993 and destinations visited include Gran Canaria, Izmir Adnan Menderes, and Tunis. Unable to achieve economic viability, the company shuts down in April 1994.

ENTERPRISE, A.S. See CONAIR OF SCANDINAVIA, A.S.

ENTERPRISE AIRLINES: United States (1988–1990). After establishing a plan and raising \$1.2 million, Patrick Sowers forms Enterprise Airlines at Cincinnati in the spring of 1988 to operate "spoke-to-spoke" services to eight destinations: Columbus, Dayton, Baltimore, Milwaukee, Green Bay, Greenville/Spartanburg, and Greensboro/High Point.

Employing one of three used Cessna Citation II business jets, the new regional inaugurates revenue flights, the first to Milwaukee, on May 2 and transports a total of 870 passengers during its first month.

Monthly bookings of primarily corporate executives average 3,000 by year's end. Poor load factors cause service to Buffalo to be dropped just after Christmas.

In February 1989, daily roundtrip flights commence from Louisville's Standiford Airport to Cincinnati and Greensboro, North Carolina.

In April, a nine-month contract is signed with **British Airways, Ltd.** (2) to feed the megacARRIER at Boston and New York (JFK). The arrangement begins in May when, under BA's two-letter designator, the airline provides three daily frequencies between Boston and New York, connecting with Concorde flights. Simultaneously, twice-daily service is introduced from Hartford to Boston under its own designator.

In June, 51% shareholding is sold to Chicago West Pullman. Three additional Citations are acquired during the remainder of the summer to accommodate the BA service and, in anticipation of additional expansion, six landing slots are purchased by lottery at Chicago (ORD).

The BA contract ends in January 1990. In April, Memphis is added as an extension of the route from Cincinnati to Louisville. Ground handling at the Tennessee airport is provided by **United Airlines**.

With fuel prices more than doubling after the August 2 Iraqi invasion of Kuwait, the carrier is forced to drop 28 daily flights from its schedule in November. Unable to maintain viability in a time of recession, the small regional is forced to cease operations on November 14, laying off all employees and returning all of its corporate jetliners.

Enterprise is largely remembered as one of the first U.S. regional airlines to employ regional jetliners; a year later, the carrier's surviving local competitor, **Comair**, will announce its launch of the Canadair Regional Jet, which will further revolutionize short-segment services.

ENTA (EMPRESA NACIONAL DES TRANSPORTES AEREOS, S.A.): Costa Rica (1932–1940). American William "Bill" Schoenfeldt establishes ENTA at San Jose on March 2, 1932 and irregular sight-seeing flights over the capital city and charters to outlying communities are initiated. A government mail contract, which can be interpreted as an 8,000 colones annual subsidy, is received on October 29.

With a Fokker F-VII, scheduled services are inaugurated on April 5, 1933 to such destinations as Liberia, Santa Cruz, Las Canas, Nicoya, Ciudad Quesada, Limon, San Ramon, Buenos Aires, San Isidro de el

General, Puerto Jimenez, and Puerto Cortes. A Fokker F-VIIb/3m is placed in service on May 23.

Services are maintained and the fleet is increased by the addition of a Fokker F-10, a Boeing 40B-4, and the Ford 5-AT-39 in 1934 and 1935. On March 13 of the latter year, Schoenfeldt withdraws from the company and is succeeded by Eric Murray. On May 30, Murray and Roman Macaya, owner of competing **Aerovias Nacionales (Macaya), S.A.**, agree to rationalize their competition by halting unnecessary duplication and offering a unified fare structure.

Following a complete overhaul, the Ford 5-AT-43 Tri-Motor (which had begun operations in 1929 as the *Wichita Falls* of **Southwest Air Fast Express**) is purchased from **American Airlines** on February 15, 1936.

During the spring, a Travel Air 6000 is acquired to replace the single-engine Fokker. The new aircraft is employed to begin international services from San Jose on July 14 to Managua and to David, Panama.

On June 20, 1937, the Travel Air crashes in the mountains and all aboard are lost; the wreckage will not be found until February 9, 1941.

During 1938–1939, both the domestic and regional networks are maintained and the fleet is increased by the addition of four more Travel Airs and, on June 24, 1938, the Ford 5-AT-70. During this time, Eric Murray and Roman Macaya lay plans to sell out to Lowell Yerex's Honduran carrier **TACA (Transportes Aereos Centros Americanos, S.A.)**, which begins flying into San Jose on October 20 of the latter year.

The first outward step is taken on January 16, 1940 when ENTA and **Aerovias Nacionales (Macaya), S.A.** are merged into **Aerovias Nacionales de Costa Rica, S.A.** On June 20, the government cancels the airmail contracts of the Murray–Macaya operation, but on October 20, TACA absorbs the newly amalgamated carrier as **Compania Nacional TACA de Costa Rica, S.A.** and receives the government mail subsidies formerly held by the independents.

EQUATOR AIRLINES, LTD.: P.O. Box 43356, Nairobi, Kenya; Phone 254 (2) 501 319; Fax 254 (2) 506 101; Code 3P; Year Founded 1989. Equator Airlines is organized at Wilson Airport at Nairobi in 1989 from the assets of the former **Pioneer Airlines, Ltd.** Managing Director Capt. Musa H. Bulhan's company prepares to offer service with a fleet that initially comprises 2 Britten-Norman BN-2 Islanders, 4 Cessna 310s, 3 Cessna 402s, 3 Cessna 404 Titans, and 2 Piper PA-31-310 Navajos. Scheduled commuter flights are undertaken linking Nairobi with Mombasa, Malindi, and Lamu.

Three Cessna 310s join the fleet in 1990 followed by three Piper PA-32 Cherokee Sixes and three Piper PA-34 Senecas in 1991.

The Islanders are withdrawn in 1992 and are succeeded by a single Piper PA-31-350 Navajo Chieftain.

The aircraft mix changes again in 1993–1994, this time to include two Senecas, one Cessna 310, one C-402, and three Cherokee Arrows.

Service is maintained in 1995–2000, though by the latter year the fleet includes only two C-402Bs.

EQUATORIAL INTERNATIONAL AIRLINES OF SAO TOME E PRINCIPE, S.A.: São Tome & Principe (1986–1993). Equatorial International is formed in 1986 to succeed the nation's former flag carrier, **Linhas Aereas de São Tome e Principe, S.A.**, which had stopped flying in December 1985. Shareholding in the joint venture is held equally by the São Tome government and International Aircraft Services, based at Shannon, Ireland.

In 1988, Chairman K. R. G. Hellinger and General Manager J. Portugal's single Fokker F.27-400M Friendship maintains services from its São Tome base to Principe and to Libreville, Gabon.

Portugal is succeeded as general manager by Joao E. Dos Reis in 1990 and an Aerospatiale (Nord) 262 joins the fleet, allowing the introduction of a frequency to Douala, Cameroons.

The fleet in 1991 includes a pair of Nord 262s and a Fokker F.27-400M.

The Fokker is retired for economic reasons in 1992 and yet another general manager, Victor Manuel da C. Diogo, is appointed. In 1993, he

oversees a workforce of 55 and briefly returns the Friendship to service. In addition to charter flights, the company continues to operate its previous schedules until October, when the company is reformed as **Air Sao Tome e Principe, S.A.**

ERA AVIATION: 6160 Carl Brady Drive, Anchorage, Alaska 99502, United States; Phone (907) 248-4422; Fax (907) 266-8350; <http://www.era-aviation.com>; Code 7H; Year Founded 1947. Having learned to fly helicopters in Yakima, Washington, in 1947, Carl F. Brady leases a Bell 47A (later purchasing it for \$29,500) and with two partners establishes Economy Pest Control.

In 1948, Brady wins a U.S. Geological Survey contract to assist in the mapping of Alaska. The Bell 47A is transferred to Anchorage, where its owner, having established the territory's first commercial helicopter operation, renames his company Economy Helicopters. It is at this point that Brady, having discovered that his craft's castored wheels work poorly in the new environment, attaches two strips of lumber to them, creating what will come to be known as Tundra Boards. Legend has it that Bell, as a result, now replaces the wheels on its helicopters with skids.

Two years after starting Anchorage flights, Brady accepts his first petroleum-support job in 1950.

Geophysical and mapping flights continue during the next five years and, in 1956, offshore operations are begun on the Kenai Peninsula on behalf of Union Oil and Standard Oil of California.

Unable to purchase the larger Sikorsky S-55s required to fulfill its initial contract from its own resources, Economy enters into a partnership with California-based Rotor Aids. The new ERA Helicopters is able to acquire two S-55s for \$175,000 each. Bell 47J-2s are soon added and Cook Inlet becomes a service area. In 1957–1958, ERA is the first to use Sikorsky S-55s for external loads in Alaska.

In 1959, company headquarters are moved to a new hangar complex at Anchorage's Merrill Field and a satellite base is set up at Kenai in 1962. Two years later, in 1964, the company introduces the first turbine-powered helicopter to fly in Alaska, a Bell 204B. The first S-62 is introduced in Alaska during the following year.

In need of additional capitalization, founder Brady allows ERA to be acquired in 1967 by Houston-based Rowan Drilling, Inc. for \$2.5 million. Rowan Drilling is a major corporation involved in worldwide oil exploration, including recent finds on the North Slope of Alaska. Brady becomes a Rowan board member and executive vice president in charge of ERA Helicopters.

The concern's first Bell 206A JetRanger along with its first turbine-powered Bell 205A-1 are dispatched to Alaska in 1968. The company also sends its first Swearingen Merlin IIA to Anchorage the same year to fly fixed-wing freight services.

In 1969, ERA is the first company to employ a Sikorsky S-64E Sky Crane on a commercial contract; the huge helicopter is able to lift 20,000 pounds.

In 1970, the company begins heavy involvement in offshore support, launching operations into the Gulf of Mexico. The same year it accepts its first contracts to provide foreign services, beginning in Africa and the Mideast. At the same time, a Beech King Air 90 is acquired to provide emergency hospital transfer flights on behalf of Anchorage's Providence Hospital.

The first de Havilland Canada DHC-6-200 Twin Otters arrive in 1971–1973 and begin roundtrip flights to Kenai. A Part 121 charter license is acquired and a Hawker Suddely DH-125 executive jet is employed commercially in Alaska for the first time.

CEO Brady realizes that for its Alaska operation to remain effective ERA will have to introduce instrument flying. A close and lasting relationship is now established with Norway's **Helikopter Service, A.S.**, which initially trains ERA pilots in the new science.

The Fairbanks-based helicopter company, Merrick, Inc., is purchased in 1974; in 1975, Livingston Copters of Juneau is also taken over. During the year and into the decade, the operator pioneers instrument flight

rules (IFR) helicopter operations in Alaska, with minimums of 200 feet and visibility of half a mile. It also advances IFR flight by pioneering the use of airborne radar as an approach aid to ships, while also working on the Alaska Pipeline.

A DHC-6-200 is destroyed in a ground accident at Fairbanks on May 13, 1976.

In 1977, sling-load techniques are developed for use in instrument conditions and the company's Sikorsky S-61s and Bell 212s begin to support drilling rigs in the Gulf of Alaska.

In 1978, a Gulf of Mexico division is established at Lake Charles, Louisiana. Simultaneously, IFR helicopter operations are introduced to the North Slope of Alaska.

The Rowan Corporation subsidiary is now divided into three divisions. ERA Helicopters Alaska Division and ERA Helicopters Gulf Coast Division, provide charter, contract, survey, exploration and energy industry support services within their respective U.S. geographical areas. The third division, Jet Alaska, later takes the name of the corporation and provides fixed-wing charter and contract flights within the state.

In 1979, the company transfers from Merrill Field to Anchorage International Airport and establishes a new aviation center.

The fixed-wing fleet of nine de Havilland Canada DHC-6 Twin Otters and Beech King Air 100s is enhanced in September 1980 when ERA receives government authority to employ its three new Convair CV-580s under Part 121 conditions. The first Aerospatiale AS-350 AStar enters service toward year's end.

In 1981, the FAA approves the introduction of techniques for carrying external helicopter loads in instrument conditions. The first Bell 412 helicopters, with their four-bladed rotor systems, join the helicopter fleet in Alaska.

Beginning in April 1982, company helicopters are based at Bristol Bay to provide a quarter of support services to fish-processing ships anchored offshore. The activity will become an annual event.

On April 8, an ERA helicopter makes the first certified Airborne Radar Approach to an oil platform in the Gulf of Mexico.

In 1983, the company becomes the first air operator to fly a de Havilland DHC-7 in Alaska. A scheduled service is initiated with the new turboprop in May between Anchorage and Valdez.

While landing three passengers and a load of cargo on a ridge near the upper part of a glacier not far from Yakutat on May 20, the pilot of an SA-318C encounters whiteout conditions. The helicopter's right float and main rotor strike the snow-covered surface and the machine rolls over. The aircraft is shut down, all aboard escape, don survival gear, and are rescued the following day after a weather delay.

Just after takeoff from Dutch Harbor on July 11, an AS-350 with one pilot and three passengers encounters engine problems. The helicopter autorotates down to an emergency landing on sloping, mountainous terrain, rolling over and sliding to the bottom of a ravine. All aboard are injured—one seriously—but are quickly rescued.

While 50 helicopters operate in the Gulf of Mexico and 62 in Alaska, the company's fixed-wing division joins the **Alaska Airlines** Commuter Service network as a code-sharing partner on December 31. It begins to undertake scheduled third-level services to destinations in the south and central part of the state under a program later labeled Village Service. Bases are established at Anchorage and Bethel.

Employing 3 Convair CV-580s, 1 DHC-7-103, and 8 DHC-6 Twin Otters, the carrier inaugurates fixed-wing scheduled flights in early 1984 to Chefnak, Chevak, Eek, Goodnews Bay, Hooper Bay, Kenai, Kipnuk, Kongiganak, Kwigillingok, Marshall, Mekoryuk, Newtok, Nightmute, Platinum, Quinhagak, Russian Mission, Scammon Bay, Toksook, Tununak, and Valdez.

As many as four IFR contracts are now being fulfilled by eight helicopters from Dead Horse, on Alaska's North Slope. The company's Alaska-based helicopter fleet is joined by ERA's first AS-332C/Ls and Bell 214STs.

Founder/CEO Brady retires on October 31.

Just after liftoff from a 130-ft. high drilling rig at E Cameron Blk. 2 in the Gulf of Mexico on November 12, a Bell 206L LongRanger with one pilot and four passengers loses all power. Although autorotation is begun, the ditching is hard, causing the aircraft to roll over. All aboard escape, but four are injured, one seriously.

A total of 140,000 passengers are flown on fixed-wing services during the year.

In January 1985, the company is reorganized. David L. Baumeister becomes president/CEO, while Charles W. "Chuck" Johnson, the Gulf Coast Division's manager, becomes executive vice president.

In April, the company acquires a Boeing Vertol Model 234 Commercial Chinook and establishes a new base at St. Paul Island. Under contract to Exxon USA, ERA pilots, trained by the Norwegian operator **Helikopter Service, A.S.**, operates the new helicopter to the Exxon USA rig *Doo Sung* (Korean for *Big Dipper*). Located in the Navarin Basin, a new energy field in the Bering Sea off Alaska, beginning in June.

On July 14, a Soviet Air Force reconnaissance aircraft makes several low-level passes over the *Doo Sung* rig less than half an hour after the Chinook departs for St. Paul Island.

While on final approach to the airport at Gulkana, Alaska, on the night of August 20, a Gates Learjet 24D of the Jet Alaska division, with one pilot and two passengers, descends below minimum altitude and crashes 7.4 mi. N of the runway; there are no survivors.

At the end of the summer, one of the company's Aerospatiale AS-332Ls is also operated on behalf of Arco Alaska.

While on approach to Juneau on an October 22 medevac flight, another Jet Alaska Gates Learjet 24D with two crew and two passengers descends below minimum altitude and crashes into a 3,500-ft. mountain; there are no fatalities.

Offshore support flight hours per month reach a company high of 3,750, while fixed-wing passenger boardings for the year rise 3.6% to 145,000.

The fixed-wing fleet in 1986 includes nine Twin Otters and three CV-580s. Following receipt of three more MBB BO-105 helicopters at its Lake Charles, Louisiana, base, the company, with 23 of the type, is the largest BO-105 operator in the world.

The company's Aviation Services Division begins manufacturing external auxiliary fuel tanks for the Bell 205, 212, and 214 helicopters. Known as Kevlar tanks, those aircraft fitted gain 1.5 hours of additional endurance.

During the summer, the company accepts a contract to fight fires in California with Bell 212s. At the same time, Bell 206B JetRanger sight-seeing tours are first offered in Alaska.

An average of 57 helicopters are now active in offshore support roles. Fixed-wing enplanements for the year climb 4.8% to 151,988.

One Twin Otter is withdrawn in 1987 and replaced by a Beech King Air 200. In February, sight-seeing work begins in Hawaii employing a pair of Aerospatiale AS-355 TwinStars based at Kauai.

During the spring, the Alaska-based ERA Helicopters enters the sight-seeing business. Flights are offered to Norris Glacier employing two Bell 206B JetRangers and a Bell 212.

A total of 1,200 passengers are transported by summer's end on 11 packages from Juneau, Anchorage, Mount McKinley, Valdez, Fairbanks, and Prudhoe Bay. At the same time, seven VFR-equipped Bell 206B JetRangers are contracted to provide support for mineral exploration in Alaska; flights are made on behalf of gold, silver, lead, zinc, and platinum mining. With the downturn in exploratory work on Alaska's North Slope, the company now bases only one Bell 412 at Dead Horse, where it flies under contract to Tennaco, and three Bell 212s at Cook Inlet.

The company's helicopter division expands its base network along the Texas and Louisiana coasts in November when it opens a new facility at Intercoastal City, the third site commissioned in two years.

By year's end, the company has flown over 22,000 incident-free IFR hours. Although several new fixed-wing routes are added, passenger boardings decline by 7.9% to 139,923. Freight, on the other hand, accelerates by 27.5% to 2.88 million pounds.

Airline employment grows by 11.1% in 1988 to 750 and the Alaska-based fixed-wing fleet now includes 8 Twin Otters, 3 CV-580s, and 1 Beech King Air 200. An average of 46 helicopters are now active in off-shore support roles.

While practicing touch-and-go landings from Dillingham Airport on May 24, a Cessna 206 with one pilot, collides with a company AS-350D with one pilot and three passengers that is lifting off; both aircraft crash and all aboard each aircraft are killed.

On June 18, the carrier celebrates its fortieth anniversary and changes its name from ERA Helicopters to ERA Aviation to reflect its diversity.

At the same time, the rotary-wing fleet is increased by the addition of six Aerospatiale AS-355 TwinStars and four AS-350B Ecureuils. Two of the TwinStars are based on Kauai and one on Maui for Hawaiian sight-seeing operations. A Bell 212 is sent to Phoenix, Arizona, under contract to assist in the Salt River hydroelectric project.

During the summer, company helicopters are called upon to fight massive fires, including those consuming over a million acres in Alaska and in Yellowstone National Park. Bell 212s from the Lake Charles, Louisiana, base are sent to participate in suppression of the latter. Three Bell 212s based at a West Coast division in Santa Monica, California, combat blazes in the far west; one of these, based at Chantry Flat in the San Gabriel Mountains is the first helicopter under contract to the U.S. Forest Service for IFR flight. Another aircraft, an AS-355 TwinStar based at Boise, is equipped with an experimental Conair fire-retardant system.

As the Gulf support market improves slightly, the company is able to announce a 7% rate increase on September 1.

In the fall, a specially equipped AS-355 TwinStar begins a six-month experimental emergency medical service (EMS) on behalf of Providence Hospital at Anchorage.

While departing an elevated heli-deck on an offshore production platform in the Gulf of Mexico on November 4, an AS-355F with one pilot and five passengers suffers a complete loss of tail rotor thrust and aircraft control due to a failure of the tail rotor drive shaft. The helicopter crashes into the sea and sinks; four aboard are killed and the two survivors are seriously injured.

Also in Alaska, an AS-332L Super Puma provides 400 hours of support work for Amoco off the North Slope before it is sold to **CHC Canadian Helicopter Corporation, Ltd.** later in the month.

Fixed-wing customer bookings rebound by 17.7% to 164,728 and cargo rises 9.7% to 3,160,000 pounds.

The workforce is increased by 21.1% in 1989 to 809 and the fixed-wing fleet is increased by the addition of another CV-580. The helicopter fleet now includes 86 aircraft. In Alaska, ERA bases 4 AS-350Bs, 1 AS-355, 14 Bell 206Bs, 4 Bell 206Ls, 4 Bell 212s, and 1 Bell 412. Three AS-355s are based in Hawaii and in California there are 1 each AS-355, Bell 206B, and Bell 206L, plus 6 Bell 212s. At Lake Charles, ERA bases 3 AS-355s, 5 Bell 206Bs, 1 Bell 212s, 11 412s, and all 23 of its MBB BO-105s.

Two Aerospatiale AS-350B-1 Ecureuils are delivered to the Anchorage helicopter base in March.

Following the grounding of the tanker *Exxon Valdez* in Prince William Sound on March 25, a total of 17 company helicopters are sent to the *Valdez* to provide assistance. AS 350 AStars, Bell 206L/Bs, a Bell 412, and even an AS-332L Super Puma are employed during the remainder of the month and into April to help chart the spill's spread, fly to and from the stricken ship, and install emergency telecommunications gear.

En route from Anchorage to Valdez on May 6, a Bell 412 crashes into a snowbank some 32 miles SE of the former location; although both occupants escape injury, the \$3.5-million machine must be written off.

While en route back to base from a passenger service to a remote drilling site in rural Alaska on June 15, an AS-350B collides with the rock face of a 3,900-ft. ridge near Puntilla Lake; the pilot is killed and the helicopter is destroyed.

Following the October 17 San Francisco earthquake, California division Bell 206Bs provide power line patrol for PG&E between Monterey

and Santa Cruz while, on behalf of the state's Department of Forestry, a specially equipped JetRanger helps to assess damage in the Santa Cruz region employing a forward-looking, infrared (FLIR) system.

During the year, founder Brady is named "Alaskan of the Year."

Passenger boardings for the Convairs and de Havillands jump 31.4% over these 12 months to 216,107 and the company, with the submergence of **Okanagan Helicopters, Ltd.** into **CHC Canadian Helicopters Corporation, Ltd.**, is now the oldest surviving commercial helicopter operator in the free world.

On average, 37 helicopters are active in offshore support roles in 1990 as the company now employs 95 pilots and 122 mechanics.

To serve the company's southeast Gulf Coast operations, ERA Helicopters opens a new base in Houma, Louisiana, in January.

During the spring, an Aerospatiale AS-332L Super Puma is acquired to support Shell Western Oil Company's Chukchi Sea operations.

Just after landing at Chevak following a March 29 service from Bethel, the right main landing gear of a DHC-6-200 with 2 crew and 13 passengers breaks off, causing the plane to yaw right and veer off the runway; although the turboprop is damaged beyond repair, there are no fatalities.

In August, a company Bell 212 from Santa Maria is one of several private helicopters dispatched to battle a fire near famed Steamboat Rock, outside Yosemite Valley.

Two DHC-8-100s join the fixed-wing fleet, but cannot prevent a 4.4% decline in passenger traffic to 206,598 passengers flown.

In addition to the 2 DHC-8-100s, the fleet in 1991 includes 4 Convair CV-580s, 5 DHC-6-100s, 2 DHC-6-200s, and 1 DHC-6-300s, plus helicopters. Meanwhile, the company is the only offshore-support operator in the Gulf of Mexico to employ an all twin-engine helicopter fleet; in February, orders are placed for 10 MBB BO-105CBSs.

President/CEO Baumeister dies on February 13. He is succeeded by Rowan Companies, Inc. Chairman/CEO C. R. "Bob" Palmer. Wilbur O'Brien, meanwhile, becomes president/chief operating officer of the ERA subsidiary.

On July 1, a letter of intent is signed by parent Rowan Companies, Inc. with **KLM Royal Dutch Airlines, N.V.** for the purchase of a 49% stake in **KLM Helicopters B.V.** The contract takes effect in October, at which point the two helicopter operations commence "close cooperation." On November 1, **KLM Helicopters, B.V.** is renamed **KLM/ERA Helicopters, B.V.** The Dutch line's managing director, Harry Schoevers, assumes the same post with the new joint venture, while ERA Aviation's Services Division General Manager Rudy Park becomes deputy managing director. With the exception of KLM's 7 Sikorsky S-61Ns, the 114 helicopters that the new operation has to draw upon are all medium twin-engine aircraft. Plans are made for KLM/ERA to concentrate on world markets while ERA Aviation flies in North America.

Helicopter sight-seeing operations continue to be coordinated with the Holland America and Princess cruise lines. Flight-seeing trips are made with three AS-355 TwinStars from Juneau to the surrounding Taku, Hole In the Wall, and Dead Branch glaciers, as well as to old Gold Rush sites.

ERA Aviation, the fixed-wing subsidiary, is largely able to avoid being caught up in the fare war that erupts between **Alaska Airlines** and **MarkAir** late in the year. The Rowan subsidiary does, however, become an affiliate in the former's commuter network.

As Alaska's largest Section 401 carrier, the 660-employee ERA transports a total of 208,090 fixed-wing passengers, down 0.7%, and 3,736,829 pounds of mail.

In January 1992, ERA Aviation begins to coordinate its schedule with **Peninsula Airways** and **Reeve Aleutian Airways** so as to achieve a better exchange of passengers with Alaska Airlines jetliners serving Anchorage. It also becomes the **Alaska Airlines** feeder on the busy Anchorage to Kodiak route and quickly sees its market-share on that run increase 30%-60%.

During the second quarter, the helicopter division takes delivery of five new Eurocopter (formerly Aerospatiale) AS-350B-2 Ecureuils,

which replace eight AS-355 TwinStars. The sight-seeing competition with **Temsco Airlines** of Ketchikan now intensifies.

On May 1, the company receives a \$532,000 contract to transport government workers and cargo throughout Alaska for the U.S. Bureau of Land Management.

During the summer, five Bell 212s and 22 pilots, under the direction of veteran ERA helicopter pilot Larry Schmidt, are contracted to fly in Bosnia-Herzegovina on behalf of the UN from a base at Zagreb.

In July, the company contracts with Marathon Petroleum Sakhalin, Ltd., in conjunction with its **KLM/ERA Helicopters, B.V.** affiliate, to provide a pair of Bell 212s and eight crew for oil exploration work off Russia's Sakhalin Island, north of Japan. The work, conducted through October, marks the first time a U.S. helicopter operator has flown U.S.-registered aircraft in Russian territory.

Meanwhile, five ERA helicopters and their crews are sent to Croatia to participate in the UN peacekeeping effort.

Overall passenger boardings not only recover but jump ahead by 33.3% to 277,484.

In 1993, President/CEO O'Brien oversees a workforce of 300 and the operation of 4 CV-580s, 8 DHC-6s, and 1 DHC-8. Service is provided from Bethel and Anchorage to Kenai, Homer, Valdez, Kodiak, Iliamna, and 17 western Alaska villages.

During the first quarter, the company receives a one-year UN contract to operate three Bell 212s and three Bell 206L LongRangers in Croatia.

In July, senior pilot Daniel Hurst retires after 13 years with the company. When President O'Brien retires on December 1, he is succeeded by Charles "Chuck" W. Johnson, the company's longtime executive vice president.

Customer bookings for the year increase 12.4% to 311,858.

Airline employment is increased by 8.8% in 1994 to 822 and the fleet now includes the 4 CV-580s, 11 Twin Otters, and 2 DHC-8-102s, plus 2 Cessna 208 Caravan Is, 1 Beech Super King Air 200, and 1 Learjet 35A.

In July, a 3-year, \$17-million contract is signed with **China Southern Airlines Company, Ltd.**'s helicopter subsidiary **Zhuhai Helicopter Company** to support the Liuhua 11-1 oil field work of Amoco Orient Petroleum Co. at a location 120 mi. SE of Hong Kong. The deal includes use of an ERA helicopter, personnel, and maintenance support.

Following flight-simulator training on the **Helikopter Service, A.S.** simulator in Norway, four Chinese pilots arrive at Anchorage on August 1 to train to ERA's AS-332L Super Puma. On August 7-15, the company's Super Puma with a crew of two Chinese pilots, an ERA pilot, an ERA mechanic, and a Russian navigator, is ferried from Nome to Shenzhen, China via Russia. A second Super Puma will later be sent out to join the Sino-American energy effort.

During late fall, the Santa Maria, California, operation is moved to Reno's Stead Airport to take advantage of expanded business opportunities and to escape the Golden State's air transport and tax problems. In December, three contracts are acquired to provide AS-350 heli-skiing services in Telluride, Colorado, Snowbird, Utah, and Sun Valley, Idaho.

At year's end, negotiations begin for the ERA Aviation subsidiary Rowan Companies to purchase the assets of **Alaska Helicopters**.

At the same time, two Douglas DC-3s are acquired for use with the new nostalgic subsidiary, ERA Classic Airlines. With interiors redone to 1940 vintage and a bright red, white, and black livery, the ancient airliners transport tourists over and around various Alaskan sites. The classic operation will come to generate significant public relations for the company, particularly with visitors from Europe.

Passenger bookings leap ahead by 21.7% to 379,372 while freight jumps 17.6% to 7.82 million FTKs.

Employment at the Airline Division stands at 330 in 1995 and its fleet comprises 9 DHC-6s, 2 DHC-8s, and 4 CV-580s.

The West Coast regional headquarters is moved to Reno, Nevada. On March 9, the *Anchorage Daily News* reports that ERA has developed a new passenger lift for physically challenged visitors wishing to view the state from the air. The portable lift will be available for flight-seeing tours during the summer over Juneau and Denali National Parks.

Restored to their 1940s splendor, the 28-seat DC-3s *Spirit of Alaska* and *Spirit of the North* of ERA Classic Airlines in mid-May inaugurate daily, seasonal, Nostalgic Air Tours over a route that takes them over Mount McKinley, the Alaska Range, Prince William Sound, and the Harding Ice Field. The long Alaskan summer days allow the 50-year-old ex-USAAF C-47s to depart Anchorage at 4 p.m. and 7 p.m. local time.

In late August, a letter of intent is signed for the \$11-million purchase of **Alaska Helicopters**. The assets acquired include 17 Bell helicopters, associated spare parts, and hangar and office space adjacent to ERA's location at Anchorage International Airport. The final agreement is signed in early October.

Meanwhile, in mid-September, the seasonal flights of ERA Classic Airlines end for the year.

Scheduled enplanements this year jump 8% to 408,404.

Although the employee population does not change in **1996**, the fixed-wing fleet is increased by the addition of one each Twin Otter and CV-580. Orders are placed for a pair of Embraer EMB-145 Amazon regional jets.

While en route from an offshore platform at Main Pass 265 in the Gulf of Mexico to another platform 44 miles away at Mobile Bay on February 10, an MBB BO-105 with two passengers disappears. Wreckage is not found for 18 days, at which point a shrimp boat entangles pieces of the helicopter in its net, 6 mi. SW of the aircraft's destination. There are no survivors.

ERA Classic Airlines' two DC-3s return to the air in mid-May for four months of flight-seeing.

For two months during the summer, the company tests the concept of heli-hiking at Alaska's Denali National Park. A pair of two Eurocopter AS-350Bs, stationed just outside the park and contracted with a local guide company, transport tourists into the park, where they undertake 1-5-mile hikes and then are returned by air.

While transporting two passengers on a flight-seeing service over a large mountain range near Cantwell, Alaska, on September 13, the pilot of a Bell 206B JetRanger becomes disoriented during a whiteout and crashes into a 5,300-ft. high ridge. There are no survivors.

Customer bookings accelerate 3.7% to 423,564.

International service begins in May **1997** as the Convairs inaugurate twice-daily return service between Anchorage and Whitehorse, Yukon Territory.

Four months of heli-hiking flights commence at Denali National Park during the month; at the same time, the company's aerial tour of the park is expanded to a full 75 minutes. Simultaneously, the two DC-3s of ERA Classic Airlines resume their four-month summer schedule.

On June 8, twice-daily roundtrips are inaugurated from Anchorage to Seward. In conjunction with Alaska's centennial celebration for the gold rush stampedes, ERA creates a historical tour out of Valdez—that will run for two years—that follows a path of the original gold rushers to a historical location where passengers receive dinner and lecture at a historic lodge.

Having decided to concentrate on its core business of offshore support, Leiden, Netherlands-based Schreiner Aviation Group on September 1 purchases the 51% controlling interest in **KLM ERA Helicopters, B.V.** held by **KLM Royal Dutch Airlines, N.V.** The remaining shares continue to be held by the Rowan Co. via its subsidiary ERA Aviation. The sale includes five Sikorsky S-61Ns and five S-76Bs. Three of the former are purchased back.

One S-61N arrives at the Gulf Coast division headquarters at Lake Charles, Louisiana, in October. In November, the Sikorsky is introduced on offshore transfers in the Gulf of Mexico from a base at Houma, Louisiana, to which it is repositioned.

Fixed-wing passenger boardings at the airline slide 1.6% to 416,857.

The second two Sikorsky S-61Ns arrive in Louisiana in February **1998**. The fixed-wing fleet now includes 5 CV-580s, 10 Twin Otters, 2 Dash-8s, and 2 DC-3s.

During the spring, a new livery is introduced to celebrate the company's fiftieth anniversary.

In mid-May, the two DC-3s of ERA Classic Airlines resume their summer schedule.

On May 30, a Take Flight Alaska Cessna 172RG with two passengers on a flight training sortie from Anchorage, collides with an ERA AS-350B2 with a pilot and four cruise ship passengers who are being transported to the Juneau ice fields, at a point 4 mi. E of Juneau. The helicopter sustains substantial damage to its right doors and fuselage and one passenger is seriously injured. The helicopter is, however, able to make a safe emergency landing at a mine site a half-mile from the impact site. The Cessna, meanwhile, crashes into Gastineau Channel and is destroyed; both men aboard are killed.

Joined by helicopter manufacturing executives, 600 employees, Alaska Governor Tony Knowles, and retired USAF Gen. Chuck Yeager, ERA celebrates its fiftieth anniversary in July. The milestone marks ERA as the oldest continuously operated commercial helicopter operations in the world. Its airline division also celebrates; it is the largest regional carrier in Alaska. Customer bookings during the 12 months climb 2.1% to 425,449.

By the beginning of **1999**, airline employment has grown to 350. ERA is now the third largest helicopter operator in the Gulf of Mexico and the world's fifth largest rotary-wing concern. In January, its offshore support fleet of S-61Ns and S-76A+s is bolstered by the addition of a Eurocopter AS-332L Super Puma. Indeed, the helicopter makes the first commercial flight by its type in the Gulf during the month when it flies a crew-change mission to a Norwegian seismic vessel 190 mi. S of New Orleans.

Another summer of flight-seeing trips are started by the two DC-3s of ERA Classic Airlines in mid-May.

While on final approach to Anchorage on a May 25 service from Kenai, Flight 4857, a DHC-6-300 with two crew and two passengers hits a flock of birds; the aircraft crash-lands two mi. S of the runway. Although no injuries are reported, the plane is badly damaged.

A Bell 206B JetRanger with a pilot and two passengers fails its take-off from the Greens Creek Mine, some 20 mi. S of Juneau, on June 9; the aircraft is badly damaged and 2 of the occupants receive minor injuries.

ERA employs 200 full-time pilots at the beginning of **2000**. Stationed at Juneau International Airport, Alaska, to fly support and charter flights, the northern rotary-wing fleet includes 13 Bell 212s, plus a mix of 36 other helicopters. The fixed-wing fleet at Anchorage now comprises 5 CV-580s, 2 DC-3s, 2 each DHC-6-200s and DHC-8-100s, 5 DHC-6-300s, and 1 Bell 212 helicopter. Also at Anchorage, a Eurocopter BO-105 is assigned to ERA Aviation Lifeguard Alaska and employed for medevac flights. The Gulf Coast division operates a combined fleet of 50 helicopters, including numerous Bell 412s and BO-105s, plus 3 Sikorsky S-61Ns, 3 S-76A++s, and 1 Eurocopter AS-332L2 Super Puma. The latter 7 are capable of visiting energy platforms as much as 200 mi. offshore. Orders are outstanding for a pair of Sikorsky S-76A++s, the first of which is scheduled for delivery in early summer.

This year, the fire season is the worst in the U.S. West since 1994, with over 67,000 fires consuming in excess of 5 million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by mid-summer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires rampaging through New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. ERA is one of 10 civil helicopter operators assigning assets to the blazes; through June, one each of the company's Bell 212s and Bell 412s have helped to contain all but the Viveash blaze.

ERA CLASSIC AIRLINES. See ERA AVIATION

ERICKSON AIR CRANE COMPANY: P.O. Box 3247, 3100 Willow Springs Road, Central Point, Oregon 97502, United States; Phone (503) 664-5544; Fax (503) 664-2312; <http://www.erickson-air->

crane.com; Year Founded 1972. During the 1960s, Maryville, California, sawmill operator and Piper Cub pilot Jack Erickson decides to take helicopter lessons from Wesley Lamatta, who will later establish **Columbia Helicopters** at Aurora, Oregon.

In 1967, Columbia President Lamatta, who had let his dream to start heli-logging be known three years earlier, is approached by representatives of Sikorsky Aircraft Corporation, which sell him an S-61 and recommend the purchase of the Boeing Vertol 107s currently operated by **New York Airways**. The scheduled rotary-wing operator needs to find a buyer for its older aircraft before it can obtain, under an agreement with **Pan American World Airways (1)**, Sikorsky S-61s.

Lamatta approaches **New York Airways** in 1968 and is able to purchase three machines. The first of these enters service and helps the company execute a contract to set power line towers across the Continental Divide in Colorado. These, along with the Sikorsky S-61, are employed in construction work during **1969–1970**.

In 1971, **New York Airways'** last four Boeing Vertol 107s are purchased. With the lift available, Columbia is ready to initiate the first trial use of heli-logging in the U.S. (helicopters had first carried logs in Scotland in 1956). The initial effort is a cooperative venture between Columbia, the U.S. Forest Service, and Erickson Lumber Company of Marysville, California. Joint venture partner Jack Erickson, who will later form a competing operation, pilots one of the 107s on this Lights Creek Timber Sale experiment.

A second heli-logging experiment and the first commercial timber sale occurs in early summer in Plumas National Forest in northern California as part of the Drum Timber Sale. The 107s prove Lamatta's concept is sound and, in the first successful commercial heli-logging operation in the west, harvest 3 million board feet of wood in 12 weeks.

A third commercial timber sale and another study involve the Siskiyou National Forest in Oregon and the Boulder Overstory sale. The research is designed to study the feasibility of helicopter yarding of large Douglas fir trees, as well as the fire hazard potential and aesthetics associated with heli-logging. This operation, netting five million board feet of wood, is completed between August 8 and October 7.

During the early 1970s, Sikorsky Aircraft builds 10 S-64 Sky Cranes, the civilian version of its huge CH-54 military helicopter. When four of these come on the market, Erickson, who continues to operate his own sawmill and a fleet of 18 lumber trucks, determines to acquire them, even though they are completely unproven for heli-logging, and launch his own aerial company.

Erickson Air Crane is set up in 1972 and the four S-64Es, painted bright red, are put to work. Although they can lift 20,000 pounds at a time, their operating costs for logging are completely unknown. They could be an economic failure, but they are not. Over the next two decades, Erickson's four helicopters move between 80 million and 100 million board feet of timber a year, accounting for 75% of the company's business, often from routinely hazardous mountain locations where truck-based logging is not practical or even possible.

Heavy lift external loads and support of the construction industry account for the remainder of Erickson's income. There are three accidents in these years and two fatalities. Although the S-64s deliver much, they require constant maintenance. The aircraft, no longer in production by Sikorsky, require Erickson to redesign and rebuild the aircraft, at each point providing significant additional venture capital and referencing a dozen supplemental type certificates. To enhance S-64 activities, the company patents an antirotation system for underslung loads, which can be guided from a rear-facing third pilot's position.

By 1990, the company's four Sky Cranes have flown a collective 50,000 hrs. in service. In 1991, the first Asian contract is operated. They will grow in number until the economic downturn of 1997–1998 causes many of them to end.

In 1992, Erickson purchases the Sky Crane type certificate from Sikorsky Aircraft. The documents allow him, should he choose, to manufacture the S-64E and S-64F from scratch.

Over the next 6 years, the company's fleet grows by 2 aircraft a year and includes 6 S-64Es and 5 S-64Fs, which will fly an average of 14,000 hours annually. Retained former military CH-53 mechanics labor to keep them aloft; each Sikorsky requires an average of 10 hours of maintenance for every flight hour.

With a range of 1,300 nm., Erickson's helicopters are able to fly to North American locations. A growing number of activities are carried out overseas in the Pacific Rim countries of Malaysia, Papua New Guinea, Indonesia, and Australia. The Sky Cranes are usually sent by ship to remote locations, although, late in the decade, response to urgent need can be met by sending a machine via the Antonov An-124 Ruslan freighters operated by such companies as **Air Foyle, Ltd., HeavyLift Cargo Airlines, Ltd., or Volga-Dnepr Airlines**.

The company continues to engage in construction, external load, fire control, support, heli-logging, and general transportation.

The workforce climbs to 400, including 300 at Central Point. Use of the antirotation system allows the S-64s to stack large high-voltage metal line towers, place large air-conditioning units atop commercial buildings, and transport heavy construction equipment, such as trucks, to remote locations. Individual Sky Cranes are able to move up to six million pounds in a single day. In the U.S., an S-64E places more than 140 wooden H-frame power line towers in a single day. Still, more than 80% of the company's flight hours are involved in heli-logging, using the long-line method first pioneered by Lamatta and Erickson 30 years before.

Much of the emphasis is on environmentally correct selective logging, which harvests a small proportion of the trees in a forest leaving ecosystems intact. Such a process is employed during the summer of 1995 when Sky Cranes harvest the Sugarloaf acreage in southern Oregon on behalf of Boise Cascade. A total of 12-million board feet of timber are selectively harvested from the 700-acre site; however, the operation is made controversial by environmental protesters.

Directly connected with heli-logging is Erickson's involvement in fire control and fire fighting, which will come to comprise 10–12% of the company's business, particularly in the years after 1990. A self-filling heli-tanker version of the Sky Crane is developed that can deliver an average of 1,750 gallons every six minutes when a water source is nearby. In a 12-hr. day, one Sky Crane can deliver 200,000 gallons. Indeed, Erickson comes to operate the only Type I (large) heli-tanker with a modern, Interagency Airtanker Board approved fixed-tank retardant delivery system.

In May 1994, the Los Angeles County Fire Department contracts with Erickson for the deployment of two heli-tankers during the annual fire season, which extends to December (with the driest period ranging from late July through November). In their inaugural season, the aircraft are called to assist fire fighters 66 times.

By 1996, that response number has climbed to 98 outings, with a total of 282 drops completed (423,000 gallons of water). The contract with LACFD becomes an annual arrangement, one that Craig Bonholtzer will profile under the title "Aerial Workhorses" in the November 1998 issue of *Rotor & Wing International*.

Company employees are told in November that a group of investors is negotiating for purchase of the company. Although no news concerning the talks is forthcoming, it is known that, should they be successful in the takeover, the new owners would not move the company from the Central Point area.

Having outgrown the eight-acre site it has been occupying adjacent to Interstate 5 at the Blackwell Hill exit, Erickson, in late January 1997, leases space on the other side of the freeway. The rotor blade repair and overhaul operation is moved into a 20,000-sq.-ft. building previously owned by the Double Dee Lumber Company on Highway 62.

During the fall, the Seli Corporation of Italy is desperately attempting to complete the construction of an underground tunnel that will create a diversion of water from a river into Angat Lake, the principal source of water for the city of Manila. After unanticipated project delays eliminate the option for slower ground transport, Seli turns to Erickson for aerial

support. What follows is one of the more spectacular construction projects undertaken by the S-64s and the largest airlift operations in the history of the Philippine construction industry.

An EAC helicopter harvesting timber in nearby Malaysia is sent to the Philippines while Seli and EAC devise a plan to make up for lost time. When the S-64 reaches the scene, it undertakes three days of service over a distance of 10 km. from the staging point and moves, in 107 lifts, some 2.2-million pounds of required equipment to the operations area. One of the heaviest transfers in this project is that of a tunnel-boring machine; however, two dump trucks, seven generators, and a tractor truck are also flown. The airlift puts the project back on schedule, to the delight of all involved from the contracting Municipal Water and Sewage Service down to and including the pilots of the Sky Crane.

In December, a contract is signed with the Australian Department of Natural Resources and Environment, via **Hevi Lift (Pty.), Ltd.**, for the use of an S-64 during the 1998 fire season. On December 13, an S-64, under contract to the Wohlson Construction Company of Pennsylvania, removes the "Statue Commonwealth" from atop the dome of the state capitol in Harrisburg for gold plating and repairs.

By the end of the year, the company has flown over 95,000 hours (cumulative) since its founding, including over 7,000 hours of fire fighting in just the last seven years.

The Erickson S-64, equipped with its heli-tanker attachment, no sooner reaches the scene in January 1998 than it is called to battle a series of lightning-caused brush fires that threaten the Eastern Highlands in Victoria, Australia. Employing the Wonnangata River for fast water delivery, the S-64 is quickly able to assist ground personnel in containing the running edges of the fires.

Six seven-ton telescope enclosures are placed near the Mt. Wilson Observatory by an S-64E on January 22.

As summer in Australia continues, lightning sparks a fire in the Frankston area north of Melbourne. Because of environmental restrictions against building roads to the fire site, air attack is the only way to contain the potentially devastating blaze. The EAC helicopter is brought to the scene and drops 40,000 gallons of water, successfully checking the leading edge of the fire.

EAC's fire-fighting exploits in the South Pacific continue next in Brunei. As forest fires devastate areas of the country causing an immense cloud of smoke and haze, Bruneian fire authorities request assistance from two heli-tanker S-64s to backup their military Blackhawks. The 2 Sky Cranes fly 488 hrs. (8.13 hrs./day) and drop over 12 million gallons of water on the fires in a 1-month period. Officials estimate that the heli-tankers assist in controlling 95% of the inferno in an adventure described by reporter Andrew Healey in the October 1998 issue of *Helicopter World*.

Developed at the request of Pacific Rim countries where officials want a tool for fighting high-rise fires, a giant water cannon that can shoot a spray of water 175 feet through the air is demonstrated by an Air Crane on April 11. The demonstration, conducted for firefighters, captains, and chiefs from Los Angeles and Orange counties and the U.S. Forest Service is carried out at the Pasadena Rose Bowl.

In the spring, upwards of 277 large fires break out in the area of Chiapas state, Mexico, which is the scene of a continuing armed revolt, plus Oaxaca state. High winds help to spread the blazes and, as in Brunei, immense clouds of smoke from this "Rio Blanco Fire" spread northward. Upon a request from the Mexican government and members of the Texas Congressional delegation, the U.S. Agency for International Development (AID) provides a \$5-million grant to cover the cost of sending American aerial fire-fighting aircraft to southern Mexico.

At the beginning of May, 2 S-64Es begin a 6-month contract to move drilling rigs, supplies, and testing equipment 64 mi. to the new Shahuinto oil field, located 210 mi. NE of Lima, Peru.

In mid-May, SEMARNAP, the Mexican Federal Natural Resources Department, joins AID in contracting with Erickson for the deployment of an S-64 to assist with the fire's suppression. The agencies also sign

agreements with **Rogers Heavy Lift Helicopters** for the use of one of its five Sikorsky CH-54As.

The Erickson S-64 heli-tanker *Georgia Peach* departs Oregon for Mexico on May 16 and, operated by the company's chief pilot, Paul Mavrinac, begins fire-fighting drops three days later from a base at Zanatepec, a city near Mexico's Pacific Coast and close to the borders of Chiapas and Oaxaca states. The *Georgia Peach* continues its Mexican operations for the remainder of the month and into June, also operating near the Rio Blanco River, north of Tehuantepec.

Although as noted Erickson's heli-tankers are involved in a variety of fires in Western states, Mexico, and elsewhere, the company is largely unknown in the Eastern U.S. until now. Fortunately, the Interagency Fire Center, at Boise, Idaho, has, on behalf of the Federal Emergency Management Administration, had the foresight to contract with EAC and several other companies, including **Columbia Helicopters**, for airborne fire-fighting support. Hundreds of lightning strikes ignite the drought-stricken swamplands and underbrush in northern Florida in the days around the end of May. As these wildfires sweep across the state in the weeks after Memorial Day, local firefighters are nearly overwhelmed. Even the Daytona 500 motor race must be cancelled.

By the fourth week of June, 45 of 67 Florida counties are on fire. Fire-fighting aircraft, as well as personnel and equipment, are mobilized from across the U.S. and these volunteers arrive from around the country to assist in combating the inferno engulfing over a third of the state. Two of the company's Sky Cranes are dispatched south and east and are engaged in water drops near Deland and Lake City from June 22. At the same time, another S-64, which has been fighting a series of arson-related fires in the Santa Fe, New Mexico, region is placed on standby, while a fourth Sky Crane is en route to Texas, where it will also remain on standby. The New Mexico machine is in action by month's end.

On July 6, two more Sky Cranes arrive and join the other three aircraft in battling fires in areas around Lake City and Deland, and as far north as the Georgia Border. Refilling their tanks from various shallow "gator ponds" and streams near the fire area, the original 2 EAC aircraft are, over the 25 days of their commitment, able to log over 139 flight hours and drop over 2 million gallons of foam mix and water. The contribution of the three other machines is approximately the same.

On August 1, an S-64E transports an F-16 Fighting Falcon fighter plane from Kingsley Field in Klamath Falls to its final resting place as a static display at the Rogue Valley International Airport at Medford, Oregon.

The gold-plated and repaired "Statue Commonwealth" is successfully replaced atop its original resting-place atop the Capitol Dome at Harrisburg, Pennsylvania, on September 12. Under contract to Tri-State Hydroseeding, which, in turn, has been contracted by the U.S. Army Corps of Engineers, an S-64, during an 11-day operation in October, participates in the revegetation of 235 acres of chemically scorched hillside surrounding an abandoned silver mine near Kingston, Idaho.

Completing the last phase in the \$30-million restoration of the West Baden Springs Hotel, 110 mi. S of Indianapolis, also in October, an S-64 returns four new towers to the spot where the originals had crumbled and had been removed for safety reasons. The event is covered by reporter Frederick Charles in the February 1999 issue of *Life* magazine.

Operations continue apace in 1999, though not without an early tragedy. While heli-logging near Shelton, Washington, on March 2, a crewman is fatally injured when a choker line from an S-64E malfunctions, causing a log to drop on the worker.

On April 27, a contract is received from the Los Angeles Sheriff's Department for the refurbishment of its three Sikorsky SH-3H Sea King helicopters, recently received from the USN.

Company helicopters again fight fires and harvest logs. As has been and will continue to be the case, due to environmental and wildlife regulations, logging in many locales can only be completed during severely regulated monthly "windows."

The U.S. suffers its second driest summer on record, leading to a rash of wildfires in California, eastern Oregon, and other Western states dur-

ing July–September. The fires all spread rapidly, requiring quick responses. With most of the company's helicopters working on logging operations in the Pacific Northwest, all concerned are proud of the rapid response that is made to calls from the U.S. Forest Service (USFS) and state forestry departments. Several fires in California are so large that they must be fought by numerous small helicopters as well as by the larger types. By the end of August, the National Interagency Fire Center reports 23 large fires in California, Idaho, Montana, Nevada, Utah, and Texas on a total of 150,000 acres. They are fought by more than 11,000 firefighters, supported by 849 fire trucks, 102 helicopters, 5 air-tankers, and 2,059 support personnel.

Erickson, meanwhile, has made six S-64s available to the California Department of Forestry and the U.S. Forest Service to handle the blazes in the northern and central portions of the Golden State. In the period after August 24, the 3 Aircranes based at Benton Airport at Redding operate an average of 6 hours a day dumping as much as 19,000 gallons of water every hour on fires burning in the "Shasta-Trinity" and "High" complexes.

Another Aircrane based at Redding under an "exclusive use" contract with the USFS is employed primarily to fight fires in the "High Complex" north of town. Over the weekend of August 28–29, the Helitanker flies 19 hours and drops over 178,000 gallons of water and retardant on the 19 lightning-ignited fires around the complex. Also on August 28, an Aircrane is diverted from logging operations in British Columbia and is assigned to fight the "High Complex" fires north of Redding.

On September 1, another Aircrane begins an "exclusive use" contract with the Los Angeles County Fire Department and is employed to fight fires in southern California under assignment from the fire department.

Also during the summer, Erickson accepts its first contracts to provide fire-fighting coverage in Italy and on the Greek mainland, sending one Aircrane to each country. This is the seventh year that Erickson has operated its fire-fighting S-64s on U.S. and overseas fire suppression assignments, having previously flown them in Canada, Malaysia, Mexico, and Borneo.

On August 18, the concern's Aircrane from Greece becomes the first American fire-fighting aircraft sent to Turkey as part of a disaster relief effort, the "Hellenic Task Force," sent from Greece to provide rapid reaction support in the aftermath of devastating earthquakes.

The S-64 is diverted to deal with a blaze at the Tupras refinery at Izmit, 74 km. E of Istanbul and close to the epicenter of an earthquake that has killed over 2,000 people. Tupras, the largest crude oil processing facility in the country, accounts for 35% of Turkey's oil and natural gas supply. Within three hours of its arrival from its base at Ioannina, near the western coast of Greece, the Aircrane has dropped over 16,000 gallons of AFFF suppressant foam on the areas near the fire. The next day, 37 drops are made, delivering almost 80,000 gallons. On August 20, the fire is deemed under control and the Aircrane is able to depart the scene, returning to its base at Ioannina to immediately begin battling a large wildfire threatening a nearby town.

In December, the Australian Department of Natural Resources again contracts with Erickson and **Hevi Lift (Pty.), Ltd.** for fire suppression assistance. The S-64 operating in Papua New Guinea is barged to Brisbane, from which it flies to Melbourne to operate tanker flights during the summer fire season under the Hevi Lift operator's certificate.

The 2000 fire season is the worst in the U.S. West since 1994, with over 67,000 fires consuming in excess of 5 million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by midsummer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires rampaging through New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. Erickson is one of 10 civil helicopter operators assigning assets to the blazes; through June, company Vertol 107s dump 53,000 gallons of water and 27,000 gallons of retardant on the Cree fire near Riudoso and 146,000 gallons of water on the Cerro Grande fire.

The most severe damage occurs in Montana, where Erickson, under USFS contract like its competitor, **Columbia Helicopters**, assigns a major part of its U.S. based heavy helicopter fleet. Working daily through June, the operator's Aircranes drop thousands of gallons of water and retardant. As the conflagration continues, Erickson also cycles aircraft in and out of heli-logging commitments. Later in the summer, Erickson Aircranes will also fight the California fires once again.

For the second year in a row, Erickson also contracts with the governments of Italy and Greece to provide S-64s to support fire suppression efforts. Two Aircranes are sent to Italy, with one based at Cagliari and the other at Oristano and these begin fighting wildfires on June 19. A third arrives at Cagliari on July 24. A single S-64 is dispatched to an Army base 35 mi. W of Athens, Greece, and on July 8 begins fighting a devastating series of fires off the west coast of the North Aegean island of Samos, as well as in the area around the capital.

On July 15, the Greek Aircrane performs a medevac mission when it lands in a clearing at the 3,500-ft. level of a mountain near Korinthos and rescues a 30-year-old firefighter who had fallen down a cliff. The woman is rushed to a hospital in the city of Patrai, where she recovers.

At the beginning of December, the Australian Department of Natural Resources again contracts with Erickson and **Hevi Lift (Pty.), Ltd.** for S-64 support during the summer fire season. This year, however, the preliminary period is spent somewhat differently.

As the giant helicopter is being barged to Brisbane from Malaysia, a request is received from the Australian Broadcasting Corporation for help in removing and replacing sections of three different television antenna towers. After the S-64 is reassembled at Brisbane on December 17, it is flown to Melbourne's Essendon Airport.

On December 20, the antenna and 2 sections of the first pair of 550-ft., 4-legged lattice broadcast towers are removed. Then five additional steel reinforced sections are brought in and a new HD-TV antenna is placed. The removal of four steel sections and placement of five new reinforced sections of the second broadcast tower is now completed. The helicopter will be back at the end of March to install the HD-TV on the second tower.

On December 28, at Gore Hill, outside Sydney, the top 2 sections of another 500-ft. lattice broadcast tower are removed. Then 5 new sections, each weighing 18,000 pounds, are placed into position. The next day, the HD-TV antenna is put into place. From Sydney, the S-64 returns to Melbourne on December 30, prepared to start fighting fires on New Year's Day.

ERIE AIRWAYS: United States (1980–1982). EA is set up by William "Bill" Connor at Erie, Pennsylvania, in 1980 to provide daily roundtrip passenger flights to Pittsburgh and Detroit. Cessna 402 revenue frequencies are duly inaugurated and are maintained until April 1982.

ERIE ISLE AIRWAYS. See **ISLAND AIR LINES**

ERNIR AIRLINES ISAFERDI, H.F.: Iceland (1991–1997). **Flugfélag Ernir** (established in 1969 as a regional carrier) is reformed in 1991 and renamed Ernir Airlines Isafærði by Hordur Gudmundsson, its owner and managing director. The fleet of one de Havilland Canada DHC-6 Twin Otter, Piper PA-23 Aztec, and Piper PA-31-350 Navajo Chieftain maintain the company's previous routes linking its base at Isafjörður Airport with Siglufjörður, Ólafsfjörður, Grimsey, Husavík, Kopasker, Raufamhöfn, Thorshöfn, Vopnafjörður, Egilsstaðir, and Reykjavík.

Services continue without change in personnel, routes, or equipment during 1992–1994. Unhappily during those years, the company is increasingly unable to maintain its economic viability. It finally is shut down in 1997, with principal owner and Managing Director Gudmundsson becoming a pilot for another airline.

EROS AIRLINES, LTD.: United Kingdom (1962–1964). Capitalized at £20,000, this charter carrier is founded at London (LGW) on March 2, 1963. With three ex-Air Safaris, Ltd. Vickers Vikings, revenue

services are inaugurated on March 31. Inclusive-tours are flown to a variety of Mediterranean and Scandinavian destinations during the first summer. In December, by order of the U.K.'s Air Transport Licensing Board (ATLB), the company is reorganized, capitalization is increased, and two Vikings are retained.

Although a large number of destinations are served in the summer of **1963**, only 10,680 passengers are carried. Only a few additional charters are flown during the winter and early spring of **1964**; unable to obtain an "E" license for its operations, the company is forced to cease operations on April 4.

ESQUIRE AIRWAYS BOTSWANA, LTD. See **DESERT AIRWAYS BOTSWANA, LTD.**

ESSAIR LINES: United States (1939–1946). Founded by World War I pilot and noted barnstormer William "Bill" Long and aeronautical engineer Samuel Marshall at Houston in January **1939** as the nation's premier "feeder" airline, Essair ("Efficiency, Safety, and Speed by Air") receives government authority to inaugurate experimental scheduled local service flights over routes from its base.

The firm begins scheduled passenger and cargo services to Amarillo via Abilene later in the month with a Consolidated Model 20A Fleetster. The company is quickly forced to suspend operations in July because of objections to the CAB by competitor **Braniff Airways** and because the Fleetster, caught up in litigation between the carrier and the Pacific Discount Corp., had its license expire on June 15.

During World War II, founder Long operates pilot training schools for both the USAAF and the RAF. Following a war-delayed hearing, the CAB, on November 5, **1943**, turns aside the Braniff complaint, and authorizes Essair to resume service.

The CAB establishes the new classification of "Feeder Airline" on July 11, **1944** and certifies Essair as the first of the new group. Company executive offices are established at Dallas, while an operating base is set up at Houston (HOU). Buddy Lee Wynn steps forward to become the airline's second major investor.

Equipped with three war surplus Lockheed UC-36As (military Model 10A Electras) converted to civil standard, Essair Lines begins long-delayed, four-stop service from Houston to Amarillo on August 1, **1945**, via Austin, San Angelo, Abilene, and Lubbock. With over 25,000 pilot and engineer graduates from his schools, Long receives the Order of the British Empire (OBE) at war's end.

During the spring of **1946**, Robert J. Smith, **Braniff Airways'** former executive vice president, buys half-interest in the airline from former backer Wynn for \$200,000, much of the money being in the form of a loan from the First National Bank of Dallas. The company is now reorganized with Long becoming board chairman and Smith, president; headquarters are consolidated at Houston (HOU).

Meanwhile, Essair General Manager L. H. Luckey travels to the War Assets Administration depot at Walnut Ridge, Arkansas, and purchases 5 government surplus Douglas C-47s (military DC-3s) for \$20,000 each. New CEO Smith objects to the Essair name and, in a marketing move, Smith and Long change the company's name on May 15 to more accurately reflect its status, becoming **Pioneer Air Lines**.

ESTONIAN AIR, A.S.: Lennujaama Tee 2, Tallinn, EE0011, Estonia; Phone 372 6401101; Fax 372 6313740; <http://www.estonian-air.ee>; Code OV; Year Founded 1991. The newly independent Baltic state acquires the old **Aeroflot Soviet Airlines** division headquartered at Tallinn on December 1, **1991**. With its 10 inherited Tupolev Tu-134As given new livery, General Manager Anti Oidsalu's newly appointed flag carrier, a government-owned joint-stock company, undertakes scheduled passenger and cargo flights, beginning on December 1, to Helsinki, Stockholm, Frankfurt, Moscow, Kiev, Vilnius, Minsk, Kardla, Kuresaare, and Tartu.

In **1992**, the reformed **Aeroflot Russian International Airlines (ARIA)** presents the Estonian government with a \$2-million invoice for

the lost Tallinn division. Flights are started at the end of March to Copenhagen and Budapest.

Abandoning the old Aeroflot reservations system, Estonian Air, in April, joins the BABS system of **British Airways, Ltd. (2)**. Later, the company will employ the services of Amadeus, Galileo, Gabriel, and SABRE.

The company joins IATA in December.

Enplanements for the first full year of service total 159,501 and 327,000 FTKs are flown. Revenues total \$2.9 million, but expenses are higher, leaving an operating loss of \$308,053. The fleet, meanwhile, is increased by 4 Yakovlev Yak-40s and 9 Antonov An-2s.

The workforce totals 676 in **1993** and the fleet includes 11 Tu-134As, 4 Yak-40s, and 12 Antonov An-2s. Flights are started to Amsterdam.

In August, the company joins the IATA Multilateral Interline Agreement. It also becomes a participating member, in November, of the European Billing and Settlement Plans.

Passenger boardings decline by 17.1% to 132,208, but freight inches up 0.9% to 330,000 FTKs. On revenues of \$13.2 million, losses are suffered: \$686,000 (operating) and \$608,000 (net).

The workforce is cut 11.8% in **1994** to 507, but orders are placed for a pair of Boeing 737-5Q8s. Service to Hamburg is introduced.

In April, OV Estonian Air establishes an office in Vilnius.

Customer bookings recover, bouncing upward by 24.6% to 164,593 and cargo is up an equally strong 23.5% to 405,000 FTKs. Although revenues rise 35.9% to \$23.01 million, expenses are up 34% to \$23.61 million. Consequently, a \$596,000 operating loss is taken and the net loss grows to \$713,000. The loss figures are later adjusted upward to read minus \$1.06-million operating and \$1.18-million net.

The employee base is reduced a further 20.1% in **1995** to 405.

An office is opened in Kiev during January. Delivery is taken on July 7 on the carrier's first Western-manufactured aircraft, a B-737-5Q8 chartered from ILFC. In celebration, a new dark blue, light blue, and white livery is introduced and service is inaugurated at the end of the month to London (LGW). Roundtrips to Amsterdam are initiated in November, the same month an office is opened in Minsk.

Plans are announced by the Estonian Privatisation Agency in December to begin company privatization during the next year, with 66% of the shares offered for sale. Applications will be accepted from Western carriers seeking to become strategic partners.

Enplanements move ahead by 5.9% to 174,247 and cargo grows 7.9% to 437,000 FTKs. Revenues advance 17.4% to \$26.23 million, but costs rise 18.1% to \$27.67 million. The operating loss increases to \$1.43 million while the net loss deepens to \$2.21 million.

On February 11, **1996**, the second Boeing arrives. The two "Baby Boeings" now replace Tu-134As on services from Tallin to Amsterdam, Copenhagen, Frankfurt, Hamburg, London, and Stockholm. **SAS (Scandinavian Airlines System)** and a consortium led by **Maersk Air, A.S.** offer bids to take a 49% minority stake in the carrier. The former sees Estonian as a tool with which to integrate the Estonian market into that of the carrier while the latter recommends that Estonian Air become an efficient carrier able to stand on its own feet and link on its own to Maersk's operations.

Not surprisingly, the Estonian government chooses the latter and, when privatization is completed on September 1, the ownership breakdown is **Maersk Air A.S.** group 49%, Estonian government 34%, and the Baltic Cresco investment group of local bankers 15 per cent. Maersk Air executive Borge Thornbeck is seconded over from Copenhagen to become Estonian's new president. Numerous other company officials and experts will also be seconded, including Aarne Tork, who becomes vice president-technical, and Toomas Leis, vice president-commercial.

Two Fokker 50s, leased from **Maersk Air A.S.**, begin revenue flights on October 21 and 27, respectively.

A strategic pact is signed with **Finnair O/Y**; it begins on October 29 with dual-designator flights between Helsinki and Tallinn and with co-operative ground handling in those cities. Ten Maersk pilots arrive in November and December to help train Estonian's new Fokker pilots. At

the same time, representatives from Maersk's unions arrive to help company employees sort themselves into airline unions.

In December, a claims settlement of \$700,000 is reached with **Aeroflot Russian International Airlines (ARIA)** for compensation to the Russian line for losses taken in 1991. Enplanements for the year slip to 172,000 and operating revenues total \$27.2 million.

Airline employment in 1997 stands at 380 and the fleet includes 2 B-737-5Q8s and 2 Fokker 50s. The Russian equipment is mostly grounded.

In January, a \$1.3-million program is completed for the replacement of ground handling equipment taken over from **Aeroflot Soviet Airlines**.

The number of dual-designator Fokker 50 flights between Tallinn and Helsinki in cooperation with **Finnair O/Y** is increased to four per day in February. During the first quarter, the B-737-5Q8s operate nonstop scheduled roundtrips from Tallinn to London, Amsterdam, Hamburg, Copenhagen, Stockholm, Moscow, Kiev, and Minsk. A total of five Estonian Fokker pilots are certified by the end of April, at which point the two Fokkers leased the previous fall return from Eindhoven, The Netherlands, where they have received a new livery from Aviation Cosmetics, B.V.

Also in April, a Fly & Drive product is introduced in cooperation with Avis Rent-a-Car. A full complement of 15 Fokker pilots is ready by June 1, at which point the Danish instructors are able to return home.

During the month, negotiations for code-sharing or other rights are begun with **Transaero Airlines, British Airways, Ltd. (2), KLM (Royal Dutch Airlines, N.V.)** and the government of the Ukraine.

As part of a marketing agreement, **Aeroflot Russian International Airlines (ARIA)** starts dual-designator flights four times a week between Moscow and Tallinn from August 15, operating Tu-134 jets belonging to the Estonian carrier. The Blue Star frequent flyer program is established and the first Estonian Air Open golf tournament is held.

Customer bookings this year jump 19% to 230,514 while cargo is up 22% to 980,000 freight FTKs.

Services continue apace in 1998. During the summer, the company takes delivery of a third B-737-5Q8 from **Maersk Air, A.S.**, placing it into service on routes to Helsinki, Stockholm, and Riga.

A strategic marketing agreement is entered into with **SAS (Scandinavian Airlines System)** on February 12 (effective March 28, 1999). Blue Velvet business-class service is started on May 1, while flights to Riga begin on June 1.

In August, a homepage is opened on the Internet's World Wide Web. B-737-5Q8 roundtrips commence on October 25 between Tallinn and both Oslo and Frankfurt, four times a week. The former is operated in cooperation with **SAS (Scandinavian Airlines System)**. The next day, a Blue Velvet business class lounge is opened at Tallinn Airport. A fifth B-737-5Q8 enters service on October 29.

Customer bookings during the 12 months increase 18% to 282,000, but freight traffic falls 8% to 907,000 FTKs.

The pact with **SAS (Scandinavian Airlines System)** takes effect on March 28, 1999. Estonian now joins the SAS EuroBonus frequent flyer program. The two also offer dual-designator service on their flights from Oslo to Tallinn and Stockholm. Thrice-daily dual-designator roundtrips are started between Tallinn and Copenhagen; weekend flights are also offered.

On July 6, a cooperative agreement is signed with **Air Baltic Corporation, A.S.** Under its terms, the two begin to code-share on their weekly return services from Riga or Tallinn to Kiev and Minsk, thereby boosting the number of flights to the first point to six and the second to five.

With the beginning of the winter schedule on October 31, Estonian begins to code-share on **SAS (Scandinavian Airlines System)** four-times-per-weekday roundtrips from Tallinn to Brussels via Stockholm and Copenhagen. One roundtrip to Belgium is also flown on Saturdays and two on Sundays. Additionally, the number of weekly return services by Estonian from Tallinn to Helsinki is boosted from 13 to 21.

Customer bookings climb 3.2% for the year to 291,000, while cargo jumps 42.6% to 1.29 million FTKs.

Airline employment at the beginning of 2000 stands at 370, an 8.8% increase over the previous 12 months. The carrier now operates to 12 locations: Helsinki, Stockholm, Copenhagen, Hamburg, Oslo, Frankfurt, London (LGW), Kiev, Moscow, Minsk, Vilnius, and, with SAS, to Brussels.

Given a sufficiency of sea traffic, service to Helsinki is terminated for the summer on March 26. On March 29, permission for **Elk Air, A. S.** to operate a competing service from Tallinn to Moscow is withdrawn. In retaliation, Russian aviation authorities order Estonian flights halted, as Elk Air is a partner of **Aeroflot Russian International Airlines (ARIA)**. The dispute over flights to Moscow leads both companies on April 6 to suspend all service to the Russian capital from Tallinn. Following the route cutback, the B-737-5Q8 employed on the route is subleased to **TAROM (Romanian Air Transport-Transporturile Aeriene Romane, S.A.)**.

On May 1, Jorn Eriksen, senior vice president at **Maersk Air, A.S.**, succeeds Borge Thornbech as president; Thornbech returns to an executive position at Maersk. At the same time, the carrier's commercial department is reorganized into two main functions: scheduled services and customer services.

Four-times-a-day Fokker 50 roundtrip service is resumed on May 5 from Tallinn to Moscow.

A code-sharing agreement is signed with **Aerosvit Airlines** on October 1 under which the two will jointly sell tickets for the Tallin to Kiev route that Estonian Air B-737-5Q8s fly thrice weekly.

ESTRELLAS DELAIRE, S.A. de C.V.: Mexico (1992–1996). Estrellas is founded at Mexico City in 1992 as a division of the inter-city bus company, Tres Estrellas del Oro, to offer passenger charter and inclusive-tour flights to regional and international destinations in the Western hemisphere. Revenue operations commence with a single leased Douglas DC-9-14.

No statistics are provided for the privately owned carrier; however, a second DC-9-14 is chartered for the 1993 season. It is returned to its lessor in early 1994. The lone Douglas flies on until the company closes down in 1996.

ETA (EMPRESA TRANSPORTES AEREOS, S.A.): Bolivia (1977–1988). The all-cargo ETA is set up at La Paz in 1977 to provide domestic ad hoc services. Flights commence and continue throughout most of the 1980s with one each Curtiss C-46 Commando and Douglas DC-6, the latter once flown by American Airlines.

The C-46 and its crew are lost in January 1988 when the plane smashes into the mountains near its base. The DC-6 is sold during the summer and the company shuts its doors.

ETAPA (EMPRESA DE TRANSPORTES AEREOS DE PEMBA). See **COMAG, S.A.**

ETEL AERO AIR COMPANY: 18/20-6 B Pochtovaya Street, Moscow, 107082, Russia; Year Founded 1996. EAAC is established at Moscow in 1996 to offer regional passenger charters. Revenue flights begin and continue with a single Yakovlev Yak-40.

ETHIOPIAN AIRLINES, S.C.: Bole International Airport, P.O. Box 1755, Addis Ababa, Ethiopia; Phone 251 (1) 612222; Fax 251 (1) 611 474; <http://www.ethiopian-airline.com>; Code ET; Year Founded 1945. During June 1945, Gen. T. B. Wilson, who is also president of **Transcontinental and Western Air Lines (TWA)**, meets with officials of the government of Ethiopia on behalf of the U.S. State Department. Wilson promises them assistance in their desire to create a national airline and the foundation of this great African carrier can be traced to the agreement the parties sign on August 8. This new Ethiopian Airlines is officially chartered as the result of a December 26 proclamation by

Emperor Haile Selassie. The government provides Birr 2.5 million in capitalization and Minister of Works and Communications Fitawrari Tafasse Habte Mikael is appointed the first chairman.

At the first board meeting on the day of incorporation, TWA is contracted (for \$12,000 per year) to provide technical and managerial support and two Americans are appointed to the EA board: H. H. "Dutch" Holloway, who is named general manager, and secretary/treasurer Henry Bruce "Obie" Obermiller. Two letters of credit, worth £E75,000 each, are issued to TWA for the acquisition of aircraft and the funds are deposited in banks in Cairo and New York.

In January 1946, a fleet of five ex-U.S. Army Air Forces Douglas C-47s (military DC-3s) is assembled from the Allied war surplus depot at Cairo and are flown, en masse, by U.S. Army pilots to Addis Ababa on February 1. A sixth Douglas arrives with the formation and returns the loaned flyers to Egypt the next day. Ethiopian Airlines' first official service is a government charter, operated a few days after the arrival of the C-47s, for the delivery of \$3.7 million in East African currency to Nairobi. Proving and public relations flights commence on March 3.

Regularly scheduled passenger and cargo services commence on April 8. Before a large crowd that includes Emperor Haile Selassie and several of his ministers, the fully loaded premier flight, piloted by Capt. William "Bill" Campbell, with Otha Salyers as copilot and "Pop" Phillips as flight attendant, completes a 150-min. service from Addis Ababa to Cairo via Asmara without incident.

From Addis Ababa, weekly routes are also planned for or stretched to Aden via Djibouti, as well as to Asmara, Khartoum, occasionally via Gambela, and to Cairo via Jeddah. A service is also provided between Asmara and Khartoum. With the British refusing landing rights to the Sudanese capital, EAL must initially fly on to Port Sudan for refueling.

Obie Obermiller succeeds General Manager Holloway in June, while in early July, four more Douglas transports are acquired, one primarily for spare parts.

Flights to Othman, Yemen, begin on July 30.

In September, three C-47s are flown to the U.K. for conversion by Scottish Aviation, Ltd. to DC-3 civil standard at a cost of £8,510 each.

Waldon Gene "Swede" Golien becomes general manager at the beginning of 1947 and another DC-3 arrives in February.

The three converted DC-3s enter service during the second quarter. Flights commence to the communities of Mukalla on June 15 and Sheikh Othman Airport, 15 miles from Aden on July 30.

Expansion continues during the year's second half. Port Sudan joins the network on September 26, followed by Jeddah on September 29 and Lydda on October 15.

In cooperation with **British Overseas Airways Corporation (BOAC)**, charter service begins in November from Aden (terminus of the British service from Cairo) to Bombay via Mesirah Island (a refueling point), Oman, and Karachi.

The DC-3 service to Lydda ends in February 1948, as do the technical stops at Mesirah Island in April. Also in April, twice-weekly flights begin to French Somaliland while the same frequency is introduced to Aden.

A DC-3 is destroyed as the result of a bad landing at Gore on July 22; there are no fatalities. The fuselage becomes the EAL office at the newly opened airfield at that town.

Service over the route from Aden to Bombay via Oman and Karachi is regularly scheduled as of September 14.

On December 20, the British finally allow Khartoum to be added as a regular stop on the route to Cairo.

A survey flight is made in 1949 to West Africa; visits are made from Khartoum to the cities of El Fasher, El Geneina, Fort Lamy, Kano, Lagos, and Accra. Before regular flights can be made to these cities, however, better flight equipment will be required. To that end, TWA now makes arrangement for the acquisition of a pair of Convairliners.

Here it might be noted that, during the years since start-up, domestic services and schedules are very impromptu. Frequencies are initially operated to just Dire Dawa, Gondar, Gore, and Jimma, although others are

often added. Pilots sell tickets and handle passenger baggage and cargo services. Like motor coaches, the aircraft can be enticed to land at small airfields by villagers displaying white cotton shawls as rudimentary windsocks.

Service to Bombay ends in July 1950. Two Convair CV-240s arrive at Addis Ababa on December 29 and are christened *Eagle of Ethiopia* and *Haile Selassie I*.

When the pressurized Convairliners enter service in late January 1951, several problems are discovered. Addis Ababa's runways are not sufficient to handle a fully loaded CV-240 so the 36-passenger planes are often flown 20 km. to Awash, where their heavy load of fuel can be taken aboard. Additionally, JATO (Jet-Assisted Take Off) rockets must be employed to get the Convairs away from the short field at Asmara. This revolutionary takeoff procedure, seldom employed by commercial carriers, will be discontinued after an accident. Despite these problems, CV-240 service is extended to Dhahran and Sharjah on February 20, as well as to Jeddah and Karachi by spring. Flights to India are also resumed.

All of the above DC-3 and CV-240 services are maintained in 1952. In addition, the domestic route network from Addis Ababa now includes stops at Asosa, Assab, Axum, Bahar Dar, Dangilla, Debre Markos, Dembidollo, Dessie, Dire Dawa, Ginnar, Goba, Gondar, Gore, Hosana, Jimma, Maqalle, Mizan Teferi, Negelle, and Soddu. As noted above, many of these points are irregular, both as airports and scheduled destinations.

The Indian service is suspended in February 1953, along with flights to Sharjah. Plans are made to launch flights to Europe the following year. On February 20, Convairliners replace DC-3s on the important Addis Ababa to Cairo route; on March 1, Convair flights are started to Djibouti. The management and support contract with TWA is renewed on July 14. Among the provisions is one declaring an ultimate aim of having the airline run entirely by Ethiopian personnel.

An Addis Ababa-Athens service via Khartoum is launched in April 1954.

Fleet improvement becomes a prime company goal during the middle years of the 1950s and technical examinations are made of many of the prominent airliners of the day.

Early in 1955, Vic Harrell arrives as general manager and he purchases a third CV-240, christened *The Spiritual Power*, from **Sabena Belgian World Airlines, S.A.** for \$560,000. Wadi Halfa becomes a point on the Athens route during the summer.

Flights to Benghazi commence on November 7, 1956. One month later, a \$4-million order is placed for two DC-6Bs, plus spare parts.

In late December, Capt. Alemayehu Abebe is appointed the first Ethiopian aircraft commander, effective on the first day of the new year.

Service to Benghazi is halted on January 15, 1957. Following the award, on the same day, of a \$24-million U.S. Export-Import Bank loan to the government for the modernization of its air transport system, **Trans World Airlines (TWA)** is contracted to train the carrier's pilots, the first of whom is appointed on March 3. On May 23, the first four Ethiopians begin pilot training under the auspices of **Swissair, A.G.**

Meanwhile, in February, EAL authorizes the acquisition a Lockheed L-749 Constellation that had been requested as a gift to the Emperor Haile Selassie, who refuses it.

On behalf of EAL, TWA now leases a Lockheed C-121A that it has refurbished to L-749A civil Constellation standard at a cost of \$1.6 million. Complete with the Lion of Judah painted on its forward fuselage and a removable stateroom for Emperor Haile Selassie, the aircraft is delivered on June 2. Less than six weeks after its acquisition and while en route 49 km. N of Khartoum on July 10, two engines of the refurbished L-749, operating as Flight 3 with 6 crew and 14 passengers, take fire, forcing the Constellation down near Gezira in northern Sudan. Although no injuries are reported, the airliner must be written off. Service to Hodeida and Taiz, in Aden, begins on September 1.

The first Douglas DC-6B arrives in April 1958, followed by two more in each of the succeeding months. Flights to Wadi Halfa end on May 23,

but the Athens run is stretched to Frankfurt on June 18. The Convairs and DC-3s are now assigned completely to domestic or regional services. Among these is the establishment of a new route from Addis Ababa to Nairobi on June 21.

In September, fifth freedom rights are withdrawn to Aden, as is service from Djibouti. Newly completed shops and facilities allow the company to begin its own engine overhaul work at Addis Ababa in November.

EAL joins IATA on January 1, 1959. Two additional DC-6Bs join the fleet and the Convairs are now fully replaced on the services to Cairo and Europe with DC-6Bs; however, the route to Nairobi is closed. Bulchi, Dodollo, Lalibela, and Masawa join the domestic network and a rotary wing fleet is established, comprising eight Bell 47s and a Hiller 360.

Planning for the acquisition of jetliners begins in February 1960 as General Manager Harrell's technical staff begins the consideration of available models. Service to Port Said is suspended on March 1. A pact is signed on June 26 allowing for the initiation of service to Ghana, Guinea, and Liberia.

Flight 372, a DC-3, with 3 crew and 8 passengers, crashes 17 mi. S of Jimma, Ethiopia, on July 15; pilot Thomas P. Hallock is killed in the airline's first fatal accident.

Two Boeing 720-060Bs (B-720Bs) are ordered on August 12 and European frequencies are increased to six per week in September.

On November 8, Addis Ababa to Monrovia DC-6B flights via Accra and Lagos begin, the first East-West African route to be opened since the days of **Imperial Airways, Ltd.**

A nonscheduled DC-3 with 19 passengers crashes S of Sendafar, on September 5, 1961 (5 dead). A DC-3 with 3 crew and 15 passengers fails its climb away from Tippi, on January 13, 1962; 5 people are killed when the plane, originally acquired as a C-47 back in 1946, crashes nearby. These disasters lead the government to order closure of the inadequate airfields at Gore, Tippi, and Mizan Teferi.

Two replacement DC-3s arrive in March, while DC-6B service to Kano, Nigeria, begins on March 18.

General Manager Harrell is succeeded by Jack B. Asire in April.

The first B-720-060B, which will be christened *The Blue Nile*, cannot be delivered before November 30, when improvements at Addis Ababa's Bole Airport will be completed.

Once it is worked up, *The Blue Nile* enters service early on January 15, 1963, over a route from Nairobi to Frankfurt via Addis Ababa, Asmara, Cairo, and Athens. The second B-720-060B, delivered the previous December 3 and christened *The White Nile*, is employed the next day to fly via Asmara, Cairo, and Athens to Madrid.

Beginning on April 1, B-720-060Bs replace DC-6Bs on the routes to Athens and Frankfurt, allowing the carrier to retire two DC-6Bs. The jetliners, also in April, initiate joint service with **Sudan Airways, Ltd.** and **Aden Airways, Ltd.** over a route from Khartoum to Aden, via Asmara.

Flights to Conakry commence on May 8 as the route to Kano is closed. While on a test flight from Addis Ababa on November 30, a DC-3 with three crew, crashes; there are no fatalities reported. A pilot training school is opened at the Addis Ababa base and enplanements for the year are 126,218.

Airline employment in 1964 is 1,670. The fleet now includes 3 DC-6Bs (with 2 more up for sale), 2 B-720-060Bs, 7 DC-3s, and 2 CV-240s.

Early in the year, J. I. Greenwald succeeds General Manager Asire. Additionally, the Ethiopian Air Lines Employees Association (EALEA) is formed and the service to Madrid becomes thrice weekly. Weekly Rome service is inaugurated via Khartoum and Athens.

The airline establishes at its base the largest jet engine overhaul facility on the African continent; contract fan-jet services are also undertaken for other airlines.

An IBM computer system is installed and the new pilot training school, employing Cessna and Piper lightplanes, accepts its first class.

The company also transports 1,100 Ethiopian Army UN peacekeeping soldiers back from the Congo over a 10-day period.

Two Convairs are sold in August to **Central Airlines** for \$350,000. In November, the EALEA flexes its muscles by staging a six-day strike. Service to Monrovia and Hodeida is discontinued late in the fourth quarter.

Passenger boardings jump 21% to 159,769. This is the largest numerical increase in passengers transported in the entire 19-year history of the company. Revenues are \$16.8 million.

Two Piper PA-18s, three Cessna, and one Beech AT-11 lightplanes are acquired for the flight training program early in 1965, along with four more Bell Model 47 helicopters.

In cooperation with United Touring Company, a flight program to sites identified of historic interest begins in February; the four cities chosen under this program are Lalibela, Bahar Dar, Gondar, and Axum. These will be visited by two more DC-3s now received.

Another B-720-060B arrives on September 20 and is christened *Queen of Sheba*. A third weekly jetliner service is launched from the capital to Accra via Nairobi, Entebbe, and Lagos.

The company is reformed in August and its legal name is changed from Ethiopian Air Lines, Ltd. to the more modern **Ethiopian Airlines, S.C.** The change legalizes the creation of unions and the company's ability to negotiate its own loans and other financial arrangements without government interference.

A DC-3 is lost on September 14 as the result of a bad landing at Gore; there are no fatalities.

Additional services are started in the middle of the fourth quarter. On November 2, new frequencies begin to Beirut, while flights to Entebbe are launched on November 5, along with an expanded route to Lagos, from Nairobi and Entebbe.

Enplanements climb again, up 21% to 193,411. Revenues increase 8% to \$18,144,000.

Airline employment stands at 1,720 in 1966 and the fleet comprises 3 B-720-060Bs, 1 Beech 18, 4 Bell Model 47 helicopters, 3 Cessnas, 8 DC-3s, 3 DC-6Bs, and 2 Piper PA-18s. Three more DC-3s are added and two Boeing 707-320Cs are ordered. The B-720-060B *Queen of Sheba* is leased to **Middle East Airlines** for 22 months on January 1. Two weeks later, on January 14, the first pilot class graduates from the EAL flight school.

Toward the end of the first quarter, an agreement is signed with **East African Airways Corporation**. Under its terms, the two carriers begin a pooled daily roundtrip service between Addis Ababa and Nairobi. EAL performs the flights thrice weekly with its B-720-060Bs, while EAAC flies the route twice weekly with de Havilland DH 106 Comet 4s.

Early in the second quarter, the historic sites program is expanded. Again in cooperation with United Touring Company, flights are undertaken for tourists and scholars to Ambo, the Blue Nile Gorge, Debrezeit, the Lake Regions, Asmara, Harar, and Dire Dawa.

The management and support agreement with **Trans World Airlines (TWA)** is renewed on April 20. B-720-060Bs replace DC-6Bs on the Karachi service as of June 30, while on July 6, Delhi replaces Bombay as terminus of the Indian route.

Service to Dar es Salaam begins on November 12.

Enplanements for the year accelerate to 204,000.

H. E. Ato Emanuel Abraham becomes chairman at the beginning of 1967 as Joe Brumit is appointed general manager, the last TWA man to hold that post.

Unheralded but important to the company's future is the establishment of an aviation maintenance technician school.

Following a suspension of Mideast services, due to the outbreak of the Six-Day War on June 5, the airline refuses to land at Cairo when the United Arab Republic reopens that nation's main airport on June 18. Instead, it continues to operate newly opened routes to Bamako, Brazzaville, and Chad in West Africa. Flights are also begun locally to Setit Humera.

The B-720-060B *Queen of Sheba* is returned by MEA in October. On November, she is replaced on the MEA register by the leased B-720-060B *The Blue Nile*. Orders are now placed for two Boeing 707-320C

Stratoliners. Freight traffic grows significantly during the year and passenger boardings advance to 208,317.

The employee population is 2,316 in **1968**. *The Blue Nile* is hit by lightning while landing at Beirut on January 9; although the aircraft must be written off, there are no fatalities. The first B-707-360C is delivered on April 13 and enters service on May 20.

Extensive sales and marketing campaigns are now undertaken and the carrier joins the Societe Internationale de Telecommunications Aeronautiques (SITA) communications network. Originally ordered by **Saturn Airways** but not delivered to it, a B-707-379C arrives in September.

As a way of increasing cargo operations, pallet shipments are introduced on B-707-360C flights to Europe from East Africa. Douala, Paris (ORY), London (LHR), Shanghai, and Beijing join the route network.

Passenger traffic jumps 13% to 245,091 passengers flown and cargo grows by 42.6%; revenues of \$22.1 million are earned.

A B-707-327C is delivered in early **1969** and on March 11 it is badly damaged when bombed while standing empty on the ground at Frankfurt. The unsold DC-6Bs are reinstated during the second quarter and service is started to Ogaden.

A DC-3 freighter is apparently shot down near Suez, Egypt, on April 10. While on the ground at Karachi on June 18, the B-707-360C is the target of bomb throwers; the aircraft is not damaged. Six students and a government official hijack a DC-3, en route from Bahir Dar to Addis Ababa, on August 11, forcing the pilot to land at Khartoum, Sudan, where they seek political asylum; the plane is allowed to return to the Ethiopian capital next day.

A month later, on September 13, a DC-6B, en route from Addis Ababa to Djibouti with 66 passengers, is hijacked by three Eritreans. Members of the Syrian-based Eritrean Liberation Front, they force the aircraft to land at Aden in South Yemen, where an Ethiopian security agent, who is a passenger, shoots one of the air pirates. The next day, the plane departs for Addis Ababa with 64 passengers, the severely wounded hijacker being left behind.

Two more Eritrean Liberation Front members attempt to force the B-707-360C, en route from Madrid to Addis Ababa via Asmara to fly to Aden on December 14. Three Ethiopian security agents capture the pirates, tie them up, and then slit their throats. The Boeing is then diverted to Athens, where the bodies are off-loaded.

A total of 196 million revenue passenger miles are flown during the year.

In **1970**, a DC-3 is retired. The route network now extends 27,000 miles.

A bomb is found aboard a Boeing at Rome on March 2. A DC-6B freighter, with three crew and one passenger, overruns the runway while landing at Asmara on March 12, tearing off its landing gear and catching fire; although the aircraft must be written off, there are no fatalities. Flights to Beirut end on March 31.

The B-707-379C and B-707-360C are both leased out to **Nigeria Airways, Ltd.** in June. The former will return in 13 months, but the latter will be operated by the West African carrier until 1973. The Rome frequency becomes daily on April 1 and, during the summer, domestic DC-3 flights commence to Fincha.

While on a January 22, **1971** domestic flight from Bahir Dar to Gondar, a DC-3 with 23 passengers is taken over by members of the Eritrean Liberation Front and forced to fly to Benghazi, Libya, where Libyan officials promptly arrest the pirates.

Service to Madrid ends on March 30; the next day, four-times-a-week flights begin via Athens or Rome to Paris.

The first Hadj Muslim pilgrimage flights to Mecca commence in May. Douala and Abidjan join the route network on July 1.

The B-707-379C returns from **Nigeria Airways, Ltd.** in September as another DC-3 is acquired for the domestic program.

The long-standing agreement with **Trans World Airlines (TWA)** for the provision of management personnel ends on November 1 as LTC Semret Medhane becomes the carrier's first Ethiopian general manager,

succeeding TWA's Brumit. With Medhane's appointment, the company creates a new position, TWA Senior Advisor, in order that cooperation with the U.S. airline might be maintained.

Changes on the eastern route come in December as Karachi and Delhi are dropped and Bombay returns as the Indian terminus.

Passenger boardings for the year are 262,000 and a \$1.2-million profit is recorded.

The workforce totals 2,547 in **1972**. B-720-060Bs are placed on the Jeddah service on April 1 while Air America, the U.S. CIA proprietary company, provides a DC-6A freighter on June 6.

En route from Asmara to Addis Ababa via Axum, Gondar, and Bahar Dar on September 10, a DC-3 with three crew and eight passengers is lost when it crashes 35 min. after takeoff from Gondar; there are no survivors.

On December 8, seven members of the Eritrean Liberation Front, including two women, attempt to hijack Flight 708, a B-720-060B en route from Addis Ababa to Paris with 94 passengers aboard. Passengers D. and M. MacIntosh attempt to subdue one of the pirates, whereupon, a gun battle breaks out between the hijackers and Ethiopian security police. The exchange results in the deaths of all seven hijackers. Another American customer, meanwhile, tosses a loose grenade to an unoccupied corner of the cabin, where it explodes, damaging an engine and causing structural damage to the fuselage, while wounding eight passengers. Despite the grenade explosion, the aircraft is able to make a safe return to the Ethiopian capital. Enplanements grow 9.5% this year to 289,000 and profits double to \$2.5 million.

The workforce in **1973** totals 2,639 as the B-707-360C returns from **Nigeria Airways, Ltd.**

On February 22, the Ethiopian flag line becomes the first carrier in Africa to serve the People's Republic of China as Addis Ababa to Shanghai via Bombay B-707-379C flights begin.

After a period of suspension, thrice-weekly B-720-060B return flights to London begin on April 1 as an extension of the route from Paris. With the addition of a fourth B-720, a Dash-024B from **Continental Airlines**, the route is operated four times a week.

Service to Shanghai ends on October 31 as the China route is extended to Peking on November 1, the same day DC-6B flights to S'anaa commence.

Freight is up 22% this year and passenger boardings climb 7% to 309,230.

A second Peking service is added in **1974**. Normal flight schedules are resumed on March 13, despite a strike by air traffic controllers at Addis Ababa and Asmara, which ends on April 1. The unprofitable local markets of Hosana, Ghinnir, Mendi, and Nejjo are closed in May.

The carrier's three B-707s are wet-leased during the summer to **Iran Air** and **Saudia (Saudi Arabian Airlines)**.

A DC-3 is damaged beyond repair at Mota on August 5. On September 16, two more B-720-024Bs are purchased from **Continental Airlines**.

A fifth U.S. sales office is opened, the largest number for any African airline. Emperor Haile Selassie is deposed and replaced by a left-wing military government.

A DC-3 with 3 crew and 21 passengers fails its climb away from and crashes near Soddu on November 20 (2 dead).

The last **Trans World Airlines (TWA)** employee attached to the airline, J. A. Tucci, returns to the U.S. by the end of the year. There are no plans to sign the TWA support contract when it comes up for renewal the following year.

Passenger bookings dip 13% to 269,520 and freight drops 7%. Employment stands at 2,733.

The workforce in **1975** is 2,733. During January, the company shares, with **Austrian Airlines, A.G.**, the 1974 "Market Development Award" from *Air Transport World* magazine. Rebel gunfire destroys a DC-3 as it lands at Lalibela on March 14 (one dead).

On April 4, service is inaugurated to Kinshasa, with Kigali joining the route network 11 days later. The Stratoliner leased to **Iran Air** is

returned in May; repainted, it is chartered to **Saudia (Saudi Arabian Airlines)** in June for a year.

The DC-6A provided by Air America fails its takeoff from Addis Ababa on July 31 and is destroyed in the ensuing crash.

Orders are placed for six de Havilland Canada DHC-7s during the fall, but Canadian financing falls through and the request will not be honored.

While trying to maneuver away from the Chote Mountains near Bahar Dar in cloud cover on September 11, a DC-3 clips trees with its tail, loses control, and crashes (one dead).

Director General Tafesee Ayalew now becomes general manager in November.

Freight drops 3.2% and passenger boardings fall 9.3% to 245,000.

The workforce grows 9.8% in 1976 to 3,000.

Taiz service ends on March 1, while frequencies are opened to Abu Dhabi and Bahrain on April 2 and 5, respectively.

One DC-3 catches fire while taxiing at Massawa on April 23 and is burned out. Another DC-3 is further damaged by fire after it suffers an explosion on the ground at Massawa on May 31.

The two Stratoliners chartered to **Saudia (Saudi Arabian Airlines)** are both returned in June. A source of necessary fiscal income, the two Boeings receive maintenance checks and new paint jobs prior to going out again.

One of the B-707s is turned around in July and sent to **Singapore Airlines, Ltd.** for four months. Another passes to **Air Algerie, S.A.** in September.

Having failed its takeoff from Asmara on October 13, a DC-6B crashes and loses its landing gear; the damage requires that the plane be written off.

When the Stratoliner out with **Singapore Airlines, Ltd.** is returned in late October, it is turned around and chartered out to **Air India, Ltd.** in early December.

A DC-3 with three crew and five passengers suffers the collapse of its right main landing gear after landing at Oborso on December 14. The crew retracts the gear and the plane slides along on its belly until it hits an anthill. Although the aircraft is damaged beyond repair, no serious injuries are reported.

Passenger traffic advances 18% to 289,000 and freight is up 13%.

Alyemda Airlines purchases EAL's last operational DC-6B in March 1977. Plans are made to replace the DC-6Bs with B-727-200s.

On April 25, security agents on board shoot and kill two members of the Eritrean Liberation Front during the latter's unsuccessful attempt to divert a DC-3 on a domestic flight from Makele to Gondar to a destination in either the Sudan or Saudi Arabia.

The landing gear of a DC-3 collapses as it lands at Kabri Dar on June 12; although there are no fatalities, the plane must be written off.

En route from Tippi to Jimma in bad weather and low clouds on July 20, a DC-3 freighter with three crew and two passengers crashes into a mountain at Tubo Milkie; there are no survivors.

Although the company has lost a large number of Douglas transports in recent years, it has also replaced many of them, adding 14 to its fleet since early 1975. The Boeing Stratoliner leased-out to **Air Algerie, S.A.** is regained in September. Flights to Kilimanjaro commence on October 1.

Another DC-3 is involved in an accident on November 15 when it hits (and kills) a donkey while taking off from Arba Minch. Just after takeoff from Rome's Fiumicino Airport on November 19, a B-707-360C freighter with three crew and two passengers strikes trees and crashes into the ground 280 m. beyond the end of the runway, exploding in flames; there are no survivors.

Following the significant traffic decline of the previous year, bookings for general manager Ayalew's 2,993-employee company now total only 184,398.

A B-707-351C is leased from **Alyemda Airlines** in January 1978 for six months. Meanwhile, EAL personnel are seconded to Alyemda. The Alyemda Boeing is employed to launch services to Mahe, Seychelles, on April 1.

During the summer, a contract is signed with **Kenya Airways, Ltd.** to maintain the Nairobi-based carrier's fleet. An order, later cancelled, is placed for five de Havilland DHC-6-300 Twin Otters. A DC-6A cargo plane is acquired in August.

A loss of hydraulic pressure causes a DC-3 with 3 crew and 29 passengers to divert to Sodo on October 15; the plane rolls 1,200 m. off the runway, coming to rest in a big ditch. There are no fatalities. Another DC-3 with four crew and nine passengers is destroyed as the result of a bad landing at Degahbur on October 25; again, there are no fatalities.

Twice-weekly service to Bujumbura begins on November 14.

The Boeing Stratoliner that has served with **Air India, Ltd.** for the past several years returns in January 1979.

A DC-3 is lost at Tessenei on January 28. There are no other details concerning the accident. En route southwest of Asmara on February 19, a DC-3 with five passengers is destroyed in midair over Barentu by a bomb; there are no survivors.

Dubai replaces Bahrain on the Mideast route on April 4 while, on May 1, another DC-3 is received to replace that destroyed in February.

The last two DC-6Bs are retired during the summer. The first of two B-727-260As to be delivered on the year arrives at Addis Ababa on September 18 and is christened *Yekatit*. Three days later, yet another DC-3 is damaged beyond repair at Barentu.

The second B-727-260A is delivered on October 17 and is named *Karamara*.

Orders are placed in December for six de Havilland Canada DHC-6-300s and two DHC-7-103s to replace the DC-3s on domestic/regional routes.

Cargo declines 11% this year, but enplanements are up 8% to 200,433.

Flights to Paris and China are suspended on January 25, 1980.

A DC-3 carrying three crew on a training flight is destroyed in a bad landing at Addis Ababa on March 18; there are no fatalities.

Service to Mahe, Seychelles, ends March 31. Service to Beijing is resumed on April 4 and frequencies to Harare, Zimbabwe, commence on August 5.

As of November 2, service is also restarted to Abidjan under a pool agreement with **Air Afrique, S.A.** Capt. Mohammed Ahmed becomes the new general manager at the end of the year, replacing Gen. Ayalew. He is given a mandate to turn the company's finances around by any means possible.

A DC-3 is destroyed on January 11, 1981 as the result of a bad landing at Bahar Dar when its undercarriage collapses. There are no injuries reported.

Service to Monrovia is restored on March 28 and, in May, three more DC-3s are purchased.

Another Douglas transport is involved in a landing accident at Kembolcha on October 7. Repaired and returned to service, it is damaged again at Addis Ababa when rammed by a Mil Mi-24 helicopter.

One more B-727-260A, named *White Nile*, is received, also in December.

Enplanements this year are way up to 380,000.

Two de Havilland Canada DHC-5 Buffalo cargo planes are acquired in early 1982. A contract is signed with **Zambia Airways Corporation** under which the older airline will manage the Zambian line's technical and operations departments for the next three years.

A DC-3 fails its takeoff from Makele on August 24 and, as a result of its forced landing, must be written off.

Customer bookings for the 12-month period dip to 335,000.

In 1983, the domestic network includes 40 markets. International services to southern, western, eastern, and central Africa are expanded as frequencies are increased to Lagos, Kilimanjaro, Dakar, Dar Es Salaam, and Bujumbura.

In April, a \$151-million order is placed for B-767-260ERs.

The Dash 7 order is cancelled. The last two DC-3s to join the company are received during July.

A new route to Brazzaville begins on November 1.

Passenger boardings plunge to 342,667 as the world economic situation hits home. The operating and net profits in the latter year are \$17 million and \$9.3 million, respectively, on revenues of \$120 million.

The workforce is increased by 4.7% in **1984** to 3,174 and the fleet includes 1 B-707-360C, 5 B-720-024/060Bs, 3 B-727-260As, 9 DC-3s, and 2 DHC-5s.

The company inaugurates a trans-Saharan route on April 8 with a B-720B service to Niamey, Bamako, and Dakar.

The first of two B-767-260ERs to be delivered during the year arrives at Addis Ababa on May 23 and a month later is placed in service on the Bombay-Beijing run.

The aircraft are the first of their type to begin flying for any African carrier. Financing for the new equipment is provided by foreign loans. A group of U.S. and European banks led by Bankers Trust provide 85% of the cost for the Boeings, plus spare parts and engines.

Service to Moscow begins in June as an extension of the Addis Ababa-Cairo-Athens route.

Following a hard landing at Addis Ababa, the B-720-060B *The White Nile* is withdrawn and sent to Davis Monthan AFB in the U.S., where it will be broken up.

Passenger boardings accelerate 6.1% this year to 374,500 and cargo surges 31.2% to 29.41 million FTKs. On total revenues of \$141 million, the operating profit rises to \$19 million, but the net falls to \$8.6 million.

Airline employment grows 3.5% in **1985** to 3,285.

Five de Havilland Canada DHC-6-300 Twin Otters are received, beginning in February, for use on domestic services, allowing reduction of DC-3 operations. A loan from Canada's Export Development Corporation covers their acquisition costs.

A B-707-320C freighter is acquired on May 14. Orderly withdrawal of the surviving DC-3s begins during the summer as additional Twin Otters are received.

In October and in cooperation with **Air Afrique, S.A.**, B-767-260ERs are introduced on two of the company's four weekly Addis Ababa-Abidjan flights.

Passenger boardings jump 18.1% to 471,175 and cargo advances 30.4% to 57.78 million FTKs. On revenues of \$163.12 million, expenses climb 14.3% to \$145.41 million, leaving an operating profit of \$17.7 million and a net of \$5.1 million.

The payroll is increased by 4.5% in **1986** to 3,380 and the fleet includes 2 B-767-260ERs, 2 B-707s, 3 B-720Bs, 3 B-727-260As, 9 DC-3s, 5 DHC-6-300s, and 2 DHC-5s. Orders remain outstanding for a B-767-260ER, two B-737-260s, and two ATR42-320s.

During the second quarter, the government opens negotiations with Beijing and Tokyo aimed at providing sixth freedom rights for a route between the Chinese and Japanese capitals; the talks will not be successful.

While on initial approach to Addis Ababa on June 22, a DHC-6-300 with 3 crew and 17 passengers, stalls; the turboprop descends into trees and crashes near Dembidollo. There are no fatalities.

In July, B-720B routes are extended to Luanda via Entebbe and to East Berlin via Khartoum, Cairo, and Athens.

During the year, two B-720Bs are retired and two B-737-260s arrive; automated reservations and check-ins are introduced.

Customer bookings climb 19% to 509,600 and freight rises 32.2% to 78 million FTKs. Revenues advance 24.2% to \$182.4 million and costs are handled, thereby allowing an operating profit of \$19.9 million and net gain of \$5.7 million.

The workforce grows by 2.8% in **1987** to 3,475 and a third B-767-260ER enters service together with another pair of Twin Otters. The new Boeing airliners fly to Europe, Bangkok, and Beijing.

A used B-737-260A with just 1,377 hrs. flying time is delivered on October 29. Passenger boardings ascend 2% to 584,352 and cargo climbs 3.1% to 90.72 million FTKs. Revenues dip 0.3% to \$184.7 million and costs are down 0.8% to \$161.6 million, leaving an operating profit of \$23.1 million. The net gain is \$9.7 million.

The payroll is cut by 0.1% in **1988** to 3,426 as civil war grips the country.

An eagle crashes into the cockpit of a B-727-260A on January 8, breaking the copilot's leg and forcing the plane to make an emergency landing at Khartoum, Sudan.

The fleet is enhanced by the delivery in March of two ATR42-320s.

Ethiopian Air Force MIG-23s attack the airfield at Axum on May 2, destroying one of the carrier's DC-3s.

On September 15, Flight 604 is operating a service via Bahar Dar from Addis Ababa to Asmara with 6 crew and 98 passengers. The B-737-260A, which has been in service for less than a year, ingests part of a flock of pigeons into both engines as it is taking off from its point of origin. Both power plants flame out, forcing the aircraft to make a wheels-up crash landing in open country. A post-crash fire breaks out and 31 aboard die.

The last B-720B, a Dash-024B, is retired on October 19.

Service is initiated to N'Djamena and Lilongwe while ticketing and other office functions are automated. Two Lockheed L-382G Hercules freighters arrive in the fall.

These civil versions of the well-known military transport enter service in November, replacing DC-3Fs on domestic routes and to regional destinations throughout the Mideast and Africa. The two Buffalos also deliver cargo, which now accounts for almost 30% of the airline's total revenues.

After takeoff from Gondar on November 8, the pilot of a DHC-5A Buffalo is unable to retract the main landing gear and loses hydraulic pressure. The aircraft returns to its point of origin and makes an emergency landing, rolling 900 m. before veering off the runway into a ditch. The flyer is killed and the freighter is damaged beyond repair.

Customer bookings rise 8.2% to 687,399 while freight ascends 16.8% to 111.19 million FTKs. Revenues jump 18.9% to \$219.7 million and with costs low again, the operating profit is a record \$29.8 million and net profit is \$7.3 million.

Airline employment is increased by 7.6% in **1989** to 3,452 and the fleet includes 27 aircraft: 3 B-767-260ERs, 1 each B-707-379C and B-707-385C, 2 B-737-260s, 2 B-727-260As, 7 DC-3/C-47s, 2 ATR42-320s, 2 L-382G Hercules, 2 DHC-5A Buffaloes, and 5 DHC-6-300s.

In January, the carrier inaugurates weekly Saturday services from Addis Ababa to Dakar via N'Djamena, Ouagadougou, and Bamako.

A management contract is signed with **Sudan Airways Corporation** in May. When the arrangement comes into effect, Assefa Ambaye, the carrier's former deputy general manager, is made leader of the team sent to Khartoum.

Weekly flights begin in June linking the capital with Conakry, Guinea, while thrice-weekly service is launched to Mogadishu, Somalia. A total of 29 international destinations in Africa are now visited.

Figures are only released for the year's first half and show passenger boardings to be down by 3.4% to 331,829. Freight, however, is up by 6.1% to 62.81 million FTKs and after tax profit climbs to \$12.10 million.

In November, daily frequencies are initiated to Lome, Togo; however, flights to Abidjan are reduced by order of the Ivory Coast government.

The number of workers inches up 1.5% in **1990** to 3,502.

When loud bangs are heard during its takeoff roll, a B-707-379C with four crew aborts its takeoff from Addis Ababa on July 25 on a service to Asmara. The Stratofreighter overruns the runway and smashes into the ground, breaking up. No injuries are reported and the bangs are later determined to have been caused by birdstrikes.

The first of three ordered B-757-260PFs, which can also transport passengers, is received in August. It will be the first of its type to enter service outside of the U.S. New routes are inaugurated from Addis Ababa to Gabarone in Botswana and Windhoek, Namibia, and a route to Mahe, Seychelles, closed years earlier, is reopened. At the same time, flights begin to Riyadh, Saudi Arabia.

The first B-757-260PF is employed, beginning in December, to inaugurate three to five-times-per-week charter flights from Addis Ababa to Amsterdam.

Customer bookings slide another 4.7% on the year to 620,304 and cargo declines 27.1% to 67.32 million FTKs. Net gain, including \$26.31 million from the sale of aircraft, reaches \$41.98 million.

In 1991, two more B-757-260PFs are acquired, one of which is immediately leased to **Air Tanzania Corporation**. Artillery fire claims the B-707-385C on the ground at Asmara on March 29. Service is inaugurated to Muscat on April 1, the same month in which the last DC-3 is scheduled for withdrawal.

In May, a B-757-260PF participates in Operation Solomon, the evacuation of Jewish refugees from Addis Ababa to Tel Aviv. The following month, a B-767-260ER is leased to **Air Tanzania Corporation**. When the old regime collapses during the month, the company suspends all services to Asmara, the capital of Eritrea province.

As the nation's civil war draws to a close, operations must be shifted from Addis Ababa to Nairobi for 15 days. On August 15, thrice-weekly flights to Asmara are resumed.

Having experienced nose gear problems, an L-100-30 with four crew attempts to return to Djibouti, its point of origin, on September 17; unhappily, the Hercules descends too soon and crashes into Mount Arey. There are no survivors.

The last DC-3 is actually retired in October.

On October 16, a Twin Otter en route from Debre Markos to Bahar Dar is hijacked by rebels to Djibouti. On November 25, a B-737-260, flying from Addis Ababa to Dire Dawa, is similarly stolen to the same destination.

Customer bookings decline 4% to 571,599, but cargo increases by 4.5% to 73.28 million FTKs. Revenues total \$310.8 million and expenses are less. As a result, there are profits: \$14.6 million (operating) and \$9.08 million (net).

Terrorists and rebels plague the airline with hijackings in 1992. The first incident occurs on February 5 when, en route from Addis Ababa to Bahar Dar, a Twin Otter with 18 passengers is diverted to Djibouti. During the month, the B-767-260A chartered to **Air Tanzania Corporation** is returned.

A B-727-260A with 115 passengers and en route from Dire Dawa to Addis Ababa on April 1 is pirated to Yemen. On April 12, rebels attempt to capture the second B-727-260A on the ground at Addis Ababa as it prepares to depart for Nairobi; the pirates surrender before takeoff.

At this point, authorities begin to impose strict security measures at Addis Ababa Airport. Scanning equipment is installed, body searches are carried out, and those accompanying the infirm or very young into the departure area must have special passes.

Also in April, another B-757-260PF is delivered and a new L-100-30 Hercules freighter is leased from the Ministry of Transport.

In May, the technical division of **SAS (Scandinavian Airline System)** is retained to provide advice concerning a new hangar and maintenance facility to be built at Addis Ababa Airport with funds provided by the African Development Bank.

Two B-767-260s are returned to Shannonair Leasing in early July.

On July 22, two soldiers take over the new B-757-260 passenger plane on a flight between Dire Dawa and Addis Ababa and demand that it be flown to Djibouti, where they surrender.

The longest hijack of the year occurs on August 28 when 5 terrorists take over a B-727-260A with 94 passengers as it departs Addis Ababa. The plane is flown to Aden, where landing permission is denied. Over the next two days, it travels via Cairo to Rome, where the pirates surrender. The last diversion of the year happens on September 4 when the second B-727-260A is taken over by two men and a woman who escape with it to Djibouti.

Another B-757-260PF passenger plane is delivered in November, allowing retirement of the B-727-260As.

Passenger boardings ascend 35.7% to 776,399, while freight climbs 41.3% to 94 million FTKs. Revenues swell 2.7% to \$291.4 million and operating profit doubles to \$30.2 million. The net profit is \$14.7 million.

Airline employment at Defense Minister/Chairman Steye Abraha and General Manager Capt. Zeleke Demissie's carrier totals 3,306 in 1993. The fleet now includes 4 B-757-260PFs, 1 B-727-260A, 5 DHC-6-300s, 1 B-767-260ERs, 2 each ATR42-320 and L-382G Hercules, and 1 each B-707-327C, B-737-260, and DHC-5A Buffalo.

The spate of hijackings resume on March 12 as an ATR42-320 with 15 passengers is taken over on a flight from Gambela to Addis Ababa; at the capital, the passengers are allowed off and negotiations are undertaken. On March 18, troops storm the turboprop, killing four of the six pirates.

On June 1, a new twice-weekly service is inaugurated to Johannesburg, followed eight days later by a new route to Karachi.

A cooperative agreement is signed with **Ghana Airways Corporation** in July.

Following delivery of a B-757-260PF in October, the last B-727-260 is retired.

A block-space agreement is entered into with **Air India, Ltd.** in November covering routes from Bombay to Beijing.

Customer bookings for the year plunge to 378,019 and only 45.73 million FTKs are flown. Still, profits are made: \$25 million (operating) and \$44 million (net).

The workforce is cut to 3,267 in 1994. While en route from Dakar to the Malian capital of Bamako on January 24, Flight 972, a B-757-260 with 11 crew and 32 passengers is hijacked by a lone pirate and diverted to Rome, where he surrenders.

In March, a government task force is established as a board of control (directors). Led by Minister/Chairman Abraha, it severely criticizes the airline's alleged inefficiencies and recommends a radical restructuring. Many of the airline's top 37 managers sign a letter rebutting the critique—and all are summarily fired. General Manager Demissie, who did not sign, is also removed. The effect of the wholesale housecleaning on the carrier is complicated by the appointment of a whole new management team of airline outsiders without practical experience, headed by Dr. Ahmed Kellow, an expatriate business professor at the University of Wales.

In July, Capt. Demissie is released from house arrest and is allowed to travel abroad. Meanwhile, Dr. Kellow creates a new five-year plan.

During the year, a number of pilots resign.

Enplanements decline by 4.8% to 716,361 while cargo increases by 19.3% to 110.3 million FTKs. Revenues plunge to \$226.9 million and expenses drop to \$207.2 million. As a result, the operating profit falls to \$19.7 million and net gain drops to \$8.6 million. A correction in reporting will later show an operating gain of \$28,988,000 and a net profit of \$19,764,000.

Employment stands at 3,219 in 1995.

As the result of a failed assassination attempt against the president of Egypt during a visit to Addis Ababa in September, the Ethiopian government determines that Sudan is behind the plot. Consequently, all services to and from that nation by Ethiopian Airlines are suspended, while **Sudan Airways Company, Ltd.** is banned.

While on descent to Addis Ababa on an October 22 service from Dessie, Flight 173, a DHC-6-300 with 3 crew and 17 passengers, collides with a large white-backed vulture that crashes through the cockpit windshields. An emergency is declared and the Twin Otter makes an emergency descent and forced landing 300 m. short of the runway at Bole, where the plane hits a depression and ground loops. No serious injuries are reported.

An order for five Fokker 50s is placed, also in October.

The recovery coming to the world airline industry is realized by this carrier as well. Passenger bookings increase 4.7% to 749,931 while freight climbs 3.9% to 114.7 million FTKs. Operating revenues are boosted 10.2% to \$273,844,000 but expenses rise only 7.6%, to \$236,234,000. The operating profit jumps to \$37.61 million and net income reaches \$25.51 million. These figures are later adjusted to \$41.85 million (operating) and \$13.08 million (net).

Airline employment is increased by 5.1% in 1996 to 3,418. The fleet now includes 4 DHC-6-300s, 5 B-757-260PFs, 1 B-767-260ER, 2 each ATR42-320s and L-382G Hercules freighters, and 1 each B-707-327C, B-737-260 and DHC-5A Buffalo.

Orders are outstanding for 5 Fokker 50s. A third ATR42-320 is delivered in July, acquired from **CSA Czech Airlines**. It is employed to

increase frequencies of domestic services. Also in July, a B-767-3P6ER is chartered from Bahrain-based **Gulf Air Company, Ltd.** A new \$7-million computer system is installed. The first Fokker 50 is delivered on October 2. When U.S. Secretary of State Warren Christopher visits Addis Ababa during the month, he is shown the new computer system.

The second mysterious airline tragedy of the year—after the crash of TWA Flight 800 in July—occurs on November 23. Two men and one woman wielding guns hijack, for unknown reasons, Flight 961 over East Africa. The B-767-260ER, piloted by Capt. Leul Abate and en route from Addis Ababa to Abidjan with 11 other crew and 163 passengers, is forced to fly out into the Indian Ocean in the general direction of Madagascar.

The jetliner runs out of fuel and crashes into the sea 500 yards off Mitsamouli, Grand Comore, Comoro Islands, narrowly missing a resort hotel. Fifty-two people, including the aircraft commander, survive the bizarre disaster, which is caught on video from the beach by a South African tourist with a camcorder. Some vacationers and local citizens valiantly rush to rescue survivors and the scene draws both crowds and, within hours, scavengers. As the injured are assisted and dead recovered, the video makes its way onto television news broadcasts around the world. Among those lost is the internationally known cameraman Mohammed Amin and Brian Titley, the editor of EAL's in-flight magazine *Salamta*.

Traffic is mixed as enplanements dip 2.8% to 730,460 and cargo climbs 11.5% to 112.03 million FTKs. Operating income falls 3.5% to \$260.84 million while costs move up 3% to \$235.22 million. The operating profit slips to \$25.62 million while net gain declines to \$7.32 million.

The workforce is reduced by 3.2% in **1997** to 3,309. Traffic figures are only reported through the first half of the year. These show enplanements up 3.1% to 365,471.

Without stating its reason, on July 13 the board of directors appoints a new top management team, led by Bisrat Nigatu, a 24-year veteran of the airline. Two of the four new top managers are women.

Twice-weekly roundtrips to Kuwait City commence on October 28. The inaugural flight carries national athletic heroes Derartu Tultu and Haile Gebreselassie, as well as a traditional musical troupe from the Hager Fiker Theater, scheduled to stage shows at an Ethiopian Cultural Week in Kuwait.

Full year operating revenues are \$228.6 million.

Employment falls to 3,000 in **1998**. In addition to some 40 domestic markets, the company, also visits 30 other African destinations, as well as Abu Dhabi, Aden, Athens, Berlin, Bombay, Beijing, Frankfurt, Jeddah, London, Moscow, and Rome.

The five Fokker 50s now arrive and are placed on internal and regional routes.

A strong new security system is put in place to guard against sky-jackings.

During the spring, commercial pacts, short of dual-designator, are signed with **American Airlines**, **Delta Air Lines**, and **Trans World Airlines (TWA)**. Flights are cancelled to Asmara, Brazzaville, Kinshasa, and Bujumbura due to security concerns.

A long-simmering border dispute between Ethiopia and Eritrea breaks out into full-scale war on May 6. Hundreds will be killed in ground and air fighting over the next month or so.

The wing of an Ethiopian B-767-260ER clips that of an **EgyptAir, S.A.E.** aircraft while taxiing at Cairo on May 12; the wide-body, nevertheless, takes off for Addis Ababa. After 20 minutes, it is determined that the damage is too significant to continue and the Boeing returns to Cairo, where it makes a safe emergency landing.

Thrice-weekly roundtrips commence in June between Addis Ababa and Washington, D.C. (IAD) and New York (JFK) employing a leased B-767-3Q8.

The carrier's agreement to lease an A340-300 from Airbus Industrie is cancelled on August 17 because the manufacturer-lessor has not been able to deliver the aircraft on time.

In the fall, work begins on a \$115-million expansion of the runway at Addis Ababa's Bole International Airport, together with the construction of a new terminal. Funding has been provided by international loans and the Ethiopian government.

Ethiopian authorities continue to believe the men who carried out an attack against Egyptian President Mubarak in Addis Ababa in 1995 are harbored in Sudan. Still, Ethiopian Airlines is permitted to resume flights to Khartoum on October 23.

Passenger boardings during the 12 months accelerate by 20.5% to 974,000, while freight traffic is up 16.6% to 145.19 million FTKs. Revenues dip 2.3% to \$250.41 million, while costs slide 5.2% to \$236.6 million. The operating profit doubles to \$13.81 million, while net gain does the same, hitting \$6.38 million.

Airline employment is increased by 2.4% in **1999** to 3,594.

Sales Manager Yoseph Wolde-Yohannes proudly informs the press at Addis Ababa on January 24 that the new routes the airline has opened over the past 15 months have all proven profitable. These include the services to Lusaka, Tel Aviv, Beirut, Khartoum, Muscat, Washington, D.C. (IAD), and New York (JFK). On the other hand, the executive must also report the necessity of temporarily suspending flights from the Ethiopian capital to Kuwait City due to lack of patronage.

Leaders of East Africa end their 2½-year embargo of Burundi on January 26. Ethiopian, which has honored the sanctions since their imposition in July 1996, resumes flights to Bujumbura on February 1. As the war with Eritrea intensifies, Ethiopian Airlines, on February 6, temporarily moves its principal hub from Addis Ababa to Nairobi, Kenya. Commercial air traffic in the area of the Badme front is not possible, as Ethiopian defense forces are fully engaged in efforts to beat back an Eritrean advance. The airline is able to recommence normal scheduled operations from Addis Ababa airport on March 1.

General Manager Nigatu of Ethiopian and his counterpart, E. L. Quarkey of **Ghana Airways Corporation** sign a cooperative agreement in Addis Ababa on March 18. Under its terms, the two will implement schedule harmonization and joint utilization of aircraft for the development and better utilization of new routes and markets. Ethiopian will also provide its maintenance and training facilities to GAC.

On March 29, the company launches a frequent flyer program called Shebamiles for its international services. Speaking before an annual marketing meeting at Addis Ababa on May 21, EAL Sales Director Wolde-Yohanes indicates that the company is planning to triple its service over the next decade and to open direct routes to such northern European cities as Amsterdam, Copenhagen, and Oslo.

New twice weekly B-767-260ER return service is introduced on November 1 from Addis Ababa to both Copenhagen and Maputo. A fourth weekly roundtrip is added on December 2 from Addis Ababa to Newark and Washington, D.C. (IAD).

Enplanements for the year total 603,079.

Airline employment at the beginning of **2000** stands at 3,700, a 2.9% increase over the previous 12 months.

On March 28, the company begins to share the Addis Ababa to Accra route thrice weekly with **Ghana Airways, Ltd.** Ghana handles marketing while Ethiopian provides the lift.

With the outbreak of a new war with Eritrea on May 12, service is suspended to Gondar and Lalibela; when the Ethiopian government declares the contest finished on June 5, scheduled flights are resumed.

During the summer, some regional newspapers carry stories suggesting that the airline has dropped its quarter-century-old lion logo. On September 28, the airline finally issues an official news release denying any change.

A B-737-25C is purchased from **Xiamen Airlines** on December 29.

EUGENE AVIATION SERVICE: United States (1966–1967). This Eugene, Oregon-based FBO enters into a contract with **West Coast Airlines** in the summer of **1966** to offer third-level commuter service from Roseburg. Equipped with a Piper PA-23 Aztec, EAS inaugurates scheduled revenue services on September 15, continuing them until August

1967 when West Coast takes the route over and operates it with Piper PA-31-310 Navajos.

EURAFRIC, S.A. See **AER TURAS TEORANTA, LTD.**

EURALAIR INTERNATIONAL, S.A.: Aéroport du Bourget, Le Bourget, F-93350, France; Phone 33 (1) 49 34 62 00; Fax 34 (1) 49 34 63 00; <http://www.euralair.com>; Code RN; Year Founded 1964. This air taxi and executive charter operator is established at Le Bourget Airport at Paris in October 1964 with Alexandre Couvelaire as chairman/president. Later in the decade, the company begins to fly international passenger and cargo charter flights complementing those flown within France.

By the late 1970s, the company's fleet comprises 2 Sud-Est SE-210 Caravelles, 4 Gates Learjet 24s, 1 Dassault Falcon 20, 1 Falcon 10, 2 Cessna Citation 500s, 1 Beech King Air 90, and 1 Bell 206B JetRanger helicopter.

During the early 1980s, the company begins to fly contract services for **Air Charter, S.A.**, the **Air France** subsidiary. In 1984–1985, the fleet includes 3 Boeing 737-228s, 5 Learjet 24s, the 2 Citations, and various smaller propeller types.

Revenue passenger kilometers (RPKs) flown reach 353.8 million by 1986.

RPKs zoom upward for the 180-employee airline in 1987, rising to 395.7 million. That figure jumps 14.4% in 1988 to 452.6 million as a total of 403,800 passengers are transported. The fleet in 1989 includes 6 B-737-228s, 7 Cessna Citations, 4 Dassault Falcon 20s, and 2 British Aerospace BAe 146-200QTs. Passenger boardings jump 29% to 520,000.

Company employment is increased by 14.3% in 1990 to 400.

Permission is received late in the year to inaugurate scheduled services to Madrid.

Customer bookings ascend another 24.6% to 648,100.

Unfortunately, due to recession and the effects of the Gulf conflict, 1991 is not a good year and the scheduled flights are left unstarted.

Twenty-eight new employees are hired in 1992, as the scheduled service is allowed to commence between Paris (ORY) and Madrid. In addition, the 35% shareholding held in the French regional **Air Littoral, S.A.** by **KLM (Royal Dutch Airlines, N.V.)** is acquired.

Still, enplanements fall to 630,000.

In 1993, President Couvelaire oversees a workforce of 369, down 13% from the previous year. Markets are served all around southern Europe and the fleet comprises 5 B-737-228s, 2 B-737-53Cs, 2 B-727-228s, 2 British Aerospace BAe 146-200QTs, 2 Cessna Citation Is, 2 Citation Vs, and 4 Falcon 20s. The company awaits delivery of its order for three Airbus Industrie A321-100s and three A330-320s plus two Boeing 777s.

Passenger boardings rise 8.2% to 689,918.

Thirty years old in 1994, Euralair celebrates by increasing its fleet of B-737-53Cs by one and trading its pair of B-727-228s in on three B-737-222s. One of the B-737-53Cs is wet-leased to the Philippine freight operator **Pacific East Asia Cargo**.

During the last week of November, the independent files complaints with the European Court of Justice challenging France's air transport policy, specifically with regard to state aid to **Air France**, access to Paris (ORY), and the monopolistic Paris–Madrid route.

Traffic figures are not provided.

Airline employment stands at 180 in 1995. In September, a code-sharing agreement is signed with **Air Liberte, S.A.**; under its terms, the two independents will jointly operate return services between Paris and Toulouse.

At the end of the year, the charter operator reports the transport of 501,600 passengers.

A company's share in **Air Littoral, S.A.** is purchased by the Air France Groupe during the first quarter of 1996.

The Credit Lyonnais subsidiary CDR, in something of a surprise move, dismisses **AOM French Airlines, S.A.** Chairman/CEO Marc

Rochet during the second week of June. He is succeeded by Euralair Group CEO Alexandre Couvelaire, who is given a mandate to seek a merger with **Air Liberte, S.A.**

The B-737-53C wet-lease with **Pacific East Asia Cargo** expires in August.

Flights continue in 1997–1998. On December 1 of the latter year, it is announced that the carrier has leased two Next Generation B-737-85Fs from San Francisco-based GATX Partners. The first is delivered at the end of the month. Enplanements during the latter year total 248,000 and revenues of \$53 million are generated.

By the beginning of 1999, airline employment has been increased by 19.8% to 284.

After the arrival of the second Next Generation Boeing, the two planes begin revenue flights on behalf of the French tour operator Voyages FRAM on charter routes from France to destinations in the Mediterranean and North Africa. They are painted in the colors and trademark logo of the large French travel operator.

Two more Next Generation B-737-85Fs are received before the end of the year.

Airline employment stands at 250 at the beginning of 2000. The company's fourth Next Generation B-737-85F is delivered on January 29. Wearing the tour operator's famous frog-face logo on its tail, the new aircraft begins flying charters for Paris-based Go Voyages at the end of March.

With French government approval, but not that of the UN's sanctions committee, a privately chartered Next Generation B-737-85F makes a humanitarian flight to Baghdad, Iraq, on September 22. Approximately 60 French doctors, artists, and sports personalities are on board to provide medical assistance and take part in a cultural festival. Euralair thus becomes the first Western European operator to land in the Iraqi capital since before the Gulf War.

EURASIA AVIATION CORPORATION (CHINESICH-DEUTSCHE LUFTVERKEHRSGESELLSCHAFT): China (1930–1943). Following two test flights from Berlin to Irkutsk, **Deutsche Luft Hansa, A.G. (DLH)** begins negotiations with the Nationalist Chinese government on February 21, 1930, for the development of German-assisted air services; plans are undertaken for the creation of an affiliate (read: subsidiary) Chinese carrier. Negotiations continue until, at year's end, **Eurasia Aviation Corporation** (trading name for Chinesich-Deutsche Luftverkehrsgesellschaft) is formed with headquarters in Nanking; two-thirds of the shares are held by the Chinese government and one-third by DLH, with the latter promising route and technical assistance. The government of Chiang Kai-shek, in turn, grants the new entrant a 10-year contract, backdated to February.

In February and March 1931, the airline provides two Junkers W.33s and two F.13s. Instead of aircraft registrations, the aircraft wear the titles for Eurasia (in both roman letters and Chinese characters) on wings and fuselage.

The first commercial flight is made on May 31; mail from Berlin is obtained from the Soviet airline **Dobrolot** at Manzhouli, Manchuria, and then flown by W.33 on to Peiping, Nanking, and Shanghai. The service is suspended after the inaugural flight. In June, a mail route is, however, opened from Shanghai to Manzhouli.

On July 2, soldiers near Manzhouli shoot down the W.33 *Eu II*, piloted by Johannes Rathje and seriously wound flight engineer/radioman Otto Kolber. The two are held hostage for 10 weeks before they are allowed to return to Peiping on September 15, Kolber minus his leg that has been amputated under less-than-sanitary conditions. Following this incident on the Mongolian frontier, the Shanghai–Manzhouli mail route is cut short to Peiping.

On December 22, a W.33 from Peking completes a survey flight landing at Urumchi in western China.

Attention is now given to finding a new route to the northwest; a W.33 proving flight is made to Chuguchak in Sinkiang, on the border with Soviet Kazakhstan.

Begun the previous December 20, the flight is completed on January 10, **1932**. From a base at Lanchow, the principal community in Kansu, the Eurasia Aviation Corporation's Shanghai-Sinkiang route is opened on April 1. Flights are split at Loyang, allowing segments to be offered to either Peiping or Shanghai via Nanking.

Two more W.33s are delivered in June and July, but two of the company's five W.33s are lost in crashes near Lanchow on August 26 and September 1, respectively. One of the carrier's two Junkers F-13s is crashed and lost near Shanghai on December 15.

Another W. 33 is lost at Sian on February 1, **1933**. It is replaced when DLH sends out two new W.33s on February 23 and March 17.

Beginning on May 11, two Junkers W.34s fly Berlin-Shanghai via Siberia and the Gobi Desert, arriving on June 10. The "Sinkiang Incident" in July prevents flights from being continued west of Lanchow.

At the request of the Chinese government, Eurasia inaugurates a new route on May 1, **1934** between Peiping and Canton, flying via Hankow. The first of four Ju-52/3ms departs Berlin for Shanghai on August 29, arriving via India on September 11.

In November, service is initiated from Lanchow to Ninshia and Paotow.

Two more Ju-52/3ms are delivered and during the spring of **1935**, yet another new route is begun, from Sian to Chengtu, where passengers are able to connect with aircraft flown by **China National Aviation Corporation (CNAC)**; this route is later extended to Kunming.

Four W.34s are lost in crashes during the year: near Changsha on February 22, near Canton on May 11, at Lanchow on July 4, and near Sian on September 27. The carrier's only Junkers Ju-160 (newly delivered on October 3) crashes near Shanghai on December 25.

In June and July **1936**, a Eurasia Ju-52/3m makes the first proving flight on a central Asian route, flying 7,600 miles over the Hindu Kush and Pamir mountain ranges from Sian to Kabul, Afghanistan.

Three more Ju-52/3ms are delivered in March, May, and September and Hong Kong becomes a destination in **1937**.

On August 24 and 26, two Junkers Ju-52/3ms depart Kabul for Sian, arriving on August 27. One aircraft is turned over to Eurasia as its September delivery; the second, while returning, crash-lands near Chotan in southern Sinkiang. The crew is briefly held hostage, but is delivered back to Kabul by September 27.

Also in August, the company loses three aircraft to Japanese attack, an F-13 and W.33 at Shanghai and a Ju-52/3m at Hanchung; simultaneously a Ju-52/3m is lost in a crash at Kunming.

Two more Ju-52/3ms are delivered in March and September **1938**, the second of which actually replaces one lost in a crash on July 16.

At the end of December, Eurasia extends its Sian-Kunming route to Hanoi.

A Ju-52/3m is lost in a March 12, **1939** crash near Weining.

Hit by Japanese anti-aircraft fire while flying just north of the Indochina border on April 13, the Ju-52/3m *Eu XIX* crash-lands on a mountain slope; rescued, the pilot directs a salvage effort that sees the plane flown to safety on October 15.

Japanese Air Force fighter planes reportedly down a Ju-52/3m near Hanchung on May 6; there is no information on any possible casualties.

The Germany-Italy-Japan Tripartite Pact is signed in September **1940**.

A Ju-52/3m, with four passengers, is attacked by Japanese fighter planes near Kunming and must make a forced landing, with both crew members injured.

With Eurasia's European partner now allied with China's enemy Japan, the airline's services are suspended on November 1 on orders of the Chinese government; all German personnel depart China in December.

The 10-year contract between the airline and the Chinese government expires on February 21, **1941**, but remains in effect under a one-year extension clause written into the arrangement in order to allow the Germans time to shut down in an orderly fashion. The Kuomintang severs diplomatic relations with the Third Reich on July 2 and Eurasia's operations are taken over by the Chinese Transport Ministry on August 1.

The new **Central Air Transport Corporation** is formed by the Chinese Ministry of Communications on March 1, **1943**. Eurasia is officially dissolved on June 1 and its last few Ju-52/3ms are turned over to CAT.

EURAVIA, LTD.: United Kingdom (1961-1964). Under the leadership of Universal Sky Tours, Ltd. owner Ted Langton, Euravia, Ltd. is formed at London (CTN) on December 1, **1961** to make certain, after the failures of **Air Safaris, Ltd.** and **Falcon Airways, Ltd.**, that the company has an airline to provide lift for its holiday passengers. The carrier name reflects a hope that the U.K. will soon join the European Economic Community. J. E. D. Williams is named managing director.

During the winter, the four surplus Lockheed L-049 Constellations of the Israeli state carrier **El Al Israel Airlines, Ltd.** are purchased; the first arrives at London (CTN) on April 12, **1962**.

After several proving flights, the first inclusive-tour revenue charter is initiated on May 5 from Manchester to Palma de Mallorca. The initial summer season, flown from both Manchester and Birmingham, is a big success as operations are conducted on behalf of other charter companies as well as Universal Sky Tours. A need for additional capacity is keenly felt.

Consequently, in July, Langton and his backers enter negotiations with financially distressed **Skyways, Ltd.**, purchasing that veteran independent on September 1, but allowing it to continue operations under its previous identity during an amalgamation period. Among the assets acquired by Euravia in the transaction are four badly needed Constellations, one L-094, and three L-749As. Skyways' Avro Yorks will be allowed to continue ferrying engines for **British Overseas Airways Corporation (BOAC)** and **Pan American World Airways (PAA-1)** for the next two years.

Almost overlooked among the year's activities is the appointment of Roy McDougall as deputy chief pilot; he will retire in 1985 as the senior employee of successor company **Britannia Airways, Ltd.**

One L-049 is leased out to **Skyways, Ltd.** in order for its contracted Crusader services to Cyprus, Malta, and Tunis to be concluded.

In summer of **1963**, Euravia launches a larger variety of European tour flights with its Constellations, as well as the three repainted Skyways L-749As and two L-049s purchased from **Trans European Airways, Ltd.** These are flown from London (CTN), Newcastle, Blackpool, Manchester, Birmingham, and Liverpool.

The Crusader flights end in April **1964**, as do charters from Birmingham. New destinations in southeastern Europe are initially flown during the summer and new departure airports include Cardiff.

Success again brings a need for increased capacity and the owners now approach **British Overseas Airways Corporation (BOAC)** concerning the purchase of the state carrier's recently retired fleet of Bristol Britannia 102s. An arrangement is made and in celebration, Euravia, is renamed **Britannia Airways, Ltd.** on August 16.

EURAVIA, S.A. See MERIDIANA AIR, S.A.

EURECA (EUROPEAN REGIONAL CARRIER, S.p.A.): P.O. Box 15, Orio Al Serio, 24050, Italy; Phone 39 (035) 420 3911; Fax 39 (035) 31 4615; <http://www.eureca.it>; Code F4; Year Founded 1998. International Flying Service, S.p.A. is renamed in January **1998**. Capt. Cesare Musumeci is managing director and his 36-employee company maintains a small scheduled network linking its base with Alghero, Milan, Pescara, and Turin. The fleet remains unchanged during most of the next 2 years and includes 1 Avions de Transport Regional ATR42-320, 2 Fokker F.27-100s, and 1 each F.27-500 and F.27-600.

With the beginning of the winter schedule on October 29, **2000**, Eureka halts all Friendship operations. Instead, it wet-leases an ATR42-320 that enters service alongside the company's earlier ATR on its roundtrip routes daily from Milan to Pescara via Turin and weekly from Turin to Alghero.

EUREKA AERO INDUSTRIES: United States (1978–1982). EAI is set up at Eureka, California, in 1978 to provide both scheduled and charter intrastate passenger and cargo flights. Cessna lightplane operations continue apace over the next 16 years, with destinations visited including Redding, Chico, Sacramento, Santa Rosa, Oakland, and San Francisco. Flights cease in 1982.

EURO ATLANTIC AIRWAYS, S.A.: Rua das Sesmarias N3, Cascaias, 2710-444, Sintra, Portugal; Phone 351 (21) 924 7300; Fax 351 (21) 924 7391; Code MM; Year Founded 2000. With continued backing from the Lisbon-based travel group Pestana Hotels, **Air Zarco, S.A.** is renamed in June 2000. The 42-person workforce, under the direction of President Tonaz Metello, continues operations with a former **TAP-Air Portugal, S.A.** Lockheed L-1011-500 TriStar and a leased Boeing 737-33A, named the *Jose de Olivera Marques*. The principal long-haul destination is Canada, where there is a large expatriate Portuguese population. The “Baby Boeing” flies tourists to holiday destinations in the Mediterranean.

L-1011 charters commence on October 29 between Lisbon and Miami.

EURO CITY LINE LUFTVERKEHRS mbH.: Stuttgart Airport, Stuttgart, D-70629, Germany; Year Founded 1995. Euro City Line is established at Stuttgart in 1995 to offer scheduled third-level regional commuter service over a line to Rotterdam. Flights commence employing a Fairchild Metro II and a SAAB 340B.

EURO DIRECT AIRLINES, LTD.: United Kingdom (1994–1995). Former **British World Airlines, Ltd.** executive Neil Hansford establishes Euro Direct Airlines, Ltd. at London in February 1994 to provide regional and domestic services. The airline is introduced in April 8 ceremonies at Bournemouth Airport. Four days later, revenue operations begin to Amsterdam, Brussels, Dublin, Exeter, Paris, Humberside, and Leeds/Bradford with a fleet of three leased British Aerospace BAe Jetstream 31s, all of which, including the *Spirit of Bournemouth*, are named for cities.

A pair of BAe ATPs are added in July and these inaugurate flights from Bournemouth and London (LGW) to Berne, Switzerland. At the same time, a fourth Jetstream 31 arrives and is used to fly a network from Exeter–Amsterdam–Brussels–Bournemouth–Exeter.

In October, a Jetstream 31 is transferred to the Belgian aircraft register to support the carrier’s new associate, **Sky Freighters, B.V.** Later in the month, twice-weekly ATP roundtrips commence to Hamburg from London (STN).

Through November, enplanements total 18,838; however, the cost of start-up has proven expensive.

In December, services are suspended from Humberside to Bournemouth, from Dublin to Paris, and from Exeter to Dublin.

Unable to achieve economic viability, the enterprise is forced to shut down and liquidate on February 26 1995. Chairman Hansford blames rising costs of navigation services for small turboprops and the high cost of landing and handling in major European cities as among the reasons for the airline’s failure.

EURO FIRST AIR/CANARIAS CARGO, S.A.: Madrid, Spain; Year Founded 2000. Euro First is established at Madrid in the fall of 2000 to offer contract service, freight, and express flights throughout Europe and the Mideast. Two Airbus Industrie A300B4-203Fs are leased from **Express.Net Airlines** and revenue flights begin at the end of November. One freighter is operated on behalf of **United Parcel Service (UPS)**, but wears the color scheme of Canarias Cargo, S.A.

EUROAIR TRANSPORT, LTD.: Gatwick House, Peeks Brook Lane, Horley, Surrey, England RH6 9SU, United Kingdom: Phone 44 (0) 1293 776 969; Fax 44 (0) 1293 776 971; Year Founded 1977. Euroair is formed at Biggin Hill Airport in 1977 to offer domestic and regional executive charter and freight flights as well as contract and air-

line support services. Owned by the Alexandra Towing Company, Ltd. Group, the carrier opens branch offices at Aberdeen and Guernsey.

On October 29, 1979, the company joins the Royal Mail program known as “Spokes from Speke,” flying a Britten-Norman PBN-2 Islander or an Embraer EMB-110P1 freighter each night from Cardiff, Wales, to the sorting hub at Liverpool (Speke Airport) and back to Cardiff for distribution.

Other services are maintained without change into the early 1980s, when the company base is transferred to London (LGW).

The employee population in 1984 stands at 45 and the fleet comprises 4 Vickers Viscounts, 3 Embraer EMB-110s, 1 British Aerospace BAe (HS) 125 executive jet, 1 Britten-Norman BN-2 Islander, and 2 Piper PA-23 Aztecs. Within two years, Chairman H. G. Mack has replaced the Viscounts with two BAe (HS) 748s, one each Dash-B1 and Dash-B2. An EMB-110P1 freighter flies into a 4,800-ft. hill SE of Inverness, Scotland, on November 19; the aircraft is destroyed and the pilot is killed.

In August 1985, the carrier becomes the first U.K. airline to operate the Embraer EMB-120 Brasília, taking delivery of two. When the first is placed into service in September, the company’s four Viscounts are sold to **British Air Ferries, Ltd.** for \$3.3 million.

Scheduled destinations in 1986 include Birmingham, Exeter, Liverpool, and Manchester. In 1987, the Lydd-based charter operator **Janus Airways, Ltd.** is taken over and merged. The company now operates on three primary routes: Bournemouth–Belfast–Edinburgh, Belfast–London (STN and LGW), and London (STN)–Belfast.

Service is maintained in 1988–1990. Scheduled passenger flights end during the former year as the company begins to concentrate on aircraft leasing.

The leased fleet in 1991 includes three Embraer EMB-110P1 Bandeirantes and one EMB-110P2, all four of which are leased to **Business Air, Ltd.**; two EMB-120s, one BAe (HS) 748-B2, which is leased to **Jersey European Airways, Ltd.**; and one 748-B1 operated by the carrier.

Two additional BAe (HS) 748-B2s are chartered in 1992, one of which is leased out to **Airfast Services Indonesia**. In October, the “Spokes from Speke” program is altered into the Royal Mail Skynet.

By 1993, Chairman Mack oversees a workforce of 21 and his fleet comprises 6 BAe 748s and 4 Bandeirantes.

The company stops flying in 1994, selling off three 748s and leasing the other three to **Knight Air, Ltd.** One Bandeirante is chartered to **Airfast Services Indonesia** and the other to **Mount Cook Airlines, Ltd.**

The Mount Cook lease ends in 1995 and the company withdraws from the airline business to become an aircraft leasing concern.

EUROBELGIAN AIRLINES, S.A.: Belgium (1991–1996). Following the failure of **Trans European Airways, S.A.**, the assets of that company are purchased by the Brussels-based City Hotels Group, which forms this new nonscheduled airline at Melsbroek Airport in November 1991. Victor Hasson and Jacques Halfon are named joint managing directors, a 90-employee workforce is recruited, and a fleet is assembled comprising 2 leased Boeing 737-33As and 2 B-737-3Y0s, 1 of which is chartered to the Egyptian carrier **Transmed Airlines, Ltd.**

Revenue operations by the 100-employee airline commence on April 1, 1992 to holiday destinations in the Canary Islands and Mediterranean. Enplanements during the first full year of service total 383,600.

Airline employment in 1993 stands at 100 and the fleet now includes 3 owned B-737-3M8s and 1 each leased B-737-33A and B-737-4S3. **Air Provence Charter, S.A.** now becomes a subsidiary. Customer bookings climb to 587,504.

Although there is no change in the workforce during 1994, the fleet is increased by the addition of two B-737-436s leased from **British Airways, Ltd.** (2). Late in the year, these are employed to inaugurate deep-discount scheduled services from Brussels to Rome and Vienna. Passenger boardings jump 29.8% to 836,900. Airline employment stands at 230 in 1995. On December 26, the tour operator Look Voyages acquires a 25% stake for FFfr 33.5 million.

Enplanements increase 56.8% to 1,312,500 and revenues reach \$167 million.

Twenty new workers are hired in 1996.

On February 19, British entrepreneur Richard Branson holds a press conference to announce that his Virgin Group has plans to take over the carrier for operation as a subsidiary of **Virgin Atlantic Airways, Ltd.** Current majority-owner City Hotel Group plus a small group of private investors will receive a reported £43 million (\$67 million) for an 80% stake in their regional. The carrier will be renamed **Virgin Express-EuroBelgium Airlines, Ltd.** and placed under the direction of former **Continental Express** CEO Jonathan Ornstein. The takeover is completed on April 30.

EUROBERLIN FRANCE, S.A.: France (1988–1994). In order to compete with American and British carriers flying into the former German capital, EuroBerlin France is founded on September 9, 1988 by **Deutsche Lufthansa, A.G.** (49%) and **Air France** (51%) to operate scheduled passenger services from West Berlin's Tegel Airport. French majority participation is necessary in order to satisfy the legal requirement's of the city's Big Four occupation.

Bernard Arrali is named chairman with Jean Signoret, formerly the **Air France** general manager for Germany, as managing director. A workforce of 99 is recruited and a fleet is assembled comprising 4 Boeing 737-3Y0s wet-leased, complete with cockpit crews and maintenance, from **Monarch Airlines, Ltd.** Flights are undertaken, beginning on November 7, linking the one-time German capital with Hamburg, Stuttgart, and Dusseldorf.

Airline employment is increased by 10% in 1989 to 110. In December, **Air France** pumps \$7.1 million into the carrier to aid in its further development. Enplanements during this first full year total 604,000 and 652,600 FTKs are flown.

A fifth B-737, a Dash-33A, arrives in April 1990. Following German unification in October, EuroBerlin begins to operate its services primarily on behalf of **Deutsche Lufthansa, A.G.**

Airline employment in 1991 stands at 200 and the fleet, still leased from Monarch, includes 4 B-737-3Y0s and 3 B-737-33As.

For all intents and purposes, EuroBerlin's independence ends with its previously scheduled flights in April. With **Deutsche Lufthansa, A.G.** now able to fully service Berlin, General Manager B. Teyssler's carrier becomes a replacement service for its French and German owners until October, after which EuroBerlin operates only on behalf of **Deutsche Lufthansa, A.G.**, flying from the reunified city to Dusseldorf, Hamburg, and Stuttgart.

For the year as a whole, passenger boardings skyrocket to 912,729, together with 108,000 FTKs. Revenues are \$145.9 million and with expenses down, profits are posted: \$19.3 million (operating) and \$17.1 million (net).

Operations continue apace in 1992–1993 but, by 1994, the partners have agreed that support of this joint enterprise is no longer required. When the leasing arrangement is concluded, it, therefore, ceases operations on October 31.

EUROCYPRIA AIRLINES, LTD.: 97 Artemidos Ave., Artemis Building, P.O. Box 970, Larnaca, Cyprus; Phone 357 (4) 65 8000; Fax 357 (4) 65 8006; http://www.cyprusair.com.cy/SubComp/Eurocyp/body_Eurocyp.htm; Code UI; Year Founded 1991. Established at Larnaca on June 12, 1991, Eurocypria is a wholly owned subsidiary of the Cypriot airline **Cyprus Airways, Ltd.** established to provide charter and inclusive-tour flights from both Larnaca and Paphos International Airports. General Manager Demetris Pantazis oversees a workforce of 110 and a fleet comprising 2 Airbus Industrie A320-231s leased from the parent.

Destinations visited, beginning on March 25, 1992, include Basel, Belfast, Bergen, Birmingham, Blackpool, Bristol, Budapest, Cardiff, Dublin, Dusseldorf, East Midlands, Edinburgh, Exeter, Glasgow, Hamburg, Hanover, Helsinki, Humberside, Innsbruck, Jersey, Jonkoping,

Klagenfurt, Leeds/Bradford, Leipzig, Liverpool, London (CTN), Manchester, Newcastle, Norwich, Nuremberg, Stavanger, Stockholm, Strasbourg, Stuttgart, Teesside, and Vienna.

A third A320-231 is delivered in March 1993 and flights continue apace in 1994. Traffic figures are not provided.

Flights continue in 1995–1997, during which years the company continues to visit the same destinations as it had in 1992.

Eurocypria becomes the subject of a parliamentary investigation in the spring of 1998 when its senior captains allege that their management is rigging recruitment procedures to secure appointments of particular pilots as political favors. At the same time, a number of Eurocypria pilots allege that **Cyprus Airways, Ltd.** Pasipya pilot union members are attempting to close the charter firm by arranging disruptions and delays of its flights.

Although flights continue, so too does labor unrest. Under terms of their collective bargaining agreement with **Cyprus Airways, Ltd.**, copilots are not allowed to apply for captain vacancies at the charter subsidiary. This perceived injustice so angers union members that, when Cyprus advertises for captain vacancies at Eurocypria, all of the Cyprus flyers stage a 24-hr. strike on June 22, 1999 as a protest. The industrial action delays 11 flights and 3,000 passengers and costs the carrier C£120,000 (\$215,000).

After giving the government and airline executives 24 hours to show goodwill (which is not forthcoming), the pilots return to the picket lines on June 24–25. Angered, the government of Cyprus refuses to cave in and temporarily deregulates its skies at midnight on June 24, opening air corridors to all airlines, including the most precious Larnaca to Athens to London's Heathrow Airport run. Only 4 of 18 daily scheduled flights are thus affected, with 14 others completed using aircraft wet-leased from abroad.

The labor unrest is eventually resolved and service is maintained in 2000. A variety of new destinations are added with the beginning of the summer schedule in late March. Among these is a series of charters to airports in the U.K., including for the first time the facility at Humberside.

EUROFLIGHT SWEDEN, A.B.: P.O. Box 2174, Landvetter, S-3814, Sweden; Phone 46 (31) 947 200; Fax 46 (31) 946 070; Code HZ; Year Founded 1996. Euroflight Sweden is set up in 1996 to provide domestic and regional charter services from bases at Goteborg and Bromma Airport at Stockholm. JanPeder Stensson is managing director and he begins revenue services to Gallivare, Skelleftea, Sundsvall, and Umea with a fleet of 2 Beech 1900Cs and 1 each Embraer EMB-110 Bandeirante and Piper PA-31-310 Navajo. A British Aerospace BAe (HS) 125-700 executive jet is also flown.

EUROFLITE, LTD.: United Kingdom (1981–1985). The third-level carrier Euroflite, Ltd. is formed at London (CTN) in 1981 as a subsidiary of **Executive Express, Ltd.** to offer commuter services to various regional destinations in the U.K.

A route is extended to Brussels in 1982. Managing Director M. Harwood oversees a staff of 43 and a fleet comprising 2 Beech Super King Air 200s, 5 Cessna 404 Titans, 3 Cessna 421s, and 1 Beech King Air 90.

Upon the liquidation of **Executive Express, Ltd.** during the summer of 1983, McAlpine Aviation, Ltd. acquires Euroflite, operating it as before. Employing two BAe Jetstream 31s, scheduled service is provided to four British cities, plus Paris and Brussels in 1984. Late in the year, a route is opened to Amsterdam.

In June 1985 the carrier is purchased by six-month old **London European Airways, Ltd.**; the merger is a failure and both carriers are gone by April 1986.

EUROFLY, S.p.A.: Aeroporto Citta di Torino, Caselle Torinese, I-10072, Italy; Phone 39 (11) 470-4444; Fax 39 (11) 470-4988; <http://www.eurofly.it>; Code GJ; Year Founded 1989. This Learjet executive charter operator is reformed at Turin on May 26, 1989 to offer

inclusive-tour charters to destinations in Europe, Africa, and the Middle East. Angelo Fornassari is chairman and managing director, with Giampiero Gabotto as president. A workforce of 48 is recruited and 2 chartered Douglas DC-9-51s are acquired. Revenue flights commence on February 26, 1990.

Services continue into the new decade and in 1994 the fleet includes 4 DC-9-51s and 1 leased McDonnell Douglas MD-83.

Flights are maintained in 1995–1997 with a workforce of 25 and a leased fleet of 2 DC-9-51s and 2 MD-83s.

Seasonal Saturdays-only MD-83 roundtrips commence on May 30, 1998 from Milan and Bologna to Alghero, Sardinia. Two B-767-31Bs, previously operated by **China Southern Airlines Company, Ltd.** are received in December for use during the summer tourist season.

The seasonal schedule is a bit more adventuresome in 1999 as the carrier, beginning on May 29, launches summer MD-83 weekly return flights from Milan to Moscow, Russia, via St. Petersburg. In addition, the two B-767-31Bs, painted in full **Alitalia, S.p.A.** livery, with Eurofly titles, are operated on long-haul charters from Milan to Africa and the Caribbean.

Airline employment at Chairman Angelo Formasari's carrier totals 36 at the beginning of 2000.

In late July, the company sells its 2 DC-9-51s to the Hungarian start-up airline **Hun Air, Kft.** On December 17, *AirlinersOnline.com* reports that the two are now in Florida, where they will be sold for their parts.

EUROJET, LTD.: *Easysell House, Gifen St., Bugibba, SPB 03, Malta; Phone 356 444-234; Fax 356 440-738; Year Founded 1994.* Eurojet is established at Malta in 1994 as a subsidiary of the Tumas Group of companies. Capt. L. Xuereb is named managing director and chief pilot and he begins and continues executive and small group charter flights to international destinations with a single Cessna 550 Citation II. Revenues by 1997 total \$1 million.

Service is maintained in 1998–2000.

EUROLINK. *See SAS (SCANDINAVIAN AIRLINES SYSTEM)*

EUROLOT, S.A.: *17 Stycznia Str. 3900906, Warsaw, PL-00908, Poland; Phone 48 (2) 606-6467; Fax 48 (2) 606 6169; http://www.eurolot.com.pl; Code ELO; Year Founded 1996.* Eurolot is established at Warsaw on December 19, 1996 as a fully owned subsidiary of **LOT Polish Airlines, S.A.** With the mission of taking over the flag carrier's domestic and regional services, especially the thin money-losing routes, President Marek Rymkiewicz's new regional is equipped early in 1997 with eight Aero International (Regional) ATR72-202s leased from the parent.

On July 1, the ATRs launch 200 weekly roundtrips frequencies from Warsaw to 5 other Polish cities, Poznan, Krakow, Wroclaw, Gdansk, and Szczecin. Plans are made to acquire additional turboprops and to undertake regional flights to cities in Scandinavia, Germany, Austria, and the Baltic States. Enplanements during the year total 318,500.

Five ATR42-320s are ordered in February 1998, along with three options. The first three of the new aircraft arrive in late June and permit Eurolot to develop new point-to-point city services and to operate to smaller regional airports such as Lodz and Rzeszow.

A homepage is opened on the World Wide Web in October.

Passenger boardings during the 12 months accelerate 9% to 350,000.

Airline employment at the beginning of 1999 stands at 148.

Eurolot is entirely reorganized into a purely low-cost service division of **LOT Polish Airlines, S.A.** on August 1, 2000, losing its autonomous status. As a result, all management functions, such as sales and ticketing, revenue management, route planning, and purchasing are transferred back to the parent airline. All aircraft are now wet-leased from LOT. The changeover is part of a LOT program to rationalize its activities and cut costs.

EUROPAIR. *See EUROPE AERO SERVICE, S.A. (EAS)*

EUROPE AERO SERVICE, S.A. (EAS): France (1965–1995). Organized at Aerodrome de Perpignan-Riversaltes in July 1965, this privately owned charter carrier is a subsidiary of **Societe Aero-Sahara**. Revenue charters and contract service flights begin operation within Europe and to Africa and the Middle East.

Scheduled passenger services are inaugurated with Handley Page *Heralds* in 1966 between Perpignan and Palma de Mallorca and are continued throughout the remainder of the decade and into the next.

Upon its failure in September 1971, **Trans Union Airlines, S.A.** is purchased for its fleet of three former **Sabena Belgian World Airlines, S.A.** Douglas DC-6Bs, one of which is damaged beyond repair as the result of a bad landing at Nice on October 22.

By 1978–1979, the company is linking Nîmes to Carcassonne, Perpignan, Ajaccio, Bastia, Palma, and Ibiza. Also flown are routes from Paris to Valence and Perpignan to Palma and Toulouse. On behalf of **Air France**, nightly newspaper and cargo flights are made from Paris to Marseilles and Toulouse.

General freight replacement flights are flown by EAS on behalf of the flag carrier from Paris to Milan, Zurich, Frankfurt, Casablanca, Tunis, Algiers, and Barcelona.

President Georges Masurel's workforce totals 220 and his fleet comprises 8 Vickers Vanguard freighters, 2 Handley Page *Heralds*, 3 Dornier Do-28As, 1 Do-27, and 1 Cessna 180. The first Sud-Est SE-210 Caravelle is received during the latter year.

During the early 1980s, the mission of the carrier shifts away from heavy emphasis upon freight haulage and more toward the provision of passenger services (mostly charter) for **Air Charter International, S.A.** Later in the decade, replacement services will also be provided on behalf of **Air France** and **Air Inter** and significant emphasis will be placed upon aircraft leasing.

The fleet is changed in 1983–1984 to comprise a single Boeing 727-227A, once flown by **Braniff International Airways**, and 10 Sud-Est SE-210 Caravelle XRs. A single replacement route is now maintained for **Air France** linking Paris (ORY) with Valence.

In 1985–1986, four Caravelles are temporarily withdrawn and, in 1987, two more Do-28s and a SAAB 340 are added to the fleet.

In March, the subsidiary **Europair, S.A.** is established to fly replacement services on behalf of **Air France**, including a new service to London (LGW).

Airline employment grows by 44.4% in 1988 to 481 and the fleet now includes 1 B-727-227A, 3 B-737-200s, and 8 Caravelle XRs.

Orders are now placed for two Airbus Industrie A310-304s and two B-737-53As, with options taken on two more of the latter. The opportunity to fly a new scheduled service between Paris and Bissau in cooperation with **Air Bissau** arises and second Boeing 727, a Dash-2H3A, formerly operated by **Tunis Air, S.A.**, is acquired, allowing the international route to be initiated. Enplanements for the year surge 30.2% to 1,074,515.

Operations continue apace in 1989.

While on initial approach to Valence on an April 10 service from Paris, Flight 602, an FH-227B with 3 crew and 19 passengers, smashes into a mountain at Col de Tourniol; there are no survivors.

In 1990, the carrier contracts with the new French operator **Jet Europe, S.A.** for scheduled daily Caravelle XB return flights from Valence to Paris.

The leased fleet in 1991 includes five Caravelle XBs, three XBRs, and one each B-727-2H3A, B-727-227A, B-737-2A1A, B-737-2L9A, B-737-2Q8A, B-737-2S3, and B-737-53A. In 1992, one B-737-2A1A, one B-737-2L9A, one B-737-2S3A, and one B-737-53A are leased out to **Air Charter International, S.A.**

In 1993, Chairman/Managing Director Francis Lagarde oversees a workforce of 550. Two Caravelle XBs and all three Caravelle XBRs are withdrawn as operations continue apace and a new scheduled service is inaugurated from Paris (ORY) to Valencia. Fiscal difficulties force the carrier into bankruptcy at year's end, but it continues flying nevertheless.

Renamed **EAS Europe Airlines, S.A.**, the company possesses a fleet in 1994 that includes three Caravelle XBs, which are leased out to **Air Toulouse International, S.A.**, along with the B-737-2A1A formerly leased to **Air Charter International, S.A.** The B-737-2S3A also comes off the **Air Charter International, S.A.** lease. Efforts are made to lower costs, with special attention paid to lower personnel expenses. When unions fail to assist, the carrier suspends operations on March 6, 1995. It is now liquidated.

EUROPE AIR POST, S.A.: BP 10454, Roissy-Charles de Gaulle International Airport, F-95700, France; Phone 33 (1) 43 62 1400; Fax 33 (1) 48 62 80; Code FPO; Year Founded 2000. This new carrier is established on December 1 when **Air France** relinquishes its 50% shareholding in **Aeropostale (2) (L'Aeropostale/Societe de Exploitation Aeropostale, S.A.)** to Sofipost, a subsidiary of the French state mail service, La Post.

Although for historic reasons if no other the major retains rights to the old Aeropostale brand, it turns over the company headquarters in Paris (CDG). Also provided is a fleet of 4 Boeing 737-3B3QCs, 3 B-737-33AQC, 2 each B-737-348QCs and Dash-3H6QCs, and 1 each B-737-3B8QC, -382QC, B-737-3S3QC, B-737-3Q8QC, B-737-3Y0QC, and B-737-3M8QC, 3 Airbus Industrie A300B4-103Fs, 4 Avions de Transport Aerien ATR72-210Fs, and 8 Fokker F.27-500Fs.

The renamed carrier continues to operate nightly mail and express flights to mail depots at Toulouse, Marseilles, Bourdeaux, Mulhouse, Lyon, Nantes, and Strasbourg, while indicating that it may also outsource a portion of its fleet.

EUROPEAN AIR CARGO, S.A.: Apdo 197, C/Calatrava 18, Palma de Mallorca, 070001, Spain; Phone 34 (71) 171 251; Fax 34 (71) 717 251; Code EAC2; Year Founded 1992. EAC is established at Palma de Mallorca in January 1992 to offer charter all-cargo services to the Spanish mainland, regional European destinations, and the Balearic and Canary Islands. Shareholding is divided between Capt. Bernardo G. Lwowski Hofmann and Antonio Casas Saavedra, plus M. Salva Buyosa, N. Backet, and H. Klodt. Hofman becomes chairman/president, with Saavedra as assistant CEO and head sales officer. Revenue services are launched during the summer with a pair of Convair CV-580s.

Operations continue apace in 1993-1995 as plans are made to lease two additional Convairs plus larger aircraft, either Canadair CL-44Ds or Lockheed L-188AF Electras. Scheduled flights are started in January 1996 and destinations visited include Africa, Europe, and the Balearic and Canary Islands.

Service is maintained and at the beginning of 2000 airline employment totals 16.

EUROPEAN AIR EXPRESS, GmbH.: Flughafenstrasse 95, Moenchengladbach, 41066, Germany; Phone 49 (2161) 66 990; Fax 49 (2161) 669 9111; <http://www.european-air-express.de>; Year Founded 1999. With shareholding divided between Peter Hautvogel, the German general manager of **Debonair Airways, Ltd.**, former **Austrian Airlines, A.G.** Operations Director Christian Weissgerber, and the Vibrogruppe, EAE is incorporated in December 1998. Plans are in place to offer scheduled service for business travelers along the German border, in the greater Aachen and lower Rhine regions. It is believed that the new airline will greatly benefit its base, Dusseldorf Express Airport (Moenchengladbach).

Employing the first of three Fokker 50s leased from **Denim Air, B.V.**, twice-daily return service to Munich is inaugurated on February 1, 1999. Beginning in April, the company adds flights from Moenchengladbach to Sylt and Nice.

It is reported on October 13 that European Air Express has purchased a portion of the recently failed **Debonair Airways, Ltd.** and will use the assets to inaugurate weekday roundtrips between London (LTN) and Dusseldorf Express Airport. These flights commence in November.

At the beginning of 2000, 40 people are employed by CEO Hautvogel's small regional. On March 31, Nuremberg-based **Filder Air Ser-**

vice, GmbH. is taken over, along with its two British Aerospace BAe Jetstream 31s and two Avions de Transport Aerien ATR42-320s, which latter are purchased from the manufacturer and pressed into service wearing Filder colors and 3D titles.

On April 1, Wolf Jaura becomes general manager and the ex-Filder ATR42-320s begin flying thrice-weekday roundtrips from Dusseldorf Express Airport to London (LTN). Sunday return flights are also operated.

Malcolm Ginsberg reports in the April 16 issue of his informative *Air & Business Travel News* that EAE has found a unique way to crack down on in-flight rowdiness. If a passenger misbehaves, he or she is shown a yellow card and the name is taken for entry in the aircraft log. If a second instance occurs, the passenger is "red carded" and black-listed in the company's reservations system. Although the airline promises to circulate names to other airlines, the legality of such an approach to air rage control is questioned.

An ATR42-320 is leased from **Air Open Sky, S.A.** and enters service on April 26 over a route from Moenchengladbach to Munich.

Beginning in August, a new full-meal product is offered to business-class customers on every flight, with different choices served depending upon the time of day. During the first six months of ATR operations, 96% of all EAD flights have arrived on time.

Daily (except Saturdays) ATR42-320 return service starts on September 4 between Munich and London (LTN).

During December, the ATR42-320s must be grounded at Moenchengladbach owing to incomplete maintenance records dating back to the time when they were operated with **Zambia Airways Corporation**. In the interim, the company leases a Fokker 50 from **VLM V(laamse Luchttransportmaatschappij, N.V.)** and a de Havilland Canada DHC-8 from **Cirrus Luftfahrtgesellschaft, mbH**. Orders are simultaneously placed for a pair of ex-**Continental Airlines** ATR72s.

EUROPEAN AIR TRANSPORT, S.A. Building 4-5, Brussels National Airport, Zaventem, B-1930, Belgium; Phone 32 (2) 718-1414; Fax 32 (2) 718-1555; Code QY; Year Founded 1971. EAT is organized by Iwein Van Caelenberg and three associates at Brussels in December 1971 to provide international charter and contract service flights as well as replacement services for **Sabena Belgian World Airlines, S.A.** Employing aircraft provided by the state carrier, revenue flight activities begin in April 1972.

In 1976, a code-sharing agreement is signed with **Sabena Belgian World Airlines, S.A.** for the provision of feeder services linking Brussels with Dusseldorf and Luxembourg. These roundtrip scheduled passenger services are conducted daily with a pair of Fairchild-Swearingen Metro IIs—for which EAT is European launch customer—and a Piper PA-23 Aztec.

President Paul Pirlot de Corbion's company continues air ambulance, air taxi, charter, cargo, contract service flights and the Sabena replacement services throughout the remainder of the decade and into the early 1980s. During these years, the airline employs 15 (later 17) workers and owns a fleet that includes the 1 Aztec and 4 Metro IIs.

In order to provide feed to its Brussels hub, the **DHL Corporation**, in early 1985, elects to purchase an established airline rather than form its own. Late in the year, corporation officials approach **Sabena Belgian World Airlines, S.A.**, which agrees to sell EAT to the American air express concern in the spring of 1986.

A Fairchild Merlin IV is acquired in 1987. EAT's transition from a commuter airline to a participant in the first integrated express freight system in Europe actually begins in August when the first Convair CV-580 freighter arrives at Brussels National Airport in DHL colors. It inaugurates cargo flights to Lyon, Stuttgart, and Munich.

To handle the traffic the new routes generate, the fleet is significantly upgraded in 1988 as three more Metroliners, a CASA C-212 Aviocar, and six Convair CV-580s are obtained, including four previously operated by **Metroflight** and two by **Summit Airlines**.

The workforce is increased to 200 and Gordon Olafson is appointed managing director in September replacing Freddy Van Gaever. The company now abandons passenger services. Four more CV-580s are in business by the end of October.

Additional destinations are added in **1989–1990** and the company expands its express parcel services around the Continent on behalf of DHL Corporation. Again, the fleet is upgraded as six additional CV-580s, including three from **Air Ontario, Inc.** and three Boeing 727-51Fs are leased; four Metroliners are withdrawn.

In **1991**, another Metroliner is withdrawn. The fleet now includes the 3 leased Boeings, 11 Convairs, 1 Metro II, and 1 Merlin IV.

On May 29, **1992**, EAT is granted scheduled cargo authorization and destinations now served daily include Athens, Barcelona, Basel, Budapest, Cologne, Copenhagen, Dublin, East Midlands, Frankfurt, Geneva, Hamburg, Lisbon, London (CTN), Lyon, Madrid, Malta, Milan, Nuremberg, Paris, Stockholm, Toulouse, and Vienna.

The fleet now comprises 3 B-727-31Fs, 2 B-727-35Fs, 12 CV-580s, and 3 Metro IIs. Airline employment in **1993** stands at 250.

DHL's primary European carrier, EAT increases its fleet in **1994**, adding two B-727-223Fs, originally flown as passenger planes by **American Airlines**, and establishes a Madrid-based subsidiary, **European Air Transport Spain, S.A.**

Operations continue apace in **1995** and another B-727-223F is acquired.

In **1996**, airline employment stands at 320. The fleet is increased by the addition of three more B-727-223Fs. The company hauls a total of 298.1 million tons of freight and generates revenues of \$309 million.

Flights continue in **1997** and cargo traffic accelerates to 390.3 million tons of goods delivered.

Managing Director Olafson's fleet during this year and in **1998** comprises 6 B-727-100Fs, 19 B-727-200Fs, and 4 DC-8-73Fs. Arrangements are made for the acquisition of seven A300B4-203s, which will be converted into freighters by British Aerospace Aviation Services. Wearing full **DHL Worldwide Express** livery, the first A300B4-203F is rolled out at Hamburg on March 25, **1999**. It is ferried to Brussels five days later and enters revenue service.

As the number of Airbus freighters is increased, the company's narrow-body fleet is reduced by the end of **2000** to 4 DC-8-73s and 16 B-727Fs, including 3 Dash-31Fs, 2 each Dash-35Fs and Dash-277Fs, 6 Dash-223Fs, and 1 each Dash-230AF, Dash -2Q4AF, and Dash -2J4AF. The company now operates six leased A300B4-203Fs, including two operated on behalf of **DHL Worldwide Express** in that firm's color scheme.

EUROPEAN AIR TRANSPORT SPAIN, S.A. See **EUROPEAN AIR TRANSPORT, S.A. (EAT)**

EUROPEAN AIRLIFT, S.A.: Belgium (1992–1994). EA is established at Brussels in **1992** to provide long-haul international passenger and freight charters, particularly to Zaire, where an associate airline does business. Revenue operations commence with a single Douglas DC-10-10 leased from that colleague, **Scribe Airlift Cargo, S.A.**

The Zairian Douglas is returned in **1993** as a similar machine is rented from **Air France**. When the lease is concluded in **1994**, the company ceases trading.

EUROPEAN AIRLINES, S.A.: Belgium (1991–1994). EA is founded as **Frobisher Airlines, S.A.** at Brussels in **1991** to offer charter and inclusive-tour flights throughout Europe and into the Mediterranean. Revenue services commence in **1992** with a single Boeing 737-3M8 previously operated by **Trans-European Airways, S.A.** The Boeing is removed as Managing Director Rens Kockenbeir's company is able to acquire one owned and two leased Airbus Industrie A300B4-103s.

The owned Airbus becomes a leased unit in **1993**. Airline employment stands at nine in **1994** as one of the aircraft is subleased to the Turkish airline **Air Alfa, A.S.** Unable to achieve economic viability, the company shuts down in November **1995**.

EUROPEAN AIRWAYS, LTD.: United Kingdom (1990–1998). European Airways, Ltd. is established at Newcastle in February **1990** to offer international and domestic scheduled services. Given the economic situation in the airline industry, serious efforts to begin service are delayed.

David Allen becomes managing director and he leases a pair of British Aerospace Jetstream 31s from **Maersk Air, A.S.** in late **1994**. These are employed to launch regular flights to Southampton, Le Havre, and Manchester on February 22, **1995**.

Through September, enplanements are 3,629.

Operations continue apace in **1996** and full year enplanements nearly quadruple, rising to 11,788.

The workforce stands at 19 in **1997**. Customer bookings skyrocket 62.9% to 19,094. Business fails badly for this company during **1998**.

Passenger boardings plunge all the way back down to 4,000. On the plus side, 422,000 FTKs of cargo are transported. The good freight numbers cannot overcome the fiscal reversal, which now forces the airline to shut its doors.

EUROPEAN AVIATION AIR CHARTER, LTD.: European Aviation House, Bournemouth International Airport, Hum, Christchurch, Dorsetshire, England, BH23 6EA, United Kingdom; Phone 44 (121) 557-8111; Fax 44 (121) 557-4479; http://www.eu-roav.com; Code E7; Year Founded 1993. EAAC is established at Tivendale, Warley, West Midlands in February **1993** to offer ad hoc passenger and cargo services from U.K. airports to European destinations employing a fleet of BAC 111s to be acquired from **British Airways, Ltd. (2)**. Paul G. Stoddart is chairman with T. Whetter appointed managing director. An application is filed for an Air Operators Certificate, which the CAA will grant early in the new year.

A workforce of 74 is recruited and revenue services commence in March **1994** with three leased British Aerospace (BAC) 1-11-510EDs and a Bell 206B JetRanger helicopter. Three more BAC 1-11-510EDs and two BAC 1-11-530FXs are chartered later in the year.

Airline employment stands at 200 in **1995**. Having dry-leased much of its fleet the previous year, the company now begins to offer a series of aircraft, crew, management, and insurance (ACMI) contracts to several carriers.

Enplanements for the year total 10,631.

Willie O'Neil becomes managing director in **1996** and the fleet is increased to include 1 BAC 1-11-501EX, 2 1-11-530FX, 1 1-11-523FJ, and 11 1-11-510EDs, 3 of which are subleased to **Sabena Belgian World Airlines, S.A.** A single owned Boeing 727-23 is also operated.

Passenger boardings increase to 86,000.

The workforce grows to 350 in **1997**. During the summer, the one-millionth passenger is boarded. In September, an ACMI BAC 1-11-510ED is provided to the start-up **Euroscot Express, Ltd.** Customer bookings surge to 141,000.

Business continues to improve at this concern in **1998** and several hush-kitted B-737-200As are acquired.

Passenger boardings accelerate 39% to 196,000.

The first of 13 hushkitted B-737-229As acquired from **Sabena Belgian World Airlines, S.A.** a year earlier is received during the first week of October. Three more are to enter service before summer.

Customer bookings jump 5.3% to 217,000.

The workforce at the beginning of **2000** totals 350. On May 3, the carrier initiates twice-daily roundtrip B-737-239A nonstops from Belfast International Airport to Amsterdam.

The company wet-leases a pair of British Aerospace BAe (BAC) 111-500s to the new Swedish concern **Fly European Airlines, A.B.**, which that carrier employs to inaugurate return service to Malmö on June 30. The company barely operates a week before closing down on July 9 and returns the jetliners.

It is reported at the end of September that the carrier's sister company, European Aviation, has negotiated the purchase of the entire B-737-200 spare parts inventory of **British Airways, Ltd. (2)**.

EUROPEAN EXPEDITEE, S.A.: Belgium (1988–1992). European Expeditree, conceived by GPA Group Chairman Tony Ryan, is established at Brussels in May 1988 to provide scheduled all-cargo services to regional European destinations. **UPS (United Parcel Service)** executive Dallas Sherman is recruited and named president; he is provided with a fleet that includes one Dassault Falcon 20 and four Convair CV-580s, formerly flown by **Summit Airlines**. The company is registered as a Belgian airline in December.

Revenue operations to destinations in Spain, France, Austria, and Sweden commence on March 31, 1989 and are continued. The fleet is increased by the addition of one more Falcon and four additional Convaers and their routing is coordinated with that of **Extra Executive, GmbH**, a German freight operator half-owned by GPA. Flights continue until 1992.

EUROPEAN REGIONS AIRLINES, S.A.: Spain (1998–2000). This Spanish charter operator is established in 1998 by several tour companies seeking lift for short-haul holiday flights, as well as domestic scheduled services.

Revenue operations commence at the end of March 1999 with 2 Embraer ERJ-145s and 1 Grumman Gulfstream Aerospace II. Initial scheduled destinations include Barcelona, Seville, and Vitoria.

During the remainder of the year, the company inaugurates scheduled return flights to La Coruna, Milan, Stuttgart, and London (LGW).

A total of 94 workers are employed at the beginning of 2000. Unable to maintain economic viability in the face of rising fuel costs, the carrier declares bankruptcy in September. After the airline is grounded, its aircraft are disposed of, with at least one ERJ-145 going to **KLM Exel, B.V.**, which completes some of ERA's charters.

EUROSCOT EXPRESS, LTD.: United Kingdom (1997–1999). Jack Romero, who becomes CEO, sets up Euroscot at Bournemouth Airport in May 1997; other shareholders include finance director Michael Allen, NVM, and R. Davis. The bulk of the new entrant's financial backing is provided by Edinburgh-based Northern Investors Company and Northern Venture Trust, with fiscal advice provided by KPMG Corporate Finance. Michael Denny is appointed chairman. A workforce of 14 is recruited and a British Aerospace BAe (BAC) 1-11-510ED is wet-leased from neighboring **European Aviation Air Charter, Ltd.**

Deep-discount service is inaugurated in September linking the company's base with Glasgow and Edinburgh five times weekly. The company will board 25,000 customers in its first 6 months, plus 27 tons of cargo.

The workforce is increased by one at the beginning of 1998.

The carrier's 500th flight arrives at Bournemouth from Glasgow on February 10 and, to mark the occasion, CEO Romero is on hand to personally welcome all of the passengers off the flight. Plans are announced in early April for connecting flights to Amsterdam. Eventual plans for service from Glasgow to Toronto are also broached.

When a rival **British Airways, Ltd. (2)** service from Glasgow to London (Hurn Airport) is unable to depart on April 21, its passengers are able to make a connection on the Euroscot flight. A record number of 362 passengers are boarded on April 27.

By the time of the carrier's first anniversary in May, Euroscot has established financial security and plans are made for partnerships with other airlines.

The company's homepage on the World Wide Web is unveiled on May 8. The schedule is altered on May 25. Twice-daily service from Glasgow to Hurn is operated, along with four weekly flights between Bournemouth and Edinburgh.

During the summer, an **Avions de Transport Regional** ATR72-201 is leased to help with new daily return services between Bournemouth and Edinburgh. In the fall, the BAC is returned to its lessor. Daily roundtrips commence on November 10 between Bournemouth and Amsterdam.

Enplanements total 50,000.

The company experiences a fatally dismal 1999. In mid-July the company turns over to **Gill Airways (Gill Aviation, Ltd.)** its routes and

bookings from Bournemouth to Edinburgh and Glasgow. Unable to raise additional capitalization, the company goes into receivership and shuts its doors.

EUROSKY, GmbH.: World Trade Center, Vienna Airport, Vienna, A-1300, Austria; Phone 43 (1) 7007 6770; Fax 43 (1) 7007 6771; Code JO; Year Founded 1994. J. Ralph Atkin and Dr. Alexander Schodl form Eurosky at Vienna Airport in 1994. Employing a Fairchild Metro III, revenue flights are inaugurated linking the company's base with Verona and Trieste.

Another Metro joins the fleet in 1995, allowing the company, in July and August, to inaugurate daily return flights to Wroclaw, Poland, and Kosica, Slovakia, as well as twice-daily roundtrips to Trieste. Despite the initiation of the previous year's new routes, traffic and revenues are so slim as to require the company to briefly shut down March 1996.

Services are resumed in the fall with three Beech 1900Cs. Destinations visited during the remainder of the year and in 1997–2000 include Debrecen, Kosice, Ostrava, Trieste, Verona, and Wroclaw.

EUROSUN (GUL HAVACILIK ISLETMELERI, A.S.): Gagiavan Man, Antalya, 07160, Turkey; Phone 90 (242) 324 0222; Fax 90 (242) 324 0226; Code ESN; Year Founded 2000. The failed **Air Rose, A.S.** is reorganized and renamed during June 2000. By July 14, it has received 1 B-737-236A previously operated by **AccessAir** and 2 B-737-3K2s once flown by **Transavia Holland, N.V.**, all of which have been chartered from Pegasus Aviation. The reborn charter operator is able to resume operations with the beginning of the winter charter season at the end of September. Package tour customers in northern Europe are carried to Mediterranean locations, including the golden beaches of Turkey.

EUROWINGS FLUGDIENST, GmbH.: Flugplatz 13, Dortmund 44319, Germany; Phone 49 (231) 9244 0; Fax 49 (231) 9244 704; Code EWF; Year Founded 1996. A subsidiary of **Eurowings Luftverkehrs, A.G.**, Eurowings Flug is set up at Dortmund on June 26, 1996 to serve primarily as its parent's charter arm, as well as to provide back-up capacity to the main fleet. Managing Director German Larrabe places orders for three (later four) Airbus Industrie A319-112s, which arrive at the end of the year.

Revenue holiday services to Mediterranean and North African destinations commence on January 28, 1997. A total of 93 workers are employed at the beginning of 2000.

EUROWINGS LUFTVERKEHERS, A.G.: Flughafenstrasse 100, Nuremberg, D-90411, Germany; Phone 49 (911) 36 56 0; Fax 49 (911) 36 56 20 3; http://www.eurowings.de; Code EW; Year Founded 1994. **Eurowings NFD & RFG, GmbH.** is renamed on January 1, 1994. Airline employment is increased by 8.4% during the year to 1,030 (including 168 full-time and 10 part-time pilots) and the fleet now includes 17 ATR42-320s, 6 ATR72-202s, and 3 ATR72-210s. The carrier introduces deep-discount flights on a number of domestic routes and in July requests the lease of two British Aerospace BAe 146-200s from Asset Management Organization.

In addition to its own scheduled routes, Eurowings also flies replacement services for **Deutsche Lufthansa, A.G.** and **Swissair, A.G.** and with a provided BAe 146-200QT, operates cargo services for **TNT Worldwide Express**.

In September, a block-space, code-sharing agreement is signed with **Air France** and when the first BAe 146-200 is delivered in October, it inaugurates thrice-daily, dual-designator roundtrips from Nuremberg to Paris (CDG). Plans are made during the fourth quarter to accommodate the transfer of several former **KLM (Royal Dutch Airlines, N.V.)** routes to Amsterdam and the initiation of new services to Poland.

Scheduled departures total 56,100 and customer bookings accelerate 12.1% to 1,210,000. Revenues swell by 6.3% to \$234.6 million, but still, expenses are higher and a \$5.7-million net loss is suffered.

Twenty-nine new employees are hired in **1995**, a 13% increase and the second BAe 146-200QT is delivered in April. It is based at the Bavarian city of Hof and is used to operate charters on behalf of the tour operators TUI and NUR. A new Avions de Transport Regional ATR72-212 arrives in May.

Code-sharing alliances are initiated with **KLM (Royal Dutch Airlines, N.V.)** and its U.S. partner **Northwest Airlines**. As a result, several of the Dutch major's routes are transferred to the regional, which boosts its traffic dramatically. The principal services flown on behalf of the Netherlands line are to Amsterdam from Dusseldorf, Nuremberg, and Hanover.

The arrangement with **Northwest Airlines**, which will be maintained independently of that held with KLM, will come to provide for code-sharing on routes from nine German cities to Amsterdam, with connections to the U.S.

During the fall, the tour subsidiary EWG is established and two Airbus Industrie A320s are leased to operate passenger charters on its behalf.

When the "Air France-Air Inter Express" program is established late in the year, Eurowings becomes a code-sharing partner, agreeing in exchange for subsidy to repaint its aircraft and to fly medium- and low-density domestic or regional routes for the Air France Groupe.

Enplanements increase 48.9% to 1.8 million and revenues jump 8.7% to \$277.3 million. Costs move up 5% to \$268.45 million and allow a \$10.95-million operating profit and net gain of \$1.39 million.

Airline employment is increased by 6.9% in **1996** to 1,132 and the owned fleet includes 4 ATR72-212s, 8 ATR42-320s, 3 ATR72-202s, and 1 BAe 146-200. Also operated, under charter, are 9 ATR42-320s, 3 ATR72-202s, 1 BAe 146-200, and 2 BAe 146-200QTs, which are flown on behalf of **TNT Express Worldwide**.

In March, the BAe lease is renewed for three years and two Dash-300s are chartered. The first arrives on April 1.

During the first two quarters, thrice-daily, dual-designator roundtrips on behalf of **KLM (Royal Dutch Airlines, N.V.)** commence to Amsterdam from Leipzig, Stuttgart, and Dresden.

The charter subsidiary **Eurowings Flug, GmbH**, is established on June 26, with German Larrabe as its managing director. Orders are placed for three (later four) Airbus Industrie A319-100s with which to begin service.

Thrice-daily ATR42-320 dual designator roundtrip flights begin with **KLM (Royal Dutch Airlines, N.V.)** on September 1 over a route from Cologne to Amsterdam. On behalf of **Air France**, flights are initiated to Paris and Strasbourg and from Strasbourg to Berlin (Tempelhof Airport).

A code-sharing agreement begins with **Air U.K., Ltd.** during the spring and the second leased BAe 146-300 is delivered in August. The new jetliner is assigned to Mediterranean charter operations, flying from the airports at Hof and Kassel. The carrier, having signed a code-sharing agreement with **Gill Airways, Ltd.**, ceases direct service from Dusseldorf to Newcastle on August 30. Gill takes over the route next day.

In October, the carrier swaps its "NS" ATA code for the "EW" code of an Australian airline. In December, orders are placed for five ATR42-520s, while the three A319-112s ordered earlier are delivered.

Customer bookings accelerate 5.6% to 1.9 million and operating income jumps 12.4% to \$306.25 million. Costs are up only 10.6% to \$289.36 million and allow profits to grow again, rising to \$16.89 million (operating) and \$5.8 million (net).

Airline employment grows 16.4% in **1997** to 1,414. **Eurowings Flug, GmbH**, charter services to Mediterranean holiday destinations commence on January 28. The leased BAe 146-200 is purchased from British Aerospace Assets Management-Jets during the second week of April.

A new base is established at Berlin (Tempelhof Airport) and the monopoly of **Deutsche Lufthansa, A.G.** over the key Frankfurt to Berlin route is broken by Eurowings on May 5.

On behalf of **Air France**, new "Air France Express" services are introduced during the summer from Cologne and Bonn to Paris (CDG).

By this time, the company is offering 322 weekly flights on behalf of its French partner and another 240 weekly services for **KLM (Royal Dutch Airlines, N.V.)**.

In September, a code-sharing arrangement is entered into with **Gill Air (Gill Aviation, Ltd.)**. Under its terms, the U.K. regional launches twice-daily Aero International (Regional) ATR42-320 roundtrips from Newcastle to Hamburg. It also operates a route from Belfast to Dusseldorf via Newcastle.

The first ATR42-520 is delivered in time to help inaugurate the winter schedule in late October. Four more BAe 146-200s are leased from BAe AMJ in October and are delivered in November; the charters for three others are extended. A number of route frequencies are now increased; for example, daily flights from Frankfurt to Berlin (Tempelhof Airport) are doubled from four to eight. Three more BAe 146-200s are added between November 24 and December 17.

Passenger boardings leap upward 31.6% to 2.5 million while operating income accelerates 22.2% to \$325.9 million. Net profit accelerates to \$8.7 million.

At the beginning of **1998**, Chairman/President Santner oversees the flights of 2 A319-112s, 17 ATR42-320/520s, 10 ATR72-212s, and 2 each BAe 146-200s and BAe 146-300s. From bases at Amsterdam, Dortmund, Nuremberg, and Paris, the company flies to Bayreuth, Bonn, Brussels, Cologne, Dresden, Dusseldorf, Frankfurt, Guernsey, Hamburg, Hanover, Hof, Jersey, Katowice, Krakow, Leipzig, Lippstadt, London, Lyons, Munich, Munster, Newcastle, Nice, Olbia, Osnabruck, Paderborn, Poznan, Prague, Stuttgart, Sylt, Vienna, Warsaw, Wroclaw, and Zurich.

Nonstop dual-designator Dornier 328-110 roundtrip services commence in April with **KLM (Royal Dutch Airlines, N.V.)** between London (STN) and Dresden.

A new London (STN) to Dortmund service is opened in September in cooperation with **KLM UK, Ltd.** The new ATR42-320 flights are operated twice daily during the workweek and daily on weekends. A revised agreement is signed with KLM on October 14. The pact is designed to boost German market share up to 15% from the current 7% through an increase in capacity.

Customer bookings for the year increase 16.9% to 2.49 million. Revenues jump 21.1% to \$394.49 million, while expenses are up 22.2% to \$386.12 million. The operating profit grows to \$8.37 million, while net gain drops to \$2.78 million.

By the beginning of **1999**, airline employment has been increased by 19.6% to 1,691.

Service between Frankfurt and Berlin (Tempelhof Airport) ceases on October 31. Also in October, Rhenus, A.G. CEO Friedrich Wilhelm Weitholtz is named president/CEO, succeeding Capt. Reinhard Santer, who remains on the board, but also returns to the line to fly an A319-112.

The "Air France Express" contract ends late in the year. During the year, five more ATR42-520s are acquired giving the carrier the largest ATR fleet in Europe.

Passenger boardings ascend 4.9% to 3.04 million, while revenues of DM 729 million (\$389,671,000) are generated. Airline employment at the beginning of **2000** stands at 1,589, a 5.4% decline over the previous 12 months. Daily ATR42-320 return service is inaugurated on January 24 from Nuremberg to Poznan, Poland.

The last of five Airbus Industrie A319-112s received since January 1997 is delivered on March 9.

Beginning in March, the carrier operates commuter service from Germany to Amsterdam under contract to **KLM (Royal Dutch Airlines, N.V.)**; the German originating cities include Berlin, Bremen, Cologne, Dortmund, Dresden, Dusseldorf, Hamburg, Hanover, Leipzig, Munich, Munster, Nuremberg, Paderborn, and Stuttgart.

The arrangement with KLM is modified on September 19; although the contract remains in place, Dresden and Leipzig are dropped as service points beginning on October 29.

It is announced on September 22 that **Deutsche Lufthansa, A.G.** will, assuming cartel authorities agree, take a 24.9% stake in Eurowings

effective January 1. The shareholding may later be increased. Protesting that the move will allow the major to control 80% of Germany's domestic market, **Deutsche BA Luftfahrtgesellschaft, GmbH**. Managing Director Adrian Hunt petitions the EU Commission and German antitrust authorities on October 3 seeking to have them disallow the announced 24.9% share. **Deutsche Lufthansa, A.G.** will take in Eurowings. The effort will not succeed.

While en route from Palma de Mallorca to Kassel on October 15, a BAe 146 encounters heavy turbulence over Nice. Nine passengers and two flight attendants are injured.

The A319-112 received in March is leased back to its manufacturer for four months; it will be used for braking tests. Service between Cologne and Milan ends on October 31.

On December 12, Eurowings and **KLM (Royal Dutch Airlines, N.V.)** agree that, as of March 26, the Dutch national airline will assume full commercial control of the Amsterdam-Germany services currently flown by Eurowings. **KLM Cityhopper, B.V.** will immediately take over the Amsterdam-Bremen route, with the other frequencies gradually turned over by October.

Company officials will be displeased when Germany's federal cartel office announces on March 7 that it will block **Deutsche Lufthansa, A.G.** plans to take a 24.9% stake in Eurowings.

EUROWINGS NFD + RFG, GmbH.: Germany (1993-1994). Early in December 1992, **Nurnberger Flugdienst, GmbH.** and **RFG (Regional Fluggesellschaft, GmbH.)** are merged, becoming Dortmund-based Eurowings NFD + RFG, GmbH., on January 1, 1993. Majority shareholder Albrecht Knauf, the plasterboard tycoon and aviation enthusiast, becomes chairman with Reinhard Santar as president.

The workforce totals 950 and the fleet comprises 19 Avions de Transport Regional ATR42-320s and 6 ATR72-202s, with 4 of the latter, Dash-210s, on order, along with 2 British Aerospace BAe 146-200s. The company's name first appears as part of the new corporate identity on two of five ATR42-320s delivered in February and March. The integration process will be completed on the last day of December.

In February, thrice-weekly ATR42-320 service is inaugurated between Frankfurt and the Polish city of Wroclaw; it is the first time that a western carrier has linked the city to a West European community.

In cooperation with **CSA Czechoslovak Airlines**, joint, weekday ATR42-320 roundtrips are inaugurated in April between Munich and Prague. Other destinations visited include Berlin, Budapest, Dresden, Leipzig-Halle, London (LGW), Munich, Nuremberg, Dortmund, Paris, Stuttgart, Sylt, Zurich, Hanover, Munster, Paderborn, Brussels, Milan, Prague, Erfurt, Lyon, Osnabruck, Amsterdam, Dusseldorf, Frankfurt, Cologne, Mailand, and Vienna.

On November 2, daily (save Saturday) ATR42-320 roundtrips commence between Dusseldorf and Newcastle. Plans are made to revise the company's identity once more; from January 1 of the following year, the carrier will be known as **Eurowings Luftverkehrs, A.G.**

Enplanements for the first full year total 611,225 and a total of 1.5 million FTKs are operated.

EUROWORLD, LTD.: United Kingdom (1991-1993). Following the demise of **Air Europe, Ltd.**, which had integrated **Air Europe Express, Ltd.** (comprised of **Connectair, Ltd.** and **Guernsey Airlines, Ltd.**) just before its own failure, former Connectair personnel, led by its onetime chairman, Robert Wright and managing director, Brad Burgess, form this new regional early in 1991. A code-sharing agreement is signed with **British Airways, Ltd. (2)**.

Two Shorts 360-300s are employed in August to inaugurate twice-daily, dual-designator services from the company base at London (LGW) to Rotterdam and Guernsey and daily flights to Antwerp. Two more Shorts 360-300s arrive at the end of the month and, in September, frequencies are increased to four daily returns to Rotterdam and three to Guernsey and Antwerp. Late in the year, the new regional is awarded the

routes of failed **Capital Airlines, Ltd.** A total of 22,407 passengers are carried for the 3 months the airline makes its statistics public.

Operations continue apace in 1992 as the airline begins dual-designator flights to Newcastle, Dublin, and the Island of Jersey.

In December, a \$40-million order is placed for 2 Avions de Transport Regional ATR42-300s, plus 2 options.

A total of 78,000 passengers are carried by the company this year and a £9-million turnover is recorded. A loss of £500,000 is suffered.

Recognizing the need for further public exposure, company executives in January 1993 announce that they are renaming the company **CityFlyer Express, Ltd.** Company Shorts 360-300s are repainted at the carrier's London (STN) base.

EVA AIR (EVA AIRWAYS, LTD.): EVA Air Building, 376 Hsin-nan Road, Sec. 1, Luchu, Taoyuan Hsien, Taiwan; Phone 886 (3) 351-5167; Fax 886 (3) 335-2093; <http://www.evair.com.tw>; Code BR; Year Founded 1989. Established by the Evergreen Marine Group of Taiwan, the world's largest container shipping line, in late 1989, this new entrant's first task, owing to the existence of the U.S. carrier **Evergreen International Airlines**, is to change its name in April 1990 from **Evergreen Airlines** to EVA Air. Assisted by William Burke, general manager of the consulting firm Avmark Asia, Ltd., Chairman Chang Yung-fa and President Frank Hsu announce plans to commence operations the following spring while placing US\$3.6 billion in orders for 4 Boeing 767-35EERs, 8 B-747-45Es, and 6, later 14, McDonnell Douglas MD-11s.

Start-up is however delayed in 1990 by government-imposed conditions and aircraft delivery delays. Employing a series of interline agreements, **China Airlines, Ltd.** attempts to limit the new entrant's access to Hong Kong, Thailand, and the Philippines.

The company's first aircraft, a B-767-3T7ER is delivered in May 1991. At long last, the privately owned Taiwanese airline, capitalized at US\$370 million, is able to inaugurate services on July 1 with a B-767-3S1 and two B-767-3T7ERs. Initial destinations are Hong Kong, Seoul, Bangkok, Jakarta, Kuala Lumpur, and Singapore.

During September and October, Penang and Vienna join the route network. Permission is received from the U.S. government in November for the initiation of services to seven American destinations. The first two B-747-45Es are received in late fall, allowing initiation of scheduled Amsterdam service in December.

Enplanements total 146,000 on the year, along with 14.22 million FTKs. Revenues total \$38 million and there is a \$4-million loss.

During the first half of 1992, a second gateway is opened at Kaohsiung and new services are started to Vientiane, Manila, Ho Chi Minh City, and Male in Maldives. Two B-767-35EERs are delivered in July, followed by the first two B-747-45Es in November.

Meanwhile, in September, following the transfer of South Korean diplomatic recognition from Taiwan to Beijing, service to Seoul is ended.

The new Dash-400 Jumbojets allow EVA to begin four-class, scheduled nonstop flights in December from Taipei to Los Angeles. Charter service is inaugurated to the Republic of Maldives.

Bookings for the year total 566,011. Although operating income climbs to \$169 million, the loss grows to \$55 million.

Airline employment is increased a whopping 54.5% in 1993 to 3,880 and the fleet now includes 4 B-747-45Es, 2 each B-767-3T7ERs and B-767-35EERs, and 1 B-767-3S1ER. Orders are outstanding for one B-747-45EC, four B-767-25Es, and six McDonnell Douglas MD-11s. Having reached an accommodation with **British Asia Airways, Ltd.**, a subsidiary of **British Airways, Ltd. (2)**, and thereby skirting the matter of diplomatic relations, thrice-weekly Taipei to London (LGW) via Bangkok service is started on March 29; flights to New York via Seattle begin on June 8.

A new wide-body maintenance hangar is occupied at Chiang Kai-shek Airport during the summer.

Flights to San Francisco and Sydney start in the fall and the first of three B-747-45ECs to arrive on the year is delivered in October.

Passenger boardings skyrocket 119.8% to 1,243,628 while freight traffic rockets skyward an almost unbelievable 313.1% to 262.8 million FTKs. Revenues climb to \$390 million, but the loss jumps to \$83 million.

A marketing agreement is signed with **Garuda Indonesia** in September 1994. Under its terms, a joint ground handling agency is established at Denpasar and the two share codes on frequencies from Kao-hsiung to Denpasar.

The premier MD-11F arrives on November 30 and completes its first flight to Los Angeles early in December.

Enplanements slide during the 12 months to 1,560,000. Enplanements rise during the 12 months to 2,133,860 and revenues double to \$737 million. The loss, on the other hand, falls to just \$36 million.

Airline employment stands at 2,300 in 1995. A 32% slice of **Makung Airlines, Ltd.** is acquired in late March.

In April, the company acquires a 20%, US\$13.02-million stake in **Great China Airlines, Ltd.** and also takes 32% shareholding for US\$18.2 million in **Makung Airlines, Ltd.**

In May, the company inaugurates its 24th international route when it starts MD-11 service to New York (JFK). A second MD-11F is acquired during the third week of June.

In October, it launches all-cargo services from Taipei to Amsterdam.

Code-sharing starts with **Ansett Australia (Pty.), Ltd.** in November on a route from Taipei to Sydney, as well as some Ansett domestic routes.

A comprehensive agreement begins with **Air Nippon Co., Ltd.** in December. Under its terms, the two start to cooperate on sales and reservations, ground handling, and on flights from Taipei to Fukuoka.

Passenger boardings increase 50% to 3.12 million while freight skyrockets 90.2% to 1.68 billion FTKs. Business is so good that the carrier is able to report its first profits. Operating revenues jump 45% to US\$1.05 billion and yield a net gain of US\$7.2 million.

The workforce is dramatically increased in 1996 reaching a total of 5,000.

The fleet is improved by the addition of two B-747-45ECs. Control of the domestic regional airline **Taiwan Airlines Company, Ltd.** is acquired; however, it is allowed to continue its nonscheduled services as before.

On August 1, the company begins twice-daily roundtrip code-sharing services with **Air Macau** between Kao-hsiung and Macau. With its gambling casinos, the latter point is a draw for Taiwanese vacationers. At the same time, 16 weekly Jumbojet services are inaugurated from Taipei to Hong Kong.

The first of 12 ordered MD-90-30s arrives from Long Beach during the last week of October. Negotiations with the PRC for air routes into mainland China continue as they have for some years.

Enplanements climb 19.6% to 3,730,000 and 1.93 billion freight FTKs are operated, a 2.2% increase. Operating income moves up to US\$1.28 billion and a pretax \$15.7-million profit is reported.

The employing population continues to increase during 1997, climbing 14% to 5,700. Markets visited now include Amsterdam, Anchorage, Bangkok, Dubai, Fukuoka, Ho Chi Minh City, Hong Kong, Jakarta, Kao-hsiung, Kuala Lumpur, Los Angeles, London, Manila, Maldives, New York, Paris, Penang, Seattle, Seoul, Singapore, Sydney, and Vienna. In January, \$330 million in orders are placed for two B-747-400s.

During late summer, a new five-year code-sharing alliance is entered into with **Continental Airlines**; it represents an expansion of the 1994 all-cargo arrangement between the two carriers. When the agreement begins the following spring, EVA's extant U.S. routes will be merged with those of the American major, thereby raising the effective number of United States destinations from 5 to 22. In addition, it will apply to Continental connections with EVA services to Taipei and 15 Southeast Asian destinations from Seattle, Honolulu, Newark, Los Angeles, and San Francisco. Joint marketing, maintenance coordination, and frequent flyer programs will also be included.

Two MD-11Fs are ordered in October for delivery in October and November 1998. This request is followed in November with another order

for two more MD-11Fs for delivery in 1999. Despite the Asian economic downturn during the second half of the year, the company is able to continue to prosper.

Passenger boardings leap upward by 16.8% to 3,986,272, while cargo swells 30% to 2.722 billion FTKs. Revenues increase by 9.8% to \$1.3 billion and the net gain nearly doubles, hitting \$29.75 million.

At the beginning of 1998, EVA is the 13th largest airline in the world in terms of freight carried.

Dual-designator connections with **Continental Airlines** to Taipei begin on March 30 via Newark, Seattle, San Francisco, Los Angeles, and Honolulu.

On April 1, the company begins to code-share with both **Ansett Australia (Pty.), Ltd.** and **Air New Zealand, Ltd.** on routes from Taipei to Seoul and Sydney.

Triggered by the crash of a **China Airlines, Ltd. (CAL)** A300B4-622R on February 16 (202 dead) and a **Formosa Airlines, Ltd.** SAAB 340A on March 18 (13 dead), EVA, in mid-April, makes a government-supported and dramatic move that will also improve its balance sheet.

A code-sharing agreement is signed with **America West Airlines** on April 21. When the pact takes effect during the summer, the two will link their frequent flyer programs and link EVA's daily nonstop transpacific services to Los Angeles and San Francisco with AWA's hubs in Phoenix and Las Vegas.

It is announced that, effective July 1, the major will no longer offer any domestic services and that its regional subsidiaries **Taiwan Airlines Company, Ltd.**, **Great China Airlines, Ltd.**, and **Uni Air, Ltd.** will all be merged into an enlarged **Uni Air, Ltd.**, which will provide only domestic services. In June, again with government approval, EVA acquires a 60% stake in **Uni Air, Ltd.** Thrice-weekly MD-90-30 nonstop return service is initiated on June 11 between Kao-hsiung and Ho Chi Minh City, Vietnam. On July 1, new service is inaugurated to Osaka (KIX) and Phnom Penh.

The Asian economic crisis begins to have a severe impact. The ambitious fleet expansion plan is put on hold while, in mid-September, a loss for the first half of the year is reported: T\$180 million.

During the early fall, negotiations are begun with **Myanmar Airways, Ltd.** concerning a possible equity stake of as large as 50% plus management control in **Myanmar International Airways, Ltd.** In October, a team is dispatched to Yangon from Taipei to carry out due diligence. At the beginning of November, EVA makes a provisional proposal concerning Myanmar, even as it continues to study actual completion of the arrangement.

Thrice-weekly all-cargo return service is inaugurated on November 23 between Taipei and Dallas (DFW).

The dual-designator service with **America West Airlines** is expanded on December 21 as EVA places its two-letter "BR" code on AWA services from Los Angeles to both Las Vegas and Phoenix and on its flights from San Francisco to both Phoenix and Las Vegas.

After showing a loss for the first half of the year, the carrier has been able to successfully implement a series of strategic countermeasures and return to profitability, one of the few Asian carriers to sustain gain in 1998's adverse economic environment.

International bookings reach 3.34 million and 2.33 billion FTKs are operated. Revenues increase 11% to \$1.28 billion and a net profit of \$1.92 million.

After all studies are completed and possibilities examined, EVA, during the first full week of January 1999, drops plans to buy into **Myanmar International Airways, Ltd.**

On January 17, the carrier introduces the first MD-11F all-cargo service between Taiwan and India. Brussels service is rerouted from Brussels via Mumbai while the return flight operates from Brussels to Taipei via Mumbai and Singapore.

Orders are placed on May 6 for four B-747-400Fs for delivery beginning in 2000. EVA is the first airline to request this version of the Jumbojet freighter.

Challenges faced late in the year include a devastating September 21 earthquake and a dramatic rise in fuel costs.

Citing a reduction in demand and not safety concerns, EVA cancels six freighter flights and reschedules eight others in December. As New Year's approaches, additional changes are made in the passenger schedule. EVA's computer alterations related to the "Y-2K millennium bug" are among the largest upheavals in service in the airline industry.

Passenger boardings climb 5.5% to 3,867,000 while freight surges 23.9% to 3.15 billion FTKs. Operating revenues jump 15.8% to \$1,487,501,000 while costs fall 14% to \$857,604,000. The operating profit doubles to \$118,854,000, while the net gain skyrockets to \$36.01 million.

Airline employment at the beginning of 2000 stands at 4,977, a decline of 1.6% over the previous 12 months. Among the world's top 25 airlines, EVA ranks 14th in FTKs.

In January, subsidiary Evergreen Airways Services, Ltd. purchases a 5%, HK\$25-million (\$3.2-million) stake in **Air Macau, Ltd.** The deal represents the first cross-shareholding in a single company by firms from both the People's Republic of China and Republic of China. **China National Aviation Corporation (CNAC-2)** remains the majority shareholder and controls the Macau line's management.

When, in February, **Ansett Australia (Pty.), Ltd.** halts its thrice-weekly return service between Brisbane and Taipei, it is taken over by EVA.

Signed on March 10, a new code-sharing agreement is begun with **Qantas Airways (Pty.), Ltd.** on May 1. The arrangement allows EVA to place its designator on the Australian line's thrice-weekly return flights from Sydney to Taipei and Qantas to place its code on EVA's thrice-weekly roundtrips from Taipei to Brisbane, which it has recently taken over.

On March 20, the thrice-weekly service from Taipei via Bangkok to Amsterdam is boosted to four times a week. The company's 19th U.S. cargo destination is Atlanta, begun at the end of March.

Operated since December 1995, the Panama City extension of the route from Taipei to Los Angeles is shut down on June 1 due to poor load factors. The B-747-25EF capacity will be employed elsewhere.

An order is placed on June 27 for three B-777-200Xs and four B-777-300Xs for delivery beginning in 2005. EVA will employ the aircraft on its nonstop international routes from Taipei to the U.S. and Europe.

The first locally owned B-747-400F, a Dash-45EF, is delivered on July 21 and enters service on the Taipei-Los Angeles route. The next B-747-45EF Jumbojet freighter will be delivered in 2002, followed by the third in 2003. On July 25, new facilities at Terminal II of Taipei's Chiang Kai-Shek International Airport are dedicated.

Weekly freighter roundtrips from Taipei to Toronto, initially scheduled to begin a week later, are delayed on August 3 until August 23. On August 9, MD-11F weekly frequencies are increased from two to three between Taipei and London (LGW).

Twice-weekly B-767-25E roundtrips are inaugurated on September 7 between Taipei and Tokyo (HND). They complement new twice-weekly MD-11F return cargo flights started over the route a week earlier. Emma Kelly notes in her brief September 12 *Flight International* article "Taiwan's EVA Air Finds Itself in Favour As CAL Struggles," that EVA appears to be gaining influence and dominance in Taiwan aviation circles after the election of President Chen Shui-ban, a former lawyer with EVA's owner, the Evergreen Group. Chen employs EVA for his foreign trips and remains close to the Evergreen Chairman Chang Yung-fa.

On October 3, the company notes that in association with **American Airlines**, it will begin daily B-777-227ER roundtrips between San Jose and Taipei in April.

Daily B-767-25E roundtrip service from Taipei to Manila is resumed on October 16. At the end of the year, a new code-sharing agreement is signed with the Russian carrier **Transaero Airlines**. The arrangement will allow EVA, on March 1, to become the first Taiwanese carrier to overfly Russian territory with a new thrice-weekly direct roundtrip service from Taipei to Paris (CDG).

EVEREST AIR, LTD.: P.O. Box 10760, Kalimadole, Kathmandu, Nepal; Phone 977 (1) 477 174; Fax 977 (1) 470 255; <http://www.asian-trekking.com/everair.htm>; Code E2; Year Founded 1992. Ever-

est Air, Ltd. is established as **Nepal Air Charter, Ltd.** at Tribhuvan Airport at Kathmandu on June 1, 1992 to offer nonscheduled sight-seeing scenic mountain "hops" around Nepal during the prime tourist season of June–September. During the summer, the decision is taken to provide scheduled, local passenger and cargo commuter services and, on September 17, the company is given its present name.

Founder and Managing Director Pradeep Raj Pandey recruits a workforce of 162 and assembles a fleet of two Dornier 228-212s and a 228-101. Scheduled services are inaugurated linking the company's base with Bhadrapur, Bhaprahawa, Bharatpur, Biratnagar, Jomsom, Jumla, Phaplu, Pokhara, Ramechhap, Rumjatar, and Mount Everest. Permission is sought to fly to India.

While en route from Kathmandu to Bharatpur on July 31, 1993, a Dornier 228-101 with 3 crew and 16 passengers collides with a mountain while on approach to its destination; there are no survivors.

Operations continue apace during the remainder of the year and in 1994, during which time the fleet is altered to include two Dornier 228-101s and a Do-228-212. Four Russian-made Mil Mi-8 helicopters are brought in to undertake sight-seeing operations in the Himalayan area. Consideration is given to the acquisition of a SAAB 340 turboprop.

Operations continue apace in 1995.

In November, the Kathmandu Airport Authority organizes rescue operations to save people trapped in snowbound locations as much as 17,000-ft. high. Three Mi-8s are dedicated to the task and rescue 360 persons. Additional destinations visited in 1996–2000 include Atharai, Aainselukherk, Bhojpur, Chainpur, Dharan, Diktel, Dingla, Katari, Lukla, Syangboche, Taplejung, and Therathum.

EVERGREEN AIRWAYS, LTD. See EVA AIR, LTD.

EVERGREEN CHILE, LTDA.: Office 47, Bandera 537, Santiago, Chile; Phone 2-699-6969; Fax 2-697-0408; Year Founded 1981. This affiliate of the U.S. operator **Evergreen Helicopters** is established at Santiago in 1981 to provide sight-seeing flights, as well as agricultural, construction, energy exploration, and offshore support and services. Rotary-wing maintenance and overhaul are also available.

By 2000, President Luis E. Silva-de-Balboa oversees a workforce of 42 and his firm generates revenues of \$42.6 million. The fleet comprises one Bell 206B JetRanger, two Eurocopter BO-105Cs, four Hiller UH-12Es, and five McDonnell Douglas MD-500s.

EVERGREEN HELICOPTERS. See EVERGREEN INTERNATIONAL AIRLINES

EVERGREEN INTERNATIONAL AIRLINES: 3850 Three Mile Lane, McMinnville, Oregon 97126, United States; Phone (503) 472-0011; Fax (503) 434-4221; <http://www.evergreenaviation.com>; Code EZ; Year Founded 1975. **Evergreen International Airlines** is formed on November 28, 1975 when **Evergreen Helicopters**, founded by Delford M. Smith in 1957 and based at McMinnville, Oregon, acquires, after a year of court battles, the operating certificate of the defunct pioneer fire-fighting supplemental **Johnson International Airlines**, formerly **Johnson Flying Service**, of Missoula, Montana.

The new parent is now reorganized into a holding company, **Evergreen International Aviation**. Also included in the reorganization are its newly acquired Evergreen Air Center in Arizona—formerly the U.S. CIA proprietary company Intermountain Aviation—and two operating divisions: **Evergreen Helicopters**, noted for its work in Alaska and offshore oil rigs and **Johnson International Airlines**, now renamed **Evergreen International Airlines**. Although operations are integrated whenever possible, the resumption of fixed-wing operations is held up by the search for jetliners as well as the outcome of CAB hearings on the expansion of the role of supplemental air carriers.

In 1976 the renamed airline confines its services to charter, cargo and contract services, using Johnson's certification as a U.S. supplemental air carrier with authority to operate passenger and inclusive-tour flights to Canada, Hawaii, and Alaska. Other operations overseen by Vice President Ernest C. Brace, who had once flown for **Continental Air Services (CAS)** in Indochina and, between 1965 and 1973, was America's longest-held "civilian" POW of the Vietnam conflict, include the provision of air taxi, fire fighting, agricultural, crop dusting, flight training, and FBO services.

The carrier's fleet grows to comprise 2 DC-8-50s, 2 DC-8-50Fs, 3 DC-9-30CFs, 3 Lockheed L-188As, 3 Convair CV-580CFs, 1 Curtiss C-46, and 3 DC-3s.

In response to contracts received from Arco and Shell Oil, **Evergreen Helicopters** inaugurates rotary wing support flights into the Gulf of Mexico from a base at Galveston, Texas.

A total of 37,000 airline passengers are flown during the first complete year while 12.56 million FTKs are operated. Although operating income is \$5.41 million, expenses are \$6.4 million. An operating loss of \$987 million is taken, as is a net loss of \$1.29 million.

A UN World Health Organization contract for insect-control operations in Upper Volta is obtained in 1977, along with a U.S. narcotics control program of aerial application in Mexico. In March, an L-188A is sold to **Air California**.

Enplanements this year leap to 141,000, causing two more DC-8-50s to be purchased.

The National Organization to Repeal Marijuana Laws (NORML) obtains an injunction against Evergreen in 1978 for endangering American lives while spraying in Mexico and shuts down the herbicide-application project.

Passenger boardings climb rapidly again, up 34.4% to 215,000. Freight traffic, however, dips by 5% to 69.18 million FTKs.

Airline employment in 1979 stands at 425 and the fleet includes 12 aircraft.

Orders are placed in January for 11 used Boeing 727-100s that are to be converted into combi freighters. Two Lockheed L-188CFs are purchased from **Pacific Southwest Airlines (PSA)** in April. Also added are one each DC-8-61CF and -63CF.

An Evergreen Helicopters DHC-6-300 with two crew and two passengers disappears on a December 3 flight along the coast of Alaska to Shismaref; the search is called off on December 19 without having found any wreckage.

Customer bookings jump 38% to 296,000 while cargo skyrockets 159.4% to 10.25 million FTKs.

The fleet in 1980 comprises five DC-8-50/60Fs, four DC-9-32CFs, and six L-188AFs.

In the heat of newly deregulated competition, Evergreen elects to venture into the provision of scheduled services. The timing is not good, as recession actually causes overall enplanements to fall by 24% to 225,000. Freight is also off by 32.5% to 47.1 million FTKs. Although a \$92,000 operating profit is generated, a net loss of \$1 million is suffered.

The scheduled gambit is abandoned in 1981 as the carrier elects to return to its status as a cargo charter operator. The 11 B-727-100Cs begin to arrive and are dedicated to freight and package flights on behalf of **UPS (United Parcel Service)**. In addition, the Gulf of Mexico operation is also reduced, the subsidiary **Evergreen Chile, Ltd.** is established, and another L-188A is sold to **Galaxy International Airlines**.

In the year, only 121,000 airline passengers are flown, a 46.7% decline. On the other hand, freight rallies upward by 22.9% to 57.96 million FTKs. Overall revenue drops 14.4% to \$49.3 million and expenses climb to \$51.96 million. As a result, losses must be absorbed: \$2.66 million (operating) and \$804,000 (net).

The 340-employee carrier acquires a DC-8-61F in 1982 and enjoys both traffic and fiscal gains. A total of 194.37 million FTKs are operated. Revenues drop 13.1% to \$42.9 million, but costs decline 33.5% to \$34.6 million. Consequently, an \$8.3-million operating profit is generated, along with net gain of \$2.5 million.

Evergreen has a good year in 1983, during which Chairman Smith directs a reemphasis on Gulf of Mexico offshore support by **Evergreen Helicopters**. Plans are made to open helicopter bases at Port O'Connor and Sabine Pass, Texas, and at the Louisiana communities of Abbeville, Patterson, Cameron, and Venice.

A total of 285.4 million FTKs are flown, a 46.8% boost. Revenues advance 16.1% to \$49.75 million, while expenses are reduced \$10 million. As a result, the operating gain ascends to \$9.85 million and net income dips slightly to \$2.2 million.

When Los Angeles-based **Airspur Airlines** suspends operations in late 1984, it is purchased by Evergreen and reformed as **Evergreen Airspur**. The new subsidiary is allowed to resume its scheduled de Havilland Canada DHC-6 Twin Otter and Westland helicopters flights.

Meanwhile, the parent's 36 aircraft transport a total of 406.5 million FTKs during the year, a 42.4% increase.

