Just after takeoff from Bandung on a July 17, 1997, service to Jakarta, the F.27-600 *Jayapura* with 5 crew and 45 passengers and leased to **Sempati Air**, develops engine problems and begins trailing smoke. The pilot attempts to make an emergency landing at Sulaiman AFB, but instead, hits the roofs of houses in a residential area and crashes into a muddy field (29 dead).

TRILLIUM AIR, LTD.: Waterloo Regional Airport, P.O. Box. 70, Breslau, Ontario N0B 1M0, Canada; Phone (519) 648-1204; Fax (519) 648-1208; <http://www.trilliumair.com>; Year Founded 2000. Trillium is established at Waterloo Regional Airport in June 2000 as a subsidiary of **Pem Air, Ltd.** Daily Jetstream 31 roundtrips are initiated connecting Kitchener and Waterloo with Ottawa. At the end of October, the schedule becomes twice daily.

TRILLIUM AIR, LTD. See also PEM AIR, LTD.

TRINIDAD AND TOBAGO AIRWAYS CORPORATION, LTD. See TTAS (TRINIDAD AND TOBAGO AIRWAYS SERVICES, LTD.)

TRINITY AIR BAHAMAS, LTD.: Bahamas (1993–1994). TAB is organized at Nassau in the fall of 1993 to offer scheduled service to the U.S. in competition with the state airline **Bahamasair, Ltd.** Employing 2 former **Delta Air Lines** Douglas DC-9-32s, the new entrant launches flights to Miami and Fort Lauderdale on November 11.

Unable to achieve viability, the airline will not see its first birthday.

TRISTAR AIRLINES: United States (1995–1996). TriStar Airlines is established by Chairman/President/CEO Donald Martin at Las Vegas, Nevada, in the spring of 1995. Martin had previously served as president of **Rocky Mountain Airways**.

Marketing alliances are established with **All Nippon Airways Company, Ltd.** and **Japan Air Lines Company, Ltd.** (2) and 3 British Aerospace BAe 146-200As, previously flown by the Hawaiian carrier **Discovery Airways**, are leased from Asset Management Organization to begin scheduled services on July 17.

Chief Pilot Capt. Norman Sevigny and his pilots fly the U.K.-made jetliners on daily nonstop roundtrips from Las Vegas to Los Angeles and San Francisco, with tourist flights to Grand Canyon Airport. Meanwhile, a contract is let with SABRE for computerized reservations services.

In November, flights are launched from Los Angeles to Eugene, Oregon. The following month, BAe services are inaugurated, on behalf of Peak International, from Los Angeles and Dallas (DFW) to Aspen and from Eugene to Reno.

A total of 73,944 passengers are flown over the next 6 months.

A fourth chartered BAe 146-200A arrives on March 1, 1996. It is employed on March 18 to start twice-daily nonstop frequencies connecting Los Angeles and San Francisco. Departures are advanced to thrice daily on April 7. Although **USAir** begins to withdraw from the Los Angeles (LAX)-San Francisco (SFO) market, the company faces stiff competition from **Southwest Airlines** (2) and the Shuttle by United division of **United Airlines**. Winter services to Aspen end on April 14.

Fast Fare discount fares are introduced systemwide on May 1 and charter flights from Fresno to Las Vegas are offered every evening on behalf of Fun Jet Express. The same day, Super Size Me Fares are introduced on the Los Angeles-San Francisco route. The new \$88 tickets will be good through June 15.

New marketing agreements are signed during the spring with **Asiana Airlines, Ltd.**, **British Airways, Ltd.** (2), **Cathay Pacific Airways (Pty.) Ltd.**, **China Air Lines, Ltd.** (CAL), **Continental Airlines**, **Frontier Airlines** (2), **Hawaiian Airlines (HAL)**, **KLM (Royal Dutch Airlines, N.V.)**, **Korean Air/Korean Airlines (KAL)**, **Midwest Express Airlines**, **Northwest Airlines**, **Qantas Airways (Pty.) Ltd.**, **Singapore Airlines, Ltd.**, **Trans World Airlines (TWA)**, **USAir**, and **Virgin Atlantic Airways, Ltd.**

On June 7, a joint marketing, ticketing, and baggage agreement is signed with **Eagle Canyon Airlines** at Los Angeles. The two will also share codes on connecting services from Los Angeles or San Francisco to the Grand Canyon; through passengers are allowed a Las Vegas stopover at no additional cost.

In cooperation with the air services company Peak International and Aspen Skiing Company, Los Angeles to Aspen flights commence thrice weekly on June 12 (with direct connecting service during the summer to Aspen from San Francisco). These services will operate for 14 weeks, after which the parties will switch over to a winter schedule similar to that operated in 1995.

The Fun Fare promotion is reinstated on August 14 covering flights made through October 15.

The carrier has a tough year and reports its financial returns through July and traffic through August. Although revenues in the first half are \$10.64 million, expenses are \$15.69 million and leave an operating loss of \$5.04 million and a net loss of \$6.07 million. In 8 months, customer bookings reach 120,000. The airline stops flying after Thanksgiving and goes out of business in December.

TROPAIR (PTY.), LTD.: South Africa (1965–1970). Tropair is established at Johannesburg on March 28, 1965 to provide regional freight charters throughout Africa. Revenue flights commence with a pair of Lockheed L-100-20 Hercules freighters and continue until March 18, 1970.

TROPIC AIR: United States (1967–1982). TA is founded by Hank Younge at Honolulu in the summer of 1967 to offer Piper Aztec scheduled passenger and cargo flights around Oahu and to Molokai, Maui, and Lanai. Revenue flights commence on August 16 and over the next 15 years the fleet grows to include 2 Douglas DC-2s and 5 Cessna 402s.

The company is acquired by **Air Hawaii (2)** in 1978, but regains its independence in 1980. Late in 1982, the carrier is purchased by the Connecticut-based Concord Development Corporation. It is reformed and renamed **Air Molokai**.

TROPIC AIR (TROPICAL AIR SERVICES, LTD.): San Pedro, Ambergris Caye, Belize; Phone 501 (2) 62 012; Fax 501 (2) 63 338; <http://www.tropicair.com>; Code PM; Year Founded 1979. Tropic Air Service, Ltd. is established at San Pedro, Belize, in 1979 to offer domestic and regional scheduled passenger and cargo services; charters will also be flown. The company, headed by John Greiff III, is a formalized outgrowth of a Cessna 180 service that John Grief Sr. has been providing from Ambergris Caye since 1965.

Scheduled Cessna 172 revenue flights commence in November and in 1981 a terminal building is constructed at the Belize City Airport. A new terminal building is added in San Pedro in 1984 and the name of the airline is shortened to Tropic Air.

Operations continue for the next 18 years linking the company's base with Belize International and Belize Municipal Airports, Caye Caulker, Corozal, Dangriga, Flores, Placencia, and Punta Gorda.

Celi McCorkle is chairman/president in 1998, with John E. Greif III as managing director/chief operating officer. The workforce stands at 65 and the fleet includes 2 de Havilland Canada DHC-6-300 Twin Otters, 3 Cessna 208 Caravan Is, and two each C-207A Stationairs and C-172Ps. The company is now the largest carrier providing intrastate services in the nation.

On October 20, Tropic receives a Model 208B Grand Caravan, the 1000th example of the Caravan single-engine turboprop utility aircraft delivered by Cessna.

By the beginning of 1999, flights are also offered to Flores (Tikal) in Guatemala, with connecting service to Corozal. The first airline in Belize is now the largest and remains the only one with an air operator's certificate and certified for maintenance. During the year, the company opens a homepage on the World Wide Web. A total of 120 workers are employed at the beginning of 2000.

TROPIC AIR (TROPICAL AIR SERVICES [BARBADOS], LTD.): Barbados (1973–1981). This small, private charter company is established at Christchurch in February 1973 to offer nonscheduled passenger and cargo flights to various Caribbean destinations. The fleet includes 1 each Aero Commander and Britten-Norman BN-2 Islander.

Two Douglas DC-3s are acquired in mid-decade. One DC-3 is destroyed in early 1979 during the filming of the motion picture *The Island*. Later in the year, the company is purchased by the Canadian operator **Air Dale, Ltd.**

Operations cease in 1981.

TROPIC AIRWAYS (PTY.), LTD.: South Africa (1950–1953). Three ex-Royal South African Air Force pilots form Tropic Airways on September 21, 1950 to offer charter flights from South Africa to Europe. Equipped with a single ex-military Douglas C-47 converted to civil DC-3 standard, the company initiates service on March 18, 1951, flying multistop from Johannesburg to London via Entebbe, Wadi Halfa, and Malta. During the remainder of the year, Dutch and German immigrants are flown to South Africa from Amsterdam and Hamburg.

While crossing the Mediterranean one day in July 1952, the company's DC-3 with 28 passengers is forced to ditch at sea. All are saved when Royal Navy warships pick up the plane's two lifeboats.

Early August, Tropic purchases an ex-RAF Dakota with which to resume business; however, British regulations require that, for the purchase to be consummated, a U.K. subsidiary be formed. As a result, **Meredith Air Transport, Ltd.** (named for founder Thomas Meredith) is formed and registered on August 12. In December, radio parts are hauled to Khartoum.

In 1953, inclusive-tours are undertaken to the Mediterranean from London while the South African Dakota continues to fly immigrants southward. In June, the Meredith DC-3 is sold to raise capital that will allow Tropic's founders to reform their South African company into **Trek Airways (Pty.), Ltd.** The Meredith subsidiary continues in Britain as a separate entity.

TROPICAIR (TROPIC AIR SERVICES [PTY.], LTD.): Australia (1969–1994). TropicAir is founded at Carnarvon, Western Australia, in 1969. Equipped with a Cessna 206, the company begins revenue operations in early 1970. Nonscheduled services are expanded to include not only air taxi and passenger and cargo charters but air tour and sight-seeing flights as well. The fleet grows to comprise 1 each Cessna 172, Piper PA-28-181 Archer, and a Partenavia P-68B in addition to the original Cessna 206.

Operations continue quietly apace for the next 23 years. In 1993, General Manager Keith Hasleby's fleet is the same as at start-up, minus the Cessna 172. Operations cease in 1994.

TROPICAL AIRLINES, LTD.: 2 Eastwood Avenue, Kingston 10, Jamaica; Phone (809) 968-2477; Fax (809) 926-4379; <http://www.tropicalairs.com>; Code VF; Year Founded 1996. Donovan and Suzanne Grant set up Tropical Airlines at Tinson Pen, Kingston, Jamaica, in late 1996 to offer domestic and regional scheduled passenger services. Employing 3 Beech 99s, the company launches daily shuttle flights between Kingston and Montego Bay.

Flights continue without incident or headline during the remainder of the decade. During these years, the company also operates charter flights on behalf of Gemini Tours to Santiago de Cuba. These services are flown twice weekly from both Kingston and Montego Bay. By the beginning of the new millennium, Tropical Airlines has also established a homepage on the World Wide Web.

TROPICAL AIRWAYS (1): United States (1933–1934). In December 1933, newly formed Tropical Airways is able to outbid **Johnson Airways** for the New Orleans–Pilottown airmail route previously operated by the latter. Operations commence in January 1934 with a Keystone K-84 amphibian. The mail route is permanently terminated on July 1, causing Tropical to shut its doors.

TROPICAL AIRWAYS (2): United States (1986–1989). The second U.S. Tropical Airways is established at New York (JFK) in 1986 to offer service to Georgetown, Guyana. A Boeing 707 Stratoliner is leased and bookings are taken before the DOT, having learned of the operation, forces the carrier to stand down due to its lack of certification.

When its application is approved in the early spring of 1988, TA-2 in May charts a Douglas DC-8-62 previously flown by **SAS (Scandinavian Airlines System)** for six months. Scheduled roundtrips are inaugurated on June 1 from New York to Port-au-Prince, Haiti, via Miami. In November, the aircraft is returned and the airline goes dormant for the winter season.

The DC-8-62 is reacquired in March 1989, by which time the company has concluded an arrangement to operate inclusive-tour flights on behalf of **Egyptair, S.A.E.** Flights commence in April, but in August, FAA inspectors ground the company for maintenance and safety irregularities. Unable to finance a resumption of services, TA-2 folds.

TROPICAL SEA AIRLINES COMPANY, LTD. ("THE YELLOW-BIRDS"): Bangkok International Airport, Building 302, Service Road 8, North of Old Terminal, Bangkok, 10210, Thailand; Phone 66 (2) 535-3461; Fax 66 (2) 535-3470; Code BN; Year Founded 1992. Tropical Sea is formed at Bangkok in 1992 to offer seaplane flights to various destinations along the Gulf of Siam. Operations Director Capt. Sarisport's initial fleet comprises 1 each Grumman G-21 Goose and G-73 Turbo Mallard.

Flights continue during the remainder of the decade as 1 each additional Goose and Mallard are placed into service.

TROPICAL TRANSPORT, LTD. See **TROPIC AIR (TROPICAL AIR SERVICES, LTD.)**

TRUMP AIR: United States (1988–1990). Donald Trump, the famous New York real estate mogul who is also chairman of Resorts International, establishes Trump Air in the March 1988 as successor to **Resorts International Airlines (RIA)**. A rotary-wing operation equipped with 3 Sikorsky S-61s, the airline inaugurates scheduled flights from Manhattan's West 30th St. heliport to Atlantic City's Steeplechase Pier with the original RIA personnel. Plans are made to initiate services to the New Jersey holiday location later in the year from Washington, Baltimore, and Philadelphia. Late in the year, the three Sikorskys begin cabin refurbishment one after another, with the first completed in December.

In 1989, the fleet is upgraded by the addition of the Aerospatiale AS-332L Super Puma previously operated as the VIP shuttle **Trump's Resort Air**. Boeing Vertol's Model 234 Civil Chinook demonstrator is purchased in April. Like the aircraft in the **Trump's Resort Air** fleet, it is painted in jet-black livery with red trim and is based at Linden Airport, New Jersey. A month later, a used Civil Chinook is purchased from Norway's **Helikopter Service, A.S.** for introduction in December.

When the former Boeing Chinook demonstrator begins flying from New York City to Atlantic City on behalf of its owner's casino operations in August, the Civil Chinook becomes the first of its type to be employed in a U.S. passenger shuttle service.

Following the purchase and renaming of the **Eastern Air Lines** shuttle, the Sikorsky choppers are tasked to provide Trump Shuttle Connection flights between New York (LGA) and destinations in the Midtown and Financial District of Manhattan, including the Wall Street Heliport. The six-min. flights are operated eight times a day weekdays.

En route from Manhattan to Atlantic City on October 10, the rotor of an Agusta 109 with two crew and three top Trump officials aboard and flown by Paramount Aviation Corporation on behalf of Trump Air, separates in midair, causing the helicopter to crash; there are no survivors.

Following introductory fanfare, eight-times-per-day S-61N roundtrips commence on December 4 linking La Guardia Airport with downtown Manhattan.

The Trump Shuttle Connection flights from La Guardia and the Wall Street Heliport are discontinued on July 1, 1990, due to low load factors.

When the service is discontinued, a number of pilots are fired and the chief operating officer and director of flight operations resign. Longtime Trump employee Michael J. Burke is named chief operating officer on July 9.

As Chairman Trump begins to suffer financial reversals, the carrier is forced to find ways to cut costs. Over the next six months, the carrier negotiates with **Columbia Helicopters** of Aurora, Oregon, and in December sells that pioneer rotary-wing operator its pair of Civil Chinooks.

Citing high fuel costs and low demands, winter flights from Manhattan to Atlantic City are now suspended. *The New York Times* reports on January 15, 1991, that they will resume during summer. They do not.

TRUMP AIR SHUTTLE: United States (1988–1992). In October 1988, Texas Air Corporation (TAC), parent of **Eastern Air Lines**, prepares to strip off that carrier's most successful operation, the northeast shuttle, and sell it as a way of earning desperately needed capital.

Following the strike-induced grounding of Eastern on March 4, 1989, an arrangement is made to sell the shuttle, along with 21 Boeing 727s (8 Dash-25s and 13 nonadvanced Dash-225s) and \$15 million worth of spare parts, to New York real estate tycoon Donald Trump for \$365 million. U.S. Bankruptcy Court Judge Burton R. Lifland approves the sale on May 25. A new management team, led by President Bruce R. Nobles, Vice President-Operations Richard F. Cozzi, and Chief Pilot Terry V. Hallcom is put into place. Six hundred, mostly Eastern, employees are hired and the aircraft are repainted in new livery. The tails of each B-727 receive a big red "T," while other markings in gold, black, red and white resemble the owner's private jet.

The Trump Shuttle inaugurates service on June 8 on Eastern's old routes from Boston to New York (LGA) and from New York to Washington, D.C. (DCA). **Hub Express Airlines** contracts with Trump to provide scheduled helicopter services linking Boston with Foxboro, Burlington, Norwood, Cambridge, Hanscom Air Field, the Boston financial district, and Waltham suburbs.

In August, a B-727 shuttle flight is forced to land at Boston with its nosewheel retracted; Trump and Nobles personally fly to Logan to comfort the 49 passengers and at a news conference, praise the skill of their flight crew.

A variety of marketing strategies and gimmicks are employed in the competition with the shuttle operated by **Pan American World Airways (1)**, including the distribution of free computer programs and video tapes. In October, fleet structural and cabin refurbishment modifications begin; lavatory vanities are provided with a pink marble pattern modeled on the Taj Mahal Casino Resort at Atlantic City. Late in the year, to take advantage of two newly won New York (LGA) slots and to transport jets to Florida-based Page Avjet without ferry costs, Trump inaugurates weekday roundtrip service between New York and Orlando. Passengers flying at Christmas are given their choice of free copies of the videos of either *It's a Wonderful Life* or *Miracle on 34th Street*.

Enplanements for the year total 768,389.

From March 14–31, 1990, Chairman Trump offers an on-time guarantee, redeemable for tickets or certificates if flights are more than 15 minutes late. Fog in Boston during the last week requires that 15,000 passengers be compensated. Late in the first quarter, the company begins to operate its B-727s with hush-kits for noise suppression and on March 31 the fleet includes 7 B-727-25s, 5 B-727-254s, and 4 each B-727-214s and B-727-224s.

The on-time guarantee is extended on April 1 to June 30, although compensation awards are lessened in value. Meanwhile, and also during April, a new contract is signed with ALPA that eliminates the existing two-tier wage structure inherited from **Eastern Air Lines**. Late in the month, free copies of the Lotus Magellan personal computer software program are given away to passengers.

With more aircraft than necessary on weekends, Trump begins Saturday and Sunday charter flights to Florida, the Bahamas, and Mexico. It also undertakes contract flights for musical groups such as the Boston Symphony Orchestra and such major sports teams as the

Boston Red Sox and Minnesota Twins. A code-sharing arrangement is also entered into on the New York to Boston route with **El Al Israel Airlines, Ltd.**

While splitting the market with Pan Am's shuttle and earning a small operating profit, the Trump enterprise suffers financially from the high interest rates involved in its highly leveraged acquisition. After expressing displeasure over this state, owner Trump, in July, fires President/Chief Operating Officer Nobles and replaces him with Vice President-Operations Richard Cozzi.

With a tiny net profit reported at the end of the third quarter, Chairman Trump announces on October 1 that the shuttle is no longer for sale. The fleet renovation project is completed in November. The recession hurts the Trump empire and the financier's problems are such that he now begins to seek a buyer for the Shuttle. It is proposed that **Northwest Airlines** acquire an equity stake and take over operations.

Passenger boardings for the year skyrocket 114.2% to 1,915,000. Still, the operation is a losing proposition; its losses total \$40.12 million (operating) and \$68.76 million (net).

Loss of the shuttle not only contributes to the failure of **Eastern Air Lines** in January 1991 but it now cannot be effectively maintained by its new owner either.

Enplanements during the company's final year under the tycoon's banner total 1,756,000, a decline of 8.4%. In addition, 413,000 FTKs are operated. Revenues decline 1.7% to \$169.09 million, expenses drop 8.66% to \$193.76 million, and the operating loss improves to minus \$24.67 million. The net loss is cut by \$10 million to \$58.55 million.

Boeing trijet service is inaugurated on February 14, 1992 from Boston and New York (JFK) to Barbados via Miami. Also in the first quarter, Donald Trump enters into a management agreement with **USAir**. In exchange for \$16.2 million, the carrier, renamed Shuttle, Inc., is turned over to a consortium of bankers and the major is allowed to takeover the operation, relabeled **USAir Shuttle**, on April 12. The arrangement also provides the Pittsburgh-based airline with the option to purchase the carrier outright in 1995. The offer will be extended until the end of 1997.

TRURO FLYING CLUB, INC.: P.O. Box 242, Spitfire Rd., Debert, Nova Scotia, B0M 1G0, Canada; Phone (902) 662-2228; Fax (902) 662-2669; Year Founded 1972. Truro is established at Debert, Nova Scotia, in 1972 to provide passenger charters and flight training. Operations continue without fanfare for the next quarter century.

S. Fairchild is general manager in 1997 and oversees a workforce of 6 and a fleet of 2 each Cessna 152s and C-172s. Revenues total C\$100,000. Flights continue in 1998-1999.

TRYGG-FLYG, A.B.: Stockholm-Skavsta Airport, Nykoping, S-61192, Sweden; Phone 46 (155) 267725; Fax 46 (155) 267772; <http://www.trygg-flyg.se>; Year Founded 1997. Erik Trygg forms this nonscheduled carrier at Nykoping in the spring of 1997 to provide nightly airmail service on behalf of the Swedish Post Office. Revenue flights commence in July with a fleet of 1 CASA 212-100 Aviocar and 2 212-200s. Flights continue during the remainder of the decade. During these years, ad hoc cargo charter and passenger air taxi flights are also provided, along with skydiving flights.

TSA (TRANSCONTINENTAL, S.A.): Argentina (1956-1962). Encouraged by **California Eastern Airlines** President Jorge Carnicero, a group of Argentine investors form Transcontinental at Buenos Aires on September 5, 1956. Ownership is 75% Argentine and 25% American, with Carnicero receiving his quarter interest in exchange for a promise to lease the carrier aircraft and maintain them at reasonable rates. During the remainder of the year, Carnicero busily provides a fleet of 4 Curtiss C-46s and 3 Lockheed L-1049H Super Constellations.

Scheduled services are inaugurated in early 1957 over domestic routes from the capital city. Destinations include Mendoza, Cordoba, Tucuman, Salta, Mar del Plata. International flights are also undertaken across the Rio de la Plata to Montevideo, Uruguay.

All three Super H Constellations are subleased on a staggered schedule to the Hughes Tool Company at the beginning of 1958 for the use of **Trans World Airlines (TWA)**. Two Bristol Britannia 305s are ordered from Great Britain in August and in September the "Connies" inaugurate flights to New York via São Paulo, Rio de Janeiro, and Caracas.

The resort city of Bariloche joins the route network in February 1959. Two L-1049Hs are sold to **Slick Airways** in the U.S. during the year. The Britannias are received in early 1960 and in March are placed on the New York route. Frequencies on all services are now increased. Flights are started to Asuncion, Paraguay, and Miami in October.

Although greatly overexpanded, TSA initiates a regional service to Asuncion in early 1961. In January, the L-1049Hs chartered to **Trans World Airlines (TWA)** are returned, allowing two to pass to **Slick Airways**. The financial picture continues to deteriorate; at one point, a Bristol turboprop is impounded at New York until \$83,000 in fees and fuel costs can be paid. **Sabena Belgian World Airlines, S.A.** attempts to bail out the situation in late spring by purchasing a large share, but arrangements fall through.

The fiscal situation is compounded by a major accident. A C-46A with 5 crew and 30 passengers crashes while on final approach to Buenos Aires on June 30 (24 dead).

The company staggers on for several months, but ceases operations on November 8. Late in the year, negotiations are undertaken with **Austral Airlines (Austral Lineas Aereas, S.A.)** and **Aerolineas Argentinas, S.A.** The former agrees to take over the domestic routes while the latter takes on the international. Before Christmas, Austral takes over the domestic services, employing TSA aircraft.

Transcontinental officially declares bankruptcy in September 1962.

TSELINOGRAD UNITED AIR DETACHMENT: Tselinograd-26 Airport, Akmolinsk Region, 473026, Kazakhstan; Phone 7 (31722) 25 733; Fax 7 (31722) 27 800; Year Founded 1996. TUAD is established in 1996 to provide domestic all-cargo charters. Mikhail R. Peshkov is director general and he begins revenue flights with several Antonov An-24s and An-2s.

TSENTR AVIA: Bykovo Airport, Moscow, Central Region, 140150, Russia; Phone 7 (095) 558-4181; Code BYO; Year Founded 2000. **Bykovo Aviation Enterprise (Bykovskoe A.P)** is renamed on March 5, 2000. Shareholding remains divided between the Bykovsky Aircraft Repair Plant (29.40%), Bykovo Airport (19.95%), MARIK Investment Company (19.95%), and Resourcetrustbank (10.75%). The fleet includes 25 Yakovlev Yak-42Ds, 3 Yak-40s, and 1 Antonov An-24. Orders are outstanding for 2 Tupolev Tu-204s.

Flights continue to be offered from Magnitogorsk, Moscow's Domodedovo Airport, and from Bykovo Airport, 30 mi. SW of Moscow. From Magnitogorsk, Tsentra offers scheduled return flights to Yerevan, Mineral Waters, Anapa, and Sochi. The airline operates from the Bykovo Airport to Anapa, Gelendzhik, Volgograd, Magnitogorsk, and Stravropol. From Domodedovo Airport, it flies to Hanover and Stuttgart, Germany. The carrier also operates charter services during the summer from Magnitogorsk to Mineral Waters and Sochi.

At the beginning of October, weekly Yak-42D roundtrips are started from Bykovo to Rostov-on-Don. On October 29, new flights are launched from Bykovo to Ufa.

Late in the year, the two Tu-204s arrive and enter service. Enplanements for the company's three quarters of existence total 156,484. Costs surrounding the airline makeover, rising fuel prices, and the necessity of aircraft modification to meet Eurocontrol and ICAO standards cause a 29.3-million ruble (\$1-million) loss.

TSITOTRANS AIR CONCERN: 3/227 Oktiabir Square, Yekaterinburg, 620031, Russia; Phone 7 (3432) 511 414; Fax 7 (3432) 511 233; Year Founded 1996. TAC is established in 1996 to offer domestic and international passenger charters. Andrei Kuznetsov is director general and he begins revenue flights with a single Tupolev Tu-154M.

Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

TTA (EMPRESA NACIONAL DE TRANSPORTE E TRABALHO AEREO, S.A.): P.O. Box 2054, Maputo, Mozambique; Phone 258 (1) 465 292; Fax 258 (1) 465 484; Code TTA; Year Founded 1980. TTA is the result of a 1980 reorganization and renaming of the nation's local service carrier **Comaq, S.A.** Scheduled passenger and cargo feeder flights and charters are undertaken throughout the nation along with medical evacuation, aerial surveying, and agricultural services. Principal bases include Maputo, Beira, Quelimane, and Nampula, from which flights are undertaken to 23 domestic villages and airstrips.

The fleet by 1984 includes 4 Pilatus-Britten-Norman PBN-2 Islanders, 8 BN-2 Islanders, 1 British Aerospace BAe-125, 12 Piper PA-23 Aztecs, 6 Aero Commander 500s, and 5 Bell 206B JetRangers. Services are maintained for the next seven years largely without change.

In 1988, General Manager Jeronimo Albino Parruque's 400-employee carrier extends service to Zimbabwe and South Africa. In 1991, the fleet comprises 8 PBN Islanders, 1 Piper PA-23, and 2 Cessna 206s.

Operations continue apace during 1992–2000 and new General Manager Estevao Alberto Jr.'s aircraft mix includes 5 Islanders, 2 C-206s, 1 Cessna 402, and 3 PBN-2T Turbo-Islanders.

In November of the latter year, a Fokker 50 joins the fleet. In early December, the carrier wins government authority to begin operating regularly scheduled domestic flights over major trunk routes in competition with **LAM (Linhas Aereas de Mocambique, S.A.)**. It is anticipated that larger equipment will necessarily be ordered shortly.

TTAC (TRINIDAD AND TOBAGO AIRWAYS CORPORATION, LTD.). See **TTAS (TRINIDAD AND TOBAGO AIR SERVICES, LTD.)**

TTAS (TRINIDAD AND TOBAGO AIR SERVICES, LTD.): Trinidad and Tobago (1974–1981). TTAS is established by the government of Trinidad and Tobago at Port of Spain on June 12, 1974 to take over the Port of Spain to Tobago service suspended upon the failure of **Caribbean United Airlines, Ltd.** Employing a pair of Douglas DC-6Bs, TTAS undertakes air bridge flights to Tobago, as well as routes to Grenada, Martinique, and St. Lucia.

The Douglas transports are replaced in 1977–1979 by 6 British Aerospace BAe (HS) 748s. The company is taken over and merged into **British West Indies Airways, Ltd.** (2) in 1981.

TUBEL AIR, S.A.: Tunisia (1993–1994). Established during the summer of 1993 as a joint-venture Tunisian-Belgian all-cargo operation, Tubel acquires an Ilyushin Il-76MDK under charter from **Aeroflot Russian International Airlines (ARIA)**. Once the giant freighter arrives from Moscow, it inaugurates the company's services in October, flying back and forth between Monastir and Ostend every weekday.

Flights continue apace until July 1994 when the Ilyushin returns to Russia for an overhaul. Although arrangements are supposedly made to acquire a second Il-76 from ARIA, it never arrives and the carrier goes out of business before its first birthday.

TULA AIR ENTERPRISE (TULA AVIA PREDPRIATIE): Tula Aeroport, Tula, Central Regions Zone, 300038, Russia; Phone 7 (0872) 774 406; Code TULA; Year Founded 1993. Established at Tula Airport in 1993, this new domestic carrier elects Vladimir S. Aleshin as director general. A workforce of 436 is recruited (most of which is assigned to the airport) and revenue operations begin with an all-Antonov fleet of An-2s, An-24s, and An-26s.

Flights continue in 1994–1997, during which year the fleet includes 5 An-24s and 2 An-26s. Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

TULIP AIR, B.V.: The Netherlands (1988–1998). Tulip Air is set up at Rotterdam in 1988 to offer nonscheduled urgent-cargo flights and executive and small group passenger charters. Revenue flights commence with a mixed fleet that grows to include 7 Piper PA-31-350 Navajo Chieftains, 2 Cessna 172s, and 1 Beech Super King Air 200.

A joint venture document is signed with Basel-based **Farnair Air Transport, A.G. (FAT)** in 1995. Two Fokker F.27-500Fs are acquired via Farnair in 1996 and are employed to enhance the carrier's cargo services. Tulip's Fokkers operate on behalf of **United Parcel Service (UPS)**, **TNT Express Worldwide**, and **Federal Express**.

FAT, which is owned by Suisse Atlantique, is significantly expanded in 1997, becoming the core subsidiary of a new holding group, Farnair Europe Aviation Group. Tulip also becomes a subsidiary and at this point is split into two divisions. **Tulip Air Taxi, B.V.** continues to provide passenger charters, while **Tulip Air Charter, C.V.** operates freight operations. The Fokker fleet is transferred to the latter, while **Tulip Air Taxi, B.V.** receives 5 Piper PA-31-350 Navajo Chieftains.

TULIP AIR CHARTER, C.V.: The Netherlands (1997–2000). Basel-based **Farnair Air Transport, A.G. (FAT)**, which is owned by Suisse Atlantique, is significantly expanded in 1997, becoming the core subsidiary of a new holding group, Farnair Europe Aviation Group. **Tulip Air, B.V.**, which has been a FAT joint venture partner for a year, becomes a subsidiary and at this point is split into two divisions. **Tulip Air Taxi, B.V.** provides passenger charters, while **Tulip Air Charter, C.V.** flies freight operations. Both subsidiaries continue to be based at Rotterdam. Tulip Air Charter receives Tulip Air's two Fokker F.27-500Fs, while **Tulip Air Taxi, B.V.** receives five Piper PA-31-350 Navajo Chieftains. TAC's Fokkers continue to operate on behalf of **United Parcel Service (UPS)**, **TNT Express Worldwide**, and **Federal Express**.

Three Airbus Industrie A300B4-103Fs, purchased by FAT the previous year, are acquired in 1998, and are placed into service delivering packages around Europe on behalf of **DHL Worldwide Express**. In 1999, a third F.27-500F joins the fleet. TAC moves into new Rotterdam premises in April 2000. In May, **Tulip Air Taxi, B.V.** and its maintenance division are sold. Tulip Air Charter is renamed **Farnair Netherlands, B.V.** in August.

TULIP AIR TAXI, B.V.: Postbus 12110, Luchthaven, Rotterdam, 3004, The Netherlands; Phone 31 (1) 043 78100; Fax 31 (1) 043 72164; Code TLP; Year Founded 1997. Basel-based **Farnair Air Transport, A.G.**, which is owned by Suisse Atlantique, is significantly expanded in 1997, becoming the core subsidiary of a new holding group, Farnair Europe Aviation Group. **Tulip Air, B.V.**, which has been a FAT joint venture partner for a year, becomes a subsidiary and at this point is split into two divisions. Tulip Air Taxi, B.V. continues to provide passenger charters, while **Tulip Air Charter, C.V.** flies freight operations. Tulip Air's two Fokker F.27-500Fs are transferred to the latter, while Tulip Air Taxi, B.V. receives five Piper PA-31-350 Navajo Chieftains.

Unscheduled operations continue apace under the Farnair banner until May 2000, when Tulip Air Taxi and its maintenance division are sold.

TULIP CITY AIR SERVICE: 1581 South Washington Ave., Holland, Michigan 49423, United States; Phone (616) 392-7831; Fax (616) 392-1841; Year Founded 1967. Originally established as the FBO at Tulip City Airport in 1967, this concern also undertakes executive and small group passenger charters throughout the U.S. and Canada, many in connection with the city's famous tulip bulb festival.

In 2000, the company employs 9 pilots and flies 2 Cessna 401s and 1 each C-310, Beech King Air 100, and King Air 90.

TULPAR AVIATION: 2 Academician Pavlov Street, Kazan, Tatarstan, 420036, Russia; Phone 7 (8432) 35 64 34; Fax 7 (8432) 35 64 44; Code TUL; Year Founded 1991. TA is set up at Kazan in the fall of 1991 to provide domestic and international passenger and cargo charters. Vasily Vazhenin is general director and he begins revenue service in November.

Flights continue during the remainder of the decade. During these years, the workforce grows to 30 and the fleet comes to include 5 Yakovlev Yak-40s and 1 each Yak-42 and Antonov An-74. The carrier also enters into a marketing alliance with **Volga-Dnepr Airlines**.

TULSAIR BEECHCRAFT: 3027 N. Sheridan, Tulsa, Oklahoma 74115, United States; Phone (918) 835-7651; Fax (918) 832-0651; Year Founded 1945. Originally established at an FBO at Tulsa in 1945, this concern, over the next 50-plus years, also becomes a Beechcraft sales outlet and offers executive and small group passenger charters.

Tom Clark is president in 2000 and he employs 9 pilots to fly a mixed Beech and Learjet fleet to worldwide destinations. His operational fleet includes 1 each Learjet 55 Longhorn and Learjet 25, 2 Beech 58 Barons, 1 Super King Air 200, and 1 Beech 76 Duchess.

TUNDRA COPTERS: 3868 University Ave, South, Fairbanks International Airport, Fairbanks, Alaska 99709, United States; Phone 907 474-0429; Fax 907 474-8948; Year Founded 1961. Tundra is established at Fairbanks in 1961 to offer helicopter charters and support flights throughout the region. By 2000, the company employs 2 full-time and 10 part-time pilots to fly a fleet that comprises 2 each Bell 206L LongRangers and Hughes 500Ds, plus 4 Bell 206B JetRangers.

TUNINTER, S.A.: BP 1080, Bd 7 November 1987, Imm Naghreb, Tour B, Tunis-Carthage, 2035, Tunisia; Phone 216 (1) 701 717; Fax 216 (1) 712 193; Code UG; Year Founded 1991. Tuninter, S.A. is formed at Tunis on July 21, 1991 to take over the domestic services of the flag carrier **Tunis Air (Societe Tunisienne de l'Air, S.A.)**. Capitalized at 12 million dinars (\$11 million), shareholding is divided between Tunis Air, S.A. (40%), private interests (51%), and government-owned banks (9%).

Tunis Air (Societe Tunisienne de l'Air, S.A.) Chairman/Director General Abdelhamid Fehri is named chairman of Tuninter's 12-person board and Vice President-Commercial Raouf Essaied is seconded to become director general. In the fall, a \$42-million order is placed for two Avions de Transport Regional ATR72-202s (*Habib Bourguiba* and *Tahar Haddad*) and an ATR42-320 (*Alyssa*), the names and color schemes for which are personally chosen by the Tunisia President Zine Ben Ali.

The new regional launches revenue services in March 1992 linking the capital with the tourist destinations of Monastir, Djerba, Sfax, Tozeur, and Tabarka.

International flights are also undertaken to Malta, Sardinia, and the Sicilian city of Palermo. During the remaining 3 quarters of the year, a total of 248,000 passengers are transported.

Airline employment in 1993 stands at 100 as one ATR72-202 is withdrawn. During the summer, scheduled roundtrips are inaugurated to the Algerian cities of Annaba and Constantine. Although traffic figures are not provided, it is known that with their country suffering under a UN boycott, more Libyans are flying the airline after arriving at Djerba by surface transport. Services continue apace in 1994 and charter flights are introduced to Naples, Sardinia, and Palermo, Sicily. To accommodate this growth, the out-of-service ATR72-202 is reintroduced.

Operations continue apace in 1995-1996. During October of the latter year, a Douglas DC-9-32 is chartered from **JAT Yugoslav Airlines**.

In 1997, Querdain ab Derrazek is chairman/director general. During the busy summer season, a Boeing 737-2H3A is leased from **Tunis Air (Societe Tunisienne de l'Air, S.A.)**.

Enplanements for the year reach 431,376.

Service is maintained in 1998-1999. Customer bookings during the former year accelerate 5.4% to 456,000. In April of the latter year, the UN lifts its sanctions against Libya.

The removal of this embargo will lead to a collapse of the Libyan business previously enjoyed by Tuninter, with an overall decline of 20% in market activity recorded by end of the year.

The company unveils a new corporate image at the beginning of 2000. On January 7, it acquires a B-737-3Y0 under charter from

GECAS; it is delivered in a new blue and white color scheme. It joins the company's older B-737-2H6A.

Now faced with huge fiscal difficulty, the airline seeks financial backing from private sources. When outside funding cannot be found, the government steps in during August to assist the troubled airline by forgiving its debt, via capital reduction and a plan for recapitalization.

TUNIS AIR (SOCIETE TUNISIENNE DE L'AIR, S.A.): Blvd. du 7 November, Tunis-Carthage, 2035, Tunisia; Phone 216 (1) 700 100; Fax 216 (1) 700 102; http://www.tunisair.com.tn; Code TU; Year Founded 1948. The Tunisian government and **Air France**, in a joint ownership arrangement, form this carrier late in 1948. Shareholding is split between the government (35%), **Air France** (35%), French shareholders (16%), and Tunisian investors (14%). Longtime **Air France** employee Rene Lefebvre, known for his pioneering prewar activities in Africa and in long-distance flying, is appointed managing director.

The French flag carrier transfers over a start-up fleet of four Douglas DC-3s along with a number of short-haul routes. Flights are started from Tunis to a number of these markets during the inaugural year and the two following, including Ajaccio, Algiers, Bastia, Bone, Nice, Rome, and Marseilles, the latter a freight route. The company also begins booking Muslim Hadj charters to Mecca.

During the first quarter of 1951, new routes are opened to Casablanca, Tripoli, and Ghudamis. A Tunis to Sabhah via Tripoli service is started in May, but is rerouted via Sfax and Djerba in September. The Ghudamis route is withdrawn in 1952 while that to Casablanca is turned over to **Air France**.

The route from Tunis across the Mediterranean to Marseilles is extended north to Paris just before Christmas in 1953. A DC-4, leased from **Air France**, is placed on the Paris service in August 1954.

In 1955-1956, another DC-4 is chartered from **Air France** and two DC-3s are retired. In 1957, the ownership arrangement is revised with the government acquiring 51% control; **Air France** retains 15% interest and other private parties take 34% of the stock. Routes and frequencies are improved during 1958-1960 and preparations are made for the introduction of jet service.

The first jetliner, a Sud-Est SE-210 Caravelle III, is delivered on August 31, 1961 and is placed on the Paris route in the fall. Meanwhile, a Lockheed L-1049G Super Constellation is leased from **Air France** and is employed to start a route to Frankfurt in October. During the year, the company turns over a cabotage route from Tunis to Sabhah to **Libavia, S.A.**, along with a DC-3.

With ridership low, the company closes down its new Frankfurt route in March 1962 and returns the Super Constellation. A second Caravelle III is requested in mid-1963.

Capitalization is increased by \$350,000 in January 1964 and the second Caravelle arrives on March 20 and after workup, enters service during the summer. During July, and in cooperation with **Swissair, A.G.**, holiday flights begin to Switzerland.

The workforce stands at 417 in 1965 and the fleet includes 2 DC-4s, 2 DC-3s, and 2 Caravelle IIIs.

In April, in partnership with **Lufthansa, A.G.**, the company resumes service to Frankfurt, employing Caravelle IIIs on weekly roundtrips. In cooperation with **Air France**, weekly DC-4 cargo services are operated between Tunis and Paris. Enplanements total 138,443.

During 1966-1971, the two DC-4s and a DC-3 are retired as two additional Caravelles and a Nord 262 join the fleet. Routes are extended or frequencies increased to Paris, Marseilles, Rome, Algiers, Athens, Kharthoum, Damascus, Tripoli, and Casablanca.

A third Caravelle is purchased in 1966 and service is started to Brussels and Amsterdam. A route from Tunis to Zurich, via Geneva, begins in 1967. A fourth Caravelle arrives in 1968 as frequencies are launched to Casablanca and Lyon. A Nord 262 is acquired in 1969 and Tunisair begins flying to Nice, Milan, Munich, and Cairo. Also during these years, the two DC-4s and a DC-3 are retired.

Service from Tunis to Palermo begins in 1970 and in 1971 orders are placed for four Boeing 727s. The first B-727-2H3A is delivered at the beginning of 1972; christened *Carthage*, it enters revenue service on March 21 on new routes now opened to Luxembourg and Jeddah. Orderly retirement of the DC-3s continues and that of the Caravelles begins.

Tunis air inaugurates service to London (LHR) in April 1973. The second B-727-2H3A is received in mid-June; christened *Djerba*, it begins revenue flights on June 30. The third trijet, the *Monastir*, enters revenue service on December 19 and the Nord 262 is retired at the end of the year, along with the last DC-3. Enplanements during these 12 months total 129,000.

Orders are placed for three more Boeings early in 1974. The fourth B-727-2H3A of the original order arrives in early November; christened *Tozeur-Nefta*, it launches service on November 19. Cargo traffic grows this year while passenger boardings skyrocket 83% to 756,000, thanks largely to the introduction of the Boeing jetliners.

At the end of March 1975, new service is started from Tunis to Toulouse and to Damascus and Abu Dhabi. Also, new routes are launched from Djerba to Luxembourg and Brussels and from Monastir to London. In 1976, the B-727-2H3As *Kairouan* and *Sidi Bou Said* enter service on three new routes: Tunis-Vienna-Munich, Tunis-Dusseldorf, and Tunis-Kuwait via Cairo. The remaining Caravelles are now sold as additional Boeings are ordered.

Orders are placed in 1977 for two B-737-2H3As. The B-727-2H3A *Hannibal* enters service on March 13. New service from Monastir to Lyon and from Djerba to Frankfurt begins in early April. At the beginning of June, new flights commence from Monastir to Nice. The B-727-2H3As *Jugurtha*, and *Ibn Khaldoun* both enter service on the same day, June 18. Passenger boardings during these 12 months pass the million-mark for the first time (1,100,000), but a net loss of \$62,905 is suffered.

President Abdel Aziz Zennadi's workforce in 1978 is 3,144. Service is inaugurated in April from Tunis to Madrid and from Monastir to Toulouse and Bordeaux. New flights begin in December from Tozeur and Monastir to Paris.

Freight traffic surges 24.3% while passenger boardings jump 12.4% to 1,266,862. Operating income jumps 22.1% to \$116.7 million and allows net gain of \$6.8 million.

A B-727-2H3A, with 75 aboard en route from Tunis to Djerba Island on January 12, 1979, is commandeered by three hijackers armed with starter pistols, who demand the release of a former Tunisian foreign minister and a union leader, both of whom have been jailed. To show their good faith, the pirates release the passengers unharmed when the aircraft lands at Tripoli. Later, eight crew members are released, after two prominent Tunisian opposition political figures, detained in Tunis, are freed; the skyjackers give up the next day.

In April, domestic service is initiated between Tunis and Tozeur. During the year, the company begins to do all of its own B-727 overhaul work, as well as "D" checks on its B-727/737s. Two B-737-2H3As are delivered and are named *Salamambo* and *Bulla Regia*. They enter service on October 29 and November 17, respectively.

Cargo traffic is up 8.9% while bookings accelerate 18.4% to 1,500,515.

The workforce remains level in 1980 at 3,533. New service is inaugurated on April 1 from Tunis to Copenhagen and in November, from Sfax to Paris. Passenger traffic dips 1.9%, down to 1.47 million, but freight grows 6.9% to 12.21 million FTKs.

New service is started in April 1981 from Tunis to Dubai and Barcelona. The third B-737-2H3As *Zarzis* enters service on April 30 and new roundtrips begin from Tunis to Salzburg and Graz in May. The B-737-2H3A *Sousse* joins the fleet on July 3.

Enplanements this year rebound to 1,596,000, including 7,000 pilgrims flown on the Hadj to Mecca. Although charter flights thus increased, there is a \$5-million loss.

The workforce grows to 4,008 in 1982 and one B-727-2H3 is sent to **Sudan Airways, Ltd.** on long-term lease. An order is placed for an Airbus Industrie A300B4-203 during the first quarter and a purpose-

designed \$25-million technical facility is opened at Tunis-Carthage International Airport.

New routes are started from Tunis to Dakar in March and from Tunis to Athens and Amman and to Graz and Linz on June 1. The new A300B4 arrives on May 22; christened *Amilcar*, it enters service on June 6. Roundtrips from Sfax to Tripoli commence in November.

Cargo climbs 30.7% to 18.18 million FTKs and passenger boardings accelerate 7.8% to 1,721,000, of whom one half are tourists. Another \$5-million loss is suffered.

Two B-727-2H3As are sold in 1983. Service to Amman ends in April and is suspended to Athens in June. The new A300B4-203 arrives in the fall. Still, the year's bookings advance to 1,747,100.

In 1984, new lines are stretched from Djerba to Strasborg, Copenhagen, and Marseilles and from Monastir to London (LHR). Customer bookings slide to 1.247 million. New routes are started in 1985 from Monastir to Geneva, to Zurich via Geneva, and from Tunis to Istanbul via Athens, which is reopened for the purpose. Flights from Tunis to Tripoli end on September 26. Passenger traffic totals 1.246 million passengers flown.

In 1986, **Air France** shareholding is reduced to just 5.58%. The Palermo route is closed at the end of February. Fears of terrorism abound and as a result enplanements continue to fall, dropping to 958,346.

The 4,711-employee carrier enjoys a healthy 1987. Flights to Kuwait end in April, but new service is launched on July 3 from Monastir to Luxembourg and the Tripoli route is restarted. Passenger boardings jump 15% to 1,127,465. Income exceeds expenses and, without the requirement to pay income taxes, there are profits: \$45.2 million (operating) and \$54.4 million (net).

In February 1988, Mohamed Ali Souissi succeeds Mohamed Hedi Attia as chairman/CEO. Orders are now placed for eight A320s and four B-737-500s.

Flights to Casablanca and Dakar end in January, but new service is inaugurated in April from Monastir to Amsterdam and the routes to Amman and Kuwait are reopened on May 11.

Customer bookings decline 0.5% to 1,121,730 and cargo is off by 11.1% to 15.26 million FTKs. Revenues increase 17.5% to \$290 million and allow an operating profit of \$74.4 million and record net gain of \$81.6 million.

The 4,711-employee state airline enjoys another successful year in 1989. The fleet now includes 8 B-727-2H3As, 4 B-737-2H3As, and 1 A300B4-203. Orders are outstanding for three (later eight) A320-211s and two (later four) B-737-5H3s. A sudden surge in tourism requires the lease of two B-737-3B3s from **UTA French Airlines, S.A.**

Although service to Khartoum is suspended in April, new joint flights with **Air France** from Tunis to Lille and Mulhouse begin and the route from Tunis to Palermo is reopened. Flights to Amman and Dubai end in September.

Enplanements during these 12 months are up 9% to 1,139,775 and freight rises 11.2% to 15.42 million FTKs. The operating profit falls to \$71 million.

Company employment grows by 5.4% in 1990 to 4,471. In February, the airline contracts with a group of French, German, British, and Tunisian banks for a \$102-million export credit for the purchase of the three, later five, Airbus aircraft. The British institutions provide 20% of the necessary capital, the Germans give 31%, and the French-Tunisian group, led by the latter's Credit Commercial, comes forward with 49% interest.

With the opening of the summer schedule at the end of March, new lines are stretched from Tunis to Hamburg and Munich, from Monastir to Rome, and from Djerba to Brussels.

The first two A320-211s, named *Farhat Hached* and *7 Novembre*, join the fleet in October, triggering a change in fleet livery (highlighted by a stately gazelle tail motif). One of the first aircraft painted in the new color scheme is a B-727-2H3A. The new Airbus aircraft begin service to France on October 22 and November 9, respectively.

Passenger boardings move along, by 8.2%, to 1,437,961 while freight gains by 9.1% to 14.53 million FTKs.

The payroll is increased a slight 0.6% in **1991** and the fleet now includes 1 A300B4, 7 B-727-2H3As, 1 B-727-2H3, 3 B-737-2H3As, and 1 B-737-2H3C. Orders are outstanding for A320-211s and B-737-5H3s.

Marhaba class service is introduced in January and new service from Tunis to Berlin commences in April. The third A320-211, *Khereddinez*, enters service on July 6. Customer bookings total 1,415,335 this year, but cargo climbs slightly to 15.56 million FTKs. Income exceeds expenses and there are profits: \$25.92 million (operating) and \$20.34 million (net).

The employee population climbs a full 13% in **1992** to 5,787 and another B-727-2H3A is retired on February 12. The first B-737-5H3, named *Sfax*, enters service on April 14; the next day, following declaration of the UN embargo, revenue flights to Tripoli cease.

Also in April, domestic routes are transferred to newly formed **Tuninter, S.A.** The Tunis to Palermo route is restructured into a joint service with Tuninter. Abdelhamid Fehri becomes chairman/CEO in August, and invites all of his 15 predecessors to dinner. At the end of October, routes are extended from Djerba to Vienna and Luxembourg.

The fourth A320-211, *Tabarka*, enters service on December 4. Topped by the airline's flying gazelle logo, a new office building is completed and occupied at Tunis Airport late in the year.

Passenger boardings accelerate 28.1% to 2,384,407 while freight rises 38.2% to 318.67 million FTKs. Revenues increase 34.8% to \$406.46 million while expenses ascend 34.3% to \$331.07 million. As a result, there is an operating surplus of \$75.39 million and net gain of \$68.95 million, making Tunis Air the nation's number one company.

Just as the workforce grows in 1992, so does it decline, by 22.2%, in **1993**, to 4,500. Capitalization stands at 91-million dinars (\$18 million), divided between the government (85%), government agencies (9.5%), and **Air France** (6.5%).

As the result of the UN's boycott of neighboring Libya, citizens of that country seeking international air transport must take surface transport to the Tunisian city of Djerba and board a Tunis Air aircraft.

At the end of March, routes are opened from Tunis to Lisbon, to Budapest, to Prague, and to Nouakchott in Mauritania, as well as from Tozeur to Lyon. Another B-737-5H3s, the *Hammamet*, enters service on May 24 and is joined by the fifth A320-211, the *Jerba*.

In association with the German tour operator Neckermann, construction of a joint \$22-million hotel venture is started on the vacation island of Djerba. The resort will be served on a charter basis by **LTU International Airlines (Lufttransport Unternelhman, GmbH)**.

Traffic figures are revealed through November and show passenger boardings up 5.3% to 2,291,059. Cargo declines a slight 0.4% to 16.38 million FTKs.

The employee population increases by a third (33.3%) in **1994** to 6,000. In need of additional capacity, the carrier leases a B-737-291A, B-737-2X6AC, and Lockheed L-1011-100 TriStar I from **Air Atlanta Icelandic, H.F.** The B-737-5H3, the *Mahinda*, is received, and enters service on March 13.

At the end of March, new routes are opened from Monastir to Casablanca, to Istanbul, and to Vienna and from Tunis to Warsaw. Two more A320-211s, the *Abou el Kacem* and *Chebby* enter service between April 1 and April 7.

Traffic figures, reported through July, show an increase of 10.6%, to 1,481,697 passengers flown. Cargo jumps 6.7% to 10.85 million FTKs. Meanwhile, private institutions have by now acquired a collective 60% shareholding in **Tuninter, S.A.**

Revenues for the full year are \$485.76 million, while expenses are but \$380.28 million. As a result, the operating income is \$105.47 million and net gain totals \$18.85 million.

The staff in **1995** remains at 6,000. In January, \$3 million is spent to introduce Espace Privilege business-class service on board four A320-211s; systemwide, a frequent flyer program, Fidelys, is simultaneously unveiled. The fourth B-737-5H3 enters service on March 13th, followed by the A320-211 *Ali Belhaouane* on March 26.

This year, traffic figures are reported through October, but still they are down. Enplanements fall by 1.4% to 1,118,675 and freight is off 9.6% to 10.16 million FTKs.

The workforce grows to 7,134 in **1996** and the fleet now includes 8 Airbus A320-211s, 6 B-727-2H3As, 4 B-737-5H3s, 3 B-737-2H3As, and 1 each B-737-2H3CA, B-727-2H3, and A300B4-203. Service to Amman is restored in January.

Joint insurance purchasing begins with **Air Algerie, S.A.** and in September, the Nouvel Inventaire computerized reservations system (CRS) is turned on.

Enplanements for the whole year reach 1,519,614 and there are profits: \$9 million (operating) and \$26 million (net).

Airline employment inches up 0.5% in **1997** to 7,168 as former Tourism Minister Ahmed Smaoui becomes chairman.

In January, a joint weekly all-cargo service is inaugurated with **Alitalia, S.p.A.** over a route from Tunis to Rome. At the end of March, new service is inaugurated from Tabarka to Brussels, Milan, Paris (CDG), from Tozeur to Milan, and from Tunis to Bratislava and Moscow.

The company's catering division prepares a record 16,000 meals on August 28. A special pro rata agreement takes effect with **Air France** in October. Under its terms, the two begin dual-designator flights to French provincial cities, with code-sharing to Paris put off until 1998. Cooperation is also undertaken with the French giant in the areas of frequent flyer program linkage, purchasing, information systems, cargo, and maintenance.

A \$600-million order is placed with Airbus Industrie in September for four A320-211s and three A319-114s; the first of the latter will be delivered next summer. On October 31, a firm \$300-million order is placed with Boeing for four Next Generation B-737-6H3s; options are taken on three others, with deliveries scheduled to start in the spring of 1999. Retirement of the last B-727-2H3As progresses.

Passenger boardings accelerate 18.1% to 3,227,899 while cargo climbs 10.4% to 22.6 million FTKs. Operating revenue swells 10.9% to \$520.6 million while expenses are up an equal 10.9%, to \$509.5 million. The operating profit improves to \$11.09 million and a net gain of \$26.9 million is reported.

When the spring schedule begins in late March **1998**, new services are inaugurated from Tunis to Beirut and Stockholm. To provide capacity for the new endeavors, a Douglas DC-10-30 is leased from **Skyjet, S.A.**

Although it has long enjoyed various official and semiofficial relationships with **Air France**, the Tunis-based state airline now concludes its first-ever code-sharing pact with the French flag carrier.

A government announcement in May promises that plans are being prepared to float initial or additional shareholding in 19 state-owned concerns, including the airline, and to sell off upwards of 50 other companies by the end of 1999.

Still in need of additional capacity, the carrier leases a DC-10-30 from **Malaysia Airlines, Ltd. (MAS)** on August 9.

The first A319-114 is received in late August and enters service on company domestic routes as well as on services to Europe and the Mideast. Tunisair is the first A319 operator in either Africa or the Middle East and takes delivery of its second unit at the end of September.

A French-language homepage is opened on the World Wide Web in early October. In November, an A320-211 is delivered wearing an enhanced and more-colorful version of its leaping gazelle tail logo.

Customer bookings through October climb 2.3% to 2.6 million, but freight traffic is down by 14.1% to 14.6 million FTKs.

The company workforce at the beginning of **1999** stands at 7,250, a slight 0.1% over the previous year. At the end of March, a wet-leased **Air Atlanta Icelandic, H.F.** B-747-128 enters service for the summer, flying tourists back and forth between Tunisia and Europe.

President/Director General Abdel Malek Larif travels to Seattle on May 29 to accept delivery of the carrier's first two Next Generation B-737-6H3s. The first, christened *Tozeur-Nefta*, returns to Tunis the next day and enters service on routes to Europe, Africa, and the Mideast.

The current three-city code-sharing agreement with **Air France** is expanded on August 16 to include all French and Tunisian cities. Four days later, the company accepts a new, unpainted BBJ (B-737-7H3) for use as an executive aircraft.

Enplanements for the year total 1.92 million and 7.37 million FTKs are operated. Airline employment at the beginning of 2000 stands at 7,259, a 0.1% increase over the previous 12 months. The Boeing fleet continues to include 4 B-727-2H3As, 4 B-737-5H3s, and 3 Next Generation B-737-6H3s.

On February 28, an A300B4-620 is leased from **Saudi Arabian Airlines**; it will be employed until TunisAir receives its A320-211 on March 30. The last three units of a six-ship B-737-6H3 order are delivered on April 21, May 8, and May 25, respectively.

The new Airbus is the last of 11 received since 1990. Service to Tripoli, Libya, is resumed on June 9.

The June 14 issue of the *A-Sahafa* newspaper reveals that between April 12, 1999 and January 14 of this year, Tunisair has transported 26,000 passengers on its return route from Tunis to Jeddah. An increased load was particularly noticeable during the period of Ramadan.

A code-sharing agreement is inked with **Royal Air Maroc** on August 7. Under its terms, RAM flies TunisAir passengers from Casablanca to New York (JFK) and points in Europe, while TunisAir is permitted to transport RAM customers throughout the Mideast and Eastern Europe. The two companies also link their frequent flyer programs. In addition, they will jointly fly the routes between Tunis and Casablanca, beginning in March.

A preliminary agreement is signed with **Delta Air Lines** on August 22 under which the two carriers will examine possibilities for increased cooperation, including the possibility of first-time flights by Delta to Tunisia, either as charters or later as scheduled service.

TUNISAVIA (SOCIETE DE TRANSPORTS, SERVICES ET TRAVAUX AERIENS, S.A.): Immeuble Saadi Spric, Tourd CD 2080, L'Ariana, Tunisia; Phone 216 (1) 717 600; Fax 216 (1) 718 100; Code TT; Year Founded 1974. Organized as a subsidiary of **Tunis Air, S.A.** on April 27, 1974, this charter carrier inaugurates revenue flights throughout Tunisia, particularly in support of the oil industry, on July 10.

A scheduled passenger service is started in July 1976 in association with **Air Malta, Ltd.**, linking Carthage Airport at Tunis with Malta. The fleet for the remainder of the decade comprises a single de Havilland Canada DHC-6-200 Twin Otter, a Beech B80 Queen Air, and an Aerospatiale AS-315B Lama helicopter.

During 1980, a Hawker Siddeley HS-748 is leased from **Air Senegal, S.A.** and is employed on the Tunis to Malta route. Frequencies are initiated from Sfax in 1981 to Tripoli and on to Marseilles.

Also during the early 1980s, services are maintained by President Slahheddine Ferchou's 100-employee carrier. Shareholding is now acquired by Tunisian National Bank, CTAMA Insurance Company, and France's **Heli-Union, S.A.**

Destinations visited for tourists, oil personnel, and other charters include Djerba, Gabes, Sfax, Tozeur, Tunis, Annaba, Algeria, and Valletta, Malta. The fleet grows by the addition of another Twin Otter, a Vickers Viscount 700, a Dassault Falcon 20, a Beech King Air 200, a Sikorsky S-76, and an Aerospatiale AS-330 Puma. Operations, destinations, and fleet change little during the remainder of the decade.

In 1990, President Larbi Hamoude's carrier has 122 employees and a fleet made up of 2 Twin Otters, 1 King Air 200, and 2 Aerospatiale AS-365N Dauphin helicopters. Destinations visited include Tunis, Sfax, El Borma, Monsatir, and Djerba.

Enplanements total 8,629 and revenues are \$5.21 million. Expenses are \$5.05 million and the profit is \$157,772.

Passenger boardings decline to 1,682 in 1991 and revenues fall to \$4.73 million. Still, a \$189,300 profit is generated. That figure climbs to \$348,000 in 1992 on revenues of \$6.2 million.

Airline employment stands at 100 in 1993-1999 as services continue without fanfare.

TUOLUMNE AIR SERVICE. See YOSEMITE AIRLINES

TUPOLEV-AEROTRANS AIR: 2221188 Tupolev Street, Zhukovski, Moscow, 140160, Russia; Phone 7 (95) 556-5236; Fax 7 (95) 556-5235; Code TUP; Year Founded 1994. TAA is set up at Moscow in the spring of 1994 to provide both scheduled and charter passenger and cargo services to domestic and international markets. Victor Kovalenko is director general and he begins revenue flights in June with a fleet that includes 2 Ilyushin Il-76Ms, 1 each Tu-154B, Tu-154M, and Tu-134A.

Operations continue in 1995-2000. During these years, the fleet is altered to include 2 Tu-134As and 1 each Tu-134B, Tu-154B, Tu-154M, Tu-204-100, and Ilyushin Il-76M.

TUR AVROPA (TUR EUROPEAN AIRWAYS, A.O.): Turkey (1988-1994). Tur Avropa is established at Istanbul in early 1988 to offer nonscheduled passenger and cargo charters and inclusive-tour flights to various European destinations. The enterprise is a joint venture between the Turkish trading group Kavala, one of the nation's largest businesses, and the Belgian carrier **Trans European Airways, S.A.** Omar F. Turkhan is appointed president, with Aydin Ertuzun as general manager. Employing a single chartered Boeing 727-76 first flown by **Trans Australia Airlines (Pty.), Ltd.**, Tur Avropa begins revenue services at the beginning of the European summer schedule on April 1. Flights are largely operated to Germany, with tourists and expatriate Turkish workers filling most of the Boeing's seats.

In 1989-1990, the fleet is enhanced by the addition of two B-727-230s purchased from **Deutsche Lufthansa, A.G.** Holiday passenger charters and worker flights continue to operate from the U.K., Belgium, France, Germany, and the Netherlands to Antalya, Ankara, Izmir, and other Turkish destinations. Scheduled services are also begun between the named Turkish cities.

The Iraqi invasion of Kuwait in August of the latter year and the Gulf War that follows in early 1991 cause a dramatic reduction in the number of tourists willing to fly down to Turkey from Northwest Europe and the U.K. That situation is not improved by Turkey's conflict with its minority Kurd population, which draws significant international media attention. The B-727-76 is replaced with a leased McDonnell Douglas MD-83.

Unable to acquire more MD-83s, Tur Avropa charts three German B-727-230s in early 1992. Unhappily, the charter market remains depressed and many planned tour flights must be cancelled.

Airline employment in 1993 stands at 270. The tourist downturn continues and the carrier's financial picture darkens. In an effort to cut costs, scheduled domestic service is terminated and the two owned B-727-230s are sold. The carrier now places all of its hope on a revival of its charter activities.

The tourist industry does not revive in time to save the carrier. Unable to maintain its fiscal viability, Tur Avropa suddenly ceases operations in early 1994 and is liquidated.

TURAN AIR: Azerbaijan (1994-2000). Turan Air is one of several small private airlines established in Azerbaijan following the demise of **Aeroflot Soviet Airlines**. Employing a mix of the usual Russian-made Antonov types, revenue flights are undertaken in 1994 linking the company's Baku base with Moscow and Guianja. Almost nothing is heard of this carrier in the West until the beginning of the new millennium.

In an effort to "clean up" its private sector in order to facilitate the nation's entry into the European Civil Aviation Conference, the state aviation holding entity, Azarbaijan Hava Yollary, through a process of strict airline operating rules enforcement, begins to weed out those smaller carriers that it believes unsafe.

Inspection reveals that Turan Air has ignored air operator regulations in many instances. For its entire lifespan, Turan has hired contract pilots from **Azerbaijan Airlines** and has had no flight crews of its own. In addition, it has no ground staff to schedule flights or to undertake maintenance. Such of these activities as it performs are also done on a contract

basis. Most seriously, the airline has taken it upon itself to extend airworthiness certificates and life limits on its aircraft, most of which are quite old.

In light of these deficiencies, the government, on October 29, 2000, suspends Turan's route authority. Without routes, the company will be forced to shut its doors.

TURKMENISTAN AIRLINES (TURKEMEN HAVA YOLLARI): Ashkhabad Airport, Ashkhabad, 744008, Turkmenistan; Phone 7 (363) 225-1087; Fax 7 (363) 229-0724; <http://www.rz.uni-frankfurt.de/~puersuen/twaakh.htm>; Code T5; Year Founded 1992. Based at Ashkhabad's airport in the eastern part of central Asia, the former **Aeroflot Soviet Airlines** Turkmenavia directorate becomes, in early 1992, the flag carrier of the newly independent CIS state of Turkmenistan. The company also acts as the country's Civil Aviation Department and assumes the old Aeroflot responsibility for general aviation, airports, and air traffic control.

While going around after a missed landing at Chardzhev on May 13, a Yak-40 with 4 crew and 36 passengers strikes a radio mast with its right wing, impacts the ground, and catches fire; although the plane is damaged beyond repair, there are no fatalities.

One of the few former Russian airline divisions not to start over with entirely Soviet-made flight equipment, Turkmenistan takes delivery of a single Boeing 737-341 in November and places it into scheduled operations in December.

Operations continue apace in 1993 with the short-haul Boeing also serving as the "Air Force One" of the government and employed, on occasion, to transport VIPs to conferences and so forth. A British Aerospace BAe 125-1000B is also employed for executive transport.

An order is placed for a Boeing 757-23A, which is delivered on December 1.

The Boeing arrives in its new homeland in January 1994. It replaces the B-737-341 on executive services, with the smaller aircraft joining the commercial fleet. Connecticut-based Ronnell Aviation arranges for Turkmenistan to acquire a pair of chartered B-737-332s purchased new by **Delta Air Lines**, but never operated. At the same time, the Atlanta major signs a number of joint venture contracts with the CIS airline in the areas of technical operations, planning, scheduling, and marketing.

Constructed by the Turkish concern Alarko, the new \$85-million Saparmurat Turkmenbasi Airport is opened at Ashkhabad on October 27. Some work remains to be completed on the new nation's largest building project.

In 1995, the company is reformed and incorporates three formerly independent carriers as its operating divisions: **Akhal Air Company**, based at the capital of Ashkhabad, **Khazar Air** at Krasnovodsk, and **Lebap Air Company** at Chardzou.

By early March, much of the new \$85-million airport at Ashkhabad is completed. It is anticipated that new flight control equipment will soon be installed and a second runway constructed.

Aleksi Bondarev is director general and he places an order for three more Boeing jetliners. Meanwhile, flights to previously served destinations are maintained with the old Soviet-era fleet of 7 Antonov An-24Bs, 4 An-24RVs, 7 Ilyushin Il-76TDs, 3 Tupolev Tu-154B-1s, 9 Tu-154B-2s, and 4 Yakovlev Yak-42s. Also flown is the B-757-23A, B-737-341, and 2 newly received B-737-332s.

In January 1996, Turkmenistan becomes the last central Asian airline to complete arrangements to place its schedule into a computerized reservations system. A contract is signed with AMADEUS toward this end. On April 1, one additional weekly frequency is added to Abu Dhabi and Karachi. Two B-757-22Ks are now delivered, one each on August 29 and 30 and enters service in the fall of the year.

An order for the 18-month lease of a Boeing 757-236 is filled in June 1997. On October 25, the Turkish construction firm Alarko completes work on a second, 3,800-mile runway at Ashkhabad's new airport. Other upgrades now added include a Turkmenistan Airlines headquarters building, an ATC center, and a fire-guard building.

In March 1998, orders are placed for additional Boeing jetliners under a new 25-year contract signed with the Seattle-based aircraft manufacturer. The long-term arrangement is fiscally guaranteed by the U.S. Export-Import Bank. Seven new international routes and three new flights into Russia are planned.

A code-sharing agreement is signed with **Air Moldova International, S.A.** at the beginning of 1999. In March, the two companies offer twice-weekly dual-designator Boeing 737-341 roundtrips between Ashkhabad and Chisinau. With the beginning of the summer schedule on March 29, weekly B-757-22K roundtrips are inaugurated between Ashkhabad and Bangkok.

Direct access into the AMADEUS reservations system is turned on in June. Scheduled B-757-22K return service to Frankfurt begins on July 31, followed by routes to Birmingham and London (STN).

Scheduled destinations visited at the beginning of 2000 include Abu Dhabi, Almaty, Ashkhabad, Bangkok, Birmingham, Delhi, Frankfurt, Istanbul, Karachi, Kiev, London (STN), Mary, Moscow, Nebitdag, Tashauz, Tashkent, Turkmenabad (Chardzhou), and Turkmenbashi (formerly Krasnovodsk).

A follow-on order is placed with Boeing on January 12 for a third B-757-22K that will be delivered next January.

On July 14, Turkmen President Saparmurat Niyazov announces at a cabinet ministers meeting at Ashkhabad that the state airline is planning to purchase three more Boeing jetliners that will be employed on domestic routes. This statement is confirmed by Boeing on July 28 when it promises to provide the first B-717-200 within a year.

Daily B-757-22K roundtrips from Ashkhabad to Birmingham, England, begin in November. On November 10, President Niyazov announces at a senior managers meeting that all Russian aircraft will be replaced with Boeings and would not now accept Tupolev Tu-334s even if they were ready, which they are not.

TURKS AND CAICOS AIRWAYS, LTD.: P.O. Box 114, Providenciales, Turks and Caicos Islands; Phone (809) 946-4255; Fax (809) 946-5388; Code QW; Year Founded 1983. When **Turks and Caicos National Airline, Ltd.** is privatized in December 1983, it is renamed **Turks and Caicos Airways, Ltd.** and certified by the government as the national airline. During the next decade, service is maintained over all previous domestic and regional routes and is extended to Nassau and Jamaica.

The fleet of General Manager Gary J. Palin's carrier is revised to comprise 2 Piper PA-23 Aztecs, 2 Pilatus-Britten-Norman BN-2 Islanders, 3 Cessna 402Cs, 1 Embraer EMB-110P Bandeirante, and 1 Beech 1900C. An order is placed for a Boeing 727-200.

In the spring of 1992, the company is reformed and merged with Charles Air Service, Ltd. and Charles Airline Handling. A. V. Butterfield Sr. is named chairman, with C. D. Moser as director general. The company resumes flights under new management on August 29.

A de Havilland DHC-6-300 joins the fleet in 1994; however, the jetliner order is delayed. Another Twin Otter is chartered in 1995-1996,

but removed in **1997**. Destinations visited outside the islands include the Bahamas, Cuba, the Dominican Republic, Haiti, Jamaica, Miami, and Puerto Rico.

Flights continue without fanfare during the remainder of the decade.

TURKS AND CAICOS NATIONAL AIRLINE, LTD.: Turks & Caicos Islands (1979–1983). Turks and Caicos National Airline, Ltd. is the new name given, in **1979**, to **Air Turks and Caicos, Ltd.** The government assumes 85% of the company shares. Previous routes are maintained and a new service is now offered to Puerto Plata in the Dominican Republic. The fleet is increased to comprise 2 Britten-Norman BN-2A Trislanders, 4 Britten-Norman BN-2 Islanders, 1 Douglas DC-3, and 1 Piper PA-23 Aztec.

No profits are made and by **1981** the operating loss is \$85,000. Passenger traffic steadily increases; enplanements in **1982** total 39,294, a 15.8% boost over the previous year. The workforce is now 45. Revenues total \$1,000,756 and expenses are \$1,072,756. The operating loss is \$72,000.

In December **1983**, the carrier is privatized and adopts the name **Turks and Caicos Airways, Ltd.**

TURNER AIRE: United States (1985). This tiny commuter is set up at Silver City, New Mexico, early in **1985** to provide scheduled passenger and cargo flights to Carlsbad via El Paso. Cessna lightplane flights are duly inaugurated, but cannot be maintained beyond the summer.

TURNER AIRLINES: United States (1947–1950). With the brothers Paul and John Weesner as partners, the legendary 1930s air racer Col. Roscoe Turner, whose title, given his nonmilitary service, is honorary, establishes Roscoe Turner Aeronautical Corporation at Indianapolis in 1940. Ground is broken for a large complex that will include shops, hangar, flight school, and dormitories. A terminal and control tower are also constructed. What is started is not an airline per se, but a basic air training facility for the U.S. Army Air Corps. From this point through World War II, RTAC will educate 3,500 students for the U.S. military.

Col. Turner has ideas about forming an airline, even as the CAB is debating the concept of the “feeder airline.” In 1944, Turner, employing single-engine Stinson SR Reliants, undertakes what he calls “scheduled charters,” multistop flights from Detroit to Memphis. The new service is protested by **Chicago & Southern Air Lines** and the CAB orders it shut down.

RTAC is incorporated as an unscheduled air carrier on September 3, **1947**, with Col. Turner as president. The CAB, during the third quarter of **1948**, grants RTAC certification to operate as a local service provider from Indianapolis to nine communities in Indiana and Ohio. Charter flights commence with a fleet of 2 Beech 18s and 3 V-tailed Beech Bonanzas.

Having expended over \$2 million on start-up costs, Col. Turner sells controlling interest to the Weesner brothers, while agreeing to remain as minority owner and unofficial director of public relations. His activities with this carrier will be reviewed by Carroll V. Glines in his *Roscoe Turner: Aviation's Master Showman* (Washington, D.C.: Smithsonian Institution Press, 1995).

On May 31, **1949**, the firm's name is changed to **Turner Airlines**. The Beech single- and twin-engine aircraft operations continue as a search is made for larger aircraft.

Two Douglas DC-3s are purchased from **Northwest Airlines** in October and one of these, on November 12, inaugurates scheduled passenger services from Indianapolis to Grand Rapids, Michigan, via Kokomo, South Bend, and Kalamazoo.

A total of 559 passengers are transported by December 31.

Airline employment stands at 25 in **1950**. In January, DC-3 service is started from Chicago (MDW) to Cincinnati via Lafayette, Indianapolis, and Connersville. This roundtrip route and the previous one are operated twice daily.

During the fall, the Indiana communities of Bloomington and Richmond are added to the route network and a third DC-3, also purchased from **Northwest Airlines**, is placed into service.

On November 12, the DC-3 operator is renamed once again, this time becoming **Lake Central Airlines**.

Enplanements for the year total 12,757.

TURNER AVIATION SERVICE. See **REALWEST AIRLINES**

TURTLE AIRWAYS, LTD.: Private Mail Bag, Nadi Airport, Fiji; Phone 679 722 988; Fax 679 720 346; <http://www.turtleairways.com>; Code KT; Year Founded 1979. Having purchased the island of Nanuya Levu in the Fiji Islands in 1972, Californian Richard Evanson is approached by Columbia Pictures in February **1979**. The studio is seeking a good locale in which to remake the 1949 Jean Simmons motion picture *Blue Lagoon*, this time starring Brooke Shields. Evanson agrees to the use of his island and purchases a float-equipped Cessna 206 to fly filmmakers and their equipment back and forth from Nadi to the beach of his island.

Employing proceeds provided by the studios and others, Evanson now creates Turtle Island resort. The center comprises a number of simple but luxurious thatched tropical villas known as bures. Evanson also begins a campaign to promote an environmentally sound tourism industry that will do no harm to his island paradise, bringing in visitors aboard the Cessna in an operation he calls Turtle Island Airways, Ltd.

The company undertakes one-plane, nonscheduled flights all over Fiji in **1980–1981**, notably to Blue Lagoon Lodge, Pacific Harbor, and Suva. Scheduled flights are also operated linking Nadi with Castaway Island, Mana Island, and namesake Turtle Island. The most exciting event of these years is the transport of 34 injured people from Kadavu following a 1981 hurricane.

In **1982**, founder/owner Evanson sells a 75% stake in his airline to South Sea Island Cruises, Ltd., in exchange for a 25% equity stake in the cruise operation. John Pettitt becomes chairman/managing director of the renamed Turtle Airways, Ltd.

Operations continue with little change in **1983–1987**, although the fleet is increased by the addition of two more float-equipped Cessna 206s. Minority owner Evanson looks after guests and to his philanthropic desire to care for the needs of local islanders by providing medical services for them to local clinics and by bringing in medical teams for their treatment. Flights are also operated to other nearby islands where resorts and vacation areas are opening up.

In **1988–1989**, Chairman/Managing Director Pettitt acquires another amphibious Cessna 206. Also during the latter year, Turtle Island guest Dr. Jerrold Beeve, a California ophthalmologist and his wife, Dorothy, a nurse, convince Evanson to establish an annual eye clinic to treat the many islanders with eye problems caused by intense exposure to the tropical sun.

A fifth float-equipped Cessna 206 is purchased in **1990**. In February, Dr. and Mrs. Beeve return to the island with a team of specialists and establish the Beeve Foundation Clinic, which will operate annually thereafter in February under the sponsorship of Doctors without Borders and the World Health Organization, providing eye care for Fiji islanders. The resort is closed down for the entire month to handle the service, which eventually wins visibility on U.S. television. Dental, pediatric, and other health care clinics are offered throughout the year. Enplanements for this year total 16,132.

The number of boardings increases to 18,000 in **1991**; bookings advance 1,000 to 19,000 in **1992**.

Flights continue without headline or incident in **1993–1997**. Toward the close of these years, a surplus de Havilland Canada DHC-2 Beaver is located in British Columbia; it is flown to Vancouver, Washington, where it is disassembled and taken by boat to Fiji. There it is reassembled and placed into service.

Fullers, Ltd. purchases South Sea Cruises, Ltd. in **1998**, at which point, airline founder Richard Evanson buys back his 75% stake, originally sold to the cruise operator in 1982. Having become a leader in the regional environmental organization, as exemplified in the operation of its local resort, Turtle Airways receives two “Grand Green Leaf” awards from the Pacific Asia Travel Association.

During 1999, the motion picture industry returns to Turtle Island, filming the Tom Hanks movie *Castaway* on nearby Monuriki Island. By year's end, the company, under the direction of Evanson and Chief Pilot Paul Hodges, who had joined the company in 1993, is operating 25 daily flights to the resorts on Yasawa and Mamanuca Islands.

Airline employment at the beginning of 2000 stands at 18.

TUVINSK AIRLINES (TUVINSKIE AVIATSIONNIE LINII AOOT): Kyzyl Aeroport, Krasnoyarsk Region, 667008, Russia; Phone 7 (39422) 30 025; Fax 7 (39422) 30 025; Year Founded 1995. Tuvinsk Airlines is set up at Kyzyl Airport in 1995 to offer domestic passenger charters and rotary-wing aerial contract work. Aleksander Marsekha is CEO and he begins services with 10 each Yakovlev Yak-40s and Let L-410 UVPs, 12 Antonov An-2 biplanes, and 5 Mil Mi-8 helicopters.

TUXHORN AIRLINES: United States (1931–1932). Tuxhorn is founded at Kansas City in the spring of 1931 to offer scheduled, multi-stop passenger service across Missouri to Springfield. Flights commence on March 23, but without a mail contract, the carrier is unable to generate sufficient income to remain in operation beyond January 1932.

TWA. See **TRANSCONTINENTAL AND WESTERN AIR, INC.; TRANS WORLD AIRLINES, INC.**

TWENTE AIRLINES, B.V.: The Netherlands (1990–1995). Twente Airlines is established by Robert J. Soetens at Enschede Twente under the sponsorship of Twente City Council and Twente Airport in June 1990 to offer scheduled commuter services. The Province of Overijssel, in the eastern part of the country, and the Twente en Salland Chamber of Commerce provide capitalization.

Managing Director Soetens appoints Bernard Jacobs as general manager, while recruiting six other employees. The company's revenue services are begun in August with a pair of Beech Super King Air 200s; scheduled services to Amsterdam's Schiphol Airport are inaugurated in September with a leased Embraer EMB-110P1 Bandeirante. These flights are subsidized by **KLM (Royal Dutch Airlines, N.V.)**.

The general recession in commercial air activities is such that insufficient traffic can be generated from local concerns to cover start-up expenses and thus, in March 1992, the little operator is acquired by Eindhoven-based **BASE Business Airlines, B.V.**

Allowed to continue operations under its previous identity, Twente, in 1993–1994, concentrates on express and freight services with four Cessna 406 Caravan IIs. Two Caravans are withdrawn in 1995 and the company is shut down by year's end.

TWENTIETH CENTURY AIRLINES. See **NORTH AMERICAN AIRLINES (1) (NAA)**

TWEXPRESS. See **AIR MIDWEST; ALPHA AIR; CHAUTAUQUA AIRLINES; CHICAGO EXPRESS AIRLINES; CORPORATE AIRLINES; GULFSTREAM INTERNATIONAL AIRLINES; METRO AIRLINES NORTHEAST; POCONO AIRLINES; RESORT AIR; RESORT COMMUTER; TRANS-STATES AIRLINES; TRANS WORLD EXPRESS; VIRGIN ISLANDS SEAPLANE SHUTTLE**

TWIN AIR: The Jet Center, Fort Lauderdale International Airport, 1100 Lee Wagener Blvd., Suite 113, Fort Lauderdale, Florida 33315, United States; Phone (954) 359-8266; Fax (954) 359-8271; Year Founded 1972. Twin Air is established as an FAR Part 135 carrier in 1972 under the auspices of Red Aircraft Services, the FBO at Fort Lauderdale Airport that had been set up by Alfred Harper and Red Gamber in 1954. Passenger and cargo charters are initiated, many to Great Abaco Island and Eleuthera Island in the Bahamas.

As 1999 begins, 74-year-old Mrs. Athley Gamber, wife of the co-founder, is managing director. She oversees the work of 17 employees, who operate 4 Piper PA-31-350 Navajo Chieftains and handle the needs

of customers, most of whom are either tourists or Bahamian citizens. Late in the year, the tiny airline wins a U.S. government authority to operate direct return flights to Guantanamo Bay, Cuba. An Embraer EMB-110 Bandeirante is obtained to fill subsequent contracts, many of which are from various federal agencies.

Destinations served from Fort Lauderdale in 2000 include Governor's Harbour, North Eleuthera, Treasure Cay, Marsh Harbour, and Rock Sound. The company's story is told by Geoff Jones in the March issue of *Airways* magazine.

TWIN CITIES AIR SERVICE: 390 Lewiston Junction Road, Auburn, Maine 04210, United States; Phone (207) 784-6318; Fax (207) 784-3819; Year Founded 1992. Roger LeBlanc establishes this nonscheduled carrier at Auburn–Lewiston Municipal Airport in 1992 to provide executive and small group passenger charters throughout the Eastern U.S. and into Canada. Revenue flights begin with 2 Cessna 402s, 1 C-303 Crusader, and 1 Beech King Air 100.

TWIN CITY AIRWAYS: United States (1973). TCA is set up at Texarkana, Arkansas, in 1973 to provide daily roundtrip air taxi flights to Dallas. Although daily Cessna lightplane flights are duly inaugurated, they cannot be maintained beyond year's end.

TYDEN AIR, LTD.: The Valley, Anguilla; Year Founded 1984. This tiny operator is established on Anguilla, the northernmost of the Leeward Islands, in 1984, to offer charter service to St. Martin. Revenue flights begin with a pair of Britten-Norman BN-2 Islanders. Flights continue without incident or headline over the next 16 years. During this period, the company also undertakes day trips to St. Barths, St. Kitts, Nevis, and Virgin Gorda.

TYEE AIR, LTD.: Canada (1960–1985). A. B. Campbell founds Tyee Air at Sechelt, in British Columbia, in February 1960. Scheduled passenger and cargo services are initiated from Vancouver Harbour and Vancouver Airport to the company's base, with connections to Pender Harbour, Jervis Inlet, Sechelt Inlet, and Powell Lake. Twenty years after start-up, President Campbell oversees (depending upon season) between 25 and 40 workers and operates a fleet of 5 de Havilland Canada DHC-2 Beavers and 4 float-equipped Cessna 180s.

In 1982–1984, services are added to Nanaimo Harbour; one Cessna is retired. Recession causes the carrier to shut down in 1985.

TYEE AIRLINES: United States (1936–1985). Tyee is originally established at Ketchikan in 1936 as the charter operator **Simpson Air**. Over the next quarter century, the carrier operates its single-engine, float-equipped aircraft in support of southeast Alaska's mining, logging, government, and tourist (including fishermen and hunters) industries.

The small concern is purchased by Stan Hewitt, Art Hack, and Terry Willis in 1971 and renamed **Coast Air**. Scheduled operations begin during 1973, primarily in the form of replacement flights for **Alaska Airlines** from Ketchikan to Metlakatla, Craig, Klawock, and Hydaburg. **Coast Air** is sold to Kirk Thomas in 1975 and its corporate identity is again changed, this time to Tyee Airlines.

In 1977, enplanements total 36,428. These now begin to rise slightly: 38,762 in 1978 and 41,498 in 1979. During the latter year, the fleet includes 7 de Havilland Canada DHC-2 Beavers and 2 Cessna 185s.

The upward pattern in enplanements continues in 1980 with a total of 42,295; an operating profit of \$92,255 is achieved.

Airline employment is increased by 28.1% in 1981 to 41 and the fleet is upgraded by the addition of 2 de Havilland Canada DHC-3 Otters, which replace 2 Beavers and 1 Cessna. A new advertising campaign is begun emphasizing the carrier's traditional support of fishing charters and regional tourism.

Passenger boardings accelerate 1.9% to 43,080. Revenues jump 53.8% to \$2.6 million and expenses swell 57.6% to \$2.5 million; the operating profit is \$79,812.

The fleet in **1982** includes 2 de Havilland DHC-3 Otters, 8 DHC-2 Beavers, and 1 Cessna 185. This number grows as the carrier purchases **Seair Alaska Airlines (Sea Airmotive)** in July and **Southeast Alaska Airlines** in October. When the integration process is completed on December 31, both acquisitions will be operated as subsidiaries; however, their traffic and financial figures will be combined with those of the parent.

Bookings for the year are 65,000.

Airline employment in **1983** stands at 70. All SEA operations are fully integrated by the end of January and result in a number of new stops for Tyme. The fleet now includes 3 Otters, 12 Beavers, 3 Cessna 185s, and 2 Britten-Norman BN-2 Islanders.

Enplanements for the year total 78,400.

Too rapid expansion and recession combine to take their toll on company finances in **1984** and operations cease on January 25, **1985**. The carrier's assets are acquired by **Temco Helicopters** in May **1986** and reformed into **Temco Airlines**.

TYME AIRLINES: United States (1967–1968). When, during the summer of **1967**, partner **TAG Airlines** alters its route network, its Huntington, West Virginia-based **Air Enterprises** elects to end its affiliation and strike off on its own as an independent. The company, which had provided daily scheduled roundtrips to Columbus, Ohio, for over a year, transfers to Columbus on October 3.

O. M. Pierce's Piper PA-23 Aztecs now add revenue flights to Cleveland, Toledo, and Detroit. These are maintained until July 3, **1968**, when Tyme is purchased by and merged into **Wright Airlines**.

TYNE TEES AIRWAYS, LTD.: United Kingdom (1960–1965). Ghulam Mohamed forms TTA at Newcastle Airport in September **1960**. With Trans World Leasing Chairman Thomas Keegan as advisor, the company obtains a de Havilland DH 104 Dove 1 and begins ad hoc charters on September 9. **Tyne Tees Air Charter, Ltd.** is registered as an airline on December 21 and is capitalized at £25,000.

Another DH-104 is acquired in February **1961**, followed by a DH-89A Dragon Rapide in April and an Auster J/5R Alpine in June. Ad hoc pleasure, passenger and cargo, and aerial charters are flown during the summer and with the arrival of a Piper PA-23 Apache and a Riley 65, air taxi flying begins in September. A Dove is sold in December.

Another DH-104 is leased for a year from Trans World Leasing in January **1962** while a third is purchased in February. The company's first DC-3 is received on March 22 followed by a second on June 1; these are used to fly summer inclusive tours Newcastle–Ostend and Manchester–Perpignan, although the premier Douglas is leased to **TASSA** of Spain on May 22. Denis Martin becomes general director in July. Following the tourist season, the second DC-3 is also leased to **TASSA**.

A Bristol 170 Mk. 21 Freighter is leased from Keegan Aviation for a year in January **1963**. Other additions during the year are two DH-114 Herons leased from Keegan that never enter service, and two more DC-3s, one of which is not used. Also a Dove, the Apache, the Auster, and the Riley 65 are all sold. During the summer season, several inclusive tours are flown to Continental destinations and a variety of ad hoc charters are undertaken.

Enplanements for the year total only 614.

The two DC-3s on lease in Spain are returned in early **1964**, allowing the sale of another Douglas. Ad hoc charters to a variety of British Airports and several Continental destinations are now flown, including a number in Scandinavia late in the year. Following the summer season, work is harder to find and with debts accumulating, it is decided at year's end to cease operations. Tyne Tees and its last two DC-3s are sold in January **1965**.

TYROLEAN AIRWAYS (TYROLEAN AIRWAYS LUTFAHRT-GESSELLSCHAFT, GmbH.): Furstenweg 176, Postfach 58, 6026 Innsbruck, A-6026, Austria; Phone 43 (512) 2222-0; Fax 43 (512) 2222-9; <http://www.telecom.at/tyrolean>; Code VO; Year Founded

1956. Aircraft Innsbruck, GmbH. is formed in **1956** to provide air ambulance, air charter, inclusive-tour, executive jet, and other nonscheduled services to Austro-German destinations. Together with Christian Schwemberger, Gernot Langes-Swarovski and another family member, who control a major Tyrol-based group working in crystal and optics, acquire the company in **1978**.

In early **1980**, the opportunity is taken to acquire a scheduled route from Innsbruck to Vienna and the decision is taken to begin scheduled services; the company is thus reformed on April 1, renamed, and given new logo and livery.

Managing Director Jakob Ringler assembles his workforce of 115 and a fleet comprising 1 de Havilland Canada DHC-7, the *Stadt Innsbruck*, 1 Cessna Citation II, 1 Aerospatiale AS-3552C Super Puma, 2 SA-315B Lamas, and 1 AS 350 Ecureuil. For political reasons, flights are initiated on a scheduled charter basis, linking the company's base with Graz, Frankfurt, Zurich, and Vienna.

Enplanements for the year total 38,000.

A second Dash 7, the *Stadt Wien*, arrives in April **1981** and frequencies begin to Frankfurt.

These factors combine to help passenger enplanements to rise to 70,380.

The workforce is reduced by 12.1% in **1982** to 109. Twenty-year **Austrian Airlines, A.G.** executive Fritz A. Felti, the flag carrier's marketing director, is named Tyrolean's managing director in August.

Customer bookings during the 12 months jump 17.2% to 82,498.

In the spring of **1983**, rotary-wing services are transferred to a new subsidiary company, **Helicopter Air Transport, GmbH.** In March, flights begin from Innsbruck to Graz. Charter and inclusive-tour flights continue to be offered, primarily to resorts in Spain, Greece, Italy, and Yugoslavia.

Enplanements this year are 100,950.

The payroll is cut 1.9% in **1984** to 106. An agreement is signed with **Austrian Airlines, A.G.** whereby the flag carrier becomes the regional's general agent in 20 nations.

Passenger boardings jump a strong 18.8% to 120,000 and cargo surges 22% to 272,000 FTKs. Revenues advance 18.4% to \$9.9 million and expenses are held to a point where a \$1.15-million net profit can be generated, a 20.6% boost.

Employment grows 2.8% in **1985** to 109. In May, new Managing Director Josef E. Burger adds a DHC-8-100 to his fleet; like the two Dash 7s already on hand, it is given new livery. The three aircraft begin a heavy schedule of Aegean Island holiday charters during the summer.

Customer bookings jump 7.9% to 129,500 and freight is up to 280,000 FTKs.

During **1986–1987**, new frequencies are started to Wien, Dusseldorf, and Paris. Agreements are signed during the latter year with **Austrian Airlines, A.G.** and its **Austrian Air Services (Oesterreichischer Inlandsflugdienst, GmbH.)** subsidiary calling for the principal activities of the three carriers to be harmonized.

Replacement DHC-8-100 scheduled service is operated on behalf of **Contactair Flugdienst GmbH.** under contract to **Deutsche Lufthansa, A.G.** from Munich to Stuttgart, Turin, Bologna, Florence, and Zagreb. On these services, the flight-deck crews are drawn from Tyrolean and the cabin crews from Contactair.

Enplanements in the latter year total 142,000.

Airline employment grows by 9.1% in **1988** to 168 and on January 28 an accord is signed with **Austrian Airlines, A.G.** and **Austrian Air Services (Oesterreichischer Inlandsflugdienst, GmbH.)** guaranteeing Tyrolean's monopoly at Innsbruck and banning parallel routing. The letter of agreement thus protects the regional's lucrative Innsbruck–Vienna route—and its future.

During the winter, the carrier, on behalf of **TAT (Transport Aerien Transregional, S.A.)**, flies a Sunday-only flight between Paris (ORY) and the "altipor" at Courchevel, in the French Alps. In February, the Austrian Ministry of Transport grants the company a scheduled carrier license.

Along with a second DHC-8-100 that is dry-leased to **Air Atlantic, Ltd.** in Canada, the last production DHC-7 is obtained. Scheduled flights are launched to Amsterdam and under contract to 27 different charter groups, tours are flown to 19 destinations in 5 countries. A new hangar and maintenance facility is occupied at the Innsbruck base.

Enplanements rise 4.5% to 149,085 and freight is up by 4.8% to 592,000 FTKs.

Company employment is increased 14.3% in 1989 to 192. Rome joins the route network as two more DHC-8-100s are acquired.

Passenger boardings surge 14.8% to 171,025 and freight does even better, climbing by 34.5% to 796,000 FTKs.

Fritz A. Feitl returns as managing director in 1990 with former Managing Director Josef Burger shifting to the marketing manager's post. The workforce is increased another 19.7% to 231 and 2 additional DHC-8-100s are purchased.

Customer bookings move ahead by 19.9% to 205,000.

The fleet in 1991 includes 2 DHC-7-102s, 3 DHC-8-300s, and 8 DHC-8-100s. Two of the latter are leased, one to **Albanian Airlines** and one to **Interot Air Service**. In August, thrice-weekly direct flights begin from Salzburg to Amsterdam.

Enplanements for the 12 months ascend to 208,693.

The payroll grows by 27.4% in 1992 as three DHC-8-300s are delivered. New alliances are signed with **Air France**, **KLM (Royal Dutch Airlines, N.V.)**, **Swissair, A.G.**, and **Deutsche Lufthansa, A.G.** Destinations now served include Amsterdam, Graz, Linz, Paris (ORY), Vienna, Stuttgart, and newly opened markets at Salzburg and Dusseldorf.

Passenger boardings increase 47.9% to 400,562.

In 1993, Managing Director Feitl oversees a workforce of 362. Flights are inaugurated to Paris (CDG), Munich, and Frankfurt.

The new routes help customer bookings to accelerate 25% to 500,748 while cargo swells 31.9% to 578,800 FTKs.

Airline employment increases 73.4% in 1994 to 657 and during the first quarter, the company sells a 42.85% stake to **Austrian Airlines, A.G.** Shareholding is now divided between the flag carrier, Gernot Langes-Swarovski GmbH. (42.85%), and Leipnik Lundenburger Industrie A.G. (14.30%). Share capital is doubled to S 135 million. Austrian now begins the process of turning Tyrolean into its domestic feeder subsidiary and merging into it during June its own local service carrier, **Austrian Air Service (Oesterreichischer Inlandsflugdienst, GmbH.)**, with the Tyrolean name surviving.

The fleet now includes 7 DHC-8-311s, 4 DHC-8-314s, 6 DHC-8-106s, 2 DHC-8-103s, 1 DHC-8-102, and 2 DHC-7-102s. The DHC-8-102 is leased to **Albanian Airlines**, one of the DHC-8-103s is chartered to Germany's **Interot Air Service, GmbH.**, and DHC-8-106 is leased to **Asia Pacific Airlines (Pty.), Ltd.** in Papua New Guinea. One DHC-8-314 is chartered to **Air Creebec, Ltd.** in Canada. Plans are made to offer routes to Nuremberg and Hanover. Late in the year, a DHC-7-102 is replaced by a Fokker 50. Orders are placed in December for four Fokker 70s.

Passenger boardings skyrocket 85.8% to 930,565 while freight jumps 42.5% to 825,000 FTKs.

A total of 120 new employees are hired in 1995, an 18.3% increase. In April, Bombardier Regional Aircraft Division delivers its 400th aircraft, a DHC-8-314.

The first two Fokker 70s are delivered in June and July. With the arrival of the new Fokker jetliners, a dual-designator agreement is made with **Swissair, A.G.** for 100 weekly flights to Zurich from Tyrolean destinations.

Similar arrangements are also made with **KLM (Royal Dutch Airlines, N.V.)**, **Sabena Belgian World Airlines, S.A.**, **LOT Polish Airlines, S.A.**, **CSA Czech Air**, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, and **Tarom Romanian Airlines, S.A.** for flights to Amsterdam, Brussels, Frankfurt, Krakow, Madrid, Prague, and Timisoara. In cooperation with **Eurowings Luftverkehrs, A.G.**, frequencies begin to Hanover and Nuremberg from Innsbruck, Salzburg, and Vienna.

When the main runway at Stuttgart Airport is closed for repairs between July 31 and October 4, the carrier employs a Fokker 70 to offer

thrice-daily frequencies to the cross-runway of the German airport. The third Fokker 70, coincidentally, arrives in September. During the fall, orders are placed for five Canadair CRJ-100ERs.

A total of 60,000 flights are made, helping enplanements accelerate 35.5% to 1,260,747.

The workforce is increased another 2.8% in 1996 to 799 and the fleet now includes 3 RJ70s, 10 DHC-8-314s, 1 of which is leased to **Augsburg Airways, GmbH.**, 4 DHC-8-311s, 4 DHC-8-106s, 2 DHC-8-106s, including a unit out with **Augsburg Airways, GmbH.** for the summer, 1 DHC-8-102, and 2 DHC-7-102s, 1 of which is out of service.

On July 1, Tyrolean joins with **Austrian Airlines, A.G.** and **Lauda Air, A.G.** to file suit against the government in an effort to reverse implementation of its new 50% increase in airport security taxes. Several new routes are inaugurated from Innsbruck, where the new CRJ-100ERs are based following their delivery. On October 10, an CRJ-100ER, equipped with the Heads-up Guidance System of FlightDynamics, makes the first Category IIIa landing for the aircraft type at Graz.

In November, orders are placed for two more Canadairs. At year's end, the carrier is performing 1,250 flights per week to 6 domestic and 30 international destinations.

Customer bookings soar 10.3% to 1,390,183 while 1.01 million FTKs are operated, an 18.5% increase. Operating income totals \$239.4 million and a net profit of \$8.74 million is reported.

The employee population grows 6.3% in 1997 to 856. Ownership is now divided between **Austrian Airlines, A.G.** (42.85%), Gernot Langes-Swarovski (42.85%), and Leipnik-Lundenburger Industrie, A.G. (14.30%). The two new CRJ-100ERs are delivered in January and March and are assigned to boost the fleet operating from Innsbruck. They will replace the two DHC-8-106s operating longer turboprop segments.

One of the released DHCs is again leased to **Augsburg Airways, GmbH.** for its summer season. Flights to Luxembourg and Dublin begin at the close of the winter season.

Two new super-quiet DHC-8Q-300s are delivered, one each in April and June, and enter service as part of a promotional program for "The Sounds of Silence." Both are painted in a special blue-and-green mountains fortieth anniversary color scheme.

When during the summer the airport at Banja Luka is reopened, the first in the Serbian-controlled area of Bosnia to resume operations since the end of the 1992-1995 civil war, Tyrolean begins DHC-8-311 roundtrips into the airport.

The former Tyrolean route to the Romanian city of Timisoara is taken over by **Lauda Air, A.G.** on October 6, with a **Lauda Canadair** providing weekday flights. Also in October, a \$65-million order is placed for three more DHC-8Q-300s that will be delivered before the end of the year and replace two DHC-8-311s.

It also requests six of the new DHC-8Q-400s, the first example of which is rolled out in Toronto ceremonies on November 21.

Also during November, the company joins with **Austrian Airlines, A.G.** and **Lauda Air Luftfahrtgesellschaft, A.G.** to create Austrian Airlines Group-Cargo and Australia. The airline has a turnkey network for freight of 118 destinations in Europe, the Mideast, the Far East, and the U.S.

Passenger boardings jump 10.4% to 1,587,425 while freight rises 29.3% to 1.3 million FTKs. Operating revenues swell 22.6% to \$278.24 million, while costs are up 15.8% to \$249.09 million. There is an operating profit of \$24.2 million and a \$32.6 million net gain is celebrated.

The CRJs ordered the previous year, together with the new DHC-8Q-300s, are all in service during 1998. In order to meet the exacting demands of its business clientele, the carrier now spends more on service and catering than it does on fuel.

Customer bookings accelerate 16.1% to 1.83 million on the year. Revenues jump 10.8% to \$301.16 million, while costs climb 13% to \$264.59 million. Although the operating profit ascends to \$36.57 million, the net gain slips to \$32.15 million.

In recognition of its almost 20 years of profitability and inventive growth, the company, in January 1999, receives the "Regional Airline of the Year Award" from *Air Transport World* magazine.

Air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo are now anticipated. On March 24, Tyrolean, together with **Austrian Airlines, A.G.** and **Lauda Air Luftfahrtgesellschaft, A.G.**, halts all scheduled service into Belgrade and nine other Balkan destinations. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the NATO bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25–26 and for the duration of the NATO bombing campaign. Flights to south-central and southeastern Europe experience delays of 30–60 minutes due to airspace closure.

By April 23, the company is able to fly to all of its previous Balkan destinations except Belgrade, Skopje, and Tirana.

Austrian Airlines, A.G. CEO Mario Rehulka reports on April 26 that the Austrian group, including Austrian, Lauda, and Tyrolean, have lost revenue in each of the past 5 weeks because of the Kosovo crisis, including \$ 4.4 million (\$340,000) the week of April 19.

The group's problems continue on May 1 when **Air Engiadina, Ltd.** and its new Austrian Air Alps, GmbH., flying together as KLM Alps, GmbH., take over Tyrolean's thrice-daily roundtrip service between Bern, Innsbruck, Salzburg, and Amsterdam.

Delta Air Lines begins to code-share with Tyrolean on October 15, placing its code on the Austrian line's flights from Vienna to Bremen, Graz, Katowice, Klagenfurt, Krakow, Linz, Nuremberg, and Salzburg.

By year's end, the carrier offers 1,440 weekly flights to 48 national and international destinations in 23 countries.

Passenger boardings rise 10.1% to 2,011,000 on 1,879,000 scheduled departures.

Airline employment at the beginning of 2000 stands at 1,050, a 16.8% increase over the previous 12 months.

New service begins from Vienna to Bern on February 14 and to Friedrichshafen on February 20.

After six months of successful changeover and an investment of ATS 500 million, the full Austrian Airline Group (**Austrian Airlines, A.G.**, **Lauda Air Luftfahrtgesellschaft, A.G.**, and Tyrolean) becomes the 10th official member of the "Star Alliance" on March 26. The same day, Austrian's daily return service from Vienna to Tirana, Albania, is transferred to Tyrolean. Simultaneously, twice-daily Fokker 70 roundtrips are inaugurated by Tyrolean from Vienna to Helsinki. It also begins daily Fokker 70 return flights from Vienna to Kosice and Krakow.

Daily Fokker 70 return service is inaugurated on April 3 between Vienna and Pristina. Employing its first new Next Generation B-737-8Z9, **Lauda Air Luftfahrtgesellschaft, A.G.** on May 22 initiates new four-times-a-day return service from Linz to Frankfurt, taking over the route from Tyrolean.

The carrier's first DHC-8-Q402 enters service on May 24, flying roundtrips from Innsbruck to Frankfurt.

Wearing the full colors of its English owner, a B-737-33A is wet-leased from **Titan Airways, Ltd.** on June 16.

With two already in service, Tyrolean on July 25 orders an additional DHC-8-Q402, bringing its order book total for the super-quiet turbo-props to six firm and six options. A letter of intent is signed for the purchase of 12 CRJ900s.

At the same Austrian Airlines Group supervisory board meeting in November where it is voted to purchase an additional stake in **Lauda Air Luftfahrtgesellschaft, A.G.**, employee representatives walk out in order to delay, if not prevent, the appointment of Tyrolean chief Fritz Feitl as joint CEO of **Austrian Airlines, A.G.**

On December 13, Austrian Airlines Group announces that its large restructuring process will bring a profit for FY00, despite an expected E 14.5-million (\$12.8-million) loss at **Lauda Air Luftfahrtgesellschaft, A.G.** Lauda will be reined in and its new management will be integrated closely with those of wholly owned subsidiary airlines **Austrian Airlines, A.G.** and Tyrolean. The group's supervisory board approves im-

plementation of the reorganization scheme by the executive board during the first half of 2001. Lauda will continue as a charter operator with a few scheduled flights and Tyrolean will be primarily a domestic and regional carrier. As the year ends, the fleet includes 4 DHC8-Q400s, 12 DHC-8-300s, 2 DHC-8-100s, 10 CRJs, and 6 Fokker 70s.

TYROLEAN JET SERVICE, GmbH.: P.O. Box 71, Flughafen Innsbruck, Innsbruck, A-6026, Austria; Phone 43 (512) 22422; Fax 43 (512) 288888; <http://www.tjs.at>; Year Founded 1975. TJS is established at Innsbruck Airport in 1975 to provide executive and small group passenger charters throughout Europe. During the next 20 years, the company also establishes a base at Vienna and prides itself on meeting self-imposed airline standards.

In 1998–1999, the company employs 23 pilots and operates 2 Cessna 550 Citation IIs and 1 each C-501 Citation I, Dassault Falcon 900B, Falcon 10, plus a brand new Dornier 328-110.

On October 5, 1999, the carrier takes delivery of its first Fiachild-Dornier 328JET.

TYUMEN AIRLINES (TYUMENSKIE AVIALINII): Roshchino Airport, Tyumen, West Siberian Zone, 625033, Russia; Phone 7 (3452) 262 566; Fax 7 (3452) 232 835; Code 7M; Year Founded 1993. An independent carrier established at Tyumen's Roshchino Airport in 1993, TA provides scheduled passenger and cargo services to domestic and international destinations. Nikolay N. Zienko is managing director and he recruits a workforce of 4,000. A mixed fleet of unspecified numbers is assembled, including all the usual Russian aircraft types: Antonovs, Ilyushins, and Tupolevs.

Services continue in 1994–1998 as the number of Tu-154B/Ms reaches first 18, later 16, plus 16 Tu-134As, 17 An-24s, 6 An-26s, 9 An-12s, and 5 Il-76T/TDs.

The employee population is reduced to 2,871 and destinations visited include Adler, Anapa, Ekaterinburg, Hanover, Johnston, Krasnodar, Moscow, Nadym, Nizhnevartovsk, Raduzhni, St. Petersburg, Salehard, Surgut, and Uraj.

Enplanements during the latter year total 329,000.

Passenger boardings ascend to 474,000 in 1999 while 68,000 FTKs are operated. Revenues of \$37 million are generated.

During the fourth quarter of 2000, the regional government for the Khanty Mansisk Autonomous District puts out feelers concerning the creation of a possible "super regional airline," through some combination of Tyumen, **Tyumenaviatrans (TAT)**, **Kogalym Airlines**, and **Yamal Airlines**. It is understood that any such amalgamation is a long way off.

At the conclusion of the **Tyumenaviatrans** annual general meeting on May 31, 2001, it will be reported that the Khanty Mansisk Autonomous District and Surgut city governments have increased their shareholding from 8.8% to 25.1% and from 10% to 18.8%, respectively, with the former seeing four of its representatives elected onto a new seven-seat board of directors. One of these, Surgut Deputy Mayor Vladislav Nesterov, is quoted in the day's *Moscow Times* as revealing that "by the end of the year, the merger of debt-ridden Tyumen Airlines with **Tyumanaviatrans**" will be completed.

TYUMEN PRODUCTION ASSOCIATION (TYUMEN MPO): Russia (1994–1996). TPA is formed at Roshchino Airport at Tyumen in 1994 to provide domestic passenger and freight charters. V. G. Kulchikin is appointed general director and he launches revenue services with a mixed fleet of Antonov An-26s and -32s. Flights continue until 1996.

TYUMENAVIATRANS (TAT): Surgut Airport, Surgut, Tyumen Region, Siberia, 626400, Russia; Phone/Fax 7 (3462) 280057; <http://www.cssc.tat.ru>; Code P2; Year Founded 1992. This former **Aeroflot Soviet Airlines** directorate, based at Tyumen in western Siberia, achieves its independence on March 25, 1992. A major cargo operator,

General Manager Vladimir A. Illarionov's company, which still retains ties with **Aeroflot Russian International Airlines (ARIA)**, provides both freight and passenger services on trunk and regional routes out of Mineralnic Vody and serves as the parent company for the other airlines based at Tyumen. It also operates wholly owned airports at Noyabrsk, Berezhovo, Igrim, Tyumen, Mys-Kamenny, and Tazovsky.

The fleet includes 20 Ilyushin Il-76s, 16 Tupolev Tu-154s, 10 Tu-134s, 10 Antonov An-12s, and 10 An-26s. A large rotary-wing division, made up of various Mil helicopter types, is also operated. From a high of 8.25 million passengers in 1990, enplanements slide to 3,512,953.

In 1993, the Il-76 fleet is expanded and worldwide ad hoc freight charters are undertaken. As the economy declines, so too does company traffic. Passenger boardings fall 29.1% to 2,721,110 while cargo is off 21.6% to 426.5 million FTKs.

Customer bookings for the 111-aircraft carrier drop another 20.1% in 1994 to 2,174,200 as freight rises 6.6% to 455 million FTKs.

Flights continue in 1995, although traffic figures are not available. The company begins to revitalize its mission, increasing emphasis on rotary-wing operations and decreasing fixed-wing all-cargo services. Still, modernization of the remaining passenger aircraft begins with an order for six Tu-154Ms, equipped with state-of-the-art engines, from the Samara-based Aviacor factory, with delivery scheduled between April 1996 and late 1998. The aircraft are paid for through a \$15-million debt receipt to the Samara Energo electricity supplier.

TAT accepts its first major support contract with the UN in 1996. The agreement will bring in initial revenues of \$300,000.

Coming in from Tyumen on October 26, a Yak-40 with 4 crew and 33 passengers lands to the right of the runway at Khanti on a helipad, where it smashes into 3 Mil Mi-8 helicopters and bursts into flame (5 dead).

Despite this disaster, service is maintained during the remainder of the year, but once again, no figures are available. As the year ends, the company, not having received payment, refuses to renew its contract with the regional administration at Salekhard to provide daily An-2 services between the scattered communities of the region. A separate contract for the provision of aeromedical flights remains in place.

Unwilling or unable to redress its dispute with Tyumenaviatrans, the Salekhard regional administration promotes the establishment of **Yamal Airlines** in February. TAT will eventually receive payment and resume its flights, which are particularly important during the winter when river transportation is impossible. Helicopter support for the UN continues and these international flights bring in \$400,000. Enplanements are 694,890.

Airline employment at the beginning of 1998 stands at 4,367. In August, as economic problems persist, the Russian government devalues the ruble. The official exchange rate is initially pegged at six rubles to the dollar, but soon plunges. By mid-September, currency trades at 16 to 1. The economic situation will have an impact on the carrier, but its location in the middle of an area with a booming oil industry and its good relationship with energy companies helps to keep its fuel costs down.

Although many carriers increase their economy-class rates over various routes, this carrier is one of several to resist. Indeed, on September 22, it actually reduces its Moscow-Tyumen fare from 1,225 rubles to 890. Also during September, the first Tu-154M is acquired from Aviacor.

Passenger boardings fall 10.3% to 630,000. Revenues for the year total \$80.5 million, but operating costs are \$93.4 million. The operating loss is \$12.9 million and the net loss is \$20.8 million.

Airline employment at the beginning of 1999 stands at 3,729. Surgutneftegaz, a large local oil company with which TAT has dealt for some time, doubles its business to \$10 million. As a result, TAT now transfers its headquarters from the city of Tyumen to the city of Surgut, where it can be closer to this and other energy industry customers.

A dry-lease agreement is signed with **Heyns Helicopters (Pty.), Ltd.** of South Africa, to which TAT sends eight Mi-8s; three Mi-8s are also chartered to the Mozambique operator Elak KFT.

Contracts are signed with the UN for the operation of helicopters on its behalf in the Western Sahara, the Central African Republic, Sierra

Leone (two Mi-26Ts), and East Timor (two Mi-8MTVs). In December, orders are placed with Mil for two more Mi-26Ts; funding for the arrangement is provided as part of a credit to TAT from Petrokomers bank. The first Mi-26T will enter service on December 31. Separately, one Mi-8AMT is ordered from the manufacturer's plant at Ulan-Ude.

During the year, TAT generates 43.4% of its income on regular airline passenger services, 4.1% on international activities, 45.4% on helicopter services inside Russia, 3.3% on charter flights. Contracts with oil companies in the energy-rich, local Siberian region account for 38% of TAT's activities, while natural gas companies account for 22%. Another 5% of business is generated from patrolling power lines, 10% from flying medial services, and 4% on geological missions.

Enplanements for the year total 403,000, a 16% decline. Revenues plunge to \$37.8 million and expenses are \$36.7 million. Although there is a \$1.1-million operating profit, the net loss is still \$6.7 million.

In January 2000, the shareholder breakdown is the state (2%), foreign investors (30%), Russian investors (33%), and individuals (26%), with the remaining 9% allocated for ADRs. The fixed-wing fleet now includes 5 Tu-154Bs, 1 Tu-154M, 2 Tu-134As, 22 Yak-40s, 11 An-24s, 2 An-26s, and 52 An-2s. The rotary-wing division, with the largest helicopter fleet of any operator in the world, flies 134 Mi-8Ts, 19 Mi-8MTW/AMTs, 7 Mi-10s, 9 Mi-6s, and 15 Mi-26Ts. TAT is the only Russian operator of the latter type, the world's largest, because it is very difficult to maintain.

A new management team, led by Director General Andrei Martirosov, takes over and begins to implement additional cost-cutting and revenue enhancing measures. Under the leadership of Director General Martirosov and acting Chief Financial Officer Igor Petrov, the airline will pay off 55 million rubles of its debt to the state and 21 million rubles to the state pension fund. It will attract 280 million rubles in development loans (up from 5 million rubles in 1999) and will have 133 million rubles in debt to the state medical-insurance fund written off. The institution of centralized management and control over cash flow will save the company 60 million rubles in taxes. Other tax debt remains, however.

The workforce, for example, is reduced again, being cut in April to 3,540. Average salaries for those remaining will be boosted 75% from \$150 every month in 1999 to \$262. At the same time, Surgutneftegaz awards TAT the largest annual Russian helicopter service order ever: \$15 million. The Sibneft contracts with TAT for use of its Tu-154 fleet to convey its oil shift workers, while the same firm requests the assistance of two Mi-26Ts in the aerial drilling of two new oil wells. Company jets continue to connect Western Siberia with over 40 destinations in central and southern Russia and 16 new routes are now started, including flights to Omsk, Perm, and Chelyabinsk.

It is revealed in July that, at the Annual General Meeting (AGM) in May, shareholding was divided between the Russian government (2%), individual investors (22%), the City of Surgut (10%), Russian investors (35%), and foreign investors (31%). Outstanding shares total 577,208, while authorized shares number 124,945,000. Also at the AGM, three representatives are elected to the board of directors from the Russian investment fund Sovlink and another from the Templeton Asset Management of the U.S.

By August, TAT has received only one Tu-154M from its 1995 order. TAT offers to settle the growing dispute with Aviacor by agreeing to pay another \$500,000 in return for the delivery of two more aircraft. The manufacturer does not find this acceptable. It has, sometime since, halted Tu-154 production, although it has sufficient components on hand to complete 10 last machines.

A suit is filed against the Aviacor manufacturing concern on August 15 for its failure to deliver five of the Tu-154Ms ordered in 1995 and for supplying the one in received in 1998 with second-hand, overhauled Soloviev D-30KU engines rather than the new power plants for which payment had been made. TAT now demands \$48 million in compensation and if cash is not available, indicates that it will settle for a takeover of the plant's property.

On September 13, the company agrees to pay \$5.3 million in owed taxes over a six-year repayment schedule. By the end of the month, a new money dispute has arisen with the regional administration at Salekhard. This time the local leaders have failed to make good on a \$4-million debt for local air services. When TAT once again shuts off flights, the leaders of that community, on October 1, turn to **Yamal Airlines**, which by now has grown into a respectable local service operation.

The hearing by the Samara Arbitrage Court into the dispute between TAT and Aviacor is postponed on October 18. Also in mid-October, an \$8-million UN contract is received from the UN for the provision of helicopter support services (three Mi-8MTVs) in Eritrea. On October 23, a **Volga-Dnepr Airlines** An-24-100 transports four Mi-8MTWs and 32 TAT employees to Eritrea to begin operating the mission.

TAT plays host to Chris Fry and Paul Gliddon, two directors of **Bristow Helicopters, Ltd.**, on October 25. The two have come to discuss the possibility of a joint venture. Under such an arrangement, Bristow might provide Eurocopter Super Pumas and TAT would fly Mi-26Ts on contracts in which costs and profits would be shared. During the exchange, Director General Martirosov expresses his displeasure with the quality of aircraft contemplated or under development in current Russian helicopter building programs.

At a news conference in early November, Director General Martirosov indicates that his concern, which is also a major heavy lift helicopter operator, is seeking a Western strategic partner and may soon name one. Although Martirosov refuses to name his potential partner, Andy Chuter of *Flight International* suggests that it may be U.S.-based **Offshore Logistics**.

On November 15, the carrier, which now operates 300 Russian-made helicopters (172 of which are classified as heavy-lift, including 26 Mi-26Ts, the largest rotary-wing aircraft in the world), opens a New York office, not far from the UN, one of its major customers. During the month, the regional government for the Khanty Mansisk Autonomous District puts out feelers concerning the creation of a possible "super regional airline," through some combination of TAT, **Tyumen Airlines**, **Kogalym Airlines**, and **Yamal Airlines**. It is understood that any such amalgamation is a long way off.

In December, Director General Martinosov reveals that his concern is giving serious consideration to the use of Western-built turboprop aircraft on its short- and medium-range Siberian routes. The company will examine the Bombardier Dash-8 and perhaps the Avions de Transport Regional ATR72.

At year's end, 31% of the carrier's shareholding continues to be held by Western investors, principally through the American Depository Receipt market. Passenger bookings during these 12 months have soared upwards by 62% to 720,000 and Tyumenaviatrans quietly moves from Russia's No. 9 airline, in terms of domestic passenger volume, to No. 3. Overall, it remains the 5th largest airline in the country behind Aeroflot, Pulkovo, Vnukovo, and Sibir.

Revenues for the year jump 124% to \$84.5 million, while costs are just \$63.2 million. Operating gain totals 21.3 million and a very welcome \$17.4-million net profit is posted, the highest profit margin for any Russian airline in 2000. For the first time since 1996, the company's board authorizes a stock dividend; the payment will be 0.5 rubles (17¢) for each of the 124,945,000 ordinary shares.

As the year ends, the carrier reports that its UN contracts have been very lucrative and have brought in 25.1% of its 900-million ruble income. Tyumenaviatrans earns \$4.6 million from its provision of aerial support for the peacekeeping mission in East Timor, \$1.8 million from Eritrea, \$250,000 from West Sahara, and a whopping \$14,350,000 from Sierra Leone. All of these arrangements will be extended into the new year.

At the conclusion of the AGM on May 31, **2001**, it will be reported that the Khanty-Mansisk and Surgut governments have increased their shareholding from 8.8% to 25.1% and from 10% to 18.8%, respectively, with the former seeing four of its representatives elected onto a new seven-seat board of directors. One of these directors, Surgut Deputy Mayor Vladislav Nesterov, is quoted in the day's *Moscow Times* as re-

vealing that "by the end of the year, the merger of debt-ridden **Tyumen Airlines** with Tyumanaviatrans" will be completed.

UES-AVIA: Airport 42, Dnepropetrovsk, 380582, Ukraine; Phone 380 (562) 650879; Fax 380 (562) 650342; Year Founded 1996. Ues-Avia is established at Dnepropetrovsk in 1996 to provide executive and small group passenger charter to destinations in Europe, Africa, the Mideast, and the CIS. Revenue flights begin with 3 Yakovlev Yak-40s.

U-LAND AIRLINES, LTD.: Taiwan (1995-2000). The failed **China Asia Airlines, Ltd.** is purchased by the Taipei-based U-Land Enterprise Group in early 1995 and renamed. ULEG official Lee Min Chung is appointed executive vice president, with Lt. Gen. Yin Heng-Yuan as vice president-operations. A McDonnell-Douglas MD-82 is acquired and scheduled flights to various domestic destinations from Taipei Sung Shan Airport commence in December.

A second MD-82 is purchased in 1996. Both jetliners are painted in black and white livery with large script "U-Land" titles on the forward fuselage.

It is announced on May 13, 1997 that the carrier will sell space on their planes' sides for ads in a program reminiscent of the "logo jets" of **Western Pacific Airlines**.

Flights continue in 1998. The U-Land Enterprise Group orders all flights cancelled on October 5 due to its financial problems; once matters are put right, service is resumed on October 6.

During the year, revenues of \$36 million are generated, but a \$25.1-million loss is suffered.

Having received government authority to divest upwards of 90% of its shares, **Air Philippines (2)**, during the week of March 15, 1999, holds discussions with U-Land concerning the possible partnership in which the Taiwan-based carrier will take a 50% stake.

With capitalization of NT\$1.5 billion (\$50 million), the company runs up combined losses for the year of NT\$3.9 billion (\$130 million). Its debt reaches NT\$7.6 billion (\$253 million).

At the beginning of 2000, U-Land's 5-ship fleet operates 10 daily flights from Taipei to Kao-hsiung and to Kinmen and from Kao-hsiung to Kinmen.

On May 15, U-Land is grounded by the Civil Aeronautics Administration because it has failed to meet minimum safety requirements, with particular deficiencies in the maintenance department. Within two weeks, all of the carrier's technicians have departed and no progress has been made in redressing concerns. Faced with a worsening situation, the CAA, on May 31, withdraws certification from the carrier's entire fleet. The grounded airline is given six months to correct its safety problems and to address lingering financial difficulties. Analysts do not expect it to recover and it does not.

UBAIR, LTD.: India (1991). Vijay Maillya establishes this private air taxi and commuter at Bangalore in 1991 as a subsidiary of a major brewery group. Scheduled operations are inaugurated with Dornier 228-200s linking the company's base with Madras and Cochin. When one of the Dorniers is damaged in a landing accident, UBAir ceases operations.

UFS (UNITED FEEDER SERVICE): United States (1993-2000). **Trans States Airlines'** founder Hulas Kanodia purchases the Chicago-based turboprop operations of **United Airlines'** "United Express" partner **Air Wisconsin** in September 1993. Given the major's desire to retain the **Air Wisconsin** slots, Kanodia agrees to provide "United Express" services if **United Airlines** will continue to maintain the six owned and four leased British Aerospace BAe ATPs. Gary Santos is named vice president/general manager.

After such an arrangement is struck, the large regional's new subsidiary, UFS (United Feeder Service, Inc.), transports a total of 142,239 passengers during the remainder of the year. Revenues are \$15.2 million, but expenses are higher. As a result, there are losses: \$359,611 (operating) and \$608,283 (net).

Operations continue apace in **1994** and passenger boardings increase to 735,853. Revenues skyrocket a staggering 245.9% to \$52.49 million, while expenses jump 222.3% to \$50.07 million. As a result, there is an operating surplus of \$2.42 million and a net gain of \$1.34 million.

The company's nine ATPs transport a total of 655,964 passengers in **1995**, a 10.9% decline. Still, operating income exceeds costs and there are profits: \$2.75 million (operating) and \$1.84 million (net).

There is no change in either company employment or fleet during **1996**. Traffic continues to slide, falling 4.3% to 639,023 on 22,481 scheduled departures. Revenues move ahead by 2.5% to \$54.55 million and expenses climb 3.5% to \$52.12 million. Operating gain slips to \$2.43 million and a \$1.59-million net profit is reported.

A 10th ATP joins the fleet in **1997**.

"United Express" Flight 5748, an ATP with 4 crew and 39 passengers en route from Chicago-O'Hare to Peoria, Illinois, on September 6, encounters clear-air turbulence at 10,000-ft. near Peru, Illinois. Both flight attendants are injured, one seriously.

Passenger boardings rebound this year, growing 6.2% to 666,826 on 21,774 scheduled departures. Operating revenues inch up 2.6% to \$56.16 million, while expenses climb 7.4% to \$55.99 million. Profits drop significantly, down to \$167,000 (operating) and \$549,000 (net), respectively.

Flights continue in **1998** without significant incident. Additional frequencies are laid on during the summer strike at **Northwest Airlines**.

Customer bookings jump 3.3% to 689,000. Revenues climb 6.8% to \$59.99 million, while expenses increase 2.7% to \$57.49 million. The operating profit grows to \$2.49 million, while net gain reaches \$1.87 million.

The swirling wake of a **Mexicana Airlines, S.A. de C.V. B-757-2Q8** causes a UFS ATP with 50 passengers to roll 45 degrees and break off its approach into Chicago (ORD) on January 27, **1999**. Both ATC and the Mexican carrier are faulted for not maintaining proper distance between the two airliners.

Late in the year, the decision is taken to halt the "United Express" operation. Beginning on December 1, the carrier's routes are gradually transferred to **Atlantic Coast Airlines** and **Air Wisconsin**.

Passenger boardings fall 12.3% during the year to 601,000. Revenues advance 12.5% to \$67.5 million, while expenses are up 7.1% to \$61.59 million. The operating profit improves to \$5.91 million, while net gain reaches \$6.11 million.

The workforce totals 400 at the beginning of **2000**. When the hand over of the ACA and AW routes are completed on February 9, the carrier shuts down. A total of 20,000 customers are flown during these 40 days. The entire fleet of 9 ATPs has been parked at Kingman, Arizona, by March 13.

UGANDA AIRLINES, LTD.: Uganda (1986-2000). **Uganda Airways Corporation** is reformed in May **1986** and renamed. The wholly owned 600-employee government corporation, under General Manager C. Adoko Ajiku, is equipped with a fleet comprising 1 each Boeing 707-324C, B-737-300, British Aerospace BAe 146-100, and Fokker F.27-600. Passenger operations are flown within the country and from Entebbe to Harare, and Nairobi, serving Kampala. All-cargo services are undertaken to Entebbe to Brussels, London (LGW), Nairobi, Sharjah, Djibouti, Cairo, and Bujumbura. Profitability is restored.

Operations continue apace in **1987** as a B-707-328C is leased from **ZAS Airline of Egypt, Ltd.**

While on final approach to Rome on October 17, **1988**, after a flight from London (LGW), Flight 775, a B-707-338C with 7 crew and 45 passengers, crashes near foggy Fiumicino Airport on its third landing attempt (33 dead).

In May **1989**, Christopher S. K. Mboijana, one of the founders of Kenya's **African Safari Airways, Ltd.**, is named chairman and managing director. The recession that closes out the decade and begins the next takes a terrible toll on the airline.

The company is in total chaos during **1990**. The last available annual report, published in December, shows the company \$10 million in debt. From an appended deposition by the nation's Auditor General, it is

learned that the company has operated without a budget, cannot meet its short-term obligations, and its records have been so badly kept—or not kept—since 1982 that an audit of the books is impossible.

Chairman/Managing Director Mboijana is succeeded in January **1991** by Abraham Waliggo. The leased B-707-328C, piloted by Capt. Stephen Mukyeli and four other Ugandans, is detailed at Belgrade Airport in August when it is discovered that its cargo consists of 19 tons of arms and ammunition from South Africa, reportedly destined to Croatia. While the crew is held, Croatian-born Canadian businessman Anton Kikas, aboard the plane as a passenger, is fined C\$1 million for arms smuggling and is released.

In September, a major shakeup in airline management occurs because of the Yugoslav incident. Chairman/Managing Director Waliggo, together with John Kalahan, flight operations/marketing manager and Ocheng' Dohi, corporate secretary, are relieved of their duties and arrested. Benedict Motyaba becomes the new chairman/managing director.

In October, Ugandan President Yoweri Museveni refuses to seek the release of Capt. Mukyeli and his crew, calling them mercenaries. It is reported at the same time that the carrier will be partially privatized, with the government retaining a 49% share. A date for the changeover is not provided. Enplanements for the year are just 16,716.

By **1992**, the owned fleet of the 600-employee airline has been reduced to only the Fokker turboprops.

Former Chairman Waliggo and two other airline executives, indicted for organizing and authorizing an arms smuggling ring, appear in court at Kampala on January 11 and claim innocence. Nothing more will be heard of them, or Capt. Mukyeli.

International service is continued when, in April, the carrier signs an agreement with **Air Botswana (Pty.), Ltd.** Under its terms, the Nairobi-Entebbe sector of the Botswana-based airline's twice-weekly Gaborone-Entebbe service is operated on behalf of the Ugandan company.

In **1993**, the workforce totals 350. A Boeing 737-2N0A is leased by Managing Director Motyaba from **Air Zimbabwe Corporation** and operates scheduled services linking Entebbe with Nairobi, Harare, Johannesburg, Kigali, and Bujumbura.

The company releases its first public report of the decade in September and its figures show that 37,884 passengers have been transported since the beginning of the year. An operating profit of \$2 million is reported; for the first time in years, the company has moved into the black.

Reductions in the workforce continue in **1994**. In addition, service is withdrawn to Rome, Brussels, and London. When Uganda and its airline each acquire a 10% stake in the new multinational consortium **Alliance Air (African Joint Air Services)**, the national airline surrenders its long-haul traffic rights, particularly those for routes to Europe.

Passenger boardings climb a strong 56.4% to 67,719. For the year, an operating profit of \$1.3 million is posted.

Rigorous employee cost-cutting results in a **1995** drop of 48.6% in the number of workers, down to 180. Through October, enplanements leap ahead by 47.7% to 65,814 and freight skyrockets 91.8% to 744,000 FTKs.

Flights continue in **1996** and beyond, during which years marketing alliances are signed with over 35 foreign carriers, including **British Airways, Ltd. (2)**, **El Al Israel Airlines, Ltd.**,

Continental Airlines, South African Airways (Pty.), Ltd., and **Air Zimbabwe, Ltd.**

Twice-weekly roundtrip service is inaugurated on February 27 from Kampala to Tel Aviv. Flights to Kigali cease. Other destinations visited from Entebbe include Bujumbura, Dar es Salaam, Dubai, Harare, Johannesburg, Lusaka, Mombasa, and Nairobi.

Following the overthrow of the democratically elected government of Silvestre Ntibantunganya by Piere Buyoya, the nations of East Africa impose sanctions on war torn Burundi. Among these is the suspension, in August, of flights by UAC to Bujumbura.

In its May 14, **1997** issue, *The New Vision*, a major Kampala-based newspaper, reports that the airline will inaugurate shuttle services from Entebbe to Goma and Kisangani in the eastern portion of the Democratic Republic of the Congo. The Ministry of Works, Transport and

Communications had been approached with a request for the service by the new Kinshasa government.

A team headed by General Manager Dickinson Turinawe travels to Goma and Kisangani in late June to handle necessary logistic matters prior to the resumption of services. Piloted by Capt. Chris Owor and Ernest Yoti, a chartered B-737-53A resumes service to Kinshasa from Entebbe on July 7. Transporting 100 passengers and an official Ugandan government delegation led by State Minister for Foreign Affairs Rebecca Kadaga, the aircraft first makes a brief stop at Goma, where it is welcomed by local government officials.