Found unprofitable, the new **Evergreen Airspur** experiment in commuter operations into Los Angeles (LAX) is closed down on February 26, 1985.

Equipped with 2 Douglas DC-8s, 7 B-727-100s, and 2 DC-9-32CFs, the 552-employee carrier at mid-decade maintains scheduled domestic freight flights, worldwide cargo charters, and contract services and holds authority for charter group passenger operations. Although freight traffic falls 11.2% to 397.9 million FTKs, profits are generated: \$22.41 million (operating) and \$15.8 million (net).

A new wet-lease contract is entered into with **Air India, Ltd.** during 1986 to provide weekly DC-8 cargo flights from New York to Bombay and Madras via Paris and Dubai. Following the purchase of a Boeing 747-273C from **World Airways** on March 18, it is assigned to the Indian service via Luxembourg. During the year, an average of 14 helicopters are active in offshore support roles.

In 1987, a multimillion-dollar contract is received to transport mail and parcels for the U.S. Postal Service. The semi-public agency allows the carrier to select the first USPS national hub, which it does, at Terre Haute, Indiana. To help make deliveries, a second B-747-273C is purchased from **World Airways**. The new subsidiary Evergreen Aviation Ground Logistics Enterprises (EAGLE) is formed to provide ground-handling for the many new narrow-bodies now ordered.

Evergreen Aircraft Sales & Leasing Company is energized to handle a growing aircraft leasing business. In November, the second new Jumbojet transports eight green-liveried MD-500D/Es to Abidjan, West Africa, to undertake a World Health Organization contract to help eradicate river blindness disease. This is the fifth three-year contract for this work received since 1974, but the first for which a company plane delivers company helicopters. Four other helicopters are already in the country.

Another B-727-100C, a Dash-185C, arrives at year's end and begins servicing the carrier's long-term contract with **UPS (United Parcel Service)**.

The 625-employee carrier enjoys a 7.9% increase in FTKs during the year to 586.03 million. Revenues total \$126.21 million and qualify the carrier to move from the category of cargo carrier or large regional to national status. Expenses are \$108.5 million and the operating profit is \$17.7 million. Net gain reaches \$8.01 million.

Airline employment grows by 10.2% in 1988 to 689 and the fleet now includes 2 DC-8-73Fs, 2 DC-8-63Fs, 1 DC-8-62F, 4 DC-9-32Fs, 2 leased DC-9-33s, 2 DC-9-15Fs, 9 B-727-100s, 3 leased B-727-100s, 2 B-747-273Cs, and 1 leased B-747F, plus helicopters.

Employing DC-8Fs, Evergreen accepts a contract in August from **Qantas Airways (Pty.), Ltd.** to fly freight twice weekly from New York to Sydney via Honolulu, Tokyo (NRT), and Hong Kong. Jumbojet freighters are put on the route on November 22.

Cargo recovers and advances by 22% to 805.1 million FTKs. Revenues ascend a huge 122.3% to \$208.9 million, costs swell 130.04% to \$164.31 million, and the operating profit doubles to \$44.27 million. Net profit jumps to \$19.63 million.

While en route from Salt Lake City on February 9, 1989, a DC-9-32F with two crew experiences cabin pressurization difficulties. When the

captain goes aft to find the problem, he becomes tangled in a cargo net, losing access to his portable oxygen system. He is eventually found by the copilot, who declares an emergency and lands at Lubbock, Texas. The captain is rushed to hospital, but is dead on arrival.

Just after takeoff from Carswell AFB, Texas, on a service to Tinker AFB, Oklahoma, on March 18, the two-man crew of Flight 4U17, a DC-9-33RC, suffers the in-flight opening of an improperly latched cargo door. The pilot attempts to return the freighter to its point of origin, but while turning into its final approach, the aircraft rolls and crashes near Saginaw, Texas; there are no survivors.

Also in March, Evergreen is unable to win the U.S. Postal Service contract again, and in April the prize is awarded to **Emery Worldwide**. As the result of advance knowledge and planning, the one-time supplemental air carrier is able to shift its emphasis to wide-body cargo operations and to minimize financial loss when its previous \$90-million USPS contract is cancelled in July. Still, the workforce is cut 12.9% to 600, due largely to the USPS cancellation.

Additional Boeing 747s are ordered during the year, including a leased B-747F that now enters service on the **Air India, Ltd.** contract.

A B-727-185C is sent to Spain during the summer to operate all-cargo replacement services around that country and to Palma de Mallorca on behalf of the cargo division of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

Two DC-9-10Fs are put up for sale and four others join seven B-727-100s in storage. Cargo tonnage declines by 10.8% to 596.84 million. Despite the postal setback, overall revenues advance by 32.81% to \$211.33 million. Expenses increase 56.88% to \$186.83 million and cause the operating profit to fall to \$24.49 million. Net profit declines almost four fifths to \$4.23 million.

A B-747F transports the concert equipment of Paul McCartney from Manchester to Detroit in January 1990.

Also during the first quarter, two L-188CFs are sold to **Channel Express Air Services, Ltd.**

By April, the 600-employee airline owns or has purchased 18 Boeing 747s, including 2 B-747-100Fs in operation, 3 in conversion, 1 in storage, and 2 not delivered. There are also 2 B-747-273Cs in operation, 1 not yet delivered, and 2 on dry lease (together with 5 unconverted B-747-100s) to **Pan American World Airways (1)** (3 are actually purchased from Pan Am and then leased back). The **Evergreen Helicopters** fleet includes 10 Bell 212s, 5 Bell 205s, 8 Bell 206L-1 LongRangers, 7 Aerospatiale Lamas, 7 Alouette IIIs, the 12 MD-500D/Es in Africa, 2 MBH BO-105s, 5 Hiller 12-Es, and 1 Sikorsky S-64 Skycrane.

On behalf of the rotary-wing division, the Evergreen Aircraft Sales and Leasing Co. (EASL) purchases 10 Bell 206B-3 LongRangers and 2 McDonnell Douglas MD-520Ns. The company now has an average of 25 helicopters (including 2 twins) active in offshore support roles. These are operated by 45 pilots and serviced by 35 mechanics.

The company's two DC-8-73s maintain a long-standing contract with the MAC to provide twice-weekly flights to Europe and weekly service to Asia. A marketing alliance is signed with the Italian flag carrier **Alitalia, S.p.A.** and three B-727-100CFs are now wet-leased to **Cargosur, S.A.**, the **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** subsidiary, to provide freighter services from a base at Madrid. They join the B-727-185CF sent to Spain the previous year.

Meanwhile, with part-time flight attendants, the two operational DC-9-33s are used for domestic passenger charters, including a contract to transport the NBA's Portland Trailblazers basketball team.

In May, the world's second-oldest flying DC-3, which began life with **United Air Lines** as the *Mainliner Reno* in 1936, is purchased at auction from Larry Ray of Arizona.

In June, company aircraft transport Muslim pilgrims from Algeria to Jeddah, where they make the Hadj trek by bus to Mecca. In early July, the travelers are returned to their homeland. On August 2, Iraq invades Kuwait and drives fuel prices significantly higher.

A total of 18,000 passengers are flown on charter during the year and cargo declines a whopping 59.1% to 270.33 million FTKs. Revenues in-

crease 2.97% to \$217.6 million, costs jump 4.36% to \$194.98 million, and operating income slides to \$22.62 million. Net profit also declines, to \$3.11 million.

The fleet in 1991 includes 2 DC-8-73Fs, 1 DC-8-62F, 2 DC-9-15Fs, 6 DC-9-30s, 11 B-727-100s, and 8 B-747s. Orders are outstanding for 2 MD-80s.

On January 27, a Bell 206L LongRanger goes down in the Gulf of Mexico in bad weather (three dead).

In cooperation with **Aeroflot Soviet Airlines**, B-747F flights commence in July from Hong Kong to Anchorage via Khabarovsk. The U.S.S.R. destination in the Far East is a technical and fuel stop.

The Jumbojets leased to **Pan American World Airways (1)** are returned upon the major's December collapse.

Largely as a result of troop flights to the Persian Gulf in support of Operation Desert Storm, passenger boardings skyrocket 94.4% to 35,000. Freight traffic also recovers, jumping 47.2% to 455.31 million FTKs.

Company employment stands at 600 in 1992 as the 10 new Bell 206B-3 LongRangers join the helicopter division.

In March, **British Air Ferries, Ltd.** joins with the American carrier **Evergreen International Airlines** to form the British registered all-cargo Evergreen International Europe, Ltd. Based at Southend Airport, the company begins freight charter and contract service flights to European, African, and Mideast destinations with a Boeing 747-200F provided by the American partner.

Following a May incident in which a B-747F, with its autopilot engaged, unaccountably engages in a steep, uncommanded roll, the NTSB recommends a review of Jumbojet autopilot systems.

Freight traffic declines 26.5% to 334.85 million FTKs. Still, profits are earned: \$40.68 million (operating) and \$3.48 million (net).

Chairman Ronald A. Lane's fleet is increased in 1993 by the addition of one DC-8-73F and one DC-9-15F.

Plans continue to be made for the 1996 opening of the Evergreen Air Venture Museum at McMinneville. On March 1, Howard Hughes' "Spruce Goose" flying boat arrives from Long Beach at the carrier's nearby private airfield.

Shortly after takeoff from Anchorage on March 31, Flight 46E, a B-747F with a three-person crew, encounters extreme air turbulence that damages the Jumbojet severely, including wing damage and even an engine separation. The cockpit crew is able to return and safely land the aircraft, with assistance from a pair of USAF F-15Es from the 54th Fighter Squadron stationed at Elmendorf AFB.

Evergreen Helicopter's West African spraying contract is renewed by the World Health Organization during the spring.

Despite the fact that it is no longer the prime contract for the U.S. Postal Service flight operation out of Indianapolis, the company, through its Evergreen Aviation Ground Logistics subsidiary, is awarded the postal agency's TNET contract. Under its terms, Evergreen becomes responsible, as of May 10, for all of the aircraft loading, unloading, maintenance, mail sorting, and general operation on the ground at the Indiana hub.

In September, the carrier files a complaint with the U.S. DOT charging that **Air China International Corporation** and **China Eastern Airlines Company, Ltd.** had threatened its Chinese customers with retaliatory actions if they shipped with the American freighter rather than them. Following an investigation, the DOT, in October, terminates the all-cargo rights of the two Chinese airlines to the U.S.

A total of 14,000 charter passengers are flown and cargo increases by 44.2% to 484.73 million FTKs. Revenues decline 6% to \$312.6 million and expenses grow 0.4% to \$293.02 million. Consequently, the operating profit is \$19.57 million. The previous year's net gain becomes a net loss of \$8.11 million.

Airline employment stands at 2,530 in 1994.

During the first quarter, the company loses its cargo contract with **Japan Air Lines Company, Ltd. (2)**, which has elected to begin its own cargo operation. Consequently, Evergreen must ground 5 B-747Fs and

begins to downsize its workforce, cutting over 100 associated flight and ground crew positions.

The harrowing flying feat over Anchorage the previous March earns the Jumbojet's crew the Airmanship Award in April from The Order of Daedalians, a national fraternity of commissioned military pilots. Unhappily, in the year since, two of the three heroes have been laid off and the third, the captain, Laurence Branstetter, is demoted to first-officer status.

During the summer, it is decided that the former **United Air Lines** DC-3 *Mainliner Reno*, the highest flying time DC-3 in the world, is no longer required and it is placed up for sale at \$310,000.

Four weekly eastbound flights per week are started eastward from Fairbanks in October and November, one each to Shanghai and Beijing and two to Hong Kong.

The B-727-185CF on duty in Spain is returned in December and sold to **UPS (United Parcel Service)**.

Customer bookings total 27,000 and freight traffic surges 11.4% to 539.98 million FTKs. Revenues decline 14.4% to \$267.7 million and, although expenses decline by 7.4%, costs still reach \$271.34 million. There is a \$3.64-million operating loss and a huge \$23.49-million net loss.

There is no change in the workforce during **1995**.

On March 1, the company agrees to transfer its China rights to **Federal Express**, including its routes to Beijing and Shanghai, along with two B-747-121Fs that FedEx will operate under lease.

Between December 22 and 25, EIA becomes the first airline to circle the world with a B-747 navigating completely by global positioning system (GPS), flying from New York (JFK). The Jumbojet is equipped with three Trimble TNL-8100 GPS receivers.

Enplanements increase 92.6% to 52,000 and freight rises 9.7% to 592.13 million FTKs. Costs exceed income and there are losses: \$4.46 million (operating) and \$10.81 million (net).

The airline population numbers 450 in **1996**.

CAAC (The General Administration of Civil Aviation of China) during the last week of January grants final approval for the **Federal Express** takeover of Evergreen's routes into China.

Evergreen abandons the passenger business to concentrate solely on cargo.

During the year, both the airline and Evergreen helicopters are given World Wide Web sites.

A total of 658.82 million FTKs are operated, an 11.3% increase. Operating income declines 3.1% to \$213.02 million while expenses fall 13.6% to \$193.86 million. The operating loss is turned into a \$19.16-million gain, but a larger \$11.4-million net loss is suffered.

The employee population grows 9.1% in **1997** to 454.

During the spring, Taiwan and the U.S. enter into a new "open skies" bilateral air agreement. The pact will allow the establishment of several new alliances and introduction of new services.

Boeing and the NTSB contract with Evergreen in June for a series of tests designed to better understand the loads and conditions that may have led to the TWA Flight 800 tragedy. Also during the month, a \$400-million financial package is arranged with Chase Manhattan Bank. In addition to \$370 million in term loans, the deal, which replaces the carrier's existing secured debt, provides for a \$30-million revolving credit facility.

Between July 14 and 19, a company B-747-121 conducts nine test flights from New York (JFK).

While transporting three FAA technicians to a radio relay installation site atop Kemuk Mountain, 42 nm. N of Dillingham, Alaska, on August 20, a Bell 206B JetRanger crashes into the steep terrain. The pilot is killed and all three technicians are injured, one seriously. Weather prevents rescue of the survivors until the next day.

A total of 980.93 million FTKs are operated this year, a significant 46.7% increase over the previous year. Operating revenues jump 20% to \$255.53 million, while expenses climb 15.3% to \$223.5 million. The previous year's operating gain increases to \$32.03 million while the net loss becomes a net profit of \$21.2 million.

Flights continue in **1998**. The fleet this year includes 8 B-747-100Fs, 4 B-747-200CFs, 2 DC-9-15Fs, and 6 DC-9-30Fs.

When two British soldiers are injured and stranded at the 19,000-ft. level of Alaska's Mt. McKinley in July, an Evergreen Helicopters Aerospatiale Lama, piloted by James Hood, undertakes their rescue. After establishing a base company at the 14,000-ft. level, the mission is accomplished using a U.S. Army CH-47 as a refueling ship.

Freight traffic increases 30.43% during the 12 months to 1,272,967,000 FTKs. Revenues jump 10.9% to \$283.43 million, while expenses climb 11% to \$248.18 million. The operating profit rises to \$35.24 million, while the net gain of the previous year once again becomes a net loss, \$3.69 million.

On April 14, **1999**, Evergreen announces that it has leased two B-747-212BFs with which to increase its domestic business. One aircraft will serve companies in southern California through Los Angeles. The other will serve companies in the southeast U.S. and Puerto Rico, being routed through Raleigh, North Carolina, and San Juan.

While en route on December 5 from Platform 89, located in the Ship Shoal 225 area of the Gulf of Mexico, to another platform located in the Ship Shoal 222 area, a Bell 206L LongRanger loses engine power and lands hard on the surface of the sea. The badly injured pilot, who is shortly thereafter rescued, is able to scramble into a life raft before his helicopter sinks.

Also during the fourth quarter, **Qantas Airways (Pty.), Ltd.** wet-leases two weekly B-747-212BF flights from Evergreen International in response to a new U.S.-South Pacific cargo partnership between **Air New Zealand, Ltd.** and **Polar Air Cargo**. The Evergreen arrangement replaces a wet-lease the U.S. cargo carrier has had with **Air New Zealand, Ltd.** and will make money on the outbound leg to Hong Kong that can now be routed via Australia and New Zealand. The new Qantas return services, with blocked-space sold to **BAX Global** from Ohio west, depart New York (JFK) twice weekly and fly to Hong Kong via Toledo, Chicago (ORD), Los Angeles (LAX), and the South Pacific.

Cargo traffic falls 9% to 1.15 billion FTKs. Revenues accelerate 30.5% to \$369.86 million, while expenses are up 26.7% to \$314.36 million. The operating profit grows to \$55.5 million, while the previous year's net loss becomes an \$11.89 million.

Airline employment at the beginning of **2000** stands at 594, a 15.6% increase over the previous 12 months. The company continues to also operate 2 DC-9-15Fs and 5 DC-9-33Fs. At the start of the year, the company chooses Greeneville, Tennessee-based Forward Air to provide exclusive trucking services between its terminals at Los Angeles and San Francisco.

In order to allow owner/founder Del Smith to focus on long-term planning, President/CEO Timothy Wahlberg, a 31-year company veteran, is named chairman in February. Wahlberg is succeeded by Joseph O'Gorman, former chairman/CEO of **Reno Air**.

Scheduled twice-weekly B-747F return freighter service is inaugurated on April 12 from Columbus to Singapore. Following the May 1 bankruptcy of **Kitty Hawk Air Cargo** and the shut down of **Kitty Hawk International Airways**, Evergreen picks up some of the U.S. Postal Service contracts that the latter is unable to fly.

June 3 sees the start of a weekly three-day all-cargo service, operated under contract to **Qantas Airways (Pty.), Ltd.**, from New York (JFK) to Sydney. The Evergreen B-747-212F departs the Big Apple on Monday and reaches Australia on Monday, having operated via Chicago (ORD), San Francisco, Honolulu, and Nadi. The SFO stop is made possible when the American operator agrees to reroute one of its own five weekly South Pacific freighter flights.

The Columbus to Singapore B-747F route is boosted to thrice weekly on June 15.

This year, the fire season is the worst in U.S. West since 1994, with over 67,000 fires consuming in excess of 5 million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by midsummer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires rampaging through

New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument, while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. Evergreen is one of 10 civil helicopter operators assigning assets to the blazes; through June, the company's Bell 212 has helped to contain all but the Viveash blaze.

In September, Vice Chairman Ronald Lane is lured away to become chief marketing officer for rival **Polar Air Cargo**.

In a nonoperational event loaded with nostalgia, the Hughes Spruce Goose aircraft is moved into a purpose built facility at the Evergreen Aviation Museum at McMinnville in November. In December, Anthony Bauckham is named executive vice president.

EVERGREEN INTERNATIONAL EUROPE, LTD. See **BRITISH AIR FERRIES, LTD.**; **EVERGREEN INTERNATIONAL AIRLINES**

EVERTS AIR FUEL: P.O. Box 60908, 6348 Old Airport Road, Fairbanks, Alaska 99706, United States; Phone (907) 474-0802; Fax (907) 479-3826; Year Founded 1980. Clifford R. Everts forms this all-cargo carrier at Fairbanks in 1980 to specialize in the transport of bulk fuel throughout Alaska and western Canada with Curtiss C-46A Commandos and Douglas DC-6As. Operations continue apace over the next 18 years, largely without publicized accidents. There is one, however, in 1992. Just after landing at Selawik on a March 3 on a service from Fairbanks, a DC-6BF with three crew overruns the runway, loses its landing gear, and ends up on a frozen river; although the aircraft is damaged beyond repair, there are no fatalities.

By 2000, the workforce of the founder/president and his vice president, Robert W. Everts, totals 44 and the fleet includes 4 DC-6As, 4 Commandos, and 1 ex-USAF Fairchild C-119.

Just after loading 450 gallons of aviation fuel into its primary tank of a company C-46A at Kenai on August 31 of the millennium year, the tank springs a leak and begins spilling avgas around the aircraft. The spill is quickly contained by the fueling crew, airport fire services, and Kenai Airport Fuel Services employees.

A Convair CV-131 is acquired in late October.

While en route back to Kenai via Lake Clark Pass from a December 21 fuel delivery to Nondalton, the same Commando involved in the August fuel spill incident diverts to a southern route to avoid bad weather. The aircraft crashes at the 2,800-ft. level of a peak on a steep ridgeline about 10 mi. SE of Redoubt Volcano, near Cook Inlet. The wreckage is found the next day; both crew members are killed.

EXACO (EXPRESO AEREO COSTARRICENSES, S.A.): Costa Rica (1951–1980). Dr. Francisco Vanolli forms a small air taxi operation at Limon in 1951. This company is taken over by a larger road and air transport firm in 1956; specializing in air cargo, the carrier's two Curtiss C-46 Commandos and lone Beech 18 begin flying to destinations throughout the nation.

During the 1960s and 1970s, the operation is expanded throughout the region; passengers are carried in a fleet that comes to additionally comprise a DC-3 and a pair of DC-6s. The marketing name **LADC (Lineas Aereas del Caribe, Ltd.)** is employed until Exaco fails in 1980.

EXCALIBUR AIRWAYS, LTD.: United Kingdom (1991–1996). Following the collapse of **Trans-European Airways, Ltd.**, in 1991, a new leisure charter carrier, Excalibur, Ltd., is formed in December from the assets its successful British subsidiary, **Trans European Airways U.K., Ltd.**, by its five senior managers, Bob O'Donnell, Capt. Harry Apiafi, Trevor Jackson, Steve Jones, and John Williams. Shareholding in a new airline holding company, Excalibur Travel, Ltd. (of which the airline is principal subsidiary), is divided between them (40%), **Air Malta, Ltd.** (30%), and the investment group 3i (30%). O'Donnell, a former **Orion Airways, Ltd.** executive, is appointed managing director and he recruits a workforce of 180.

In January 1992, O'Donnell leases a fleet of three Airbus Industrie A320-202s from GPA Group, signing a contract with **British Airways, Ltd. (2)** for their maintenance. Based at East Midlands Airport, the company's planes are positioned at London (LGW) and Manchester and inaugurate revenue flights to Tenerife on May 1. Flights are soon made to other Mediterranean, Middle East, and North African holiday destinations. Enplanements total 330,000 and revenues are £25 million (\$32.2 million).

Passenger bookings double to 650,000 in 1993 as a fourth A320-202 joins the fleet. Customer bookings total 623,475 and revenues reach \$65 million.

Airline employment stands at 220 in 1994 and, during the summer, service is inaugurated from East Midlands Airport. Charter destinations now also include destinations as far afield as Luxor in Egypt, Eilat, Israel, and Mombasa and upwards of 50 tour operators provide business. Passenger boardings jump 19.5% to 765,000 and revenues advance 18.5% to \$80 million. Although an operating profit of \$1.52 million is earned, there is a \$4.74-million net loss.

Ten new employees are hired in 1995 and the fleet now includes 4 leased A320-212s and 2 Douglas DC-10-30s.

The U.K.'s largest remaining independent charter operator loses its struggle to stand alone when, on November 22, it is taken over and purchased by the Scottish tour operator Globespan. The DC-10-30s are now operated five times a week between Manchester and Orlando.

There is no change in the workforce or fleet at the start of 1996. Measures that the CAA will confirm as appropriate and correct will cause much adverse publicity and significant booking cancellations.

On June 8, 91 passengers refuse to board a Manchester-bound DC-10-30 at Atlanta after smoke begins coming from the plane. The pilot reports that oil has seeped into air-conditioning ducts during servicing and orders the plane taken out of service until it can be put right.

Flight 98, due to depart from Manchester for Orlando on June 23, is delayed over 12 hours due to mechanical problems. Once these are resolved and the plane is on its takeoff roll, the pilot has cause to slam on the breaks to abort departure. Almost 350 passengers are temporarily stranded in Manchester on June 24 after some refuse to board the rescheduled Flight 98 to Orlando. Another 91 are stranded in Orlando.

Excalibur ceases operations on June 26, stranding an estimated 1,000 Britons in Florida and Los Angeles. Liberty World Travel, which has booked the charters, is held responsible for finding alternative flights back to the U.K. Through the year's first 6 months, 93,000 passengers are transported. The company is liquidated in late summer.

EXCEL AIRWAYS, LTD. See **SABRE AIRWAYS, LTD.**

EXCELAIRE SERVICES: 200 Hering Drive, L.I. MacArthur Airport, Ronkonkoma, New York 11779, United States; Phone (516) 737-0477 Fax (516) 737-0354; <http://www.guides.com/acg/excelair>; <http://www.island-metro.com/trade/mustsee/excel.htm>; Year Founded 1993. An FBO established at Long Island's MacArthur Airport in 1993, Exelaire also undertakes a full range of worldwide executive and small group passenger charters.

By 2000, the company employs 12 pilots and operates 4 Grumman G-1159 Gulfstreams and 1 each Dassault Falcon 900B and IAI Westwind I. It also flies a single Cessna 525 Citation I from Republic Airport at Farmingdale, New York.

EXCELLAIR: United States (1983–1984). Riverton, Wyoming-based **Air U.S.** is reformed on January 15, 1983 and renamed after **USAir** purchases rights to the previous name. Service to Worland, Wyoming, and Billings, Montana, are suspended. During the spring, the carrier's two Handley Page Jetstream 37s and two Grumman Gulfstream G1-C turboprops undertake new frequencies to Denver, Amarillo, and Vernal, Utah, while maintaining the Wyoming city network of Casper, Cody, Gillette, Riverton, Rock Springs, and Sheridan. Customer bookings accelerate 23.7% to 60,000.

The financial situation, which has been difficult for several years, does not improve and when joint plans for the company's purchase by **ITR Airlines** fail early in **1984**, Excellair stops flying in May and files for bankruptcy, from which it does not emerge. Several of its routes are taken over by **Frontier Commuter**.

EXCLUSIVE AIR CHARTER (PTY.), LTD.: South Africa (1986–1994). Kenneth Geldenhuis forms Exclusive Air Charter in **1986** to provide missionary-type charters throughout the northern part of South Africa. In time, both scheduled and nonscheduled charter licenses are obtained and flights are provided with a pair of Cessna 404 Titans and, in the early **1990s**, a Beech Super King Air 200.

In **1994**, the scheduled licenses are sold to Phoenix Airways, while Gary van der Merwe of Million Air Aviation purchases a 50% stake in Exclusive. The company is then transferred to the Million Air groups facility at Lanseria Airport and is renamed **Million Air Charter (Pty.), Ltd.**

EXEC EXPRESS I: United States (1985–1988). Exec Express is established by former Occidental Petroleum Company pilot Philip H. Trenary and Gary Varnell at Stillwater, Oklahoma, on February 25, **1985** to provide scheduled passenger and cargo flights via an Essential Air Services (EAS) contract. At the same time, Aviation Educational Services, a Part 141 school, is established in cooperation with Oklahoma State University to provide flight and classroom training. The fleet comprises 4 Piper PA-31-310 Navajos, 2 T-1020s, and 1 Dornier 228-200 and is employed, in June, to inaugurate daily revenue services to Tulsa, Enid, Ponca City, and McAlester.

Enplanements for the year total 5,912.

Beginning in January **1986**, additional EAS contracts are obtained and the airline commences an 18-month program of expansion into Texas, Arkansas, Missouri, and Tennessee, setting up hubs at Dallas (DFW) and Memphis during the process.

Passenger boardings accelerate 37.1% to 9,399 and cargo climbs 28.7% to 2,000 pounds.

The fleet in **1987** grows to include 11 Navajos and 4 leased Dorniers.

In November, the owner's interest in Aviation Education Services is sold and the airline is transferred to a new hub at Fort Worth's Meacham Airport, from which services are relaunched. The undercapitalized move, headquartered next to the downtown rodeo arena, is not successful and is financially draining.

In the spring of **1988**, Exec Express I is forced to declare Chapter XI bankruptcy because of the Fort Worth gambit and to return the Dorniers to their manufacturer. The Navajos, however, briefly continue to provide EAS services in Texas, Oklahoma, and Arkansas, with the final flight being completed on April 13.

EXEC EXPRESS II: United States (1988–1991). Philip H. Trenary reforms the failed third-level commuter **Exec Express I** at Fort Worth, Texas, in April **1988** to resume scheduled Essential Air Services (EAS) passenger frequencies to Dallas, Stillwater, Enid, Ponca City, and Brownwood. Flights commence on April 27 with a fleet of 6 Piper PA-31-350 Navajo Chieftains and 5 T-1020s. During the year, the fleet is altered to include 9 Chieftains, 3 T-1020s, and 1 Beech 99.

A total of 28,786 passengers are flown, but the economic return is so bad that the carrier enters Chapter XI bankruptcy in early **1989**.

After reforming its route network, Exec Express II emerges from Chapter XI early in **1990**. President Trenary adds four Beech 99s as his carrier inaugurates EAS flights from Mountain Home, Arkansas, to St. Louis and from Dallas (DFW) to Enid and Ponce, Oklahoma. The route network now includes 16 destinations in 6 states, many of which are unwritten by the DOT under the Essential Air Services program. Passenger boardings accelerate 36.9% to 39,397.

The Beech 99 and 1900 are replaced in **1991** by four more Metro IIIs. An agreement in principle is reached for company takeover by Texas-based **Conquest Airlines**. In June, the company is renamed **Lone Star Airlines**.

For the year as a whole under both names, passenger boardings advance 23.6% to 48,681. Revenues total \$7.82 million and expenses are \$9.23 million, leaving a net loss of \$1.41 million.

EXECAIR (PTY.), LTD.: Australia (1991). Execair (Pty.), Ltd. is established at Perth in early **1991** to provide scheduled flights to Kalgoorlie. Revenue services commence with a single Piper PA-31-310 Navajo in February, but the tiny regional is unable to achieve the traffic necessary to sustain operations. The doors are closed in August.

EXECAIRE, INC.: 10225 Ryan Ave., Dorval, Quebec H9P 1A2, Canada; Phone (514) 636-7070; Fax (514) 636-8520; http://www.execaire.com; Year Founded 1964. Execaire is established as an FBO at Montreal Airport (YUL) in **1964** and over the next 26 years develops into the largest management and executive charter firm in Canada. During this period, the company expands physically, opening offices and departments at Toronto and Vancouver, while also serving as the Canadian authorized sales representative for Cessna Aircraft Company's Citation series of bizjets.

A charter division is established at Mississauga Airport in **1978** to operate business and small group charters on behalf of leading North American corporations. As the nonscheduled operation grows, it employs a full complement of pilots, reservations personnel, dispatchers, and flight attendants. A total of C\$20 million is invested in facilities, equipment, training, and technology.

In **1990**, Execaire becomes a subsidiary of Halifax-based IMP Group, Ltd. IMP is divided into four core groups that include a diverse number of businesses ranging from Can-Med Surgical Supplies (commercial group) to Holiday Inn Select Halifax (corporate group). Execaire is placed in the aviation group.

By the end of the **1990s**, the fleet includes 1 British Aerospace BAe (HS) 125 Hawkers, 3 Canadair 601 Challengers, 1 Cessna 550 Citation II, 1 Learjet 35, and 1 Learjet 55 Longhorn. Another Longhorn and a Challenger are also flown from the Toronto base as part of **Air 500, Ltd.**

More than 70 million miles are logged in over 180,000 accident-free flights over 82 million miles in 22 years of corporate flying.

Meanwhile, the original FBO has evolved into a full-scale repair station, specializing in avionics repair and aircraft overhaul. It will provide important support for the new IMP Group Corporate division scheduled airline **CanJet Airlines, Ltd.**, formed in the spring of **2000**.

EXECJET CHARTER & MANAGEMENT CORPORATION: 115-A Airport Road, Noonan, Georgia 30263, United States; Phone (770) 936-8383; Fax (770) 254-9058; Year Founded 1989. This independent aviation concern is established in **1989** to provide executive and small group passenger charters and all-cargo freight and express flights. By **2000**, the company employs 8 pilots and bases 2 Cessna 208 Caravan I freighters plus 1 each Learjet 25, Beech King Air 90, and Piper PA-31-310 Navajo at Atlanta's DeKalb-Peachtree Airport.

EXECAIR: United States (1972–1979). Execair is formed at Richland, Washington, in **1972** to offer scheduled commuter flights to various destinations in the state, including Seattle. Operations continue apace in **1973–1974** with a fleet of 3 Piper PA-31-310 Navajos. By **1975**, enplanements are 18,040.

Airline employment doubles in **1976** to 58. The fleet is increased by the addition of two PA-31-350 Navajo Chieftains and a Learjet 24 is acquired for executive charter work. Scheduled service is inaugurated to Pasco in August. Passenger boardings skyrocket 66% to 53,058 while freight traffic is up by 50% to 3.12 million FTKs.

During **1977**, the Richmond base is improved by the completion of new offices, a hangar, and maintenance facilities. Overextended, the carrier is unable to survive the oil crisis of **1979**.

EXECUJET AUSTRALIA (PTY.), LTD.: Hangar 394, Ross Smith Ave., Mascot Airport, Sydney, New South Wales, 2020, Australia;

Phone 61 96930800; Year Founded 1983. Execujet is established at Sydney in 1983 to provide executive and small group charter services around the country. By 2000, Charter Manager Lionel Roser oversees the work of 7 full-time pilots and operates 2 Beech 400A Beechjets, 1 each Cessna CE-500 Citation I, CE-550 Citation II, and CE-560 Citation V, plus 1 each Dassault Falcon 200, British Aerospace (Hawker) HS-125-800, Israel Aircraft Industries IAI-1124 Westwind 1, and Learjet LR-35A Century III.

EXECUTIVE AEROSPACE OPERATIONS (PTY.), LTD.: P.O. Louis Botha Airport, Durban, 4029, South Africa; Phone 27 (31) 469-0774; Fax 27 (31) 427-810; <http://www.aerospace.co.za>; Year Founded 1984. Keith Roseveare establishes this operation at Durban International Airport in January 1984 to offer charter and contract service flights, particularly city-to-city flights for executives. Managing Director Roseveare and three other employees commence revenue services the same month, employing a single Beech 58 Baron.

Flights continue over the next decade, during which time the company is expanded into a privately owned group of companies, which also comprise a management concern, aircraft maintenance operation, and asset owning company. From the 1 Beech B-58 Baron, the fleet is increased to include 6 Beech King Air 200s and 2 Shorts SC-7 Skyvans.

During 1993, a joint venture is established with a Nairobi-based operation that permits access to East and Central Africa under contract to humanitarian organizations. In late 1994, two of the King Air 200s have been withdrawn in favor of a third Skyvan, which arrives in early the following year.

During 1995, founder Roseveare becomes chairman. Orders are placed by new Managing Director Cecil M. Francis for two (later three) British Aerospace BAe (HS) 748-B2s, which will operate from both Durban and Johannesburg.

The British-built turboprops enter service in 1996–1998 and allow the inauguration of replacement frequencies on behalf of other South African scheduled airlines. In addition, Executive Aerospace, in late 1997–1998, operates 600 hours of HS-748 flood relief flights on behalf of the UN and the International Red Cross.

Flights continue in 1999–2000. Employment rises to 65, 2 more BAe (HS) 748-B2s join the fleet, and annual turnover reaches R30 million.

EXECUTIVE AIR CHARTER: United States (1979–1992). Executive Air Lines is established by Joaquin Bolivar at San Juan, Puerto Rico, in 1979 to operate both as a Part 135 charter carrier and as Latin American distributor of the Ted Smith Aerostar. Having acquired an Aerostar, a Cessna 402, a de Havilland DH 114 Heron, and a Mitsubishi Mu-2, EAL, with the Heron, flies its first charter to Mayaguez.

During the remainder of the year and into the next decade, the Bolivar enterprise undertakes nonscheduled flights throughout the Caribbean, Miami, and coastal cities in the southern U.S. and in northern South America.

When, in the early 1980s, Piper Aircraft acquires Ted Smith, it cancels Bolivar's Caribbean distributorship. Bolivar now enhances his charter business, renamed it Executive Air Charter, and becomes a consultant to CASA USA. Seeking to begin scheduled operations, former Prinair (Puerto Rico International Airlines) official Jose Facundo is hired as president.

Employing an ex-Prinair (Puerto Rico International Airlines) de Havilland DH 114 Heron, Bolivar and Facundo undertake a route proving flight from San Juan to Mayaguez in July 1985. Shortly thereafter, EAC receives authority to serve St. Thomas and St. Croix, in the U.S. Virgin Islands, and a subsidy to provide Essential Air Service (EAS) to Ponce, Puerto Rico.

At the beginning of 1986, the fleet comprises two CASA C-212 Aviocars and two de Havilland DH 114 Herons.

In January, Bolivar approaches American Airlines and nine months of negotiations result in his company becoming a member of the American Eagle commuter network. In just 90 days from the date of its ap-

plication, Executive becomes a combined Part 121 and Part 135 carrier on March 31 and on September 1, Bolivar's enterprise is officially named an American Eagle carrier. The first American Eagle feeder flight occurs two weeks later.

Four Avions de Transport Regional ATR42-300s are provided and, beginning in December, destinations served on behalf of the major include Ponce, Mayaguez, St. Thomas, St. Croix, Tortola, Virgin Gorda, St. Martin, St. Kitts, Antigua, Guadeloupe, and Martinique. During the year, both as an independent and an American Eagle airline, Executive transports a total of 150,000 passengers.

Since the previous September, the workforce is increased from 20 to 100-plus and the fleet is increased in 1987 by the addition of 9 Aviocars; the Herons are withdrawn.

While on final approach to Mayaguez after a service from San Juan on May 8, American Eagle Flight 5452, a CASA C-212-200 Aviocar with two crew and four passengers loses control and lands 643 ft. short of the runway. The turboprop plunges another 100 ft. through a chain-link fence and into a ditch (two dead).

Frequencies commence in July from San Juan to the Dominican Republic cities of Santo Domingo and Puerto Plata while, in September, nonstops begin from Mayaguez to Santo Domingo and twice-daily American Eagle flights are initiated from San Juan to the island of Anguilla. Casa de Campo and La Romana in the Dominican Republic joins the route network in November.

In December, daily service is initiated from St. Thomas to St. Martin and St. Kitts; flights out of San Juan are significantly expanded—16 daily to St. Thomas, 12 daily to St. Croix, and three daily to St. Kitts.

Passenger boardings double to 398,786, pushing the airline into the ranks of large regionals.

An 11th Aviocar arrives in early 1988 and the employee population now numbers 250. During the first quarter, Executive undertakes 107 daily departures, including 62 from San Juan. A monthly enplanement record is broken in March when 50,000 passengers are boarded.

By fall, EAC has the largest route network out of San Juan. Points visited include Santo Domingo, La Romana, Puerto Plata, Mayaguez, St. Thomas, St. Croix, Tortola, Virgin Gorda, St. Martin, St. Kitts, Antigua, Guadeloupe, and Martinique.

Customer bookings for the year increase by 58.8% to 577,241, largely at the expense of Crown Air. Profits are generated: \$3.12 million (operating) and \$1.65 million (net).

Airline employment is increased by 26.7% in 1989 to 408 and the fleet now includes 5 ATR42-300s and 10 Aviocars. Competing Crown Air is driven out of business in March. With Hurricane Hugo approaching its base on September 17, company officials are able to save their fleet by cancelling all services and transferring the 15 aircraft to the Dutch Antilles.

Customer bookings rise 27.7% to 722,769 and revenues swell 36.6% to \$38.7 million. Expenses climb only 34% to \$33.83 million and leave an operating profit of \$4.84 million. Net gain ascends to \$1.93 million. On December 31, the American Eagle partner becomes an AMR Eagle subsidiary and is renamed Executive Airlines (3).

EXECUTIVE AIR CHARTER OF NEW ORLEANS: Lakefront Airport, New Orleans, Louisiana 70124, United States; Phone (504) 246-6543; Fax (504) 488-4070; <http://www.execheech.com>; Year Founded 1990. EAC is established at Lakefront Airport in 1990 to provide executive and small group passenger charters throughout the U.S., Canada, and Mexico. By 2000, the company employs 3 pilots and operates 1 each Learjet 24, North American Sabreliner, and Beech King Air 90.

EXECUTIVE AIR EXPRESS. See GRAND AIRE

EXECUTIVE AIR FLEET. See EAF CHARTER

EXECUTIVE AIR TRANSPORT, LTD. (1): United Kingdom (1960–1972). EAT is formed at Coventry Airport on September 19,

1960; initial share capital is £500. In December, a de Havilland DH 104 Dove 1 is purchased.

The initial executive charter is undertaken from Birmingham to Southend on March 5, 1961, followed by others through the month to such destinations as Exeter, Newcastle, Wolverhampton, Leicester.

A Douglas DC-3 is acquired in April and employed, beginning on April 3, to fly replacement services for **Derby Airways, Ltd.** to Paris, Glasgow, Dublin, Amsterdam, as well as charters to such stops as Rotterdam and Cambridge. The DH 104, together with another Dove leased for a month in July, is employed exclusively on personnel charters. A DH 114 Heron 2 is obtained in December.

The company is allowed to begin operating its own scheduled routes on April 3, 1962, including Birmingham to Leeds and Newcastle. The Newcastle route proves unprofitable and it is given over to **Derby Airways, Ltd.** in August, when the DC-3 is sold. A Heron 1 is purchased in October.

The subsidiary Executive Air Engineering, Ltd. is established in 1963 to overhaul company and other aircraft and to engage in equipment leasing. Although ad hoc charters are flown, the carrier now concentrates on obtaining a fleet of Herons to charter to others.

A Piper PA-23 Aztec is purchased in July 1967 and employed to inaugurate air taxi flights for industrial customers in the Midlands area.

The small operator **Air Gregory (Mid-Fly), Ltd.** is purchased and merged in April 1969, together with its Cessnas, which are exchanged for three Beagle B.121 Pups.

Rather than growth, however, the company faces decline and stops flying in 1971. The parent company fares little better and halts operations on July 28, 1972.

EXECUTIVE AIR TRANSPORT, LTD. (2): Riyadh Airport, Riyadh, 11432, Saudi Arabia; Phone 966 (1) 232-6090; Fax 966 (1) 232-6090; Year Founded 1989. Executive Air Transport, Ltd. is set up at Riyadh in 1989 to offer executive passenger and express charter services throughout the Mideast and Europe.

Flights are interrupted by the Gulf War, but by 1994 Taker Deir is general manager and oversees a workforce that includes 14 full-time and eight part-time pilots. Two Canadair Challenger 601s are based at Zurich, Switzerland, while the company operates another Challenger 601, a Boeing 727-100, a Gulfstream G-1159C Gulfstream IV, a Cessna 560 Citation V, a Dassault Falcon 10, and a Piper PA-31-310 Navajo from other locations.

Service is maintained in 1995–2000.

EXECUTIVE AIRLINE SERVICES, LTD.: 29 Adenlyl Jones Ave., P.O. Box 2051, Ikeja, Lagos, Nigeria; Phone 01 49;6-5802; Fax 01 496-4736; Code EAS; Year Founded 1992. When **EAS Cargo Airlines, Ltd.** is shut down in January 1992, its owners elect to start an executive jet charter service under the name of Executive Airline Services, Ltd. (EAS). On-demand flights with Piper equipment commence to domestic and regional destinations beginning in November 1993.

During the spring of 1996, Capt. Idns Wada and his colleagues set up an airline division and begin marketing scheduled services. A Boeing 727-200 is acquired and frequencies commence on May 12 linking the company's base with Enugu, Kaduna, Kano, Maiduguri, Owem, and Yola. Meanwhile, the executive business is continued with a Beech Super King Air 200.

Flights continue in 1997–2000, during which years the Boeing is replaced with a pair of BAC 111-500s.

EXECUTIVE AIRLINES (1): United States (1967–1973). Joseph C. Whitney, president of **National Executive Flight Service**, reforms his small regional at Boston, Massachusetts, on January 1, 1967 and renames it. Scheduled daily roundtrip passenger services continue to be provided over route networks in New England and Florida. Among the destinations served are Martha's Vineyard, Nantucket, Hyannis, points in Maine and New Hampshire, plus Sarasota, Tampa, and other Florida

communities. During the fall, replacement service for **Northeast Airlines** is inaugurated between Boston and Lebanon and Montpelier.

The small Pittsfield, Massachusetts-based competitor **Yankee Airlines** is purchased in July 1968 and its route to New York is taken over.

The fleet continues to grow during the late 1960s, coming to include Aero Commander 500s, Beech 99s, de Havilland DH 104 Doves, and the company's first de Havilland Canada DHC-6-100 Twin Otter, which Whitney personally ferries down from Toronto. Late in the year, the company is sold to Walter F. Beinecke Jr.; Whitney, however, stays on as president/CEO.

In 1969, the company is one of the largest regionals in the nation and continues to expand its operations north and south.

President Whitney and a number of senior executives depart the airline in 1970 to begin work on the establishment of **Air New England**. The departure of Whitney and company's continuing expansion lead to a financial crisis in 1971 that results in a filing for Chapter XI bankruptcy protection. Although every effort is made to emerge, the company's divisions cease operations all together in July 1973.

EXECUTIVE AIRLINES (2): United States (1976–1977). The second Executive Airlines is set up at Cambridge, Massachusetts, in 1976 to provide scheduled passenger and cargo services from Boston to White Plains, New York. Although Daily Beech 99 roundtrips are duly inaugurated they cannot be maintained beyond 1977.

EXECUTIVE AIRLINES (3): P.O. Box 38082, San Juan, Puerto Rico 00937; United States; Phone (809) 791-8070; Fax (809) 791-5180; Code NA; Year Founded 1989. The San Juan-based large regional **Executive Air Charter**, a three-year veteran of the American Eagle commuter network, becomes an AMR Eagle subsidiary on December 31, 1989 and is renamed. The workforce is reduced by 20.3% in 1990 to 325 and the carrier is the beneficiary of an order for 2 ATR72-202s. The route grows to encompass 16 cities and passenger boardings increase 32.1% to 946,277.

Company employment is cut another 36.3% in 1991 to 207 and the company now operates to 14 destinations with a fleet that includes 2 ATR72-202s, 8 ATR42-320s, and 9 CASA C-212 Aviocars.

Twice-daily CASA roundtrips begin in August from San Juan to Mayaguez and four-times-per-day service commences from San Juan to Tortola, British Virgin Islands. In October, the Aviocars employed on the San Juan to Anguilla, St. Kitts, and Nevis services are replaced by ATR42-320s.

Customer bookings slip 0.2% during the 12 months to 944,162 and revenues total \$71.34 million. Expenses are \$62.9 million and guarantee operating income of \$8.43 million. The net profit is \$4.86 million.

Company employment increases to 778 in 1992.

In a near-repeat of the predecessor airline's 1987 tragedy, a CASA C-212-200 with two crew and three passengers crashes in a nose-down attitude while landing at Mayaguez from San Juan on June 7; there are no survivors.

The remaining Aviocars are returned before their leases expire and are partially replaced by two more ATR72-202s.

Passenger boardings for the year slide 3.4% to 912,000, but freight doubles to 6,000 pounds. Revenues ascend a slight 0.7% to \$71.87 million and expenses climb 4.9% to \$65.97 million. The operating profit is down to \$5.89 million and the net loss is \$2.9 million, due entirely to the \$8.8-million write-off of the CASAs.

The payroll grows by 2.1% in 1993 to 792 and President Thomas Del Valle's fleet grows to include 19 aircraft: 2 ATR72-202s, 7 ATR42-320s, and 10 Shorts 360-320s, the latter replacing the older Aviocars and several ATR72-202s. Additional U.S.-based management personnel are sent to assist in the carrier's growth and marketing.

Customer bookings slip another 0.3% to 908,938 and revenues fall 18.4% to \$59.6 million. Expenses, on the other hand, move upward by 4.6% to \$71.27 million and cause an \$11.63-million operating loss. The net loss deepens to \$9.84 million.

The leased fleet in **1994** includes 12 Shorts 360-300s, including 12 from **Simmons Airlines**; 6 ATR72-202s, including 4 from Simmons; and 7 ATR42-320s, of which only one is chartered.

Schedules to 15 cities from San Juan are maintained, including a new Shorts 360-300 route to Miami inaugurated four times per day late in the year. The new services to Florida will replace those previously offered by **Flagship Airlines**, whose aircraft have been shifted further north.

As the result of the October 31 loss of a **Simmons Airlines'** ATR72-210 near Roselawn, Indiana, the FAA on December 9 places a prohibition on the operation of ATR turboprops, which comprise much of the American Eagle fleet. Fortunately, American Eagle President Robert Martens is meeting at AMR headquarters in Dallas with the presidents of the four confederated regionals and they are quickly able to come up with a plan to reconfigure the combined Eagle fleet around the country.

Sixteen **Simmons Airlines** ATR42-320s are transferred to Miami, while an ATR72-210 is placed with Executive at San Juan. Miami becomes an all-ATR hub when six of Executive's Shorts 360-300s are dispatched to Dallas (DFW) to support Simmons while two others are sent to San Juan.

Passenger boardings recover, rising 40.2% to 1,274,000. Freight skyrockets 200% to 4,000 FTKs.

In June **1995**, frequencies on the San Juan-Miami route are increased to 15 per day.

The company is raised to a National rank by the DOT in late December.

The carrier's 36 aircraft transport a total of 1,546,000 passengers, a 21.4% increase. Freight traffic skyrockets 166.7% to 12,000 FTKs. Expenses exceed income and there are losses; \$7.25 million (operating) and \$10.79 million (net).

The employee population numbers 1,800 in **1996**. Customer bookings slide 2.9% to 1,501,534 and only 4,000 FTKs are operated, a 62.5% plunge. Operating income increases 9.5% to \$132.21 million and costs slip 8% to \$117.72 million. The previous year's losses are turned into profits, a \$14.47-million operating gain and a net profit of \$16.2 million.

The employee population is slashed 19.7% in **1997** to 1,446.

On March 10, a request is made by Montserrat officials for disaster relief in the face of a pending eruption by the Soufriere Hills Volcano. Over the next month, 7,000 lbs. of goods, ranging from powdered milk to cloth diapers, soap, duct tape, and chain saws are collected at Executive's San Juan base.

The four-times-a-week service between San Juan and Port-au-Prince, Haiti, is suspended on March 31. On April 15, the goods collected at San Juan are loaded aboard a company ATR42-320 and flown to Montserrat, where they are met by Governor Frank Savage and other VIPs.

Under terms of the May agreement between the Allied Pilots Association and **American Airlines**, American Eagle pilots will be offered one of every two new-hire positions, but places limits on the stage-length Eagle regional jet pilots may fly (555 nm.). Meanwhile, negotiations between representatives of ALPA and AMR's American Eagle subsidiary are completed and sent to the 1,900 pilots of Executive, **Simmons Airlines**, **Wings West Airlines**, and **Flagship Airlines** for ratification.

American Eagle Flight 5484, an ATR42-320 with 3 crew and 43 passengers en route from San Juan to Puerto Plata on May 28, experiences extreme vibration and begins to lose altitude. The pilot declares an emergency but is able to make his destination, with no injuries reported. The problem has been caused by a faulty wing-to-fuselage center panel.

On June 1, the company begins a four-month aircraft upgrade program. During this time, the last six Shorts 360-300s are retired and are replaced with an equal number of ATRs.

The new ALPA contract is ratified during the third week of August by a vote of 773 to 473. The 16-year compact provides for guaranteed annual pay increases of 7%, improved crew scheduling and reserve conditions, replacement of the 4 individual company contracts with a single master American Eagle document, and a no-strike-no-lockout agreement.

George Hazy is now appointed president.

Daily ATR42-320 nonstop return service is inaugurated on December 14 from San Juan to Santiago de los Caballeros, Dominican Republic.

Passenger boardings fall 9% to 1,366,183. Operating revenues drop 5.2% to \$125.36 million, while expenses decline 3.4% to \$113.74 million. Operating profit falls to \$11.61 million, while the net gain drops to \$5.78 million.

The fleet at the beginning of **1998** includes 14 ATR42-320s and 6 ATR72-212As. On January 15, AMR Eagle officials, led by President Daniel P. Garten, announce that the change in the availability of regional jets, combined with the previous August's single Eagle pilot contract and changes in the economics of the regional airline business, dictate consolidation. Consequently, AMR will integrate all four of its airlines into a single carrier by year's end.

During the second quarter, the new carrier's field services organization begins to take shape. On April 13, **American Airlines** significantly reduces its Caribbean hub operations at San Juan. To help offset some of the reduction in jetliner service, Executive simultaneously increases the number of its ATR72-212A frequencies to five neighboring islands: Antigua, St. Croix, St. Lucia, St. Martin, and Barbados.

A number of appointments are made at the end of April (effective July 1), including David D. C. Kennedy, who becomes senior vice president-operations, while **Flagship Airlines** Vice President-Flight Operations Ed Criner is named AEA's vice president-flight operations. Reporting to Mr. Kennedy will be six new hub vice presidents: Mike Costello at Dallas/Fort Worth; Dave Brown at Los Angeles; Jacques Vachon at Miami; Robert Hamilton at New York (JFK); and former Executive President Hazy at San Juan.

On April 30, the company's four semiautonomous carriers (**Simmons Airlines**, **Flagship Airlines**, **Executive**, and **Wings West Airlines**) begin a seven-month period of amalgamation into the single mammoth **American Eagle Airlines (2)**, now viewed by AMR as a sister of **American Airlines**. The presidents of Simmons, Flagship, and Wings West are provided with appointments elsewhere within AMR and are replaced with vice presidents at each of the new airline's hubs. Simmons forms the core of AEA, with Flagship Airlines joining the merger in May and Wings West in June.

Simultaneously, agreement is reached with the Transport Workers Union of America for a new single-carrier contract. The agreement covers flight dispatchers, mechanics, and ramp-service personnel.

In late June, the decision is taken to separately maintain the certificate of Executive Airlines, moving its operating certificate to Dallas/Fort Worth on July 1. The physical merger of the company into **American Eagle Airlines (2)** is thus put off until the spring of 1999.

Executive is forced to suspend operations in many locations over the week between September 24-30 due to Hurricane Georges. On October 5, the carrier, together with its **American Airlines** affiliate, announce that special fares will be offered in October for flights between the U.S. mainland and areas struck by the tropical storm, including Puerto Rico and Haiti. The low-cost flights will be designed to assist family and friends to come and help with the rebuilding process.

ATR72-212A nonstop roundtrip service is inaugurated between Fort Lauderdale and Nassau on November 15, four times a day. Two more daily nonstop ATR72-212A roundtrips are added on December 10 between Fort Lauderdale and Nassau.

Customer bookings during the 12 months jump 16.34% to 1.59 million. Revenues leap up 19.7% to \$150.03 million, while expenses are up only 2.5% to \$116.58 million. The operating profit grows to \$33.45 million, while the net gain triples to \$20.1 million.

By the beginning of January **1999**, airline employment has been increased by 10.7% to 1,600. During January, **American Eagle Airlines (3)** and its affiliate becomes the first U.S. regional airline to be awarded Extended Overwater Certification by the FAA. The new certification allows Executive to initiate daily ATR72-212A roundtrips on February 1 between San Juan and Port of Spain in Trinidad. Daily ATR72-212A return service is started on May 25 from San Juan to Grenada.

Passenger boardings jump 12.3% to 1,791,000. Revenues advance 11.7% to \$167.54 million, while expenses shoot up 25% to \$145.76 million. The operating profit slides to \$21.77 million, while net gain drops to \$14.61 million.

Airline employment at the beginning of 2000 stands at 1,597, a 17% increase over the previous 12 months.

EXECUTIVE AIRLINES (4): 1300 New Highway, Republic Airport, Farmingdale, New York 11735, United States; Phone (516) 752-8301; Fax (516) 694-0712; Code YL; Year Founded 1993. The fourth EA is established by President Michael Peragine at Republic Airport in 1993 as the scheduled airline division of his FBO East Coast Aviation Services. Revenue services to regional destinations, including New York (LGA), commence with a pair of de Havilland Canada DHC-6-300 Twin Otters and two Piper PA-31-310 Navajos.

Operations continue apace in 1994-1999 however, the fleet is changed to include two British Aerospace BAe Jetstream 31s and a Beech Baron.

While on its second approach in light rain and mist to Pennsylvania's Wilkes-Barre-Scranton International Airport after a May 21, 2000 charter service from Atlantic City, a Jetstream 31 with 2 crew and 17 passengers crashes in a ball of fire into the woods 11 mi. S near Bear Creek. There are no survivors.

EXECUTIVE AIRLINES (PTY.), LTD.: Nomad Road, Essendon Airport, Melbourne, Victoria, 3041, Australia; Phone 61 39 374 1777; Fax 61 39 379 7321; Year Founded 1979. Executive Airlines is established at Melbourne in 1979 to offer executive and small group passenger charters. In 2000, Managing Director Geoffrey Harding oversees the work of 5 full-time pilots and the operations of 2 Cessna 550 Citations and 1 British Aerospace HS-125-800 Hawker.

EXECUTIVE AVIATION: United States (1967-1968). A scheduled air taxi division of the FBO Executive Aviation is set up at Fort Smith, Arkansas, in 1967. Employing a Beech 18, the company undertakes local passenger and cargo services, maintaining them for a year.

EXECUTIVE AVIATION LOGISTICS: 7000 Merrill Ave., Hangar 1, Chino, California 91710, United States; Phone (909) 597-0779; Fax (909) 597-0786; <http://www.guides.com/acg/eal>; Year Founded 1987. EAL is established at Chino Airport, California, in 1987 as a full service maintenance and fueling facility. It also specializes in the management, sale, and charter of corporate aircraft.

Over the next 13 years, the company also undertakes worldwide executive and small group passenger charters with 10 pilots and a fleet of 2 Grumman Aero Commander 500s, 1 Turbo Commander 980, 1 Swearingen Metro, and 2 executive jets, a Learjet 25G and a Learjet 36A.

EXECUTIVE CHARTER SERVICES: United States (1983-1984). ECS is established at Bethel in the fall of 1983 to provide scheduled passenger and cargo services to local communities and bush destinations.

Revenue flights commence in November with a fleet of Cessna 185s, 206s, and 207s and are maintained until May 31, 1985, when the company is purchased by **Ryan Air Service**. Integration is completed next day.

EXECUTIVE FLIGHT: Pangborn Memorial Airport, East Wenatchee, Washington 98802, United States; Phone (509) 884-1545; Fax (509) 884-0534; Year Founded 1982. Executive Flight is founded at East Wenatchee in 1982 to provide executive and small group passenger charters to worldwide destinations.

Eighteen years later, the company employs 25 pilots and operates a large fleet of business aircraft, including 2 each Learjet 35A Longhorns, Cessna 182 Skylanes, and Piper PA-34 Senecas, as well as 1 each Learjet 31, Canadair 600 Challenger, and Grumman 840 Commander Jet-prop.

EXECUTIVE FLIGHT MANAGEMENT: 5923 S. Central Ave., Chicago, Illinois 60638, United States; Phone (773) 735-6906; Fax (773) 735-5622; Year Founded 1984. EFM is set up at Chicago (MDW) in 1984 to offer executive flight management of corporate aircraft as well as executive and small group passenger charters on a worldwide basis.

During the next 16 years, the company grows to employ 22 full-time pilots and operates a mixed fleet of 1 each Grumman G-1159 Gulfstream II, Dassault Falcon 20, British Aerospace BAe (HS) 125-700 Hawker, Cessna 525 Citation, and Beech King Air 100.

EXECUTIVE FLIGHT SERVICES: United States (1977-1980). Executive Flight Services, a charter operation, elects to form a scheduled airline division at Portland, in August 1977 and begins to operate new scheduled flights under that name. Initial services commence with a Piper PA-31-310 Navajo.

Enplanements for the first year total 6,919.

Two Fairchild-Swearingen Metro IIs are purchased in 1978 and frequencies are increased over a network that grows to include eight Oregon cities plus Seattle and Tacoma, Washington. Bookings skyrocket 392% to 34,049.

Passenger boardings rise again in 1979, up 252% to 119,858. Revenues total \$6.06 million and expenses \$5.88 million; however, an \$824,899 loss is suffered.

In 1980, the parent elects to rename its airline subsidiary **Air Oregon**, giving it a new logo and its aircraft new liveries. At this point, the fleet comprises 6 Metro IIs, and 1 each Metro IIA and Navajo.

EXECUTIVE JET AVIATION: United States (1970-1989). Columbus (Ohio)-based EJA is established in the spring of 1970 to offer passenger charter and contract service flights throughout the U.S. The fleet, comprised of business types, will come to consist primarily of Learjets. One of these, an L-23A, crashes near the Emmet County Airport at Pellston, Michigan, on May 9.

Operations continue without major incident over the next 15 years. In 1985, the fleet includes 12 Learjet 25s, 5 Learjet 24s, 1 Learjet 35A, and 1 British Aerospace BAe 125-400 Hawker. Flights cease by the end of the decade.

EXIN COMPANY, LTD.: Rynek 18, 20-111 Lublin, Katowice, Poland; Phone 48 (81) 532-1247; Fax 48 (81) 532-5904; <http://www.exin.pl>; Year Founded 1991. Exin is established at Katowice in January 1991 and is one of the first private air companies in postwar Poland. The concern operates initially as a helicopter company, providing heli-taxi, fire-fighting, and heavy lift services with a fleet of Mil Mi-2s.

In 1992, Exin secures a contract to fly charter all-cargo freight flights for **DHL Worldwide Express**. That operation begins employing a Let L-410 freighter.

In 1993, the Let is replaced with an Antonov An-26 with three times the payload. The company web page, put up seven years later, proudly reports that in 1996 the carrier's Antonov participates in the transport support of the Granada-Dakar rally.

All-cargo services to various European destinations on behalf of DHL continue during the remainder of the decade. In addition to standard cargo, the carrier also transports hazardous materials, live animals, and perishable items. During these years, the fleet of An-26s is boosted to three. Airline employment at the beginning of 2000 stands at 30.

EXPEDITION AIRWAYS (PTY.), LTD.: P.O. Box AP12, Harare Airport, 170 Chinkoyi Street, Harare, Zimbabwe; Phone (263-4) 781390; Fax (263-4) 781399; <http://www.africaonline.co.zw/expedition>; Code FO; Year Founded 1997. Expedition is formed by Denver and Yvonne Hornsby at Harare in 1997 to provide scheduled and charter passenger services. Denver Hornsby, an expatriate American, had come to Zimbabwe a decade earlier and served as a captain with **Air Zimbabwe, Ltd.** and an official with the government's Department of

Commercial Aviation. Two Beech 1900Cs are obtained and four pilots are recruited. These are employed to initiate revenue flights on July 27 to Kariba, Victoria Falls, and Bulawayo, and from Harare to Johannesburg via Masvingo and Chiredzi.

A homepage is opened on the Internet's World Wide Web in 1998 and flights are started to Vilankulos in Mozambique. Service is maintained in 1999–2000.

EXPRESS AIR COMPANY: P.O. Box 25, E-425, Moscow, 105425, Russia; Phone 7 (095) 164 56 51; Fax 7 (095) 164 56 06; Code PSR; Year Founded 1995. EAC is established at Moscow on June 28, 1995, to offer domestic, regional, and international all-freight charters. Nikolai Bomko is named president and he recruits a workforce of 51. One each Antonov An-12 and Ilyushin Il-76T are acquired and allow revenue flights to commence on September 15.

Nonscheduled services are continued and a wide variety of destinations are visited over the next five years. Principal among these is Sharjah and Libreville. During this time, a second Il-76T is acquired.

EXPRESS AIR SERVICES, LTD. See CHANNEL EXPRESS (AIR SERVICES), LTD.

EXPRESS AIR SERVICES TRUST (PTY.), LTD. See RENNIES EXPRESS AIR SERVICES (PTY.), LTD.

EXPRESS AIRE: United States (1984–1991). Founded at Osterville, Massachusetts, in 1984, Express Air inaugurates scheduled Cessna 402 services from Hyannis on Cape Cod to the island of Nantucket. During the next four years, President Michael Josefek continues operations from the municipal airport at New Bedford and adds another Cessna 402.

In early 1989, former **Provincetown-Boston Airline (PBA)** official Richard Pereira takes over the airline. Ben Garneau becomes president and the fleet is increased by the addition of two more C-402s. Unable to maintain its economic viability in a time of recession, the small regional ceases operations in 1991.

EXPRESS AIRLINES I: 1777 Phoenix Parkway, Suite 303, Atlanta, Georgia 30349, United States; Phone (404) 991-3300; Fax (404) 997-0127; <http://www.nwairlink.com>; Code9E; Year Founded 1986. In January 1986, it is announced that Northwest Airlines will purchase Republic Airlines and its Republic Express commuter partner on August 12, with integration to be completed by October 1. When the takeover occurs in mid-August, Republic Express is renamed and plans are undertaken for it to become a Northwest Airlink partner. Former Republic Express CEO Michael J. Brady is named president with H. E. Belcher as vice president-operations.

The fleet comprises 23, later 26, British Aerospace BAe Jetstream 31s and 8 SAAB SF340As. With a base at Atlanta, Georgia, Express is certified to continue its operation of an extensive commuter network between Memphis and Minneapolis.

Enplanements for the year total 707,323.

Arriving at Joplin, Missouri, after a flight from Memphis on December 14, 1987, a Jetstream 31 with two crew and six passengers is destroyed as the result of a bad landing at its destination; there are no fatalities.

The 850-employee large regional has otherwise enjoyed a successful year as passenger boardings jump 24.9% to 941,841.

In 1988, the carrier becomes a member of the Northwest Airlink commuter network and the fleet now includes 25 Jetstream 31s and 11 SAAB 340As.

During the past 24 months, 50 cities have been added to the route network. Bookings for this year are up to 967,004.

The 1,000-employee large regional adds 6 SAAB 340As to its fleet in 1989 and passes the million mark in annual boardings for the first time (1,000,004). Freight, on the other hand, declines by 5.5% to 667,000 pounds.

The fleet is increased in 1990 by the acquisition of 2 additional Jetstream 31s and 7 SAAB-340As.

While feeding its major partner's Memphis hub, the large regional increases its ridership by 9.4% to 1,093,809. Cargo recovers and rises 8.6% to 724,952 pounds.

Company employment is cut 9% in 1991 to 900 and the fleet's 2 aircraft types are evenly matched in numbers (25 each).

As the result of the Gulf War, fuel prices rise 150% and load levels decline, at least during the first part of the year. Passenger boardings increase by 16% to 1,268,880.

The workforce grows 11.1% in 1992 to 1,000, but fleet standardization is disrupted when 8 SAABs are withdrawn in the face of recession and a damaging fare war. Still, despite the loss of over \$13 million since Iraq invaded Kuwait 2 years earlier, customer bookings ascend 35% to 1,713,361.

In 1993, President/CEO Brady's fleet includes 11 Jetstream 31s and 17 SAAB 340s. Eight SAABs remain on order.

With icing a factor, Flight 5719, a SAAB 340A with 3 crew and 28 passengers, stalls while landing at Hibbings-Chisholm Airport in Minnesota on a January 2 service from Minneapolis (MSP). Having approached too steeply, the plane lands hard, causing the right main landing gear to collapse, the fuel tank to rupture, and the right wing spar to bend forward. There are no fatalities.

Frequencies continue to be offered to some 40 cities in 15 states.

In April, the company is fined \$92,000 by the FAA for unauthorized Jetstream 31 flights to Owensboro, Kentucky, and errors on weight manifests for 194 flights.

Former WestAir Airlines executive Bryan Bedford becomes chief financial officer and joins Brady in a restructuring effort that includes relief from creditors, help from NWA, Inc., and the launching of a new fleet standardization plan centered on the SAABs. At Northwest's request, twice-daily roundtrips are inaugurated between Memphis and Atlanta.

While coming in behind schedule to Hibbings-Chisholm Airport from a December 1 service in heavy fog and freezing drizzle from Minneapolis (MSP), Northwest Airlink Flight 5719, a Jetstream 31 with 2 crew and 18 passengers, has approached too steeply and below minimum altitude. The turboprop strikes a tree and 634 feet further on, a group of aspen trees. After bounding off two ridges, it comes to rest upside down and lying on its right side. There are no survivors.

Passenger boardings for the year decline by 6.5% to 1,599,070 and although there is a \$289,000 operating profit, there is also a net loss of \$3.47 million.

CFO Bedford departs in early 1994 to become president/CEO of the "Delta Connection" partner Business Express Airlines. Meanwhile, Northwest makes the carrier a 3-year, \$7-million loan to help it transition from Part 135 to Part 121 standard.

Customer bookings drop another 31.3% to 1,071,637, but revenues leap ahead by 31.5% to \$152.31 million. Expenses rise 21.7% to \$140.63 million and there are profits: \$11.68 million (operating) and \$4.81 million (net).

The workforce stands at 1,500 in 1995. The fleet now includes 22 Jetstream 31s and 36 SAAB 340s. Orders are outstanding for 10 of the latter type, plus 10 SAAB 2000s. By the end of the year, the carrier is offering 350 daily departures, serving 15 cities from Minneapolis (MSP) and 40 from Memphis. Enplanements soar 37% to 1,469,398.

The employee populations grows 6.7% in 1996 to 1,600. Negotiations with pilots over a new contract come right down to the wire of a strike before they are successfully concluded. Most of the flyers, and many cabin personnel, have not forgotten a plan by CEO Brady, several years earlier, to relocate crews to rural outposts to cut travel costs.

Passenger boardings accelerate 16.6% to 1,783,851 on 136,342 scheduled departures. Revenue figures, though not released, are estimated by airline analysts to average between \$95 million and \$150 million annually.

In something of a surprise move, the *St. Paul Pioneer Press* on March 25, 1997, reports that Northwest will purchase its Northwest Airlink

partner outright when its contract expires on April 30. Terms of the sale are not initially released. The \$20-million buyout, which is closed on April 1, also includes all of the airline's stock and that of its affiliate management company, Phoenix Airlines Services. The retirement of CEO Brady is part of the package.

At the same time, a new contract between Northwest and **Mesaba Airlines** takes effect; Mesaba takes over the Express Airlines I services at Minneapolis, with Express shifted to Memphis. At the West Tennessee metropolis, Philip H. Trenary, former president of **Lone Star Airlines**, is installed as the carrier's new CEO. By summer, the airline is feeding 50% of its parent's Memphis flights from cities in the South and Southwest.

Customer bookings slide 3% to 1,592,642 on 112,585 scheduled departures.

Working begins during the spring of **1998** on the transfer of corporate headquarters from Atlanta to Memphis.

The fleet now includes 32 SAABs.

Upon departure from Huntsville, Alabama, for Memphis on June 4, Northwest Airlink Flight 5545, a SAAB 340A with 3 crew and 15 passengers, experiences the activation of a baggage compartment smoke warning alarm just after takeoff. The fire suppression system is activated and the turboprop returns to its point of origin. After landing, the aircraft is stopped on the runway and the passengers are evacuated.

The company unveils the latest aircraft in its refurbishment project on July 21 at Chattanooga. In a ceremony attended by state, local, and company officials, the mayor of the Tennessee community christens the SAAB 340A *The Spirit of Chattanooga*.

On August 20, the airline notifies the Essential Air Service Division of the DOT that Express might be faced with an involuntary interruption of service in the event of a strike by Northwest pilots.

Following the strike by Northwest pilots on August 29, President/CEO Trenary informs his 1,400 personnel on September 1 that plans are in hand to retain all of them for a minimum of two weeks even though the regional, itself, must be shut down. On the morning of September 3, Transportation Secretary Rodney Slater orders Express Airlines I and its fellow Northwest Airlink feeder **Mesaba Airlines** to resume service to 17 small towns in 11 states in the Midwest and South. As the DOT official puts it, federal rules prohibit the carriers from suspending air service below mandated levels without first filing a 90-day notice.

Secretary Slater requests the return of air service to Muscle Shoals, Alabama, Owensboro, Kentucky, Greenville, Laurel, and Hattiesburg, Mississippi, and Jackson, Tennessee. President/CEO Trenary response is that the company is within the law, which permits a company to suspend service without notice "for any interruption of service that the carrier cannot reasonably be expected to foresee or control such as . . . strikes."

Following negotiations between President/CEO Trenary and Assistant DOT Secretary Charles Hunnicutt, an agreement concerning EAS services is reached on September 8. Under the accord, Express will be allowed time to examine a number of different service scenarios that will allow cost-effective flights to the five affected cities. The plan chosen will be made available to DOT in two days.

Even though the company continues relatively amiable discussions with DOT, Secretary Slater and Attorney General Janet Reno file suit against it, together with **Mesaba Airlines**, on September 10 seeking to force a resumption of Essential Air Services. In addition, the suit seeks to require Northwest to provide support for the operations of the two, even though the major is shut down by the pilots strike.

Northwest itself now steps into the dispute between the DOT and the DOJ and its Northwest Airlink affiliates. The major, presenting the same arguments that both **Mesaba Airlines** and Express have unsuccessfully employed with government officials, files an emergency petition with the U.S. Court of Appeals for the District of Columbia asking it to stay the effects of the DOT order requiring NWA to provide support services so that its affiliates can resume EAS services.

Northwest argues that its constitutional right to a hearing has been violated because the DOT issued a final order adversely affecting the carrier's interests without providing it with notice. Furthermore, as preparations for the pilot strike were made earlier in the month, the major had specifically and legally executed an agreement with the Northwest Airlink partners suspending all of its obligations, including code-sharing (an important legal point now in play), should a job action occur.

None of these lawsuits come to trial as the Northwest strike is tentatively settled late in the evening. Air service is reinstated along the company's entire route network on September 16. Express is at 100% pre-strike status two days later.

The last Jetstream 31 is retired on October 1. Thereafter, all flights are operated with 33-seat SAAB 340s.

Tragedy strikes the airline on November 3 when a ground worker is killed. Northwest Airlink Flight 5858, with three crew and eight passengers, is being prepared for departure from Memphis for Cincinnati. While assisting with the starting of the No. 2 engine of the SAAB 340A, a ground crew member is given the signal by the flight crew to disconnect the ground power unit (GPU) parked behind the right wing. Turning, she walks toward the GPU and straight into the rotating right propeller.

On December 5, Northwest, which has vowed to complete a deal with **Continental Airlines** despite an antitrust lawsuit by the government, completes its acquisition of a controlling stake in Continental. The arrangement gives the nation's fourth-largest airline a 14% equity stake in Continental as well as voting control of up to 51% of the No. 5 carrier. Executives from both airlines indicate that they will proceed to implement domestic code-sharing involving upwards of 850 flights.

Due largely to the Northwest strike, customer bookings this year plunge 28.5% to 1.19 million.

Northwest and **Continental Airlines** begin linking a major portion of their domestic flight schedules and implementing more international dual-designator flights on January 7, **1999**. The two majors, despite DOT opposition, initiate code-sharing on approximately 850 domestic and international flights to 95 destinations. As part of the arrangement, Continental code-shares daily on **Northwest Airlines** and Northwest Airlink domestic flights, including cities where it does not currently fly, such as Sioux City, Boise, Knoxville, and Spokane.

In February, an order is placed by Northwest with Bombardier Aerospace for the acquisition of 54 CRJ200LR aircraft, with options taken on another 70 aircraft. Express moves its six daily Fayetteville flights on March 15 from the city's Drake Field to the new Northwest Arkansas Regional Airport.

On May 3, in what could be described as a model for the rest of the airline industry, management and the local ALPA chapter, headed by Capt. Garth Thompson, ratify a new 6-year labor contract by an 89.5% margin—even though the current agreement still has 18 months to run.

On May 7, Northwest officials announce that Express will be the launch operator for 42 of the CRJ-200LRs that it has ordered from Bombardier in Canada. To accommodate the new jetliners, Northwest and the Memphis Shelby County Airport Authority will combine forces to expand Concourse A and build jet bridges.

Customer bookings drop 5.1% to 1,147,000.

Airline employment at the beginning of **2000** stands at 1,209. Following receipt of the first CRJ200LR, christened *Spirit of Memphis*, the new Canadair enters four-times-a-day roundtrip service on June 1 between Memphis and Greenville and Spartanburg. On June 15, the airline's second CRJ200LR replaces **Mesaba Airlines'** RJ85s on the Memphis-Wichita route and on one route from Memphis to Huntsville.

Receipt of a third CRJ200LR on June 24 allows the initiation of four-times-a-day return jet service between Memphis and Mobile on July 1. The fourth CRJ200LR arrives on July 14.

Thrice-daily SAAB 340 roundtrips are inaugurated on July 17 between Memphis and Tallahassee. The four-times-a-day SAAB 340 service from Memphis to Branson and Springfield is simultaneously upgraded to CRJ200LR. The fifth CRJ200LR arrives on August 1.

On August 28, all four daily Memphis to Tulsa roundtrips are upgraded from SAAB 340 to CRJ. Much of the carrier's service within Tennessee is new or boosted on September 5, including initiation of thrice-daily roundtrips between Knoxville and Nashville and an increase of the number of flights between Memphis and Nashville from four to six. New thrice-daily return flights begin on September 11 between Memphis and Bristol's Tri-Cities Regional Airport. The sixth CRJ200LR is delivered on September 18.

In a special ceremony at McGee-Tyson International Airport on October 1, Northwest AirlinK Vice President Philip Reed joins with University of Tennessee President Dr. J. Wade Gilley, Mayor Victor Ashe, and Tennessee Department of Economic Development Commissioner Bill Baxter to celebrate the new service linking Knoxville with Nashville. Accompanied by the UT the pep band's rendition of *Rocky Top* and a water cannon salute, a SAAB 340A is christened the *UT* in honor of the Spirit of the Volunteers. Northwest Airlines and its AirlinK partner now serve every major airport and area in the state of Tennessee.

Also on October 1, CRJ200LRs replace SAAB 340s on two of the carrier's four daily return flights from Memphis to Pensacola. Simultaneously, a fourth daily roundtrip is added between Memphis and Tallahassee. The thrice-daily SAAB 340 roundtrips from Rapid City to Sioux Falls via Pierre are discontinued on October 15.

The seventh CRJ200LR arrives on October 18 and twice-daily CRJ200LR roundtrips begin on October 29 between Memphis and Pittsburgh.

Three of the carrier's four daily roundtrips between Memphis and Montgomery are upgraded on November 20 from SAAB 340s to CRJs.

It is announced on December 15 that the company will launch twice-daily CRJ200LR roundtrips on April 1 from Memphis to Monterrey, Mexico.

EXPRESS AIRWAYS, GmbH.: Heuserweg 13-15, Troisdorf-Spich, D-53842, Germany; Phone 49 (2241) 9433010; Fax 49 (2241) 9433033; <http://www.farnair.com>; Year Founded 1998. Express Airways is established at the former USAF base at Hahn in late 1998 to offer express and overnight package delivery.

In February 1999, the company's air operating certificate is purchased by Basel-based Farnair Europe Aviation Group. Employing a leased Shorts 360-300, daily roundtrip service is inaugurated between a temporary operating base at Paris (CDG) and Madrid. Although headquarters remain in Hahn, the Paris base is made permanent in May, after which the company also initiates frequencies to Germany, Italy, the Netherlands, and Switzerland, all under contract to **Federal Express**.

In October, additional aircraft are acquired and new routes are started to additional points in Spain, as well as Ireland.

Managing Director Peter Sanden's workforce totals 75 at the beginning of 2000 and during the first quarter the fleet acquires 2 Fokker F.27-500Fs and 11 Shorts 360-300s. The Shorts all wear FedEx titles and are painted in a modified version of the U.S. major's colors. Additional frequencies are added in April from Cologne to Glasgow, Berlin, Amsterdam, Nice, Venice, Hamburg, Stuttgart, and Madrid, along with new services to Vienna.

To handle the new services begun in the spring, arrangements are made to acquire between two and four more F.27-500Fs. In July 8, company headquarters are transferred from Hahn to Cologne.

EXPRESS AIRWAYS, LTD.: Nigeria (1989-1994). Organized to provide domestic commuter services, Express Airways is founded at Lagos in 1989. Managing Director Mohammed Joji's fleet comprises 5 Embraer EMB-110P1 Bandeirantes. Services are continued into the 1990s. The fleet in 1990-1992 includes 4 Bandeirantes. The number is increased to 5 in 1993, but services cease in 1994.

EXPRESS AIRWAYS NIGERIA. See **SKYPOWER EXPRESS AIRLINES, LTD.**

EXPRESS CITY, S.A.: BP 128947, Kinshasa, Democratic Republic of the Congo; Phone 32 (2) 275 548; Code XP9; Year Founded 1995. EC is set up at Kinshasa in 1995 to provide domestic and regional passenger charters. Revenue flights begin, and continue, with a single Boeing 727-200.

EXPRESS ONE INTERNATIONAL: 3890 West Northwest Highway, Suite 700, Dallas, Texas 75220, United States; Phone (214) 902-2500; Fax (214) 350-1399; Code EO; Year Founded 1987. The supplemental carrier **Jet East International**, a subsidiary of Dallas-based Wilkert and Wilkert, is renamed Express One International in 1987. Charter passenger and cargo and contract service flights are undertaken to destinations throughout the Western Hemisphere and to northern Europe, initially with seven B-727Fs. Contracts are maintained with **Emery Air Freight** and **DHL Airways**. In November, a B-737-210C is purchased from **Quebecair, Ltd.** Airline employment totals 125 and FTKs rise 30.5% to 52.6 million.

The workforce is cut by 20% in 1988 to 100 as the company enters the passenger charter market as a serious sideline to its freight business.

A total of 11,000 bookings are generated during the year. Meanwhile, cargo declines 4.4% to 50.23 million FTKs. Revenues total \$20.9 million, the operating income is \$211,000, and net gain is \$297,000.

The employee population is elevated by 25% in 1989 to 125 and the fleet comprises 2 B-727-31s, 1 B-727-44, and 7 B-727Fs plus 1 B-737-210C and 1 Douglas DC-9-15.

Chairman Alinda H. Wilkert and President James R. Wilkert now seek scheduled passenger authority from the DOT. Granted, the company is able to increase its passenger bookings to 226,665. Cargo, on the other hand, plunges 58.3% to 21.18 million FTKs. Revenues skyrocket 72.6% to \$36.07 million, expenses rise 71.2% to \$35.44 million, and the operating profit swells to \$626,232. As a result of costs associated with service changes, the net profit plunges to \$12,400.

Customer boardings plunge 52.6% in 1990 to 129,000 and freight is down again, by 3.2%, to 24.73 million FTKs. Revenues drop to \$29.3 million, but allow an operating profit of \$2.28 million. There is a \$5.5-million net loss.

The fleet of the 125-employee Dallas-based regional in 1991 includes 5 B-727-31s, 3 B-727-25s, 2 each B-727-31Fs and B-727-44Fs, 1 B-727-29F chartered to **DHL Airways**, 1 B-727-81F, 1 each B-727-30C and B-727-155C, which are also leased to **DHL Airways**, and the B-737-210C now chartered to **Atlanta Icelandic Airlines, H.F.** The 5 B-727-31s are leased to **Front Page Tours**, a charter start-up seeking to capture a market with professional sports teams. Passenger boardings plunge 43.4% to 73,277, but freight rises 7.5% to 26.6 million FTKs. Revenues fall 5.5% to \$34.08 million, expenses decline 15.7% to \$29.86 million, and the operating profit is \$4.21 million. Net gain is \$56,173.

The carrier enjoys an interesting second half of 1992. Following the Democratic National Convention, three B-727-25s are leased to the Democratic Party and furnish the transportation for the successful presidential campaign of Bill Clinton and Al Gore.

In the fall, a newly received B-727-223, passed on to **Front Page Tours**, becomes (for one season only) the official team plane of the Minnesota Timberwolves NBA professional basketball team and wears the team logo on its blue tail.

Total enplanements for the year are 122,307 (not counting the politicians and their entourage) and revenues shoot up to \$77 million. A net \$11-million profit is generated.

In 1993, airline employment stands at 805 and President James R. Wilkert's fleet now includes 2 B-727-31, 3 B-727-25s, 8 B-727-100Fs, 6 B-727-200s, 3 DC-9-31s, and 1 DC-9-32. Wet-leased to **Japan Air Lines Company, Ltd.**, a B-747-100F en route to Chicago from Tokyo loses its No. 2 engine shortly after takeoff from Anchorage on March 31.

In July, three leased Douglas DC-10-30s are acquired to operate charters from the U.S. to Frankfurt. During the fall, several B-727-100Fs are contracted to provide service on behalf of the new freighter **Roadway Global Air**.

Passenger boardings skyrocket 82.3% to 691,000, but freight declines 41.1% to 11.13 million FTKs. Revenues increase 50.4% to \$115.81 million while expenses jump 75.1% to \$115.52 million. The operating profit falls to \$288,234 and there is a \$3.47 million net loss.

When **Emery Worldwide** begins to operate a new decade-long mail service from Indianapolis on behalf of the U.S. Postal Service in 1994, it subcontracts with Express One International to fly freighters on its behalf. A B-727-2A7F is immediately dedicated to the duty. The airline also becomes a scheduled carrier when it introduces DC-10-30 passenger frequencies in early spring from Los Angeles to Honolulu. In the summer, a DC-9-31 is placed into service in the livery of Front Page Tours, and, with an appropriate tail logo, the plane is also employed to fly gamblers to Mississippi on behalf of Casino Magic.

During the fall, a single, daily scheduled \$278 roundtrip service is inaugurated from Dallas (DFW) to New York (JFK).

At year's end, the DOT elevates the company to National status. At the same time, **Emery Worldwide** purchases six former **United Airlines** B-727-223Fs, which it will turn over to the company to operate in U.S. Postal Service.

Customer bookings for the year dip 7% to 1,217,000, but cargo skyrockets 392.6% to 161.21 million FTKs.

Airline employment stands at 160 in 1995.

As the result of a FAA probe of its parts and maintenance program, Express One voluntarily halts service on June 5 and enters into Chapter XI bankruptcy. The company reports its traffic figures for the first half as 314,000 passenger boardings and 52.85 million FTKs operated. Fiscal figures shown through September reveal an operating gain of \$6.47 million and an \$82,000 net loss.

Front Page Tours, meanwhile, successfully purchases the newly available **MGM Grand Air** division of **American International Airways** (3).

When **Federal Express** (FedEx) pilots begin a work slowdown in December over the issue of overtime pay, the Memphis-based cargo giant wet-leases seven Express One International B-727Fs to help handle the Christmas holiday surge in business.

The carrier continues to operate 20 aircraft in 1996.

Late in the first quarter, one each B-727-221A and B-727-277A are leased to **Western Pacific Airlines** (Westpac) and are given dual Westpac and Express One titles. Between June 15 and September 5, they will provide scheduled service on behalf of Westpac from Colorado Springs to Newark (EWR) and Washington, D.C. (IAD).

Meanwhile, the carrier emerges from bankruptcy during July.

Traffic and financial reporting is spotty and only incomplete figures are available. A total of 5,000 international boardings are reported for the year and, through September, a \$43.43-million operating income is generated. Expenses during the same period are \$45.02 million and leave an operating loss of \$1.36 million. A \$1.9-million net loss is also posted.

Customer bookings for all of 1997 total 438,000. Freight traffic skyrockets 99.8% to 180.35 million FTKs. Operating revenues rise 5.7% to \$67.66 million and expenses are \$63.99 million. The operating profit doubles to \$3.67 million, while a net loss of \$867,000 is suffered. Service continues apace in 1998, a ruinous year. Passenger boardings plunge 71.5% to 133,000. Revenue figures are not available.

Airline employment stands at 500 at the beginning of 1999.

Revenues of \$120.71 million are posted, while expenses total \$108.96 million. The operating profit is \$11.75 million and there is a \$7.51-million net gain.

The domestic freighter fleet at the beginning of 2000 includes 28 B-727s: 1 each Dash-82F, Dash-231F, Dash-264F (operated in the color scheme of **DHL Worldwide Express**), Dash-243AF, Dash-277AF (operated for the U.S. Postal Service in its USPS color scheme), Dash-2A7F (USPS color scheme), Dash-2M7AF, and Dash-231F, 13 Dash-223Fs (6 in USPS color scheme, 1 in DHL color scheme), and 5 Dash-225Fs. A B-727-25F is operated for **DHL Worldwide Express** in Europe.

The company's fleet is increased to 29 with the addition of a B-727-2M7AF leased from Pegasus Aviation in late July. The company oper-

ates its final contract flight for **DHL Worldwide Express** on October 31 using a B-727-264AF painted in DHL colors.

EXPRESO AEREO COSTARRICENSES, S.A. See **EXACO (EXPRESO AEREO COSTARRICENSES, S.A.)**

EXPRESO AEREO INTER-AMERICANO, S.A.: Cuba (1942–1961). Capitalized at \$100,000 (17.5% American), this little-known Cuban independent is formed at Havana on August 4, 1941 to provide cargo and passenger flights to Florida. The first of three Ford Tri-Motors to be purchased by the company is the 4-AT-67, which is acquired on November 21, 1942.

The former **Carolina Air Transport** freighter and Ford Tri-Motor 4-AT-51 is acquired on January 18, 1943. Although bought six months earlier, the 4-AT-67 does not reach Havana until May. It begins all-cargo Havana–Miami service on August 28, along with flights to Santa Fe, Isle of Pines. Having begun service with **Maddux Air Lines** back in 1928, the Ford 4-AT-31 is acquired on March 18, 1944.

Domestic routes are opened in 1945–1946; however, the carrier faces numerous difficulties (chiefly financial) and disappears from the airline scene after 1948.

In 1951, the moribund company is reorganized. Equipped with three Curtiss C-46 Commandos, it operates freight services around the island nation until July 1961 when it is absorbed into **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**.

EXPRESS.NET AIRLINES: 803 Willow Run Airport, Ypsilanti, Michigan 48198, United States; Phone (313) 484-3435; Fax (313) 484-3260; Code TCN; Year Founded 2000. At the beginning of 2000, Willow Run-based **Trans Continental Airlines** is renamed. *Aviation Today* reports on January 20 that the concern has purchased three Airbus A300B4-203Fs for \$12 million each, a price significantly lower than current market values for a single unit. The arrangement has been completed primarily because of a need by Aviation Sales to unload the planes in order to reduce its debt. The first two are delivered by mid-April, with the third arriving in May. The original two are operated on an ACMI contract for **Emery Worldwide** from Dayton to Phoenix and Minneapolis.

The company also operates four B-727s, one each Dash-21C, Dash-22C, Dash-173C, and Dash-227AF, the former wearing the colors of **BAX Global**. During the fall, two A300B4-203Fs are subleased to the new Spanish cargo line **Euro First Air/Canarias Cargo, S.A.**, with the second delivered on November 15. Meanwhile, two other A300B4-203Fs are chartered from **Pace Airlines**.

EXPRESO AEREO PERUANO, S.A. (1): Peru (1956–1962). This all-cargo carrier is organized at Lima in May 1956 to offer ad hoc services to the nations of Central America. Equipped with three Fairchild C-82 Packets, the company begins multistop flights to Nicaragua, Honduras, Panama, Costa Rica, and other destinations during the summer. Ultimately an unprofitable concern, the company is forced to shut its doors in March 1962.

EXPRESO AEREO PERUANO, S.A. (2): Larco 101, Office 306, Lima 18, Peru; Phone 51 (14) 616373; Fax 51 (14) 619275; Code 9D; Year Founded 1991. The second EAP is founded at Lima in late spring 1991 to pick up where its predecessor had stopped two decades earlier. Regional services commence in the summer with one Fokker F.27-200 and two F.27-500s. Although statistics are not released, the company does announce the addition of a 1992 fleet revision. One F.27-500 is retired in favor of two more leased F.27-200s.

Flights continue in 1993 and, in 1994, a leased B-727-264A is acquired, allowing services to be expanded accordingly. Airline employment stands at 85 in 1995 and 102,180 passengers are transported. An Antonov An-24 is added in 1996 and services continue in 1997–2000.

EXTRA EXECUTIVE, GmbH. See **EUROPEAN EXPEDITE, S.A.**

EYRE CHARTER (PTY.), LTD. See **EYRE COMMUTER (PTY.), LTD.**

EYRE COMMUTER (PTY.), LTD.: Australia (1979–1996). Founded by private interests in 1979, **Eyre Charter (Pty.), Ltd.** undertakes non-scheduled services in the Cummins, South Australia, area. Within two years, the carrier changes its name and begins regularly scheduled daily flights between Cummins and Adelaide via Tumby Bay, on demand.

By 1983, the 5-person concern is flying 7,000 people annually with a fleet comprising a Cessna 402B, a Piper PA-34 Seneca, and a Piper PA-28 Cherokee Arrow.

General Manager Barry Firth adds another Seneca to his airline in 1987–1988 and a new stop at Port Lincoln. There are no significant personnel, equipment, or route changes over the next two years.

Airline employment stands at 6 in 1990 and a total of 10,500 passengers are transported by the carrier's Cessna 402 and 2 Piper PA-34 Senecas. Passenger boardings slip to 10,450 in 1991, but grow to 11,000 in 1992.

The mini-airline in 1993–1995 still operates the Cessna 402 and two Piper Senecas, but closes down in 1996.

EYRE PENINSULA AIRWAYS (PTY.), LTD.: Australia (1931). This short-lived carrier is formed at Adelaide in 1931. Capt. J. A. Mol-lison, flying a Junkers F-13, offers services to Broken Hill and Streaky Bay. Traffic is too light to sustain business and the company ceases flying within months of its start-up.

F & F AIRCRAFT. See **FINAIR**

FAI AIRSERVICE, A.G.: Flughafenstrasse 100, Nuremberg, 90411, Germany; Phone 49 (911) 36 00 90; Fax 49 (911) 36 00 959; http://www.fai-airservice.com; Year Founded 1987. FAI is established at Nuremberg in 1987 to provide executive and small group charter flights to points within Germany and around Europe. Employing Cessna Citation I and II bizjets, revenue flights are begun and continued without incident.

FAIR AIR COMPANY, LTD.: Sendai, Japan; Year Founded 2000. Fair is established by former **Skymark Airlines, Ltd.** executives at Sendai in the late spring of 2000 to offer scheduled regional passenger services. Employing a pair of used Canadair CRJ100LRs, the new concern launches thrice-daily return flights to Osaka (KIX) on August 7.

FAIRBANKS AIR SERVICE: United States (1946–1975). FAS is established at Fairbanks, Alaska, in 1946 as the flight division of an FBO founded during World War II. Lightplane passenger and cargo charter services are offered to various local destinations and to Anchorage.

During the next two decades, the company also elects to provide larger all-freight flights, particularly in support of military construction projects. A fleet of 7 Curtiss C-46 Commandos and 1 Douglas DC-3 are placed into service.

Two decades later, on February 16, 1965, the company begins to employ certain of its Beech 18s, Britten-Norman BN-2 Islanders, and de Havilland Canada DHC-6 Twin Otters to provide scheduled third-level flights to its previously nonscheduled stops. Commuter and cargo services continue apace for another decade.

During the early 1970s, a Lockheed L-188A first operated by **National Airlines** is purchased and converted into a freighter.

Following its landing at Deadhorse on December 11, 1974, the aircraft, with three crew and a load of diesel fuel, veers off the left side of the cargo and catches fire. Although the aircraft must be written off, there are no injuries reported.

A C-46A, with two crew aboard, is destroyed as the result of a bad landing at Deadhorse, on March 28, 1975; there are no fatalities.

During the spring, a Lockheed L-188CF, first flown by **Northwest Airlines**, is leased and four L-188PFs are purchased. The aircraft will be employed to support the North Slope oil industry and Alaska pipeline project. In July, the carrier is renamed **Great Northern Airlines**.

FAIRCHILD AVIATION COMPANY, LTD.: Canada (1927–1929). Formed in 1927, this company (not related to any of the U.S. enterprises of Sherman Fairchild) begins the operation of a mail service from Hailyburg to Rouyn.

Passenger and freight services are offered in 1928 over a route from Chibougamau to Oskelaneo River. On October 1, weekday mail flights are initiated from Montreal–Toronto under subcontract to **Canadian Airways, Ltd.**

In early 1929, the carrier is renamed **Inter-Provincial Airways, Ltd.**

FAIRFLIGHT, LTD.: United Kingdom (1948–1952). Air Vice Marshal D. C. T. Bennett, having given up his managing directorship of **British South American Airways, Ltd.**, forms the charter carrier **Air-flight, Ltd.** on June 4, 1948. The company is based at Langley, later Blackbushe, Airport and is equipped in August with two Avro 689 Tudor 5s. These are immediately assigned to the civil portion of the Berlin Airlift, one as a tanker.

In March 1949, the company's two aircraft set an operation record of 50 roundtrip sorties in a single week. On May 31, the Tudors are withdrawn from the airlift; however, an Avro Lincolnian is acquired in June and is employed in the German rescue mission until withdrawn on July 12. During the Berlin Airlift, company Tudors fly 921 sorties and the Lincolnian 46 sorties, most of which were in tanker configuration.

Returned from Germany, the Tudors are converted to passenger status and are ready for charter work when Bennett forms **Fairflight, Ltd.** on August 25 to take over the work of **Airflight, Ltd.**

The first passenger charter is inaugurated on September 2 with a flight of apprentices from Karachi to Blackbushe.

The first sustained service is participation in the airlift of Jewish refugees from Aden to Palestine during October and November.

On March 12, 1950, one of the two Tudors, with 5 crew and 78 passengers, mostly Welsh rugby fans returning home from a Dublin match, crashes at Llandow, near Cardiff (80 dead). The disaster is the world's worst air crash to date.

The surviving Tudor and the Lincolnian continue to accept long-haul passenger and freight charters. Bennett registers the travel subsidiary **Fairtravel, Ltd.**

A variety of charters are flown during the summer, including a significant airlift of pilgrims from Karachi to Jedda under contract to **Orient Airways, Ltd.**

Long-distance nonscheduled destinations are flown during January–July 1951, but in August the Tudor is dispatched to West Berlin to fly 350 cargo sorties to Hamburg during the next five months.

In November, Bennett sells **Fairflight, Ltd.** to Aviation Traders subsidiary **Surrey Flying Services, Ltd.** and the company is gradually amalgamated into **Air Charter, Ltd.** during 1952, losing its identity completely during July.

FAIRFLIGHT (CHARTERS), LTD.: United Kingdom (1968–1992). With assets and equipment purchased out of the **British Eagle Airways, Ltd.** bankruptcy, the nonscheduled carrier **Fairflight** is formed at Biggin Hill in December 1968 to undertake passenger, cargo, and contract services in the U.K. and throughout Europe.

In May 1969, a de Havilland DH 104 Dove 5 is purchased and employed to inaugurate ad hoc passenger and cargo charters.

Another Dove is purchased in January 1970, followed by the ex-**Gibair** DC-3 in June. During the national dock strike, the Douglas transport is employed to fly foodstuffs from Rotterdam to various English destinations. An undercarriage accident in September forces the company to sell the aircraft.

During 1971 the Doves are chartered to the British Airports Authority. A Dove 5 is obtained in March 1972, followed by a DH 114 Heron 1B in May.

During this year and 1973 the aircraft fly out of London (LGW) to three destinations in France plus the Channel Islands.

Operations begin in support of the North Sea oil industry in 1974, as two of the Herons are replaced by Piper PA-23 Aztecs and PA-31-310 Navajos. During 1975, Riley Dove conversions are placed in service.

During the years 1976–1981, Fairflight Charters begins to obtain larger aircraft, such as Shorts 330s, and undertakes contract charters as far away as North Africa. On January 31, 1980, the company joins the Royal Mail program known as “Spokes from Speke,” flying one of its new Embraer EMB-110 Bandeirantes each night from Exeter to the sorting hub at Liverpool (Speke Airport) and back to Exeter for distribution.

In 1982, the carrier becomes affiliated with the commuter **Air Ecosse, Ltd.**, a feeder marriage that lasts until December 1985.

Thereafter in 1986–1990, Managing Director Gordon Burdess’s company continues air ambulance and charter services to previous destinations with a fleet of 2 Shorts 360s, 2 Shorts 330s, 8 Embraer EMB-110 Bandeirantes, and 2 Cessna Citations.

While taxiing at Southport preparatory for a flight to Biggin Hill for maintenance, a Shorts 330-200 with two crew suffers the failure of its nose gear steering. Consequently, the aircraft makes an uncommanded left turn and crashes into a parked **British Air Ferries, Ltd.** Vickers Viscount 806. Although both aircraft are damaged beyond repair, the two pilots escape without injury.

As the 1990s begin, the fleet is altered. Gone are the Bandeirantes and Citations, replaced by a fleet of nine additional Shorts 330s and one Shorts 360s. In 1990, three of the former are leased to **Celtic Airways, Ltd.**, four to **Gill Aviation, Ltd.** and one is placed in storage while the Shorts 360 is leased to **Air Europe Express, Ltd.** Operations are performed with but two Shorts 330s.

Revenue flight operations are suspended in 1991 as all but four Shorts 330s are withdrawn; three of those remain on lease to **Gill Aviation, Ltd.** and the fourth is stored.

Two Shorts 330s are sold in 1992 and two remain on lease to **Gill Aviation, Ltd.** When the lease is concluded, the company shuts its doors.

FAIRLINE, A.B.: Sweden (1966–1968). Supported by Swedish shipping interests, Fairline is established at Goteborg in November 1966 to operate all-cargo flights in Scandinavia on their behalf. Employing a pair of Curtiss C-46 Commandos, revenue operations duly begin and continue into 1968.

FAIRLINES, B.V.: The Netherlands (1996–1998). Fairlines, also known as F^{air}lines, is established in 1996 to provide scheduled domestic and regional passenger services. G. Ter Beek is managing director and he recruits a workforce of 20. Revenue flights begin with four Embraer EMB-110 Bandeirantes.

Service is maintained in 1997–1998. In April of the latter year, the company is taken over by **KLM Exel, C.V.**

FAIRLINES, S.A.: France (1997–1998). Francois Arpels, of the fragrance and jewelry concern Van Clef & Arpels, establishes Fairlines at Paris (CDG) in December 1997 to offer up-scale business-class service from Paris to Italy. Two Boeing and McDonnell-Douglas MD-81s are acquired under charter and christened *Faust* and *Tosca* in honor of two operas of interest to the owner. They are employed, beginning on January 19, 1998, to inaugurate thrice-daily roundtrips to Nice. Twice-daily services from Paris to Milan commence on March 4, along with twice-daily service between Nice and Milan.

Plans are made to inaugurate services to additional European cities and to acquire eight more MD-80s over the next three years. In May, the airline is the official carrier for the Monte Carlo Open tennis tournament. The high-class, business-class service never catches on and, in September, the carrier is forced to terminate its scheduled routes, re-

placing them with scheduled flights. Without income, the company is also forced to suspend its aircraft lease payments.

French aviation authorities agree to give Fairlines three months to get its financial house in order. In exchange, owner Arpels promises to find a major airline partner and find investors willing to join him in making additional equity infusions. He also seeks to renegotiate lease payments and build a cash reserve. Progress toward these goals is slow, with none achieved by the beginning of November. On December 31, Fairlines ceases operations.

FAIRWAYS: Philippines (1964–1965). Led by former **Philippine Air Lines (PAL)** President Renato Barretto, a group of the flag carrier’s former executives form this concern at Manila in December 1964 to offer scheduled services in competition with their former employer. Capitalization comes in the form of a PP 2.7-million loan from the Philippine National Bank.

After obtaining a temporary government operating certificate and a fleet of 8 Douglas DC-3s and two DC-6Bs, Fairways inaugurates revenue flights (initially charter) on January 6, 1965, linking its base with Bacolod, Cebu, and Davao. It will be plagued with numerous operational accidents, beginning on January 21 when a DC-3 is destroyed at San Jose as the result of a bad landing; no injuries are reported.

Flight 43, a chartered DC-3A with 3 crew and 9 passengers and en route from Manila, crashes into Mt. Tangcong Vaca on March 8 (10 dead). The tragedy does not prevent the new entrant from inaugurating scheduled flights on March 10. Discount scheduled DC-6B Orchid service is started between Manila and Cebu on March 30. Other Orchid communities are added during the next two quarters and orders are placed for Japanese-made Nihon YS-11A turboprops. President Barretto resigns in May.

A DC-6B is destroyed when it fails takeoff from Cebu City on June 6; there are no fatalities. A DC-3A with three crew and eight passengers crashes into Mt. Kantakan near Bacolod on September 11; there are no survivors. This second loss of a Douglas transport within four months, and the fourth since January, leads to public concern over the airline’s safety. In response, the company is shut down for assessment during the next 45 days. The reformed carrier returns to service in November under the name **Filipinas Orient Airways (FOA).**

FAIRWAYS AVIATION (JERSEY), LTD.: United Kingdom (1953–1956). To operate scheduled services from the Channel Islands to England, **Channel Air Services (Jersey), Ltd.** is formed at Jersey in January 1953. Employing two Avro 19s, the company flies ad hoc seasonal charters from Jersey to both England and northern France. The name Fairways Aviation (Jersey), Ltd. is adopted at year’s end.

During 1954–1955, the carrier, having received a license for inclusive-tour flights from Jersey and Guernsey to London (LGW), undertakes these charters as well as those to destinations reached earlier. On August 6 of the latter year, an Avro 19 runs out of gas and successfully ditches in the Solent, off Calshot. The aircraft is replaced by another Avro 19 in September.

Late in the year, the company applies to the U.K.’s Air Transport Licensing Board (ATLB) for scheduled routes; however, instead of receiving such permission, it is convicted of operating an unlicensed scheduled Jersey–Blackbushe route. To pay the £500 fine, company directors sell their two aircraft and go out of business in the spring of 1956.

FALCHAIR. See **MAERSK AIR A.S.**

FALCK AIR, A.S.: Odense Airport, Odense, DK-5270, Denmark; Phone 45 65 95 52 22; Fax 45 65 95 53 44; <http://www.daa.dk/falck.index.htm>; Year Founded 1974. Falck is set up as the FBO at Odense Airport in 1974. During the next quarter century, it also undertakes a wide variety of executive and small group passenger charters, including air ambulance flights.

In **2000**, the concern employs 11 pilots and operates 2 Britten-Norman BN-2 Islanders, and 1 each Learjet 35A Century III, Learjet 55 Longhorn, Cessna 500 Citation I, C-550 Citation II, and C-650 Citation III.

FALCON AIR EXPRESS: 7270 North West 12th St., Suite 681, Miami, Florida 33126, United States; Phone (305) 592-5672; Fax (305) 592-8608; Code F2; Year Founded 1995. FAE is established at Miami during the summer of **1995** to offer international passenger and charter services. Falcon Travel Chairman Emilio Dirube is owner, chairman, president, and CEO and his workforce totals 49. Simultaneously, the affiliate **American Falcon, S.A.** is also established in Argentina, initially to provide lift for members of the North American Olympic Committee at the Mar del Plate Pan American Games. Two Boeing 727-200As are chartered, one of which is subleased to fellow Miami new entrant **Halisa Air (Haitian Aviation Line, S.A.)**.

Revenue services commence on March 21, **1996**, the very day the company receives final DOT approval to fly its trijets to the Caribbean and Mexico.

A total of 5,000 passengers are flown during the last three quarters of the year and 12.64 million FTKs are operated. Revenues of \$1.4 million are generated. With expenses of \$1.82 million, there are equal operating and net losses of \$420,000.

Dirube does not quit in **1997**. Despite his losses, he acquires a third trijet freighter and continues operations.

Customer bookings surge to 15,000. During the second half, revenues total \$10.3 million and a net \$149,000 profit is generated.

Chairman Dirube's faith is rewarded in **1998** when passenger boardings increase 57.1% to 22,000.

Customer bookings for the year skyrocket 303.8% to 214,000.

A total of 150 workers are employed at the beginning of **2000**. The operational B-727 fleet now includes 1 each Dash-259A, Dash-224, Dash-251, and 2 Dash-224As, with 1 Dash-231A and 1 Dash-223A out of service. The company also flies 3 B-737-33As.

The **Air 2000, Ltd.** B-757-28A chartered by **Aero Continente, S.A.** is returned on April 29 and is replaced on the Miami-Panama City route with a Falcon B-727-224A. After returning the Boeing on July 1, Aero Continente, which has been unsuccessful in its efforts to gain access to Florida with its own aircraft, suspends its U.S. service.

The B-727-251A previously operated by **Discovery Airlines** is received on August 18 and is christened *Lillian*. Two B-737-3H6Fs, previously operated by **Malaysia Airlines, Ltd. (MAS)**, are chartered from Aviacargo Leasing by **LAV Venezolana Airlines (Linea Aeropostal Venezolana, S.A.)** on September 22. These are operated to Miami from Caracas and Maracaibo under subcontract by Falcon Air Express.

Falcon Air Express also paints two of its own B-727-224As in Aeropostal colors and operates them on LAV's behalf beginning on November 1.

FALCON AIRLINES (PTY.), LTD. (1): Australia (1987-1990). Falcon-1 is organized in **1987** to provide scheduled passenger and cargo flights from Cairnes, Queensland, to the Torres Islands. With a temporary license in hand, General Manager Ron Seager's small regional begins revenue flights employing a Cessna 402 and a Pilatus-Britten-Norman PBN-2 Islander.

At the end of the decade, the Islander is replaced by two Piper PA-34 Senecas. Operations continue apace until June **1990** when the license is withdrawn, forcing the company out of business.

FALCON AIRLINES (PTY.), LTD. (2): Australia (1990-1995). Falcon-2 is formed at Stratford, Queensland, in late **1990**. Equipped with a mixed fleet comprising 2 Beech B-80 Queen Airs, 1 Cessna 402, 2 Pilatus-Britten-Norman PBN-2 Islanders, 1 Aero Commander 500, and 1 Piper PA-31-310 Navajo, Managing Director Ron Seager's operation inaugurates scheduled services on routes out of Cairns in early **1991**.

Services are maintained, however, in **1992-1994** one Islander, the Navajo, and the Aero Commander are withdrawn. The company shuts down in **1995**.

FALCON AIRWAYS, LTD.: United Kingdom (1959-1962). Former **Independent Air Transport, Ltd.** Managing Director Capt. Marian Kozubski forms Falcon Airways at Blackbushe Airport in March **1959**, equipping it with an ex-**Independent Airways, Ltd.** Beech 18S and a Vickers Viking. Commercial operations begin on March 29 and a series of inclusive-tour flights are undertaken during the summer.

In June, a Handley Page Hermes 4 is acquired and added to the tour routes.

The Beech 18S is destroyed in a Bournemouth crash on August 5.

When Blackbushe Airport is closed on May 31, **1960**, company headquarters are transferred to London (Gatwick). Mediterranean tour operations continue during the summer, on behalf of Universal Sky Tours, Ltd. in particular, and, in June, a Hermes is chartered to assist in the evacuation of Europeans from the Belgian Congo to Brussels.

Two North American flights are made in August and September. The Viking is retired in September.

A chartered Handley Page HP 81 Hermes 4 with 5 crew and 71 passengers makes a bad landing at Southend Airport on October 9; although the aircraft must be written off, there are no fatalities.

The second Hermes is now retired, but is replaced with a DC-4, leased for a month from Kay Rings, Ltd., and used to finish the year's Universal Sky Tours contract.

With his fleet sold, Kozubski visits America during the winter and purchases four Lockheed L-049 Constellations, three of which, formerly flown by **Capital Airlines**, are delivered during January and March **1961**. The fourth machine is registered to an Austrian charter line, **Aero Transport Flug-betriebsgesellschaft, GmbH**, and operated under contract. Transatlantic charter flights are inaugurated on March 8.

Difficulties with safety authorities prevent use of two of the three Falcon Constellations so that, for most of the summer, only one L-049 is available to operate inclusive-tour flights to North America and southern Europe. In July, a Constellation is sold to **Trans-European Aviation** while plans to operate the Austrian L-049 are quashed by the government. As a result, much of the Universal Sky Tours business is lost to other operators.

Other charter possibilities also evaporate and the last revenue flight, Palma-London (Gatwick) is completed on September 19. Three days later, the company's operating certificate is withdrawn. Capt. Kozubski's efforts to return are unsuccessful and Falcon Airways, Ltd. goes into receivership on January 2, **1962**.

FALCON AVIATION, A.B.: Box 36, Malmo-Sturup, S-23032, Sweden; Phone 46 (40) 50 05 00; Fax 46 (40) 50 01 49; http://www.falconair.se; Code IH; Year Founded 1965. The Malmo-based Falcon is originally organized as an air taxi to offer lightplane passenger and cargo charters. These services continue for 21 years until October **1986**, when company officials elect to upgrade their operation into an air cargo carrier under the name **Falcon Cargo, A.B.** Revenue flights commence from Saeve Airport at Goteborg with a fleet of 3 Lockheed L-188CFs; the primary business is the transport of the internal mails for the national post office.

In two phases during **1987-1988**, the company is taken over by Postbolagen, A.B. The main task of this wholly owned subsidiary of the Swedish postal service is to run the nation's domestic airmail service. In October of the former year, an L-188CF is acquired from Detroit-based **Interstate Airlines**.

In **1989**, Managing Director Alf Olsson's carrier places orders for three Boeing 737-33AQC's.

These leased machines are delivered in **1990**, at which time the company begins to undertake a limited number of European passenger charters and inclusive-tour flights and changes its name to Falcon Aviation.

Local destinations served in **1991** include Lulea, Umea, Stockholm, Sundsvall, Jonkopings, and Malmo.

Airline employment in 1992 stands at 116. The company is now re-named Falcon Aviation, A.B.

Annual cargo poundage now averages 41,000 as services continue in 1993.

During the year, the company's four L-188CFs are leased to **Hunting Cargo Airlines, Ltd.** and placed on that carrier's **DHL Worldwide Express** routes.

A fourth B-737-33AQC is acquired in 1994.

Flights continue in 1995–1997, during which years Chairman Borge Osterholm and Managing Director Rolf Johansson continue to operate general charters throughout Europe and continue to fly scheduled internal mail service for the Swedish Post Office. Airline employment is cut to 65 as 1 leased Boeing is withdrawn for overhaul. A total of 750 million letters and 240,000 passengers are flown during the latter year.

Its overhaul complete, the leased B-737-33AQC is returned in the spring of 1998 wearing a brand new livery. A snow-white fuselage with a black cheatline is complemented by a stylized falcon head profile on the tail's background of red and white horizontal stripes.

The L-188CF contract with **Hunting Cargo Airlines, Ltd.** ends in midyear when that company is sold. One Electra is sold to **Channel Express Air Services, Ltd.**

Completely owned by the Swedish Post Office, the Boeing flies mail at night and passenger charters during the day, the latter usually on behalf of tour operators or **SAS (Scandinavian Airlines System)**. The marketing name Falcon Air is widely employed.

Service is maintained in 1999–2000. During these years, Bo Alerfeldt becomes chairman and the workforce now totals 117. At the end of 2000, a contract is signed with **Atlantic Airlines, Ltd.** for the wet-lease of a DC-6 during the first quarter of 2001. The propliner freighter will operate between Bothenbourg and Stockholm transporting specially designated mail shipments.

FALCON CARGO, A.B. See **FALCON AVIATION, A.B.**

FALCON EXPRESS AIRLINES: 4200 East Skelly Drive, Suite 420, Tulsa, Oklahoma 74135, United States; Phone (918) 495-3900; Fax (918) 495-1116; Year Founded 1996. Falcon Express is established at Tulsa in 1996 to provide regional all-cargo services. Vicken L. Karjian is president and revenue services commence and continue with a fleet that includes 4 Beech 1900Fs and 1 Fokker F.27F.

FALCON FLIGHT. See **FIRST AMERICAN AIRLINES**

FALCON JET CENTRE, LTD.: #2 Maintenance Area, Heathrow Airport, Hounslow, Middlesex, England, TW6 3AE, United Kingdom; Phone 44 1818-976021; Fax 44 1818-977638; Year Founded 1974. Falcon Jet is established at London (LHR) in 1974 to operate executive and small group passenger charters on a worldwide basis, with emphasis on Northwest Europe. Twenty-six years later, the company employs 11 pilots and flies 1 each Dassault Falcon 20 and Falcon 50 plus 1 British Aerospace BAe (HS) 125-700B Hawker.

FALCONAIR CHARTER, A.B.: Sweden (1967–1970). Not to be confused with **Falcon Aviation, A.B.**, which is also based at Malmo, this nonscheduled operator is established in the spring of 1967 to fly passengers to regional holiday destinations. Revenue operations commence in May with three Vickers Viscount 784Ds.

Initially successful and in need of additional capacity, the company seeks a lease of two Lockheed L-188Cs formerly operated by **Eastern Air Lines**. The first arrives in December 1968, with the second entering service in January 1969. The two big turboprops not only fly to European destinations, principally in Austria and Switzerland, but to winter vacation areas of the Mediterranean. A third L-177C, also ex-EAL, is purchased.

Service diminishes after a change in ownership during the spring of 1970. Operations cease on September 1, after which the two chartered

Electras are returned to their lessor and the owned unit is sold by receivers to **Sterling Airways, A.S.**

FAMA (FLOTA AEREA MERCANTE ARGENTINA, S.A.): Argentina (1946–1949). In order to ensure more local involvement in Argentine commercial air service development, the Argentine government in 1945 authorizes the establishment of joint-stock companies able to offer regularly scheduled commercial flights. The first to be set up, on February 8, 1946, is FAMA.

Initially capitalized at \$150 million, the infant carrier's shareholders include the national government (33.3%) and private interests (66.7%), including aviation enthusiast Dr. Jose Dodero's steamship concern, Dodero having just established an air transport subsidiary for his company, **Compania Argentina de Aeronavegacion Dodero, S.A.**, and anxious for further involvement. Dr. Dodero's initial participation results in the acquisition of a fleet comprising 1 Short S.25 Sunderland 3 flying boat, 1 Douglas DC-4 (the first of 15 to be delivered in the next 2 years), 3 Avro 685 Yorks Is, and 5 Douglas DC-3s. Having already obtained the required permissions from Chile and the U.K., a Sandringham makes a proving flight to London on June 4, the same day the first DC-4 begins service to Santiago de Chile.

Unable to sell his interest in transatlantic flying boat services and a participant in the founding of another airline—**ALFA (Aviacion del Litoral Fluvial Argentina, S.A.)**—which uses flying boats and is thus in conflict with government officials, Dodero withdraws from active participation with the carrier in August, though remaining a stockholder.

On September 17, FAMA inaugurates a DC-4 frequency to London via Rio de Janeiro, Natal, Dakar, Lisbon, and Paris. Madrid service begins on October 11. Ten days later, DC-4 flights are launched to New York via Rio de Janeiro, Natal, Belem, Port of Spain, and Havana.

In December, orders are placed for six Douglas DC-6s.

On December 23, an Avro 685 York I with 6 crew and 15 passengers crashes 31 km. from Rio de Janeiro while on initial approach; there are no survivors.

During early 1947, the fleet is upgraded by the addition of three Avro Lancastrian 4s, six Vickers-Armstrong 615 Vikings, and three Bristol 170 Mk. 1A Freighters. These serve as both a supplement to the DC-4 international frequencies and as provider of domestic and regional flights to Santiago de Chile, Porto Alegre, and São Paulo. Orders are also placed for five Convair CV-240s.

An Avro 691 Lancastrian I with 5 crew and 13 passengers is involved in a landing accident at Natal on June 11 (5 dead).

Rome is added to the European route network on July 9.

On July 25, an Avro 685 York I with six crew is involved in an accident while landing after a test flight; two people aboard are killed, along with two on the ground.

A C-54A with four crew is lost while landing at Itapermirim, Brazil, on August 12; although the aircraft must be written off, there are no fatalities.

The fleet is upgraded in 1948 by the addition of six DC-6s, the first of which arrives on May 18; all of the other equipment except for the DC-4s is sold. The new pressurized acquisitions provide New York and Europe trunk services, while some of the unpressurized Douglas transports fly the regional service to Santiago, Rio de Janeiro, São Paulo, Natal, and Belem and others are stationed in Europe to maintain the Lisbon–Madrid–Rome link.

Meanwhile, on May 14, a Vickers 615 Viking 1B with five crew aboard crashes while landing at Junin, Argentina; although the aircraft must be written off, there are no fatalities.

On July 13, two DC-4s, the *Sky Chief Pueblo* and the *Sky Chief Taos*, are purchased from the disbanded American carrier **Santa Fe Skyways**.

FAR EAST AIRLINES COMPANY, LTD. (KYOKUTO KOKU): Japan (1952–1958). Capitalized at ¥50 million (US\$150,000), FEA is formed at Tokyo in August 1952. Representing investors, Tomoo Kondo is named president with Choichi Inouye as vice president. Inouye, the grand old man of Japanese commercial aviation, had formed the

country's first airline, **Nippon Koku Yuso Kenkyujo (Japan Air Transport Research Institute)**, on June 4, 1922.

Operator and route certification is sought from the government, with permission for the initiation of aerial work contracts received on October 21. Two single-engine Auster J/5 Autocars are purchased on November 15. The company is incorporated on December 26.

Meanwhile, a competitor at Osaka, **Japan Helicopter and Aeroplane Transport Company, Ltd. (Nihon Herikoputa Yuso Kabushiki Kaisha)** has been registered.

FEA purchases a pair of de Havilland DH 104 Doves from JHAT on March 18 and on May 26, both companies simultaneously receive domestic charter authority. While watching JHAT initiate Bell 47D-1 flights, FEA prefers to inaugurate its services with fixed-wing aircraft slightly larger than the Doves. Thus a pair of Miles, later Handley Page, Marathons are ordered from the U.K. as it awaits scheduled authority from the government.

The company's premier service, a mail run, is completed on January 20, 1954 between Tokyo and Osaka. At this point, officials from FEA and JHAT agree to operate complementary rather than competing services.

When FEA launches scheduled passenger frequencies on February 1, they are undertaken between Osaka and Iwakuni.

On February 21, a passenger commits incendiary suicide aboard a J/5. The Autocar catches fire in midair and crash-lands at Yata Village, from whence the two injured crewmen are rushed to hospital.

Service to Fukuoka from Iwakuni begins on April 20.

The first Miles Marathon is received in September and it enters service between Osaka and Kochi on October 1.

Takamatsu joins the route network on May 23, 1955.

In October, the Miles Marathon is grounded due to loose ribs; it is replaced by Douglas DC-3s.

Service is initiated from Fukuoka to Oita on April 7, 1956.

On April 13, 1957, the carrier begins joint operations with **Japan Helicopter and Aeroplane Transport Co., Ltd.** The last FEA services to be started are those from Oita to Kagoshima and Miyazaki on July 1.

A decision for consolidation of the two airlines is taken on October 30.

On March 1, 1958, the two companies are actually merged and the single carrier is renamed **All Nippon Airways Company, Ltd. (ANA)**.

FAR EAST CARGO LINES: Marsovaya St. 8, Khabarovsk, 680011, Russia; Phone 7 (4212) 339 949; Fax 7 (4212) 713 101; Code FEW; Year Founded 1997. FECL is set up at Khabarovsk in 1997 to operate all-freight charters throughout the nation, particularly in Siberia. S. A. Samoilovov is general director and he begins revenue flights with an unspecified number of Ilyushin Il-76Ts.

Service is maintained in 1998-2000, with charters operated as far away as Singapore and the U.S. West Coast. Destinations now visited include Almaty, Archangle, Aomori, Chita, Harbin, Khabarovsk, Krasnoyarsk, Los Angeles, Moscow, Niigata, Omsk, Petropavlovsk, San Francisco, Seattle, Seoul, Shenyang, Singapore, Ulan-Ude, Vladivostok, and Yuzhno-Sakhalinsk. Director General Leonid V. Nagomy's fleet is altered to include one each Antonov An-24B and Ilyushin Il-62M.

FAR EASTERN AIR TRANSPORT, INC. (FEATI): Philippines (1945-1947). FEATI is the new name chosen by Eugenio Lopez for his prewar airline, **Iloilo-Negros Air Express Company (INAEC)**. With a fleet of former Douglas C-47s converted to DC-3 standards and backing from **Pan American Airways (PAA)**, FEATI gets a leg up on **Philippine Air Lines (PAL)** by resuming service first, flying from Manila to Iloilo in November 1945.

With government support as well as backing from **Transcontinental and Western Airlines (TWA)**, PAL resumes service on February 14, 1946.

A major competition between the two carriers begins. During the spring, the FEATI fleet is increased to 12 DC-3s and, in May, scheduled flights are inaugurated to Bangkok and Hong Kong.

President Lopez acquires several C-54s (military DC-4s) and these are employed, beginning on August 20, on new services from Manila to Iloilo, Cebu, Hong Kong, and Shanghai.

A DC-3 with 4 crew and 10 passengers is lost near Mt. Banahaur in the Philippines on December 14 (12 dead). Still, nonscheduled flights from Manila to Oakland, California (across the Bay from San Francisco) begin two days later via Guam, Kwajalein, and Hawaii.

A C-54A with 5 crew and 37 passengers is lost 130 km. W of Lasq, China, on January 11, 1947 (7 dead). Following the crash of this nonscheduled transpacific flight, FEATI is grounded. Before it can resume operations, the new Philippine government, which had certified both carriers, agrees to support only one. On May 3, FEATI sells out to PAL for PP 3.4 million.

FAR EASTERN AIR TRANSPORT CORPORATION (FAT): No. 5, Alley 123, Lane 405, Tun Hwa North Road, FAT Building, Taipei, 105, Taiwan; Phone 888 (2) 712-1555; Fax 888 (2) 712-2428; http://www.fat.com.tw; Code EF; Year Founded 1957. K. T. Siao, who becomes chairman, and former Air Force pilot Tung Ching Hu, who becomes president, join millionaire businessman, T. C. Hwoo, in forming FAT at Taipei in August 1957. Ad hoc Beech 18 services are initiated to communities in the southern half of Taiwan.

Employing a fleet of three Douglas DC-3s, the carrier begins nonscheduled charter services in June 1960 from Taipei to Kaohsiung.

Scheduled services begin in January 1965 and provide regular links from the capital to the Taiwanese cities of Kao-hsiung, Hualien, Makung, Painan, and Taitung.

Enplanements total 41,995.

Airline employment in 1966 totals 120 and the fleet comprises 5 Beech 18s and 3 DC-3s. Orders are placed for a Handley Page HPR-7 (Dart) Herald 201, which enters service on February 21.

Two former **Ansett Airlines of Australia (Pty.), Ltd.** DC-6Bs are acquired on March 12, 1967.

Operations continue apace during the next two years.

A DC-3 is lost at Kao-hsiung on February 15, 1969. Its No. 2 engine having failed, the HPR-7 Herald 201 with 4 crew and 32 passengers makes an emergency belly landing in southern Taiwan near Tainan on February 24 and slides into a creek; there are no survivors.

A chartered DC-3 with 3 crew and 28 passengers is destroyed as the result of a bad landing at Phantiet, Vietnam, on April 24; there are no fatalities.

Not long after takeoff from Taipei on February 20, 1970, a DC-3 freighter with two crew crashes into a 1,230-ft. high mountain; there are no survivors.

The first of nine used Vickers Viscount 800s are acquired from Australia beginning in April. These replace the DC-6Bs and DC-3s that are chartered to **Air Vietnam, S.A.**

By 1972, enplanements reach 470,470.

The employee population in 1973 is 900. Two Sud-Est SE-210 Caravelle VIRs join the fleet along with two Bell 212 helicopters for use in support of the company's offshore oil industry operations.

Passenger boardings accelerate 38.9% to 770,000.

Another Caravelle, a Douglas DC-8-50, and a third Bell 212 are acquired in 1974.

A DC-3 with 27 aboard crashes near Taipei on July 31; there are no survivors.

En route from Tainan to Taipei on October 7, a Vickers Viscount 810 is taken over by a lone assailant armed with a knife and four gasoline-filled bottles, who demands to be flown to mainland China. Before the aircraft can be diverted, the hijacker is overpowered by a flight attendant and a security guard.

Enplanements for the year total 723,330.

The Douglas transports leased to South Vietnam are returned in March and early April of 1975.

Coming in from Hualien, a Vickers Viscount 837 with 5 crew and 70 passengers stalls and crash-lands onto a Taipei runway in heavy rain on July 31 (27 dead).

Passenger boardings jump 15.4% to 855,000 while freight traffic is up by 24.1% to 757,000 ton kilometers.

Airline employment in 1976 stands at 950, a 10% increase. Three Boeing 737-247s are acquired from **Western Airlines** and these allow substantial service upgrades.

Consequently, customer bookings accelerate 30.9% to 1,185,785 while cargo booms up 24.7% to 2.5 million FTKs.

A DC-3 is damaged beyond repair while landing at Tainan on April 16, 1977, when its landing gear collapses; there are no serious injuries reported.

Enplanements for the year total 1,478,726.

Airline employment is increased 9.2% in 1978 to 1,112 and the fleet comprises 3 Boeing 737-247s first flown by **Western Airlines**, 3 Sud-Est SE-210 Caravelle VIRs, 7 Vickers Viscount 800s, 2 Handley Page Herald, 4 DC-3s, and 3 Bell 212 helicopters.

Passenger boardings shoot up 28.4% to 2,065,258 and freight traffic is up by 16.4% to 2.53 million FTKs. Operating income is up by 24.5% to \$32.5 million.

The number of workers is decreased by 8.6% in 1979 to 1,067. A JT8D engine test stand is completed and two more B-737s, one each Dash-222 and Dash 2Q8, join the fleet.

Passenger enplanements advance 7.4% to 2,265,382.

Despite souring economic conditions, the carrier hires 3.3% more employees in 1980, for a total of 1,102.

New charter destinations include Singapore, Bangkok, and Hong Kong. The equipment list is enhanced through the addition of two B-737-130s. All other propeller equipment (except the helicopters) and the French-made jetliners are retired.

Customer bookings decline by 13.5% to 1,959,000 while cargo is down 24.2% to 756,000 pounds. Revenues total \$34 million.

The employee force is reduced by 1.4% in 1981 to 996.

Severe corrosion causes the pressure hull of Flight 103, a B-737-222 with 6 crew and 104 passengers, to rupture 14 minutes after takeoff from Taipei to Kao-hsiung on August 22; the aircraft disintegrates and there are no survivors. The little Boeing had been delayed on the ground for two hours prior to departure because of known pressurization problems.

Passenger boardings dip 10.6% to 1,750,583 while freight is up by 16.2% to 2.45 million FTKs. Revenues are \$34.9 million and an operating profit of \$801,000 is recorded.

The number of employees is lowered again in 1982, dropping by 7.4% to 924. The effects of the world economic recession bring traffic downturns. Customer bookings decline 17.5% to 1,445,100, while cargo is down even further, off 31% to 436 million FTKs. On revenues of \$30.4 million, an operating loss of \$2.5 million is suffered, along with a net decline of \$1.6 million. The number of workers is increased by 2.3% in 1983 to 936. Enplanements swell 4.7% to 1,512,600 while freight leaps upward by 45.3% to 633,500 FTKs. An operating profit of \$1.6 million is recorded, but a net loss of \$601,843 must be absorbed.

Scheduled and nonscheduled service is maintained throughout 1984-1986.

Following the death of founder Hu during the latter year, his family becomes divided over shareholding and takes their dispute to court. As a result, the government's Civil Aviation Administration appoints former **China Airlines, Ltd. (CAL)** Deputy President Hong I. Chang as president, with instructions to keep the company going until the dispute is settled while, simultaneously, preparing it for international operations.

Enplanements in 1987 total 1,817,945 and profits of \$7.37 million (operating) and \$7.6 million (net) are generated.

The workforce is increased by 6.5% in 1988 to 980 and the fleet now includes 2 B-737-130s and 6 B-737-200s. Orders are outstanding for two Avions de Transport Regional ATR72s, with options taken on four others.

Passenger boardings jump 10.3% to 2,026,694, but cargo is off by 2.3% to 861,000 FTKs. Revenues advance by 14.7% to \$59.2 million

and with costs under control, the operating profit is \$9.2 million and net gain reaches \$11.3 million.

Operations continue apace in 1989 and in 1990, the list of destinations visited by the 1,196-employee carrier includes Kao-hsiung, Hualien, Kinmen, Tainan, Taitung, Makung.

The fleet comprises 3 Boeing 737-247s, 1 B-737-222, 1 B-737-2Q8, 1 B-737-27A, and 2 B-737-130s, and 1 ATR72.

Enplanements total 2,118,129 and 4.74 million pounds of freight are transported.

In 1991, plans are made to upgrade the fleet through the addition of three McDonnell Douglas DC-9-83s (MD-83s) and an MD-82. The latter will replace the two B-737-130s that will enter storage pending their sale.

Hong I. Chang remains president and plans are still under discussion for the start of international flying.

Passenger boardings jump to 2,271,058 and cargo rises to 6.99 million pounds.

In 1992, all of the B-737-200s begin withdrawal as another MD-82 enters the fleet. Service is inaugurated to Kinmen. Bookings double to 4,642,938 and freight is up to 7.56 million pounds.

In 1993, Vice President-Operations C. W. Lee oversees a workforce of 1,326 and a fleet comprising 3 leased MD-83s and 3 B-737-247s, 2 B-737-130s, 1 each B-737-222, B-737-2Q8A, B-737-27A, and 2 chartered MD-82s.

Routes link Taipei with Kao-hsiung, Hualien, Kinmen, Tainan, Taitung, and Makung. Domestic and international charters are also available.

While climbing away from Kao-hsiung on October 25, an MD-82 with 8 crew and 152 passengers loses its fan cowl from the No. 1 engine. The aircraft returns for a safe emergency landing, but then runs off the end of the runway and over a ditch, causing the landing gear to fail. Seriously damaged, the aircraft slides to a stop; no injuries are reported.

Operations continue apace in 1994. Enplanements total 4,406,750 and there are profits: \$48.18 million operating and \$38.18 net.

Airline employment grows by 6% in 1995 to 1,510. The B-737-222 and two B-737-130s are sold and replaced by two owned B-757-29Js, one owned and three leased MD-83s, and three owned MD-82s.

Passenger boardings ascend 20.6% to 5,550,062 and operating revenues climb 14.1% to \$223.49 million. Expenses are up 17.5% to \$173.58 million, leaving an operating gain of \$49.9 million and net gain of \$34.84 million, down from the previous year.

The fleet in 1996 includes 2 owned B-757-29Js, 3 leased and 1 owned MD-83s, 2 leased and 3 owned MD-82s, 1 leased B-757-2Q8, and 1 each owned B-737-2Q8A and B-737-27AA. The company continues to fly 14 domestic routes and offers service to Palau and the Philippines.

Enplanements total 5,338,385 and the operating profit is \$32.46 million.

Airline employment grows by 9.3% in 1997 to 1,888.

One of the company's two B-757-29Js unveils a new white and red livery on February 28 as a promotion the country's second major league baseball league. The newly repainted narrow-body is hijacked to Xiamen, China, on March 10; all of the hostages aboard are released and the perpetrator is detained.

During the third week of November, an order is placed with Boeing for five B-757-200s and two MD-83s, the first of which will begin to arrive at its Taipei base in early 1998. Options are also taken on five additional B-757s.

During this month the company celebrates its fortieth anniversary. Merger discussions begin with **TransAsia Airlines, Ltd.**

Customer bookings advance by 2.7% to 5,486,521, while cargo accelerates 14% to 2.85 million FTKs. Revenues move ahead 2.8% to \$184.93 million, while expenses climb 5% to \$154.83 million. The operating profit slips to \$30.1 million, while net gain is boosted to \$22.66 million.

Just after landing at Taipei following a February 23, 1998 service from Kao-hsiung, a B-757-29J with 126 passengers skids off the wet runway; no injuries are reported.

In late April, the Civil Aeronautics Commission at Taipei refuses a company request to send pilots to Beijing for Boeing simulator training. As **CAAC (The General Administration of Civil Aviation of China)** will not allow CAC officials to oversee the training, any simulator time gained would be uncertifiable.

Enplanements during the 12 months total 5.08 million and a \$5.5-million profit is reported on revenues of \$171 million. By the start of **1999**, airline employment has been cut by 12.9% to 595.

Service is maintained in **2000**. On January 27, the company receives the last of five B-757-27As delivered since December 1998. It also continues to fly three MD-82s and five MD-83s.

Flights between Taipei and Chiayi end on October 23 and are reduced on the route between Taipei and Kao-hsiung. On December 1, new service is introduced between Taipei and Kinmen Island.

FAR EASTERN AVIATION. *See* **DAK FAR EASTERN AVIATION (KHABAROVSK UNITED AIR DETACHMENT)**

FAR WEST AIRLINES (1): United States (1979–1982). The initial FWA is established at Portland, Oregon, in late spring **1979** to provide scheduled passenger and cargo services. Employing a Piper PA-31-350 Navajo Chieftain, the little commuter inaugurates flights on July 1, linking its base with Seattle and North Bend. Operations continue until **1982**.

FAR WEST AIRLINES (2): United States (1984). Privately owned FWA is established at Fresno, California, in the spring of **1984**. Minority ownership is held by the City of Fresno, in exchange for construction improvements at the city airport. CAB approval for scheduled service is obtained in June and a staff of 130 is hired.

Two Japanese-made Nihon YS-11As are leased from **Mid-Pacific Airlines** and these are employed to inaugurate flights on September 24 linking the company base with Oakland and San Jose. Burbank, Ontario, and Orange County are added to the initial network in October.

The cost of start-up and expansion proves too much for the new entrant and it suspends operations on December 13 stating simply that it "had run out of money." The turboprops return to Honolulu.

FARNAIR HUNGARY, KFT.: P.O. Box 173, Budapest, H-1701, Hungary; Phone 361 282 92 86; Fax 361 377 21 83; <http://www.farnair.com>; Year Founded 1990. **NAWA Air Transport, Kft.** is originally established at Ferihegy International Airport at Budapest in **1990** as the first privately owned airline in Hungary since before World War II. Employing a single Let L-410UVP, revenue flights are started under contract to **United Parcel Service (UPS)**. Two more Lets soon join the fleet.

NAWA Air Transport is acquired by the Swiss carrier **Farner Air Transport, A.G.** in **1993**. The company is renamed and a leased Fokker F.27-400s and two more Let L-410UVPs are provided.

By **1996**, the company is operating not only on behalf of UPS, but also on humanitarian missions for the Swiss government and in support of the Paris–Dakar automobile rally.

The Farnair Europe Aviation Group is created in **1997**, with **Farner Air Transport, A.G.**, **FAH**, **Tulip Air, B.V.**, and **Air Service Basel, A.G.** all becoming subsidiaries. The company now trades under the marketing name Farner Europe.

In **1998**, FAT (Hungary) becomes the approved CAA-145 maintenance organization for the nation's L-410 fleet.

Airline employment at Managing Director Mihaly Fabian's company stands at 49 at the beginning of **1999** and the fleet includes 5 Let L-410UVPs and the chartered Fokker.

FAH is renamed again, becoming Farnair Hungary, Kft. A new contract is accepted from the Italian post office and the fleet is boosted through the addition of two more L-410UVPs and a Cessna 402.

The workforce grows to 87 in **2000** and an F.27-500F replaces the Dash-400.

FARNAIR NETHERLANDS, B.V.: Sheffieldstraat 21, Rotterdam, 3047, The Netherlands; Phone 31 (10) 238-0909; Fax 31 (10) 238-0900; <http://www.farnair.com>; Code FRN; Year Founded 2000. **Tulip Air Charter, B.V.**, a subsidiary of the Basel, Switzerland-based Farnair Europe Aviation Group, is renamed in early August **2000**. Managing Director Urs Zurcher's three Fokker F.27-500Fs continue to fly overnight express services on behalf of **United Parcel Service (UPS)**, **TNT Worldwide Express**, and **Federal Express**.

The company's three Airbus Industrie A300B4-103Fs remain dedicated to **DHL Worldwide Express**. On August 24, a fourth A300B4-103F is wet-leased for a four-month period.

FARNAIR SWITZERLAND. *See* **FARNER AIR TRANSPORT, A.G.**

FARNER AIR TRANSPORT, A.G. (FAT): Postfach, Basle Airport, CH-4030, Switzerland; Phone 41 (61) 325 30 67; Fax 41 (61) 325 48 24; <http://www.farnari.com>; Code FAT; Year Founded 1984. This concern traces its history back to the September 1982 arrival in Basel of a Dutch Piper PA-34 Seneca transporting express packages. Farner is set up in early **1984** as an air taxi and express-cargo airline. Employing 1 each Piper PA-31-350 Navajo Chieftain, Cessna 402, Cessna 404, and Cessna 421, the new operator starts flying goods for integrators within central Europe.

Over the next three years, the company increases the number of express-parcel contracts accepted and undertakes service linking its base with Geneva, Brussels, Cologne, and Paris.

Two Embraer EMB-110P1s are acquired in **1987** to operate between Basel and Brussels, while in July **1988**, a Fairchild F-27J is introduced. It is flown for the remainder of the year on behalf of a new integrator customer.

During **1989**, a leased Belgian Fokker F.27-200 is operated from Brussels to Geneva via Basel.

The company acquires its first owned Fokker Friendships in March **1990**. One each Dash-400 and Dash-600 are operated on behalf of two different integrators; the first is operated over a route from Basel to Brussels and the second, on behalf of **Federal Express (FedEx)**, from Basel to Cologne. Later in the year, Suisse Atlantique becomes FAT's major shareholder and new parent.

Early in **1991**, the carrier adopts a new logo and livery. In the spring, a special operations base is established at Laayoune, in the Western Sahara. From there, the company operates a pair of Pilatus Turbo Porter PC-6s and a de Havilland DHC-6-300 Twin Otter in support of the Swiss medical unit assigned to the UN's MINURSO mission. This service marks the beginning of Farner's specialization in the transport of goods for humanitarian organizations.

FAT diversifies into the technical area in **1992** as Suisse Atlantique purchases majority shareholding in Air Service Basel, A.G. from General Aviation Genossenschaft Basel, A.G. ASB will henceforth provide technical support for FAT.

Managing Director Guy Girard in **1993** oversees a total of 45 workers and a fleet comprising 1 Cessna 404 Titan, 2 PC-6 Turbo Porters, 1 de Havilland Canada DHC-6-300 Twin Otter, 1 Fokker F.27-400, 1 F.27-600, and the Embraer EMB-110P1 Bandeirante.

The Turbo Porters and Twin Otter continue to support the Swiss medical team in Africa. Late in the year, majority shareholding is acquired in the Hungarian airline **NAWA Air Transport, Kft.** It becomes the subsidiary **Farner Air Transport (Hungary), Kft.** and the F.27-400 is leased to it. In addition, two Let L-410UVP-Es are acquired.

Flights are initiated to Southend-on-Sea in the U.K. in **1994**. Later in the year, the UN MINURSO mission is closed down.

A joint-venture service is established with Rotterdam-based Tulip Air, B.V. in **1995**.

In **1996**, an F.27 is based at Tbilisi to fly for the UN, while on behalf of the Swiss government, the other Fokker operates an OSCE operation to Sarajevo. During these years, the Fokker fleet is increased by one F.27-400 and five F.27-600s.

The Farnair Europe Aviation Group is created in **1997**, with Farnair Air Transport, A.G., **Farnair Air Transport (Hungary), Kft., Tulip Air, B.V.**, and Air Service Basel, A.G. all becoming subsidiaries. Aviation Group CEO Guy Girard's concern now trades under the marketing name Farnair Europe.

In **1998**, FAT becomes one of the first Swiss airlines to receive its JAR-OPS 1 air operator certificate (AOC). This document represents official authorization and authority according to the JAR-OPS 1 regulations of the European Union. At the same time, the concern is certified according to ISO 9901 quality standards. **Miniliner, M.N.L.** is taken over, becoming the latest Farnair Europe Aviation Group subsidiary.

Farnair Air Transport is reorganized during **1999** into two profit centers: the headquarters and the operator, FAT, which now adopts the marketing name Farnair Switzerland, A.G. and is placed under the direction of Flight Operations Director Francis Pfammatter. All Aviation Group aircraft now operate under the Farnair Europe trademark, while sales, financial services and controlling, and quality assurance for the whole group are centralized at headquarters. Air Service Basel, A.G. is reborn as Farnair Technical Services, A.G. This renamed unit takes over all corporate line maintenance.

Express Airways, GmbH. is taken over at the end of February and integrated into the Farnair Europe Aviation Group.

Twice-weekly F.27 passenger service is operated on behalf of the Swiss government in **2000** from Geneva to Pristina, Kosovo. The operation is code-named SWISSCOY. During the fourth quarter, arrangements are completed for the acquisition of two Avions de Transport Aerien ATR42-320s. One will be delivered as a freighter, with Farnair gaining the honor of serving as launch customer for the ATR all-cargo version.

The first ATR42-320 is received in December and immediately enters service on a Swiss Federal Department of Defense contract passenger service between Basel and Skopje.

FARNER AIR TRANSPORT (HUNGARY), KFT. See **FARNAIR HUNGARY, KFT.**

FARWEST AIRLINES: Biegert Aviation, 22022 S. Price Road, Chandler, Arizona 85248, United States; Phone (800) 843-8723; Fax (520) 796-5895; <http://www.farwestairlines.com>; Year Founded 1999. Max and Thelma Biegert, owners of **Biegert Aviation**, revitalize the historic Grand Canyon Railway and put it back into operation in September 1989 between Williams and Grand Canyon National Park. Early in **1999**, Farwest Airlines is established to operate supplemental passenger flights from Phoenix to Northern Arizona to complement and feed the railroad. Biegert Aviation President/CEO James Jefferies is named president of Farwest and a small group of staffers, together with a de Havilland Canada DHC-7-102, is acquired. Revenue flights commence in June.

A second DASH-7 is put into service during September.

WALTER FARYNIAK: United States (1965–1968). Mr. Faryniak founds this third-level operation at Allentown, Pennsylvania, in late fall **1965** to offer scheduled services to regional destinations employing Piper lightplanes. Revenue flights commence on November 19 and continue for three years.

FAST AIR CHILE (FAST AIR CARRIER, S.A.): Avda. Americo Vespucio 901, Santiago, Chile; Phone 56 (2) 565-6001; Fax 56 (2) 565-6222; <http://www.fastair.cl>; Code UD; Year Founded 1978. This all-cargo carrier is formed by a group of local businessmen at Santiago de Chile on August 14, **1978**. Equipped with an ex-**Trans World Airlines (TWA)** Boeing 707-331CF, it begins flight operations on November 27.

In **1979**, the carrier receives permission to operate to the U.S.

During **1980–1986**, the 60-employee carrier remains a single-freighter charter operation dedicated to transporting Chilean agricultural

goods outbound and bringing home various manufactured products. Destinations visited include Bogota, São Paulo, Panama City, Miami, New York, and Frankfurt.

Freight traffic gradually increases and by **1987**, the company has carried 52.2 million FTKs—a 29.9% increase over the previous year.

The lone Boeing freighter gives the company another good year in **1988**, flying 58.43 million FTKs for an 11.8% boost.

Airline employment stands at 56 in **1989** as the Boeing increases freight by a impressive 75.4% to 102.36 million FTKs.

Cargo rises another 24.1% to 127.08 million FTKs in **1990**. Income exceeds expenses and there are profits: \$712,000 (operating) and \$2.45 million (net).

The workforce is increased 23.8% in **1991** to 260 as a B-707-341C, originally delivered to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, joins the fleet and orders are placed for 2 B-757s. Both of the Stratoliners are sold and leased back.

Freight climbs 10% to 80.87 million FTKs and revenues accelerate 22.9% to \$32.6 million. Costs are kept in line and thus allow an operating surplus of \$2.4 million and a net gain of \$1.65 million.

The B-757 order is cancelled in **1992** as a leased DC-8-71F arrives.

Cargo advances a hearty 18.5% to 168.77 million FTKs. Revenues total \$27.3 million and a \$1.3-million operating profit is generated.

In **1993**, Chairman/President Juan C. Sierra employs 56 workers and flies 3 leased aircraft: a B-707-331C, a B-707-341C, and a Douglas DC-8-71F. Markets served from Santiago now include Bogota, Frankfurt, Miami, New York, Panama City, and São Paulo.

Through September, cargo is up 5% to 124.18 million FTKs. In December, the company, through its membership in the Cueto Group, acquires 20% shareholding in **LanChile Airlines, S.A.**

Airline employment is increased to 230 in **1994** and the fleet includes three leased Douglas DC-8-71Fs and a Boeing 707-331C, the latter chartered from **Aero Uruguay, S.A.**

The Cueto Group joins with Boris Hirmas in February to purchase the 42.1% stake in LanChile held by **SAS (Scandinavian Airlines System)**.

In June, **LanChile Airlines, S.A.** takes over Fast Air for \$13.7 million and the Boeing is withdrawn. The freight line is operated as a subsidiary.

Through November, freight traffic rises 2.3% to 157.65 million FTKs.

There is no change in the workforce during **1995**. During the year, a minority interest is taken in Miami-based **Florida West Airlines**. The company's 3 Douglas freighters and 1 active Boeing haul 292.11 million FTKs, a 55% increase.

The workforce is reduced to 56 in **1996** as the company suffers a bad traffic year. Cargo is off by 14.1% to 250.89 million FTKs.

The fleet is increased in **1997** by one DC-8-71F. Painted in an attractive two-tone green and white color scheme, the freighter undertakes all-cargo flights from Mexico City to Miami and Los Angeles on behalf of **Aerotransportes Mas de Cargo, S.A. de C.V.**

Freight traffic for the year dips another 1.8% to 115.4 million FTKs.

On March 19, **1998**, two **Tower Air** B-747-121Fs are wet-leased for a year under a \$22.86-million contract, which is extendible by mutual agreement.

In July, **LADECO Chilean Airlines, S.A.**, at the request of **LanChile Airlines, S.A.**, agrees to absorb Fast Air during early 1999.

American International Airways (3) receives its first B-747-2B4BC from Boeing's Wichita conversion facility in early October and places it under a three-year aircraft, crew, management, and insurance (ACMI) contract with Fast Air late in the month, slightly earlier than originally planned.

Flights continue in **1999–2000**.

At the end of October of the latter year, Eagle Global Logistics, new majority owner of **Miami Air International**, enters into a new strategic all-cargo alliance with **LanChile Airlines, S.A.**, as well as the freight lines it controls, **Fast Air, MasAir (Aerotransportes Mas de Cargo, S.A. de C.V.)** and **Florida West International Airways**.

FAST AIRLINES (PTY.), LTD. See EAST COAST COMMUTER AIRLINES (PTY.), LTD.**FAST AIRWAYS HOLLAND, B.V.: The Netherlands (1977–1984).**

Fast Airways Holland, B.V. is established at Groningen's Eelde Airway in January 1977. Employing a Piper PA-31-310 Navajo, charter operations are inaugurated on April 14. At decade's end, a Piper PA-31-350 Navajo Chieftain is acquired and scheduled flights are started to Rotterdam.

In January 1984, the company is reformed and renamed **Quick Airways, B.V.**

FAUCETT PERUVIAN AIRLINES (COMPANIA DE AVIACION FAUCETT, S.A.): Peru (1928–1998).

Led by expatriate U.S. flyer Elmer J. Faucett, a group of Peruvian nationals sets up this carrier on May 1, 1928, with initial capitalization of 100,000 sols (about \$800), and seeks government authority to launch a passenger and cargo service. Permission is obtained on June 4 and preparations are made in July and August, including the acquisition of two Stinson SM-6B Detroiters. Lima–Chiclayo flights are inaugurated on September 15, followed by north to south extensions to Talara and Arequipa. During the final quarter, the two six-seaters fly 30,000 miles and transport 242 passengers.

Additional Detroiters join the fleet in 1929 and service is started to Tumbes and Tacna. In June, U.S. aeronautical promoter Clement M. Keys of North American Aviation provides additional capitalization of 350,000 sols.

Flights continue in 1930–1931 and on June 11, 1932, Faucett makes a survey flight from Chimbota–Yungay. Cargo service to Puno is started during the summer and an unsustained Yungay passenger operation begins on December 2.

The company ceases trading between April 23 and July 1, 1933 as the Detroiters are employed to support the Peruvian armed forces during a border dispute. Supplies are flown from Lima to San Ramon.

With a license from Stinson and a company engineer, Gale Alexander, Faucett in 1934 modifies a Detroit into a new Faucett-Stinson F-19 (test-flown on September 20) suited for local conditions. Construction of the first 30 F-19s begins at Lima and these will form the backbone of the carrier's fleet until after World War II. Meanwhile, the Keys interest in the airline is sold to the Sperry Corporation.

In cooperation with the state carrier **LAN (Linea Aerea Nacional, S.A.)**, Faucett opens a route from Chiclayo–Yurimaguas in 1936, connecting with LAN. Sperry's shares in Faucett are now acquired by local investors, making the airline's ownership completely Peruvian.

Employing an F-19, Comdr. Armando Revoredo Iglesias, on March 27, 1937, flies nonstop from Lima to Buenos Aires in 13 hrs. 38 min.

Aerovias Perunas, S.A., a subsidiary of the giant American carrier **Pan American-Grace Airways (Panagra)**, is acquired on April 26, 1938 in exchange for a 20% interest in Faucett.

Two Consolidated PB-5 Catalinas are acquired in 1943 and are employed to support the Allied war effort by flying 6,800 passengers and 1,375 tons of cargo to U.S. Rubber Development Corporation centers near the Brazilian border prior to V-J Day in 1945.

The Yurimaguas route is extended to Iquitos in 1946. The first of 19 ex-military Douglas C-47s (converted to DC-3 civil standard) and 8 DC-4s obtained from the U.S. Reconstruction Finance Corporation begin to join the fleet, allowing the opening of services from Lima to Iquitos.

Capitalization is increased to 5 million sols in 1947 and additional Douglas transports are placed in service.

The arrival of still more Douglas transports in 1948–1951 allows development of a full-fledged 31-stop network based on the main Lima base.

A DC-3 with four crew and five passengers crashes near Cuzco on November 25, 1950; there are no survivors.

When Elmer J. Faucett retires on August 7, 1951, his pioneer line is truly his adopted country's national carrier, in practice if not in title.

This domestic system is maintained in 1952–1959 and frequencies are improved. Equipment remains the same, although late in the period six

Douglas DC-6Bs are ordered. Aircraft are lost in 1955 and 1959. On October 3 of the former year, a DC-4 crashes in the Andes (19 dead) while another DC-4 with 12 aboard is reported missing on May 14 of the latter year; the wreckage is found the next day and there are no survivors.

A DC-3 freighter with four crew goes down near Chimbote, Peru, on March 20, 1960; although the aircraft must be written off, there are no fatalities.

Founder Faucett dies in April. The same month, officials of the carrier obtain government permission to open international service.

The first DC-6B is delivered in July and is employed to launch flights from Lima to Cuzco.

In October 1961, the U.S. CAB grants a five-year permit for services to the United States.

Although five additional DC-6Bs are delivered in 1962–1966, the carrier, under **Pan American-Grace Airways (Panagra)** influence, elects not to start international services, preferring to maintain its domestic and regional network.

On February 4 of the former year, a DC-3 with 3 crew and 15 passengers crashes NE of Tingo Maria, in central Peru; there are no survivors. Another, with nine aboard, goes down near Cerro Puena Paz on August 24; again, there are no survivors.

The last F-19 is removed in mid-1964.

Braniff International Airways acquires **Pan American-Grace Airways (PANAGRA)** on January 31, 1967 and with it, 17.7% interest in Faucett. Meanwhile, a Boeing 727-63 is ordered.

On a December 8 flight from Huanuco, a DC-4 with 6 crew and 66 passengers crashes just 30 ft. from the top of 10,500-ft. Carpich Huanuco Mountain, near Huanuco; there are no survivors and only 25 bodies can be recovered from the wrecksite.

The B-727-63 is delivered on April 9, 1968 and is placed on the domestic routes.

En route from Lima to Arequipa on March 17, 1969, the new B-727-63 with 4 crew and 73 passengers is taken over by 4 skyjackers who order the plane diverted to Cuba. The pilot is able to convince the pirates to refuel at Guayaquil and, while there, to release the other 69 passengers. After arriving at Jose Marti Airport, the hijackers meet and eat with the hijacker of a **Delta Air Lines** jetliner pirated to Havana the same day.

In June, Faucett files notice with the U.S. CAB that it would soon begin passenger service to Miami, its permit having been renewed.

An RC-54V (converted to civil DC-4 standard) with 4 crew and 24 passengers, crashes into Mt. Pumacona, Peru, on January 14, 1970; there are no survivors.

Multistage Lima–Miami DC-4 all-cargo flights begin in April, instead of the passenger frequencies the Americans had expected.

In June, Faucett becomes the first airline to order the DASH-475 mark of the British Aircraft Corporation One-Eleven.

The company's first BAC 1-11-476FM makes its maiden flight on April 5, 1971, and joins the fleet on July 22. When the second arrives, it is employed to make an extensive demonstration tour of South America, visiting 21 airports during the remainder of the year and into the next.

In 1972, the fleet comprises the BACs, 1 B-727-63, 6 DC-6Bs, 4 DC-4s, and 6 DC-3s. Ownership of the Lima and Trujillo Airports, built in the 1930s, is maintained.

While en route from Piura to Chiclayo on April 8, the B-727-63 is subjected to a skyjacking attempt by two men who are overpowered and captured by the crew.

Having flown no travelers into Miami, Faucett loses its passenger rights to that city in August 1973; never having really wanted them, the carrier files no protest against the CAB action.

During 1974–1981, the fleet is increased by another B-727, a DASH-51C, and a BAC 1-11-523, which had previously been operated by **Transbrasil, S.A.**; all of the piston-engine equipment is retired and sold.

The airline is badly managed during these years and incurs a debt exceeding \$18 million.

As the May 1982 collapse of **Braniff International Airways** approaches, the Zanetti family, majority owners of rival **Aeronaves de**

Peru, S.A., purchases 59% controlling interest in the carrier for \$4 million (including the Braniff interest) and assumes its debt. Faucett is allowed to continue operations under its previous identity.

One BAC 1-11-476FM is withdrawn in June while the other operates its last service on December 31.

Zanetti reorganizes Faucett's management in **1983** and transfers an Aeronaves DC-8-40 to the subsidiary's Miami cargo route. The BAC 1-11-523 is withdrawn in October.

In May **1984**, U.S.-Peru commercial services are suspended due to political difficulties. Faucett, by now enriched by the addition of four DC-8-52/55Fs and two Britten-Norman BN-2 Islanders, commences twice-weekly service Lima-Grand Cayman Island, where a **Cayman Airways, Ltd.** connection to Miami is available.

On the Peruvian domestic front in this year and **1985**, service to Yurimaguas, Tingo Maria, Rioja, Huanuco, and Pucallpa is begun.

On December 16, **1986**, the U.S. and Peru sign a new bilateral air agreement that calls for the resumption of multistop Lima-Miami service beginning the following spring.

Enplanements for the year total 689,066.

Airline employment stands at 1,270 in **1987** and the multistop Lima to Miami service resumes on June 12.

Passenger boardings accordingly leap upward by 57.7% to 1,628,997.

The workforce remains the same in **1988** and the fleet now includes 5 DC-8-55s, 2 B-727-247s, 2 B-737-247s, and 1 B-737-112. Like other South American carriers, Faucett is lax on reporting its operating statistics. For the 8 months revealed, customer bookings rise 16.8% to 1,201,769, but cargo plunges by 56.6% to 9.6 million FTKs.

Neither fleet nor workforce changes in **1989** as the company suffers a bad year.

A B-737-248 with 6 crew and 133 passengers suffers a gear collapse while landing at Iquitos in stormy weather on April 3. The Boeing slides off the runway, at which point the No. 2 engine separates from the wing. Although the aircraft will be written off and there are no fatalities, 11 people are injured.

Passenger boardings for the full year decline by 35.7% to 1,006,246 and freight drops again, down 29.7% to 84.32 million FTKs.

With company assistance, the regional charter operation **Haiti Trans Air, S.A.** is established at Port-au-Prince in **1990**; the new entrant begins service with two aircraft, one of which is a B-727-247 leased from Faucett.

After coming off a lease to **Air Malta, Ltd.**, a B-727-247 with 3 crew and 15 passengers begins a ferry back to Peru on September 10, over a course that will take it to Gander and Miami. The next day, after the aircraft has departed Keflavik on its next leg to Gander, the trijet disappears 180 mi. E. of Newfoundland. There are no survivors. It will be reported that crews from **Trans World Airlines (TWA)** Flight 851 and **American Airlines** Flight 35 have both heard distress messages, noting that the Faucett aircraft is descending with its low-fuel light on. Through the first nine months, customer bookings total 788,728 and 2.64 million FTKs are operated.

Company employment grows by 10.2% in **1991** to 1,400 and the fleet, mostly leased, now includes the B-727-247 leased to **Haiti Trans Air, S.A.** and 1 each B-737-112, B-737-222, B-737-247, DC-8-51, DC-8-53F, DC-8-61, 3 DC-8-52s (one of which is out of service), and 1 L-1011 TriStar 1, formerly flown by **Trans World Airlines (TWA)**.

The DC-8-51 with 125 passengers is captured at Trujillo, Peru, by a lone gunman on January 7 and ordered to fly to Lima. Upon landing, the aircraft is stormed by security police who kill the hijacker.

Passenger boardings fall 17.3% to 754,380, while freight climbs 16.5% to 3.86 million FTKs.

The employee population is reduced by 28.6% in **1992** to 1,000 and a DC-8-61 is leased to **Haiti Trans Air, S.A.**

Direct Iquitos to Cuzco service is started on January 16, eliminating the need for a Lima stopover.

Once flown by **United Airlines**, the DC-8-52 *Santa Isabelle* is retired during the month.

Company data is provided for the first 10 months and show customer bookings down another 19.4% to 567,974. Cargo, on the other hand, more than triples, rising an almost unbelievable 219.3% to 9.76 million FTKs. Revenues on the year total \$71.4 million, but expenses are higher. Consequently, losses are suffered: \$12.3 million (operating) and \$17 million (net).

In December, the company joins with the shipping line Naviera Santa to purchase rival **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** for \$41 million.

In **1993**, the company's new president, Roberto Leigh, who has taken over from the Zanetti family during the AeroPeru negotiation, oversees a workforce unchanged from the previous year.

In January, the government of Peru declares the **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** purchase to be null and void because the winning bid had not met certain, unspecified, requirements. On top of this reversal, the DC-8 lease expires.

Domestic markets now served include Arequipa, Ayacucho, Chiclayo, Cuzco, Iquitos, Juliaca, Piura, Pucallpa, Rioja, Tacna, Talara, Tarapoto, Trujillo, Tumbes, and Yurimaguas. An international route continues from Iquitos to Miami.

Passenger boardings accelerate 16.7% to 818,834 while freight rises 5.1% to 12.79 million FTKs.

Airline employment is increased by 40% in **1994** to 1,400 and the fleet consists of 1 each owned B-737-112 and B-737-222 plus a number of leased machines, including 1 each Airbus A300B4-203, B-727-35, B-727-247, B-727-264A, B-737-247, B-737-2A9A, B-737-212A, B-737-269A, DC-8-61, L-1011 TriStar I, L-1011-50 TriStar, and 2 DC-8-52s.

A dramatic red and white color scheme is unveiled in early spring, together with a new bird tail logo.

During the summer, the company takes an interest in the Santo Domingo-based carrier **APA (Internacional Airlines, S.A.)**, wet-leasing to it the Lockheed L-1011 TriStar I, which it also agrees to maintain.

Former CEO Alfredo Zanatti is sent to prison for misuse of a government subsidy during his Faucett tenure. Some will consider his jail sentence a political price paid for associating with the wrong politicians, but in any event, it will be relatively short.

Customer bookings move ahead by 6.6% to 1,204,956, while cargo climbs 11.8% to 120.19 million FTKs.

The workforce is decreased by 42.9% in **1995** to 800.

In November, U.S. FAA officials point out that the nation's civil aviation agency does not comply with the safety standards established by ICAO. Faucett, which has also begun to wet-lease a DC-8F to **APA Internacional Airlines, S.A.**, begins to share codes on APA's scheduled routes from Santo Domingo to Puerto Plata, Miami, San Juan, and New York.

Traffic figures, reported through November, are mixed: enplanements are off by 15.5% to 625,026 but freight increases 188.9% to 31.3 million FTKs.

Airline employment jumps 25% in **1996** to 1,000.

On February 29, Flight 251, a B-737-222 with 6 crew and 117 passengers en route from Lima to Arequipa's Rodriguez Ballon Airport, suffers engine failure and crashes while on approach into an Andean canyon 2½ mi. N of its destination. There are no survivors from Peru's worst civil aviation accident.

Figures for the year show customer bookings dropping another 13.1% to 593,508. Cargo collapses as 15.59 million FTKs are operated, a 57.4% decline.

Markets visited in **1997** include Arequipa, Ayacucho, Chiclayo, Chimbote, Cuzco, Iquitos, Juliaca, Miami, Piura, Pucallpa, Porto Maldonado, Rioja, Tacna, Talara, Tarapoto, Trujillo, Tumbes, and Yurimaguas.

In a related matter, the son of former Faucett CEO Zanatti, with his father behind the scenes as driving force, establishes Alas del Pacifico ("Wings of the Pacific"), to compete with Faucett and **Aerocontinente**,

S.A. for rights to fly to the U.S. Although the start-up will secure a domestic license, it will remain moribund. After years of heavy losses, Faucett suspends operations in September.

Traffic figures are revealed for the year's first half and show a 9.3% decline in passenger boardings to 293,346. Freight plunges another 45.7% to 5.05 million FTKs.

Moribund Faucett declares bankruptcy during the spring of **1998** and remains grounded, ordered by the courts to reorganize under their supervision. At the same time, an intense struggle for control of the airline is waged between President Leigh and former owner Alfredo Zanetti. In the midst of all this, Leigh and his executives put forward a plan to regain the approval it lost to operate to the U.S. Indeed, the Peruvian Transport Ministry confirms that it will restore the U.S. operating authority as soon as the company resumes domestic flights.

In early June, the Airlines Reporting Group kicks Faucett out for failing to meet its financial obligations and stops processing agents' transactions on the carrier on June 22. Meanwhile, a strategic alliance is entered into with **EVA Airways Company, Ltd.** of South Korea. Under its terms, the Asian carrier will code-share on any future Faucett flights to the U.S.

President Leigh now unveils a reorganization plan that includes a challenge to the \$20 million still owed to the government over the Zanetti affair and a financing plan to pay off the airline's remaining \$30 million in debt, mostly owed to its own employees. Despite legal assistance from Luz Helena Garcia, Leigh is unable to convince creditors at an August meeting to accept his reorganization ideas.

In early October, as a result of the ongoing battle for control, the creditors, having lined up behind former CEO Zanetti, are able to oust President Leigh. Larrieu Bellido, a German national without known airline experience, is named as his replacement, while a representative from the Peruvian tax agency SUNAT takes over as receivership trustee.

It is at this point that the long and distinguished 70-year history of the country's oldest airline comes to an end.

FAYETTEVILLE FLYING SERVICE. See **SCHEDULED SKYWAYS**

FEDERAL AIRLINES, LTD.: P.O. Box 44887, Khartoum, Sudan; Phone 24 911544 1855; Code FLL; Year Founded 1994. Little-known outside the Sudan, Federal Airlines is established at Khartoum in **1994** to provide passenger and cargo charters. Revenue flights begin under the leadership of Managing Director Moheideen Abdullah al-Faqeeh with 1 Boeing 727-100 and 8 Piaggio P-166 Albatros.

In **1995–1996**, an Antonov An-24V is acquired.

On a May 3 service from Wau in the latter year, the An-24 is unable to land at Khartoum because of sandstorms. Carrying 6 crew and 47 passengers, the aircraft attempts to make a forced landing NE of the city near Haj Yousif. After touching down, the aircraft smashes into a building and all aboard are killed. Among the dead is Managing Director al-Faqeeh.

There is no information on the company after this point, but it is still extant, according to the "World Airline Directory" in *Flight International* (April 4, 2000).

FEDERAL CARRIERS: United States (1975–1978). Federal Carriers is established at White Lake, New York, in **1975** to provide scheduled passenger and cargo services from Monticello to New York (LGA). Daily Beech 18 roundtrips are duly inaugurated, and are maintained into **1978**.

FEDERAL EXPRESS (FEDEX): P.O. Box 727, Memphis, Tennessee 38194, United States; Phone (901) 369-3600; Fax (901) 332-3772; <http://www.fedex.com>; Code FX; Year Founded 1971. Independently wealthy former USMC Vietnam pilot Frederick W. Smith, who as a Yale undergraduate had received a "C" on an economics paper suggesting a need for air express services, purchases controlling interest

in Little Rock-based Arkansas Aviation Sales in 1969. It requires two years to make the company profitable, during which time the veteran continues his interest in the development of "time-sensitive" air transport for packages and papers.

With \$500,000 capitalization (half his own investment and half from a family trust named for his father), Smith, hoping to fly cash letters overnight between banks for the Federal Reserve System, incorporates the Federal Express Corporation under Delaware laws, on June 1, **1971**.

When the Federal Reserve fails to contract with him, the entrepreneur elects to widen the scope of his operation and moves to Memphis in **1972** where he can establish a "hub-and-spoke" distribution system. Smith's plans for accelerated package air mail are reminiscent of the air express carriers of the 1920s and 1930s, but his new guarantee of overnight delivery for packages not exceeding 70 pounds or 108 inches in combined length and width anywhere in America is a gamble both modern and huge.

Federal Express is geared up at a Memphis base, where a large sorting center is established and staff assembled. Several Cessna 310s are acquired along with an option to purchase from the Business Jets Division of **Pan American World Airways (1)** a total of 23 Dassault Falcon 20Cs (the French-made business jets are specially fitted with 74" x 60" cargo doors).

With the assistance of Washington, D.C. attorney Ramsey D. Potts, Smith is able to convince the CAB on July 18 to waive its weight limits for air taxis. The ruling ends up in court due to objections from the Air Line Pilots Association (ALPA), Hughes Air Corporation, and **North Central Airlines**.

Having laid out funds for over a year with no return, Smith begins to encounter financial difficulties at the start of **1973**. In January, however, he is able to stave off initial disaster when he negotiates a paper payment for his Dassaults. **Pan American World Airways (1)**, instead of cash, will accept warrants to buy common stock in FedEx.

The first test operation is conducted on March 12–13. Eleven cities ranging from Dallas to Kansas City to St. Louis to Cincinnati to Jacksonville and to Atlanta send the embarrassing (and officially forgotten) total of six packages to Memphis. Another test, this time to 25 cities, is run on April 17–18 and nets 186 packages.

The experiment continues and within 3 months, the average combined daily package count is up to 286.

The deficit grows from \$4.4 million in April to \$7.8 million at the end of September. When the board of General Dynamics turns down his loan request, Smith flies to Las Vegas and wins the \$27,000 needed for the payroll by playing blackjack. Following some other unusual financing activities, which include a later-dismissed charge of forgery against Smith, the nearly bankrupt operation is, on November 13, granted a \$52-million line of credit from various banks and investors.

In December, the U.S. Court of Appeals at Washington, D.C., rules in Federal's favor in the air taxi weight limit case.

Much of the recapitalization is gone by January **1974** and in March the company's creditors meet in Chicago to discuss additional investment. Chairman Smith narrowly avoids dismissal, although he is required to take on retired USAF General Howell M. Estes Jr. as president/CEO.

New funding (\$6.4 million) is granted that month, but by May it, too, is used up.

Upon his resignation, President/CEO Estes is succeeded by Arthur C. Bass, who becomes president, with Smith returning to the CEO seat; Peter S. Willmott becomes senior vice president-finance.

In default of its loans, the company must again seek money and in September it receives another \$3.9-million credit and a one-year grace period from loan repayments. The additional financing provides sufficient income to cover expenses.

Meanwhile, business begins to improve, due largely to a lengthy strike at **UPS (United Parcel Service)** and the collapse of REA Express.

Despite opposition from the established carriers to a Federal application to the CAB for permission to operate larger freighters, the first

profit (\$55,000) is shown in July 1975. Meanwhile, as the traditional ground delivery systems begin to require additional capacity, Federal is able to find additional opportunity.

On May 31, 1976, the carrier reports a net \$3.6-million gain and, financially speaking, the company now begins to take off. During the year, the carrier's 32 Falcons fly 62,656,285 pounds of freight, a 62% increase over the previous year.

When the CAB deregulates air cargo in November 1977, authority is finally received to operate larger aircraft. In December, Chairman Smith purchases a fleet of 11 Boeing 727-25Cs. Simultaneously, the fast-talking actor John Moschitta is employed to begin a series of extremely popular and effective television commercials.

The first B-727-25C enters service on a Memphis to Los Angeles route in January 1978 and, during the month, the company receives the 1977 "Cargo Development Award" from *Air Transport World* magazine.

On April 12, the company becomes a publicly held corporation. Through the sale of 783,000 \$24 shares, capitalization is increased by \$17.5 million, much of which is employed to pay debt and acquire additional aircraft.

At this point, the company operates Overnight Air Service, Standard Air Service, and Courier Pak Service to 138 U.S. cities and Toronto.

Chairman/CEO Smith and President Bass oversee a workforce of 3,000 and operate a fleet comprising 10 B-727-25Cs and 32 Falcon 20Cs. Orders are outstanding for 5 B-727-123s. On May 18, a Falcon 20C is involved in a midair collision with a Cessna 150M over Memphis; both planes crash and there are no survivors.

During the year, the workforce is increased by 55.3% to 4,222. Cargo accelerates by 38% to 103.34 million FTKs.

Now a significant success, Smith's air-ground company now begins to face many rivals and imitators and must continuously seek improvement to maintain its Number 1 ranking in the overnight, door-to-door delivery game.

The workforce is increased by 35.5% in 1979 to 7,637.

On January 2, the company begins trading on the New York Stock Exchange under the symbol FDX. Additional innovative television commercials begin running.

Cargo jumps 50.6% to 155.61 million FTKs. Revenues advance 61.3% to \$258.48 million while expenses, although up by 61.8%, are held to \$216.83 million. As a result, the operating profit is \$42.15 million and the net profit rises 7% to \$21.42 million.

The employee population is increased by 37.1% in 1980 to 240. Peter S. Willmott becomes president, while the former president, Arthur Bass, steps aside to handle special projects.

Digitally Assisted Dispatch System (DADS) computer terminals are installed in courier vans to expedite customer pickup and delivery. In addition, Hotel Pak is introduced for the convenience of customers wishing to send or receive packages from over 250 hotels nationwide.

Eighty more communities join the network during the year.

Three DC-10-10s are purchased from **Continental Airlines**, with the first arriving in May; orders remain outstanding for a fourth DC-10-10 and 16 B-727s.

FTKs operated jump 17% to 268.7 million. Operating income improves by 60.7% to \$415 million and, with expenses held in check, allow the operating profit to ascend by 63.6% to \$69 million. Net income is up a welcome, but less dramatic, 0.8% to \$38.7 million.

The number of employees grows by 28.9% in 1981 to 11,272 and the fleet includes 29 Boeing 727-123s, 32 Falcon 20s, and 4 Douglas DC-10-10s. Orders remain outstanding for 15 new B-727-200Fs and 9 used B-727-22Fs.

The company now becomes the first express delivery company with over-the-phone package tracking. It also introduces an extremely popular "overnight letter" service at 50% of the cost of its Courier Pack.

The number of FTKs operated zooms upward by 17.4% to 284.85 million. Revenues soar 41.9% to \$589.49 million and expenses climb 40.8% to \$487.39 million. Consequently, the operating profit increases

48% to \$102.09 million and the net \$59.3-million profit is 53% better than 12 months earlier.

Total net profits climb to \$78.3 million in 1982, despite the national recession. A new container system is introduced to move packages even faster and in excess of 100,000 move through Memphis nightly.

The fleet now includes 38 B-727-100s, 32 Falcon 20s, and 4 DC-10-10s. Orders remain outstanding for 2 DC-10-30CFs and 15 B-727-200Fs.

A B-727-25QC is purchased from **Eastern Air Lines** on August 31 and christened *Stuart Shawn*.

During the year, a marketing agreement is signed with the Indian-based courier company **Blue Dart, Ltd.** Special projects director and former president Bass departs to become president/CEO of **Midway Airlines (1)**.

Cargo increases to 273.66 million-ton kilometers. Profits continue to be generated: \$119.46 million (operating) and \$78.38 million (net).

The workforce in 1983 stands at 20,015.

The Memphis-based small package carrier raises its weight limit to 125 pounds, enters 25 new markets, begins Saturday pickup service, opens the first of 1,400 Business Service Centers for walk-in customers, and otherwise continues its rapid expansion.

Three DC-10-30CFs are purchased from **Transamerica Airlines** and orders are placed for 30 Cessna 208 Caravan Is to service feeder routes.

When President Willmott resigns, CEO Smith assumes his title and promotes James L. Barksdale to executive vice president/chief operating officer. Former USAF pilot T. Allan McArtor becomes senior vice president-operations.

Revenues balloon 25.4% to \$1 billion and expenses climb by the same percentage, 25.3%, to \$857.35 million. An operating profit of \$150.73 million is created and the net profit line jumps to \$88.9 million. FedEx is the first company in American business history to reach the hallmark of \$1 billion in revenues in 10 years after start-up, without mergers or acquisitions.

Airline employment stands at 31,000 in 1984 and the fleet includes 11 DC-10s, 15 B-727-200s, and 35 B-727-100s.

Gelco Express International, Ltd./Gelco Express International, N.V., a worldwide courier with service in 84 countries, is acquired in January.

Beginning the same month, the company introduces the same on-board courier service employed by other international express operators. Electronic document transmission service—ZapMail—is inaugurated in July.

Total freight traffic accelerates by 59% to 719.59 million FTKs as over 60 million packages are transported. Although revenues are up to \$1.43 billion, the start-up of ZapMail causes expenses to rise to \$1.36 billion. The operating profit declines to \$72.12 million and the net profit falls to \$34.18 million.

The payroll grows by 18.1% in 1985 to 33,622 as the DOT reclassifies the company as a major carrier.

To handle traffic on branch routes, Federal in March begins to deploy the first of 30 Cessna 208A Caravan Is received. They will be operated under contract by **Mountain Air Cargo**, Sacramento-based Union Flights, and **Baron Aviation Services** of Vichy, Missouri. Orders remain outstanding for almost 80 more.

To speed up office-to-office document transmission, the first of over 3,000 ZapMailers are installed during the spring. Simultaneously in May, the carrier also begins European service, to London (STN) from Newark (EWR).

Belgian-based **Jean Dandois Transports SPRL** is purchased and the company establishes a sorting center in Brussels in mid-June. In addition, a five-day-per-week overnight B-727-100 schedule from Memphis-New York-Brussels is introduced, as is overnight service to 10 European nations.

A new regional hub is established at Newark and in December the first convertible wide-body freighter arrives; the DC-10-30CF *Alison* has been rebuilt from a passenger plane formerly operated by **SAS (Scandinavian Airlines System)**.

Traffic zooms upward by 32.4% to 952.9 million FTKs. Operating revenue jumps 41.4% to \$2.03 billion, but ZapMail expenses help increase costs by 49% to \$1.89 billion. Operating profits are down to \$14 million, but a \$76.1 million net gain is posted.

Airline employment is up substantially in 1986, by 28.8% to 43,300, just 385 employees behind second place **Eastern Air Lines**.

To support its heavy lift requirements, the carrier on January 24 accepts the first of 8 (later 10) new Douglas DC-10-30Fs, which succeed the B-727-100s on the transatlantic service. During the month, the company receives the 1985 "Labor Relations Award" from *Air Transport World* magazine.

Also in the first quarter, the British concerns Lex Wilkinson, Ltd. and Lex Systemline, Ltd. are purchased.

During the year, every courier is equipped with Super Tracker, a hand-held device for scanning each package as it passes through the FedEx system.

This year's ZapMail income is \$33 million, but again, the loss is high: \$140.9 million. After several years of seeking profit with the novel scheme, FedEx elects in October to discontinue ZapMail and write off the loss.

Late in the year, the company becomes one of the launch customers for the new McDonnell Douglas MD-11, although only one plane is firmly ordered.

Freight traffic accelerates 37.5% to 1.3 billion FTKs. Revenues increase to \$2.93 billion, costs are up to \$2.57 billion, and the operating profit is \$364.73 million. There is a net loss of \$64.38 million, due to the \$227.5 million write-off of the ZapMail experiment.

Airline employment grows by 1.6% in 1987 to 44,005. The fleet now includes 11 DC-10-30CFs, 8 DC-10-10CFs, 21 B-727-200s, 39 B-727-100s, and 66 Cessna 208 Caravan Is. Orders are placed for 90 more Caravans.

In February, the Canadian company Cansica, Ltd. is acquired. Williames Transport, Ltd. of Ireland joins the corporate fold in April, followed by Island Couriers from Latin America in December.

Meanwhile, in September, the work of adding 15.4 acres to its 27.8-acre hub facility at Newark (EWR) begins.

Following the **Emery Air Freight** purchase of competing **Purolator Courier**, the former sells the latter's new 400,000-sq.-ft. Indianapolis hub to FedEx on November 2. Customer shipping processes are now automated with the free-of-charge PC-based Powership. Despite increased competition, the carrier's traffic continues to improve.

Certainly the company's emotional highlight of the year is its participation in the rescue of 18-month-old Jessica McClure, who had fallen down a well and whose rescue is covered by the media worldwide. To facilitate the extraction of the toddler, FedEx has quickly flown a 4-ton high press water drill and 5,700 pounds of equipment to Midland, Texas, near her home.

Package volume swells 26.9% to 163.6 million while FTKs operated advances by 25.4% to 1.64 billion. Revenues rise 21.53% to \$3.57 billion, expenses grow 23.93% to \$3.19 billion, and the operating profit is \$381.27 million. Net profit advances to \$166.26 million.

The workforce is reduced by 2.3% in 1988 to 43,000.

In January, the company receives the 1987 "Cargo Development Award" from *Air Transport World* magazine.

The Italian company SIAMEX is taken over in April and in May the first units of the supplemental order for 90 Caravans begins to arrive.

United Parcel Service now attempts to conquer FedEx's leadership of overnight mail. Small package service to Japan is initiated on June 16; company officials are pleasantly surprised when Japanese customs officials agree to employ FedEx waybills.

East-West Courier, Ltd. of Canada is acquired in July.

By July, Federal is the world's largest operator of the DC-10; its fleet of that type includes 10 Series 30Fs, 8 Series 10CFs, and 6 Series 30CFs.

The last of the 1984 order for DC-10-30CFs arrives in October and by this time, several have been converted into the world's only all-cargo Series 30Fs.

On November 11, a B-727-25 is purchased from **Eastern Air Lines**; it will be converted into a freighter and named *Annalisa*.

Service to Fairbanks begins at the end of November.

In December, five foreign companies are merged: Bingham Group of the U.A.E.; British Winchmore Development, Ltd.; the Japanese Daisei Companies (Daisei Shokuhinrytsu Company, Ltd. of Tokyo; Nagoya Daisei Cargo, Ltd.; Daisei Air Cargo Company, Ltd. of Osaka); the UK-based Home Delivery Service, Ltd.; and Elbe Transport GmbH. of West Germany.

Having lost \$74 million on international operations since 1985, Smith and his lieutenants now make arrangements to take over a more experienced international operator, the world's largest air cargo airline, **The Flying Tiger Line**.

Senior Vice President McArtor becomes FAA administrator at the end of the year.

Freight traffic rises 16.46% to 1.91 billion FTKs. Revenues jump 20.40% to \$4.3 billion, costs accelerate 21.56% to \$3.88 billion, and operating income reaches \$421.35 million. Net gain swells to \$210.1 million.

The \$880-million acquisition of Tiger International and its principal subsidiary, **The Flying Tiger Line**, on January 31, 1989 makes the company the world's largest all-cargo airline, as measured by capacity. Included in the purchase are routes to 21 countries, a large Boeing freighter fleet exceeding 160 aircraft, facilities throughout the world, and the expertise of international air freight specialists who total 56,500 in number. The workforce, due largely to this takeover, jumps 63.3% on the year to 80,000.

In the same month, Netherlands-based Transport Group Alvrach and the Canadian couriers Yuill Couriers, Ltd. and Blue Jay Couriers, Ltd. join the FedEx family.

At Dubai, in February, an agreement is reached to acquire the air express operations of the Bingham Group. Serving the U.A.E., Bingham is the first Mideast concern taken over.

The Express Shipping Division of the Australian concern Rainers Customs & Transport (Pty.), Ltd. is acquired in May. During the same month, the Custom Logistics Services division reaches agreement with Global Aircraft Parts, Ltd. on a centralized distribution system in Memphis for primarily general aviation parts delivery worldwide.

In June, FedEx sells \$150 million in 7-year, 9.75% notes.

The Flying Tiger Line is officially integrated in August, at which time its name disappears into history. The first reliveried ex-**The Flying Tiger Line** Jumbojet, repainted by DynAir at Phoenix, is rolled out on August 20 and the next day is filmed in-flight by Clay Lacy for a company commercial.

Scheduling inefficiencies due to the merger continue as administrators struggle to integrate the pilot seniority lists of the two airlines. Maintenance costs also climb, particularly on the ex-Tiger aircraft. Although the 2,022 eligible pilots vote to reject ALPA representation in October, the carrier will actually continue to operate as two separate airlines until the pilot seniority question is resolved.

Eruptions of Alaska's Mount Redoubt volcano disrupt Anchorage operations as well as a malfunction of the computer system at the Memphis hub just before Christmas cause both losses and, in the latter case, some public concern.

Combined tonnage of the two carriers shows a decline of 2.2% to 6.32 billion FTKs, a figure still higher than that for any other air transport firm in the world. Revenues rise 15.33% to \$6.45 billion, expenses jump 19.54% to \$6.01 billion, and operating income declines to \$444.09 million. All of the costs involved in taking over the world's largest freighter cause the net profit to drop to \$81.9 million.

With 80,000 employees in 1990, FedEx ranks second among U.S. majors behind **American Airlines** in that category.

On January 2, stockholders are pleased to learn that common stock purchased for \$1,000 in 1980 is now worth \$3,914. The air fleet, now the 8th largest in the world, includes 259 aircraft: 64 B-727-100s, 23 B-727-200s, 8 DC-10-10s, 16 DC-10-30s, and 146 Cessna Caravans. The ground fleet features 29,000 white vans.

During the second week of April, Chairman/President/CEO Smith is named the third "Aerospace Laureate" in the area of commercial air transport by *Aviation Week and Space Technology*.

In May, a government arbitrator resolves the pilot seniority question by ruling that the lists from the two carriers be merged; many pre-merger FedEx pilots are demoted.

In June, the French Transports Transvendeens Chronoservice is taken over, as is the Mexican Aeroenvios S.A. de C.V.

A survey completed by Landor Associates finds that the company possesses the 139th most powerful name brand in the U.S.; the next closest airline is **American Airlines**, at 292nd.

Iraq invades Kuwait on August 2, driving up fuel prices significantly and adding to the expenses and difficulties that continue in the assimilation of the large cargo and international operations of the former **Flying Tiger Line**.

The last unit from the supplemental 90 Caravan order of 1987 is delivered in August, making a fleet of 199 Cessna 208s.

As a result of the Gulf crisis, the carrier now becomes one of the airlines sharing in a \$700-million DOD Civil Reserve Air Fleet (CRAF) contract for the provision of airlift services to the USAF. The first Pentagon contract in company history, obtained as a result of the August 17 CRAF call-up, employs the Jumbojet assets of the former **The Flying Tiger Line**, along with three DC-10-30CFs.

An initial lack of ground support equipment causes turnaround on flights to Dahrhan to take as long as 7 hours; by early December, time is down to 2-3 hours.

Also in December, the company leases a Douglas DC-3 Turbo 67 (equipped with Pratt & Whitney of Canada PT-6A-67A turboprop engines) from Basler Flight Services of Oshkosh, Wisconsin, and gives it an experimental freight contract.

Charter passenger boardings jump a pleasing 67.5% to 387,000, but freight is down 0.2% to 6.3 billion FTKs. The latter figure may be a decline, but it is still good enough to rank the corporation as the largest freight carrier in the world. Revenues climb 17.95% to \$7.61 billion, 4th highest among the world's airlines. Expenses are up 19.61% to \$7.18 billion and the operating profit is down slightly to \$423.69 million, which is also the world's 4th best. Net gain, however, rises to \$127.36 million.

Airline employment in 1991 is 81,711. FedEx becomes the first service company to win the Malcolm Baldrige National Quality Award. The fleet now comprises 8 B-747-100s, 10 B-747-200s, 11 DC-10-10s, 16 DC-10-30s, 92 B-727-100s, 57 B-727-200s, 10 Cessna 208As, 183 Cessna 208Bs, and 26 Fokker F.27s.

It is announced in February that the company has agreed to load express with the European carrier **TNT Express Worldwide**. Limited potential for market growth and profitability, mounting costs, and losses cause the company in March to give up on its European domestic and intra-European express package operation.

On June 1, the same day on which the first all-cargo MD-11F, christened *Malcolm Baldrige 1990*, is delivered, international distribution service is upgraded into a new product labeled International EXPRESS-freight. The MD-11F and the DC-10s are now called Express freighters and are employed, along with the Jumbojet freighters, to connect the company's international operating regions, including the provision of direct service to and from 16 cities in the U.K. and on the Continent.

On July 5, in one of the largest orders for commercial aircraft to date, FedEx places orders with Airbus Industrie for 75 A300-600Fs; the request is broken down into 25 firm orders, 25 confirmed but subject to cancellation, and 25 options.

The company is selected by the U.S. General Services Administration on August 15 to operate a one-year contract to provide domestic express services for the federal government, including the DOD. The contract will be rebid—and reawarded—annually thereafter.

Pilots in September reject, in a close vote, another attempt at their organization by ALPA. Executive Vice President/Chief Operating Officer Barksdale resigns in November and is succeeded by Thomas R. Oliver.

Senior Vice President Byron Hogue, head of airline operations, also retires; three years later, he will be named chairman of **Kiwi Airlines**. A lesser executive to depart is Ruthie McKee, a one-time nurse who has risen to become a vice president and now accepts a new post at **Northwest Airlines**.

Overall, cargo traffic for the year declines by 6.1% to 6 billion FTKs. Revenues decline 0.76% to \$7.55 billion and expenses are up 0.63% to \$7.23 billion, guaranteeing an operating profit of \$320.59 million. Costs associated with ending the inter-European service cause a net loss of \$34.01 million.

The workforce is increased by 3% to 84,162 in 1992.

Four B-747-100s, one B-747-200, and seven B-727-100s are withdrawn as three MD-11s, one DC-10-30, seven B-727-200s, and 23 Cessna 208Bs are acquired.

On January 1, in conjunction with TransAfrica Express, the company expands its pickup and delivery service to 21 new African destinations. Having discontinued its European domestic and inter-European services, the freighter on May 4 instead inaugurates intercontinental flights from the U.S. to 16 European cities.

Contracts are let with two European companies to offer cargo services within Europe to destinations the major does not serve. Simultaneously, **TAT (Transport Aerien Transregional, S.A.)** is recruited to provide intra-European service to Federal in 10 European nations.

At the same time, FedEx receives FAA certification for the hush kits to be employed on its B-727-200s.

Also in May, ALPA comes with 23 votes (1%) of establishing a FedEx chapter.

Vice President-Finance David D. Anderson resigns and William J. Rzzouk now becomes executive vice president, with Alan B. Graf Jr. as senior vice president-finance.

It is now reported that, in the 10 years since June 1983, sales have increased by 649% and the carrier's net worth has risen 213% from \$504 million to \$1.58 billion.

In October, the National Mediation Board (NMB) accuses the company of interfering in the ALPA election four months earlier and orders a new election.

A less-visible service provided during the year leads to the gratification of thousands. A FedEx freighter transports the sets, props, and sound equipment for entertainer Michael Jackson's *Dangerous* tour from the U.S. West Coast to Frankfurt, Germany.

Freight rises 2.5% to 6.15 billion FTKs and revenues ascend 2.1% to \$7.71 billion. Expenses are up 2.9% to \$7.44 and guarantee a lessening of operating profit to \$269.75 million. The net loss, due to "extraordinary charges," increases to \$83.91 million.

The payroll grows by 2.6% in 1993 to 86,324, the second largest (behind **American Airlines**) air transport workforce in the world. The last 4 B-747-100s, 1 B-747-200, and 5 B-727-100s are retired and replaced by 4 more MD-11s, 2 DC-10-30s, and 21 B-727-200s. With 456 freighters, FedEx now possesses the 4th largest fleet in the world.

ALPA wins a major victory on January 14 when 1,015 of 2,279 eligible pilots at the carrier vote to be represented by the union. FedEx files an objection with the NMB, but it is overturned.

On February 9, the cargo handling facility at London (LHR) is sold to British Airport Authorities, plc, for \$7.2 million.

On March 1, a daily DC-10-10F express package and freight service is inaugurated linking Prestwick, Scotland, with Paris (CDG) via London (STN). B-727s replace the wide-bodies on the route connecting Frankfurt and Cologne with Malpensa Airport at Milan.

The company celebrates its twentieth birthday in the spring as one of the carrier's original Dassault Falcons is enshrined at the National Air and Space Museum, Washington, D.C.

New service-driven technologies are unveiled, including command and control vehicle coordination system, FedEx On-Line, and Power-ship 3.

ALPA is certified on June 15 as the official bargaining unit for the carrier's pilots.

Also during the month, the company's sorting center and facilities at Brussels Airport are acquired by **DHL Worldwide Express**, which now enjoys the largest automated hub outside of the U.S.

Because of its two-day air delivery, the carrier is chosen by Omaha Steaks in July as its exclusive transport for mail-order steaks. Meat shipments are flown from any of the airline's domestic hubs.

On August 2, Federal Express is one of seven carriers to win an Air Force contract to provide long- and short-range international airlift services under the Civil Reserve Air Fleet program; the pact, by far the largest of those awarded, is valued at \$308 million.

Former President Bass dies of cancer on August 22 at the age of 61.

Talks on a new bilateral air agreement between Japan and the U.S. during the month and will drag on; the delay will come to have an impact on the carrier's plans to expand across the Pacific.

On September 1, the line agrees to lease 13 Airbus Industrie A310-203s from **Deutsche Lufthansa, A.G.** and beginning in 1998 to sublease 5 B-747-200Fs to the German carrier.

In October, an agreement is signed with Kinko Copy Service to provide a new 24-hour-per-day business convenience for pickup and delivery.

It is announced on November 20 that construction will begin on a new regional transportation center at Cubi Airfield, Subic Bay, Philippines, to be completed within 18 months. Although package shipments climb during the year, international air freight declines. Consequently, overall cargo traffic inches up only 0.5% to 6.17 billion FTKs, which is still 1.5 billion FTKs more than 2nd place **Deutsche Lufthansa, A.G.** Revenues rise 5.7% to \$8.15 billion, the globe's 8th best income, and expenses are up 3.5% to \$7.7 billion. Operating income doubles to \$473.37 million, 2nd best in the world, while net gain reaches up to \$179.47 million, the 6th highest.

Airline employment surges by 25.7% in **1994** to 108,500.

In January, the company receives the 1993 "20 Years of Excellence in Cargo Development" award from *Air Transport World* magazine.

A multiyear contract is signed with General Motors Corporation in January; under its terms, the airline becomes GM's exclusive U.S. express carrier for everything but production parts.

In February, International Priority Freight Service into the U.S. is announced, allowing customers to ship large packages from international destinations door-to-door.

A disgruntled pilot, Auburn Calloway, being given a free ride in a bumper seat, uses a hammer to attack the crew of a DC-10-10 departing Memphis on April 7. Although badly hurt, the three men are able to overcome their assailant and return to Memphis.

During the week of April 4, delivery service is begun to Ho Chi Minh City, Hanoi, and Da Nang in Vietnam.

On April 27, the company takes delivery of the first of 25 of the world's first Airbus all-freight aircraft, the A300F4-605R; the new freighters will gradually replace the carrier's DC-10-10Fs.

In June 21 Memphis ceremonies, Chairman Smith unveils a new corporate livery and logo, the latter emphasizing the longtime publicly employed verb, "FedEx." The first aircraft painted in the new scheme, a B-727-233F, is employed as backdrop.

In ceremonies during the first week of July, Smith and his colleagues receive the "Gold Medal Award for Heroism" from ALPA.

The first three A310-203Fs are delivered from **Deutsche Lufthansa, A.G.** in September.

International Priority Freight Service is expanded during the month to both inbound and outbound flights. The service is available between the U.S. and Puerto Rico to Belgium, Brazil, Canada, France, Germany, Great Britain, Hong Kong, Indonesia, Italy, Japan, Korea, Malaysia, Mexico, the Netherlands, the Philippines, Singapore, Taiwan, and Thailand.

Other highlights later in the year include negotiations for the acquisition of the all-cargo authority to China held by **Evergreen International Airlines** and the completion of work on a new hub at Subic Bay, Philippines. Application will now be made to the Japanese government for seven new routes from that facility to and through Japan.

An MD-11F is badly damaged in a hard landing at Anchorage on November 4. Cargo swells 13.4% to 6.91 billion FTKs and revenues surge 11.3% to \$9.18 billion. With expenses of \$8.57 billion (up 10%), the pretax profit is \$610.69 million and net gain reaches \$291.06 million.

The workforce grows by 6.4% in **1995** to 94,201.

On February 27, Flight 3527, a DC-10-10 from Memphis, is the first commercial service to arrive at the new Denver International Airport.

The company, on March 1, agrees to acquire the China rights of **Evergreen International Airlines**, including its routes to Beijing and Shanghai, along with two B-747-121Fs that it will operate under lease.

During the first quarter, the company begins to develop a new regional hub at Fort Worth (Alliance Airport). It will complement those domestic centers already operating at Indianapolis, Newark, Oakland, Chicago, Los Angeles and Memphis plus the international hubs in Japan, Germany, France, and the U.K.

Former pilot Calloway is convicted of air piracy in federal court at Memphis on March 30; he will be sentenced to a long prison term.

On April 7, a major aircraft deal is signed with AMR Corporation, parent of **American Airlines**. Under its terms, the freighter agrees to take over American's remaining MD-11 options and to purchase a dozen of its already delivered MD-11s, with deliveries beginning within two years.

On June 15, a DOT aide notes that Secretary Federico Pena has been unable to resolve a dispute with Japanese officials concerning Japanese landing rights for FedEx aircraft. The company has been planning to operate a new schedule into and beyond Japan from the company's new Subic Bay facility. The Japanese object not only to the U.S. position that the bilateral agreement with Tokyo permits such flights, but to American threats of economic sanction as well.

After five years of negotiations, the carrier, in the person of Senior Vice President Joseph C. McCarty, completes negotiations with Taiwan's Ministry of Transport and Communications on June 17 for the establishment of a second Asian hub at Taipei's Chiang Kai-shek International Airport in early 1998.

Two days later, the U.S. government threatens to bar **Japan Air Lines Company, Ltd. (2)** from some of the most profitable cargo routes to the U.S. in retaliation for Japan's continued refusal to allow the Memphis-based freighter to expand its operations. American officials are also upset with Japan's refusal to approve FedEx's request until the basic 1952 bilateral agreement between the two nations is revised and their continued contention that the U.S. has subjected their airlines to decades of unfair treatment.

The dispute intensifies on June 20 when Japanese Transport Minister Shizuka Komei threatens to bar a number of flights into Japan of both Fed Ex and **Northwest Airlines** that have their origin in the continental U.S. Plans to formally open the new FedEx Asian hub at the former USN base at Subic Bay on July 3 are delayed and flights from Subic to Japan and beyond are held up by the Washington-Tokyo discussions. Those unhappy talks between representatives of the two governments end without agreement on July 14.

A mini-conference is held on July 20-21 between Secretary Pena and Japanese Minister Komei, who reach an accord that avoids a conflict over the route requests made earlier by Federal Express. **United Airlines** and **Northwest Airlines** officials express relief that Japan had not renounced the 1952 bilateral agreement, which could have seriously threatened their beyond-rights from Tokyo.

The temporary accord on the air route question also includes an agreement to enter into later discussions aimed at revising the all-cargo provisions of the 1952 bilateral. Under the July 21 accord, FedEx will be granted the seven routes it had sought from the Tokyo government earlier. These include Tokyo (NRT) to Subic Bay and Kuala Lumpur and Osaka (KIX) to Subic Bay, Kuala Lumpur, Singapore, Penang, and Kaohsiung, Taiwan. In return, the U.S. will grant the Japanese a new cargo route from Osaka to Chicago and New York.

During the last week of the month, the company announces that it will purchase 15 A310-221s/222s formerly operated by **Swissair, A.G.** and

KLM (Royal Dutch Airlines, N.V.) from the International Lease Finance Corporation (ILFC), which will have them converted into freighters.

On August 17, FedEx reveals its new Asiaone product, an overnight delivery network that will connect 11 major commercial and financial centers in Asia.

The Subic Bay transshipment base is opened on September 4.

During the first week of November, the Japanese Ministry of Transport refuses to approve FedEx flights beyond Tokyo to Beijing and Shanghai that had been scheduled to start in late October. The following week, Secretary Pena, on a 17-day Asian tour on behalf of his government's "open skies" concept, visits with Japanese Transport Minister Hiranuma Takeo in Tokyo to discuss the matter.

After lengthy negotiations with its pilots, the company, on November 25, rejects a last-ditch contract offer from the flyers. The local ALPA Master Executive Council announces during the last week of November that its FedEx members will refuse to work overtime during the upcoming holiday season. With overtime flying accounting for upwards of 20% of all daily shipping frequencies, FedEx faces a difficult winter. In an effort to maintain its scheduled cargo services, company managers begin to employ training instructors as supplementary crew, curtail flights to South America, and offer an increase of 200% in overtime pay to those ALPA members willing to risk accepting it.

Two more MD-11Fs arrive in December, bringing the total for this type to 15 aircraft. Meanwhile, to assist in holiday deliveries in the face of its pilots' slowdown, FedEx wet-leases seven B-727Fs from **Express One International**.

The cargo giant's 498 aircraft operate 7.4 billion freight FTKs during the year, a 7% increase. Operating income increases by 10.8% to \$9.32 billion while costs are up 10.7% to \$8.8 billion. Operating gain swells to \$580.91 million and a net \$282.41-million profit is posted.

Company employment in 1996 grows 35% to 127,200.

During the year's first week, the carrier, at no charge, flies 10 tons of Red Cross supplies to Bosnia. The cargo, including 10,000 emergency supply kits, is destined for U.S. soldiers.

A severe winter storm throughout the Northeast region of the U.S. hampers operations between January 7 and 11.

ALPA pilots end their work slowdown on January 25 as contract talks continue.

During the last week of January, **CAAC (The General Administration of Civil Aviation of China)** grants final approval for the company's takeover of **Evergreen International Airline's** cargo routes into China. FedEx is now the only U.S. carrier to hold all-cargo rights to the PRC. Employing one of the two B-747-121Fs acquired from Evergreen, FedEx inaugurates this U.S.-China route in early March. The premier outbound flight is made from New York (JFK) to Shanghai via Chicago, Anchorage, and Beijing; the return is from Shanghai to New York via Anchorage.

Toward month's end, a new five-year pact is tentatively worked out between the carrier and its local ALPA chapter. A vote will be taken of the 3,000 FedEx pilots to determine if they are in accord with the improved retirement benefits, work rule changes, and pay increases offered in the contract.

Flight 71, an MD-11F with two crew, is substantially damaged when its tail strikes the runway during a May 16 landing at Anchorage, following a 6 1/2 hr. flight from Newark. The captain reports minor injuries.

During the spring, the carrier files with the Japanese Transport Ministry an amendment to its summer schedule of services. The document proposes that, beginning on July 1, it be allowed to offer beyond-flights from Tokyo to Manila, Cebu, and Jakarta. These would complement the four weekly frequencies offered between Tokyo and the Chinese cities of Beijing and Shanghai. Also sought is permission to fly weekly from Osaka to Beijing and Shanghai. Because of the U.S. bilateral air agreement with China, transport of local cargo would continue to be prohibited. The Japanese refuse to allow the requested flights.

As disputes flare anew, the negotiations between the U.S. and Japan over air cargo are terminated during the last week of June. Senior Vice President Michael L. Ducker, in charge of the new Filipino base, notes in early July that the company's new Subic Bay facility, via 11 major airport ramp operations, now supports a network that stretches to 330 Asian cities. Unhappily, the disagreement with Japan forces a delay in desired service start-up.

Also, 30 new pilots are hired during the month, bringing to 599 the number of new flyers employed by the company during the last year.

During the first week of July, the company contacts with Manila-based **Airfreight 2100** to provide daily Convair cargo flights from Subic Bay to Cebu. On July 16, the DOT suggests a limitation on JAL flights to the U.S. carrying cargo that has originated in Indonesia, China, or the Philippines unless Japan relaxes its restrictions on FedEx as promised a year earlier, granting the U.S. giant the routes sought in the spring. On July 18, in retaliation for the DOT proposal, the Japanese Transport Ministry announces that it will not allow FedEx or **Northwest Airlines** to fly to destinations in Asia from Japan.

Also during the month, seven regional managing directors are promoted to vice president.

The long-standing contract with the General Services Administration is re-awarded to FedEx on August 15.

Chairman Smith also meets with President Bill Clinton during the month to personally lobby for a stronger administration stance in the bilateral agreement negotiations between the U.S. and Japan.

En route from Memphis to Boston on September 5, the five-person crew of DC-10-10CF Flight 1406 is alerted by a smoke alarm in the main cargo hold that a cargo container has caught fire. The wide-body makes an emergency landing at Stewart International Airport in Newburgh, New York. All of the crew members are able to escape unhurt before flames engulf the freighter. Ironically, the cargo includes \$100 million in outdated \$100 bills being sent to the Federal Reserve Bank in Boston to be burned.

In mid-September, twice-weekly DC-10-30F direct roundtrips commence between Subic Bay and Shanghai. Five-times-per-week A310-203F flights are also initiated from the Philippine hub to Hong Kong. When combined with flights from Anchorage, the freight operator now has available at Subic four weekly connections from the U.S.

Also in September, a contract is signed with The Boeing Company for the conversion of 60 DC-10-30s into MD-10s. The upgraded aircraft will have state-of-the-art avionics and other freighter improvements. FedEx will later increase its commitment to this program, with requests for a total of 70 MD-10s, with 40 on option.

Plans to inaugurate a dedicated service from Subic Bay to Jakarta are dropped in mid-October when the Indonesian Transport Ministry decrees that all new cargo routes into the country must employ Hang Nadim Airport (20 miles from Singapore) as a condition of access to other national markets.

During the second week of December, an agreement is reached with **American Airlines** under which FedEx will trade 30 hush kits to American in exchange for 14 used DC-10-10s. The transaction is to be completed by the end of 1997.

Also during the week, FedEx signs a letter of intent with the Albany, Georgia-based Ayer Corp. for 50 Ayer LM200 Loadmasters. At the turn of the century, founder/CEO Fred Ayer's company will offer these as a single-engine, multipurpose aircraft.

The carrier now announces a major European service launch. From a base at Moscow's Vnukovo Airport, the company will inaugurate five-night-per-week FedEx Russia service to the CIS, to Paris via Frankfurt, and on to the U.S. and Asia, including Tokyo, Hong Kong, and Singapore. The Memphis-based line becomes the first Western all-cargo company to offer freight and express service on a regular basis from the Russian capital.

An agreement is signed on December 31 with the Paris airport authority, under the terms of which FedEx will invest a billion dollars

in Charles de Gaulle International Airport for the creation of its FedEx European hub.

A total of 8.14 billion FTKs are operated, a 10.1% increase, while operating revenues jump 11.5% to \$10.95 billion. Expenses rise an identical 11.5% to \$10.3 billion and leave an operating profit of \$646.98 million and a \$318.49-million net gain.

An agreement is signed with the Taiwanese government in January 1997 under which FedEx will open a transshipment center at Taipei. The pact settles a dispute that had impeded completion of a new bilateral air agreement between the U.S. and Taiwan.

In the first quarter, the company, which has been acquiring 60 DC-10s from **American Airlines** and **United Airlines**, begins converting them into MD-10s through the installation of Honeywell glass cockpits.

On April 3, ground is broken for a \$38-million expansion of the Anchorage hub.

"Project Grid" is initiated during the spring; designed to upgrade the company's internal information technology (IT) infrastructure, the initiative will include replacement of 60,000 terminals and some personal computers with up to 75,000 network computers.

On June 2, the government of Japan approves several of the new routes sought by FedEx for over a year, but refuses to relax its overall restrictions on flights between Tokyo and other Asian destinations.

On June 9, Flight 80 must stop its taxi into the ramp area at Chicago (ORD). The DC-10-30F with four crew backs up 20 ft. to avoid being struck by the left wing of **Japan Air Lines Company, Ltd.** (2) Flight 6012, a B-747-246F with three crew that is taxiing out of the ramp area.

Authority to operate two weekly return cargo services from the U.S. to Argentina is purchased in June from **Arrow Air**.

Company agents at Sylmar, California, on June 30 discover that a shipment arriving from New York contains an undeclared oxygen generator. Following the **Valujet Airlines** disaster the government has banned such shipments unless properly packaged. FedEx officials notify the FAA, which traces the canister back to a shipment coming into the country via **Air France**.

During July, the carrier renews an earlier agreement with **Blue Dart, Ltd.** of India for an additional five-year period. It also purchases, for an undisclosed price, the rights to operate two weekly scheduled all-cargo flights to Argentina previously flown by **Arrow Air** and an additional all-cargo route from **Florida West International Airways**.

Coming in from Anchorage, Flight 14, an MD-11F with two pilots and three jumpseat passengers, crashes while landing at Newark (EWR) early on July 31. Following a heavy bounce, the aircraft comes to a stop on its back 4,800 ft. down Runway 22R, some 200 yds. from the airport's Terminal B complex and bursts into flame. Although the five aboard escape via the cockpit hatch and no personal injuries are reported, the plane, which has some 400 lbs. of "routine hazardous materials" aboard among 145,000 pounds of cargo from Asia (mostly electronic, computer, and machinery parts), bursts into flames and is destroyed.

Also on July 31, the company begins to implement temporary service adjustments to provide its regular customers the best service possible by managing what is expected to be a dramatic volume increase resulting from the expected job action by employees of **UPS (United Parcel Service)**. In what the media will portray as one of the last great conflicts between labor and management in this century, 200,000 ground workers, members of the Teamsters, strike UPS on August 4 and are supported by UPS's 2,000 pilots. Management pilots and contract aircraft are only able to provide a trickle of service.

Kiwi International Airlines and **United Airlines** recruit new business for its shipping services and **Emery Worldwide** attempts to accommodate those customers sending packages in excess of 5 pounds. However, UPS's major competitors, FedEx and **DHL Worldwide Express**, refuse most new corporate accounts (the latter takes new international business), but do accept packages left in drop-off boxes. Still, FedEx experiences an overload of shipments during the job action, and places a restriction on the number of packages that may be shipped.

Many FedEx employees work overtime and thousands of other employees volunteer to assist the company to help it manage the additional packages and delivery demands.

A strategic alliance is signed between Federal Express and **Air New Zealand, Ltd.** on August 6; First Express, Ltd., a wholly owned subsidiary of the New Zealand flag carrier, will handle the ground portion of the agreement, designed to significantly enhance express and document services to Kiwi businesses.

Talks between the Teamsters and **UPS (United Parcel Service)** resume on August 7 and the job action is settled a little over a week later. New corporate accounts are welcomed on August 21, the same day restrictions on the number of packages customers may ship is lifted. Saturday service resumes on August 22 and full service returns as of August 24. FedEx is able to retain some of the additional small package business generated during the walkout.

With 23 MD-11Fs left on hand (still more than any other carrier), FedEx tasks one to launch the company's longest nonstop route on September 1 from Osaka (KIX) to Memphis. The 12-hr., 7,000-mi. flight allows FedEx to offer the first and only "next business day" delivery of packages shipped from Asia to the U.S. and return. Although package shipping times are cut from 48 hrs. to 24 hrs., customers will be offered the new service at the same price as the previous two-day delivery.

The results of the first quarter announced on September 15 show that profits have more than doubled from a year earlier, up to \$143.3 million from \$62 million. The good fortune is attributed almost entirely to the 15-day UPS strike. At the same time, the sale of hush kits generates \$22 million in operating income while a net gain of \$17 million is realized from settlement of insurance claims for the MD-11F lost in July.

An ATC error on September 25 causes an **American Airlines** MD-80 and a FedEx A300F to pass within 800 ft. vertically and 2.3 miles horizontally near McAlester, Oklahoma.

On October 6, \$2.4 billion is paid out in an all-stock transaction for the acquisition of Akron, Ohio-based Caliber Systems, Inc., the second largest ground-transport company after **UPS (United Parcel Service)**. In making the announcement, FedEx Chairman Smith notes that both companies will continue to operate separately under a new holding company to be called FDX Corporation. However, he will become chairman of Caliber as its current CEO, Daniel Sullivan, steps down to the presidency.

Plans are announced in early October for the retirement of the company's three Hitachi Skyline and four IBM mainframe computers by June 1, 2001 and their replacement with Sun and Hewlett-Packard UNIX systems. In addition, a new data center will be opened in Miami in 1998 to complement those already operating at Memphis, Colorado Springs, Orlando, Dallas-Fort Worth, Singapore, and Brussels. In 1999, a major hub will be opened at Miami for South American and Caribbean traffic.

On December 18, the company and negotiators for its pilots union reach a tentative agreement on a new four-year pact, the first union contract for the flyers of an overnight delivery company. The carrier's pilots remain the only domestic employees of FedEx represented by a union. The deal is sent to the 3,400 pilots for a vote early in the new year.

By year's end, the company has rolled out 1,000 T1 lines to handle its electronic communications.

This year, the company transports a total of 9.3 billion freight FTKs, up 14.2% over 1996, thanks in part to the strike at competing **UPS (United Parcel Service)**. Operating revenues accelerate 16.3% to \$12.73 billion, while expenses are up 14.8% to \$11.82 billion. The operating profit climbs to \$901.06 million while a net \$458.19-million profit is recorded.

At the beginning of 1998, FedEx is the largest airline in the world in terms of freight carried and employee number, 2nd in fleet size, 5th in operating profit, 6th in operating income, and 10th in net profit.

In early January, the company announces that it will equip its entire fleet with traffic collision avoidance system (TCAS) II at a cost of \$100 million; 95% of the work will be completed within four years. Simulta-

neously, it is noted that an enhanced global positioning warning system (GPWS) will also be added within three years.

Swissair, A.G. announces on January 10 that it will replace its A310s, B-747-300s, and MD-11s with A330/340 equipment between the end of 1998 and 2008. The MD-11s will be sold to an unnamed "major American airline."

Having completed its take over of Caliber Systems, Federal Express Corporation is reconstituted on January 27, becoming FDX Corporation, a holding company for Federal Express Corporation, Caliber Systems, and their subsidiary companies. FedEx Chairman/President/CEO Smith is voted the top officer of the new entity. He will have four executive vice presidents at headquarters, not including Theodore L. Weise, who becomes the new president/CEO of Federal Express, the airline and express network. The \$15-billion global transportation and logistics powerhouse begins trading its shares on the New York Stock Exchange on January 28.

On January 30, a tentative new bilateral air agreement is signed between the U.S. and Japan. The redistribution of the airline's Tokyo (NRT) slots, which had played a key role in the final accord, is not resolved.

A new International Economy Freight service is introduced in February; rates are lower than those charged for other international time-definite shipping.

While shutting down its engines on the parking ramp at Memphis on March 6 after a flight from San Diego, a DC-10-30F with three crew experiences a loud bang and a failure of the pressurization outflow valve on the left main cargo door. When the captain exits the aircraft, he finds a ramp worker who has been injured by the accident.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14.

On March 23, the U.S. Supreme Court rejects without comment the suit of former FedEx pilot Robert J. Coupe, who had sued his employer for enforcing the FAA rule that he retire at age 60. Coupe had claimed that the rule violated the Age Discrimination in Employment Act, while lower courts had indicated that the carrier could not be sued for complying with a government regulation.

Also during the first quarter, optional Sunday deliveries to 50 selected U.S. destinations are introduced in a television ad campaign.

With the signing of a new U.S.-France "open skies" bilateral air agreement on April 8, FedEx is free to set up a European hub at Paris (CDG).

Later in the month, it is announced that a new hub will be constructed at Greensboro, North Carolina.

It is learned on April 23 that FedEx will purchase 20 used MD-11s from the **Swissair, A.G.**-owned subsidiary Flightlease, Ltd. After conversion from passenger to cargo aircraft, the new units will begin to enter service in August 2002, with deliveries continuing through December 2006. In a separate purchase the same day, the company signs with Boeing for the acquisition of three new MD-11Fs to be delivered between March and June 1999.

When new Philippine President Joseph Estrada appoints another leader for the Subic Bay Metropolitan Authority, there is rioting in the streets in support of the incumbent. To maintain its neutrality in the dispute, FedEx, in late June, closes its Asia-Pacific hub and moves its operations from Subic Bay to Manila and Taipei until the political matter can be sorted out.

A delivery service for aircraft spare parts customers is announced to September 11. Known as "Boeing Express," the flights are operated by FedEx in cooperation with Boeing Commercial Airplane Company.

Simultaneously, the company donates the services of an MD-11F to fly \$1.73 million in medicines and medical supplies to Indonesia. Undertaken on behalf of several charitable agencies led by Uplift International, the donation, badly needed as the result of the Asian economic crisis impact on the local currency, is distributed internally by aircraft from **Garuda Indonesia**.

On September 27, it is announced that all nine of the MD-11s operated by **KLM (Royal Dutch Airlines, N.V.)** have been purchased. Their transfer to Memphis will commence in 2004.

Negotiations between management and the carrier's pilots drag on. On October 19, leaders of the FedEx pilots' union unanimously vote to seek strike authorization from members. Negotiations between labor and management continue during the remainder of the month, but break down on October 30. Officials from the NMB work to get them restarted. Without progress towards a contract, company pilots, on November 9, begin to refuse overtime work. The union sends out strike authorization ballots, which will be counted on December 3.

On November 10, President/CEO Weise outlines contingency plans that the company will employ if the FedEx Pilots Association stage a job action. In essence, the company's 140,000 employees will provide overnight and deferred delivery services by reconfiguring the U.S. domestic air system around available pilots, contract air service, and expansion of the ground portion of the integrated network. It is admitted that overnight deliveries will not be available in some areas and international deliveries will be extended by a day. At all costs, the company will maintain its money-back guarantees on two- and three-day deliveries, which constitute a third of its business.

A standard ACMI agreement is signed with **Atlas Air** on November 12 for the use of two wet-leased B-747-47UFs on international air freight services during the remainder of the fourth quarter.

The next day, executives at **United Parcel Service (UPS)** begin to court FedEx customers, informing them that, should a strike occur, UPS will be able to step in and meet their shipping requirements. Simultaneously, the FedEx Pilots Association calls for binding arbitration on a work contract. Company officials reject the concept, believing that it will be able to absorb the impact of any job action with the strategy outlined by President/CEO Weise earlier in the week and comforted by a newly received second \$1-billion line of credit to cover any strike-related expenses.

Representatives from the airline and its pilot union meet with the NMB at Washington, D.C. on November 16. Simultaneously, 40 company pilots stage an informational picket in Atlanta. Although pilots also stage pickets at Los Angeles and New York on November 17, 3,500 nonunion employees stage a rally at company headquarters in Memphis in support of FedEx. At a pilots meeting that evening, Chairman Smith warns that the firm will keep its shipments moving come what may and bluntly implies that, since the company's latest contract is rescinded, positions will be in the balance if a job action occurs.

On November 20, leaders of the FedEx Pilots Association agree to delay the December 3 count of strike-authorization ballots for at least 60 days. Additionally, they pledge to keep working during the holiday season and to resume flying overtime. Labor and management return to the bargaining table at an undisclosed location in Memphis on November 23. On December 18, the company and representatives from the FedEx Pilots Association reach a tentative agreement on their first contract. Under terms of the agreement, the company's 3,500 pilots will each receive a 17% pay increase. The union's board of directors approves the contract, takes it under review for a week until December 23, and sends it to pilots for a ratification vote, which will begin on January 4. Ballots are to be counted on February 4.

Also on December 18, an ice storm in the southern U.S., including Memphis, slows departures and weather remains poor through most of December.

During the 12 months, cargo traffic climbs 6.66% to 9.92 billion FTKs. Revenues climb 7.4% to \$13.68 billion, while expenses are up 7.9% to \$12.75 billion. The operating profit moves up to \$907.29 million, while net gain falls back to \$435.44 million.

On February 4, 1999, company management and the FedEx Pilots Association jointly announce that the union's membership has ratified a five-year collective bargaining agreement; it will take effect on May 31, bringing the negotiating process to a successful conclusion.

On February 6, FedEx Flight 1020 and **Air Canada, Ltd.** Flight 754 survive a near-miss 40 mi. N of Lincoln, Nebraska. The FedEx

DC-10-30F with three crew is en route from Newark to Oakland and the Air Canada A320-211 with 6 crew and 89 passengers is en route from San Francisco to Toronto. Although the aircraft come within 1-mi. horizontal and 600-ft. vertical of each other, they sustain no damage or injuries.

An agreement is signed with **Atlas Air** on February 24 concerning a restructuring and continuation of the November ACMI contract with FedEx for the use of two B-747-47UFs.

While en route from Los Angeles to Indianapolis at 33,000 ft. over Kansas on March 2, a **Kitty Hawk International** L-1011F with three crew comes within 100 ft. of a FedEx DC-10F en route from Portland, Oregon, to Memphis. According to a report in *The Washington Post* two days later, both aircraft had apparently lost radio contact with the Kansas City ATC center.

On March 15, listed rates are increased an average of 2.8% for shipments within the U.S. The first MD-10 to be converted under the contract signed with The Boeing Company in September 1996 is rolled out in a ceremony at the Boeing Airplane Services facility in Long Beach, California, on March 19. Its inaugural flight is made on April 10, after which the upgraded DC-10F begins a 10-month test program.

On April 16, AEA Technology QSA of Burlington, Vermont, ships, via FedEx, a 200-lb. container holding a relatively small amount of a radioactive isotope of the metal iridium, to a construction company in Toluca, Mexico. It does not arrive, setting off a frantic search and a special alert from the U.S. Nuclear Regulatory Commission. The potentially lethal, but unopened package turns up at London (STN) on April 26 and is safely recovered. The Associated Press and the *Boston Globe* quote an NRC spokesman as noting that such disappearances occur approximately once a year. The airline and the DOT launch investigations. On April 29, U.K. press reports indicate that the package has now been delivered to its original Mexican destination.

On June 15, the airline contracts with Boeing for the conversion of another 19 MD-11 passenger planes into freighters. Eight modified MD-11Fs have already been delivered.

FedEx is one of three U.S. airlines tentatively granted a total of 17 additional roundtrips per week on June 23 between the U.S. and China.

Flight 77S from Cebu, an A310-203F with two crew and a jumpseat rider, runs off the end of the runway while landing at Manila in light rain on June 28. The aircraft is damaged when it hits and destroys the instrument landing system (ILS) antennae; its nose gear is folded back and the engines are damaged. Although no injuries are reported, several international flights must be diverted or delayed.

While on approach to Manila on a June 30 service from Tokyo (NRT), Flight 15P, an MD-11F with two crew, experiences a structural failure of a left-wing elevator. A safe landing is, nevertheless, completed.

In August, against opposition from British cargo airlines, the company, and 14 other foreign airlines, is granted fifth-freedom beyond rights from Scotland's Prestwick Airport. The FedEx petition for similar rights from London (STN) is denied.

The additional China route authority is confirmed on August 16; FedEx receives four new routes immediately and two in April. At month's end, a new A300F4-605R is specifically assigned to handle the markets of Jalisco and central Mexico, flying daily roundtrips between Memphis and Guadalajara.

The company lets it be known on September 24 that it will soon replace the six B-727Fs operated in Europe with Airbus A310-203Fs.

On September 27, a new 77,000-sq.-ft., \$200-million European sorting hub is opened for business at Paris (CDG). At the same time, next-business-day services among 38 European cities begin under a new **EuroOne** network program. On hand for these inaugurations, Chairman Smith reveals that the six B-727Fs employed in Europe will be replaced with five A310-203Fs during the next year.

During the week of December 19, FedEx transports an estimated 4.5 million packages in one day, a new record. Also during the fourth quarter, the company adds a major contact with Cisco Systems, an alliance with international supply chain consultant KPMG, and a new version of

its FedExShip computer software. It also drops plans to build a new \$50-million truck hub at Chicago (ORD).

The great floods in Venezuela during Christmas week displace thousands. The Latin American and Caribbean division quickly secures space on the company's daily 727 ExpressFreighter service from Miami and begins to funnel supplies and equipment to the humanitarian relief effort centered in the city of Valencia. These flights will continue into the new year.

Cargo traffic climbs 3.9% to 10.31 billion FTKs. Revenues ascend 6.2% to \$14.5 billion, while costs are up 6.6% to \$13.59 billion. The operating profit rises to \$909.91 million, while net profit grows to \$442.06 million.

Corporation employment at the beginning of 2000 stands at 150,000, a 3.4% increase over the previous 12 months. As the year starts, COO David Bronczek succeeds retiring President/CEO Theodore Weise.

Reacting to a growth of only 2.7% in domestic shipments during the six months ending on November 30, the company in the first quarter takes steps to refocus on its core freight and box business as well as to boost its domestic yield. To accomplish these ends, capital spending at the FedEx companies will be reduced by \$200 million, aircraft orders are to be cancelled or deferred, and a 3% fuel surcharge is added to cope with rising fuel prices. A hiring freeze is instituted and the sales force is realigned, with a greater emphasis placed on small-to-medium sized shippers.

On March 1, the RPS subsidiary begins a domestic ground residential parcel delivery service.

Nine miles out and inbound to Seattle on March 28, the crew of an A300F finds smoke in their cockpit; an emergency is declared and after the plane is landed, it rolls quickly onto a taxiway where the flyers abandon the plane.

On April 3, per an announcement made in late February, FedEx surrenders its five-times-a-week MD-11F beyond service from Prestwick to consolidate its efforts at the more-tightly restricted, but larger, London (STN) facility. The U.S. giant has found the generous rights granted out of Scotland to be worth little without a similar arrangement with London.

Also during April, FedEx opens a new 112,000-sq.-ft. facility at Louisville International Airport (home of its **United Parcel Service** competitor).

Delivery of the first of 89 MD-10s is accomplished in ceremonies at Williams-Gateway Airport in Arizona on May 10. The wide-body is christened *Brandon*.

Service to Munich and Tel Aviv from Paris (CDG) is upgraded on May 26 from B-727F to Airbus A300-600F. In June, the FAA rejects an objection from company pilots and rules that FedEx may employ the same pilots to operate both its MD-11Fs and MD-10Fs. The carrier also steps up its commitment to deliver some freight service to various points by 10:30 a.m.

It is announced on July 10 that the company will soon be boosting its international schedule from France with five weekly MD-11F roundtrips from Paris (CDG) to Subic Bay; 10 weekly A-310F frequencies from Paris (CDG) to Dubai, Bombay, Bangkok, and Subic Bay, and 10 weekly A310-203F night return flights from Paris (CDG) to Frankfurt, Milan, London (STN), and four other European points. Daytime A310F roundtrips will link Paris (CDG) and Copenhagen.

Also on July 10, FedEx is named fourth best-managed company among non-state-owned, major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology*. Also during July, FedEx and **United Parcel Service (UPS)** are both anchor tenants of the new 172,000-sq.-ft. cargo facility that opens at Sky Harbor International Airport in Phoenix.

Displeased by progress at the renewed U.S.-U.K. bilateral talks in London in mid-August, Chairman Smith allegedly threatens to withdraw his line's arrangements with all British airlines. The expectations for renewal of the FedEx contract by **Channel Express (Air Services)**, Ltd. for one, are dashed when a new agreement is not offered.

Also in mid-month, FedEx completes the wet-lease of a Lockheed L-100-30 Hercules from **Safair (Pty.), Ltd.** of South Africa; the turbo-prop freighter will be operated in Europe. On August 22, *Flight International*, in its annual commercial airline survey, confirms that FedEx is the largest cargo airline in the world.

By September, FedEx has, as promised, added five A310-203Fs to its European freighter fleet.

In early November, discussions commence with the U.S. Postal Service concerning the possibilities of shared express mail and ground deliveries. On September 13, a comprehensive similar package is signed with La Poste, the French post office.

The A310-324 previously operated by **Air Maldives, Ltd.** is purchased from Airbus Industrie on September 19.

In October, the yacht of the U.S. Paralympic Sailing Team is transported from the U.S. East Coast to Sydney, Australia, for the 2000 Paralympic Games, the Olympic equivalent for the world's top athletes with disabilities.

On November 13, the trucking concern American Freightways is purchased for \$1.2 billion in assumed debt, stock, and cash. The ground service, which will complement on the East Coast the activities of Viking Freight on the West Coast, will compete with **United Parcel Service (UPS)** in next-day delivery service. A new corporate world headquarters center is opened in Memphis on November 15. Founder Smith undergoes successful coronary bypass surgery at Memphis on the evening of November 24.

In early December, after five months of work with U.S. and Chinese government officials and zoo representatives, FedEx representatives in the U.S. and China are able to duplicate for Washington, D.C.'s National Zoo a feat accomplished earlier for the Atlanta zoo by rival **United Parcel Service (UPS)**. Following a closed ceremony, two giant pandas, Tian Tian and Mei Xiang, housed in two custom-built transport containers each with 110 pounds of bamboo and a big box of biscuits, depart Beijing on December 5 aboard a specially painted MD-11F, *FedEx Panda One*. Granted special flight privileges, Chinese and American handlers join the animals, which the U.S. zoo is "borrowing" for \$1 million a year over the next decade.

After 17 years of service, FedEx Corporation Logistics President/CEO Joseph C. McCarty, also on December 5, announces his plans to retire on May 31.

Following a customs check and crew change at Anchorage, the VIP panda plane arrives at Washington, D.C. (IAD) in mid-afternoon on December 6. Still in their crates, the pandas are trucked to the National Zoo, where they will remain out of public sight until their exhibit is officially unveiled sometime later. *FedEx Panda One* returns to its regular freighter duties still wearing its special color scheme.

The panda-lift comes just as the DOT is making an award of 10 new weekly all-cargo frequencies to China, two of which go to **United Airlines**, along with six to **United Parcel Service (UPS)** and one each to **Northwest Airlines** and FedEx.

A deal is struck with Boeing Airplane Services on December 21 under which the concern will convert 19 MD-11 passenger aircraft into freighters for FedEx beginning during the third quarter of 2002.

Two A310-324s once flown by **Merpati Nusantara Airlines** are purchased on December 22 from Magellan Aircraft Services; the wide-bodies will be converted into freighters and delivered early in 2001.

A 90-year unwritten industry taboo against depicting a calamity involving an actual airline's aircraft in a fictional motion picture comes to an end on December 22. FedEx agrees to feature one of their planes crashing and leaving Tom Hanks stranded on a deserted island in the film *Cast Away*, co-starring Helen Hunt, which opens nationwide. No passenger airline has yet been so daring.

After years of competing with air cargo concerns such as **United Parcel Service (UPS)** and **Emery Worldwide** that are contracted to transport the U.S. Mail, FedEx, as the year ends, completes four months of negotiations for a new 7-year, \$6.3 billion alliance with the U.S. Postal Service. Under its terms, which will be announced on January 10 and

take effect in August, FedEx will provide some 3.5 million pounds of airlift capability to the USPS every day.

FEDERAL EXPRESS CORPORATION U.S. FEEDER AIRCRAFT OPERATIONS. See **BARON AVIATION SERVICES; CORPORATE AIR; CSA AIR; EMPIRE AIRLINES; FREIGHT RUNNERS EXPRESS; MOUNTAIN AIR CARGO; TRANS FLORIDA AIRLINES; TWIN AIR; WESTAIR; WIGGINS AIRWAYS**

FEDERATION AIR SERVICES, LTD.: Malaya (1951–1955). Mansfield & Co. of Penang forms this small carrier in October 1951 to fly to bush locations on routes out of Kuala Lumpur. Employing de Havilland Canada DHC-2 Beavers, the company provides ad hoc charters until taken over by the Railway Administration in 1955.

FEDERICO II AIRWAYS, S.p.A.: Via Grieco Ruggeiero 32, Foggia, 71100, Italy; Phone 39 (058) 168-8730; <http://www.federicoII-airways.it>; Code 2D; Year Founded 1998. Federico is established at Foggia in the fall of 1998 to provide scheduled third-level domestic passenger services. Orders are placed for four Fairchild Dornier 328-110s, the first of which is delivered at the beginning of November. Revenue flights to Bologna, Palermo, and Rome begin on November 16.

Service is maintained in 1999–2000, as one additional Dornier turbo-prop joins the fleet. On December 23 of the latter year, a SAAB 2000 is leased from **Med Airlines, S.p.A.**

FEGAN AVIATION, LTD.: Nigeria (1995–1996). Privately held Fegan Aviation is established at Lagos, Nigeria, in the summer of 1995 to offer passenger and cargo services, primarily for personnel working in the energy industry. Two British Aerospace (BAC) 1-11s and de Havilland Canada DHC-6-300s inaugurate services. Work on a maintenance hangar is begun in 1996, but no other information is thereafter available.

FERRANTI HELICOPTERS, LTD. See **BRITISH CALEDONIAN AIRWAYS, LTD.**

FIESTA AIR: United States (1970–1973). Owned by the board of trustees of Hawthorne Christian College, the small Long Beach, California-based Fiesta operates charters throughout the Western U.S., as well as to Mexico.

A Lockheed L-188A formerly operated by **American Airlines** and an L-188C previously flown by **Eastern Air Lines** are obtained in the fall of 1971 and allow the company to greatly expand its operations.

Although services are maintained throughout 1972, the great oil embargo of 1973 forces the company to declare bankruptcy and shut its doors in April.

FIGAS (FALKLAND ISLANDS GOVERNMENT AIR SERVICES, LTD.): Stanley Airport, Stanley, Falkland Islands; Phone 500 27219; Fax 500 27039; Year Founded 1982.

Based at Stanley Airport on East Falkland, FIGAS, originally set up in 1948 to offer nonscheduled services, is reestablished after the Argentine war to provide scheduled, third-level passenger and cargo services linking East Falkland with West Falkland and New Island. The initial fleet comprises two Britten-Norman BN-2 Islanders.

Although the service network remains the same, frequencies are increased in 1992–2000 as General Manager Vernon Steen's fleet grows to comprise six Islanders. Company aircraft are also employed to

undertake aerial reconnaissance over the 320-nm. conservation area surrounding the islands.

FIJI AIR, LTD.: Fiji (1971–1995). When **Fiji Airways, Ltd. (2)** is renamed **Air Pacific, Ltd.** in April 1971, **Air Pacific, Ltd.** is renamed Fiji Air, Ltd. Majority ownership (77%) remains in private hands with the remainder held by the Fiji government.

Although profits are recorded in 1973–1974, the world oil crisis causes significant losses over the next several years. During the remainder of the decade, the company maintains its local interisland scheduled and nonscheduled routes and adds international services to Funafuti in Tuvalu.

D. L. Hazard is appointed chairman in 1978 with the mission of turning the airline around.

By late 1981, the fleet at Managing Director Martin C. D. Tyler's operation employs 66 workers and has a fleet comprising 3 de Havilland Canada DHC-6 Twin Otters and 1 each Britten-Norman BN-2 Islander, Beech B-58 Baron, and de Havilland DH 114 Riley Heron 2. Enplanements this year total 90,511 and grow to 94,002 in 1982.

In 1983, a Beech King Air 200 joins the fleet.

The company earns a profit in 1984, a trend that will be repeated over the next three years.

While taking off from Vanuabalavu on September 11, 1986, the DH 114 Riley Heron 2 with a pilot and two passengers veers right off the runway and into a tree; the flyer is killed and the aircraft is damaged beyond repair.

The government is overthrown in a military coup on May 14, 1987. Another coup on September 25 destroys the country's tourism industry and sends the airline into a tailspin.

The fleet is revised during the middle years of the decade and in 1988 is made up of 1 B-58, 1 DHC-6, 2 Islanders, and 2 Riley Turboliners (reengined de Havilland DH 114 Herons).

Suspended service to Tuvalu is reinstated in 1989.

CEO Tyler adds another Islander in 1990.

In 1991, orders are placed for four Harbin Yu-12 IIs, the first of their type to be sold outside of Asia. Simultaneously, Fiji Air takes over the Air Pacific, Ltd. route to Labasa, on the island of Vanua Levu. The undercarriage of a Riley Turboliner with two crew collapses as the plane lands at Suva from a December 15 test flight.

Enplanements for the year rise to 80,000.

The first Harbin is delivered from China to Fiji in January 1992 in a 39-hr. flight via Hong Kong, Manila, Davao, Palau, Biak, Papua, Solomon Islands, and Vanuatu. It joins the fleet on February 6, along with another Twin Otter. Christened *Danny Jorgensen*, the Chinese turboprop is commissioned in a special ceremony attended by CEO Tyler, Prime Minister Ratu Sir Kamisese Mara, and the Chinese ambassador to Fiji.

The last three Yu-12 IIs are delivered in 1993, the year U. Rad becomes CEO.

Operations continue apace in 1994; however, in February 1995 the company is renamed **Air Fiji, Ltd.**

FIJI AIRWAYS, LTD. (1): Fiji (1932–1934). Fiji Airways is founded at Adelaide in late 1932 by **Guinea Airways (Pty.), Ltd.**, which provides its subsidiary's A£10,000 capitalization. Two Gernairco float-planes are obtained and two every-two-weeks and one weekly, subsidized service to Fiji destinations is inaugurated on March 20, 1933: Suva to Lambasa via Levuka, Suva to Naselesele via Savusavu, and Suva to Suva via Ellington and Lautoka. Following a summer crash by one of the Gernaircos, only the Suva to Suva route is maintained.

The little carrier ceases operations in February 1934.

FIJI AIRWAYS, LTD. (2): Fiji (1947–1971). Present-day **Air Pacific, Ltd.** has a colorful history, being first registered two years after World War II as **Katafaga Estates, Ltd.** It is the brainchild of the famous Australian aviator, Harold Gatty, who settles in Fiji after the war.

Gatty reforms his company at Suva in July 1951, establishing his wholly owned Fiji Airways, Ltd. The airline's lone de Havilland DH 89A Dragon Rapide inaugurates regular service within the Fiji group to Nadi International Airport Lantoka on September 1 and Lambasa on December 1.

A second DH 89A is acquired in February 1952 and is employed to launch Savusavu flights on December 6. DH 89A service to Teveuni is begun on October 24, 1953.

In July 1954, **Qantas Empire Airways (Pty.), Ltd.** takes a 50% interest and **British Overseas Airways Corporation (BOAC)** takes 5%. Two ex-Qantas de Havilland Australia DHA-3 Drovers are placed in service. Following the death of Gatty, Qantas purchases full ownership on March 24, 1958.

Two ex-Southern Airlines de Havilland DH 114 Herons are purchased on January 9, 1959; christened *Queen of the South* and *Queen of the Islands*, they are employed to initiate scheduled services to Tonga later in the year.

The carrier is reconstituted on January 1, 1960 as **British Overseas Airways Corporation (BOAC)** and **Tasman Empire Airways, Ltd. (TEAL)** become equal co-owners; capitalization is increased to F£180,000, and Qantas retains management responsibility. Suva-Levuka and Kapavu de Havilland Canada DHC-2 Beaver services begin on March 4.

The fleet in 1961 includes 3 DH 114s, 2 DHA-3s, and 1 DHC-2. Services are inaugurated to the Solomon Islands early in the year.

Under Qantas control in 1962–1970, regional routes are opened as far as Australia and the carrier's first jetliner, a BAC 1-11-475, is placed in service.

The most dramatic tragedy occurs on February 26, 1964 when a Heron crashes near Oita Airport (20 dead). Two more de Havillands are lost during the next two years.

A DH 114 Heron 1B, with a pilot and 16 passengers, is destroyed as the result of a bad landing at Ura Airstrip on December 11, 1965; there are no fatalities.

A second DH 114 Heron 1B is lost as the result of an accident at Suva on November 9, 1966; no injuries are reported.

Operations continue apace in 1967–1968; however, in 1969, the company, through a combination of undercapitalization and poor traffic yields, encounters severe financial difficulties. Shareholders decide to fund the company at a higher level to keep it going.

In 1971, the airline's name is changed to **Air Pacific, Ltd.**

FILAIR, S.A.: BP 14671, Kinshasa, Zaire/Democratic Republic of the Congo; Phone 243 (88) 44 702; Fax 243 (88) 45 702; Code FIL1; Year Founded 1988. Filair is established at Kinshasa in early 1988 to offer nonscheduled passenger charter and cargo services to local and regional destinations and contract service flights worldwide. Revenue operations commence with a single Boeing 707-373C freighter leased from Sicotra Aviation and two British Aerospace BAe (Vickers) Viscount 757s. One of the latter is lost in a Tshikapa accident on December 31.

Service continues in 1989–1992 and the fleet is increased in 1993–1994 by the addition of two Lockheed Electras, one each L-188A and L-188CF, first operated by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.).**

Despite the civil war, flights continue in 1995–2000, during which years Dany Philemotte is president and the Boeing is removed and replaced with a Convair CV-580 and a Douglas DC-6A. Two more ex-VARIG Electras are acquired, but only one will remain in operation by the end of these years. The workforce reaches a high of 90.

FILDER AIR SERVICE, GmbH.: Germany (1999–2000). FAS is established at Nuremberg Airport in 1999 to provide regional scheduled and charter services. Kai Schroeder is named managing director and he acquires a fleet of 2 each Avions de Transport Aerien ATR42-320s and British Aerospace BAe Jetstream 31s. When revenue flights are begun,

scheduled destinations include Dusseldorf Express Airport, Leipzig, and Strasbourg.

The concern and its aircraft are purchased by **European Air Express, GmbH**, on March 30, 2000.

FILIPINAS ORIENT AIRWAYS: Philippines (1965–1974). Having been reformed following a September 1965 Douglas DC-3 crash, **Fairways** continues operations after November as Filipinas Orient Airways. Scheduled Orient flights are maintained between the nation's principal cities with a fleet of 6 DC-3s, 2 DC-6Bs, and the first of several newly delivered Nihon YS-11A turboprops.

Enplanements for the year under both names total 195,000.

Services continue apace in 1966 and by 1967 bookings have reached 376,000. FOA maintains its domestic schedules in competition with the government carrier, **Philippine Air Lines (PAL)**, and another private operator, **Air Manila**, over the remainder of the decade.

A DC-3 with 3 crew and 28 passengers overruns the runway while landing at Manila on April 23, 1969 after a flight from Roxas; the Douglas crashes 200 ft. into rough terrain, but no injuries are reported.

In February 1971, PAL is authorized to drop service to 18 Rural Air Service domestic communities; 13 are quickly divided between FOA and **Air Manila**.

At the end of 1972, the company leases a pair of Sud Est SE-210 Caravelles from **Sterling Airways, A.S.**

As the result of widespread dissatisfaction with his government and an armed insurrection by Muslim guerrillas in Mindanao, Philippine President Marcos declares martial law on September 23, 1972. The Air Force is given the unwelcome responsibility of supervising the airlines and a series of fare increases and decreases follow.

On March 31, 1973, the president directs that all of the nation's airlines should merge under **Philippine Air Lines (PAL)**. By Letter of Instruction No. 151 of January 1, 1974, PAL is confirmed as the nation's sole flag carrier and the National Bank is authorized to acquire the assets of both FOA and **Air Manila**, turning them over to PAL. The two Caravelles return to Denmark.

FINAIR EXPRESS: United States (1981–1984). Established at Miami in 1979, **F & F Aircraft** undertakes charter and contract service flights to neighboring Florida communities. The name Finair Express is adopted in 1981.

Late in 1982, the company becomes an **Air Florida** Commuter partner and inaugurates daily roundtrip scheduled passenger flights linking its base with Fort Lauderdale, Fort Myers, Jacksonville, Key West, Marathon, Naples, Sarasota, Tallahassee, and Tampa.

The company workforce in 1983 totals 138 and the fleet grows during the year to comprise 4 Embraer EMB-110 Bandeirantes, 1 Piper T-1020, and 6 Piper PA-31-350 Navajo Chieftains.

Enplanements reach 34,600. Operations are undertaken for its larger partner through April 1984. On May 15, following the collapse of **Air Florida**, Finair is renamed **Southern Express**.

FINE AIR: P.O. Box 523726, 1640 North West 62nd St., Miami, Florida 33152, United States; Phone (305) 871-6606; Fax (305) 871-4232; <http://www.fineair.com>; Code FB; Year Founded 1992. Fine Air is established by Jacob Frank "Sonny" Fine and his son Barry H. Fine at Miami during the spring of 1992 to offer all-cargo flights to Latin American markets with a fleet of 3 Douglas DC-8-51s, 1 DC-8-51F (leased to **Alas Airlines, S.A.** of the Dominican Republic), 2 DC-8-55Fs (1 chartered to Alas), 6 DC-8-54Fs (2 leased to Alas), and 2 DC-8-61s. In an all-white livery with script titles over a cheatline, each of the narrow-bodies wears the carrier's "Big Eff" ("F") logo on its tail.

Having accepted a contract to undertake replacement cargo services for **TAMPA (Transportes Aereos Mercantiles Panamericanos Tampa, S.A.) Cargo**, the company's DC-8-55F Jet Trader begins a temporary, weekly, all-cargo service in May between Miami and Ostend via London (STN).

Regularly scheduled revenue flights commence on November 10 over a route from Miami to Venezuela, the Dominican Republic, and several Central American countries. In addition, the new entrant is able to perform a number of Christmas mail flights on behalf of the U.S. Post Office between December 10 and December 24.

By year's end, a total of 1.6 million FTKs have been flown. Revenues total \$1.08 million, but expenses are higher and cause an operating loss of \$172,242 and a net loss of \$237,586.

Airline employment in 1993 stands at 450 and the fleet remains the same. Countries served from south Florida include Belize, Brazil, Colombia, Dominican Republic, Peru, Trinidad, and Venezuela.

During the first full year of operation, a total of 104.24 million FTKs are flown and revenues jump to \$17.26 million. Expenses total \$16.88 million, operating income is \$374,486, and net gain rises to \$313,760.

Operations continue apace for a second full year in 1994.

On the down side, the Peruvian government charges that, in February, a Fine cargo jet delivers at least one load of arms to the government of Ecuador during the border fighting between the two nations. Chartered by a Texas broker, a DC-8F has, in fact, delivered 75 tons of arms and ammunition worth \$33 million to Ecuador from Argentina. Although founder Fine and his son Barry deny knowledge of the contents of these shipments, Peru thereafter refuses to allow Fine Air into the country, and cancels its twice-weekly authority. Interestingly, Ecuador, meanwhile, refuses to act on a Fine request to start scheduled freight services into that nation.

Cargo traffic for the year skyrockets 99.2% to 245.82 million FTKs. Revenues advance a staggering 246.7% to \$59.85 million, while expenses increase 246.9% to \$58.58 million. There are profits of \$1.27 million (operating) and \$1.3 million net.

Rapid expansion continues for the Florida-based freight operator in 1995 as its workforce is increased a dramatic 77.8% to 800.

When George Batchelor's **Arrow Air** is grounded during the spring, Fine agrees to transport that company's freight to San Juan. The two freighters become involved in a dispute when Arrow is allowed to resume its Puerto Rico flights and Fine remains in the market.

During the summer, President Fine negotiates with airport officials in both Miami and Orlando concerning a possible expansion of the firm's maintenance business. The company's dispute over the 1994 arms flight to Ecuador intensifies. The FAA investigates the matter and, in August, FAA Administrator David Hinson writes Peruvian officials that the agency has failed to "uncover any evidence supporting the conclusion that Fine Airlines violated regulations governing the transportation of hazardous materials by air."

On October 1, the company enters into an interline agreement with **Air France** to move cargo traffic between south Florida and Latin America and the Caribbean. Under terms of the arrangement, Fine will link up with the French flag carrier's weekly B-747-200F service to Miami and its daily A340 passenger flight.

The company, still banned from Peru, files a complaint with the DOT in late October against both Peru and Ecuador. The Peruvian case relates to the arms case. The Ecuadorian case is a petition that requests the U.S. government not to permit the Ecuadorian cargo carrier **AECA (Aeroservicios Ecuatorianos, C.A.)** to fly into Miami until Fine is allowed to offer scheduled cargo service to Ecuador. President Fine notes that the petition will be dismissed if Ecuador grants the requested authority.

The company's 10 aircraft operate 243.92 million freight FTKs, a 2.3% dip under the previous year. Operating income slightly exceeds costs and there are profits: \$399,000 (operating) and \$370,000 (net).

There is no change in the employee population during 1996; however, the fleet is increased by five Douglas freighters. The company now operates 15 weekly flights, primarily from Miami to the Caribbean. Cargo increases 12% to 345.87 million FTKs. Revenues of \$68.86 million are generated and expenses are \$66.69 million. Operating gain surges to \$2.17 million and a net \$2.17-million profit is also reported.

Early in 1997, the company decides to go public and sell its stock on the New York Stock Exchange.

On August 7, Flight 101A with three crew and a security guard takes off from Miami under contract flight to **Aeromar International, S.A.**, the Dominican Republic's foremost air freight forwarder. The DC-8-61F, en route to Santo Domingo with 40 tons of fabrics for Dockers and Slates brand men's pants, enters an 85-degree, nose-up attitude, stalls, and crashes. The plane skids across 72nd Ave. into an empty lot ¼ mi. W of the airport and bursts into flame. Wreckage smashes into a warehouse and retail complex; there are no survivors. A fifth person, local motorist Renato Alvarez, is also killed on the ground.

On August 14, the *Miami Herald* runs an exposé in which two former **Aeromar International, S.A.** employees as well as others who supervised cargo loading on Fine aircraft claim the planes are routinely overloaded. Former Fine employees also claim that there are separate accounting procedures. Both Aeromar and Fine deny the story. NTSB investigators now focus their probe of the August 7 crash on the manner in which Aeromar employees loaded and secured the 16 cargo pallets placed aboard the aircraft. Of the 49 aluminum cargo latches (from 90 total) that are found, 48 are in the open (unlocked) position. The next day, the company suspends its two-day-old public stock offering.

The FAA dispatches 11 inspectors to Miami for a 10-day examination of the company's practices. The detailed review finds violations in cargo loading and the handling of hazardous materials. It also charges that 29 Fine pilots have been flying into high-altitude airports in South America in aircraft that are not certified to fly into those places with the loads they are carrying and under existing conditions; it begins the required procedures to suspend the aviators. The carrier voluntarily ceases operations on September 4 rather than have its operating certificate revoked by the FAA. It also returns to investors the \$120 million raised in the initial public offering.

On September 14, Fine reaches a consent agreement with the government under which it will pay fines of up to \$1.5 million. The money will cover the cost of inspections made since the crash and future inspections to ensure compliance. The fine is to be paid in installments of \$115,000 every 3 months beginning on January 15, with \$500,000 to be waived if Fine meets all of the provisions of the agreement by December 31. The FAA also agrees to drop its suspension proceedings against the 29 pilots.

Over the next month, the company implements and trains its personnel in a number of new FAA-mandated rules for hazardous cargo handling and freight loading. It also conducts background checks of its employees. As a result, the FAA grants approval for a resumption of operations on October 28. Flights thereafter are closely monitored.

On November 19, the company acquires a \$32.5-million line of credit through a 3-year agreement with NationsCredit Commercial Corporation, a subsidiary of NationsBank Corporation. Part of the money will be employed to complete the purchase of a Lockheed L-1011F.

The next day, Flight 363, a DC-8-55F with three crew experiences an in-flight fire in the No. 4 engine compartment area after takeoff from Miami (MIA); the aircraft successfully returns to runway 9R and is evacuated as airport fire trucks arrive to put out the blaze. No injuries are reported.

Despite the tragedy, freight traffic for the year as a whole falls only 0.6% to 289.44 million FTKs. Operating revenues, however, fall 14% to \$87.45 million, while expenses drop 6.4% to \$87.44. The operating profit drops to just \$9,000 while the previous year's net gain is turned into a \$1.9-million loss.

The L-1011F arrives early in 1998 and allows the carrier to expand its business into the Mercosur countries of South America, primarily Brazil, but also Paraguay and Chile.

While taxiing for takeoff from Brownsville on a scheduled all-cargo service to Laredo, Texas, on April 29, the three-person crew and a jumpseat rider aboard a DC-8-51F become short of breath and don their oxygen masks. The Douglas is moved back to the ramp, after which the four people are taken to the hospital. The diagnosis is carbon monoxide poisoning.

On July 22, Fine executes a letter of intent to acquire Columbus, Ohio-based **Southern Air Transport**. The acquisition is expected to be

completed within 90 days, subject to the satisfactory completion of due diligence, receipt of all necessary regulatory approvals, and certain other conditions, including board approvals. Fine has plans to continue SAT as a separate company, which will, in turn, lease its B-747-200Fs to other carriers. Three would be taken by Fine itself for use on its expanding Latin American services.

In the month afterwards, both parties work together in an effort to develop an acquisition plan that will be effective for both companies. A major stumbling block occurs when SAT is unable to find a buyer for its fleet of Lockheed Hercules freighters, which Fine does not want to acquire. Because a way to dispose of the SAT Lockheeds cannot be found, an agreement is not reached; both parties elect to explore other business opportunities and terminate their acquisition plans on August 24. SAT, after a similar negotiation with **Kitty Hawk Air**, shuts down on September 24 and files for Chapter XI on October 1.

Meanwhile, during the summer, Fine moves to block the application by **Aero Continente, S.A.** of Peru for authority to operate from Lima to Miami, asking that the DOT deny service until Peru allows Fine to resume services suspended earlier over the arms shipments. Even though the U.S. Drug Enforcement Agency is no longer investigating, Fine also revives allegations of drug trafficking by Aero Continente's former owner, Fernando Zevallos. The Peruvian line hires an attorney in Washington, D.C., to press its requests, which remain on hold at DOT through the end of the year.

Freight traffic during the 12 months falls by 9.2% to 179.95 million FTKs. Revenues move ahead by 29% to \$116.1 million, while costs are held to \$107.03 million. The operating profit is \$9.06 million and net gain reaches \$4.86 million.

By the beginning of 1999, airline employment has been boosted 26% to 1,008.

Fine's fleet is significantly increased on February 9 by the addition of a Lockheed L-1011F. The wide-body freighter will immediately begin the transport of payloads of up to 120,000 lbs. over the carrier's routes from Miami to Puerto Rico, Guatemala, Venezuela, Ecuador, and Colombia.

On February 11, Frank and Barry Fine reach an agreement with Guillermo Cabeza, president/CEO of **Arrow Air**, to take over that company and operate it as a subsidiary under its current identity. The acquisition from Puerto Rico-based International Air Leases will be accomplished for \$112 million in cash. Cabeza will remain as Arrow's president and no layoffs are foreseen.

The Federal Trade Commission (FTC) completes its review of the merger during March and on April 9 the DOT approves the acquisition. Only **Gemini Air Cargo** has filed a regulatory objection to the arrangement, which is not heeded. In an interview with Reuters, Ltd. on April 15, Fine President/CEO Barry Fine notes his plans to keep Arrow as a separate cargo carrier for up to two years, primarily because of the strong customer loyalty President Cabeza has built up in the shipping industry. Fine indicates that Arrow will add new services in the southern region of South America over the next three to four months, with Bolivia and Brazil seen as the initial markets.

As a result of its involvement in the 1997 crash of the Fine DC-8 at Miami, **Aeromar International, C. por A.** is linked with the U.S. carrier in lawsuits pursued during the year. During the legal proceedings that follow, prosecutors point out that Aeromar, a company half-owned by Fine, is no longer a real airline because it has no employees and conducts no day-to-day business. Fine, it is charged, charters its own aircraft and flight crews to its own partnership.

Cargo traffic falls 21.8% to 205.54 million FTKs. Revenues rise 4% to \$114.85 million, while expenses drop 2.1% to \$102.34 million. Operating profit ascends to \$12.5 million, while the previous year's net loss is turned into a \$10.97-million gain. All of this is on top of a fourth quarter \$7.8-million loss laid to the need to pay higher fuel bills and acquire expensive hush-kits for its older aircraft.

Airline employment at the beginning of 2000 stands at 1,117, a 10.3% increase over the previous 12 months. The fleet now includes 2 each

DC-8-51Fs and DC-8-61Fs, plus 7 DC-8-54Fs and 1 DC-8-55F. At the start of the year, Chairman Fine, in an interview with *Air Cargo World* published in March, indicates that he has plans to add three or four wide-body freighters this year and to begin flying to Brazil, Bolivia, Paraguay, Argentina, and Chile.

Senior Vice President/Chief Operating Officer John Zappia is appointed president of the Fine parts and engine sales business Fine/AAA Interair in February; he is succeeded by Guillermo Cabeza, who had been president of **Arrow Air** before its takeover by Fine.

On March 27, Aeromar and Fine accept a guilty plea agreement to five charges of obstruction in connection with the 1997 DC-8 disaster. Fine and Aeromar are the first airlines to be tried and convicted of criminal charges stemming from a fatal air crash. The two are collectively fined \$5 million, \$1.5 million of which will be paid by Aeromar. Despite its earlier history, Aeromar is prohibited from calling itself an airline. Fine is placed on probation for four years and is required to implement a new air safety program. Fine Air President Barry Fine issues a statement apologizing for his company's "shortcomings" and "lapses in judgement."

When financial figures appear, they show a first quarter loss of \$7.9 million, continuing the unhappy fourth quarter showing at the end of 1999. Fuel, noise control, and fines are the cause.

On May 1, **Kitty Hawk Air Cargo** declares bankruptcy and shuts down its subsidiary **Kitty Hawk International Airways**. The closure of the latter leaves Fine as operator of four of the six remaining L-1011Fs in the world.

On June 5, while negotiating to restructure its debt payments, Fine Air Services, the airline's parent, misses a \$9.4-million interest payment on its debt payment. It bluntly acknowledges that it must raise \$10 million in new capital over the next 12 months, even as debt-rating services Moody's and Standard & Poor's lower the company's rating and issue warnings concerning its long-term potential future.

Still, the company is able to report on July 1 that it has successfully restructured its debt and will be allowed to expand its freight network.

Fine Air Services and **Arrow Air**, through the holding company Fine Air Services Corporation, declare Chapter XI bankruptcy on September 27; both lines will continue operating through reorganization.

Permission for a merger between Fine and **Arrow Air** is received from U.S. Bankruptcy Judge A. Jay Cristol on October 16. On November 10, the holding company receives a \$55-million line of credit from the Bank of America as part of its Chapter XI restructuring program. The funds may be employed to smooth a combination of Fine and Arrow.

In December, 29 additional weekly roundtrips are laid on from Miami to points in Central and South America.

FINGER LAKES AIR SERVICE: United States (1920–1922). Finger Lakes is established by M. W. Blasier, Mrs. E. Blasier, and G. H. Leonard of Auburn, New York, in early July 1920. The new charter line is outfitted with a single Curtiss HS-2L flying boat christened *Auburn* and based at Island Park on Lake Owasco. Piloted by L. H. Todd, the *Auburn* inaugurates revenue flights around the New York Finger Lakes region on July 28, transporting a total of 235 passengers by the fall.

Following the loss of the *Auburn* during the winter, a second HS-2L named *Mayflower* is purchased and delivered to the airline in May 1921. Piloted by W. Roy Benedict and later W. N. DeWald, the aircraft begins its summer season on July 21, making at least one tour of the Thousand Islands that concludes back at Island Park on September 10.

As of October 1, a total of 450 passengers have boarded the *Mayflower*.

Plans made to shift the *Mayflower* to Florida for the winter flying season do not materialize and in the spring of 1922 the financially distressed owners decide to close their enterprise.

FINIST-AIR, S.A.: Guipavas Airport, Brest, F-29490, France; Phone 98-846487; Fax 98-846460; Year Founded 1985. This small

commuter is established by the Department of Finistere at Aeroport Brest-Guipavas in 1985 to operate air taxi, air ambulance, passenger, and cargo charters, as well as a scheduled service linking the company's Brest base with Ouessant. Other shareholders include the city of Brest, the Brest Chamber of Commerce and Industry, and the commune of Ouessant. Jean-Yves Cozan is named president, with Robert Le Thous as general manager.

The initial fleet comprises 3 Cessna 207s and 1 Socata Rallye 892E.

Enplanements for 1986, the first full year of service, total 12,674.

Operations continue apace in 1987. In 1988, Lorient and Quiberon are added and increase the number of markets served to four; Belle Isle is added in 1990–1991. During these years, one each Cessna 208 Caravan I and 208 Caravan II are placed into service. Operations continue apace in 1992–2000 with no change in fleet or mission.

FINNAIR O/Y: Tietotie 11A, Helsinki-Vantaa Airport, Vantaa, 01053, Finland; Phone 358 (9) 818 81; Fax 358 (9) 818 7701; <http://www.finnair.fi>; Code AY; Year Founded 1968. Although marketing its airline service under the title "Finnair" since 1953, **Finnish Air Lines O/Y** does not formally adopt the carrier's current name until January 1968, when a new logo and corporate identity are unveiled. Despite the title and visual facelift, administration and operations continue.

The fleet comprises 8 Sud-Est SE-210 Caravelle XB, 7 Convair CV-440s, and 5 Douglas DC-3s. Orders are outstanding for 2 Douglas DC-8-62CFs. On the year, a total of 895,672 passengers are transported.

An agreement is signed with **Braniff International Airways** in 1969 for use of the American carrier's terminal facilities at New York (JFK). The first DC-8-62CF arrives at Helsinki on February 8 and is placed on charter service on February 28. Following receipt of the second Douglas jetliner in April, the first Finnair service outside of Europe begins on May 15 as a DC-8-62CF pioneers a Helsinki–Copenhagen–Amsterdam–New York route.

On October 20, the carrier becomes the first airline in the world to introduce an inertial navigation system (INS) on scheduled services.

Passenger boardings skyrocket to 1,035,280, passing the million-mark in annual boardings for the first time. Of the total, 15,000 customers are flown on the new route to the U.S.

The workforce is increased 4.7% to 3,286 in 1970 and the fleet comprises 8 Caravelles XBs, 8 CV-440s, and 3 DC-8-62CFs, the third being delivered that December.

A computerized check-in system is introduced in May.

In September, orders are placed for eight DC-9-10s for Convair replacements on domestic service and in December two DC-10-30s are requested for international frequencies. Enplanements grow to 1,279,538 and freight traffic skyrockets 83.1%.

The first DC-9-10 is delivered on January 23, 1971 and enters domestic operations on April 1.

En route from Helsinki to Copenhagen on June 29, a woman passenger attempts to hijack the new Douglas jetliner, but she is quickly overpowered by the plane's crew.

The seven other DC-9-10s are delivered in late December. Construction continues on a new headquarters facility and passenger terminal at Helsinki Airport, where the company is also a major stockholder in the new Inter-Continental Hotel. A route is opened to Lisbon. Enplanements total 1,346,080.

A domestic Helsinki–Kussamo DC-9-10 segment is started in 1972 and passenger boardings jump 10.5% to 1,535,773.

The workforce in 1973 is 3,655. Domestic routes are opened to Mikkeli and Savonlinna and international service is inaugurated to East Berlin, Brussels, and Warsaw.

The new computer reservation system FINNRES is installed.

The carrier's fiftieth anniversary is celebrated on November 1.

Customer bookings advance by 24% to 1,857,000 and cargo traffic climbs 14%.

A total of 2,174,130 passengers are transported in 1974 and the employee population climbs to 4,477.

The first DC-10-30 is delivered on February 4, **1975** and mounts a Helsinki-Las Palmas proving charter flight 10 days later. The wide-body is then placed on the transatlantic route on March 27. The second DC-10-30 arrives and is also placed on the New York run in late fall.

On the year, freight traffic declines 20%, but passenger boardings rise 13% to 2,499,000 and charter traffic rises 54%. Cargo, however, declines 20% to 31.71 million FTKs.

Ordered the previous year, the first of six DC-9-51s to be delivered in **1976** arrives on January 23. The first machine, the 800th DC-9 built, enters European service in February, flying to London, Brussels, Paris, Zurich, and Copenhagen. Charter flights to Bangkok are offered, beginning in November.

The workforce is reduced by 2.8% during the year to 4,353. Passenger bookings increase 3.8% to 2,593,752. A total of 14.69 million freight FTKs are operated.

Montreal is added to the transatlantic network in April **1977**. Two more DC-9-51s are delivered.

Enplanements for the year dip to 2,302,800.

In **1978**, President Gunnar Korhonen oversees a workforce of 4,333. Two additional DC-9-51s join the fleet and Finnair inaugurates Europe's longest nonstop segment—Helsinki to Madrid.

On May 24, Mikhail Timoshukov, a 22-year-old escaped convict from Kazakhstan, takes two hostages at the Finnair office and demands a plane to fly him out of the country. He is seized by Soviet police during a shootout at Moscow.

Aarno Lamminporras commandeers a DC-9-51 with 48 passengers en route from Oulu to Helsinki on September 30. After reaching Oulu, he collects a ransom of \$206,000 and requires the plane return to its point of origin via Amsterdam. Lulled into a sense of safety when police at Oulu allow him to return home, the pirate is arrested six hours later when police storm his house and take him into custody. Tried, the perpetrator will receive a prison term of seven years. Freight traffic increases 2.4% and passenger boardings rebound 5.1% to 2,424,000.

Low-fare Helsinki to Stockholm service is started in **1979**. On June 19, **Finnaviation O/Y** is formed as a commuter subsidiary; it begins operations with three Embraer EMB-110 Bandeirantes on October 7.

International routes are opened to Istanbul and Cairo in the fall.

Enplanements jump 13.3% to 2,950,000.

Airline employment is increased by 4.8% in **1980** to 5,350. CV-440 service ends in April and the remaining four Metropolitans are replaced by two Fokker F.27-200s. Three used DC-9-41s are ordered. Routes are extended to Athens and Baghdad.

An in-flight magazine, *Blue Wings*, is started.

Bookings increase only 1.5% to 2,994,000, but freight is up by 14.3% to 48.44 million FTKs.

The employee population is increased by 3% in **1981** to 4,951.

Flights to Geneva from Helsinki commence in early spring. Following receipt of a third DC-10-30, polar service to Los Angeles via Seattle is begun on May 16. Tampere-Leningrad operations are also started.

Two DC-8-62CFs and four Super Caravelles are retired, replaced by the delivery of three DC-9-41s and three DC-9-51s.

Executive-class service is introduced on most European routes, plus those to Bangkok and America; first-class is, however, retained on several services.

Passenger boardings rise 8% to 3,098,000 and cargo is up by 7.1% to 51.87 million FTKs.

The workforce grows 6% in **1982** to 5,487.

On April 1, the original company name is revived; Aero O/Y, a new subsidiary, is formed to handle aircraft sales and leasing, as well as the sale of technical services. The same day, service is launched to Amman. Also in April, Finnair becomes a launch customer by placing an order for five Avions de Transport Regional ATR42s.

Freight traffic is up 17.1% to 61.13 million FTKs and passenger boardings accelerate 2.9% to 3,281,111.

The number of employees is reduced by 87 in **1983**.

The unprofitable Amman frequency is suspended in January; however, with a DC-10-30ER equipped with extra fuel tanks, weekly nonstop Helsinki-Tokyo service is inaugurated on April 22.

The company's first three McDonnell Douglas MD-82s enter European service in April and the last scheduled Super Caravelle flight is made on April 30. In May, the Caravelle simulator is sold to **Sterling Airways, A.S.**

Although he has reached the normal age 65 retirement age, Chairman Korhonen has his contract renewed for two more years.

The company's sixtieth anniversary is celebrated on November 11.

Enplanements are up by 2.9% to 3,282,753 and cargo accelerates 17.8% to 72.44 million FTKs.

The payroll is trimmed by 6.7% in **1984** to 5,042 workers. The Super Caravelles are sold to an Italian group at midyear.

Customer bookings jump 8.1% to 3,456,696, while freight climbs 9.7% to 78.9 million FTKs. Employment falls another 1.1% in **1985** to 5,470.

Early in the spring, Finnair (with **Austrian Airlines, A.G.**) becomes launch customer for the MD-87 transport, ordering five.

In April, the company joins **Transwede Airways, A.B.** in signing a maintenance joint venture and marketing agreement. The first ATR42s are delivered in December.

Passenger boardings jump 7% to 3.7 million and cargo grows by 10.2% to 86.96 million FTKs. A net profit of Fmk 5.3 million is posted. Airline employment ascends 2.9% in **1986** to 5,626.

The first ATR42 enters service in March, the same month a new ATR42 flight simulator from George Moody, Inc. becomes operational. Regional flights to Munich and Paris begin later in the spring. A second ATR42 arrives in July and in October **Finnaviation O/Y** orders two SAAB 340s. The final ATR42 delivery of the year occurs in December.

Also during the year, Finnair adds one Airbus Industrie A300B4-203 while retiring one F.27 and one DC-9-10.

Customer bookings decline a slight 1% to 3,791,811; however, freight jumps 12.9% to 100.39 million FTKs.

The workforce grows 1.5% in **1987** to 5,712 as a number of new routes and frequencies are inaugurated.

Longtime CEO Korhonen retires in January and is succeeded by Antti Potila.

Nonstop Helsinki to Paris service begins in March, followed by five-times-per-week flights to Geneva and Munich in April. During those two months and in May, three more ATR42s arrive and orders are placed for five ATR72s.

Passenger boardings shoot upward by 19.4% to 4,525,643 while cargo moves ahead 2.5% to 102.9 million FTKs.

The employee population multiplies still further in **1988**, by 13.9% to 6,505. The fleet now includes 5 DC-10-30s, 2 A300B4-203s, 3 MD-82s, 4 MD-83s, 3 MD-87s, 12 DC-9-51s, 5 DC-9-41s, and 5 ATR42s. Orders remain outstanding for 5 ATR72s, 3 MD-82s, 2 MD-83s, and 4 MD-11s.

DC-10-30 service is inaugurated to Beijing from Helsinki in June; overflying the U.S.S.R., the weekly frequency requires just under eight hours flying time.

Customer bookings ascend another 11.5% to 5,047,875 and cargo climbs 11.1% to 114.27 million FTKs. Revenues advance to \$805 million and generate an operating profit of \$182.5 million. Net gain totals \$85.1 million.

The payroll grows by 8.1% in **1989** to 7,035.

The airline's initial share issue of January is subscribed several times over and is quickly closed; \$60.1 million is raised on the sale of 6.8 million shares.

Flights start to Toronto and on February 3, 95% shareholding is acquired in the charter and regional operator **Karair O/Y**, in which Finnair has previously held 35% interest.

The first ATR72 arrives in May and cooperative agreements are signed with **SAS (Scandinavian Airlines System)**, **Swissair, A.G.**, **Aeroflot Soviet Airlines**, and **Japan Air System, Ltd.**

Finnair shares begin to be traded on the Helsinki Stock Exchange in June; however, the government still retains 70% interest.

During the summer, a 49% interest is taken in Moscow's new Savoy Hotel.

As the result of a recommendation of the Nordic Council of Ministers, the carrier begins to cooperate with **SAS (Scandinavian Airlines System)** in September on a total ban of smoking on all flights to and within Scandinavia.

The following month, the carrier joins the Aeroplan frequent flyer program of **Air Canada, Ltd.** and in November a comprehensive marketing agreement is signed with **SAS (Scandinavian Airlines System)**.

Passenger boardings jump 8% to 5,457,504 and freight climbs 28% to 146.23 million FTKs. Revenues swell 7.3% to \$1.12 billion. Costs are kept down, but operating profit declines to \$121.3 million and net profit falls to \$32.5 million.

Company employment is increased by 3.8% in **1990** to 7,302.

Early in the year, the airline becomes a subsidiary of the holding company Finnair Group, together with **Karair O/Y** and **Finnaviation O/Y**, which are independent carriers. The seven departments of the old Finnair parent company are converted into three operational divisions; Finnair now enjoys three operational divisions: commercial, operations, and technical.

While landing at Helsinki in fog on the night of February 4 after a service from Oslo, an MD-87 tears the roof off a runway lights maintenance vehicle parked on the runway; no one aboard the aircraft sees the car and no injuries are reported.

Under terms of the new marketing agreement with **SAS (Scandinavian Airlines System)**, a shuttle service is created during the first quarter that offers 16 hourly departures daily between Helsinki and Stockholm. At Helsinki, the partners begin to link with Finnair's daily Moscow and Leningrad services. New services are inaugurated to Sturup, Stuttgart, Tallinn, and Murmansk.

The company joins with **Swissair, A.G.**, **SAS (Scandinavian Airlines System)**, and **Austrian Airlines, A.G.** in the European Quality Alliance. Finnair joins with **Austrian Airlines, A.G.** in April on code-sharing flights from Helsinki to Stockholm and Vienna.

Following Iraq's August 2 invasion of Kuwait, charter traffic nose-dives and, as the fear of terrorism rises, the government requests that the airline suspend services to Jordan, Egypt, Israel, Cyprus, Morocco, Tunisia, and Kenya.

During the fall, charter emphasis is shifted to Florida, the western Mediterranean, the Caribbean, and the Canary Islands.

A new cooperative marketing agreement is signed with **Austrian Airlines, A.G.** Under its terms, code-sharing flights are offered on the Helsinki to Vienna route employing Finnish aircraft.

The first customer MD-11, the ninth unit built, is delivered on November 29 in ceremonies that feature a Douglas DC-2 and on December 20 is the first of its type to enter commercial service anywhere, flying the company's transpolar route to Tokyo.

Customer bookings move ahead this year by 2.9% to 5,616,866 and cargo rises a slight 1.1% to 147.9 million FTKs. Revenues increase 8.2% to \$1.24 billion.

The payroll shrinks 1.4% in **1991** to 7,713 and President/CEO Antti Potila's fleet now includes 2 A300B4-203s, both of which are leased to Karair, 5 DC-9-41s, 12 DC-9-51s, 8 MD-82s, 5 MD-83s, 3 MD-87s, 4 DC-10-30s, 1 DC-10-30ER, and 2 MD-11s. Orders are outstanding for 1 MD-82 and 2 MD-11s.

The company holds discussions with Russian officials concerning a joint venture airline to be hubbed at St. Petersburg. In May, service from Helsinki to Toronto and Los Angeles is increased while the schedule to New York is revised to allow earlier departure and arrival times.

When a scheduled MD-82 flight from Paris to Helsinki is cancelled for flight control reasons in September, mechanics find that the plane's captain had placed smuggled liquor bottles under a cockpit floor hatch, jamming the control runs.

In order to pursue its own approach to signing alliances with a variety of carriers, including this year's catch—**Deutsche Lufthansa**,

A.G.—Finnair, in November, secedes from its European Quality Alliance with **SAS (Scandinavian Airlines System)**, **Swissair, A.G.**, and **Austrian Airlines, A.G.** It also drops a relatively new affiliation with the frequent flyer program of **USAir**.

The alliance with the German major takes effect in December; under its terms, the two offer a joint frequent flyer program and joint venture flights from Turku to Hamburg. The deal also covers block-space flights from Helsinki to Berlin and from Stockholm to Berlin and Stuttgart. Later, a block-space cargo agreement will cover a route from Helsinki to Frankfurt via Cologne.

Recession and the aftermath of the Gulf crisis combine to force traffic down; passenger boardings plunge 9.9% to 5,271,176 while freight is off 5.8% to 139.48 million FTKs. Revenues decline 6.5% to \$1.25 billion; however, an \$11.2-million net profit is banked.

The workforce is cut a mere 0.1% in **1992** to 7,704 as the 9th MD-82 is delivered.

Two new marketing alliances are signed in April. The first, with **Air Canada, Ltd.**, links frequent flyer programs and covers block-space flights from Helsinki to Toronto; the second block-space agreement, with **Air China**, goes into effect on flights from Helsinki to Beijing. Beginning in June, the company offers 10-day "Out of this World" travel packages from New York to Swiozdnij (Star City) via Moscow. The excursions to the Russian cosmonaut training center 40 miles east of the capital allow traveler interaction with Russian space officials and visits to air and space museums.

A new market is opened at Kiev and, in October, roundtrip flights commence from Helsinki to Miami. During the year, the company stops operating the tour company Tolvelomat O/Y.

Customer bookings fall another 3.7% to 5,077,136 and cargo drops 5% to 132.52 million FTKs. Revenues decline 7% to \$1.12 billion and losses are too embarrassing to report.

In **1993**, President Potila oversees an employee population of 7,714, up a slight 0.1% over the previous year.

A new strategic plan is adopted early in March, designed to save the equivalent of \$17 million per year. The company defines itself as an independent Finland-based airline that will not allow itself to become a target in the current wave of global investment by such megacarriers as **British Airways, Ltd. (2)**.

To retain its viability, new layoffs will be required, along with fleet rationalization and the consolidation into the parent of the subsidiaries **Karair O/Y** and **Finnaviation O/Y**. Details call for the layoff of 1,000 personnel and implementation of a decision not to replace its MD-80s and DC-9s with the proposed B-737X.

During the spring, charter flights are introduced from the U.S. West Coast to Southeast Asia. Helsinki to Toronto and San Francisco flights commence in May.

Passenger boardings fall again, by 6.8%, to 4,102,636, but freight climbs 27.4% to 168.5 million FTKs. Losses are suffered: \$9.9 million (operating) and \$16.7 million (net).

Airline employment stands at 7,082 in **1994**.

On February 28, the carrier sets up Finnair Travel Services, O/Y to manage and finance its travel subsidiaries: O/Y Aurinkomatkat-Suntours, Ltd. and O/Y Finnmatkat-Finntours, Ltd. Simultaneously, shareholding in the U.S.-based Finnway travel agency is increased from 50% to 100%.

Early in the spring, a DC-10-30 is wet-leased to **LOT Polish Airlines, S.A.** Returned at the end of the first quarter, the Douglas wide-body is released by Warsaw for the summer season. Also in March, a marketing agreement is signed with **Braathens SAFE, A.S.**, which links the frequent flyer programs of the two carriers and provides for joint ground handling at Oslo. The two also begin planning for code-sharing flights.

In April, a major marketing agreement is concluded with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**; code-sharing flights begin from Helsinki to Madrid and Barcelona via Goteborg and Amsterdam.

During the year, aviator Antti Terrasmaa publishes his recollections, *The Life and Times of an Ordinary Captain: Forty Years of Flying* (Calumet, Mich: FinPro, Inc., 1994).

Customer bookings for the year recover, growing a full 10% to 4,513,290; cargo increases by 19.3% to 201.01 million FTKs. Revenues slide 7.2% to \$869 million, but expenses fall as well. Consequently, an operating profit of \$30.8 million is allowed and a net gain of \$25.4 million is generated.

Airline employment in 1995 stands at 7,414, a 3.6% increase. During the first quarter, the company offers 12 million new shares to international and domestic investors, reducing the government's stake to 60.7%. The public float raises approximately Fmk 500 million and will be employed to replace DC-9s with second-hand MD-80s.

In April, two previously employed MD-80s join the fleet.

Early in the second quarter, a \$32.6-million contract is signed with **Air Liberte, S.A.** Under its terms, all four of the major's DC-10-30s will be leased to the French independent over the next year; however, Finnair will continue to maintain them. The first wide-body is dispatched in early June.

A multifaceted alliance is entered into with **Transwede, A.S.** in August. The pact covers a joint maintenance venture, linkage of frequent flyer programs, and shared codes on flights from Stockholm to London.

A code-sharing agreement is signed with **Delta Air Lines** on September 7 that provides for frequent flyer program linkage as well as block-space and code-sharing on frequencies from Helsinki to New York and San Francisco and on Delta services between New York and Boston. The world's first heavy maintenance of an MD-11 is completed by the company's technical division at Helsinki Airport during the first week of October. The pact with **Delta Air Lines** is initiated on October 30 when Delta purchases seats on Finnair's MD-11 service between New York and Helsinki.

Enplanements jump 8.1% to 5,846,000 while freight inches ahead 0.9% 45.56 million FTKs. Revenues total \$1.46 billion and profits are high: \$114.8 million (operating) and \$92.1 million (net).

There are no changes in the workforce during 1996 and the owned fleet now includes 2 Beech Super King Air 200s, 2 DC-9-41s, 2 DC-9-51s, 15 DC-10-30s, 4 MD-82s, 4 MD-83s, 3 MD-87s, and 4 MD-11s. Also operated, under charter, are 2 A300B4-203s, 6 MD-82s, and 3 MD-83s. Three DC-10-30s remain on lease to **Air Liberte, S.A.** and orders are placed for four B-757-2Q8s.

Early in January, the company merges with its dormant subsidiary Aero O/Y. At the same time, three new members join the board of supervisors and Jorma Eloranta is named executive vice president, replacing the retiring Pertti Laine.

A code-sharing alliance is entered into with **Lithuanian Airlines** in May and in June the fourth DC-10-30 is dispatched to **Air Liberte, S.A.**

The company begins a block-space and code-sharing arrangement with **El Al Israel Airlines, Ltd.** in July over a route from Helsinki to Tel Aviv. The arrangement with **Lithuanian Airlines** begins in August covering service from Helsinki to Vilnius.

When **Air Liberte, S.A.** enters receivership in September, the Douglas lease is cancelled. Also during the month, the subsidiaries **Finnavigation O/Y** and **Karair O/Y** are absorbed into a single division that will develop and market package tours under the product names of Suntours, Finntours, and Top Club.

A strategic pact is signed with **Estonian Air, A.S.**; it begins on October 29 with blocked-seat, dual-designator flights between Helsinki and Tallinn and with cooperative ground handling in those cities.

In October, an exchanged seat agreement is signed with **Alitalia S.p.A.** over a route from Helsinki to Milan via Stockholm.

Three more alliances come into effect during November. A marketing agreement is entered into with the Danish airline **Maersk Air, A.S.** for frequencies from Stockholm to Billund and Copenhagen and with **Sabena Belgian World Airlines, S.A.** for services from Brussels to Stockholm and Geneva.

Passenger boardings soar 28% to 6,492,376 and 241.3 million FTKs are operated, a 12% increase.

A major block-seat, code-share, marketing agreement is signed with **Maersk Air, A.S.** during the first week of February 1997. ATR72 frequencies are increased between Helsinki and Tallinn during the month to thrice daily.

Employing its DC-9-51s, the company launches dual-designator service with **Maersk Air, A.S.** from Copenhagen to Stockholm on April 28. Finnair will employ its B-737-5L9s and, between them, the two carriers will offer 47 weekly roundtrips between the two Scandinavian cities.

A code-sharing agreement starts with **Aer Lingus Irish Airlines, Ltd.** in May over a route from Helsinki to Dublin via Stockholm. The same month a similar deal begins with **Swissair, A.G.** on flights from Helsinki to Zurich. The company is also admitted to participation in the Qualiflyer frequent flyer program jointly sponsored by **Swissair, A.G.**, **Austrian Airlines, A.G.**, and **Sabena Belgian World Airlines, S.A.**

During July, the former **Karair O/Y** ATR72-201s that have been transferred to the major begin to receive new color schemes. Also during the month, the company signs a letter of intent with Airbus Industrie for the purchase of a 12-plane mix of A319s, A320s, and A321s to be delivered between 1999 and 2001. The new aircraft will replace an equal number of DC-9s. As a result of its deepening partnership with **SAS (Scandinavian Airlines System)**, **Deutsche Lufthansa, A.G.** gives Finnair notice on August 1 of its intention to terminate next October the regional agreement signed with the Helsinki-based flag carrier in 1991.

While descending through 29,000 ft. on an August 9 service from Helsinki to Alicante, Spain, an MD-83 with 156 passengers is hit by hailstones that crack the windshield and damage the nose radome beyond repair. The aircraft is able to land at its destination without difficulty and no injuries are reported.

A code-sharing agreement is entered into with **Braathens SAFE, A.S.** during September for a total of six daily return frequencies between Stockholm and Oslo. Under its terms, the two carriers will book seats for sale on each other's flights, with Finnair operating one flight and Braathens the rest.

Also during the month, the Finnish government reduces its 70% stake in the carrier to just 59.8%; some 21% of the carrier's stock is held overseas, with the remainder in the hands of domestic banks, insurance concerns, and private investors.

In a lease-purchase arrangement, Finnair on October 1 sells four of its 25 MD-82s to foreign financial concerns for \$16.5 million each; the aircraft will remain in the fleet until 2002 at an annual leasing fee of \$170,000 per month each. The July A310 order is confirmed in early October. Total value of the CFM56 engines to power the new fleet is placed, by CFMI, at \$150 million.

On October 13, the company confers with **Aeroflot Russian International Airlines (ARIA)** concerning the possibility of increasing its services to selected Russian cities, beginning with a thrice-weekly frequency between the border town of Lappenranta and St. Petersburg.

A midair collision is narrowly avoided on October 25 when a DC-9-51 climbing away from Helsinki moves into the approach path of a company MD-82 coming in from London with 40 passengers at 11,000 ft. over Vihti, Finland.

The code-sharing pact with **Delta Air Lines** is expanded on October 26. Finnair sells seats on Delta flights from New York (JFK) to Washington, D.C. (IAD), Chicago (ORD), Atlanta, and Miami. Delta returns the favor for passengers flying Finnair from Helsinki to Frankfurt or Zurich.

The first of four B-757-2Q8s, wearing the company's new livery, is delivered at month's end and after its delivery flight to Helsinki and crew workup, begins flying travelers during November to holiday destinations in the Canary Islands and Mediterranean.

Calling itself "the official carrier of Santa Claus," the company in November introduces an MD-11 painted with St. Nick's image. At the same time, Finnair is named official airline for the Cultural Capital of Europe celebrations in 1998; that capital is Stockholm, headquarters city of rival **SAS (Scandinavian Airlines System)**.

At the beginning of December, the company begins introduction, by regions, of the Unisys Airline Revenue Enhancement System.

Having almost reached age 60, President/CEO Potila announces his retirement at the end of the following year.

Passenger boardings rise 14% to 7,456,000. The company's charter division adds another 686,380. Revenues total \$1.44 billion, while expenses are \$1.35 billion. There is a \$90.9-million operating profit and an equal amount of net gain.

Airline employment in 1998 stands at 7,500 and the fleet, 73.3% of which is Stage III certified, includes 45 airplanes: 12 DC-9s, 2 each B-757s and A300B4-203s, 4 MD-11s, and 24 MD-80s.

In January, Leaf Group President Keijo Suila is named to replace President/CEO Potila on January 1, 1999. **SAS (Scandinavian Airlines System)** begins to counteract Finnair's increasingly aggressive marketing in the Baltic. Its first move is to purchase the Helsinki carrier's domestic partner, **Air Botnia, O/Y**.

Arrangements are completed in February with ILFC for the charter of a B-757-2Q8ER for eight years beginning in April 1999.

On March 4, a joint-marketing pact is entered into with **British Airways, Ltd. (2)**. In addition to frequent flyer program integration, the agreement allows for code-sharing on 15 daily return flights from London (LHR) and Manchester to Stockholm and on to Helsinki. The arrangement is also extended to the London-based major's German subsidiary **Deutsche BA Luftgesellschaft, GmbH**.

On March 11, a dual-designator arrangement is entered into with the BA partner **LOT Polish Airlines, S.A.** Under its terms, flights from Warsaw to Helsinki will be served by Finnish aircraft seven times a week and six times a week by LOT. Dual-designator flights to points in the Baltic region are planned for the summer of 1999.

Dual-designator service actually begins with **British Airways (2)** on March 29 on 15 daily return frequencies from London (LHR) and Manchester to Stockholm and Helsinki. Codes are also shared on a new twice-daily BA service from London (LGW) to Helsinki. Daily MD-82 roundtrips commence the same day between Helsinki and Barcelona. Also in March, Neticket, an Internet-based booking service, is unveiled.

In April, dual-designator arrangements are entered into with the BA partner **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. In May, the BA code-share is deepened to allow an additional daily dual-designator flight on the Finnair service between Manchester, Stockholm, and Helsinki. Flights are also increased between Helsinki and Warsaw and dual-designator flights are introduced between Helsinki and Barcelona. Seasonal roundtrip code-sharing with **Delta Air Lines** begins on May 21 on Finnair MD-11 services from Helsinki to San Francisco.

At the same time, **SAS (Scandinavian Airlines System)** and **Air-lines, A.S.** enter into a strategic alliance, effective September 1; the two will try to blunt the successful Baltic marketing of Finnair. Expanded code-sharing begins on June 1 with **Delta Air Lines**. Finnair purchases seats on Delta's daily, nonstop B-767-332ER services from New York to Helsinki via Stockholm. The same day, Delta purchases seats on Finnair's daily MD-80 and DC-9-51 return services from Helsinki to Stockholm.

During the summer, plans are made to celebrate Finnair's seventy-fifth anniversary in November.

Although the European Commission has begun to take a harder line toward code-sharing pacts, on July 14, EU Commission Chief Karel Van Miert, speaking for the EC, approves the carrier's pact with **Maersk Air, A.S.** Van Miert states that the pact has enhanced competition between Copenhagen and Stockholm which had previously been dominated by **SAS (Scandinavian Airlines System)**.

The company enters into a strategic marketing agreement with **American Airlines** on September 29 that includes reciprocal frequent flyer programs, code-sharing on some transatlantic flights, and a move by Finnair into American's terminal at New York (JFK). The programs will take effect on April 1.

With the introduction of the winter schedule on October 25, the dual-designator arrangement with **British Airways, Ltd. (2)** is enhanced. Added are new evening departures from Helsinki to London (LHR), as well as

thrice-daily roundtrips to Edinburgh and Glasgow via London (LHR) plus flights to Birmingham via Dusseldorf, Brussels, and Copenhagen.

In cooperation with **Deutsche BA Luftgesellschaft, GmbH**, code-sharing is now offered on a service by the German carrier from Stuttgart to Helsinki via Berlin. **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** places its code on Finnair's daily roundtrips from Helsinki to Barcelona, while Finnair's code begins to appear on Iberia services from Madrid to Helsinki.

Finnair's latest dual-designator partner, **Tyrolean Airways, A.G.**, operates daily Fokker 70 roundtrips (except Saturdays) from Vienna to Helsinki. Cooperation with **Maersk Air, A.S.** between Stockholm and Copenhagen continues, with twice-daily Finnair departures and six weekday Maersk roundtrips.

DC-9-51s replace the ATR72-201s currently employed on the morning departures from Helsinki to Tallinn, while a new dual-designator evening departure between the two cities and flown by an **Estonian Air, A.S.** Fokker 50, is added.

On November 1, MD-83s replace B-757-2Q8ERs on the weekly roundtrip charter operated from Helsinki to London (GTW).

As part of its fleet renewal program, the carrier, in mid-November, purchases three ATR72s from **TransAsia Airways Company, Ltd.** of Taiwan and sells a pair of SAAB 340s to **Flying Enterprise, A.B.** of Sweden.

For the winter, Fort Lauderdale replaces Miami as a leisure destination; the twice-weekly roundtrips, routed via Bangor, Maine, are operated by B-757-2Q8ERs.

Domestic flights added the previous winter and in August to Oulu, Rovaniemi, Jyväskylä, Kokkola, Pietarsaari, Kuopio, Lappeenranta, Pori, Tampere, Vaasa, and Varkaus are continued. An MD-83 replaces the B-757-2Q8 on the weekly scheduled charter from Helsinki to London (STN) as of November 1.

On December 9, Finnair becomes the first new recruit to join the "OneWorld" alliance since its formation in September. It will be formally inducted next August.

It is announced at year's end that MD82/83 equipment will replace DC-9-51s on the company's routes from Helsinki to Joensuu, Finland, and to St. Petersburg, Russia, and Budapest, Hungary, by November 1, 1999.

Enplanements for the year total 7.29 million and 75.34 million FTKs are operated. Airline employment during the 12 months has been increased by 36.9% to 11,351.

Leaf Group President Keijo Suila replaces President/CEO Potila on January 1, 1999. Early in January, the government of Finland takes action to prevent further defections to the world's sixth oldest airline from the pilot corps of the Finnish Air Force. During the past 12 months, 33 pilots and 7 trainees have resigned to accept higher-paying posts with Finnair. To counter the attraction, a new "compensation" package is offered the military flyers.

The carrier takes delivery at Hamburg on January 28 of its first A321-211. The Airbus introduces Finnair's new color scheme, which features a solid blue tail with logo. Arrival of the A321 marks the actual beginning of the carrier's single-aisle fleet renewal program.

Finnish air traffic controllers begin a nationwide strike on February 1. Four days later, A321-211 roundtrips commence from Helsinki to Oulu, in northern Finland. In mid-month, thrice-weekly roundtrips are inaugurated from Helsinki to Enontekiö, in Finnish Lapland.

The continuing ATC job action has cost Finnair an estimated Fmk 70 million (\$13.8 million) by February 22. As the government seeks to negotiate an end to the walkout, the airline is forced to begin talks with its own employees concerning temporary layoffs. The ATC strike ends on March 8. The carrier's international traffic returns to its normal schedule on March 12 and domestic traffic on March 15.

The carrier celebrates its seventy-fifth anniversary on March 20. To mark the occasion, a new book, *Time Flies—Finnair 75*, by Heikki Haapavaara is commissioned and published in both Finnish and English editions.

In cooperation with its "OneWorld" partners, Finnair opens a revised summer schedule on March 28. The carrier's twice-daily MD-87 return flights to Hamburg are replaced by B-737-3L9s operated by **Deutsche BA Luftgesellschaft, GmbH**. At the same time, a second daily MD-82 return service to London (LGW) is added via Stockholm. MD-87s replace DC-98-51s on the company's daily, nonstop roundtrips from Helsinki to Goteborg, Sweden.

The dual-designator pact with **American Airlines** also takes effect on March 28. In addition to mutual frequent-flyer benefits, passengers are able to employ their tickets on Finnair flights from New York (JFK) to Helsinki. Finnair and American also cooperate on flights via Stockholm. Under this arrangement, the Finnish carrier is able to place its code on American services between Chicago (ORD) and Stockholm for passengers making online connections to Finnair's flights between Stockholm and points in Finland. American places its code on Finnair flights between Stockholm and Helsinki, as a continuation of its Chicago-Stockholm service. Finnair also places its "AY" code on American and **American Eagle Airlines** (2) flights from New York (JFK) to Boston, Dallas (DFW), Los Angeles, Miami, San Francisco, and Washington, D.C. (DCA).

On April 15, the Helsinki-Seinaejoki-Kokkola route is outsourced to the Swedish regional **Golden Flyg, A.B.** Under a new dual-designator pact with **Luxair, S.A.**, Finnair inaugurates code-sharing on May 17 over a route from Helsinki to Luxembourg via Stockholm. Beginning on June 3, **American Airlines** places its "AA" code on Finnair services between Helsinki and San Francisco.

Finnair is formally inducted into the "OneWorld" alliance on September 1.

The first A319-112 is delivered on September 20 and enters service on October 1, operating daily roundtrip routes from Helsinki via Stockholm to Berlin and via Stockholm to Munich. It will be joined by the second A319-112 after its arrival on October 29.

Meanwhile, it is announced on October 3 that due to a lack of booked passengers, the airline must cancel its flights to Moscow over the December 31-January 1 period; the potential Y2K computer problem is not mentioned.

Enplanements for the year total 8,065,000, while 80.13 million FTKs are operated.

Airline employment at the beginning of 2000 stands at 11,900, a 4.7% increase over the previous 12 months.

The company's agreement with **Flying Enterprise, A.B.** is cancelled during the first week of March following the regional's acquisition by **Skyways, A.B.**, which leads to termination of the Helsinki to Mikkeli service operated by Flying Enterprise on behalf of Finnair. The third of four A321-211s is delivered on March 8.

The schedule out of Helsinki is altered with the beginning of the summer schedule on March 26. Flights to San Francisco, Toronto, and Osaka (KIX) are suspended, while weekly flights are increased to Beijing (2 to 3), to Singapore via Bangkok (3 to 4), to Dublin via Stockholm (3 to 7), and to Rome (4 to 5). Daily service is offered to New York (JFK) and to Milan via Stockholm. A321s are placed on the routes to Brussels, Zurich, Oulu, and Amsterdam.

On June 1, daily MD-82 return service is inaugurated from Helsinki to Madrid via Stockholm. Based on the previous Finnair symbol, created in 1968 by Professor Kyosti Varis, a new visual image is unveiled on the first day of the month. The company's blue-and-white colors continue to be employed, but a softer font is chosen. The carrier's aircraft will be repainted during their normal overhaul cycles.

Also on June 1, a new code-sharing agreement begins with **Qantas Airways (Pty.), Ltd.** Under its terms, the Australian line places its designator on Finnair return flights from Helsinki to both Bangkok and Singapore, while Finnair is allowed to assign its code to Qantas' roundtrips from Bangkok to Melbourne and from Singapore to Sydney. The fourth A321-211 arrives on June 9.

Thrice-weekly B-757-2Q8 roundtrip scheduled charters are operated from Helsinki to Toronto for the summer season, beginning on June 15.

The same day, in response to a need to transport Japanese tourists, thrice-weekly return flights are initiated from Helsinki to Bergen, Norway, via Stockholm.

A new corporate design is unveiled on the company's website on July 1.

Finnair is named ninth best-managed company among non-state-owned national-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

An order is placed on July 25 for two A319-100s and four A320-200s, with deliveries beginning in 2002.

The third A319-112 is delivered on August 19. It enters revenue service on August 31 wearing the company's new modified tail markings, which feature a white Viking version of the "F" design and a blue arc on a navy blue background.

Also during the summer, a **Polar Air Cargo B-747-200F** operates under an ACMI contract for Finnair, flying one weekly roundtrip between New York (JFK) to Helsinki via Goteborg and a second from New York (JFK) to Helsinki via Prestwick and Goteborg.

On October 9, three MD-80s are sold and then leased back for three years.

New A319-112 frequencies are launched on October 29 between Helsinki and Vienna as the number of weekly roundtrips between the two capital cities grows to 10. Three additional return flights employing A319-112s are offered to London (LHR) from Helsinki, with the number of weekly roundtrips to Budapest boosted to eight. The number of return flights from Helsinki to Dublin is doubled from three to six. Roundtrips from Helsinki to Oulu grow from 15 to 16 and 2 new return frequencies are added to the Helsinki-Rovaniemi schedule. The fourth A319-112 is delivered on October 29.

Company employees, protesting the carrier's rationalization moves which their unions assert will endanger passenger services, stage a six-hour strike on November 1. The job action forces Finnair to cancel all of its domestic and some of its European services.

In addition to a weekly return charter from Helsinki via Bangor, Maine, to Fort Lauderdale and Hollywood, Florida, Finnair, on November 7, also begins, through March 20, weekly B-757-2Q8 vacation flights from Helsinki to West Palm Beach, again via Bangor.

On November 13, Finnair begins to code-share on **British Airways, Ltd. (2)** services between London (LHR) and Toronto; this is the first marketing arrangement between the two "OneWorld" alliance partners.

Following a three-year suspension, B-757-2Q8 weekly roundtrips are resumed on November 29 between Helsinki and Mombasa, Kenya. The initial service is a charter arranged by the Finland's leading tour operator Aurinkomatkat.

On December 15, Flight 2162, a chartered MD-83 with 149 passengers is on approach to Helsinki's Vantaa Airport following a return from Malaga, Spain. At a 2-km. altitude inside a cloud the Finnair aircraft comes close to colliding with **Aeroflot Russian International Airlines (ARIA)** Flight 204, an Il-62 that has just taken off for Moscow. The TCAS aboard the Finnish aircraft sounds, allowing its pilot to maneuver out of the way; the two aircraft pass each other at a distance of 150 meters.

As the year ends, employees look forward to the company's January 1 restructuring. A group management team, headed by new President/CEO Keijo Suila, oversees six business areas: scheduled passenger traffic, cargo, leisure, aviation services, travel services, and support services.

The year's customer bookings drop 7.8% to 7.43 million, while cargo traffic rises 3.4% to 82.84 million FTKs.

FINNAVIATION O/Y: Finland (1950-1996). Finnaviation originates at Helsinki in 1950 as **Lenthohuolto O/Y**. As a result of growing international operations, the name is later changed to **Wilhuri O/Y**. Through its first three decades, the company undertakes FBO, aircraft sales, maintenance, flight training, and executive and cargo charter operations.

In early 1979, the commuter airline **Nordair O/Y** is purchased and merged, giving the carrier the opportunity to begin scheduled operations

as a wholly owned subsidiary of **Finnair O/Y**, under its new name Finnaviation O/Y.

The company's fleet is now anything but standardized, and includes 1 Dassault Falcon 20C, 3 Embraer EMB-110 Bandeirantes, 2 Cessna 404 Titans, 2 Cessna 401s, 1 Partenavia P-68, 1 Rockwell Commander 690, 1 Beech B-55 Baron, 1 Piper PA-32 Cherokee Six, 2 Cessna 185s, 1 Cessna 182, 3 Cessna 172s, and 7 Cessna 150s. The Bandeirantes are employed to launch scheduled services in October and within three years are linking the company's base with Vaasa, Kauhava, and Kuorevesi.

During the early **1980s**, Jyväskylä, Kuopio, Kuusamo, Oulu, Tampere, and Turku join the route network.

The lesser aircraft are assigned to charter and contract service work; however, in **1983–1984**, a Cessna 441 Conquest II is added.

Passenger enplanements average 30,000.

In **1985–1986**, Sundsvall and Umea become destinations and Managing Director Lars Dahlberg's fleet is increased by the addition of 3 SAAB-Fairchild SF 340QCs.

The company's turboprops begin flying passengers to Stockholm in **1987**, with two involved in a domestic night-airmail operation from Helsinki to Oulu in the north of the country. At Oulu, a company Cessna 401 takes the post to points beyond the Arctic Circle. A Dassault Falcon 20 begins courier service on behalf of the **DHL Corporation**.

Enplanements for the year total 140,000.

The fleet in **1988** includes 5 SAAB 340As for scheduled operations and a number of smaller types for charter and contract service flights.

A total of 175,561 passengers are flown on the year. A \$190,000 net loss is suffered on revenues of \$21.3 million.

Pekka Valimäki becomes managing director of the 119-employee airline in **1989**.

In addition to the 3 SAABs, the fleet now also includes 3 Embraer EMB-110P Bandeirantes and 1 each Dassault Falcon 20 and Cessna Conquest.

Customer bookings jump 32.9% to 240,252.

Company employment is increased by a huge 66.4% in **1990** to 198 as Managing Director Valimäki is succeeded by Paavo Turtiainen. Also, during the latter year, the fleet is completely standardized around its Swedish turboprops; gone are the Cessna, Dassault, and Embraers, replaced by 5 SAAB 340As and 1 340B.

Still, customer bookings decline 1.6% to 236,334.

The payroll is sliced by 14.1% in **1991** to 170. Passenger boardings fall a further 1.6% to 240,214 and freight is down 8.2% to 101,000 FTKs.

The previous year's worker cut is restored and then some in **1992**, climbing 16.5% to 198. Traffic figures show enplanements of 237,811. Additionally, 84,000 FTKs are flown.

In **1993**, the employee population stands at 180, down 9.1% from the previous year.

The company must contend with a new **Finnair O/Y** plan to merge it, along with the charter **Karair O/Y**.

The operator's 6 aircraft undertake over 300 flights per week and its passenger boardings for the whole year are up a slight 0.9% to 261,330. Freight swells to 119,000 FTKs.

Airline employment is increased by 5 in **1994** and the leased fleet now includes 5 SAAB 340As and 1 340B.

As is the case with its parent, Finnaviation's customer bookings increase by 3.9% to 271,572 while cargo moves ahead by 10.9% to 132,000 FTKs.

There is no change in the size of the workforce in **1995**, but traffic growth is excellent. Passenger boardings rise 9.3% to 296,832 while 132,000 FTKs are also operated.

The carrier is absorbed into its parent in October **1996**. During the first nine months of the year, the feeder has transported a total of 216,206 passengers, a 0.8% increase.

FINNISH AIR LINES O/Y: Finland (1946–1968). Having had 70% of its stock purchased by the government the previous year, the adminis-

tration of the pioneer **Aero O/Y** is reorganized in May **1947**. Gone is the pioneering name and in its place a new title, **Finnish Air Lines**. A 12-member board of administration designates a 6-man board of directors, the chairman of which is also managing director. Lt. Gen. Leonard Grandell becomes chairman/managing director on June 14.

In June, stewardesses are introduced on the eight new Douglas DC-3s taken over from **Aero O/Y** and the last de Havilland DH 89A Dragon Rapide is sold during the summer. International service over the Helsinki–Stockholm route is restarted on November 3.

DC-3 service is inaugurated to Copenhagen and Amsterdam in March and July **1948**, respectively.

In **1949**, FAL joins IATA and retires its last two Junkers Ju-52/3ms.

Nine scheduled destinations in Finland as well as four abroad are maintained in **1950–1951** and in **1952** service is begun from the new Helsinki Airport, near Seutula, on July 10. In September of the latter year, three Convair CV-340s are ordered as DC-3 replacements.

In the spring of **1953**, the current name "Finnair" is initiated in company marketing strategy. The first CV-340s are delivered during the summer and are placed in service on a new Helsinki–Paris run in October.

Additional CV-340s become available in early **1954**. Following an August 31 proving flight, a Convair begins regularly scheduled London–Helsinki via Hamburg flights on September 1.

In **1955**, at least one CV-340 must be diverted from international flights to help the fleet's DC-3s handle increasing domestic traffic. On November 15, the carrier begins direct, thrice-weekly Helsinki to Moscow service, becoming the first non-Communist airline to get a Moscow route.

On April 21, **1956**, Convair CV-440s are introduced; one is placed on a route Helsinki–London via Hamburg and Amsterdam.

The board of administration on December 20, **1957**, approves acquisition of the French SUD SE-210 Caravelle jetliners and on January 18, **1958**, an order is placed for three Caravelle IAs.

There is no change in **1959**.

The first SE-210 arrives at Helsinki on February 22, **1960** followed shortly by a second. Caravelle service begins on April 1 over routes from the Finnish capital to Copenhagen,

Frankfurt, Cologne, Stockholm, Hamburg, Amsterdam, London, Paris, Malmo, and Zurich.

The Caravelle *Sinilintu* (*Blue Bird*) starts a Helsinki–London via Amsterdam frequency on April 18 and Gunnar Korhonen succeeds the retiring Gen. Grandell as managing director.

On January 3, **1961**, Flight 311, a DC-3 with 3 crew and 22 passengers and en route from Helsinki, crashes while on initial approach to Koivulahti, Finland; there are no survivors. After an investigation, police report a week later that the pilot and copilot of the lost aircraft had been out drinking the night before.

Polar Air O/Y is established as a charter subsidiary. SE-210 flights to Moscow begin on April 21. The three Caravelles are converted to Caravelle III standard.

The first domestic Caravelle service, Helsinki–Oulu, is launched on December 15.

A Caravelle III is delivered in February **1962** and **Polar Air O/Y** Caravelle charter service is begun in the spring to Tenerife, Palma de Mallorca, and Rimini.

Minority interest in the airline **Karair O/Y** is purchased on November 30.

Having gained control of a majority of **Karair O/Y** stock during **1963**, that carrier is merged on November 1.

A week later, on November 8, a DC-3 with 3 crew and 21 passengers and on a domestic flight, crashes while on final approach to Mariehamn, Åland Island (22 dead).

Enplanements for the year total 591,472.

The Finnair Aviation College is opened on January 1, **1964**; the inaugural class of student pilots and mechanics begins training later in the month.

During the first weeks of the second quarter, a deal is made with the U.S. carrier **Northwest Airlines** for the purchase of two DC-6Bs, the first of which arrives on June 12.

After trading in its four Caravelle IIIs as partial payment (the first such arrangement in commercial aviation history), the company receives the first five of a six-plane order for Pratt & Whitney-powered Caravelle XB Super Caravelles in July, placing them in international service in late August and early September. New routes are now extended to Milan, Göteborg, Luxembourg, Barcelona, Malaga, and Leningrad.

Passenger boardings rise 6% to 629,225 and revenues of \$15.7 million are earned.

The second **Northwest Airlines** DC-6B arrives on February 1, 1965 and Finnair Aviation College graduates its first class of pilots and mechanics in May.

Airline employment reaches 2,081. Passenger service is inaugurated to Athens, Brussels, and Dubrovnik and a twice-weekly Helsinki–Amsterdam all-cargo route is opened. Daily north to south Helsinki to Oulu service is initiated.

The fleet now comprises 5 Super Caravelles, 7 CV-440s, and 5 DC-3s. Enplanements for the year rise 13.8% to 704,775.

A New York office is opened on January 1, 1966 and in the spring daily Super Caravelle XB flights are inaugurated from Helsinki to Frankfurt. Another Super Caravelle is received in September and two Douglas DC-8-62CFs are ordered in November. Passenger boardings reach 897,605.

Service continues apace in 1967 and in January 1968 a new company emblem is unveiled and the name **Finnair O/Y** is formally adopted.

On the year, a total of 895,672 passengers are flown.

FIREBALL AIR EXPRESS. See **NORTH AMERICAN AIRLINES (NAA)** (1)

FIRST AIR, LTD.: Carp Airport, 3257 Carp Road, Carp, Ontario K0A 1L0, Canada; Phone (613) 839-3340; Fax (613) 839-5890; <http://www.firstair.ca>; Code 7F; Year Founded 1946. Originally formed by Russell Bradley in 1946 as the small Frobisher Bay-based charter and flight training operator **Bradley Air Service, Ltd.**, this company is acquired by pilot John G. Jamieson upon Bradley's death in 1970.

In 1971, the company establishes the world's most northerly based commercial air service at Eureka, on Ellesmere Island, just 600 nautical miles from the North Pole.

The operation remains largely unchanged until October 1978, when Jamieson is able to acquire the former Nordair Arctic service and two de Havilland Canada DHC-6 Twin Otters from **Survair, Ltd.** At this point, **Bradley Air Service, Ltd.** is reformed and establishes at Ottawa the scheduled commuter airline division First Air, Ltd. Its fleet now comprises 6 DHC-6s and 7 Douglas DC-3s.

A DHC-6-300 with 2 crew and 4 passengers is 40 ft. over the runway on final approach to Frobisher Bay on August 23 when it rolls left and hits the ground (1 dead).

One of the Douglas DC-3s is withdrawn in September and another in November. A Hawker Siddeley HS 748-A2 is acquired in December.

While on initial approach to Frobisher Bay on August 29, 1979, a DHC-6-300 with two crew and seven passengers strikes high ground 1,200 ft. E of the runway; there are no survivors. Services are inaugurated in 1980–1983 between Montreal and Ottawa and from Frobisher Bay to Nuuk, Greenland. During these years, four DC-3s and a DHC-6 are withdrawn in favor of two more HS 748s and a Beech 99.

A DHC-6-300 is involved in an accident at Station Nord, Greenland, on March 15, 1981; there is no information concerning any possible casualties.

President Jamieson's carrier begins flying from Ottawa to Rouyn and Val d'Or in November 1984 employing Saunders ST-27s—stretched de Havilland DH 104 Doves with Pratt & Whitney of Canada PT-6 turbo-prop engines—leased from **Voyageur Airways, Ltd.**

At the same time, two new HS 748s acquired in April commence an Ottawa–Boston return frequency. The same month, the company obtains a C\$9-million contract to maintain the government ice reconnaissance DHC-7 based at Ottawa.

In July 1985, a DC-3 is given over by **Bearskin Lake Air Services, Ltd.** in exchange for two DHC-6s delivered by First Air the previous September. Authority for a route from Ottawa to Frobisher Bay is secured in late fall.

A Boeing 727-90QC is acquired from **Alaska Airlines** in December and christened *Spirit of Iqaluit*, it inaugurates thrice-weekly service between the two Ontario and Northwest Territories cities on March 31, 1986.

The jetliner also undertakes weekend Toronto–St. Petersburg charters under contract to **Nordair, Ltd.** Weeknights, the Boeing is leased by **Air Canada, Ltd.** to fly nightly return cargo shuttles from Ottawa to Winnipeg via Toronto. Ottawa–Rouyn via Val d'Or service ends in July. In late fall and winter, the jetliner flies holiday charters from Toronto, Ottawa, and Windsor to Puerto Vallarta, Montego Bay, and Caracas.

An Embraer EMB-110 Bandeirante joins the fleet in January 1987 followed by a second Boeing, a 727-27C, in February. In addition to its allowing an increase in frequency on the Ottawa–Frobisher Bay route, the jetliner also links Ottawa and Montreal.

One additional HS 748s joins the fleet in May and two more in September and these begin flying in October from Iqaluit Airport at Frobisher Bay to Yellowknife via Igloolik, Pelly Bay, Spence Bay, Gjoa Haven, and Cambridge Bay.

During the year, the EMB-110, two Beech 99s, and a DC-3 are withdrawn as orders are placed for two more Boeings and two HS 748s.

Beginning in late fall and continuing through the winter season, the jetliners already on hand provide twice-weekly replacement service from Montreal–Detroit on behalf of **Sabena Belgian World Airlines, S.A.**

Two additional HS 748s are delivered in May 1988, including one from failed **Cascade Airways**, followed by a Boeing 727-35 in June. The new jetliner inaugurates service from Ottawa–Yellowknife via Frobisher Bay.

The last three DC-3s are withdrawn in August as a fourth 727, a Dash-44C, arrives. While on initial approach to Cheney on an all-cargo flight from Montreal on September 15, the ex-**Cascade Airways** HS 748-2B with two crew strikes high ground short of the runway; the aircraft is destroyed and there are no survivors.

In late fall and continuing through the winter, the company's four jetliners fly from Montreal and Ottawa, under contract to Mirabelle Tours, to such southern vacation destinations as Orlando, Santo Domingo, Freeport, Curaçao, Acapulco, and Havana.

In December, a B-727 flies Armenian earthquake relief supplies to Moscow.

An HS 748-2A freighter with two crew fails its takeoff from Tipp City, Ohio, on January 12, 1989, for a service to Montreal (YUL); the turboprop smashes into trees and crashes, killing both flyers.

During late winter, two new routes are inaugurated from Ottawa to Newark and to Goose Bay. Also, a compact is signed with **NWT Air, Ltd.** sharing responsibility for service north of the 60th parallel.

In May, they begin taking turns on Mondays and Fridays flying the route from Frobisher Bay to Yellowknife, allowing an expansion of service to the areas of Keewatin and Kitikmeot.

The fleet in 1990 includes 20 aircraft: 4 Boeings, 8 BAe 748s, 6 Twin Otters, and 2 Beavers. Although the airline is now the dominant regional carrier of the Canadian Arctic, it still does not reveal its traffic or financial data.

Operations continue apace in 1991–1992, although severe competition is felt from the “Delta Connection” carrier **Business Express**.

A DHC-6-300 with two crew and four passengers noses over while landing on a gravel airstrip near Iqaluit on July 19 of the latter year; although the aircraft is damaged beyond repair, there are no fatalities.

In 1993, President Kamal B. Hanna oversees a workforce of 550.

Service is dropped from Ottawa to Boston, Goose Bay, and Montreal's Mirabel Airport. During the spring, on behalf of **Gronlandsfly, A.S./Greenlandair, A.S.**, First Air begins weekly B-727-90C services linking the newly opened civil airport at Pituffik (formerly Thule Air Base) with Ottawa via Kangerlussuaq, Iqaluit, and Montreal (YUL). Incoming passengers to Pituffik are shuttled to Qaanaaq, 90 miles south by a **Gronlandsfly, A.S./Greenlandair, A.S.** Bell 212.

Flights to 24 destinations continue in **1994** and the fleet, shared with **Bradley Air Services, Ltd.**, now includes 5 each de Havilland Canada DHC-6-300s and BAe (HS) 748-2As, 2 748-2AFs, and 1 each B-727-35, B-727-27C, B-727-44C, B-727-90C, B-727-225F, B-727-233AF, DHC-7-150R, and BAe (HS) 748-2B.

The company is sold to the Makivik Corporation of Kuujuaq, Quebec, in **1995**. At the same time, **Ptarmigan Airways, Ltd.** is purchased, along with its routes in the western area of the Northwest Territories.

In **1996**, the fleet is increased by the addition of seven DHC-6-300s and a BAe (HS) 748-2B.

The company's fiftieth anniversary is celebrated throughout the year.

From hubs at Hall Beach, Iqaluit, Ottawa, Resolute Bay, and Yellowknife, services are provided to Broughton Island, Cambridge Bay, Cape Dorset, Clyde River, Coppermine, Coral Harbour, Gjoa Haven, Holman, Igloodik, Kangerlussuaq, Kuujuaq, Lake Harbour, Montreal, Nanisivik, Pangnirtung, Pelly Bay, Pituffik, Pond Inlet, Rankin Inlet, and Taloyoak.

While landing at Markham Bay on an August 12 all-cargo service from Iqaluit, a DHC-6-300 with two crew bounces twice heavily before striking a rock with its landing gear, which are sheared off, and plunges into the sea; there are no survivors.

A total of 115,000 passengers are flown on the year.

On January 10, **1997**, 900 pilots from four "Air Canada Connector" airlines go on strike over merged seniority lists. NWT Air is not immediately affected as its flyers do not participate. When the job action is concluded in early March, **Air Canada, Ltd.** begins a review of its entire regional airline situation. The examination, driven not only by the strike, but also by the start-up of deep-discount competitors **Vistajet, Ltd.** and **Greyhound Air, Ltd.**, results in the major's decision to sell NWT Air.

About this same time, First Air completes arrangements for the purchase of Yellowknife-based **Ptarmigan Airways, Ltd.** and its fleet of three float-equipped de Havilland Canada DHC-6-300 Twin Otters and three Grumman Gulfstream Is, all painted in bright yellow livery. Amalgamation begins immediately.

In a significant feat of endurance, First Air achieves the longest scheduled same-plane flight in North America, from Ottawa to Yellowknife via Iqaluit, Nanisivik, and Resolute. The 5,241-km. flight requires 10 hrs. 20 min. to complete.

Another highlight of the year is the purchase of **NWT Air, Ltd.** from **Air Canada, Ltd.** on June 19. The purchase, which makes First Air the nation's third largest scheduled airline, includes three B-737-200As and the former "Air Canada Connector" carrier's routes to Edmonton, Winnipeg, Inuvik, Yellowknife, Cambridge Bay, Rankin Inlet, and Iqaluit. NWT Air founder Robert Engle leases the Lockheed L-100-30, which he had retained, to First Air; the Hercules is the only one of its type in commercial service in Canada.

During the spring of **1998**, the wet-leased B-727-90C, operated on behalf of **Gronlandsfly, A.S./Greenlandair, A.S.**, comes off lease. The amalgamation of NWT Air, Ltd. is completed on June 24. The Hercules, based at Yellowknife, will not be repainted in First Air colors like the larger Boeings.

In an effort to rescue people stranded by the pilots' strike begun on September 2, **Air Canada, Ltd.** wet-leases aircraft from **Royal Aviation, Ltd.**, **First Air, Ltd.**, **Skyservice, Ltd.**, and **Corsair, S.A.** to move people over the next week.

During the 12 months, a total of 200,000 souls are transported.

Airline employment at the beginning of **1999** stands at 970. The B-727 fleet now includes 1 each Dash-90C, Dash-27C, Dash-44C, Dash-

225F, and Dash-2H3F, plus 2 Dash-223Fs. Several of the Boeings wear special "Celebration '99" decals in honor of the creation of Canada's new territory, Nunavut, in April.

A number of lightplanes are also operated, including two of the three former Ptarmigan DHC-6 Twin Otters. The last of the Gulfstream Is is sold in June and is replaced with a BAe (HS) 748.

Overall enplanements for the year total 200,000.

The company workforce at the beginning of **2000** stands at 1,050, an 8.2% increase over the previous 12 months.

An Antonov An-2, transporting aeronautical engineer Dick Rutan and four others on an Arctic adventure, inadvertently puts down on thin ice four miles from the North Pole on May 15 and sinks. The travelers are rescued by a First Air DHC-6 after an accompanying Cessna 185 returns to Deadhorse to summon help.

The B-727-90C is withdrawn from service on June 10. It will be used for spare parts.

FIRST AIR INTERNATIONAL: 8036 Aviation Place, P.O. Box 29958, Dallas, Texas 75229, United States; Phone (214) 352-5228; Fax (214) 352-5899; Year Founded 1993. J. Michael Little sets up FAI at Dallas Love Field in **1993** to offer worldwide passenger air charters. With a workforce of six full-time and four part-time staff, Little begins FAR Part 135 service with a fleet that includes one each British Aerospace BAe (HS) 125-731 Hawker, Learjet 24, and Learjet 35A.

Operations continue during the next five years. In **1998**, planning begins for the inauguration of scheduled services. These do not come to pass and in **1999-2000**, services are maintained as before.

FIRST AMERICAN AIRLINES: United States (1993-1995). First American Airlines is established at Telluride, Colorado, in **1993** as subsidiary to the charter operator **Falcon Flight** to offer scheduled services. Fairchild Metro IIIA aircraft, chartered from the parent, are employed to fly four-times-per-week between the company base and Colorado Springs-Denver International Airport. Operations continue apace in **1994** and the privately owned airline chooses to release neither traffic nor financial information.

The company shuts down in **1995**.

FISCHER AIR, A.S.: Evropska 178, Prague 6, CZ-16067, Czech Republic; Phone 420 (2) 2011 6170; Fax 420 (2) 2011 5439; http://www.fischer-air.cz; Code 8F; Year Founded 1996.

Fischer Air is established by Vaclav Fischer at Prague in **1996** to offer regional passenger charters in cooperation with his tour agency. Ian Drahorad is appointed managing director and recruits a workforce of 119.

The new entrant inaugurates scheduled services to Malta on April 30, **1997** with a pair of leased Boeing 737-33As. Over the next 3 years, the concern will also flies holiday charters to over 30 destinations in 10 African and European nations. Michal Tomis becomes managing director and a third B-737, a Dash-36N, is acquired.

By the beginning of **2000**, the airline employment stands at 170.

FISCHER BROTHERS AVIATION: United States (1951-1987). According to R. E. G. Davies's *Airlines of the United States since 1914* (London, Eng.: Putnam, 1972, p. 631), this company, at one point, is America's sixth-oldest third-level airline. By the time of its conclusion, it will rank first in years of continuous service. Montford R. and William R. Fischer organize **Galion Commuter Service** at the north central Ohio community of Galion in **1951**. Located at Galion's airport, it is the air transport division of their three-year-old FBO, Shelby Sky Haven, Inc., and is to provide thrice-daily roundtrip, Stinson 108 service to nearby Marion and on to Mansfield and Cleveland.

In **1957**, elements of both the FBO and airline name is given to a new holding company, GCS (the initials of Galion, Shelby, and the nearby town of Crestline), which now operates its airline as a subsidiary. A Lockheed Model 12 and Piper PA-23 Aztec are acquired late in the decade.

In **1960**, the carrier begins flying a de Havilland DH 104 Dove and in **1963** it is renamed Fischer Brothers Aviation. The small privately held regional reaches the "big time," so to speak, on July 1, **1969** when it becomes part of the "Allegheny Commuter" network.

Fischer Brothers employs a mixed fleet during its first two decades, mostly small single- or twin-engine Pipers, the Dove, and two de Havilland DH 114 Riley Herons.

By **1975**, enplanements are 23,196. Passenger boardings accelerate 13% in **1976** to 26,662. Flights continue with unknown figures in **1977-1978**.

Service to the Michigan cities of Flint and Detroit begins in September **1979**. Enplanements total 33,000, a growth of 58%.

In mid-**1980**, the carrier takes delivery of three Spanish-built CASA C-212 Aviocars. Routes are stretched to Detroit and Flint, Michigan, in spring **1981** and another Aviocar is ordered.

Despite the PATCO air traffic controller's strike and subsequent ATC restrictions, 96,824 customers and 71,326 pounds of freight are flown. The fourth C-212 is delivered during the fourth quarter of **1982**.

Passenger traffic climbs 23% as 119,097 passengers are transported, along with 169,000 pounds of cargo, a spectacular 136.5% boost.

Traffic remains good for the Ohio airline in **1983**. Customer bookings increase 41.7% to 168,719 and cargo climbs to 212,693 pounds, a 26.1% boost.

The employee total is now 140 and service is launched to Pittsburgh in early **1984**. To handle the increasing passenger loads, a Shorts 330 and two Shorts 360s are acquired during these two years. Enplanements jump 14.2% to 192,635; however, freight is off 13% to 185,062 pounds.

By **1985**, the nation's oldest commuter is providing scheduled service to seven cities in Michigan and Ohio. The longtime affiliation with **US-Air's** "Allegheny Commuter" network is now severed, as the company becomes a unit of the **Northwest Airlines'** "Northwest Airlink" commuter network.

Passenger boardings fall off 1.4% to 189,921.

Operations continue apace in **1986** until events of the summer bring crisis. On August 12, **Northwest Airlines** purchases **Republic Airlines**, with the latter integrated into the Minneapolis-based major on October 1. At this point, officials at Northwest are faced with a decision as to which of two regional airlines will provide the single feeder service necessary at Detroit. The choice is between the incumbent small regional Fischer Brothers, the Republic Airlines carrier, and large regional **Simmons Airlines** of Chicago.

Meanwhile, Ohio-based GCS sees its passenger traffic for the year fall 7.1% to 176,397 passengers flown.

Tragedy strikes the company during the first quarter of **1987**. A CASA C-212, on a training flight near Springfield, Ohio, on February 10, crashes, killing the three persons aboard. While landing at Detroit (DTT) on March 4 after a service from Cleveland, "Northwest Airlink" Flight 2268, a CASA C-212-200 Aviocar with 3 crew and 16 passengers, strikes the ramp area 1,101 ft. inside the Runway 21R threshold. The aircraft skids 398 ft., hits three ground support vehicles in front of Gate F10 of Concourse F, and comes to a stop just short of striking the terminal building itself. The turboprop catches fire and 9 aboard are killed; the 13 survivors are all injured, 7 seriously.

Later in the month, **Northwest Airlines** removes its "Northwest Airlink" affiliation from Fischer Brothers and assigns it to **Simmons Airlines**. The Galion-based commuter is devastated and shuts down operations for a month. During the hiatus, a \$150-million antitrust suit is filed against both Northwest and Simmons.

The company resumes limited services in May and eagerly seeks a new code-sharing partner. On May 27, the airline assets of GCS are purchased for \$2.5 million by **Midway Airlines (1)** and are reconstituted as **Midway Commuter**. GCS now proceeds to establish a new Essential Air Service airline, **GCS Air Service**, to offer Cessna 402C and Beech B-80 Queen Air service from Mansfield to Cleveland.

FIT AVIATION: Melbourne International Airport, 640 Harry Sutton Road, Melbourne, Florida 32901, United States; Phone (407) 727-0461; Fax (407) 768-2136; Year Founded 1968. This subsidiary of the Florida Institute of Technology is established at Melbourne in **1968**. Over the next 40 years, the company becomes established as a charter operation, which rents aircraft and operates a flight school, while also becoming FAA repair station #5403.

Michael F. Wilson is president in **2000** and he oversees a 42-person workforce. Nonscheduled charters and instruction are undertaken with a fleet that includes 14 American General Tigers, 1 Bellanca Super Dechathalon, 6 Mooney M20Js, 4 Piper PA-34 Senecas, 1 PA-31-350 Navajo Chieftain, and 17 Piper Warrior/Cadets. Revenues reach \$2 million.

FIVE STAR AIR (FIVE STAR AIRCRAFT): United States (1985-1995). Having obtained two Lockheed L-1011 TriStar 1s from **Trans World Airlines (TWA)**, Five Star is established in **1985** as the flight department of the GWV Travel, based at Needham, Massachusetts, as a division of the Interface Group. Seasonal charter and tour group services are undertaken in the fall, primarily between Boston and other northeastern cities and the resort areas of Mexico, the Bahamas, and the Caribbean. Without its own certificate, the inaugural season is operated under contract with IASCO.

A third TriStar 1 is acquired in **1986** as the company, having received its own operator's permit, continues its seasonal tour operations, again returning the chartered TriStar 1s when its charter schedule is finished.

In **1987**, the company runs into financial difficulties and reports statistics for only the first five months. Through May, a total of 94,000 passengers are transported. Revenues are \$14 million and although an operating profit of \$652,000 is earned, there is a net loss of \$302,000.

The three TriStar 1s of the 218-employee carrier transport a total of 106,000 passengers in **1988**, down 3.6%. Revenues rise slightly to \$14.35 million. Again there is an operating profit, \$616,181, but a net loss of \$81,230.

Late in the year, the carrier's Interface Group parent purchases the Sands Hotel in Las Vegas. The airline will now begin dedicated charter flights to the Nevada city.

After operating for the first five months of **1989**, the TriStars are leased back to **Trans World Airlines (TWA)** between May and October in what has become an annual leasing practice. This sporadic operation finally leads to revocation of the carrier's operating certificate in November, a move that is successfully opposed.

Revenues for the year total \$9.9 million and allow profits of \$549,038 (operating) and \$585,576 (net).

The fleet is enlarged during the next 8 years to include 3 TriStar 1s and 1 TriStar 50; however, by **1994** these are usually leased to other carriers, such as **Air Transat, Ltd.** or **American Trans-Air**. Operations cease in **1995**.

FLAGSHIP AIRLINES: United States (1991-1998). AMR Eagle forms this new subsidiary on June 1, **1991** through the merger of **Nashville Eagle** and **Command Airways**. Former Nashville Eagle President John Hayes remains in charge and his fleet includes 88 turbo-props: 2 Shorts 330s, 10 Shorts 360-300s, 19 SAAB 340Bs, 5 Avions de Transport Regional ATR42-300s, 34 British Aerospace BAe Jetstream 31s, and 18 Fairchild Metro IIIs.

Service is inaugurated to 57 destinations from hubs at the company's headquarters in Nashville, as well as Miami, Raleigh/Durham, and New York (JFK). Daily SAAB 340Bs begin daily flights from Nashville to New York and twice-daily roundtrips from Nashville to Pittsburgh. In October, thrice-daily roundtrip SAAB 340B services commence from Atlanta to Nashville, along with thrice-daily flights from Nashville to Dayton and daily nonstops from Nashville to Fort Walton Beach, Florida.

Enplanements total 2,364,839, a figure 46.4% higher than the combined boardings of the two partners a year earlier.

Airline employment in 1992 stands at 3,615 and the fleet is increased to 137 aircraft: 56 SAAB 340Bs, 47 Jetstream 31s, 19 Shorts 360-300s, and 15 ATR42-300s. Collective bargaining begins between the regional and its unions in May, but no accords are reached.

Passenger boardings shoot up 50.7% to 3,564,954.

The payroll grows by 6% in 1993 to 3,831 and the fleet is altered to include 42 Jetstream 31s, 59 SAAB 340Bs, 23 Shorts 360-300s, and 14 ATR42-300s. During the year, the Shorts begin transfer to **Executive Airlines**, to be replaced with additional SAABs.

In March, the third attempt to reach accord since the previous spring is successful, at least in so far as negotiations with the 1,105 mechanics of the carrier's Transport Workers Union chapter are concerned. The new contract is ratified in April. Unknown to company officials at the time, the carrier's services from Nashville peak in August, when 146 daily departures are offered to 41 destinations. After a year of negotiations, an accord is reached with the pilots union in September.

Customer bookings advance by another 16% to 4,138,387.

Leaders of the company's 350-member chapter of the Association of Flight Attendants (AFA) win a new labor contract in April 1994.

During the spring, **American Airlines** withdraws jet service from a number of cities, including several large markets in the Northeast, Midwest, and South. Flagship, the largest Eagle partner, is called upon to replace these frequencies with turboprop flights; among the cities joining the company's network are Philadelphia, Cleveland, Birmingham, Orlando, and Tampa. At the same time, services from Miami to the Bahamas and from Washington to Boston via New York are increased to meet demand.

Reacting to the October 31 **Simmons Airlines** ATR72-210 crash, the FAA on December 9 places a prohibition on the operation of ATR turboprops—much of the American Eagle fleet—into known icing conditions. Fortunately, American Eagle President Robert Martens is meeting at AMR Corporation headquarters in Dallas with the presidents of the four confederated regionals and they are quickly able to come up with a plan to reconfigure the combined Eagle fleet around the country.

Two Flagship SAAB 340Bs are dispatched to Chicago (ORD) to resume services; however, in the light of media attention on commuter airlines, the decision is taken to stop American Eagle flights out of the Windy City on December 14 and resume them in early January. In the interim, Flagship contributes significantly to the transfer of aircraft around the American Eagle network. Flagship virtually stops flying from its parent's Raleigh/Durham hub when it dispatches 23 SAAB 340 to Dallas (DFW) to support the flights of **Wings West Airlines** and **Simmons Airlines**. Ten Jetstream 31s are sent from Raleigh/Durham to Baltimore as 6 Shorts 360-300s are sent to Nashville; 15 SAABs based at Miami are sent to New York (JFK).

In the early evening of December 13, Flight 3379, a Jetstream 31 en route from Greensboro to Raleigh/Durham with 20 aboard, crashes in fog and rain while on approach to Raleigh/Durham (15 dead). The NTSB will later hold pilot Michael P. Hillis largely responsible; Hillis had joined Flagship just four days after failing his one-year probation with **Comair**.

The next day, Transportation Secretary Federico Pena summons chief pilots and operations officials from U.S. airlines to meet with him and FAA Administrator David R. Hinson at Washington, D.C., on January 9–10 for the largest air safety conference in recent memory.

On December 13, Flight 3379, a Jetstream 31 with 10 aboard en route from Nashville to Greenville/Spartanburg, South Carolina, develops engine trouble and makes a safe emergency landing at Knoxville, Tennessee.

Passenger boardings jump 11.2% during these 12 months to 4,603,367. At this point, the Nashville hub has only 18 months left before closure.

The workforce stands at 2,957 in 1995.

The scattered fleet is gradually returned to its previous hubs between January and the start of the April 2 summer schedule.

After its front landing gear fails to deploy, a SAAB 340B makes a safe landing on its back wheels at its scheduled destination of Rochester on April 6; no casualties are reported.

As **American Airlines** continues to shut down hub operations at Nashville and several other cities in the regional's network, opportunities shrink for this American Eagle carrier.

The company's huge 81-unit fleet transports a total of 3,411,837 passengers, a 26.3% decline. What little freight traffic there is also falls, dropping 17.8% to 748,000 FTKs.

The employee population is increased by 21.2% in 1996 to 3,583.

By the year's end, **American Airlines** has shut down its Nashville hub and all 25 Jetstream 32s are retired.

The end in Tennessee and the reduction in capacity contribute to another traffic downturn. Customer bookings fall 11.5% to 3,020,881 and figures for cargo are not provided.

The workforce is reduced by 5.7% in 1997 to 3,377.

On February 7, four 113th Fighter Wing Air National Guard F-16s from Andrews Air Force Base make an unauthorized close approach to a fully loaded company SAAB 340B. The fighters are within 2,000 feet above and below the SAAB as it flies north just off the Maryland coast from Washington, D.C., en route from Raleigh to New York (JFK). The pilot of the commercial turboprop is not required to take evasive action. The incident, along with similar ones involving **Nations Air**, **American Airlines**, and **Northwest Airlines** the same day, brings a series of investigations from the U.S. Air Force, the FAA, and the NTSB.

Under terms of the May agreement between the Allied Pilots Association (APA) and **American Airlines**, American Eagle pilots will be offered one of every two new-hire positions, but places limits on the stage length Eagle regional jet pilots may fly (550 nm.). Meanwhile, negotiations between representatives of ALPA and AMR's American Eagle subsidiary are completed and sent to the 1,900 pilots of Flagship, **Simmons Airlines**, **Executive Airlines**, and **Wings West Airlines** for ratification.

The new ALPA contract is ratified during the third week of August by a vote of 773 to 473. The 16-year compact provides for guaranteed annual pay increases of 7%, improved crew scheduling and reserve conditions, replacement of the four individual company contracts with one master American Eagle document, and a no-strike, no-lockout agreement.

In addition to 10 daily roundtrips between Miami and Nassau, Flagship, on September 3, inaugurates daily SAAB 340B return service to Nassau from Orlando.

Passenger boardings slide 6.6% to 2,822,482.

On January 15, 1998, AMR Eagle officials, led by President Daniel P. Garten, announces that the availability of regional jets, combined with the previous August's single Eagle pilot contract and changes in the economics of the regional airline business, dictate consolidation. Consequently, AMR will integrate all four of its airlines into a single carrier by year's end.

En route from Tampa to Miami on March 10, American Eagle Flight 5634, an ATR42-320 with 3 crew and 44 passengers, experiences an in-flight electrical malfunction. The pilot declares an emergency and diverts to Fort Myers, where a safe emergency landing is made. No injuries are reported.

During the second quarter, the new carrier's field services organization begins to take shape. A number of appointments are made at the end of April, effective July 1. David D. C. K. Kennedy becomes senior vice president-operations, while Flagship vice president-flight operations Ed Criner is named AEA's vice president-flight operations.

In May, the company's four semiautonomous carriers (**Simmons Airlines**, Flagship, **Executive Airlines**, and **Wings West Airlines**) begin a seven-month period of amalgamation into the single mammoth **American Eagle Airlines**, now viewed by AMR as a sister of **American Airlines**. Simmons is the core, with Flagship joining the merger during May and **Wings West** in June. During the latter month, the decision is taken to postpone integration of **Executive Airlines**. The presidents of **Simmons**, Flagship, and **Wings West** are provided with appointments elsewhere within AMR and are replaced with vice presidents at each of the new airline's hubs.

At the same time, agreement is reached with the Transport Workers Union of America for a new single-carrier contract. The agreement covers flight dispatchers, mechanics, and ramp-service personnel.

FLAGSHIP EXPRESS (FLAGSHIP EXPRESS SERVICES): United States (1990–1991). The air transport division of Ypsilanti, Michigan-based **Rosenblum Aviation** is renamed **Flagship Express** in late 1990. Operations from the municipal airports at Detroit and Medford, Oregon, continue as before. The company's principal business remains air cargo and express service under contract to other carriers, including **Emery Worldwide** and **Burlington Air Express**.

In 1991, the fleet is made up of 19 DC-8-63Fs, including 15 leased from Emery and 4 from Burlington, plus 7 DC-8-73s leased from Emery. In an effort to gain some independence from the forwarders who have provided most of the carrier's previous business, the airline moves from Detroit to Chicago. The move in time of recession is a failure and freight traffic falls by 31.2% to 605.85 million FTKs. Operations cease and the company files for Chapter XI bankruptcy on December 13. Assets are liquidated in early 1992 as the Douglas freighters are returned.

FLAIR AIR. See **SOUTHEAST ALASKA AIRLINES**

FLAIT AIR COMPANY: 53 Zhelyabov Street, Astrakhan, 414000, Russia; Phone 7 (8512) 225544; Year Founded 1995. Flait Air is established in 1995 to offer regional cargo charter service. Vladimir L. Rezhels is director general and he begins flights with 1 each Antonov An-12B, Tupolev Tu-134A-3, and Mil Mi-8T.

FLAMENCO AIRWAYS: P.O. Box 224, Culebra, Puerto Rico 00775, United States; Phone (809) 722-0237; Fax (809) 722-0237; <http://www.lunken.com/FlamingoAir/index.html>; Code FK; Year Founded 1974. Ruben Torrez founds Flamenco Airways at Culebra, Puerto Rico, in September 1974, but does not immediately initiate regular service. A number of charters are, however, operated employing Piper PA-32 Cherokee Sixes. After acquiring four Britten-Norman BN-2 Islanders, Flamenco begins scheduled passenger, mail, and cargo flights on September 28, 1976, to San Juan, Vieques, and Fajardo, as well as St. Croix and St. Thomas in the U.S. Virgin Islands.

Airline employment reaches 22 by 1980 and in 1981, enplanements total 19,110. Customer bookings accelerate to 22,062 in 1982 and the 4 Islanders also haul 276,000 pounds of cargo.

The workforce is reduced 9.1% in 1983 to 20, even though the fleet remains the same size. Enplanements swell 54.6% to 33,400 and freight rises to 358,000 pounds, a 29.8% boost. Revenues advance 17.2% to \$708,000 and a \$45,000 operating profit is generated.

The laid off employees return to work in 1984 and the four Islanders fly considerably more passenger traffic. Bookings advance 30.5% to 28,700. Revenues, however, dip 4.2% to \$704,000. Fortunately, costs drop 6.1% and thus allow a \$19,000 operating profit.

Three new workers and a fifth Islander arrive in 1985. While taxiing at San Juan on July 18, a PA-32 with a pilot and a passenger collides with a ground vehicle that has failed to yield at a stop sign and continued on into the path of aircraft; the driver of the ground vehicle is killed. Passenger boardings plunge 15.5% to 24,510. Cargo, however, is up by 5% to 417,000 pounds. Revenues accelerate by 47.9% to \$1.1 million and low costs allow a \$26,000 operating profit.

The previous year's traffic slowdown is forgotten in 1986 as enplanements swell 7.8% to 26,426 and cargo jumps 24.8% to 760,000 pounds. Revenues ascend 49.3% to \$1.32 million, expenses climb 46.9% to \$1.26 million, and the operating profit is \$60,000.

The workforce is reduced by 20% in 1987 to 20, despite a 2.6% increase in boardings to 27,103.

Flamenco's 1988 fleet includes 4 Islanders, 1 Trislander, and 1 Cherokee. Customer bookings fall a slight 0.8% to 26,885. Profits total \$362,505 (operating) and \$220,417 (net). Airline employment is increased by 7.1% in 1989 to 45 and the fleet is increased by the addition of 2 Islanders and 2 Douglas DC-3s.

Despite the growth in capacity, enplanements fall 25.9% to 20,228 and freight is down 1.6% to 792,000 pounds. Revenues advance 7.7% to

\$2.7 million, expenses rise 7.3% to \$2.31 million, and the operating profit is \$400,024. Net gain reaches \$244,015.

The fleet is increased in 1990 by the addition of one more Islander and another DC-3. Routes are now somewhat realigned.

Passenger boardings increase by 36.6% to 27,704. Freight advances 15.4% to 626,000 pounds. Revenue climbs 25% to \$2.5 million, but costs grow only 6.7% to \$1.6 million. As a result, operating profit is almost doubled, to \$900,000, while net profit reaches \$213,000.

The fleet in 1991 includes 11 Islanders, 2 DC-3s, and 1 Trislander.

Customer bookings climb 45.2% to 39,506 and cargo slips 0.2% to 624,524 pounds.

Company employment stands at 65 in 1992 and 2 more aircraft arrive: a DC-3 and a Piper Cherokee.

Passenger boardings shoot up 42.3% to 56,200 and freight rises 52.2% to 950,366 pounds.

In 1993, President Noemi Gonzalez's fleet includes 11 Islanders, 1 Trislander, 3 DC-3s, and 1 Cherokee. Customer bookings decline 5.8% to 52,924 and cargo drops 2% to 931,108 pounds.

Airline employment stands at 65 in 1994 and passenger boardings recover, surging upward by 31.3% to 60,478.

There is no change in the workforce during 1995, but a Cessna 402C is acquired. Still, traffic at the Puerto Rico-based carrier drops sharply, falling 28% to 50,078 passengers carried. Freight is also down, by 14%, to just 1,063 pounds carried.

The 65-person workforce remains in place during 1996 and the fleet now includes 8 Islanders, 1 Trislander, 3 DC-3s, and 1 Cessna 402C. Passenger bookings plunge another 11% to 44,545.

On August 7, a **Trans Caribbean Airlines** Islander with one crew and three passengers collides in midair over the landing threshold of Runway 8 at Diego Jimenez Airport at Fajardo, Puerto Rico, with a Flamenco Islander with a pilot and nine passengers. The Trans-Caribbean is destroyed and one passenger receives slight injuries. The Flamenco plane is badly damaged and five passengers are hurt, one seriously.

Just after takeoff from Isla Grande on October 31, a DC-3C with three crew suffers an engine fire. The aircraft attempts to divert to San Juan, but crashes into a riverbed before it can reach that destination. There are no fatalities.

Late in the year, the company is unable to successfully complete a maintenance and safety inspection by FAA regulators.

For the year as a whole, customer boardings advance by 4.9% to 46,727.

Pending the outcome of an eventually successful appeal, the carrier is grounded in February 1998. Enplanements this year total just 24,000.

The company website is closed in 1999. Flights are otherwise maintained during the year and into the new millennium.

FLAMINGO AIR SERVICE: United States (1945–1948). FAS is established at Aron Park, Florida, late in 1945 to offer nonscheduled all-freight services with a war surplus fleet of Douglas C-47s and Curtiss C-46s. Revenue services are undertaken to destinations in the Northeast and Great Lakes regions.

On July 10, 1946, the carrier flies a UN Relief and Recovery Administration shipment from Chicago to New York (LGA) free of charge in an effort to spur aid to European refugees.

The first scheduled all-freight service is inaugurated from Boston to Chicago on September 20, 1947 via Hartford, New York, and Cleveland.

The company goes out of business during the recession of 1948.

FLAMINGO AIRWAYS, LTD.: Bahamas (1971–1973). Flamingo Airways, Ltd. is formed in the Bahamas in March 1971 to operate regional and international cargo and passenger services with a fleet comprising 1 Convair 580, 1 Martin 4-0-4, 1 Lockheed L-188AF Electra, and 1 BAC 1-11-400.

On June 18, 1973, the company is merged with **Out Island Airways, Ltd.** to form the national carrier of the newly independent Bahamas, **Bahamasair, Ltd.**

FLANDERS AIRLINES, S.A.: Belgium (1989–1992). Flanders Airlines, S.A. is established at Wevelgem in 1989 to offer domestic commuter services as well as international charter flights to Brussels, Antwerp, and Amsterdam. Managing Director Yves Carpentier's initial fleet comprises 1 Cessna 401, 1 Embraer EMB-110 Bandeirante, 2 Fairchild Merlin IVs, 3 Fokker F.27-100s, and 1 Fokker F.27-600 that operates a dedicated service for **Federal Express**.

In the spring of 1990 the company is purchased by **British Air Ferries, Ltd.** Operated as a subsidiary, the fleet remains unchanged and performs as before until February 1992, when the company is declared bankrupt.

FLANDRE AIR, S.A.: France (1985–2001). Organized at Aeroport Lille-Lesquin in the summer of 1985, Flandre Air is initially equipped with a fleet comprising 1 Beech King Air 90, 1 King Air 100, and 1 Piper PA-31-350 Navajo Chieftain. President Luc Delesalle's carrier quickly inaugurates services to Metz and Rouen in September.

After four years' of low-key success, the company accepts a subcontract in 1989 to fly to Frankfurt on behalf of **TAT (Transport Aerien Transregional, S.A.)**. The service is provided with a new Beech Super King Air 200.

Enplanements total 12,350 and revenues are \$3.8 million.

In 1990–1991, the King Air 90 is replaced by another Super King Air 200.

Two more Super King Air 200s, three additional King Air 100s, and three Beech 1900Cs join the fleet in 1992; the PA-31-350 is retired. Enplanements total 28,500.

Three more 1900Cs are delivered in 1993. Passenger boardings swell by 5% to 30,000 and revenues are up 26% to \$14 million. The net profit is \$605,500.

The fleet in 1994 includes 1 owned Beech King Air 100, 2 chartered Beech Super King Air 200s, 6 Beech 1900Cs (of which 2 are leased), and 4 chartered Embraer EMB-120 Brasilias.

Late in the year, plans are made to initiate new routes in the spring. By summer, the company is performing a steady business in replacement services for both **TAT European Airline, S.A.** and **Air Littoral, S.A.** Destinations visited from Paris include Epinal, Bergerac, Agen, Aurillac, and Roanne.

Meanwhile, overall customer bookings increase to 140,000.

A \$32-million order is placed in the summer of 1995 for two Beech 1900Ds, plus four options. The aircraft are delivered in February 1996. Three more EMB-120s also enter service. Destinations visited now include Agen, Aurillac, Bergerac, Brest, Caen, Clermont, Epinal, Metz, Nancy, Montpellier, Mulhouse, Paris (ORY), Rouen, and Strasbourg.

During the annual meeting of the European Regional Airline Association at Baveno, Italy during the first week of October 1997, Flandre agrees to become European launch customer for the Embraer ERJ-135 jetliner, with an order for 8, plus 12 options.

On October 21, President Delesalle joins with Chairman Marc Rochet of the enlarged **Air Liberte, S.A.** to sign a new partnership agreement. Flandre is the last of the seven largest French regionals to enter into a code-sharing pact. Three dual-designator routes will be immediately assigned to Delesalle's company.

An eighth Brasilia is received in November.

Enplanements for the year total 150,000 and operating income of FFR 869 million is generated.

The fleet at the beginning of 1998 includes 11 Beech 1900Cs and 7 EMB-120s. Orders remain outstanding for 10 ERJ-135s.

While en route on a scheduled November 5 service, a Beech 1900C is diverted into Luxeuil due to smoke and small flames emanating from the windshield assembly.

At the end of December, a franchise agreement is signed with **Air Liberte, S.A.**; under the accord, the **British Airways (2)** affiliate will assume control over the 18-aircraft fleet and the routes of this code-sharing partner. Plans are made for the receipt of the 10 ERJ-135s in the new year.

The Air Liberte franchise agreement takes effect in January 1999. On April 25, **Regional Airlines, S.A.** agrees to purchase a 34% stake in the commuter line. Both companies have complementary route networks and nearly identical fleets.

In October 2000, the company is acquired by **Proteus Air System, S.A.** At the end of November, it is announced that **Air France** will merge Flandre, Proteus, and Regional Airlines by April 2001 into a unified large regional airline. **Region, S.A.** will operate 80 aircraft to approximately 400 domestic and European destinations and may earn as much as \$325 million in annual revenues.

FLASH AIRLINES, LTD.: 55 2nd East Secular Road, Benin City, Nigeria; Phone 234 (52) 244 028; Year Founded 1989. Flash Airlines, Ltd. is formed at Benin City in 1989 to fly all-cargo charters between its base and various destinations in Africa and Europe. Founder/President P. E. Osakwe's fleet initially comprises 1 Douglas DC-8-52 and 2 DC-8-55Fs leased from Intavia Group, Ltd. in the U.K. With business uncertain, the company operates ad hoc European charters from a base at Ostend; the DC-8-52 is withdrawn in 1991.

One DC-8-55F is taken out of service in early 1992, but recessionary forces are too ferocious and the company suspends operations, having run out of money. The operational DC-8-55F is jointly operated with **MK Air Cargo, Ltd.** after October and Flash provides some flight crews to the British carrier.

During the spring of 1994, the DC-8-55F in storage is chartered to **Overnight Cargo, Ltd.** It is returned the following summer when that concern folds.

Operations are again suspended in October 1995. The company does not go out of business, but revives as world airline fortunes improve at mid-decade.

By 1998–2000, President Osakwe and his 50 employees reportedly are offering enhanced international services with 5 DC-8Fs.

FLEET AIR SERVICES, LTD. See IPEC AVIATION, LTD.

FLEET AIRLINES: United States (1967–1969). Fleet Airlines is set up at Hopkins, Minnesota, in the summer of 1967 to provide scheduled daily passenger and cargo services from the Minneapolis area to Duluth and Fargo. Regular de Havilland DH 104 Dove flights commence on August 26.

Early in 1968, corporate headquarters are transferred to Eden Prairie, Minnesota. From here, the route network is expanded by the addition of stops at Alexandria, Fergus Falls, Detroit Lakes, Baudette, and Roseau. Operations continue apace until the company goes out of business in December 1969.

FLEETWAY AIRLINES: United States (1967–1969). Fleetway is set up at Tyler, Texas, during the early summer of 1967 to provide scheduled passenger and cargo services to regional destinations. Outfitted with a fleet of Beech 99s and Cessna 402s, the company inaugurates daily roundtrips on July 24, linking its base with Austin, Longview, Houston, Dallas, Shreveport, Texarkana, and Nacogdoches. Service can only be maintained for two years.

FLEMING AIRWAYS SYSTEMS TRANSPORT (FAST): Philippines (1957–1965). Former Commercial Air Lines, Inc. (CALI) pilot James Fleming establishes FAST at Manila in October 1957 to provide low-fare Douglas DC-3 passenger charters around the Philippines. Revenue flights commence on March 5, 1958, but the company's only aircraft, a chartered DC-3 with 3 crew and 37 passengers, fails its initial climb from Bacolod on March 22; although the aircraft is wrecked beyond repair in the subsequent forced landing, there are no fatalities. A second Douglas transport is acquired and undertakes services to Cebu.

Single-plane operations continue until March 5, 1961, when a four-engine DC-4 is acquired from **KLM (Royal Dutch Airlines, N.V.)** and is placed into service on the Bacolod route. After two years of

half-hearted competition, the state carrier **Philippine Air Lines (PAL)** counters the Fleming DC-4 with DC-4 local services of its own.

By the middle of **1964**, the nonscheduled carrier has once again bettered its equipment, acquiring a DC-7 from KLM. This is the high-water point for this company, which now flies 2 DC-3s, 1 DC-4, and 1 DC-7.

A DC-3 is destroyed in a hangar fire at Panay City on May 20. The two four-engine airliners must be grounded during the fourth quarter for lack of spare parts.

A C-47 with 4 crew and 13 passengers crashes near Milluni, Northern Panay, on December 8; there are no survivors.

The company's last operational aircraft, a DC-3 and a Nourdyn C-64 Norseman, continue flying until May 16, **1965**, when the Douglas crashes in northern Panay. Bankrupt, Fleming flees the country; what is left of his company is liquidated on July 6.

FLEMING INTERNATIONAL AIRWAYS: United States (1973–1983). Fleming International is established at Miami in **1973** to provide scheduled all-cargo freight and express services, both on its own and as a subcontractor, to New York, Chicago, Pittsburgh, Boston, Dallas, Atlanta, and Baltimore. Services are maintained through the remainder of the decade with a fleet that comes to comprise 4 Boeing 727-100s, 8 Lockheed L-188AFs, and 1 DC-8-20F. Subcontract work is also undertaken for such freight forwarders as **UPS (United Parcel Service)** and larger cargo airlines like **Emery Air Freight**. Charters are also flown and aircraft are leased upon occasion.

Problems with the No. 2 engine cause an L-188AF with three crew to abort its takeoff from St. Louis on July 6, **1977**. After returning to the ramp where maintenance on the power plant is completed, a second takeoff is attempted. The plane rises 8,000 m. before veering left and crashing; there are no survivors.

In **1979** the firm employs 130. On February 3, a door falls off an L-188A, narrowly missing a home in Jacksonville, Florida.

A total of 68.03 million FTKs are flown during the year.

Operations continue apace in **1980–1982**, during which years the Electra fleet reaches 10. The carrier shuts down in early **1983**. It will be reincarnated as **Cam Air International**.

FLEXAIR, B.V.: The Netherlands (1989–1994). Set up by Flexifloat at Rotterdam in early **1989**, Flexair's board appoints C. Carlo Englebert as president. He in turn assembles the company's fleet—a single Dornier 228-202K. Coming as the result of a company contract with London (LCY) for the development of a floating harbor for the Falkland Islands, weekly scheduled services to London (LCY) begin on September 25.

In February **1990**, frequencies from Rotterdam to London (LCY) are advanced to thrice-weekday, with one flight on weekends. Financial difficulties now occur and cause the carrier to stop flying in September.

The remainder of the year is spent in the pursuit of new financing; in mid-December, company services are tested on the Galileo computerized reservations system.

New funding is fortunately located from sources in the U.K. and Netherlands in the spring of **1991**. Services resume and an option is taken up on a second Dornier 228-202K.

The year's enplanements for the 16-employee company total 17,502.

In **1992**, the number of frequencies increase to four per weekday (and once on Sunday's) on the lone route from Rotterdam to London (LCY).

Passenger bookings in this recession year dip 1.3% to 17,277.

A second route is inaugurated, between Amsterdam and London (LCY), on July 19, **1993**, with a second Dornier 228-202K leased from Aerocondor Transportes Aereos, S.A. of Portugal.

The new service cannot be sustained; the company is shut down in February **1994**.

FLIGHT DETACHMENT 223 (223 LETNY OTRYAD): Shchelkovo 10, Moscow Region, 141100, Russia; Phone 7 (095) 224-5007; Fax 7 (095) 526-7025; Year Founded 1995. FD 223 is a large Russian

Air Force transport division that becomes available in **1995** for civilian domestic passenger and cargo charters. A. V. Pavlov is CEO and he begins revenue services with a fleet that comprises 6 each Ilyushin Il-62Ms and Il-18s, 14 Tupolev Tu-134s, 11 Tu-154B/Ms, 5 Antonov An-24s, 4 An-26s, 2 An-12s, and 1 Mil Mi-8 helicopter.

FLIGHT DETACHMENT 224: Matrosskaya Tishina 10, Moscow, 103160, Russia; Phone 7 (095) 269-9383; Fax 7 (095) 269-3162; Year Founded 1996. FD 224 is a large Russian Air Force transport division that becomes available in **1996** to provide civilian domestic all-freight, including out-sized cargo charters. V. V. Yefanov is general director and he begins revenue flights with 11 Ilyushin Il-76MDs and 12 Antonov An-124-100 Ruslans.

FLIGHT DEVELOPMENT, INC.: United States (1972). During the emergency caused by a strike at **Northwest Airlines** in the summer of **1972**, Flight Development steps in, beginning on July 24, to maintain daily scheduled passenger and cargo roundtrips between its Minneapolis base and Fargo, North Dakota. Operations cease on October 31.

FLIGHT EXPRESS: 3614 East Amelia Street, Orlando, Florida 32803, United States; Phone (407) 895-0453; Fax (407) 894-2944; http://www.flightexpress.com; Year Founded 1993. Flight Express is established at Orlando in early **1993** as a FAA Part 135 all-cargo carrier. John Kirchhoefer is president, with Brian Smith as director of operations and Doug Flescher as chief pilot. Revenue operations commence with a fleet that includes 17 Cessna 210s, 5 Beech Barons, 7 Piper Cherokee Sixes, and 1 Cessna 182.

By **2000**, Mr. Flescher is director of operations and the fleet has been increased by the addition of 16 C-210s, 7 Barons, 2 Cessna 172s, and 2 Mooney M20s. One Cherokee Six and the C-182 have been withdrawn.

FLIGHT INTERNATIONAL AIRLINES: United States (1984–1985). In May **1984**, Aerostar is purchased by Atlanta-based Flight International Group (FIG), which plans to establish its own charter business. For several months, while the latter awaits government approval for a merger, Aerostar's Boeing 727-100 is able to continue to offer charters and the fleet is increased by two B-727-121s chartered from the leasing division of **Pan American World Airways (1)**.

Late in the year, with DOT approval, Aerostar is renamed Flight International Airlines and Daniel Bradford is appointed president of the new 79-employee entity. Under both names, the company transports a total of 704,994 customers.

Early in **1985**, FIA applies for scheduled authority and receives a fourth B-727-121 courtesy of Pan Am. Four-times-per-week service is inaugurated between Baltimore (BWI) and holiday destinations in the Bahamas and Caribbean and daily from Seattle and Portland to Reno and Las Vegas.

In May, permission is received for the launch of operations to Mexico and the Bahamas from Boston. Overexpanded, FIG is forced to shut down its charter division in October after transporting 272,000 passengers. The company, after returning its Boeings, does, however, continue to operate its aircraft sales and leasing activity and to train pilots.

FLIGHT LINE: United States (1983–1985). Jackson, Mississippi-based **Miller Airtransporters** is renamed Flight Line in **1983**. President William Hegman IV's company employs 1 Handley Page HP-37 Jetstream, 1 Piper T-1040, 1 Beech Super King Air 200, 1 Piper PA-31-350 Navajo Chieftain, 1 Cessna 402, and 4 Beech B-58 Barons. The company's base is linked with Columbus, Greenwood, Laurel, Hattisburg, Oxford, Tupelo, Memphis, Atlanta, New Orleans, Birmingham, and Destin.

The workforce in **1984** totals 25 and the fleet includes 2 Cessna 402s, 1 Jetstream, 1 King Air, and 1 T-1040. In June, Essential Air Service (EAS) scheduled service is launched between Columbus and Starkville, between Oxford, Jackson, and Tupelo, and between Greenwood and Memphis.

Over the next 6 months, 1,678 passengers and 4,500 pounds of freight are flown.

On February 13, **1985**, as the result of an on-site inspection, the third-level operation is accused by the FAA of violating FAR Part 135 regulations. Flight Line voluntarily closes down for nine days to clear its record and safeguard its subsidy.

President Hegman resigns and is succeeded by Dennis Miller, executive vice president.

Renamed **Southern Airways**, the carrier resumes flying on February 22. EAS officials now pay close attention to the company's traffic levels. In March, the regulators charge the carrier with over 1,000 FAR violations and rather than wage a costly battle to regain certification, the company shuts down permanently.

FLIGHT MANAGEMENT: 7600 E. Apache, Hangar 22, Tulsa International Airport, Tulsa, Oklahoma 74115, United States; Phone (918) 834-3240; Fax (918) 834-3250; Year Founded 1989. Flight Management is founded at Tulsa in **1989** to provide executive and small group passenger charters throughout the Western Hemisphere. By **2000**, the company employs six pilots and operates a mixed jet, turboprop, and piston-engine fleet that includes one each Cessna 501 Citation I, Learjet 25, Beech Super King Air 200, King Air 90, Beech 58 Baron, and a Mitsubishi Mu-2.

FLIGHT REFUELING, LTD.: Brook Road, Wimborne, Dorset, England, BH21 2BJ, United Kingdom; Phone 1202 882121; Year Founded 1932. Sir Alan Cobham, famous for his long-range flights and proving surveys made on behalf of **Imperial Airways, Ltd.**, forms this concern at Ford Aerodrome in England in **1932**, primarily as a way to keep his Flying Circus team together during the winter seasons.

Cobham has been convinced that long-range commercial service was technically and fiscally possible with current aircraft if only a safe manner could be found to refuel them en route to their destinations. Much of his thinking is inspired by the success of the U.S. Army Air Corps Fokker C-2A *Question Mark*, the military version of the commercial F-VIIA/3m. Flown from Burbank on January 7, 1929, by Maj. Carl Spaatz, Capt. Ira C. Eaker, and Lt. Elwood R. Quesada, the trimotor, refueled in-flight, had set an unofficial endurance record by remaining aloft for just over six days while flying over its circular California course.

Determined to try out the refueling concept in a nonstop flight from England to India, Sir Alan acquires the use of several Handley Page W10 tankers and an Airspeed AS.5 single-engine Courier monoplane. Departing Portsmouth Airport early on September 22, **1934**, the flyer, with RAF Squadron Leader Helmore as passenger, refuels in flight over Selsey Bill in southern England. The little aircraft proceeds to a second rendezvous off Malta. Although the two aircraft are able to approach, a broken throttle connection on the Airspeed prevents the vital synchronization of speed required for the one plane to pump gas into the other. Out of fuel and with his engine sputtering, Sir Alan is able to make a forced landing at Halfar, barely avoiding disaster.

Despite his near-loss at Malta, Cobham remains convinced of the possibilities for in-flight refueling and campaigns with Air Ministry and **Imperial Airways, Ltd.** officials to be given a chance to try his concepts on a larger scale.

During the summer of **1937**, Cobham is able to acquire the Armstrong Whitworth AW.23 bomber-transport prototype on loan from the Air Ministry for preparatory trials aimed at proving his theories.

On January 23, **1938**, the AW.23 refuels the Short S23 Empire flying boat *Cambria* in the first British flying boat in-flight refueling test. The demonstration, made offshore from Southampton, illustrates the possibility of extending the transatlantic range of British aircraft. Cobham now acquires three former RAF Handley Page Harrow transports for conversion into tankers. Their purchase is made possible by a contract with **Imperial Airways, Ltd.**, which plans to employ four stripped-down Short S23s to make a series of transatlantic proving flights the next year.

In the spring of **1939**, a Harrow tanker plane is prepositioned at Shannon, Ireland, while two others are sent out to Hatties Camp, the new base built by the Canadians in Newfoundland (and later known as Gander). The S23s *Cabot*, *Caribou*, *Connemara*, and *Clyde* commence the return proving flights in June. At appointed rendezvous points, the Harrows come over the flying boats, dropping down long hoses that are guided in to dispense 800 gallons of fuel in just 12 minutes of formation flying. A total of 15 trips are completed before the outbreak of war in September brings them to a halt.

Not all of the in-flight activities have been without incident. One flight cannot be serviced in flight because poor weather keeps the tanker from finding its flying recipient. On five occasions, fuel in some quantity has leaked from the refueling hoses into the hulls of their intended targets, requiring crewmen soak up the bilge and keep it in containers. Capt. Kelly Rogers, who has overseen the long-range flights for **Imperial Airways, Ltd.**, details in his November summary report his concern for the obvious safety risks involved in in-flight refueling. Although he hopes transatlantic flights will shortly resume, he emphatically states: "Flight refueling in connection with a passenger service would be out of the question."

With the end of the **Imperial Airways, Ltd.** tests and the outbreak of war, Flight Refueling, Ltd.'s contract ends and the company is required to transfer from Ford Aerodrome to the Morgan Motor Works in Malvern during **1940**. The company's activities are very low-key during World War II. The major experiment involves an unimplemented idea for the airborne towing of Spitfire and Hurricane fighters.

In **1946**, the company is able to return to Ford Aerodrome and acquire a new fleet. Two converted Avro Lancasters give a demonstration of aerial refueling during the year's SBAC Flying Display at Radlett.

On May 28, **1947**, Chairman Cobham, accepts a contract from the British Ministry of Civil Aviation to undertake a series of refueling experiments for commercial airliners on long-distance flights. In the first of 22 missions, Cobham and Air Vice Marshal D. C. T. Bennett fly an Avro Lancastrian, borrowed from **British Overseas Airways Corporation (BOAC)**, nonstop from London to Bermuda. A Lancaster tanker from the Azores refuels the aircraft in flight over Bermuda with 1,700 gallons of avgas. Although the tests are largely successful, in-flight refueling is not seen as a practical answer to transatlantic commercial service.

Tests are conducted over the North Atlantic in **1948**, the same year in which the company moves to Tarrant Rushton. When the Berlin Airlift begins in the spring, Flight Refueling has 13 converted Lancaster tankers, which are all contracted to fly fuel to the former German capital. As frequencies are increased, the number of personnel employed on the ground to maintain the tanker fleet grows to 652.

An Avro 691 Lancastrian 3 tanker with four crew and four passengers is lost while on initial approach to Conholt Park, U.K., on November 22; there are no survivors.

Flight Refueling's tanker fleet finishes its commitment to the Berlin Airlift in the spring of **1949**.

In March, a USAF Boeing B-50A, the *Lucky Lady II*, makes a record 94-hr. nonstop around the world flight employing the "looped-hose" in-flight refueling equipment developed by the company during its civil tests three years earlier.

An Avro 691 Lancastrian XPP with four crew is lost near Schiveria, Germany, on May 10; there are no survivors.

The company continues its in-flight refueling experiments in the early **1950s**, concentrating on increasing the endurance of jet fighter planes. The last piston-engine tankers employed are former RAF Avro Lincolns.

In these years and in the two decades that follow, the company largely abandons experimental aviation in favor of the manufacture of air-to-air refueling systems, remotely piloted vehicles and drones, fuel system components, towed targets, external fuel tanks, and other components. In addition, various aircraft are repaired and overhauled, including many for the Belgian Air Force. The RAF No. 210 Advanced Flying School is the only jet training unit serviced by a civilian company.

Chairman Cobham sees national vindication of his work in 1958 when the RAF establishes its first dedicated tanker unit, No. 214 Squadron.

Michael Cobham, son of the founder, becomes deputy managing director/CEO in 1961. During the early 1960s, a new factory is constructed at Wimborne. This activity consumes the founder's attention until his retirement in 1969. Michael Cobham becomes both managing director and chairman.

Sir Alan dies at his home, "The Willows," on October 21, 1973.

In 1980, the company's flying activities are transferred to Bournemouth International Airport. All of the company's diverse operations are placed under the control for FR Group plc, in 1982.

In 1985, an airfield and flight operations division is created; **FR Aviation, Ltd.** is established at Bournemouth International Airport to operate contracts on behalf of the military, as well as environmental and fisheries surveillance with a fleet of Dassault Falcon 20s.

The founder's reminiscences are published in the U.S. in 1986, *A Time to Fly: The Memoirs of Sir Alan Cobham* (Concord, Mass.: Paul & Company Publishers Consortium).

Later, in November 1994, FR Group, after having taken over a number of French and U.S. concerns, including its principal American rival Sargent Fletcher, is renamed Cobham plc.

Knighted upon his retirement as group chairman, Michael Cobham remains president in 1995. With the integration of the Fletcher operation, Cobham enjoys a near-monopoly on air-to-air refueling technology.

Sir Michael Knight becomes the new chairman, with Gordon F. Page as managing director.

In 1996, the group commissions Colin Cruddas to prepare the memorial volume *Cobham: The Flying Years*, which is published by Chalford in 1997.

A part of the Cobham Group, Flight Refueling in 1998 employs 850 people, exclusive of **FR Aviation, Ltd.**, with Cobham Group Managing Director Page as chairman and R. H. L. Clark as managing director.

Annual revenues average £50 million. Service is continued in 1999–2000.

FLIGHT SERVICES GROUP: Sikorsky Memorial Airport, 1000 Great Meadow Road, Stratford, Connecticut 06497, United States; Phone (203) 380-4009; Fax (203) 380-4063; Year Founded 1982. William Juvonen establishes FSG at Stratford, Connecticut, in 1982 to offer charter passenger and cargo services and contract flights. Chairman Juvonen and President David C. Hurley recruit a workforce of 50 and begin service with a fleet that grows over the next decade to include 1 Piper PA-31T Cheyenne, 1 Beech King Air 90, 1 King Air 100, 3 Cessna Citation IIs, 1 Gates Learjet 35A, 1 Learjet 36, 1 Westwind I, 1 Learjet 55, 1 Citation III, 1 Dassault Falcon 20, 1 Falcon 50, 2 Canadair Challenge 601/3As, and 4 Boeing 737-100s.

Operations continue and by 2000, the workforce includes 55 full-time and 10 part-time staff.

FLIGHT TRAVEL SERVICE, GmbH: Germany (1980–1990), Düsseldorf-based executive charter operator City Flug establishes this scheduled carrier in January 1980 to take over a former **DLT (Deutsche Luftverkehrsgesellschaft mbH.)** route from Frankfurt to Paderborn and Lippstadt. The initial fleet comprises a single Fairchild-Swearingen Metro II. Within five years, Managing Director Lothar Nilsch's fleet has been increased to two Metro IIs, a Merlin, a Cessna Titan, and a Cessna Conquest.

Munich is added as a new destination in 1986.

Jürgen Appenowitz is appointed general manager in 1988. The fleet is altered to comprise an Avions de Transport Regional ATR42-200, a Nord 262, and a single Metro II.

Frankfurt is added to the route network in early 1989.

Unable to cover expansion expenses during a time of airline recession, the company ceases trading in 1990.

FLIGHT WEST AIRLINES (PTY.), LTD.: P.O. Box 1126, Eagle Farm, Brisbane, Queensland, 4009, Australia; Phone 61 (7) 3212-1212; Fax 61 (7) 3212-1299; <http://www.fltwest.com.au>; Code YC; Year Founded 1987. After making a successful bid for western Queensland routes eliminated by **Australian Airlines (Pty.), Ltd.** upon its takeover of **Air Queensland (Pty.), Ltd.**, Sir Dennis Buchanan and his family, which also owns **Air Melanesie, Ltd.** and **Talair (Tourist Airlines of Niugini, Ltd.)**, establish Flight West at Brisbane in May 1987. There are only 13 days between the company's establishment and route award and service start-up.

Equipped with three leased Beech Super King Air 200s named for Queensland pioneers—two of which are leased from **Skywest Airlines (Pty.), Ltd.**—the company undertakes scheduled and nonscheduled frequencies, beginning on June 1. The 17-point route network runs from the Gold Coast and Surfers' Paradise in the south to Cape York, far to the north in Queensland. In September, the company takes over the Gulf of Carpentaria area routes abandoned by **Air Queensland (Pty.), Ltd.** Another Super King Air and a Beech 58 Baron are acquired to assume these services.

Early in 1988 a hub is established at Cairns and a fifth and sixth Super King Air are delivered. Among the destinations now served are Whitsunday, Lizard, Grat Keppel, Magnetic, Bundaberg, Rockhampton, Gladstone, Townsville, and Mackay. A contract is signed to provide lift for the Queensland Flying Surgeon and Flying Gynecologist services. The latter employs three newly acquired Beech 58 Barons, with two stationed at Longreach and the third at Roma.

General Manager Scott McMillan adds three Embraer EMB-110P1s in 1989. The company enters into a code-sharing agreement with **Ansett Airlines of Australia (Pty.), Ltd.** to provide feed off of its Cairns–Brisbane route.

In October, **Air Melanesie, Ltd.** is closed down and its two de Havilland Canada DHC-6-300 Twin Otters are transferred to Flight West's Gulf and Cape operations. Also during the fourth quarter, contracts for "fly-in, fly-out" charters are received from mining concerns for flights between Cairns and Chillagoe and from Townsville to Mount Selwyn.

Flight West undergoes a major reorganization in 1990. Sir Dennis assumes the managing directorship, with Graham Vonhoff as general manager and Scott McMillan as finance director. New offices are opened at Cairns, Mount Isa, and Townsville, while in January, a new hangar and administration facility are opened at Brisbane.

The fleet is upgraded by the addition of two King Air 200s, three Beech B-55s and two more Bandeirantes. In May, an EMB-120 Brasília, the first of its type to enter service in Australia, is delivered. A DHC-8-100 is acquired from **Talair (Tourist Airlines of Niugini, Ltd.)** in August.

When Norfolk Airlines Group goes under, Flight West is allowed to pick up several Queensland routes, including those to the Torres Strait Islands. A second Brasília arrives in November, along with a Bandeirante, the latter from **Talair (Tourist Airlines of Niugini, Ltd.)**. A new daily, one-way DHC-8-100 service is introduced in December from Brisbane to Cairns via Gladstone, Rockhampton, Mackay, and Townsville.

Paula Cox replaces Graham Vonhoff as general manager in 1991 and orders are placed for another DHC-8-100, two Brasília's, and a British Aerospace BAe 146. The Brisbane–Cairns roundtrip service is increased to twice daily and similar frequencies are introduced over the roundtrip Cairns–Townsville route.

In June, a new EMB-120 daily roundtrip is offered from Brisbane and Coolangatta to Canberra. At the same time, a second DHC-8-100 is received from Talair and is based at Cairns.

Having been quickly countered by **Ansett Express (Pty.), Ltd.** and Australian Airlink services, Flight West's interstate debut is cancelled after just six weeks.

In September, the company receives the North Queensland Tourism Award in the category of "Tourist Transport."

A total of 127,828 passengers are carried on the year.

In 1992, airline employment stands at 260 and the Beech B-55s are replaced by another EMB-120, another EMB-110P1, and two Pilatus-Britten-Norman PBN-2 Islanders.

In March, the company joins Ansett's frequent flyer program.

Passenger boardings jump 9.8% this year to 233,029.

Ten new employees are hired in 1993 and the fleet now includes 6 EMB-110P1s, 3 Brasilias, and 2 each EMB-110P2s, DHC-6-300s, and DHC-8-102s. Orders are placed for 2 EMB-145s.

Services link Brisbane with Aurukun Mission, Badu Island, Bamaga, Barcaldine, Birdsville, Blackall, Boigu Island, Burketown, Cairns, Charleville, Charles Towers, Cloncurry, Coen, Coconut Island, Darnley Island, Doomadgee Mission, Edward River, Gladstone, Horn Island, Hughenden, Julia Creek, Karumba, Kowangama, Kubin Island, Lockhart River, Longreach, Mabuiang Island, Mackay, Mornington Island, Mount Isa, Murray Island, Mormanton, Quilpie, Richmond, Rockhampton, Roma, Sabai Island, Thursday Island, Townsville, Warraber Island, Weipa, Windora, Winton, Yam Island, and Yorke Island.

Thrice-daily service is inaugurated in May from Brisbane into Bundaberg and twice-daily flights from Brisbane to Hervey Bay. Another Brasilia is delivered in September and support for the Flying Gynecologist Service ends in December.

Enplanements for the year total 250,664.

The workforce is increased by 3.6% in 1994 to 285. Yet another Brasilia is acquired in January. On January 24, all of the company's various departments are consolidated in a new headquarters at Brisbane Airport.

In November, a DHC-6-300 is chartered to **Solair (Solomon Islands Airways, Ltd.)**.

Customer bookings ascend 8.7% to 274,549 and revenues swell 9.9% to \$A41.2 million.

The fleet in 1995 includes 5 Beech Super King Air 200s, 8 EMB-120 Brasilias, 13 Bandeirantes, 2 DHC-8-102s, 1 of which is leased to **Ansett New Zealand, Ltd.**, and 8 DHC-6-100s, including that 1 with Solair. Two EMB-120 Brasilias are added, one each in January and June.

On October 9, Brisbane to Moree (NSW) Beech Super King Air 200 roundtrips commence five times a week.

When the second Brasilia arrives in late November, it is painted in the livery of the North Queensland Rugby League Club, which the airline helps to sponsor.

On December 10, the Brisbane to Moree service is increased from three to five weekly roundtrips, while the daily Beech Super King Air 200 service from Brisbane to Maroochydore is replaced and increased by five Twin Otter daily services on weekdays, three on Saturdays, and four on Sundays. These de Havilland flights are code-shared with **Ansett Australia (Pty.), Ltd.** Passenger traffic increases 19.2% with 310,000 passengers carried.

Airline employment stands at 320 in 1996 and several changes are made in the fleet. Another Brasilia is acquired and six DHC-6-300s are removed, one of which remains out on lease to **Solair (Solomon Islands Airways, Ltd.)** and another to the RAAF. Both of the DHC-8-102s are now chartered to **Ansett New Zealand, Ltd.** and four Bandeirantes are also leased to the RAAF.

Orders are placed for four EMB-145 regional jets as, in November, the State Cabinet approves a new five-year contract for Flight West to continue serving all of the Western Queensland ports covered by the previous agreement and adding a new route from Brisbane-Toowoomba-St. George-Cunnamulla-Thargomindah.

Customer bookings move up 5.6% to 301,413.

The workforce drops 15.6% in 1997 to 270. Twelve-times-a-week EMB-120 return service is inaugurated on March 30 between Brisbane and Prosperine. These new services replace those currently operated by **Ansett Australia (Pty.), Ltd.**, and will be code-shared with them. When **Ansett Australia (Pty.), Ltd.** embarks upon a fleet rationalization program in May, it sells four F.28-4000s to Flight West. The company procures traffic rights to all of Ansett's flights north of Brisbane to Papua New Guinea for the next five years.

The first two Fokkers arrive in their white and green livery during late June; they are christened with the two longest names on any aircraft in scheduled commercial service: *Wing Commander R. H. (Bobby) Gibbes' D.S.O. D.F.C. and Bar, Post World War II Papua New Guinea Pioneer Aviator, Farmer, & Entrepreneur* and *Sir John Guise' GSMG, KBE, KstJ., A Founding Father of a Nation—Papua New Guinea*.

The company expands further on July 1 when it begins Townsville to Port Moresby roundtrips, four times per week. In addition, the decade-old Brisbane-based regional takes over AA's thrice-weekly roundtrip route from Brisbane to Norfolk Island, out in the Tasman Sea, operating it with the two new Fokkers. Other new routes inaugurated include weekly one-day out, one-day back service from Brisbane to Longreach, and weekly return flights from Townsville to Cloncurry and Brisbane to Roma. F.28-4000 roundtrips to Port Moresby from Cairns are announced for October and plans are made to establish connections to Lae and Mt. Hagen.

Enplanements for the year decline by 3.4% to 291,212.

As the result of a long-standing dispute between the government of Papua New Guinea and Chairman Buchanan concerning the termination of **Talair (Tourist Airlines of Niugini, Ltd.)** years earlier, Flight West's application to serve the country is not approved until August 1, 1998. As the regional prepares to launch service, it is tapped to become general sales agent for **Ansett Australia (Pty.), Ltd.** in Papua New Guinea.

Employing F.28-4000s, the carrier is able to inaugurate eight-times-a-week service from Cairns and Townsville to Port Moresby on October 12.

It is announced the following month that the company will install Honeywell traffic collision avoidance systems (TCAS) in 12 turboprop and jet aircraft by the end of 1999, including its EMB-120s in which it is not, by government regulation, required.

Customer bookings climb to 326,000.

By the start of 1999, airline employment has been boosted 25.9% to 340. Beginning on February 1, **Ansett Australia (Pty.), Ltd.** places its "AN" code aboard Flight West roundtrip flights operating from North Queensland to Port Moresby. Twice-weekly F.28-4000 roundtrips commence on May 1 between Brisbane and Emerald, Queensland, replacing two turboprop services. F.28-4000 roundtrips are offered, starting on June 29, between Brisbane, Sydney, and Norfolk Island, four times a week.

Twice-weekly F.28-4000 return morning service is initiated, beginning on July 19, from Brisbane to Port Moresby, Papua New Guinea.

In early August, as an experiment, the carrier introduces completely standard fares on two of its Queensland coastal routes, with no cancellation or change penalties charged.

Beginning on August 9, the company offers a standard fare on two coastal flights; both are devoid of change or cancellation penalties. Eleven weekday F.28-4000 roundtrips are inaugurated between Townsville and Mt. Isa on September 6, while an EMB-120 offers a single Saturday flight.

Passenger boardings accelerate 3.6% to 338,000. Airline employment at the beginning of 2000 stands at 350, a 2.9% increase over the previous 12 months.

Beginning on October 12, passengers are able to employ the **Ansett Australia (Pty.), Ltd.** E-check-in machines that were installed at the domestic terminals at Melbourne, Sydney, and Brisbane in August.

On November 22, it is announced that the company will introduce a fifth weekly return service from Sydney to Norfolk Island at the end of March.

At year's end, plans are announced for the initiation of twice-weekly Fokker 100 roundtrips between Brisbane and Proserpine beginning on February 12. One-way fares for the route are to be reduced 75% to A\$99.

FLIGHTCRAFT: 7505 N.E. Airport Way, Portland, Oregon 97218, United States; Phone (503) 331-4244; Fax (503) 331-4247; Year Founded 1948. One of the largest and oldest FBOs in the Pacific

Northwest, Flightcraft, established in **1948**, is also, by **2000**, one of the region's largest charter operators. Employing 20 full-time pilots, the company bases a large fleet of business aircraft at three airports along the Pacific coast.

From the home field at Portland, Flightcraft operates three Beech King Air 90s, a Super King Air 200, a Beech 58 Baron, and four Cessna Citation executive jets. Further north at Seattle, the concern bases a Super King Air 200, a King Air 90, and a Cessna C-525 Citation. Simultaneously, company pilots fly two Super King Air 200s and a Cessna 421 from Hayward Air Terminal in California.

FLIGHTLINE, LTD.: Viscount House, Southend Airport, Southend-on-Sea, England, SS2 6YE, United Kingdom; Phone 44 (1702) 543 000; Fax 44 (1702) 547 778; <http://www.bathtravel.com/palmair.html>; Code B5; Year Founded 1989. Owned by Flightline Holdings, Flightline, Ltd. is established at Southend Airport in **1989** to offer charter services. Ian Stewart is appointed chairman and Alan Trotter is named managing director; the new concern begins domestic flights with one each Beech King Air 90 and Beech Super King Air 200.

Operations continue into the new decade and, in **1993**, the fleet is increased by the addition of two Embraer EMB-110P-1 Bandeirantes. In April, a British Aerospace BAe 146-300 is leased from Asset Management Organization and enters charter service in a joint venture, Palmair Flightline, with R. E. Bath Travel Service, Ltd.'s in-house tour operation.

During **1994**, orders are placed for two BAe 146s with which to expand nonscheduled flights to the continent. The jetliners, first flown by **Pacific Southwest Airlines (PSA)**, will be chartered from USAir Leasing and undergo overhaul at the Calgary, Alberta, base of **Canadian Regional Airlines, Ltd.** It will then be ferried 5,000 miles across the Atlantic to the Marshall Center at Cambridge for U.K. certification work, and only then handed over for the airline's use.

The two jetliners arrive in **1995**. The first, a 146-200, is dedicated to the Palmair Flightline joint venture service with R. E. Bath Travel Services, Ltd. The second, a 146-300, begins flying to Zurich and Geneva on behalf of the Swiss agency Falcon Travel, Ltd. While the main runway at Stuttgart Airport is closed for repairs between July 31 and October 4, the BAe 146-200 is chartered to **British Airways, Ltd. (2)**, which employs it to replace its four normal daily B-737 services to the German airport from London.

Airline employment stands at 85 in **1996**. From hubs at Bournemouth, Exeter, London (STN) and Southampton, Flightline operates nonscheduled flights to summer destinations in the Mediterranean and the winter ski resorts and holiday points at Alicante, Chambery, Faro, Geneva, Innsbruck, Jersey, Malaga, Palma de Mallorca, Pula, and Zurich. Enplanements reach 190,000.

Both of the carrier's BAe 146-200s are chartered to **British Airways, Ltd. (2)** at the beginning of **1997**, with the major employing them on services from London (Gatwick) to Toulouse and Bordeaux. The lease on one is extended on July 1, however, the second is returned to Falcon Travel, Ltd. for use on scheduled charters from Zurich and Geneva to London's Southend Airport. Enplanements for the year total 167,700.

Service continues apace in **1998**. The Palmair Flightline commitment continues. At the end of the year, arrangements are made to lease a BAe 146-200 to **Aer Lingus Commuter (Aerlinite Eireann Tiorante, Ltd.)** during the following March. Customer bookings fall 30% to 129,000; 9,000 FTKs are operated.

Flightline makes a major expansion commitment during the first quarter of **1999** when it signs franchise agreements with both **Swissair, A.G.** and **Lufthansa Cityline, GmbH**. Under terms of the first pact, the Flightline paints one of its BAe 146-200s in the colors of "Swissair Express" and, with the beginning of the European summer schedule on March 28, launches twice-daily roundtrips between London (STN) and Zurich.

As the seventh and newest member of "Team Lufthansa," the company employs a second BAe 146-200, reclaimed from **Aer Lingus Commuter, Ltd.** and painted in the livery of the Lufthansa organization,

to simultaneously begin six months of replacement operations for Cityline from Dusseldorf to Birmingham, Budapest, Helsinki, and Nice. A third BAe 146-200 is dedicated to the summer charter schedule of Palmair Flightline.

Following the October 1 failure of **Debonair Airways, Ltd.**, Flightline, on October 14, purchases a 25% stake in the defunct carrier. Over 100 Debonair jobs also transferred along with three of the carrier's BAe 146-200s as Flightline restarts Debonair's "Swissair Express" contract on October 26. When the European winter schedule begins on October 31, daily return frequencies to Bologna are increased from three to four, while those to Turin are cut from four to three.

Two BAe 146-200s are wet-leased to **Aer Lingus Commuter, Ltd.** on November 1.

Customer bookings this year plunge 43.5% to 74,000.

In February **2000**, **Swissair, A.G.** sells its truck service between Zurich and northern Italy and replaces its with direct air cargo flights, employing the belly space of the "Swissair Express" frequencies operated by Flightline from the Swiss city to Bologna, Venice, and Turin.

On April 12, a company British Aerospace BAe 146-200 begins wet-lease flights on behalf of **Croatia Airlines** for the summer season. The charter had been arranged by Airbus Industrie to cover the late delivery to Croatia of another A320. On July 1, dissatisfaction with the airliner results in its being returned.

On October 29, **Volare Airlines, S.p.A.** takes over the "Swissair Express" service between Venice and Zurich previously operated by Flightline with a BAe 146-200.

A BAe 146-200 is wet-leased to the new Italian regional **Goldwing Airlines, S.p.A.** in mid-December, allowing that carrier to inaugurate daily roundtrip service between Taranto and Rome on December 20. Within days, Goldwing returns the British aircraft and begins using a SAAB 2000 wet-leased from **Med Airlines, S.p.A.**

FLIGHTSTAR CORPORATION: 7 Airport Road, Savoy, Illinois 61874, United States; Phone (217) 351-7700; Fax (217) 351-9843; <http://www.flightstar.com>; Year Founded 1978. Flightstar is set up as the FBO at Savoy, Illinois, in **1978**. Over the next 12 years, the company also undertakes a variety of executive and small group passenger charters throughout the Western Hemisphere with a fleet of 2 Dassault Falcon 20s, 2 Beech Super King Air 200s, and 1 Piper PA-60 Aerostar.

FLIGHTWAYS AIR SYSTEM: United States (1974-1975). The Flightways Corporation, based at Philadelphia, establishes a commuter airline division in early **1974** to provide services to New York (JFK), as well as the airport at Wilmington, Delaware. Daily de Havilland DH 114 Heron roundtrips are duly inaugurated, but can only be sustained for a year.

FLINDERS ISLAND AIRLINES (PTY.), LTD.: Australia (1945-1990). Formed at Moorabbin Airport, Mentone, Victoria in **1945**, Flinders Island undertakes charter and contract passenger and cargo services throughout Australia, with emphasis on Victoria, Tasmania, and New South Wales. Unheralded, flights are maintained on a regular basis during the remainder of the decade and through the next three.

By the early **1980s**, the company's fleet comprises 2 Piper PA-31-350 Navajo Chieftains, 1 Piper PA-31-310 Navajo, 1 Piper PA-34 Seneca, and 1 Beech 18. Two more Navajo Chieftains plus one more Seneca and one more Navajo are added in the next several years; however, the carrier is unable to maintain its economic viability and is forced to shut its doors in May **1990**.

FLIRITE: United States (1984-1985). Marilyn L. Baker establishes Flirite at Kodiak, Alaska, in the fall of **1984** to provide scheduled passenger and cargo service to Old Harbor. Employing a Cessna 206, revenue flights commence in November. Operations continue apace for just over a year, but, unable to maintain viability, the little commuter folds in December **1985**.

FLITESTAR AIRLINES, LTD.: South Africa (1991–1994). With G. A. Nortje as general manager, Safair Lines (Pty.), Ltd. is organized at Cape Town's Malan Airport in 1989 as a rebirth of the noted onetime charter operator, **Trek Airways, Ltd.** Outfitted with a fleet comprising 2 Convair CV-580s and 1 Partenavia P-68B, the reborn pioneer now initiates scheduled passenger and cargo services to Oudtshoorn, George, Port Elizabeth, Alexander Bay, Luderitz, and Bloemfontein. A stop at Walvis Bay is added in 1990.

In October 1991, following the deregulation of the nation's air transport industry, Safair Lines, Ltd. is reformed and renamed Flitestar Airlines at Johannesburg to compete with **South African Airways (Pty.), Ltd. (SAA)**. Flitestar is owned by the financial concerns Rentmeester Investments and Muelkin, plus the giant shipping firm South African Marine Corporation (Pty.), Ltd. (Safmarine). Jan V. Blake is managing director and many of his personnel were once associated with the noted South African international charter carrier, **Trek Airways, Ltd.** The company organization provides for a holding company under the Trek name; thus, Flitestar can be seen as a continuation of that carrier.

Chairman G. A. MacMillan and Managing Director Blake assemble a fleet comprising 2 chartered Avions de Transport Regional ATR72-210s and 3 Airbus Industrie A320-212s leased from the GPA Group. The domestic challenge to SAA begins almost immediately as Flitestar inaugurates A320-212 services from Johannesburg to Cape Town on October 16. Services from Johannesburg and Cape Town to Durban and Port Elizabeth commence a week later. Flights to Bahrain begin in November and another A320-212 arrives in December.

Destinations served from Johannesburg include Cape Town, Durban, George, Port Elizabeth, Alexander Bay, and Walvis Bay.

In 1992, the 1,000-employee carrier acquires the smaller airlines **Air Cape (Pty.), Ltd.** and **Luxavia** (now **Luxavia Express, S.A.**) and they continue their operations as subsidiaries of Trek Airways Holdings.

It is reported in the Middle East press on April 28 that negotiations have been completed and that Flitestar will commence operations in October from Johannesburg to Bahrain via Mombasa. It will be the South African carrier's first international route.

Interavia Air Letter reports in its May 22 issue that the company, by May 19, has reached the 57% load factors required to break even. The airline in seven months has successfully captured 20% of the South African domestic market.

Following the positive conclusion of a three-month legal battle with **South African Airways (Pty.), Ltd.**, Flitestar receives a license from the South African National Transport Commission on June 15 to inaugurate services between Johannesburg and Mombasa in September.

G. A. Nortje returns as general manager and his company suffers heavy financial reversals during the remainder of the recession year as SAA pours additional capacity onto its domestic routes to overwhelm the independent. Additionally, pressure on yields and the devaluation of the rand against the U.S. dollar, in which most of Flitestar's leasing and other costs are paid, ends the previous spring's hope of profits. As the situation worsens for Flitestar the government does not interfere. The company is unable to launch its new international services and runs up large debts.

Enplanements total 400,000.

In January 1993, Prime Minister De Klerk's regulators require SAA to cut back capacity on domestic trunk routes by 30% in an effort to save Flitestar. Unhappily for General Manager Nortje and his employees, these measures come too late and the airline is forced to suspend operations in mid-April. Sufficient funding is found and Flitestar is able to resume limited domestic operations on September 1.

In cooperation with **Luxair (Societe Luxembourgeoise de Navigation Aerienne, S.A.)**, the international route to Europe once flown by Trek Airways, Ltd., is reopened. It is operated by the Luxair Boeing 747SP-44 *Luxavia Star*, which wears the old **Trek Airways (Pty.), Ltd.** color scheme with small Luxair titles on the forward fuselage.

Services continue apace in early 1994 and, in March, the company receives authority from the Indian government to inaugurate twice-weekly

flights from Johannesburg to Bombay and/or Trivandrum. On April 11, Flitestar, in desperate need of support, signs a commercial agreement with **South African Airways (Pty.), Ltd.** The arrangement puts an end to Flitestar's attempts to compete head on with SAA on domestic trunk routes. The holding company, Trek Airways, withdraws from the market after the flag carrier provides a multimillion rand payment. Shareholders shut down both Flitestar and **Luxavia, S.A.** on April 20, thereby bringing South Africa's experiment with deregulation perilously close to failure.

FLOAT AIR PICTON (1992), LTD.: P.O. Box 7, Picton, New Zealand; Phone 3-573-6433; Fax 3-573-5711; Year Founded 1992. John Sinclair and two other shareholders establish Floatair at Wellington, New Zealand, in March 1992. Equipped with a pair of float-equipped Cessna 180s (hence the name), the tiny airline begins regularly scheduled flights to Great Barrier and Stewart Islands.

Having borrowed significant funds and caught by rising interest rates, the company is unable to compete when fast island ferryboats are introduced. As a result, the carrier declares bankruptcy in early 1996 and sells out to **Soundsair, Ltd.** which operates it as a subsidiary. In 1997, Garth Nicholls is managing director and chief pilot; he oversees a workforce of 12 and the operations of two float-equipped de Havilland Canada DHC-2 Beavers. Revenues reach NZ\$500,000.

Flights continue in 1998–2000.

FLORENCE AIRLINES; United States (1969–1974). The scheduled air taxi service **Air Taxi** is established at Florence, South Carolina, in 1969 to provide passenger services to destinations in the Carolinas. Employing one each Piper PA-23 Aztec and PA-32 Cherokee Six, the company duly inaugurates daily frequencies linking its base with Charlotte, Myrtle Beach, and Winston-Salem.

The company is reformed in 1970 and renamed; operations continue apace thereafter until 1974.

FLORIDA AIR; United States (1992). Jack E. Robinson, the former **Eastern Air Lines** commuter president, establishes Florida Air in early 1992. Employing a single Embraer EMB-110P1 Bandeirante, the carrier undertakes scheduled service to Nassau in February. When financing cannot be obtained, the announced March start-up of flights to Tampa is postponed for five months while an order for 19 more Bandeirantes must be cancelled. In late April, the company's lone EMB-110 breaks down in Nassau, stranding a number of passengers and bringing an end to operations.

FLORIDA AIR CARGO: Opa Locka Airport, 3921 NW 144th St., Building 66, Opa Locka, Florida 33054, United States; Phone (305) 687-1080; Fax (305) 681-2168; Year Founded 1994. FAC is established at Opa Locka Airport in 1994 to provide all-cargo charters and contract service flights to destinations from Canada to Mexico. By 1998–1999, the company employs eight pilots and flies two Douglas DC-3s and a Beech 18 in freighter configuration and a Piper PA-23 Aztec.

As the result of a hard landing at Nassau in the Bahamas on February 17 of the latter year, after a service from Opa Locka, Florida, a DC-3 crashes into a fence and receives substantial damage. Neither crewman aboard is injured.

The Douglas is repaired and operations continue into 2000. On February 2, a Beech 18S with a pilot and a passenger en route from Opa-Locka to Bimini suffers the failure of its left engine and is forced to ditch into the Atlantic Ocean 47 mi. E of its destination. Both occupants escape and are rescued less than an hour later by a passing pleasure craft.

FLORIDA AIR TAXI. See FLORIDA AIRLINES (2)

FLORIDA AIR TRANSPORT (FLORIDA AIRCRAFT LEASING CORPORATION): Fort Lauderdale, Florida, United States; Year Founded 1970. Operated as a division of the rental concern Florida

Aircraft Leasing, Florida Air Transport, beginning in **1970**, undertakes contract service and cargo charters from a base at Fort Lauderdale. Equipment employed over the years has included Douglas DC-4s and DC-6s as well as Convair CV-440s.

Operations by President/CEO Thomas E. Boy's concern continue without headline or incident in **1993–1998**.

During December of the latter year, Boy joins with Carlos Gomez to place an immaculately restored DC-7C into service. Painted in an original facsimile of an **American Airlines** paint scheme, the freighter is featured in the September–October **2000** issue of *Airliners*.

FLORIDA AIRLINES (1): United States (1936–1937). FA is formed in Jacksonville in December **1936** to offer scheduled passenger and air express flights to Sarasota via Tampa. A Ford 5-AT Tri-Motor is acquired and revenue services commence on January 2, **1937**. Operations cease at the end of March.

FLORIDA AIRLINES (2): United States (1945–1981). Founded at Sarasota in **1945** as **Florida Air Taxi**, this charter operator elects, in the early fall of **1964**, to initiate scheduled services. Employing Beech 18s and Piper PA-23 Apaches, FAT inaugurates daily roundtrip frequencies on October 30 between Tampa and Fort Myers.

The company changes its corporate identity in **1968**, identifying itself as a provider of scheduled passenger, mail, and cargo services to a number of intrastate destinations. In addition to the Beechcraft and Apaches, FA commences the use of two Douglas DC-3s.

Operations continue apace during the remainder of the decade and into the **1970s**. Between **1970** and **1974**, scheduled frequencies are also initiated to Ocala, Gainesville, Jacksonville.

In **1975**, **Air South** is purchased and merged and the two operate for the next six years as **Florida Airlines-Air South**. Frequencies are offered by 11 DC-3s and 2 Martin 4-0-4s to Atlanta, Miami, Sarasota, Fort Myers, St. Simons Island, Fort Lauderdale, Tampa, and Hilton Head.

Airline employment in **1976** stands at 160 and enplanements reach 22,091.

Enplanements in **1977** increase to 68,899 and a net profit of \$470,940 is earned.

Five additional Martin 4-0-4s are placed into service during **1978** and the DC-3s are retired.

Passenger boardings jump 34% to 104,391. On revenues of \$4.1 million, expenses surge to \$4.3 million and cause a net loss of \$250,000.

When **Eastern Air Lines**, taking advantage of the route-setting provisions of the new Airline Deregulation Act, suspends its Macon route in **1979**, it is assumed by FA; the company also expands to Columbus when **Delta Air Lines** halts its flights to that Georgia community. Passenger boardings for the year leap upward by 54.6% to 161,000.

Florida's oldest commuter experiences a year of traffic disaster in **1980**. Operations are suspended on January 11 to address safety concerns, followed by the loss of a DC-3 in a crash at Grand Bahama Island on September 12.

Customer bookings plunge by 86.9% to 21,063.

In February **1981**, hoping to reverse this slide toward certain extinction, the carrier becomes the second member of the **Air Florida** commuter third-level network. Reorganized, the company, now with David Stempler as president, changes its name to **Southern International** and trades in its previous fleet for four Convair CV-440 Metropolitans. Flights are launched to Key West and the Bahamas Outer Islands.

Fiscal difficulties occasioned by higher fuel costs, recession, and the PATCO air traffic controller's strike, force Southern International, after transporting 88,116 passengers, to cease operations late in the year.

FLORIDA AIRLINES-AIR SOUTH. See **FLORIDA AIRLINES (2)**

FLORIDA AIRWAYS: United States (1943–1949). Organized at Orlando in the spring of **1943** as Orlando Airways, this small charter oper-

ation is renamed upon its receipt of certification from the CAB on March 26, **1946**. Scheduled passenger and air express services are undertaken with Beech 18s in January **1947**, linking the company's base with Tallahassee via Jacksonville and Orlando.

Unable to weather the recession and inflation in fuel prices of the decade's closing years, FA ceases revenue flights on March 29, **1949**.

FLORIDA AIRWAYS CORPORATION: United States (1926). Organized at New York in February **1926** by World War I hero Reed Chambers and long distance flyer John Harding, with a small investment by "Ace of Aces" Capt. Edward V. "Eddie" Rickenbacker and support from a number of prominent bankers, Florida Airways is equipped with a single Stinson Detroiter. The transport of small package express from Atlanta to Miami via Jacksonville, Tampa, Fort Myers, and West Palm Beach, begins on April 1. The pioneer is awarded Contract Air Mail (CAM) Route No. 10 from Atlanta to Miami in May.

In exchange for a block of stock, the Ford Motor Company sells the new entrant four single-engine, eight-passenger Stout 2-Ats. One is named *Miss Miami*, the other *Miss St. Petersburg*; the names of the other two are unknown. The four begin their delivery flight south, stopping at Nashville, where the mass arrival is a cause of celebration and dinners.

When, according to the recollections of Capt. Rickenbacker, the first Stout leads out for a mass departure takeoff for Florida, its tailhook fish-tails on the grass, sending the aircraft toward a group of dignitaries that includes the mayor of Nashville. To avoid catastrophe, the pilot quickly turns his aircraft around—and smashes into all three of the other aircraft. Ford dispatches a crew of mechanics to Nashville, who put all the pieces together again, creating three aircraft that proceed to Florida without incident. There they begin mail and passenger services on June 1.

As the result of negotiations between Rickenbacker and Atlanta's assistant city attorney, William B. Hartsfield, Florida Airways begins scheduled services from Miami via Tampa to Atlanta on September 15, employing the infield of the Atlanta Motor Speedway for an airport. Later in the month, the operator receives public notice by flying support to victims of a Florida hurricane. The Detroiter flies \$2 million in cash to the Bank of Biscayne and also brings in needed medical supplies from Atlanta.

Following the loss of two of the big aircraft, the carrier, down to 2-AT-8 and the Stinson, is left with a route that does not connect with any other and a volume of mail too low to earn sufficient, sustaining subsidy. As a result, FAC discontinues service at the end of the year and the 2-AT-8 is repossessed for assignment to **Stout Air Services**. As of December 31, Florida Airways has safely transported 939 passengers, plus mail, over almost 300,000 miles.

In July **1927**, the remaining company assets, excluding the dormant route, are reformed as **Southeastern Air Lines**. Reed Chambers and his followers change the name of the nonoperating company to **Atlantic, Gulf and Caribbean Airways** on October 11.

On June 25, **1928**, AGCA is one of three companies merged to form **Pan American Airways (PAA)**. The old Florida Airways route is finally taken over by **Pitcairn Aviation** on December 1. Despite its untimely death, the short-lived company is, nevertheless, considered one of the earliest forerunners of the long-time major carrier, **Eastern Air Lines**.

FLORIDA ATLANTIC AIRLINES: United States (1968–1969). FAA is set up at Fort Lauderdale in early **1968** to offer scheduled daily roundtrip passenger flights to Miami and to Freeport in the Bahamas. The company duly inaugurates this route employing a Beech 18 and a de Havilland Canada DHC-6-100, while also stretching service from Miami to Freeport.

By **1969**, the company is claiming to operate more flights per day between Florida and Freeport than any other airline. These frequencies do not, however, generate the traffic and income to keep the airline in business beyond year's end.

FLORIDA CARIBBEAN AIRWAYS: United States (1970–1971).

FCA is established at Miami Springs in the spring of 1970 to operate contract cargo services. A Curtiss C-46 Commando is acquired and freighter flights around the Caribbean commence in June. Operations continue for a year until the government cancels the company's operating certificate.

FLORIDA EXPRESS: United States (1983–1989). Organized at Orlando by former **Midway Airlines** (1) President/CEO Gordon Linkon, Kenneth W. Gann, and Robert J. Coombs in January 1983, Florida Express is initially financed (before going public) by Wallace Carroll, International Metals and Machines owner and chairman. Linkon becomes chairman/CEO; Gann is president/chief operating officer; and Coombs is vice president-corporate planning. As soon as possible, the nonunion company becomes partially owned by employees. Three BAC 1-11-203s are chartered from **USAir**.

The new entrant inaugurates low-fare scheduled BAC 1-11-203 service from its hub over a route to Norfolk, Virginia, on January 26, 1984. Service from Indianapolis to Orlando begins the next day. One more One-Eleven is acquired from **USAir** during the year, the workforce reaches 300 employees, and economy-fare frequencies are opened to Miami, Nashville, New Orleans, Fort Lauderdale, Tampa, St. Petersburg, Indianapolis, Louisville, Cincinnati, and Columbus.

Enplanements reach 280,825 and revenues are \$20.94 million. Losses are \$1.74 million (operating) and \$1.9 million (net).

Airline employment in 1985 totals 280. Service to Richmond and Norfolk is suspended; however, flights are initiated to Birmingham, Milwaukee, Clearwater, Sarasota, and West Palm Beach.

Passenger boardings jump a spectacular 133.7% to 656,321 and revenues do better, climbing 150% to \$52.4 million. With costs in hand, profits are made: \$5.2 million (operating) and \$4.4 million (net).

The fleet in 1986 includes 14 BAC 1-11-200s and 6 BAC 1-11-400s. These maintain previous services and launch new ones to Fort Myers, Knoxville, Akron, Canton, and Harrisburg. Flights are resumed to Richmond and Norfolk.

The ninth consecutive profitable quarter is celebrated at the end of December. Customer bookings swell again, up 47.2% to 1,415,142. Revenues ascend by 37.9% to \$72.31 million, expenses climb 46.4% to \$68.95 million, and the operating profit is \$3.36 million. Net profit slides to \$1.89 million.

Airline employment rises 20.8% in 1987 to 993 and 2 BACs are withdrawn.

A failure in the software of the reservations system subscribed to by the airline in January and February erroneously indicates to travel agents that many flights are sold out when they are not and requires most of March to put right.

Nonstop five-times-per-day jet service is launched between Sarasota and Bradenton and Orlando in May. Daily roundtrip jet flights to Orlando commence in June from Grand Rapids, Milwaukee, Harrisburg, and Wilkes-Barre. In July, the company begins its first international route from Orlando to Nassau in the Bahamas. Simultaneously, jetliner service begins to Orlando from Huntsville and Decatur.

The seasonal services begun in June are suspended in September; however, daily nonstops commence from Dayton to Orlando. At the same time, services are inaugurated to Milwaukee.

Financial difficulties ensue and, to regain fiscal viability, the carrier reaches agreement with **Eastern Air Lines** to become an "Eastern Express" carrier. This arrangement does not go through as, late in the year, the carrier is forced to accept a merger offer from **Braniff, Inc.**, which will operate the carrier as a "Braniff Express" subsidiary during an integration period.

Passenger boardings leap upward by 9.4% to 1,547,522 and revenues climb 5.4% to \$76.3 million. Expenses, however, exceed income, producing an operating loss of \$13.8 million and net loss of \$12.1 million.

The workforce is cut by 29% in 1988 to 705. With its 18 BAC 1-11s repainted in new livery, the large regional inaugurates "Braniff Express" services on January 15. Also in January, service is suspended to Dayton,

Huntsville, and Knoxville. Following the completion of all formalities, the **Braniff, Inc.** acquisition is completed on March 1.

In June, Braniff is acquired by developers Arthur Cohen and Jeffrey Chodorow. Orders are placed in September for Fokker 100s with which to replace the BACs and the route system begins a period of readjustment.

Customer bookings decline 23.5% to 1,183,971. Although revenues are up by 4.2% to \$79.5 million, expenses climb 17.6% to \$105.92 million. The operating loss doubles to \$26.44 million and the net loss is more than doubled to \$28.2 million.

The integration of the two airlines is accomplished in the spring of 1989. Costs of the previous year's Braniff buyout and subsequent equipment orders and other changes force **Braniff, Inc.** into bankruptcy in November, with the attendant ripple ending the stories of both airlines.

FLORIDA GULF AIRLINES: United States (1991–1997). Established at Jacksonville, Florida, in late fall 1991, FGA is a subsidiary of **Mesa Airlines**. Former **Air Midwest** CEO Robert Priddy, who was also a founder of **Atlantic Southeast Airlines**, is named president and his initial fleet comprises 8 Beech 1900Cs. A "USAir Express" contract is negotiated and scheduled revenue flights commence in December serving the major's Orlando hub from 22 communities.

A total of 7,847 passengers are carried by year's end.

Eight more Beech 1900Cs are acquired during 1992 and, in January, seven new "USAir Express" flights are inaugurated from Jacksonville to Florida communities.

Enplanements this year skyrocket to 278,614.

In 1993, airline employment stands at 225 and 22 cities are served. Founder Priddy departs in March to launch a new airline, **Charter Way**, and is succeeded by Clark Stevens, former executive vice president of **Metroflight**.

In May, a 25-year lease is signed for 3.8 acres at Jacksonville where the carrier desires to build a 40,000-sq.-ft. maintenance facility. A new Northeastern division is established and "USAir Express" service is inaugurated from Boston to Martha's Vineyard and Hyannis during the summer with a pair of Beech 1900Ds.

Operations continue apace in 1994 with a fleet of 39 Beech 1900C/Ds.

On August 23, the **Mesa Airlines** parent **Mesa Air Group** enters into an agreement to purchase a major packet of **USAir** assets for \$28 million and to become the "USAir Express" feeder at Boston, Philadelphia, and Baltimore. Among the gains are nine Beech 1900Bs, five Shorts 360-300s, the leases on three more of the latter type, plus spare parts and support equipment. In addition, the maintenance and office facility in Reading, Pennsylvania, are taken over and headquarters for the Northeastern division are shifted on October 23. Two hundred additional employees are hired to accommodate the expansion.

"USAir Express" flights continue in 1995 from Boston, Philadelphia, Orlando, Tampa, and New Orleans. The fleet employed includes 40 Beech 1900s and 9 EMB-120s.

Operations continue apace in 1996.

Just after takeoff from Jacksonville on a March 28 ferry flight, a Beech propeller blade separates forcing an immediate engine shutdown and return to the Florida departure point. Neither of the two crewmen aboard are hurt.

During the first week of January 1997, **Mesa Air Group** is again reorganized. The operating divisions **Desert Sun Airlines**, **Florida Gulf**, **Liberty Express**, and **Mountain West** are replaced by four new units: "America West Express," "Independent," "United Express," and "USAir Express." Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**. Florida Gulf is absorbed into the "USAir Express" unit.

On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional will repaint its aircraft in a modified version of the major's new grey and dark blue livery. A few weeks later, the division loses its identity entirely as it becomes **USAirways Express (Mesa Airlines)**.

FLORIDA JET SERVICE: 2665 NW 56th St., Hangar 54, Fort Lauderdale, Florida 33309, United States; Phone (954) 772-0778; Fax (954) 491-4537; Year Founded 1991. FJS is established by Terry N. Robertson at Fort Lauderdale Executive Airport in 1991 to provide executive and small group passenger charters throughout the U.S. and Caribbean. By 2000, the company employs seven pilots and flies two Learjet 55 Longhorns and a Learjet 35A Century III.

FLORIDA WEST AIRLINES: United States (1981–1995). Originally known as **Pan Aero International Airlines** and **Aero Exchange Airlines**, this nonscheduled Tampa-based operator receives CAB charter authority in 1981 under the name Florida West Airlines. Employing a Boeing 707-331C, the company undertakes cargo charters and contract service flights to Bogota, Buenos Aires, Managua, Panama City, and San Jose during the next three years.

In 1984, the company proposes the initiation of scheduled flights to Baltimore, Charleston, Hartford, Houston, Miami, Orlando, and Tampa with B-737-200s, but this domestic authority is not received. Simultaneously, permission is received to inaugurate scheduled freight flights from Miami to destinations in South and Central America, Europe, the Caribbean, and the Middle East.

Employing its single B-707-331C, the cargo operator continues services in 1985, earning profits of \$657,000 (operating) and \$633,000 (net).

In 1986, airline employment is increased by 400% to 160 as 2 additional Stratoliner freighters are received.

Cargo traffic skyrockets 251.4% to 76.8 million FTKs and revenues shoot upward by 106.6% to \$9.35 million. Expenses climb 90.3% to \$7.16 million and the operating profit is \$2.18 million. Net profit gains by 100% to \$1.28 million.

Freight is increased by 21.1% in 1987 to 92.8 million. The 175-employee earns revenues of \$17.3 million. Profits total \$1.39 million (operating) and \$204,000 (net).

A fourth B-707-320C enters service with the Miami operator in 1988 and helps freight to increase by 4.2% to 96.68 million FTKs. Revenues are level at \$17.3 million, but costs jump 11.3% to force a \$367,000 operating loss. There is a net loss of \$1.4 million.

The fleet in 1989 includes two each B-707-331Cs and B-707-351Cs and one each B-707-323B, B-707-324C, and B-707-373C. Two other freighters are on order, one of which, a B-707-321C previously operated by **CF Airfreight**, is received in December.

Cargo climbs an outstanding 60.9% to 155.56 million FTKs. Revenues exceed costs and allow profits of \$51.48 million (operating) and \$468,000 (net).

The B-707-323B is leased to **Arkia Israel Airlines, Ltd.** in 1990, while the B-707-331Cs are both chartered out, one to **LanChile Airlines, S.A.** and one to **Million Air**.

Later in the year, as part of the international buildup of opposition to the Iraqi invasion of Kuwait, the company receives several freight contracts from the USAF.

Freight at the 350-employee carrier grows again, by 21.9%, to 190.56 million FTKs. Revenues total \$34.97 million, expenses are \$32.98 million, and the operating profit is up to \$1.99 million. Net gain shoots up to \$3.71 million.

The workforce is cut by 40% in 1991 to 210 due to a 12.6% reversal in freight traffic to 166.51 million FTKs. Although revenues are up by 29.3% to \$45.17 million, expenses rise more quickly, by 38.2%, to \$45.43 million. As a result, the operating loss is \$266,690 and the net loss is \$187,000.

Company employment is increased a whopping 66.7% in 1992 to 350. The fleet, however, is reduced. Two Stratoliners are repossessed by their owner, the Union Bank, and three others are sold to Omega Air, Ltd., an Irish lessor. Union Bank's two planes will eventually be converted by Northrop Grumman into J-Stars airborne surveillance platforms for the USAF.

Late in the year, the company files for bankruptcy protection. Even so and with traffic down again, money is made. Cargo falls 19.6% to

133.95 million FTKs and revenues also slide, by 47.6%, to \$23.65 million. Expenses, however, fall 48.5% to \$23.39 million and grant an operating profit of \$254,481. There is a net profit of \$612,175.

In 1993, Chairman Craig K. Williams and President John J. Maloney oversee a workforce of 350 and a fleet still comprising 3 Stratoliner freighters. Scheduled destinations visited now include Bogota, Buenos Aires, Managua, Panama City, and San Jose.

The company is reorganized in July and emerges from bankruptcy; Maury Joseph becomes chairman, with Allen Beni as president, having purchased the airline from creditors for \$4.2 million. The concern is taken public and begins to trade its shares on Nasdaq.

As a result of the bankruptcy and changeover, freight traffic for the year declines by 37.1% to 84.23 million FTKs. Revenues decline 14.4% to \$20.23, but still there is an operating loss of \$2.97 million. The net loss is \$2.76 million.

In February 1994, most of the flight operations of North Carolina-based **Tradewinds International Airlines** are acquired. Florida West stock, traded on Nasdaq, hits a high of \$16 per share.

The \$5-million transaction with Tradewinds is completed in March, the same month in which an agreement is signed with **United Airlines** for the purchase of 5 B-727-222s and options on another 12. On March 1, two Douglas DC-9s and two B-727-200s are acquired from Aeron Aviation that will be converted to cargo configuration at the Miami maintenance base. The buying spree is completed with the purchase of a B-707F from **Southern Air Transport**.

Problems begin in April, when a freighter is seized after cocaine is discovered on board during a drug raid in Ecuador. Stockholders and the public are not advised. Some weeks later in May after word leaks out, shareholders file a lawsuit and the company's auditors quit. Delays in filing annual and quarterly reports with the Securities and Exchange Commission trigger an SEC investigation of the volatility of Florida West's stock.

Chairman Joseph and President Beni resign in July at which point former **Arrow Air** President Richard L. Haberly becomes CEO.

The financially troubled company lays off 54 workers in September. Overextended from its airline and aircraft acquisitions, the carrier files for Chapter XI bankruptcy in October, listing assets of \$14.7 million and liabilities of \$19.2 million. At the time of its bankruptcy, the company's stock is valued at less than \$1 per share.

Although Florida West continues to operate, the Aeron Aviation contract is terminated and the **United Airlines** arrangement is cut back to three aircraft.

For the year, cargo falls 24.7% to 77.18 million FTKs. Revenues decline 10% to \$16.05 million and expenses swell 12.8% to \$23.47 million. Losses advance to \$7.41 million (operating) and \$9.64 million (net).

The company continues to fly in 1995 while under protection of the bankruptcy court. On July 1 (effective July 12), the company and all of its assets and subsidiaries are sold to a new entity, **Florida West Indies International Airways**, for \$3.5 million. Under a new name, FWIA continues operations.

FLORIDA WEST INDIES AIRWAYS: United States (1919–1920). Seeking to make money out of the new Prohibition laws by flying thirsty people from Florida to Cuba where drinking is legal, a number of ex-U.S. servicemen, including Albert Tilt, Alvin W. McKaig, and Geoffrey H. Bonnell, establish an air service at Key West in the fall of 1919.

The start-up costs involved in obtaining aircraft and spare parts soon drain the little group's meager resources. Unable to secure bank loans, they are forced to go public to raise a needed \$200,000 in capitalization. On November 1, the enterprise is registered as Florida West Indies Airways under Cuban law; the same day, it undertakes the first American international scheduled passenger air service from Key West to Havana.

Due to recession, the subscription does not materialize and in the summer of 1920 the carrier approaches the U.S. Post Office. On August 25 it receives the nation's first airmail subsidy for a Foreign Air Mail

route (FAM-1), a one-year contract which will provide \$20,000 plus \$1.68 for every letter transported.

The subscription drive is now resumed in hopes of obtaining sufficient capital to allow inauguration of the route on October 15. Few sign up and at last, in early October, Inglis M. Uppercue, owner of **Aeromarine Airways**, steps forward and purchases Florida West Indies, merging it to form **Aeromarine West Indies Airways** as a subsidiary division of his northern operation.

FLORIDA WEST INTERNATIONAL AIRWAYS: 7500 North West 25th Street, Suite 237, Miami, Florida 33122, United States; Phone (305) 591-9161; Fax (305) 591-2385; Code RF; Year Founded 1995. Florida West Airlines is purchased out of bankruptcy at Miami for \$3.5 million in cash on July 1 (effective July 12), 1995 by the new entity, Florida West International Airways. Chairman/President/CEO Richard L. Haberly, who has led the purchase consortium, retains his posts, with Richard Hanson as technical director and ex-president John Maloney as vice president-operations. **Fast Air, Ltda.** and Alexander Cargo acquire minority shareholding. Marketing alliances are entered into or renewed with **Atlas Air, LanChile, S.A., Ladeco (Linea Aerea del Cobra, S.A.), Fast Air, Ltda.,** and **Tower Air.**

Scheduled destinations include Bogota, Buenos Aires, Managua, Panama City, and San Jose, while nonscheduled flights are made to various markets in the Caribbean, South America, the Mideast, and Europe. These are visited by one each Douglas DC-8-61F and Boeing 707-351C and B-707-321C. Three B-727-222s acquired by the predecessor organization from **United Airlines**, together with two DC-8-32s, are leased out.

The 75 employees and 4 aircraft operate only 53.98 million FTKs, a 52.5% decline over the previous year. Costs exceed operating income and there are losses: \$1.74 million (operating) and \$1.78 million (net).

Florida West continues to fly in 1996, even as its employee population is cut to 20 and its fleet reduced to 1 each leased Douglas DC-8-61F and Boeing 707-351C.

Traffic begins to recover, growing 11.9% to 52.73 million FTKs. Still, there are fiscal losses: \$1.4 million (operating) and \$1.52 million (net). Revenues skyrocket 84% to \$16.23 million, but expenses are up 67% to \$17.62 million. Both of the bottom line loss figures "improve" as the operating loss totals \$1.4 million and a net \$1.52-million downturn is suffered.

The employee population in January 1997 stands at 104. Both chartered aircraft remain in service.

In July, a scheduled all-cargo route is sold to **Federal Express (FedEx).**

Freight skyrockets an almost unbelievable 277.4% to 196.6 million FTKs, while operating revenues reach \$83.97 million. With expenses of \$83.01 million, the previous year's operating loss is turned into a \$961,000 gain. The net loss becomes a \$512,000 profit.

The company's weekly service from Miami to São Paulo becomes daily during the spring of 1998. In addition, plans are announced for the inauguration of new services to Venezuela. During these 12 months, cargo traffic moves ahead by 11.2% to 272.01 million FTKs. Revenues surge 56.3% to \$131.2 million, while costs are \$132.19 million. The operating loss is \$907,000, while the net gain triples to \$1.5 million.

Freight traffic plunges 56.4% to 118.53 million FTKs. Annual revenues reach nearly \$40 million.

Only 20 workers are employed at the beginning of 2000. A DC-8-71F is placed into service on July 15.

At the end of October, Eagle Global Logistics, the new majority owner of **Miami Air International**, enters into a new strategic all-cargo alliance with **LanChile Airlines, S.A.,** as well as the freight lines it controls, **Fast Air Chile, S.A., MasAir (Aerotransportes Mas de Cargo, S.A. de C.V.),** and Florida West.

LanChile Airlines, S.A. formally purchases a 25% stake in the carrier on December 22 for \$900,000. The move is made to strengthen the Chilean carrier's cargo position in South Florida.

FLORIDA WINGS: 5500 NW 21st Terrace, Hangar 12, Fort Lauderdale, Florida 33309, United States; Phone (954) 776-0278; Fax (954) 491-3642; Year Founded 1977. Florida Wings is established as an FBO and charter operation at Fort Lauderdale Airport in 1977. Flight operations are duly inaugurated and, by 2000, Director of Operations Paul Warsaw oversees the work of four full- and two part-time pilots flying a Gates Learjet 55 Longhorn and a Eurocopter As-350 A-Star.

FLOTA AEREA MERCANTE ARGENTINA, S.A. See FAMA (FLOTA AEREA MERCANTE ARGENTINA, S.A.)

FLUGDIENST FEHLHABER, GmbH: Germany (1991–1993). Flugdienst Fehlhaber is established in 1991 to offer all-cargo services to regional destinations on behalf of larger corporations and the major freight operators. Revenue flights begin and continue for two years with a pair of Cessna 406 Caravan IIs.

FLUGFELAG AKUREYRAR, H.F.: Iceland (1937–1939). In the spring of 1937, **Flugfelag Akureyrar** is formed at the north coast community of Akurayri and is equipped with a WACO YKS floatplane. The first Akureyri to Reykjavik air bridge is inaugurated on May 4. Summer-only service begins on June 5 over routes from Reykjavik to London, Glasgow, and Copenhagen.

Operations continue apace in 1938 and into 1939. While taking off from a fjord during the winter of the latter year, the WACO capsizes and with the loss of the company's total flying equipment, it is forced to close its doors. It will be succeeded the following year by **Flugfelag Islands, H.F. (2).**

FLUGFELAG AUSTURLANDS, H.F.: Egilsstadir Airport, Egilsstadir, IS-700, Iceland; Phone 354 (97) 11122; Fax 354 (97) 12149; Code XZ; Year Founded 1972. Flugfelag Austrurlands is organized at Egilsstadir in 1972 to continue the commuter work of failed **Flugjonustan**. Shares are held by private and local government interests (55%) and **Flugfelag Islands, H.F. (2)/Icelandair, H.F. (45%).** Ronar Faisson is named managing director. Employing a Piper PA-31-310 Navajo, revenue flights are started or continued linking the company's base with Bakkafjörður, Vopnafjörður, Borgarfjörðureyri, Nordfjörður, Breiddalsvík, Hofn í Hornafirði, and Akureyri.

Services are maintained throughout the remainder of the decade and into the 1980s, by which time Reykjavik has joined the route network. In 1983, a second Navajo is acquired.

The two Pipers maintain the company's regional system until 1990 when a third PA-31 is purchased. Gustaf Gudmundsson becomes general manager in 1991.

Operations continue in 1992–1999; however, recession causes the fleet to be reduced to just one each Navajo and Navajo Chieftain.

As the new millennium begins, Flugfelag Austurlands is also operating as Eastair, Ltd. True to its name in either language, sight-seeing tours continue to be offered from Egilsstaðir to impressive sites throughout East Iceland.

FLUGFELAG ERNIR, H.F.: Iceland (1969–1991). Organized at Isafjörður on May 1, 1969, this carrier is originally known as **Hordur Gudmundsson Air Service**. Scheduled commuter services are undertaken linking the company's base with Sudureyri, Flateyri, Thingeyri, Bildadular, Holt, and Patreksfjörður. During the 1970s, the company name is changed to Flugfélagid Ernir and the fleet comprises one Britten-Norman BN-2 Islander and a Piper PA-23 Aztec.

Markets do not change in the 1980s; however, the Islander is replaced by a Cessna 404 Titan in 1987. In 1990, President Gudmundsson adds a de Havilland Canada DHC-6 Twin Otter and a Cessna 404 Titan in place of the Islander.

In 1991, the company is renamed **Ernir Airlines.**

FLUGFELAG ISLANDS, H.F. (1): Iceland (1928–1931). The Icelandic government forms this carrier on May 1, 1928 to provide seasonal

services around the island. Richard Walter is named managing director and a Junkers F-13, christened *Sulan*, is leased from **Deutsche Luft Hansa, A.G. (DLH)**. During the summer, services are expanded by the addition of a second chartered F-13, the *Veidibjallan*.

The two Junkers are lost in accidents during **1929–1930**; however, a third F-13, the *Alfin*, is rented for the **1931** season. The effects of the world depression are felt even in Iceland and the last scheduled flight is made on August 3.

FLUGFELAG ISLANDS, H.F. (2)-ICELANDAIR, H.F.: **Reykjavik Airport, Reykjavik, IS-101, Iceland; Phone 354 (1) 690 100; Fax 354 (1) 690 391; <http://www.centrum.is/icelandair.front.html>; <http://www.arctic.is/Transport/Icelandair/Icelandair.html>; Code FI; Year Founded 1940.** Flugfelag Akureyrar is reorganized in **1940** as **Flugfelag Islands** (Air Company of Iceland) and company headquarters are transferred to Reykjavik. A new WACO YKS floatplane is purchased to replace the crashed unit and domestic service is restarted. A total of 770 passengers are transported prior to a total ban on flying instituted later in the year in response to the widening European war. The restriction of flying is lifted in **1941** and the Reykjavik to Akureyri WACO operation is resumed.

The first landplane to be received is a Beech 18D, which is delivered in **1942**. It is employed to inaugurate a new service, linking the capital with Egilsstaðir.

Two de Havilland DH 89A Dragon Rapides are acquired in **1943** and irregular domestic flights continue in **1944–1945** as a war surplus Consolidated PBY Catalina is acquired. In March of the former year, three local flyers (Kristinn Olsen, Alfred Eliasson, and Sigurour Olafsson) return from Canada and unsuccessfully attempt to sell the company their Stinson SR Reliant. When Flugfelag turns them down, they launch **Loftheadir, H.F.**

Two Douglas DC-3s are leased from **Scottish Airlines, Ltd.** in **1946** and scheduled service to Prestwick and Copenhagen begins on May 27.

A DC-3 with 4 crew and 12 passengers, disappears while on a May 29, **1947** flight from Reykjavik to Akureyri; the wreckage is found the next day near Hjedinsfjörður and there are no survivors.

The aircraft lease with **Scottish Airlines, Ltd.** lapses in **1948**; the first DC-4 is delivered and enters service on April 10 and a joint Reykjavik–London DC-4 service is inaugurated with **Loftheadir Icelandic Airlines, H.F.** on May 3, **1949**.

Flights continue in **1950**.

While on final approach to land at Reykjavik on January 31, **1951**, a DC-3 with 3 crew and 17 passengers crashes at sea off Hafnarfjörður during its second attempt to land in a snowstorm; there are no survivors.

The Icelandic government now decrees that domestic competition between its two airlines is undesirable. Internal services are awarded to Flugfelag Islands while **Loftheadir Icelandic Airlines, H.F.** is freed to inaugurate deep discount fares across the North Atlantic.

The marketing title of Flugfelag Islands-Icelandair is adopted in **1952**.

Little change is seen in **1953–1956**. The carrier's first turboprop, a Vickers Viscount 759, is deployed on several European routes in May **1957**, including Reykjavik–Copenhagen via Glasgow on May 3, Reykjavik–London via Glasgow on May 6, and Reykjavik–London on June 3.

In **1959**, enplanements are 51,195; these figures rise to 61,554 in **1962** and 62,056 in **1963**.

A Vickers Viscount 759D with four crew and eight passengers crashes while on final approach to Nesoy Island, Norway, on April 14 of the latter year; there are no survivors.

With a base in the middle of Western Europe, the carrier is able to offer low-cost access almost everywhere on the Continent and the U.K. and wins a reputation as the “hippies” airline.

In **1964**, the Handley Page Herald and Fokker F.27-200 Friendship are evaluated as Viscount replacements, with the latter winning out.

Annual enplanements are 90,701.

Birgir Kjaran becomes chairman in **1965**.

New sales facilities are opened in Frankfurt and Reykjavik and the passenger terminal at Reykjavik is upgraded. The first Fokker F.27-200 is delivered in May.

Passenger boardings jump 33.7% to 136,793 while freight traffic is up 12.3%.

A second F.27-200 arrives in **1966** as airline employment reaches 380. A total of 160,000 travelers are carried on the year and revenues are \$2.43 million.

A DC-3 is lost under unknown circumstances at Danmarkshavn, Iceland, on February 23, **1967**.

The first Boeing 727-108C is delivered in June and helps the year's bookings to climb to 182,666. Revenues total \$7.2 million.

There are 380 workers in **1968** and the fleet comprises 1 B-727-108C, 1 Viscount 759, 2 DC-6Bs, 2 F.27-200s, and 2 DC-3s. Traffic falls off to 109,516.

The payroll reaches 386 in **1969** as boardings drop to 156,719. The Viscount 759 is withdrawn.

In **1970** the employee population is increased 2.08% as passenger traffic fall to 108,328.

An F.27-200 with 4 crew and 30 passengers crashes into a 1,500-ft. mountain while descending to Mygganaes, on Denmark's Faeroe Islands, on September 27 (8 dead).

A replacement F.27-200 is added in **1971** and traffic rebounds to 130,612.

A second B-727-108C is acquired in **1972** as one DC-3 is retired; passenger boardings rise to 152,246.

Even though pilots strike the carrier May 8–10, **1973**, a merger process with **Icelandic Airlines, H.F.** is begun in August when the capital stock of the two carriers is consolidated under a new holding company, Flugleidir, H.F.

The employee population totals 465 and the fleet includes 2 B-727-108Cs, 4 F.27-200s, and 1 DC-3. Revenue passengers number 183,287.

The two airlines maintain separate operating identities in **1974–1978** under the direction of a three-man executive committee whose aim is to eliminate wasteful competition and achieve rationalization through centralization of finances, marketing, operational, and technical affairs, domestic services, and administration. Loftleidir now flies 11 weekly roundtrips between Luxembourg and New York, while the Flugfelag B-727-108Cs fly to Scandinavia, central Europe, and the U.K.

The merger process moves slowly and, while emphasis continues to be placed on domestic and European regional service, low-fare, non-IATA flights from the U.S. to Iceland or Luxembourg grow to account for 65% of the line's service. Passenger boardings statistics during the period are 201,375 (1974), 205,176 (1975), 205,756 (1976), 235,394 (1977), and 243,485 (1978).

The operations of Icelandic and Icelandair are fully integrated into a single national flag carrier, Icelandair H.F., on October 1, **1979**. Flugfelag (“Air Company”) is retained as the carrier's domestic trade name while Icelandair becomes the international moniker.

Deregulation of the U.S. industry begins to increase competition and the oil crisis brings additional costs.

Consequently, on January 2, **1980**, the company is forced to lay off 139 employees. Passenger enplanements for the year total 661,557. Expenses of \$133 million exceed operating income of \$126.5 million, leaving losses: \$6.6 million (operating) and \$7 million (net).

The workforce is increased by 8.8% in **1981** to 1,159 and the fleet includes 3 DC-8-63s, 3 B-727-108Cs, and 5 F.27-200s.

The fiscal situation is such that the carrier's board of directors considers an end to transatlantic services, in the process cutting back flights to New York from 23 to 2 each week and suspending service to Baltimore.

Boardings dip 7.6% to 533,513 and freight traffic falls 11% to 18.52 million FTKs.

Despite a return to Baltimore and growth in passenger boardings to 640,000 in **1982**, a net \$2.6-million loss is taken.

The workforce is increased by 0.8% in **1983** to 1,221 and an F.27-500 is delivered. Passenger traffic dips 0.1% to 640,093, but freight traffic

jumps 21.5% to 22.98 million FTKs. A net \$4-million profit is posted on revenues of \$126.7 million.

The payroll is boosted 9.6% in **1984** to 1,338 as service is launched from Luxembourg to Detroit and Orlando, both via Reykjavik. A DC-8-71 joins the fleet.

Boardings jump 10.5% to 707,371, as cargo accelerates 6.3% to 24.02 million FTKs. Revenues advance 6.1% to \$134.4 million while costs rise just 4.6% to \$125.6 million. An operating profit of \$8.8 million is generated and the net profit grows to \$11.4 million.

On January 1, **1985**, Sigurdur Helgason Jr. becomes president/CEO and he unveils a plan for total restructuring of corporate philosophy, fleet, and routes. The carrier is fully privatized in August as all remaining government shares (20% of the total) are sold to private investors; employees now hold a 42% stake.

The route network grows to 17 cities in 11 countries as service is inaugurated from Reykjavik-Bergen and Salzburg.

Passenger boardings accelerate 10.9% to 784,501. Expenses, however, skyrocket and the profit declines to \$4.7 million net.

Airline employment in **1986** stands at 1,611 and the fleet includes 4 DC-8-63s, 1 DC-8-55, 1 B-727-208A, 1 B-727-108C, and 5 F.27-200s.

In January, a CL-44D-4 is sold to **Aer Turas Teroranta, Ltd.** A new marketing approach is undertaken, placing emphasis on Iceland-Europe service, downgrading Europe-U.S. service, and the promotion of Iceland as a tourist destination.

A cooperative route is opened with **Gronlandsfly/Greenlandair, A.S.** linking Godthab and Reykjavik. The company transports large numbers of the world's journalists to Reykjavik to cover the Hofdi House summit between U.S. President Ronald Reagan and Soviet President Mikhail Gorbachev.

Customer bookings rise 5.5% to 788,831 and cargo is up 11.6% to a total of 7,596 tons. Revenues reach \$161.4 million and profits double and then some to \$8.26 million (operating) and \$8.1 million (net).