Flight 561, the B-737-2N0A with 4 crew and 100 passengers develops engine problems just after takeoff from Nairobi on October 4 on a flight to Entebbe; the aircraft returns to Jomo Kenyatta Airport where it makes a safe, one-engine landing. No injuries are reported, the engine is repaired within two hours, and the plane flies on to Entebbe with no further problems.

During October, plans are completed that will have **Air Tanzania Corporation** and Uganda Airways merge with **Alliance Airlines (African Joint Air Services)**, forming the core of **Alliance Express, S.A. South African Airways (Pty.), Ltd.** and Transnet, its government-owned parent firm, are expected to cover costs.

The goodwill trip and other activities does little to take away from the fact that the financially troubled airline is, by year's end, an economic disaster. The chartered Boeing that had flown to Kinshasa has been returned; the company has no flyable aircraft of its own and "huge liabilities."

Resources are found early in 1998 to recharter the B-737-53A, which is employed to operate twice-weekly return service to Dubai. The company begins to plan for a code-sharing service with **Air Zimbabwe Corporation** between Entebbe and Dubai with a Zimbabwean B-767-2N0ER in October.

A crisis erupts with **Alliance Airlines (African Joint Air Services)** during the late spring.

On May 13, **Alliance Airlines (African Joint Air Services)** corporate secretary Frederick Ochieng-Obbo calls a press conference to announce that the carrier's legality is not, in fact, being investigated by the Ugandan government. The story had earlier gained currency as the result of a letter to that country's transport minister, John Nasasira, written by Uganda Airlines General Manager Turinawe. Ochieng-Obbo believes Turinawe had written the "malicious" communication because his company does not "understand the way we are structured, even though they are a shareholder."

There the matter rests as the government of Uganda appoints a privatization unit to oversee the process of turning Turinawe's carrier from a state-run airline into a commercial enterprise. Equator Bank is retained to assist in the fiscal arrangements necessary for privatization. The air carrier is one of more than 30 public enterprises in various stages of preparation for divestiture; indeed, over 70 have been sold since 1992 when the privatization process began. President Museveni indicates that he wants UAC sold by the end of March 1999.

Negotiations are opened with six (later four) different airlines concerning a possible stake in Uganda Airlines, Ltd. Among the suitor finalists are **Air Mauritius, Ltd.**, **British Airways, Ltd. (2)**, **South African Airways (Pty.), Ltd.**, **Alliance Airlines (African Joint Air Services)**, and **Sabena Belgian World Airlines, S.A.** The company chosen will also be asked to develop Entebbe Airport into a regional air transport hub.

Rebellion erupts in Laurent Kabila's Democratic Republic of the Congo on August 2 and as the fighting develops, Uganda and Zimbabwe find themselves on opposite sides. Zimbabwe President Robert Mugabe sends troops to support Kabila, while Uganda finds itself supporting his opponents.

As might perhaps be expected, business ties between the two airlines become strained. Additionally, all scheduled Uganda Airlines services to Goma and Kinshasa are suspended.

In early August, the Ugandan national Parliament decides to suspend the entire national privatization process. As a result of this controversial

move, the country stands to lose billions of shillings and become entangled in costly litigation arising from breach of several contracts.

For the airline, the decision of the lawmakers makes it necessary to suspend the international bidding process and requires the government to continue its support. Additionally, maintenance work cannot now be contracted or IATA bills paid and all of the divestiture audits (which cost \$150,000 to conduct) will become outdated.

In addition, it is expected that the bidders will all withdraw their offers and that there will be difficulty in attracting credible new offers. Indeed, the company will probably be banned from international flights not only because of air safety concerns, but because it cannot provide alternative sources of funding with which to pay its out-of-country bills.

On August 23, Prime Minister Matthew Rukikaire announces his decision to ignore Parliament's resolution and to proceed with privatization. International developments will pose the prospect of further delay for that action.

In a letter to the Ugandan airline's Acting Managing Director Derek Else in early September, **Air Zimbabwe Corporation** CEO Donohoe cancels the joint Dubai operation due to commence in October. At the same time, he refuses to renew the lease of the B-737-2N0, due in November, claiming that Air Zimbabwe has new use for the Boeing. It will be claimed elsewhere that Uganda Airlines is employing the aircraft to ferry military supplies to the Congo. The Ugandan line will be left only with a single chartered B-737-53A.

Uganda Airlines requests a six-month extension for the B-737-2N0 it has been chartering, while attempting to persuade officials at Harare that business should come before politics. When the Ugandan government learns of the airline's entreaties, it orders Managing Director Else to break off negotiations with AZC and find an alternative source for aircraft.

Managing Director Else indicates that the schedule can be reworked and operated with one aircraft, but worries what will happen if the plane breaks down or crashes. Officials of Prime Minister Rukikaire's government hope that privatization can, in fact, be completed before the lease expires in November as the new partner would be expected to provide new aircraft.

On October 9, the Ugandan army bans all aircraft from entering the airspace over the industrial town of Jinja and the capital of Kampala. It is suggested that the precautionary move, which impacts the airline, is in response to growing threats from Sudan.

Despite regional tensions, scheduled service is maintained to Nairobi, Kigali, Dubai, Johannesburg, Harare, and Lusaka. Agreement is reached with **British Airways, Ltd. (2)** for the inauguration of Saturday service between Entebbe and London in January.

Prime Minister Rukikaire's push for privatization continues. Under his direction, the Public Enterprise Reform and Divestiture Committee announces that 51% of the state airline will be sold to Ugandans, with the remainder going to the international airlines with which Uganda Airlines has been in negotiation. One of the airline's most profitable activities, cargo handling at Entebbe is now privatized. Unhappily, the carrier cannot raise the 9 billion Ugandan shillings needed to pay the displaced workers.

Like **Air Tanzania Corporation**, Uganda is finding it impossible to proceed toward privatization without the international traffic rights it had given away to **Alliance Airlines (African Joint Air Services)** in 1994. Prospective investors inform the airline that they will not provide equity without the rights. Like the Tanzanians, Uganda must decide on whether to remain in the consortium and face the prospect of not privatizing or pulling out.

As these considerations continue, the airline draws closer and closer to fiscal collapse. On November 9, the carrier is ordered to pay the \$500,000 it owes Shell Uganda for avgas; as it does not have the cash, the carrier is permitted to begin making installment payments.

It is reported on November 11 that Uganda Airlines will be privatized in four days. The next day, its public relations director, Hadija Naki-tende, informs the press that it will no longer pursue business opportunities with AZC, having turned to **Air Djibouti, S.A.** and achieved an agreement for an Entebbe-Dubai service beginning early in 1999.

Over the next several days, Uganda Airlines receives numerous offers of aircraft from around the world, with the majority coming from the U.S.

With the return of the B-737-2N0 on November 15, all business dealings with **Air Zimbabwe Corporation** are severed.

On December 8, the Parliamentary Select Committee on Privatization reports, according to *The New Vision*, that the entire governmental privatization effort of the airline and other entities has been manipulated by nepotism and politically powerful families. It also calls for the dismissal of four Cabinet ministers involved.

With regards to Uganda Airlines, State Planning Minister Sam Kutesa and Works, Housing, and Communications Minister John Nasasira are alleged to have employed political influence to run down the airline. Several other ministers are cited for failing to supervise privatization. It is found that in-flight catering services have been wrongly advertised—no bids have been received and awarded to allies. Ground handling assets, which have previously contributed up to 60% of the airline's income, have been similarly disposed of in an "ad hoc, unprofessional, unethical and unfair" way to a monopoly consortium planned by Minister Kutesa.

The Ugandan Parliament schedules hearings on the transactions.

To reduce costs and increase efficiency, the carrier, during the first week of January 1999, fires 72 workers.

Ugandan Finance Minister Gerald Sendaula reports to a key privatization working committee of the Parliament on January 5 that three foreign carriers have informed the government that they have reservations concerning their bids to participate in the privatization of Uganda Airlines, now scheduled for March. The reservations are based on the fact that the carrier does not control its international routes, which are now operated by **Alliance Airlines (African Joint Air Services)**.

The finance minister informs the legislators that he will approach a shareholders meeting of the AJAS consortium later in the month and seek a guarantee of its routes. If the issue is not resolved diplomatically by the end of January, the Ugandan government will issue a 12-month notice of withdrawal from the AJAS Accord and Shareholders' Agreement.

On January 25, the leaders of Kenya, Ethiopia, Eritrea, Tanzania, and Rwanda lift sanctions against Burundi during a summit meeting at Arusha, Tanzania. Consequently, a UAC B-737-53A resumes twice-weekly roundtrips from Entebbe to Bujumbura on February 2.

The Parliamentary privatization working committee on February 3 rejects any option of entering into negotiations with bidder Transnet/**South African Airways (Pty.), Ltd.** on grounds that it would preempt the question of the disputed route rights.

Instead, the group, in order to meet the March 1 deadline of President Museveni, recommends that the government form a limited liability company to which all of UAC's assets would be transferred while the government continues to shoulder its liabilities. One of the four foreign carriers should be chosen during the next month; if one is not, the Ugandan government will have to invest another \$1 million into its state airline.

Although no action has been taken on the creation of a limited liability company, the committee investigating the activities of former Minister Kutesa report that, although he and his associates are guilty of shady practices, the ownership by Kutesa's group of the airline's former ground handling activity is legal.

On March 7, Joachim Buwembo of *New Vision* calls upon the government to buy back the ground-handling concern and to move ahead with privatization. D. S. Katongole responds in the March 14 issue of the same journal that such a move would not be necessary. Effective in February, ground handling was liberalized, per the National Aviation Policy, and the monopoly on ground handling at Entebbe Airport ended. Any organization, including Uganda Airlines, can handle its own cargo and other ground activities.

The number of weekly roundtrips between Entebbe and Johannesburg is increased on April 19 from two to three, while a third weekly flight to Dar es Salaam is simultaneously added in cooperation with **Air Tanzania Corporation**.

As the week progresses, employees and others become excited as the prospect of a conclusion to the initial stage of a long-delayed privatiza-

tion. Technical proposals are scheduled to be presented by bidders on April 23, after which a preferred partner will be chosen to take over the airline, owned flight equipment assets of which include just one out-of-service Fokker Friendship.

The choice will be made from among **British Airways, Ltd. (2)**, **Sabena Belgian World Airlines, S.A.**, and a consortium of **South African Airways (Pty.), Ltd.** and its sister **Alliance Air (African Joint Air Services)**. All liabilities incurred by the company up to April 30 will be assumed by the government and assets will be transferred to a new Uganda Airlines, Ltd.

South African Airways (Pty.), Ltd. and its partner **Alliance Air (African Joint Air Services)** are, by late April, ready to quit the bidding process for the carrier. The two partners had insisted on not being saddled with the entire Uganda Airlines debt, including the lease on a B-737, and have less than parity on the board of directors. They also required that the business and capital investment plans already drawn up be binding, that certain airports become hubs, and that brand names and airline codes continue to reflect Uganda. All of these concerns are rejected by the Ugandans.

Indeed, on April 21, the two airlines do withdraw from the UAC bidding process. So concerned is Ugandan Privatization Minister Manzi Tumubweine that he personally calls CEO Coleman Andrews and obtains a meeting to review the outstanding issues. Within several days, the two sides have convened and the Ugandan government has agreed to water down or delete entirely all of the requirements that SAA has found objectionable. Events will, arguably, prove this decision on the part of the Ugandans to be a wise course of action.

After both **British Airways, Ltd. (2)** and **Sabena Belgian World Airlines, S.A.** pull out of the tender process, **South African Airways (Pty.), Ltd.** and its protégé, **Alliance Air (African Joint Air Services)**, are the only prequalified bidders to make an offer for the available 49% stake in Uganda Airlines, Ltd.

On April 30, the Ugandan government, via the Parliamentary Select Committee on Privatization, cancels the tender process and invites SAA to negotiate the purchase during the week of May 3. In announcing the decision, Michael Opagi, the committee chairman, indicates that the government continues with its plans to sell off the remaining 51% of the loss-making carrier over the next year. A total of 5% will be offered to employees and the remainder floated on the open stock market.

In a letter from Ugandan Privatization Minister Tumubweine, **South African Airways (Pty.), Ltd.** is informed that his government will negotiate directly with the airline with a view of reaching an agreement by May 31.

It is reported on May 5 that the airline's chief cashier and manager of revenue services have been detained as suspects in a massive fraud investigation; upwards of \$127,000 has been stolen from UAC via the improper use of American Express credit cards.

Discussions with **South African Airways (Pty.), Ltd.** drag into June, with members of Uganda's Parliament upset over a plan to remove the carrier's "QU" call sign and privatization unit members concerned that the South African major is not fully wedded to the concept an Entebbe hub. By June 22, *The New Vision* reports that the carrier is losing a billion Ugandan shillings a month.

On December 7, **South African Airways (Pty.), Ltd.** officials travel from Johannesburg to Uganda where, in discussions with Ugandan President Yoweri Museveni, they make an offer to purchase a 49% stake in his troubled flag carrier.

Due to be handed back to Ansett Worldwide a month earlier, the chartered B-737-53A is not returned until the third week of February 2000. Penalties of \$280,000 are assessed. Unhappy with the inability of the Ugandan government to come to a decision concerning its equity offer, on March 28 SAA drops its offer to buy Uganda Airlines.

After stepping back from a call for the April closing of **Alliance Airlines (African Joint Air Services)**, Transnet, parent of **South African Airways (Pty.), Ltd.**, instead gives warning that it wishes to pull out of the joint venture within six months. It does, however, agree to provide

funding as long as Uganda and Tanzania agree to a new business plan and contribute monthly funding of \$126,000 each.

With no other buyers in sight and the concept of privatization nearly dead, the airline lays most off its staff on April 7.

During the third week of May, Uganda Airlines and **Air Tanzania Corporation** inaugurate joint daily service over a direct route from Dar es Salaam to Entebbe. The flights upgrade a previous twice-weekly schedule and allow connections to international destinations, as well as points within Tanzania.

Uganda fails to make payment of any kind after May and Tanzania escapes the cash contribution by providing **Alliance Airlines (African Joint Air Service)** with in-kind services, such as landing fees and ground handling. The two national governments, acting in consultation, do agree to sell their shares into the private sector, thereby minimizing state involvement in the joint venture. Their national carriers, meanwhile, concentrate on a new daily roundtrip schedule jointly introduced between Dar es Salaam and Entebbe.

During a June 1 robbery at Wamala, six Sudanese Kuku tribesmen allegedly murder former Uganda Airlines Commercial Services Manager Davis Joash Mugizi and wound several other people. On June 26, Manzi Tumubweine, Ugandan minister of state for finance, assures a travel agencies convention at Kampala that Uganda Airlines may be structurally changed, but that it will continue as an operational entity. He does, however, indicate that it owes the government repayment of a 1997 loan of \$650,000, which he will obtain when he visits the company within a few days.

Blaming leaders of its partner nations, particularly Tanzania, for its inability to perform to a higher level, **Alliance Air (African Joint Air Service)**, during the first week of September, reports a \$50-million loss since 1994.

On September 18, a new air service pact is entered into between Namibia and Uganda. Under its terms, **Air Namibia (Pty.), Ltd.** will launch its first direct scheduled service into East Africa on September 26 with flights code-shared with Uganda Airlines between Windhoek and Kampala. Last minute instructions to the management of their carrier from the Uganda privatization authorities put the flights on hold.

On October 2, **DAS Air Cargo, Ltd.** and the Tanzanian Chamber of Commerce step forward with an offer to purchase 30% stakes (the Uganda and Tanzania holdings) each in Alliance, with DAS also bidding \$5 million to take over the 40% stake held by Transnet. The deal is conditional in that DAS must also be given traffic rights to the Alliance routes and the Alliance debt must be satisfied.

The **DAS Air Cargo, Ltd.** rescue effort collapses on October 10. With both Uganda and Tanzania having failed to pay their part of expenses, **South African Airways (Pty.), Ltd.** refuses to continue operating its Boeings for the partnership airline. Without lift, the company is forced to suspend all operations the same day.

All hope for any arrangements with **Air Namibia (Pty.), Ltd.** are crushed on October 13 when the Ugandan airline is liquidated and its last aircraft, an F.27-600, is sold.

UGANDA AIRWAYS CORPORATION: Uganda (1976–1986). With an initial capitalization of 75 million Ugandan shillings, this carrier is formed in 1976 as a subsidiary of the Uganda Development Corporation. Following the sudden collapse of **East African Airways Corporation** in late winter 1977, the airline assumes responsibility for both the nation's domestic and international air services and takes over **Uganda Aviation Services, Ltd.**

During 1978–1979, service to domestic points is started, as is service to London, Brussels, and Rome following delivery of the first Boeing 707-324C, a refurbished ex-**Continental Airlines** machine. On April 1 of the latter year, the Boeing is destroyed in a ground accident at Entebbe; there are no other details on the incident.

A total of 79,002 passengers is flown in 1980. General Manager William Dunn's fleet now comprises the Boeing, 1 Lockheed L-188-20 Hercules freighter, 2 Britten-Norman BN-2 III Trislanders, 2 Beech

King Air 100s, 1 Cessna 402B, 1 Cessna 206, and 1 Piper PA-32 Cherokee Six. Pooled all-cargo services to London are undertaken in cooperation with **Tradewinds, Ltd.**

Airline employment is increased by 3.1% in 1981 to 1,161. A second B-707-324C is delivered, joining a sister-ship, two Fokker F.27s, and a Beech King Air in the company fleet. Service is launched to Cairo, Cologne, and Dubai.

Freight traffic skyrockets 255.6% to 32.28 million FTKs, but customer bookings, despite a 24% increase in revenue passenger miles operated, drop by 25.4% to 63,000.

During 1982–1984, services are started to Dar es Salaam, Kilimanjaro, and Nairobi in Africa, but the Cologne service is withdrawn. No fleet changes take place and traffic figures are not available. In 1985 the company experiences a very bad year. General Manager Colonel G. W. Toko is named minister of defense in the new government formed in July.

On November 11, rebel National Resistance Army soldiers hijack a B-707-324C with 49 aboard after its departure from Entebbe. Security police search houses near the airport and arrest 200 people in connection with the theft. Two days later, the aircraft, which has returned to Uganda's main airport, but is in bad condition, is released, save for 10 government soldiers who are held as POWs as the rebels make their escape.

For nonpayment of maintenance bills, the second and last serviceable B-707-324C in the fleet is impounded at London (LGW) on December 24. Travelers are embarrassingly stranded in the U.K. over Christmas.

In May 1986, the carrier's 1,000 personnel are cut by 400 as the airline seeks profitability and is reformed into **Uganda Airlines, Ltd.**

UGANDA AVIATION SERVICES, LTD.: Uganda (1965–1977). The nation's Piper Aircraft distributor, UAS is established at Entebbe in late 1965 under the direction of D. J. Hogg. Employing small Pipers, the company, in the spring of 1966, launches a program of inclusive-tour passenger charters to Arua, Gulu, Lira, Moroto, and Soroti, towns that ring three national parks. These services continue until the company is taken over by Uganda Airways Corporation in 1977.

UKHTA ENTERPRISE (UKHTINSKOE GUSUDARSTVENNOE PREDPRIATIE): Russia (1993–1996). Established at Ukhta in 1993, this new regional provides ad hoc passenger and cargo flights to domestic locations and also operates ambulance, agricultural, and energy-industry support services. The mixed fleet of fixed- and rotary-wing aircraft includes Antonov An-2s, Yakovlev Yak-40s, and Mil Mi-2, Mi-6, Mi-8, Mi-10, and Mi-26s.

General Director Ye Yu Starkov's carrier continues its operations without substantial change in 1994. Flights cease in 1996.

UKRAINE AIR ALLIANCE: P.O. Box 136, Kiev, 270054, Ukraine; Phone 7 (34522) 242 349; Fax 7 (34522) 242 288; Code UKL; Year Founded 1992. This joint stock company is established at Kiev on February 28, 1992 and is one of the first private enterprises established in the Ukraine following the breakup of the Soviet Union. Plans are made for the initiation of domestic, regional, and international passenger and freight charters.

Valen Marinitchemko is director general and he begins revenue services in early 1993 with four Antonov An-32s.

Service is maintained without incident or headline during the remainder of the decade. During these years, the fleet is increased to include 2 An-12s, 1 An-24V, 2 An-26s, 2 An-32s, and 1 An-74–2000.

UKRAINE INTERNATIONAL AIRLINES: Propekt Peremogy 14, Kiev, 252135, Ukraine; Phone 380 (044) 221-8135; Fax 380 (044) 216-7994; <http://www.uia.ukrpack.net/1252>; Code PS; Year Founded 1992. Ukraine International is founded at Kiev in October 1992 as a joint venture between **Air Ukraine** and GPA, later GE Capital Aviation Services (GECAS), with the former owning 88% of the shareholding. The western lessor provides Manager Vitali Potyomski's new international carrier with two chartered Boeing 737-400s in early 1993.

At the same time, a code-sharing agreement is signed with **Austrian Airlines, A.G.** covering routes from Kiev, Dnepropetrovsk, and Odessa to Vienna. The Vienna-based flag carrier also acquires equity.

The new jetliners also inaugurate and continue flights to London, Paris, Frankfurt, Amsterdam, Manchester, Munich, Berlin, Milan, and Brussels. Orders are placed for B-767-300ERs with which to launch transatlantic flights in 1995. Also in 1993, GPA seconds Richard Creigh to the carrier to act as vice president. He is also named to the company board and thus becomes the first non-Soviet director of any of the new CIS airlines. By the end of the decade, he will be the only non-CIS director with any real executive authority.

The financial break-even point is reached in 1994, at which point the Ukrainians seek 25% in expanded equity from private Western interests. Enplanements approach 250,000.

In August 1995, UIA launches dual-designator flights from Kiev to Madrid in partnership with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Additional destinations added in 1996 include Barcelona and Zurich. The company now also visits Kiev, Larnaca, Riga, Rome, Athens, Budapest, and Vienna. In July, the Ukraine government elects to partially privatize the concern. Foreign airlines seek shareholding.

The Zurich-based flag carrier **Swissair, A.G.** takes an equity interest in November; together, **Swissair A.G.** and **Austrian Airlines, A.G.** own a combined 18.4%. The GPA Group stake is now 13.3%, while the State Property Fund for Ukraine holds the majority (68.5%) interest.

Airline employment in 1997 grows to 470.

During the spring, the company contracts with **Transavia Airlines, N.V.** of the Netherlands to operate on its behalf numerous scheduled flights out of Kiev.

On May 1, the carrier joins with **AMADEUS, S.A.** and the Ukraine Civil Aviation Computer Centre to form a new company to market the Amadeus reservations system in Ukraine. Travel agencies and others employing Amadeus will be able to gain information on UIA flights and book seats.

Code-sharing is now inaugurated with **Swissair, A.G.** between Kiev and Zurich.

On a flight to Greece on December 17, a Yak-42 with 75 aboard goes down near Mount Olympus; there are no survivors.

Enplanements during the 12 months total 143,420.

With the beginning of the summer season at the end of March 1998, new frequencies are extended to Belgrade. Four-times-a-week Yak-40 roundtrips are inaugurated on June 22 between Kiev and the Crimean capital city of Simferopol.

Passenger boardings jump 29% to 202,000, while freight traffic increases 75% to 3.94 million FTKs.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, UKI, on March 24, 1999, halts all scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo begins.

Service to Belgrade remains halted on March 25 and for the duration of the NATO bombing campaign. Flights throughout south-central and south-eastern Europe experience delays of 30–60 min. due to airspace closure.

On April 13, an An-24 is detained at Kishinev, Moldavia. Customs officials, inspecting the aircraft, en route from Hungary to Yemen with a declared cargo of oil production equipment, have found 5,000 undocumented pistols. It will be some time before the matter can be straightened out and the aircraft, minus its confiscated cargo, released.

Yugoslavia bends to NATO will on June 11.

Flights to Belgrade are resumed in the fall.

Customer bookings total 193,000 during the year and 4.94 million FTKs are operated. Revenues total \$55 million.

Airline employment at the beginning of 2000 total 702, a 49.4% increase over the previous 12 months. The fleet now includes 5 Boeing 737s, 2 Dash-35Bs, and 1 each Dash-247A, Dash-2T4A and Dash-32Q.

It is announced on May 25 that the carrier will soon inaugurate regularly scheduled services from Kiev to Copenhagen.

The carrier enters into several new code-sharing agreements to promote service to Western Europe. Effective September 12, a dual designator flight operated with **KLM (Royal Dutch Airlines, N.V.)** is added from Kiev to Amsterdam. Three days later, in cooperation with **Blue Panorama Airlines, S.p.A.**, twice-weekly B-737-4K5 roundtrips are inaugurated from Kiev to Milan. UIA launches its own thrice-weekly return flights on October 4 between Kiev and Copenhagen.

UKRAINIAN CARGO AIRWAYS: 19/21 Frunze Str., Kiev, 254080, Ukraine; Phone 38 (044) 463 7004; Fax 38 (044) 463 7002; <http://www.avia-uca.com.us>; Code UKS; Year Founded 1997. The State Property Fund of the Ukraine establishes this charter carrier at Kiev in July 1997 to make use of surplus transport aircraft available from the downsizing Ukrainian Air Force. Nikolas M. Mayak is elected president and he takes the 6 months to refurbish a fleet of 18 Ilyushin Il-76s, 1 Il-62M, 6 Antonov An-24s, 5 An-12s, and 3 Tupolev Tu-154s.

Revenue passenger and cargo charters are inaugurated in January 1998 to domestic and international destinations.

While on approach to Asmara after a July 17 service from Burgas, an Il-76 with nine crew and a passenger crashes into a hillside seven km. short of the runway; there are no survivors.

Flights continue in 1999. Business in southeast Europe is impacted by the April and June Kosovo crisis.

Service continues apace for the remainder of the year, with UCA winning contracts from the UN to provide humanitarian flights into the Sudan, Kosovo, and the Democratic Republic of the Congo.

Early in 2000, a Tupolev Tu-154B-2 is added and employed to launch medium-haul passenger charters. At the same time, a homepage is opened on the Internet's World Wide Web.

UKRVOZDUKHPUT (UKRAINSKOE AKTSIONERNOE OB-SHCHESTVO VOZDUSHNYKH SHOOBSHCHENII): Ukrainian Soviet Socialist Republic (1923–1930). Meeting at Kharkov on March 26, 1923, representatives from a variety of Ukrainian organizations agree to create the Ukrainian Air Service Joint-Stock Company (Ukrainskoe Obshchestvo Vozdushnykh Shooobshchenii). "Ukrairways," to give it an English translation, is also known as Ukrvozdukhput (UVP) from its initials. V. N. Ksandrov, chairman of the Supreme Ukrainian Council for National Economy (Ukrsovnarkhoz) is elected managing director and initial share capitalization is 550,000 gold rubles.

The Ukrainian Council of the People's Commissars ratifies the company's statutes on June 1. Orders are placed for six Dornier Komet IIs and planes are made to open services in August. Airports are created at Kharkov (combined with a racetrack), Kiev, Odessa, Elisabetgrad, and Poltava, together with several emergency landing fields. While Soviet pilots are trained, three German flyers are recruited to fill the gap: Walter Neun, Egon Fath, and one Zinneimer.

After tests and modifications, the first two Dorniers arrive on September 5 and, like those that follow, are given a blue and yellow livery. The first two Komet IIs are officially presented on September 30 and are christened *Donets-Zheleznodorozhnik* and *Ukraina*. The final four are acquired on November 18: *Kharkovskii Metallist*, *Krasnyi Khimik*, *Kharkovskii Proletarii*, and *Ukrvenshtorg*. By the time the last aircraft are available, it is too late in the year to begin services.

Two routes are proven by the company's German pilots during the first quarter-and-a-half of 1924: Kharkov to Odessa via Elisabetgrad and Kharkov to Kiev via Poltava. A 46-ruble, 80- kopeck one-way fee will be charged for each of the 3 hr. 35 min. flights. Scheduled services are launched with ceremonies on May 25 and, after a month, 90 passengers and 350 kg. of cargo has been flown. When the flying season ends on October 1, records reveal that 347 persons have been flown on 118 scheduled flights; another 413 passengers have been accommodated on charters. Late in the year, orders are placed for seven Dornier Komet IIIs and the first of nine Soviet pilots is employed.

The routes and services of **Junkers Luftverkehr Russland, A.G.** are acquired early in **1925** and the year's Kiev services resume on April 15. The first three Komet IIIs arrive in June and are employed in mid-month to reopen flights to Odessa and to begin service to Moscow. The remaining four Komet IIIs arrive during July and August and enter service before the company is closed down for winter on September 23.

With five additional Komet IIIs on hand, Ukrvozdukhput opens its **1926** season in early April. While attempting to land at Kharkov on May 19, a Komet III, with four aboard and engine failure, attempts to avoid a horse race in progress, but hits a tree and crashes into an unoccupied viewing stand; there are no survivors from the company's first fatal accident. The aircraft, however, will be rebuilt as a Merkur and returned to service.

Flying another Komet III, pilot I. P. Shurygin undertakes a proving flight, beginning on May 17, from Kharkov to Baku and Tbilisi. A month later, on June 20, scheduled flights are inaugurated by V. M. Melnikov over a route from Moscow to Tbilisi via Orel, Kharkov, Artemovsk, Rostov-on-Don, Mineralnye Vody, Grozny, Baku, and Evlakh. At Moscow, connections are established with Dobrolet and at Tbilisi with **Junkers-Luftverkehr's** Persian service. The 114-hr. train trip from Moscow is cut to 38 hrs. by air.

A Komet III is lost in a July 28 crash. During the fall, the company receives two more aircraft. One is an old Red Air Force de Havilland DH 34 and the other is a brand new Dornier Merkur, received in October after its September sales trip from Germany to Moscow and points south.

The Komet II *Ukraina* is lost in a fire on May 8, **1927**. In need of additional capacity, two Fokker F-IIIs are chartered from **Deruluft** later in the month. On June 2, a new Aerial Photography Department, under I. K. Kirillov, is created to officially take over the agricultural reconnaissance work performed over the past two years. The Dornier IIs *Donets-Zheleznodorozhnik*, *Kharkovskii Metallist*, and *Krasnyi Khimik* are converted into camera ships and are assigned to the unit.

A Komet III must be written off following a July 28 crash, but the leased Fokkers are purchased from **Deruluft** in August. Following some negotiation, a pact is signed in October with the Persian branch of **Junkers-Luftverkehr** for a joint Ukraine-Persia service. Following successful completion of a December 1 proving flight to Pakhlevi, the agreement is endorsed by the Soviet and Persian governments. Enplanements for the year total 2,320.

Employing a Ukrainian Komet III, Moscow to Pakhlevi scheduled services are inaugurated in February **1928**, but the aircraft is lost in a crash at Pakhlevi on April 7. A third Deruluft Fokker is purchased in April and in early June a new Junkers F-13 is acquired. Placed on the Persian service, it makes its initial flight to Tehran on June 28. Two Kalinin K-4s, the first successful Soviet-designed airliner, are received, one each in July and August.

The Fokker acquired in April is withdrawn following a crash on October 11. On December 11, the Council of Civil Aviation determines to alter the Moscow to Baku route. The service is sent south (instead of north) of the Caucasus and along the Black Sea coast via Sochi, Sukhum, Kutais, Tbilisi, and Gandzhe. It actually stretches over the route network of the small Caucasus airline **Zakavia**, which is acquired and merged. Enplanements for the year total 3,050.

The fleet at the beginning of **1929** includes 4 Komet IIs, 5 Komet IIIs, 2 Merkurs, 1 DH-34, 2 F-IIIs, and 8 K-4s. Eighteen of the latter type will join the fleet during the year. The Komet II *Krasnyi Khimik* is lost in a crash on May 15 and the *Kharkovskii Proletarii* is retired on May 30. While en route from Sochi to Tbilisi on June 25, a K-4, piloted by M. Pavlov with five passengers aboard, develops engine trouble and crashes into the Black Sea (two dead).

One of the last two F-IIIs is withdrawn on July 10. The Sochi-Tbilisi route is now the company's most dangerous. Just after takeoff from the former point on August 24, an overloaded K-4 crashes into the Black Sea (one dead). The last F-III is retired on August 29 and two K-4s are transferred to the Red Air Force at month's end. Control problems force

I. S. Zakharov to crash another K-4 at Sukhum on September 12; no injuries are reported. Six days later, the Council of Civil Aviation suspends the Sochi-Tbilisi service, which a commission of inquiry will find too difficult for single-engine aircraft. Ukrvozdukhput is required to return to its previous Baku routing, north of Caucasus via the Caspian Sea.

The DH-34 is withdrawn from service on September 23 and the flying season ends on October 1. Enplanements for the last year of flying total 4,040, with 20,550 kg. of mail also transported.

As a result of the Soviet government's 1928 Five-Year Plan, the central decision is taken in Moscow on December 12 to end the joint-stock status of the carrier and its Russian neighbor **Dobrolet** and to merge both into a single state-owned national airline.

The last Ukrvozdukhput stockholders meeting is held at Kharkov on January 15, **1930**. Three days later, a final fatal accident occurs at Baku when a K-4 smashes into a mast at the airport (three dead). The company ceases to exist on January 20, being merged into the new **Dobroflot**.

UKUNDA AIR, LTD.: Kenya (1990–1992). Ukunda is established at Nairobi in **1990** to offer scheduled and charter passenger flights to various domestic destinations, including the big game parks. Revenue operations commence with a single Dornier 228-202. The Dornier is upgraded to a Dash-212 in **1991**. Operations continue another year.

ULAN UDE AVIATION ENTERPRISE (ULAN UDENSKOE AVIA PREDPRIATIE): Russia (1994–1996). Ulan Ude is formed at the airport of that community in **1994** to undertake trunk and regional scheduled passenger and cargo services. A. P. Abashev becomes general director and he undertakes revenue flights with a fleet of 1 Tupolev Tu-154B/M, 2 Let 410s, 24 Antonov An-2s, 10 Antonov An-24s, and three Antonov An-26s.

Enplanements total 186,597.

The carrier's 70 aircraft transport a total of 162,400 passengers in **1995**, a 15.9% decline. Freight traffic also falls, dropping 23.9% to 4.67 million FTKs.

In **1996**, the company is reformed and renamed **Buryat Airlines**.

ULSTER AIR TRANSPORT, LTD.: United Kingdom (1967–1970). On December 1, **1967**, UAT is formed at Aldergrove Airport, Ulster, to acquire the assets of bankrupt **Emerald Airways, Ltd.** The trading name **Air Ulster, Ltd.** is adopted, J. W. Rigby is named managing director and the ex-**Emerald Airways, Ltd.** Douglas DC-3 is obtained, refurbished, and delivered on January 25, **1968**. A second DC-3 is leased from **British United Airways (BUA), Ltd.** for a quarter. Revenue charter operations commence in February. A second DC-3 is placed into service in March and on April 8 scheduled Belfast-Glasgow service is introduced. Later, a Belfast-Prestwick schedule begins. A variety of ad hoc charters are flown during the summer, including replacement service for BUA on routes from the Isle of Man to Blackpool and Belfast.

Early in **1969**, the company enters into an association with newly formed **Phoenix Airlines, Ltd.** and later undertakes a variety of charters for the Liverpool-based carrier. A DC-3 is leased from **Skyways Coach-Air, Ltd.** to replace a Douglas withdrawn in July. Also in this month, a Vickers Viscount 803 is leased for five months from **Aer Lingus Irish Airlines, Ltd.** and is assigned to the Belfast-Prestwick service.

With losses on all services growing steadily more oppressive, the carrier ends the year in the red and on January 5, **1970** ceases all flight operations.

ULSTER AVIATION, LTD. See **NORTHWEST AIRLINES (ISLE OF MAN), LTD.**

ULTIMATE JET: 3153 Donald Douglas Loop South, Santa Monica, California 90405, United States; Phone (310) 915-7557; Fax (310) 915-7565; Year Founded 1993. Ultimate Jet is established at Santa Monica Municipal Airport in **1993** to provide executive and small group

passenger charters throughout the Western Hemisphere. Revenue flights begin with 2 each IAI 1124 Westwinds and 1 Mitsubishi Mu-2.

ULTRAIR: United States (1992–1994). The new passenger charter operator **Airline of the Americas** is established by Houston entrepreneur Barney Kogen and his associate Gordon Cain, chairman of the Sterling Group banking firm, at Smyrna, Tennessee, in the spring of 1992 to offer nonscheduled flights to destinations throughout the eastern U.S., the Caribbean, and to Mexico.

Employing a pair of chartered re-engined ex-**Trans World Airlines (TWA)** Boeing 727-231s, the company of President Charles P. Caudle, formerly an executive with **Pan American World Airways (1)**, inaugurates revenue services in June. A total of 27,000 passengers are flown by December 31.

In January 1993, President Caudle oversees a workforce of 100. Kogen and Cain invest \$10 million in the spring to create Ultrair and employing the Airline of the Americas certificate, transfer it to Houston, where it will begin to provide luxury scheduled service to a variety of domestic destinations. From Houston (IAH), roundtrips are begun twice daily in March to Newark and thrice daily to Los Angeles, with a leased fleet of 3 Boeing 727-225As, 1 B-727-214A, and 2 B-727-231s.

When success is not immediate, President Caudle is replaced by Ronald Ridgeway, former head of **Braniff, Inc.** Operations commence between Houston (IAH) and New York (LGA) in April and weekday roundtrips to Washington, D.C. (DCA) begin in May. This marketing approach is a failure and is abandoned. On July 25, Kogen's interest is sold and the company ceases its luxury, scheduled services. In August, blaming **Continental Airlines** for illegal, anticompetitive, and predatory behavior, the new entrant sues the major in Galveston federal court, seeking injunctive relief and monetary damages.

The reborn airline, under the direction of new CEO J. Patrick Millinor Jr., reconstitutes itself as a low-fare, no-frills carrier on the model of **Southwest Airlines (2)**. In November, Ultrair relaunches frequencies (20 daily nonstop and single-class) from New York (JFK) to Florida destinations. The fleet is cut by the withdrawal from service of two B-727-225As.

In both service modes, Ultrair transports a total of 114,000 passengers on the year and earns revenues of \$6.4 million. Expenses are higher and there are, to no one's surprise, big losses: \$25.56 million (operating) and \$27.78 million (net).

Airline employment in 1994 stands at 200. On February 3, service is initiated from Houston and New York (JFK) to Orlando. These services are followed by the introduction of twice-daily roundtrips to Birmingham and Mobile, Alabama. Meanwhile, during the year's first six months, the carrier is only able to slide deeper into debt as the result of stiff competition from **American Airlines**, **USAir**, and the CALite division of **Continental Airlines**.

After transporting 205,000 passengers in six months, operations cease after the last flight on July 13. They are later briefly resumed, but cannot be sustained. Revenues received for the year increase by 31% to \$21.32 million. Expenses decline by 30.5%, but still read \$29.07 million and the loss lines improve to minus \$7.74 million (operating) and \$7.48 million (net).

At the beginning of 1995, the company's assets are purchased by NavCom Aviation of Manassas, Virginia. The new owners will reform the carrier into **Paradise Airways** and fly one of the B-727-231s in a new paint scheme.

ULYANOVSK CIVIL AVIATION FLIGHT TRAINING SCHOOL (ULYANOVSK VAU-GA): Russia (1994–1995). One of several Russian flight training operations that is given permission in 1994 to operate charter passenger and cargo services as a way of earning additional revenues. V. M. Rihevski is general director and he undertakes revenue flights with 9 Tupolev Tu-154B-2s, as well as an unspecified number of Ilyushin Il-62s and Il-76s.

In 1995, the concern is renamed **Simbirsk Aero Air Company**.

UMCA (URABA, MEDELLIN AND CENTRAL AIRWAYS, S.A.): Colombia (1931–1961). With a vision for a transcontinental South American air service, Gonzalo Mejia, who had helped to form **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** in 1919, is given a 15-year Colombian government route concession on January 14, 1931. The permit requires a connection with a service offered by a North American airline.

Following a meeting with **Pan American Airways (PAA)** President Juan Trippe, Mejia sees UMCA incorporated (under the laws of the state of Delaware) on August 24, taking its name from its route award, Medellin to the Gulf of Uraba.

The PAA holding company, the Aviation Corporation of the Americas, assumes 54% majority shareholding on April 13, 1932. One of Juan Trippe's Sikorsky S-38s, the *Marichu*, is now sent down to Medellin and inaugurates UMCA's twice-weekly, passenger-only services on July 12. On June 20, 1933, the government grants a mail subsidy.

Pan American Airways (PAA) retains its grip on this Colombian connection for the next 28 years, first as a method of keeping German-influenced **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** away from the Panama Canal and then as a fully owned subsidiary. UMCA never receives a livery, owns an airplane, hires a workforce or publishes a schedule; all of these are provided by the American parent.

Despite the loss of the government mail contract on September 1, 1940, the masquerade is continued until July 28, 1959 when the U.S. CAB withdraws the company's certificate. UMCA still is not finally dissolved until June 15, 1961.

UNALAKLEET AIR TAXI SERVICE: United States (1950–1979). Wilfred Ryan Sr. establishes an FBO at Unalakleet, Alaska, in 1950. Over the next couple of years, Ryan flies occasional lightplane charters between Unalakleet and Kaltag. This popular service requires Ryan to upgrade it into a regular operation in 1953. At this point, the founder operates two aircraft, with much of his business coming under a contract with the U.S. Bureau of Indian Affairs. An airmail contract is also obtained.

Over the next decade, Ryan, finally with the help of another hired pilot, operates all flights over the next decade, visiting St. Michael, Stebbins, and other communities along the lower Yukon River.

Unalakleet Air Taxi Service is officially formed in 1963 as the air transport division of Capt. Ryan's FBO. Nonscheduled passenger and cargo charters continue to be undertaken to surrounding local communities and bush destinations with a fleet that includes de Havilland Canada DHC-2 Beavers, Beech 18s, and Cessna lightplanes.

In order to inaugurate scheduled commuter flights, Ryan changes his company's name to **Ryan Air Service** in late 1979.

UNI-AIR. See **UNI AIRWAYS CORPORATION, LTD.**

UNI-AIR INTERNATIONAL, S.A.: France (1969–1994). With Hemet Aviation as majority shareholder (90%), Uni-Air is established at Toulouse-Blagnac in 1969 to offer passenger and cargo charters to various destinations in Europe and the Mediterranean. Henri Clerc is appointed president and services are inaugurated with a single Douglas DC-3.

Frequencies and fleet equipment multiplies during the next decade and in 1978 the 34-employee carrier lists a total of 5 DC-3s, 1 Cessna 421, 1 Cessna 402, 3 Beech B-58 Barons, 1 Piper PA-34 Seneca, 1 Piper PA-32 Cherokee Six, 1 Kamov Ka-26, and 1 Bell Model 47 helicopters.

During the 1980s, the company begins to provide services out of Paris (Orly) and in 1985 airline employment is 50 and the fleet comprises 4 Fokker F.27s, 3 Gates Learjet 24s, and 1 Beech King Air 90. In 1986–1987, General Manager J. Papillault and Managing Director J. P. Sauval delete one Learjet 24 and replace it with two Learjet 35As and four Aerospatiale 601 Corvettes.

In 1988–1989, the fleet is altered again as the company is taken over by the holding company Heliport. The number of Corvettes is increased

to seven, the two Learjet 24s are withdrawn along with an F.27, and a Dassault Falcon 50 and two Falcon 20s are added.

Operations continue apace in **1990–1992**, during which years J. Bastien and J. Thomas become joint managing directors. Airline employment in **1993** totals 96. Flights cease in **1994**.

UNI AIRWAYS CORPORATION, LTD.: No. 2-6 Chung-Shan 4th Road, Kao-hsiung 801, Taiwan; Phone 886 (7) 791-7611; Fax 886 (7) 791-7511; <http://www.uniair.com.tw>; Code B7; Year Founded 1996. The former **Makung International Airlines, Ltd.** is renamed in May 1996. With 51% majority shareholding held by **EVA Air, Ltd.**, the re-formed carrier of Chairman Frank Hsu and President Joseph Lin employs a workforce of 960.

With a fleet of 3 McDonnell Douglas MD-80s, 5 British Aerospace BAe 146-300s, and 2 BAe (HS) 748-B2s, the company, under the marketing name Uni Air, continues to offer scheduled passenger services that link its Taipei and Kao-hsiung bases with Hualien, Kinmen, Makung, Taitung, and Tsuxiang. The airline also offers charter services to the Philippine market of Laoag.

In August, the carrier receives permission to begin international operations. Orders are placed for five MD-90-30s, the first of which is delivered in the company's new livery at Long Beach on November 6. The BAe (HS) 748-B2s are now retired.

Airline employment is increased by 15.8% in **1997** to 1,100. The company now begins operates 131 weekly roundtrips between Taipei and Kao-hsiung plus Kota Kinabalu. Twenty-one more weekly flights are made over 11 other domestic routes. The fleet grows to include 7 MD-90-30s and 5 BAe 146-300s.

Passenger boardings increase 25.7% to 2,226,358 while freight skyrockets 51.1% to 436,000 FTKs. It is reported that a small profit is generated on the year.

In mid-April **1998**, **EVA Air, Ltd.** makes a dramatic move that will also improve its balance sheet. Triggered by the crash of a **China Airlines, Ltd. (CAL)** A300B4-622R on February 16 (202 dead) and a **Formosa Airlines, Ltd.** SAAB 340A on March 18 (13 dead), EVA employs the national debate over air safety to announce that effective July 1, it will no longer offer any domestic services. Instead, its regional subsidiaries **Taiwan Airlines Company, Ltd.**, **Great China Airlines, Ltd.**, and Uni Airways will be merged into an enlarged Uni Air, Ltd. that will provide domestic services. Safety will, however, continue to be an issue.

During July, the enlarged Uni's Dornier 228 fleet experiences 14 mechanical problems, primarily with braking systems. Just after landing at Matsui on August 9, a Dornier 228 runs off the runway. No injuries are reported. The next day, the CAA orders the company's Dorniers grounded for safety inspections.

Four additional MD-90-30s are received, one per month beginning on October 12. The new aircraft join the others in the company's fleet and are used on domestic routes, as well as on an expanding regional route system.

Passenger boardings this year increase by 49% to 3.32 million, while cargo traffic jumps 35% to 590.8 million FTKs. Revenues surge 35.2% to \$136.06 million, but expenses hit \$140.41 million. Losses are \$4.34 million (operating) and \$19.86 million (net).

During the first quarter of **1999**, the five BAe 146-300s are sold to Global Air Australia (Pty.), Ltd. The sale is occasioned by a plan between **British Airways, Ltd. (2)** and **National Jet Systems (Pty.), Ltd.** to purchase a major stake in the struggling Irish scheduled carrier **CityJet, Ltd.** and equip it with the BAe jets leased from Global. The arrangement will be thwarted by EU regulations concerning non-European ownership of EU-based airlines.

On April 16, Uni purchases a DHC-8Q-200 from Bombardier Aerospace for use on the route between Taiwan and neighboring Matsu Island.

While landing at Hualien, 108 mi. SE of Taipei on August 24, an MD-90-30 with 96 passengers, suddenly bursts into flame, with eyewitnesses reporting a fireball after the aircraft touches down. A total of 28 people are injured and it requires 30 min. to extinguish the flames.

Customer bookings skyrocket 109.6% to 2,286,000, while freight traffic increases 167.1% to 413,000 FTKs.

The workforce at the beginning of **2000** totals 1,947. While en route from Taipei to Chiayhi on April 17, the pilot of a DHC-8-300 with 56 passengers is forced to make an emergency landing at Taichung after developing engine problems. No injuries are reported.

A Bombardier DHC-8-Q400 arrives in the spring and is employed for route proving and pilot training. Due to market conditions, the carrier asks the manufacturer to postpone delivery of the six it had ordered and the one visiting Taiwan is returned to Canada, refurbished, and provided to another carrier. On July 25, a 13th DHC-8-300 is ordered.

After the failure of **U-Land Airlines, Ltd.**, the Vietnamese carrier **Pacific Airlines, S.A.** is forced to return the MD-82 it had chartered from it. At this point, Pacific is able to lease one of Uni's seven MD-90-30s.

Service is increased on November 1 between Taipei and Kinmen Island.

UNIAO TAXI AEREO, S.A. See UTA (UNIAO TAXI AEREO, S.A.)

UNIFLY, S.p.A. See UNIFLY EXPRESS, S.p.A.

UNIFLY EXPRESS, S.p.A.: Italy (1980–1990). Unifly is established at Rome's Ciampino Airport in **1980** to offer executive passenger and small group charters with Cessna 402Cs and Citation Is. These non-scheduled services continue for the next 4 years, during which time the fleet is increased with a Dassault Falcon 20 employed to transport overnight package express.

The initiation of public charter service is planned during late **1983** and arrangements are made to acquire a former **Braathens S.A.F.E., A.S.** Fokker F.28-1000. Following the arrival of the Fokker during the first quarter of **1984**, flights are started with the beginning of the European summer schedule on April 1.

Early in **1985**, agreement is reached with **Alitalia, S.p.A.** under which the charter company will fly a number of scheduled replacement services on its behalf.

In October **1986**, the company acquires a second Braathens Fokker F.28-1000 jetliner, which significantly increases capacity for the company's charters and replacement flights. During the year and in **1987**, holiday flights continue to be operated from various Italian communities to destinations in northern Europe, Greece and the Mediterranean, and North Africa.

In **1988**, the Fokkers are leased out to **Alinord, S.p.A.** and are replaced with two Douglas DC-9-15RC convertible freighters, as well as three McDonnell Douglas MD-83s and an MD-82 leased from GPA Group, Ltd.

The DC-9s undertake all-cargo replacement services from Rome to Frankfurt, flying mail and newspapers four times per week on behalf of **Alitalia, S.p.A.** The MD-80s are contracted for inclusive-tour flights.

Unifly, S.p.A. is reformed in **1989** and renamed Unifly Express, S.p.A. At this point, it takes over **Alinord, S.p.A.** and regains control of the Fokkers chartered to that carrier the year before. A number of the scheduled routes operated by the new Alinord subsidiary also pass to Unifly Express.

In **1990**, Unifly Express encounters severe financial difficulty and in an effort to cut costs, the MD-80s are grounded. Plans to wet-lease them out to other European airlines are disapproved by the company's creditors and the aircraft are, consequently, returned to their lessors. Without capacity to operate its charter obligations, the carrier is forced to rely on its few Fokker services and the DC-9-15RC cargo flights for its income. Knowing that this will be insufficient for the maintenance of economic viability, company executives attempt to reorganize and find fresh capital. Unable to accomplish the latter goal, Unifly declares bankruptcy and goes out of business in May. Within a few months, the **Alinord, S.p.A.** subsidiary fails as well.

UNION AEROMARITIME DE TRANSPORT, S.A. (UAT): France (1949–1963). Following the French government's **1949** decision to al-

low the creation of independent carriers, UAT is formed by Compagnie Maritimes des Chargeurs Reunis, the shipping line, as successor to its prewar **Aeromaritime, S.A.**, which is now absorbed as a division. Francis Fabre is named president. Destinations visited in Africa include Rhodesia, French Equatorial Africa, Mozambique, and South Africa, while several points in the Mideast also are serviced by UAT DC-4s.

In competition with **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)**, Douglas DC-4 services are begun in 1950 over routes from France to Saigon, Dakar, and Pointe Noire. On December 9, a DC-4 carrying 37 Senegalese soldiers crashes at Bangul, French Equatorial Africa; there are no survivors.

The Dakar route is extended to Abidjan in 1951 and the West African network is consolidated. Orders are placed for de Havilland DH-106 Comet I jetliners, with the first received in late fall 1952. A DC-4 with five aboard crashes near Lake Chad on November 11; there are no survivors. On December 27, the first operational DH-106 completes a Paris to Dakar proving flight in 6 hrs. 25 min. or one hour under the conventional propeller time.

En route to Paris from French West Africa on February 7, 1953, a DC-4 with 21 aboard crashes near Bordeaux (six dead). Comet Is enter service on the Dakar route on February 19 and by November, are flying as far south as Johannesburg.

The Comet I fleet is grounded on January 11, 1954 following a crash by an aircraft on **British Overseas Airways Corporation (BOAC)** inventory. UAT becomes the first civil customer for the Nord 2501 Noratlas, acquiring seven for its fleet during the summer, partially in replacement for the British jetliners now grounded.

The first Noratlas enters service on September 10 and all will be employed to haul passengers and cargo in French Equatorial Africa and the Cameroons. The jetliner ban is later lifted; however, the French civil aviation ministry, on December 5, orders all UAT Comet Is permanently grounded following a second **British Overseas Airways Corporation (BOAC)** crash off Sicily.

Orders are placed for DC-6Bs, which join the fleet as Comet I replacements in 1955. **Societe Aigle Azur, S.A.**, together with its African and Indochina routes, its subsidiary **Aigle Azur Extreme Orient Airlines, S.A. (AAEO)**, and fleet of aging Boeing 307s, is acquired and merged. AAEO is, however, allowed to continue its operations from the base at Saigon.

On April 18, a de Havilland DH 114 Heron 1B with 4 crew and 10 passengers, crashes into Kupe Mountain while on a flight between Yaounde and Doula, Cameroon; there are no survivors.

A C-54A freighter with three crew is destroyed in a bad landing at Fort Lamy, Cameroon, on June 3; there are no fatalities.

On January 1, 1956, France reorganizes its overseas air network. **Air France** retires from Africa, which routes UAT now receives in exchange for its abandonment of the Pacific to **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)**.

On March 7, 1958, the seventh and last Nord 2501 Noratlas is received and, as the earlier deliveries, is placed in freighter service in French Equatorial Africa and the Cameroons. Also during the year, UAT sponsors creation of the Libyan carrier **Libiavia** in July, and leases several DC-6Bs to it.

A DC-6B with 7 crew and 63 passengers fails its takeoff from Salisbury, Rhodesia, on December 26 for a service to Brazzaville (three dead).

The business of AAEO is wound up in 1959 and its three Stratoliners are sold to another French independent airline, **Airnautic, S.A.** On March 13, a Noratlas, with nine aboard, is lost in a crash near Banga, Chad; there are no survivors.

Orders placed the previous year for Douglas DC-8-33s, which are received in the summer of 1960. Beginning on September 10, the new Douglas jetliners are placed into service on the African routes; frequencies include Paris to Brazzaville via Marseilles and Douala, Paris to Brazzaville via Douala, and Paris to Johannesburg via Brazzaville and Salisbury. During the year, all seven Nord 2501s are sold to the Portuguese Air Force.

In association with **Air France** and in cooperation with 11 newly independent French colonies, UAT in 1961 forms the multinational carrier **Air Afrique, S.A. (2)** on March 28, modeling its consortium arrangement on the highly successful constitution of the **SAS (Scandinavian Airlines System)**. On September 14, UAT and **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)** agree, in principle, to a future merger.

The fleets and schedules of the two carriers are integrated in 1962 and a DC-8-32 is purchased from **Northwest Airlines** on October 3. The amalgamation of the two airlines is completed a year later on October 1, 1963, resulting in the creation of the new **UTA French Airlines, S.A./Union de Transports Aeriens, S.A.**

UNION AIR (PTY.), LTD.: Australia (1972–1982). In April 1972, two small carriers, **Island Airways (Pty.), Ltd.** and **Union Air (Pty.), Ltd.**, are merged; the resultant commuter line takes the name of the larger merger partner. The fleets of the two carriers are assembled and rationalized at the carrier's base at Toowoomba, Queensland, and the resultant group is employed to fly to Hervey Bay, Maroochydore, Brisbane, Maryborough, and Orchid Beach.

Services are maintained for a decade and the fleet grows to include 2 Piper PA-31-350 Navajo Chieftains, 2 Britten-Norman BN-2 Islanders, 3 Cessna 402s, 2 Beech B80 Queenaires and several smaller types. Rising expenses (led by radical fuel cost increases) and declining traffic in recessionary times lead to a cessation of services in early 1982.

UNION AIR LINES. See **WEST COAST AIR TRANSPORT**

UNION AIRWAYS (PTY.), LTD.: South Africa (1929–1934). In preparation for the inauguration of South African internal airmail service, the Union of South Africa publishes an official notice on July 19, 1929, amending its postal rate schedule. A new charge of 4d. per ounce is to be charged for the conveying of postal articles (exclusive of parcels) by Union Air Mail.

Having been in negotiation with former Royal Flying Corps veteran, Swaziland native, and South African Parliament member Allister M. Miller for some time, the government, on July 24, reaches an agreement with the aviator/politician for the establishment of an airmail and passenger service. Union Airways is chosen as the marketing name and this pioneer is simultaneously incorporated at Pretoria. Maj. Miller holds 4,998 of the 5,000 available shares, with 1 each held by Atlantic Refining Company of Africa (Pty.), Ltd. Manager Dayton P. Clark and Assistant Manager E. H. Lewis. Miller persuades Clark to serve as chairman so that he may oversee operations as managing director.

Capitalization is realized under an initial £8,000 annual subsidy (which Miller has helped achieve) from the South African Parliament. A fleet of 5 de Havilland DH 60G Gypsy Moths is assembled at Fairview Aerodrome at Port Elizabeth. A cadre of pilots, including Caspar Caspareuthus, William F. Davenport, and Graham Bellin, plus mechanics, is recruited.

Union receives a three-year license from the government to operate first mail and then mail and passenger services scheduled to connect with the arrival of the Union-Castle Mail Steamship Line's vessels coming into Cape Town from Southampton. Traffic rights to two domestic routes are also provided. The new weekly service is thus to run between Cape Town and Port Elizabeth, with extensions from Port Elizabeth to Durban via East London and from Port Elizabeth to Johannesburg via Bloemfontein.

A pair of new airmail stamps is issued by the government of South Africa on August 21; one is green and sells for 4d. while the other is orange and retails for 1s. They are to be affixed to letters and post cards going via Union Airways.

By August 25, the Union-Castle Mail Steamship Line has landed about 200 Paquebot letters at Cape Town for the first flight, as well as some 2,500 letters from England, of which 191 are registered. Additionally, 5,234 internal letters from points around South Africa have been gathered, including 510 registered.

Maj. Miller's Gypsy Moth, with five stowed mailbags, undertakes the inaugural Union service on August 26 from Cape Town to Port Elizabeth. En route from Port Elizabeth to Johannesburg, Capt. Bellin must make a forced landing at Bloemfontein; his mail sacks are sent on by train. The last flight of the day is carried out by Capt. Caspareuthus, who flies the entire route from Cape Town to Durban via Port Elizabeth and East London.

The premier return flights leave Durban and Johannesburg on August 29. These arrive at Cape Town with 4,015 letters (272 registered) for local delivery, with another 3,782 letters that are to be put aboard the Royal Castle vessel for its voyage back to England.

Service continues without significant incident during the remainder of the year. A total of 245 flights are completed, with 104 passengers and 6,161 pounds of mail flown.

The pioneering airline's success requires the addition of more aircraft in 1930. Added are a Fokker Model 4 Universal and a DH 80A Puss Moth. This expansion exceeds income (subsidy and otherwise) and requires Managing Director Miller to seek additional funding at home and in England. A case for cooperation, pooled services, subsidy or any combination of the three are discussed when an **Imperial Airways, Ltd.** official visits. An offer to purchase the airline is made, but Miller respects a request (made with veiled suggestions of assistance) from South African Defence Minister Oswald Pirow not to sell out.

In 1931, Parliamentary Act. No. 21 grants South African Railways authority to begin an air transport service. Financial problems persist, but pale compared to two fourth-quarter accidents. On November 13, Capt. Davenport's Puss Moth with two passengers crashes at Sir Lowry's Pass, 30 mi. from Cape Town; there are no survivors. Having departed East London in bad weather on December 31, the Universal crashes at Kayser's Beach; although the aircraft is destroyed, there are no injuries reported.

Miller spends the opening months of 1932 seeking additional funding; he is turned down by all concerns visited until an arrangement is struck with F. Hoepfner, the South African representative of Junkers Aircraft Corporation. Under its terms, company headquarters are transferred to Durban and Hoepfner becomes joint managing director. Junkers sends out a pair of its all-metal F.13s.

Unsubsidized thrice-weekly Durban to Johannesburg (actually Rand Airport at Germiston) passenger and freight flights are inaugurated on April 16. A Junkers Ju-52/3m is ordered from Germany during the year and, upon its arrival, it is christened *Jan van Riebeeck*.

At the beginning of January 1933, the South African government signs a contract with Union for the transport of mail on the airline's thrice-weekly Durban-Germiston route. The first mail is transported from Durban on January 2 and from Germiston on January 3. On April 1, the government grants a one-year, £10,000 subsidy for operation of the Cape Town to Durban route; no additional subsidy is given for the Durban-Johannesburg run. The Port Elizabeth to Johannesburg service is suspended on May 31, but the Durban to Johannesburg frequency is increased to daily on June 1.

Financial difficulties mount late in the year. Since start-up, accidents have plagued the carrier. En route from Durban to Johannesburg on December 14, an F.13 with two crew and four passengers crashes near Eshowe (five dead).

On January 29, 1934, Union completes its final northbound flight from Cape Town to Durban via Port Elizabeth and East London. **South African Airways (Pty.), Ltd.** is formed at Durban on February 1 as a division of the South African Railways; failing Union Airways is purchased and merged therein.

UNION AIRWAYS OF NEW ZEALAND, LTD.: New Zealand (1935-1945). Capitalized at £100,000, the Union Steam Ship Company, Ltd.'s air transport subsidiary is founded at Christchurch in December 1935 and equipped with 3 de Havilland DH 86s, christened *Kotuku*, *Karoro*, and *Korimako*. The *Karoro* inaugurates service between the North Island town of Palmerston North and the South Island city of Dunedin via Blenheim and Christchurch on January 16, 1936.

In 1937, three Lockheed Model 10 Electras arrive at the company headquarters; christened *Kotare*, *Kuaka*, and *Kereru*, they are the first all-metal airliners employed in New Zealand.

Taking off in a steady rain, the *Kotare* initiates the first daily Auckland to Wellington via New Plymouth and Palmerston North, flights on June 26.

The Model 10A *Kotare*, with 2 crew and 11 passengers, crashes upon takeoff from Auckland into the SW slope of Mount Ruapehu on May 10, 1938; there are no survivors from New Zealand's worst civil aviation disaster to date.

Gradually coming to dominate the nation's commercial air service scene, the carrier purchases competing **East Coast Airways, Ltd.** on July 1.

Capt. A. G. Gerrand, flying the DH-86 *Korimako* begins Palmerston North to Auckland services on March 20, 1939, landing en route at Napier, Gisborne, Opoiki, and Tauranga. There is little growth and some tragedy during the war years. The Model 10A *Kereru* crashes into Mount Richmond on May 7, 1942; no one aboard survives. On December 7, 1945, Union Airways becomes one of three companies merged to form the new state-owned domestic carrier **New Zealand National Airways Corporation**.

UNION AREA ESPANOLA, S.A. (UAE): Spain (1925-1929). With support from the German airplane manufacturer Junkers Flugzeugbau, UAE is formed in early 1925 to compete with the Seville-Spanish Morocco carrier **Compania Espanola de Trafico Aereo, S.A. (CETA)**. The new entrant, equipped with F-13s, quickly overshadows its predecessor and in 1926 is provided with G-24 trimotors with which to open routes from Seville to Madrid and Lisbon.

The carrier ceases operations on March 13, 1929 when it becomes one of three airlines merged to form **Concessionaria Lineas Aereas Subvencionadas, S.A. (CLASA)**.

UNION DE TRANSPORTS AERIENS, S.A. (UTA). See **UTA FRENCH AIRLINES (UNION DE TRANSPORTS AERIENS, S.A.)**

UNION FLIGHTS: 6273 Freeport Blvd., Executive Airport, Sacramento, California 95822, United States; Phone (916) 421-8531; Fax (916) 421-8546; Code UNF; Year Founded 1955. C. Jayne Paynter sets up Union Flights at Sacramento, California, in November 1955 to undertake charter flights in the Sacramento area. Cessna lightplane revenue flights commence in July 1956.

Over the next 40 years, services to such regional destinations as Oakland and Ontario, California, and Phoenix are begun and scheduled frequencies launched. In 1985, Union becomes a feeder for **Federal Express (FedEx)**.

At the beginning of the 1990s, the fleet includes 3 each Piper PA-31-350 Navajo Chieftains and Cessna 208 Caravan Is, plus 2 Piper Cherokee Sixes. The workforce totals 55 in 1998-2000 and President Paynter operates 8 Caravans and 7 Chieftains.

UNION OF BURMA AIRWAYS, LTD.: Burma (1948-1972). Following the creation of the Socialist Republic of Burma on January 4, 1948, its new government decides that it should have its own air service. To that end, an Air Transport Board, capitalized at 5 million kyats, is established to fulfill that desire and is outfitted with 6 de Havilland DH 104 Dove 1s. These inaugurate scheduled services in October, linking the company's Rangoon base with Mandalay, Akyab, and Moulmein.

The Air Transport Board, though still an Air Ministry division, is renamed Union of Burma Airways in early 1949 and during the remainder of the year the Doves extend the route network to 14 additional communities.

Employing Douglas DC-3s, the carrier opens international routes in 1950 to Chittagong, Calcutta, and Bangkok. Operations continue apace in 1951. The government department becomes an autonomous concern when it is reconstituted on October 1, 1952. It receives an independent board of directors and a full-time chairman/managing director.

While on final approach to the airport at Mergui on January 10, 1953, a DC-3, with three crew and 15 passengers, strikes trees 820 ft. short of the runway and crashes; although the aircraft must be written off, there are no fatalities.

Three Handley Page (formerly Miles) Marathons enter service during the summer; they are employed to open scheduled flights to Singapore via Mergui and Penang.

Unsuccessful, the Marathons are withdrawn the following June and the company returns to DC-3s. In May 1955, three Vickers Viscount 761s are ordered.

While climbing away from Meiktila on September 2, a DC-3 with three crew and six passengers stalls and then crashes; there are no survivors.

En route from Rangoon via Mingaladon to Mandalay on August 8, 1956, a DC-3 with 3 crew and 17 passengers is lost at Thazi, SE of Mandalay (12 dead).

In circumstances unknown (possibly a bad landing), a DC-3 with 4 crew and 19 passengers is lost at Loikaw, Burma, on March 19, 1957; there are no fatalities.

The first Viscount 761s enter service in early 1958 on the carrier's Rangoon–Calcutta–Singapore routes. Those services are extended to Hong Kong and Jakarta soon thereafter. As a result of travel restrictions on Burmese citizens and foreign visitors, the three turboprops are seldom filled. Consequently, flights to Bangkok and Hong Kong end in 1959, though the former market is reopened in 1960.

Service continues without further interruption until the military coup of March 2, 1962 brings a new government into office. Later in the year, the carrier is allowed to order seven Fokker F.27-100s. One of the Douglas transports, with 5 crew and 15 passengers, crashes into Mount Kaolokung in Yunnan Province, China, on June 10, 1963; there are no survivors.

The first Fokker Friendship arrives in October and enters service on November 1.

The domestic network grows during 1964–1968 to include 31 stops, while Viscount service to Siem Reap, near the archaeological site of Angkor Wat in Cambodia, is added as a foreign destination. The fleet is upgraded to include not only 6 DC-3s, but also 7 Fokker F.27-100s and 3 Viscount 761Ds.

One of the Fokkers is destroyed at Moulmein on June 25, 1966, as the result of a bad landing; there are no fatalities.

A chartered C-47 with four crew and two passengers suddenly loses control at an altitude of 300 ft. while on final approach to Lashio on May 23, 1969; the plane crashes into the ground and there are no survivors.

On July 26, the government of Burma charters a **Northwest Airlines** Boeing 727-51 on behalf of the carrier for a year, complete with three U.S. crews, to operate tourist flights in and to its country. It is also employed to resume frequencies to Hong Kong via Bangkok and Phnom Penh. The chartered Northwest trijet is returned in 1970 and replaced with a purchased unit from **Hughes Airwest**.

A DC-3 with 4 crew and 27 passengers crashes into the ocean just after takeoff from Sandoway on August 16, 1972 (28 dead).

On August 24, a Vickers Viscount 761D, with 5 crew and 38 passengers slides off the side of the runway after landing at Akyab and skids 1,250 ft. before coming to a stop with a broken undercarriage; although the aircraft must be written off, there are no fatalities.

In December, the carrier is reformed and renamed **Burma Airways Corporation, Ltd.**

UNITAIR, S.A.: Cameroon (1993–1994). Unitair is established at Douala in 1993 to provide both scheduled and charter passenger flights to domestic destinations. Revenue operations begin with a single de Havilland Canada DHC-6-200 Twin Otter, but only continue for a year.

UNITED AFRICAN AIRLINES. See **JAMAHIRIYA AIR TRANSPORT (LIBYAN ARAB JAMAHIRIYA)**

UNITED AIR CARRIERS. See **NATIONAL AIRLINES (2)**

UNITED AIR EXPRESS AIRLINES, LTD. 229 Ikorodu Road, P.O. Box 2278, Lagos, Nigeria; Phone 234 (1) 496 6641; Fax 234 (1) 263 2873; Year Founded 1984. UAEA is set up at Lagos in November 1984 to operate lightplane passenger charters and air taxi flights to domestic bush locations. In March 1992, a scheduled airline division is established under the leadership of chairman/CEO Capt. T. Bello. Employing turboprops, the carrier introduces regional services to Sierre Leone and other West African destinations. These flights are maintained until 1994, when the unprofitable unit is closed down.

After several years of renewed charter operations, Capt. Bello's concern resumes regular airline operations late in the 1990s. Scheduled destinations visited at the beginning of 2000 include Freetown and Abuja.

UNITED AIR LINES (1): United States (1928–1934). United Air Lines is not the initial name of what would one day become the country's largest air transport concern. Rather, the name comes deep into a process of amalgamating into a single system a strong confederation of various airlines already in existence. The merger ball begins to roll on January 1, 1928 when **Boeing Air Transport (BAT)** takes control of Vernon Gorst's **Pacific Air Transport (PAT)**. On October 30, the holding company Boeing Airplane and Transport Corporation is formed to operate **Boeing Air Transport** and **Pacific Air Transport** as subsidiaries. On December 17, PAT is merged, becoming a BAT division.

On February 1, 1929, Boeing manufacturing and airline interests are merged with the manufacturing concerns of the Pratt & Whitney engine company to form **United Aircraft and Transport Corporation**. Boeing Airplane Company President Philip C. Johnson hires William A. "Pat" Patterson away from San Francisco's Wells Fargo Bank on April 15 to become his assistant. The latter is soon deeply involved in handling the day-to-day operations of the growing airline conglomeration.

The new giant now purchases several other manufacturers, including Sikorsky and Stearman. **Stout Air Services** is purchased by United on June 30 and gives its new owners a chance to extend their San Francisco–Chicago route on to Detroit and Cleveland while acquiring Ford Tri-Motors in the process. To train pilots and ground crews for the corporation, Boeing School of Aeronautics is established on September 16.

After a short but bitter boardroom fight with the North American Aviation Corporation, United takes over **National Air Transport (NAT)** on May 7, 1930. That move allows United to complete its transcontinental system by taking over NAT's Cleveland–New York route. Johnson and company officials have their plans confirmed during their participation in the May 15–June 9 "Spoils Conference" held between Postmaster General Walter F. Brown and representatives of the major air transport concerns in his office in Washington, D.C. Route negotiations and awards, however, are made by the government with the individual carriers and not with Johnson or the United conglomerate as a whole. President Johnson is able to maintain all routes, but gains no new ones.

Varney Air Lines (VAL) comes under the corporation's umbrella on June 30, the same day stewardesses are initially employed on Boeing 80As flying the San Francisco–Chicago route. The weaving together of these various subsidiaries into an integrated coast-to-coast network will take about a year. While landing at Baker, Oregon, with a broken fuel line on August 22, a Boeing 40B-4 of the VAL subsidiary crashes; none aboard are hurt, but the plane is destroyed by fire. En route from Cleveland to New York on September 21, the engine of a NAT Boeing 95 catches fire over Warren, Ohio, forcing the aircraft to make a safe emergency landing.

On New Year's Day 1931, a Boeing 40B-4 of VAL being ferried from Medford to Seattle makes a successful crash landing at Crescent Lake, Oregon. A VAL Boeing 40B-4 en route from Seattle to Pasco crashes into Baldy Mountain at Washougal, Washington, on January 22 (one dead). En route to San Diego from Seattle on March 2, a BAT Boeing 40B-4 catches fire south of Glide, Oregon, and makes a successful crash landing. En route from Chicago to Cleveland on April 29, NAT Ford 5-AT-81 with 10 aboard and engine failure, strikes a tree and barn but lands upright safely in a field at Elyria, Ohio.

On July 1, **United Air Lines** is formed to merge the various semiautonomous airline subsidiaries and divisions then under control of United Aircraft and Transport Corporation. The new entity, under President Philip C. Johnson, is, in fact, a management concern for the four subsidiaries, which now become "divisions." For the time being, they are allowed to continue operations under their previous identities under the direction of BAT President/United Vice President William A. "Pat" Patterson.

In order for the company's leadership to be located in the center of the transcontinental trunk line, corporate headquarters for United Air Lines are now transferred to Chicago from Seattle. Service is expanded to include 46 cities in 20 states.

Just after takeoff on September 16 from Oakland, a VAL division Boeing 40B-4 crashes into the mud flats of San Francisco Bay (four dead). A few days later, NAT Ford 5-AT-87 piloted by Ralph Reed makes a safe crash landing for unknown reasons at Ashley, Indiana.

On November 23, a Boeing 40B-4 of the BAT division crashes in a snowstorm near Salt Lake City (one dead). Trying to find Pasco, Washington, in the fog on November 26, a VAL division Boeing 40B-4 crashes (one dead).

En route to Newark from Cleveland on Christmas Eve, NAT pilot James O. Johnson's Curtiss Carrier Pigeon II suffers wing failure over Allport, Pennsylvania; knocked out, Johnson revives in time to bail out at 500 feet.

In December, the carrier becomes the first in the world to fly 50 million miles, with almost half undertaken at night. Also, during the year, a Boeing 80A is the first aircraft to carry the United Air Lines name; it is painted in shades of green, orange, and tan and also sports the company logo, a modified map of the U.S.

En route to Salt Lake City from Oakland with mail on February 2, 1932, a BAT Boeing 40B crashes in bad weather at Rio Vista, California (one dead). Five days later, a BAT Boeing 40B mailplane crashes east of Knight, Wyoming (one dead). En route from Newark for Cleveland on March 31–April 1, a NAT Boeing 95 mailplane crashes on a farm at Bedford, Ohio, in bad weather (one dead).

Flying from San Diego to Seattle on May 16, a PAT Boeing 40C piloted by Harry Crandall with two passengers, crashes in fog at Burbank (three dead). On May 30, a VAL Boeing 40B-4 literally loses an engine while landing at Portland, Oregon, and explodes (one dead).

A Boeing 40B-4 flown by PAT pilot E. L. Remelin catches fire 2,000 ft. above Fresno on June 2; Remelin makes a safe emergency landing and escapes the burning aircraft. Construction is started on the first Boeing 247 airliners later in the month. While taking off from Boeing Field, Seattle, on July 11, Ford 5-AT-108 loses its left engine and makes an emergency crash landing off the runway in a field; no injuries are reported.

NAT pilot Paul Reeder escapes when his Boeing 95 mailplane crashes into Pennsylvania's Snow Shoe Mountains on September 27. Ice in the carburetor of a BAT Boeing 40B-4 forces the plane to crash-land east of Council Bluffs, Iowa, on December 13. Flying a BAT Boeing 40B mailplane out of Oakland on December 17, pilot Claire K. Vance hits near the crest of Rocky Ridge, California, and is killed.

On January 24, 1933, a PAT Ford 5-AT-98, the *Dawson*, lifting off from Eugene for Seattle, hits a power pole and crashes (two dead). Taking off from Toledo, Ohio on February 25, a Boeing 95 hits a boundary fence and crashes; pilot Nicholas Laurenzana is unhurt.

Postmaster General Brown requires United on February 28 to divest itself of shares covertly purchased in **Eastern Air Transport** and its North American Aviation holding company. The stock is sold to General Motors. By this time, the transcontinental mail route monopoly is over and the carrier's percentage of total domestic mail payments has dropped from a high of 66% in 1928 to 34%.

On March 30, the United group takes delivery of the first of 54 ordered Boeing 247s, the first modern airliner. Group Vice President Patterson works with ALPA to protect the jobs of pilots who are threatened with layoffs due to the use of the new aircraft. A NAT Boeing 40B-4 is

lost in a safe crash landing at Liberty, Missouri, on April 7. On May 12, a NAT Boeing 247 crashes in fog at Provo, Utah, during its delivery flight; the plane will be repaired. The second Boeing 247 is placed into limited service on May 22. As the month closes, BAT Capt. John McCullough Hodgson completes his two-month task of delivering the first 25 B-247s to the different divisions.

On June 12 and in conjunction with a heavy advertising campaign, Boeing 247s begin thrice-daily trips each day over the transcontinental route, New York to San Francisco via Cleveland, Chicago, Des Moines, Omaha, Cheyenne, Salt Lake City, Reno, and Sacramento. Time on the initial westward flight, piloted by NAT Capt. Warren Williams, is 21 1/2 hours and 20 hours on the eastward flight. Also in June, the number of New York–Chicago return frequencies is increased from six to eight per day, including four provided by the new Boeings. A severe windstorm destroys a BAT

On July 1, William A. "Pat" Patterson becomes president of BAT, PAT, NAT, and Varney Air Lines; he continues as vice president of United Air Lines. The NAT Ford 5-AT-80 collides with a Boeing 80A on the ground at Chicago Municipal Airport on July 2, but no injuries are reported. Boeing 247s begin service on the company's Chicago to Dallas (DFW) run on August 15. During the summer, a fully operational B-247 is housed in the Travel and Transport Building at Chicago's Century of Progress International Exposition.

By September, United is offering 10 daily roundtrips between New York and Chicago. The Boeing time is 10 hrs. 30 min. on the westbound route and 4 hrs. 45 min eastbound. During the next three months, the new 10-passenger airliners establish several records. On September 25, the Kansas City–Chicago run is made at a speed of 204 mph. Meanwhile, on September 16, a NAT Boeing 95 piloted by Harold L. Neff crashes in a storm north of Jackson, Michigan; the pilot is found three days later near the wreck of his aircraft, but dies of his injuries. Also during the month, the Varney system is absorbed.

While approaching Chicago on October 10 on the final leg of a flight from Newark via Cleveland, the cargo aboard a NAT Boeing 247 explodes. The burning plane crashes five miles east of Chesterton, Indiana, 10 mi. W of Gary, and all seven aboard are killed, including Alice Scribner, the first United stewardess to die in the line of duty.

Two days later, newspapers report that parts of the wreckage had shown traces of gunpowder. Rumors of a Chicago gangland "hit" against a passenger will persist thereafter. Indeed, investigators will conclude that the aircraft has, indeed, been destroyed by an explosive device, using nitroglycerine rather than gunpowder, but attached to a timing device. No one is ever prosecuted in the first proven case of sabotage in the history of commercial aviation.

Also in October, a BAT 247 piloted by A. W. Stainback makes the Salt Lake City to Cheyenne 421-mile flight in 1 hr. 59 min. During the month, *Popular Aviation* magazine sponsors a B-247 model-building contest and begins the distribution of 6,000 sets of plans.

Just after takeoff from Portland, Oregon, on November 9, a PAT Boeing 247 hits a tree and crashes (four dead). While being ferried from Chicago to Kansas City on November 24, a NAT Boeing 247 is unable to make altitude after taking off from the former location and crashes (three dead). To reassure the public concerning its B-247 transport, UAT in early December delivers one of its new transports to the Army Air Corps Materiel Division at Wright Field, Ohio, for tests. The military will endorse the aircraft and the airline will make certain that newspapers from *The New York Times* report the findings.

In late December, George Boyd flies a Boeing, with the assistance of a tail wind, from Salt Lake City to Rock Springs in 38 min. at an average speed of 256 mph. Also, a Boeing flown by John Wolf is able to make the 418-mile New York to Cleveland frequency in just 1 hr. 55 min. for an average speed of 218 mph. Profits for the year total \$175,000.

On February 9, 1934 as a result of the so-called "Air Mail Scandal," the U.S. government cancels existing airmail contracts and calls upon the U.S. Army Air Corps to fly the mail. United continues passenger

service on a reduced basis. En route to Cheyenne from Salt Lake City in heavy fog on February 23, a B-247 crashes into the 8,000-foot level of the Wasatch Mountain Range (eight dead). The loss suffered during the 90-day company shutdown is \$1,117,567.

The Army experiment ends on March 30 and the Post Office advertises for new contracts that will be awarded to carriers not attending the June 1930 "Spoils Conference". Because mail contracts were all let to its divisions, United Air Lines, unlike the other majors, is not initially required to find a way around the prohibition or use the ruse of a slightly changed name. Still, President Johnson, aided by United Aircraft's Joseph Ripley and Joseph McCarthy, design a reorganization plan designed to meet government requirements.

Most of the corporation's old routes are regained when new contracts are let on April 20; however, the Chicago-Dallas via Kansas City run is lost to **Braniff Airways** and the Omaha to Watertown run is halted. UAL becomes an operating company on May 1 as the Boeing (including Varney), National, and Pacific Air Transport companies (divisions) go inactive. The New York-Seattle via Salt Lake City and San Francisco route, together with the Seattle to San Diego route, are reopened on May 8. The board of directors approves the reorganization plan on May 14. A Boeing 247 crashes in bad weather near Selleck, Washington, on June 7; the seven survivors are rescued after a harrying night.

On June 12, Congress passes the Air Mail Act of 1934 that effectively removes manufacturers from the air transport business and gives them until December 31 to do so. As the end of the first UAL approaches, President Johnson, himself soon to be replaced, takes time out on July 12 to authorize the lease of a new B-247D to famed racing pilot Col. Roscoe Turner for use in the forthcoming MacRobertson England-Australia race.

The holding company's separate subsidiaries are broken out on July 20 into three separate companies. With the individual divisional identities integrated, the air transport concern, United Air Lines Transport Corporation (or United Air Lines for short), is now reincorporated as a new entity. Patterson succeeds Johnson as the airline's president and will remain so until 1962. Johnson is forced to retire under terms of the new airmail law that prohibits employment in the commercial airline industry by any company official having attended the 1930 "Spoils Conference." On August 31, United Aircraft and Transport Corporation is dissolved.

UNITED AIR LINES (2): United States (1934-1974). United Air Lines (2) is often ranked as the world's largest privately owned air carrier and the only one to service all 50 United States. A member of the early, exclusive group of airlines known as the "Big Four," it is born as the result of corporate mergers and political maneuvers that began in 1928 and it will continue beyond 1974, when its name is changed yet again.

The "new" United grows steadily following its May 1, 1934 transformation from a collection of United Aircraft and Transport Corporation subsidiary divisions to a free-standing air transport operation. President William A. "Pat" Patterson visits Newark and averts a pilot strike by agreeing to visit every station during the next two months seeking suggestions for improvements. These discussions will lead to the seniority system later adopted by all airlines.

Noted aviator Col. Roscoe Turner and his recently recruited, equally famous copilot Clyde Pangborn, accept their UAL B-247D at Seattle on September 10 and promptly fly it down to Los Angeles in a record 5 hrs. 33 min. On September 18, the company, acknowledging the superiority of its competitors' Douglas transports, becomes the third transcontinental carrier to introduce the sleeper version of the DC-3, the DST.

Still, significant effort is made to upgrade existing equipment, bringing on line a new version of the B-247, the B-247D, the same make aircraft that Turner and Pangborn employ in the MacRobertson race, which begins from England on October 20. The intrepid airmen cover the 11,323-mile course to Melbourne, Australia, in 92 hrs. 55 min., taking third place behind a specially designed de Havilland Comet and the Douglas DC-2 *Uiver* of **KLM (Royal Dutch Airlines, N.V.)**, which was

not stripped down but had actually flown passengers and mail as part of the Dutch carrier's normal scheduled service.

Having taken the decision to retire its early, unmodified B-247s, UAL agrees, on October 31, to lease three machines to **National Parks Airways**. The first of the airline B-247Ds are employed in November to open faster New York-San Francisco schedules. Eastbound flight times are reduced to 17 hrs. and westbound times to 20 hrs. On December 6 and 26, respectively, sales contracts are signed for the delivery of unmodified B-247s to **Western Air Express** and **Pennsylvania Airlines and Transport**. On December 31, assets are \$3.66 million and liabilities total \$773,043.

Having returned with his racer to the U.S., where it is reconverted back to airliner status by the removal of extra fuel tanks, Roscoe Turner flies the UAL MacRobertson B-247D, now fleet flagship with its achievement painted on its fuselage, from Seattle to Chicago on January 1, 1935. Thirty days later, an agreement is concluded that will provide **Wyoming Air Service** with sufficient B-247Ds to maintain its Denver-Cheyenne route thrice daily.

On April 7, a B-247D flies the 724-mile Newark to Chicago via Cleveland route in a record 4 hrs. 4 min. The memory of the removal of former President Johnson has so enraged his successor "Pat" Patterson that United files a \$2.8-million suit against the government in the U.S. Court of Claims on June 4. Both to recoup losses and to clear Johnson's name, the suit challenges the legality of the airmail cancellations.

All B-247D frequencies on the New York to Chicago return service rise to 10 per day in summer, with at least three continuing to or arriving from San Francisco. San Diego to Seattle return services climb to three per day while San Francisco to Los Angeles and San Diego return flights total five. In the first arrangement of its type between American and European transport concerns, UAL, in July, joins with The French Line, owners of the SS *Normandie*, and **Imperial Airways, Ltd.** to promote seamless worldwide travel for American tourists.

A close association is begun with William A. Coulter's **Western Air Express Corporation**. Routes and schedules are integrated, giving Harris "Pop" Hanshue's former airline access to United's transcontinental route. In addition, the major will sell or lease 28 Boeing 247s/247Ds to Western over the next 3 years. On October 7, a B-247D crashes while landing at Cheyenne (three dead) and while on a night check flight over Cheyenne on October 30-31, a B-247D crashes (four dead).

Having required a year and \$1 million, the remaining units of the carrier's B-247 fleet complete upgrade to B-247D status. Having begun discussions with Douglas Aircraft Company for a transport with twice the capacity and range of the DC-3 several months earlier, President Patterson is able to persuade Donald Douglas to begin designing a DC-4 while he approaches the rest of the "Big Four," plus **Pan American Airways (PAA)**, for joint funding.

The United Air Line Employee's Credit Union, the industry's first, is incorporated in Illinois on November 1.

On December 6, three B-247Ds are sold to **SCADTA (Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** in Colombia. Flying his B-247D low over a Nevada mining camp isolated by blizzard later in December, pilot Don Broughton keeps his ship level while stewardess Ida Novelli shoves food and supplies out to six trapped miners waiting below.

Enplanements for the year are 201,338 and revenue passenger miles flown total 98.65 million. The company suffers a net loss of \$1,392.

Meeting in Chicago on January 14, 1936, President Patterson joins with **Eastern Air Lines** President Capt. Eddie Rickenbacker, **American Airlines** President C. R. Smith, and **Transcontinental and Western Air Lines'** CEO Jack Frye to announce creation of the Air Transport Association of America (ATA) and appointment of Edgar S. Gorrell as its first president.

Also during the first quarter, the first of 13 surplus B-247s are sold to **Pennsylvania-Central Airlines** and an effort to purchase **Pennsylvania Airlines** before its merger with **Central Airlines** is blocked by the Interstate Commerce Commission.

On March 23, the company joins with **American Airlines, Eastern Air Lines, Transcontinental and Western Air Lines (TWA), and Pan American Airways (PAA)** in pledging equal shares of \$100,000 each toward the development of the Douglas DC-4E (the "e" stands for "experimental") prototype. Douglas will commit approximately \$300,000 in initial engineering costs. The aircraft will be constructed to United's Chief Engineer G. T. Mead's previous year specifications: 44 passengers, 175 mph, and 27-tons weight.

Having recognized that its Boeings cannot effectively compete with the new Douglas sleeper transports, the DC-3 DST, or provide adequate service to high altitude airports in the west, United, on April 6, orders 20 of the more powerful Douglas airliners.

Also in April, the company, having provided close assistance, reaps the acclaim when the first major motion picture to accurately depict airline operations is released. Paramount's *13 Hours by Air* stars Fred MacMurray as the captain of a DC-2 transporting a diverse group of passengers from Newark to San Francisco. The plot will be repeated in nearly all airline-oriented films made thereafter.

On June 17, UAL becomes the world's first airline to fly a cumulative 100 million miles. Concerned by rising costs, **Pan American Airways (PAA)** and **Transcontinental and Western Air Lines (TWA)** withdraw from the DC-4E project in July, withholding their \$100,000 payments and casting their support to the smaller Boeing 307 Stratoliner concept.

While landing at Newark in a snowstorm on November 23, the landing gear of a B-247D crumples; no one is hurt seriously.

Powered by Pratt & Whitney R-1830 Twin Wasp radials, the first DC-3A is delivered on November 27 and begins a testing program. At this point, a new United logo—a patriotic shield—appears and the word "Mainliner" is painted in bold red letters on fuselages in honor of the main line route the aircraft fly from coast to coast. The inaugural Douglas transport is christened *Mainliner Reno*. The *Mainliner Los Angeles* and *Mainliner California* arrive on December 5 and 9 and are followed by three unnamed units between December 11 and 23.

While attempting to exit California's Newhall Pass in rain while en route to Burbank from Oakland on December 27, a B-247D crashes (13 dead). The sixth DC-3A of the month arrives on December 31; christened *Mainliner Des Moines*, it, like its predecessors, is equipped with Skylounge luxury chairs. Also in December, United opens the industry's first flight kitchen, at Oakland, California. During these 12 months, a net profit of \$371,000 is recorded.

The DC-3 Mainliners commence service on the Los Angeles–San Francisco route on January 1, 1937. Eighteen days later, the Skylounge service is introduced on the New York to Chicago DC-3 frequency. The \$2.07 extra charge is not well received and the service will be discontinued with the aircraft changed into normal 21-seat arrangement. During January, seven additional DC-3As are acquired, including the *Mainliner Sacramento*, *Mainliner San Francisco*, *Mainliner New York*, *Mainliner Akron*, and *Mainliner Spokane*.

The *Mainliner Pennsylvania* arrives on February 1. On February 9, the copilot's microphone is accidentally lodged between the control column and seat support of one of the unnamed DC-3As received in December. Piloted by Capt. A. R. Thompson, with 10 others aboard and en route to Oakland from Los Angeles, the aircraft crashes into San Francisco Bay (11 dead). The tragedy is the first fatal accident suffered by a DC-3.

During the remainder of the month and in March, five additional DC-3As are received, including the *Mainliner Massachusetts*, *Mainliner Chicago*, *Mainliner Bellingham*, and *Mainliner Medford*.

Meanwhile in February, the carrier acquires AM-17 and the Cheyenne to Denver route for \$209,000 from **Wyoming Air Service**. Four surplus Boeing 247s/247Ds are now made available to **Wyoming Air Service**, later **Inland Air Lines**, and will be delivered over the next four years. Also in March, the cause of the February 9 tragedy is discovered; **American Airlines** President C. R. Smith phones President Patterson to tell him of how a copilot's microphone, which had fallen from its position to become wedged in the steering controls, had nearly caused a similar disaster for an AA flight at Newark. Upon examination of the February

wreckage, investigators find a wedged microphone, just as described by Smith to Patterson.

On July 9, the first of eight DSTs are received. With several available, they are placed into service during the month's last week between New York and San Francisco via Chicago, Cheyenne, and Salt Lake City. Those received in July and into the next month include *Mainliner Cheyenne*, *Mainliner Fresno*, *Mainliner Ohio*, *Mainliner Eugene*, and *Mainliner Utah*.

In midyear, a Denver–Cheyenne route is purchased from **Wyoming Air Service**. In August, United opens at Oakland, California, the world's first flight kitchen designed to prepare food for dining aloft; the facility is overseen by a Swiss chef hired away from the Clift Hotel in San Francisco. The DC-3As *Mainliner Indiana* and *Mainliner Oregon* are delivered on September 8 and 9, respectively. During the early fall, the B-247 *Flying Lab*, piloted by Benjamin O. Howard, undertakes a series of rain and snow radio static investigations. Off course in a snowstorm, an unnamed DC-3A, also delivered in December 1936, crashes into a mountain at Hump Ridge, Utah, on October 17 (19 dead). A net loss of \$754,486 is suffered.

New Hamilton Standard Hydromatic propellers are installed, beginning in March 1938, on an order for 10 DC-3As. They will be retrofitted to aircraft already received. The 100th DST/DC-3A delivered is the *Mainliner Nebraska*, which arrives to enter company service on March 25. The nine remaining Douglas transports are received between March 7 and May 1, and include *Mainliner Connecticut*, *Mainliner Denver*, *Mainliner South Bend*, *Mainliner Pendleton*, *Mainliner Cleveland*, *Mainliner Detroit*, and *Mainliner Vancouver*.

On May 24, an unnamed DST received less than a month before crashes while attempting a one-engine-out landing at Cleveland (10 dead). Piloted by Carl Cover, the Douglas DC-4E prototype makes its maiden flight from Clover Field, Santa Monica, California, to Mines Field, later Los Angeles (LAX) on June 7. Six months of scheduled testing lie ahead for the huge airplane (now significantly heavier with 52 seats instead of the requested 44), although minor modifications will require the time to be stretched much further.

Passed earlier by the U.S. Congress, the Civil Aeronautics Act of 1938, signed into law by President Roosevelt, takes effect on August 22. The legislation emancipates the airlines from Post Office control and establishes the Civil Aeronautics Board (CAB) as the airline industry regulatory agency. United is awarded "grandfather" certificates on all domestic routes it was operating before the new law comes into force.

In the aftermath of the September 21 New England hurricane, **American Airlines**, the principal carrier in the Northeast, is overwhelmed in its efforts to open air-only communications to replace the ruined ground transport infrastructure.

At the request of ATA President Edgar Gorrell, **Eastern Air Lines**, United, and **Transcontinental & Western Air Lines**, under special permission from Washington, are allowed to contribute aircraft and flight crews to fly emergency relief services over the American routes from New York to Boston.

Five United DC-3As immediately begin to fly mercy missions in and out of Boston. For a week, these aircraft join planes from the other carriers in flying over 8,000 return passengers and 317,000 pounds of mail from New York and Massachusetts.

Two new flight aids, a radio altimeter and an automatic direction finder, are demonstrated before Department of Commerce (DOC) and Civil Aeronautics Administration (CAA) officials by the carrier's B-247 flying laboratory during a flight over New York on October 9. Lost and out of fuel, an unnamed DC-3A, en route to Sacramento from Medford Oregon, lands in the Pacific Ocean off Point Reyes, California, on November 29 (five dead).

A doctor in the employ of United now discovers that a new drug intended to allay morning sickness in pregnant women might help queasy passengers more than the previously employed ammonia spirits; as a result, the carrier begins to recommend the use of Dramamine to combat air sickness. The company's net loss for the year is \$900,000.

The 25,000th New York–Chicago–San Francisco transcontinental flight is completed on January 12, **1939**. The company leases four DC-3As to **Eastern Air Lines** to help that carrier meet peak winter traffic demands on its New York to Miami route. On March 20, United and the Airmen's Association of America, representing the carrier's mechanics and related ground service employees, sign the airline industry's first collective bargaining agreement.

The revolutionary DC-4E receives certification from the DOC on May 5 and is officially turned over to United Air Lines, which christens it the *Super Mainliner*. On June 1, Patterson's company becomes the first U.S. airline to operate a modern four-engine land plane in transport service when it places the DC-4E into experimental service over its network.

On June 26, William Coulter and a group of **Western Air Express** stockholders attempt to sell their carrier to the Chicago-based major. Asked for its approval, the CAB, despite the recommendation of an impartial examiner, jurist Roscoe Pound, refuses on July 19. Later in the summer, the *Super Mainliner* is returned to its builder.

Too advanced to be competitive against the smaller DC-3A and with performance less than expected, the manufacturer and the "Big Four" airlines (minus TWA) will elect to develop a smaller DC-4 or, in later military terms, C-54. The DC-4E is sold by Douglas to Japan's Mitsui Trading Company, Ltd. for **Japan Air Lines Company, Ltd.** (1); no more are built. The Japanese pay \$950,000 for the airplane, which is shipped to Tokyo by sea on September 29. After it is reassembled by Douglas technicians, the *Super Mainliner* will be the model for that nation's first four-engine land plane, the unsuccessful Nakajima G5N bomber/transport *Shinzan* (Mountain Recess).

United joins with **American Airlines**, **Eastern Air Lines**, and **Pan American Airways (PAA)** on January 26, **1940** to order 61 DC-4s, a redesigned type smaller than the DC-4E. Between January 25 and February 13, four additional DC-3As are placed into service, including *Mainliner Nevada*, *Mainliner Brooklyn*, and *Mainliner North Platte*. Four Lockheed Model 18 Lodestars are also acquired.

Originally ordered by **KLM (Royal Dutch Airlines, N.V.)** as the *Havik*, a DC-3A, which cannot be delivered, is acquired on April 2 and christened *Mainliner Tacoma*. Los Angeles–San Francisco multistop B-247 Sky Coach flights commence on April 10. By employing fully depreciated airliners, the carrier's experimental service will be offered at \$13.90 until 1942 as the first air coach or "economy" operation by an American trunk line. The *Mainliner Bethlehem*, *Mainliner Tacoma*, *Mainliner Nevada*, *Mainliner Illinois*, and one unnamed DC-3A unit arrive during a nine-day period between April 20 and April 29. On June 25, United joins with the other three members of the "Big Four" and ATA to form Air Express, Inc., a research organization concerned with increasing air freight service. Two DSTs, including the *Mainliner Iowa*, are leased from **Western Air Lines** in August.

While the merger case is under review by the government, an interchange service is inaugurated on September 1 between Los Angeles and New York. The carrier begins a long charter association with the National Football League in the fall. The first team flown, at least partially, is the Green Bay Packers. After arriving at Chicago by train, the 33-man team, plus coach Earl "Curly" Lambeau, public relations man George Calhoun, the trainer, equipment men, and the writer Walter "Red" Smith, board two DC-3s for a flight to New York and a game with the Giants. Players are split by position on the two aircraft in case of an accident.

Unfortunately, the flight is grounded by weather at Cleveland and the trip must be completed by train; the aerial return to Chicago after the 7–3 loss is uneventful. The following week, the squad tries flying again, winging from Chicago to Detroit for a game with the Lions; after the smashing 50–7 win, the team returns to the airport to find all planes grounded, except for the Green Bay Specials. The third week, the last flight of the season, is a charm; a roundtrip Chicago–Cleveland flight is made without incident—except for a 13–13 tie-game.

A government contract is now accepted by United and on October 7 the training of aircraft mechanics begins at the company's Oakland Training Center. En route from San Francisco to Salt Lake City on No-

vember 4, an unnamed DC-3A goes off course and crashes into Bountiful Peak in the Wasatch Mountains (10 dead). In one of the largest delivery months in airline history to date, nine more DC-3As arrive during November, including *Mainliner Chicago*, *Mainliner Washington, D.C.*, *Mainliner Santa Barbara*, *Mainliner Medford*, *Mainliner Salem*, *Mainliner Youngstown*, *Mainliner Philadelphia*, and *Mainliner Toledo*.

On December 4, an unnamed DC-3A en route to Chicago from New York ices up while landing at the Illinois airport and crashes (10 dead). On December 23, the carrier, in complete association with the Railway Express Agency, begins the first all-cargo service in U.S. airline history from New York to Chicago via Cleveland. Departing the "Big Apple" at 11:30 p.m. and arriving in Illinois at 3:40 a.m., this night frequency is essentially a scheduled freight-express operation made by loading packages into unconverted day-Mainliners that are flown as supplement to normal daily passenger and cargo frequencies. RAA will continue in operation until 1975.

Three DC-3As are chartered to fly the Big Ten champion University of Michigan football team to California to play the University of California at Berkeley. Head coach Fritz Crisler claims the airlift helps Tom Harmon and his teammates to win by five touchdowns. A net profit in excess of \$1 million is earned for the year.

United establishes the first airline pension program on January 1, **1941**, and a Salt Lake City hangar fire destroys a Boeing 247D and the Douglas DC-3A *Mainliner California* on January 12. Although the case examiner recommends the merger, the full membership of the CAB now refuses to grant permission for the WAE–United amalgamation and all relations between the two are ended on March 11. The company's attempt to obtain a Los Angeles terminus for its transcontinental service is, thus, temporarily ended. Two days later, ATA and the "Big Four" establish Air Cargo, Inc. to further examine the questions of all-cargo services.

In April, four more DC-3As are delivered, including *Mainliner Utah*. During the spring, a DC-3 freighter, in one of the heaviest airlifts to date, transports a 1,000-lb. diesel-engine crankshaft from Chicago to San Francisco. At the same time, the DC-4 order is, with those for other carriers, jointly cancelled.

In early May, the four Lockheed Model 18 Lodestars acquired just a year earlier are sold to the U.S. Army Air Corps for \$95,000 each; they will become C-56Ds. Seattle to Vancouver service is inaugurated over AM-57 on May 12. The New York–Cleveland–Chicago all-freight service ends on May 31 and three more DC-3As arrive in June, including *Mainliner Washington* and *Mainliner Allentown*.

The Philadelphia Eagles become the second pro football team, after the Green Bay Packers, to fly with United. On September 11, the Eagles depart their training camp at Two Rivers, Wisconsin, take a train to Chicago, and board a pair of DC-3s for Philadelphia, where they will play (and lose 24–0) their opening game of the season with the New York Giants. Like the Packers, the Eagles also divide their players by position between the two Douglas transports.

Japan attacks Pearl Harbor on December 7 and the U.S. declares war on Japan the next day. On December 16, United management orders that absolute priority be given to military requirements for official travel and that charters to professional sports teams end "for the duration." A number of company flights now transport cargo shipments of factory blueprints from the East Coast to the West Coast.

A total of 563,883 passengers are flown over 270 million revenue passenger miles during this last year of peace. With the lowest mail payments in the industry, United turns in another \$1-million-plus net profit primarily from the transport of live passengers.

In January **1942**, two Boeing B-17s are modified into camera ships at the company's Cheyenne maintenance facility. Seven weeks later they will reconnoiter those areas of Japan to be attacked by Col. Jimmy Doolittle's Tokyo raiders. The fleet at the beginning of the year comprises 62 aircraft: 12 Boeing 247Ds, 16 DSTs, and 39 DC-3As.

Sky Coach discount service ends on April 23 as the number of aircraft needed for its success has been diminished by the transfer to the military, beginning on March 15, of 36 of the company's DC-3s and B-247s.

An unnamed DC-3A crashes near Salt Lake City on May 2 (17 dead). On May 15, the company begins Operation Alaska, a contract airlift of military and other supplies to Anchorage, Alaska, from Patterson AAF base, Ohio, via Chicago, Minneapolis, Fargo, Regina, Fort St. John, Whitehorse, and Fairbanks. The route is 3,489-miles long.

Following a successful personnel transfer from Anchorage to Cold Bay on May 31, the DC-3 of Capt. Bob Dawson returns to make a second flight from Anchorage to Unmak with a cargo of aircraft bombs. No sooner does the aircraft land than the Aleutian post is attacked by JNAF Zero floatplanes. The UAL airliner is not hit and its shaken crew safely returns to Anchorage.

During the first week of June, four DC-3s are transferred to **Western Air Lines**. As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA president Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. Their aircraft are dispatched to Edmonton, Alberta, for participation in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from UAL and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions. The first Alaskan route is followed on June 27 by a second from Salt Lake City via Edmonton.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 contract carriers (also including **American Airlines**, **Braniff Airways**, **Chicago & Southern Air Lines**, **Pennsylvania Central Air Lines**, **Transcontinental** and **Western Air Lines**, and **Northeast Airlines**) that are rushed to Presque Isle. From here, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland that will facilitate Operation Bolero, a mass bomber ferry from the U.S. to England.

The Edmonton-hubbed flights are suspended on August 4 to allow for the Aleutians battles; during the lull, pilot Orvis M. Nelson is elected first vice president of ALPA. It is he who successfully negotiates with the AAF for the retention of civilian status by pilots flying under contract to the military. At month's end, the company's Dayton to Nome Operation Alaska route is turned over to **Northwest Airlines**.

At midyear, the remainder of the B-247 fleet, except for the test plane *Flying Lab*, is purchased by the government. The company is now requested by the Army to retire from Alaska and begin Operation Pacific supply flights to the South Pacific. Patterson agrees to begin an 8,269-mi. route from San Francisco to Brisbane, Australia, within 45 days. In early August, a contract is signed for transpacific operations; 25 aircrews are trained and outfitted with Consolidated C-87 Liberator freighters.

The first Consolidated C-87 Liberator is delivered to United at Mills Field, San Francisco, in early September. The 25 crews prepared for Operation Pacific receive check rides.

Five more C-87s arrive on September 23 as Capt. Jack O'Brien, UAL's Ops Pacific superintendent, takes off for the South Seas. Guadalcanal and Port Moresby become stops on this new 50-hr. (flying time) run to Australia. Other points visited by United's Liberators include Hickam Field, Hawaii, Canton Island, Nandi, Fiji, New Caledonia, and/or Palmyra Island and Christmas Island.

Also in September, following an unsuccessful attack on Oregon by a Japanese submarine-based Yokosuka E14Y1 floatplane, company cargoliners are called upon to rush several Curtiss P-40 fighters to the area. These are flown across the Rocky Mountains from Chicago with their fuselages inside the DC-3s and their wings slung in special brackets below. No Japanese submersibles are ever attacked.

Capt. O'Brien returns to Mills Field on October 1, completing United's first transpacific flight, some 16,500 miles. By this time, a con-

tingent of company ground crews is sent to the South Pacific, serving first at Honolulu and Brisbane.

On October 6, a loan of \$250,000 is made to the Mexican carrier **LAMSA (Lineas Aereas Mineras, S.A. de C.V.)**, which was founded and owned by the American Gordon S. Barry. Multistop all-cargo services are started on behalf of the war effort from New York to Salt Lake City on November 1 and an unnamed DC-3A crashes at Dayton, Ohio, on November 18.

Alaska service is resumed on a temporary basis in January 1943, from Seattle to Anchorage and the Aleutians via Ketchikan, Juneau, Yakutat, and Cordova. When service to the north is completed, United will have flown over two million miles in Operation Alaska without a serious accident. The *Mainliner Medford* is lost in a crash at Oakland, California, on January 11.

While on approach to Canton Island on February 7, a C-87, with 16 passengers crashes into the sea; two Army officers and the copilot survive. The Alaska route is shortened during late February to include just two intermediate stops at Juneau or White Horse and Anchorage. The shift is made possible by the creation of a joint UAL/Air Transport Command meteorological bureau, the Alaska Air Transport Meteorological Office, established under the direction of chief United weatherman Howard Hoffman.

On March 1, the Court of Claims decides that the 1934 cancellation of airmail contracts was legal and simultaneously rules that United is due \$364,000 for revenues lost to its former subsidiary lines due to the suspension. On May 10, the carrier is given CAB permission to serve Washington, D.C. All-cargo flights from New York to Salt Lake City end on May 31.

By July, the carrier has completed the training of 5,000 AAF aircraft mechanics and 1,000 Navy. The Australian terminus is now transferred to Townsville, 600 miles north of Brisbane. At about the same time, Capt. Seely Hall becomes the new Ops Pacific superintendent. The first C-54s (military DC-4s) begin to replace the company's Ops-Pacific Liberators at mid-month.

Just after takeoff from Auckland, New Zealand, on August 2, on a flight to Port Moresby, a C-87 with 24 Japanese POWs crashes in heavy rain; 12 prisoners and 2 of 5 crewmen survive.

On September 17, the previous year's loan to **LAMSA (Lineas Aereas Mineras, S.A. de C.V.)** is adjusted to 75% ownership (worth \$3 million) and an effort to connect with Denver from Ciudad Juarez and El Paso receives CAB permission to expand south below the Colorado capital to meet the Mexican partner at Nogales, Arizona.

In October, LAMSA's name is changed to **Lineas Aereas Mexicanas, S.A. de C.V.** Employing three DC-3s returned by the military, an all-cargo transcontinental Cargoliner service is started from New York to San Francisco on October 16. During the fall, Ops Pacific crews flying to Australia are often sent to satellite destinations such as Nadzab Field in New Guinea and Kwajalein.

The *Mainliner Tacoma* is returned on December 5 and on December 12, stockholders approve a recapitalization plan and a change in the company name to United Air Lines, Inc. The company's South Pacific-based Ops Pacific ground crews are transferred to Guam on December 26.

The 50,000th transcontinental flight is completed on January 18, 1944 and the first new Douglas transport received since 1941 is the DC-3A *Mainliner Oakland*, delivered on February 3. United appeals to the CAB in April for routes from San Francisco and Los Angeles to Honolulu. On May 3, one of the company's last C-87s blows a tire during takeoff from Canton Island and crashes (two dead). This is the third and final fatal crash during 7,000 flights the company starts during its wartime Operation Pacific.

Service to Boston is authorized by the CAB on June 12. President Patterson is the only trunk line CEO to support **Pan American Airways (PAA)** requests to Congress for the establishment of a single foreign flag carrier.

With the time now right, United reorders 15 DC-4s on September 11, along with 20 DC-6s. On September 22, the carrier signs its first labor

agreement with the Flight Engineers Association, a union formed by United flight engineers back in the spring.

Flights to Alaska cease on November 15 and after its having compiled significant research, Air Cargo, Inc. is closed down on November 29. Company statisticians report that load factor has now risen to 96% from 66% in 1941. Stewardess supervisor Ada Brown returns to flying the line on December 16; her purpose is to begin the organization of a flight attendants' union.

United Air Lines (2) receives a special National Safety Council award in January 1945 recognizing three years and more than one billion passenger miles of accident-free operations. Pacific flights end on March 31.

By the beginning of April, Ada Brown and her associates have signed up three-fourths of all company stewardesses into a new organization called not a union, but the Air Line Stewardesses Association (ALSA). On April 15, Los Angeles joins San Francisco as a terminus on the carrier's cross-country all-cargo service.

Transcontinental service is started from Boston in May, with Hartford and Cleveland as stops in the east. Although the war is still not over when the company's operational involvement ceases, the record is proud: United aircrew have flown nearly 200,000 men and 20,000 tons of material over 21 million miles, including 1,800 trips on the Alaskan run and 1,700 on the Pacific.

The National Mediation Board (NMB) certifies the International Association of Machinists (IAM) as the bargaining agent for United mechanics and related crafts on July 3, replacing the Airmen's Association of America. Bomber modification ends at Cheyenne on July 31. In August, the Association of Air Line Stewardesses (AALA), later the Air Line Stewardesses Association (ALSA), is named the bargaining unit for United stewardesses on labor contracts. Also in August, following cessation of hostilities with Japan, a group of pilots, led by Orvis Nelson, attempt to persuade management to open a Far East division. On VJ-Day, 12 C-54s piloted by company crews are in the air armada flown over Tokyo during the surrender ceremony. Also in September, the NFL's Green Bay Packers resume charter flights. The company now begins flying mail for the armed forces between San Francisco and Honolulu.

Two ex-AAF C-54s are received on October 17 under lease from the Reconstruction Finance Corporation (RFC); they enter service as the *Mainliner Yosemite* and *Mainliner Yellowstone*. The DC-4 order is cancelled on October 24 when the government begins to make available war-surplus C-54s, easily convertible to civil standard. President Patterson obtains 25. During the fall, Patterson and other top officials visit 36 stations in 32 days aboard a DC-3, checking conditions and personnel.

The first refrigerator plane with a full payload arrives at New York from the West Coast on November 3, continuing on to Boston, from whence it will fly fresh fish back to California. On November 10, the training of more than 7,000 military personnel is completed at the Oakland training center. Still hoping that **LAMSA (Lineas Aereas Mexicanas, S.A. de C.V.)** will be able to expand up to Arizona, that Mexican operator receives a \$1-million cash infusion on November 27, along with the B-247 *Flying Lab*, now reconfigured to civil airliner standard.

United ends the training of U.S. military personnel at Oakland on November 10 after having qualified more than 7,000 ground crew members. Also during November, eight C-54Bs are converted to DC-4 civil standard and are christened *Mainliner Ranier*, *Mainliner Golden Gate*, *Mainliner Lake Huron*, *Mainliner Crater Lake*, *Mainliner Lake Tahoe*, *Mainliner Lake Tahoe II*, *Mainliner Olympic*, and *Mainliner Lake Ontario*. Seven more C-54Bs are acquired in December and, upon conversion, they will become *Mainliner Lake Champlain*, *Mainliner Lake Michigan*, *Mainliner Lake Erie*, *Mainliner Lake Superior*, *Mainliner Mississippi River*, *Mainliner Missouri River*, and *Mainliner Ohio River*.

The first United-IAM labor agreement also takes effect during December and, for the year as a whole, the net profit is \$39,348,000.

The entire fleet on January 1, 1946 comprises 77 DC-3s, including 21 C-47s leased from the government. On the same day, the carrier pioneers for the industry the 40-hour workweek. The DC-3A *Mainliner Tacoma*,

with 3 crew and 21 passengers, crashes into Elk Mountain, near Laramie, Wyoming, on January 31; there are no survivors.

Airline employment swells to 8,000 with the return of 1,500 personnel from the war and 5 more C-54Bs arrive during the month to become *Mainliner Colorado River*, *Mainliner Hudson River*, *Mainliner Delaware River*, *Mainliner Wabash River*, and *Mainliner Columbia River*.

The previous experimental all-cargo association with the Railway Express Agency is revised to allow United to begin offering its own cargo initial peacetime tariffs on February 1. The first DC-4 is delivered on February 11; a military C-54 converted to Douglas DC-4 civil standard, it is the first *Mainliner 230* (referring to the 230-mph cruising speed) and is christened *Mainliner Chicago*. Three daily New York-California Cargoliner frequencies are now offered per day. Only one C-54B is purchased in February; it will become *Mainliner Lake Michigan*.

The *Mainliner Chicago* begins 14-hour coast-to-coast New York to San Francisco service on March 1. Like *American Airlines*, United's Douglas transports are initially at a disadvantage in cross-country service competing against the 80-mph, faster Lockheed L-049 Constellations of **Transcontinental and Western Air Lines (TWA)**, which operate nonstop. Eight days later, Vice President-Operations Jack Herlihy arranges a contract with Senior Pilot Orvis Nelson and several associates to fly a route, on behalf of the military, between San Francisco and Hickam Field, Hawaii. DC-4 New York to Chicago flights begin in mid-month. Employing two unconverted ex-AAF C-54Bs, Nelson initiates United's military contract on March 18. Meanwhile, two more C-54Bs are purchased from the RFC during the month for conversion into *Mainliner Puget Sound* and *Mainliner Chesapeake Bay*.

The group charter by the All-America Football Conference signed on April 13 is called the largest in airline history. On April 25, the carrier signs its first labor agreement with ALSA, which is retroactive to January 1. The carrier flies its first charter for a major league baseball team, the New York Yankees, on May 9.

New York to San Francisco overnight service is opened on May 10 and an unnamed DC-4 crashes at Chicago on May 29. The carriage of dogs, suspended at Pearl Harbor, is resumed on June 2. With agreements made with all affected parties and permission from the CAB obtained the next day, United inaugurates DC-3 frequencies to Avalon Airport, on Catalina Island, from Los Angeles, Burbank, and Long Beach, beginning July 1.

The CAB on July 2 grants San Francisco-Honolulu authority. On July 19, application is made to the CAB for permission to inaugurate scheduled helicopter service between Chicago (MDW) and a number of suburban communities; permission is forthcoming. The company redefines its transcontinental route during the summer.

On August 1, the 21 leased DC-3s are purchased from the War Assets Administration for a combined price of \$290,000. The same day, an \$11-million order is placed with Boeing for 7 Model 377 Stratocruisers; the giant aircraft will be delivered in a 55-seat sleeper version. The next day service is initiated from New York to the Pacific Northwest.

On August 24, the newly organized San Francisco 49ers of the All-America Football Conference (later merged into the NFL) fly to their very first away game, an exhibition in San Diego against the Los Angeles Dons.

A C-54B is acquired on October 4 for conversion into the *Mainliner Cape Cod*. On October 9, the DC-4 *Lake Michigan*, with 4 crew and 37 passengers crash-lands in fog 1.5 km. from the airport at Cheyenne, Wyoming, while on final approach (two dead).

The Cleveland Browns are the second AAFC team to fly with the airline, choosing to visit New York via a pair of leased DC-3s, again with players apportioned between the two aircraft, for their fourth game (versus New York) on October 11.

Another C-54B is purchased on November 9 to become *Mainliner Schuykill River*. While on final approach to the airport at Cleveland, Ohio, on November 11, a DC-3 with 3 crew and 17 passengers crashes (two dead). On November 12, orders are placed for 7 Boeing 377 Stratocruisers.

The first of three new DC-6s to be received before month's end arrives on November 24, the same day **American Airlines** receives its first new Douglas Flagship. As the type has yet to receive government certification, both companies must begin a five-month interim period of crew training and route proving.

The DC-4 *Lake Champlain* must be written off after a bad landing at Los Angeles on December 24; fortunately, none of the 4 crew or 41 passengers aboard are killed.

At year's end, United turns back its California-Hawaii contract, by which time, its supervisor, Orvis Nelson, has organized his own company, **Transocean Air Lines**. The first C-54G is acquired for the airline from RFC on December 28; it will become *Mainliner Potomac River*.

The first production DC-6, *Mainliner San Francisco*, arrives in January 1947 and it, too, begins a series of proving flights. Like the DC-4s, these new pressurized aircraft are known by their cruising speed, becoming Mainliner 300s. A stock offering is undertaken on February 14. The company gains direct entry from the east into Southern California on March 6 when it purchases **Western Air Lines'** Denver to Los Angeles route; the arrangement must be approved by the CAB. On March 27, United and Western file a joint route and equipment transfer application with the CAB and in early April, four DC-4s are leased from **Eastern Air Lines**. Pressurized operations are inaugurated by the carrier's new Douglas DC-6s on April 27, as a new five-mile-per-minute DC-6 flies New York to San Francisco via Lincoln (Nebraska) in 11 hours; the eastbound returns take only 10 hours. Although United offers fewer frequencies than **American Airlines**, the new Douglas transports allow a more even competition with the Constellations of **Transcontinental and Western Air Lines (TWA)**.

DC-6s begin the new roundtrip Hawaiian service on May 1. A Mainliner 300, with 44 passengers aboard, inaugurates the first service to Honolulu from San Francisco.

The same day, overnight San Francisco-New York DC-6 flights are inaugurated; without traffic stops, they require only 9 hrs. 55 min. flying time. On May 17, the CAB authorizes consolidation of the western part of the carrier's transcontinental route.

The DC-4 *Lake Tahoe*, with 4 crew and 44 passengers, is caught by a sudden wind shear while taking off from New York (LGA) on May 29 and crashes (43 dead).

Also in May, having obtained a Sikorsky S-51, the carrier begins experimental rotary-wing flights connecting Chicago (MDW) with a number of suburban communities. Passenger loads do not cover costs and permanent service is not initiated; the S-51 helicopter is sold.

New York-Chicago-Los Angeles flights begin on July 17. On August 25, the CAB authorizes the United-Western route and equipment transfer, which was actually consummated on August 1; for \$3.75 million plus a \$1-million loan, United receives Western's Denver-Los Angeles route plus five DC-6s ordered for its operation. The next day, overnight freight service is initiated to Los Angeles from New York via Philadelphia, Detroit, and Chicago. One million ton-miles in a month is topped for the first time in September.

An in-flight fire causes Flight 608, the DC-6 *Mainliner Seattle* with 5 crew and 47 passengers en route from Los Angeles to Chicago, to crash at Utah's Bryce Canyon National Park on October 24; there are no survivors.

Through month's end, a total of 35 DC-6s have been delivered since April.

As a result of the Bryce Canyon disaster and several other DC-6 accidents industry-wide, the pressurized fleet is grounded, along with those of other carriers, beginning on November 12. Meanwhile, during October, a Fairchild C-82 Packet is employed in an experimental "flying mail car" service over AIM 1. The last DC-3A, *Mainliner Milwaukee*, is accepted on November 15. Frequencies on the Hawaii run are briefly suspended until arrangements are made to lease DC-4s from **Transocean Air Lines (TAL)** and Matson Navigation Company. On December 5, a CAB report blames fuel overflow into the heating system as the cause of the Bryce Canyon disaster.

Setting a new pattern for the centralized control of airline activities, United opens an operations hub at Denver in January 1948. Having been modified to eliminate the problem causing in-flight fires, the government releases the DC-6 to reenter commercial operation; United service with the type is resumed on March 21. Counting all services since the first flight of predecessor **Varney Air Lines**, the company passes the half-billion plane-mile mark on April 6. On April 28, all maintenance work is centralized at a new San Francisco "push button" overhaul base.

En route from San Diego to New York on June 17, a DC-6 hits a power wire and crashes while making a forced landing at Mount Carmel, Pennsylvania, killing all 4 crew and 39 passengers, including showman Earl Carroll and actress Beryl Wallace.

On July 1, the company inaugurates 7 hr.10 min., twice-daily DC-6 roundtrips from Chicago to Providence, Rhode Island, via Toledo, Cleveland, and Hartford, Connecticut. UAL will be the only airline to consistently offer air service to the citizens of Providence over the next 50 years.

A DC-6 with a defective engine crash-lands at Harrisburg while on a July 29 New York to San Francisco flight; no injuries are reported. Also in July, the company transports its 10 millionth passenger and flies its 5 billionth passenger mile. United inaugurates ILS (Instrument Landing System) operations on July 8. Still, with the bloom off the postwar travel boom, it becomes necessary to lay off 4,000 employees or 25% of the total workforce by year's end.

Formerly known as the *Mainliner Oakland*, the DC-3A *Mainliner Ogden* is sold to **Piedmont Air Lines** on March 21, 1949 along with the *Mainliner Boston*. Several new Boeing B-377 Stratocruisers are delivered later in the year, beginning with the *Mainliner Hawaii* on September 28 and the *Mainliner Kauai* on October 28. Airline dependability shows continued progress with United, for example, reporting in December that it has completed 98% of all scheduled miles during the year.

On December 2, the stewardesses of the company's ALSA merge their organization into the larger Air Line Stewards and Stewardesses Association (ALSSA). The B-377 *Mainliner Hana Maui* arrives on December 12 while a Christmas-rush record four million ton-miles of freight are flown between December 1 and 24. The Stratocruiser *Mainliner Hilo* is delivered on December 30 and during the year DC-3 Captain Hamilton Lee, the company's first pilot, retires.

Boeing 377 New York-Glasgow-Amsterdam service is inaugurated on January 9, 1950 by one of the new Stratocruisers, while others start flights over the Hawaii route on January 15, the day the *Mainliner Oahu* arrives. The last new B-377, *Mainliner Kano*, is delivered on January 28.

On April 17, John H. Grant is arrested at Los Angeles for placing a bomb on a company aircraft about to leave for San Diego in a plot to kill his wife and three children for their insurance; the bomb is found minutes before takeoff. Grant, who is deeply in debt and supposedly infatuated with another woman, will be convicted of attempted murder and given a 20-year prison term.

The DC-4 *Mainliner Grand Canyon* is sold to **El Al Israel Airlines, Ltd.** on April 27.

Los Angeles to San Francisco DC-4 coach-class service (\$9.95 one-way) is inaugurated on May 14. The next day, the twentieth anniversary of the first stewardess service is celebrated. A company record 5.66 million passenger miles are flown in a single day on June 19 and United begins participation in the Korean Airlift in late June, flying between San Francisco and Tokyo with contracted supply shipments. One million passengers are carried during the first half of the year, according to a July 15 company report. The CAB grants Los Angeles to Honolulu authority on August 4. Los Angeles to Honolulu B-377 flights commence on October 9.

On January 31, 1951, United completes its 10,000th crossing between California and Hawaii in more than 8 years of transpacific operations both commercial and military. The first DC-6B makes its maiden flight on February 2 and a \$16.5-million order is placed on February 20, for 20 Convair CV-340s. As launch customer, United takes delivery in March of the first of six DC-6Bs to be received in the year's initial quarter.

The carrier's twentieth anniversary is celebrated on April 6 and transcontinental DC-6B service is inaugurated by the *Mainliner Milwaukee* on April 11. The DC-3A *Mainliner Hartford* (originally *Mainliner Chicago*) with 11 aboard, crashes in a storm while landing at Fort Wayne, Indiana, on April 28; there are no survivors. Investigators will later list the probable cause of the disaster as wind shear.

The same day, the first production DC-6B arrives and is christened *Mainliner Newark*. A record 6,112,000 revenue passenger miles are flown in a single day on June 4.

Seeking a larger share of revenue and shorter hours, company pilots present CEO Patterson with a proposal that their pay be based upon miles rather than hours flown; when the airline leader refuses, the flyers strike on June 20, grounding all aircraft. President Harry S Truman urges the pilots to return to work on June 23, but with neither management or labor prepared to settle, the DOJ prepares to seize the airline. The strike ends on June 30, the same day a DC-6B with 5 crew and 45 passengers crashes into Rocky Mountain National Park, 4 km. SW of Fort Collins, Colorado, killing everyone aboard.

ALPA pilots refuse to fly DC-6Bs on July 15 without a pay differential, thus grounding these units of United's fleet. After lengthy negotiations, the pilots agree on August 1 to resume flying DC-6Bs and the carrier immediately restores them to service. Following the defeat of the ALPA strike for a new pay formula, President Patterson orders all company employees not to voice animosity toward the flyers. A New York–Chicago–Los Angeles DC-6B service is added on August 15. On August 22, United begins using mobile air conditioning units at New York (LGA) to cool the cabins of DC-6Bs.

En route from Boston to San Francisco via Hartford, Cleveland, and Chicago, two days later, Flight 615, a DC-6B with 6 crew and 44 passengers preparing to land, crashes into a hill near Oakland, California; there are no survivors.

The B-377 Stratocruiser *Mainliner Oahu*, on a September 12 training flight, is forced to feather an engine and falls into San Francisco Bay northwest of the Port of Redwood City; the three crewmen aboard all perish. New York to San Francisco DC-4 coach fares of \$110 one-way are offered, beginning on September 25 and for September as a whole, a total of 186,377,000 revenue passenger miles are flown.

In October, the NFL Chicago Cardinals fly to an away game, winging via Des Moines, Iowa, to Los Angeles; despite an effort to thus keep his players fresh, coach Curly Lambeau's team loses 45-21.

Also during the fall, President Patterson accepts an invitation to speak at a New York City dinner sponsored by the Newcomen Society in North America; as is the Society's custom, his remarks are published as a small pamphlet, *25 Years among the Stars: United Air Lines, 1926–1951*.

On November 18, a DC-6 with 39 aboard and a DC-6B with 38 aboard each land safely with one engine out.

The pilot of a DC-3, with two other crewmen aboard, loses control and crashes at Denver on December 4; there are no survivors.

On December 7, the tenth anniversary of the Japanese attack on Pearl Harbor, President Patterson announces that United (which will shortly be followed by other majors) is declaring a fare war on the nonscheduled carriers, pledging to continue matching their low fares on the DC-4 New York–San Francisco run.

To end the fare war begun late the previous year, on January 9, 1952, United, **American Airlines**, and **Trans World Airlines (TWA)** agree to offer \$99 coast-to-coast coach fares. The copilot of a B-377, en route from Honolulu to Los Angeles on February 25 with 43 aboard is able to safely return his Stratocruiser to Hawaii when the pilot dies of a heart attack. On March 9, DC-6 flights are added from New York to Philadelphia, Detroit, and points west, while the first delivery of a production CV-340 is made on March 28.

A total of 25 DC-7s are ordered, at a cost of \$56 million, on June 25. A new livery is introduced on company aircraft. With several permutations, it will serve throughout the remainder of the decade and into the early 1970s. With U.S.-Mexican air rights under inharmonious discussion, United sells LAMSA to Mexican investors and the founders of

Lineas Asociadas Mexicanas, S.A. de C.V. on July 22 for \$1.23 million. The DC-6B *Mainliner Des Moines* is received on July 29.

Wavering in their commitment to air transport, the NFL Cleveland Browns elect to make several game trips by train during the fall, but soon return to flight. The *Mainliner Salinas* begins the company's CV-340 operations in California on November 1.

United flight engineers stage a strike ordered by the Flight Engineers International Association (FEIA). President Harry S Truman intervenes and the job action ceases the next day.

A new contract is signed between FEIA and United on January 30, 1953.

On February 22, 1953, a DC-6 flies from Cleveland to Hills Grove, Rhode Island in a record 1 hr. 24 min. Also in February, United joins with the Radio Corporation of America (RCA) to develop an airborne radar unit for weather mapping on commercial transports.

The C-53D, reconverted to DC-3 civil standard as the *Mainliner Red Bluff*, is sold to **Northeast Air Lines** on March 5; it is followed to Boston by the *Mainliner Avalon*, the former DC-3A *Mainliner Sacramento*, on March 10. DC-6 air coach flights are inaugurated between California and Hawaii on March 22 and extended in April to mainland destinations.

United introduces "Executive Flights" for men only on April 26. These services feature complimentary cocktails, steaks, business publications, and cigars. The popular program will end in January 1970.

Despite the transport of 400,000 passengers in 8 years, the company determines in midyear that the Catalina Island service, begun in 1946, is not profitable and gives a year's notice that it will cancel the route. Also in July, an employee stock-purchase plan is unveiled and a new Denver Operating Base, representing the latest in centralized control of airline operations, is opened.

United and **American Airlines** Convairliners, with a total of 57 aboard, brush in midair over Michigan City, Indiana, on August 26; although the planes are damaged, both land safely with no one hurt. Once known as the *Mainliner Ohio*, the DC-3A *Mainliner San Diego* is sold to **Trans-Texas Airways** on September 8. On September 27, the company and **Braniff International Airways** inaugurate an interchange route between Portland and Seattle and Dallas (DFW) via Denver. Also in September, United joins with **Continental Airlines** in operating an interchange service between the Pacific Northwest and Tulsa via Denver and Wichita.

Participation in the Korean Airlift ends in October; in 3 years of contract flights, the carrier has made over 1,000 roundtrip flights between San Francisco and Tokyo and carried in excess of 25,000 troops, plus supplies. The same month, United joins in a Post Office experiment to carry first-class mail from Chicago to New York (Newark) and Washington, D.C. (DCA). Los Angeles–Seattle B-377 Stratocruiser flights are inaugurated on December 1.

Two nonstop New York to Cleveland frequencies are opened on April 24, 1954. **American Flyers Airline** purchases the C-53, converted to DC-3 civil standard as the *Mainliner Tacoma*, on April 21; the DC-3A *Mainliner Salinas*, formerly known as *Mainliner Indiana*, follows on May 18. Employing a new DC-7 Mainliner, the *Mainliner Hawaii*, United, on May 24, operates the first dawn-to-dusk flight from New York to Honolulu via San Francisco; the 5,000-mile flight is completed in a record 16 hrs. 51 min. **Transocean Air Lines (TAL)** purchases the DC-3A *Mainliner Salem*, formerly the *Mainliner Utah*, on May 27.

Mrs. Earl Warren headlines the VIPs making the first nonstop transcontinental DC-7 flight on June 1; company President Patterson awards each passenger on the inaugural flight a share of United stock. San Francisco to New York return service is offered nonstop in 7 hrs. 30 min on the same day, while New York to San Francisco requires a Chicago stop and takes 9 hrs. 30 min. The individual cross-country flights will be christened *The Continental*, *The Overnight Hollywood*, *The San Francisco*, and *The Overnight Continental*; all offer special Red Carpet passenger and White Glove baggage services.

A C-54G with 3 crew and 79 passengers is lost in a landing accident at Oklahoma City on June 15; although the aircraft must be written off, there are no fatalities.

Also in June, the installation of four electronic flight simulators is completed at the Chicago and Denver training sites.

The DC-4 *Mainliner Colorado River* is sold to **American Flyers Airline** on July 1. Six of the no-longer economical Boeing Stratocruisers are offered to **British Overseas Airways Corporation (BOAC)** in July, which desperately needs capacity in the wake of the grounding of its de Havilland DH 106 Comet I jetliners.