The payroll is increased by 6.3% in **1987** to 1,563; as the company celebrates its fiftieth anniversary, it remains the largest private enterprise in Iceland.

During public ceremonies, orders are placed for two B-737-408s. On April 14, the company president, Vigdis Finnbogadottir, opens the Leif Eriksson Terminal at Keflavik Airport, 30 miles south of Reykjavik; international flights are transferred to it from Reykjavik Airport. Passenger boardings surge 16.7% to 920,594 and freight rises 30.4% to 23.7 million FTKs. Revenues advance 26.1% to \$211 million, but costs increase 35.3%. As a result, the operating loss is \$4.2 million and the net loss is \$2.55 million.

The workforce grows a further 2.4% in **1988** to 1,600 and the fleet now includes 4 DC-8-63s, 1 DC-8-55F, 1 B-727-108C, 1 B-727-208A, and 6 F.27-200s. Orders are placed for 3 B-757-208s.

As the result of severe financial losses, services to Baltimore (BWI), Chicago and Boston are suspended at the end of September; however, twice-weekly nonstop flights begin from Glasgow to Orlando on October 31.

In December, Reykjavik to London frequencies are increased from four to six per week while flights to Frankfurt are expanded from one per week to two.

Customer bookings descend 9.2% to 835,759, but cargo swells by 18.4% to 28.07 million FTKs.

The payroll is cut by 12.5% in **1989** to 1,400 as another bad year is suffered. The high operating cost of the DC-8-63 forces a suspension of flights to Baltimore (BWI). Further emphasis is now placed on an increase of service to Europe, which now grows to total 68% of company traffic. Flights are now offered from Keflavik to London, Glasgow, Paris, Frankfurt, and Salzburg, as well as Luxembourg, the Faeroe Islands, and three Greenland stops.

In July, an interline marketing agreement is signed with **Midwest Express**. The arrangement offers discount fares to Midwest passengers that connect with Icelandair for travel to Iceland and Luxembourg. Simultaneously, the single-class, low-cost service operated for decades is aug-

mented by the introduction of enhanced Saga Class business service. In November, the carrier offers a cash-bonus program to promote the new Saga Class.

Passenger boardings fall another 12.2% to 733,754 and freight is off by 3.1% to 27.19 million FTKs. Losses of \$6.2 million (operating) and \$3.1 million (net) are suffered. Still, the 252,000 domestic passengers transported equal in number the nation's entire population.

Company employment is increased a slight 0.4% in **1990** to 1,405.

Beginning in January, U.S. skiers are offered a special add-on inclusive-tour package, the first by the company, to the Akureyri resort, far to the north of the capital near the Arctic Circle. At the Cannes Duty Free Exhibition in February, the carrier wins the 1989 Sony Award for excellence in-flight entertainment.

In an effort to redress its traffic downturn, Icelandair acquires two Rolls Royce-powered B-757-208s and three B-737-408s. The arrival of first of the B-757-208s is delayed until early April, due to a strike at Boeing. Using water from four Iceland rivers is used instead of traditional champagne, it is christened *Hafdis* (*Water*) and is employed to resume services to Luxembourg, Oslo, and Stockholm from Baltimore (BWI). The three "Baby Boeings" are named *Eydis*, *Vedis*, and *Fannidis*.

On May 7, thrice-weekly roundtrip service is initiated by the *Hafdis* from Keflavik to Baltimore (BWI); a fourth weekly flight will be added at month's end.

Meanwhile, the second B-757-208, *Aldis*, arrives as the last DC-8-63 is sold to new owners, just one day short of the twentieth anniversary of its delivery to Flugfelag.

Orders are placed in June for three Fokker 50s; the last B-727-108 is sold to **UPS (United Parcel Service)** in September. Several of the B-737s join F.27-200s on the domestic service that links Reykjavik with nine local destinations, including the furthest point, Egilsstadir, 235 miles away near the east coast fjords.

Later in the year, Orlando to Europe charter flights join those already mounted from Baltimore and New York.

Customer bookings rebound 6.3% to 779,964 and cargo increases 31.7% to 35.8 million FTKs. A net \$7.2-million gain is realized following an operating surplus of \$9.2 million, both on revenues of \$208.68 million.

The payroll is downsized by 11.8% in **1991** to 1,280 and the fleet now includes 4 B-737-408s, 3 B-757-208s, and 5 F.27-200s.

Both the last B-757-208 and final B-737-408 arrive in April, allowing retirement of all remaining B-727-208As. One B-757-208 is chartered to **Britannia Airways, Ltd.** for a year and orders are outstanding for four Fokker 50s, which will be employed by the Flugleidir subsidiary. During the summer, the new B-757-208s achieve a utilization rate of 16 block hours per day.

Passenger boardings slide again, falling 0.8% to 773,833 and freight drops 3.3% to 34.62 million FTKs. Revenues increase 9.5% to \$215.49 million, the operating profit climbs to \$15.2 million, and net gain tops out at \$2.5 million.

Employee numbers are not changed in **1992**.

New sale fares from the U.S. to Luxembourg are introduced on April 1 (through June 10) and include the use of a rental car for a week when two people travel together on the same flight. A three-year fleet renewal program is completed in May by the delivery of the fourth and last Fokker 50 (the *Asdis*); Icelandair now claims to have the youngest scheduled airline fleet in the world. Also during the month, the airline's London-based consultant, Lincoln Beddows, assists the company in reaching a decision to target future growth in the intra-European market.

At the same time, a new weekly service is launched from Glasgow to the Faroe Islands.

Free limousine service is introduced in June for business-class passengers at New York and Baltimore (BWI). Also in June, the new Flugleidir Fokker 50s, which succeed the F.27-200s now retired, begin daily roundtrip services from Reykjavik to the Faeroes Islands, Isafjordur, Kalusuk, Glasgow, and a new destination, Narsasuaq in Greenland.

A 134,500-sq.-ft. repair station at Keflavik is occupied in December.

Customer bookings recover and advance by 4.4% to 807,575 while cargo declines 12.5% to 30.30 million FTKs. Revenues total \$227 million and there is a net downturn of \$315,000 despite a \$15.9-million operating gain.

In 1993, President/CEO Helgason oversees a fleet that includes 4 each B-737-408s and Fokker 50s plus 3 B-737-208s. In addition to a 10-stop domestic network, international destinations visited from Reykjavik include Amsterdam, Baltimore, Barcelona, Copenhagen, Faroe Islands, Frankfurt, Glasgow, Goteborg, Hamburg, London, Luxembourg, Milan, Munich, New York, Orlando, Oslo, Paris, Salzburg, Stockholm, Vienna, and Zurich.

In February, a strategic and code-sharing alliance is entered into with **SAS (Scandinavian Airlines System)**. The pact will link frequent flyer programs and provide for code-sharing on all SAS flights within Scandinavia and to Hamburg via a new hub at Copenhagen. Simultaneously, an 18-month "cost rebalancing program" is started, designed to reduce expenses by 5%.

On June 1, a joint European hub is established with **SAS (Scandinavian Airlines System)** at Copenhagen that allows the island carrier's passengers to interline with SAS intra-European and long-haul flights. To take advantage of this new arrangement, frequencies are increased from 7 per week to 28. Code-shared services are also inaugurated from Reykjavik to Hamburg via Copenhagen.

Later in the year, a new maintenance base is set up at Keflavik.

Customer bookings recover and grow by 2.8% to 829,935, while cargo ascends 20.2% to 36.4 million FTKs. Although an operating gain of \$10.21 million is registered, there is a net loss of \$1.99 million.

Airline employment is increased by 2.3% in 1994 to 1,222.

Copenhagen is now the company's main European terminus and the busiest of its markets. Consideration is given to new markets in both the U.S. and Canada. In addition to its international routes, the company still serves 10 cities located on the periphery of the country. Plans are made to pass all domestic operations to a new Flugleidir Innanlands, H.F./Icelandair Domestic, which will fly local routes until total domestic airline deregulation occurs in 1997. Passenger boardings jump 16.9% to 1,061,472 while freight does slightly better, climbing 17% to 42.02 million FTKs. Revenues advance 8.3% to \$220.61 million as expenses grow only 4.4% to \$201.97 million. Consequently, the operating profit swells to \$18.64 million and net gain recovers and rises to \$7.18 million.

The workforce grows by 11.2% in 1995 to 1,359.

Throughout the year, the company celebrates the fiftieth anniversary of international operations.

On March 26, the company becomes the first European airline to go completely smoke-free on both its domestic and international routes.

In August, domestic operations are split off from the main carrier and are centered under the name Flugleidir Innanlands, H.F. at their own Reykjavik Airport terminal. Given the carrier's Fokker 50s, the new division operates to a variety of points around the island as well as weekly to Vagar, the only airport in the Danish-owned Faroe Islands.

Enplanements accelerate 6.7% to 1,132,127 and cargo does even better, climbing 7.6% to 45.14 million FTKs. Revenues swell 18.2% to \$260.68 million. Expenses rise 19.6% to \$241.53 million and there are profits: \$19.14 million (operating) and \$9.77 million (net).

Airline employment grows by 18% in 1996 to 1,603 and the owned fleet now includes 2 B-737-408s, 3 B-757-208s, and 2 Fokker 50s. Also operated, under charter, are 4 B-737-408s, 1 B-737-4S3, and 3 Fokker 50s, one of which is subleased to **Skyways, A.B.** of Sweden.

A B-757-28AER arrives in January under a 75-month charter from ILFC. A B-737-3Y0 is also owned, but is leased to the New Zealand line **Kiwi Travel International Airlines, Ltd.** in mid-spring.

Four-times-a-week B-757-208 roundtrip service begins from Keflavik to Boston on March 31 followed by Halifax, Nova Scotia, on May 14. Flights are also started to Munich, and Berlin.

Icelandair and **Greenlandair, A.S.** collaborate with Greenland Tourism, the national tourism board, to increase the number of tourists visiting Greenland during the summer. Between mid-June and mid-

September, a Fokker 50 honors this commitment with four weekly roundtrips between Narsarsuaq, South Greenland, and Reykjavik.

In December, a marketing agreement is reached with **Southwest Airlines (2)** for services beyond Baltimore (BWI) to Cleveland. Under terms of the pact, Icelandair will handle all reservations and ticketing, ensuring its passengers a smooth transit onto Southwest jetliners. Customer bookings soar 12.7% to 1,275,294 and 52.95 million FTKs are operated, a 17.3% increase. Operating income grows 16.2% to \$302.87 million while costs decline 3.1% to \$285.16 million. Operating income declines to \$17.71 million and net gain inches up to \$9.84 million.

Airline employment grows by 4.8% in 1997 to 1,680.

Southwest Airlines (2) and Icelandair begin to test their single-route program on January 22. Passengers from Cleveland are able to connect at Baltimore (BWI) to Icelandair flights bound for Reykjavik.

In February, code-sharing begins with **British Midland Airways, Ltd.** on services from Reykjavik to London (LHR) and beyond to Dublin and Belfast and from Reykjavik to East Midlands Airport via Glasgow. Also during the month, the Flugleidir Innanlands, H.F. division is combined with **Flugfelag Nordurlands, H.F.** to form the new domestic carrier **Flugfelag Islands, H.F. (3)**.

Icelandair flies the cast and crew of ABC-TV's *Good Morning America* to Scandinavia for their live broadcasts from the "Lands of the Midnight Sun," between May 12-17. Hosts Charles Gibson, Joan Lunden, and Spencer Christian broadcast live from Denmark, Norway, Sweden, Finland, and Iceland. Although the airline is not specifically profiled, the ABC and Icelandair personnel work well together.

Flugfelag Islands, H.F. (3) begins operations on June 3.

The Icelandair/Greenland Tourism service is operated again this summer. This year, a fifth weekly frequency is provided by an **Atlantic Airways Faroe Islands, A.S.** British Aerospace BAe 146-200A.

During the July Paris Air Show, the carrier orders a pair of B-757-200s for delivery in 1998-1999 and two B-757-300s for delivery in 2001; eight options are also taken for planes to be received between 2000 and 2006.

The carrier serves as the official airline of the 24th Annual Virginia Scottish Games at the end of the month.

Southwest Airlines (2) and Icelandair expand their marketing agreement on August 14 to include Chicago (MDW), and Providence. Southwest passengers from those cities, as well as Cleveland, are able to connect at Baltimore (BWI) with Icelandair flights to Reykjavik. All reservations and ticketing will continue to be handled by Icelandair Reservations.

On October 6, the alliance with **Southwest Airlines (2)** is further expanded. Southwest customers from Louisville to Baltimore (BWI) are able to seamlessly connect with Icelandair flights to Luxembourg.

During the month, a B-737-3S3QC arrives under a four-year charter from ILFC.

Service is inaugurated to Glasgow on November 1 from both New York (JFK) and Baltimore (BWI).

Passenger boardings fall 5% to 1,211,732, but freight climbs 5.5% to 55.8 million FTKs. There are losses: \$5 million (operating) and \$4 million (net).

Icelandair begins weekly B-757-208ER roundtrip service from Reykjavik to Minneapolis (MSP) on April 9, 1998. Those taking the flight to Iceland are able to connect on to Copenhagen, Oslo, Stockholm, London, Glasgow, Frankfurt, Hamburg, Luxembourg, Amsterdam, and beginning on May 14, the carrier's newest European gateway, Helsinki.

An arrangement is entered into with **Gronlandsfly, A.S./Greenlandair, A.S.** in June. Flights previously operated from Kangerlussuaq and Narsarsuaq to Copenhagen with a B-727-90C wet-leased from **First Air, Ltd.** of Canada will now be operated under a wet-lease agreement with Icelandair. A B-757-208ER, painted in Greenlandair livery and christened *Kunuunnguaq (Little Knud)* in honor of the Danish explorer Knud Rasmussen, is dedicated to the arrangement.

For the second consecutive year, the company serves as the official airline of the Annual Virginia Scottish Games, which begin on July 24.

Under terms of a marketing agreement signed with **Trans World Airlines (TWA)** on July 30, customers of Icelandair and TWA are able to earn and redeem loyalty points in each other's frequent flyer programs beginning on September 1.

The board of directors, meeting at Reykjavik during the week of August 17, determine to place greater emphasis on travel to Europe and makes several changes in the company's route network that are announced on August 24. Services to Paris and Frankfurt will be expanded in January and, perhaps most startlingly, service to Luxembourg, an integral part of the carrier's route network since 1955, will be eliminated as improved connections are made via the airline's hub at Keflavik.

The carrier's staff at New York (JFK) is significantly reduced on September 15. From that date, Icelandair operations are handled by **British Airways, Ltd. (2)**, under the supervision of five Icelandair employees.

Employing the ILFC B-737-3S3QC, Icelandair begins weekly all-cargo service between Boston and Reykjavik on October 25. The service will be tested for nine weeks, after which the airline will determine whether or not it should be expanded.

Beginning on November 1, Icelandair, makes a special package available to families wishing to visit the new home of Keiko, the killer whale from the film *Free Willy*, who is Iceland's newest tourist attraction. The offer, which will end on March 31, includes a viewing and a talk by a local guide.

A \$131-million order is placed with Boeing on December 3 for two B-757-208ERs. The purchase is in addition to three B-757 requests still outstanding.

Passenger boardings accelerate 17.6% to 1.32 million, while freight traffic rises 6% to 54.5 million FTKs. Revenues advance 12.6% to \$321 million, while costs climb 7.2% to \$312 million. Consequently, there are profits: \$9 million (operating) and \$2 million (net).

Flights continue in 1999. During the summer, an MD-83 is wet-leased by **Crossair, Ltd.** and employed on a weekly seasonal service between Reykjavik to Zurich.

While in the final stages of takeoff from New York (JFK) on June 27, Flight 614, an Icelandair B-757-208ER with 7 crew and 185 passengers, clears an **Air France** B-747F, which has just landed, turned, and crossed the runway in front of the departing passenger plane; no injuries are reported.

A former **Challenge Air Cargo** B-757-23APF is added to the fleet in September, replacing the company's smaller B-737-3S3QC. At the same time, Icelandair moves the North American terminus of its transatlantic freight service, operated from Liege via Keflavik, from Boston to New York (JFK) to accommodate a new loading agreement with **TNT Worldwide Express**.

A code-sharing agreement is signed with **SAS (Scandinavian Airlines System)** on October 8. Under its terms, SAS is allowed to assign its designator to Icelandair flights from the three Scandinavian capitals to Boston, Minneapolis/St. Paul, and Baltimore/Washington and from Reykjavik via Copenhagen, Stockholm, and Oslo to Hamburg, Göteborg, Munich, Düsseldorf, Brussels, and Zurich. Icelandair, for its part, places its code on SAS flights from Scandinavia to all of its new partner's destinations in Europe.

The carrier's new millennium color scheme is unveiled on the B-757-27B *Hafdis* in November. Featuring "Icelandair Holidays" titles, the new livery also commemorates the 1,000th anniversary of Leif Eriksen's visit to North America.

Passenger boardings rise 3% to 1,349,000, as freight traffic plunges 11% to 75.9 million FTKs. Revenues rise 8.7% to \$416.7 million and there is a net profit of \$20.8 million.

The workforce at the beginning of 2000 totals 1,769 and the company continues to fly 1 each B-737-3S3QC and B-737-408 on local services. The B-757 fleet now includes 6 Dash-208ERs and 1 each Dash-23APF, Dash 27B, and Dash-28A. The code-sharing agreement with **SAS (Scandinavian Airlines System)** takes effect on January 1.

Permission is received from Transport Canada on February 18 to increase Keflavik to Halifax roundtrips to four times a week.

While on final approach into Minneapolis (MSP) on November 1, Flight 1653, a B-757-208ER arriving from Reykjavik, is hit by lightning. Although the aircraft is able to land safely and no injuries are reported, the Boeing is damaged and requires such repairs as to force a 24-hour postponement of the return flight.

As a cost-cutting measure, service from Reykjavik to Copenhagen, Frankfurt, and Minneapolis is suspended on November 23.

Customer bookings jump 10% during these 12 months to 1.47 million, while cargo traffic skyrockets 748% to 115.1 million FTKs.

FLUGFELAG ISLANDS, H.F. (3): Reykjavik Airport, Reykjavik, S-101, Iceland; Phone 561-6060; Fax 561-6062; <http://www.airiceland.is>; Code NY; Year Founded 1997. In February 1997, the **Flugfélag Islands, H.F. (2)/Icelandair, H.F.** division Flugledir Innanlands, H.F. is combined with the Akureyri-based **Flugfélag Nordurlands, H.F.** to form this new domestic carrier, which is also known as Air Iceland. The combined fleet includes 3 Fokker 50s, 2 Fairchild Metro 23s, 1 Metro III, 2 de Havilland Canada DHC-6-300 Twin Otters, and 1 Piper PA-31-350 Navajo Chieftain.

The new entity begins revenue services on June 3, the sixtieth anniversary of the founding of Icelandair. A total of 12 domestic markets are visited from Reykjavik and Akureyri, along with Vagar in the Faroe Islands, Glasgow, and the Greenland communities of Kulusuk and Narsarsuaq. Flights continue in 1998.

Realizing that the Internet will play an important role in its future, the company, in late 1999, begins working on a ticketless travel system.

The company takes over both of the Avions de Transport Aerien ATR42-320s of **Islandsflug, H.F.** on May 21, 2000.

In cooperation with **Gronlandsfly, A.S./Greenlandair, A.S.**, twice-weekly return service is launched from Ilulissat to Kulusuk on June 12. At Kulusuk, Greenlandair customers are able to connect with the Air Iceland service to Reykjavik.

Losing money on the routes, the carrier, on September 22, suspends flights from Akureyri to the Faroe Islands communities of Egilsstadir, Isafjardur, Thorshavn, and Vopnfjordur.

The new ticketless sales system is first tested on flights to Husavik in September and in October is placed into operation.

Like Icelandair, Air Iceland, in late November, considers dropping loss-making domestic routes.

FLUGFELAG NORDURLANDS, H.F.: Iceland (1974-1997). With **Icelandair, H.F.** holding a new 35% interest, Nordflug is renamed Flugfélag Nordurlands on May 1, 1974. Einar Helgason, son of founder Tryggvi Helgason, is named chairman with Sigurdur Adalsteinsson as general manager. The previous scheduled services linking the company base at Akureyri Airport with Grimsey and Vopnafjordur are maintained and new routes are added to Raufahrhofn and Thorshofn.

Late in the decade, the fleet is upgraded to comprise 2 de Havilland Canada DHC-6-100 Twin Otters, 1 Piper PA-31-350 Navajo Chieftain, 1 Mitsubishi MU-2, and 1 Piper PA-23 Aztec. New markets are opened at Isafjordur, Egilsstadir, and Siglufjordur.

A DHC-6-100 is destroyed in a ground fire at Daneborg on July 27, 1979.

During the early 1980s, Husavik, Kopasker, Olafsfjordur, Reykjavik, and Siglufjordur join the route network. Passenger bookings for the 20-employee company fluctuate during the recession; 23,400 are carried in 1981; 20,100 in 1982; and 22,500 in 1983.

On behalf of mining and other private interests, services are initiated in 1984-1987 from the east coast of Greenland.

A third Twin Otter is added in 1988, along with two Piper PA-38 Tomahawks.

A DHC-6-200 is based at Sodalen, Greenland, in the summers of 1989-1990 on behalf of a Canadian gold mining concern.

A Fairchild-Swearingen Metro III is purchased in 1991. At this point, the fleet includes that aircraft plus one DHC-6-200 and two DHC-6-300s, one of which is chartered to **Empire Airways** in the U.S.

In **1992–1993**, President Helgason's fleet includes 1 DHC-6-200, 2 DHC-6-300s, 2 Piper Navajo Chieftains, 1 Metro III, and 1 Piper PA-23 Aztec. The company continues as an affiliate of **Flugfelag Islands, H.F. (2)/Icelandair**.

Twelve points in Iceland are served during **1994–1996**, along with several charter destinations in Greenland. In February **1997**, the carrier is combined with the Icelandair division Flugledir Innanlands, H.F. to form the new domestic airline **Flugfelag Islands, H.F. (3)**.

FLY BVI, LTD.: Beef Island Airport, Tortola, British Virgin Islands; Phone (284) 495-1747; Fax (284) 495-1973; <http://www.duhe.com/wwwsail/flybvi>; Year Founded 1992. Fly BVI is set up at Beef Island Airport in **1992** to provide executive and small group passenger charters throughout the Caribbean. By **2000**, the company employs 6 pilots and flies 3 Piper PA-23 Aztecs, 2 Cessna 172 Skyhawks, and 1 each C-404 Titan and Britten-Norman BN-2 Islander. The company now guarantees that, if it is not on the ground within 30 minutes of confirmed pick up time, passengers will receive a refund equal to 10% of their charter.

FLY EUROPEAN AIRLINES, A.B.: Sweden (2000). FEA is set up at Skavsta Airport at Linköping in April **2000** to offer scheduled domestic passenger services. Two British Aerospace BAe (BAC) 1-11-500s are wet-leased from **European Aviation Air Charter, Ltd.** and delivered on May 7. The carrier inaugurates return service to Malmö and Stockholm three days later. The company operates almost exactly two months before closing down on July 9 and returning its jetliners.

FLY FTi, GmbH. See **AIRTOURS INTERNATIONAL AIRWAYS, LTD; BRITANNIA AIRWAYS GERMANY, GmbH.; FTI FLUGGESELLSCHAFT, GmbH.**

FLY LINHAS AEREAS, LTDA.: Rua Evaristo da Veiga, 47 Grupo 501, Rio de Janeiro, 20031040, Brazil; Phone 55 (21) 533 7605; Fax 55 (21) 532 1705; <http://www.voefly.com.br>; Code FLB; Year Founded 1995. Fly Linhas Aereas is established at Rio de Janeiro in **1995** to offer domestic passenger charters. Sergio Luis Burger is CEO and 2 Boeing 727-2B6As are acquired with which to launch revenue flights from Rio and São Paulo to Barloche.

Over the next five years, 1 each B-727-224A and B-727-247A are added. Additional destinations visited include Recife, Natal, and Fortaleza. Charters into nearby countries are also offered.

The company's Portuguese language homepage on the World Wide Web reports in **2000** that the carrier has transported 200,750 passengers since its start-up.

FLYGBOLAGET I HUDIKSVALL, A.B.: Sweden (1973–1982). Hiab-Foco A.B. and A.B. Iggesunds Bruk, local industrial organizations in the Swedish city of Hudiksvall, establish this carrier in **1973** to provide scheduled flights to Arlanda and Bromma Airports at Stockholm. Services are maintained for the next decade with a Cessna 404 Titan, a Cessna 421, and a Beech Super King Air 200, but cannot, due to recession and rising expenses, be continued beyond **1982**.

FLYING COLOURS AIRLINES, LTD.: United Kingdom (1995–2000). FCA is established at Manchester Airport in November **1995** as the in-house airline for the Flying Colours Leisure Group. The group is an umbrella organization for the tour operators Club 18-30, Priority Holidays, and Sunset Holidays. Erroll P. Cossey is chairman, with Jeremy Muller as managing director.

Orders are placed in **1996** for three owned B-757-200ERs and one each leased B-757-28AER and Airbus Industrie A320-200. Meanwhile,

charter lift is provided under contract by other airlines, including **Monarch Airlines, Ltd.**, which will also be contracted to provide the new line's catering, ground service, and maintenance services.

In early **1997**, FCA hires an initial staff of 72 pilots and 200 flight attendants. The leased B-757-28AER is received on February 26 and is employed, beginning on March 6, to offer holiday flights. The inaugural service is undertaken on behalf of Club 18-30 and Sunset Holidays from Manchester to the Canary Islands. Another tour, to Venice, takes off from the same market eight days later.

With the arrival of the first owned B-757-236ER in April, twice-weekly transatlantic charters are flown from Manchester to Orlando. Flights to the Caribbean are also operated on behalf of **British Airways, Ltd. (2)** using a leased DC-10-30.

While taxiing for departure from San Juan on May 11 on a service to London (LGW), BA Flight 4508, the Douglas wide-body with 14 crew and 248 passengers, suffers an engine fire in its No. 3 engine. The plane is stopped and all aboard are evacuated down chutes, during which exercise one passenger is seriously injured. Airport fire trucks arrive and extinguish the blaze.

The leased Airbus arrives in June and is employed during the summer season as Birmingham, Newcastle, and Glasgow join Manchester as departure points. Arrangements are completed in October with ILFC for the eight-year charter of a B-757-3Q8ER the following May.

Enplanements for the year total 1,103,700.

The B-757-3Q8ER duly arrives in May **1998**. In June, Sunworld, Ltd. acquires the Flying Colours Leisure Group, and its carrier Flying Colours Airlines, Ltd., as its parent, Thomas Cook Group consolidates as a major European tour operator. The combined **Airworld Aviation, Ltd./Flying Colours** fleet will create the U.K.'s sixth largest airline, with a huge European charter network.

While en route to Turkey on a charter from the U.K. on July 21, a passenger becomes so inebriated and unruly that the captain of his B-757-23AER is forced to make an unscheduled landing at Bucharest to remove him.

The British Broadcasting Corporation (BBC) will report the following February 19 that, based on data supplied by the Air Transport Users Council, Flying Colours has had only 5.33% of its summer flights delayed by more than an hour. At the top of the on-time list of European nonscheduled carriers, the average length of a company delay has been just 8.33 min.

In late October, Thomas Cook Group, which has recently purchased and begun to merge both Sunworld and its house carrier **Airworld Aviation, Ltd.**, as well as Flying Colours, acquires Carlson Leisure Group and its airlines **Caledonian Airways, Ltd. (2)** and **Peach Air**.

Passenger traffic is reported through October and shows bookings of 1.05 million; 463,000 FTKs are also operated.

By November 1, the U.K. charter airline business is rapidly approaching consolidation. Through its October move, Thomas Cook gains Caledonian's slots at London (LGW) and Manchester and, with 32 aircraft, now owns the second largest fleet among the nation's charter carriers.

Plans are announced for an increase of service from London (STN), Bristol, Cardiff, Birmingham, and Glasgow. The fleet will also be rationalized, with only the TriStars seen as certain for retention.

At the beginning of the winter charter season in November, an A320-214 is leased from Flying Colours to the U.S. operator **Ryan Air International**. Wearing a pure white color scheme with a large apple painted on its tail, the Airbus is operated on behalf of Apple Vacations from cities in the northern U.S. to the Caribbean, Costa Rica, and Mexico.

As the year ends, Thomas Cook Group, which has assigned its own name to the enlarged travel group, is conducting marketing surveys to determine which airline brand name has the best public image and should be retained for the larger carrier. Early betting is that the names Caledonian (with its memory of delays and incidents) and Peach Air will disappear in addition to that of Airworld, with the romantic Flying Colours winning the label. A final decision is promised before the start of the 1999 summer holiday season.

Under a general agreement signed with Westdeutsche Landesbank (WestLB) on December 23, Preussag, A.G. acquires a 24.9% stake in Thomas Cook Group, parent of Flying Colours. An additional agreement provides that Preussag, subject to the approval of the German Federal Cartel Office, will acquire a further 25.2% stake by September 30, 1999, thereby achieving 51.1% majority shareholding. The prize is assigned to the Hapag-Touristik Union (HTU), which, since October 1, has controlled the tourism activities of **Hapag-Lloyd, A.G.** and Touristik Union International (TUI). In announcing the deal, Preussag Managing Director Dr. Michael Frenzel indicates that his concern will now join in the merger discussions being held between Thomas Cook and the Minneapolis-based Carlson Leisure Group for the acquisition of Carlson Leisure Group U.K.

Passenger boardings during the year increase 92.2% to 2.12 million.

The merger between Thomas Cook and the Carlson companies is completed on February 2, 1999. Shareholders Carlson Companies, Westdeutsche Landsbank, Thomas Cook, and Preussag, A.G. combine their shares with those of Carlson Leisure Group U.K. to create Thomas Cook Holdings. The Preussag arrangement to acquire 51.1% majority control is transferred to this new entity. With over 20,000 employees, Thomas Cook Holdings is now the third largest of the "big four" British travel and tour operators after Thomson and Airtours.

Although Flying Colours is, indeed, the surviving airline, the **Caledonian Airways, Ltd. (2)** brand does not immediately disappear. The two companies, with their enlarged fleet of 34 aircraft, begin the new summer holiday season at the end of March 1999. The amalgamation of travel concerns comes as the European Commission grants permission for Thomas Cook to merge with the Carlson Leisure Group's U.K. travel interests. Caledonian, for its part, launches direct weekly return charter flights from London (LGW) to St. Thomas, U.S. Virgin Islands.

Just after departure from London (LGW) for Tenerife on April 27, a couple on board a Flying Colours B-757-23AER gets into a fistfight and must be restrained by fellow passengers and cabin crew. Police are on hand when the aircraft lands on the Spanish island, but the matter has, by then, been sorted out and they are not arrested.

Plans for amalgamation with **Caledonian Airways, Ltd. (2)** at the conclusion of the summer holiday season in November proceed; it is anticipated that the two carriers will officially become one by the end of March 2000.

Caledonian Operations Director David Newall and Operations Manager Barry Fitzgerald resign in July, as Robert Willis becomes operations general manager for the combined operation. The engineering facilities of the two companies are also combined at Manchester, with some job loss, while fleet rationalization and repainting continues. Arrangements are also made under a new fleet rationalization plan to replace four L-1011s with three B-757-200s and to return three wet-leased TriStars to **Air Atlanta Icelandic, H.F.**

On September 1, Thomas Cook Group establishes a new holiday travel concern to replace its Sunworld, Sunset, and Inspiration holiday subsidiaries, as well as both Caledonian and **Flying Colours Airlines, Ltd.** Under the direction of Managing Director Simon Vincent, the new travel brand, to be known as JMC after the son of Thomas Cook (John Mason Cook), will complete this changeover within five years, assisted in the process by a £200 million (\$320 million) investment program.

As aircraft are repainted and other vestiges of corporate image are altered, the names of the tour operating division (JCM Holidays, Ltd.) and in-house airline (**JCM Airlines, Ltd.**) will be gradually introduced during the next six months. Terry Soult is named managing director of the new JCM Airlines, Ltd. Customer bookings for the final year skyrocket 140.9% to 3,738,000.

The workforce at the beginning of 2000 totals 2,037. **Caledonian Airways, Ltd. (2)** and **Flying Colours Airlines, Ltd.** disappear completely on March 26, 2000 when **JMC Airlines, Ltd.** becomes operational under a single air operator certificate.

FLYING DUTCHMAN CORPORATION: United States (1975–1976). The Flying Dutchman Corporation of Amherst, New Hampshire,

establishes a scheduled airline subsidiary at Manchester in 1975 to provide scheduled passenger and cargo services to Washington, D.C. (DCA). Daily Piper PA-31-310 Navajo roundtrips are duly inaugurated, but cannot be maintained beyond 1976.

FLYING ENTERPRISE, A.B.: Sweden (1989–2000). Flying Enterprise is established by pilot and former sea captain Eigil Jakobsen at Flygfaltsgatan in Torslanda in 1989 to offer domestic passenger and cargo charters. Revenues commence with a single Fairchild-Swearingen Metro II.

Over the next six years, the employee population grows to approximately 70 and the fleet is expanded by the addition of 3 Shorts 360-300s. Regularly scheduled flights commence in 1994 linking Jonkoping with Skovde and Stockholm's Arlanda and Bromma Airports. Plans are made to begin flying into Poland from Stockholm (Arlanda Airport).

Owned by Tipp and Kran Transport (Tipp Fastighets, A.B.), FE continues flights in 1995–1997; Eigil Jakobsen is now president, with Alf Lindqvist as chairman. The employee population numbers 103 and the fleet comprises 3 Piper PA-31-350 Navajo Chieftains, 2 Metro IIs, 3 British Aerospace BAe Jetstream 31s, 3 Shorts 360-300s, and 1 Shorts 330. Destinations visited include Gdansk, Halmstad, Jonkoping, Skovde, Stockholm (Arlanda and Bromma Airports), and Visby.

Revenues reach \$22,000,000.

Flights continue in 1998. To make up for the loss of feeder services provided by **Air Botnia, A.B.** before its purchase by **SAS (Scandinavian Airlines System)**, **Finnair O/Y** enters into an arrangement with Flying Enterprise. Four SAAB 340s previously employed by **Finnavia, O/Y** are sold to Swedish regional and then wet-leased back to Finnair.

This new approach to covering Finnish domestic service does not prove profitable and **Finnair O/Y** serves notice that it would like to terminate its arrangement at the end October 1999. That date will actually be missed by six months.

During the fall of 1999, President Jakobsen enters into negotiations with the large Swedish regional **Skyways, A.B.** concerning a possible equity stake or corporate takeover. On January 18, 2000, Skyways Holdings, A.B. agrees to purchase 900,000 A shares of Flying Enterprise from Tipp Fastighets, A.B. for SKr 62.50 per share; B shares will fetch SKr 60 per share. The board of directors approves of the sale at a special meeting on February 15. The remaining B shares are purchased from other shareholders and the entire transaction is completed by February 28.

Renamed **Skyways Enterprise, A.B.**, the company's agreement with **Finnair O/Y** is cancelled during the first week of March, leading to termination of the wet-lease service operated by Flying Enterprise from Helsinki to Mikkeli.

FLYING MEDICAL SAMARITANS. See PACIFIC MISSIONARY AVIATION

THE FLYING TIGER LINE: United States (1945–1989). The longest-lived American all-cargo airline of the postwar boom and (as measured by FTKs operated) the largest air freight operator in the free world prior to its acquisition by **Federal Express**, The Flying Tiger Line presents one of the most illustrious stories in the history of commercial air freight. With the backing of Samuel B. Mosher of the Signal Oil Company and the hope of providing transcontinental all-cargo service, Robert W. Prescott, a former wartime "Hump" ferry pilot, organizes his **National Skyway Freight Corporation (NSFC)** in California on June 25, 1945.

Mosher becomes board chairman with Prescott as president/CEO. With an initial \$90,000 raised partly by his wartime buddies of the American Volunteer Group (the AVG or "Flying Tigers"), Prescott is able to put a down payment on 14 Budd RB-1 Conestoga transports. The following month, he flies one of the Budds loaded with grapes to Georgia on his first revenue run and on August 21, launches coast-to-coast

Budd service with a flight of flowers to Detroit—only to suffer a crash three days later.

Meanwhile, following V-J Day, a large number of independent non-scheduled airlines are formed to provide all sorts of air service—cargo, charter, passenger, and mixed. These soon find themselves in a hotly contested rate war with the scheduled airlines.

A Conestoga is chartered by the Philadelphia Eagles in September to transport the pro football team from Philadelphia to Buffalo for an exhibition game with the Detroit Lions.

In the first flight of thoroughbred horses between U.S. race tracks, a Budd transports El Lobo and Featherfoot from Long Beach to Bay Meadows in October; within days, the former wins \$10,000 in its first post-flight race.

Also in October, the infant carrier ventures into passenger charter when, under contract to the U.S. Navy, five Budds fly 117 sailors from California to New York. Still, at year's end, Prescott and Mosher are able to raise \$2.5 million from a Wall Street brokerage firm.

A Budd crash-lands on a Bluefield, West Virginia, golf course during a blizzard on January 1, **1946**; it is soon repaired and flown out.

In February, a Budd transports one of the famous Tucker automobiles designed by entrepreneur Preston Tucker.

During the spring, the first of 16 Douglas C-47s (military DC-3s) are acquired; the Budds are withdrawn and sold, including four to Asiatic Petroleum Company for \$198,000 and another to Preston Tucker. Weekly New York to Los Angeles overnight service is inaugurated for Sears, Roebuck & Co. on April 7.

To supplement cargo revenues, the carrier now begins to haul passengers on a nonscheduled basis. Advertising of this service is very informal; pilots simply roam airports where they land offering cut-rate flights to passengers waiting for scheduled flights.

On August 4, NSFC applies to the CAB for certification. The "nonskeds" now appeal to the CAB for help against the rate-war being waged by the trunk lines.

Late in the year, NSFC is successful in its bid for a six-month, \$500,000 Army Air Transport Command contract to provide cargo service from the U.S. West Coast to bases in East Asia. The company begins 28-per-week transpacific flights with the first of 32 Douglas C-54s (military DC-3s) which will be provided by the military. Start-up and other costs bring a first year net loss of \$199,595.

In February **1947**, Prescott moves company headquarters to Burbank and, responding to the demand of his associates and ex-AVG colleagues, changes the corporate identity to The Flying Tiger Line. The following month, the last of 16 Douglas C-47s (military DC-3s complete with sharks' teeth painted on their noses) comes on line. At this point, the last of the Budd RB-1s are retired.

On May 5, the CAB grants all of the charter operators, including Prescott's company, temporary certificates to provide regularly scheduled service pending an outcome of its investigation (the famous Air Rate Case).

The ATC contract is renewed in May for an additional six months.

The first purchased C-54 is acquired and placed in service on contract service flights in July from New York to Rome.

Buoyed by its military contract (terminated on November 20) and a \$500,000 profit during the first half of the year, the Flying Tigers are able to survive the high mortality rate of the internecine freight war and even score a few points by lowering tariffs.

Meanwhile, the C-47s are followed in October by 5 ex-Army C-54s that are immediately assigned to a 13-hour Sky Tiger cargo run from Burbank to New York (Newark Airport).

During the year, the Borden Company charters a Douglas transport for a one-month promotional tour for "Elsie the Cow."

The rate war with the scheduled carriers ends in April **1948**. By year's end, Prescott's company is one of only six remaining all-cargo airlines in the U.S. Operations continue apace with freight bringing in revenues of \$1.17 million. A number of aircraft and their crews are chartered to

irregular passenger airlines and help the company earn an additional \$350,000.

The CAB reaches a final decision in the Air Rate Case on April 24, **1949**, and thereafter awards experimental five-year scheduled all-freight certificates to the remaining cargo carriers, among them The Flying Tiger Line. The route allowed, Air Freight No. 100, stretches from the Pacific to the North Atlantic coast via the Midwest.

A C-54 and its crew are chartered by **Near East Air Transport** to fly the majority of the 35,000 Jewish refugees transported from Yemen to Israel.

Late in the year, Robert Prescott purchases 18 Curtiss C-46A Commandos from the USAF, outbidding both **American Airlines** and **Slick Airways** for the \$509,000 purchase. The company also signs its first contract to fly military personnel.

A profit is recorded for the year, the first for any major unsubsidized freight line.

Traffic increases a startling 70% in January **1950**. Stations are now opened at the following destinations along the company's new transcontinental route: San Diego, Burbank, San Francisco, Oakland, Denver, Chicago, Milwaukee, Toledo, Cleveland, Akron, Canton, Buffalo, Rochester, Philadelphia, New York (Newark Airport), Hartford, Providence, and Boston.

Several of the C-54s are equipped with passenger seats and offer charters from California to New York. Others are employed to undertake inclusive-tour flights to Europe for student and religious groups.

The Venezuelan subsidiary **Aerovias Venezuela Europa, S.A.** is established at Caracas and with two C-54s, flies pilgrims to Spain for the Holy Year and returns with immigrants. Toward the end of a 25-flight contract with a Chicago agency, the contractor goes broke, leaving 4 plane loads of students in Europe. Despite being \$45,000 short of the contract fee, Prescott agrees to return the first group free and take promissory notes from members of the latter three.

On June 26, Flying Tiger is the first civilian operator to make aircraft available to the Military Air Transport Service (MATS); the C-54 is enroute from California to Japan via Hawaii only 24 hours after the Communist invasion of South Korea.

On July 9, the final C-46A is reconditioned; purchase and refurbishment brings the cost of the 18-ship fleet to \$990,000.

A C-46F with four crew is lost in a crash landing at Denver on July 30; although the aircraft must be written off, there are no fatalities.

The 7 Douglas and Curtiss transports which President Prescott can commit to the Korean Airlift by mid-August represents 10% of all the commercial lines' contribution.

In late summer, 2 C-54s are employed on a 3-month animal charter to Bogota; flown are 250 cows and bulls, 35 horses, 1,000 pigs, 110 goats, 4,000 chickens and turkeys, one 1,600 sheep, and 50 sheep dogs.

With great difficulty, a now-scarce DC-4 is purchased from a Mexican source in the fall. A total of 28.12 million ton-miles of freight are flown during the year.

In February **1951**, new regional overnight services commence from the New York (Newark Airport) and Chicago hubs.

A record is established on March 20–21 when 11 planes crisscross the U.S. with a total of 71 tons of cargo. The company has become sophisticated enough to simultaneously operate 8 separate charters, the 6 flights of the regular transcontinental service, and the Korean Airlift.

The fleet totals 35 aircraft. During the summer, the carrier begins, under a two-year contract from the U.S. Immigration & Naturalization Service, to return illegal Mexican entrants from a base at Brownsville, Texas, to the cities of San Luis Potosi, Durango, and Guadalajara; 6 roundtrip C-47 trips are made daily. At the same time, the company also airlifts in seasonal workers from both Mexico and Puerto Rico.

In Operation Moo, C-46As fly calves from Oklahoma to California and from Idaho to Wisconsin.

On August 25, new daily service is introduced from New York to Oakland via Milwaukee.

In late fall, 7 DC-6A freighters are ordered at \$1 million each. Direct service is opened on November 21 to Binghamton, Endicott, and Johnson City, New York.

On December 25, two C-46As arrive at West Berlin to begin a three-month "Baby Berlin Airlift" contract (actually a subcontract from the first **Pan American World Airways**).

Cargo ton-miles flown on the year jump to 31.78 million.

When citizen protests shut down Newark Airport in February 1952, the local station is moved to a rented circus tent on an old taxi runway at Idlewild (Long Island); the base will operate in this location until November.

In June, a company aircraft flies veterans to the first annual reunion of the wartime American Volunteer Group, "The Flying Tigers." The Mexican repatriation flights continue during the summer.

At the same time, Flying Tiger C-47s are under contract from growers to fly legally documented *braceros* to worksites in Montana, Washington, California, Colorado and other western states. Simultaneously, the carrier undertakes 153 C-46A flights that deliver 11,000 Puerto Rican laborers to work the farms in Pennsylvania, New Jersey, Ohio and elsewhere in the east. An application is filed with the CAB for a low-fare, regularly scheduled service to Puerto Rico, but it is denied.

When the C-46s belonging to General Claire L. Chennault's former Nationalist Chinese airline **Civil Air Transport** are finally legally available, they are sent to Prescott's Burbank base for modification. Thirteen are purchased by Flying Tiger, which sells them to other freight operators for a \$350,000 profit.

The company's skill in diversification holds it aloft as the scheduled carriers, led by **American Airlines**, now take aim at running the all-cargo companies out of the picture. The plain economic fact is that in the face of concentrated competition from the larger, scheduled trunk lines during the early 1950s, the freight rates offered by the nondiversified, all-cargo airlines cannot be maintained. For most of its first 7 years, The Flying Tiger Line has been overshadowed by the larger, nondiversified, all-cargo carrier **Slick Airways**. Faced with head-on competition from the passenger airlines after 1949, Slick begins to fade and is eventually forced to seek a merger in order to survive.

Flight 841, a C-54B with four crew and three passengers is lost 3 km. S of Issaquah, Washington, on January 7, 1953; there are no survivors. Later in the month, a leased L-049 is destroyed by fire after its pilot, on a training flight, is forced to make a wheels-up landing at Burbank.

In February, DC-6As fly food and medical supplies to assist in Dutch flood relief operations.

On March 26, **Slick Airways** and Prescott agree to join forces and file a merger petition with the CAB; the document has an escape clause permitting its withdrawal if it is not approved by October 1.

In midsummer, Flying Tiger earns \$1.45 million when it sells two of its undelivered DC-6As to **Japan Air Lines Company, Ltd.** (2) and \$9 million more when it leases four others to **Northwest Airlines** for four years.

The Korean Airlift ends in July, the same month the CAB opens hearings on the Tiger-Slick merger. Opposition is significant. In addition to protest from the passenger carriers concerning potential monopoly to be created by such an amalgamation, the CAB's own lower-level lawyers join the protest, echoing the same sentiments.

With the Korean Airlift over, requirements for cargo capacity shrink, business falls off, layoffs are imminent, and labor problems for **Slick Airways** and Flying Tiger become serious. Between September 1 and 13, three DC-6As are leased to **Northwest Airlines**.

Cargo traffic advances to 51.32 million ton-miles, while revenues for the year exceed \$25 million.

The CAB approves the Tiger-Slick merger on January 7, 1954. The regulators, seeking a way out of the nasty political spot they are in, elect to delay issuing its permanent certificate until the cargo companies have resolved their labor difficulties.

On January 24, a fourth DC-6A is chartered to **Northwest Airlines**.

On May 5, the presidents of **Slick Airways** and The Flying Tiger Line formally merge through the tying of a knot in a cord stretched between

two C-46As. It will not stay tied, even though joint schedules are issued and an earnest effort is made at the first joint board meeting on May 17 to set a collective goal.

On June 1, fast Daybreaker Los Angeles to New York via Chicago all-cargo service is inaugurated employing the six DC-6As brought into the merger by Slick.

As the year wears on, the labor problems worsen instead of better, and the costs of this maneuvering mount for both Slick and Prescott. The end of the Korean Airlift has meant a decline in business and by midsummer, a total of 909 employees from both carriers are laid off. As late as August, the CAB still withholds permanent certification. Reluctantly (from a management perspective), on September 20, the merger arrangement is abandoned.

Although **Slick Airways** will close its doors four years later, The Flying Tiger Line is able to weather this crisis and grow. The next day, the Flying Tiger board decides to turn the company into an aircraft leasing company, but employee appeals led by President Prescott encourage the board to reverse this plan on September 27.

The **Slick Airways** divorce is finalized in November when new Tiger freight schedules are issued.

Voluntary wage cuts take effect in December. The number of revenue ton-miles flown during the year slides to 45.15 million.

On February 13, 1955, the carrier inaugurates overnight transcontinental cargo service using newly purchased DC-6A freighters.

In February, the company begins to provide support in the construction of the Canadian DEW line. Eleven C-46As are dispatched to operate subcontracts on behalf of **Queen Charlotte Airlines, Ltd.** and seven fly to Churchill, Newfoundland, to fly for **Maritime Central Airways, Ltd.**

Beginning in April, and at any given point during the year, 20 Tigers aircraft are on contract work in the Orient, Europe, and the Caribbean. Eight others are flying domestic Army troop movements in a Civilian Army Movement (CAM) program. With these and other new domestic freight services very successful, the wage cuts are ended on May 1 and restored over the next five months.

The next day, Flying Tiger becomes, by specific CAB exemption, the first all-cargo carrier allowed to transport the U.S. Mail under an experimental, space-available airmail scheme.

On June 19, company members of the International Association of Machinists and Aerospace Workers (IAM) begin a 114-day strike.

The company's tenth birthday is celebrated on June 25 with a luncheon for 200 civic leaders at Long Beach Airport.

During three summer weeks, the airline transports over 250 tons of fans and air conditioning equipment from Milwaukee to New York to help allay a prolonged heat wave.

Also during the summer, following a CAB ruling on "right of first refusal," it enters the passenger group charter business; 50 groups are booked through August.

In September, Tiger places a \$20-million order for 10 (later 12) Lockheed L-1049H Super Constellations freighters.

During the same month, a Tiger aircraft lands at New York with the first 30 of 1,000 Italian and Yugoslav tailors imported to meet a labor shortage in the garment industry.

En route from Hawaii to Wake, Flight 7413-23, a C-54A freighter with five crew is forced to ditch in the Pacific Ocean 1,600 km. W of Honolulu on September 24 (three dead). It is later determined that the accident had been caused by incorrect fuel system management, which had caused three engines to stop and faulty restarting methods that resulted in a ditching.

The machinists' strike ends on October 5.

En route to Tokyo from Honolulu via Wake Island on November 14, another DC-4 crashes at sea between Hawaii and Johnston Island; before rescue by the freighter *S.S. Steel Advocate* 30 hr. later, one crewman is lost.

Cargo falls again, down to 36.89 million ton-miles flown.

The company's importance and stature are reaffirmed on March 12, 1956, when the CAB again renews its operating certificate.

Meanwhile, as the Super Constellations come on line, Prescott initiates an orderly disposal plan for the older freighters in his fleet.

A C-46F, with two crew and a passenger, is lost at Pelly Bay, Canada, on March 18; although the aircraft must be written off, there are no fatalities.

On April 6, a C-54 flying for **Maritime Central Airways, Ltd.** crashes at DEW Line Site 30, but will be repaired in a long process.

In late spring, as the result of a contract with World Vision and Mr. and Mrs. Harry Holt, a Tiger C-54 brings the first of 3,500 unwanted children from Korea to the U.S. for adoption. The "baby airlift" will continue for eight years.

The first mail flights are started on May 28 while the first air express flights are made in mid-June.

Having flown from Vienna via Munich, a Tiger C-54 arrives at McGuire AFB, New Jersey, on November 21 with the first planeload of Hungarian refugees allowed into the U.S. The second Hungarian Airlift C-54 arrives at Milwaukee two days later. Hungarian refugees will also be flown from Munich to Istanbul and on to Australia.

Work in support of DEW Line construction continues during the year.

By November, 7 Tiger aircraft are disabled.

The company also becomes the first cargo carrier to join the Air Transport Association of America (ATA).

The carrier is now the largest independent operating across the North Atlantic; 20,000 tour passengers are flown during the year, while freight ton-miles leap to 49.64 million.

A DC-6A leased to **Northeast Airlines** crashes at Rikers Island, New York City, on February 1, **1957** (22 dead).

A record commercial air freight load of 41,746-lbs. of general cargo is flown by an L-1049H on March 11 from Newark to Burbank.

A Flying Tiger passenger agency opens in Geneva, Switzerland, in the spring and an L-1049H Super Constellation flies 114 passengers to London on May 1 in the year's first charter flight.

Eleven of the 12 new Super Constellations are on hand by June 21 when the first inaugurates a new \$18-million MATS charter from California to Tokyo.

Just after takeoff from New York (IDL) on the same day, a DC-6A with nine aboard loses all four engines; avoiding populated areas, it makes a nonfatal emergency crash landing into Jamaica Bay. The Douglas will later be loaded onto a barge and taken off for repairs.

The DEW Line support subcontracts with **Queen Charlotte Airlines, Ltd.** and **Maritime Central Airways, Ltd.** end in July.

New freight services are opened from Newark to the West Coast on October 4 and transcontinental Super Constellation 7 hr. 55 min. all-cargo service is initiated 6 days later.

The number of revenue ton-miles flown on the year reaches 53.52 million.

Other airlifts conducted during the year and in **1958** include: the transfer of Greek brides to Australia; the return of Antarctic seamen to Norway; flights of Chinese seamen from Singapore to Marseilles; the transport of the deported from Australia; the carriage of immigrants from England and France to Canada; the reunion of Chinese war brides from Hong Kong with husbands in San Francisco; the reunion of 500 British wives with former GIs waiting for them in New York; and the continuing airlift of Korean War orphans to adoptive families in the U.S.

A chartered L-1049H with six crew and two passengers is lost on Mount Oyama, Japan, on September 9; there are no survivors.

For the first time in the airline industry, the 100-million ton-mile air freight figure is broken by Flying Tiger; the fleet now comprises 13 L-1049H Super Constellations and 9 C-46As. North Atlantic bookings for the year total 70,000, while freight traffic rises slightly to 54.74 million ton-miles operated.

In May **1959**, President Prescott places an order for the revolutionary swing-tail Canadair CL-44D freighter, a modified version of the Bristol Britannia.

During the summer, the sets of the Broadway musicals *Marriage-Go Round* and *Pink Jungle* are transported.

In three days, a 380,000-pound dredge-head is delivered from Seattle to Dover, Maryland, for the Army Corps of Engineers; broken down into four components, the shipment is made by Super Constellation and flatbed truck.

Since the previous year, the Flying Tigers find themselves engaged in a rate war with a new group of independents. These nonscheduled carriers, equipped with airline-surplus, piston-engine aircraft disposed of at the dawn of the jet age, seek military contracts in direct competition with Prescott and at rock-bottom rates. When the Flying Tigers do not reduce tariffs, they lose significant revenue, having only the satisfaction of watching some of the newcomers fold after miscalculating costs.

In September, the company is underbid and loses the MATS contract won in 1957.

With its nose ballasted with 65,000-pounds of weights, an L-1049H flies a 34,000-pound ship's propeller shaft from Newark to Palermo; the item is the single largest piece of air freight transported to that time.

Since the previous year, company aircraft have transported 340 Korean babies to the U.S. The number of revenue ton-miles flown advances to 76.17 million, but the rate war costs the company its annual profit.

Between January 16 and February 19, **1960**, the carrier is struck by its pilots.

Meanwhile, on February 17, one R. I. Lewis is taken into custody in Rye, New York, and charged with flying the company's transports with a forged pilot's license.

One of the L-1049As withdrawn by **Trans World Airlines (TWA)** is quickly leased and an L-1049H is chartered to **Deutsche Lufthansa, A.G.**

New York to San Francisco all-cargo services are unveiled on August 8 and on October 1 the CAB steps into the freight picture once more and establishes minimum rates for military contracts.

Over 300 roundtrip charters open new vacation opportunities for more than 30,000 passengers during the year.

On November 14, two L-1049Hs are leased to **Trans-International Airlines**.

Revenue ton-mile statistics show the year's total to be 85.31 million. Although the rate war has been ended by the CAB decree, its savagery during the first 10 months causes the Tigers to again lose any profit.

On February 8, **1961**, the carrier is one of seven majors struck by the Flight Engineers International Association (FEIA). The job action lasts six days until President John F. Kennedy appoints a special commission to examine the situation.

In the spring, roundtrip \$99 fares are introduced for European tourists from London, Paris, Brussels, and Amsterdam to New York and Boston.

The first Canadair CL-44D is delivered on June 2. Simultaneously, the corporate image is changed when the only company insignia of an open-mouth tiger shark is replaced by a giant encircled "T."

Armed with CAB authority, the MATS negotiates new charters, giving preference to those carriers with the most modern equipment. With its 10 CL-44Ds, The Flying Tiger Line is at the top of the list and is given a new 3-year arrangement on July 1, allowing the company to launch transpacific military flights from Travis AFB on July 16.

Three of the four DC-6As leased to **Northwest Airlines** are returned between August 24 and September 19.

New freight rates are unveiled on October 17, based on cargo density, and an L-1049H is damaged in a ramp accident at Grand Island, Nebraska, on December 1.

The final **Northwest Airlines**-leased DC-6A is returned on January 2, **1962**. Also in January, the CAB grants The Flying Tiger Line permanent certification for its Air Freight Route No. 100.

An engine of a CL-44D fails at Burbank on February 27; 4 of the 10 persons in the crew are slightly hurt.

An L-1049H with a seven-man crew is destroyed as the result of a March 7 crash at Adak, Alaska (one dead).

A new "See America" program is initiated for European tourists during the early spring.

En route from Travis AFB to Tokyo on March 15, an L-1049H with 11 crew and 96 passengers disappears into the Pacific Ocean between

Guam and Manila; no trace is found before the search is given up on March 25. The loss marks the first fatal passenger flight of a Tiger aircraft.

The same day, another L-1049H with seven crew and carrying a secret cargo, overshoots the runway while landing at Adak, Alaska, and crashes (one dead).

Also in March, a new \$1.5-million freight terminal is opened at Chicago.

A new \$17-million contract for the overseas transport of DOD personnel and cargo is received on May 18.

During the summer, a CL-44D transports a 35,200-lb. turbine rotor and 26,000 lbs. of freight from Newark to Burbank, breaking the L-1049H record set with the Palermo flight in 1958.

During the same period, the airline becomes the first to join the Pacific Steamship Conference. It also inaugurates Skyroad, an air-truck service reaching 1,500 communities.

En route from Gander to Frankfurt on a continuing leg of a September 28 MATS charter that has begun at McGuire AFB, an L-1049H with 8 crew and 68 passengers begins to lose its engines 3 hours out from Ireland. The No. 3 engine catches fire and is shut down and the No. 1 engine overspeeds 5 minutes later, causing it to be shut down. The crew seeks to turn back to Shannon, but when the No. 4 engine fails, the aircraft must be ditched 560 mi. W of Ireland. As the plane goes in, the left wing breaks off. The cabin of the intact fuselage quickly fills with water and the aircraft sinks within 10 min. (28 dead). A USAF C-118 en route from Prestwick to New York, circles the scene, bringing the merchantman SS *Celerina* to the scene where it rescues survivors.

On December 14, the pilot of an L-1049H, with two other crew and two passengers and on final approach to Burbank Airport, has a heart attack. His copilot is unable to prevent its crash into a North Hollywood, California, residential area; there are no survivors on the aircraft and three people are killed on the ground.

During the year, the last two C-46s are retired and revenue ton-miles flown slides to 75.19 million.

The Korean "baby airlift," begun in 1956, ends in 1963.

An air-sea cargo service, in cooperation with **Pacific Far East Lines**, is opened on March 1 and joint air-rail freight service is later launched in cooperation with the New York Central Railroad.

A record 64,917-pound cargo flight is reported on July 6 and two L-1049Hs are leased from **World Airways** in July.

During the year, two other L-1049H Super Constellations are placed into service; the planes had been built by mating the fuselages of two surplus USAF YC-121Fs and the wings, power plants, and tails of two L-1049Gs. The cost of creating these two "new" aircraft from the remnants of four Super Constellations is less than the price of one new L-1049H. One of these is leased to Air America, the proprietary airline of the CIA, at the year's end for use in Laos. Revenue ton-miles flown advance slightly to 78.3 million, while a net loss of \$204,134 is suffered.

Airline employment in 1964 stands at 1,359 and the fleet includes 21 aircraft.

Another L-1049H chartered from **World Airways** will be added to replace one of the L-1049Hs out on charter to **Trans-International Airlines**, which now purchases it.

On May 1, an L-1049H, which had first flown as the *Star of Edinburgh* for **Trans World Airlines (TWA)**, is leased for a year from its final owner, Bill Murphy Buick, Inc.

In August, the CAB votes to allow guaranteed block-space discount fares to shippers and carriers. In September, the regulators agree to limit the amount of off-route charter service that the scheduled passenger airlines can perform, thereby opening yet another line of business for the cargo and supplemental carriers.

The main landing gear of a CL-44D collapses following the plane's November 12 landing at Detroit. There are no injuries.

An L-1049H freighter with three crew crashes in the San Bruno Mountains following takeoff from San Francisco on December 24; there are no survivors.

Freight ton-miles operated are 99.48 million. Revenues advance 7.7% to \$45.5 million, allowing a net profit of \$1.3 million.

In January 1965, The Flying Tiger Line acquires two more CL-44Ds, leases two Boeing 707-349Cs, moves its general offices and maintenance facilities from Burbank to a new \$4.5-million base at Los Angeles (LAX), and joins the charter business in a big way.

Its workforce now totals 1,666 and the fleet includes 26 aircraft: 2 B-707-349Cs, 15 CL-44Ds, and 9 L-1049Hs.

A new around-the-world distance and speed record by a commercial airliner is established on November 15-17 by the B-707-349C *Pole Cat*; the Stratofreighter circles the globe in 62 hrs. 27 mins. 35 secs. The mark will stand until broken by the **Pan American World Airways (1)** B-747SP-21 *Clipper Liberty Bell* on May 1-3, 1976.

An L-1049H freighter with three crew is lost 50 km. NE of Alamosa, Colorado, on December 15; there are no survivors.

Charter enplanements total 62,023 and a total of 127.61-million freight ton-miles are flown. Revenues advance to \$56.15 million, providing a \$4.64-million net profit.

In 1966, Prescott places a \$206-million order for 10 (later 17) Douglas DC-8-63F jet freighters. Slated to be purchased back two years later, one of the two composite L-1049Hs is sold to Fairbanks-based **Interior Airways** for lease-back on January 21.

Flight 6303, a CL-44D with six crew, is destroyed as the result of a bad landing at Norfolk Naval Air Station on March 21; there are no fatalities.

Several of the Constellations are now retired and on April 14 one is chartered to **Korean National Airlines**. The two L-1049Hs chartered from **World Airways** three years earlier are purchased in April and the former TWA L-1049A is acquired for transfer to **Paramount Airlines, Ltd.**

The carrier formally begins its Pacific Airlift Operation on July 1 in support of the Vietnam crisis, dedicating seven CL-44Ds and four L-1049Hs. A hub is established at Yokota AFB, Japan and flights are undertaken to Udon and Khorat AFB in Thailand, Clark AFB Philippines, and the South Vietnamese air bases of Da Nang, Cam Ranh Bay, Tan Son Nhut, and Bien Hoa. To help handle traffic to these facilities, the L-1049H sold to **Trans International Airlines** two years earlier is repurchased on September 30.

On October 24, an L-1049H is chartered to **China Airlines, Ltd. (CAL)**.

Flown by Flying Tiger pilots under contract, the Super Connie is employed to launch twice-weekly Taipei-Saigon roundtrips on December 2.

Arriving from Japan, an MATS-chartered CL-44D with four crew, crashes at Da Nang on December 24; all aboard are killed, along with 107 Vietnamese civilians on the ground.

A total of 423,795,000 freight ton-miles are flown. The operating profit is \$20 million.

The employee population in 1967 is 2,096 and the fleet includes 20 aircraft: 6 B-707-349Cs and 14 CL-44Ds.

The concept of equipment trust financing is pioneered, as the company prepares to undertake a \$25-million expansion program.

On December 4, the L-1049H chartered to **Korean National Airlines** is returned.

At year's end, Wayne M. Hoffman becomes the new board chairman, sharing CEO duties with President Prescott.

On the year, a total of 21,019 military charter passengers are originated. Freight ton mileage operated increases to 472,636,582, two-thirds of which comes from international services. Net income declines to \$6,785,029 on record revenues of \$87,031,494.

The \$25-million facilities and equipment expansion and modernization program gets under way in 1968. In the first phase, eight domestic stations are affected, including Newark, Chicago, Los Angeles, and San Francisco. All are provided with fully mechanized freight handling equipment.

The **Interior Airways** L-1049H is bought back on January 1 while a B-707-349C is wet-leased to **El Al Israel Airlines, Ltd.** for four months, beginning on April 1.

The carrier asks the CAB to approve flights into 12 additional communities.

Meanwhile, a six-month delay in the delivery of the DC-8-63F fleet ordered in 1966 causes a significant drop in traffic and income as the Tigers are forced to operate turboprops in competition with jetliners. Due to prior commitments, the airline had leased its six B-707-349Cs to other carriers and cannot get them back.

In early September, an L-1049H is leased to a group of U.S. and Indonesian businessmen who have set up Nusantara Airlines to operate domestic and limited international services in the former Dutch East Indies. When the new entrant runs into financial problems, the Connie is impounded at Singapore on September 21 and operations never begin.

Meanwhile, on the jet front, four of the Douglas cargo jets finally arrive and begin operations during the year's final quarter.

The employee population numbers 2,475 and the fleet reaches a 24-plane total. On the year, 191,799 charter passengers are boarded and 342.32 million freight ton-miles are flown. Revenues are \$76,699,000.

The last two DC-8-63Fs arrive early in 1969.

At the close of the decade, Flying Tiger, like several other air transport concerns, elects to reorganize in order to pursue even larger business opportunities.

On January 28, a B-707-349C is leased to Universal Studios. It will be transformed into a plane of the fictional Trans Global Airlines in the motion picture *Airport* to portray a bomb-damaged airliner as well as a jetliner mired in mud and snow off a runway.

On May 28, the CAB certifies the carrier for operations over transpacific cargo International Route 163 and in July the carrier deploys its first DC-8-63F on the Vietnam airlift.

The holding company Flying Tiger Corporation is incorporated in Delaware in August with the airline becoming its subsidiary. Also in August, the much-traveled composite L-1049Hs are sold to the North Slope Supply Company.

International Route 163 is inaugurated in September from Los Angeles to Tokyo, Bangkok, Hong Kong, Seoul, Okinawa, and Manila.

Freight ton-miles flown equal 331.61 million, while revenues are \$97 million and the profit is \$4.3 million.

The employee population in 1970 numbers 2,782 and the fleet includes 17 aircraft. On June 30, pursuant to its announced plan of corporate reorganization and merger, the carrier is merged into a corporation subsidiary, FTL Air Freight Corporation, which then changes its name to The Flying Tiger Line, Inc.

While on final approach to Naha AFB, Okinawa, on July 27, Flight 45, a DC-8-63AF with four crew, descends below its glide slope and crashes into the sea, hitting a coral reef 1,200-ft. short of the runway; there are no survivors.

Despite this transport tragedy, the new Pacific cargo route pays off handsomely during its first full year. These services help the company to boost its commercial operations 99% over the previous year. Military charter enplanements rise 16.6% to 211,641. Freight ton-miles flown increase to 390.21 million while revenues advance 27% to \$123 million. Net earnings climb 144% to \$10.5 million on revenues of \$125.5 million.

With Indochinese charter contracts shrinking yearly, the company's military boardings are 122,450 in 1971. A total of 599.74 million freight-ton miles are flown and revenues increase to \$209.6 million. Profits total \$82.92 million (operating) and \$20.38 million (net).

The workforce in 1972 is 3,195 and the number of charters declines a full 55% to 79,000.

Scheduled service is inaugurated to Manila.

Permission is sought from the CAB for authority to fly regularly to Anchorage, Singapore, Kuala Lumpur, and Djakarta.

Construction is begun on new facilities at the Los Angeles (LAX) headquarters and at New York (JFK). Another DC-8-63F joins the fleet.

The loss of military business is offset by an increase in commercial business as the world's largest all-cargo carrier increases its freight ton-miles flown by 18% to 881.34 million. In an industry record, the carrier has a claims payout of 3/10 of a cent per dollar, the lowest claims ratio

ever. The big profitmaker among aerial cargomovers, the carrier shows revenues of \$161.94 million and expenses of \$131.87 million. Consequently, the net profit is \$18.86 million.

The workforce in 1973 is 3,550. Joseph J. Healy is named vice president operations and an order is placed for two B-747Fs.

Scheduled service is started to Bangkok as Asian service is expanded to 20 flights per week. A fully automated cargo information system comes on line.

Freight ton-miles flown grow by 3.8% to 1.14 billion. Passenger charters are down by 20.3% as 63,000 passengers are transported. Income jumps to \$174.5 million while expenses are \$30 million less. The operating profit is \$29.7 million and net gain reaches \$20.2 million.

Only one employee is released in 1974 and Joseph Healy is named executive vice president.

Two B-747-123SFs, formerly operated by **American Airlines**, are purchased early in the year and ground is broken for a new Seattle cargo terminal.

On July 1, Flying Tiger Corporation adopts the name of Tiger International, Inc. After the reorganization, Tiger International diversifies further and acquires a number of other transport subsidiaries besides The Flying Tiger Line, including automobile, insurance, equipment rental firms, and the Colorado Air Center.

The first ex-AA Jumbojet arrives on August 28 and beginning in September is employed on a route from New York to Taipei via Anchorage and Tokyo. It is joined by a second B-747-123SF on September 28.

As the year closes, a huge air freight terminal is occupied at New York (JFK).

Freight traffic declines 5.3% as 1,291,474,000 FTKs are flown. Although revenues of \$186.95 million are generated, expenses climb to \$189.25 million. The operating profit is off by \$2.29 million, but income from other subsidiaries helps the corporation to post a \$3.78-million net profit.

The workforce at the beginning of 1975 is 3,439 and the fleet comprises 18 DC-8-63CFs and 2 B-747-123Fs.

The company's thirtieth anniversary is celebrated.

The entry into service of the third Jumbojet freighter allows the carrier to devote one DC-8-63CF exclusively to passenger charter and the decision will pay off handsomely. Meanwhile, a new charter program department is created to handle the booking of both military and civilian passenger flights.

Beginning in late February, until the airport is overrun by the Khmer Rouge on April 12, Tiger's DC-8-63CFs from Saigon land 176 times at Phnom Penh's Pochentong Airport to deliver 16,687,265 pounds of rice in the Cambodian Rice Lift. The carrier now joins **World Airways** in participating in Operation Frequent Wind, supporting the evacuation from Saigon by transporting cargo, troops, and passengers. Following Saigon's fall in late April, service is suspended to South Vietnam.

A ground pickup and delivery services department is created, new marketing programs are designed, and two new terminals are opened, one each at Anchorage and Seattle.

During July, a third former **American Airlines** B-747-123SF joins the fleet while flights to Bangkok end in December.

Thanks largely to the designation of just one airplane, passenger boardings for the year jump 62.9% to 101,903. A total of 1.17 billion FTKs are flown for a modest 4.3% increase. With expenses of \$211.98 million neutralized within overall income of \$216.74 million, the carrier enjoys an operating profit of \$4.76 million and a significant \$11.05-million net gain.

Employment is increased by 0.5% in 1976 to 3,457.

In January, the company receives the 1975 "Cargo Development Award" from *Air Transport World* magazine.

During the spring, a DC-8-63CF is chartered to fly 122 wild animals from Los Angeles to Fukuoka for the new Koizumi African Safari Park at Beppu.

The Tigers seek route authority from the CAB to operate domestic services to Miami, Baltimore (BWI), Houston, Atlanta, San Juan, San

Diego, and Dallas (DFW). Additionally, permanent certification is sought on transpacific routes.

A new European Interline service is initiated, which provides confirmed space on Asian and U.S. flights for cargo shipped via European carriers to New York and Chicago. Another new marketing approach is International Skyroad, a combination air-truck service, as well as allocation of space within B-747Fs for garment-on-hanger service.

During the summer, a chimpanzee named Oliver is transported in the passenger section of a New York to Tokyo Jumbojet flight.

When Vice President Duke Hedman retires on December 17 after 31 years service, he is the last active pilot to have commercially flown every type of aircraft in the company's inventory since the company began.

Freight increases 11.1% to 1.27 billion FTKs. Operating income is \$249.43 million and expenses are \$235.14 million. This balance allows an operating profit of \$14.29 million and record net income of \$61.39 million.

The most famous passenger of 1977 is transported roundtrip between New York and Los Angeles during the spring when Triple-Crown winner Seattle Slew makes a public appearance at Longacres Race Track.

Meanwhile, between February 11 and May 24, three B-747-123SFs are purchased from **Delta Air Lines**. On June 18, the Japanese transport ministry bars the carrier from making off-route charter flights to Tokyo (HAD) in retaliation against the CAB's ban on **Japan Air Lines Company, Ltd. (2)** off-route charters made from Tokyo (HAD) to the U.S.

New authority is received in July for services to Singapore, Indonesia, and Malaysia.

On August 15, the company services 27 new domestic destinations, bringing the U.S. route network to 53 destinations and adding 3 DC-8-63Fs to handle the new service. The CAB deregulates the air freight industry in November.

Enplanements for the year total 68,670 and a total of 1,314,397,000 FTKs are operated. Revenues total \$515.3 million and the net profit is \$20.74 million.

Airline employment is increased by 21.7% in 1978 to 4,865. Chairman Hoffman and President Prescott operate their worldwide certified all-cargo flights with a fleet of 4 B-747-123Fs, 14 DC-8-63CFs, and DC-8-61s.

Founder Prescott dies of cancer on March 3 at age 64.

In the spring, the company begins a yearlong cargo service from Seattle to Doha, Qatar, known as the Safeway Charter; weekly, 100,000 pounds of fresh and frozen meat, fresh fruits and vegetables, dry goods, dairy products, and household goods are transported for the Doha Center, a supermarket location.

On July 1, a B-747-124SF is chartered from **World Airways**.

On August 14, the 10-story headquarters building at Los Angeles (LAX) is dedicated in memory of Flying Tiger's founder, Robert Prescott, who is now succeeded as president by Executive Vice President Healy.

Primarily through the start-up of the new Southeast Asian routes, the route network is increased by 72.1% to 39,753 unduplicated miles.

During the year, a DC-8-63CF makes two flights to transport camera equipment, explosives, a helicopter, and a tiger named Gombi from Los Angeles to Manila for use in the making of the Francis Ford Coppola (1979) film *Apocalypse Now*.

Revision of the corporate image and livery begun the year before is completed; the encircled "T" on aircraft tails is replaced with the script words "Flying Tigers." Also, Diana Nichols becomes the first woman A & P with the maintenance division; she will rise to become a senior aircraft maintenance planner with successor **Federal Express**.

Airline employment is increased 0.4% in 1979 to 4,501 and the fleet includes 30 aircraft. In January, Flying Tiger receives the 1978 "Cargo Development Award" from *Air Transport World* magazine.

On February 16, just after landing at Chicago (ORD), a B-747F is forced to run into a snowbank to avoid a **Delta Air Lines** B-727-232 that taxis into its path across the runway; the near-collision costs \$17 million in Jumbojet repairs.

In the first phase of its most important air freight merger, Tiger International purchases 99.9% interest (600,000 shares) in an old rival, **Seaboard World Airlines**, also in February. In August, Thomas Grojean becomes president and the boards of Flying Tiger and Seaboard announce the approval of a merger agreement.

Mechanics and ramp service personnel, members of the IAM, go out on strike on August 25. The job action is settled by mediated agreement on September 12.

The company's first new Jumbojet, a Dash-249F, is delivered on October 31 and, in elaborate ceremonies, is named *Robert W. Prescott*, the company founder. The second new B-747-249F is named *Thomas Haywood* in honor of another ex-"Flying Tiger" and longtime company employee on December 11.

A total of 130,000 charter passengers are hauled during the year, a 23.8% rise, while 1.95 billion FTKs are operated, a modest 3.8% boost. Higher fuel costs and expansion lead to an operating loss of \$8.86 million; however, net gain swells to \$23.46 million.

The third B-747-249F arrives on July 3, 1980, and is named *William E. Bartling*; its receipt allows return of the **World Airways** Jumbojet leased two years earlier. A fourth B-747-249F, the *Clifford G. Groh*, is delivered on September 12.

At a cost of \$450 million, the takeover of **Seaboard World Airlines** is completed on October 1, following receipt of company stockholders approval on September 8.

Having obtained four B-747-245SF freighters in the deal, including the *Houston Rehrig*, Tigers International is able to sell three of its older B-747Fs and some spare parts for \$90 million. As a corollary to the Seaboard takeover, the enlarged airline receives scheduled passenger authority from New York to Europe and the Middle East. Two more B-747-249Fs arrive, on October 3 and 14 respectively, the *W. Henry Renninger* and the *Henry L. Heguy*.

To take advantage of the merger's aircraft windfall, a new charter subsidiary, **Metro International Airways**, is formed in December; it will fly passengers with leased Tiger aircraft painted in a Metro livery.

Meanwhile during the year, James A. Cronin, the company's future president/CEO, arrives as a senior planner.

Passenger charters jump 66.6% to 223,000 and cargo immodestly rises 26.8% to 2.99 billion FTKs. Revenues accelerate 14.14% to \$689.29 million, but expenses (caused by expansion) jump 13.22% to \$693.91 million. As a result, a \$4.61-million operating loss is suffered. The aircraft sale allows a \$10.4-million net profit to be claimed. As Flying Tiger enters the era of deregulation, they do so as the undisputed giant of the American air freight industry.

The workforce is reduced by 9.2% in 1981 to 6,614. On the domestic front, scheduled Chicago to Denver service begins in January, along with a national door-to-door delivery plan. Overseas, Flying Tiger inaugurates charter cargo service to Mexico, opens a new terminal at Frankfurt, and establishes London (LHR) as its European hub.

Employing two (later three) of the leased ex-**Singapore Airlines, Ltd.** B-747-212Bs, **Metro International Airways** launches passenger charters in March to Israel, Greece, Portugal, and other points in the Caribbean, Europe, and the Mediterranean; DC-8-63s will also be employed.

Three B-747-123SFs are sold to **American Airlines**—their original owner—between March and September.

In cooperation with **Saudia (Saudi Arabian Airlines)**, direct B-747F service is inaugurated between the U.S. and Saudi Arabia on October 13.

Mail, express, and other cargo traffic increases 19.7% to 2.94 billion FTKs, while the number of charter passengers skyrockets 69.8% to 377,000. Revenues advance 22.7% to \$845.6 million, including \$112 million from military charters. Unhappily, expenses involved with expansion, commercial passenger charters, fuel price increases, and problems caused by the U.S. recession rise 26.8% to \$879.62 million. Thus the carrier is forced to record an operating loss of \$34.01 million, up significantly, and a \$10.6-million net loss.

The payroll is cut another 3.2% in 1982 to 6,400. The last DC-8-63 **Metro International Airways** service is flown on February 23 while, in

March, **Metro International Airways** inaugurates scheduled Jumbojet passenger service from New York to Brussels.

Cargo service is inaugurated to South America on routes to Brazil and Argentina, as well as to Mexico City from Houston. Pacific and Atlantic operations are increased and a domestic door-to-door delivery service is begun.

Still, the world's largest cargo airline faces a need to reduce its capacity and as a result, sells four DC-8-63CFs to **UPS (United Parcel Service)** for \$74 million.

Unfortunately, recession, excess capacity, slumping passenger charters, and intense Atlantic and North American competition from such former air freight forwarders-turned-airlines as **Emery Worldwide** and **UPS (United Parcel Service)**, cause the pioneer's freight traffic to fall 1.2% to 2.8 billion FTKs. Even though revenues, including \$114.9 million from military contracts and that from the UPS sale, advance 3.8% to \$877.74 million, expenses climb faster, rising 5.3% to \$926.03 million. The Flying Tigers lose \$48.28 million (operating) and \$43.78 million (net) and must request of its creditors a moratorium on its loan payments.

The general resurgence in air cargo during **1983** brings new traffic gains. John E. Flynn now succeeds President Grojean.

During the year, officials of the 6,000-employee company elect to end the commercial passenger charters and scheduled services that have been offered for two years under the name of **Metro International Airways**. Once these operations are terminated in February, the company swaps its three Boeing 747-212Bs to **Pan American World Airways (1)** for four B-747-121Fs and a B-747-123F. In addition, a B-747-273C is chartered from **National Airlines**.

On the freight front, scheduled service is inaugurated to Australia, but scheduled flights to the Netherlands, Switzerland, France, and Italy are discontinued.

Flight 2468, a DC-8-63CF, is lost in a crash at Chambers Field Naval Air Station on October 25.

FTKs operated jump 7.6% to 3.4 billion. These maneuvers and figures have little impact on the company's ledgers. Despite a 15.4% rise in revenue to \$1.01 billion, including \$84 million from military charters (a decline of \$30 million from 1982), costs rise 8.7% to \$1 billion. Although a \$6.23-million operating gain is generated, a \$67.5-million pretax net loss appears on the corporation's balance sheet.

The payroll grows 11.8% in **1984** to 6,100.

On April 19, Chips, a 350-lb. White Bengal tiger, who has been on loan to the Miami Metrozoo since the previous September, is returned aboard a company aircraft to its permanent home at the Cincinnati Zoo. The 1 1/2-year-old cat is replaced by a permanent pair of young White Bengal cubs.

After three lean years, the world's largest freight airline records a dramatic turnaround. Much of this return can be traced to the 1983 decision to slow European service and return to and expand the long-time favorite company markets in the Far East. Consequently, transpacific traffic increases 23.7%, with much of the load being ferried by aircraft freed from Atlantic operations.

A total of eight charters are flown into the People's Republic of China, transporting primarily electronics and cattle. Elsewhere, the Tigers experience a 99.98% jump in South American traffic, becoming the largest U.S. cargo carrier south of the border.

On September 6, a \$60.8-million USAF Military Airlift Command (MAC) contract is received for cargo and passenger services.

On October 10, a B-747-273C is chartered from **Evergreen International Airlines** and, late in the year, an interline agreement is signed with **Air Lanka, Ltd.**

Overall FTKs operated rise 13.8% to 3.72 billion. As a result of this upswing, the corporation's total revenues jump 15% to \$1.17 billion as costs ascend only 5.8% to \$1.06 billion. A \$109-million operating profit—twelfth largest in the world airline industry—is achieved and a net profit of \$60.5 million is celebrated.

The payroll stands at 6,449 in **1985** and the fleet consists of 11 DC-8-63s, 6 DC-8-61s, 7 B-747-100Fs, 10 B-747-200Fs, 1 B-747-273C, and 4 B-727-100s.

The first of two company-sponsored Operation Lifeline famine relief flights from New York (JFK) to Addis Ababa, Ethiopia, is undertaken by a B-747F on January 29.

New scheduled service is started to Trinidad, Caracas, and Saudi Arabia and the year's major domestic initiative is the launch of a door-to-door delivery service using trucks.

A second **National Airlines** B-747-273C is chartered on March 16, allowing return of the first in April.

Flying from Los Angeles to Addis Ababa via New York, Brussels, and Khartoum, a B-747F delivers 231,463 pounds of relief supplies for USA for Africa in June.

A \$74.4-million MAC award is received in September, a company record, and the most awarded to any civilian carrier this year for transatlantic and transpacific passenger and cargo services.

A B-747-133 is leased from Guinness Peat on September 22; the aircraft, formerly flown by **Air Canada, Ltd.**, is assigned to passenger charter.

An interline agreement is signed with Viking Airfreight on October 1 to promote marketing in Africa and Asia.

In November, Robert P. Jensen is named president/CEO of the parent firm and Lewis Jordan, airline president/CEO for a month, also becomes chief operating officer.

A total of 42 flights are made to the Chinese cities of Beijing, Shanghai, and Guangzhou; the charters to the first two destinations are interlined with **CAAC (General Administration of Civil Aviation of China)**.

A traffic downturn prevents back-to-back fiscal victories as FTKs operated slip 0.5% to 3.7 billion. Interestingly enough, in a time of general renewal in industry passenger enplanements, a total of 102,000 charter passengers are flown, a 6.3% increase. Revenues drop 5.6% to \$1.09 billion, expenses rise \$1.7% to \$1.07 billion, and operating profit plunges to \$20.51 million. A net airline loss of \$44.23 million is suffered. The parent, Tiger International, which also controls Warren Transport, loses a net of \$53.6 million.

Early in March **1986**, the 6,500-employee carrier transfers its overnight and second-day package delivery hub from Chicago to Columbus, Ohio, site of its trucking hub. The new hub is equipped with a 196,000-sq.-ft. sorting facility and has the capacity to simultaneously handle 4 B-747s, 16 B-727s, and 26 trucks; initial operations from it are flown by 5 B-747s and 10 B-727s.

Former **Republic Airlines** CEO Stephen Wolf arrives in August as Flying Tiger's new president/CEO. In the fall, management warns company unions that, if substantial wage and work-rule concessions are not received during contract negotiations, the company will be broken up and sold. The unions agree to tendered terms and the carrier is able to begin restructuring its debt.

Following the agreement, the carrier leases six DC-8-73CFs, begins to reinstitute its old logo, and announces that it will sign an agreement with **Canadian International Airlines, Ltd.** for operation of a joint cargo service. The operation will feature around-the-world flights by Tiger's aircraft hauling freight sold separately by both airlines. Meanwhile, the government chooses Flying Tiger to operate a charter cargo service to the Peoples' Republic of China.

Tour and contract passenger boardings jump 61.2% to 166,000; however, cargo, the mainstay, falls 4% to 3.55 billion FTKs. In terms of FTKs, the Tigers are now second behind **American Airlines**. Revenues decline 4.02% to \$1.04 billion, costs drop 73.2% to \$991.6 million, and the operating profit climbs to \$54.93 million. The net loss improves to \$18.64 million.

Airline employment falls 6.2% in **1987** to 6,100.

Early in the year, Stephen Wolf becomes chairman, CEO, and president of the Tiger International holding company, while retaining his control of the airline subsidiary. Senior planner Cronin is appointed

president/COO of the carrier. Cost-cutting measures are introduced and even the company yacht, the *Sea Tiger*, is sold. In January, however, a lease is signed for six Douglas jet freighters formerly owned by **Transamerica Airlines**.

Service to Bangkok is resumed on February 23.

In April, a joint-marketing agreement is signed with **Canadian International Airlines, Ltd.** for an around-the-world route that includes most major Canadian cities.

In September, the carrier signs an agreement with **UPS (United Parcel Service)** covering service between the U.S. and Japan and inaugurates daily flights from Columbus to Nashville. Also during the month, the headquarters of the Latin American division are moved from Miami to São Paulo, to take advantage of the fact that 70% of the Tiger's business south of the border involves flights to Brazil and Argentina.

The company now begins to deploy six DC-8-73CFs.

On September 22, the 19th B-747, a Dash-2R7F formerly flown by **Cargolux Airlines International, S.A.** and chartered during the summer, is received. The introduction of the Douglas jets allows the transfer of a Jumbojet to the Pacific and the initiation of direct flights from the U.S. to Milan.

Daily Columbus to Richmond, Virginia, flights begin in November and, in December, Chairman Wolf is lured to **United Airlines** to replace its former leader, Richard Ferris. Upon Wolf's departure, President Cronin takes over the departed chief's role at the holding company.

A new corporate identity is introduced, including restoration of the noted circle logo painted off aircraft tails in 1976.

During the fourth quarter, two litigation matters are settled and agreement is reached that will allow the prepayment of \$132 million in debt at a significant discount.

Building on labor and other achievements of 1986, the Tigers enjoy a good year, with freight regaining its upward momentum and climbing by 9.3% to 3.88 million FTKs. Passenger bookings decline 9.6% to 150,000. Revenues advance 12.29% to \$1.17 billion, expenses rise 3.24% to \$1.02 billion, and the operating profit is \$151.41 million. The net profit of \$81.71 million is a new record.

The workforce is reduced by 1.7% to 6,000 in 1988, the airline's last independent year.

Scheduled frequencies from Los Angeles to Auckland, New Zealand, commence on March 7 via Honolulu. Later in the month, Portland is added to the route network, with daily service to the Columbus, Ohio, hub via Seattle.

In May, B-747F Hong Kong to Europe via Taipei, Seoul, and Anchorage flights commence.

When the 20th B-747F is placed into service in September, the carrier now operates fully one-fourth of the world's entire Jumbojet freighter fleet.

During the fall, Shannon is added to the westbound Frankfurt-New York Jumbojet service; the Irish city is already covered on the eastbound run out of Boston. Simultaneously, the company adds a fourth weekly B-747F flight between America and Australia and a second to New Zealand.

As the winter season begins, the company inaugurates four-times-per-week, over-the-pole frequencies from Europe to Asia via Anchorage, while the number of weekly Asia to Europe frequencies over the same route grows to six.

Unlike many carrier's that are soon to be merged, The Flying Tiger Line closes out business with record traffic, revenues, and profits. It also goes out on a public relations high note. In mid-December, a B-747F flies a disaster relief team and supplies from New York to Yerevan, Armenia, via Frankfurt to assist in earthquake relief.

Cargo swells 16.2% to a record 4.51 billion FTKs; much of the increase comes from a doubling of traffic between Europe and Asia. Revenues jump 10.18% to \$1.29 billion, costs ascend 12.12% to \$1.14 billion, and operating income drops to \$146.96 million. The net gain is \$74.4 million. The parent corporation, Tiger International, reports earnings are up 55% to \$89.5 million.

On January 31, 1989, the historic carrier is purchased for \$880 million by **Federal Express** and Jeffrey Rodek is named interim president.

While on final approach to Kuala Lumpur after a February 19 service from Subang, Flight 66, the B-747-249F *Thomas C. Haywood* with four crew, flies below minimum altitude and crashes into a wooded hillside 7.5 mi. from the runway; the Jumbojet is destroyed and there are no survivors.

In March and April, weekly Asia to Europe service is increased from once per week to daily and Europe to Asia services are boosted to four per week.

Meanwhile, the entire year is set aside by FedEx for the integration of the world's largest all-cargo carrier into its own huge small-package operation. The two companies are officially amalgamated in August, at which time the Tigers name disappears into history. Through June, the final month for which the carrier maintains separate figures, records show that the company has flown 2.06 million FTK, a 2.4% decline over the first six months of the previous year.

FLYING W AIRWAYS: United States (1968–1970). Flying W is set up at Medford, New Jersey, in 1968 to fly contract service on behalf of the energy industry. Revenue flights are undertaken with a huge fleet of 6 Curtiss C-46 Commandos and the company even forms a subsidiary, **Red Dodge Aviation**, to operate 5 Lockheed L-100 Hercules freighters. Operations cease in 1970.

FLYN AIR TAXI, A.S.: Denmark (1986–1991). Flyn Air Taxi is founded at Odense in 1986 to provide scheduled passenger and cargo flights to Tirstrup and Alborg. Birger Skaaning becomes managing director and his initial fleet comprises 2 Piper PA-31-350 Navajo Chieftains, 1 PA-31-310 Navajo, 1 Piper PA-23 Aztec, and 1 Cessna 303.

The Navajo, Aztec, and Cessna are withdrawn in 1990, but the move cannot reverse a general deterioration caused by recession. The company enters receivership in 1991.

FONTANA AVIATION: United States (1967–1978). Fontana Aviation is formed as the airline division of the FBO operated at Iron Mountain, Michigan. Employing a Beech 18, the unit begins flying scheduled daily passenger and cargo flights to local destinations in 1967, continuing them for a decade.

FONTSHI AIR SERVICE, S.A.: Zaire (1984–1991). Fontshi is set up at Kinshasa in 1984 to operate regional passenger and contract service flights. Revenue operations commence with a single Sud Est SE-210 Caravelle III. Flights continue during the remainder of the decade and the fleet is increased with another Caravelle III and a Boeing 720B.

The onset of recession in the early 1990s proves fiscally fatal and the company shuts down in 1991.

FORD AIR FREIGHT LINES: United States (1925–1931). Automobile magnate Henry Ford, having been interested in aviation by his son, Edsel, a friend's son, Harry Brooks, and his chief engineer, William B. Mayo, elects to support aircraft designer William B. Stout's efforts to build a modern all-metal airliner. He builds an airfield and manufacturing facility at Detroit for the Stout Metal Plane Company. Here Liberty-engine, 6-seat Stout 2-ATs (the "AT" stands for air transport) could be built. Following passage of the Kelly Air Mail Act, the senior Ford decides to begin a company airline for the rapid transport of freight.

Employing the Stout 2-AT *Maiden Dearborn I*, Ford Air Freight Lines inaugurates six-times-per-week in-house all-cargo flights between Dearborn and Chicago on April 13, 1925. A second single-engine Stout 2-AT *Maiden Dearborn II* enters service on the Michigan-Illinois route on April 27.

Flying the *Maiden Dearborn I* to Chicago on May 18, pilot Ross Kirpatrick encounters a storm that forces him to make an emergency landing at Summit, Illinois; the plane noses into soft ground and Kirpatrick is killed. The loss represents the first fatal accident for a privately operated U.S. airline.

The Stout Metal Plane Company is purchased on July 31 and, on the last day of the month, Ford 2-ATs begin all-cargo frequencies to Cleveland.

With a successful company service in hand, Ford elects to bid for government airmail routes and the subsidies that come with them. Bids are placed for the two covering his present network and they are both won: CAM Route No. 6, Detroit–Chicago and CAM Route No. 7, Detroit–Cleveland.

After being delayed by a \$500,000 fire at the Stout plant, regularly scheduled airmail flights begin on February 15, 1926 with five, later six, Ford 2-ATs, along with the cargo service. The first carrier to fly the mail under contract within the continental U.S. and thus, arguably, the nation's premier carrier, Ford continues the operation with little change until August, when passengers are first carried.

Two or three flights a day are now initiated, with payloads of 1,000 lb. to 1,500 pounds each. Late in the year, two of the first three Ford 4-AT Tri-Motors, 4-AT-1 and 4-AT-3, enhance the equipment available.

Over 1,000 fights are made without loss, while passenger enplanements for the year total 657.

A private express service is inaugurated from Dearborn to Buffalo on March 28, 1927. Mail and passengers will be flown for another year.

When **Atlantic, Gulf and Caribbean Airways**, the reborn **Florida Airways Corporation**, ends in late fall, the two remaining aircraft, Ford 2-AT-7 and 2-AT-8, are reacquired.

Arriving in fog at Wayne, Michigan, on February 2, 1928, the Ford 2-AT-4 is destroyed in a crash landing. Ford 2-AT-11, the last of its type manufactured, is sold to **Betz Air Lines** at Hammond, Indiana, on February 20.

Ford 2-AT-5 *Maiden Dearborn V* is lost in a Cleveland crash during April, while on May 12 the Ford 4-AT-1 carrying 1,200 pounds of freight, crashes on takeoff from the Ford Airport on its way to Buffalo (two dead).

In July, the mail contracts are turned over to **Stout Air Services**, which does not honor them, preferring to concentrate on the passenger traffic Ford now no longer seeks. Both CAM routes are suspended by the Post Office.

The Ford 2-AT-6 is withdrawn from service on August 11 and dismantled.

The Buffalo run is ended in early 1930 and the Chicago and Cleveland services in July 1931.

FORD-AIRE. See SUSQUEHANNA AIRLINES

FOREMOST AVIATION, LTD.: Nigeria (1992–1994). Foremost is established by Chief Oluwoluf Alani Adeosun at Lagos in the summer of 1992 to provide all-cargo services. In October, the Irish lessor, Omega Air, Ltd., provides under charter a Boeing 707-351C, first flown by **Northwest Airlines** years earlier and now christened *Latter Rain*. Flying from an operational base at Ostend, Belgium, the Stratofreighter brings in pineapples from Africa during the winter, while also flying humanitarian missions on behalf of Doctors without Borders.

After a busy winter schedule, the company continues to provide ad hoc freighter flights during 1993 and the first three-quarters of 1994. In October of the latter year, the Boeing is returned to its lessor and the company shuts its doors.

FORMOSA AIRLINES CORPORATION, LTD.: Taiwan (1966–1999). Formed by U. T. Wei as an agricultural support service (aerial spraying, etc.) at Taichung in January 1966, this company is reconfigured during the early 1970s into **Yung Shing** ("Forever Prosperous") **Airlines, Ltd.** Provided with a Britten-Norman BN-2 Islander, it undertakes nonscheduled passenger and charter flights about the nation.

Scheduled service is inaugurated in 1976 from Taichung and Tainan to Makung in the Pescadores Islands.

On July 15, 1978, the carrier is purchased by ex-banker Y. L. Wang and is restructured as a third-level commuter carrier, which is also known by its marketing name, Formosa Airlines.

Flying three Britten-Norman BN-2 Islanders and three Cessna 404s, the company establishes a domestic route network for scheduled and charter passenger and cargo flights. Emphasis is placed upon the delivery of tourist and shuttle flights to offshore islands. Destinations visited include Kao-hsiung, Orchid Island, Taichung, Taitung, Chimay, Makung, Hualine, and Green Island.

Chairman Kuo-Hsiung Kao's airline changes its fleet throughout the 1980s, moving from an organization dominated by such light types as the Cessna 404 and BN-2 Islander to the new Dornier turboprop, with two 228-212s entering service, beginning on February 11, 1983. Passenger traffic accelerates slowly in 1984–1986. **China Airlines, Ltd. (CAL)** becomes a major shareholder.

In 1987, the carrier is reformed and given its current name. Ch. H. Hsin is named chairman and an order is placed for two SAAB 340As.

In 1988, the workforce grows 32.6% to 256 and the fleet now includes 4 Islanders, 1 Titan, 5 Dornier 228-212s, 2 newly delivered SAAB 340As, and 5 Bell UH-12E helicopters. Orders are outstanding for 1 Shorts 360, 2 more SAABs, and 2 Airbus Industrie A300-600s. Enplanements for the year reach 295,824, an 11.4% boost over 1987, and revenues increase by 23.6% to \$11.5 million.

Operations continue apace in 1989 and in 1990 the company is the nation's largest third-level operator. Over 125 daily flights are operated with a fleet that now includes 1 Cessna Skywagon, 3 Islanders, 3 SAAB 340As, 1 Shorts 360-300, and 7 Dornier 228-200s.

Among services operated are four-times-per-day roundtrips between the company base and the island of Matsu.

A Dornier 228-201 freighter, with two crew, undershoots the runway while landing at Orchid Island on August 14, 1991; the undercarriage collapses and the plane slides 400 ft. There are no injuries reported.

The carrier is successful and employs 271 workers in 1992. In October, orders are placed for five SAAB 340As.

The fleet in 1993 comprises 4 Dornier 228-212s, 1 Dash-202, and 1 Dash-201 in addition to 3 Pilatus-Britten-Norman PBN-2 Islanders, and 1 Bell UH-12E helicopter.

While on final approach to Orchid Island in heavy rain on February 28, a Dornier 228-201 with two crew and four passengers plunges into the sea off Green Island; there are no survivors.

While landing at Green Island on June 14 after a service from Taitung, a Dornier 118-201 with 2 crew and 20 passengers undershoots the runway; its right main landing gear strikes the raised lip of the runway and collapses. There are no fatalities.

The first two SAAB 340As are delivered in April and May.

Passenger boardings this year total 380,000.

With deliveries to begin a year hence, five Dornier 328-100s are ordered in January 1994. Meanwhile, two more Dornier 228-212s enter service along with three more SAAB 340As. Two Fokker 50s are ordered in December.

The arrival of the Dornier 328s and Fokker 50s is delayed during much of 1995.

With the government unwilling to fund the construction of a new airport on Matsu Island, the airline requests permission to withdraw its services. Political requirements will, however, require that the daily schedule be maintained.

Following a June 15 service from Green Island, a Dornier 228-202 with 2 crew and 17 passengers, belly-lands at Taitung Airport; although the aircraft is badly damaged, there are no fatalities.

While taxiing out for takeoff from Green Island on June 18, the pilot of a Dornier 228-201 with another crewman and 17 passengers loses control and drives his aircraft into a ditch. There are no fatalities.

The first two new Fokker 50s are delivered in September and October, with a Fokker 100 arriving in December.

A second Fokker 100 is delivered in March 1996 while the first of five Dornier 328-100s arrives during the spring.

Having arrived in the Matsu Island area following an April 5 service from Taipei, a Dornier 228-212 with 2 crew and 15 passengers is forced

into a holding pattern due to poor visibility. The turboprop subsequently crashes into the sea (6 dead).

Enplanements for the year total 1,887,632 on 57,575 scheduled departures.

In 1997, the largest commuter carrier in Taiwan visits 24 points from Taipei's Sung Shan Airport.

On August 10, Flight 7601, a Dornier 228-221 with 2 crew and 14 passengers from Taipei fails its first approach to the runway on Matsu Island in high wind and rain. The aircraft attempts a second approach, but this time hits the tops of trees and the water tower at a military base, before crashing in flames. There is just one survivor.

Later in the day, a weather observer with the duty of providing weather information to the airport control tower, commits suicide by self-immolation.

Passenger boardings accelerate to 2,141,258 on 60,262 scheduled departures.

Chairman James Liao and President H. H. Sun oversee the operations of a fleet which, at the beginning of 1998, includes 3 Dornier 228-221s, 5 Fokker 50s, 2 Fokker 100s, and 6 SAAB 340As.

Previously restricted for military use only, the Hsinchu to Kao-hsiung air corridor is opened to civil use on February 15. A month later, on March 15, Formosa inaugurates daily service over the new track.

En route from Hsinchu to Kao-hsiung on March 18, a SAAB 340A with five crew and eight passengers, crashes into the sea six miles off the northeast coast of Taiwan, just four minutes after takeoff. The tragedy, from which there are no survivors, is the sixth fatal accident in a decade for the company and leads to its immediate grounding. Local media speculate that the aircraft is the victim of errant anti-aircraft fire during a military exercise; however, investigators later blame mechanical failure.

Although government authorities will not allow it to employ its six remaining SAAB 340As, they do grant the carrier permission to resume Dornier 228 flight operations during the second week of April. Safety will continue to be an issue. Just after landing at Matsu on August 5, a Dornier 228 runs off the runway; no injuries are reported. After a **UNI Airlines, Ltd.** Dornier 228 has a similar braking problem four days later, the Civil Air Transport Authority (CAA) orders the Dorniers of both companies grounded on August 10 for inspection.

At this point, **China Airlines, Ltd. (CAL)** announces that, during the following early summer, Formosa will be combined with **Mandarin Airlines, Ltd.** with the latter name surviving. The reformed company will emphasize domestic service with CAL operating all international flights.

Frequencies continue during the remainder of the year, but during the 12 months, passenger boardings plunge 31.4% to 1.47 million. Revenues fall 29.9% to \$50.78 million, while costs drop 18.3% to \$57.18 million. Although an operating loss of \$6.4 million must be reported, there is a net gain of \$17.84 million.

Service is maintained in 1999. The workforce is cut 12.9% to 595. The merger with **Mandarin Airlines, Ltd.** occurs on August 8, at which point the Formosa Airlines name fades into aviation history.

FORT COLLINS FLYING SERVICE. See **AIR LINK**

FORT VANCOUVER AIRLINES: United States (1979–1981). Established at Vancouver, Washington, in 1979, FVA undertakes scheduled lightplane commuter flights to Seattle. Light traffic and the PATCO air traffic controller's strike cause the company to fail in 1981.

FORT WAYNE AIR SERVICE: United States (1963–1967). FWAS is set up at Fort Wayne, Indiana, in January 1963 to offer scheduled air taxi services to Detroit. Employing a Beech 18, the company inaugurates daily roundtrip frequencies on February 4 and maintains them into 1967.

FORT WORTH AIRLINES: United States (1984–1985). Established at Fort Worth's Meacham Field in the fall of 1984, Fort Worth is pro-

vided with a fleet of four Japanese-made NAMC YS-11A turboprops leased from **Mid-Pacific Airlines**. These are employed to inaugurate scheduled passenger and cargo services to Austin, Houston (HOU) and San Antonio on December 12.

The workforce in 1985 totals 150 and the route network is expanded to include stops at Austin, Abilene, Oklahoma City, and Tulsa. Enplanements average 18,000 per month, but do not bring sufficient revenue to keep the airline aloft. Operations cease in September and the carrier files for bankruptcy.

FORTUNAIR CANADA, LTD.: Canada (1994–1995). FC is established at Montreal in the spring of 1994 to offer passenger charter and inclusive-tour passenger services from Montreal and Toronto to Florida and France. A leased Boeing 747-212B is leased from **Air France** on May 24 and the first revenue flight, from Montreal to Paris (CDG), occurs on June 30.

Unable to achieve fiscal viability, the carrier is ordered by a Quebec court to suspend operations on August 19, just five weeks after start-up. A new investor steps forward to rescue the company at the beginning of September and arrangements are made to resume nonscheduled services with the beginning of the winter holiday schedule at the end of October.

Flights are undertaken to Fort Lauderdale and points in the Caribbean, but once more, great sums of money are lost. On January 23, 1995, the company shuts down for a second time and goes into voluntary liquidation. The Jumbojet is returned and the brief saga of this company ends.

FORTUNE AVIATION, S.p.A.: Italy (1994–1995). Fortune is established at Rome in January 1994 to offer nonscheduled passenger services to Trieste and other regional destinations. Revenue flights commence with 4 Cessna Citations, 1 Boeing 737-200, and 2 Douglas DC-9-32s. Plans are made during the fall to begin scheduled services and the company name is changed to **Noman, S.p.A.** in January 1995.

FORTY-MILE AIR: P.O. Box 539, Tok, Alaska 99780, United States; Phone (907) 883-5191; Fax (907) 883-5194; <http://www.alaskan.com/promos/40mile.html>; Code Q5; Year Founded 1978. Created by Charles Warbelow at Tok, Alaska, in 1970, Forty-Mile Air initially operates nonscheduled passenger services in the east central part of the state. Destinations visited with Cessna lightplanes include Boundary, Chicken, Delta Junction, Eagle, Fairbanks, Tanacross, and Tetlin. With the addition of such aircraft types as de Havilland Canada DHC-3 Otters and a Grumman G-21A Goose, scheduled flights commence in 1974.

By 1983, the workforce totals 11 and the fleet comprises 2 DHC-3 Otters, 3 Piper Super Cubs, 1 Cessna 185, 2 Cessna 172s, 1 Cessna 206, and 1 Cessna 207A.

In 1990, the fleet includes 2 de Havilland Canada DHC-3 Otters, 1 each Piper PA-31-350 Navajo Chieftain and PA-34 Seneca, 3 each Cessna 206s/207As, and 2 Cessna 185s.

In September, the company is sold to **Warbelows Air Ventures**, which continues to operate it as a subsidiary.

Enplanements for the year total 3,069.

Passenger boardings are cut by more than half in 1991, down to 1,191.

Operations continue apace in 1992 and in 1993 President Warbelow's fleet has been altered slightly; gone are the Otters, replaced by a DHC-6 Twin Otter, two more Cessna 206s, and a Piper PA-18-150 Cub.

Enplanements in 1994 total 4,826.

Flights continue in 1995. While transporting the second of two hunters to a landing strip near Deadhorse on August 26, the Piper crashes into the ridge of a box canyon; both the pilot and his passenger are killed.

The remaining 6 aircraft fly just 1,811 passengers during the remainder of the year.

The fleet is shuffled again in 1996 and now includes the Twin Otter,

4 Cessna 206s, two C-207As, and 1 each Navajo Chieftain and PA-23 Aztec. Customer bookings skyrocket 70% to 3,071.

Unhappily, in 1997, boardings dive 24.7% to 2,313.

Enplanements in 1998 are just 2,000.

Passenger boardings for 1999 jump 13% to 3,000.

Flights continue in 2000. While taking off from Delta Junction for the continuation of a March 10 mail service from Fairbanks to Healy Lake, a Cessna 207 makes a forced landing about 2 mi. NW of the airport. The aircraft is badly damaged and the pilot is injured.

FOSHING AIRLINES, LTD.: Taiwan (1951–1991). This Taiwanese domestic charter carrier based at Taipei, is founded in May 1951 as the first postwar Chinese airline established by civilians. Revenue operations commence with a pair of ex-USN Consolidated PB5Y-5A flying boats; the fleet will be increased with the addition of Douglas DC-3s.

After 15 years of unsteady operations, the carrier voluntarily returns its license to the government in 1965.

For the next 14 years, the main activity is ground handling and operation of a flight-catering kitchen service for international airlines visiting the country; the Goldsun Group purchases the business in 1983 and Anthony M. I. Kang becomes its supervisor.

The nation's first private airline resumes scheduled operations in 1989 after a 35-year hiatus. Equipped with an initial fleet of 2 Avions de Transport Regional ATR42s, the company undertakes services linking Taipei with the cities of Hualien, Kao-hsiung, Kinmen, Makung, and Tainan.

President Charles C. Lin's fleet is upgraded by the addition of three more ATR42s and an ATR72 in 1990.

Through November, the last month for which statistics are provided, enplanements total 464,000. After gaining approximately 11% of the domestic market, the company still manages to lose \$10 million. Three more ATR72s are received in 1991, and, in December, the company name is changed to **TransAsia Airways, Ltd.**

FOSTER AVIATION: United States (1947–1984). Originally established as a Nome FBO by Neal Foster in 1947, a charter air division provides nonscheduled flights to local destinations over the quarter century. In 1973, Foster contracts with **Ryan Air** to provide a scheduled, winter-months only service to an ice runway at Little Diomed Island. Revenue frequencies commence and continue with a Beech 18, Cessna 185, Cessna 207, and Piper PA-32 Cherokee Six until the contract expires in 1984.

4-AIR AIRLINES, S.A.: Rzeszow Jasionka, Port Lotniczy Jasionka, Jakionka, 38002, Poland; Phone 48 (17) 852-5412; Fax 48 (17) 852-5412; Year Founded 1994. This tiny airline is established by Waldemar Miszkurka at Rzeszow in 1994 to offer both passenger and cargo charters to local destinations. Revenue flights begin with one each Piper PA-34-T200 Seneca II and an Antonov An-2 biplane.

FOUR ISLAND AIR SERVICES, LTD.: Antigua and Barbuda (1976–1986). This small commuter operation is established on Antigua in mid-1976 as a subsidiary of **LIAT, Ltd. (Leeward Islands Air Transport, Ltd.)**. Scheduled services are soon offered to Barbuda, Nevia, St. Croix, and St. Kitts with 3 Britten-Norman BN-2A Islanders. Passenger and express charters are also flown. In the difficult economy of the mid-1980s, the carrier is not profitable and its operation is halted in 1986.

FOUR SONS FLYING SERVICE: United States (1978–1979). Four Sons is set up at Dodge City, Kansas, during the first quarter of 1978 to provide scheduled air taxi flights. Employing a Beech 18, the company launches revenue passenger services on June 26, linking its base with Garden City, Liberal, Topeka, Wichita, and Kansas City. In June 1979, the commuter is reformed and renamed **Air Plains**.

FOUR STAR AIR CARGO. See **FOUR STAR AVIATION**

FOUR STAR AVIATION (1): Cyril E. King Airport, One Air Cargo Center, St. Thomas, U.S. Virgin Islands 00802, United States; Phone (809) 776-4702; Fax (809) 776-5536; <http://www.fourstaraircargo.com>; Code HK; Year Founded 1982. Four Star Aviation, also known as Four Star Air Cargo, is established at Cyril E. King Airport at St. Thomas, U.S. Virgin Islands, to undertake scheduled all-cargo services linking its base with St. Croix, San Juan, and St. Martin. Equipped with a fleet of 2 Douglas DC-3s, 2 Beech 18s, and 1 Piper PA-34 Seneca, the company commences revenue flights on January 1, 1982.

Operations continue apace for over a decade and a half. During these years, the fleet is increased by the addition of four Convair CV-440Fs and interline agreements are signed with **American Airlines, Arrow Air, British Airways, Ltd. (2), Continental Airlines, Delta Air Lines, Deutsche Lufthansa, A.G., Federal Express (FedEx), Fine Air, and USAir.**

While climbing away from Aguadilla on May 10, 1991, a DC-3 with two crew stalls and crashes; both flyers are killed. The surviving DC-3 with two crew noses over while landing at San Juan on March 10, 1992; there are no fatalities. Replacement Douglas freighters are obtained in 1993–1996 along with other aircraft types.

In 1997–2000, President F. J. McCarthy Jr. oversees a workforce of 42 and still operates 5 Douglas plus 4 Convair freighters. Destinations visited include St. Croix, Boringguen, Santo Domingo, and Tortola.

FOUR STAR AVIATION (2): Lawrence Municipal Airport, Sutton Street, North Andover, Massachusetts 01845, United States; Phone (978) 686-3412; Fax (978) 683-6115; <http://www.4staraviation.com>; Year Founded 1994. The second Four Star Aviation is founded at Lawrence Municipal Airport in 1994 to provide executive and small group passenger charters. By 2000, the company employs four pilots and operates one each Piper PA-34 Seneca, Cessna Tu-206 Turbo Stationaire, and C-172 Cutlass RG.

FOX CITIES AIRLINES. See **AIR WISCONSIN**

FR AVIATION, LTD.: Bournemouth International Airport, Christchurch, Dorset, England, BH23 6NE, United Kingdom; Phone 1202 580936; <http://www.cobham.com>; Code FRA; Year Founded 1985. Descended from the Flight Refueling, Ltd. operation established by Sir Alan Cobham in the 1930s and partnered with an American subsidiary in 1953, FR Aviation is established in 1985 from the airfield division of **Flight Refueling, Ltd.** Over the next decade, FR will be noted for its support of the Royal Navy and Royal Air Force threat simulation programs. FR Aviation will also operate a major maintenance subsidiary.

In support of the military, the company flies what will become, by 1994, the world's largest fleet of Dassault Falcon 20s. In addition to the 20 French-made transports, Managing Director Colin F. Jones's fleet also includes 3 Dornier 228-200s employed for surveillance of the U.K. economic shore zone. Executive charter and freight services are also provided, the former with two Cessna Citations and a Pilatus-Britten-Norman BN-2 Islander. In November, FR Group, which has acquired several other concerns in the U.S. and France, is renamed Cobham Group. FR Aviation continues its activities as before.

On October 1, 1996, **FR, Bristow Helicopters, Ltd.,** and Serco, Ltd. are awarded a £400-million, 15-year contract to provide support for the Joint Service Defence Helicopter Flying School at RAF Shawbury, Shropshire, and the School of Army Aviation at Middle Wallop, Hampshire.

Service continues over the next four years. Activities now include not only military contracts but environmental surveillance and fisheries patrol.

FRANCO-ROUMAINE. See **COMPAGNIE FRANCO-ROUMAINE DE NAVIGATION AERIENNE, S.A. (CFRNA)**

FRANKLIN & BAKER AIRLINES: United States (1934). With George T. Baker as general manager, Franklin and Baker is formed at

Daytona Beach, Florida in the fall of 1934 to open the last of 32 new airmail routes granted by the government in the wake of the Airmail Scandals. Employing two Ryan B-5 Broughams, the company inaugurates AM-31 to St. Petersburg on October 15. On November 19, the route is extended north of Daytona Beach to Jacksonville. Passengers and express are carried, beginning in December, and, at the end of the year, the carrier is renamed **National Airlines System**.

FRED OLSEN'S FLYSELSKAP, A.S. (FRED OLSENS AIR TRANSPORT, LTD.): Norway (1933–1997). Fred Olsen, a leading Norwegian shipping magnate, invests heavily in **DNL Norwegian Airlines (Det Norske Luftfartsselskap, A.S.)**, the new national airline, on October 16, 1933. In 1935, capitalization is increased when four other companies provide funding. In cooperation with DNL, Fred Olsen & Bergenske, A.S. acquires a Sikorsky S-43 on July 29 for use in extending a proposed, but unrealized, transatlantic service with **Pan American Airways (PAA)**. It is employed to offer summer scheduled service between Oslo and Stockholm through July 31, and is then sold to a French carrier.

Operations continue apace until April 1940, when flights cease with the Nazi invasion of Norway.

Fred Olsen's Flyselkap is formed in June 1946 to lease aircraft to other airlines and to offer passenger and cargo charters, calibration flights, and contract service flights.

Operations continue without incident in 1947–1951.

Completing a flight from Madrid and Bordeaux, a C-47A with three crew suffers engine failure and crash-lands on a beach three km. N of Mimizan, Norway, on April 2, 1952; although the plane is a total wreck, there are no fatalities. A C-47A with 3 crew and 26 passengers is lost near Skien, Norway, on May 5 (11 dead).

Five years later, on September 30, 1957, the company takes a 15% interest in the new **Austrian Airlines, A.G.**

Olsen continues its nonscheduled work, flying primarily cargo from Oslo Airport to various destinations in Europe. Five Curtiss C-46Rs enter service in 1958 as many of the company's services are now undertaken under contract to **SAS (Scandinavian Airlines System)**.

By 1965, the company's fleet of 3 Curtiss Commandos and 1 Douglas DC-6A/B is carrying 4 million ton-miles of freight for the multinational airline.

A total of seven million ton-miles of freight are flown in 1966; this figure rises to 11.61 million in 1967. During the latter year, the workforce totals 100 and the fleet comprises 2 DC-6As, 1 DC-6A/B, and 3 C-46Rs.

In 1968–1970, the fleet is increased by the addition of a Convair CV-340 and two Dassault Falcon 20s. Emphasis is now begun on executive passenger charter services and in the latter year, enplanements total 2,741 and the workforce is 140.

Bookings fall to 2,150 in 1971, the year the C-46Rs are withdrawn.

In 1972, the carrier's DC-6s continue to operate freight service under contract to **SAS (Scandinavian Airlines System)**, which consequently reports the traffic as part of its own figures.

Passenger boardings decline .75% to 2,000 executive customers. In December, Olsen's sells its two Falcons to the Royal Norwegian Air Force.

A used Dassault Falcon 20 is purchased in January 1973 as company officials reassess the possibilities of the executive charter market. It is followed into service during November by a Lockheed L-188AC received from **Nordic Air, A.S.**

By the late 1970s, the fleet comprises 3 L-188AC Electras, 1 Hawker Siddeley HS 748-B1, and 1 Dassault Falcon 20. A 40% interest is also held in **Wideroe's Flyvelskap, A.S.**

Operations continue apace through the remainder of the decade and into the 1980s. In 1986, Managing Director Alex Lange's fleet and operations remain the same, although, by now emphasis has been shifted entirely to cargo charters.

By 1991, the HS 748 has been joined by a BAe (HS) 748-B2; three L-188Cs and the Dassault have been replaced by four L-188AFs.

Charter cargo flights continue apace in 1992–1996. The Lockheeds fly overnight services to Brussels and back on behalf of **DHL World-wide Express**. During the latter year, General Manager Frederick Hirsch's fleet includes 1 BAe (HS) 748-B2 and 5 Electras.

Airline employment stands at 110 at the beginning of 1997. The aviation division of Fred Olsen's ceases operations at the end of April. One of the Electras is sold to **Atlantic Airlines, Ltd.** while the five remaining are parked. One of these is leased to Amerer Air in April 1998.

FRED OLSEN'S OFFSHORE HELIKOPTERS, A.S. See **HELIKOPTER SERVICE, A.S.**

FREE AIRLINES, S.p.A.: Via Galente 56/58, 70019, Triggiano (Bari), Italy; Phone 39 80 462 20 20; Fax 39 80 462 20 20; Year Founded 1996. Free Airlines is set up by members of the Giannelli family at Bari in July 1996 to offer international, regional, and domestic charters, both cargo and passenger. Rag Antonio Giannelli is managing director, with his brother Flippo as president and three other brothers holding lesser administrative posts. A fleet of unspecified turboprops is assembled and revenue flights begin to Belgrade, Bucharest, Istanbul, Larnaca, Malta, Moscow, Nis, Podgorica, Tirana, and Tivat.

FREEDOM AIR: P.O. Box 1578, Guam International Airport, Agana, Guam 96910, United States; Phone (671) 646-8009; Fax (671) 646-0729; Year Founded 1983. Freedom Air is set up at Agana on the island of Guam in 1983 to offer scheduled passenger and cargo services in the Northern Marianas between Saipan and Tinian, and to undertake miscellaneous charter flights. Joaquin Flores Jr. is general manager and his initial fleet is made up of a Piper PA-28 Cherokee, a Piper PA-23 Apache, and a Cessna 172.

By 1987–1988, the fleet has been changed to include 2 PA-32 Cherokee Sixes, 1 PA-23 Aztec, and 2 Cessna 206s.

Another PA-32 is purchased in 1989 and one C-206 is withdrawn in 1990. Three years later in 1993, the company flies 5 PA-32s.

The fleet is enhanced in 1994 by the addition of a Cessna 207A, a Piper PA-31-350 Navajo Chieftain, and a Shorts 330-200.

The year's enplanements reach 57,483.

Operations continue apace in 1995. Airline employment stands at 34 in 1996 and the fleet now includes 1 each Shorts 330-200, Navajo Chieftain, Cessna 207A, and 5 PA-32s.

A total of 64,608 passengers are carried.

Passenger boardings in 1997 climb 15.2% to 74,440. Flights continue in 1998–1999. Although it is understood that operations continue, no exact information is available on this carrier beyond this point.

FREEDOM AIR INTERNATIONAL, LTD.: P.O. Box 109-698, Level 3, 136 Broadway, Newmarket, Auckland, New Zealand; Phone 64 (9) 912-6980; Fax 64 (9) 912-6998; <http://www.freedom.co.nz>; Code FOM; Year Founded 1995. A subsidiary of **Mount Cook Airlines, Ltd.** (itself a subsidiary of **Air New Zealand, Ltd.**), FAI is established at Auckland in 1995 to provide trans-Tasman and South Pacific island passenger charters. Wayne Dodge is appointed CEO and is provided with a single Boeing 737-219A leased from **Air New Zealand, Ltd.** Revenue flights begin on December 8.

In addition to islands and countries in the South Pacific, the company, in 1996–1999, flies from Auckland, Dunedin, Hamilton, and Palmerston North to Brisbane, Coolangatta, and Sydney in Australia. During the latter year, the "Baby Boeing" is repainted, à la **easyJet, Ltd.**, with its website appearing over the windowline.

Flights continue in 2000 with 1 each leased B-737-3M8 and B-737-33R. On May 19, a passenger B-737-3L9, upon which lease payments could not be made by **VASP (Viacao Aerea Sao Paul, S.A.)**, is returned to IMS Leasing. It is repainted and chartered to Freedom on June 15.

FREEDOM AIRLINES (1): United States (1980–1982). Freedom Airlines is established by Jerry Winston at Cleveland Hopkins Airport in

1980 to offer scheduled service to such regional destinations as Chicago, Washington, D.C. (DCA), Saginaw, and Flint, with a fleet of 5 Convair CV-580s. Daily roundtrips commence on April 27. A 10-day strike by the pilots of the Binghamton, New York-based sister carrier **Commuter Airlines** on December 5 ends with a 9.5% wage increase over the next 5 years; the terms of the pact also apply to Freedom's flyers. Enplanements for the year total 55,558.

Operations continue apace in **1981** as four Swearingen Metro IIs are placed into service. Owner Winston now elects to withhold traffic and financial data. Early **1982**, a new route is opened from Cleveland to the Akron-Canton Airport. In November, the company is merged with **Commuter Airlines**, continuing under the **Freedom Airlines (2)** name.

FREEDOM AIRLINES (2): United States (1982-1984). Binghamton, New York-based **Commuter Airlines** merges with its Cleveland-based subsidiary, **Freedom Airlines (1)**, in November **1982** under the Freedom name. The base of operations is transferred to Cleveland, Ohio. Employing a fleet of 5 Convair CV-580s and 4 Fairchild-Swearingen Metro IIs, the 200-employee company operates routes linking Cleveland with Allentown, Boston, Grand Rapids, Harrisburg, Lansing, Norfolk, Washington, D.C. (DCA), and Wilkes-Barre.

In **1983**, President Jerry Winston's company initiates flights to Chicago, Flint, Williamsport, and Saginaw. Enplanements climb to 150,000.

The four Metroliners are grounded for maintenance in early **1984**. Scheduled passenger and freight operations continue apace until October 14, when services are suspended following Jerry Winston's death. Unable to find a successor, the family liquidates the company and sells the Convairs to **Air Ontario, Inc.**

FREEWAY AIR, B.V.: The Netherlands (1989-1995). Freeway Air is established at Amsterdam in **1989** to offer nonscheduled cargo and passenger charters to domestic and regional destinations. Much of the former is flown under subcontract to large corporations and other freight operators. The inaugural fleet includes 8 leased Cessna 406 Caravan IIs and 1 Embraer EMB-110P1 Bandeirante.

The number of Caravan IIs is reduced to four in **1990** as two are provided to a new Spanish affiliate, **Freeway Iberica, S.A.** Recession begins to impact the Dutch carrier in **1991** and the number of Cessnas is again cut in two; however, another Bandeirante is acquired.

Two additional Caravan IIs join the fleet in **1992**, but are again withdrawn in **1993**. In **1994**, the company flies a pair of Embraer EMB-110P-1 Bandeirantes. Unable to maintain its economic viability, the company shuts its doors in early **1995**.

FREEWAY IBERICA, S.A.: Spain (1990-1995). Freeway Iberica, S.A. is established at Madrid in **1990** as an affiliate of the year-old Dutch operator **Freeway Air, B.V.** Nonscheduled all-cargo flights are initiated to domestic and regional destinations with a pair of Cessna 406 Caravan IIs. Operations continue apace in **1991-1994**, but with the failure of **Freeway Air, B.V.** in early **1995**, this company also stops flying.

FREIGHT RUNNERS EXPRESS: 1901 East Layton Ave., Milwaukee, Wisconsin 53207, United States; Phone (414) 744-5525; Fax (414) 744-4850; <http://www.freightrunners.com>; Year Founded 1985. Freight Runners Express is established by Chip Zens at Milwaukee in **1985** to fly overnight freight to Midwestern destinations. Revenue flights commence with a single Cessna 207.

The carrier is expanded over the next 15 years and by **2000**, President Zens oversees the work of 25 staff, including 12 pilots. Scheduled and on-demand cargo services are provided throughout the continental U.S.

The company flies on behalf of such customers as **Federal Express (FedEx)**, **United Parcel Service (UPS)**, **DHL Worldwide Express**, Daimler Chrysler, Ford Motor Company, and Harley Davidson. The fleet includes 5 Beech 99s, 1 Beech 18, 3 Cessna 402Cs, and 2 C-207s.

FRIEDKIN AIRLINES CHARTER SERVICE. See **PACIFIC SOUTHWEST AIRLINES (PSA)**

FRIENDLY ISLANDS AIRWAYS, LTD.: Tonga (1985-1991). During **1985**, **Tonga Air Services, Ltd.**, trading under the name **Tonga Air**, is renamed Friendly Islands Airways, Ltd. Interisland services linking Tongaputu, Vav'u, Ha'apia, and 'Eua are maintained. Within four years, General Manager Robert Main's fleet comprises 1 Britten-Norman BN-2 Islander and 1 CASA C-212 Aviocar.

Paul Karalus becomes general manager in **1989** and the fleet is upgraded by the addition of a de Havilland Canada DHC-6-300 Twin Otter. A second Canadian-made turboprop is acquired in **1990**. In May **1991**, the carrier becomes **Royal Tongan Airlines, Ltd.**

FRIENDSHIP AIR ALASKA: United States (1986-1990). Galena, Alaska-based **Harold's Air Service** is renamed in October **1986**. Regional scheduled passenger and cargo services are maintained by President Robert Schafer's company to McGrath, Aniak, Fairbanks, and 60 other west and central Alaskan destinations.

The fleet in **1987** comprises 3 Piper PA-31-310 Navajos, 2 Cessna 208s, 1 USAC DC-3 Turbo Express, and 20 Cessna 207s.

A total of 36,281 passenger are transported by the state's second largest commuter on the year.

Operations continue in **1988** and the company becomes a code-sharing partner of **Frontier Flying Service**. The carrier, which does not release its traffic statistics, encounters enormous financial difficulties. The popular DC-3 Turbo Express is sold to Warren Basler, president of **Basler Flight Services** in Oshkosh, Wisconsin.

The financial slide intensifies in January **1989** when **Hermen's Air**, doing business as MarkAir Express, expands into 6 Friendship markets, driving down fares. Losses quickly become such that Schafer's airline is forced to shut its doors on February 9. All but a few of the nearly 100 employees are laid off.

Unable to resume operations, the company's dormant certificate is revoked in early **1990**. All of the remaining workers, including President Schaefer, are consequently out of work.

FRIGORIFICO REYES (FRI-REYES), LTDA.: Avenida Juan Pablo II, No. 505, El Alto, La Paz, Bolivia; Phone (2) 334450; Year Founded 1968. Fri-Reyes is established at La Paz in **1968** to operate nonscheduled, all-cargo services throughout the country. Becoming the largest of the so-called "meat haulers of La Paz," the airline's claim to fame rests primarily upon its transport use of several Boeing B-17s, the last in airline service.

During the early **1970s**, the last two of three Flying Fortresses are sold to the U.S. for restoration. In their place, Fri-Reyes receives eight former USAF Convair CV-240s. Four Douglas C-54s (military DC-4s) arrive from the U.S. during the remainder of the decade, followed, in **1980**, by receipt of a fifth from Argentina.

A C-54D with three crew and four passengers suffers an engine failure during its takeoff roll from San Borja on January 26, **1977**. The loss of power causes the aircraft to run off the left side of the runway and smash into a parked DC-3. Although both aircraft are badly damaged, there are no fatalities.

When **Faucett Peruvian Airlines, S.A.** becomes an all-jet operation in **1981**, its last two DC-4s and two DC-6s are sold to Fri-Reyes for conversion into freighters.

In **1982**, a DC-6 is purchased from the Chilean Air Force.

Having arrived at Palmira from La Paz on June 8, **1983**, a chartered VC-54Q (converted to DC-4 civil standard) with three crew and two passengers encounters of bad weather and is diverted to Trinidad, Bolivia; the aircraft crashes during its landing and catches fire, leaving no survivors.

During its initial climb away from Rurrenabaque on March 24, **1984**, a C-54S with three crew and two passengers loses engine power; the pilot loses control and the Douglas crashes into a forest. There are no survivors.

Operations continue apace during the remainder of the decade. Aircraft come (including a CV-440 and a Martin 4-0-4) and go (the CV-440 to **Panambra, Ltda.** in 1985 and the last B-17 in 1986) or are lost.

The undercarriage of a DC-6BF with three crew collapses as the Douglas lands at La Paz on May 8, 1987, causing the aircraft to flip over, break into three pieces, and catch fire. There are no fatalities.

Engine trouble causes the three-man crew of a C-54A to make a belly landing at La Paz on September 9, 1988; although the aircraft must be written off, there are no fatalities. Only a few planes are in inventory as the company completes its thirtieth anniversary year.

During its initial climb away from La Paz on June 20, 1993, a DC-6B freighter with three crew loses its No. 2 engine; when fire breaks out as the prop feathers, a forced landing is made on a grass airstrip 5 nm. from the runway. Again, there are no fatalities.

Flights continue without headline or incident during the remainder of the decade. Two C-46s make up the fleet in 2000.

FRIGORIFICO SANTA RITA, LTDA.: Aeropuerto Internacional, El Alto, La Paz, Bolivia; Phone (2) 011046; Fax (2) 356247; Year Founded 1972. Another of the large La Paz-based "meat haulers," this all cargo service begins flying in 1972 with a fleet of Douglas DC-3s, Curtiss C-46 Commandos, and a single Douglas DC-6. Operations continue apace largely without incident over the next 20 years.

During the first quarter of 1992, two aircraft are lost in rapid succession. A DC-3 with one crewman aboard is lost after its engine catches fire while the freighter is parked at Carollit Ranch on February 29; the pilot is not killed. On March 2, a C-46T with three crew and two passengers loses power to its No. 1 engine while taking off from El Trompillo, loses height, and strikes the ground with its left wing; no one aboard survives the ensuing crash.

While on initial climb away from Angora, Bolivia, on September 13, 1993, a C-46A with three crew loses its No. 1 engine; while trying to make an emergency landing, it crashes and burns. There are no fatalities. Ad hoc flights continue until mid-decade.

FRISIA LUFTVERKEHR NORDDEICH, GmbH.: Postfach 1160, Flugplatz Norden-Norddeich, Norden, D-26501, Germany; Phone 49 (3193) 32930; Fax 49 (3193) 32200; <http://www.reederei-frisia.de>; Year Founded 1969. Ostfriesische Luftdienst, GmbH. forms this subsidiary 1969 to undertake both charter flights and regularly scheduled services between Norddeich and the Frisian Islands towns of Juist and Nordeney. Dr. Carl-Uffert Stegmann is appointed president with Tjado Ihmels as managing director. The initial fleet comprises 3 Pilatus Britten-Norman PBN-2 Islanders, 1 Cessna 206, and 1 Cessna 172. Within five years, Munich and Stuttgart have joined the route system.

In 1989, a fourth PBN-2 is acquired. Upon the retirement of Dr. Stegmann in 1990, Managing Director Ihmels is elevated to the company's top post. Services continue largely without change during the remainder of the decade and into the new millennium. Late in the 1990s, a German-language homepage is opened on the World Wide Web.

FRONT LINE TOURS: United States (1991–1995). Richard Page and Larry Tighe establish this charter operation at Minneapolis (MSP) in 1991 to provide inclusive tours to retail travel agencies throughout the upper Midwest. As many of these packages include hotel arrangements and tickets to sporting events, the company comes to emphasize service to professional baseball, basketball, and hockey teams. The air transport phase of the business is handled by five Boeing 727-31s leased from **Express One International**, based in Dallas (DFW).

Flights continue apace during the remainder of the year and into 1992. In the fall, a B-727-223, newly received from **Express One International**, becomes, for one season, the official team plane of the Minnesota Timberwolves NBA professional basketball team and wears the team logo on its blue tail.

As the company continues to experience success in 1993–1994, Page and Tighe determine to acquire an existing certified airline. This proves

to be a wise choice, as Express One is about to experience significant difficulty.

As the result of a FAA probe of its parts and maintenance program, **Express One International** voluntarily halts service on June 5, 1995, and enters into Chapter XI bankruptcy. Front Page is now required to return its five chartered Boeings. Front Page Tours, meanwhile, has entered into negotiations with Conrad "Connie" Kalitta for the purchase of the newly created **MGM Grand Air** division of **American International Airways (3)**.

On July 1, majority interest in MGM is sold to Front Page Tours; AIA continues to hold a 20% interest. President Page renames his new unit **Champion Airlines** and it is provided with 1 DC-8-62 and 1 each Boeing 727-91, B-727-223, and B-727-224A, all leased from AIA, plus a 200-person workforce (a 66.7% increase over what it had been under MGM), that includes most of the former MGM employees.

FRONTIER AIR, LTD. See CANADIAN FRONTIER, LTD.; ONTARIO EXPRESS, LTD.

FRONTIER AIRLINES (1): United States (1950–1986). In December 1949, **Monarch Airlines** of Denver acquires **Challenger Airlines** of Salt Lake City and, four months later, **Arizona Airways** of Phoenix, both founded as "feeder airlines" in 1947. The enlarged company, now with 600 employees and a fleet of 12 Douglas DC-3s, is renamed **Frontier Airlines (1)** on June 1, 1950. The aviation press labels the new entrant a "super feeder." Twice-daily DC-3 services are undertaken over the combined route network of the merger partners.

By 1951, the new carrier's service routes stretch to 40 cities in 7 states from Montana to the Mexican border. In addition to passenger services, the company, in 1952, begins to stress the importance of hauling freight. With the discovery of large oil reserves in the Williston Basin of North Dakota and Montana, a need for air transport develops and Frontier expands its routes to seven destinations in those two states during 1954.

Twenty-eight additional markets are taken in during 1956–1957 and in late 1958 the CAB decides its Seven States Area Case. As a result, Frontier's operations are increased by 70% and 24 additional communities are added to the company's route network in Nebraska, Missouri, Wyoming, Colorado, South Dakota, and North Dakota. When the CAB decides the Montana case in the spring of 1959, Frontier is able to add four more stations and offer service to Jackson, Wyoming, key to the national parks at Yellowstone and Grand Teton. Expanding high-altitude operations and traffic growth lead to the introduction during the summer of the first of 14 pressurized Convair CV-340s.

The remainder will arrive in 1960–1961. On June 17 of the latter year, one of the new aircraft crashes at Durango, Colorado, when its pilots fail to extend the landing gear prior to touchdown. Having missed an airport sign, a truck runs into a DC-3 with four aboard at Bismarck, North Dakota, on July 5.

March 1962 brings a unique managerial shift. When Frontier is sold to the Goldfield Corporation, the airline's former president, L. B. Maytag, becomes CEO of **National Airlines**. In turn, **National Airlines** allows its former president, Lewis W. Dymond, to move to Denver and become president of Frontier. Once on board, Dymond begins to revitalize and expand his new charge. The former **United Air Lines CV-340 Mainliner Salinas** is purchased from Turboprop Conversions on July 20. In the fall, a number of new marketing innovations are unveiled, including the "21" Fare Plan, a liberal Family Plan, and savings for clergy and military personnel.

A CV-340 with 3 crew and 39 passengers touches down 4,061-ft. short of R17 at Grand Island, Nebraska, in fog on December 21. Although the aircraft catches fire and will have to be written off, all of the passengers are evacuated without injury, although one crewman is seriously hurt.

Passenger boardings leap ahead by 26% during the year's second half and total 292,304 for the year.

In 1963, Frontier introduces a Vacationland Fare, which permits 30 day's worth of unlimited travel anywhere over the company's system for

\$100. In addition, package tours to nine major national parks are very successful.

Enplanements for the year increase by 44% to 521,970. Revenues are \$19,915,074 and a net profit of \$792,393 is banked.

Airline employment in 1964 stands at 1,239 and the fleet includes 28 aircraft.

A DC-3 with three crew and two passengers crashes while landing in a snowstorm at Miles City, Montana, on March 12; there are no survivors.

The carrier's routes link 11 states and an application is made to the CAB for authorization to inaugurate service to the Pacific Northwest from St. Louis and the Gulf Coast. In June, the company begins phasing out its piston-powered CV-340s in favor of propjet CV-580s, four of which enter service.

On September 14, a CV-440 with 23 aboard, fails to recover from a bounced landing at Farmington, New Mexico, and crashes; no serious injuries are reported. On October 25, a CV-340 with 27 aboard makes a rough landing at Rock Springs, Wyoming, but again, injuries are minor.

Later in the fourth quarter, 54.1% control of the airline passes to RKO General, a subsidiary of the General Tire and Rubber Company.

Passenger boardings climb 17.8% to 635,000 and freight traffic jumps a full 25%. Revenues advance by 10.4% to \$22.22 million and earnings swell 11% to \$890,329.

The workforce in 1965 grows by 113. Eight more CV-580s are received following their conversion into turboprops. On August 9, the company places a \$55-million order for five Boeing 727-100s.

Bookings climb to 737,375 and cargo is up by 20%. Net earnings total \$1.31 million.

In early 1966, Frontier is awarded authority to operate a nonstop service from Denver to St. Louis and a one-stop between those two cities via Kansas City.

On June 13, the company becomes the first local service carrier to introduce the Boeing 727-191 trijet.

In midyear the last three converted CV-580s join the fleet and the revolutionary Standby Plan is introduced, allowing considerable savings to travelers lucky enough to find an empty seat available at departure time.

On July 27, a DC-3 with 3 crew and 13 passengers fails its takeoff from Gallup, New Mexico, swerves off the runway and lands in a ditch; there are no fatalities, but five aboard are injured.

Revenues are \$43,316,383; traffic figures are unknown.

The employee population in 1967 totals 3,096 and the fleet includes 54 aircraft: 5 B-727-191s, 22 CV-580s, 11 CV-600s, and 16 DC-3s. Orders are outstanding for 3 B-727-291s, 5 B-737-291s, and 8 CV-580s.

Additional CAB route awards come during the year's first half, including authority for the Yampa Valley in northwest Colorado, West Yellowstone, Missoula, and Bozeman. In addition, an east to west shortcut service is allowed from Great Falls to St. Louis via Billings, Rapid City, Omaha, and Kansas City. Finally, government permission is received to begin flying nonstop from Denver to Las Vegas and for an extension of the Wichita and Topeka service to Chicago.

Central Airlines of Fort Worth is acquired, together with its routes and assets, on October 1, allowing Frontier service into a total of 15 states with unduplicated route mileage of 12,200. The amalgamated airline is reorganized and although this causes an increase in expenses, additional jobs are created.

As the result of the failure to remove an elevator gust lock, Flight 2610, a DC-3C with two crew crashes upon takeoff from Denver on December 21; there are no survivors. Enplanements total 2,059,000. Revenues climb 24% to \$56,995,240 and net income is \$93,283.

The employee population in 1968 numbers 3,450 and the fleet includes 5 B-727-191s, 22 CV-580s, 11 CV-600s, and 17 DC-3s. The 3 B-727-291s and 10 additional CV-580s are acquired early in the year; the Boeings enter service on the new nonstop routes from Denver to Las Vegas.

The enlarged airline becomes a jet airline when its last DC-3 is retired.

The Fort Worth operations base is closed when a new \$10-million operations base is opened at Denver.

Meanwhile, operations begin with a \$7-million IBM 360/65 Sentry computerized reservations system.

On October 29, service to Memphis begins from Little Rock; the addition of the company's 116th city in its 16th state makes Frontier the second largest airline in the U.S. in terms of the number of cities visited.

Passenger boardings for the year jump 19.6% to 2,463,172 and freight traffic swells by 52.2%. Revenues increase 26.2% to \$56,995,240.

In early 1969, following his election to the board of directors as chairman, E. Paul Burke is also named Frontier's president, succeeding Lewis W. Dymond, who resigns. President Burke's first major action is to order additional B-737-291s.

Significant competition is now encountered from **Trans World Airlines (TWA)**, which triples its daily roundtrip jet service from Denver to St. Louis.

In April, the company is awarded routes from Salt Lake City to Dallas via Denver and from Kansas City to Dallas. When the first two Boeing 737-291s join the fleet in June, rapid retirement of the B-727-191s begins. New service is inaugurated in September linking Dallas with Las Vegas via Albuquerque.

With the onset of a national recession, enplanements decline to 2,342,396. Revenues are \$82.66 million. Although a \$479,000 operating profit is earned, the net earnings side of the ledger shows a \$12.21-million loss.

The employee population in 1970 is 33,500, a reduction of 1.1%.

In March, Jack A. Vollbrecht becomes chairman and A. L. "Al" Feldman is elected president/CEO.

The fleet now comprises 49 aircraft: 32 CV-580s, 10 B-737-291s, 3 B-727-291s, and 2 de Havilland Canada DHC-6-200 Twin Otters. The latter are employed to inaugurate flights to the Montana cities of Great Falls, Lewistown, Billings, Glendive, Miles City, Havre, Sidney, Wolf Point, and Glasgow plus Wiliston and Minot, North Dakota.

Nonstop service is initiated between Omaha and Chicago (MDW), as well as Denver. Direct through-plane Boeing frequencies are offered to Phoenix from Chicago via Omaha and Denver and from Billings, Rapid City, and Chicago via Omaha. Grand Island is also first visited by a Frontier jetliner.

Customer bookings incline upward by 5.1% to 2,468,278 and cargo tonnage grows by 15.9%. Revenues for the second largest local service airline are \$91,776,000. Again, an operating profit (\$415,000) is achieved, but again, a net loss (\$16.7 million) is suffered.

During the last two years of the decade, newly formed **Air Midwest**, with CAB approval, begins to replace Frontier services to three smaller towns in eastern Colorado and western Kansas. This service is subsidized via a unique "flow through" or "trickle down" arrangement by which the government pays Frontier, which in turn pays AM. This payment method is challenged in court.

Beginning on March 10, 1971, service is inaugurated with two Beech 99s to Sidney, Nebraska, and six other communities in rural Nebraska, Wyoming, and South Dakota in a six-month experiment to test whether small turboprops might be able to fill the growing gap in transportation for small, isolated communities.

Enplanements for the year are 2,747,030 and pass the 21 million-mark, cumulative. Due to higher costs, led by fuel prices, the carrier must absorb a \$2.5 million net loss.

A new Roadrunner Service is opened in 1972 between Denver and Albuquerque while Nighthawk Service is begun linking several city pairs after dark.

On April 13, Roberto Chavez-Ortiz hijacks Flight 91, a B-737-291 with 33 passengers en route from Albuquerque to Phoenix. Brandishing a pistol, he forces the Boeing to fly to Los Angeles, where he holds the crew captive and conducts a live television and radio news conference, during which he complains about injustices meted out to Mexican-Americans and other minorities. After the interviews are over, the pirate surrenders to the jetliner's pilot, who turns him over to the FBI. Chavez-

Ortiz will be tried and sentenced to prison for life; he will, however, be paroled in late 1979.

Three B-737-291s are added and by the end of the year, Frontier has phased out all of its B-727-191s. Passenger boardings accelerate 6.5% to 2,938,000 and freight is up a full 18%. Income is \$109.64 million and expenses are \$98.18 million. Consequently profits are made: \$11.45 million (operating) and \$8.59 million (net).

The workforce in 1973 is 3,561.

Elizabeth Howell is hired on January 11 as a pilot, marking the first time a female has been hired in such a capacity by a large, modern U.S. airline. That mark is bettered on January 29 when Emily H. Warner, hired a few days before, undertakes a flight as the second officer of a Boeing 737, thereby becoming the first American woman in modern times to actually serve in a flying capacity with a major U.S. scheduled carrier. After second officer service aboard Convair 580s, she will become, in 1974-1976, first officer and then captain of a de Havilland Canada Twin Otter, the first qualified woman captain with a major U.S. airline. Warner is also the first female member of the Air Line Pilots Association (ALPA). Later, she will move on to **PeopleExpress Airlines**, **Continental Airlines**, and **United Parcel Service (UPS)**. Following her 1990 retirement, her pilot uniforms will be displayed in the Smithsonian Institution's National Air & Space Museum and the Pima Air & Space Museum.

Early in the spring, the company trades its Dallas (DFW) to Albuquerque authority to **American Airlines** in exchange for the major's routing from Tucson and Phoenix to San Diego. The 13th and 14th B-737-291s join the fleet and Glen L. Ryland is named executive vice president.

A route request is filed with the CAB for initiation of service to the West Coast; additionally, plans are made to begin flying to Winnipeg next year. However, due to cutbacks in the supply of avgas, the carrier is forced to cancel 750 of its 4,138 weekly departures in December.

Customer bookings grow by 14.9% to 3,377,000 while freight climbs by 15.6%. Revenues are up to \$124.79 million, while expenses are just \$115.96 million. The operating profit is \$8.83 million while the net income of \$6.78 million is the second highest in the local service industry for the year.

Sixty-six new employees are hired in 1974.

With the inauguration of service to Winnipeg on July 1, the company becomes an international airline.

The "flow through" payment provisions to **Air Midwest** are turned down in court rulings. AM now applies to become the first certified commuter airline, a petition the CAB readily grants. A CV-340 is sold to **Sierra Pacific Airlines** on October 15.

On December 3, a B-737-291 with 102 aboard mistakenly lands at Salt Lake Airport, instead of Salt Lake City International Airport.

Enplanements climb 7.1% to 3,614,000, but cargo traffic is down by 5.9%. Income grows 18.5% to \$156.73 million and expenses are held in check at \$138.38 million. The operating profit is \$18.35 million and the net \$9.4-million income is the highest in the local service airline industry this year.

The workforce in 1975 is 3,675. The company's 17th and 18th B-737-200s are delivered and are—or were—the last 2 B-737-214s sold by **Pacific Southwest Airlines (PSA)**.

Officials seek authority from the CAB to operate to San Francisco, San Diego, and five Mexican destinations.

Passenger boardings accelerate 3.3% to 3,276,837 and a total of 14.56 million FTKs are flown, a 6.8% increase. Expenses of \$156.228 are submerged within total income of \$167.79 million, leaving an operating gain of \$11.56 million and, although down, a welcome \$6.79 million in net revenues.

The number of employees is increased in 1976 by 4.9% to 3,844.

The request for Mexican authority is partially successful late in the year, as the U.S. government grants permission to serve Mazatlan and Guadalajara. The same applies to bids for flights to Regina and Saskatoon. The carrier must, however, await grants from the Mexican and Canadian governments.

Four more B-737-291s arrive.

Customer bookings rise 13.7% to a record 3,725,250, while freight is up by 15.8% to 16.8 million FTKs. Operating revenues are \$204.16 million and expenses are \$183.16. This happy imbalance results in an operating profit of \$20.99 million and net income of \$10.94 million.

During 1977, the carrier begins an interline arrangement with **Hughes Airwest** that allows the Denver-based local to fly into Orange County and Hollywood-Burbank Airports in southern California. Simultaneously, officials approach the CAB for permission to service markets at Louisville, Milwaukee, Des Moines, Atlanta, Chicago, Spokane, San Francisco, and Sacramento.

In the 160th hijacking in U.S. aviation history, accused bank robber Thomas M. Hannan hijacks Flight 101, a B-737-291 with 34 passengers en route from Grand Isle to Lincoln, Nebraska, to Atlanta on October 20. At Atlanta, he demands a \$3-million ransom and the release of his friend, George D. Stewart, from prison. When authorities refuse his requests, Hannan releases his prisoners and commits suicide.

Enplanements for the year total 4,566,000. On revenues of \$236.57 million, a \$13.8-million net profit is banked.

Airline employment is increased by 20.5% in 1978 to 5,060.

Misuse of the flaps on takeoff for a training flight from Pueblo Memorial Airport on January 18 causes a DHC-6-300 with two crew and a passenger to lose flying speed and control, resulting in a crash in which all aboard are killed.

Also in January, the company receives the 1977 "Financial Management Award" from *Air Transport World* magazine.

The Denver-based airline experiences its most successful year to date, even as the Airline Deregulation Act becomes U.S. law in October. The fleet now comprises 30 B-737-200s (including 8 added during the year), 2 B-737-214s, 27 Convair CV-580s, and 3 de Havilland Canada DHC-6 Twin Otters. Orders are outstanding for 10 additional B-737-291s.

The company also becomes a three-nation carrier by launching service to the Mexican cities of Guadalajara and Mazatlan on November 3. On the domestic scene, frequencies are launched to San Francisco, Sacramento, Milwaukee, Louisville, Des Moines, Spokane, Detroit, and Atlanta.

Passenger boardings jump 17.5% to 5,534,000 while freight is up by 20.8% to 12.8 million FTKs. Operating income climbs \$21.4 to \$287.22 million and expenses are held to \$274.02 million. As a result, the operating balance is \$13.2 million, but net gain is down 1.24% to \$13.6 million.

Airline employment grows by 8.7% in 1979 to 5,500.

President/CEO Feldman moves to **Continental Airlines**, but growth continues under his successor, Executive Vice President Ryland.

Passenger boardings rise 18.2% to 5,349,000, revenues soar to \$390 million.

After service is terminated on low-density routes to 10 cities, 1 Canadian and 1 Mexican market, plus 6 domestic markets, are added to Frontier's network—Shreveport, Boise, Toledo, Helena, Vancouver, Ixtapa/Zihuatanejo, Redding, and Eugene. Commuter carriers are wooed with interline service while five more B-737-291s are acquired.

Customer bookings accelerate 18.2% to 6,539,000 and freight is up a minor 1.1% to 20.86 million FTKs. Revenues jump 35.82% to \$390.09 million and expenses reach \$356.91 million. Consequently, operating gain skyrockets 151.24% to \$33.17 million while net income shoots up 51.07% to \$20.63 million.

The employee population grows a scant 0.8% in 1980 to 5,622.

Service is initiated to Houston, Stockton, Regina, Saskatoon, and Lexington. Despite skyrocketing fuel prices, a sterling workforce, cost-cutting measures, suspension of service to 14 unprofitable communities, support from affiliated travel agency associations, concentration on the Denver hub, and efficient jetliners protect the carrier from fiscal turbulence.

Freight is off by 10.6% to 29.1 million FTKs and enplanements fall 11.3% to 4,971,000. Operating income swells 20.3% to \$468.9 million while costs grow 21.3% to a manageable \$432.5 million. As a result, a

\$36.4 million operating profit is realized and Frontier is able to post a record \$23.2 million in net earnings.

The number of workers is increased by 4.7% in **1981** to 5,887.

During the year, six mobile passenger lounges are introduced at the Denver hub. Five CV-580s are sold for \$1.6 million each.

In late fall, President/CEO Ryland is named board chairman; William D. Wayne is elected a company director and executive vice president.

A CV-580 with three crew is destroyed on a training flight at Longview, Texas, on November 4 when the landing gear is inadvertently retracted during the practice of touch-and-go landings.

By the close of the year, the fleet includes 43 B-737-291s (including 2 delivered since January), 2 B-737-214s, and 15 CV-580s. The route network links 86 cities in 27 states and 2 foreign countries. Passenger bookings incline upward by 4.5% to 6,289,000, despite the ATC difficulties of the year's second half; freight, however, declines 6.4% to 15.9 million FTKs. The year is a fiscal success as operating income swells 23.75% to \$577.69 million and expenses, up 21.27%, are held to \$524.29 million. The operating profit is \$53.39 million and another record net profit (\$33.3 million) is achieved.

The payroll is reduced by 7.5% in **1982** to 5,370 employees.

During January, Frontier receives the 1981 "Financial Management Award" from *Air Transport World* magazine.

In the early spring, 11 small and unprofitable communities are dropped from the route network, triggering the employee cut. Also during the first quarter, the five oldest Convairs are withdrawn and turned over to their new owners. At the same time, new markets are entered at Indianapolis, Columbus, San Diego, Fresno, Palm Springs, Manzanillo, and Puerto Vallarta.

To handle the sale and lease of used aircraft, ground equipment, and related facilities, Frontier Leasco is founded on April 22.

Frontier Airlines (1) becomes the prime subsidiary of newly created Frontier Holdings, Inc. on May 6; Frontier Leasco is also placed under the new parent. On May 12, Frontier Services Company is established to provide support services relating to aviation and travel. M. C. "Hank" Lund is named its general manager.

While taking off from Madera on a May 15 ferry flight, a Martin 4-0-4 freighter with two crew suffers an engine failure at 300 ft. and makes a forced landing in a dirt field; although the aircraft is damaged beyond repair, there are no personnel injuries.

A week later, the carrier introduces the first of three McDonnell Douglas DC-9-80 (MD-80) and four B-737-291s to be received over the next seven months.

To handle businesses not related to aviation, Frontier Development Group is set up on May 23.

On June 1, Frontier goes all-jet with the retirement (mostly to storage) of its 10 remaining CV-580s.

On the down side, intense competition, a Christmas blizzard that closes Denver Airport for most of two days, and the small-city service termination together drive passenger traffic downward by 7% to 5,850,000 passengers carried. Cargo is also off, by 18.3%, to 12.99 million FTKs. Operating income declines 6.92% to \$537.73 million and expenses are held at \$530.92 million. As a result, an operating profit of \$6.81 million is generated as are net earnings of \$15.9 million, which are less than half of those captured in 1981 and may suggest the difficulties lying ahead.

The payroll is increased by 4.6% in **1983** to 5,605.

The landing gear of a B-737-291 collapses on touchdown at Natrona County Airport in Wyoming on March 23 and both engines are afire when the aircraft skids to a stop. The flames are quickly extinguished and only one of the 95 persons aboard is slightly injured during the aircraft's evacuation.

The year's most promising achievements are negotiation of new labor contracts, which achieve 20% savings via wage concessions; the creation of a commuter network; the rescuing of bankrupt **Combs Airways**; introduction of a ground transportation system; and creating the nonunion subsidiary, **Frontier Horizon**.

Customer bookings accelerate 7.7% to 4,609,000 and freight jumps 20.5% to 15.66 million FTKs. Revenues ascend 8.3% to \$584.7 million, but costs jump 17.7%, leaving an operating loss of \$31.5 million. With a net loss of \$13.8 million, Frontier Airlines (1) suffers its first loss in more than a decade.

The workforce is reduced by 5.6% in **1984** to 5,140. The year proves turbulent for an operator that was stable just two years earlier. In the face of mounting financial and labor difficulties, to say nothing of cutthroat competition with low-cost carriers, CEO Ryland resigns and is replaced by **Frontier Horizon** President Hank Lund. Thrice-daily B-737-291 service begins in November from Denver to Minneapolis (MSP) and to Milwaukee.

Despite Mr. Lund's negotiation of a cost-saving labor agreement and an 11.2% increase in passenger boardings to 7,068,000, the picture presented also includes a 10.4% drop in freight traffic to 14.03 million FTKs. The balance sheet is mixed at best. Revenues rise 15.4% to \$674.6 million, but at \$31.3 million, the net loss more than doubles.

As **1985** begins, Frontier is flying 51 Boeing 737-200s and 5 MD-80s to 60 cities in 22 states, plus Canada and Mexico.

In January, Frontier Holdings sells its **Frontier Horizon** subsidiary to the newly formed **Skybus Corporation**.

Flights from Denver to New York (LGA) are suspended on April 1 while those from Denver to Washington, D.C. (IAD) cease on May 1.

A new president/CEO arrives during the month as Joseph R. O'Gorman Jr. moves over laterally from **Aloha Airlines**.

Significant internal change is afoot by late spring, summarized nicely in the August issue of *Air Transport World*: "Frontier Airlines' board of directors approved a plan to turn over ownership of the troubled Denver-based carrier to its employee groups. The \$211 million cost of the buy-out was expected to be financed through the sale of equipment, including 25 Boeing 737s to United, nine Convair 580s plus simulator to Metro, and possibly some Denver gate space."

Throughout the fall, it is expected that the carrier will be taken over by its employees at a price of \$17 per share. However, in early October, Texas Air Corporation, which owns **Continental Airlines** and is led by Frank Lorenzo—who has recently lost a bid to take over **Trans World Airlines (TWA)**—puts in an offer to Frontier stockholders that is substantially above that which the carrier's employees can muster. The employees, fearful of Lorenzo's reputation, plan a court action protesting such a takeover as monopolistic at the Continental and Frontier Denver hub.

PEOPLEExpress now enters the picture during the second week of the month. It offers stockholders \$24 per share and wins control of Frontier, much to the delight of its previous owners and employees. Takeover of the Denver-based national, which will now operate as a People subsidiary, is completed in November. Larry Martin now succeeds Joseph O'Gorman as president.

The workforce is reduced throughout the year, dropping by 6.7% to 4,800. For the same timeframe, customer bookings also fall, down 4.3% to 5,030,000. Revenues are off 5.2% to \$557.81 million, costs dip 4.4% to \$583.62 million, and the operating loss jumps to \$25.81 million. There is, largely through assets sales, a net profit of \$36.28 million.

Frontier's financial difficulties continue to worsen in **1986** while **PEOPLEExpress'** management is unable to find a workable marketing strategy for its acquisition. The two negatives will prove fatal for both carriers. Before that fate occurs, however, People attempts to sell Frontier to **United Airlines**, a move blocked by the major's pilot union. The assets of the Frontier subsidiary are sold to Texas Air Corporation (TAC) in July at an undisclosed price reported to be a great bargain.

Between January and July, Frontier has transported a total of 4.19 million passengers, a drop of 3.5% over the previous period in 1985. The parent will follow into the TAC empire in early 1987.

There is an unofficial website at <http://www.cuug.ab.ca:8001/~busew/frontier.html>.

FRONTIER AIRLINES (2): 12015 East 46th Ave., Denver, Colorado 80239, United States; Phone (303) 371-7400; Fax (303)

371-7007; <http://www.flyfrontier.com>; Code F9; Year Founded 1994.

Into the spring of 1994, **Continental Airlines** reduces its Denver hub from 150 to 13 flights each day and vacates 51 of its 54 airport slots. Led by Chairman/President M. C. "Hank" Lund, who had served as president of **Frontier Airlines (1)** and including seven executives from the original carrier, Frontier-2 is reborn to take advantage of this situation.

Former Denver National Bank President Samuel Addoms is appointed president/CEO and capitalization of \$9.4 million is quickly obtained, including \$7.6 million in an initial public offering in May. Investments also come from the founders and private stock placements; employees, through an Employee Stock Ownership Plan, have nearly 700,000 shares allocated for them.

After sifting through over 5,000 applications, many from one-time employees of the first Frontier, a workforce of 180 is assembled, 75% of whom are veterans of Frontier-1. Five B-737-201s are leased from **US-Air**, and a strategy is developed calling for service "In the Spirit of the West," on medium-haul spoke routes out of Denver currently served by turboprops.

Employing the first two "Baby Boeings" received, the airline launches daily roundtrip service on July 5 from Denver to Bismarck, Fargo, Grand Forks, and Minot in North Dakota. Jet service is offered at the same rates charged by turboprop commuter operators.

Upon receipt of a third B-737-201 late in the month, flights begin, on August 4, to the Montana cities of Bozeman and Missoula. Two more B-737-201s are delivered in September and all now appear in a new "Spirit of the West" livery, complete with a pair of 21-ft. high wildlife decals on the tail of each aircraft, different on each side. Animals depicted include a fox, buffalo, polar bear cubs, raccoons, ducks, a bear cub, mustang, wolf, bald eagle, deer, puma, and big horn sheep.

A marketing alliance is signed with Billings, Mont.-based **Big Sky Airlines** in October; under its terms, the two begin to offer their passengers joint fares, ticketing, and baggage transfer services.

Plans are made in November and December to inaugurate flights at the first of the year from Denver to Omaha, Albuquerque, and El Paso. The company also joins in the Continental OnePass frequent flyer program and makes a concerted effort to avoid direct competition with **United Airlines**.

Enplanements for the six months of operation total 145,400 and revenues are \$13.03 million. With expenses of \$19.36 million, the new entrant suffers a pretax loss of \$6.36 million and a net loss of \$6.18 million.

Airline employment is increased by 36.4% in 1995 to 450 and the fleet is increased through the addition of one each B-737-301 and B-737-317. The former unit displays polar bears on its tail.

The number of roundtrip flights offered between Denver and Las Vegas is doubled to 20 on April 17.

A new marketing strategy is announced at the September 17 first annual stockholders meeting. The plan creates a Denver hub and results in the introduction, between September 25 and November 15, of new longer-haul services to Phoenix, Omaha, Salt Lake City, Minneapolis, Chicago (MDW), San Francisco, Los Angeles, and Las Vegas. Flights to Bozeman and Missoula, plus two North Dakota cities, are dropped.

Enplanements for the first full year of service total 613,900 and revenues are \$55.87 million. Plagued by start-up and expansion costs, expenses reach \$64.42 million and result in losses of an almost equal amount: \$8.55 million (operating) and \$8.2 million (net).

The workforce increases 61% in 1996 to 721. Destinations visited now include Albuquerque, Bismarck, Chicago (MDW), El Paso, Fargo, Las Vegas, Los Angeles, Minneapolis (MSP), Omaha, Phoenix, Salt Lake City, and San Francisco.

En route to Denver on June 22, a B-737-201 with 98 passengers encounters severe turbulence over Granite, Colorado; an elderly passenger is badly injured.

Customer bookings skyrocket 82.1% to 1,118,082 and operating income soars 95.9% to \$109.48 million. Still, costs accelerate 83.4% to \$118.16 million and cause the operating loss to ascend to \$8.67 million.

A net \$8.08 million loss is also reported, but that is a slight improvement over the previous year.

The employee population surges 25% in 1997 to 900 and the fleet is increased by two B-737-200s and five B-737-300s—all leased.

Despite a long-standing policy of avoiding direct competition with **United Airlines**, Frontier finds itself forced into a pricing war with the major at Denver. On January 16, Frontier accuses the major of a pattern of predatory pricing designed to force it out of that market. United, in a press release, blasts Frontier-2, calling its charges "utterly groundless." Frontier prepares a 50-page factual summary of the issues from its viewpoint; entitled *Unfriendly Skies over Colorado*, the document is hand-delivered to the Departments of Justice and Transportation on January 23.

Ticketless reservations are offered to Denver customers beginning on January 28.

The debate between the two companies continues and Frontier, seeing its market share at Denver decline, elects to file a complaint with the DOJ on February 11 formally charging that the major is engaged in predatory pricing practices designed to put it out of business. The charges will quietly be investigated.

Also in February, the company enters into a marketing and code-sharing agreement with **Aspen Mountain Air** (formerly **Lone Star Airlines**). The arrangement covers passenger flights between Aspen and Denver.

A marketing and code-sharing agreement is signed with **Maverick Airways** in March. The arrangement will connect passengers arriving at Denver aboard Frontier flights with Maverick's service to Steamboat Springs and Grand Junction. This pact will cease in May when Maverick gives up scheduled service.

During the spring, new services are inaugurated to St. Louis, San Diego, and Seattle.

Unhappily, the Shuttle by United division of **United Airlines** is able to force Frontier to reduce its flights between Denver and Las Vegas to two daily roundtrips, beginning on July 8.

A B-737-3Q8, chartered from ILFC enters service on May 1 over a new third daily roundtrip between Denver and Seattle.

Frontier now again appeals to the DOT. On May 8, a stung **United Airlines** files a motion with DOT accusing Frontier of waging an unrelenting campaign of "mischaracterizations, misrepresentations, and misstatements." The Chicago-based major, in a press release, charges that Frontier is petitioning the government "to interfere with the free workings of the marketplace to protect them from the rigors of competition that all carriers face." At the beginning of June, leases are renewed through 1999 on five B-737-200s chartered from S-C Aviation Group.

New competition is faced from **Western Pacific Airlines (Westpac)** beginning on June 29 when that Colorado Springs-based company begins an enhanced schedule of services from Denver. Although Frontier proudly maintains excellent revenue yields, its costs are much higher than Westpac's. Officers from both airlines realize that competition against each other—and against **United Airlines**—will be fiscally disastrous.

In a surprise initiative designed to neutralize any adverse traffic or fiscal impact from Frontier and to assist it in the upcoming battle with the Chicago-based major, Westpac on July 1 begins the process required to takeover its rival. Officials from both companies agree that Westpac, with Robert A. Peiser as president/CEO (Frontier CEO Addoms will retire), will eventually be the surviving partner after stockholders from Frontier hopefully accept 0.75 shares of Westpac stock for every one of their own. The cashless arrangement, valued at \$45 million, will be accomplished in stages, beginning with joint code-sharing on August 1 and total merger in October.

Service between Denver and Las Vegas is reduced on July 8 from three daily roundtrips to two.

Toward the end of the month, officials of the two carriers suggest that, upon merger, the Frontier name survive for the united entity, as the name is associated with **Frontier Airlines (1)**, widely recognized and still

remembered as one of the nation's safest carriers. The proposal is noted in the July 28 issue of *Aviation Week & Space Technology*.

Service between Denver and Las Vegas is terminated on August 1. Also in August, two more leased B-737-300s are acquired, one each from Boullioun Aviation Services and the other from GE Capital Aviation Services.

Twice-daily B-737-300 roundtrips commence on September 16 between Denver and Boston.

Despite the introduction of code-sharing operations on the appointed date, Frontier and Westpac find it difficult to coordinate their schedules and integrate their cabin and cockpit crews. With both carriers suffering financially, merger plans falter and on September 29 the two announce an end to their code-sharing agreement. On October 3, Westpac President Peiser releases a statement to the media. Due to "cultural differences and the contrast in our scheduling difficulties," the merger with Frontier is dead. Even the dual-designator compact will end on November 16.

Industry insiders suggest that the union has failed because Frontier, with only \$7 million on hand, is unwilling to join in a situation where \$15 million in debt is due and payable shortly after the merger. Near-partner Westpac declares Chapter XI bankruptcy on October 6.

On October 24, Frontier is one of four carrier's to receive special permission from the DOT to share 31 slots at New York (LGA) and Chicago (ORD).

Early in November, Greenwich, Connecticut-based Wexford Management LLC announces a \$15-million investment letter of commitment in Frontier, in exchange for a 10% stake.

On November 16, the day that code-sharing with Westpac is finished, Frontier inaugurates daily roundtrips from Denver to Baltimore (BWI). Due to the city's supersaturation of service, the carrier withdraws from San Diego, which it has served for over a year.

Having made a controlling investment in **Hawaiian Airlines (HAL)** the previous year, Smith Management Co. (SMC) of New York City steps forward early in the third week of November to rescue **Western Pacific Airlines (Westpac)**. That firm joins with company officials and asks the bankruptcy court to allow it to inject \$10 million into the destitute carrier before December 4 in order to allow the airline to make its aircraft lease payments. Thereafter, on December 20, another \$20 million in "debtor in possession" financing would become available as working capital, with another possible \$20 million to follow, which would assure emergence from Chapter XI. In exchange for this aid, SMC would receive nearly all equity in Westpac.

On November 21, former partner Frontier, backed by Wexford Management LLC, submits a surprise bid for Westpac of its own. The new plan is similar to SMC's in that \$15 million would be put forward by December 4 for Westpac's aircraft lease payments, followed by additional debtor-in-possession financing. Bankruptcy Judge Sidney Brooks orders a preliminary hearing on the two plans for November 28 with a decision on December 3, in time for the lease disbursement.

On November 24, the newspaper *USA Today* reveals that the DOJ is, indeed, in the early stages of investigating the carrier's February 11 charges against **United Airlines** concerning predatory pricing practices at Denver. UAL has denied the charges and it would appear that no ruling will be given before year's end. The earlier letter of commitment to Frontier by Wexford Management is formalized on December 2. Frontier will now receive up to \$15 million through the sale of 10% senior secured notes. Up to \$3 million of the notes may be exchanged for convertible preferred stock issued by the airline. Frontier takes an immediate draw of \$5 million.

On December 3, \$151 one-way Denver to New York (LGA) service is inaugurated. The same day, SMC is awarded debtor-in-possession control of **Western Pacific Airlines**. Arthur H. Amron, Senior Vice President/General Counsel of Wexford Management, is voted on to the board of directors on December 12.

Passenger boardings climb 17.7% to 1,315,728 while operating revenues advance 26.3% to \$138.32 million. Expenses jump 33.5% to \$157.87 million. The operating loss widens to \$19.55 million and the net loss deepens to \$18.94 million.

A third daily nonstop roundtrip is added on February 1, 1998 between Denver and New York (LGA). It employs a second B-737-300 acquired from Boullioun Aviation Services received at the end of the previous month.

When Westpac finally collapses on February 4, Frontier offers to allow its ticket-holding passengers space available passage on Frontier flights. It also enters into a code-sharing agreement with **Aspen Mountain Air**.

On April 6, Frontier issues a press release praising the DOT's decision to review anticompetitive behavior in the airline industry. The same day, it is announced that an institutional investor will make a significant purchase.

Daily nonstop B-737 roundtrips commence on April 13 between Omaha and Minneapolis (MSP). The service will compete directly with flights offered by **Northwest Airlines**.

The purchase transaction is closed on April 24 when the unnamed investor formally purchases 4,363,001 newly issued shares of Frontier common stock for approximately \$14.2 million (\$3.25 a share) and receives approval to nominate two more members to Frontier's six-person board of directors.

AVStar International is retained as the carrier's worldwide general sales agent on April 28.

On May 4, in conjunction with Hunt Valley, Maryland-based Adventure Vacations, the airline introduces a new tour product called Frontier Airlines Vacations. Air-inclusive tour packages will be offered at most destinations across Frontier's coast-to-coast route network via its Denver hub beginning on June 15.

On May 26, two new directors are added to the corporate board, John E. Luth and B. Ben Baldanza; the former had been chief financial officer of **Continental Airlines** from 1989-1995 while the latter is managing director/chief operating officer of the TACA Group of Central American airlines.

A third daily nonstop roundtrip is added on July 7 from Denver to Seattle.

At the beginning of the month's second week, it is revealed that, after a study, the decision has been taken not to add a premium class, but to remain an all-coach airline.

Twice-daily B-737-300 nonstop return service is initiated on July 23 between Denver and San Diego. Additionally, frequencies are increased from two to three daily roundtrips from Denver to Salt Lake City and El Paso and from three to four daily roundtrips from Denver to Los Angeles.

On July 28, President Addoms announces that, for the first time in two years, the carrier has earned a profit (\$433,709) during the second quarter. The turnaround is directly attributed to the shutdown of its rival, **Western Pacific Airlines (Westpac)**, in February.

In September, the airline begins its own flight servicing operations at Denver. One hundred additional personnel have been brought on staff to handle baggage and cargo loading, lavatory servicing, and water provisioning.

Two B-737-300s are leased on October 26, one each from **Air New Zealand, Ltd.** and the other from Heller Financial.

In early November, an eighth B-737-200 is received; it will be employed on charters and to provide additional flight frequencies during holiday traffic periods. Frontier flyers are offered a free bus service between Boulder, Colorado, and Denver beginning on November 1. Also at the beginning of November, an investment group, including W. R. Hambrecht & Co. purchases an 8% stake in Frontier.

On November 13, Hambrecht files a Schedule 13D with the Securities and Exchange Commission, which, among other things, recommends that a merger or business combination be undertaken between Frontier and **Vanguard Airlines**. Flattered by the suggestion, Frontier President Sam Addoms declines the approach on December 16.

Thrice-daily B-737-300 roundtrips begin on December 17 from Denver to Dallas (DFW) and to Las Vegas and twice-daily roundtrips from Denver to Atlanta.

Customer bookings during the 12 months climb 16.4% to 1,534,000, while freight traffic increases 78% to 3.92 million FTKs. Revenues

surge 39% to \$192.31 million, while expenses are up 15.5% to \$182.32 million. There is an operating profit of \$9.99 million, while a \$10.67-million net gain is celebrated.

In February 1999, Frontier prepays the \$943,000 balance on a \$5-million loan from Wexford Management that is due in December 2001.

In a move calculated to save \$1 million per year on contract FAA-approved repairers, Frontier, on March 1, begins in-house heavy maintenance checks on its aircraft at its Denver base.

To replace the B-737-200s that do not meet Stage 3 noise reduction regulations, Frontier, on March 12, leases three B-737-200As from Triton Aviation Services, Ltd. of San Francisco and two B-737-300s from Stockholm-based Indigo Aviation, A.B.

The first B-737-300 is delivered on March 31, followed by the three B-737-200As on April 15. The second B-737-300 arrives on May 1. The arrival of these aircraft permits the carrier, on May 10, to increase its daily nonstop roundtrips from Denver to New York from two to three and from Denver to Seattle from three to four. Daily B-737-300 roundtrips commence on June 14 between Denver and Portland. At the same time, the number of daily roundtrips from Denver to San Francisco is increased from three to four.

The company now serves a total of 20 cities.

In October, the company reveals that it is planning a large purchase from Airbus Industrie.

Passenger boardings surge 42.9% to 2,187,000 while cargo traffic increases 46% to \$5.72 million FTKs. Revenues jump 59.8% to \$307.3 million, while revenues are up 45.5% to \$265.36 million. The operating profit leaps up to \$41.94 million, while net gain reaches \$32.75 million.

Airline employment at the beginning of 2000 stands at 1,948, a huge 57.6% increase over the previous 12 months. The B-737-300 fleet now includes 3 Dash-3Q8s, 1 each Dash-3M8, Dash-301, Dash-317, Dash-3S1, Dash-3U3, and Dash-36N, 2 Dash-36Qs, 3 Dash-3L9s, and 4 Dash-36Es.

On January 5, a contract is signed with GE Capital Aviation Services (GECAS) for the lease of four B-737-300s, to be delivered by May.

The Airbus Industrie deal reported in October is firmed up during the first quarter. On March 15, the airline officially signs contracts with the European manufacturer for six A319-111s and five A318s, which, when delivered, will be the airline's first owned airplanes. It also signs a lease agreement with GECAS for 15 A319-111s and with ILFC for an A318.

On June 1, daily frequencies from Denver are increased to Boston (1 to 2), to Dallas (3 to 4), to Portland (2 to 3), to San Diego (2 to 3), and to San Francisco (3 to 4). New thrice-daily nonstop B-737-300 return service is started on June 15 from Denver to Kansas City, one of the most popular routes of **Frontier Airlines (1)**.

A B-737-3Q8 leased from ILFC on June 17 enters service on July 1. The company's sixth anniversary is now celebrated. Since 1994, the carrier's fleet has grown from 2 to 24 B-737s, the number of employees has increased from 180 to 2,400, the number of destinations served has been boosted from 4 to 23, and enplanements have grown from 400 thousand to 2.4 million.

Frontier is named second best-managed company among non-state-owned national-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

Delivery of the first A319-111 is advanced on July 21 from September 2002 to May 2001. A second will follow in June. Another B-737-3Q8, previously operated by **ProAir** of Detroit, is chartered from ILFC on August 31, for delivery in September.

Daily B-737-3Q8 roundtrips are inaugurated on September 7 between Denver and Washington, D.C. (DCA). Frontier had obtained this and a second Reagan National slot in early July under the Congressional Reform Act for the 21st Century.

In conjunction with the introduction of new aircraft in June 2001, Frontier, on December 11, completes a "Spirit of the West" wildlife photography contest begun some weeks earlier designed to find a new image for the tail of its inaugural Airbus.

Daily B-737-3Q8 return frequencies from Denver to Orlando are doubled from one to two on December 14. The same day, the number of

daily roundtrips from Denver to San Diego is boosted from two to three, one of which is the day's earliest departure from the airport.

At year's end, the company begins discussions with **Great Lakes Aviation** concerning a possible strategic and code-sharing agreement.

FRONTIER COMMUTER: United States (1983-1985). Late in 1983, Frontier Holdings, Inc. forms a number of commuter alliances in order to strengthen the feed to Denver-based **Frontier Airlines (1)**. Among these is the all-cargo airline **Combs Freightair**, which has formed a passenger subsidiary, **Combs Airways**, to operate Frontier Commuter services.

Following the bankruptcy of Combs in early 1984, International Technology Resources forms an airline division, **ITR Airlines**, to operate Frontier Commuter flights. Subsequent to the ITR takeover, the Frontier holding company pours cash and to which it transfers nine Convair CV-580s.

The reborn Frontier Commuter, with 380 employees, commences operations with 11 CV-580s to 19 cities in May. In all, 220,000 passengers are boarded, 80% of whom are fed to Frontier-1, before a major impasse arises over a means of repaying the parent company's investment.

In January 1985, Frontier Commuter shuts its doors. Frontier-1 repossesses its nine aircraft and the other two are sold.

FRONTIER FLYING SERVICE: 3820 University Avenue South, Fairbanks, Alaska 99701, United States; Phone (907) 474-0014; Fax (907) 474-0774; <http://www.frontierflying.com>; Code 2F; Year Founded 1950. One of Alaska's longest surviving regional independents, Frontier is formed by John Hajdukovich at Fairbanks in 1950 to offer passenger and cargo charters out into bush areas. Operations continue apace for the next 30 years.

A Douglas DC-3 strikes three parked aircraft while landing at Bettles on October 30, 1979; although the Douglas must be written off, there are no fatalities.

By the time the company signs a feeder agreement with **Wien Air Alaska** in 1980, the little charter operator has become a scheduled airline, delivering service to communities in the central and northern parts of the state, including Allakaket, Anaktuvuk Pass, Bettles, Fort Yukon, Galena, Husliis, Kaltag, Nulato, Prospect Creek, and Venetie.

President Hajdukovich's fleet in 1981 comprises 1 Douglas DC-3, 1 Piper PA-31-350 Navajo Chieftain, 2 Cessna 207s, 1 Cessna 206, and 1 Cessna 185.

There is no break in service during the remainder of the decade, despite the loss of the **Wien Air Alaska** affiliation in 1984. New destinations added include Wiseman and Chandalar. Operations continue apace in 1985-1989. In April of the latter year, Frontier is one of five Alaskan air carriers subpoenaed by the DOJ to provide information in an investigation of possible antitrust violations in the airline industry. Together with **Peninsula Airways**, **Reeve Aleutian Airways**, **Ryan Air Service**, and **Alaska Airlines**, Reeve is required to supply documents (dating back to January 1, 1984) to a May 9 grand jury session or forward them directly to Washington. Although the airline subpoenas do not name a target, the May 6 issue of the *Anchorage Daily News* reports the subject is **MarkAir**. President Hajdukovich informs the newspaper that DOJ lawyers have contacted him within the past year concerning possible antitrust violations by Neil Bergt's carrier.

In 1990, the 49-employee company operates over its traditional route network with a fleet of 2 Beech 99s, 1 Piper T-1040, 4 Piper Navajo Chieftains, 1 DC-3, and 1 Cessna 207. A PA-31-350 crashes at Kaltag, Alaska, on September 3 (three dead).

Enplanements total 27,952.

A third Beech 99 and a replacement Chieftain are added in 1991. On February 6, Frontier expands from Fairbanks to Anchorage with a new Beech 99 route via McGrath and Galena. As a result, the commuter enters into a fare war over the same route with the much-larger **MarkAir**. Passenger boardings inch up to 28,461 and a total of 1,396,805 pounds of mail are flown.

Airline employment is increased by 22.4% in **1992** to 60 and the T-1040 is replaced with a Dornier 228-212.

Customer bookings ascend 2% to 29,158.

President Hajdukovich adds a fourth Beech in **1993**. Passenger boardings leap upward by 21% to 35,306.

Two Beech 99s are acquired in **1994** and assist customer bookings to ascend 20% to 42,395 and cargo to rise to 673,421 FTKs.

The company's 8 aircraft transport a total of 42,831 passengers in **1995**, a slight 1% increase.

In terms of traffic, **1996** is the first bad year of the decade for this Fairbanks-based operator. Customer bookings plunge 13% to 37,281.

The fleet in **1997** includes 2 Beech 1300s and 2 Beech 99s. Markets visited include Allaket, Barker Island, Beaver, Fairbanks, Galena, Husila, Janana, Kaltag, Kotzebue, Koyukuk, Nulato, Nome, Prudhoe Bay/Deadhorse, Ruby, and Stevens Village.

Scheduled passenger boardings climb by 200 to 37,406. In addition, 9,373 charter customers are also flown.

During the spring of **1998**, the company acquires two Beech 1900Cs, which are delivered wearing a brand new livery. Customer bookings drop 8.2% to 34,000.

Airline employment at the beginning of **1999** stands at 60. Passenger boardings for the year jump 14.2% to 39,000.

A total of 45 full-time pilots are employed at the beginning of **2000** to fly the company's fleet, which now includes 3 Beech 1900s, 6 Navajo Chieftains, and 1 each PA-31-310 Navajo, Cessna 207A, and Beech Super King Air 200.

For the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Gov. Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and which depend upon salmon as their food source, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by Warbelow's at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of chief pilot Michael Morgan, Warbelow's, which has the only bypass-mail-shipping permit in Fairbanks, runs the packages through its meter and, with USPS assistance, farms out this mail for delivery. The airlines involved, **Warbelow's Air Ventures**, **Frontier**, **Arctic Circle Air Service**, **Belair**, **Larry's Flying Service**, **Servant Air**, **Tanana Air Service**, **Tatonduk Air Service**, and **Wright's Air Service**, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk rivers.

With the acquisition of a Beech 1900D, daily no-frills passenger roundtrips (except Saturdays) are inaugurated on September 5 between Bethel and Anchorage. Just over a month later, on October 22, the new Airliner is badly damaged while landing at Bethel after its Anchorage service. Neither the 2 pilots nor any of the 17 passengers aboard are hurt as the plane continues 150 ft. off the runway into soft terrain, where its nose landing gear collapses.

The company takes delivery of a replacement Beech 1900D on November 13.

FRONTIER HELICOPTERS, LTD. See **CONAIR AVIATION, LTD.**

FRONTIER HORIZON: United States (1983–1985). To help reverse its financial slide, Frontier Holdings, Inc., in late **1983**, forms a nonunion subsidiary of **Frontier Airlines (1)** to operate in long-haul markets not served by the Denver-based carrier. Frontier Services General Manager M. C. "Hank" Lund is named president, with Edward Dunaway as vice president-marketing. Initial capitalization of \$34 million is provided by the holding company and includes the \$16 million necessary to lease a fleet of jetliners. From 40,000 applications, 280 employees are hired.

Part 401 certification is received from the CAB on January 6, **1984**. On January 9, using seven Boeing 727–191s leased via its parent's Frontier Leasco subsidiary from **American Airlines**, Frontier Horizon begins thrice-daily nonstop scheduled services from Denver to Chicago (ORD) and two to Washington, D.C. (IAD).

The first day of operations is only slightly marred by light snow at Denver and unionized **Frontier Airlines (1)** personnel conducting "informational picketing." More seriously, Seattle-based **Horizon Air** goes to court to force the new entrant to change its name, claiming it is an infringement against its own title. A court agrees at the end of the month, but Frontier Horizon continues to pursue steps that will allow its retention. Among these is a referral of the question to the CAB.

Flights to New York (LGA) begin late in the month and to San Francisco on March 1.

By the end of March, Frontier Holdings and the ALPA-represented pilots of **Frontier Airlines (1)** contractually agree that any increase in the number of aircraft in the Frontier Horizon fleet will be subject to an ALPA agreement.

Nonstop B-727–191 frequencies are initiated in the fall from Denver to Orlando and Tampa.

Late in the year, the CAB rules upon a complaint from **Horizon Air** and agrees that the Denver concern's name must be changed because it is too confusing for would-be customers of the Seattle-based **Alaska Airlines** sister company. The name Frontier Discovery is chosen in a public competition.

A total of 509,402 passengers are transported before this new entrant is sold for \$20 million to another newly formed company, **Skybus Corporation**, in January **1985**, effective in May. Frontier Horizon's routes are absorbed by **Frontier Airlines (1)**, or dropped by Skybus in its attempt to establish its own low-cost service hubbing on Atlanta's Fulton County Airport.

FS AIR SERVICE: 6121 South Air Park Place, Anchorage, Alaska 99502, United States; Phone (907) 248-9595; Fax (907) 243-1247; Code Y7; Year Founded 1995. FSAS is established at Anchorage in **1995** to offer on-demand passenger and freight charters throughout Alaska and regularly scheduled return passenger service to Seward. CEO Floyd Saltz Jr.'s fleet includes 2 Cessna 207As and 2 Fairchild Merlins, plus 1 each Piper PA-34 Seneca, PA-31-350 Navajo Chieftain, and CASA C-212-200 Aviocar. Enplanements nearly reach 4,000.

In **1996**, orders are placed for 13 Beech 1900Cs. Customer bookings, however, decline by 9% to 2,829. These traffic figures deflate interest in continuing scheduled customer service and the company now reverts to charter flights only.

By **2000**, Sandra Saltz is president, with Scott Anderson as director of operations. A total of 30 full-time and 3 part-time pilots are employed to operate the fleet, which now includes 2 each Navajo Chieftains, Beech 18s, and Metros, plus 1 each Swearingen Metro, Beech Turbo 18, Learjet 35A Century III, and the Aviocar. The latter is employed on cargo service.

FTi FLUGGESELLSCHAFT, GmbH.: Germany (1918–2001). In cooperation with the German tour operator Frosch Touristik International, GmbH. (FTi), Thomson Travel group, parent of **Britannia Airways, Ltd.**, establishes the subsidiary **Britannia Airways Germany, GmbH.** at Berlin's Schoenefeld Airport in July 1997. Boeing 767-304ER charters on behalf of FTi and Thomson Travel are flown, with new attention paid to the Mediterranean destinations of Majorca and Malta.

On May 13, **1998**, Thomson rival Airtours, plc, enters the German package vacation market when it purchases a 29.03% stake in Frosch Touristik, GmbH. (FTi) for an initial cash price of DM 50 million (£17.2 million or \$28.5 million). Airtours has the option to purchase the whole concern by 2002. Dietmar Gunz, Frosch founder/managing director, joins the Airtours board while the British concern begins to make good on a pledge to invest DM 10 million in loan capital to enable Frosch to finance its short-term growth.

On September 7, Frosch Touristik, GmbH. (Frosch translates as "frog") Managing Director Gunz announces that his tour concern will soon create its own airline to operate a trio of Airbus A320-231s, sub-leased from **Airtours International Airways, Ltd.**, on routes from Germany to the major Mediterranean holiday destinations.

It is noted that Fti's current contract with **Britannia Airways Germany, GmbH.** for flight services, which is due to end in 2001, will be progressively scaled back even as Herbert Kracker, vice president-operations of Britannia Airways Germany, GmbH., is hired as the new airline's operations director. It is anticipated that, beginning during the fourth quarter, **Britannia Airways Germany, GmbH.**, which has been operating B-767-304ER services for FTi to Majorca and Malta, will restrict its flights to long-haul operations to the U.S. and Caribbean.

FTi is not able establish its short-haul airline subsidiary as quickly as anticipated during the fourth quarter and thus **Britannia Airways Germany, GmbH.** also continues to operate to the Mediterranean on behalf of the German travel operator.

On March 15, **1999**, Airtours, plc, raises its stake in Frosch Touristik, GmbH. from 29.03% to 35.92%. The stake of Fti founder Gunz falls from 23.04% to 19.67%, with private investors holding the remaining stock. Airtours promises to stem Fti's losses by half by 2001 and make the business profitable by the end of 2002.

Employing three leased German-registered A320-231s in livery similar to that of Airtours, FTi Fluggesellschaft, GmbH., doing business as Fly Fti, begins revenue operations from Munich, Berlin, and Cologne on May 1. The Frosch Touristik, GmbH. subsidiary operates from Munich to the 18 major Mediterranean vacation destinations in 11 countries previously visited on its behalf by **Britannia Airways Germany, GmbH.** Other German gateways include Dusseldorf, Frankfurt, Hamburg, Hanover, Koln/Bonn, Leipzig, Nuremberg, Paderborn/Lippstadt, Saarbrücken, and Stuttgart.

Enplanements for the year double from 1 million to 2.2 million, but profitability slides.

Airline employment at the beginning of **2000** totals 182. Another A320-231, in a slightly modified color scheme, is delivered on February 13. Two more are anticipated shortly.

Although the current agreement with **Britannia Airways Germany, GmbH.** is not due to expire until April 2001, Frosch Touristik CEO Dietmar Gunz begins renewal talks in April. The tour master seeks a two-year extension, but hopes that his own in-house airline, Fti Fluggesellschaft, GmbH., doing business as Fly Fti, will eventually be able to take over the long-haul services.

Britannia Airways Germany, GmbH. inaugurates biweekly B-767-304ER roundtrips for FTi on May 4 between Dresden and Varadero, Cuba.

Also during the month, **Airtours International Airways, Ltd.** enters into discussions with **LTU International Airlines (Lufttransport Unternelhman, GmbH. & Co., KG)** concerning a possible combination of tour operations.

As a result of the complete takeover of Frosch Touristik by Airtours, plc on July 14, Fti Fluggesellschaft, GmbH., doing business as Fly Fti, informs the German Britannia that it will not renew after April 2001. After all, **Airtours International Airways, Ltd.** and Britannia are now direct competitors. Although talks concerning the wet-lease of aircraft continues, the principal discussions with **LTU International Airlines (Lufttransport Unternelhman, GmbH. & Co., KG)** are broken off by Airtours Managing Director Timothy Byrne on August 9. The UK operator is required to provide its full attention to stemming the losses that

continue to be suffered by Fti and which are expected to hit £85 million for the year. Several new cost-cutting measures are put in place at Fti, including a reduction in the number of German airports from which it departs from 16 to 6.

On September 5, a contract is placed with **LTU International Airlines (Lufttransport Unternelhman, GmbH. & Co., KG)** for the wet-lease of a pair of B-767-365ERs in April next, as the carrier switches away from **Britannia Airways Germany, GmbH.** The aircraft will transport FTi passengers to Cuba and the Dominican Republic.

Due to anticipated heavy losses, the company makes only three A320-231s available for holiday charters at the beginning of the winter schedule on October 29. Two others are put up for lease and one is in heavy maintenance, which will not be finished until March 31.

The press learns at the beginning of November that **Britannia Airways Germany, GmbH.** is scheduled to be shut down in April 2001. Frosch Touristik will shut down its house carrier in late October.

FUJI AIR LINES COMPANY, LTD.: Japan (1952–1964). Formed on Kagoshima, off Kyushu, on September 13, **1952**, Fuji offers nonscheduled Cessna 170 sight-seeing and aerial survey flights on local routes. In affiliation with **Japan Air Lines Company, Ltd. (2)**, scheduled Beech 18 frequencies commence on April 1, **1958**, from Kagoshima to Tanegashima.

A used de Havilland DH 114 Heron 1B is acquired during the summer of **1959** and is employed, on August 1, to begin Niigata to Sado Island frequencies. As the decade ends, a Sikorsky S-62 helicopter is also placed into service.

The company purchases a Convair CV-240 in the spring of **1963** and uses it to launch scheduled daily return service on July 1 from Tokyo to Kagoshima via Takamatsu and Oita. The Convairliner is in operation less than a year when, on February 1, **1964**, as Flight 902 with 5 crew and 37 passengers, it overshoots the runway while landing at Oita. The aircraft crashes into a pile of lumber 124 m. past the end of the runway and falls into dried-up Urakawa River (20 dead).

This and other disasters befalling the nation's smaller carriers causes the Ministry of Transport to seek route rationalization. On April 15, Fuji is one of three small regionals merged to form **Japan Domestic Airlines Company, Ltd.**

FUJIAN AIRLINES COMPANY, LTD.: Tiedao Building, Wuyi Central Road (5,1), Zhong Lu, 3500005, Fuzhou (Fujian), China; Phone 86 (591) 753-9073; Fax 86 (591) 343-8402; Code IV; Year Founded 1993. A subsidiary of **Xiamen Airlines Company, Ltd.**, Fujian Airlines is established at Fuzhou on August 8, **1993** to provide scheduled passenger and regional service. Hou Zhenshan is appointed president and flights begin with a pair of Xian Y-7s (Chinese license-built Antonov An-24s).

While on a December 28 domestic service from Ganzhou to Xiamen, a Y-7 is taken over by a married couple, Luo Changhua and Wang Yuying, with their 11-year-old son in tow, and is diverted to Taipei. The aircraft is returned. The parents will be tried and sentenced to prison terms of 11 and 8 years, respectively, while the youth will be placed in a foster home.

Operations continue apace in **1994–1995** and during these years, two more Y-7s enter service, along with a pair of Boeing 737-505s. In **1996**, an order is placed for a Next Generation B-737-700. Service is maintained without incident or headline during the remainder of the decade. The Next Generation B-737-700, a Dash-75C, is delivered on August 21, **1998**.

FUJITA AIR LINES COMPANY, LTD.: Japan (1952–1963). Aoki Air Transport Company, Ltd. is formed on April 26, **1952** to offer flights between Tokyo with the vacation island of Hachijojima. The small operator does not launch scheduled services for two years; however, in the late winter of **1954**, several light aircraft are purchased, allowing the inauguration of revenue flights in April. De Havilland

DH-104 Dove charters are initiated on May 15, 1958 from Tokyo, Osaka, and Nagoya to Oshima.

Having expanded its route network, the company acquires **Nihon Yuran Hiko (Japan Sightseeing Flying Company, Ltd.)** on June 11, 1961 and with the award of a permanent route certificate, changes its name to Fujita Air Lines Company, Ltd. in November. The fleet is enhanced by the addition of de Havilland DH 114 Heron 1Bs as the carrier operates regular return services from Tokyo, Osaka, and Nagoya to the Oshima islands and to Hachijojima. On August 31, 1963, the carrier is purchased and merged into **All-Nippon Airways Company, Ltd. (ANA)**.

FUNAIR: 3655 NW 87th Ave., Miami, Florida 33178, United States; Phone (305) 599-2600; Year Founded 1998. Funair is established at Miami (MIA) during the first quarter of 1998. It is outfitted with a single Boeing 727-100 with which to undertake its domestic passenger charters. Leased equipment will be employed in the new millennium.

FUNTSHI AVIATION SERVICE, S.A.: Zaire (1992–1993). This African charter carrier is formed at Kinshasa in 1992 to fly holiday and tour flights to destinations in Africa, the Middle East, and Europe. The fleet comprises 2 Sud-Est SE-210 Caravelle IIIs. Unable to achieve viability in a recession year, the company fails to survive until its first birthday.

FUTURA INTERNATIONAL AIRWAYS, S.A.: Gran Via Asima 17, Poligono Son Castello, Palma de Mallorca, 07009, Spain; Phone 34 (71) 755 196; Fax 34 (71) 202 014; <http://www.irinfo.es/aviacion/futura.html>; Code FH; Year Founded 1989. This Palma de Mallorca-based airline is established in late 1989 to operate inclusive-tour flights from Ireland to Spain and other European holiday travel destinations. The financial interest is held by Spanish banking interests (75%) and **Aer Lingus Irish Airlines, Ltd.** (25%). Leo Guckian is named managing director.

Services are inaugurated from Dublin to Palma de Mallorca in February 1990 with the first of three leased Boeing 737-4Y0s to be acquired over the next two quarters from GPA Group, Ltd. Flights soon thereafter begin to Vienna, Munich, Dusseldorf, and Manchester.

A fourth Dash-4Y0 is added in 1991 and shareholding is revised: **Aer Lingus Irish Airlines** (85%) and **Belton Air, Ltd.** (15%).

In 1992, the fleet comprises 6 leased B-737-4Y0s and 1 B-737-348, the latter provided by **Aer Lingus Irish Airlines, Ltd.**, but subleased to **Viva Air, S.A.**

Airline employment in 1993 stands at 220. Enplanements total 1,266,100.

A 7th chartered B-737-4Y0 and 6 more employees join the carrier in 1994 as passenger boardings slip to 1,253,249.

The workforce skyrockets in size during 1995, growing by 143.4% to 550. One B-737-4Y0 is leased to **Transbrasil, S.A.**, but is replaced in service with a B-737-46B. Enplanements recover, growing 10.2% to 1,395,600.

There is no change in employment or fleet in 1996. Customer bookings drop 4.6% to 1,332,400.

Airline employment declines 14.5% in 1997 to 470. Destinations visited include all of the Western European nations plus Russia, Ukraine, the Czech Republic, Hungary, and Israel. Scheduled flights are inaugurated on May 2 from London (LGW) to Palma de Mallorca. Technical problems delay the departure of a B-737-4Y0, with 170 passengers from Malaga to Aberdeen on August 8. As a result of the Scottish airport's curfew, the plane is diverted first to Glasgow, but it is found that there are too few busses at that point to drive the group to Aberdeen, then on to Edinburgh. A spokesman for Aberdeen Airport indicates that 16 flights each year are allowed to breach the curfew, but only if they can arrive before 11 p.m. Passenger boardings advance by 8.1% to 1,440,100.

Flights continue in 1998 and customer bookings surge 18% to 1.71 million. By the beginning of 1999, airline employment has been reduced by 8.5% to 430.

The Palma–London (LGW) route is taken over by **Air Europa, S.A.** on October 31. At this point, a B-737-4Y0 is subchartered to **Ryan International Airlines** for use on winter holiday flights down the U.S. East Coast to the Caribbean.

Two Next Generation B-737-86Ns, chartered from GECAS, are now delivered, one each on November 12 and December 20. They wear the company's new color scheme, complete with new titles and tail markings with a modified atomic image.

Enplanements for the year total 47,000.

Airline employment at the beginning of 2000 stands at 550, a 57.1% increase over the previous 12 months. The first of four Next Generation B-737-86Ns to be delivered on the year arrives on April 7; the others follow on May 19, May 30, and June 15, respectively.

During the summer, the company operates charter services from the U.K. airports to Tenerife and Menorca. These flights continue after the beginning of the fall schedule in October, however, an older B-737-4Y0 is substituted for the Next Generation B-737-800 used earlier.

While landing at Shannon after a November 30 service from Lanzarote, Flight 1331, a Next Generation B-737-86N, suffers the collapse of its nose gear. Although the plane skids sideways, the pilot is able to keep in under control and complete a safe emergency landing. The incident closes the airport for 24 hours.

G & G AIR LINES COMPANY. See **GILPIN AIR LINES**

GABON EXPRESS, S.A.: BP 13893, Aeroport Leon Mba, Libreville, Gabon; Phone (241) 73 38 40; Fax (241) 73 44 49; <http://www.gabonexpress.com>; Year Founded 1998. Following the demise of the Mobutu government of Zaire in 1998, Capt. Robert Sovek, owner/pilot of Eastern Congo Airlines, S.A. transfers his single British Aerospace (HS) 748MF to Gabon. At Libreville, Sovek makes the acquaintance of Capt. Ondo Nikoulou, a local pilot who has authority to begin an airline. With Sovek as majority owner, the two launch Gabon Express in the fall. With Sovek's 748 as the company aircraft, the inaugural four-times-a-day return service is started on October 26 between Libreville and Port-Gentil, on an island at the mouth of the Ogooue River.

Service thereafter is extended to Oyem, in northern Gabon, to Bitam, and to the southeastern city of Franceville. The load is shared by a second 748, a Dash-2A, and a terminal is built at Libreville Airport, complete with an air-conditioned passenger waiting room.

A former French Air Force Sud Est SE-210 Caravelle XIR is acquired, one of only six built, and enters service on July 18, 1999 between Libreville and Port-Gentil. During the following months, it also flies to Oyem and Franceville. Both passengers and cargo are transported, including agricultural products. On board amenities include newspapers, a snack, and soft drinks—or beer.

Enplanements for the year total 90,000, of which 42,000 are flown by the Caravelle during its five-and-a-half months of service.

Airline employment stands at 55 at the beginning of 2000. On the newly opened company website, the airline's officials, noting the importance of their jetliner, entreat aviation enthusiasts everywhere to come to Gabon and fly on their Caravelle, one of the last of its type still flying anywhere in the world. A sales office is also established in Paris to market the carrier.

GAIL FORCE AIR CHARTERS. See **GAIL FORCE EXPRESS**

GAIL FORCE EXPRESS: 4746 South Columbia Drive, Janesville, Wisconsin 53546, United States; Phone (608) 756-1000; Fax (608) 756-5719; Code EP; Year Founded 1995. The all-cargo carrier **Blackhawk Airways** is renamed in 1995. At this point, the founder and chairman, Mark T. Jacobson, and President Richard Wixon oversees 22 employees services are offered essentially without change from the start-up years. The fleet, which visits various Midwestern destinations, now consists of 5 Beech 18s, 2 Beech 58 Barons, 1 Piper PA-31-310 Navajo, 1 Beech King Air, and 1 Cessna 182.

In 1998, GFE operates a fleet that includes 4 Mitsubishi Mu-2s, 3 Beech 18s, 2 Beech Barons, 1 Piper Navajo, 1 Piper Cherokee Six, 1 Cessna 340, and 1 C-172. While going around for a second approach to Peoria, Illinois, on February 23, Flight 179, the Cherokee Six with one pilot aboard, sustains substantial damage when it collides with the ground after stalling. The flyer is not hurt.

Robert Hansen is president in 1999–2000. The fleet is changed by the elimination of the Cessna 340 and C-172 and their replacement with two C-210s.

Having failed to use his checklist, the pilot of a Beech 58, landing at Decatur, Illinois after an April 19, 2000 service from Peoria, forgets to lower his landing gear. The Baron sustains substantial damage in the wheel's-up touchdown that follows. The flyer is unhurt and his future with the company is unknown.

GALAXY AIRLINES (1): United States (1968–1969). The first Galaxy is established at Cleveland, Ohio, during the early summer of 1968 to provide scheduled intrastate passenger and cargo services. Having obtained an exemption from the CAB for their use, Galaxy inaugurates daily roundtrip frequencies with Douglas DC-3s on July 1. Flying from Cleveland's Cuyahoga and Lakefront Airports, the refurbished transports will, for the next year, visit Cincinnati by way of Columbus and Dayton.

GALAXY AIRLINES (2): United States (1981–1987). Galaxy Airlines is set up at Fort Lauderdale, Florida, in 1981 to operate cargo and passenger charters and other contract services. Originally affiliated with Carefree David Travel, the nonscheduled carrier subsequently changes owners before receiving its charter authority in August 1983.

Galaxy is equipped in September with a Lockheed L-188C purchased from COPA (Compania Panamena de Aviacion, S.A.) and an L-188AF from TACA International Airlines, S.A. The latter had begun service with Trans Australia Airlines (Pty.), Ltd. in 1960 as the *Charles Sturt*. On behalf of Computer Components Industry, the new airline launches scheduled cargo charters at the end of the month.

With the beginning of the summer passenger charter schedule in March 1984, Galaxy acquires a Convair CV-990A Coronado on a six-month lease, and employs it to operate flights between Fort Lauderdale and Freeport, in the Bahamas, on behalf of the Princess Hotel. Although a customer boarding count on the jetliner is not released, it is noted that the Electras have operated a total of 332,304 FTKs of cargo in this, the company's first full year.

On January 21, 1985, Flight 203, with 6 crew and 65 passengers, is returning customers home to Minneapolis (MSP) after a weekend gambling trip. The failure of ground handlers to properly close an air access door on the ex-COPA L-188A leads to severe vibration just after its take-off from Reno. The aircraft attempts to make an emergency landing back at its point of origin, but crashes into a field, bounces up and into a number of nearby mobile homes, and catches fire; the entire crew perishes and only one passenger survives the crash.

Following this well-publicized Electra disaster, President Philip Sheridan announces on January 25 that Galaxy will temporarily suspend passenger operations while its two remaining Lockheeds are examined by FAA inspectors. Both aircraft are found to be in acceptable condition and flights resume two days later. The accident is reviewed by Peter Garrison in his "Bad Vibrations: Fatally Low and Slow in an Electra at Reno," *Flying*, 113 (August 1986): 24–26.

In the meantime, the FAA discovers that the CV-990A that has been operating Galaxy's gambling junkets has been wearing company titles in violation of the Federal Air Regulations (FAR) 125 that the jetliner has been permitted to fly under. With no visual advertising of any kind permitted on the aircraft, the company now removes the titles. It will soon, thereafter, remove the aircraft.

Having suffered a jammed right main landing gear upon takeoff from Philadelphia for Charlotte on January 29, an L-188CF with three crew and a cargo of hazardous materials, is diverted to Dobbins AFB at Ma-

rietta, Georgia, where an emergency belly landing is made on a foamed runway. The aircraft skids 4,200 ft. and is damaged beyond repair, but there are no fatalities.

Later in the year, Galaxy elects to inaugurate scheduled daily roundtrip Cessna 402 shuttle flights linking its base with Miami. Cargo operations continue as FTKs ascend 31.2% to 483,000. At year's end, the company stops flying military charters, although the Cessna service in Florida is maintained.

An unattended oil leak prompts the USAF to suspend the carrier from further MAC cargo charter flights on supply routes, as of March 25, 1986, until government inspectors are satisfied that Galaxy has addressed its maintenance problems adequately. The remainder of the year is occupied attempting to win a new fitness finding from the DOT.

Electra operations resume in early 1987 and continue for five months before the company shuts its doors. Prior to cessation, a total of 347,900 passengers are transported on the year. The assets are purchased by Sacramento-based Celebrity Travel, which has stillborn plans to operate Electra passenger charters. Declaring the carrier "defunct," the DOT revokes the Galaxy certificate in mid-1988.

GALAXY AIRWAYS, S.A.: Greece (1999–2001). Theodore Kokmotos founds this Galaxy at Athens in the second quarter of 1999 to offer scheduled passenger and charter flights to points around Europe. In an unusual move, the founder serves as vice president/general manager, while C. Ioannides is chairman and Vassiliki Ioannidou is managing director.

A workforce of 60 is recruited and revenue flights commence on August 31 with a leased Boeing 737-430, previously flown by Air One, S.p.A. and now christened *City of Kavala*. Approximately 30 weekly flights are operated linking Thessaloniki, Kavala, and Preveza with Berlin, Stuttgart, Munich, Dusseldorf, Frankfurt, Cologne, and Nuremberg. The load is more evenly distributed during the fall following the addition of a chartered B-737-5K5. Revenues of £25.5 million are generated.

With the beginning of the summer schedule at the end of March 2000, charter flights are also introduced on behalf of the tour operators Golden Sun and Alpha Risen to points in northern Europe. A DC-10-15 is acquired to help service these.

On October 30, thrice-weekly roundtrips to London (STN) are inaugurated from Thessaloniki, Kavala, and Preveza employing a newly acquired second B-737-430.

Galaxy will be shut down on March 12, 2001.

GALENA AIR SERVICE: United States (1986–1989). Norman Yeager establishes GAS at Galena, Alaska, in the early fall of 1986 to provide scheduled passenger and cargo services to local communities and bush destinations. Revenue flights commence in October with one each Cessna 207, Beech 58 Baron, and Piper PA-31-310 Navajo and continue until the company is taken over by St. Mary's-based **Hermen's Air** on June 27, 1989.

GALION COMMUTER SERVICE. See **FISCHER BROTHERS AVIATION**

GAMA AVIATION, LTD.: Fairoaks Airport, Cobham, Surrey, England, GU24 8HX, United Kingdom; Phone 44 1276 856961; Fax 44 1276 858485; <http://www.gamaaviation.co.uk>; Year Founded 1983. Gama is established at Fairoaks Airport in 1983 to provide FBO services. Over the next 17 years, the company, like many FBOs around the world, also operates executive and small group passenger charters and air taxi flights.

By 2000, Operations Manager Neil Capstick oversees the work of six local full-time pilots and the operations of a Beech Super King Air 200. An even larger fleet is based at London (LHR) to provide European flights and includes 2 Super King Air 200s, 1 Learjet 35 Century III, and 2 Cessna Citations. At the end of the year, 2 long-range Learjet 45s are scheduled for delivery in September and October 2001.

GAMBIA AIR SHUTTLE, LTD.: **Gambia (1987–1991).** During the summer of 1987, several years after expiration of the BCAL arrangement with **Gambia Airways, Ltd.**, Gambia Air Shuttle, Ltd. is established under the leadership of General Manager Lennart Voigt and is equipped with one each leased Vickers Viscount 813, Convair CV-640, and Antonov An-24V. Scheduled operations are begun in September linking Banjul and Dakar and continue until early 1991 when the carrier stops flying.

GAMBIA AIRWAYS, LTD.: **The Gambia (1964–1998).** Gambia Airways, Ltd. is formed in December 1964 by the government and **British United Airways, Ltd. (BUA)**. Max Stuart-Shaw is named chairman. In June 1973, the government's shareholding is increased to 60%. The company operates passenger, freight, and aircraft handling facilities at Yundum International Airport under a 10-year contract with BUA successor-line **British Caledonian Airways, Ltd. (BCAL)**. Flight activities are not begun, although expansion plans include development of an airline.

Gambia Air Shuttle, Ltd. is reformed at Yundum International in 1992. S. M. Jallow is appointed managing director and is charged with restarting passenger and cargo services under the Gambia Airways name. In addition, the company continues its monopoly on ground handling at the airport. Two Nihon YS-11A-100s are acquired and scheduled flights are inaugurated to Praia in the Cape Verde Islands, Free-town, Conakry, Bissau, and Nouakchott, Mauritania, the latter a joint flight with **Air Mauritania, S.A.** In addition, six-times-per-week roundtrips are inaugurated to Dakar, in cooperation with **Air Senegal, S.A.**

Operations continue apace in 1993–1994. In February of the latter year, a block-space agreement and code-sharing arrangement is entered into with **Air Afrique, S.A.** on services from Banjul to London. Airline employment grows to 336 in 1995–1997 as another Nihon YS-11A joins the fleet. Unhappily, the carrier is unable to maintain economic viability and is shut down in early 1998.

GANDALF AIRLINES, S.p.A.: **Via Aeroporto 13, Orio al Serio, 24050, Italy; Phone 39 (035) 45 95 011; Fax 39 (035) 42 43 307; <http://www.gandalfair.it>; Code G7; Year Founded 1998.** Named for the good wizard character in J. R. R. Tolkien's *The Lord of the Rings*, Gandalf is established by McKinsey consultant partners Domiziano Boschi, Luigi Gozzini, and Luciano di Fazio at Orio al Serio (Bergamo) Airport, 40 min. from Milan, during April 1998. Founder di Fazio becomes CEO, with Boschi a principal director. Italy's newest scheduled carrier plans to offer scheduled services catering to businessmen flying into and out of the Milan area.

The first two of five ordered Fairchild Dornier 328-110 turboprops are acquired during the first quarter of 1999 and orders are placed for four (later eight) 328JETS. The start-up leaves the sale of its tickets to travel agents, who are encouraged with extra commissions, and to general sales agreements with major marketing organizations such as the Air Promotion Group in France. Twice-daily nonstop roundtrips commence on April 6 to Stuttgart and Munich.

Another 328-110 is delivered, along with an Avions de Transport Aerien ATR42-320, and the route network is expanded to include Amsterdam, Barcelona, Budapest, Cologne, Rome (Foggia), Hamburg, Hanover, Lyon, Milan, Paris (CDG), Prague, and Zurich. An Embraer ERJ-145 is leased and will remain in service until November.

Plans to launch regularly scheduled turboprop service from Milan to Berlin (Tempelhof) in the fall are reduced to a couple of proving flights. Still, a code-sharing agreement is signed with **Deutsche BA Luftfahrtsgesellschaft, GmbH**.

Twice-daily 328-110 return service is launched on December 13 from Milan to London (LCY).

Having completed the admission process, the company is listed on the Nuovo Mercato of the Italian Stock Exchange on December 23 following a successful E39-a-share initial public offering (IPO) and the sale of

tranches of shares to employees and a group of 70 Lombardy investors (including the Mondadori publishing group). A top price (since fallen back) of E199-a-share is recorded on December 30.

Passenger boardings total 45,636 and it is reported that \$8.1 million in revenues have been generated. Passenger traffic for the year 2000 is forecast to reach 200,000, but it will also be reported later that the carrier has lost L17 billion.

Arrival of the first two 328JETS in early 2000 allows the inauguration of new service from Milan to Prague. Beginning in February, the routes to Paris (CDG) and Zurich are code-shared with **Air France** and **Swissair, A.G.**, respectively.

By May 2, the company is operating 4 each 328-110s and 328JETS. On that date, a firm order is placed for five more 328JETS, with the first set to arrive in June. To fund the purchase, the company's capital base is expanded to L55 billion (\$26 million) through a sale of another L30 billion worth of shares to existing stockholders.

New Dornier 328-110 roundtrips commence on May 15 between Florence and Barcelona. Daily 328-110 return service begins on May 22 from Pisa to Barcelona, from Venice to Prague, and the new Milan to Valencia service is extended on weekends to Barcelona.

New 328JET return services are introduced on June 22: thrice weekly from Trapani to Tripoli, twice weekly from Trapani to Malta, and thrice daily from Trapani to Rome. Summer-only, twice-weekly Dornier 328-110 roundtrips begin on July 10 from Milan to Grosseto.

The third 328JET is received in early August.

Daily 328JET return frequencies are initiated from Milan to Berlin on October 29 and from Pisa to Madrid on December 8. As the year ends, plans are in hand to expand the company's commercial agreement with **Air France**. With the beginning of the summer season at the end of March, the two will extend their code-sharing to 658 weekly flights out of Italy. Enplanements reach 194,626.

GARUDA INDONESIA: **jl Merdeka Selatan 13, Jakarta, 10110, Indonesia; Phone 62 (21) 380–1901; Fax 62 (21) 368-031; <http://www.inn.bppt.go.id/commercial/check-in.html>; Code GA; Year Founded 1990.** Almost all domestic routes and aircraft are transferred to **Merpati Nusantara Airlines** in April 1990 as **Garuda Indonesian Airways** is reconstituted into a holding company, **Garuda Group**, with both **Garuda** and **Merpati** as subsidiaries. **Garuda Indonesian** is renamed **Garuda Indonesia** and is given responsibility for long-haul operations while **Merpati** is not, after all, digested as planned, but is given divisional status. A new aircraft livery is introduced and names are dropped from the six Boeing 747-2U3Bs.

Joint flights, using Russian aircraft, begin with **Aeroflot Soviet Airlines** in May over a return route from Jakarta to Moscow.

In June, an L-1011 is leased for two months from **Royal Jordanian Airlines** and is employed to fly passengers roundtrip from Jakarta and Bali to Hong Kong.

The company begins code-sharing with **China Airlines, Ltd. (CAL)** in October on a route from Denpasar to Taipei.

In November, special fares are introduced under a "Visit Indonesia Year" program for tourists who want to visit between 4 and 12 different cities. Later in the month, a freight block-space agreement comes into effect with **Korean Airlines/Korean Air (KAL)** for service from Jakarta to Seoul.

A cooperative agreement is signed with **Deutsche Lufthansa, A.G.** in December covering an increase in frequencies and destinations in Indonesia and Germany.

As might be expected due to the restructure and division of labor, **Garuda's** passenger boardings decline 20.5% to 5,183,126. Freight is also down, by 3.6%, to 368.1 million FTKs. Revenues for **Garuda Group** jump, however, by 35% to \$1.36 billion. The operating profit is \$155.5 million and net gain reaches \$68 million.

Neither fleet nor personnel are changed in 1991. The agreement with **DLH** takes effect in January. In addition to new services, the Germans begin to provide training to **Garuda's** future Airbus engineers and a Ger-

man cargo consultant is seconded to Jakarta to coordinate the functioning of Garuda's new cargo facility. Lufthansa also assumes, under contract, responsibility for the maintenance of Garuda's Airbus fleet.

Also in January, joint services commence with **Malaysia Airlines, Ltd. (MAS)** over a route from Denpasar to Kuala Lumpur. Twice-weekly B-737-3Q8 service is started in March from Singapore to Juanda Airport in Surabaya.

In the spring, a Lockheed L-1011 is leased from **Royal Jordanian Airlines**.

The company yields to pressure from environmental groups on July 15 and agrees to no longer transport wild tropical birds to the U.S.

A code-sharing pact begins with **China Airlines, Ltd. (CAL)** in September for cargo flown from Jakarta to Taipei. Following the resolution of visa problems between Indonesia and China, Garuda launches flights in November from Surabaya to Guangzhou via Jakarta. Leased from Guinness-Peat, the first of five MD-11s arrives in December.

Customer bookings slide another 6% to 2,509,379; however, cargo climbs 4.8% to 195.25 million FTKs. Revenues are \$1.52 billion and the group operating profit is down to \$120.16 million; still, a group net profit of \$94.51 million is reported.

The payroll grows 13.9% in 1992 to 12,000 and the fleet now includes 9 A300B4-220s, 7 A300D4-620Rs, 8 B-737-3Q8s, 1 B-747-129C, 6 B-747-2U3Bs, 1 B-747-212B, 18 DC-9-32s, 6 DC-10-30s, 1 MD-11, 5 F.28-3000s, 1 F.28-3000C, and 28 F.28-4000s. Orders are outstanding for 4 A300D4-620Rs, 9 A330-341s, 16 B-737-4U3s, 9 B-747-4U3s, 6 MD-11s, and 12 Fokker 100s.

President since 1988, Mohammed Soeparno is succeeded in February by **Pelita Air Service** CEO Wage Mulyono. Two more MD-11s are received during the first quarter.

Reciprocal Jakarta to Beijing service is inaugurated in April, in cooperation with **Air China**. A new MD-11 service is added with **Deutsche Lufthansa, A.G.** linking Denpasar on Bali with Munich via Abu Dhabi. Also in April, pooled flights begin with **Saudia (Saudi Arabian Airlines)** from Jakarta to Riyadh, Jeddah, and Dhahran.

A DC-9-32 with 71 aboard crashes in fog in mid-August; there are no survivors.

In October, the Indonesian government imposes new restrictions on foreign borrowing. Consequently, the previous aircraft orders are trimmed to just two B-747-4U3s and seven B-737-4U3s. The freefall in traffic is reversed as passenger boardings move upward by 3.2% to 5,546,000 and freight climbs 6.3% to 460.22 million FTKs. Revenues reach \$1.57 billion and grant an operating profit of \$112.1 million. The net gain is \$62.4 million.

The workforce of President/Managing Director Wage Mulyono is increased by 40.6% in 1993 to 13,272. Three A300-620Rs and three MD-11s join the fleet as one each DC-9-32, F.28-3000, and F.28-4000 are retired.

In May, a new agreement is signed with **KLM (Royal Dutch Airlines, N.V.)** that provides for the establishment of joint task forces to examine the joint development of cargo and tourist traffic between Indonesia and the Netherlands. Also in May, a marketing agreement with **Iberia (Lineas Areas de Espana, S.A.)** allows joint code-sharing to begin on a route from Denpasar and Jakarta to Madrid.

Berlin also joins an international route network which now includes Abu Dhabi, Adelaide, Auckland, Bangkok, Brisbane, Brussels, Cairns, Darwin, Fukuoka, Guangzhou, Hong Kong, Ho Chi Minh City, Honolulu, Jeddah, Kuala Lumpur, London, Los Angeles, Melbourne, Nagoya, Paris, Perth, Port Hedland, Riyadh, Rome, Seoul, Singapore, Sydney, Taipei, Tokyo, Townsville, Vienna, and Zurich.

Coming in from Yogyakarta on June 21, Flight 630, a DC-9-32 with 7 crew and 72 passengers, lands hard at Denpasar; the Douglas transport taxis safely to the apron where major structural damage is found. No injuries are reported.

An F.28-4000 with 40 aboard crashes in a remote eastern province on July 1; there are no survivors.

Statistics are released for the first 6 months and show customer bookings up 2.4% to 2,602,553 and freight ahead by 16.1% to 251.9 million

FTKs. The first 2 of 12 Fokker 100s is delivered for the Merpati subsidiary in October. Losses are suffered on the year: \$88.87 million (operating) and \$3.11 million (net).

The employee population grows by 4% in 1994 to 14,589 and a B-737-4U3, the 7,500th jetliner built by Boeing, is delivered in January.

On January 26, the company's 45th anniversary is celebrated as its first B-747-4U3 arrives. A new slogan, "As We Race for the Future, We Haven't Forgotten the Past," is marketed in 18 nations.

In July, two B-747-2U3Bs are sold to an unnamed U.S. company.

A compact signed with **Singapore Airlines, Ltd.** in September gives the Indonesian carrier a 10% stake in SIA's Pan Asia Pacific Aviation Services maintenance concern at Hong Kong's Chek Lap Kok Airport.

The same month, shared-code flights with **EVA Air, Ltd.** commence between Denpasar and Kao-hsiung. The two also establish a ground handling agency at Denpasar.

On the year, passenger boardings jump 9.6% to 6,278,994 while cargo is boosted 16.7% to 669.28 million FTKs. Revenues swell 13.7% to \$1.75 billion while costs accelerate 5.8% to \$1.72 billion. Consequently, there are profits: \$27.77 million (operating) and \$76.21 million (net).

In April 1995, a compact is signed with **KLM (Royal Dutch Airlines, N.V.)** that provides for jetliner upkeep and overhaul. The two also agree to explore a comprehensive passenger code-sharing arrangement.

All three B-747-2B4BCs of **Middle East Airlines, S.A.L.** are wet-leased in May for the Hadj season. On May 29, the government allows Garuda 12 new routes. These include Jakarta to Palembang, Penanbaru, Padang, and Banjarmasin. In July, KLM and Garuda begin a weekly joint-cargo service between Jakarta and Amsterdam via Kuala Lumpur and Bombay, employing a B-747F leased from **Atlas Air**.

To strengthen its competitive position, Garuda announces in the fall that it has temporarily suspended services to Berlin, Madrid, Munich, and Vienna. Until flights resume, **KLM (Royal Dutch Airlines, N.V.)** will transport Garuda passengers to the four cities under an implemented code-sharing pact discussed earlier.

Late in the year, four DC-9-32s are sold to the new Philippine carrier **Cebu Pacific Air**. This year, the company provides very few figures to ICAO. It does admit that its workforce is cut 4% to 14,000 and that it has carried 2,944,000 passengers over its international routes.

Airline employment is reduced by 5.2% in 1996 to 13,272 and orders remain outstanding for 9 A330-341s and 2 MD-11ERs.

The first two MD-11ERs manufactured are received under lease by **World Airways** from their builder during April. They will be wet-leased to Garuda for use on that flag carrier's Hadj flights to Saudia Arabia. In addition, four B-747s will be subleased from **Tower Air**.

During the spring, domestic services to 11 destinations are launched from the new Hang Nadim Airport on Batam Island, 20 miles from Singapore.

Having reached a 4-ft. height in its takeoff from Fukuoka on a June 13 service to Jakarta via Denpasar, Flight 865, a DC-10-30 with 15 crew and 260 passengers, suffers the separation of a fan blade in its No. 3 engine, which catches fire. The crew elects to abort takeoff, at which point the wide-body returns to the runway, slides down the pavement, over a ditch, through a fence, and across a road. It comes to a stop 1,600 ft. past the concrete, having lost its No. 1 engine and landing gear in the skid. Three passengers are killed and 60 injured.

With no bilateral air agreement signed between the U.S. and Japan, **Northwest Airlines** is unable to commence its planned return service on July 1 from Seattle to Jakarta via Osaka. Some 6,000 passengers planning to leave Jakarta for the U.S. through Japan must be diverted to Garuda.

Having been under surveillance for some time, a Garuda pilot is arrested by Dutch police on September 29 while boarding his aircraft at Amsterdam. Although his entire crew is searched, only the captain is detained for the possession of drugs—8,000 Ecstasy pills.

Through October, enplanements are up 14.1% to 5,683,266 and 507.02 million FTKs are operated, an 8.6% decline over the same period a year earlier.

Also during October, service is inaugurated from Hang Nadim to Jeddah.

The company's first owned MD-11ER is delivered in December, as is an A330-341.

A memorandum of understanding is signed with **Northwest Airlines** on December 23; it is designed to lead to an operational and marketing alliance to enhance service between Indonesia and the U.S.

Although the company loses \$37 million from its airline operation, it is able to post a \$52-million profit after the sale of assets.

Airline employment is increased by 3.4% in 1997 to 13,727, largely before the economic downturn.

During February, the nation's finance minister, Mar'ie Muhammad, indicates that a date has been set for the company's privatization—December 1998. Hang Nadim to London flights commence in March.

The second A330-341 arrives in April and, as the first aircraft, enters service on Asian routes.

On May 1, a **Finnair O/Y** DC-10-30 is subchartered for 10 weeks of Hadj flights from **Air Liberte, S.A.**; four **Tower Air** Jumbojets are again subleased for Hadj flights this year. Following the unexplained in-flight shutdown of the Rolls Royce Trent 700 engine of a **Dragonair (Pty.), Ltd.** A330-342 on May 23, the fourth such incident since November, the carrier's two A330-341s are grounded on May 26. By June 14, officials from Rolls Royce have repaired the Trent 700 power plants in all three fleets.

Under a dual-designator agreement with **SilkAir (Pty), Ltd.**, Garuda is able to place its code aboard the Singapore company's twice-weekly Fokker 70 roundtrips, beginning on June 2, between Singapore and Balikpapan, Borneo.

Arriving at Honolulu from Jakarta on June 21, Flight 800, an MD-11 with 19 crew and 299 passengers, sustains heavy damages in a bad landing; fortunately, no injuries are reported to any of the passengers.

Great forest fires plague the island nation during the summer, spreading a cloak of haze over much of Southeast Asia.

On September 26, Flight 152 with 12 crew and 222 passengers on a service from Jakarta passes through an area affected by smog from forest fires. While on initial approach to Medan, the A300B4-220 crashes 32 km. from the runway in a valley near the village of Pancur Batu. There are no survivors from Indonesia's worst-ever air disaster. The public reacts with anger over the fourth fatal accident involving an Indonesian commercial aircraft this year. Calls voiced for over a year are again made for the resignation of Transport Minister Haryanto Dhanutirto and other departmental bureaucrats who are seen as lax towards safety. As the English-language daily *The Indonesian Observer* editorializes on September 29, "Laxity claims more lives!"

Traffic figures are provided through the end of September. These show enplanements off 0.6% to 5,078,921 and a dip in cargo to 440.74 million FTKs.

Officials notice a significant downturn in Japanese bookings beginning in October. It is speculated that those foreign customers are deserting the airline in droves, especially the lucrative routes to Tokyo and Osaka, because of the accidents and the smog.

At the end of the year, international investment bankers recommend to the airline's senior management that it indefinitely postpone a plan to float the airline's stock. They report that the company's poor financial position will prevent the foreign investment required for a successful offering.

The first of five new B-737-5U3s is delivered at the beginning of October.

Catastrophic forest fires and the Asian currency crisis have a devastating cumulative impact. To help stave off fiscal disaster, the company now closes down its services to Rome and Zurich and cuts back on its Paris and London operations. Direct flights to Bali and Medan from Europe are halted while the number of frequencies to Abu Dhabi, Amman, Beijing, Kao-hsiung, and Saigon is reduced. All ties with **Merpati Nusantara Airlines**, itself \$250 million in debt, are severed and efforts are made to unload its owned hotels and its ground-handling business.

Efforts to sell its physical assets meet with little success. In December, Minister Dhanutirto calls in the airline's senior management to inform them that if they do not dispose of the hotels and ground handling business soon, the carrier will go bankrupt.

Just after departure from Manado on December 30, Flight 741, a DC-10-30 with 13 crew and 151 passengers, develops engine problems; as a precaution, the aircraft returns to its point of origin.

Full year revenues total \$1.57 billion, with expenses of \$1.50 billion. There is a \$66.5 million operating profit and an equal net gain.

Airline employment stands at 12,851 in 1998 and the fleet, 92.3% of which is Stage III certified, includes 65 airplanes: 23 B-737s, 4 Fokker F.28s, 11 B-747s, 8 A300s, 7 DC-10s, and 6 each A330s and MD-11s.

Indonesian aviation policy wavers in the face of the national currency and economic crisis during the opening months of the year. Efforts continue at the flag line to sell noncore businesses, including hotels, spare parts, and travel agencies. Plans are announced to sell a quarter of the fleet and in January and February international frequencies are reduced by 30% while a 26% cut is announced for domestic services.

On February 3, an arrangement is entered into with **World Airways** for the lease of six MD-11s for the upcoming Hadj season, from March through early May.

As the economic crisis worsens in April, Garuda finds itself unable to accommodate all of its lessors. A major examination of aircraft leases occurs as the airline, which cannot pay for its A330-341s, seeks to return them early. To cut costs, the six **World Airways** MD-11s are returned on May 6. Simultaneously, Garuda announces that it will retain the five DC-10-30s, using them to cover the capacity lost with the return of the MD-11s.

In late spring, Jakarta is rocked by political demonstrations and on May 21 President Suharto resigns.

The new government appoints former Citibank Indonesia CEO Robby Djohan as president and requires major restructuring to save the airline. Djohan announces a plan to cut employment by half, return extra airplanes, and restructure the giant \$400-million debt. It will also sell or return 6 MD-11s, 6 A330-341s, 11 B-737-300s, and up to 3 B-747s. With the rupiah now valued at 17,000 to the U.S. dollar, the nation's airlines are granted permission to increase fares by 37.5%.

With his own airline is disarray, **Philippine Air Lines (PAL)** Chairman Lucio Tan offers up to \$1,000-a-month salaries for flyers willing to come to Manila and fly for his carrier. As PAL moves toward collapse, the offer is soon withdrawn.

During June and July, President Djohan is able to make significant headway in cutting costs. Plans are made to lay off 3,000 of the carrier's 12,900 employees, including maintenance personnel. Six MD-11s are returned to Boeing, while five DC-10s are put up for sale. Talks with Morgan Grenfell concerning the lowering of Airbus leasing rates fail, thereby depriving the carrier of badly needed funds with which to begin rebuilding the vaporized cash base.

By the beginning of August, a cost-cutting plan that would have combined the domestic operations of Garuda, Bouraq, Merpati, and Mandala collapses. Despite load factors as low as 30%, the smaller airlines refuse to join with the flag carrier. The effects of the Asian currency crisis and the national economic downturn continue. At this point, the four companies are losing significant funds as 80% of their costs are in U.S. dollars, but only 20% of their income is in the same currency. During the last week of August, however, the Indonesian parliament does grant a long-desired fare increase. An extra flight is added to the Medan to Banda Aceh route on August 9.

Domestic tickets increase in price by 40% on September 1.

At the beginning of the month, orders for six B-777s and six B-737-500s are cancelled. Financing is, however, found to take delivery of six other B-737s that the manufacturer has been holding back while President Djohan seeks funding.

A management contract is signed with **Deutsche Lufthansa, A.G.** during the month; under its terms, six seasoned executives from the German subsidiary Lufthansa Consulting are seconded to Jakarta to help

revitalize the failing company through a hands-on application of their collective wisdom. The team, all given Garuda titles, is headed by Executive Vice President-Operations Walter Prenzler and includes Senior Vice President-Technical and Operations Hanns Marienfeld and Vice President-Network Management Dr. Maria Angelika Hanne.

The services of a **Federal Express (FedEx)** MD-11F, donated to the cause, are employed to fly \$1.73 million in medicines and medical supplies needed in Indonesia on September 11. Undertaken on behalf of several charitable agencies led by Uplift International, the donation, badly needed as the result of the Asian economic crisis impact on the local currency, is distributed internally by aircraft from Garuda.

To the surprise of many, a \$20-million August profit is announced on September 21. Still, company executives decide to only serve profitable international routes and to reorient their approach from a product to a market focus. The services of Deutsche Bank are retained to assist Garuda in restructuring its debt, which is tied closely to its fleet.

Company executives announce on October 8 that Garuda has been able to save \$100 million by the cancellation of seven projects previously operated because of corruption, collusion, or nepotism. Among the seven are agreements with Antarini Mitra Sejati, Bimantara Graha Insurance Broker, and Angkasa Bina Wisesa.

The European route is altered on October 24. Daily one-stop flights are now operated to Frankfurt via London three times a week and via Amsterdam four times. The Paris route is suspended; however, flights are timed to allow connections from Frankfurt or London to the French capital via **Air France**.

President Djohan is asked to take over as head of Bank Mandini on November 1 and oversee the operations of the nation's four state-owned banks. Although Djohan will retain an interest in the carrier as its president commissioner, he is succeeded as airline president by Bank Duti president Abdul Gani.

Domestic ticket prices rise another 14% on December 1.

Having flown to Seattle, Presidents Djohan and Gani, on December 11, begin renegotiations with representatives from the U.S. Export-Import Bank, Boeing, and General Electric. The talks will concern credit terms and length of leases, particularly on Garuda's short-haul B-737s. The Herculean task of rescheduling \$370 million in foreign debt is now in sight for the two bankers working in tandem.

During the 12 months, enplanements slump to 4.1 million and a net loss of \$46.6 million is suffered.

Airline employment stands at 12,723 in 1999 as Garuda's 50th anniversary is celebrated. Special "50 Years of Challenge" logos are applied to company aircraft.

On February 2, Monang Sianipar, chairman of the advisory board of the Indonesia Cargo Agents Club, notes during a press interview that approximately 90% of the nation's domestic air cargo operators have discontinued joint operations with Garuda since late 1998. The reason given is a preference for working with foreign airlines.

It is announced on February 4 that in order to obtain fresh funds for working capital and payment of its foreign debts, the carrier will reduce its fleet during the year from 52 to 40 aircraft. Four A300B4-220s and all of the B-747-2U3Bs will be withdrawn and sold.

On February 15, **Merpati Nusantara Airline** cancels service from Denpasar and Bali to Melbourne and Perth, Australia. The routes are picked up by Garuda.

In a further effort to cut costs, the airline in early March requests that 3,000 of its 12,732 workers take early retirement. In addition, company offices are moved from downtown Jakarta to the airport, where rentals are less.

While visiting the Pacific Asia Travel Association trade show in Singapore on April 14, Executive Vice President Walter Prenzler informs a news conference that Garuda has enjoyed a very successful first quarter and is on track to make a significant recovery and profit this year. Prenzler, one of five executives from **Deutsche Lufthansa, A.G.**, which have been assisting the carrier since September, offers hope that the car-

rier's fortunes will improve after Indonesia's upcoming parliamentary and presidential elections.

During the first six months of the year, the rupiah regains some 50% of its strength. The balance of the parliamentary-approved fare increase is postponed.

An extra flight is added to the Medan to Banda Aceh route on August 9.

Air Transport World reports in its November issue that the Indonesian government has agreed to inject \$62 million a year for eight years into Garuda to service its mounting debt. When a new government comes to power, however, it quickly reneges on the former regime's promise in order to handle other severe and pressing national budget deficits.

The Jakarta Post reports on December 10 that the Indonesian Ministry of Religious Affairs has signed an agreement with Garuda to transport 111,607 Hadj pilgrims to Saudi Arabia, beginning in February, at a price of \$1,200 per person.

Speaking at a breakfast held at the offices of the Center for Strategic and International Studies in Jakarta on December 20, President Abdurrahman Wahid announces that Garuda has reached an agreement with its foreign creditors for the rescheduling of its \$1.8-billion debt. After receiving necessary parliamentary approval, the debt would be extended up to 16 years. He also speaks out against a suggestion from Kwik Kian Gie, Coordinating Minister for the Economy, Finance, and Industry, that would have **Singapore Airlines, Ltd.** invited to help manage Garuda. Although Garuda is receiving consul from **Deutsche Lufthansa, A.G.**, no foreign airline should be allowed to dominate the national carrier.

Also during December, the Ministry of Transport issues permits to three new domestic carriers. The move is challenged—unsuccessfully—by the National Air Carriers Association on behalf of Garuda, **Bouraq Indonesian Airlines**, and **Merpati Nusantara Airlines**.

Customer bookings jump 5.4% to 5,365,000, but cargo falls 21.9% to 1,414,517,000 FTKs. Operating revenues ascend 9% to \$902,976,000, while costs plunge 14% to \$857,604,000. The previous year's losses are turned into profits: \$45.37 million (operating) and \$72.54 million (net).

A yearlong celebration of the company's 50th anniversary begins in January 2000. The B-737 fleet now includes 6 Dash-3U3s, and 1 Dash-3Q8, 7 Dash-4U3s, 2 Dash-4Q8s, and 1 each Dash-4K5, Dash-43Q, and Dash-4Y0, plus 5 Dash-5U3s. Also operated are 5 DC-10-30s, 4 B-747-2U3s, 2 B-747-4U3s, and 1 B-747-441.

The year opens with the company continuing to face liabilities of \$1.81 billion with assets of just \$758 million. Although discussions with creditors have continued and a plan is nearly official, no payment on the debt's principal has been paid since June 1998. Additionally, continuing national political violence is driving away tourists, many of whom pay well to ride with Garuda.

A code-sharing agreement is signed with **Malaysia Airlines, Ltd. (MAS)** on February 11. Under its terms, the two share their designators on the return flights operated by both from Kuala Lumpur to Jakarta and Medan and the services provided by MAS from Kuala Lumpur to Surabaya and Denpasar and from Pulau Pinang to Medan.

Garuda wet-leases six **Britannia Airways, Ltd.** B-767-204ERs (with Garuda providing cabin crews) on February 17 to help it deliver Muslim pilgrims on their annual Hadj to Mecca. Supported by 50 operations and engineering personnel, 108 Britannia pilots transport 40,000 worshipers to Jeddah on 119 flights during the month. The return trip of equal demand will be completed in April. In addition, five MD-11s are wet-leased from **World Airways**, along with an Airbus A340-313X from **China Southwest Airlines Company, Ltd.**

The next day, President Abdul Gani reports to the Indonesian parliament in writing that his carrier remains deep in debt and is, in fact, technically bankrupt. The company's \$1.8-billion debt, run up by December and growing, includes \$610 million owed to the European Credit Agency for the lease on six Airbus aircraft and \$420 million due the U.S. Export-Import Bank for the charter of 11 B-737s. Another \$610 million is owed the U.S. in bank loans and various business debts. Still, an A340-300 is leased from **China Southwest Airlines Company, Ltd.** on February 24.

By March 7, 182,000 Indonesians have departed on 435 flights for the Hadj pilgrimage to Mecca. The airports at Surakarta, Jakarta, Surabaya, Makassar, Medan, Balikpapan, and Banda Aceh have served as official embarkation points.

On March 26, B-737-3Q8s reopen a previously suspended route linking Medan with Kuala Lumpur.

A full-page ad is published by the airline in *The Jakarta Post* newspaper on June 12 acknowledging and apologizing for its record of poor service and promising to improve.

In July, the government officially approves a Garuda plan to restructure approximately \$1.2 billion in debt along the lines of terms that have been discussed with French, German, and U.S. creditors. Under a plan initially put forward by Deutsche Bank, Garuda's financial advisor, the \$610-million debt to the European Credit Agency (a consortium of creditors) could be paid over 16 years instead of 10. Additionally, the airline wins approval for the issue of 5-year convertible bonds to cover \$38 million owed to Angkasa Pura, the operator of Indonesia's airports, and \$103 million in Bank Mandiri debt. Restructuring of \$460 million in local and international bank debt also wins government sanction. As these arrangements are completed, plans will be finalized for the privatization of Garuda in 2003.

A B-737-4Q8 is chartered from ILFC on August 22 for delivery in November.

Company officials announce on September 19 that they will resume the international routes dropped during the 1997 economic crisis, including those to the U.S., France, Italy, Switzerland, Taiwan, and South Korea. Although financing has not yet been found, at least seven new aircraft will be acquired with which to operate these flights. President Abdul Gani reports on September 20 that the government will inject \$62 million annually for the next eight years to cover the leasing of the required new aircraft. Their arrival will allow not only the initiation of news services, but replacement of the aging Fokker F.28 fleet.

Arrangements are completed on October 9 for the charter of seven B-737-300s and B-737-400s, which will join the fleet by January. On October 16, the carrier announces that it will lease 15 aircraft for the 2001 Hadj season (February–April), during which it anticipates the transport of 200,000 pilgrims to Mecca. As usual, **World Airways** is sure to be among the participating ACMI carriers.

After a two-year suspension, thrice-weekly DC-10-30 roundtrips are resumed on October 29 from Jakarta to Seoul.

It is announced on November 21 that the airline will replace its five noisy Fokker F.28-3000/4000s with six B-737-4Q8s leased from ILFC, the first of which is delivered almost immediately. The last Fokker will be gone from the fleet by the end of 2001.

New frequencies are introduced on December 1 from Jakarta to Pontianak, Semarang, Yogyakarta, and Denpasar, as well as a third roundtrip between Jakarta and Solo.

A B-737-4S3 previously operated by **Istair Istanbul Airlines, A.O.** is leased for five years from GECAS on December 22. The company's two-year contract with Lufthansa Consulting concludes on December 31. At the same time it is noted that, due to delays in obtaining bank guarantees, only 70% of the planned debt restructuring has been achieved.

GARUDA INDONESIAN AIRWAYS: Indonesia (1949–1990). This carrier traces its history back to January 26, 1949, rather than the normal December date usually assigned. On that date, a Douglas DC-3, registered under the name **Indonesian Airways**, makes a flight from Calcutta to Rangoon. As the Netherlands Indies are not yet independent, the aircraft, for political reasons, cannot immediately fly in its homeland.

Bringing back the exile carrier and the Inter-Island Division (IIB) of **KLM (Royal Dutch Airlines, N.V.)** from Burma, the two-day-old independent government of Indonesia and KLM begin working to reform them into Garuda on December 21 as successor to the Dutch flag carrier's prewar subsidiary, **Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij (KNILM)**. Each partner will own 50% of the

stock with **KLM (Royal Dutch Airlines, N.V.)** also providing technical, managerial, and maintenance support. Using the marketing name Garuda for the first time, IIB operates a service the same day.

Flight services commence with a mixed fleet of 22 Douglas DC-3s and 8 Consolidated PB-5A Cansos on March 31, 1950, the day the airline is officially registered. All have been repainted in the company's new livery and carry the airline's new name—that of a mythological Hindu creature—throughout the nation over its Dutch predecessor's routes.

An order is placed for eight Convair CV-240s and the first Convairliner is delivered in September, the first pressurized airliner to offer civil service in Indonesia.

On November 17, a DC-3 with 3 crew and 20 passengers, runs off the runway after landing at Surabaya and hits a ditch (two dead).

The Indonesian–Dutch joint operations continue apace in 1951–1953. Although the company fleet is increased during this period by the addition of eight de Havilland DH 114 Herons in 1953, it is also decreased by accidents. On such incident occurs on May 9, 1952 when a DC-3 fails to successfully climb out of Ipoh on its flight to Palembang and makes a forced landing; although the plane must be written off, there are no fatalities.

Over 5,000 **KLM (Royal Dutch Airlines, N.V.)** employees strike on February 1, 1954 over the pending nationalization of the Indonesian carrier. On March 24, the governments of Indonesia and the Netherlands sign the accord of nationalization for a jointly owned Garuda; the new republic agrees to compensate **KLM (Royal Dutch Airlines, N.V.)**.

Garuda is nationalized on July 12 and **KLM (Royal Dutch Airlines, N.V.)** shareholding ceases. Technical and maintenance assistance from the Dutch carrier continues and the fleet grows by the acquisition of six more Herons and eight CV-340s. Initial international services are inaugurated to Singapore, Manila, and Bangkok.

On November 25, having failed a missed approach procedure, the captain of a DC-3 with 3 crew and 19 passengers on a flight from Palembang lands his aircraft on a slippery runway at Djambia at an excessive rate of speed. The aircraft overruns the runway and comes to rest in a muddy field; although the aircraft must be written off, there are no fatalities.

Passenger boardings are 401,000 in 1955. **KLM (Royal Dutch Airlines, N.V.)** collaboration is ended in September 1956; all Dutch personnel are required to withdraw.

At this point, many of the Herons are retired and orders are placed in 1957–1958 for three CV-440s. Three Lockheed L-188s are ordered in 1959.

Flight 330, a DC-3 freighter with two crew develops engine problems 13 min. after takeoff from Palembang on December 24; the pilot elects to return to Palembang, but crashes in a swamp three miles from the airport in bad weather (one dead).

Service deteriorates badly and passenger bookings fall; in the three years starting this year, they will dip from 367,000 to 335,000.

The Lockheed L-188Cs arrive on January 14, 1961 and are christened *Palau Bali*, *Tjandi Bororudar*, and *Danau Toba*.

En route from Jakarta to Surabaya on January 24 via Bandung and Yogyakarta, Flight 424, a DC-3C with 5 crew and 16 passengers, crashes into Mt. Burangrang; there are no survivors. Flight 542, a C-47A with 5 crew and 21 passengers, disappears off Madura Island on February 3 during a flight from Surabaya to Balikpapan; the wreckage is never found.

The last significant event of the year is far more positive—the opening of Jakarta to Hong Kong Electra service on May 16.

The fleet in 1962 comprises 18 DC-3s, 3 Lockheed L-188A Electras, and 20 CV-240s.

A CV-240 is damaged beyond repair at Palembang on February 27.

The Hong Kong Electra route is extended to Tokyo on March 13. Two more accidents are recorded during the year. A DC-3 is lost under unexplained circumstances at Jakarta on April 5 and another CV-240 is damaged beyond repair, this one in a landing accident at Ambon on August 17.

De Kroonduif's domestic operations in West New Guinea are taken over on January 1, **1963**.

The first jetliner, a Convair CV-990 Coronado christened *Majapakit*, is acquired on September 3; the second Coronado, *Sriwijaya*, is received on October 21.

Later in the year, the independent carrier **De Kroonduif**, operating in the Indonesian portion of New Guinea, is taken over and merged.

Coronado turbojet service to Singapore, Hong Kong, Bangkok, Manila, and Tokyo is inaugurated on November 20.

Another CV-990 arrives on January 24, **1964** and christened *Pajajaran*.

Domestic services are turned over to **Merpati Nusantara Airlines** in early spring.

Coronado services are inaugurated from Jakarta to Canton via Phnom Penh, Cambodia, on January 11, **1965**.

Twice-weekly Jakarta to Amsterdam flights commence on March 30 via Bangkok, Bombay, Cairo, Rome, Prague, and Frankfurt. Every other week, Phnom Penh and Paris alternate with Bangkok, Prague, and Frankfurt.

India cancels Garuda's landing privileges on September 15 after a mob attacks **Air India, Ltd.** offices at Jakarta.

Two C-47As, each with 3 crew and 17 passengers, collide while on approach to Palembang, Sumatra, on January 1, **1966** and crash into a swamp; there are no survivors. Fourteen bodies are found the next day in the wreckage of one, but the other aircraft is not located.

In early spring, orders are placed for two DC-8-54s. Flights to Paris and Frankfurt are suspended on June 7, as passenger traffic is too thin.

The first Douglas jetliner is delivered in mid-July and it replaces a Coronado on European services as of August 12.

Reciprocal service is resumed to India on September 27.

Airline employment is 5,906 in **1967**. Two DC-3s and nine CV-240s are retired as the second Douglas jetliner arrives.

Having departed Jakarta for a flight to Manado via Surabaya and Makassar on February 16, Flight 708, the L-188C *Tjandi Bororudar* with 8 crew and 84 passengers, is forced back from Makassar by bad weather. The service is rescheduled for February 17 and is completed, whereupon the aircraft is landed 156-ft. short of the runway, causing it to skid with collapsed landing gear and catch fire (22 dead).

Enplanements for the year continue to fall, reaching 234,000.

Orders are placed in **1968** for a DC-9-32 and Fokker F.27-600s.

Early in the first quarter, a new president, Suharto, succeeds Indonesian President Sukarno. On February 17, the new leader calls upon Air Commodore Wiweko Supono, who had operated **Indonesian Airways** in 1948-1950, to take over as Garuda's chairman/CEO.

Some 4 minutes after takeoff from Bombay for Karachi on May 28, the CV-990A *Pajajaran*, with 14 crew and 15 passengers, crashes vertically into the ground 20 mi. N of the runway; there are no survivors from the aircraft and one person is killed on the ground.

Between September 12 and September 15, 2,800 employees are dismissed for alleged membership in banned Communist organizations.

Regional and domestic services are improved in **1969** as the DC-9-32 and Fokker turboprops join the fleet. The latter are particularly welcome on longer domestic segments from Jakarta to Biak, Medan, and Makassar.

A DC-8-53 is leased from **KLM (Royal Dutch Airlines, N.V.)** and is employed to inaugurate flights to Sydney via Bali on November 25.

Routes are opened through the Middle East to Rome during **1970-1971**. The fleet grows to include 12 F.27-600s, 6 F.28-1000s, 2 DC-9-32s, 3 DC-8-54s, 6 DC-3s, and 8 CV-240s.

In April 1970, pooled flights are undertaken with **Japan Air Lines Co., Ltd. (2)** on routes to Tokyo from Jakarta and Denpasar. Two Douglas DC-10-10s are briefly operated during these years, but are sold to provide the funding necessary for the purchase of the Dutch-made Felloships.

On April 5, **1972**, the pilot of an F.28-1000 fatally wounds a hijacker at Jakarta after the man threatens to blow up the airliner with a hand grenade unless he receives a \$50,000 ransom and two parachutes. Hav-

ing climbed 30 m. into its takeoff from Jakarta on a September 26 training flight, an F.27-600 with three crew mysteriously crashes; there are no survivors.

Toward the end of the year, the two L-188Cs *Palau Bali* and *Danau Toba* are withdrawn from service and parked off the tarmac at Jakarta's main airport.

The CV-990s *Majapakit* and *Sriwijaya* are sold to California Airmotive in June **1973**, but on September 10, while being delivered to the U.S., the latter is destroyed in a landing accident at Agana, Guam. California Airmotive also acquires the two retired Electras. A DC-10-30, leased from **KLM (Royal Dutch Airlines, N.V.)**, is placed into service in October.

The year's boardings total 1.6 million.

The company enters into a contract with the American supplemental carrier **World Airways** in April **1974**, under which the American carrier will provide Muslim pilgrimage flights to Saudi Arabia. The inaugural Hadj service is operated with a wet-leased DC-8-63CF. An F.27-600 with 3 crew and 33 passengers collides with a building in a rainstorm during its final approach to the airport at Tanjung Karang, 130 mi. NE of Jakarta, on September 7 (35 dead).

A DC-8-54F crashes on Laxabana Hill, 80 miles east of Colombo, Sri Lanka, on December 4 (four dead).

Customer bookings grow to 1,688,198.

The employee population in **1975** stands at 2,829. With the DC-3s and CV-240s all retired, as well as 6 F.27-600s, the fleet is upgraded by the addition of 4 DC-10-30s, 8 DC-9-32s, and 11 F.28-1000s, with 2 DC-10-30s, 6 DC-9-32s, and 6 F.28s on order.

Service is inaugurated to Melbourne, Taipei, Colombo, and Karachi and flights resume to Paris and Singapore.

While on initial approach to Palembang in bad weather on September 24, an F.28-1000 with 4 crew and 57 passengers, strikes a palm tree and crashes 4 km. from the runway; 26 aboard and 1 person on the ground are killed.

Charter passengers increase 59% to 318,674 while scheduled boardings jump 25.4% to 2,263,000, and freight traffic increases by 6%. President Supono's fleet is further enhanced as two DC-10-30s, 12 DC-9-32s, and two F.28-3000s are placed in service.

On April 6, **1976**, the first Douglas wide-body, the *Irian Jaya*, inaugurates nonstop roundtrips from Jakarta to Amsterdam via Jeddah and Paris. Routes are opened or frequencies improved to Amsterdam, Frankfurt, Paris, Rome, Sydney, Kuala Lumpur, Manila, Penang, plus 36 domestic destinations.

The year's most significant internal development occurs on July 1 when the company inaugurates eight-times-per-day Jakarta to Medan DC-9-32 Air Shuttle service, modeled on the Ponte Aerea in Brazil and the **Eastern Air Lines** Air Shuttle in the U.S.

Having proven successful, particularly during the previous Christmas season, the Air Shuttle from Jakarta to Semarang is expanded to six times per day on July 1, **1977**, employing F.28s.

En route from Jogjakarta to Surabaya on September 5, a DC-9-32 is taken over by a lone assailant, who holds a stewardess hostage. Before the aircraft can be diverted, the hijacker is overpowered by other crew members.

Zurich joins the route network on November 3 and enplanements that year total 3,372,560.

Airline employment grows to 4,180 in **1978** while Brussels becomes a European market on April 1. Flights to Bangkok cease during the spring; however, nonstop roundtrips are simultaneously inaugurated between Bali and Hong Kong.

Nearly £5 million in debt, **Merpati Nusantara Airlines** is, by order of President Suharto, taken over by Garuda on October 27. The process is financial; the Minister of Communications transfers Indonesian shareholding to the flag carrier. Desiring an outwardly independent feeder airline, Garuda officially allows **Merpati Nusantara Airlines** to continue operations under its own name and livery. On November 14, the company is further reorganized into Garuda's sister carrier, with R.A.J.

Lumenta, Garuda's corporate secretary and future CEO, named president and a Mr. Soeritman as general manager.

Carrying 259 Indonesian Muslim pilgrims, a DC-8, leased by **Loftheidir/Icelandic Airlines** to Garuda, crashes during its landing approach to Colombo, Sri Lanka, on November 15 (173 dead); the press labels the crash the fourth worst in aviation history to date.

Passenger boardings for the year show significant improvement, reaching 3,970,357.

Merpati Nusantara Airlines's new relationship with Garuda becomes official on January 1, 1979. Long-haul trunk routes from Jakarta to Biak via Ujungpandang and from Jakarta to Medan are surrendered to Garuda, but short- and medium-haul regional routes are retained. Merpati is even given a minor, almost backup role, in the provision of Hadj pilgrim flights to Mecca in Saudi Arabia.

While descending on March 6, the F.28-1000 *Sambas*, with four crew, smashes into Mount Bromo; there are no survivors.

Following the May crash of an **American Airlines** DC-10 at Chicago, Garuda's fleet is grounded for inspections.

At the same time, the national government devalues the Rupiah by 33%.

On July 11, en route from Talang Betutu to Medan, a route newly acquired from Merpati, the F.28-1000 *Mamberamo* with 4 crew and 57 passengers, crashes into Mt. Sebayak on northern Sumatra, at an altitude of 5,560 ft.; there are no survivors.

Enplanements this year climb to 4,167,000.

During 1980, five F.28-4000s are delivered and placed in service; the fleet now includes 6 DC-10-30s, 24 DC-9-32s, 23 F.28-1000s, 5 F.28-3000s, and 5 F.28-4000s.

The DC-9-32 *Brantas* with 5 crew and 121 passengers, is damaged beyond repair as the result of a heavy landing at Banjarmasin on January 13; there are no fatalities.

The first of four Boeing Jumbos to be received on the year, a Dash-2U3B, is delivered on July 2 and christened *Jakarta*. It is followed by three more of the same type: *Bandung* on July 30, *Medan* on August 11, and *Surabaya* on August 26. With seating for a then-record total of 546 passengers, the aircraft are inaugurated on the summer's Hadj pilgrim flights from Jakarta to Jeddah.

On August 26, an F.28-1000, with 31 aboard, crashes during its approach to Jakarta Airport; there are no survivors.

Jumbojet routes are launched in December from Jakarta via Singapore, to London, Paris, and Munich. Darwin and Bangkok service is resumed with DC-10-30s displaced from the European services, and on December 1, six-times-per-week Jakarta to Ganjung shuttle flights begin. Simultaneously, several-times-daily Jakarta to Tanjungkarang Air Shuttle service is started.

Freight soars 50.2% to 114.56 million FTKs and passenger boardings accelerate 9.4% to 4.63 million. An operating profit of \$51 million is earned.

The number of employees is increased by 4.9% in 1981 to 7,264.

Delivery is taken on six Airbus Industrie A300B4-220s and three Fokker F.28-4000s and orders are placed for two more B-747-200s and three A300B4-220s. With 36 F.28s, Garuda now operates more of that type than any other carrier in the world.

On March 28, during a domestic flight from Palembang to Medan, 6 gunmen hijack Flight 206, a DC-9-32 with 57 aboard and force it to fly to Bangkok, Thailand, where the release of so-called Indonesian political prisoners is demanded. The next day, American hostage Karl Schneider is shot by the pirates during an escape attempt; the wounded passenger is taken to a local hospital and the hijackers increase the number of prisoners to be released to 84.

Negotiations continue for two days, during which, unbeknownst to the air pirates or the media, Thailand requests and the U.S. dispatches, by order of President Ronald Reagan, a Delta Force team to provide assistance, which arrives on March 30. While Indonesian officials are announcing their agreement to the hijackers' terms, the Americans join local commandos in storming the plane. Four of the 5 pirates are killed

and 55 hostages are freed; during the brief gunfight, a member of the assault force and the chief pilot are wounded. Because of its remote location, the incident remains largely unpublicized.

Later in the year, the DC-10-30 Darwin frequency is increased to twice weekly. Douglas wide-bodies are also employed on routes to Singapore and Tokyo.

Passenger bookings jump 11% to 5,249,489 while freight is up 23.9% to 144 million FTKs. On total revenues of \$684 million, expenses surge 31.6% to \$648 million, leaving an operating profit of \$36 million.

In 1982, service is launched to Port Hedland, Australia, and Singapore.

Beginning in January, three more A300B4-220s are delivered, the first configured for two-man crews, plus two more B-747-2U3Bs, the *Yogyakarta*, and *Denpasar*. These join the fleet's 27 F.28-1000/3000s, 8 F.28-4000s, 21 DC-9-32s, and 6 DC-10-30s.

The first A300B4-220 service is operated at the end of January, thrice daily from Jakarta to Medan.

On March 20, an F.28-1000 with 4 crew and 23 passengers overshoots the runway while landing at Tanjung Karang, Sumatra, and crashes into a building, where it explodes into flames; there are no survivors.

Passenger boardings drop 3.7% to 5,206,000, but cargo accelerates 16.2% to 172.51 million FTKs.

One DC-9-32 is retired in 1983.

The F.28-3000RC *Selegan* with 4 crew and 57 passengers, fails its takeoff from Tanjung Karang on June 2 and runs 138 m. off the end of the runway before stopping (3 dead).

In cooperation with **Japan Air Lines Company, Ltd. (2)**, Jakarta to Tokyo Express service is inaugurated on August 1.

Enplanements are off again, down to 4,784,670.

The employee population in 1984 stands at 7,000.

A DC-9-32 with two crew and three passengers, bounces three times while landing at Jakarta on June 11; on the third bounce, the fuselage fails and the aircraft is destroyed. There are no fatalities.

A new management team headed by R. A. J. Lumenta, former **Merpati Nusantara Airlines** president, takes over from that of Wiweko Soepono in September. Garuda's future president, Mohammed Soeparno, is the commercial director.

On December 30, a DC-9-32 with 6 crew and 67 passengers touches down too far along the runway at Denpasar and runs off the end of the concrete. The aircraft goes over and through a ditch, trees, and a fence before breaking into three pieces and catching fire; there are no fatalities. Passenger boardings rise only 1% to 4,833,000 and the number of FTKs falls to 157.8 million. The financial loss is \$70 million.

The workforce is increased 4.6% in 1985 to 7,754 and San Francisco-based Landor Associates is retained to change the company's image.

In May, an agreement is reached with **Thai Airways International, Ltd. (THAI)** and **Continental Airlines** for joint operations to the holiday island of Bali. Employing a company DC-10-30 painted in Garuda's colors on one side and Continental's on the other, the two airlines, on August 18, inaugurate weekly Douglas wide-body service from Bali to Los Angeles via Biak and Honolulu. Garuda crews operate the Bali to Guam sector and Continental flies the plane from Guam to Los Angeles via Honolulu.

In September, business-class service is introduced and first-class service is discontinued. The joint Continental service to Bali is increased to twice weekly in November, the same month in which the cooperative joint service with **Thai Airways International, Ltd. (THAI)** is opened to the same destination employing a Thai Airbus.

Also during the final quarter, a new corporate design by Landor Associates is approved and painters begin applying new livery to the company's airplanes.

Passenger boardings grow 0.1% to 5,005,000 as freight declines 5.2% to 165.25 million FTKs. Revenues are \$678.52 million and expenses are \$622.89 million, leaving a \$55.63-million operating profit; a net loss of \$31.47 million is, however, suffered.

The number of workers continues to grow in 1986, up by 9.9% to 7,482. In March, joint services begin with **Malaysian Airlines System, Ltd. (MAS)** over a route from Denpasar to Kuala Lumpur.

The weekly 9,800-mile Bali-Los Angeles route is increased to thrice weekly in April. Also in the spring, Jakarta to Tokyo flights are increased from five per week to daily service.

The arrangement with **Continental Airlines** ends during the early fall and in October Garuda begins its own weekly service from Jakarta to Los Angeles via Bali, Biak, and Honolulu.

The same month, Bali to Medan to Amsterdam service is inaugurated followed in November by flights, in cooperation with **Philippine Airlines (PAL)**, from Bali to Manila.

Customer bookings swell 12.5% to 5,628,981 and cargo is elevated 41.2% to 233.34 million FTKs. Operating revenues rise 16.8% to \$792.2 and costs are held to \$672.9 million. As a result, operating profit nearly doubles to \$119.3 million and the net loss is downsized to \$17.6 million.

The payroll improves even further in **1987**, climbing 17.8% to 8,811.

While on final approach to Medan on April 4, Flight 035, a DC-9-32 with 8 crew and 37 passengers, strikes a TV aerial and high-voltage electric lines during a heavy rainstorm and crashes (23 dead).

In May, President Lumenta is injured when his motorcycle collides with a bus in Jakarta.

Services to Manila, operation in cooperation with **Philippine Airlines**, are extended to Taipei while Cairo and Vienna join the long European route network, frequencies over which increased to 14 per week by year's end.

Passenger boardings reach 6,160,205 while freight booms to 105.13 million FTKs, a 7.5% increase. Revenues increase 47.8% to \$901 million but expenses are up, and create an operating loss of \$28.2 million. Since 1978, the carrier has lost \$600 million.

The employee population is increased again in **1988**, growing by 8.6% to 9,571. The fleet now includes 34 F.28s, 18 DC-9-32s, 9 A300B4-220s, 6 DC-10-10s, and 6 B-747-212Bs.

At the beginning of the year, Mohammed Soeparno is named president.

Customer bookings increase by 17.5% to 7,044,413 and cargo accelerates 28.4% to 467.12 million FTKs. Revenues balloon 20.9% to \$1.1 billion and with costs in hand, the operating profit zooms upward to \$160 million and net gain of \$94.4 million is generated.

The workforce is cut by 9.1% in **1989**, the 40th anniversary year, to 8,696. Six B-737-3Q8s are leased and orders are placed for six McDonnell Douglas MD-11s, six A340s, and six B-747-4U3s.

Beginning in April, the company starts to hand over 11 of its 35 domestic routes to **Merpati Nusantara Airlines**; a number of domestic sectors, operated on international routes, such as Jakarta to Bali, are retained. It is originally anticipated that the full transfer will require three years.

In May, a commercial agreement begins with **Vietnam Airlines** covering flights from Singapore to Ho Chi Minh City.

In November, a mutual cooperation agreement is signed with **KLM (Royal Dutch Airlines, N.V.)**. The pact covers the expansion of joint services between Indonesia and The Netherlands, human and fleet resource usage, the further development of each carrier's hub and spoke system, and the joint development of Garuda's organization, management, and workforce. During the same month, a memorandum of understanding is signed with the French engine manufacturer SNECMA under which the two companies will coordinate Garuda's CFM56-3 power plant maintenance.

Passenger boardings during the first eight months climb 5.3% to 4,876,952, while freight is off by 6% to 274.91 million FTKs.

In September, the domestic subsidiary **Merpati Nusantara Airlines** is ordered assimilated; the new division will assume all local services and is provided with an additional 15 F.28s and two DC-9s from the main fleet.

The year's enplanements total 6,245,666. Revenues total \$1.25 billion and allow a \$38.88-million net profit atop an operating income of \$43.88 million.

Company employment is increased by 21.2% in **1990** to 10,540.

In January, twice-weekly Jakarta to Seoul flights are inaugurated via Taipei.

Almost all domestic routes and aircraft are now transferred to **Merpati Nusantara Airlines** as Garuda is reconstituted into a holding company, Garuda Group, with both Garuda and Merpati as subsidiaries.

At the recommendation of Landor Associates and in an effort to achieve a stronger national identity, Garuda Indonesian Airways is renamed **Garuda Indonesia** in April and is given responsibility for long-haul operations. Merpati is not digested after all, but given divisional status.

GARY JET CHARTER: 5401 Industrial Highway, Gary, Indiana 45406, United States; Phone (219) 944-1210; Fax (219) 944-8232; Year Founded 1971. GJC is set up as the FBO at Gary Airport in **1971**. Over the next 29 years, the company also undertakes executive and small group passenger charters with a Learjet 24B.

GAS AIR CARGO (GENERAL AND AVIATION SERVICES, LTD.): Plot 5A, Old Domestic Airport, P.O. Box 21231, Ikeja, Lagos, Nigeria; Phone 234 (1) 933 510; Fax 234 (1) 962 841; Code GR; Year Founded 1973. GAS is established as an international all-cargo and domestic passenger and cargo operation at Ikeja, near Murtala Mohammed Airport at Lagos, in early **1973**.

Start-up is not immediate and it is not until late **1975** that GAS's founder, chairman, and president, S. K. S. Olubadewo, and his 140 employees employ a BAC 1-11-424EU leased from **TAROM Romanian Airlines (Transporturile Aeriene Romane, S.A.)** to begin domestic passenger services. Regularly scheduled services are provided to the Nigerian cities of Lagos, Kaduna, Kano, Yola, and Maiduguri.

A decade after its launch, GAS elects to enter the all-cargo arena and leases a Boeing 707-338C.

Beginning in July **1983**, the aircraft flies to destinations in Europe and East Africa. The Stratofreighter is leased to another carrier early the following year.

After a four-year pause, the company headquarters its freight operation at Ostend in Belgium in **1987** and begins flying perishables into northern Europe from Africa and returning with machinery and other ad hoc general cargo. The aircraft employed is a subleased B-707-321C first flown by **Pan American World Airways (1)** as the *Clipper Eagle*.

A B-707-351C is leased from **Biman Bangladesh Airlines, Ltd.** in June **1988**.

After two missed approaches at Cairo following a December 13 service from Dar es Salaam, the Biman Stratofreighter with five crew and three passengers, elects to divert to Luxor. The fuel-starved Boeing crashes into a residential area near Kom-Omran before it can reach its new destination. All aboard the plane are killed, along with one person on the ground.

During **1989-1990**, the fleet in Nigeria is increased with a BAC 1-11-424EU, also leased from Romania, and two Piper PA-31-310 Navajos.

The BACs and Pipers operate domestic service in **1991** while another B-707-351C, chartered from **EAS Air Cargo, Ltd.**, flies between Kano, Lagos, and Port Harcourt and Amsterdam, Cologne, and Ostend.

Suffering from serious maintenance deficiencies, the airworthiness certificate of the former *Clipper Eagle* is withdrawn in late spring and the aircraft is parked at Lagos.

On April 29, **1992**, the former **Northwest Airlines** B-707-351C chartered from **EAS Air Cargo, Ltd.** is unable to get its landing gear down and is severely damaged while making an emergency landing at Ilorin, 250 km. from Lagos. The Stratofreighter must be written off, thereby ending GAS international cargo operations.

Chairman Olubadewo's workforce during **1993** totals 150. The former *Clipper Eagle* is ferried back to Luxembourg in April.

BAC local and regional flights continue in **1994-1999** with the Piper PA-31-310 Navajos employed for domestic feeder flights.

BAC local and regional flights continue during the remainder of the decade, with the Piper PA-31-310 Navajos employed for domestic feeder flights. No longer in the freight business, the carrier now trades under the marketing name GAS Air Nigeria, Ltd.

GAS AIR NIGERIA, LTD. *See* GAS AIR CARGO (GENERAL AND AVIATION SERVICES, LTD.)

GAT (GUYANE AIR TRANSPORT, S.A.): Aeroport de Rochambeau, Matoury, 97351, French Guiana; Phone 594 356 555; Code GUY; Year Founded 1948. SATGA (Societe Aerienne de Transports Guyane-Antilles, S.A.) is formed by Air France at Cayenne in 1948 to serve as a feeder. Routes are opened from the Aeroport Rochambeau at the colonial capital to Regina, St. Georges, Saul, St. Laurent du Moroni, Paramaribo, Albina, and Maripasoula. Although the French flag line initially operates flights, during the late 1950s and 1960s the subsidiary is allowed to originate some frequencies of its own. During the 1970s, SATGA is renamed GAT and begins to operate under the marketing title **Air Guyane, S.A.**

In 1981, the fleet comprises two Britten-Norman BN-2 Islanders.

Operations continue apace in 1982–1988 and in 1989 the fleet includes two de Havilland Canada DHC-6-300s, one of which is leased.

In 1990–1991, routes and local services are maintained and Managing Director G. Malidor's fleet has been upgraded to include a de Havilland Canada DHC-6-300, one Cessna 208 Caravan I and one Cessna 206.

Two years later, in 1993, Jean Pierre Prevot becomes managing director and trades in his Caravan I for a Pilatus-Britten-Norman PBN-2 Islander. That ship is removed in 1994 and replaced with the first of two ordered Cessna 406 Caravan IIs.

Operations continue apace in 1995–1996 with various degrees of good fortune.

By 1997–1999, the concern flies only one de Havilland DHC-6-300.

An Avions de Transport Aerien ATR42-520 is acquired during the first quarter of 2000 and enters revenue service wearing the company's new color scheme.

GATARI AIR SERVICE: 2nd Floor, Terminal Building, Halim Perdana Kosuma Airport, Jakarta, 13610, Indonesia; Phone 62 (21) 809-6102; Fax 62 (21) 809-2900; Code GHS; Year Founded 1983. Gatari is established at Jakarta on March 31, 1983 to provide offshore support services for the country's growing oil and natural gas market. With government support, the company launches revenue services on April 4 with a pair of Bell 412s. Operations from Halim Airport continue apace over the remainder of the decade and, by 1990–1991, the company is offering 12,000 flight hours of service per year.

In 1992, the Gatari fleet includes both fixed- and rotary-wing aircraft. Among the former are two Shorts SC-7 Skyvans, a Piper PA-350-310 Navajo, a British Aerospace BAe (HS) 125-700, a Canadair 601 Challenger, and a Piper PA-46 Malibu. These are employed to transport workers and others to heliports, many of which are scattered at bush communities. The helicopter fleet includes 9 Bell 412s, 9 Bell 212s, and 5 Bell 206L LongRangers.

Services are maintained with little fanfare in 1993–1994. In 1995–1997, the Canadair, a Skyvan, three Bell 412s, a Bell 212, and the Navajo are replaced with one Boeing 737-200, a Pilatus-Britten-Norman PBN-2 Islander, three IPTN/CASA 212-200 Aviocars, and three Beech Super King Air 200s.

Services in support of the energy industry are maintained with little fanfare during the remainder of the decade. During these years, the Canadair, three Bell 412s, a Bell 212, and the Navajo are replaced with one Boeing 737-200 (removed during the 1997–1999 economic crisis), a Pilatus-Britten-Norman PBN-2 Islander, three (later six) IPTN/CASA 212-200 Aviocars, and three Beech Super King Air 200s.

GATEWAY AIRLINES: United States (1959-1960). A scheduled air taxi operator at Long Island's MacArthur Airport creates an airline division and begins to offer regularly scheduled services in July 1959. Employing one each de Havilland DH-103 Dove and DH-114 Heron, flights are undertaken to Boston, Newark, and Washington, D.C. (DCA). The new service is not profitable and the carrier ceases operations in February 1960.

GATEWAY AIRLINES, LTD.: 150 Aviation Ave., Brantford Municipal Airport, Brantford, Ontario N3T 5T6, Canada; Phone (416) 801-9151; Fax (905) 943-4434; http://www.gatewayltd.com; Year Founded 1998. Believing that Nova Scotia-based seafood companies are being left out of the market because their live catch cannot be delivered to markets in Europe and Asia quickly enough, former Maritime resident Shawn Saulnier establishes Gateway in July 1998 in an effort to redress the situation. Flights from Nova Scotia to New York commence with a pair of Douglas C-117 Super DC-3s.

Unhappily, a sudden change in market conditions, particularly the Asian economic crisis, results in a huge decrease in the demand for live seafood shipped internationally from Canada. Consequently, in January 1999, Gateway is transformed by President/CEO Saulnier into an ad hoc air charter company. According to the company's website, established later in the year, the carrier is forced to turn down 8 charters within 36 hours of changing its mission statement.

Flights across Canada and into New York continue in 2000.

GATEWAY AVIATION: United States (1968–1969). The American company Gateway Aviation is set up at La Crosse, Wisconsin, in 1968 to provide daily scheduled passenger and cargo flights to Milwaukee and Chicago with a de Havilland Canada DHC-6-100 Twin Otter. Operations are duly inaugurated until September 1969, when the company is reformed and renamed **Mississippi Valley Airways.**

GATEWAY AVIATION, LTD.: Canada (1952–1979). Established at Edmonton in 1952, this Alberta-based charter operator undertakes flights to the Northwest Territories and the Yukon during the next two decades with a fleet of Douglas DC-3s. Operations are undertaken in support of government projects, mining interests, the oil industry, and so forth. Scheduled replacement services are undertaken on behalf of **Pacific Western Airlines, Ltd. (PWA)** from Edmonton to Jasper National Park, Slave Lake, Peace River, and Rainbow Lake.

In April 1972, Gateway purchases a Hawker Siddley HS 748 from **Transair, Ltd.** This allows the withdrawal of a DC-3 from service in 1973.

A de Havilland Canada DHC-6-200 Twin Otter arrives in 1974 and the last DC-3 is purchased in 1975.

The original DHC-6-200, with a pilot and two passengers, is damaged beyond repair as the result of a bad landing at Yellowknife on February 24, 1976 (one dead). The aircraft is replaced with four others during the remainder of the year and in 1977.

A DC-3 is withdrawn in 1978, to be succeeded by a former PWA Convair CV-640, which arrives in June. Airline employment is 72 and President R. D. Wager and General Manager R. A. Russell oversee a fleet of 4 DC-3s, 1 HS 748, 4 DHC-6s, 1 Mitsubishi Mu-2, 2 Cessna 402s, 2 Cessna 310s, 3 DHC3s, 1 Cessna 185, and 2 Cessna 172s.

The HS 748 is sold in 1979, just before the company is purchased, in December, by **Northward Airlines, Ltd.**

GAWNE AIRLINES (PTY.), LTD.: Australia (1977–1983). Privately formed Gawne is set up in June 1977 as an outgrowth of the FBO Gawne Aviation, based at Shepparton, Victoria. Scheduled operations are undertaken to Melbourne with a fleet comprising a Beech B-55 Baron, a Piper PA-28 Cherokee, and a Cessna 152. Unable to maintain its economic viability as a commuter, Gawne discontinues its scheduled services in late 1983.

GAZPROMAVIA AIR ENTERPRISE: Nametkina Street 16, Moscow, 117939, Russia; Phone (095) 133-9100; Fax (095) 131-0729; Code GZP; Year Founded 1995. GAE is set up at Moscow in March 1995 to offer passenger and cargo charters, the former services being provided mainly in support of the nation's expanding oil and gas industry. More than a year will be required before the start-up can take to the air. Viktor Chechwarin is president and he begins flights on April 16, 1996, with a fleet that comprises 2 Ilyushin Il-76TDs, 2 Dassault Falcon 900s, and 1 each Antonov An-24 and Yakovlev Yak-42.

Airline employment stands at 272 in **1997**. The fleet is changed. Gone are the Il-76TDs and added are one An-12, an An-74, a Let L-410UVP, another Yak-42, two Tupolev Tu-154Ms, and a Kamov Ka-26 helicopter. Enplanements for the year are approximately 30,000.

Airline employment at the beginning of **1998** stands at 1,165. Passenger boardings increase 125.8% to 298,000.

Konstantin Axenov is president in **1999** and his fleet includes 12 An-74s, 2 Tu-134As, 3 Tu-154Ms, 4 Yak 40Ks, and 5 Yak-42Ds. Customer bookings surge 48.8% to 445,000, while 66,000 FTKs are operated.

GB AIRWAYS, LTD.: Iain Stewart Centre, Beehive Ring Road, Gatwick Airport, West Sussex, England, RH6 0PB, United Kingdom; Phone 44 (1293) 664 239; Fax 44 (1293) 664 218; <http://www.gbairways.com>; Code GT; Year Founded 1981. In November 1981, **Gibraltar Airways, Ltd. (2)** is reformed and headquartered at London (LGW). Chairman/Managing Director Joseph J. Gaggero's fleet now comprises a Vickers Viscount 807 and a Boeing 737-236A, the latter leased from **Britannia Airways, Ltd.** Scheduled services are continued linking Gibraltar with London (LGW) and Tangier.

Enplanements for the year, under both airline names, are 74,630, a 13% increase; cargo plunges 11.3% to 291 million FTKs.

During the next seven years, services are expanded. Destinations visited from London (LGW) include not only Gibraltar, but Tunis, Madeira, and Marrakech as well. In a protest against British ownership of Gibraltar, the Spanish government maintains its closure of the land frontier (a blockade begun in 1968) through 1985, while developing a competing airport at Malaga on the Mediterranean coast. During this period, **British Airways, Ltd. (2)** agrees to become the company's sales agency worldwide. Still, the carrier has lost passengers and income to the Spanish land route closure.

The 56-employee company flies one each B-737-236A and Viscount 807 in **1988** and begins service to Casablanca and Tangier.

In April, the first non-Gibraltar route is opened between London (LGW) and Funchal, Madeira.

Just after landing at Tangiers on November 23, the Viscount 807 with 4 crew and 74 passengers, runs off the side of the runway and eventually comes to rest in a shallow channel 1,165 yards past the touchdown point; although the aircraft is damaged beyond repair, there are no fatalities.

Enplanements for the year total 241,000, of which 57,000 are flown on regional routes and the remainder on the principal route to London.

The workforce balloons by 87.5% in **1989** to 150 as new routes are inaugurated during the summer from London (Gatwick) to Marrakech, Tunis, and Tangier, as well as twice-weekly from Manchester to Gibraltar. Flights over the company's most important route, Gibraltar to London (Gatwick) are increased from 12 per week to 17 and the owned "Baby Boeing" is replaced by two chartered B-737-236As.

Passenger boardings leap upward by 37.9% to 160,000 and freight climbs 70.6% to 2.9 million FTKs.

London (Gatwick) to Jerez flights begin in April **1990**.

Customer bookings jump to 370,000.

The workforce is 125 in **1991** and the fleet now includes 3 B-737-206As chartered from **British Airways, Ltd. (2)**.

Through October, the company reports its passenger boardings up 24.7% to 246,290.

The employee population swells by 28% in **1992** to 160 as another B-737-206A is leased from BA and a B-737-2M8A is purchased. Customer bookings for the year as a whole are up by 36.3% to 394,029, but cargo slides 0.2% to 1.84 million FTKs.

In **1993**, the fleet of Chairman Gaggero and Managing Director Ray Sayer comprises 4 Boeing 737-206As leased from B.A. and an owned B-737-2M8; airline employment is 160. Through November, passenger boardings increase 2.4% to 376,399, but freight is down again, by 1.1%, to 1.7 million FTKs.

Although the workforce is unchanged in **1994**, the owned B-737-2M8 is replaced by two chartered B-737-236As.

It is announced on December 1, that, effective February 1, GB Airways will become a franchise of its 49% minority owner, **British Airways, Ltd. (2)**; this regional affiliation will allow the carrier to paint its planes in a modified BA livery and to share use of the major's designator code.

John Osbourne becomes the new managing director and weekly service is inaugurated on November 1 from London (LHR) to Agadir in Morocco.

During the year, customer bookings slide 1.6% to 247,939. Operating revenue totals \$50.09 million and expenses are \$47.96 million. As a result, there is an operating surplus of \$2.13 million and a net gain of \$2.38 million.

Airline employment stands at 174 in **1995** and the leased fleet now includes two B-737-4Q8s and three B-737-236As, the latter chartered from **British Airways, Ltd. (2)**.

On February 1, the carrier becomes the **British Airways, Ltd. (2)** franchise for Spain and North Africa. The comprehensive arrangement provides for frequent flyer programs, joint marketing, passenger handling, freight, and engineering services. GB Airways aircraft are repainted in modified BA livery.

Still, enplanements drop 17% to 418,858.

The workforce is increased a dramatic 60.9% in **1996** to 280 and the number of Dash-4Q8s is increased by three. Several aircraft are wet-leased to BA to operate services from London to Scotland, Oslo, and Stockholm, and to the French city of Lyon.

Passenger boardings inch up 2.5% to 491,652 and 2.58 million FTKs are operated, a 22.8% increase. A profit of £4 million is realized.

The employee population grows by 15.7% in **1997** to 324.

Early in the year, the company requests its first new aircraft, two B-737-300s. Destinations visited from London (LHR and LGW) and Manchester include Agadir, Casablanca, Faro, Funchal, Gibraltar, Jerez, Madeira, Malaga, Malta, Marrakech, Murcia, Porto, Tangier, Tunis, and Valencia.

Customer bookings skyrocket 81% to 712,034 while cargo traffic accelerates 86% to 4.98 million FTKs.

When the new B-737-3L9s are delivered in January and February **1998**, they replace two chartered B-737-236As.

During the spring, the carrier, in direct competition with **British Midland Airways, Ltd.** and **Air Europa, S.A.**, begins BA franchise flights from London (LGW) to Majorca.

In late November, a firm order is placed with Airbus Industrie for nine A320/A321s, with options on five more, to be delivered between 2001 and 2003.

Passenger boardings accelerate 34% to 957,000, while freight traffic rises 9% to 5.43 million FTKs.

British Airways, Ltd. (2) Director of Alliances John Patterson succeeds John Osbourne as managing director on December 1.

Customer bookings accelerate 15.5% in **1999** to 1,105,000 as cargo falls 4.3% to 5,283,000 FTKs. Employment at the beginning of **2000** stands at 566, a 10.8% increase over the previous 12 months. The B-737 fleet now includes 2 each Dash-34Ss, Dash-3L9s, and Dash-4Q8s, plus 3 Dash-4S3s.

While preparing for departure from London (LGW) to Malta on February 17, flight attendants aboard a company B-737-4S3 helping passengers place hand luggage into overhead bins are startled when four chickens escape. By the time the birds have been captured and 4 offending passengers have been removed—with all of their luggage—the flight is 90 minutes late.

In March, the carrier moves into a new headquarters at the Grade II Gatwick Beehive building. Originally opened in 1936 as the world's first circular passenger terminal, it was closed in 1956 and later remodeled. Daily nonstop B-737-4Q8 roundtrips from London (LGW) to Nantes begin on March 26.

During the last week of April, the company wins a Millennium Queen's Award for International Trade.

An A320-232, the first of a mixed order for 10 A320/A321s, is received at London (LHR) on May 18, and enters service eight days later.

The franchise agreement with **British Airways, Ltd. (2)** is renewed for eight years on June 22. The press release announcing the arrangement notes that GB Airways has transported 7.6 million passengers since its founding..

With the beginning of the winter schedule on October 31, the carrier inaugurates its first BA scheduled return service to Tenerife, flying down and back from London (LGW) thrice weekly. The flights complement those simultaneously started to the Spanish island from London (STN) by GO, the low-cost division of **British Airways, Ltd. (2)**.

GCS AIR SERVICE: United States (1987-1990). Following the purchase by **Midway Airlines (1)** in early June 1987 of the airline assets of his FBO GCS Aviation, William Fischer, former CEO of **Fischer Brothers Aviation**, proceeds to establish a new Essential Air Service (EAS) airline, GCS Air Service. Employing a Beech B-80 Queenaire, GCS inaugurates daily roundtrip scheduled passenger services in March 1988 linking its hub at Mansfield, Ohio, with Cleveland. Services are maintained until February 1990.

GEM STATE AIRLINES: United States (1978-1980). Organized by Tom Soumas Jr. and James H. Alexander at Coeur d'Alene, Idaho, in the fall of 1978, Gem State begins scheduled commuter service to Boise and Pocatello on December 1 with a fleet of 3 Swearingen Metro IIs. This is the first airline service to the community in a decade.

A total of 2,611 passengers are transported by the 72-employee company during the first month.

The fleet is increased to 14 aircraft in 1979 as the route network is expanded to Pullman, Lewiston, Idaho Falls, Salt Lake City, Sun Valley, and Twin Falls.

The year's passenger boardings jump to 78,000.

Declining traffic and significantly higher operating costs, led by radical fuel price increases in early 1980, conspire to force the intrastate out of business by December.

GEMINI AIR CARGO: P.O. Box 16254, Dulles International Airport, Washington, D.C. 22041, United States; Phone (703) 391-0100; Fax (703) 391-0965; <http://www.gac-cargo.com>; Code GR; Year Founded 1995. Former **Seaboard World Airlines**, **PeoplExpress**, and **Presidential Airways** executive William Stockbridge, who is currently president of the Potomac Electric Power Company subsidiary Potomac Capital Leasing, incorporates the aircraft trading and leasing concern Potomac Financial Group, LLC at Washington, D.C on September 14, 1995. Ownership is divided between President/CEO Stockbridge, Lehman Global Air Cargo, a Lehman Brothers subsidiary, and the Oak Tree Capital Management subsidiary Jet Air Cargo. An initial equity fund of \$94 million is collected with which to begin operations and purchase six aircraft. A \$40-million line of credit is raised via Lehman Brothers as prime lender.

Potomac Vice President Daniel Upham becomes general manager and an application for certification is made to the Department of Transportation. Six former **Deutsche Lufthansa, A.G.** DC-10-30s are acquired and are sent to Aeronavali, S.p.A. in Italy for conversion into freighters.

Unable to immediately acquire its government certification in time for a November launch of services, the carrier leases three newly acquired Douglas DC-10-30Fs to **Sun Country Airlines**, which initiates services on behalf of the new operator in December. Sun Country benefits in that it is allowed to continue operating passenger aircraft that exceed FAA noise standards.

In January 1996, Potomac complains that Sun Country has employed the wrong flight number on a service from New York to Seoul, thereby causing a delay in cargo aboard the wide-body. This action results in the cancellation of three later contracted flights and a loss of \$400,000 to the company.

PFG receives its own FAA Part 121 certificate in June and a fourth Douglas freighter is acquired. Reporting that both **UPS (United Parcel**

Service) and **Swissair, A.G.** found the service provided so poor in results that they refuse to ship cargo on planes operated by **Sun Country Airlines**, PFG attempts to cancel the DC-10 contract with the charter airline.

The 25-employee cargo concern operates 50.85 million FTKs on the year. Unhappily, there are fiscal losses: \$1.82 million (operating) and \$1.66 million (net).

Sun Country Airlines files suit in Hennepin County District Court and in U.S. District Court in Minneapolis in January 1997 seeking an injunction against PFG's repossession. The passenger charter operator contends that, if the planes are reclaimed, it would suffer "catastrophic" financial injury at the height of the winter tourist season. The companies settle their claims on February 7 in an agreement that allows Sun Country to continue operating on behalf of Gemini for the immediate future.

The agreement with **Sun Country Airlines** is officially terminated during the second week of April. Gemini is now flying its six DC-10-30s with its own pilots; a seventh aircraft is down for maintenance. The airline currently flies one scheduled service from New York to Seoul six times a week.

At this point, Gemini elects to depart the aircraft leasing business and model its operation on that of **Atlas Air**, which is and will remain the largest operator of the ACMI strategy. Gemini will henceforth provide wet-lease replacement all-cargo services for international carriers such as **Swissair, A.G.** Two new ACMI customers are added in May.

Two more DC-10-30Fs begin flying for the company later in the year. In November, the pair is leased to the new Belgian carrier **City Bird, S.A.**

Potomac Financial Group changes its corporate structure in December from an LLC to a C corporation and is renamed Gemini Air Cargo. Also in December, the carrier is outbid by **Swissair, A.G.** and loses to the Swiss major the chance to purchase four **LTU International Airlines, GmbH, MD-11s**.

A total of 760.8 million FTKs are operated and \$74.78 million in operating revenues are earned. With expenses of \$69.83 million, the new freight operator realizes an operating gain of \$4.94 million. Still, the previous year's net loss deepens to \$15.1 million.

Flights continue in 1998. The fleet now includes eight DC-10-30Fs. The company remains a nonunion airline; a six-member crew committee sits to resolve any issues between flight crews and management.

On March 8, an agreement is reached with **Air France** under which Gemini will operate a trio of DC-10-30Fs for the French line, replacing the DC-8Fs that it had previously wet-leased from **Cargo Lion, S.A.**

In an effort to make certain that sufficient capacity is available in the wake of the start of the September 3 pilots' strike, **Air Canada, Ltd.** wet-leases a DC-10-30F from Gemini Air Cargo. It will provide freight charters to London and Frankfurt over the next week on behalf of its key freight forwarder supporters.

When that aircraft is returned, it, too, is wet-leased to **Air France** to supplement that carrier's 12 B-747F Jumbojet freighters.

On September 28, a contract is signed for the purchase of four former **British Airways, Ltd. (2)** DC-10-30s, which will all be converted into freighters.

Freight traffic during the 12 months increases 42% to 1.08 billion FTKs. Revenues surge 47.6% to \$110.34 million, while costs are held to \$94.42 million. The operating profit jumps to \$15.91 million, while the previous year's net loss becomes a \$4.75-million gain.

Converted into a freighter at the Aeronavali factory at Naples, Italy, the first former **British Airways, Ltd. (2)** DC-10-30F is delivered in February 1999.

When **Fine Air Services** and **Arrow Air** announce a merger on February 11, Gemini is the only carrier to file a regulatory objection with the DOT. The Gemini protest is unheeded as DOT approves the Fine takeover on April 9.

The Oak Tree Capital Management interest in Gemini is purchased on July 8 by William D. Carlyle's investment firm The Carlyle Group. Shareholding is now divided between Carlyle (85%) and company em-

ployees (15%). During the summer, a DC-10-30 is wet-leased to **Qantas Airways (Pty.), Ltd.** for cargo flights to the South Pacific from the U.S.

Cargo traffic plunges 37.6% to 674.71 million FTKs. Revenues fall 25.3% to \$82.39 million, while expenses drop 20.3% to \$75.22 million. The operating profit drops to \$7.17 million, while the previous year's net profit becomes an \$11.31-million loss.

Airline employment at the beginning of 2000 stands at 471, a 32.3% increase over the previous 12 months.

Financial advisors hired by the company advise it during the spring to forgo an initial public offering until such time as it has more completely developed its long-term strategic plan. In light of this report, the Carlyle Group, which is not anxious to have an initial public offering, arranges for the concern to be refinanced through Lehman Brothers for a total of \$160 million in revolving credit. Fresh capital is now pumped in sufficient amounts to build up the cargo line's fleet to 12 each MD-11Fs and DC-10Fs over the next 3 years. As the new freighters arrive, Gemini will be able to more actively compete in the transpacific market against its model and rival, **Atlas Air**.

Following the May 1 bankruptcy of **Kitty Hawk Air Cargo** and the shut down of **Kitty Hawk International Airways**, Gemini picks up some of the U.S. Postal Service contract that the latter is unable to fly. It also takes over its contract from Pathfinder Air Resources.

The company's first MD-11F, leased from AerFi of Ireland and christened *Mary*, enters service on June 12. It is operated on behalf of **United Parcel Service (UPS)** between Louisville and Seattle. On behalf of **BAX Global**, DC-10-30F roundtrips start on July 10 between Toledo and Los Angeles.

Previously operated by Fort Lauderdale-based **Laker Airways**, a DC-10-30 is acquired from GECAS on a 10-year lease as of July 15. After its conversion in Italy to freighter configuration, it will begin flying for Gemini in October. On August 22, arrangements are completed with Mitsui for the charter of one of the MD-11s previously flown by **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. It will be among 11 more to be received by the operator as part of its plan to double its freighter fleet in the next 3 years.

A second MD-11F enters service at the end of September. In October, a new twice-weekly DC-10-30F roundtrip service is inaugurated on behalf of Eagle Global Logistics. The wide-body flies from Austin to Taiwan via Los Angeles, Honolulu, and Guam and from Taipei back to Texas via Anchorage. Under term of the 12-month Eagle contract, the service is scheduled to be upgraded to MD-11F in February, but actually moves up to the larger aircraft in late December following the arrival of the former VASP MD-11F. The freighter still wears the South American line's colors, with Gemini titles.

GEMINI AIR TRANSPORT (GHANA), LTD.: Ghana (1974–1982). GAT is established at Accra in 1974 to undertake international cargo flights between African destinations and Europe, especially the U.K. Gemini is the first privately held airline formed in Ghana.

Former **African Safari Airways, Ltd.** Managing Director Michael Owens and his wife Judi are joined in May 1976 by Lynn Wilson and Kevin McPhillips of newly formed **Redcoat Air Cargo, Ltd.** in winning a contract to operate the Accra-based carrier's commercial activities. Under terms of the agreement, Gemini will provide the aircraft and London-based Redcoat the crews and expertise.

Scheduled revenue flight operations commence in June with a single Bristol Britannia 253C, which operates a weekly roundtrip all-cargo flight from Accra to London (LTN) via a refueling stop at Valencia, Spain. Ad hoc charters are undertaken throughout Europe, Africa, and the Mideast. Even after Redcoat acquires an operating certificate for flights under its own name in spring 1977, the British partner will continue to manage Gemini's Britannia right up until the time of its own failure in 1982.

GEMINI AIRLINES. See **AIR GEMINI**

GEMINI AIRLINES, LTD.: Ghana (1981–1990). This new Gemini is formed in 1981 as successor to **Gemini Air Transport, Ltd.** The Accra-based all-cargo operator is supported by **Tradewinds Airways, Ltd.** of the U.K., which on behalf of Gemini undertakes a weekly Accra–London freighter flight. When the British associate goes bankrupt in 1990, Gemini also ceases operations.

GENAIR, LTD.: United Kingdom (1981–1984). Organized at Liverpool in April 1981 as the business travel division of the telecommunications manufacturer General Relays, Ltd., Genair officials name J. E. Marsden as chairman with D. Allen as general manager. A workforce of 12 is employed and a fleet is assembled comprising two Embraer EMB-110 Bandeirantes and a Beech King Air 90. Beginning in August, twice-daily scheduled services are inaugurated linking the company's base at Liverpool Airport with London (Gatwick). Thrice-daily flights commence on October 26.

During late 1982, the carrier takes over financially distressed **Eastern Airways, Ltd.** and **Casair, Ltd.** The company now transfers its headquarters to Eastern's former base at Humberside and joins the **British Caledonian Airways, Ltd. (BCAL)** commuter network. Employing an upgraded fleet of Shorts 330s and 360s, the carrier initiates scheduled flights to Belfast, Blackpool, Bristol, Cardiff, Glasgow, Leeds, London (LHR, LGW, and STN), Norwich, and Teesside in the U.K. and Esbjerg in Denmark.

Although this expansion makes Genair, Ltd. one of Britain's top commuter airlines, the expenses involved prove to be more than can be recouped. As a result, the carrier must cease operations and enter receivership in July 1984.

GENERAL AIR, GmbH.: Germany (1972–1975). A group of West German businessmen in early 1972 obtain certification to operate small Soviet-made aircraft on scheduled domestic routes from Frankfurt. Five Yakovlev Yak-40s are ordered from Riga, Latvia, with the first arriving in June. A number of de Havilland Canada DHC-6-300 Twin Otters are also obtained. Services commence in mid-July and all five Yaks are flying by November.

A DHC-6-100, with three crew and 10 passengers, crashes near Helligoland on May 27, 1973 (eight dead).

Operations continue with little fanfare during 1974.

Because an overrun seems imminent, a Yak 40FG with 2 crew and 14 passengers steers off the right side of the runway after touching down at Saarbrücken on February 9, 1975; the plane collides with some trees, but no serious injuries are reported.

Unable to achieve financial viability because of competition and its accident record, the company shuts down in October.

GENERAL AIR LINES. See **WESTERN AIR EXPRESS**

GENERAL AIRLINES: United States (1967–1968). **General Aviation Services**, based at Reading, Pennsylvania, is reformed in 1967 and renamed. Daily Beech 18 scheduled roundtrips continue to be maintained linking the company's base with Baltimore and Washington, D.C. Operations cease in 1968.

GENERAL AIRWAYS, LTD.: Canada (1928–1933). General is formed at Amos, Quebec, in 1928 and undertakes nonscheduled cargo and passenger flights linking its base with Noranda, Rouyn, and Haileybury. Contract mail flights begin over a route from Amos to Siscoe on October 28, 1930. Scheduled passenger and freight services begin over the main route late in the year.

Introduced in early 1931, mail services from Amos to Chibougamau are withdrawn on January 8, 1932. On September 15, the Siscoe mail terminus is stretched to Pascalis. All services cease when the company closes its doors on November 24, 1933.

GENERAL AND AVIATION SERVICES. See **GAS AIR CARGO, LTD.**

GENERAL AVIATION (1): United States (1930). General is established at Elmira, New York, in late spring **1930** to offer scheduled passenger services to Syracuse. A Ryan B-1 Brougham is acquired and flights commence in June. The operation is not a success and ends in July.

GENERAL AVIATION (2) (GREENEVILLE AIR): United States (1974–1988). Former Magnavox corporate pilot Scott M. Niswonger and insurance broker S. Wylie Milligan form Greenville Air at Greenville, Tennessee, in **1974** to provide short-haul contract and charter freight services on behalf of package express and courier companies, particularly **Emery Air Freight**. Revenue cargo operations commence with Beech 18s leased from Little Mountain Air in North Carolina.

During the remainder of the decade, the leased Beech fleet, which at its zenith totals 14 aircraft, is gradually replaced with three Cessna 404 Titans, three Navajos, and two Convair CV-240s. Greenville Air provides regular and reliable freight service to Greenville, South Carolina, Raleigh, North Carolina, and other points throughout the Southeast. Passenger charters are also operated employing the Piper equipment. Investment is found in these years from the W. W. Williams Company of Columbus, Ohio, and two company divisions are formed, one concentrating on air freight and the other on ground transport with medium-sized trucks.

Following the onslaught of the **1981** recession, Greenville Air is dissolved. Partner Niswonger sells his interest to Milligan and forms Landair Transport; his firm will provide scheduled trucking services to air freight forwarders, fully integrated air cargo carriers, and domestic and international airlines, becoming Landair Services in September 1993. Partner Milligan disposes of the company's assets, including its aircraft, to Raleigh-based General Aviation (2), which operates on behalf of **UPS (United Parcel Service)**. General Aviation (2) adds to the former Greenville Air Convair fleet over the next three years, eventually owning six CV-240/440s and a Grumman Gulfstream G-159.

In **1984**, the company acquires a major contract from **Kitty Hawk Air Cargo**. All of the aircraft are now dedicated to transporting freight around the Eastern U.S. on behalf of the Dallas-based operator.

During its initial climb away from Nashville Metropolitan Airport on the evening of May 31, **1985**, Flight 115, the G-159 with two crew, loses power on its No. 1 engine and crashes 100 ft. beyond the end of the runway; there are no survivors.

Flights continue without fanfare during the remainder of the year and through **1986–1987**.

In **1988**, General Aviation (2) is sold outright to Kitty Hawk, which transfers all of the freighters to Texas. Pilot Niswonger goes on to found Greenville-based Forward Air, a leading national expedited trucking concern serving air freight consolidators.

In something of a piece of irony, *Air Cargo World* reports in its June **2000** issue that Forward Air has put together a team of former air freight executives, including several from defunct **Roadway Global Air**, to review newly bankrupt **Kitty Hawk Air Cargo** as a potential takeover target. No merger will occur this year.

GENERAL AVIATION (3). See **CHINA GENERAL AVIATION CORPORATION**

GENERAL AVIATION SERVICES: United States (1966–1967). General Aviation Services is established at Reading, Pennsylvania, in January **1966** to provide scheduled air taxi services to Baltimore and Washington, D.C. Employing a Beech 18, daily roundtrips are inaugurated on February 15 and are maintained into **1967**, when the company name is changed to **General Airlines**.

GENERAL CARGO AUSTRALIA (PTY.), LTD.: Australia (1980–1993). General Cargo is set up by Cranways at Launceston, Tasmania, in **1980** to provide all-cargo services to the mainland, particularly Essendon Airport at Melbourne. Revenue operations commence with a

single Douglas DC-3 and continue without incident until the carrier shuts its doors 13 years later.

GENERAL TRANSPORT SERVICES: 185 East Reno, Suite B1, Las Vegas, Nevada 89119; Phone (702) 798-3333; Fax (702) 597-1799; Year Founded 1990. The corporate carrier GTS is established at Las Vegas in **1990** to provide lift for executives and small passenger groups flying into Las Vegas from around the country, especially California. By **2000**, the company employs five pilots and operates one each Learjet 24D, Learjet 25D, and Learjet 35A.

GENESIS AIRWAYS, LTD.: United Kingdom (1994–1995). Genesis is set up by Terry and Dorothy Beanland at East Midlands Airport in June **1994** to offer domestic passenger services, both scheduled and charter. With Terry as managing director and Dorothy as commercial director, a staff of seven is recruited. A single British Aerospace BAe Jetstream 31 is leased and employed to launch frequencies on September 12 to Belfast. Late in the year, a Piper PA-31-310 Navajo is acquired and plans are made to switch services to Belfast City Airport in January. Unfortunately, financial reversal causes the company to shut its doors in June **1995**.

GENEVA INTERNATIONAL, LTD./EXECUTIVE AIR CHARTER: 10500 Terminal Road, Manassas Regional/Harry P. Davis Field, Manassas, Virginia 20110, United States; Phone (703) 369-0582; Fax (703) 369-8966; Year Founded 1984. This independent charter operator is established at Manassas, Virginia, in **1984** to provide executive flights to destinations throughout the U.S. and Canada. Revenue flights commence with a fleet that by **2000** comes to comprise 2 Grumman G-1159 Gulfstream IIs and 1 British Aerospace BAe (HS) 125-400F Hawker.

GENIUS AIR: Serbia (1992). An operator with a very brief history, Genius is established at Belgrade in **1992** to operate public passenger charters to destinations in Western Europe. Employing a Boeing 727-2H9 leased from JAT (Yugoslavenki Aerotransport), the company undertakes a number of flights to London (CTN) during the summer season. Political problems force the company to stand down in the fall.

GEORGIA AIR: United States (1970–1972). GA is set up at Atlanta in **1970** to provide daily roundtrip shuttle flights to Rome, Georgia. Daily Cessna 402 revenue frequencies are duly inaugurated and are maintained for two years.

GEORGIA JET EXECUTIVE CHARTER: Gwinnett County Airport, 530 Briscoe Blvd., Lawrenceville, Georgia 30245, United States; Phone (770) 513-0180; Fax (770) 513-0249; Year Founded 1985. Doing business as **Critical Care Medflight**, GJEC is established at Lawrenceville, Georgia, in **1985** to provide worldwide air ambulance and patient transfer flights. Over the next 15 years, the company comes to employ 23 pilots and to operate 1 each Beech 400 Beechjet, Mitsubishi Mu-300 Diamond IA, and Aerospatiale AS-350 Astar helicopter.

GEORGIAN AIRLINE-ORBI: Georgia (1995–1997). GA-O is set up at Tbilisi in **1995** as a joint venture sister company of **Orbi Georgian Airlines**. Significant shareholding is assumed by **Germania Fluggesellschaft, GmbH**. OGA Managing Director Vasili S. Jambazisvili holds the same post with this small charter operator, which acquires a single Boeing 737-3M8 from Germania. Revenue flights in support of OGA to international destinations begin. Destinations visited on a regular basis during the remainder of the year include Adler/Sochi, Athens, Kiev, Moscow, Rostov, St. Petersburg, Tehran, Tel Aviv, Thessaloniki, and Volgograd.

The company is merged into **Orbi Georgian Airlines** in **1997** to become **Georgian Airlines**.

GEORGIAN AIRLINES: Georgia (1997-1999). *Georgian Airline-Orbi* and *Orbi Georgian Airlines* are merged in March 1997. David Davidtze becomes director general and the fleet is rationalized at 2 Tupolev Tu-134As, 3 Tu-154Bs, and 5 Yakovlev Yak-40s. The schedule introduced on July 1 is significantly increased.

Flights continue in 1998-1999 as airline employment grows to 488. The state, which had acquired full ownership, issues a privatization tender for the sale of a 49% stake during July of the former year.

Destinations visited on a scheduled basis include Adler/Sochi, Athens, Kiev, Moscow, Rostov, St. Petersburg, Tehran, Tel Aviv, Thessaloniki, and Volgograd. Cooperative agreements are signed with **Air India, Ltd.**, **Caspian Airlines**, and **Swissair, A.G.**

When the winter schedule is released at the end of October, it shows the carrier with daily service to Prague, Moscow, and Tel Aviv; flights to Thessaloniki and Athens five times a week; thrice-weekly service to Frankfurt; as well as weekly or twice-weekly flights to Adler/Sochi, Kiev, Rostov, St. Petersburg, Tehran, and Volgograd.

The company is merged with **Air Georgia** on October 31 to form **Airzena Georgian Airlines**.

GEORGIAN BAY AIRLINES, LTD.: Canada (1946-1992). Established by the Powell family at Parry Sound, Ontario, in 1946, this small charter operator undertakes both passenger and cargo flights to large and bush destinations in the Georgian Bay area.

Twenty-five years later, the company, which also operates a flight school, introduces a scheduled passenger service linking its base with Sans Souci. In 1981, President F. D. Powell and operations manager B. D. Powell oversee 25 employees and a fleet of 10 Piper PA-23 Aztecs and 1 de Havilland Canada DHC-2 Beaver. Flights continue during the remainder of the decade and into the 1990s, ceasing in 1992.

GEOTERREX AND SOUTHERN COMMANDER (PTY.), LTD.: c/o Western Commander (Pty.), 17, Dumeries Terrace, Greenvale, Victoria, 3047, Australia; Phone 61 (3) 9374 2239; Fax 61 (3) 9379 8460; Year Founded 1996. GASC is set up at Greenvale in 1996 to provide nonscheduled domestic passenger and cargo charters. Revenue flights begin with one each CASA C-212-200 Aviocar and a Cessna 404 Titan.

GERMAN CARGO AIRLINES, GmbH.: Germany (1977-1995). The **Deutsche Lufthansa, A.G.** charter subsidiary GCA is established on March 10, 1977 to supplement the freight capability of the parent airline. Wilhelm Althen and Siegfried Koehler are named joint managing directors and the company is capitalized at DM 1.5 million. GCA is equipped with 2 B-707-330Cs painted curry-yellow and transferred from the parent's fleet; operations commence on April 1 with a Frankfurt-Hong Kong charter. Maintenance is contracted with the parent and flight crews are also loaned to the subsidiary. Until the mid-1980s, annual freight and financial figures will be combined with those of Lufthansa.

On October 20, 1979, a third B-707-330C is assigned to German Cargo. A new cargo marketing scheme is unveiled in the spring of 1980 and a fourth B-707-330C is added to the fleet. GCA, in 1981-1982, begins to specialize in the carriage of livestock, developing special aluminum horse stalls and cattle containers.

On June 1, 1983, German Cargo places a DM 220-million order for four reengined Douglas DC-8-73s from Cammacorp in the U.S. Meanwhile, pilots for them are trained by **United Airlines**.

The four DC-8-63s are flown from Dallas, Texas, to Paris (Le Bourget Airport) between July and October 1984. In France, the four aircraft are outfitted to German specifications by **UTA French Airlines, S.A.**, with the first entering German Cargo service in September.

The last of the four B-707-330C freighters, representing the last of its type in Lufthansa service, is retired on December 31. Principal routes for the carrier's charter and contract cargo flights are to Africa and the Middle East, including Abu Dhabi, Bahrain, Doha, Cairo, and Nairobi.

Airline employment in 1985 stands at 248 as a fifth DC-8-73 freighter is acquired. GCA begins to undertake its own maintenance and, during the year, the final B-707-330C is sold. A total of 172,767 FTKs are operated. A net \$1.8-million profit is earned atop an operating gain of \$900,000.

The workforce is cut by 7.6% in 1986 to 230 and a plan to purchase the failed British cargo airline **Tradewinds, Ltd.** is shelved when it is learned that the prospective-parent's DC-8-73s cannot win certification in the U.K. Cargo traffic rebounds to advance by 13.4% to 199,500 FTKs. Revenues ascend 10% to \$73.6 million, but costs also climb, resulting in a \$300,000 drop in operating profit and a \$600,000 decline in net gain.

During 1987-1988, North and South American destinations are added to the route network. During the summer of the former year, the convertible Dash-73 is employed for passenger charters by sister carrier **Condor Flugdienst, GmbH.** Managing Director Siegfried Koehler's company also begins flying all-cargo service to Hong Kong and Bangkok on behalf of its parent.

In March 1989, the company begins five-times-per-week service between Frankfurt and Birmingham, the first scheduled all-cargo service from Germany to that British city. B-747F Frankfurt to Dallas (DFW) flights commence in June and twice-weekly all-cargo frequencies are initiated from Frankfurt to San Francisco in November.

Airline employment stands at 385 in 1990. The fleet comprises 3 Boeing 747Fs, 5 DC-8-73Fs, and 2 B-737-230Fs, the latter received in May. In October, a B-737-210C is leased from **Atlanta Icelandic Airlines, H.F.** for 18 months. Freight traffic declines 6.2% to 212.3 million FTKs.

In October 1991, the company joins with **Air Rwanda, S.A.** to begin joint cargo service from Frankfurt to Kigali; the airlines alternate on the weekly flight, GCA employing a DC-8-73F and **Air Rwanda, S.A.'s** B-707F.

In one of the most unusual freight deliveries of all time, a DC-8-73, on October 11, transports 1.3 billion sterilized male fly larvae from Tuxtla, Mexico, to Tripoli, Libya, to help Colonel Qaddafi's government combat the parasite known as the New World screwworm.

At the end of the year, a B-737-230F becomes the first "Baby Boeing" in the world to be equipped with a Nordam noise-suppressing "hush kit" unit installed by DLH technicians at Berlin's Schoenefeld Airport. It will enter service during the following January. Traffic figures are not released for the year; however, sources report a \$5.6-million profit.

The system of joint managing directors is maintained in 1992 and in 1993 they are Dietmar Kirchner Johannes and Heinrich Irle. Airline employment now stands at 673. Destinations visited from Frankfurt include Aden, Addis Ababa, Asmara, Bahrain, Bujumbura, Bangalore, Buenos Aires, Cairo, Calcutta, Damascus, Dakar, Doha, Entebbe, Harare, Kigali, Khartoum, Lusaka, Madras, Montevideo, Nairobi, Sana'a, Santiago, and Sao Paulo.

To cut costs, **Deutsche Lufthansa, A.G.** Chairman Jurgen Weber unveils a new program on November 27, 1994 that will eliminate 8,400 jobs, abolish unprofitable routes, spin off air freight, catering, and some passenger services to independent subsidiaries called profit centers. **Lufthansa Cargo Airlines, A.G.**, as the renamed German Cargo Airlines becomes known, stands alone as of January 1, 1995.

GERMAN WINGS, GmbH.: Germany (1989-1990). The privately owned independent GW is established at Munich in January 1989 to provide regional and domestic all-business-class services with a fleet of four McDonnell Douglas MD-83s. Ownership is divided between publishing executives Franz and Frieder Burda, who also own the airlines (45%), joint managing directors Peter and Christian Kimmel (40%), and the venture capital firm Bayerische Unternehmens-Beteiligungsgesellschaft, A.G. Capitalization is DM55 million (\$32 million). The employee population totals 510.

Operations commence in April, as routes are stretched to Frankfurt, Cologne, Dusseldorf, Hamburg, and Paris. An inability to obtain

sufficient slots at German airports and a slow domestic market caused by recession lead to significant financial difficulties. It requires a court order to force **Deutsche Lufthansa, A.G.** to complete interlining agreements that it had declined to sign. Still, two more MD-83s are received in October and November, one purchased and one on lease from **Air Libertie, S.A.**

Early in 1990, as fiscal difficulties mount, the carrier unsuccessfully attempts to negotiate partnerships with other airlines, including **Swissair, A.G.**, **SAS (Scandinavian Airlines System)**, and **British Airways, Ltd.** (2). Meanwhile, intense competition from **Deutsche Lufthansa, A.G.** is encountered in late winter and spring and leads the carrier to shut down on April 30 and file for bankruptcy in early May. Prior to its cessation, the new entrant transports some 450,000 passengers; as part of a planned expansion, the state carrier accepts passengers with German Wings tickets and hires a number of the former regional's employees.

GERMANAIR FLUGGESELLSCHAFT, mbH. See **BAVARIA-GERMANAIR FLUGGESELLSCHAFT, mbH.**

GERMANIA FLUGGESELLSCHAFT, GmbH: Berlin Tegel Airport, Berlin, D-13405, Germany; Phone 49 (30) 4101 3610; Fax 49 (30) 4101 3615; <http://www.germaniaairline.de>; Code ST; Year Founded 1986. On June 1, 1986, **SAT Fluggesellschaft, GmbH (Special Air Transport)** is reformed and renamed Germania. Dr. Heinrich Bischoff is named chairman. Employing a fleet of three Sud-Est SE-210 Caravelle XRs, the carrier continues its passenger and cargo charters and inclusive-tour flights from its base at Koln-Bonn Airport to holiday destinations in the Canary Islands, southern Europe, the Near East, and North Africa.

Operations continue apace during the remainder of the decade and in 1989 the Caravelles are replaced by the first Boeing 737-35Bs. In 1990, the fleet comprises 5 B-737-35Bs (2 of which are wet-leased to **Condor Flugdienst, GmbH.**) and 1 B-737-3L9, which is chartered to **Berlin European U.K., Ltd.** for a year.

Two more B-737-35Bs are acquired in 1991 and two more B-737-3L9s in 1992, one of which is leased from **Maersk Air, A.S.** Scheduled flights are introduced from Berlin to Heringsdorf and the Baltic Sea area. A shuttle service is introduced for civil servants who need to fly from Cologne and Bonn to Berlin.

Airline employment in 1993 stands at 335 and the fleet now includes 3 owned B-737-3L9s and 7 leased B-737-35Bs, including 2 leased to Condor. Enplanements total 1,211,900.

Two B-737-330s are acquired in 1994, but these, too, are chartered to **Condor Flugdienst, GmbH.** The year's passenger boardings ascend 11% to 1,345,500.

There is no change in the size of the workforce in 1995. During the last week of March, \$512 million is committed to an order for 12 Next Generation B-737-75Bs. Ownership passes to Hetzel Travel Company and two B-737-35Bs remain with **Condor Flugdienst, GmbH.** Traffic is excellent this year, growing by 25% to 1,681,600 passengers transported.

Again in 1996, airline employment does not increase. Neither, for that matter, does traffic; instead, customer bookings drop 5.8% to 1,584,400. Flights continue in 1997. In addition to charter flights to North Africa, the Canary Islands, Bratislava, Tel Aviv, Larnaca, Kuwait, Turkey, and the Caribbean, the Cologne and Bonn to Berlin shuttle is maintained. Passenger boardings rise 15.6% to 1,831,500.

Despite a five-month delay in Joint Airworthiness Authority type certification, in April 1998 the carrier receives its first B-737-75B. The aircraft arrives at Berlin (Tegel Airport) following a 9 hr. 27 min. nonstop flight from Seattle's Boeing Field. Painted in the colors of Touristik Union International (TUI) with "Schöne Ferien" (Have a Nice Vacation) titles, the new aircraft begins service on behalf of the tour operator from not only Berlin, but Düsseldorf and Stuttgart as well. Customer bookings fall 10.1% to 1.64 million.

By the beginning of 1999, airline employment has been cut back by 13.1% to 338. During the spring, the company paints its latest four B-737-75Bs in the colors of other concerns for which it operates tours: Olimar Reisen, Jahn Reisen, Tjaereborg, and Meier's Weltreisen. On white fuselages, the tails and cheatlines will be black stripes and solid green, yellow, and blue, respectively.

Passenger boardings jump 7.1% to 790,000 while freight rises 2.4% to 247,000 FTKs. Airline employment at the beginning of 2000 stands at 411, a 21.6% increase over the previous 12 months.

Two Next Generation B-737-75Bs employed under lease by **LTU International Airways, K.G.** are returned at the end of the summer season on October 28. A Next Generation B-737-75B enters revenue service on November 7 wearing a new color scheme in honor of Siemens. Another begins flying in an orange-and-white livery that advertises 1 + 2 Fly.

The company now flies a mix of 8 Next Generation Dash-75Bs and 2 Dash-73Ss.

GESTAIR EXECUTIVE JET, S.A.: Aguetol, 7, Barajas, Madrid, E-28042, Spain; Phone 34 (1) 329-0500; Fax 34 (1) 329-3323; <http://www.gestair.es>; Code GP; Year Founded 1982. Gestair is formed at Madrid in 1982 as the Spanish member of the JET Europe marketing consortium. Employing a Gates Learjet 35, a Casa C-212 Aviocar, a Piper PA-31-310 Navajo, and various small Cessnas, domestic and international air taxi flights are initiated. By 1986, General Director Alberto Lluch Bazo's fleet has grown by two Aviocars.

Operations continue apace for the remainder of the decade and into the 1990s. In 1993, Chairman Jesus Macarron and Managing Director Juan C. Santilan oversee a workforce of 100. The fleet of the air taxi operator in 1994 includes 2 Beech Super King Air 200s, 3 Cessna 650 Citation IIIs, 1 British Aerospace BAe 125-700B, and 7 Aviocars.

Flights continue in 1995-1999, during which years the workforce is increased from 153 to 180 and the company enters into the forest fire-fighting business, acquiring 6 Canadair CL-215s for the purpose. During the latter year, 15,000 VIP passengers are flown from over 3,000 companies. A total of 130 workers are employed at the beginning of 2000.

GHANA AIRLINK. See **GHANA AIRWAYS, LTD.**

GHANA AIRWAYS, LTD.: No. 9 Ghana Airways Avenue, Airport Residential Area, P.O. Box 1636, Accra, Ghana; Phone 233 (21) 773 321; Fax 233 (21) 777 078; <http://www.ghana-airways.com>; Code GH; Year Founded 1958. After the British trust territory of Togo, together with the British Gold Coast colony, achieve independence as Ghana in 1957, the national carrier of Ghana is formed at Accra on July 4, 1958. A successor to **West African Airways Corporation**, which had ceased trading, holdings are divided between the government of Ghana (60% interest) and **British Overseas Airways Corporation (BOAC)** (40%). Initial capitalization is £400,000 and BOAC executive James Mercer is named chairman. Under supervision of the British flag line, London-Accra service is begun on July 16 with the wet-leased Boeing B-377 *Cordelia*.

This Stratocruiser will be joined by a second, the *Canopus*, also painted with Ghana Airways titles, later in the year. Domestic and some regional flights, operated previously by WAAC, are restarted on October 1. The carrier's first owned aircraft and the first to be registered in the independent country, is the de Havilland DH 114 Heron 2, 9 G-AAA, received on December 30.

An additional DH 114 is delivered in 1959, as is the first Douglas DC-3, the latter being received on March 9. London to Accra service is begun on April 14 with a Bristol Britannia 102 operated under contract from **British Overseas Airways Corporation (BOAC)**. The last Stratocruiser flight is made on May 30. Orders are placed for two Britannia 102s, later changed to Dash-300s.

Several of the carrier's receptionists begin training at the London Model's School on March 20, 1960. Three Viscount 838s are ordered on

April 20; the first of two purchased Britannia 300s, a Series 319, to be delivered on the year arrives at Accra on July 27. On August 18, six Ilyushin Il-18 turboprops are ordered from the Soviet Union and, in the interim, a number of Douglas DC-3s are acquired for domestic operations.

The second Britannia 300, a Series 309, is delivered on November 8 and is christened *Osagyefo*; the two Bristols launch twice-weekly London–Accra return service on December 2. The first two Il-18s are delivered the next day. Orders are placed for two Boeing 707-420s late in the month as the nation's president, Kwame Nkrumah, directs the airline to become a major national employer, taking on a number of managers and workers alike who lack the appropriate background and skills to make a useful contribution.

The fleet in 1961 comprises 1 each Britannia 309 and 319, 2 DH 114s, 4 DC-3s, 1 Antonov An-12, and 2 Il-18s. Orders are placed in January for two B-707 Stratoliners and for three Standard VC10s. On February 4, Britannia flights across Africa to Beirut are begun, the first by a West African airline. Ten days later, the government buys the remaining **British Overseas Airways Corporation (BOAC)** stock for £160,000, making Ghana Airways entirely state-owned. The Boeing order is now cancelled in favor of one for Vickers VC10s.

In June, the Britannias inaugurate the first nonstop Accra–London air service and by July four more Il-18s have been delivered and enter service. Also during July, a two-man government committee is appointed to plan the airline's reformation; their report is delivered to President Nkrumah in October. Meanwhile, due to financial constraints, the Stratoliner order is cancelled in August.

Domestic and regional services operated by fall include routes from Accra to Abidjan, Bathurst, Conakry, Dakar, Freetown, Kumasi, Lagos, Robertsfield and Takoradi. International destinations visited now include Adis Ababa, Beirut, Cairo, Khartoum, London, Rabat, Rome, and Zurich. It is reported in December that the carrier has lost \$800,000 since February.

The fleet is strengthened in 1962 by the arrival of the three Viscount 838s and six Il-18s. Many of the recommendations of the government's two-man commission are implemented, beginning in April. On July 4, weekly DC-3 service commences from Accra to Bamako via Kumasi, Tamale, Ouagadougou, Mopti, and Segou. The new Il-18s are placed on the regional routes, but regularly experience mechanical problems.

The workforce in 1963 is 1,152 and the government-appointed board of directors is increased from 6 to 9. One of the new members is General Manager B. C. L. Odei. A route from Accra to Moscow via Zurich is briefly operated, beginning in March. At the same time, Il-18 services to Asmara is inaugurated.

The company is incorporated on May 7, with Dr. E. Ayeh-Kumi as the first Ghanaian chairman. On June 1, weekly routes are started from Accra to Bamako via Kumasi, Tamale, Ouagadougou, and Mopti; and to Aden via Kano, Khartoum, and Asmara. Weekly all-cargo service is also begun from Accra to Freetown via Abidjan and Robertsfield.

Having proven unsatisfactory, four of the Il-18s are returned to the Soviet Union, beginning in September. To operate the nonstop Ghana–UK service for the next two years, a Convair CV-990A Coronado is wet-leased in October from **Swissair, A.G.** The same month, Ghana Airways joins the International Air Transport Association (IATA). Accra to London Britannica service is upgraded in December when one of the Bristols is replaced with the Swiss Coronado.

During 1964, bilateral air agreements are signed with 14 other African nations. Airline employment grows to 1,305, including 1,191 Ghanaians. R. R. Amponsah becomes the new chairman.

During the spring, a new pool agreement is signed with **Nigeria Airways, Ltd.** Under its terms, Ghana Airways and its new partner are able to launch new weekly frequencies from Accra to Kano; to Addis Ababa via Kano and Khartoum; and to Beirut via Cairo. The arrangement also provides one other rather unique feature. **Nigeria Airways, Ltd.** F.27s operate cabotage flights on Ghana's internal routes, while GAC Viscount 838s fly from Accra to Lagos for the benefit of both operators. The

first new VC-10 is received on December 18. Enplanements for the year total 106,123.

The employee population in 1965 is 1,290. The Coronado is returned to Switzerland on February 10, and the Britannias are withdrawn two days later. The fastest direct Accra–London service is established on February 15 with the newly received Vickers VC10, with some London frequencies including stops at Rome and Zurich.

A second VC10 is delivered in June and is placed in service, on the Beirut route. During the summer, Amsterdam becomes a stop on the London route, which is now flown thrice weekly. In addition to the two Britannias, four Ilyushins and one Viscount 838 are retired, leaving the fleet with the two Vickers jetliners, two Viscount 838s, two Il-18s, and four DC-3s. Orders for a third VC10 are cancelled. Passenger boardings increase 17% to 124,300 and air freight traffic climbs by 54%.

President Nkrumah is overthrown in February 1966 and, because of Egypt's support for him, the airline is required to suspend service to Cairo. The route from Accra to Bamako is also shut down. When the new leadership is secure, the national airline is reorganized. Chairman Amponsah and General Manager Odei are both ousted.

George Boughton becomes the new general manager in April 1967. Also during the month, VC10 proving flights to Kinshasa are started and one of the VC10s is leased to **Middle East Airlines (2), S.A.L. (MEA)**. All of the remaining Soviet-made aircraft are returned.

While impounded at Port Harcourt, a DC-3 is destroyed in an air raid on August 3. In partnership with **Air Mali, S.A.**, service is restarted from Accra to Bamako, using Mali equipment. The government halts its subsidy during the year and traffic throughout the following years will rise only slightly.

Domestic and international routes and frequencies are improved during the period from 1968 to 1971, but not significantly altered, except regionally. Domestic and international routes and frequencies are improved during the period from 1968 to 1971, but not significantly altered, except regionally.

Two political events of interest occur during these years. On April 2, Ghana Airways hosts a meeting at Accra of 10 African carriers seeking more efficient cooperation and economic integration of the participants. The conference culminates in the founding of the African Airlines Association or AFRAA. The Ghanaian government publishes a new law on June 26, 1970 stipulating the conduct of affairs by the airline. The law takes effect on August 1.

The fleet is modified somewhat in that the Viscounts, Il-18s, and DC-3s are retired in favor of two Hawker Siddeley HS 748s and two Fokker F.28s (one each Dash-2000 and Dash-4000), with the VC10s continuing flights to London.

There are three hull losses and a death during these years. The VC10 leased to MEA is destroyed during the Israeli raid on Beirut on December 28, 1968. A DC-3 with 3 crew and 30 passengers suffers engine problems and crash-lands near Takoradi on April 24, 1969 (1 dead). An HS 748-2A, on a training flight from Accra on January 22, 1971, loses power and crashes at low altitude; there are no fatalities.

Flights continue apace in 1972–1974, with little information available on activities during these years. Orders are placed for Douglas DC-9-50s. The first DC-9-51, leased from **Hawaiian Airlines (HAL)**, enters service in 1975 and enplanements total 142,100.

Airline employment in 1976 is 1,730. Services are inaugurated to Lagos and on an Accra–Lome–Cotonou route; F.28 frequencies on Africa's west coast are increased and a new flight kitchen is opened with a capacity of providing 5,000 daily meals. Freight traffic dips 1.2%, but passenger boardings soar 18.7% to 175,379.

The law governing the affairs of the airline is altered on January 16, 1977. The company's CEO now has the authority to engage consultants and advisors and to appoint an internal auditor. A second chartered **Hawaiian Airlines (HAL)** DC-9-51 enters service as orders are placed for a DC-10-30 and two DC-9-51s. Enplanements for the year climb to 309,000.

The employee population at Chairman J. Bentum-Williams' carrier in 1978 is 1,895. The company's first owned DC-9-51 enters service in

July. As in 1976, cargo falls sharply, down 19.2%; enplanements dip 1% to 206,067.

During **1979–1981**, a DC-10-30 is leased from **KLM (Royal Dutch Airlines, N.V.)** while the carrier awaits the unit ordered in 1976. The last HS 748 is retired during the former year followed by the VC10 in December 1980. From this point on, the company employs no expatriate pilots.

The F.28-4000 with two crew aboard is destroyed on March 11 of the latter year as the result of a bad landing while on a training flight from Accra; there are no fatalities. Fuel prices and the world economic situation have a negative impact on both cargo and passenger traffic.

A Fokker F.28-4000 is delivered during **1982**, replacing one destroyed in March 1981. Enplanements for the year are 165,600. The workforce is increased by 2.7% in **1983** to 1,900. The long-awaited Douglas wide-body is delivered on February 24 and the **KLM (Royal Dutch Airlines, N.V.)** unit is returned. The aircraft, painted in the red, yellow, and green colors of the national flag, is employed, beginning on March 1, to continue the London and Rome services previously provided by the chartered aircraft.

Cargo rises 5.7% to 6.56 million FTKs and passenger boardings grow 8% to 180,458.

In **1984**, new routes are proposed for or opened to Amsterdam, Frankfurt, Jeddah, Douala, Naimey, Libreville, Ouagadougou, and the West Indies. A total of 260,741 passengers are carried on the year.

In April **1985**, the carrier contracts with the Ghana Air Force to provide charter service, while in July the airline begins the operation of DC-10-30 charters for the rotation of UN forces serving in Lebanon. Scheduled passenger boardings decline 3.06% to 253,000, but freight increases a strong 24.71%. Profits are earned: \$1.6 million (operating) and \$700,000 (net).

On January 4, **1986**, a contract with **Caribbean Airways, Ltd.** is renewed, allowing the African carrier's DC-10-30 to continue flying the twice-weekly roundtrips between Europe and Barbados begun the previous year. An operating profit of \$2.8 million is generated, along with a net gain of \$1.3 million.

The government receives its first dividend—\$120,000. Operations continue apace in **1987**, with Ben Azariah named managing director in February of the former year. In March, the company begins discussions with McDonnell Douglas concerning the possibility of a trade-in of its DC-9-51 for an MD-82. The nation's economic problems delay finalization of a contract.

Following the conclusion of a new air agreement between the Ghanaian and Gambian governments, the carrier is able to extend its West African coastal service and link Accra with Dakar and Banjul. During the year, the company is readmitted to the IATA Clearinghouse and pays off \$3.2 million in outstanding debts to other airlines.

The company accepts its first B-767-300 in July **1988**; the airliner's delivery flight sets a type record of 14 hrs. 32 min. nonstop over the 8,065 miles from Seattle. A second B-767-300 arrives in November as the company completes settlement of its \$10.9 million in interline billings from the previous year.

In **1989**, enplanements total 231,052. In **1990**, the 1,461-employee state carrier operates 2 B-767-300s and 1 each DC-10-30, DC-9-51, F.28-2000, and F.28-4000. Passenger boardings plunge 17.8% to 196,140, but freight ascends 20.2% to 17.19 million FTKs.

In January and February **1991**, the airline contracts with the Ghanaian Air Force to provide F.27 replacement services between Kumasi and Tamale. A commercial agreement is signed with **Middle East Airlines (2), S.A.L.** in March.

Operations continue apace in **1992**. Recession and a continuing drop in traffic forces removal of the Boeings. Enplanements total only 165,162. Still, income exceeds expenses and there are profits: \$3.28 million (operating) and \$44.14 million (net).

Twenty new employees are hired at Chairman Sam Jonah and Managing Director A. G. Sam's airline in **1993**. Destinations now visited from Accra include the regional cities of Abidjan, Banjul, Conakry, Co-

tomou, Dakar, Freetown, Harare, Lagos, and Lome. In Europe, markets include Rome, Dusseldorf, and London.

After months of covert diplomacy between the U.S., Ghana, and Nigeria, FBI agents are on hand on July 15 to arrest notorious hijacker Omar Mohammed Ali Rezaq, when he steps off a GAC flight just landed in Lagos, Nigeria. From Accra, Rezaq is taken to the U.S. to stand trial for the November 1985 **Egyptair, S.A.E.** piracy that resulted in the death of an American woman passenger. Also in July, a cooperative agreement is signed with **Ethiopian Airlines, S.C.**

Passenger boardings for the year decline 6.5% to 153,204, but freight skyrockets 94.4% to 22.53 million FTKs. Revenues slide 38.2% to \$42.89 million and expenses plunge 45.7% to \$35.93 million. Despite the drop in operating income, the decline in costs allows an operating surplus of \$6.96 million. Net gain, however, falls to \$12.34 million.

Airline employment stands at 1,500 in **1994**. Early in the year, the Accra–Harare route is extended to Johannesburg and marketing alliances are signed with **Air Afrique, S.A.** and **American Airlines**.

An MD-11 is leased from **World Airways** (complete with U.S. pilots for the first six months) on October 5 for use on a new twice-weekly Accra to New York (JFK) service. Although the company initially plans to inaugurate these flights on October 14, launch is delayed until December. The westbound flight is required by U.S. law to stop at Dakar for a security check. Enplanements for the year total 182,000. Financial figures are not released.

The workforce stands at 1,162 in **1995** and the owned fleet includes 1 each DC-9-51, DC-10-30, F.28-2000, and F.28-4000. Under the Companies Code (1963) of Ghana, Act 179, the carrier becomes a Limited Liability Company, Ghana Airways, Ltd., on June 1. Enplanements reach 185,351.

The workforce is increased by 8.8% in **1996** to 1,274 and another DC-10-30 is acquired. Both of the F.28s are sold in May. Customer bookings accelerate 8.8% to 197,181, and 29.54 million FTKs are also operated, a 22.7% increase.

Service continues apace in **1997**. Coming in from Accra on April 12, Flight 560, a DC-9-51 with 7 crew and 97 passengers, is unable in heavy rainfall to complete its first landing attempt at Abidjan. A second ILS attempt is completed, but the wet runway forces the aircraft to veer to the left off the side, where the undercarriage collapses. Although the plane must be written off, there are no fatalities. A homepage is opened on the World Wide Web in late summer.

Service is restarted between Accra and Monrovia on December 19. Due to the loss of Flight 560, which leaves the airline without certain capacity, enplanements for the year fall to 193,000.

Markets visited at the beginning of **1998** include Abidjan, Banjul, Conakry, Cotonou, Dakar, Dusseldorf, Freetown, Harare, Johannesburg, Kussi, Lagos, Lome, London, Monrovia, New York (JFK), and Rome. The regional network is substantially increased during the first four months of the year. In February, service is started to Ouagadougou and Bamako, while suspended service to Freetown is resumed in April.

Passenger boardings accelerate to 271,000. The increase is attributed to strategies being developed to turn Accra into a regional hub.

A code-sharing agreement is signed with **South African Airways (Pty.), Ltd.** on January 27, **1999**, for a joint midweek service between Accra and Johannesburg. The two flag carriers will pool their services to make more efficient use of capacity and market reach. Beginning today, the two will share the Wednesday return flight operated by SAA, the cabins of which will be staffed by Ghana flight attendants. The carrier announces on February 16 that it will begin service to Dubai and Toronto by the end of June.

General Manager E. L. Quartey of GAC and his counterpart, Bisrat Nigatu, of **Nigeria Airlines, S.C.**, sign a cooperative agreement in Addis Ababa on March 18. Under its terms, the two will implement schedule harmonization and joint utilization of aircraft for the development and better utilization of new routes and markets. Ethiopian will also provide its maintenance and training facilities to GAC. Under the arrangement signed in January, **South African Airways (Pty.), Ltd.** withdraws

service from Dakar on March 29. South African customers are offered more frequent service to Dakar via Accra in cooperation with GAC.

During late spring, the nation's air force operates one of its F.27-600s on behalf of the airline. The Fokker wears Ghana Airways titles under its wings and a roundel just behind the after hatch.

The company is the official carrier for the African/African American summit held in Accra during the summer.

New flights are initiated to Ouagadougou and Bamako in December, while suspended services to Monrovia and Freetown are simultaneously resumed.

On March 28, 2000, the company begins to share the Accra to Addis Ababa route thrice weekly with **Ethiopian Airlines, S.C.** Ghana handles marketing while Ethiopian provides the lift.

Early in the second quarter, Ghana Airways and the Ghana Air Force create a joint-venture service, "Ghana Airlink," to provide regional services with a pair of Fokker F.27-600s supplied by the military. The military has been flying one of the Fokkers on behalf of the carrier since the previous spring.

While landing at Accra in pouring rain on June 5 after a service from Tamale, Flight 200, one of the Airlink Fokkers with 5 crew and 52 passengers, touches down hard, causing the fuselage to break in half. Seven customers are killed.

New twice-weekly DC-10-30 roundtrips commence on July 9 from Accra to Baltimore/Washington, D.C. via Banjul and New York (JFK).

On July 28, the lease of the **Skyjet, S.A.** DC-10-30 is extended through February. It is employed to initiate a weekly return service from New York (JFK) to Monrovia, Liberia, on August 10 on behalf of Lone Star Airlines.

Orders are placed on October 6 for four Embraer ERJ-145 Amazons. On November 5, arrangements are completed for the charter of a DC-10-30 to **Nigeria Airways, Ltd.** from late December into April. The timeframe will cover Christian and Muslim pilgrimages to the Mideast for Christmas and Hadj observances.

The DC-9-51 scheduled to make the inaugural flight from Accra to Dubai on November 21 makes an unfortunate—and unexplained—wheels-up landing at Conakry, Guinea, on November 13 after its main landing gear fails to deploy. The new Mideast route is, however, started on time, using a DC-10-30.

GIBRALTAR AIRWAYS, LTD. (1): Gibraltar (1931–1932). GA-1 is established by Sir George Gaggero, chairman of the shipping company M. H. Bland & Co., Ltd., on Gibraltar during the summer of 1931 to undertake an experimental air service to Tangier. Once the six-seat Saunders-Roe Windhover amphibian *General Godley* is prepared, pilot Edgar Percival makes the first return flight on September 23. A total of 117 of these services are executed before the operation is halted on January 3, 1932.

GIBRALTAR AIRWAYS, LTD. (2): Gibraltar (1947–1981). A second GA (sometimes called "Gibair") is founded on May 15, 1947 with the same purpose as the first, to provide a scheduled service across the Straits of Gibraltar to Tangier. Initial capitalization is £200,000 and the shareholders are **British European Airways Corporation (BEA)** (51%) and the local shipping concern M. H. Bland and Co., Ltd. (49%), still controlled by Sir George Gaggero. When a de Havilland DH 89A Dragon Rapide inaugurates services on August 30, BEA's link around the Western Mediterranean is completed.

On June 2, 1950, the company's DH 89As undertake an experimental scheduled service from Gibraltar to Malaga and Seville and to the Spanish Moroccan city of Tetuan. Insufficient traffic causes the routes to be closed before year's end.

In 1953, **British European Airways Corporation (BEA)** is contracted to take over the Straits route with Douglas DC-3s. The first of these, the *Bert Hinkler*, initiates the improved service on October 5. Except for frequencies, there are no changes in the BEA-Gibraltar Airways, Ltd. operation until 1958. In that year, **Royal Air Maroc** acquires

a share of the Gibraltar traffic in an agreement signed with **British European Airways Corporation (BEA)** and Gibraltar Airways, Ltd.

In the spring of 1959 the British state regional carrier introduces Vickers Viscount 807 replacements for the DC-3. The first to enter service is the *Sir Edward Parry* on April 2.

On February 2, 1960, M. H. Bland & Co., Ltd. becomes majority owner with 51% interest; **British European Airways Corporation (BEA)**'s shareholding is reduced to 49%. The Viscount service continues throughout the 1960s.

The owned fleet in 1965 consists of 1 DC-3 and a total of 33,611 passengers are flown on the year.

In 1972, upon the formation of **British Airways, Ltd. (2)**, the BEA shareholding is transferred to the new state airline's subsidiary British Airways Associated Companies, Ltd. and the managerial contract is continued.

Operations continue apace in 1973 and 1974; enplanements for the latter year total 41,748. Employing de Havilland Trident 2s leased from **British Airways, Ltd. (2)**, thrice-weekly scheduled Gibraltar to London flights commence on July 1, 1975. Chairman Gaggero reports that, largely because of this one new service, passenger boardings accelerate 34% to 63,255.

Operations continue in 1976–1977.

In 1978, Sir George remains as honorary president; however, operational authority is vested in his son, Chairman/Managing Director Joseph J. Gaggero. At this point, airline employment stands at 211 and the fleet comprises just one Viscount 807. Enplanements total 79,393.

Airline employment is increased by 6% in 1979 to 53. In April, the carrier's London base is transferred from Heathrow Airport to Gatwick. A Boeing 737-200 is leased and employed to inaugurate services from Gibraltar to London (LGW). Passenger boardings accelerate 4.4% to 83,047, but cargo is down 19.9%. Enplanements in 1980 total 65,250.

The company's fiftieth birthday is celebrated in 1981. As a result of the British government's decision to change its aviation policy away from one specific airline's sphere of influence, opportunity now arises for direct service to the possession by another U.K. carrier. Consequently, the holding company GB Airways, Ltd. is established in the Channel Islands in November, with Gibraltar Airways, Ltd. as a subsidiary. The carrier's name is quickly changed to **GB Airways, Ltd.**

GIBSON AVIATION: P.O. Box 490, Clarksburg, Maryland 20871, United States; Phone (800) 344-2055; Fax (301) 874-5173; Year Founded 1978. Joseph W. Gibson establishes this operation at Clarksburg, Maryland, in 1978 to operate both as FAA repair station #121-38, but as a provider of passenger and cargo charter services. Twenty-two years later, the company employs 12 workers and operates a fleet that includes 2 Beech 58 Barons, 1 Piper PA-31-350 Navajo Chieftain, and 1 Mitsubishi Mu-2B-35.

GIFFORD AVIATION: United States (1977–1985). Jack Gifford founds a commuter airline named for himself at Bethel, Alaska, in 1977. After acquiring a Shorts SC-7 Skyvan and a de Havilland Canada DHC-6-100, he launches revenue passenger and cargo flights to local and regional village and bush destinations.

Whiteout conditions cause an SC-7 Skyvan, with two crew, to crash while on a go-around at Toksook Bay on December 31; although the aircraft must be written off, there are no fatalities.

Flights continue in 1978 and in 1979 a feeder agreement is signed with **Wien Air Alaska**. An ATL Carvair (a heavily modified Douglas DC-4 cargo aircraft) is purchased from **British Air Ferries, Ltd.** in 1982; the plane is not a success in Alaska and is withdrawn in 1983.

Having lost a major revenue source with the failure of Wien in 1984, Gifford is not able to continue much longer and he closes his company's doors in 1985.

GILL AIRWAYS (GILL AVIATION, LTD.): New Aviation House, Newcastle International Airport, Newcastle-upon-Tyne, England,

NE13 8BT, United Kingdom; Phone 44 (191) 214-6600; Fax 44 (191) 214-6699; <http://www.gill-airways.com>; Code 9C; Year Founded 1969. Gill is organized at Newcastle in 1969 by former RAF pilot Michael Gill to provide general aviation and air taxi services. Gill, in financial difficulty, becomes a flying instructor in Scotland in 1983 after selling out to the Tyneside-based industrial concern owned by James Jobling-Purser. Employing a pair of Shorts 330s leased from Fairflight Leasing/M.B. Holdings at Biggin Hill, Gill commences ad hoc charter and night mail services.

Former **Air Ecosse, Ltd.** executive Colin Pollard is appointed managing director in 1986. As the relationship with Fairflight is intensified in 1987, plans are made to offer scheduled services, beginning in 1988, to other British cities with a fleet comprising 3 Shorts 330s and 1 Piper PA-31-310 Navajo.

Managing Director Pollard becomes communications manager in 1989 and Malcolm Hart arrives as his successor following the carrier's purchase by Fairflight Leasing/M. B. Holdings. The new owner's engineering resources are transferred to Newcastle to support Gill's development and scheduled service is introduced from Newcastle to Manchester, Belfast, and Aberdeen.

Meanwhile, a Shorts 330-200 is destroyed on the ground at Glasgow on February 13. Enplanements for the year are 27,000.

Company employment is increased by 22.2% in 1990 to 110 as the fleet is now upgraded. The Navajo is gone, replaced by five additional Shorts 330s. New routes are opened and frequencies on existing services are increased. Consequently, passenger boardings boom upward by 92.6% to 52,000.

A Shorts 360-200 is added in 1991 and, through September, the small regional reports that its customer bookings are up 45.4% to 45,129.

The fleet in 1992 includes 1 owned and 3 leased Shorts 360-200s and 7 owned and 2 chartered Shorts 330s. An order is placed for a pair of Avions de Transport Regional ATR42-300s.

In 1993, Chairman Reginald Mulligan and Managing Director Hart oversee an employee population of 160. Routes flown include Aberdeen to Newcastle, Wick, and Teesside; Teesside to Belfast and London (LGW); and Newcastle to Belfast, Manchester, London (LGW), Jersey, and Guernsey. Enplanements total 115,382 through November.

Airline employment is increased to 170 in 1994. The first ATR42-300 is delivered in January and enters service to Belfast and the Channel Islands; the second is received late in April. Although most of the fleet is stationed at Newcastle, four Shorts 330 freighters are stationed elsewhere, one each at Wick, Aberdeen, Belfast, and Exeter. These support a long-term BP Oil contract to provide service to Scatsta, near the Sullom Voe oil terminal in the Shetland Islands.

In the fall, a £150,000 hangar extension, offices, and storage complex is completed at Newcastle. Enplanements through September total 103,809.

Fifty employees are laid off in 1995 as a management buy-in team purchases the carrier. The purchase price is £7 million, some of which will be employed on expansion. Still, the company suffers a huge 11.7% drop in enplanements. Through September, bookings total 91,628.

There is something of a recovery in 1996. Airline employment inches up 1.3% to 301 and the fleet now includes 2 each ATR42-320s, ATR72-202s, Shorts 330s, and Shorts 360-300s, 1 of which is leased to **Labrador Airways, Ltd.** Five Shorts 360-200s are also flown.

In August, the company enters into a code-sharing agreement with **Eurowings Luftverkehrs, A.G.** and, on September 1, launches twice-daily ATR42-320 service from London (STN) to Hamburg and from Newcastle to Dusseldorf. It also inaugurates a service from Belfast to Dusseldorf, via Newcastle, on September 15. For the full year, customer bookings rise 1.6% to 381,000. Operating revenues total \$44.8 million.

In 1997, in response to buoyant demand, Gill increases its weekday return flights from twice daily to thrice daily. Frequencies from Aberdeen to Southampton via Newcastle are doubled from one to two each day.

Late in October, a franchise agreement is entered into with **Air France**. Under its terms, one of the regional's ATR42-320s, painted in

modified Air France livery, inaugurates twice-daily "Air France Express" roundtrips from Newcastle to Paris (CDG). Thrice-daily Shorts 360-300 roundtrips are inaugurated on November 24 from Newcastle to Teesside.

Passenger boardings drop to 222,049 and 2.33 million freight FTKs are operated.

Flights continue in 1998. During the fall, the franchise agreement with **Air France** is expanded. Under terms of the revision, the carrier leases three former **Midway Airlines (2)** Fokker 100s from Cabot Aviation for delivery in February. Once the first of the new jetliners are in hand, they are employed in March to upgrade the twice-daily "Air France Express" service from Newcastle to Paris (CDG) in terms of capacity and by adding a third frequency. Simultaneously, twice-daily roundtrips will be introduced from Paris (CDG) to Helsinki and Goteborg.

Customer bookings during the 12 months jump 23.4% to 274,000. Airline employment is boosted 56.3% to 500.

Gill celebrates its thirtieth anniversary in 1999. On March 8, the number of flights from Newcastle and Teesside to Belfast is increased to nine roundtrips every day. Two of the new Fokker 100s enter service as scheduled, with the third jetliner delivered in April.

In May, weekend ATR42-320 "Air France Express" roundtrips are initiated from Teesside via Humberside to Paris (CDG).

The carrier takes over the **Euroscot Express, Ltd.** routes from Bournemouth to Edinburgh and Glasgow in mid-July. Euroscot itself goes into receivership. At the end of August, 31, the carrier's majority stakeholder, appoints Gordon Miller chairman, demoting William Price into the nonexecutive vice chairmanship.

It is announced on October 5 that Gill will soon replace **KLMuk, Ltd.** on the routes it had operated from Newcastle to London (STN) and from Norwich to Aberdeen. The Dutch major's U.K. subsidiary is preparing to launch its own subsidiary, **Buzz**, and so will now concentrate on only the provision of feeder flights to Amsterdam.

It is reported on October 17 that, following the sudden departure of 10-year veteran Managing Director Malcolm Hart, Chairman Miller has appointed Colin Pollard, the company's commercial director, and Joseph Forster, the flight operations director, as joint managing directors. A search for a permanent managing director begins.

When Gill picks up the former **KLMuk, Ltd.** services on October 29, they are flown in its own colors and not as part of its "Air France Express" contract.

Also on October 29, the number of "Air France Express" roundtrips offered every day between Newcastle and Paris (CDG) is increased from two to three and are operated with a Fokker 100. As the year ends, the company continues to offer nightly Royal Mail postal service flights to various airports around the country.

Passenger boardings for the year surge 20.8% to 354,000.

Airline employment at the beginning of 2000 stands at 465, a 7% decline over the previous 12 months.

Former **Brymon Airways, Ltd.**, **Kenya Airways, Ltd.**, and **British Regional Airways, Ltd.** executive Malcom Naylor becomes managing director on January 23. In fiscal difficulty, the company enters administration (the equivalent of U.S. Chapter XI bankruptcy) on February 24. Managing Director Naylor turns over day-to-day administration to the Arthur Andersen accounting firm.

The "Air France Express" service from Teesside to Paris (CDG) ends on March 25, as does the nonfranchise service from Bournemouth to Glasgow and Edinburgh. Arrangements have been made for ticket holders on flights to Scotland to make their flights aboard **British Regional Airlines, Ltd.** services from Southampton.

During September, the fleet is reduced to 12 aircraft: 6 ATRs and 3 each Fokker 100s and Shorts 360-300s. The overnight mail contract flights are suspended and the Teesside to Paris (CDG) route is closed.

On October 20, Managing Director Naylor announces the forthcoming retirement of the carrier's Shorts 360s, which will be replaced with Avions de Transport Aerien ATR72-520s.

The **Maersk Air U.K., Ltd.** "British Airways Express" CRJ service from Newcastle to Birmingham is turned over to **British Regional Airlines, Ltd.** on October 30; the new operator downgrades the route from jet to turboprop by replacing the Canadair with a British Aerospace BAe Jetstream 31. The move is protested by Gill, which had been negotiating with Maersk Air U.K. to take it over for itself.

Employing a new ATR72-520, a fourth daily roundtrip is added on November 1 between Newcastle and London (STN).

Blaming stiff competition from the **British Airways, Ltd. (2)** low-cost subsidiary GO, Gill, on November 17, withdraws its thrice-daily return service from Aberdeen to Teesside. Shorts 360 services end on November 19 as the last three of that type in the carrier's fleet are retired.

The ATR42-320 "Air France Express" route between Humberstone and Paris (CDG) is closed on December 15 in order that new flights from Newcastle to Dublin and other points might begin in January.

In February, the carrier's creditors, pleased with its progress, will agree to write off £18 million in debt accumulated before Gill entered administration.

H. GILLAM AIRLINES. *See* **NORTHERN CONSOLIDATED AIRLINES**

GILPIN AIR LINE: United States (1930–1934). Gilpin is established at Los Angeles in the late fall of 1930 to offer scheduled passenger and express flights to San Diego and Agua Caliente, Mexico, over a route previously employed by **Pickwick Airways**. Employing a Lockheed Model 5 Vega, the carrier inaugurates flights on December 8.

The company is later renamed **G & G Air Lines Company** and continues in operation until February 1934 when the U.S. Post Office cancels all mail contracts.

GINGER COOTE AIRWAYS, LTD.: Canada (1938–1942). Ginger Coote establishes an air service named for himself at Vancouver, British Columbia, in 1938. Services are inaugurated linking the company's base with Ware via Fort St. John, Edmonton, and Prince George.

This small-scale operation continues for the next four years, often in close cooperation first with **United Air Transport, Ltd.** and then with **Yukon Southern Airways, Ltd.** On January 30, 1942, Coote becomes 1 of 10 companies merged to form **Canadian Pacific Air Lines, Ltd.**

GISBORNE AIR TRANSPORT, LTD.: New Zealand (1931–1932). GAT is founded at the North Island city of Gisborne in the winter of 1931 to provide service along the coast southward to Hastings. A Desoutter piloted by J. W. H. Lett initiates service in March. A total of 590 flights are made before the company goes out of business in December 1932.

GIYANI AIRWAYS (PTY), LTD. *See* **LETABA AIRWAYS (PTY), LTD.**

GLACIER BAY AIRWAYS: United States (1966–1991). Robert Gildersleeve founds this small Part 135 air taxi operation at Gustavus on Alaska's Glacier Bay in early 1966 to perform an exclusive National Park Service contract that provides connections to offshore cruise ships from Glacier Bay Lodge, the community's main attraction. Revenue flights commence in April with float-equipped Cessna 206s and de Havilland Canada DHC-3 Otters.

Arthur D. Hayes purchases the operation in 1970, reforming it to offer regularly scheduled and charter passenger and cargo flights to the southeastern part of the state. Destinations visited with amphibious Cessna 206s and DHC-3s include Bartlett Cove, Elfin Cove, Excursion Inlet, Haines, Hoonah, Juneau, Pelican, and Skagway.

By 1989, the fleet includes 4 Cessnas and 1 DHC-3 Otter. Part owner Linda Hayes reports that new business to fishing lodges atop the Glacier Bay Lodge contract makes the year's first nine months very successful.

As a result of a fatal 1987 crash by an aircraft from **Ryan Air Service**, inspectors from the Alaska Region of the FAA have begun an intensive safety audit earlier in the year.

On October 13, the FAA issues an emergency license revocation against Glacier Bay, yanking the company's operating certificate and confiscating the Otter in the dispute. It is alleged that the little carrier, which has never had a serious accident, has engaged in false or poor record keeping and employing inappropriate flight crews. A temporary stay of execution regarding the revocation order is overturned by the U.S. 9th Court of Appeals on October 20. The entire adult population of Gustavus (225 residents in winter) signs a petition, carries picket signs in airport protests, and writes to Congress. Alaska Senator Ted Stevens publicly questions the fairness of FAA procedures and meets with the FAA's administrator, James Busey, on December 7.

The company is able to win recertification in 1990 and operations continue for a brief time into 1991.

GLOBAL AIR: Bulgaria (1992–1995). Global is founded at Sofia in early 1992 to operate ad hoc cargo charters to a variety of European destinations. Operations commence in March with a single Boeing 707-330C first flown by **Deutsche Lufthansa, A.G.**

Operations continue in 1993 and a second Stratoliner freighter enters service in 1994. Unable to maintain economic viability, the carrier shuts its doors in 1995.

GLOBAL AVIATION: Seletar Airport, 1075 West Camp Road, Singapore, 797800, Singapore; Phone 65 481 9522; Fax 65 481 9997; Year Founded 1996. GA is established at Seletar Airport in 1996 to provide executive and small group passenger charters worldwide. Flights are conducted with one Canadair 601 Challenger and Learjet 36A. A Learjet 35A Century III is also stationed at Baiyun International Airport at Guangzhou to provide service to those needing charters in and out of the growing Chinese economic center.

GLOBAL EXECUTIVE CHARTER: 15707 Fairchild Drive, Hangar 4, St. Petersburg–Clearwater International Airport, Clearwater, Florida 34622, United States; Phone (813) 536-4567; Fax (813) 536-2729; <http://www.nettally.com/med/air.htm>; Year Founded 1995. GEC is set up at Clearwater, Florida, in 1995 to offer domestic and international passenger air charters. Revenue flights begin and continue with a fleet that includes 1 each Learjet 25D, Learjet 35A, Learjet 36, Learjet 36A, and a Beech King Air 90.

GLOBAL EXCELLENCE ALLIANCE. *See* **DELTA AIR LINES; DEUTSCHE LUFTHANSA, A.G.; SINGAPORE AIRLINES, LTD. (SIA); SWISSAIR, A.G.**

GLOBAL INTERNATIONAL AIRWAYS: United States (1978–1985). A major charter operator, GIA is established by Farhad Azima at Kansas City in late 1978 to undertake jet cargo charter and contract flights in the U.S. and abroad. A fleet of four leased Boeing 707-320Cs, formerly operated by **American Airlines**, **Pan American World Airways (1)**, and **Trans World Airlines (TWA)** is utilized.

Global International makes headlines in 1979 when a company aircraft, reported to be flying relief supplies from Europe to Costa Rica, is found by inspectors in Tunis to be, in fact, loaded with weapons. The flight crew, which is unaware of the contents of their cargo, refuses to take off until the arms are removed.

Passenger charters, inclusive tour, and other services are started on February 15, 1981, to U.S., Middle Eastern, and European destinations.

Flights continue in 1982, as two former **American Airlines** B-727-23s enter service. A total of 282,000 passengers are flown on the year, but the start-up costs of the new passenger services exceed revenues, leaving a net loss of \$57,000.

The workforce in 1983 stands at 150 and the year begins with a fleet comprising 2 B-727-100s and 19 B-707-320Cs. The charter operator now flies to 140 destinations from over 120 departure points.

On approach to Baltimore on April 2, a B-707-323C with 191 passengers encounters severe air turbulence in the vicinity of thunderstorms. One flight attendant is thrown upward striking the ceiling and sustaining a severe lower back injury.

On May 25, the carrier joins fellow charter operator **American Trans Air** in suing to prevent the Port Authority of New York and New Jersey from enforcing new noise regulations that will ground the airlines' flights from the New York area airports.

Repainted in the airline's red and white livery with GIA on its tail, a B-747-133 is leased from **Air Canada, Ltd.** in June and is assigned to the carrier's transatlantic summer charter routes. Recession and expansion will, however, now cut deeply into the airline's success.

In September, Azima forms the holding company Capitol Holding Company and purchases controlling interest in **Capitol Air**. GIA's losses reach \$5.87 million and on October 20 officials file for Chapter XI bankruptcy and return the Canadian Jumbojet. Flights continue on a reduced basis; however, on December 24 the FAA intensifies its campaign to prevent airline accidents and orders an emergency suspension of company flights, citing substantial safety questions and maintenance violations.

For the year, the carrier has flown 598,004 passengers, a 115.4% boost, and operated 40.5 million FTKs, up 16.6%.

The carrier attempts to reemerge from bankruptcy on February 6, 1984. CEO Azima, who in the meantime has set up an aircraft leasing firm, acquires a pair of 20-year-old Douglas DC-8-61s, which are chartered to **Nationair Canada, Ltd. (NCL)**.

A B-727-23 and a hush-kitted B-707-321C are prepared for the resumption of charter services by Global International on a new summer schedule. Although a number of flights are completed, the company cannot effectively reorganize. In addition, Azima's company again becomes the subject of potential scandal when the *Kansas City Star* in June runs a series of articles pointing out that the company's aircraft have often engaged in gun-running on services reported to be delivering food or medical supplies.

When the original shareholders in NCL withdraw early in 1985, the Montreal-based carrier's president/CEO Obadia is forced to obtain \$1 million in financing to keep his charter operation alive. Reports in the April 1, 1993 issue of *Frank Magazine* claim that the necessary funds come from Farhad Azima.

On November 30, 1985, GIA's assets are finally and officially liquidated. Still, in November 1986, *The New York Times* will report that in July an ex-Global Stratofreighter transported 23 tons of military equipment to Tehran, thereby securing the release of an American hostage held in Lebanon.

GLOBAL STAR AIRLINES, LTD.: P.O. Box 67216, Nairobi, Kenya; Phone 254 (2) 607 752; Fax 254 (2) 822 050; Year Founded 1996. GSA is set up at Nairobi in late 1996 by George Mumbo Joel and Capt. R. F. Thuo to offer regional all-cargo services. Revenue flights begin in early 1997 with a fleet comprising 1 Boeing 727-100F and 2 Douglas DC-3s.

Flights are sporadic in the period thereafter; although the airline is understood to continue operations, exact information is not available.

GLOBE FREIGHT AIRLINE: United States (1945-1948). Globe is established as an all-cargo line at Hartford in late 1945, joining U.S. Airlines as the first to seek official certification from the CAB. Operations are undertaken between Boston and New Orleans using a fleet of war surplus cargo planes, primarily Curtiss C-46 Commandos.

Flights continue for three years through the rate war with the scheduled carriers and recession, but finances cause Globe to cease services in 1948.

GMG AIRLINES, LTD.: ABC House (9th Floor), 8 Kemal Atatürk Ave., Banai, Bangladesh; Phone 88 (2) 882 5848-9; Fax 88 (2) 882 6115; <http://www.gmggroup.com>; Code Z5; Year Founded 1997. GMG is set up at Banai in July 1997 as the airline division of the GMG Group, an industrial conglomerate involved in textile manufacture, distribution of razor blades, the re-rolling of steel. Abdus Sattar is named chairman/managing director.

Corporate leadership, which invests \$24 million in the private carrier, believes that significant improvement is required in the nation's domestic airline services and to that end, promises to launch regional and local flights by the end of the year. It is anticipated that the initial fleet will comprise second-hand SAAB 340Bs and Aero International (Regional) ATR72-200s.

Scheduled service is launched in April 1998 employing a fleet of three leased de Havilland Canada DHC-8s. Emphasis is on the provision of first-class service, primarily for business travelers. Customers are encouraged to join the airline's Golden Deer Club, the deer being the company mascot.

A marketing and interline agreement is signed with **British Airways, Ltd. (2)** in May, which provides for harmonized services in the areas of reservations and connections. Seats in the de Havillands are trimmed in plush leather and offer a generous 31-inch pitch. Destinations visited by July include Jessore, Sylhet, Rajshahi, Saidpur, and Chittagong.

Response to the new carrier is spectacular. Enplanements reach 120,000 or 25% of Bangladesh's domestic passengers.

Reflecting on the success of his carrier, Chairman/Managing Director Sattar tells Reuters, Ltd. correspondent Mustak Hossain on April 13, 1999 that he expects to expand again within six months. If the government grants a license, GMG will be ready to fly to India, Nepal, Bhutan, and Myanmar.

Cox's Bazaar is added to the route network later in the year.

A total of 280 workers are employed at the beginning of 2000 and the fleet includes 2 DHC-8-100s. Requested earlier in the year, the company's first DHC-8-300 is delivered on December 22.

GOA WAY, LTD.: Aban House, 23 Rope Walke Lane, Off K Dubash Mang., Bombay, 400000, India; Phone 91 (22) 233 970; Fax 92 (22) 287 4717; Year Founded 1996. This holiday airline is established at Bombay in 1996 to provide domestic passenger charters. Revenue flights begin with 2 British Aerospace BAe (HS) 748-B2s.

GOL TRANSPORTES AEREOS, S.A. See **RIO-SUL (EMPRESA RIO-SUL SERVICOS AEREOS REGIONALS, S.A.)**

GOLD COAST AIR: United States (1981-1982). GCA is set up at Hawthorne, California, in late 1981 to provide scheduled passenger services to Bullhead City, Arizona. Cessna lightplanes are employed, but services cannot be maintained beyond 1982.

GOLD COAST AIR TAXI. See **GOLD COAST AIRLINES**

GOLD COAST AIRLINES: United States (1966-1968). GCA is founded at West Palm Beach in the summer of 1966 as **Gold Coast Air Taxi** and will operate throughout most of its scheduled service life under that moniker. Employing a Beech 18 and Piper PA-32 Cherokee Six, the company begins flying daily roundtrips on October 20, linking its base with Fort Lauderdale, Miami, and Boca Raton.

Operations continue apace until 1968 when the company changes its name, a move that has no impact on its failure that year.

GOLDEN AIR, A.B. See **GOLDEN AIR FLYG, A.B.**

GOLDEN AIR FLYG, A.B.: Box 900, Lidköping, S-53119, Sweden; Phone 46 (510) 84 850; Fax 46 (510) 84 855; <http://www.goldenair.se>; Code DC; Year Founded 1976. Organized by Eric Thun at Karlstad on June 28, 1976, Managing Director Goran Jansson's small

air taxi **Golden Air Flyg** is outfitted with a fleet comprising 1 Cessna 404, and 2 Cessna 402s. These are employed to inaugurate scheduled service from Karlskoga to Bromma Airport in Stockholm.

During the early **1980s**, a four-nights-per-week return mail service is started Karlstad–Borlänge–Arlanda. Oslo joins the route network and international service is inaugurated to the Norwegian capital with a new Fairchild-Swearingen Metro II in **1982–1983**.

Flights begin to Karlstad in **1984**. A Fairchild Merlin IVC is acquired in **1985–1986**.

On July 1, **1988**, the company is sold to the competing Swedish carrier **Avia Airlines, A.B.** and is allowed to remain dormant for the remainder of the year.

In early **1989**, it is decided by the shipping concern Gotlandsbolaget, A.B., parent of **Avia Airlines, A.B.**, to sell the new air transport subsidiary to the city of Linköping, which wishes it restarted. Ake Sveden is appointed managing director and he assembles a fleet comprising one SAAB 340B and three leased Fairchild-Swearingen Metro IIs.

Scheduled flights are resumed in May from the new base to Karlstad, Skovde, Stockholm, Arlanda, and Copenhagen.

A fourth Metroliner is acquired in **1990** as Lennart Johansson becomes the latest managing director.

In **1991–1992**, the fleet is increased by the addition of a SAAB 340A and three leased SF340Bs, the latter delivered in the fall of the second year.

Airline employment in **1993** stands at 40. The terrible Swedish recession forces the carrier to cease flying all but one route in May and to file for bankruptcy. Operations are suspended in June. Resources are found that allow resumption of service on August 13, the day the carrier is restructured and receives its present name. The workforce is cut in half and the fleet is reduced to one SAAB 340B; flights continue from Stockholm's Bromma Airport to Trollhättan.

Anders Kallsson becomes managing director in early **1994** and plans are made to acquire six more SAABs, one of which will be delivered by year's end.

Flights continue with the six aircraft in **1995–1998**; however, the workforce now totals only 15. Principal destinations include Bergen, Lidköping, Skien, Stockholm (Bromma Airport), and Trollhättan.

Beginning on April 16, **1999**, Golden operates replacement services for **Finnair O/Y** over a route from Kokkola to Helsinki via Seinäjoki.

During the winter season, Golden Air operates three SAAB 340s on behalf of **Finnair O/Y**, serving Helsinki from Pori and Seinäjoki.

At the beginning of April **2000**, the carrier, on behalf of **Finnair O/Y**, launches services to Savonlinna and Varkaus, complementing the already visited destinations of Pori and Seinäjoki.

Two SAAB 340s are chartered from SAAB Aircraft Leasing on October 27, with two more expected before the end of the year.

A total of six weekly roundtrips are offered, as of October 29, on the axis from Helsinki to Mikkeli to Savonlinna. All are flown with weekend reductions.

GOLDEN AIRWAYS: United States (1981–1983). Also known as **Golden West Air Service**, Golden Airways inaugurates scheduled passenger commuter flights in early **1981**. Cessna lightplanes and a Beech 99 link the company's base at Sierra Vista, Arizona, with Tucson and Ft. Huachuca.

Services are maintained into **1983**.

GOLDEN CARRIAGE AIRE: United States (1979–1982). William T. Brooks 3rd forms GCA at Paso Robles, California, in **1979** to offer scheduled passenger and cargo commuter flights between its base and San Francisco. The service replaces one previously provided by **Swifte Aire**. Employing a Piper PA-31-310 Navajo, revenue frequencies commence in June, linking the company's base with King City.

In **1980–1981**, San Luis Obispo, Los Angeles, and Sacramento join the route network and the fleet now comprises 3 Piper PA-31-350 Navajo Chieftains and 1 Navajo.

Cash flow problems caused by recession and the effects of the PATCO air traffic controllers' strike during the summer of the latter year conspire to put the company out of business in November **1982**.

GOLDEN EAGLE AIR TOURS: United States (1984–1995). A division of Golden Eagle Enterprises, GEAT is founded by James E. Brannan at Fresno, California, in **1984** to offer regularly scheduled 75-minute sight-seeing flights over Yosemite National Park. A de Havilland Canada DHC-6-200 Twin Otter is employed to inaugurate revenue services.

A decade later in **1994**, Brannan continues operations, having added charter services as well. The new services are not well received and the company shuts down in **1995**.

GOLDEN EAGLE AIRLINES: United States (1979). Named for the California bird, GEA is set up at Santa Rosa on January 1, **1979**. Cessna 402 services are inaugurated linking the new commuter's base with Redding, Chico, Sacramento, and San Francisco.

After only a quarter, the company is taken over by **Western Commuter Airlines** on April 1.

GOLDEN GATE AIRLINES: United States (1980–1981). Successor to Idaho-based **Gem Star Airlines** and **Air Pac** of Oakland, California, the large regional GGA is organized by Justin Colin at Monterey on January 1, **1980** to provide commuter services to some 13 cities in California, Nevada, and Idaho. The initial fleet comprises 6 de Havilland Canada DHC-7-102s, 11 Swearingen Metro IIs, and 4 Convair CV-580s and orders are outstanding for 8 additional Dash 7s and 12 DHC-8s.

An affiliation is also arranged with **Air Oregon** of Portland and **Apollo Airlines** of Goleta, California, and on March 1 **Air Pacific** is purchased and merged. Initial points visited are San Francisco, Modesto, Fresno, San Jose, and Los Angeles. Nearly 396,000 passengers are carried during the start-up year.

In **1981**, a new corporate identity program is initiated, complete with new logo and livery, as new advertising campaigns are started. Retirement of the Convairs begins in April as four additional Dash 7s arrive.

As is the case with **Aeromech Airlines** of West Virginia, the PATCO air traffic controllers' strike and subsequent ATC restrictions are severely damaging; indeed, in this case, it is quickly fatal. Up to the time of the controversial job action, the one-year-old Monterey-based carrier has boarded 442,363 travelers on the year. With the sudden traffic drop caused by the ATC effects of the strike, the company's cash flow situation becomes so critical that it is simply forced to shut its doors on August 21.

GOLDEN GATE AIRWAYS: United States (1960–1961). GGA is set up at San Francisco in the fall of **1960** offer scheduled passenger and cargo services to Lake Tahoe. Beech 18 flights commence in November and continue until the company is grounded in November **1961** by the FAA for maintenance and FAR difficulties.

GOLDEN HORN AVIATION, A.O: Turkey (1990–1995). GHA is established at Istanbul in **1990** to offer charter and contract service cargo flights to regional destinations; M. Truhan Senay is CEO. Revenue operations commence with two leased Boeing 707-324Cs first flown by **Continental Airlines**, but are cut short as a result of Iraq's August invasion of Kuwait and subsequent UN actions.

Operations are suspended for the next three years; however, flights are briefly resumed for the summer schedule in **1994** with a single chartered B-707-324C.

Flights are halted in September, this time for good. The carrier is liquidated in early **1995**.

GOLDEN PACIFIC AIRLINES (1): United States (1969–1973). GPA-1 is set up at San Francisco in early **1969** to provide scheduled passenger and cargo flights. Revenue flights commence on March 3 with a

fleet that grows to include Beech 99s, Convair CV-440s, and Piper PA-31-310 Navajos. Destinations visited include Merced, Modesto, Visalia, Santa Rosa, Sacramento, and Fresno.

Operations continue apace into the new decade and by 1971, GPA-1 is the eighth largest commuter airline in the U.S. Unable to survive the first great oil crisis, the company goes under in 1973.

GOLDEN PACIFIC AIRLINES (2): United States (1981–1988). Maurice Liebman organizes GPA-2 at Kingman, Arizona, in the fall of 1981 to offer Essential Air Services (EAS) scheduled passenger and cargo commuter services linking its base with Phoenix and Prescott. Operations commence in December.

Airline employment in 1982 stands at 27 and the fleet includes 3 Cessna 402s and 2 each Cessna 206s, C-182s, and C-172s. Enplanements total of 5,200 passengers and 70,000 pounds of freight on the year. Revenues total \$820,000 and expenses are \$798,557. Although the operating profit is \$21,453, a net loss of \$55,737 is suffered.

The workforce is increased 29.6% in 1983 to 35. Las Vegas joins the route network and service is initiated to Ft. Huachuca via Sedona. Passenger traffic triples, up 153% to 13,190 passengers flown. Cargo sky-rockets 81.3% to 127,000 pounds. Revenues advance to \$1.6 million and provide profits: \$236,346 (operating) and \$127,922 (net).

The fleet in 1984 includes 4 Cessna 402Bs, 2 Cessna 206s and 1 Cessna 182. Customer bookings increase 60.7% to 22,044 and freight jumps a huge 123.3% to 282,501 pounds.

Passenger boardings climb 13.8% in 1985 to 25,083, but cargo is down by 36.3% to 180,000 pounds.

Operations continue apace in 1986, but the 58-employee small regional suffers a 1.4% dip in enplanements to 24,732.

In 1987, President Liebman adds another C-402. His partnership now sells the carrier to Jerry Holm, who becomes president. Passenger boardings jump 9.3% to 27,031.

A code-sharing arrangement is made with **Havasu Airlines** in 1988. Maintenance difficulties force the carrier to cease operations in December and no traffic or financial figures are provided to the government for the year.

GPA-2, which returns two of its Cessnas to their lessor, reapplies to the DOT in early 1989 for permission to resume EAS operations. Citing lack of communications from the carrier (including provision of 1988 statistics), DOT dismisses the request.

GOLDEN SOUTH AIRLINE: United States (1979–1980). GSA is established at Fort Pierce, Florida, in 1979 to provide scheduled daily roundtrip air taxi flights. Employing a Piper PA-31-310 Navajo, Golden South duly inaugurates revenue frequencies linking the company's base with Orlando and West Palm Beach. Low traffic and high fuel costs force the company out of business in 1980.

GOLDEN STATE AIRLINES (1): United States (1968–1969). GSA-1 is set up at Burbank, California, during the first quarter of 1968 to provide scheduled passenger and cargo services on local routes out of the city. Employing a Beech 18 and a refurbished Lockheed Model 12A, GSA-1 inaugurates its flights on April 8, maintaining them for only a year.

GOLDEN STATE AIRLINES (2): United States (1986). GSA-2 is established at Newport Beach, California, just after New Year's 1986 to offer scheduled commuter flights from Los Angeles (LAX) to Orange County Airport. A single Piper PA-31-350 Navajo Chieftain launches revenue flights on January 15. The little new entrant is purchased by **StatesWest Airlines** of Phoenix in November.

GOLDEN VALLEY AERO: United States (1982). GVA is set up at Bakersfield, California, in the spring of 1982. Employing Cessna 402s and 404s, the company inaugurates scheduled commuter flights to Fresno and San Jose, but cannot maintain them until year's end.

GOLDEN WEST AIR SERVICE. See **GOLDEN AIRWAYS**

GOLDEN WEST AIRLINES (1): United States (1968–1969). GWA-1 is set up at Van Nuys, California, in 1968 to provide scheduled passenger and cargo flights from Los Angeles to Palm Springs, Oxnard, Orange County, and Santa Barbara with a fleet of de Havilland Canada DHC-6-100 Twin Otters.

Revenue flights continue until March 11, 1969, when the company is sold to **Aero Commuter Airlines**, which integrates it by May. The following December, Aero Commuter, under the leadership of CEO John M. Harmon, joins with three other carriers to create **Golden West Airlines (2)**.

GOLDEN WEST AIRLINES (2): United States (1969–1983). GWA-2 is formed at Newport Beach, California, in December 1969 by the merger of four small California commuter operations, themselves all organized in 1967–1968: **Cable Commuter**, **Skymark**, **Golden West Airlines (1)**, and **Aero Commuter Airlines**, the latter originally set up as **Avalon Air Transport** in 1953. The strongest merger partner is new CEO John M. Harmon's **Golden West Airlines (1)** and its name survives as that chosen for the amalgamation.

Operations to such California cities as Lake Tahoe, Oxnard, San Diego, Santa Ana, and others as well as Catalina Island begin with a fleet of de Havilland Canada DHC-6-100 Twin Otters.

For most of the next decade, passenger boardings rise. In 1971, the carrier purchases the assets of **Los Angeles Airways**, the pioneer helicopter carrier that has been operated as an airport shuttle by **United Airlines** and **American Airlines** since 1965. The rotary-wing service is continued with the Sikorsky S-61Ns painted in the Golden West livery of white with gold cheatlines.

In 1973, GWA-2 flies 61,162 regular and 3,357 extra sections while operating 152 Los Angeles flight segments daily. A total of 396,160 passengers are carried on the year, a figure which, however, declines to 364,110 in 1974.

The workforce in 1975 is 205. On January 9, Flight 261, a DHC-6-100 with 2 crew and 10 passengers, collides with a Cessna Aviation Cessna 150 with 2 persons aboard, over Whittier, California; there are no survivors from the crash of either aircraft.

Still the largest continental U.S. commuter airline, GWA-2 inaugurates new services to Palmdale and Trona. The carrier buys into **American Airlines'** SABRE II computerized reservation system and begins to expand joint fares with certified airlines. A Speed Air express package service is started and new three-year contracts are signed with customer service and mechanics personnel.

The 10 de Havilland DHC-6 Twin Otters transport a total of 317,871 passengers, a decline of 14.5% from the previous year. Cargo grows a modest 2.4% as 15,000 FTKs are operated.

The employee population is increased by 12 in 1976 and 2 Shorts 330s are ordered. The company adopts a new look as ground and flight personnel receive new uniforms and the 11 Twin Otters in the fleet are given new external livery and internal refurbishment. Systemwide, terminal facilities are also refurbished. An application is filed by the intrastate with the Golden State's Public Utilities Commission for permission to service Palomar and San Diego.

Customer bookings leap upward by 23.5% to 398,170 while freight traffic grows nearly as much, up 20.2% to 472,439 pounds.

The two Shorts 330s enter service early in 1977 and with them, the carrier's first cabin attendants. Flights begin to San Diego and Palomar. Passenger enplanements total 510,449.

The number of employees is increased by 19.9% in 1978 to 320. A third Shorts 330 joins the fleet and late in the year, service is started to Edwards AFB. Customer bookings increase by 22.7% to 626,248, while freight advances by 31.4% to 503,840 pounds.

President James M. Harmon resigns in January 1979 and is succeeded by Henry R. Voss. The first of three Shorts 330s to be delivered during the year arrives in April. The workforce is now 355. Bookings advance

another 12.1% to 702,258. Freight traffic, however, drops by 12.3% to 442,000 pounds.

At the end of the decade, the fleet comprises 10 de Havilland DHC-6 Twin Otters and 5 Shorts 330s.

The Newport Beach-based company moves into the ranks of the nation's "large regionals" when the CAB creates that classification category in 1980. The workforce this year is 420. GWA-2 orders five DHC-7s, with the first arriving in December. Meanwhile, the company moves into the **Trans World Airlines (TWA)** hangar at Los Angeles (LAX) and construction is started on a \$500,000 microwave landing system at Lake Tahoe.

The effects of deregulation in the always-competitive California market are now initially felt as the carrier suffers a 3.7% passenger traffic decline to 676,019 passengers flown and an operating loss of \$970,000.

The picture worsens in 1981, the year of the PATCO air traffic controllers' strike and subsequent ATC restrictions. At Los Angeles, passenger facilities are established in the new **Trans World Airlines (TWA)** terminal and a new maintenance hangar is occupied.

The company is now the largest commuter airline in the U.S. and its fleet comprises 5 DHC-7-102s, 4 Shorts 330s, and 11 DHC-6s. The first of four additional Dash 7s to be delivered on the year enters service in February, flying the lucrative Lake Tahoe route.

Enplanements drop another 3.7%, to 651,143 and cargo drops by 8.3% to 32,000 FTKs. Although revenues advance 38% to \$28.19 million, costs jump 40.6% to \$20.3 million, resulting in an operating loss of \$7.65 million. Airline employment is still allowed to grow, however, up to 469.

Employees on March 15, 1982 agree to a one-week pay deferral and accept the company's request for an immediate 10% wage cut. GWA-2 transports 689,290 passengers on the year, a 5.9% boost. However its financial base has all but evaporated by December.

During the first two months of 1983, the California-based large regional transports 1.07 million pounds of freight, up 107.6%, but enplanements drop to 100,543. Unable to proceed, the company files for bankruptcy in March. It will be liquidated by August.

GOLDENSUN AVIATION, LTD.: India (1977–1978). The cargo operator Goldensun is set up at Bombay in late fall 1977 to operate local passenger and cargo services. Beech 18 revenue flights commence on December 20, but cease the following year.

GOLDFIELDS AIR SERVICES (PTY), LTD.: Australia (1986–1996). GAS is formed at Kalgoorlie, Western Australia, in 1986. Founder David Horsley becomes managing director, with his wife Jan as chief financial officer. With a fleet initially comprising a Cessna 310 and a Cessna 402, services are inaugurated to Laverton.

The fleet is upgraded in 1989 by the addition of another Cessna 310, another Cessna 402, and two Cessna 210s. Leonora and Leinster become destinations in 1990 and a third Cessna 210 is obtained in 1992.

In 1993–1996, the small regional employs 15, but the concern closes down during the latter year.

GOLDWING AIRLINES, S.p.A.: Italy (2000–2001). Goldwing is established at Palermo in July 2000 to offer scheduled domestic passenger flights between Sicily and the Italian mainland. Plans are made to initiate services at the end of October, employing a British Aerospace BAe 146-100 leased from **Air Botswana Corporation**.

In order to avoid direct competition with the new **British Airways, Ltd.** (2) franchise partner **National Jet Italia, S.p.A.**, the company later moves its operating base to Taranto, in southern Italy. The move is completed during the fall, after it is learned that the African BAe will not be available on time to begin services as scheduled.

Employing a BAe 146-200 wet-leased from **Flightline, Ltd.**, the carrier finally inaugurates twice-daily roundtrip service between Taranto and Rome and daily roundtrips from Taranto to Milan on December 20.

Within days, Goldwing returns the British aircraft with which it is unhappy and begins using a SAAB 2000 wet-leased from **Med Airlines, S.p.A.** Orders are placed for two more BAe 146s for delivery in the spring.

Goldwing will cease operations at the end of February 2001.

GOLFE AIR QUEBEC, LTD.: Canada (1955–1982). Known at its founding in 1955 as **Baie Comeau Air Services, Ltd.**, this small third-level operator initially provides charter services from its base at Hauterive to various destinations in the province of Quebec.

During the next 20 years, scheduled passenger services are inaugurated linking its gateway with Rimouski, Mont Joli, and Forestville.

In 1975, President G. Hamel oversees a workforce of 25 and operates a fleet made up of 3 Douglas DC-3s, 1 Beech 18, 2 Britten-Norman BN-2 Islanders, and 1 de Havilland Canada DHC-6 Twin Otter. Matane becomes a destination in 1980.

Unable to weather the airline recession of the early 1980s, the carrier ceases operations in 1982.

GOMAIR, S.A.: Goma, Zaire/Democratic Republic of the Congo; Year Founded 1996. Privately owned Gomair is established at Goma, in the eastern part of Zaire, in 1996 to operate passenger and cargo charters throughout the nation and across the borders to Kigali and Entebbe, also serving Kampala. Revenue flights are initiated employing a single Boeing 727-41C.

Service is maintained throughout the civil war which, in early 1997, results in the formation of the Democratic Republic of the Congo.

The trijet provides flights, often on a charter basis, throughout the remainder of the year and into 1998. The Congo civil war reignites on August 2 as rebel forces, operating from Goma under the leadership of Gen. Jean-Pierre Ondekane, attempt to overthrow the new government of president Laurent Kabila, victor in the first civil war a year earlier. Gomair becomes the phantom flag carrier of the insurgents, transporting its leadership around the eastern portion of the country, as well as to Uganda and Rwanda.

While on its takeoff role from Goma on November 23 on a flight taking Gen. Ondekane and 125 civilians NE to Kisangani, the B-727-41C hits a hole in the runway and bursts a rear tire. The landing gear collapses as the aircraft skids off the runway into a grassy field. With smoke billowing from an engine, passengers flee the aircraft, with many, including Ondekane, sliding down a rope.

Out of danger, Ondekane confirms to his followers and to the rebel's Radio Goma that he is not hurt and that the accident was not caused by any assassination attempt. The number of injuries to the other passengers and crew or the subsequent fate of either the aircraft or the airline is not presently known.

GOMEL AIR DETACHMENT. See **GOMELAVIA**

GOMELAVIA: Gomel Airport, 246011, Belarus; Phone 375 (232) 531415; Fax 375 (232) 536414; Code YD; Year Founded 1993. Gomel Air Detachment, a former **Aeroflot Soviet Airlines** unit based at Gomel's airport in what was Belorussia, is reconstituted in 1993 as an autonomous division of **Belavia (Belorussian Airlines)**. Valeriy N. Kulakovsky is general manager. His workforce totals 1,299 and a scheduled service to Moscow is maintained, along with regional charters and rotary-wing aerial work.

Flights continue in 1995–2000, during which years the company becomes fully independent and is renamed. Kulakovsky remains CEO and his fleet includes 2 Antonov An-24Bs, 3 An-24RVs, 3 Tupolev Tu-134As, 1 Tu-154M, and 8 Mil Mi-8 helicopters. In the fall of the latter year, an An-24RV is leased to the new Mali concern **Lignes Aeriennes Felou, S.A.**, for use on its Kayes–Bamako route.

GONINI AIR SERVICE, N.V.: P.O. Box 1614, Paramaribo, Suriname; Phone 597 499 098; Fax 597 498 363; Code 5Z; Year Founded

1993. The 20-year-old carrier **Gum Air, B.V.** is renamed in **1993**. Domestic passenger and cargo services, both charter and scheduled, are maintained by Managing Director Gerard Brunings's concern with 1 Cessna 206, the transferred GAF Nomad N-22B, and 2 Beech 1300s.

Flights are continued, without headline or incident, into the new millennium. While en route on a February 10, 2001, charter from Paramaribo to Jakobkondre, the Nomad, with one pilot and nine passengers, will crash into a mountain 2 mi. from its destinations. There will be no survivors.

GOPHER AIRLINES: United States (1968). One of the shortest-lived American commuter airlines, Gopher Airlines is set up in the spring of **1968** as the airline division of Gopher Aviation, the FBO located at the airport at Rochester, Minnesota. Employing a Beech 18 and a Beech 19, the small regional inaugurates scheduled daily passenger and cargo flights in June, linking its base with Roseau, Baudette, and Meigs Field in downtown Chicago. After only 73 trips, the unprofitable service is ended in August.

GORDA AERO SERVICE, INC.: Beef Island Airport, East End Tortola, British Virgin Islands; Phone (284) 495-1571; Fax (284) 495-2838; Code DV; Year Founded 1979. Gorda is established at Beef Island Airport in **1979** to provide scheduled commuter passenger services throughout the islands of the Caribbean.

Flights continue for the next 20 years with a fleet which, by **2000**, includes 1 each Cessna 402 and C-208 Caravan I.

GORDON AIR MANAGEMENT CORPORATION: 6060 West Airport Drive, North Canton, Ohio 44720, United States; Phone (330) 497-3344; Fax (330) 497-3644; Year Founded 1984. John Gordon establishes this independent concern at Akron-Canton Regional Airport in **1984** to provide aircraft management for local corporations.

Over the next 13 years, his concern comes to employ 11 pilots and to offer executive and small group passenger charters over an area from Canada to the Caribbean. The fleet in **2000** includes one IAI Westwind 1, 1 Beech King Air 100, and 2 King Air 90s.

GORDON AIRWAYS, LTD. See AIR WINDSOR, LTD.

GORIZONT AIRLINE CLOSE STOCK COMPANY: Military Base, V-CH 26265, Krasnodar, 350016, Russia; Phone 7 (8612) 545 444; Year Founded 1996. GACSC is set up at Krasnodar in **1996** to operate ad hoc all-cargo services to domestic locations. V. V. Federchenko is general director and he is able to inaugurate, and continue, revenue flights with an unspecified number of Antonov An-26s leased from the Russian military.

GORKHA AIRLINES, LTD.: New Baneshwar, P.O. Box 9451, Kathamandu, Nepal; Phone 977 (1) 475855; Fax 977 (1) 471136; <http://www.shorkhaairlines.com.np>; Year Founded 1996. Under the direction of Chairman Prajwaal Shrestha, Gorkha is established at Kathamandu in **1996** to offer rotary-wing charters on behalf of the tourist industry. Revenue flights commence with a pair of Russian-made Mil Mi-17 helicopters.

During the first quarter of **1998**, Gorkha is granted authority to offer scheduled fixed-wing domestic flights to domestic locations. Two Fairchild Dornier 228-202s are acquired and enter service on June 15.

Flights continue in **1999–2000**. Airline employment reaches 179 and scheduled service is provided to Bhadrapur, Bharatpur, Jomsom, Lukia, Phaplu, Pokhara, Thimpu, and Tumlingtar. Daily rotary-wing flights to Himalayan sight-seeing locations continue.

GORST AIR TRANSPORT: United States (1929–1935). In July **1928**, Edward "Eddie" Hubbard sells his **Seattle-Victoria Air Mail Line** to Vern C. Gorst, founder of **Pacific Air Transport**.

After a year's continued service as **Northwest Air Service**, the carrier is reformed in early June **1929** as GAT. Employing a pair of Loen-

ing C-2C Air Yachts and an Eastman E-2 Sea Rover, 11-times-per-day Seattle–Bremerton multistop passenger and air express service is inaugurated on June 15. On October 31, a C-2 crashes at Manette, Washington (two dead).

A total of 15,000 passengers are carried in **1930** alone. The "Air Mail Scandal" and subsequent passage of a new air mail law in **1934** causes no interruption in service.

GAT remains a popular form of Puget Sound transport until September **1935** when it ceases operation.

GOSNII GA: Sheremetyevo Airport, Moscow, 103340, Russia; Phone (095) 578-4801; Fax (095) 578-8688; Code ISP; Year Founded 1996. This operator is, in fact, a research institute for civil aviation that is forced to undertake flight services in order to raise sufficient income to continue its academic work. Vitali Guritchev is general director and he begins revenue passenger and cargo flights with a mixed fleet that includes 2 Antonov An-12s, 1 An-30, 3 Ilyushin Il-18s, 1 Il-62M, and 1 each Tupolev Tu-134 and Tu-154B.

GOTIA SHUTTLE EXPRESS, A.B. Sweden (1993). GSE is founded at Goteborg's Saeve Airport in the spring of **1993** to offer scheduled passenger flights to Bromma Airport at Stockholm. President Goran Linden, who owns 40% shareholding, begins revenue services in May with a SAAB 340A formerly operated by **Tempelhof Airways USA**. Orders are placed for three SAAB 340Bs once flown by **Golden Air, A.B.**

New services are inaugurated in August between Stockholm's Arlanda Airport and Trolhattan. Unable to achieve viability, the new regional is forced to close down in November and return its aircraft.

GOVERNMENT AIR SERVICES: Russia (1992–1994). Section 235 of **Aeroflot Soviet Airlines**, later **Aeroflot Russian International Airlines (ARIA)**, has long had the responsibility for the provision of VIP executive flights for senior government officials. Passengers are flown to both domestic and international destinations in significant numbers (298,000 in 1990).

Following the airline's reformation in **1992–1993**, the GAS is given authority to earn income by undertaking commercial charter operations through a new subsidiary, **Korsar Airline**. Meanwhile, GAS also leases aircraft to other new Russian start-up operators. A. A. Larin is now CEO and his 80-unit mixed fleet includes Ilyushin Il-62s, Il-18s, Tupolev Tu-154s, Yakovlev Yak-40s, and Mil Mi-8 helicopters.

Operations continue and are reported in the entry for **Korsar Airline**.

GP EXPRESS AIRLINES: United States (1977–1996). Based at Grand Isle, Nebraska, founder George Poulos's third-level **GP Air** begins life as a passenger and cargo charter service in **1977**.

Late in **1985**, certification is received for the start-up of scheduled service and the subsidiary GP Express is formed. Employing three Cessna 402Cs, the newly certified GPE inaugurates scheduled Essential Air Services (EAS) services over the former **Pioneer Airlines** panhandle route from Chadron, Alliance, and Sidney to Denver on January 26, **1986**. A total of 12,059 passengers are carried during the remainder of the year.

Airline employment is increased by 28.2% in **1987** to 100 and the fleet grows to include 2 Beech 99s and 7 Cessna 402Cs. Replacing **Rocky Mountain Airways**, doing business as "Continental Express," nonstop services are inaugurated over a "river run" between Grand Island and Scottsbluff, North Platte, Lincoln, and Omaha.

GP Air, meanwhile, continues its charter activities, often flying athletic teams for the University of Nebraska or dedicated flights on behalf of the Nebraska Department of Aeronautics. Customer bookings more than double, climbing to 26,574.

The workforce grows another 30.7% in **1988** to 98 and another Beech 99 arrives, replacing one Cessna. As on-time performance improves, passenger boardings accelerate by 25.6% to 33,381. The long-term subsidy from the federal government is increased to \$2.3 million.

In 1989, the airline is caught up in a brief fare war with "Braniff Express" partner **Midcontinent Airlines** that lasts until Braniff's September collapse. The fleet of 2 Beech 99s and 6 Cessna 402s is unable to successfully compete and the carrier survives largely by the good fortune of Midcontinent's December failure.

Customer bookings decline 8.6% to 30,525 and, as a result, the workforce is reduced by 8.2% to 90.

The payroll is increased by 100% in 1990 to 180. In January, GPE is selected as one of the small regionals to participate in the South Dakota Intrastate Airline project. Despite opposition to what is, in fact, a state-owned airline from South Dakota's FBOs, the small regional inaugurates service with four added Cessna 402Cs under contract on July 1 over a route from Pierre to Sioux Falls via Aberdeen and Watertown. When traffic proves disappointing, Pierre officials cancel the project on September 30. As the end of the experiment approaches, GPE begins to enter other markets in the Upper Mississippi Valley, especially small point-to-point destinations in Minnesota, and begins to plan a Minneapolis hub.

Late in the year, a letter of intent is signed with the expanding Texas regional **Conquest Airlines** for its acquisition of GP Express. Passenger boardings increase 45% to 44,245.

The fleet in 1991 comprises 8 Beech 99s and orders are placed for a large new fleet of Beech 1900Cs. Customer bookings rise by 36% to 60,145.

Company employment declines 5.9% in 1992 to 160 and the fleet now includes 6 Beech 99s, 3 Beech 1900s, and 6 Cessna 402s. In the spring, two EAS routes in Alabama are won away from competing **Skybus Express**. Flight 861, a Beech 99 with 10 aboard, crashes at Fort McClellan, Alabama, on June 8 (3 dead).

Passenger boardings for the year still ascend 22.3% to 73,560.

Destinations served in 1993 include the Nebraska communities of Alliance, Chaldron, Sidney, Hastings, Kearney, McCook, Scottsbluff, North Platte, Grand Island, Lincoln and Omaha; the South Dakota cities of Mitchell, Huron, and Brookings; Fairmont, Mankato, and Worthington in Minnesota; the Alabama towns of Anniston, Gadsen, Tuscaloosa, and Muscle Shoals; Laurel and Hattiesburg in Mississippi; Hilton Head, South Carolina; and Des Moines, Iowa. The hub cities of Chairman George Poulos and President Doug Caldwell's airline are Atlanta, Denver, Kansas City, and Minneapolis.

While on a proficiency check flight from Grand Island, Nebraska, on April 28, a Beech 99, with two crewmen aboard, attempts a prohibited barrel roll aerobatics maneuver; the Beechcraft strikes the ground before the roll is completed, crushing the aircraft and killing both flyers. Passenger boardings for the year rise another 32% to 97,121.

Airline employment stands at 160 in 1994 and the fleet includes 6 Beech 99s and 22 Beech 1900Cs, including 15 of the latter type leased from **Continental Express Airlines**, many of whose routes from Denver are now taken over. Customer bookings skyrocket to 230,300.

The fleet is reduced to 19 Beech 1900Cs in 1995. The decision of **Continental Airlines** to reduce its Denver hub and of **Southwest Airlines** to enter the Omaha market has a devastating financial impact on the carrier. Still, enplanements accelerate 34.8% to 310,264.

In January 1996, the carrier files for Chapter XI bankruptcy protection. "Continental Express" services continue to be operated in Nebraska and into the Southeast, but cannot bring sufficient income to avoid disaster. Prior to its permanent shutdown in October, GPE transports a total of 124,296 passengers.

After the company grounds its 13 aircraft and dismisses nearly 150 employees, it enters Chapter VII liquidation. Chairman Poulos blames the closing on the reduction of the EAS subsidy and continued bad publicity concerning regional airlines.

GPA (GOLFO Y PACIFICO AEROTRANSPORTES, S.A. de C.V.): Mexico (1945–1948). Francisco Sarabia's brother Herculano and a group of investors set up GPA in 1945 with the aim of flying commercially across Mexico between the Gulf of Mexico and the Pacific Ocean. A sin-

gle Avro Anson is acquired and service is launched late in the year between Veracruz and Ixtepec. The operation is not financially successful.

Carlos Oriani purchases the company in 1946 and immediately appoints Ruben Ruiz Alcantara as its general manager. The previous route is maintained.

The following year, **Aerovias Reforma, S.A. de C.V.** is acquired and, in 1948, the larger **Servicios Aereos Panini, S.A. de C.V.** is taken over. At this point, GPA is liquidated and the three airlines are merged under the **Aerovias Reforma, S.A. de C.V.** banner.

GRAND AIR (GRAND INTERNATIONAL AIRWAYS): Philippines (1994–1999). In anticipation of the upcoming government deregulation of civil air transport, Grand Air is established at Manila in late 1994 to offer scheduled passenger and cargo services to Cebu and Davao.

Two Airbus Industrie A300B4-203s are leased from General Electric Capital Aviation Services (GECAS) early in 1995 and commence flight operations on March 16, twice daily between Cebu and Davao. The carrier attempts to remind travelers of foreign airlines with fares somewhat less than those of the flag carrier **Philippine Airlines (PAL)** and better in-flight service. Applications are placed with the government's Air Transport Office (which continues to regular foreign services) in September for the right to inaugurate overseas routes.

Two more A300B4-203s arrive under lease in early 1996. Twice-weekly frequencies from Manila to Hong Kong commence in January.

To improve its competition with PAL on domestic routes, a Boeing 737-247, formerly operated by **Far East Air Transport, Ltd.** on Taiwan, is chartered. Upon its arrival, the "Baby Boeing" is employed to inaugurate daily flights from Manila to Cagayan, Iloilo, and Tacloban.

Another Dash-247 is purchased and in April service is launched to Puerto Princesa and the number of flights on the Cebu route is increased. A third weekly A300B4-203 service to Hong Kong via the new Subic Bay International Airport commences in May followed by twice-weekly roundtrips to Taipei on July 13.

Because the Philippines do not meet the safety requirements laid down by the FAA for entry into the U.S., company plans to begin flights to California are put on hold.

Competition from **Philippine Airlines (PAL)** intensifies in early 1997, along with that offered by the new entrants **Cebu Pacific Air** and **Asian Spirit**. Service to Singapore begins in July. Late in the year creditors in Taiwan impound the Airbus.

As a result of regional economic problems, in February 1998 the carrier suspends all international services and concentrates on domestic frequencies. The lessons of over-expansion are learned by the carrier's rivals—**Air Philippines (2)** and **Cebu Pacific** both shelve extensive plans for international growth.

From June onward, the air transport situation in the Philippines enters crisis as labor and management at **Philippine Airlines (PAL)** move toward closure for Asia's oldest airline.

When this fate becomes inevitable in mid-September, the leaders of the nation's four independent airlines are summoned to a meeting with Philippine President Joseph Estrada in Malacanang. It has become necessary to find a way to increase the gap between the 230,000 monthly domestic seats provided by them and the 280,000 offered by PAL. Meeting with Estrada on September 22, company executives and the leaders of **Cebu Pacific Air**, **Asian Spirit**, **Air Philippines**, and several other small operators promise to acquire additional aircraft and fill any vacuum left by PAL within a month. For its part, the government indicates a willingness to grant incentives, including higher fares and concessional loans, designed to help them speed up their capacity build-up.

Grand's two aircraft cannot significantly increase operations following the temporary grounding of **Philippine Airlines (PAL)** on September 23. One of the company's B-737-200s is held on the tarmac at Taipei while the carrier negotiates with creditors; the other two fly sporadically. Horror stories concerning lengthy and unexplained delays continue to be told.

By the end of October, Grand Air controls only 5% of the domestic market. Still, it is hoped by company officials that the third company aircraft can be reacquired from creditors by November, in time for the winter travel season. In fact, the company will twice again suspend service and is not operational as 1999 begins. Although plans are initiated during the first quarter to put the carrier back in the air, they are not fulfilled.

GRAND AIRE: 11777 West Airport Service Road, Swanton, Ohio 43558, United States; Phone (419) 865-1760; Fax (419) 865 2965; <http://www.grandaire.com>; Code GAE; Year Founded 1985. One of the nation's larger charter operations, GAE is founded at Louisville, Kentucky, in 1985. From that base in 1994, Chairman Tahir Cheema's Executive Air Express division flies five passenger-configured Piper PA-60 Aerostars. Three Fairchild Metro IIs in all-cargo configuration are operated by the Grand Aire Express division, along with five Dassault Falcon 20 combis.

Bases are also maintained at Columbia, South Carolina, Monroe, Michigan, Denver, Colorado, and Oakland, California. In all-cargo configuration, one each Falcon 20 and Metroliner are flown from the former destination while, from Monroe, Grand Aire flies three Falcon 20s and four Metro IIs for freight and four Piper Aerostars for passengers. For all cargo purposes, one Falcon 20 is flown from Denver and another from Oakland.

In 1995, Monroe, Michigan, becomes principal company headquarters while another hub is established at Addison, Texas. In 1996, Tahir S. Cheema is president, with Lawson L. Josey as general manager and Scott A. Hall as director of operations. The cargo fleet is increased to nine Falcon 20s. Also flown are a Metro and five Metro IIs plus three HFB-320 Hansa Jets.

The flight equipment is altered somewhat in 1997–1998 as two more Falcon 20s are acquired, along with three more Hansa Jets and a Metro II. The Metro is withdrawn.

On May 12 of the latter year, a Falcon 20 with two crew runs off the end of Runway 21 at Monroe, Michigan, after experiencing a locked elevator control. Although neither flyer is injured, the aircraft sustains serious damage when its nose landing gear collapses.

On January 4, 1999, the company is relocated to a suburb of Toledo, Ohio. Its hubs now include Columbia, Dallas (DFW), Denver, Louisville, Oakland, and Phoenix. Flights continue without incident or headline during the remainder of the year.

Following the May 1, 2000, bankruptcy of **Kitty Hawk Air Cargo**, several of its large accounts, particularly the anchor General Motors service, begin shifting to such operators as Grand Aire. On June 8, Lear Corporation awards Grand Aire a \$20-million contract to act as its sole air cargo management company.

While on approach to Peterborough, Ontario, after a June 13, service from Ypsilanti, Michigan a Falcon 20 impacts a freshly plowed field 2,000 ft. prior to the runway and skids 400 ft., spinning around to stop facing the opposite direction. Although the aircraft is substantially damaged, neither the pilot nor copilot are badly injured.

GRAND AIRE EXPRESS. See GRAND AIRE

GRAND AIRWAYS: United States (1991–1996). Shahid Saddigi establishes GA at Las Vegas, Nevada, on October 7, 1989 to operate regular charter and group tour passenger services to regional destinations, including the Grand Canyon, with a fleet of 5 Fairchild Metro IIIs and 1 Cessna 421.

La Verne and Carlsbad join the route network during 1990–1991 and enplanements in 1992 total 75,179. Passenger boardings jump 47.5% in 1993 to 110,852.

Early in 1994, a pair of Douglas DC-9-32s, formerly flown by **Midway Airlines (1)**, are acquired and begin flying longer-haul charters in and out of the Nevada gambling mecca to Dallas (DFW), Phoenix, and Houston. Scheduled service to Oakland begins on February 15.

The regional sightseeing business is abandoned along with the smaller aircraft, which explains the year's 17.1% drop in customer bookings to 91,549.

The picture continues to blacken in 1995. An effort to gain public attention by painting the aircraft in bright navy blue and yellow livery fails. In November, the carrier files for Chapter XI bankruptcy protection and stops flying. A total of 163,000 passengers are transported during those last 11 months.

At the beginning of 1996, the grounded airline returns its certificate to the FAA.

GRAND AVIATION: National Jets Facility, 3495 SW 9th Ave., Fort Lauderdale, Florida 33315, United States; Phone (954) 359-4200; Fax (954) 359-4203; Year Founded 1995. GA is set up at Fort Lauderdale–Hollywood International Airport in 1995 to provide executive and small group passenger charters worldwide. Within five years, the fleet includes 1 each Grumman G-1159A Gulfstream III and a British Aerospace BAe (HS) 125-600 Hawker.

GRAND CANYON AIRLINES (1): P.O. Box 3038, Grand Canyon, Arizona 86023, United States; Phone (520) 638-2407; Fax (520) 638-9461; <http://www.grandcanyonairlines.com>; Code YE; Year Founded 1927. One of the oldest operators in the U.S., GCA-1, employing a variety of light aircraft during its seasonal pre-World War II and immediate postwar operations, eventually becomes an affiliate of **Scenic Airlines**. GCA-1, like its younger parent, offers scheduled commuter service and charter and scenic air tour flights.

From the company's base at Grand Canyon, Arizona, the carrier offers flight-seeing tours over the canyon. In addition, scheduled commuter service is offered between the North Rim and the South Rim plus Marble Canyon. Enplanements reach 23,677 by 1977.

The fleet in 1978 includes 4 Cessna 402s, 1 Cessna T207, and 1 Piper PA-32 Cherokee Six. Passenger boardings jump 35% to 36,994.

Operations continue apace during the remainder of the decade and enplanements reach 44,500 by 1981. Unfortunately, recession and foreign currency fluctuations force away customers and bookings drop to 33,000 in 1982.

Figures are not released in 1983; however, bookings climb back to 36,388 by 1984. In 1985, the fleet comprises 2 de Havilland Canada DHC-6-300 Twin Otters (later specially fitted with oversized viewing windows) and 2 Cessna T207s. Ronald L. Warren is promoted to vice president/general manager. Passenger boardings jump 23.4% to 44,895.

In the worst Grand Canyon air disaster in thirty years, a company DHC-6-300 with 2 crew and 18 passengers collides with a Tusayan, Arizona-based **Helitech Choppers** Bell 206B JetRanger with five aboard. The accident occurs over Scorpion Creek, about 15 miles from the park's visitors center on June 18, 1986 (25 dead). This latest scenic air tour disaster brings renewed calls for tougher government regulation of the flight-seeing industry. Still, enplanements for the year rise to 48,619.

The 30-employee small regional enjoys a splendid 1987 as customer bookings move upward by 38.3% to 67,249.

Passenger traffic rises again in 1988, climbing by 17.5% to 79,001 passengers flown.

While landing at Grand Canyon National Park Airport on its second charter of September 27, 1989, from Grand Canyon, Arizona, Flight YE5, a DHC-6-300 Vista Liner with 2 crew and 19 passengers, bounces twice. Full power is applied for a go-around maneuver, but control is lost and the plane crashes into a line of trees (10 dead). As a result of these disasters and their media coverage, as well as hard economic times, enplanements for the year rise slightly to 79,512.

The 29-employee tour operator flies 5 Twin Otters to the Grand Canyon in 1990. Recession and threat of war following Iraq's August invasion of Kuwait dampens overall traffic figures as customer bookings fall 6.3% to 74,800. Hereafter, traffic figures are not provided.

In **1991–1994**, Chairman John R. Seibold and President Michael A. Mooney oversee a 42-member workforce and operate a fleet of 5 DHC-6-300s.

The workforce grows to 50 in **1995–2000** and business improves to the point where a sixth Twin Otter is added.

GRAND CANYON AIRLINES (2): United States (1936–1937). The second, larger, and less successful GCA-2 is established on July 1, **1936** to fly three Ford 5-ATs on scheduled \$21 per person sight-seeing tours over the 269-miles between Boulder Dam and the Grand Canyon. It is the only new airline not created by merger to start operations in the U.S. during the year.

Flight-seeing tours are conducted again in **1937**. At the end of the season in October, the carrier closes down permanently.

GRAND CENTRAL AIR CHARTER (PTY.), LTD.: South Africa (1971–1986). GCAC is originally established as a division of the Grand Central Flying Club at Grand Central Airport at Halfway House. Operations are conducted with 2 Cessna 210s and 1 C-182. In 1967, the concern becomes a Handley Page Jetstream dealer.

In **1971**, the company, now also known as Grand Central Airways (Pty.), Ltd., becomes a subsidiary of **Avex Air (Pty.), Ltd.**, based at Rand Airport at Germiston, near Johannesburg. Flights continue until Avex's **1986** failure.

GRAND CENTRAL AIRWAYS (PTY.), LTD. See **GRAND CENTRAL AIR CHARTER (PTY.), LTD.**

GRAND INTERNATIONAL AIRWAYS. See **GRAND AIR: GRAND INTERNATIONAL AIRWAYS**

GRANT AIRWAYS: P.O. Box 92200, 203 West 15th Ave., Anchorage, Alaska 99501, United States; Phone (907) 248-7031; Fax (907) 248-6416; Code GS; Year Founded 1994. This new Alaskan regional is established by Bruce McGlasson at Anchorage in **1994** to offer light-plane passenger and cargo services. A total of 9,014 passengers are flown during the initial year.

Airline employment stands at 8 in **1995** and the fleet includes 2 Cessna 207As and 1 Piper PA-31-350 Navajo Chieftain.

Enplanements increase 75% to 15,809 and swell 10% in **1996** to 17,401.

President McGlasson in **1997** operates 5 Cessna 207As, 3 Navajos, 1 Beech 18 freighter, and 1 Cessna 172. Enplanements total 18,012 passengers, an increase of 3.5% over the previous year.

Business dramatically improves during **1998** as customer bookings increase 66.1% to 30,000.

Flights continue in **1999**. While en route from Bethel on a December 7 service to Nightmute, Toksook, and Tununak, Flight 261, a Cessna 207A with a pilot and five passengers, crashes into remote, snow-covered terrain some 49 mi. W of the point of origin. There are no survivors. Despite an intensive air search, the wreckage is not found until the next day.

While taking off from Bethel on a December 24 service to Chefornak, Flight 281, a Cessna 207A with a pilot and five passengers, collides with snow-covered terrain. The pilot suffers minor injuries and none of the passengers are hurt, but the aircraft is badly damaged.

Despite these two incidents at year's end, customer bookings for the year as a whole increase another 76.2% to 53,000.

A total of 27 full-time and 9 part-time pilots are employed at the beginning of **2000**.

While landing at Emmonak after a September 14 service from Alakanuk, the right landing strut of Flight 166, a Piper PA-31-350 Navajo with a pilot and three passengers, collapses, causing the aircraft to stop and tip onto its right wing. Although the aircraft suffers substantial damage, no one aboard is hurt.

GREAT AMERICAN AIRWAYS: United States (1979–1997). GAA is organized as Target Airways, Ltd. doing business as Great American Airways at Reno, Nevada in the fall of **1979** to offer passenger tour group charter and contract jet flights, especially on behalf of Nevada casino operators, to cities throughout North America. Employing three Douglas DC-9-15s, of which one has been purchased from **Trans World Airlines (TWA)**, the holiday carrier inaugurates revenue service on September 26. A total of 36,000 passengers are flown during the remainder of the year.

A scheduled Reno to Oakland return service is inaugurated in **1980** and a total of 85,000 customers are flown in the first full year of service. Expenses, however, lead to an operating loss of \$536,436.

The workforce is cut 44.7% in **1981** to just 21 and 2 DC-9-15s are withdrawn. The carrier comes under new management and suspends its scheduled frequency, electing to concentrate on nonscheduled holiday flights. Passenger boardings decline to 77,000. Revenues accelerate to \$3.9 million and the operating loss is slashed to \$132,381.

Customer bookings fall 3.4% in **1982** to 72,839. The payroll is increased by 4.8% in **1983** to 22. The carrier's single DC-9-15 is able to fly 3.8% more passengers, 75,615. Plans are made to acquire another DC-9-15. The B-720-023B *Kay O'II* is purchased from the Los Angeles Dodgers, but will not enter service.

Two more employees are hired in **1984**, but the new Douglas does not arrive. Still, passenger boardings climb 14.2% to 86,333.

The employee population totals 25 in **1985**, a 4.2% increase. The lone DC-9-15 receives new livery, but customer bookings drop 23.6% to 65,944.

Enplanements fall a further 3.3% in **1986** to 63,783. Airline employment grows by 29.2% in **1987** to 31, but passenger boardings decline another 42.9% to 36,418. Although revenues of \$2.6 million are generated, costs are so high that operating income is only \$5,000 and a \$367,000 net loss is suffered.

The workforce is cut by 9.7% in **1988** to 28, but the one-plane company is able to reverse its traffic pattern of the previous year. Customer bookings rise 32.9% to 47,681. Revenues jump 22.9% to \$3.19 million and allow an operating income of \$458,000. Net profit is \$198,000.

Three new employees are hired in **1989** as a second DC-9-15 is placed into service. Despite the doubling of capacity, passenger boardings actually decline by 10.9% to 42,478.

The workforce is reduced by 3.8% in **1990** to 25 as one DC-9-15 is withdrawn. Still, charter passengers increase by 0.1% to 75,224 and revenues climb to \$5.1 million. Costs are low enough to guarantee operating income of \$719,406 and a net profit of \$581,951.

Company employment grows 40% in **1991** to 35 and the second DC-9-15 is reinstated. Passenger boardings shoot up 18.2% to 87,989.

General Manager Kenneth Damask's workforce is increased by 66.7% in **1992** to 40. The two Douglas jetliners fly a total of 94,391 passengers on the year, an 8.6% boost. Revenues total \$6.6 million and expenses are held low enough to allow generation of a \$545,999 operating profit and net gain of \$452,060.

Airline employment is increased a remarkable 137.5% in **1993** to 95 as a third DC-9-15 is placed into service. The company now expands the scope of its operations from North America to worldwide. Passenger boardings climb 49.4% to 141,003.

A McDonnell Douglas MD-87, acquired from **ZAS Airline of Egypt** joins the fleet in early **1994**. Customer bookings skyrocket 114% to 259,000 and operating revenue advances 109.6% to \$21.39 million. Expenses are up 88.1% to \$18.9 million and consequently profits are nearly identical: \$2.49 million (operating) and \$2.47 million (net).

A second MD-87 and an MD-82 are acquired in **1995**. During the summer, the carrier contracts with the city of Myrtle Beach, South Carolina, and tour operator World Technology Systems (WTS) to provide charter service that supplements regular flights schedules. The operation will be known as Myrtle Beach Jet Express.

Traffic surges for the Las Vegas-based carrier as enplanements skyrocket 82.8% to 468,000. Plans are discussed for the future inauguration

of scheduled services. Revenues again exceed costs and profits accelerate to \$3.79 million (operating) and \$3.83 million (net).

Airline employment stands at 100 in **1996**. To assist reformed **Air Jamaica, Ltd. (2)** in its expansion plans, the carrier wet-leases to the Kingston-based national airline a pair of MD-83s painted in "AirJam's" new multihued livery.

Employing the GAA operating certificate and licenses as a way to get around the U.S. Category II safety prohibition against its direct flights to the U.S., the Jamaican line inaugurates new routes between Chicago and Jamaica and from New York (JFK) to markets throughout the eastern Caribbean. In the wake of the May **Valujet Airlines** disaster, GAA, like similar U.S. airlines, becomes the focus of intensified and continuing safety audits by the FAA.

Beginning in September and continuing through the following February, tour operator WTS sponsors a promotion in which every passenger purchasing a ticket will receive two free rounds of championship golf at a selected course.

Passenger boardings swell 26.5% to 592,000 and operating income advances 27.9% to \$40.08 million. Expenses, however, rise 48.6% to \$40.92 million and leave an \$836,000 operating loss. A \$1.76 million net loss is also suffered.

Acting on a tip from what management will call a disgruntled worker, the Federal Aviation Administration conducts a safety investigation of the carrier late in the first quarter of **1997**.

Citing numerous falsifications of its flight and duty time records, training records, and load manifest documents, the Federal Aviation Administration, in what it deems an emergency action, pulls Great American's operating certificate on April 13. The Reno-based airline, now famous for its free—or inexpensive—tickets for gamblers, files for Chapter XI bankruptcy protection the next day and protests the government's action. The grounding severely impacts the wet-lease arrangement with **Air Jamaica, Ltd. (2)**. WTS, which has been operating both Myrtle Beach Jet Express and its own public low-cost charter company **Sun Jet International Sales**, now offers its business to **Sun Pacific International Airlines** and **TransMeridian Airlines**.

Despite its appeal, Great American does not return to the skies.

GREAT BARRIER AIRLINES, LTD.: P.O. Box 53-091, Auckland Airport, Auckland, 1030, New Zealand; Phone 64 (9)275-9120; Fax 64 (9) 275-6612; <http://www.greatbarrierairlines.com>; Code GB; Year Founded 1990. This new entrant is set up at Auckland Airport in **1990** to provide scheduled flights to Palhia. Murray Pope becomes managing director and revenue services are inaugurated with a start-up fleet comprising 1 Pilatus-Britten-Norman PBN-2 Islander, 3 Piper PA-23 Apaches, 2 PA-32 Cherokee Sixes, and 1 PA-28 Cherokee.

Nelson McEwan becomes general manager in **1992** and the Cherokee is withdrawn.

Service is maintained in **1993–1994**, during which latter year an order is sent to Montreal for the acquisition of a de Havilland Canada DHC-6-200 Twin Otter.

While on its ferry delivery flight from Oakland, California, to Auckland, N.Z., via Hawaii, the DHC-6-200 with one crew and two passengers suffers fuel exhaustion 750 km. NE of Honolulu on July 3, **1995**, and ditches at sea; although the plane is lost, a passing ship rescues those aboard.

Flights continue in **1996** as a second Islander is acquired.

Service is maintained during the remainder of the decade. During these years, Mark Roberts becomes general manager and the fleet is expanded with a de Havilland DHC-6-100 Twin Otter.

GREAT CHINA AIRLINES, LTD.: Taiwan (1955–1998). This charter carrier is formed at Taipei in **1955** as a rotary-wing sight-seeing and crop-dusting operator. Both regular and ad hoc passenger charter flights are undertaken to a variety of destinations, particularly between Taichung, Sun Moon Lake, and Lishan.

After three decades of service, the fleet of the helicopter carrier in **1985** is made up of two machines: one Bell 206B JetRanger and a Bell Model 47. Late in the year, it ceases operations.

In response to deregulation in **1987**, the company is purchased by new owners in January **1988**. The company is reformed and reorganized as a scheduled regional passenger airline employing fixed-wing aircraft. Capitalization stands at NT\$300 million and orders are placed for 10 de Havilland Canada DHC-8s.

President Peter Szu obtains four de Havilland Canada DHC-8-100s and frequencies are posted in January **1989** for flights from the capital city to Kao-hsiung, Makung, and Tainan. Orders are placed for two Boeing 737-300s.

Enplanements total 32,850. Expenses exceed costs and there are losses: \$2.3 million (operating) and \$2.99 million (net).

Company employment is increased by 58.6% in **1990** to 287 and the jetliner order is changed to three McDonnell Douglas MD-90s. Passenger boardings skyrocket 88.4% to 283,185. Revenues total \$7.65 million, but costs are higher. The operating loss swells to \$4.78 million and net downturn reaches up by \$4.5 million.

Two DHC-8-311s are acquired in **1991** allowing service to be opened to Chiayi and Taichung. Customer bookings are reported for the first half year and are up a whopping 72.7% to 196,000.

Airline employment in **1992** stands at 376 and a third DHC-8-311 joins the fleet. In October, charter flights are inaugurated from Taipei to Phnom Penh.

The fleet in **1993** comprises 4 DHC-8-102s, 1 leased DHC-8-301, and 3 DHC-8-311s. Orders are placed for three McDonnell Douglas MD-90-30s. Destinations visited from Taipei now include Taichung, Chiayi, and Makung while those routes flown from Makung include services to Chiayi, Taichung, Tainan, and Kao-hsiung.

A \$26-million order is placed for two more DHC-8-311s in January **1994**. These are received in April and May as airline employment grows to 536, including several Canadian instructor pilots. Routes are added from Taichung to Kinmen and from Taipei to Pingtung. Capitalization on the year's last day stands at NT\$1.1 billion.

Operations continue apace in **1995**. In April, a 20% stake is sold to **EVA Air, Ltd.** for \$12 million.

Three more DHC-8-311s are received in **1996**. In mid-February, President Szu's company becomes Asian launch customer for the de Havilland Canada DHC-8Q-400B with an order for six.

The first MD-90-30 arrives in the late spring of **1997**. In October, a \$27.7-million order is placed for two DHC-8Q-300s that will be delivered in December. Company officials and other dignitaries are on hand during the November 21 ceremonies as the first DHC-8Q-400B is rolled out at the Downsview, Ontario, plant of Bombardier Regional Aircraft Division. It is reported that the carrier just manages to break even fiscally this year.

At the beginning of **1998**, the company operates 148 daily flights connecting medium-sized cities on a 12-point route network. The fleet includes 12 DHC-8-311s and 1 MD-90-30.

Just after takeoff from Taipei to Chiayi in southern Taiwan on February 1, a DHC-8-311 with 4 crew and 16 passengers is taken over by passenger Lin Chin-wen, who has taken out two bottles of suspected gasoline and splattered it on nearby seats and carpeting. Before he can ignite the liquid, he is subdued and restrained by flight attendant Chen Kung-cheng and three passengers. The captain diverts his flight to Taichung Airport, where Lin is escorted off the plane. Arrested by police, the hijacker admits he wished to commit suicide on the plane because he would soon die of a terminal disease.

The crash of a **China Airlines, Ltd. (CAL)** A300B4-622R on February 16 (202 dead) and a **Formosa Airlines, Ltd.** SAAB 340A on March 18 (13 dead) triggers **EVA Air, Ltd.** to make a dramatic move. In mid-April, with government support, the company announces that effective July 1, the major will no longer offer any domestic services. Its regional subsidiaries—Taiwan Airlines Company, Ltd., Great China, and **Uni Air, Ltd.**—will be merged into an enlarged **Uni Air, Ltd.**, which will

provide only domestic services. This move not only addresses the national debate over air safety, but improves its balance sheet as well.

THE GREAT EASTERN SHIPPING COMPANY, LTD.: Huhu Aerodrome, Hangar 6A, Bombay, Maharastra 400054, India; Phone 91 (22) 496-5733; Fax 91 (22) 496-5054; Year Founded 1995. The rotary-wing division of this concern is established at Bombay in 1995 to provide corporate passenger and cargo services. By 2000, Manager R. M. Choudhary oversees the work of 8 full-time pilots, who fly 3 Bell 212s.

GREAT LAKES AIRLINES: United States (1951–1962). Little is known of the operations of this supplemental carrier. Formed in early 1951, the company purchases a Curtiss C-46F from the USAF in February, but by April the aircraft has been transferred to **The Flying Tiger Line**.

In 1953, a second C-46F is purchased from the same source and registered to Nevada Aero Trades, who lease it to Skycoach Express.

Although a supplemental certificate is obtained from the CAB at the end of the decade, it is cancelled in 1962.

GREAT LAKES AIRLINES, LTD.: Canada (1961–1981). Organized at Sarnia, Ontario, in January 1961, GLA is initially the in-house airline of the Homes-Blunt Company, Ltd. Flight services begin in April. A Beech 18 and Cessna 310 are employed for the first six years to provide executive charter flights to and from Toronto.

Company officials decide to begin a scheduled return service in 1967 and add two Douglas DC-3s, one each in June and November. The original Cessna 310 is sold to Hughes Marine Sales, Ltd. in May 1968.

Two CV-440 Metropolitans are purchased from **Swissair, A.G.** in December 1969 and enter service in 1970. Their arrival allows sale of a DC-3 in May 1971. The Beech 18 is sold in January 1972 and the last DC-3 in November.

London, Ontario, joins the route network in 1973 and in the fall negotiations with the Swedish carrier **Linjeflyg, A.B.** lead to the purchase of four CV-440s, the first of which arrives in December.

The final three CV-440s arrive between January and June 1974. With six CV-440s now available, route expansion occurs, with services started to Peterborough, Ottawa, and Kitchener. Frequencies to Toronto are increased.

Operating in a haphazard fashion and losing money, the airline is closed down (except for its original route) for review briefly in early 1975. A group of Toronto businessmen now purchase Great Lakes from Homes-Blunt. A contract is let with **Air Canada, Ltd.** for the provision of ground support and reservations.

The oldest CV-440 is sold for scrap in September with another passed to **Sun Valley Key Airlines**.

In order to take advantage of hockey charters available in southern Ontario, the company wet-leases a CV-580 from **Allegheny Airlines (1)** in February 1976. With Allegheny pilots at the controls, the new aircraft flies its first hockey charter in March.

Scheduled services are resumed in April, although the Kitchener stop is eliminated. A second CV-580 is added the same month and a CV-440 is sold to Onyx Aviation, Inc. in June. All but one of Air Canada's Toronto–London frequency is assumed in October.

In January 1977, company headquarters are transferred to London from Sarnia just in time to receive another CV-580. London-based **Flightexec, Ltd.** and its Piper PA-23 Aztec are now acquired and operated as a wholly owned subsidiary specializing in executive charters.

Two CV-440s are sold in May and one in July. A CV-580 wet-leased from Allegheny is employed in November and December to provide extra seating during the holiday season.

The same aircraft is again employed between October and December 1978. Enplanements total 282,468.

Small package charter services are started to Winnipeg, Calgary, Edmonton, and Vancouver on behalf of **Purolator Courier** during the

summer of 1979. An application is made to the Canadian government for permission to operate downtown-linking services between Toronto, Ottawa, and Montreal, employing DHC-7s.

Passenger boardings are level, climbing only a minor 0.05% to 283,887.

Between December and March 1980, extra capacity is provided by a CV-580 leased from **Great Northern Airlines, Ltd.** Passenger business is so hectic between February and April that Purolator flights are suspended to western Canada.

Flights from Toronto to Peterborough and Ottawa are suspended in January 1981 and taken over by **Air Atonabee, Ltd.** In February, direct, weekday-only Toronto–Ottawa service begins. **Purolator Courier** services are again reduced, this time in March, and are discontinued outright in early April.

On April 27, the carrier is reformed and renamed **Air Ontario, Inc.**

GREAT LAKES AIRWAYS COMPANY: United States (1921). The first company to name itself in honor of America's inland oceans is established at Cleveland, Ohio, in the spring of 1921. Employing an Aero-marine-modified Curtiss HS-2L flying boat, the line flies 100 passengers during the summer to Toledo and Detroit.

Although plans are made to expand and acquire at least three additional HS-2Ls for the next season, the company is forced, by financial realities, to close down in late fall.

GREAT LAKES AVIATION: 1965 330th Street, Spencer, Iowa, 51301-9211, United States; Phone (712) 262-1000; Fax (712) 262-1001; <http://www.greatlakesav.com>. Code ZK; Year Founded 1979. When two-year-old Spencer, Iowa-based **Spirit Lakes Airways** fails in the summer of 1979, Douglas G. Voss and his colleagues I. L. Simpson, D. K. Evans, and W. E. Winger reform it, registering this successor on October 25.

Charter replacement flights are flown over the next two years and a limited Beech B-58 Baron scheduled service linking the company base with Des Moines is started in October 1981.

Certification as a small regional airline is received from the CAB on June 25, 1982 and regular scheduled services are begun on August 1. The same day, the company begins to honor a marketing agreement with **Ozark Air Lines**. Destinations served include Des Moines, Dodge, and Spencer in Iowa; Fairmont and Minneapolis (MSP) in Minnesota; and the Nebraska city of Omaha.

Within four years, the fleet comprises two Beech 99s and a number of Cessna 402s.

Airline employment is increased by 15.4% in 1987 to 75 and the fleet now includes 3 Beech 99s and 1 Beech 1900. A total of 25,461 passengers are flown, a 0.7% increase.

In 1988, the fleet is enlarged by the addition of another Beech 1900. Passenger boardings skyrocket 116.9% to 55,237.

On August 1, 1989, the company takes over the Wisconsin-based **Al-
liance Airlines**. As a result, the route system grows to 15 cities in 5 states.

During 1990, two additional Beech 99s and five Beech 1900Cs are acquired. Service is inaugurated by the 272-employee large regional from Minneapolis to the Nebraska communities of Grand Island and Norfolk. Enplanements total 166,456.

The fleet at the beginning of 1991 is comprised of 19 Beech 1900Cs and a marketing agreement, not quite code-sharing in status, is signed in March with **United Airlines**. The last of 257 Beech 1900Cs constructed is delivered to the carrier in September. Passenger boardings leap skyward by 50% to 249,251.

Two more Beech 1900Cs join Chairman/CEO Voss's fleet in 1992 as the large regional advances its relationship with its partner to that of "United Express" carrier. Its aircraft, repainted in modified United colors, feed 6 communities from Minneapolis (MSP), 20 from Chicago (ORD), 2 from Detroit, and 8 from Denver.

In December, a cooperative internship agreement is signed with the Aerospace program at the University of North Dakota.

Customer bookings accelerate 59% to 396,153. Revenues exceed expenses and there are profits: \$7.35 million (operating) and \$497,590 (net).

In **1993**, the workforce is increased 25% to 700 and the fleet comprises 34 Beech 1900Cs, including 12 added during the year.

Effective in January, graduates of the UND Spectrum airline pilot degree program are able to earn internships with GLA under which they will fly as paid first officers on the company's Beech 1900Cs.

A new roundtrip service, independent of "United Express," is launched five times per day in March between Chicago's Meigs Field and Minneapolis (MSP).

Customer bookings increase 54.7% to 611,528 and revenues surge 44.5% to \$58.72 million. Expenses leap ahead by 47.3%, but that figure is only \$49.04 million and allows an operating profit of \$9.68 million. Net gain reaches \$2.12 million.

Airline employment is increased by 20.9% in **1994** to 846. During the spring and summer, five new Beech 1900Ds are delivered and placed into service.

The company continues to connect Denver, Chicago, Minneapolis (MSP), and Detroit (DTT) with 54 locations in 9 midwest and mountain states. The third Embraer EMB-120 Brasilia leased since January enters service on June 10. On June 19, thrice-daily nonstop roundtrips commence from Rapid City, South Dakota, to Minneapolis (MSP).

For the year as a whole, passenger boardings accelerate 8.5% to 663,627 and revenues leap ahead by 17.4% to \$68.81 million. With expenses of \$63.61 million, the pretax gain is \$5.2 million and net profit totals \$403,841. Both profit lines are down from the previous reporting period.

Midway Connection flights commence in July **1995** as the company maintains its growing route network with a fleet of 39 Beech 1900s and 12 Brasilias. By mandate of the FAA, each of the latter must be withdrawn from service for inspection of their propeller blades, a process that is both expensive and inconvenient to scheduling.

Service from Arizona to Mexico is launched in August. In early October, two Beech 1900Ds are received and placed into Midway Connection service.

Enplanements soar 21.3% to 805,516 and revenues surge 20.3% to \$84.19 million. Costs, however, climb 31.1% to \$84.95 million and leave losses. The operating loss is \$758,000, but a large \$2.68-million net loss is also suffered.

The employee population stands at 1,250 in **1996**. GLA continues to offer "United Express" frequencies to 54 upper Midwest destinations. It also flies independently to 13 points in the Southwest and provides Midway Connection flights to another 13 markets on the East Coast.

The company begins to transition from FAR Part 135 to FAR Part 121; the upgrade to the more-stringent operational standard will not be simple. In the wake of the May **Valujet Airlines** disaster, this company, as several other similar airlines attempting to upgrade, becomes a target for increased FAA safety surveillance.

The fourth quarter is a traffic and financial fiasco as increased fuel costs, bad weather, and pilot defections to other airlines combine to force a major downturn. Disaster strikes during this period.

On November 19, "United Express" Flight 5925, a Beech 1900C-1 with 3 crew and 10 passengers, first stops at Burlington on a service from Chicago before departing to Quincy. At the latter point, a Beech King Air 90 with two crew and a Piper Cherokee, are both taxiing for takeoff from the uncontrolled airport.

Due to confusion in communications, the 1900C touches down just as the King Air begins its takeoff roll. Both planes collide, their wings interlock, and they skid 110ft. down the runway. Three people on the ground witness the event and rush to the scene, but are unable to open the jammed door of the commuter plane. All aboard, plus those in the King Air, perish. This is the first fatal U.S. commuter airline accident of the year and the first ever involving a scheduled airline at an airport operating without an FAA control tower.

At year's end, three Beech 1900Cs are returned to their lessors. Overall passenger boardings do jump 25.8% to 1,012,791 on 165,972 scheduled departures, but the net loss line skyrockets to \$12.8 million.

The company's 18th year picks up where the 17th left off—badly. Early in **1997**, three more Beech 1900Cs are returned to their lessors as the carrier experiences a major cash flow problem; service to 12 destinations is eliminated.

At the prompting of the FAA, GLA voluntarily suspends services for a period beginning on May 17. The action is taken after FAA safety inspectors from the Des Moines Flight Standards District Office find a number of maintenance and reporting deficiencies, as well as problems with improperly trained personnel and aircraft that are not airworthy. On top of the fiscal and operational problems—indeed, as part of them—**Midway Airlines (2)** announces that it will terminate its Midway Connection agreement on November 1.

Following the May 17 "voluntary" shutdown, the carrier's fleet is ferried to the company's maintenance center at Spencer, Iowa. There, company mechanics and FAA officials begin detailed aircraft inspections, completing a check of four Beech 1900Ds within four days.

After reaching a consent agreement with the FAA under which it admits to no wrongdoing, GLA, under tight government scrutiny, resumes flights to 5 cities over the Memorial Day weekend with 10 of its 53 aircraft.

On June 1, Jeffrey Redlin is appointed the company's new maintenance director. By June 11, GLA is serving a total of 21 cities (as compared to its 70-market network prior to May 17). Company officials now take the unusual step of criticizing the FAA, claiming that a shortage of aircraft inspectors is delaying its full return to service. The agency denies the charge and points out that serious maintenance problems continue to exist at the airline's Iowa repair base.

New services are inaugurated during the summer to Kearney, Nebraska, on July 10 and Lamar, Colorado, plus Goodland, Kansas, on August 1.

The Midway Connection arrangement duly ends on November 1.

Thrice-daily roundtrips are restarted in December from Aberdeen, South Dakota, to Denver. Passenger boardings this year plunge 33.3% to 674,844 (on 102,722 scheduled departures), due almost entirely to the carrier's temporary service suspension. Operating income totals \$83.8 million, but expenses ascend to \$97.4 million. Consequently, there is a \$13.6-million operating loss. The net loss worsens to \$18.3 million.

The fleet at the beginning of **1998** includes 42 Beech 1900s and 8 EMB-120s. Following the January termination of the "United Express" contract between **United Airlines** and **Mesa Air Group** covering the latter's services to Denver, United authorizes GLA to operate the routes on its behalf. Simultaneously, United and GLA enter into negotiations concerning shared codes and financial support for the regional's flights into the expensive Colorado airport.

At this point, Beech manufacturer Raytheon Aircraft and GLA enter into a refinancing arrangement. In exchange for a 10-year warrant to acquire up to a million shares of GLA common stock, Raytheon provides a \$4-million short-term loan, a \$5-million line of credit, and arranges the transfer of 15 Beech 1900Ds previously leased to Mesa.

While negotiations on code-sharing with United continue into the spring, **Mesa Air Group**, in April, turns over four Beech 1900Ds. On April 23, these allow GLA to inaugurate twice weekly "United Express" flights from Denver to Dodge City, Great Bend, Salina, and Worland, Wyoming. Thrice weekly flights from Denver are to Garden City, Liberal, Alamosa, Pueblo, Laramie, Rock Springs, and North Platte. Flights from Denver to Scottsbluff, Nebraska are four times per week.