On August 1, company officials announce that the airline is flying 300,000 miles per day. Orders are placed the same day for \$21 million worth of new aircraft; additionally, \$4 million is committed for the installation of airborne radar on the company's fleet. Also in August, the NFL New York Giants make their first charter flight, from Salem, Oregon, to Oklahoma City for an exhibition game.

On September 2, the B-377 *Mainliner Hilo* is sold to **British Overseas Airways Corporation (BOAC)**. The DC-7 *Mainliner City of Hartford* inaugurates Boston to San Diego service via Hartford, Chicago, and Los Angeles on September 26. The final Burbank-Avalon flight is made on September 30. On October 3, passenger Lt. Col. Greenway almost falls out of a DC-6 when the plane's emergency hatch flies off at 13,000 feet over Indiana; he is saved by his safety belt.

Four are hurt on October 21 during the refueling of a DC-6 at Chicago (MDW); gutted, the plane will be rebuilt and returned to service. Six days later, the B-377 *Mainliner Kauai*, is purchased by **British Overseas Airways Corporation (BOAC)**. To support nonstop cross-country flights, a long-range weather advisory unit is established at Denver on November 23. A DC-7 flies from Chicago to New York on December 1 in a record 1 hr. 45 min. The DC-7 *Mainliner Waipahu* arrives on December 3 and the remaining B-377s *Mainliner Hawaii*, *Mainliner Kano*, *Mainliner Waipahu* and *Mainliner Hana Maui*, are all sold to **British Overseas Airways Corporation (BOAC)** during the month.

DC-7 Mainliner service is inaugurated between Hawaii and California on January 1, 1955. On February 16, the CAB grants permanent authorization to operate between California and Hawaii. A DC-7 flies from San Francisco to Honolulu on March 12 in a record 6 hrs. 56 min. Nonstop 8 hr. 45 min. flights are initiated on May 6 between New York and San Francisco. The twenty-fifth anniversary of the first stewardess service is celebrated on May 15.

DC-6B is equipped with a set of tubeless tires makes the first test of this equipment, landing safely at New York (LGA) on a regularly scheduled May 21 flight. Formerly known as the *Mainliner Massachusetts*, the DC-3A *Mainliner Merced* is sold to **Southern Airways** the same day. In June, United becomes the world's largest airline operator of electronic flight simulators as three additional units are ordered. The first installation of weather-mapping radar is completed aboard a company aircraft in July.

Restrictions on nonstop Seattle and Portland to Chicago service are lifted by the CAB on September 15. An interline accord is signed with **Seaboard & Western Airlines** on October 2 permitting a single airway bill for cargo shipments to and from Europe and to and from any point in the U.S. served by United.

In the worst crash in U.S. commercial aviation history to date, Flight 409, the DC-4 *Lake Michigan*, with 5 crew and 39 passengers en route to San Francisco from New York on October 6, plunges into Medicine Bow Peak, 40 mi. W of Laramie; there are no survivors.

On the second Sunday in October, the New York Giants professional football team finally takes its first regular-season charter flight, home from Chicago after defeating the Packers at Green Bay 31-17. For several years yet, until the introduction of jetliners, any trip that can be made overnight by train is still made that way.

The airline is struck by 475 flight engineers on October 24, leading to many flight cancellations and lengthy negotiations. The next day, October 25, United becomes the first U.S. domestic airline to request jetliners, placing a \$175-million order for 30 DC-8-11s and DC-8-21s. Nonstop Seattle to Chicago flights commence on October 31.

En route from New York to Portland, Oregon, at 5,000 ft. on November 1, Flight 629, a DC-6B with 5 crew and 39 passengers, explodes in midair near Long Mount, Colorado, about 100 miles from the October 6 disaster site, after takeoff from Denver; there are no survivors.

Two weeks later, the FBI arrests John G. Graham, who admits to carrying out a plot to kill his mother, Mrs. D. King, after purchasing six 25¢ life insurance policies on her flight, totaling \$37,500, from a Stapleton Airport vending machine. Graham, who had planted a bomb made up of 25 sticks of dynamite and a dry-cell battery timer in Mrs. King's suitcase, is arraigned on murder charges on November 16 and on December 10 he pleads insanity and is committed for testing.

After hiring and qualification questions are resolved, the flight engineers strike ends four days later. On December 28, the company completes the largest single airline financing program in history to date—\$150 million over five years.

Daily New York to Kansas City flights commence on February 7, 1956. Accused bomber Graham withdraws his insanity plea on February 25 and pleads not guilty. United celebrates its thirtieth birthday on April 6; it is noted that 38 million people have been flown nearly 25 billion revenue passenger miles since start-up. The Graham trial opens on April 16 and the 20,000th crossing of the California to Honolulu route is completed on April 24. DC-6A Cargoliner service is initiated between New York and San Francisco via Chicago on April 30.

The saddest courtroom trial in company history ends on May 3, with Graham's conviction and death sentence. Also in May, the first nonstop DC-7 service is opened from Washington, D.C. to San Francisco.

The nation's senior airline pilot, Capt. Harry W. Huking, retires on June 1 after logging over 7 million miles and 29,000 hours. The maximum height requirement for stewardesses is raised on June 18 to 5'8" and a minimum age of 20 is set.

Departing Los Angeles just three minutes apart, Flight 718, the DC-7 *Mainliner Vancouver* with 58 aboard, and Flight 2, the **Trans World Airlines (TWA)** L-1049G Super Constellation *Star of the Seine* with 70 aboard, collide in midair over the Arizona Grand Canyon on June 30. All 128 people aboard both aircraft are killed in the worst civil aviation disaster to date. With heavy thunderstorms in the area, the Lockheed had sought permission to fly 1,000 ft. above the 20,000-ft. cloud cover, where the Douglas is cruising at its designated 21,000-ft. height, and it is granted by ATC.

The tragedy will receive intense media exposure and will lead to calls for government changes in the nation's air traffic control situation. Donald B. Jr. and Michael B. McComb review "Final Destination: The Story of Flight 2 and Flight 718" for *Airliners* 5 (Spring 1992): 41-47.

Interline agreements are signed on August 13 with **Braathens SAFE, A.S.** of Norway, **Union of Burma Airways, Ltd.**, and the U.K. operator **Cambrian Airways, Ltd.** While landing at New York (LGA) on September 13, a DC-6 with 13 aboard narrowly misses crashing into an automobile driven onto the runway by a drunkard. A week later, on September 20, the Southern Pacific Railroad begins selling United tickets at 130 depots where the airline has no representative.

The last DC-3 is retired on October 28; since its introduction into the fleet 20 years earlier, "the plane that changed the world" has flown 12.7 million passengers for the company over 400 million revenue airplane miles. The DC-3As *Mainliner North Platte*, *Mainliner Pendleton* and *Mainliner Moline*, the latter formerly known as *Mainliner Connecticut*, are sold to **Southeast Air Lines** on November 12, 19 and 27, respectively. The twentieth anniversary of the first Oakland flight kitchen is celebrated in December and the DC-3A *Mainliner Cheyenne* is sold to **Southeast Air Lines** on December 3; the same carrier also purchases the *Mainliner New York*, formerly *Mainliner Bethlehem*, three days later.

A DC-7 flies from Chicago to Washington, D.C. on January 1, 1957 in a record 1 hr. 23 min. Ten days later, John G. Graham is executed in the California gas chamber. New York to Los Angeles via Philadelphia and Detroit service is inaugurated on February 10. The DC-7 *Mainliner City of Baltimore* is received on the last day of the month.

In April, the employee population exceeds 20,000 for the first time and on May 15 DC-7 Custom Coach service is opened on all long-haul routes.

During the summer, DC-4s of **Pacific Southwest Airlines (PSA)** begin to compete with the company's DC-6B Air Coach service north and south on the California corridor between Los Angeles and San Francisco. A DC-6B is sent by the airline to represent it at the October 12 MacArthur Airport air show on Long Island.

On November 22, an order is placed for 11 (later 29) Boeing 720-022s, derivatives of the B-707, plus another 10 DC-8-10s, at a total cost of \$100 million. Walter O'Malley charts company DC-7s to move the Brooklyn Dodgers professional baseball team to Los Angeles. The last DC-4s are retired at year's end.

In anticipation of the complexities of the Jet Age, the carrier's top management is broadened in January 1958 to include 7 senior vice presidents and 18 vice presidents. A computerized reservations system is placed into full service in February. Chartered United DC-7s fly the renamed Los Angeles Dodgers on all of their cross-country road trips, beginning in early April.

While en route from Los Angeles to New York on April 21, a DC-7 with 5 crew and 42 passengers collides head-on with a U.S. Air Force F-100 Super Sabre with two crew that is on a training flight at 21,000 ft. outside of Las Vegas. There are no survivors from either aircraft.

Two are hurt on June 20 as a DC-7 is forced to dive to avoid a collision with a USAF B-52 over Modesto, California. Also in June, the 50 millionth passenger is flown.

On July 15, a \$16-million order is placed with the Teleregister Corporation for a new computerized reservations system to meet expanded Jet Age needs. Flight crew training begins at Denver in September in the first DC-8 electronic simulator in airline history. A DC-7 with 32 aboard narrowly avoids colliding with a military aircraft while landing at San Francisco on November 18. The fleet at year's end comprises 90 DC-6/DC-6Bs, 55 DC-7s, and 53 CV-340s.

On January 11, 1959, Dayton and Columbus become stops on the company's Chicago-New York DC-7 route. Air travel, much of it under United charter, makes possible the transfer of professional sports franchises and team expansion by allowing for extensive and fast road trips. In April, an industry record is set when all 16 American and National League baseball teams sign for charter flights—nine on an exclusive basis.

The first DC-8-11 is received in a ceremony on June 3 and is christened *Mainliner Capt. R. T. Freng*. A large number of guests, led by Chairman Patterson and Donald Douglas, inspect the jetliner. An order is signed in June for 7 additional B-720-022s, bringing the \$74 million total to 18. In a preservice test flight, the DC-8-11 *Mainliner Capt. R. T. Freng* flies from Denver to New York in a record 3 hrs. 31 min.

Mainliner Capt. W. D. Williams is the second DC-8-11 delivered, on June 27, and on August 19 and 25 and September 3 and 14, respectively, is followed by the *Mainliner R. I. Dobie*, *Mainliner Capt. Harry Huking*, *Mainliner Capt. R. I. Wagner*, and *Mainliner Capt. George Douglas*. On September 18, the first DC-8-11 jetliner, *Mainliner Capt. R. T. Freng*, is placed into service over the San Francisco to New York (IDL) route. Eastbound, scheduled time is cut from 8 hrs. to 5 hrs., while on the westbound run, the time falls from 9 hrs. 15 min. to 6 hrs. 5 min.

Between September 29 and December 30, nine more DC-8-11s arrive: *Mainliner Donald Douglas, Sr.*, *Mainliner William B. Stout*, *Mainliner J. A. Herlihy*, *Mainliner Will Rogers*, *Mainliner Capt. W. E. Rhoades*, *Mainliner W. C. Mentzer*, *Mainliner James Doolittle*, and one unnamed unit. Meanwhile, the first B-720-022, a shortened version of the Stratoliner, makes its maiden flight (in United colors, but with Boeing titles) on November 23.

During the year, the first of six DC-7s are converted into DC-7BF freighters and flight attendant Lucille Chase sees her humorously told recollections published, *Skirts Aloft* (Chicago: Louis Mariano).

On December 31, the first sales from the DC-6 fleet are made when four units are purchased by **Delta Air Lines**. The same day, the DC-7 *Mainliner Waipahu* is traded back to its manufacturer.

Passenger boardings for the year total 7.5 million.

United announces the beginning of daily jet service from New York to Los Angeles on January 2, 1960, via Chicago. The company's first DC-8-21, an upgraded DC-8-11, is delivered on January 21 and is christened *Mainliner W. CV. Mentzer*. Four days later, a DC-7 encounters severe air turbulence over Boulder, Colorado; 1 of the 26 passengers aboard is seriously hurt.

A second B-720-022, also painted in United colors, begins tests in late January.

A DC-7 nearly collides with an **American Airlines** DC-6 over Ohio on February 5. Twelve days later, on February 17, the carrier inaugurates daily DC-8-11 service from Philadelphia to Chicago, continuing on to San Francisco. The same day the DC-8-21 *William B. Stout* is placed into service. On February 18–22, a "DC-8-to-the-Fiftieth State" introductory flight is made by the DC-8-11 *Mainliner Oahu* from New York to Honolulu via San Francisco in 9 hrs. 53 min; eastward bound from Hawaii to Chicago, the return flight is completed in 7 hrs. 52 min. Douglas jets continue on these routes.

On February 26, a \$20-million order is placed for 20 Sud-Est SE-210 Caravelle VIRs from Sud Aviation in France; this is the first foreign jetliner adopted by an American airline (all will receive names honoring French cities) and the first anywhere built with aft-mounted engines. On February 26, the first unaltered DC-8-21, *Mainliner Hana Maui*, arrives while the second is delivered on February 28 and christened *Mainliner W. A. Patterson*. DC-8-21 service is inaugurated to Seattle on March 1 and Baltimore (BWI) on March 18.

In April, two DC-8-21s join the fleet: *Mainliner Hilo* and *Mainliner Annie E. Johnson*, the first of its type named for a woman. The use of a new passenger baggage system is started on April 17, involving the use of special containers developed by Douglas for its DC-8s. The next day, DC-8-11 flights commence to Portland. Christened *720 Jet Mainliner Walter T. Varnet*, the first B-720-022 is delivered on April 30; five more will arrive in May and June.

Sudden in-flight turbulence is encountered by a DC-8-21 with 113 aboard en route to Denver on May 24, the same day Douglas jetliner service to that Colorado city begins; two passengers are seriously hurt. Also in May, President Patterson meets in New York with **Capital Airlines** Board Chairman Thomas D. Neelands Jr. to discuss a possible merger.

During this month and in June, DC-7F Cargoliners begin to join the fleet, as do three more DC-8-21s: *Mainliner Waipahu*, *Mainliner Kauai*, and one unnamed unit. Also in June, ground is broken for a new Executive Office and Training Center near Chicago and on June 22, flights commence to Detroit. The initial three B-720-022s complete their test program and is certified on June 30.

When the pilot switches on the seat belt sign aboard a DC-8-21 with 84 aboard near Poughkeepsie, New York, on July 3, some passengers fail to heed it and not all flight attendants enforce it; as a result, when the plane hits turbulence, one passenger is seriously injured.

The first Boeing B-720-022s come on line on July 5, beginning Jet Mainliner service over the Chicago-Los Angeles, via Denver route. Jet Mainliner B-720-022 roundtrips commence on July 8 from Los Angeles to Seattle via San Francisco.

Frequencies are initiated by DC-8-11s to Cleveland on July 24. On July 28, Patterson and Neelands announce that negotiations are completed for the purchase of financially strapped **Capital Airlines**. Following the approval of the boards of directors of both carriers on August 11, permission to complete the merger is sought on September 15 from the CAB.

Meanwhile, DC-8-11 flights are begun to Omaha on August 12 and to Las Vegas, San Diego, and Salt Lake City on September 5, 13, and 25, respectively. Incidentally, at San Diego on the 13th, the company's first B-720-022, received back on April 30, is christened *Jet Mainliner Claude T. Ryan*, in honor of the aviation pioneer.

In addition, the last named DC-8 to be received until 1965 is placed into service: *Mainliner James M. Doolittle*. The first full year of jet service is completed in September, during which time 1.3 million passengers have been flown over 1.8 million revenue passenger miles.

Stockholders of both United and **Capital Airlines** approve in October the marriage of their two companies; the United vote is 3,291,237 to 35,014 while the Capital count is closer, 677,687 to 34,604. Incidentally, as part of the merger, United will take over **Capital Airlines'** long-standing charter arrangements with the Baltimore Colts, Detroit Lions, and Pittsburgh Steelers professional football teams. On November 17, a Beech 35 Bonanza collides midair with a DC-6 with 19 aboard as it is landing at Denver; although both planes are severely damaged, no one is killed.

A B-720-022 with 91 encounters a pocket of clear-air turbulence over Wolbach, Nebraska, on December 4 that results in serious injury to one passenger. The next day, a contract is signed with Boeing for 40 B-727-100s. A day later, the CV-340 *Mainliner Salinas* is sold out of service.

United Flight 826, the DC-8-11 *Mainliner Will Rogers* with 7 crew and 77 passengers approaches New York (IDL) on December 16 after a flight from Chicago (ORD). At the same time, **Trans World Airlines (TWA)** Flight 266, a Lockheed L-1049G with 5 crew and 39 passengers is approaching New York (LGA) in IFR. The jetliner, proceeding beyond its clearing point, crosses the flight path of the Super Constellation and at short range, the No. 4 jet engine slices open the propeller-liner's fuselage top. The impact causes the TWA Super Constellation to break into three pieces and crash in flames on Miller Army Air Station, Staten Island. The DC-8 limps on for another 13.5 km. before crashing into Sterling Point, Brooklyn, destroying a church, 10 apartment buildings, and several shorts and causing a 7-alarm fire. All aboard both aircraft are killed, along with 5 people on the ground.

Donald B. McComb Jr. portrays "Collision Course: The Tragic End of *Mainliner Will Rogers* and the *Star of Sicily*" in *Airliners* 8 (January–February 1995): 20–23.

The company now flies 60% of all air traffic between California and Hawaii. Also in December, \$186 million in requests are also made for 1964 and later delivery slots for 40 Boeing 727-22s. On December 30, after four months of examination, hearing examiner Thomas L. Wrenn recommends approval of the **Capital Airlines** merger to the full CAB.

Enplanements for the year total 8.11 million.

The first two Caravelles arrive from France on January 4 and 6, 1961, respectively, and are christened *Caravelle Jet Mainliner Ville de Bordeaux* and *Caravelle Jet Mainliner Ville de Lyon*. Two B-720-022s are leased to **Capital Airlines** and commence service on January 8. While landing at Chicago on a positioning flight on January 14, the landing gear of a DC-7 collapses, causing the aircraft to crash. Oral arguments on the Capital merger begin before members of the CAB on January 25 and six days later, the CAB issues its final decision in the affirmative.

Daily DC-8-11 flights into Bradley Field, Connecticut, begin on February 15. On March 9, birds strike a DC-6 with 46 aboard near Elgin, Illinois; all aboard report minor injuries. Four days later, the No. 4 engine of a DC-7 with 51 aboard fails during the plane's takeoff roll from Cleveland.

The January 31 CAB decision is formally announced on April 4.

On April 25, the landing gear of a DC-6 fails as the freighter is landing at Denver. DC-8-51 service is inaugurated on April 30, as up-engined DC-8-11s and DC-8-21s join the fleet. The thirty-fifth anniversary of corporate start-up is also celebrated in April. A new instamatic reservations system is placed in use in May; as of then, it is the largest interconnected electronic data processing facility ever built for business use.

United substantially expands its system on June 1 through the CAB-approved acquisition of financially troubled **Capital Airlines**, its assets and liabilities. As a result of this merger, the carrier comes to service 116 cities in 32 states, the District of Columbia, Hawaii, and British Columbia with a fleet of 250-plus aircraft, including 41 turboprop Vickers Viscount 745Ds previously flown by Capital. Other aircraft acquired in the Capital deal include 11 DC-6Bs leased from **Pan American World Airways (1)**, 10 DC-4s, 10 parked L-049 Constellations, and 17 DC-3s.

A DC-8-52 is received on June 8 and the third SE-210, *Caravelle Jet Mainliner Ville de Toulouse*, is delivered on June 10. The *Caravelle Jet Mainliner Ville de Cahora* arrives on June 20. Capital's orders for Lock-

heed Electras and Convair 880s are immediately cancelled; the move also expands company debt and raises a demand for newer aircraft. Attention to the latter concern is partially addressed by continuing Caravelle deliveries from France. The two Boeing 720-22s leased by their manufacturer to **Capital Airlines** in January are returned on June 30.

The schedules of United and **Capital Airlines** are merged on July 1 and the name Capital disappears into history. The *Caravelle Jet Mainliner Ville de Marseille* and *Caravelle Jet Mainliner Ville de Paris* are delivered on July 2 and 6, respectively. As the result of thrust reverser malfunctions on both its No. 1 and No. 2 engines, Flight 859, a DC-8-51 with 7 crew and 115 passengers en route from Philadelphia to Los Angeles on July 11, skids off the runway at Stapleton Field, Denver. The aircraft crashes into a maintenance truck and burns, killing 17 people, including the truck driver. Only a month old and with but 125 hours, the jetliner must now be written off.

Many new markets will also be served by the Caravelle VIRs, the first of which, *Caravelle Jet Mainliner Ville de Paris*, begins New York (IDL)–Chicago (ORD) operations as Flight 601 on July 14, Bastille Day. A DC-8-51 suffers an in-flight engine fire at Chicago on July 24, but none of the 102 passengers aboard are hurt.

Between July 31 and September 26, seven more Caravelles arrive: *Caravelle Jet Mainliner Ville de Grenoble*, *Caravelle Jet Mainliner Ville de Saintes*, *Caravelle Jet Mainliner Ville de Coutances*, *Caravelle Jet Mainliner Ville de Rochefort*, *Caravelle Jet Mainliner Ville de Rouen*, *Caravelle Jet Mainliner Ville de Strasbourg*, and *Caravelle Jet Mainliner Ville de Dijon*.

On August 13, a company aircraft is the first scheduled airliner to operate into the new T. F. Green State Airport at Providence, Rhode Island. The new \$2-million United Training Center is opened in October at Chicago and three more SE-210s are delivered: *Caravelle Jet Mainliner Ville de Lille*, *Caravelle Jet Mainliner Ville de Aries*, and *Caravelle Jet Mainliner Ville de Nice*.

The old headquarters near Chicago (MDW) are moved on December 11 to suburban Elk Grove Township, near O'Hare International Airport, where a new Executive Office building is occupied. Three more French jetliners are also received: *Caravelle Jet Mainliner Ville de St-Nazaire*, *Caravelle Jet Mainliner Ville de Nantes*, and *Caravelle Jet Mainliner Ville de Cannes*.

The final three SE-210 Caravelle VIRs are delivered between January 4 and February 24, 1962: *Caravelle Jet Mainliner Ville de Bordeaux*, *Caravelle Jet Mainliner Ville de Lyon*, and *Caravelle Jet Mainliner Ville de Calais*. Meanwhile, on January 13, a DC-6 with 52 aboard encounters clear-air turbulence over Fillmore, California; one stewardess is seriously injured. Seven days later while taxiing on an icy runway at Chicago, a company DC-7 with 26 aboard crashes into an **American Airlines** CV-240; both aircraft are badly damaged, but fortunately, no injuries are reported.

A B-720-022 with 49 aboard suffers engine failure at Portland, Oregon, on February 1. Two days later, a DC-8-51 with 125 passengers is unable to stop after landing at New York (IDL) and crashes at the end of its run. The plane takes substantial damage, but no one aboard is hurt. The last DC-3 inherited from **Capital Airlines** is retired in the spring and the last remaining leased DC-6B is returned to **Pan American World Airways (1)**.

A Caravelle VIR with 64 aboard suffers a nosewheel failure while landing at Cleveland on September 11. The DC-7 *Mainliner Baltimore* is withdrawn on September 17. A DC-7 with 38 aboard loses part of its fin and rudder during an October 14 flight over Sacramento; the airliner is able to land safely at San Francisco and no injuries are reported. Components from another DC-7, in storage at San Francisco, are used in the plane's repair.

During its Newark to Washington, D.C. frequency on November 23, two swans hit an ex-**Capital Airlines** Viscount 745D, one of which becomes imbedded in the plane's stabilizer, causing it to crash at Ellicott City, Maryland (17 dead). A landing gear accidentally retracts during the December 10 landing of a DC-6 with nine aboard at Los Angeles; no injuries are noted.

Also in November, plans for one-class service are announced and later in the same month, United's Caravelles transport their millionth passenger. During the year, a new Training and Education Center/executive offices complex and new passenger terminal are occupied at Chicago (ORD).

One-class B-720-022 service is inaugurated in March 1963, the same month three DC-8-54F Jet Freighters are ordered. In the spring, Chicago-New York executive flights "for men only" are started. To commemorate three decades of leadership, a new DC-8-51, *W. A. Patterson*, is christened. A similar jetliner, with 56 aboard, encounters clear-air turbulence near Des Moines on July 28; a passenger is seriously hurt. President since 1934, William "Bill" Patterson is elevated on September 23 to the position of board chairman/CEO. George E. Knack is elected president.

The first production Boeing 727-22 is delivered on October 29 while the hulk of a DC-7 is donated to the USCG at San Francisco two days later. The remains of the old piston-powered airliner will be employed for ditching training and will be floated in San Francisco Bay for five years. Hawaiian economy coach service (\$100 one way) is introduced from Los Angeles and San Francisco in November.

Annual boardings for the year set an all-time world traffic record to date, reaching 13,670,000. A profit of \$3.82 million is reported.

Airline employment in 1964 stands at 33,528 and the fleet includes 251 aircraft. A Viscount 745D, with 23 aboard, encounters clear-air turbulence near Asheville, North Carolina, on January 13; one passenger not wearing a seat belt is badly hurt. The first DC-8-54F Jet Trader is delivered on January 30 while Boeing 727-22s are introduced on the San Francisco-Salt Lake City-Denver route on February 6. A new method of fog dispersal at Pacific Northwest airports is now introduced as dry ice is scattered from small aircraft.

On March 1, the Denver B-727-22 route is stretched to Chicago. One-class service celebrates its first birthday in March; in 12 months, 1.2 million passengers have flown. Later in the month, three new DC-8-54Fs commence all-cargo runs between Chicago, San Francisco, and Los Angeles. These are the first company aircraft to employ the Freightair mechanized handling system, which can load 46 tons in 25 minutes. The Chicago terminus of the Jet Freighter run is stretched to New York, also in April.

While preparing to land after a May 9 training mission, the crew of a Viscount 745D fails to extend the landing gear; none of the three are hurt when the plane crashes at Chantilly, Virginia. A Caravelle VIR with 54 aboard encounters severe turbulence near Knoxville on July 8; one passenger's seat belt fails and he is killed. The next day, a Viscount 745D inherited from **Capital Airlines** with 4 crew and 35 passengers en route from Philadelphia to Knoxville, suffers an in-flight fire that causes it to crash near the city of Newport, Tennessee; there are no survivors.

In August, United becomes the first airline to ever fly more than a billion revenue passenger miles in a month. On the nonstop transcontinental routes, three-class Red, White, and Blue Service is introduced. In order to fend off competition from intrastate rival **Pacific Southwest Airlines (PSA)**, B-727-22s introduce \$14.50 one-way Jet Commuter service on the Los Angeles-San Francisco run, beginning on September 27. The initial frequency is nine roundtrips per day.

The nosegear of a B-720-022 collapses after the plane touches down at San Francisco on November 5; none of the 94 persons aboard are hurt. Also in November, wide-screen Jetarama Theater motion pictures are introduced aboard Hawaiian flights to and from California. The company becomes the first airline, in December, to install a new, fully automatic, all-weather landing system; it is initially demonstrated by a Caravelle VIR at Washington, D.C. (IAD). Inadvertent fuel starvation causes both engines of a CV-340 to shut down while the plane is taxiing at Saugus, California, on December 30.

During the year, 25 of the original order for 40 B-727-22s are delivered and the order is increased to 65. Orders are also placed for 40 B-737-222s, chosen as the company's short-haul jetliner, and the last DC-7s are retired.

Passenger boardings increase 6.8% to 13,224,077 and freight traffic advances by 23%. Record revenues of \$669.4 million are taken in and the highest net earnings in company history are enjoyed as profits skyrocket 86% to \$27.3 million.

The workforce in 1965 is now 36,268. The 31 passengers aboard a Caravelle VIR suffer from turbulence as the plane passes over Allentown, Pennsylvania, on January 24. United now actively begins to promote the development of the then-infant scheduled air taxi and commuter industry and maintains close links with the National Air Taxi Conference. Early in the year, Jet Commuter frequencies reach 20 times a day.

The nosewheel of a DC-6B, with 58 aboard, collapses just after the plane lands at Fort Wayne, Indiana, on March 4. Ten days later, the left engine of a Caravelle VIR with 55 aboard disintegrates during the plane's takeoff from Ypsilanti, Michigan; an emergency landing is made. Converted to all-economy-class seating, Boeing 720s are introduced on the Los Angeles-San Francisco route on April 1, offering \$13.50 one-way Fan-jet Commuter flights. Also in April, the carrier places the largest equipment order by an airline to date: \$750 million for 75 DC-8-61s, B-737-222s, and B-727-222s, with 44 options. Vietnam MAC airlift charter flights commence in June.

While being ferried, a DC-6B with three aboard suffers a nosewheel collapse after landing at Boston on August 15.

Descending toward Chicago from 35,000 ft. after a flight from New York (LGA) on August 16, Flight 389, a B-727-22 with 6 crew and 24 passengers, passes its ATC-assigned altitude of 6,000 ft. and plunges into Lake Michigan. There are no survivors from an accident the cause of which will never be solved.

The only DC-8-54F to receive a name is received on September 28 and is christened *City of Philadelphia*. The famous "Fly the Friendly Skies of United" ad campaign is launched in October. Simultaneously, the carrier becomes the first to qualify for the FAA all-weather program, which allows its DC-8s to land at specific airports when ceilings are as low as 150 feet.

While taxiing at San Diego NAS with 117 aboard on an October 15 military charter, a DC-8-51 rams another aircraft; no injuries are reported. Two days later, a DC-6 with 5 crew and 11 passengers fails its takeoff from Huntsville, Alabama, after its nosewheel collapses; there are no fatalities.

En route from New York (LGA) to San Francisco via Cleveland, Chicago, Denver, and Salt Lake City on November 11, Flight 227, a B-727-22 with 6 crew and 85 passengers descends too rapidly and crashes 335 ft. short of the runway at the Utah airport. The Boeing collides with threshold lights, which strip away its main landing gear and cause the fatal crash and subsequent fire (43 dead).

In December, United helps to save the struggling helicopter carrier **Los Angeles Airways** from extinction after the loss of its government subsidy by assuming, with **American Airlines**, joint control through equal guarantee of the carrier's new \$3.2-million loan. The two operate LAA as an airport shuttle. During the year, new freight facilities are opened at Cleveland, Detroit, New York, Los Angeles, and San Francisco.

A fleet of 255 owned and 29 leased aircraft is operated during the year, with orders outstanding for 148 more. With customer bookings up by 18% to 17.3 million, United Air Lines enjoys the distinction of transporting more passengers than any other carrier in the world. Cargo tonnage advances by 27%. Revenues are also up 18%, to \$792,759,000 while profits skyrocket 67% to \$45,767,000.

United appeals to the CAB on February 28, 1966, for an extension of its U.S. mainland to Hawaii routes to new destinations in the Far East. The request marks the company's first major move toward international operations. Also during the first quarter, the board votes to split the company's common stock on a two-for-one basis. William "Pat" Patterson retires as board chairman/CEO on April 28 and is succeeded by his hand-picked replacement, President Keck. In appreciation of Patterson's years of service, the carrier has a small biography commissioned, Frank J. Taylor's "*Pat*" *Patterson* (Menlo Park, Calif.: Lane Magazine, 1967).

The first B-727-22QC is received on May 1 and on May 18 a DC-7, employed for crew training at Denver for the past six months, must be written off after a blown tire forces it to wreck while landing. A total of 2,007,871 passengers are carried in June making United the first line in the world to top two million bookings in a single month.

On July 8, the airline is one of five struck by the membership of the IAM. The combined effect of the job action is to halt 60% of U.S. passenger service and 70% of airmail operations. After several weeks of negotiations, President Lyndon B. Johnson announces a strike settlement on national television on July 29.

On August 1, the IAM membership votes 2 1/2 to 1 to reject the proposed settlement. Talks resume and on August 15 tentative agreement is reached on a new 3-year contract. The membership votes to ratify the contract on August 19 by a 2 to 1 margin, thus ending the longest and costliest strike in U.S. commercial aviation history to date.

B-727-22QC freighter service between New York and Chicago begins in September. Orders are placed in November for five Boeing 747 Jumbos; requests will later rise to 18, at a total cost of more than \$400 million. Revenues for the year total \$926 million.

The workforce in 1967 grows to 46,038 and the first DC-8-61, *Mainliner Eric A. Johnson*, is delivered on January 7.

A Vickers Viscount 745D with 4 crew and 46 passengers hits a snowplow on the runway while landing at Norfolk, Virginia, on January 19; the aircraft loses a wing, but no fatalities are reported.

Also in January, United inaugurates an Airport Masterplan Program to apprise government officials of industry requirements through 1980. The era of large-capacity airliners is introduced on February 24 as 259-passenger DC-8-61 services are launched by the *Mainliner Eric A. Johnson* over United's transcontinental and Los Angeles to Hawaii routes. Air turbulence over Wyoming on March 28 causes a B-720-022 with 49 aboard to drop 8,000 feet before it can be recovered (one dead). A Personal Travel Credit Plan is instituted in April and the DC-8-61 *Mainliner Capt. R. D. (Dick) Petty* is delivered on May 7.

The interchange agreement with **Continental Airlines** established back in 1953 ends on June 12, as does a similar agreement with **Braniff International Airways**. A total of 1.85 billion revenue passenger miles are flown in July, an industry record for a single month. Designed to sell two seats at once, the "Take Me Along" promotion begins in September and becomes one of the most remembered in airline advertising history.

Chicago to Toronto flights commence in October, the same month the company begins flying from California to Hilo, Hawaii. In November, it is reported that the carrier is the first in airline history to exceed \$1 billion in revenues for a single year (\$1,098,938,000). A DC-8-52 is leased to **Air New Zealand, Ltd.** for three months, beginning on November 13.

The nosegear of a Vickers Viscount 745D with 4 crew and 39 passengers fails while the turboprop is landing at Raleigh/Durham on November 28; there are no fatalities.

While landing at Akron-Canton Regional Airport on December 11, a Vickers Viscount 745D with 3 crew and 15 passengers overruns the end of the runway by 120 yards and goes down a 20-ft. embankment. Although there are no fatalities, the aircraft must be withdrawn from service as the result of damages received.

The first 18 of 40 B-737-222As are delivered by December 29 and joins 26 other aircraft received since spring: 4 DC-8s, 15 B-727-100QCs, 1 B-737-222, and 6 DC-8-61s. Formerly operated by **Braniff International Airways**, a lone DC-8-31 is acquired from Douglas for pilot training; painted white and without the normal United livery, it is dubbed the *White Whale*.

During the year, the company also places a \$520-million order—the largest of its day—for additional aircraft, including Jumbos, B-737s and B-727s, 5 DC-8-61s, 10 DC-8-62s, and 3 DC-8-54Fs (not delivered). Enplanements reach 21,715,000 and a total of 417.18 million freight ton-miles are flown, an increase of 28%.

A \$2.5-million B-747 simulator is ordered in January 1968.

Flight 9963, a B-727-22C freighter with three crew aborts its takeoff from Chicago (ORD) on March 21, but shoots off the right side of its

runway, coming to rest in a ditch 1,100 ft. away. Although the aircraft must be written off from the damages it sustains, there are no fatalities.

Also in March, the last CV-340 is retired, along with the final Viscount 745D taken over in the 1960 **Capital Airlines** merger.

B-737-222 short-haul service begins on April 29. Also in April, a \$465-million order is placed for 30 DC-10s.

B-727-222A service is inaugurated in June. Also during the month, the new B-737-222 *City of Providence* inaugurates twice-daily roundtrips from Providence to Chicago via Hartford, Cleveland, Fort Wayne, and South Bend.

For the first time, United appeals to the CAB for transpacific authority beyond Hawaii in July in addition to nonstop domestic authority from Hawaii to 12 mainland cities. In August, a new \$30-million Flight Training Center is occupied at Denver. With 43,758 hours in service since its 1951 delivery, the DC-6B *Mainliner Newark* is sold to Mars Aviation, Inc. on October 22. Also in October, group inclusive tours are launched from East Coast cities to Hawaii.

The "no marriage" rule for stewardesses, in effect since the beginning, is abolished in November. It might be noted here that, during the year, female flight attendants are outfitted in two-tone A-line mini-dresses designed by Jean Louis. The same month, 24-hour reservations service begins at all United destinations.

As a result of the Transpacific Route Case argued before the CAB, United's Hawaii route is further strengthened when, on December 19, President Johnson approves new authority for United to operate to Hawaii from additional cities in the Northeast, Midwest, and Great Lakes region. It is quickly reported that 94,532 passengers are carried on the Friday before Christmas, the highest one-day total yet in company history.

During the year, United takes delivery of or purchases 102 jetliners during the year: 40 B-737-222s, 10 DC-8-32s—8 from **Pan American World Airways (1)** and 2 from **SAS (Scandinavian Airlines System)**—19 DC-8-61s, 19 B-727-222As, 8 B-727-22QCs, and 6 DC-8Fs. The DC-8-61 fleet now comprises 25 aircraft, a total large enough to allow dedication of 2 to Caribbean and Mexican charters and 2 to military airlifts to South Vietnam. The last DC-6 is retired at year's end and on December 30 the UAL Corporation is incorporated as the inactive, wholly owned subsidiary UAL, Inc.

Customer bookings accelerate 13.5% to 24,645,000. Cargo climbs 14% to lead the domestic industry in freight ton-miles for the first time: 476.04 million. Revenues are also up by 14%, to \$1,261,693,000.

On January 11, 1969, passenger R. McR. Helmy seizes Flight 459, a B-727-22C en route from Jacksonville to Miami with 20 aboard, and forces it to fly to Havana.

Returning to Los Angeles (LAX), its point of origin after departure to Denver, with a burning No. 1 engine on January 18, Flight 266, a B-727-22C with 6 crew and 32 passengers, crashes into Santa Monica Bay, 11.3 mi. W of the runway; there are no survivors.

Six days later, President Nixon announces a deferment of the Pacific routes until his new administration can review the Johnson awards.

On February 4, A. E. Evans is seized at Honolulu before he can make good on his threat to board an airliner scheduled for California and take it over. Three men, two of whom wear Black Panther party badges, are taken off a plane at Chicago on February 23 and arrested because the crew fears a hijacking; one of the suspects carries a pistol.

Despite its many successes, United is in financial difficulty by the close of the 1960s, suffering record losses. In April, the "Come Fly With Me" theme is introduced into United's national advertisements and the CAB confirms the awards made under the Transpacific Route Case. Having flown to Canada from Cuba, R. McR. Helmy is seized by the RCMP and is extradited back to the U.S. where he is indicted on May 6 during the first arraignment of a person charged with a "successful" hijacking. He will be acquitted on grounds of temporary insanity.

A \$2.1-million contract is signed in May for the carrier's first DC-10 simulator. The first DC-8-62, christened *Mainliner Harold Creary*, is received on June 15.

Just after takeoff from Los Angeles for a June 25 transcontinental service to New York, Flight 14, a DC-8-61 with 58 passengers, is taken over by a lone gunman. In one of the longest of the "Cuban diversions," the plane flies southeast all night, arriving in Havana the following morning.

The last named DC-8, the DC-8-62 *Mainliner Hilo Hattie*, is received on July 28. On July 29, modified confirmation of the December permission is received; United will be allowed to fly from Hawaii to 12 mainland destinations, but not to the west of Hawaii. The initial DC-8-62s are employed, beginning on August 1, to initiate a 4,340-mile, 8 hr. 50 min., nonstop Chicago-Honolulu service, the first by any airline.

On August 1, UAL, Inc. converts the airline and three other businesses into wholly owned subsidiaries. The carrier becomes known as United Air Lines, Inc. and UAL, Inc. becomes a holding company and the parent of the airline. Nonstop 10 hr. 40 min. New York to Honolulu DC-8-62 service is inaugurated on October 1, establishing at that time the longest U.S. domestic air route (4,979 miles).

Simultaneously, new nonstop flights begin from Los Angeles to Memphis via Huntsville and Birmingham. At the same time, express service is started from Norfolk to Los Angeles via Newport News, Charlotte, Knoxville, Raleigh/Durham, Greensboro, High Point, and Winston-Salem. The last DC-8-62 is delivered on October 14.

Although the two SAS DC-8-32s had been received the previous year, it requires all of this year through November for the **Pan American World Airways (1)** models to arrive. The fleet now numbers 386 aircraft, including 29 B-720-022s, 122 B-727-100s, 28 B-727-222As, 73 B-737-222s, 74 DC-8-10/-50s, 40 DC-8-61/-62s, and 20 Caravelles. Of these, 10 DC-8-62s, 5 DC-8-61s, 7 B-727-222s, and 31 B-737-222s are received during the year and all of the Caravelles face withdrawal. The DC-8 fleet of 114 aircraft is at its high-water mark of deployment.

While en route from New York (LGA) to Chicago on the day after Christmas, Flight 929, a B-727-222A with 32 passengers, is taken over by a lone gunman who orders it flown to Havana. In 1983, the pirate will turn himself over to U.S. authorities in San Juan; thereafter, he will be tried and sentenced to life in prison.

Passenger boardings for the year total 30 million. Revenues of \$1.9 billion are earned, including a record industry income of \$150 million from air cargo service. The net profit is \$47.7 million.

Airline employment in 1970 totals 52,000. The first Caravelle VIR, *Caravelle Jet Mainliner Ville de Toulouse*, to be retired departs the fleet on January 2. Under pressure, New York-Chicago-New York executive flights "for men only" are discontinued on January 5. Also in January, Seattle and Tacoma to Tokyo authority is sought from the CAB.

A three-year, \$3-million program is announced on February 25 for the modification of all 665 engines on its B-727s and B-737s to reduce noise and air pollution.

One C. Stuffs, with his wife and four children along, forces Flight 361, a B-727-222A with 106 passengers en route from Cleveland via Atlanta to West Palm Beach, to divert to Cuba on March 11. Stuffs is jailed in Cuba and while attempting to escape in 1973, he will be shot and killed.

While over Nebraska the next day, an unidentified man stands up in the cabin of a B-727-222A en route from San Jose to California and shoots himself in the head. Triggered by his reflex, the suicide's automatic pistol discharges again, seriously wounding another passenger.

The first Boeing 747-122 Jumbojet is delivered during June 30 ceremonies at Seattle and is christened *Mainliner William M. Allen*. Flight 611, the B-737-222 *City of Bristol* with 6 crew and 55 passengers, suffers the loss of No. 1 engine after its takeoff for Buffalo from Philadelphia on July 19; the pilot returns to his point of origin, but overruns the runway. Although there are no fatalities, 11 passengers receive injuries.

The *Mainliner William M. Allen* is employed on July 23 to introduce New York to California and California to Hawaii Friendship Service. It is followed by other B-747-122s on San Francisco-Washington runs as of August 14. Meanwhile, UAL, Inc. acquires the Western International (Westin) Hotel chain on July 31. Its chairman, Edward E. Carlson, is elected to the board of UAL, Inc.

Following the introduction into service of the B-747-122s *Mainliner William M. Allen* and *Mainliner Charles F. McErlean*, plus two unnamed units, United, on August 31, receives the ship with the longest name, *Mainliner The Original Eight: Ellen Church, Ellis Crawford, Inez Keller, Margaret Arnott, Cornelia Peterman, Harriet Fry, Jessie Carter, Alva Johnson*. The ladies thus honored were the original nurses who flew the San Francisco to Chicago route for **Boeing Air Transport**, beginning in May 1930.

Having flown over 10 million passengers since their introduction in 1961, the nine remaining French-built Caravelles are withdrawn in October.

En route from San Diego to Los Angeles on November 1, Flight 598, a B-727-222 with 35 passengers, is taken over by a lone gunman, who has his two young children in tow; after refueling at Tijuana, Mexico, the aircraft flies on to Cuba.

On November 3, a B-747-122 scheduled to Honolulu loses a wheel on takeoff from San Francisco, but is able to make a safe emergency landing back at the California airport. Two more Jumbojets arrive in November, one of which is named the *Mainliner Justin Dart*. Meanwhile, a DC-8-52 is sold to **Air New Zealand, Ltd.**

During the year an excess-capacity situation arises on the coast-to-coast routes flown by three of the "Big Four," and the government is approached by them on December 21 with a plan for its solution.

Edward E. Carlson, Westin's president, is chosen by the UAL, Inc. board on December 29 to succeed George E. Keck as United chairman/CEO and is charged with returning the carrier to profitability. During December, two more Jumbojets arrive, one of which is christened *Mainliner Edward E. Carlson*.

Passenger boardings drop 5.3% to 28.5 million and freight is off by 4%. Income is \$1.59 billion, but expenses, led by increased fuel prices, are \$1.60 billion. The operating loss is, consequently, \$13 million and the net loss is \$40.9 million, an \$88.5-million turnaround since the previous year's net profit, and the largest downturn in company history to date.

United's new computerized reservations system, Apollo, is activated at Pittsburgh in March 1971. In mid-April, United becomes the first American carrier to offer passengers a choice of seats in specific sections reserved for smokers and nonsmokers. The policy is adopted after the success of a necessary April 4 action. That day, smokers and nonsmokers are segregated aboard the Cleveland-Miami flight after a passenger complains that his heart condition is directly related to cigarette smoke.

The first Jumbojet of the year, *Mainliner Thomas F. Gleed*, is delivered on May 27. The first steps in corporate reorganization are taken in May, with eventual restructuring into 16 divisions—5 for operations, 2 for services available outside purchase, 4 for intracompany system services, and 5 for corporate activities.

En route from Charleston, West Virginia, to Newark on June 4, Flight 796, a B-737-222 is hijacked by G. E. Riggs, brandishing a pistol and demanding that the little Boeing be diverted to Washington, D.C. (IAD), where he requires a larger craft be prepared for a journey to Israel. During the Washington, D.C. switch, Riggs is disarmed and captured. He will be tried and given a 20-year prison sentence.

On certain aircraft, beginning also in June, Friendship Lounges are created for economy-class passengers. The same month, the new computer center at Denver is named in honor of William A. "Pat" Patterson and two unnamed Jumbojets are acquired.

Unable to erase the memory of a Sikorsky S-61 crash, United and **American Airlines** sell their shares in **Los Angeles Airways** to **Golden West Airlines** in July. The second production Douglas DC-10-10 is delivered on July 29.

United places its new wide-bodied aircraft into transcontinental service on August 14, Washington to San Francisco. In response to the excess-capacity petition, the CAB, on October 3, allows United to enter into New York-Los Angeles temporary scheduling agreements with **American Airlines** and **Trans World Airlines (TWA)**. Later in the month, a food services division is created.

Enplanements for the year are 22,074,886 and the year's loss is down to \$7 million.

One A. Hill is arrested at Omaha on New Year's Day 1972 after threatening to blow up his jetliner en route from Las Vegas to Newark if he is not served with unlimited free liquor. Also in January, UAL, Inc. acquires the Anchorage-Westward Hotel Co. in Alaska. The carrier hires its first domestic male flight attendants in March. They join a workforce that this year reaches 48,230. Increased emphasis is placed on charter flights as two B-747-122s, the *Mainliner William A. Peterson* delivered on January 6 and the *Mainliner Robert E. Johnson*, which arrives on June 27, plus 10 DC-10-10s, join the fleet.

Meanwhile, the standard-body jet fleet begins refurbishment with new liveries and wide-body interior modifications. In addition, new uniforms are issued to flight and ticket counter personnel. The last two Caravelle VIRs are withdrawn in March: *Caravelle Jet Mainliner Ville de Rochefort* and *Caravelle Jet Mainliner Ville de Rouen*. While in United service, none of the French made jetliners have ever suffered a serious accident.

Shortly after a stop at Denver on April 7, Richard F. McCoy Jr., a 29-year-old Brigham young University criminal justice major, ex-Green Beret helicopter pilot, and father of two, hands a note to a stewardess aboard Flight 885. The B-727-222 with 91 passengers is en route from Newark to Los Angeles. Brandishing a pistol and a hand grenade, he now moves to take over the airliner and forces it flown to San Francisco, where he allows the passengers to deplane in exchange for \$500,000 in ransom and several parachutes. Forcing the trimotor to fly in the general direction of Nevada, McCoy bails out over Provo, Utah, à la "D. B. Cooper."

Independently, a Utah highway patrolman, who knows McCoy from BYU, recalls the student discussing the mechanics of hijacking and leads FBI agents and federal marshals to his residence on April 10. After comparing the handwriting on the note given the stewardess with a sample from the suspect, McCoy is taken into custody. A search of his home leads to the recovery of \$499,970. He will be tried and given a 45-year prison sentence.

The next day, the FAA files charges against United for failing to screen its passengers in accordance with the government's new regulations.

On June 2, wearing a hood and brandishing a pistol, 22-year-old parking lot attendant R. D. Heady commandeers Flight 239, a B-727-222 with 97 passengers on the ground at Reno, Nevada, en route from New York to San Francisco. Heady also demands parachutes, as well as a \$200,000 ransom, and when the trimotor is airborne, jumps out somewhere near Lake Washoe, about 40 km. S of the city. Unhappily for him, Heady loses track of his money during his descent and is arrested by the FBI on June 5. After two more days of searching, agents also recover the ransom. Tried and convicted, Heady will receive a 30-year prison sentence.

F. M. Sibley Jr., a 43-year-old resident of Stateline, Nevada, pedals his bicycle, with a rifle across the handlebars, into Reno Municipal Airport on August 18 and takes over another B-727-222, Flight 877 on the ground. After holding the plane captive on the tarmac for 13 hours and receiving a \$1-million ransom, destined, he says, for juvenile victims of the Vietnam War, he orders the trimotor to fly to Seattle. There he is shot by FBI agents while he is deplaning and is arrested. Tried, Sibley will be sentenced to 30 years in prison.

A B-737-222 with 57 aboard makes an emergency landing in Sacramento on August 30 after experiencing engine trouble. The excess capacity arrangement expires on September 16. Also in September, the last B-720-022 is retired.

A reorganization of the carrier into divisions, in contrast to the previous centralized structure, is completed by the start of the fourth quarter. Three geographical divisions (east, central, and western) now emerge, along with four operational divisions: maintenance operations, flight operations, computer and communications, and food services.

R. L. Illingworth, a passenger aboard a scheduled flight from Denver to Des Moines, is taken into custody at Stapleton International Air-

port on November 21 after customs agents discover 10 sticks of dynamite in his luggage; the man had planned to blow up the plane and himself.

While on final approach to Chicago (MDW) Airport on a flight from Washington, D.C. (DCA) to Omaha on December 8, Flight 553, the B-737-222 *City of Lincoln* with 6 crew and 55 passengers, hits a tree and then crashes through several others, plus houses, garages, and utility poles and cables, before coming to rest (43 dead). Among the victims are U.S. congressman Collins, CBS newswoman Marcia Clark, and the wife of a Watergate figure, Mrs. E. Howard Hunt, who's purse contains a mysterious \$10,000.

Passenger boardings bound upward by 25.4% to 29,591,000 and cargo traffic grows by 5.9%. Overall income is \$1.72 billion and expenses are \$1.65 billion. By keeping costs under control, the carrier is able to return to profitability for the first time in three years. The operating profit is \$75.94 million and a net profit of \$17.77 million is recorded.

A total of 1,056 new employees join the airline in 1973. Despite a telephone threat that the craft is carrying a bomb set to explode at 3,500 feet, a B-747-122 makes an emergency landing at Omaha on February 3; no bomb is discovered. Also in February, an Air Freight Information System (AFIS) is introduced as the most modern and complete air cargo computer system in the U.S.

B. J. Anderson, a Southern University coed who gave birth during a flight aboard a company jetliner on February 19, is indicted by a federal grand jury at Cleveland on March 15 for attempted murder after she abandons the child in a washroom at Youngstown Municipal Airport, shortly after its birth. Seven persons suffer smoke inhalation on April 24 when the cabin of a Philadelphia-bound DC-10-10 is enveloped in smoke shortly after takeoff from Chicago (ORD). An unnamed B-747-122 is delivered the same day with the last named unit, the *Mainliner Gardner Cowles*, arriving on April 27.

Accountant H. C. Carlsted, a relative, reports that the \$10,000, found in Mrs. E. Howard Hunt's purse in the wreckage of Flight 553 in December was to be employed to buy a Holiday Inn franchise. Chicago legal researcher S. H. Skolnick alleges on May 25, however, that the plane was sabotaged as part of the Watergate cover-up, a charge soon dismissed as bogus.

The last B-747-122, an unnamed ship, is delivered on May 30. A B-727-222 with 62 passengers aboard mistakenly lands at Opa-Locka Airport, a small USCG field, on June 11, instead of Miami (MIA); the flight crew is disciplined.

The company's divisional structure is refined during the year and each of the three major units reports significant occurrences. In the east, a goal of answering 80% of all reservation calls within 20 seconds is realized. Productivity is boosted in the central division, resulting in a need for less manpower during peak traffic months. In the west, terminal facilities are opened at six cities and scheduling is improved. New flight kitchens are opened at Los Angeles and Denver. The other divisions also report profits from ancillary activities.

The government announces a mandatory jet fuel allocation plan on October 12, designed to take effect 19 days later. The carrier joins with **Trans World Airlines (TWA)** and **American Airlines** on October 18 in a flight reduction plan, also due on November 1, designed to save 6.6 million gallons of fuel per month thereafter. On November 27, United announces that it must lay off 950 employees, including 300 pilots, as a result of the fuel shortage.

In a move to conserve jet fuel, President Nixon, his family and members of the official White House press corps, fly to San Clemente on December 26 aboard a company DC-10-10 instead of Air Force One and a military craft. The trip marks the first ever made by a sitting president aboard a regularly scheduled airliner.

Customer bookings jump 5.2% to 31,131,000 and cargo traffic is up an equal 5.5%. Expenses of \$1.79 billion are charged off against total income of \$1.94 billion. An operating profit is posted of \$150 million, along with a net gain of \$52.01 million.

Airline employment in 1974 is 50,014; a B-720B is sold to Air Viking. UAL's entire schedule of 16 daily flights to Chicago (MDW) are eliminated on January 3 and on January 7, the layoffs announced the previous November take effect as the airline eliminates 100 more flights per day. On January 24, a contract is signed with the National Aeronautics and Space Administration (NASA) for the development of a package of scientific instruments that can be employed aboard commercial Jumbojets.

Automated check-in is installed at New York City in March at a number of locations in the passenger terminal; these significantly reduce lines at the terminal ticket counter. The Ilikai Hotel in Honolulu is purchased on April 7 for \$35 million. Three days later, a DC-10-10 is routinely delivered; N1819U will, however, become the best known of its type to serve with the company as a result of its loss at Sioux City on July 19, 1989.

Serving 45 years for air piracy, Richard F. McCoy Jr. escapes from Lewisburg Federal Prison on August 11. In preparation for the nation's Bicentennial, United introduces the song "Mother Country" in September as the base for its "Friendly Skies of Your Land" ad campaign. Simultaneously, a new corporate identity program is introduced for the country's largest trunk line, featuring a new service mark, logotype, and color scheme. United Air Lines officially becomes **United Airlines**.

UNITED AIR SERVICES (PTY.), LTD.: South Africa (1965–1988). H. Strachan and J. Bekker form United Air at Sunnyside in the Transvaal in 1965 to offer scheduled commuter services linking the base with Johannesburg, Pretoria, Pietersburg, and Sishen. At the end of the decade, control of the company is acquired by a holding company, Unitair Holdings, Ltd., formed to allow diversification.

In September 1975, Sandriver Safaris (Pty.), Ltd. purchases the carrier and names H. Beetge as chairman and managing director. His fleet now comprises two Douglas DC-3s, a Piper PA-31-310 Navajo, and two Piper Aztecs. A third DC-3 is purchased for the fleet in March 1976.

Operations continue apace in 1977–1978 and a Vickers Viscount 700 is acquired in 1979. These are now dedicated to charter and contract services while the scheduled routes are shared with **Magnum Airlines (Pty.), Ltd.**, which employs its own Navajos and Fairchild Swearingen Metro IIs to maintain them.

Flights continue into the 1980s. Destinations visited from Pretoria include Johannesburg, Louis Trichardt, Pietersburg, Sishen, and Vryburg. Equipment employed in 1985–1987 includes 3 DC-3s, 1 Cessna 402, and 1 Vickers Viscount 700.

Just after takeoff from Johannesburg on April 12, 1988, a chartered DC-3C with 3 crew and 21 passengers suffers an on-board fire; the pilot attempts to return to the point of origin and make an emergency landing, but the aircraft crashes before it can reach the runway. There are no survivors.

The company shuts down shortly thereafter.

UNITED AIR TRANSPORT, LTD. (UAT): Canada (1937–1938). On August 4, 1937, under the banner of **United Air Transport, Ltd.**, pioneer pilots Grant McConachie and Ginger Coote, the latter owner of his own carrier, launch the first official direct airmail route in Canada, from Vancouver to the Yukon. The route covered by the two men in a Fleet seaplane runs from Vancouver to Whitehorse and Dawson City via Fort St. John, Williams Lake, Quesnel, and Prince George. UAT's Noorduyt Norseman and Ford 4-AT-10 Tri-Motor are also placed on this route.

Later in the year, **Ginger Coote Airways, Ltd.** and UAT amalgamate into **Yukon Southern Air Transport, Ltd.**, with McConachie as president. Service is now started from Ware to Prince George and from Vancouver to Fort St. John and Edmonton.

UNITED AIRCRAFT SERVICES, LTD. See **CANADIAN PACIFIC AIRLINES, LTD. (CPAL)**

UNITED AIRLINES: 1200 East Algonquin Road, Elk Grove Township, Illinois 60666, United States; Phone (708) 952-4000; Fax (708) 952-7345; <http://www.ual.com>; Code UA; Year Founded 1974. In

September 1974, United Air Lines, the nation's largest trunk carrier, begins a new corporate identity program, introducing a new service mark, logotype, and color scheme. The flying "U" logo that has adorned company aircraft for over two decades is now adopted. Additionally, the company, a subsidiary of UAL, Inc., is renamed United Airlines.

En route from Chicago to New York on September 17, a B-727-222 with 45 aboard is forced to make a nonscheduled stop in Allentown, Pennsylvania, after an anonymous caller warns of a bomb aboard; no bomb is found. Later in the month, automated teleticketing—an industry first—is introduced to provide faster ticket service for travel agencies and commercial accounts.

A new cargo division is formed in October for air freight marketing and support services. "Apollo One-Call" is also started at this time, offering airline, hotel, and rental car bookings with a single telephone call. After eluding capture for two months, escaped hijacker Richard F. McCoy Jr. is cornered and killed by FBI agents at Virginia Beach, Virginia, on November 10. McCoy is the first convicted U.S. hijacker to escape from prison and die a fugitive on American soil. Richard J. Ferris is elected as the airline's president in December while Edward E. Carlson is elected UAL, Inc. board chairman; the latter remains CEO of both concerns.

Passenger boardings grow by a slight 1.1% to 31,511,000, but freight traffic is off by 3.4%. Income advances 14% to \$2.25 billion and expenses, based largely on gains in productivity, are held to \$2.07 billion. As a result, the operating profit is \$178.87 million and net income rises by over \$40 million to \$92.21 million. Consolidated net earnings reach \$101 million, making this UAL, Inc.'s most profitable year to date.

Airline employment in 1975 is 49,609. The economic slump causes the carrier to reduce the number of its flights by 3% on January 10. On January 28, a B-727-222 comes perilously close to striking a ridge on Mount Weather, Virginia, site of a December TWA crash, while on its landing approach to Washington, D.C. (IAD).

Also during the first month, the company receives the 1974 "Airline of the Year" award from *Air Transport World* magazine.

On March 30, United begins to offer 12 Bicentennial vacation packages that highlight historic landmarks in Philadelphia, Boston, Washington, D.C., and Williamsburg, Virginia.

Frank Page Covey is arrested by police at Atlanta on April 25 after unsuccessfully attempting to hijack Flight 344, a B-727-222 with 68 other passengers en route from Raleigh, North Carolina, to Newark. Covey will be tried and given a five-year prison term.

Also in the spring, the company files a request with the CAB for permission to begin flying the routes being abandoned by **Pan American World Airways (1)** from New Orleans into Mexico.

Declaring that she does not wish to go to the scheduled destination, a 16-year-old girl attempts to take over Flight 509, a B-727-222 en route from Eugene, Oregon, to San Francisco, on May 15. A crew member quickly captures the young lady and places her in restraints. Upon landing, it is learned that she has escaped from a mental institution, to which she is returned on the next flight back.

In May, First Freight, a new small package priority service is introduced; it quickly becomes one of the carrier's fastest growing air freight services. The B-727QC service, due to costs, is shortly thereafter suspended as spiraling costs force tickets and tariffs to be increased.

Vancouver, British Columbia-based customer service agents, affiliated with the International Association of Machinists (IAM) strike United for five weeks, beginning July 10. Philippine officials detain a DC-8-62 with 142 aboard on July 16–17 for violating local rules pertaining to the routing of air traffic. Late in the month, president Ferris withdraws from industry talks with the American Society of Travel Agents aimed at the possible creation of a single unbiased computerized reservations system.

A chartered B-737-222 with the Kansas City Royals baseball team aboard makes an unscheduled landing at Salt Lake City on September 12 due to a bomb threat. In mid-month, freighter operations of all B-727-22QCs are phased out and the aircraft are used only to carry passengers.

In October, UAL, Inc. diversifies further, purchasing GAB Business Services, the nation's oldest and largest independent insurance and adjusting company, for \$40 million cash. A mechanics strike occurs in December. A 16-day IAM-backed mechanics strike begins on December 6.

Customer bookings decline 5% to 29,927,000 and cargo is also off, down 13.3% to 697.3 FTKs. On overall revenues of \$2.22 billion, expenses are \$2.23 billion and the operating loss is \$5.38 billion. The previous year's happy gain becomes an unpleasant net loss of \$4.45 million.

The number of employees is increased by a scant 0.5% in 1976 to 49,849. Chicago-New Orleans service is inaugurated in the early spring while CEO Ferris announces that the carrier will now begin to market its new Apollo reservations system to travel agencies. This electronic process, for those who can afford to lease it, will allow the replacement of paperback flight schedules and handwritten tickets with computer printouts. With this pioneering travel information, United offers travel agencies an accurate and timely computerized system for handling customers' reservations.

On April 6, United celebrates its fiftieth anniversary and the fiftieth anniversary of continuous scheduled passenger air service in the U.S. The event is marked by a restored **Varney Air Transport** Curtiss Swallow, which, after a 244-mile commemorative flight from Pasco, Washington, to Boise, Idaho, begins a 65-station tour across the country. The refurbished aircraft had been stored in a Chicago garage for 40 years. Simultaneously, Richard J. Ferris is named the airline's president, with Edward E. Carlson continuing as chairman/CEO of UAL, Inc. Board Vice Chairman Charles McErlean steps down, but remains a board member. Total Apollo Baggage System (TABS) is also an April highlight; it is announced as the most advanced baggage tracing and baggage mishandling information system in the industry.

Meeting at Atlanta's Peachtree Plaza Hotel in late spring, an association of large travel agencies known as the Woodside Group hears presentations on computerized reservations systems from United, **Trans World Airlines (TWA)**, and **American Airlines**. With United absent and TWA ineffective, the major commercial agencies sign up with American's SABRE system. Surprised, United now offers its equipment free to agencies willing to forgo SABRE and opens up a new long-term competition with American reminiscent of the classic contests between chairmen Patterson and Smith decades earlier.

On May 1, the airline agrees to pay \$1,050,000 in back pay to settle discrimination complaints brought against it by the EEOC on behalf of its minority groups and women. William A. "Pat" Patterson is inducted into the Aviation Hall of Fame at Dayton, Ohio, in July. During the fall, self-ticketing machines are installed at the airports in Cleveland, Chicago, San Francisco, and Los Angeles; customers pay for their fares by inserting a credit card.

Gunman Palmer J. Hinnant seizes two maintenance workers at Los Angeles on December 21 and commandeers a DC-8-61. After authorities refuse to allow the Douglas to takeoff, Hinnant stabs hostage Richard Funk; the next day, the pirate releases his captives and surrenders. Upon examination, Hinnant will be found mentally unstable and will be sent to a psychiatric institution.

Also in December, Patterson receives the prestigious Wright Brothers Memorial Trophy in ceremonies at Washington, D.C. New uniforms are adopted by flight attendants and those ground personnel meeting the public.

Enplanements zoom upward by 13.6% to 34,002,000 while freight grows a more modest 3.4% to 829 million FTKs. Operating income is \$2.63 billion and expenses are \$2.59 billion, resulting in an operating profit of \$33.99 million and net gain of \$21.36 million. The latter figure represents a \$28-million turnaround from the previous year's loss.

Negotiated just before year's end, United \$12.8 million contract with OTC Tours of Chicago for 474 one-stop, inclusive-tour charter flights to Las Vegas begins in January 1977. Guaranteed airfares are established as an industry first in August. When the U.S. Congress begins to seriously consider deregulation of the air transport industry, United is so confident of its health, position, and future as to stand virtually alone

among the major airlines as a proponent of a free-market philosophy for what many consider an over-regulated industry. This position is first espoused by president Ferris at the New York Wings Club on March 16 and is later confirmed when the company testifies at October U.S. Senate hearings on deregulation.

As events will show, passage of the Airline Deregulation Act the next year will make United the biggest of profit makers—at least for a while. Also in October, the carrier places its first B-727-222As into service.

While in a holding pattern, Flight 2860, a DC-8-54F with 3 crew, crashes into a 7,665-ft. high mountain peak in Bear Canyon, in the Wasatch Mountains, 20 mi. NE of Salt Lake City near Daysville, on December 18; there are no survivors.

On Christmas Eve, postal inspectors recover 12-pounds of Christmas mail from the crash site, leaving the rest for the spring thaw.

During the year, UAL, Inc. sells the Anchorage-Westward Hotel Co. while airline enplanements for the 12 months total 34,800,000. On revenues of \$2.94 billion, a record \$102.12-million net profit is posted.

United, still the largest airline in free world, increases its workforce by 5.6% in 1978, to 52,065. On February 8, it is reported that more than 150 passengers, en route to Honolulu, have spent two nights aboard a B-747-122 at New York (JFK) because they were stranded after the airport had closed in a storm. Also in February, UAL, Inc. continues its efforts to diversify by acquiring the Mauna Kea Beach Hotel on the Big Island of Hawaii for \$54.98 million.

Gail Gorski, Queen of the 1972 Kentucky Derby, is hired as a pilot on March 10.

On March 13, Flight 696, a B-737-222 en route from San Francisco to Seattle with 72 persons aboard, is skyjacked by Clayton Thomas, who surrenders without incident at Denver. Upon examination, Thomas is found to be legally insane and is sent to a psychiatric hospital.

A new flight schedule is introduced systemwide in June, greatly increasing the utilization of aircraft in hours flown daily. The same month, the company's first female vice president is elected and given responsibility for in-flight services.

With the addition of 35 B-727-222As, the operator of the world's largest, privately held airliner fleet increases its total to 336 jetliners. Preparation for the future is made on July 14 when the company notifies Boeing that it will be launch customer for its new B-767-200.

Claiming to be a member of the Palestine Liberation Organization, Arthur J. Mogilner calls in a threat to the company's Miami headquarters on July 25, warning that a confederate will blow up an airliner leaving Los Angeles unless Mogilner is paid a \$3-million ransom. When arrested by the FBI, which apparently taps the suspect's phone, the would-be extortionist admits that he is not a PLO member and had acted alone.

On August 1, in the largest aircraft order in history to date in terms of cost, United pledges \$1.6 billion to the manufacturer for 30 B-767-200s and 30 additional B-767-222As. The same day, authority is sought from the CAB for the inauguration of service from the U.S. to the mainland China cities of Peking, Shanghai, and Canton.

En route from Denver to Seattle on August 27, Flight 179, a DC-8-61 with 159 passengers, is taken over by a lone female assailant claiming to have a bomb. The aircraft is diverted to Vancouver, where the perpetrator surrenders to police. She will be examined, found mentally unstable, and sent to a psychiatric hospital.

As the Airline Deregulation Act becomes law on October 24, President Carter approves the carrier's 13-year-old request for permission to fly from Seattle and Tacoma to Tokyo. New domestic services are also inaugurated: Chicago-Vancouver, Cleveland-San Diego, and Buffalo-Orlando. The DC-8-21 *Mainliner Kauai* is sold to Sun Land Airlines in November for conversion into a freighter.

The U.S. government files charges against United on December 8 alleging it has violated the sanctions against Southern Rhodesia since 1974 by training commercial air crews for the outlaw airline **Affretair, Ltd.**, which is wholly owned by **Air Rhodesia, Ltd.** The major pleads guilty and pays a \$10,000 fine. In a mid-month ruling, expectant flight attendants are permitted to fly up to the end of the 27th week of their pregnancy.

Unable to lower its landing gear while on initial approach for a landing at Portland on December 28, Flight 173, a DC-8-61 piloted by Capt. Malburn McBroom with 7 other crew and 181 passengers, circles the airport for over 30 min. while the crew attempts to solve the difficulty. Out of fuel, the plane makes a forced landing in a wooded suburban area 6 mi. SE of its destination, destroying a vacant house. The copilot, a flight attendant, and 8 passengers are killed; 21 other people are injured. Pictures taken by investigators will reveal that, while entering the woods, the big jet's tail had snagged a mass of high tension power lines, which had acted like arresting gear on an aircraft carrier to slow the plane's descent.

Passenger boardings, the reason for the carrier's existence, rise 16.5% to 41.7 million. In the past 12 months, the carrier has achieved the most profitable year in aviation history to date. Revenues increase 19.64% to \$3.52 billion and expenses are held to \$3.23 billion. As a result, an operating profit of \$289.44 million is generated and a huge \$287.21-million net gain, up 181.24%, is earned. This figure is 3 times more than in 1977 and in fact, 27% of the U.S. trunk line industry total. Company coffers are also fattened by \$138.8 million in investment tax credits and \$34 million from a refined passenger revenue accounting estimate.

Airline employment grows 5.4% in 1979 to 54,888 and the fleet begins the year at 18 B-747-122s, 9 DC-8-62s, 30 DC-8-61s, 45 DC-8-20/50s, 14 DC-8-50Fs, 37 DC-10-10s, 34 B-727-222As, 86 B-727-122s, 29 B-727-22Cs, 59 B-737-222s. Forty B-747-222As remain on order.

Irene McKenney commandeers Flight 8, a B-747-122, en route from Los Angeles to New York on January 27 with 131 aboard and holds some hostages for 6 1/2 hours after landing at New York (JFK); even when she surrenders, the woman's motives are unclear.

Also in January, nonstop Denver-San Diego service begins. The fuel crisis forces the carrier to announce on March 7 that it will cancel 479 flights during the remainder of the month.

As the carrier concentrates on the immediate effects of deregulation and fuel costs during late winter, it misses an opportunity to expand further when it fails to react to an inquiry from **Pan American World Airways (1)** concerning the possible sale of its Pacific division. It does, however, become an important supporter of the reengine program for DC-8s put forward by Cammacorp and in March leases an unnamed DC-8-61 to that organization. It will have its JT3D-3Bs replaced with CFM56-2 turbofans and, with several other modifications, will emerge as the prototype DC-8-71.

On April 1, more than 18,000 members of the IAM reject a contract offer and walk out on strike. Richard J. Ferris, UAL, Inc. president, is elected CEO, also in April; Edward E. Carlson remains chairman. Percy A. Wood is elected the airline's president/CEO.

On May 8, United announces the cancellation of all scheduled flights through May 16 because of the five-week old strike. IAM members ratify a contract on May 24 and when their company resumes full operations 4 days later, the 58-day machinists' strike stands as the longest in company history.

Following resolution of the job action, the airline introduces a controversial half-fare coupon plan to help win customers back, distributing 2.5 million in an industry first. In a move to make Memphis an important hub, Memphis-West authority is now expanded to provide new nonstop service to Denver, Las Vegas, San Diego, Seattle, and San Francisco. Automated check-in is expanded to 60 locations and fleet modernization continues apace as all 22 remaining DC-8-50s and DC-8-62s begin removal from service and 4 B-737-22Cs are sold.

On July 20, Ronald Allan Rimerman attempts to hijack Flight 320, a B-727-222A en route from Denver with 126 passengers, to Cuba. He is seized by FBI agents at Omaha and will be tried and found not guilty by reason of insanity.

Four days later, a DC-10-10 with 172 aboard makes an emergency landing at Cleveland after the left-wing engine is shut down because of excessive vibration.

On August 22, James R. Alibee, a mental patient, is held at Portland, Oregon, after hijacking Flight 739, a B-727-222A with 120 aboard en

route from Portland to Los Angeles and forcing it to return to its point of origin. He will be tried and given a 60-year prison sentence.

Her motives still unclear, pirate Irene McKenney is indicted on September 13 on charges of kidnapping rather than air piracy. She will receive a five-year probation. Two anti-abortion groups begin a nationwide boycott of United on September 18, contending that the carrier donated \$7,000 to Planned Parenthood; the airline and Planned Parenthood assert that donations came from employees and were not corporate.

Due to fuel costs and the economic recession, the company announces on October 9 the necessity for further cutbacks of flights systemwide in November. UAL, Inc. acquires Olohana Corporation for \$38 million in December, merging it into another subsidiary.

Enplanements fall off 13.4% to 36,083,000, even though United passengers redeem 1.8 million half-fare coupons by the December 15 deadline—a redemption rate of 73%. Cargo is also down, by 26.1%, to 685.6 million FTKs. If United's \$247-million profit of 1978 is the greatest financial gain in commercial airline history, then its slide to a \$99.6-million loss in the next 12 months must surely give the company the mark for the largest one-year, negative economic turnaround. This remarkable event is caused by a variety of factors, some common to other carriers: a deepening national recession, the grounding of all DC-10s for 38 days beginning in June, fuel-cost escalation, and the 58-day strike-shutdown. On the year, company revenues drop 8.5% to \$3.2 billion, while expenses in general accelerate 7% to \$3.46 billion. The net loss is \$99.6 million.

The employee population falls by 5.5% in 1980 to 52,000. Fleet upgrading continues as 16 B-737-222s are disposed of and 12 B-727-222As are added, giving the carrier a total of 76 of these short-range models. A B-747-133 en route from San Diego to Honolulu on January 21, makes an emergency landing at Colorado Springs after an anonymous caller warns that a bomb aboard will explode if the plane descends below the 5,000-foot level. At the 6,000-foot airport, a device resembling a bomb is removed.

The DC-8-62 *Mainliner* Capt. Ralph J. Johnson is donated on March 12 to Project Orbis, which converts it into a flying eye hospital. The organization's management is realigned and streamlined on July 9, with 9 division officer positions and 100 staff positions eliminated; United now also drops several short, unprofitable routes.

Two baggage handlers are injured when a small package explodes in the cargo hold of a B-727-222A at Sacramento on September 9, where it has just arrived from Portland, Oregon, and deplaned its passengers.

A chartered DC-8-62 carrying the New York Giants professional football team makes an emergency landing at Newark on December 8 after experiencing hydraulic problems during a flight from Seattle. Frequencies are initiated on December 18 from Chicago to Phoenix and Houston, along with a new service from Chicago to Houston and from Phoenix to Seattle. Two days later, nonstop New York and Chicago to Mexico City flights commence.

As the result of discontinuing many short-haul operations, the average passenger trip distance rises by 12%, a figure that cannot, unfortunately, be adapted to traffic reports, as enplanements decline 8% to 33.2 million. Cargo is up, however, by 15% to 788.35 million FTKs. Financially, United's revenues total \$4.46 billion, allowing the net loss picture to improve to minus \$15 million, atop an operating loss of \$67 million. UAL, Inc.'s other interests allow the holding company to post a \$21-million net profit.

The workforce is cut again in 1981, declining 12.7% to 45,500, with much of the reduction coming in the fourth quarter. Service is opened in January to Oklahoma City, Tulsa, and Wichita. On February 1, a B-727-222A with 135 aboard en route from Las Vegas to Chicago, makes an emergency landing at Los Angeles after experiencing landing gear problems shortly after takeoff from the Nevada city. En route from Los Angeles to Newark on April 3, a DC-10-10 experiences extreme turbulence; 22 passengers are hurt. The 353rd of its type and the last DC-10-10 delivered to the company arrives on April 20. The new Mileage Plus frequent flyer program is unveiled on May 6.

The large airline now reacts to the success of the low-fare operators. First it secures its own base by working out a "Blue Skies" work-rules agreement with its pilots; in exchange for a 15% cut in costs, the pilots receive wage increases and protection from layoffs. Next, the major pulls out of an interline agreement with upstart **New York Air**, a nonunion subsidiary of **Continental Airlines**.

On June 12, United unveils Friendship Express service, a low-fare B-737-222 imitation of **PEOPLExpress**, on a sixth of its route network. United's cost structure is too high to support the concept, which is abandoned until the fall of 1994, when it is reborn in California as Shuttle by United. Meanwhile, the company joins **American Airlines** in charging other airlines a processing fee for every booking made via its reservations system; when **PEOPLExpress** refuses to pay its Apollo fee, it is dropped from the computer code listings.

On October 29, James Hartigan Sr. is elected president of United. Former President Wood is elevated to board vice chairman. The Westin International Hotel subsidiary is now renamed Westin Hotels.

Federal district judge Prentice H. Marshall at Chicago rules, on November 8, that the carrier discriminated against former pilot Robert L. Kendall, a member of the Worldwide Church of God, who refused to fly on weekends because his religion forbade it; Kendall is awarded \$17,500 in damages.

Like most major U.S. airlines, United suffers a poor year primarily because of the continuing recession, intensified airfare wars, and the PATCO air traffic controllers' strike, which sharply reduces capacity at the company's Chicago (ORD) hub. Losing money, the carrier by year's end completes abandonment of 123 short-haul routes.

Passenger boardings drop 12.2% to 29,162,000, but cargo is up a minor 0.4% to 791.65 million FTKs.

Simultaneously, revenues advance only 2.2% to \$4.47 billion and expenses swell by 3.96% to \$4.61 billion. As a result, the free world's largest airline, which has more operating income than any other, is faced with the industry's second largest operating loss (after Pan Am's) of \$146.7 million. The net loss of \$104.89 million, most of which comes in the year's last quarter, is second only to that of dying **Braniff International Airways**.

United stages a significant comeback in 1982 from what could be another bad year. Even though the payroll is reduced by 8% to 41,550, 7 new cities are added to the route network: Syracuse, New Orleans, San Antonio, Sioux Falls, Dallas (DFW), Albuquerque, and Harrisburg; 28 new segments are also introduced. More than 100 passengers are stranded overnight on January 2-3 in Honolulu because the carrier has overbooked flights to Portland and Seattle.

The hijacking of Flight 674, a B-727-222 with 103 passengers en route from Chicago to Miami, is foiled on March 1 when a passenger and crew members subdue a Major Diaz, who is armed with a bottle of liquid and yelling "Cuba, Cuba, Cuba!" It is later reported that the pilot deliberately flew south to the Florida Keys to confuse the would-be hijacker, and then circled back to land at Miami (MIA). Upon examination, the pirate will be declared mentally deficient and is sent to a psychiatric facility.

Richard A. Ferris is elected chairman of UAL, Inc. on April 29, succeeding Edward Carlson, who will remain on the board for a year before retiring. Vice Chairman Wood now retires.

In mid-May, just after the collapse of **Braniff International Airways**, the airline initiates service from Dallas (DFW) to Chicago and Denver. On May 16, the first DC-8-71 enters service, performing a rotation from San Francisco to Portland. Chairman Edward Acker now turns down a \$50 million-offer from United for **Pan American World Airways (1)**' routes to Japan.

The first of seven B-767-222As to be delivered during the remainder of the year arrives on August 19. The ninth built and the first accepted by any airline, it makes a proving flight on the launch carrier's Chicago to Denver route on September 8. The next day, regularly scheduled B-767-222 flights begin to San Francisco, Boston, New York, and Chicago, replacing DC-10s. Three days later, on September 12, a B-767-

222 with 171 aboard must make an emergency landing in Chicago because of a malfunctioning wingflap.

Specially commissioned for assignment to the company's support of the Civil Reserve Air Fleet (CRAF), a DC-10-10CF is delivered on September 20; it is the 9th Dash-10CF, the 379th DC-10 overall, and the 2,000th Douglas jetliner to be constructed.

Late in the year, the reengining of 11 DC-8-61s into DC-8-71s is completed.

Passenger traffic figures rise 13.6% for a total of 33.1 million customers served; freight declines 9.8% to 714.45 million FTKs. Revenues jump 3.21% to \$4.61 billion, but costs shoot up to \$4.68 billion. The company is headed for a major loss beyond the operating downturn of \$68.64 million until a tax credit and the sale of tax benefits on its 767s and DC-8-61s "improve" the net loss to \$10.75 million.

As the economy improves in 1983, United joins **American Airlines** and **Pan American World Airways (1)** in presenting shareholders with a financial turnaround; at the same time, its employee population increases by 4.9% to 43,000. Thirteen additional DC-8-61Fs are reengined and 12 additional B-767-222s join the fleet.

Flight 2885, a DC-8-54F with three crew, fails its initial climb away from Detroit (DTT) on January 11 for a service to Los Angeles, rolls right, enters a steep descent and crashes into wooded terrain 8,800 ft. past the end of the runway, exploding; there are no survivors.

This is also the year the carrier becomes a true international carrier. Boeing 747-122 flights are launched from Seattle and Portland to Tokyo by the *Friendship Japan* on April 1 and from Seattle to Hong Kong in May. Additional new service is initiated to Calgary and Edmonton in Canada, Freeport and Nassau in the Caribbean, and to Maui and Kona, Hawaii, from the West Coast. San Francisco becomes the West Coast hub, while those at Chicago and Denver are strengthened.

While taking off from Chicago (ORD) on June 11, a B-727-222A with 142 passengers must abort its roll when the No. 1 engine fails. After the trijet is stopped, the captain is informed by another company aircraft that his No. 1 engine is on fire. The engine, unseen from the cockpit, is shut-down and a fire extinguisher is discharged into it. A second radio call informs the crew that the fire remains aflame and a second extinguisher is discharged into it. The other two engines are simultaneously shut down and all occupants are evacuated using the emergency exits. Seventeen people are injured during the evacuation, two seriously.

Four California men bound for a wedding in Chicago are taken off a company jetliner at Omaha on July 2 after burning money, grabbing flight attendants, and talking about hijacking; they are charged with interfering with a flight crew. A B-767-222 pilot aborts his landing at San Francisco on August 18 to avoid a collision with another plane on the runway designated for the jetliner.

Lightning is initially suspected of causing a B-767-222 to lose its main electrical power over the Colorado Rockies on August 20 and plunge 8,000 feet before the pilot is able to restart its engines. Four days later, NTSB officials suggest that icing during a thunderstorm may have caused the overheating of the jet engines and loss of electrical power.

When **AirCal** and **Pacific Southwest Airlines (PSA)** increase frequencies in the Los Angeles-San Francisco corridor in September, United finds itself engaged in a two-front fare war. In response, it introduces 9 more flights for a total of 24 daily roundtrips.

The first scheduled service from Chicago to the Bahamas begins on December 15.

Passenger enplanements jump 15.3% to 38.2 million and cargo swells 20.9% to 885.4 million FTKs. Revenues accelerate 14.4% to \$5.4 billion, expenses are kept under control, and the bottom line figure appears in black: \$120.7 million operating gain, representing a \$227 million turnaround.

If 1983 was a good year for United, 1984 would be the best since passage of the Airline Deregulation Act. Employment grows 9.3% to 47,000—tops among U.S. carriers—and the fleet now includes 29 DC-8-70s, 6 DC-10-30s, 44 DC-10-10s, 104 B-727-222As, 50 B-727-100s, 49 B-737-222s, 18 B-747-222s, and 19 B-767-222s.

An overheated air conditioning unit sends smoke into the cabin of a B-727-222A on the ground at Los Angeles on March 27, forcing evacuation of the 111 people aboard; no injuries are reported. Flight 663, a B-727-222, is involved in a landing accident at Denver on May 31. When its hydraulic system fails on June 28, a B-727-222A is forced to make an emergency landing at Cleveland's Hopkins Airport.

New route expansion now allows the pioneer to become the first U.S. airline ever to fly to all 50 states. Frequencies are significantly enhanced to Hawaii and to Chicago (ORD). On the downside, however, this positive economic news has an adverse impact on negotiations underway with labor groups on new cost-saving contracts.

Although the 14,000-member machinists union agrees to a new pact featuring a two-tier wage scale, management and the pilots union make little progress toward a similar package. As employer-employee relations worsen, CEO Ferris places a halt on fleet enhancement. Meanwhile, the carrier joins a number of independent airlines in opposition to the new "code-sharing" arrangements being organized between commuter airlines and major carriers. Petitions are filed with the CAB and United threatens to eliminate all code-sharers from its Apollo reservations system.

On September 3, Flight 827, a B-727-222A with 81 passengers is maneuvering at a runway holding point prior to takeoff from Washington, D.C. (DCA) for a service to New York (LGA). It is struck in the trailing edge of its right wing by the left wing tip of the trailing **New York Air (1)** Flight 306, a DC-9-30 awaiting liftoff for the same destination. The United aircraft is damaged, but no one aboard either service is injured.

The CAB now forbids United and **American Airlines** from imposing discriminatory reservations booking fees on competing carriers; the two simply raise the cost for all others, which places severe financial burdens on the low-fare operators. Eleven of these now file a \$1-billion antitrust suit against the two majors.

Customer bookings accelerate 8% to 41,272,000, but cargo dips 4.2% to 828.78 million FTKs. Revenues on the year climb upward by 15.8% to \$6.2 billion and costs are contained at \$5.54 billion, an 8% boost. A record leap of 252% in operating profits (\$564 million) and a spectacular 114.6% jump in net profit (\$258.9 million) are experienced.

The payroll grows 6.4% in 1985 to 50,000, tops in the U.S. airline industry. United's all-jet fleet of more than 320 Boeing 767s, 747s, 727s, and 737s, plus McDonnell Douglas DC-10s and MD-80s now operate some 1,500 flights per day to 150-plus cities in the U.S., Canada, Mexico, the Bahamas, Japan, and Hong Kong.

Desperately in need of funds, **Pan American World Airways (1)**' Chairman Acker meets with United CEO Ferris at New York's Plaza Hotel in mid-March, where the two negotiate the transfer of Juan Trippe's jewel.

On April 2, officials of United and Pan Am announce a \$715.5-million deal whereby the latter's Pacific division, together with its stations and equipment, 11 B-747SP-21s, 6 Lockheed L-1011-500s, and 1 DC-10-30 will pass to the former, thereby making it the second largest American transpacific carrier after **Northwest Airlines**. In addition, United will rehire approximately 3,000 Pan Am employees currently in place. With the approval of their boards, Acker and Ferris sign the transfer contract at Washington, D.C. on April 22 and then present it to the DOT for its blessing.

On May 17, the local chapter of ALPA, led by Ferris opponent Frederick "Rick" Dubinsky, strikes the company over the question of a two-tier pay scale. A week later, even as its schedules are severely reduced, United announces its long-term \$265-million purchase of 5 MD-80s and 25 Boeing 737-291s from **Frontier Airlines (1)**.

As negotiations with the pilots continue, Chairman Ferris, while retaining management contracts, sells a number of hotels and places the proceeds, together with \$962 million from overfunded pension plans, into a special corporate account earmarked for expansion. The pilot's job action ends on its 29th day, June 15, in acceptance of the company's salary position; three days later, a large-scale marketing campaign is undertaken to win back customers.

The pilots' displeasure with Chairman Ferris deepens as a result of his refusal to rehire 500 trainees afraid to cross the picket lines. Unable to reverse the trend toward major-commuter interline arrangements, the carrier signs an agreement in June to participate with **Air Wisconsin** as a code-sharing partner listed in the Apollo computerized reservations system.

A broad-based marketing agreement is completed with **Deutsche Lufthansa, A.G.** on July 3 calling for a meshing of the airlines' flight schedules at 10 American airports and enhancement of the automation features between the carriers' reservations systems. Also in July, GAB Business Services, acquired a decade earlier, is sold at a pretax gain of \$28.88 million.

On August 26, just four days after the **British Air Tours, Ltd.** B-737 tragedy, a United B-737-222 with 74 people aboard is delayed from taking off from Cleveland for 44 minutes after a valve malfunctions on one of its two engines.

UAL, Inc. officials, with board approval, spend \$1.6 billion on August 30 to purchase The Hertz Corporation. With some \$587.5 million of the expenditure coming from the employees' overfunded pension fund and without input in the matter, the move angers the rank and file.

A \$3.1-billion order is now placed for 110 B-737s and 6 B-747s. The order is flexible and will allow the airline to choose other models later if desired. Meanwhile, 10 **Frontier Airlines (1)** B-737-291s arrive, along with the MD-80s, beginning in early September; the latter are immediately leased to other carriers. On September 26, President Hartigan also becomes CEO, succeeding Richard Ferris, who remains president/chairman/CEO of UAL, Inc.

In the fall, a DC-10 exchange is made with **World Airways**. The latter takes four United DC-10-10s in exchange for four of its DC-10-30CFs, \$30 million, and cancellation of its Dash-30 debt.

In November, DOT Secretary Elizabeth Dole approves the transfer of the Pacific division of **Pan American World Airways (1)** to United. A Chicago to Fort Lauderdale flight is cancelled on November 30 after more than 50 Chicago Bears football fans pass around liquor and refuse to take their seats before takeoff. A new north-south hub is opened at Washington, D.C. (IAD) in December and the Pan Am arrangement is consummated on December 31.

Passenger boardings drop 7.7% during the 12 months to 38,113,000 and cargo is off by 13.5% to 593.53 million FTKs. Revenues decline by 19.3% to \$4.92 billion, costs fall 5.4% to \$5.24 billion, and a huge \$328-million operating loss is incurred. The strike brings a net loss of \$88.2 million.

Airline employment slips by 0.4% in 1986 to 49,800. On January 6, hourly B-727-222A shuttle service is initiated from Washington, D.C. (DCA) to Chicago (ORD) between 7 a.m. and 6 p.m. Also in January, the carrier announces plans to expend \$10.6 million renovating its Central Terminal at New York (LGA); opening will occur in 18 months. As a cost-cutting move, 1,016 corporate staff positions are targeted for elimination; the move is aimed squarely at reducing overall labor costs and as a challenge to union groups.

The former **Braniff International Airways** B-747SP-27 is delivered on February 9 and the \$715.5-million purchase of the Pacific division of **Pan American World Airways (1)** is completed on February 11. Simultaneously, the new owner begins service to an additional 11 cities for a total of 13 cities in 10 Pacific Rim countries. Much of this service will be offered with 10 former **Pan American World Airways (1)** B-747SP-21s acquired as part of the takeover.

During the spring and in a two-step service increase, an extra 41 daily flights are launched from Denver. Meanwhile, in April, former **Frontier Airlines (1)** President Joseph O'Gorman is named senior vice president-corporate planning. Revenue operations from the new north-south Washington, D.C. (IAD) hub commence on May 1 with a goal of 100 daily flights within 3 years.

To accommodate the new D.C. hub, plans are announced to build a 10-11 gate midfield terminal on the existing jet ramp. Both of these expansions come as competition with **Continental Airlines** heats up. After a year's lease, the 15 remaining **Frontier Airlines (1)** B-737-291s

join the fleet by month's end. Joint marketing ventures are formed with the regional carriers **Air Wisconsin** (feeding Chicago O'Hare and Washington Dulles), **Aspen Airways** (Denver), and **Westair Commuter Airlines** (Los Angeles), resulting in "United Express" service.

It is announced on July 10 that the carrier will pay nearly \$33 million in back wages and reinstate flight attendants who were forced to quit because of the no-marriage rule, since declared illegal. Four hundred return to work immediately and 1,721 will receive settlements of up to \$22,000 each. Later in the month, the carrier reports that it is spending \$60 million to refurbish the aircraft acquired with the **Pan American World Airways (1)** Pacific route purchase; \$24 million of the total is spent in Hong Kong and improvements include new exterior paint jobs and significant interior changes.

The pilot of a company jetliner landing at Chicago (ORD) on August 29 is forced to make an emergency climb to avoid hitting a man who has wandered out onto the runway.

Also at Washington, D.C. (IAD), a midfield facility is constructed during the summer and fall. Covertly, the pilots' union, under Chairman Roger Hall, is developing an Employee Stock Ownership Plan (ESOP), with which it is hoped to take over the airline. When leaders of the other company unions show no interest in the pilots' plan, the concept is laid aside. Late in the year, the first 3 of over 100 ordered Boeing 737-322s are received. Meanwhile, the Apollo reservations system is incorporated under the name Covia.

UAL, Inc., having spent \$3 billion, is now the world's largest travel conglomerate and the chairman himself suggests a new corporate identity: Allegis ("allegiance and aegis") Corporation.

In December, Frederick "Rick" Dubinsky succeeds Roger Hall as chairman of the pilots union.

Addition of the Pacific routes help the carrier attract 50,690,000 passengers this year, a 27.7% boost; cargo is up an exactly equal percentage of 27.7% to 1.02 billion FTKs. Revenues increase 35.94% to \$6.68 billion (most for a U.S. airline) as costs climb 12.59% to \$6.69 billion. The operating loss is \$10 million and the net loss is \$80.63 million; both figures, while still negatives, are improvements on those of the year before.

The workforce grows by a sizeable 20.5% in 1987 to 60,000, highest among U.S. airlines.

Unemployed construction worker and hunter Robert Raymond Prouix fires on Flight 1502, a B-737-222 coming in for a landing at Raleigh/Durham Airport on January 1; Prouix misses the pilot, at whom he had been aiming, but hits passenger Barry Rollins. Quickly called into the case, the FBI arrests Prouix on January 6; he will be tried and given a 20-year prison sentence.

Five days later on January 11, a bomb threat delays the return of the Denver Broncos' charter from Cleveland after the playoff game. Also in January, pilot leader Dubinsky retains famed lawyer F. Lee Bailey and Felix Rohatyn, director of the financial firm Lazard Freres, to assist in a revival of the ESOP.

In early February, Chairman Ferris, unaware of or unconcerned by the pilots' planning, meets with Wall Street financial analysts, who are not impressed with his travel empire scheme, now officially named Allegis, and watches UAL stock fall by \$3 more per share. Mr. Prouix admits his guilt in court on February 20. Increasing discontent spreads to most airline workers, unhappy with the Allegis diversification moves into hotel and ground transport.

In March, it is publicly revealed that real estate magnate Donald Trump has acquired 5% shareholding in UAL, Inc. and the media, at a time of multiple corporate buyouts, begins to speculate on various takeover scenarios for the long-lived airline company. The carrier's pilots, speculating that the holding company or the airline or both are undervalued and ripe for takeover, are rebuffed when they attempt to interest the line's machinists in their ESOP; the IAM members will offer their own plan.

Two B-747-222Bs are acquired to assist with the work in the Pacific, with the first delivered on March 19 and the second on April 2. Meanwhile, when **KLM (Royal Dutch Airlines, N.V.)** fails to conclude its

purchase, the 88-unit Hilton International hotel chain is acquired by UAL, Inc. from Trans World Corporation on March 31 for \$835,746,000 in cash, debentures, and 2.5 million shares of common stock, bringing the total cost to \$977.5 million.

On April 5, in addition to the four-per-week flown via Hong Kong, the company begins thrice-weekly nonstop flights from Tokyo to Singapore and from Hong Kong to Bangkok; simultaneously, it increases its nonstop San Francisco to Tokyo service to twice-daily.

In mid-April, the pilots offer to purchase control of the airline for \$4.5 billion and split it off from the UAL Corporation. The UAL board of directors briefly considers and rejects the pilots' offer. As the month draws to a close, **Aer Lingus Irish Airlines, Ltd.** and **Trans World Airlines (TWA)** file a complaint with the DOT charging the Apollo reservations system lists incomplete and inaccurate international fares.

At the April 30 annual meeting, CEO Ferris asks for and receives the company shareholders' permission to rename the corporation Allegis. Simultaneously, Dubinsky attempts to interest Chicago billionaire Jay Pritzker in joining his ESOP assault; the two cannot agree on partnership terms. In conjunction with an order for 15 Dash-400 Jumbojets and 21 B-737-300s, \$700 million in convertible debt (worth 16% in Allegis common stock) is sold to Boeing, which manufacturer now becomes, potentially, the largest shareholder in the company, just as it was almost half a century earlier.

In a May 20 footnote unrelated to the corporate maneuvering, prisoner Prouix is sentenced to 20 years in prison and is ordered to pay UAL \$53,300 in restitution.

At month's end, Coniston Partners, a New York investment firm, files an affidavit with the Securities and Exchange Commission revealing that, with 13% shareholding, it is the corporation's largest shareholder. It now desires to seek authority from a majority of the other stockholders to oust the board, restructure the corporation, and liquidate its assets.

As Allegis stock values rise, the pilots up their ESOP offer, seeking 80% control for \$5 billion. It is suggested that, should management fail to act, Dubinsky and his colleagues would join the Coniston effort. This time, management and the board of directors are not successful in withstanding the challenge.

During the first week of June, Chairman Ferris meets with pilot leader Dubinsky in Ohio and New York in an unsuccessful attempt to reach accommodation. Meanwhile, led by senior outside director Charles F. Luce, the board secretly meets away from management to consider the Allegis situation. At a specially called board meeting on June 9, Chairman Ferris is ousted, being succeeded on an interim basis by Hertz Chairman Frank Olson. Allegis is dissolved and its diversification efforts cut back.

The board now announces a restructuring plan that includes the sale of its nonairline businesses, including Hilton International, Hertz Corporation, and Westin Hotels, and distribution of the proceeds to shareholders. In addition, 50% of Covia, the name of the company employed to incorporate the Apollo reservations system, is also put on the market. President/CEO Hartigan is elected United chairman on June 25.

State-of-the-art, 48-gate Terminal One is opened at Chicago (ORD) in August; up to 18 wide-body aircraft can be accommodated at one time. On September 1, five B-747-123s, formerly operated by **American Airlines**, are purchased; they, too, will be assigned to Pacific operations.

On September 3, the Allegis board approves the sale of Hilton International; the \$1.07-billion sale is completed on October 14. On October 29, Coniston Partners forces Allegis to sell its interests in the Hertz Corporation. Also in October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

United signs a new three-year contract in November with its 21,000 mechanics, thereby avoiding a strike; as part of the package, the carrier agrees to a \$20-million retroactive wage increase. A B-727-222A carrying

116 people goes into a dive over Long Beach Municipal Airport on November 29 to avoid collision with a smallplane that passes within 100 ft.

Also in November, a fifth nonstop, roundtrip is initiated between Louisville and Chicago. Perhaps the greatest blow occurs at month's end when it is announced that, for the first time since the acquisition of **Capital Airlines** in 1961, the company is no longer the largest airline in the western world. **American Airlines** achieves its decades-old dream of surpassing the Chicago major by flying 200 million more revenue passenger miles on the month.

On December 12, 47-year-old Stephen M. Wolf, former CEO of **Republic Airlines** and **The Flying Tiger Line** is elected chairman/president/CEO of Allegis and president/CEO of United Airlines.

By its donation just before Christmas, United becomes the first airline Fair Share Signatory Company of the National Association for the Advancement of Colored People (NAACP). The Hertz Corporation is sold for \$1.3 billion on December 30.

Despite the year's chaos, United establishes new industry highs for traffic as passenger boardings jump 9.3% to 55,087,000 and freight ascends 23.1% to 1.78 billion FTKs, a figure second only to Pan Am among passenger-carrying majors. Revenues swell 17.56% to \$7.86 billion (tops again in the U.S. industry), costs grow 15.13% to \$7.71 billion, and the operating profit is \$151.21 million. Costs involved in reorganization allow only a \$33.33 million net profit, the smallest such positive report by any U.S. major.

The workforce remains largest in the U.S. industry in 1988, climbing by 14.2% to 68,500. During early January, Allegis pays off its \$700-million note to Boeing, along with accrued interest, and a \$50-million early retirement premium. In the same month, members of the Red Carpet Club gain access to the lounges of **Australian Airline Ltd.**'s Flight Deck Club under a reciprocal agreement.

Piloted by Capt. Clay Lacy with 141 passengers, the B-747SP-21 *Friendship One*, chartered by the Seattle-based Friendship Foundation to raise money for children's charities, completes the fastest around-the-world flight by a commercial airliner between January 28-30. The 23,125-mile Jumbojet service from Seattle to Seattle is completed in 36 hrs. 56 min. with refueling stops only at Athens and Taipei. Among those aboard are astronaut Neil Armstrong and former UAL official Edward Carlson. The Westin Hotel Co. is sold on January 31 for \$1.35 billion.

In February, United agrees to pay \$45,000 to settle a DOT complaint of rule violations in the Apollo reservations system. It is also reported that, to satisfy its new Pacific customers, the company has been required to make a number of changes. Among these are the substitution of steamed towels for microwaved hot towels for Japanese passengers, provision of real cream for the coffee of Australian and New Zealand travelers, and the removal of white carnations (viewed as death symbols) from first-class during operations to Chinese destinations.

In March, the company completes the restructuring begun the previous year, even though the pilots keep working on a plan to purchase the airline. Allegis buys back 35.5 million shares of its common stock at \$80 per share, a figure representing a payout to stockholders of \$2.84 billion. Under its new management, the carrier returns to the core business of running an airline and Chairman Wolf works hard to establish a solid line of communication with employees.

United Airlines Chairman Hartigan retires on May 1 and is succeeded by Allegis Chairman/President/CEO Wolf; former **American Airlines** Vice President John "Jack" Pope becomes the airline's executive vice president. Washington to Bermuda flights also begin on May 1. En route from Los Angeles to Japan on May 2, a B-747SP-21 with 19 crew and 239 passengers suffers engine problems. About 200 km. from Tokyo (NRT), the pilot is forced to shut down Nos. 3 and 4 engines because their measuring devices show abnormalities. Just before landing at the airport, the No. 3 engine is shut down when its measuring instrument fails. Although all aboard are advised to wear their life jackets, a safe landing is made on the one engine. The airport is closed for five minutes due to the incident.

The holding company's Allegis name is dropped on May 26. UAL, Inc. becomes UAL Corporation, with United Airlines as its principal

subsidiary. Also in May, the carrier completes the withdrawal of L-1011s from its Pacific service, moving to an all-Jumbojet fleet, and announces the sale of 50% of its Covia reservations system for \$500 million; deduction of direct-selling expenses will leave a profit of \$493 million.

In July, the word "United" is enlarged in its aircraft livery and the "U" on the tail of B-737-222s is repositioned. Later in the month, 15 gates at Washington, D.C. (IAD) are purchased from **Continental Airlines**. The \$223.4-million sale of 50% interest in the Apollo computerized reservations system is completed on August 5; the Covia Partnership are the new half-owners and comprise **Air Canada, Ltd.**, **Alitalia, S.p.A.**, **British Airways, Ltd. (2)**, **KLM (Royal Dutch Airlines, N.V.)**, **Swissair, A.G.**, and **USAir**. A marketing agreement is initiated with the British flag carrier and in August the two companies begin code-sharing operations. United shares the BA designator on its domestic flights from Denver to Chicago and Washington, D.C. The same month, the Hyatt Hotels chain becomes the largest international hotel participant in United's frequent flyer Mileage Plus program.

On September 1, the carrier increases the number of its daily departures from Washington, D.C. (DCI) from 91 to 114. Among the new services from the nation's capital are flights to Houston, Milwaukee, and Madison. Simultaneously, routes are opened from Denver to Colorado Springs and Houston, from Minneapolis (MSP) to St. Louis, and from San Francisco to Burbank and Monterey.

A \$2-billion order is placed with Boeing for 30 B-757-200s with which to replace the aging DC-8 fleet. The entire DC-8-71 fleet is now sold to the GPA Group subsidiary AeroUSA, with deliveries to the leasing organization scheduled a year hence. In October, Pacific capacity is increased by 11% as the number of flights is increased from 85 per week to 94. In mid-month, the third quarter results are announced and are the best in the company's long history.

Late in the year, the FAA launches a new round of airport screening tests. In addition, Capt. W. E. Dunkle, who had served the airline as pilot and board member from 1938 into the 1970s, publishes his memoirs, *Bird's Eye View* (Camarillo, Calif.: Juli Sellers Press).

Customer bookings for the year grow a slight 2.2% to 56,372,000 and in terms of enplanements, the onetime leading carrier is now third behind **American Airlines** and **Delta Air Lines**. Cargo climbs a similarly small percentage, up 2.9% to 1.37 billion FTKs. Revenues earned are still the highest among U.S. carriers and total \$8.79 billion, an 11.87% boost. Expenses jump only 5.4% to \$8.12 billion, and the operating profit is a record \$668.56 million. Like revenues, the \$589.23 net gain is highest among American air transport concerns.

The workforce, although up 4% to 71,170 in 1989, shrinks to second place behind that of **American Airlines**. The fleet, now third behind AA and **USAir**, includes 2 B-747-222Bs, 18 B-747-100s, 2 owned and 3 leased B-757-222s, 19 B-767-222s, 4 owned and 7 leased B-747SPs, 34 owned and 13 chartered DC-10-10s, 8 leased DC-10-30s, 25 owned and 2 chartered DC-8-71s, 38 B-727-100s, 28 B-727-222s, 51 owned and 25 leased B-727-222As, 49 B-737-222s, and 11 owned and 64 chartered B-737-300s. Orders are outstanding for 15 B-747-400s and 16 B-767-322ERs and options are held for 16 B-767-322ERs. Company stock is now worth \$112 per share.

Flight attendants at Newark (EWR) force the company to cancel a Los Angeles-bound flight on January 3 when they learn, shortly before the passengers board, of a sabotage threat made against their aircraft. The air cargo operation at Chicago (ORD) is relocated late in the month into a new \$50-million, 585,000-sq.-ft. facility.

The cargo door of Flight 811, a B-747-122 en route from Honolulu to Auckland on February 24 with 336 passengers and 18 crew, breaks loose in mid-flight and a huge piece of fuselage, approximately 12 x 25 feet in size, peels away. Nine passengers and several rows of business-class seats are sucked out and 23 are injured in the first explosive rush of decompressed air when the overhead bins fall apart and baggage flies through the cabin. Twenty-five harrowing minutes later, the Jumbojet's pilot, Capt. David M. Cronin, is able to return to Honolulu on just the

two left engines. The company begins an inspection of the cargo bay door locks of its entire Jumbojet fleet on February 27 and a week later, the FAA orders the cargo bay door locks of all B-747s strengthened. The NTSB will initially rule the accident the fault of poor airline maintenance and inspection.

Meanwhile in February, a multiyear aircraft cabin refurbishment program is started. Daily nonstop flights commence on March 2 between Washington, D.C. (IAD) and San Diego. Service on the Seattle to Tokyo route is suspended on March 26, in favor of **Continental Airlines**, which has won the authority following a DOT service review. In April, the reservations center previously located at Washington, D.C. (IAD) is relocated to a new \$30-million facility at Sterling, Virginia.

In April and May, an enormous \$15.75-billion order is given to Boeing for 370 new B-737s and B-757s to be delivered into the 21st century. The move signals United's desire to regain lost initiative and its once proud position as the free world's largest air carrier; the company now becomes the largest transpacific carrier, surpassing both **Northwest Airlines** and **Japan Air Lines Company, Ltd. (2)**.

San Francisco to Mexico City return service begins on May 2. On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. United, with 23 security breaches, has the most of any airline and is faced with \$167,000 in punishment.

Speaking of **Northwest Airlines**, that carrier is taken over in a leveraged buyout on June 19, the same day United stock reaches \$128.50 per share in worth. Also in June, United begins a third daily B-747-133 San Francisco to Tokyo frequency. The parent holding company makes a capital contribution to the airline of its investment in UAL Leasing; UAL Leasing is liquidated and the airline assumes all of its assets and liabilities.

A 20-inch crack is found in a B-727-22C on July 1 and leads the FAA to issue an emergency order calling for inspection of the nation's 46 oldest Boeing trimotors. A brand new B-747-422, the *Spirit of Seattle II* and the first of 15 ordered by the company, stands idle at San Francisco on July 8 when pilots refuse to fly it or any of the other new Jumbojets in protest of delays in the settlement of the ALPA chapter's contract. The regional ticket office at Rocky River, Ohio, near Cleveland, is closed on July 12.

En route to Chicago from Denver on July 19, DC-10-10 Flight 232 with 296 aboard, crashes while attempting to make an emergency landing at Sioux City, cartwheels, breaks up, and catches fire (111 dead). The NTSB will determine that the disaster is caused by the uncontained disintegration of the fan section of the No. 2 engine and the subsequent failure of the triple redundant hydraulic system.

Capt. Alfred C. Haynes will relive the tragedy in his "'I Couldn't Control the Airplane!'" in *Smithsonian Air and Space* 6 (October–November 1991): 26+. Jane Briggs-Bunting, *et al.*, remember "'Here I Was Sitting at the Edge of Eternity': Following the Crash of Flight 232, Life Seems Utterly Different for Most of the 185 Survivors" in *Life* 7 (September 1989): 28–36. Ruth Ness recalls "'My Moment of Courage'" in *Ladies' Home Journal* 106 (November 1989): 28+ while Kevin Simpson will later examine his life in *Chosen to Live: The Inspiring Story of Flight 232 Survivor Jerry Schemmel* (Littleton, Colo.: Victory Publishing Co., 1996).

The event brings national attention to the Iowa city's community's emergency preparedness and is portrayed in the Charleston Heston and Richard Thomas television movie *Crash Landing: The Rescue of Flight 232*. In 1994, the film is repackaged on video cassette under the title *A Thousand Heroes*. Incidentally, the scenes depicting the interior of Flight 232 are shot inside a portion of the center fuselage of the very first Con-
 vair CV-880, which had been shipped to Minneapolis for the filming.

In addition, Emily Dee in 1990 pens *Passengers on Board: Responses to the United 232 Tragedy*, which is published by the Sioux City firm of Loess Hills Press. Robert Monserrate's "The Crash of United Flight 232: Rescue, Recovery, and Identification of Victims" appears in *Disaster Management* 4 (Summer 1992): 157+.

During the summer, the corporation again becomes a target for corporate raiders Saul Steinberg, whose Reliance Group Holdings has ac-

quired 5% (later 9.7%) shareholding, and Los Angeles billionaire Marvin Davis, who has just failed to acquire **Northwest Airlines**. Unable to takeover the Minneapolis-based major, Marvin Davis bids \$5.4 billion (\$240 per share) for United on August 8. On Wall Street, UAL stock jumps 46 points to \$210 per share. Also in August, the first DC-8-71 is turned over to AeroUSA.

To avoid a Davis takeover, Wolf and pilots union leader Dubinsky agree to work on a cooperative financial counterattack and the board sets October 12 as the deadline for their buyout. As the union and company partners and Davis alternate offers, the pilots pledge \$500 million in work concessions and pension fund financing, management borrows, and **British Airways, Ltd. (2)** is sold 15% shareholding and a board seat for \$750 million. Meanwhile, far from Wall Street, the carrier's maintenance center at San Francisco, the largest such center in the world, begins serving only its own jetliners on August 23 and phasing out contract work that it has done on planes owned by more than 60 other commercial and military customers.

In September, United, with its corporate leadership focused more directly on banks and boardrooms, employs three leased machines, to become the first airline to offer B-747-422 service from the U.S. to Australia. Through the month, CEO Wolf continues his attempt to hold together a management and union group of investors to buy out United and to find new investors; \$3 billion in pledges is received from Citibank and the Chase Manhattan Bank. Late in the month, black clouds appear.

First, the DOT official signals a negative change in the government's view of the rules governing foreign airline investment in U.S. carriers. Then it is revealed that Chairman Wolf stands to make a potential \$77-million windfall profit from the buyout—President Pope will receive almost \$38 million. The news causes outrage among union members and the IAM chapter in particular now actively campaigns against the labor-management takeover and warns off other parties from joining a movement that now begins to falter.

By early October, only \$1.4 billion of the required additional \$4.2-billion purchase price has been obtained by the Wolf/Dubinsky group. The \$6.78-billion (\$310 per share) buyout scheme fails on October 13 and helps to trigger a huge "Black Friday" Stock Market decline or "adjustment"; during the next 10 days, UAL stock falls in value to \$170 per share.

Janice and Dale Sorenson, farmers in Alta, Iowa, receive a \$116,000 reward from General Electric on the same October 13 as Black Friday for finding the long-sought fan disk suspected of causing the Flight 232 disaster in mid-July. Also in October, company facilities at San Francisco are damaged by the huge earthquake, while in Charleston, South Carolina, Hurricane Hugo inflicts loss.

Pilots abandon their threat on November 20 to stop flying B-747-422s and also during the month the company launches daily nonstop B-727-222A roundtrips between Los Angeles and Kansas City and B-737-322 flights to that Missouri city from San Francisco.

In addition, the company joins with **British Airways, Ltd. (2)** to offer through check-in for passengers connecting on the two airlines' flights.

In December, scheduled B-747-422 flights are also started by the *Spirit of Seattle II* from San Francisco to Hong Kong.

Customer bookings decline by 2.3% to 54,951,000, but cargo is up by 4.6% to 1.43 billion FTKs. Revenues jump 9.61% to \$9.64 billion, expenses are up 13.01% to \$9.18 billion, and the operating profit is cut to \$456.85 million. Net gain drops to \$358.08 million.

Airline employment climbs 5.4% in 1990 to 75,025 and is the third largest among U.S. carriers and also third largest in the world. The fleet of 462 jetliners is second largest in the U.S. and third largest in the world behind **Aeroflot Soviet Airlines** and **American Airlines**. Just after New Year's, each stockholder learns that one of his common shares purchased for \$1,000 in 1980 is now worth \$8,224.

On January 24, local representatives from ALPA, AFA, and the IAM notify the UAL, Inc. board of their interest in acquiring 75% majority control. Also in January, the company begins the largest renovation and upgrade program in U.S. commercial airline history with a \$45-million

investment designed to enhance its international business-class service. The first step now undertaken is the replacement of appropriate seating aboard the company's Jumbojets.

At the same time, daily service is introduced between Chicago and Sioux City, Iowa, via Cedar Rapids on the way west, but nonstop on the return. Daily B-747-422 services commence on February 1 from San Francisco to Hong Kong. On February 22, the UAL, Inc. board authorizes the release of information to representatives of the unions preparing an acquisition proposal.

Nonstop authority for a route from San Francisco to Toronto is received on March 14. A \$336-million lawsuit, brought against the carrier by **Continental Airlines** and charging that UAL had practiced unfair competition in the use of its reservations system, is settled on March 29 just before jury deliberation begins in a 10-week trial in Los Angeles federal court. Also in March, the international business-class renovation and upgrade is completed with the replacement of seating aboard United's DC-10-30s.

Mount Redoubt erupts on the evening of April 6 and the following afternoon United cancels its flight to Seattle from Anchorage.

Following first quarter negotiations with union leaders, acting under the collective name of the United Employee Acquisition Corporation (UEAC) and their allies, the resurfaced Coniston Partners, the board agrees on April 9 to sell the airline to its employees for \$4.4 billion, if they can come up with financing.

The first of more than 400 aircraft to be equipped with the GTE Airfone "Seatfone" system is introduced on April 21. Three days later, the "United Shuttle" is launched nonstop from Los Angeles to San Francisco and back every half-hour from 7 a.m. to 7 p.m. A number of gates, slots, and assets of bankrupt **Eastern Air Lines** are purchased at Chicago (ORD). Late in the month, former Chairman/CEO Edward E. Carlson dies at the age of 79.

San Francisco-Toronto daily roundtrips commence on May 1 and on May 15, European service is inaugurated; B-747-422s fly from Chicago (O'Hare) and Washington, D.C. (IAD) to Frankfurt. When an attorney aboard a Los Angeles flight refuses to lease a set of earphones to listen to the film *Presumed Innocent* and instead employs his own, the airliner captain has him arrested for theft by airport security upon landing.

A joint marketing program is unveiled with **British Airways, Ltd. (2)** on June 1 that allows BA passengers to fly the Concorde at no extra cost through August 31 when connecting from selected United U.S. gateways after having flown first-class on United domestic routes. Daily nonstop roundtrips commence on June 8 between Washington, D.C. (IAD) and Portland, Oregon. Additionally, daily nonstop B-747-422 service is inaugurated from Newark to Tokyo together with four-times-per-week B-747-222B flights from San Francisco to Bangkok via Taipei.

Former Chrysler Corporation Vice Chairman Gerald Greenwald is appointed, also in June, to lead the employee's buyout effort and is guaranteed \$9 million whether he is successful in the attempt or not. During the summer, a program is started in Denver to donate surplus food to needy people from the airline's flight kitchen. Within six months, the program will spread to Boston, Chicago, Detroit, Honolulu, Newark, San Francisco, Seattle, Philadelphia, and Washington, D.C. and see over 30 tons of goods distributed.

Thrice-weekly flights begin from Los Angeles to Seoul in July and nonstop B-747-422 Chicago to Paris frequencies commence on August 1. On August 6, Iraq invades Kuwait, sending fuel prices significantly higher and setting off an international crisis.

Unable to lock its landing gear, a B-737-222 skids to a safe emergency landing at Los Angeles on August 20. The next day, United begins its Civil Reserve Air Fleet (CRAF) participation in the buildup of U.S. forces in Saudi Arabia, Operation Desert Shield. On August 27, a B-747-422 with 323 aboard is unable to get its front landing gear down, but skids to a safe Los Angeles (LAX) landing.

With financial institutions queasy as a result of the Gulf crisis and withdrawing their commitments, the unions dissolve their alliance with Coniston in September. On a positive note, during the last week of the

month, the USN deep submersible *Sea Cliff* (DSV-4), recovers the forward cargo door torn from Flight 811 in January 1989 from 14,100 feet.

With the UEAC unable to meet the carrier's October 9 deadline for a takeover bid, this year's buyout efforts now taper off as a new labor contract is signed with company pilots. Later in the month, seasonal B-727-222A service begins from Washington, D.C. (IAD) to Cancún and daily B-767-222ER flights commence from Chicago to Paris.

The largest wide-body order in history is announced on October 15 as United becomes the launch customer for the B-777-200; a total of 34, outfitted with Pratt & Whitney engines, are ordered with 34 options. The \$22-billion request is completed by asking for 60 B-747-422s. The same day the DOT, somewhat unexpectedly, chooses United rather than **American Airlines** to receive a new nonstop Chicago to Tokyo route. An agreement is concluded with bankrupt **Pan American World Airways (1)** on October 23 to purchase that fellow-pioneer's prized routes to London (LHR) for \$290 million, effective in mid-November. Boeing's board of directors on October 29 authorizes full-scale development of the B-777, which the builder will market in competition with the A340 and the MD-11.

The route-transfer agreement includes a provision under which United will honor up to \$100 million in Pan Am tickets should that airline cease operations. Consummation of the deal must, however, await resolution of a diplomatic negotiation between the U.S. and U.K. over substitution of United in a new bilateral agreement.

United introduces Cargo Plus 1, a computer system that enables air freight forwarders worldwide to reserve cargo space and track shipments. Four fuel tanks at Denver, along with just over two million gallons of jet fuel, are destroyed in a November 24 fire that takes a day to extinguish, but forces cancellation of only a 12 of 186 departures.

Passenger boardings move ahead by 5% to 57,612,000, good enough for 5th place among the world's airlines. Freight jumps 7.9% to 1.55 billion FTKs, a figure that represents 2nd place among America's passenger carriers and 10th in the world. Among the world's air transport companies, United ranks 2nd behind American in terms of operating revenue, which is up 13.63% to \$10.95 billion. Expenses, however, jump 19.87% to \$11.01 billion and cause an operating loss of \$54.25 million. Net profit is cut to \$95.75 million.

The workforce grows 8.3% in 1991 to 81,242 and the fleet now includes 486 aircraft. Six-times-per-week Washington, D.C. (IAD) to Tokyo (NRT) B-747-422 service via Chicago O'Hare begins on January 8. The same day, the company joins with Bankers Trust to pledge a \$150-million loan to **Pan American World Airways (1)** to tide it over until the London route sale is approved; in return, Juan Trippe's creation is required that day to declare Chapter XI bankruptcy.

Ironically, later in the day, the DOT finally approves the London route transfer. As a result, Pan Am's hub at London (LHR) and other assets are now acquired, which will allow United to add six transatlantic and seven intra-European routes to its growing global network. The route payment now made by United keeps Pan Am alive a little while longer.

On January 13, the carrier returns to Boeing its OI N7001U, the very first B-727-100 built, for display at the Seattle Museum of Flight. Purchased for just \$4.4 million in October 1964, the aircraft had accumulated 64,492 hours of flight service.

Following the outbreak of the Mideast war on January 17, a number of transatlantic flights are cut. Responding to the next night's collapse of **Eastern Air Lines**, the carrier, in early February, agrees to purchase three of its gates at Los Angeles and 21 slots at Chicago (ORD) for \$60 million. Nonstop B-727-222A service is initiated on February 15 from Washington, D.C. (IAD) to San Juan, Puerto Rico.

The cause of the crash of Flight 585 on March 3 is one of the great, unsolved mysteries of aviation. Having departed Peoria for Colorado Springs, with intermediate stops at Moline and Denver, the B-737-291 with 5 crew and 20 passengers has departed the Denver stop on the last leg and is in sight of the runway at its destination. Suddenly, the plane rolls right, pitches nose down, and just misses a 250-unit apartment complex before plowing into the ground of Widefield Park 4 mi. away

at an almost vertical angle. There is a huge explosion that leaves only a charred 14-ft.-deep crater; no one aboard survives.

At the time of this encyclopedia's publication, the NTSB and other agencies have not learned the cause. However, Daniel A. Lauing examines much of the available information in his *Manitou, Fountains of the Deep: The Crash of Flight 585, March 2, 1991* (Estes Park, Colo.: Plumb Line Press, 1995).

Also in March, 68 departures from the carrier's 4 domestic hubs are added, bringing the daily total to 1,986. On April 4, London (LHR) is designated as the carrier's primary European gateway, replacing Frankfurt.

Nonstop B-737-322 service is inaugurated on April 10 from Washington, D.C. (IAD) to Hamilton, Bermuda. Also in the early spring, the company finds it must engage in a deep discount fare war with its major competitors as the result of **American Airlines'** new four-tier tariff schedule.

Four-times-per-day roundtrips begin on May 1 between Chicago and New Haven, Connecticut. Five of the six former **Pan American World Airways (1)** transatlantic routes to London (LHR) are inaugurated by B-767-222ERs on May 1 from Washington, Newark, New York, San Francisco, and Seattle. On May 2, United begins thrice-weekly roundtrip Amsterdam, Brussels, Frankfurt, and Paris to London (LHR) flights while service between Washington, D.C. (IAD) and Paris (CDG) is also initiated. The transatlantic and European services are expanded in mid-month.

Roundtrip service between Washington, D.C. (IAD) and Madrid begins on June 1. The company joins with **Air Wisconsin**, **Mesa Airlines**, and **Westair Commuter Airlines** on June 6 to celebrate the fifth anniversary of their "United Express" partnership. The next day, a third daily flight is added between John Wayne-Orange County Airport, California, and Chicago (ORD). One of the year's highlights is the signing of multiyear contracts with the three principal labor unions and by the end of July, fully one-third of company capacity is dedicated to international routes.

Twice-daily roundtrips commence on August 1 between John Wayne-Orange County Airport and Denver. On August 7, the U.S. Federal District Court, Atlanta, converts an antitrust lawsuit against nine airlines into a class-action that could benefit many consumers and cost the carriers millions of dollars. The antitrust suit charges that this company and the others conspired to keep ticket prices high at 23 hub airports. Also in August, nonstop daily B-767-222 is initiated from Washington, D.C. (IAD) to Madrid.

In early October, flights commence from Los Angeles to Brisbane via Sydney and to Auckland. Los Angeles to Paris frequencies are increased during the month from three to five per week. In cooperation with McDonald's Restaurants, Friendly Skies Meals are introduced on October 31. The same day, Orlando becomes a "connecting complex" (rather than a hub) as daily departures are increased from 18 to 47. Halloween is also chosen as the day for the last DC-8-71 service; an air conditioning problem develops on the Kona to San Francisco run and the aircraft must be diverted to Los Angeles. When the machine is ferried up to San Francisco the next day, it is the highest-time DC-8, with 71,280 hrs.

Elevated business service, Connoisseur Class, is initiated on November 1. After Pan Am's December 4 collapse, its Latin American route network is purchased at auction for \$135 million. Negotiations are now undertaken for the complete takeover of the financially ailing "United Express" partner **Air Wisconsin**. Service begins on December 18 between Orlando and Mexico City. At month's end, a B-757-222, cleared to land at San Juan mistakenly—but safely—lands 4 mi. E on the 5,000-foot runway of Fernando Rivas Dominici, Isla Grande; the jetliner, with 200 passengers aboard, makes a successful STOL takeoff for its original destination.

Customer bookings for the year jump 7.6% to 62,003,000 and cargo is twice as high, up 24.2% to 1.77 billion FTKs. Although revenues are up 6.43% to \$11.66 billion, expenses are up 10.36% to \$12.15 billion and cause a \$490.6-million operating loss. A net loss of \$335.34 million is suffered, much of it coming in the fourth quarter and \$64 million of that

arising from the back payment of wages and benefits as labor contracts are settled. Parent UAL Corporation takes a \$331.9-million net loss.

Company employment is boosted a slight 2% in **1992** to 82,889.

The company's Latin American service is inaugurated on January 15 over the former **Pan American World Airways (1)** routes; flights commence from New York (JFK) to Caracas and Port of Spain and from Miami to Caracas. Flights commence from New York to Rio de Janeiro via Miami on January 31. Senior Vice President-Planning W. Thomas Lagow resigns at the end of January to become vice chairman and executive vice president-marketing at **USAir**.

On February 6, Geneva to Paris flights begin; a week later, frequencies are initiated from Miami to Buenos Aires and São Paulo and from New York to Montevideo via Rio de Janeiro. Zurich to Paris service starts on February 14. The Covia reservations system is merged with the Galileo system; United takes a 38% interest in the surviving company, Galileo International. Despite efforts by **American Airlines** to prevent the maneuver, United is able to obtain Air Wisconsin and its principal subsidiary, the national carrier **Air Wisconsin**, late in the month. At the same time, a forthcoming major upgrade in the marketing agreement with **British Midland Airways, Ltd.** is announced, including code-sharing.

Service is inaugurated on March 2 from Miami to Mexico City, San Jose, Guatemala City, Panama City, and San Salvador. Also in March, the airline outbids **American Airlines** by pledging \$66,000 per month in payments for 16 **Trans World Airlines (TWA)** gates and landing slots at Chicago (ORD). Losses cause the airline to begin reducing capital spending over the next three years by at least \$2 billion through the delivery deferral of 122 jetliners. Four-times-per-week nonstop B-767-322ER flights commence from San Francisco to Paris on April 5.

In a rare reversal of an accident finding, the NTSB announces, also in April, that faulty wiring and not poor company maintenance and inspection caused the February 24, 1989 Jumbojet tragedy. At the same time, a marketing and code-sharing agreement is officially signed with **British Midland Airways, Ltd.** Under the pact, joint services on BMA aircraft are initiated from five U.S. gateways via London (LHR) to Amsterdam, Brussels, Belfast, Edinburgh, Frankfurt, Leeds/Bradford, Teesside, and Glasgow.

Additionally, BMA passengers from East Midlands and Birmingham are able to connect via Brussels onto UAL flights to Washington, D.C. (IAD). Passengers on the major are allowed a variety of amenities, including heavily discounted Visit U.K. Air Passes while travelers from the British line become part of United's Silver Wings program.

Stephen Wolf relinquishes the airline presidency on April 30, but remains chairman and CEO of United and of UAL Corporation. Executive Vice President John Pope takes over as airline president and chief operating officer.

On May 1, departures from Denver are increased from 179 to 205 daily and include new daily services to Phoenix, San Diego, and Seattle. Miami to Caracas flights begin as the major debuts in South America during May. During the same month, the corporation is reorganized through the addition of an international division and the promotion of Vice Chairman/Chief Financial Officer John C. "Jack" Pope to the post of president/chief operating officer.

Also in May, the carrier becomes launch customer of the Collins Series 900 avionics system for its 777 fleet. It also receives the International Flight Catering Association's gold plaque for its sale of 100,000 Friendly Skies Meals, an in-flight version of McDonald's Happy Meals.

The San Francisco to Paris B-767-322ER service becomes daily on June 1; the next day, roundtrip Paris to Athens flights begin. In a second Chicago offering to **Trans World Airlines (TWA)** in June, United loses out to American, which captures 40 slots and 3 gates. The battle for dominance at O'Hare continues. During the next 6 months, the Latin operation expands to 13 cities in 11 countries. The carrier opens Spanish-speaking, toll-free reservations line for North America, Puerto Rico, and the U.S. Virgin Islands on August 8.

In addition to its regular sports charters with major league baseball's San Francisco Giants and Chicago Cubs and White Sox, United is now

the second largest carrier flying nonscheduled frequencies on behalf of the National Football League (NFL). Also in August, the San Francisco 49ers are flown to London for an exhibition game with the Washington Redskins; when the regular season begins, the company will also provide lift to the Chicago Bears, Denver Broncos, New York Giants, and the Redskins.

In midsummer, Paris to Athens intra-European flights begin. *USA Today* Sky Radio is started on September 1, the industry's first live, in-flight radio broadcasts. Enhanced First Class service is unveiled on domestic flights and a strategic alliance is signed with **Ansett New Zealand, Ltd.** Under its terms, the arrangement with the New Zealand carrier calls for marketing and code-sharing to destinations via Auckland to Christchurch, Wellington, and other communities.

Also in September, a Spanish-language reservations service is initiated in response to increased South American operations and Chairman Wolf joins the CEOs of **American Airlines**, **Delta Air Lines**, and **Federal Express** in opposing approval of the USAir-BA arrangement unless greater traffic rights are received from the U.K.

A new in-flight magazine, *Hemispheres*, is launched on October 1, while on October 10, a flight from Chicago to New York dissolves into a misadventure of curses, cops and chaos when foul weather diverts it to Hartford. The passengers are not allowed to disembark and the plane completes its flight to New York (LGA) many hours later. Business One airport services are introduced on October 22 at Boston, Minneapolis (MSP), New York (LGA), Newark, Philadelphia, and Washington, D.C. (DCA).

A strategic and code-sharing agreement is signed with **Air Canada, Ltd.** effective October 25. Under its terms, the two agree to provide joint marketing, cargo and tour operations, advertising and promotions, and participation in both carriers' frequent flyer programs, later expanded by both into cooperation with **Ansett Australia (Pty.), Ltd.**

In addition, the North American partners begin passenger connections through such common hubs as Denver, San Francisco, Los Angeles, Winnipeg, Calgary, Montreal, and Toronto.

New international menus are introduced on intercontinental flights beginning on November 1. After a year of federal mediation, a new five-year contract is signed with the local chapter of the IAM on December 23. At year's end, the company retains the honor of offering the world's shortest service by a turbine-powered aircraft, a 12-mile (5-minute) route from San Francisco to Oakland operated by B-727-222As.

Passenger boardings swell 7.6% to 66,696,000 and freight is up by 8.8% to 1.92 billion FTKs. Although revenues advance 9.1% to \$12.72 billion, expenses shoot up 8.8% to \$13.22 billion and guarantee an operating loss of \$538 million. Net loss triples to a staggering \$957 million. Parent UAL Corporation has revenues of \$12.9 billion, up 10%. Costs, however, force an operating loss of \$537.8 million and there is a net loss of \$956.9 million, \$540 million of which is caused by adoption of the FAS 106 accounting form.

The payroll is sliced 2.6% in **1993** to 81,500, still leaving the 3rd largest airline workforce in the world; the fleet of 544 aircraft is also 3rd largest. On January 11, a new gray, navy blue, and red paint scheme is unveiled for the fleet's aircraft, reflecting the global nature of the carrier's operations. Livery enthusiasts will later point out that it is similar to that worn by the jetliners of **British Airways, Ltd. (2)** and **Canadian Airlines International, Ltd.**

In an effort to cut expenditures, a new cost-cutting program is also inaugurated, featuring a 2,800-employee layoff, including 10 vice presidents—20% of the senior management staff. Also initiated are a freeze on the planned hiring of 1,900 workers, a 5% salary reduction on officers and nonunion personnel and 10% on directors, the grounding of aircraft, and a cut-back in departures.

In addition, a new subsidiary, UAL Leasing Corporation, is formed to charter new and used aircraft surplus to the company's fleet. Simultaneously, Chairman Wolf calls on newly inaugurated U.S. President Bill Clinton to convene a special air transport commission to study difficulties affecting the industry.

United begins thrice-weekly roundtrips between New York and Johannesburg on January 31.