GLA and **United Airlines** continue their talks on code-sharing and financial assistance. The airline, under its own identity, continues to offer 16 weekday flights between Springfield, Illinois, and Chicago (Meigs Field).

"United Express" flights commence on June 1 from Denver to Cortez, Telluride, Cody, Wyoming, Farmington, Santa Fe. On June 15, the carrier's eight daily roundtrips from Springfield, Illinois, to Chicago (Meigs Field) are converted to "United Express." Additionally, five weekday "United Express" flights are scheduled between Springfield and Chicago (ORD), with a reduced schedule on weekends.

By midyear, the company operates a fleet of 8 EMB-120s and 40 Beech 1900Ds to 68 airports in 13 states.

While en route from Denver on August 19, Flight 6105, a Beech 1900D, suffers the separation of the leading edge of a propeller that enters the cabin and causes a loss of pressurization. The aircraft returns to its point of origin and completes a safe emergency landing.

During the **Northwest Airlines** strike that begins on August 29, customers of the Minneapolis-based major are accepted by GLA without penalty or additional restrictions.

With "Northwest AirlinK" partner **Mesaba Airlines** shut down and unable to begin its planned services to the Michigan communities of Sault Ste. Marie and Alpena, GLA flies to the rescue on September 9. "United Express" Beech 1900 roundtrips, which the carrier had been scheduled to end in favor of Mesaba, are continued between those cities and Chicago (ORD) on weekdays through September 30, with twice-daily roundtrips on weekends. Plans to cease service to Pellston on October 7 in favor of Mesaba are shelved the next day as, instead, a second weekday and Sunday "United Express" EMB-120 roundtrip is introduced between that Michigan city and Chicago (ORD), also through September 30.

Pilots at **Northwest Airlines** ratify a new contract on September 12. As is the case with its major partner, **Mesaba Airlines** resumes "Northwest AirlinK" service over its route network on September 14, reaching 100% pre-strike status within two days.

A third daily nonstop "United Express" return service is introduced on October 1 between Dickinson, North Dakota, and Denver. With appreciation to GLA, **Mesaba Airlines** inaugurates new "Northwest AirlinK" turboprop services to Pellston, Alpena, and Saute St. Marie in early October.

On October 25, capacity on Great Lake's six daily "United Express" roundtrips between Bismarck and Denver is increased by 70% by the introduction of EMB-120 Brasilas. A third nonstop roundtrip "United Express" service is simultaneously added between Dickinson, North Dakota, and Denver. At the same time, thrice-daily EMB-120 "United Express" roundtrips commence from Chicago (ORD) and Decatur, Illinois.

The company's turboprop "United Express" service to Fargo is replaced on December 15 when **Atlantic Coast Airlines** introduces thrice-daily Canadair CRJ-200 "United Express" jetliner service to Hector International Airport at the North Dakota city from Chicago (ORD).

As the year draws to a close, GLA is providing "United Express" service to 72 airports in 13 states, with 8 EMB-120s and 40 Beech 1900Ds. On December 30, the maintenance base at Springfield, Illinois, is closed, its employees being offered positions elsewhere.

Customer bookings for the year surge 29.1% to 873,073. Revenues accelerate 36.1% to \$114.03 million, while costs are held to \$107.51 million. The operating profit is \$6.51 million and there is a \$2.72-million net profit.

Per an announcement made on February 26, 1999, the carrier drops its thrice-daily "United Express" roundtrip service on April 3 between Aberdeen and Denver. Traffic and revenues generated on the route have not been sufficient to cover expenses. Thrice-daily Beech 1900D "United Express" roundtrips begin on April 18 from Denver to Amarillo, Texas.

In response to a continuing crew attrition problem, Great Lakes, on August 26, is forced to suspend service from Minneapolis (MSP) to Fairmont, Minnesota, Devils Lake and Jamestown, North Dakota, Brookings and Huron, South Dakota, while also reducing frequencies to Chicago (ORD) and Denver. The carrier promises to reinstate these "United Express" flights by mid-September. The next day, the DOT, indicating that sufficient notice has not been given, orders service reinstated. Great Lakes, after an accord is reached with DOT, resumes twice-daily "United Express" service on September 9 to Mount Vernon, Fairmont, Devils Lake, Jamestown, and Brookings.

Due to the failure of the U.S. Congress to pass an anticipated law giving smaller airlines increased access to large airports, Great Lakes can obtain no additional slots at Chicago (ORD). Consequently, in December, service must be halted between that point and Quincy, Illinois.

Passenger boardings jump 21.1% to 1,058,000. Revenues climb 15.2% to \$131.37 million, while expenses are up 14.1% to \$122.66 mil-

lion. The operating profit grows to \$8.7 million, while net gain inches up to \$2.72 million.

Airline employment at the beginning of 2000 stands at 1,300, a 4% increase over the previous 12 months.

The number of daily "United Express" return services from Denver is significantly expanded on April 2: to Santa Fe (6 to 11), to Cheyenne (6 to 8), to Riverton, (4 to 5), to Sheridan, (4 to 5), to Grand Island, (3 to 4), and to Kearney, (3 to 4). All three one-stops to Pierre, South Dakota, become nonstops.

On June 8, the number of daily "United Express" roundtrips out of Denver is once more boosted: to Hayden/Steamboat Springs (3 to 4), to Colorado Springs (3 to 4), to Vail/Eagle (4 to 8, with 7 on weekends), to Telluride (2 to 3), and to Sheridan (5 to 6). Simultaneously, twice-daily return flights begin to Gunnison, Colorado.

At the end of the year, work is nearly completed on a new relationship with **United Airlines**. On February 8, it will change from a "United Express" partner to a full code-sharing affiliate. As such, it will be able to rename under its own independent identity and carry UA flight numbers in connecting passenger itineraries that include United/United Express flights. The regional will also be free to enter into code-sharing arrangements with other airlines, including **Frontier Airlines** (2) with which it is holding discussions.

GREAT LAKES COMMUTER: United States (1972–1974). GLC is established at Flint, Michigan, in the spring of 1972 to provide, in association with Chicago-based **Hub Airlines**, regularly scheduled passenger and cargo services to regional destinations. Employing Beech 99s, the company inaugurates daily roundtrip frequencies on May 1 over a network stretching from Traverse City in the north to Chicago in the south.

Operations continue apace during the remainder of the year, through 1973 and into 1974. On April 1, the company is sold to Cecil Pond's **Skystream Airlines**.

GREAT LAKES LINK. See **ALLIANCE AIRLINES**

GREAT NORTHERN AIRLINES: United States (1975–1980). The 20-year-old **Fairbanks Air Service** is renamed GNA in July 1975. Third-level Cessna commuter operations continue to interior destinations as well as to Fairbanks. The company also operates a large freighter fleet of upwards of 10 Curtiss C-46 on statewide all-cargo services, as well as four leased Lockheed L-188AF/PFs.

While attempting to stay on the runway after landing at Udrivik Lake on March 12, 1976, an L-188AF with three crew and a cargo of fuel oil slides off sideways. As a result of the accident, the right main landing gear collapses and the plane catches fire. The crew escapes before the aircraft is destroyed.

An L-188PF with six crew and nine passengers touches down short of the runway while on final approach to land in Alaska's North Slope on January 5, 1979; although the left landing gear and wing fail, severely damaging the aircraft, there are no fatalities.

Great Northern is purchased by and merged into **Alaska International Air** in September 1980.

GREAT NORTHERN AIRWAYS, LTD.: Canada (1965–1972). GNA is established at Calgary Airport in 1965 to offer scheduled and charter services within Alberta and flights commence with a single Fokker F.27-100.

Two DC-3s join the fleet in 1966 followed by a third in 1967, along with a de Havilland Canada DHC-3 Otter.

A DHC-6-100 Twin Otter and another Fokker, license-built in the U.S. by Fairchild and purchased from **Allegheny Airlines** (1), join the fleet on May 15, 1968. Less than a month after its acquisition, the new F-27J, with three crew and nine passengers, crashes on approach to Resolute Bay on June 12; there are no fatalities. **Allegheny Airlines** (1) supplies a replacement aircraft, which arrives on July 12.

A Douglas DC-4 is acquired from **Wardair Canada, Ltd.** in 1969. The replacement F-27J is damaged as the result of a bad landing at Inuvik Airport, Northwest Territories, on December 20; there are no fatalities. It will take over a month for repairs.

Barely out of the shop, the F-27J runs off an icy runway at Inuvik Airport on February 14, 1970; although no injuries are reported, the plane must now be written off.

The two Friendship accidents, coming within a 10-month period, cause significant adverse publicity and loss of business. The Twin Otter is withdrawn and the Otter, DC-4, and three DC-3s are sold in 1971.

The F.27-100, together with the carrier, stops flying in 1972.

GREAT PLAINS AIRLINES. *See* **METRO AIRLINES**

GREAT SIERRA AIRLINES: United States (1980–1981). GSA is set up at Oakland, California, in the late spring of 1980 to provide scheduled passenger and cargo services. Employing a pair of Piper PA-31-310 Navajos, revenue flights commence on June 27 linking the company's base with Truckee, Reno, and Lake Tahoe.

Unable to achieve economic viability, the company is forced to shut down in April 1981.

GREAT WALL. *See* **CHINA GREAT WALL CORPORATION**

GREAT WESTERN AND SOUTHERN AIR LINES, LTD.: United Kingdom (1938–1947). Great Western and Southern is formed on December 5, 1938 by the owners of **Railway Air Services, Ltd.** and Capt. Gordon Olley's **Channel Air Ferries, Ltd.** John Elliott is named chairman and initial capitalization is £100,000.

The new entrant purchases two RAS de Havilland DH 89A Dragon Rapides and a DH 84 Dragon and takes over certain of the southern routes of RAS as well as those of CAF, operating initially under the latter name. Among the more popular destinations from London are Deauville, Le Touquet; the Land's End–Scilly Isles service is also acquired.

The **Channel Air Ferries, Ltd.** identity is abandoned on March 24, 1939. Daily Liverpool to Brighton via Manchester, Birmingham, Bristol, Southampton, and Ryde flights begin on May 1. Four days later, company Dragon Rapides launch daily Bristol–Scilly service, via Exeter (on demand), Plymouth, and Land's End. Cardiff–Brighton via Bristol, Bournemouth, and Ryde operations start on May 8. Twice-weekly flights to Luxembourg begin on May 16. On May 26, four new services from London (Croydon) are offered four times per day to Deauville and Le Touquet, to Le Touquet via Brighton, and from London (Hendon) to London (Croydon) to Ryde.

War is declared on Germany on September 3 and all civil flying ceases. On September 25, the company receives government approval to restart Land's End–Scilly flights.

Total passenger traffic since start-up to March 31, 1940 is announced as 12,898. On May 5, the carrier is one of seven independents joining together, under auspices of the Secretary of State for Air, to form the **Associated Airways Joint Committee** for the wartime governance of domestic air transport operations and services.

Between May 22–June 2, the company's aircraft join those of other AAJC members in the evacuation of British Expeditionary Force troops from Dunkirk. On June 15, certain of the carrier's planes are sent to France via Exeter for additional evacuation duties, being released on June 24.

Scilly–Land's End mail flights are restarted in October. Bookings for the year total 3,252.

While operating a Scilly–Land's End mail flight, a DH 84 Dragon with a pilot and five passengers disappears on June 3, 1941 and is presumed shot down by the Luftwaffe. The service is suspended until October 27 and on November 4, is shut down again. The year's enplanements are only 1,375.

The ferry and mail flights are resumed in 1942, during which year boardings accelerate to 3,869.

Traffic figures for 1943 are not revealed, but enplanements for 1944 are 6,593.

The war in Europe ends on May 8, 1945 and, in July 1946, new routes are introduced from Cardiff to Weston-super-Mare and to Bristol. On August 1, the new **British European Airways Corporation (BEA)** is established. Bristol–Southampton flights commence on October 7. Passenger traffic for the final year soars to 12,306 passengers carried.

On February 1, 1947, **British European Airways Corporation (BEA)** acquires the aircraft, personnel, and services of all the former **Associated Airways Joint Committee** members, including Great Western and Southern thus end.

GREAT WESTERN AVIATION: United States (1990–1991). Rodney Skillman sets up GWA at Sioux Falls, South Dakota, in the fall of 1990 to provide scheduled daily passenger and cargo services to Rapid City. Fairchild Metro III roundtrips commence on October 30 and continue less than a year.

GREAT WESTERN AVIATION (PTY.), LTD.: Perth Flight Centre, Fautieroy Ave., Perth, Western Australia, 6105, Australia; Code GWA; Year Founded 1996. Great Western is established at Perth in 1996 to offer domestic passenger charters. Revenue flights begin with 1 each Beech 1900C and Beech King Air 100.

GREATER JAPAN AIR LINES COMPANY, LTD. See JAPAN AIR LINES COMPANY, LTD. (1) GREATER SOUTHWEST AVIATION: United States (1985). GSA is set up at Roswell, New Mexico, during the first week of January 1985 to provide scheduled passenger and cargo service to Santa Fe. Piper PA-31T Cheyenne flights commence on January 14, but cannot be maintained more than a few months.

GREEN BAY AIRLINES: United States (1978–1980). Terry Kunes purchases **Green Bay Airways** at Green Bay, Wisconsin, in January 1978 and continues its scheduled passenger flights to the state capital of Madison and other destinations under a changed corporate identity. Employing two Cessna 402s, the company inaugurates revenue schedules on February 20.

Operations continue until 1980, when the carrier is reformed and renamed **Central States Airline**.

GREEN BAY AIRWAYS: United States (1965–1978). GBA is established at Green Bay, Wisconsin, during the first quarter of 1965 to provide scheduled passenger and cargo flights to various intrastate locations. Employing Cessna lightplanes and Aero Commander 500Bs, the company inaugurates revenue services on March 2, linking its base with Sturgeon Bay, Ephraim, and Gills Rock.

Operations continue apace over the next 13 years, with the route network expanded to take in Land O'Lakes, Antigo, Eagle River, and Madison. In January 1978, the company is sold to Terry Kunes and renamed **Green Bay Airlines**.

GREEN HILLS AVIATION: United States (1978–1987). GHA is formed at Cannon Memorial Airport, Kirksville, Missouri, in the spring of 1978 to offer scheduled third-level Essential Air Service (EAS) passenger and cargo flights to Kansas City over routes formerly operated by the Missouri commuter **Horizon Air**. President Michael W. Mulford oversees a workforce of 11; his fleet comprises 2 Piper PA-32 Cherokee Sixes and 1 PA-31-310 Navajo. Revenue flights commence on April 4 and enplanements for the year total 4,687.

St. Louis and Quincy, Illinois, service is inaugurated in 1979 and Columbia in 1980.

Two additional employees are hired at the start of 1981, but traffic falls as a result of the PATCO air traffic controller's strike. A search for new flight equipment is begun and evaluations are made of the Piper T-1020 and T-1040. Bookings are down 21% to 3,698.

EAS flights continue apace in 1982–1986. However, cash flow difficulties become such that the third-level operator cannot afford to oper-

ate. When the carrier fails to fulfill its EAS obligation in May 1987, the FAA revokes its operating certificate.

GREEN MOUNTAIN AIRLINES: United States (1979–1980). GMA is established at Warren, Vermont, in March 1979 to provide scheduled passenger services linking the capital city of Montpelier with New York (LGA).

Daily Cessna 402 roundtrips are inaugurated on April 1 and continue until late 1980.

GREENAIR, A.S.: Turkey (1990–1995). Greenair is established at Istanbul in 1990 to offer nonscheduled passenger and cargo charters to regional destinations, including those in Eastern Europe. **Aeroflot Soviet Airlines** acquires shareholding and leases aircraft to the new entrant. Revenue operations commence with 2 Tupolev Tu-134A-3s and 3 Tu-154Ms. President Ali Sen's fleet does not change, but his employee population reaches 200.

In 1992, the company is flying passenger charters from Istanbul to Frankfurt, Nuremberg, Berlin, Milan, Paris (CDG), and London (LGW). Plans are made for the initiation of scheduled return services to Moscow and roundtrip flights to several Turkish domestic points are inaugurated.

The collapse of the Soviet Union and the reformation of **Aeroflot Soviet Airlines** into **Aeroflot Russian International Airlines (ARIA)** has a negative impact on Greenair, which loses an important supporter in the process. The company limps on until December 1994, when it closes down and returns all of its Russian-made equipment.

New investors now provide additional capital that allows the carrier to be reborn under the marketing name **ActiveAir, A.S.** at the beginning of 1995. A Tu-154M is chartered from **Vnukovo Airlines** and is employed to resume charters at the end of March. Additional Vnukovo Tupolevs are obtained and European flights continue through the end of October, when the company shuts down a second time—permanently.

GREENEVILLE AIR. See **GENERAL AVIATION (2) (GREENEVILLE AIR)**

GREENLANDAIR, A.S. See **GRONLANDSFLY, A.S./GREENLANDAIR, A.S.**

GRENZLAND AIR SERVICE, GmbH.: Airport Stadtiohn, Stadtiohn, 48703, Germany; Phone 49 (2563) 93230; Fax 49 (2563) 932320; Year Founded 1990. Grenzland is established at Stadtiohn in 1990 to offer executive and small group passenger charters to points within Germany and throughout Europe. Revenue flights begin and continue with a fleet that includes at least 1 each Cessna Citation II, III, and V and British Aerospace (Hawker) 800 bizjets.

GREYHOUND AIR, LTD.: Canada (1996–1997). Late in 1995, **Kelowna Flightcraft Air Charter, Ltd.** enters into an agreement with the Calgary-based Greyhound Transport Canada Corporation, Ltd. to provide capacity for a new air transport company designed to complement the bus operator's ground schedule with links from western Canada to Hamilton, Ottawa, and Toronto, Ontario.

Dick Huisman, president and chief executive officer of Greyhound Canada, indicates that the new carrier will take advantage of the existing infrastructure of Greyhound bus services for ticketing and marketing. It will feed passengers into the flight network from Greyhound bus services, offering fares up to 55% cheaper than the full economy fares of **Air Canada, Ltd.** and **Canadian International Airlines, Ltd.**

With the Dial Corporation of Tucson holding 66% shareholding, Greyhound Air is established on February 11, 1996. Greyhound Vice President John Munro is placed in charge and his fleet includes Kelowna's 2 B-727-25Cs, 3 B-727-22Cs, and 1 B-727-51C. As the carrier cannot operate with its own titles until it receives certification, the planes are given a generic red, white, and blue livery with billboard-sized telephone numbers on their sides.

In May, the low-cost Canadian start-up is prevented from commencing operations by the National Transportation Agency, which upholds a complaint regarding foreign ownership and control issues by **WestJet Airlines, Ltd.** The NTA's action is overturned by the Canadian Minister of Transport early in June, subject to several conditions: that the company remains in Canadian hands; that passengers are told Kelowna Flightcraft, not Greyhound, is providing the air service; and that the business arrangement between Greyhound and Kelowna remains in place. Under the deal, Greyhound will market the service, which will be operated on Kelowna aircraft by Kelowna crew. Kelowna will also be responsible for maintenance.

As a result, the Dial Corporation sells its majority stake in Greyhound Canada to a widely distributed group of Canadian investors, while retaining several profitable components. Consequently, the parent is weakened to the point that without a deep-pocketed backer, it will be unable to bear the inevitable start-up losses.

Operations by Kelowna on behalf of Greyhound finally get underway from Winnipeg on July 8; eight daily frequencies are offered to Vancouver, Calgary, Kelowna, Edmonton, Hamilton, Ottawa, and Toronto. Scheduled flights are increased to 12-per-week during the second week of July. A B-727-214 is added in late fall.

By late spring of 1997, Greyhound has lost C\$30.7 million (US\$22 million) on the enterprise. CEO Huisman, however, promises the media on June 30 that, if his concern can reach a break-even point, it will attempt to offer services through a second year.

These losses cannot be continued and another bus operator, Ontario-based Laidlaw, Inc., North America's largest school bus and ambulance operator, offers to take over the company's parent, Greyhound Canada Transportation Corporation, for C\$100 million—without the airline.

The decision having been taken to discontinue operations, the carrier's parent, Greyhound Canada, works out an arrangement on September 1 with **Canadian Airlines International, Ltd. (CAI)**. The major agrees to honor all reservations made before September 2 for travel after the new entrant's shutdown, subject to availability. Affected Greyhound passengers or their travel agents will be rebooked by September 15.

With transfer arrangements in place, the company, on September 4, makes a public announcement of the air service termination and while apologizing to its customers, advises them of the CAI assistance. It also pledges that a sister company operating under the Greyhound Canada Transportation umbrella will drive a bus service on routes similar to those now abandoned by the airline.

There is considerable dismay in Alberta over the termination, which many blame on Ottawa's harassment of the Greyhound ownership a year earlier. **Kelowna Flightcraft Air Charter, Ltd.** will contend that the experiment has been cancelled on the verge of success.

The last Greyhound service is completed at midnight on Sunday, September 21. The company's airport ticket counters are staffed for another five days to assist passengers with alternate travel arrangements. At the close of the workweek and with all employees paid, the Greyhound experiment in air transport is over.

GROGNET FLYING SERVICE. See **SHAWANO FLYING SERVICE**

GROMER AVIATION: United States (1980). Gromer Aviation, the FBO at Versailles, Missouri, establishes a scheduled airline division in January 1980. Equipped with a Piper PA-31-310 Navajo and a PA-34 Seneca, the new subsidiary inaugurates daily passenger and cargo flights on February 1, linking its base with Kansas City, Lake of the Ozarks, and Sedalia.

Revenue roundtrips can only be maintained until November.

GROMOV AIR. See **GROMOV FLIGHT TEST INSTITUTE/GROMOV AIR**

GROMOV FLIGHT TEST INSTITUTE/GROMOV AIR: Flight Research, Zhukovski-2, Moscow, 140160, Russia; Phone 7 (095) 556-2217; Fax 7 (095) 556-5334; Code LII; Year Founded 1994. Based at Zhukovski in the Moscow Region, Gromov is the former Soviet aviation research institution which, beginning in 1994, is allowed to fly international charters in order to earn hard currency. K. K. Vasilchenko is appointed general director and begins operations with a pair of Ilyushin Il-62s.

Flights continue in 1995–2000, during which years Leonid Lobas becomes CEO and the fleet is altered to include 2 each Yakovlev Yak-40s, Tupolev Tu-154As, Ilyushin Il-76TDs, and Antonov An-12s, plus 1 Il-18.

GRONLANDSFLY, A.S./GREENLANDAIR, A.S.: Nuuk Airport, P.O. Box 1012, Nuuk, DK-3900, Greenland; Phone 299 288 88; Fax 299 272 88; <http://www.greenland-guide.dk/gla/default.htm>; Code GL; Year Founded 1960. This carrier is formed at Nuuk on November 7, 1960 by a consortium that includes SAS (Scandinavian Airlines System) (25%), Royal Greenland Trading Co., A.S. (25%), Cryolite Mining Company Oeresund, A.S. (25%), and the Greenland Provincial Council (25%). With a mission to develop necessary aerial communications between the main communities on the island, the company is given the sole concession to operate domestic scheduled services, together with international and domestic charter and contract service flights.

Following a year of establishment in 1961, passenger, freight, and mail service is launched to six points on the island on May 1, 1962, employing a Consolidated PBY-5A Catalina and a de Havilland Canada DHC-3 Otter leased from Eastern Provincial Airlines, Ltd. The destinations served include the west coast communities of Nanortalik, Narssaq, Narssarsuaq, Julianehab, Groennedal, and Frederikshab.

In 1963–1966, three Douglas DC-4s are acquired and for support of services to remote areas, the fleet is expanded by two Sikorsky S-61N helicopters and an Aerospatiale Alouette III. Resupply flights are initiated, under contract to the USAF, to Distant Early Warning (DEW) Line points on Greenland and in eastern Canada. Ice patrol, search and rescue, and geological survey missions are also undertaken.

Airline employment is 65 and a total of 16,500 passengers are transported in 1967. In 1968–1969, a DC-6B is added for longer segments and two additional S-61Ns enter service. Bookings in the latter year total 36,163 and the workforce is 94.

In 1970, the employee population increases to 102 and passenger boardings jump 23% to 46,965. Enplanements total 52,800 in 1971 and the fleet remains static with 4 S-61Ns, 1 A-43, and 2 DC-4s.

In 1972, a second DC-6B is acquired, along with the fifth and sixth S-61Ns. Airline employment grows to 150 and passenger boardings jump 20% to 66,000.

Fifteen new employees are hired in 1973. Customer bookings accelerate 17% to 77,000 and cargo traffic is up by 9%.

The fleet is modernized in 1974–1977 as the DC-4s are replaced by three de Havilland Canada DHC-6 Twin Otters and a Sikorsky S-58T is also purchased.

The Douglas transports operate services from Sondrestromfjord to Thule USAF base, Narssarsuaq in southern Greenland, and Kulusuk on the east coast. S-61N helicopters operate scheduled flights from Godthab and Sondrestromfjord to 15 west coast destinations while S-58Ts fly out of the east coast city of Angmagssalik.

Chairman Erik Hesselbjerg and President Jorgen Hoy oversee 250 workers in 1978 and possess a fleet comprising 2 DC-6Bs, 3 DHC-6s, 8 Sikorsky S-61Ns, 4 S-58Ts, 5 Bell 205B, and 3 Bell 206 JetRangers. Orders are outstanding for a DHC-7.

Airline employment rises during the early 1980s to reach 360 in 1983–1984. A total of 19 Greenland destinations are now served along with the USAF contract service flights. The fleet by now has received two DHC-7-103s *Papikkaaq* (Big Tail) and *Nipiki* (Silent), allowing the DC-6Bs to be retired.

During the spring of the latter year, three S-61Ns are sold to **Resorts International Airlines** for use on shuttle flights between New York City

and Atlantic City. Paid for with funding from the EEC, a new airport is opened at Ilulissat, above the Arctic Circle, in August 1984. Enplanements in that year total 93,366.

Employment grows by 9.6% in 1985 to 338 and the fleet now comprises 2 DHC-7s, 3 DHC-6s, 1 Piper PA-31T Cheyenne, 1 Beech King Air, 4 S-61Ns, 3 Bell 206B JetRangers, and 6 Bell 212s. The carrier's twenty-fifth anniversary is celebrated. Passenger boardings rise 18.5%, up to 114,559.

A Piper PA-31-310 Navajo is acquired in early 1986 and, in cooperation with **Flugfelag Islands, H.F. (2)/Icelandair**, a route is opened from Godthab to Reykjavik.

In November, the carrier, again in partnership with **Flugfelag Islands, H.F. (2)/Icelandair**, begins service to Copenhagen from Narsarsuaq via Keflavik.

Enplanements total 122,745 and, on revenues of \$40.4 million, a \$3.3-million operating profit is earned. The net profit is \$2.4 million.

Airline employment grows 8.6% in 1987 as Jan Rasmussen succeeds Claes Piper as president. The company's helicopter operation adds a Bell 212 and an Aerospatiale AS-350B-1, as plans are made to replace the five Bell 206Bs. On September 11, a Sikorsky S-61N crashes during an external-load mission.

Passenger boardings jump 26.5% to 167,000 and freight increases 59.6% to 1.69 million FTKs. Revenues ascend 50.1% to \$60.4 million and with costs kept low, the operating profit is \$8.3 million with net gain reaching \$5.6 million.

During the first quarter of 1988, a Sikorsky S-61N is purchased from **KLM Helikopters, B.V.** to replace the unit destroyed the previous fall. The company's S-61N fleet now stands at seven as additional Bell 212s are acquired. A third DHC-7-103 *Minniki* (Short Lander) arrives in May and a second AS-350B-1 joins the fleet during the summer.

Operations continue apace in 1989–1990, during which years the carrier operates five S-61Ns thrice-weekly roundtrips from Kangerlussuaq on the east coast to Holsteinsborg on the east coast. Facing losses of DKr 15 million (US\$2.52 million), the company, on November 15 of the latter year, sells its S-61 fleet and shuts down several scheduled services.

Three more AS-350B-1s enter service in 1991 to replace the larger helicopters that have been withdrawn. Losses of an undisclosed amount continue to be suffered.

In 1992, Jonathon Mortzfeldt becomes chairman with Oje Bjerregaard as the new president. The fleet now comprises 1 Beech King Air 90, 5 Bell 206B JetRangers, 6 Bell 212s, 3 DHC-7-103s, 3 DHC-6-100s, 1 Cessna Citation II, 2 Aerospatiale AS-350B-1 Ecureuils, and 3 Sikorsky S-61Ns. When the Thule Air Base (closed to civil traffic) is shut down on October 1, a new civilian airport, named Pituffik, is built in its place.

Airline employment in 1993 stands at 470. Regularly scheduled services are continued within Greenland and to and from Denmark, Iceland, and Canada. On behalf of Greenlandair, **First Air, Ltd.** of Canada begins weekly B-727-90C services linking Pituffik with Ottawa via Kangerlussuaq, Iqaluit, and Montreal (YUL). Incoming passengers to Pituffik are shuttled to Qaanaaq, 90 miles south, by a Bell 212.

The workforce is cut to 360 in 1994; however, the fleet is increased by the addition in the fall of a fourth DHC-7, a Dash-102 from Abu Dhabi named *Sapangaq* (Pearl). Although the rotary wing fleet is reduced by one JetRanger and one Bell 212, it is increased by one S-61N and two AS-350B-2s.

Operations continue apace in 1995 from the nation's eight airfields. One of the 20-year-old Twin Otters is assigned to perform thrice-weekly ice reconnaissance missions on behalf of the Danish Meteorological Institute while the other flies charters.

For three months in 1996, a Twin Otter is chartered by the U.S. National Aeronautics and Space Administration (NASA).

Greenlandair and **Flugfelag Islands, H.F. (2)/Icelandair** collaborate with Greenland Tourism to increase the number of visitors to Greenland during the summer. Between mid-June and mid-September, a Fokker 50 honors this commitment with four weekly roundtrips between Narsarsuaq, South Greenland, and Reykjavik.

A total of 237,000 passengers are transported during the 12 months and 14.43 million FTKs are operated. Revenues of DKr 459.8 million are generated.

Peter Finch, formerly with **SAS (Scandinavian Airlines System)**, becomes president on May 1, 1997. The Icelandair/Greenland Tourism service is operated during the summer. This year, a fifth weekly frequency is provided by an **Atlantic Airways Faroe Islands, A.S.** British Aerospace BAe 146-200A.

Enplanements for the year total 251,000 and freight traffic grows to 16.28 million FTKs. Revenues ascend to DKr 491.2 million.

A new arrangement is entered into with **Flugfelag Islands, H.F. (2)/Icelandair** in June 1998. Flights previously operated from Kan-gerlussuaq and Narsarsuaq to Copenhagen flown with a B-727-90C wet-leased from **First Air, Ltd.** of Canada will now be operated under a wet-lease agreement with Icelandair. A B-757-208ER, painted in Greenlandair livery and christened *Kunuuunguaq* (Little Knud) in honor of the Danish explorer Knud Rasmussen, is dedicated to the arrangement.

Passenger boardings inch up 1% to 252,000, while cargo jumps to 20.34 million FTKs. Revenues increase to DKr 572.6 million.

By the start of 1999, airline employment has been increased by 5.6% to 436. Customer bookings surge to 282,000 and freight traffic rises to 28.11 million FTKs. Operating revenues climb to DKr 610.8 million.

A total of 493 are employed by the company at the beginning of 2000. In cooperation with **Flugfelag Islands, H.F. (3)/Air Iceland**, twice-weekly return service is launched from Ilulissat to Kulusuk on June 12. At Kulusuk, Greenlandair customers are able to connect with the Air Iceland service to Reykjavik.

While en route from Narssarsuaq to Copenhagen on November 15, Flight 786, the B-757-208ER *Kunuuunguaq* with 97 aboard, is hit by lightning that burns through the fuselage skin causing smoke from partially burned insulation. An emergency landing is made at Kastrup Airport with the power plant ablaze. Firefighters quickly extinguish the fire and no injuries are reported among the passengers, who are evacuated by chute.

GROSS AVIATION: United States (1972–1973). In an arrangement similar to that between Eugene Aviation Services and **West Coast Airlines**, Gross Aviation, a Tacoma-based FBO, contracts with the Point Orchard commuter **Cross Sound Commuter** in 1972 to fly regularly scheduled passenger and cargo services to Seattle and Olympia. The arrangement lasts only a year.

GROSSMAN AIR SERVICE, GmbH.: Brunnerstrasse 170, Vienna, A-1210, Austria; Phone 43 (1) 292-3456; Fax 43 (1) 292-3456-18; Year Founded 1991. GAS is set up at Vienna Airport in 1991 to provide executive and small group passenger charters worldwide.

Within nine years, the company employs eight pilots and operates one each Learjet 35A Century III and Canadair 600 Challenger from Vienna and one each Cessna 500 Citation I and C-414 Chancellor from Salzburg.

GSC AVIATION: 120 Billy Diehl Road, Teterboro, New Jersey 07608, United States; Phone (201) 229-1988; Fax (201) 229-1252; Year Founded 1993. GSC is founded at Teterboro in 1993 to offer executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean. Two pilots are employed and the small concern begins revenue operations with a single Canadair 600 Challenger.

GTI HAVAYOLLARI, A.S. AIRLINES: Turkey (1996–1997). Owned by Hassan Cebi, GTI is established at Antalya on September 26, 1996, to offer passenger charters from that city to northern Europe. Abdulkadir Kolot is appointed managing director and he assembles a fleet of six Airbus Industrie A300B4-103s. In October, these inaugurate flights to Amsterdam and Dusseldorf.

Unable to achieve economic viability, the company shuts down within a year.

GUAM MARIANAS AIR: United States (1990–1993). Richard McCord forms GMA at Tamuning, Guam, in 1990 to offer scheduled interisland services to Rota and Saipan with three Casa C-212-200 Aviocars. One C-212 is withdrawn in 1991.

Operations continue into early 1993.

GUERNSEY AIRLINES, LTD.: United Kingdom (1978–1989). GAL is formed in April 1977 as an associated of East Midland-based **Alidair, Ltd.** offering charter and air taxi services. In November 1978 the company becomes a subsidiary of **Alidair, Ltd.**

A chartered Vickers Viscount 735 with 4 crew and 47 passengers is destroyed as the result of a bad landing at Kirkwall on October 25, 1979; there are no fatalities.

Scheduled passenger service is initiated over a Guernsey–Cambridge and Manchester route on April 1, 1980. During the summer season, the network is expanded to link Guernsey with Jersey and Jersey with Cambridge, Gloucester, Newcastle, and Prestwick. Chairman R. J. Dadd and Managing Director T. G. Jones employ 40 workers and fly both a Vickers Viscount 700 and a Shorts 330.

Guernsey–London flights begin on April 1, 1983. The London-based development company Jadepoint, Ltd., which had purchased **British Air Ferries, Ltd.** on March 1, acquires the carrier in August. Robin Pesskin is named chairman of both airline companies with Alan Weiner as managing director.

Overall passenger boardings for the two carriers, which are allowed to continue operations under their previous identities, total 99,658 on the year.

BAF/GA enplanements skyrocket to 300,000 in 1984. Airline employment for the two reaches 1,200 in 1985 as their bookings soar to 750,000.

In 1986, the GAL fleet includes 1 Vickers Viscount 802, 1 Viscount 806, and 2 Shorts 330s; scheduled services are maintained from Guernsey to Aberdeen, Edinburgh, Glasgow, Newcastle, Manchester, Humberside, Gloucester, Cambridge, Southend, London (LGW), and Manston.

Having undergone an ownership change in October 1987, the third-level carrier has no traffic or financial statistics to release for the year.

The workforce is increased by 2% in 1988 to 51 and the old fleet is replaced by 2 Shorts 360s. Enplanements for the year total 126,000 and revenues are \$9.6 million. The latter generate an operating profit of \$2 million and net gain of \$350,000.

In April 1989, the company is sold to International Leisure Group, Ltd., parent of **Air Europe, Ltd.**, for £3.9 million in cash. In July, it is merged with **Connectair, Ltd.** to form **Air Europe Express, Ltd.**

GUERNSEY AIRWAYS, LTD.: United Kingdom (1934–1945). GA is formed on November 24, 1934 by **Jersey Airways, Ltd.** owner W. L. Thurgood with support from Whitehall Securities. On June 9, 1935, thrice-daily (except Wednesday) services are initiated Guernsey–Jersey with the Saunders-Roe Windhover, christened *Windhover*. The operation ends for the winter on November 19, after a half-year that sees 387 passengers carried.

Another amphibian, a Saunders Roe Cloud, christened *Cloud of Iona*, is obtained in late spring 1936 and is also placed on the Jersey route, with a stop at Alderney. The *Cloud of Iona* is lost off Jersey on July 31 (10 dead) and the service is suspended. The year's bookings are at 1,877 before the tragedy. Summer services resume in 1938.

On May 5, 1939, a new airport is opened on Guernsey. Simultaneously, both **Jersey Airways, Ltd.** and Guernsey Airways, Ltd. begin new services from the island to Alderney, Southampton, London, and Jersey.

The DH 86 *The Belcroute Bay* initiates mail flights from Southampton–Guernsey on May 8. The company starts flying mail Jersey–Guernsey on May 22. On May 27, both Jersey and Guernsey Airways open DH 86 services from Guernsey to Exeter and Brighton.

Mail flights Guernsey–Jersey commence on July 10. On July 31, Thurgood sells his interest to Whitehall Securities' nonflying holding company

Channel Island Airways, Ltd., which now becomes half owner along with Great Western Railway (25%) and Southern Railway (25%).

On September 3, war is declared on Germany and all civil flying ceases. Bookings for the year have totaled 11,088. Working closely with **Jersey Airways, Ltd.** as the result of the railroad investment, limited interisland services are resumed on October 24 as well as flights from Shoreham to Jersey and Guernsey.

When a number of independent carriers band together on May 5, 1940 to form the state-sponsored **Associated Airways Joint Committee** for the wartime governance of domestic air operations, Guernsey, as **Jersey Airways, Ltd.**, is allowed to remain functional outside the organization. The war situation becomes so serious that, on June 15, Channel Islands services are suspended and all company aircraft are transferred to Exeter. In cooperation with **Jersey Airways, Ltd.**, Guernsey DH 86s assist in the evacuation of 319 people from the islands between June 19–21.

The war in Europe ends on May 8, 1945 and, on May 26, officials from the Guernsey and Jersey companies fly to the Channel Islands in a DH 89A (leased from **Railway Air Services, Ltd.**) to plan coordinated service resumption.

On July 7 and 12, two DH 89As are delivered for use by both carriers. On July 16, the two begin daily early morning cargo and newspaper flights to the islands from London (Croydon); on July 18, weekday frequencies are again offered between Jersey and Guernsey.

On September 1 the railroad owners consolidate the two carriers into one, giving it the **Channel Islands Airways, Ltd.** designation.

GUINEA AIRWAYS (PTY.), LTD.: Australia (1926–1960). To exploit the air transport possibilities of the gold mining region of New Guinea's Bulolo River, local administrator Cecil J. Levin, together with several investors, forms the New Guinea Gold No-Liability Company at Aldelaide in May 1926. On December 30, a government-surplus de Havilland DH 37 is purchased from the small syndicate that owned it.

During the first week of January 1927 New Guinea Gold No-Liability Company is renamed **Guinea Gold Air Service (Pty.), Ltd.** New Guinea's first bush pilot, Andrew E. "Pard" Mustar and his mechanic, A. W. D. "Mull" Mullins, are engaged to oversee shipment of the company's airplane by sea to Rabaul, New Britain. Reassembled, the DH 37, christened *Old Faithful*, is flown to the coastal strip at Lae on March 30, from whence it will operate to the goldfields in the Edie Creek area of the Mandated Territory. Following a proving flight, regular A£25 per person Lae–Wau air service begins on May 18.

Prices drop somewhat following the June 23 launch of competing service by a DH 4 of **Bulolo Goldfields Aeroplane Service (Pty.), Ltd.**, started by another soon-to-be-legendary flyer, Raymond "Battlin" Parer. Additional pilots and mechanics join the rival operators during the year.

To comply with an ordinance against no-liability companies, New Guinea Gold in December is reformed into **Guinea Airways (Pty.), Ltd.**, with share capital of A£20,000.

On Muster's advice, Levin purchases a Swedish-built Junkers W-34 in 1928, placing it in service on the gold field run in April. Four additional W-34s are acquired in 1929 while rival Parer adds a DH 9C.

Levin places orders for two Junkers G-31s in 1930. Equipped with Pratt & Whitney Hornet engines, the stretched German aircraft have specially enlarged cargo holds (24' x 6.5' x 5.9'). A W-34 crash-lands at Wau in March.

In 1931, with their two G-31s and with another pair owned by Bulolo Gold Dredging, Ltd., Guinea Airways pilots, under Muster's direction, undertake the world's largest air freight operation to date, the delivery of three huge complete dredgers to the goldfields. The airlift began on March 31, continues throughout the year, along with regular charter flights by the W-34s.

Meanwhile, on May 22, the first fatality in New Guinea air transport occurs when Les Trist, flying one of the W-34s, crashes into a mountain in the Wampit Gap.

The dredge-carrying airlift ends early in 1932 and the first of the big, re-assembled machines begins operation on March 21; since the project began, Guinea Airways aircraft have ferried 3,947 tons of associated freight. In contrast, during a similar period, all of the airlines in France together carry only 1,508 tons; the U.K., 649 tons; and the U.S., 513 tons of goods.

The carrier continues to chalk up stupendous freight records during 1933–1936 while adding additional planes and other such noteworthy pilots as William Wiltshire and Ian Grabowsky, the latter succeeding Mustar as 6M in 1934. Several smaller independents are acquired, including another carrier started by "Battlin" Parer, **Pacific Aerial Transport (Pty.), Ltd.** In 1933, Guinea Airways starts an unsubsidized Lae–Port Moresby service, providing connections to ships bound to and from Australia.

On February 22, 1937, 10-stop Adelaide–Darwin service is begun.

A new Lockheed Model 10A Electra arrives from the United States on June 23 and enters operations.

On August 16, weekday-only Adelaide–Sydney Electra flights are started via Mildura, Hay, and Cootamundra. Passenger and mail traffic on the Australian routes increases in 1938 and a new Lockheed Model 14H Super Electra enters service on March 6.

In August, the carrier receives its first government subsidy for the maintenance of its services. A total of 1,857 supply flights are completed in the year.

On January 13, 1939, the Super Electra crashes near Katherine River in Northern Australia. The aircraft is transporting mail from Great Britain posted between January 5–7 addressed to destinations in Northern Australia, Western Australia, Victoria, and Tasmania. Although most of the recovered letters and postcards are wet, they are forwarded.

DH 84s now join the fleet and the network from Adelaide is widened by the acquisition of several services formerly provided by **McRobertson-Miller Airlines (Pty.), Ltd.**

The Electra and all aboard are lost on December 18 when it crashes 20 miles south of Darwin. A total of 8,804 tons of freight is carried on the year.

The RAAF commandeers the carrier's two DH 84s in 1940. These are replaced by two Lockheed L-14Hs purchased from **Aer Lingus Irish Airlines** and flown to Australia from Ireland in only 65 hours.

Following the Pearl Harbor attack and associated December 1941 raids, Guinea Airways aircraft evacuate hundreds of women and children from interior New Guinea towns, villages, mines, and missions to Port Moresby for evacuations to Australia by ship.

A Japanese raid on Lae on January 21, 1942 destroys three of the company's four G-31s (the fourth is impressed into the Royal Australian Air Force) and brings its New Guinea operations to a halt; several single-engine de Havillands and Junkers escape across the Torres Strait.

On February 14, an L-14H is destroyed in a crash at Cairns, Queensland. The other is lost in a Northern Territory crash on February 21. In a report released in June, the company reveals that between February 1929 and February 1942 a total of 105,314 passengers and 73,480 tons of freight have been carried.

In November and December, employing two replacement Lockheed L-14H Super Electras and two L-18 Lodestars received from the Allied Directorate of Air Transport, the carrier participates in the air drop of supplies ("Bully Beef Bombers") to Allied troops during the Buna-Sanananda-Gona campaign. Following Buna's recapture, two company L-10A Electras reestablish service to that point from Port Moresby.

Service in New Guinea during 1943–1945 is sporadic; that in Australia continues, primarily in support of the Allied war effort. The first Douglas DC-3 is acquired in January 1945.

After lengthy negotiations and the payment of A£20,000, the new state carrier **Trans-Australian Airlines (Pty.), Ltd.** acquires the carrier's Adelaide–Darwin route on January 11, 1947. Meanwhile, Guinea Airways itself comes under the control of **ANA (Australian National Airlines, Ltd.)**; aircrews are administered by the larger line and all administrative, engineering, maintenance, and reservation work is performed under contract.

On January 22, an L-14H is lost in a crash at Schofield, New South Wales.

During the decade **1948–1958**, a small regional DC-3-oriented network centered on Adelaide is continued, along with assorted diversified activities under a new parent, Guinea Holdings, Ltd. Little is heard of the carrier and its glory days are only a remembrance.

Guinea Holdings is purchased by Ansett Transport Industries in July **1959** and on January 17, **1960**, the pioneer airline is renamed **Airlines of Southern Australia (Pty.), Ltd.**

GUINEE AIR SERVICE, S.A.: BP 1515, Conakry, Guinea; Phone 224 441 747; Fax 224 442 761; Code GI; Year Founded 1992. Buoh Jijohn Kah establishes GAS at Conakry in **1992** to offer charter domestic passenger and cargo services. Operations begin with a single Antonov An-24V wet-leased from **Kazair (Kazakhstan Airlines)** and two Piper PA-23 Aztecs.

Flights continue in **1993–1994**.

While taking off from Sambailo on January 26, **1995**, the chartered Kazair An-26V with five crew and two passengers overruns the runway, fails its lift off, and collides with a line of trees; although the aircraft is damaged beyond repair, there are no fatalities. Replacement aircraft are ordered.

Flights continue without further incident during the year and into **2000**. During these years, Ibrahim Kouyate is appointed president and he continues revenue services with 2 each An-26Vs and Aztecs.

GUIZHOU AIRWAYS COMPANY, LTD.: 20 Shengfu Road, Guiyang, Guizhou, 550001, China; Phone 86 (851) 584-7641; Fax 86 (851) 584-7672; Code G4; Year Founded 1991. Founded by the Guizhou Government at Guiyang in **1991**, this local service airline begins revenue flights within its namesake province late in the year with 2 Xian Y-7-100s (Chinese made Antonov An-26s).

A Harbin Yu-12 II is acquired in **1992**. A third Y-7-100 is delivered in **1993** as President Ma Yongxing continues operations in this year and the next.

Enplanements total 174,750 in **1995**.

Airline employment stands at 300 in **1996** and the fleet now includes 1 Yu-12 and 4 Y-7-100s. Customer bookings fall 16.5% to 150,000. Flights continue in **1997**.

One Y-7-100 is removed from the fleet list. During the first quarter of **1998**, the regulatory body **CAAC (The General Administration of Civil Aviation of China)** significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered around major carriers. It is hoped that Guizhou will be taken over by **China Southern Airlines Company, Ltd.** by 2001.

The acquisition proceeds more quickly than envisioned. As early as April, a 60% stake is acquired by **China Southern Airlines Company, Ltd.**

Enplanements in **1999** total 234,000 while 419,000 FTKs are operated.

The company continues to fly scheduled domestic passenger and cargo in southern China. Operations are enhanced by the acquisition of a Boeing 737-31B leased from its parent.

GUJARAT AIRWAYS, LTD.: India (1994–1999). This new regional is established at Ahmedabad on February 2, **1994**. Owned by Gujarat State Fertiliser Company, the Torrent Group, Indamer, and Bombay's Concept advertising agency, the company faces an initial delay in undertaking services. Nevertheless, Chairman G. N. Patel and Managing Director R. C. Shama recruit a workforce of 130 and place orders for 4 Beech 1900Ds.

Following delivery of the first two turboprops, scheduled services are inaugurated on July 25, **1995**, linking the airline's base with the Gujarat state destinations of Bombay, Bhavnagar, Bhuj, Diu, Jaipur, Keshod, Porbandar, Pune, and Vadodara.

Services continue in **1996–1997**. The country's largest regional airline now also flies to Maharashtra, Madhya, Pradesh, Andhra Pradesh,

Karataka, and Tamil Nadu. On July 17, **1998**, new return frequencies are inaugurated between Bombay and Hubli.

The second pair of Beech 1900Ds arrives in June **1999** and allows the company to launch flights from Bombay to Jamnagar and Kandla and from Pune to Hyderabad. Due to what are termed "unavoidable circumstances," all flights originating from Bombay, Hubli, Bangalore, and Coimbatore are withdrawn on October 8 as the carrier seeks \$10 million in additional financing.

The funds are not forthcoming and the company joins a long list of Indian private airlines that have failed during the decade.

GULF AIR: United States (1986–1989). The one-time **Music City Airways** is transferred from Tennessee to New Iberia, Louisiana, early in its career to support the oil industry with contract charters employing Convair CV-240s and, two years later, a Lockheed L-188C Electra.

The reborn Gulf Air Transport shortens its name to Gulf Air and moves to a new hub at Philadelphia in **1986**. Its fleet expanded with four more B-727-100s, the carrier now undertakes contract flights for tour operators as well as federal government agencies.

During **1987**, permission is received from the DOT for the inauguration of transatlantic tour flights. A number of Boeing 727-200s are leased, one of which is employed to operate subcharters during the summer on behalf of **Air Malta, Ltd.**

In this first full year of operations under the new name, Gulf Air transports a total of 377,000 passengers. Revenues reach \$38.2 million and expenses are kept low enough to allow profits of \$927,000 (operating) and \$65,000 (net).

Airline employment is increased by 19.1% in **1988** to 417 and the fleet now includes 3 B-727-100s and 4 B-727-200s, the latter over-water equipped.

In May, two B-727-200s are wet-leased to **Air Malta, Ltd.** for its seven-month summer tour season. In June, the remaining two B-727-200s start weekly charter flights from Boston to the Azores. Construction is started on a new operations base approximately one mile away from the old one.

Passenger boardings increase 51.3% to 644,735 and revenues shoot up 65.3% to \$63.2 million. Expenses, however, skyrocket 76% and create an operating loss of \$2.5 million. The net loss is half a million dollars less.

The airline plans to begin overseas tours in early **1989**, but finds that it must change its name, which is the same as that operated by the Gulf States consortium carrier. When GAT announces its desire to be known as Sun International Airlines, this decision is challenged by **Sun Country Airlines** as being too close to its own.

Finally, on May 1, executives elect to honor the memory of Orvis Nelson's pioneer Pacific supplemental. Gulf Air becomes **Transocean Airways** and signs an agreement with the ILFC for the charter of two DC-8-71s.

GULF AIR AVIATION, LTD. See AIR BC, LTD.

GULF AIR COMPANY, G.S.C.: P.O. Box 138, Manama, Bahrain; Phone 973 322 200; Fax 973 330 466; <http://www.gulfairco.com>; Code GF; Year Founded 1973. Interests in certain of the Gulf States enter into negotiations with **British Airways, Ltd.** (2) in late 1972 for purchase of the British carrier's longtime shares in the two carriers **Gulf Aviation, Ltd.** and **Gulf Helicopters, Ltd.**

An arrangement is arrived at in **1973** as the talks are successfully completed.

In anticipation of the forthcoming sale, Gulf Aviation, Ltd. is renamed Gulf Air Company, a new livery and logo are adopted, and the present headquarters are established. With **Air Afrique, S.A.** and **SAS (Scandinavian Airlines System)**, GAC is one of the world's three multinational airlines.

A total of 240,720 passengers are carried on the year.

Bahrain, Oman, Qatar, and the UAE, each with 25% shareholding, take over formal control of GAC on April 1, **1974**, along with **Gulf**

Helicopters, Ltd. and four VC10s leased from **British Airways, Ltd.** (2). The latter are employed to continue flights to London, Beirut, Karachi, Cairo, and Bombay. A BAC 1-11-409 is also placed into service, joining two BAC 1-11-432s already flying with the new concern.

The Gulf Hotel is constructed in Muscat as part of the airline's hotel operations. Orders are placed by the multinational for two Lockheed L-1011 TriStar 200s.

Passenger boardings soar 52.8% to 509,827 and freight traffic skyrockets an almost unbelievable 854%, with 8.84 FTKs operated.

The workforce totals 2,762 in 1975 and the fleet includes 10 aircraft.

Services are inaugurated to Amman, Basra, Baghdad, and Athens. Orders are placed for two additional L-1011-200s as a fifth rented VC10 joins the fleet. In October, the two BAC 1-11-432s and BAC 1-11-409 are re-registered in the Sultanate of Oman.

Cargo traffic is up 170% and enplanements jump 46% to 650,278.

Airline employment in 1976 is increased a whopping 81% to 5,000. Four L-1011 TriStar 200s in striking color schemes are received beginning in January and orders are placed for five Boeing 737-2P6As.

Outfitted with 40 first-class seats and a 10-seat lounge, the first L-1011, nicknamed a "FiveStar TriStar," enters service on April 1 from London to Bahrain.

Passenger bookings accelerate 47% to 960,253 and cargo is up 71.3%.

In May 1977, pooled flights commence with **British Airways, Ltd.** (2) between the Gulf states and London. All five B-737-2P6As are delivered, the first in June and the VC10s are gradually returned to Britain.

Troops, led by Qatar's crown prince, overpower a Lebanese hijacker, who steals a VC10 with 68 aboard en route from London to the UAE, on June 29, and diverts it to Oman.

Later in the year, a Lockheed L-1011 TriStar 1 is leased from **Trans World Airlines (TWA)** for three years. Removal of the chartered VC10s continues. Enplanements pass the million-mark for the first time, totaling 1,136,251.

Airline employment at Managing Director Salim Bin Nassir's carrier totals 3,500 in 1978. A treaty is signed by the four national owners at Doha, Qatar, under which the carrier is registered in each country as a company, the aircraft are registered in Oman, and the head office remains in Bahrain. It is further confirmed that the board of directors shall consist of three representatives from each nation, with annual rotation of the chairmanship alphabetically by country. Approved and subscribed capitalization is established at 28 million Bahrain dinars, which are divided into 280,000 shares, each worth 100 dinars. The 4 nations own 70,000 shares each.

On June 28, the two BAC 1-11-432s and single BAC 1-11-409 are sold to **British Island Airways, Ltd.** Service is opened to Ras Al Khaimah; L-1011-200 flights commence to Bangkok and Hong Kong, and B-737-2P6A operations are started to Jeddah.

Passenger boardings rise 22.3% to 1,463,000 and freight grows 17.6%.

Two more B-737-2P6As are placed in service during 1979, while the L-1011-200s are reconfigured from 211 to 231 seats.

Cargo is up 44.5% and passenger traffic jumps 24.8% to 1,826,000.

Freight skyrockets 87.4% in 1980 to 104.87 million FTKs, while passenger boardings advance 14.2% to 2,086,000. The workforce is unchanged and remains at 2,900 employees. Airline employment grows in 1981 to 6,198, although only 4 Gulf nationals hold management titles.

An award is received from the British Safety Council and is accepted by Ali Al-Malki, who now becomes president/CEO. A worldwide record 99.8% technical dispatch reliability rate is claimed for the carrier's B-737-2P6As.

The light aircraft division is spun off into a new subsidiary, **Oman Aviation Services, Ltd.**, to provide domestic flights in Oman and regional Middle East charters. OAS's initial fleet comprises 3 F.27s, 2 de Havilland Canada DHC-6s, and 2 Beech 99s.

Passenger boardings for the parent increase 10.8% to 2,311,000, but freight dips 18.6% to 85.5 million FTKs. A profit of \$31 million is reported.

Airline employment drops 17% in 1982 to 4,400.

Karachi airport security officials arrest Palestinian "potential hijacker" Yusuf Yusufi while he is boarding a company aircraft on January 2.

Services are added or restarted to Athens, Tunis, Larnaca, and Nairobi. Unable to obtain permission to fly in B-747s from the Philippine government, the carrier suspends service to Manila. Meanwhile, a former **All-Nippon Airways Company, Ltd. (ANA)** Lockheed L-1011 TriStar 1 is chartered from GPA. An extensive training program is inaugurated for Gulf state nationals.

Passenger bookings accelerate 14% to 2.2 million and a net \$20-million profit is posted. The workforce shrinks in 1983 to 4,193 as a second ex-ANA L-1011 TriStar 1 is leased.

While en route from Karachi to Manama, Bahrain, via Abu Dhabi on September 23, Flight 771, a B-737-2P6A with 6 crew and 105 passengers, crashes and burns in the mountains 50 km. NE of the intermediate stop; there are no survivors. Arriving at the crash site from Abu Dhabi, investigators will collect evidence that will confirm the tragedy is the result of a bomb, perhaps hidden in baggage placed aboard by a ticket-holder who did not board.

After many years on the outside, GAC joins IATA late in the year.

Freight is up 6.1% to 93.34 million FTKs and enplanements climb 5.3% to 2,430,000. A net \$51.8-million profit is banked, on top of an operating gain of \$88.2 million.

The employee population declines 1.4% to 3,643 in 1984.

In March, a Boeing 747-2B4BC is subleased for eight months from **Middle East Airlines, S.A.L. (2)**; it is employed to operate a service from Bahrain to Manila via Bangkok. Passenger boardings advance 12% to 2,696,869 and cargo grows 29.5% to 123 million FTKs. On total revenues of \$625.8 million, the operating profit is \$72.5 million and net gain is \$61.5 million.

Airline employment grows 8.1% in 1985 to 4,924.

During the year, two from the UAE—Abu Dhabi and the Emirate of Dubai—quit the consortium to form their own carriers. President Al-Malki's fleet now includes 5 L-1011 TriStar 200s and 8 B-737-2P6As.

When the **Middle East Airlines, S.A.L.** Jumbojet is returned in July, it is replaced by a B-747-283B chartered from **SAS (Scandinavian Airline System)**.

Passenger enplanements jump 5.6% to 2.87 million and a net profit of \$36.4 million is realized.

The emergence of Dubai-based Emirates on routes to India and Pakistan in 1986 brings the start of cutthroat competition. Although enplanements total 2,615,610 and plans are made to become a major worldwide airline, the company suffers its first-ever net loss, \$791,000.

The workforce is reduced by 8.1% in 1987 and the fleet includes 11 L-1011 TriStar 1/100/200s and 8 B-737-2P6As. Six new B-767-2P6s will arrive during the year.

In April, a new technical base is opened at Abu Dhabi; owned by the airline (40%) and the government of the Emirate of Abu Dhabi, the \$100-million Gulf Aircraft Maintenance Company (GAMCO) prepares to undertake heavy maintenance for GAC in the fall.

Meanwhile, a long-standing technical support contract with Hong Kong Aircraft Engineering Company (HAECO) is cancelled during the summer and for the few months until it can move into its new Abu Dhabi base, the carrier contracts its technical support from **British Airways, Ltd. (2)**.

The **SAS (Scandinavian Airline System)** Jumbojet is returned in September and service is inaugurated to Dar es Salaam, Nairobi, and Damascus later in the fall.

Stiff competition from **Emirates, Ltd.** causes customer bookings to dip 3.6% to 2,254,721, but cargo moves ahead by 11.6% to 127.6 million FTKs. Revenues fall 14.8% to \$472.9 million and losses of \$6 million (operating) and \$7.7 million must be absorbed.

The number of employees is increased by 7.1% in 1988 to 4,797 and the fleet includes 6 B-767-2P6s, 8 B-737-2P6As, and 11 L-1011 TriStars. Orders are outstanding for four B-767-3P6ERs. The entire B-737-2P6A fleet is sold to Polaris and is then leased back.

B-767-2P6 twice-weekly service is inaugurated from Bahrain to London via Amsterdam in February.

In April, pooled service from the Gulf States to Kuwait is inaugurated with **Kuwait Airways Corporation**.

Customer bookings recover and rise by 12.6% to 2,863,000; cargo climbs 12.5% to 144 million FTKs. Revenues jump 13.9% to \$547.5 million, but expenses prohibit a return to profitability by causing an operating loss of \$700,000 million and net loss of \$6 million.

Company employment is increased by 6.5% in **1989** to 5,110 as four B-767-3P6ERs are delivered.

After an eight-year interruption caused by the Iran-Iraq War, flights are resumed to Tehran on May 4. Later in the month, a code-sharing agreement is signed with **Air Lanka, Ltd.** for joint operations to Bahrain and Muscat.

In December, a pact is signed with **Air India, Ltd.** providing for pooled services from Muscat to Trivandrum.

Although traffic is good, the fiscal picture decays. Passenger boardings move ahead by 7.5% to 3,112,000 and freight is up 11.6% to 160.2 million FTKs. Revenues ascend 7.8% to \$596.7 million, but costs explode by 9.5% to \$606.7 million and guarantee an operating loss of \$10 million. The net loss is \$10.6 million.

The payroll is chopped 11.9% in **1990** to 4,500.

In March, Abdulla bin Nasser Al-Suweidi, who is also Qatar's minister of transport and communication, is succeeded as chairman by Ali bin Khalfan Al-Dhahry, Abu Dhabi's department of civil aviation chief. The first of 12 ordered A320-212s is delivered in June.

A record 400,000 passengers are carried in the month of August.

During the year's second half, three more B-767-3P6ERs join the fleet and beginning in November, launch twice-weekly roundtrips from Bahrain to Singapore. The aircraft are financed with a \$178-million loan (covering 85% of their cost) from the Private Export Funding Corporation, guaranteed by the U.S. Export-Import Bank and repayable in fixed installments over 12 years.

All of the capacity improvements, however, result in only a 2.5% increase in traffic, to 3,892,858 passengers flown. Much of the expected increase after the record month of August does not occur due largely to Iraq's invasion of Kuwait and Operation Desert Shield. Meanwhile, freight rises 10% to 221.53 million FTKs; expenses, led by fuel prices, exceed income and losses are suffered: \$55.6 million (operating) and \$74.1 million (net).

The workforce is reduced another 3.4% in **1991** to 4,961 and the fleet now includes 12 B-767-3P6ERs, 8 L-1011 TriStar 200s, 8 B-737-2P6As, and 1 each leased B-737-2S3A and B-737-2T5A. Orders are outstanding for 11 Airbus Industrie A320-212s, 12 A321-100s, and 6 B-767-3P6ERs.

By January, passenger boardings have been cut to 200,000 per month.

Following the launch of Operation Desert Storm at the end of the month, the company is forced to abandon its hub for five days, ground half of its flights, and operate under extreme uncertainty.

Following the liberation of Kuwait, GAC is able to rapidly rebuild in the months after February. Even so, there remains a certain amount of confusion in matters of public relations and marketing into the spring, while jetliner pilots must become accustomed to landing at their Bahrain base through a haze of brown, smoky pollution blown 300 mi. south from the still-burning oil fields in Kuwait.

In June, twice-weekly frequencies are introduced to Rome and Geneva. With the introduction of four-times-a-week roundtrips to Beirut in July, GAC becomes the first new carrier to operate into the Lebanese capital in many years.

As a result of the fast recovery from the Gulf War, customer bookings ascend 6.5% to 3,369,072 while cargo jumps 15.5% to 204.98 million FTKs. Revenues increase 19.7% to \$767.5 million and with expenses low, operating income surges to \$87.2 million. The net gain is \$45.8 million.

The payroll is sliced 3.2% in **1992** and the fleet now includes 37 aircraft. Capitalization is increased to 840 million dinars (\$311 million), with each member-nation increasing its stake to 210,000 shares.

Two new routes are initiated in July: Amsterdam via Zurich and Frankfurt and Melbourne via Sydney. Also during the summer, the second A320-212 is placed into service; as each new Airbus arrives, a B-737-200 is retired.

A new headquarters building at Bahrain is occupied during the fall. In November, pooled flights between the Gulf States and Iran commence with **Iran Air**.

Passenger boardings jump 14.1% to 3,845,280 while freight booms upward by 35.7% to 278.48 million FTKs. Revenues swell to \$900 million and with costs held in check, there are profits: \$94.04 million (operating) and \$50.58 million (net).

In **1993**, President/CEO Salim Bin Ali Bun Nassar Assiyabi's workforce is increased by 10.7% to 5,985 and the fleet now includes 8 A320-212s, 5 B-737-2P6As, 18 B-767-3P6ERs, and 8 L-1011 TriStar 200s. Orders are outstanding for 12 A321-100s, 6 A340-312s, 2 B-767-3P6ERs, and 6 B-777-2P6s.

A \$10-million advertising campaign is launched in the international media under the title "The International Smile of the Gulf" and new routes are inaugurated to Jakarta, Entebbe, Kilimanjaro, Madras, Rome, Zurich, Sana'a, and Zanzibar.

In April, the four owner states sign a limited "open skies" agreement with two other members of the Gulf Cooperation Council, Kuwait and Saudi Arabia.

Other markets now served include Abu Dhabi, Amman, Amsterdam, Athens, Bahrain, Bangkok, Beirut, Bombay, Casablanca, Colombo, Damascus, Dar es Salaam, Delhi, Dhahran, Dhaka, Doha, Dubai, Entebbe, Frankfurt, Fijairah, Hong Kong, Istanbul, Jeddah, Johannesburg, Karachi, Khartoum, Kilimanjaro, Kuwait, Larnaca, London (LHR), Manchester, Manila, Melbourne, Muscat, Nairobi, Paris, Ras Al Khaimah, Riyadh, Sharjah, Shiraz, Singapore, Sydney, Tehran, and Trivandrum.

During the third quarter, 20% shareholding is acquired in the new Indian domestic airline **Jet Airways, Ltd.**

Three new airline alliances come into effect during the fourth quarter. Code-sharing flights commence in October with **EgyptAir, S.A.E.** between Cairo and Casablanca. A route to Casablanca from Cairo is also shared, beginning in November, with **Royal Air Maroc**.

In December, the company begins code-sharing with **Air Seychelles, Ltd.** on a joint route from Bahrain to the Seychelles.

Customer bookings for the year accelerate 11.8% to 4,298,389 while cargo grows 25.7% to 349.81 million FTKs. Revenues ascend 8.5% to \$933.06 million, but expenses leap up 13.5% to \$870.06 million. As a result, the operating profit declines to \$63 million and net gain falls to \$37.22 million.

The employee population is up by 6% in **1994** to 6,345. In January, as a result of a huge increase in cargo traffic over the previous two years, the company acquires its first dedicated freighter, a B-757-23APF leased from AWAS Australia (Pty.), Ltd. It begins six-times-per-week roundtrips to Brussels on behalf of **DHL Worldwide Express**; five rotations are night flights, with one daytime service on Sundays.

At London in February, a code-sharing agreement is signed with **American Airlines** covering service from the U.S. via London (LHR) to Abu Dhabi, Muscat, Doha, and Bahrain. Flights also begin to New York and Ho Chi Minh City. In March, shared-code flights begin with **Air Malta, Ltd.** from Bahrain to Malta.

The first A340-312 is delivered in May and is employed, beginning in June, to replace L-1011 TriStar 200s on the New York route. Partial privatization of the airline is the main topic at the month's board meeting, where a three-year, \$2.2-billion expansion plan is unveiled.

Two more long-range Airbuses arrive during the remainder of the year and succeed the company's last three B-737s and six TriStars.

The code-sharing agreement with **American Airlines** is expanded in July to cover flights between New York (JFK) and Bahrain, Abu Dhabi, Muscat, and Doha.

Four-times-per-week nonstop A340-312 roundtrips commence in August, with American purchasing blocks of seats, providing marketing, and feeding passengers to JFK. At the same time, a 25%, six-month fare

cut is announced on routes from Doha to Bombay, New Delhi, Trivandrum, and Madras; the move is made in competition with start-up airline **Qatar Airways, Ltd.**

Following the outbreak of pneumonic plague at Surat, India, in mid-September, the airline suspends flights to India. These are not resumed until early October. Toward year's end, a new Falcon frequent flyer program is introduced.

This year, passenger boardings move ahead by 6.4% to 4,602,130, while freight jumps 22.2% to 428.41 million FTKs.

There is no change in the workforce during 1995. A code-sharing and block-space agreement with **Alitalia, S.p.A.** takes effect in March on flights between Abu Dhabi and Bahrain.

Gulf Air, on April 1, drops its \$1.4-billion deal to purchase 6 B-777-2P6s with options on 6 others. The reason given is fear of excess capacity during a period of consolidation.

In October, a block-seat code-sharing agreement with **Cyprus Airways, Ltd.** takes effect; the Larnaca-based carrier purchases seats on Gulf Air's twice-weekly nonstop L-1011-200 flights to New York. One of these New York services is, incidentally, one of four new weekly services inaugurated during the month between Bahrain and Houston; the other three include stops made at Abu Dhabi, Doha, and Qatar prior to departure for Texas.

In a stunning about-face, the carrier, at the November air show in Dubai, announces an arrangement to purchase six A330-342s from Airbus Industrie. As the new aircraft arrive, the L01011-200s will be withdrawn and converted into freighters. Meanwhile, delivery is taken on four chartered A340-312s.

Enplanements increase by 4.1% to 4,791,534 and cargo improves by 5.9% to 453.79 million FTKs. Despite this growth, a \$164-million net loss is reported.

Airline employment is reduced 5.4% in 1996 to 6,000. In January, the company receives the 1995 "Passenger Service Award" from *Air Transport World* magazine. Also during the month, Capt. Shaikh Ahmed bin Sail al-Nahyan, a member of the Abu Dhabi ruling family, becomes president/CEO under an arrangement that allows the company's top post to be rotated among the four government owners.

The fleet now also includes 14 A320-212s, with orders outstanding for 7 more, plus 4 A340-312s, 18 B-767-3P6ERs, 5 L-1011-200 TriStars, and 1 leased B-757-23APF that will be repainted in full **DHL Worldwide Express** livery during the summer. Orders are outstanding for 11 A321-100s and 6 A330-342s.

Four of the A340-312s delivered late the previous year enter service during the first quarter and one is leased to **EgyptAir, S.A.E.** Flights to Manchester, Cebu in the Philippines, and Kilimanjaro in Tanzania cease at the end of March. The route network now includes 55 destinations.

A two-month Go for Gulf promotion begins in May, celebrating the *Air Transport World* recognition. In June, pooled flights commence with **Syrianair (Syrian Arab Airlines)** over a route from Bahrain to Damascus. At the same time, the dual-designator flights with **Cyprus Airways, Ltd.** to the U.S. are increased to thrice weekly.

Reeling under competition from regional airlines, President Al-Nahyan indicates in July that the company will have to take tough measures in order to remain economically viable. While awaiting its own aircraft, **Philippine Airlines (PAL)** wet leases a pair of A340-312s from Gulf Air; the first arrives at Manila in July, followed by the second in September.

During the GAC board meeting on November 27, it is decided to implement a major restructuring plan at year's end that will include a \$200-million capital injection by the shareholding states. In addition, early retirement is to be offered to scores of employees and plans are made to close unprofitable routes. Oman and Qatar, with their own emerging air services, initially refuse to participate in this bailout at an extraordinary general assembly meeting in December.

Customer bookings inch up 1.5% to 4,801,175 and 423.01 million freight FTKs are operated, a 6.8% decline. The previous year's huge loss is slightly improved; this year, the net loss is \$156 million. Still, a \$1.6-billion debt exists.

The employee population grows by 7.5% in 1997 to 6,450. Markets visited now include Amsterdam, Amman, Athens, Bangkok, Beirut, Bombay, Brussels, Casablanca, Colombo, Damascus, Delhi, Dharan, Entebbe, Frankfurt, Hong Kong, Istanbul, Jakarta, Johannesburg, Karachi, Kuala Lumpur, Kuwait, London, Namibia, Nairobi, Paris, Rome, Singapore, Sydney, Zanzibar, and Zurich.

As part of the company's restructuring plan, six B-767-3P6ERs are sold to **Delta Air Lines** and a number of leased aircraft are returned, including a pair of A340-312s. In addition, service is suspended on revenue-negative routes to Geneva, New York, Durban, and Johannesburg.

As the result of directional control difficulties experienced while taking off from Abu Dhabi on March 10, Flight 71, an A320-212 with 8 crew and 107 passengers, aborts its takeoff and settles back down on the runway, which is now overrun, causing the nosegear to collapse. There are no fatalities.

By the time the \$200-million UAE cash injection is delivered in April and May, Oman and Qatar are back on board and participate in the infusion. In May, one of the L-1011-200 is returned to service to provide summer capacity; two more will join it in June and July.

During the fall, unprofitable routes to Europe and the U.S. are cut back. Passenger boardings slide 2.9% to 5,885,050 while freight is off 8.7% to 483.5 million FTKs. Revenues total \$1.02 billion, with almost equal expenses. There is an \$8.2-million operating profit and a net gain of \$48 million.

Airline employment stands at 5,500 in 1998 and the fleet, all of which is Stage III certified, includes 29 airplanes: 11 B-767s, 13 A320s, 4 A340-312s, and 1 L-1011.

In February, a sale and leaseback agreement is signed with Abu Dhabi-based Oasis International Leasing Co. covering six of the carrier's oldest A320-212s. The arrangement is valued at \$195 million.

Also during the month, a 10-year technology agreement is signed with **American Airlines**; under its terms, SABRE Group will provide GAC with a new information structure, including application development and maintenance, as well as data center and network management.

Twice-weekly A340-312 roundtrips commence on July 4 to Kathmandu, Nepal. This is the latest destination on the Asian continent, where the carrier operates extensively, flying to markets such as Bangkok, Hong Kong, Singapore, Manila, Kuala Lumpur, Jakarta, Karachi, Mumbai, Delhi, Trivandrum, Madras, and Dhaka.

Senior executives from GAC and **American Airlines** meet at AMR Corporation headquarters at Dallas (DFW) on October 15 to discuss an expansion of their commercial partnership. As a result, GAC is authorized to place its "GF" code on AA flights between London (LHR) and New York (JFK), Miami, and Chicago (ORD) beginning in the winter.

Customer bookings rise 3.8% to 4.82 million, while cargo traffic jumps 10.2% to 134.11 million FTKs. On revenues of \$968 million, there is a \$9.6-million operating profit.

Owned 40% by the airline and 60% by the government of Abu Dhabi, Gulf Aircraft Maintenance (GAMCO) pushes forward an aggressive expansion program beginning in early February 1999. A new GAMCO division is established at Bahrain and plans are made to take over GAC's entire line maintenance operation by April.

Two hours into a B-767-3P6ER service from London (LGW) to Abu Dhabi on March 31, Kenyan passenger Grace Ndanyu goes into labor. Luckily for her, three pediatricians, a surgeon, and a consultant in palliative care are aboard, en route to medical conferences. Both of the premature twins are saved by quick care, including resuscitation in the plane's toilets. An emergency landing is made at Larnaca Airport in Cyprus, where the mother and infants are taken to the hospital.

With the beginning of the summer schedule, the number of weekly flights from Bahrain to Beirut is increased from 5 to 14. A code-sharing agreement is signed with **Air Tanzania Corporation** on May 14.

Officials from GAC meet with their counterparts from **Emirates Airlines, Kuwait Airways Corporation, Oman Airways, Qatar Airways, and Saudi Arabian Airlines** at Kuwait City on May 15 to plan a united body to compete against the growing number of major world airline al-

liances. The CEOs, who also agree to meet quarterly, discuss ways to coordinate and develop additional revenues, cut expenses, and invest jointly in support services.

Under terms of the new dual-designator pact, **Air Tanzania Corporation** is able to place its code on GAC flights, beginning on May 29, from Zanzibar and Dar es Salaam to Dubai, Muscat, and Jeddah.

The first of nine A330-342s is delivered on June 9, with the second arriving on June 24. Smoking is banned on July 1 on all company flights between London and Damascus. Twice-weekly A330-342 roundtrips begin on July 3 frp, Abu Dhabi to Geneva. Two more A330-342s arrive on July 12 and 26, respectively.

The route to Colombo, Sri Lanka, is improved on August 4; the route becomes daily and is flown with an A340-312

Net profit falls to \$1.1 million.

On March 28, **2000**, a new special 50th anniversary color scheme, featuring the work of world famous calligrapher Nja Mahdaoui, is unveiled; new blue, gold, and white 50th anniversary paint jobs will appear on one of every type of aircraft flown, beginning with a B-767-3P6ER.

On May 18, \$20 million in financing is arranged with European banks that will permit the purchase of two new A330-243s, which are delivered on May 23 and 29 and enter service at the end of June.

Using a mix of B-767-3P6ERs and A330-243s, the company, on July 1, increases the number of its weekly roundtrips from Bahrain and Muscat to Frankfurt from five to seven. The same day, using the new A330-212s, the company initiates twice-weekly summer service from Abu Dhabi to Geneva.

While on final descent on a go-around into Bahrain International Airport after an August 23 service from Cairo, Flight 72, an A320-212 with 8 crew and 135 passengers, misses its approach and crashes into the sea; there are no survivors. Just over 50 years earlier (on June 12 and 14, 1950), two **Air France** DC-4s had crashed into the sea in the same place.

The Abu Dhabi to Geneva summer season service ends on September 16. After a fifteen-year suspension, twice-weekly roundtrips are resumed on November 1 using an A320-212 between Dubai and Kuwait.

Blaming the high price of its airport fees and its curfew, Gulf Air, on November 5, reduces the number of its weekly flights to Sydney from six to four.

Service is increased to Kathmandu on November 11; the new routes include weekly roundtrips from Abu Dhabi and Bahrain, one that begins in Abu Dhabi and ends in Bahrain, and one that begins in Bahrain and ends in Abu Dhabi.

GULF AIR LINES: United States (1928–1929). **St. Tammany–Gulf Coast Airways** is reorganized in October **1928** and receives a new corporate identity, Gulf Air Lines. Financially more viable, the carrier, while maintaining its predecessor's passenger and mail frequencies, opens a new mail route from its New Orleans base to Houston in January **1929**.

Later in the spring, the company is merged with C. R. Smith's **Texas Air Transport** to form **Southern Air Transport**.

GULF AIR TAXI: P.O. Box 367, Yakutat, Alaska 99689, United States; Phone (907) 784-3240; Fax (907) 784-3380; Year Founded 1992. Notice of this FAA Part 135 nonscheduled operator is first taken in **1995** when it joins the Regional Airline Association. Formed as early as **1992** and perhaps earlier, President Marie Ivers's service in **1999** operates 3 Cessna 185s, 2 C-206s, and 1 C-207A to local communities and bush locations. Unhappily, one of the C-185s is badly damaged during its October 7 landing at a bush airstrip 20 mi. E of its point of origin at Yakutat. Fortunately, none of the four people aboard are hurt.

GULF AIR TRANSPORT: United States (1979–1985). GAT is originally established at Smyrna, Tennessee in **1972** as the charter operator **Music City Airways**. The small airline is purchased by newly formed Gulf Air Transport in **1979** and is transported to New Iberia, Louisiana, in May.

Gulf Air is now dedicated to exclusive support of the offshore oil industry with a single Convair CV-440. Over the next two-and-a-half years, the company undertakes many charter and contract service flights and its fleet grows to include 8 Convairs (all of which are up-engined into CV-580s) and a Lockheed L-188A Electra.

During **1981**, the company receives authority from the CAB to undertake worldwide nonscheduled services and it will come to emphasize operations not only within the U.S., but to Mexican, Caribbean, and destinations in Central and South America.

Public charters are first offered in January **1982** and by the end of the year, a total of 12,000 passengers are flown. On revenues of \$9.37 million, profits are earned: \$27,000 (operating) and \$19,000 (net).

Enplanements advance to 18,000 in **1983**.

The first jetliners, two B-727-121s leased from **Pan American World Airways (1)**, are acquired in **1984** as GAT transforms itself into a tour operator. Over 60 military charters are flown with 100% reliability, a feat for which the carrier receives an award from the Military Traffic Management Command. Bookings advance to 49,950.

The workforce is reduced by 11.5% in **1985** to 115; however, the fleet of 4 CV-580s and 2 B-727-121s is improved by the addition in late March of a B-727-200, purchased from **Western Airlines** with **USAir** as agent. A new regional operations center is opened at Philadelphia in April, where the jetliners are based. Passenger boardings jump 66.7% to 150,000. Additional regional centers are opened in **1986** to support an increased contract tour operator charter business. The company is renamed **Gulf Air**, but releases no traffic or financial figures.

GULF AVIATION, LTD.: Bahrain (1950–1973). On behalf of the Sheik of Bahrain and private interests, S. F. Bosworth forms GAL on March 25, **1950** and assumes the position of managing director.

Employing a single Avro Anson, Bosworth personally opens Bahrain–Doha–Sharjah service on July 5. Thrice-daily de Havilland DH 89A Dragon Rapide flights begin between Bahrain and Dhahran on July 25.

Killed in the U.K. on June 10, **1951**, Bosworth is succeeded as managing director by George B. Thompson on June 11.

The first de Havilland DH 104 Dove is placed in service on August 15. **British Overseas Airways Corporation (BOAC)** acquires 51% controlling interest on October 1.

In **1952**, the Anson and Dragon Rapide are at first supplemented and then replaced by DH 104s.

Bahrain–Muscat service via Doha and Sharjah is inaugurated on January 7, **1953**, while regular Bahrain–Kuwait flights replace irregular frequencies on July 12.

DH 104 weekly service Bahrain–Abu Dhabi via Doha and Sharjah begin on January 19, **1955**.

Orders are now placed for DH 114 Heron 2s, the first of which enters service on September 4, **1956**.

Operations continue without incident through the remainder of the year and until July 10, **1960**. On that date, a DC-3 with 3 crew and 13 passengers crashes near Sharjah, UAE; there are no survivors.

Following five months chartered use, a **Kuwait Airways Corporation, Ltd.** DC-3 obtained as a replacement is purchased on November 23. Meanwhile, the aircraft is employed to launch Bahrain–Dubai operations on October 10. BOAC and **British European Airways Corporation (BEA)** sponsor a gradual expansion of regional routes and services in **1961–1964**.

In **1965**, the fleet comprises 4 DC-3s, 1 leased DC-6, 4 Heron 2s, and 1 DH 104 Dove. Enplanements for the year total 118,363.

A C-47 with 2 crew and 18 passengers fails its takeoff from Azaiba, Oman, on August 17, **1966**, and crash-lands 565 yards from the end of the runway; there are no fatalities. Operations continue apace during the remainder of the decade, highlighted by the introduction of new equipment, including Fokker F.27s (February **1967**) and BAC 1-11-432 jetliners (November **1969**).

By 1970–1971, enplanements average 200,000 per year. Earlier scheduled routes are maintained together with new services to Muscat and Oman. The fleet comprises 2 BAC 1-11-432s, 2 F.27s, and 4 DC-3s.

The lease of a Vickers VC10 in April 1970 allows the start-up of London services while the subsidiary **Gulf Helicopters, Ltd.** is formed in April of that year.

Airline employment in 1972 stands at 1,061. The fleet is enhanced through the addition of another F.27, two Britten-Norman BN-2 Islanders, four Shorts SC-7 Skyvans, and two Beech 80 Queen Airls. Regional services are opened or expanded to and through Cairo, Kuwait, Dhahran, Bahrain, Boha, Abu Dhabi, Dubai, Sharjah, Muscat, Shiraz, Bender Abbas, Karachi, Bombay, and Salalah.

Interests in certain of the Gulf States enter into negotiations with **British Airways, Ltd.** (2) for purchase of the British carrier's shares. When this arrangement is completed, the company is merged into **Gulf Air Company, G.S.C.**, and is operated in conjunction with **Gulf Helicopters, Ltd.** Enplanements climb to 249,000 and airline employment is 1,100.

GULF CENTRAL AIRLINES: United States (1983–1984). Jack DeVoe's Opa Locka, Florida-based **Devoe Airlines** is renamed in 1983. Employing a fleet of 4 Piper PA-31-35- Navajo Chieftains, 1 PA-31-310 Navajo, and 1 Cessna 402B, the small intrastate continues to maintain daily roundtrip scheduled passenger flights on November 9 to Orlando, Jacksonville, Melbourne, Tallahassee, Fort Lauderdale, and Key West.

Early in 1984, GCA enters into a feeder agreement with **Republic Airlines** to feed the major at Florida's major cities. The arrangement comes too late to save the company from bankruptcy.

GULF COAST AIR LINE: United States (1923–1931). In late winter 1922–1923, Merrill K. Riddick and E. K. Jaquith are able to obtain the nation's third Foreign Air Mail (FAM) Route award from the U.S. Post Office, becoming the last operator of such a service prior to the start-up of **Pan American Airways (PAA)**. Unlike the FAM-2 arrangement with **Hubbard Air Transport**, the partners are not actually required to fly to a foreign destination; they only have to reach a location where a connection might be made with steamships outward bound to Caribbean and South American points. Three Curtiss N-9 floatplanes are acquired for the enterprise.

On April 9, 1923, pilot Riddick inaugurates FAM-3, transversing the 80 miles southeast from New Orleans to Pilottown, at the mouth of the Mississippi River.

Unable to continue beyond spring, Riddick and Jaquith sell GCAL to A. E. Cambas, who renames his prize **New Orleans Air Line**. The little-heralded carrier is re-equipped with 2 Curtiss MF and 2 HS-2L flying boats which, on July 2, commence a program of 8 to 10 roundtrips per month. A third HS-2L is acquired in October and a total of 85 roundtrips are accomplished by November 1, when the carrier shuts down for the winter.

It having been decided that loads and revenues are insufficient to maintain the HS-2Ls, the large flying boats are put up for sale in mid-June 1924. The route is maintained during the remainder of the decade with the MFs and Travel Air 4000s.

On May 29, 1930, a Travel Air 4000 is lost in a Franklin, Louisiana, fire.

Flights continue until December 1931, when the company is sold to a man named Johnson, who will undertake flights under the name **Johnson Airways**.

GULF COAST AIRLINES: United States (1971–1975). In 1971, officers of Gulf Coast Aviation, based at Gulfport, Mississippi, elect to establish a scheduled airline division to provide daily roundtrip shuttles to Jackson and New Orleans. Britten-Norman BN-2 Islander revenue frequencies are duly inaugurated and are maintained into 1975.

GULF COAST AIRWAYS: United States (1928–1929). In order that **St. Tammany–Gulf Coast Airways**, established the previous summer,

might enjoy greater financial support, New Orleans interests form **Gulf Air Lines** in October 1928 to serve as a holding company for the carrier, which is acquired and reformed as the operating subsidiary, dropping the **St. Tammany** prefix. With capitalization of \$225,000, several Fokker Model 8 Super Universals are acquired.

On January 23, 1929, a new Contract Air Mail Route, No. 29 New Orleans to Houston, is opened.

On March 31, when Tennessee financier A. P. Barrett and his vice president/treasurer Cyrus R. ("C.R.") Smith form **Southern Air Transport System**, GCA is acquired and serves as a division until the amalgamation is taken over by **AVCO** in January 1930.

GULF FALCON: P.O. Box 8199, Sharjah, United Arab Emirates; Phone 971 (6) 557-0515; Fax 971 (6) 557-0516; <http://www.air-gulf-falcon.com>; Year Founded 2000. **Air Gulf Falcon** is renamed on November 6, 2000. Sheikh Hamad Ali Jabour Al-Thani, a member of the royal family, a former pilot, and managing director of **Qatar Airways**, had established that airline in 1999 as a subsidiary of the Doha-based Falcon Group. Headquartered at Sharjah International Airport Free Zone, the new concern continues to provide aircraft on ACMI charters to other airlines for charters, VIP flights, and cargo services. It also flies direct VIP contracts and undertakes lift on behalf of the UN.

The initial fleet of 6 Boeing 747-100/200/SP and 2 B-707-320CFs is significantly increased as the year wears on and by the third quarter, 16 B-727-200As and B-737-200As have been acquired. One each B-747-230F and B-747-273C are both expected by December. An additional 12 aircraft, valued at \$400 million, are scheduled for delivery in 2001.

In ceremonies at Baghdad Airport on November 16, President Sheikh Hamad Ali Jabour Al-Thani presents **Iraqi Airways** with the gift of a B-747SP-09 previously owned by **Mandarin Airlines, Ltd.**

The workforce at year's end exceeds 300.

GULF HELICOPTERS, LTD.: P.O. Box 811, Al Areesh Street, Ras Abu Abaud Road, Doha, Qatar; Phone 974 333 888; Fax 974 411 004; <http://www.gulfhelicopters.com>; Year Founded 1970. Formed on July 6, 1970 to offer general charter flights in the Persian Gulf region, the technical and managerial partner in this new rotary-wing concern is **British Airways Helicopters, Ltd.** (24%).

Revenue flight services commence from the principal base at Doha, Qatar, in February 1973. Principal services are operated on behalf of oil companies developing the offshore exploration and production industry.

On April 1, 1974, the British interest is purchased and the carrier is merged into the new consortium airline **Gulf Air, Ltd.**, becoming a wholly owned subsidiary.

Operations continue with Bell and Aerospatiale equipment chartered from the parent and are flown primarily in support of the Qatar General Petroleum Corporation. The light fixed-wing aircraft previously operated by **Gulf Aviation, Ltd.** are also employed.

Following a November 22, 1976 engine failure, a Shorts SC-7 Skyvan with a pilot and a passenger ditches in the Persian Gulf near Oman's Das Island; although the aircraft is lost, both aboard are rescued.

A former manager for a North Sea helicopter concern, Michael J. Evans becomes general manager in 1988.

Former **Bristow Helicopters, Ltd.** Manager Graham Caven becomes chief pilot in 1991.

By 1994, General Manager Evans's fleet includes 7 Bell 212s, 2 Bell 206B JetRangers, and 2 Bell 412SPs.

Flights to destinations in Oman, Qatar, Yemen, and India continue in 1995–1996 as the fleet is increased by the addition of four more Bell 412SPs. A member of the Helicopter Association International, the company wins the Operators Safety Award in both years.

Gulf Aviation Company, Ltd. in March 1997, purchases all of the shares in Gulf Helicopters for the purpose of developing economical cooperation and transportation in the field of civil aviation and the carrier is operated in the State of Qatar as a wholly owned subsidiary.

In June 1998, Gulf Helicopters is purchased by Qatar General Petroleum Corporation, a concern fully owned by the government of the State of Qatar. Abdulla Bin Hamad Al-Attiya is now chairman. Several members of the engineering staff, led by Chief Engineer Steven McComish (formerly chief engineer with **Dollar Helicopters, Ltd.**) receive Technical Safety Awards.

The fleet at the beginning of 1999 includes 8 Bell 412SPs, 7 Bell 212s, and 2 Bell 206B JetRangers. In early February, a homepage is launched on the World Wide Web.

Service is maintained in 2000.

GULFSTREAM AIRLINES: United States (1984–1993). Mark F. Butler establishes Gulfstream Airlines at South Windsor, Connecticut, in 1984 to offer daily roundtrip passenger services between Hartford and Atlantic City. His initial fleet comprises two Piper PA-31-310 Navajos and a PA-23 Aztec.

Both scheduled and charter operations continue apace over the next decade and Butler remains president at the beginning of 1993. Unable to maintain economic viability in a time of recession, the company shuts down at year's end.

GULFSTREAM INTERNATIONAL AIRLINES: P.O. Box 777, 5000 North West 38th Street, Miami Springs, Florida 33266, United States; Phone (305) 871-0727; Fax (305) 871-4800; <http://www.gulfstreamair.com>; Code 3M; Year Founded 1989. GIA is founded by former **Eastern Air Lines** Capt. Thomas L. Cooper at Miami (MIA) in 1989 to provide on-demand FAR Part 135 passenger taxi and cargo charters to Cap Haitien, Haiti, with a single Cessna 402B. The following year, the Haitian destination, due to that nation's political climate, is switched to the Bahamas and an intrastate Florida service is launched with daily return flights from Miami to Key West.

The failure of both **Eastern Air Lines** and **Pan American World Airways (1)** in 1991 leads Cooper to obtain an FAR Part 145 air carrier certificate and to offer scheduled passenger and cargo flights with a fleet of five Cessna 402Cs and a Cessna 402B. The company headquarters is located in the same building that once housed the Latin America operations of **Pan American World Airways (1)**.

Revenue services are inaugurated to the Florida, Bahamian, and Haitian destinations of Treasure Cay, Marsh Harbour, North Eleuthera, Governor's Harbour, San Andros, Andros Town, Congo Town, Rock Sound, George Town, Freeport, and Cap Haitien.

Enplanements for the year total 9,659 and revenues are \$1.2 million.

During the spring of 1992, a route is inaugurated from Vero Beach to Orlando, but proves unprofitable. After it is dropped at midyear, a new intrastate service is started from Miami to Key West.

Three Beech 99s are purchased for \$4.2 million in December and are employed to begin scheduled services to Freeport and the Bahamas at mid-month.

Bookings for the year swell to 23,164.

Airline employment grows to 35 in 1993 and in April a marketing, code-sharing, and frequent flyer benefit agreement is signed with **United Airlines**. The following month, the regional begins feeding the major as "United Express" at Miami and Fort Lauderdale, with new frequencies from Daytona Beach, Tampa, and Orlando.

The 99s and new accord assist in boosting traffic figures as 85,000 scheduled and 8,000 charter passengers are flown. Sales total \$6 million.

The first Beech 1900C joins the fleet in January 1994.

Early in the year, the carrier seeks and achieves a U.S. government Essential Air Service (EAS) contract from Atlanta to Anniston, Alabama. The EAS program will grow to include routes to Mobile, Birmingham, and New Orleans. Later in the year, as the workforce grows to 150, the company becomes a launch customer for the IPTN N250-100, ordering four plus six options.

Customer bookings increase to 195,761.

No changes are made in the workforce during 1995 and the fleet now operates 5 Beech 99s, 3 Beech 1900Cs, and 8 Cessna 402Cs. The com-

pany, with 50 daily departures, is the third largest airline flying out of Miami (MIA).

Four-times-per-day Beech 99 roundtrips are inaugurated on January 15 between Naples and Miami. Thrice-daily roundtrips from Tallahassee to St. Petersburg commence on August 6. Until August 15, roundtrip fares on the new route will be \$69. The dual-designator arrangement with UAL is expanded in August.

New service to Jacksonville begins on September 6.

A new minihub is established at Birmingham, Alabama, on November 1 to serve Mobile, New Orleans, and Columbus, Georgia, with daily Beech 1900C service. Weekend flights are also started between Mobile and Tallahassee, where connections are available to GIA services to Gainesville, St. Petersburg, Daytona Beach, Orlando, Naples, Palm Beach, Fort Lauderdale, and Miami.

The first of five new Shorts 360-300s joins the fleet in November.

An FAR Part 121 certificate enabling the company to operate larger airplanes is received on December 1. The new aircraft are simultaneously placed on the route from Miami to Orlando. Also on December 1, the company transfers its hub activities from St. Petersburg to Tampa; the airline is left with seven daily services from the former community as it grows to 20 at the latter.

Plans are made to initiate services from Tampa to Mobile as soon as additional Shorts 360-300s become available. Destinations, including Nassau and Freeport, are visited in the Bahamas.

On December 14, the carrier becomes the official airline of the new \$40-million Sandals Resorts International at Nassau, in the Bahamas. Just six weeks after beginning four-times-a-day service from Columbus, Georgia, to Birmingham and thrice-daily flights from Columbus to Atlanta, GIA, on December 16, cancels the wildly unprofitable routes.

Enplanements this year skyrocket 91.3% to 369,840.

Operating primarily as a "United Express" carrier, GIA grows dramatically in 1996. The employee population is increased to 650 as 16 Beech 1900Cs and 5 Shorts 360-300s join the fleet; the 5 Beech 99s are retired.

The contract with Sandals Resorts takes effect in March when the new Sandals Royal Bahamian Resort & Spa opens at Nassau. GIA begins to fly tourists from Florida to the Bahamas six times a day from Miami and thrice daily from Fort Lauderdale and Hollywood.

In April, one of the Shorts 360-300s, previously flown by **Business Express (BEX)**, becomes a "logo turboprop," displaying the sponsored multicolored motif of Sandals Resorts International. The plane flies between Miami and Nassau, where a new Sandals Royal Bahamian facility is located. A second "logo turboprop" Shorts 360-300 painted to honor Grand Bahama Island begins flying from Miami at the end of July. The plan to acquire IPTN N250s is abandoned.

Awarded on an annual basis, a \$5-million contract is signed with the State of Florida and several local Florida governments in August and begins transporting employees over intrastate routes between the larger communities.

On September 9, thrice-daily nonstop roundtrips commence between Melbourne and Miami and twice-daily nonstop roundtrips begin between Melbourne and Tampa, with limited weekend service on both routes.

Passenger boardings increase 60.7% to 594,892.

Airline employment in 1997 stands at 480 and the fleet now includes 22 Beech 1900Cs, plus the "logo turboprops." Twice-daily nonstop roundtrips commence on January 6 between Tallahassee and Orlando.

New daily nonstop roundtrips, again on behalf of UAL, are initiated in March on routes from Tampa to Orlando, Miami to Tampa, Fort Lauderdale to Orlando, Miami to Naples, and West Palm Beach to Tampa.

On April 6, GIA becomes a "Continental Connection" partner; it provides feed to **Continental Airlines** flights to Houston, Cleveland, and New York from Miami, Fort Lauderdale, Orlando, Tampa, Jacksonville, and West Palm Beach in Florida and at Nassau, Eleuthera, Marsh Harbor, Freeport, and Treasure Cay in the Bahamas. It simultaneously introduces daily return flights between Orlando and Key West.

The company is hit with three FAA fines during the remainder of the year. In July, a \$40,000 sanction is proposed for the operation of 60 flights with a Shorts 360-300 after improper maintenance procedures have been employed. Two more fines are levied in September. In the first, a \$10,000 penalty is assessed for the operation of three 1995 flights employing a replacement engine that had not been inspected for two years. The second bill, also for \$10,000, covers 32 services in 1994 made before complying with a safety directive.

Business slows during the remainder of the year and, for all 12 months, customer bookings slide to 589,202.

Responding to increased demand for more intrastate air travel, GIA announces plans on March 17, 1998, for an expansion of its route system in Florida. Beginning on May 1, twice-daily service is initiated from Fort Myers and Miami to Tampa.

The April acquisition arrangement with Air Alaska having fallen through, the "USAirways Express" company **Paradise Island Airways** again becomes available. Meanwhile, on July 31, GIA is acquired by G-Air Holdings Corp., a public corporation, through a reverse merger transaction.

On August 1, PIA is sold to G-Air Holdings, the new parent of GIA, which will now operate both airlines as its subsidiaries. Chief Operating Officer Roger Larreau indicates that PIA will continue to operate its daily service between airports in South Florida and Paradise Island in the Bahamas under its historic marketing name **Chalk's International Airlines (2)**. However, the PIA arrangement with **USAirways** will now be terminated and the carrier will join GIA in operating under "Continental Connection" flight codes and branding.

Beginning on September 22, GIA operates an air shuttle service to help evacuate visitors from Key West in the face of Hurricane Georges. Flights in South Florida and the Bahamas cease because of the storm two days later, but are resumed on a limited basis on September 29. Service from Key West resumes on September 30 with eight departures to Miami; all scheduled service across the network returns to normal on October 1.

Like GIA, **Paradise Island Airways** suspends service on September 24–25 in the face of Hurricane Georges. All flights are resumed from Miami, Fort Lauderdale, and West Palm Beach on September 26 and although Paradise returns to service, it is also bankrupt.

When FAA inspectors observe "mechanical irregularities" on two of GIA's Beech 1900Cs in a maintenance hangar on October 19, the aircraft are grounded, causing cancellation of several "Continental Connection" segments to Orlando, Key West, and Tampa.

By the end of the year, GIA, in terms of departures, is the third busiest airline at Miami (MIA). Customer bookings shoot up 25.5% during the year to 740,000, while revenues of \$63.3 million are generated. A net profit of \$2.9 million is reported.

On Wednesday, February 10, 1999, **Pan Am Air Bridge** files for Chapter XII bankruptcy protection with the U.S. Bankruptcy Court at Dallas, Texas, and suspends service the next day.

On February 12, the court reaches an agreement with GIA to resume service to Bimini on a temporary basis, effective February 26, as the historic carrier attempts to reorganize under the protection of the bankruptcy laws. The U.S. Bankruptcy Court at Dallas, on February 24, requests that GIA also continue to operate **Paradise Island Airways** as it, too, reorganizes under the protection of the bankruptcy laws.

GIA's President Cooper indicates that the historic airlines will be preserved and that they will resume 12 daily Grumman amphibian roundtrips on February 26 from Miami to Bimini and Paradise Island and from Fort Lauderdale to Bimini, Paradise Island, and Walker's Cay.

While a final decision on the future of **Pan Am Air Bridge** is made, its planes, like those of **Paradise Islands Airways**, are repainted in the colors of **Chalk's International Airlines (2)**.

Nearly 30 Beech 1900s are grounded on February 26 for overdue maintenance inspections and repairs. The action affects forces the cancellation of approximately 50 flights.

The inspections and repairs are all completed over the weekend, allowing all of the turboprops to return to the air by March 1.

As **Chalk's International Airlines (2)**, PIA and PAAB continue and expand daily services as of February 26.

Paradise Island Airways ceases operations on May 11. Afterwards, Gulfstream continues to operate its aircraft from Florida to Paradise Island.

An expanded code-sharing agreement is signed with **Continental Airlines** on July 14. Under its terms, GIA will open a new hub at San Juan, Puerto Rico, and expand its "Continental Connection" services out into the Caribbean. A code-sharing agreement is signed with **Trans World Airlines** on September 24; the regional airline will operate "TWExpress" flights beginning in November.

During the fall, 75 new employees are hired to operate the new San Juan hub and 6 Beech 1900Cs are sent to the new base. In a 24% increase in the company's total number of daily flights, the carrier, on November 1, launches "Continental Connection" services from San Juan to St. Thomas, St. Croix, St. Martin, and St. Kitts in the Virgin Islands, along with an intra-island shuttle between St. Thomas and St. Croix.

The code-sharing agreement with **Trans World Airlines** begins on November 15. Under its terms, the regional, also operating as "TWExpress," allows the major to place its code on Beech 1900C frequencies from San Juan to St. Thomas, St. Croix, St. Kitts, St. Martin, Tortola, and Virgin Gorda.

Passenger boardings for the year swell 27.1% to 940,000.

On January 1, 2000, company officials reveal that a minority stake has been sold to **Continental Airlines**.

A block-seat, code-sharing agreement covering certain Caribbean services is signed with **Northwest Airlines** on February 15.

Five-times-per-day "Continental Connection" return service is inaugurated on February 10 from Fort Lauderdale to Tortola and Virgin Gorda in the British Virgin Islands.

While taxiing on the ramp at Miami after a March 18 service from Nassau, Flight 9399, a Beech 1900C with 2 crew and 19 passengers is hit by a tug and baggage cart. Although the tug driver is seriously injured, no one aboard the aircraft is hurt.

The dual-designator pact with **Northwest Airlines** begins on April 2 as the Minneapolis-based major places its code on Gulfstream International services to and from Fort Lauderdale, Miami, Tampa, and the Bahamas.

The alliance with **Trans World Airlines** is further expanded on May 1, as Gulfstream begins "TWExpress" service for the St. Louis-based pioneer from Fort Lauderdale to Key West, Miami, Orlando, Tampa, and West Palm Beach and from West Palm Beach to Freeport, Fort Lauderdale, Marsh Harbour, Nassau, North Eleuthers, and Treasure Cove.

Under terms of a new pact, **COPA (Compania Panamena de Aviacion, S.A.)** begins to place its "CM" code on Gulfstream International flights between Miami and Orlando on May 2. Later, flights from Miami to Tampa, Key West, Fort Myers, Gainesville, Tallahassee, and Jacksonville are included in the pact.

On August 18, 2000, USAirways Group begins negotiations with Gulfstream concerning a takeover of the stock of **Paradise Island Airways**. The same day, a new **USAirways** subsidiary, **Potomac Air**, is established to operate in the Northeast and Mid-Atlantic regions as part of the larger merger proposal between its parent and **United Airlines**. A deal between the major and Gulfstream is struck on August 24 under which **USAirways** acquires 100% shareholding in PIA. On October 2, Merv Griffin's old commuter will be merged into **Potomac Air**, giving the newcomer an automatic Part 121 operating certificate.

The company's first, newly received Beech 1900D is dedicated to the company's employees during special ceremonies held in the Fort Lauderdale hangar on September 13.

GULKANA AIR SERVICE: United States (1983–1995). David W. King forms Gulkana at Glennallen, Alaska, in 1983 to offer scheduled passenger and cargo services to Anchorage as well as charter passenger

and freight flights to bush destinations throughout the south central part of the state. The initial fleet comprises a Cessna 185, a Cessna 206, a Fairchild Hiller FH-100, and a Grumman G-73 Widgeon.

While approaching a glacier at 5,500 ft. on March 4, 1984, the pilot of the FH-100 with three passengers experiences a downdraft. Control of the helicopter is lost and it collides with the ground, rolling inverted. No injuries are reported.

Operations continue throughout the remainder of the decade and into the 1990s.

In 1994, President King still oversees two other employees; however, his fleet now comprises a Piper PA-31-310 Navajo instead of the Widgeon.

Operations are halted in 1995.

GULL AIR: United States (1974–1987). Gull is created by Robert Welch at Barnstable Municipal Airport at Hyannis, Massachusetts, in February 1974 to offer scheduled passenger and cargo flights to Nantucket and Martha's Vineyard. Daily roundtrip revenue services commence on April 1 and are continued for the next five years, with routes also opened to Boston and New Bedford.

By 1979, enplanements are 29,250. President William E. McGrath Jr.'s fleet in 1980 includes 4 Cessna 402s and 1 Beech 18. Passenger boardings jump 24.9% to 56,693 while freight traffic is up 73.7% to 896,321 pounds.

A second Beech 18 freighter is added in 1981 and helps Gull's cargo traffic to increase 250% to 3.13 million FTKs. A fifth Cessna 402 arrives and contributes to a 12% boost in passenger traffic, as 63,480 passengers are flown.

Early in 1982, the company is purchased by the Iyanough Management Corporation and is reformed. In addition to a northeast division based at Hyannis, a southern division and hub are established at Ocala, Florida, from which to initiate scheduled passenger and cargo as a member of the **Air Florida** Commuter network. Destinations visited in Florida and the Bahamas include Fort Lauderdale, Miami, Bimini, and Freeport.

Customer bookings are down 9.5% to 57,477, but cargo rises 33% to 4.2 million pounds.

The fleet in 1983 comprises 12 Cessna 402s, 3 CASA C-212-200s, and 3 Beech 18s.

The southern division begins services to Tampa, West Palm Beach, Tallahassee, Orlando, Gainesville, and Pensacola.

The Florida unit contributes 18,000 bookings to the carrier's overall enplanement total of 95,919, a 67% boost. Freight falls 1.5% to 4.1 million pounds.

The failure of **Air Florida** in 1984 requires the company in mid-April sever its relationship with its former parent and, beginning in May, to operate as an independent under the computer code 9S. This arrangement is changed shortly thereafter when a code-sharing, marketing, and feed arrangement is made with **Ozark Air Lines** and Gull becomes the Ozark Commuter for Florida.

The fleet is increased by the addition of another Cessna 402, three Beech 99s, and a fourth CASA C-212-200 as the three Twin Beechcraft are retired.

When rival **Provincetown-Boston Airlines (PBA)** encounters difficulties, Gull is able to fill the gap and attract additional business by opening new Bahamas routes. Robert Wilson is named executive vice president/general manager in August. Emphasis continues to be placed on a PBA-like shift of services north in summer and south in winter.

Passenger boardings skyrocket 132.7% to 223,294 and push the carrier into the ranks of the large regionals.

In April 1985, Gull introduces a frequent-flyer program and a novel Hyannis to Nantucket Gull-on-Demand shuttle service. Having received government permission, the airline in May inaugurates scheduled flights to Freeport in the Bahamas from Fort Lauderdale, Miami, and West Palm Beach.

In June, the first of seven ordered Metro IIIs are received and placed on the service.

Unsatisfied with its Ozark connection, the large regional spends the second half of the year attempting to interest Washington, D.C. (IAD)-based start-up airline **Presidential Airways** in a spin-off enterprise, **Presidential-1**.

Passenger boardings jump 30% to 290,000.

Airline employment in 1986 stands at 185 and the fleet is altered to include 28 Cessna 402s. Negotiations with **Presidential Airways** fail early in the first quarter as do talks with **Will Air**; undismayed, Gull turns around in March to sign a code-sharing contract with the Texas Air Corporation (TAC) nonunion subsidiary, **New York Air**.

Customer bookings accelerate 22% to 354,000.

In February 1987, TAC, parent of **Continental Airlines**, integrates **New York Air** into that major and elects to cancel the Gull contract. Loss of this support forces the company to file for Chapter XI bankruptcy protection on March 10.

Gull does not go quietly, however, as it files suit against TAC charging the holding company's **Continental Airlines**, **Eastern Air Lines**, **Bar Harbor Airlines**, and **Provincetown-Boston Airline (PBA)** subsidiaries with restraint of trade by "intentionally and maliciously" conspiring to eliminate Gull as a competitor. While the suit drags to an unsuccessful conclusion, Gull officials make plans to restart operations from Hyannis in May, but find the necessary financing to be unavailable.

GUM AIR, B.V.: Suriname (1974–1993). This small privately owned operation is formed at Paramaribo in 1974. Equipped initially with a Cessna 206, it undertakes local passenger and cargo charters.

During the next two decades, the carrier's size advances only slightly, less than 20 workers are employed, and scheduled services are not provided. The fleet is, however, upgraded by the acquisition of an Australian-made GAF Nomad N-22B and a German-made Dornier Do-28.

In 1993, the company is renamed **Gonini Air Service, N.V.**

GUVEN AIR, A.S.: Catal Sok, A1, Blok no. 5, Florya, Istanbul, 34810, Turkey; Phone 90 (212) 662 0362; Fax 90 (212) 662 0261; <http://www.guvenair.com.tr>; Year Founded 1996. Guven is established at Istanbul in the fall of 1996 to offer executive and small group passenger charters as well as air ambulance service. Ali Paya is managing director and he begins revenue services in November with a fleet that includes 2 Raytheon Beechjet 400As and 1 each Raytheon Hawker 800XP, Raytheon Super Beech King Air 200, and Bell 430.

Service is maintained throughout the remainder of the decade. The workforce at the beginning of 2000 totals 24.

GUY AMERICA AIRWAYS: United States (1981–1983). GAA is established by former **Pan American World Airways (1)** pilot Anthony Tirri at Forest Hills, New York, in the spring of 1981. Equipped with 4 Boeing 707-123Bs first operated by **American Airlines**, the carrier receives international authority and undertakes charter flights exclusively to Guyana, beginning on June 2, over the now-dormant PAWA route. By year's end, a total of 13,000 passengers and 223,000 pounds of freight have been flown.

Three Douglas DC-8-62s are ordered in 1982 (they will not enter service) as customer bookings on the New York–Guyana service accelerate to 62,218.

The FAA collects a \$50,000 fine from the carrier and forces the resignation of President Tirri on February 17, 1983, for what the regulators label as violations of safety rules in its jet services to Guyana and the Caribbean island of St. Martin. Citing safety reasons, the FAA issues an emergency order on March 26 halting the company's flights and its certificate is suspended.

GUYANA AIRWAYS CORPORATION: Guyana (1963–1999). In September 1963, three years prior to the independence of British Guiana, the colonial government purchases **British Guiana Airways, Ltd.** from its owner, A. J. Williams, for £170,000. A management and support contract is signed with **British West Indies Airways, Ltd. (2) (BWIA)**.

A network of scheduled services is developed through the **1960s** and **1970s** linking Georgetown with 24 domestic destinations, as well as Miami, Boa Vista (Brazil), and such Caribbean spots as Barbados and Port of Spain.

A de Havilland Canada DHC-6-100 with four passengers crashes at Kurupung on December 3, **1973** (three dead).

The fleet is increased during **1974–1977** by the addition of three previously employed Lockheed L-188Cs, all of which are operated on short-term leases and two of which are quickly returned.

Still, the fleet continues to grow to comprise, by **1978**, a DC-6A, 2 Hawker Siddeley HS 748s, 2 DHC-4A Caribou, 2 DHC-6 Twin Otters, and 1 Cessna 310.

Airline employment is 500 and a Boeing 737-2L9 is leased from **Maersk Air, A.S.** in **1979**.

In the early **1980s**, a Boeing 707-323B, first delivered to **American Airlines**, and a Lockheed L-188A Electra are added.

Following an engine failure on climbout from Castries on November 30, **1981**, the DC-6A with three crew attempts to return to its point of origin, but crashes and catches fire; there are no survivors.

A Tupolev Tu-154 is leased in early **1985**. During that latter year, a total of 108,936 international and 59,113 domestic passengers are flown.

In **1986–1989**, new frequencies are introduced to New York and Toronto. The Lockheed and Tupolev are retired and a Shorts SC-7 Skyvan is leased from Aero Services Barbados, Ltd.

Operations continue apace in **1990–1992**.

In **1993**, Chairman Joe Viera and General Manager Guy N. Spence oversee a workforce of 400 and a fleet that consists of the owned Boeing, 1 leased Boeing 707-344B, 1 Twin Otter, and 2 BAe (HS) 748s, both out of service.

Enplanements climb 4% during the 12 months to 109,579 and small financial rewards are seen in profits of \$640,851 (operating) and \$416,550 (net).

Airline employment is increased by 6.2% in **1994** to 494 as the owned and leased Stratoliners are retired during the first quarter. On April 4, their replacement, a B-757-28A, arrives at Georgetown's Timebri Airport from Seattle. Chartered from ILFC at a cost of \$275,000 each month, the aircraft is employed to double the company's Toronto frequencies.

Later in the year, a code-sharing agreement is signed with **Continental Airlines** and plans are made to begin services to Curaçao.

Passenger boardings slip by 1.9% to 107,561, but revenues accelerate 8.3% to \$27.99 million. Expenses fall 4.8% to \$23.98 million and allow pretax profits of \$4.01 million and a net gain of \$2.61 million.

The workforce is decreased by 3.3% in **1995** to 353.

Through June, the company's three aircraft fly a total of 59,000 passengers, a 32.8% increase. Freight is off by 25.5% during the same period to 1.24 million FTKs.

In **1996–1997**, Ralph Ramkaran is chairman, with Fazel Khan as managing director. The employee population grows to 475 and service continues to two dozen points in Guyana, as well as to Miami, New York, and Toronto.

The carrier is forced to pay \$150,000 per week for eight weeks during the latter year when the B-757-28A goes out of service three times for unscheduled maintenance.

As **1998** begins, it is reported that the airline is near bankruptcy as the result of on-going maintenance problems with the ILFC B-757-28A, which forces the leasing of back-up aircraft. Costs involved reach \$6 million.

During the summer, plans are made to privatize the airline and transfer its huge costs to a hoped-for strategic partner and/or other investors. Bids will be sought for an award of 51% majority ownership.

The **TradeWinds Airlines** Lockheed L-1011-200 TriStar *Allison Ann* begins operating from New York (JFK) to Georgetown on July 19 on behalf of GAC.

While baggage is being loaded prior to departure of Flight 712 for New York on November 4, a fault is discovered in the right main landing gear of the B-757-28A. The service must be cancelled, with passen-

gers accommodated overnight and transferred to a **British West Indies Airways, Ltd. (2) (BWIA)** flight the next day.

Also on November 5, a B-757-28AER is wet-leased from **North American Airlines** to ensure continuity of operations on the main international route between Guyana and New York. When an inspection team arrives from Boeing several days later, it is found that costs involved in repairing the jetliner will be substantial; the aircraft remains grounded, even as lease costs mount up. At this point, the U.S. FAA refuses to recertify the Boeing.

The fiscal situation does not significantly improve until the company is able to arrange a \$1-million loan in December. That, too, is seen as a short-term measure, designed to meet immediate payroll needs and keep the airline afloat. When the money is used up, as it quickly is, CEO Dr. Frederick Duncan announces that there is no money to pay salaries and the concern all but collapses.

Trade Minister Mike Shree Chan reports, on January 18, **1999**, that he has asked **American Airlines** to begin flights into Cheddi Jagan International Airport, outside Georgetown, to take up the slack resulting from the troubles at the financially strapped, state-run GAC.

As part of a plan to privatize GAC, the government, on January 28, lays off 128 airline workers. With the airline \$10 million in debt, Prime Minister Samuel Hinds indicates that the search for a majority strategic investor is being intensified. Under the leadership of privatization unit director Winston Brassington, bids are invited from outside groups, due on February 16.

On February 1, the government wins a bid to return the damaged B-757-28A to ILFC before the end of its November lease without early return penalties. The wet-lease arrangement with **North American Airlines** remains in place and can hopefully be maintained until privatization, now on a fast track, can be completed.

On February 2 and 5, respectively, the aviation departments of the U.S. (FAA) and Canada (Transport Canada) suspend GAC's authority to operate into those North American nations. Although it cannot operate its own planes to Miami, New York, or Toronto, it can continue to wet-lease flights.

Seven bids are received by the 2 p.m. deadline on February 16. The remainder of the month will be taken up with consideration of the bids by the four-person privatization unit. Director Brassington indicates that negotiations with the bid winner will be conducted in March, with the process hopefully concluded by April 1. By February 17, the situation is so desperate that the airline does not have sufficient cash to pay for its twice-weekly wet-leased flights to New York. The airline temporarily suspends selling passenger tickets, but will help to return home by other carrier those passengers it has brought into the country.

The ILFC B-757-28A departs on a February 18 ferry flight to Alabama for a certification check, freeing the debt-ridden airline of its \$260,000 monthly lease. Just after departure, thick black smoke and fire is seen coming from the right engine. The aircraft must return to its point of origin where, after a check by representatives of Rolls Royce, it is determined that a new engine will be sought.

Also on February 18, the timetable originally established for consideration of privatization bids is dramatically boosted when the seven requests are presented at a special cabinet session chaired by President Janet Jagan. Rather than wait another week, the decision is taken to award 51% majority shareholding to Aviation Investments Incorporated (AIC), a 12-member group led by the Aircraft Owners Association of Guyana (AOAG), which is the only local bidder.

Under terms of the agreement, the new owner will be given a rather free hand, including the right to retrench all 184 remaining employees if so desired. In its February 22 issue, *The Stabroek* reports that a three-man team from AIC will take over operations. The carrier's new chairman will be Yesu Persaud, while the next president will be Anthony Mekdeci, the nation's former director of civil aviation. It is also reported that the new owners will immediately pump \$1.8 million into GAC and appeal the FAA's suspension of its authority.

A new Rolls Royce engine for the grounded B-757 arrives from the U.S. on February 26 and is installed by five U.S. engineers. The main

parliamentary opposition, The United Front, voices support on February 27 for the decision by the government to accept the bid of AIC.

The ILFC B-757-28A departs Guyana on February 28 for Alabama, where it will undergo a certification check at PEMCO.

On March 1, all 184 remaining GAC employees receive letters of termination; they will receive severance packages and the entire matter will be discussed at a government cabinet meeting on March 3.

Capt. Rodwell A. Paul, who had piloted the B-757-28A, and who along with all other employees has been terminated, joins with former Engineering Manager Lyndon Chance and Marketing Manager Hugh Denbow on March 2 establish a ground-handling business, Timehri Aviation Services, Inc., at Cheddi Jagan International Airport. Some 25–30 former GAC employees are expected to be hired.

Having missed a chance to bid on the airline, the Guyana Association of Airline Professionals offers its congratulations to AIC on March 3. The next day, it is reported that the consortium and the government, which have been in negotiations, expect to seal an arrangement within a few weeks.

On March 11, Roy Hughes, president of the Clerical and Commercial Workers Union, is officially notified that the new ownership will terminate all remaining workers on April 1, paying them 30 days wages in lieu of longer notice. A senior government official tells *The Guyana Chronicle* on March 12 that negotiations for a joint partnership in GAC are in their final stages and should be completed within a week. The newspaper also learns that the FAA has given GAC a three-month extension from March 5 to allow for the “reorganization of the company.”

Discussions drag on longer than expected, but finally, on April 12, the nine-member consortium of Guyanese businesses is able to clinch 51% controlling interest. It is noted that the \$1.8 million paid by AIC for the majority stake will be utilized in the creation of a new airline that will be named **Guyana Airways 2000 Incorporated (GA 2000 Inc.)**. AIC will absorb \$3.3 million in debts from the predecessor organization, but will abandon its uneconomical domestic operations.

Simultaneously, President Mekdeci indicates that two aircraft will be leased and tickets sold in order that services might commence in May. A workforce of 30 will be employed, growing to 150 by year's end. GA 2000 Inc. is formally registered on April 16 and the privatization process with the government is completed on April 23 when Finance Minister Bharrat Jagdeo closes out the remaining details.

The board of directors for GAC 2000 is approved by the cabinet on April 27. Yesu Persaud from Aviation Investments is chairman, with Stanley Ming, Vic Oditt, and Michael Correia. Representing the government are Winston Brassington, Carole Hebert, and Gita Raghubir. CEO Mekdeci reports that the carrier's first flight will be made on May 27 from Toronto–Guyana–New York (JFK) with an Airbus Industrie A300-600R from an as-yet unnamed leasing company (which will turn out to be Nordstress Australia, Pty.).

Plans are confirmed on June 12 to start Toronto service within five days; however, the scheduled launch must be scrubbed on June 17 because Canadian regulatory authorities have not yet finished processing an approval for Nordstress, the Australian concern from which the Airbus has been leased.

After considerable delay, the leased, former **China Northern Airlines Company, Ltd.** Airbus Industrie A300B4-622R, wearing the carrier's new red, golden orange, and blue livery, undertakes the reborn company's first roundtrip service to New York (JFK) on July 9, continuing on to Toronto.

GUYANA AIRWAYS 2000, INC. (GA 2000, INC.): Guyana (1999–2001). As part of a plan to privatize its financially distressed national airline, the government of Guyana, on January 28, 1999, lays off 128 **Guyana Airways Corporation** workers. With the airline \$10 million in debt, Prime Minister Samuel Hinds indicates that the search for a majority strategic investor is being intensified. Under the leadership of privatization unit director Winston Brassington, bids are invited from outside groups, due on February 16.

The government, on February 1, wins a bid to return its damaged B-757-28A to ILFC ahead of the end of its November lease without early return penalties. The wet-lease arrangement with **North American Airlines** remains in place and can hopefully be maintained until privatization, now on a fast track, can be completed.

On February 2 and 5, respectively, the aviation departments of the U.S. (FAA) and Canada (Transport Canada) suspend GAC's authority to operate into those North American nations. Although it cannot operate its own planes to Miami, New York, or Toronto, it can continue to “wet-lease” flights.

Seven bids are received by the 2 p.m. deadline on February 16. The remainder of the month will be taken up with consideration of the bids by the four-person privatization unit. Director Brassington indicates that negotiations with the bid winner will be conducted in March, with the process, hopefully, concluded by April 1.

By February 17, the situation is so desperate that the airline does not have sufficient cash to pay for its two-weekly wet-leased flights to New York. The airline temporarily suspends selling passenger tickets, but will help to return home by other carrier those passengers it has brought into the country.

The ILFC B-757-28A departs on a February 18 ferry flight to Alabama for a certification check, freeing the debt-ridden airline of its \$260,000 monthly lease. Just after departure, thick black smoke and fire is seen coming from the right engine. The aircraft must return to its point of origin where, after a check by representatives of Rolls Royce, it is determined that a new engine will be sought.

Also on February 18, the timetable originally established for consideration of privatization bids is dramatically boosted when the seven requests are presented at a special government cabinet session chaired by President Janet Jagan. Rather than wait another week, the decision is taken to award 51% majority share-holding to Aviation Investments Incorporated (AIC), a 12-member group led by the Aircraft Owners Association of Guyana (AOAG), which is the only local bidder. Under terms of the agreement, the new owner will be given a rather free hand, including the right to retrench all 184 remaining employees if so desired.

In its February 22 issue, *The Stabroek* reports that a three-man team from AIC will take over operations. The carrier's new chairman will be Yesu Persaud, while the next president will be Anthony Mekdeci, the nation's former director of civil aviation. It is also reported that the new owners will immediately pump \$1.8 million into GAC and appeal the FAA's suspension of its authority.

A new Rolls Royce engine for the grounded B-757 arrives from the U.S. on February 26 and is installed by five U.S. engineers.

The main parliamentary opposition, The United Front, voices support on February 27 for the decision by the government to accept the bid of AIC. The ILFC B-757-28A departs Guyana on February 28 for Alabama, where it will undergo a certification check at PEMCO.

On March 1, the 184 remaining GAC employees receive letters of termination; all will receive severance packages and the entire matter will be discussed at a government cabinet meeting on March 3.

Capt. Rodwell A. Paul, who had piloted the B-757-28A, and who along with all other employees has been terminated, joins with former Engineering Manager Lyndon Chance and Marketing Manager Hugh Denbow on March 2 establish a ground-handling business, Timehri Aviation Services, Inc., at Cheddi Jagan International Airport. Some 25–30 former GAC employees are expected to be hired.

Having missed a chance to bid on the airline, the Guyana Association of Airline Professionals offers its congratulations to AIC on March 3. The next day, it is reported that the consortium and the government, which have been in negotiations, expect to seal an arrangement within a few weeks.

On March 11, Roy Hughes, president of the Clerical and Commercial Workers Union, is officially notified that the new ownership will terminate all remaining workers on April 1, paying them 30 days wages in lieu of longer notice.

A senior government official tells *The Guyana Chronicle* on March 12 that negotiations for a joint partnership in GAC are in their final

stages and should be completed within a week. The newspaper also learns that the FAA has given GAC a three-month extension from March 5 to allow for the "reorganization of the company."

Discussions drag on longer than expected, but finally, on April 12, the nine-member consortium of Guyanese businesses is able to clinch 51% controlling interest. It is noted that the \$1.8 million paid by AIC for the majority stake will be plowed back into the creation of a new airline, which will be named Guyana Airways 2000 Incorporated (GA 2000 Inc.). AIC will absorb \$3.3 million in debts from the predecessor organization, but will abandon its uneconomical domestic operations.

Simultaneously, President Mekdeci indicates that two aircraft will be leased and tickets sold in order that services might commence in May. A workforce of 30 will be employed, growing to 150 by year's end. GA 2000 Inc. is formally registered on April 16 and the privatization process with the government is completed on April 23 when Finance Minister Bharrat Jagdeo closes out the remaining details.

The board of directors for GAC 2000 is approved by the cabinet on April 27. Yesu Persaud from Aviation Investments is chairman, with Stanley Ming, Vic Oditt, and Michael Correia. Representing the government are Winston Brassington, Carole Hebert, and Gita Raghubir.

Simultaneously, CEO Mekdeci reports that the carrier's first flight will be made on May 27 from Toronto-Guyana-New York (JFK) with an Airbus Industrie A300B4-622R from an as-yet unnamed leasing company (which will turn out to be Nordstress Australia, Pty.).

Plans are confirmed on June 12 to start Toronto service within five days; however, the scheduled launch must be scrubbed on June 17 because Canadian regulatory authorities have not yet finished processing an approval for Nordstress, the Australian concern from which the Airbus has been leased.

After considerable delay, the leased, former **China Northern Airlines Company, Ltd.** Airbus Industrie A300B4-622R, wearing the carrier's new red, golden orange, and blue livery, undertakes the reborn company's first roundtrip service to New York (JFK) on July 9, continuing on to Toronto.

In September, the U.S. DOT amends the carrier's exemption authority to include service to Santo Domingo, St. Lucia, Grenada and Haiti as intermediate points on its New York route. Plans to inaugurate twice-weekly return service to Miami on October 29 must be rescheduled.

Miami finally joins the route network on November 14, giving GA2000 seven nonstops per week into North America, including five to New York and Toronto. *The Stabroek* reports five days later that the airline is now boasting that so far it has transported more passengers in this peak Christmas season than it ever had under its Guyana Airways Corporation banner and that it has yet to leave any baggage behind.

A strategic alliance is entered into with **SLM (Surinam Airways, N.V.)** at the end of the year. Under terms of the agreement, the two carriers will now share facilities and ticketing to Barbados, Trinidad and Tobago, and North America.

Rumors begin to circulate in early January 2000 that the reborn carrier is in significant financial difficulty. Shortly after New Year's, Chairman Persaud and several members of the board of directors meet with Guyanese President Bharrat Jagdeo to discuss the airline's progress. On January 10, Persaud and other executives travel to Trinidad and Tobago for what are termed "exploratory" talks with **BWIA West Indian Airways, Ltd.** On January 12, *The Guyana Chronicle* suggests that the airline had lost \$800 million during the second half of 1999 and that several of its key officials may soon be leaving.

With public concern over the fiscal state of GA2000 rising, President Jagdeo holds a news conference on January 13 to discuss his meeting with airline officials. He takes pains to indicate that, while losses had been sustained, they were nowhere near as deep as those suggested by the newspaper report of the previous day. Larry Singh, the carrier's operations director and a shareholder, resigns on January 18. After only three months, the Miami service is withdrawn in late January at the same time that CEO Anthony Mekdeci resigns his office.

Even though it is very expensive to operate, plans are announced in early February for the renewal of the wet-leased A300B4-622R from Nordstress, with the option to alter that charter to a dry-lease after six month's service. By this action, the international regulations necessary for company to continue claiming the title of Guyana's flag carrier will be met. Demerara Distillers, Ltd. Human Resources Manager Nowrang Persaud is seconded to the airline as acting general manager to help it engage in a certain amount of restructuring, during which the services of a number of employees are terminated, reducing the workforce from over 200 to 140. Bridge financing is also sought to help the airline make its way through what has turned out, in fact, to be a difficult period.

To cut costs, the decision to request the Nordstress Airbus is scrubbed and on March 8 Chairman Persaud discloses that another deal with the Australian lessor will, instead, allow introduction of a smaller wet-leased Boeing 757-200 by April. The dry-lease arrangements made for the Airbus are carried over to the new aircraft. Delivery of the Boeing is delayed; as late as April 19, AirlinersonLine is suggesting that Guyana Air 2000 may have changed its mind about replacing the Airbus with a B-757 because the larger aircraft is still operating the company's flights to New York (JFK) and Toronto.

On May 9, the B-757-23A, painted in Guyana Airways 2000 livery, finally arrives at Cheddi Jagan International Airport under the a six-month wet-lease agreement announced earlier, complete with the option to convert to dry-lease within six months after Guyanese flight crew become available. The Boeing enters service on May 13, allowing return of the Airbus.

Former **BWIA West Indies Airways, Ltd.** executive Thomas Scarlett becomes the new CEO July 1, allowing Nowrang Persaud to return to Demerara Distillers, Ltd. Speaking at the formal news conference held in Georgetown to introduce the new leader, Chairman Persaud reviews the challenges of the first year, the anniversary of which will be celebrated in just eight days. The opportunity is taken to announce that GA2000 is positioning itself to increase its share capital to approximately \$15-\$20 million and will soon announce a new marketing strategy.

Return frequencies between Guyana and North America are boosted in August to eight per week, six to New York (JFK) and two to Toronto. Meanwhile, eight local pilots who earlier flew the GAC B-757, have been hired and sent for a refresher course so that the current wet-lease arrangement may be changed over to dry-lease in October.

GA 2000 will cease operations on August 2, 2001.

GUYANE AIR TRANSPORT, S.A. See **GAT (GUYANE AIR TRANSPORT, S.A.)**

H & D AVIATION: United States (1980-1982). Jack Daub founds H & D at Terre Haute, Indiana, in the spring of 1980 to provide scheduled passenger and cargo service from his town's Hulman Field to Lawrenceville-Vincennes Airport and St. Louis. A single Piper PA-31-350 Navajo Chieftain is employed to inaugurate revenue services in June.

Operations continue apace; however, ATC problems caused by the summer 1981 PATCO air traffic controllers' strike conspire with the recession to put the company out of business in 1982.

H. C. SLEIGHT AIRLINES (PTY.), LTD. See **SLEIGH AIRLINES**

HADAG AIR (HAFENDEAMPFSCHIFFFAHRTS-ACTIEN, GmbH); Germany (1974-1983). Hamburg-based **General Air**, which was established as an air taxi operator in 1962, is reformed in 1974 and renamed **Hadag Air, GmbH**. The decision is taken late in the decade to begin scheduled commuter services employing a de Havilland Canada DHC-6 Twin Otter and Cessna lightplanes. Flights are initiated linking the company base with Dortmund, Helgoland, Westerland, Sylt, and Wyk.

Operations continue apace during the remainder of the decade and into the next with little change. In April-May 1978, the company

provides replacement service for Stuttgart-based **Delta Air Regionalflygverkehr GmbH. & Co.** until that new commuter is able to obtain its own Twin Otter.

Passenger enplanements fluctuate during the difficult years of recession and fuel price increases; boardings total 11,347 in **1981** and 10,612 in **1982**.

In an effort to increase bookings, the company is reformed in **1983** and renamed **Holiday Express, GmbH.**; it begins scheduled international flights to Rotterdam.

HAGELAND AIR (HAGELAND AVIATION SERVICES): P.O. Box 195, St. Mary's, Alaska 99658, United States; Phone (907) 438-2246; Fax (907) 438-2435; Code H6; Year Founded 1992. Hageland is established at Anchorage in **1992** to offer scheduled and charter flights to regional destinations. A three-person workforce is recruited for this airline division of president Ron Tweto's Hageland Aviation Services and revenue flights commence with five Cessna 207As and one each C-185, C-402C, and Beech 18 freighter. Enplanements total 7,000.

Passenger boardings in **1993** skyrocket 97% to 12,314.

Scheduled customer bookings climb 22% in **1994** to 14,976, while an additional 17,676 charter travelers are also flown.

Despite earlier success, neither the workforce nor the fleet grows in **1995**. Enplanements soar another 67% to 25,078.

Flights continue apace in **1996**. While transporting dog food supplies in support of the Iditarod Sled Race on March 13, a Cessna 185 is unable to locate its normal landing site near Cripple, Alaska, because of a recent snowfall. The pilot elects to land on an ice-covered creek, but the aircraft lands hard and slides into spruce pine at the end of the landing area. Uninjured, the flyer's plane is badly damaged.

While en route from Bethel to Marshall via Russian Mission and Emonak on a November 30 moose-count survey, a Cessna 185 with a pilot and a state naturalist, disappears. When the wreck site is found near the Yukon River, there are no survivors.

Passenger boardings surge upward 59.1% to 39,892.

While en route from Barrow to Wainwright on April 10, **1997**, Flight 502, a Cessna 402B with a pilot and four passengers, crashes into the frozen Arctic Sea while maneuvering near its destination; there are no survivors.

Beginning its taxi from the ramp at Buckland for a September 8 service to Noorvik, a Cessna 402C with a pilot and six passengers, collides with a parked **Bering Air** Cessna 208B, with a pilot and nine passengers; no injuries are reported and damages are slight.

Just after landing at Kivalina on September 14, Flight 916, a Cessna 402C with a pilot but no passengers, suffers the collapse of its nose landing gear; although the flyer is not injured, substantial damage is sustained.

The company's incredibly unlucky year continues on November 8. While climbing away from Barrow on an evening service to Wainwright, a Cessna 208B with a pilot and seven passengers stalls and plunges into the Arctic Ocean 1/2 mi. W of the runway; there are no survivors.

At the end of the year, the fleet comprises 18 Cessna 207As, 4 C-402s, 3 C-208 Caravan Is, 1 C-172, and the Beech 18. These fly a total of 53,939 passengers, a 35.2% increase over the previous year.

Service is maintained without incident in **1998**. Customer bookings plunge 17.7% to 44,000.

Passenger boardings turn around in **1999** and increase 47.8% to 66,000.

Flights continue in **2000**. Flight 71, a Cessna 207A with a pilot and four passengers, fails its takeoff from Tuluksak for a February 7 service to Bethel. Although the aircraft is badly damaged, no one aboard is hurt.

HAGERSTOWN COMMUTER. See **HENSON AVIATION**

HAHN AIR BUSINESSLINE/HAHNAIR SUDWESTFLUG, GmbH. Flughafen Hahn, Lautzhausen, 55483, Germany; Phone

49 (6543) 980 134; Fax 49 (6543) 980 736; Code HR; Year Founded 1994. This scheduled third-level domestic carrier is established at Hahn Airport on January 1, **1994**. Gerd Schaeter is CEO of the company, which also operates a flying school. Employing one each Beech 1900C and Fairchild Metro II plus two Fairchild Metro IIIs, revenue flights are launched to Berlin, Cannes, Dusseldorf, Erhurt, Frankfurt, Friedrichshafen, Leipzig, Munich, and Stuttgart.

HAIDA AIRLINES, LTD. See **AIR BC, LTD.**

HAINAN AIRLINES. See **CHINA HAINAN AIRLINES**

HAINAN VIP FLIGHT SERVICE: Jingchao Building, No. 5 Nungzhanguan Nanlu, Chaoyang District, Beijing, 100026, China; Phone 86 (10) 6506 8300; Fax 86 (10) 6506 8221; Year Founded 1995. Hainan VIP is established by **China Hainan Airlines Company, Ltd.** (51%) and other investors at Beijing in **1995** to offer ad hoc executive and small group passenger charters throughout China and Asia. Zhizheng Tu is chairman, with Lang Pu Bin as managing director. Revenue flights begin with one each Learjet 55 and Learjet 60.

HAINES AIRWAYS: P.O. Box 470, Haines, Alaska 99827; Phone (907) 766-2646; Fax (907) 766-2780; <http://www.hainesairways.com>; Code 7A; Year Founded 1986. HA is founded by Reginald Radcliff at Haines, Alaska, in the fall of **1986** to offer regularly scheduled passenger and cargo services as well as charter and contract service bush flights to surrounding destinations. Scheduled revenue flights commence in November to Juneau, Skagway, and Hoonah with three Piper PA-32 Cherokee Sixes and a Cessna 182.

Regular and on-demand frequencies continue apace for the remainder of the decade and enplanements in **1990** total 8,118.

New CEO Michael Shallcross's workforce is increased by 33.3% in **1991** to 12, but passenger boardings slide to 6,209. A total of 134,860 pounds of mail are transported.

Enplanements continue their downfall in **1992** landing at 5,653. However, in **1993**, customer bookings boom upward 51% to 11,536.

When the two-year **Alaska Airlines** Essential Air Service (EAS) expires on September 30, **1994**, Haines, with a \$678,000 bid to the DOT, becomes the first carrier to challenge the major's 14-year lock on the subsidy for service to 5 Southeast Alaskan communities. The bid is not successful.

Passenger boardings grow an additional 20.8% to 13,937.

Although the workforce does not change in **1995**, the fleet grows by the addition of a Piper PA-31-350 Navajo Chieftain. The added capacity is useful as enplanements rise by 20% to 16,724.

The roller coast ride for traffic figures turns downward again in **1996** as passenger boardings slide 3% to 16,222.

Flights continue in **1997**. While on a sight-seeing service from Haines to Skagway on July 3, a Piper PA-32 with one pilot and five passengers loses power and ditches in the ocean 1.5 mi. SW of its destination (four dead).

Customer bookings for the year skyrocket 83% to 29,693.

Business is off badly in **1998** as passenger boardings plunge 59.6% to 12,000.

Customer bookings turn around in **1999** and increase 57.9% to 5,000. At the beginning of **2000**, 4 Cessna 2076 Stationaires and 3 C-208 Caravan Is are stationed at Juneau.

HAITI AIR FREIGHT INTERNATIONAL, S.A.: International Airport, Port-au-Prince, Haiti; Phone (809) 246-2850; Fax (809) 246-0848; Code 9F; Year Founded 1992. Under the direction of Smith Augustin, HAF is established at Port-au-Prince in **1992** to offer all-cargo charter services. Operations commence with a fleet that includes 1 Convair CV-880, 2 Douglas DC-6BFs, 1 DC-4, and 2 Curtiss C-46A Commandos. Struggling to establish its viability in the face of Organization of American States trade sanctions against Haiti, HAFI is largely unsuccessful.

As part of the UN effort to restore democracy to the country, the U.S. bans flights between Miami and Haiti on June 24, **1994**. Unable to fly to its principal market, the airline shuts down. Plans for a resumption of services from Port-au-Prince following the change of government in October are realized within a month.

Haiti is, however, found to be deficient in its enforcement of international safety standards. Consequently, it becomes necessary for it to obtain a special exemption from the U.S. Department of Transportation in order to continue flying to U.S. territory. In June **1996**, Haiti Air Freight is given an exception from 49 USC 41301 to conduct scheduled foreign air transportation of cargo and mail between Port-au-Prince and San Juan, Miami, and New York. These charters may only be operated with properly authorized wet-leased aircraft from a U.S. or foreign carrier.

Service to Miami and throughout the Caribbean is maintained and by **1997**, the jetliners and Commandos have been withdrawn and flights are conducted employing the DC-6BF and two CV-440s. The exemption certificate is renewed on May 30.

HAF continues flying during the remainder of the decade and its exception certificate is renewed annually, on June 15, **1998** and June 14, **1999**.

HAITI AIR INTER, S.A. See HAITI AIR TRANSPORT

HAITI AIR INTERNATIONAL, S.A. See HAITI AIR TRANSPORT, S.A.

HAITI AIR TRANSPORT, S.A.: Haiti (1943–1983). On May 31, **1943**, the government air force **Corps d'Aviation de la Garde d'Haiti** inaugurates domestic airmail Douglas DC-3 services; passenger service is started in **1944**. Throughout the **1950s**, the Corps' local routes are maintained while a Boeing 307 is used to fly to Miami.

En route from Auxcayes to Port au Prince on April 9, **1959**, a DC-3 with 34 passengers is taken over by 6 pirates. They kill the pilot and force the copilot to divert the aircraft to Santiago de Cuba.

The Stratoliner is replaced by a Curtiss C-46 in **1961**, the same year in which the service becomes the national airline, operating under the name **COHATA (Compagnie Haitienne de Transports Aeriens, S.A.)**.

Operations continue largely without incident during the remainder of the decade and into the next. However, on January 22, **1966**, a DC-3, with 30 aboard goes down near Duchity and there are no survivors.

COHATA is succeeded by Haitian Air Transport in **1973**. This wholly owned government subsidiary is divided into two lines: Haiti Air Inter, S.A. for domestic flights and Haiti Air International, S.A. for international service. Haiti Air Inter employs a fleet of 2 Douglas DC-3s, 1 de Havilland Canada DHC-6-100, and 2 Britten-Norman BN-2 Islanders to link Port-au-Prince with Jeremie, Gonaives, Port-de-Paix, and Cap Haitien. Equipped with a B-737-200, Haiti Air International, S.A. undertakes flights to New York (JFK).

En route from Port-au-Prince to Cap Haitien on September 9, **1975**, the DHC-6-100 with 2 crew and 15 passengers is taken over by three hijackers who demand that the turboprop be flown to Cuba. After landing at Gonaives for refueling, the pirates are overwhelmed by the other passengers. Both airlines experience one significant incident each before their demise, one more tragic than the other.

Nine are killed in the crash of a Haiti Air Inter, S.A. BN-2 at Port-au-Prince on January 2, **1980**.

Services are maintained without change or additional adverse incident until **1984** when Haiti Air Inter, S.A. is shut down and its remaining Twin Otter is sold to the Haitian air force. Haiti Air International, S.A. is continued.

At New York on September 26, **1985**, the B-737-200 is the target of an attack by one Winston Spencer Dobson, who plants a device in a suspicious suitcase that is placed aboard five minutes before takeoff. Fortunately, alert crew members spot his bag and notify police. The carrier stops flying at year's end.

HAITI REGIONAL AIRWAYS, S.A.: Haiti (1990–1991). HRA is established at Port-au-Prince in **1990** to offer regional passenger and cargo charters with a pair of Convair CV-440s. Unable to achieve economic viability, the company goes out of business in December **1991**.

HAITI TRANS AIR, S.A.: Haiti (1988–1995). With assistance from **Faucett Peruvian Airlines, S.A.** and \$300,000 borrowed from friends and relatives, Charles Voight founds HTA at Port-au-Prince in **1988** to offer regional passenger and freight charters. Revenue flights to Caribbean destinations and Miami are inaugurated with a single leased Boeing 727-222 flown by chief pilot Augusto Delgado. A second Tri-Jet, a Dash-247, is chartered from Faucett in **1989**. Profitless services are continued by the 70-employee concern in **1990**.

In September **1991**, the Haitian army overthrows elected President Jean-Bertrand Aristide and the country enters a period of crisis. HTA is severely impacted by the trade sanctions imposed by the Organization of American States. The route network is reduced to just one segment: Port-au-Prince to Miami.

The B-727-222 is withdrawn in **1992** and replaced with a Douglas DC-8-61, also chartered from Faucett. In **1993**, President Voight oversees a workforce of 185. By year's end, losses since start-up approach \$7 million.

On June 25, **1994**, a UN embargo on flights to the island nation takes effect. Consequently, HTA is forced to shut down. Voight keeps his Miami reservations desk going a few days longer, but is forced to return his leased Douglas to Peru. Plans for a resumption of service following Aristide's UN-assisted return to power in October are almost immediately realized.

Unable to regain viability, Haiti Trans Air declares bankruptcy and is grounded in March **1995**. The B-727-247 is returned to **Faucett Peruvian Airlines, S.A.** and the remainder of the company is liquidated.

HAITIAN AVIATION LINE. See HALISA AIR (HAITIAN AVIATION LINE, S.A.)

HAJVAIRY AIR, LTD.: Pakistan (1993–1994). HAL is established at Karachi during the first quarter of **1993** as a joint venture company between Pakistan's Hajvairy Association and **Aeroflot Russian International Airlines (ARIA)**. Tauqir Sultan Awan is named chairman/CEO, initial capitalization is \$1.5 million, and three leased Ilyushin Il-86s are acquired. The inaugural revenue flight occurs on March 22 between Karachi and Islamabad, with a deep-discount holiday season service made available through the end of the month. Plans are made to transfer the base of operations to Lahore.

Operations continue into **1994** before ceasing.

HALIC HAVACILIK, A.S. See GOLDEN HORN AVIATION, A.S.

HALISA AIR (HAITIAN AVIATION LINE, S.A.): 7270 NW 12th St., Miami, Florida 33126, United States; Phone 305 477-2400; Fax 305 758-1476; Code WD; Year Founded 1995. Under the leadership of Ronald Madsen, Halisa Air is established at Miami in April **1995** to operate scheduled and charter passenger flights between Miami and Port-au-Prince. Revenue flights begin later in the year with a single Boeing 727-200A leased from fellow Miami new entrant **Falcon Air Express**.

HALISA AIR, S.A. See ACORI: AERO COSTA RICA, S.A.

HAMAREIN AIR - GULF CARRIERS, LTD.: United Arab Emirates (1977–1980). Established at Ras al Khaimah Airport in **1977**, Hamarein operates cargo and charter services in the Persian Gulf region employing a single Douglas DC-8-20F.

In **1978**, the carrier seeks authority to serve London (LGW); however, the Iranian revolution of **1979–1980** so depletes traffic that the company must stop flying.

HAMBURG AIRLINES, GmbH. & CO., K.G. (1): Germany (1988–1993). This new German regional carrier is established at Hamburg on April 15, 1988 with Wolfgang Biederbeck as managing director. The initial fleet of this successor to bankrupt **Hansa Express, GmbH.** comprises a de Havilland Canada DHC-8-100 and a Dornier 228-200 and these are employed in September to inaugurate scheduled services to Goteborg, Rotterdam, and Antwerp.

Enplanements total 2,000.

The fleet of the 92-employee commuter in 1989 includes 4 DHC-8-100s.

Passenger boardings leap up 241.7% to 40,600. Revenues skyrocket 255.9% to \$6.3 million.

In 1990, a Fokker 100 jetliner is added for charter flights between the various German states. Antwerp is dropped from the route network as flights are initiated to London (LGW) and Amsterdam. Enplanements total 84,730.

Airline employment is increased by 15.2% in 1991 to 190. The Fokker 100 is withdrawn and replaced by three additional DHC-8-100s and two DHC-8-300s. In March, daily frequencies are inaugurated from Hamburg to Birmingham and Manchester, England. Other new routes are initiated to Riga, Vilnius, and Saarbrücken.

Passenger boardings swell 54.2% to 185,000.

Owner Eugene Block, now holding the last independent regional carrier in Germany, opens negotiations for a new partner in the first quarter of 1992. As a result, the company is sold to **Saarland Airlines, GmbH.** in December. Chairman Block retains 20% shareholding and is given a seat on the Saarland board. Managing Director Biederbeck is succeeded by new joint managing directors, Manfred Moeschel and Jürgen Nappe. Traffic figures are now no longer released.

Airline employment in 1993 stands at 170. The fleet of the Saarland subsidiary is increased by three DHC-8-300s and plans are announced to replace the Boeing with Airbus equipment.

Minsk joins the route network while other scheduled destinations served come to include Amsterdam, Birmingham, Manchester, Dresden, Hamburg, Leipzig, Halle, Berlin (Tempelhof), Brussels, Riga, Saarbrücken, Riga, Vilnius, and Frankfurt. Charters are also offered to Venice, Sylt, Verona, Geneva, Paris, London, and Edinburgh.

In financial difficulty since the collapse of a major tour contractor, MP Travel, Saarland and its Hamburg subsidiary go bankrupt at the end of August.

HAMBURG AIRLINES, GmbH. & CO., K.G. (2): Germany (1993–1997). Following the summer 1993 bankruptcy of **Hamburg Airlines, GmbH. & Co. (1)**, a new carrier with the same name is established at the Hamburg base in the fall. Bernard Walter is the new managing director and his leased fleet includes 3 de Havilland Canada DHC-8-102s and 2 DHC-8-311s. Revenue flights are restarted to the company's previous markets.

The workforce is cut to 120 in 1994 and Managing Director Walter places orders for two British Aerospace BAe 146-200s, the first of which is delivered late in the year.

The second Dash-200 is delivered in 1995 and enplanements total 290,460.

Airline employment is increased by 32.3% in 1996 to 340 and the all-leased fleet now includes 2 BAe 146-200s, 3 DHC-8-102s, and 2 DHC-8-311s. A BAe 146-300 is leased from Asset Management Organization during the first quarter and is placed into service on May 1 over the company's summer charter routes. Code-sharing agreements are signed with **Deutsche Lufthansa, A.G.** and **Aer Lingus Irish Airlines, Ltd.**

These feeder arrangements allow passenger boardings to soar 38.2% to 470,000.

Destinations visited in 1997 include Athens, Berlin, Dresden, Dublin, Hamburg, Leipzig, Oporto, Riga, Rome, Saarbrücken, Stuttgart, Thessaloniki, and Vilnius. The company enters into a code-sharing alliance with **TAP Air Portugal, S.A.**

Unable to maintain economic viability, the company conducts its last flight on December 21 and shuts down.

HAMBURG CHILE AIRLINES, S.A. See HAMBURG INTERNATIONAL AIRLINES, GmbH.

HAMBURG INTERNATIONAL AIRLINES, GmbH.: Obenhauptstrasse 3, Hamburg, 22335 Germany; Phone 49 (40) 500 5010; Fax 49 (40) 500 50111; <http://www.hamburg-international.de>; Code HHI; Year Founded 1999. Successor to **Hamburg Airlines, GmbH. & Co., K.G. (2)**, HHI is established at its namesake city in July 1998 to offer holiday charters throughout the Mediterranean region. Norbert Grella is appointed managing director and he immediately places orders for a pair of Next Generation Boeing 737-700s. Meanwhile, a workforce is recruited and arrangements are made to also hub at Saarbrücken, Lubeck, and Luxembourg. Bookings are invited and received from such noted German tour operators as Neckermann, TUI, Alltours, and Oger Tours.

The first Next Generation B-737-73S is received on April 1, 1999 and is employed to begin revenue services 28 days later. The second "Baby Boeing" arrives on October 27. Based in Munich, it is chartered to operate replacement services for **Deutsche Lufthansa, A.G.** More and more, the company also flies from Karlsruhe/Baden and Kassel.

The workforce totals 45 at the beginning of 2000. A new Chilean subsidiary is established during the year and is outfitted with a Next Generation B-737-73S. Arrangements are completed with CIT's Capital Finance on October 4 for the lease of a third Next Generation B-737-73S that will be delivered in April 2001.

A new division is opened at Santiago de Chile in time for the beginning of the fall schedule. In partnership with two Chilean businessmen, **Hamburg Chile Airlines, S.A.** operates Caribbean charters on behalf of the Spanish tour operator Iberojet. The Next Generation B-737-73S Trevor Henderson delivered to Hamburg the previous October 27 is employed for the program, which will continue through March. Whether it will operate thereafter will depend upon traffic during the winter and the acquisition of a replacement aircraft.

HAMIATA (SINO-SOVIET AVIATION CORPORATION, LTD.): China (1939–1949). Following the conclusion of a Sino-Soviet nonaggression pact on August 21, 1937, **Aeroflot Soviet Airlines** is permitted to inaugurate a military support route from Alma Ata in Kazakhstan to the Chinese city of Lanchow via Urumchi. Negotiations for the creation of a joint-stock airline between the two countries begin in April 1938.

With talks going well, the Russians are permitted to begin proving flights even before a pact is signed. The first, between Alma Ata and the Sinkiang Province town of Hami is concluded on March 24, 1939 via Lanchow.

The nonaggression pact between Russia and Germany is signed on August 23 and World War II in Europe begins with the German invasion of Poland eight days later. On September 9, China and the Soviet Union each contribute half of the \$1 million capitalization needed to finally form the joint air transport enterprise.

With a Russian name of Sovetsko-Kitaiskaya Aviatsionnaya Kompaniya, the Soviet-Chinese Aviation Company holds its first corporate meeting on November 15 and names a board of directors that includes two Chinese and two Soviet representatives. A Chinese president is appointed, with a Soviet vice president.

Employing Russian personnel, the carrier's aircraft, two Soviet Douglas DC-3s, begin service on December 6 linking Alma Ata with Hami via Urumchi. Soon the carrier is popularly known as Hamiata after these two destinations.

The **Eurasia Aviation Company** makes a connection at Hami, linking the Soviet Union with China over to Chongqing.

Regularly scheduled services commence on January 8, 1940, but with only Soviet official personnel as passengers, the company soon must revert to nonscheduled status. When German personnel depart **Eurasia Aviation Company** in November, it is taken over by the Chinese.

Just before the outbreak of conflict with Germany, scheduled flights are resumed by Soviet pilots in May **1941**. Despite World War II, sporadic service continues between the carrier's two base destinations.

On March 28, **1945**, the Lanchow route to Hami is taken over by **China National Aviation Corporation (CNAC-1)**, which makes a direct link with the Sino-Soviet company.

On April 19, the Nationalist government, fearing Soviet favoritism toward Red Chinese forces, refuses to renew the Hamiata entry permits. The company nevertheless continues.

Following the Communist victory over the Nationalists in **1949**, the airline is officially disbanded, the service being continued by **Aeroflot Soviet Airlines** and the new Maoist carrier soon known as **CAAC (General Administration of Civil Aviation of China)**.

HAMMONDS COMMUTER AIRLINES: P.O. Box 996, Houma, Louisiana 70361, United States; Phone 504-876-0584; Fax 504-851-4681; Year Founded 1977. The FBO Charlie Hammonds Flying Service is formed at Houma, Louisiana, in the fall of **1977** and inaugurates nonscheduled flights as a side venture in November. Two years later in the spring of **1979**, a scheduled airline division is established to offer scheduled passenger and cargo flights to Patterson, Lafayette, and Houston. These begin in late **1980**.

President Charles L. Hammonds and Vice President Carol H. Hammonds in **1981** operate a fleet of 1 Embraer EMB-110 Bandeirante, 6 Piper PA-31-350 Navajo Chieftains, 1 Piper PA-31-310 Navajo, 1 Cessna 414, 6 Cessna 185s, and 2 Cessna 180s.

A total of 37,570 passengers and 280,425 pounds of freight are flown during the first full year of service. A \$68,000 operating profit is earned.

The payroll is reduced by 40% in **1982** to 90 employees. The EMB-110 is removed in favor of 3 more Chieftains.

Customer bookings accelerate 14.3% to 29,261. Although revenues rise 5% to \$4.16 million, expenses jump 17.9% to \$4.6 million. As a result, a \$433,000 operating loss is suffered.

Beaumont, Texas, joins the route network in **1983**, but the Hammonds run into financial difficulties in **1984** and are forced to file for bankruptcy in November, returning to the charter business. FBO and Part 135 services continue.

HANDLEY PAGE INDO-BURMESE TRANSPORT COMPANY, LTD.: United Kingdom (1920-1921). British aircraft manufacturer Frederick Handley Page causes this subsidiary to be formed at Calcutta in late June **1920**.

Capitalized at 1.5 million rupees and with Ivo Edwards as managing director, the enterprise seeks to secure an Indian Post Office contract while operating freight and passenger flights and a flying school. Funding and facilities will prove insufficient; however, the enterprise is allotted four HP 0/7 transports (upgraded 0/400s), which are shipped by sea to Calcutta and reassembled. Flight operations begin in the fall and consist primarily of charters, including the October 17 marriage flight of Mr. Charles Manson Mann. One of the aircraft is destroyed in an October gale.

Without adequate backing, the subsidiary flies only short haul charters in **1921** and these with de Havilland DH 9s, except when a full load for the big 0/7s could be arranged. The company ceases operations in July; its assets are sold in September to the G. McKenzie, Ltd., automobile firm.

HANDLEY PAGE TRANSPORT, LTD.: United Kingdom (1919-1924). Following the November **1918** armistice, the U.K. government ends its contracts with British airplane builders, including Handley-Page, Ltd. operated by Sir Frederick Handley Page. With the workforce down to one research engineer and a test pilot, Handley Page in early **1919** elects to form an airline.

Advertisements for help bring in Maj. George Woods-Humphrery, RFC, as general manager; Maj. Herbert G. Brackley, RFC, as Air Superintendent; Lt. Col. William Sholto Douglas, RFC, as chief pilot; and

several other pilots, including R. H. McIntosh, Orde Lee, and, notably, Gordon P. Olley, RFC, who would become a famous airline pilot and founder of his own carrier. The pilots would all be paid an annual salary of £915.

On May 1, the first postwar day of U.K. civil flying, new government-ordered air navigation regulations take effect. All civilian aircraft are to be registered, possess certificates of airworthiness, and to display allocated national markings and numbers, with "G" standing for Great Britain. Simultaneously, British Certificate of Airworthiness No. 1 is issued to a Handley-Page, Ltd.-owned 0/400; the converted bomber is later designated the company's G-EAAF. Crews are also to have flying certificates. The same day, aircraft builder Handley Page orders the launch of a 12-day series of airline-like passenger proving flights from the company airfield at Cricklewood near London.

The first service is unsuccessfully attempted to Manchester by an 0/400 converted bomber piloted by Sholto-Douglas (who will one day become Marshal of the RAF and head the **British European Airways Corporation**), with 11 passengers.

The May 1 passenger flight is laid on again on May 3 and completed. On May 5, 1,500 pounds of newspapers are delivered by parachute in a spectacular demonstration of the possibilities of aerial delivery of the press. Over Aberdeen, which is not scheduled as a stop on this Scottish run, Maj. Orde Lee departs the aircraft by parachute.

Additional test parachute drops occur on May 6, 9, and 11 and when the exhibition is completed, Sholto-Douglas has made deliveries at Manchester, Eastbourne, Carlisle, Brighton, Hastings, Montrose, Aberdeen, Preston, Dundee, Edinburgh, Bristol, Preston, Plymouth, Exeter, Bournemouth, Cardiff, Ryde, Norwich, Swansea, Yarmouth, and Cromer.

With an initial capitalization of £200,000, Handley Page Transport, Ltd. is incorporated on June 14.

An upgraded 0/400, the 0/7 or 0/700, is test flown on July 5 and thereafter assigned to the company fleet. On July 15, the same day on which **Aircraft Transport & Travel, Ltd.** makes the U.K.'s first recognized commercial flight, a company 0/400 piloted by Sholto-Douglas makes a test run from London (Cricklewood)-Paris via London (Hounslow); other proving flights continue throughout the summer.

Sholto-Douglas flies an HP V/1500 ex-bomber in a London-Brussels demonstration on August 19. To showcase the 0/400's superior landing qualities, a machine piloted by W. Shakespeare flies 11 journalists (each paying £15.15 shillings fare) London (Cricklewood)-Brussels on August 21. The advanced Handley Page W.4 (a stretched 0/400) prototype is test flown by Sholto-Douglas two days later.

The 0/7 makes a London-Paris load-carrying proving flight on August 25. With a limousine readied to offer passengers a complementary road service from the British and French airports, the company is ready to begin the three-hour scheduled service; fares will be the same as first-class rail or channel-ferry tariffs.

Operating in cooperation and alternatively with the French carrier **Compagnie des Messageries Aeriennes, S.A. (CMA)**, Sholto-Douglas launches the company's 0/400 passenger and freight flights London (Cricklewood)-Paris (Le Bourget) on September 2. The next day, the company boards the first two women passengers to fly on a scheduled airline service between England and France.

On September 23, thrice-weekly passenger and cargo frequencies are started to Brussels. Due to a rail strike, the company begins flying mail to Brussels as of September 29. When the strike ends on October 6, the Brussels concession is retained and a total of some 250,000 letters will be carried by year's end.

Allowing passengers to purchase three-shilling lunch baskets, Handley Page Transport, Ltd. introduces the world's first airline food service on October 11.

The carrier introduces "season tickets" for Paris service on January 10, **1920**—12 flights for £120. Customs facilities are placed at Cricklewood on February 17, allowing company aircraft to operate from either the industrial facility or the commercial airport at Hounslow.

Two 0/400s are scrapped after crashes in April. At Cricklewood, pilot R. H. McIntosh worries over the low, 50-foot takeoff height of company aircraft as they pass over motorways at the end of the grass field.

In cooperation with **KLM (Royal Dutch Airlines, N.V.)**, a London–Amsterdam passenger and mail route is opened on July 6, followed by London–Brussels airmail flights on July 19. Experimental London–Brussels, Amsterdam, and Rotterdam airmail operations commence on July 26.

On October 30 and November 17, respectively, the London–Amsterdam and Paris services are suspended for lack of business and support.

Piloted by Raymond Vaughan-Fowler, a company DH 4A, with two passengers, makes a record London (Cricklewood)–Paris (Le Bourget) flight on December 4 in 1 hr. 48 min.

The first British scheduled air transport fatal accident occurs on December 14 when, en route Cricklewood–Le Bourget, an 0/400 piloted by R. Bager with seven others aboard, crashes just after takeoff in fog at Golders Green. Although Bager and two passengers are killed, mechanic J. H. Williams and three passengers survive. Suffering from concussion, but obsessed with a need to reach the French capital, Williams leaves the scene, makes his way by subway to London's Victoria Station, by train to Dover, and by boat to Calais. He reaches Paris where he is found in a daze, identified, and returned home.

During the year, several 0/400s are equipped with early Marconi airborne radio-telephones with an approximate 50-mile range. Woods-Humphrey transfers his services to **The Daimler Airways, Ltd.** at year's end.

By December 31, the company has flown 4,000 passengers since its start-up.

All British civil air services are suspended on February 28, 1921 for lack of money in the face of subsidized foreign competition. Maj. Brackley now departs to join a government training mission to Japan; he is succeeded by pilot R. H. McIntosh. Indeed, McIntosh and pilot W. Rogers approach Sir Frederick, offering to fly without pay until new funding can be located; the generous offer is declined with regret.

After having originally opposed state aid, Secretary of State for Air Winston S. Churchill on March 2 organizes a Cross-Channel Subsidies Committee under Lord Londonderry. To allow competition with the French, a temporary Air Ministry subsidy of £88,200 is granted to the overseas carriers on March 19, allowing the resumption of operations. With a £25,000 grant, Handley Page Transport, Ltd. restarts Paris service the next day.

The first to employ the Marconi wireless is chief pilot McIntosh; unhappily, the airborne radio-telephone is not immediately successful due to its long trailing aerial, which could be caught by obstructions (e.g., trees) and snapped off. On one of his first flights with it, McIntosh, with the editor of the London *Daily Chronicle* aboard to observe the use of the new communication gear, is caught in fog while flying into the airport at Croydon. Having dipped lower for better visibility, his 0/400 loses its aerial in a tree, a fact McIntosh is able to conceal from the newsman. Seeing the towers of the Crystal Palace and knowing the route by heart from there, the pilot is able to make a safe landing. His radio gear is highlighted in the next day's edition and he is dubbed "All-Weather Mac."

In April, a bad landing of an An 0/400 makes repair uneconomical and it is withdrawn.

Headquarters and flight operations are transferred from Cricklewood to Croydon on May 27.

In June, the engineering firm Oglivie and Partners, Ltd. is appointed to manage the carrier; W. A. Bristow, formerly of **The Instone Air Line, Ltd.**, becomes managing director.

The first W.8, christened *Newcastle*, is placed on the Paris route, flying its inaugural October 21 service in 2 hrs. 10 min. In November, orders are placed for three W.8bs.

On April 1, 1922, a new government subsidy program is introduced whereby the Air Ministry would issue £200,000 over three years and

support airliner purchases and the operators would avoid cut-throat competition of the same routes.

The first W.8b, *Bombay*, flown by A. S. Wilcockson, is introduced on the Paris frequency on May 4; it is followed by the *Melbourne* on May 9. In a May 16 ceremony at Croydon Airport, Sir Sefton Brancker, British Director of Civil Aviation, christens the carrier's W.8bs *Princess Mary* (formerly *Bombay*), *Prince Henry*, and *Prince George* (formerly *Melbourne*).

A record 1,076 passengers are flown London–Paris between August 14–20; during the month, the company breaks the route's single week record with 260 passengers carried in seven days.

The revised subsidy scheme is introduced on October 1; Handley Page Transport, Ltd. receives £15,000 and exclusive rights to fly the U.K.'s only London–Paris route.

In early February 1923, the Parliament's Civil Air Subsidies Committee, headed by Sir Hebert Hambling, makes a report favoring the merging into one state carrier of all the private British carriers. On March 14, Sir Samuel Hoare, Secretary of State for Air, indicates the U.K. government's acceptance of the Hambling Report and its intention to merge the private airlines when their subsidy contracts expire the following March.

A record 79 passengers are carried in one day on June 23.

The original W.8, *Newcastle*, crashes at Poix on July 10. The Paris route is extended by R. H. McIntosh, flying a company HP 0/10 to Basel and Zurich on August 16 and the thrice-weekly service becomes weekly on October 5.

As a result of the Civil Air Transport Subsidies Committee report released earlier, the Air Council on December 3 reports a decision to merge the independent British carriers into a single state-owned airline.

During the year, Maj. C. C. Turner publishes the souvenir pamphlet *To Air by Paris* (London: William Cate) to describe the carrier's England to France service, which includes aerial photographs taken en route.

On the year, 7,179 passengers are carried by Handley Page from London to Paris.

Handley Page Transport, Ltd., ceases to exist on March 31, 1924, as **Imperial Airways, Ltd.** is incorporated as the first British national airline.

HANFORD (TRI-STATE) AIR LINES: United States (1932–1938).

This pioneer local service company is organized in the spring of 1932 to provide scheduled passenger and air express service between Sioux City and St. Paul. Employing two Lockheed Model 5 Vegas, Hanford begins revenue frequencies on April 1.

In December 1933, the route is extended south to Omaha by the purchase of St. Louis-based **Rapid Air Lines (RAL)**. RAL is allowed to continue operations as a subsidiary under its own name, flying the Sioux Falls–Kansas City via Sioux City and Omaha mail route obtained at its 1930 start-up. Hanford, however, elects to lease RAL's largest aircraft, the Lockheed Model 5C *Vega Aksarben Comet*.

On February 9, 1934, as a result of investigations into the Air Mail Scandal, the U.S. Post Office cancels all existing mail contracts and the White House orders the U.S. Army Air Corps to fly the mail. Hanford temporarily closes its routes, especially the RAL mail run. When the military option proves unsuccessful, the Post Office rebids the mail contracts at the end of March and opens applications in late April. Hanford wins two significant routes, AM-16 from Chicago to Winnipeg via Fargo and Pembina, and AM-26 and its three spurs, which include the previous RAL route, the previous Hanford passenger route now also to include mail, and Sioux Falls to Bismarck.

Mail is added to the previous St. Paul–Sioux City run in May and Hanford initiates the remainder of its routes in June. Meanwhile, on June 12, the former **Pacific Air Transport/United Air Lines** Ford 5-AT-110 once named *Glacier* is purchased.

En route to Omaha from Kansas City in a rainstorm on August 31, an RAL division Stinson 6000 crashes at Oregon, Missouri (five dead). The newly acquired Ford is also the victim of an accident, at Cochrane, Wisconsin, on September 2, although exact details are unknown.

The Model 5C Vega *Aksarben Comet* is badly damaged in a crash landing at Albany, Minnesota, on October 19. En route to Omaha from Kansas City on November 15, a Stinson 6000B hits a hill at Amazonia, Missouri, and crashes (two dead).

In December, a new mail route is received from St. Paul to Fargo and AM-16 is purchased by **Northwest Airways**.

Flights continue apace throughout 1935 and, on July 1, 1936, A. S. Hanford turns over control of the concern to new management, which renames the company **Hanford Air Lines** and extends its routes from Chicago and the upper midwest to Tulsa, Oklahoma. Late in the month, two Lockheed Model 10A Electras are acquired, one new and the other from **Northwest Airlines**.

On January 20, 1937, the Lockheed Model 5c Vega *Aksarben Comet* is destroyed in a Sioux City, Iowa, hangar fire. A second Electra arrives from **Northwest Airlines** in November. Eighteen months later, in August 1938, the carrier is renamed **Mid-Continent Air Lines**.

HANG KHONG VIET NAM: Vietnam (1976–1991). Following the July 2, 1975 unification of the defeated Republic of Vietnam (South Vietnam) and People's Republic of Vietnam (North Vietnam) into the Socialist Democratic Republic of Vietnam, a new airline is formed to replace the south's old **Air Vietnam, S.A.** and the north's **CAAV (Civil Aviation Administration of Vietnam)**. Operating under the auspices of the national defense department, the carrier retains its principal base at Hanoi's Gialem Airport and will acquire and integrate the remaining facilities and damaged aircraft of the ex-Saigon-based airline at Ho Chi Minh City.

From that destination, 2 Douglas DC-4s, 3 DC-3s, and 1 DC-6 resume domestic services on November 1, 1976, to Hanoi, Da Nang, and Phu Quoc Island. With technical assistance from **Aeroflot Soviet Airlines**, the company, without access to western aircraft or parts, is rebuilt to Russian standard.

Twice-weekly Antonov An-24 service is started between Hanoi and Ho Chi Minh City and on December 1, the company takes over the Soviet carrier's rights on the routes from Hanoi to Vientiane and Phnom Penh. Four Soviet-made Il-18s maintain service from Hanoi to Moscow.

During this process, on October 29, 1977, four armed Vietnamese commandeer a Douglas DC-3 during a domestic flight from Ho Chi Minh City to Phu Quoc Island, Thailand. After killing two crewmen, they force the plane to fly to Singapore, where the pirates seek and receive political asylum. They also receive 14-year prison terms.

Enplanements for the year total 21,000.

Daily nonstop flights are operated between Hanoi and Ho Chi Minh City with Tupolev Tu-134As and Ilyushin Il-18s; a second main line adds a stop at Danang. Other domestic destinations visited include Nha Trang and Hue.

Weekly Tu-134A flights are opened from Hanoi to Bangkok via Ho Chi Minh City and Phnom Penh and between Ho Chi Minh City and Phnom Penh, on May 11, 1978. Nonstop weekly Antonov An-24 service is inaugurated from Hanoi to Vientiane.

Reciprocal Tu-134A Ho Chi Minh City to Moscow flights begin on June 16, 1979, but because of hostilities with China, continuing service to Beijing is halted.

These services are maintained over the next decade with a fleet that grows to include 5 Tu-134As, 3 Yakovlev YAK-40s, 8 An-24s, 3 Il-18s, and 1 Boeing 707-344 leased from the Irish concern Air Tara. Most of the Antonovs come from **Interflug (DDR German Airlines)**, which contracts to provide management and technical assistance. Arrangements are also made with **Air France** and **Deutsche Lufthansa, A.G.** for traffic rights from Bangkok and Singapore to Ho Chi Minh City, respectively; with dual airline designation, the seats are purchased by Hang Khong and are thus considered Vietnamese flights.

With the beginning of *doi moi* (modernization) in 1985, Hang Kong inaugurates its own Tu-134A services from Ho Chi Minh City to Bangkok. Fuel shortages in Vietnam require the airliners to load maximum poundage in Thailand.

Operations continue apace in 1986–1987.

Attempting to avoid thunderstorms while on a flight from Hanoi on September 9, 1988, Flight 831, a Tu-134A with 6 crew and 84 passengers, drops below minimum altitude and crashes on final approach 6 km. from the airport at Bangkok, bursting into flames. There are no survivors from the Tupolev and an additional six people are killed on the ground.

Enplanements for the year total 250,000.

The marketing name **Vietnam Airlines** is first employed by the 2,000-employee carrier in 1989. The most visible sign of this change is a new blue and white aircraft livery and flying crane logo.

By 1990, Director General Khoang Igok Zieu has added three more YAK-40s. The company becomes independent on April 1 as the company's world profile is enhanced by its formal transfer from the Department of Defense to the Department of Civil Aviation.

Orders are now placed for two Avions de Transport Regional ATR72s and service is inaugurated to Singapore. Enplanements for the year increase 34.9% to 427,192.

The following year, 1991, the carrier is officially renamed **Vietnam Airlines**.

HANKYU AIR LINES COMPANY, LTD. (HANKYU KOKU): **Hankyu Terminal Building, 1-1-4, Shibata, Kita-ku, Osaka, 530, Japan; Phone (6) 373-1661; Fax (6) 373-1660; Year Founded 1980.** Hankyu Air Lines is established at Osaka in 1980 to provide aerial work and charters. Business includes passenger and cargo flights, offshore support, construction, aerial application, aerial photography, and so forth. A mixed fleet, beginning with Bell 206B JetRangers, Bell 47G3s, and Aerospatiale AS-365N Dauphins will be employed over the next decade.

Tetuzo Okano is president in 1991 and he operates a 25-unit fleet.

In August, a Dauphin, with 8 passengers crashes in Hyogo Prefecture; there are no survivors. The tragedy is one in a series of eight accidents that have afflicted Japanese helicopter operators over the last 18 months and claimed 21 lives.

Flights continue apace during the remainder of the decade, but, as a result of more stringent regulations on the commercial rotary-wing community established by the Ministry of Transport, helicopter fleets, in general, are reduced. President Okano now oversees the work of 10 Eurocopter AS-350Bs, 4 AS-355Fs, 3 Dauphins, and 2 Hughes 369Ds.

HANNA AIR, LTD. See PACIFIC SPIRIT AIR, LTD.

HANSA EXPRESS, GmbH.: Germany (1988–1989). In an effort to improve its traffic by heralding marketing links with historic northern European trading centers, Hamburg-based **Holiday Express, GmbH.** changes its corporate image in 1988. The company's Dornier 228-100 and 228-201 continue scheduled commuter services to Goteborg, Helgoland, Hamburg, and Rotterdam, while adding the new destination of Antwerp.

The company is unable to generate the traffic necessary to cover its indebtedness and must cease operations in early 1989. Assets are purchased by new entrant **Hamburg Airlines, GmbH. & Co., K.G.** in April.

HAPAG-LLOYD FLUGGESELLSCHAFT, mbH.: Box 420240, Flughafenstrasse 10, Hanover, D-30662, Germany; Phone 49 (511) 9727 0; Fax 49 (511) 9727 494; http://www.hlf.de; Code HF; Year Founded 1972. In July 1972, the shipping concern Hapag-Lloyd A.G. forms this charter subsidiary (originally known as Hapag-Lloyd Flugzeug, GmbH.) at Hanover. Hapag-Lloyd A.G.'s antecedents include the ocean carriers Hamburg-America Line (HAPAG) and North German Lloyd (NDL), both of which had important roles to play in the early days of German commercial aviation, with their joint subsidiary, **Deutscher Aero Lloyd, A.G.** merged into the new **Deutsche Luft Hansa, A.G. (DLH)** in 1926.

Three Boeing 727-81s are purchased from **All-Nippon Airways Company, Ltd.** and are employed to inaugurate inclusive-tour flights

and cargo operations from Bremen, Hanover, Hamburg, Dusseldorf, Munich, and Frankfurt to southern Europe, West Africa, and the Canary Islands on March 31, 1973.

Orders are placed that August for shorter-range BAC 1-11-500s, which begin to join the fleet in 1974, thereby allowing additional European destinations. The final British jetliner is received in 1975.

Following a quiet 1976, the competing charter operator **Bavaria-Germanair, GmbH**, and its fleet of 4 Airbus Industrie A300B2-105s are purchased in April 1977 from Josef Schorgruber and merged. The workforce of the 2 carriers totals 1,500. A total of 687,360 passengers are carried on the year.

Because West Germany's Federal Cartel Office will not immediately approve the merger, the two carriers retain separate identities through 1978; their combined workforce remains at 1,500 and bookings rise 0.4% to 716,000.

The FCO sanctions the amalgamation of the two airlines in January 1979 and **Bavaria-Germanair, GmbH**, is completely absorbed by March. The fleet of the joint managing directors, Klaus Bertram and Karheinz Schneider, now comprises 4 A300B2-105s, 7 B-727-100s, and 7 BAC 1-11-524s.

The world's first A300B4-203 enters service with the carrier on April 3.

The employee population stands at 460 and enplanements jump to 1,169,018.

Passenger traffic remains flat in 1980-1981 as the effects of the world economic situation are felt. Aircraft are leased to other carriers during the tourist off-season, including **Kuwait Airways Corporation, Tunis Air, S.A., Air Jamaica, Ltd., Egyptair, S.A.E., JAT Yugoslav Airlines, Air Djibouti, and Air Malawi, Ltd.**

Two B-727-2K5As replace three B-727-81s and all seven BAC 1-11-524s are sold, including two to **Air Malawi, Ltd.**, two to **British Caledonian Airways, Ltd. (BCAL)**, and three to **Austral Airlines, S.A.** An A300B4 is outfitted as a freighter and begins all-cargo services in February of the latter year from Cologne to New York, via Shannon and Gander.

Third party maintenance and overhaul work is offered from the maintenance base at Hanover (Langenhagen Airport) beginning in 1982 and under the 90-minute ICAO rule, the A300C4 launches North Atlantic all-cargo flights on January 28.

Claus Wulfers is named the 13th managing director late in the year.

Overall bookings reach 1,655,000.

The A300C4 freighter concludes all-cargo operations in March 1983, but resumes them in November, becoming the first twin-engine airplane to fly the North Atlantic commercially under the 90-minute rule.

Passenger traffic soars 9.6% to 1,831,000 and 486.81 million FTKs are flown. A net profit of \$5.38 million is posted on revenues of \$175.5 million.

The A300B4 cargo operation ends in April 1984 following 80 transatlantic flights. Three B-737-2K5As join the fleet and cooperative "hub and spoke" operations are begun with **Condor Flugdienst, GmbH**, at the tourist hub established at Munich.

Enplanements total 1.77 million and a net profit of DM 26.4 is realized on revenues of DM 486 million, largely due to the sale of engine spares.

Airline employment is stabilized at 756 in 1985. The fleet now comprises 5 A300B4s, 3 B-727-100s, 2 B-727-2K5As, and 3 B-737-2K5s.

With 10 years experience with the Airbus, company technicians, beginning in the summer, contract to provide 6-week familiarization courses for **Aer Lingus Irish Airlines, Ltd.** and Boeing.

The 860-employee German charter airline reports a 3.2% increase in its 1986 revenue passenger miles (RPKs) flown, up to 4.29 million.

In January 1987, orders are placed for three A310-300s, with options for two others. RPKs advance 1.5% to 4.36 billion.

The first A310-304 is received in January 1988 and the fleet now also includes 4 B-737-2K5s, 3 B-727-2K5As, and 5 A300B4s. Enplanements total 2,294,600.

The fleet of the 1,024-employee charter carrier is altered in 1989 by the withdrawal of a B-727-2K5A and the addition of an A310-304.

The first B-737-4K5 enters service in July, but cannot prevent passenger boardings from plunging downward to 1,216,900.

Company employment grows 12.3% in 1990 to 1,150. The A300B4-203s are sold as the B-737-4K5s continue to arrive and help reverse the free fall in passenger traffic. Customer bookings for the year shoot up to 2,793,000.

The leased fleet in 1991 includes 4 A310-204s, 3 A310-304s, 1 B-737-2K5A, 8 B-737-4K5s, and 5 B-737-5K5s. Weekly A310-304 charters begin to Fort Lauderdale and Caribbean in early November.

Customer bookings slip to 2,783,872.

Airline employment stands at 1,400 in 1992 as enplanements rise 16.8% to 3,346,000.

In 1993, Managing Director Wulfers oversees a workforce of 1,190, down 15% from the previous year. Fleet alterations include the replacement of an A310-304 with a Dash-308, removal of the B-737-2K5A, and the addition of a ninth B-737-5K5.

Passenger boardings move ahead by 7.5% to 3,596,000.

Airline employment is increased by 5.2% in 1994 to 1,499 and the fleet now includes 4 A310-204s, 3 A310-304s, 1 A310-308, 11 B-737-4K5, and 5 B-737-5K5s. Orders are placed for 8 B-737-8K5s.

One of Germany's leading charter operators, the carrier continues to undertake flights to the U.S. and Caribbean, the Middle and Far East, Africa, the Mediterranean, and the Canary Islands.

Customer bookings move up 11.1% to 4,031,000.

The workforce grows by 6.7% in 1995 to 1,600 and another 8 B-737-8K5s are requested. Enplanements move ahead by 12.4% to 4,531,000.

Operations continue apace in 1996. Before a large and appreciative gathering, the first B-737-8K5 is rolled out of Boeing's narrow-body factory at Renton, Washington, during the first week of July and makes its maiden flight on July 31.

A total of 4.8 million passengers are transported and revenues of \$1 billion are earned.

Employment at Germany's third largest charter airline climbs 3.9% in 1997 to 1,723.

In April, at a cost of DM 7 million, the carrier begins to install traffic alert and collision avoidance (TCAS) avionics on its entire fleet of 25 B-737s.

On September 17, 99.2% of the shareholding in Hapag is purchased by the Preussag, A.G. industrial group (best known for its mining and steel manufacturing activities), which is largely owned by the Dusseldorf-based Westdeutsche Landesbank (WestLB). The stake is acquired from Gevaert N.V., Veba, **Deutsche Lufthansa, A.G.**, Metro, Deutsche Bank, Dresdner Bank, and Veritas Vermögensverwaltungsgesellschaft, GmbH. The carrier continues to hold a 30% stake in Touriste Union International (TUI), in which WestLB holds the same number of shares. WestLB executive Dr. Michael Frenzel is named managing director.

Discussions begin with TUI concerning a possible merger. Such an amalgamation would prove formidable for the newly formed, but second-place **C&N Condor Neckermann Touristic, A.G.**, which has been created as a fifty-fifty joint venture between Karstadt, A.G. and **Deutsche Lufthansa, A.G.**

Preussag, on August 27, engineers the takeover of TUI by Hapag-Lloyd. The industrial giant bundles the two entities together into a new Hapag-Touristik Union (HTU), which begins operations on October 1. With a combined 15,000 employees, HTU is now the largest integrated tourism provider in Europe.

Passenger boardings ascend 3% to 4,925,500 while operating revenues inch up just 0.4% to \$721.2 million.

In order to gain the German antitrust office's approval for the merger of Hapag-Lloyd and TUI into HTU, WestLB, at the beginning of 1998, is required to divest itself of its 34.2% interest in **LTU International Airlines, GmbH**. Negotiations are begun with other entities to this end and thus the Federal Cartel Office approves the HTU marriage on March 2. Two days later, on March 4, Hapag-Lloyd signs an agreement with

Schickedanz-Holding Stiftung & Co. KG for the purchase of the Fuerth-based concerns 20% stake in TUI.

On April 22, Hapag-Lloyd receives its first B-737-8K5, the second model in the Next Generation B-737 airplane family and the first to be delivered to any airline. As additional units are delivered, they will begin to supplant the B-737-4K5s and B-737-5K5s currently operated.

In September, an agreement is signed with **CSA Czech Air, A.S.** under which the Prague-based scheduled operator will perform certification checks on the B-737-4K5s.

After months of negotiation, WestLB completes arrangements during October for the sale of its **LTU International Airlines, GmbH** stake to SAirGroup, parent of **Swissair, A.G.**

Under a general agreement signed with WestLB on December 23, Preussag, A.G. acquires a 24.9% stake in Thomas Cook Group, parent of **Flying Colours Airlines, Ltd.** An additional agreement provides that Preussag, subject to the approval of the German Federal Cartel Office, will acquire a further 25.2% stake by September 30, 1999, thereby achieving 51.1% majority shareholding.

The prize is assigned to HTU, which, since October 1, has controlled the tourism activities of Hapag-Lloyd and TUI. In announcing the deal, Preussag Managing Director Frenzel indicates that his concern will now join in the merger discussions being held between Thomas Cook and the Minneapolis-based Carlson Leisure Group for the acquisition of Carlson Leisure Group U.K.

Passenger boardings during the 12 months climb 6.4% to 5.23 million.

During the second week of January 1999, Preussag, A.G. announces plans to acquire the First Reisebuero, a chain of German travel agencies.

The merger between Thomas Cook and the Carlson companies is completed on February 2. Shareholders Carlson Companies, Westdeutsche Landsbank, Thomas Cook, and Preussag, A.G. combine their shares with those of Carlson Leisure Group U.K. to create Thomas Cook Holdings. The Preussag arrangement to acquire 51.1% majority control is transferred to this new entity.

With over 20,000 employees, Thomas Cook Holdings is now the third largest of the "big four" British travel and tour operators.

Enplanements for the year total 2,840,000.

Airline employment at the beginning of 2000 stands at 1,876, an 8.6% increase over the previous 12 months. The carrier's 12th Next Generation B-737-8K5s is delivered on January 31, followed by the 13th on February 20. Employing an Israeli Aircraft Industries Astra bizjet, the company begins to offer VIP executive charters during the first quarter.

In a rare triple delivery, three Next Generation B-737-8K5s are turned over on April 3, with the 17th arriving on April 26.

Also in April, **Britannia Airways, Ltd.**'s parent, Thomson Travel Group, rejects as inadequate a £1.45-billion (\$2.3-billion) takeover bid from Germany's second largest tour operator, C&N Touristic, A.G., which is affiliated with **Deutsche Lufthansa, A.G.** and **Condor Flugdienst, GmbH**. Earlier, Thomson had refused to take a £1.3-billion offer from the same concern.

In less than a month, the fate of Thomson is settled when, in something of a surprise, it is acquired by Preussag, A.G. on May 19 for £1.8 billion (\$2.8 billion). To allay regulatory competition concerns, the new German owners promise to divest themselves of their 50.9% stake in another British holiday concern, Thomas Cook Group. Two more Next Generation B-737-8K5s are delivered in May.

Just after departure from Chania, Crete, on a July 12 service to Hanover via Vienna the right main landing gear of Flight 3378, an A310-304 with 8 crew and 142 passengers, cannot be retracted. After declaring an emergency during descent toward the Vienna Airport, both engines fail due to fuel starvation. A forced landing is executed 500 ft. short of the runway, at which point the left landing gear, which had purposefully been put down, collapses and shears off, causing the engine and wing to hit the ground. Fortunately, there is no fire. During the emergency chute evacuation that follows, 26 people are slightly injured. A review of the badly damaged aircraft will show that its rear fuselage has also been cracked. The aircraft must be written off.

On September 12, an A310-324, previously operated by **Singapore Airlines, Ltd.** is leased through November to replace the wide-body damaged at Vienna in July.

In late September, Hapag-Lloyd's Preussag, A.G. parent announces that it is joining with the Belgian tour operators Jetstar, VTB, and Belgium International Travel to establish a new subsidiary carrier, Hapag-Lloyd Belgium, to begin flying inclusive tours at the end of March. Most of the new business would be generated at the expense of **Sobelair, S.A.**

It is confirmed at the beginning of October that Thomson group CEO Charles Gurassa will remain with the company for the next two years; among his principal assignments will be the merger of **Britannia Airways, Ltd.** with Hapag-Lloyd.

It is announced on October 9 that Preussag, A.G. will purchase a 6% stake in the Nouvelles Frontieres parent of **Corsair, S.A.**, subject to European Commission approval. The stake will later be boosted to 34.4%. Preussag officials believe that Corsair's long-haul operations will complement the medium-range services of their own charter airline, Hapag-Lloyd.

On October 24, Hapag-Lloyd becomes the first airline in the world to fly the Next Generation B-737-800 with blended winglets; the new winglets, which reduce drag and boost performance, are being retrofitted in a joint program with Aviation Partners Boeing. Hapag-Lloyd will achieve another first early in 2001 when, after delivery of its B-737-8K5 on December 20, it becomes the first carrier to put such a winglet-equipped "Baby Boeing" into service.

A new **Hapag-Lloyd Netherlands, D.V.** subsidiary, outfitted with two of the parent's B-737-4K5s, begins operations on November 1.

The A310-324 is returned on November 15.

Plans to launch a Hapag-Lloyd Belgium charter subsidiary with two transferred Hapag-Lloyd Boeing 737s in March are scrapped on December 8 when Jetair, with which it was to contract for inclusive-tour flights, signs instead to continue with **Sobelair, S.A.**

Options to purchase another three Next Generation B-737-8K5s are turned into firm orders on December 21. The type's launch customer, Hapag-Lloyd has received 21 of the 25 aircraft it ordered earlier.

HAP'S AIR SERVICE: United States (1953–1995). Hap Estbrook establishes an FBO and charter operation at the Municipal Airport, Ames, Iowa, in 1953. Small on-demand flight services and pilot training takes place over the next 40 years.

By 1994, President Estbrook employs five full- and two part-time pilots, who fly charters with one each Cessna 340, Cessna 402C, Cessna 414 Chancellor, Cessna 172RG Cutlass, Cessna 182 Skylane, and Cessna T210N Turbo Centurian.

Flights cease in 1995.

HARBOR AIR SERVICE: United States (1985–1994). HAS is organized at Sewark, Alaska, by Linda K. Pfefer in early 1985 to provide both scheduled and nonscheduled passenger and cargo services between its base and the cities of Anchorage and Prince William. Revenue flights commence in April with a fleet of Piper and Cessna lightplanes and a de Havilland Canada DHC-2 Beaver and continue apace for the remainder of the decade, with Seward joining the route network.

The fleet in 1990 includes 1 each Piper PA-31-350 Navajo Chieftain, de Havilland Canada DHC-2 Beaver, Cessna 185, and Cessna 336 plus two each Cessna 206s/207s. Enplanements for the year total 1,772.

Passenger boardings slide down to 1,287 in 1991. Operations continue apace in 1992 and, in 1993, President Pfefer's company flies 2 Cessna 206s. Flights cease in 1994.

HARBOR AIRLINES: United States (1971–2001). Founded three years earlier by former **Whidbey Air Service** CEO Wes Lupien, the corporate identity of **Oak Harbor Airlines** is changed in early 1971. By the time of the reformation, the company's two Britten-Norman BN-2 Islanders are flying from Whidbey Island and Bellingham to Seattle-Tacoma International Airport.

As the result of the departure of **Hughes Airwest**, Lupien, in June, acquires a third Islander and inaugurates scheduled return services from Seattle-Tacoma to Hoquiam, Washington, and Astoria, Oregon. Traffic on the Hoquiam route is so thin that it must be closed in early December. An Islander, with four aboard, crashes at Riverton Heights on December 26; there are no survivors.

Lack of passengers also causes Harbor to close down its routes to Portland and Astoria in January **1975**. The BN-2 lost in December is replaced and enplanements for the year reach 31,222.

Airline employment is increased a substantial 28.5% in **1976** to 30. A new package tour charter business is inaugurated allowing vacationers time on the Puget Sound's Whidbey Island.

Passenger boardings decline 9.5% to 28,513, primarily as a result of the suspension of Oregon flights. Freight is down the same amount, 9.2%, to 406,000 ton kilometers.

Frequencies on the Seattle to Bellingham route is increased in early **1977** to seven times a day. In May, the three BN-2s launch frequencies from Seattle to Mount Vernon's Skagit Regional-Bayview Airport. Enplanements grow to 35,795.

In **1978**, the year the Airline Deregulation Act becomes federal law, customer bookings jump 21.7% to 45,714 while freight grows more slowly, up 2.8% to 815,219 pounds.

A fourth Islander is acquired in **1979** and it assists the other three in boosting passenger boardings by 30.2% to 60,000. Cargo, however, falls 7.8% to 752,000 pounds.

In the summer of **1980**, the company becomes the first commuter ever to receive authority for customs preclearance in Canada for its U.S.-bound passengers by gaining a special exemption to the 1974 Preclearance Treaty, which normally bars such preferential treatment for small airlines. As a result of the new authority and anticipated additional traffic, Harbor Airlines leases several de Havilland Canada DHC-6-200 Twin Otters.

On the year, 59,516 passengers are enplaned, but cargo drops 22.5% to 583,000 pounds. Revenues rise 12.7% to \$1.96 million and a net profit of \$34,907 is posted.

At the beginning of June **1981**, an Embraer EMB-110 Bandeirante is leased and employed to inaugurate a route from Seattle to Vancouver via Bellingham on June 21. President Lupien's fleet now comprises the Bandeirante and 5 Islanders.

The PATCO air traffic controllers' strike and subsequent ATC restrictions have an adverse impact upon traffic. High custom fees and costs of operating the turboprop force the end of Vancouver services in December.

Passenger boardings decline 8% to 46,190.

The costs of competing in deregulated skies and the national recession cause the airline to undergo severe retrenchment in **1982**. Service to Bellingham ends in April and to Mt. Vernon in October. Traffic and revenues both decline.

Enplanements total 20,209. The operating profit is \$73,677 and a net income of \$27,104 is reported.

The payroll is increased 15.4% in **1983** to 15. The fleet, however, shrinks to a single Islander, which flies 16,039 passengers from Oak Harbor to Seattle-Tacoma and back, a decline of 26%. An order is, however, placed for a Piper T-1020.

Revenues plunge 12.5% to \$561,808 and expenses fall 18.3% to \$464,459. As the result, operating profit climbs to \$97,349 and net gain ascends to \$51,746.

Three more employees are hired in **1984**, a 12.5% boost and Harbor disposes of its BN-2 and begins operating a Piper PA-31-310 Navajo in May and a Beech B-55 Baron.

With these, Harbor is able to raise its enplanements by 6.4% to 17,028.

As **1985** opens, the carrier is providing scheduled service to three cities in Washington State and its precleared market of Vancouver. The employee population is now 15, a 15.4% boost, although the fleet remains the same.

Passenger boardings jump 15.1% to 19,663.

Airline employment rises 46% in **1986** to 22. Customer bookings rise 5.4% to 20,715, operating income reaches \$64,850, and the net profit is \$34,511.

Two additional workers are hired in **1987**, a 10% boost, and the fleet is increased to include three Piper PA-31-350 Navajo Chieftains.

Passenger boardings jump 11.7% to 23,365 and cargo climbs 8.7% to 1.56 million pounds. Revenues swell 12.4% to \$905,263 and costs allow an operating profit of \$93,626 and net gain of \$47,710.

Customer bookings for the Washington State carrier rise 7.6% in **1988** to 24,861 and freight jumps 24.1% to 41,000 pounds. Profits total \$152,037 (operating) and \$103,417 (net).

The workforce is increased by 4% in **1989** to 26. When competing **San Juan Airlines** fails, its services to Friday Harbor and Eastsound in the San Juan Islands are taken over.

Enplanements swell by 13.8% to 28,255 and cargo rises 3.9% to 1,888,000 pounds. Revenues jump 17% to \$1.3 million, expenses are up 22.9% to \$1.18 million, and operating income is \$120,902. Net gain falls to \$86,243.

In **1990**, the small regional's three Chieftains initiate scheduled flights from Friday Harbor to Seattle. As a result, passenger boardings shoot up 19.3% to 33,932 and freight climbs to two million pounds. This success leads to a 12.5% boost in airline employment to 27.

In **1991**, a total of 22,707 passengers are flown. Revenues reach \$1.73 million with expenses of \$1.68 million; the net profit for the year is \$49,600.

Operations continue apace in **1992**. On April 15, Verne Howard, president of Friday Harbor-based VMAL Corporation, the concern that owns Roche Harbor Resort in the San Juan Islands, purchases controlling interest in the airline for an undisclosed price. Howard indicates that all current routes, personnel, and services will remain in place and may be expanded.

In **1993**, General Manager William D. Hildebrand oversees 50 employees and a fleet of 4 Piper PA-31-350 Navajo Chieftains. Enplanements for **1994** total 42,365.

Operations continue apace in **1995**. Following the death of founder Lupien in the spring, the airport on Whidbey Island is renamed in his honor in impressive June ceremonies.

In **1996**, the company is sold to Richard "Rick" Boehlke, owner of the assisted-care company Crossings International. A total of 41,975 passengers are boarded.

The fleet in **1997** includes 9 Chieftains. Service to Astoria and Portland is resumed. The carrier enters into a code-sharing agreement with both **Alaska Airlines** and **Horizon Air** and feeds Alaska Airlines Commuter passengers to both at Seattle. A total of 56,000 passengers are flown on the year.

Airline employment stands at 120 in February **1998**.

Early in the year, company headquarters are transferred to Tacoma Narrows Airport at Gig Harbor, Washington, where owner Boehlke also operates the FBO Crossings Aviation. Scheduled flights to Bremerton begin on March 15. A new logo and livery are introduced.

The move to Gig Harbor is completed by June. At this point, scheduled flights to Seattle-Tacoma International Airport begin.

A Cessna 408 Grand Caravan is placed into service on the route to Seattle during late summer. Harbor Air thus becomes the first scheduled airline in the continental U.S. to fly the single-engine aircraft in commercial passenger service. Government regulators have not previously allowed single-engine turboprops to so operate.

Passenger boardings jump 26.5% to 71,000.

A second Grand Caravan joins the company fleet in January **1999**.

Customer bookings drop 12.3% to 63,000. A total of 108 workers are employed at the beginning of **2000**, a 116% increase over the previous 12 months. All scheduled operations will cease on May 9, **2001**.

HARBOUR AIR, LTD.: 4760 Inglis Drive, Vancouver, British Columbia V7B 1W4, Canada; Phone (604) 278-3478; Fax (604)

278-9897; <http://www.harbour-air.com>; Code H3; Year Founded 1981. Established at Vancouver in 1981 as a seaplane charter company dedicated to the British Columbia forestry industry, the company adds, in mid-decade, charter flights to resorts and a scheduled route to Duncan. Equipment employed consists of de Havilland Canada DHC-2 Beavers and Cessna 185s, both types float-equipped.

In 1993, President/General Manager Greg McDougall oversees a workforce of 100 and a fleet that includes 1 Cessna 180, 5 Cessna 185s, 12 DHC-2s, and 1 DHC-3 Otter, all on floats. In addition, an Otter and Turbo-Otter are operated equipped as amphibians along with 9 DHC-6 Twin Otter landplanes on lease.

Scheduled services are greatly expanded as routes are opened to Port Simpson, Chibougamau, Sandspit, Queen Charlotte, Hartley Bay, Kitkatla, Maple Bay, Miner's Bay, Bewell Harbour, Lyall Harbour, Ganges Harbour, and Vancouver Coal Harbour.

On June 23, 1994, a Beaver departs from a floating fishing resort with the pilot, one passenger, and a load of fish on board for a 30-min. flight to Sandspit, British Columbia. When the aircraft fails to arrive, a search is organized. The aircraft is later found submerged in the water at Hunter's Point, about 7 mi. from its point of departure, with both occupants dead. The cause of the crash is never determined.

The fleet is expanded and enlarged in 1995 as 3 DHC-6-100s and 2 DHC-6-200s are chartered from **Ken Borek Air, Ltd.**

President McDougall's concern in 1996-1998 flies 16 Beavers, 2 Turbo Otters, 1 Otter, 8 Cessna 185s, 8 DHC-6-300s, and 5 leased aircraft. The Borek Twin Otters are returned during the latter year.

HARCO AIR SERVICES, LTD.: Nigeria (1992-1994). HASL is established by Alhaji Rabi'u Isyaku Rabi'u at Lagos in the early fall of 1992 to offer scheduled and charter regional and domestic passenger services. Three Tupolev Tu-134s and two Yakovlev Yak-40s are wet-leased from Russia and revenue flights commence in October linking the company's base with Abuja, Enugu, Kano, Kaduna, and Port Harcourt.

Operations continue apace in 1993 as two Boeing 727-214As join the fleet. Service is started to Maiduguri, Sokoto, and Yola.

In February 1994, the company is renamed **Harka Air Services, Ltd.** by Managing Director Rabi'u.

HARKA AIR SERVICES, LTD.: 41 Allen Ave., Ikeja, Lagos, Nigeria; Phone 234 (2) 221 2138; Code HAK; Year Founded 1992. In February 1994, Harco Air Services, Ltd. is renamed Harka by Managing Director Rabi'u. The workforce now totals 120 and the fleet includes 3 Tupolev Tu-134s, 2 Yakovlev Yak-40s, and 2 Boeing 727-214As.

While landing at Lagos in heavy rain after a flight from Kanduna on June 24, 1995, a Tu-134 with 80 aboard runs off the runway, hits a culvert, and catches fire (16 dead).

Frequencies over the domestic network continue sporadically during the remainder of the decade. The company is reported to have suspended operations in 1998, at which point it retires its Boeings. At the beginning of 2000, the workforce totals 124, but only a single Yak 40 is still in service.

HARLEQUIN AIR COMPANY, LTD.: 3-5-1 Toranomon, Minato-ku, Tokyo, Japan; Phone 03 5756 4091; Fax 03 5756 0661; <http://www.harlequin-air.co.jp>; Code JH Year Founded 1997. A fully owned subsidiary of **Japan Air System, Ltd.**, Harlequin is formed at Tokyo on January 20, 1997, to provide domestic and international passenger charters. JAS provides ¥ 480 million in start-up capitalization.

Start-up and planning occupies most of the year, although by late fall, a McDonnell Douglas MD-81 and a DC-10-30 have been leased from the parent.

The inaugural flight, a charter from Fukuoka to Brisbane and Sydney, Australia, is undertaken on December 19. Three more MD-81s are chartered and are employed to operate upwards of 16 daily replacement flights on behalf of JAS.

Charter flights are inaugurated to Honolulu in February 1998, followed by nonscheduled flights to Bali and Kathmandu.

The fleet at the beginning of 1999 includes 7 MD-81s and the DC-10-30.

As the result of a first quarter call for flight attendant applications, 3,000 people apply.

It is announced on April 19 that the carrier will interview 390 women for these slots, along with 40 men—the first men ever considered for flight attendant positions with the airline.

A series of DC-10 charters undertaken on behalf of **Japen Air Systems Company, Ltd.** end on March 27, 2000.

HAROLD'S AIR SERVICE: United States (1974-1986). Harold Esmaika establishes a small charter operation at Galena, Alaska, in 1974 to operate nonscheduled flights to local communities and bush destinations with a fleet of Cessna and Piper lightplanes. Operations continue without change until 1979, when Aniak-based **Vanderpool Flying Service** is purchased and merged.

Two years later, in 1981, the freight carrier **Alaska Central Air** is also acquired and the fleet now includes not only lightplanes, but an Embraer EMB-110P1 Bandeirante as well.

Scheduled services are begun by Harold's in May 1982; in addition to the Vanderpool route from Aniak to Crooked Creek, Nyac, Kalskag, and Holy Cross, the company begins regular operations to many of its previous charter points, including McGrath and Fairbanks. A number of routes are operated under a feeder arrangement with **Wien Air Alaska**, which lasts until that national fails in 1984.

Harold's achieves its greatest claim to fame with an equipment purchase of November 9. Equipped by California-based United States Aircraft Corporation with a pair of Pratt & Whitney of Canada PT6A-45R turboprop engines two years earlier, the USAC DC-3 Turbo Express arrives at Galena, after a stop at the Experimental Aircraft Association convention at Oshkosh, Wisconsin, in August. Chief Pilot Bob Mason finds the unique \$2-million aircraft conversion quiet and responsive. During the remainder of the year and throughout the next two, the Turbo Express is employed on Essential Air Service flights to remote destinations.

In October 1986, Harold's is renamed **Friendship Air Alaska**.

HARRISBURG COMMUTER: United States (1965-1970). Harrisburg Commuter is created by L. W. "Roy" Clark at the airport of Pennsylvania's capital city during the first quarter of 1965 as a subsidiary of the FBO, L. B. Smith Aircraft Corporation. Employing a Beech 18, the "Airline with a Smile" inaugurates daily roundtrips on April 15, linking its base with Washington, D.C. (DCA) and with State College, home of Pennsylvania State University. The Washington route is dropped in the spring of 1967 when a second Beech 18 is acquired.

Operations continue apace until October 8, 1968, when a contract is signed with **Eastern Air Lines**, providing for feeder flights to Washington, D.C. from Lancaster, Pennsylvania. In mid-1969, the company acquires a de Havilland Canada DHC-6-100 for \$175,000; however, the opportunity for profit quickly arises, and the Twin Otter is almost immediately sold for \$225,000.

On January 29, 1970, the airline is purchased by L. W. "Roy" Clark and reregistered as **Pennsylvania Commuter Airlines**.

HARRISBURG JET CENTER: Capital City Airport, New Cumberland, Pennsylvania 17070, United States; Phone (717) 774-0145; Fax (717) 774-0924; Year Founded 1954. Originally established as the Capital City Airport FBO, HJC branches out in to executive and small group passenger charters throughout the northeastern U.S. By 2000, the company employs six pilots and operates a pair of Cessna 402Bs.

HARRISON AIRWAYS, LTD.: Canada (1960-1976). This charter operation is founded at Richmond, British Columbia, in 1960 and undertakes passenger and especially cargo flights and contract service to destinations in western Canada and the U.S. The fleet grows to comprise 1 Convair CV-440, 2 DC-3s, 2 Aero Commander 680s, 1 Beech 18, and 1 Beech B-80 Queen Air.

In February 1976, the company is placed into receivership. An effort is made to reform the carrier and operations are briefly resumed, but not sustained.

HART AIRCRAFT COMPANY (PTY.), LTD.: Australia (1933–1934). HAC is set up as a mail carrier at Melbourne in early 1933. Equipped with an Avro 10, the company inaugurates twice-weekly service from Launceston, Tasmania, to Flinders Island on April 4. When the subsidy is withdrawn, operations cease in February 1934.

HARTFORD AIRLINES: United States (1966). HA is established at Plainville, Connecticut, on January 1, 1966 to provide scheduled air taxi flights to New York (LGA) via Hartford. Aero Commander 500B daily roundtrips are inaugurated on January 13, but only last a few months.

HAVASU AIRLINES: United States (1978–1987). HA is formed as the western division of **Nicholson Air Services** (owners of the Maryland commuter **Cumberland Airlines**) in the spring of 1978 when **Lake Havasu Air Service** is purchased and reformed. Employing a fleet of 2 Piper PA-31-350 Navajo Chieftains, 1 Piper PA-31-310 Navajo, and 1 Piper PA-23 Aztec, the new subsidiary inaugurates scheduled passenger and cargo flights to Bull Head City, Arizona, on April 1. Previously flown services to Las Vegas are now also scheduled.

Enplanements are now reported for the joint airline operation and total, respectively: 21,559 in 1978; 24,933 in 1979; 15,078 in 1980; and 14,562 in 1981. During the latter year, service is initiated to Los Angeles.

Declining traffic patterns continue throughout the middle 1980s, with statistics included with those of Cumberland Airline.

In 1986, a Dornier 228-212 is added in an effort to attract additional customers, but has no impact. Operations cease in December 1987 after company pilots go on strike.

Although efforts are made throughout 1988, the company cannot generate the capital necessary to resume scheduled flights under its own name. Operating as **YB Express**, services are undertaken in a code-sharing arrangement with **Golden Pacific Airlines**. When these prove unsuccessful, the company is liquidated in early 1989.

HAWAII EXPRESS: United States (1982–1983). Also known as The Hawaii Express, this carrier is established at Los Angeles in the spring of 1982 to provide Boeing Jumbojet flights exclusively to Honolulu. A B-747-143, once operated by **Alitalia, S.p.A.**, is leased from the manufacturer. Given a multicolor cheatline and a pineapple yellow tail, the *Jason Everest* (also called “The Big Pineapple”) begins daily \$89.95 one-way service to Honolulu on August 20.

By year’s end, a total of 50,000 passengers have been transported.

In May 1983, two leased Douglas DC-10-30s, complete with giant white pineapples painted on their tails, replace the Jumbojet and frequencies are increased to thrice daily. Despite the increase, mounting financial losses result in the company being forced to cease operations on December 20 and file for bankruptcy the next day.

A total of 319,000 passengers are flown before the doors are shut and revenues of \$5.5 million earned—against debts of \$20.5 million.

HAWAII HELICOPTERS: Kahului Helicopter, Hangar 10, Kahului, Hawaii 96753, United States; Phone (808) 877-3900; Fax (808) 877-4724; <http://www.hawaii-helicopter.com>; Year Founded 1985. Former **Papillon Helicopters** pilot Donald Ballard establishes this concern at Maui in March 1985 to provide local charter and flight-seeing operations.

In 1993, the company expands to Kona and Hilo on the Big Island and greatly expands its charter operations. In October 1994, the FAA issues a directive that limits air tours to a minimum 1,500-ft. altitude. The ruling has the effect of hurting the tourist air business across the country. In late November, Hawaii receives a waiver of the ruling, but is still required to maintain a minimum altitude of 1,000 feet.

Hawaii Helicopters adds additional locations and itineraries to its flight packages in 1995 in an effort to overcome the problems caused by the FAA requirement. Of particular interest is a service from Kona to Hawaii Volcanoes National Park. When the state’s largest helicopter operator, Papillon, shuts its doors in September, Hawaii responds by taking over its exclusive lease at Princeville Airport on Kauai’s north shore.

Flights continue in 1996–1997 as the company fleet grows to include three Eurocopter AS350BAs and an AS-355F1.

The second-largest helicopter sight-seeing operator in Hawaii, the concern continues to fly tourists and others in 1998 from bases on Maui, Kauai, Kona, and Hilo.

A collaborative joint venture is entered into with Vancouver-based **Helijet Airways, Inc.** on July 9. Under its terms, HH is able to lease a 12-passenger Sikorsky S-76A+ all-weather, medium twin-engine, dual pilot helicopter. When it arrives painted in Hawaii livery, it becomes the first of its type to serve with one of the state’s tour operators. It is employed to operate four flights daily on behalf of Tauck Tours and American Hawaii Cruises from Maui to view Haleakala and Kilauea craters on the Big Island.

Through the end of September, over 600 sight-seers are transported on the Sikorsky, which is so successful that President Ballard begins to openly discuss the possibility of extended, multi-island tours and even an interisland helicopter commuter service—a first in Hawaii. Plans are made to acquire a second S-76A+ from Helijet.

The joint venture with **Helijet Airways, Inc.** is expanded during the summer of 1999 when the partners receive a subcontract to transport men and equipment from Maui to an adjacent island reserve that for 50 years has been used as a military weapons range. Through at least December, clean-up teams will undertake a large-scale ordnance clean-up and environmental restoration.

On July 11, a Helijet Sikorsky S-61N, painted in Hawaii colors, is reconfigured, disassembled, shrink-wrapped, and placed on a freighter from Vancouver to Honolulu. There it is reassembled and flown to Maui, where it begins its new six-month contract on August 15. At least initially, the S-76A+, which remains under lease from Helijet, is also employed to transfer workers and their supplies to the reserve.

These and other flights continue during the remainder of the year and into the millennium. During this period, a second Canadian Sikorsky S-76A+ is placed into service and the company now has the marketing advantage of being the only twin engine helicopter tour operator to service all of the state’s islands. Over 14,500 annual flights allow more than 116,000 passengers to experience the magic of Hawaii from the air.

HAWAII PACIFIC AIR CARGO: United States (1991–1992). HPAC is created at Honolulu in the fall of 1991 to provide interisland freight services. With backing from Robert N. Iwamoto Jr., president of Roberts Hawaii, a major travel concern, the company obtains two Douglas DC-4s that are placed into service during November.

Unable to achieve economic viability in a time of recession, the company is forced to close its doors in May 1992.

HAWAII PACIFIC AIRLINE: United States (1975–1979). Herman Brandt’s **Alii Air Hawaii** is renamed on January 1, 1975. Employing a Beech 18, Brandt continues to provide scheduled passenger and cargo services to Molokai until recession and the energy crisis force him out of business in 1979.

HAWAIIAN AIR TOUR SERVICE (HATS): United States (1965–1987). Hans Mueller founds HATS at Honolulu in early 1965 to offer regularly scheduled flight-seeing tours of the state, including a one-day trip over eight islands, with stops at several. The initial fleet comprises 3 de Havilland DH 114 Herons, 1 DH 104 Dove, and 1 Aero Commander 680; revenue operations commence on April 8.

Resort Airways and its Aero Commander 680 are taken over and merged in 1967. Operations continue unchanged during the next decade.

HAWAIIAN AIRLINES (HAL): P.O. Box 30008, Honolulu, Hawaii 96820, United States; Phone (808) 525-5511; Fax (808) 525-3299; <http://www.hawaiianair.com>; Code HA; Year Founded 1941. On October 1, 1941, Hawaii's pioneer passenger airline, 13-year-old, accident-free **Inter-Island Airways**, is redesignated **Hawaiian Air Lines** (the change to the single word "Airlines" occurs in 1960). To accommodate an increasing Hawaii tourist industry, the moniker change improves company identification in the continental U.S. The fleet of President Stanley C. Kennedy consists of 4 Sikorsky S-43s, 1 S-38, and 3 DC-3s (the latter christened *The Moanalua*, *The Haleakala*, and *The Waiialeale*). These aircraft maintain the 451 miles of previous routes linking Oahu's John Rodgers Field to Hilo Airport on Hawaii, Kihei Airport on Maui, and Hanapepe Airport on Kauai.

A portion of the purchase price for the new Douglas transports is recovered when one of the Sikorsky S-43s is sold for \$100,000 on October 6 to the Dutch East Indies carrier **KNILM (Koninklijke Nederlandsch Indische Luchtvaart Maatschappij)**.

During the Japanese attack on Pearl Harbor on December 7, *The Moanalua* is strafed as it prepares to take off from John Rodgers Airport. Passengers and crew are safely evacuated and the fire in the cockpit is extinguished when bullets from a second Japanese plane hit the cockpit fire extinguisher releasing carbon dioxide.

All of the company's aircraft, are slightly damaged in the raid, however, they are quickly repaired. With Hawaii under martial law, government authorities elect to allow the airline to continue, but under Army supervision. Until the end of World War II, HAL will maintain a monopoly on civil air transportation in the islands. Commercial service resumes on December 10.

A total of 45,000 passengers are transported on the year.

In early 1942, the Sikorsky S-38 is employed to haul beef from Molokai to Honolulu, while one of the S-43s flies meat from Upolu to the capital city. On March 20, the CAB grants Hawaiian a certificate to operate an all-cargo service between the territory's islands. It is the very first all-cargo certificate issued by that government agency.

The two S-43s are converted into freighters and dedicated to frequent cargo flights. While taking off from Rodgers Airport in June, a U.S. Army Air Forces C-34 (military DC-2) crashes into *The Haleakala*, putting it out of action for four months.

Enplanements for the year rise to 82,000.

Miss Momi Grace Jacobs, the company's first female flight attendant, is hired in 1943. Bookings for the year are 108,000, growing to 110,000 in 1944.

Following VE-Day in May 1945, a large number of ex-military C-47s (military DC-3s) become available for purchase by the commercial carriers. During the remainder of the year, four additional Douglas transports are so acquired. Two are freighters, though one is later converted back to passenger configuration. In the fall of 1946, a fifth DC-3 is purchased from **Continental Air Lines**; piloted by James Hogg with a crew of three, the plane is ferried to Honolulu on December 17 in 14 hrs. 21 min.

In 1947, a DC-3 is acquired from the failed local Hawaiian carrier **Rainbow Airlines**. On July 31, two S-43s are sold to **Amphibian Air Transport Service** of Long Beach, California. Net earnings allow a stock dividend to be paid to investors.

Two more DC-3s are acquired in the spring of 1948. Arrival of the DC-3s during the previous three years allows retirement of the last Sikorsky. During the year, night and instrument flights are initiated using wartime radio facilities. Enplanements for the year climb to 350,000.

With the beginning of scheduled service by **Trans-Pacific Airlines** (later **Aloha Airlines**) in mid-1949, there ensues a back-and-forth competition over nearly identical routes, particularly after the early 1950s when both come to possess government mail subsidies. Success in attracting or holding passengers often comes to depend on the introduction of new marketing strategies or the acquisition of new airliners.

In 1950, HAL's fleet comprises 12 DC-3s and 1 new Beech 18C. In August, the carrier completes 150 flights in the transport of over a mil-

lion pounds of pineapple planting stock from Maui to Kohala. The company's 20th anniversary is celebrated and a special National Safety Council award is received.

Bookings for the year total 1.9 million.

A \$3.5-million order is placed in April 1951 for the delivery of six pressurized Convair CV-340s. The first arrives in Honolulu on November 11, 1952 and the second on December 20. Also during the month, the company's first and most senior pilot, Charles I. "Sam" Elliott, retires.

The lead 44-passenger CV-340 is placed into service on HAL's inter-island routes on January 19, 1953, thereby gaining a slight advantage over Aloha. Three more arrive and enter service between March and July. Three surplus DC-3s are ferried to California and sold. The sixth Convair is not purchased. The fleet now additionally comprises 7 DC-3s and 3 DC-3Fs.

Airline employment exceeds 500. Passenger boardings exceed 400,000.

HAL's 25th anniversary is celebrated in 1954.

Former **American Airlines** official Arthur D. Lewis is appointed executive vice president in February 1955; he will become president later in the year. A program is introduced on September 24 to provide the remaining DC-3s with outsized "viewmaster" windows and seating for upwards of 31 passengers. Meanwhile, the Convairs are modified to 48-passenger configuration.

During 1957, a program is started to modify the 5 CV-340s to 52-seat CV-440 Metropolitan standard. Six passenger and two cargo DC-3s remain in service.

A DC-6A freighter is purchased from **Slick Airways** on January 13, 1958 and christened *King Kamehameha—The Pacific Adventurer*; prior to its introduction into service, it is reconfigured to DC-6B passenger standard. Contract San Francisco to Tokyo via Honolulu passenger charter operations for the MATS are started with the new aircraft on July 1 and continue until Thanksgiving.

On March 17, 1959, the company files an application with the CAB seeking transpacific jet authority. In November, Kilauea-Iki volcano erupts and the company transports over 1,000 witnesses to the sight. The last CV-340 is converted to CV-440 standard.

Two additional DC-6Cs are acquired and employed on October 1 to launch twice-weekly MATS flights from Honolulu to Midway Island via Johnston Island; Kwajalein and Eniwetok are soon added as destinations. The company's original DC-3, *The Moanalua*, is now flown to Japan and transferred to its new owners, **North Japan Airlines Company, Ltd.**

Enplanements for the year are 498,861.

The airline's 30th birthday is celebrated in 1960. During the year, the company applies to the CAB for authority to operate routes to the continental U.S. and places options for several DC-8 jetliners (which will expire). Progress on the former will be held up until after the Airline Deregulation Act becomes law 18 years hence. Transpacific off-route contract flights cease in December.

MATS contracts are terminated in the spring of 1961 and the two DC-6Cs are leased overseas. In June, HAL becomes the first airline to begin passenger operations from the international terminal at Honolulu airport.

During the spring of 1962, plans are announced for the order, the following January, of three BAC 1-11-209s. This does not materialize because the CAB, in July, begins to investigate the carrier and **Aloha Airlines** with a view to reducing uneconomic competition and reducing subsidy payments. One of the first steps in this package is cancellation of the BAC order.

While taxiing at Honolulu on January 24, 1963 the pilots of a DC-3 freighter fail to see and consequently hit a truck that has strayed out onto the runway; no injuries are reported.

Single-day, scheduled viewmaster flights over the state's three main islands begins in July. The same month, annual airmail subsidies of \$485,700 begin.

To offset Aloha's inauguration of Vickers Viscount service, the carrier leases a Viscount 745 from **Philippine Airlines** in August and the same month also introduces a DC-6A/B on interisland flights. A second leased Viscount 745 is also placed into service later in the year.

Enplanements total 553,265. Revenues are \$10.4 million.

John H. Magoon Jr. purchases majority control and becomes the airline's president on January 1, **1964**. Airline employment is now 759 and the fleet includes 15 aircraft. A CV-440 with 40 aboard crash-lands at Hilo on February 13; three passengers are seriously hurt. During the spring, two additional DC-6Bs join the fleet, including the former **American Airlines** *Flagship Oklahoma City*, which arrives on April 9; orders are also placed for two DC-9-10s. Beginning in October, the six CV-440s begin conversion to CV-640 standard.

The company's 35th birthday is celebrated. The DC-8F palletization system is adapted to the company's DC-6A/B, allowing rapid deplaning and loading. In November, orders are placed for two DC-9-10s and the two Viscounts are returned.

Enplanements reach 10 million (cumulative), including the year's 638,137 boardings. Freight is up as well. Revenues climb 12.2% to \$10,559,047 and a record net profit of \$601,724 is earned. In December, a 5% stock dividend is announced, the first since 1947.

The workforce in **1965** grows to 842 and the fleet includes 14 aircraft: 6 CV-340/440, 3 DC-3s, 2 DC-3Fs, 1 DC-6A, and 1 DC-6B.

En route from Honolulu to Kauai on August 31, Flight 358, a DC-3 with 15 passengers is taken over by a 16-year-old knife-wielding youth who wishes the plane to return to its point of origin. After the Douglas lands back at Honolulu, the young man surrenders. He will be convicted of interfering with an aircraft crew and sent to a juvenile correctional facility, from which he will be paroled two years later.

The first of eight reconfigured CV-640s arrives in December. Late in the year, full airmail service of all classes of mail to and between the islands goes into effect with third- and fourth-class mail also becoming airborne via HAL.

Bookings grow 17.5% to 835,984.

Indigenous jetliners make their initial Hawaiian appearance in March **1966**, with the state's senior carrier first off the runway with DC-9-10 Royal Fan Jet Service flights beginning on April 1. The new aircraft reduce travel time between the islands to 20–30 minutes.

Orders are placed for five DC-9-31s. A summer strike at the trunk lines costs HAL \$300,000 in revenues lost from nonarriving tourists. Still, a record one-day booking is accomplished on September 5—6,885 passengers.

The last DC-3 flight from Honolulu to Hilo via Maui is completed on October 31. Three Japanese-made Nihon YS-11As are introduced on an interim basis in November and December until more jetliners can be obtained. Application is made for a transpacific route to Taipei.

Passenger enplanements total 953,000. Revenues are \$13,236,000, but a \$317,000 loss is suffered.

The \$485,700 airmail subsidy ends on January 1, **1967**, at which time the CAB places the company on a subsidy-free mail rate. The employee population is now 1,071. In February, Hawaiian undertakes a ground servicing contract business for other carriers. The carrier issues 250,000 additional shares of stock and effects a three-for-two stock split in the form of a dividend.

The first DC-9-31 is delivered in November and it begins service on a route to Kona in December. The fleet at year's end includes 8 CV-640s, 2 DC-9-10s, 2 YS-11As, and 1 DC-9-31.

Customer bookings jump to 1,024,670. Revenues advance to \$16,092,000 and although the new ground servicing contract business shows a loss, a \$9,000 net profit is obtained.

The employee population in **1968** numbers 1,165. The second DC-9-31 is delivered on April 5, bringing the fleet total to 12. Late in the year, the carrier begins to phase out its YS-11As and Convairs. The former **American Airlines** DC-6B *Flagship Oklahoma City* is sold to **Yemen Airways Corporation**.

The year's on-time performance is one of the highest in the entire recorded history of airlines: 88.9%. Bookings advance 38.3% to 1,247,000 and 2.19 million freight ton-miles are flown. Revenues jump 22% to \$19,639,855.

The company's DC-3 era ends in January **1969** when the final two Douglas transports are sold to Muskegon, Michigan-based Aircraft Unlimited. The third through seventh DC-9-30s are delivered between March and October. The last is christened in early November by Mrs. Chauncey Wightman—who had christened the company's first aircraft in 1929—in the inaugural ceremony of the 40th anniversary year. Enplanements are 1,392,000.

The employee population in **1970** numbers 1,227, a 10% decline. The fleet now includes 7 DC-9-30s and 7 CV-640s. Negotiations begin in January to end the rivalry with **Aloha Airlines** through a merger. The eighth DC-9-30 is received on April 28.

Passenger boardings increase a healthy 13% to 1,600,000 and cargo tonnage is up by 14.1%. Revenues advance 23.8% to \$27.95 million. A \$727,000 operating profit is earned; however, nonoperating expenses of \$1.4 million leaves the company with a net \$684,000 loss.

Mistrust between the two sides discussing merger is so great that the talks are broken off in April **1971**. Thereafter, both have to face stronger competition, not only from one another, but from third-level commuters whose numbers increase in the era of deregulation. Two more DC-9-30s are acquired during the year.

Enplanements are 1,831,200.

The employee population in **1972** numbers 1,100 and the CV-640s begin retirement. The CAB now rules that **Aloha Airlines** must be given a minimum of the state's local bookings in order that it might more effectively compete and avoid collapse. Meanwhile, the arrival of the 11th DC-9-30, an RC model, on June 13 provides sufficient DC-9 capacity to allow the introduction of jet all-cargo services, including the dedication of one Douglas to night freight flights.

Passenger boardings jump 16% to 2,180,180 and cargo traffic swells 20.7%.

The workforce in **1973** is 1,326. The last two Convairs are sold in March, making HAL an all-jet operator. Service to Hana on Maui is also suspended in March. The new Rapid Change (RC) air cargo system is introduced as the second and last DC-9-30RC arrives on November 1.

Customer bookings grow 17.2% to 2,554,000 and cargo traffic accelerates by 19.1%. The company now transports 88% of the state's inter-island air freight and its passenger load factor of 64.3% is the highest in the U.S. domestic industry.

Fifty-eight new employees are hired in **1974**. The carrier petitions the CAB for authority to operate from Honolulu to Vancouver. A new corporate identity is unveiled in October featuring a *pualani* or "flower of the sky" design by San Francisco's Landor Associates, incorporating the state flower, the red hibiscus, with the profile of a Polynesian woman.

The company marketing name is shortened to Hawaiian Air. Anticipating the delivery of new aircraft next year, four DC-9-30s are sold to **Hughes Airwest**.

Enplanements climb 7% to 2,733,000, or almost 59% of the state's air traffic. Cargo advances a full 10.7% as 7.41 million FTKs are flown. On revenues of \$55 million, a net profit of \$2.3 million is recorded, a 78% increase.

The workforce in **1975** is 1,350. The airline is launch customer for the DC-9-50, which is introduced in elaborate ceremonies on September 15. Four are received by year's end.

Passenger boardings advance a scant 0.3% to 2,742,000. With 7.74 million FTKs flown, cargo is up by 4.5%.

A total of 102 new employees are hired in **1976**, a 7.6% increase. John J. Higgins is appointed executive vice president and corporate headquarters are transferred to a new downtown Honolulu facility. In September, a MAC contract is won; HAL will shortly begin all-cargo services between Hawaii and mainland military bases.

Two more DC-9-50s and a DC-9-51, each named after a Hawaiian flower, are delivered and by year's end the fleet includes 6 DC-9-50s, 1 DC-9-51, and 2 DC-9-30RCs.

Customer bookings accelerate 7.5% to 2,947,922 while freight traffic jumps 10.1% to 5.8 million FTKs. HAL enters a period of growth toward the end of the 1970s.

In July 1977, a Lockheed L-188AF, first flown by **Pacific Southwest Airlines (PSA)**, is purchased from **LACSA (Lineas Aereas Costarricenses, S.A.)**.

In these 12 months before passage of the Airline Deregulation Act, HAL passes the 3 million-mark in annual boardings (3,274,000) for the first time and equals in one 12-month period as many enplanements as were transported during the company's first 24 years. In addition, a \$633,586 profit is posted on income of \$78.86 million.

The workforce is increased by 5.4% in 1978 to 1,451. In January, HAL begins a new Mainland Air Cargo Division from a base at Macon, Georgia, ordering 10 more refurbished Lockheed L-188AFs (7 will be delivered) to employ in this service, as well as the MAC service started two years earlier. Wearing a modified color scheme with black Hawaiian Air Cargo titles, the first of the L-188AF order is delivered on February 14. A delay in the receipt of the remaining aircraft causes significant financial loss.

A second DC-9-51 is acquired in July while expansion of the cargo division is put on hold in September, by which time the company has eight Lockheed turboprop freighters.

The first of three Shorts 330s is introduced in December and begins flights to and from the small terminals at Molokai, Lanai, and Waimea. Its captain is Sharyn Eminger, the company's first female pilot. President/CEO Magoon's fleet comprises 10 DC-9-50s and three DC-9-30Fs. Orders are now placed for six McDonnell Douglas DC-9-80s (MD-80s).

Passenger boardings jump 11.8% to 3,712,000 and freight is off by 69.3% to 4.34 million FTKs. Revenues for the year total \$89.86 million and expenses are \$88.81 million. Despite an operating profit of \$1.05 million, the delay in the Georgia start-up results in a loss of \$698,651.

Airline employment is reduced 1.1% in 1979 to 1,630. Several notable events occur for the carrier, including receipt of authority to fly outside the islands. The second Shorts 330 is delivered on January 25. On March 6, Captain Sharyn Emminger, First Officer Karen Squyres, and Trude Asade, flight attendant, operate it from Honolulu to Molokai and make history, becoming the first all-woman crew to fly in scheduled, certified U.S. airline service. The last DC-9-51 is received on June 16.

November 11 is proclaimed Aviation Day by Governor George Ariyoshi and a special flight follows the original **Inter-Island Airways** path from Honolulu to Maui and Hilo leading up to celebration of the Golden Anniversary on November 19. At this time, uniforms colors complementing aircraft livery are adopted.

Enplanements of 3,795,802 are recorded, a 2.3% boost, while freight traffic falls by 31.8% to 1.26 million FTKs. Revenues advance by 20.8% to \$108.53 million, but expenses leap 23.6% to \$109.78 million. Although the operating income becomes a minus \$1.25 million, HAL stockholders are relieved at the achievement of a \$778,000 net profit.

The 1980s begin poorly for Hawaii's senior air transport firm. In 1980, the employee population is cut 5.9% to 1,335.

The disintegration of a Pratt & Whitney engine on a DC-9-51 taking off from Honolulu in June prompts the FAA to order an inspection of all such engines on American passenger airliners; the order covers over 4,500 engines on 1,650 aircraft.

The mainland-based air cargo division is discontinued in September and sold, along with all eight of the L-188AFs, to the all-freight carrier **Zantop International Airlines**. In November, the Shorts 330s are withdrawn and four DC-9-51s are sold to **Eastern Air Lines**. Orders are placed for three de Havilland Canada DHC-7s, as well as six DC-9-80s (MD-80s).

As a result of the cargo division sale and a 13.3% drop in passenger boardings to 3,292,000 (plus a 9.4% decline in freight traffic), HAL re-

ports that, even though revenues have grown by 13.4% to \$104.5 million, a net loss of \$2.4 million must be posted. Perhaps the brightest spot during the year comes when the airline is reclassified as a "National" under the new CAB airline classification scheme.

The workforce is increased by 4.9% in 1981 to 1,400. During the spring, the carrier takes delivery of six McDonnell Douglas DC-9-81s (MD-81s) and in May three de Havilland Canada DHC-7-102s. Two DC-9-33RCs are leased to **American International Airways (2)**, allowing that carrier to inaugurate new services in September.

Officials begin negotiation of new labor contracts with the airline's major unions, seeking the implementation of cost-cutting measures and offering pilots a variable earnings program.

Inflation and recession bite deeply into the travel budgets of customers and thus Hawaiian encounters another decline in traffic, down 10.3% to 2,917,000 passengers flown. Statistics for freight traffic are a disaster, plunging 94.4% to just 1.86 million FTKs; however, this "adjustment" is expected following the previous year's **Zantop International Airlines** sale.

Operating income declines 16.39% to \$97.13 million while expenses also decline, by 12.61%, but are still higher at \$104.49 million. As a result, however, of the sale of three DC-9s and some tax credits, the company is able to report a net profit of \$5.29 million on top of an operating loss of \$7.4 million.

The payroll is reduced by 300 names in 1982. The carrier is now reorganized and adopts the corporate name of HAL, Inc. The fare wars begun earlier continue and difficulties deepen as **United Airlines** begins direct service to Maui from the U.S. West Coast. A second DHC-7-102 is received in May, followed by two more later in the year; orders for two more are cancelled. When Paul J. Finazzo becomes the airline's president/CEO in December, he introduces a corporate cost-cutting plan. Immediately, two MD-80s are chartered out.

Although passenger boardings rise 7.7% to 3,165,000, cargo is off by 15.4% to 1.57 million FTKs. Revenues advance 2.83% to \$99.89 million, while expenses jump 1.92% to \$106.5 million. The MD-80 lease saves \$5 million and the operating loss is \$6.6 million. The latter figure has been achieved largely through the leasing of unnecessary capacity during the year: four DC-9-50s, three DC-9-30s, and three Shorts 330s. With no more airplanes to sell, HAL finishes the year a net \$16.76 million in the red.

After three hard years, HAL begins to reverse its downward trend in 1983. Significant achievements include labor cost reductions; the continued leasing out of unrequired capacity, including two newly acquired MD-83s; a \$22.3-million, one-time gain through the Supreme Court's negation of a state tax; and the establishment in early December of a worldwide charter division, for which three leased DC-8-62s are obtained.

On December 16, two of the new aircraft initiate scheduled charter services between the West Coast and Maui; the same day, the third aircraft, stationed at Niagara Falls, New York, begins flying charters from Niagara to Florida and Las Vegas.

While on final approach to Honolulu on December 23, a DHC-7-102 with 27 passengers encounters turbulence; two flight attendants are injured, one seriously.

Customer bookings are off 12.8% to 2,655,000 and freight dips 3.5% to 1.51 million FTKs. Although revenues are down 6.19% to \$93.71 million, costs fall 15.82% to \$89.65 million. Holding down expenses gives the company an operating profit of \$3.97 million, while the Supreme Court is almost solely responsible for the net profit of \$16.6 million.

Employing three leased hush-kitted DC-8-62s and a DC-8-63, the 1,250-employee company in 1984 undertakes both military and civilian worldwide charters. In addition, new scheduled services are inaugurated to Pago Pago, the Tonga city of Nuku'alofa, Auckland, Sydney, Guam, Apia, Papeete, and Rarotonga.

Two additional DHC-7-102s are acquired, one each in April and December. Plans are made to acquire British Aerospace BAe 146-200s as DC-9 replacements.

Largely on the basis of these new operations, HAL records a 13.6% boost in customer bookings to 3,016,000; cargo skyrockets 80.5% to 2.74 million FTKs. The Pacific pioneer takes in record operating revenues of \$128.04 million, up 36.6%, and holds costs to \$120.65 million. As a result, it is able to bank an operating profit of \$7.4 million and a net profit of \$5.8 million, which includes pretax gain on a DC-9 sale.

The workforce is reduced by 4% in 1985 to 1,200. The first of two DC-9-15F freighters to be received by December arrives at Honolulu on February 21. The Pago Pago and Nuku'alofa service frequency is increased to thrice weekly and on April 19 the carrier acquires the first of five former **All Nippon Airways Company, Ltd.** Lockheed L-1011-385-1 TriStar 1s it will obtain during the year to bolster its charter business.

The second TriStar 1 arrives in May, at which time a \$26-million payment is made to Boeing, which had taken the Japanese aircraft in trade. Late in the month, permission is sought to inaugurate thrice-weekly flights from Honolulu to Tokyo and Nagoya. On June 12, scheduled, roundtrip TriStar flights are inaugurated to Honolulu from Los Angeles, San Francisco, Seattle, and Portland. Weekly nonstop flights are also initiated from Honolulu to Las Vegas. Operating on behalf of the travel agency Suntrips of California, an L-1011, with the Suntrips logo on its tail, undertakes charter flights between San Francisco and Honolulu.

In addition, a second TriStar operates on behalf of the tour operator Pleasant Hawaiian Holidays, offering weekly scheduled service for it to Seattle, Dallas (DFW), St. Louis, and Salt Lake City. On behalf of **UTA French Airlines, S.A.**, an L-1011 flies weekly to Tahiti. During July and August, two MD-80s are leased to **Pacific Southwest Airlines (PSA)**.

Passenger boardings climb 8.6% to 3,611,000 and cargo increases 84.2% to 5.05 million FTKs. Revenues advance 24.8% to \$159.76 million, costs jump 32.5% to \$159.88 million, and a \$124,000 operating loss is taken. The net loss is \$179,000.

Airline employment rises 27.8% in 1986 to 2,300 and the fleet comprises 5 L-1011-385-1s, 2 MD-80s, 4 DC-9-50/51s, 2 DC-9-15Fs, 1 DC-8-63, 2 DC-8-62s, and 6 DHC-7-102s. The decision is taken not to acquire BAe 146-200s as officials elect, instead, to acquire two DC-9-15s from **Finnair O/Y**. The company serves not only seven destinations on six of the state's islands, but several mainland communities plus Tonga and American Samoa. In January, daily flights begin from Honolulu to San Francisco and Seattle. The former frequency is extended weekly to Sacramento while the latter is pushed on to Portland thrice weekly.

In March, the charter operator **Air Hawaii** collapses after five months operation; several months elapse before HAL agents can clear up impressions that the two airlines are not the same. April brings ground-breaking for the new wholly owned Kapalua-West Maui Airport. On July 11, Hawaiian becomes the first U.S. flag carrier to announce the beginning of regularly scheduled flights between Honolulu and Apia, Western Samoa. Orders are placed for two additional DC-8-62s and by year's end, HAL is the third largest U.S. carrier in terms of traffic operated to and from Honolulu.

Customer bookings swell 23.9% to 4,149,000 and freight rises 5% to 3.06 million FTKs. Revenues balloon 40.9% to \$225.01 million, expenses rise 34.5% to \$214.75 million, and the operating profit is \$10.25 million. The net figure is reversed and ascends to \$3.44 million.

The workforce is increased by 4.3% in 1987 to 2,400. A DC-8-62 inaugurates nonstop service from Honolulu to Apia in February, becoming the first airline to introduce service between the U.S. and the independent South Pacific nation of Western Samoa. Kapalua-West Maui Airport opens on March 1. In addition to the owner-operator, which flies in and out with de Havilland Canada DHC-7-102s, the new facility also services seven commuter carriers. Roundtrip service between Honolulu and Pago Pago is increased to six frequencies per week in April while the **USAir** frequent flyer program is joined in May.

Regular charter flights from Hawaii to Europe via Anchorage are inaugurated on May 30 under contract to Ferien Services, Ltd. of Switzerland and Cala Riesen of Frankfurt. Delays in the refurbishment of the

DC-8-62s cause difficulty with a number of these charter flights and the carrier must reaccommodate passengers booked when it appeared the aircraft would be available. Due to the corrosive salt air and stress from frequent short flights to the new airport, an unusually large number of engine repairs are required during the year, a not inexpensive problem.

Meanwhile, the company continues to expand out into the South Pacific, inaugurating services to Guam, Tahiti, and the Cook Islands. Charter flights to Japan are increased as are military charters.

In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

As a result of its new flights, passenger boardings at HAL jump 15% to 4,772,000. Freight, however, is off by 2% to 11.07 million FTKs. Revenues rise 32.9% to \$299.11 million, expenses ascend 44.6% to \$310.33 million, and the operating loss is \$11.21 million. The previous year's net gain becomes a net loss of \$8.77 million.

Hiring continues apace in 1988 as 600 new workers join the company, a 14.6% increase. The fleet now includes 5 leased L-1011-385-1s, 2 MD-80s, 8 leased DC-9-51s, 2 leased DC-9-14s, 2 owned and 2 leased DHC-7-102s, 6 leased DC-8-62s, and 3 leased Shorts 330s.

Flights from Pago Pago to Sydney and Auckland are initiated in mid-January and the company's twice-weekly frequencies from Honolulu to Guam are increased to six per week in February.

Customer bookings jump 13.2% to 5,793,000 and cargo climbs by 16.9% to 12.94 million FTKs. Although traffic is good, financial return is not, due largely to higher maintenance costs and the unprofitable mainland to Honolulu route. Although revenues are up by 18.16% to \$353.44 million, costs jump 15.43% to \$358.2 million. The operating loss "improves" to \$4.75 million, but the net loss deepens slightly to \$8.48 million.

The fleet is altered slightly in 1989 by the addition of another MD-80, three more DHC-7s, deletion of three DC-9-51s and the three Shorts 330s. In celebration of the sixtieth anniversary, ground and flight staff of the 1,300-employee airline receive new uniforms. Fares are reduced on February 25 by one-third on twice-daily flights between Honolulu and four outer islands.

Early in the year, a unit of the Portland, Oregon-based PacifiCorp utility firm offers Chairman John H. Magoon Jr. a cash buyout proposal of \$45 per share. It is rejected, with the 70-year-old patriarch telling *Forbes* magazine that he needs \$50 per share. There now enters onto the scene the investment team HAL Acquisition of J. Thomas Talbot, founder of both **Air-Cal** and **Jet America Airlines**, and former baseball commissioner and Magoon friend Peter V. Ueberroth, fresh from the collapse of their March-April negotiations to purchase bankrupt **Eastern Air Lines**.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. HAL, with five security breaches, is faced with \$41,000 in punishment.

In September, an arrangement is concluded with Chairman Magoon and Hawaiian is sold to Talbot and Ueberroth for \$22 per share. Magoon remains on the board, Talbot becomes board chairman/CEO, and John A. Ueberroth is appointed president. Meanwhile, a marketing and code-sharing agreement is signed with **Japan Air Lines Company, Ltd. (2)**. The new arrangement will allow HAL to link its Kahului-Honolulu segment with JAL's flight from Tokyo to Maui.

The year's passenger boardings dip 2.4% to 5,655,000, but freight moves skyward 4.9% to 13.58 million FTKs. Revenues decline 1.46% to \$348.26 million, expenses jump 9.63% to \$392.68 million, and the operating loss deepens to \$44.42 million. The net downturn worsens to \$42.68 million.

Airline employment is increased by 30.4% in 1990 to 2,300 and the fleet now includes 6 L-1011-385-1s, 12 DC-9-51s, 8 DHC-7-102s, and 7 DC-8-62s.

In February, service from Honolulu to Nuku'alofa, Tonga, via Pago Pago is increased by one weekly flight. Simultaneously, a three-month

"nonuse" status is imposed upon the airline by the MAC pending an inquiry into maintenance and record-keeping practices.

In March, an L-1011 is leased to Hollywood and, at Evergreen's Pina Air Park at Marana, Arizona, is repainted with water-based pigments in the colors of a mythical Northeast Airlines for use in the Bruce Willis action film *Die Hard II*.

In June, HAL sues start-up competitor **Discovery Airways**, operating since March 25 under a newly granted, temporary DOT authority. The new entrant's authority is consequently rescinded in July due to its failure to abide by conditions of its award. Despite new leadership, the company continues to suffer a bad year, due to such factors as fare wars, recession, and higher fuel prices in the wake of Iraq's August 2 invasion of Kuwait.

The August issue of Conde Nast *Traveler*, it is noted that Hawaiian is one of only five U.S. carriers, along with four with relatively short histories, that have never had an air fatality in their entire histories.

In September, Honolulu to Sydney service is suspended as HAL, in support of its government Civil Reserve Air Fleet (CRAF) commitment, begins to fly the first of some 200 charter flights to the Mideast in support of Operation Desert Shield and later, Operation Desert Storm. Also withdrawn during the fall are flights to Auckland, Guam, Anchorage, and Las Vegas. In consequence of these developments, HAL, Inc. must secure \$20 million in bridge financing during November from principal lender Security Pacific National Bank.

Customer bookings this year plunge 10.2% to 4,736,000 and cargo is down by 5% to 12.9 million FTKs. Revenues fall 2.35% to \$340.73 million, expenses shoot up 10.32% to \$433.05 million, and the operating loss more than doubles to \$92.32 million. The net loss is a staggering \$121.28 million, just \$4 million less than the operating revenue of the smallest national, **Midwest Express**.

The payroll climbs 8.7% in 1991 to 2,500 and President Ueberroth's fleet now includes 36 aircraft. Early in the year, **Northwest Airlines** provides a \$20-million cash injection into the national in exchange for 25% ownership and the wet-lease (with option to buy) of HAL's routes from Honolulu to Sydney and from Guam and Saipan to Nagoya and Fukuoka. In addition, the two agree to coordinate schedules and coordinate passenger services on the ground in Honolulu. Aircraft charter costs are lowered following renegotiations with the lessors and in late January Honolulu to Sydney flights are resumed. A television news magazine causes the company embarrassment—and some lost traffic—when it alleges in the spring that Hawaiian's maintenance practices are among the industry's worst.

As part of the agreement with **Northwest Airlines**, which provides the aircraft and crews under lease, Hawaiian starts daily Honolulu to Fukuoka service on June 1. Longtime corporate attorney H. Mitchell D'Olier succeeds John Ueberroth as president in August. Rainbow Connection service is offered, beginning in October, from Honolulu to either Kona or Hilo for the price of a single interisland roundtrip. A \$2-million program is announced in November for the 14-month refurbishment of the company's 13 DC-9-50s.

Passenger boardings for the year fall 19.5% to 4,059,000 and freight plunges 40.8% to 7.65 million FTKs. Although revenues are 7.1% ahead to \$365 million, expenses swell 4% to \$460 million and guarantee a \$9.5-million operating loss, which is, in fact, a significant improvement. The net loss is cut to minus \$98.5 million.

In March 1992, West Coast service is expanded by the introduction of nonstop service from Seattle and Los Angeles to Kahului, Maui; the previous connecting service to the latter point via Honolulu is discontinued. The carrier's Honolulu to Fukuoka route is transferred to **Northwest Airlines** on May 11. The Minneapolis-based major operates the route through late October with TriStars wet-leased from HAL.

Traffic recovers as customer bookings leap upward 17% to 4,748,000 and cargo skyrockets 195.2% to 22.59 million FTKs. Revenues rise 8.2% to \$395.1 million and expenses climb 10% to \$506.1 million. The year's operating loss is \$111.04 million, although a net \$28.96-million net profit is generated.

Company employment is cut a significant 31.7% in 1993 to 1,708. Destinations now regularly served from the Honolulu hub include Lihue, Kahului, Kapalua-West Maui, Hilo, Seattle, San Francisco, Los Angeles, Anchorage, Molokai, Lanai, Kona, Pago Pago, Papeete, Apia, and Rarotonga. In July, HAL Director Martin Anderson becomes chairman of the executive committee as President D'Olier resigns; Bruce R. Nobles, former president of **L'Express** and the **Trump Shuttle**, is named president/CEO.

Work is undertaken in August and September on financial restructuring; however, after years of losses (now standing at a cumulative \$320 million), the airline, through its HAL, Inc. parent, must declare Chapter XI bankruptcy on September 21. The same day, a reorganization plan is filed with U.S. Bankruptcy Court, which is supported by many of the carrier's unsecured creditors, and an announcement is made pledging no disruption in service.

In a further cost-cutting move, six DC-8-62s employed for international charter flights are eliminated during October and November. In December, a large-scale contract is signed with AMR Corp., parent of **American Airlines**. Under its terms, the Hawaiian carrier agrees to purchase its training from the AMR subsidiary AMRCG, reservations services from SABRE, join its AA Advantage frequent flyer program, its Fly Aaway Vacations inclusive-tour program, and lease six DC-10-10s with which to replace its TriStars.

Passenger boardings for the year fall 4.8% to 4,336,814, but freight climbs 46.3% to 33.04 million FTKs. Revenues decline 23.1% to \$304.1 million and expenses fall 35%, but still reach \$328.9 million. The operating loss is cut to \$24.8 million, but the net loss decays to \$69.4 million.

The workforce is boosted 46.4% in 1994 to 2,500 as CEO Nobles and a new board begins revision of the company's reorganization plan on January 1. Given an extremely beneficial leasing arrangement by **American Airlines**, Hawaiian now begins to return to lessors its seven Lockheed L-1011-1s/L-1011-50s in favor of six ex-American Airlines DC-10-10s, the first of which departs Los Angeles for Honolulu in February. The Dash 7s are also withdrawn. As the Douglas wide-bodies arrive, they are placed on the carrier's daily services to Los Angeles, San Francisco, and Seattle, as well as weekly routes to Las Vegas, Tahiti, and American Samoa.

Meanwhile, long-haul services to Pago Pago and Papeete are permanently suspended. The interline agreement with **Polynesian Airlines, Ltd.** is suspended. Honolulu to Anchorage roundtrips end in April.

Interisland services are boosted on August 1 with the Maui Shuttle (later the Island Shuttle) providing hourly services daily from Honolulu to Kahului Airport and, subsequently, to Kauai'i.

The U.S. Bankruptcy Court in Honolulu approves the airline's reorganization plan on August 30, allowing it to emerge from bankruptcy on September 11. Under the reorganization plan, unsecured creditors receive 68.7% shareholding, employees obtain 16.8% through an Employee Stock Ownership Plan and a 401(k) program, and 14.5% is reserved. The latter interest will be employed for warrants related to post confirmation financing (9%) and the creation of a management stock incentive stock option plan (5.5%). Negotiations are finalized with CIT Group/Credit Finance for an \$8.6 million secured line of credit. Additionally, a \$2.8-million deposit made with the State of Hawaii to help secure a loan earlier is recovered.

On November 1, four-times-per-week service is inaugurated from Portland, Oregon, to Honolulu.

The year's customer bookings at "Hawaii's Flagship Airline" move ahead by 5.7% to 4,583,444 and cargo balloons 26.7% to 42.54 million FTKs. Revenues inch up 0.7% to \$306 million, but expenses are \$318.7 million. As a result, there is a pretax loss of \$12.7 million and a net downturn of \$12.9 million. With a \$190.1-million noncash gain from elimination of liabilities held prior to bankruptcy, ledgers are later able to show a \$169.4-million net profit.

Airline employment in 1995 stands 2,700, an 8% increase. In May, Hawaiian's exclusive "Hawaii Regional Cuisine" meal service in first-

class wins the coveted 1995 "Onboard Services Award" from *Onboard Services* magazine over the food service programs of several leading international carriers.

Following a bad first quarter, the company's stocks are again traded on the stock exchange on June 21 and within a day advance 97% in value. At the same time, rumors circulate that the company will be purchased by either **USAir** or **Trans World Airlines (TWA)**. All three carriers firmly deny the rumors on June 23 and Hawaiian's stock falls 34 points within 4 days.

During July, the carrier is able to make an initial distribution of 5.4 million shares of common stock to creditors. It is anticipated that, later in the year, employees will receive 1.9 million shares, while unsecured creditors will receive 2.1 million more.

Having lost \$451,000 during the second quarter, but posting a \$431,000 operating profit, HAL is able to convince American Airlines to defer \$6.1 million in lease and maintenance payments on its DC-10s until October.

An alliance is signed with **Northwest Airlines** that will provide for computerized reservations and frequent flyer program linkage, shared codes and joint fares.

Enplanements increase by 4.3% to 4,781,000 while freight jumps 36.4% to 58.88 million FTKs. Although operating income is up 13.4% to \$346.9 million, costs advance 9.5% to \$348.8 million. The operating loss is cut to \$1.9 million while the net loss "improves" to \$5.5 million.

The workforce is reduced 20.9% in 1996. On January 18, the cash-strapped airline accepts an \$3-million loan from New York-based Smith Management Co. During the third week of January, the company's four unions agree to delay wage increases as a cost-cutting measure. In exchange for some layoff protection and the chance to win bonuses, the affected personnel allow their contracts to be extended to February 2002. This arrangement saves the carrier \$5 million per year.

Shareholders vote on January 30 on a proposal to sell 61% of the company to Airline Investors Partnership, a division of Smith Management Co., for \$20 million. The vote having provided affirmative, Bruce Nobles relinquishes his chairmanship to Smith Management Co. President John W. Adams on February 2; Nobles remains on as president/CEO. AIP also wins 6 of the company's 11 seats on the board of directors. Unions retain three chairs while Nobles and an outside director occupy the remaining two.

AMR Corporation also assists HAL to save \$2 million by restructuring the \$10 million owed on the DC-10 lease, reducing the lease rate to 28% for 3 years and in fact deferring lease and maintenance charges for 5+ years.

On April 8, the company introduces a consumer campaign designed to promote interisland and West Coast travel. The promotion involves a scratch-and-win game, Go Where the Action Is, which will award more than \$750,000 in travel and prizes. All passengers over age 21 on all flights (except to Tahiti) will receive game cards for two months, with prizes announced on June 1.

The marketing agreement with **Northwest Airlines** takes effect during the summer. The two coordinate their schedules so that Hawaiian flights to Molokai, Lihue, Lanai, Kona, Hilo, and Kahului all connect with Northwest services into Honolulu from Japan and California.

In August, a total of 12 million shares of common stock is offered to existing shareholders, who purchase the entire offering for \$39.3 million.

Following the indefinite grounding of **Rich International Airways** by government safety inspectors shortly after Labor Day, Hawaiian takes over that airline's contract with Alaskan wholesaler Hawaiian Vacations.

During the fall, HAL begins to code-share with start-up **Mahalo Air** on frequencies from Honolulu to Molokai and Kapalua. On October 1, the five-times-a-week roundtrips from Honolulu to Portland, Oregon, become daily frequencies.

On December 3, a code-sharing alliance is signed with **Reno Air**. Under its terms, HAL passengers will, upon implementation, be able to

connect at Los Angeles with **Reno Air** flights to Tucson, Albuquerque, Reno, Tahoe, and San Jose. The pact also allows frequent flyers to choose their miles from the AAdvantage Flyer program of **American Airlines** or HAL's Gold Plus.

On behalf of Hawaiian Vacations, HAL, on December 14, inaugurates weekly DC-10-30 charters from Anchorage to Kahului, following these with Anchorage to Honolulu flights four days later.

Rising fuel costs, lack of demand for mainland-Hawaii travel, and unexpected engine repairs bring a fiscal downturn. Customer bookings move ahead by 4.6% to \$5,161,000 and 74.19 million FTKs are operated, a 26% increase. Revenues jump 10.8% to \$384.73 million while expenses accelerate 9.6% to \$382.44 million. A \$2.02-million operating profit is reported and the net loss is down to \$1.53 million.

The employee population grows 17% in 1997 to 2,500. On January 1, the company adds two weekly return flights to its Las Vegas charter operation, bringing the total number of weekly charter flights between Honolulu and Las Vegas to eight. Four flights are offered in partnership with Vacations Hawaii and four with Jackie's Travel.

The **Reno Air** dual-designator pact comes into effect on January 7. Twice-weekly nonstop return service is kicked off on January 18 between Kahului, Maui, and Seattle. Plans for a code-share alliance with **American Airlines** are delayed by the American pilot strike threat.

On February 1, the company introduces its "Mea Ho'okipa" in-flight hospitality program, which integrates "the best of Hawaii" on all audio-visual, magazine, food, gift, and catalog services. A different major island destination will be emphasized each quarter, beginning with Oahu, and following with Maui, the Big Island, and Kauai.

The company on February 19 opens a new centralized passenger terminal at Honolulu.

A marketing agreement does begin with American Eagle subsidiary **Wings West Airlines** on March 4. It provides connecting services for Hawaiian passengers from Los Angeles to 10 other cities in California and Nevada. Later in the month, President/CEO Nobles resigns and is succeeded by former **Continental Airlines** executive Paul J. Casey.

Twice weekly nonstop DC-10-10 roundtrips commence on May 2 between Maui and San Francisco. The delayed code-sharing agreement with **American Airlines** is concluded on July 22. American is able to attach its two-letter booking code in worldwide reservations systems to Hawaiian's daily DC-9-51 flights among the Hawaiian islands. The two will coordinate flight schedules to provide convenient connections between American's mainland-to-Hawaii flights and Hawaii's domestic network.

A marketing alliance is signed on August 1 between **Continental Airlines** and Hawaiian, which includes **Continental Micronesia** as well. The pact, scheduled to start on October 1, will allow the former to tie its feed to the latter's 12 daily nonstops from Honolulu to the West Coast. In addition, Continental will be able to increase feed for HAL and Continental Micronesia on their services from Hawaii to Guam.

Former **Delta Air Lines** China Managing Director David M. Boaz is appointed vice president-flight operations on August 22. In November, Executive Vice President/Chief Operating Officer Michael J. McQuay resigns to become managing director/CEO of **Air Pacific, Ltd. (2)**.

Passenger boardings inch up 1.1% to 5,217,749 while cargo dips 1.7% to 74.94 million FTKs. Operating revenues increase 5.1% to \$404.21 million, but expenses are such that a \$1.02-million net loss is suffered.

On March 1, 1998, HAL becomes the first airline to sell tickets through a bank automated teller machine; full-fare interisland tickets are available from Bank of Hawaii ATMs.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14. The document had received tentative approval in Tokyo on January 30.

Two days later, the DOT authorizes 64 weekly flights to Japan for carriers that in the past have had their services severely limited. It also

names two new passenger carriers to fly to Japan, one of which is HAL. Hawaiian will be permitted to inaugurate daily service from Maui to Tokyo on January 1, 2000.

Although neither flight crews file a near-midair collision report, an ATC error on March 20 allows a company DC-10-30 and a chartered U.S. Interior Department B-737-200 to come within 100 ft. vertically and 300 ft. horizontally as both takeoff from Las Vegas.

President/CEO Casey suffers a mild stroke on June 17 and is hospitalized; he is able to resume his duties on July 1.

Previous winter seasonal flights between Seattle and Maui become year-round, nonstop DC-10-10 return service on September 8, operated four times per week.

On September 10, it is announced that the company will acquire two (later three) DC-10-30s under charter from **American Airlines** and expand its services to the state from Los Angeles. Beginning in mid-March, daily return service from Los Angeles (LAX) to Maui and from Los Angeles (LAX) to Maui and Kona will be added. In addition, a new charter route from Los Angeles to Tahiti will be opened in August. The aircraft involved had previously been out on lease to the Russian carrier **Transaero Airlines**; having come back early, they now undergo maintenance checks.

HAL joins forces with Carrier Services on October 30 to offer a pre-paid telephone card. The Global Phone Card holds 170 min. of pre-paid call time, plus 500 Hawaiian Miles, and retails for \$50.

The first DC-10-30 is delivered on November 24. The second is expected during the first quarter, with the third arriving sometime after that.

The agreement with **Polynesian Airlines, Ltd.**, suspended some four years earlier, is reinstated on December 7. The interline agreement covers both passengers and bags transferred between the Samoan-government owned carrier and HAL. Simultaneously, the American Samoa attorney general has waived an entry permit requirement for HAL transit passengers passing through Pago Pago on their way to Samoa.

Two DC-9-51s are purchased from **Meridiana, S.p.A.** on December 29; they will be delivered in February.

Customer bookings increase a minor 1.18% on the year to 5,260,133; however, freight traffic accelerates by 15.64% to 64.35 million FTKs. Revenues rise 5.5% to \$426.4 million, while expenses inch up 0.5% to \$409 million. The operating profit surges to \$17.4 million and there is an \$8.2-million net gain.

The Douglas narrow-bodies arrive in February 1999. Daily nonstop DC-10-30 return service is inaugurated from Los Angeles to Maui on March 12, with continuing direct service thrice weekly to Kona on the island of Hawaii starting next day.

Former **USAirways** official Michael R. Schwab is appointed on an interim basis on April 14 to oversee the company's flight and service operations.

John L. Ryan is named vice president-maintenance/engineering on May 1.

A \$430 million order for 13 B-717-200s, with seven options, is announced on September 23; the first aircraft is scheduled for delivery in February 2001.

DC-10-30s inaugurate a second weekly roundtrip service between Honolulu and Papeete, Tahiti, on December 15.

Passenger boardings climb 8.5% to 5,708,000 while cargo jumps 14% to 95.74 million FTKs. Revenues accelerate 14.6% to \$488.87 million, while expenses surge 29.4% to \$529.41 million. The previous year's profits are turned into losses: \$40.53 million (operating) and \$29.26 million (net).

Airline employment at the beginning of 2000 stands at 3,091, a 14.6% increase over the previous 12 months. On March 2, the B-717 order is confirmed.

On May 24, the commercial compact with **Northwest Airlines** is renewed for another five years.

A second daily nonstop DC-10-30 return service is initiated on June 1 between Honolulu and San Francisco. On August 4, management re-

quests that the Federal Mediation Service join in efforts to settle a new contract with its ALPA-represented pilots, the need for which has been occasioned by the upcoming introduction of the B-717s.

It is announced on September 1 that beginning on June 15, the carrier will offer the first nonstop daily roundtrips between San Diego and Honolulu, employing DC-10-30s. Capt. Rolland F. Lawrence becomes vice president-flight operations at the end of July.

Under an exclusive two-year, \$70-million contract signed with Renaissance Cruises the previous year, a DC-10-30 launches roundtrip charters on August 31 from Los Angeles and Tahiti via Honolulu. Welcomed at Papeete by President Gaston Flosse of Tahiti, HAL President Paul J. Casey, and Renaissance Cruises Chairman Richard Kirby, the flight is the first of 18 to 20 long-haul services to be flown monthly between California and the French Pacific possession by two dedicated DC-10s.

Negotiations between the ALPA-represented pilots and management continue on October 1. The Hawaiian local receives a \$2-million grant from the union's national headquarters as support in case of a job action.

The company's first B-717-22A enters final assembly at Renton on October 3; the 50th 717 to be manufactured is scheduled for delivery as the *I'iwi*, to the Honolulu-based company on February 1. To celebrate, the carrier holds an ancient hula ceremony on the grounds of the manufacturer's Long Beach plant.

While landing at Tahiti's Faaa Airport following a December 23 service from Honolulu, Flight 481, a DC-10-30 with 136 aboard, overshoots the runway and stops just short of disaster with its front wheels in a lagoon. Luckily, only one person is injured; however, the airport is temporarily closed to other wide-bodied airliners until the aircraft can be extracted.

On Christmas Eve, the company and its pilots reach accord on a new 42-month contract, effective January 1.

Customer bookings during the 12 months accelerate 9.8% to 6,268,161.

HAWKAIR AVIATION SYSTEMS, LTD.: Site 16, C.5, RR4, Bristol Road, Terrace, British Columbia V8G 4V2, Canada; Phone (250) 635-4295; Fax (250) 635-4295; <http://www.harkair.net>; Year Founded 1993. At the beginning of 1993, the fleet of Jim Soden, **Trans Provincial Airlines, Ltd.**'s general manager, comprises 2 DHC-6s, 3 DHC-3s, 6 DHC-2s, 2 Bristol 170 Mk. 31s, and 3 Grumman G-21 Geese. The Bristol all-cargo service is closed down in January, but the company is already in significant financial difficulty. Having overexpanded ahead of revenues, the carrier ceases operations in March.

The Bristol assets and contracts are sold by the carrier's receivers to a British consortium made up of employees of **British Airways, Ltd.** (2). These contract with the new FBO, Hawkaair Aviation Services, Ltd., run by former Trans Provincial executives Paul Hawkins, Rod Hayward, David Menzies, and Donald Vienneau. Hawkaair will modify two Bristol Freighters, including one obtained from the Pakistani Air Force, and train pilots. The FBO operators talk to local mine owners and convince the British to leave one Bristol in Canada.

Hawkaair begins revenue flights in British Columbia in August 1994 employing the former Pakistani Freighter flown under dry-lease. The entire company pilot roster includes just three names. In September, the other aircraft is flown to England. The U.K. owners turn over the airframe of a third Bristol to the Terrence-based Hawkaair as partial payment for its rebuilding activities.

Initial contracts operated by the Freighter include the transport of gold concentrate from mines at Bronson Creek and Johnny Mountain in Alaska to the coast and a return with fuel. The company very nearly goes out of business before the end of the year; even partner Donald Vienneau sells out. Menzies and Hayward are left to fly the plane, with namesake Hawkins handling maintenance.

Between July and August 1995, Hawkaair flies its first major business when it undertakes a reclamation project for the Windy-Craggy Mine, owned by Royal Oak Mines, in the northwest part of British Columbia.

Flights continue in 1996, but in July the Bristol that had been sent to England must be written off following a bad landing at Enstone.

On April 24, 1997, the Hawkeair Bristol is badly damaged in a landing accident at Bronson Creek. While the former military Freighter is repaired, Paul Hawkins mortgages his home to provide a down payment on an Aviation Traders Limited ATL-98 Carvair. It enters service on behalf of Hawkeair during the second week of June. On July 9, the Bristol that had been received as partial payment years earlier also completes its rebuild and is available for service.

Charter work continues throughout the remainder of the decade without headline or incident. In anticipation of the upcoming merger battle for control of **Canadian Airlines, Ltd.** during the summer of 2000, the major Canadian carriers and their regional affiliates reduce air service to communities in the Northwest. The reduction brings economic and personal difficulties for many northern sectors, particularly in the communities of Terrace, Kitimat, Prince Rupert, and the Nass Valley. To help redress this situation, Hawkeair converts itself into the nation's newest scheduled airline during August. A workforce of 20 is appointed to operate the new service, employing a single de Havilland Canada DHC-8-100. Twice-daily C\$148 roundtrips commence on September 8 between Terrence and Vancouver. The fully loaded inaugural flight also includes a cargo of locally grown pine mushrooms destined for Asia. The company's Carvair, meanwhile, is parked at Vancouver and put up for sale.

At the end of the year, it is announced that daily Prince Rupert to Vancouver direct return flights will commence on February 27.

HAWKEYE AIRLINES: United States (1974). Taking the state's nickname, this small regional is set up at Ottumwa, Iowa, in 1974 to provide scheduled passenger and cargo services to Marshalltown, Des Moines, Omaha, and Sioux City. Although Douglas DC-3 flights duly begin, they cannot be maintained until year's end.

HAWKINS AIRWAYS: United States (1969–1977). Jackson Air Center, the FBO at Jackson, Mississippi, elects to establish a scheduled airline division in 1969. Hawkins Airways, as it is known, is outfitted with 1 each Beech 18 and Piper PA-32 Cherokee Six, which are employed to inaugurate daily roundtrips to New Orleans. Operations continue apace until 1977.

HAZELTON AIRLINES (PTY.), LTD.: P.O. Box 12, Orange Road, Cudai, New South Wales, 2864, Australia; Phone 62 (63) 615 815; Fax 62 (63) 642 294; <http://www.hazelton.co.au>; Code ZL; Year Founded 1953. Hazelton Air Services (Pty.), Ltd. is formed by C. Max Hazelton at Cudal, New South Wales, some 140 miles west of Sydney, in 1953 to provide charter and agricultural services. With an Auster Aglet, Hazelton flies his first charter client, a sheep dealer, to various properties in the west, while barnstorming on weekends.

On October 16, 1954, the Auster crashes into the forested mountains near Bankstown while en route to Toogong. Unhurt, Hazelton is able to walk out of the bush six days later to a timber camp in the Burratorang Valley, near Cox's River.

All kinds of specialized charter and contract service flights, including crop dusting, are now undertaken throughout eastern New South Wales, with the Cessna 180 acquired to replace the Auster. In an episode that dramatically increases his charter business, the intrepid pioneer makes an aerial circumnavigation of Australia during the 1960s, flying the 7,150-mile route in 13 hrs. 38 min. and breaking a 31-year-old record.

On a controversial note, Hazelton agrees to fly protesters over the French nuclear weapons test area at Muraroa Atoll in 1972; although the demonstration, primarily because of fueling problems, does not get airborne, the publicity raises national awareness of South Pacific nuclear activity. In 1979, the carrier receives a permit to offer scheduled third-level flights under the marketing name Hazelton Airlines (Pty.), Ltd.

Regular commuter routes are established between the Cudal base and Sydney, Orange, Dubbo, and Canberra. In addition, Hazelton's carrier

also maintains its own engineering workshops and heavily promotes tourist package tours.

In 1981, the fleet comprises 2 Beech Super King Air 200s, 5 Piper PA-31-350 Navajo Chieftains, 6 Cessna 310s, 3 Piper PA-30 Twin Comanches, 1 Cessna 206, 1 Cessna 185, and 1 Cessna 172.

During the next six years, service is also initiated to Condobolin, Gunnedah, Moruya, Mudgee, and Quirindi. The fleet is expanded by the addition of an Embraer EMB-110P1 Bandeirante and another Navajo Chieftain; one King Air is withdrawn.

Operations continue apace in 1982–1987. Another Cessna 310 and one more PA-31 are acquired in 1988. As a result of the previous year's *New South Wales Service Review*, Hazelton begins a route system re-assessment and in March announces an A\$10-million expansion and re-equipment program. Enplanements reach 60,000.

Changes are made in 1989, including placement of an order for three Shorts 360-300s. General Manager Bevan Coote's fleet now includes 13 Piper PA-31-350 Navajo Chieftains, 3 Cessna 310s, and 2 Embraer EMB-110 Bandeirantes. Job actions by ATC personnel and pilots of various domestic carriers cause traffic and financial reversals.

Enplanements are off 6.2% from the previous year to 106,000 and freight is down 7.4% to 113,400 pounds.

In 1990, the Cessnas are replaced by a Beech 1900, two Shorts 360-300ss, and six more Navajo Chieftains. Several new markets are added to the route network and the airline is able to begin feeding passengers to Sydney via its new western hubs at Dubbo and Orange. Among the communities visited are Coonabarabran, Cootamundra, West Wyalong, Temora, Dubbo, Cobar, and Lightning Ridge. Bookings total 314,740.

Two SAAB 340Bs are purchased in 1991 as, by April, over 400 departures are made weekly. Recession raises its ugly head and in September service is halted to 14 destinations.

Passenger boardings for the year plunge 50% to 209,827 and a significant financial loss is incurred.

The previous year's SAAB acquisition forms the basis of a complete fleet change in 1992, as the company elects to fly three 340Bs and two Shorts 360-300s on its scheduled routes. Meanwhile, the financial downturn forces the company to dismiss a third of its workforce. In November, orders are placed for two more SAAB 340Bs, one of which is delivered in December.

Customer bookings slide another 0.7% to 202,035.

In 1993, founder Hazelton's carrier employs 170 workers and the second unit of the November SAAB order arrives in March. Also in March, the company begins a long-lasting commercial relationship with **Ansett Australia (Pty.), Ltd.** Under a commercial agreement, Ansett begins to provide the regional with ground handling services at Sydney Airport and to host it on its computer reservations system. Hazelton now joins the Ansett frequent flyer program, Global Rewards. Additional destinations added so far this decade include Bathurst, Bourke, Brewarrina, Brisbane, Broken Hill, Cobar, Coonamble, Gold Coast, Griffith, Lightning Ridge, Merimbula, Narrandara, Nyngan, Parkes, and Walgett.

A Fairchild Metro is purchased and received in September. The regional becomes the first Australian airline to go public, issuing A\$10 million in shares on the Australian Stock Exchange in October.

The stake consequently changes; Hazelton and his family own only a third of the carrier after the float, with major institutions, including Rothschild Australia (Pty.), Ltd., holding half. In November, the company takes delivery of its first Fairchild product, a Metro 23.

Enplanements for the year drop to 169,497. The year's profits are A\$3.76 million (operating) and A\$2.52 million (net).

The fleet in 1994 comprises 5 340Bs, 2 Shorts 360-300s, 1 Metro 23, and 7 Piper PA-31-350 Navajo Chieftains. Orders are placed for three more Metro 23s, which will replace the Chieftains upon their arrival, and a SAAB 340B, which is delivered in July. The 270-employee airline at year's end operates on 22 routes along the New South Wales coast from a hub at Sydney.

Plans are made to open a hub-by-passing route that flies over Melbourne to Geelong from Sydney.

Customer bookings increase by 49.1% to 333,000. Revenues increase by 26.5% to \$A36.27 million, while expenses swell 28.1% to \$A31.91 million. Consequently, there is an operating profit of \$A4.36 million and net gain of \$A2.92 million.

Airline employment stands at 270 in **1995** and the fleet is also altered. Both Shorts 360-300s and five Navajo Chieftains are removed and replaced by a sixth SAAB 340B and three Metro 23s. The new SAAB 340B Geelong to Sydney twice-daily roundtrip route is inaugurated in February.

Rod Nelson is named general manager in June.

Passenger boardings during the 12 months accelerate 15.3% to 376,000.

Airline employment stands at 294 in **1996**. One Shorts 360-300 is returned to service and another Metro 23 joins the fleet.

In a surprise move, **Skippers Aviation (Pty.), Ltd.**, a charter carrier, purchases a 17.3% equity stake from Rothschild Australia (Pty.), Ltd. on July 30 for \$A3.2 million. The acquisition comes as a surprise in many circles as **Qantas Airways (Pty.), Ltd.** had been expected to take the shareholding instead.

During the fall, the previous marketing arrangement with Qantas rival **Ansett Australia (Pty.), Ltd.** is expanded into a major strategic code-sharing agreement.

Enplanements move ahead 4.5% to 392,481.

The workforce is cut a dramatic 25.2% in **1997** to 220 and the fleet is also reduced as two Navajos and two Cessna 310s are sold. Still, passenger boardings inch up 1.3% to 397,829.

Flights continue in **1998**. Customer bookings accelerate 26% to 413,000. Revenues rise a slight 0.3% to \$A34.73 million, while costs are held to \$A28.02 million. The operating profit is \$A6.7 million, but an \$A975,000 loss must be reported.

On February 4, **1999**, the company makes known its requirement for a new administrative and maintenance base. An invitation is immediately put forward by Eurobodalla shire council on behalf of Moruya Airport in the southeast part of the country.

At the beginning of April, Hazelton renews its agreement with **Ansett Australia (Pty.), Ltd.** for another five years. Ansett also gains right of first refusal on a minimum 20% of Hazelton's shares.

Also during April severe hailstorms strike Sydney. Three of the carrier's aircraft are badly damaged and require a month of work to repair them.

Passenger boardings for the year dip 1.5% to 410,000. On revenues of \$A69.2 million, the operating profit is \$A1 million. Because of steep fuel costs, net gain plunges to \$A288,000. The ink on the bottom line would have been written in red save for an \$A2.3-million gain from the sale and leaseback of two SAAB 340As.

In August, Hazelton reports revenues of \$A69 million for **2000**, but a 72% slump in profits to \$A228,000. These losses are blamed on high fuel prices and a less favorable tax position.

On October 6, the Hazelton family sells a 20% stake in the carrier to the **Air New Zealand Ltd.**-owned Ansett Holdings, Ltd., cutting its stake in the carrier from 33.11% to 13.11%. Six days later, Ansett launches an \$A15.3 million (\$A.90-a-share) takeover bid for the remaining shares of the regional. Although Deputy Chairman Charles Hazelton announces that the sale will be good for Australia, several minority shareholders do not believe that. Both Truegrip Aviation (10% stake), led by Peter Truegrip, and Hazelton Chairman Stan Quinlivan, who is also chairman of **Skippers Aviation (Pty.), Ltd.** (25%) believe the Ansett offer to be inadequate. Consequently, a bidding war will soon follow.

On November 28, **Qantas Airways (Pty.), Ltd.** enters the picture when its wholly owned subsidiary Qantas Longreach (Pty.), Ltd. makes an off-market takeover bid for all of the shares in Hazelton via a cash offer of \$A1.20 a share. According to Qantas CEO James Strong, this tender is a 33% increase over the Ansett price. The Hazelton board, led by Chairman Quinlivan, quickly endorses the Qantas bid as representing far better value for the company's shares.

Not to be outbid, Ansett soon returns with an offer of \$A1.35 a share and lowers its ownership demand from 90% to 50.1% control. On December 12, Qantas CEO-designate Geoffrey Dixon informs the press that his carrier will be revising its Hazelton bid and urges the regional's shareholders not to accept the Ansett offer. Rivalry for the Hazelton slots intensifies in light of the government's decision not to proceed with plans to build a second international airport at Sydney, indicating that it will instead direct overflow traffic to an upgraded smaller airport at Bankstown.

On December 20, the Australian Competition and Consumer Commission (ACCC) notifies **Qantas Airways (Pty.), Ltd.** that it will be coming out against the proposed ownership of Hazelton by either **Ansett Australia (Pty.), Ltd.** or Qantas. In its announcement, the ACCC notes that a takeover by either major would stifle competition in New South Wales' regional market and by controlling Hazelton's 450 takeoff and landing slots, have an unfair advantage at Sydney Airport.

After informing the ACCC that it wishes to proceed anyway, Qantas, on December 27 informs the Hazelton shareholders that it wishes to purchase 20.1% of the shares, instead of the 20% originally sought. It will leave its offer open until January 24 in order to give it time to consult with the ACCC.

As the year ends, the Hazelton family prepares to accept the Ansett bid on January 2, boosting the stake of Australia's No. 2 carrier from 23% to 35.4% and bidding up Hazelton's value to \$A23 million (US\$22 million). The bidding war will intensify in early January **2001**, with both sides topping each other "subject to ACCC approval." The ACCC will eventually disapprove the Qantas effort and the pioneer will bow out of the Hazelton bidding on January 22.

At the end of February, it will be reported that the carrier has suffered a half-year net loss of \$A1.705 million (\$889,158). Analysts will suggest that the outlook for the company's survival is bleak unless the ACCC allows Ansett to take it over.

HEARTLAND AVIATION: Chippewa Valley Regional Airport, Eau Claire, Wisconsin 54703, United States; Phone (715) 835-3181; Fax (715) 835-7150; Year Founded 1960. Heartland is established in **1960** as the FBO at Chippewa Valley Airport. Over the next 37 years, the company also undertakes executive and small group passenger charters to destinations throughout the U.S. and Canada. By **2000**, the fleet includes 3 Cessna 310Rs and 1 each C-550 Citation II executive jet, C-402, and C-414 Chancellor.

HEATHROW JET CHARTER, LTD.: Heathrow Airport, Hounslow, Middlesex, England, TW6 3AE, United Kingdom; Phone 44 (181) 759-5560; Fax 44 (181) 759-5551; Year Founded 1992. This executive charter service is founded at London (LHR) in **1992** to provide personnel charter about the nation and into Western Europe. Richard R. Thurburn is managing director with Steve J. Jacobs as chief pilot. A staff of 13 is assembled and revenue flights commence with two Learjet 35As and one British Aerospace BAe (HS) 125-800 Hawker.

Operations continue in **1993-2000**, during which years the Hawker is withdrawn.

HEAVYLIFT CARGO AIRLINES, LTD.: London Stansted Airport, Enterprise House, Stansted, Essex, England CM24 1QP, United Kingdom; Phone 44 (1279) 680611; Fax 44 (1279) 680615; <http://www.heavylift.co.uk>; Code NP; Year Founded 1978. TAC Heavylift, Ltd. is formed on October 31, **1978** on a two-thirds to one-third shareholding basis by Cunard Steamship Line, Ltd. (which also controls **Transmeridian Air Cargo, Ltd.**) and Eurolatin Aviation, Ltd., owners of **IAS Cargo Airlines, Ltd.** then involved in the (later cancelled) establishment of a proposed African cargo airline later cancelled. The amalgamation is completed on August 15, **1979**, at which point P. J. McGoldrick is appointed managing director.

A fleet of five Shorts SC.5/10 Belfast turboprop freighters is assembled in after being modified to civil status by Cambridge-based Marshall

Aerospace. Following the receipt of its air operating certificate in January 1980, the new company's Belfasts launch worldwide contract bulk freight and charter services (with emphasis on outsized shipment transport) in March.

The company is reorganized and the current name is adopted in September. Michael Hayles becomes managing director, with Graham Pearce as commercial director. The Anglo-Norwegian engineering/consulting group Kvaerner becomes principal shareholder.

FTKs operated during the 12 months total 6.33 million.

The employee population is increased by 10% in 1981 to 55. Sales offices are opened in Houston, Los Angeles, and New York and the Singapore firm Boustead Air Cargo (Pty.), Ltd. is named exclusive sales agent for Southeast Asia. A variety of operations are undertaken between 1982 and 1983 as the carrier becomes a subsidiary of the London-based investment firm Trafalgar House, Ltd., a shipping-to-construction conglomerate.

Examples of service include the transport of Boeing 767 components from Italy to Seattle; transport of CN-235 components, Spain to Indonesia; return to Holland of wrecked or damaged Fokker F.27s needing repair; delivery of Westland/Sikorsky S-61s from England to the Middle East; and the transport of textiles (for **Deutsche Lufthansa, A.G.**) from India to West Germany. Major publicity is received as the result of company support for the British effort in the Falklands War.

In 1984, HeavyLift seeks a U.S. market. The fleet is altered through the retirement of one Belfast and the addition of a swing-tail Canadair CL-44D. In September, the company is chosen by **British Airways Helicopters, Ltd. (BAH)** as its sole agent for the marketing of its external-lift business throughout the U.K. and mainland Europe. HeavyLift, on its part, modifies one of its Belfast freighters to accommodate a pair of Sikorsky S-76s.

In 1985, the CL-44D, under contract to the German aircraft builder Dornier, begins the transport of Dornier 228 assemblies to Hindustan Aeronautics in India, where they will be put together under license. Later in the year, a Belfast transports a consignment of 21 giraffes and 42 antelopes from Kenya to the U.S.

Among the company highlights later in the decade is the shipment by Belfast, in August 1986, of the first set of wings for the Fokker 100 from Short Brothers in Ulster to the assembly point in Holland. In October, the company's U.S. sales agency is moved from Houston to Miami.

Operations continue apace in 1987-1988. During the former year, Farhad Azima is appointed the company's sales agent in the U.S.

During the fall of 1989, two Lockheed L-382 Hercules freighters are chartered from **Pelita Air Service** of Indonesia. In May, a CL-44D-4 is purchased from **Aer Turas Teoranta, Ltd.**

In 1990, the fleet includes 1 each B-707-323C, B-707-351C, and B-707-324C, all 3 Stratoliners being leased from the U.S. freight operator **Buffalo Airways**, 1 CL-44J, 1 CL-44D-4; 5 Belfasts, and 3 Pilita Lockheed L-382Gs. The first two Stratoliners are returned by year's end as three Lockheed L-100-30 Hercules freighters are leased from an Indonesian concern.

In the summer of 1991, the company enters into a joint venture, HeavyLift-Volga-Dnepr Cargo Airlines, with the Russian joint stock company Enterprise Volga-Dnepr, at Ulyanovsk, to operate a fleet of three giant Antonov An-124-100 Ruslan freighters, plus three An-12s. In addition to the Russian freighters, Managing Director Hayles's fleet also now includes 1 Boeing 707-324C, 1 Canadair CL-44D, 2 Ilyushin Il-76s, Pelita's 4 Lockheed L-382G Hercules, 5 Shorts SC-5 Belfasts, and 1 Aerospatiale AS-365N Dauphin helicopter.

An-124 commercial services commence in September with an initial charter flown on behalf of the Houston-based Bechtel Corp. One of the huge freighters is repositioned from Volga Dnepr's Ulyanovsk base to London (STN), where it is loaded with three VC-20 tracked excavation vehicles, each weighing 33+ tons and with a 30-ft. bucket jib. It then flies to Kuwait, where the machines will be employed to extinguish oil-well fires set by the retreating Iraqi army at the end of Operation Desert Storm.

Although traffic figures are not provided, the carrier proudly notes that revenues are up 14.3% to \$40 million.

The number of leased giant An-124s is increased by one in 1992.

In October, an An-124 transports a Ka-32 helicopter and the entire Russian exhibit and static display to Melbourne, Australia, for the Avalon Air Show.

In 1993, Managing Director Hayles oversees a workforce of 145. Two more Antonov An-124s enter service as one Belfast is retired. In June, the joint-venture agreement with Enterprise Volga Dnepr is extended for a further three years, with the British carrier continuing to provide marketing services for its Russian partnership. In addition to the combined bases at Moscow and London, facilities are obtained at Singapore and Beijing that will permit an increase in operations in the Far East.

Specialized outsized cargo operations continue. As part of the UN's Operation Lifeline Sudan, HeavyLift pilot Capt. David Manning, in association with the UNICEF children's charity, organizes a special £16-million appeal to British industry for goods and fuel to make a special shipment to the Sudan. On June 1, an An-124-100 piloted by Manning flies 120 tons of blankets, medical supplies, high-energy food bars, and prefabricated building materials from London (STN) to Nairobi, Kenya, for transshipment. At Nairobi, two chartered Lockheed L-100-30s take the goods to aid stations in southern Sudan.

In October, a world record is claimed for a single air freight movement. Prepositioned from London (STN) to Amsterdam, an An-124 takes aboard a 130,000-kg. oil rig component and flies it nonstop to Perth, Australia. Income from the Antonov services reaches \$30 million.

Although the employee population is not changed in 1994, several more An-124s are placed into service. The fleet now includes, by station: Moscow, 1 Antonov An-32; London, 8 An-124s, 1 B-707-324C, and 1 Ilyushin Il-76TD; Singapore, 2 Lockheed L-100-30 Hercules turboprops; and Beijing, 1 Il-76TD. Special operations flown early in the year include the shipment of Boeing 777 engines to Everett, Washington, and the transport of airframe sections for a Jumbojet disabled at Tahiti. In February, a yearlong contract is signed between **British International Helicopters, Ltd. (BIH)** and the UN for support for aid operations in Mozambique. Five Eurocopter AS-332L Super Pumas are delivered from London (STN) to the African nation within five days of the arrangement's completion aboard a HeavyLift An-124.

When refugees begin to flee to Goma, Zaire, in the summer from neighboring Rwanda, HeavyLift's An-124s are among the first aircraft chartered by relief organizations to fly in supplies. They also bring in equipment and supplies for the French Army's security mission.

During the first week of September, another An-124 delivers a pair of Mil Mi-8MTV helicopters leased from the Belgian operator-broker **Skytech Helicopters, S.A.** to Katmandu, where they are turned over to officials of **Nepal Airways, Ltd.**

Just after takeoff from Hong Kong on a September 23 service to Jakarta, an L-100-30 with six crew and six passengers suddenly ditches into Kowloon Bay (six dead). It will be reported that the aircraft's No. 4 propeller pitch control system had failed.

During the third week of October, a Belfast transports the first fuselage for the new Learjet 45 from the Shorts Group factory in Northern Ireland to the Learjet facility at Wichita, Kansas. On December 18, an An-124-100 leased from **Volga-Dnepr Airlines** departs Minsk for Huntsville, with an SA-10 Grumble SAM missile system for the U.S. Army Missile and Space Intelligence Center. Three days after arrival, the giant Antonov departs Alabama for New York and a humanitarian airlift of medical supplies to Moscow.

Revenues for the year top \$100 million.

Operations continue apace in 1995. Airline employment stands at 145 in 1996 and the fleet now includes 2 Shorts Belfasts, 1 Lockheed L-100-30, 2 Il-76Ts, 1 An-12, and 6 huge An-124-100s. The Russian aircraft continue to be provided under charter by **Volga-Dnepr Airlines**. Kvaerner, an Anglo-Norwegian engineering and construction group, purchases Trafalgar House during the year, gaining the airline in the process.

A total of 229.2 million FTKs are operated.

Two Airbus Industrie A300B4-203Fs, first flown as passenger aircraft by **Air France**, are leased in July 1997 from S-C Aviation. The first enters service in August and is flown on behalf of **KLM Royal Dutch Airlines, N.V.** On weekdays, the freighter, flown by **TransAer International Airways, Ltd.** under contract, provides lift between the Scandinavian hub at Skavsta, Sweden, and Amsterdam. On weekends, the Airbus flies from Amsterdam to Bologna, Italy, and Zaragoza, Spain.

A HeavyLift An-124 transports Richard Noble's rocket vehicle, *Thrust SSC*, to the Black Rock Desert in Nevada. In one flight from London (STN), the giant aircraft transports the car, its trailer, the team's pit stop truck, a fire tender, two spare engines, two Supercat support vehicles, two air-start units, a forklift truck, and a motorbike. Once in place, driver Andy Green sets a new supersonic world land speed record of 763.035 mph on October 15.

In the wake of a December 6 crash of a Russian military An-124 at Irkutsk, company officials, along with those from **Volga-Dnepr Airlines**, announce that they are intensifying inspection and control of their Ruslan fleets. The company's second A300B4-203F arrives at month's end.

A total of 166.4 million FTKs are operated.

A subcontract is received from **Lufthansa Cargo, A.G.** in February 1998. It is operated from Frankfurt to and from Athens and Istanbul by a leased Airbus Industrie A300B4-203F flown by **TransAer International Airways, Ltd.** under contract. A third A300B4-203F is delivered in August.

During the last week of September, a company An-124-100 is contracted to fly the first forward and center fuselage of the new Canadair CRJ Series 700 aircraft from the Short Brothers' factory at Belfast, Northern Ireland, to the final assembly line of Bombardier Aerospace at Montreal.

Freight traffic grows by 20.2% to 200.01 million FTKs. Revenues this year reach \$144 million.

Airline employment is cut 3.3% to 145 in 1999.

The continuing political problems in the Yugoslav province of Kosovo boil over into a conflict between Belgrade and NATO on March 24. As aircraft from the NATO nations pound Yugoslav targets in Operation Allied Force, hundreds of thousands of Kosovo refugees cross borders into Albania and Macedonia. As aid workers struggle to provide relief, several governments step forward to provide relief and sanctuary, sending in all manner of aid and agreeing to take various numbers of displaced persons.

In April, Managing Director Hayles, Commercial Manager Pearce, and U.S. sales agent Azima organize a management buyout, purchasing the company from Kvaerner for \$23.8 million. In announcing the change, Mr. Pearce indicates that the carrier will expand its fleet and increase operations under a new business plan.

On April 30, HeavyLift is contracted by the British government to participate in a massive airlift that the RAF is operating to Tirana and Skopje from RAF Lyneham, Manston, and Stansted. Coordinated by the United Nations High Commission for Refugees, military Lockheed C-130s and both of HeavyLift's Il-76Ts deliver 265 tons of tents, blankets, medical supplies, food, forklift trucks, and 4x4 vehicles by May 7. On May 8-9, a company Ilyushin makes two flights transporting water purification equipment and health kits from London (STN) to Tirana.

Numerous additional flights are conducted until Yugoslavia accedes to NATO terms and Operation Allied Force is concluded on June 11.

When the cargo division of **KLM (Royal Dutch Airlines, N.V.)** informs HeavyLift on October 6 that it will not, in light of the forthcoming merger by the Dutch carrier with **Alitalia, S.p.A.**, be renewing its contract for the lease of two A300B4-203F freighters, HeavyLift turns around and subleases one to **Lufthansa Cargo, A.G.** **Air France** Cargo charts the other at the end of the month, intending to operate it on its African routes.

Cargo traffic for the year totals 213,481,000 FTKs.

Airline employment at the beginning of 2000 stands at 272, a huge 87.6% increase. In March, a B-707F is wet-leased to the start-up Thai Flying Cargo, Ltd.

The two leased A300B4-200Fs are purchased from C-S Aviation Services on September 1; a third A300B4-203F, managed by C-S, is leased. Takeover discussions with financially distressed **TransAer International Airlines, Ltd.** fail on October 13 and the Irish carrier, unable to secure additional funding during the following week, collapses on October 20.

By the end of October, rumors are rampant in the Russian press that **Volga-Dnepr Airlines** is in the process of negotiating a separate U.S. marketing deal with Kansas City-based Aircraft Leasing Group, one that would leave HeavyLift out of the picture. Fahhad Azima of ALG, a leading Heavy Lift shareholder, indicates that his firm will continue to represent the British airline and its joint venture with Volga-Dnepr in the Americas. Tensions coming from a failure of the two carriers to rework the current fifty-fifty split of cost and revenues in their joint venture are said to be behind the ALG rumors, which will, in fact, turn out to be accurate.

During the fall and into the winter, discussions, begun months earlier and now often reported as "stormy," are held between representatives of **Volga-Dnepr Airlines** and HeavyLift concerning the future of their joint venture. While HeavyLift seeks to maintain the marketing arrangement and the fifty-fifty split of costs and revenues, the Russian carrier, despite a lack of experience in the area, believes it is capable of undertaking its own marketing without the mediation of the British carrier. It also sees little chance of the joint venture providing the amount of investment capital required for the purchase of additional An-124s, recalling that all of the loans so far obtained to purchase the first nine An-124s have been of Russian origin, with higher interest rates than might have been had from Western banks and institutions. The British, for their part, believe that investment opportunities they have arranged for the joint venture have consistently been turned down by its conservative, short-sighted Russian partners.

On January 29, 2001, **Volga-Dnepr Airlines** will be named recipient of the 2000 "Cargo Development Award" from *Air Transport World* magazine. It is the first Russian carrier to achieve the publication's recognition. Four days later, the 10-year-old joint venture with HeavyLift will end and the Russian carrier prepares to go it alone and market its An-124 capability through its new London (STN)-based Volga-Dnepr UK, Ltd. and Houston-based Volga-Dnepr (Unique Air Cargo) subsidiaries. Two weeks later, HeavyLift will form a public passenger charter division branded Breeze to operate A300B4s and on February 27 it will begin to participate in the Antonov Airlines joint venture between Antonov Design Bureau and **Air Foyle, Ltd.**

HELENAIR (BARBADOS), LTD.: Barbados (1998-1999). Under the leadership of former **Carib Express, Ltd.** chief pilot Capt. John Dulieu, HelenAir (Barbados), Ltd., is established at Grantley Adams International Airport on September 28, 1998. Shareholding is divided between three Barbadian investors headed by Dulieu (61%) and Capt. Joaquin Willie's St. Lucia-based **HelenAir Castries Corporation, Ltd.** (39%).

The new concern overcomes objections from **Leeward Islands Air Transport Services, Ltd. (LIAT)** and receives operating authority from the Barbados Air Transport Licensing Board (ATLB).

With 30 employees and 1 Beech 1900C, the little start-up begins revenue services on November 30. Daily flights are undertaken to Trinidad, St. Lucia, Grenada, and St. Vincent.

At the beginning of 1999, plans are made to expand flights to Martinique, Guadeloupe, and Dominica. These ideas come to naught when the HelenAir parent runs into almost terminal financial problems later in the year.

HELENAIR CASTRIES CORPORATION, LTD.: P.O. Box 253, Castries, St. Lucia; Phone (758) 452-1958; Fax (758) 452-1958; <http://www.stluciatravel.com.lc/helenair.htm>; Code 2Y; Year

Founded 1995. Capt. Joaquin Willie sets up HelenAir at St. Lucia in **1987** to offer nonscheduled interisland passenger and cargo services. Revenue flights commence with a pair of Britten-Norman BN-2 Islanders.

Flights continue apace during the remainder of the decade and into the **1990s**. In **1993–1995**, the fleet is increased with one each Beech 99A and Beech 99B.

Services continue in **1996–1997**, during which years a second Beech 99B is acquired. The marketing name Helen Air Caribbean is adopted and scheduled flights, started in the former year, take customers to Barbados, Bequia, Dominica, Grenada, St. Vincent, and Port of Spain.

Under the leadership of former **Carib Express, Ltd.** chief pilot Capt. John Dulieu, a new affiliate carrier, HelenAir Barbados, Ltd., is established at Grantley Adams International Airport on September 28, **1998**. Shareholding is divided between three Barbadian investors headed by Dulieu (61%) and Capt. Willie's carrier (39%).

The new concern overcomes objections from **Leeward Islands Air Transport Services, Ltd. (LIAT)** and receives operating authority from the Barbados ATLB. With 30 employees and a Beech 1900C, the little start-up begins revenue services on November 30. Daily flights are undertaken to Trinidad, St. Lucia, Grenada, and St. Vincent.

Despite a mixed previous year, HelenAir announces plans on January 23, **1999**, to place a large 30-seater aircraft into service by the end of March. Such an aircraft will allow service segments to be lengthened across the Caribbean.

Owing to an increase in charter requests and a shortage of aircraft, the airline, on March 17, temporarily suspends its services to Barbados and Dominica.

In July, HelenAir begins a daily service that originates out of St. Lucia to Union Island in the Grenadines as a charter and then continues back up the islands as Flight 702. The new operation replaces a service previously provided by **Mustique Airways, Ltd.**, the fleet of which is now insufficient to handle the route.

The *St. Lucia Mirror* reports on November 27 that the national carrier has embarked upon a major cost cutting campaign aimed at resuscitating the airline and consolidating gains made from its more lucrative charter operation. Up to 50 of the carrier's 90 employees, including pilots and reservations agents, are laid off for 3 months, during which time the company expects to achieve the viability necessary in order to allow their return. In addition, services to Barbados and Trinidad and Tobago are temporarily dropped from the schedule, although a mini-service to underserved Dominica and St. Vincent and the Grenadines is maintained.

Although the airline has received an EC\$4-million government loan guarantee, it has not yet heard from various financial institutions regarding funding sought from them.

The company's future parent, **British West Indies Airways, Ltd. (2) (BWIA)** is renamed **BWIA West Indies Airways, Ltd.** on December 2. The future relationship is not anticipated at this time. Indeed, HelenAir has entered into discussions with **Air Jamaica, Ltd.** concerning the possibility of a takeover by the AJL subsidiary, **Eastern Caribbean Express, Ltd.**, which is still being set up.

It is anticipated in the Caribbean region press and elsewhere, by January 10, **2000**, that a merger arrangement between HelenAir and Eastern Caribbean is imminent. The next day, **Air Jamaica, Ltd.** Vice President Allan Chastanet informs the press that a provisional agreement has been completed between the two airlines and that an official amalgamation announcement could be made within four days. Acquisition of the ailing St. Lucian national airline would facilitate the Eastern Caribbean start-up and would automatically provide the needed licenses for service to the four Windward Islands, Barbados, Jamaica, and Trinidad and Tobago. On January 12, HelenAir Vice President Arthur Neptune tells the newspapers that although his concern and **Air Jamaica, Ltd.** are continuing negotiations, no agreement "provisional or otherwise" has been reached.

The hoped for union does not occur. After an exchange of proposals, neither HelenAir nor **Air Jamaica, Ltd.** are able to close a deal. Faced with extinction if it signs with the larger Jamaican line, Helenair an-

nounces suspension of its negotiations with **Air Jamaica, Ltd.** on February 4. New talks now open with **BeeWee Express, Ltd.**

A tentative five-year agreement is reached with **BeeWee Express, Ltd.**, the regional subsidiary of **BWIA West Indies Airways, Ltd.** on February 7, under which the St. Lucia-based commuter will operate for BWIA as a "BeeWee Express" franchise carrier. Under terms of the pact, the two carriers are able to synchronize their schedules to provide adequate connections in St. Lucia and Barbados, and better serve destinations such as St. Lucia, Dominica, St. Vincent, and the Grenadines, Martinique, and Guadeloupe. HelenAir is able to retain its identity. However, the two companies pledge to pursue "operational integration" in reservations, ground handling, maintenance, purchasing, and accounting.

The HelenAir "BeeWee Express" contract starts on April 2. The fleet is now enhanced by the addition of five Beech 1900Cs.

While the new marriage begins happily enough, the entire history of the carrier's recent troubled past, much of it political, continues to be published, down to and including transcripts of public hearings in a series of exposés by *The St. Lucia Star*. (See the articles of February 26 and April 28 archived at the *Caribbean Airnews* site <http://www.caribbeanavenue.com/airnews>.)

During August, both **SVG Air, Ltd.** and **Mustique Airways, Ltd.** complain to the Air Transport Licensing Board that HelenAir is operating its service into Union Island in the Grenadines without the required license. HelenAir readily acknowledges the situation, recalling the special circumstances under which the flights began. Consequently, when the ATLB requires HelenAir to quite the service, the St. Lucia-based carrier is given until the end of October to do so.

HELI-AIR: United States (1985–1989). Heli-Air, Inc. is established at Broussard, Louisiana, in the summer of **1985**. Gary Villiard is named president and his company immediately obtains a 10-year contract to operate over two Chinese tourist attractions, the Great Wall and Ming Tomb. When operations commence with three helicopters, they replace those previously provided by the Chinese Air Force. Operations continue through the end of the decade.

HELI-AIR, GmbH: Flughafen Innsbruck, Innsbruck, A-6026, Austria; Phone 43 512 288880; Fax 43 512 286200; Year Founded 1968. The Austrian Heli-Air is set up at Innsbruck in **1968** to not only provide executive and public charter flights, but also to engage in air ambulance and mountain rescue flights. By **2000**, the company employs 16 pilots and operates 3 Aerospatiale AS-350B-2 Astars, 2 AS-355F Twinstars, and 1 AS-355N Twin Ecloy.

HELI-AIR MONACO, S.A.: Heliport de Monaco, Monte Carlo, 98000, Monaco; Phone 3393 050050; Fax 3393 057617; <http://www.heli-air-monaco.com>; Code YO; Year Founded 1975. Organized by brothers Jacques and Patrick Crovetto at Monaco Airport in June **1975**, this privately owned rotary-wing carrier is originally known as **Heli-Monaco, S.A.** The current name is adopted in **1976**. During its inaugural year, the company's single helicopter flies 747 passengers.

Flights continue apace over the next four years. In addition to the provision of scenic tours, charter flights, and photographic opportunities to points along the French Riviera and to the mountainous areas of France, Switzerland, and Italy, the carrier inaugurates a scheduled service between Monte Carlo and Nice. By the end of the **1970s**, the fleet has grown to include 3 Bell 206B JetRangers.

Enplanements in **1980** total 15,237. Frequencies on the scheduled route are increased during the early eighties and by mid-decade four Aerospatiale AS-350B Ecureuils have joined the fleet. A new 8,600-ft. heliport is opened in **1986**, allowing the company to transfer from the heliport originally built on reclaimed land at Fontvieille, west of Monte Carlo.

With few changes, the carrier grows into the **1990s**. An average of 200 passengers per day are transported, 90,000 per year.

Airline employment stands at 150 in **1994** and the fleet includes 6 Eurocopter AS-350B Ecureuils, 1 AS-355F-1 Twin Ecureuil, 1

Aerospatiale Lama, 1 AS-365C-3 Dauphin, and 1 Bell 206B JetRanger. Bases continued to be maintained at the heliports at Monte Carlo and Saint Tropez, as well as the Nice Airport.

In 1995, enplanements total 85,054, including the one-millionth passenger, boarded during the fall. The workforce is decreased 2.6% in 1996 to 113 and the fleet is reduced to 1 Ecureuil, 1 JetRanger, and 2 Dauphins. Customer bookings inch up 1.1% to 86,000.

The upward progress stalls in 1997, as bookings fall 3.5% to 83,000. Flights continue in 1998, during which year a contract is placed for a new Eurocopter EC-120 Colibri.

The fleet in 1999 includes 1 Dauphin, 6 Ecureuils, and 1 JetRanger. The EC-120 enters service in July and helps passenger boardings rise to a record 99,000 on the year.

The workforce at the beginning of 2000 totals 120.

HELI-ALFA (ALFA HELICOPTERS-INVERSIONES CIRRUS, S.A.): Avda Larrain 7941, Aerodromo Eulogio, Sanchez-Tobalaba, Santiago, Chile; Phone (2) 273-4357; Fax (2) 273-1937; <http://www.turismochile.cl/helialfa>; Year Founded 1982. Originally founded in 1982, Heli-Alfa is presently the oldest helicopter operator in Chile. A variety of services are provided over the next 15 years, including passenger transport, fire fighting, logging, rescue, and power line work.

Mauricio Gutierrez Manzi is general manager in 2000 and he oversees the flights of 1 Eurocopter SA316B Alouette III, 1 Bell 206B JetRanger, 1 Bell 204 Huey, and 1 fixed-wing Cessna 206.

HELI-EUROPE, S.A.: Belgium (1990–1993). HE is established at Brussels National Airport in the summer of 1990 to provide charter passenger, cargo, and other miscellaneous services. Employing 1 Agusta A109, 1 Bell 206B JetRanger, and 1 McDonnell Douglas MD-500, Heli Europe inaugurates VIP transport, sight-seeing flights, organ transport, cargo express, and aerial photography work in September.

Operations continue apace in 1991–1993. During the latter year, the company identity is changed to CHS (Cilenroc Helicopter Service, S.A.) with Roger and Michael Cornelis as directors.

HELI-GABON, S.A.: Box 240, Aeroport de Port-Gentil, Port Gentil, Gabon; Phone 241-552923; Fax 241-552923; Year Founded 1975. HG is formed at Port Gentil in 1975 as an affiliate of the expanding French rotary-wing operator Heli-Union, S.A. Shareholding is divided between the French concern (75%) and local interests (25%). Revenue operations, largely in support of the local energy industry, commence with equipment leased from Heli-Union.

Operations continue apace over the next quarter century. Airline employment reaches 50 by the 1990s and Operations Manager Michel Jaguelin operates a fleet that includes a combination of Aerospatiale AS-355s, SA-316Bs, SA-315Bs, AS-365N2s, and AS-365C2s.

HELI HONG KONG, LTD. See **HELICOPTERS HONG KONG, LTD.**

HELI-INTER CALEDONIE, S.A.: Aeroport de Noumea-Magenta, Noumea, New Caledonia, French Polynesia; Phone (687) 275925; Fax (687) 275925; <http://www.heli-inter.fr/implantations/caledonie.htm>; Code EC; Year Founded 1996. The newest subsidiary of Heli-Air Riviera, S.A., Heli-Inter Caledonie is established at Noumea, New Caledonia, in 1996 to provide a variety of missions between Grande Terre and the islands of Pins, Ouvea, Lifou, Mare, and to the Province Nord. Employing a pair of Eurocopter AS-350BA Ecureuils, the company offers charter and urgent-need express flights, transport for technicians and other professionals, electrical line installation and surveys, support for mineral exploration, and flight training.

HELI-INTER CARAIBES, S.A.: “Le Privilege” Anse Marcel, Saint Martin, 97150, French West Indies; Phone (0590) 873588; Fax (0590) 873447; <http://www.heli-inter.fr/implantations/caraibes.htm>;

Code EC; Year Founded 1987. A subsidiary of Heli-Inter Riviera, S.A., Heli-Inter Caraibes is established at Saint Martin in 1987 to provide executive and small group passenger flights between the islands of the French West Indies. Over the next 13 years, the concern's 2 Eurocopter AS-350 Ecureuils regularly link St. Martin with Saint Barthelemy and Guadeloupe. They also provide shuttle services between Juliana Airport and major hotels, day tours, and sight-seeing excursions, and EMS services for Saint Martin's major hospital.

HELI-INTER GUYANE, S.A.: Aeroport de Rochambeau, Matoury, 97351, French Guyana; Phone (0594) 356231; Fax (0594) 358256; <http://www.heli-inter.fr/implantations/guyane.htm>; Code EC; Year Founded 1984. A subsidiary of Heli-Inter Riviera, S.A., Heli-Inter Guyane is established in 1984 to provide air transport services linking Kourou with Iles du Salut, Saint-Elie, and Ouanary. In addition to passenger and urgent-express flights, contracts are undertaken with Eurocopter AS-350B Ecureuils for a variety of clients, including the Conseil General, Conseil Regional, Centre Spatial Guyanais de Kourou, France Telecom, EDF, DDE/DDA, Samu de Cayenne, and the police.

HELI-INTER RIVIERA, S.A. (LIGNES REGULIERES TRANSPORT PUBLIC ET TRAVAIL AERIEN PAR HELICOPTERE): Heliport de Cergy, Cergy Pontoise, BP 55-95312, France; Phone 01 (30) 373000; Fax 01 (34) 645527; <http://www.heli-inter.fr>; Code EC; Year Founded 1976. Heli-Inter is established in 1976 by its president, C. A. d'Albronn to provide executive and small group passenger flights around the French Riviera and in French Polynesia. At home over the next quarter century, regularly scheduled flights are offered to Nice from both Cannes and Monaco.

In Polynesia, bases are established at Bora-Bora, Marquises, Moorea, and Tahiti. Regular flights are operated from Aeroport de Bora to the local hotel, from Aeroport de Terre Deserte to the Village de Taiohae on Marquises, and from Faaa Airport on Tahiti to Moorea Beachcomber Parkroyal and Beachcomber Tahiti. Over the decades, a variety of excursion packages are also developed, including “Sunset Champagne” flights.

Subsidiary organizations are also established in Guyane (1984), the French West Indies (1987), and in New Caledonia (1996). To gain wider international recognition and to facilitate interline agreements with major fixed-wing airlines, the company joins the International Air Transport Association. By 2000, Heli-Inter operates a fleet of over 50 Eurocopter helicopters, including Pumas, Ecureuils, and Dauphins.

HELI-MAX, LTD.: 3650 Blvd. de l'Aeroport, Trois-Rivieres Airport, Trois-Rivieres, Quebec G9A 5E1, Canada; Phone (819) 377-3344; Fax (810) 377-3858; <http://www.cgocable.ca/commerce/heli-max/princa.htm>; Year Founded 1976. Heli-Max is established at Trois-Rivieres Airport in 1976 to provide any number of rotary-wing services in Quebec, Ontario, Labrador, and the Northwest Territories. Over the next 22 years, the company engages in mineral exploration and mining, including airport geophysical surveys, drill moves, and camp construction. It also is active in aerial construction, power line construction, forest fire prevention and fighting, aeromedical evacuations, flight-seeing, and aerial photography.

By 2000, President Wilfrid Hamel oversees a fleet that comprises 6 Eurocopter AS350Bs and 6 McDonnell Douglas HC 520 Notars. Heli-Max is the only Notar operator in Canada.

HELI-TRANSPORT, S.A.: France (1990–1994). A scheduled rotary-wing operation, Heli-Transport is based at Cannes. President Jean Claude Van Latem's fleet comprises 4 Aerospatiale AS-350B Ecureuils and 2 AS-313B Alouettes. Flights are undertaken, beginning in the spring of 1990, linking the company's base with Nice, Monaco, St. Tropez, Sophia Antipolis, and Toulon.

The company gains a place in the *Guinness Book of World Records* when Brother Michael Bartlett makes 42 scheduled passenger flights be-

tween Nice, Sophia Antipolis, Monaco, and Cannes in 13 hrs. 33 min. on June 13. The flights represent a record for the most flights in a 24-hour period.

Airline employment in 1991–1993 stands at 34 as flights continue. By the latter year, the fleet has been increased by one Ecureuil and a Bell 205A. Operations cease in 1994.

HELI-UNION, S.A.: 4 Ave. de la Porte de Sevres, Paris, F-75015, France; Phone 33 (1) 4554 9290; Fax 33 (1) 4557-0955; Year Founded 1961. To work off the extra flying hours on his Hiller H-12E, Jean-Claude Roussel, heir to the Roussel-Uclaf pharmaceutical empire, forms this rotary-wing carrier at Paris in 1961 undertake charter flights. The company gains its first oil support in Tunisia in 1964, which mission is executed with Aerospatiale SA-318 Alouette IIs. Heli-Union France is established as a subsidiary at Grenoble, in the southeastern part of the nation, to handle logging, power line construction, and short-range charters. These North African and domestic flights continue apace until founder Roussel is killed in 1972 when his helicopter hits a power line.

When the 1973 oil crisis brings an increase in energy exploration activities, company operations increase. Revenues increase from \$2.6 million to \$13.3 million in just five years at an annual growth rate of 46%.

The affiliate **Heli-Gabon, S.A.** is set up at Port-Gentil in 1975 while another subsidiary, **Nile Delta Air Service, Ltd.**, is established at Cairo in 1976.

Meanwhile, in 1977, a total of 26,800 flight hours are flown. The company enters into a joint venture in 1978 with Petrol Vietnam and begins to provide rotary-wing support for Western oil concerns that become involved in offshore exploration.

Another energy crisis in 1979 brings more work and revenues through 1981 double again to \$30.8 million. In need of additional capitalization, founder Roussel's heirs sell the company to the Worms Financial Group. Heli-Union, S.A. is now a major helicopter operator, providing contract and charter services, primarily in support of the energy industry, in France and through subsidiaries in Africa, Brazil, Italy, and Vietnam. Vietnam's conflict with Cambodia and continuing political difficulties with the U.S. lead to an American trade embargo that requires Heli-Union, S.A.'s withdrawal.

Operations continue apace in 1982 and for just on onshore and offshore oil activities, a total of 40,123 flight hours are flown. In 1983, Europe's largest privately owned flight school is established at Tarbes, in southwestern France, to train corporate personnel and to provide helicopter training for clients from around the world. A total of 45,500 flight hours are operated on the year, with oil support flight hours (70% of company business) down to 31,968.

In 1984, Heli-Union France provides 15% of corporate income and the flight school offers up another 15%; the remaining 70% comes from foreign subsidiaries. At this point, these diversely located concerns include **Nile Delta Air Service, Ltd.** in Egypt, **Cambel** in Cameroon, **Helivifra** in Vietnam, **Elitos S.p.A.** in Italy, and **Helicopteros Marinos, S.A.** in Argentina. A subsidiary is established at Nuremberg, Germany, and it undertakes as its first contract aerial forest spraying for the government of Bad Wurtemberg. Under these arrangements, the French company wet-leases helicopters, pilots, spare parts, and maintenance personnel to its clients. Another subsidiary, **Cameroon Helicopters, S.A.**, is established in Cameroon, with Heli-Union leasing to it a single SA-318C Alouette II.

The fleet in 1985 includes 121 rotary-wing aircraft: 2 Sikorsky S-76s, 2 S-61Ns, 26 Aerospatiale AS-365 Dauphins, 19 SA-316B/319B Alouette IIIs, 24 SA-313B/318C Alouette IIs, 14 SA-330J Pumas, 12 SA-315B Lamas, 7 SA-341G Gazelles, 4 AS-355F Ecureuil 2s, 4 AS-350 Ecureuils, 1 Augusta 109A, 2 Bell 206B JetRangers, 1 412, one 222, and 2 Messerschmitt-Boelkow-Blohm BO-105s.

During the year, Vietnam's Service Flight Corporation (SFC), the national helicopter corporation, acquires a Puma and signs a contract with Heli-Union to maintain it. The arrangement returns the French line to Southeast Asia four years after its exit.

During the first quarter of 1986, an S-76 is leased to Turbomeca, which equips it with one of its Arriel 1S engines. Later in the year, the **Nile Delta Air Service, Ltd.** is shut down.

Following a test program, the S-76 tested by Turbomeca the previous year is sent out to Tunisia in 1987 for use on an offshore support contract. During the year, a new Heli-Union Industries maintenance subsidiary is established at Toussus-le-Noble, a Paris suburb.

The 25th anniversary of the company's mountain subsidiary, which flies 15 helicopters, is celebrated on June 3, 1988. Heli-Union fleet totals 129 aircraft and revenues through the first 3 quarters are \$53 million. In October, the launch customer for the Turbomeca Arriel-equipped S-76A+ increases its fleet to five, sending two to perform offshore support in Africa's Republic of Gabon. Late in the year, the company enters the helicopter brokerage business and a second Puma and support contract are taken by Vietnam's SFC.

Now France's largest commercial helicopter operator, Heli-Union begins Sikorsky S-76A+ VIP charters in the Paris area during the first quarter of 1989. The new Heli-Union Ecuador, S.A. subsidiary is established at Quito with 49% shareholding. Another new associate is **Cruzio Taxi Aereo, S.A.** of Brazil. In Europe, a Heli-Union Deutschland, GmbH. is established.

In April, a partnership is established with **Vendee Helicopters, S.A.**, based on the island of Yeu in the Bay of Biscay. The company is renamed **Oya Helicopters, S.A.** and, by August, with the Paris-based line's help, is transporting 1,700 passengers per month. Revenues for the year total \$73.8 million.

Excluding its subsidiaries, company employment stands at 200 in 1990 and the fleet now includes 91, mostly Aerospatiale, helicopters: 15 Alouette IIIs, 20 Lamas, 1 Gazelle, 5 Ecureuils, 10 Ecureuil 2s, 10 Alouette IIs, 6 Pumas, 17 Dauphins, and 7 Sikorsky S-76s.

The company continues its offshore oil support mission and, by late spring, operates or contracts helicopters for companies exploring or developing resources near Gabon, Angola, Cameroon, Congo, Guinea-Bissau, Tunisia, and Madagascar in Africa; Brazil, Argentina, and Ecuador in South America; and Vietnam, Yemen, and Burma in Asia.

The contract with the former colony of Vietnam is part of a joint venture operation, **Helivifra**, established with Petrol Vietnam and Service Flight Corps (SFC) to service the exploration efforts of Shell Oil and Total Oil.

Despite the political turmoil, four helicopters find exploratory work in Burma profitable. Operations continue apace during the remainder of the year; however, the company suffers a fiscal downturn.

In July 1991, the Worms financial service sells its 80% shareholding to another Heli-Union investor, **Compagnie Francaise de Navigation, S.A.**, which now owns a 90% stake. Christophe Marcilhacy becomes general manager and operations continue apace during the remainder of the year and throughout 1992.

In January 1993, the Vietnamese joint venture company **Helivifra** subcontracts with Norway's **Helikopter Service, A.S.** for the wet-lease of a Eurocopter (formerly Aerospatiale) AS-332L Super Puma. It will support a BP/Statoil drilling ship and rig working 200 nm. offshore in the South China Sea. Meanwhile, from a base at Vung Tau, 62 mi. S of Ho Chi Minh City, Heli-Union operates a supporting Puma. Another Puma and an AS-365 Dauphin fly from Da Nang while a third Puma supports the Japanese company Idemitsu's exploratory work to the north. During the spring, **Helivifra** begins to support a second HS Super Puma, which flies on contract with the Arabian Energy Development Corporation (AEDC).

Beginning in August, a \$5-million contract is signed between **Helivifra** and Australia's BHPP. With maintenance support from Heli-Union, S.A. and ground support from SFC, an HS AS-332L Super Puma is dispatched to support the Australian drilling efforts in the Dai Hung field. In September, a similar arrangement is entered into between the Vietnamese, Norwegian, and French partners with the Korea Petroleum Development Corporation. Another HS Super Puma begins flying this support at year's end.

Managing Director Maricilhacy's fleet in **1994** includes 5 Eurocopter AS-313Bs, 14 each SA-318s and SA-315Bs, 8 SA-316Bs, 7 SA-330Js, 6 AS-350Bs, 6 AS-355Fs, 19 AS-365Cs, 4 SA-365Ns, and 4 Sikorsky S-76s. In Germany, the Heli-Union Deutschland, GmbH, subsidiary, under the leadership of General Manager Wolfgang Zagel, has grown large enough to operate a fleet of 3 Bell 206B JetRangers, and 1 each Eurocopter AS-350B, AS-350B2, SA-315B, Bell 206L LongRanger, Hiller UH-12T, Robinson R-22, and Hughes 269.

Ordered earlier in the year, the first two AS-355L Super Puma Mk. IIs are delivered to Helivifra on December 12.

Flights continue in **1995–2000**. During the latter year, General Manager Maricilhacy's fleet includes 1 each Eurocopter AS-350B, and SA-355F, 3 each SA-316Bs and AS-365N2s, 2 each SA-318Bs and Bell 76s, and 13 SA-315Bs.

HELI-UNION DEUTSCHLAND, GmbH. See HELI UNION, S.A.

HELIAVIA (TRANSPORTE AEREO, LTDA.): Lisbon Airport, Lisbon, P-1709, Portugal; Phone 351 (1) 847 47 16; Fax 351 (1) 847 50 42; Year Founded 1971. Helavia is formed at Lisbon Airport in **1971** to provide both fixed-wing and rotary-wing executive and small group passenger charters and express flights throughout Europe. By **2000** the company operates 1 each Dassault Falcon 20F and Falcon 50, 1 Cessna 337G Super Skymaster, and 1 Aerospatiale AS-350B Ecureuil helicopter.

HELICOL (HELICOPTEROS NACIONALES DE COLOMBIA, S.A.): CRA 13, No 2B-17, 6th Floor, Bogota, DE, Colombia; Phone 57 (1) 287-6030; Fax 57 (1) 413-8716; Year Founded 1957. Helicol is established at Bogota in **1957** to provide nonscheduled passenger and cargo charters, air taxi services, air ambulance, mining, timbering, and oil industry support services. A subsidiary of **AVIANCA Colombia Airlines (Aerovias Nacionales de Colombia, S.A.)**, Helicol employs three Bell 47Gs on a contract to lay oil pipeline linking the coast with the new petroleum-producing field near Puerto Assis.

During the **1960s** and **1970s**, Helicol becomes known for its work with pipelines, oil and mineral prospecting, logging, training, cargo charters, maintenance, and agricultural support; contracts are offered and accepted in Panama, Brazil, Peru, Costa Rica, Argentina, El Salvador, and Ecuador. The line's international work falls off significantly at decade's end as the continent's newer military governments assign their own pilots to the civil helicopter work previously flown by Helicol.

During the **1980s**, the 280-employee Helicol flies both fixed- and rotary-wing aircraft, including 6 de Havilland Canada DHC-6 Twin Otters, 3 Bell 206B JetRangers, 3 Bell 205s, and 4 Bell 204s.

The fleet is continuously increased and, by **1989** features 1 Bell 204B, 2 Bell 205As, 3 Bell 206B JetRangers, 5 Bell 206L LongRangers, 4 Bell 212s, 3 owned and 2 leased de Havilland Canada DHC-6-300 Twin Otters, 2 Grumman G-159 Gulfstream Is, and 2 Israel Aircraft Industry IAI 1124 Westwinds.

In January, **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** presides over the creation of Association Colombiana de Operadores Helicopteros, S.A., a cartel designed to compete for legitimate business divorced from the drug trade. In addition to Helicol, four other operators become members, including Bogota-based **Helitaxi, S.A.**, **Aeroexpreso Bogota, S.A.**, and **Helivalle, S.A.**, plus **Lineas Aereas Petroleras, S.A.** at Entrada.

The fleet is increased in **1990** by the addition of an Aerospatiale AS-355F Ecureuil II, a G-1159 Gulfstream II, two G-159 Gulfstream Is, and an IAI 1124A Westwind.

While on a charter service on February 5, a G-159 Gulfstream I with 4 crew and 11 passengers, crashes into Mt. El Saludo, Colombia; there are no survivors. Just after landing at Monteria on May 2, a chartered Gulfstream I, with four crew and two passengers, overruns the runway by 95 m.; there are no fatalities.

As an incident in the country's continuing guerrilla war, company officials are able to persuade kidnappers to return unharmed both a Bell 206B JetRanger and the hostages they are threatening.

An Aerospatiale AS-350B Ecureuil arrives in **1991**, along with three DHC-7-102s operated for Carbocol. Terrorists firebomb a Bell 47G, which is replaced. While on a scheduled service, a DHC-7-102 with two crew and a passenger collides with a hill near El Yopal on July 4; there are no survivors.

Operations continue apace in **1992–1993** and the fleet now includes 2 Dash-7s, 2 Bell JetRangers, 1 Bell 204B, 2 Bell 205Bs, and 1 Bell 412.

In **1994–1995**, the fleet is increased by the addition of 12 leased Russian-made Mil Mi-8 helicopters. Business continues uninterrupted in **1996–2000**, during which years President Nicanor Isaza's concern operates not only the 12 Russian helicopters, but also 1 Bell 204B, 2 Bell 205Bs, 1 Bell 47G, 4 Bell 206L LongRangers, and 1 Ecureuil.

HELICOPTER AIR SERVICES (HAS): United States (1949–1956). Selected by the CAB to operate local mail routes in the Windy City area, HAS, the nation's second helicopter mail shuttle, is founded at Midway airport in the summer of **1949**.

Employing 6 Bell Model 47s, the rotary-wing operator commences scheduled flights on August 20 linking its base 18 times per day with the downtown Post Office. In addition, 3 roundtrips per day are flown to up-wards of 34 suburban heliports. Over the next 5 years, a total of some 700,000 tons of mail is transported.

After seven years service, it is decided, with CAB backing, that the company should expand into the transport of passengers. Reorganized and upgraded with three Sikorsky S-55s, the operator is renamed **Chicago Helicopter Airways** on August 20, **1956**.

HELICOPTER FLIGHT SERVICES: 421 East 60th Street, New York, New York 10022, United States; Phone (212) 355-0801; Fax (212) 355-0950; <http://www.hfiavserv.rotor.com>; Year Founded 1993. This rotary-wing concern is established in **1993** to provide flights from the local heliport to the city's major airports and a few other commercial destinations. By **2000**, the company employs three pilots and operates one each Bell 206B JetRanger and Bell 206L LongRanger.

THE HELICOPTER LINE, LTD.: P.O. Box 16, Dunedin, New Zealand; Phone 64 (24) 776829; Fax 64 (24) 779987; <http://www.discover.co.nz/thlintro.html>; Year Founded 1965.

The charter operator **Alpine Helicopters, Ltd.** is formed by Walter Reid Jackson at Queenstown in **1965** to provide on-demand flights into the bush for deer hunters. Operations begin in **1966** with 2 Bell Model 47s and 1 Hiller H-12E. As demand increases during **1967–1984**, the company, during the latter year, elects to join with **Whirl-Wide Helicopters, Ltd.** (in which it holds a 50% stake) and its **Wishart Helicopters, Ltd.** subsidiary in the formation of a holding company named **The Helicopter Line, Ltd.** The new entity coordinates operations through three divisions, which retain the names of the three formerly independent operations, under the direction of Chairman Jackson and the new managing director, Graham Gosney of **Whirl-Wide Helicopters, Ltd.** A fleet of 14 Hughes 500Cs, 18 Bell 206B JetRangers, and 2 Aerospatiale AS-350B Ecureuils is assembled as the company employs an overall logo in marketing, management, and maintenance from three bases at Queenstown, Wanaka, and Te Anau.

During **1985–1986**, operations are increased to include mineral and mine location surveys, sight-seeing over the mountain ranges of the South Island, airlift of Skiers Queenstown–Cardrona and Coronet Peak, agricultural spraying, etc. Airline employment climbs to 120, a Cessna 182, 206, and 210, a Mitsubishi MU-2, and a Piper PA-31-310 Navajo are acquired for internal services among the branches, the Navajo also being employed for charters under the name of a new subsidiary, **Air Timaru, Ltd.** During the latter year, the joint venture officially becomes a single corporate entity and increases capitalization through the issuance of 8 million shares of common stock.

A total of 62,000 passengers are flown.

In late **1987**, two Bell 212s are leased from the Australian subsidiary of **Bristow Helicopters, Ltd.** by the Whirlwind Division; they are employed to operate contract services in support of New Zealand's oil company, Petra Corporation.

Enplanements climb to 80,000 and revenues for the year total NZ\$5.9 million.

The fleet in **1988** includes 4 Ecureuils, 5 McDonnell Douglas 500Ds, 4 Soloy/Hiller UH-12Es, and 20 Bell 206B JetRangers.

To assist its tourist and transport business, the company purchases 54% interest in the Treble Cone Ski Field, at Wanaka, on the South Island. Operations continue apace without incident over the remainder of the decade and into the **1990s**.

By **1994**, Managing Director Graham Gosney oversees operations from bases at Auckland, Timaru, and Queenstown. His fleet includes 12 Eurocopter AS-350Bs, 2 AS-355s, 2 Bell 206B JetRangers, 3 McDonnell Douglas MD-500Ds, and 2 MBB BK-117s. In October, the company suffers two fatal crashes during sight-seeing flights. The first occurs on October 11 when a Eurocopter AS-350 crashes into the sea off the Coromandel Peninsula (two dead). Seven are killed when another AS-350 smashes into a mountain on the South Island on October 29.

Flights continue largely without incident or fleet change during the remainder of the decade. A homepage, opened on the World Wide Web in **1997**, is updated on October 12, **2000**.

HELICOPTER RESOURCES (PTY.), LTD.: Western Port Airfield, 110 Stuart Road, Tyabb, Victoria, 3913, Australia; Phone 59 774506; Fax 59 774491; Year Founded 1970.

Established at Tyabb, south of Melbourne, in **1970**, this rotary-wing operator will win its niche as a specialist in helicopter services ranging from construction and agriculture to support of offshore oil and gas exploration ventures. Like **Helicopters (NZ), Ltd.**, it will become known for its work in Antarctica.

The company makes its first visit to Antarctica in **1975**. In the 30 years thereafter, the company returns during every southern summer to support the work of government and private expeditions, not only from Australia, but from China, Germany, Italy, and Pakistan as well.

By **1994**, Managing Director William J. English and his chief pilot, Leigh Hornsby, oversee the work of 7 Aerospatiale AS-350Bs, 5 Bell 206B JetRangers, and 4 Sikorsky S-76s. In July, the company contracts to provide S-76 support for the annual expedition of the Australian National Antarctic Research Expedition (ANARE); this will be the company's first use of twin-turbine helicopters in on behalf of ANARE. Following several weeks of trials aboard ANARE's mother ship *RSV Aurora Australia*, Hornsby and two float-equipped Sikorskys sail south from Hobart on August 31.

After a 10-day voyage, the ship arrives in Antarctic waters. From points offshore, the two helicopters begin a process of resupplying the three ANARE bases. On scene, they are based at Davis, on Prydz Bay on the Davis Coast, from which they fly various resupply missions.

The most spectacular use of the S-76s comes in November when both are taken back aboard the *RSV Aurora Australia*, which steams 760 nm. to retrieve a stricken worker from the Casey base. The helicopters cut a day off the mission by flying to land from the ship.

After seven months work, the ANARE expedition is completed and returns to Hobart.

The company continues its domestic services in **1995–2000**, including air taxi, charter, air ambulance, marine pilot transfer, forest fire control, and offshore energy support. Although one S-76 is withdrawn, the company and its 40 employees continue to accept contracts that take many of them on summer trips to Antarctica.

HELICOPTER SERVICE OF ICELAND, H.F.: P.O. Box 3146, By Skeljana Roads, Hangar 14, Reykjavik Airport, Reykjavik, 123, Iceland; Phone 354-561-6100; Fax 354-561-6122; http://www.helicopter.is; Year Founded 1988. HIS is established at Reykjavik in

1988 to provide sight-seeing, air taxi, aerial filming, air ambulance, and sling work. Additionally, scientific and exploration teams visiting the nation's geysers are also accommodated. By **2000**, the fleet includes both Bell 206L LongRangers and Schweizer 300Cs.

HELICOPTER SERVICES (BOP), LTD.: Tempo, New Zealand; Phone 64 (7) 378-8074; Fax 64 (7) 378-0468; http://www.heliserv.co.nz; Year Founded 1984. Former **Helicopters (NZ), Ltd.** pilot John Funnell establishes this company in **1984** and is soon involved as search controller in the Turangi area, seeking a missing aircraft transporting the managing director and another official of Philips (NZ), Ltd. After a week, the official search ends; however, Funnell and others continue the effort privately in what would become the most comprehensive private search in New Zealand history. Eventually, when weather over the area clears, the aircraft is found. In appreciation of the dedication of all concerned, Philips creates the Philips Search and Rescue Trust (PSRT), which will contract with Helicopter Services (BOP), Ltd. to supply helicopters as needed. A total of 30 calls for assistance are answered during the remainder of the year.

In the years that follow, Funnell's helicopters operate frequent search and rescue (SAR) missions and air ambulance flights. In October **1987**, the PSRT is asked to fund a fully dedicated medevac air ambulance helicopter for Hamilton's Waikato Hospital to provide patient lift from the communities of Taupo, Taumarunui, Thames, Gisborne, and New Plymouth. The successful implementation of this service encourages Palmerston North Hospital to seek funding for a helicopter of its own, which begins flying in November **1989**. Two part-time helicopter services will later operate from Taupo and within a decade, over 2,700 missions will have been completed.

In addition to its air ambulance flights, Helicopter Services (BOP), Ltd. now becomes involve in the provision of selective heli-logging services throughout the country. In an effort to provide creative logging without the environmental destruction caused by traditional logging roads, a revolutionary proposal is made to the state-owned Timberlands West Coast, Ltd. on the South Island. The approved idea sees Heli Harvest, Ltd., a new joint-venture concern owned on a fifty-fifty basis by Helicopter Services (BOP), Ltd. and Rural Aviation (1963), Ltd. The operation takes out trees from approved areas employing two wet-leased Mi-17s, closely monitored by the Mil Design Bureau from Moscow.

Both the air ambulance and heli-logging activities continue into the new millennium and are reviewed on the company's new homepage on the World Wide Web.

HELICOPTER SERVICES OF NEVADA. See SUNDANCE HELICOPTERS

HELICOPTER SEYCHELLES, LTD.: P.O. Box 595, Victoria, Seychelles; Phone 375400; Fax 373792; http://helico.seychelles.com; Year Founded 1992. The idea of a helicopter service in the Seychelles comes from Frederic Kelley, the South African owner of Cousine Island and several other local concerns, such as the Seychelles Shipping Line, Ltd. and Gondwana Granite. In June **1992**, he hires Capt. Vic Davies to deliver a single Bell 206B JetRanger III with which to begin a helicopter service named for the islands.

With backing from Dr. Selwyn Gendron's Gondwana Enterprises, Ltd., Capt. Davies is able to gradually attract business, beginning with helicopter transfers to the tourist establishments at Silhouette, La Digue, and Felicite Islands. Over the next eight years, an expatriate pilot and engineer corps is appointed, along with a Seychelles staff. The company purchases a second JetRanger and offers air taxi and flight-seeing to any of the nation's 87 islands. It also engages in the support of aerial photography, construction in remote areas (principally through out-sized load lifts), the provision of medevac and air ambulance flights, and search and rescue at sea.

Employment stands at 19 at the beginning of **2000** and a third Bell 206B JetRanger III is delivered in February to accommodate demand

created by the new Fregate Island Private Lemuria Resort. On March 1, Capt. Davies and his wife retire to Ireland. He is succeeded by Capt. Rick Dooley. By now, the company has become sufficiently prominent for its profile to appear in *The Seychelles Review* 5 (February–March 2000).

HELICOPTER TRANSPORT SERVICES: 701 Wilson Point Road, Box E, Martin State Airport, Baltimore, Maryland 21220, United States; Phone (410) 391-7722; Fax (410) 686-4507; <http://www.htsc.ca>; Year Founded 1998. The trans-border HTS is established at Baltimore's Martin State Airport in the spring of 1998 to coordinate the activities of divisions in both the U.S. and Canada. In the U.S., divisions are established at Chicago (ORD), Cleveland's Lake Burkfront Airport, the airport at Norfolk, Virginia, and at Northeast Philadelphia Airport. The Canadian unit, built around recently acquired Huisson Aviation (1989), Ltd., maintains bases at Carp, Kenora, Moosonee, Timmins, Sudbury, and Markham in Ontario and Sept-Iles, Quebec.

Services provided by the various units include executive passenger charters, sight-seeing, medevac/air ambulance flights (including service from Carp, Moosonee, and Kenora for the Ontario Ministry of Health), aerial photography, heavy lift and general crane activities, forestry reconnaissance and airborne geophysical surveys, police aviation, and electronic news gathering. The various units are dealers and/or authorized maintenance centers for all the major helicopter manufacturers and provides training at several locations.

Michael Aslaksen is executive vice president/chief operating officer in 2000 and oversees the activities of a large fleet that includes a mix of Sikorsky S-76s, Bell 222s, Bell 212s, Bell 205A-1s, Bell 407s, and Eurocopter AS-350B-1 Astars. In addition, one each Sikorsky S-61N and S-61 provide heavy lift and corporate charter services and three Schweizer 300 helicopters are operated for the Baltimore Police Department.

HELICOPTEROS, S.A. (HELICSA): Musgo 3, Urbanizacion La Florida (Aravaca), Madrid, 28023, Spain; Phone 34 (1) 307-6768; Fax 34 (1) 307-6049; Year Founded 1988. Helicopteros is established at Madrid in 1988 to provide aerial work and charters, including passenger and cargo flights, aerial photography, agricultural applications, construction, fire fighting, search and rescue (SAR), medevac, and other activities. It also becomes an authorized service center for Aerospatiale, Bell, and Sikorsky helicopters employed throughout Spain.

By 1990, the concern is a market leader in Spain and owns 40 helicopters. Ownership is divided between Spanish shareholders (66%) and Schreiner Aviation Group of the Netherlands.

During the summer of 1992, the Spanish journal *Expansion* reports that **Helikopter Services, A.S.** will acquire a 66% majority stake. In fact, the October 16 issue notes that the stake taken will be 33%—equal to Schreiner's share.

Jaime Arque is general manager in 1994 and his fleet includes 3 SA-365C Dauphins, 2 each SA-319Bs and SA-316Bs, 5 Agusta-Bell 47Gs, 2 Sikorsky S-58Ts, 7 Bell 204s, and 3 Bell 212s.

Service continues apace in 1995–1999, during which years the SA-319Bs, SA-316Bs, Bell 204s, and S-58s, plus five Bell 204s and two Agusta-Bell 47Gs, are replaced with two more Dauphins, seven AS-350Bs, five Sikorsky S-61Ns, and four Eurocopter BO-105s.

On January 28, 2000, **Canadian Helicopter Corporation (CHC)** sells the 33% stake acquired by **Helikopter Services, A.S.** in 1992 back to Helicoptereros, S.A. and **Schriener Airways, B.V.** for C\$6.8 million.

HELICOPTEROS DEL SURESTE, S.A.: Urbanization La Font-1, San Juan Alicante, 03550, Spain; Phone (6) 566-3835; Fax (6) 566-5924; <http://www.helisureste.com>; Code UV; Year Founded 1973. Originally established in 1973 as **Trabajos Aereos Bonny, S.A.**, and a part of the Office of Civil Aviation for Private Air Operations, Sureste is reformed into a public firm and renamed 10 years later. During its pioneering years and throughout the 1980s, the carrier engages in a wide

variety of aerial work, beginning with agricultural insecticide spraying, crop sowing, and forest fertilization. Other activities soon added include aerial photography, flight training, and passenger charters. Beginning in 1982, the company undertakes rescue services for the provinces of Alicante, Murcia, Valencia, and in Extremadura. In the years following, the company will be applauded for its emergency rescue work carried out during floods in Alicante, Murcia, Valencia, and Badajoz.

Sling-load forest fire control contracts are undertaken annually after 1984. The first forest-fire flights are made in the Valencian community and over the next 16 years, company Bells will clock over 25,000 flight hours and release over 60 million liters of water while battling blazes.

Luis Minano San Valero is managing director as the 1990s begin and his fleet includes 3 Agusta/Bell AB 206B III JetRangers, 4 August A-109s, 6 Bell 206L LongRangers, 2 Bell 412s, and 1 Bell 212.

On behalf of various Spanish government agencies, the company, in 1990, develops a system of geo-referenced aerial photographs that allows it to monitor and survey the state or development of forest fires from a central control center in real time. Long-range helicopters or light aircraft can be outfitted with this equipment.

In 1992, a modern base is set up at Alicante. Provision is made there for helicopter parking, hangars, workshops, operations offices, and training facilities. During the year, the Secretaria General de Pesca Maritima of the Spanish Ministry of Agriculture, Fishing, and Foods awards a contract to Helicopteros del Sureste to maintain and operate its fleet of three Agusta 109Cs. Over the next 18 years, Sureste will log over 6,500 flight hours for this government body, including 3,200 fishery patrol operations along the Spanish coast.

On January 1, 1993, the maintenance shops are certified for JAR-145 repair work. On April 1, 1996, the company inaugurates four-times-a-day scheduled Bell 412 return service between Ceuta, an enclave on the North African coast, and Malaga. Enplanements on the route will average 12,000 per year.

Flights continue during the remainder of the decade as the operator becomes one of the largest helicopter operators in Spain. In 1997, a Beech Super King Air 200 is acquired and in collaboration with Seville-based Transportes Aereos del Sur, S.A., flies organ transplant missions around the country. The Beech is also employed for patient transfers. A Bell 206 is equipped with the Wescam System that allows it to provide television images, particularly of sporting events.

In 1998, Sureste becomes the first Spanish aerial company to accept foreign contracts. In July, a Bell 212 is stationed in South Portugal to perform to provide EMS flights. A Kamov Ka-32 helicopter is leased from Russia and is employed to provide heavy-lift for various construction projects.

On December 31, the company operates its 85,000th flying hour.

During the spring of 1999, two new bases are opened in Portugal (Lisbon and Porto) and aerial ambulance service is provided under contract to the Instituto Nacional de Emergencias Medicas. Also during the year, Sureste is contracted by the Spanish Emergency Medical Services to establish a nationwide 24-hour, 7-days-a-week air ambulance service. A total of 14 Bell helicopters equipped with the latest medical instruments are assigned to this important duty.

The fleet in 2000 includes 6 Bell 412s, 4 Bell 212s, 10 Agusta 109s, 7 Bell 206L LongRangers, 1 Bell 205, and 1 Ka-32.

On October 1, plans are announced for the introduction in February of scheduled Bell 412 roundtrips between Gran Canaria and Santa Cruz de Tenerife. One-way fares will be about \$180.

HELICOPTEROS MARINOS, S.A.: Panamericana y Cno Moron, Cno Real L 54, Boulogne, Buenos Aires, 1605, Argentina; Phone 54 (1) 741-4718; Fax 54 (1) 748-6886; Year Founded 1985. HM is formed during 1985 to provide aerial support services to the offshore oil exploration industry from a base at Tierra del Fuego island. Minority financial control (40%) is held by the French rotary-wing giant **Heli-Union, S.A.**, which also holds a management contract.

The carrier acquires a pair of Sikorsky S-61Ns and six Aerospatiale AS-318C Alouette IIs. The French provide pilots, maintenance personnel, and spare parts under a wet-lease arrangement that also wet-leases the company two AS-350B Ecureuils, two SA-365 Dauphins, and an SA-315B Lama.

Operations continue apace over the next 15 years, during which time Raul van Sanchez becomes president and his fleet includes 3 Lamas and 3 Dauphins.

HELICOPTERS AUSTRALIA (PTY.), LTD.: P.O. Box 263, Belmont, Western Australia, 6984, Australia; Phone (09) 9277 8399; Fax (09) 9479 1008; <http://www.helicopters.com.au>; Year Founded 1980. HA is incorporated at Perth on August 11, 1980 to provide passenger and cargo charters in and around the city. The first contract, started in November, is with STW Channel 9 television news.

During the next three years, the company, employing 4 Bell 206B JetRangers, is engaged by the State Emergency Commission of Western Australia to provide helicopter support and transportation service for the construction and maintenance of a gas pipeline from Dampier to Perth. The contract will be retained.

Beginning under an April 1984 contract, Helicopters Australia provides marine pilot transfer service at Port Walcott, near Karratha, in Western Australia. From the time it is formed in 1985 until it is disbanded in 1988, the company provides lift for Perth's Surf Lifesaving Helicopter Rescue Service. Simultaneously, the company undertakes to fly Perth's Police Westpac Rescue Helicopter (PWRH) service.

At the end of the 1980s, the company is merged with **Helicopters (NZ), Ltd.** in order to consolidate the two companies' activities in Indochina and to allow Helicopters Australia access to Helicopters (NZ)'s offshore experience and expertise.

The PWRH service is concluded in May 1992.

The contract to operate marine pilot transfer service at Port Walcott ends in February 1993. In December, the company is awarded a five-year contract to supply aircrew to act as copilots for Esso Australia, Ltd. in the Bass Strait.

A new five-year contract to operate marine pilot transfer service at Port Walcott is secured in June 1995. Also during the year, the company receives a five-year contract to support the Australian Antarctic Division, Department of the Environment, Sport and Territories on the frozen continent with a Sikorsky S-76A+ and two Aerospatiale AS350B Ecureuils.

In 1996, the company begins a forest and timber inventory on behalf of the Department of Conservation and Land Management of Western Australia. The service complements a long-standing contract with the bureau for fire spotting and reporting, aerial mapping, and aerial photography.

Flights continue in 1997–2000. Managing Director Dennis Troup's fleet now includes 4 JetRangers, 2 Ecureuils, and 1 Sikorsky S-76A+.

HELICOPTERS HONG KONG, LTD. (HELI HONG KONG): Penthouse 39F, Shun Tak Centre, 200 Connaught Rd. C, Hong Kong; Phone (852) 2573-8882; Fax (852) 2573-3878; <http://www.helihongkong.com/hhkhome.htm>; Year Founded 1996. HHK is incorporated in 1996 to provide charter helicopter services in Hong Kong. Revenue flights commence with a single Bell 206B JetRanger.

In May 1997, HHK receives an air operator's certificate for scheduled public transport; it is only the seventh such document issued in Hong Kong over the past 50 years. During the remainder of the month through the changeover in sovereignty of the British crown colony to China in July, the Bell is in demand by news organizations from China and the U.S.

With most of Hong Kong's helicopter passengers flying with **East Asia Airlines (Pty.), Ltd.**, Heli Hong Kong, after the political change and through 1998, continues to emphasize its expertise with aerial surveying, corporate and other charters, and helicopter tours. Particular destinations favored by flight-seeing clients are The Great Buddha, the Outlying Islands, Victoria Harbour, and the Tsing Ma Bridge.

Early in 1999, HHK acquires **East Asia**, which it will continue to operate as an affiliate under its own name. The two companies join together to open a homepage on the World Wide Web and HHK takes over one of **East Asia's** new Sikorsky S-76C+s.

HELICOPTERS (NZ), LTD.: Private Bag 9, Nelson, New Zealand; Phone 64 (3) 547-5598; <http://www.icairiac.org.nz/logistics/hnz.helo.html>; Year Founded 1955. Originally established with Bell 47Gs at Nelson in 1955, Helicopters (NZ) will win its niche as a specialist in rotary-wing services ranging from construction and agriculture to support of offshore oil and gas exploration ventures. Like **Helicopter Resources (Pty.), Ltd.** in Australia, it will become known for its work in Antarctica.

The company makes its first visit to Antarctica in 1979. In the 30 years thereafter, the company returns during every southern summer to support the work of government and private expeditions. Eurocopter AS350B Squirrels, Bell 206B JetRangers, and Bell 212s are regularly disassembled and sent to the frozen continent aboard ships or Lockheed Hercules transport aircraft.

Services continue apace during the 1980s and into the 1990s. At the end of the 1980s, the company is merged with **Helicopters Australia (Pty.), Ltd.** in order that the Australian firm might access the NZ operator's offshore experience and expertise.

P. Tait is managing director in 1997–2000 and he deploys a fleet of 12 Squirrels, 2 each Bell 212s and JetRangers, and 1 SA-315B.

Service is maintained in Antarctica while a contract is obtained to supply helicopters to Shell for that energy firm's Maui field activities.

HELICOPTERS VICTORIA (PTY.), LTD.: Melbourne, Victoria, Australia; Phone 61 396295542; Fax 61 394847522; <http://www.helivic.com.au>; Year Founded 1989. Capt. David Sewell establishes this small concern at Melbourne in 1989 to provide corporate air transport and search and rescue facilities. Over the next 11 years, contracts are accepted to provide Agusta 109C flights on behalf of local and federal government, corporate, and private sector agencies and groups to a variety of destinations in Victoria, New South Wales, Tasmania, and South Australia.

When participants in the Sydney to Hobart Yacht Race are caught in bad weather in the spring of 1999, Capt. Sewell is one of the first to respond. His life-saving intervention will result in a special award in May from American Helicopter Society International.

HELIFRANCE, S.A.: Heliport de Paris, 4 Ave. de la Porte de Sevres, Paris, F-75015, France; Phone 33 (01) 4554 9511; Fax 33 (01) 4554 0107; <http://www.helifrance.com>; Year Founded 1982. With support from **Air France**, **Air Inter**, and **Aéroports de Paris**, HeliFrance, S.A. is formed by Joel Bastien in 1982 to provide scheduled city-to-airport shuttle service, the only such link in France. Simultaneously, rotary-wing charters are inaugurated. A slight \$200,000 profit belies the fiscal difficulties to follow when scheduled flights are inaugurated. Service launch is held up in 1983 as government units consider noise and environmental implications.

With two Aerospatiale SA-365C Dauphins leased from their manufacturer, Paris (CDG and ORY) service is begun by President Bastien's carrier on March 23, 1984. The commuter is only authorized to operate visual flight rules (VFR) flights and, unhappily, weather causes HeliFrance, S.A. to stand down on 83 of 310 days through year's end.

Still, a total of 8,361 passengers are carried. Total revenues of \$298,000 are earned, but expenses are \$894,000, resulting in a \$596,000 loss. Services continue as does the search effort to find additional subsidiary sources.

Four AS-350B Ecureuils and an AS-355F TwinStar are acquired and placed in service in 1985–1986 alongside of the carrier's two replacement Aerospatiale AS-365N Dauphins. A total of 11,000 passengers are flown in 800 revenue hours during the former year. Having served as the company's handling agent for two years, **Air France** breaks its agreement in March of the latter year.

HeliFrance, S.A. is able to start all-weather, half-hour instrument flight rules (IFR) roundtrips between the city's two major airports in **1987**. Beginning on May 3, **1988**, the company offers a twice-daily Ecureuil service from Paris (CDG) to La Evry, La Defense, and St. Quentin en Yvelines, high-rise business districts south and west of Paris. An agreement is signed with **Pan American World Airways (1)**, which joins **Air France** and several other European airlines in providing complimentary tickets to first- and business-class passengers.

The company continues to provide air taxi, pilot training, survey flights, and photography opportunities into the **1990s**. President Bastien's fleet in **1994** includes 2 AS-355Fs, 9 AS-350Bs, and 2 each AS-355F1s, AS-318Cs, Bell 47Gs, and Robinson R-22s.

In May, the company, employing a British-registered Sikorsky S-76A, inaugurates a joint venture with **Air Hanson, Ltd.**, linking Issy-les-Moulineaux Heliport at Paris with London's Battersea Heliport.

Flights continue apace during the remainder of the decade without significant fleet changes.

In addition to providing its regularly scheduled services, HeliFrance gains new media exposure and public respect in the period after the December 26, **1999** blizzards that do immense damage to the national infrastructure because of so much ice. Company helicopters perform various rescue missions and are instrumental in assisting in the restoration of electrical power in black-out areas.

In early July **2000**, the company, as it has for several years, provides support for the Grand Prix de France.

HELIJET AIR SERVICES (PTY.), LTD.: P.O. Box 5719, McKay Mail Centre, Queensland, 4740, Australia; Phone (79) 577400; Fax (79) 577858; Year Founded 1992. HeliJet Seaplanes is formed at Whitsunday Airport, Whitsunday, Queensland, in **1992** to offer flights along the Great Barrier Reef. Gregory M. Schweikert is named managing director with R. W. Pickett as administrative manager. Services are inaugurated with a fleet made up of 2 de Havilland Canada DHC-2 Beavers and 2 Lake Buccaneers.

Flights continue and the company, with the addition of rotary-wing aircraft, is renamed HeliJet Air Services (Pty.), Ltd. By **2000**, Managing Director Schweikert not only operates the original fixed-wing planes, but 2 Bell 206JR JetRangers, 4 LongRangers, and 2 Bell 222s.

HELIJET AIRWAYS, INC.: Canada (1986–2000). This helicopter service is opened in **1986** to offer scheduled passenger flights linking Vancouver Harbor and Victoria Harbor with Vancouver International Airport. Shares in President Daniel Sitnam's publicly owned carrier are traded on the Vancouver Stock Exchange. Operations commence in November employing a fleet of 3 Sikorsky S-76A Mk. IIs and continue apace for the remainder of the decade.

A fourth S-76A is added to the fleet during the first quarter of **1990** and the number of daily flights is increased from 32 to 41.

In December **1991**, the 83-employee firm begins flying to Whistler, some 65 miles north of Vancouver.

For the year, it enplanes 97,300 passengers and earns an undisclosed net profit.

The fleet at the beginning of **1992** includes 5 S-76As. These provide 43 daily scheduled roundtrips between Vancouver Harbor and Victoria Harbor. On June 1, the company places Canada's first S-76A+ into service and, by month's end, it is being employed to offer thrice-daily roundtrips from Vancouver International Airport to Whistler.

In **1993**, Chairman Alistair MacLennan and President/CEO Sitnam oversee a workforce of 100 and a fleet of 6 S-76A Mk. IIs. A total of 47 daily flights are made between the carrier's destinations.

In honor of the Commonwealth Games held in Victoria in August **1994**, an S-76A Mk. II is painted as *Spirit of the Commonwealth*, taking the motif of the mascot orca Klee Wyck (Laughing One).

Operations continue apace in **1995**, during which year the company receives the "Operator Safety Award" from the Helicopter Association International.

In July **1996**, **Vancouver Helicopters, Ltd.** is purchased. During these years, marketing alliances are entered into with **Delta Air Lines**, **United Airlines**, **British Airways, Ltd. (2)**, and **Canadian Airlines International, Ltd.**

Enplanements for the route between Vancouver and Victoria almost reach 100,000. Revenues are C\$13.4 million and net income of C\$613,000.

On May 22, **1997**, thrice-daily roundtrips are inaugurated from Victoria, British Columbia, to Boeing Field in downtown Seattle. The \$92 one-way fare allows journey completion in 34 min. instead of the 120 min. required for a hydrofoil trip between the two cities. Seattle becomes the first U.S. city to receive scheduled helicopter service from Canada and is, indeed, one of the few in America to have scheduled services at all.

HeliJet Airways joins the Canadian Plus frequent flyer program of **Canadian Airlines International, Ltd. (CDN)** on October 6. Passengers of the helicopter line are able to earn loyalty points on HeliJet scheduled flights between Vancouver, Victoria, and Seattle.

Also in October, the company opens a new 25,000-sq.-ft. facility on the south side of Vancouver International Airport; the site includes a 1,000-sq.-ft. terminal and lounge.

To celebrate the opening of the major league baseball season in April **1998**, a company S-76A Mk. II is painted in the logo and colors of the Seattle Mariners. The aircraft will fly promotions, but few, if any, players.

A collaborative joint venture is entered into with Kahului, **British Columbia**-based **Hawaii Helicopters** on July 9. Under its terms, Hawaii is able to lease a 12-passenger Sikorsky S-76A+ all-weather, medium twin-engine, dual pilot helicopter. When it arrives painted in Hawaii livery, it becomes the first of its type to serve with one of the state's tour operators. It is employed to operate four flights daily from Maui to view Haleakala and Kilauea volcanoes on the Big Island.

A new code-sharing partnership is announced on September 29 with CDN. Effective October 14, CDN passengers with premium-fare tickets will have the option to travel on one of 10 daily HeliJet-operated shuttles between Vancouver's South Airport and Victoria's downtown inner harbor.

The company enters the paramedical field in October when it secures a five-year air medical service contract with British Columbia Ambulance Services. The new service will begin in January. Revenues for the year total C\$13.16 million.

Airline employment stands at 120 at the beginning of **1999** and HeliJet is now North America's largest and most profitable scheduled helicopter service. Code-sharing continues with the renamed **Canadian Airlines, Ltd.**, as HeliJet's 6 S-76+s provide return services from Vancouver International Airport to downtown, 10 times a day.

In late April, the carrier, which trades on the Vancouver Stock Exchange, launches a radio and print communications advertising campaign, "You First," which stresses HeliJet's service ethic.

The joint venture with **Hawaii Helicopters** is expanded during the summer when the partners receive a subcontract to transport men and equipment from Maui to an adjacent island reserve that for 50 years has been used as a military weapons range. During an unspecified period, clean-up teams will undertake a large-scale ordnance clean-up and environmental restoration.

On July 11, a HeliJet Sikorsky S-61N, painted in Hawaii colors, is reconfigured, disassembled, shrink-wrapped, and placed on a freighter from Vancouver to Honolulu. There it is reassembled and flown to Maui, where it begins its new contract on August 15. At least initially, the S-76A+, which remains under lease from HeliJet, is also employed to transfer workers and their supplies to the reserve.

Also during the year, the television and motion picture production industry in British Columbia becomes a billion-dollar industry. HeliJet continues to be Hollywood's first choice for helicopter services when filming in British Columbia and during the year, the carrier participates in the motion pictures *Romeo Must Die* (Jet Li), *Along Came a Spider*

(Morgan Freeman), *The Sixth Day* (Arnold Schwarzenegger), *North Face* (Antonio Sabato Jr.), and *Shutterspeed* (Daisy Fuentes). It also films the famous "car driving off the ferry" scene, among others, in *Double Jeopardy* (Tommy Lee Jones and Ashley Judd). The television series *Seven Days* and *Secret Agent Man* are also supported.

Revenues for the year rise to C\$17.24 million and allow a net gain of C\$855,445. During the year, overall fleet time has increased by 5% over 1998 to more than 10,000 hours. The two major growth areas held to be responsible for this boost are the British Columbia Ambulance Service contract and increased business by the carrier's charter division.

On January 11, 2000, the board of directors authorizes the amalgamation of Helijet Airways and its parent, WM Helijet Airways, Inc., into the unified company **Helijet International, Inc.**

HELIJET INTERNATIONAL, INC.: 4520 Agar Drive, Vancouver International Airport, Richmond, British Columbia V7B 1A3, Canada; Phone (604) 273-4688; Fax (604) 273-5301; <http://www.helijet.com>; Code JB; Year Founded 2000. On January 11, 2000, the board of directors authorizes the amalgamation of **Helijet Airways** and its parent, WM Helijet Airways, Inc., into the unified company Helijet International, Inc. Daniel Sitnam remains president/CEO and his Sikorsky S-76A+ fleet offers between 200 and 255 scheduled weekly passenger flights, depending on the season, to Victoria and Seattle. The code-share with **Canadian Airlines, Ltd.** is maintained.

The airline, together with **Cougar Helicopters, Ltd.**, becomes a launch customer for the new 190-seat Sikorsky S-92A Helibus, signing a contract with Sikorsky on January 24 for the delivery of several machines by the end of 2002.

Also in January, the S-61, having successfully completed its contract to fly workers from Maui, is returned to Vancouver. Plans now call for the machine to be placed on Helijet's scheduled route between Vancouver and Victoria, but six months is required to clear the paperwork for service introduction that finally starts in mid-June.

During the spring and summer, the company once again provides support to the province's motion picture and television industry, taking a role in the filming of 11 new projects. Meanwhile, the on-going joint venture with **Hawaii Helicopters** continues.

On September 7, the Vancouver Whistler 2010 Bid Corporation and Helijet International proudly unveil a Sikorsky S-76A wearing the Vancouver Whistler Olympic Bid logo. The Bid Corporation is preparing an offer to host the Olympic Winter Games and Paralympic Games in 2010.

At this point, the concern—the largest scheduled helicopter operator in North America—has transported over 1.25 million passengers since its founding.

HELIJET SEAPLANES (PTY.), LTD. See **HELIJET AIR SERVICES (PTY.), LTD.**

HELIJET WHITSUNDAY (PTY.), LTD.: Airport, Hamilton Island, Queensland, 4551, Australia; Phone 61 79-468249; Fax 61 79-468280; Year Founded 1985. Helijet Whitsunday is established on Hamilton Island in 1985 to provide both fixed-wing and rotary-wing services, including passenger and cargo charters. By 2000, the company employs 15 full-time pilots and operates 1 each Britten-Norman BN-2 Islander, Cessna 206 Stationaire, C-402 Business/Utiliner, Bell 206B JetRanger, Bell 206L LongRanger, Bell 222, and Hughes 500.

HELIKOPTER AIR SERVICE. See **TYROLEAN AIRWAYS, A.G.**

HELIKOPTER SERVICE, A.S.: Norway (1956–2000). Morton H. Hancke founds **Scancopter Service, A.S.** on February 20, 1956 to provide a wide range of services entailing almost every commercial aspect for which helicopters can be adapted.

When President Hancke's company, by now given its current name, inaugurates offshore oil exploration support work and acquires its first two Sikorsky S-61Ns in 1966, company activities are divided into two

categories: offshore, for service to North Sea rigs and domestic, including long- and short-haul charter and air taxi service. Flights originate from bases at Forus Heliport near Stavanger, Bergen, Bodo, Trondheim, and Oslo.

Among the energy firms contracting with the company are Mobile Exploration Norway, Phillips Petroleum Company (Norway), Elf Aquitaine Norge, A.S., Amoco Norway Oil Company, Esso Exploration and Production Norway, Inc., and a number of smaller operators. The fleet grows to include 11 Sikorsky S-61Ns, 1 Bell 214B, 4 Bell 47Js, 4 Bell 206Bs, and 1 Bell 204B, plus 1 Piper PA-31 Navajo Chieftain.

In the years 1977–1982, HS becomes the largest helicopter airline in Scandinavia, continuing to operate charter and contract flights from its six Norwegian bases. The basic division of operations into offshore and domestic segments does not change; however, a fixed-wing subsidiary, Helikopter Service Ski-og, is created to handle air taxi work and is equipped with Cessna 185s and 206s. Two Boeing Vertol Model 234 Civil Chinooks are ordered in April of the latter year, by which point the fleet has come to comprise the following rotary-wing aircraft: 4 Aerospatiale AS-332 Super Pumas, 17 Sikorsky S-61Ns, 4 Bell 206s, 7 Bell 202s, and 3 Bell 214s.

During these years, HS provides 17 daily S-61N flights from Forus Heliport to the Statfjord field platforms of Mobil Exploration Norway. At this point, HS Sikorskys fly over 100,000 passengers per year on behalf of Phillips Petroleum Company (Norway) from the mainland to this firm's 27 permanent Ekofisk field platforms. Additionally, upwards of 400,000 passengers are transported on the company's Bell 214 thrice-daily interplatform shuttle flights.

Upwards of 25 weekly S-61N and AS-332L Super Puma roundtrips are flown from Stavanger to the 6 permanent platforms of Elf Aquitaine Norge, A.S.'s Frigg field, the world's largest natural gas field. Eleven weekly Super Puma roundtrips connect the three platforms of Amoco Norway Oil Company's Valhall field with Stavanger. S-61Ns from Bergen also service Esso Exploration and Production Norway's Odin Platform 10 mi. N of the Frigg field. The Norwegian state oil company, Statoil, employs the carrier's S-61Ns to perform flights from Kristiansund to a rig in the Haltenbanken, as well as two drilling rigs west of Bergen. Also from Bergen, S-61Ns fly the Treasure Saga rig of Saga Petroleum, A.S.

Super Pumas and S-61Ns also fly on behalf of A.S. Norske Shell, providing transport to a drilling rig in the Haltenbanken north of Kristiansund, one in the Troll field north of Bergen, and a third near the Ekofisk field to the south. The Haltenbanken drilling rig of Conoco Norway, Inc. is also served by an S-61N.

A longtime policy of buying up competitors and merging them into its own activities begins quietly in 1980 with the acquisition of Fred Olsen's Offshore Helicopters, A.S.

When, during the summer of 1983, **British Caledonian Helicopters, Ltd.** receives permission to fly Bell 214STs from Aberdeen to a pipe-laying barge north of Stavanger, HS protests the move to aviation authorities in both the U.K. and Norway. In October, the BCHL permission is withdrawn and HS takes over the Elf Aquitaine Norge, A.S. contract.

Early in 1984, Mobil Exploration Norway grants Tromsø-based new entrant **Luftransport, A.S.** a contract to fly eight-times-per-week AS-332L supply flights from Bergen to its platforms in the Statfjord field. The contract ends the HS near-monopoly on Norwegian offshore operations.

Shortly thereafter, Esso Norge A.S. contracts with HS to operate flights from Tromsø to the exploratory Zapata Ugland rig. Phillips Petroleum Company (Norway) signs a five-year contract with the company in late spring to operate S-61Ns and Civil Chinooks from Forus Heliport to its Ekofisk fields. To support this enterprise, which will come to represent 45% of company business, as well as other contracts, a Boeing Vertol Model 234L Civil Chinook is leased from its manufacturer in July.

Beginning on August 25, the company inaugurates 5 Boeing 234LR and 12 S-61N weekly flights to participate in aerial transport support of

the platforms in the Heimdal field, south of the Frigg field platforms of Elf Aquitane Norge, A.S. The Esso Norge A.S. operation begins in September.

Following its purchase of the chartered Civil Chinook in April 1985, **ERA Aviation** of the U.S. sends pilots to Stavanger to receive HS training. In June, a contract bid to the Swedish state power board for external-lift assistance on its tower-construction project in the southern part of the country is lost to **British Airways Helicopters, Ltd.**

In Norway, the company undertakes the unusual mission of lifting out a 17,000-lb. historic schoolhouse (ca. 1870s) from its island base to a university in Stavanger in an 8-minute, 20-mile flight. In Norway, the company maintains a fleet of two Bell 214Bs, a Bell 205, and a Bell 204 to work on power lines for that country's utilities under a long-term contract that creates an \$8-million annual turnover.

On August 1, the operator begins flying its Super Pumas from Stavanger to fixed and mobile rigs in the Valhall-Hod field under a two-year contract with Amoco Norway Oil Company. From Andenes, two AS-332L Super Pumas are dedicated, in mid-August, to supporting AS Norske Shell's exploration in the Tromsflaket field off northern Norway. Another two-year contract, this one with BP Petroleum Development, Ltd. begins on September 1 as HS inaugurates services on behalf of that explorer to sites in the Ula oil field. Late in the year, company experts perform a feasibility study in Thailand to assist **Thai Airways Company, Ltd. (THAI)** to establish an offshore helicopter service.

Revenues for the year increase by 12.5% to \$98.4 million and net gain swells to \$2.5 million.

The fleet in 1986 includes 3 Model 234Ls, 19 S-61Ns, 7 AS-332Ls, 8 Bell 212s, and 1 leased Bell 214ST. Over the past 20 years, HS has accomplished over 350,000 S-61N hours, more than that for all other operators of the type combined. During the first quarter, an S-61N is sold to **KLM Helicopters, B.V.** Bases are located not only at Stavanger and Bergen, but also at Kristiansund, Bodo, Andenes, and Tromsø. After **Bristow Helicopters, Ltd.**, HS is now the second largest operator in the North Sea.

Early in the year, Marketing Director Emil Gamborg is appointed the company's new general manager, a Super Puma is leased to **Maersk Air, A.S.**, and an S-61N is sold to **KLM Helicopters, B.V.** The Elf Aquitane Norge, A.S. contract ends during the spring; however, the number of support flights on behalf of Phillips Petroleum increases to thrice daily. Although holding few overseas contracts, HS does undertake a mission in Sudan, flying supplies on behalf of the UN. A strike by caterers working on offshore oil production platforms begins in May; it results in the removal of workers from the platforms and a downturn in company lift requirements (and income).

Undertaken as a civic responsibility for many years, a daily helicopter passenger shuttle between Bodo and the islands of Vaeroy and Rost ends in July when fixed-wing aircraft begin landing at their new airstrips.

The Norwegian government revokes the HS license to operate out of the company's Forus field base at Stavanger, preferring that it move its flight operations to Sola Airport. The transfer is made during the remainder of the year and into the next, although heavy maintenance and training remains at the company facility. During the year, the Helicopter Service Reinsurance, S.A. subsidiary is set up in Luxembourg.

HS experiences two problems with its Civil Chinooks during the second quarter of 1987. The first occurs on April 23 when an engine power loss results in an engine shutdown. A more serious event occurs on May 1 when, following an engine failure, the Model 234LR in question suffers a frightening pitch-up and control loss. The crew is able to make a safe onshore precautionary landing, after which the engine is replaced.

Following these incidents, the company's Model 234Ls are grounded and replaced, temporarily, by S-61Ns. The Civil Chinook difficulties are resolved and the company's three machines are returned to service on November 30, following reauthorization by prime contractor Phillips Petroleum.

After two years of increasing its HS stock, Andenaes, a real estate conglomerate, assumes 90% shareholding in January 1988, with General Manager Gamborg named president.

Outbound from Stavanger to the North Sea's Cod field with 15 passengers aboard on March 1, an AS-332L Super Puma encounters a sudden and severe vibration; as a precaution, the helicopter is landed aboard a Polish bulk carrier. On July 15, another Super Puma, with 18 aboard, also encounters severe vibration. It ditches in the North Sea and all evacuate, remaining afloat 10 hours before rescue.

The AS-332L fleet is grounded for inspection and requirements are filled with S-61Ns and Civil Chinooks. A Super Puma is now leased, long-term, to **British International Helicopters, Ltd. (BIH)**.

When the oil rig *Ocean Odyssey*, located 138 nm. E of Aberdeen, Scotland, takes fire on September 22 following a gas blowout, a company Bell 212 joins units from the British military and **Bond Helicopters, Ltd.** in rescuing the 67 survivors from supply boats to a nearby platform. In October, three local unions stage a wildcat strike in objection to a proposed merger of the carrier with chief shareholder Andenaes. Although company officials promise to look at the amalgamation plans carefully, the merger is completed on schedule in November, leading to employee unrest that continues.

After more than two decades, HS's final offshore helicopter flight from Forus is made by an S-61N on February 11, 1989. Since operations from the facility began in 1966, more than three million passengers have passed through its terminal. As of February 13, all offshore support flights from the mainland and the installations in the southern North Sea are offered from a new terminal at Stavanger Airport, Sola. In reaction to a new pay and conditions package, company pilots stage a three-day walkout at the end of the first quarter.

American multimillionaire Donald Trump, owner of **Trump Air**, purchases a Model 234 Civil Chinook from HS during May, planning to introduce it during December. At the Paris Air Show, company officials discuss a joint venture operation with executives from Louisiana-based **Air Logistics**. During the spring and into the summer, company officials continue to negotiate new contracts with employees.

On June 20, a Spitsbergen-based AS-332L Super Puma joins three Norwegian Air Force Sea Kings and two **Aeroflot Soviet Airlines** Arctic division Mil Mi-8s in evacuating passengers from the Russian cruise ship *Maxim Gorky*, which has struck an iceberg while sailing in the Barents Sea north of Norway.

Boardings for the first half total 318,489.

When contract talks with HS fail on July 2, pilots, having given notice of a potential for a job action a month earlier via the Norwegian ALPA, again walk out. The strike continues for a week and costs the company \$360,000 a day in lost revenues. Possible termination notices are sent to all remaining 600 employees.

Later in the month, the company is reorganized into four divisions: offshore, industry, training, and property. Christian Brinch is appointed the new HS president and onshore operations are assigned to **A.S. Lufttransport**.

In the wake of a downturn in offshore oil support activities and its earlier strike, HS begins to trim its fleet in the fourth quarter. The B-234 for the Trump Organization is handed over in the U.S. in mid-November. Two Super Pumas are dry-leased to **Bond Helicopters, Ltd.** and a third is chartered to the government of Togo, which will use it for presidential travel.

Airline employment stands at 700 in 1990 and a total of 34 aircraft are now active in offshore support roles. A joint 50% venture, HS Logistics, Inc. is established with the Lafayette, Louisiana-based firm **Air Logistics** in February; the new operation is announced during the Helicopter Association International's Heli Expo '90 at Dallas, Texas. To manage the new joint subsidiary, an executive council is established with representatives from both companies.

In May, HS Logistics acquires its first contract when it takes over an **Air Logistics** contract with the U.S. Department of State for Bell 206L LongRanger helitransport in Honduras. While searching for a small fish-

ing vessel in bad weather at night along the Norwegian coast north of Bergen on October 4, a Bell 214ST crashes at sea (five dead).

The company takes a 44.5% interest in **A.S. Morefly** late in the fourth quarter and a \$17.26-million net profit is generated on the year, atop operating revenues of \$193.5 million.

Following an incident aboard a KLM Helikopter S-61N late in December, HS's 15 S-61Ns are grounded during the first week of January 1991 for an approved inspection program, which allows them to return to service at month's end. Under contract for the Shell Oil subsidiary Pecten, three HS Logistics helicopters, a Bell 212 and two Bell 214Bs, commence offshore support flights in Papua New Guinea in February. The former ship is American-registered and the latter two Norwegian.

At the same time, HS Logistics places an AS-332L Super Puma in service to two oil rigs in the Bay of Bengal under contract to Amoco. During the first quarter, long-term maintenance contracts are signed to service the power plants of the rotary-wing fleets of **British International Helicopters, Ltd. (BIH)**, **Maersk Air, A.S.**, and **A/S Morefly**, in addition to the Royal Swedish Air Force.

On April 6, an HS Logistics Bell 212, leased from **Air Logistics**, begins flying offshore support missions for Pecten at Trinidad. Two more Bell 212s chartered from the American partner are dispatched to Kuwait during July on a two-year medevac contract. At the same time, the company goes public and begins to trade its shares on the Oslo Stock Exchange. The move reduces the previous owner's share from 80% to 30% and brings in Nkr 385 million (\$59.6 million).

The **A/S Morefly** subsidiary begins operation of an AS-332L Super Puma during the summer. The company begins to upgrade its 17 S-61Ns, providing them with new avionics, interior layouts, pushout windows, cargo-hold smoke detectors, and new life rafts. Meanwhile, three Super Pumas are leased to **Bond Helicopters, Ltd.** and a fourth to **Maersk Air, A.S.** Late in the year, the company tests an FLIR-equipped AS-365N Dauphin 2 as a possible Bell 212 replacement.

Revenues for the year increase 51% to Nkr 1.21 billion (\$190 million), granting a Nkr 176.4-million (\$25.3-million) net profit.

The fleet at the beginning of 1992 includes 17 S-61Ns and 12 Super Pumas, plus 2 Civil Chinooks and Bell 212s. **Offshore Logistics** General Manager Harris Albert announces in February that **Air Logistics** has redeemed the stock in HS Logistics held by HS, primarily because work cannot be found for the partnership's larger helicopters outside of the North Sea. The joint venture becomes a wholly owned subsidiary of the American firm. The ongoing contracts of HS Logistics in Brazil and Trinidad will be completed by **Air Logistics** machines under that company's direction.

A Eurocopter (formerly Aerospatiale) AS-365N Dauphin 2 is leased for a trial period at month's end. At the beginning of March, the concern receives an Nkr 6 million contract from British Petroleum to transport its personnel between Kristiansund and the Ross Isle mobile drilling platform. The award begins when BP starts drilling an exploratory well on Haltenbanken at month's end.

During the spring, plans are made to move maintenance and administrative staff from Forus to Sola during the next year.

On July 1, a \$73-million order is placed for four Eurocopter AS-332L Super Puma Mk. IIs. The contract includes pilot training and technical maintenance.

As the result of increased North Sea competition costs, a total of 120 staff are laid off by November. Also during the year, a 33% interest is acquired in **Helicopter, S.A. (Helicsa)** of Spain.

A pretax profit of Nkr 208 million (\$28.5 million) is reported on top of operating revenues of \$150 million.

In late January 1993, HS is awarded a \$6-million contract by Helivifra, a joint venture of the French operator **Heli-Union, S.A.**, the Vietnamese national helicopter company **Service Flight Corporation (SFC)**, and Petrol Vietnam. Under its terms, HS dispatches a wet-leased AS-332L in February to Vung Tau, 62 nm. SE of Ho Chi Minh City, to support a BP-Statoil drilling ship and rig operating 200 nm offshore in the South China Sea. The number of AS-332Ls participating in this con-

tract will later be increased to five. During the spring, Helivifra begins to support a second HS Super Puma, which flies from Vung Tau on a \$5-million, yearlong contract with the Japanese-controlled Arabian Energy Development Corporation (AEDC).

Another new \$31-million, three-year contract begins on May 1; the Elf Petroleum Norge arrangement includes crew-change S-61N flights from Stavanger to the Frigg and Heimdal fields and shuttle and SAR services employing a Dauphin 2.

The outstanding shares of **A/S Morefly** are meanwhile purchased and that company will become a wholly owned HS subsidiary at the end of the fourth quarter.

In May, the Ministry of Social Affairs awards HS a five-year, \$59-million contract to provide some 65% of the nation's emergency medical service (EMS) airlift. The contract is divided between the company's subsidiaries, **A/S Morefly** and **Lufttransport, A.S.**

In June, a management contract is signed with Sweden's largest helicopter operator, Heliflyg A.B.; the arrangement also gives the Norwegian operator an option to purchase.

The company, on August 23, becomes the first helicopter line to take delivery of the Eurocopter AS-332L Super Puma Mk. II. It will be based at Stavanger to join five other Mk.IIs on offshore work. Also in August, a \$5-million contract is signed between Helivifra and Australia's BHPP. With maintenance support from **Heli-Union, S.A.** and ground support from SFC, an HS AS-332L Super Puma is dispatched to support the Australian drilling efforts in the Dai Hung field off the Vietnamese coast.

On September 1, **Braathens Helikopter A.S.** is purchased from Braathens Group. The merger leaves HS without domestic competition in Norway, a workforce increased to 900, and a fleet of 66 aircraft, including 7 Eurocopter Super Pumas. The move comes under the scrutiny of the national Monopolies and Mergers Commission (MMC) at month's end. Also in September, an offshore support arrangement similar to the BHPP deal is entered into by the Vietnamese, Norwegian, and French partners with the Korea Petroleum Development Corporation. Another HS Super Puma begins flying this support from Vung Tau in October.

During October and November, the U.K.'s **Bristow Helicopters, Ltd.** becomes minority shareholder in a new Stavanger-based operation, **United Helicopters, Ltd.** The new entrant, which will operate under the name **Norsk Helikopter, A.S.**, will directly challenge HS's growing monopoly of offshore work in its portion of the North Sea. As a result, the MMC, on November 19, informs HS that it will not intervene in its Braathens acquisition. The same day, HS increases its outstanding common shares through the issue of 2.2 million shares to the stakeholders in Braathens Helikopter, A.S.

Revenues for the year climb almost 20% to \$179 million and pretax profit accelerates by 12% to \$32 million.

The workforce in 1994 totals 942 and President Brinch's fleet now includes 68 helicopters and 10 fixed-wing aircraft, including: 23 Eurocopter AS332L Super Pumas, 16 Sikorsky S-61Ns, 2 Civil Chinooks, 9 Bell 212s, 1 Bell 214ST, 2 Eurocopter SA 315B Lamas, 5 Bell 214B-1s, 1 Partenavia AP-68TP Spartacus, 2 AS 332L.2 Super Puma IIs, 6 AS 350B1 Ecureuils, 3 AS 365N Dauphin 2s, 2 Bell 205s, and 10 Beech Super King Air 200s.

In addition to the main headquarters at Stavanger, as well as other offices at Oslo, Bergen, and Kristiansund, the company also maintains bases at Sola, Alesund, Bronnoysund, Tromsø, Longyearbyen, Mo i Rana, Bergen, Hammerfest, Svalbard, and Gaupne.

Acquisition of **Braathens Helikopter, A.S.** is concluded on January 1 and leaves HS, briefly, unchallenged in offshore helicopter services in its portion of the North Sea until **Norsk Helikopter, A.S.** appears later in the first quarter.

The carrier's wholly owned subsidiaries now include **A.S. Lufttransport, Heliwest, A.S.**, **Helimatic, A.S.**, and **A.S. Helicopter Service Reinsurance, S.A.** of Luxembourg. In addition to the Spanish operator **Helicopters S.A. (Helicsa)**, the company also maintains minority interest in **Avicopter, S.A. (25%)** and **Wiking Helicopter Service, GmbH.** of Germany (49%).

During the first quarter, the company receives two, five-year contracts to provide the Norwegian state-owned company Statoil with offshore support. One contract is for offshore-based infield shuttle and SAR services in the Veslefrikk, Statfjord, and Gullfaks fields. The other is for crew change operations from the carrier's Bergen base to Statfjord, Veslefrikk, and Gullfaks. Under the arrangement, one Bell 214ST and two S-61Ns will be fully committed.

Through two June purchases, HS assumes a 42% share of the North Sea offshore support market. First is the exercise of the option to take over Sweden's largest helicopter operator, Heliflyg, A.B. Second, and far more significant, is the June 27 (effective July 1) two-phase merger with the U.K.'s **Bond Helicopters, Ltd.**

The British transaction calls for the Norwegian line to assume an immediate £32.4 million, 49.4% stake and increase its holding over the next three years. Meanwhile, Bond's ownership (Managing Director Stephen and his brother Peter) will retain the largest individual shareholding with a 12% stake in the merged operation until the 43-million share, 50.6% takeover is accomplished.

Although the accounts of the two companies are combined, officials of both emphasize that the two lines will operate as independent national entities. They will continue to compete globally, but no longer against each other in the North Sea region. The deal is worth \$112 million (\$75 million in cash and \$37 million in stock options) and leaves the enlarged HS with 1,800 employees and 156 helicopters. Through Bond, HS also gains further entrance into southern Europe via the U.K. carrier's control of **Heli Portugal, S.A.** and further presence in Southeast Asia via Bond's purchase of Australia's **Lloyd Helicopters (Pty.), Ltd.**

During the summer, the company signs its first offshore support contract with a South American concern. To support Petrobras, the Brazilian state oil company, Aeroleo Taxi Aero, Ltda. leases two S-61Ns for three years. HS also agrees to provide maintenance support and pilot training. At the same time, the takeover of **A.S. Morefly**, begun in 1992, is completed, giving the company total control of the Norwegian helicopter market.

In early fall, new oil support contracts, signed in July, come into effect, including a deal from Statoil worth \$113 million, one worth \$20 million from Saga Petroleum, and a third, for \$30 million, with Norsk Hydro.

The latter will run for five years and include all of the concern's transport between its offshore fields and Stavanger and Bergen. Described as a "partnering" agreement, the award stipulates that any savings achieved through streamlining services to Hydro's platforms will be shared between the two companies.

Share capital is increased by Nkr 34.9 million on October 3 through an offering of Nkr 3.03 million. On October 28, HS signs an Nkr 200-million (\$30-million), five-year contract with Norsk Hydro A/S for North Sea offshore helicopter support out of both Bergen and Stavanger. The deal is the first giving the carrier business into the twenty-first century. A Sikorsky S-61N begins to handle the new arrangement as of November 1.

On December 1, President Brinch becomes board chairman, while Vice President Lars Harlem is elevated to general manager. Also in December, **Bristow Helicopters, Ltd.** is finally able to outmaneuver HS, winning the lion's share of two Phillips Petroleum contracts for shuttle services to and from the Ekofisk oil field in the Southern North Sea. Reportedly worth \$15 million per year and with a three-year option to extend, the arrangements will require Bristow to supply Norsk with four more Super Pumas early in the new year.

The **Norsk Helikopter, A.S.** success will idle the larger operator's two Model 234 Civil Chinooks, which will be put up for sale or lease. HS, meanwhile, acquires a five-year, \$7.5-million contract, with a two-year option, for shuttle service between Phillips platforms and for SAR missions.

New negotiations are initiated with the company's unions concerning the need for staff reductions and plans are made to merge the Lufttransport, Morefly, and Osterman subsidiaries early in 1995.

Airline employment stands at 1,450 in 1995. In January, Amerada Hess Norge A/S awards the company a \$227,272 contract for support flights out of Stavanger while a \$37-million extension (to the year 2000) is signed with Statoil for expansion of offshore support from Bergen. Also at the beginning of the year, the Brazilian operator Aeroleo Taxi Aero, Ltda. leases a pair of S-61Ns for three years; the Sikorskys will be used to support the state oil company, Petrobras.

On February 1, Phillips awards the concern a Nkr 250-million contract to expand its interplatform transport and rescue services. Two Bell 212s will be assigned when the enhanced service begins in August.

Simultaneously, the **Norsk Helikopter, A.S.** subsidiary receives a five-year, Nkr 500-million (US\$75.5-million) Phillips contract, set to begin on September 1, for the transport of workers between Stavanger and Ekofisk.

On April 1, all of the offshore responsibilities of **A/S Morefly** are assumed by HS.

A consortium led by Mobil Oil Canada (33.1%), Chevron Canada (26.8%), Petro-Canada (25%) create the Hibernia offshore oil project and award a five-year, C\$37-million contract to **Cougar Helicopters, Ltd.** of St. Johns, New Brunswick, in July. Cougar will provide support during and after the construction of the drilling platforms. Cougar now enters into a fifty-fifty joint venture with HAS. Under its terms, HAS will provide Cougar with pilot training and maintenance as well as lease the new Cougar Hibernia Division three of its Eurocopter AS-332L.1 Super Pumas.

During the summer, an experimental sea pilot transfer program is undertaken on behalf of the Norwegian coastal authority. If successful, a long-term contract will be granted.

The subsidiary merger with **A/S Morefly** finally occurs on September 1, with the single new **Lufttransport A/S** headquartered at Tromsø. The new entity, with former Lufttransport CEO Gunnar Bjorsvik as managing director, will employ 11 fixed-wing and 19 rotary-wing aircraft on air ambulance, charter, SAR, coast guard, and utility operations.

The five-year contract with Phillips Petroleum for shuttle and SAR services in the Ekofisk area also ends on September 1. Crew change operations in this area are terminated and the two B-234 helicopters performing the service are sold. Simultaneously, a long-term, \$24-million contract is signed with **Maersk Air, A.S.** for the lease of three Super Pumas.

In November, 44,978 shares of company stock are sold to HS employees at a special Nkr 58-per-share price.

The workforce is increased in 1996 to 1,832. After severe in-flight vibration, a Super Puma with 18 passengers ditches in the North Sea on January 18, some 26 nm. SW of Stavanger. Although all aboard are rescued from the floating helicopter, the machine sinks on January 19 before it can be salvaged.

The company is reconstituted on February 19 into the holding company Helikopter Services Group, A.S. (HSG) with Christian Brinch as board chairman and Lars Harlem as managing director. The activities formerly performed by Helikopter Services, A.S. are transferred to Lufttransport, A.S. Other wholly owned subsidiaries include Helikopter Service U.K., Ltd., Heliwest, A.S., Helicopter Service Reinsurance, S.A., Heliflyg A.B., Scancopter A.S., and Helimatic A.S. **Bond Helicopters, Ltd.** retains its identity and Stephen Bond remains CEO of Bond Helicopter Group, which also controls Australia's **Lloyd Helicopters (Pty.), Ltd.** All of the shares of HAS, Bond, and Lloyd are held by HSG and are traded daily on the Oslo Stock Exchange.

During early July, the company, in a \$5.5-million transaction, purchases a third of the shareholding in Capetown, South Africa-based **Court Helicopters (Pty.), Ltd.** Managing Director Larlem informs the press that the arrangement is part of the group's strategy of making acquisitions of selected regional helicopter carriers.

Acquired the previous summer, the Shannon-based SAR mission of **Irish Helicopters, Ltd.** is handed over to **Bond Helicopters, Ltd.** on January 1, 1997. In an example of industry consolidation, execution of the contract is arranged by HSG employing a Sikorsky S-61N leased from **Court Helicopters (Pty.), Ltd.** of South Africa.

After months of trial, the Norwegian Coastal Authority on January 7 executes a 3-year, Nkr 50-million pilot transfer contract with HS. The service will continue to be performed out of the Fedje sea pilot station, off Bergen on the Norwegian west coast, mainly ferrying sea pilots to and from tankers calling at the oil terminals of Mongstad and Sture.

On February 7, HAS wins a three-year, Nkr 90-million contract with two yearly options (valued at \$1.5 million per annum) to provide off-shore support for the Statoil north Norwegian base of Bronnoysund. At the same time, both Statoil and BP Norge extend their Stavanger-based contracts for another year from the coming January.

After some months of negotiation, HS, in March, wins the right to raise its holding in **Court Helicopters (Pty.), Ltd.** to 100% by the fall of 1998.

On April 22, the Tromsø-based subsidiary **Lufttransport, A.S.** obtains a 5-year, Nkr 200-million air ambulance contract from the Norwegian Social Security Department.

The HAS training contract for **Cougar Helicopters, Ltd.** begins in April, as does delivery of the Super Pumas. At the same time, the company removes several Bell 212s and receives two new Super Pumas Mk.IIs. Orders are placed for four more of the later type. The temporary Bronnoysund operation becomes a permanent helicopter base on May 1.

While on a crew familiarization flight from the airport at Maca, Brazil, on June 24, the S-61N, on lease to Aeroleo Taxi Aereo, Ltda., is destroyed beyond repair in a bad landing.

On July 1, the company's Heliflyg, A.B. subsidiary receives the largest helicopter service contract ever awarded in Sweden; the \$13.4 million award runs through mid-2000 and provides for EMS, air ambulance, environmental, police, and mountain search and rescue on behalf of the government.

Simultaneously, a \$5.3-million award is received from Finland for the modification of three Finnish Guard Eurocopter AS-332L.1 Super Pumas. After a year of ad hoc service, the company now begins providing sea-pilot transfer at Fedje, off the Norwegian coast near Bergen, on behalf of the Norwegian Coastal Authority, Statoil, and BP Norge. The \$12-million, one-year service will be executed with Super Pumas flights from Stavanger.

On July 22, Statoil and BP Norge extend by one year their \$14 million contracts for the transport of cargo and personnel to and from oil rigs. At month's end, a Nkr 40-million contract is received from the Finnish government for the modification of three Eurocopter AS-332L Super Pumas for the border guard.

The company signs an agreement with Bell Helicopter in August for cooperation on development of an offshore version of the Bell Boeing 609 civil tilt-rotor. An S-61N is leased to Rio de Janeiro-based Aeroleo Taxi Aereo, Ltda.

En route from Bronnoysund to Statoil's Norne platform 125 nm. off-shore on September 8, an AS-332L.1 Super Puma with 2 crew and 10 passengers crashes 100 nm. into its flight; there are no survivors. The disaster triggers a week-long grounding of all North Sea Super Pumas; those of HAS remain withdrawn from service through month's end as all are inspected.

Two Bell 212s flying SAR from Stortfjord on behalf of Statoil and Shell Expro over the East Shetland Basis are retired at year's end. They had been the last of their type in the company fleet.

In early January 1998, the two Stortfjord Bells are replaced with a Bell 214ST.

On March 11, a letter of intent is signed with the state oil company, Statoil, for the use of two new Super Puma Mk.IIs out of Bergen beginning in January. The helicopters will enter service under the existing contract, but at new and improved rates.

Managing Director Harlem resigns on March 24; Senior Vice President Jan Bengtson is named acting managing director. Having served on the board of directors for a year, Prosafe A.S. CEO Reidar Lund becomes board vice chairman at this same time.

The first of four new Super Puma Mk. IIs to be received by March 1999 arrives at the company's Oslo base in April. It is immediately committed to the Statoil and BP Norge services from Stavanger.

Under a deal signed on April 23, HAS begins to operate a support contract for Norsk Hydro's Visund oil field from Florø on June 15 employing an S-76C provided by sister company **Bond Helicopters, Ltd.** HAS already supports Saga Petroleum's Snorre field out of the Florø base.

Subsidiary **Lufttransport, A.S.** on June 9 signs a sale and lease-back agreement for seven Beech Super King Air 200s, which it will fly in support of the Norwegian ambulance service. The deal is valued at Nkr 20 million.

On June 13, the Aberdeen (Scotland) *Press and Journal* reports that **Canadian Helicopter Corporation, Ltd. (CHC)** is targeting either HAS or one of its subsidiaries (most likely U.K.-based **Bond Helicopters, Ltd.**) as a possible takeover target.

BP Norge renews its contract with HS on July 7 for another year; a Super Puma Mk. II will continue to be committed to the BP project from December. Two other contracts are also signed on the day: a 70-day pact with Norsk Hydro, beginning in August, and a two-year training contract with the German Luftwaffe. Together, the day's three new business arrangements are valued at Nkr 42 million.

Another Norsk Hydro contract is signed on July 1 and takes effect on August 1. It provides Super Puma helicopter support for up to 70 days for an exploration drilling out of Hammerfest.

During the fall, Statoil, the state-owned oil company, awards HS a 10-year, \$230.5-million contract to fly support from Bergen with a Bell 214ST beginning in March 1999, along with three Eurocopter Super Puma Mk. IIs, also from Bergen, starting a year later.

On October 29, HAS signs a Nkr 1.7 billion contract with Statoil to provide helicopter support out of Bergen on behalf of the state oil company for 10 years from February 2000. In addition to the commitment at that time of three Super Puma Mk. IIs, a Bell 214ST will begin flying on behalf of the company a year earlier.

In November, the **Norsk Helikopter A.S.** subsidiary takes over 40% of the Statoil contract. The terms of the \$203.4-million, 5-year Norsk contract (with five years of options) will be for support flights from Stavanger using two Super Puma Mk. Is.

A five-year, Nkr 250-million support contract is signed with Saga Petroleum on December 2. Options for another three years are contained in the paperwork. Additionally, the contract with Esso Norge is extended for another year; valued at Nkr 20 million, it will see continued use of a Super Puma Mk. I.

The board of directors elects Reidar Lund as the new chairman of Helikopter Services Group on December 10. He succeeds Chairman Brinch, who had asked to be relieved but who remains a member of the board.

Two Super Puma Mk. IIs enter service out of Bergen in early January 1999 on behalf of the Norwegian state oil company, Statoil. A third Super Puma Mk. II flies from Stavanger on behalf of BP Norge in support of that concern's activities on the Norwegian continental shelf.

The Aberdeen (Scotland) *Press and Journal* reports on January 12, that the **Canadian Helicopter Corporation, Ltd.** has purchased a package of 5.1 million shares in Helikopter Services Group. The 25% stake in the Norwegian operator, valued at a "knock-down price" of £16 million (Nkr 40 per share), is acquired from an institutional investor via the CHC Norwegian subsidiary Vinland Helicopters. The purchase makes CHC the largest shareholder in HAS, as well as its subsidiaries, **Bond Helicopters, Ltd.** and Australia's **Lloyd Helicopters (Pty.), Ltd.**

Under terms of the October 29 Statoil contract, a Bell 214ST begins service from Bergen on March 1.

An additional 5% stake in HSG is acquired on March 24, together with controlling interest. Interviewed by the *Press and Journal*, HSG Chairman Lund indicates that the action is regarded as an "unfriendly takeover" attempt. CHC Chief Financial Officer Jo Mark Zurel discourages "takeover speculation" and claims the share purchase is a money-making exercise.

The Norway Post on March 30 reports that the company has identified a need for staff cutbacks in addition to 50 already announced earlier. The

rotary-wing company will cut the posts during the remainder of the year through natural turnover, early retirement, outsourcing, and redundancies.

On April 14, Reuters, Ltd. publishes news that CHC will bid Nkr 45 per share for the remaining shares in HSG and that the official offer will be released within a week, again through its Norwegian subsidiary, Vinland Helicopters. After a preliminary discussion, the Norwegian operator indicates that the offer, compared to booked capital, is too low. CHC requires acceptances from those who hold 90% of HSG shares in order to accomplish the takeover.

CHC counters on April 26 with an offer, via Vinland, of Nkr 45 per share for the remaining shares. The purchase would be subject to successful completion of a due diligence review and government approvals. A statement from CHC also indicates that the offer is conditional upon Vinland gaining a minimum of 90% of HSG stock.

Because it has not yet received the required consent from HSG for the shares previously acquired, Vinland Helicopters (acting on behalf of **Canadian Helicopter Corporation, Ltd.**), on May 10, extends its voluntary offer to acquire all the shares of HSG to May 28.

A major minority shareholder with a 20% stake, the U.S.-based investment firm Tiger Management moves on May 21 to block the CHC takeover of HSG. Tiger, like the HSG management, believes CHC's 45 crowns per share bid is too low. A spokesperson tells the Norwegian business daily *Dagens Naeringsliv* that the current share price does not reflect the real value of the company.

CHC ups its offer to Nkr 60 per share in early June. As a result, CHC obtains 90.2% of the shares in HSG on June 25. The takeover immediately brings concern to workers at **Bond Helicopters, Ltd.** that many may lose their jobs if the new owners elect to merge their concern with **British International Helicopters, Ltd.**, which CHC already owns.

Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** announces on August 2 that all of the remaining conditions to its offer to purchase all shares in Helikopter Services Group, A.S. (HSG) have been satisfied or waived and that the acquisition is completed. Shareholders accepting the CHC offer receive a cash settlement by August 9.

CHC now finds itself the owner of two major U.K. rotary-wing subsidiaries, as well as the giant Norwegian operator's foreign subsidiaries that include **Court Helicopters (Pty.), Ltd.** of South Africa and **Lloyd Helicopters (Pty.), Ltd.** of Australia. In a move that foreshadows a corporation-wide integration a year later, **Bond Helicopters, Ltd.**, the HSG U.K. subsidiary also acquired, is now renamed **CHC Scotia, Ltd.**

On October 28, HSG is delisted on the Oslo Stock Exchange. This is the final step in CHC's takeover of its former rival; with completion of the acquisition, the Canadian giant is now the world's largest helicopter operator.

By November, the activities of CHC's **British International Helicopters, Ltd.** subsidiary and **CHC Scotia, Ltd.** at Aberdeen, Scotland, have been amalgamated and over 100 nonflight positions are eliminated.

On January 26, 2000, the U.K. Department of Trade and Industry and the EU Competition Commission both clear the merger of CHC's UK operations and those of **Helikopter Services Group, A.S.**

Phillips Petroleum Company Norway, A.S. awards HSG a Nkr 750-million (\$130.2-million), five-year contract on March 8, with an option for another five years. Under terms of the new deal, HSG will provide helicopter support to Phillips operations in the Ekofisk area of the North Sea. The contract also includes SAR and shuttle services for BP Amoco's Ula, Gyda, and Valhall fields in the same offshore region.

Working with the Welsh Development Agency, the U.K. managers of **British International Helicopters, Ltd.** open negotiations with CHC during the first quarter concerning a possible management buyout. With the acquisition of **Bond Helicopters, Ltd.**, now **CHC Scotia, Ltd.**, BIH has become the redundant U.K. subsidiary (publicly referred to as a noncore operation in the United Kingdom) for the giant North American concern.

A satisfactory arrangement is concluded on May 17 under which BIH, sold for \$51 million, once again becomes the largest U.K.-owned heli-

copter operator. The Canadian corporation's U.K. offshore activities will now center fully on **CHC Scotia, Ltd.**

Effective October 19, all of the subsidiaries of the **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, Helikopter Service, A.S. becomes **CHC Helicopter Service, A.S.** Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

Operations continue as before, employing a fleet of 30 aircraft, including 19 AS-332L Super Pumas. The main focus remains support of oil and gas exploration, although a variety of EMS, SAR, and charter flights continue to be offered, along with a scheduled passenger service from the north Norway town of Bodo to the island of Vaeroy.

HELIKOPTER SERVICE EURO AIR, A.B.: Oceangatan 6, S-25225 Helsingborg, Frihamnen Malmö, S-21123, Sweden; Phone 46 (42) 183515; Fax 46 (42) 187415; <http://www.helikopterservice.com>; Code YQ; Year Founded 1982. HSEA is established at Helsingborg in 1985 to provide daily roundtrip shuttle flights linking its base with Malmö and Copenhagen. Managing Director Sten Gunnarsson employs a workforce of 15 and inaugurates services with a small fleet of Bell 206Ls and Agusta A109s.

Operations continue apace during the remainder of the decade.

In 1990, the company replaces its earlier helicopters with a fleet of Aerospatiale AS-365N Dauphins. During 1991–1993, these are supplemented by two Bell 206L LongRangers. Passenger enplanements steadily increase, reaching 37,800 in 1994, a 37% jump in 5 years.

During 1995, the company makes a total of 12,500 flights, transporting 55,000 passengers. Three Sikorsky S-76C+s are purchased in October 1996. Enplanements for the year reach 70,000.

Service is expanded in 1997–2000, during which years the staff grows to 45 and 82 weekday flights are operated by the Sikorsky S-76C+s. The Dauphins and Agustas are replaced, but one LongRanger is retained for use on taxi runs and contract inspection flights. A new departure lounge is opened at Helsingborg.

HELIKOPTER SERVICE GROUP. See BOND HELICOPTERS, LTD.; COURT HELICOPTERS (PTY.), LTD.; HELIKOPTER SERVICES, A.S.; LLOYD HELICOPTERS (PTY.), LTD.

HELIKOPTERIPALVELU O/Y: Finland (1960–1999). One of the oldest rotary-wing operations in Finland, Helikopteripalvelu (Helicopter Service) is established at Helsinki in 1960 to provide power line inspections. It later branches out into passenger and cargo charters, search and rescue, EMS, aerial photography, and flight training. Flying between November and March will continue to prove difficult.

In 1978, the company becomes Finnish distributor for the Robinson Helicopter Company. Still, throughout the 1980s the company's main business remains power line inspection. Some 10–12% of Helikopteripalvelu's income is, however, now derived from passenger charters, including the transport of businessmen from Helsinki across the Gulf of Finland to Tallinn, Estonia.

By 1991, the company employs 10 workers, including 5 pilots. Fifteen other pilots are available on call, primarily from **Finnair O/Y** or the Finnish Frontier Guard. The fleet includes 2 Agusta A109s, 3 Robinson R-22, 3 Bell 206B JetRangers, and 1 Bell 206L LongRanger.

Newer activities include search and rescue and, on behalf of the police, speed checks using radar guns. In September, the carrier begins a six-month EMS test in the southern part of the nation.

Revenues total \$1.8 million.

Service continues apace in 1992–1997. During these years, the carrier leases a Bell 212 from **Helikopter Service, A.S.** of Norway. It is em-

ployed on behalf of the Finnish Ministry of the Environment to fly oil pollution patrol and containment missions in the eastern archipelago. It is also engaged to test the possibility of Finnish civil offshore support; the trial will show the market to be insufficient.

In 1999, Managing Director Pekka Kannien oversees a 22-person workforce and enjoys annual revenues of \$3.5 million. His fleet includes 1 Augusta 109, 1 Aerospatiale AS-355, 2 Eurocopter BO-105Cs, 1 Bell 206L LongRanger, 4 Bell 206B JetRangers, and 1 Robinson R-22.

In March, the operator is merged with cross-town Copter Action, O/Y to become **Copterlines, O.Y.**

HELIPOLIS AIRLINES, S.A.E.: Egypt (1996–2000). Heliopolis is established at Cairo in late fall 1996 to offer nonscheduled charter and inclusive-tour flights to domestic and European destinations. A McDonnell Douglas MD-83 is leased and begins flights to Mediterranean holiday spots in late December.

Early in 1997, the MD-83 also begins tourist flights from Cairo to Sharma El Sheikh, Hurghada, and Luxor. Orders are placed for an MD-90-30, which is delivered in August. Unable to maintain viability, the company shuts down in June 1998.

Following an 18-month hiatus, Heliopolis is reborn at the beginning of 2000. Chartered from ILFC, a Boeing 737-3Q8 in a white color scheme is christened *Karim* and enters service on March 16; a second Boeing 737-3Q8, *Shaza*, follows. Unhappily, rising fuel costs and a poor summer season combine to force the company on October 22 to again cease operations.

HELIOS AIRWAYS, LTD.: Ria Court, No. 9, P.O. Box 52022, Larnaca, 6028, Cyprus; Phone 357 (4) 815700; Fax 357 (4) 815701; <http://www.helios-airways.com>; Code HCY; Year Founded 1998. Helios is established in September 1998 as the first independent charter airline in Cyprus. It is majority-owned by TEA (Cyprus), a Cypriot offshore operator specializing in wet-leased Boeing 737 worldwide, with minority stakes held by various Swiss interests. A long gestation period will ensue before company flight activities actually begin.

At the beginning of 2000, CEO Markus Seiler has assembled a workforce of 90 ground and flying personnel. During the first quarter and into the second, the new airline, which is capitalized at £3 million, secures contracts from the following tour operators: London-based Olympic Holidays, Golden Sun, Falcon Holidays, Profilo Mediterraneo of Milan, Warsaw-based Cypriosun Holidays, and Nicosia's Louis Organisation.

The company's first dedicated aircraft, a B-737-4Y0 leased from GECAS christened *Athena* and wearing an ancient figurehead depicting the Greek Sun god on its tail, arrives at Larnaca on May 17. After Helios receives its air operators certificate from the Cyprus Directorate on May 24, the new Boeing is employed on May 26 to inaugurate weekly Sunday roundtrips from Larnaca to London (LTN). B-737-4Y0 charters are operated from Cyprus to Bergamo and Verona, Italy, between June 12 and September 18. Other destinations visited include Milan and Warsaw.

As the year continues, preparations are made for the arrival of two B-737-86Ns in March and April 2001.

HELIPORTUGAL, LTDA.: Cascais Municipal Airport, Hangar 3, Cascais, 2785632, Portugal; Phone 351 (21) 445-1575; Fax 351 (21) 444-8067; <http://www.heliportugal.pt>; Year Founded 1982. The oldest rotary-wing operator in Portugal, this concern is established in 1982 to provide fishery spotting, offshore oil rig support, air taxi and urgent-express delivery, aerial filming, and forest fire-fighting support. Over the next 18 years, the company spreads its wings across both Portugal and Spain, adding such missions to its portfolio as infrared inspection of power lines, life-line insulator spraying, forest fertilizing with differential GPS guidance, emergency medical services, power line pilot line placement, electronic journalism, and sling load work, such as the placement of antennas or air conditioning units.

Major customers for which services have been provided include SNB Service Nacional de Bombeiros, EDP Electricade de Portugal, SIC So-

ciade Independente de Comunicacao, RTP Radio Televisao Portuguesa, Empresa Sevillana de Electricidad, Electricidad de Cataluna, Portucel, Soporcel, CELBI, CELPA Associacao das Empresas Produtoras de Pasta de Papel, CME Construcoes e Manutencao Metalurgica, and Pinto & Bentes. The concern also joins the Flight Safety Foundation and the Helicopter Association International. Its maintenance arm becomes an authorized service center for both McDonnell Douglas Helicopters and Robinson Helicopter Company equipment.

Francisco Silva Passos is managing director in 1998, with G. Sousa Coutinho as operations director. The company now also provides a number of services to various sporting and entertainment industry projects. Among these are Portugal's Bike Tour, Rallye TAP Air Portugal, Baja Telecel, and Beja 2000. It also provides filming for the RTL television series *Der Clown*, television commercials, and documentary films about Portugal for foreign television channels. It also provides support for the producers of the motion pictures *Overkill* and *Hornblower*, the latter seen in the U.S. over the Arts & Entertainment Network (A&E) in 1999.

Also, in January 1999, the company takes over competing HFS Portugal, Ltda. The fleet is increased to 4 Eurocopter AS-350B Ecureuils, 1 AS-355 Ecureuil Twin Star, 1 Robinson R44 Newscopier, and 2 McDonnell-Douglas MD 500s. In October 2000, Heliportugal becomes the first rotary-wing operator in the country to accept delivery of a new Eurocopter EC-120 Colibri.

HELISUL LINEAS AEREAS, LTDA.: Rua Bela Cintra, 2093, São Paulo, 01415, Brazil; Phone 55 (455) 231190; Fax 55 (455) 744114; <http://shsibm.shh.fi/~an944420/heli.htm>; Code PE; Year Founded 1994. To take advantage of the recent increase in scheduled Brazilian regional airline operations, Helisul is established at Bacacheri Airport, in downtown Curitiba, in May 1994 as a subsidiary of the 32-year-old air taxi concern, Helisul Taxi Aereo, Ltda.

Flights commence with a fleet of 4 Embraer EMB-110P1 Bandeirantes. After fall negotiations, the government authorizes the company in December to inaugurate scheduled flights linking Curitiba with Francisco Beltrão, Pato Branco, Guarapuava, Campo Mourão, Maringá, Apucarana, Cascavel, Blumenau, Joacaba, Concordia, Chapeco, and São Paulo.

The company also operates a rotary-wing fleet that comprises 3 Bell 206A and 2 Bell 206B JetRangers, plus 2 Eurocopter AS-350B A-Stars. These continue to offer helicopter flights in Rio de Janeiro on behalf of Helisight Viagens e Turismo, Ltda., services that now include regular operations from the Urca Hill (Sugar Loaf) helipad.

Operations continue apace in 1995. Five more communities in the southeastern states of Paraná and Santa Catarina become scheduled destinations.

To supplement its domestic feeder routes, the rapidly expanding **TAM (Transportes Aereos Regionais, Ltda.)** purchases Helisul in August 1996. The sale price is 2 million reais (US\$2 million). The company, which is allowed to retain its independent identity, is assigned to TAM's **Brasil Central (Linha Aerea Regional, S.A.)** subsidiary.

An EMB-110 freighter with two crew crashes into a mountain near Joinville, Brazil, on September 13; there are no survivors.

At the beginning of 1997, the fleet of President Eloy Biesuz includes 1 Bell 206A, 7 Bell 206Bs, 4 HB350Bs, and 4 Bandeirantes. In September, the carrier takes over a number of routes previously operated by Brasil Central.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Enplanements for the year total 148,287.

Flights continue in 1998. On December 30, the DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Passenger boardings increase 126.1% to 335,000, while freight traffic skyrockets 116.6% to 2.06 million FTKs.

Flights continue in **1999–2000**, during which years a honeypage for the Helisight operation is also opened on the Internet at <http://www.helisight.com>.

HELISUL TAXI AEREO, LTDA. See **HELISUL LINEAS AEREAS, LTDA.**

HELISWISS (SWISS HELICOPTERS, LTD.): P.O. Box 75, Bern Airport, Belp, CH-3123, Switzerland; Phone 41 (31) 819-3311; Fax 41 (31) 819-4171; <http://www.businessworld.ch/11/be/31/heliswiss.htm>; **Year Founded 1953.** This charter operator is formed at Berne in April 1953. In 1953–1982, extensive domestic passenger and cargo operations are developed, along with survey flights, agricultural spraying, and sight-seeing charters, including many of an international nature. The company's fleet includes a variety of rotary-wing aircraft, including Bell 47s, 204s, 205s, 206s, 412s and Aerospatiale AS-315s and 350s.

The company is purchased in 1983 by competing Air Grischa Helikopter, A.G.; allowed to retain its own name, the company is folded into a group of firms managed by Heri/Swiss Helicopter Management. Other operators in the group include **Eliticino, S.A.** and **Helitrans**; the three fly from several bases. Corporate headquarters are maintained at Bern's Belp Airport, where Dr. Jurgen Riedi serves as president.

In 1984–1988, Heliswiss develops a reputation for construction work in mountainous areas. In addition, it continues to undertake international missions, including geological survey work in Greenland, insect spraying in Africa for the World Health Organization, power line construction in Nigeria, and fish spotting in Mauretania. During the latter year, the company's Bell 214B participates in the construction of a crane on top of 9,745-ft. high Schilthorn Mountain, which will be employed, in turn, to build a cable car station.

Two Barcelona, Spain-based operators are brought into the corporate fold in 1989, Aercombi, S.A. and Rescate Aero, S.A. The acquisition allows the Spanish customers of Heliswiss, Ltd. to circumvent the need to seek government permission to contract with foreign firms.

The fleet in 1990 includes 5 Bell 206B JetRangers, 5 Aerospatiale SA-315 Lamas, and 1 each Bell 205A, 214B, and Aerospatiale SA-316 Alouette III and AS-350B Ecureuil. The Eliticino fleet features 8 Lamas, 2 Alouette IIIs, and 1 each Ecureuil, Bell 205A, and Bell 206B JetRanger.

A Soviet-built Kamov Ka-32 is chartered for three months and is employed to assist civil authorities in clearing salvageable timber from damaged forests between Unterwallis to Zentralschweiz following major storms early in the year.

A Ka-32 is again placed into service during April 1991. Service continues to expand during the remainder of the decade and by 2000, Dr. Riedi's fleet includes 5 Eurocopter AS-315Bs, 6 each AS-350Bs and Agusta-Bell 206B JetRangers, 2 Bell 214Bs, and the leased Kamov Ka-32.

HELITOURS, LTD.: P.O. Box 594, Colombo 2, Sri Lanka; Phone 431584; Fax 432336; **Year Founded 1971.** Helitours is born of the 1971 political and economic debacles, the containment of which is responsible for a sudden large expansion of the Sri Lankan Air Force. After the upheavals, a proposal is made to the government to utilize the helicopters and fixed-wing aircraft and their crews on nonmilitary duties as a way of helping to recover part of the cost of the defense establishment, while keeping personnel trained and ready. The idea is accepted and authorized under a presidential decree as a charter operation, not a scheduled service selling tickets. Regular domestic flights are inaugurated between Colombo and Amparal, Anuradhapura, Batticalos, Jaffna, Koggala, Minneriya, Trincomalee, Vavuniya, and Wirawila.

Within seven years, Air Vice Marshal Harry Goonetilleke's fleet comprises 1 Convair CV-440, 2 Riley Turboliners (de Havilland DH 114 Herons with turboprop engines), 2 Herons, 2 DC-3s, and 7 Bell 206 JetRangers. During the early 1980s, the fixed-wing fleet is upgraded by the

addition of 1 Hawker Siddeley HS 748 in place of the Convair, 3 Cessna 337F Super Skymasters, and 2 Aerospatiale SA-365C Dauphin 2s.

By 1988, CEO Air Marshal M. J. T. des Gunarante's fleet comprises 3 HS 748s, 1 Beech King Air 200, the 3 Super Skymasters, and 6 Yun Y-12s. Two Y-8s are acquired in 1990. Airline employment in 1992 stands at 35 civilian personnel in addition to military flight and ground crews.

Operations continue in 1993–1994, at which point the rotary-wing fleet includes 12 Bell 212s, 4 Bell 412s, 6 Bell 206A JetRangers, and 3 Mil Mi-17s. The fixed wing fleet has not changed since the 1980s.

Just after takeoff from Palay AFB on a charter troop service to Colombo on April 18, 1995, a BAe (HS) 748-2A with 3 crew and 42 passengers is hit in the left wing by a surface-to-air missile. The pilot attempts to return to his point of origin in heavy rain, but the right wing fails and his aircraft crashes 700 ft. short of the runway. There are no survivors from a tragedy blamed on Tamil separatists.

The next day, a BAe (HS) 748-B2 with 3 crew and 49 passengers on another troop charter en route from Anuradhapura to Palay AFB, is hit at 3,000 ft. by a surface-to-air missile. The turboprop smashes into the ground 10 km. from its destination and, again, there are no survivors.

While on final approach to Palay AFB on November 18, a Yunshuji Y-8 with six crew is shot down by 20mm. Orikon antiaircraft fire from two Tamil separatist gunboats and crashes into the sea three km. off-shore (five dead).

As civil disturbances continue to rock the island nation and attacks by the Tamil Tiger rebels become more fearsome, the government bans domestic flights, particularly those between the Jaffna Peninsula and Colombo. As a result, the company is shut down.

In late January 1999, the Sri Lankan Defence Ministry informs the press, including the BBC, that Helitours, Ltd. will be reactivated to operate daily service into the Jaffna Peninsula. The service, employing SLAF Antonov An-32s, will replace the frequencies previously provided by Lionair before its aircraft was destroyed.

Due to the threat of missile attack from rebel forces, the government again halts its Jaffna Peninsula service in March 2000. Civilian traffic from the embattled area to the capital must travel by sea to Trincomalee and then by train.

In October, arrangements are completed with **Air Moldova International** for the operation, on behalf of Helitours, of a replacement civil service between Colombo and the Jaffna Peninsula. The Moldovians send out a wet-leased Antonov An-24V, which begins revenue flights on November 17 from Colombo to Ratmalana and Palaly/Kankesanturai.

HELITRANS, LTD. See **HELISWISS, LTD.**

HELITRANS AIR SERVICE: United States (1989–1992). Longtime tour operator Helitrans, based at Los Angeles, makes plans in the spring of 1989 to offer a new helicopter scheduled airline service for the city. A fleet of 3 Aerospatiale A350D AStars is assembled to which is added Helitrans' Bell 206L LongRanger. Simultaneously, joint-fare agreements are signed with two American and three foreign flag carriers: **American Airlines, United Airlines, British Airways, Ltd. (2), Korean Air, and Virgin Atlantic Airways, Ltd.**

Roundtrip revenue flights commence on August 15, linking Los Angeles (LAX) with John Wayne Airport in Orange County, John Wayne to Catalina Island, San Pedro to Catalina Island, and Los Angeles (LAX) to Catalina.

Operations continue apace with no change into 1991. However, significant financial problems are encountered as a result of the recession and the carrier becomes the latest in a long line of scheduled rotary-wing failures when it folds in 1992.

HELLENIC AIR, S.A.: Greece (1992–1995). Established at Athens in 1992, HA must wait two years to begin regional services. When flights commence in 1994, only one British Aerospace (BAC) 1-11-500 is employed. Unable to achieve viability, the company shuts down in 1995.

HELLENIC AIRLINES, S.A.: Greece (1947–1951). The commissioners of the three branches of the Greek armed services plus the Civil Service Pension Fund (60% interest) join **Scottish Airlines, Ltd.**, the air transport division of Scottish Aviation (40% interest), in forming this ambitious carrier on September 1, 1947. A leased Scottish Douglas DC-3 is employed for crew training, but while on a September 3 training mission, the plane, with eight crew, crashes near Hassani Airport (three dead).

In February and March 1948, a **Scottish Airlines, Ltd.** Consolidated Liberator II and two Douglas DC-3s are purchased and these are employed, beginning in February, to initiate scheduled services from Athens to Salonika, Larissa, Crete, and London. On September 14, eight armed Communists seize one of the Douglas transports, beat the crew, and force the aircraft to land in Yugoslavia. The plane, crew, and passengers are allowed to return the next day.

A DC-3 crashes near Athens on June 6, 1949 (22 dead). A second Liberator II is acquired in July, allowing the Greek airline to provide new or additional frequencies to Glasgow, Alexandria, Kavala, Janina, Nicosia, Paris, Tel Aviv, and London. Additionally, DC-3s are flown to the various islands in the Aegean.

The last Liberator II is withdrawn, together with **Scottish Airlines, Ltd.** involvement, in October 1950, having been replaced by DC-4s that allow new or more frequent flights to start to Rhodes, Cairo, and Cyprus. Unfortunately, these services are not financially viable.

The Greek government in July 1951 supervises a national airline realignment. Hellas is one of three carriers amalgamated into a new joint stock company under the banner of the country's major local service operator, **TAE Greek National Airlines, S.A.**

HELLINIKI ETERIA ENAERION SYNGHINONION, S.A. (HEES): Greece (1931–1940). This company is formed at Athens in early 1931 to provide service along the coast and northwest to Janina. Four Junkers G.24 trimotors are obtained and services begin in mid-June. The first flight is made between Athens and Thessaloniki and an enthusiastic Prime Minister Eleutherios Venizelos is the first official passenger. Frequencies are expanded throughout the remainder of the decade.

By 1939, the fleet has been upgraded to include not only the original G.24s but three new Junkers Ju-52/3ms; this year some 2,000 passengers are transported. When a new company, **TAE Greek National Airlines, S.A.**, known officially as Technical and Aeronautical Exploitations Company (TAE), is formed in 1940, HEES ceases operations.

HELO AIR: Richmond Jet Center, 5733 Huntsman Road, Sandston, Virginia 23150, United States; Phone (804) 226-3400; Fax (804) 226-3494; <http://www.heloair.com>; Year Founded 1993. Helo Air is established at Richmond in 1993 to provide executive and small group passenger charters throughout the Washington, D.C. and Virginia metropolitan area, including the major airports of Washington, D.C. (DCA and IAD) and Baltimore (BWI).

By 2000, the company employs five pilots. From Richmond, it flies 2 Bell 206B JetRangers and 1 Bell 206L LongRanger; 1 JetRanger is also stationed at Washington, D.C. (DCA).

HELOG, A.G.: Haltikon, Kussnacht CH-6403, Switzerland; Phone (041) 854-0854; Fax (041) 854-0855; <http://www.helog.ch>; Year Founded 1981. Helog is established in the central region of Switzerland in 1981 to provide lift support for construction projects in an area stretching to Zurich and Lucerne. Over the next 20 years, the company, beginning with a single Aerospatiale AS-332 C1 Super Puma, specializes in such activities as lift for the building or repair of cable car and electrical systems, as well as fire fighting and VIP passenger transport. A maintenance center is established that carries out its work in accordance with JAR 145 standards, while the concern's safety is recognized by receipt of the Operator Safety Award from the International Helicopter Association.

In 2000, CEO Rolf W. Stalder's fleet includes 2 Aerospatiale AS-332C1 Super Pumas and 1 Kama Ka-21 heavy lift helicopter leased from Russia.

HELY AIR SERVICES, LTD.: Sofia Airport North, Sofia, 1540, Bulgaria; Phone 359 (2) 795036; Fax 359 (2) 791151; Year Founded 1988. HAS is established at Sofia Airport in 1988 to undertake the international and domestic air transport of passengers, construction and assembly work, fire fighting, timber work, and agricultural and sanitary activities. Managing Director Georgi Spassov's fleet comprises 10 Mil Mi-8 helicopters.

The rotary-wing component is changed in 1989–1990 as four Mi-2s are added. Operations continue apace in 1991–1992. Airline employment in 1993–1994 totals 84 and revenues in the former year reach \$1.5 million.

Flights continue during the remainder of the decade; however, the number of Mi-8s is reduced by one.

HELYJET, S.A: Esmeralda 1320, Piso 5A, Buenos Aires, 1007, Argentina; Phone 54 (11) 4322-9100; Fax 54 (11) 4327-0404; Year Founded 1996. Helyjet is established at Buenos Aires in 1996 to offer executive and small group passenger charters and medevac flights. By 2000, Managing Director David Yacobite oversees the work of 12 full-time pilots and the operations of 2 each Swearingen Metros and Learjet 25s, plus 1 Eurocopter Bo-105 helicopter.

HEMISPHERE AIR TRANSPORT. See NORTH AMERICAN AIRLINES (NAA) (1)

HEMUS AIR, LTD.: Sofia Airport, Sofia, BG-1540, Bulgaria; Phone 359 (2) 702 076; Fax 359 (2) 796 380; Code DU; Year Founded 1989. Hemus is formed at Sofia Airport in 1989 to operate domestic services, initially with a single Antonov An-30. The fleet is substantially increased in 1990, adding three Let L-410UVPs, two Tupolev Tu-134As, one Tu-134A-3, and eight Yakovlev Yak-40s.

The Tu-134A-3 is withdrawn in 1991 and one Let 410 is chartered to **Malitas (Mali Tombouctou Air Service)**. Two internal routes are now flown on behalf of **Balkan Bulgarian Airlines**. The Malitas lease ends in 1992 as flights begin to Thessaloniki, Greece. Operations continue apace in 1993 and revenues total \$4.7 million.

In 1994, Managing Director Zdravko Velichkov's fleet includes 9 Yak 40s, 2 Tu-134As, and 3 Let 410UVPs. In addition to international and domestic air transport, the company continues to offer charter flights, air photography, sanitary activities, and the technical air control of air navigation equipment.

Flights continue in 1995–1998. Destinations served on a scheduled basis include Bratislava, Bucharest, Leipzig, Oslo, Skopje, Sofia, and Triana. Dimitar Pavlov becomes managing director and his fleet is revised to include 5 Yak-40s, 3 Tu-134As, and 2 L-410UVPs. As **Balkan Bulgarian Airlines** encounters financial difficulties, Hemus is able to assume some of its business.

Unable to change the Belgrade government's policy toward the ethnic Albanians in Kosovo province, NATO, on March 24, 1999, closes the airspace over the federal republic of Yugoslavia, plus Croatia, Bosnia, and Albania and launches the bombing campaign Operation Allied Force against Yugoslavia. Hemus is prohibited from flying into those nations and, like other European airlines, finds itself confronted with cancellations and delays on services throughout southeastern Europe until June.

The Bulgarian transport minister argues in April for a delay in the timing of Hemus Air's privatization. However, it is reported on May 23 that the carrier will be put up for auction. Plans for a sale of a 51% stake in Bulgaria's second state airline are confirmed in September.

On November 3, the airline is officially put up for sale. Thirteen companies, including **Albanian Airlines**, submit tender documents after studying Hemus' finances. All agree that they will be able to pay up

front at least half of the total price, when it is set. These results come in the wake of two deadline extensions, the second to January 10.

Flights to 7 international and 2 domestic points continue with 6 Tu-134s, 6 Yak 40s, several L-410UVPs, and 1 leased Tu-154. At the end of the year, Reuters, Ltd. reveals that the state privatization agency has extended the bid deadline for a third time, from January 10 to February 12.

HENEHERY AVIATION (PTY.), LTD.: Australia (1967–1987). Incorporated by Manager Kevin T. Henebery and Assistant Manager Irene M. Henebery at Caloundra, Queensland, in early 1967, Henebery Aviation inaugurates local charter and contract service flights in August with a single Cessna 172. Flight training is also provided. In early 1972, by which time the company's fleet has grown to comprise 1 Cessna 210 and 2 Cessna 172s, permission is received to inaugurate commuter services; regularly scheduled flights to Brisbane commence in July.

For the next 15 years, the single route is maintained. During this time, A. J. S. Fyfe takes over and the fleet is upgraded by the addition of three Partenavia P-68Bs, two Beech B-58 Barons, and a Piper PA-34 Seneca. Financial difficulties mount through the mid-1980s and, in 1987, the carrier is forced to close.

HENRY'S CHARTER SERVICE: United States (1965–1968). Henry's is formed at Concordia, Kansas, in the summer of 1965 to offer nonscheduled Cessna lightplane services to Kansas City. FAA certification to provide scheduled daily passenger and cargo roundtrips is received on August 17.

Revenue commuter flights commence on May 15, 1966 and continue until 1968.

HENSLEY FLYING SERVICE: United States (1944–1978). Walter Hensley establishes an FBO at Havre, Montana, in 1944, adding charter flights, which continue to be offered for the next 30 years. In 1974, the company is purchased by James Stroh, who continues to provide nonscheduled air taxi services for the next two years.

Cessna 206 scheduled services to Great Falls are introduced in 1976 and maintained, along with the charter network, until the company's certificate is sold to **Big Sky Airlines** in late 1978.

HENSON AVIATION: United States (1962–1993). Richard A. "Dick" Henson begins **Hagerstown Commuter** on October 1, 1962 as a division of his successful FBO operation, originally started in 1931. A Beech 18 in bright yellow livery together links the western Maryland city four times Monday–Friday with Washington, D.C. (DCA). The Beechcraft is initially unprofitable and beginning in 1963 it is supplemented by an Aero Commander 680 and a Beech Bonanza. Operations continue apace in 1964–1967, during which years Henson captures over 70% of the Hagerstown traffic.

In August of the latter year, Henson enters into the first "Allegheny Commuter" associate agreement with **Allegheny Airlines**. The third-level carrier will now provide four per day scheduled flights from its western Maryland base to Washington, D.C. (actually, Baltimore's Friendship Airport). For its part, the larger local service carrier agrees to help with reservations and ticketing, station handling, market planning, and accounting, and to offer a two-year financial guarantee against loss.

Employing a Henson Beech B-80 Queen Air with the words "Allegheny Commuter" painted on its white fuselage sides in red, what will become the nation's most successful interline operation begins on November 15, replacing the heavier (and more expensive) Fokker F.27 service of **Allegheny Airlines (1)**.

The third-level contract quickly proves its worth. Within a year, **Allegheny Airlines (1)** is able to withdraw its \$58,000 annual subsidy. On June 1, 1968, Beech 99s, in suitable livery, increase capacity. After two promotional flights, they launch seven-times-per-day frequencies between Salisbury, Maryland, and Washington, D.C. (DCA). Traffic increases dramatically over the next decade as a variety of new destinations are added, including Pittsburgh, Hagerstown, and Philadelphia.

Operations continue apace in 1969–1973 and, by 1974, enplanements are 126,380.

Airline employment in 1975 stands at 68. A new hangar and terminal are dedicated in November at Salisbury. The carrier's five Beech 99s transport 142,369 passengers on the year, an increase of 11%.

The workforce is increased by 30% in 1976 to 80. Although a sixth Beechcraft is acquired, termination of Beech 99 production requires the company to begin seeking different equipment.

Passenger boardings accelerate 30% to 184,932. Freight traffic rises a spectacular 179.8% to 21.6 million FTKs.

In 1977, enplanements reach 219,179.

Airline employment is increased by 8.1% in 1978 to 134 as service is maintained over the carrier's 435-mile route network.

Passenger boardings increase by 17.1% to 256,769; however, cargo is down by 17.1% to 822,000 pounds.

Beginning on June 1, 1979, service is inaugurated from Baltimore (BWI), Norfolk, and Newport News to many of the communities on the Virginia peninsula.

The carrier's 8 aircraft are able to boost enplanements by 34% to 343,986; they cannot carry more freight, which falls by 26.6% to 603,000 pounds.

As the airline grows, so does its workforce, reaching 235 in 1980. William P. Gombe is now appointed vice president-operations and the fleet grows to include 1 de Havilland Canada DHC-7-102, 4 Shorts 330s, and 6 Beech 99s, with orders outstanding for another Dash 7 and 6 Dash 8s. Service is extended into the Shenandoah Valley on September 15, with emphasis on the Virginia capital of Richmond.

Bookings advanced 16% to 400,676. On revenues of \$8.85 million, expenses are \$7.3 million, leaving a \$691,906 profit.

Airline employment is increased to 267 in 1981. Two more Dash 7s arrive in early spring to join the four Shorts and one less Beech 99. Services are inaugurated from Richmond to Pittsburgh and Washington, D.C. (DCA) via Newport News; and from Baltimore (BWI) to New York City (JFK). Corporate headquarters are transferred to Salisbury, as a new \$1-million multipurpose facility is opened.

Traffic increases by 24% as 495,945 passengers are flown. Revenues advance 36.2% to \$11 million and expenses by 36.3% to \$10 million, leaving a profit of \$931,238.

The payroll is increased another 38% in 1982 to 363. In January, the company receives the 1981 "Regional Airline of the Year" award from *Air Transport World* magazine.

During the year, founder Henson begins looking for a buyer who can assure the future of his carrier. Early in the spring, a new market is initiated at Harrisonburg, Virginia, and the move is followed by a June launch of service to Charlottesville.

On June 23, a woman, claiming to be armed, approaches the copilot of a Dash 7 as it prepares for a commuter service from Staunton, Virginia. When the man calls her bluff and refuses to immediately depart, she walks back into the terminal, where she is arrested on attempted hijacking charges by security police.

Later, flights begin from Baltimore (BWI) to New York (LGA) and Ocean City. The outstanding Dash 7 is delivered and a new livery and logo are introduced during December.

Enplanements for the year jump 31.1% to 650,290 and income of \$35 million is reported.

Airline employment jumps 37.6% in 1983 to 494 and the fleet now includes 4 Shorts 330s, 7 Beech 99s, and 6 Dash 7s. Orders remain outstanding for eight DHC-8s. Long Island, Roanoke, and Norfolk join the route market.

Henson concludes its 15-year-old arrangement with **USAir** and signs an agreement on October 30 with Piedmont Aviation, holding company for **Piedmont Airlines (1)**.

The North Carolina-based national will now acquire full ownership of the regional through five annual 20% stock transactions to be concluded in 1987. Henson will continue to operate under its own name as Henson, the Piedmont Regional Airline, becoming, in essence, a dedicated

feeder, transporting passengers for its new owner, especially to Baltimore (BWI), where its schedule is integrated with the national's. These "Piedmont Commuter" services commence in November.

Bookings rise 7.6% to 699,437 and cargo jumps 10% to 983,000 pounds. A private company, Henson chooses to no longer release financial data.

The payroll ascends 18.6% in **1984** to 554 and the fleet includes 7 Shorts 330s, 5 DHC-7-102s, and 9 Beech 99s. The route system is extended from Boston to North Carolina; among the new destinations visited are the Pennsylvania cities of Allentown, Wilkes-Barre, and Harrisburg; MacArthur Airport on New York's Long Island; the West Virginia resort area of Greenbrier; and the Virginia communities of Lynchburg, Norfolk, and Roanoke.

Enplanements jump 4.9% to 733,569, but freight declines 2% to 963,000 pounds.

The employee populations increases again in **1985**, climbing 72.3% to 672 and the fleet is enhanced by the delivery, through the year, of 5 DHC-8-102s and 5 Shorts 330s. Six cities circling Piedmont's Charlotte, North Carolina, hub receive initial service beginning on March 15, as do markets at Bridgeport, Connecticut, and White Plains, New York. Also in March, a fifth frequency is added from Baltimore (BWI) to Wilkes-Barre and Scranton. The first DHC-8-102 enters service on May 2 between Salisbury and Baltimore-Washington International Airport. Later in the month, frequencies begin to Florence and New Bern, South Carolina.

Flight 1517, a Beech 99 with 2 crew and 12 passengers, crashes into the side of a 2,400-ft. high mountain in Shenandoah National Park, 5 mi. E of Shenandoah Valley Airport in Weyers Cave, Virginia, on September 23; there are no survivors. Flights to Hilton Head, South Carolina, also commence in September.

Passenger boardings swell 19.8% to a record 878,659, but cargo plunges further, down 31% to 664,000 pounds.

Airline employment rises 21.1% in **1986** to 814. Fellow commuter **Jetstream International Airlines** is acquired, allowing the **Piedmont Airlines** affiliate to extend its influence west toward Dayton and the Midwest. A reorganization plan is initiated, with **Jetstream International Airlines** remaining an independently named Henson subsidiary.

In July, company officials, seeking a new aircraft, sponsor a fly-off between the British Aerospace BAe Jetstream 31, the Fairchild Metro III, and the Beech 1900C. By September, Henson flies farther north, south, and west than any other regional airline on the eastern seaboard.

Donald Curtis Smith becomes president in October and in November it is announced that Henson will implement a Piedmont Shuttle Link service in Florida, under the direction of long-time **Eastern Air Lines** official Joseph Chornyel, beginning early the next year.

Customer bookings jump 31% to pass the one million-mark in annual boardings for the first time (1,151,027). Cargo also accelerates, by 24%, to 910,000 pounds.

The workforce is increased by 26% in **1987** to 1,028 and the fleet comprises 9 DHC-8-102s, 4 Dash 7s, 11 Shorts 330s, and 7 Beech 99s. Orders are outstanding for 9 additional DHC-8s. From a headquarters at Jacksonville, the Piedmont Shuttle Link service is inaugurated in Florida on February 1; 11 Sunshine State cities and 5 Bahamian destinations are connected by DHC-8-100 with the major's intrastate route network.

The system is expanded on March 15 and by June, over 60 daily frequencies are available. The incremental stock purchase signed with **Piedmont Airlines** in 1983 is now completed and in October Henson becomes a wholly owned subsidiary of the major.

Passenger boardings advance by 15.2% to 1,325,917, including 200,000 flown in Florida.

The employee total is cut by 2.5% in **1988** to 1,000 and the fleet now includes 20 DHC-8-102s, 5 DHC-7-102s, and 6 Shorts 330s. Service is inaugurated in February from Fort Lauderdale and Orlando to Treasure Cay and Marsh Harbour, in the Bahamas. Trenton, New Jersey, becomes the 39th point on the route map in March, with a service to it from Washington, D.C. (DCA).

In May, the company inaugurates flights from Nassau to Fort Lauderdale and West Palm Beach. Two daily flights are added in September between West Palm Beach and Freeport, Grand Bahamas. During the same month, a DHC-8-102 is ferried north one day per week from Jacksonville to Charlotte; from there it undertakes a roundtrip shuttle to Hilton Head Island, South Carolina.

Four-times-per-day DHC-8-102 frequencies are initiated in October from Brunswick's Glynnco Jetport to Charlotte's Douglas International Airport; thrice-daily Shorts 330 flights begin from Mercer County Airport at Trenton to Washington, D.C. (DCA). Service is also launched from Washington, D.C. (DCA) to New York (JFK). Flights are now provided to 42 airports in 12 states, the District of Columbia, and the Bahamas. Founder Richard A. Henson retires at year's end and is succeeded as president/CEO by Ronald Holley.

Customer bookings hit a new record as 1,586,142 passengers are flown, a 19.6% boost.

The **USAir** subsidiary replaces its Shorts 330s in **1989** with 13 additional DHC-8-102s. In April, four daily DHC-8-102 frequencies are added from Naples Municipal Airport to Tampa. On July 1, the **Piedmont Airlines** merger into **USAir** is completed.