Effective February 10, 33 unprofitable north-south daily domestic departures from Washington, D.C. (IAD) are terminated and 40 older aircraft are retired; a B-747SP-21 is leased to **Tajik Air**, flag carrier of the new Republic of Tajikistan. Federal Judge Marvin H. Shoob approves a \$458-million settlement of a class-action antitrust suit charging United and five others carriers with price fixing. Travelers will now be able to receive discount airfare coupons to compensate for overcharges made by the airlines between January 1988 and June 1992.

Also in February, the airline is able to sell \$600 million in preferred stock to private investors and the UAL parent forms a new subsidiary, UAL Leasing Corporation, to handle the firms aircraft sales and leasing activities worldwide. The strategic alliance with **Ansett Australia (Pty.), Ltd.** comes into effect during the month. In addition to reciprocal lounge and club access and frequent flyer program linkage, UAL is allowed to share codes on Australian domestic routes from Sydney and Melbourne to the Gold Coast.

On March 2, scheduled services are increased to Houston (IAH), doubled to Denver, and from these locations, service is enhanced with daily departures to Miami and Washington, D.C. (IAD). In mid-month, it is decided not to start the Ontario, California, to Mexico City route planned for July 1. A severe winter storm over the eastern U.S. during the week-end of March 12–14 forces the company to cancel 1,149 flights.

Flights commence on April 4 from Los Angeles to Hong Kong. Also in April, the Chicago-based ATP turboprop operations of **Air Wisconsin** are sold to Hulas Kanodia, owner of **Trans States Airlines**, who is beginning a new airline, **UFS (United Feeder Service)**. Air Wis President William J. Andres is succeeded by Vice President-Operations Ronald Aramini; however, the transfer of assets will not be completed until September.

Meanwhile, a purchaser continues to be sought for the BAe 146 operation formerly known as **Aspen Airways**. Unions, requested to make wage concessions, refuse. Simultaneously, the company purchases the **USAir** Philadelphia to London (LGW) route, which the Pittsburgh major has been required to divest itself of as part of its alliance with **British Airways, Ltd. (2)**, for \$14.5 million. The arrangement is not completed because the British will refuse to approve a key component of the deal, a switch of the U.K. terminus to Heathrow Airport.

Teaming up with Collins, the airline conducts HF datalink flight testing during the spring. Employee negotiations continue and by year's end a deal is struck that will make UAL Corporation the largest employee-owned company in the U.S. In exchange for \$5 billion in wage and work-rule concessions, workers will receive 53% majority shareholding and Gerald Greenwald as chairman in place of the widely disliked Stephen Wolf. Months will be required for the employee-buyout to work its way over all of the executive, political, and financial hurdles required.

Also in April, a marketing and code-sharing partnership begins with **Aloha Airlines** for Hawaiian flights inbound, via Honolulu, to Kona, Hilo, Maui, and Kauai.

The Los Angeles–Auckland B-747-422 service is increased on May 1 from thrice weekly to daily while B-737-322s launch twice-daily nonstops between Denver and Cleveland. On May 1–2, south to north B-767-322ER roundtrip service is inaugurated between New York (JFK) and Buenos Aires. The flights complement a nonstop Jumbojet service to the Argentine capital from Miami (MIA).

A broad commercial alliance is signed on May 15 with **Transbrasil, S.A. (Linha Aerea Transbrasil)**; its terms, effective on July 1, feature unified frequent flyer programs, reservations services, joint check-in, code-sharing, and mutual block-seat arrangements in general and on flights via São Paulo to Brasilia and Porto Alegre.

Also during May, the carrier invests \$300,000 over two years to sponsor the London Wasps rugby team. Sponsorship is seen as a way of attracting their fans—many of them frequent business flyers.

On June 9, nonstop B-757-222 roundtrips commence between New York (JFK) and Port of Spain, Trinidad; the previous one-stop service to

Trinidad is replaced with a one-stop flight from Miami to Port of Spain via Caracas. The same day, the Denver–Cleveland frequency becomes thrice daily. For the flying public's enjoyment, the availability of in-flight McDonald's meals is significantly increased on June 10. The use of laptop computers and CD players is, beginning on June 22, prohibited during takeoffs and landings.

In July it is announced that UAL will retire 15 of its 46 DC-10-10s over the next 14 months, along with all 10 B-747SP-21s. The megacARRIER enters into a code-sharing agreement with **USAir** in August. Under its terms, the Pittsburgh major will feed UAL's Latin American hub at Miami beginning the following month, while the Chicago giant will scale back its Orlando departures from 39 to 16 and end service from that Florida city to 6 domestic locations.

The number of Miami to Santiago de Chile roundtrip frequencies is increased on September 8 from three per week to daily and nonstop roundtrips are launched from Atlanta to San Francisco. As part of a cost-cutting requirement, flights are discontinued the same day to Bangor, Maine; Fargo, North Dakota, Fresno, Great Falls, Montana, Huntsville, Alabama, and Sioux City, Iowa. The next day, daily roundtrips begin from Washington, D.C. (IAD) to Glasgow and Zurich.

On September 13, the giant airline announces an agreement to sell 15 of its 17 U.S. flight kitchens in 14 cities to Dobbs International Services, a division of the Dial Corporation, for \$119.4 million. There is also an agreement in principle to purchase catering assets from Caterair International Corporation and provide catering services at New York (JFK). The divestiture ends an era of all-in-house catering launched in December 1936.

Business One service is expanded on September 17 to two new locations: Atlanta and White Plains, New York. On September 23, an agreement to code-share is signed with **Emirates Airlines, Ltd.** designed to attract more high-paying business travelers flying between Dubai in the Persian Gulf and the U.S. via London (LHR). Later in the month, a code-sharing marketing agreement is also signed with **Trans World Express**; under its terms, the regional provides feed to the major at New York (JFK).

Daily nonstop roundtrips commence on October 1 from New York (JFK) to São Paulo, Brazil, with continuation to Rio de Janeiro. The same day, the carrier reduces the number of daily departures from Orlando from 39 to 16, cutting out flights to Boston, Jacksonville, Newark, New York (LGA), Sarasota, Tampa, and Washington, D.C. (DCA). Culminating a lengthy courtship, the company joins with **Deutsche Lufthansa, A.G.** on October 2 to announce that they are joining forces as marketing partners.

Under the arrangement, which does not include the usual exchange of equity, passengers of either carrier may share in the other's frequent flyer program and use either airline's airport lounge. The two airlines will code-share to and from Frankfurt, using the "DL" designator on the German leg of transatlantic flights and "UA" on the American. The union, which will eventually result in 3,100 weekly code-share passenger connections and coordinated freight services, will also see shared advance seat reservations and through check-in.

In addition to the trading agreements, new routes are inaugurated: San Francisco to Guadalajara, Chicago (ORD) to Seoul, Atlanta to San Francisco, Miami to San Juan, and Washington (IAD) to Glasgow and Zurich.

On October 5, cabin crew on one flight "mutiny." While en route from Los Angeles to Auckland, a B-7747-422 with 19 crew and 418 passengers is diverted to Nadi because of a threat of fog at Auckland and marginal weather at the flight's alternate airport of Christchurch. Because of the change, the crew exceeds its maximum duty time and after the Jumbojet lands at Fiji, they walk out. Matters are eventually resolved and the aircraft departs Nadi for Auckland 11 hours later.

The company's pilot union informs its members on October 28 that it is suing the company over the code-sharing deal with **Deutsche Lufthansa, A.G.** Also in October, a credit-card marketing program is entered into with the Shanghai Bank of Hong Kong. Under its terms, bankcard members are able to earn frequent flyer miles. Daily roundtrips are initiated on October 31 between San Francisco and Guadalajara.

A comprehensive joint marketing and code-sharing agreement is signed with **ALM Antillean Airlines, N.V.** in November, connecting the two airlines at Miami; the U.S. major gains dual-designation on ALM flights to Bonaire, Curaçao, and Aruba.

UAL Corporation rejects a union offer in early November; however, during the fourth week of the month, negotiations are reopened. The first Airbus Industrie A320-232 is delivered on November 30.

The UAL Corporation board of directors on December 22 approves, in principle, the United Employee Stock Ownership Plan (ESOP). The sale of the last remaining components of **Air Wisconsin** to CJT Holdings is arranged at year's end: 12 BAe 146s and their routes out of Chicago (ORD).

Customer bookings ascend 4.7% to 69,816,000, the 3rd best showing in the world. In another category, revenue passenger kilometers, United increases its output 9.2% to 162.95 billion and by this measurement, it is once again able to claim that it is the world's largest airline. Cargo climbs 16.2% to 2.25 billion FTKs, good for an 11th-place showing. Revenues shoot up 12.6% to \$14.51 billion; only **American Airlines** has higher overall income. Expenses are up 6.1% to \$14.24 billion and allow an operating profit of \$295 million, the global industry's 10th best. Net loss is cut to \$50 million.

Airline employment drops 6.5% in **1994** to 76,282. A jetliner, en route to Spokane, makes an unscheduled stop at Madison, Wisconsin, on New Year's Day to rescue a dog and a cat mistakenly placed in an unheated cargo compartment. Twice-daily B-737-322 flights are initiated four days later from Miami to San Juan, Puerto Rico. The carrier joins with Delta and Northwest on January 18 in agreeing to pay \$30 million in \$5 fare coupons and lawyers fees to settle a class-action suit over tax-related surcharges on jet fuel attached to passenger fares at Chicago's airports.

On January 28, members of the machinists union approve a plan to give employees 53% control of the airline in exchange for cost saving and flexibility to create a low-fare carrier. Service is initiated in February from San Francisco to Beijing and Shanghai. In addition, a two-year marketing and code-sharing agreement is signed with the Mexican airline **TAESA (Transportes Aereos Ejecutivos, S.A.)**.

Daily nonstop roundtrips are launched on February 9 between John Wayne–Orange County Airport in California and Washington, D.C. (IAD). A new \$800-million B-737/B-757 maintenance center at Indianapolis is formally dedicated on March 2 with the opening of the first hangar in the huge complex. Also in March, five B-727-222As are sold to **Florida West Airlines**. The first B-777 is rolled out on April 9 and a marketing agreement is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on April 18. Under terms of the agreement, the two airlines agree to coordinate their schedules and marketing activities and, in the future, to introduce joint code-sharing.

Also during the month, a "definitive documentation" is signed with ALPA and the machinists' union covering the restructuring of the airline into an employee-controlled company. Under terms of the accord, employees are to receive 53% of the carrier in exchange for pay cuts and work-rule concessions worth \$5 billion. To satisfy investor and pilot concerns over a fall in the company's stock value from \$170 to \$143 a share, management agrees to increase the cash payout for shares from \$28.50 each to \$88 and to increase employee ownership to 55%.

Although the carrier's second largest stakeholder, Vanguard/Windsor Funds (10%) opposes the changes, the largest investor, Alliance Capital, supports it and the arrangement will be completed in July. At the same time, a campaign to halt the buying and selling of Mileage Plus travel certificates is expanded. Also during the month, a code-sharing, marketing, and frequent flyer benefit agreement is signed with Miami-based **Gulfstream International Airlines**.

In early May, a Gunther's Transport 53-foot semitrailer is painted in United Airlines Cargo colors and is employed to transport B-747 freight between Washington, D.C. (IAD) and East Coast freight centers. At the same time, international in-flight service is extended to the domestic transcontinental routes between New York (JFK) and San Francisco/Los

Angeles. **Gulfstream International Airlines** begins to feed its major partner in mid-month at Miami and Fort Lauderdale.

During the spring, a woman on an 8 1/2-hour flight from Chicago to Honolulu infects 4 others sitting near her with tuberculosis; she will die a few days later. Passengers on the flight will be tested and although all sitting in her area will test positive, none will become ill.

The long-delayed cooperative accord with **Deutsche Lufthansa, A.G.** begins on June 1 with two transatlantic flights from Frankfurt. Also during the month, nonstop B-747-422 flights commence from San Francisco to Sydney, Australia. Employees gain control of the company on July 12 by voting to exchange \$4.9 billion in wages and benefits over the next six years for 55% controlling interest. Gerald Greenwald replaces chairman/CEO Wolf and employees are given 3 seats on the new 12-man board of directors, whose members include John F. McGillicuddy, James J. O'Connor, Paul E. Tierney Jr., Joseph V. Vittoria, Paul A. Volker, Richard D. McCormick, Duane D. Fitzgerald, and John K. Van de Kamp.

Former **Northwest Airlines** Chief Financial Officer John A. Edwardson is elected president/chief operating officer of the nation's largest employee-owned company on July 15, succeeding Jack Pope, who leaves with Executive Vice President Lawrence Nagin. Nagin will later assume the same post with **USAir**.

At this point, it is announced that a low-cost Shuttle by United service will be introduced in the fall, designed to assault **Southwest Airlines** (2)'s domination of the California market. With **Continental Airlines'** CALite avoiding Southwest strongholds and **American Airlines** not competing with the Texas tornado, United becomes the first major to mount a direct attack on Herb Kelleher's airline on its own terms.

Just after restructuring is completed, Master Executive Council Chairman Roger Hall is forced to resign his post and withdraw from the board of directors when it is learned that he had authorized a \$2-million payment to ALPA staff attorney Charles Goldstein during the employee buyout effort. He is succeeded as chairman of the pilot's group by Harlow Osteboe, its vice chairman.

A month after employees take majority ownership, a company spokesman announces on August 17 that the airline is "understaffed" and that the hiring freeze is lifted in order that an application process might begin to fill 1,700 positions. During September, another former **Northwest Airlines** executive, Alan B. "Sky" Magary is appointed president of the new Shuttle by United division. The flight attendants' union now ends discussions with the airline concerning the possibility of joining the employee-ownership coalition; concerned that insufficient value is being offered for concessions, the union disbands its negotiating committee. Late in the month, a comprehensive marketing and code-sharing agreement is entered into with the Chilean domestic carrier **National Airlines, S.A.**

On October 1, the Shuttle by United division, employing a dedicated B-737-300/500 fleet, begins no-frills, low-fare, frequent service, with a 20-minute turnaround, in competition with **Southwest Airlines** in the California market; initially, 14 city pairs are served with a total of 82 daily flights. Unlike Southwest, United offers assigned seating, first-class service, and interlined baggage; it does, however, begin a ticketless travel product.

During the month's third week, in three days of testing, a B-737-322 outfitted with Stanford University Global Positioning System (GPS) equipment, makes 110 auto-landings at a NASA airfield near San Jose, California.

Also in November, fragrance manufacturer Takasago International Corporation purchases the former UAL reservation center in Rockleigh, New Jersey; it will be redesigned and equipped to house the firm's U.S. corporate headquarters.

Early in November, the airline reaches an agreement with the City of Denver to split the cost of overhauling the defective "high-tech" baggage system at the new Denver International Airport. The airline and city each pledge \$11 million and United agrees to pick up any cost beyond that, subject to reimbursement within six months of the airport's opening. The California shuttle service is increased to 271 flights in November. During the

month, service to seven U.S. and eight international destinations is terminated in order to make additional capacity available for the shuttle effort.

On December 5, Phoenix becomes the 10th western city to join the Shuttle by United route network; the number of flights operated by the division reaches 286 per day. Ten days later, the number of San Francisco to Los Angeles roundtrips totals 20 per day. Also on December 15, the carrier sells six B-727-22Cs to **Emery Worldwide**.

A comprehensive alliance with **Cayman Airways, Ltd.** begins in December. It provides for frequent flyer program linkage, joint advertising, marketing, promotion, schedule coordination, and connections at Miami for passengers of both carriers. Customers of UAL are able to enjoy code-sharing Cayman flights from Tampa and Miami to Grand Cayman and Cayman Brac.

During the year, another B-727-222 is donated to the Chicago Museum of Science and Industry and after reassembly, goes on display in 1995 in its original 1964 livery. In addition, veteran navigator and radio operator Ralph Lewis sees his memoirs published, *By Dead Reckoning: Recollections of a Master Navigator* (McLean, Va.: Paladwr Press).

Passenger boardings for the year rise 6.3% to 74,241,000 and freight moves ahead by 3.5% to 3.03 billion FTKs. UAL Corporation earns revenues of \$13.95 billion, up 4.7%, and generates profits of \$521 million (operating) and \$51 million (net). United Airlines contributes most of these figures, bringing in revenues of \$13.88 billion, up 5.5%. Expenses climb 3.9% to \$13.37 billion and the operating profit swells to \$513 million. The previous year's net loss becomes a \$51-million net gain.

The workforce stands at 82,321 in 1995, a 7.9% increase. Company officials announce on January 13 that the carrier will offer ticketless travel over its entire domestic system by midsummer in an effort to ease travel for some passengers while at the same time reducing costs. In mid-month, James J. Hartigan Jr. is named vice president-cargo and is charged with taking the carrier back into the full freighter business; United's Worldwide Cargo Division will now be treated as a core enterprise.

On January 30, it is announced that UAL is one of three majors that will increase roundtrip fares on flights starting or ending in Denver by an average \$40 to offset higher costs of operating from the new Denver International Airport when it opens at the end of February.

Also during the month, cleaning crew worker Ahmad Abu Aziz is terminated for allegedly stealing company property and drinking wine at an unauthorized party held aboard a parked aircraft at San Francisco. The man will file suit claiming he is a victim of anti-Muslim bias.

By the end of January, United workers at London have become the carrier's first international employee owners through the ESOP. By December 31, employees in Japan, New Zealand, Singapore, and Canada will also become owners.

On February 1, the carrier, overwhelmed by calls from its reservations offices, temporarily halts a scheduled change in its frequent flyer program that will raise the requirement for free domestic roundtrip tickets. Shuttle by United on February 8 begins to offer 32 daily departures in 8 East Coast city-pairs and a new route, from Phoenix to San Francisco, with 6 daily flights. The expansion brings the division's daily departures to 342, up from the 184 on opening day the previous year.

Two days later, the carrier joins in the **Delta Air Lines** initiative to place a cap on travel agent commissions. Four days later, it is one of five majors sued over the new practice by Travel Network, Ltd., franchiser of 350 travel agencies.

Also on February 15, company officials announce that they will match the fare cuts for winter and spring travel in the U.S. and to Europe and the Caribbean started by **American Airlines** and **America West Airlines** two days earlier. It is also reported that the company expects to take delivery of its first Boeing 777 on May 15 and to launch transatlantic service with it on June 7.

A controller at the Chicago (ORD) tower, accidentally steers a departing **British Airways, Ltd. (2)** Jumbojet onto a collision course with a departing DC-10-10 on February 25. Although the error is quickly realized and the Douglas is advised to climb, the 2 wide-bodies, with 507 people aboard, miss each other by just 300 feet.

Flight operations from the new Denver International Airport commence at 6 a.m. on February 27. United Flight 1062 for Kansas City is the first passenger service to depart. Five minutes later, Flight 1474, a B-737-522 from Colorado Springs, is the first passenger service to land at the new facility. Later in the day, the carrier imposes a fare increase that mainly involves business travelers; the tariff boost will quickly be matched by four other U.S. majors.

On March 3, federal officials release a full report of the previous spring's tuberculosis incident, calling the event the first documented case of the disease being transmitted from one passenger to another on a commercial airline. In response to a same-day offer by **American Airlines**, United, on March 31, offers discounts of up to 50% on all domestic flights booked by April 14.

At the beginning of the second quarter, United personnel begin a 90-day test cycle on the new B-777-222. After a ferry flight to Los Angeles (LAX) from Seattle on April 1, unit WA004 the next day begins several days of flying to Washington, D.C. (IAD) and back to Los Angeles (LAX) via Denver. Boeing retains overall responsibility for the new plane, even though some 660 UAL personnel will fly and maintain it and offer cabin services during the next three months.

On April 3, company officials announce a major restructuring of company marketing designed to eliminate unnecessary management and cut costs. All marketing operations are now separated from the airline's planning organization and top marketing executives begin to report directly to Chairman/CEO Greenwald.

On April 4, UAL Services is established as a division of United to sell the company's nontransport services to other carriers. Ten days later, a press release notes that the carrier will replace 94 of its oldest aircraft over the next 5 years.

As part of its 90-day test cycle, B-777-222 WA004 is flown by company personnel to and from London (LHR) during the third week of April. On April 25, company parent UAL Corporation announces its first profitable quarter since 1989. Success for the favorable report is attributed solely to the 1994 employee buyout program, which helped to sharply reduce costs.

On April 26, a B-767-322ER maintained to ETOPS standards with an engine out, experiences a pressurization problem en route from New York to São Paulo and must make an emergency landing at Bermuda. Air traffic controllers at New York Center lose radio contact with the jetliner during its long North Atlantic descent as it flies too low to communicate with the controllers' antiquated equipment. On the other hand, the plane remains in contact with United's Chicago dispatchers, who are employing a more advanced satellite link. Due to their advanced communications system, UAL, in commenting on the incident, indicates that their aircraft was never in any danger and no injuries are reported.

United Connection access via the Internet becomes available to CompuServe customers on April 30. Use of the service will, incidentally, earn members up to 5,000 extra miles from United's Mileage Plus frequent flyer program.

A German Transportation Ministry official reports, on May 1, that the cooperative agreement between **Deutsche Lufthansa, A.G.** and United is adding thousands of bookings a day for the German carrier on the fiercely competitive North Atlantic routes. When **Continental Airlines** the same day opens what has become an annual seasonal airfare competition, UAL quickly matches its fare discounts of up to 35% for off-peak summer travel on certain days.

Also on May 1, twice-daily nonstop B-737-322 service is inaugurated from San Francisco to Vancouver.

On May 14, employees file suit against Boston's State Street Bank claiming that it allowed them to overpay by some \$1 billion for their stock in the airline. To further a Shuttle by United experiment in the high-tech check-in of passengers, the company by month's end has installed kiosks at Los Angeles (LAX) and San Francisco that will assign seats and issue boarding passes to customers who have reserved seats electronically. The first of 34 B-777-222s on order is delivered the next day.

On May 30, the FAA announces that the company's new B-777-222s may skip the customary two-year test period and begin immediate flights over routes up to three hours from the nearest possible landing point. This is the first time that a new twin-engine jetliner has won such regulatory approval.

With three aircraft on hand, UAL is able to launch its high-profile B-777-222 into service on June 7. The first aircraft, replacing the service formerly provided by a B-767-322ER, performs Flight 921 from London (LHR) to Washington, D.C. (IAD). The plane departs London at 11:40 a.m. and arrives at Dulles at 2:55 p.m. From Dulles, the aircraft departs as Flight 911 to Chicago (ORD). Although scheduled to depart Chicago for Denver as Flight 941, the plane develops a mechanical problem and the service is cancelled.

A B-747-122 also assigned to transatlantic services is replaced the same afternoon with a B-747-222. The other two B-777-222s the same day fly from Frankfurt to Chicago and Chicago to Denver. Almost lost in this blitz of inauguration is the launching of weekly B-767-322ER roundtrips between Chicago (ORD) and London (LHR); the Dash-322ER-sized aircraft must be employed for the next 18 months by U.K. order.

Two additional daily roundtrips between Seattle and Anchorage are introduced, also on June 7. Nine survivors and relatives of four victims of the 1989 Iowa City crash are awarded a total of \$29 million in a June 8 out-of-court settlement. As part of a new decade-long program aimed at the elimination of 2,000 positions at San Francisco, the company, on the same day, announces that it will begin transferring 245 maintenance jobs to Indianapolis. No layoffs are envisioned as part of the transfer plan.

The U.S. Supreme Court rules on June 14 that settlements received by pilots forced by the company to retire at age 60 must be considered as taxable income; the flyers had argued that, as victims of age discrimination, they had suffered tax-exempt injuries. A Pratt & Whitney PW4084 engine on the first B-777-222 begins to encounter starting problems on June 17; it will be replaced by a spare engine at month's end.

Also during June's second week, the fourth B-777-222 makes the type's first visit to an international exposition when it arrives at Le Bourget airfield for the Paris Air Show after a record-breaking 9 hr. 2 min., 4,470-nm. flight from Seattle.

Also in June, the company introduces thrice-weekly roundtrips between Belo Horizonte, Brazil, and Miami.

The largest contractor with the U.S. Postal Service with 22% of all air-shipped domestic mail the previous year, United plans to obtain \$200 million in revenues from postal business this year, with three-fourths of that coming from domestic mail shipments. To ensure a smooth program, the company redesigns its postal depot operations at Chicago and Denver to facilitate easy transfer of mail from trucks to aircraft, thereby helping to improve on-time performance.

Upon its return from France to Illinois, the new B-777-222 becomes available on July 2 to inaugurate a Chicago-Paris route, with continuing service to Amsterdam. B-777-222 frequencies from London (LHR) to Newark (EWR) commence on July 17.

When the U.S.-Thailand bilateral air agreement is suspended by Thailand in early July because of Washington's requirement for greater access to Bangkok, **Thai Airways International, Ltd. (THAI)** makes it known that, although it also supports Japan in that country's discussions with the U.S. over beyond-flights for **Federal Express**, discussions for a proposed around-the-world pact with **Deutsche Lufthansa, A.G.** and UA will not be disrupted.

A mini-conference is held on July 20-21 between DOT Secretary Federico F. Pena and Japanese Transport Minister Shizuka Komei and they reach an accord that avoids a conflict over the route requests made earlier by **Federal Express**. UAL officials express relief that Japan had not renounced the 1952 bilateral agreement, which could have seriously threatened its beyond rights from Tokyo.

Having also encountered start-up problems, the spare PW4084 engine mounted on the first B-777-222 is removed at Chicago on July 22 and replaced. On July 24, a computer failure at the Air Route Traffic Control Center at Aurora, Illinois, forces UAL to cancel eight flights and divert

a number of others. The next day, self-service boarding machines are introduced at the Shuttle by United check-in areas of the airports at Los Angeles and San Francisco.

At month's end, the company, to further promote its B-777 service from London, pays to have a 350-ft. subway train painted in blue, gray, and red and become a moving billboard on the route from center city to London (LHR). During the month, President Edwardson is also given the title of chief operating officer.

On August 1, the service between Miami and Belo Horizonte becomes daily. Despite the introduction of additional electronic ticketing and the United Connection online reservations system during the first week of August, Shuttle by United does not seem to be making an impact on the **Southwest Airlines (2)** advantage in the West Coast market. The "United Express" contract with **Mesa Air Group** is renewed for service out of Denver; as part of the arrangement, Mesa is allowed to trade 12 DHC-8-300s for 25 smaller, hot-and-high DHC-8-200s.

In August, Washington and Caracas commence an intense series of discussions concerning Venezuelan aviation safety standards. Also during the month, a company DC-10-10, operating from McDonnell Douglas facilities at Long Beach, California, tests the Cockpit Weather Information Needs (CWIN) system developed by NASA and the Langley Research Center. During the last week of August, a B-747-422 flying from San Francisco to Sydney sends GPS positions by satellite employing the Future Air Navigation (FANS-1) navigation suite.

On September 2, Flight 881, a FANS-1 equipped B-747-422, operates the first commercial service using satellite navigation and communication on a scheduled service from Chicago (ORD) to Tokyo (NRT). On board for the historic flight is Russian CAA Chairman Nikolay Zobov, as the airliner flies over Siberia and communicates with the FANS-1 ATM work station at Magadan.

Despite progressive hiring, UAL finds itself in need of additional pilots. Management approaches the Master Executive Council of the local ALPA chapter, seeks, and wins its approval to buy back half of vacation days of currently employed flyers. A special election is called for September 8 to test the concept and when votes are counted three days later, the plan to pay flyers 3.6 hr. of overtime for every vacation day surrendered is accepted by 72.24% (3,338) of those pilots voting.

A B-777-222 is covertly flown into Dallas' Love Field on the night of September 10. The next day, it is unveiled as a surprise at the traditional luncheon for the introduction of the Neiman Marcus Christmas Book. The airline has teamed up with the upscale department store to offer "His" and "Her" B-777s as the top feature of this year's catalog. The opportunity to have the company paint a name of choice across the nose of one of the new wide-bodies is being auctioned off with a minimum opening bid of \$100,000. Any amount offered above that sum by the lucky winner will be donated to United's designated charity, AmeriCares. The package also includes a year of unlimited first-class travel on United, a VIP trip to Seattle to see the B-777 assembly line, and a flight in a B-777 simulator.

As a complement to the pact it holds with **Deutsche Lufthansa, A.G.**, UAL on September 11 joins with **SAS (Scandinavian Airlines System)** in a comprehensive pact that links the ticketing, schedules, and airport services of all three companies. Passengers will now be able to fly to any of these carriers' destinations in the U.S. and Europe with one ticket and collect frequent flyer mileage points for use in any of the companies' reward programs.

A computer malfunction at the Chicago Air Route Traffic Control Center during the second week of September again forces the carrier to cancel or delay flights. After years of planning, the carrier is finally able to inaugurate services in September from Chicago (ORD) to London (LHR).

Ticketless travel is expanded on September 18 into an option for passengers on all of the company's 2,000 daily flights. Requests for E-Tickets must be placed in advance with the carrier or through a travel agent.

On October 2, **USAir** admits that it is holding merger talks with the parent companies of United and **American Airlines**. The next day,

British Airways, Ltd. (2) announces that it is reevaluating its alliances in North America in light of the **USAir** announcement.

The next day, while taking off from Chicago (ORD) on a service to Tokyo (NRT), a B-747-422 with 22 crew and 263 passengers suffers a blown tire on its main landing gear. When the Jumbojet arrives in Japan, it is discovered that debris from the exploding tire has torn a 3.3-ft.-long hole in the fuselage behind its main section. The Fuji television station shows the pictures to the Japanese public.

On a less sensational note, the seventh B-777-222 is delivered during the month's first week.

A B-747-422 with 337 passengers encounters severe air turbulence while en route over the Pacific Ocean on October 17; five persons are injured, one seriously.

A freak snowstorm hits Denver on the night of October 22-23. Preparing to takeoff in early evening, Flight 1667 becomes stuck by ice and snow on a taxiway and blocks **American Airlines** Flight 2037 behind it; an hour will elapse before a tow truck can arrive. Just after midnight, a company B-727 landing on Runway 35-Left narrowly misses an airport worker's Chevrolet that has mistakenly driven out onto the runway. The airliner pilot executes a missed approach from low level without further difficulty or incident.

On October 24, DIA officials discover that a girl, traveling alone, has been stranded at the airport by the sudden collapse of **MarkAir**. Airport security personnel house the 13-year-old passenger overnight and the next morning, having learned of her predicament, United puts the girl—for free—on its flight to her New Orleans destination. Daily nonstop service is inaugurated on October 29 between Washington, D.C. and Milan; the previous intermediate stop at Rome is eliminated.

Also during the month, a trilateral around-the-world service is initiated with **Thai Airways International, Ltd. (THAI)** and **Lauda Air Luftfahrtgesellschaft, A.G.**, the latter replacing **Deutsche Lufthansa, A.G.** The new thrice-weekly flights allows dual-designator code-sharing via Bangkok with THAI, Los Angeles, or San Francisco with UA, and Vienna via **Lauda Air Luftfahrtgesellschaft, A.G. Deutsche Lufthansa, A.G.** is the big winner in this arrangement in that its pact with Lauda provides the German major with an alternative service from Frankfurt to Sydney, Australia, that allows it to discontinue its own thrice-weekly frequencies over the route.

On November 1, after an acquisition decision is postponed for two weeks, Chairman Greenwald begins to actively seek the support of United's employees for a takeover of **USAir**. Letters are sent to local ALPA members explaining that the deal is being evaluated, not only on the overall importance of a combined carrier, but also on cost reductions to be enjoyed along with revenue enhanced synergies. Greenwald will find much opposition to the union among rank and file, but will persevere, believing the merger good for his employee-owned company. FANS-1 crew training is completed the same day.

Also on November 1, a passenger aboard a B-747-122 with 301 aboard en route over the Pacific Ocean, suffers a broken leg when the aircraft encounters turbulence. The rough flight had been anticipated and, although all passengers had been warned to fasten their seat belts, she left her seat, anyway.

During the first week of November, the Japanese Ministry of Transport refuses to approve United flights from Osaka (KIX) to Seoul that had been scheduled to start in late October as a complement to the UAL service from Tokyo to Los Angeles via the South Korean capital. The following week, U.S. DOT Secretary Pena, on a 17-day Asian tour on behalf of his government's "open skies" concept, visits with Japanese Transport Minister Hiranuma Takeo in Tokyo to discuss the matter.

Following the conclusion of a new bilateral agreement between the U.S. and India, the carrier, on November 15, arranges to code-share on flights with **Air India, Ltd.** from New Delhi to Newark via London and Delhi to Los Angeles via Hong Kong segments of its about-to-be-launched "Round-the-World" service.

CEO Greenwald is unable to overcome union opposition and merger talks with **USAir** collapse at Thanksgiving. While descending for its

landing at Portland, Oregon, on November 25, a B-737-522 with 112 passengers encounters moderate turbulence. A flight attendant falls backwards onto a stove in the galley, breaking her shoulder.

All of the carrier's B-747-422s are equipped with the FANS-1 GPS suite by December 1. On December 15, code-sharing flights commence with **Air India, Ltd.** over a route from Chicago and Washington, D.C. (IAD) to New Delhi via London. The industry's only "Round the World" service is introduced during the month with flights connecting New York, London, New Delhi, Hong Kong, and Los Angeles. Other routes are now discontinued, including Seattle-London, Washington-Rome, and Tokyo-Taipei.

Enplanements accelerate 6.2% to 78,665,000 and cargo grows by 5.8% to 2.46 billion FTKs, the 5th highest freight total for any U.S. carrier after FedEx, UPS, American, and Northwest. Operating income jumps 7.1% to \$14.94 billion while costs grow just 5.1% to \$14.11 billion. Operating profit climbs to \$829 million while a \$349-million net profit is posted.

A total of 86,315 workers are employed in 1996, a 4.9% increase. Despite the fact that the U.S. Congress has failed to renew the decades-old 10% excise tax on airline tickets, United, together with **Southwest Airlines (2)**, raises fares by 10% on January 1, effectively cancelling out the savings for its passengers. Phase-in of the code-sharing pact with **SAS (Scandinavian Airlines System)** begins the same day. Later in the month, Shuttle by United withdraws its Seattle-Oakland service.

A severe winter storm cripples airline operations on the East Coast between January 7 and 11. Although 850 flights must be cancelled, advanced weather reports allow the major to fly most of its aircraft out of the region, primarily to Chicago (ORD). Only 8 aircraft remain immobilized at Newark (EWR), along with 17 at New York (LGA) and Boston before flights resume.

A tentative agreement with the flight attendants' union is reached on February 7; voting on the terms is concluded by mail by the rank-and-file members in April. A number of DC-10s are sold to **Federal Express** in exchange for cash and hush-kits.

While departing the gate at Fairbanks on February 20, the left wing of a **Delta Air Lines** B-757-232 with 91 passengers accidentally strikes the left wing of a United B-757-222 parked at the adjacent gate. The Delta crew, which had not noticed the ramp marshals' signals, is recalled before their aircraft can depart the taxiway.

Concerned over the reliability rate for its new B-777-222s, company officials meet with those from Boeing on February 22 to discuss the problems encountered. United announces a 4-for-1 stock split on March 1.

The U.S. and Germany agree on March 1 to drop restrictions on air travel between the two nations in support of the UAL and **Deutsche Lufthansa, A.G.** alliance. In remarks made at this time that will come back to haunt them, company officials from **British Airways, Ltd. (2)** led by CEO Ayling, strongly criticize the request made by United and **Deutsche Lufthansa, A.G.** for U.S. anti-trust immunity for their strategic alliance.

Following up on the brand new U.S.-Canada "open skies" agreement, UAL on March 1 launches daily roundtrips to Vancouver from both Denver and Los Angeles.

Direct B-777-222 return services commence on March 2 between Miami and São Paulo, Brazil. During the second week of the month, Executive Vice President-Fleet Operations Joseph R. O'Gorman writes to Boeing complaining of the continuing poor reliability rate of the 10 B-777-222s now on hand; his letter is seen as confirmation of points raised by company officials with Boeing at the end of February.

On April 1, the carrier expands its code-sharing agreement with **Air India, Ltd.** to include services between Delhi and Washington, D.C. (IAD). Simultaneously, the Indian flag carrier places its two-letter code on United flights between Delhi and Los Angeles.

The code-sharing compact with **SAS (Scandinavian Airlines System)** takes effect on April 15, although the SAS link with **Continental Airline's** OnePass frequent flyer program will continue through August. The deal provides for dual-designator flights between the U.S. and Europe and on selected U.S. and Scandinavian domestic routes. Also

linked are frequent flyer programs, airport services, marketing, promotions, and advertising, and freight. Among the services now provided are dual-designator SAS B-767-383ER flights from Stockholm, Oslo, and Copenhagen to Newark.

Also in April, the carrier announces that it will convert four DC-10s into freighters and return to the all-cargo arena in the fall with transpacific all-cargo services. In an almost unheard of move, a passenger slot at Tokyo's notoriously crowded Narita International Airport will be converted into a freighter slot.

On May 1, the company initiates a second daily B-747-422 roundtrip between Los Angeles and Tokyo (NRT) while discontinuing the daily roundtrip between Tokyo (NRT) and Newark (EWR).

Together with **Northwest Airlines** and **USAir**, the company, on June 29, offers its customers software programs that allow do-it-yourself reservations and ticketing. The same day, **Cathay Pacific Airways (Pty.), Ltd.** begins B-747-467 code-sharing flights with United from Hong Kong to New York via Vancouver five times per week.

It is announced on July 1 that the company has hired 40 new pilots in June and a total of 586 over the preceding 12 months. The American major sells seats to Cathay for its thrice-weekly nonstop B-747-238B frequencies from Chicago to Hong Kong that begin on July 16.

When a man is detained with a false passport at the Frankfurt Airport on July 20 prior to boarding a UAL flight to Washington, all aboard the B-767-322ER he was planning to board, including U.S. delegate to the U.N. Madeleine K. Albright, are evacuated.

Also in July, officials of **TACA International Airline, S.A.** (TACA Group) and **American Airlines** sign a memorandum of understanding for establishment of a strategic partnership. Due to intense opposition from other Latin American carriers, as well as **Continental Airlines** and United, the pact will remain enmeshed in bureaucratic regulatory wrangling during the next year.

Growing out of the continuing dispute between Washington and Caracas over Venezuelan aviation-safety standards, a two-day disruption of air service between the U.S. and Venezuela occurs on August 7-8. Government officials agree on the latter date to end the reciprocal flight cancellations and UAL resumes service on the evening of August 9.

Having received landing permission from Indonesian government officials, the company, on August 14, applies to the DOT for a route to Jakarta. It is noted that it is understood that the service, to be flown thrice weekly via Osaka, cannot begin until a new bilateral is signed between the U.S. and Japan.

During mid-month, United is the "official airline" for the Democratic National Convention, meeting in Chicago. On August 22, a \$900-million order is placed with Airbus Industrie for 24 A319s.

Also during the summer, a lounge is opened in London (LHR) where first-class and business-class passengers who pay full fare can shower and enjoy a variety of amenities. **Cathay Pacific Airways (Pty.), Ltd.** increases its dual-designator flights to daily with UAL on September 1.

Following the lead of **Continental Airlines**, United and three other major airlines on September 3 agree in principle to settle a suit by the American Society of Travel Agents charging the carriers illegally conspired to cap travel agent commissions on domestic airline tickets. The five will reportedly pay a total of \$87 million, but will be able to retain the controversial \$50 commission cap.

Ground is broken on September 17 at New York (JFK) on a new \$9.5-million, 92,000-sq.-ft. cargo transfer facility.

At the beginning of October, UAL and AlliedSignal begin a joint evaluation of the latter's Enhanced Ground Proximity Warning System. Several days will be given over to the trial conducted by a company A320-232 with pilots, engineers, or representatives aboard from the FAA, ALPA, AlliedSignal, and **American Airlines**, which allow UAL representatives on its test flights in November.

On October 18, **Lufthansa Cargo, A.G.**, a separate profit center from **Deutsche Lufthansa, A.G.**, begins a global freight partnership with United. Under terms of the agreement, the two will undertake joint rates, sales, and marketing.

Simultaneously, it is announced that two new advertising agencies—Minneapolis-based Fallon McElligott and New York-based Young & Rubicam—have been selected to coordinate the airline's \$120-million annual advertising account. The three concerns will form a strategic partnership to design and implement new advertising campaigns.

Six days later, on October 24, company officials report that Shuttle by United is now holding its own in its contest with **Southwest Airlines (2)** for control of the West Coast air travel market. Even while preserving first-class service and offering baggage check-in, the low-cost unit has been able to command 41% of market-share, compared to the Texas discount operator's 43%. The division operates a total of 360 daily departures from 12 West Coast cities; SWA, meanwhile, is busily expanding into the Northeast during the month.

Toward the end of the month and into November, United begins to seek DC-10-30CFs to lease for a new dedicated all-cargo service in the Pacific. The search is fruitless and the carrier soon begins to convert four of its passenger DC-10-30s to freighter configuration.

The Department of State and United, together with six other majors, reach an agreement on November 19 to provide speedier notification of the families of U.S. victims in the event of air disasters abroad. The arrangement, lobbied for by groups representing crash victims' families, puts into effect the provisions of a 1990 federal law calling upon the carrier's to provide DOS with a passenger list within three hours of a crash.

Flight 2188, a B-737-522 with 112 passengers, en route from San Francisco to Las Vegas on November 19 encounters clear-air turbulence near Bishop, California; one flight attendant is seriously injured.

A comprehensive alliance is entered into with **Mexicana Airlines, S.A. de C.V.** on November 25. It provides for frequent flyer program linkage, joint programming, advertising, promotions, ground handling, airport lounges, and cargo cooperation. The two will share codes on flights within the U.S. and throughout Mexico and Central America and have access to each partner's international networks beginning the following May.

On November 28, an agreement is reached between the airline and its local ALPA chapter that calls for four wage increases (3%, 3%, 2%, and 2%) through the year 2000. The arrangement also includes eligibility for profit-sharing payments of up to 2% to be paid in lump sums in December of both 1997 and 1998. A similar arrangement is worked out with the members of the company's machinist union chapter. In a reflection of the competition for new business and leisure travelers, the company during the month elects to seek a new advertising agency.

Since January, employees in Argentina, Australia, El Salvador, France, Germany, Hong Kong, Mexico, Taiwan, Thailand, The Netherlands, the Philippines, and Venezuela have become company owners via the ESOP.

A reciprocal marketing and code-sharing agreement is signed with **Air New Zealand, Ltd.** on December 3, covering routes between Australia and the U.S. via New Zealand gateways, on selected U.S. domestic routes and on the trans-Tasman route between New Zealand and Australia. As part of the arrangement, which will commence in March, ANZ gains two new American entry points: San Francisco and Chicago.

When a delay in FAA certification blocks the planned start-up date for **Mountain Air Express** on December 4, UA is contracted to fly from Denver to six Colorado ski resorts on its behalf until the paperwork is completed and Mountain Air Express can take over its routes on December 15.

On December 5, United launches the 1990 vintage of Cuvee Dom Perignon champagne. For the entire month of December, the carrier's international first-class cabins are the only locations in North America where this newest Dom Perignon vintage can be tasted.

As of December 21, travelers booking flights to Australia via the company may obtain permission to enter the country through a new program that issues electronic travel authority.

Airline volunteers expand this year's "Fantasy Flights" holiday program for disadvantaged and handicapped children from 4–5 locations of the past several years to 27. At these domestic cities, the airline fills children into special aircraft that either taxi around the airport or provide lo-

cal flights before returning to Christmas gates to be greeted by Santa and Mrs. Claus. The jolly elf and his wife then distribute gifts from UAL employees and local businesses.

At the end of the year, the carrier reports that the number of disruptive passenger incidents has almost doubled since the previous year, increasing from 226 to 404.

Customer bookings accelerate 4% to 81,945,000 and 2.6 billion FTKs are operated, a 5.9% growth rate. Operating income for UAL Corporation grows 9.5% to \$16.36 billion while costs climb only 8% to \$15.23 billion. Operating profit hits \$1.12 billion while, after \$685 million in ESOP expenses are deducted, a huge \$533-million net profit is posted.

The employee population is increased by 6.3% in 1997 to 91,779. On January 2, torrential rain forces the swollen Truckee River to overflow and flood the area around Reno, Nevada, including Reno-Tahoe International Airport. Thirteen aircraft are grounded by the floodwaters, including at least one UAL B-737-222 that suffers damage to its landing gear and silt seepage into its brakes.

The next day, nonstop flights are added from Newark (EWR) to Boston and San Diego.

Incensed over the tone of recent contract negotiations, Michael H. Glawe, chairman of the United ALPA chapter and company board member, announces on January 5 that the carrier's pilots will no longer cooperate in the effort, proposed at the time of the employee takeover, to create a culture of collegiality. Glawe suggests that, as pilots have done more than other workers to ensure United's success of late, the flyers deserve a greater raise than is offered in the contract they are about to vote upon.

Four days later, ramp, food service, dispatch, and other members of the machinists' union accept a new wage-increase contract, although mechanics reject the one offered to them.

On January 10, United joins **Continental Airlines, Delta Air Lines, USAir, and Trans-World Airlines (TWA)** in submitting requested comments to the U.K. Office of Fair Trading concerning the proposed strategic alliance between **American Airlines** and **British Airways, Ltd. (2)**. All five protest that such a pact would give the British and American giants the dominant positions in transatlantic and other markets and that the OFT's proposal to require them to relinquish 168 weekly slots at London (LHR) is insufficient to counterbalance the alliance. BA files a 148-page written response.

Like the mechanics, the pilots, led by the militant Glawe, reject their contract on January 16. Neither the flyers nor the mechanics accept management's macroeconomic theories concerning recent financial good fortune, and instead attribute the company's upswing to their hard work. Management's failure in these labor negotiations calls into question the entire future direction for U.S. employee-owned companies during favorable economic times. The two labor disputes are sent to binding arbitration.

Despite a long-standing policy of avoiding direct competition with United, **Frontier Airlines (2)** finds itself forced into a pricing war with the major at Denver. On January 16, Frontier accuses the major of a pattern of predatory pricing designed to force it out of that market. United, in a press release, blasts Frontier-2, calling its charges "utterly groundless."

A block-space and code-sharing agreement is signed with **Saudi Arabian Airlines** on January 23 covering flights between Jeddah and Los Angeles. Under its terms, both carriers commit to a set number of seats on each other's flights, agree to link their frequent-flyer programs, offer a single check-in process, and cooperate on reservations, ground handling, and technical issues.

Sydney's Olympic Organizing Committee CEO Mal Hemerling and **Ansett Australia (Pty.), Ltd.** Chairman Rod Eddington announce on January 28 that UAL has been chosen one of seven carriers to receive the designation of official carrier for the Sydney 2000 Olympic Games.

The carrier's Denver operations are significantly expanded on February 11, with the company now offering 303 daily departures. Additional flights from the Colorado airport are offered to Colorado Springs, Las Vegas, Los Angeles, Miami, Minneapolis, Oakland, Ontario, Orlando, Phoenix, Portland, San Francisco, and Seattle. Included as part of this

service increase is the introduction by Shuttle by United of 12 daily roundtrips to Las Vegas and 13 daily roundtrips to Phoenix.

The increasingly uneven contest between United and **Frontier Airlines (2)** continues. Frontier, foreseeing its market share at Denver severely impacted by the UAL growth, elects to file a complaint with the U.S. DOJ on February 11, formally charging that the major is engaged in predatory pricing practices designed to put it out of business. The charges will quietly be investigated.

The same day, United launches daily service between Atlanta and Miami that will connect with seven UAL flights operating daily to and from South America through Miami (MIA)

Also during the month, dual-designator flights commence with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** over a route from Miami to Mexico City. Additional code-sharing is initiated with **Thai Airways International, Ltd. (THAI)** on services from San Francisco to Bangkok either via Taipei or Hong Kong. In addition, THAI begins to share codes on UAL flights from Los Angeles to selected U.S. communities.

At the beginning of February, an agreement is reached with IBM and Speedwing to cooperate on an immediate marketing of the carrier's E-Ticket electronic ticket service to airlines worldwide.

The pact with **Saudi Arabian Airlines** takes effect on February 18. Saudi Arabian offers two flights a week between Jeddah and New York. These will now connect with UAL's transcontinental flights to and from Los Angeles.

During its descent over mountainous terrain toward a landing at San Francisco on February 25, a B-767-322 with 110 aboard experiences a severe jolt of unexpected, moderate clear-air turbulence; one flight attendant is seriously injured.

The reciprocal marketing and code-sharing agreement with **Air New Zealand, Ltd.** begins on March 1, covering routes between Australia and the U.S. via New Zealand gateways on selected U.S. domestic routes and on the trans-Tasman route between New Zealand and Australia.

On March 3, UAL settles with its local chapters of ALPA and District 141 of the IAM by giving its members, employee-owners of the airline, the largest salary and benefits increases permitted under the arbitration ruling. If they agree, the workers will receive 5% wage raises this July and in July 1998, while the airline will raise its contributions to their pension plans from 1% to 9%.

Flight attendants, still without a contract, threaten a campaign of "chaos" to force a favorable deal; brief, unannounced work stoppages designed to disrupt schedules are given as a potential example of actions that might occur.

The same day, new all-cargo flights commence from Chicago (ORD) to Asia. The first of two DC-10-30Fs launches six-times-a-week freighter service from Chicago (ORD) via Los Angeles and Anchorage to Osaka, Taipei, and Manila. The carrier thus becomes the second passenger line in the U.S. after **Northwest Airlines** to operate dedicated freighters.

Anchorage is the hub for this new operation, which will have 4 aircraft and 100 pilots based in the Alaskan community by September. This is the first time in company history that UAL has entered the international freighter business and indeed, the first time since the 1980s that it has flown all-cargo planes.

When the major, early in the year, elects to transfer code-sharing on eight "United Express" routes out of Los Angeles to **SkyWest Airlines**, previous operator **United Express (Mesa Air Group)** files suit. Although Mesa will continue to seek certain "commercial resolution" of the move, UAL will eventually provide it with seven new California routes as compensation. Employing two converted DC-10-30s as of March 17, the company's Worldwide Cargo Division launches pure freighter services to Japan and on to Taipei and Manila.

At San Francisco, former worker Ahmad Abu Aziz, who had claimed in court that he had been discriminated against and terminated by his supervisors because he is a Muslim, is awarded almost \$3 million as settlement in his wrongful termination suit. United appeals the verdict and award to the 1st District Court of Appeals.

At the same time, a \$14.6-million order is signed with AlliedSignal to equip the entire fleet with its Enhanced Ground Proximity Warning System (EGPWS); 11 more A320-232s will have the system on board by the end of April.

As a result of a successful argument before British regulators, UAL is able, on March 30, to inaugurate a second daily Chicago-London (LHR) roundtrip. It can, however, only be flown during the high summer season that ends in October.

The next day, a B-777-222 IGW (increased gross weight) replaces a B-767-332ER on one of the carrier's two daily frequencies from San Francisco to London. The scheduled 10 hr. 45 min. California-England flight by the new aircraft is 20 min. less than that for the B-767.

The all-cargo service based in Anchorage is off to a bumpy start. Engine problems force the carrier to cancel over 30% of its scheduled Worldwide Cargo flights during the month.

On April 1 the company defies the current trend in reducing food quality and quantity, by "substantially increasing" both in coach-class on its flights from Newark (EWR) to the West Coast cities of Los Angeles, San Diego, San Francisco, and Seattle. The move is an attempt to win some business away from the "snack flights" of its major competitors.

Deutsche Lufthansa, A.G. is also interested in this experiment to see whether better and more food lures passengers and its subsidiary, LSG Lufthansa Service-Sky Chefs, gives United \$1 million worth of food and services as part of the study.

Electing not to compete for the moment with the transatlantic services of **American Airlines** or **British Airways, Ltd. (2)**, the company continues to operate only two daily B-767-222ER roundtrips from New York to London. Since January, employees in Belgium, Brazil, and Peru have become United owners via the ESOP.

Dual-designator flights with **Air New Zealand, Ltd.** are significantly expanded on April 1. Covered are ANZ services from Sydney to Los Angeles and to Auckland, Auckland to Los Angeles, Honolulu, and Melbourne, and Melbourne and Los Angeles. ANZ is able to place its code on UAL flights from Los Angeles to Auckland, San Francisco, Chicago; Sydney and Los Angeles, San Francisco; Melbourne and Los Angeles and Auckland; and Auckland and Melbourne.

The same day, a second daily B-767-322ER roundtrip is started between Chicago (ORD) and London (LHR); the service will be operated through October 25.

B-747-422s replace B-747-200s on the company's daily services between New York (JFK) and Tokyo as of April 3. A wide-ranging strategic alliance is entered into with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, also on April 3. When implemented on October 26, the arrangement will see coordination of schedules, shared frequent flyer programs, and code-sharing. VARIG will operate dual-designator flights from Rio de Janeiro and São Paulo to Los Angeles, Miami, New York, Atlanta, and Orlando, while VARIG will attach its code to United services to São Paulo and Rio de Janeiro from New York, Chicago, and Miami.

Flying nonstop, B-777-222 IGWs replace B-767-322ERs on the carrier's daily service between San Francisco and London (LHR) on April 5. On April 7, Flight 203, an A320-232 with 5 crew and 40 passengers en route from Boston to Newark encounters clear-air turbulence as it approaches the latter point; one flight attendant is seriously injured.

Beginning on April 8, UAL adds 4 B-747-422 flights between New York (JFK) and Tokyo for a total of 11 departures each week.

On April 10, ALPA-represented pilots agree to the mid-contract wage agreement negotiated the previous month. The terms are ratified by 98% of qualified employees voting. On April 11, the second B-767-322ER is relieved of flights from San Francisco to London, making the twice-daily nonstop service all B-777.

While on descent into Ontario, California, on the evening of April 16 following a flight from San Francisco, the captain of Flight 2327, a B-737-522 with 100 passengers, is injured when exposed to a laser beam from the ground.

After pushing back from the gate at Chicago (ORD) on April 28 for a flight to Philadelphia, Flight 1210, a B-737-222 with 4 crew and 54 pas-

sengers, suffers an uncontained failure of its right engine; no one is injured in the subsequent evacuation.

Also during the month, the new \$9.5-million transfer facility is opened at New York (JFK).

Dual-designator flights with **Mexicana Airlines, S.A. de C.V.** begins on May 1. Under terms of their alliance, United is able to place its codes on Mexicana flights from San Francisco to Guadalajara, Chicago to Guadalajara and Puerto Vallarta, Miami to Cozumel and Cancún, Denver to Mazatlan, Puerto Vallarta, and Cabo San Lucas, Newark to Cancún, Los Angeles to Cancún, and San Jose, California, to Guadalajara.

Also on May 1, United launches a series of commemorative events in Honolulu, Kona, Maui, and its mainland gateway cities designed to celebrate 50 years of service between the U.S. West Coast and Hawaii. Flight attendant Ron Akana, one of the airline's original eight male stewards hired in 1949 to serve on the Hawaiian route, is aboard a number of celebratory flights that follow the day's return voyage by Flight 825, a B-747-100. Akana is now No. 4 on the carrier's flight attendant seniority list.

During the spring, the Shuttle by United division of United is able to force **Frontier Airlines (2)** to reduce its flights between Denver and Las Vegas. Frontier again appeals to the DOT. Stung, United, on May 8 files a motion with DOT accusing Frontier of waging an unrelenting campaign of "mischaracterizations, misrepresentations, and misstatements." The Chicago-based major, in a press release, charges that Frontier is petitioning the government "to interfere with the free workings of the marketplace to protect them from the rigors of competition that all carriers face."

With considerable fanfare on May 14, United joins with its marketing partners **Deutsche Lufthansa, A.G., Air Canada, Ltd., Thai Airways International, Ltd.,** and **SAS (Scandinavian Airlines System)** in an enhanced joint venture marketing venture to be called Star Alliance. The new alliance, seen in some quarters as a counter to the proposed **British Airways, Ltd. (2)-American Airlines** arrangement, will stitch together the operational and marketing efforts of all five airlines.

Employees of the five will be able to share ticket offices and airport services, purchase supplies jointly, and contribute to joint promotional and advertising campaigns that will be handled by the New York firm of Young & Rubicam Advertising, which is given a \$25-million budget to publicize unified efforts.

Travelers on any of the carriers will be able to accumulate and cash in frequent flyer mileage from any of the five. Plans are made to have **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** join the group in October.

While company leaders are celebrating the new alliance in a grand Frankfurt ceremony, aircraft from two of the partners are involved in a ground collision at London (LHR). While both are taxiing to a holding point prior to takeoff, a United B-777-222 and an **Air Canada, Ltd.** B-747-433 scrape wings. Both aircraft are inspected. The Canadian Jumbojet, which takes only superficial and easily repairable damage to one of its winglets, is cleared to depart for Toronto three hours later. The 777, however, sustains leading edge and aileron damage sufficient to cause cancellation of its flight to Washington, D.C. (IAD).

Almost unnoticed in this flurry of international activity is the inauguration of a reciprocal code-sharing and marketing agreement with **Air New Zealand, Ltd.** It covers frequencies between the U.S. and New Zealand, the New Zealand-Australia trans-Tasman routes, and domestic services in the U.S. and throughout the ANZ domestic route network.

Young & Rubicam Advertising unveils its new publicity on May 16; the noted three-decades old "friendly skies" campaign from the Leo Burnett agency is replaced with a new "United Airlines Rising" push that emphasizes the role the carrier can play in solving the problems of frustrated passengers.

U.S. President Clinton, on May 20, names Jerry Greenwald chairman of the "National Welfare to Work Partnership," making United a leader in the effort to move people off welfare and into jobs.

On May 22, United discontinues its "Friendly Skies" slogan, first introduced in 1965, and launches a new ad campaign called "Rising." The

campaign focuses on the company's new Customer Satisfaction Philosophy (CSP) that will become the basis for all of its future actions. Also on May 22, a nonbinding agreement in principle is reached with Galileo International Partnership (GI), under which GI will purchase United's entire 77% stake in Apollo Travel Services for \$539 million.

Toward the end of the month a near tragedy occurs at Chicago (ORD). While on its takeoff roll down runway 14R, a **British Airways, Ltd. (2)** B-747-436 with 335 passengers is ordered to abort its liftoff when wind causes a United B-737-322, with 58 passengers, to land long on intersecting runway 27L directly toward the path of the Jumbojet. Blowing 6 tires, locking up 12 brakes, and stunning all aboard, the heavily loaded British jet screeches to a stop just 2,000 ft. from the little Boeing.

Beginning on June 1, B-777-222 IGWs replace B-767-322ERs on the Los Angeles-London service. En route from Buenos Aires to New York (JFK) two days later, a B-767-322ER with 11 crew and 111 passengers encounters severe turbulence 100 mi. S of Asuncion, Paraguay; one flight attendant is seriously injured.

By June 4, the company has 16 B-777-222s and 6 B-777-222 IGWs on hand and during the month, B-777-222s complete the takeover of most of the airline's transatlantic routes, including those from Chicago, Newark, and Washington to London, Washington to Paris, Chicago to Paris and Frankfurt, and Washington to Amsterdam, Paris, and Frankfurt. New York is the only U.S. airport left with a year-round daily B-767-322ER service to London.

Meanwhile, on June 5, a second daily nonstop flight is launched between Frankfurt and Washington, D.C. (IAD).

En route from Philadelphia to Chicago (ORD) on June 8, Flight 1517, a B-737-322 with 5 crew and 76 passengers is involved in a near miss with a Cessna 414, near Valparaiso, Indiana. A TCAS advisory and alert allows the Boeing to climb out of the path of the smaller aircraft.

On June 11, Flight 441, a B-737-291A with 5 crew and 103 passengers and on descent into Albuquerque after a flight from Denver, encounters clear-air turbulence; one flight attendant is seriously injured.

A second daily nonstop is introduced on June 16 between Frankfurt and Chicago (O'Hare). Both are operated with B-777-222 IGWs, as is the second daily service to D.C. The second daily service from Frankfurt to Chicago is flown by a B-767-322ER. UAL's existing daily nonstop from Dusseldorf to Chicago will continue to be operated with a B-767-322ER. All flights to and from Germany are flown as dual-designator offerings with **Deutsche Lufthansa, A.G.**

The same day, daily B-737-322 roundtrip service is inaugurated between Austin, Texas, and San Francisco, while daily A320-232 roundtrip flights commence between Baltimore (BWI) and Los Angeles.

Flying nonstop, in a timeframe four hours shorter than one-stop, a company B-747-422 on June 12 initiates seasonal summer flights from Chicago (ORD) to Hong Kong.

Operating nonstop, B-777-222 IGWs replace B-767-322ERs on the carrier's daily service from Los Angeles to London (LHR). Daily A320-232 roundtrips commence on June 15 between Hartford, Connecticut, and San Francisco.

On June 26, the carrier receives its premier A319-131 in ceremonies at Toulouse, France; it is the first of 24 UAL has on order and will arrive at Chicago 4 days later. United is the first U.S. Carrier to accept one of the small Airbusses.

While on a company service from New York to Los Angeles on June 28, televangelist Rev. Robert Schuller becomes involved in a scuffle with a male flight attendant in an incident that increases over the preacher's request for fruit without cheese. His actions are reported to authorities after the plane lands.

The World Cargo service from Anchorage has righted itself by the end of the second quarter, with 100% of its departures on time.

The transition to a smoke-free airline is completed on July 1 when UAL bans smoking on its 32 daily Asian and South American flights. Also on the first day of the month, the new A319-131 arrives at the company's San Francisco maintenance base after a flight from France via Toronto.

The next day, it is reported that since the company's 1994 rebirth, its stocks have risen 260% in value. With a second A319-131 now available, the company introduces the type into commercial service on July 8 with daily flights from Chicago (ORD) to Boston, Los Angeles, Santa Ana (Orange County), and Washington, D.C. (DCA). United is the first U.S. operator to fly the little Airbus.

Negotiations with AFA, which chose not to join the union-led company buyout, are reopened on July 10.

The flight crew of Flight 2327, a B-737-522 with 112 other passengers, is exposed to a laser beam during approach to Ontario, California, on July 14 while on a service from San Francisco. The incident, in which a red light on two occasions appears to track the aircraft, does not result in any injuries, but is, immediately upon landing, reported to UAL, the FBI, and the Aero Bureau of the San Bernardino County Sheriff's Department.

A dispute between **Mesa Air Group** and its **WestAir Commuter Airlines** unit, doing business as **United Express (Mesa Air Group)**, vs. **United Airlines** and **SkyWest Airlines** concerning access to certain West Coast markets results in a July lawsuit. UAL files suit in the U.S. District Court in Chicago seeking a determination as to the rights of all parties to the routes before any of the companies suffer economically. Mesa does not countersue.

On July 15, a tentative agreement is reached on a new contract with AFA. Under its terms, they will receive raises and bonuses totaling 36% over the next decade. If approved, the arrangement will bring to a close a difficult 500-day negotiation.

The same day, an additional daily B-737-322 roundtrip is inaugurated between Miami and Caracas, Venezuela. The new offering boosts United's U.S.-Latin America services to 202 weekly flights.

Manila experiences a runway blackout on July 18 that results in delayed departures, arrivals, and diversions for several hours; a UAL flight from Japan is diverted to Taipei, Taiwan.

According to an article by Dave English, UAL now operates three of the longest routes in the world. By city-pair, distance, and time, they include: Chicago to Hong Kong, 7,769 st.mi., 15 hrs 50 min. eastbound, 14 hrs 30 min. westbound; Los Angeles to Sydney, 7,489 st.mi., 14 hrs. 40 min. eastbound, 13 hrs. 50 min. westbound, shared with **Air New Zealand, Ltd.** and **Qantas Airways (Pty.), Ltd.**; and San Francisco to Sydney, 7,420 st.mi., 14 hrs., 25 min. eastbound, 13 hrs. 20 min. westbound (*Airways* [July-August 1997]: 21).

Although it will continue its long-standing relationship with **WestAir Commuter Airlines**, UAL, on July 22, announces a new marketing agreement with **SkyWest Airlines**. The new "United Express" partnership is designed to enhance services from Los Angeles.

A wide-ranging new strategic partnership between **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and **American Airlines** is tentatively concluded at the end of July. Under its terms, AMR Corporation would acquire a 10% stake in Iberia's owner, SEPI, which also controls the Argentine carriers **Aerolineas Argentinas, S.A.** and **Austral, S.A.** and lead an effort to find additional investors who will purchase up to 35% additional shareholding. In addition, Iberia and American will begin to share codes on flights from Spain to the U.S. and link their frequent flyer programs.

In South America, American would establish reciprocal frequent flyer arrangements with both **Aerolineas Argentinas, S.A.** and **Austral, S.A.** and code-share on certain of their internal routes. Meanwhile, the U.S. major's almost-partner **British Airways, Ltd. (2)** and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent flyer program linkage and code-sharing on routes between Madrid and London. Significant opposition quickly materializes from **Continental Airlines** and United; both fear not only an AA-BA linkup, but also the potential domination of Latin American routes by the Dallas-based megacARRIER.

In early August, UAL joins forces with the Buick division of General Motors to promote the Regal automobile. Passengers receive a snack pack containing a cookie and promotional material on the car, including

an invitation for a test drive. Those actually taking a drive will receive a certificate that can be mailed back to United for the receipt of 500 United Reward frequent flyer miles.

On August 11, as employees of **UPS (United Parcel Service)** go on strike, UAL runs national ads for same-day delivery of packages weighing up to 70 pounds. In federal court on August 13, the noted television evangelist Rev. Robert H. Schuller apologizes for assaulting a flight attendant over service on a recent UAL flight; he agrees to enter a program that could end the possibility of further prosecution after six months of good behavior.

The FBI is called in at Indianapolis on August 23 after the carrier reports finding several apparently intentional maintenance irregularities on a B-737-222A. On September 4, **Northwest Airlines** raises its domestic fares by 5% and over the weekend, most other U.S. majors, except **Southwest Airlines (2)**, join in.

On September 8, **American Airlines**, **Delta Air Lines**, and **Trans-World Airlines (TWA)** abandon the fare boost, but when United does not go along, these big three reinstate the higher tariffs the next day.

In spite of a 1993 air transport agreement between Russia and the U.S. that allows cooperative arrangements, Russian civil aviation officials decide to disallow joint flights between United and **Deutsche Lufthansa, A.G.** to Moscow. After United's application to use a recently established air route over the territory of the Russian far east is denied, the American major attempts retaliation. On September 9, it petitions the DOT to ban **Aeroflot Russian International Airlines (ARIA)** landings in Washington, Chicago, and San Francisco.

Also on September 9, the company moves and embellishes its transcontinental services from New York (JFK). All 14 of its daily flights to San Francisco and Los Angeles are now operated from Gates One, Two, and Three in Terminal Six, formerly the **Trans-World Airlines (TWA)** terminal.

Simultaneously, daily nonstop B-767-322ER return service is inaugurated from Chicago (ORD) to São Paulo. It is the first international route introduced in over a year.

On September 12, UAL requests that the U.S. DOT investigate a new agreement signed during the first week of September between **LAN-Chile Airlines, S.A.** and **American Airlines** designed to increase the number of LANChile destinations. It would also permit LANChile customers to travel from any city in Chile to any destination in the U.S. airliner's worldwide network.

After 31 years with the airline, Senior Vice President-Fleet Operations/Administration Joseph O'Gorman retires. He is succeeded by Andrew P. Studdert, senior vice president-information services/chief information officer.

Also during September, the carrier reports an unprecedented increase in coach-class food ratings. United attributes this success to the introduction of 17 selections from *USA Cookbook* by consultant Sheila Lukins.

Two more DC-10-30Fs arrive on September 20 and the company's international freighter service begins to hub at Anchorage. The new aircraft add east- and westbound routes via Alaska, between New York, San Francisco, and Tokyo.

On September 25, the company announces that it will launch electronic ticketing E-Ticket service, widely popular in the United States, on transatlantic flights for the first time during the following week.

While en route from Chicago (ORD) to Tokyo (NRT) on September 26, Flight 881, a B-747-422 with 13 crew and 321 passengers, encounters clear-air turbulence near Grand Forks, North Dakota. Although one flight attendant is seriously injured and one passenger receives minor injuries, the captain does not declare a medical emergency and continues on to Japan.

During the month, two additional DC-10Fs are acquired for the fleet of the Worldwide Cargo Division. In addition, code-sharing is expanded on **Deutsche Lufthansa, A.G.** routes thrice weekly from Frankfurt to Addis Ababa via Cairo and Frankfurt to Amman, twice weekly from Frankfurt to Johannesburg, and weekly from Frankfurt to Harare, Zimbabwe via Johannesburg, and Munich to Cairo.

Although the majors disagree over Latin American routing, they band together behind United on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing.

Also on October 1, **United Express (Mesa Air Group)** and **Skywest Airlines** increases "United Express" services from their Los Angeles hub by 73% to 175 daily flights; at the same time, 12 new California destinations are now initially visited, including San Jose, and E-Ticket sales commence for foreign destinations.

United, on October 1, launches an ad campaign in Latin America, Asia, and Europe that features actor Marlon Brando in his first commercial role. The "Rising" ad comes from New York-based Young & Rubicam.

The travel agent payment initiative is matched on October 6 by **American Airlines**, **Continental Airlines**, **Delta Air Lines**, **USAirways**, and **Northwest Airlines**. **Southwest Airlines** and **Kiwi International Air Lines** announce that they will maintain the 10% scale. The travel agency industry, which, despite ticketless travel still writes 80% of all tickets sold, protests.

In mid-month, the Chicago (ORD) service to São Paulo is extended to Buenos Aires. On October 16, it is announced that, beginning in the fall of 1998, the company will provide heavy maintenance overhauls for its Airbus fleet at its Indianapolis Maintenance Center.

Deval L. Patrick is named the new salaried/management employee director on the UAL board on October 17, replacing Joseph Vittoria.

An unusually severe winter snowstorm blankets parts of Colorado with up to four feet of snow on October 24–25. On the first day of the crisis, UAL cancels 500 flights from Denver.

VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.) joins the "Star Alliance" on October 26. Simultaneously, daily nonstop UAL B-767-322ER service from Chicago (ORD) to São Paulo, Brazil, begins; the return service from São Paulo to Chicago begins the next morning. UAL is now the only airline with nonstop service between the Midwest and South America. Seoul joins the DC-10-30F freighter route the same day.

On October 31, the carrier moves its Toronto gates to Terminal 2 in order to be closer to its "Star Alliance" partners **Air Canada, Ltd.** and **Deutsche Lufthansa, A.G.**

The same day, Shuttle by United begins to offer nine daily roundtrips between Denver and Salt Lake City. The new low-fare offering replaces seven daily main line frequencies previously provided by the parent. The Denver flights are in addition to the Shuttle's three nonstops to San Francisco and the two mainline flights from Salt Lake City to Chicago.

Also during the month, Jumbojets on the Miami–São Paulo route are replaced by B-777-222 IGWs. Simultaneously, a retired B-737 is turned over to the State of Indiana; it will be placed in a hangar at Indianapolis for training use by company mechanics and students at the Aviation Technology Center.

E-Ticket travel on nonstop flights between London and Chicago, Los Angeles, New York, Newark, San Francisco and Washington begins on November 1.

Also on November 1, **Continental Airlines** moves out of **Air Canada, Ltd.'s** Terminal 2 in Toronto, making room for "Star Alliance" partner, United Airlines. Simultaneously, **Air Canada, Ltd.** transfers from Continental's Newark terminal to United's.

United Express (Mesa Air Group) service from Denver to Fort Collins, Loveland, and Longmont, Colorado, is terminated in November as the result of low prorates from **United Airlines** and high Denver airport costs. United begins an "Airport Express" bus service that operates 14-times-per-day roundtrips from Denver to Fort Collins and 12 times per day to and from Longmont and Loveland.

Pilots, on November 18, ratify an agreement allowing "United Express," the company's feeder partners, to operate jet aircraft with 50 seats or less. Previously, the pilots' contract restricted the feeders to the

operation of turboprop aircraft, while other feeder or regional airlines were offering jet service.

Former director of flight operations and chief pilot on the company's San Francisco–Honolulu route, Capt. Walter J. Addems, 98, dies at his Palo Alto, California, home on November 21.

On November 24, the newspaper *USA Today* reveals that the DOJ is, indeed, in the early stages of investigating a February 11 complaint by **Frontier Airlines (2)** against United concerning predatory pricing practices at Denver. UAL has denied the charges and it would appear that no ruling will be given before year's end.

Another revolutionary policy, initially announced as a two-month test, is unveiled on December 1; on each of the carrier's five daily flights to Des Moines from Denver and Chicago, low-cost Takeoff Fare passengers will be allowed only one carry-on bag instead of two. Except for those traveling on frequent flyer awards, these customers are also required to employ the carrier's electronic ticketing system.

Saturday and Sunday seasonal nonstops are launched on December 6 between New York (JFK) and San Juan, Puerto Rico.

USA Today reports, on December 10, the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; United demonstrates a 77.2% achievement, good for 10th place.

A giant storm dumping heavy wet snow blankets the Chicago area, also on December 10, with as much as 8 inches. United and **American Airlines** are forced to cancel between 25%–40% of their flights from O'Hare. Many delays are caused by poor visibility at other affected airports further east.

The last of six A319-131s delivered this year arrives in mid-month and on December 20, A320-232 nonstops are initiated between Denver and Mexico City. This seasonal service will continue until next April 4. On December 22, President/Chief Operating Officer Edwardson announces an increase in the company's grant to the National Association for the Advancement of Colored People to \$100,000 a year for the next two years.

Flight 318, a B-737-322 with 5 crew and 100 passengers, is standing at the gate at the airport in Eugene, Oregon, on Christmas Day and in the process of deplaning passengers after a flight from San Francisco. Suddenly, the captain orders an emergency evacuation when ground personnel notify him that the No. 2 engine is on fire. During the evacuation, the captain discovers that the fuel lever is in the flight-idle position; when it is turned off, smoke stops coming from the engine. The evacuation order is cancelled and the rest of the passengers deplane normally.

United Express (Mesa Air Group) flights from Denver to Laramie, Rock Springs, and Worland, Wyoming, are terminated after Christmas.

En route from Tokyo (NRT) to Honolulu on December 28, Flight 826, a B-747-122 with 393 passengers, encounters clear-air turbulence at a point about 1,100 mi. E of Japan. The Jumbojet returns to Tokyo where 74 passengers and 9 flight attendants are hospitalized. One 32-year-old Japanese woman subsequently dies of injuries.

During December, a total of 2.7 million E-Ticket coupons are employed. During the year, more than 40% of all eligible UA itineraries have been ticketed electronically.

Passenger boardings ascend 2.8% to 84,245,000, while freight jumps 24.4% to 3.24 billion FTKs. Operating revenues for UAL Corporation climb 6.2% to \$17.37 billion, while expenses rise 5.8% to \$16.11 billion. The operating profit grows to \$1.25 billion, while a net \$949-million profit is celebrated.

At the beginning of 1998, United leads the world in terms of operating revenue, 2nd in terms of the number of passengers flown and in employees, 3rd in operating profit and fleet size, 4th in net profit, and 11th in FTKs.

Airline employment stands at 94,000 and the fleet, 79.1% of which is Stage III certified, includes 575 airplanes: 75 B-727-200s, 207 B0737s,

51 B-747s, 94 B-757-200s, 42 B-767s, 30 B-777s, 4 A319s, 41 A320s, and 30 DC-10-30s.

Flight 965, a B-767-322ER en route from Zurich to Washington, D.C. (IAD) on January 9, experiences electrical problems that force it to divert from a point west of Paris to London (LHR). After landing, flight attendants report smoke in the first-class cabin and galley, leading to an emergency evacuation during which several minor injuries are reported. Investigators find concentrated fire and heat damage in a bundle of wiring.

Also in January, the company announces that, effective on May 30 and September 30, it has cancelled "United Express" feeder service with the **Mesa Air Group** subsidiary **Westair Commuter Airlines** on flights from San Francisco and the Pacific Northwest.

During the month, the carrier is sued by the wife of a man who had died of a heart attack aboard one of its flights; the suit charges that the carrier should have equipped its planes with portable defibrillators, even though the FAA does not require them.

On January 30, a new bilateral air agreement is signed between the U.S. and Japan. Under its terms, the company is able to add 90 weekly roundtrip flights to the 46 it already flies.

It is announced at the beginning of February that construction will begin soon on a \$200-million expansion of the carrier's Los Angeles (LAX) terminal facilities, including a 43% boost in the size of the terminal employed by Shuttle by United.

Also during the month, the carrier joins with **United Airlines** and **Air Canada, Ltd.** to announce creation of a joint venture that will trade aircraft parts. During the first two months, discussions concerning a strategic alliance have been undertaken with **All Nippon Airways Company, Ltd.**

Having been opened for sale since February 1, International E-Ticket service becomes available for flights on March 1 between United's gateway cities and the Canadian communities of Calgary, Toronto, and Vancouver.

It is announced on February 20 that the company will spend \$200 million on renovations at Los Angeles (LAX) over the next 16 months.

Connoisseur Class is renamed United Business Class on February 24. Two days later, UAL begins a 6-month, \$425,000 project to upgrade its entire fleet with air-conditioning recirculation filters. A new image is announced on February 25; it includes an updated logo.

Asian meals from television chef Martin Yan become available on March 1 aboard the company's flights from the U.S. to Tokyo, Osaka, Seoul, Taipei, and Hong Kong.

Seasonal A320-232 service between Denver and Mexico City ends on April 4. Simultaneously, a second daily nonstop roundtrip is instituted from Chicago (ORD) and Mexico City, while a new daily B-757-222 roundtrip is started between Chicago and Guatemala City. The next day, nonstop A319-131 roundtrips commence between Hartford, Connecticut, and San Francisco; at the same time, the seasonal Saturday and Sunday roundtrips between New York and San Juan are concluded.

On April 14, Boeing confirms a company order for 1 B-747-422, 6 B-767-322ERs, and 16 B-777-222 IGWs, with deliveries scheduled to begin during the first quarter of 1999 and continue to 2002. The 23 aircraft will be powered by \$550 million worth of Pratt & Whitney PW4000 engines.

A310-131 nonstops commence on April 15 between San Diego and Boston.

A formal agreement is signed between United and **All Nippon Airways Company, Ltd.** on April 21. The document provides for linkage of frequent flyer programs and schedule coordination, as well as code-sharing on selected transpacific routes and flights within the U.S. and Japan beginning in October.

Also in April, the IAM begins a campaign to organize the carrier's 17,000 unaffiliated passenger-service workers.

At the end of April, EC Competition Commissioner Karel Van Miert asks both United and **Deutsche Lufthansa, A.G.** to cede up to 100 slots at Frankfurt and Munich under a proposed code that affects multinational alliances. The approach is the same that the EC is taking toward the troubled linkup between **American Airlines** and **British Airways, Ltd.** (2).

Having made extensive diversions around thunderstorms while en route from Chicago (ORD) to Baltimore (BWI) on April 17, Flight 100, a DC-10-10 with 287 passengers, runs low on fuel and is forced to make a safe emergency landing at Washington, D.C. (DCA). Efforts to route the plane to Dulles International Airport south of the capital are thwarted by more bad weather.

On May 1, a week after a marketing agreement is inked between **US Airways** and **American Airlines**, the carrier joins with **Delta Air Lines** in an even grander alliance. In addition to the shared frequent flyer programs, lounges, and other activities agreed to by their rivals, UAL and Delta, while agreeing to remain independent, also agree to "engage in code-sharing arrangements" as soon as permissions can be won from their respective pilot unions.

This pact will be implemented in the U.S. first, followed by the rest of the world, save Europe, where the regulatory environment is too uncertain. Contending that their agreement does not require U.S. government approval, this position on consolidation is countered by both the DOT and the Subcommittee on Aviation of the U.S. House of Representatives, which indicate concern.

Despite their emergence in rival camps, UAL and **American Airlines** jointly announce that they are engaged in finding a way to make it possible to interline E-tickets, which cannot now be transferred between airlines, even among those in alliance. A solution is promised by summer 1999.

Also on May 1, United Airlines and **All Nippon Airways Company, Ltd.** formally integrate their frequent flyer programs.

New coach-class meals by gourmet chef Sheila Lukins are introduced on May 5.

As the result of a May 7 FAA directive for carriers to inspect the wiring to wing-tank fuel boost pumps, United maintenance performs the required inspections and finds a B-737-222 with signs of arcing in a single conduit. Consequently, the FAA on May 10 issues an emergency airworthiness directive that effectively grounds 161 U.S.-registered "Baby Boeings" until all are carefully checked. The directive results in the cancellation of 54 company services during the day.

It is announced on May 8 that beginning in July, the carrier will show the Academy Award-winning motion picture *Titanic* on many of its east-west nonstop services. A hot start engine fire forces the emergency evacuation of Flight 801, a B-747-422, at Tokyo (NRT) on May 12. At least 19 of the 365 passengers and 20 crew are hurt exiting down the chutes while airport fire trucks extinguish the blaze.

To expand its presence on the Internet, United, on May 20, invests in the Internet Travel Network. **Vanguard Airlines**, on May 29, publicly protests UAL's announcement that it will dramatically add capacity and lower fares in the Des Moines-Chicago market, a market that Vanguard had earlier indicated it would begin serving during the fall.

As a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting, as of June 8, the issuance of advance boarding passes.

Beginning on June 10, new 9:30 p.m. (EST) flights are launched linking Washington, D.C. (IAD) with Atlanta, Denver, Los Angeles, New Orleans, Orlando, Philadelphia, San Francisco, and Seattle. Additionally, a second daily service to Paris is started, along with a new nonstop route to Munich, both also departing at 9:30 p.m.

During its pushback at Denver on June 17 preparatory to departure on a service to Ontario, California, Flight 475, a B-737-322 with 5 crew and 65 passengers, collides with a Dobs International catering truck, knocking it on its side. The little Boeing loses its tail cone, the frame of the truck is bent, and although the drivers had been able to escape, both have received minor injuries.

An incident occurs, also on June 17, that will have a significant legal impact on the airline and on code-sharing legalities. A partially paralyzed passenger in a wheelchair travels from Seattle to New York on a United flight. He then attempts to seamlessly transfer to Flight 3516 to Frankfurt, operated as a dual-designator service by **Deutsche Lufthansa, A.G.**, but employees of the German carrier refuse to let him board. The gentleman will make his case known to the DOT.

The U.S.-France bilateral accord reached on April 8 is formally signed on June 18 in a ceremony by French Foreign Minister Hubert Vedrine and U.S. Secretary of State Madeleine K. Albright and Secretary of Transportation Rodney E. Slater.

The pact opens the way for new transatlantic code-sharing and additional frequencies from Washington, D.C. (IAD), including a second daily departure to Paris and a new nonstop service to Munich.

All 33 of the carrier's B-777-222s must be grounded on June 19 because the loading of new software into the planes' navigation computers cannot be completed. The problem will be resolved within days.

A fire at Ezeiza International Airport at Buenos Aires late in the third week of June causes the carrier, along with others, to cancel a number of flights on June 20-21; the flight schedule returns to normal on June 22.

Flight 863, a B-747-422 with 307 passengers, loses power to its right inboard engine just after takeoff on June 23 from San Francisco on a 14 hr. 25 min. flight to Sydney. In the process of adjusting, the copilot, who is flying the plane, goes off course and comes within 100 ft. of smashing into 1,576-ft.-high San Bruno Mountain north of the city before the ground-proximity device shouts a warning to pull up. Although the Jumbojet misses the mountain, it startles nearby residents.

As the result of a unique air-rail marketing agreement drawn up in late June, UAL passengers riding the Eurostar train under the English Channel between the U.K. and France after July 1 will receive Mileage Plus frequent traveler credits. At the same time, a new pact begins with the French rail operator SNCF. UAL passengers arriving at Paris from San Francisco, Chicago, and Washington, D.C. are able to connect with the rail link to Lyon.

During June, the company, which operates a B-747-422 on the U.S. to Hong Kong segment and a B-767-322ER on the Hong Kong to New Delhi segment of its around-the-world service, transfers the B-767-322ER to the North Atlantic, replacing it with another B-747-422. Aviation officials in Hong Kong and India respond by citing bilateral air agreements and restricting seating on the Jumbojets to just 206 passengers, the same number previously accommodated by the smaller B-767-322ERs.

Also at the beginning of July, the company joins with **Delta Air Lines** to announce that the two carriers will merge their domestic frequent flyer programs on September 1 as a prelude to the larger alliance outlined in April.

The only airline to consistently offer air service to Providence, Rhode Island, for 50 years, United throws a large celebratory event at T. F. Green State Airport on July 1. UAL officials announce that, later in the year, a unique Fantasy Flight will be operated for local special needs children.

When the European Commission on July 7 announces plans to curtail the code-sharing and other activities of the United-Lufthansa-SAS alliance, United files a protest with the DOT under terms of the "open skies" bilateral agreements signed between the U.S. government and those of several European nations. The EC had, two months earlier, filed suit against the European signatories of these agreements in an effort to nullify them.

Nonstop daily B-747-422 roundtrips between Chicago (ORD) and Osaka commence on July 8. On July 15, daily nonstop B-757-222 roundtrips commence between Washington, D.C. (IAD) and San Salvador, El Salvador.

In response to President Clinton's lifting of the ban on direct flights to Cuba, put in place in 1996 to punish the Castro government for shooting down two unarmed civilian aircraft, UAL becomes the first U.S. carrier to resume charters to Havana. On July 16, a B-767-222, with 208 passengers who had been booked by the city's ABC Charters, fly down from Miami.

More than 18,000 company reservation agents and other passenger service personnel vote on July 17 to join the IAM. The election is the largest airline election in the history of the NMB and the largest private-sector union victory in over two decades.

Just after takeoff from London (LHR) on a July 29 service to New York (JFK), the left engine of a B-777-222 explodes; an emergency

landing is made back at the point of origin and after the plane stops its roll, passengers are deplaned down air stairs. No injuries are reported.

It is announced on August 1 that the carrier has placed firm orders with Airbus Industrie for \$1 billion worth of transports, 12 A320s and 10 A319s, to be delivered between 2000 and 2001. It is also noted that the company will equip 473 of its aircraft with an advanced version of AlliedSignal's RDR4-B weather radar.

Union leaders from United and **Delta Air Lines** meet at Herndon, Virginia, on the weekend of August 1-2 to discuss the proposed alliance between their airlines and its potential impact on pilot jobs. They also adopt resolutions in support for the **Northwest Airlines** pilots, who have reached an impasse in their negotiations for a new contract.

As a result of its failure to win voting status on the board of directors, **Delta Air Line's** ALPA pilots refuse to allow the necessary change in their contract needed to implement the code-sharing portion of the carrier's new alliance with United. Still, President/CEO Mullin indicates that Delta will move forward where it can on the alliance, but will stop pursuing an agreement for joint-ticket sales.

Arrangements are made with **Northwest Airlines** on August 26 for the accommodation of its ticketholders in the event of a pilots strike. Although reservations are recommended, the airline agrees to take NWA tickets on their face and, if necessary, provide seating on a stand-by basis. The job action against the Minneapolis-based major begins on August 29.

The company join's the SkyMiles frequent flyer program of **Delta Air Lines** on September 1 as an initial step toward alliance. Domestic passengers can earn miles in the other airline's program; international flights may be included at a later date.

Daily nonstop A320-232 roundtrips are started on September 9 between Washington, D.C. (IAD) and San Jose, California. Eight daily Shuttle by United frequencies are added the same day between San Jose and Los Angeles. The eight flights are offered in direct competition with the 12 of **Southwest Airlines** (2).

With the earlier aircraft named in his honor having been retired, the late airline head William A. Patterson is again honored on September 14 when, in a Chicago ceremony, a new B-747-422 is named for him. The event is hosted by President/Chief Operating Officer Edwardson, with members of the Patterson family in attendance. Few present realize that this will be the Edwardson's last major function.

With Chairman/CEO Greenwald due to retire in July 1999, leaders of the airline's major unions, which continue to own a majority of the stock in the company, let it be known that they do not support President/Chief Operating Officer Edwardson for the top post. Consequently, Edwardson resigns on September 18. Senior Vice President-North America James E. Goodwin succeeds Edwardson on September 22; his old post of senior vice president-North America goes to Senior Vice President-International Christopher D. Bowers.

As a result of an appeal over the June 17 case concerning a partially paralyzed passenger denied boarding to a dual-designator **Deutsche Lufthansa, A.G.** service to Frankfurt, Transportation Secretary Slater announces DOT's finding on September 23.

Both DLH and UAL operate under a tariff provision requiring that passengers be carried unattended unless they have a mobility impairment so severe that it prevents them from assisting in their own evacuation. Transportation authorities find that, because the passenger had flown across country without assistance and had made it down the boarding ramp without help, he could, if necessary, have assisted in his evacuation from the German aircraft. This is the first time that the DOT finds a U.S. carrier has violated a disabled passenger's rights on a "code-share" flight operated by a foreign airline. United is required to pay a civil penalty of \$3,000 and Lufthansa \$1,000, but under terms of the settlement, neither carrier admits to any wrongdoing.

Also on September 23, United becomes the first airline to offer electronic ticketing on around-the-world flights.

Because of severe weather conditions expected in the South Florida area as a result of Hurricane Georges, a total of 36 domestic and international flight segments serving Miami (MIA) are cancelled on

September 24–25. Three days later, the major announces that it will inaugurate daily nonstop B-767-322ER return service from Boston to London (LHR) on April 4, 1999.

Daily B-747-422 service is resumed on October 5 between Seattle and Tokyo (NRT), a route given up in 1989, while twice-daily service to the Japanese capital from Los Angeles is reduced to a single frequency.

The same day, the company places its code on the new daily BAe 146-200 roundtrip service introduced by **Air BC, Ltd.** between Edmonton and Denver.

The carrier, together with **Air Canada, Ltd.**, announces plans on October 6 to expand their code-share alliance in stages throughout the month of October, thereby resulting in the placement of the Canadian major's "AC" code on more than 600 UA flights throughout the United Airlines domestic system. The action is the largest single expansion made by United with one of its alliance partners. On October 8, the first phase of the enhanced UA-AC alliance takes place on flights out of United's Denver hub.

It is noted on October 12 that since June 1997, the carrier has added 10 full-flight simulators to its flight training center at Denver, including a fourth B-777 simulator brought on-line at the beginning of the month, but excluding a fourth A320 machine that will arrive in March. Investment in training equipment over the period has come to \$340 million.

As the result of low passenger levels and an economic downturn, the carrier, on October 12, discontinues its daily flights from Lima, Peru, to Santiago, Chile. On a brighter note, it is announced that the flights will be resumed on January 1.

The second phase of the enhanced UA-AC alliance takes place on flights out of Chicago (ORD) on October 22.

On October 25, United becomes the first foreign airline to resume flights to South Korea when it restarts flights between Seoul and Osaka abandoned earlier in the year because of declining passenger traffic.

The third phase of the enhanced UA-AC alliance takes place on flights out of United's hubs at Los Angeles and San Francisco on October 29.

Also on October 29, United and **All Nippon Airways Company, Ltd. (ANA)** implement their historic alliance—the first between a Japanese and U.S. carrier to include code-sharing and the first Japan-U.S. air alliance to be implemented following negotiation of the new bilateral between the two countries.

The carriers begin to offer dual-designator service on 391 weekly flights. Under the agreement, UAL offers the new destinations of Fukuoka, Okinawa, Nagoya, and Sapporo. Additionally, members of UAL's Mileage Plus can earn miles in their program for all flights operated by the partner carrier and can redeem their earned miles for award travel on the worldwide network of both carriers. Customers whose travel itinerary includes flights of both UAL and ANA receive boarding passes for all flights operated by both carriers at their first point of check-in. Eligible customers have access to the lounges of the carrier on which they are traveling, regardless of whether their ticket was sold as a UAL or an ANA flight.

While en route south from Miami on November 11, Flight 985, a B-777-222B with 17 crew and 210 passengers, encounters severe air turbulence near Concepcion, Bolivia. A passenger who, contrary to orders, has left her seat belt unfastened suffers a broken leg.

Travel agency commission rates for international travel are restructured on November 12 in a move designed to save the airline \$100 million each year. Tickets purchased in the U.S., its possessions, and Canada for travel outside those points will henceforth earn an 8% commission rate.

On November 16, UAL Corporation announces that it will award former President/Chief Operating Officer Edwardson a "golden parachute" lump sum severance payment of \$2,501,816.13 on January 4. Additionally, Edwardson will remain "on call" and will receive a monthly salary, retroactive to September 25 and through December 31, of \$41,348.67, plus \$2,500 per month from January 1 through September 24.

From November 19 through December 19, United employees, in cooperation with the airline, various unions, local children's hospitals,

orphanages, and organizations such as "Make-a-Wish," offer North Pole Fantasy Flights. Over 2,000 special children and their families in 42 U.S. cities (plus London, Paris, Sydney, and Guatemala City) take part—the most ever since the airline's workers created the event a decade earlier.

By November 23, electronic ticketing has been extended to 11 cities in 7 Asian and European countries since September 8. Included are Amsterdam, Beijing, Brussels, Dusseldorf, Frankfurt, Hong Kong, Milan, Munich, Paris, Shanghai, and Singapore.

While en route from Los Angeles to New York (JFK) on November 30, Flight 14, a B-767-34AFER with 169 passengers, experiences smoke in the cabin and is diverted to Denver. After a 2 1/2-hr. repair job, the aircraft is allowed to proceed.

As part of the new alliance with **All Nippon Airways Company, Ltd. (ANA)**, UAL, on December 1, places its code upon the Japanese line's new daily roundtrip service from Tokyo (NRT) to San Francisco.

On December 4, United launches a program designed to boost volunteerism among college students. For every 50 hours of work for selected nonprofit organizations, students can claim an award of 5,000 frequent flyer miles.

The "Star Alliance" carriers on December 8 form a six-member management board to carry out the group's five-year business plan. **Deutsche Lufthansa, A.G.** Executive Vice President Friedel Roedig is named chairman, with United executive Bruce Harris as his deputy.

Mayor Alex Penelas proclaims December 14 as "United Airlines Day" in Miami. In a special ceremony at Concourse F at Miami (MIA), Penelas and Vice President-Latin America Maria Sastre review the carrier's 40 years of service to South Florida and unveil a new corporate traveling exhibit that detail's the airline's history.

On December 17, **Atlantic Coast Airlines** signs a \$210-million order with Bombardier for the acquisition of 10 more CRJ-200ERs, plus 10 options, with deliveries to start in July 2000. Simultaneously, a comprehensive new 10-year "United Express" marketing agreement is signed with United.

As the result of U.S. and British bombing raids on Iraq between December 17 and 19, UAL cancels its London to New Delhi return flights for the duration plus a day.

A code-sharing agreement is signed with **Air Nova, Inc.** on December 22. It is reported the same day that the carrier's \$240-million modernization of its Los Angeles (LAX) terminal has passed the half-way point. By the end of the year, the workforce has been increased by 3.4% to 91,000.

During the past 12 months, customer bookings have ascended 3.11% to 86.86 million, while freight traffic has moved ahead by 5.5% to 3.42 billion FTKs. Revenues inch up 1.1% to \$17.56 billion, while expenses dip 0.2% to \$16.08 billion. The operating profit jumps to \$1.47 billion, while net gain drops to \$821 million.

The daily flights from Lima, Peru, to Santiago, Chile, discontinued on October 12 are resumed on January 1, 1999.

UAL strengthens its transatlantic service by adding a third daily nonstop flight between Chicago (ORD) and London (LHR) on January 2; it will be followed by a second daily nonstop between Chicago (ORD) and Paris (CDG) in early May. The new London flight eastward will initially be operated with a B-767-34AFER and westward with a B-777-222 IGW.

Beginning on January 2, a severe snowstorm hits the Midwest causing significant air and ground transportation problems. This day, UAL at Chicago (ORD) is only able to operate at 20%, with 750 cancellations systemwide. The next day, 50% of the schedule is flown, with 460 cancellations systemwide. Traffic in and out of Chicago is back to normal by January 4.

Under terms of the new alliance with **Air Nova, Inc.**, the U.S. major, beginning on January 4, sell blocks of seats on the "Air Canada Connector" DHC-8-100s return services between St. John, New Brunswick, and Boston.

On January 6, the Chicago-based major announces that it will increase service from the Washington, D.C. area by more than 60% by

May. The move comes a month after the **USAirways** division MetroJet begins service from the UAL hub at Dulles International Airport. The upgrade will consist of an increase in the average number of daily flights to Boston from 4 to 14.5 and to New York (LGA) from 2.5 to 8 in April and from 2 to 7 to Atlanta in May.

While en route from Anchorage to Tokyo on January 10, Flight 833, a B-747-422 with 23 crew and 227 passengers, encounters turbulence over the Kamchatka region of eastern Russia; two U.S. passengers and three flight attendants are slightly injured and are treated after the plane lands at Narita International Airport.

United, on January 11, becomes the first major airline at Los Angeles (LAX) to pay its subcontracted security workers the city's mandated "living wage" of \$7.39 per hour. Officials in San Francisco seize upon the achievement to complain about the carrier's refusal to comply with their city's domestic partners ordinance.

Beginning on January 16, United expands its code-share agreement with **Deutsche Lufthansa, A.G.** on the German major's thrice-weekly routes from Frankfurt to Sana'a, Yemen, via Cairo.

The code-sharing agreement with **All Nippon Airways Company, Ltd. (ANA)** is enhanced on January 19, when the two carriers jointly affix their codes to daily flights between Tokyo (NRT) and Bangkok.

On January 20, **America West Airlines** announces that it has been contacted by a number of airlines expressing interest in a variety of business transactions ranging from strategic alliances to mergers. It confirms that United has made an offer to take it over in a merger; the action is similar to the pact concluded in December between **Northwest Airlines** and **Continental Airlines**. Analysts see the alliance as a move by the Chicago-based major to counter the recent acquisition for western growth of **Reno Air** by **American Airlines**.

The next day, it is revealed that **Delta Air Lines** has also been in conversation with America West. **Southwest Airlines (2)**, which is the second most dominant carrier at Phoenix, denies any interest in taking over the company. Texas Pacific (46.9%) and **Continental Airlines** (8%), which between them own 54.9% of the company and have a right of first refusal on any shares that Texas Pacific may offer for sale. Continental Chairman Gordon Bethune indicates that his carrier "would assert its rights" over those shares in the unlikely event that an offer for America West is cleared by federal regulators and labor unions.

America West Airlines CEO William Franke, speaking before a Goldman, Sachs & Co. airline conference in Miami on February 5, lets it be known that the airline's major minority shareholder, TPG Partners L.P., will support the sale of the airline only if the buyer purchases all of its stock, Class A and Class B shares alike, valued at approximately \$1 billion. **Continental Airlines**, which seeks to block a takeover by United, has contended that it could take control merely by acquiring TPG's Class A stock, at an estimated cost of \$50 million. The position, seconded by TPG Chairman Bonderman later in the day, is seen by analysts as an effort by America West to maximize the value of any purchase for shareholders.

Just after departure from Denver on a February 7 service to John Wayne-Orange County Airport in California, Flight 553, a B-757-222 with 7 crew and 22 passengers, encounters severe air turbulence that causes one flight attendant to suffer a fractured knee. A safe emergency landing is made back at the point of origin, and the passengers are booked on the next flight to Orange County.

As of February 11, all three United roundtrips between Chicago and London are operated by B-777-222 IGWs.

According to a report in the February 19 issue of *The Wall Street Journal*, **Delta Air Lines**, which has been considering entry into the bidding war for **America West Airlines**, has withdrawn as of February 17. Also on that Wednesday, UAL, Inc., parent of United, tenders an undisclosed cash offer for the airline. The newspaper sees the prospect of a bidding war with **Continental Airlines**.

As a result of the offer, stock in **America West Airlines** rises 13.8% to \$22.75 per share on the New York Stock Exchange; the value of United stock climbs 25 cents to \$59.50.

Not long after takeoff from New York (JFK) for London (LHR) on the evening of February 20, a B-767-322ER with 195 passengers suffers engine problems; the pilot elects to return to his point of origin. No injuries are reported and the customers are placed on a later service.

To cheering by company employees, **America West Airlines** CEO Franke announces that the board of America West, on February 22, has voted to end its discussions with other airlines and remain an independent operator. The chairman refuses to acknowledge that United has made an offer, but acknowledges that conditions of a deal with a possible suitor, particularly antitrust concerns, had been viewed by decision-makers as "difficult and unlikely." The same opinion had been expressed by airline analysts since the day the possible deal was announced.

Speaking before an aviation industry lunch in Brussels on February 23, United Vice President Michael Whitaker indicates his belief that the EU will impose no restrictions on the alliance between **Deutsche Lufthansa, A.G.**, UAL, and **SAS (Scandinavian Airlines System)** until it has reviewed a number of other transatlantic pacts. On February 25, United announces the coordinated branding of all of its products and services.

With the first two of four new Canadair CRJ-200LRs acquired during the first quarter, regional partner Air Wisconsin Airlines Corporation on March 1 introduces daily nonstop "United Express" regional jet service from Denver to Omaha. Employing B-757-222s and B-727-222As, United continues to provide six daily main line return flights between the two cities.

Starting on March 2, the four DC-10-30CFs of United Cargo operate all-cargo service between Chicago (ORD), New York (JFK), Los Angeles, Osaka, and Manila through its hub in Anchorage. The addition of New York to the schedule includes suspension of service to San Francisco and Taipei, where United will continue to provide freight capability in the bellies of the carrier's B-747-422s, which continue to provide daily nonstop passenger flights.

While en route from Chicago (ORD) to Newark on March 2, Flight 648, a B-757-222, encounters severe air turbulence over Michigan; four flight attendants standing in the rear of the aircraft fall, with one hurt seriously.

Chairman Greenwald and Chicago Mayor Richard M. Daley jointly announce on March 3 that the airline will build a 250,000-sq.-ft. corporate headquarters on a vacant lot at Chicago (ORD) to be opened within two to four years.

Two important enhancements for the benefit of passengers are announced on March 4. In the first, the company notes that it is spending \$12 million on a program to install automated defibrillators on all of its aircraft (by March 2000) to assist heart attack victims.

Twenty B-777-222 IGWs and B-747-422s will be modified by the end of the year to offer United First Suite service. The reconversions will include installation in first-class sections of a special combination seat that can be made into a 6'6" flat bed, the first aboard any aircraft in the international fleets of U.S. airlines.

On March 5, in the largest donation ever received by Southern Illinois University, the Carbondale-based institution receives a B-737-2A1A retired from the airline after completing its last regular service (from Chicago to Minneapolis) the previous November 30. The last of its type withdrawn from the United fleet prior to its transfer, the aircraft will be used by students in the Aviation Management and Flight curriculum. Thirty years after UAL had provided the school with a Vickers Viscount, the airline employs more SIUC aviation graduates than any other carrier.

The UAL-ANA partnership is increased again on March 8 on joint daily services from Tokyo (NRT) to Singapore.

On March 15, **Northwest Airlines**, which has been recalcitrant in the past, joins United, **Delta Air Lines**, **Southwest Airlines (2)**, **American Airlines**, and **USAirways** in raising business fares by 1% and imposing another 3% hike on leisure tickets. United had begun this second round of ticket price increases on March 12.

By the time news of the new disaster of the previous June 28 appears in the press on March 22, United has instituted new pilot training for long-haul services.

The thrice-daily nonstop roundtrip flights between Washington, D.C. (IAD) and New York (LGA) are increased on March 30 to eight-times-per-day service. In conjunction with **Atlantia Coast Airlines** upgrade of all 8 of its daily "United Express" flights to Canadair CRJs, the 2-plane network now offers hourly jet service between the 2 cities with a total of 16 flights each day.

On March 31, the Chicago-based major announces that it will begin daily roundtrip B-747-422 roundtrips on October 31 between Chicago (ORD) and New Delhi, India. One of the longest flights operated by any airline, the new service is expected to take 15 hours and cover 7,484 miles. Given the complexities and economics of such a long route, the company will, on June 9, cancel these plans.

The same day, the carrier also promises to begin daily nonstop roundtrips from Chicago (ORD) and Washington, D.C. (IAD) to St. Thomas in the Virgin Islands.

With the second two of four new CRJs on hand, Air Wisconsin Airlines Corporation, on April 1, opens daily "United Express" Canadair roundtrips from Denver to Billings, Montana. United, using either or both B-737-322s and B-727-222As, continues to offer twice-daily main line roundtrips between the two cities.

The major inaugurates daily nonstop B-767-322ER return service from Boston to London (LHR) on April 4. Citing "commercial considerations," United ends its three-year-old around-the-world services, also on April 4, when it drops its daily flights from London to New Delhi and from New Delhi to Hong Kong.

On April 4, the company also adds three new nonstop transcontinental return services from Los Angeles to Washington, D.C. (IAD) and now offers almost hourly service on 12 daily trips. The flights are provided by various aircraft types: 5 A319-131s, 2 A320-232s, 1 B-747-422, 1 B-777-222 IGW, 1 B-767-322ERs, and 2 B-757-222s. Indeed, the major now offers 37 daily transcontinental flights from Los Angeles (LAX) to 9 East Coast cities, the most by any airline operating from Los Angeles.

Building on the success of its first Denver-Edmonton nonstop roundtrip service, **Air BC, Ltd.** adds a second daily BAe 146-200 non-stop roundtrip on April 5. Like the first started in October, it is a dual-designator service flown with United.

United and **All Nippon Airways Company, Ltd. (ANA)** significantly upgrade their dual-designator partnership on April 13 when the Japanese line introduces daily flights from Tokyo (NRT) to Chicago (ORD). In addition to code-sharing on the new service, the date will mark placement of ANA's code on five daily United-operated domestic routes from Chicago to Cleveland, Cincinnati, Columbus, Indianapolis, and Miami for a total of 35 weekly flights.

On April 14, Flight 2781, a **British Airways, Ltd. (2)** B-737-236A with 137 passengers inbound to London (LGW) from Goteborg, Sweden, is ordered to circle, mistakenly at the same altitude as a United B-777-222 IGW, with just 19 passengers en route to London (LHR) from Amsterdam. At 24,000 ft. off the Essex coast near Southend, the TCAS systems in the two planes sound, allowing the BA aircraft to climb and the UAL aircraft to descend. The jetliners miss each other by four seconds.

Weather plays havoc with service to the company's largest and second-largest hub airports on April 22. Severe springtime weather causes a cancellation of 30% of all flights at Chicago (ORD) through the end of the day, while in Denver, heavy snow forces almost 50% of all flights to be scrubbed.

Also on April 22, the U.S. District Court of Appeals upholds a March 1997 award of nearly \$3 million made to former UAL cleaning crew worker Ahmad Abu-Azis, who had claimed he was a victim of anti-Muslim bias.

A tentative agreement is reached with the IAM on April 23 on a contract for United's 19,000 U.S.-based passenger service employees. The membership will ratify the pact on May 27.

On April 26, an announcement is made that the company will sell approximately 17.5 million shares of common stock in Galileo International, valued at \$900 million. The next day, Los Angeles (LAX) is officially designated one of the airline's principal hubs.

The FAA recognizes the inspection department at United and 291 individual aircraft maintenance technicians with its coveted Diamond Award on April 30. The agency's highest honor is designed to promote advanced training for aircraft maintenance technicians throughout the airline industry.

A new Cargo Consolidation Center is opened at Dallas (DFW) on May 4. The facility incorporates a dedicated trucking service that provides a direct link between Dallas, other Texas and Oklahoma cities, and the UAL international gateways at Chicago (ORD) and Los Angeles (LAX).

A strategic alliance is signed with **Singapore Airlines, Ltd.** on May 5 covering linked frequent flyer programs and one-stop check-in services. The former is slated to begin on July 1 and the latter during the third quarter.

Seven former or current Denver area flight attendants, all in their 40s or 50s, file suit in U.S. District Court in Denver on May 14 claiming that United had discriminated against them during a 14-year period (prior to 1994) when it imposed a maximum flight attendant weight limit. The case, for unspecified back pay and damages, is reported by the media four days before the company's annual shareholders' meeting opens in Denver.

A \$260-million upgrade of facilities at Los Angeles (LAX) is completed on May 15. In an appointment first announced on May 3, 20-year veteran Capt. Stephen A. Forte becomes United's new vice president-operations also on May 15. He will work on transition with Capt. Hart Langer, a 10-year veteran of United with 21 years at **Pan American World Airways (1)**, who is set to retire on September 1.

Daily nonstop A319-114 roundtrips from Calgary to Chicago (ORD) are started by **Air Canada, Ltd.** on May 17. The new flights are offered as code-shares with United. The next day, retiring board member Duane D. Fitzgerald is succeeded by Hazel R. O'Leary, former U.S. Secretary of Energy. United's public contract employees, on May 27, ratify their first contract since voting in July 1998 for representation by the IAM.

In early June, the company begins to rename its Shuttle by United division as simply United Shuttle. The previous script titles on the unit's aircraft are replaced with simple white "United" and black "Shuttle" titles above the windowline forward of the wings.

While en route from Singapore to Tokyo (NRT) on June 9, Flight 890, a B-747-422 with 19 crew and 306 passengers, must make an emergency landing at Hong Kong to assist a flight attendant seriously injured when struck by beverage cart.

Daily B-747-222 roundtrips commence on June 10 from San Francisco to Hong Kong. The seasonal flights will be offered through September 7. Also on June 10, the company, having further assessed the economic viability of the undertaking, announces that it is cancelling plans to operate nonstop service between Chicago (ORD) and New Delhi, India, starting on or before October 31.

While on descent into Chicago (ORD) on a June 11 service from Minneapolis (MSP), Flight 256, a B-777-222 with 10 crew and 280 passengers, experiences clear-air turbulence near Madison, Wisconsin. One passenger is seriously injured, two others plus two flight attendants receive minor injuries, and all receive medical treatment when the aircraft reaches its destination.

Scheduled seasonal Saturday flights commence on June 12 between San Francisco and Lihue, Kauai. The new service, scheduled to end on August 28, complements the major's weekday roundtrips.

On June 15, it is announced that the company will launch new daily nonstop B-747-422 service from Los Angeles (LAX) to Melbourne, Australia, on December 4. In response to customer complaints, the U Air Transport Association develops a customer service improvement plan for U.S. carriers on June 17, effective December 15. United will dub its version **Our United Commitment**.

The carrier is able to report on June 21 that its E-Ticket product, first introduced in 1994, has proven a major success. In May, 51% of the more than 7 million tickets used on United worldwide were electronic.

On June 23, United is one of 3 U.S. airlines tentatively granted a total of 17 additional roundtrips per week between the U.S. and China.

En route from Minneapolis (MSP) to Denver, also on June 23, Flight 281, a B-737-322 with 63 passengers is diverted to Scottsbluff, Nebraska, after an electrical smell is discovered in the cabin. No injuries occur during the plane's evacuation. The passengers are later sent to Denver aboard a replacement aircraft, while the "Baby Boeing" is ferried over for further examination.

On June 28, Chairman-elect James E. Goodwin names a new senior leadership team, which includes Senior Vice President-Planning Rono J. Dutta as president, Executive Vice President/Chief Operating Officer Andrew Studdert, and Executive Vice President/Chief Financial Officer Douglas Hacker.

A fire in an underground tunnel at Chicago (ORD) forces United to evacuate its terminal; although flights must be delayed, no injuries occur. **Singapore Airline, Ltd.**'s KrisFlyer members are, as of July 1, able to redeem miles for travel over the network of United Airlines while UA's Mileage Plus members are also able to earn loyalty points when flying with SIA.

Chairman Greenwald retires on July 13; new chairman/CEO Goodwin and his management team take over. On July 20, United and Internet retailer Buy.com sign an agreement to create a new Web site, Buy-Travel.com.

A withdrawn B-737-222 is donated to Lewis University at Romeoville, Illinois, on July 21 for use as a ground trainer.

While descending into Boston on a July 24 service from San Francisco, Flight 174, a B-767-322 with 9 crew and 159 passengers is subjected to an unusual attack. An Irish wolfhound that has gotten out of its cage begins chewing on cables in the cargo hold. Consequently, the wing flaps cannot be fully extended upon landing and a faster-than-desired arrival is made. Baggage handlers find the tail-wagging canine waiting for them when they open the cargo hatch.

On July 30, United becomes the first U.S. airline to offer domestic partner benefits to employees and retirees worldwide. Economy Plus is announced on August 5, a plan to create additional legroom by removing one row of seats from United Economy on all non-United Shuttle aircraft.

Although a fire at World Headquarters on August 12 does not impact operations, it does force the relocation of many employees to other Chicago-area locations, some for months.

The additional China route authority is confirmed on August 16; United will receive five new routes in April.

On August 26, a passenger runs past a security checkpoint and disappears into the United terminal at Chicago (ORD). Company officials are forced to shut down the terminal and clear out 6,000 passengers, while a fruitless three-hour search is made. A total of 81 flights are cancelled and others are delayed. As the month ends, the first two B-757-222s, reconfigured for Economy Plus, are placed into domestic service.

While en route from Los Angeles to San Francisco on September 2, United Shuttle Flight 2036, a B-737-222A with 5 crew and 107 passengers, encounters severe turbulence. Seventeen people are treated for injuries after the plane reaches its destination.

United's mainline service from the West Coast is significantly expanded on September 7. Three new daily A319-131 nonstops are added from Los Angeles to both Dallas (DFW) and Houston (IAH), along with one from Los Angeles (LAX) to Atlanta. Simultaneously, one additional nonstop is added from Los Angeles (LAX) to both Orlando and Miami.

Additional daily A319-113 nonstop roundtrips are also inaugurated on September 7 between both Sacramento and San Jose and Washington, D.C. (IAD). United remains the largest air carrier in the world and now offers 2,370 daily flights over its global network.

On September 18, the carrier operates its final Dash-100 Jumbojet revenue service; the last B-747-123, acquired from **American Airlines** in 1988, is flown as Flight 153 from Chicago (ORD) to San Francisco and then retired. Also in September, United commits to a two-year quality assurance training program for senior Chinese airline managers, mechanics, and regulatory personnel. The exchange program is launched with a two-week series of classroom seminars at the Civil Aviation University of China at Tianjin attended by participants from

the **CAAC (The General Administration of Civil Aviation of China)** and 19 airlines.

The company installs its first defibrillator on a B-747-422 on September 28 to help passengers who suffer heart failure in flight; the entire fleet is to be so equipped by March.

Together with **Deutsche Lufthansa, A.G.**, United, on October 19, pledges C\$730 to Air Canada, Ltd. to help it solidify its place in the "Star Alliance" and to beat off an attempt by **American Airlines**-backed investors to take it over. The remainder of the month is almost quiet in comparison to the variety of news stories that will break on its final day.

B-777-222ER ETOPS operations begin across the Pacific from Seattle to Tokyo (NRT) on October 31. After introducing it across the Atlantic in March, United debuts United Suite service across the Pacific on this service.

Pursuant to an agreement signed on September 23, a new accord between United and **Spanair, S.A.**, one the Spanish line has been seeking since it first began flying to the U.S. in 1997, takes effect on October 31. Under its terms, United places its code on Spanair flights from Washington, D.C. (IAD) to Madrid and from Madrid to Barcelona, Palma de Mallorca, and Malaga. Additionally, passengers on both lines are able to accrue and use rewards from the United frequent flyer program and participate in convenient one-stop check-in service.

The Chicago (ORD) to São Paulo route is upgraded on Halloween when a B-777-222 replaces the currently employed B-767-322ER. Also on October 31, the weekly San Francisco to Lihue, Kauai Island (Hawaii) service is doubled by the addition of a new Sunday flight.

Also in October, Capt. Frederick C. "Mad Dog" Dubinsky, who had played a prominent role in the ALPA strike against the carrier in 1985, is elected president of the UAL ALPA chapter.

By November, United has completed the retrofit of 98 B-757s with its Economy Plus product designed to provide more seat leg-room.

On November 1, UAL Corporation announces plans to start a common stock dividend program by 2000, if approved by stockholders, allowing ESOP participants to receive a cash dividend instead of having their dividends reinvested into UAL stock. The next day, United reveals that it will launch daily nonstop service between San Francisco and Beijing in June 2000 and between Chicago (ORD) and Shanghai in April 2001.

In a rare double delivery, two A320-232s are accepted on November 9. On November 17, e-ticket service is added in Brazil. United now offers electronic ticketing in every market it serves.

New UAL Chairman/CEO Goodwin and **USAirways** Chairman/CEO Steven M. Wolf hold preliminary discussions during a November business meeting concerning a possible UAL purchase of the latter. Additional rounds of discussion are scheduled on UAL's second bid for its smaller rival since 1995.

On November 24, United announces that it has picked Hawaii as the site for a new reservations center; when it opens in 2000, it will employ 200 workers.

With continuing support and assistance from the other "Star Alliance" carriers (especially financial help from **Deutsche Lufthansa, A.G.** and United), **Air Canada, Ltd.** is able to put together its own \$760-million recapitalization plan for company stockholders and makes a successful C\$92-million (\$63-million) counteroffer against an **American Airlines**-backed plan for **Canadian Airlines, Ltd.** The drama reaches a high point on December 4 when the Canadian board of directors accepts the Air Canada tender.

Also on December 4, United starts daily nonstop B-747-422 direct service from Los Angeles to Melbourne, Australia, removing the Auckland stopover, which now also becomes a direct destination. United is the first airline to offer direct service between the two points. The last of four A320-232s to be delivered on the year is accepted on December 8.

On December 15, United launches its Our United Commitment program, which is dedicated to improving customer service.

Meanwhile, eight top Chinese airline managers arrive at the UAL fleet operations base at San Francisco in December to continue the exchange program begun in September. Also in December, United,

USAirways and **American Airlines** join **Delta Air Lines** as airline participants in Priceline.com.

On December 23, United increases its baggage liability limit. The airline joins with the United Negro College Fund on December 27 for an in-flight candy promotion.

Passenger boardings dip 0.3% to 86,580,000, while cargo climbs 4.7% to 3.58 billion FTKs. UAL Corporation revenues advance 2.7% to \$18.02 billion, while expenses rise 3.4% to \$16.63 billion. The operating profit is down to \$1.39 billion, while net gain jumps to \$1.23 billion.

Airline employment at the beginning of 2000 stands at 96,675, a 4.8% increase over the previous 12 months. Among the world's top 25 airlines, United is 2nd in total passengers, 3rd in FTKs, employees, and fleet size, while UAL Corporation leads in operating revenue and operating profit, and is 2nd in net profit.

On January 3, a passenger aboard Flight 105, a B-747-422 en route from Chicago (ORD) to Los Angeles, is overheard by a flight attendant making strange comments about an explosive device being aboard. The pilot makes an unscheduled stop at Denver where the man is taken in hand by police and the aircraft is searched. No explosives are found.

A new U.S. advertising campaign is introduced on January 7. An hour after takeoff from Tokyo (NRT) on a January 10 service to Honolulu, Flight 826, a B-747-422, encounters severe turbulence; eight people are injured, but none seriously enough to prevent the aircraft from flying on to its destination. On January 18, United introduces its Proactive Flight Paging service, which is designed to automatically notify customers of flight delays, cancellations, and gate assignments via personal computer, cell phone, or pager. A major winter storm disrupts flights to the East Coast on January 25.

On February 9, United and Safeway Super Markets introduce the first nationwide grocery miles program.

B-777-222s replace B-767-322ERs on the daily San Francisco to Maui return frequencies beginning on February 15; a Hawaii-born pilot flies this first service. Timed to begin with the start of the European summer schedule on March 26, the carrier and the SNCF French railroad agree to expand their July 1998 multimodal code-sharing agreement. Using its high-speed trains, SNCF will speed entitled passengers from Lyon, Nantes, Rennes, Tours, Poitiers, Angers, Le Mans, Bordeaux, and Lille to their United connections at Paris (CDG).

On March 15, the airline claims victory in the industry's "race for (leg) space" by the completion of the installation of Economy Plus seating in its domestic non-United Shuttle fleet.

In a speech before the Wings Club at New York on March 24, Chairman Goodwin predicts a greater change over the next five years in the way airlines do business than has been experienced since 1945, much of it centered on the intrusion of the Internet. The same day, United pledges to assist **USAirways** customers if a strike occurs at that line.

DOT permission is received on March 29 for the initiation of an extensive code-sharing agreement with **Austrian Airlines, A.G.** The installation of roomier overhead bins on the B-757 fleet is completed on March 30.

New daily B-777-222 return service is inaugurated on April 2 from Los Angeles to Paris (CDG). Simultaneously, the number of daily B-777-222 roundtrip flights between Los Angeles (LAX) and London (LHR) is doubled from one to two. Around-the-world B-747-422 service is also resumed.

New five-times-a-week return service is inaugurated, also on April 2, from San Francisco to Shanghai; one more daily nonstop is also added from San Francisco to Seoul and to Beijing. United now serves 14 international destinations from this north California aerodrome.

Also at the start of the month, the carrier joins **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** and **Deutsche Lufthansa, A.G.** in moving into joint facilities at Rio de Janeiro International Airport. Rio becomes the fifth major airport (after Frankfurt, Copenhagen, Shanghai and Beijing) to house all "Star Alliance" partners in a single terminal. The membership's corporate leadership is currently discussing similar arrangements with the airports at London (LHR), Paris (CDG), Los Angeles, and Miami.

On April 5, United is recognized by the Computerworld Smithsonian program as a technology innovator. The next day, United urges Congress to pass legislation granting China permanent "most-favored nation" trading status.

Amidst significant labor turmoil, particularly among pilots seeking a new contract with higher wages, the ESOP, an industry model, is allowed to lapse on April 12. The pilots will react by often refusing to fly "voluntary" overtime flights, while the local ALPA chapter warns management that a pilot shortage is imminent.

Continuing its liberal affirmative programs, UAL, on April 14, introduces a new national advertising campaign aimed at gay and lesbian travelers. United purchases block seats on the new **Austrian Airlines, A.G.** nonstop daily return service from Vienna to Chicago (ORD) that begins on April 15, as well as on Austrian flights to New York (JFK) and Washington, D.C. (IAD). A new United.com Internet address is introduced on April 17.

On April 18, the dual-designator arrangement with **All Nippon Airways Company, Ltd.** is expanded to include an additional 20 daily flights on 20 domestic routes from Chicago (ORD), Los Angeles, and San Francisco. A radar outage disrupts operations at Boston's Logan International Airport on April 24.

Despite numerous discussions, negotiators from United Airlines and **USAirways** are unable to reach agreement on a price for the purchase of **USAirways**. Sensing the possibility of failure, Chairman Goodwin and his executives walk away at the end of the month.

Twice-daily B-737-322 roundtrips are initiated on May 4 between Denver and Toronto. A second daily B-757-222 return flight is simultaneously begun from Los Angeles to Kona, Hawaii. Four days later, the company announces that it will launch daily nonstop B-747-422 roundtrips from Chicago (ORD) to Shanghai in April 2001.

Blaming pilots who refuse to fly overtime, United, on May 11, cancels 150 U.S. flights on May 11 and begins a review of its schedule in an effort to determine which, if any, future services will need to be scrubbed. ALPA counters that it warned management earlier of the potential for this kind of protest due to lack of progress on the completion of a new contract. Bad weather and a further shortage of pilots who have refused to fly overtime forces the company to cancel 240 of its 2,400 services on May 13; the next day, 108 services are scrubbed. Bad weather causes 40 more cancellations on May 15, while the pilot shortage adds another 17. A new international advertising campaign is launched on May 15. Severe weather causes a major schedule disruption on May 18, the same day the company announces that it will resume around-the-world service.

Chairman Goodwin's decision to leave the **USAirways** merger talks proves a successful move. On May 18, Chairman Wolf calls Goodwin back, offering to lower the asking price. Weather, not pilots, is responsible for the cancellation of over 500 flights mainly at Chicago (ORD) on May 19, but flyer problems and weather cause another 320 services—13% of the schedule—to be scrubbed on May 20.

In New York on May 24, Goodwin and Wolf announce that a deal has been struck. United will purchase its smaller rival, **USAirways**, for \$11.6 billion (\$60 a share), in an arrangement that can hopefully be completed before expiration of their agreement on January 1, 2001—and before United would have to pay a \$50-million earnest interest penalty. As part of the arrangement, UAL promises not to raise fares (except for fuel surcharges) for two years or lay off any workers from either carrier. It will spin off the **USAirways** operation at Washington, D.C. (DCA) to a new concern, DC Air, which will be operated by Black Entertainment Television owner/**USAirways** board member Robert Johnson. It is also promised that the larger United would serve all of the cities presently visited by **USAirways** and also offer 64 new daily domestic nonstops and 29 new daily international frequencies.

If the pact is approved by stockholders and can clear federal, state, and European regulatory hurdles, it will create a company with 145,000 employees and \$25 billion in annual revenues that operates 1,000 aircraft, serving 316 cities around the world with over 6,500 daily flights.

Even if created, however, such a giant United conglomerate would face a number of major problems: merger of the employees of both companies (readers need only review the merger of Northwest and Republic to remember how badly such an amalgamation can go); the joining of two presently incompatible reservations systems; UAL's assumption of \$7.3 billion in **USAirways** debt and lease obligation; a need to borrow funds with which to cover the \$4.3-million purchase of **USAirways** stock; cost problems brought about by the no-layoff and no-price increase promises; and fleet and route rationalization.

The announcement of the pact between the two airlines immediately worsens the labor situation at United. Under ALPA rules, the senior pilots in a merger are always awarded the highest-paid posts and most of the **USAirways** flyers had accumulated more hours than those at United. UAL, which had come to rely on a clause in its ALPA contract providing for freely donated overtime, had by now become dependant upon this generosity of its pilots to maintain its daily schedule. At this point, the angered pilots stop signing up for overtime.

As in 1999, the summer flying season of 2000 for United, like other majors, is beset by difficulties caused by weather, too few runways, ATC problems, and too many travelers. Now, the pilot shortage worsens the carrier's situation significantly, forcing managers to cancel hundreds of flights every week and institute even more delays. As a result of these problems, United turns in the worst on-time performance of all major U.S. airlines in the month of May, with only 57% of its flights arriving on time.

The situation does not get any better as May turns into June. Bad weather continues to plague takeoffs from Chicago (ORD). One service, Flight 1806 of June 1, serves as illustration of the problems of many: a procession of East Coast thunderstorms forces the scheduled B-777-222, with nearly 200 passengers, to sit on the runway for over 8 hours after its 1:44 p.m. departure time for Washington, D.C. (IAD). There are no meals (emergency stores of soda, granola bars, cookies, and crackers kept aboard are entirely depleted) and twice the plane returns to the gate, once to refuel and once to exchange crews. Takeoff finally occurs at 10:53 p.m.

Largely unnoticed by the public or media on June 1 is a company announcement that it will build a \$100-million regional aircraft terminal at Denver International Airport.

While en route from Chicago (ORD) to Las Vegas on June 2, Flight 1047 is forced to divert to Denver when all five flight attendants complain of dizziness and being lightheaded. All are taken to the hospital, treated, and released, without a cause of their condition explained.

En route from Washington, D.C. (IAD) to San Jose on June 3, an A320-232 operating as Flight 231 is diverted to Denver when it is learned that a dog had been penned in the unheated forward cargo hold, rather than the heated air compartment. The canine survives.

Air Canada, Ltd. initiates new dual designator A319-114 or CRJ service with United on June 5 from Vancouver to Denver and Washington, D.C. (IAD), from Montreal to Philadelphia, and from Toronto to Austin and Ontario, California. The fifth anniversary of the launch of B-777 service is celebrated on June 7.

On June 8, code-shared return service from Chicago (ORD) to Toronto is expanded from five daily roundtrips to nine. New daily non-stop B-777-222 return service is also introduced from Los Angeles to Frankfurt, while B-747-422s begin flying daily roundtrips from San Francisco to Beijing.

The main line and its "United Express" regional partners **Air Wisconsin** and **SkyWest Airlines** exchange several routes, also on June 8. Employing B-737-322s and B-727-222As, United replaces Air Wisconsin and operates four daily roundtrips from Denver to Boise, two to Cedar Rapids, two to Memphis, and three to Wichita. Employing Embraer EMB-120s, SkyWest replaces United's 11 daily roundtrips between Monterey and San Francisco.

Pending the approval of the United/**USAirways** merger, **USAirways** executive N. Bruce Ashby is named acting president of the new entrant DC Air on June 10. In Congressional testimony on June 13, Chairman/CEO Goodwin calls the United merger with **USAirways** a "win-

win" for consumers. The same day, a new Mileage Plus partnership with Abercrombie & Kent is announced.

United and **Air Canada, Ltd.** introduce the airline industry's first inter-airline electronic ticket on June 14. On June 15, United announces that it offer free headsets and movies to customers in all classes aboard U.S. domestic flights equipped with video players. Customers on flights exceeding 3 hours will see a courtesy feature film.

On June 28, the company is allowed to place its "UA" designator aboard **Air New Zealand, Ltd.** flights from Auckland to Wellington, Christchurch, Queenstown, and Dunedin. The same day, for safety reasons, the laptop electrical ports on the B-777s are all disconnected until they can be rewired.

Also in June, the cargo division leases a 10,000-sq.-ft. warehouse space at Alaska CargoPort, a facility at Anchorage International Airport. When, on August 31, on-time performances for June are released, they will show United with the worst record of any of the 10 big airlines reporting figures to DOT, only 48.3%.

The 70th anniversary of San Diego service is celebrated on July 1. On July 5, laptop power is ordered turned off on some B-777-222Es. Two B-747-222Bs are sold to **Northwest Airlines** on July 7 for conversion into freighters. United is named 15th best-managed company among nonstate-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

ATC problems at Chicago (ORD), fog in San Francisco, and heavy thunderstorms in Denver play havoc with the carrier's schedule on July 17-18. On the latter date, weather forces the carrier to cancel 28 departures and 37 arrivals at its Denver hub, where 317 departures occur on a normal day. On July 20, UAL Corporation promises to proceed with the creation of a Pittsburgh maintenance base if its merger with **USAirways** is approved.

A code-sharing agreement is signed with **BWIA (British West Indies Airways, Ltd.)** on July 25, with an immediate linkage of frequent flyer programs. The pilot shortage, nature, and other difficulties continue to plague UAL all summer.

On August 1, the company's 10,000 ALPA-represented pilots activate a strike committee. If no contract is signed by September 4, the group will trigger a job action. Also on August 1, the third B-767-332ER to be delivered this year is accepted; it is also the last of 35 of its type that have joined the fleet since 1991.

By August, 4,800 flights have been cancelled. On August 4, mechanics (and perhaps the pilots) of Flight 914 refuse to clear that service for departure from Washington, D.C. (IAD) for Paris (CDG). Advised of the situation, management scrubs the flight due to "some sort of mechanical issue." The real reason for the cancellation was the presence aboard of **USAirways** Chairman Stephen M. Wolf.

A total of 120 more flights are scrubbed on August 5, followed by 80 more on August 6. The next day, the carrier removes 1,980 flights from its September schedule, as it suffers the loss of 240 more flights. With consumers and elected officials weighing into the verbal battle between pilots and management, UAL has a first-class public relations disaster on its hands. President Dutta personally apologizes to customers for the carrier's weekend operations.

On August 9, 140 flights must be cancelled. A second daily roundtrip service from Chicago (ORD) to Mexico City is initiated on August 10 employing a B-757-222. On August 14, the 48th B-777-222 is delivered and on August 16, United announces an extension of its pet embargo.

During August, the airline delays four out of every five departures and drops to last in on-time performance among the 10 reporting U.S. majors.

United's management is now beset from all sides, with business clients expressing consternation, unhappy passengers filing reports of abusive practices, expressions of concern from board members, and interrogations from Congressional leaders and DOT Secretary Rodney A. Slater. Wearing a blue shirt and yellow tie, Chairman Goodwin films a commercial in the cabin of a B-777 in which he, personally, apologizes to passengers for delays or cancellations that have caused them to be stranded or suffer other hardships.

A tragedy in the skies over England is narrowly averted on August 20. Descending into London (LHR) from different angles, a United B-777-222 and a **Virgin Atlantic Airways, Ltd.** B-747, with 700 passengers between them, come within 700 feet of one another before ATC orders the United captain to take evasive action. Both aircraft land normally and no injuries are reported.

While its operational problems persist, the carrier, nevertheless, continues to look to the future. On August 22, options placed in 1998 are exercised for the acquisition of six each A320s and A319s to be delivered by 2002.

Also on August 22, *Flight International*, in its annual commercial airline survey, reports that United is the still the second largest airline in the world in terms of actual passenger boardings and largest in terms of revenue passenger kilometers.

The only immediate way out of this morass for United's leadership is to settle with ALPA, which it does on August 26 following two days of intensive, round-the-clock negotiations. Under terms in the new pact, which ends the summer delay war, company pilots become the highest paid in the airline industry. Retroactive to April, pilots receive pay raises of between 21.5% to 28.5%, plus annual 4% increases through 2004. The company's contribution to the flyers' pension fund is boosted from 1% to 11% and, even if pushed to lower pay grades as the result of a merger, serving pilots will remain at their latest pay grades.

Dual designator flights with **BWIA (British West Indies Airways, Ltd.)** commence on September 1 on routes from Washington, D.C. (IAD) and New York (JFK) to Trinidad, from Miami to Antigua, Barbados, and Port of Spain, and on connecting flights to Tobago.

On September 6, new thrice-daily B-737 United Shuttle return service is initiated from Los Angeles (LAX) to Salt Lake City (thrice-daily); flight to Seattle are offered twice daily and those to Portland daily. Also on September 6, United Shuttle expands into the Denver market; new roundtrips are initiated from Denver to Albuquerque 8 times a day, Boise 4 times a day, Colorado Springs five times a day, and Tucson once daily.

At 10,800 ft., just after departure from Los Angeles on a September 7 service to Boston, Flight 174, a B-757-222 with 166 passengers, experiences a near miss with a USAF F-117 Stealth Fighter from Edwards AFB that comes within 500 ft. vertically and 0.6 mi. horizontally. TCAS allows the jetliner to execute a rapid climb, after which it continues safely on to its destination. The next day, a \$4.5-million state-of-the-art reservations center is opened at Honolulu.

On September 12, the company reduces its fall fares substantially and drops a surcharge imposed a week earlier. The move is made in an effort to win back business and shore up the company image following a summer of delays, cancellations, and labor strife. The lower fares are matched by other majors on September 13.

United announces on September 15 that it will end its all-cargo operations on Christmas Eve and retire its four DC-10-30Fs. The last two DC-10-30 passenger planes will be retired in February 2001.

While en route from Chicago (ORD) to New York (JFK) on September 22, Flight 678, a B-727-222A with 5 crew and 120 passengers, is hit by lightning; a safe emergency landing is made at Toledo, Ohio, with no injuries reported.

Despite UAL's employment of such well-known lobbyists as Kenneth M. Duberstein and Thomas Hale Boggs Jr. to promote the merger, the U.S. Senate Commerce Committee, chaired by Sen. John McCain (R-Ariz.), approves a September 23 nonbinding resolution opposing the company's proposed purchase of **USAirways**. Offering the opinion that the move would not be in the public interest, the resolution is transferred to the full Senate for further action.

The last of four A319-131s to be delivered this year is accepted on September 25; nine more units will be delivered in 2001, completing a 40-ship order. United executives and members of the Association of Flight Attendants (AFA) meet briefly and agree to reopen negotiations.

On September 26, UAL files papers with the European Union Commission seeking its required approval of the \$11.6-billion takeover of its

smaller competitor. The carrier announces on September 28 that it will open the world's longest scheduled route on April 1, a 7,339-nm. B-747-422 run between New York (JFK) and Hong Kong. The service will require five minutes more flying time than the Newark-Hong Kong service flown by **Continental Airlines**. Also on September 28, fares are cut 20%-40% for Alaskans flying to the lower 48 states.

Contract discussions with AFA resume on October 2. **Continental Airlines** Chairman Gordon Bethune, also on October 2, formally bids \$215 million in cash for **USAirway's** 119 jet slots and 103 commuter, short-haul slots plus 8 gate leases, ticket counters, ramps, aircraft parking and other facilities at Washington, D.C. (DCA). The offer, which would be good only after a United-**USAirways** merger, is also to include the assets being sold to the proposed new entrant DC Air, led by cable television mogul and **USAirways** board member Robert Johnson. The tender amount exceeds by some 50% the \$141 offered by Johnson and is meant to appease regulators by keeping competition alive in the DCA market.

On October 3, the York County, South Carolina, Economic Development Board endorses the merger with **USAirways**. A new contract is signed with the Professional Airline Controllers Association on October 4 covering UAL's 200 flight dispatchers.

Working with Softnet Systems subsidiary Aerozone, the airline and **Delta Air Lines** now both begin to offer customers wireless Internet access in their airport lounges and gate areas. Also, United now begins to test 25 airport self check-in kiosks (USCs) at Chicago (ORD); the machines allow passengers to book passage aboard flights of the main line, as well as United Shuttle or "United Express."

USAirways shareholders, voting on October 12, approve by 98% the \$60-a-share merger offer from United. Before amalgamation can begin in early 2001, the takeover must obtain approval from the U.S. DOJ and DOT, as well as the European Commission and several state attorneys general, who are voicing concern.

On October 17, United pledges to maintain a reservations center in Winston-Salem, North Carolina, pending its successful takeover of **USAirways**. The company, as part of its campaign to win approval of the takeover, has agreed to serve all 14 North Carolina airports now visited by **USAirways**. Indeed, it is planned to increase the importance of the hub at Charlotte-Douglas International Airport. After the merger is finished, it is anticipated that 490 daily departures (one-stop and nonstop) will be offered to 249 communities, with additional nonstops to Denver, San Francisco, and Seattle, as well as new one-stops to Portland, Austin, San Antonio, Aruba, and Barbados.

Flight 848, a B-747-422 with 296 passengers en route from Melbourne to Los Angeles, also on October 18, is forced to make an emergency landing at Auckland, New Zealand, due to electrical problems. The passengers are booked on a replacement service and the aircraft is ferried to San Francisco the next day.

The same day, the EU Commission, which had originally intended to render its ruling by October 25, suspends its review of the proposed merger due to a need for additional information.

United begins testing self check-in kiosks at Chicago (ORD) and San Diego on October 23.

A B-747-238B is withdrawn on October 26 after completing its last revenue service (Flight 40) from Kona to San Francisco. It will be ferried to Marana, Arizona, where it will be parked in storage.

On October 29, United begins to code-share on **Deutsche Lufthansa, A.G.** flights from Frankfurt to Abidjan, Accra, and Lagos.

Flights 157 and 153, respectively, from Chicago (ORD) to San Francisco on October 30 are the last company services operated with DC-10-10s. The two aircraft are withdrawn and ferried to Las Vegas on October 31 for storage; simultaneously, the withdrawn Jumbojet is ferried to Marana, Arizona, for storage. One other DC-10-10, without titles, remains at Chicago (ORD), where it will be employed for deicing training.

Daily B-757-222 roundtrips begin on October 31 between San Francisco and Lihue, Kauai, Hawaii.

By the beginning of November, the company's on-time departure rate has increased by 40% over August and cancellations are down by 60%.

Still, it is not anticipated that United will be flying its full scheduled of 2,400 daily flights until January—at the earliest.

Federally mediated contract negotiations between the airline and the International Association of Machinists break down on November 2. A second withdrawn B-747-238B is ferried to Marana, Arizona, for storage the same day.

Because the pilots had earlier won an industry-leading salary contract and their request for early, mid-contract wage talks had not been fully honored, the officers of the carrier's Association of Flight Attendants (representing the carrier's 25,000 flight attendants) do not support the **USAirways** merger. Contract talks between the AFA local and United, begun in early October, end on November 4, after the airline fails to meet a deadline to provide a wage proposal. UAL also offers no date for a restart of discussions.

Following its charter from New Orleans to San Francisco on November 5 with the San Francisco 49ers NFL team on board, another B-747-238B is retired. The next day, fares are lowered to Hawaii and within the Western U.S.

On November 7, AFA announces that it will oppose the pending purchase and take other actions to force the company to grant a substantial pay increase. The next day, the National Mediation Board officially adjourns the stalled talks between the airline and the IAM. The union calls for a "30-day cooling off period," after which it would be free to strike.

Air Canada, Ltd.'s daily nonstop A319-114 return flights from Vancouver to New York (JFK), begun on October 30, are code-shared with United starting on November 9. Two days later, weekend B-757-222 roundtrip seasonal service, continuing through April 1, is launched from Chicago (ORD) to Aruba.

The merger with **USAirways** does not appear to be any closer to realization by mid-November than it was in May. Indeed, so many problems continue to exist that even before the DOT, DOJ, and the EU act, the investment firm Paine Webber Buttrick advises Chairman Goodwin to take advantage of the January 1 closing date, even if he has to pay the \$50-million earnest penalty, and simply withdraw. In his insightful review of the UAL-USAirways compact in the November 13 issue of *Business Week*, Michael Arndt writes: "In the final stroke of irony, losing **USAirways** could be the best thing to happen to UAL."

Also on November 13, United becomes the first airline to offer air travel wireless booking. It is simultaneously announced that the United Networks Proactive Paging Service has increased its usage 300% since January.

In addition to difficulties with the company's flight attendants, management now also must contend with slow-downs brought about by mechanics whose contract talks have stalled. The company, on November 15, reports via *The Wall Street Journal* that it has had to cancel hundreds of flights due to the mechanics actions, including 38 on November 14 and 71 of 78 services scrubbed this day.

On November 17, United seeks a temporary restraining order against IAM District 141M; a federal court in Chicago grants the order the same day. The DC-10-10 held at Chicago (ORD) for deicing training is ferried to Las Vegas for storage on November 18.

Noting that contract talks are unproductive, local International Association of Machinists and Aerospace Workers leaders ask federal mediators on November 20 to release them from negotiations and to declare a "30-day cooling off period," after which the 44,000 members will be free to strike.

On November 21, 85 of the company's 121 cancelled flights are blamed on "maintenance operations issues." The same is said of 18 of 25 flights scrubbed by 9 a.m. the next morning. Only 9 flights are scrubbed on November 23, which is significantly better than the pre-slowdown average of 44 a day.

Just before Thanksgiving, in a move overshadowed by the personnel issues, the new UAL subsidiary United New Ventures is set up to explore e-commerce possibilities under the direction of Chief Financial Officer Douglas Hacker.

The situation with the mechanics continues to worsen. Over 86 of 106 flight cancellations on November 30 are directly attributed to the labor

difficulties, along with another 86 on December 1. Also on December 1, a 6-member jury of a Colorado court orders the company to pay \$3.27 million to 6 former employees whom, it has been found, were promised free air travel for life 13 years earlier. The airline appeals.

On December 5, it is revealed that the United New Ventures e-commerce unit of UAL Corporation and **American Airlines** Cargo will begin to co-operate with NextJet in January to offer new express small-package services in the U.S.

In the first week, a new financial and code-sharing arrangement is signed between the major and its "United Express" affiliate **Atlantic Coast Airlines**. Under its terms, the regional will be able to increase its regional jet fleet to 108 aircraft by the end of 2003.

Mediated talks under supervision of the NMB resume between the company and the IAM on December 7. The same day, a federal judge, not wishing to see the talks unduly influenced, lifts a temporary restraining order against the IAM-represented company mechanics.

Citing what it believes to be strong facts against the UAL/**USAirways** merger, the State of Maryland launches an aggressive campaign to defeat the arrangement. Details are reported in the December 9 issue of the *Baltimore Sun*.

A major blizzard forces UAL to cancel 75% of its flights from Chicago (ORD) on December 11. Associated freezing also plays havoc with traffic to and from Detroit (DTT). At the latter point, over 500 people are stranded. Adding to company "cheer," members of the Association of Flight Attendants indicate their plans to continue their CHAOS campaign throughout the upcoming holiday season in protest of the end to contract talks in November. U.S. District Judge William J. Hibber terminates the temporary restraining order placed on the IAM on December 11, believing that it is ineffective and could hinder contract talks with the carrier.

A major snowstorm pounds Chicago (ORD) and other Midwestern communities on December 12; at the Illinois hub and elsewhere, UAL cancels one-third of its schedule.

While en route from Washington, D.C. to Hong Kong via San Francisco, also on December 12, Flight 805, a B-747-422 with 22 crew and 368 passengers, encounters severe turbulence north of Seattle. With three crew members and a passenger hurt, the aircraft diverts to Anchorage, where the injured are taken to hospital and the others are accommodated overnight until a replacement Jumbojet can arrive from California the next day.

The winter storm forces cancellation of 197 flights on December 13, including 40 from Denver. All but 25 are weather-related.

Discussions between the airline and the IAM are recessed by the National Mediation Board, also on December 13. UAL now seeks a preliminary injunction against the IAM, indicating that the union is in contempt of a temporary restraining order by causing continued delays and cancellations due to maintenance problems. Judge Hibbler denies the injunction the next day.

Due to stalled contract negotiations between the airline and members of its Association of Flight Attendants local, the carrier's flight attendants stage protests at major airports beginning on December 14. The informational picketing and other activities will continue through Christmas Eve.

Flight 156, a B-747-238B, departs San Francisco late on December 14 and arrives at Chicago (ORD) early on December 15, completing the last UA flight by a "classic" Jumbojet. The aircraft is ferried to Marana, Arizona, for storage on December 17, a day after another B-747-238B arrives at the Desert Graveyard from Los Angeles.

After United and **USAirways** representatives appear before it and offer unspecified concessions designed to address competition concerns, the EU Commission, on December 18, extends from December 21 to January 12 its deadline to rule on the UAL proposal to takeover **USAirways**.

Also on December 18, the last of 12 A320-232s to be delivered on the year is accepted. Eleven more units will be received in 2001, completing a 79-ship order.

The eruption of the Popocatepetl Volcano 40 mi. NW of Mexico City on December 20 forces the carrier to cancel upwards of 7 flights into the

Mexican capital. The airport at Puebla is closed due to the fear of mud-slides.

On December 21, the carrier announces that it will retire 25 of its 75 B-727-222As in 2001, a year ahead of schedule. The decision is based on anticipated higher fuel bills in the months ahead. To compensate for their loss, the company requests 13 additional Airbus planes for delivery in the fourth quarter of 2002.

In a 48-page report released on December 21, the U.S. Government Accounting Office (GAO) indicates that a merger between UAL and **USAirways** would significantly reduce or eliminate domestic airline competition in 290 of the top 5,000 markets in the United States. The same day, according to *The Wall Street Journal*, the two majors begin intensive negotiations with the DOJ antitrust division, which has not yet ruled out blocking the merger.

On December 22–23, United drops its three-year-old transpacific all-cargo operation and retires its four DC-10-30Fs. The move comes just as the DOT is making an award of 10 new weekly all-cargo frequencies to China, 2 of which go to UAL, along with 6 to **United Parcel Service (UPS)** and 1 each to **Northwest Airlines** and **Federal Express (FedEx)**.

The final services flown by the DC-10-30Fs wearing United Airlines Worldwide Cargo markings are operated. Flight 9206 from Tokyo (NRT) to Chicago (ORD) via Anchorage and Flight 9208 from Osaka (KIX) to Los Angeles via Anchorage flies on December 22. On December 23, Flight 9206 from Tokyo (NRT) to Chicago (ORD) via Anchorage and Flight 9208 from Manila to Osaka (KIX) to Anchorage to Los Angeles are operated.

A press release notes, on December 29, that the carrier will halt its nonstop service from Chicago (ORD) to Honolulu on February 15, due to the retirement of its last two passenger-configured DC-10-30s. The last DC-10-30F to be placed into storage arrives at Marana, Arizona, during the day. The four planes will not remain out of action for very long; on February 5, they will be sold to **Federal Express (FedEx)**.

At New Year's, the DOJ extends its regulatory review of the proposed **USAirways** merger from January 16 to April 2. Company employees will be heartened to learn on January 12 that the EU Commission has approved the union with **USAirways**. Few people are publicly aware that **American Airlines** will shortly enter the picture.

Overall customer bookings during these 12 months drop 3.08% to 83,914,000, but freight traffic climbs 3.15% to 3.69 billion FTKs. Revenues for the year rise 7.4% to \$19.35 billion, while expenses jump 12.4% to \$18.7 billion. Operating profits plunge 53% to \$654 million and net gain falls all the way down to a mere \$50 million.

UNITED AIRWAYS, LTD. (1): United Kingdom (1935). With Whitehall Securities providing £50,000 capital and in association with **Jersey Airways, Ltd.**, United Airways, Ltd. is registered at London on April 4, 1935. The initial fleet consists of Spartan Cruisers and a de Havilland DH 89A. Twice-daily London (Heston)–Blackpool service is inaugurated on April 30 as part of a mass flight comprising the company's Dragon Rapide and two Jersey Airways DH-86s.

The same day, four-times-per-day Blackpool–Isle of Man Spartan Cruiser flights begin, with an extension on to Carlisle. On June 18, two new routes are started from Blackpool: to Morecambe and to Leeds, as well as a service from Liverpool through Blackpool to the Isle of Man. On September 30, the airline is one of three small Whitehall-controlled carriers merged to form **Allied British Airways, Ltd.**, which will become **British Airways, Ltd. (1)** on October 29.

Allowed to continue briefly operating under its pre-merger identity and with a mail contract in hand, the company begins a month of Liverpool–Isle of Man flights on November 1.

UNITED AIRWAYS, LTD. (2). See **CANADIAN AIRWAYS, LTD.; MACKENZIE AIR SERVICE, LTD.**

UNITED ARAB AIRLINES: Egypt/Syria (1958–1971). Following the February 1, 1958 establishment of political union between Egypt and Syria, the Egyptian carrier **Misrair, S.A.E. (1)** is renamed UAA.

On a March 7 flight from Athens to Cairo, a Vickers 628 Viking 1B with 4 crew and 22 passengers is lost in Egypt's Lake Menzalah, near Port Said (8 dead).

Tupolev Tu-104s are purchased from the Soviet Union on April 3 and a select group of pilots is sent to Moscow for training. On September 3, a UAA delegation arrives in Moscow for consultations with **Aeroflot Soviet Airlines** officials. On December 23, **Syrian Airways** is amalgamated into an expanded UAA.

During 1959, the enlarged carrier assumes responsibilities for the routes and services of the merger partners, employing their aircraft in new livery. The available Douglas DC-3s are all flown on domestic routes to Alexandria, Assuit, Aswan, Cairo, Luxor, Mersa Matruh, and Port Said.

The newest aircraft in the fleet are a Vickers Viscount 732 and four Viscount 739s. Orders are placed for three de Havilland DH 106 Comet 4Cs. These, together with several DC-6Bs, are employed on regional routes in the Mideast and Mediterranean.

Flights to Baghdad cease during the first quarter of 1960. The Viscount 732 with 3 crew and 17 passengers crashes near Elba on April 10; there are no survivors. The first Comet 4C is delivered on June 10 and is employed to inaugurate Cairo–London service on July 1. The second Comet 4C now arrives and inaugurates twice-weekly return flights from Cairo to Khartoum and Jeddah.

A DC-4 with five crew and nine passengers engaged in hauling freight is lost in the Congo River, Congo, on September 1; all aboard make it to shore.

On September 29, a Viscount 739B with 4 crew and 17 passengers en route from Geneva to Cairo disappears over the Mediterranean; its wreckage is found 17 miles off Elba on October 5 and there are no survivors.

The third Comet 4C is delivered on December 23; on Christmas Day it joins the other two in altering the European schedule. Flights from Cairo to London are now flown five times a week, with daily stops at Rome, twice-weekly visits to Frankfurt and Zurich, and weekly stops at Geneva.

Three more DC-6Bs are acquired from **SAS (Scandinavian Airlines System)** in April 1961.

A DC-3 with five crew and two passengers crash-lands near Kameshli, Egypt, on May 6; although the aircraft must be written off, there are no fatalities.

Services are now opened to Lagos and on June 12 it is extended to Accra. Meanwhile, service to Moscow begins on June 1 and 20 days later the service to London becomes daily. The fourth and fifth Comet 4Cs are requested and an order is placed with Boeing on September 1 for five B-707-366C Stratoliners.

A bloodless revolution on September 28 splits the United Arab Republic. **Syrian Airways** withdraws from the amalgamation in September, taking the three ex-SAS DC-6Bs, two DC-4s, and three DC-3s. The remaining Egyptian portion soldiers on as UAA and on November 1 launches flights to Karachi, continuing on to Bombay. The sixth and seventh Comet 4Cs are requested in December.

A Vickers Viscount 739 with 6 crew and 10 passengers is destroyed in a forced landing 3 mi. W of Wadi Halfa, Egypt, on March 16, 1962; although there are no fatalities, the plane must be written off.

Two Comets are delivered in April, but the company now enters a period of several years plagued with accidents.

A DC-3 freighter with three crew crashes at Heliopolis near Cairo Airport on May 15; there are no survivors.

Three days later, weekly Comet 4C service to Tokyo begins via Kuwait, Bombay, and Bangkok, while flights to Hong Kong, the final point before Japan, are made twice weekly.

While descending toward Hong Kong during a July 19 flight from Bangkok, Flight 869, a DH 106 Comet 4C with 8 crew and 18 passengers, disappears. Wreckage is found in a teakwood forest 50 mi. N of Bangkok the next day and there are no survivors. Another Comet 4C is delivered in August.

The Baghdad route is restarted with Comet 4Cs, five times a week, on February 15, 1963. While on a May 12 domestic flight, a DC-3 with 4 crew and 27 passengers crashes at the Nile Delta village of Nawa just after takeoff from Cairo; there are no survivors.

En route from Bangkok to Bombay on July 27, Flight 869, a DH 106 Comet C with 8 crew and 55 passengers crashes 9 nm. W. of Madh Island, India; there are no survivors. The aircraft had been acquired as a replacement for the one lost in 1962.

Yet another Comet 4C is damaged in a landing accident at Benghazi on September 12. UAA no longer has sufficient jetliners to serve both Europe and Japan and, consequently, the Tokyo route is now suspended. Arrangements are made to obtain additional aircraft.

Two Comet 4Cs are delivered in February 1964, along with three DC-6Bs from **Pan American World Airways (1)**. These propeller-planes supplement the earlier Viscounts and DC-6Bs on domestic and regional services.

A Vickers Viscount 732 with 4 crew and 45 passengers must be written off after a bad landing at Beirut on February 23; there are no fatalities.

In April, four more DC-6Bs are purchased from **Northwest Airlines**. The first arrives on October 15.

During the fall, company officials decide to create a domestic subsidiary, **Misrair, S.A.E. (2)**, leaving UAA to handle long-haul services. The company stages a fly-off evaluation of turboprop equipment and eventually chooses to place a \$2.3-million order for seven Antonov An-24Vs. As Egypt falls under Soviet influence, its airline fleet is altered as the Russians grant easier payment terms and Western builders turn away. The previous arrangement with Boeing for the acquisition of Stratoliners collapses in November when financing terms cannot be finalized.

The remaining three **Northwest Airlines** DC-6Bs arrive in January, March, and June 1965. The Soviet Antonovs now also begin to arrive.

A DC-3 is lost while landing at Cairo on June 6; there are no fatalities.

All of the new Antonovs are placed on domestic and regional routes when **Misrair, S.A.E. (2)** begins operations on August 1. UAA is now reorganized; it, like Misrair, is owned by General Arab Air Transport Organization, which also oversees the hotel unit, General Aviation Services, and the Karnak Travel and Tourist Corporation.

Coming into Cairo in bad weather from Nicosia on March 18, 1966, Flight 749, an An-24V with 5 crew and 25 passengers, crashes 5 mi. from the runway; there are no survivors.

A new agreement is reached with Boeing on June 15 and a \$30-million contract is signed with the American builder for three B-707-366Cs.

An An-24V with 6 crew and 37 passengers is destroyed as the result of a bad landing at Cairo on September 30; there are no fatalities.

Service to Prague, a stop on the Cairo to Moscow route, is dropped on November 1.

Flights commence from Cairo to Copenhagen via Frankfurt on January 4, 1967. A DC-6B is destroyed as the result of a bad landing at Hodeidah, Aden, on January 24, when it ground loops off the runway causing its landing gear to collapse; no fatalities are reported.

When the summer schedule begins in April, a number of Comet 4C charters are authorized for New York. A Comet 4C is destroyed on June 22 as the result of a bad landing at Kuwait City; there are no fatalities.

Having cost more to operate than its services had generated, the General Arab Air Transport Organization announces on January 1, 1968 that it will fold **Misrair, S.A.E. (2)** back into UAA on June 1.

Just after takeoff from Cairo on January 15, the four-man crew of a DC-3 freighter elects to return due to icing conditions; the aircraft crashes before they can put it back down to the runway and there are no survivors.

En route from Cairo to Damascus on August 18, an An-24V with 7 crew and 33 passengers crashes into the sea off Nicosia; there are no survivors.

During August, two Ilyushin Il-18s are acquired from the Soviet Union and in the fall, the first Boeing Stratoliners arrive and enter service on the London route.

While attempting its third approach to Aswan Airport in a sandstorm on March 20, 1969, a chartered Il-18D with 7 crew and 93 passengers crashes and burns (100 dead).

An Il-18 route to East Berlin is started at the end of the month. A DC-3 freighter with three crew strikes high ground near Cairo on April 10 and is destroyed; there are no survivors.

Weekly flights to Tokyo via Kuwait, Bombay, Bangkok, and Hong Kong, are resumed on June 15.

On August 18, an An-24V with 30 passengers en route from Cairo to Aswan is taken over by two Egyptian brothers, one of whom is accompanied by his wife and children, and diverted to El Wagah, Saudi Arabia. The pirates are arrested and on order of King Faisal are returned to Egypt.

Late in this period, a deal is struck whereby the Soviets will outfit the carrier with a fleet of Tupolev Tu-154 jetliners to replace Western types including the Comet 4Cs.

There will be a string of aircraft accidents in 1970. Having arrived on a service from Cairo via Khartoum, Flight 755, a DH 106 Comet 4C with nine crew and five passengers crashes while landing at Addis Ababa on January 14; although the aircraft must be written off, there are no fatalities.

While landing at Luxor on January 30, the landing gear of an An-24V collapses; there are no fatalities.

As a result of heavy buffeting and ice on the wings, a DH 106 Comet 4C with 9 crew and 14 passengers rejects takeoff from Munich on February 9 at a height of 30 ft. The aircraft settles back down, but overruns the runway, hits a fence, loses its undercarriage, and is exposed to a quickly extinguished fire. Although there are no fatalities, the aircraft must be written off.

Just after takeoff from Alexandria on March 14, an explosion caused by an imbedded foreign body, rocks the No. 1 engine of an An-24V with seven crew and eight passengers. Diverted to Cairo, the turboprop makes a safe wheels-up landing near Runway 05. Although the plane must be written off, there are no fatalities.

The fourth B-707-366C is delivered on April 1.

While practicing touch-and-go landings from Cairo on July 19, an An-24V with three crew goes out of control and crashes; there are no survivors.

In mid-September, the carrier is subjected to three unsuccessful hijacking attempts.

On September 10, three gunmen unsuccessfully attempt to take over an Il-18 en route from Cairo to Beirut, but are foiled by security guards. Two days later, a lone skyjacker, S. Nasr, is subdued before he can capture an An-24V en route from Cairo to Tripoli and divert it to Saudi Arabia.

The third effort proves no more successful than the first two. En route from Luxor to Cairo on September 16, another lone assailant tries to take over an An-24V with 46 passengers, but he, too, is thwarted by security policemen.

The unduplicated route mileage in 1971 totals approximately 40,000, a number equivalent to 10% of the number of passenger boardings per year.

On January 2, Flight 844, a Comet 4C with eight crew and eight passengers en route from Cairo, begins final approach to Tripoli, but flying below minimum altitude, crashes into a 395-ft. high sand dune near the Libyan city and crashes (16 dead). Two days later, the Egyptian government tightens controls on the airline.

The fleet now includes 4 Comet 4Cs, 3 Boeing 707-366Cs, 7 Antonov An-24s, and 2 Il-18s.

Orders are placed with the Soviet government on May 23 for two Il-62s that are delivered a month later and assigned to the European routes.

Il-62 service to Tokyo begins on July 9. On August 22, a security guard subdues a lone pirate as he attempts to divert to Israel an Il-18 flying en route from Cairo to Amman.

New livery and the name **Egyptair, S.A.E.** are adopted on October 10.

UNITED ARABIAN AIRLINES, LTD.: Sudan (1996–1998). **Trans Arabian Air Transport, Ltd.** is renamed during 1996 and receives a new corporate identity. Capt. Mustafa H. Y. Kordofani is managing director and he continues to oversee a workforce of 230.

In addition to 3 Antonov An-26s, the fleet includes 1 each owned Boeing 707-349C and B-707-351C, plus a leased B-707-321C.

Destinations visited during the year and in 1997–1999 include Addis Ababa, Amsterdam, Athens, Cairo, Doha, Harare, Jeddah, London (LGW and STN), Malta, Nairobi, Port Sudan, and Sharjah.

The new brand does not last and by 1998 United Arab is once again known as **Trans Arabian Air Transport, Ltd.**

UNITED AVIATION. *See* **UNITED STATES AIRWAYS**

UNITED CHINA AIRLINES. *See* **CHINA UNITED AIRLINES**

UNITED EXPORT COMPANY: United States (1948–1952). One of many small U.S. irregular carriers established in the years immediately after World War II, UE is set up at Miami in 1947 to operate all-cargo charters. Revenue operations commence with a single leased Curtiss C-46 Commando.

Flights continue without incident until August 31, 1952, when the transport suffers engine trouble just after takeoff from Prescott, Arizona, and crashes. Although no injuries are reported, the Curtiss is so badly damaged that the company elects to liquidate rather than undertake its repair.

UNITED EXPRESS. *See* **AIR WISCONSIN; ASPEN AIRWAYS; ATLANTIC COAST AIRLINES; GREAT LAKES AVIATION; GULFSTREAM INTERNATIONAL AIRLINES; HORIZON AIR; MESA AIRLINES; SKYWEST AIRLINES; UFS (UNITED FEEDER SERVICE, INC.); WESTAIR COMMUTER AIRLINE**

UNITED EXPRESS (MESA AIR GROUP): United States (1997–1998). During the first week of January 1997, Mesa Air Group is again reorganized. The operating divisions Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced by four new units: America West Express, Independent, “United Express,” and “USAirways Express.” Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**. Robert Dynan, former president of Liberty Express, is placed in charge of this new unit.

When **United Airlines** early in the year elects to transfer code-sharing on eight routes out of Los Angeles to **SkyWest Airlines**, Mesa files suit. Although Mesa will continue to seek certain “commercial resolution” of the move, UAL will provide “United Express” with seven new California routes as compensation.

A dispute between Mesa Air Group and its **United Express (Mesa Air Group)** division versus **United Airlines** and **SkyWest Airlines** concerning access to certain additional West Coast markets results in a July lawsuit. UAL files suit in the U.S. District Court in Chicago seeking a determination as to the rights of all parties to the routes before any of the companies suffer economically. Mesa does not countersue.

Recognizing the higher costs of operating at the new Denver airport, Congress, on July 1 under the leadership of U.S. Senator Pat Roberts (R-Kans.), restores—and increases—the EAS subsidy for Kansas and eastern Colorado that Mesa Air Group had lost the previous year. In the next fiscal year, MAG will receive \$2,797,280.

Consequently, twice-daily **Air Midwest** “USAir Express” roundtrip Beech 1900D flights are resumed on October 1 from Hays to Kansas City via Great Bend and from Garden City to Kansas City via Dodge City. Additionally, “United Express” resumes twice-daily Beech 1900D roundtrips from Great Bend to Denver via Dodge City and twice-daily roundtrips from Hays to Denver, plus thrice-daily roundtrips from Liberal to Denver via Garden City.

Also on October 1, the company, together with **SkyWest Airlines**, increases “United Express” services from their Los Angeles hub by 73%

to 175 daily flights; at the same time, 12 new California destinations are now initially visited, including San Jose.

CCAir board member Peter Murname, a principal in Barlow Partners and former Mesa executive Jonathan Ornstein, president of **Virgin Express Airlines, S.A.**, make a \$50-million offer in October for Mesa’s “United Express” operation at Denver, along with **WestAir Commuter Airlines**. The tender is rejected.

“United Express” service from Denver to Fort Collins, Loveland, and Longmont, Colorado, is terminated in November as the result of low prorates from **United Airlines** and high Denver airport costs. United begins an “Airport Express” bus service that operates 14-times-per-day roundtrips from Denver to Fort Collins and 12-times per day to and from Longmont and Loveland.

Having weathered the required three-month interim, the company drops “United Express” flights to Worland and Rock Springs, Wyoming, plus Pueblo and Alamosa, Colorado, at the end of the year.

In January 1998, word of separation comes from **United Airlines**, which announces an end to its “United Express” arrangements with Mesa Air Group subsidiary **Westair Commuter Airlines**. The San Francisco component is cancelled, effective on May 31, with Pacific Northwest flights to end in September.

The loss of this operation is a serious blow, as the “United Express” relationship had been worth 47% of the group’s revenue.irate investors, claiming to have lost millions over the past year due to poor management, threaten lawsuits. The entire matter brings a major change in Mesa Air Group management and by midyear former executive Jonathan Ornstein will, in fact, be in charge.

At the beginning of May, Mesa Air Group retains the International Airline Support Group to assist **Westair Commuter Airlines** with the disposition of its leased fleet of Brasilias and Jetstream 31s.

Both that carrier and this division are now shut down.

UNITED IMPERIAL AIRLINES. *See* **IMPERIAL AIRLINES; PACIFIC COAST AIRLINES (2)**

UNITED IRANIAN AIRWAYS. *See* **IRAN AIR**

UNITED LIBYAN AIRLINES: Libya (1962–1964). ULA is established at Tripoli in 1962 to provide aerial support to the growing energy industry. Although owned by local concerns, management and aircraft are provided by **Autair, Ltd.** of the U.K. C. J. Bicknell is appointed CEO and several Autair Douglas DC-3s provide lift.

In 1964, the company is merged with **Libavia** to form **Kingdom of Libya Airlines**.

UNITED PARCEL SERVICE. *See* **UPS (UNITED PARCEL SERVICE)**

UNITED SHUTTLE. *See* **UNITED AIRLINES**

UNITED STATES AIRWAYS: United States (1929–1934). Organized by N. A. Letson at St. Louis in the spring of 1929, United States Airways is equipped with Metal G-2W Flamingos that are employed to inaugurate scheduled, multistop passenger service to Denver via Kansas City on July 29. Operations continue apace in 1930, during the spring of which the carrier joins with **Ohio Air Transport** and **Pittsburgh Airways** in the creation of **United Aviation**, a confederation seeking a transcontinental mail route.

To split the aviation group and halt its desire to participate in his airway master planning, Postmaster General Walter Fogler Brown allows **American Airways** to extend its new AM-30 westward from Kansas City to Denver in June 1931. Part of the deal includes an understanding that it would (as occurs) be sublet to United States Airways should the partner see fit to secede—which it does. **United Aviation** folds on July 15.

A Flamingo is lost in a nonfatal crash landing at Goodland, Kansas, on May 22, 1933. En route to Denver from Kansas City on June 28, a

Flamingo catches fire in the air and makes a safe emergency landing at Goodland, Kansas.

On February 9, 1934, as a result of concerns raised during the so-called "Air Mail Scandal" controversy, the U.S. Post Office cancels all existing airmail contracts. The White House calls upon the U.S. Army Air Corps to fly the mail, a military option that does not prove successful. As a result, the Post Office rebids the routes. United States Airways, which has meanwhile ceased operating, goes out of business in June.

UNITED STATES AVIATION COMPANY: 3315 N. Memorial Drive, Hangar 31, Tulsa, Oklahoma 74115, United States; Phone (918) 836-5387; Fax (918) 836-7804; Year Founded 1995. This corporate carrier is established at Tulsa in 1995 to provide businessmen with on-demand charters to worldwide destinations. The company employs eight pilots and begins revenue flights with 1 each Grumman G-1159C Gulfstream IV, Dassault Falcon 20, Learjet 55C Longhorn, and Learjet 25B.

UNITED STATES OVERSEAS AIRLINES (USOA): United States (1946–1964). USOA is organized at Cape May, New Jersey, in June 1946 to offer irregular cargo service. Revenue flights begin on November 12 employing two war-surplus Douglas C-54s (military DC-4s). Transcontinental freight flights are made and the fleet grows to include DC-6As and DC-7Fs.

A decade later, on January 1, 1956, USOA receives a operational certificate as a "large irregular" from the CAB. By 1958, the fleet comprises 11 freighters: 9 Douglas DC-4s and 2 Lockheed L-1049Hs. Destinations now served include Los Angeles, Miami, New York, Chicago, and San Francisco.

On February 14, 1960, failure to maintain sufficient altitude to clear obstructions during an attempted VFR approach to Providence, Rhode Island, in IFR conditions results in the crash of a DC-4; both crewmen aboard are slightly injured. When **Transocean Air Lines (TAL)** folds on July 11, the company assumes that carrier's routes, with emphasis on the service from Honolulu to Okinawa via Wake Island and Guam.

The nosegear of a DC-4 collapses as the freighter lands at Patrick AFB, Florida, on June 25, 1961. Flights are conducted without incident in 1962. However, a DC-6B with five aboard on a ferry flight crashes upon landing at Wildwood, New Jersey, on May 31, 1963 after the flight engineer prematurely retracts the main gear. Overexpanded and under financed, USOA is declared as unfit to operate by the CAB on September 25, 1964. It goes out of business on November 30.

In 1980, company officials seek recertification from the CAB; the government grants worldwide charter authority in August. Efforts to raise sufficient capital to resume flying are unsuccessful.

UNITED WEST AIRLINES: P.O. Box 824870, Fort Lauderdale, Florida 33082, United States; Phone (954) 438-9077; Fax (954) 431-3573; Year Founded 1993. This nonscheduled carrier is established at Fort Lauderdale in 1993 to provide executive and small group charters to worldwide destinations. Four pilots are employed and revenue flights begin with a single Dassault Falcon 20.

UNIVERSAIR, S.A. See MERIDIANA AIR, S.A.

UNIVERSAL (TRANSPORTES AEREOS UNIVERSAL, LTDA.). See SERVICIOS AEREOS DEL ORIENTE, LTDA. (SAO)

UNIVERSAL AIRLINE COMPANY: United States (1966–1972). **Zantop Air Transport** becomes a wholly owned subsidiary of the Detroit-based Universal Airline Company on September 21, 1966. UAC itself is a subsidiary of Universal Consolidated Industries.

A week later, under the new name of Universal Airlines, the carrier receives CAB authority to provide charter passenger and freight service into Canada and Mexico.

Revenues for the year are \$35,013,761. An operating profit of \$15,858,058 is turned in along with a net profit of \$982,664.

The workforce in 1967 totals 1,537. In October, former **Central Airlines** President M. Lamar Muse becomes president/CEO. The fleet grows to include 6 Armstrong-Whitworth AW-650 Argosy freighters, 19 DC-7Fs, 6 DC-6As, and 34 Curtiss C-46As. Orders are placed or outstanding for 2 DC-8-61CFs and 4 DC-9-30CFs, while 2 Lockheed L-188A Electras are acquired from **PSA (Pacific Southwest Airlines)** for conversion into L-188AF freighters.

A total of 149.09 million freight ton-miles are flown. Revenues climb 5% to \$36.7 million. Net earnings fall to \$266,819.

Airline employment declines to 1,500 in 1968. Early in the first quarter, the company purchases all 11 L-188Cs put up for sale by **KLM (Royal Dutch Airlines, N.V.)**; the first, converted into an L-188CF, is delivered on March 14.

Two DC-8-61CFs also join the fleet during the year and Universal becomes a public corporation. As greater emphasis is placed on turbojets and turboprops, the Commando fleet is reduced, with many sold to the new **Span East Airlines**.

While landing at Philadelphia during a storm on July 2, a DC-7F with two crew suffers an undercarriage failure and crashes; although no injuries are reported, the aircraft must be written off.

About to complete a military contract, a DC-7B with no passengers crashes and burns during its final approach to Cherry Point Marine Air Station on September 27, killing its three crew members.

A total of 26,816 passengers are flown on the year.

Hubbing out of Detroit (YIP), the carrier now offers cargo flights based on an "either/or" tariff (either use the space contracted for or pay for it anyway), a policy that does not immediately help to increase the number of freight ton-miles flown. In fact, these actually decline this year to 147.58 million; revenues are \$45,827,091. Profits rise, both operating (\$6,051,063) and net (\$2,901,339).

In 1969, the fleet includes 2 DC-8-61CFs, 1 DC-8-55F, 12 L-188A Electras, 8 Argosys, 6 DC-7BFs, 5 DC-6As, and 10 C-46s. The last L-188CF from **KLM (Royal Dutch Airlines, N.V.)** arrives on February 2.

The Commandos and DC-6As are sold to **Span East Airlines** as four DC-9-30CFs are also delivered during the spring.

Unable to agree with his board's desire to purchase Boeing 747F freighters, Muse is forced out and his contract is terminated. Income is \$46,134,376; however, losses are suffered: \$2,354,276 (operating) and \$3,174,481 (net).

Still specializing in the delivery of auto parts, Universal purchases **American Flyers Airline** on June 4, 1970. A total of 202,344 charter passengers are carried while freight ton-miles operated advance to 36.4 million. The fleet now includes 12 Electras and 4 DC-8-61CFs.

Flight 9524, the former **KLM (Royal Dutch Airlines, N.V.)** L-188CF Electra *Saturnus* with three crew, fails its takeoff from Ogden-Hill AFB, Utah, on an August 24 Logair service, crashes into the runway, and slides 2,600 ft. to a stop; there are no fatalities.

Revenues increase slightly to \$47,555,232. Although a \$1,257,989 operating profit is realized, the net is again off by \$297,471.

Service continues without incident in 1971 as the company works to integrate its new acquisition.

While landing at Hill AFB, Utah, on March 19, 1972, the former **KLM (Royal Dutch Airlines, N.V.)** L-188CF *Mercurius* with three crew experiences propeller problems; after the plane is on the ground, the propeller separates from the turboprop and punctures a fuel tank. The crew is able to evacuate before the Electra is burned out.

Costs, led by fuel price increases, prohibit the carrier from earning sufficient revenues to sustain the new merger and on May 4, Universal declares bankruptcy and shuts its doors. Its USAF contract, together with the ex-KLM Electras, will be taken over by **Saturn Airways**.

UNIVERSAL AIRLINES (1): United States (1946–1947). Universal Airlines is formed at New York in 1946 to operate an nonscheduled deep discount service to Miami and San Juan. Seven former **Pan**

American Airways (PAA) Boeing 314 flying boats, the *Pacific Clipper*, *Atlantic Clipper*, *Dixie Clipper*, *American Clipper*, *California Clipper*, *Capetown Clipper*, and *Anzac Clipper*, are purchased from the U.S. War Assets Administration at San Diego, California. The ships are hardly in hand when the first named is severely damaged in a storm; it is salvaged for parts.

Unable to obtain sufficient financial return, the charter operator goes broke in the spring of 1947; unpaid for, the Boeings are returned to San Diego in poor condition. They will be sold to another nonscheduled airline, **American International Airways**.

UNIVERSAL AIRLINES (2): United States (1990–1992). A subsidiary of Dallas-based WAA Leasing, Universal is established in 1990 to offer cargo charter and contract service flights in Alaska with a Cessna 411 and a Piper PA-31 Navajo.

A total of 182,500 FTKs are operated on the year.

Although the fleet is altered in 1991 to include 6 Douglas DC-6As, the 40-employee carrier, unable to attract business in time of recession, suffers a major traffic decline.

Cargo traffic plunges by 61.6% to 70,080 FTKs.

At the beginning of 1992, Universal serves 10 communities from Anchorage with cargo flights and transports passengers from Bethel. The insurance company AIG Aviation informs the DOT that liability insurance coverage for the airline will be cancelled on March 25, but will be reinstated two days later. In the interim, the government requires the carrier to shut down. Under DOT rules, the company cannot fly again for at least 45 days unless an exemption is granted. No exemption is sought.

Over the next few weeks, the government evaluates the airline's financial soundness. No report is finished because, on the evening of April 3, WAA Leasing notifies the DOT that it will close permanently as of 12:01 a.m. April 4. Its last action is to take down the sign outside at Anchorage and disconnect the telephone.

UNIVERSAL AIRLINES SYSTEM (UNIVERSAL AVIATION CORPORATION): United States (1928–1930). On July 30, 1928, a group of investors and bankers from St. Louis, Minneapolis, and Chicago meet in Delaware to incorporate the Continental Aviation Corporation as a holding company under that state's laws. Initial shareholding is \$2.3 million. A workforce of 25 is assembled and 5 Hamilton H-45 Metal Planes are purchased.

On September 1, the holding firm's name is changed to Universal Aviation Corporation and the airline operating subsidiary becomes Universal Air Lines. Fifteen days later, scheduled passenger-only service is inaugurated between Chicago and Cleveland. On November 24, a Hamilton H-47 en route to Chicago from Cleveland crashes at Edgerton, Ohio, in a snowstorm (three dead). By year's end, UAL transports a respectable 425 passengers.

On December 31, after much planning and negotiation, Universal Aviation Corporation, in a rush of acquisitions, instantly forms the first airline system in the United States, Universal Air Lines System. On that day, UAC purchases **Robertson Aircraft Corporation**, **Northern Air Lines**, and **Continental Air Lines**. Together with UAL, the three will be operated as subsidiary divisions of UALS.

The three subsidiaries continue operations as before in early 1929. Plans to extend the new Northern division's Chicago to Minneapolis route beyond Fargo are reconsidered. The first 2 of 15 ordered Fokker F-10As is received; christened *Miss Cleveland* and *Miss Chicago*, they are placed into service on the route of the namesakes and complete with chefs, offer the first airline dinner service prepared on electric stoves in the rear fuselages.

On April 1, **Central Airlines** and **Paul R. Braniff** are purchased and UAC begins amalgamating its small components into a single whole with a 2,858-mile route system. Simultaneously, the corporation opens 10 flying schools from Memphis to Minneapolis and Oklahoma City to Cleveland. It also begins taking delivery of the remaining ordered Fokker F-10A trimotors, eight Fokker Model 8 Super Universals, two

Boeing Model 40Cs (obtained from **Pacific Air Transport**), and several Travel Air 6000s, Fairchild 71s, and Hamilton H-47 Metal Planes.

On April 16, the northern routes (totaling 617 miles) to and between Minneapolis and Fargo are closed and assigned to the Northern division. Meanwhile, the Universal Air Lines division, employing the first F-10As to be delivered, stretches its Chicago route up to Minneapolis. In a short-term experiment designed to relieve some of the boredom of flight, the diversion of motion pictures is introduced over this new route. Projection equipment is too primitive to be successfully employed airborne.

As other F-10As become available, they are apportioned to the Northern, Central, Robertson, and Braniff divisions (those provided the latter are employed only on the Tulsa–Oklahoma City segment). The eight Super Universals are divided between the Robertson and Continental divisions while the former receives the two Boeings for its CAM-2 mail route. The Central division is given the Travel Airs while the former Braniff operation in Oklahoma receives the Fairchilds and Hamiltons. In July, the ex-Robertson Ryan B-1s are sold.

On June 15, America's first transcontinental air-rail service is started by the Universal division; passengers embarked on the Universal Air Express will be able to cut their New York to Los Angeles travel time to just 67 hrs. 15 min. for just \$85 more than an all-rail trip. Sent off by Mayor Jimmy Walker from New York overnight via the New York Central Railroad's *Southwest Limited*, six passengers reach Cleveland in the morning where they board a Fokker F-10A (two others filled with media fly escort) for the flight to Garden City via Chicago and Kansas City. At the Kansas terminus by dusk, customers board the Atchison, Topeka and Santa Fe Railroad's *California Limited* for completion of their journey.

On June 30, a Travel Air 4000 of the Continental division is caught in heavy fog and crashes into the radio tower of Columbus' WAIU (one dead). A Boeing 40B-4 hits a truck while taking off from Kansas City on October 8 and crashes; none aboard are injured. On October 29, a Stearman C3B of the Continental division crashes in fog at Mt. Vernon, Ohio (one dead). Late in the year, the corporation is purchased by a larger conglomerate, The Aviation Corporation (AVCO), which allows Universal to operate under its own identity for the remainder of the year.

On January 25, 1930, **American Airways** is formed as AVCO's principal operating subsidiary through the expedient of a stock exchange. Universal receives 4,288 shares, becoming not only a division, but a stockholder as well. Its remaining story will be continued under the **American Airways** entry.

UNIVERSAL AIRWAYS: United States (1978–1981). Established at New Orleans's Lake Front Airport in 1978, Universal is outfitted with 1 each Beech 18 and Beech B-80 Queenaire. Scheduled passenger and cargo services are inaugurated linking the company's base with Gulfport, Morgan City, Patterson, Laurel/Hattiesburg, Houma, and Houston. The Beech 80 is lost in a crash landing at Gulfport, Mississippi, on March 1, 1979; however, a replacement aircraft is acquired to replace it.

Overextended, the commuter is unable to survive the crash of its second Queenaire near Madisonville, Texas, on July 2, 1981 and is history by year's end.

UNIVERSAL JET: 2828 Donald Douglas Loop N, Santa Monica, California 90405, United States; Phone (310) 399-7371; Fax (310) 399-7341; Year Founded 1997. This new nonscheduled operator is established at Santa Monica Municipal Airport in 1997 to provide executive and small group passenger charters throughout the Western Hemisphere and to Europe. James Duggan is general manager and he employs eight pilots, who fly the company's British Aerospace BAe (HS) 125-700A Hawker and Learjet 35A Century III.

UNIVERSAL JET AVIATION: Boca Raton Airport, 3700 Airport Road, Boca Raton, Florida 33431, United States; Phone (561) 989-0025; Fax (561) 361-0920; <http://www.aerosearch.com/companies/univjet>; Year Founded 1994. Michael McCauley establishes this nonscheduled carrier at Boca Raton, Florida, in 1994 to provide execu-

tive and small group passenger charters throughout the Western Hemisphere and to Europe. President McCauley, together with his brother Vice President Robert, employs five pilots who fly the company's Learjet 25B, Learjet 25D, and Learjet 35A Century III.

A story in an April 1997 issue of the *Boca Raton News* labels the brother's charter operation as "a Boca Raton version of the NBC sitcom 'Wings.'"

Flight are continued during the remainder of the decade without incident.

UP AIRWAYS, LTD.: India (1994–1998). NCM (Singapore) and the state government of Uttar Pradesh join together in late 1994 to establish this airline for the express purpose of helping the latter develop the tourist potential of the Lucknow area, particularly in relation to Buddhist traffic. Capt. V. P. S. Sindu is appointed CEO.

Two Fokker F.27-500s are acquired early in 1995 and employed in April to launch pilgrim flights to cities of Agra, Bhopal, Delhi, Kanpur, Lucknow, Patna, and the Bihar Buddhist centers.

NEPC Airlines, Ltd. signs a management contract during the spring of 1996. Services begin from Delhi to Lucknow and Kulu. In April 1997, the Indian government refuses to permit foreign participation in the nation's domestic carriers and the NCM stake is passed to the Delhi-based business house Roopali Industries.

The company is renamed **SGA Aviation, Ltd.** in 1998.

UPALI AVIATION, LTD.: Sri Lanka (1979–1984). Upali Aviation, Ltd. is formed at Colombo Airport in late 1979 as a subsidiary of one of the nation's largest companies, Upali Trading, Ltd. Keenly interested in aviation, the group's President Upali Wijewardena serves as airline chairman; A. S. Pelimuhandiram is appointed managing director. The initial fleet comprises 1 each de Havilland Canada DHC-6-300 Twin Otter, Cessna Citation executive jetliner, Cessna 206, and Bell 206B JetRanger helicopter.

In addition to corporate flight support activities, which are provided by the Citation and JetRanger, the private carrier undertakes scheduled services beginning in August 1980, linking Colombo with Anuradhapura, Batticaloa, Jaffna, and Trincomalee.

Operations continue apace in 1981–1984. During the latter year, the decision is taken to discontinue all scheduled, charter, and flight support domestic passenger services and to concentrate only on corporate airlift. The Twin Otter is sold to **Skywest Airlines (Pty.), Ltd.** in Australia.

UPS (UNITED PARCEL SERVICE): 1400 North Hurstbourne Parkway, Louisville, Kentucky 40223, Phone (502) 329-6500; Fax (502) 329-6550; <http://www.ups.com>; Code 5X; Year Founded 1934. UPS is incorporated in Ohio on March 19, 1934 to provide ground freight transport services. During the next 48 years, it often contracts to have certain of its shipments flown by air. Contract carriers allow the company to introduce UPS-AIR service in 1953; it will later be known as UPS 2nd Day Air.

The company operates to all 48 contiguous states by 1975 and initiates flights to Europe in 1976 with service to Frankfurt.

To complement its already huge ground transport system and to take advantage of the possibilities opening up in air express, UPS starts its own airline. A sorting and distribution hub is opened at Louisville at decade's end.

UPS Airlines is established in 1981 and \$28 million is spent to acquire a mixed-fleet of propeller and jet freighters, including 12 Fairchild-Swearingen Expeditors (cargo version of the Metro II airliner), 24 Boeing 727-100Fs, 5 Douglas DC-8-73Fs, and some 90 smaller aircraft on contract. All aircraft will be flown under contract by specialized carriers such as **Evergreen International Airlines** and **Orion Air**.

Following the lead of **Federal Express Corporation**, UPS begins air operations in 1982. UPS Blue Label Air Service (renamed UPS 2nd Day Air) guarantees delivery anywhere on the mainland U.S. and Oahu within 48 hours. Overnight service, UPS Next Day Air, is also started.

To promote the new service, the first company ad campaign is undertaken. The first three of four DC-8-63Fs previously operated by **The Flying Tiger Line**, which have been converted into DC-8-73Fs, are delivered at year's end.

Coverage of the nation is expanded in 1983 to nearly twice the number stops and capacity available in the first year of air express service. Twelve Fairchild Expeditors are now acquired and provided to **Merlin Express** under contract with which to operate feeder flights from large East Coast hubs to smaller regional airports. Although the fourth ex-Flying Tiger DC-8-73F is acquired, flights to and within Alaska are, however, suspended.

By 1984, the fleet has been upgraded further by the acquisition of 4 more B-727-100Fs and 13 DC-8-71/73Fs. A total of 55.6 million shipments are flown; it is known that \$165 million in bonds are sold to pay for the freighters. Many flights are also still made under contract for UPS by other carriers, including the Lockheed L-100-30s of **Southern Air Transport**, the B-727-100s of **Jet East International**, and the DC-8-73Fs of **Orion Air** and **Evergreen International Airlines**. Between August and December, six B-747-123SFs, formerly operated by **American Airlines**, are purchased and turned over to **Orion Air** for operation on UPS' behalf. Corporate income totals \$6.83 billion and a net gain of \$477 million is generated.

At the beginning of 1985, the UPS fleet includes 6 B-747-100Fs, 29 DC-8-71/73Fs (the largest DC-8 fleet in the world), 28 B-727-100Fs, 8 B-727-200Fs, and 11 Fairchild Expeditors. These are all operated under contract by other specialized carriers. In June, the company guarantees next-day delivery to every point in America except Alaska, where service is resumed. New frequencies are started to and within Puerto Rico.

Contracts are let with carriers in six European nations to begin UPS services; plans are made to begin employing UPS aircraft in Europe in the future. UPS becomes launch customer for the B-757PF Package Freighter, with an order for 20, with 15 options. In October, service to Europe is begun; the lower 48 United States are now connected with destinations in France, West Germany, Belgium, Luxembourg, the Netherlands, and the U.K.

Although exact traffic and financial figures for the airline portion of the corporation are not released, officials note that 350,000 packages are moved nightly. Systemwide, a total of 2.06 billion packages are delivered, revenues total \$7.68 billion, and a net profit of \$568 million is reported.

In late fall 1986, construction is begun on a second cargo hub at Philadelphia; when completed in two years, the \$128-million center will become a twin of the Louisville operation. The carrier joins **DHL Worldwide** in establishing a subsidiary, **International Parcel Express (IPX)**, to operate in the event that a bid for a U.S.–Japan express route proves successful.

Systemwide package deliveries increase to 2.26 billion, revenues advance to \$8.62 billion, and the net gain swells to \$669 million.

Beginning in June 1987, the carrier increasingly operates its own air services, replacing outside companies earlier chartered to fly express. The carrier pays cash to purchase 110 aircraft, instantly becoming the 10th largest U.S. airline. The fleet now also includes the first three newly delivered B-757-24APFs.

When the Japan express route is won by **Federal Express, International Parcel Express (IPX)** is wholly acquired and integrated into the UPS network. Late in the year, remaining contract partners are informed that the company will take over all of its airlift during the next year.

Systemwide, 2.49 billion packages are delivered, corporate revenue reaches \$9.68 billion, and net gain totals \$784 million.

The giant small-package carrier received FAA authorization in 1988 to form its own airline division and operate it as an airline. One of the fastest growing airlines in U.S. civil aviation history, UPS Airlines is equipped with a fleet of 104 aircraft: 6 B-747-100Fs, 42 DC-8-73Fs, 38 B-727-100Fs, and 20 B-757-24AFs. A total of 844 pilots are hired and trained between January and February (and also join the International Brotherhood of Teamsters union) and each month thereafter for

the remainder of the year, one more aircraft is placed into service when returned from its contract carrier.

In November, Asian Courier Systems is acquired, along with its operations to Hong Kong, Malaysia, Singapore, Taiwan, and Thailand. UPS now provides international deliveries in 40 nations, along with 57 cities in the People's Republic of China alone.

The DOT now designates the new all-cargo operation as a national. In return, the corporation reports a total of 2.68 billion packages delivered, revenues of \$11.03 billion, and a net profit of \$758 million.

UPS has over 241,000 people employed in its entire operation in 1989 and does not provide separate employment numbers for UPS Airlines. The fleet grows by four owned aircraft, although another 246 are leased. In January, international air delivery is extended to 18 additional countries in Europe and on the Pacific rim: Andorra, Brunei, the People's Republic of China, Greece, Hong Kong, Indonesia, Macau, Malaysia, New Zealand, Papua New Guinea, the Philippines, Portugal, Singapore, South Korea, Spain, Taiwan, Thailand, and Turkey.

In August, weekly service is initiated from Los Angeles to Sydney via Honolulu and Nadi, Fiji. Now employing the marketing slogan "the tightest ship in the shipping business," UPS later in the month inaugurates worldwide air-express package (up to 70 lbs.) and document delivery.

During the fall, company pilots abandon the Teamsters Union in favor of their own breakaway Independent Pilots Association (IPA).

Thrice-weekly flights begin in November from Newark to East Berlin via Cologne, to Moscow via Cologne, to Budapest via Cologne, and to Krakow and Warsaw via Cologne. Services into the U.S.S.R. are operated by German or Soviet aircraft in partnership with the ground transportation concern Sovtransavto.

The national reports its first traffic statistics. After flying 2.09 billion FTKs in almost 20,000 shipments, UPS Airlines ranks second behind **Federal Express** among U.S. all-cargo airlines; however, the corporation as a whole now begins ranking #1 in the *Fortune* 50 Transportation Companies. The parent corporation reveals that its aviation division earns revenues of \$650.4 million and is profitable on both bottom lines: \$32.92 million (operating) and \$47.45 million (net). Shareholders' equity totals \$3.5 billion while long-term debt stands at only \$165 million.

The 2,000-employee airline division operates 135 aircraft in 1990. Kent C. ("Oz") Nelson is elected chairman/CEO of UPS in January, succeeding John W. ("Jack") Rogers. During the month, the corporation sells \$700 million in 20-year, 8 3/8% debentures through the public debt market. Also, the carrier's first scheduled service to Asia using its own aircraft is initiated five times per week; routing of the DC-8-73Fs is Anchorage-Seoul-Hong Kong-Seoul-Anchorage. Simultaneously, UPS contracts with **Northwest Airlines** for cargo service from Anchorage to Tokyo (NRT). In May, B-727F Pilot Capt. Emily H. Warner retires. Capt. Warner had joined **Frontier Airlines** (1) in 1973, becoming the first American woman in modern times to fly for a scheduled airline. Later, she would become the first qualified woman captain with a U.S. airline. After stints with **PeoplExpress Airlines** and **Continental Airlines**, she moved on to UPS. Following her retirement, she will become an FAA examiner in Colorado.

The \$183.5-million Louisville air operations facility is completed with a new maintenance center; a \$2.5-million Phase III simulator center is also set up at Louisville and is equipped with three Rediffusion Simulation, Ltd. simulators worth \$34 million. Construction is begun on a \$53-million hub center at Ontario, California, and \$1.7 billion in orders are placed for additional 25 B-757-24APFs.

A \$90-million cockpit modernization program, the Electronic Flight Information System, (EFIS) is started for the DC-8Fs and B-727Fs by the Dee Howard Company of San Antonio and a \$1.4-billion, five-year investment in computer technology, UPSCODE, is initiated. The first EFIS-equipped B-727-100F is ready by September.

During all this expansion, the carrier is able to match **Federal Express** in domestic overnight delivery operations and begins overseas expansion through the acquisition of express concerns in France, Japan, as well as the Seabourne Express Parcels division of the U.K. and Belgium

based Seabourne Express, Ltd. Beginning in October, six-times-per-week flights are inaugurated from Louisville to Tokyo via Anchorage.

Cargo traffic accelerates by 14.4% to 2.39 billion FTKs. UPS Airline's portion of the corporation's revenues totals \$891.09 million, a 37.01% increase. Costs, led by increased fuel prices in the wake of Iraq's August 6 invasion of Kuwait, climb 42.35% to \$878.94 million. These force operating income to decline to \$12.14 million. The net profit slides to \$37.23 million.

Five more aircraft join the fleet in 1991 as the carrier takes over 11 package delivery services in Europe. In March, Worldwide Expedited Package Service is begun from the U.S. to destinations in Europe and Asia. Weekly charters are also flown to Europe and the Soviet Union and relief supplies are flown to Bangladesh and Turkey. Several other FedEx services are now equaled, including Saturday overnight delivery, on-demand pickups, discount pricing on high-volume accounts, and computerized package tracking.

On May 25, the company announces that it will spend \$400 million with the Dee Howard Company in the next two years to equip its fleet of B-727Fs with quieter engines, the Rolls Royce Tay 654-54.

By midyear, the fleet includes in operation or on order 55 B-757-200PFs, 8 B-727-200Fs, 39 B-727-100Fs, 49 DC-8Fs, and 11 B-747Fs; an additional 259 aircraft are chartered and the daily schedule features 960 domestic and 415 international segments.

One of France's leading parcel-delivery companies, Post Transport, is acquired in August while, during the same month, UPS joins with the freight-forwarder, Yamato Transport Company, Ltd. of Tokyo, in a partnership designed to further serve the growing U.S.-Japanese freight market. A 19-month-old pay and work rules dispute with IPA pilots is settled in December. Construction is started in the fall on a \$21-million hangar handling facility at Dallas (DFW).

Cargo climbs 19.2% to 2.85 billion FTKs. Revenues increase 30.4% to \$1.12 billion, expenses are up 27.58% to \$1.08 billion, and operating income totals \$39.83 million. The net gain slips to \$27.71 million.

The company's western air hub at Ontario, California, is expanded in 1992 and the 1,000-employee headquarters operation is transferred from Greenwich, Connecticut, to Atlanta. Despite FedEx's withdrawal and stiff competition from DHL Worldwide, UPS continues to build its European network. In April, the major purchases **Star Air Parcel Service** of Austria, a key agent for many of the carrier's East European deliveries.

The new 3-Day Select air-ground delivery service is introduced during the summer. In August, a new \$53-million hub facility is opened at Ontario, California. The first Rolls Royce Tay 651-54-powered B-727-100F "Quiet Freightier" enters service on December 11.

Freight accelerates 14.5% to 3.13 billion FTKs, a figure approximately half that of rival **Federal Express**. Revenues climb 4.5% to \$1.17 billion, expenses leap up by 7% to \$1.15 billion, and operating income slides to \$14.68 million. The net profit decays to \$7.12 million. UPS places first in the airline business with a net worth of \$3.72 billion, \$371 million more than second place AMR Corporation.

In 1993, Richard Oehme is chief operating officer of the 1,307-pilot UPS Airlines, which is elevated to major status by the U.S. DOT at the beginning of the year. The fleet consists of 11 B-747-100Fs, 8 B-727-200Cs, 44 B-727-100Cs, 30 B-757-24APFs, and 49 DC-8-73Fs. Also in January, the carrier becomes launch customer for the B-767-34AFER, with an order for 30. UPS Airlines now has the 15th largest airline fleet in the world—such giants of the industry as **Air France** and **Alitalia**, **S.p.A.** operate fewer aircraft.

Orders are outstanding for 25 B-757-24APFs and 30 B-767-34AFER freighters are requested in February.

Later in the year, another B-747-100F is assigned to replace a DC-8-73F on the U.S. to Europe service. Across the Atlantic, three more intra-European flights are scheduled. Plans are announced for a new regional sorting center at Rockford, Illinois.

Cargo rises 26.6% to 3.96 billion FTKs; over 2.9 billion packages are delivered in more than 185 countries.

Overall revenues jump 8.5% to \$1.27 billion, expenses rise 4.7% to \$1.21 billion, and the operating profit shoots up to \$59.65 million. The net profit also surges, to \$26.13 million. The parent UPS, which employs 285,000 workers, enjoys revenues of \$17.8 billion, an operating profit of \$1.5 billion, and net gain of \$809.6 million.

Overall UPS employment in 1994 climbs 10.5% to 315,000 and 26 aircraft join the fleet. Daily service is started to Taiwan. In the first of a series of planned expansions in mainland China, the company announces on May 15 that it has opened its own business development offices in the cities of Beijing, Shanghai, and Guangzhou. The \$21-million, 250,000-sq.-ft. handling facility and hangar at Dallas (DFW) opens in June.

A second regional hub, built for \$60 million in only seven months, opens at Greater Rockford Airport in late November. A B-757-34AFER, based at the new 70-acre Illinois facility, is employed to relieve congestion at the Louisville hub. Service-wise, a new 8:30 a.m. delivery is offered.

The next-day delivery company SonicAir is taken over in December, becoming an independent subsidiary.

During the year, the carrier begins flying its own aircraft into the territory of the former Soviet Union for the first time.

Freight traffic climbs 3.5% to 4.26 billion FTKs and revenues accelerate by 10.1% to \$19.6 billion. Net gain reaches \$900 million.

The workforce stands at 332,000 in 1995, a 4.8% increase. In an effort to sustain its business surge, the company announces on January 13 that it will add 29 new aircraft over the next 2 years. It also becomes launch customer for the freighter version of the B-767-34AFER, adding five (beginning in late October), along with eight more B-757-24APFs.

Plans are announced for the construction of a \$400-million Asia and Pacific hub in Taiwan, while the first shovel of dirt is turned over on a new Columbia, South Carolina, hub.

While on rollout after its May 13 landing at Louisville, a DC-8-71 with three crew suffers the failure of its right main landing gear, which allows the No. 3 and No. 4 engine cowlings to settle onto the runway; no injuries are reported.

At the beginning of November, four Lockheed L-100 Hercules freighters are leased from **Southern Air Transport**; repainted in UPS colors, they will provide extra capacity into smaller airports for the upcoming holiday season.

The company's contract with the 2,000 members of its Independent Pilots Association expires in December. The premier B-767-34AFER enters service later in the month flying between Louisville and Cologne.

Freight traffic grows by 14.2% to 4.87 billion FTKs making UPS the only No. 2 freight carrier behind FedEx. Operating income jumps 7.5% to \$21.04 billion while costs inch up only 0.1% to \$19.25 billion. Profits are up substantially over the previous year; operating income climbs to \$1.79 billion, while a huge \$1.04-billion net profit is posted. The airline division contributes \$52.1 million (operating) and \$29.62 million (net), respectively, to the profit picture.

Company employment stands at 335,000 in 1996, a 0.6% increase.

In a highly visible operation conducted on January 7, one of the L-100 Hercules freighters leased from **Southern Air Transport** is employed to transport or "killer whale" Keik, star of the *Free Willie* films. In a 9 1/2-hr. flight from Mexico City via Monterrey and Phoenix, the Orca is delivered to a custom-designed tank at the Oregon Coast Aquarium in Newport, Oregon.

A severe winter storm throughout the Northeast region of the U.S. hampers operations to a degree between January 7 and 11.

On February 3, UPS becomes the first package-delivery company to implement distance-based pricing for its air-express service; the new fee is a tariff based on both package weight and the distance it is flown.

Also in February, a basic agreement is reached with **Nippon Cargo Airlines, Ltd.** concerning distribution possibilities. As NCA works with cargo and UPS with parcels, their operations do not directly cross. However, NCA will, under the agreement, be able to employ UPS' U.S. domestic trucking network to provide a direct delivery service.

An \$18-million order is placed with Flight Dynamics on April 1 for 60 head-up guidance systems; these will be installed on the carrier's

fleet of B-727QFs over the next year. After several years of sometimes-bitter negotiations, a new cargo agreement is signed between the governments of the U.S. and Japan on April 16. The accord grants UPS rights to operate 12 weekly flights to Osaka (KIX).

On May 7, a spokesperson announces that the company is actively considering a new plan for a charter service that will carry passengers on weekends when the carrier's aircraft are idle. In this first-of-its-kind experiment, UPS will only employ a few aircraft until it is clear that the new concept works and does not detract from its principal cargo business. A week later, the decision is taken to go ahead with the charter plan.

Also in May, **Challenge Air Cargo** leases a B-767-34AFER from UPS on a month-to-month basis. The wide-body, which replaces a DC-8-73F leased the previous August from **Southern Air Transport**, will be employed to operate weekend all-cargo services from Miami (MIA) to Venezuela and Brazil.

The carrier teams up with Boeing on June 1 to announce the inauguration of Boeing Direct, the first "just-in-time" delivery system for airlines; rates discounted 10%–40% from existing aircraft parts shipping rates are offered. It is announced on June 30 that the company has hired a total of 176 new pilots during the preceding 12 months.

UPS Customhouse Brokerage, the carrier's first full-service customs brokerage operation, is opened at Miami on July 8; it is designed to provide customs clearance for all international air shipments regardless of type. UPS also begins a Pacific Rim expansion at midyear.

On July 24, the company enters into a joint venture with the People's Republic of China transportation company Sinotrans Pekair for establishment of a concern with branches at Shanghai and Guangzhou. Under its terms, UPS will provide service to 108 Chinese cities via Sinotrans.

The same day, it signs an agreement with Taiwan promising to locate its new Asia-Pacific hub at Taipei as a major component of its \$400-million investment in the Orient.

In October, six-times-a-week code-sharing flights commence from Osaka via Taipei to Los Angeles with **Nippon Cargo Airlines, Ltd.** UPS had been awarded the route in April at the conclusion of bilateral talks between Japan and the U.S. Nippon is guaranteed four main deck pallet positions on the UPS B-767-34AFER.

Toward the end of the year, five B-727-100Fs, including one leased from **Evergreen International Airlines**, begin modification with quick-change kits to combi status so they can once again transport upwards of 113 passengers each.

Contract talks between the Independent Pilots Association and company management continue throughout the year without resolution. The flyers want parity with salaries paid at **American Airlines** (a 25% pay increase) while the company offers an 11% boost.

On December 27, UPS becomes the first major airline in North America to completely meet federally mandated aircraft noise reduction standards.

A total of 4.89 billion FTKs are operated, a minor 0.4% increase considered as level growth. Revenues for the airline division, however, accelerate 10% to \$1.79 billion even as expenses climb 8.8% to \$1.76 billion. Operating income moves up to \$76.12 million and a net profit of \$30.13 million is posted, up slightly from the previous year.

The fleet in 1997 includes 197 owned aircraft, with another 302 flown under charter, all of which are flown by 2,000 company pilots. From a main hub at Louisville and regional hubs at Philadelphia, Dallas, Miami, Rockford, Ontario, Columbia, Cologne/Bonn, Hong Kong, Singapore, Taipei, Montreal, and Hamilton, Ontario, over 995 daily U.S. and 559 foreign departures are flown to 391 U.S. airports and 219 more overseas.

During the last week of January, work begins on a new \$59-million, 535,000-sq.-ft. advanced package-sorting facility on an 84-acre site at Memphis. The facility, which will replace one outside the airport grounds, is slated to open in late December 1998 and will allow UPS to process over a quarter of a million documents and packages per day.

On February 25, a UPS official announces that the company has just met the December 1999 federal deadline for quieting all of its noisy airplanes. With the re-engining of a final B-727-100F with Rolls-Royce Tay 650s, it thus becomes the first all-Stage III U.S. major.

In the company's first human cargo flight, a B-727-025C charter flies 113 passengers from Pittsburgh to Orlando on March 7. President Thomas Weidemeyer comments publicly on his new service on April 26. Although the carrier is still working to speed up the time it takes to manipulate the quick-change kits on these Jumbojets back and forth from cargo to passenger use, he is looking ahead to the possibility of offering scheduled service.

Negotiations between the company and the Independent Pilots Association drag on. In April, the company withdraws its previous 11% salary increase offer. The company's main Asian hub at Taipei is opened on April 30.

In early May, IPA union members vote 1,874 to 28 to authorize a job action if their leadership deem it necessary.

During the last week of May, a B-747F encounters Air Force One off the Irish coast, setting off the collision alarm aboard the White House jet. On June 3, officials of the USAF and the Independent Pilots Association report the incident, with the latter group calling for mandatory collision alarms on cargo aircraft.

Also on June 3, five-times-per-week B-747-121F direct service is inaugurated between Chicago (ORD) and Tokyo (NRT). The Jumbojet freight flights replace Anchorage to Tokyo service previously offered by B-767-34AFERs.

Having been called into the contract talks between the Independent Pilots Association and management, the NMB, seeing that progress cannot be made, suspends negotiations between the parties in mid-month. Plans are made to launch dual-designator flights with **Nippon Cargo Airlines, Ltd.** in midyear between Los Angeles and Japan.

On August 4, the Teamsters Union strikes UPS; the contest between the union's 200,000 drivers, mechanics, and package sorters and the parcel service will be portrayed in the media as one of the century's last great labor battles with management. Members of the company's Independent Pilots Association support the job action, grounding the carrier's Next Day Air and Second Day Air services.

Management personnel attempt to provide service and over the next 3 days, 105 management pilots are able to complete a daily average of 41 departures and 41 evening arrivals from Louisville; another 59 departures and arrivals are achieved by chartered aircraft. The normal three daily B-747F flights to Europe are cut to one while several wet-leased DC-10Fs deliver packages from Anchorage to Asia. In addition, numerous packages are sent as belly cargo with scheduled airlines.

Kiwi International Airlines recruits new business for its shipping services and **Emery Worldwide** attempts to accommodate customers sending packages in excess of 5 pounds. However, UPS' major competitors, **Federal Express (FedEx)** and **DHL Worldwide Express** refuse most new business (the latter takes new international business), but do accept packages left in drop-off boxes. Although talks between the Teamsters and UPS resume on August 7, IPA President Capt. Bob Miller notes that, even if the ground workers' strike is ended, the pilots could go out in an effort to resolve their contract situation.

The Teamsters Union and management resolve the job action during the month's second week and both ground workers and pilots return to work. Negotiations for a new IPA contract must now be conducted.

On August 24, company negotiators offer the pilots a new, but "last chance" contract and ask the membership to vote on it. IPA leaders, agreeing to remain neutral, put the question to the 2,000 union flyers as the NMB negotiations adjourn in recess.

The results of the balloting are revealed in Washington, D.C. on October 1; the contract is rejected by a vote of 1,861 to 39. Although a strike was authorized the previous May, it may occur only if the NMB releases the two sides from discussions—and both sides indicate such a move is not desired. To demonstrate its support for the 1998 Winter Olympics in Nagano, Japan, the carrier unveils a special paint scheme on a new B-767-34AFER on October 2. The aircraft, which will fly its first service from Seattle to Louisville later in the day, wears the traditional UPS tail livery, but has a pure-white fuselage decorated with stick athletes.

Talks between the company and its pilots adjourn just before Thanksgiving, with both sides promising to resume discussions in good faith

come January 12, 1998. The arrangement will allow UPS to enjoy its peak holiday shipping season free of labor worry.

To take some of the pressure off the Louisville center during the holiday season, UPS, on December 15, begins flying packages through Nashville. The move is designed to further facilitate movement from Louisville to Nashville to New Orleans for next-day delivery as well as from the Carolinas through Nashville to Ontario, California. If the experiment is successful, company officials declare, then the move to make Nashville a permanent gateway between the Carolinas and California will be created next year.

B-727F roundtrips commence on December 17, four times a week between Washington, D.C. (IAD) and Cancún, Mexico. During the year, the B-727-100Cs assigned to passenger charters are operated from Chicago (ORD), Pittsburgh, and Detroit (DTT) to Orlando, Tampa, and San Juan.

A total of 5.37 billion FTKs are operated during the year, a 9.9% increase over 1996. Despite the strike, operating revenues advance 3.9% to \$1.86 billion, while costs rise 5.3% to \$1.8 billion. The operating profit, however, slides to \$56.1 million and net gain is halved to \$15.3 million.

Union and management in the pilot talks resume negotiations on schedule as of January 12, 1998. The two sides will reach agreement within a month. A tentative U.S.-Japan bilateral is negotiated on January 30.

Rates for most domestic air-express services are increased by 3.3% on February 7, although there are no increases in international service rates.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14.

During the first quarter, construction begins on an \$860-million Hub 2000 at the Louisville base. The new facility, scheduled for completion in 2001, will replace the existing main facility and almost double the number of packages that can be processed every hour.

On March 17, company pilots, represented by the Independent Pilots Association, vote to approve a six-year contract that promises increased benefits and a 27% wage boost.

A firm commitment is made to Airbus Industrie on September 9 to accept delivery of 30 A300-622Rs, with options on 30 others, over the decade, following delivery of the first in mid-2000. The order is valued at \$5 billion.

The B-727-025C charter fleet is fully engaged this year, operating on behalf of a variety of inclusive tour operators such as Apple Vacations and Vacations Express and the cruise lines Royal Caribbean and Carnival Cruise Lines. In addition to the previous destinations, Cancún and other Mexican resorts join the holiday network.

On the night of September 11, just after landing in rain at Ellington Field Airport near Houston after a service from Louisville, Flight 774, a B-767-34AFER with two crew is unable to stop. It runs 1,489 ft. off the left side of the runway before coming to a stop with its right landing gear collapsed; neither flyer is hurt.

Recently chosen as the only U.S. carrier to receive new landing rights at Paris (CDG), UPS inaugurates a direct air link from New York with a B-767-34AFER on September 14.

At the same time, as the result of a recently signed strategic agreement with Miami-based **Challenge Air Cargo**, enhanced scheduled express service via Brazil to South America becomes available five days a week. Beginning on September 15, Challenge will operate a wet-leased UPS B-767-34APF into Campinas, one hour from São Paulo. This service complements additional Latin American routes also announced by UPS and Challenge as part of their pact.

Under this agreement, Challenge has contracted with UPS to operate wet-leased B-757-24APF freighter flights between Miami and the Dominican Republic on Tuesdays, Thursdays, and Sundays and between Miami and Venezuela on Wednesdays and Fridays. A wet-leased B-767-34APF is also operated by Challenge for UPS from Miami and Honduras to Costa Rica on Saturdays.

Two B-767-34AFERs are simultaneously employed to launch new transit-timesaving flights around the world from Taipei to Bombay, the UAE, Frankfurt, London, and New York.

Also during the month, UPS provides the funds and logistical support necessary to airlift *Keiko*, the Orca whale star of the motion picture *Free Willy*, from Newport, Oregon, to its new home in Iceland.

Having found itself at loggerheads with its pilots over a new contract since July, **Federal Express (FedEx)**, in late October and early November, begins to position itself for a possible strike during the Christmas holiday season.

UPS, which lost customers to FedEx during its own strike in August 1997, begins to court FedEx customers worried about a possible strike. On November 12, UPS announces that, if shippers come to it early enough, the largest air and ground distribution infrastructure in the world has various ways of handling additional volume before Christmas.

The FedEx pilots do not go out, choosing to settle with their employer just before Christmas.

On December 22, a new accord is reached with Sinotrans Pekair; three new regional offices will be added to the three existing stations at Beijing, Shanghai, and Guangzhou. Additionally, UPS will move into a further 18 cities across the country, serving the Chinese market directly with the UPS brand rather than through Sinotrans.

A new \$59-million advanced package sorting facility is opened on an 84-acre site at Memphis in late December; the facility replaces one outside the airport grounds.

For the first time in UPS history, on December 22, online tracking requests exceed one million.

Freight traffic during the past 12 months has ascended 9.92% to 5.57 billion FTKs. Passenger bookings, meanwhile, have increased 82.2% to 133,000. Overall corporate revenues for the year climb 10.8% to \$24.8 billion, while net gain rises to \$1.7 billion. The airline brings in \$1.99 billion and its net profit is \$7.94 million. For the first time, UPS' international operations post a profit.

In an effort to enhance its Central American service and meet customer demand, UPS, on January 19, 1999, begins dedicated roundtrip B-757-24APF all-cargo flights from Miami to San Jose, Costa Rica, five days a week. Feeder flights are simultaneously begun from San Jose to Panama City. Deliveries through San Jose to Guatemala, Honduras, El Salvador, and Nicaragua will begin before the end of the second quarter.

When negotiations between the U.S. and China open on February 23, UPS presses both sides to increase the number of cargo carriers permitted to fly into the People's Republic. UPS does not now fly directly into China, but serves the country through its agent partnership with Sinotrans.

On March 5, UPS Chairman Kelly speaks before the Postal Service Subcommittee of the U.S. House of Representatives. He asks that any future reform of the USPS focus on creating greater accountability and oversight of the agency in order to ensure a level playing field for competitors and greater protection for consumers.

A unique mission is announced on May 5. UPS will provide a specially equipped B-767-34AEFR in September to transport a pair of rare Chinese giant pandas from the Chengdu Research Base of Giant Panda Breeding to Zoo Atlanta. It is also noted that the UPS Foundation, the company's charitable arm, will donate \$625,000 over the next five years to maintain a new state-of-the-art panda facility at the Georgia zoo.

On May 6, a B-757-24APF begins to offer five-days-a-week service between Miami and San Jose, Costa Rica, and next-day deliveries to Honduras and Guatemala.

A new B-727F charter service is inaugurated on May 15 from Hong Kong to Singapore and Kuala Lumpur.

UPS joins with **Midway Airlines (2)**, also on May 15, to cohost a fund-raising event at Raleigh/Durham on behalf of the 1999 Special Olympics World Summer Games and the North Carolina Special Olympics team. Outside the UPS Cargo terminal, teams of eight workers from each carrier test their strength in pulling a 30,000-lb. CRJ-200ER in a first annual "Plane Pull."

On June 1, five weekly B-757-24APF roundtrips are launched from Singapore to Taiwan via Hong Kong.

Following several weeks of negotiations, the assets of Miami-based **Challenge Air Cargo**, including all leased facilities, ground equipment, computer systems, and route authorities, but not including aircraft, are sold to UPS (United Parcel Service) on June 28. The move transforms UPS overnight into the largest all-cargo and express carrier in Latin America.

In September, the company, convicted of establishing Bermuda-based Overseas Partners, Ltd. in 1983 as a "sham transaction" to avoid paying U.S. taxes, faces a possible \$2.35-billion liability. While preparing to appeal, it also establishes a \$1.44-billion fund from which to pay back taxes, fines, and interest. The last of B-767-36AFs delivered since October 1995 is accepted on September 9.

A pair of giant Panda cubs arrives at the Atlanta Zoo on November 5 following a 17-hr. flight from Beijing via Anchorage aboard a specially equipped and decorated B-767-34AF dubbed *The Panda Express*. Two-year-olds *Yang-Yang* and *Lun-Lun* are on loan from China for 10 years.

In a move even more exciting in financial circles, UPS stages the largest initial public offering in U.S. history during November. The sale of 9% of the company (109.4 million shares at \$50 each) is more than 9 times oversubscribed and brings in \$5.47 billion.

Passenger boardings for the year rise 2.5% to 124,000, while cargo traffic accelerates 8% to 6.01 billion FTKs. Revenues advance 7.8% to \$2.15 billion, while expenses are up 5.2% to \$2.05 billion. The operating profit surges to \$116 million, while net gain increases to \$66.27 million.

Corporate employment at the beginning of 2000 totals 308,000. Among the world's top 25 airlines, UPS leads in employee numbers, ranks 3rd in FTKs, and 13th in fleet size.

It is reported in March that DHL Airways will soon be taken over by the combined forces of Deutsche Post and **Deutsche Lufthansa, A.G.** Each has a 25%-plus-1-share stake in the company and its European counterpart, DHL International. Although smaller than either **Federal Express (FedEx)** or UPS, **DHL Worldwide Express** (parent of both DHL-A and DHL-I) leads both in cross-border mail and express deliveries (38% against 20% for the former and 15% for the latter). It has also made purchases in trucking, logistics, and air freight that rivals both of the American giants.

The story is part of a general revelation in the aviation media that Deutsche Post and Deutsche Lufthansa Group are reviewing several schemes for a joint-venture (code-named PELIKAN) merging of their logistic activities. PELIKAN would see the joining of DHL Worldwide with **Lufthansa Cargo Airlines, A.G.** and with Deutsche Post-owned Air Express International.

At this point, UPS demands that the EU Commission require Deutsche Post to split up its commercial and public service activities. UPS had originally petitioned the Commission in 1994, alleging unfair competition in the parcel post sector. Now it emerges that Deutsche Post has invested almost \$5 billion in the years since to build up its parcel post activities, while recently engaging in alliance discussions with DHL and **Deutsche Lufthansa, A.G.** It is anticipated that the Commission will respond by April, but it will not open its formal investigation until August.

On May 1, the company begins flying a number of its own freighters over certain of the Latin American routes of **Challenge Air Cargo**. CAC will continue to operate others until the remainder of the route authorities have been transferred.

As a supplement to the weekly B-747F roundtrip flown from Louisville to Sydney, a second, Saturday-Monday Australian return service, is introduced on May 26. It is flown by a B-747-300F from Ontario, California, via Honolulu and Nadi.

When **Gemini Air Cargo's** first MD-11F enters service on June 12, it is operated on behalf of UPS between Louisville and Seattle. During July, UPS and **Federal Express (FedEx)** are both anchor tenants of the new 172,000-sq.-ft. cargo facility that opens at Sky Harbor International Airport, Phoenix.

The first of 30 A300F4-622Rs is received on July 25. On August 22, *Flight International*, in its annual commercial airline survey, reports that UPS is the third largest cargo airline behind **Federal Express (FedEx)** and **Lufthansa Cargo, A.G.**

Two more A300F4-622Rs are delivered in September, one each on the 12th and 21st.

The company's weekly return service between Taipei and Bangkok is upgraded to six times a week on September 25. It is announced on October 3 that Executive Vice President Michael Eskew will become board vice chairman and that UPS Airlines President Thomas H. Weidemyer will become chief operating officer of the UPS parent corporation on January 1, succeeding the retiring Charles L. Schaffer. Also announced is the appointment of Vice President-Finance D. Scott Davis as chief financial officer.

The fourth and fifth A300F4-622Rs are delivered on October 20 and October 30, respectively.

Also in October, an Airbus Industrie A300F4-622R all-cargo roundtrip service is begun on behalf of UPS by the Turkish freight operator **MNG Cargo Airlines, A.S.** between Hong Kong and Singapore.

At the beginning of November, arrangements, valued at \$2 billion, are completed with Boeing for the acquisition of 13 previously employed MD-11s that would be converted into freighters and delivered in 2001-2004. It also takes options on another 22 for possible delivery by the end of the decade.

Additionally, UPS joins with India's largest general sales agency, Je-tair, Ltd., to create a joint venture company based at Bombay that will provide international express delivery services throughout India beginning in early 2001.

Previously operated by **Tower Air**, a B-747-259C is acquired under lease on November 21. On November 27, the twice-weekly "Round the World" service is boosted to five times a week; the B-767Fs are routed from Louisville via Cologne, Sharjah, Bombay, Singapore, Taipei, and Anchorage. A sixth A300F4-622R is delivered on November 29 and is followed by a seventh, the last for the year, on December 8. Thirteen more will arrive in 2001 and nine in 2002.

Although it has been operating to Hong Kong since 1988, UPS has no beyond-rights. In December, in the wake of the lapse of rights given to **Continental Micronesia** in 1996, the carrier seeks acquisition of that authority. If granted, UPS will hub at Hong Kong, a move made particularly important in light of the company's newly received award of six more weekly all-cargo routes to China from the U.S.

Also in December, the company announces a \$30-million investment in its hub facility at Miami International Airport. The improvements are aimed at enhancing services to and from Latin America.

On December 22, the concern announces that it is terminating its Olympic sponsorship. One each B-747F, B-757PF, and B-767F wearing Olympic-theme livery will soon be repainted.

At the end of the year, competitor **Federal Express (FedEx)** prepares to sign a major contract with the U.S. Postal Service. UPS, for its part, places a follow-on order for 60 A300-600Fs, with options on another 50, for delivery beginning in 2003. The \$6-billion request is the largest in company history.

Passenger boardings this year rise 8.6% to 134,000, while freight traffic jumps 5.24% to 6.33 billion FTKs.

UPS AIRLINES. See UPS (UNITED PARCEL SERVICE)

URAL AIR (URAL TOO): Russia (1993-1997). This Urals division of **Aeroflot Russian International Airlines (ARIA)** is reformed at Ekaterinburg in 1993 to offer worldwide cargo and passenger charters. Vladimir E. Beketov is general director and he launches revenue flights with 2 Antonov An-32s and 3 An-24s.

Two Ilyushin Il-86s, 19 Tupolev Tu-154Bs, and 6 An-12s are added in 1994 and passenger boardings reach 524,840.

The carrier's 32 aircraft transport a total of 494,200 passengers in 1995, a 6.2% decline. Cargo traffic, on the other hand, accelerates by 13.4% to 9.3 million FTKs.

Much of this growth can be attributed to the company's newfound practice of performing nonscheduled cargo flights to Sharjah, UAE, where Tu-154Bs can be loaded with profitable cargos of cheap (by Russian standards) clothing and all kinds of electronic products.

Flights continue in 1996, although the fleet is altered downward to include 2 Antonov An-32s and 1 Ilyushin Il-76TD.

In 1997, the **Urals Civil Aviation Department (Uralskoe UGA)** and **Ural Air (Ural Too)** are joined together into a single joint stock company, with shareholding divided between the airline's employees (56%), **Proektniye Tekhnologi** (13.9%), and private investors, including **Deutsche Lufthansa, A.G.** (30%).

URAL AIRLINES: Koltsovo Airport, Sputnikov Str. 6, Ekaterinburg, Urals Zone, 620025, Russia; Phone 7 (3432) 266625; Fax 7 (3432) 266221; <http://www.uralairlines.com>; Code U6; Year Founded 1997. In 1997, the **Urals Civil Aviation Department (Uralskoe UGA)** and **Ural Air (Ural Too)** are joined together into a single joint stock company, with shareholding divided between the airline's employees (20.47%), **Proektniye Tekhnologi** (13.93%), **Uraltransbank** (14.7%), and private investors, including **Deutsche Lufthansa, A.G.** (50.5%). Under the leadership of Director General Serguey Skuratkov, the new entity is named Ural Airlines.

Domestic, regional, and international passenger services, both scheduled and charter, are maintained. Among the routes operated is a twice-weekly (thrice-weekly between June and August) return service from Yekaterinburg to Bonn and Cologne. Despite reorganization and a 26% reduction in ticket prices for domestic flights and flights to CIS countries, overall passenger boardings for the year decline another 10.8% to 344,300.

Service continues without incident or headline in 1998. New charter destinations initially visited include Israel, Italy, Spain, and Bulgaria. Customer bookings ascend to 480,000. The Russian currency crisis, which starts in August, has a significant impact on company earnings, although exact figures are not available.

The situation improves somewhat during 1999 and the fleet is upgraded by the return to active status of 5 An-12s, 2 An-24Bs, 3 Il-86s, and 10 Tu-154s withdrawn earlier.

Weekly Tu-154M return service is inaugurated on September 1 from Ekaterinburg to Cologne via Prague. In Prague, Viola Plus, S.R.O. becomes the carrier's general sales agent (GSA).

On September 28, Ural Airlines becomes the first airline to install a Siren-3 booking system.

An on-line reservations service is opened on December 9. The same day, a strategic marketing agreement is signed with **CSA Czech Airlines**. The two agree to share European services and ground services requirements beginning in April, while Ural passengers are immediately able to interline on Czech long-haul flights to such points as New York (JFK).

On December 10, An-12 cargo flights commence from Dubai to Prague via Istanbul, Tashkent, Baku, Tbilisi, Yerevan, and Ekaterinburg. Express mail service between Ekaterinburg and Prague begins the same day.

Enplanements are level at 480,000 while 16.95 million FTKs are operated. Revenues of \$34 million are generated. There are, however, large, if unannounced, losses.

Airline employment totals 1,129 at the beginning of 2000. The fleet now includes 3 each An-24s and Il-86s, 12 Tu-154Bs, and 2 Tu-154Ms.

In cooperation with **CSA Czech Airlines**, dual-designator twice-weekly return service is launched on April 1 between Ekaterinburg and Prague. On April 6, weekly roundtrips are initiated by these partners from Yekaterinburg to Prague.

By the spring, the carrier is in a dire financial situation. On April 10, the regional property fund announces that the 13.93% of the airline held by **Proektniye Tekhnologi** will be sold at a public auction in about a month.

Ural Airlines and CSA begin a second weekly return service to the Czech capital from Yekaterinburg on April 24. Also on April 24, the carrier begins to code-share with **Transaero Airlines** over a route from Ekaterinburg to Moscow.

On April 25, the regional property fund announces the date of the airline's sale will be May 18. The carrier publishes its summer schedule on May 11, but is uncertain as to the volume of traffic that it may generate. The May 18 auction is pushed back into late June.

After a Ural Tu-154 flight lands at Yekaterinburg, in SE Siberia, on May 30 following a service from Tashkent, an unexploded bomb is found aboard. Russian aviation authority experts later report that the explosive device is not in working order and could not have blown up.

An auction of the airline is held on June 27, but attracts little interest. To offset rising fuel costs, ticket prices begin to climb; they will reach a total 15% increase for the year.

Plans are announced on August 10 for a second auction of the company, as well as Koltsovo Airport. When the event is held on August 31, no bids are received. Officials later report that the lack of interest was not unexpected.

Having been unable to unload the airline, its leadership now determines to make a go of it. Work begins to upgrade the fleet of 4 Il-86s, 15 Tu-154s, and 3 An-24s by installing TCAS aboard 7 aircraft (at a cost of \$1.5 million) to meet the April demands of Eurocontrol. Additional improvements include cabin upgrades and the installation of KLN-90B satellite navigation systems.

In addition to the flight equipment improvements, Ural also opens more ticket offices to be closer to its customers. New officers are opened in Moscow, Sochi, Khabarovsk, Yerevan, Baku, Tbilisi, Tashkent, Cologne, and Dubai, as well as Prague. Plans are made to open five more in the Sverdlov region in the new year.

Frequencies are also increased on the popular summer routes, including flights to Sochi, Anapa, Mineral Waters, Astrakhan, Krasnodar, Rostov, Sartor, and Samara. Charters are operated to Tunisia and Mallorca.

Late in the year, permission is received from the Czech transport ministry for the initiation of services from Prague to foreign destinations. Planning immediately begins for the inauguration of flights to The Netherlands, Spain, and France, as well as to Turkey and the UAE.

Passenger boardings dip to 476,623 however cargo and mail increases by 12% to 4,816 tons.

URAL INTERAVIA (URALINTERAVIA AQZT): 2 Ulitsa Kuznetsova, Ekaterinburg, Urals Zone, 620012, Russia; Phone 7 (3432) 266 942; Fax 7 (3432) 266 026; Code U3; Year Founded 1993. Another new private enterprise airline founded at Ekaterinburg in 1993 is Ural Interavia, a domestic ad hoc all-cargo carrier. Mikhail U. Deriagin is named director general and he initiates regional and international revenue services with 3 Ilyushin Il-76s.

Passenger charters are started in 1994 and the fleet grows to include 4 Il-76s and 5 Il-86s. The Russian currency crisis of 1998-1999 has a significant impact on the airline, which now reverts to its original mission as a freight operator. The Il-86s are withdrawn and replaced with two more Il-76, Dash-TDs.

URALS CIVIL AVIATION DEPARTMENT (URALSKOE UGA): Russia (1992-1997). When Aeroflot Soviet Airlines is reformed in early 1992, this Ekaterinburg-based Urals Directorate is reborn as an affiliate of the new Aeroflot Russian International Airlines (ARIA). V. V. Vakmromov is placed in charge and he continues to operate scheduled domestic trunk and regional services with a fleet that includes 10 Antonov An-12s and 20 Tupolev Tu-154s.

Enplanements total 4,443,948.

International charter flights are initiated to Europe and Southeast Asia in 1993. The downturn in the Russian economy brings a big decline in traffic.

Passenger boardings plunge 38.7% to 3,204,000 while freight is off by 38.3% to 523.7 million FTKs.

The fleet is reduced by three Tu-154s in 1994. Customer bookings decline another 34.4% to 2,102,000, while cargo drops 13.2% to 455 million FTKs.

Enplanements plunge in 1995, falling all the way down to 470,713.

In 1996, the carrier's 26 aircraft transport a total of 386,464 passengers, a 21.8% decline.

In 1997, the company is altered into a joint stock company, with shareholding divided between the airline's employees (56%), Proektniye Tekhnologi (13.9%), and private investors, including Deutsche Lufthansa (30%). The new entity is renamed Ural Airlines.

LA URRACA (LINEAS AEREAS LA URRACA, S.A.): Colombia (1955-1979). Alvaro Henao and Fernando Jaramillo found La Urraca ("The Magpie") at Villavicencio in 1955. Employing Douglas DC-3s and Curtiss C-46 Commandos, the brothers seek passenger and cargo charters throughout the heart of Colombia and into the Caribbean. Services continue without incident until November 26, 1962, when a Curtiss C-46 crashes near Port Henderson, Jamaica (two dead). Scheduled flights are initiated in January 1963.

Late in that decade, Fernando is killed in the crash of a new Curtiss C-46 being ferried in from Miami. Ownership now reverts to Alvaro and Fernando's widow Nydia, who maintains operations apace during the remainder of the 1960s.

While en route from Villavicencio to Monterrey on June 20, 1969, a DC-3 with 20 passengers is hijacked to Cuba by three men and a woman.

In 1970, three Handley Page Herald's are purchased. Thirteen are killed as a DC-3 explodes and burns after an emergency landing on a riverbank near Puerto Infrida, 80 miles south of Bogota, on February 12.

In 1971, the fleet comprises 3 Herald's, 4 DC-3s, 2 C-46s, and 1 de Havilland Canada DHC-2 Beaver. Regularly scheduled passenger and cargo services are launched from Bogota and Villavicencio to south Colombian destinations, including Miraflores, Sogamoso, Mito, and Agnazai.

While climbing away from Bogota for a flight to San Andres on January 21, 1972, a Vickers Viscount 837 with 5 crew and 15 passengers suffers an explosion and crashes near Funza; there are no survivors.

A Handley Page HPR-7 Herald 101 is damaged beyond repair in a bad landing at Valledupar on May 7; there are no fatalities.

A little over 9 months later, on February 21, 1973, 22 people perish when a DC-3 smashes into the mountains near Boquete, Panama. While landing at Arauca on November 2 after a flight from Paz de Ariporo and Tame, a Herald 101 with 4 crew and 12 passengers is diverted to Villavicencio, where, with a feathering No. 1 engine, it crashes (6 dead).

Flights continue apace in 1974, but there is another accident in 1975. The failure of its No. 2 engine forces an HPR-7 Herald 101 with two crew and a passenger to make an emergency landing on a grassy field near La Libertad, Colombia, on June 22; no injuries are reported.

Toward the end of the decade, the company acquires a pair of Britten-Norman BN-2 Islanders. However, following the loss of two DC-3s in crashes, the 248-employee carrier returns its focus to charter work and in 1979, following government investigations into various rules violations, La Urraca's operating license is revoked.

U.S. AIRCOACH: United States (1951-1957). Established at Miami in 1951, U.S. Aircoach inaugurates nonscheduled all-cargo charters with a single Curtiss C-46 Commando. A second Curtiss freighter is leased from The Flying Tiger Line in 1952, but is only flown for a brief period. The company fails in 1957.

U.S. AIRLINES: United States (1944-1955). U.S. Airlines, Inc. is organized at St. Petersburg, Florida, on June 9, 1944. Douglas C-47 (military DC-3) charter operations of the irregular begin on December 5, 1945. Scheduled flights commence in January 1946 and on October 10, the CAB grants the carrier the first operating permit given a nonscheduled U.S. airline. The carrier receives its letter of registration on July 30 and flights are now undertaken from Boston to New Orleans, with various stops in between.

U.S. Airlines is one of the cargo carriers caught up in the rate war that now breaks out between the scheduled airlines. So intense is the conflict

that special hearings on the matter are held before the CAB. In May **1947**, the government awards temporary certificates to 14 "non-skeds." Although a recipient, U.S. Airlines elects to suspend services until the CAB completes its work.

In April **1948**, a minimum rate level is ordered put in place and U.S. Airlines now resumes operations, employing eight Curtiss C-46 Commandos leased from the USAF. By year's end, the company is one of only six all-cargo carriers still flying. When it is fully certified on August 12, **1949**, U.S. Airlines is one of just four still operating.

Scheduled freight flights to New York, Texas and other destinations with Skytrains and Curtiss Commandos continue apace in during the remainder of the year and into **1950**. Scheduled service is withdrawn in June **1951**, but Newark to Miami all-cargo contract flights begin on September 18, followed by nonstop New York to Miami routing on November 30.

A reserved space cargo plan is established on January 6, **1952**. New York to New Orleans through-service begins on March 19. On April 5, a C-46 with two crew en route to Idlewild Airport from Fort Lauderdale misses its approach and plunges steeply into a residential section of Jamaica, New York. Both pilots are killed, along with three people on the ground; in addition, 5 houses and 22 autos are destroyed.

Thereafter the company files for bankruptcy, but operations are maintained throughout the remainder of the year, in **1953**, and into **1954**.

A merger with **California Eastern Air Lines** is announced on July 26. All 55 aboard are safe as a DC-4 lands at Hilo, Hawaii, on November 7 after a 300-mi. flight with 2 engines out. Scheduled authority is withdrawn on April 27, **1955** and the business shuts its doors shortly thereafter.

USAIRWAYS. *See* INTERSTATE AIRLINES (2)

U.S. AVIATION: United States (1978–1979). U.S. Aviation is set up at Sheridan, Wyoming, in late **1978** to provide Essential Air Service (EAS) flights to Gillette and Denver. Although revenue flights with Cessna lightplanes commence, they cannot be maintained through **1979**.

U.S. DELIVERY SYSTEMS: 3402 East Wier Avenue, Phoenix, Arizona 85040, United States; Phone (602) 243-9810; Fax (602) 243-9584; Year Founded 1994. Woodrow Matthews sets up U.S. Delivery Systems at Phoenix in **1994** to operate lightplane express, cargo, and courier services. Revenue flights begin with a fleet that includes 6 Piper Cherokee Sixes, 3 Cessna 207As, 1 Cessna C-206, 2 Piper Lances, and 1 Piper Navajo.

U.S. JET AVIATION: United States (1988–1990). U.S. Jet is established at Washington, D.C. in **1988** to offer passenger charter flights with a fleet of 3 Learjets, 2 Beech King Airs, and 10 Eurocopter BK-117 helicopters.

Enplanements total 4,819.

Airline employment is increased by 28.8% in **1989** to 152. When the FAA attempts to revoke the company's operating certificate for alleged FAR violations, the small regional fights back in court and wins its case.

Passenger boardings, meanwhile, skyrocket 43.6% to 8,544 and revenues accelerate 23.4% to \$15.3 million.

Increased fuel costs brought about by Iraq's August **1990** invasion of Kuwait conspire with the deepening recession to force this charter operator out of business in December.

USA JET AIRLINES: Wilson Run Airport, Hangar 2064D, Belleville, Michigan 48111, United States; Phone (313) 483-7833; Fax (313) 483-1023; <http://www.active.aero.com>; Code U7; Year Founded 1979. David B. and Brian M. Hermelin join Martin R. Goldman in establishing this company at Willow Run Airport, Belleville, Michigan, near Detroit, in **1979** to operate on-demand quick-delivery air charters for the automobile industry. This non-scheduled operation continues for the next 15 years, by which time the executives operate as Air Charter Manager for Ford Motor Company of North America.

In late **1994**, the Hermelins and Goldman are ready to inaugurate scheduled cargo services, primarily linking Detroit (YIP) with El Paso, Little Rock, and Memphis. Airline employment at this point stands at 80 and the fleet includes 15 Dassault Falcon 20s and 4 Douglas DC-9-15Fs. Orders are placed for three more of these chartered freighters.

Scheduled flights commence in January **1995** and a total of 7.83 million FTKs are operated by December 31. Operating income exceeds costs and there are profits: \$3.49 million (operating) and \$3.53 million (net).

The employee population stands pat in **1996** and traffic figures are reported through June. These show cargo rising 70.9% to 13.90 million FTKs. Revenues of \$18.46 million are generated and expenses are \$13.09 million. The operating profit is \$5.37 million and a net \$3.53-million profit is reported.

The fleet is increased in **1997** through the addition of another Falcon 20 and a Beech King Air 90; the workforce grows 28% to 320.

Although cargo traffic is down 7.9% to 12.33 million FTKs, the company reports operating revenues have shot up to \$80.2 million. With expenses in hand, profits are reported: \$3.5 million (operating) and \$3.4 million (net).

Flights continue apace in **1998** without incident. A total of 13.06 million FTKs are operated, a 5.9% boost over the previous year. Revenues rise 14.2% to \$91.55 million, while expenses are up 3.6% to \$79.43 million. The operating profit grows to \$12.11 million, while net gain surges to \$10.3 million.

Airline employment has been cut 21.9%, to 250, by the beginning of **1999**.

While on final approach to Kansas City on a March 4, service from Los Angeles, a DC-9-15F with two crew encounters a large flock of birds. During the incident, several birds are ingested into both engines, causing substantial damage and resulting in severe power loss. Still, the aviators are able to successfully complete their landing.

Cargo traffic jumps 29.1% on the year to 16.86 million FTKs. Revenues advance 22.1% to \$111.81 million, while expenses are up 15.7% to \$91.89 million. The operating profit climbs to \$19.91 million and the net gain reaches \$19.28 million.

Airline employment at the beginning of **2000** stands at 424, a 20.5% increase over the previous 12 months. Operations continue to be undertaken with 8 DC-9-15Fs, all Stage 3 noise compliant.

Due to increased demand by the automobile industry for the domestic transport of parts, the company in August acquires three DC-9-32Fs, one DC-9-33F, and a DC-9-51. All are placed into service from the Willow Run base before Christmas.

Freight traffic during these 12 months plunges 22.64% to 13.04 million FTKs.

USAFRICA AIRWAYS: United States (1993–1995). USAfrica is established by its chairman Arthur S. Lewis at Washington, D.C. (DCI) in early **1993** to offer scheduled services to South Africa. Edward R. Bolton is named vice chairman and chief operating officer and plans are made to initiate services early the next year. Interim financing of \$30 million, including two bridge loans worth \$12 million each, are obtained and a workforce of 380 is employed.

The top corporate leadership changes in early **1994**. Wesley Kaldahl, former vice president-route planning at **American Airlines**, becomes chairman while the founding chairman's son, Gregory S. Lewis, is named president/CEO. Two McDonnell Douglas MD-11s are leased from **American Airlines** in late spring and the first delivered, christened *Edward R. Bolton*, is employed to inaugurate twice-weekly scheduled services to Johannesburg via Cape Verde on June 3. The frequency becomes thrice weekly on July 2 as a weekly service to Cape Town is also introduced.

Plans are made to secure a domestic marketing partner in **United Airlines**; however, the employee-buyout of that major during the summer delays the accord until much later in the fall. Meanwhile, as long-term financing is sought, most of the short-term money available comes from mutual funds, one of the year's bad investments.

Frequencies by year's end are 6 roundtrips per week and a total of 33,000 passengers are flown on the year. Revenues are just \$10.29 million and expenses are \$27.79 million. The operating loss is \$17.49 million and the net loss totals \$18.14 million.

Short-term financing cannot, however, sustain the company's operations far into 1995. On February 3, USAfrica Airways misses an important lease and maintenance payment to **American Airlines**, which is forced to repossess the two MD-11s. A week later, the new entrant suspends operations and files for Chapter XI bankruptcy.

During the last week of July, company officials forge a marketing alliance with **Continental Airlines**. The executives have (wrongly as it turns out) expectations of emerging from bankruptcy in November and resuming flights. **Continental Airlines**, for its part, would code-share on USAfrica Airways frequencies and provide ground-handling at Newark (EWR), to which the new entrant would shift from Washington, D.C. (IAD).

USAIR: United States (1979-1997). USAir is born on the morning of October 28, 1979 when the nation's sixth-largest air carrier, **Allegheny Airlines (I)**, changes its corporate identity to reflect its ever-expanding network. A few months later, in accordance with the CAB's revised airline classification scheme, the newly renamed company, the largest local service airline, is ranked as one of the country's 13 "major" carriers. Although its operations and maintenance hub at Pittsburgh is strengthened, corporate headquarters remain in the same Washington, D.C. (DCA) hanger they have occupied since 1949. The workforce is 9,317 and the fleet includes 2 B-727-2B7s, 11 B-727-1B7s, 49 DC-9-31s, and 28 BAC 1-11-200s.

In the year's closing months, the carrier's niche in the Northeast is maintained, the "Allegheny Commuter" network is nurtured and expanded, and unlike the approach of other airlines flying deregulated skies, no rush is made to lower fares. At the same time, orders are placed for 10 additional Douglas DC-9-30s and 3 Boeing 727-2B7s. Largely unnoticed during the year is the appointment of Joyce Stripp to the right seat of a BAC 1-11-200; she is the company's first female pilot.

Passenger boardings for the year under two names total 14,152,000, a 9.2% jump; cargo climbs a meager 0.1% to 30.39 million FTKs. Operating income accelerates 28.58% to \$728.71 million and expenses are held to \$676.77 million, a 27% gain. Consequently, profits for the year are \$51.93 million (operating) and \$33.4 million (net).

The employee population rises by 11.2% in 1980 to 10,470. Over \$16 million is expended to upgrade terminals systemwide while also expanding maintenance facilities at Pittsburgh. Airliner interiors are all refurbished. During the first complete year of the major's new title, USAir adds San Antonio, New Orleans, Houston, and Phoenix to its domestic route network.

It records a 1% rise in passenger boardings, up to 14.3 million; cargo declines by 27.8% to 27.2 million FTKs. A net profit of \$60.3 million is earned on total revenues of \$971.8 million, up 33.4%, and \$880 million in expenses, continuing a trend that will eventually show, at least for awhile, the company as the most profitable since deregulation.

Airline employment is increased 3.7% in 1981 to 10,764. Service is extended to Dallas (DFW), Kansas City, Austin, Knoxville, Grand Rapids, and Fort Lauderdale. The fleet is strengthened by the arrival of 11 new aircraft: 3 new Boeing 727-2B7s and 8 Douglas DC-9-30s. Orders are placed for 15 B-737-2B7s and 10 B-737-3B7s, with USAir the launch customer for the latter aircraft.

A \$16-million concourse is opened at Pittsburgh and boasts the world's largest ground power system. Maintenance facilities at the Pittsburgh airport are also improved, to the tune of \$19 million. The carrier's management information services division is transferred from Washington, D.C. (DCA) to a new \$12-million computer center in Virginia.

En route from Albany to Buffalo on October 5, Flight 455, a BAC 1-11-200 with 66 passengers, is taken over by a man claiming to have a bomb, but who quickly surrenders. Upon examination, he will be found mentally unstable and will be ordered to a psychiatric facility.

The PATCO air traffic controllers' strike of the summer is almost solely responsible for a 5.6% decline in passenger traffic to 13.4 passengers. It also forces a 20.7% downturn in freight traffic, to 17.41 million FTKs. Revenues accelerate 14.27% to \$1.11 billion, but even with a 19.49% boost, expenses are kept to a manageable \$1.05 billion. The operating profit swells to \$58.46 million and net income of \$51.08 million is banked.

From a psychological and marketing standpoint, the year's greatest achievement comes in the wake of the earnings statement because its operating income now qualifies USAir to be labeled a "major" carrier under the CAB's airline classification scheme. It is the first company added to that select list since its initial publication.

USAir has a remarkable 1982. The payroll is boosted 2.6% to 11,046, as Denver joins the route system. New aircraft overhaul and flight training facilities are occupied in Pittsburgh and a \$16-million remodeling of the South Dock there adds 10 new boarding gates. On that basis, the carrier is now ranked 10th in size in the free world. New deliveries aid the company's fleet modernization program as 6 B-737-2B7s, 2 B-727-2B7As, and 8 DC-9-31s are placed on line.

A DC-9-31 strikes a deer on takeoff from Pittsburgh on August 28 and although the plane must make an emergency landing and be taken out of service, no injuries are reported by anyone aboard.

Boardings rebound strongly, jumping 9.1% to 14,727,000; cargo, unhappily, drops 14.2% to 14.93 million FTKs. On the financial side, CEO Edwin I. Colodny's cautious post-deregulation approach pays big dividends. The debt and equity position is improved to one of the best in the industry, with a ratio of 42 to 58. Additionally, in a year when most of the country's airlines are having financial trouble as the result of recession and cutthroat competition, USAir produces a \$59.1-million net profit on revenues of \$1.27 billion.

The ledgers not only show that the company possesses the best operating margin among domestic air carriers, they also proclaim the sensational news that it has achieved the largest net profit of any airline in the world and is one of only two American majors to have net gain.

Fifty-four new employees are hired in 1983 and on February 1, shareholders approve the creation of a holding company, USAir Group, which will now operate the airline, several regional carriers, and aviation support firms as subsidiaries. Since 1979, the carrier has acquired 58 aircraft, bringing its total to 18 B-737-2B7s, 14 B-727-2B7/-2B7As, 71 DC-9-31s, and 24 BAC 1-11-200s, the latter mostly holdovers from the **Allegheny Airlines (I)** era. All remaining B-727-1B7s and most BAC 1-11-200s are disposed of as 9 B-737-2B7s and 3 B-727-2B7As are delivered.

USAir becomes a transcontinental airline in March when nonstop service is launched from Pittsburgh to Los Angeles and San Francisco in competition with **United Airlines**, which will drop those routes in January 1984, and to San Diego. From the Pittsburgh hub, routes are extended to seven new markets in the North and South Carolina and Virginia.

When flights from its connecting "Allegheny Commuter" system are included in the total, USAir has 300 departures a day from its Pittsburgh base, the most by any carrier from any airport save Atlanta, where **Eastern Air Lines** has 327 and **Delta Air Lines** has 301.

Enplanements increase by 11% to 16,352,000 and as the routes lengthen, the average passenger trip grows from 327 miles in 1978 to 452; freight booms upward by 9.3% to 16.31 million FTKs. Revenues accelerate 12.51% to \$1.43 billion and costs climb 9.19% to \$1.30 billion. The operating profit is \$128.87 million and net gain totals a record \$78.38 million.

Employment grows 5.3% in 1984 to 12,524 and the fleet now includes 21 BAC 1-11-200s, 49 owned and 22 leased DC-9-31s, 14 B-727-2B7As, and 17 owned plus 6 leased B-737-2B7s.

In January, the carrier receives the 1983 "Financial Management Award" from *Air Transport World* magazine. Flight 183, a DC-9-31, is involved in a landing accident at Detroit (DTT) on June 13, while the first 4 of 30 B-737-3B7s on order arrive in December.

Although service is begun to Fort Myers, Florida, no major moves are made by USAir this year, save the establishment of a frequent-flyer

program, Frequent Traveler. Frequencies from the Pittsburgh hub are increased; 249 departures leave the Pennsylvania city daily for 69 destinations. Meanwhile, as is the case with several competitors, the company negotiates a two-tier wage scale with its employees.

Passenger traffic increases by 5.7% as 17,277,000 customers are flown; cargo rises 22.8% to 20.2 million FTKs. Operating revenues jump 13.8% to \$1.62 billion and costs are checked at \$1.43 billion, a 10.3% boost. Operating profit balloons to \$550 million and yet another record net profit, \$121.4 million, is turned in.

The payroll grows by 10.1% in 1985 to 13,789 as nonstop service from Pittsburgh to San Diego, Milwaukee, and Green Bay. The carrier now flies over 70% of all customers flying through or from Greater Pittsburgh, now the nation's 5th largest hub. In April, the company orders 20 sets of avionics for its B-737-2B7s and markets 2 jetliners, a B-727-247 for **Western Airlines** to Louisiana-based **Gulf Air** and a B-727-1B7 for Calgary-based VCHC Enterprises, Ltd. to **Avensa (Aerovias Venezolanas, S.A.)**.

Flights begin on May 1 from Pittsburgh to Newport News and Myrtle Beach. In mid-May, it is announced that "Allegheny Commuter" partner **Pennsylvania Commuter Airlines**, based at Harrisburg, has been purchased. In late July, the company signs a \$380-million order to purchase 20 Fokker 100s, becoming the jet's U.S. launch customer. Commuter partners **Ransome Airlines** and **Fischer Brothers Aviation** defect to other majors during the fall and plans are now made to take over **Suburban Airlines** as "Allegheny Commuter" bookings reach a cumulative total of 25.7 million.

Customer bookings advance by 13.1% to 19,278,000 and freight balloons 26.2% to 91.15 million FTKs. Revenues accelerate by 7.3% to \$1.74 billion, costs climb 10.1% to \$1.58 billion, and the operating profit declines to \$166.92 million. Net gain dips to \$109.85 million.

Airline employment rises 8% in 1986 to 14,800. A new hub is opened at Philadelphia to complement the cross-state operation at Pittsburgh.

While landing at Erie, Pennsylvania, following a service from Toronto on February 21, Flight 499, a DC-9-31 with 5 crew and 18 passengers, encounters tailwind conditions and a slippery runway, which is overrun. The aircraft crashes through a fence, across a road, and into a ditch 180 ft. from the end of the concrete. There are no fatalities.

By March, the "Allegheny Commuter" network is operating 594 flights per day, feeding USAir at Baltimore, Boston, New York, Newark, Pittsburgh, Philadelphia, and Washington, D.C. **Suburban Airlines** is acquired on April 30 as, beginning this spring, flights are inaugurated to Atlanta, Jacksonville, Portland, and Manchester.

In June, the company begins hush-kitting the Rolls Royce Speys on its 20 BAC 1-11-200s at the rate of one per month. Also during the summer, the company begins dual-designator flights with **Northwest Airlines** on USAir routes between San Francisco and Los Angeles and starts to participate in Northwest's frequent flyer program in the Pacific.

On August 28, four B-727-2B7s are sold to **Sterling Airways, A.S.** of Copenhagen and in September, four-times-per-day nonstop service is initiated from Washington, D.C. (DCA) to Boston. As the airline industry goes through a consolidation phase, competition for the lucrative California market intensifies as local carriers are bought and merged into larger partners. **Pacific Southwest Airlines (PSA)** of San Diego is purchased by USAir on December 6.

Passenger boardings jump 12.7% to 21,725,000, while cargo falls 3.2% to 21.49 million FTKs. Revenues swell by 2.2% to \$1.78 billion, costs climb 2.6% to \$1.62 billion, and the operating profit is down \$2 million to \$164.13 million. The net gain also slips, by \$20 million to \$89.16 million. Income by USAir Group totals \$169.4 million (operating) and \$98.4 million (net).

The workforce is increased another 12.3% in 1987 to 16,620. In January, Norfolk Southern Railroad, which owns almost 20% of North Carolina-based **Piedmont Airlines (1)**, the dominant carrier throughout the mid-Atlantic region, announces its plan to take over complete control with an offer of \$65 per share for the outstanding common shares. In early February, after 11 straight profitable years and still in an ex-

pansion mode, USAir Group Chairman Colodny counters the Norfolk Southern Railroad offer with a \$72 per share bid (\$1.65 billion total) that forces the railroad to withdraw its bid.

On March 4, just as USAir Group is about to savor the purchase of 2,292,599 shares in the larger Piedmont, **Trans World Airlines (TWA)** Chairman Carl Icahn offers \$1.4 billion for the pride of Pittsburgh itself, suggesting he will merge the two airlines with his own to form a super-carrier. Although he has managed to acquire 15% shareholding in USAir through an investment group known as Swan Management, the rival's hostile takeover is successfully fought off during the next few days. It is helped along, no doubt, by a Securities and Exchange Commission March 4 announcement that it is investigating Icahn's practices as part of a general SEC review of insider trading.

On March 5, USAir's principal financial backer, Manufacturers Hanover, in response to a request from the Piedmont board for a cash deal, agrees to advance the necessary \$800 million, allowing the USAir and Piedmont boards to complete approval of the merger on March 6. An additional 9,309,394 Piedmont shares are thus acquired by Chairman Colodny on April 1 and by mid-month, a plan for merger of the field sales staffs of the three airlines is cancelled; the TWA chairman's interest in USAir is finally abandoned in May.

In July, USAir Group prepays \$505 million in indebtedness under a \$2-billion credit agreement. Daily nonstop B-737-3B7 flights commence in September from New York (JFK) to Ottawa. The following month, as the DOT approves the Piedmont acquisition, six-times-per-day nonstop return trips commence from Cleveland to Newark.

In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

The **Piedmont Airlines (1)** purchase arrangement is completed on November 5, with all remaining outstanding stock now passing to USAir. Total cost of acquiring the new North Carolina-based subsidiary is \$1.6 billion and it is slated for integration completion in early 1989. It will be operated as a subsidiary for eight months while, in addition, the "Piedmont Commuter" affiliates **Henson Aviation** and **Jetstream International Airlines** now become "USAir Express" operators. Thrice-daily service is inaugurated in November from Pittsburgh to Wichita via Kansas City.

An engine falls off a B-737-2B7 minutes after takeoff from Philadelphia on December 5 and makes a hole in a plowed field in Deptford Township, New Jersey; passengers aboard the little Boeing panic, but flight attendants bring them under control, allowing the plane to land safely.

Also in December, USAir Group continues to retire debts incurred to acquire PSA and Piedmont by prepaying another \$400,000,000 in indebtedness under the \$2-billion credit agreement; still, \$1 billion is outstanding under the agreement. On the last day of the year, the fleet numbers 401 aircraft, not including either orders or the planes of commuter partners.

The year's customer bookings accelerate 14% to 23,772,843, while freight recovers to increase by 4.4% to 22.44 million FTKs. Revenues advance 15.86% to \$2.07 billion, expenses grow 11.34% to \$1.8 billion, and the operating profit is \$283.61 million. Net profit balloons to \$140.07 million. USAir Group's consolidated operating profit is \$319.2 million and net gain is \$194.6 million.

The employee population falls 9.9% in 1988 to 14,976. **Pacific Southwest Airlines (PSA)**, despite objections from certain of its pilots, completes an integration process on April 9 and becomes a wholly owned subsidiary of USAir Group. As the result of negotiations with Allegheny County, a new long-term lease is signed with officials for occupancy at Pittsburgh.

The carrier now switches from its old "AL" two-letter code to a new "US" designation. At the same time, an 11.5% interest is taken in the Covia computerized reservations system still 50% owned by **United Airlines**. Meanwhile, experimental color schemes are applied to two DC-9-31s; both continue to place emphasis upon the bare metal livery.

On May 2, service is started from Pittsburgh to Atlantic City. Later in the month, year-round, nonstop flights are initiated between Palm Springs and San Diego, with continuing service to Pittsburgh. Simultaneously, the Visit USA airfare plan is revised.

As its difficult integration continues, **Piedmont Airlines (1)** continues to operate in a subsidiary role. On June 1, the new parent launches four daily roundtrips between Pittsburgh and Chicago (MDW) and thrice-daily frequencies between Philadelphia and Atlanta. Beginning in October, the company launches sustained competition against **Braniff, Inc.** at Kansas City by introducing daily nonstop return flights from that Missouri city to Los Angeles. Subsidiary **Piedmont Airlines (1)** also participates in the assault.

In November, twice-daily roundtrips begin from Pittsburgh to Worcester, Massachusetts.

Passenger boardings decline 3.3% to 35,054,000 and cargo is down by 2.9% to 35.3 million FTKs, the smallest amount hauled by any U.S. major. Revenues grow by 6.06% to \$2.98 billion, costs are up 12.44% to \$2.84 billion, and the operating profit is cut almost in half to \$140.16 million. The same integration costs that impact the receipt of operating income slice the previous year's net gain to only \$57.71 million.

The fleet of the 18,000-employee major in **1989** includes 6 leased B-767-201ERs, 12 owned and 13 leased B-737-4B7s, 15 owned and 16 chartered MD-81s, 9 owned and 35 B-727-2B7/-2B7As, 60 owned and 14 chartered DC-9-31s, 8 Fokker 100s, 62 owned and 23 leased B-737-2B7s, 41 owned and 61 chartered B-737-3B7s, 4 owned and 17 leased BAe 146-200s, 4 owned and 21 leased F.28-4000s, and 20 F.28-1000s. Orders are outstanding for 55 B-737-300/400s, 5 B-767-2B7ERs, 20 MD-82s, and 22 Fokker 100s.

Swissair, A.G. becomes a partner in the airline's frequent flyer program on May 1. Also, beginning in May, the carrier offers five Visit US airfare packages for non-U.S. visitors to America; each is priced according to the number of sectors traveled.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. USAir, with seven security breaches, is faced with \$65,000 in punishment. The first Fokker 100 is received from Holland in June and the last BAC 1-11 is retired.

In July, USAir Group becomes the 186th member of IATA. Integration of the salaries and benefits of its PSA and Piedmont acquisitions are completed by August 5, at which point Piedmont is finally integrated. The achievement marks the largest merger in world airline history. The Piedmont policy of giving passengers a whole can of soda instead of just a cupful is adopted company-wide on August 19. A new color scheme and logo is unveiled and work is begun on redesign of aircraft interiors.

Also in August, USAir Group sells \$358 million in 9.25% Series A preferred stock to Berkshire Hathaway, which is controlled by billionaire investor Warren E. Buffet; Buffet's acquisition represents a 12% interest. Flight 105, a B-737-2B7A, is involved in a landing accident at Kansas City on September 8. Additionally, daily nonstop service is inaugurated on September 15 from Philadelphia to Los Angeles and Bermuda.

After inadvertent rudder trim threatens to force it to veer off the runway to the left on September 20, Flight 5050, an 8-month-old B-737-401 with 6 crew and 57 passengers en route to Charlotte, North Carolina, rejects takeoff when about half-way down the New York (LGA) runway. The Boeing then slides off the end of the rain-slicked concrete, dropping onto a light pier that collapses. The plane breaks into three parts and falls into the East River to a depth of 7-12 ft. (two dead). Pilot Michael Martin and copilot Constantine Kleissaf, neither with much B-737 flight experience, initially disappear from the wreck site.

During pushback in preparation for departure from Orlando during a thunderstorm on October 7, a DC-9-31 with 107 passengers is struck in the tail by lightning. A ground worker wearing a headset connected to the aircraft is fatally injured by the bolt as it travels into him via the Douglas.

Hurricane Hugo in September and the San Francisco earthquake of October cause damages and impact schedules. Still, USAir begins daily

nonstops from Dayton to Phoenix and adds a third daily nonstop from Dayton to Tampa. **Air France** becomes a member of the company's Frequent Traveler program.

Eighteen new departures are initiated from the Philadelphia hub on December 1, including daily nonstop service to Sarasota, Florida, Nassau, and San Juan. The same day, nonstop flights commence to Baltimore (BWI) from Denver and between Long Beach and Phoenix. Later in the month, twice-daily nonstops commence between Kansas City and Indianapolis, while a second daily nonstop is introduced from the Missouri city to Los Angeles and San Francisco.

Customer bookings for the year dip again, by 1.3%, to 61,152,000; cargo, however, is up by 10.3% to 143.99 million FTKs. Revenues rise 9.53% to \$6.25 billion, expenses jump 18.15% to \$6.23 billion, and operating income plunges to \$21 million. The previous year's net profit becomes a \$63-million net loss.

With 52,000 workers, USAir in **1990** is the 5th largest airline employer in the world; the 452-jetliner fleet is fourth largest.

Just after New Year's, stockholders, including company board member George Goodman, alias Adam Smith the economics author, find that a common share purchased for \$1,000 in 1980 is now worth \$5,090.

While en route from Buffalo to Cleveland on January 18, an MD-81 is forced to turn back to its point of origin when its cockpit is filled with smoke from an improperly repaired electrical installation in the left generator. A safe emergency landing is made and no injuries are reported.

A \$1-million renovation and remodeling project is begun in February to increase the USAir Club on Concourse C at Charlotte Douglas International Airport by 50%.

At the same time, Hyatt Hotels and Resorts becomes a partner in the Frequent Traveler frequent flyer program. Still struggling with problems caused by the takeovers of **Pacific Southwest Airlines (PSA)** and **Piedmont Airlines (1)**, the Pittsburgh heavyweight acquires Gate 43 at Greater Pittsburgh International Airport from **Eastern Air Lines** in preparation for an expansion of its international services. The company now flies to 135 cities in 36 states, plus Canada, the Bahamas, and the new European markets. Indeed, the company has more flights per day than any other airline.

One nonstop daily roundtrip is introduced in March between New York (LGA) and Charleston and Greenville/Spartanburg; two roundtrips are offered from New York (LGA) to Colombia and Jacksonville. At the same time, seven daily nonstop roundtrips are inaugurated from New York (LGA) to Boston. On May 1, daily nonstop roundtrips inaugurated between New York (LGA) and Bermuda. The next day, May 2, daily roundtrip nonstops are started from Orlando to Los Angeles and Kansas City. From the latter point, daily flights begin to Seattle and twice-daily frequencies are launched to Wichita.

A daily nonstop roundtrip is inaugurated from Baltimore (BWI) to San Juan. Daily nonstop roundtrips to San Diego from Cleveland now begin, as do thrice-daily nonstops from Milwaukee to Charlotte. A marketing alliance is entered into with the Italian flag carrier **Alitalia, S.p.A.** Under its terms, the two carriers will code-share from Washington and Philadelphia to Rome via Boston. Simultaneously, an initial agreement for block-space purchase and connecting service on three weekly flights between Washington (IAD) and Orlando is inked with **All Nippon Airways Company, Ltd. (ANA)**. The Japanese carrier joins in the USAir Frequent Traveler frequent flyer program.

For the summer season that begins in June, the airline offers all-inclusive Universal Studios Star Vacation packages as well as special discounts on flights to the Universal Studios facilities in Florida and Hollywood, California; movie characters are featured on all of the airline's ticket jackets to promote the Universal programs. Pittsburgh-Frankfurt B-767-2B7ER service is inaugurated on June 15, the same day daily roundtrips are begun between San Diego and Charlotte. These German service complements existing Charlotte to London service begun by **Piedmont Airlines** three years earlier. As both are taxiing at New York (JFK), a B-737-4B7 collides with an **Alitalia, S.p.A.** aircraft also on June 15, causing minor wing and tail damage, but no injuries.

Air New Zealand, Ltd. and **Sabena Belgian World Airlines, S.A.** join the carrier's Frequent Traveler frequent flyer program in July. The same month, the company's new \$58-million, 551,000-sq.-ft. maintenance complex is opened at Charlotte and **StateWest Airlines** joins the "USAir Express" commuter compact.

A B-737-222 with 5 crew and 22 passengers fails its takeoff from Charlotte on July 22; following the abort, an engine must be shut down and the nosewheels separate from their gear. There are no injuries reported.

Fare wars during the summer, coupled with enormous fuel price increases in the wake of Iraq's August 2 invasion of Kuwait and growing national recession in the year's second half, lead to what Chairman Colodny calls "the most difficult year in the company's history." Seattle to Reno service begins in August and at the end of the month, 3,600 employees are laid off.

On September 5, thrice-daily roundtrips begin from Charlotte to Harrisburg while Philadelphia to New Orleans service is increased from one to two daily roundtrips and Pittsburgh to Charlotte frequencies are reduced to five daily roundtrips. **Alitalia, S.p.A.** and **KLM (Royal Dutch Airlines, N.V.)** join the Frequent Traveler frequent flyer program later in the month, as four new destinations are inaugurated from Boston: Columbus, Indianapolis, Tampa, and Orlando.

In October, daily roundtrip service is initiated from Boston to Columbus, Indianapolis, and Orlando and from Kansas City to Tampa/St. Petersburg. A B-737-2B7 flight is added roundtrip from Kansas City to Orlando while a B-737-3B7 roundtrip is started from Los Angeles to Kansas City. Daily nonstop B-737-3B7 Dayton to Fort Myers service begins on November 1, followed by daily B-767-2B7ER service from Pittsburgh to Frankfurt in December.