The new services help the operator to establish yet another new traffic record for itself as enplanements climb 16.8% to 1,852,530.

The fleet in **1990** includes 7 DHC-7s and 33 DHC-8-102s. The last four remaining Shorts 330s are all chartered to **Allegheny Commuter Airlines**. In April, the company's flight attendants, represented by the Association of Flight Attendants (AFA), overwhelmingly accept their first contract with the airline. Passenger boardings for the year expand another 8.3% to 2,006,069.

The largest "USAir Express" carrier withdraws two DHC-7-102s in **1991**. In January, the company becomes the first regional certified to use TCAS in scheduled U.S. airline service.

The year's enplanements move ahead by 2.6% to 2,058,329.

The fleet in **1992** includes 44 aircraft: 39 DHC-8-102s and 5 DHC-7-102s. Passenger boardings swell 9.1% to 2,246,195.

A new \$1.6-million maintenance facility is opened at Jacksonville, Florida, in January **1993**. In honor of its onetime owner and code-sharing partner, Henson is renamed **Piedmont Airlines (2)** later in the year.

HERMEN'S AIR: United States (1970-1990). Established at St. Mary's, Alaska, in **1970** by Stanley Hermen, HA develops an nonscheduled route network that links its base with Nome in the north, Holy Cross, Dillingham, and Bethel in the south, Toksook in the west, and St. Michael in the east. By **1977**, company employment is 12 and the fleet comprises 5 Cessna 207s, 1 Piper PA-18 Super Cub, and 1 Piper PA-24 Seneca II. Enplanements for the year are 2,292.

Boardings fall a significant 17% in **1978** to 1,956. Following the introduction of scheduled passenger and cargo flights late the previous year, enplanements rebound in **1979**, advancing by 114% to 4,178.

The fleet is increased in **1980** by the addition of several de Havilland Canada DHC-2 Beavers and DHC-3 Otters and a feeder arrangement is entered into with **Wien Air Alaska**. Bookings skyrocket 180% to 7,513, but grow by only 8 bookings in **1981**.

Bethel becomes a major hub in **1982** and operations continue apace, despite the loss of the feeder arrangement with **Wien Air Alaska** upon the national's failure in **1984**.

By **1985**, the fleet comprises 8 Cessna 207s, 2 Cessna T-1040s, 1 Cessna 185, 1 Cessna 402, 1 Piper PA-34 Seneca, 1 Cessna 172, and 1 de Havilland Canada DHC-2 Beaver.

Just after takeoff from Bethel on November 1, a Cessna 208 with a pilot and three passengers suffers a total loss of power and crashes; there are no survivors.

Flights continue without incident in **1986**, but tragedy again occurs on August 8, **1987**. While en route to Red Devil, a Cessna 207A becomes lost in fog and crashes at a point 9 mi. S of Crooked Creek, along the western shore of the Kuskokwin River; the pilot is killed and the aircraft is destroyed.

Galena Air Express is purchased and merged on June 27, 1989.

Having found it necessary to relocate its two Cessna T-1040s away from Fairbanks International Airport, the carrier, on August 1, discontinues passenger services from that point to Anaktuvuk Pass, Bettles, Fort Yukon, Galena, Ruby, and Tanana.

In 1990, the company is sold to **MarkAir**, which reconfigures its new wholly owned subsidiary as **Hermen's MarkAir Express**. Stan Hermen remains as president and the fleet is altered to include 10 Cessna 208 Caravan Is, of which 6 are leased from the new parent.

HERON AIRLINES (PTY.), LTD.: Australia (1991–1993). Heron is established at Sydney in 1991 to offer charter and local tourist flights. Revenue services commence with a pair of de Havilland DH 114 Heron 2s and continue for approximately two years.

HEUSSLER AIR SERVICE: United States (1977–1983). This Buffalo, New York-based air taxi and air ambulance operator is formed by Richard A. Hammond in early fall 1977. In addition to its charter flights, Heussler also offers, beginning in October, a scheduled service from Erie, Pennsylvania, to Detroit. The fleet employed comprises 1 Cessna Citation executive jet, 1 Cessna 402, and 4 Bell Model 47G helicopters.

Unable to weather the recession of the early 1980s, President Hammond's company folds in 1983.

HEVI LIFT (PTY.), LTD.: Box 49, Mt. Hagen, WHP, Papua New Guinea; Phone 67 5 545 1240; Fax 67 545 1261; Year Founded 1985. Following the bankruptcy of Australian helicopter pilot Tony Karas's helicopter charter company during the early 1970s, two new companies are established to take its place: Rotorwork (Pty.), Ltd. and Pacific Helicopters (Pty.), Ltd., the latter based at Goroka, Papua New Guinea, where it exists today.

Having gone with Rotorwork as its managing director, Karas in 1985 provides the leadership necessary to expand. Financing is found from a group of investors collectively known as Hevi Lift. With this capital investment, Rotorwork is reorganized during the year, becoming Hevi Lift-Rotorwork (Pty.), Ltd. A Bell 205 is acquired and employed to service an oil industry contract.

The operation is purchased by Collins & Leahy (Pty.), Ltd. in 1989. The new investor, a Papua New Guinea concern listed on the Australian stock exchange, provides a cash infusion that allows Hevi Lift to acquire a number of new helicopters. Among these is a wet-leased Mil Mi-26 and several Kamov Ka-32s acquired from **Aeroflot Soviet Airlines** during the fourth quarter.

In 1990, Rotorwork is split off from Hevi Lift and quickly thereafter ceases operations. In June, an Aeroflot Antonov An-26 arrives at Lae and unloads three Kamov Ka-32Cs, which allows the company to begin introducing the Russian-made equipment into competition with the Boeing-Vertol 107s operated under contract in support of the PNG energy industry by **Columbia Helicopters**.

At the end of July, a Soviet freighter, unable to dock at Lae, sails over to Brisbane where it unloads the giant Mi-26, which is its principal cargo. The helicopter is flown over to Lae and in August enters service for Hevi Lift on behalf of a consortium of Papua New Guinea oil exploration concerns, headed by Chevron Niugini, which have decided to begin oil production in the Kutubu Basin. Language difficulties between the Russian-speaking flight crews and ground control are solved by the addition of English-speaking copilots.

Hevi Lift establishes a presence at Sydney, Australia, in 1991; from the company's new base, two Bell 212s are assigned to forest fire control. A variety of support contracts are acquired over the next three years and the number of Kamov helicopters is increased to four. In addition, an engineering and maintenance hangar is built and filled with \$3 million worth of spare parts.

The Mi-26, valued at \$20 million, reaches the end of its yearlong charter in October. Although the Soviet airline is willing to release the aircraft, the government's customs service vetoes the arrangement, forcing

return of the huge helicopter at the beginning of 1992. Flights continue with the smaller Kamovs and other aircraft in 1993. **Columbia Helicopters**, meanwhile, has responded to the "Russian threat," by introducing the larger Boeing 234 Civil Chinook.

Veteran pilot Brian Lukian is managing director in 1994 and his fleet includes 2 Bell 206B JetRangers, 8 Bell 206L LongRangers, 4 Bell 212s, and 4 Kamov Ka-32Cs. For the transport of larger numbers of workers or various supplies, the company also flies 2 de Havilland DHC-6 Twin Otters, 2 Beech King Air 100s, and 1 Piper PA-31-310 Navajo.

During the year and into 1995, three LongRangers and two Ka-32s are assigned to long-line rig equipment and move supplies and personnel to an oil and gas exploration site being established by British Petroleum at Nogoli. Three other helicopters are assigned to support the Chevron project at Moro, while two others are flying on a contract at the Frieda River copper deposit.

In August, a Bell 212 is contracted to begin a nine-month contract to help build the 4.6-mile Skyrail gondola cableway in Cairns, Australia. Towers are assembled by sections, with three required for each. During the year, the company's aircraft put in 14,500 hours moving rig equipment and other material in support of the mineral and petroleum industries.

Early in 1996, the fleet is increased by the addition of two Bell 407s, two McDonnell Douglas MD-500s, and two Ka-32s. A Ka-32, a Bell 212, and a new Mil Mi-171 continue an assignment, several years old, to support workers at the Porgera gold mine in the mountainous central region of the nation. The mine, the 11th largest one in the world, is a joint venture of the government, Placer Pacific, Ltd., Highlands Gold, Ltd., and Gold Fields, Ltd.

At Cairns during the spring, the Bell 212 working on the Skyrail gondola cableway is joined by another Bell 212 and a Kamov Ka-32. By the time the project is completed in April, the three helicopters have installed, in careful flying over the forest canopy, 29 of the 36 towers. Late in the year, Mick McDonald becomes managing director.

Early in 1997, discussions begin with Pacific Helicopters (Pty.), Ltd. concerning a possible merger. In December, **Erickson Air Crane** via Hevi Lift contracts with the Australian Department of Natural Resources and Environment for the use of a Sikorsky S-64 Skycrane during the upcoming fire season.

The Erickson S-64, equipped with its "helitanker" attachment, no sooner reaches the scene in January 1998 than it is called to battle a series of lightning-caused brush fires that threaten the Eastern Highlands in Victoria, Australia. Employing the Wonnangata River for fast water delivery, the S-64 is quickly able to assist ground personnel in containing the running edges of the fires.

As summer in Australia continues, lightning sparks a fire in the Frankston area north of Melbourne. Because of environmental restrictions against building roads to the fire site, air attack is the only way to contain the potentially devastating blaze. The EAC helicopter is brought to the scene and drops 40,000 gallons of water and successfully checks the leading edge of the fire.

Flights continue in 1999–2000. Each December, the Australian Department of Natural Resources contracts with Hevi Lift and Erickson for fire support. The local S-64 is duly barged over to Melbourne to operate under an operating certificate provided by Hevi Lift.

HEVRA AVIRIT MISKHARIT: Israel (1939). Equipped with a Fokker F-XVIII trimotor, this one-purpose freight line is formed at Aqaba, Palestine, in early 1939 to fly fish from the Red Sea, Aqaba–Transjordan–Lydda. The Dutch aircraft is repaired following a crash in January but a second crash late in the month costs the company both its aircraft and its business.

HEX'AIR, S.A.: Aeroport Le Puy Lourdes, Lourdes, F-43320, France; Phone 33 (4) 71 08 62 28; Fax 33 (4) 71 08 00 33; Code UD; Year Founded 1992. Hex'Air is founded by Financiere Hex Air at Le Puy Aero-

port at Loudes in late **1992** to offer scheduled commuter services to Paris and Valladolid. Flights begin with a Fairchild-Swearingen Metro II.

In July, a \$20-million order is placed for a single British Aerospace BAe Jetstream 31, plus an option. The turboprop is delivered in January.

Early in **1993**, Hex'Air acquires the distinction of becoming the first French regional carrier to place a Jetstream 31 into service. It flies from Le Puy to Loudes and Paris.

The workforce totals 21 in **1994** as a second Jetstream 31 and a Beech 1900D join the fleet.

Flights continue in **1995–2000**, during which years President Pierre Bernard withdraws the Jetstreams, but continues services to Bordeaux, Paris, and Reims with the Beech 1900D.

HI-WOOD HELICOPTERS, LTD.: 71 Sienna Park Terrace, S.W., Calgary, Alberta, T3H 3L4, Canada; Phone 217-2278; Fax 217-2275; Year Founded 1972. Hi-Wood is established at Calgary in **1972** to provide passenger and cargo charters, VIP and executive transport, and to engage in construction, pipeline surveys, forestry patrol and fire protection, energy exploration, aerial photography, survey work, and law enforcement.

By **2000**, President and General Manager Hermann Lorenz employs 7 full-time workers and has revenues of C\$1 million per year. His fleet comprises 6 Aerospatiale or Eurocopter AS-350s and 2 AS-315 Lamas.

HIBERNIAN AIRLINES, LTD.: Ireland (1966–1967). Founded at Dublin Airport in early **1966** as **Air Charters of Ireland, Ltd.**, this carrier acquires a Douglas DC-3 on April 5, employing it to begin commercial charters to British airports on April 9. With business good, a second Douglas transport is acquired in July. In December, 55% control in Ulster-based **Emerald Airways, Ltd.** is purchased.

A DC-3 is leased for a month from **Skyways Coach-Air, Ltd.** in May **1967** while in June, the machine purchased in April 1966 is sold, but a second is chartered from **Air Gregory, Ltd.** These are employed on behalf of Emerald and also on replacement flights for **British United Airways, Ltd.**, Dublin–Isle of Man–Blackpool.

A few inclusive tours are also flown from Dublin during the summer, however, the second 1966 machine is sold in August. By early October, only one Douglas is left in service and financial difficulties compel Hibernian to cease operations at month's end.

HIGH LINE AIRWAYS, LTD.: Canada (1975–1983). Saskatchewan entrepreneur and construction company magnate Albert Ethier forms High-Line in **1975** to support the passenger and equipment transport needs of his company throughout the province, as well as the Northwest Territories and into the high Arctic.

Employing two Convair CV-640s, Ethier continues nonscheduled operations for the remainder of the decade and into the next.

The historic and larger **Norcanair, Ltd.** is purchased in **1983** and its name survives when the two air transport concerns are amalgamated.

HIGHLAND AIR, A.B.: Sweden (1995–2000). In July **1995**, **Holmstroem Air (Holmstroem Flyg, A.B.)** receives a new corporate identity. Sivert Andersson remains managing director, his workforce totals 48, and the fleet comprises 3 Shorts 330s. On September 1, service is resumed over the previous Holmstroem routes.

The fleet is altered in **1996** to include 1 each Dornier 228-100 and 228-201 plus 1 British Aerospace BAe Jetstream 32EP. Destinations visited now include Borlaenge, Gallivare, Goteborg, Hultsfred, Oskarshamn, Mora, Stockholm (Arlanda Airport), Sundsvall, Umea, and Vasteras.

In order to provide itself with assured feed, the Swedish regional **Skyways, A.B.** purchases 91% majority ownership in March **1997**. The company name remains the same and Managing Director Andersson is left in charge. In August, a former **American Eagle Airlines (2)** Jetstream 32 is placed into service; it frees up one of the Dorniers for use on dedicated cargo frequencies.

Flights continue during the remainder of the year and in **1998**, linking the company's base with Borlaenge, Galivare, Goteborg, Mora, Stockholm (Arlanda Airport), Sundsvall, Umea, and Vasteras. During these years, the Dornier 228-101 is replaced with three more Jetstream 32EPs.

Early in **1999**, the fleet receives a new color scheme. The aircraft are all painted white, with stylized billboard "Highland" fuselage titles and a small white "s" in a red circle on their tails. Flights continue apace with the Skyway acquisition process completed on May 12. Further route integration continues during the remainder of the year and into the new millennium.

On October 1, **2000**, Highland is combined with **Air Express I Norrköping, A.B.** and **Airborne of Sweden, A.B.** to form Hultsfred-based **Skyways Regional, A.B.**

HIGHLAND AIRWAYS, LTD. (1): United Kingdom (1933–1937). In September **1931**, former RFC instructor Capt. Ernest Edmund Fresson, flying the **North British Aviation Co., Ltd.** Avro 504K, transports sight-seeing passengers between Kirkwall and Thurso. Later in the year and during **1932**, a de Havilland Gipsy Moth makes exploratory flights Inverness–Kirkwall and surveys a variety of routes to the Orkney Islands over Pentland Firth. Additionally, Fresson provides charter flights for local businessmen, some of whom are easily persuaded as to the potential value of air transport.

Capt. Fresson, with himself as managing director/chief pilot, establishes HA-1 on April 3, **1933**; registered at Edinburgh, the new entrant is capitalized by 17 shareholders at £2,675. Dr. Thomas Alexander, a physician, becomes chairman and an office is set up on that city's Academy Street.

Employing a General Aircraft Monospar ST-4 painted in a green-and-white livery and named the *Inverness*, Fresson launches summer service from Inverness' new Longman Airport in the Scottish Highlands to Kirkwall via Wick on May 8. The inauguration follows a public ceremony and both events are given prominent coverage by the Edinburgh newspaper *The Scotsman*, which is one of the carrier's sponsors.

As the spring proceeds, additional ground facilities are opened at Wick and Wideford Farm, near Kirkwall.

A route is stretched from Kirkwall to Thurso on May 11, but is officially suspended on September 6. Meanwhile, during July, the *Inverness*, piloted by Capt. Fresson, is badly damaged when it makes a bad landing in fog at Wideford Farm. Although no injuries are reported, it will take six weeks to repair the Monospar. Fortunately, Fresson is able to borrow an aircraft from **Midland & Scottish Air Ferries, Ltd.** with which to maintain services in the interim.

Meanwhile, in August, an order is placed for a de Havilland DH 84 Dragon. To obtain the necessary funds, capitalization is increased during the first week of October. The North of Scotland Orkney & Shetland Steamship Company, Ltd. subscribes £2,000, while George Law, owner of *The Scotsman*, offers £500. Dr. Alexander is succeeded as chairman by Richard Donald, managing director of the Inverness bus company, Macrae and Dick, Ltd.

Airline employment reaches 3 in the spring of **1934**; the DH 84 Dragon, christened *Aberdeen*, is acquired and employed to open weekday Aberdeen (Seaton Airport)–Wick–Kirkwall flights on May 7. The company becomes the first local service airline to fly regularly scheduled, British internal airmail and receives the initial internal Royal Air Mail pennant from Sir Frederick Williamson, Postal Services director; Capt. Fresson, flying the *Aberdeen*, transports 2,000 letters from Inverness to Kirkwall on May 29. Weekday flights commence next day.

Beginning on August 6, the *Inverness* is used to inaugurate weekday summer service to airfields on the islands of North Ronaldsay, Rousay, Stronsay, Westray, Sanday, and Hoy. Airmail flights are started Inverness–Wick on December 1 and Thurso–Wick on December 10. During the year, the North of Scotland and Orkney and Shetland Steam Navigation Company's managing director joins the Highland board of directors.

Aberdeen operations are transferred from Seaton Airport to Kintore on May 22, **1935**. On June 1, mail service is extended to the Shetland

Islands, with the Lerwick–Kirkwall sector covered by ship. Financial difficulties do not allow seasonal opening of the trans-Pentland Firth route. In June, Edmund Fresson is forced to merge with **United Airways, Ltd.**, formed on April 4 by the Whitehall Securities group; however, the Scottish carrier is allowed to fly under its previous name and livery.

Additional resources now allow purchase of a de Havilland DH 89A Dragon Rapide. On September 30, Highland Airways, Ltd. is one of several small carriers merged into **Allied British Airways, Ltd.**, later **British Airways, Ltd. (1)**, a title employed during the winter. Again, Highland is permitted to retain its identity and Capt. Fresson remains in control.

Another Dragon Rapide is acquired in early 1936 and on May 4, HA-1 reopens its Aberdeen–Kirkwall via Wick route. A month later on June 3, the network is extended thrice weekly to Sumburgh Airport in the Shetlands; the frequency becomes daily between July and October. Other routes and charter work are maintained during that summer and the next.

Capt. Fresson, with the company Monospar ST.4, makes the first landing on Fair Isle on May 13, 1937. To undertake domestic operations for **British Airways**, Highland is merged on August 12 with **Northern and Scottish Airways, Ltd.**, to form the northern division of **Scottish Airways, Ltd.**

Thirty years later, Capt. Fresson will tell his story in *Air Road to the Isles* (London: David Rendel, 1967).

HIGHLAND AIRWAYS, LTD. (2): Inverness Airport, Inverness, Scotland, IV1 2JB, United Kingdom; Phone 44 (1667) 462 664; Fax 44 (1667) 462 696; <http://www.highlandairways.co.uk>; Code 8R; Year Founded 1991. Capt. Alan Mossman and Capt. Kath Burnham establish a flight school, Air Alba, Ltd., as a subsidiary of the Atlantic Group at Inverness Airport in 1991. Following the erection of a 15,000-sq.-ft. hangar, the company acquires a Douglas DC-3 and a Cessna 404. The Cessna is employed to fly oil spill reconnaissance, while the Douglas is used, as required, to spray dispersant.

A Cessna 310 is purchased in 1992 and is employed to fly H.M. Forces mail to St. Kilda and on organ transplant missions. The company staff is involved in helping to contain the Braer oil spill. The CAA now approves of the company's training course for commercial pilots and flight instructors. With this certification in hand, Air Alba is able to take over aviation training responsibilities for the Atlantic Group.

In 1993, the company takes over the avgas refueling concession at Inverness Airport. An air operating certificate is received from the CAA that allows the beginning of passenger charter operations with a Britten-Norman BN-2Islander. Regular passenger charters now begin, transporting oil industry personnel to and from Norway. The charter base is increased during 1994 and missions are undertaken on behalf of a wide range of customers. The Douglas, meanwhile, also operates a contract flying building materials to Fair Isle.

Capt. Mossman's concern takes on training responsibilities in 1995 for the local Highland Aero Club. The FBO's office area at Inverness is expanded and a Beech 55 Baron is acquired. A regular charter service is initiated to Islay for the Scottish whiskey industry.

A Cessna 402C is acquired in 1996 and is employed to enhance charter operations. Among the new contracts taken on are the movement of high-value seafood from the Faroes and Western Isles and the movement of trawler crews. When it becomes necessary, on occasion, to offer charters to points further out, as in the London area or Europe, Air Alba is able to lease larger aircraft from his Atlantic Group partners **Atlantic Airways, Ltd.** or **Atlantic Cargo Airways, Ltd.** The DC-3 flies dispersant missions to combat the Sea Empress oil spill.

Air Alba is renamed in 1997, receiving its current name. Capt. Mossman continues as chairman/managing director and his workforce now totals nine. The flight school extends its range of training aircraft while the concern helps to establish an Islander operation in Gibraltar and North Morocco. After the Islander departs south, the fleet is enhanced

by the addition of a Cessna 406 Caravan II and two Beech Super King Air 200s.

During the summer, a leased Shorts 360 is employed to operate two oil contract shuttles from Aberdeen to Cork and Shannon. While on a training flight from Dalcross on October 30, a lightplane crashes into Cromarty Firth (one dead).

Highland retains its subsidiary status in 1998 when the Atlantic Group becomes **Atlantic Airlines, Ltd.** Three more C-406s are delivered, allowing the carrier to enhance the number and type of its cargo charters. The Cessnas are tasked to operate a daily newspaper distribution contract to the Northern and Western Isles, as well as from Inverness to Stornoway, Orkney, and Shetland. Additionally, the number of regular charters flown from Inverness to Islay on behalf of the whisky industry is increased.

A new terminal is opened at Inverness in 1999 as Highland Aviation Services are formed. The company begins to operate specially converted surveillance aircraft on behalf of the Brig Marine of Aberdeen and of the Oil Spill Response Club. A contract is also accepted for the operation of transatlantic cable surveillance. The newspaper delivery contracts received the previous year are extended, while the live seafood consignments from Stornoway and Sumburgh to Inverness are increased. Single passenger tickets are now offered for flights from Sumburgh or Stornoway to Inverness.

The Discovery Channel comes to Scotland in January 2000 to film a story concerning Highland's reconnaissance and pollution control activities that airs in April. Several new contracts are now accepted, including one to fly oil crew return flights thrice weekly between Aberdeen and Donegal, a second to transport oil crews from Aberdeen to Stornoway, and a third to transport oil crews twice weekly between Aberdeen and Cork. In order to accomplish these assignments, the carrier adds a British Aerospace BAe Jetstream 31, which is based in Glasgow much of the time. The new turboprop also operates a BAe Systems corporate travel return service thrice weekly between Glasgow and Filton.

During the summer and fall, construction is begun on new purpose-built offices next to the company's Inverness hangar. A modern air operations center and an upgrade in information technology systems are built into the move. Also, the company disengages from its longtime mission of running the local flying school, spinning it off to operate under separate management.

HIGHLAND EXPRESS AIRWAYS, LTD.: United Kingdom (1983–1987). Former **Virgin Atlantic Airways, Ltd.** Chairman Randolph Fields, a U.S. lawyer based in the U.K., forms HEA at Prestwick, Scotland in 1983 to offer low-fare Lockheed L-1011 service from Prestwick–New York, Newark, Toronto, London, Birmingham, and Maastricht. Petitions for authority and financing delay actual start-up almost three years.

Christened *The Highlander*, one ex-American Airlines B-747-123 is acquired on lease from Citicorp in May 1986, but failure to raise required capital in time for the scheduled June 20 launch forces a year's postponement of service.

The carrier, labeling itself the new Scottish flag carrier, is finally piped off the ground by bagpipes on July 1, 1987. With a one-way fare of \$179, the inaugural flight is made from Prestwick to Newark; later transatlantic services will also be flown from Birmingham. In September, the Boeing also starts \$46 one-way service between London (STN) and Brussels—the world's shortest 747 route is just 170 miles.

Operations as originally designed continue apace and, in the fall, the company offers its passengers, with the purchase of a single regular fare roundtrip ticket, their choice of a three-day bed and breakfast visit at one of three Scottish hotels, or a free economy-class roundtrip ticket. When the Jumbojet is taken out of service for maintenance in November, Highland is unable to generate sufficient funds to cover its return to service.

As a result, the enterprise is liquidated on December 11. At a creditor's meeting in Scotland, debts of \$5.4 million are reported with a total deficiency of \$15.1 million, including \$4.32 million to creditors and another \$720,000 owed to people who had purchased tickets.

HILLMAN'S AIRWAYS, LTD.: United Kingdom (1931–1935). In November 1931, Edward Hillman has been the rough-and-ready owner of the Essex-based 300-unit tour bus company Hillman's Saloon Coaches, since 1928. The former British Army sergeant-major, diplomatic chauffeur, taxi driver, and car hire service operator is forced out of business when the U.K. government places severe regulation upon the growing number of bus companies proliferating around the country.

The government grants Hillman a £145,000 settlement, which he uses to purchase a new de Havilland DH 80A Puss Moth from Brian Lewis, Ltd. and establishes an air taxi operation. The first flight of Hillman's Saloon Coaches and Airways occurs as a December 25 de Havilland Puss Moth charter flown from the Maylands airfield near Romford, Essex, a private grass field that Hillman rents from a farmer.

Former noncommissioned RAF pilots are engaged as pilots at bus driver's salaries and on March 11, 1932, Hillman purchases a pair of de Havilland DH 83 Fox Moths and employing them, together with his Puss Moth, opens regularly scheduled Romford (Maylands) to Clacton-on-Sea service on April 1. Beginning in June, the service is operated as a summer shuttle, flying every three hours during daylight. Hillman is launch customer for one of de Havilland's more successful small airliners, the DH 84 Dragon; he accepts the first. When he is satisfied with the plane's £3,000 bill (he objects strongly to the £50 toilet), the aircraft is flown from Stag Lane to Romford, where it is christened *Maylands* by Amy Mollison on December 20.

On April 1, 1933, HA launches twice-daily Maylands–Paris DH 84 service. The flights cost passengers less than the fares charged by **Imperial Airways, Ltd.** and are completed half an hour faster. The same day, seasonal flights are resumed to Clacton with a service to Manston, for Margate and Ramsgate, added on April 8. On June 30, the Paris route is stretched to Vichy for the summer, ending on September 4. On November 8, the company is renamed Edward Henry Hillman, Ltd.

Hillman's operation begins use of Stapleford Airport, Essex on June 1, 1934. Hillman becomes launch customer for the DH 89 Dragon Rapide in late spring. On July 16 the company takes over the London to Belfast via Liverpool and Isle of Man route of **Midland and Scottish Air Ferries, Ltd.** (abandoned on July 14), only to suspend it on September 30 in face of overwhelming competition from the subsidized **Railway Air Services, Ltd. (RAA).**

Hillman obtains his own airmail subsidy on November 15 and on December 1 he relaunches his Belfast service on strength of the contract previously held by RAA, substituting Glasgow for Isle of Man. Hillman's Airways, Ltd., is registered as a public company on December 12. It is reorganized and capitalized at £150,000 and all of the shares are taken up in just 60 minutes. Edward Hillman dies of a heart attack on December 31.

Early in 1935, the estate of Hillman's family sells the late founder's shares to the banking house owned by Erlangers. One of the directors, Gerard d'Erlanger, will later become chairman of the state-run **British Overseas Airways Corporation (BOAC).** The new owners appoint Maj. Ronald McCrindle as chairman. On June 6, Liverpool–Hull services via Manchester are inaugurated. Thrice-daily Stapleford–Antwerp flights are started on June 19 via Ostend and Brussels. The first DH 86 is delivered to Stapleford next day; christened *Drake*, it is immediately placed on an accelerated service to Paris. Flights to Ramsgate and Le Zoute from Stapleford begin on July 15.

Although these additional opportunities have been added, the carrier's future without its dynamic founder is bleak; when **British Airways, Ltd. (1)** is founded on September 30, it moves to purchase several smaller independents, including HA, which is amalgamated on December 11.

HIMALAYAN AIR TRANSPORT AND SURVEY, LTD.: India (1934–1935). Founded in 1934 to provide ad hoc charters, Himalayan Air Transport and Survey, Ltd. flies an experimental Airspeed Ferry route between Hardwar and Gauchar. Beginning on April 22, 1935, the Ferry, joined by a de Havilland DH 83 Fox Moth, begins flying the route

on a scheduled basis, twice weekly. At the end of the summer, business slows and both the route and the airline are closed on October 21.

HIMALAYAN AVIATION, LTD.: India (1947–1953). HAL is formed as a charter operation in 1947. Nonscheduled flights are undertaken between Kathmandu and various small Nepalese communities with subsidy from the Nepal government. When **Deccan Airways, Ltd.** and **Dalmia-Jain, Ltd.** suspend their Delhi–Madras and Bombay–Calcutta via Nagpur night-airmail contract on June 30, 1949, the government passes it to Himalayan, which reopens it with Douglas DC-3s on October 15–16.

This service remains the company's primary business in 1950; however, in June 1951 the contract is returned to **Deccan Airways, Ltd.** Charter and irregular services resume; flights are occasionally made to Karachi in Pakistan and even to Zahedan in Iran. In December, a formal scheduled Ahmedabad to Kabul frequency is inaugurated, provided rather as compensation for loss of the mail service. Kandahar is also visited.

As the result of parliamentary study and debate in 1952, an Air Corporation Bill for the nationalization of the Indian air transport industry receives presidential assent on May 28, 1953. As a result, **Indian Airlines Corporation** is established on August 1, acquiring and merging the assets of Himalayan Aviation and other small carriers.

HIMALAYAN HELICOPTERS, LTD.: P.O. Box 10775, Kathmandu, Nepal; Phone 977 (1) 231236; Fax 977 (1) 225150; Year Founded 1992. HH is established at Kathmandu in October 1992 to provide sight-seeing and charter flights to local destinations, including the mountains. Sunil Bhattarai is appointed managing director and revenue flights commence with a single Bell 206L3 LongRanger.

Operations continue apace in 1993–1994 and the fleet is enhanced by the addition of another LongRanger. Severe economic difficulties are encountered in 1995–1999. By the latter year, Rabindra Rimai is general manager and his concern operates one Eurocopter AS-350B Squirrel.

HINDUJA CARGO SERVICES, LTD.: 2nd Floor, D1 Green Park Commercial Complex, New Delhi, 110 016, India; Phone 91 (11) 686-4201; Fax 91 (11) 686-4189; Code LF; Year Founded 1996. HCS is established at New Delhi on February 9, 1996 to offer domestic all-cargo services. Shareholding is divided between nonresident Indians based in London as the Hinduja Group (60%) and **Deutsche Lufthansa, A.G.** through its **Lufthansa Cargo Airlines, A.G.** subsidiary Lufthansa Cargo Ventures (40%); Robert Strodel is named managing director/CEO.

In addition to a management contract, the Germans lease three (later five) B-727-243Fs with which to begin operations. In September, **Hinduja Cargo Services, Ltd.** contracts with the American freight charter operator **Custom Air Transport** to provide flight services to Sharjah, U.A.E., from six cities on the subcontinent, where they connect with LCA DC-8-73CFs from Europe.

The Custom-flown Boeing freighters duly inaugurate scheduled services to Hyderabad, as well as New Delhi, Bombay, Madras, Bangalore, and Kathmandu. Flights are also made to Colombo, Sri Lanka.

The route network is increased in October with stops added at Ahmadabad, Varanasi, and Coimbatore. In mid-October, the company inaugurates weekly service into Indonesia's new Hang Nadim Airport, which is located just 20 miles from Singapore.

The fleet is increased in 1997 by the addition of four more B-727Fs. During the first quarter, the Indian Ministry of Civil Aviation decrees that no more than 40% equity may be held in Indian carriers by foreign entities. **Lufthansa Cargo Airlines, A.G.** files a rejoinder that argues that the Hinduja joint-venture company is, in fact, an international airline based in India and therefore no subject to the 40% rule.

Bangalore, Bombay, Calcutta, and Madras join the route network in May. To the surprise of many, the Indian government accepts the carrier's status, as suggested by **Lufthansa Cargo Airlines, A.G.**

Flights continue without incident in **1998**, but disaster strikes on July 7, **1999**. Flight 8533, a B-727-243F with five crew, crashes while taking off from Kathmandu for a service to New Delhi; there are no survivors.

It is announced on April 20, **2000**, that **Lufthansa Cargo Airlines, A.G.** is terminating its arrangement with Hinduja Cargo, which has been feeding the German major's Frankfurt-bound MD-11Fs at Sharjah for flights to India. With increased demand, Lufthansa Cargo is now operating its Frankfurt service nonstop.

The June 26 report of the Nepali government's Commission for Accident Investigation reports that although the crew of the July 7 crash had not adhered to standard instrument departure procedures during their takeoff, it had also not received any advisory alert from ATC.

The company's relationship with **Lufthansa Cargo Airlines, A.G.** is officially ended on December 31.

HISPANIA LINEAS AEREAS, S.A.: Spain (1982–1989). Hispania is established in the Balearic Islands in November **1982** by some 80 former employees of the recently failed Spanish charter carrier **TAE (Trabajos Aereos y Enlaces, S.A.)**. Revenues are provided by the founders, as well as on loan from several Spanish banks.

The new charter and inclusive-tour airline is physically activated during the first quarter of **1983**. A pair of Sud-Est SE-210 Caravelle XRs is acquired and on April 28, the first revenue service is operated from Palma de Mallorca to Seville. Enplanements for the three quarters or so of operations this year are 20,323 and these are the last traffic figures ever released.

Charters to points in Germany, France, the U.K., and internal Spanish locations continue in **1984**, as two more Caravelle XRs join the fleet. The workforce totals 90 at the beginning of **1985** and fleet is increased by the addition of a former **Maersk Air, A.S.** Boeing 737-2L9 leased from GPA. Due to their high operating costs, the Caravelles are withdrawn and sold in **1986** and replaced with one more B-737-200 and three B-737-300s, all chartered from GPA.

The company generates its first profit in **1987** and in early **1988** the carrier places orders for two B-757-200s. The first of the advanced Boeing narrow-bodies arrives during the spring of **1989**. Unhappily, the carrier has, by now, fallen deeply into debt and banking interests begin to withdraw their support. In July, the company must enter receivership following seizure by GPA of its Boeings for lease nonpayment.

HISPANIOLA AIRWAYS, S.A.: Dominican Republic (1979–1988). This privately owned carrier is formed at Santo Domingo in **1979** to offer scheduled passenger and cargo flights, plus charters. A Douglas DC-6A, a DC-8-43, and a Boeing 720-022B are acquired and regular flights to Puerto Plata, Miami, and New York are initiated.

A frequency is launched to Port-au-Prince (Haiti) in **1980**. Because of increasing fuel prices and a downturn in the world economy, the carrier's services and finances begin to deteriorate in **1981**.

While on a ferry flight, the B-720B with five crew is destroyed as the result of a bad landing at Miami on December 16; there are no fatalities.

In **1983**, flights to the U.S. are suspended and the single route to Haiti will prove insufficient to generate required revenues. Still, service is continued.

While en route over the Gulf of Mexico on July 20, **1988**, the DC-6A, with three crew suffers fuel exhaustion to three of its four engines. Permission is received to make an emergency landing; however, the aircraft crashes into a drainage canal at Golden Meadow, Louisiana, killing the three flyers. The company shuts its doors shortly thereafter.

HISPANIOLA AIRWAYS: P.O. Box 524211, Miami, Florida, 33138, United States; Phone (305) 591-1704; Fax (305) 591-1706; Code ZS; Year Founded 1996. Hispanola is established at Miami (MIA) in **1996** to resume the work abandoned by **Hispanola Airways, S.A.** almost a decade earlier. President/CEO Jacques Bernateau recruits a workforce of 25 and serves markets in the Dominican Republic with leased Boeing 727F freighters, which fly both to Miami and to New York (JFK).

HOGAN AIR: 1707 Run Way, Middleton, Ohio, 45042, United States; Phone (513) 422-3737; Fax (513) 422-1494; Year Founded 1993. Terry Hogan forms his all-cargo airline at Middleton, Ohio, in **1993** to provide regional services on behalf of other express-cargo operators and freight forwarders. Revenue operations commence and continue with a fleet that includes 3 Beech 18s, 5 Douglas DC-3s, 2 Piper PA-23 Aztecs, and 2 Gates Learjets.

Operations continue.

HOKKAIDO AIR SYSTEM COMPANY, LTD.: Sapporo-Shi, Shinashi-Ku, Hokkadama-Cho Airport, Sapporo, 063, Japan; Phone 81 (11) 7811247; Fax 81 (11) 7841716; Code HAS; Year Founded 1998. HAS is established at the beginning of **1998** as a joint venture between **Japan Air System Company, Ltd.** (51%) and the Hokkaido prefectural government (49%). Takeshi Kandi is named president and revenue operations begin with a pair of leased SAAB 340Bs.

Fights continue during the remainder of the decade. The fleet is enhanced by the addition of a third leased SAAB 340B and destinations visited include Asahikawa, Hakodate, Kushiro, and Sapporo.

HOKKAIDO INTERNATIONAL AIRLINES COMPANY, LTD. ("AIR DO"): Cargo Center Building, 4F, 2-6 Haneda Airport, 3 Chome, Ota Ku, Tokyo, 144-0041, Japan; Phone 81 (3) 5757 4901; Fax 81 (3) 5757 4918; <http://www.hac-air.co.jp>; Code HD; Year Founded 1996. This Sapporo-based new entrant is established in November **1996** with initial capitalization of ¥3.58 billion. When it finally begins flying over two years later under its two names, it will be only the second airline to begin service in Japan in 35 years.

The brainchild of a successful poultry farming business on the northern home island of Hokkaido, the start-up, with Teruo Hamada as president, will take advantage of the new era of deregulation being fostered in Japan by the Ministry of Transport.

Over 100 local individuals and concerns invest in the carrier during the first half of **1997**. A business plan is developed, based on a paper by Prof. Tadahisa Wada of Seishu Women's University in Sapporo, which projects the city's new Chitose Airport as a new international hub for northern Japan.

On November 6, the start-up carrier signs an agreement with **Japan Air Lines Company, Ltd. (2)**. JAL will provide operational, technical, and airport handling support and assist the carrier as it seeks Ministry of Transport operating and route authority and can launch Japanese domestic service, hopefully in July.

The economic situation and the recession on Hokkaido bring a slowdown in the effort to launch Air Do. Still, plans are afoot in the spring of **1998** to lease a B-767-33AER from Ansett Worldwide Aviation, Ltd. and to achieve certification in September. The start-up date is changed to October 30.

After a long gestation period, Hokkaido International is finally able to launch service on December 20. Employing the chartered B-767-33AER, the JAL-backed new entrant begins thrice-daily roundtrips from Tokyo (HND) to Shin-Chitose Airport near Sapporo. The inaugural one-way service is fully booked with 286 passengers, each of whom pay ¥16,000 (\$138) for their tickets (or about 36% less than regular fares on the same route offered by the Big Three Japanese airlines).

HIA is the second discount airline to launch service in Japan since September when **Skymark Airlines Company, Ltd.** took to the air. During the remainder of the fall, the company makes plans to raise an additional ¥1.5 billion in capitalization.

Although traffic figures are unavailable, the company has brought in revenues of \$16.66 million and has expenses of \$21.66 million. The operating loss is \$5 million.

On January 24, **1999**, it is revealed that Air Do has approached Kyocera in an effort to gain ¥500 million of the new funding it seeks. Kyocera, which is receptive to a proposal, already has ¥3 million invested in the airline.

All Nippon Airways Company, Ltd. and Japan Air Lines Company, Ltd. (2) respond to the challenge posed by the discount carriers by slashing their fares by up to 50% in early February. By April, Air Do's load factor has been cut to 65%.

On May 5, company officials inform the Dow Jones Newswires that HIA will begin performing its own maintenance and will add another aircraft in early 2000.

Once again, traffic figures are not released. The year's pretax and net losses total approximately ¥ 2 billion.

Facing stiff competition and significant financial problems throughout 2000, Air Do takes the controversial step on December 1 of revoking a ban it had earlier placed on in-flight smoking. A company official notes that the island of Hokkaido has the highest smoking rate in Japan and in a bid to attract some of those passengers, the company is now allocating smokers one quarter of all seats on its flights from Sapporo to Tokyo (HND).

The airline is flooded with complaints from antismoking groups and announces that it will review how big an economic boost the smoking seats make before making a decision on whether or not to continue. During the month, approximately 20% of the company's passengers will request a smoking seat.

The new smoking policy is not the only change needed; the carrier, facing bankruptcy, must obtain a government loan. Although the politicians are willing, the investment is contingent upon a matching grant from business leaders, who are unwilling to extend themselves for the loss-making airline. Progress in obtaining this funding is slowed after the death of the airline's president. As late as December 10, no replacement has been chosen, but that decision will be taken as the end of the year approaches.

Beginning on November 30, Hokkaido is unable to pay its user fees at New Chitose and Tokyo (HND); the bill will amount to ¥ 300 million by mid-January.

On December 15, word is received that the carrier will be given a ¥ 1-billion loan by the Hokkaido business community if it continues drastic cost-cutting steps. After several candidates turn the post down, government official Michimasu Ishiko is named president on December 27.

At a New Year's Eve party, the president-designate, a reformed smoker, indicates that he may soon quash the in-flight smoking policy, indicating that his carrier cannot go against the "nonsmoking trend."

HOLD TRADE AIR SERVICES, LTD.: PMB 2346, 6A Sokoto Road, Ahmadu Bello Way, Kaduna, Nigeria; Phone 234 (62) 215 405; Fax 234 (62) 215 368; Code H2D; Year Founded 1991. HTAS is established at Lagos in early summer 1991 to provide regional scheduled services. Revenue operations commence on August 1 with four British Aerospace (BAC) 1-11-208ALs and a Douglas DC-8-61.

One of the BACs, with 72 passengers, is involved in an accident at Kaduna on August 29, 1992; although no injuries are reported, the badly damaged aircraft must be withdrawn.

Operations continue apace in 1993-1994; however, CEO Zakari Hamura is forced to withdraw a second BAC when the capacity of three machines proves not to be required.

The aircraft is returned to service in 1995-2000. By the latter year, airline employment stands at 150 and destinations visited from Lagos include Kaduna, Kano, Maiduguri, and Yola.

HOLDEN AIR TRANSPORT (PTY.), LTD.: Australia (1929-1936). L. H. Holden forms an air transport operation bearing his name in 1929 to haul freight from Port Moresby to the mining towns of New Guinea. Upwards of six tons of cargo are carried per day in 1934-1935. The company is purchased by **Guinea Airways (Pty.), Ltd.** in 1936.

HOLIDAIR, LTD.: Canada (1980-1990). Established at Edmonton, Alberta, in the fall of 1988, Holidair, Ltd. is a wholly owned subsidiary of Harry Borenstein's holiday company Travel 'N' Save. Joe Garrihy is appointed president and an ex-Iberia Spanish Airlines (2) (Lineas

Aereas de Espana, S.A.) DC-8-52 is purchased. When Spain delays in delivering the Douglas, the company is forced to contract with a U.S. firm to fly a Lockheed L-1011 TriStar 1 on a short-term basis in order to begin its mid-December Honolulu operations.

Several flights are made, each costing in excess of C\$200,000. The DC-8-52 arrives after Christmas, allowing the American Lockheed contract to be concluded. Christened *Aaron*, the former Spanish jetliner now initiates tour flights from Calgary and Edmonton to Honolulu and Cancún, Reno, and Las Vegas.

In the summer of 1989, charter and inclusive-tour flights begin from Vancouver to Prestwick, London, Amsterdam, or Frankfurt, all via Edmonton. Operations cease in response to the boost in fuel prices and costs associated with the invasion of Kuwait by Iraq on August 2, 1990.

HOLIDAY AIRLINES (1): United States (1960). The first U.S.-based Holiday Airlines is established at Pomona, California, on April 1, 1960, to provide scheduled passenger and cargo flights to Santa Catalina. Beech 18 flights commence on April 15 and continue until October 10, when the company shuts down.

HOLIDAY AIRLINES (2): United States (1965-1966). Holiday Airlines (2) is set up at Oakland, California, in late spring 1965 to provide scheduled commuter service. Regular de Havilland DH 104 Dove 1 flights commence on June 14, linking the company's base with Red Bluff via Marysville and Chico. Unable to achieve viability, the airline folds before its first anniversary.

HOLIDAY AIRLINES (3): United States (1968-1975). Holiday Airlines (3) is created at Lake Tahoe, California, in 1968 to provide scheduled passenger services linking that destination with San Francisco, Sacramento, San Jose, Los Angeles, Burbank, and San Diego. Revenue operations commence in November with a pair of Lockheed L-188A Electras, including the very first of the type, purchased from **Pacific Southwest Airlines (PSA)** on October 22.

Flights continue apace during the remainder of the decade and into the 1970s. In 1974, a third L-188A is acquired and is employed to inaugurate services to Lake Tahoe.

Operations continue apace until 1975 when, in deep financial difficulty, the company is forced, in February, to shut its doors. Its southern routes will subsequently be awarded to **Pacific Southwest Airlines (PSA)**.

HOLIDAY AIRLINES (4): United States (1970). This short-lived Holiday is set up at Monticello, New York, in the spring of 1970 to provide scheduled passenger and cargo services from Sullivan County Airport to New York (LGA). Also known as **Catskill Holiday Airlines**, the company duly inaugurates daily Beech 99 roundtrips, but these are discontinued in late fall.

HOLIDAY AIRLINES (5): United States (1979-1989). Dominick Borzomati founds the longest-lived U.S.-based Holiday Airlines as a wholly owned subsidiary of Clinton Industries at Newark in the spring of 1979. With a goal of providing scheduled passenger services to Baltimore (BWI) via Montgomery, and to Atlantic City from Baltimore (BWI), the new commuter inaugurates daily services in April employing a fleet of 2 Piper PA-31-350 Navajo Chieftains.

Within two years, frequencies have risen to thrice daily. Although the private company chooses not to release traffic figures in 1979-1981, in 1982 it reports to the CAB that 15,139 passengers have been transported on the year. During these years, service is started to Hartford and Richmond, and seasonally, to Martha's Vineyard and Hyannis.

Airline employment stands at 40 in 1983 as the Pipers are replaced by two de Havilland Canada DHC-6-200 Twin Otters.

Customer bookings jump 50% to 19,500.

Flights to Atlantic City and the recently introduced Richmond market are suspended in 1984.

Enplanements balloon by 45.1% to 33,528.

A third Canadian turboprop joins the fleet in **1985** as the New Jersey-based airline boosts its passenger boardings 9.9% to 36,848.

Airline employment jumps 100% in **1986** to 70 as 3 more Canadian turboprops are acquired. Service is extended to Providence, Rhode Island.

Customer bookings increase by 53.7% to 56,131.

Airline employment is cut by 35.7% in **1987** to 45. Still, passenger boardings accelerate 26.3% to 70,902. The fleet in **1988** continues to include only the two Twin Otters.

Enplanements for the year fall by 10.6% to 63,396.

The Clinton Industries subsidiary is sold to new owners in the spring of **1989**. They immediately order four Beech 1900s. Employing them to replace the DHC-6-200s, they inaugurate services to Nantucket, Providence, Hartford, and Martha's Vineyard during the summer.

Internal discord, argument, and disagreement between the owners begin in the fall, leading to a permanent suspension of operations on December 18. Through August, when the carrier stops supplying its figures, passenger boardings are down 30.9% to 31,553.

HOLIDAY AIRLINES, A.S.: Turkey (1994–1996). Holiday is established at Istanbul in the first quarter of **1994** to offer passenger charter and inclusive-tour flights to various European destinations. Arrangements are completed to charter two Airbus Industrie A320-231s from **Mexicana Airlines, S.A. de C.V.**, while the manufacturer provides a former **Delta Air Lines** A310-324 under a short-term contract. The latter is delivered first and is employed to launch revenue flights on June 23. The summer season is not profitable. Unhappily, the company is forced to stop flying in November when the Mexicana aircraft are returned for lease nonpayment.

The fleet is significantly altered in early **1995**. Brought in, again under lease, are one each A300B2-1C and A300B4-2C from **Air Inter, S.A.**, a Tupolev Tu-154M from the Russian carrier **Alak Airlines**, and a Yakovlev Yak-42 from **Air Ukraine**. When the summer holiday calendar begins at the end of March, flights are again undertaken to a variety of locations in Europe, particularly Germany.

On February 6, **1996**, a **Birgenair, A.O.** B-757-225 wet-leased to **Alas de Transport Internacional, S.A.** crashes off the Dominican Republic. The German media now begins an exposé on charter airlines, focusing on those from Turkey. In the process of revelation, newsreaders brand all Russian aircraft as unsafe for use in European skies. This uproar causes Holiday Airlines to replace both its older Airbus and the Russian aircraft with a purchased Boeing 737-217, another chartered A300B4, and a Lockheed L-1011 TriStar 1 first flown by **Eastern Air Lines**.

On September 10, German aviation authorities withdraw permission for Holiday to land at any airport in the Federal Republic. Holiday sues to regain this lost authority, but is turned down by a high court in November. With its principal European market out of bounds, the company has no option but to shut down and liquidate.

HOLIDAY EXPRESS HX (DEUTSCHE LUFTVERKEHRS, GmbH. & CO.): Germany (1962–1988). Organized at Hamburg in **1962** as the air taxi operator General Air, this company is reformed and renamed **Hadag Air, GmbH.** in **1974**. The decision is now taken to undertake scheduled commuter operations. Managing Director York C. Hevelke's de Havilland Canada DHC-6 Twin Otter and light Cessna equipment initiates services linking the company base with Helgoland, Westerland, Sylt, Dortmund and Wyck.

In the interest of promoting new services, the company is renamed **Holiday Express, GmbH.** in **1983**. The fleet, upgraded by the addition of a Dornier 228-100, undertakes new services to Rotterdam. Flights to Goteborg and Hanover begin in **1986**, by which time the Canadian turboprop has been withdrawn in favor of two Britten-Norman BN-2 Islanders and a Fairchild-Swearingen Metro II.

Fleet and route changes continue apace in **1987** as the BN-2s are replaced by a Dornier 228-201 and Antwerp succeeds Goteborg and Hanover

as destinations. In an effort to capitalize on the idea of providing an air link between the old trading cities of northern Europe, the carrier is reformed yet again in early **1988** and renamed **Hansa Express, GmbH.**

HOLLAND AERO LINES, B.V. (HAL): The Netherlands (1978–1988). Holland Aero Leasing, B.V. is formed in **1978** to undertake contract charter and leasing operations. Lightplane flight activities begin in July. Between **1979–1982**, nonscheduled flight opportunities are pursued with a fleet comprising Piper PA-31-310 Navajo and PA-31-350 Navajo Chieftain equipment. When **Air U.K., Ltd.** surrenders its Southend–Rotterdam route in September **1983**, HAL bids for and receives the service.

During **1984**, corporate reorganization to meet the scheduled challenge is undertaken. A new company is formed; Holland Aero Leasing remains as a division while the new airline division, Holland Aero Lines, B.V., is formed to assume the ex-**Air U.K., Ltd.** operation. Theo Scholes becomes managing director. Two GAF Nomad 24As, the first of the Australian-built commuters to be purchased by a European regional, are acquired and readied for service.

Scheduled Rotterdam–Southend and Norwich service is inaugurated on February 4, **1985**. During the summer, two Avions de Transport Regional ATR42s are ordered and are received late in the year.

Rotterdam–Paris and Frankfurt ATR42 services begin in January and July, **1986**, respectively. Groningen, Norwich, and Southend join the route network in **1987**. Unable to generate the traffic to cover the costs of expansion, the company enters receivership in early **1988**.

HOLMSTROEM AIR HUDIKSVALL, A.B.: Sweden (1994–1995). HAH is established at Hudiksvall in **1994** as a subsidiary of **Holmstroem Flyg, A.B.** to offer scheduled domestic commuter flights. Revenue services are inaugurated with three Shorts 360-100s. In July **1995**, the decision is taken to provide the company with a new corporate identity. Its aircraft launch services on September 1 as **Holmstroem Air Sweden, A.B.**

HOLMSTROEM AIR SWEDEN, A.B.: Skogsta 41, Hudiksvall, S-82492, Sweden; Phone 46 (650) 24000; Fax 46 (650) 24224; Code HJ; Year Founded 1995. In July **1995**, the decision is taken to provide Hultsfred-based **Holmstroem Air (Hudiksvall, A.B.)** with a new corporate identity. On September 1, Managing Director Sivert Andersson's three Shorts 330s resume services over the previous Holmstroem routes.

The fleet is altered in **1996** to include 1 each Dornier 228-100 and 228-201 plus 3 British Aerospace BAe Jetstream 31s. Destinations visited now include Borlaenge, Gallivare, Goteborg, Hultsfred, Oskarshamn, Mora, Stockholm (Arlanda Airport), Sundsvall, Umea, and Vasteras.

In order to provide itself with assured feed, the Swedish regional **Skyways, A.B.** purchases 91% majority ownership in March **1997**. The company name remains the same and Managing Director Andersson is left in charge. In August, a former American Eagle Jetstream 32 is placed into service; it frees up one of the Dorniers for use on dedicated cargo frequencies.

HOLMSTROM AIR (HOLMSTROM FLYG, A.B.): Sweden (1989–1995). Holmstrom Flyg, A.B. is founded at Hultsfred in early **1989** to offer scheduled services to Stockholm. Founder John Olof Holmstrom becomes managing director and inaugurates flights with a fleet of 2 Dornier 228-100s, and 1 each 228-201, Beech 99, and Super King Air 200.

The year does not, however, begin auspiciously. While on final approach to Oskarshamn after a May 8 flight from Stockholm, a Beech 99 with 2 crew and 14 passengers suddenly enters a steep dive to the left and crashes 150 m. short of the runway; there are no survivors.

Operations continue apace in **1990–1991** and three Shorts 360-300s and a Piper PA-31-310 Navajo are purchased. In **1992**, a fourth Dornier is acquired, a Dash-201.

Destinations visited in 1993 include Gavle, Hudiksvall, Idre, Mora, Oskarshamn, and Stockholm's Arlanda Airport. In response to the national airline recession that brings a traffic downturn, the fleet is reduced to the two Dornier 228-201s, the Shorts, and the Navajo.

Flights continue in 1994 and frequencies are increased after the addition of an Avions de Transport Regional ATR42-312 leased from **Cimber Air, A.S.** In July 1995, subsidiary **Holmstrom Air Hudiksvall, A.B.** is established to operate commuter passenger flights from Hudiksvall.

At this point, both the parent and its offspring are renamed. The former becomes **Highland Air, A.B.**, while the latter becomes Holmstrom Air Sweden, A.B., better known as **Swedeways, A.B.**

HOLMSTROM AIR SWEDEN See **SWEDWAYS, A.B.**

HOLYMAN'S AIRWAYS (PTY.), LTD.: Australia (1933–1936): With capitalization equally provided by Huddart Parker Ltd., the Union Steam Ship Company of New Zealand shipping firm, plus Holyman Brothers, Ltd., the corporate identity of **Tasmanian Aerial Services (Pty.), Ltd.** is changed to Holyman's Airways, Ltd. in late 1933.

Given **Hart Aircraft Co. (Pty.), Ltd.**'s subsidized mail route Launceston–Flinders Island–Melbourne, the carrier's new de Havilland DH 61, *Miss Hobart*, piloted by Victor Holyman and Gilbert Jenkins, initiates service on October 1, 1934. Nine days later, the aircraft is lost (12 dead).

A new DH 89 is acquired in the summer of 1935; christened *Memma*, it begins weekday flights from Melbourne–Sydney via Canberra on October 7. On October 29, a Melbourne–Adelaide frequency is introduced.

The fleet at year's end comprises the *Memma*, two DH 86s, the *Lepana* and *Loila*, two DH 84s, *Golden West* and *Miss Launceston*, plus a Fox Moth, a Percival Gull, and three DH Moths. Orders are placed for three Douglas DC-2s, the first of the large American airliners to be allowed entry into the Australian market.

The first DC-2 is delivered to the carrier in June 1936; named *Bungana*, it is placed in service on a Melbourne to Hobart via Launceston route. On July 1, Holyman's is the largest of four airlines merged to form **ANA (Australian National Airlines [Pty.], Ltd.)**; the company retains its identity until November 2, when it is officially absorbed.

HOME AVIATION, LTD.: Canada (1990–1999). Home is created in the early 1990s as the charter division of Home Oil Company, Ltd., which has had its own corporate flight unit for some years operating a de Havilland DH 103 Dove flown by the unit's founder and chief pilot, Donald Douglas (no relation to the famous manufacturer).

In early 1996, Home Oil is sold to Anderson Exploration, Ltd., which in turn sells Home Aviation, together with its Beech Super King Air 200 and Cessna Citation II, to Richard Hotchkiss and three partners in March. In June, Hotchkiss adds a Learjet 55.

By 1997, Home, which is operating from an inherited, leased Esso Aviat hangar, is flying passenger and cargo charters with 8 aircraft. It also operates medevac flights and manages aircraft for various clients.

During the spring of 1998, merger discussions are begun between CEO Hotchkiss and Gordon Laing, who together with his wife and several partners own Calgary-based **Sunwest International Aviation Services, Ltd.**, and his chief pilot, Mark Eberl. Although discussions between the two concerns continue into the summer, they end abruptly in August after Gordon and Kathy Laing are killed in an accident.

Southwest and Home resume amalgamation discussions in January 1999. On June 24, a merger is completed and the two concerns become **Sunwest Home Aviation, Ltd.**, with Eberl and Hotchkiss as joint managing directors.

HONDA AIRWAYS COMPANY, LTD.: 51-3 Ooaza Shimogo Kawashima-cho, Hiki-Gun, Saitama-Prefecture, Japan; Phone 81 492-99-1111; Fax 81 492-97-7748; Year Founded 1964. Honda is established in 1964 to offer small group passenger and other contract service flights with a mixed fleet of helicopters and fixed-wing aircraft. By

2000, the company, which now also flies small package cargo and medevac, employs 96 full-time pilots. The rotary-wing fleet includes 1 Agusta AG-109A Mk. II, 14 Eurocopter AS-350B Ecureuils, 1 Eurocopter BK-117, and 2 Robinson R-22s. Also flown are 18 Cessna 172 Skyhawks.

HONG KONG AIR INTERNATIONAL (PTY.), LTD.: Hong Kong (1966–1975). A subsidiary of Hutchison International, Ltd., HKA is formed as a helicopter airline to provide scheduled services between Kai Tak International Airport and Hong Kong Island.

Like many similar operations around the world, costs prove too high and the carrier is forced to cease operations in 1975.

HONG KONG AIRWAYS, LTD.: Hong Kong (1947–1959). With support and equipment from **British Overseas Airways Corporation (BOAC)**, HKA is set up on October 22, 1947 to feed traffic coming out of China to the British flag carrier at Hong Kong's airport. Another purpose is to regain commerce lost to **Pan American Airways (PAA)** via its subsidiary **China National Airways Corporation (CNAC)**. Outfitted with Douglas DC-3s from BOAC, HKA inaugurates twice-daily service to Shanghai on December 2.

Twice-daily frequencies are initiated on January 10, 1948 between Hong Kong and Canton. The new route proves so rewarding that it is doubled to four times per day on March 22.

Later in the spring, flights begin to Manila and a spirited competition is undertaken with **Cathay Pacific Airways (Pty.), Ltd.**

On May 13, 1949, the Hong Kong government, acting on orders from the Colonial Office in London, divides the routes emanating out of Hong Kong between HKA and Cathay. The BOAC-supported company receives all of those to the north, except Manila, which it must share with Cathay. When the forces of Mao Tse-tung take power in China, they order all Chinese contact with the West be severed, including HKA services. As a result, on November 30 BOAC sells its stake to Jardine, Matheson. The new owners sell the Douglas transports and consider new services.

In January 1950, Hong Kong Airways, which had once aspired to size, is reduced to operating a single route to and from Taipei with a Curtiss C-46 Commando leased from **The Flying Tiger Line** and a DC-4 chartered from **Northwest Airlines**. This service is the company's entire business for the next five years. In October 1954, HKA orders a pair of Vickers Viscount 760Ds, while the TFTL Curtiss lease ends in November.

In January 1955, BOAC reenters the picture, taking back the stake it had sold six years earlier. While awaiting delivery of the Viscounts, an effort is made by the British company to revitalize HKA and expand its services with leased aircraft.

The Viscounts arrive in January 1957 and enter service on February 25 between Hong Kong and Seoul, South Korea. The turboprops expand HKA business in March when they begin flying to Manila, following up with services in April to Taipei and in May to Tokyo.

Strong, but unprofitable, competition now resumes with Cathay Pacific. Eighteen months into the fiscal bloodletting, BOAC and Cathay officials agree to rationalize the situation by combining forces. Cathay Pacific Holdings (Pty.), Ltd. is established in December 1958 for the purpose of organizing a merger of the two airlines.

Management of HKA passes to Cathay Pacific on February 1, 1959. Assimilation begins and is formally announced on June 8; the process is completed on July 1, with Butterfield and Swire (Pty.), Ltd. the majority owners and Cathay Pacific the surviving name.

HONG KONG DRAGON AIRLINES. See **DRAGONAIR (PTY.), LTD.**

HOOD AIRLINES: United States (1963–1972). Hood is organized at Killeen, Texas, in late 1963 to offer lightplane shuttle service for military personnel stationed at Fort Hood. Employing Beech 18s and Beech 99s, the new entrant inaugurates scheduled daily roundtrips, beginning on April 27, 1964, linking the company base with Dallas and Houston.

The carrier is unable to maintain economic viability and its fiscal situation deteriorates throughout 1967. On May 23, 1968, Ted C. Connell's **DAL Airlines**, Hood's major Killeen-based competitor, purchases the company from bankruptcy proceedings. DAL is merged into Hood and the amalgamated company emerges not as an upgraded DAL Airlines, but as a new Hood Airlines.

In 1969, Hood transports 34,700 customers.

In 1970, owner-operator Connell purchases **Rio Airways**, an airline begun as a charter operator in 1963 and operating a single Austin-Houston route with a Piper PA-31-350 Navajo Chieftain since August 1966.

The Hood fleet in 1971 includes the Rio Piper plus a Douglas DC-3 and a Cessna 402. With assistance from **Air South** President/CEO F. E. "Pete" Howe, then in the process of transferring to a similar post with Hood, Chairman Connell is able to acquire a new intrastate route from Dallas to Wichita Falls on November 15.

Howe's presidency begins on January 1, 1972 and, on May 1, the merger of Hood into Rio is completed. The Hood name disappears and a stronger **Rio Airways** begin operations.

HOOKE AIR SERVICES, LTD. See **AUSTIN AIRWAYS, LTD.**

HOP-A-JET: 5340 NE 21st Ave., No. 60, Fort Lauderdale, Florida 33309, United States; Phone (954) 771-5779; Fax (954) 772-6981; http://www.aerosearch.com/companies/hopajet; Year Founded 1976. Hop-a-Jet is set up at Fort Lauderdale in 1976 to provide executive and small group passenger charters throughout the U.S., the Caribbean, South America, and Europe.

By 2000, Operations Director Barry Ellis oversees the work of 22 pilots and directs a fleet comprising 3 Canadair 600 Challengers, 2 Learjet 25Bs, 2 Learjet 35A Century IIIs, and 1 Learjet 55 Longhorn.

HORDUR GUDMUNDSSON AIR SERVICE. See **FLUGFELAG ERNIR H.F.**

HORIZON (GORIZONT): Russia (1993-1996). Established at Krasnopar airport in 1993, this new all-cargo charter operator names V. V. Fedorchenkov as its general manager. He acquires an Antonov An-26, which is employed to inaugurate revenue flights to other CIS destinations, as well as ad hoc markets in Africa, Europe, and the Mideast. Additional An-26s are acquired in 1994 as operations continue for two more years.

HORIZON AIR (HORIZON AIR INDUSTRIES): 19521 Pacific Highway South, Seattle, Washington 98188, United States; Phone (206) 241-6757; Fax (206) 248-6361; http://www.horizonair.com; Code QX; Year Founded 1981. Horizon Air (officially Pacific Horizon Airlines) is incorporated on May 7, 1981 at Seattle, Washington, under the leadership of campground magnate (Thousand Trails, Inc.) and former Boeing Commercial Airplane Company executive Milton G. "Milt" Kuolt II. The new regional's initial investors (Joe Clark, Bruce McCaw, and Scott Kidwell) put up sufficient capital to hire 36 employees and acquire 3 Fairchild F-27As from **Quebecair, Ltd.** These inaugurate daily scheduled, roundtrip, third-level passenger flights to Yakima on September 1 in competition with Spokane-based **Cascade Airways**. A week later, flights commence to Pasco's Tri-Cities Airport. Airline employment stands at 98 by year's end, but there is no profit.

Air Oregon is acquired on June 17, 1982, together with its fleet of Swearingen Metro IIs and its route from Medford to Seattle via Portland and Tacoma. This new Horizon service is now marketed as the I-5 Express.

The route system is increased when service is initiated to Spokane, Pullman, and the Idaho community of Lewiston.

Charter trips for ski buffs to Sun Valley, Idaho, commence in December.

Following the **Air Oregon** merger, passenger boardings increase to 282,214, which is 52% over the 185,372 combined 1981 total of the two

independents. The fleet now includes 3 F-27As, 2 F-27Js, 1 F-27M, and 5 Swearingen Metro IIs, many with a brilliant sun logo; orders remain outstanding for 2 more F-27s.

In 1983, President Kuolt's 650-employee Horizon begins merger discussions with the financially troubled, Utah-based commuter **Transwestern Airlines**. Destinations now visited by Horizon include Spokane, Weco, Pullman, Seattle, Spokane, Wenatchee, Yakima, Eugene, Klamath Falls, Medford, North Bend, Pendleton, Portland, Redmond, and Salem. In Idaho, flights are made to Boise, Idaho Falls, Lewiston, Pocatello, Sun Valley, and Twin Falls. San Francisco and Salt Lake City are also markets following **Transwestern Airline's** absorption in December.

With a total of 3 F-27As, 1 F-27M, 6 F-27Js, and 13 Fairchild-Swearingen Metro IIIs in its fleet, the airline increases passenger traffic by 94.1% to 452,925 passengers flown.

The workforce is increased 79.5% in 1984 to 917 and to meet the year's continuing demand, two more Fokker Fairchild (F-27Fs) and seven Metros (Metro IIIs) are acquired and arrangements are made for receipt of the first jetliner.

Meanwhile, on January 1, the holding company Horizon Air Industries is formed as a public stock corporation; Horizon Air is now the operating subsidiary. An initial public offering of 750,000 shares of common stock is now made.

During January-May, plans are made to occupy a new Seattle headquarters facility later in the year; a frequent-flyer program is introduced, along with the SunStreak small-package express service on scheduled flights. Two Convair CV-580s are wet-leased from **Sierra Pacific Airlines** during the summer.

Sunjet Service, employing a DC-9-14 (wet-leased from Boston-based **All Star Airlines** and wearing that airline's livery) is inaugurated between Seattle, Portland, Boise, and Pasco at the end of July, making Horizon the first regional from the northwest to make such a link. The Douglas service is an economic disaster and the chartered jetliner is withdrawn and returned after Thanksgiving.

A leased Fokker F.28-1000 replaces the Douglas in December and is employed to launch weekday return service from Seattle to Boise. On weekends, it provides Sky Lift Service flights from San Francisco to Sun Valley, Idaho.

Enplanements spiral upward by 95.9% to 887,280 and cargo balloons 106.9% to 4.25 million FTKs. Revenues skyrocket 113% to \$56.42 million and costs climb 107.9% to \$53.86 million. The operating profit swells to \$2.56 million and the previous year's net loss turns into a gain of \$293,000.

In 1985, Horizon becomes a code-sharing partner of **United Airlines**. To replace the aging Fokker Fairchild, the company now places an order for 10 de Havilland Canada DHC-8-100s. To help cover the cost, Horizon arranges for the manufacturer to take the F-27s as partial payment, acquiring them as new Canadian aircraft are delivered.

Meanwhile, beginning in June, the carrier attempts to reach an arrangement to acquire bankrupt **Cascade Airlines**, which has steadily been withdrawing from routes on which it has been challenged by Horizon.

During negotiations, two BAC 1-111s are wet-leased to Horizon to help cover the routes Cascade abandoned in the spring, but the short-lived operation actually costs Horizon \$1.5 million. A deal to take over Cascade is signed on July 31.

Passenger boardings ascend 22.4% to 942,023 and freight skyrockets 75.7% to 7.47 million FTKs. This year, Horizon transports more cargo than any other regional save one. Revenues advance 23% to \$69.3 million, but a net \$9.1 million loss is suffered, including a \$4-million write-off of the Cascade takeover attempt costs.

On January 31, 1986, a day after the DOT grants approval (with restrictions) to the merger, the 870-employee Horizon, itself losing money, pulls out of discussions regarding a takeover of **Cascade Airways**, citing unacceptable competitive issues raised in the DOT approval.

Service from Seattle to Kalispell, Montana, begins on March 1. Unable to find other financing, **Cascade Airways** collapses on March 7 and is liquidated in April. The defunct company's leadership files a breach of contract suit against Horizon, but the case is dismissed.

Although Kuolt's concern is now the largest regional carrier in the Pacific Northwest, the **Cascade Airways** "mistake" costs Horizon \$4 million. Also in March, the first of 10 requested de Havilland Canada DHC-8-102s is placed into service between Seattle and Pocatello. The only company aircraft to wear names, the first ship is christened *Seattle/Tacoma*.

On May 1, I-5 Super Shuttle service is introduced between Seattle and Portland; by early October, 50 roundtrip weekday frequencies will be flown between the two cities.

The following day, May 2, an armed gunman hijacks a Metroliner en route from Medford to Portland with 14 passengers and orders it diverted to Hillsboro, Oregon. After releasing his hostages, the pirate negotiates his own surrender, three hours later. While in police custody, the perpetrator will commit suicide.

It is also announced in May that the company will be purchased for \$68 million by Alaska Air Group, parent of **Alaska Airlines**, in late fall and notice of withdrawal is provided to **United Airlines**.

The fifth anniversary is celebrated on September 5 as the company now serves 27 cities in Washington, Oregon, Idaho, Utah, Montana, and California. In October, Chairman Kuolt suggests that he is looking toward retirement.

The formal Alaska purchase occurs on November 19, when the boards of both Alaska and Horizon approve it. Alaska makes clear that it will operate its new subsidiary as a separate "sister" company, allowing it to retain its own identity and management.

In December, Horizon Air Holiday flights are started to the Sun Valley ski country while scheduled service to Helena and Great Falls, Montana, is begun. Full DOT approval to the Alaska takeover occurs before Christmas.

Customer bookings ascend 21.8% to 1,147,805 and cargo grows by 36.1% to 10.17 million FTKs. Revenues slip to \$62.4 million, but expenses of \$56.6 million allow a \$5.8-million operating profit. The company loses its independence on a profitable note, showing a net gain of \$3.7 million.

Airline employment is increased by 22.7% in 1987 to 1,466 and the fleet includes 2 F.28-1000s, 8 F-27s, five DHC-8-101s, and 22 Metro IIIs.

Alaska Airlines Vice President John F. Kelly is appointed president/CEO (effective in June) at the first of the year. Former Chairman Kuolt agrees to remain vice chairman and a consultant, but Executive Vice President George Bagley (who will retain that title and become chief operating officer as well) will have charge of day-to-day operations during the year's first half. Service is started to Bellingham, Washington, in February.

The code-sharing agreement with **United Airlines** officially ends on March 1 as the large regional switches from that major's Apollo computerized reservations system to the CCS system operated by **Continental Airlines**. It also joins the **Alaska Airlines** Gold Coast Travel frequent flyer program. On April 5, thrice-daily Metro III nonstop roundtrips are inaugurated between Seattle and Port Angeles.

Competitors now increasingly enter Horizon's Northwest territory. Montana-based **Big Sky Airlines** begins service to Spokane under a code-sharing agreement with **Northwest Airlines** while new "United Express" partner **NPA, Inc.**, using British Aerospace Jetstream 31s, forces Horizon to abandon its Sacramento market in June. Late in that month, a court appeal is lost and the effort to have a DOT decision giving **San Juan Airlines** the lucrative Seattle-Vancouver route cannot be reversed.

While on a training flight from Twin Falls, Idaho, on September 29, a Swearingen Metro with three crew collides with an antenna tower and crashes out of control; although the aircraft is damaged beyond repair, there are no fatalities.

Despite these disappointments, passenger boardings leap upward by 22.7% to 1,388,912 and freight is up by 6.9% to 10.87 million FTKs. Revenues ascend 29.2% to \$107.8 million and push the carrier from the ranks of the large regionals (where it was Number Four) into national status. Expenses are kept low enough to guarantee profits: \$2.93 million (operating) and \$887,000 (net).

Employment falls by 4.5% in 1988 to 1,400, but the fleet is increased by the brief addition of another F-27J, plus nine DHC-8-102s.

In January, the company begins to offer weekend discount fares that are 40% to 60% lower than regular weekday fares. The Canadian routes of the small Washington State-based regional **San Juan Airlines** are purchased. Thrice-daily Seattle-Spokane roundtrip F.28-1000 service is introduced in February.

Just after takeoff from Seattle for Spokane on April 16, a DHC-8-102 with 3 crew and 37 passengers develops a large fire in its No. 2 engine nacelle. The turboprop returns to its point of origin, makes an emergency landing, and strikes ground equipment and jetways B7 and B9 of the main terminal. Although the de Havilland is damaged beyond repair and there are no fatalities, 18 people are injured.

A third DHC-8-102 roundtrip is added in May from Seattle to Kennewick, Pasco, and Richland, Washington. The twelfth Dash 8 is acquired in early August and, on August 19, the last F-27 is retired.

Service is inaugurated from Seattle to Bellingham and from Billings to Missoula, Montana, in November, and several other frequencies are increased.

Operating regional services throughout the Pacific Northwest, Horizon enplanes a total of 1,397,139 passengers, a slight 0.6% increase. Revenues, however, jump 5.31% to \$113.38 million, costs climb 5.53% to \$110.52 million, and operating income totals \$2.86 million, a slight decline. Net gain skyrockets to \$2.56 million.

The workforce grows by 7.1% in 1989 to 1,500 and the fleet, which continues to feed **Alaska Airlines** in the Pacific Northwest, now includes 3 F.28-1000s, 32 Metro IIIs, and 13 DHC-8s, including 2 101s and 11 102s. Six DHC-8s remain on order.

Beginning in February, three of the eight roundtrips from Bellingham to Seattle are served by new DHC-8-102s. The U.S. routes of **San Juan Airlines** are purchased in May when the Washington State small regional becomes a code-sharing affiliate of Horizon's parent.

In June, five daily nonstop DHC-8-101 flights from Seattle to Vancouver and Victoria, British Columbia, begin over the Canadian routes transferred earlier from **San Juan Airlines**. During the month, an hourly Seattle-Spokane nonstop roundtrip F.28-1000 shuttle service is inaugurated.

Three months later, in August, **San Juan Airlines**, the 40-year-old small regional, turns in its operating certificate to the FAA and liquidates. Meanwhile, a ninth daily Pasco to Portland service is added. Other new frequencies are initiated from Seattle, Spokane, Vancouver, and Yakima.

A third daily flight is added in September from Portland to Lewiston, Idaho, and an eleventh weekday service is started from Seattle to Spokane. In November, additional frequencies are added from Seattle to Vancouver, Walla Walla, and Wenatchee.

The year's passenger boardings at Horizon swell 13.6% to 1,587,000 and freight jumps 10.1% to 1.03 million FTKs. Revenues increase 16.86% to \$132.52 million, expenses ascend 14.48% to \$126.52 million, and the operating profit doubles to \$5.99 million. Net profit nearly doubles, to \$1.86 million.

In 1990, the 1,500-employee **Alaska Airlines** feeder owns or leases 48 large and small airliners, including 32 Metro IIIs, 13 DHC-8-100s, and 3 F.28-1000s. Six DHC-8-100s remain on order.

In January, daily service is initiated from Butte to Billings, Helena, Kalispell, and Spokane and from Cincinnati to Birmingham, Alabama; three daily roundtrips are added from Kalispell to Billings and from Boise to Pullman and Lewiston. A passenger is injured on May 24 when a window in the cabin of a DHC-8-102 blows out during a flight from Portland to Seattle.

Service is inaugurated in September between Portland, Oregon, and Vancouver. Customer bookings climb another 14.4% to 1,816,000 and revenues swell 23.6% to \$163.82 million. Costs rise 24.86% to \$157.97 million and operating income dips very slightly to \$5.84 million. Net gain slides to \$1.05 million.

The employee population declines by 6.7% in 1991 to 1,400 and the fleet now includes 53 aircraft. Additional flights are begun in February from Portland to Lewiston and Pullman and return trips from Seattle to Walla Walla.

In April, two DHC-8-102 trips are added from Seattle to Spokane. A second DHC-8-102 frequency is launched from Kalispell to Spokane and replaces its Metro IIIs with DHC-8-102s on most of its Spokane-Missoula roundtrips. DHC-8-102s are added to the hourly F.28-1000 Spokane-Seattle shuttle.

In May, a \$260-million order is placed for 35 Dornier 328-110s, plus 25 options. A new corporate image is unveiled during the first half, including a new white, red, and burgundy livery. Additionally, aircraft fuselages are adorned with the Horizon name in scripted lettering 5-feet high.

In July, a second DHC-8-102 is added to the Victoria and Port Angeles to Seattle roundtrip making a total of four per day. A DHC-8-102 is also added to the Seattle-Portland shuttle service. In August, the Metro IIIs are replaced on the afternoon frequency between Bellingham and Seattle.

Passenger boardings pass the two million-mark in annual enplanements for the first time, climbing by 11.3% to 2,022,000. Freight, meanwhile, rises 6.8% to 1.6 million FTKs. Revenues ascend 11.79% to \$183.14 million and expenses are up 10.89% to \$175.17 million, guaranteeing a \$7.96 million operating profit. Net income doubles to \$3.6 million.

Company employment increases 42.9% in 1992 to 2,000. With the retirement of a Metroliner and the addition of 4 DHC-8-102s, the fleet reaches a total of 55 aircraft.

Spokane is one of five Western cities under consideration by **Alaska Airlines** in the spring as the location of a heavy maintenance base for its aircraft and Horizon's.

Alaska officials express displeasure with Spokane on May 8 when new entrant **Morris Air Service** begins daily nonstop roundtrips to that point from Seattle. **Alaska Air** and Horizon, which had dominated the air corridor between Washington State's two largest cities and charged roundtrip fares of \$190 to \$380 per trip, are forced to match the \$78 tariff of MAS.

A one-stop Portland-Redding roundtrip is inaugurated. One of the last F-27s is destroyed by Hurricane Andrew at Miami on August 24.

Alaska Airlines B-737 service from Nome to Anchorage via Kotzebue must be curtailed on September 11 as airport authorities repair and upgrade the main runways. For the next five days, twice-daily roundtrips will, however, be provided by Horizon DHC-8-100s.

Customer bookings jump 17.8% to 2,381,000 and revenues ascend 13.7% to \$208.1 million. Expenses climb 14.6% to \$200.84 million and leave an operating profit of \$7.3 million. Net gain slips to \$5.73 million.

In 1993, President/CEO Kelly oversees a workforce of 2,267, a 13.4% boost, and a fleet of 20 DHC-8-100s, 32 Metroliners, and 3 F.28-1000s. The de Havillands are all now equipped with the Head-Up Guidance System (HGS) employed by **Alaska Airlines** for four years. Orders are outstanding for 35 Dornier 328-110s.

In the spring, the company, together with **Alaska Airlines**, begins to employ the **American Airlines** SABRE reservations system. During the summer, the Metros are withdrawn from the high-frequency Seattle to Portland and Spokane shuttle and are replaced with Dash 8s. The premier Dornier 328-110 is handed over on November 12 in ceremonies at the builder's Oberpfaffenhofen facility.

Not only does the first Dornier enter service in December, but the original F.28-1000s are also increasingly taken out of service for normal maintenance and upgrading. Seventeen of the daily roundtrip Seattle-Spokane shuttle flights will be operated over the next six months by wet-leased **Alaska Airlines** jetliners.

Passenger boardings shoot up 15.6% to 2,751,778 and freight ascends 26.1% to 3.49 million FTKs. Revenues climb 7.3% to \$223.33 million, expenses are up only 6.8% to \$214.57 million, and operating income grows to \$8.75 million. Net profit swells to \$4.6 million.

Airline employment is increased by 22.4% in 1994 to 2,999 and Sacramento is added to the route network in April. During the spring, **Southwest Airlines** moves into Horizon's service area, placing pressure on Horizon's fare structure and directly competing with it on routes from Seattle to Spokane and Portland.

In September, six Fokker F.28-1000s are leased from **USAir**. When President Kelly is appointed executive vice president/chief operating officer of sister **Alaska Airlines** in December, he is succeeded by that carrier's vice president-finance, Kathleen H. Iskra. Senior Vice President Operations William Ayer is also promoted into Alaska's hierarchy.

Customer bookings surge 26.5% to 3,481,587 while cargo moves up 3.8% to 3.63 million FTKs. Revenues accelerate 15% to \$256.9 million while expenses rise only 13.7% to \$243.98 million. Pretax profit climbs to \$12.92 million, while net gain increases to \$7.7 million.

One new employee is hired in 1995. The fleet grows throughout the year to include 23 Fairchild Metro IIIs, 10 Dornier 328-110s, 23 DHC-8s, and 12 Fokker F.28-1000/4000s.

Thrice-daily nonstop F.28-1000 roundtrips are initiated on March 19 between Boise and Oakland, California.

During the summer and fall, electronic ticketless travel is made available with **Alaska Airlines** on routes from Seattle to Ketchikan, Oakland, Spokane, and Oakland to Boise. On October 11, this electronic option is extended from Seattle to San Francisco, San Jose, and Portland.

At the same time, automated check-in becomes available employing kiosks similar to bank ATM machines. President/CEO Iskra departs in October and is replaced, initially on a temporary basis, by Executive Vice President/Chief Operating Officer Bagley.

Daily F.28-1000 roundtrips commence on December 17 from Seattle to Edmonton. Two more Dornier 328-110s are delivered in December, including the 50th production unit.

Despite competition from other discount carriers, enplanements jump 9.1% to 3,796,000 and freight accelerates 12.1% to 2.78 million FTKs. Operating revenues move up 8.8% to \$279.5 million and costs advance 12.8% to \$275.3 million. Operating profit falls to \$4.2 million while an equal \$4.2-million net profit is posted.

There is no change in the workforce in 1996. Chief Operating Officer Bagley becomes permanent president/CEO at the beginning of the year. The two new Dornier 328-110s enter service in January. Plans are made to replace the F.28-1000s with F.28-4000s.

Also during the first quarter, the FAA approves Horizon's request to launch new low-visibility landings at the airport at Medford, Oregon. Seven of the company's eight daily services to Medford will be performed by DHC-8s equipped with Flight Dynamics' HGS. The eighth frequency, performed by a Dornier, must remain high-visibility until the 328-110 can be equipped with its own HGS.

Daily Dornier 328-110 roundtrips to Jackson Hole, Wyoming, via Bozeman, Montana, commence in June. In August, negotiations for a new contract begin with AFA. Also during the month, orders are placed for 25 DHC-8Q-200s.

During the fall, a cost-cutting program built around schedule and fleet simplification is announced. A losing two-year-old rivalry with **Southwest Airlines** (2) on routes from Seattle to Spokane and to Portland begins to hurt the company's bottom line.

Customer bookings slide 1.1% to 3,752,690 on 204,447 scheduled departures, but cargo accelerates 9.1% as 3.04 million FTKs are operated.

Revenues climb 7.8% to \$301.3 million and expenses jump 9.4% to \$301.2 million. At \$300,000, the net gain is \$200,000 higher than operating profit. Still, it is only 7% of the previous year's gain and causes alarm bells to ring at company headquarters.

The employee population is cut 3.6% in 1997 to 3,000. At an impasse, the National Mediation Board (NMB) is called in during February to assist in the negotiations between the carrier and AFA.

Flight 2157, a DHC-8 with 3 crew and 13 passengers arriving from Seattle, is substantially damaged on March 26 when it collides with ground equipment during taxi in Wenatchee, Washington; no one aboard the plane is injured as it moves to the terminal following its landing.

To help lower costs, the company begins to rationalize its fleet. Plans are made to withdrawn all of the Dornier 328-110s and Fairchild Metro IIIs in favor of Fokker F.28-4000 and DHC-8 equipment. Frequencies will also be slightly reduced—an inconvenience the carrier hopes to offset with the comfort of the larger aircraft.

Service to a few less popular stops is now suspended, including Twin Falls, Idaho, Jackson Hole, Wyoming, and Helena, Montana. Daily F.28-4000 return service is started from Seattle to Billings, Montana, in June.

On August 3, twice-daily nonstop DHC-8 return flights are started between Seattle and Medford, Oregon. These are in addition to the 10 flights a day between Portland and Medford. A third daily nonstop is initiated from Seattle to Redmond and Bend. New shuttle service is launched from Seattle to Vancouver. Flights are increased from 13 to 16 per day and are scheduled to depart every hour on the half-hour from Seattle and every hour on the hour from Vancouver.

A seventh daily DHC-8 nonstop between Seattle and Victoria, British Columbia, is added on September 7. Simultaneously, a second daily F.28-4000 roundtrip is instituted between Seattle and Billings.

Also during the fall, an F.28-1000 is sold to the Canadian charter operator **Air Niagara Express, Ltd.** Still, sufficient units remain on hand to honor all commitments, including daily service between Seattle and Spokane and Spokane and Billings.

On November 9, the company replaces the Metroliners serving the Portland to Klamath Falls, Oregon, route with DHC-8s.

In a special ceremony at the Bombardier facility at Toronto, the company, on November 21, receives the 500th DHC-8 built, a Dash-8Q-200, which is christened *Wenatchee*.

At the same time, the manufacturer rolls out its new DHC-8Q-400. During the fall, most of the airline's final Metro IIIs wing their way north to the manufacturer as part of the price Horizon pays for the new de Havilland equipment.

A tentative agreement on a new five-year contract is reached between the carrier and AFA on December 15. The 275 rank-and-file flight attendants, based at Spokane, Portland, and Boise, will vote on acceptance during January.

Nonstop return service from Seattle to all seven of the company's Montana destinations begins three days later. Also on December 18, thrice-daily nonstops are inaugurated between Seattle and Sun Valley for the ski season.

Passenger boardings dip 1.8% to 3,685,606 on 171,417 scheduled departures. Operating revenues inch up 0.8% to \$303.6 million. Expenses fall 1.1% to \$297.8 million. The operating profit grows to \$5.8 million, while net gain sails upward to \$6.3 million.

With founder Kuolt, cofounder McCaw, and CEO Bagley aboard, Flight 2420, a Metro III piloted by Capt. Mike Roy, lands at Portland on February 10, 1998, from North Bend, completing the carrier's last scheduled Metroliner service. The aircraft taxis to Gate A2 under the traditional water arch provided by the Port of Portland Fire Department.

Later in the day, the plane will replace an out-of-service DHC-8-100 on a flight to Redmond, but the North Bend-Portland flight completed earlier will remain, officially, its last company service.

On March 1, a third daily F.28-4000 roundtrip is added between Seattle and Calgary. On the same day, a one-stop jet flight between Seattle and Missoula becomes nonstop, making all three daily roundtrips nonstop. Similarly, between Seattle and Kalispell, Horizon converts a one-stop to a nonstop so that two of three flights each way will be nonstop.

In March, Horizon introduces new DHC-8Q-200s on services to and from Klamath Falls, North Bend, and Pendleton. Fares on the inaugural flights are reduced. In an effort to remain competitive, tariffs are also reduced on flights from Portland, Seattle, Spokane, and Boise.

Four-times-a-day nonstop, roundtrip DHC-8Q-200 flights from Seattle to Kelowna, British Columbia, commence on May 10.

A new 190,000-sq.-ft., \$17.3-million Operations Center is dedicated on August 14 at Portland International Airport. Full occupancy by 1,400 employees requires a 5-week move from 5 World War II-era buildings on the southside of the airport.

On September 27, the number of daily seats offered on the thrice-daily flights between Seattle and both Butte and Helena is doubled by upgrading from 37-seat DHC-8Q-200s to 69-seat F.28-4000s. Horizon now provides jet service to all of its Montana markets.

Also during the day, a ninth nonstop is introduced from Seattle to Pasco, Washington, with the elimination of flights shared with Walla Walla. Walla Walla now receives its own nonstop flights and two new daily nonstop return services are introduced from Seattle to Spokane.

First used by **Piedmont Airlines (1)**, a 17th F.28-4000 is leased during October.

Moses Lake is dropped as a destination between Seattle and Wenatchee on November 1 while Wenatchee is cut from three of the four daily roundtrips between Moses Lake and Seattle. A fourth daily nonstop roundtrip is introduced between Seattle and Medford, Oregon.

On November 20, the company announces that it will start thrice-daily F.28-4000 roundtrips on March 1 between Seattle and Fresno, the first nonstop service between the two communities ever offered.

On December 9, Alaska Air Group President Ayer announces that a letter of intent for the creation of a marketing partnership has been signed between its subsidiaries, **Alaska Airlines** and Horizon, and AMR Corporation and its subsidiaries, **American Airlines** and **American Eagle Airlines (2)**. The alliance will greatly expand travel and mileage opportunities for AAG passengers and strengthen the marketing presence for both corporations in California, the Pacific Northwest, and the West Coast. The four airlines will implement a fully reciprocal frequent flyer relationship; code-sharing is also under discussion, but remains subject to labor contract provisions.

Alaska also announces that notice has been provided to **Northwest Airlines** of its intent to modify an existing marketing agreement. Talks are underway and it is hoped that it might be maintained.

A February 14 schedule enhancement is announced on December 14. On that date, the company will add a fourth daily F.28-4000 roundtrip between Seattle and Calgary and a fifth daily DHC-8Q-200 roundtrip between Portland and Klamath Falls.

On December 17, a third daily nonstop roundtrip is added between Seattle and Sun Valley, with a fourth flight on weekends. The nonstop weekend service will cease on February 5.

Alaska Airlines President Ayer and **Northwest Airlines** President/CEO John Dasburg jointly announce on December 22 that their commercial cooperation agreement, which includes Horizon Air, will be extended. To mark and celebrate this arrangement, both carriers offer their respective frequent flyers the opportunity to earn bonus miles for flights taken on the other carrier between January 4 and February 28, 1999.

Also during the day, Horizon President Bagley announces that his carrier has placed a \$580 million order with Bombardier for 25 Canadair CRJ-700s, delivery of which will start during the second quarter of 2002.

During the 12 months, customer bookings jump 19.07% to 4.38 million, while freight traffic drops 2.54% to 2.85 million FTKs. Revenues jump 14.6% to \$347.8 million, while expenses are up 10.7% to \$329.6 million. Operating profit grows to \$18.2 million, while net profit triples to \$18.9 million.

A comprehensive marketing agreement, effective April 1, is announced by **Canadian Airlines, Ltd.** on January 12, 1999, with **Alaska Airlines** and its sister carrier Horizon.

On February 10, an agreement is concluded with *The Wall Street Journal* under which passengers travelling with Horizon to or from Boise, Portland, Seattle, or Spokane will be offered copies of the newspaper as they board their flights.

Starting on February 14, flights are increased from Seattle to Calgary and from Portland to Klamath Falls.

A comprehensive three-way marketing alliance is entered into with **Continental Airlines** and **Alaska Airlines** on February 25.

Nonstop F.28-4000 daily roundtrips begin on March 1 from Seattle to Fresno, California. While en route from Billings to Seattle on March 31, Flight 2419, an F.28-4000 with 4 crew and 40 passengers, experiences a loss of hydraulic pressure in the primary hydraulic system. The flight crew switches to the secondary hydraulic system and diverts to Spokane, where a safe landing is made without incident.

When the code-sharing agreement between **Canadian Airlines, Ltd.**, **Alaska Airlines**, and Horizon takes effect on April 1, the three companies begin to participate in each other's frequent flyer programs and begin code-sharing on routes between Vancouver, Seattle, and numerous cities across the western U.S. and Canada.

Thrice-daily F.28-4000 roundtrips begin on June 7 from Boise to Los Angeles (LAX). On June 14, a firm \$321-million order is placed with Bombardier Aerospace for the acquisition of 15 DHC-8-Q400s, with an option taken on 15 more. Deliveries of the advanced turboprop, for which Horizon is North American launch customer, are expected to begin in August 2000.

Passenger boardings accelerate 13.6% to 4,984,000 while freight climbs 11.7% to 3.18 million FTKs. Revenues swell 19.6% to \$415.9 million, while costs are up 18.7% to \$391.1 million. The operating profit rises to \$24.8 million, while net gain reaches \$25.5 million.

Airline employment at the beginning of 2000 stands at 3,798, a 17.2% increase over the previous 12 months.

While en route from Seattle to Fresno on February 14, Flight 2457, a Fokker F.28-4000 with 4 crew and 20 passengers, encounters clear-air turbulence over Red Bluff, California. One flight attendant is thrown across the cabin, suffering a broken ankle.

The carrier, on April 9, increases its DHC-8-102 return frequencies from Seattle to Bellingham (8 to 9) and Victoria, British Columbia (7 to 8). An agreement is reached with Bombardier Aerospace on May 31 for the acceleration in delivery of the company's order for 30 CRJ700s. Instead of 2002–2003, the first 14 are rescheduled to arrive between December 2000 and October 2001.

With contract talks unsuccessful, the carrier's Teamster-represented pilots vote on August 15 to strike if released from federal mediation efforts.

New daily nonstop F.28-4000 roundtrips are inaugurated on September 11 from Eugene, Oregon, to Los Angeles. On October 1, an F.28-4000 replaces a DHC-8-102 on one of the carrier's six daily return flights between Seattle and Eugene. The withdrawn Fokker is put up for sale as the carrier awaits delivery, hopefully in December, of its first CRJ700.

On November 13, the carrier's Transport Workers Union-represented mechanics approve a two-year contract extension, which includes a 15% wage increase.

As the year ends, employees are thrilled by the receipt of the carrier's first DHC-8-Q401 on December 29. It will enter service on February 18, 2001, and fly from Seattle to Kalispell, Missoula, Portland, Spokane, and Vancouver.

HORIZON AIR TAXI, LTD.: Switzerland (1984–1987). HAT is established at Zurich in 1984 to offer charter and on-demand passenger flights to regional destinations. Revenue operations commence with a pair of Cessna 414s.

Services are maintained until 1994, when the company stops its non-scheduled flights and becomes a flight training center.

HORIZON AIRLINES: United States (1967–1969). Horizon Airlines is initially set up at Lynchburg, Virginia, in the first quarter of 1967 before moving its base to Charlottesville. Employing a Piper PA-23 Aztec, the company inaugurates daily roundtrips on June 11, linking the home of the University of Virginia with Lynchburg and Richmond. Services are maintained into 1969.

HORIZON AIRLINES (PTY.), LTD.: Hangar 14, Airport Ave., Sydney, New South Wales, Australia; Phone 61 (2) 9791 9398; Fax 61 (2) 9791 9844; <http://www.horizonairlines.com.au>; Year Founded 1998. Horizon Airlines is established at Sydney in early 1998 to offer third-level passenger services to points in New South Wales and Victoria. Employing a small fleet of Fairchild Metro 23s, General Manager Malcolm Campbell's new concern launches revenue flights to Mildura on March 31. Service to Broken Hill begins on July 1.

So popular are these new frequencies that the company expands again on February 1, 1999, adding new flights to Deniliquin and Swan Hill. In March 2000, the company begins flying to Wangaratta and Shepparton. This strong new route is served daily after July 1.

HORIZON AIRWAYS: United States (1969–1976). Horizon is established at Kirksville, Missouri, in 1969 to provide air taxi flights to St. Louis and Kansas City. Cessna 207 operations continue apace until April 1976, when the company is reformed into the commuter **Air Missouri**.

HORNBILL SKYWAYS SDN BHD: P.O. Box 1387, North Pan Hangar, Kuching International Airport, Kuching, Sarawak, 93728, Malaysia; Phone 60 (82) 455737; Fax 60 (82) 455736; Year Founded 1988. Hornbill Skyways is set up at Kuching in 1988 by the State Government of Sarawak to provide charter and contract service flights to bush airfields in the jungle regions of Sarawak and Sabah in eastern Malaysia. Operations begin with 1 Shorts SC-7 Skyvan, 1 Cessna Citation I, and 5 Bell 206B JetRangers. In 1994, minority interest is taken in Malaysian Helicopter Service, Ltd.

Flights continue in 1995–1999. By the latter year, the fleet of General Manager Lt. Col. Sharkawi Hasbie includes the Skyvan, Citation I, 9 JetRangers, and 1 Bell 222.

HORTON AIRWAYS, LTD.: United Kingdom (1946–1950). Formed at London (LGW) in late summer 1946 by three brothers named Gee, Horton Airways acquires a Percival P.44 Proctor 5 in October and inaugurates air taxi flights. An Airspeed AS.65 Consul is purchased in February 1947 and in April the company is registered as an airline, purchasing two more Consuls the same month. Nonscheduled personnel and cargo charters are undertaken and the fleet is increased during the summer by the addition of an Auster J/1 Autocrat, a de Havilland DH 89A Dragon Rapide, and a Miles M.65 Gemini 1A.

In January 1948, the company establishes an overseas charter division in Cyprus, purchases a Douglas DC-3, and joins forces with the Swiss-based White Star Continental Tours, Ltd. The company's two Consuls are transferred to Cyprus on February 1 and launch ad hoc passenger and cargo charters from Nicosia on February 7. Coach-Air service from London to Switzerland, the south of France, and the Channel Islands is started in early summer.

On September 24, the carrier's lone DC-3 arrives at Lubeck to join the civil side of the Berlin Airlift. Flying most of its 108 cargo flights into the ex-German capital from Hamburg, beginning on October 5, the lone plane transports a total of 397 tons of supplies in 301 flying hours. The Douglas returns to London on November 18 and resumes its holiday charter operations.

British European Airways Corporation (BEA) grants Horton an associate contract in April 1949 for a scheduled routes between London (LGW) and Land's End and London (LGW) to Exeter and Plymouth. The Dragon Rapide is assigned to provide the scheduled service while the Gemini begins concentration on the provision of flights to horse races.

Without sustainable financial success, the carrier is faced with a severe cash flow problem in the spring of 1950 and is ceased to force operations in May.

HOT AIR, LTD. See BALTIC AIRWAYS, LTD.

HUACHUCA AIRLINES: United States (1983–1985). Organized at Sierra Vista, Arizona, in 1983, this small third-level operation begins in-

trastate Piper PA-31-310 Navajo services to Phoenix, Safford, Globe, Ft. Huachuca, and Tucson. Operations continue for two years until, deeply in debt, the carrier stops flying in **1985**.

HUB AIR SERVICE: United States (1964–1976). HAS is established at McGrath, Alaska, in the summer of **1964** to provide scheduled passenger and cargo flights to local destinations. Employing various Piper and Cessna lightplanes, revenue services commence on October 15 linking the company base with Medfra, Tatlina, Ophir, and Flat.

Operations continue apace for just over a decade until the company folds in **1976**.

HUB AIRLINES: United States (1966–1973). George Bailey establishes Hub Airlines at Fort Wayne, Indiana, in the late fall of **1966** to provide scheduled air taxi services to Chicago's Meigs Field via South Bend and to Detroit. Employing a Beech B-80 Queenaire, the company inaugurates daily revenue frequencies on December 21.

In September **1970**, Hub acquires the Meigs Field-based **Commuter Airlines of Chicago**, together with its Beech 99. Bailey transfers his headquarters to Chicago and maintains his schedule, adding flights to Dayton, Ohio.

On May 1, **1972**, the company enters into an association with Flint, Michigan-based **Great Lakes Commuter**. Operations continue apace throughout the remainder of the year; however, financial difficulties ensue in **1973** and in November the company closes its doors and its routes are transferred to **Skystream Airlines**.

HUB EXPRESS: United States (1987–1991). Ex-U.S. Marine Corps helicopter pilot Morris "Rhett" Flatter signs a wet-lease agreement with **New Hampshire Helicopters** in late fall 1986 to begin Hub Express, a rotary-wing air taxi operation based at Minuteman Airfield, Stowe, Massachusetts. Flights along the I-495 and Route 128 corridor from Boston to Logan International Airport commence on December 1. Shortly after nonscheduled service begins, HubExpress is able to acquire by merger the paper Part 135 operator **Air East Airlines**.

During **1987**, as operations continue apace, Flatter is able to raise nearly \$1 million in investments, including \$100,000 from Boston University. Additionally, by March, frequencies from suburban landing sites to Logan are increased to 17 per day and in September the DOT grants the company a fitness determination, originally started for **Air East Airlines**, but amended for helicopter operations.

Regularly scheduled helicopter shuttle service from Logan International Airport to various corporate locations in the Boston area begins in December. The fleet of the nation's only federally registered helicopter commuter airline comprises 3 Bell 206B JetRangers.

A total of eight scheduled round trips are completed by year's end and, after start-up costs are deducted, revenues total only \$100,000.

Sustained revenue operations commence in January **1988** and in August, daily roundtrip flights are increased to 26. The fleet is increased by another JetRanger.

Charter flights grow to account for 40% of the carrier's business; however, the remainder is all scheduled and 90% of the passengers are business people. Enplanements for the year total 6,756.

By May **1989**, the company has concluded joint-fare agreements with seven airlines serving Logan (**Northwest Airlines**, **Delta Air Lines**, **USAir**, **American Airlines**, **Swissair, A.G.**, **Sabena Belgian World Airlines, S.A.**, and **Trump Shuttle**) and added another LongRanger. Plans for substantial growth are made, including the inauguration of shuttle flights to New York and Washington, D.C.

Passenger boardings jump 108.9% to 13,279.

The workforce is increased by 7.4% in **1990** to 29 and the fleet now includes 2 LongRangers. In March, Bell Helicopter Textron agrees to finance 90% of two new \$950,000 LongRangers that are placed into service. Plans are made to expand to Washington, D.C. and link the Reagan National and Dulles Airports with an intermediate stop at Tysons Cor-

ner, Virginia's business park. Operations continue apace into the summer as 14,000 passengers are transported.

Iraq's August 2 invasion of Kuwait forces up avgas prices and causes a severe downturn in business travel. As the Massachusetts recession deepens, Hub is unable to maintain its viability let alone launch its expansion. No profit has been earned since start-up and \$3.5 million has thus far been invested.

Still, based on traffic generated early in the year, customer bookings accelerate to 26,035.

Investors, in January **1991**, call off plans for a major recapitalization effort and, in February, all but a few of the 40-person workforce is laid off. Unable to generate sufficient traffic to continue, the company ceases operations at the end of June, becoming the latest in a long line of American scheduled helicopter operations to fail.

HUBBARD AIR TRANSPORT: United States (1919–1935). On March 2–3, **1919**, carrying 60 letters and airplane designer William "Bill" Boeing as passenger, pilot Edward "Eddie" Hubbard undertakes an international mail route survey flight from Vancouver, British Columbia, to Seattle, Washington. Flying a Boeing CL-4S, the pair run into a snowstorm, which requires an overnight stop at Anacortes.

Together with Vancouver postmaster R. G. Macpherson, this first transport of airmail across an international boundary in North America is the product of an idea by a prominent Vancouver druggist, E. S. Knowlton, who earlier at the Vancouver Exhibition had spoken to Boeing and Hubbard about the feat. This exercise in Canadian-U.S. cooperation requires 2 hrs. 10 min. flying time.

After leaving Boeing's employ, Hubbard resumes these trials on July 1, **1920**. After obtaining a U.S. Post Office mail subsidy for Foreign Air Route (FAM) 2, Hubbard departs Seattle for Victoria on October 15. As the head of newly created Hubbard Air Transport, with a Boeing B-1 purchased from his former boss, Hubbard connects at Victoria with the Japanese ship *S.S. Africa-Maru*, which will take the post on to the Orient.

A small group witnesses the Seattle liftoff; however, thousands are on hand to see the Vancouver arrival. In accordance with the terms of his contract, Hubbard undertakes, beginning on October 20, the prescribed 12-plus, monthly roundtrips necessary to transport a quota of 7,200 pounds of mail. The FAM contract pays \$200 for each flight and makes Hubbard the first company to exercise a U.S. Post Office FAM agreement.

Averaging 25,000 to 50,000 pounds of mail annually in larger B-1s and B-1Ds, Hubbard continues his service for seven years, although other pilots will take a more active hand toward the end. He and Boeing remain close and Hubbard actually serves as a Boeing test pilot during the early to mid-**1920s**.

In the fall of **1926**, Hubbard returns to work for Boeing, primarily to convince the manufacturer and his representatives, including chief designer Clairmont "Claire" L. Egrvedt and Philip Johnson, of the benefits to be gained by their direct involvement in the provision of air services.

HAT is left, for the most part, for others to handle while its owner seeks to engineer the birth of a larger concern. Boeing and Hubbard, who has continued to receive much support from designer Egrvedt, now busily creating the Boeing Model 40, submit an application to the Post Office for its newly available Chicago to San Francisco Contract Air Mail Route (CAM) No. 18.

The route award is granted on January 15, **1927**. Boeing now names Hubbard vice president-operations of his new **Boeing Air Transport**, which will begin scheduled Model 40 service on July 1. Hubbard, for his part, now sells his own HAT to Vernon C. Gorst, who renames it the **Seattle-Victoria Air Mail Line**, a title it will keep until July **1928** when chief pilot Percy Barnes purchases half interest and it is renamed **Northwest Air Service**.

Although Gorst, who had begun **Seattle Flying Service** on June 15, will stray away to form and lose other airline projects, the two men share equally in this enterprise and keep it flying the international route until December 31, **1935**.

Today's **United Airlines** traces its history back to this first U.S. intercontinental contract airmail service and author Jim Brown profiles its founder in his *Hubbard, the Forgotten Boeing Aviator* (Seattle, Wash.: Peanut Butter Publishing, 1996).

HUDSON AIR SERVICE: P.O. Box 648, Talkeetna State Airport, Talkeetna, Alaska 99676, United States; Phone (907) 733-2321; <http://www.hudsonair.com>; Year Founded 1946. The oldest of six air taxi services in Talkeetna, Alaska, HAS is established by pioneer aviator Glen Hudson in 1946 to provide all manner of Denali-related services, from climber support to sight-seeing. Charter services are also arranged to bush destinations for fishermen, hunters, and kayakers, many of whom elect to stay in the company's own rental cabins.

Over the next 50-plus years, Hudson will also become the largest FBO in the Talkeetna area, providing a variety of aviation support services. After the founder's passing, the firm is taken over and operated by his brother Clifford, his wife Ollie, and their sons.

On July 23, 1997, a ski-equipped Cessna 185 with one pilot and three passengers sustains substantial damage when it impacts terrain during takeoff from the 9,500-ft. level of the Kahiltina Glacier; no injuries are reported.

Flights from the Talkeetna Airport, which is located 115 mi. N of Anchorage, are maintained in 1998–2000.

HUDSON VALLEY AIRWAYS: United States (1972–1973). HVA is created at White Lake, New York, in 1972 to provide scheduled passenger and cargo services to regional destinations. Employing Piper light-planes, the company duly inaugurates daily roundtrips linking Monticello with New York (LGA) and with Buffalo via Scranton, Pennsylvania. Operations cannot be maintained beyond 1973.

HUFF-DALAND DUSTERS: United States (1924–1928). Thomas H. Huff and Elliott Daland form Huff, Daland & Co., Ltd. at Ogdensburg, New York, in 1921 to build light bombers and small civil aircraft, including the Model 5 Petrel, used successfully in crop-dusting experiments.

To make regular use of the agricultural aircraft, a subsidiary, Huff-Daland Dusters is established at Macon, Georgia, in 1924. It is the world's first aerial crop-dusting company. Huff, with authority from Maj. Gen. Mason Patrick, chief of the Army Air Service, is able to recruit Capt. Harold R. Harris (on official leave of absence) to become chief executive and pilot.

Harris joins Huff-Daland in February 1925, at which point both the parent organization and its child move. Huff, Daland and Co., Ltd. is reorganized, renamed Huff-Daland Airplanes, Inc., and shifted to Bristol, Pennsylvania, where a new plant is built for the construction of improved airplanes, including an upgraded Model 5 known as the Model 31.

Huff-Daland Dusters, meanwhile, moves to a new base at Monroe, Louisiana, where, Harris is joined by the division's new chief entomologist Collett Everman (C.E.) Woolman, who has been loaned to the enterprise by the U.S. Department of Agriculture (DOA), who in turn has borrowed him from the State of Louisiana.

Following a moderately successful dusting season up and down the Gulf coast, it is found that there is no off-season work for the specially equipped Petrel 31s. As a result, an experimental service is operated in Mexico.

At the beginning of 1926, the acreage of the cotton planters in the South American country of Peru is under siege by plant-eating army worms. Acting on behalf of the planter community, Pedro Beltran, himself owner of a large cotton farm, travels to Washington, D.C. to consult with the DOA, which recommends dusting and sends him down to Monroe. Beltran is able to convince Huff-Daland to send Woolman down to check out the problem and, once on the scene, the entomologist finds such promise that a contract for dusting is signed.

In December, Huff-Daland sends Harris and Woolman, along with five crated dusters, by ship to Lima, Peru. There the two, having re-

assembled their Petrel 31s, begin what will prove a valuable seasonal service to local cotton growers.

Back in the U.S. on March 8, 1927, Huff-Daland Airplanes, Inc. is purchased by the New York City-based Hayden Stone brokerage house and reorganized, becoming the Keystone Aircraft Corporation. Later in the year, Harris presents a report on the Huff-Daland operation in Peru, which is complete with maps and notebooks containing proposed passenger and airmail routes down the west coast of South America.

Hayden Stone senior partner Richard Hoyt brings in Juan T. Trippe and Andre Priester of newly formed **Pan American Airways (PAA)** to review the Harris documents. Trippe and Priester, who are busily expanding into the Caribbean from south Florida, are excited

Stone and Trippe move to form a new airline for Peru on September 4, **Peruvian Airways, S.A. (PAC)**. Trippe will be president of the new carrier, with Harris as vice president-general manager. An arrangement for joint services is quickly struck with Harris and Woolman, in their capacity as officers of the Huff-Daland Dusters Air Navigation Company, and orders are placed for Fairchild cabin monoplanes.

After two successful seasons in both the U.S. and Peru, Harris and Woolman, still in charge of Keystone's Huff-Daland Dusters subsidiary in South America, seek additional opportunities for that organization and also for the new PAC. On May 28, 1928 they are awarded Peruvian government permission to initiate services both within the nation and to the U.S.

Supplying a Fairchild FC-2 and operating under terms of Huff-Daland's government certificate, **Peruvian Airways, S.A.** inaugurates regularly scheduled weekly flights from Lima's Santa Beatriz racetrack to Talara on September 13.

Three days after **Peruvian Airways'** first revenue flight, the Aviation Corporation of the Americas, holding company of Juan Trippe's **Pan American Airways (PAA)**, purchases 50% shareholding in the **Peruvian Airways, S.A.** operation. Just over two months later, on November 28, all of the Huff-Daland operating permits are turned over to **Peruvian Airways Corporation, S.A.** PAC will soon be transformed into **Pan American-Grace Airways (PANAGRA)**.

Harris and Woolman return to the U.S. in the fall after briefing president-elect Herbert Hoover when the latter visits Callao, Peru, aboard the battleship *U.S.S. Maryland*. At Monroe, Louisiana, the latter finds the local Huff-Daland Dusters operation in shambles, due largely to a lack of interest and leadership from Keystone Aircraft Corporation, which desires to divest itself of this southern stepchild. With \$40,000 from local investors, Woolman purchases Keystone's subsidiary on November 12 and obtains its Petrel 31s three days later. Following a preliminary reorganization, the new company is chartered as **Delta Air Service** on December 3. Sixty years later it would be one of America's largest carriers, **Delta Air Lines**.

HUGHES AIRWEST: United States (1968–1980). **Air West** is created at Seattle on April 9, 1968 through the mergers of **Bonanza Air Lines**, **Pacific Air Lines**, and **West Coast Airlines**, which is engineered by the latter's CEO, Nick Bez. The three bring their fleets and routes into this CAB-approved marriage with hopes that a combined operation can hold market share. As each airline component retains significant independence, resistance to the merger begins almost immediately.

The combo, unfortunately, also quickly encounters major financial difficulty increased in magnitude by the failure of the new computerized reservations system. So great do these fiscal problems become that the last option before bankruptcy must be exercised: the company's sale. The purchaser turns out to be pioneer aviator Howard Hughes, who had seven years earlier been forced out of his longtime association with **Trans World Airlines (TWA)**.

On August 12, Bez announces a \$90-million sale. A number of **Air West** directors, several of whom hear of the deal over the radio for the first time, pillar Bez as a Hughes stooge and bring suit to halt the takeover. Still, sufficient boardroom support is found for Bez (who dies

in the new year) and Hughes, in the entity of his Hughes Air Corporation (Summa), to sign the legal papers on December 31.

Following unsuccessful legal opposition, the CAB grants sale approval and Summa assumes control on July 21, 1969. During the next 10 months, the carrier is reorganized. Headquarters are transferred to San Mateo, California. The changeover does not have sufficient time to work before the year's net balance sheet is revealed to have been written in \$20.8 million worth of red ink.

Less than a year later, in April 1970, the concern is relabeled Hughes Airwest. At this point, the employee population numbers 3,500 (a 6.8% decline) and the fleet includes 44 aircraft: 19 DC-9-30s and 25 Fairchild F-27s and F-27As. A former **Pacific Air Lines** Boeing 727-193 is sold to **Union of Burma Airways, Ltd.** The highly visible purple and yellow colors of Hughes Aircraft are applied to all of the company's aircraft.

Passenger boardings increase 2% to 2,898,258 and freight traffic is up by 26%. Revenues advance 15.3% to \$75.9 million. Operating losses are cut to \$5.7 million and the net loss is cut in half to \$10.1 million.

Nonstop service from Phoenix and Tucson to Guadalajara begins in April 1971.

While climbing to 33,000 ft. on June 6, Flight 706, a DC-9-31 with 5 crew and 44 passengers en route from Los Angeles to Salt Lake City, collides with a USMC F-4B Phantom II at 15,150 ft. over the San Gabriel Mountains. Both planes crash, killing all aboard the jetliner. One of the fighter-bomber's two crew is able to successfully bail out and survives.

Aircraft mechanics, members of the Aircraft Mechanics Fraternal Association, walk out on strike on December 15.

Enplanements for the year total 2,917,935 and a net loss of \$3.3 million is absorbed.

Dressed in cowboy boots and western clothes, former paratrooper R. C. LaPoint hijacks Flight 800, a DC-9-30 on the ground at Las Vegas as it is about to takeoff for Reno on January 20, 1972. He releases 2 stewardesses and 67 passengers in exchange for parachutes and a \$50,000 ransom and then orders the Douglas to takeoff in the direction of Denver.

LaPoint, the second bandit after D. B. Cooper to escape from a jetliner by parachute, jumps from the jetliner over Akron, Colorado, but is captured by police in nearby Sterling after suffering injuries during his descent. He will be tried and given a 40-year prison sentence.

A four-month strike by mechanics ends on April 10 after an agreement is reached with management.

R. Butte is arrested by FBI agents aboard Flight 775, a DC-9-30, at Portland on July 1 after reportedly asking a stewardess for \$50,000 and a parachute during a service from Seattle. Upon examination, Butte will be found mentally unfit and sent to a psychiatric facility.

As the year progresses, the billionaire's carrier seems to recover and prosper. Plans are announced for the relocation of its headquarters to a new \$6.1-million complex under construction in the San Francisco Bay region. Services to Mexico are increased and frequencies enhanced on the Portland to Los Angeles via San Francisco route. A new market is opened at Lake Havasu City, Arizona.

Ten DC-9-10s are purchased from **Continental Airlines** in November and in December Howard Hughes is indicted by a federal grand jury on charges of conspiring with Bez to force **Air West's** stockholders to sell out four years earlier. The case will continue for six years.

Passenger boardings this year decline 6.3% to 2,745,000 and freight traffic is down by 13.9%. Both failures are due largely to a strike. Still, the company performs well on the economic side. Revenues are \$96.7 million and expenses are \$94.17 million. Consequently, profits are made: \$2.52 million (operating) and \$1.91 million (net).

The workforce in 1973 is 3,476. Customer bookings accelerate 33.9% to 3,675,000 and freight jumps by 38.9%. On income of \$130.10 million, expenses are \$123.82 million. The operating profit is \$6.28 million and net income is up to \$4.66 million.

A total of 285 new employees are hired in 1974. In February, HAW begins phasing out its F-27As and replacing them with four DC-9-30s purchased from **Hawaiian Airlines (HAL)**.

Flights begin to Edmonton, Alberta, while new services are opened from Seattle and Salt Lake City to five vacation cities in Mexico. A fifth overseas management contract is signed at year's end, with **Air Mauritanie, S.A.**

Enplanements climb 8.8% to 3,662,200 while cargo is up by 8.9%. Revenues swing upward to \$164.69 million while expenses are held to \$152.32 million. The operating profit is \$12.36 million and the \$7.94-million net profit is an all-time record.

The workforce in 1975 is 3,790. A sixth overseas management contract is signed, this one with **Saudia (Saudi Arabian Airlines)**. Three of the withdrawn F-27As are leased to the Saudis and 33 Hughes personnel are sent to manage their operation on domestic routes.

Spokane-based **Cascade Airways** begins flying replacement service over the carrier's routes to Pullman and Moscow, Idaho, and Walla Walla, Washington. Scheduled jetliner flights are inaugurated from Seattle and Portland to Edmonton and charter services are resumed.

Passenger boardings accelerate a slight 1.1% to a record 3,700,519, but cargo is down 1.7%. Expenses of \$174.84 million are submerged in overall revenues of \$177.6 million. The operating profit is \$2.76 million and a fourth consecutive net gain (\$1.7 million) is achieved.

The employee population is increased by 5.6% in 1976 to 4,004.

HAW becomes an all-jet company with the delivery and integration into the DC-9-10/30 fleet of three B-727-200s. On April 1, a DC-9-10 and a **Northwest Airlines** DC-10-40, carrying 181 people between them, nearly collide over Spokane. The near-miss occurs after the DC-9-10 misses its landing approach and overtakes the wide-body, which has just taken off. Chief patron Howard Hughes dies on April 5.

On July 1, flights commence from Portland and Seattle to Reno in Nevada. An interchange agreement is inked with **Frontier Airlines (1)** allowing flights from the Pacific Northwest to Orange County and Hollywood and Burbank Airports in southern California. Among five other nonstop segments begun are frequencies from Las Vegas to Alberta and from Alberta to Los Angeles. President Irving Tague resigns in midyear and Russell V. Stephenson is named acting president.

Customer bookings accelerate 9.1% to a record 4,038,811 while FTKs climb 8% to 8.95 million. On revenues of \$210.98 million, expenses are only \$204.31 million. As a result, another year of profits can be celebrated: \$6.67 million (operating) and \$3.64 million (net).

Acting President Stephenson is permanently confirmed in his post in January 1977. Enplanements for the year total 5,044,000. On revenues of \$249.86 million, the company posts its highest profit (\$9.4 million). It will not, however, be able to withstand the rigors of deregulation now under debate.

Airline employment is increased by 13.7% in 1978 to 5,029 and the fleet now includes 26 Douglas DC-9-30s, 11 DC-9-10s, 5 Fairchild F-27As, and 4 Boeing 727-200s. During the year, five more DC-9-30s arrive, along with a fifth B-727-200. Twelve DC-9-30s are reengined with Pratt & Whitney JT8D-15s and refurbishment is begun on the cabin interiors of the entire Dash-30 fleet. A new regional base is established in El Segundo and assistance agreements are renewed with seven foreign countries.

Following President Carter's signing of the deregulation law in October, the 55-point western route network is expanded by five cities as widely separated as Milwaukee, Des Moines, Houston, Denver, and Manzanillo, Mexico. Several older routes become nonstop and business-class service is introduced. New flight attendant uniforms are adopted.

Higher fuel costs, the expense of the new routes, and increased competition cause significant fiscal problems. Passenger boardings jump 21.4% to 6,417,000 and FTKs flown are up by 20.8% to 12.8 million. On income of \$313.15 million, expenses are held to \$300.88 million. Although a \$12.17-million operating profit is made, expenses associated with deregulation cause a 43% dip in profits to \$5.3 million.

Disaster strikes in 1979 and for the first time since 1972, Hughes falls out of the black. In January, Summa agrees to pay \$37 million to the former **Air West** shareholders to end their conspiracy challenge. Four more B-727-200s are delivered and new frequencies are improved from Houston, Denver, and Los Angeles to Seattle, and Seattle to Phoenix.

A unique "sale" is launched, offering 70% discounts in several markets on tickets purchased by passengers the night before use. Technical assistance programs are renewed in Saudi Arabia, the Philippines, Argentina, and Mauritania.

Ticket and reservation agents and office personnel, members of the Air Line Employees Association, strike Hughes on September 10. The walkout is resolved by mediated agreement on November 10.

Still, the lengthy job action leads to a 19.5% decline in passenger boardings to 5,166,000. Cargo is down 18% to 10.53 million FTKs and the workforce is cut by 0.06% to 5,000. Revenues shrink to \$312 million and expenses rise to \$326 million, leaving the airline to suffer a \$13.78-million operating loss and \$22.6-million net in the red.

The employee population is cut by 2% in 1980 to 4,900. On January 2, a DC-9-30 with 53 aboard must make an emergency landing at Seattle after smoke from faulty air recycling equipment enters the cabin. In the spring, the carrier's parent company, Summa Corporation, reaches an agreement to sell the airline to **Republic Airlines** for \$38 million plus its assumption of Hughes's debt, including that for four more B-727-200s acquired.

The acquisition process is completed on October 1, on which date the airline, pending its integration, is relabeled **Republic West** and operated as a subsidiary.

Enplanements for the year, as HAW/RW, grow 6.6% to 5,504,000 while freight traffic rises 13.7% to 11.98 million FTKs.

HUISSON AVIATION (1989), LTD.: Canada (1974–1998). Huisson is established at Timmins, Ontario, in 1974 to serve the forestry and mining industries. During the next 15 years, service is expanded into passenger charters and air ambulance service and support and via provision of outsized-load lift, the construction industry.

The company is reformed in 1989 and by 1997, President Luc Pilon employs a 50-person workforce. With annual revenues of C\$8.5 million, Huisson also owns a fleet that includes 1 Aerospatiale AS-350 Ecureuil, 3 Bell 205s, 7 Bell 206B JetRangers, 7 Bell 206L LongRangers, and 1 each Bell 212, Bell 222, Robinson R-44, and Sikorsky S-76A.

In 1998, Huisson becomes part of one of the largest and most diverse helicopter operations in North America, the trans-border firm **Helicopter Transport Services**, with corporate headquarters in Baltimore, Maryland.

HUITONG AIRWAYS (HUITONG HANGKONG GONGSI, LTD.): China (1936–1938). Backed by the Japanese Army, which is in need of air transport support for its invasion of North China, Huitong Hangkong Gongsi, also known as Huitong Airways, is established at Tanjin on November 7, 1936. Publicly, the new entrant is a subsidiary of **Manchurian Air Transport Co., Ltd.** and a local Chinese government. Employing several Fokker Model 8 Super Universals, Huitong begins service on November 17.

Operations are maintained on a small scale in 1937 and 1938 and the company never quite meets the need of its covert military sponsors. As a result, it is merged into **Zhonghua Hangkong Gongsi (China Airways Corporation)**, which is established as a subsidiary of **Japan Air Lines Company, Ltd.** (1) on December 16 of the latter year.

HULMAN AIRLINES: United States (1959–1971). **Hulman Field Aviation** is set up by George Johnson at Terre Haute, Indiana, in 1959, offering charter passenger and cargo services to destinations throughout the state.

In the early summer of 1969, the decision is taken to establish a scheduled air taxi division, which is named Hulman Airlines. Outfitted with Cessna 402s, daily revenue frequencies are undertaken to Indianapolis and Chicago, beginning on November 12. With little change, operations are maintained for the next two years.

HULMAN FIELD AVIATION. See **HULMAN AIRLINES**

HUMBER AIRWAYS, LTD.: United Kingdom (1968–1975). Formed as an executive air taxi operator in 1968, Humber begins Piper PA-23 Aztec flights from Hull, Lincoln, and Grimsby, often leasing additional aircraft from other small operations. The carrier is purchased by Ellerman Wilson Shipping Line, Ltd., in early 1969 and receives a substantial boost in capitalization. Christopher Treen is appointed managing director in September and a Britten-Norman BN-2 is evaluated in October and November, leading to the long-term lease of two Islanders, christened *Apollo* and *Juno*, in December. Treen is killed in an auto accident on December 13.

Following a hearing, the ATLB grants a license for a scheduled route from Hull to London (Leavesden), which is initiated on March 16, 1970. Only 57 passengers are carried during the first week; however, by May 27, the 1,000th is boarded. A second scheduled service, Chester to London (Leavesden) is launched in October and by November 23, bookings reach 3,500. Meanwhile, company Piper PA-23 Aztecs continue to provide nonscheduled charters, being joined by the Islanders during the winter.

Having proven financially unsuccessful, the company's scheduled services are suspended in August 1971. While the PA-23s continue air taxi flights, primarily between Hull and London (LHR), the BN-2s are employed in charter work in support of the North Sea oil industry. They are also, occasionally, leased to other small carriers.

The four Douglas DC-3s of the **Macedonian Aviation, Ltd.** are purchased in December 1974 in anticipation of additional oil industry charter contracts. When the contracts do not materialize out of on-going negotiations, the company is forced to cease operations on January 13, 1975; the DC-3 purchase is voided, the Islanders are returned their manufacturer, and the Aztecs are sold.

HUMMINGBIRD AIRWAYS, LTD.: Maldives (1997–1998). **Hummingbird Helicopters, Ltd.** is renamed in the spring of 1997 to reflect its new operating equipment, 2 float-equipped de Havilland Canada DHC-6-300 Twin Otters. These, together with the 4 Mil Mi-8 helicopters already on hand, continue to operate scheduled service from the capital of Male to the nation's 74 ocean-atoll resorts.

In October, the company's ownership forms another subsidiary, **SunExpress Airlines Maldives, Ltd.** to take over fixed-wing operations, leaving HA to return to helicopter charters. Shareholding is divided between UB Group (60%), Air Beach Resorts (30%), and Kit Chambers (10%).

HA chief pilot Capt. Garth Duncan is named flight operations manager. The two Twin Otters, along with an Mi-8, are wet-leased to his start-up, along with a Yakovlev Yak-40 chartered from Russia. Revenue flights from Male to the outer islands of the Maldives commence in March 1998.

When Kit Chambers departs the company in October 1998, UB Group and Air Beach Resorts purchase his equity and rename the company **Hummingbird Island Airways, Ltd.**

HUMMINGBIRD HELICOPTERS, LTD.: Maldives (1989–1997). Backed by private investors, former **British International Helicopters, Ltd. (BIH)** executive Kit Chambers and his wife establish Hummingbird in the Republic of Maldives in January 1989. A fleet of 2 Sikorsky S-61Ns is leased from **Court Helicopters (Pty.), Ltd.** of South Africa and a staff of 15 employees is assembled. Twice-daily interisland flights are inaugurated in May from Male International Airport.

Operations continue apace in 1990 and as demand for shuttle flights between the nation's 19 atolls slowly grows, the company, in October 1991, wet-leases a pair of Mil Mi-8s from Sofia, Bulgaria-based Heli Air Services. Upon arrival, the first of two Russian-made helicopters, flown by Bulgarian crews, begins a six-month trial in December. Also during the year's final month, the two **Court Helicopters (Pty.), Ltd.** S-61Ns are returned as the first of two S-61Ns chartered from **Bristow Helicopters, Ltd.** arrives and enters service.

The second Heli Air Services Mil Mi-8 arrives on January 29, 1992. The second Bristow S-61N is delivered in November. Two more Mi-8s

are placed into service in **1993** as Managing Director Chambers' concern continues to enjoy a successful and expanding scheduled and charter business.

While shuttling tourists to the island of Kandholhudu on January 8, **1994**, an Mi-8 with 11 aboard suffers a failure of its tail-rotor drive system and crashes into the Indian Ocean (9 dead). The entire fleet is grounded for inspection, but returns to service three days later.

Operations continue apace in **1995** and in **1996** the company is transporting some 10,000 passengers per month, most to the country's 74 ocean atoll resorts. The corporate name is changed to **Hummingbird Airways, Ltd.** in **1997** as the carrier also begins flying a pair of float-equipped de Havilland Canada DHC-6-300 Twin Otters.

HUMMINGBIRD ISLAND AIRWAYS, LTD.: Maldives (1998-1990). When Kit Chambers departs **Hummingbird Airways, Ltd.** in October **1998**, UB Group and Air Beach Resorts purchase his equity and rename the company Hummingbird Island Airways, Ltd. HA Chief Pilot Capt. Garth Duncan is named flight operations manager. Services continue employing 1 leased Yakovlev Yak-40, 1 Mil Mi-8 helicopter, 1 float-equipped Cessna 208B Caravan, and 2 float-equipped de Havilland Canada DHC-6-300s

Just after takeoff from a hotel on Rangali Island on January 26, **1999**, the pilot of the Mi-8 hears a loud noise and attempts to turn back. The Russian-made helicopter loses power and ditches into the sea, rolls over, and sinks. Five aboard die.

The company is now reduced in size as the chartered jetliner is returned. Fixed-wing floatplane charters continue and on May 27 the company is renamed **Trans Maldivian Airways, Ltd.**

HUNGARIAN AVIATION JOINT STOCK COMPANY: Hungary (1922-1928). The HAJSC is formed at Budapest on November 19, **1922**. Employing the first of four Fokker F-IIIa, it launches daily service between the capital city and Vienna on July 30, **1923**. Budapest to Graz flights also begin.

Seeking independence from the growing German multinational airline groups, the government in **1924** grants exclusive domestic rights to the company, thereby ending competition from the Junkers Trans-Europa Union partner **Aero-Express R.T.** It also acquires five more Fokker F-IIIas. The next four years are spent building a local system and maintaining the Austrian connection.

Flights continue until the middle of **1928**. During these years, the company transports some 10,000 passengers and 1 million kg. of mail and freight over 850,000 km. At this point, the company is reformed as **Malert**.

HUNGARIAN-UKRAINIAN HEAVY LIFT, LTD.: Hungary, Ukraine (1994-1995). Established in late **1994** as a joint venture all-cargo airline, H-U is based at Budapest. Revenue operations commence with 2 Ilyushin Il-76TDs, but last less than a year.

HUNS AIR, LTD.: India (1974-1976). HA is set up at Bombay in late fall **1974** to operate passenger and charter services to the Persian Gulf port of Sharjah. Employing a leased Boeing 707 and two Vickers Viscounts, the company inaugurates revenue services in November, hauling cargo in and contract workers out.

HUNTER AIRWAYS: United States (1932). Organized at Tulsa, Oklahoma, in the first week of January **1932**, Hunter employs a Stinson SM-6000B to inaugurate scheduled, multistop passenger service to Little Rock, Arkansas, on January 11.

Just after takeoff from Little Rock on November 25-26, the trimotor, piloted by Kenneth Yoder with one passenger aboard, crashes into the bottoms of the St. Francis River, northeast of Marianna; both are killed. Without an aircraft and/or the funds to obtain a replacement, the company is forced to close its doors during the first week in December.

HUNTING AEROSURVEY, LTD. See **HUNTING AIR TRAVEL, LTD.**

HUNTING AIR TRANSPORT, LTD. (HAT): United Kingdom (1951-1953). With a staff of 150, a fleet comprising 8 Vickers Vikings and 1 Douglas DC-3, and significantly increased business, **Hunting Air Travel, Ltd.** is renamed in August **1951**. During the remainder of the year, the carrier flies those contracts initiated by its predecessor as well as replacement flights on behalf of **British European Airways Corporation (BEA)** and **Air France**.

On February 16, **1952**, HAT suffers its first fatal accident when a Viking, christened *A. C. Greta*, with 5 crew and 26 passengers, crashes into Mt. Rose, near Burgio, Sicily; there are no survivors. A second DC-3 is acquired at the end of February.

Employing Vikings and in association with **Airwork, Ltd.**, the carrier launches joint, weekly Colonial Coach and Safari services, London-Nairobi via Malta and Cairo from its Bovingdon base on June 14. A advanced model Viking is purchased late in the month and leased to **Aer Lingus Irish Airlines, Ltd.** for the summer.

The workforce is now 200 and a total of 37,103 passengers are transported on the year.

Two Avro Yorks are purchased in January **1953**, but never enter service. Government permission is granted in February allowing the company to operate twice-weekly Safari flights to Africa for a period of seven years. Additional licenses are now also received allowing start-up of scheduled services from Newcastle to destinations in Holland, Switzerland, Denmark, Germany, Luxembourg, Norway, Sweden, and the U.K. As a result, four additional DC-3s are acquired during the second quarter.

The new scheduled international services are introduced: daily Newcastle to Glasgow and London (Bovingdon) and thrice-weekly Newcastle to Paris, Luxembourg and Basle on May 2 and thrice-weekly Newcastle to Amsterdam and Dusseldorf on May 25.

Joint Safari service, in cooperation with **Airwork, Ltd.**, is extended to Salisbury, Rhodesia, on June 26 via Nice, Malta, Mersa Matruh, Wadi Halfa, Khartoum, Juba, Entebbe, Tabora, Ndola, and Lusaka. The company's international network provides the resume necessary for HAT to become, in July, the first independent ever admitted to the ranks of IATA.

In the two years since its award, the Malta and Gibraltar war office's trooping contract has witnessed the transport by HAT aircraft of 75,333 personnel. In October, it is renewed for an additional two-year period. Also in October, the Clan Line shipping combine purchases an interest in **Hunting Air Transport, Ltd.**

The Hunting and Clan groups jointly form Hunting-Clan Air Holdings, Ltd., with capitalization of £1 million (£500,00 each). The new concern acquires all Hunting Air Transport shares, together with equipment, facilities, and the associated Field Aircraft Services, with the airline division being renamed **Hunting-Clan Air Transport, Ltd.**

HUNTING AIR TRAVEL, LTD.: United Kingdom (1945-1951). Hunting Aviation Group directors Charles, Percy, and Gerald Hunting form HAT at London (CTN) Airport in December **1945**, equipping it with a P.44 Proctor 5 from the associated Percival Aircraft Company. This aircraft makes the first postwar U.K. air taxi flight on January 1, **1946**. During the year, the company undertakes ad hoc charters and establishes several flying clubs. The fleet is upgraded by the addition of three more Proctor 5s, three de Havilland DH 89As, and in October, three Avro 19s.

The company base is moved to London (LGW) Airport in February **1947**. The first Proctor 5 is lost in a crash at Haven, Belgium, on May 17. The company's premier DH 104 Dove 1 is delivered on April 22. Christened *Clyde*, it makes the first private charter flight from London (LGW) to Jersey by its type within the U.K. on May 8. An initial Vickers Viking is, meanwhile, accepted on May 5, beginning commercial service on May 13 hauling fruit to England from Italy.

A second Dove, the *Thames*, also enters service in May and the second Viking joins the fleet in July. When a French railway strike strands British tourists in June, HAT Doves, Avro 19s, and Dragon Rapides return many to England.

During the fall, the Vikings fly three replacement flights to Athens on behalf of **British Overseas Airways Corporation (BOAC)** and one roundtrip service to Johannesburg. During the year, two Proctor 5s and an Avro 19, christened *Oryx*, are sold.

A variety of domestic and continental tourist charters are undertaken in **1948**. The Avro 19 called *Eland* is sold in April. Weekly Viking charter flights, London (Bovingdon) to Dar es Salaam on behalf of Overseas Food Corporation, are inaugurated on November 1.

The contract necessitates the purchase for four additional Vikings, three of which are delivered in January **1949** and the fourth in July. In March of the new year, the company receives a contract from the British Legion to fly member veterans to grave sites in Italy beginning on May 16. The Dove 1 *Clyde* is sold in May.

Between September 10 and 22, a Bristol 170 Freighter is leased from **Hunting Aerosurveys, Ltd.** and used to fly a government pest control helicopter out to Khartoum. Losing the Overseas Food Corporation contract to **British Overseas Airways Corporation (BOAC)**, which had flown it before HAT, the company begins flying Catholic pilgrims from Dublin to Rome on December 9 in a series of Christmas-oriented Viking charters.

Under BOAC subcontract, a Hunting Viking provides transport for a British Board of Trade mission to and around Pakistan during February and March **1950**. On April 3, the Dublin–Rome Viking holiday charters are restarted, on behalf of **Aer Lingus Irish Airlines, Ltd.**, first for the Easter season and then continuously throughout the year. The Dove 1 *Thames* is sold in April.

As a follow-up to ad hoc West African flights on behalf of the war office, the company receives a nine-month troop transport contract in June; previously flown by **Airwork, Ltd.**, the undertaking is launched on July 1. At the same time, HAT signs up as a **British European Airways Corporation (BEA)** associate and is allowed to start scheduled London–Strasbourg service on May 16.

The contract with West Africa's war office is renewed in March **1951** and is followed, in August, by a two-year accepted offer to fly servicemen and dependents from U.K. to Malta and Gibraltar and back. Meanwhile, a Vickers 639 Viking I with 5 crew and 32 passengers is lost in an accident at Mirnac Airport, Bordeaux, on May 8 (2 dead). During that month and the next, three more Vikings and a Douglas DC-3 are added. As a result of this growth, the company name is changed in late August to **Hunting Air Transport, Ltd.**

HUNTING CARGO AIRLINES, LTD.: United Kingdom (1992–1998). In September **1992**, the Hunting Associated Industries, PLC, subsidiary **Air Bridge Carriers, Ltd.** is reorganized and renamed. Chairman G. H. Williams and Managing Director M. P. Timpson retain their 185-employee workforce and a fleet comprising 1 Boeing 737-200QC, 2 Lockheed L-188C Electras, and 3 Vickers V-593C Merchantmen, all of which receive a new livery.

The company continues its tasks as subcarrier to such major parcel distributors as **DHL Worldwide Express** and **UPS (United Parcel Service)**. In October, four L-188CFs are leased from **Falcon Aviation, A.B.**

The sold ABC routes into Europe, flown primarily at night, are maintained; the company operates scheduled all-cargo services to 15 Continental destinations in 10 countries. Statistics are reported, under both names, through November and show a total of 22.7 million FTKs of freight operated.

Airline employment increases to 240 in **1993** and the Boeing is replaced by the last Swedish Electra freighter upon its arrival in May. Markets now visited include Coventry, Belfast, Manchester, Bergamo, Cologne, Brussels, East Midlands, Shannon, Southend, Dublin, Frankfurt, Nuremberg, Stuttgart, and London (LHR).

Data is provided through September and reveal cargo traffic to be down by 13% to 18.06 million FTKs. One of the Merchantman freighters is now retired.

At year's end, the company creates a Dublin-based subsidiary, **Hunting Cargo Airlines (Ireland), Ltd.**, which begins to operate a number of European freighter services on behalf of **Aer Lingus Irish Airlines, Ltd.** For the year as a whole, the Aviation Division of Hunting posts an operating profit of £1.8 million.

At the beginning of **1994** and in association with **DHL Worldwide Express**, it is decided that HCA will develop a fleet of Boeing 727Fs. The first such freighter, a B-727-225F, is delivered in April and joins a fleet of 7 Electras and 2 Vickers Vanguard 953Cs. Operating profit swells to £2.3 million (\$3.8 million).

Operations continue apace in **1995** as four B-727-223Fs are purchased. A contract is won to manage the entire B-727F fleet of **TNT Worldwide Express**. On November 12, the Merchantman stored at East Midlands Airport is carved into five large sections and is put on trucks to be hauled away to a scrap dealer. Another Merchantman is withdrawn at the end of the year.

There is no change in the workforce in **1996** and the owned fleet includes 4 B-727-223Fs, 7 L-188CFs, and 1 Vanguard 953C. The latter, named *Superb*, is the world's last operating Merchantman cargo aircraft. It is employed primarily on DHL contracts from Belfast to Brussels via Coventry. Also operated, under charter, are 1 B-727-225F, 2 B-727-281Fs, 1 B-727-243AF, and 1 B-727-243AF.

A contract is won to provide international support to Oil Spill Response, Ltd. A Lockheed L-100-30 Hercules is leased from **Safair (Pty.), Ltd.** with which to spray dispersant.

The final Merchantman service is operated on September 20 by Hunting's fleet manager Capt. Peter Moore and Capt. David Smart. The *Superb* is flown for preservation to Brooklands Museum, on the site of the former Vickers factory in Surrey on October 17.

A total of 15.31 million FTKs are operated.

Flights continue apace in **1997**. On June 17, **DHL Worldwide Express** announces that it has chosen Hunting to operate its first three A300B4F freighters. Traffic figures are released for the first half-year and show the operation of 166.4 million FTKs.

In order to concentrate on its oil and defense business, Hunting, PLC, in late June **1998** sells the airline to **Safair (Pty.), Ltd.** and Compagnie Maritime Belge, S.A. for \$14.7 million, not including the aircraft. Hunting negotiates with other parties the sale of its five remaining L-188CFs. The new owners transfer the operation to Ireland, where it is outfitted with new aircraft and registered as **Air Contractors (Ireland), Ltd.**

HUNTING CARGO AIRLINES (IRELAND), LTD. See **HUNTING CARGO AIRLINES, LTD.**

HUNTING CLAN AFRICAN AIRWAYS, LTD. See **HUNTING CLAN AIR TRANSPORT, LTD.**

HUNTING CLAN AIR TRANSPORT, LTD.: United Kingdom (1953–1960). The Clan Steamship Company buys into **Hunting Air Transport, Ltd.** in October **1953** and the independent airline's name is once more changed. The two stockholders operate the carrier as a division of a holding company, Hunting Clan Air Holdings, which the Hunting and Clan groups had jointly capitalized £1 million (£500,000 each). The start-up fleet comprises 8 Vickers Vikings and 4 Douglas DC-3s; the workforce totals 200 with Maurice Curtiss as managing director. Late in the year, a 5% interest is taken in the Kuwait-based **British International Airlines, Ltd.** and orders are placed for three new Vickers Viscount 732s.

The London terminal is transferred from Bovingdon to Northolt on April 1, **1954**. On April 9, DC-3 flights commence Newcastle–Hamburg and Copenhagen, with a Manchester–Newcastle connection also begun. Frequency is extended Newcastle–Oslo and Stockholm on April 14. Two Avro Yorks are acquired, one each in April and May. Joint Safari

multistop London–Accra flights begin on June 14; two days later, the Stockholm destinations are withdrawn in favor of Stavanger. On June 21, mail is first carried aboard Safari flights. London (LHR)–Newcastle DC-3 operations are inaugurated on October 3.

Also in October, the carrier reaches an agreement with **Dragon Airways, Ltd.** for the latter to operate a Hunting-Clan Northern Division and to provide Manchester–Owlieli holiday service. In December, Vikings are introduced on the European network: London–Newcastle and Newcastle–Oslo and Stavanger on December 1; London–Paris on December 3; London–Hamburg and Copenhagen on December 6; and London–Amsterdam and Dusseldorf on December 10.

Systemwide boardings for the year total 85,483.

Operating without **Airwork, Ltd.**, the carrier opens a third monthly Colonial Coach service on February 21, **1955** from London to Gibraltar. On February 28, the subsidiary Hunting-Clan African Airways, Ltd. (HCAA) is formed at Salisbury, Rhodesia, to provide Africargo Avro York all-cargo services from London and Manchester.

Hunting-Clan becomes the sixth British carrier to employ the Vickers Viscount, receiving its first 732 in May and launching service with the turboprop on June 17. Two more Viscount 732s are received, one each in June and July.

Africargo flight activities commence on July 23, with frequency increased to twice weekly by the end of September. Meanwhile, employing a DC-3 freighter, HCAA begins all-cargo services in August from Salisbury to Nairobi.

Not having made a significant difference in scheduled service and with the war office contract of 1953 completed, the Viscounts are found to provide excess capacity and so are leased to **Middle East Airlines, S.A.L. (I)** on September 22 for two years.

During the fall, HCAA initiates a passenger route from Salisbury to Abergorn via Lusaka, Ndola, and Kasama.

In December, the carrier becomes half owner (with Elder-Dempster Lines/Tyne-Tees Shipping Co.) of **Dragon Airways, Ltd.**, which is now reorganized and moved to Newcastle from Liverpool and assigned Hunting-Clan's entire Northern Network.

While performing an oil industry support flight in Arabia on February 18, **1956**, a DC-3 is lost in a crash. In April, DC-3s replace the DH 89A that HCAA has been employing for a year on inclusive tour services from Salisbury and Vilanculos, the airport community serving a number of resort areas.

On May 3, newly delivered de Havilland DH 114 Heron 2s are placed on the London to Newcastle and Newcastle to Amsterdam and Dusseldorf frequencies.

Johannesburg becomes a stop on the HCAA Salisbury and Vilanculos network on July 1. An additional DC-3 is purchased by the parent in July.

A new scheduled route is opened by HCAA on August 3 between Salisbury, Lusaka, and Kariba. Also in August, subsidiary Dragon Airways takes over the parent's Southern Network; Vikings and Herons begin several new routes, including Newcastle–Belfast, Liverpool, and Bergen.

Two Viscount 759s are delivered in November and December and orders are placed for two DC-6Cs.

Not requiring the capacity of the Viscount 759s, they are sold in March and April **1957**, never having entered company service. A weekly Frankfurt stop is added to the Africargo system on August 1. The Viscount 732s return from Middle East Airlines in September and on October 17 and 18, respectively, they are introduced on the Nairobi and Salisbury Safari flights.

Viscounts are placed on the joint Safari route to Accra on January 6, **1958**, replacing former Colonial Coach service. One of the Viscount 732s is lost in a crash at Frimley, Surrey, on February 12 (five dead).

The two requested DC-6As arrive at London (LHR) in August and September and replace Avro Yorks on the Africargo frequencies as of December 14. Meanwhile, a DC-3 crashes in Iran on October 22 and two Bristol Britannia 317 turboprops are delivered, one each in October and December.

A Vickers Viscount 732 with a 6-man crew is lost while on a training mission at Frimley on December 2; there are no survivors.

The first Bristol Britannia 317 is placed in commercial service on January 31, **1959**, flying a charter to India; the other Britannia 317 is now also making inclusive-tour flights to the Far East. A Britannia 319 is leased in January, but is returned to Bristol in February. In April, the War Office grants the carrier a new trooping contract for services to the Far East.

On May 1, a DC-6A kicks off the year's inclusive-tour operations, flying a charter from Manchester to Palma. Three new Viscount 833s are delivered in June and July and begin flying tours from Manchester on July 10. The larger Viscounts are also placed on the Colonial Coach routes in July and August. HCAA is dissolved late in the year; its assets will later be combined with those of several other small African airlines to form **Rhodesia United Air Carriers, Ltd.**

A DC-3 is sold in February **1960** while negotiations are started with **Airwork, Ltd.** in March with the idea of a possible merger. The last five Vikings are sold in May. Following lengthy negotiations, the carrier is combined with **Airwork, Ltd.**, on July 1 to form **British United Airways, Ltd.**

HW AIR, GmbH.: Germany (1975–1982). HW Air is organized at Hamburg in June **1975** to offer passenger charter flights to Elba on behalf of a tour operator. These duly begin in April **1976** with a fleet of 2 Cessna 404 Titans. Later in the decade, a Cessna 441 and a Fairchild-Swearingen Metro II are added and scheduled services are undertaken to Saarbrücken and Straubing. Unable to generate sufficient traffic and revenues in a time of recession and increased fuel prices, the small carrier shuts its doors in **1982**.

HYANNIS AVIATION: United States (1977–1982). Formed to service the area around its Massachusetts namesake community, HA begins scheduled third-level operations with 3 Cessna 402s in late **1977**. Enplanements total 872. The workforce is increased by 600% in **1978** to 42. Passenger boardings jump 81.7% during this first full year of business, rising to 4,762. In **1979**, two more Cessna 402s are acquired and routes are stretched to Falmouth and Martha's Vineyard.

Unable to survive recession and maintain viability, the carrier ceases operations in **1982**.

HYDRO AIR CARGO (PTY.), LTD.: Johannesburg International Airport, Johannesburg, South Africa; Year Founded 2000. HAC is established at Johannesburg in the fall of **2000** to operate all-cargo charters to northern Europe. After acquiring a Boeing 747-258C from **El Al Israel Airlines, Ltd.**, the new freighter launches a roundtrip proving flight on November 12 to Ostend via Frankfurt. Regular thrice-weekly return service over the route begins on November 15. Plans are also announced concerning a possible initiation for four-times-a-week roundtrips from Johannesburg to Ostend via Libreville and Munich.

IAACA. See **INDUSTRIA AERO AGRICOLA, C.A.**

IAT CARGO AIRLINES, LTD.: Unit 127, Southampton House, Building 521, World Cargo Centre, London Heathrow Airport, Hounslow, Middlesex, England, TW6 3HF, United Kingdom; Phone 44 (181) 745-1780; Fax 44 (181) 745-1778; Code VGO; Year Founded 1996. IAT is set up at London (LHR) in August **1996** to offer worldwide and ad hoc all-cargo charters. Peter Barnes is general manager and he recruits a workforce of 20 and leases a Boeing 707-355C. Revenue services commence on November 1. It is understood that flights have continued.

IBA INTERNATIONAL BUSINESS AIR, A.B.: Bromma Flygplats, Bromma, S-16169, Sweden; Phone 46 (8) 286050; Fax 46 (454) 19596; <http://www.algonet.se/ulldani/iba.html>; Year Founded 1995. IBA is set up at Bromma in **1995** to offer executive charter services to

domestic and Scandinavian destinations. Joakim Palsson is operations manager and his concern operates a fleet comprising 2 Mitsubishi Mu-2Bs and 1 each SAAB-Fairchild Metro II and Piper PA-31-350 Navajo Chieftains.

Scheduled services are added in 1996 with a Metro III and these continue.

IBC AIRWAYS: 8401 NW 17th St., Miami, Florida 33126, United States; Phone (305) 591-8080; Fax (305) 471-9619; Year Founded 1991. IBC is founded at Miami (MIA) in 1991 to provide all-cargo and express charters to destinations throughout the U.S. and Latin America. By 2000, the company employs four pilots and flies three Swearingen Merlins.

IBERIA SPANISH AIRLINES (1) (SOCIEDAD IBERICA DE AVIACION, S.A.): Spain (1927–1929). On April 11, 1927, the Spanish government forms a Superior Aviation Council (CETA) to oversee airline development and subsidy distribution. Meanwhile, in need of a jumping off point for its South American services, **Deutsche Luft Hansa, A.G. (DLH)** on June 28, assists a Spanish business group in the formation of the first Iberia and the Spanish state awards it exclusive rights to the air route between Madrid and Barcelona.

The local interests hold 51% of the shares and the German airline owns 49% while providing technical support and three ex-DLH Rohrbach Rolands, the *Watzmann*, *Feldberg*, and *Brocken*. Following a ceremony attended by King Alfonso XIII, the aircraft are employed to inaugurate Madrid–Barcelona flights on December 14. Passengers at Barcelona are able to connect with DLH's service to Marseilles and hence to Berlin and beyond.

In early 1928, a fourth ex-DLH Rohrbach Roland, the *Zugspitze*, is acquired. Having determined just over a year later that a unified state carrier is required, CETA halts subsidy to Iberia and two other small carriers, **Compania Espanola de Trafico Aereo, S.A. (CETA)**, and **Union Aerea Espanola, S.A. (UAE)**. On March 29, 1929, these are merged into the new national airline **Concessionaria Lineas Aereas Subvencionadas, S.A. (CLASSA)**.

IBERIA SPANISH AIRLINES (2) (LINEAS AEREAS DE ESPANA, S.A.): Calle Valazquez 130, Madrid, E-28006, Spain; Phone 34 (1) 587-8787; Fax 34 (1) 587-7329; <http://www.iberia.com>; <http://www.irinfo.es/aviacion/eng/iberia.html>; Code IB; Year Founded 1940. During the Spanish Civil War, a Falangist air transport wing is formed (**Sociedad Espanola Iberia or SEI**) and in August 1937 is equipped with two **Deutsche Lufthansa, A.G.**-supplied Junkers Ju-51/3ms, a third being delivered in 1938. As Nationalist forces approach victory, the military airfield at Son Bonnet on Palma de Mallorca is readied to receive civilian traffic.

Meanwhile, the Republican airline **Lineas Aereas Postales Espanolas, S.A. (LAPE)** employs a variety of transports until the government surrenders in April 1939. During that month, the most modern LAPE units, the original Douglas DC-1 and three DC-2s, flee to France with officials of the former regime.

In May, the Douglas transports are returned to Madrid, where they are reunited with the *Capitan Vara de Rey*, a former LAPE DC-2 taken early in the war and renamed. On June 15, civilian services are resumed to Palma de Mallorca from Barcelona.

LAPE continues to function in a minimal fashion until late in the year when it is succeeded by the **Compania Anonima Espanola de Transporte Aereo, S.A. (SAETA)**, to which all former commercial airliners and some military transports in the country are transferred.

In April 1940, the Franco government replaces SAETA and forms the **Trafico Aereo Espanol (TAE)** to control air services. TAE is given the seven or eight SEI trimotors and the Douglas transports, including the DC-1 now christened *Manuel Negron* (after the Battle of Turuel hero Commandante Manuel Negron de las Cuevas) and assigned to a Seville to Tetuan via Malaga route. During the spring, an agreement is signed

with Italy and services commence Lisbon–Barcelona via Madrid and Madrid–Tetuan and Melilla via Malaga.

On July 7, the new state airline, Iberia Spanish Airlines (2) (**Lineas Aereas de Espana, S.A.**), is formed around the TAE aircraft, plus the former Republican Douglas DCs and a de Havilland DH 89 Dragon Rapide. The government holds 51% of the shares and private and foreign interests, including **Deutsche Lufthansa, A.G. (DLH)**, own the remainder. An Administrative Council is set up to control operations; two of its members come from DLH. While taking off from Malaga on December 1, the DC-1 *Manuel Negron* loses an engine and makes a crash belly landing; although no injuries are reported, the aircraft must be written off as a complete wreck.

In June 1941, a network of domestic service is opened within Spain to the Canary Islands via Cabo Jabi and Ifni to Palma and Morocco. Three Junkers Ju-52/3ms are delivered from Germany in December and are placed in service. Fuel shortages cause severe reductions in frequencies beginning in March 1942 and, in November, the Canary Island service is withdrawn.

In March 1943, only the Madrid–Morocco route remains; service to Seville is suspended on May 5. The route is operated by the Dragon Rapide, the only available aircraft that burns ordinary gasoline. On August 14, a new government organization, the Instituto Nacional de Industria (INI) acquires the carrier's private and foreign shares, thereby buying out any German interest. Service is resumed on November 20 between Barcelona, Madrid, and Lisbon.

While landing at Barcelona on February 3, 1944, the DC-2 *Capitan Vara de Rey*, with 11 aboard, crashes (8 dead). INI assumes full control of Iberia on September 30; however, provision is made for a future sale of stock to create a new private minority holding and a 20-year domestic concession is granted. During the summer, limited fuel resources are delivered by the U.S. and allow the start-up of domestic services, together with flights to Bata (Spanish Guinea) and Santa Isabel. Three interned Douglas C-47s are brought up to DC-3 civil standard and three purchased DC-3s arrive from America. A new Spain–U.S. bilateral agreement is signed on December 2.

Route development continues in 1945, with the DC-2 *Carlos Haya* withdrawn from service in September. In March 1946, the Canary Islands route is restarted. The DC-2 *Garcia Morato* completes its final flight on April 11.

Service is extended to London on May 3 and to Rome in August. In the latter month, multistage flights are launched, in cooperation with the Argentine carrier **FAMA (Flota Aerea Mercante Argentina, S.A.)**, from Madrid to Buenos Aires via Villa Cisneros, Natal, Rio de Janeiro, and Montevideo, with newly delivered Douglas DC-4s. Service to passengers on long-haul routes demands new approaches, including the introduction of the air hostess, or stewardess.

In 1947–1948, the European regional network is improved as additional DC-3s are placed in service. One of these crashes near Tarragona on Christmas Eve 1948 (27 dead). Also in 1948, an arrangement is concluded with **AVIACO (Aviacion y Comercio, S.A.)** whereby the private airline will operate low-density, secondary domestic routes for the state carrier while Iberia flies the high-density trunk routes.

Multistage Madrid–Caracas via the Central Atlantic DC-4 flights are inaugurated on July 3, 1949 and on March 15, 1950 transatlantic DC-4 flights start from Madrid to Havana and Mexico City via Venezuela and Puerto Rico. In 1951–1953, in anticipation of long-haul service, orders are placed for three Lockheed L-1049G Super Constellations; additionally, Convair CV-440 Metropolitans are ordered for the regional routes.

On May 27, 1954, Lt. Gen. Gonzales Gallarza reports, too optimistically, that the carrier will begin thrice-weekly Madrid–New York flights at month's end. The first direct Madrid–New York service begins on September 2 with three newly delivered L-1049Es; on November 30, a Super Connie flies from New York to Madrid nonstop in a record 9 hrs. 25 min. A total of 1,000 persons are flown across the North Atlantic during the fourth quarter. Meanwhile, the new CV-440s enter service on the

European routes. Two L-1049Gs are ordered in December 1955 as the carrier's North Atlantic traffic grows to 7,000.

An L-1049E crashes while attempting to land at Madrid on May 10, 1957 (37 dead). The two surviving L-1049Es are now brought up to L-1049G standard. A DC-3 with 4 crew and 17 passengers is lost at Getafe, near the Spanish capital, on October 26; there are no survivors.

Under unknown circumstances, a DC-3 is lost at Palma de Mallorca on April 10, 1958; there are no fatalities.

En route from Bilbao to Barcelona on April 15, another DC-3 is lost with 16 passengers. Another Douglas transport crashes while flying from Vigo to Madrid on December 4 (21 dead). Orders are placed in 1959 for three DC-8-30, later Dash-52, jetliners.

A DC-3 with 3 crew and 25 passengers is lost at Cuenca, near Valdemeca, on April 29; there are no survivors.

Later in the year, the L-1049G Super Constellations enter service.

In 1960, controlling interest is taken in **Aviacion y Comercio, S.A. (AVIACO)**. North Atlantic enplanements for the year total 11,000. An L-1049E is lost in a crash at Madrid on March 6, 1961. An L-1049E is leased as an interim replacement from **KLM (Royal Dutch Airlines, N.V.)** on April 1. The arrival of the first DC-8-52 in late spring allows launch of jet service from Madrid to New York's Idlewild Airport on July 2, Caracas on September 3, and Buenos Aires on November 1. Meanwhile, on July 18, the first DC-3 service is inaugurated to the new Son Sant Joan airport on Palma de Mallorca.

For the first time, the company this year flies in excess of one million passengers.

Early in 1961, an L-1049G is leased from **KLM (Royal Dutch Airlines, N.V.)**. On March 6, the Super Constellation with 10 crew and 36 passengers arriving from Madrid, crashes while on final approach to São Paulo; although the Super Constellation is damaged, there are no fatalities.

The damaged KLM machine is replaced in service by an L-1049G purchased from **Aerovias Guest, S.A.** of Mexico. As the CV-440s begin orderly retirement, they are replaced on European services by four Sud Est SE-210 Caravelle VIRs, the first of which enters operations on May 1, 1962.

The chartered Dutch L-1049E Super Constellation is returned to Amsterdam on May 28; however, the leased L-1049G, by now repaired, is purchased on August 15.

While on initial approach to the airport at Carmona on October 12, a CV-440, with four crew and 14 passengers, crashes into a mountain; there are no survivors. Transatlantic traffic accelerates for the year to 16,000.

The two remaining Super Constellations are withdrawn from frontline service in 1963. One is outfitted as a freighter and the other is leased to **Aviacion y Comercio, S.A. (AVIACO)**.

Systemwide, enplanements total 1,432,293.

Airline employment is 6,518 in 1964. On March 1, the airline steps up its DC-8-30 passenger traffic to Cuba, cutting back on cargo shipments; the weekly Madrid-Havana return service becomes Cuba's only western air link to Europe. Orders are placed for three DC-9-15s.

Total passenger boardings accelerate 14.7% to 1,679,124 and the 68% gain in North Atlantic traffic is the largest recorded by any airline in that market this year. Revenues total \$72.59 million.

The employee population swells to 9,700 in 1965. Two additional SE-210s arrive, in March and April respectively, with three more ordered in March. The fleet now includes 6 DC-8-30s, 11 SE-210s, 6 L-1049Gs, 15 CV-440s, 7 DC-4s, and 17 DC-3s.

En route from Malaga, a CV-440 with 5 crew and 48 passengers stalls 10 nm. off Tangier, Morocco, on March 31 while on initial approach and crashes into the Mediterranean Sea (50 dead).

While going around in thick fog for another landing at Los Rodeos Airport, Tenerife, Canary Islands, on May 5, Flight 401, a L-1049G with 9 crew and 40 passengers coming in from Madrid, crashes (32 dead). Construction is undertaken during the year on a new 15-floor headquarters building in downtown Madrid and bookings jump to 2,254,356, of

which 60% are flown in national service and 40% in international. Three DC-9-15s are delivered in 1966 and two Caravelles are leased.

A DC-3 with 3 crew and 24 passengers loses an engine just after take-off from Tenerife on September 16; the Douglas is ditched, but remains afloat for 5 min. One passenger who refuses to abandon the aircraft goes down with it.

As Spain continues to attain world recognition as a major tourist destination, passenger boardings climb slightly to 2,274,000.

During 1967, 22 more aircraft join the fleet: 2 Carvairs, 9 DC-9-32s, 1 DC-8-63, 6 SE-210s and 4 Fokker F.27s. Orders remain outstanding for 4 F.27s, 12 DC-9-32s, 1 DC-8-50, 4 DC-8-63s, 4 B-747s, and 3 U.S. SSTs, the last on option.

The first of the nine DC-9-32s to be received on the year arrives on June 29, the day after the company celebrates its 40th anniversary. Iberia is the first European operator of the DC-9.

A Boeing 707-387B, operated jointly with **Aerolineas Argentina, S.A.**, inaugurates 6,462-mile nonstop service from Buenos Aires to Madrid on August 8, the world's longest nonstop scheduled frequency.

During the summer, a Convair CV-990A Coronado is leased from the cargo charter operator **Spantax, S.A.**

On descent toward a November 4 landing at London (LHR) following a service from Malaga, an SE-210 Caravelle XR with 7 crew and 30 passengers crashes into the southern slope of Black Down Hill, near Femhurst, England, 40 mi. SW of the airport; there are no survivors.

The workforce grows to 9,581 and passenger boardings jump 16% to 2,632,053.

The employee population numbers 12,615 in 1968. Nonstop New York to Barcelona service is opened on April 1. In Europe, new routes are opened to cities in Belgium, Holland, the U.K., Germany, Denmark, France, and Switzerland, while domestic services are also expanded. Twenty new offices are opened worldwide and new aircraft livery and flight attendant uniforms are introduced, along with Royal Rose first-class service. The fleet is increased by four DC-9-32s, four DC-8-62s, and six Friendships. All but five DC-3s and one DC-4 are retired.

Cargo traffic skyrockets 60% and passenger boardings soar 30% to 3,410,008. Revenues are now \$147 million.

An unofficial Douglas jetliner capacity record is established in April 1969. A company DC-8-63 transports 346 Spanish nationals from Bata to Las Palmas and Madrid in an emergency evacuation following the independence of Equatorial Guinea.

On June 4, Socarras Ramirez becomes history's most daring—and luckiest—stowaway. Fleeing "Cuban oppression," he hides in the unpressurized wheel well of a DC-8-62's starboard wing and survives the 5,600-mi. flight from Havana to Madrid. He receives asylum for his effort. During the summer, two more CV-990As are chartered from **Spantax, S.A.** and orders are placed for a pair of Boeing Jumbojets.

In the fall, the carrier joins the ATLAS maintenance consortium, along with **Air France, Alitalia, S.p.A., Deutsche Lufthansa, A.G.,** and **Sabena Belgian World Airlines, S.A.**

Enplanements swell to 4,249,341 as the last DC-4 is sold. As the new decade dawns, Iberia, in terms of bookings, is the world's 17th largest airline; its workforce of 15,529 is 13th in size and the fleet, with 86 aircraft, ranks 11th.

Jesus Romero Garcia becomes chairman on January 1, 1970.

An F.27-600, with 3 crew and 46 passengers skids off the runway while landing at Tenerife on January 5; there are no fatalities.

On January 7, teenager M. Ventura Rodriguez is held after attempting to hijack a CV-440 with 45 other passengers when it stopped for refueling at Zaragoza while on a domestic flight from Madrid. On January 9, Spanish pilots charge that Lt. Gen. Rute Vilanova, military governor of the city, had endangered the lives of the crewmen and passengers on the plane during his capture of the pirate, who had actually surrendered peacefully. Rodriguez will be tried and given a six-year prison sentence.

On May 11, planes in four European cities are targets of fire bombers believed to be political enemies of the Franco government. Disaster is

narrowly averted in Geneva where 50 passengers have been removed just before a bomb explodes in the baggage compartment of a DC-9-32.

Named for the Spanish literary giants *Cervantes* and *Lope de Vega*, two B-747-156s are placed in service in October and November, boosting the fleet total to 86 airliners, all of which, except for seven CV-440s and three DC-3s, are jets. Madrid to New York B-747-156 flights commence in December. Freight climbs 11.65% and in recognition of a booming cargo business, the carrier opens a new air cargo terminal at Madrid Barajas Airport.

Passenger boardings pass the five million-mark, up 26.12% to 5,742,352, and freight tonnage accelerates by 11.65%.

In March 1971, Jose Sanz Insausti is named director general. Service begins on April 1 from Madrid-Santo Domingo, Panama, and Guatemala.

Enplanements reach 6,362,404, the third consecutive year in which boardings are up by over 1 million.

Airline employment is 17,346 in 1972.

While on final approach to Sierra de Atalaya on a January 7 service from Valencia, Flight 602, an SE-210 Caravelle VIR with 6 crew and 98 passengers, crashes into the side of a 415-m. mountain, 30 m. from its summit; there are no survivors.

As the first 2 Fokker F.28s and 10 DC-9-32s enter service, 3 of the 5 remaining DC-3s are sold.

The first of six B-747-256Bs, the *Calderon de la Barca*, joins the fleet on June 4.

Faulty brakes cause an F.28-1000 with four crew to run off the runway while landing at Bilbao on a December 28 training flight; there are no fatalities.

Passenger traffic zooms upward again this year, climbing 18.2% to 7,778,374 passengers carried and freight is up by 27.1%. On revenues of \$461 million, a \$10-million net profit is posted.

To bolster **Aviacion y Comercio, S.A. (AVIACO)**'s charter mandate, the 4 older DC-8-62s and 15 Caravelles are transferred to the subsidiary in 1973. The flag line acquires 3 Douglas DC-10-30s and 13 Boeing 727-256s, the latter for European service.

On March 5, while en route from Palma de Mallorca to London (LHR) during a strike of French air traffic controllers, Flight 504, a DC-9-32 with 7 crew and 61 passengers collides with a **Spantax S.A. (Transportes Aereos)** CV-990A Coronado over La Trauche, near Nantes. The Coronado makes an emergency landing at the military airfield near Cognac, but the Douglas explodes and crashes, killing all aboard.

New routes are extended during spring and summer to Washington, D.C., Costa Rica, and El Salvador, and the DC-10-30s are placed in service on routes Malaga and Las Palmas-New York and Madrid-Venezuela.

An SE-210 Caravelle VIR is destroyed in a hangar fire at Madrid on September 29. Another SE-210 Caravelle VIR is destroyed after it catches fire on the ground at Madrid on November 5.

On December 17, during an instrument landing at Boston in bad weather, Flight 933, a DC-10-30 with 14 crew and 154 passengers, strikes approach lights. The aircraft hits a dyke and with its right main landing gear collapsed, skids 3,000 ft. to a stop. There are no fatalities, but the aircraft must be written off, the first of its type to be lost.

Passenger boardings accelerate 16% to 10,267,754 and total revenues climb 17.9% to \$543 million.

The workforce in 1974 is 19,100. New Boeing 727-200 flights are launched to Rome, Athens, Istanbul, Warsaw, and Budapest, while DC-10-30s fly from Las Palmas to Dakar and Lagos. Two pedestrians are injured in Brussels on May 22 when a bomb explodes near the company's office.

Hourly DC-9 Madrid-Barcelona shuttle service begins; the first Spanish cities to be linked by air are now the first in Europe to be joined together by an air bridge—or shuttle.

In July, an agreement is signed with **LOT Polish Airlines** for the introduction of what will evolve into joint code-sharing flights over a

route from Madrid to Warsaw. The last two DC-3s are sold; all of the F.27s and both F.28s are transferred to **Aviacion y Comercio, S.A. (AVIACO)**, thus giving the parent an 84-aircraft, all-jet fleet. Late in the year, the Inforiberia high-technology telephone information service is introduced.

Passenger traffic dips 2.4% to 9.5 million.

A total of 858 personnel are added to the employee base in 1975. Cargo service to New York is inaugurated from Alicante along with new routes to Central America. New European customer and cargo destinations include Rome, Athens, Istanbul, Warsaw, and Budapest. A fourth DC-10-30 is delivered and in June joint flights commence from Madrid to Beirut in cooperation with **Middle East Airlines, S.A.L. (2)**.

The airline cancels its flights to Italian and Scandinavian destinations on October 2, following boycotts by European trade unions protesting the execution of terrorists by the Spanish government.

The year's freight traffic grows 9.3% and enplanements leap a modest 3.6% to 9,844,000.

The employee population in 1976 is 20,181. Manuel de Predo y Colon de Carvajal, the IATA president, is appointed CEO. New routes are opened to Monrovia, Abidjan, Libreville, and Recife. Two additional DC-10-30s arrive and one DC-8-63 is reconfigured into a freighter. A new engine maintenance facility is opened at Barajas Airport; it not only services Iberia's aircraft but the Concorde of **Air France**.

Passenger bookings climb 8.14% to 10,779,000 and cargo is up 3.89%.

In 1977, the company celebrates its fiftieth anniversary by redesigning its insignia and renovating its international image.

During a March 14 Barcelona-Palma flight, gunman Luciano Porcari hijacks a B-727-256 with 36 aboard and diverts the aircraft to the Ivory Coast, where he receives \$16,000 of a demanded \$140,000 ransom. Refused landing permission in Morocco, the pirate orders the Boeing flown to Seville and Turin, now requiring the return of his young daughter from his estranged wife. From Turin, the aircraft is ordered to Moscow, but Porcari is seized by police during a refueling stop in Switzerland.

Porcari will be tried and receive a 10-year prison term. Later, he will walk away from a prison leave and try to take over another aircraft. Captured in Italy, he will go on trial again and be imprisoned for an additional nine years.

After a flight from Madrid on May 2, hijacker Abuiasha Ali Fargani is overpowered by the pilot of a B-727-256 during an attempted takeover at Rome. Fargani is turned over to police and will be tried and sent to prison.

Enplanements for the year jump to 11,831,296.

The workforce totals 23,116 in 1978. On March 3, a DC-8-63 with 11 crew and 211 passengers is broken in two after a bad landing at Santiago de Compostella, in northwest Spain; there are no fatalities.

New service is launched to Tehran and Moscow while an order is placed for four Airbus Industrie A300B4-120s. The first electronic ticket reservation terminals are made available to Spanish travel agencies.

Passenger boardings climb 15.2% to 13,952,000 and freight accelerates 9%. On revenues of \$1.2 billion, a record \$11.3-million net profit is earned.

New routes are started to Kuwait, Mairubi, Cairo, and Jeddah in 1979. The ATLAS Group names Iberia as Central Agency and assigns to it the task of inspecting and maintaining the engines of the B-747 and A300 fleets maintained by the partners. The carrier's industrial installations in this regard now cover in excess of two million square meters and employ over 5,000 workers.

On August 5, a trio of armed Spanish foreign legionnaires hijacks a DC-9-32 with 23 aboard at Fuerteventura, Canary Islands, and forces it to fly to Lisbon. There they release all of their hostages save the captain and first officer and demand food and fuel for a flight to Rhodesia. The next day, they fly to Geneva, instead, and surrender to Swiss police. The 3 perpetrators will be tried and given prison terms of 20 months.

Passenger traffic moves ahead 5.8% to 14,417,023 and freight climbs 5.6%. High fuel costs and a drop in Spanish tourism conspires to raise

expenses 19.7% to \$1.46 billion. On total revenues of \$1.42 billion, a net \$39-million loss is suffered.

The B-747-156 *Cervantes* is sold to **Trans World Airlines (TWA)** in May 1980, the same month in which two B-757-256Bs, *Cervantes II* and *Francisco de Quevedo* enter service. A DC-10-30 collides with a Colombian Air Force plane on the runway at Bogota on June 12; no injuries are reported.

As the economic crisis deepens, passenger boardings fall 4% to 13.8 million. Still, new B-747-256Bs inaugurate nonstop flights to Mexico City and Buenos Aires; a multistop route is opened to Nairobi. On revenues of \$1.7 billion, expenses climb 30.4% to \$1.85 billion, and a record \$120.8-million loss is taken.

The workforce is increased a scant 0.1% in 1981 to 23,181 and the B-747-156 *Lope de Vega* is sold to **Trans World Airlines (TWA)** in February. Christened *Francisco de Quevedo*, a new B-757-256B arrives on February 18. The B-747-256B *Lope de Vega II* enters service on March 24 as frequencies are inaugurated to Algiers and Tunis.

A new training center is opened in La Munoza where Iberia trains its pilots for the A300B4-120s; ATLAS Group now contracts with the carrier to teach all of its A300 pilots as well. A new computerized reservations system is installed late in the year.

Enplanements fall another 4.4% to 13,234,000, but freight grows 5.4% to 415.76 million FTKs. Revenues are down to \$1.75 billion, but expenses are up to 1.79 billion. Thus a \$40.6-million loss is recorded.

The workforce in 1982 is 24,332, a 2.4% boost. The last F.27 is sold as a B-747-256B and two A300B4-120s are delivered; the B-747-256B *Juan Ramon Jinez* is acquired on February 26.

In March, a code-sharing agreement is signed with **CSA (Czechoslovak Airlines)** covering flights over the route from Madrid to Prague. In April, a similar arrangement is inked with **Balkan Bulgarian Airlines** for services going from Madrid to Sofia. New charter operations and classes of service, including business-class, are introduced. The new CRS, Resiber III, is turned on.

Cargo is up 8.1% to 488.09 million FTKs, but boardings decline again, down 9.7% to 13,144,342. On revenues of \$1.76 billion and expenses of \$1.81 billion, the net loss climbs to \$76.1 million, atop an operating decline of \$54.5 million. The cumulative loss since 1979 is now \$210 million.

The workforce is cut 4.7% to 23,189 in 1983. Carlos Espinosa becomes director general in March. In April, a joint marketing arrangement is signed with **TAROM (Transporturile Aeriene Romane, S.A.)** covering flights from Madrid to Bucharest. New uniforms are now designed for cabin attendants, a market is opened at Tel Aviv, and three additional A300B4-120s are delivered.

In thick fog at Madrid on December 7, Iberia Flight 350, a B-727-256 with 9 crew and 84 passengers, is taking off for Rome when its crew sights **Aviacion y Comercio, S.A. (AVIACO)** Flight 134. The DC-9-32 with 5 crew and 37 passengers is taxiing out onto the active Runway 1 for takeoff to Santander. Flight 350 attempts to take evasive action, but it is too late and the aircraft collide. The Boeing's left wing and left main landing gear are torn off and the two planes catch fire and are destroyed. Although 8 crew and 30 passengers escape burning Flight 350, there are no survivors from Flight 134.

This is the second airline disaster at Barajas Airport within a 10-day period, causing union and airline officials to complain bitterly about the lack of ground radar and warning lights.

Boardings slip 1.3% to 12,968,000 as freight gains 0.8% to 492.2 million FTKs. Revenues jump 14.3% to \$1.3 billion, but are submerged under skyrocketing expenses. The operating loss quadruples to \$150 million.

Airline employment grows 0.1% to 24,232 in 1984. Madrid-Los Angeles and Houston charter flights are introduced. Pilots return to work on July 25, ending a 36-day strike that causes the loss of \$20 million in lost business. Two accidents and a series of pilot navigational errors bring additional concerns and new safety precautions are taken on top of a rigid cost-cutting program.

New freight terminals and automated booking and routing systems are introduced along the company's domestic network. In November, a new shuttle service is inaugurated between Madrid and Barcelona.

Passenger boardings drop 3.2% to 12,577,000, but cargo grows 6.7% to 525.31 million FTKs. On total revenues of \$1.58 billion, another giant net loss is suffered, \$106.8 million, which comes on top of an operating loss of \$99.3 million.

The employee population drops 1.7% to 22,335 in 1985 and the fleet now totals 6 B-747-256Bs, 8 DC-10-30s, 6 A300B4-120s plus 35 B-727-256s and 29 DC-9-32s.

On initial approach to Bilbao on a service from Madrid on February 19, Flight 610, a B-727-256 with 7 crew and 141 passengers, is 3 mi. off course and 990 ft. below its recommended minimum altitude. Consequently, the aircraft strikes a television antenna atop Mount Oiz. The left wing separates and the Boeing crashes at the hill's 3,400-ft. altitude; there are no survivors.

Following acrimonious clashes with government officials of Instituto Nacional de Industria regarding safety, Director General Espinosa is replaced on March 18 by respected banker Narciso Andreu Muste, with Francisco Escarti Carbonell as managing director; at approximately the same time, plans to withdraw the carrier's 29 DC-9s are shelved. As a new management team takes office, routes are opened to Hamburg, Tokyo, and Bombay; however, a two-week pilot strike is also suffered.

Once operated by **Air Canada, Ltd.**, a B-747-133 is leased from Guinness Peat for six months, May-October, to replace the Airbus. A new "Iberiamatic" ticket dispensing system installed at Madrid and Barcelona airports are the first of their kind anywhere in Europe. Based on a Unisys package, a new yield management program is introduced at year's end.

Passenger bookings grow 4.8% to 13.16 million and freight is up 13% to 517.49 million FTKs. On revenues of \$1.94 billion, up 10.4%, a smaller net loss is reported, \$64.5 million, on top of an operating loss of \$56 million. Despite its financial woes, Iberia retains its position as Europe's 3rd largest carrier and in terms of passengers carried, 17th among all world airlines; it is 22nd in terms of fleet size, 12th in total number of employees, and 14th in revenues generated.

The payroll increases 12% in 1986 to 25,009 and the new yield management program is started up in January. In March, weekly Madrid to Bombay via Tokyo service is announced; it is inaugurated on May 1. Protesting the line's failure to carry out certain provisions in its contract, the carrier's pilots stage a 24-hour strike on May 17, forcing the cancellation of 143 domestic and international flights. During the year, two DC-9-32s are retired and other aircraft are moved from unprofitable to profitable routes.

On September 24, a DC-10-30 en route from Managua, Nicaragua, to Madrid via Havana makes an emergency landing in Miami when Manuel de Jesus Prado-Ortega, the 20-year-old son of a Nicaraguan official, joins a Cuban family of three in asking for political asylum.

A joint venture is now formed with **Swissair, A.G.**, "Iberswiss," a catering company that begins operations in several domestic airports. Under its ATLAS partnership agreements, the carrier now services the aircraft of 110 airlines in 48 airports, including 21 outside of Spain.

Passenger boardings climb 3.8% to 13,645,463 while cargo rises 2.3% to 525.23 million FTKs. Revenues advance 4.3% to \$1.98 billion and costs are kept low, allowing profits of \$45.9 million (operating) and \$5.3 million (net). The operating gain is the first in a decade.

Airline employment in 1987, the 60th anniversary year, totals 26,417, a 3.6% boost. Share capital amounts to PTA 93 million and offices are maintained in 51 nations. In January, a code-sharing alliance is entered into with **Kuwait Airways Corporation** for flights between Madrid and Kuwait City. Nonstop service is introduced from Chicago and Los Angeles to Madrid in April, with special reduced fares through the month of May. Also in April and May, a process to redesign the uniform of all personnel working in contact with passengers is started in cooperation with the nation's best fashion designers.

In the summer, flights begin to Los Angeles and San Francisco. In October, code-sharing flights commence from Las Palmas to Nouabibou

via Nouakchott, under terms of an alliance inked with **Air Mauritanie, S.A.**; the following month, a similar deal with **MALEV Hungarian Airlines** brings joint services from Madrid to Budapest. Sometime afterwards, MALEV jetliners take over the frequencies and add a route from Barcelona to Budapest.

Late in the year, the fleet includes 83 aircraft as \$400 million in orders are placed for 17 McDonnell Douglas MD-87s as B-727-256 replacements.

Customer bookings zoom upward by 7.3% to 14,127,160. Revenues climb 8.7% to \$2.7 billion and allow an operating profit of \$279.4 million.

The workforce is cut a major 16.9% in 1988 to 21,994 and the fleet now includes 6 B-747-256Bs, 35 B-727-256/-256As, A300B4-120S, 8 DC-10-30s, 24 DC-9-32s, 4 DC-9-33Fs, and 6 Airbus Industrie A300B4-120s. Orders are placed for 15 A320s as DC-9-32 replacements and 8 A340s as DC-10-30 follow-ons and the B-747-256B *Garcia Lorca* enters service on April 5.

New uniforms are introduced by all personnel having contact with customers. Chairman Muste and Managing Director Carbonell oversee planning for privatization two years hence. A code-sharing and pooling agreement is signed with **Royal Air Maroc** in March covering the route from Madrid to Malaga via Barcelona, Casablanca, and Tangier. Dual-designator flights from Barcelona to Casablanca and from Malaga to Casablanca will be added later. On April 1, nonstop Madrid to Los Angeles service is introduced, followed by the initiation of a third weekly Los Angeles (LAX)–Madrid roundtrip in June.

A code-sharing agreement is reached with **Dominicana Airlines, S.A.** covering a route from Madrid to Rio de Janeiro via Santo Domingo and Bogota. Passenger boardings ascend 2.6% to 14,487,687 and freight grows 13.5% to 596.08 million FTKs. The operating gain is \$190 million.

Airline employment is increased by 27.3% in 1989 to 28,003. Two B-747-256Bs are withdrawn as two A300B4-203s join the fleet.

A strike forces cancellation of 55 flights on January 3. Later in the month, a B-747-256C succeeds the DC-10-30CF employed on the Madrid–Chicago–Los Angeles route. In February, a B-747-256B is introduced on the semiweekly flights from Madrid to Los Angeles via Chicago. Planning for privatization continues and total 100% shareholding is taken in **Aviacion y Comercio, S.A. (AVIACO)**.

The state carrier now begins to develop five regional feeder airlines. These include Seville-based **Binter Andalucia, S.A.**, Canary Islands-based **Binter Canarias, S.A.**, Binter Cantabria, S.A. in northern Spain, Madrid-based **Binter Centro, S.A.**, and Majorca-based **Binter Mediterraneo, S.A.**

Binter Canarias, S.A. is the first of the regionals to inaugurate services. With pilots provided by the parent, it begins operations in March, only to be shut down for two days in May by a pilots' strike.

Service to the U.S. is significantly expanded in June. Six-times-per-week roundtrip passenger service is inaugurated from Barcelona to New York and two more B-747F frequencies are added from Madrid to New York. During the month, the carrier also joins the frequent flyer programs of **Continental Airlines**, **Eastern Air Lines**, and **United Airlines**. The previous four-times-per-week Madrid to Miami roundtrip DC-10-30 service becomes a daily Jumbojet offering on July 1.

On September 1, Iberia becomes the first airline to fly nonstop from New York (JFK) to Barcelona; passengers choosing to fly the new Barcelona Express route receive six nights free at a hotel in either Barcelona or Torremolinos.

Customer bookings climb another modest 2.8% to 14,894,485 while cargo surges by 23.6% to 736.47 million FTKs.

With 28,000 workers, Iberia is Europe's fourth largest carrier in 1990, overseeing the 14th largest number of airline employees in the world. Additionally, the company's 97 aircraft comprise the 22nd largest fleet. On May 25, the government grants the company permission to purchase 16 B-757-256s for \$1 billion; the cost will actually be closer to \$4 billion.

Chairman/CEO Muste signs a major cooperative agreement in June with Giovanni Bisignani, managing director of **Alitalia, S.p.A.**; the pact covers not only the joint development of new routes, but joint cooperation in technical, commercial, and other operational activities. During the summer, flights are initiated from Barcelona and Madrid to Berlin and from Bilbao to Frankfurt.

On July 15, the carrier reaches resolution with **American Airlines** concerning a four-month dispute over reservations systems. Four days later, Argentina agrees to sell the majority share of **Aerolineas Argentinas, S.A.** to a consortium led by Iberia for an estimated \$260 million in cash and \$2.01 billion in debt paper.

The **Alitalia, S.p.A.** pact comes into effect in August; under its terms, Iberia begins to fly the Italian line's passengers from Madrid to Mexico City while Alitalia takes Spanish-booked travelers from Rome to Bangkok. Iberia on September 14 purchases the 48% minority shareholding in the inclusive-tour operator **Viva Air, S.A.** from the German state airline **Deutsche Lufthansa, A.G.** **Viva Air, S.A.** is reconfigured as a scheduled airline for the tourist trade.

Later in the year, the Majorca-based feeder **Binter Mediterraneo, S.A.** initiates services. The airline is reorganized in October into two principal units with the entire structure overseen by corporate group headquarters.

The major operating division is comprised of three business units: Iberia Intercontinental, Iberia Europe, and Iberia Spain, while four other business units cover Iberia Cargo, **Aviacion y Comercio, S.A. (AVIACO)**, **Viva Air, S.A.**, and the Binter subsidiaries. The support division comprises four units: flight technology, engineering, systems, and handling. Also during the month, the company begins to explore the possibility of taking shares in three more South American airlines: **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**, **VIASA (Venezolana Internacional de Aviacion, S.A.)**, and **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)**. The **Aerolineas Argentinas, S.A.** takeover comes into effect on November 1.

Passenger boardings ascend 4.3% to 15,500,000 (including 1.84 million on the Madrid–Barcelona shuttle service) and freight climbs 3.7% to 763.9 million FTKs. The boarding figure makes the Spanish airline the world's 20th largest.

The payroll is sliced 10.1% in 1991 to 25,000 and the fleet now includes 114 aircraft. Seven days of strikes early in the year cost the company PTA 2.1 billion; however, the carrier's unions do agree to accept work rules changes along with their 7% wage increase. A new terminal is opened at Barcelona's Prat Airport in March for the company's shuttle service to Madrid.

During the second quarter, the carrier acquires an almost total monopoly of the Argentine scheduled air transport industry. Iberia retires over \$1.6 billion in debt, along with a \$142.5-million foreign-debt title payment to the Argentine government (plus the \$130 million in cash paid the previous year). Iberia then increases its ownership in **Aerolineas Argentina, S.A.** from 13% to 30% and acquires a 70% majority interest in **Austral Lineas Aereas, S.A.**

In order to increase its South American presence, the Spanish flag carrier's consortium in April purchases 35% shareholding in **LanChile Airlines, S.A.**'s domestic competitor **LADECO Chilean Airlines (Lineas Aerea del Cobre, S.A.)** for \$10.5 million; a comprehensive marketing agreement is also signed with Ladeco.

Chairman Muste resigns in June to become chairman/CEO of the Spanish-Italian independent **Meridiana Air, S.A.** and is succeeded by Miguel Aguilo. The same month, the U.S. government grants the airline permission to operate a minihub at Miami.

In addition, the carrier leads a Venezuelan consortium, with Banco Provincial, which is able to acquire controlling interest in the Venezuelan airline **VIASA (Venezolana Internacional de Aviacion, S.A.)** on August 9 for \$145.5 million; the arrangement marks the first big sale of a Venezuelan state asset to a foreign buyer. A major alliance is signed with this South American carrier; it includes a management contract and marketing agreement with joint routes, code-sharing, joint frequent flyer programs, and schedule coordination.

Also during the month, agreement is reached with the Argentine government on a new formula covering Iberia's 85% acquisition of **Aerolineas Argentinas, S.A.** Although the amount of foreign debt that the Spanish must retire is reduced, \$171 million is added to AA's cost. The arrangement is completed in September, the same month the **LADECO Chilean Airlines (Lineas Aerea del Cobre, S.A.)** agreement takes effect.

Due to recession and the Gulf crisis, customer bookings decline 10.3% to 14,551,989 and cargo drops 18.7% to 635.17 million FTKs. Expenses exceed income and there is a \$305-million operating loss.

The employee population declines another 13% in 1992 to 27,000 and the fleet now includes 8 Airbus Industrie A300B4-120/203s, 21 A320-211s, 29 Boeing 727-256As, 6 B-747-256Bs, 1 B-747-256B/C, 12 Douglas DC-9-32s, 1 DC-9-34, 2 DC-9-34CFs, 24 MD-87s, and 8 DC-10-30s.

In a move completed by summer, the carrier, in February, begins the transfer of its U.S. headquarters from Los Angeles to Miami, where a hub is created to connect European traffic with Latin America. An alliance is entered into with **Air Canada, Ltd.** in April providing for code-sharing on the route from Madrid to Montreal and Toronto.

The company transports passengers to the Expo'92 World's Fair at Seville and the Summer Olympics at Barcelona. Iberia helps to sponsor both events, as well as Madrid's year as Cultural Capital of Europe. In addition, new markets are opened at San Salvador, San Pedro Sula, and Guatemala City. The company now stations three DC-9-32s at Miami that are employed to operate a daily change of gauge operation to these points, as well as Cancún and Managua. Simultaneously, two DC-9-32s are posted to Santo Domingo in the Dominican Republic to fly services to Havana and Panama City.

On July 7, the computerized reservations system dispute with **American Airlines** resumes as Iberia files a complaint with the European Union accusing the U.S. major of using its jointly run reservation system to discourage passengers from using the Spanish airline. Also in July, the company receives EU Commission approval for a PTA 120-billion bailout from the government; the approval is contingent upon the funding being "the last capital injection from public funds for the duration of the [1989-1996] programme." The arrangement prohibits Iberia from acquiring shareholding in European carriers, but does permit Chairman Aguilo's continuing "Latin American adventure." Preliminary discussions concerning the acquisition of a stake in **Dominicana Airlines, S.A.** end.

The Argentine government agrees to take its shareholding in **Aerolineas Argentinas, S.A.** to 33%, but then threatens to damage its flag carrier by deregulating domestic routes. Numerous wrangles with the Argentine government and its legislature over this and manpower issues lead to a revised pact with the Iberia group, signed in October. In an effort to further reduce expenses, the workforce is reduced 12% during the year and the wages of all pilots are frozen.

Enplanements recover and grow by 11.1% to 23,172,000, but freight falls 7.4% to 588.41 million FTKs. Revenues rise 9.1% to \$3.55 billion and with costs down, the operating loss is cut to \$128 million. The net loss is \$263.5 million.

The workforce in 1993 totals 26,000, down 3.7% from the previous year. One more A320-211, a B-727-256A, three B-757-256s, and three DC-9-32s are acquired. In January, the company begins to second 38 managers to **Aerolineas Argentinas, S.A.**, including directors for financing and commercial, marketing and maintenance. Strategic plans are developed for massive route rationalization with the South American partners, beginning late in the first quarter. In April, the carrier joins with the American charter operator **Carnival Air Lines** in an application to the U.S. DOT seeking permission to code-share on routes out of Miami to New York, New Orleans, Chicago, Houston, and Los Angeles. The plan envisions the purchase of blocks of up to 150 seats on flights operated by the American carrier.

Air Seychelles signs an agreement with Iberia during the same month that provides for code-sharing flights from Madrid to Mahe via Nairobi.

The following month, a similar deal is signed with **Garuda Indonesia** covering joint services from Madrid to Jakarta and Denpasar. In May, Argentine company employee Manuel Moran is appointed president of **Aerolineas Argentinas, S.A.** During the first six months, the flag carrier loses a total of PTA 29.9 billion (\$221 million). The code-sharing pact with **Carnival Air Lines** is approved by the U.S. DOT on June 15.

Chairman Aguilo's turbulent and expansionist tenure comes to an end in September when he is succeeded in office by the parent INI company's chairman, Javier Salas; another INI official, Juan Saez, is appointed vice chairman and managing director. In October, **VIASA (Venezolana Internacional de Aviacion, S.A.)** becomes the exclusive general sales agent for the Spanish major, as well as **Aerolineas Argentinas, S.A.** in Colombia. A new cargo division is established to coordinate the freight operations of all three airlines in South America.

Late in the month, Saez, reporting the annual loss of \$15 million on the Miami hub, recommends its closure. The first code-sharing flight with **Carnival Air Lines**, from Miami to Los Angeles, is completed on October 11 with an Airbus A300B4-203 leased from **VIASA (Venezolana Internacional de Aviacion, S.A.)**. Simultaneously, the Spanish flag carrier ends its thrice-weekly service from Madrid to Los Angeles.

Argentina in November rejects an Iberia request that \$215 million be contributed by its government to a \$500-million capital pool being assembled for use in reinvigorating **Aerolineas Argentinas, S.A.**

Passenger boardings for the year slide 6.7% to 14,383,262 while freight drops 5.4% to 543.21 million FTKs. The operating loss reaches \$124.06 million with a net loss of \$487 million following right behind. The cumulative debt is now almost \$1 billion.

Airline employment is cut another 3.8% in 1994 to 25,100 and the owned fleet now includes 8 A300B4-120/203s, 22 A320-211s, 30 B-727-256As, 6 B-757-256Bs, 1 B-747-256B/C, 8 B-757-256s, 10 DC-9-32s, 1 DC-9-34, 2 DC-9-34s, 24 MD-87s, and 8 DC-10-30s, 1 of which is chartered to **VIASA (Venezolana Internacional de Aviacion, S.A.)**. A total of \$2.6 billion in debt still remains on those aircraft acquired after 1990. Leased units include six B-727-256As and orders are outstanding for eight A340-300s.

Early in the year, a code-sharing and block-space agreement begins with **Austrian Airlines, A.G.** on routes from Barcelona and Madrid to Vienna. In February, the government, following deregulation of the domestic airline market, authorizes the private carrier **Air Europa, S.A.** to begin competitive scheduled service over the lucrative Madrid to Barcelona route. In March, a comprehensive marketing agreement and management contract is negotiated, but put on hold, with **Aerolineas Argentinas, S.A.**

A marketing and code-sharing alliance is signed with **United Airlines** on April 18. About the same time, a code-sharing agreement is signed with **Finnair O/Y** covering service over routes from Madrid and Barcelona to Helsinki, via Amsterdam and Gothenburg. Later in the month, the on-again, off-again stake increase in **Aerolineas Argentina, S.A.** (to 85%) is on again after a higher court overturns a lower court challenge to the \$500-million arrangement. Although many no longer wish to acquire the Argentine carrier, the unacceptable alternative is to let it collapse and assume responsibility for its debt. The March pact now comes into effect as code-sharing, joint routes, and a linked frequent flyer program begins.

By August, the start-up **Air Europa, S.A.** has seized 14% of the traffic on the Madrid-Barcelona return service; the state carrier must now offer discount fares on this important internal artery. Another new entrant, **Spanair, S.A.**, is also becoming something of a concern. Both are based at Palma de Mallorca; their entry onto the scene will help force Iberia to push its self-reform.

In early November, Chairman Salas announces a restructuring plan designed to stave off bankruptcy and to win EU Commission approval for a government aid package worth PTA 130 billion (\$1 billion). Under its terms, salaries will be cut 15%, approximately a quarter of the workforce will be laid off, an order for eight A321s is cancelled, and deliveries of four A340-300s are delayed. In addition, the U.S. investment

banks Goldman Sachs, Morgan Stanley, Bankers Trust, and Salomon Brothers are invited by the government holding company INI (Instituto Nacional de Industrias) to undertake valuations of the carrier's assets.

Airports across Spain are paralyzed on November 28 and more than 100,000 passengers are stranded in a wildcat strike by the carrier's workers, staged to protest the state carrier's announced plans to dismiss almost 25% of its workforce and to start selling off assets. All Iberia flights are grounded as management and the unions seek an agreement that will save the airline from financial disaster. The one-day job action ends on November 29, but costs the airline over \$11.5 million in lost revenue and compensation to replacement carriers and stranded passengers. The government agrees to pay back wages of PTA 10 billion (\$76 million) and the workers agree to reduce their wages by 8%, seven points less than management had desired.

On December 2, the airline's 1,100 pilots, facing 20% salary and benefit reductions, make it known that they will not accept the pay cuts agreed to by the carrier's other employees. The next day, the airline agrees with the unions to postpone its decision on drastic employment reductions. Talks continue until December 6 when Iberia, without an agreement from the pilots union, announces that it will impose a huge program of asset sales recommended in a plan from the American bankers. Jobs will be cut by up to 5,200 in an effort to avoid the necessity of a government bailout or bankruptcy. On December 7, the layoff figure is stated as one-fifth of the workforce.

The pilots union threatens a 12-day strike, but following several weeks of posturing on both sides, the pilots call off their job action on December 28 after having reached an accord with management. Contingent upon EU approval of state aid to the carrier, the pilots approve an 8% salary cut in exchange for a larger share in company decision-making.

In something of a footnote, one other piece of good news is received this year. After 239 judges have flown 100,000 miles on the carrier since January, Iberia defeats 29 others carriers (including two from the U.K.) to win the 1994 British National Tea Council's "Inflight Best Cup of Tea" award.

On the year, customer bookings decline by 4.4% to 13,756,022, while cargo swells by 4.9% to 569.75 million FTKs. Revenues move up 2.9% to \$3.28 billion and expenses dip 2.3% to \$3.24 billion. As a result, there is an operating surplus of \$45 million. The net loss "improves" to \$314 million. In terms of passengers flown, Iberia is now the 22nd largest airline in the world.

The number of employees is cut by 4% in 1995 to 24,000. Company officials report, on April 18, that they have cut Iberia's fleet by 19% as part of the state carrier's bid to secure European Union approval for a \$1.06-billion government bailout. Also in April, a memorandum of understanding concerning possible future joint operations is signed with **Air Afrique, S.A.** The same month, a code-sharing pact with **British Midland Airways, Ltd.** begins on services from Barcelona, Bilbao, Madrid, Seville, and Valencia to London (LHR) and beyond to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

Dual-designator flights with **Ukraine International Airlines** commence in August between Madrid and Kiev. With EU approval still not forthcoming, pilots vote on October 20 to stage a series of one-day strikes in November to protest what they see as management's inability to get the needed permissions and funding.

During the last week of the month, the company refuses to allow **LADECO Chilean Airlines, S.A.** a capital raise of \$3 million. Iberia indicates that it must evaluate the South American line's expansion strategy.

In a further effort to win EU approval, Iberia announces during the last full week of November that it is planning to sell its entire 83% stake in **Aerolineas Argentinas, S.A.** It is hoped that most of the company would be sold to a consortium of American banks; however, any sale would have no effect on the operating and marketing alliances in place between the two national carriers. Still, based on the October vote, pilots stage a 48-hr. walkout, beginning on November 29, that heavily disrupts the major's operations.

On December 14, the EU Commission reports that it has approved the Spanish government's plans to inject PTA 87 billion (\$71 million) into Iberia as soon as the Spanish airline has its house in order. It also agrees that the company may apply for additional aid of PTA 20 billion (\$16 million) the following year, if it improves its productivity and gains.

Enplanements inch ahead 2.6% to 13,705,800, but cargo does much better, rising 19.8% to 678.82 million FTKs. Although revenues are \$5.4 billion, costs leave a \$360-million net loss.

The workforce is reduced by 4,000 in 1996 and the owned fleet now includes 8 A300B4-120/203s, 22 A320-211s, 25 B-727-256As, 6 B-747-256Bs, 1 B-747-256BC, 4 B-757-256s, 5 DC-9-32, 8 DC-10-30s, and 24 MD-87s. Also operated, under charter, are 3 B-757-256As and 4 B-757-256s. Orders are outstanding for 8 A340-300s and 8 B-757-256s. Four DC-9-32s are out on lease to **Binter Canarias, A.S.** and one DC-10-30 is with **VIASA (Venezolana Internacional de Aviacion, S.A.)**.

Settlement is reached between Iberia and its pilots on February 19, thereby clearing the last obstacle to an injection of EU-approved \$690 million in new government-supplied capital. A code-sharing service begins in March with **Syrianair (Syrian Arab Airlines)** over a route from Madrid to Damascus.

With the beginning of the summer schedule on May 1, Iberia inaugurates service to four new European markets—to Hanover, Stuttgart, and Venice from Madrid via Barcelona and to Oporto from Madrid. On May 23, the company reports a \$22.55-million profit for the first quarter, the first fiscal gain in this time period since 1989.

The international press reports the same day that **British Airways, Ltd. (2)** has under active consideration a plan for the acquisition of a \$100 million 15% stake in the Spanish carrier. A block-space agreement with **Korean Airlines/Korean Air (KAL)** commences in June on flights from Madrid to Seoul.

The current daily roundtrip nonstop service from Madrid to Miami is doubled on July 1; the twice-daily service will be offered through September 29.

On July 26, Lebanese passenger Saad'o Mohamed Ibrahim Intissar, claiming to have a bomb, hijacks Flight 6621, a B-747-256B with 232 passengers and bound for Cuba from Madrid, and forces it to land at Miami (MIA). When Ibrahim eventually surrenders and is arrested, his bomb turns out to be a fake, assembled in one of the plane's bathrooms from a cassette record and an electric shaver. Two Palestinians reportedly involved in planning the hijacking are arrested in Germany on July 30.

During late summer and early fall, Iberia begins the search for a U.S. alliance partner. In addition, the first four A340-313s are delivered; one is christened *Rosa Chacel* and enters transatlantic service from Madrid to New York (JFK).

On November 19, Spanish Transport Minister Rafael Arias-Salgado and U.S. Transportation Secretary Federico Pena meet to discuss an "open skies" agreement between the United States and Spain, a liberalization that could help the state carrier find a U.S. affiliation.

Passenger boardings accelerate 5% through November to 14,070,616 and 661.56 million FTKs are operated, a 7.8% increase. In December, Iberia notifies officials of the Venezuelan government and **VIASA (Venezolana Internacional de Aviacion, S.A.)** that no more money will come to the South American carrier from Madrid until it puts a radical restructuring plan into effect.

The Spanish partner proposes that VIASA withdraw from its more unprofitable routes, that 30% of the workforce be laid off (some 2,200 personnel), and that the remaining 70% have their wages frozen. In addition, restructuring costs should be assumed by Fondo de Inversiones de Venezolanas (FIV), which national privatization and investment body owns 40% of VIASA.

A net profit for the year of \$24.9 million is widely reported; it will later be adjusted downward to \$18.4 million.

During January 1997, the EC orders Iberia to reduce its Latin American holdings as a condition for the company receiving another \$330 million in government capitalization. On January 17, following nearly a

month of discussions, the FIV and VIASA employees reject Iberia's December restructuring demand; the Spanish withdraw their plan. On January 23, VIASA's board of directors closes down the airline and sets February 8 as the date to decide upon the carrier's fate.

Meeting at Madrid on January 28, officials from Iberia, the Venezuelan government, and **VIASA (Venezolana Internacional de Aviacion, S.A.)** agree on a plan to keep the partner going. The Venezuelan government will set up a special fund to take care of their carrier's expenses until a foreign operating partner can be signed up. Iberia, for its part, will convert \$30 million, about 20% of the money it is owed by VIASA, into additional equity by taking over ownership of its fleet. It is also agreed that the Venezuelan airline will remain grounded until a new associate is located and new labor agreements are signed.

On February 18, however, FIV Chairman Alberto Poletto announces that the nation will spend no more money on **VIASA (Venezolana Internacional de Aviacion, S.A.)**, which lost \$45 million in 1996 and had accumulated debts of \$200 million. He also notes that the deal put forward the previous month does not preclude liquidating VIASA, particularly since it is now losing \$250 million per month, more than twice the figure estimated.

Now that the end is at hand, Iberia pays severance to VIASA's employees and agrees to write off its \$30-million stake in return for preservation of its rights to serve Venezuelan destinations.

The company's 1996 net profit, the first since 1989, attracts investment interest from **Continental Airlines**, **KLM (Royal Dutch Airlines, N.V.)**, **British Airways, Ltd. (2)**, **Air France**, and **American Airlines**. In a February interview in the European edition of *The Wall Street Journal*, Chairman Xavier de Irala notes that, despite its profit, the company still faces acute challenges from growing competition, European deregulation, and falling airfares. These problem areas have a potential, de Irala warns, to change the government's plans to privatize the carrier two years hence.

Consequently, a new three-year cost cutting plan will be implemented designed to boost productivity by 20% and reduce expenses 3% annually. Such an effort should bring a PTA 40-million operating profit and underscore the carrier's obligation, under Spanish law, to remain in the black for three years prior to privatization.

Also during the first quarter, a group of Spanish regional airlines, including **Canarias Regional Air, S.A.** doing business as Air Europa Express, **Spanair, S.A.**, and **Futura, S.A.**, complain to the EC that part of the government funds injected into the state line during the fall of 1995 have been employed to finance a fare war against them. In addition, Canarias claims that Iberia has engaged in predatory pricing, arranging some of its schedule to directly affect private carriers such as itself. The Commission investigates.

Spanair S.A. increases its ticket prices by 15% on April 10, leading Iberia to increase its tariffs by 3.5% on April 25, the same day **Air Europa, S.A.** boosts its fares by 20%, the largest increase yet.

Saad'o Mohamed Ibrahim Intissar is convicted of air piracy in U.S. federal court on April 25. Also during the month, the company leases the lone Lockheed L-1011 TriStar 1 of **Aer Turas, Ltd.** painted in the full livery of the Spanish major, the Irish aircraft is the first of its type to fly with Iberia and enters charter service from Madrid to the Canary Islands.

Following complaints from a consumers' group and local authorities in the Balearic and Canary Islands, the Spanish government, on April 28, begins a price-fixing investigation of Iberia and two of its rivals. Antitrust authorities in the Ministry of Finance begin to review an arrangement between the flag carrier and **Spanair, S.A.** and **Air Europa, S.A.** that has seen them end a yearlong price war while increasing fares an almost equal average of 10% on all Spanish domestic routes and dropping promotional fares.

At the same time, Iberia is also accused of employing a part of the government's capital injection to fund domestic fare reductions. The Asociacion Espanol de Companias Aereas is unable to prove its case given that Iberia's average prices remain some 25% higher than those of its competitors.

A block-space agreement begins with **Malaysia Airlines, Ltd. (MAS)** in May on frequencies from Madrid to Dubai and Kuala Lumpur. An expansion of the marketing agreement with **TAROM (Transporturile Aeriene Romane, S.A.)** is considered; if implemented, dual designators will appear on flights of the two carriers between Barcelona and Bucharest.

A formal franchise agreement is entered into with **Air Nostrum, S.A.** on May 12. Employing 12 (later 14) Fokker 50s, the partner will operate its 400 weekly departures under Iberia code, livery, and other branding. At the same time, Iberia and **Aviacion y Comercio, S.A. (AVIACO)** also begin dual-designator flights over their domestic routes.

A wide-ranging new strategic partnership with **American Airlines** is tentatively concluded on July 21. Under its terms, AMR Corporation would acquire a 10% stake in Iberia's owner, SEPI, which also controls the Argentine carriers **Aerolineas Argentinas, S.A.** and **Austral, S.A.** and Andes Holding, which controls Interinvest, S.A.—which actually owns the two companies. It will also lead an effort to find additional investors who will purchase up to 35% additional shareholding. In addition, Iberia and American will begin to share codes on flights from Spain to the U.S. and link their frequent flyer programs. In South America, American would establish reciprocal frequent flyer arrangements with both **Aerolineas Argentinas, S.A.** and **Austral, S.A.** and code-share on certain of their internal routes.

Meanwhile, the U.S. major's almost-partner **British Airways, Ltd. (2)** and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent flyer program linkage and code-sharing on routes between Madrid and London. Significant opposition quickly materializes from **Continental Airlines** and **United Airlines**, which fear not only an AA-BA linkup, but the potential domination of Latin American routes by the Dallas-based megacARRIER.

On October 26, the carrier integrates its own resources, together with those of its domestic subsidiary **Aviacion y Comercio, S.A. (AVIACO)**, its charter operation, **VIVA Air (Vuelos Internacionales de Vacaciones, S.A.)**, and its regional **Air Nostrum, S.A.** under one centralized operational holding company. Long-term plans are made to place all three under the Iberia name, but due to potential union problems, this plan will be implemented in phases. Meanwhile, coordination becomes the theme of the day in the short run.

Although the companies are held as separate legal entities, a management committee made up of the commercial directors from each airline now allocates the group's fleet, crew, and scheduling according to perceived daily requirements for each route. All passenger revenue receipts are turned into a central office and all marketing activities are also centralized. Under this reorganization, VIVA begins to drop unprofitable charters, while AVIACO dumps unprofitable routes off on Air Nostrum, thereby freeing up capacity for Iberia.

The Spanish Airlines Pilots Union (SEPLA), concerned that the modernization and cost-cutting plans afoot at Iberia's airlines might badly impact its members, stages a one-hour strike at the end of October as a symbolic protest against them.

On November 3, an aircraft, crew, management, and insurance (ACMI) contract is signed with **Air Atlanta Icelandic, H.F.** under which the Icelandic line will operate twelve roundtrip charters from Madrid to Tenerife during the winter holiday season.

Iberia's cargo division deploys four extra freighters to the Netherlands from Madrid on November 4, boosting its total to 10 B-747Fs and DC-8Fs in an effort to defeat the road blockade earlier established by French truckers at the borders.

In a normal week, Iberia operates six freighter flights from Madrid to Maastricht-Aachen Airport. Two of these are flown by **Aerolineas Argentinas, S.A.** and are routed via Madrid on to Buenos Aires. The French road blockade is lifted on November 5.

During the last week of November, final agreement is reached with **American Airlines** along the terms negotiated in July. A \$71-million record profit is reported for the year. AMR Corporation, parent of

American Airlines, executes the purchase of equity in Interinvest, S.A. in December, subject to approval by the U.S. Justice Department.

Customer bookings grow 5.5% this year to 15,431,583, but freight dips 1% to 724.77 million FTKs. A \$70.58-million net profit is reported atop operating revenues of \$3.74 billion.

At the beginning of 1998, airline employment stands at 23,576 and the fleet, 71.1% of which is Stage III certified, includes 114 airplanes: 28 B-727-200s, 5 DC-9s, 7 B-747s, 10 B-757s, 23 A320s, 6 each A300B4-120s and A340s, 4 DC-10-30s, 24 MD-87s, and 1 L-1011.

Four-times-a-week nonstop roundtrips commence on January 1, between Madrid and Santiago. At the beginning of the year, Iberia is the 19th largest airline in the world in terms of passenger boardings and employee number, 20th in fleet size and operating revenues, and 23rd in net profit.

Iberia purchases all of the outstanding stock of **Aviacion y Comercio, S.A. (AVIACO)** early in the year, making the nation's second largest carrier a 100%-owned subsidiary of its largest carrier.

At the end of January, a \$2.5-billion order is placed with Airbus Industrie for up to 76 new aircraft from the A319/A320/A321 family. Fifty of the orders are firm and the rest are options.

The carrier struggles to integrate AVIACO's resources and schedules, having particular problems in redeploying the unit's pilots to fly a range of aircraft with which they are unfamiliar. A new labor accord will be reached with the pilots' union, SEPLA, in April. To accommodate the reorganized European operations, Iberia plans to open a new terminal at Madrid Airport large enough for the unified network.

On February 1, Chairman de Irala proposes to end a number of pilot perks, including the 70-hour monthly flying requirement and travel bonuses for dependents. Angry pilots retaliate with a "work-to-rules" slowdown, which causes chaos for everyone attempting to employ Madrid's Barajas Airport.

On February 3, Iberia repossesses three DC-10-30s from **VIASA (Venezolana Internacional de Aviacion, S.A.)**, hoping to lease them to another carrier.

Chairman de Irala, in an effort to hold firm on his cost-cutting measures, negotiates a franchise agreement similar to those signed by **British Airways, Ltd. (2)** and **Deutsche Lufthansa, A.G.** with smaller regional carriers, including **Air Europa, S.A.** Under terms of the arrangement, Iberia will wet-lease 11 of the carrier's 34 aircraft (also employing their crews) and operate them out of the domestic line's Spanish airport slots.

Also during the month, a code-share partnership is entered into with **Royal Air Maroc**. Both share their codes on roundtrips from Barcelona and Malaga to Casablanca.

At the same time, discussions continue with **British Airways, Ltd. (2)** concerning an equity stake. BA wishes to take 25% shareholding, but 5% is all the Spanish are willing to offer.

Daily MD-87 roundtrips commence on March 29 between Madrid and Helsinki.

In April, a dual-designator arrangement is entered into with the BA partner **Finnair, O/Y**. In May, code-sharing is introduced on flights between Barcelona and Helsinki.

Repainted in Iberia livery, two wet-leased **Air Europa, S.A.** B-767-3Y0s enter service in May over the flag carrier's routes from Madrid to Chicago, San Jose, Costa Rica, and Rio de Janeiro.

A broad marketing agreement is signed with **American Airlines** on May 18. In addition to linking their frequent flyer programs, the majors will code-share on numerous flights between the U.S. and Spain. Twice-weekly A340-313 nonstops commence on May 19 between Madrid and Johannesburg.

Beginning on May 27, Iberia Plus members are able to earn mileage on **American Airlines'** AAdvantage Travel Awards Program while AAdvantage members can do the same on Iberia flights.

Having taken delivery of its first A321-211 (christened *Benidorm*), Iberia places its new aircraft into twice-daily service on June 5 between Madrid and Amsterdam.

American places its two-letter code aboard the Spanish carrier's services from Madrid to Miami, San Juan, and New York (JFK) on June 10. Simultaneously, Iberia begins dual-designator service aboard **American Airlines** and **American Eagle Airlines** services beyond Miami to Orlando and Houston (IAH).

On July 1, American does the same aboard Iberia flights beyond Madrid to Barcelona, Malaga, and Palma de Mallorca. Also on July 1, Iberia places its "IB" code on **American Eagle Airlines** frequencies from New York (JFK) to Philadelphia and Pittsburgh.

The U.S. DOJ grants clearance for the AMR Corporation equity investment in Interinvest, S.A. on July 8.

A five-year agreement is signed with ILFC on August 20 for the charter, beginning the following May, of nine A319s.

On September 1, new daily A340-313 nonstop roundtrips commence from Madrid to Chicago (ORD). Although customers can earn free travel by being members of the Iberia Plus or AAdvantage frequent flyer programs, the service is not a dual-designator offering with **American Airlines**.

Discussions continue with **British Airways, Ltd. (2)** concerning a code-sharing pact similar to that enjoyed with AA. Both the British and American majors are each expected to acquire 5% equity in Iberia when it is privatized during the first quarter of 1999. A dispute with the pilots' union, SEPLA, over pay is settled and permits the company to place a huge \$1.3-billion order for long-haul fleet renewal.

A 23-year-old man hides in the wheel bay of a DC-9-34 and survives a flight from San Pedro Sula to Miami on September 16. While conducting a routine checkup of the aircraft just after landing, mechanics discover the stowaway, who is taken in hand, seated in the passenger cabin, and returned to Honduras when the plane turns around.

It is announced at a London news conference on September 21 that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and Iberia announces its membership before the day is over.

Orders are placed on September 27 for six A340-313s with which to replace the carrier's DC-10s; the initial deliveries are slated for 1999.

On October 6, the carrier enters into a long-term agreement to acquire B-747-200F air freight services from **Atlas Air**. Iberia quickly utilizes the Atlas aircraft to provide scheduled services on its routes with Atlas supplying not only the planes, but the crews, maintenance, and insurance under an ACMI contract.

The Miami freight center benefits greatly from the two Jumbojets; one opens a route from Miami to New York and Madrid, while the other flies from Madrid to New York to Mexico City and back. Other new services operated include one from Madrid to Tokyo (NRT) direct and another that is operated roundtrip from Madrid to Bogota, Lima, Santiago de Chile, and Buenos Aires.

Because of a change to the ATC system at Madrid (Barajas Airport), Iberia must cancel 90 flights between October 8-16; affected passengers are transferred to other services. Employing mostly **Aviacion y Comercio, S.A. (AVIACO)** MD-88s, Iberia, on October 25, inaugurates up-graded daily roundtrips between Madrid and Amsterdam.

Citing continuing problems with the pilots' union SEPLA, Iberia absorbs its charter subsidiary **VIVA Air (Vuelos Internacionales de Vacaciones, S.A.)**, on November 1, and operates it as a separate division as it prepares for full integration.

Also on November 1, a new contract is signed between management and the pilots' union SEPLA. It includes pay raises, a change in work rules, and an increase in annual flight hours.