Passenger boardings for the year decline 1.8% to 60,059,269, a figure still 4th among world carriers. Freight comes through again, however, climbing 15.8% to 166.74 million FTKs. It is in the ledger books that disaster is most clearly seen. Revenues are off by 2.66% to \$6.08 billion, still 7th best in the world. Expenses, on the other hand, swell 6.39% to \$6.62 billion and turn the previous year's small operating profit into a huge \$543.23-million loss. Meanwhile, the small net loss becomes a gigantic \$454.4-million downturn.

Not willing to suffer reversal without a fight, USAir attacks its physical and fiscal difficulties in 1991. Seven thousand employees are laid off, twenty-four B-727-2B7s begin withdrawal, and B-737/767 deliveries are pushed back into the future. Beginning on January 1 and running through March 15, the carrier offers special \$175 roundtrip fares to Frankfurt for travel agents in appreciation of their assistance over the previous year.

DC-9-31 flights commence on January 8 from Pittsburgh to Stewart International Airport in New York State. Also in January, an additional flight is added from Greenville and Spartanburg to Baltimore (BWI). **Air Midwest** joins the "USAir Express" commuter network at month's end, while daily DC-9-31 service from Pittsburgh to Newburgh, New York, begins in February.

Flight 1493, a B-737-3B7 with 6 crew and 83 passengers landing in clear weather at Los Angeles (LAX) on February 1, alights atop **Skywest Airlines** Flight 5569, a Fairchild Metro III with 2 crew and 10 passengers, preparing for takeoff. The jetliner bursts into flames (34 dead) and the Fairchild is smashed and all aboard are killed. The crash is blamed on an air traffic control error.

In the face of tough competition from **Southwest Airlines**, withdrawal from the eight California markets, including Orange County-John Wayne Airport, begins on May 2 as hubs are realigned with more through-flights from Pittsburgh, Charlotte, and Philadelphia and fewer departures from Baltimore (BWI) and Cleveland.

Flight crew bases are closed at San Diego, Syracuse, Miami, and Greensboro and all 18 ex-PSA BAe 146-200s are withdrawn, while delivery of 16 aircraft is delayed. The same day, nonstop daily B-767-2B7ER service begins from Philadelphia to Paris and San Francisco. During the month, nonstop daily Fokker 100 flights commence from

Pittsburgh to Des Moines and Omaha, while DC-9-31s offer nonstop Pittsburgh to Myrtle Beach and Birmingham flights. B-737-4B7s now fly nonstop from Pittsburgh to Reno.

Chairman Colodny relinquishes his CEO/president titles to Seth Schofield on June 1. After issuing \$213 million of convertible preferred stock and completing \$332 million of aircraft lease financing through the first six months, the airline's liquidity position, at the end of June, is approximately \$820 million in cash and available bank lines of credit.

In July, employing five Fokker 100s as security, the company completes \$103 million of secured-debt financing with Kreditanstalt für Wiederaufbau. Also during the month, the new \$22.5-million maintenance facility is opened at Indianapolis.

During July, a code-sharing agreement is signed with **LADECO Chilean Airlines, S.A.** and is designed to promote transportation between the South American nation and USAir's North American cities served from the Baltimore (BWI) hub.

On August 7, the U.S. Federal District Court, Atlanta, converts an antitrust lawsuit against nine airlines into a class-action that could benefit many consumers and cost the carriers millions of dollars; the antitrust suit charges that this company and the others conspired to keep ticket prices high at 23 hub airports.

Also in August, hourly shuttle service commences between Boston and Washington, D.C. In conjunction with **All Nippon Airways Company, Ltd. (ANA)**, USAir inaugurates daily B-737-3B7 service from Washington, D.C. (DCA) to Orlando at month's end.

On September 4, Philadelphia to Austin and San Antonio B-737-4B7 flights begin while, on September 23, an all-cargo interline agreement is signed with **Aeroflot Soviet Airlines**. Also in September, the carrier initiates hourly (14 flights per day) Boston to Washington direct frequencies. After losing some \$45 million in 18 months, the carrier closes its Dayton hub, laying off 359 employees; "spoke" flights from the Ohio city are diverted to Pittsburgh. An agreement in principle is signed with **Air Canada, Ltd.** for a strategic alliance in the areas of operational, marketing, technical, and investment activities.

In October, "USAir Express" Charlotte-Montgomery commuter service is replaced with Fokker Fellowships. Also in October, a new arrangement is made with General Electric Capital Corporation for aircraft leases; under its terms, 10 former **Eastern Air Lines** B-757-225s, parked since that carrier's January failure, are chartered. In addition, GECC promises to purchase and leaseback to USAir 15 B-737-3B7s at a price of \$330 million. Simultaneously, the airline begins to call upon its employees for further participation in cost-cutting programs.

Daily F.28-4000 frequencies are introduced on November 1 from Charlotte to Rochester and twice-daily nonstops begin from New York to West Palm Beach and three-times-daily nonstops are launched from Pittsburgh to Trenton. The same day, daily nonstop roundtrip B-767-2B7ER service is inaugurated from Charlotte to Frankfurt. Also in the fall, total of 114 slots are purchased from **Continental Airlines** at Washington, D.C. (DCA) and New York (LGA) for \$61 million, with new the East End Terminal thrown in at the latter point.

Additionally, two London routes are purchased from **Trans World Airlines (TWA)** for \$50 million. A management contract is signed for operation of the **Trump Shuttle** and \$16 million is spent for an option to purchase it.

Customer bookings fall another 7.4% to 55.6 million, while cargo moves ahead by 19.7% to 199.53 million FTKs. Although revenues decline 0.58% to \$6.04 billion, expenses drop 5.68% and still total \$6.25 billion. The resulting operating loss is an improvement over the previous year, but still a minus figure of \$202.1 million. The net loss is cut in half to \$259.99 million.

Company employment remains level in 1992 at 47,000 as 10 B-757-225s arrive, replacing a number of retired B-737-2B7s and BAe 146-100s. Due to operating losses, the company discontinues hub operations from Dayton on January 2, reducing the number of daily jet departures from 73 to 20. The majority of jetliner flights previously flown between the home of the Wright Brothers and smaller communities are hubbed at

Pittsburgh and there is no reduction in systemwide capacity as a result of the shift.

Hourly Boston–Newark shuttle service begins on January 7, the same day nonstop daily frequencies are initiated from Charlotte to Albany, from Pittsburgh to Evansville, Champaign/Urbana, Flint, Kalamazoo, Lansing, Fort Wayne, and South Bend, and from Philadelphia to Dallas (DFW). “USAir Express” commuter flights from Charlotte to Atlanta are replaced by F.28-1000s and four-times-per-day DC-9-31 flights are opened from Atlanta to Madison via Indianapolis.

Flight 305, a DC-9-31 with 5 crew and 36 passengers, is destroyed as the result of a heavy landing at Elmira, New York, on January 18; there are no fatalities.

Also in January, USAir begins flying its B-767-2B7ERs from Philadelphia to Paris. Vice Chairman/Executive Vice President-Marketing Randall Malin resigns at month's end and is succeeded, in February, by **United Airlines** Senior Vice President-Planning W. Thomas Lagow. When the new Galileo International reservations service is formed, the carrier acquires 11% shareholding. It is announced at month's end that the salaries of directors will be cut 20% and those of top airline officials by 15%.

With ice on its wings, Flight 405, an F.28-4000 with 4 crew and 47 passengers, mostly from Ohio, is unable to complete its March 22 take-off from New York (LGA) for Cleveland in a blizzard. The jetliner stalls and crashes, coming to rest upside down and partially submerged in Flushing Bay (27 dead). Fredric Nickell, who is driving a lavatory pump truck, and Jimmy May, operating a baggage cart, race to the scene and braving flaming jet fuel, pull dazed survivors from the freezing waters in an act of heroism celebrated by the local media.

Alan Ebert tells of the survival of actor Richard Lawson after the accident in “Angel in My Corner” in *Essence* 23 (July 1992): 90–92. The Subcommittee on Transportation and Related Agencies of the U.S. Senate's Committee on Appropriations also looks into the accident in its *Field Hearing to Receive Testimony on the Crash of USAir Flight 405: Hearings*, 102nd Cong., 2nd sess. (Washington, D.C.: GPO, 1992). Kendra St. Charles will live with memories of the tragedy for years before reporting them, with the help of editor Patricia Burnstein, in “Just Lean on Me” in *Ladies Home Journal* 107 (May 1995): 44+.

On April 12, USAir assumes management of the former **Trump Shuttle** and renames it **USAir Shuttle**; hourly service is continued between New York and Boston and between New York and Washington, D.C. (DCA). The contract gives USAir the right to purchase the shuttle outright at the end of four-and-a-half years. “USAir Express” chief Gordon Linkon is transferred to the shuttle as president/CEO. Also in April, ground is broken on a \$23.5-million maintenance hangar at Tampa.

Daily, nonstop service is inaugurated from Philadelphia and Baltimore (BWI) to London (LGW) on May 1, the same day flights commence between Charlotte and Bermuda. Service from Baltimore (BWI) is adjusted downward on May 22 to certain markets, while allowing increases to other destinations. Overall daily jetliner departures are reduced from 111 to 88 while “USAir Express” flights are increased from 87 to 102.

A B-727-254 shuttle, approaching New York (LGA) on May 19, aborts its landing and passes within 50–75 feet of a **United Airlines** jetliner taking off for Chicago.

Also in May, a new four-year contract is signed with company pilots that provides for \$100 million in wage and work rule concessions. The FAA cites company heroes Nickell and May, now working for **USAir Shuttle**, for their “selfless concern for the preservation of human life” for their rescue work in connection with the Flight 405 disaster.

When Chairman Colodny retires on June 30, his title is assumed by President/CEO Seth Schofield.

Piedmont Aviation Services, Air Service, and Aviation Supply Corporation are sold to Piedmont Holding on July 15. The carrier joins with **British Airways, Ltd. (2)** on July 21 to announce plans for the formation of the world's largest code-sharing alliance. The U.K. flag carrier will invest \$750 million in new 7% convertible preferred shares in USAir and receive, in return, 4 seats on the company's board of directors and 21% interest in the voting stock.

Although the company offers nonscheduled lift to some 20 college football teams and a number of professional hockey teams, its only charter contract with a National Football League team continues to be held with the Pittsburgh Steelers.

Two of the carrier's jetliners, a B-767-2B7ER and a DC-9-31 carrying more than 200 passengers, come within half a mile of each other 28,000 feet over Richmond, Virginia, on September 1. The new USAir Terminal at New York (LGA) is opened on September 12. Also in September, the chairmen of **Federal Express**, **United Airlines**, **Delta Air Lines**, and **American Airlines** formally oppose the USAir-BA arrangement unless greater traffic rights are forthcoming from the U.K.

The carrier becomes the primary tenant (53 of 75 gates) when the new, \$750-million state-of-the-art Midfield Terminal is opened at Pittsburgh on October 1, gaining 17 additional gates. On October 8, the company's 8,300 unionized machinists stage a 4-day job action, the first strike in the company's history, to protest the carrier's call for additional economic concessions; the action causes the cancellation of over 1,000 daily flights. Machinists end their strike on October 12 by agreeing to pay concessions as part of a new 4-year contract.

During November, another alliance is signed with **All Nippon Airways Company, Ltd. (ANA)** to provide one-stop service between Charlotte and Tokyo. Six-times-per-week Charlotte (later Orlando)–Washington, D.C. (IAD) flights are inaugurated, timed to connect with the ANA service to Japan.

In December, the outgoing Bush administration signals its disapproval of the BA deal. The arrangement costs USAir \$750 million in an immediate and long-term British cash infusion and is put off in December. Chairman Schofield and nine other top executives are forced to delay receipt of \$4.3 million in bonuses due upon completion of the BA deal.

Passenger boardings for the year dip 1.7% to 54,654,575, but freight rises 4.2% to 207.89 million FTKs. Although revenues are up by 3.1% to \$6.23 billion, expenses jump 5.8% to \$6.61 billion and guarantee a leap in operating loss to \$330.52 million. The net loss is an almost unbelievable \$1.22 billion, highest in the U.S. airline industry.

The payroll is cut a slight 0.7% in 1993 to 46,667, 6th largest in the world airline industry; the 441-unit fleet is the 5th biggest.

Early in the month, the carrier merges its USAir and “USAir Express” operations in Florida into a new USAir Florida Shuttle. At the same time, the carrier engages in a costly fare war with **Delta Air Lines** in the Boston–New York–Washington shuttle market, shaving its weekday tariffs by 34%.

On January 21, USAir and **British Airways, Ltd. (2)** announce a restructured investment and alliance plan. The U.S. DOT approves the British airline's immediate, passive investment of \$300 plus \$450 million over the next five years if outstanding difficulties (read: the necessity to get USAir's costs down) are resolved. In return, BA will receive an initial 19.9% voting interest and a major code-sharing marketing agreement. Three BA executives are voted onto the 16-member USAir board: CEO Sir Colin Marshall, Chief Financial Officer Derek Stevens, and Corporate Strategy Director Roger Maynard.

Although the integration plan contemplated the previous July is shelved, the U.K. operator receives entry to 38 American communities via Philadelphia, Pittsburgh, and Baltimore (BWI). USAir is required to divest itself of its rights to London from Philadelphia, Pittsburgh, and Charlotte, but wet-leases Boeing 767-3B7ERs to BA for London to Baltimore, Charlotte, and Pittsburgh frequencies.

On February 1, the USAir Florida Shuttle begins to cover all USAir flights within the Sunshine State. Copying the ex-**Trump Shuttle** operation up north, the airline introduces new hourly jetliner or DHC-8 turboprop flights between Miami and Tampa and Miami and Orlando. Passengers frequently employing the new service are given the opportunity to join the USAir Florida Shuttle Club. Overall, intra-Florida operations are increased by 10% from 300 to 330 daily departures, while services from Florida to other states rises by 11% from 199 to 221 flights.

The same day, new B-737-3B7 services are launched from Bangor to Boston, Lebanon to Boston, Manchester to Boston, Tampa to Nassau,

Tampa to Columbus, and Orlando to Columbus. Flights to the Colorado ski slopes are increased in number via a new daily nonstop B-737-3B7 roundtrip frequency from Philadelphia to Denver. The next day, roundtrip nonstops commence from Washington, D.C. (DCA) to St. Louis. Company flight attendants reach tentative agreement on a new contract, also in February.

Albuquerque to Kansas City flights begin on March 2. The same day, services are increased from the St. Louis hub by 11 flights per day, including thrice daily to New York (LGA), four times per day to Kansas City, one to Orlando, one to Omaha, and two to Baltimore (BWI).

A severe winter storm over the eastern U.S. on the weekend of March 12-14 severely impacts company services; on Saturday alone, all operations are cancelled at Boston, New York (LGA), Rochester, Pittsburgh, Newark, Philadelphia, Cleveland, Atlantic City, Syracuse, Buffalo, and the Charlotte hub. Flights gradually resume March 14-16.

During the month, the U.S. government approves the company's strategic alliance with **British Airways, Ltd. (2)** for a year and authorizes the wet-lease transatlantic services contemplated. In early spring, USAir cancels delivery of 20 B-737-4B7s this year and defers delivery of 40 others for 5 years.

Roundtrip B-727-2B7A service is inaugurated on April 4 from Boston to Bermuda. The same day, new nonstop B-727-2B7A roundtrips are started from Orlando to San Juan while B-737-3B7s begin flying, twice daily, from Pittsburgh to John Wayne-Orange County Airport in California. The long haul flights from Orange County are the first flown by the company from that destination in two years. At the same time, jet service is discontinued out of Tucson. **Northwest Airlines** announces on April 15 that it will buy the carrier's Baltimore to London route for \$5 million and move the U.S. terminus to Detroit by mid-June.

The City of Nashville reaches an unusual agreement with USAir on April 27 to acquire that carrier's Charlotte to London route for \$5 and to shift the U.S. end to Nashville, allowing **American Airlines** to operate the route in exchange for certain concessions to the city. Also during the month, the Philadelphia to London (LGW) route is sold to **United Airlines** for \$14.5 million; **American Airlines** protests the arrangement, which is not completed. To compensate the manufacturer, company officials agree to exercise options on 15 B-757-2B7s and place options on 15 more.

Also during the month, the company proposes the sale of 10 million shares of common stock. Acting under the January 21 agreement, **British Airways, Ltd. (2)** announces that it will purchase sufficient additional preferred stock in USAir so as to maintain its 24.6% interest in USAir Group's equity share capital on an undiluted basis. The final significant event of the month is the opening of the new \$27-million maintenance base at Tampa.

On May 1, **British Airways, Ltd. (2)** announces that it will begin sharing flight codes with its new American partner; the move will provide flight codes of both airlines on USAir domestic services that connect with BA's transatlantic flights. Meanwhile, USAir initiates additional new routes: Philadelphia to Mexico City, Baltimore to St. Thomas, and Charlotte to Grand Cayman.

The right engine of an MD-81 is completely destroyed by an explosion at cruise altitude later in the day; the aircraft is able to execute a safe emergency landing at Tampa and no injuries are reported.

On May 2, new nonstop service is initiated from Savannah, Georgia, to New York (LGA) and from Washington, D.C. (IAD) to Boston. Because the U.S. and German governments cannot agree on a new bilateral agreement, new Philadelphia to Frankfurt service scheduled for the day must be cancelled. During the month, the carrier receives cash infusions not only from BA, but from a \$231-million offering of common stock. At their annual meeting in Virginia, USAir Group stockholders approve the **British Airways, Ltd. (2)** arrangements announced in January and April. Their action is the final step in the completion of the integration process.

Nonstop B-757-2B7 roundtrips are inaugurated on June 9 from Philadelphia to both Seattle and San Diego. New daily roundtrips are also initiated from Orlando to Raleigh/Durham; they are flown one way with B-737-4B7s and the other way with Fokker 100s. Daily B-737-3B7

roundtrips are also begun from Kansas City to Boston during the day, as a new Northeast fare program is unveiled that provides savings for business and leisure travel in 286 markets.

Also during the month, a B-767-2B7ER equipped with Sundstrand Data Control's HF-DataLink system, begins operational trials of the ground-based reporting and data transmission system. Another of the type, wet-leased to **British Airways, Ltd. (2)** in BA colors, begins daily nonstop service from London (LGW) to Pittsburgh; the flights are staffed by USAir crews in BA uniforms.

The DOT awards **American Airlines** the Philadelphia to London route on July 5 that the carrier was recently forced to cede as part of the price of the BA link. Arch-rival **Southwest Airlines (2)** steps up the pace of competition in California in July and, consequently, USAir reduces the fares on its hourly Los Angeles-San Francisco shuttle and offers special bonus miles in its frequent flyer program for those employing the service. During the month, \$300 million in income is received from a public debt issue.

Daily nonstop roundtrips are inaugurated on August 1 to Mexico City from both Philadelphia and Tampa. Southwest also causes considerable pain when it begins to move into East Coast markets, starting with service on August 17 from Baltimore (BWI) to Chicago (Midway) via Cleveland. A full-scale fare war breaks out between the two as both slash fares to rock-bottom prices in the competition that follows. A new intra-Florida small package express service is introduced on August 20 between 19 airports.

Terry V. Hallcom succeeds the retiring Gordon Linkon on September 1 as president/CEO of USAir Group. Additional nonstops are added on September 7 between Baltimore (BWI) and Chicago (MDW) via Cleveland; also from Baltimore (BWI), new daily roundtrips are started to Las Vegas and New Orleans. Service from Baltimore (BWI) to Indianapolis is also increased this day from two to three daily flights and to Pittsburgh from five to seven.

From Pittsburgh on September 7, daily B-737-2B7 roundtrips are offered to Tri-City Airport in Tennessee, while daily Pittsburgh to Charlotte "USAir Express" DHC-8 flights are supplemented by twice-daily B-737-3B7 frequencies. Finally this day, roundtrips are started every 24 hours between Charlotte and Las Vegas and to Las Vegas from Columbus. Responding to the continuing rivalry with **Southwest Airlines (2)**, the carrier, on September 16, cuts fares to many East Coast cities, including Florida destinations.

Four days later, USAir unveils new package tours, known as USAir Vacations. Effective October 1, package tours to vacation destinations will be offered, including 2-to-21-day tours to 27 markets, including Paris, London, Frankfurt, and Mexico City. In October, revived **Continental Airlines** establishes its CALite low-fare operation and, like **Southwest Airlines (2)**, specifically targets USAir markets. Also during October, **British Airways, Ltd. (2)** launches daily nonstops from London (LGW) to Baltimore (BWI) employing a wet-leased USAir B-767-2B7ER in BA livery and staffed by USAir crew in BA uniforms working to BA service standards.

The company initially enters the Virgin Islands market on November 10, with the start of daily roundtrip B-727-2B7A services from Baltimore (BWI) to St. Thomas. The same day, four-times-per-week roundtrips commence from Tampa to Grand Cayman and thrice daily to that destination from Charlotte. Also on November 20, twice-daily nonstop roundtrips begin from Roanoke to Pittsburgh, increasing the total number of frequencies in that market to nine per day.

Customer bookings slide 1.8% to 53,678,114, still 4th highest among the globe's carriers. Cargo grows 4.2% to 216.59 million FTKs. Revenues advance 5.9% to \$7.08 billion, the 10th best income in the world. Expenses rise 2% to \$7.15 billion and cause an operating loss of \$149.1 million. Net loss is \$418.97 million.

Airline employment in 1994 is cut by 1.4% to 46,000. The DOT, in January, agrees to extend its approval of the expanded BA-USAir code-sharing agreement through March 17, but no longer than that unless all U.S. airlines receive additional access to London (LHR).

At the same time, **British Airways, Ltd. (2)** inaugurates daily non-stop service from London (LGW) to Charlotte using a wet-leased USAir B-767-2B7ER in BA livery and staffed by USAir crew in BA uniforms. This is the last of three wet-leased services to be provided by BA under the January 1993 alliance agreement.

To battle **Continental Airlines'** CALite, USAir, beginning on February 16, unveils Project High Ground, which increases frequencies to 18 of its East Coast short-haul markets, reducing turnaround times from 45 to 25 minutes. An agreement is started with **Qantas Airways (Pty.), Ltd.** that covers round-the-world fares, links frequent flyer programs, and provides code share on USAir flights for the Australian line on services between Los Angeles and San Francisco.

As the result of recommendations by the company's unions, Executive Vice President-Finance Frank L. Salizzoni, elected president/chief operating officer at the end of 1993, takes office on March 1, while Michael Schwab, executive vice president-operations, resigns; John W. Harper becomes senior vice president/chief financial officer.

At the same time, another public debt issue brings in \$175 million that helps to pay for slots at Washington, D.C. (DCA), New York (LGA), and Orlando. As a further response to CALite and **Southwest Airlines**, the company, in early March, reduces business-class fares by 50% to 96 cities and drops leisure fares by up to 70% in the same markets.

During the first week of March, the company indicates that its financial losses will again be high this quarter. To combat the situation, the carrier introduces its Management Action Plan, which is designed to enhance revenue opportunities and pursue cost reductions and productivity improvements.

Still, the airline's partner, BA, freezes further investment in USAir Group until the carrier can get its costs under control. On March 17, the BA code-sharing agreement, which will cover 66 cities by year's end and become a factor in U.S.-U.K. bilateral negotiations, is, nevertheless, approved by the DOT through March 1995. The government refuses to act on the U.K. line's application to extend these arrangements to further destinations. In response to its low-fare enterprise, the company must, during the month, recall or hire 800 part-time reservations agents and 200 flight attendants.

The smell of a household bug killer in a carry-on bag prompts authorities at Baltimore (BWI) to evacuate a USAir flight on April 1 and quarantine 78 passengers for 4 hours.

On April 5, a new turnaround, short-haul approach is developed; based on the use of B-737-2B7s, the program is designed to cut costs and have aircraft in and out of airport gates in as little as 20 minutes. A total of 22 "Baby Boeings" are initially committed to the new effort.

The company begins offering year-round discounts of as much as 55% on many routes between the Northeast and Florida. Two days later, USAir drops its weight standards for flight attendants, settling a 1992 lawsuit filed by the EEOC, and institutes a performance test to make sure attendants can easily fit down aisles and emergency chutes.

On May 1, a B-737-3B7 with 89 aboard lands at Charlotte without its faulty nose gear deployed; no injuries are reported. During the month, low-fare flights are inaugurated from Washington, D.C. (DCA) to Newark. Also in May, the company announces plans to subcontract freight and mail operations at 35 cities. Although the move is challenged in court by the United Steel Workers of America, the case is dismissed in U.S. District Court.

Actual possession of 40 B-737s scheduled for delivery between 1997 and 2000 is postponed on May 12.

Beginning in June and continuing through August, the carrier's air freight and mail-handling operations at 56 cities are subcontracted; the move is designed to save \$11.5 million. Also, on routes from Atlanta to Philadelphia and Chicago (MDW), the company faces and responds to a challenge from new competitor **Valujet Airlines**.

Chairman Schofield announces the company's intention, in a "Billion Dollar Solution" plan, to cut expenses by a billion dollars a year for the next 3 years, with \$500 million each 12 months coming from permanent wage cuts and productivity improvements. The other half will center on

a combination of maintenance restructuring, fleet rationalization, increased aircraft utilization, product changes and enhancements, and purchasing centralization. At the same time, it is announced that a memorandum of understanding has been signed with **Mexicana Airlines, S.A. de C.V.** under which negotiations will proceed toward a strategic and code-sharing alliance.

By July 1, 100 aircraft are dedicated to the quick-turn service, which is viewed as one way to combat the Southwest/CALite challenge. As the popularity of the approach increases, some 800 part-time reservations agents and 200 flight attendants are hired.

Coming in from Columbia, South Carolina, on July 2, Flight 1016, a DC-9-31 with 5 crew and 52 passengers, descends too fast and crashes into a wooded area and a private home while reattempting a missed approach to Charlotte in a thunderstorm (37 dead). Following the crash, flight attendant Richard DeMary becomes a hero for his rescue work in saving survivors; he will receive the Flight Safety Foundation's heroism award in ceremonies in Lisbon, Portugal, in the fall. Wind shear is determined to be the cause of the first fatal U.S. air disaster since the company's March 1992 F.28 tragedy.

In an effort to save at least \$10 million annually, the company now begins to subcontract its mail handling and air freight operations at upwards of 35 airports. Subcontractors begin handling freight services on July 3 at Hartford, Charlotte, Greensboro, Los Angeles, and Philadelphia. Beginning on July 18, other companies take over freight at Boston, Pittsburgh, Indianapolis, Providence, Roanoke, Islip, and San Francisco.

The pilots' union suggests sweeping financial restructuring of the airline on August 3, under which \$2.5 billion in wage concessions would be made in return for 25% equity, \$700 million in preferred stock, and board seats. The offer is not supported by any other employee group, including the AFA, and BA is not receptive to the idea; the carrier rejects the offer two days later.

On August 24, the airline sells a package of assets to Mesa Airlines for \$28 million; the northeastern division of the latter's **Florida Gulf Airlines** subsidiary will launch "USAir Express" flights to Baltimore, Philadelphia, and Boston from a base at Reading, Pennsylvania. Later in the month, a code-sharing agreement is signed with **United Airlines**. On August 30, it is reported that the pilots of the Douglas transport lost on July 2 did not receive the wind shear alert broadcast on radio frequencies shortly before the crash.

Flight 427, a B-737-3B7 with 132 aboard on final approach to Greater Pittsburgh from Chicago on the evening of September 8, suddenly nose-dives into a wooded area 7 miles out, near the town of Aliquippa, Pennsylvania; there are no survivors.

The arrangement with **United Airlines** comes into effect in September and under its terms, the Pittsburgh major feeds the UAL Latin American hub at Miami. Also during the month, USAir announces a decision to defer quarterly dividend payments on a class of preferred stock not held by **British Airways, Ltd. (2)**.

At the same time, the Chicago-based megacarrier scales back its daily departures at Orlando from 39 to 16 and eliminates service from that Florida city to 6 domestic locations. During the month, the carrier leases out 18 aircraft: 5 B-737-2B7s to **Frontier Airlines (2)**, 2 B-737-2B7s to Kansas-based TSP, Inc., 3 F.28-1000s to **Atlantic Island Airways, Ltd.**, 2 F.28-1000s to **Horizon Air**, and 4 B-737-2B7s to an unidentified operator.

It is announced on October 1 that the carrier will, during the next year, remove 12 B-767-2B7ERs, 8 B-727-2B7As, 10 B-737-2B7s, and 14 B-737-3B7s from its fleet over the next year and terminate transatlantic service. On October 7, the carrier's pilots, in light of the previous week's decision that will result in 525 surplus pilots, pull out of talks aimed at cutting the company's labor costs; even if 225 retire as expected, the remainder will be downgraded. At the same time, the quarterly dividend payments on \$972 million in preferred stock are suspended in an effort to save cash.

The company and its pilots, on October 25, accept a mediator, the former governor of Virginia Gerald Baliles, to help resolve the impasse

over how much union workers should contribute to the carrier's cost-cutting efforts. It is made known that the company will not participate in the fare war expected the following summer between **Southwest Airlines (2)** and the new Shuttle by United division of **United Airlines**. To emphasize the point, it is announced that the San Francisco crew base will be closed in the spring.

Under a licensing agreement with BA governed by the two carriers' global alliance, a B-767-2B7ER introduces BA's Club World business and World Traveler economy-class services on a transatlantic flight from Charlotte to Frankfurt on November 1. Over the next two months, the branded services will be put in place on frequencies from Pittsburgh to Frankfurt and from Philadelphia to Paris. At the same time, a B-737-222, B-737-247 and B-737-281 are leased to Kansas City-based new entrant **Vanguard Airlines**.

In response to intense competition in the Los Angeles (LAX)-San Francisco (SFO) market, the number of daily roundtrips between Los Angeles and San Francisco is reduced on November 13 from 16 to 4. It is revealed in *The New York Times* on the same day that, following the company's elimination of two preflight refueling checks in July of the previous year, 9 USAir departures were made without adequate fuel over the next 16 months. Two days later, on November 15, company and ALPA officials agree to resume talks and settle their contract difficulties within 30 days.

In a move to reassure customers after the fifth fatal crash in five years, USAir on November 20 appoints retired USAF Gen. Robert C. Oaks to the newly created position of vice president-corporate safety and regulatory compliance. The carrier also hires a consulting concern, PRC Aviation, to conduct an independent safety audit of its flight operations.

While at cruising altitude on November 26, a loud bang is heard in the right engine of a company MD-81, after which the engine shuts down. A safe emergency landing is made at Raleigh/Durham.

On November 27, the airline sets up a joint frequent flyer plan, Lat-inpass, with 12 Latin American carriers, becoming its exclusive domestic U.S. partner. The move is the largest expansion of the Frequent Traveler Program during its entire 10-year history.

A new \$50-million service class is introduced on December 1 for full-fare passengers in short-haul, East Coast markets, replacing first class. Business Select is unveiled aboard 30 B-737-2B7s making some 210 daily departures and is based upon the installation on those aircraft of the Recaro Aircomfort convertible seat. On December 3, the carrier, in reaction to *The New York Times* story on November 13, reports that it has reinstated the two refueling checks previously eliminated.

A week later, on December 10, transcripts of the exchange between pilots and ATC during the last moments of Flight 427 are released. On December 23, USAir Group and the pilots' union suspend cost-cutting talks for the holidays, promising to resume early in January 1995.

The windshield of the first officer of an MD-82 cracks while at cruising altitude on December 26; an emergency descent is made as the aircraft diverts to a safe emergency landing at Charlotte, North Carolina.

At year's end, plans are made with **Qantas Airways (Pty.), Ltd.** for code-sharing between Los Angeles and San Francisco and employees can take pride in having beaten back the East Coast invasion by **Continental Airlines'** CALite. Still, during the month, mega-shareholder Warren E. Buffett, chairman of Berkshire Hathaway, acknowledges to analysts that his investment in USAir had been a mistake.

Passenger boardings for the year jump 10.8% to 59,495,000, while freight falls 13.3% to 187.89 million FTKs. Revenues slip 0.7% to \$6.57 billion, while expenses advance by 4.8% to \$7.09 billion. Consequently, the pretax loss increases to \$516.97 million and the net loss surges to \$716.18 million.

The workforce stands at 43,100 in 1995, a 6.3% decrease. Two B-737-301s will be sold during the first quarter and arrangements made to sell 11 more by year's end. In addition, the leased maintenance hangar at Indianapolis will be closed and delivery of the B-757s scheduled for 1996 is pushed back a year.

As a result of electrical power problems at Newark (EWR) on January 9, the carrier is forced to cancel 18 of its 54 flights from the New

Jersey airport; power supplies return to normal the next day. During the month, Business Select short-haul service is introduced in 16 cities; the new product provides enhanced comfort for business travelers in a separate cabin, special check-in lines, advanced seat reservations, and reserved baggage space.

On February 11, the company joins in the **Delta Air Lines** initiative to place a cap on the commission paid to travel agents. Four days later, it is among the 5 majors taken to court by Travel Network, Ltd., franchiser of 350 travel agencies, in an effort to halt the new practice.

Also on February 15, company officials announce that they will match the fare cuts for winter and spring travel in the U.S., the Caribbean, and Mexico started by **American Airlines** and **America West Airlines** two days earlier. The same day, three jet flights from Cleveland to New York are dropped, along with one each to Indianapolis and Pittsburgh.

Federal regulators, on February 24, commend USAir for its safety efforts in the aftermath of recent crashes. In a ceremony, company flight attendant Richard DeMary receives the DOT Heroism Award for his "selfless heroism" following the crash of Flight 1016 the previous July. He is lauded for having disregarded his own injuries to evacuate one crew member and three passengers while helping to rescue others.

Daily nonstop B-737-296A roundtrips are introduced on March 1 from Pittsburgh to Toronto. Commissioned after the Flight 427 disaster the previous September 8, an independent study released on March 17 concludes that USAir is operated safely; still, it makes 30 recommendations for changes in flight training and maintenance procedures.

During the month, mega-shareholder Buffett announces that his Berkshire Hathaway has written down the value of its \$358-million investment to \$89.5 million and warns that he and Berkshire Vice Chairman Charles T. Munger will both resign from the airline's board if the carrier is sold.

On March 25, the company ALPA chapter breaks a yearlong deadlock in negotiations with the airline over price-cutting measures. The flyers propose to take an approximate 20% pay cut and to let the company lay off up to 300 pilots in exchange for a 20% employee stake in the company, a seat on the board of directors for each of the three major unions, a seat for the nonunionized workers, and miscellaneous preferred stock and profit-sharing arrangements. The deal will be consummated, the ALPA negotiators report, only if the flight attendants and machinists agree.

Ticketless scheduled service is inaugurated by new entrant **Nations Air** on March 26, between Pittsburgh, Philadelphia, and Boston. The frequencies are offered five times daily on weekdays and four times daily on weekends. In response to the company's \$59 Philadelphia-Pittsburgh fare, USAir quickly counters with a \$53 tariff and matches the upstart on 4 of its own 16 daily frequencies from Pittsburgh to Boston.

The Pittsburgh-Toronto frequency is doubled to twice daily on April 2 and DC-9-31s replace B-737-296As on the route. When a propane tank, thought to be a bomb, is found inside a men's room at the company's New York (LGA) terminal on April 23, the entire facility is evacuated until the New York City police bomb squad can resolve the incident. Bermuda-based Everest Capital, Ltd. and FMR Corporation of Boston purchase large investments in the carrier during the month.

On May 1, when **Continental Airlines** opens what has become an annual seasonal airfare competition, USAir quickly responds, matching that major's discounts of up to 35% for off-peak summer travel on certain days. On May 3, the carrier and its chapter of the IAM agree in principle on wages and other concessions for mechanics and fleet service personnel. B-757-225s replace DC-9-31s on the twice-daily Pittsburgh-Toronto roundtrips as of May 7.

During the month, **British Airways, Ltd. (2)** announces that it must take a \$200-million write-down to reflect the decline in value of its 24.6% stake in USAir.

A tentative settlement is reached with its AFA chapter on May 21. Under its terms, wages of flight attendants will be cut some 5% over the next five years and there will be no raises for them during the same period; in exchange, the union members will receive a 10.8% stake in the company and a seat on the board of directors.

Rumors begin on June 21, the first day of stock trading following its reemergence from bankruptcy, that **Hawaiian Airlines** will be purchased by either USAir or **Trans-World Airlines (TWA)**. The talk actually causes the stock of the Pittsburgh major to drop on the second day that shares of the Hawaiian company are traded. Officials of all three carriers deny such a possibility on June 23. During the second quarter, the price of the company's common stock almost doubles.

With the beginning of summer, the company introduces a new strategy of offering shuttle service each half-hour on long-haul routes in an effort to lure a greater number of business travelers at full-fare. Planes and frequencies are removed from smaller cities in order to enhance services between Los Angeles, San Francisco, Dallas, Chicago, New York, and Washington, D.C.

On July 13, members of the local chapter of AFA reject the offered concession and investment contract of May 21. After due deliberation by management, the carrier, on July 28, calls off the proposed deal for part-ownership in exchange for concessions discussed with its three major unions. Instead, it will negotiate separate accords with each employee group as contracts come due over the next several years.

A jetliner landing at New York (LGA) on August 3 suffers a near collision with a helicopter after air traffic controllers fail to warn the pilots of the rotary-winged aircraft's location. USAir Group informs the SEC on August 14 that the DOJ is examining charges of predatory pricing in certain cities made against it by **Valujet Airlines** and **Nations Air Express**. The charges will be dismissed. On August 28, the carrier follows the lead of **Northwest Airlines** and **Continental Airlines** two days earlier by temporarily cutting certain fares by up to 58%.

The fare sale is only the tip of the iceberg in a quiet major pricing change for flights that link major East Coast cities and Pittsburgh with most of the cities in western and northern New York. By September 1, fares for some passengers have been cut, but costs for weekly commuters rise almost 75% when the airline drops roundtrip discounts for those staying over Saturday nights.

As a result of Mexico's struggling economy, the carrier stops flying its unprofitable return service to Mexico City on September 24. The number of dual-designator U.S. cities flown in partnership with **British Airways, Ltd. (2)** reaches 62 in September with the addition of 10 more communities in New Hampshire, Georgia, Florida, Georgia, Alabama, Indiana, Missouri, and South Carolina. At the same time, the British major moves a specialized information management system into the USAir computer center at Winston-Salem, North Carolina.

On October 2, USAir admits that it is holding merger talks with the parent companies of **United Airlines** and **American Airlines**. The next day, **British Airways, Ltd. (2)** announces that it is reevaluating its alliances in North America in light of the USAir announcement the same day that Seth E. Schofield will remain chairman/CEO as talks with AA and UAL continue. During the third week of the month, the company introduces its Priority TravelWorks product that allows potential customers to review schedules and book services via the Internet.

On November 1, after an acquisition decision is postponed for two weeks, **United Airlines** Chairman Gerald Greenwald begins to actively seek the support of his employees for a takeover USAir. Letters are sent to local ALPA members explaining that the deal is being evaluated not only on the overall importance of a combined carrier, but on cost reductions to be enjoyed along with revenue-enhanced synergies. Greenwald will find much opposition to the union among the rank and file, but will persevere, believing the merger good for his employee-owned company.

On November 16, USAir inaugurates new services and added departures from Washington, D.C. (IAD) to Boston, Columbus, Orlando, and West Palm Beach.

Displeased by a *Newsweek* story, NTSB Chairman Jim Hall, during the week's hearings on the crash of Flight 427, challenges anyone with a "golden nugget" reason for the crash to first inform the safety board instead of the media.

Although merger talks with **American Airlines** are quickly abandoned, those with United are pushed by that company's chairman into

November. Rank and file of the employee-owned United voice much opposition and talks collapse at Thanksgiving. On November 28, Chairman Schofield asserts that the company's survival is not in doubt, despite the end of merger talks with the two majors.

During the year's second half, departures have been cut by 17% to save costs. For example, most of the carrier's jet service is withdrawn from Florida and turned over to local turboprop affiliates. Also, automated yield-management, crew-scheduling, and maintenance systems are turned on. Every employee seems to realize the truth in Chief Financial Officer John Harper's words when he releases the carrier's statistics at year's end; USAir's potential "cannot be realized, nor our existence assured, if we do not achieve a competitive cost structure."

His figures show enplanements of 57,095,000, down 4.7%, and freight transport of 182.95 million FTKs, a 2.6% decrease. "Rightsizing" throughout the year results in an operating income of \$7.47 billion, up 6.8%, and costs of \$7.15 billion, down 4.5%; there is an operating profit of \$321.68 million and a \$119.28-million net profit is posted.

Airline employment stands at 42,087 in 1996, a 2.3% decline.

On January 6, the major introduces new jetliner flights from Washington, D.C. to Tampa and increases service in Boston. It also replaces its four-per-day roundtrips between Pittsburgh and Fort Wayne with SAAB 340 flights operated by "USAir Express" affiliate **Chautauqua Airlines**.

A major East Coast winter storm severely impacts operations during the second week of January. On January 7 a total of 1,032 flights must be cancelled, 1,302 on January 8, and 600 on January 9. Most of the cancellations occur at Washington, D.C. (DCA), Philadelphia, and the Baltimore (BWI) hub, which, with Boston, is the first to resume operations.

BA announces on January 19 that it will not exercise two options to buy another \$450 million worth of preference shares in USAir Group. Stephen M. Wolf succeeds the retiring Seth E. Schofield as chairman/CEO on January 22. Before month's end, former **Air France** Vice President-Marketing and Development Rakesh Gangwal succeeds the retiring Frank Salizzoni as president with Lawrence M. Nagin as executive vice president.

Installation of the new management team causes stocks to increase \$15 in value and speculation, unfounded as it turns out, begins that an employee buyout could occur within a year. Among the first moves of the new group is to meet during the last week to discuss the long-delayed entry on January 22 of rival **Southwest Airlines (2)** into the Florida market.

On February 1, a DC-9-31 swerves to avoid a small plane that has blundered into its path on the runway during the jetliner's landing at Charlotte. A month-long 40% fare discount on travel between 40 markets in the Eastern U.S. ends on February 14.

Also in February, an agreement is entered into with **Deutsche BA Luftfahrtgesellschaft, GmbH**, that allows the American major to share codes on the BA subsidiary's flights from Munich to Cologne, Hamburg, Dusseldorf, and Tegel Airport at Berlin. Flights are also inaugurated from the nation's capital to West Palm Beach with additional services to Orlando and Boston.

Seven persons receive minor injuries when a B-767-2B7 with 147 passengers encounters moderate turbulence while on approach for its February 20 landing at Pittsburgh.

Under terms of the new U.S.-Canada "open skies" agreement, the carrier on February 28 launches twice-daily roundtrips between Washington, D.C. and Toronto.

Employing visual inspection methods, company maintenance personnel on March 4 uncover a 38.75-in. crack in the forward upper skin of a DC-9-31. The discovery prompts McDonnell-Douglas to issue a safety alert to all DC-9 operators.

New chairman Wolf, CEO of the nation's sixth largest airline, tells employees on April 15 that the company's future lies with purchasing another carrier, forming a partnership with another airline, or being acquired itself. For any of these possibilities to be created, Wolf notes, USAir must reduce its costs and become more productive.

Seasonal roundtrips between Pittsburgh and Frankfurt resume at the end of April. B-767-201ER frequencies commence on May 23 from

Philadelphia to Munich. On June 1, the long-haul Boeings also inaugurate nonstop roundtrips from Philadelphia to Rome.

On June 11, **British Airways, Ltd. (2)** announces a new marketing alliance with **American Airlines**. Four days later, daily B-767-201ER flights are started between Philadelphia and Madrid. As the result of a controller error at the New York Air Route Traffic Control Center on June 24, a B-737-3B7 en route to New York from Bermuda passes within 4 nm. and zero vertical separation at 31,000-ft. of a **Kiwi International Airlines** B-727-225A en route from Bermuda to New York. Disaster is averted when the latter, which had been wrongly ordered to climb, descends.

Together with **Northwest Airlines** and **United Airlines**, the company, on June 29, offers its customers software programs that allow do-it-yourself reservations and ticketing.

A Charlotte-bound B-737 is forced to return to Savannah on July 6 after 40-year-old Gary Lee Lougee of Pooler, Georgia, demands to be served drinks, pushes a flight attendant, and must be subdued by the airliner's crew; Lougee is arrested.

Flight 614, a B-737 with 119 passengers and en route from Las Vegas to Charlotte is diverted to Nashville on July 26 after 25-year-old Daniel Walters threatens other people aboard. Walters surrenders to the FBI, who do not label the event as a hijacking attempt. Walters is the second unruly passenger to be jailed within a month.

On July 30, USAir Group files suit in federal court against **British Airways, Ltd. (2)** over its marketing partner's new alliance with AA; the brief charges antitrust violations and breach of contract and fiduciary duty on the part of BA.

Roman Regman, a 21-year-old seminarian, is arrested at Tampa on September 2 after security personnel find six knives, a pistol, two grenades, and bomb-making materials in the carry-on luggage he is about to take aboard a company flight to Pittsburgh. Regman is held without bond on seven federal counts of possessing explosive devices and seven counts of possessing concealed weapons. In a statement from jail the next day, Regman claims the materials he had in his cases are harmless.

While en route on August 29, a B-737-3B7 with 4 crew and 80 passengers encounters clear-air turbulence over Chattanooga, Tennessee; four people are injured, three seriously.

Following the lead of **Continental Airlines**, USAir and three other major airlines on September 3 agree in principle to settle a suit by the American Society of Travel Agents charging the carriers illegally conspired to cap travel agent commissions on domestic airline tickets. The five will reportedly pay a total of \$87 million, but will be able to retain the controversial \$50 commission cap.

A day after the carrier elects not to renew its five-year contract with Greenwich Air Services on September 23, the stock of the engine-repair service plunges. While en route from New York City to Rochester on October 21, the cabin of a B-737 fills with smoke from an air-conditioner malfunction; the plane makes an emergency landing in Ithaca, but no injuries are reported.

As the dispute with **British Airways, Ltd. (2)** continues, the U.S. partner continues to evidence its displeasure. On October 24, USAir announces that it will end its marketing and code-sharing agreement with the BA on March 29 of the following year. At the same time, the American carrier applies to the DOT for permission to inaugurate its own services to London (LHR) from its gateways in Pittsburgh, Charlotte, Philadelphia, and Boston.

Toward month's end, the Boeing Company offers to slide delivery of the eight-unit B-757 order from 1998-1999. The suggestion is the latest in six years worth of aircraft order and delivery schedule revisions, substitutions, and sliding made by the manufacturer, which has also returned to the carrier some \$170 million in advance and options payments in an effort to help USAir survive. On November 1, the carrier defaults on a \$3-million progress payment on the eight narrow-bodies.

On November 8, the company agrees to pay \$450,000 to settle charges that it has violated, between 1990 and 1996, certain federal rules

concerning maintenance, security, and flight operations. The next day, a preliminary agreement is signed with Airbus Industrie for the delivery, by century's end, of 120 narrow-body A321s, A320s, and A319s; the sale, valued at \$5.5 billion, is the largest of the European manufacturer in North America and, indeed, is the largest in its history to date. Needless to say, Boeing officials are shocked.

Three days later, on November 12, Chairman Wolf announces that, early in the new year, the company will change its name to **USAirways**. The move will be part of a large, bold, and, analysts suggest, risky plan to execute a new survival strategy. In addition to the corporate image changeover, the plan centers on increasing domestic and international services employing the new fleet requested a few days before. The chairman publicly renounces the Boeing contract.

The DOS and USAir, together with six other majors, reach an agreement on November 19 to provide speedier notification of the families of U.S. victims in the event of air disasters abroad. The arrangement, lobbied for by groups representing crash victims' families, puts into effect the provisions of a 1990 federal law calling upon the carrier's to provide the DOS with a passenger list within three hours of a crash.

In early December, Jon Bryan succeeds Robert Gaudioso as chairman of the master council of the local chapter of ALPA. In a December 10 letter to Boeing attempting to justify his company's recent nonpayment actions, President/CEO Gangwal confirms that the B-757 contract is a binding legal document.

British Airways, Ltd. (2) takes the decision on December 18 to sell off its shareholding in USAir and in light of the suit filed by the American carrier during the summer, to disentangle itself from any further relationship. USAir is given the option to purchase the \$500 million in preferred shares or, if it becomes necessary, they can be sold privately or through a public stock offering.

As a national debate on the growing problem of disruptive passengers unfolds, Gary Lee Lougee is sentenced by a federal judge in Savannah, Georgia, on December 27 to 4 years in prison plus 200 hours of community service upon his release. Because Lougee's actions on July 6 had forced the pilot of his flight to turn around, he is also required to repay USAir \$611.35 for fuel spent in returning to its point of origin.

Customer bookings dip 0.1% to 56,640,000 but cargo rises 22.2% as 221.78 million FTKs are operated. Operating income climbs 10.3% to \$7.7 billion, even as expenses are swelling 8.7% to \$7.33 billion. Operating profit reaches \$368.68 million and a \$183.23 million is posted. USAir Group as a whole records a record \$263.4-million profit on revenues of \$8.1 billion.

There is no change in the workforce at the beginning of 1997, although the company faces an uncertain future of downsizing in light of its inability to win labor concessions. Just after the new year, Chairman/CEO Wolf opens contract negotiations with the Master Executive Council of ALPA, which represents the carrier's 5,000 pilots. He proposes a seven-year agreement that seeks pay cuts, job security and work rule changes, and increased productivity. In addition, pilots are asked to allow creation of a low-cost carrier to compete with the "Delta Express" division of **Delta Air Lines** and **Southwest Airlines (2)**.

On January 10, USAir joins **Continental Airlines**, **Delta Air Lines**, **United Airlines**, and **Trans-World Airlines (TWA)** in submitting requested comments to the U.K. Office of Fair Trading concerning the proposed strategic alliance between **American Airlines** and **British Airways, Ltd. (2)**. All five protest that such a pact would provide the British and American giants the dominant positions in transatlantic and other markets and that the OFT's proposal to require them to relinquish 168 weekly slots at Heathrow is insufficient to counterbalance the alliance. BA files a 148-page written response.

During the second week of January, the carrier is advised by Airbus Industrie that its failure to lower costs has placed in jeopardy the planned delivery of up to 57 aircraft over the next 3 years.

In early February, **British Airways, Ltd. (2)** CEO Robert Ayling, Chief Financial Officer Derek Stevens, and Investments Director Roger

Maynard all resign from the USAir board of directors. USAir Group, on February 18, refuses to exercise its option to purchase the 24.6% stake in the carrier owned by **British Airways, Ltd. (2)**. Under the leadership of Chairman/CEO Wolf, who is seeking to turn around the company's declining fortunes, the airline and its holding group parent are renamed **USAirways** effective at midnight on February 27.

USAIR EXPRESS. See **AIR MIDWEST**; **ALLEGHENY AIRLINES (2)**; **CCAIR**; **CHAUTAUQUA AIRLINES**; **COMMUTAIR**; **CROWN AIRWAYS**; **FLORIDA GULF AIRLINES**; **HENSON AVIATION**; **JET EXPRESS**; **JETSTREAM INTERNATIONAL AIRLINES**; **PARADISE ISLAND AIRWAYS**; **PENNSYLVANIA AIRLINES**; **PIEDMONT AIRLINES (2)**; **STATESWEST AIRLINES**; **TRANS-STATES AIRLINES**

USAIR EXPRESS (MESA AIR GROUP): United States (1997). During the first week of January 1997, **Mesa Air Group** is again reorganized. The operating divisions Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced by four new units: America West Express, Independent, "United Express," and "USAir Express." Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**. **Florida Gulf Airlines** and **Liberty Express** are combined into the new USAir division.

The paperwork is barely dry on the merger before an incident occurs. On January 10, Flight 5326, a Beech 1900D with two crew and nine passengers en route to Boston aborts its climb after takeoff from Bangor when the stall alert sounds; after a safe landing, the plane veers left and strikes a snowbank, injuring two passengers.

On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional begins to repaint its aircraft in a modified version of the major's grey and dark blue livery.

USAIR SHUTTLE: United States (1992–1997). On April 12, 1992, financially troubled New York real estate tycoon Donald Trump negotiates a management contract with **USAir** for operation of his **Trump Air Shuttle**, formerly the **Eastern Air Lines Air Shuttle**. In exchange for \$16.2 million, Shuttle, Inc., a subsidiary of the company's creditors led by Citibank and Bankers Trust, takes over the concern's ownership. Details are concluded with USAir, which is also given the right of first refusal to purchase the Shuttle outright four-and-a-half years hence.

USAir is able to rename the carrier USAir Shuttle, paint the 22 Boeings in modified **USAir** colors, and appoint its own leadership, beginning with ex-"USAir Express" chief Gordon Linkon, who is transferred in as president. **Trump Air Shuttle** Vice President-Operations Terry V. Hallcom retains the same post with **USAir**.

In addition, **USAir** is given the option to purchase the shuttle outright in 1995 and Mr. Trump's ownership interests, meanwhile, are turned over to a group of banks. Operations commence on April 13. In May, company employees Frederic Nickell and Jimmy May are cited for their heroism in connection with their rescue efforts in the aftermath of the March 22 crash of **USAir** Flight 405.

Later in the year, a new terminal is opened at New York (LGA) to smooth connections between the Shuttle, its parent, and "USAir Express."

Enplanements drop 9.2% to 1,594,000. Expenses exceed income and losses are suffered: \$14.38 million (operating) and \$28.59 million (net).

Airline employment is cut 33% in 1993 to 600 and the fleet now includes 2 B-727-294As, 5 B-727-254s, 4 B-727-25s, and 1 B-727-214. The company's first anniversary is celebrated on April 12. On November 12, the carrier, in a cost-cutting move, lays off 87 workers; the dismissal of Frederic Nickell and Jimmy May, company heroes a year before, creates public relations difficulties with the New York media.

Passenger boardings plunge 21.7% to 1,249,000 and freight falls 16.7% to 22,000 FTKs. Revenues increase only 0.3% to 147.56 million,

expenses decline 10.7% to \$144.25 million, and the previous year's operating loss becomes a \$3.3-million profit. The net loss is cut to \$5.13 million.

The 1,000-employee national-sized carrier has another bad year in 1994 as customer bookings plunge 13.8% to 1,297,000. Revenues dip 3.6% to \$140.64 million, while expenses fall 12.2% to \$125.79 million. The operating surplus is \$14.84 million while there is a net gain of \$5.14 million.

There is no reported change in the workforce during 1995, although three more B-727-214s are acquired. Enplanements inch up 1.9% to 1,443,000 while cargo traffic jumps 53.9% to 204,000 FTKs. Revenues exceed expenses and again there are profits: \$17.73 million (operating) and \$5.84 million (net).

The employee population stands at 523 in 1996. Flight 6500, a B-727-254 with 118 passengers, departs Washington, D.C. (DCA) on June 24 for New York in severe weather and despite warnings of potential wind shear. The flight crew is suspended while the FAA investigates.

Flight attendants represented by AFA begin contract negotiations with the airline on December 31.

Passenger boardings slip 0.6% to 1,435,000, but 223,000 freight FTKs are operated, a 9.3% increase. Operating income accelerates 8.6% to \$156.48 million while costs move up 7.4% to \$135.62 million. Operating gain rises to \$20.86 million while net profit doubles to \$9.48 million.

On February 27, 1997, **USAir** is renamed **USAirways** and the shuttle becomes **USAirways Shuttle**. The major makes plans during the spring to purchase the operation from the consortium that owns it; later, in the face of significant difficulties, USAirways postpones its decision. AMR Corporation also bids for the airline.

USAIRWAYS: 23245 Crystal Drive, Arlington, Virginia 22227, United States; Phone (703) 418-7000; <http://www.usairways.com>; Code US; Year Founded 1997. Under the leadership of new Chairman/CEO Wolf, who is seeking to turn around the declining fortunes of **USAir**, that airline and its holding group parent are renamed **USAirways** effective at midnight on February 27, 1997. Newly painted with a combination of grey and a dark, nearly black, blue ("US blue") livery and ferried to Pittsburgh from Greenville, Mississippi, for the occasion a week earlier, a Boeing 737-3B7 is the first jetliner to fly a service under the new title.

The first repainted B-757-2B7, which is also the last of its type to join the fleet, enters service with the 38,500-employee company on March 1. It is noted that only the B-737-300/400, B-757, and B-767 units will be repainted over the next three years, with older and smaller aircraft waiting their turn.

The extensive marketing and code-sharing agreement previously enjoyed between **USAir** and **British Airways, Ltd. (2)** officially ends on March 29. On April 8, USAirways Group begins to assess the valuation of the **Trump Air Shuttle**, which it had been operating as **USAir Shuttle**, in order to consider the option it holds to purchase the service launched by **Eastern Air Lines** 30 years earlier.

Determined to sell efficiency and cost-cutting, while gaining cost concessions from unionized workers, Chairman Wolf begins a series of talks before groups of employees on April 10. During these presentations, he repeats a warning given earlier: "our unit costs remain the highest in the industry and seriously restrict our ability to compete with expanding low-cost carriers."

Wolf further points out that the airline has lost \$2.4 billion in the last decade and that drastic measures must be taken to bring the airline's high costs in line with those of its rivals, particularly the "Delta Express" division of **Delta Air Lines** and **Southwest Airlines (2)**. He asks for help from the unions, including the local ALPA chapter with which the carrier has been negotiating for almost a year. He also points out that, should this help not be forthcoming, the company is prepared to begin dropping unprofitable transcontinental routes, as well as services in Florida and from its Baltimore (BWI) hub.

A month later, on May 9, the airline's management begins to shrink the company. It is announced that some unneeded operations will be

closed, service to nine cities (Albuquerque, Austin, Bangor, Cincinnati, Daytona Beach, Melbourne, Islip, and Newburgh) will be cut in September. Twenty-two older planes (5 F.28-1000s and 17 DC-9-31s) will be grounded and some pilots will be laid off. The search for a new European partner is called off.

On May 21, **British Airways, Ltd. (2)** sells the last of its 14.5 million 22.5% stake in USAirways to the public for \$499 million (\$34.50 per share).

American Airlines, on May 29, makes a \$300-million offer to purchase the **USAirways Shuttle** from the consortium of New York banks that owns it.

Saturday Fokker 100 nonstop roundtrips commence on June 21 between Harrisburg and Orlando. Also during June, the carrier purchases the anti-icing NOFOD Overwing Heater System for its 31 MD-80s.

On July 2, Chairman Wolf places a firm order for 7 Airbus A330-300s, with 7 more bids to be reconfirmed and 16 options; the premier unit is slated to arrive in December 1999.

On July 17, the airline's management offers the ALPA negotiating committee a contract proposal that it believes would be beneficial for its members. Union Master Council Chairman Jon Bryan refuses to be hurried by a company request that a decision be expedited by the last day of September. The airline cancels 110 trips in July, as sick leave for crews in certain aircraft jumps 25%. Many question the validity of the absences.

By the beginning of August, the carrier has lost 57 Airbus Industrie delivery positions and stopped negotiations aimed at acquisition of \$1.5 billion in new aircraft with which to expand services. Plans to buy the **USAirways Shuttle**, spend \$300 million on upgrading the Philadelphia hub, and on the establishment of a new Midwest hub in 1998 are all shelved, hopefully for a short period.

The network of 10 regional airlines operating as "USAirways Express" collectively achieve a historic milestone in August. For the first time in the confederation's long service, a million passengers are carried in a single month (1,000,383).

On August 28, the company signs a long-term letter of intent with SABRE Group to turn over its information technology functions to the onetime AMR subsidiary. SABRE CEO Michael Durham at a press conference announcing the arrangement describes it as "one of the five largest outsourcing contracts ever entered into by American industry." Internal reservations, aircraft and crew scheduling, yield management, airport check-in, and electronic ticketing are all areas covered, as SABRE assumes responsibility for the airline's information technology infrastructure (hardware, software, facilities, personnel, and training).

Dissatisfied pilots conduct informational picketing at Boston and at Pittsburgh on September 4. At the same time, it is noted that 103 pilots have been laid off with 42 additional reductions in force slated.

The company's difficulties are increased on September 11 when the Boeing Company files suit in the Washington State Superior Court in Seattle claiming that the company has broken contracts to purchase some \$2 billion worth of B-757s in favor of aircraft from rival Airbus Industrie.

The last of the unprofitable routes marked for termination are suspended in September. Intense negotiations between management and the pilots union commence on September 19 at Philadelphia and continue nonstop throughout the weekend, with both sides trading proposals. On September 23, the talks are moved to Washington, D.C.

At the same time, on September 24, hot sandwiches and new entrees become available for first-class passengers; meal choices also increase for those in coach class.

As the month draws to an end, the company, still unable to obtain what it considers to be a competitive cost structure from its pilots, appears poised to forfeit the remainder of a \$14-billion order for 120 new narrow-body Airbuses, along with options for 280 more.

Late in the evening of September 30, just hours before the deadline set months earlier, the Master Executive Council of the company's local ALPA chapter reaches agreement with management on a new 5-year contract. The MEC waives the 7-day review period and immediately rushes the document to the 4,800-man membership for a ratification vote.

Terms of the contract include provisions for salary increases, a formula with which to handle a low-fare division, early retirement for the 325 most senior pilots, a recall of 428 pilots, including 42 recently given notice, stock options, and a no-layoff clause. The pilots also receive 11.5 million shares of stock and a seat on the board of directors.

On the strength of the agreement, Airbus Industrie agrees to extend the company's deadline for confirming its \$14-billion order, pending the flyers' contract ratification vote.

The next morning, the company agrees to move ahead on negotiations with other groups, including the 10,000 reservations, ticket, and gate agents who voted the previous day for representation by the Communications Workers of America. The election was the largest union organizing election in private U.S. business in a decade. Plans for other objectives, shelved earlier, are now revived.

Although U.S. majors disagree over routing and other issues, they band together behind **United Airlines** on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing.

This payment initiative is immediately matched by **American Airlines**, **Continental Airlines**, **Delta Air Lines**, and **Northwest Airlines**. **Southwest Airlines (2)** and **Kiwi International Air Lines** announce that they will maintain the 10% scale. The travel agency industry, which, despite ticketless travel still writes 80% of all tickets sold, protests.

On October 14, the carrier lowers fares for travel between most eastern U.S. markets and South Florida and the Caribbean. With a 14-day advance purchase required, all tickets must be purchased by October 20 for travel by February 5.

Pending approval of a new U.S.-France bilateral air agreement, the company, on October 23, announces plans to launch service from Pittsburgh to Paris (CDG) next April.

ALPA members approve their new contract during the last week of October, effective January 1. Plans now move ahead toward the establishment of US2, a low-cost division similar to that of "Delta Express," which will begin service during the first quarter of 1998, as well as with construction of a new international terminal at Philadelphia.

Negotiations with AFA, the Communications Workers of America, the IAM, and the Transport Workers Union continue.

When the new Buffalo-Niagara International Airport opens on November 3, the USAirways club is the facility's only airline club.

On November 5, daily nonstop roundtrip B-737-4B7 service is inaugurated from Pittsburgh to San Juan. A third flight is initiated the same day between the Puerto Rico capital and Philadelphia. At this point, the company offers five daily nonstop roundtrips between Charlotte, Philadelphia, Pittsburgh, and San Juan.

While landing at Charlotte, North Carolina, on November 7 after a flight from Milwaukee, Flight 479, a Fokker 100 with 5 crew and 99 passengers experiences a failure and separation of the right main landing gear. Although the aircraft is badly damaged, no injuries are reported. A club is opened at Hartford on November 17.

Despite AA's larger bid, USAirways elects on November 22 to purchase the **USAirways Shuttle** by exercising its original option. The price is \$285 million; **American Airlines** receives a \$10-million, negotiated breakup fee.

Begun earlier from Pittsburgh, Philadelphia, and Charlotte, E-Savers bargain-rate weekend flights are initiated on December 3 from Denver, Los Angeles, Orange County, Phoenix, San Diego, San Francisco, and Seattle.

USA Today reports on December 10 the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; USAirways demonstrates a 79.2% achievement, good for 5th place.

Premium transatlantic Envoy Class service is inaugurated for international business travelers on December 15 on flights from Philadelphia to

Frankfurt, Madrid, Munich, Paris, and Rome and between Pittsburgh and Frankfurt.

Passenger boardings ascend 3.6% to 58,658,788, while freight swells 28% to 283.95 million FTKs. Operating revenues for US Airways Group advance 4.6% to \$8.51 billion, while expenses climb 2.9% to \$7.93 billion. The operating profit grows to \$584 million, while net gain skyrockets to \$1.02 billion, a company record.

At the beginning of 1998, USAirways is the 4th largest airline in the world, in terms of passenger boardings, 6th in fleet size, 10th in employees with 40,846 and operating revenue, 8th in operating profit and 3rd in net gain.

The fleet, 81.6% of which is Stage III certified, includes 375 airplanes: 203 B-737s, 55 DC-9s, 34 B-757s, 12 B-767s, 40 Fokker 100s, and 31 MD-80s.

Previously announced as US2, the company unveils firm plans for its new low-cost division in January. Electing not to have its own name in the new unit's moniker, Chairman Wolf reveals that the new operational will be known as MetroJet. It will inaugurate services from Baltimore (BWI) on June 1 with a fleet 5 B-737-201As leased from the parent.

It is also noted that the MetroJet aircraft will be painted with a red top and gray underside separated by blue and white stripes. The blue tail will carry the USAirways stylized U.S. flag and interiors will be specially designed for MetroJet. Three of the four initial destinations will be visited in direct competition with **Southwest Airlines (2)**.

As it departs Andrews Air Force Base, Maryland, on January 28, Air Force One fails to maintain proper separation from USAirways B-737 Flight 484, which has 2.36 nm. horizontal and 900 ft. vertical distance from President Clinton's aircraft. The FAA investigates.

An 11,080-sq.-ft. USAirways Club is opened at Boston on February 1. In a presentation before the Society of Airline Analysts on February 4, Chairman Wolf and President Gangwal announce that, on its June 1 launch, MetroJet will offer a simplified fare structure including 14-day and 7-day advance reservations and walk-up ticketing. The two company executives also note that, from time to time in the open market or through privately negotiated transactions, USAirways will repurchase up to \$500 million worth of its common stock. The airline will also redeem \$358 million in Series H preferred stock held by billionaire investor Warren Buffet, after which it will have no preferred stock outstanding. The airline will also retire \$379.2 million in debt.

Former **United Airlines** executive Terry Hall is appointed chief financial officer on February 9. Daily nonstop B-737-3B7 roundtrips commence on February 11 between Philadelphia and Grand Cayman. It is revealed on February 14 that a special MetroJet reservations center will be established at Indianapolis.

On February 20, the local ALPA chapter forces the company to back away from plans for joint service with **American Airlines** and **United Airlines** on routes from the U.S. to Japan. As a result, a plan to purchase long-range B-777-200s is placed in jeopardy.

En route from Charlotte, North Carolina, to Birmingham, Alabama, on February 26, a Fokker F.28-1000 with 5 crew and 87 passengers is struck by lightning and suffers total hydraulic system failure. An emergency is declared and the aircraft makes a safe landing, without nosegear steering capability. The aircraft travels off the left side of the runway, loses its nosegear, and eventually comes to rest on its nose section in the grass, 1,119 ft. from the runway. Fire rescue personnel assist all aboard to exit out the left forward door and no injuries are reported.

An about-to-lapse agreement between the airline and the American Express Membership Rewards frequent flyer program is renewed on March 1. On March 18, the company begins taking telephone reservations for the new Metrojet flights, scheduled to begin on June 1.

Daily nonstop B-767-2B7ER roundtrip service is inaugurated on April 1 from Philadelphia to London (LGW) and to Amsterdam.

Having cleared **Air Canada, Ltd.** Flight 703, an A319-114, to take-off from Runway 31 of New York (LGA) on April 3 and USAirways Flight 920, a DC-9-30, to land on R-22, ATC realizes the Airbus might not have sufficient time to clear the intersection of R-22. The USAir-

ways Douglas is directed to execute a go around and the **Air Canada, Ltd.** Airbus is directed to turn right. The Canadian jetliner rejects the ATC direction and maintains its heading, while the U.S. plane banks left to avoid it, flying under and behind the A319. Flight 703 proceeds on course while Flight 920 circles and lands.

The USAirways captain estimates that his aircraft had flown within 75 ft. horizontally and 85 ft. vertically of the **Air Canada, Ltd.** plane; ATC puts the separation at just 20 ft. The near miss is not revealed to the public until June.

A new Terminal B section is opened at Boston on April 6.

Daily roundtrip service between Charlotte and London (LGW), previously announced as having a May 7 launch, is postponed on April 22. The carrier blames the U.K. government, citing its "unlawful" behavior under the Bermuda II Treaty in refusing to grant commercially viable landing rights for the flight.

A marketing alliance is entered into with **American Airlines** on April 24. Under its terms, the two majors agree to link their frequent flyer programs, share lounges at various airports, and cooperate in such areas as joint purchasing. Code-sharing will be left for later discussion, if permission for it can be obtained from their respective pilot unions and the government. At the same time, a 25-year, multibillion contract is entered into with SABRE Corporation to take over the airline's information technology activities and modernize them.

The same day, the carrier settles the breach of contract suit filed against it by Boeing the previous September. While details of the agreement are not disclosed, the manufacturer does acknowledge receipt of a payment from the airline.

Having received approval and first announced flights the previous December, the company inaugurates daily roundtrip B-767-201ER service between Philadelphia and Amsterdam on April 29. While in London, Chairman Wolf indicates that conversations are occurring with a number of carriers concerning the possibility of a new strategic alliance.

With DOT approval, the carrier announces on May 8 that it will launch nonstop service from Pittsburgh to Paris on October 1.

During the stockholders' annual meeting in mid-May, President/Chief Operating Officer Gangwal, upon the recommendation of Chairman Wolf, assumes the CEO title as well; Wolf will remain as chairman/CEO of the holding company USAirways Group.

En route from Pittsburgh to Los Angeles on May 24, Flight 7, a B-757-2B7 with 8 crew and 120 passengers, encounters turbulence at 39,000 ft. about 80 mi. S of Wichita, Kansas. Seven people are injured, including one flight attendant, who is seriously hurt; the flight is diverted to Oklahoma City where the injured are sent to the hospital.

With appropriate ceremony, MetroJet is launched on June 1. Five B-737-201As initiate 34-times-a-day roundtrips from Baltimore to Cleveland, Fort Lauderdale, Manchester, New Hampshire, and Providence, Rhode Island. Also on June 1, USAirways more than doubles its number of daily flights between Washington, D.C. (IAD) and Boston, adding eight flights and offering hourly service. The total number of daily roundtrips between the 2 cities reaches 15.

On June 7, countering MetroJet, low-cost rival **Southwest Airlines (2)** inaugurates nonstop eight-times-daily return service from Baltimore (BWI) to Manchester, New Hampshire (its only new city this year) and 12 daily nonstop departures are launched from Manchester to Baltimore (BWI), Orlando, Chicago (MDW), and Nashville. The one-way walk-up fare between Manchester and Baltimore is \$66, \$1 more than that charged by Metrojet. A new 23,300-sq.-ft. USAirways club opens at Philadelphia on June 14.

The U.S.-France bilateral accord reached on April 8 is formally signed on June 18 in a ceremony by French Foreign Minister Hubert Vedrine and U.S. Secretary of State Madeleine K. Albright and Secretary of Transportation Rodney E. Slater. The pact opens the way for new transatlantic code-sharing and additional frequencies.

On July 2, USAirways Group Chairman Wolf announces 7 firm orders for Airbus A330-300s, together with 7 orders to be reconfirmed and

16 options. The first will be delivered in the fall of 1999, followed by six more in 2000. It is also determined to increase the delivery of Airbus narrow-bodies, with six A319-112s to arrive during the fall.

MetroJet adds four-times-a-day nonstops roundtrips on July 6 from Baltimore (BWI) to Tampa/St. Petersburg, plus twice-daily roundtrips from Baltimore (BWI) to Jacksonville and Miami. Simultaneously, two more daily roundtrips are started between Baltimore (BWI) and Manchester, New Hampshire, bringing to five the number of daily nonstops between the two cities.

As a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting, as of July 7, the issuance of advance boarding passes.

As part of the new alliance with **American Airlines**, members of the carrier's frequent flyer program can begin claiming mileage for travel on both carriers on August 1. In addition, USAirways Club members may access any of American's 47 Admiral Clubs and vice versa.

Orlando joins the MetroJet network five times daily on August 3, by which date 10 B-737-200s are operating a total of 66 daily departures. Seven days later, the company announces that it is deferring plans to serve London (LGW) from its Charlotte hub until the DOT has been able to obtain commercially viable slots from British aviation authorities.

While en route from Philadelphia to Las Vegas on August 7, Flight 623, a B-737-3B7 with 6 crew and 117 passengers, encounters severe air turbulence at 29,800 ft., 5 nm. N of McConnellsburg, Pennsylvania. Ten aboard suffer minor injuries.

A tentative contract agreement, covering 6,100 employees, is tentatively concluded with the IAM during the third week of August.

New MetroJet twice-daily nonstop flights commence on September 9 from Baltimore (BWI) to New Orleans and from Tampa/St. Petersburg to both Boston and Hartford. A third daily nonstop service is introduced between Baltimore (BWI) and Jacksonville.

A total of 12 cities are now served with 80 daily departures by the carrier's low-cost division.

Daily nonstop B-767-201ER return service is inaugurated on October 1 from Pittsburgh to Paris (CDG), the company's second European destination. This is the only nonstop flight available on the route.

On October 4, twice-daily nonstop MetroJet service is launched from Orlando to Albany, Buffalo, and Rochester, while the number of frequencies from Orlando to Baltimore (BWI) grows from five to six.

Simultaneously, new daily MetroJet roundtrips are introduced between Asheville, North Carolina, and Pittsburgh and between Knoxville and Philadelphia. One new daily roundtrip is also started between Birmingham, Alabama, and Pittsburgh.

Tiger Management, the airline's largest shareholder, submits a filing on October 12 to increase its holding in the airline above its current 20% level.

The first of as many as 400 Airbus A320-family aircraft is delivered in ceremonies at Hamburg on October 16; on hand for the turn over of the A319-112 is Chairman Wolf and Airbus Industrie CEO Noel Forgeard. Two more will quickly be delivered, with three more following before the end of the year.

It is announced on November 2 that MetroJet twice-daily return flights will begin on January 6 from Hartford to Fort Lauderdale and from Washington, D.C. (IAD) to Fort Lauderdale.

The initial two A319-112s enter service to Tampa on November 10 over the carrier's routes from Philadelphia and Raleigh-Durham.

The MetroJet schedule from Baltimore (BWI) is significantly increased, also on November 10, with the number of frequencies to Fort Lauderdale increased from two to five, to Miami from two to three, to Orlando from six to seven, and to Tampa from four to six.

Also on November 10, new Chief Financial Officer Hall, in office only since February, resigns "to pursue other interests." He is succeeded by another ex-**United Airlines** official, its treasurer, Thomas Mutryn.

Two days later, **Austrian Airlines, A.G.** joins the carrier's Dividend Miles program. The airline's President/CEO Gangwal is elected CEO of

USAirways Group on November 18. He will continue to hold his posts with the airline-operating arm.

Just after touching down at Charlotte on November 22, an MD-80 with 77 passengers rolls into the path of a Fokker 100 taking off on an intersecting runway. The Fokker pilot must aggressively lift off in order to avoid a collision, passing over the MD-80 by not more than 50-ft. Both company pilots file reports with the FAA and ALPA again rebukes the regulators for their newly introduced "Land-and-Hold Short Operations" policy that permits the simultaneous use of intersecting runways, even at night or in bad weather.

It is announced on November 27 that the carrier will inaugurate non-stop service between Philadelphia and Milan, Italy, on April 1.

At the end of November, a new MetroJet homepage is opened on the World Wide Web at <http://www.flymetrojet.com>. Also, the third A319-112 enters service, flying from Charlotte to Tampa.

The number of MetroJet flights from Hartford to Orlando grows from twice daily to thrice daily on December 2. The 1 millionth MetroJet passenger is identified the next day as Newark, Delaware, resident Jed R. Seay, who has boarded a division service from Baltimore (BWI) to Providence, Rhode Island. A special ceremony is held at Baltimore (BWI), where unit president S. Michael Scheeringa presents Seay with a number of prizes.

As the result of a "glass ceiling" review by the Office of Federal Contract Compliance Programs of the U.S. Labor Department, the carrier, also on December 3, is required to pay nearly \$400,000 to 30 women who for years were paid less than their male counterparts at the airline.

Plans are announced on December 4 for the expansion of MetroJet service on February 3 by the addition of 17 new daily roundtrips in 3 new markets with 6 additional aircraft. With the new schedule, MetroJet will operate seven flights between Washington, D.C. (IAD) and Atlanta, three flights between Washington, D.C. (IAD) and Birmingham, four flights between Washington, D.C. (IAD) and Raleigh/Durham, and three flights between Raleigh/Durham and Orlando.

As of December 15, USAirways customers may travel with the convenience of electronic ticketing to all USAirways, "USAirways Express," MetroJet, and USAirways Shuttle destinations worldwide.

Significant MetroJet service enhancements are announced on December 16. On April 7, thrice-daily deep discount roundtrips will be started from Washington, D.C. (IAD) to both Columbus, Ohio, and St. Louis. Simultaneously, the company announces that beginning on March 3, the main line will inaugurate seven-times-a-day roundtrips between New York (LGA) and Washington, D.C. (IAD).

Main line frequencies from Washington, D.C. (IAD) to Orlando increase from one to four on December 22. At this point, MetroJet operates 22 aircraft, serving 16 cities with 124 daily departures.

Despite the introduction of MetroJet, overall passenger boardings during the 12 months dip 1.1% to 57.99 million. Cargo traffic, on the other hand, rises 3.08% to 292.7 million FTKs. Revenues move up 2% to \$8.68 billion, while costs fall 3.2% to \$7.67 billion. Operating gain reaches \$1.01 billion, while net profit is cut in half to \$538 million.

MetroJet twice-daily return flights begin on January 6, 1999, from Hartford to Fort Lauderdale and from Washington, D.C. (IAD) to Fort Lauderdale.

On January 11, *The New York Times*, having obtained documents under a Freedom of Information Act request, publishes details concerning a series of security lapses by the airline between 1993 and 1996. The snafus include guns and test parcels of small explosives that find their way past passenger screening checkpoints. USAirways executives indicate that the company has been working with the FAA in the years since to enhance security procedures.

While en route from Baltimore (BWI) to Chicago (ORD) on January 15, Flight 1177, a B-737-200A with 5 crew and 88 passengers is forced to divert to Fort Wayne, Indiana, when passengers complain of a strong odor in the cabin. Upon landing, 7 people are treated and released from a local hospital for chest pains and troubled breathing, while another 17

are given medical attention at the airport. The passengers depart for Chicago a few hours later on a backup plane sent for them from Chicago.

A seventh daily nonstop roundtrip Metrojet service is initiated on February 3 between Atlanta and Washington, D.C. (IAD). Simultaneously, thrice-daily Metrojet roundtrips begin from Washington, D.C. (IAD) to Birmingham and from Raleigh/Durham to Orlando and four times a day from Washington, D.C. (IAD) and Raleigh/Durham.

Also on February 3, daily A320-214 roundtrips commence between Philadelphia and Los Angeles. The aircraft employed is the first of 11 to enter service over the next 11 months.

It is announced on February 11, that new daily main line B-757-2B7 roundtrips will be inaugurated on June 3 between Boston and the Florida cities of Fort Lauderdale and Orlando. Simultaneously, a third daily Metrojet service will be added from Boston to Tampa.

While en route from Hartford to Orlando at 33,000 ft. on February 23, Metrojet Flight 2710, a B-737-2D7A with 117 passengers, experiences an uncommanded yaw to the right and roll to the right. The flight crew immediately disconnects the autopilot and autothrottle. Although equipped with a new rudder power control unit (PCU) redesigned to prevent such upsets, the plane, which does not lose altitude, is not leveled until aileron inputs and differential thrust have been applied. The crew declares an emergency and the aircraft is diverted to Baltimore (BWI). There, NTSB and company officials immediately remove the PCU for study.

The local executive council of AFA asks the NMB on February 24 to help resolve the stalled two-year-old contract talks between their union and management.

Severe weather conditions in the upper New England states force the airline to cancel all of its flights between Boston and Providence during the afternoon and evening of February 25 and the morning of February 26.

A new USAirways Club and Business Center is opened at Charlotte-Douglas International Airport on March 1.

Beginning on March 3, the main line inaugurates seven-times-a-day DC-9-31 roundtrips between New York (LGA) and Washington, D.C. (IAD) for a regular, unrestricted \$149 walk-up fare. CCAir also provides eight daily return flights.

USAirways also introduces the A319-112 to Pittsburgh, placing the newest airliner type in inventory into service from its giant hub to Charlotte.

The next day, management and the IAM reach a tentative collective bargaining agreement covering approximately 6,000 fleet service workers. The pact is sent to the membership for a ratification vote.

Chairman Wolf reports on March 11 that the airline has successfully completed its quest for competitive takeoff and landing slots at London (LGW) for its Charlotte service, authority for which has been held for over a year. An inaugural date is promised soon.

On March 15, **Northwest Airlines**, which has been recalcitrant in the past, joins **USAirways**, **Delta Air Lines**, **Southwest Airlines (2)**, **United Airlines**, and **American Airlines** in raising business fares by 1% and imposing another 3% hike on leisure tickets. United had begun this second round of ticket price increases on March 12. On March 31, the company's sales arm has the pleasure of selling to **Debonair Airways, Ltd.** its first owned aircraft, the former **Pacific Southwest Airlines (PSA)** BAe 146-200 that it has been operating under lease since 1995.

Thrice-daily deep discount Metrojet roundtrips are started on April 7 from Washington, D.C. (IAD) to both Columbus, Ohio, and St. Louis. On April 13, it is announced that Metrojet service between Atlanta and Raleigh/Durham will be expanded to four daily roundtrips on October 2.

While on its takeoff roll from Raleigh/Durham for Washington, D.C. (IAD) on April 19, Flight 2784, a Metrojet B-737-201A, suffers a smoking engine that forces the pilot to abort the takeoff. The plane is stopped and all aboard are safely evacuated.

Thomas H. Davis, the founder of **Piedmont Airlines (1)**, dies at Winston-Salem, North Carolina, on April 22 following a lengthy illness. He was 81 years of age.

Five-times-a-day nonstop roundtrip Metrojet service is inaugurated on May 4 from Chicago (MDW) to Washington, D.C. (IAD) and four-

times-a-day from Midway Airport to Baltimore (BWI). Main line flights are initiated from Orlando to Lehigh Valley International Airport.

Also on May 4, the main line expands its daily flights from its Philadelphia hub. Service from Philadelphia to Atlanta will grow to 8 daily roundtrips, with 5 roundtrips to Cleveland, 3 roundtrips to Denver, 6 roundtrips to Indianapolis, 5 roundtrips to Los Angeles, 4 roundtrips to Minneapolis (MSP), 7 roundtrips to Chicago (ORD), 11 roundtrips to Pittsburgh, and 3 roundtrips to Seattle.

Forewarned concerning a Long Term Incentive Plan to be submitted to the annual USAirways Group general meeting at Charlotte on May 19, flight attendants, who have been seeking a contract since the beginning of 1997, organize opposition to the scheme through a letter-writing campaign and media outreach. Although the plan granting top executives 500% bonuses is approved by the stakeholders inside the meeting (while 150 flight attendants demonstrate outside), Chairman Wolf, feeling the heat of the protest, renounces the bonus (up to 220% of their annual salaries) for himself and CEO Gangwal.

Daily roundtrip Metrojet service is initiated on June 3 between Boston and Orlando and Fort Lauderdale. Simultaneously, a third daily Metrojet roundtrip is started between Boston and Tampa. The next day, thrice-daily nonstop roundtrips commence between Washington, D.C. (DCA) and Columbia, South Carolina.

Following an impressive ceremony attended by Sen. Jesse Helms (R-NC), daily B-767-201ER return service is inaugurated on June 12 between Charlotte and London (LGW). That between Philadelphia and Amsterdam is suspended the next day pending the delivery of new aircraft.

On June 29, company officials are able to report that its electronic ticketing product has exceeded the 50% mark.

Twice-daily nonstop Metrojet roundtrips are introduced on July 9 between West Palm Beach and Hartford and from West Palm Beach to Baltimore (BWI). Daily nonstop Metrojet roundtrips are simultaneously launched from West Palm Beach to Boston.

Beginning on July 15, A319-112s and A320-214s are employed on services to Richmond from both Pittsburgh and Charlotte.

The number of nonstop Metrojet roundtrips between West Palm Beach and Boston is boosted to three-per-day on August 6, but a dearth of available B-737-200s forces cancellation of plans to simultaneously begin twice-daily nonstop Metrojet roundtrips between Boston and Fort Myers and between Raleigh/Durham and Tampa.

To highlight their campaign for fairness, the carrier's Pittsburgh-based flight attendants wearing bright yellow tee shirts march in the city's annual Labor Day parade on September 6.

Lack of aircraft also causes a hold on plans to begin daily nonstop Metrojet roundtrips on September 9 between Fort Myers and Washington, D.C. (IAD) and twice-daily Metrojet nonstops from Boston to Fort Myers. The same day, twice-daily nonstop B-737-200 Metrojet roundtrips are begun from Milwaukee to Columbus, Ohio, and from Milwaukee to Washington, D.C. (IAD), as well as from Columbus to Boston.

On September 14, with its original delivery date slipping, USAirways announces that it will still become the first U.S. carrier to fly the \$115-million-a-copy A330-300, even as the number of firm orders is increased to 10, with 20 options.

At the end of the month, a strike is averted when the airline and its 7,000-member engineering union reach a tentative late-night agreement on pay and working conditions. The employees had been concerned over a company plan to hire additional part-time workers.

Thrice-daily MetroJet roundtrips are inaugurated on October 1 from Atlanta to both Baltimore and Boston on October 1. The next day, daily B-737-200 MetroJet return service is started from Orlando to Syracuse and the MetroJet frequencies from Washington, D.C. (IAD) to Milwaukee are boosted from two to three every day.

A new group of European destinations are announced on October 7; beginning in April and May, the company will operate from Charlotte to Paris (CDG) and Frankfurt and from Philadelphia to Manchester.

On November 9, the carrier's leasing and sales division signs a letter of intent to sell six B-737-200s to **Vanguard Airlines**.

New **United Airlines** Chairman/CEO James E. Goodwin and USAirways Group chairman/CEO Wolf hold preliminary discussions during a November business meeting concerning UAL's possible purchase of the latter. Additional rounds of discussion are scheduled.

The last of 21 A319-112s to be delivered during the year is accepted on December 16.

In December, USAirways, **United Airlines** and **American Airlines** join **Delta Air Lines** as participants in Priceline.com. Also during the month, a new five-year labor contract is ratified by the carrier's 10,400 passenger service workers, represented by the Communications Workers of America.

Passenger boardings slide 3.8% to 55,812,000, while cargo jumps 7.1% to 313.41 million FTKs. Revenues fall 1.1% to \$8.46 billion, while expenses are up 10% to \$8.32 billion. The previous year's large operating profit falls to \$139 million, while net gain is cut to \$273 million.

Airline employment at the beginning of 2000 stands at 41,636, a 9% increase over the previous 12 months. Among the world's top 25 airlines, USAirways is 6th in total passengers, 12th in employees, 6th in fleet size, 12th in operating revenue, 24th in operating profit, and 14th in net profit.

The first of 29 A319-112s to be delivered for main line service during the year is accepted on January 11. Nine others will be delivered for **USAirways Shuttle**.

The carrier advises the media on February 2 that it will accept delivery of the first of 34 A321-211s that it has on order during the early months of 2001.

On February 9, an emergency inspection of the stabilizer assemblies of all 31 of the company's MD-80s and 34 DC-9s is undertaken in light of the **Alaska Airlines** disaster. On February 24, the carrier announces that unless a contract is reached with its flight attendants at the end of the mandatory 30-day "cooling off" period on March 25, it will be forced to shut down.

A new four-times-a-day B-737-200 MetroJet return service is launched on March 5 from Boston to Chicago (MDW). MetroJet frequencies from Boston to Fort Lauderdale are increased from two to three and to both Orlando and Tampa from three to four.

On March 6, the company and **British Airways, Ltd.** (2) announce that they have resolved the litigation pending between them in the U.S. District Court in New York in a manner satisfactory to both sides. The next day, twice-daily B-737-200 MetroJet roundtrips begin from New York (LGA) to Fort Lauderdale. Two days later, the carrier's first A330 makes its maiden flight from the Airbus airfield at Toulouse, France.

The carrier's flight attendants, on March 10, release an initial list of routes and cities that are targeted for random, unannounced CHAOS (Create Havoc Around Our System) strikes should a contract not be signed by March 25.

In ceremonies at Toulouse, France, on March 21, Chairman Wolf accepts delivery of the first A330-323, pledging to start Philadelphia to Paris (CDG) frequencies with it on May 4. The four-engine wide-body is the first of its type acquired by a U.S. airline.

The stand-off between the company and its Flight Attendants Association local continues right up to the brink, with Chairman Wolf threatening to shut down the main line, MetroJet, and the **USAirways Shuttle** at one minute after midnight on March 24-25 if a deal is not reached.

The premier A330-323 arrives at Pittsburgh on April 5. The same day, company B-737s take over 8 of the 12 daily roundtrips operated by **USAirways Shuttle** between Washington, D.C. (IAD) and Boston. The other four frequencies are assigned to "USAirways Express" partner **Trans States Airlines**. Daily B-767-2B7ER roundtrips are launched on April 13 from Charlotte to Paris (CDG).

Despite numerous discussions, negotiators from **United Airlines** and USAirways are unable to reach agreement on a price for the purchase of USAirways. Sensing the possibility of failure, Chairman Goodwin and his executives walk away at the end of the month.

During the first week of May, 85% of the company's AFA-represented flight attendants choose to vote and ratify, on a 4 to 1 basis, the new 5-year agreement tentatively reached late on March 24. The pact is viewed as good for both labor and management. The cabin crews win an immediate 5% pay raises and a 5% signing bonus, along with 2.5% salary raises spread over the life of the contract. The airline now has agreements with all its major unions and the prospect of labor peace for some time to come.

Also during the month, the company's ALPA-represented pilots vote approval of a measure that will allow the carrier to operate up to 70 50-seat regional jets—double the current agreed-upon number. In exchange, USAirways agrees to hire an unspecified number of new pilots and give job protection to those already employed.

With departure of Flight 26 from Philadelphia to Paris (CDG) on May 4, USAirways becomes the first United States airline to operate an A330 in international service. Philadelphia city fathers and a French consulate delegation attend the departure ceremony, during which President/CEO Gangwal cuts a ribbon to open the gate area for the flight. As the A330-323 taxis out, two airport fire trucks provide a saluting water arch.

Four-times-a-day B-737-200 MetroJet return service is initiated from New York (LGA) to Tampa on May 7, along with thrice-daily roundtrips to Orlando and twice-daily return flights to West Palm Beach. On the evening of May 11, the premier A330-323 international return service is operated as the first new Airbus is placed on the company's Philadelphia to Frankfurt route. Overnight A330-323 service from Charlotte to Frankfurt begins on May 12.

On May 25, daily A330-323 roundtrips are inaugurated from Pittsburgh to Frankfurt. That evening, daily B-767-201ER return service is launched from Philadelphia to Manchester, England. The eastbound flight requires 8 hrs. 10 min.

Goodwin's decision to leave the merger talks with USAirways actually prove a successful move. On May 18, Chairman Wolf calls Goodwin back, offering to lower the asking price. In New York on May 24, Goodwin and Wolf announce that a deal has been struck. **United Airlines** will purchase its smaller rival for \$11.6 billion (\$60 a share), in an arrangement that hopefully can be completed before expiration of their agreement on January 1, 2001—and before United would have to pay a \$50-million earnest interest penalty.

As part of the arrangement, UAL promises not to raise fares (except for fuel surcharges) for two years or lay off any workers from either carrier. It will spin off the USAirways operation at Washington, D.C. (DCA) to a new concern, DC Air. This new company is established by the partners specifically to resolve antitrust concerns occasioned by the position of USAirways as the leading carrier at Washington's Reagan National Airport and of **United Airlines**, a major operator in and out of Dulles International Airport. USAirways director and Black Entertainment Television founder Robert Johnson, will own the new regional, which, it is hoped, will immediately begin serving 43 cities out of Washington, D.C. (DCA).

If the pact is approved by stockholders and can clear federal, state, and European regulatory hurdles, it will create a company with 145,000 employees and \$25 billion in annual revenues that operates 1,000 aircraft, serving 316 cities around the world with over 6,500 daily flights. Even if created, however, such a giant United conglomerate would face a number of major problems: merger of the employees of both companies (readers need only review the merger of **Northwest Airlines** and **Republic Airlines** to remember how badly such an amalgamation can go); the joining of two presently incompatible reservations systems; UAL's assumption of \$7.3 billion in USAirways debt and lease obligation; a need to borrow funds with which to cover the \$4.3 million purchase of USAirways stock; cost problems brought about by the no-layoff and no-price-increase promises; and fleet and route rationalization.

Pending the approval of the United/USAirways merger, USAirways executive N. Bruce Ashby is named acting president of the new entrant DC Air on June 10.

Twice-daily B-737-200 MetroJet roundtrips are inaugurated on June 11 from New York (LGA) to Jacksonville. Simultaneously, a second daily return service is initiated from Charlotte to Nassau. In mid-month, an A330-323 is placed on the company's twice-daily service from Philadelphia to London (LGW).

The fifth A330-323 is delivered on June 28 and later in the day operates its first revenue service, Flight 8910 from Paris (CDG) to Pittsburgh.

While the fifth aircraft is worked up, the fourth A330-323 begins flying from Philadelphia to Rome on July 4, replacing a B-767-2B7ER that will be assigned to a new London offering.

USAirways is named 18th best-managed company among nonstate-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

On July 14, a company spokesman announces that the carrier will initiate A330-323 return service from Charlotte to both Frankfurt and London (GTW) during the first quarter of 2001. Daily B-767-2B7ER roundtrips from Pittsburgh to London (LGW) commence on the evening of July 17. From July 31–August 3, USAirways, the official airline for the 2000 Republican National Convention, operates a special reservations desk to assist convention delegates, guests, and media visiting Philadelphia.

While on descent into New York (LGA) on an August 2 service from Buffalo, the pilot of a company B-737 must quickly climb approximately 1,000 feet after TCAS sounds warn him of an **Adirondack Flying Service** Cessna 310 heading at it in departure from Newburgh. No injuries are suffered in the near miss.

On August 7, it is announced that daily roundtrip service from Philadelphia to Amsterdam will be resumed in April 2000, using A330-323s. On August 18 USAirways Group begins negotiations with **Gulfstream International Airlines** concerning a takeover of the stock of **Paradise Island Airways**. The same day, a new USAirways subsidiary, **Potomac Air**, is established to operate in the Northeast and mid-Atlantic regions as part of the larger merger proposal between its parent and **United Airlines**. If government regulators approve the amalgamation, **Potomac Air** will become DC Air, the separate airline established to meet regulatory concerns.

As the result of Hurricane Debby, flights are cancelled to and from St. Croix, St. Thomas, and San Juan on August 22 and San Juan early on August 23. A deal between the major and **Gulfstream International Airlines** is struck on August 24 under which USAirways acquires 100% shareholding in **Paradise Island Airways**.

Plans are announced on September 6 for the November 11 initiation of weekend nonstop A320-200 flights on the New York (LGA) and Boston to Miami routes using equipment borrowed from **USAirways Shuttle**. The flights will mark the first regular use of Airbus equipment by the company into South Florida.

One more A319 is ordered on September 15, bringing the total order to 70; this machine will not be delivered until 2002. Simultaneously, the company announces that it will launch daily nonstop roundtrips from Philadelphia to Brussels on May 9 next.

On September 20, A330-323s quietly replace B-767-2B7ERs on the carrier's Wednesday routing from Philadelphia to Bermuda. The Boeing equipment will continue to be employed on other days of the service.

While undergoing a post-maintenance trial at Philadelphia on September 22, the No. 1 engine of a company B-767-2B7ER suffers an uncontained failure of its first stage turbine disc. The subsequent fire extensively damages not only the power plant, but its pylon, the wing, and adjacent fuselage as well. Still, it is anticipated that the aircraft can be repaired and returned to service by October 20.

On September 23, despite UAL's employment of such well-known lobbyists as Kenneth M. Duberstein and Thomas Hale Boggs Jr. to promote the merger, the U.S. Senate Commerce Committee, chaired by Sen. John McCain (R-Ariz.), approves a September 23 nonbinding resolution opposing United's proposed purchase of USAirways. Offering the opinion that the move would not be in the public interest, the resolution is transferred to the full Senate for further action.

On September 26, UAL files papers with the European Union Commission seeking its required approval of the \$4.3-billion takeover of its smaller competitor. Also during September, a new 15,000-sq.-ft. reservations center is opened in Liverpool, England; consolidating all European reservations functions, the new facility initially employs 90 people.

On October 2, **Paradise Island Airways** is merged into **Potomac Air**, giving it an automatic Part 121 operating certificate. In the interim since August 18, a headquarters and operational base for **Potomac Air** has established at the Roanoke International Airport maintenance base closed by **USAirways** Chairman Stephen M. Wolf when he took over the company in 1996.

Continental Airlines Chairman Gordon Bethune, also on October 2, formally bids \$215 million in cash for the carrier's 119 jet slots and 103 commuter, short-haul slots plus 8 gate leases, ticket counters, ramps, aircraft parking and other facilities at Washington, D.C. (DCA). The offer, which would be good only after a United-USAirways merger, is also to include the assets being sold to the proposed new entrant DC Air, led by cable television mogul and USAirways board member Robert Johnson. The tender amount exceeds by some 50% the \$141 offered by Johnson and is meant to appease regulators by maintaining competition in the DCA market.

Also on October 2, daily roundtrip MetroJet service is inaugurated between Orlando and Syracuse. On October 3, the York County, South Carolina, Economic Development Board endorses the merger with **United Airlines**. A company press release of October 6 reveals that the carrier's frequent flyer and club relationships with **American Airlines** will end on August 21 next.

USA Today reports on October 10 that company flight training personnel are now discouraging pilots from the use of certain terms over aircraft public address systems and asking that others be avoided completely. Among the discouraged words are thunderstorm (preferred: rain shower), fog (preferred: mist haze or restricted visibility), and turbulence (preferred: bumpy) while late and terminal (even if noting an airport arrival point) are now out of the vocabulary.

Company shareholders, voting on October 12, approve by 98.5% the \$60-a-share merger offer from **United Airlines**. Before amalgamation can begin in early 2001, the takeover must obtain approval from the U.S. DOJ antitrust division and the DOT, as well as the European Union and several state attorneys general, who are voicing concern.

In an incident that will garnish international attention and provide grist for the late night television comics, USAirways allows the "service animal" Charlotte, a 300-lb. Vietnamese potbellied pig, to accompany her owner, Maria Tirota Andrews, in the first-class section of the October 17 service from Philadelphia to Seattle. Following the flight, on which the pig allegedly behaves badly, the embarrassed airline files an incident report with the FAA. After *The Philadelphia Daily News* runs the Charlotte story, FAA officials interview USAirways personnel on the matter. On November 30, the agency will rule that the carrier had acted reasonably.

On October 18, the European Union, which had originally intended to render its ruling by October 25, suspends its review of the proposed merger due to a need for additional information. The last of 12 A320-214s delivered for main line service during the year is accepted on October 23.

Through October and into November, a workforce of 120 is built up for **Potomac Air** and two de Havilland Canada DHC-8-200s currently operated by **Piedmont Airlines** (2) are acquired, with plans to obtain others. Initially, a start-up date of November 12 is forecast. Left unresolved is the mechanics of a potential merger with DCAir, the company being set up to take over the majors' routes from Washington, D.C. DCAir owner Johnson now indicates that he is negotiating to sell up to 49% of his carrier to another airline, probably **American Airlines**, which would then lease to DCAir the planes and crews necessary for operation. Initial planned destinations from the DCA base include Baltimore (BWI), Charleston, West Virginia, Greensboro/High Point, White Plains, and Roanoke. As up to six more turboprops are acquired, routes will be extended to Allentown, Charlotte, Greenville/Spartanburg,

Knoxville, Philadelphia, Norfolk, Pittsburgh, Richmond, and the West Virginia communities of Greenbrier/Lewisburg, Clarksburg (Bridgeport), and Morgantown.

The "USAirways Express" contract with **Mesa Air Group** is extended on November 1 from 2007–2008. Mesa promises to grow the number of ERJ-145s committed to the pact from 28 to 32.

The weekend A320-214 roundtrip service from Philadelphia to St. Martin becomes daily on November 12, the same day Sunday flights to St. Martin are added to those already operated there on Saturdays from Charlotte. Also on November 12, new daily roundtrips are also started from Charlotte to both St. Croix and St. Thomas, the latter via San Juan; from Philadelphia to Aruba and to Santo Domingo; and from New York (LGA) to Nassau. Saturday-only roundtrips are simultaneously launched between Pittsburgh and Nassau.

The merger with **United Airlines** does not appear to be any closer to realization by mid-November than it was in May. Indeed, so many problems continue to exist that, even before DOT, DOJ, and the EU act, investment firm Paine Webber Buttrick advises UAL Chairman Goodwin to take advantage of the January 1 closing date, even if he has to pay the \$50-million earnest penalty and simply withdraw. In his insightful review of the UAL-USAirways compact in the November 13 issue of *Business Week*, Michael Arndt writes: "In the final stroke of irony, losing USAirways could be the best thing to happen to UAL."

On November 17, the company announces that it will place A330-323s on its Philadelphia to Manchester route beginning on March 4. Also during November, the last B-737, a Dash-301, is withdrawn from **USAirways Shuttle** and returned to the main line.

In December, A330-323s are placed on the weekday route between Philadelphia and Miami and on the weekend service from Philadelphia to San Juan.

Citing what it believes to be are strong facts against the UAL-USAirways merger, the State of Maryland launches an aggressive campaign to defeat the arrangement. Details are reported in the December 9 issue of the *Baltimore Sun*.

On December 12, USAirways is named the "best overall airline" by *Onboard Services* magazine.

Beginning on December 15, company passengers at New York (LGA) are able to bypass lines by purchasing their tickets, checking bags, selecting seats, and obtaining boarding passes at 10 new e-ticket check-in kiosks.

After **United Airlines** and USAirways representatives appear before it and offer unspecified concessions designed to address competition concerns, the EU Commission, on December 18, extends from December 21 to January 12 its deadline to rule on the UAL proposal to takeover USAirways. The same day, the first non-proving A330-323 domestic service flights begin on the Philadelphia–Miami route. The return service northward to Philadelphia continues on to Rome.

In a 48-page report released on December 20, the U.S. Government Accounting Office (GAO) indicates that a merger between UAL and USAirways would significantly reduce domestic airline competition in the United States. The same day, according to *The Wall Street Journal*, the two majors begin intensive negotiations with the DOJ antitrust division, which has not yet ruled out blocking the merger.

Also on December 20, the last of 29 A319-112s delivered for main line service during the year is accepted; nine other aircraft have been received for **USAirways Shuttle**. The seventh A330-323 arrives on December 27.

USAirways customer bookings during these 12 months rise 7.06% to 59,831,000, while that for the three owned "USAirways Express carriers" (Allegheny, PSA, and Piedmont-2) dip 1.2% to 6,753,000. The major's freight traffic rises 29.36% to 406.42 million FTKs.

As the year ends, the deadline for federal antitrust regulators to rule on the United-USAirways merger is moved from January 16 to April 2, 2001. Nevertheless, company employees look forward to **Potomac Air's** inaugural DHC-8-200 "USAirways Express" service, to be made from Washington, D.C. (DCA) to Charleston, West Virginia, Greensboro/High Point, and White Plains on January 5. They may also be heartened when the EU Commission, on January 12, rules in favor of the United-USAir-

ways merger. On February 4, USAirways will become the first American carrier to operate the A321 when it places its premier A321-211 into revenue service on the route from Philadelphia to Los Angeles.

Revenues for the year climb 7.8% to \$9.27 billion, but expenses jump 10.2% to \$9.32 billion, leaving an operating loss of \$53 million. The previous year's net gain becomes a \$197-million net loss.

USAIRWAYS EXPRESS (MESA AIR GROUP): 14000 Pecan Park Road, Jacksonville, Florida 32218, United States; Phone (904) 741-9000; Fax (904) 741-9901; <http://www.mesa-air.com/fl.htm>; <http://www.mesa-air.com/LIB.htm>; Code YV; Year Founded 1997. On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional begins to repaint its aircraft in a modified version of the major's grey and dark blue livery.

While on final approach to Benedum Airport at Bridgeport, West Virginia, on June 19, the outboard wingflap segment on a Beech 1900D detaches; the plane is safely landed and no injuries are reported.

On November 10, **Mesa Air Group** places \$350 million in orders with Bombardier Regional Aircraft for an additional 16 Canadair CRJ-200ERs; in fact, the request actually represents the conversion of eight DHC-8 requests and the exercise of eight options. Four will be assigned to **Mesa Airlines** and 12 to "USAirways Express."

On November 17, it is announced that the carrier will begin flying the new regional jets on January 19 from Philadelphia to Birmingham, Cincinnati, St. Louis, and Newburgh, New York.

While taxiing on the ramp at Bradley International Airport, Windsor Locks, Connecticut, on December 23 after a flight from New York (JFK), "USAirways Express" Flight 5286, a Beech 1900D with two crew and three passengers, collides with a snow bank in poor visibility. Two blades separate from the right propeller and strike the aircraft fuselage; no injuries are reported.

Passenger boardings climb 13.6% over the previous year, rising to 410,296.

On March 12, 1998, it is announced that five Canadairs will be transferred from the **Mesa Air Group** Fort Worth and Colorado Springs system to satisfy the MAG agreement with **USAirways**, which calls for the placement of 12 regional jets into the "USAirways Express" code-sharing program.

Those on hand during the first quarter fly from Philadelphia to Birmingham, Charleston, St. Louis, and Newburgh and from Charlotte to Charleston, West Virginia, Tallahassee, and Toronto.

CRJ service is inaugurated on April 1 from Charlotte to Little Rock.

Three of the jetliners enter service on May 1 on routes from Washington, D.C. (DCA) to Birmingham and Huntsville, Alabama, while a fourth flight is simultaneously started between St. Louis and Philadelphia.

While taxiing away from the ramp at Boston on the evening of June 12, "USAirways Express" Flight 5493, a Beech 1900D with 2 crew and 18 passengers, experiences the separation of two propeller blades after it strikes a plastic cone. The blades land 40 ft. behind the aircraft and no injuries are reported. The aircraft returns to the gate and its passengers are deplaned.

Regional jet service begins on June 15 between Boston and Raleigh/Durham, North Carolina, and from Philadelphia to Milwaukee and White Plains. The same day, all five daily nonstops between Philadelphia and Cincinnati are operated with the CRJs.

Former **Chautauqua Airlines** President Timothy Coon is appointed to the newly developed position of Vice President of "USAirways Express" on July 17.

Given the history between the leadership of the two organizations, it does not come as a surprise when, on August 27, it is announced that **Mesa Air Group** has signed a letter of intent for the acquisition of **CCAair**. The all-stock transaction, valued at approximately \$60 million (including \$15 million in debt assumption), will be complete as soon as stockholders and government regulators approve. Mesa will operate **CCAair** as a wholly owned subsidiary that will retain its own name.

Through their relationships with **USAirways**, the acquisition is also seen as a way for the combined "USAirways Express" companies to serve all of the major's hubs on the East Coast. On October 4, nonstop "USAirways Express" DHC-8-102 roundtrips commence between Charlotte and Tallahassee, four times a day.

In a move calculated to rebuild the strength and size enjoyed before the early 1998 "United Express" disaster, **Mesa Air Group**, on February 1, 1999, officially moves to fold **CCAair** into its "USAirways Express" division, with the merger to be complete by May. There are no initial plans to change **CCAair**'s operations or to link the carrier's route system to that of **MAG**.

On February 3, twice-daily nonstop "USAirways Express" CRJ roundtrips commence between Washington, D.C. (DCA) and Knoxville, Tennessee. "USAirways Express" roundtrips from Long Island's MacArthur Airport to Baltimore (BWI) are shut down on March 3 as **Southwest Airlines (2)** begins flying from the New York airport.

Regional "USAirways Express" service from Newburgh, New York, to Raleigh/Durham, North Carolina, is expanded on April 7 by the addition of two nonstop CRJ roundtrips.

Three daily "USAirways Express" CRJ services are added on May 4 between Philadelphia and Baltimore (BWI), complementing the existing five flights in that market.

The **Mesa Airlines**, **Air Midwest**, and **CCAair** divisions of **Mesa Air Group** all complete 100% of their flights on May 2. To celebrate this achievement, President/CEO Ornstein on May 6 hosts a company-wide pizza party, ordering pizza for all 3,800 employees in every unit spread over 100 locations.

On September 9, the **CCAair** division initiates thrice-daily Dash-8 return service from Charlotte to Montgomery, Alabama.

During November, the ALPA-represented pilots of **Mesa Airlines** and **CCAair** merge their seniority lists. Both carriers operate as **USAirways Express** (Mesa Air Group). Thrice-daily CRJ roundtrips commence at the end of the year between Washington, D.C. (DCA) and Toronto.

An agreement is signed by Mesa Air Group with Empresa Brasileira de Aeronautica, S.A. on January 27, 2000 for 36 additional ERJ-145s; Mesa also has options on 64 more regional jetliners, some of which may later be converted into ERJ-135 orders.

On April 14, plans are announced by **USAirways** for a massive increase and expansion of regional services from New York (LGA) in the period between July and October. New flights, many of which will also be flown by the "USAirways Express" partner **Trans States Airlines**, will start to Bedford, Massachusetts, Binghamton and Elmira, New York, Manassas, Richmond, and Roanoke, Virginia, Greensboro, North Carolina, and Greenville/Spartanburg, South Carolina. Present frequencies will be increased in number to Albany, Syracuse, Baltimore, Birmingham, Burlington, Charleston, Columbia, Charlottesville, Norfolk, Harrisburg, Hyannis, Martha's Vineyard, Nantucket, Portland, and Providence, Rhode Island.

The first ERJ-145 arrives and clears customs at Fort Lauderdale on April 28 and is assigned to **USAirways Express** (Mesa Air Group) on June 1. The first ExpressJet service begins the next day as one daily return flight is offered from Washington, D.C. (DCA) to Atlanta and two to Birmingham. The CRJs previously employed by the company begin a process of transfer to **America West Express** (Mesa Air Group).

Nonstop ERJ-145 return service is initiated on August 10 between Boston and Greensboro, North Carolina.

The "USAirways Express" contract is extended on November 1 from 2007–2008. Mesa promises to grow the number of ERJ-145s committed to the pact from 28 to 32.

On December 2, a fourth daily ERJ-145 service is added from Washington, D.C. (DCA) to Columbia, South Carolina. CRJ thrice-daily return flights begin on December 11 between Charlotte and Baton Rouge.

Thrice-daily CRJ roundtrips are started on December 18 from Charlotte to both Fayetteville, Arkansas, and Jackson, Mississippi.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights. On December 4, the FAA holds an action to distribute the available takeoff and landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. **USAirways Express** receives 20 of the new positions. In a supplemental auction for the slots previously assigned to defunct Legend Airlines, **USAirways Express** receives one more.

Daily roundtrip CRJ roundtrips are initiated on December 18 from Charlotte and Jackson to Northwest Arkansas Regional Airport. The new services have barely begun when they are shut down—along with most of the rest of the state—by a great ice storm at the end of the month, worse than any storm in decades.

During the first quarter of 2001, Mesa will execute a new agreement with **United Airlines**. Contingent upon the proposed merger of the major with **USAirways**, **United** will extend the **MAG** "USAirways Express" contract through December 3, 2010. The deal requires that both **UAL** and **MAG** drop all outstanding litigation remaining from the **UAL** termination of its contract with Mesa in 1998.

USAIRWAYS SHUTTLE: P.O. Box 616, La Guardia Airport, Flushing, New York 11371, United States; Phone (718) 397-6000; Fax (718) 397-6040; http://www.usairways.com; Year Founded 1997. On February 27, 1997, **USAir** is renamed **USAirways** and the shuttle service in which it holds 47% interest becomes **USAirways Shuttle**. As a cost-saving measure, the decision is taken to let the aircraft assigned to the operation retain their previous livery. It is announced on April 7 that **USAirways Group** will establish the value of the shuttle and will consider exercising the option it holds for its purchase.

On May 29, **American Airlines** makes a \$300-million offer to purchase the shuttle from Shuttle, Inc., the consortium of New York banks led by Citibank and Bankers Trust, which owns it.

Throughout the summer, **USAirways** struggles to win a contract from its pilots. Meanwhile, on August 1, Washington, D.C. (IAD)-based **Atlantic Coast Airlines** launches competing "United Express" service to New York (LGA) nine times per weekday.

When, on September 30, at the 11th hour, an arrangement is finally concluded with its pilots, **USAirways** is able to begin implementing plans for expansion that have largely been on hold.

Despite AA's larger bid, **USAirways** elects on November 22 to purchase the shuttle by exercising its original option. The price, including debts and warrants, is \$285 million; **American Airlines** receives a \$10-million, negotiated-breakup fee.

With a fleet of 4 each B-727-214s, B-727-225s, and B-727-254s (which now begin to receive new livery), the shuttle offers 17 daily roundtrips from New York (LGA) to Boston and 15 from New York (LGA) to Washington, D.C. (DCA).

Passenger boardings accelerate 5.2% to 1,509,000, while freight declines 2% to 219,000 FTKs. Operating revenues advance 10.3% to \$173.4 million, while expenses rise 15.9% to \$158.59 million. The operating gain is thus reduced to \$14.81 million, while net profit falls to \$2.79 million.

The workforce has been reduced to 620 by the beginning of 1998. During the first quarter, 17 daily nonstop roundtrips are initiated from Washington, D.C. (DCA) to Boston.

On October 4, operations at Boston are moved from Terminal A to new facilities at **USAirways**' Terminal B. All shuttle flights are now operated

from dedicated gates 10, 12, and 13. Shuttle President Rita M. Cuddihy joins airport and area officials in a ribbon-cutting ceremony the next day.

Employees of the division and the Port Authority of New York and New Jersey for the sixth straight year host nearly 75 children, patients at Schnedier's Children Hospital in New Hyde Park, New York, aboard a B-727-225 on December 12 for a "Secret Trip to the North Pole." Once aboard at Gate 22, the youngsters are treated to holiday beverages and snacks while the aircraft taxis about the airport property; they then deplane at Gate 11 to visit with Santa and Mrs. Claus in their workshop.

During the 12 months, customer boardings inch up 1.59% to 1.53 million, while freight traffic falls 10.67% to 198,000 FTKs. Revenues move up a slight 0.3% to \$173.92 million, while costs, up 9.2%, are \$163.3 million. The operating profit slides to \$10.61 million, while net gain rises to \$3.91 million.

The company introduces a new livery during the first quarter of 1999, with a B-727-225 the first to wear the new color scheme.

Beginning on April 5, shuttle flights between New York (LGA) and Boston takeoff 30 minutes earlier each weekday, the earliest scheduled departure from either airport. Hourly service is thereafter operated between the two communities until 10 p.m.

On May 17, parent **USAirways** reaches a contract agreement with the IAM covering 82 mechanic and related employees at USAirways Shuttle.

It is announced on May 26 that beginning on October 2, A320-214s will replace B-727-200s on the Boston–New York (LGA)–Washington, D.C. (DCA) route. It is anticipated that the move will save the company a million gallons of fuel every year.

Enhanced competition begins with the Delta Shuttle on July 9 over the routes from Boston to Washington, D.C. (DCA). The same day, the existing 15 daily flights offered by **USAirways** main line are merged into the USAirways Shuttle operation.

Both of the airlines face new ground competition as the rail system Amtrak opens its 150-mph *Acela* trains between Boston and New York and between New York and Washington, D.C.

Hourly B-727-200 service is launched on September 9 from Washington, D.C. (IAD) to both New York (LGA) and Boston. The Washington, D.C.–Boston schedule operates from 6:45 a.m. to 8:45 p.m., while the return from Boston to Washington, D.C. is flown between 6:15 a.m. and 8:15 p.m. The Washington, D.C. (IAD) to New York (LGA) shuttle roundtrips are operated on the same 6:30 a.m. to 8:30 p.m. schedule, coming and going.

The company assigns a newly received Airbus Industrie A320-214 to the Washington, D.C. (IAD) to New York (LGA) route on October 1. Three more Airbus will be received by December 22 and placed into service on the Shuttle's routes.

Passenger boardings climb 3.7% to 1,586,000, while freight traffic plunges 41% to 115,000 FTKs. Revenues rise 3% to \$179.15 million, while expenses jump 8.5% to \$177.2 million. The operating profit falls to \$1.95 million, while the net gain is only \$264,000.

A total of 397 workers are employed at the beginning of 2000, a large 30.8% decline over the previous 12 months. All 8 A320-214s delivered the previous year are now in service alongside 1 B-737-301 and 11 B-727s, including 4 each Dash-154As and Dash-225s, and 3 Dash-227As. The first of the latter to depart the fleet is a B-727-227A, withdrawn on January 27.

The **USAirways** Airline Pilots Association (ALPA) Master Executive Council (MEC) and USAirways Shuttle ALPA-MEC tentatively agree, on February 10, to the integration of USAirways Shuttle pilots into **USAirways**. The pact affects approximately 5,800 USAirways Shuttle and 200 USAirways Shuttle pilots.

On February 24, the carrier announces that, unless a contract is reached with its flight attendants at the end of the mandatory 30-day "cooling off" period on March 25, it will be forced to shut down.

The stand-off between the company and its Flight Attendants Association local continues right up to the brink, with Chairman Wolf threatening to shut down the main line, MetroJet, and the Shuttle at one minute after midnight on March 24–25 if a deal is not reached. An agreement is reached at the very last moment.

On April 15, the carrier's 12 daily shuttle flights between Washington, D.C. (IAD) and Boston are handed over to the main line and to "US-Airways Express" partner **Trans States Airlines**.

A disaster at the intersection of Runways 04 and 31 at New York (LGA) is avoided by just 100–300 ft. on June 12 when a corporate Beech King Air 200 coming over from Runway 4 to take off into the NW from Runway 31, just clears a Shuttle A320-214 passing the intersection after arriving on Runway 4 from the SW.

A redesigned gate and boarding area is dedicated at New York (LGA) on June 23.

Plans are announced on September 6 for the November 11 initiation of weekend nonstop A320-200 flights by **USAirways** on the New York (LGA) and Boston to Miami routes, using equipment borrowed from USAirways Shuttle. The flights will mark the first regular use of Airbus equipment by the company into South Florida.

The first of nine A319-112s is delivered on September 15; the next day, the final B-727-200A flights are completed on the Boston–New York (LGA) segment of the Shuttle. By September 20, the day the first A319-112 arrives at Washington, D.C. (DCA) from Tampa, the Shuttle is down to its last five operational B-727s (one Dash-254, two each Dash-225s and Dash-227As), which are primarily held as backups.

Two more A319-112s are now delivered, one each on September 20 and 22. The premier A319-112 enters revenue service between Washington, D.C. (DCA) and Boston on September 25. The next day, a B-727-227A is withdrawn.

On October 4–5, 17–19, and 24, five additional A319-112s are accepted, one each day. A B-727-225 is retired on October 9. The next two Shuttle-dedicated B-727s, a Dash-254 and a Dash-227A, are withdrawn from service on October 20 and replaced with new A320-214s. The final B-727-225 is withdrawn on October 24. Its departure also marks the end of a long **USAirways** association with the "three-holers" dating back to the days of **Allegheny Airlines** (1). Just since 1992, the trijets have operated approximately 200,000 shuttle flights.

The last two A319-112s are delivered on October 24 and 30, respectively. The B-737-301 is withdrawn during November and returned to the main line.

A 500-mile bonus promotion ends on December 31. Overall customer bookings during these 12 months plunge 53.59% to 736,000, while freight traffic drops 50.63% to 57,000 FTKs.

As part of a scenario that will begin on January 10, 2001, **USAirways** agrees to sell a half-interest in USAirways Shuttle to **American Airlines**, which will simultaneously purchase the assets of bankrupt **Trans World Airlines** (TWA).

UST ILMSK AIRLINES: Aeroport, Ust Ilmsk, Irkutsk Region, East Siberian Zone, 665770, Russia; Phone 7 (39535) 75246; Year Founded 1992. Ust Ilmsk is established at its namesake city in 1992 following the breakup of **Aeroflot Soviet Airlines**. Aleksandr Akimov is named director general and he begins scheduled domestic and regional passenger services with 3 Yakovlev Yak-40s and 2 Antonov An-24Vs. It is understood that flights continue.

UTA FRENCH AIRLINES (UNION DE TRANSPORTS AERIENS, S.A.): France (1963–1992). This carrier is born on October 1, 1963, by the completion of a two-year amalgamation of **Union Aeromarine de Transport, S.A. (UAT)** and **Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)**. Compagnie Maritimes des Chargeurs Reunis, a shipping company, is majority shareholder (61%). The inaugural fleet includes 6 Douglas DC-8-33s, 2 DC-7Cs, 13 DC-6A/Bs, 6 DC-4s, and 2 de Havilland DH 114 Herons.

UAT French Airlines President Francis "Tom" Fabre remains in charge of the upscaled independent as France now becomes the only country on the European continent to operate two international long-haul airlines. Late in the year, three used Douglas DC-7Cs, formerly flown by **Swissair, A.G.** and **SAS (Scandinavian Airlines System)**, are acquired under lease from the government.

In February 1964, France once again realigns its international route network, granting UTA the right to service West, Central, and South Africa (except Dakar) and the Pacific; all other foreign authority is reserved to **Air France**. Services begin over the consolidated 190,000-km. route network formerly operated by the two merger partners.

Orderly retirement of the DC-4s continues while the DC-7Cs leased from the government begin operations in support of the nuclear testing program in the Pacific Atomic Testing Area. A second weekly roundtrip from Tahiti to Fiji and New Caledonia is offered as of September 20.

While en route from Paris to Mauritania on October 2, a DC-6B crashes into a mountain peak near Granada, Spain (70 dead).

Airline employment in 1965 stands at 4,100. The fleet now comprises 1 Beech 18, 1 DC-3, 2 DC-4s, 5 DC-6Bs, and 7 DC-8-33s. On December 17, the company begins to provide assistance to **Air Afrique (Societe Aeriennne Africaine Multinationale, S.A.)**.

Passenger boardings during the 12 months total 229,190.

The charter subsidiary Aeromaritime International, S.A. is established in 1966 and, having been modified, the three DC-7Cs operated on behalf of the government are employed, after September 14, in the space program's satellite-launcher tracking and re-entry observation service at Tahiti. Beginning on December 14, scheduled Sud-Est SE-210 Caravelle XB service is inaugurated over a 1,143-mi. route from Noumea to Auckland.

Systemwide enplanements drop to 214,000.

The fleet in 1967 includes 7 DC-8-33s, 2 SE-210s, 1 DC-4, and 1 Beech 18; orders are outstanding for 4 DC-8-62s. Employing a DC-8-33 leased from UTA, Aeromaritime International, S.A. begins operations in the summer.

Passenger boardings increase to 255,020 and freight traffic soars. The workforce is now 4,496.

Enplanements in 1968 are 294,000, rising to 331,000 in 1969, the year service is extended to the U.S. West Coast and on June 26, orders are placed for DC-10-30s.

In February 1970, UTA joins **SAS (Scandinavian Airlines System)**, **KLM (Royal Dutch Airlines, N.V.)**, and **Swissair, A.G.** in forming the KSSU Group for technical and operational cooperation; the multi-airline pact is signed for a 10-year period. In November, **Air Ceylon, Ltd.** announces its decision to terminate its commercial relationship with **British Overseas Airways Corporation (BOAC)** and to enter into a new affiliation with UTA. By now, all four DC-8-62s are now in service and passenger traffic climbs to 363,000.

The new commercial pact with **Air Ceylon, Ltd.** begins on September 27, 1971 and a decade of assistance to **Air Afrique, S.A.** is celebrated. A new route from London and Paris to Jakarta via Colombo begins on November 1.

In February 1972, a pact is signed with **Air France** for route network cooperation. Employing a Douglas DC-8-33 painted in **Air Ceylon, Ltd.** colors, UTA on April 6, inaugurates service on behalf of its partner over its own London and Paris to Jakarta route via Colombo.

While en route from Abidjan to Paris on July 12, a DC-8-33 is subjected to a hijacking attempt by a man who has wounded his wife during the takeover. A security guard shoots the suspect, who is then arrested.

The 46th station is opened with the inauguration of Paris-Tripoli via Malta flights. A new DC-10 simulator is unveiled at the company base on September 25.

The employee population stands at 5,297 and 102.8 million freight ton-miles are flown. The figure for enplanements is unknown.

The workforce in 1973 is increased to 5,503. The first of three DC-10-30s to be delivered on the year arrives on March 4; wearing the carrier's new colots, it enter service on March 17 over a route from Paris (CDG) to Johannesburg via Nice and Brazzaville. After workup, the others will also be placed on the company's long-haul routes to the Far East, Australia, the U.S. West Coast, and Africa. The fleet now includes 10 DC-8-33/-62s, 1 SE-210s, and 3 DC-10-30s, all of the DC-6Bs and DC-4s having been retired.

Implementation of the computerized reservations system UTA-MATIC begins and the carrier joins with **Air France** on August 10 to announce that they are both halting passenger flights into Cambodia because of that nation's military situation.

A total of 457,032 passengers are carried.

A fourth DC-10-30, equipped with automatic landing capability, is delivered in January 1974. The French government announces that, despite the route delineation of 1965, it reserves the right to award UTA traffic rights to other world destinations when they fit in with future bilateral air agreements signed with foreign governments.

On March 13, corporate headquarters are transferred from Le Bourget to Roissy-Charles De Gaulle International Airport. The new base also includes a large hangar, cargo terminal, training center, and a passenger terminal with automated passenger check-in.

In partnership with Wagons-Lits, UTA forms the subsidiary Roissy-Service, Co. to take on catering and the cleaning of small aircraft at the new De Gaulle airport. Routes are extended on November 8 from Tokyo to Noumea, Pago Pago, and Wallis/Futuna on the Noumea line. The employee population at year's end numbers 5,846. Passenger boardings jump 16.6% to 548,000 and freight grows 14%.

The workforce in 1975 is 6,142. A fifth DC-10-30 arrives in early spring, replacing a DC-10-30 that is leased to **Thai Airways International, Ltd.** in March. Los Angeles-Tahiti traffic grows 65%. Paris-Kinshasa and Paris-Luanda frequencies begin. A commercial flight agreement is developed with **Air Zaire, S.A.** for the joint development of freight and mail traffic between Zaire and France; plans call for weekly DC-8-62 service from Paris-Kinshasa via Marseilles.

Passenger bookings rise 14% to 625,925 and cargo is up 11.5%.

Employment in 1976 is increased by 2.6% to 6,300. A sixth DC-10-30 joins the fleet. In February, an agreement is signed with **Air Ceylon, Ltd.** under which the Singales company will purchase the DC-8-33. The French Douglas is turned over on September 30.

Service is launched by UTA to Muscat and a second weekly frequency is added to Freetown as the carrier continues to grow strongly in Africa by kicking off its weekly Zaire route. The **Air Ceylon, Ltd.** relationship is ended after Air Force AVN Padwan "Paddy" Mendis is named AC chairman on December 15.

Freight traffic this year balloons by 32.9% and passenger boardings accelerate 8% to 675,828.

In 1977, Chairman Fabre and Managing Director Antonine Veil oversee a workforce of 6,376 and a fleet that comprises 2 DC-8-63s, 3 DC-8-62s, 3 DC-8-50Fs, 1 DC-8-50, and 3 DC-10-30s. The DC-10-30 out on lease to **Thai Airways International, Ltd. (THAI)** is returned in May as a second weekly service to Djakarta is added to the Lagos-Freetown route.

Enplanements for the year reach 739,591.

The first Boeing 747-2B3F is delivered on September 26, 1978. The first jetliner to display an all-white fuselage (with giant UTA titles), the freighter is placed on all-cargo routes to Africa beginning in October.

Cargo traffic soars 21% and passenger boardings are up 13.7% to 856,544.

A second B-747-2B3F is acquired on August 6, 1979. The oil price increase situation causes freight to grow only 2.7% to 564.6 million FTKs and enplanements only 0.9% to 862,602. Total revenues jump 18.1% to \$749.4 million, leaving a \$9.27 million net profit.

The workforce is reduced 0.4% in 1980 to 7,105. Freight traffic declines 13.2% to 471.28 million FTKs, but passenger traffic rises 1.6% to 874,370. Total revenues are \$867.5 million, and the net profit soars to \$15.86 million.

Two more B-747-2B3Fs are placed in service during April and May, 1981, and a route is opened to the carrier's 50th destination, Salisbury, Zimbabwe. Longtime Chairman Fabre retires in July and is succeeded by **Air Inter, S.A.** Managing Director Rene Lapautre.

Freight grows 3.2% to 486 million FTKs and enplanements climb 7.2% to 937,455. Expenses of \$857 million on total revenues of \$861 million leave only a \$6.2-million operating profit.

The workforce is reduced a scant 1.1% in **1982** to 7,044. Passenger bookings rise 4.9% to 983,192, but cargo accelerates only 1.4% to 439.06 million FTKs. Expenses rise to \$820 million on revenues of \$825 million; the net profit is reduced to \$1.1 million.

Staff reductions continue in **1983** as the workforce is cut 2.1% to 6,966. The world's first production model B-747-3B3F is delivered on March 1 and is placed into service in April on routes to the Pacific via the Middle East and Far East. A service is opened to Malawi during the year.

Freight carriage accelerates 2.6% to 506.12 million FTKs, but boardings dip 4.9% to 935,204. Still, a net profit of \$16.3 million is reported on revenues of \$517.8 million, up 7.5%.

Some 20 minutes after arrival at an intermediate stop at N'Djamena on a March 10, **1984**, service from Brazzaville, and after the deplaning of 5 crew and 18 passengers, a bomb goes off in the forward baggage compartment of Flight 772, a DC-8-63PF, destroying the jetliner.

Late in the year, the last DC-8-63 is retired as a second B-747-3B3F arrives.

A record net profit of \$21.9 million is posted, despite a 1.8% dip in freight to 465.44 million FTKs and a 9.2% drop in enplanements to 774,549.

The workforce in **1985** totals 6,770 and the fleet includes 11 aircraft. The newest B-747-3B3F is destroyed in a fire at a maintenance area at Paris (CDG) on March 16. It is replaced on May 3 by a B-747-271C chartered from **Transamerica Airlines**.

A total of 863,465 passengers are carried on the year and a net profit of \$78 million is generated.

A total of 25 employees are laid off in **1986** as a bidding war is successfully fought with **Air France** for the Paris-San Francisco route. The first B-747-3B3C arrives on January 31 and in March the first B-747-2B3F is sold to **Air France** and the leased **Transamerica Airlines** machine is returned, making room for the addition of another B-747-3B3C on April 24.

In August, two B-747-4B3s are ordered. On October 1, twice-weekly DC-10-30CF nonstop Paris-San Francisco service is launched, and is then extended on to Papeete as of November 2.

Customer bookings accelerate 6.1% to 914,991, but cargo is off by 7.8% to 461 million FTKs. With costs under control, profits jump to \$37.7 million (operating) and \$133.9 million (net).

The workforce is cut another 5.3% in **1987** to 6,631 and the fleet includes 1 B-747-2B3F, 4 B-747-3B3Cs, and 6 DC-10-30CFs. Service between Paris and San Francisco is increased to five times per week during September and the Dash-2B3F Jumbojet is turned over to **Air France** at year's end. A total of 13,500 passengers are transported between Japan and New Caledonia during these 12 months on the company's DC-10-30CF service.

Passenger boardings fall a slight 1.1% to 894,164 and freight rises a scant 0.2% to 465.76 million FTKs. Revenues decline 2.7% to \$1.07 billion, but costs eat into profits, allowing an operating profit of \$34.1 million and net income of \$20.9 million.

Employment falls again in **1988**, down 1.2% to 6,553. Orders are outstanding for two B-747-4B3s and six A340-300s. Much attention is paid to expanding the work of the charter subsidiary Aeromaritime International, S.A. Due to demand, the number of DC-10-30 weekly flights between Noumea and Tokyo (NRT) is doubled on November 1.

Although most other customer bookings decline again, by 6.6%, to 835,225, cargo is up a strong 14% to 530.8 million FTKs. Revenues recover and move ahead by 6.7% to \$1.14 billion, expenses are up only 2.7%, and operation income reaches \$76.9 million. Net gain skyrockets to \$125.6 million.

In July **1989**, weekly Saturday service is inaugurated from Paris to Malta.

While cruising at 35,000 ft., Flight 772, a DC-10-30CF with 14 crew and 156 passengers en route from Brazzaville via N'Djamena to Paris on September 19, explodes in midair in the vicinity of Bilma, Niger, after warnings of a bomb are telephoned to company offices in London and Paris. The wreckage is scattered over an 80-sq.-km. segment of the Sahara known as the Tenere Desert.

Two days later, investigators reach the wreckage and find no survivors; on September 21, they uncover evidence of a bomb (and the explosive pentharite) in the wreckage of the forward cargo hold and later, from the aircraft's "black boxes," proof of an explosion. Suspicion for perpetration of the worst act of sabotage ever to befall a European airline falls on either Syria or Libya, the government policies of which are opposed by France.

After an extensive investigation, the brother-in-law of Libyan leader Col. Muammar Qaddafi and five others will be convicted for the crime in absentia by a French court on March 10, 1999, and sentenced to life in prison. Qaddafi will refuse to turn the men over to French authorities.

Nonstop flights are inaugurated on December 12 from New York to the wine country destinations of Bordeaux and Lyons. No aircraft orders are filled in this mixed traffic year.

Passenger bookings dip 1.3% to 825,962, but freight rallies again, climbing by 6.4% to 542.55 million FTKs.

Company employment is increased by 5.4% in **1990** to 6,910. In January, **Air France** acquires 54.6% majority shareholding in the nation's largest independent and appoints Jerome Sydoux as successor to President Fabre. UTA continues to operate as a unit of the new Air France Group, which now also includes **Air Inter, S.A.** and to concentrate on its Pacific services. Simultaneously, twice-weekly flights begin from Marseilles to Newark, New Jersey, with one routed via Nantes and the other via Toulouse.

In February, weekly nonstop service is initiated from Nantes and Toulouse to Newark and direct service is started to that stop from Montpellier via Bordeaux.

Traffic statistics are reported through July and show customer bookings up 12% to 522,389 and cargo ahead by 7.2% to 329.57 million FTKs. Revenues rise 7.5% to \$1.4 billion and a net \$39-million profit is generated.

The payroll is sliced just 0.1% in **1991** to 6,900 and the fleet now includes 1 leased B-737-33A, 2 B-747-2B3BCs, 1 B-747-2B3F and 1 B-747-228F leased from **Air France**, 1 B-747-3B3C, 2 B-747-4B3s, and 5 DC-10-30s. On June 15, service from Paris to San Francisco is increased from four to six flights per week.

The number of B-747-4B3 flights from Paris to Singapore is doubled in October from two to four.

Passenger boardings decline 12.2% to 800,817 and freight is off 12.7% to 488.68 million FTKs. There is, however, a \$17.9-million net profit.

The longtime independent is absorbed into **Air France** during **1992**. There is an unofficial Web site located at <http://www.chez.com/utawebfan>.

UTILITY AIRWAYS, LTD.: United Kingdom (1936-1937). UAL is registered as a subsidiary of Merseyside Air Park Co. at London on December 30, **1936**. Employing a Monospar ST.12, it initiates four-times-per-day Hooton-Liverpool cross-Mersey flights on May 14, **1937**. On June 30, the frequency is suspended and the route is flown on demand. In July, a Hooton-Blackpool service is undertaken. Both operations are suspended on October 1.

UZBEKISTAN AIRWAYS NATIONAL AIR COMPANY (UZBEKISTAN HAVO YULLARI HY): 1 Ulitsa Proletarskaya, Tashkent, 700061, Uzbekistan; Phone 7 (3712) 911 940; Fax 7 (3712) 320 183; <http://www.uzbekistan-airways.com>; Code HY; Year Founded 1992. By decree of new President Islam Karimov, a former aircraft designer, the former Uzbeki directorate of **Aeroflot Soviet Airlines** is reformed at Tashkent on January 28, **1992** into the flag carrier of the newly independent CIS state of Uzbekistan, located in Central Asia. The company also acts as the country's Civil Aviation Department and assumes the old Aeroflot responsibility for general aviation, airports, and air traffic control.

Rafikov Ganiy is appointed president (and minister in the national government) with veteran **Aeroflot Soviet Airlines** captain Arslan Ruzmetov as director general. The former Soviet fleet is acquired: 10 Ilyushin Il-62Ms, 10 Il-86s, 13 Il-76TDs, 23 Tupolev Tu-154s, 25 Antonov An-24/26s, and 30 Yakovlev Yak-40s. All are painted in the new company's distinctive 10-color livery.

Under a 12-year lease-purchase arrangement, orders are placed for a pair of Airbus Industrie A310-324s and for new Thomson-CSF ATC equipment, both requests going to France. Revenue operations are undertaken linking the company's base and Samark with domestic locations as well as London, Tel Aviv, Istanbul, Jeddah, Delhi, Karachi, and Kuala Lumpur.

Having landed too far down the runway at Navoi following a March 23 service from Tashkent, an An-24B with 4 crew and 59 passengers overruns the runway and collides with a 1.95-m.-high pile of ferroconcrete slabs. The aircraft catches fire and breaks up (34 dead).

A total of 6.5 million passengers are transported; 3.83 million revenue passenger kilometers and 517.6 million FTKs are flown.

In response to a strike by **Indian Airlines Corporation** pilots late in the year, the government of India charts five Tu-154s, along with their crews, to fly replacement service. One of these, with 163 aboard, misses the Madras airport entirely on January 5, **1993** and lands at a nearby military base, nearly hitting a jet on the tarmac. Three days later, the same plane misses the runway while attempting to land at New Delhi, knocks out the guide lights, and flips over. Although all of the 178 passengers survive, the government grounds the Uzbek jets.

Six additional Il-76TDs arrive through April. All are contracted by **Air India, Ltd.** to fly freight on its behalf from Delhi to Zurich and back to Bombay.

The first of two A310-324s, formerly flown by **Ecuatoriana Airlines, S.A.** from whom they were repossessed, arrives under lease in the new blue and white livery in June. In July it begins replacing Il-62Ms and starts new frequencies to London via Frankfurt to Urumqi, China, and to the Mideast destinations of Jeddah, Sharjah, and Tel Aviv. A technical contract for their support is worked out with **Deutsche Lufthansa, A.G.** Il-76 freighter flights are maintained to Bangkok and Delhi.

As the result of substantial fare increases, intra-CIS traffic collapses; by fall, only 14 former Aeroflot aircraft are in service. To still earn funds with its grounded aircraft, Uzbekistan Airways begins an active wet-leasing program. Two Il-86s are chartered to **Xinjiang Airlines Company, Ltd.**, two Tu-154s are placed with **Rajiv Airlines**, one Il-62M goes to **Panaf Airways**, and three Il-76s are placed in Africa, one in the Sudan, and two in Luanda. Enplanements for the year total 460,127.

Uzbekistan's workforce totals 16,296 at the beginning of **1994**. With the arrival of the second A310-324, frequencies are initiated from Uzbekistan to Delhi, Karachi, and Istanbul. In February, commitments are made for the purchase of five Il-114-100s. They will gradually replace Yak-40 and An-24s currently in use on local lines. When the first of these arrive later in the year and enter service, they give Uzbekistan the honor of being the first Russian airline to operate the type; they also bring considerable teething problems, particularly regarding the reliability of their Klimov TV7-117 engines.

The Il-86s and Il-62Ms are employed to begin additional international flights to Bangkok, Beijing, and Kuala Lumpur. Plans are made to inaugurate scheduled long-haul intercontinental flights.

Passenger bookings during the 12 months drop to 900,000.

In **1995**, orders are placed for a VIP-configured B-757-200 and two B-767-300ERs. The first of the new long-haul Airbus services, from Tashkent to New York (JFK), begins in the spring. An agreement is entered into with **Trans World Airlines (TWA)** to interline passengers on to the domestic network of the U.S. major. At the same time, three Il-114 prototypes begin flying for the airline, two between Moscow and Tashkent.

Airline employment stands at 11,300 in **1996**. As the result of an ICAO safety inspection, the government establishes a State Inspectorate for the Supervision of Flight Safety and places Uzbekistan Deputy Director General Valeri Tian in charge. He is given the resources necessary to quickly establish the standards demanded by the U.N. affiliate.

A VIP-configured B-757-23P is delivered on October 19; it will operate on behalf of the government. The first B-767-33P, christened *Samarkland*, is delivered on November 27. The Boeing is employed to upgrade the New Delhi-London via Tashkent service, replacing an Airbus A310-324. A \$75-million order is placed at the end of December for three Avro RJ85s. The new regional jets will be jointly financed by the airline and by the U.K.'s Export Credits Guarantee Department.

Enplanements total 2.3 million, including 4,000 Japanese tourists visiting Uzbekistan, and a net \$7-million profit is reported. In addition, the company wins something of an international reputation for its nonscheduled flights in support of domestic consumer goods purchases; a total of 422 charters are thus flown to Omsk, Tomsk, Karachi, Delhi, and Sharjah.

As **1997** begins, UA is operating 75 weekly international flights plus 30 daily roundtrips to 16 domestic markets. The domestic service is, in general, operated with older Soviet equipment with the Western airliners flying internationally. The second B-767-33P arrives during March; both of the wide-bodies are 85% financed by a \$171-million loan from the U.S. Export-Import Bank.

Under a contract between the airline and Thomson-CSF, Uzbekistan, in May, turns on a new automated ATC system at Tashkent Airport. It is the first Western ATC system to operate in the CIS. Also in May, a third A310 is ordered for delivery the following April, while the two operated under lease are now purchased.

Weekly Tashkent to Jakarta B-767-33P roundtrips commence during the summer. Tourism to the ancient cities of Samarkand, Bukhara, and Urgench remains strong. New airports are now completed at the latter two destinations. The first of the three Avro RJ85s is delivered on July 7 and begins service eight times per day from Tashkent to the holiday destinations of Samarkand, Bukhara, and Koklund. On July 20, UA gains direct access to the worldwide AMADEUS reservations system. On August 29, the International Flight Safety Foundation awards the carrier a special diploma "for prominent services in the sphere of guaranteeing the safety of flights."

Company officials announce their plans on September 23 to lease between 10 and 15 Boeing 757/767 aircraft, which will be employed to replace the aging Tu-154Bs. Initial funding is provided by the sale of two Il-76TDs.

During the fall, the company signs one of the first strategic marketing pacts between airlines of the former Soviet Union when it agrees to cooperate with Moscow-based **Transaero Airlines** on code-sharing over routes from Tashkent to Moscow, maintenance, general schedule coordination, and marketing. The pact is known as the CIS Alliance.

Services continue apace in **1998**. In February, Uzbekistan and the U.S. sign an "open skies" bilateral air agreement that gives each country full access to the airports of the other. At Tashkent on June 18, the deputy directors of the Uzbek carrier and **THY Turkish Airlines (Turk Hava Yollari, A.O.)** sign a protocol that looks forward to cooperation in transportation, training, and technical matters.

A new weekly A3100-324 dual-designator service with **Transaero Airlines** is inaugurated on July 1 between Tashkent and Moscow, with connections to Bukhara, Khiva, and Samarkand. At this point, **Ukrainian International Airlines** also joins the **CIS Alliance**. Also on July 1, the company switches its Bukhara, Samarkand, and Urgench services from Domodedovo to Sheremetyevo Airport, thereby centering all of its activities in the Russian capital city at one location.

In ceremonies at Moscow on September 18, Uzbekistan Airways and **Aeroflot Russian International Airways (ARIA)** sign a new and far-reaching cooperative agreement. Under its terms, the two will undertake joint passenger flights from Moscow to the Uzbek cities of Tashkent, Samarkand, Urgench, and Bukhara and share in cargo services on the route from Moscow to New Delhi via Tashkent. Shared tariffs are introduced on flights from Uzbekistan to the European and Baltic cities served via Moscow. Managing Director Aslan Ruznetov takes the opportunity to note that the Russian currency crisis, which began the previous month, is not (yet) impacting on cooperation between the two carriers.

Flights are maintained in **1999**. The owned fleet at the beginning of the year includes 2 B-767-33Ps, 3 A310-324s, and 3 Avro RJ85s, plus holdovers from the old Aeroflot days.

Just after landing at Moscow's Sheremetyevo-1 on March 3 after a service from Tashkent, an A310-324, unable to stop, runs off the runway. No injuries are reported. The Itar-Tass news agency learns of the incident from a passenger.

On April 5, orders are placed with the Tashkent-based Tchkalov aircraft plan for 10 of the new 64-seat Il-114-100s. In a deal valued at \$80

million, the airline places orders on April 20 for two B-757-200s. The same day, part of the financing (\$18 million) is secured by loan from Barclays in London. On May 19, it is reported that delivery of the Il-114s will be delayed due to lack of engines.

A cooperative agreement, negotiated on April 29, is signed with **Air Ukraine** on June 17 covering shared routes and services. The media labels the pact as a new "CIS Alliance" air system.

While landing at Tutkul following an August 26 service from Tashkent, a Yak 40 with 4 crew and 28 passengers overshoots the runway and rolls over (2 dead).

The first B-757-23P is delivered on September 3 in ceremonies at Seattle. Beginning on September 9 and continuing for two weeks, the first three Il-114-100s powered with Klimov TV7-117 engines are delivered from the nearby TAPO manufacturing plant. The Alarko Company, Laing Company, and Maruben Company, from Turkey, Britain, and Japan, respectively, launch modernization projects on September 16 at the airports of Samarkand, Buhara, and Urgenc.

At the beginning of October, an agreement is signed between the Uzbek Council of Ministers and the Frankfurt Main Airport under which the German airport will provide equipment valued at DM 26.48 million.

The second new B-757-23P is delivered on December 9. The Il-114-100 receives its airworthiness certificate in December, the same month the carrier receives its fourth unit.

The fleet at the beginning of 2000 includes 3 A310-324s, 3 B-757-23Ps, 2 B-767-33Ps, 3 RJ85s, 1 An-2, 6 An-12s, 23 An-24Bs, 15 Il-62Ms, 20 Il-76TDs, 10 Il-86s, 4 Il-114-100s, 24 Tu-154Bs, and 28 Yak 40s. While still not having overcome the type's engine problems, Uzbekistan orders 4 additional Il-114-100s in January.

Destinations visited now include Aleppo, Almaty, Alma-Ata, Amsterdam, Andizhan, Ashgabat, Astana, Athens, Baku, Bangkok, Barnaul, Beijing, Bishkek, Bukhara, Chelyabinsk, Dhaka, Delhi, Ekaterinburg, Fergana, Frankfurt, Irkutsk, Islamabad, Istanbul, Jeddah, Kaliningrad, Karachi, Karshi, Kazan, Khabarovsk, Kiev, Kokand, Krasnodar, Krasnoyarsk, Kuala Lumpur, Lahore, London (LHR), Mineralnye Vody, Minsk, Moscow, Namangan, Navoi, New York (JFK), Novosibirsk, Nukus, Omsk, Paris (CDG), Perm, Rome, Rostov, St. Petersburg, Samara, Samarkand, Sariasia, Seoul, Shahrizabz, Sharjah, Simferopol, Tbilisi, Tehran, Tel Aviv, Termez, Turtkul, Tyumen, Uchkuduk, Ufa, Urgench, Urumqi, Vienna, Volgograd, Yerevan, and Zarafshan.

Balkan Bulgarian Airlines officials announce on February 1 that the suspended service to New York (JFK) will soon be resumed; employing a B-767-33PER in code-share with Uzbekistan Airways, the new flights will route from Tashkent to New York via Sofia. On March 29, plans are revealed for the initiation of twice-weekly A310-324 return flights from Tashkent to Birmingham, England, on April 16. Meanwhile, on April 7, weekly B-757-23P roundtrips are initiated from Tashkent to Rome.

In late April ceremonies, the Uzbekistan Minister of Communications and the Turkish Minister of Communications preside over the opening of the modernized airports at Samarkand, Buhara, and Urgenc. At the same time, it is confirmed that the carrier will take the four Il-114-100s requested from the Tashkent-based TAPO factory; these are to be powered with leased Pratt & Whitney PW-127H engines. Six more of the \$8-million aircraft, similarly configured, will also be obtained.

A joint agreement is signed on May 17 by the carrier with **East Line Airlines** and the Chkalov Aircraft Company (TAPOiCH) for the joint lease of two new Ilyushin Il-76TFs, the first of which will be delivered in the spring of 2001. Unable to obtain Pratt and Whitney power plants, TAPO must inform the airline on May 19 that delivery of its first two Il-114-100s will be delayed.

In cooperation with **East Line Airlines**, joint services are launched from Domodedovo Airport on May 25. The Rome service becomes twice weekly on June 3. Also during the summer, new service is introduced on Saturdays from Amsterdam via Tashkent to Amritsar, India.

On December 18, the carrier signs a contract with ELT Banbury, a language school based at Banbury, England, for EU-funded English instruc-

tion for its senior management, controllers, and trainers. The first of three Uzbek groups will begin their ESL training at Banbury in January.

It is announced in late December that the company will launch B-757-23P weekly roundtrips on April 28 from Tashkent to Osaka (KIX). These will be the only scheduled services between Japan and the Central Asian republic.

UZU AIR (PTY.), LTD.: Australia (1994). Uzu Air is established at Cairns in January 1994 to provide scheduled passenger services in the Torres Strait. Equipped with 2 Pilatus-Britten-Norman PBN-2 Islanders, revenue operations commence in February. Traffic does not materialize and the new entrant is forced to shut down at year's end.

VACATIONAIR, LTD.: Canada (1980-1990). Established at Toronto in fall 1988 by International Travel Group, Ltd., Vacationair acquires a leased Boeing 737-2T5A from **Air Europe, Ltd.** and begins charter flights to the Caribbean, Mexico, and Florida in December.

A second B-737, a Dash-2Q8A, is delivered in January 1989 and following the winter tourist season is leased to **Aviogenex** for the summer. When the winter schedule resumes in the fall, flights are offered to the previous year's destinations, plus Cuba, Turks and Caicos Islands, and the Dominican Republic.

Recession causes the company to cease operation in 1990.

VAIL AIRWAYS. See **ROCKY MOUNTAIN AIRWAYS**

VAK-ROSAT AIRLINE: Samara Airport, Samara, 443064, Russia; Phone 7 (8462) 227 380; Code VAK; Year Founded 1995. Vak-Rosat is established at Samara in 1995 to offer regional passenger charters. L. P. Gvozdovski is director general and he begins revenue flights with 1 each Tupolev Tu-154M and Yakovlev Yak-40.

Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

VALDEZ AIRLINES: United States (1979-1985). Valdez is founded by partners Jeffrey D. Haddock and Ronald A. Watson at Anchorage in late fall 1979 to provide third-level passenger and cargo services to destinations in south central Alaska. The carrier inaugurates revenue flights on January 1, 1980 to Valdez, the southern terminus of the Trans-Alaskan oil pipeline.

Operations continue apace in 1981 and with a fleet of 3 Piper PA-31-350 Navajo Chieftains, the commuter now begins to offer replacement flights for **Wien Air Alaska** to Homer, Iliamna, Kenai, and Kodiak in October 1982.

During 1983, the Chieftains are replaced with a fleet of Embraer EMB-110P1 Bandeirantes. Enplanements for the latter year total 52,000.

Just after landing at Cordova on February 22, 1984, Wien Air Flight 463, a company EMB-110P1 with two crew and seven passengers runs off the runway, during which exit the Bandeirante's landing gear collapses and the left propeller hits the ground. The pilot's first flight in 21 days ends with this brake failure, but no injuries are reported.

The company is purchased by **Liberty Air** on September 1, but quickly goes bankrupt, operating its final service only three days later.

VALDOSTA-PHOENIX AIRLINES: United States (1972-1973). V-PA is established at Valdosta, Georgia, in 1972 to offer daily scheduled air taxi flights to Atlanta. Employing a Cessna 402, revenue roundtrips are duly inaugurated, but cannot be maintained beyond 1973.

VALDRESFLY, A.S.: P.O. Box 30, Hommedalen, N-1350, Norway; Phone 47 6758 3588; Fax 47 6758 3644; Code VZ; Year Founded 1995. Valdresfly is established at Hommedalen in 1995 to offer passenger services, both scheduled and charter. Gunner Hagsveen is president and he begins services with 1 each Cessna 206 and Cessna 550 Citation I. A Dornier 228-212 is acquired in 1996 and flights continue in 1997-1999.

VALE INTERNATIONAL AIRLINES: United States (1979–1980). VIA is set up at Nashville, Tennessee, in 1979 to provide scheduled passenger and cargo services to regional destinations. Employing a pair of Piper PA-31-310 Navajos, the commuter duly inaugurates daily roundtrips linking its base with Lexington, Kentucky, and from there, Indianapolis and Columbus, Ohio. Services cannot be maintained beyond 1980.

VALLEY AIR: United States (1990). Valley Air, the scheduled division of Valley Flying Service, is established at Burlington, Vermont, in the early summer of 1990 to provide daily roundtrips to Albany, New York, via Rutland. Piper PA-31-310 Navajo frequencies are duly inaugurated in June, but in the face of a difficult recession, cannot be sustained beyond August.

VALLEY AIR SERVICE: United States (1976–1978). VAS is established at St. Thomas, U.S. Virgin Islands, in 1976 to provide scheduled passenger services to Anguilla in the British Virgin Islands. Daily Britten-Norman BN-2 Islander roundtrips are duly inaugurated and maintained for two years.

VALLEY AIR SERVICE, LTD.: British West Indies (1977–1979). Clayton Lloyd founds his Valley Air Service at Anguilla in the British West Indies in 1977. Employing a Britten-Norman BN-2 Islander, passenger and cargo services are offered to various destinations in the Leeward Islands and to St. Thomas.

Unable to cope with higher fuel costs, the company goes bankrupt in December 1979.

VALLEY AIRLINES (1): United States (1968–1974). The first Valley Airlines is set up at Oakland, California, in the fall of 1968 to provide scheduled passenger and cargo services. Employing Beech 18s, the commuter inaugurates revenue flights in October linking its base with San Jose, Fresno, Bakersfield, and Santa Barbara.

Operations continue apace until mid-1974, when Valley is merged with Ram Airlines to form Pacific Northwest Airways.

VALLEY AIRLINES (2): United States (1974–1989). Valley is established at Frenchville, Maine's Northern Aroostock Regional Airport in February 1974, as the scheduled airline division of the local FBO to offer regional passenger and cargo charter and contract service flights.

The decision is taken during the summer of 1981 to offer regularly scheduled service. Equipped with 2 Cessna 310s and 2 Cessna 402s, it inaugurates scheduled third-level passenger and cargo services on November 2, linking its base with Bangor via Presque Isle twice daily.

A total of 338 passengers are flown in two months.

In 1982, the small regional transports 3,048 passengers and hauls 13,000 pounds of freight. Services are started to Augusta and Portland in 1983 and these new markets help customer bookings to rise 38.6% to 4,223. Freight skyrockets by 158.7% to 32,883 pounds.

Cargo increases a further 221.1% in 1984 to 106,000 pounds. Enplanements rise 70.9% to 7,218.

The fleet in 1985 includes 3 Cessna 402s, 2 Cessna 310s, and 1 Beech 58.

The balloon is deflated, somewhat, as passenger boardings fall 8.4% to 6,614 and freight plunges 41.6% to 62,000 pounds.

The 28-employee small regional is purchased by Bar Harbor Airlines in 1986, but continues to operate as a subsidiary of its new parent.

Enplanements for the year dip a further 2.6% to 6,441.

In July 1987, four-times-per-day (except Saturdays) nonstop service is inaugurated from Laconia, New Hampshire, to Boston.

Passenger boardings rebound and indeed jump 49% to 9,597.

Airline employment grows a dramatic 79.3% in 1988 to 52 and the fleet now includes 6 Cessna 402s and 1 each Cessna 310, King Air 100, and Beech 99.

Customer bookings jump 21.2% to 11,628.

The company is renamed **Northeast Express Regional Airline** on September 18, 1989, becoming a Northwest Airlink partner of **Northwest Airlines**.

VALLEY CATALINA AIRLINES: United States (1981). VCA is set up at Van Nuys, California, in 1981 to offer scheduled passenger and cargo flights to Santa Catalina. Although Beech 18 revenue flights begin, they cannot be maintained due to the ATC restrictions imposed late in the year as a result of the PATCO air traffic controllers' strike.

VALLEY COMMUTER: United States (1975–1976). In 1975, Eugene Flight Center, the FBO at the Eugene, Oregon, airport, establishes an airline operating division in order to provide scheduled passenger flights to Portland. Employing a Piper PA-31-310 Navajo, frequencies are initiated, but lack of traffic causes this operating unit to be shut down in 1976. Charter flights are, however, continued.

VALLEY ISLE AVIATION: United States (1965–1967). VIA is founded at Kahului in the fall of 1965 to offer flights to Honolulu and flight-seeing tours. Employing a Beech 55 and often competing with **Tropic Air**, Valley inaugurates services on October 29 and continues them until it goes out of business in 1967.

VALUJET AIRLINES: United States (1993–1997). Valujet, which will soon be compared to low-cost predecessor **PEOPLEExpress**, is established at Atlanta in June 1993 by Robert Priddy, a founder of **Atlantic Southeast Airlines**, Maurice Gallagher and Tim Flynn, cofounders of **Westair Commuter Airlines** and former **Continental Airlines** President Lewis Jordan. Respectively, the four take the titles: chairman/CEO, vice chairman/treasurer, director, and president/chief operating officer. Investment is sought through public stock offering under the Nasdaq stock symbol VJET.

The newly assembled workforce dispenses with formal uniforms; tickets, nonrefundable, are also not required. Advertisements emphasize pursuit of a low-fare, low-cost, low-frequency leisure market. Twice-daily "fun and friendly" low-cost, roundtrip, scheduled passenger service is inaugurated on October 26 from Atlanta to Orlando, Jacksonville, and Tampa with a pair of Douglas DC-9-32s formerly operated by **Delta Air Lines**.

The competition is directly with the dominant carrier, Atlanta-based **Delta Air Lines**. The fleet is increased by four more Douglas transports by year's end and the carrier is the first to adopt a cartoon as its official logo. When **Delta Air Lines** counters with \$49 matching fares, Valujet is able to hold on, although one counter-pricing effort by the major in mid-December brings a predatory-practice complaint from President Jordan to the DOT.

Revenues of \$5.8 million are reported at year's end and the new entrant is profitable.

Eight more DC-9-32s are acquired in early 1994 and destinations served grow on January 12 to include Nashville, West Palm Beach, and Washington, D.C. (IAD). On January 28, a landing DC-9-30 goes off an icy runway at Washington, D.C. (IAD) and skids into the grass, forcing officials to close the airport for almost two hours. None of the 101 passengers and 5 crew members are injured.

Other markets entered in the first quarter include Memphis, New Orleans, Louisville, Savannah, Fort Myers, and Fort Lauderdale. Atlanta and Washington are designated "focus cities," and city pairs visited from those communities are chosen on a basis of low-cost profitability. Through the end of April, the airline has flown a cumulative total of 425,000 passengers.

New four-times-per-day service is inaugurated from Atlanta to Philadelphia and Chicago (MDW) on May 24. Meanwhile, **Delta Air Lines** withdraws from its competition with Valujet at Atlanta, preferring to retain its high-yield connecting traffic and many frequencies. For its part, another competitor facing Valujet's low-frequency, low-fare approach, **USAir**, fights back with its own lowered fares. Four daily nonstop

frequencies are initiated on July 12 from Atlanta to Dallas (DFW) for a one-way fare of \$69. A \$41-million order is placed in August with ABS Partnership and Pratt & Whitney for 15 DC-9 hush-kits.

Thrice-daily nonstop roundtrips commence on September 8 between Atlanta and Indianapolis. On October 1, a \$16-million agreement is signed with **THY Turkish Airlines (Turk Hava Yollari, A.O.)**, for the purchase of nine used DC-9-32s, together with spare parts and engines.

Passenger boardings for the year total 2,041,000 and revenues are \$133.9 million. With expenses of \$99.4 million, there is a pretax profit of \$34.5 million and a net gain of \$20.7 million.

There is no change in the size of the workforce in **1995**. The most successful of recent new entrants, Valujet is elevated to the ranks of National carriers by the DOT early in the year. The company adds 21 more jetliners to its fleet.

On January 9, Valujet begins service from Atlanta to Detroit (DTT), setting off a price war with **Northwest Airlines**. Northwest not only lowers its own fares, but quickly inaugurates flights to Atlanta from Flint, Lansing, Grand Rapids, Kalamazoo, Muskegon, and Saginaw.

Daily roundtrips commence on February 8 between Windsor Locks, Connecticut, and Washington, D.C. Eight more communities will join the system over the next 10 months, with Boston and Orlando marked to become focus cities. On April 10, a 2 to 1 stock split occurs and there is now 26.6 million shares outstanding.

The engine of Flight 597, a DC-9-32 with 62 passengers and bound for Miami, malfunctions as the jetliner, one of the first to be received from **THY Turkish Airlines (Turk Hava Yollari, A.O.)**, rolls for take-off from Atlanta on June 8. An engine fragment strikes a fuel line causing a fire that will destroy the aircraft. Seven people are injured in the plane's forced evacuation. The same day, thrice-daily, \$49, one-way service is inaugurated to Boston from Washington, D.C. (IAD) and thrice-daily \$149 one-way from Atlanta.

The NTSB will report on July 6 that the June fire has been traced to faulty JT8D engine repair on a Pratt & Whitney unit outsourced to Turkey for overhaul. It issues an airworthiness directive requiring that all JT8Ds acquired from or repaired by THY be inspected.

Service to and from Montreal is discontinued on July 11. At month's end, it is reported that upwards of 300 Mary Kay Cosmetics sales representatives, who thought they had booked flights, have been duped in a credit card scam.

During the summer, flight attendants continue to engage in slapstick humor as the airline continues to promote itself with the slogan "Good Times, Great Fares." **USAir** informs the SEC on August 14 that the DOJ is examining charges of predatory pricing in certain cities made against it by Valujet and **Nations Air Express**. The charges will be dismissed. Valujet launches the MD-95 on October 19 with an order for 50 of the type and options on another 50.

The Atlanta-based carrier sues **Trans World Airlines (TWA)** and **Delta Air Lines** on November 9 over landing slots at New York (LGA). Eight days later, U.S. Federal Judge G. Ernest Tidwell clears the way for Delta to lease 10 of TWA's New York (LGA) slots by rejecting Valujet's request for an injunction.

While climbing away from Dallas (DFW) on December 12, Flight 224, a DC-9-32 with 59 passengers, suffers the failure of its No. 2 engine. The pilot declares an emergency and makes a successful one-engine-out landing back at the point of origin; no injuries are reported.

On December 15, "focus city" operations are set up at Orlando and Boston. Nonstop frequencies are inaugurated from Boston to Orlando and Tampa; the same day, nonstops commence from Orlando to Boston.

Having doubled its size, the newest national experiences tremendous growth in traffic, revenues, and profits. Enplanements skyrocket 153.7% to 5,177,629. Operating income surges 174.7% to \$367.75 million while costs are unable to keep pace, rising to just \$260 million. Operating gain climbs to \$107.75 million while a net profit of \$67.76 million, three times more than the previous year, is posted.

The employee population stands at 1,411 in **1996**. Early in the year, company officials admit that ferocious competition from **Southwest**

Airlines (2), which will enter the Florida market on January 22, has had an impact upon Valujet's ability to enhance its Sunshine State market. Still, expansion continues in January as the carrier builds up a hub at Raleigh/Durham.

Flight 558, a DC-9-32 piloted by Capt. Steven Rasin and en route from Atlanta to Nashville on January 7, suffers a sudden ground spoiler deployment while on final approach to Nashville. The aircraft makes a hard landing that causes extensive damage to the fuselage underside and the forward landing gear. No injuries are reported as crew and passengers make an emergency evacuation.

On January 11, nonstop service is inaugurated to Raleigh/Durham from Orlando and Boston. At the same time, twice-daily direct frequencies begin from Raleigh/Durham to Boston and once daily to Orlando. Introductory one-way fares of \$79 are charged for the Massachusetts service and \$69 to the Florida stop.

The next day, Flight 281, a DC-9-32 arriving from Boston with 30 passengers, slides off the Washington, D.C. (IAD) runway after landing. The incident, caused by ice that had formed on the pavement, does not result in any injuries.

Nonstop daily frequencies begin on January 18 from Boston to Fort Lauderdale and West Palm Beach and from Orlando to Memphis and Philadelphia. On January 26, a DC-9-30 skids off an Atlanta runway and gets stuck in the mud. No one was injured, but 101 passengers on Flight 260 from New Orleans must be bused back to the terminal and reasigned to other flights.

While landing at Nashville after a flight from Atlanta on February 1, Flight 558, a DC-9-32 with 75 passengers and 5 crew members, suffers a burst tire upon touchdown. The plane comes to a stop with its right wing resting on the runway; no injuries are reported in the subsequent evacuation.

Under contract with TAD Aviation Services, a reservations center is opened at Newport News, Virginia, in February. At the same time, 1,000 reservations agents employed by the airline are hired by Amlease of Charlotte, North Carolina, and Foxtrot Aviation Services of Reston, Virginia, which take over the reservations functions on an outsourced basis. Three new DC-9-32s are also acquired.

Flight 574, a DC-9-32 with 74 passengers aboard, rolls off the runway after landing at Savannah, Georgia, following a flight from Atlanta on February 28. All aboard are safely evacuated without injury.

On March 1, daily nonstop roundtrips commence between Washington, D.C. (IAD) and New Orleans. Simultaneously, frequencies from Dulles to Charlotte are offered four times daily while those to Pittsburgh become thrice daily. On March 19, company officials announce the inauguration of daily roundtrip flights between Atlanta and New York (LGA).

As a result of the recent in-flight incidents noted above, the company, on April 10, announces that it will voluntarily slow the growth of its fleet while FAA regulators review the company's operation.

Five-times-daily roundtrips commence as scheduled on May 1 from Atlanta to New York (LGA). The same day, thrice-daily Boston-Philadelphia roundtrip service is launched, along with thrice-daily roundtrips from Atlanta to Mobile and twice-daily roundtrips from Atlanta to Fort Walton Beach, Florida.

Just after takeoff from Miami (MIA) for Atlanta on May 11, Flight 592, a DC-9-32 piloted by Capt. Candalyne Kubeck with 109 passengers, crashes into the dark waters and muck of the Florida everglades some 85 miles from the airport; there are no survivors. Both the NTSB and FAA begin immediate investigations into the cause, which will later be laid to exploding oxygen generators placed aboard in error.

The disaster, coming on the heels of the year's earlier incidents and intense media scrutiny, puts Valujet's survival in doubt. On May 16, the FAA launches an intense inspection regime. The next day, while FAA inspectors visit *en masse*, the carrier slashes its schedule to 320 daily flights. In the week after the crash, the company refunds some \$4.1 million to customers whose flights have been cancelled. Company stocks fall to their lowest level in a year and, on May 20, cofounder Timothy P. Flynn sells 1.5 million of his 5.98 million shares of common stock.

Company officials begin to meet with FAA inspectors at Atlanta on May 22 to discuss results of safety inspections along the company network. By the end of the first week of June, Anthony Broderick, FAA associate administrator for regulation and certification, is able to announce that 1,000 detailed safety checks have been made of Valujet since May 11. Although concern exists over quality assurance procedures at the airline, none of the findings from the inspections have prompted the agency to revoke the carrier's operating certificate.

At the same time, NTSB Chairman James Hall asks the FAA to review airline hazardous materials handling procedures and calls for a ban on the transport of chemical oxygen generators on passenger airliners.

Admitting that both his agency and Valujet had failed to properly oversee maintenance operations, FAA Administrator David R. Hinson reaches the decision on June 16 that the company cannot keep up with the volume of violations and difficulties uncovered by inspectors over the past 30 days. On June 17, before the government can issue a public grounding order, Valujet is "voluntary" shutdown by President Jordan, who hands in his Part 121 operating certificate and agrees to a binding consent order. Granted immunity for violations known to the FAA before June 18, the consent order also requires Valujet to immediately undertake a three-phase program to address its shortcomings in quality control, training, and engineering. Valujet is the largest U.S. airline ever shut down for safety concerns.

On June 24, FAA Associate Administrator Broderick is forced to retire; the respected safety official is assigned responsibility for the safety oversight failures of his agency. The Aviation Subcommittee of the Transportation and Infrastructure Committee of the U.S. House of Representatives holds hearings on the Valujet shutdown during the month's last week. FAA officials deny allegations of White House involvement in the Valujet grounding.

Former **Trans World Airlines (TWA)** Senior Vice President-Maintenance and Engineering James Jensen accepts the same post at Valujet on July 1. Later in the week, President Jordan submits a plan for the resumption of service to the FAA. The document outlines its future, particularly in terms of maintenance training and supervision, as well as its employee compensation program and oversight of its outsourced maintenance operations.

On July 15, the FAA moves to restrict the transport of certain hazardous materials on airliners, particularly oxygen canisters of the type that contractor SabreTech had placed aboard the Valujet plane blamed for the May 11 disaster. Three days later, FAA safety inspectors in Atlanta prohibit carrier personnel from conducting training or ferry flights; the ban will be lifted two weeks later. It is now revealed that gaps in the company's records for part of July have effectively disqualified all of the airline's pilots and check airmen and the FlightSafety International instructors contracted to train them. The check pilots and instructors must be retrained.

Meanwhile, the carrier's costs mount and during the summer, Valujet renegotiates its bank debt in an effort to avoid default.

The crash program by a team of 300 Valujet officials to make the stipulated corrections in the June 18 consent degree is completed by the self-imposed deadline of August 1. Documents are provided to the FAA supporting this claim. In an effort to prevent the government from grounding its pilots, the carrier on August 5 begins to require four hours of DC-9 simulator training and a check ride for all of its laid off pilots. Seventy pilots are recertified by August 21. At the same time, some 500 other employees are recalled for training: pilots, 100 flight attendants, 175 customer service agents, and 175 reservations agents.

The carrier's landing slots at New York (LGA) are returned to **Continental Airlines** on August 26.

On August 29, both the DOT and the FAA grant approval for the carrier to relaunch some services, under heavy scrutiny. Others are flown by charter operators under contract. The company's certificate is returned on August 30, with permission to resume limited operations. On September 26, the DOT rules that it has found the airline and its management fit and willing to run a safe operation.

Although AFA attempts to halt the resumption of limited Valujet service by filing a suit in U.S. Court of Appeals, Washington, D.C., claiming that the carrier remains unsafe, the judge in the case refuses to issue an injunction.

Despite a 30-min. delay, a DC-9-32 flying from Atlanta takes the airline back into operation on September 30 with a scheduled service to Washington, D.C. (IAD). The Florida communities of Fort Lauderdale, Orlando, and Tampa are also visited during the first day of resumed service. A total of 35 daily frequencies are offered during the remainder of the month with \$19 one-way introductory fares available for each flight.

Although the inaugural day is a success, financial ruin continues to stare the carrier in the face. The situation is not helped any when, on October 1, **Delta Air Lines** begins "Delta Connection" low-cost service. Many of the markets targeted by the major's division will be former Valujet destinations to which Chairman Priddy and President Jordan had hoped to return.

Service is resumed on October 4 to Columbus, Newport News, and New Orleans and on October 16, Louisville, Memphis, Savannah, Jacksonville, and Fort Walton Beach. Fifteen more DC-9-32s and MD-80s are added to handle the increased schedule.

While these services are being resumed, Valujet begins to air a series of no-frills, 30-second TV spots on Atlanta cable TV systems thanking loyal employees for remaining with the company. At the same time it attempts to boost the airline's image with the theme "Valujet's back, and here are some reasons why."

Board Chairman Priddy resigns his posts on November 6, remaining as chairman/CEO of the Valujet, Inc. holding company; his mantle is taken up by airline President Jordan. The new Valujet Airlines President/CEO is D. Joseph Corr, who had earlier followed Mr. Jordan into the presidency of **Continental Airlines**.

On November 12, Valujet reports the loss of \$21.9 million in the third quarter and a total of \$54.7 million in costs associated with the May 11 crash of Flight 592. The same day, the NTSB begins a week of public hearings on the May disaster. These disclose numerous operations and maintenance failures by the airlines, by its subcontractors, particularly canister-shipper SabreTech, and by the FAA.

Two days later, the FAA moves to require fire detection and suppression systems in the cargo holds of all airliners and acts to ban the transport of oxidizing materials that can feed fires. Also on November 14, the company, in its regular filing with the Securities and Exchange Commission, reports that because of costs associated with the disaster, it may be in default of its loan agreements by year's end.

In early December, the company, having lost confidence in one of three charter operators with which it has contracted, cancels all flights under its name to Dallas and Fort Myers. Recently added flights to West Palm Beach are, however, continued.

A contract is signed with **Sun Pacific International** and **Kiwi International Air Lines** on December 26 under which the two will operate charter flights from Atlanta to Dallas and to Fort Myers and West Palm Beach, Florida, through January 6. The flights will carry passengers who booked with Valujet when it advertised the service before it received FAA approval.

Overall customer bookings plunge 42% to 3,003,883. Revenues fall an almost equal 40.3% to \$219.63 million as expenses rise 4.5% to \$271.03 million. The previous year's giant profits are turned into huge losses: \$51.39 million (operating) and \$41.47 million (net).

As **1997** begins, the FAA allows the company to add three more DC-9s to its fleet, but withholds permission for it to resume flights to Dallas (DFW). Still, on January 3, daily roundtrips resume from Atlanta to West Palm Beach, Florida, followed by a resumption of service from Georgia to Fort Myers on January 16.

A twentieth DC-9 joins the Valujet fleet during the last week of January. At this point, service has been restored or added to 18 cities. With FAA approval, frequencies to Boston are reinstated on February 20 from Washington and Atlanta.

At this point, Valujet accuses **Delta Air Lines** and several other majors of "aggressive predatory pricing" as a result of its January traffic downturn. Delta rejects the claim, as do the others.

The carrier installs smoke detectors in all of its airplane cargo holds. Thrice-daily nonstop roundtrips commence on March 6 from Atlanta to Akron-Canton Regional Airport in Ohio.

Flights from Atlanta to Dallas (DFW) are restarted on April 10 and to Charlotte on May 15. On the latter date, the carrier launches thrice-daily roundtrips from Atlanta to Flint, Michigan. On May 21, Valujet seeks permission to restart services to New York (LGA).

Although 15 lawsuits arising from the previous year's crash have been settled out of court, the first of 40 more go to trial in June. During the month the company holds merger talks with **American Trans-Air** that will shortly prove unsuccessful.

On July 1, officials of the airline, having decided that they cannot return the company to profitability under its current identity, sign an agreement to merge with Airways Holdings, parent of **Airtran Airways**. Pending all necessary approvals that will be duly received, the union will occur within three months, with the Airtran name surviving. The arrangement calls for a straightforward one-for-one exchange of 9,067,937 shares of Valujet stock valued at \$61.8 million. Valujet's president Corr will become CEO of the enlarged operation, which will operate a fleet of 40 Boeing 737s and DC-9s.

Due to a lack of traffic, the company suspends services to Charlotte, Louisville, and Columbus on the day after Labor Day.

In September, the NTSB issues its findings concerning the crash of Flight 592. Responsibility for the disaster is assigned to SabreTech, the FAA, and the airline itself. The decision to add the airline into the mix is largely a last-minute attachment to the final report demanded by NTSB board member John Goglia. In its response to the findings, Valujet condemns Goglia; "his obvious bias and personal conduct discredit the reputation of this board," the airline states.

On October 1, **Valujet Airlines** begins flying under the name **Airtran Airlines**.

Three years after the disaster, on May 11, 1999, a new concrete memorial is dedicated in the Everglades to the memory of the victims. Designed and built by students from the University of Miami, the monument consists of 110 gray concrete pillars—one for every lost person—atop a triangular-shaped platform that points toward the crash site, some 8 mi. N.

Two months later on July 15, the State of Florida charges SabreTech, Inc. with 100 counts of third-degree murder. A former SabreTech vice president and two mechanics are indicated by a federal grand jury for a cover-up involving hazardous waste violations and other crimes.

VANAI, LTD. (VANUATU INTERNAL AIR SERVICES): Private Mail Bag 069, Bauerfield Domestic Terminal, Port Vila, Vanuatu; Phone 678 22 827; Fax 678 22 438; <http://www.islandsvanuatu.com/vanair.htm>; Code V3; Year Founded 1990. Vanair is established at Port Vila in early 1989 to provide scheduled internal services among the islands of the former New Hebrides. Merger discussions are held with **Air Melanesiae**, but these fail, as does Air Melanesiae in early November and on November 29 its assets pass to Vanair. Managing Director M. Pope's initial fleet now comprises 3 used Pilatus-Britten-Norman PBN-2 Islanders and a de Havilland Canada DHC-6-300 Twin Otter.

Flights commence at the beginning of January 1990. A Pilatus Britten-Norman BN-2A Trislander is destroyed on the ground at Vanuatu on January 3.

Two more Twin Otters are acquired in 1991, along with an Embraer EMB-110P1 Bandeirante. In October 1992, a contract is awarded to **Australian Regional Airlines (Pty.), Ltd.** for the modification of the Twin Otter; the repair job is the first such ever won by the Townsville-based airline.

Operations continue apace in 1993–1994. During these years, David Young becomes managing director. A fourth DHC-6-300 is purchased and an option is taken on an Avions de Transport Regional ATR42-520.

Flights continue in 1995–1999 with Willie Naripo becoming managing director. The ATR42-520 is not acquired; instead, the fleet is upgraded by the addition of a de Havilland Canada DHC-8-103. Scheduled destinations now include Aniwa, Craig Cove, Dillons Bay, Ermae, Espiritu Santo, Ipota, Lamap, Lamen Bay, Longana, Lonorore, Norsup, Paarva, Sara, South West Bay, Tanna, Tongoa, Torres, Ulei, Walesdir, and Walaka. A marketing alliance is entered into with **Air Vanuatu**.

Airline employment totals 145 at the beginning of 2000.

VANCE INTERNATIONAL AIRWAYS: United States (1949–1971). Vance Roberts incorporates **Vance Airways** at Seattle, Washington, on March 29, 1949. Douglas DC-3 contract services are inaugurated shortly thereafter and are maintained on a charter basis until December 19, 1962, when the company is given an exemption by the CAB to operate as a scheduled air taxi.

As a result of CAB investigations into the role of supplemental carriers, Vance is one of 10 carriers to receive permanent certification in April 1966. It is awarded traffic rights to Canada and Mexico on December 15.

Revenues for the year total \$203,264. Expenses, however, are \$252,275, leaving a loss of \$54,006.

Revenues total \$455,731 in 1967 and additional losses are taken: \$24,920 (operating) and \$25,231 (net).

The fleet is now increased by the addition of 1 each Curtiss C-46 Commando and DC-7.

Two DC-4s are acquired and inclusive-tour charters begun. These are traded in 1968–1969 for three Lockheed L-188A Electras, but losses continue to decline. Revenues in the former year reach \$410,191. Losses, however, are \$70,465 (operating) and \$71,779 (net).

Roberts sells his carrier to McCulloch of Long Beach in 1971 and it is renamed **McCulloch International Airlines**.

VANCOUVER ISLAND HELICOPTERS, LTD.: 1-9600 Canora Road, Sidney, British Columbia, V8L 5V5, Canada; Phone (604) 656-3987; Fax (604) 655-1180; <http://www.vih.com>; Year Founded 1955. Theodore "Ted" Henson establishes Vancouver Island Helicopters, Ltd. (VIH) at Vancouver, British Columbia, in 1955 to support mining and construction work in the north woods. Financial assistance is provided by Bill Boeing Jr., son of the founder of Boeing Aircraft, and revenue charters commence from Victoria Airport, near Sidney, with a single Bell 47G-2.

Following a successful first two years, Henson disappears without a trace in 1957 while flying for the BC Power Commission near Tatlayoko Lake. Henson's widow Lynn marries Alfred Stringer, a cofounder of **Okanagan Helicopters, Ltd.**, in 1959 and he departs his post as operations manager at the pioneer concern and moves to VIH to become president. General charter, sight-seeing, mineral support, agricultural services, heli-logging, ferrying of ship's pilots to vessels in the ports of Prince Rupert, Sand Spit, Port Hardy, Gold River, and Victoria, as well as other activities, are continued for the next quarter century.

In 1985, Frank Norie, who becomes the company's principal shareholder, buys out both Boeing and Stringer. His son Ken and General Manager Barry Hewko also acquire smaller stakes. In 1986–1991, the company, in addition to its earlier activities, also provides Bell 205s for fire-fighting activities under contract to the BC Fire Service. The subsidiary VIH Heli-logging, Ltd. is established under Vice President Ken Norie in March of 1991 to concentrate on timber harvesting. Initial operations are undertaken with a Sikorsky S-61N leased from **CHC (Canadian Helicopters Corporation, Ltd.)**; however, the American-made machine is replaced six months later by the first Soviet helicopter to operate commercially in North America, a Kamov Ka-32.

Meanwhile, Robinson R22s provide helicopter flight training while Bell 206L LongRangers are employed to install and maintain mountaintop repeater stations for BC Telephone Company. Sight-seeing and maintenance operations conclude the company's portfolio of aerial services.

In July 1992, VIH becomes the first helicopter operator in British Columbia to provide a dedicated aeromedical service. Under a five-year contract from BC Ambulance, part of the province's Ministry of Health, the company provides three Bell 222UTs for Airevac flights from Vancouver International Airport, Victoria Airport, and Prince Rupert Airport.

During the year, VIH and the Pacific Pilotage Authority conduct trials with a Bell 222UT fitted with a Lucas winch that may replace a Bell 206B JetRanger employed to ferry pilots to ships offshore. The Ka-32, under lease from Kamov Helicopter Scientific and Technology Company, completes 1,200 hours of heli-logging during the year and becomes the centerpiece of the company's timber harvesting operation.

Operations continue apace in 1993-1994. General Manager Hewko oversees a fleet that includes 3 Bell 205As, 22 Bell 206L LongRangers, 4 MD-500Ds, 3 Robinson R-22Bs, and the leased Kamov.

In addition to the heli-logging operation, the company continues to provide passenger flights from and between Victoria Airport, Prince Rupert Seaplane Base, Bob Quinn Lake, Sandspit Airport, Stewart Airport, Gold River, Campbell River, Port Hardy, and Bella Coola.

The fleet is increased in 1995 by the addition of four LongRangers and an MD-500D. Operations continue in 1996-1996.

During the summer of 1997, the company introduces or enhances sight-seeing tours, customer charters, golf packages, and its Heli-Picnic and Fly/Dine/Drive products.

Charter and general service is maintained in 1998 and during the year the company's latest base is opened at Port McNeill.

Heli-logging continues to be the company's major concern in 1999, but it also continues to serve mining, geology, forestry, silviculture, and fishing interests, while also providing environmental control, ship/pilot transfer, and air ambulance flights.

In July, logging magnate Frank Norie, himself a Bell 47 pilot, becomes board chairman and his son, Kenneth, also a helicopter pilot and manager of the Prince Rupert base, is named president. As 2000 begins, VIH is Canada's oldest name in helicopter transportation—and still operates from the same principal location at which it was founded 45 years earlier.

VANDERPOOL FLYING SERVICE: United States (1975-1979). VFS is established at Aniak in 1975 as an affiliate of **Wien Air Alaska** to provide scheduled third-level passenger services. Revenue flights linking the company's base with Crooked Creek, Nyac, Kalskag, and Holy Cross are initiated with a fleet of Cessna lightplanes and de Havilland Canada DHC-2 Beavers. Operations cease in 1979.

VANGUARD AIRLINES (1): United States (1973-1974). Vanguard is set up at New Orleans in 1973 to provide scheduled passenger and cargo services to intrastate destinations. Employing a Piper PA-28 Cherokee, Vanguard duly inaugurates daily roundtrips linking its base with Houma, Patterson, and Lafayette. Unable to withstand the costs of the energy crisis, the air taxi goes out of business in 1974.

VANGUARD AIRLINES (2): 30 Northwest Circle, Mezzanine Level, Kansas City, Missouri 64153, United States; Phone (816) 243-2111; Fax (816) 243-2188; <http://www.flyvanguard.com>; Code NJ; Year Founded 1994. Vanguard Airlines is established at Kansas City during the late fall of 1994. Former **PEOPLExpress** executive Robert McAdoo, the moving force behind the new enterprise, is named chairman/CEO and the company is equipped with three "Baby Boeings" leased from **USAir**, including a B-737-222, B-737-247, and B-737-281. Funding is sought via a public offering under the Nasdaq stock symbol VNGD. As the time for service launch approaches, 14- and 7-day advance booking and walk-up purchases are encouraged, with no requirements for roundtrip tickets.

Revenue flights, with an inaugural fare of just \$1, commence on December 4 linking the new entrant's base with Denver and Salt Lake City via Wichita. Plans are made for the purchase of additional jetliners and the initiation of operations to Atlanta and San Francisco.

By month's end, revenues are \$773,000, but expenses are \$3.87 million. The operating loss is \$3.09 million and net loss totals \$3.02 million. The latter two figures are later revised upward to read \$12.06 million and \$12.19 million, respectively.

The chartered fleet is increased in 1995 by the addition of two B-737-3Y0QCs leased from **Aloha Airlines** and another **USAir** B-737-222.

On May 15, twice-daily roundtrips commence from Kansas City to Des Moines and Minneapolis (MSP). From Des Moines, flights commence to Kansas City, Dallas (DFW), Denver, and Wichita. From Minneapolis, frequencies are initiated to Kansas City and Dallas (DFW). Service is also started to Chicago (MDW). Daily nonstop roundtrips commence on September 25 between Wichita and Denver.

All of this expansion will be termed "largely unsuccessful."

An initial public offering is made in November; the stock sold nets \$14.4 million.

Enplanements for the first full year total 698,000 passengers and a \$12.2-million net loss is reported.

Airline employment stands at 568 in 1996 and another leased B-737-205 joins the fleet. On September 18, the carrier meets the net worth requirements for listing on the Nasdaq SmallCap Market. Consequently, the airline's Nasdaq listing will no longer be conditional and the next day trading for Vanguard's securities resume under the trading symbol VNGD.

Still, the third quarter is a fiscal disaster as losses for July-September reach \$3.6 million. A private stock offering brings in \$5.2 million and helps to keep the company going now that the funds from its initial public offering have been eaten up.

Cincinnati becomes a new market on October 1 and in a Midnight Madness sale, 40,000 discounted tickets are sold for flights through December to Cincinnati, Dallas, Denver, Kansas City, Minneapolis, Phoenix, and Wichita.

Daily Kansas City to Seattle roundtrips commence on October 10, but Kansas City to Los Angeles and San Francisco frequencies are reduced from twice daily to daily. In addition, service from Denver to Salt Lake City is cut from three per day to two and flights from Minneapolis (MSP) to Chicago (MDW) are dropped down a level from four per day to three. Service between Chicago (Midway) and Des Moines is halted.

On October 17, the company enters the Phoenix market, offering daily roundtrips from that Arizona community to Dallas (DFW), Minneapolis (MSP), and Denver.

The board of directors appoints **Air South** Chairman/President/CEO John Tague to succeed Mr. McAdoo on November 1. The first CEO remains a board member and he is joined in the executive suite by new board member Robert J. "Rocky" Spane, a retired USN admiral.

The same day, new daily roundtrips are introduced from Minneapolis (MSP) to Kansas City and Phoenix.

Having determined that the routes will not become profitable, during the first week of his tenure, Tague directs that service be withdrawn from Seattle, Phoenix, Cincinnati, and Salt Lake City. All sold tickets will be honored by refunds, rescheduling from another network city, or booking on other airlines. The flights will end between November 17 and December 20.

On December 21, having secured a new line of credit, the company begins a major route restructuring aimed at creating a true Kansas City hub and moving into the Florida and Nevada markets. In addition to a new nonstop service to Chicago (MDW), flights are started to Atlanta, Fort Myers, Miami, Orlando, Tampa, and Las Vegas. The company also elects to accelerate scheduled maintenance on several aircraft, thereby increasing maintenance expenses.

Passenger boardings increase 47.6% to 1,151,000 and revenues skyrocket 90% to \$68.58. Unhappily, expenses total \$92.58 million, leaving larger losses: \$23.99 million (operating) and \$24.05 million (net).

The workforce is increased by 10.4% in 1997 to 542. The Road Warrior business travel program is unveiled during early spring. Figures released in May show that although revenue passenger miles and fleet capacity are both up, the company, which has lost \$7.9 million in the first quarter, continues to operate in the red.

CEO Tague departs both **Air South** and Vanguard in June to return to **American Trans Air**. After a short search, former admiral and board member Spane is appointed president/CEO on July 1. After just two weeks on the job, Spane announces on July 18 that the company has two immediate goals. First it must avoid head-on competition with **Southwest Airlines (2)** and second, it must sacrifice certain routes in order to begin service to New York.

An entirely new marketing team is brought in (largely from **Morris Air**), new uniforms and aircraft liveries are ordered, and route rationalization proceeds.

Des Moines, Los Angeles, Las Vegas, Orlando, and Tampa/St. Petersburg disappear from the company route network on September 2 in order that the company might develop an East Coast presence—as well as avoid competition with **Southwest Airlines (2)**.

Twice-daily roundtrip service from Kansas City to New York (JFK) begins on September 3 with introductory \$59 one-way fares.

Also during the month, drawings are held on all nonstop flights for gift certificates for free roundtrips to any point on the route network. It is also revealed that, through the second quarter, the company, which has never made a profit, has had combined losses of \$56.6 million.

In November, the company runs a promotion that ends up costing it more than is expected. Free roundtrip tickets will be awarded in a post-card drawing based on the winning score of the November 30 pro football game between the NFL's Kansas City Chiefs and San Francisco 49ers. At the end of the Sunday match, the hometown Chiefs have won by a point spread of 44–9, costing the airline 44 free passes.

The schedule is significantly increased on December 1 with the introduction of daily nonstops from Atlanta to New York (JFK) and from Kansas City to Washington, D.C. (IAD). Capacity for this growth is provided by the lease of another B-737-222 (from MIMI Leasing Corporation), which is to be delivered in the company's new livery.

Executive Fares are introduced on December 12; the program for business travelers features fully refundable tickets that come with express check-in, guaranteed seating, and no penalty should changes be required.

Daily service from Pittsburgh to JFK and also from Kansas City to Chicago (MDW) starts on December 17.

Passenger boardings for the year accelerate 4% to 1,311,412, as 18,195 departures are completed. Operating revenues jump 18.7% to \$81.38 million, while expenses are up 15.4% to \$106.75 million. Consequently, the operating loss “improves” slightly to \$23.35 million, while the net loss worsens to \$28.24 million.

Airline employment stands at 660 in 1998 and the fleet includes 5 B-737-222s, 2 B-737-3Y0QCs chartered from Aloha Airlines, and 1 each B-737-205, B-737-247, and B-737-281. All of these units are leased. Service to San Francisco ends on January 11.

During the first quarter, the company announces that it will begin daily roundtrip service between Chicago and Des Moines during the fall. A second daily service is started on March 1 between Kansas City and New York (JFK). A profit is made for the first quarter, the first for the airline in any quarter. Each of the next two quarters will also bring pleasant winning fiscal results.

Travel agents are allowed to begin booking Vanguard seats via the WORLDSPAN computerized reservations system on May 14. Seasonal daily roundtrip service through September 9 is started on May 21, between Atlanta and Myrtle Beach, South Carolina.

Vanguard, on May 29, publicly protests **United Airlines'** announcement that it will dramatically add capacity and lower fares in the Des Moines–Chicago market, a market that Vanguard had earlier indicated it would begin serving during the fall.

On June 15, the number of daily nonstop roundtrip flights between Chicago (MDW) and Pittsburgh is doubled from two to four. Simultaneously, it is announced that the company is extending its twice-daily nonstop roundtrip service between Atlanta and Myrtle Beach through January 15, 1999.

After the significant fiscal losses Vanguard has historically incurred, the company, on July 20, is able to report the first profitable quarter in

its history. For the three months April–June, the carrier generates a \$1.1-million operating profit and a net gain of \$323,000.

In preparation for expansion, Vanguard, on August 17, reorganizes its Maintenance and Engineering Department. Vice President-Maintenance James Miller becomes vice president-engineering and quality assurance, while Director of Stations Albert Gorthy is named vice president-maintenance.

Vanguard takes the opportunity of the **Northwest Airline** strike, which begins on August 29, to expand its Minnesota services. Beginning on September 11, a sixth daily B-737-200 return flight is added on the route between Chicago (MDW) and Minneapolis (MSP).

At the beginning of November, an investment group, including W. R. Hambrecht & Co., purchases an 8% stake in Denver-based **Frontier Airlines (2)**. On November 13, it files a Schedule 13D with the Securities and Exchange Commission which, among other things, recommends that a merger or business combination be undertaken between Frontier and Vanguard. Flattered by the suggestion, Frontier President Sam Addoms, after a discussion with CEO Spane, declines the approach on December 16.

A total of 617 more departures are made this year than in 1997 and customer bookings surge 14.8% to 1,505,976. Operating revenues accelerate 28% to \$104.3 million and operating expenses are \$102.81 million, leaving an operating profit of \$1.45 million. This year's net loss is just \$1.47 million, which represents a significant improvement over the previous year.

Lease negotiations with GE Capital Aviation Services are completed on January 12, 1999; under terms of the agreement, two more B-737-200As will be delivered, one each at the end of the month and in February.

In conjunction with the delivery of its 10th B-737, Vanguard adds two additional daily roundtrips on March 15, between Kansas City and Denver, bringing the total number to six.

A weekly Saturday roundtrip service from Chicago (MDW) to Myrtle Beach begins on April 3; it will continue through September 11.

Following workup of the 11th B-737-200A, Vanguard, on April 15, inaugurates daily nonstop roundtrip service from Chicago (MDW) to Cincinnati, four times a day. Simultaneously, a sixth daily roundtrip is started from Chicago (MDW) to Minneapolis (MSP).

In the first predatory pricing case since the government deregulated the airline industry in 1978, the DOJ on May 13 files suit against **American Airlines** for allegedly trying to quash competition, led by Vanguard Airlines, at Dallas (DFW). The filing, announced by antitrust chief Assistant Attorney General Joel I. Klein, is the most developed of several being pursued against a number of the nation's major carriers. New entrants **Sun Jet International Airlines** at Long Beach and **Western Pacific Airlines (WestPac)** on routes to Colorado Springs are other alleged AA price-cutting victims.

American responds with a statement claiming the allegations are unwarranted and that it will challenge the findings. The next day, analysts find the case to be a warning to other airlines to avoid anticompetitive practices against start-ups.

President/CEO Spane, in responding to the case, indicates his belief that the Vanguard position, maintained over the previous three years, has been vindicated. He simultaneously announces that Vanguard will commence service on July 15, in conjunction with the delivery of its 12th B-737-200A, between Chicago (MDW) and Buffalo, with four daily roundtrips.

In the Vanguard press release, Spane is quoted as indicating that the new route is one “which **American Airlines** also serves, so we will be watching closely for any capacity dumping, predatory pricing, excessive override commissions to travel agents, increased frequent flyer benefits, and disproportionate levels of advertising targeted specifically at this route.”

In response to a growing demand, the company adds two additional daily return flights on June 1 between Kansas City and Atlanta, for a total of five.

On June 14, one additional daily roundtrip (for a total of five) is added between Chicago (MDW) and Kansas City.

On November 9, the carrier signs a letter of intent with the leasing and sales division of **USAirways** for the lease/purchase of six B-737-200s.

The company celebrates its fifth birthday on December 4. A company press release recounts the progress made in this period: 2 B-737s in December 1994, 13 now; 3 destinations in 1994, 10 now; 197 employees in 1994, 968 now; and 8 daily flights in 1994, 78 now. Over 6.6 million passengers have been flown during those years on 52,000+ accident-free flights.

Passenger boardings jump 25.4% to 1,888,000. Operating revenues rise 20% to \$125.08 million, while expenses are up 26.5% to \$130.1 million. The previous year's operating profit becomes a \$5-million operating loss, while the net loss deepens to \$5.14 million.

Airline employment at the beginning of 2000 stands at 934, a 5.4% decline over the previous 12 months.

The schedule from Kansas City is significantly enhanced on March 2 as the number of B-737-200 roundtrips inaugurated to Denver increases from six to eight and those to Chicago's Midway Airport rise from five to seven. In addition, new twice-daily B-737-200 return service is started from Atlanta to Pittsburgh. On the other hand, less than a year after its start, flights to Cincinnati end. The new flights are made possible by the addition of two of the six B-737-201s to be acquired from **US Airways**.

Saturday B-737-200 roundtrips are introduced on April 15 from Chicago (MDW) to Myrtle Beach, South Carolina. Simultaneously, the schedule from Atlanta is enhanced with return frequencies to Myrtle Beach increased from two to three and to Pittsburgh from two to four.

On May 24, **Frontier Airlines (2)** Vice President-Marketing Jeff S. Potter succeeds Robert J. "Rocky" Spane as president/CEO; Spane remains company chairman. Six days later, Potter is able to announce that the carrier's pilots, represented by the Vanguard Airlines Pilots Association (VAPA), have ratified a four-year contract, their first with the airline.

Thrice-daily B-737-200 roundtrips are initiated on June 1 between Chicago (MDW) and Denver. Two daily return flights are inaugurated on July 31 between Kansas City and New Orleans and from New Orleans to Kansas City, Chicago (MDW), Denver, and Minneapolis (MSP). As part of the run-up to this service launch, Vanguard promises to give away one free roundtrip ticket (up to 1,000 total) for every person contributing a case of food to the Second Harvest Food Bank in New Orleans.

On October 1, daily B-737-200 return service is started from Kansas City to Pittsburgh, along with twice-daily roundtrips from Kansas City to New York (LGA). The Minneapolis-Chicago (MDW) route is abandoned on September 11 in order that the B-737-200s employed may be shifted to the start, the next day, of twice-daily B-737-200 roundtrips between Kansas City and Los Angeles.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights. By working closely with the Port Authority, Vanguard, on October 1, is allowed to begin a daily roundtrip service into New York (LGA) from Kansas City.

Vanguard announces on December 3 that it will introduce twice-daily nonstop roundtrips between Kansas City and Austin on January 7, along with nonstops from Kansas City to both Buffalo and Myrtle Beach. This will be the only nonstop service between Kansas City and those three cities.

On December 4, the FAA holds an action to distribute the available takeoff/landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. Vanguard receives two of the new positions.

A private stock sale is completed on December 18 which raises \$7.5 million. Debt reduction will account for \$3.5 million, while \$4 million

will be employed for continued operations, including the launch of the new January 7 services.

Papers are signed with Pegasus Aviation on December 23 for the lease of four MD-82s and two MD-87s, with the first two MD-80s scheduled to arrive at the company's Kansas City base beginning on March 22, 2001.

The "classic" B-737 fleet now includes 4 Dash-2B7As, Dash-230As, and 1 each Dash-2T5A, Dash-2Q8A, Dash-297A, Dash-222, Dash-244, and Dash-247.

Overall customer bookings during these 12 months dip 1.76% to 1.5 million. Although revenues are up 5.4% to \$131.8 million, operating expenses climb 20% to \$156.6 million, causing an operating loss of \$24.8 million. Due largely to increased fuel bills, the net loss reaches \$26 million.

VARIG BRAZILIAN AIRLINES (VIACAO AEREA RIO-GRANDENSE, S.A.): Avenida Almirante Silvio de Noronha 365, Edificio Varig, Rio de Janeiro, CEP 20 021-010, Brazil; Phone 55 (21) 272-5210; Fax 55 (21) 272-5703; <http://www.varig.com.br>; Code RG; Year Founded 1926. Having removed to Porto Alegre, in the state of Rio Grande do Sul, from Recife, German émigré and textile official Otto Ernest Meyer conceives of the need for an airline system to reduce travel time in Brazil. With the support of the local business community and state officials, Meyer founds his airline on paper, giving it the name **Empresa de Viacao Aerea Rio-Grandense**. In November 1926, he visits members of the **Condor Syndicate** in Hamburg, selling them a 21% interest in exchange for the Dornier *Wal Atlantico* and technical support.

The first shareholders meeting is held on April 1, 1927 and the carrier, with Meyer as managing director, is officially registered on May 7; 19-year-old Ruben Berta simultaneously joins the airline as assistant to founder Meyer and the company's first paid employee. Initial capitalization is 1 million reis, later raised by the Condor Syndicate 21% to 2.297 million reis.

On June 10, via a presidential decree, the infant carrier becomes the first indigenous Brazilian airline authorized to operate. The inaugural revenue service by the *Atlantico* is flown on June 22 from Porto Alegre to Rio Grande via Pelotas. The flight time is 2 hrs. 20 min. and the fare is 220 reis one way (360 reis roundtrip).

On July 1, the Condor Syndicate, already active in Brazil, ceases operations; it will be succeeded by a new Brazilian company, **Sindicato Condor, S.A.** On July 13, the *Atlantico* must be taken out of service until September 24 for repairs; it is replaced by the Junkers G-24 *Ypiranga*, leased from **Sindicato Condor, S.A.** The carrier's second aircraft is a Dornier Merkur delivered in October; christened *Gaucha*, it enters service on November 24. Meanwhile, the *Atlantico* is again removed for overhaul on November 18 and for structural reasons, the *Gaucha* is withdrawn on December 1.

Repaired and strengthened, the *Atlantico* and *Gaucha* are returned to service during 1928. They are supported by two Klemm L-25s purchased from the **Empresa de Transportes Aereos, S.A.** on November 16, 1929. With only limited finances and state subsidy, the carrier does not grow, although two Klemm L-25s are purchased and named *Ruyzinho* and *Irma*.

After petitioning it for assistance, the State of Rio Grande do Sol on April 24, 1930, provides the company with funds and leases to it an airfield at Gravata upon which to build hangars. In exchange, the carrier agrees to train military pilots. The *Atlantico* and *Gaucha* are sold to **Sindicato Condor, S.A.** during the summer and a Klemm L-25 crashes on September 17. Reduced to one aircraft, the company briefly suspends operations at year's end.

Leased back, the *Gaucha* resumes service on January 3, 1931 over the route from Porto Alegre to Rio Grande via Pelotas. Later that first week, a Morane-Saunlnier MS-130 and a Nieuport-Delage 641 are acquired, followed by the Junkers A-50 Junior *Bage*, which enters service on January 18.

With capacity of just one passenger, the A-50's main use is in the shipment of mail pouches and small packages. With these aircraft, the company

performs several advertising flights, aiming to inform the state's communities about the importance of commercial aviation in Brazil.

On February 23, frequencies are launched by the German-made plane from Porto Alegre to Santa Cruz and Santa Maria. In late April, the *Bage* is destroyed in a crash.

Still in financial distress entering 1932, the carrier, after being reorganized, is loaned sufficient funds by the state government to purchase a second A-50, the *Minuano*, two Junkers F-13s, the first of the latter being delivered on April 1. Christened *Liuramento* in homage to the community from which it will operate, the German metalplane launches two new services on April 18 and 19: Porto Alegre to Cruz Alta or to Santa do Liuramento via Bage. When the second F-13 is received, it is named *Santa Cruz*.

The Cruz Alta route is extended to Palmira in 1933. A mail subsidy is now first received from the federal government. Additional planes are ordered in 1934–1935 and plans made for route expansion.

Porto Santo–Santa Cruz direct routing is initiated in 1936 and frequency on the Porto Alegre–Pelotas route is raised to eight per week, making VARIG the first Brazilian carrier to offer a daily service.

A new Messerschmitt Me-108 Taifun ("Typhoon") monoplane is acquired in early September. With low wings, retractile landing train, and capacity for three passengers and one pilot, the type is the predecessor and quite similar to World War II's German Me-109 fighters. In VARIG, it is assigned the registry PP-VAJ and flies from September 26 to November 24, when it is retired from service as the result of a landing accident.

An ex-**Deutsche Luft Hansa, A.G. (DLH)** Messerschmitt M-20b2, the *Harz*, is acquired in early April 1937. It enters service on the 30th of that month as the *Acegua*, extending the Livramento route to Uruguaiana. This Messerschmitt is considered one of the most modern aircraft of its time, since it had onboard restrooms and a closed pilot's cabin. Unlike other aircraft, it allows passengers to open window glasses, like an automobile. Among the crew it is known as *Vaca* (Cow), obviously due to its registry "VAK."

A Junkers Ju-52/3m is acquired from **South African Airways (Pty.), Ltd.** in May 1938. Christened *Maua*, it enters operations on July 6. Elegant, imposing, and confidence-inspiring, the three-engine Ju-52 is VARIG'S "jumbo," but it flies only when the number of passengers is sufficient; only a few of the company's older crew members are able to pilot it.

With four modes of transport, the Pelotas route is extended to Jaguarao late in the year.

During the winter of 1939, Ju-52/3m holiday service is operated from Porto Alegre to Torres. On June 29, the government authorized airmail subsidy is increased. It is supplemented by a special developmental credit of 500,000 milreis provided on May 19, 1940.

The fleet in 1941 thus comprises 1 Ju-52/3m, 2 F-13s, 1 Messerschmitt M-20b, and 2 Focke-Wulf 58s leased from **Syndicato Condor, S.A.** Ruben Martin Berta succeeds Otto Ernest Meyer as president/CEO when Brazil sides with the Allies and all German employees are dismissed.

The fleet flagship *Maua* is lost in a February 28, 1942 crash near Porto Alegre; damaged beyond repair, it must be withdrawn. It is replaced in May by an ex-**Avio Linee Italiane, S.p.A./Italian Air Ministry** Fiat G-21. Originally known as the *Espaguetti* (Spaghetti) and the lone example of its type built, the six-seater is rechristened *Jacui*. It is employed to inaugurate the carrier's first international route (indeed, its first outside Rio Grande do Sul) to Montevideo on August 5. Incidentally, VARIG pilots will all hate flying the *Jacui* because they must remember to pull back on the throttles to add power, exactly the opposite of what they do with all other aircraft.

Meanwhile, in an effort to begin moving away from an uncertain German equipment source, a de Havilland DH 89A is acquired from **Compagnia Fabril de Jata, S.A.** The British-made eight-seater, christened *Chui*, begins service on August 18 as Brazil declares war on the Third Reich.

At this time, the company offers twice-weekly roundtrips. *Chui* is equipped with a Marconi radio receiver, but because there are no radio

beacons in the airports of the Rio Grande do Sul interior, and only Porto Alegre airport has a broadcast, it receives little use and is disassembled.

A Cant Z-1012, previously owned by the Italian Embassy at Rio de Janeiro, is now taken over, but it will never be operated by VARIG.

With Electra I, PP-VAP, VARIG begins its fleet standardization in 1943. The eight Lockheed Model 10A/E aircraft, known as *Electrinhas*, will be delivered during the next 12 months. They will initially cover all routes to Rio Grande do Sul's interior and Montevideo, Uruguay, followed by Santa Catarina and Paran States in Brazil. VARIG's onboard services begin with the Electras; however, without a company commissary, the copilot distributes boxed snacks to passengers. Having served as a school-plane, the remaining A-50 is retired from service in 1944.

At the General Shareholders Meeting of October 29, 1945, President Berta persuades the airline's shareholders to transfer one-half of their stock, at no cost, into an Employee Foundation. This organization will give the workers a stake in the carrier and provide income with which to pay for a variety of fringe benefits. The foundation, which he has designed, is based on his own personal views, the company's bylaws, the ideas of Jean-Jacques Rousseau, and the principles of Pope Leo XIII.

The first Douglas DC-3s, of which a fleet of 29 will eventually be acquired, are placed during early summer 1946. On August 17, with its initial "Douglinhas," as they are called, the carrier inaugurates a line from Porto Alegre–São Paulo–Rio de Janeiro; it is the nation's first interstate service. In 1947, a lone Noorduyn UC-64A Norseman VI is acquired from Ted Coleman. It will be operated for three years.

The first Curtiss C-46s, in a fleet that would come to total 20, are placed on domestic routes in 1948 as some *Electrinhas* still fly to the city of São Paulo. The F-13 *Santa Cruz*, the last of its type in regular airline service, is retired after 16 years operation. On April 10, the *Sky Chief Zuni*, a DC-4 once flown by the disbanded American carrier **Santa Fe Skyways**, is purchased and placed into service.

Operations continue apace in 1949–1951 and by the latter year the carrier is offering flights from Porto Alegre to São Paulo, Rio de Janeiro, Montevideo, six cities in the State of Parana, six in the State of Santa Catarina, and 14 in the State of Rio Grande do Sol.

These are not without cost. A Curtiss C-46D is involved in a landing accident at Jquiraro on January 26 of the former year and must be written off. During the same month, a Lockheed Model 10A crashes at São Gabriel and there are no survivors.

A small airline, **Aero Geral, S.A.**, is acquired in May 1952, together with its coastal route to Natal in northern Brazil and two aircraft (a DC-3 and a C-46). The new subsidiary is initially allowed to operate under its own identity. Meanwhile, VARIG itself begins flying to Buenos Aires and it also begins to inquire a huge fleet of C-46s; eventually, 59 machines will be registered, but not all will be flown simultaneously. On October 18, a Lockheed Model 10B Electra is destroyed in a hard landing at Lajes, South Catanna.

In February 1953, the government nominates the carrier as its second airline representative to North America and awards it a New York route. Three Lockheed L-1049Gs are ordered in April to take advantage of what was, in fact, a failure by competing **Cruzeiro do Sul, S.A.** to operate traffic rights granted earlier.

In July, **Aero Geral, S.A.** is absorbed as official government approval for its takeover is received. Planning and training for the opening of international service occupies the carrier in 1954. In September, five Convair CV-240s are purchased from **Pan American World Airways (1)**. The company now begins to operate many of its lines with Convairliners. The fast aircraft, with speeds of nearly 435 kmh, are incorporated into the fleet because of their ability to offer a significant reduction in travel time.

Flightline workers fail to remove the elevator securing device from a Curtiss C-46A on June 4. When it takes off with three crew aboard for an all-cargo service from São Paulo to Puerto Alegre, it is unable to climb and crashes (three dead).

The L-1049Gs are received in the late spring of 1955 and an order is placed for three more. An L-1049G completes a Rio de Janeiro to New

York survey flight on June 6, via Argentina, Uruguay, Brazil, and the Dominican Republic. Following a special VIP flight the previous day, regularly scheduled, twice-weekly Super Constellation flights from Rio de Janeiro to New York via Belem, Port of Spain, and Ciudad Trujillo, are launched on August 2. Outfitted with 66 seats (compared to the usual 99), the giant triple-tailed aircraft complete their flights in 27 hours. De Luxo service is available, featuring excellent cuisine.

With the company already operating to Montevideo and Buenos Aires, it is now able to offer through-plane flights all the way up the east coast of South America, across the Caribbean, and up to New York. In November, the carrier receives a government subsidy for this route, which is now doubled and stretched southward to Buenos Aires.

In 1956, orders are placed for eight more CV-240s as DC-3 replacements. Still, other units now in service are sufficient to increase the New York frequency to thrice weekly on June 10 as part of a new joint-scheduling arrangement with **Deutsche Lufthansa, A.G.**, providing a link to Europe. Also in June, an order is placed for three L-1649A Starliners. Later in the year, the company elects to standardize on the Super G Constellation and cancels its Starliner order in December.

The first purchased CV-240s are placed in service on domestic routes in 1957. A C-46A with 5 crew and 35 passengers, crashes in unknown circumstances outside the city of Babe on April 7; there are no survivors.

While on a ferry flight from Miami on August 16, an L-1049C with 11 crew is lost off Cabarete, Dominican Republic (one dead).

Three Rolls Royce-powered Boeing 707-441s are ordered in September and two Sud-Est SE-210 Caravelle Is in October. On October 14, the former **Santa Fe Skyways** DC-4 *Sky Chief Zuni* crashes at Tubarao; there are no survivors.

While on a training exercise, a DC-3 with two crew is lost at Porto Alegre on January 3, 1958; there are no fatalities.

The Convair order is finished during the year. On December 31, a CV-240 with 37 aboard crash-lands into Rio de Janeiro Bay (6 dead); 14 people are trapped in the wreck.

On July 6, 1959, a pool agreement is signed with **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** and **Cruzeiro do Sul, S.A.** under which the three airlines pledge to combine their resources on the Rio de Janeiro-São Paulo route; some 50 shuttle flights per day are made over this Ponte Aerea (Air Bridge).

The first SE-210s are delivered on October 2; originally intended for domestic operations, they are employed, instead, to launch the carrier's international jetliner service. The Brazilian commercial jetliner era starts on December 12 when the Caravelle I *Brasilia* departs Porto Alegre for New York via São Paulo, Rio de Janeiro, Port of Spain, and Nassau. Six months ahead of the introduction of Caravelle service by the U.S. carrier **United Air Lines (2)**, VARIG wins the honor of operating the first SE-210 service in North America.

With the introduction of the French-made jetliner, the New York flight, which had previously taken 27 hrs. by Super Constellation, is reduced to 22 hrs., even though Nassau has been added as an extra fuel stop. VARIG, incidentally, is the first airline company to operate a pure jet at New York's Idlewild Airport.

Brasilia is added as a stop on the New York route on January 20, 1960. Frequency on this service is now five a week—two Caravelle Is and three L-1049Gs. On April 12, a CV-240 with 22 aboard crashes at Pelotas (8 dead). The first two B-707-441 Stratoliners arrive at Rio de Janeiro on June 23 and are placed on a nonstop New York route on June 28; a Brasilia stop is added on one frequency, as of July 2.

Although the first three Stratoliners PP-VJA, PP-VJB, and PP-VJJ come equipped with Rolls Royce Conway MK 508 engines, the rest will employ Pratt & Whitney power plants. As the jetliners take over the North American route in June (reducing flying time to nine hrs.), the L-1049Gs are assigned to regional and major domestic services, while the Caravelle begins flying to the Pacific coast.

It is reported in July, the first anniversary of the Ponte Aerea service, that 387,000 passengers have been transported over the Air Bridge during its inaugural year. On September 17, the company sets up a bus as a

mobile ticket office in Brasilia. In terms of passenger kilometers flown, the carrier now ranks as the third largest airline in Latin America.

A C-46C with three crew overruns the runway while landing at São Paulo on December 18; there are no fatalities, but the plane must be written off. Also in December, a B-707-441 is leased to **El Al Israel Airlines, Ltd.**

The Stratoliner leased to El Al opens that Mideast line's first scheduled jetliner service on January 5, 1961. The aircraft is returned to Brazil in the spring. The carrier opens Brazil to New York tourist flights on April 1; two weeks later, the first group of Brazilians completes a two-week tour of the U.S. East Coast sponsored by the airline.

Aerovias Brazil, S.A., the international division of the **REAL, S.A.** consortium, is acquired on May 2. On August 16, VARIG takes over the remainder of the financially distressed **REAL, S.A.** organization, obtaining 90% of its shares.

Among the aircraft obtained through this deal are 12 CV-240s, 4 L-1049Hs, and 5 DC-6Bs. REAL's arrangement with **American Airlines** for 5 Lockheed L-188A Electra IIs will be honored.

An SE-210 Caravelle III with 9 crew and 62 passengers is destroyed as the result of a bad landing at Brasilia on September 27; no fatalities occur.

B-707-441 service is inaugurated, on November 18, from Rio de Janeiro to Los Angeles via Lima, Bogota, and Mexico City. The ex-Aerovias Brazil, Miami, and Central America routes are also maintained.

While on a training flight, a Curtiss C-46A with two crew crash-lands into the sea off Itaipassu Beach, Rio de Janeiro, on December 12; there are no fatalities.

Systemwide this year, enplanements reach 1.86 million.

At the beginning of 1962, the huge VARIG fleet includes 45 DC-3s, 2 DC-4s, 3 DC-6Bs, 10 L-1049Hs, 26 CV-340s/440s, 24 C-46s, 2 B-707-441s, and 2 Caravelle IIIs. During the summer, all of the ex-**REAL, S.A.** CV-440s are sold; simultaneously, beginning in August, REAL's order for surplus AA Lockheed L-188s begins fulfillment. The first turboprop enters domestic services on September 2. The "Electra IIs," all five of which are available by October, are now placed on a Rio-São Paulo air shuttle and will render almost 30 years of service on this line.

During initial approach to Porto Alegre on November 27 on an intermediate stop during a service from Brazil to Los Angeles, Flight 810, a Boeing 707-441 with 17 crew and 80 passengers, crashes into La Cruz Peak, Peru; there are no survivors. Among the victims are 10 Cuban officials. The resulting capacity shortage forces VARIG to divert Electras onto routes leading to the Miami and New York destinations.

While on the final leg of a service from Rio de Janeiro via Belo Horizonte, a CV-240 with 5 crew and 35 passengers is below minimum altitude and strikes a row of trees 8,400 m. short of the runway at Brasilia on December 22. The aircraft skids 300 m. before coming to rest on its side (one dead).

Unable to cancel the **REAL, S.A.** order for four Convair CV-990A Coronados and already having paid \$5 million in progress payments, the carrier agrees to purchase three on March 1, 1963, and these are duly delivered later in the year. A DC-3 with 2 crew and 13 passengers on a July 1 domestic flight, crashes at Passo Fundo (15 dead).

Upon arrival of the Coronados, they are assigned to fly from Porto Alegre to Los Angeles via Rio de Janeiro, São Paulo, Lima, Bogota, and Mexico City.

Wearing a new color scheme, a B-707-441 is delivered on November 12.

During late fall and throughout 1964, some fleet rationalization is started; two C-46s, a CV-240, six CV-440s, five DC-3s, and an L-1049H are withdrawn. The CV-440s are sold to the Spanish flag carrier **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

On February 10, 1965, **Panair do Brazil, S.A.** cancels all services, the international flights being taken over by VARIG on three hours notice. The next day, the government cancels the financially distressed Panair's operating authority, directing that its international services be taken over by VARIG. The government receiver on February 12 directs

that two **Panair do Brazil, S.A.** DC-8-33s on lease from **Pan American World Airways (1)** be leased once again to VARIG (at \$75,000 per month) in order to allow it the equipment necessary to maintain the former carrier's overseas operations. The planes, repainted in VARIG livery, will enter service in July.

Meanwhile, a C-46C freighter is lost in a landing accident at Porto Nacional on March 22; there are no fatalities.

VARIG now vastly expands the scope of its activities. Service is started on September 12 to six ex-**Panair do Brazil, S.A.** European destinations, including London, Frankfurt, and Rome, plus Chile and Africa. **Panair do Brazil, S.A.**'s low-fare immigrant Friendship Flights from Lisbon to São Paulo are also continued with Super Constellations.

A total of 1,158,862 passengers are flown by the carrier's 99-airplane fleet, for which 3 B-707-320Cs are ordered during the year.

President Ruben Berta dies in 1966 and is succeeded by Erik de Carvalho; following the death of the company's first paid employee, the Employee Foundation is renamed the Ruben Berta Foundation. A route is opened to Beirut via Rome during the late spring.

Due to a significant number of Super Constellation equipment failures, L-188As replace them at this point on the weekly transatlantic roundtrips between Portugal and Brazil; stops are made at Ilha do Sal and Recife. When the five L-1049Gs and four L-1049Hs are withdrawn during the summer, they are no longer airworthy and must be broken up. On November 1, service is started to Zurich. One leased DC-8-33 is returned to **Pan American World Airways (1)** and one CV-990A is retired.

A new rationalization program is begun for the fleet in 1967; it now comprises 3 CV-990As, 2 B-707-320Cs, 2 B-707-441s, 7 L-188As, 10 new Avro (Hawker Siddeley) HS 748s (3 of which are in service by November), 5 DC-3s, and 4 C-46s. Sold are 5 DC-6Bs and 1 CV-990A, the latter to **Alaska Airlines** in May. Out of service and awaiting certain disposal are 4 L-1049Hs, 24 DC-3s, 8 C-46A/Ds, and 4 C-46Cs.

Flight 837, a DC-8-33 with 19 crew and 71 passengers en route to Brazil from Rome, crashes into a house near Monrovia, Liberia, on March 5; 51 people on the aircraft are killed, along with 5 others on the ground.

Late in the year, two more L-188As are acquired from **American Airlines**.

In March 1968, another Electra (VARIG's eighth) is acquired from **American Airlines** and is employed to open a new route from Rio de Janeiro and São Paulo to Asuncion, Paraguay. Copenhagen service is initiated on April 15, followed by extension of the Los Angeles route to Tokyo via Honolulu.

A B-707-341C is destroyed in a hangar fire at Rio de Janeiro on September 7. The CV-240s are withdrawn now that all of the HS 748s are in service.

In 1969, orders are placed for 10 B-727-100s as the last of 13 CV-240s are retired. The carrier suffers two skyjackings during the fourth quarter. En route from Buenos Aires to Santiago on November 4, Flight 863, a B-707-441 with 101 passengers, is diverted to Cuba. An unidentified gunman captures a B-707-441 with 95 passengers en route from London to Rio de Janeiro over Portugal on November 29 and forces it to land at Havana.

Coming into Uberlandia, Brazil, at too high a rate of speed on December 14, an HS-748-2A with five crew and four passengers, attempts to go around; the aircraft subsequently crash-lands 900 m. right of and 1,400 m. past the end of the runway, but there are no fatalities.

The workforce grows to 10,461 and enplanements are 1,349,450.

Airline employment in 1970 is up to 10,920. Two convertible L-188PFs are purchased from **Northwest Airlines** in January.

An L-188A is damaged beyond repair in a landing accident at Porto Alegre on February 5; there are no fatalities, but the former **American Airlines** machine must be written off.

En route from Santiago de Chile to London on March 12, Flight 866, a B-707-441 with 41 passengers, is taken over and diverted to Cuba.

Two more former **American Airlines** L-188As arrive by April. Delivered in early July, the **Northwest Airlines** Electras launch palletized cargo flights over a 1,500-mile route from São Paulo to Manaus.

Nonstop B-707-441 service to Johannesburg begins on July 21 with a technical stop at Luanda on the westbound return. Following the bankruptcy of the third-level operator **Paranse Transportes Aereos, S.A.**, its four Fokker-Fairchild FH-227Bs are taken over by the government against loan guarantees; in July, these are leased to VARIG for five years for use on the Ponte Aerea shuttle.

The fleet now also includes 9 B-707-441s, 2 CV-990As, 1 leased DC-8-33, 10 L-188s, 9 HS 748s, 7 DC-3s, and 4 B-727-41s; the first of the latter enters service on October 13. Avro 748s now replace DC-3s in Rio Grande do Sul. They also operate the line RIN (Rede de Integrao Nacional-National Integration Network), which includes routes to Tocantine, São Francisco, and Cariri.

Passenger boardings rise 1.5% to 1.37 million, and freight traffic grows 18.9%. In terms of freight hauled, the carrier now ranks as the 25th largest airline in the world; it is 20th in number of employees.

The unduplicated route mileage in 1971 is 106,000. The two CV-990As are sold to **Modern Air Transport** in February. Enplanements total 1,557,910.

The employee population in 1972 numbers 11,513. In December, firm orders are placed for two DC-10-30s, with options on two others. The fleet now includes 10 L-188s, 8 HS 748s, 1 leased DC-8-33, 2 B-707-441s, 12 B-707-320Cs, and 4 B-727-41s.

An HS-748-2A with three crew crashes on takeoff from Porto Alegre on February 4 for a training flight; there are no fatalities.

Deceiving company officials into believing he has two accomplices, H. Martins takes over an Electra with 96 aboard during a May 30 flight from São Paulo-Curitiba-Porto Alegre. The plane returns to São Paulo, where the passengers are released in exchange for \$260,000 in ransom and three parachutes. Unable to either escape or get the plane's pilots to take off (they slip out the cockpit windows while he is checking the cabin), Martins commits suicide rather than surrender or be captured by federal troops now rushing the aircraft.

Cargo accelerates 23% this year and passenger boardings soar 17% to 1,877,000.

The employee population in 1973 numbers 12,853. Frequencies are boosted on several routes as record traffic totals begin to accumulate. The fleet is increased by the addition of 3 B-727-41Cs and 2 B-707-341Cs; orders are placed for 10 B-737-241s. Two of the new trimotor Boeings replace the Electras on the São Paulo-Manaus cargo run, allowing the Lockheeds to be reconverted to passenger use and assigned to the Ponte Aerea shuttle service. On approach to Rio Galeao Airport at Rio de Janeiro on June 9, a B-707-341C freighter strikes approach lights at a height of 70 m. and ditches into the sea, killing its two crewmen.

En route from Rio de Janeiro to Paris on July 11 with 17 crew and 117 passengers, Flight 820, a B-707-441, experiences an onboard fire that begins in the rear portion of the fuselage near the lavatories and spreads. When the crew is unable to extinguish the blaze, the pilot, thinking the fire will asphyxiate all aboard before he can land, makes an emergency crash landing into an onion field 5 km. short of the runway at Paris (ORY); all of the passengers and crew are killed except for steward Alain Turfey.

Passenger bookings swell 22.6% to 2.3 million while freight traffic jumps up by 23%.

The workforce in 1974 is 14,395. The first two of three DC-10-30s to be delivered during the year arrive at Rio de Janeiro on May 29. The delivery is unique, being the first time that the manufacturer has delivered two DC-10-30s simultaneously and one of the rare double deliveries of the Jet Age. One is placed in service to Europe on June 24 and the other to New York on July 1. When the third DC-10-30 is placed into service later in the year, it is employed on frequencies to Tokyo and Johannesburg. Four B-737-241s are also delivered, beginning in November.

Passenger boardings soar 13.3% to 2,612,691 and cargo climbs 28.5%.

A total of 226 new employees are hired in 1975. A fourth DC-10-30 and six B-737-241s are added. As the result of several fatal accidents over the previous three years, the government's Ministry of Aeronautics,

on March 1, bans the use of twin-engine aircraft on the Ponte Aerea shuttle route. Already retiring its Lockheed L-188 Electra fleet in favor of B-737-241s on domestic routes, VARIG now switches eight of the big American-made turboprops to the Air Bridge service.

The big event of the year is the May 22 acquisition of financially troubled **Cruzeiro do Sul, S.A.** The initial stock purchase is 65%, later increased to 98% full control. Although reservations, schedules, and fleets are integrated, the acquired partner is allowed to continue operations under its previous identity, as well as the name Cruzeiro Brazilian Airlines, S.A.

An HS 748-2A with 4 crew and 11 passengers overruns the runway after landing at Pedro Alfonso on June 17, crosses a street, and crashes into a house; one passenger aboard the aircraft and three on the ground are killed.

On August 26, the Aeronautics Ministry decrees that the new super-carrier cannot exceed 40% of the domestic traffic share.

Passenger boardings grow 14.5% to 2,990,677 and freight is up by 10%.

The employee population is increased 2.8% in 1976 to 15,025. The airline is now 65% employee-owned through the Fundacao Ruben Berta; Erik de Carvalho is reelected as president for the next five years. On February 23, a semi-scheduled meat haulage service is initiated to Lagos and on March 10 the carrier's domestic share percentage is allowed to increase 5 points, perhaps in anticipation of the government's next airline move.

To help recoup the national trade deficit, the government, on June 4, institutes a special exit tax on overseas flights. In reaction to the government's 1975 scheme for a system of regional airlines, the carrier **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** is established at Rio de Janeiro on August 26, with VARIG holding 51.67% majority interest.

Equipped with Fokker F.27s and Embraer EMB-110s, Porto Alegre-Pelotas services begin on September 8. In November and December, two additional L-188As are purchased from **Aerocondor (Aerovias Condor de Colombia, S.A.)**. These, like earlier units, are placed into service on the Ponte Aerea (Air Bridge) service between Rio de Janeiro and São Paulo.

The major's passenger boardings pass the 3 million mark for the first time in a year, up 9.6% to 3,278,248; freight climbs 2.3%.

The fiftieth anniversary is celebrated on May 7, 1977. Weekly B-707-320C passenger and cargo flights to Lagos begin on June 26. Orders are placed for five additional DC-10-30s and four more L-188As are purchased for Ponte Aerea service from the **Aerocondor (Aerovias Condor de Colombia, S.A.)**. In exchange for refurbishing four **TAME (Transportes Aereos Nacionales Ecuatorianos, S.A.)** Electras, VARIG is allowed to keep two as payment.

Enplanements total 3,469,830 and a \$23-million net profit is earned—despite the government exit tax.

The workforce in 1978 is 15,720 and the unduplicated route mileage is 136,799. Orders are placed for 2 more B-727-41Cs for a fleet that now comprises 4 DC-10-30s, 9 B-727-41/-41Cs, 10 B-737-241s, 12 L-188s, 14 B-707-341Cs, and 2 B-707-441s.

Passenger boardings grow 7.2% to 3,730,534, but freight remains level. Revenues climb 13.4% to \$510.9 million.

Three additional DC-10-30s and a B-727-41C are added in 1979 as the two B-707-441s and a B-707-341C are retired. Orders are placed for four additional DC-10-30s.

A B-707-323C freighter with five crew goes missing over the Pacific Ocean 30 min. after takeoff from Tokyo (NRT) on January 30; no trace of wreckage is found.

Despite the temporary grounding of the DC-10 fleet due to the Chicago **American Airlines** crash, passenger bookings accelerate 12.9% to 4,212,909. Revenues rise 35% to \$689.7 million, but the net profit drops to \$54.5 million.

The workforce is increased a scant 0.3% in 1980 to 16,722. Orders are placed for two Airbus Industrie A300B4-2Cs and three B-747-241Bs, as one B-727-41C and three DC-10-30s are added.

In January, the company receives the 1979 "Passenger Service Award" from *Air Transport World* magazine. Helio Schmidt is elected president in April, a post he will hold until his death a decade later.

Boardings rise 5.4% to 4.4 million and freight is up 4.4%. Revenues jump 19.1% to \$822 million, but expenses (led by increased fuel costs) soar 26.5% to \$806 million; the operating profit falls to \$15.8 million and the net to \$32.8 million. In terms of passenger kilometers flown, VARIG now ranks as the largest carrier in Latin America and is among the world's 24 largest airlines.

The employee population is reduced 0.3% in 1981 to 16,703. Helio Schmidt assumes the presidency and his fleet is strengthened by the delivery of three B-727-241s, two DC-10-30s, and one A300B4-2C. Also, three B-747-2L5Bs, originally manufactured for **Libyan Arab Airlines** but refused a U.S. export license, are delivered between January 30 and February 5; these are placed on the route between Rio de Janeiro and New York (JFK). Jumbojet services to Europe commence in April, followed by regional A300B4-2C services in June.

A B-707-341C with three crew is destroyed as the result of a bad landing at Manaus on June 11; there are no fatalities.

The 1946 bilateral agreement between Brazil and the U.S., criticized by both sides, is terminated later in the year, leading to five years of often harsh negotiations on a new pact.

Passenger boardings are level at 4,460,316, but freight climbs 5.0% to 561 million FTKs. A \$9.1-million operating loss is suffered.

The workforce in 1982 is up to 16,799 as the second A300B4-2C joins the fleet.

Passenger bookings accelerate 5.9% to 4,598,283 and freight rises 4.3% to 555.48 million FTKs. Revenues grow 10.4% to \$1.001 billion, expenses are up 6.4% to \$985 million, resulting in profits of \$26.8-million operating and \$43.4-million net.

Airline employment in 1983 is reduced 0.3% to 16,745 and service is started to Santo Domingo. In April, in cooperation with **Ecuatoriana Airlines, S.A.**, one joint weekly flight is inaugurated over a route from Rio de Janeiro to San Jose via São Paulo, Guayaquil, and Quito.

Passenger boardings dip 6.2% to 4,313,130 and cargo declines 3.5%. Revenues drop 17.6% to \$883 million and expenses fall 12.1% to \$866 million, leaving an operating profit of \$17.4 million.

The employee population in 1984 climbs back up to 16,948.

En route from Rio de Janeiro to Manaus on February 3, an A300B4-2C is seized by a man and woman with a small child in tow, who demand that it fly on to Cuba. During a refueling stop at Surinam, the passengers are released.

Service is initiated to Abidjan as orders are placed for two B-747-341Cs.

Passenger bookings are level at 4,305,553, but cargo swells by 22% to 651.57 million FTKs.

The employee population is increased 10.4% in 1985 to 19,383 and President Schmidt is reelected to a second five-year term. On December 10 and 19, respectively, two B-747-341Cs are received and enter service.

Passenger boardings climb 8.1% to 4,656,000 and freight rises 7.5% to 700.68 million FTKs. In terms of freight haulage, the carrier now ranks as the 16th largest airline in the world; it is 17th in terms of total employee numbers and still the largest, overall, in Latin America.

The payroll jumps 8.1% in 1986 to 20,943. The new Jumbojets extend service from Rio de Janeiro to Tokyo via Los Angeles. In March, a \$400-million firm order is placed for six B-767-241ERs, with options for four more. Two more L-188As are purchased from **TAME (Transportes Aereos Militares Ecuatorianos)** in April and are assigned to Air Bridge services.

During the spring, flights commence to Toronto and Montreal and under the direction of Walterson F. Caravajal, a new Directorate of Human Resources is established to implement an extensive training program.

Late in the year, two leased B-767-2Q8ERs and two owned L-188s are added and three B-707-341Cs are retired.

In November, the giant orders two EMB-120s for the regional **Rio-Sol (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)**; the aircraft

are to enter into service at the end of 1987. During the year, a ground handling joint venture is entered into with **Aerolineas Argentina, S.A.**

Customer bookings are up again, a healthy 21.4% to 5,650,308 and cargo accelerates 12.8% to 790.64 million FTKs. Revenues rise 18.6% to \$1.17 billion, costs climb but 10.8% to \$1.05 billion, and the operating profit is dramatically improved to \$110.55 million. Net gain also doubles to \$126.79 million.

Airline employment is increased by 11.5% in 1987 to 23,356.

Just after takeoff from Abidjan, Ivory Coast, to Rio de Janeiro on January 3, Flight 797, a B-707-379C with 12 crew and 39 passengers, develops engine trouble and attempts to return to the point of origin; the aircraft crashes into a forest 18 km. NE of the point of origin (50 dead).

In February, the carrier and Aeroportos do Rio de Janeiro hold an accident drill, simulating a Jumbojet overrun crash that involves over 150 people. On April 11, a B-747-244B is leased from **South African Airways (Pty.), Ltd.** Services are inaugurated to Montreal and Toronto in June and the two chartered B-767-2Q8ERs are returned as six owned B-767-241ERs complete their entry into service during July.

In September, the company begins serving its thirty-seventh international destination with a four-times-weekly DC-10-30 service from Rio de Janeiro to Barcelona via Madrid. In October, a \$464-million agreement is signed with ILFC for the 15-year charter of 3 B-747-341Bs. Simultaneously, Stratoliners employed on the routes from Rio de Janeiro to Lagos, Luanda, and Abidjan are replaced with DC-10-30s.

Passenger boardings slip 1.6% to 5,559,279, but freight continues its upward push, rising 9.2% to 863.6 million FTKs. Revenues climb 5.4% to \$1.23 billion, expenses jump 11.1%, and the operating profit falls to \$57 million. The net figure is a loss: \$123.9 million.

The payroll grows by 3.6% in 1988 to 24,200, largest in Latin America. The 75-plane fleet is also the largest south of the U.S. border; however, during the year, the last 5 B-707-320Cs are sold. In January, 4 A300B4-2Cs are sold to **Toa Domestic Airlines Company, Ltd.** for delivery early in the succeeding year.

In March, a marketing agreement is signed with **Japan Air Lines Company, Ltd. (2)**, which provides for code-sharing and block-space seat sales on weekly flights from Rio de Janeiro to Tokyo (NRT) via São Paulo and Los Angeles.

The three leased B-747-341Bs are delivered during the second half of the year, as orders are placed for six MD-11s. In July, two B-737-33As are leased from Ansett Worldwide Services, Ltd. and the long-haul concession is reconfirmed in August when the government revokes its earlier approval of international rights for **Transbrasil, S.A. (Linhas Aereas Transbrasil)**.

During the fall, the joint agreement signed with **Japan Air Lines Company, Ltd. (2)** begins and capacity is shared on a weekly route from Rio to Tokyo. In December, \$12 million is invested to begin construction of a new cargo terminal at Rio de Janeiro.

Customer bookings advance by 7% on the year to 5,967,477 and cargo is up 2% to 882.72 million FTKs. Revenues increase 18.4% to \$1.45 billion. Costs force an operating loss of \$51.66 million, but the net loss shrinks to \$32.62 million.

Company employment inches up by 2.1% in 1989 to 24,638 and the fleet now includes 68 aircraft, including 54 jetliners. The largest airline in South America operates to 43 destinations in 33 nations while also flying to 43 domestic locations. A new Brazil-U.S. bilateral takes effect in April after five years of often harsh negotiations.

In competition with **Transbrasil, S.A. (Linhas Aereas Transbrasil)** and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**, VARIG, also in April, places the two previously leased Australian-owned B-737-33As into service over the Rio de Janeiro-São Paulo air bridge, along with a chartered Dash-3Y0 and two Dash-2K9As rented from **Bavaria Fluggesellschaft, GmbH**. As the jetliners are introduced, Electras are retired. The nonstop, twice-weekly DC-10-30 service from Rio to Toronto is rerouted in June to include a stopover in Chicago.

Beginning in July, the megacarrier introduces two new nonstop roundtrip frequencies to Miami and replaces DC-10-30s on some routes

with B-747-2L5Bs and B-747-341Bs. In August, weekly flights begin from New York to São Paulo via Rio de Janeiro, while the B-747-2L5Bs employed on the nonstop runs to New York are replaced with B-747-341Bs.

With the crew reportedly listening to a World Cup soccer match between Brazil and Chile, Flight 254, a B-737-241 with 6 crew and 48 passengers en route from São Paulo to Belem on September 3, goes off course. It suffers fuel exhaustion that results in the Boeing making a forced landing in the Amazon jungles 60 km. from São Jos de Xingu (13 dead).

Two days later, a survivor reaches a remote ranch and reports that 43 others are alive after the belly-landing and require assistance. Unemployed 19-year-old Alfonso Saravia leads the search team that locates the wreck site and rescues the survivors.

Later in the month, the company signs an cooperative operating and marketing agreement with **Aerolineas Argentinas, S.A.** As part of the pact, the two carriers pledge to avoid fare wars and to provide reciprocal ground handling in their respective countries; also, they will develop joint flight-service training and market-development activities.

Employing Fokker F.27s, the regional **TAM (Transportes Aereos Regionais, S.A.)** inaugurates its own Rio to São Paulo air bridge shuttle in October in direct competition with VARIG and its fellow majors. The regional **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** enters the air bridge competition in December.

Passenger boardings this year shoot up 13.3% to 6,758,354 and freight rises 15.1% to 1.01 billion FTKs. Revenues advance 21.6% to \$1.86 billion, expenses climb 19% to \$1.89 billion, and the operating loss is cut in half to \$25.62 million. A \$10.41-million net profit is generated.

The number of employees is increased by 4.1% in 1990 to 25,654. Construction on a new \$10-million freighter terminal is completed at Rio de Janeiro in early January. Also at the first of the year, the company enters the currency exchange business through the establishment of a new subsidiary, Banco VARIG, S.A., capitalized with a \$25-million line of credit.

Plans are completed with **Aerolineas Argentinas, S.A.** for the inauguration of joint shuttle service between Buenos Aires and the Brazilian destinations of Porto Alegre, Florianopolis, Foz do Iguacu, São Paulo, and Rio de Janeiro. Twice-weekly service is initiated on March 1 from Chicago to Rio de Janeiro, continuing on to São Paulo. President/CEO Schmidt, due to retire on May 1, dies of cancer at New York in April at age 64; he is immediately succeeded by Executive Vice President Ruben Thomas.

In June, it is announced that the carrier will replace the L-188As employed on the São Paulo-Rio de Janeiro air bridge route with newly ordered B-737-300s. The \$2.5-billion fleet renewal contract is the most ambitious yet signed by any South American airline. The shift cannot, however, be made until a 200-m. extension is made on the runway of Rio's downtown Santos Dumont Airport.

The company's two A300B4-2Cs are withdrawn from regional routes during the month.

The Gulf crisis that follows Iraq's August 2 invasion of Kuwait brings extraordinarily high fuel costs. To meet the fiscal challenge, the company seeks to increase its capital by selling \$75 million in debentures in the local market, stepping up a Total Quality Control program, and the sale and leaseback of three DC-10-30s for \$110 million. On December 31, three hotels combined into Hotel da Bahia, S.A. are renamed Companhia Tropical de Hotels, S.A.; shareholding in the facilities is increased to 89.90%.

Customer bookings for the year fall 5% to 6,442,908 and cargo drops 9.1% to 924.2 million FTKs. Revenues swell 6.3% to \$1.98 billion, but costs are higher and force an operating loss of \$29.4 million. The net loss is \$145.1 million.

The payroll grows another 2.3% in 1991 to 26,236 and the fleet now includes 90 aircraft. **Pan American World Airways (1)** initiates new—if brief—competition with the flag carrier early in the year with new flights from Miami to Recife, São Paulo, and Rio. In May, flights from Rio de Janeiro to Chicago are increased to four per week. San Francisco becomes the fifth U.S. gateway; on May 27, four-times-per-week non-

stop service is opened from Rio de Janeiro to San Francisco. During the month, the Iris 2 reservations system comes on line.

In June, weekly Chicago to Brazil services are doubled from two to four and nonstop routes are inaugurated from Miami to Recife and weekly flights begin from the same Florida city to Belem and Manaus. New competition appears on the scene as American Airlines launches twice-daily frequencies. As the result of the British Aerospace BAe 146 challenge from failed start-up carrier **Air Brazil, S.A.** and in accordance with an earlier announcement, the carrier phases out the 14 Electras it has assigned to the Rio-São Paulo air bridge, replacing them with four B-737-3K9s chartered from **Bavaria Fluggesellschaft, GmbH**.

Nonstop Miami-Recife flights commence on July 1. During the month, discussions are held with **SAS (Scandinavian Airlines System)** concerning a joint-venture agreement on South Atlantic routes. Simultaneously, President Thomas is elected to a five-year term. Weekly frequencies to Lisbon and Oporto increase from five to seven, along with flights to Madrid and Barcelona. Frequencies from Los Angeles to Japan are increased to five per week when Nagoya joins the route network. The first B-747-400, a leased Dash-475, is delivered in October; orders remain outstanding for eight B-747-441s as well as six of eight MD-11s.

Clearing the way for the introduction of close-in B-737-3K9 service, government aviation authorities, later in the month, grant approval for jet operations into Rio de Janeiro's downtown Santos Dumont Airport.

A code-sharing agreement is implemented with **Canadian Airlines International, Ltd.** in November. Under its terms, VARIG code-shares on a route from São Paulo to Toronto via Rio de Janeiro and Chicago, while the Canadians code-share on São Paulo to Toronto services, as well as on VARIG flights to Chile and Argentina.

With the first two MD-11s delivered on November 12, VARIG, in December, becomes the first company in Latin America to operate the advanced wide-body when it places them into service on routes from São Paulo and Rio de Janeiro to Paris and Amsterdam. The leased B-747-475 simultaneously enters service, flying from Rio to Rome.

Also in December, VARIG places 13 of its 14 Electras employed on the air bridge up for sale, pledging to keep the last for its own museum.

Passenger boardings inch up 1% on the year to 6,519,255 as freight declines by 8% to 848.39 million FTKs. Revenues advance just 1.4% to \$2 billion and costs are held low enough to allow an \$80.4-million operating surplus to be earned. The net loss is cut to \$137.6 million.

Recession, inflation, and political instability caused by the impeachment of the nation's president help to insure a decline in 1992. The number of employees is reduced by 6.2% to 24,600 and only one new B-747-441 is received, with delivery of a second delayed for fiscal reasons.

PP-VJM, the first former **American Airlines** Lockheed L-188 Electra purchased in 1962, completes the last Electra flight in Brazil on January 6. The turboprop is then transferred to the Museum Aeroespacial de Campos dos Afonsos in Rio de Janeiro.

To help cope with the downturn, sale and lease-backs are taken on two DC-10-30Fs, a passenger DC-10-30 is sold in April for \$35 million, and scheduled B-737-334 deliveries are cut from six to three. In addition, the last remaining parked L-188As are sold for \$17.5 million for the lot.

In May, negotiations are undertaken designed to change its short-term domestic debt packages into long-term paybacks. The following month an agreement is signed with **SAS (Scandinavian Airline System)** under which the Scandinavian carrier purchases 40 seats and 12 tons of cargo space on each of VARIG's 3 weekly flights from Rio de Janeiro and São Paulo via London to Copenhagen.

New routes are initiated from Rio de Janeiro to São Paulo, Johannesburg, Bangkok, and Hong Kong and from Rio to Mexico City via Cancún. A joint venture agreement is signed with the Marriott Corporation in July under which the companies pledge to build an \$18-million catering facility at São Paulo's Guarulhos Airport. On September 30, the subsidiary **Cruzeiro do Sul, S.A.** begins absorption into its parent. A sixth Brazil-Japan frequency is introduced in November; in cooperation with

Japan Air Lines Company, Ltd. (2) joint flights are undertaken from São Paulo to Nagoya.

Customer bookings fall 14% to 5,622,537. The only positive statistic is a 10% growth in cargo traffic, to 929.59 million FTKs. Despite an operating profit of \$115.2 million, the company suffers a net loss of \$380.3 million.

In 1993, Chairman/President Rubel Thomas oversees a workforce of 25,152, down 4.2% from the previous year, as subsidiary Cruzeiro is fully absorbed into the carrier's operations. On January 4, capacity is increased on the routes linking Rio de Janeiro, São Paulo, Recife, and Salvador with Madrid and Barcelona. MD-11s are substituted for B-767-341ERs. Service is provided to a total of 44 Brazilian destinations and 38 foreign markets. Later in the month, the company begins to code-share on **South African Airways (Pty.), Ltd.** flights from Johannesburg to Bangkok.

In March, the company begins to operate code-share and block-space flights over domestic Brazilian routes in partnership with **Transbrasil, S.A. (Linhas Aereas Transbrasil)**.

In June, a strategic marketing and code-sharing agreement is signed with **Deutsche Lufthansa, A.G.**, effective in November. Under its terms, the two carriers coordinate their schedules and operate 28 dual-designator flights per week on routes from Rio de Janeiro and São Paulo to Frankfurt; VARIG joins the Amadeus reservations system consortium. Joint freight services will also be flown between São Paulo and Frankfurt.

Following the loss of \$100 million in the year's first half, the company institutes a stringent cost-cutting plan in late summer. Under its terms, 4 directorates are eliminated, 2 are downgraded, and layoffs are announced for 1,300 workers. In October, a historic code-sharing alliance is entered into with the nation's second largest airline, **Transbrasil, S.A. (Linhas Aereas Transbrasil)**. Designed to rationalize operating costs and keep capacity adjusted to demand, the new pact quickly sees frequencies and schedules adjusted for coordination on a number of routes.

Six DC-10-30s are retired by year's end. Also during the 12 months, the carrier joins with the Catholic University of Rio Grande do Sul to establish an Aviation Sciences Institute. Also, together with Caterair International, the joint venture subsidiary Caterair Brazil is established to provide on-board meals to outside customers on a large scale.

Enplanements for the year total 9,159,649 and as the result of new and improved services and a cost-cutting program, revenues advance 18% to \$2.6 billion. Operating income is \$43.14 million, but a \$97.2-million net loss is suffered.

Airline employment is reduced a further 14% in 1994 to 21,832. The catering facility at São Paulo's Guarulhos Airport, built jointly with the Marriott Corporation, is opened early in the year. A new frequent flyer program, Smiles, is introduced during the first quarter. Unhappily, it will turn out that the information technology system chosen to support the program is too low-grade to keep up; however, a government decision will prevent the carrier from importing foreign software with which to upgrade.

At São Paulo, in March, VARIG signs a joint marketing and feeder agreement with the new air taxi operator **Aeroexutivos, S.A.**, which will employ its two Cessna 500 Citation Is to provide connections within a 600-km. region. On the 27th of the same month, the major informs its aircraft lessors that it will suspend principal, rent, and interest payments for two months, pending renegotiation of its agreements.

A code-sharing venture is started with **LAB (Lloyd Aero Boliviano, S.A.)** in April on a route from Santa Cruz to La Paz. A significant cost-cutting program is undertaken in May and June. A total of \$6 million in monthly wages is saved by the immediate layoff of 2,600 employees. Nine leased aircraft are returned, including both B-747-441s and the B-747-475 and options are cancelled for five more B-747-400s and seven 737-300s.

Service is suspended to 11 international and 2 domestic destinations, wide-bodied aircraft are removed from domestic services, the amount of

food served in flight is reduced, 30 offices in foreign nations are closed, and 5 executive positions are eliminated. Additionally, a hotel chain, a car-rental company, a bank, and other nonairline assets are put up for sale.

The code-sharing and support agreement signed the month before with **Delta Air Lines** is implemented in July as the first Brazil to Atlanta daily roundtrip service is inaugurated. Delta purchases code-shared blocked-seats on the VARIG B-767-341ER flights to Georgia from Rio de Janeiro and São Paulo. A similar code-sharing arrangement covers flights by VARIG to Miami, New York, and Los Angeles. At the same time, the company participates as a management partner, without investment, in the privatization of **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)**. The government's new economic plan, released during the month, is of significant fiscal assistance, just through the strengthening of the nation's currency alone.

In August, a "protocol of understanding" is signed with GE Capital and McDonnell Douglas. Under its terms, the two companies agree to take over payments on 10 VARIG aircraft in exchange for 3 seats on the Brazilian major's 9-member board of directors, the first outside directors appointed in the airline's long history. GE Capital purchases six VARIG B-767s and leases them back, while also paying \$204 million of the debt owed by the airline to the U.S. Export-Import Bank.

The manufacturer, for its part, agrees to pay the same bank \$70.2 million over 18 months, to be applied to the \$407 million owed on 4 MD-11s. When Brazil defeats Italy in the World Cup championship held in the U.S., the company shows off its pride by painting special titles on the aft fuselage and engines of its DC-10-30s. During the fall, the national investment bank BNDES provides a \$130-million loan; the Banco de Brasil grants a long-term, \$250-million loan; 39 offices are closed.

Passenger boardings inch up only 0.9% to 9,242,834, but freight does much better, swelling 9.7% to 1.2 billion FTKs. Revenues move ahead by 8.1% to \$2.74 billion and expenses grow only 3.7% to \$2.59 billion. As a result, the pretax profit rises dramatically to \$158.86 million, while net gain is not revealed.

The workforce is cut another 12.2% in **1995** to 19,170. Willy Engels is named president in June and given a mandate to stem the flow of red ink on the financial ledgers. He prepares a plan, modeled on that developed by CEO Jan Carizon for **SAS (Scandinavian Airlines System)**. Emphasis is placed on cost-cutting, business-class enhancements, yield management improvement, fleet rationalization, and improvements in baggage-handling, customer relations, and punctuality.

In July, the government institutes Plano Real, a currency reform program designed to cut costs by tying Brazil's money to the U.S. dollar. The same month, the company launches the only Rio de Janeiro-to-New York (JFK) nonstop roundtrips.

In August, a B-747-2L5B is damaged in a ground accident at New York (JFK). The Jumbojet, being taxied to the gate by two **Delta Air Lines** engineers, crashes into a parked service truck, dragging it 75 feet across the tarmac and damaging a jet engine when the truck is wedged underneath.

During the fourth quarter, three B-747-2L5Bs are purchased by **Cathay Pacific Airways (Pty.), Ltd.** and sent to Boeing's Wichita division for conversion into freighters for its subsidiary, **Air Hong Kong, Ltd.**

Enplanements are up a slight 1% to 9,334,720, with cargo again making a large gain, rising 9% to 1.31 billion FTKs. Operating revenue is \$3.1 billion and, even though costs leave a \$152.11-million operating profit, there is a \$41.88-million net loss.

The number of employees is reduced a further 5.2% in **1996** to 18,119. Having been unable to impact the company's slide, President Engels is terminated and replaced on January 12 by former **Cruzeiro do Sul, S.A.** President Fernando Pinto. A restructuring program accounts for much of the reduction in force. Additional reforms undertaken include increasing the number of seats in business class, revising the company's yield management system, an improvement in on-time performance, enhancement of onboard and ground service levels, including airline business courses for cockpit and cabin crews.

In addition, a contract is signed with Speedwing, the consulting arm of **British Airways, Ltd. (2)** for help in the development of new computer systems and applications. In August, the company reports a loss of \$153 million during the first six months of the year; President Pinto blames the downturn on "administrative problems."

In late summer, U.S.-based Landor Associates is contracted to assist the company in revising its older image into one more friendly to business. The company begins a 2-year, \$15-million program in October to repaint its entire fleet with a new lighter-blue Landor-designed livery, replacing the familiar tail markings with the blue and yellow "rose of the wind" logo of the Ruben Berta Foundation. The new color scheme is only the second in company history. In addition, aircraft cabins and in-flight services are redesigned.

During the year, two wet-leased freighters are replaced with one underutilized VARIG DC-10-30 for a \$25-million saving. In addition, 10 B-737-200s are sold and leased back bringing another \$55 million in savings. Indeed, the entire cost-cutting program in 1996 saves \$140 million.

Customer bookings ascend 3.3% to 9,642,216 and 1.24 billion FTKs are operated, a 4.6% decline. Revenues dip 1.4% to \$3.01 billion, but expenses plunge 20.3% to \$2.91 billion. The result is an operating gain of \$99.68 million and net revenues of \$132.61 million.

The employee population inches up 0.5% in **1997** to 18,203. In late January, the limited 1994 joint service agreement with **Delta Air Lines** is terminated.

Flight 265, a B-737-2C3 with 6 crew and 46 passengers on a flight from Maraba, overruns the runway while landing during a thunderstorm at Carajas, Brazil, on February 14. The accident is caused when the right main landing gear collapses rearwards, forcing the plane to end up in a forest and killing the first officer.

Also in February, the company and **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)** agree to operate joint offices. VARIG will provide local management and sales for PLUNA in Brazil, Chile, and Paraguay while PLUNA reciprocates in Uruguay.

A wide-ranging strategic alliance is entered into with **United Airlines** in April. When implemented on October 26, the arrangement will see coordination of schedules, shared frequent flyer programs, and code-sharing. VARIG will operate dual-designator flights from Rio de Janeiro and São Paulo to Los Angeles, Miami, New York, Atlanta, and Orlando, while VARIG will attach its code to United services to São Paulo and Rio de Janeiro from New York, Chicago, and Miami.

When the "Star Alliance" between **SAS (Scandinavian Airlines System)**, **Deutsche Lufthansa, A.G.**, **Air Canada, Ltd.**, **United Airlines**, and **Thai Airways International, Ltd. (THAI)** is announced on May 14, negotiations have already been completed, as part of the United arrangement, to bring VARIG in as another partner in October.

On July 1, the company is finally permitted to sign 10-year leases with IBM and SITA, valued at \$450 million, for upgrade of its computer and communications or information technology systems. Software for planning, reservations, and yield management will be purchased from **United Airlines** and **Deutsche Lufthansa, A.G.**

A \$629,000 legal claim is placed against **Delta Air Lines** in U.S. District Court in Atlanta on July 30, seeking to recover damages from the August 1995 Jumbojet incident.

A plan implemented the year before to increase business-class seating and pitch across the wide-body fleet is completed at the beginning of August.

In a concentrated effort to increase the \$549 million in 1996 revenues gained from freight, the company, in September, completely revamps its all-cargo operation. The entire freight emphasis is restructured into a separate profit center, VARIG Cargo. The two DC-10-30Fs and five B-727-100Fs assigned to it are given new livery and the unit is equipped with the Unisys Air Cargo Efficiency automation system.

The lawsuit against **Delta Air Lines** is withdrawn in early October and the previously limited marketing agreement between the two companies is replaced by a more comprehensive pact. It provides not only

for coordinated frequent flyer programs, but also a code-sharing agreement on all return services the two companies fly between Brazil and the U.S.

On October 26, the company is formally accepted as the sixth member of the "Star Alliance," which is now initially thrust into the fast-growing South American airline market. The landmark event is demonstrated worldwide when, in early November, a company B-747-341C begins flights with the port side of its fuselage painted in the color schemes of the other members.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January. Also in December, the carrier introduces its deep-discount Voa Brasil night domestic service.

Passenger boardings accelerate 3.2% to 9,937,912, while freight rises 4.3% to 1.3 billion FTKs. Operating revenues reach \$3.04 billion, but huge expenses cause an operating loss of \$92.7 million. Still, a \$24.48-million net profit is generated and celebrated.

At the beginning of 1998, VARIG is the 22nd largest airline in the world in terms of employee number (18,203) and 24th in operating income. The fleet, 73.9% of which is Stage III certified, includes 88 airplanes: 5 B-727s, 48 B-737s, 5 B-747s, 12 B-767s, and 9 each DC-10s and MD-11s.

Prior to internal air force opposition that slows the process, DAC deregulation continues in January. As part of the liberalization, the government decrees that the monopoly the company shares with **Transbrasil, S.A. (Linhae Aereae Transbrasil)** and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** on the Rio de Janeiro to São Paulo air bridge must end.

Simultaneously, trunk lines are granted permission to compete with regional carriers on services between the downtown city-pairs of São Paulo and Brasilia or Belo Horizonte and Rio de Janeiro and Belo Horizonte or Brasilia. Further, airlines will be allowed to offer discounts of up to 65% on internal flights and any carrier will be allowed to fly charters on any route, with certain conditions. The move will have the desired end of increasing new business, but it will also set off a devastating fare war.

On January 22, it is announced that VARIG Cargo will begin dedicated freighter flights later in the spring between Rio de Janeiro and Milan, Italy.

Transbrasil, S.A. (Linhae Aereae Transbrasil) and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** enter the new city-pair markets in February.

Employed to handle air bridge traffic, the 61-year-old passenger terminal at Santos Dumont Airport, Rio de Janeiro, burns down on February 13, forcing transfer of connections on this end of the route from São Paulo to be transferred to Rio's international airport.

Work is begun immediately on a temporary passenger terminal, which is expected to be completed by July; a completely new facility will not, however, be available until late 1999.

Due to promotions and discount fares, industry traffic to Brazil, through March, increases by 35% over the same period a year earlier.

During April, the airline, which has been selected as "Transportadora Oficial da Selecao Brasileira de Futebol," paints two aircraft in new colors that show off its official status as the nation's airline of the World Cup games. An MD-11 and a B-737-341 each receive a white forward fuselage, a blue rear fuselage, and green and yellow ribbon bands in the center. They also show stars and badges representing the years of victory: 1958, 1962, 1970, and 1994.

It is announced on May 13 that the two repainted planes will be stationed at Paris (CDG) in June; the aircraft will be rotated for flights throughout France to the various sites of the football (soccer) matches of World Cup '98.

Voa Brasil proves such an outstanding success that, in May, the company unveils a new discount product that provides for promotional fares on all of its 280 daytime domestic flights. **TAM (Transportes Aereos Regionais, S.A.)** immediately moves to counter VARIG's low-prices,

offering 60% off fares on 45% of its own services. This challenge ignites a fare war over Brazil's domestic routes, the first in the nation's history.

On June 1, arrangements are made with **Air France** to help fly its booked soccer fans to the World Cup championships being held in France. Although the Paris-based flag carrier's pilots go out on strike this day, **Air France** aircraft already stationed in Brazil will fly customers for the next two days, after which passengers bound to the games on June 2-4 will fly VARIG. The specially painted B-737-341 is stationed in France to fly the Brazilian national team between tournament cities.

Also in June, VARIG announces that it will drop out of the joint Rio de Janeiro-São Paulo air bridge shuttle. In cooperation with **Rio Sul (Serviclos Aereos Regionais, S.A.)**, it will offer its own competition against its former partners **Transbrasil, S.A. (Linhae Aereae Transbrasil)** and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**.

The joint air bridge service with Rio Sul begins in July. The World Cup leads to a significant reduction in the number of Brazilians traveling, as they prefer to remain home and watch the month of matches on television.

During late summer, a major shakeup at the airline is begun. The change is due largely to a report that a \$168-million loss has been incurred during the year's first half.

In late August and in response to the continuing Asian economic crisis, the carrier suspends its five-year-old twice-weekly flights into Bangkok and Hong Kong.

The carrier moves from Terminal 7 at New York (JFK) on September 15 to Terminal 4. With three former **Garuda Indonesia** MD-11s already in the fleet, VARIG, on September 20, agrees to take four of the six that the Indonesian carrier had returned to its lessor in late spring. One is quickly delivered and will be joined by the other three once they have received certification checks.

Also in September, the livery of Rio Sul aircraft is changed; the planes become identical to those operated by the parent company in all but titles. Also during the month, a \$2.7-billion order is placed with Boeing for 39 new aircraft. The first is scheduled for delivery in late November, with two more arriving in December.

The premier Next Generation B-737-76N duly arrives on November 29 under charter from GE Capital Aviation Services. Three more such leased examples will enter service at the end of the year.

A DC-10-30 is leased to **AVENSA (Aerovias Venezolanas, S.A.)** on December 18.

President Pinto indicates on December 29 that the company will experience a \$200-million shortfall on its 1998 domestic revenues; company debt is now \$1.9 billion.

The reasons behind VARIG's fiscal condition, which set off a board debate on the president's future, are laid to three business decisions during the year: (1) a \$2.7-billion order to Boeing for 39 airplanes; (2) a \$500-million agreement with GE to purchase engines; and (3) a 10-year maintenance agreement, also with GE.

On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Customer bookings jump 10.9% to 11.01 million, while cargo traffic dips 1% to 1.29 million FTKs. Revenues accelerate 9.7% to \$2.6 billion; however, costs jump to \$2.78 billion. The operating loss is \$181.5 million, while the net loss is \$15.3 million.

A code-sharing agreement with VARIG is announced by **All Nippon Airways Company, Ltd. (ANA)** on January 26, 1999; the two carriers will begin joint services between Japan and Brazil in May.

It is announced on January 28 that the company has been voted the Best South American, Caribbean and Central American airline at the 1999 OAG Global Awards presentations in Washington, D.C. earlier in the month.

Although the Fundacao Ruben Berta, which holds 87.2% shareholding, continues to support President Pinto, a number of administrative

council (board) members in early March begin to campaign for his replacement by board member Nelson Sampaio Bastos. They have lost confidence in the incumbent leader's ability to redress the fiscal concerns that he had reported at the end of the previous year. Pinto, whose brother is a company captain, as was his father, receives strong support from the pilots' union, which had lobbied the Fundacao Ruben Berta on the president's behalf.

With the Brazilian real having lost 35% of its value against the U.S. dollar since mid-January, VARIG is forced on March 17 to discontinue, on a temporary basis, service to five international destinations in April. The devaluation has caused the airline to register a drop of 11% in international traffic, along with a 4.5% decline in domestic boardings.

Having called upon President Pinto to resign for complacency and been rebuffed, the entire administrative council resigns in displeasure. At a special meeting at Porto Alegre on March 24, a new administrative council is chosen for the airline. Among the new members are onetime VARIG Planning Director Harro Fouquet and Brazilian aviation legend Ozires Silva, a former air force officer and government aviation minister who had founded the Embraer aircraft manufacturing concern and served as its CEO. The council's first act is to reaffirm President Pinto's position and to give him a vote of confidence as the leader who will take the carrier out of its current economic difficulties.

Upon his reaffirmation, President Pinto announces a major cost reduction program on April 5 aimed at reducing annual expenses by \$160 million. All four remaining passenger DC-10-30s will be grounded; thereafter, VARIG will utilize two DC-10-30Fs for cargo only. Additionally, six B-737-200s and two B-737-300s will also be withdrawn. Leasing arrangements are to be renegotiated, while the financial terms of the \$2.7-billion Boeing order will be restructured.

New York-based Bankers Trust is contracted to renegotiate the airline's debt and the company soon resumes its leasing payments. Arrangements will be completed by early June for a 400-million real loan from BNDES, the national development bank.

Effective April 15, the major no longer flies to Zurich, Switzerland, Porto, Portugal, in Europe, or the U.S. cities of Orlando, Atlanta, and Washington, D.C. Passengers bound between Brazil and the discontinued U.S. cities are pointed to "Star Alliance" partner **United Airlines**.

The April 26 issue of *Gazeta Mercantil* reports that Brazil's airlines will have laid off 3,000 employees by June due to the restructuring programs they have started since the first of the year. VARIG, having reduced its domestic flights by 12%, lays off the majority of workers—2,000.

Having suffered a 35% drop in international bookings since the beginning of the year, VARIG suspends services to Johannesburg on May 9. Plans are announced for the immediate return of 14 leased aircraft, while cost cutting may result in the suspension of as many as 4 more international routes. At this point, President Pinto becomes the fourth president in six years to depart involuntarily; he is replaced with board member Silva.

Under the January code-sharing agreement and employing one of the Brazilian partner's B-747-341s, VARIG and **All Nippon Airways Company, Ltd. (ANA)** inaugurate dual-designator services on May 13 between Rio de Janeiro and Tokyo (NRT) via São Paulo and Los Angeles. The All Nippon-VARIG code-share also includes one weekly service to Nagoya; two more Nagoya flights will be added on June 29.

Under terms of a strategic agreement signed on May 21, VARIG and **LANChile Airlines, S.A.** commence dual-designator service on June 1 from Peru to Japan.

On June 10, the federal court announces that the airline is to receive 2.2-billion real (\$1.8 billion) indemnification for losses generated by the government's 1986–1992 refusal to allow price increases.

A week later, on June 18, the Brazilian national development bank BNDES grants VARIG a \$410-million loan to help it manage its debts. The funds are made available through a debentures issue that is underwritten by BNDESPar, a possible VARIG partner. Due to devaluation of the real, the company proceeds with a restructuring of its international services.

Flights five times a week between Los Angeles and Brazil are continued and on June 29 increased to daily.

Under terms of a three-way code-sharing agreement signed with **Aerolineas Argentina, S.A.** and **VARIG, South African Airways (Pty.), Ltd.** introduces twice-weekly nonstop roundtrips on July 8 between Johannesburg and São Paulo.

In September, the government proposes that the nation's four major carriers find a way to merge some or all of their activities under a joint operating agreement or some other form of umbrella.

At the beginning of October, the Brazilian National Development Bank (BNDES) adds to the discussion of airline mergers when its president, Andrea Calabi, announces that BNDES will broker and finance an amalgamation of VASP, VARIG, Transbrasil, and TAM, which may be accomplished in "the medium term." Stating that such a move without additional capital would be pointless, the initiative is publicly opposed by **Transbrasil, S.A. Linhas Aereas, TAM (Transportes Aereos Regionais, S.A.)**, and **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. VARIG, which also does not want to give up any of its market regions in order to participate, begins negotiations with BNDES about a debt rollover loan and an extension of its debt payments.

Previously operated by **Garuda Indonesia** and refurbished after a period of retirement in the Mojave Desert, the company's 14th MD-11 is received on November 1. Another ex-Garuda MD-11 arrives on December 10.

Passenger boardings decline 8.7% to 10,065,000 while cargo traffic falls 16.1% to 1.08 billion FTKs. Although revenues jump 25% to \$2.5 billion, an R 218.6-million (\$54-million) loss is suffered. The downturn is largely blamed on the devaluation of the real back in January.

Airline employment at the beginning of 2000 stands at 17,740, a 1.4% decline over the previous 12 months. The "classic" B-737 fleet now includes 2 each Dash-36Qs and Dash-33Rs, 4 each Dash-36Ns, Dash-33As and Dash-3K9s, 14 Dash-341s, 1 each Dash 3S3 and Dash-3Q8, and 4 Dash-4Y0s. Five Next Generation B-737-76Ns are also operated.

During the first quarter, Fundacao Rubem Berta undertakes a restructuring effort when it transfers part of the original holding company VARIG Brazil's equity and liabilities into two new entities, VPTA and VPSC. The rearrangement will continue later.

Frequencies from Rio de Janeiro to Rome and Milan become thrice-weekly on March 26. The same day, VARIG begins to code-share with **Spanair, S.A.** on their new flights to Brazil.

At the start of April, the carrier joins **Deutsche Lufthansa, A.G.** and **United Airlines** in moving into joint facilities at Rio de Janeiro International Airport. Rio becomes the fifth major airport (after Frankfurt, Copenhagen, Shanghai and Beijing) to house all "Star Alliance" partners in a single terminal. The membership's corporate leadership is currently discussing similar arrangements with the airports at London (LHR), Paris (CDG), Los Angeles, and Miami.

To celebrate the 500th anniversary on April 22 of Portuguese explorer Pedro Alvares Cabral's discovery of Brazil, a company B-737-341 is painted in a special commemorative color scheme.

On May 17, two B-737-2T4As join the fleet; the aircraft had previously been operated by the recently defunct Mexican carrier **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)**. Two of the MD-11s given up by **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** earlier in the month are leased to VARIG by Mitsui & Co., Ltd. on May 22. A commercial and operational alliance is formed between VARIG Cargo and **Lufthansa Cargo Airlines, A.G.** on May 31.

A B-767-241ER, the very first of its type to be delivered back on July 2, 1987, is damaged by a ground fire at Rio de Janeiro on June 7; it will be repaired and returned to service by October. A second daily MD-11 return service is initiated on June 15 between Rio de Janeiro and Los Angeles while new flights are simultaneously started from Rio de Janeiro and São Paulo to Munich.

Also during June, the company's restructuring continues. A new holding company, FRB-Par, is created for the VARIG business group, with VPTA and VPSC becoming two of its three subsidiaries, with the

original holding company, VARIG Brazil, named the third. The group's first charter organization, Rotatur, is incorporated, while the subsidiary carriers **Nordeste (Nordeste Linhas Aereas Regionais, S.A.)** and **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** are granted their independence from VARIG and placed under the control of VPTA.

On July 1, Ozires Silva is elected to succeed Fernando Pinto as CEO. The new leader will not only continue the carrier's restructuring, but launch an expansion program as well. Soon, a second daily São Paulo to Los Angeles roundtrip is started, while thrice-weekly B-767-341ER return service is also inaugurated from São Paulo to Munich.

Arrangements are completed on July 5 for the acquisition of four B-737-4Y0s previously operated by **Transbrasil, S.A. Linhas Aereas**; the premier aircraft enters service during the first week of July.

While en route from Lisbon to Rio de Janeiro on July 10, the captain of a B-767-341ER receives a warning by radio that a bomb is aboard. An emergency landing is made at Gando in the Canary Islands, where all aboard are hastily evacuated. A search reveals no explosives.

On behalf of the national post office, the company, on July 18, inaugurates B-727-41F mail service weekdays from Porto Velho to Salvador via Cuiaba and Brasilia and Tuesday-Saturday mail service from Salvador to Porto Velho via Brasilia and Cuiaba.

The company's last B-747-341C departs Rio on August 18; it has been turned over to **Atlas Air** for operation. Two B-777-2Q8s are leased for 10 years from ILFC on August 25 for delivery in October and November 2001. When they enter service, VARIG will become the first operator of the type in South America.

An ambitious \$100-million, two-year plan is unveiled in August for the creation of Brazil's top-level logistics concern. Under the concept, VARIG Cargo will be shut down as an independent company and replaced with a new VARIG Logistica. A strategic partner will be recruited to assume a 45% equity stake and the new operation will fly 10 cargo planes and operate a fleet of 2,000 ground vehicles.

During the first nine months, domestic boardings ascend to 5.2 million, a 5.8% improvement over the same period a year earlier; international bookings jump 10.8% to 2.9 million. A net loss of R 24.7 million is recorded.

The third of four B-737-4Y0s enters service during the first week of October. On October 9, a lease is signed with Pegasus Aviation for a pair of B-727-200Fs.

Due to an increase in loads, equipment utilized on the São Paulo to Munich service is upgraded on October 13 from B-767-341ER to MD-11.

When the partnership with **Lufthansa Cargo Airlines, A.G.** begins on November 2, the Brazilian carrier is able to increase sales by 40% without any new aircraft, while the German line instantly boosts its business in Brazil. Frequencies between Brazil and Germany grow from five to nine weekly flights, with incoming cargo connections made via VARIG for Bogota, Buenos Aires, and Montevideo.

A B-737-341 that had been out on lease to **Virgin Express, S.A.** is returned on November 10; three days later, it is chartered to **Rio Sul (Servicos Aereos Regionais, S.A.)**.

On November 24, VARIG is awarded 20 new international routes by the Brazilian authority International Air Navigation Studies Committee (CERNAI); many others it had sought are awarded, instead, to **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)**. Among the new opportunities presented by the government for implementation in the spring of 2001 are weekly frequency increases to the U.S. (seven), Germany (two), and Spain (three). It is also given all six available Canadian routes, an unexpected prize.

Also the end of the month, the DAC approves a route swap with **Transbrasil, S.A. Linhas Aereas** under which Transbrasil turns over its twice-weekly roundtrip service to London and VARIG gives up its three weeklies to Lisbon. The move allows Transbrasil to offer daily service from Rio de Janeiro to the Portuguese capital, while VARIG increases its number weekly London services to eleven.

A B-727-200F is added to the cargo operation on December 8.

At the end of the year, the company announces that it will soon raise by 10 (to 75 total) the number of daily air bridge shuttle flights operated between Rio de Janeiro and São Paulo.

Passenger boardings during these 12 months accelerate 8.3% to 10.89 million, while freight traffic jumps 14.3% to 1.23 billion FTKs. The year's loss is R 178.5 million.

VARMLANDSFLYG, A.B.: Box 43, Torsby, S-68521, Sweden; Phone 0560-71515; Fax 0560-13015; <http://www.algonet.se/~ulldani/varmlandsflyg.html>; Code T9; Year Founded 1989. Varmlandsflyg is established at Stockholm in 1989 to provide passenger and cargo charter services to domestic locations. Revenue flights commence with a single Beech 99.

Operations continue apace in 1990-1991 and the fleet is increased by the addition of 1 each Rockwell Commander 690A and 840. Unable to maintain economic viability, the company briefly ceases trading during the recession year of 1992.

Revenue flights are resumed in 1993 with attention paid to scheduled flights to Torsby and Hagfors, as well as charters to other domestic points. There is little change in operations over the next seven years. The most important developments are the creation of a homepage on the Internet's World Wide Web in December 1996 and the introduction to the fleet of a Beech 1900D airliner.

VARNEY AIR LINES: United States (1925-1930). California aerial entrepreneur Walter T. Varney bids on U.S. Post Office Contract Air Mail (CAM) Route No. 5, Elko, Nevada, to Pasco, Washington, via Boise, Idaho, in mid-1925. The only contestant, Varney wins the 460-mile route and establishes Varney Air Lines to operate it. Barbara Wood and Leland S. Prior will later profile the pioneer in their "Walter T. Varney: Air Mail Pioneer, Airline Executive, and Test Pilot" in *American Aviation Historical Society Journal* 31 (Winter 1986): 264-268.

Led by Chief Pilot Leon D. Cuddleback and three of his best pilot-trainees, Varney's company establishes bases, with hangars, at Pasco and Elko in spring 1926. Six Curtiss C-6 engine Swallow A27s and A28s are provided and prepositioned at both locations.

On April 6, scheduled mail services are inaugurated west to east and east to west. Flying the eastbound route, Cuddleback barely makes it over the mountains. Franklin Rose, flying to the west, is not so lucky and crashes at Jordan Valley. He recovers the mail sacks, places them on a train and rides with them the 60 miles to Boise where they are flown on to Pasco. Present day **United Airlines** traces its ancestry back to these first flights.

As additional difficulties ensue, it is determined that the Swallows are underpowered. The Post Office now grants permission for a 60-day stand-down while the biplanes are reequipped with Wright J-4 Whirlwinds. Service is resumed on June 6; however, due to a lack of traffic over the route, profits are low. Varney moves the Nevada terminus to Salt Lake City, located on the transcontinental mail route, in October.

On April 15, 1927, William Sanborn's Curtiss A28 en route to Pasco from Salt Lake City, crashes near King Hill, Idaho; Sanborn is killed. A profit is reported later in the spring and is largely employed to purchase five Stearman C2MB and C3MB Speedmails. On February 7, 1928, pilot George Buck is killed when his Swallow A27, caught in a snow squall, crashes. Despite the loss, business prospers and the company's mail subsidy totals \$400,000.

Harold Buckner's C3MB crashes at Cove, Oregon, on January 18, 1929; although managing to reach a trapper's cabin, Buckner dies of his injuries before help arrives. On March 12, the company is incorporated under Delaware law. Now 100,000 shares can be sold under authorization of the Corporation Commission of California and much of the stock is taken up by the North American Aviation holding company. The Pasco terminus is stretched to Spokane and Seattle along newly won CAM-32 on September 23.

On November 9, Kenneth Neece's C2MB, en route from Seattle to Pasco, spins into the ground in fog near Portland; Neece and 100 pounds of mail survive. En route to Portland from Pasco in thick fog on

November 30, Clarence Price is fatally injured when his C2MB flies into the Interstate Bridge over the Columbia River at Vancouver, Washington. Subsidy for the year totals \$700,000. The influx of capital allows purchase of a Boeing 40B-4, the first of an order for 13.

In January 1930, a Stearman is taken in hand and converted as a blind flying trainer with a covered rear cockpit. United Aircraft and Transport Corporation comes forward in late spring with an offer to purchase the operation. Following the advice of old colleague Louis H. Mueller, whom he had had the foresight to appoint company president, Varney allows United to be counterbid by North American. After the boardroom maneuvers, the company is sold to for \$2 million on June 30. It is operated thereafter as a division of United. On September 30, 1933, VAL is absorbed into **Boeing Air Transport (BAT)** and disappears.

VARNEY AIR TRANSPORT: United States (1934–1937). With airline entrepreneur Walter Varney's Mexican airline **LAO (Lineas Aereas Occidentales, S.A.)** just starting, Varney and his former **Varney Air Lines** President Louis H. Mueller form another Varney Speed Lines System subsidiary, Varney Speed Lines (Southwest Division), at Burbank in late April 1934. The new concern is founded after Varney wins AM-29 (once part of **Western Air Express**' AM-12), one of the airmail contracts relet by the Roosevelt administration in the wake of the "Airmail Scandal." Varney and Mueller appoint Avery J. Black, one of four pilots hired (Jess E. Hart, John Montijo, and Earl Campbell are the others), as general manager. An accountant, traffic manager, and secretary complete the staff.

Company headquarters are moved to Denver and three Lockheed Model 5 Vegas are acquired. After being sworn in early on July 15 by El Paso Postmaster M. L. Burleson, Jess E. Hart takes off in his Lockheed Vega with 100 letters to begin passenger, mail, and air-express operations over the 520-mile route between El Paso and Denver via Albuquerque and Pueblo.

No passengers are flown on inauguration day, but 9 are transported during the first 15 days. Corporate headquarters are again transferred, on September 1, down to El Paso. A new logo and the marketing slogan "Trail of the Conquistadores" is introduced. On December 17, the division is rechristened Varney Air Transport.

Services are maintained in 1935, even though the Mexican contract is lost in February and the fleet now comprises 9 Lockheed Model 5 Vegas. While attempting to drop letters to schoolchildren near Walsenburg, Colorado, on May 1, a Lockheed Vega mailplane crashes (one dead). Service is launched to Trinidad, Colorado, during the summer.

On July 5, 1936, Robert Six joins the company, purchasing a 40% interest for \$90,000. Six's investment constitutes a loan from his father-in-law William Erhart, chairman of the Charles Pfizer pharmaceutical company, and is mostly used to pay the Varney company's debts. A little later in the year, Walter Varney leaves the company to Mueller and Six and retires to Cruz Roja to run a mining company. Raton, New Mexico, now joins the route network. En route from Trinidad to Pueblo, Colorado, a Lockheed Model 5 Vega crashes into Rattlesnake Butte, near Walsenburg, on September 28 (three dead).

On April 27, 1937, while taxing for an El Paso takeoff, a Lockheed DL-1B is flipped onto its back by a wind gust and destroyed; the pilot is not hurt. A small expansion is completed on May 14 through Six's insistence on the purchase of the Denver–Pueblo mail route previously flown by **Wyoming Air Service**. Denver to El Paso through-service is started via Colorado Springs; stops at Trinidad and Las Vegas are withdrawn.

A Model 5 Vegas is destroyed as the result of a noninjurious crash landing at El Paso on May 15 and Robert Six becomes executive vice president on June 1. To become compliant with a new federal law concerning flight equipment standards, Mueller and Six now mortgage their homes to raise a \$15,000 down payment on three Lockheed Model 12 "Baby Electras." The carrier's first twin-engine aircraft arrive late in the month.

The new airliners are introduced into service on July 1. Simultaneously, a new marketing slogan "Fly the Old Santa Fe Trail" is unveiled

and, more importantly, at Six's insistence VAT is renamed **Continental Air Lines (2)**.

VARNEY SPEED LANES. See **VARNEY SPEED LINES SYSTEM (VARNEY SPEED LINES AIR SERVICE, LTD.)**

VARNEY SPEED LINES SYSTEM (LINEAS AEREAS OCCIDENTALES, S.A.-L.A.O.). See **LAO (LINEAS AEREAS OCCIDENTALES, S.A.)**

VARNEY SPEED LINES SYSTEM (VARNEY AIR FERRIES). See **AIR FERRIES**

VARNEY SPEED LINES SYSTEM (VARNEY SPEED LINES AIR SERVICE, LTD.): United States (1931–1933). After running an unnamed Oakland–Sacramento–Marysville Stinson passenger service in 1930, Walter Varney joins with former **Varney Air Lines** pilot Franklin Rose in mid-1931 to establish Varney Speed Lines Air Service, Ltd. With \$100,000 of Varney money, Rose purchases six Lockheed Model 9 Orions for the new entrant, some of which have the words "Varney Speed Lanes" added as part of their livery.

The fast aircraft are employed to inaugurate four scheduled daily passenger and air-express flights from San Francisco (Alameda) to Los Angeles (Glendale) on October 15. Advertising his 1 hr. 58 min. frequencies as the fastest in the world, Varney offers passengers a maximum \$5 refund (\$18.95 one way/\$34.11 roundtrip) should the flight be late.

Varney's popular service, which retains the Sacramento spur, becomes very popular and attracts an "in" crowd of Hollywood stars; Varney uses the public relations generated from the booking of such celebrities as Mary Pickford, Douglas Fairbanks, Maurice Chevalier, and Joe E. Brown to promote his service.

In March 1932, Varney purchases Vern Gorst's **Air Ferries**, then providing Keystone-Loening Air Yacht hourly flights from Alameda across San Francisco Bay to Oakland. The Air Yachts are replaced with three Sikorsky S-39s. Simultaneously, frequencies on the Orion service up and down the state corridor is advanced to four per day, with flights to the state capital advanced to six times per day. Just as the company appears to be heading for success, disaster strikes.

En route to San Francisco from Los Angeles on March 25–26, the Orion *East Wind*, piloted by Noel B. Evans with two passengers aboard, is caught in a severe thunderstorm over Hayward. Hurlled out of the clouds, the plane hits two houses, starting fires. All aboard the aircraft and 11 on the ground are killed.

In August, pilot V. Hoganson, flying an Orion with six passengers and aided by a strong tailwind, completes the San Francisco–Sacramento run in 17 minutes, averaging 249 mph, which is faster than the speed of any Army Air Corps pursuit plane. Still, adverse publicity growing out of the March crash and legal claims beset the carrier.

Varney's second airline first ceases operations to Sacramento and then closes its doors forever on August 15, 1933.

VARNEY SPEED LINES SYSTEM (VARNEY SPEED LINES AIR SERVICE (SOUTHWEST DIVISION). See **VARNEY AIR TRANSPORT**

VARSA, S.A. de C.V.: Mexico (1992–1993). VARSA is established at Mexico City in spring 1992 to offer ad hoc passenger charter flights to domestic holiday destinations. Revenue operations commence with a single Boeing 737-244 first delivered years earlier to **South African Airways (Pty.), Ltd.**; however, like most privately owned carriers, the company chooses not to reveal either traffic or financial data. Flights cease within a year.

VASD (VIACAO AEREA SANTOS DUMONT, S.A.): Brazil (1944–1952). Capitalized at 30 million cruzeiros, VASD is formed at

Rio de Janeiro on January 18, 1944; shareholding is held by 7,000 local investors who have responded to a public subscription. An initial fleet comprising 2 Consolidated PB5-5 Catalinas and 1 Budd Conestoga is purchased from Belem's Rubber Development Corporation and is employed on proving flights during the remainder of the year.

Regularly scheduled services are launched in early 1945 when the Budd begins flying southward to Porto Alegre from Rio de Janeiro while, from that city, the flying boats hop up the coast to Fortaleza. An operating concession is awarded to the carrier on December 17; however, by that time, the company is in serious financial difficulty. The board of directors abruptly resigns on December 29.

Without a corporate board, the company's officers carry on. The Budd is damaged in a January 4, 1946 landing accident and within days, the Catalinas are both grounded. Following a period of inactivity, VASD, in March 1947, enters into a joint arrangement with another new entrant, **LATB (Linha Aerea Transcontinental Brasileira, S.A.)**.

The latter's president, Col. Dulcilio Espirito Santo Cardoso, is named CEO on October 23 for both carriers, which, while retaining their separate identities, also share technical and other resources. Equipped with Douglas DC-3s, VASD resumes its coastal route late in the year, maintaining it with little change.

When LATB is sold to **REAL, S.A.** in August 1951, VASA retains its autonomy for an additional year. Without its stronger partner, the company is, however, unable to survive on its own and in April 1952 it is taken over by **TAN (Transportes Aereos Nacional, S.A.)**.

VASP BRASILIAN AIRLINES (VIACAO AEREA DE SAO PAULO, S.A.): *Praca Cmte. Lineu Gomes S/No, Aeroporto de Congonhas, São Paulo, SP 0426-910, Brazil; Phone 55 (11) 531-1949; Fax 55 (11) 543-7227; <http://www.vasp.com.br>; Code VP; Year Founded 1933.* With 75% capitalization from the State and City of São Paulo plus the Municipal Bank, VASP is formed on November 4, 1933. Two three-seater Monospar ST-4 Mk. II monoplanes, imported from Great Britain, arrive on November 12 and are christened *VASP 2/Edu Chaves* and *VASP 1/Bartholomeu de Gusmao*. At year's end, orders are placed for two Junkers Ju-52/3ms and a de Havilland DH 84 Dragon II.

Operating authority is received from the government on March 31, 1934. On April 16, the Monospars inaugurate scheduled passenger and mail flights over routes São Paulo–Uberaba via Riberirao Preto and São Paulo–Rio Preto. Service over the first route is curtailed during the summer as the airfield at Riberirao Preto fails.

The six-seater DH 84 arrives at São Paulo in late October; the largest landplane then in Brazil, it is christened *VASP 3* and is employed to launch São Paulo–Rio de Janeiro mail flights on November 1.

A flood at Camp de Marte airfield interrupts operations in 1935. A new up-to-date facility is now constructed at Congolias, to which the carrier shifts its headquarters and flight activities.

The two Ju-52/3ms ordered in 1933 are delivered in July 1936. Christened *Cidade de Sao Paulo* and *Cidade de Rio de Janeiro*, they are placed in service on August 5 on a regional, six-times-per-week passenger route from São Paulo to Rio de Janeiro. Both aircraft are damaged on the route's opening day and cannot resume operations until November 30, at which time the state government institutes an annual subsidy for maintenance of the service.

In July 1937, the São Paulo–Rio de Janeiro frequency is increased to twice daily. A third Ju-52/3m is now ordered. Delivered in September, it is named *Cidade de Santos* and is placed in service, allowing retirement of the two Monospar ST-4s.

A subsidy contract is signed with the Ministry of Transport and Public Works on April 4, 1938 for the inauguration of a route from Uberaba to Goiania via Araguari, Ipameri, Pires do Rio, and Anapolis. DH 84 service is started over the new line on August 1. Within weeks, the government, questioning the carrier's standards, suspends the airline's certificate for the route until December 31, 1939.

The Uberaba–Goiania route suspension is postponed by the government on March 6, 1939 as the standard question is studied. On October

14, a new government decree establishes a method whereby the carrier can regain the Goiania contract, the principal provision being the start of service from São Paulo and the use of radio-equipped Junkers trimotors.

On October 28, the small carrier **Aerolloyd Iguassu, S.A.** is purchased and as a result, additional Ju-52/3ms are received. The merged carrier's São Paulo–Florianopolis via Curitiba route is started on November 30. On December 21, a subsidized contract is reissued by the government for the suspended Goiania operation.

Ju-52/3m flights to Goiania commence on January 2, 1940. The fleet now includes 4 German-made trimotors and a Dragon II and service on the São Paulo–Rio de Janeiro run becomes thrice daily. On November 8, a Ju-52/3m collides with an Argentine DH-90 over Botafogo Bay; all aboard both planes are killed. The Florianopolis route is extended to Porto Alegre on November 28. In terms of passenger kilometers flown, VASP now ranks as the fifth largest in Latin America.

Two additional Ju-52/3ms join the fleet during the summer of 1941. Due to difficulties in obtaining spare parts from the Third Reich and other problems, service south of São Paulo must be suspended until late in the year.

The fleet grows to six Ju-52/3ms in 1942–1945, including one each acquired from Colombian Petroleum and **LAB (Lloyd Aero Boliviano, S.A.)**. Services north of São Paulo are maintained, but just barely. Orders are placed for Douglas DC-3s following VJ-Day.

The first DC-3s (converted to civil standard from ex-military C-47s) are received in January 1946. During the year, frequencies are undertaken to Presidente Prudente and Tupa. The DC-3 fleet grows to 16 in 1947–1948 as the Junkers trimotors are retired. Service is introduced to Londrina and Maringa.

On February 17, 1949, the State of São Paulo purchases **Aerovias Brazil, S.A.** On September 29, that carrier is reorganized and the Municipal Bank of São Paulo takes control, vesting operational responsibility for the airline with VASP.

A DC-3 must be written off following a hard landing at São Paulo on May 26, 1950; there are no fatalities.

The first two aircraft of a former **Aerovias Brazil, S.A.** order for six SAAB 90 Scandias arrives in Rio de Janeiro on August 11. They enter service later in the month and are transferred to VASP on December 21.

Meanwhile, a DC-3 crashes into houses at Riberirao Preto, Brazil, on December 14; one person aboard the aircraft is killed, as are three people on the ground.

In 1951, capitalization for the São Paulo-based carrier is increased to 100 million cruzeiros. Ownership is divided between the State of São Paulo (34.2%), the City of São Paulo (33.2%), the Municipal Bank of São Paulo (8.4%), and private interests (24.1%). The fleet is increased through the addition of 1 more Scandia, for a total of 3 and 9 DC-3s for a total of 25.

In bad weather, a DC-3 with three crew and six passengers, strikes high ground at Rancharia, Brazil, on May 18; there are no survivors.

Tragedy strikes again on September 8 when a DC-3 with four crew and nine passengers fails its takeoff from São Paulo and crashes into a house; there are no survivors of the aircraft and three people are killed on the ground.

Flights continue in 1952 and again there is tragedy.

On May 13, the pilot of a DC-3 with 2 other crewmen and 19 passengers, loses control of his aircraft after it has suffered engine failure. The plane crashes at São Paulo (5 dead).

São Paulo–Rio de Janeiro service is increased to 15 times per day in 1953.

In the late spring of 1955, flights are started to Curitiba. On July 28, four more Scandias are delivered; they enter service in August. Frequencies are initiated to Camp Grande, Cuiaba, and Belo Horizonte in 1956. **Aerovias Brasil, S.A.** is sold to the consortium led by **REAL, S.A.** On October 20, an agreement is signed with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** for the coordination of domestic traffic and sales and for training and maintenance facilities.

On May 10, **1957**, orders are placed for five Vickers Viscount 827s. During the summer, service is inaugurated to Brasilia and Natal. Late in the year, the entire **SAS (Scandinavian Airlines System)** Scandia fleet of eight aircraft is purchased.

The SAS Scandias are delivered in **1958** and enter service. VASP becomes the world's largest—and only—operator of the type. The first Viscount 827 is delivered on October 28 and begins revenue flight operations on November 3.

A SAAB Scania 90A-2, with 4 crew and 33 passengers, is lost at Guanabara Bay, Brazil, on December 30 (21 dead).

On July 6, **1959**, a pool agreement is signed with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** and **Cruzeiro do Sul, S.A.** for joint operations on the Rio de Janeiro–São Paulo route. VASP now dedicates 15 of its Scandias to the task of helping to maintain the world's first nonreservation airbus (or shuttle) service, the Ponte Aerea ("Air Bridge").

A SAAB Scania 90A-2 with 4 crew and 16 passengers is lost at São Paulo on September 23; there are no survivors.

Just after takeoff from Rio de Janeiro on December 22, a Vickers Viscount 827 with 6 crew and 26 passengers is hit in midair by a Brazilian Air Force AT-6 Harvard trainer; the military pilot is able to parachute to safety as both aircraft crash into a residential area. All of those aboard the Viscount and 10 people on the ground are killed.

The carrier's fleet in **1960** totals 4 Viscount 827s, 18 Scandias, and 28 DC-3s. Service is started to Belem in June, both with DC-3 multistop frequency and with Viscount 827 direct flights, from Rio de Janeiro and São Paulo via Basilia, the capital providing a connection on to Fortaleza. In terms of passenger kilometers flown, VASP is now the 11th largest carrier in Latin America.

A SAAB Scandia 90A-2 must be written off following a bad landing at São Paulo, Brazil, on August 15.

On August 7, **1961**, two multistop DC-3 routes are acquired from **Cruzeiro do Sul, S.A.**; Goiania–Belem via Tocantins and Goiania–Belem via Araguaia.

Loide Aereo Nacional, S.A. is purchased for VASP by the State of São Paulo on January 7, **1962**, the merger partner's routes and usable aircraft being integrated by the time federal government approval is received on April 4. Meanwhile, a DC-3 once flown by **Pacific Southwest Airlines** in California is lost in a March 3 crash. Also, joint shuttle service is started on March 12 over three new Ponte Aereas routes: Rio de Janeiro–Belo Horizonte and Brasilia and Belo Horizonte–Brasilia.

The fleet now comprises 33 DC-3s, 8 DC-4s, 6 DC-6s, 22 Curtiss C-46s, 5 Viscount 827s, and 15 Scandias. Service is started later in the year from Cuiaba–Rio Branco via Vilhena, Guajara Mirim, and Porto Velho.

On November 26, a SAAB Scandia 90A-2 with 5 crew and 18 passengers en route from São Paulo to Rio de Janeiro, collides with a Cessna 310 with 4 passengers at 2,400 m. above Paraibuna, Brazil; there are no survivors.

The first Viscount 701s enter service in **1963**. Obtained from **British European Airways Corporation (BEA)**, their number will eventually reach seven.

Retirement of the piston-engine Scandias and other inherited aircraft proceeds apace in **1964**. Several of the withdrawals are due to accidents.

A SAAB Scandia 90A-2 is lost under unknown circumstances at Londrina, Brazil, on March 8, while a DC-3 with three crew is lost at Rodovia during a training flight on May 27; there are no survivors. A C-46A freighter crashes 200 mi. S of Belem on August 16 (one dead).

On September 4, while on a domestic service, a Vickers Viscount 701C with 5 crew and 34 passengers crashes in a rainstorm into Nova Caledonia Mountain near Pico da Caledonia, 60 mi. NE of Rio de Janeiro; there are no survivors.

A DC-3 is damaged in a hangar fire at São Paulo on November 26; it, too, will be withdrawn.

A proposed **1965** merger with financially distressed **Panair do Brazil, S.A.** is not consummated. A Vickers Viscount 701C with four

crew is destroyed at Rio de Janeiro on March 3 as the result of a bad landing; there are no fatalities.

On April 21, orders are placed for 10 Handley Page Heralds, but these will not be delivered.

A Curtiss C-46A with 3 crew and 51 passengers is destroyed as the result of a bad landing at San Salvador, Brazil, on December 19; there are no fatalities.

Having flown 15,683 hours, the last Scandia is retired in July **1966**. A Vickers Viscount 701 is destroyed at Rio de Janeiro on October 31 as the result of a bad landing; there are no fatalities.

On June 22, **1967**, a £3-million order is placed for two BAC 1-11-422s, which are delivered on December 19. Meanwhile, a leased de Havilland Canada DHC-6-100 Twin Otter is also received.

VASP inaugurates jetliner service with the BAC 1-11-422s on January 8, **1968**. Daily, one BAC flies roundtrip from São Paulo to Manaus via Rio de Janeiro and Belem. The other operates a daily roundtrip from Porto Alegre to Fortaleza via Rio, São Paulo, Salvador, and Recife.

Orders are placed in February for six Nihon YS-11As followed by a request to Boeing in March for five B-727-200s, later changed to five B-737-200s.

While taking off on a training flight from São Paulo on September 15, a Vickers Viscount 827 with two crew fails its climb away and crashes 7,450 m. beyond the end of the runway; both aboard are killed, along with one person on the ground.

A leased Beech 99 joins the fleet and the Japanese-made turboprops arrive later in the year.

A DC-3 is lost at Loanda, Brazil, on January 11, **1969**; there are no details on casualties.

The first of four B-737-2A1s is received on July 25 and enters service in early September. A DC-3 with 20 aboard fails takeoff and crashes at Londrina on September 14; there are no survivors. By year's end, the last Viscount 701 has been withdrawn, replaced by the Nihons.

The workforce totals 3,837 and enplanements are 635,046.

Airline employment grows 8.86% in **1970** to 4,210. The fleet now includes 25 aircraft: 5 B-737-2A1s, 2 BAC 1-11-422s, 6 YS-11As, 4 Viscount 827s, and 8 DC-3s.

A DC-4 is lost at Rio de Janeiro on April 2 under unknown circumstances.

En route from Brasilia to Manaus on April 25, a B-737-2A1 with 30 passengers is captured by a hijacker, who orders it flown to Cuba. While the trijet is stopped at Guyana for refueling, the pirate allows the passengers to deplane.

On May 14, a B-737-2A1 with 48 passengers en route from Brasilia to Manaus is taken over by an armed gunman who order it to fly, via two refueling points, to Havana.

Having to feather a prop 50 minutes into a September 14 flight from Londrina, a DC-3 with 6 crew and 14 passengers elects to return to its point of origin and crashes during a go-around from a missed landing on Runway 12; there are no survivors.

Passenger boardings jump 22.2% to 816,255, and freight traffic rises 28.1%.

Enplanements in **1971** are up to 1,669,986, surpassing the million mark in annual boardings for the first time. Four DC-6A freighters and a sixth B-737-2A1 are added.

Airline employment in **1972** is 4,185. Two YS-11As are retired during the year and three more B-737-2A1s are ordered, along with eight Embraer EMB-110Cs, the first of which enters service over the southern domestic routes on November 4.

Passenger bookings and walk-ons climb 17.8% to 1,630,000 and cargo is also up.

The employee population totals 5,366 in **1973**. The fleet is enhanced by the delivery of three B-737-2A1s as orders are placed for four more. Four additional EMB-110Cs enter service. One Viscount 827, one YS-11A, and three DC-3s are withdrawn.

A DC-3 is damaged beyond repair as the result of a bad landing at Rondonopolis, Brazil, on January 29; there are no fatalities.

While on descent to Rio de Janeiro on April 12, the YS-11A with 4 crew and 21 passengers mysteriously crashes 50 km. N of the runway; there are no survivors.

A Vickers Viscount 827 veers off the left side of the runway just after landing in heavy rain at Salvador, Brazil, on May 15 and its landing gear collapses; there are no fatalities.

A YS-11A with 5 crew and 60 passengers loses power shortly after its October 21 takeoff on the first leg of a service to Belo Horizonte and crashes into Guanabara Bay at Rio de Janeiro (five dead). Among the injured are Indiana Lt. Gov. Robert Orr and 11 members of an Indiana trade delegation.

Boardings increase 30% to 1,342,374 and cargo traffic jumps 28.3%.

Airline employment in 1974 is up to 5,717. The new automated reservations system C-PARS starts operation. Both BAC 1-11-422s, one Viscount 827, one YS-11A, and all five remaining DC-3s are sold as four additional B-737-2A1s and five EMB-110Cs join the fleet. Passenger traffic swells 27.4% as 1,849,157 passengers are carried; freight accelerates by 24.5%.

The employee population is reduced to 5,505 in 1975. Joel Siquiera Jr., is shot dead by Brazilian police after commandeering a B-737-2A1 with 80 passengers during a January 15 stopover in Goiania while en route from São Paulo to Brasília. At Goiania, Siquiera had demanded a \$1.3-million ransom and the release of political prisoners.

An EMB-110C with 2 crew and 13 passengers crashes just after takeoff from São Paulo on February 27; there are no survivors.

On March 1, the federal government decrees that all twin-engine types be withdrawn from the Ponte Aerea. Under the existing pool agreement, VASP now assumes its responsibilities with leased **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** Lockheed L-188s and receives 22% of all shuttle service revenues. The company fleet now comprises 20 B-737-2A1s, 9 EMB-110Cs, 2 Viscount 827s, and 2 YS-11As.

Passenger boardings soar 11.5% to 2,061,644 and freight climbs by 10%.

The workforce in 1976 reaches 6,619. In response to the federal government's regional airline scheme, VASP and **Taxi Aereo Marilia, S.A.** in May establish **TAM (Transportes Aereos Regionais, S.A.)**, which begins operations on July 12. Meanwhile, orders are placed for two B-727-200s. The last remaining Viscount 827s are retired and the Bandeirantes are transferred to TAM as three additional B-737-2A1s are received. VASP is now the largest operator of the short-haul Boeing in Latin America.

Passenger boardings swell 19% to 2,387,404 and freight skyrockets 52%.

The two B-727-2A1s are placed in service early in 1977 and six more are ordered. In midyear, two B-737-2A1s are traded back to their manufacturer for two B-737-100C freighters.

Enplanements are up to 2,698,756.

The workforce is reduced 16.4% in 1978 to 4,586. Unduplicated route mileage is now 36,733.

A B-737-2A1 with 7 crew and 37 passengers is destroyed as the result of a belly landing and subsequent fire at São Paulo on April 2; there are no fatalities.

Passenger boardings accelerate 11.4% to 3,045,584 and cargo zooms upward by 70.5% following acquisition of the B-737-100Cs. Orders are placed for a B-727-2A1C. Revenues are \$209.1 million and expenses \$161 million, producing an operating profit of \$48.2 million—up an incredible 367.8% over 1977.

The fleet in 1979 comprises 8 B-727-2A1s, 19 B-737-2A1s, 1 B-727-100C, and 2 B-737-100Cs.

Bookings and walk-ons are up to 3,223,500 and a \$2.3-million profit is realized.

The workforce is increased by 19.2% to 5,468 in 1980. Passenger boardings climb 7.9% to 3.5 million and freight grows 2.9%. Revenues are up 26.6% to \$206 million, but expenses, led by increased fuel prices, jump 29.5% to \$200 million, forcing profits down to \$21.5 million. In

terms of passenger kilometers flown, VASP now ranks as the sixth largest airline in Latin America.

The employee population plunges 16.2% in 1981 to 4,583. Orders are placed for three Airbus Industrie A300B4-203s, the first of which arrives at São Paulo on September 26. During the year, one B-737-2A1 is sold and another B-737-100C is added.

Passenger enplanements accelerate 7.4% to 3.8 million, and freight increases by 5.8% to 349.6 million FTKs.

The workforce in 1982 totals 9,064.

A B-737-2A1 with 6 crew and 112 passengers is destroyed as the result of a hard landing in rain at Brasília on May 25 (2 dead).

While on initial approach to Sierra de Pacatuba on the night of June 8, Flight 168, a B-727-212 with 9 crew and 128 passengers, crashes into a wooded mountainside at 2,500 ft.; there are no survivors.

Orders are placed for nine A310-200s and two additional A300B4-203s enter service on November 5. Passenger boardings grow 4.7% to 3,980,029 and freight soars 21.8% to 425.64 million FTKs.

Airline employment is increased 2.5% in 1983 to 9,287. The A310 order is cancelled and two B-727-264s are leased from **Mexicana Airlines, S.A. de C.V.** Early in the year, the Brazilian cruzeiro is devalued by 40%. A month later, with the debt inflated to \$500 million, São Paulo State Governor Franco Montoro appoints jurist Prof. Antonio Angarita Silva as VASP chairman, ordering him to find a way to cure the carrier's ruined finances through a complete reorganization.

While on takeoff from Manaus for a February 22 training flight, a B-737-2A1C with two crew aboard fails takeoff, rolls over, and bursts into flames; there are no survivors.

Enplanements for the year fall 2.9% to 3,864,746 and cargo dips 6.5% to 398.13 million FTKs.

The employee population is cut by 1,300 in 1984, down 14% as a major reorganization program gets underway. Many sales offices are closed and two B-727-264s leased from **Mexicana Airlines, S.A. de C.V.** are returned. A total of 50 charter flights are made to Aruba, Orlando, Curaçao, and Bariloche, Argentina.

Scheduled Passenger boardings fall significantly, to 2,333,760 as the market share decreases to 35%. As a result of cost savings, a \$4.77-million operating profit and an \$8.73 million net profit are earned.

The employee population in 1985 stands at 8,327 and the unduplicated mileage in the route system totals 48,452. Charter flights double with 20,000 bookings. Cargo services are started to Florida, in connection with **Delta Air Lines**. The State of São Paulo invests \$4.5 million, bringing to \$10 million the amount injected since 1983 to help cover financial losses as the carrier's debt shrinks to \$310 million.

Although the market share falls to 32.4%, passenger boardings are up 4.1% to 3.57 million and freight advances 9.9% to 109.57 million FTKs. Revenues dip 2.1% to \$185.4 million and expenses fall 2.3% to \$174.5 million. The operating profit skyrockets 454% to \$21.7 million, but the net income dips 13% to \$7.7 million.

In dense fog, a B-737-2A1 with 5 crew and 67 passengers mistakenly attempts to take off from a taxiway at São Paulo on January 28, 1986; although the departure is aborted when the error is perceived, the plane overruns, collides with a dyke, and breaks into two parts (one dead).

Three B-737-33As are chartered in April, May, and June at \$275,000 apiece per month from the Irish leasing company Guinness Peat. As a result of the reestablishment of diplomatic relations between Brazil and Cuba during the latter month, plans are made to begin nonscheduled service to Havana. VASP becomes the first Latin American airline to operate the type.

By December, the fleet has been enhanced by the acquisition of six B-737-317s and a B-727-2L9A in exchanged for a single withdrawn B-737-2A1.

Customer bookings ascend 21.7% to 4,343,756, but cargo dips 2.6% to 106.49 million FTKs.

Airline employment dips 7.5% in 1987 to 7,746. Weekly charter flights are initiated to Havana in December, in the first Brazilian service to Cuba since 1959.

Passenger boardings rise 9.5% to \$4,757,242, but freight is off a slight 0.4% to 459.4 million FTKs. Expenses exceed income, producing losses of \$10.8 million (operating) and \$103.9 million (net).

The workforce grows by 7.2% in 1988 to 8,300 and the fleet now includes 3 A300B4-203s, 2 B-727-2L9As, 22 B-737-2A1s, and 3 B-737-317s. A total of 18 charter flights to Havana are completed by March, at which time the service ends. Plans are now made for privatization during the following year. In August, it is reported that 3 of 12 B-737-2A1s have been found with the same metal fatigue difficulties encountered by Aloha Airlines in April. The 3 aircraft, each a decade old, are put through a \$280,000, 35-day repair program.

At Goiania's Santa Genoveva Airport on September 29, a gunfight breaks out between a hijacker and the crew aboard Flight 375, a B-737-2A1 which, together with its 105 passengers and crew, has been diverted from its Porto Velho to Rio de Janeiro service by a mentally deficient assailant. The copilot and three other crewmembers are shot before the pirate is wounded and captured by police. Originally hoping to be able to crash into a government building in Brasilia, the misguided man will die in hospital two days later.

Customer bookings fall 9.1% to 4,323,890 and cargo declines 11.9% to 76.8 million FTKs. The airline suffers a \$35-million operating loss, bringing the cumulative total for the past two years to \$46 million.

Company employment is cut 3% in 1989 to 8,051 as VASP begins service to Aruba, the carrier's first international destination. When flights begin in January, the carrier is required to surrender its charter rights between Brazil and the U.S. Plans are now made for privatization as Price Waterhouse conducts a financial and economical evaluation of the carrier's worth. During February and March, in an effort to become more attractive to investors, the airline sells its remaining four B-727-2A1s and cuts those 99 weekly flights that have load factors lower than 35%.

The carrier signs an agreement with **Transbrasil, S.A. (Linhas Aereas Transbrasil)** in April for joint operations over the Rio de Janeiro-São Paulo air bridge. Five B-737-317s begin the service the same month. Employing a B-737-3Y0, the company in June begins its first ever international scheduled service, a weekly frequency from São Paulo to Aruba via Manaus. During the fall, a privatization bill, or "Project of Law," is sent by the State of São Paulo, the airline's owner, to the national legislature. VASP begins a struggle with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** designed to cause the senior international carrier to surrender the Buenos Aires landing rights held by its subsidiary, **Cruzeiro do Sul, S.A.**

Meanwhile, in October, the regional carrier **TAM (Transportes Aereos Regionais, S.A.)** inaugurates its own competing shuttle service over the Rio-São Paulo air bridge route. President Marcelo Antinori announces in November that an agency of the World Bank has agreed to assist the carrier in renegotiating its \$570-million debt with creditors, including the refinancing of \$251 million in short- and medium-term debt into long-term debt. In December, the regional **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** also enters the air bridge shuttle competition, flying Embraer EMB-120 Brasílias. The "Project of Law" privatization bill is approved by the São Paulo state legislature.

Passenger boardings recover nicely in these 12 months, moving ahead by 16.1% to 5,018,435. Freight skyrockets 65.3% to 113.74 million FTKs. The airline's debt now stands at \$250 million domestic and \$320 foreign.

Airline employment grows to 8,584 in 1990. In January, two auditing firms finish their analysis of the carrier's asset value, the first step prior to the letting of bids for up to 60% private investment. At the same time, the national government rejects the carrier's application for service into Buenos Aires. Privatization is officially announced at the end of March, with bidders required to submit proposals by May 31. A total of 64 offers are initially made and on June 15 the prequalified contenders are announced; however, requirements of airline debt serving will force all but one to withdraw.

A B-737-205 is purchased from **Transwede Airways, A.B.** The company begins negotiations to take over 50% control of **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**. Bids for the company's

privatization are closed in July and the winner is announced on August 31. Aeropart, a consortium made up of Voe, a company owned by 3,500 of the airline's 7,200 employees, and the Brazilian surface transport group named for its founder, Wagner Canhedo, acquire 60% shareholding for \$43.7 million. Shareholding is divided 12% and 48%, respectively, with the Voe portion actually financed by Canhedo via a 10-year, 6% loan. The winning bid is predicated upon Aeropart's willingness to extend the repayment of \$276 million owed to the Banco do Brasil and the ability to swap an additional \$350 million in debt.

The State of São Paulo turns over control of the carrier to the new major shareholder on September 15. Two months later, in December, the Brazilian DOJ is called upon to investigate charges of favoritism and undue intervention in the privatization process by President Fernando Collor de Mello's administration.

The specific charges revolve around the airline's ability, shortly after completion of privatization, to renegotiate the repayment schedule on \$276 million in debt on terms generally available only to state-owned companies. There is also an allegation that government officials have attempted to pressure the state-owned oil supplier Petrobras into giving the airline a low-interest, 10-year, \$40 million loan in return for a monopoly on supplying the carrier's fuel. The charges are later dropped.

The previous year's big traffic boost fizzles as customer bookings decline 6.9% to 4,669,712 and cargo drops 15% to 96.68 million FTKs.

The payroll is cut by 8% in 1991 to 7,900 and the fleet now includes 49 aircraft. In March, a joint venture agreement is signed with **PLUNA (Lineas Aereas Uruguayas, S.A.)** under which the Brazilian carrier will operate a pair of leased DC-10-30s for it from Montevideo to Miami and Madrid. At the same time, a commercial agreement is signed with **TAP-Air Portugal, S.A.** with the latter now selling the company's tickets in Europe. Discussions are held with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** aimed at the eventual establishment of joint operations on Canadian and European routes.

Joint B-737-2A1 service begins with **Transbrasil, S.A. (Linhas Aereas Transbrasil)** over the Rio de Janeiro-São Paulo air bridge in April. The carrier joins with the Banco Latino to make an offer in May for the 60% of **VIASA (Venezuela International Airlines, S.A.)** on the market.

While on initial approach to Cruzeiro do Sul on June 22 on a freight service from Rio Branco, a B-737-2A1C with two crew and one passenger reports an in-flight fire and then crashes into the jungle 15 km. from the runway; there are no survivors. Union officials charge the airline with faulty maintenance in connection with the accident.

Good feelings toward its new Transbrasil partner largely evaporate under deregulation in June as the two engage in intense fare wars over other routes.

Transbrasil, S.A. (Linhas Aereas Transbrasil) files a complaint with DAC, the national air transport body, claiming "predatory competition" on the part of VASP, which aggressively markets its product under a variety of promotional fares. Acting in its capacity of air transport regulator, DAC rules in July that VASP is not guilty of the Transbrasil assertion; the vindication further accelerates domestic airline deregulation. Late in the month, two DC-10-30s are acquired from Potomac Capital Leasing and begin charter flights to Orlando.

The bid for **VIASA (Venezuela International Airlines, S.A.)** is rejected by the Venezuelan government in August because VASP has not posted the \$1 billion in annual revenues the previous three years required of all bidders.

Traffic statistics are provided only through September, but these show passenger boardings up 13.2% to 3,884,671. Freight traffic during the same period increases 58% to 96.81 million FTKs.

The two chartered DC-10-30s commence regularly scheduled services in October from Brazil to Los Angeles and San Francisco; these are the first scheduled sectors to the U.S. By month's end, the company has invested a total of \$300 million in expansion since its privatization. DC-10-30 service to Miami begins in November. Simultaneously, a cooperative feed agreement is signed with **AeroPeru (Empresa de Trans-**

portes Aereos de Peru, S.A.) and with **All Nippon Airways Company, Ltd. (ANA)** to feed passengers on from California to Japan.

The workforce climbs another 19% in **1992** to 9,400 and the fleet now includes 3 A300B2s, 3 Boeing 737-2A1s, 4 B-737-214s, 7 owned and 1 leased B-737-2A1As, 3 B-737-205s leased from **Braathens SAFE, A.S.**, 1 each B-737-2A1AF and B-737-2H4C, 3 leased Douglas DC-10-30s, and 2 chartered McDonnell Douglas MD-11s.

In April, a major technical and operating agreement is signed with **Transbrasil, S.A. (Linhas Aereas Transbrasil)**. Under its terms, a variety of future operational activities are considered, joint fares are introduced and a maintenance spare parts pool is established.

To take advantage of heavier traffic, one of the MD-11s is assigned during June to replace the B-767-3Q4ER of **Transbrasil, S.A. (Linhas Aereas Transbrasil)** on certain of its frequencies from São Paulo to Miami and Orlando.

The service highlight of the year is establishment of a link on July 17 between São Paulo and Seoul, South Korea. VASP is the first South American carrier to establish direct service to Seoul and the new route is designed to connect the 50,000-strong Korean population in São Paulo with relatives in Asia. In September, the company enters into a block-seat, code-sharing agreement with **El Al Israel Airlines, Ltd.** for flights between Brazil and Israel.

Majority shareholding is now purchased by the VOE/Canhedo Group. With VASP unable to come up with funds to pay \$50 million in past-due leases, both GPA Group and Ansett Worldwide Aviation Services seize a number of company aircraft in November.

Majority shareholder/CEO Canhedo offers to sell his interest while inflation, recession, and political unrest contribute to mixed traffic results.

Customer bookings plunge 24.2% to 3,862,711 even as cargo climbs 14.7% to 169.95 million FTKs. Revenues total \$486.6 million, but expenses are higher, forcing big losses: \$173.9 million (operating) and \$249.1 million (net).

In **1993**, President Canhedo oversees an employee population reduced to 5,200. The fleet is cut by one B-737-2A1 and three DC-10-30s, but a ninth B-737-2A1A and another leased MD-11 are acquired. In addition to domestic services, the company maintains scheduled routes to Brussels, Seoul, Buenos Aires, Aruba, and Los Angeles. Totally disillusioned with President Canhedo's financial dealings, GPA Group, in May, demands that the airline, which has owed it \$16 million in back leasing fees, be declared bankrupt.

The GPA dispute is settled in July when the airline gives GPA \$10 million in cash and pledges to pay the remainder owed over the next five years. Simultaneously, however, the company becomes embroiled in a similar legal assault from Ansett Worldwide Aviation Services, which is also owed \$12 million in rent.

In October, the government of Uruguay announces that a VASP-led consortium is the only one of four prequalified bidders not to drop out of the quest to participate in the privatization of **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)**. At the same time, the airline declines to join in a historic code-sharing arrangement between **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** and **Transbrasil, S.A. (Linhas Aereas Transbrasil)**. The egos of President Canhedo and Transbrasil Chairman Omar Fontana prohibit a smooth personal mix.

VASP's problems intensify in November and December. The central bank briefly freezes its accounts until \$8.5 million in debts are paid. The company's unions attack CEO Canhedo for corruption and bad management and in December the Uruguayan government rejects the carrier's bid to acquire 51% majority control of **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)**.

Although passenger boardings for the year fall another 30% to 2,721,025, freight advances 11.7% to 189.91 million FTKs. Long-term debt stands at \$869 million.

Airline employment is increased by 1.9% in **1994** to 5,300 and the fleet includes 3 A300B4-203s, 1 leased B-707-321C, 2 B-737-2A1s, 4 B-737-214s, 1 B-737-2A1F, 9 B-737-2A1As (1 leased), 1 each owned

B-737-2L7A, B-737-2L9A, B-737-2H4C, and B-737-2L7CA, 2 chartered B-737-3L9s, and 4 leased MD-11s. Service is inaugurated to Miami in March and to New York in April with the MD-11s.

Customer bookings recover and advance by 6.5% to 2,897,129, while cargo surges 36.8% to 259.72 million FTKs. Revenues total \$887.93 million while expenses are \$784.01 million. Consequently, there is a \$103.91-million operating profit and a net gain of \$182.48 million. Long-term debt is down to \$813 million.

The workforce is reduced by 300 during **1995**. Traffic figures are reported through the first quarter and show enplanements up 30.2% to 871,500. Freight is up 6% in the same period to 47.58 million FTKs.

In April, the new management of the state-owned bank Banespa seeks payment of \$192 million in unpaid loans on two mortgaged B-737-214s. VASP claims the debt to be only \$102 million. At the height of the impasse, President Canhedo is placed in custody for six hours and his private jet is confiscated; both actions are quickly overturned by a state court and the debt is sent to arbitration.

The domestic network is readjusted in June to incorporate additional hubbing at São Paulo, while also cutting down on its point-to-point services to and between Brasilia, San Salvador, and Rio de Janeiro.

During July, the government institutes a currency reform program, Plano REAL, designed to link the nation's money to the U.S. dollar and slow rising costs. Also in July, an order is placed for 10 B-737-3A1s and 3 MD-11s. Twice-weekly roundtrips commence in September to Barcelona.

On August 1, a 51.1% stake is acquired in **Ecuatoriana de Aviacion, S.A.** VASP and the Ecuadorian investor Juan Eljuri Anton share the \$33-million acquisition, the first direct privatization in Ecuador, which is seen as part of VASP's growing regional strategy.

In October, VASP, the only bidder for the airline, acquires a 49% stake in **LAB (Lloyd Aero Boliviano, S.A.)** for \$47.4 million. The fee consists of \$5 million in cash, \$10.5 million through credit services and other assets, and the remaining \$31.9 million through the transfer to LAB of a B-737-3A1. The remaining shareholding is split between the Bolivian government (51%), **American Airlines** (.5%), and LAB employees (.5%). VASP is also given a management contract.

One of the purchased Douglas wide-bodies, together with a leased unit, are delivered during November and inaugurate twice-weekly flights to Zurich.

A second owned MD-11 arrives in December. The three new aircraft allow existing services to be increased as a third weekly frequency to Seoul is added. Additionally, twice-weekly roundtrips are laid on from São Paulo to Toronto via Miami and weekly from Salvador to Toronto.

Airline employment grows by 20.8% in **1996** to 6,400.

VASP Flight 844, an MD-11 with 12 crew and 197 passengers, collides during taxi after landing at Miami on January 23 with **Alitalia, S.p.A.** Flight 631, a B-747-243B with 19 crew and 231 passengers that is taxiing out for takeoff to Rome. Although both aircraft sustain substantial damage that causes the two services to be cancelled, no injuries are reported.

Also in January, a block-space agreement is concluded with **Olympic Airways, S.A.** that gives the Greek carrier block space on VASP flights from São Paulo and Rio de Janeiro to Athens. The third purchased MD-11 arrives in May as deliveries are accelerated. The B-737-3A1s begin arriving in June at the rate of two every month.

The company now takes control of **LAB (Lloyd Aero Boliviano, S.A.)**, leasing to it a B-737-3A1. The carrier receives its eighth MD-11 on July 2.

Customer bookings are given for the first half and show a 15.8% growth to 1,902,748. During the same period, 89.48 million FTKs are operated, a 17.1% increase.

The employee population is reduced by 17.2% in **1997** to 5,300. Destinations now visited include Aruba, Belem, Belo Horizonte, Brasilia, Brussels, Buenos Aires, Campo Grande, Florianapolis, Iguacu, Los Angeles, Macelo, Manaus, Miami, New York, Porto Alegre, Recife, Rio de Janeiro, São Paulo, Seoul, Toronto, and Vitoria.

In January, a DC-10-30 is wet-leased to **Ecuadoriana de Aviacion, S.A.** and is employed to resume that carrier's international service from Quito to New York.

Andes Holding, S.A., the parent of **Austral Airlines, S.A.** and **Aerolineas Argentinas, S.A.** held by Bankers Trust, Teneo, and Merrill Lynch, announces in February that it will consider offering for sale its total shareholding in both airlines—an 89% stake in the former and a 63.5% stake in the latter. Although no official announcement is made, VASP quietly places a bid of \$300 million.

In March, VASP, with a \$120-million investment, introduces VASPex, a door-to-door small-parcel courier service, over the company's domestic route network.

On April 16, a company MD-11 near Los Angeles (LAX) unexplainably comes within 400 ft. of a **KLM (Royal Dutch Airlines, N.V.)** B-747-406. VASPex service is extended to foreign destinations in May.

A DC-10-30CF is wet-leased from **World Airways** for six months beginning on June 1; it is employed to fly cargo from South American destinations into Miami. During July, an A310-200 is chartered via Fortis Aviation.

Work begins in mid-August on a \$100-million maintenance hangar at São Paulo. The largest hangar in South America will open in July 1999.

On September 2, the company seeks authorization from the government to enhance its five-year-old code-sharing agreement with **El Al Israel Airlines, Ltd.** through the initiation of its own twice-weekly, dual-designator services between Brazil and Israel.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Passenger boardings for the year accelerate 14.8% to 4,576,317, while freight jumps 22.7% to 255.32 million FTKs.

Government deregulation continues in January 1998.

Prior to internal air force opposition that slows the process, DAC deregulation continues in January. As part of the liberalization, the government decrees that the monopoly the company shares with **Transbrasil, S.A. (Linhas Aereas)** and **VARIG Brazilian Airlines (Viacao Aeras Rio-Grandense, S.A.)** on the Rio de Janeiro to São Paulo air bridge must end.

Simultaneously, trunk lines are granted permission to compete with regional carriers on services between the downtown city-pairs of São Paulo and Brasília, Belo Horizonte and Rio de Janeiro, or Belo Horizonte and Brasília. Further, airlines will be allowed to offer discounts of up to 65% on internal flights and any carrier will be allowed to fly charters on any route, with certain conditions. The move will have the desired end of increasing new business, but it will also set off a devastating fare war.

Transbrasil, S.A. (Linhas Aereas Transbrasil) and VASP enter the new city-pair markets in February.

Employed to handle air bridge traffic, the 61-year-old passenger terminal at Santos Dumont Airport, Rio de Janeiro, burns down on February 13, forcing transfer of connections on this end of the route from São Paulo to be transferred to Rio's international airport.

Work is begun immediately on a temporary passenger terminal expected to be completed by July; a completely new facility will not, however, be available until late 1999.

During the first quarter, the company joins with a local business group, Venezolana de Comercializaciun, in a consortium the purpose of which is to acquire **VIASA (Venezolana Internacional de Aviacion, S.A.)** from the government of Venezuela. Under terms of the plan, VdeC will take the majority 51% stake while VASP will provide 49% of the equity and receive a management contract and other considerations.

A code-sharing agreement, which will take effect during the summer, is signed with **Continental Airlines** in April. The deteriorating Asian economic condition now causes the carrier to suspend its thrice-weekly roundtrip service between São Paulo and Seoul.

In early June, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** announces that it will drop out of the joint Rio de

Janeiro-São Paulo air bridge shuttle. In cooperation with **Rio Sul (Servicios Aereos Regionais, S.A.)**, it will offer its own competition against its former partners, **Transbrasil, S.A. (Linhas Aereas Transbrasil)** and VASP.

On June 15, the company again wet-leases a **World Airways** freighter, this time an MD-11F. Under terms of the agreement, VASP is given the option to extend the agreement for an additional six months or to add a second MD-11F.

Having received formal approval from the U.S. and Brazilian governments, the code-share agreement with **Continental Airlines** takes effect on July 1. Continental places its two-letter code on VASP flights from São Paulo to Miami, to Los Angeles, and to 14 cities in Brazil. VASP, simultaneously, places its code on Continental services from Newark to São Paulo, to Rio de Janeiro, and to 20 domestic U.S. destinations.

The World Cup leads to a significant reduction in the number of Brazilians traveling, as they prefer to remain home and watch the month of matches on television.

Just after takeoff from Rio de Janeiro on a July 26 service to Porto Alegre via São Paulo, Flight 195, an A300B4-203, suffers an engine fire when its No. 2 power plant turbine explodes. A safe emergency landing is made back at the point of origin and no injuries are reported.

The fare war between the majors reaches international routes by fall. VASP attempts to institute a \$450 return service ticket price between São Paulo and New York, but when the DAC threatens not to authorize such a cutthroat tariff, the company backs down to a \$540 figure.

In an October 26 Singapore ceremony, visiting Brazilian Minister of External Relations Luiz Felipe Lampreia and Singapore Minister of Communications Mah Bow Tan sign an air services agreement. Under its terms, VASP and **Singapore Airlines, Ltd.** are designated to provide thrice-weekly services between the two countries.

On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are sought.

The Brazilian economic picture darkens during the first quarter of 1999. Between mid-January and mid-March, the national currency, the real, loses 35% of its value against the U.S. dollar.

The April 26 issue of *Gazeta Mercantil* reports that due to the restructuring programs they have started since the first of the year, Brazil's airlines will have laid off 3,000 employees by June. VASP, having reduced slightly the number of its domestic flights by 12%, lays off just 100 workers.

On June 10, the federal court announces that the airline is to receive 1.6 billion reais indemnification for losses generated by the government's 1986-1992 refusal to allow price increases.

VASP stops paying its domestic airport landing fees in September. Also in September, the government proposes that the nation's four major carriers find a way to merge some or all of their activities under a joint operating agreement or some other form of umbrella.

At the beginning of October, the Brazilian National Development Bank (BNDES) adds to the discussion of airline mergers when its president, Andrea Calabi, announces that BNDES will broker and finance an amalgamation of VASP, VARIG, Transbrasil, and TAM, which may be accomplished in "the medium term." Stating that such a move without additional capital would be pointless, the initiative is publicly opposed by **Transbrasil, S.A. Linhas Aereas**, **TAM (Transportes Aereos Regionais, S.A.)**, and VASP. **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, which also does not want to give up any of its market regions in order to participate, begins negotiations with BNDES about a debt rollover loan and an extension of its debt payments.

Passenger boardings fall 9% to 61,000. The devaluation of the Brazilian real by 50% back in January has had a devastating economic impact. Privately held, the airline is not required to reports its fiscal results; however, analysts suggest its debt has reached \$1.9 billion.

Mitsui & Co., Ltd. and its Tombo Aviation unit file suit in the New York State Supreme Court in Manhattan on January 28, 2000, seeking the return of four MD-11s and one engine from VASP, which has defaulted on their lease. The lessors also request payment of \$31.7 million in unpaid rent and by terms of the charter agreement, another \$186.6 million in "liquidated damages." Two of the MD-11s are grounded at Campinas Airport at the end of the month.

On February 11, it is announced that VASP will return all four of the Mitsui MD-11s and discontinue its services to New York (JFK) and Toronto in March. Miami will remain the only North American gateway. At the same time, it is acknowledged that only six days remain for the company to settle its unpaid domestic landing fees debt or face being shut down.

Although the fees are paid and the airline avoids, by a whisker, a shut-down, it continues to face stiff difficulties. Not only does it now fall further behind in its contributions to the national social security system, but ECT, the Brazilian postal system, now charges it with fraud and withdraws a mail contract that VASP has held since the early 1970s. VASP denies any wrongdoing and comments that, while it has indeed transported 39% of ECT's total mail and cargo volume, the contract has only accounted for 2% of the airline's annual revenues.

On February 25, it is announced that the year-and-a-half old code-sharing agreement with **Continental Airlines** is being terminated by the U.S. major. Four days later, the company announces that within the month, service to Brussels will also be suspended, while the number of frequencies to Miami will be cut.

In March, VASP is conditionally allowed to participate in the nation's Fiscal Recovery Program (REFIS), provided it make significant payments to the National Social Security Institute (INSS), which is owed \$137.5 million. VASP pledges to repay this debt in \$2.2-million monthly installments and puts up 24 aircraft as collateral against the INSS bill.

By the second quarter, VASP is in even greater difficulty. On April 3, Victoria Regis Lessor of the Cayman Islands, which owns several of the B-737s that the carrier has chartered, repossesses three of the aircraft; loss of the capacity severely impacts flights between Rio de Janeiro and São Paulo.

Failure to pay required fees forces the AMADEUS and SABRE computerized reservations systems to disconnect the carrier on April 9; the company's direct links to 80% of the nation's travel agencies are thus severed. The airport handling agency Infraero, which has also not been paid, indicates that it will begin to hinder passenger boardings on April 13 if it has not been paid. This second threat of the year to close the company down brings a debt payment of R 80 million on April 10.

Due to financial problems, the carrier is forced to ground its four remaining MD-11s on April 24; word is sent out that international flights must now be cancelled. The carrier is not forced to shut down its European and North American services as expected on April 25; it wins an extension until May 15 of the contract on its four MD-11s and will continue its long-haul flights until then.

It is announced on April 27 that **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)** and **Transbrasil, S.A. Linhas Aereas** are interested in taking over VASP's long-haul international routes to Europe and North America. The pioneer will be forced to suspend them on May 15 when its last four MD-11s are returned to their lessors.

On May 11, officials announce that they will soon sell all VASP shareholding in **LAB (Lloyd Aero Boliviano, S.A.)** and **Ecuatoriana de Aviacion, S.A.** to help meet its huge deficit problems. The last MD-11 service to Miami is flown on May 14 and to Europe the next day. VASP now suspends its international services to Toronto, New York, Miami, Barcelona, Brussels, Zurich, and Frankfurt and returns its last four MD-11s to their lessors. Mitsui, by the way, will claim that VASP had, during their operation, cannibalized two of the MD-11s for parts, components, and other equipment valued at \$39 million.

On May 19, a passenger B-737-3K9, upon which lease payments cannot be made, is returned to IMS Leasing, while two B-737-200Fs are returned by the cargo division to the same firm for the same reason.

In early June, one each B-727-1A0 and B-727-171C are leased from **LAB (Lloyd Aero Boliviano, S.A.)** for six months. At 29,000 ft. over Rio de Janeiro on June 13, a B-737-2A1 with 85 passengers aboard experiences rapid decompression. Following a hasty descent, an emergency landing is made at Rio, with no injuries reported. An inspection will reveal a 28-in. crack in the fuselage above the forward service door.

On June 21, Nilson Carlos, director of the religious confederation Confabre, announces that his organization, in a deal valued in excess of \$200 million, has agreed to purchase VASP, along with several subsidiaries, including the Nacional hotel chain.

Due to payment problems with Victoria Regis Leasing Company, three chartered B-737-3L9s are impounded on July 18 and parked at Sao Paulo Congonhas Airport. With the aircraft unavailable, the airline is forced to cancel 14 daily services. A few will be operated, beginning the next day, with a B-737-200.

On July 28, the national airline trade union representing VASP's employees demand that the government take over management of the airline and remove incumbent CEO Wagner Canhedo. To emphasize their position, the workers plan a 24-hr. strike on August 7. That job action will be postponed at the last minute after management pledges to negotiate employee concerns.

A cost-cutting effort, built around layoffs and a renegotiation of government tax debts, allows the company to post an R 94.7-million loss for the year's first half. While bad, the figure represents a significant improvement over the R 152.9-million loss recorded for the same period a year earlier.

Just after takeoff from Foz do Iguacu on an August 18 service to Curitiba, 5 gunmen spring up in the cabin and hijack a company B-737-2A1 and its 6 crew and 66 passengers, primarily French, Italian, and Japanese tourists returning from a visit to the famous Iguacu Falls on the border with Argentina. One pirate moves into the cockpit where he fires a shot and then directs the pilot to fly to a remote paved airstrip in Parana State that is surrounded by nothing but ranchland and sugar cane plantations. There, while three cover the hostages, two men loot the hold of \$3.3 million in cash being transported for various banks from the aircraft's cargo hold. The robbers escape in prearranged vehicles. Afterwards, the Boeing is flown 50 miles away to Londrina, site of the closest airport.

By the beginning of October, the carrier owes \$1.5 billion to its creditors, which include the nation's airport authority. In addition, it loses its \$1.5-billion lawsuit, pending for several years, against the government over the state's price-fixing. The carrier's interest in **TAN (Transportes Aereos Neuenen, S.A.)** is now sold. On a positive note, a net profit of \$50 million is reported for the first six months of the year; it comes almost entirely from credits obtained upon the return of its leased MD-11s.

Seeking to possibly purchase its way out of trouble, the company, on October 24, announces that it plans to buy \$320 million worth of ERJ-145 regional jets with which to link 36 Brazilian cities with direct VASP Express flights beginning during the first quarter of 2001. Analysts suggest that a major hurdle to this scheme will be the necessity of the airline to convince a bank or other financiers to lend it the required funds. The National Economic and Social Development Bank, however, supplies a \$250-million loan to be employed to launch the new subsidiary operation.

Arrangements are completed on December 4 for the acquisition of four ex-**Transavia Holland, N.V.** B-737-3K2s.

Despite all of these purchases and arrangements for expansion, a time bomb is ticking at the end of the year. Although VASP claims to be up to date on its repayments to the INSS via a credit arrangement it has worked out with the state-controlled Fundo Aeroviario airport development fund, it has paid, in actual cost, only a little over \$9,000 per month in the period since April. It is forced to make a quick \$3.5-million payment to INSS just to keep from being shown the REFIS door. To make matters worse, an independent audit of company accounts has found discrepancies and the nation's Securities and Exchange Commission informs the airline that it will review its books for 1999 and 2000.

Passenger boardings for the year accelerate 12% to 4 million. Helped along by another restructuring program, a net profit of R 114 million is generated.

VAYUDOOT, LTD.: India (1981–1994). To provide third-level feeder service in northern, central, and western India, the government, through a fifty-fifty partnership between **Air India, Ltd.** and **Indian Airlines Corporation**, establishes this regional carrier on January 26, 1981. The two major airlines each own half of the new entrant, with the managing director of the latter tasked to serve as part-time chairman. Employing two Fokker F.27-100s leased from **Indian Airlines Corporation**, initial services are concentrated in the northeastern portion of the nation.

The first services link Gauhati with Barapani, Kailashahar, and Agartala, and Rupsi/Kamarpur and also Chabua with Tezu. A total of 8 stations are served by year's end and 19,000 passengers have been accommodated.

During 1982, Vayudoot establishes a route network covering over 14 points. Service is provided with the two leased F.27-100s, supplemented by three owned British Aerospace (HS) 748-B2s known as Avro 748s (built under license by Hindustan Aeronautics, Ltd. in India and purchased from **Indian Airlines Corporation** for one Rupee apiece), and various chartered Indian Airlines aircraft.

Enplanements for the first full year of service total 79,558.

As the company becomes a public company, Harsh Vardhan, a former **Air India, Ltd.** executive, is employed as managing director in February 1983. The leased aircraft are replaced by three F.27s and four Avro 748s, all purchased from **Indian Airlines Corporation**. Main terminals are located at New Delhi, Calcutta, and Bombay.

On November 29, a contract is signed with the Dornier Corporation in Germany for 10 new 228-201 turboprops. Half of the order will be assembled at the Bangalore plant of HAL. Customer bookings jump to 104,285.

The 10 Dornier 228-201s join the fleet throughout 1984–1985. Half arrive from Germany while five are, like the Avro 748-B2s, license-built by HAL. The number of stations visited is boosted to 84, including a world record 32 opened during the latter year, while traffic figures increase. A total of 163,331 passengers are flown in 1984 and 232,837 in 1985.

An all-women crew takes flight on January 15, 1986 for the first time in the history of Indian commercial aviation. Piloted by Capt. Saudamini Deshmukh, assisted by Capt. Nivedita Bhasin, an F.27-100 completes the scheduled return service from Calcutta to Silchar without incident—other than intense media attention.

With four Dornier 228-201s, the carrier in June launches an innovative Night Air Mail Service. This is followed in July by the inauguration of overnight small package express service, "TNT Skypack," to eight cities from a base at Nagpur. Holiday tour packages are initiated, along with Himalayan Trek sight-seeing flights from New Delhi on Sundays. Daily flights are inaugurated to the community of Guna, south of New Delhi.

Introduction of the Dorniers causes a heavy fiscal loss (approximately \$500,000). Passenger boardings total 450,000.

The workforce in 1987 totals 500 and the fleet includes 10 Dorniers, 2 Dornier F.27-100s, 1 Dornier F.27-400, and 4 Avro 748-B2s. The domestic route system now includes 87 points as Vayudoot discontinues the "TNT Skypack" arrangement in favor of its own courier operation.

Enplanements decline to 300,000.

Passenger boardings accelerate to half a million in 1988 as orders are placed for two Yakovlev Yak-42s, with options on two others. An Antonov An-24 is test marketed.

An F.27-100 with 4 crew and 39 passengers is destroyed as the result of a bad landing at Calcutta's Dum Dum Airport on September 23; there are no fatalities.

While on final approach in a severe rainstorm to Gauhati on an October 19 service from Silchar, Flight 702, an F.27-100 with 3 crew and 31 passengers crashes into the side of a 1,400-ft. forested hill near Gawahat, Assam, on October 19; there are no survivors.

The fleet in 1989 includes 3 F.27s, 6 Avro 748-B2s, and 9 Dornier 228-201s.

During a heavy thunderstorm, a Dornier 228-201 with three crew and eight passengers en route from Pune on September 23, suddenly enters into a steep descent and crashes into Lake Indapur, a reservoir located behind the Ujani Dam, near Pandharpur; there are no survivors.

A total of 475,000 passengers are flown on the year, together with 32,000 FTKs.

The year 1990 turns out to be one of crisis for the carrier, which has now run up losses of \$38.3 million in the past two years on income of only \$30.3 million. The government agencies, which have provided the nation's third-level operator with everything from fuel to ground handling, have simply not been paid, nor has Hindustan Aeronautics, Ltd., owner of the Dorniers. The government is faced with several unsavory choices, all of which involve writing off the losses. During the summer, a B-757-2F8 is leased from **Royal Nepal Airlines Corporation** and employed on flights between New Delhi and Bombay.

The fleet in 1991 includes 8 Dornier 228-201s, 1 F.27-400 leased from **Indian Airlines Corporation**, 2 out-of-service F.27-100s, and 8 Avro 748-B2s. Only 45 destinations are now visited, less than half the number inaugurated at start-up a decade earlier. The government now seeks to privatize Chairman/Managing Director Capt. Vijay Trehan's faltering airline. The year's loss is \$14.2 million.

Airline employment in 1992 stands at just 100 and the fleet is unchanged. Statistics are made public through September and show enplanements off by 38.6% to 150,664 and freight by 37.7% to 33,000 FTKs.

In 1993, Chairman/Managing Director Capt. Trehan oversees a workforce of 1,681. The regional is merged into **Indian Airlines Corporation** in May, but is allowed to continue operations under its previous identity. Although traffic figures are not released, it is revealed that the loss has been cut to only \$5 million for the year.

In early April 1994, the carrier is assigned to service only the hilly regions of the northeast as the government considers complete assimilation of the regional into **Indian Airlines, Ltd.** (as Indian Airlines Corporation is now known), a move that is completed late in the year. As in the previous year, no traffic figures are provided.

VEE NEAL AIRLINES: United States (1980–1983). Founded at Latrobe, Pennsylvania, in 1980, this regional operator enjoys considerable success in the next decade. Initial Cessna 402 air taxi service is inaugurated over a Latrobe–Pittsburgh route on May 19. The fleet in 1981 includes 3 Cessna 402s and 2 Cessna 404 Titans.

Passenger traffic climbs by 30% to 21,075 as Vee Neal begins scheduled commuter service.

Boardings increase another 37.5% in 1982 to 28,936, despite national recession. To celebrate its acquisition of British Aerospace BAe Jetstream 31 turboprops and in reflection of its dreams, the small regional changes its name on December 1, 1983 to **Jetstream International Airlines**.

VEG AIR, S.A.: 1 Tache Ionescu Street, Bucharest, 71100, Romania; Phone 40 (1) 223 3852; Fax 40 (1) 223 3853; Code V3; Year Founded 1999. VEG Air is established early in 1999 to operate scheduled domestic and regional passenger services in alliance with **Moldavian Airlines**. Employing a single Yakovlev Yak-40, the new entity launches revenue flights on March 15. Scheduled destinations visited include Budapest, Timisora, and Venice.

VEGA AIR COMPANY (VEGA AVIAKOMPANIYA): Russia (1993–1996). Vega Airline is founded at Vega Voronezh in 1993 to provide worldwide ad hoc all-cargo services. A. S. Kokalin is general director and he inaugurates revenue flights with a pair of Ilyushin Il-76s. One Ilyushin is withdrawn in 1994. Flights continue into 1996.

VEGAS JET: North Las Vegas Airport, 2634 Airport Drive, Suite 106, Las Vegas, Nevada 89030, United States; Phone (702) 647-7700; Fax (702) 646-6871; Year Founded 1996. Formed at its namesake city

in **1996**, Vegas Jet provides executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean. Flights begin with 1 each British Aerospace BAe (HS) 125-400 Hawker and Piper PA-42 Cheyenne 400LS.

VENEZUELAN INTERNACIONAL DE AVIACION, S.A. See **VI-ASA (VENEZUELAN INTERNACIONAL DE AVIACION, S.A.)**

VENTURA AIR SERVICE: Republic Airport, Route 109, Farmin-dale, New York 11735, United States; Phone (516) 249-9848; Fax (516) 249-9729; Year Founded 1952. This fleet management concern is established at Republic Airport in **1952**. In addition to overseeing the aircraft of various businesses, the company, over the next 45 years, also undertakes executive and small group passenger charters to first domestic and then worldwide destinations.

In **2000**, Ventura employs 12 pilots and operates 1 each Canadair 601 Challenger, Dassault Falcon 50, British Aerospace BAe (HS) 125-700 Hawker, Learjet 25D, and Cessna 421 Golden Eagle.

VENTURE AIRWAYS, LTD. See **AIR COMMUTER, LTD.**

VENTURE JETS: Lancaster Airport, Lititz, Pennsylvania 17543, United States; Phone (717) 581-0306; Fax (717) 581-8317; Year Founded 1994. This small corporate carrier is established at Lancaster Airport in **1994** to fly businessmen to and from various destinations in the U.S., Canada, and the Caribbean. Two pilots are employed and revenue flights begin with 1 each Learjet 31A and Piper PA-31-350 Navajo Chieftain.

VENUS AIRLINES, S.A.: Greece (1993–1996). Venus Airlines, S.A. is established by the Karabatis Group at Athens during the first quarter of **1993** to offer charter and inclusive-tour services to the sunny Greek holiday destinations. Revenue flights from Scandinavia and West Germany begin with a pair of McDonnell Douglas MD-82s chartered from Aircraft Leasing and Management.

With additional bookings obtained from Austrian and Swiss tour concerns, an MD-83 is leased from **Transwede Airways, A.B.** in **1994**. The fleet in **1995** includes just 1 owned Beech Super King Air 200. Also operated under charter are 2 MD-83s, 1 MD-82, 2 B-757-2Y0s, and 1 B-757-236. During these years, the carrier also begins flying tourists down from Belgium and Luxembourg.

During the first quarter **1996**, **Edelweiss Air, Ltd.** is formed at Zurich, Switzerland, to operate both charter and scheduled passenger services. Shareholding is divided between the Venus Air, S.A. (40%), tour operator Kuoni Switzerland (33%), Emil Grotz (20%), and Niklaus Grob (7%). A management contract is signed by Venus and a workforce of 70 is recruited.

Two McDonnell Douglas MD-83s that Venus has leased from GECAS are subleased and beginning on April 1 are employed to inaugurate inclusive-tour flights to the Mediterranean and Greek islands and scheduled service from Zurich to London (CTN) via Vienna.

Service is suspended in November.

VERCOA AIR SERVICE: United States (1949–1975). Like giant **Delta Air Lines**, the Hoosier State's only indigenous airline begins as a crop-saving operation. In **1949**, University of Illinois mechanic William "Bill" Britt, a licensed pilot, discovers that farmers in his community of Royal, Illinois, are using the services of a crop duster who comes in from Florida.

Employing a patched-up plane he had obtained in **1948** by trading his new car to a friend, Britt borrows \$650 from his brother, purchases a crop-spraying unit, and sets up a seasonal side venture in **1949**.

Spraying proves worthwhile, but after losing his college job, the aviator moves his family to Danville in **1950**, becoming the FBO at the lo-

cal Vermillion County Airport. With his wife Marilyn handling administrative details, Britt gives flying lessons, sells airplanes, sprays crops, flies charters, and eventually becomes the airport's manager.

In July **1956**, naming his new enterprise in honor of his base, Britt sets up a charter segment of his business called **Vercos Air Service**. Britt's air business continues to grow through the **1960s**. Having extensive Beech 18 freighting experience and contracts to fly explosive samples for the military during the early years of the Vietnam conflict, the Danville operator is invited in late **1967** to offer emergency replacement services on behalf of **Lake Central Airlines**, then experiencing difficulties with its French-made Nord 262 turboprops.

During the first quarter of **1968**, Vercoa, employing a vintage and refurbished Lockheed Model 12A, begins feeding the local service carrier at Indianapolis and Chicago from Danville and Lafayette. Adverse reaction to the Lockheed causes Britt to almost immediately substitute a Beech 18. Following its purchase of **Lake Central Airlines** on March 14, **Allegheny Airlines (1)** elects to change the route network of its acquisition. Meanwhile, Vercoa acquires a new Beech 99 on July 28.

The company is invited in August to become the second "Allegheny Commuter" partner after **Henson Aviation**, a proposition owner Britt accepts on September 20. Wearing the livery of the Pittsburgh-based consortium, Britt's new Beech 99 launches its first scheduled airline service on October 7 over an initial Danville–Chicago route, later expanding commuter operations to Indianapolis, Bloomington, Muncie, Terre Haute, Fort Wayne, and several other small towns in Illinois and Indiana.

Britt, in **1970**, acquires a route in which **Allegheny Airlines (1)** holds no interest, Champaign and Decatur to Chicago (Meigs Field). Employing a Volpar Beech 18, the company independently maintains this service for the next three years under the name "Vercoa Commuter."

Following entreaties from city officials in **1973**, Bill Britt begins to transfer his entire company to the better-equipped Hulman Airport at Terre Haute, Indiana, a move completed in November **1974**. In February **1975**, the corporate identity is changed to **Britt Airlines** and two more Beech 99s are leased.

VERITAIR, LTD.: United Kingdom (1982–1996). The onshore helicopter operator Veritair is established by Julian Verity at Cardiff in **1982** to offer charter flights and aerial work. In July **1987**, the concern receives a 10-year Class 7 sole-use charter license from the CAA, which will permit it to compete for offshore support contracts in the Celtic Sea and Western approaches.

Support of the energy industry is not begun. Instead, the company comes to specialize in police support and over the next decade, enters into long-term contracts to provide services to the South and East Wales police forces.

By **1996**, Managing Director Verity oversees a fleet that includes 2 each Bolkow BO-105DBs and Bell 206L LongRangers. On October 31, the concern is sold to **British International Helicopters, Ltd.**, which will use it as the core upon which it will build entry into the aerial law enforcement support business.

VERMONT INTERNATIONAL AIRWAYS: United States (1967–1969). VIA is established by John McDonald at Morrisville, Vermont, on January 2, **1967** to provide scheduled air taxi services to local Granite State destinations. Employing 1 each Beech 18 and Cessna 402, McDonald inaugurates daily roundtrips on January 13, maintaining them into **1969**.

VERO MONMOUTH AIRLINES. See **MONMOUTH AIRLINES**

VETERAN AIR COMPANY: Moskovskaya 182-A, Djankoy, Crimea, 334010, Ukraine; Phone 38 (06564) 33112; Fax 38 (06564) 30122; <http://www.skylineaviation.co.uk>; Code VPB; Year Founded 1992. Veteran is founded in the Crimea on July 7, **1992** to provide ad hoc, worldwide, all-cargo charter services. Andrey Petrenko is general

director and he inaugurates revenue flights on September 19 with a large fleet, 23 Il-76s, leased from the Ukraine Air Force and the Ilyushin design bureau. The number of aircraft employed in 1994 is reduced to 17.

Flights continue in 1995–1997, during which years the workforce reaches 362 and a regular weekly route is opened to Baku in Azerbaijan and to Shariyah, UAE. A number of Antonov An-12s are acquired for work requiring less than an Ilyushin.

At the end of November 1998, an An-12 is based at Kent International Airport in Manston, U.K., to undertake ad hoc all-cargo charters. Skyline Aviation, Ltd. serves as agent and over the next month, flights are undertaken on behalf of Rolls-Royce and Ford.

Airline employment stands at 276 at the beginning of 1999.

By the first months of the year, an An-12, which Veteran has based at Kent International Airport (Manton) in the U.K. to operate the business founded by Skyline Aviation, has found work transporting cargos on behalf of DHL Worldwide Express, Rolls-Royce, and Ford Motor Company.

Veteran is deeply involved in support of the humanitarian work of the UN High Commissioner for Refugees during the Kosovo crisis. Two of the company's three Antonov An-12s operate a total of 20 relief flights from the U.K. and various European destinations to Tirana, Skopje, and, after June, Pristina. Cargos range from vehicles and blankets to water pumps and buckets. Veteran is proud to report that it has flown more relief missions into the area than any other An-12 operator.

The fleet at the beginning of 2000 comprises three An-12s. As the year begins, one is operating on a freight-hauling contract in West Africa while another is performing a similar task in the Democratic Republic of the Congo. A third aircraft is completing an overhaul at the Ukrainian plant of the Antonov Design Bureau.

VIABRAS (VIACAO AEREA BRASIL, S.A.): Brazil (1946–1950). Arnaldo Raposo Murtinho founds VIABRAS at Rio de Janeiro on April 11, 1946. A government operating permit is received on August 16 and the remainder of the year is spent on organization and the acquisition of three ex-military Douglas C-47s (reconfigured to DC-3 civil standard).

Scheduled revenue services commence on March 12, 1947 over a route to Rio Verde via Belo Horizonte, Uberlandia, and Goiania. Service is maintained in 1948 and in 1949 frequencies are initiated to the Mato Grosso cities of Cuiaba and Nortenopolis.

In order to avoid wasteful duplication on routes contested with TAN (Transportes Aereos Nacional, S.A.), VIABRAS in 1950 merges into a consortium led by the former.

VIACAO AEREA ARCO-IRIS, S.A.: Brazil (1945–1950). Arco-Iris is formed at São Paulo in March 1945. After V-J Day, the carrier purchases six British-made de Havilland DH 89As and on July 12, 1946 inaugurates services to destinations in the western part of São Paulo State as well as Parana State and its capital city of Londrina.

After a year and a half of service, the company is in considerable financial distress and its owners, knowing that they face bankruptcy and the cancellation of their operating permit, sell the carrier to a group of investors at Caxias do Sul in Rio Grande do Sul in December 1948.

Fully expecting to resume services in 1949 and even having built a new hanger to support the relocated headquarters, the new investors lose their capital when the government refuses permission to resume services employing Dragon Rapides. In June 1950, the Arco-Iris operating permit is cancelled.

VIACAO AEREA BAHIANA, S.A.: Brazil (1945–1948). This small company is set up at Salvador on December 12, 1945. Two Lockheed Model 18 Lodestars are purchased from Panair do Brazil, S.A. and employed to initiate scheduled services to Ilheus and Aracaju in February 1946.

Flights are maintained in 1946–1947 and in December of the latter year, the fleet is upgraded by the addition of 1 Boeing 247D and 3 Douglas DC-3s purchased from AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.). A DC-3 is reported missing near Bo-

gota on March 10 of the latter year; the wreckage is found near Villa Vincento on March 14 (eight dead).

Flying on the edge of financial disaster, the carrier is unable to recover from the June 22, 1948 crash of a DC-3 at Ilheus and thus shuts its doors on November 4. AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.) is finally able to reclaim its unpaid for aircraft in 1951.

VIARCO (VIAS AEREASCOLOMBIANAS, S.A.): Colombia (1947–1948). Capitalized at 3 million pesos (\$1.7 million), VIARCO is founded at Bogota in January 1947. A significant fleet comprising 7 ex-military Douglas C-47s (converted to civil DC-3 standard) and 2 Consolidated PB-5A Catalinas is assembled and service is initiated between 8 of Colombia's major cities, including Bogota, Cali, Medellin.

A C-47 with four crew and five passengers crashes in Colombia on March 8; there are no survivors.

A total of 57,000 passengers are transported during the inaugural year; however, financial difficulties force the carrier to cease flying in 1948.

VIAS AEREASCOLOMBIANAS, S.A. See VIARCO (VIAS AEREASCOLOMBIANAS, S.A.)

VIASA (VENEZOLANA INTERNACIONAL DE AVIACION, S.A.): Colombia (1960–1997). Capitalized at 12 million bolivars (\$3 million), this carrier is jointly formed by LAV Venezuela Airlines, S.A., CVF, a government development agency, and AVENSA (Aerovias Venezolanas, S.A.) on November 21, 1960 to operate their international services. Shareholding is divided between the two concerns on a 51 to 49 basis, with AVENSA assuming responsibility for daily management. The board of directors is chosen entirely from the private sector.

In February 1961, KLM (Royal Dutch Airlines, N.V.) is contracted as the new airline's European agent, also agreeing, under an operational contract, to provide service on behalf of the Venezuelan carrier. Orders placed by AVENSA two years earlier for two Convair CV-880s are taken over and increased to three and a Douglas DC-8-33 is wet leased from the Dutch flag line.

The latter is employed, beginning on April 1, to inaugurate transatlantic service from Bogota to Lisbon and Madrid via Bogota, Caracas, and Curaçao. VIASA is the only Latin American carrier to have flown jet aircraft since its creation. Five days later, on April 6, the Madrid route is pushed up to London via Paris.

In May, the network expands, replacing LAV Venezuela Airlines, S.A.'s international flights; frequencies begin to Paris and Amsterdam and to Lima, Bogota, and Curaçao.

While en route to Caracas via Santa Maria in the Azores, Flight 897, the DC-8-33 leased from Holland with 14 crew and 47 passengers, crashes into the Atlantic Ocean 3 km. offshore of Lisbon after failing takeoff on May 30; there are no survivors.

In June, a second DC-8-33 is placed in service as a replacement.

The two CV-880Ms are delivered in July, allowing the start-up of services to America: New York on August 8, Miami on October 1, and New Orleans on October 5. The latter route replacing one previously flown by AVENSA (Aerovias Venezolanas, S.A.).

On November 27, students hijack a CV-880 with 47 aboard and force its crew to drop propaganda leaflets over Caracas before diverting the jetliner to a safe landing at Curaçao. The five hijackers are arrested and returned to Venezuela on December 2 for trial.

The fleet in 1962 includes 1 leased **KLM (Royal Dutch Airlines, N.V.)** DC-8-33 and 2 CV-880Ms, both of which are now frequently leased to the Dutch flag carrier. Services are launched to Santo Domingo and Panama in October.

When the third CV-880M is delivered in late 1963, it is painted in two color schemes: VIASA's on the left and KLM on the right.

A pool agreement is signed with **Alitalia, S.p.A.** on May 1, 1964 and the last **LAV Venezuela Airlines, S.A.** international route—to Rome—is now assumed. The third VIASA CV-880M is simultaneously leased to **KLM (Royal Dutch Airlines, N.V.)**, which employs the jetliner, beginning the next day, on its flights from Curaçao to Miami. Curaçao to Paramaribo, Surinam CV-880M services are inaugurated on May 3.

An **Alitalia, S.p.A.** DC-8-40 is leased late in the year, allowing the initiation of DC-8-40 service to Mexico City in June 1965. The first owned DC-8-53 is delivered in November and is placed on the New York route on October 6.

A second DC-8-53 arrives in 1966, allowing return of the chartered DC-8-40 to **Alitalia, S.p.A.** The carrier's own Douglas jetliners commence transatlantic services on October 6. Two DC-9-10s are leased from **AVENSA (Aerovias Venezolanas, S.A.)** in May 1967. They are placed on short-haul routes San Jose, Panama City, Barranquilla, Maracaibo, Caracas, Trinidad, and Barbados.

The all-cargo subsidiary Transcarga is formed on January 10, 1968 to take over freight service to the U.S. with a new DC-8-55F. London becomes a new European destination on April 20.

En route from Miami to Caracas via Santo Domingo and Curaçao on June 19, Flight 797, a DC-9-32 chartered from **AVENSA (Aerovias Venezolanas, S.A.)** with 78 passengers, is hijacked on the Santo Domingo to Curaçao segment and diverted to Santiago de Cuba. The pirate remains behind as the Douglas twin-jet is allowed to proceed. The assailant will leave Cuba in August 1970 for the Dominican Republic, where he will be caught, tried, and sentenced to 20 years in prison.

A DC-8-53 is destroyed in a ground accident at Amsterdam's Schiphol Airport on June 29.

The New York frequency becomes daily during the summer and the first DC-8-63 is received in December. By year's end, all three CV-880Ms are withdrawn and sold to **Cathay Pacific Airways (Pty.), Ltd.**

The new DC-8-63 is introduced on the New York route on January 1, 1969. In the world's worst civil airline disaster to date, the ill-fated, previously hijacked DC-9-32 leased from **AVENSA (Aerovias Venezolanas, S.A.)** and operating as Flight 742 with 10 crew and 74 passengers, strikes power lines and crashes into the Maracaibo suburb of La Coruba just after takeoff. There are no survivors from the aircraft and 72 persons are also killed on the ground. Later analysis of the jetliner's black box tape recording indicates the pilot was shot. The second DC-8-63 is delivered in May.

Beirut service begins on May 15, 1970 and DC-8-63 flights are inaugurated to Frankfurt on June 1, 1971. Late in the year, a contract is signed with **KLM (Royal Dutch Airlines, N.V.)** under which VIASA will dry lease a Boeing 747 and become the first Latin American airline to fly a Jumbojet. Enplanements for the latter year total 291,885.

Airline employment in 1972 totals 1,297. The fleet now comprises 2 DC-8-63s, 2 DC-8-53s, 2 DC-8-33s, and 1 DC-8-55F. A B-747-206B is leased from **KLM (Royal Dutch Airlines, N.V.)** on January 1; christened *Orinoco* after Venezuela's largest river, enters service wearing the full KLM livery on one side of its fuselage and that of VIASA on the other. The initial Jumbojet service is from Caracas to Madrid, Paris, and Amsterdam via the Canary Islands. In April, orders are placed for two DC-10-30s. A big marketing campaign is undertaken to attract winter holiday traffic to Venezuela from Europe and North America.

Passenger bookings climb 8.5% to 319,000.

The wet-leased Dutch Jumbojet continues to serve on the European runs from Caracas to Rome via Madrid and from Caracas to Paris via

Madrid as of late spring 1973. As the year ends, arrangements are made with KLM for the dry lease of a DC-10-30. Overall bookings advance to 383,400.

The **KLM (Royal Dutch Airlines, N.V.)** Jumbojet is returned when the first DC-10-30 is received from the Dutch flag line on April 24, 1974. On April 30, VIASA becomes the first South American wide-body operator as it introduces its new Dutch-owned jetliner on mid-Atlantic routes from Caracas to Madrid, Paris, and Amsterdam via the Canary Islands. Later, the plane also flies from Caracas to Panama and Miami, while DC-9-10 service is started to San Juan, Puerto Rico.

Passenger boardings rise 10% to 426,088; the carrier's highest net profit to date is realized: \$6.5 million.

The workforce in 1975 totals 1,536. The fleet is strengthened through the addition of a second DC-30-30, again via **KLM (Royal Dutch Airlines, N.V.)**, in May and a DC-8-53 in November. Meanwhile, Caracas to Cali service begins in May while Rio de Janeiro and Buenos Aires join the network in June and Quito in December.

Passenger boardings grow 13.1% to 484,662, but freight is off 2%.

The employee population remains level in 1976. On April 28, VIASA purchases **Pan American World Airways (1)'s** 30% interest in **AVENSA (Aerovias Venezolanas, S.A.)**.

Alfonso Marquez-Amez succeeds Oscar Machado as president in midyear, while frequencies from Miami to Caracas are stepped up from 7 to 12 on July 1, with 5 stopping at Maracaibo en route. Caracas to New York frequencies are daily and those to Washington, D.C. are twice weekly. Orders are placed for two additional DC-10-30s.

Passenger bookings jump 24% to 538,731. This is the year in which Viasa, after years of profits, shows its first losses, due largely to labor unrest and rising fuel costs.

A third DC-10-30 is placed in service in 1977. Two additional DC-10-30s join the fleet in 1978–1979. During these years the Transcarga, S.A. subsidiary is folded back into the airline as a division. Also, the tails of all aircraft are now painted orange, with white VIASA lettering.

Traffic rises and in terms of passenger kilometers flown, the carrier in 1980 ranks as the seventh largest in Latin America. The fleet at the beginning of 1981 includes 6 DC-10-30s, 2 DC-8-63s, 2 DC-8-53s, 1 DC-8-63F, and 2 leased DC-9-15s. Enplanements these 12 months total 900,600.

During 1982, the first of three MD-80s are placed on regional routes to the Caribbean and for new services to Miami from Barquisimeto, Barcelona, and Portlamar. Customer bookings ascend to 938,200.

The bottom literally falls out in 1983. **Swissair, A.G.** is hired to conduct a study and finds the company nearly bankrupt as the result of high-cost loans taken to cover debts of \$88 million. Among the difficulties uncovered is massive over-hiring—there are now 47 pilots for every aircraft. In July, a B-747-273C is chartered from **World Airways**. This Jumbojet will be employed as a freighter on routes from Caracas to Miami and New York.

Passenger boardings drop to 673,700 and this dramatic slump in traffic brings severe financial difficulties and result in a \$75-million loss.

Luis Ignacio Mendoza Machado becomes chairman and president in February 1984 and he immediately institutes a recovery plan. In addition to rigid cost-cutting measures, all DC-8s and MD-80s are withdrawn from service, the employee force is cut to 3,400, and some service in the Caribbean is suspended, while other international destinations, like Beirut, are abandoned.

The situation is not helped by an August 1 hijacking. Two aerial pirates, one each from Haiti and the Dominican Republic, force a DC-9-10 with 79 passengers to land at Curaçao and demand \$5 million in ransom. With technical assistance from the U.S. Delta Force, a 12-man Venezuelan commando unit storms the plane, kills the hijackers, and frees all of the hostages unharmed.

Bookings drop even further this year, to 508,164. Revenues are \$189 million, producing an operating profit of \$10.7 million, but a net loss of \$2.1 million is suffered.

The employee population is reduced 6.1% in **1985** to 2,850. The fleet now comprises only the 5 DC-10-30s plus 1 DC-8-55F.

Passenger boardings accelerate 9.9% to 563,500 and freight traffic is up 5.5% to 89.12 million FTKs. Revenues slide to \$185.5 million, but this year a net profit of \$3.56 million is earned.

Operations continue apace in **1986** and a \$3.8-million profit is earned. The company's livery is altered; although retaining their orange tails, aircraft are painted a brighter white, with three-tone blue cheatlines under the windows.

Two Airbus Industrie A300B4s previously operated by **Deutsche Lufthansa, A.G.** are leased from Guinness Peat in **1987** for use on Caribbean and U.S. services. In the spring, VIASA, for the first time, undertakes domestic services, operating from Caracas to Maracaibo and Porlamar.

Jetliners from VIASA and **Pan American World Airways (1)**, carrying a total of 180 passengers, nearly collide over the Atlantic Ocean, 800 mi. S of New York, on July 9. By now, all of the pilots dismissed in 1984 are rehired and a new training center is opened in Caracas.

For a variety of reasons, enplanements fall to 187,675 and the red ink continues to flow over company ledgers.

In **1988**, the 3,035-employee carrier owns a fleet of 5 DC-10-30s, 1 DC-9-51, and 1 leased B-747-200F. A new DC-10-30 simulator is placed into service at the Caracas training facility and service is inaugurated to Houston. During the first quarter, thrice-weekly charters are flown from Toronto to Caracas via Barcelona.

The Douglas jetliners assist passenger boardings in their dramatic 80% increase to 938,372, while the Jumbojet accounts, almost completely, for an 82% boost in freight traffic to 210.88 million FTKs.

The fleet is increased in **1989** by the addition of a DC-8-63 and three leased Airbus Industrie A300B4s. During the summer, the joint Venezuela-Brazil-Argentina route is split in two. Twice-weekly nonstop Caracas to Buenos Aires and twice-weekly Caracas to Buenos Aires flights add São Paulo to the previously direct Brazilian service. In October, twice-weekly A300B4 service is inaugurated from Caracas to Havana.

Customer bookings increase 17% to 1,098,125 and cargo swells 7.6% to 226.9 million FTKs. Profits are earned: \$19.4 million (operating) and \$5.6 million (net).

Company employment grows 4.2% in **1990** to 3,690. The decision is taken late in the year to privatize the state-owned carrier.

Passenger boardings climb 5.3% to 684,695 and freight ascends 8% to 370.76 million FTKs. Revenues slip 1.8% to \$275 million and expenses swell 15% to \$299.6 million. As a result, the operating loss is \$24.6 million and net loss is \$36.6 million.

The payroll is cut 3% in **1991** to 3,580 and the fleet now includes 5 DC-10-30s and 3 leased A300B4s.

In July, a Lockheed L-188CF, originally flown as *Uranus* with **KLM (Royal Dutch Airlines, N.V.)**, is acquired by the Transcarga division and is employed to operate European freighter services on behalf of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

A sixth DC-10-30 is also delivered during the summer and employed to enhance the carrier's European routes.

A consortium led by the Spanish flag carrier **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** purchases 35% minority shareholding on August 9 for \$145.5 million.

The arrangement marks the first large sale of a Venezuelan state asset to a foreign buyer and includes a management contract and comprehensive marketing agreement that features joint routes, code-sharing, joint frequent flyer programs, and schedule coordination. **KLM (Royal Dutch Airlines, N.V.)**, with which VIASA had so long associated, is the losing bidder.

Still, customer bookings decline 4.9% to 274,028. On a happier note, cargo climbs 3.2% to 60.61 million FTKs.

Company employment falls another 6.4% in **1992** as President Arturo Cardelus has charge of 3,350 employees. One DC-10-30 is removed as six B-727-256As are acquired from **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. These are placed into service on the Miami routes, replacing the chartered Airbus that are all returned to GPA.

Passenger boardings recover and increase by 25.6% to 465,236. Freight increases 47.5% to 102.54 million FTKs. Revenues for the year total \$317.7 million; however, a \$52-million loss is suffered.

In **1993**, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** appoints one of its local officials, Jose Campins, president and his workforce now totals 2,000, down a huge 40.3% from the previous year. Western Hemisphere destinations served from Barcelona, Caracas, Porlamar, and Maracaibo include Aruba, Bogota, Buenos Aires, Curaçao, Havana, Houston, Lima, Miami, New York, Quito, Lima, Rio de Janeiro, San Juan, São Paulo, Santiago, and Santo Domingo. Scheduled flights are also made to the European cities of Amsterdam, Frankfurt, Lisbon, London, Madrid, Milan, Oporto, Paris, Rome, Santiago de Compostela, and Zurich.

Winter charters are continued to Vancouver and Toronto and during the spring a new strategic plan is developed with emphasis on route rationalization. The Boeing trimotors acquired the previous year are employed to inaugurate new routes to Cartagena, Cancún, Aruba, and Margarita Island.

Statistics are only available through July, but these show customer bookings up 3.5% to 388,035. Cargo is down, however, by 2.9% to 85.5 million FTKs. In October, the company becomes the exclusive general sales agent for **Aerolineas Argentinas, S.A.** and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** in Colombia. The Spanish flag carrier also establishes a new cargo division to encompass the freight services of the three airlines in Latin America. Enplanements total 685,963 and the year's loss is \$16 million.

Airline employment skyrockets 79% in **1994** to 3,580 and the fleet now includes 5 each DC-10-30s and B-727-256As, as well as 2 leased Airbus Industrie A300B4s. The company begins to code-share with **Aerolineas Argentinas, S.A.** over a route from Buenos Aires to Caracas.

Customer bookings surge another 24.9% to 913,300, while cargo increases 42% to 183.84 million FTKs. Enplanements for the first 7 months of **1995** total 547,135.

The workforce is cut to 2,250 in **1996**. In honor of the Pope's second visit to Venezuela in February, VIASA unveils a new aircraft color scheme, modeled after Iberia's livery.

Customer bookings are only reported through July and show a 1.5% increase to 555,466. During the same period, 59.75 million FTKs are operated, a 15.1% boost.

In December, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** notifies officials of the Venezuelan government and VIASA that no more money will come to the South American carrier from Madrid until it puts a radical restructuring plan into effect. The Spanish partner proposes that VIASA withdraw from its more unprofitable routes, that 30% of the workforce be laid off (some 2,200 personnel), and that the remaining 70% have their wages frozen. In addition, restructuring costs should be assumed by the national privatization and investment body Fondo de Inversiones de Venezolanas (FIV), which owns 40% of VIASA.

The year's losses total \$30 million.

During January **1997**, the European Commission orders **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** to reduce its Latin American holdings as a condition for the company receiving another \$330 million in government capitalization. On January 17, following nearly a month of discussions, the FIV and VIASA employees reject Iberia's December plan; the Spanish withdraw their plan.

On January 23, VIASA's board of directors closes down the airline and sets February 8 as the date to decide upon the carrier's fate. Meeting at Madrid on January 28, officials from **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, the Venezuelan government, and VIASA agree on a plan to keep the partner going. The Venezuelan government will set up a special fund to take care of their carrier's expenses until a foreign operating partner can be signed up. Iberia, for its part, with convert \$30 million, about 20% of the money it is owned by VIASA into additional equity by taking over ownership of its fleet. It is also agreed that the Venezuelan airline will remain grounded until a new associate is

located and new labor agreements are signed. A rescue plan to save the financially troubled carrier appears near at hand.

On February 18, however, FIV Chairman Alberto Poletto announces that the nation will spend no more money on the airline, which lost \$45 million in 1996 and had accumulated debts of \$200 million. He also notes that the deal put forward the previous month does not preclude liquidating VIASA, particularly since it is now losing \$250 million per month, more than twice the figure estimated.

Now that the end is at hand, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** pays severance to VIASA's employees and agrees to write off its \$30-million stake in return for preservation of its rights to serve Venezuelan destinations.

During the first quarter, the **VASP (Viacao Aereas de Sao Paulo, S.A.)** joins with a local business group, Venezolana de Comercializaciun, in a consortium the purpose of which is to acquire VIASA from the government of Venezuela. Under terms of the plan, VdeC will take the majority 51% stake while VASP will provide 49% of the equity and receive a management contract and other considerations. The government also considers a tender from another group of local entrepreneurs, SkyVen.

VIASA is, in the end, allowed to fail. Its routes will be assigned to three other carriers during 1998 and three of the four DC-10-30s will be taken by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** for its use.

VIC TURNER, LTD.: Canada (1966–1971). Vic Turner establishes this charter operation at Dawson Creek in British Columbia in May 1966. Nonscheduled bush operations are undertaken with Cessna 185s and are maintained until the company is purchased by the Borek Construction Corporation in 1971. The new owner, like his predecessor, adopts a personal corporate identity as **Kenn Borek Air, Ltd.**

VICTORIAN AND INTERSTATE AIRWAYS (PTY.), LTD. (V&IA): Australia (1936–1948). V&IA is formed at Melbourne in the summer of 1936. Equipped with 2 Miles Merlins, it undertakes a daily Melbourne–Hay via Deniliquin service, adding mail on September 14. The route is maintained without change through 1937–1939, finally ceasing on August 24, 1940.

VIEQUES AIR LINK: P.O. Box 487, Vieques, Puerto Rico 00765, United States; Phone (809) 741-3266; Fax (809) 741-0545; http://www.vieques-island.com/val; Code VI; Year Founded 1965. This company is originally established by Oswaldo "Val" Gonzalez as the air taxi, charter, and air ambulance operation at Vieques, Puerto Rico, in October 1965. Revenue flights commence with a single three-place Cessna 172. Later in the year, a Piper Cherokee is purchased, with a second one following in 1966. The nonscheduled network is expanded to include flights to San Juan.

VAL is registered as a corporation on April 5, 1967. On July 7, 1968, the carrier places a Britten-Norman BN-2 Islander into service on new routes to St. Croix and Culebra. The Islander is the first of its type to operate in the Caribbean.

Charters are continued in 1969 and throughout the 1970s. Following the completion of Fajardo Airport in 1980, new flights are laid on from Fajardo to St. Thomas.

This small operator elects to convert its charter services into scheduled passenger flights to the U.S. Virgin Islands and Puerto Rico in early 1972. An application is made to the CAB and the company is certified in early May. Britten-Norman BN-2 Islander service begins before month's end. Destinations served from Gonzalez's base include San Juan, Humacao, and St. Croix.

Frequencies are continued during the next eight years. The only untoward incident during this period is a fatal accident at Vieques on December 19, 1977 when an Islander crashes, killing its five occupants. In 1980, President Gonzalez oversees a workforce of 40. A total of 70,904 passengers are flown in 1981, a figure that climbs to 81,919 in 1982.

The Caribbean's first Britten-Norman BN-2A Trislander joins the fleet in 1983. This year, customer bookings surge to 87,834.

By 1984, the fleet includes 6 Islanders, 1 BN-2A Trislander, and 2 Piper PA-32 Cherokees. En route from Vieques to St. Croix, Flight 910, a BN-2 with 9 aboard, crashes into the Atlantic Ocean on August 2; there are no survivors. Early in 1985, the company comes under FAA review for the previous year's crash and the inspection reveals an unlicensed pilot, overloading, record falsification, and various FAR violations. The findings lead in August to an emergency revocation of the company's operating certificate.

All of 1986 is spent in a successful recertification effort. Equipped with 9 Islanders, the 37-employee small regional is allowed to resume operations in 1987. Enplanements for the year total 119,709 and advance in 1988 to 123,124.

Hurricane Hugo destroys the company's entire fleet in 1989. Consequently, passenger boardings drop 14.3% to 107,720.

The 12-employee company's fleet in 1990 includes 12 aircraft: 2 Piper PA-23 Aztecs and 10 Islanders.

Passenger traffic not only stabilizes, but climbs by 16.7% to 125,714 passengers flown.

The fleet is reduced in 1991 by one Aztec and four Islanders.

Customer bookings inch up 1.4% to 127,482.

The employee population in 1992 stands at 32 as passenger boardings climb 11.1% to 141,654.

The fleet in 1993 includes 4 Islanders, 3 Trislanders, and 1 Piper PA-23 Aztec.

Customer bookings fall 17.9% to 116,245 and decline another 8.5% in 1994 to 106,391. Airline employment is 32.

There is no relief in 1995 as enplanements fall 8.2% to 97,775. The company's 7 aircraft transport a total of 90,216 passengers in 1996, another 7.7% decline.

President Gonzalez's fleet in 1997 includes 3 Islanders and 1 Aztec. Destinations visited include Fajardo, St. Croix, San Juan, and Vieques. Customer bookings fall another 10.9% to 79,732.

Flights continue in 1998. Late in the year, a homepage is opened on the Internet's World Wide Web. Passenger boardings fall another 15.9% to 67,000.

Although founder/owner Gonzalez remains in charge in 1999–2000, Francisco Cruz is now operations director. The gentlemen oversee a workforce of 71 employees.

VIETNAM AIR SERVICES COMPANY (VASCO): 114 Bach Dang Rd., Tan Binh District, Ho Chi Minh City, Vietnam; Phone 84 (8) 844-5999; Fax 84 (8) 844-5224; Code VS; Year Founded 1995. VASCO is set up at the former Saigon in 1995 to offer scheduled and charter passenger and cargo services to destinations in the southern part of the nation. Vu Ngoc Dinh is director general and he begins revenue services with 2 each Antonov An-30s and British Aerospace BAe Jetstream 31s.

VIETNAM AIRLINES: Gialiem Airport, Hanoi 10000, Vietnam; Phone 84 (4) 8732732; Fax 84 (4) 8272291; http://www.vietnamair.com.vn; Code VN; Year Founded 1989. Formerly known as **Hang Khong Vietnam/General Civil Aviation Administration of Vietnam**, this state carrier of the Socialist Democratic Republic of Vietnam adopts a new corporate image and livery and changes its name to a more manageable title in April 1989.

The fleet, repainted in a new blue and white livery complete with a flying stork tail logo, comprises 11 Antonov An-24s, 2 Boeing 707Fs, 2 An-26s, 3 Ilyushin Il-18s, 1 Tupolev Tu-134B, and 3 Yakovlev Yak-40s.

A commercial agreement begins in May between Ho Chi Minh City and Singapore in partnership with **Garuda Indonesia**. Six Tupolev Tu-134A-1s are purchased out of the wreckage of **Interflug (DDR German Airlines)**. Even in death, the East German carrier continues to provide, if only indirectly, aid to its longtime progeny.

In February 1990, the company, which has operated under auspices of the Defense Department for the past 15 years, is transferred to civilian

control. Joint flights commence in November with **Malaysia Airlines, Ltd. (MAS)** from Ho Chi Minh City to Kuala Lumpur.

While on final approach to Ho Chi Minh City on January 12, 1991, from a service to Bangkok, a Tu-134A-1 with 4 crew and 72 passengers suddenly loses height and lands hard, causing its left main landing gear to collapse. There are no fatalities.

While continuing to maintain its base at Hanoi's Gialam Airport, the company is formally separated from CAAV on April 1. Led by the chief of the directorate of civil aviation Khoang Igok Zieu, the carrier operates international passenger flights from Hanoi's Noi Bai Airport to Phnom Penh and Vientiane. Employing a Tu-134A-1, a twice-weekly roundtrip charter is flown between Ho Chi Minh City and Singapore on behalf of Singapore's Cassidy Company. A domestic trunk route is flown from Hanoi to Ho Chi Minh City.

Early in the year, the U.S. government, protecting its embargo on technology transfer to Vietnam, halts **Martinair Holland, N.V.'s** plans to wet-lease a Boeing 737-300 to the Southeast Asian airline. A similar agreement with **Trans-European Airlines'** Swiss charter subsidiary is also stopped. After two B-737-3Y0s are ferried to Ho Chi Minh City, **TEA-Basel, A.G.** is informed that basing the airliners in Vietnam would violate the embargo and the aircraft return to Europe. An Airbus A310-324 is wet-leased from Singapore-based **Region Air, Ltd.** Unhappily, it is soon out of service having been caught in a dispute over who should pay for repairs after it suffers an accident at Taipei.

Following U.S. government approval, the carrier is allowed to partially lease an **SAS (Scandinavian Airline System)** B-767-383ER in May, employing it to continue the European major's flights from Bangkok. Alternating on Wednesday and Friday, services are offered between the Thai city and Ho Chi Minh City and Hanoi, respectively. **Air France** President Bernard Attali visits Hanoi and signs a "protocol," under which the French airline agrees to help Vietnam Airline with aircraft leases.

On December 16, and in cooperation with **Cathay Pacific Airways (Pty.), Ltd.**, twice-weekly joint service, employing Cathay's Lockheed L-1011 TriStar 1s, is inaugurated from Hong Kong to Ho Chi Minh City and Hanoi. Cathay will also come to hold a 69% stake in Vietnam Air Caterer while VA will assume 60% shareholding in Cathay Pacific Catering Services.

Painted white, the pair of Boeing 737-3Y0s, blocked from entering service the previous year, are wet-leased from **TEA-Basel, Ltd.** again on February 15, 1992. They commence frequencies from a base at Bangkok, Thailand, with foreign flight crews in January and May, respectively. Orders are now placed for the company's first Western aircraft since the late 1970s: two Avions de Transport Regional ATR72-202s valued at \$20 million.

French President Francois Mitterand, accompanied by **Air France** President Attali, visits Hanoi; while there, the latter continues negotiations begun the previous year. As the result of strong demand, the shared route with **Cathay Pacific Airways (Pty.), Ltd.** is doubled in March.

In midyear, the **Region Air, Ltd.** Airbus is replaced for six months by one of the B-767-33AERs owned by and wet-leased from **Royal Brunei Airlines**. Painted white like the Swiss airliners, it is employed to operate services to Seoul and Taipei. In August, a code-sharing agreement is signed with **China Airlines, Ltd.** covering flights on routes from Taipei to Hanoi and from Kao-hsiung to Ho Chi Minh City.

While on a scheduled November 14 service, a Yak-40 with 6 crew and 25 passengers is caught in a thunderstorm and crashes near Song Trung (30 dead).

At year's end, the two Boeing freighters are sold. The first passenger traffic statistics reported in years are publicized and show a total of 752,301 passengers flown.

Nguyen Hong Nhi is director general in 1993, with Dao Manh Nhuong his deputy. A B-767-284ER is wet-leased from **Air France** in January, replacing the **Royal Brunei Airlines** unit. The ATR72-202s arrive under lease in February as a two-year operational and technical partnership agreement is signed with **Air France**, calling for the state

carrier of the nation's former colonial masters to invest heavily and to provide aircraft and technical and training support.

In addition to the Hong Kong and domestic Hanoi to Ho Chi Minh City route, the carrier undertakes scheduled international frequencies from the capital's Noi Bai Airport to Bangkok, Phnom Penh, and Vientiane. In July, a code-sharing and block-space agreement is signed with **Korean Airlines/Korean Air (KAL)** covering flights from Ho Chi Minh City to Seoul.

Continuing negotiations with **Air France** culminate in the formal August 31 signing of a cooperative agreement. Fifteen technicians and 29 pilots are sent out from Paris in September as the European megacrier assumes responsibility for the carrier's training, maintenance, and other services. With the arrival of three chartered A320-111s in Vietnam Airlines livery at Ho Chi Minh City's Tan Son Nhat Airport from Paris via Dubai and Bangkok, the pilots, on October 25, take over the company's regional routes.

At year's end, the entire An-24 fleet is withdrawn from service and placed into storage at Tan Son Nhat Airport.

Passenger boardings for the year swell 32.6% to 1,116,173 and cargo rises by 26%; a net \$4.3-million profit is banked.

The U.S. embargo is lifted on January 27, 1994 and the company begins to phase out its Russian-built equipment. The Swiss B-737-3Y0 lease expires in February; in the 25 months of operation, the 2 "Baby Boeings" have made 5,258 revenue flights. Configured slightly differently, two **Air France** A320-211s, also given Vietnam Airlines blue and white livery, arrive on February 26, along with 14 more French pilots. Members of Capt. Dominique Sauvat's team, which now numbers 35 pilots, 15 technicians, and 5 administrators, each are employed for 6 months.

On March 1, fares are increased by 16% and the company begins to phase out subsidies for local travelers on domestic flights.

A B-767-284ER is wet-leased during the month from Ansett Worldwide Aviation Services, Ltd. and employed to inaugurate services on routes to Australia and Moscow.

During the spring, Deputy Director General Dao Manh Nhuong becomes deputy director general of the Civil Aviation Administration of Vietnam (CAAV).

The first **Air France**-trained flight crews join the aircraft during the summer. At the same time, twice-weekly B-767 frequencies are launched to Paris and Berlin via Dubai. Negotiations continue with Japan for rights to fly into Tokyo. In early August, an agreement is signed with **Cargolux Airlines International, S.A.** at Hanoi as the two companies work to establish a joint partnership for air cargo services. Employing a Cargolux B-747F, weekly freight frequencies are initiated on August 8 between Ho Chi Minh City and Europe.

On the domestic front, the company now operates two ATR72-202s provide daily service to Hue from Ho Chi Minh City and five-times-per-week flights to the ancient Imperial capital from Hanoi; the turboprops also link Da Nang and Hanoi with Vinh.

Vietnam Airlines, having applied earlier, reluctantly settles for slots at the new Kansai International Airport at Osaka after being refused permission to fly a more lucrative route to Tokyo's overcrowded Narita Airport. Employing the B-767-284ER leased from **Ansett Australia, Ltd.**, Vietnam begins thrice-weekly roundtrips to Osaka from Ho Chi Minh City on November 2 in an effort to cash in on a growing interest in Vietnam among businessmen and tourists from Japan.

During the year as a whole, \$65 million is spent to upgrade the airline's facilities and ground equipment. Overall customer bookings increase 54% to 1.68 million. A profit in excess of \$20 million is reported.

In an article published in the *Vietnam Investment Review* on January 29, 1995, Deputy Director General Pham Ngoc Minh lays out the carrier's plans for the year. Chief among these will be an increase in ticket prices pegged to rising fuel costs, a reduction in the company's growth rate, and a restructuring of company management along the lines of regional competitor **Singapore Airlines, Ltd.**

Two more ATR72-202s are delivered during the month and in February, joining the two earlier units on domestic service. Passenger board-

ings accelerate 40% through June to 1,076,000. Two B-767-33AERs are chartered, one each from AWAS and one from **Royal Brunei Airlines**, and permit connections to be made from Hanoi to Singapore, Seoul, and Kao-hsiung. Plans are made to begin services from the former U.S. military base at Da Nang by the middle of 1996.

Direct roundtrip A320-214 flights between Hanoi and Seoul are doubled as frequencies become four times a week. **Korean Airlines/Korean Air (KAL)** and **Asiana Airlines, Ltd.** share rights on the routes.

Orders are placed for two Fokker 70s and negotiations are undertaken with **Air France** and Aerostar Leasing, Ltd., a division of Region Air (Pty.), Ltd. of Singapore, for the replacement of the A320s currently flown under wet lease with 10 more under dry lease.

The company begins its first international advertising campaign in August. Advertisements are taken out in regional trade magazines and as well as such mainstream Western publications as *Time*, *Newsweek*, *Economist*, and *Far Eastern Economic Review*.

In October, a block-seat pact begins with **Philippine Airlines (PAL)** on flights between Ho Chi Minh City and Manila. Expressing an interest in joining the Orient Airline Association, Deputy Director General Pham Ngoc Minh attends the group's meeting at Brunei in mid-month.

The company now also purchases blocks of seats for flights on services provided by **KLM (Royal Dutch Airlines, N.V.)**. By year's end, the company has spent \$1.7 million on advertising.

There is no change in the workforce during 1996. The two Fokker 70s enter service on VIP frequencies and regional flights into China and two more ATR72-202s, leased from **TAT European Airlines, S.A.**, begin domestic flights. In April, the carrier launches daily dual-designator flights with **Japan Air Lines Co., Ltd. (2)** between Ho Chi Minh City and Osaka (KIX).

The **Air France** wet-lease agreement expires in June and is not renewed. Instead, the company completes arrangements to dry lease a new fleet of 8, later 10, A320-214s from Aerostar Leasing Ltd. In addition, three B-767-324ERs are simultaneously chartered from General Electric Capital Aviation Services.

Having spent \$9.09 million since July to build a terminal and upgrade the runway and other facilities at Tuy Hoa Airport, a former military field in Phu Yen Province, Vietnam Airlines begins flying into the site on September 2. Also during the month, the company introduces a business-class upgrade program.

A new commercial agreement is signed with **Air France** in October. During the year, the company's \$3-million advertising budget is employed to push Vietnam as a tourist destination as well as to stress the airline's modern aircraft, appointments, and even its "charming ao dai-clad hostesses."

In addition, the carrier is reformed into a public corporation, which brings together several service companies, with the airline at its core. Henceforth, the enterprise is run by a seven-seat management board whose members are appointed by the prime minister. Phan Van Tiem becomes acting chairman, with Le Duc Tu as director general.

On December 16, as a result of a special image marketing program for the airline sponsored and developed by the Boeing Commercial Airplane Company without charge, Vietnam Airlines is able to introduce a new aircraft livery on one of its B-767-324ERs. Designed to symbolize the airline's dramatic progress towards world-class status, the bold design is built around the Lotus flower.

Enplanements for the year climb a welcome 18% to 2.5 million.

Two A320-214s enter service in February 1997, bringing the total number of this type on hand to ten. The two requested Fokker 70s are received the same month.

On August 26, the ANZ Investment Bank, Ltd., the investment banking division of Australia and New Zealand Banking Group, Ltd., signs an A\$15-million loan agreement with the airline.

En route from Ho Chi Minh City in southern Vietnam to Phnom Penh on September 4, Flight 815, a Tu-134B-3 with 6 crew and 60 passengers, strikes trees and crashes aflame into paddy fields just off the Cambodian airport as it attempts to land in downpours (65 dead). Most of the dead are

foreigners including South Koreans, Chinese, Japanese, Thais, Americans, and Canadians. The one survivor, a 5-year-old boy, dies in hospital.

The crash is the third air accident involving a Vietnam Airlines Tu-134 in the past 10 years. Local farmers are viewed rifling the pockets of victims and rummaging through the wreckage. They also steal the flight data recorder, but after appeals are made to Cambodian radio and television, the recorder will be returned two days later.

Although an investigation is launched into the cause of the crash, the company reveals the next day that it will continue to fly the four remaining Soviet-made Tupolev planes in its fleet because all of them are within their period of operational validity. This decision is short-lived and the final Soviet-made aircraft is grounded by the end of December.

The Asian currency and economic crisis of the year's second half has an impact upon company traffic. Still, an all-cargo marketing agreement is signed with **Korean Airlines/Korean Air (KAL)**.

Passenger boardings increase 2% to 2.59 million and 45,000 tons of cargo are transported. Still a 50 billion dong (\$3.6 million) loss is suffered.

Under terms of the dual-designator freight agreement with **Korean Airlines/Korean Air (KAL)**, Vietnam Airlines, on January 10, 1998, begins to place its two-letter code aboard KAL's weekly all-cargo service from Ho Chi Minh City to Seoul and beyond.

On January 13-14, representatives from Vietnam, Myanmar, Laos, and Cambodia meet to discuss a possible sub-regional air transport agreement. A code-sharing agreement is signed with **Qantas Airways (Pty.), Ltd.** on January 16.

On January 21, the carrier joins with **All Nippon Airways Company, Ltd. (ANA)** in announcing a cooperative connection service between ANA's Asian and VNA's Hanoi Network.

Under terms of their January 16 agreement, Vietnam and Qantas B-767s commence twice-weekly dual-designator return service from Ho Chi Minh City to Sydney and weekly to Melbourne on March 28.

The next day, the so-called "Tokyo-Hong Kong-Hanoi" connection is begun in cooperation with **All Nippon Airways Company, Ltd. (ANA)**. To help get around the inconvenience passengers suffer through lack of direct service between Tokyo and Hanoi, ground agents from both companies meet flights and guide customers to the transit counters.

A passenger code-share agreement is signed with **Korean Airlines/Korean Air (KAL)** on April 9. On April 29, Chairman Tiem is succeeded by Nguyen Sy Hung, while Director General Tu is succeeded by Dao Manh Nhuong, the CAAV official who had once been deputy director general.

Cambodian officials report on May 25 that the previous September's Tu-134 crash was caused by "the captain's psychological unreadiness to abort the landing."

To regain profitability, Vietnam Airlines, in May and June, suspends services to Manila and other money-losing destinations, halves its roundtrips to Seoul, and institutes a cost-cutting plan that includes the use of smaller-capacity aircraft. In addition, one (later two) of the retired Tu-134Bs is put back into service to transport cargo on domestic and international routes.

Suspended earlier, weekly return flights resume on August 31 between Ho Chi Minh City and Manila.

The national newspaper *Thanh Nien* (Youth) begins a four-part expose of the airline on September 9, reporting on its mismanagement under former Director General Tu and allegations that \$2.2 million has gone missing due to ticket irregularities in Canada. Airline officials, which indicate that an internal audit is underway, request a halt to the series. The newspaper's editors, in light of the Communist Party's calls for an end to graft, refuse.

While taking off from Ho Chi Minh City for Osaka on September 12, a B-767-324ER with 7 crew and 188 passengers encounters engine problems, aborts, and veers off the runway. All aboard evacuate down slides and no injuries are reported. Another B-767-324ER is tasked to complete the Japan service on September 14.

A new Vietnam-France agreement is signed on September 21 between the CAAV, SNECMA, Vietnam Airlines, Hanoi and Ho Chi Minh City

Universities of Technology, and the Poitiers Ensma National and Mechanical High School. Under its terms, PEN&M will assist the carrier in years to come with on-scene training of its aviation technicians.

On October 26, new direct B-767-324ER service is introduced from Hanoi and Ho Chi Minh City to Moscow. The historic stop in Dubai is eliminated, saving upwards of 3 hrs. flying time.

As a result of the continuing Asian economic crisis, traffic this year is down. Customer bookings fall 4.7% to 2.48 million and 40,300 tons of cargo are operated.

Airline employment in 1999 stands at 5,700. The unprofitable weekly service from Ho Chi Minh City to Moscow via Hanoi, is suspended on May 5. On May 27, a third weekly roundtrip is started to Sydney.

Although the company has spent \$2 million to make the carrier Y2K ready, a spokesman, on June 21 reveals that it will stand down on the afternoon of December 31 just to make certain there are no problems.

In September, the company hosts the 35th Conference for Directors of Asia-Pacific Civil Aviation and, in December, a new Golden Lotus Plus frequent-flyer program is launched.

Passenger boardings jump 6% to 2.6 million, while 69.45 million FTKs are operated.

Airline employment at the beginning of 2000 stands at 6,200, an 8.8% increase over the previous 12 months.

The carrier inaugurates its second Cambodian route on January 7, flying five-times-a-week return service from Ho Chi Minh City to Siem Reap. The airline is the first foreign carrier to take advantage of the new Cambodian "open skies" policy and bring tourists to the site of the Angkor temples.

On January 21, the company is awarded, effective in 2002, a landing slot at Tokyo's Narita Airport. Five-times-a-week return service from Ho Chi Minh City to Siem Reap begins on February 16.

With the implementation of the summer schedule on March 26, several weekly frequencies from Ho Chi Minh City are expanded: to Osaka Kansai from 3 to 4, to Phnom Penh from 18 to 21, to Siem Reap from 5 to 14, and to Hong Kong from 1 to 2.

A total of 18 additional return flights a week are added from Hanoi and Ho Chi Minh City to the former imperial city of Hue on April 8 in order to accommodate visitors to the Hue Festival 2000, which ends on April 18.

An air service agreement is signed between the governments of Vietnam and Mongolia on July 1. A code-sharing agreement is signed with **China Southern Airlines Company, Ltd.** on July 26 providing for dual-designator service from Guangzhou to Ho Chi Minh City. Two days later, twice-weekly A320-214 nonstop roundtrips is initiated from Ho Chi Minh City to Guangzhou; the flights complement the thrice-weekly service to the Chinese city from Hanoi.

Quoting the French AFP news agency on August 21, the BBC reports that Vietnam Airlines has banned the nation's famous *nuoc mam* fish sauce from its flights because of its pungent smell. The crackdown has been ordered after a bottle broke during a flight leading to many complaints from foreign tourists.

Government approval is received and orders are placed on September 19 for three new ATR72-520s; the turboprops will be delivered one per year into 2004. A B-767-33AER is chartered from **Royal Brunei Airlines** on September 30. It wears full Royal Brunei livery with Vietnam Airlines titles.

The first ATR72-520 is received on October 8.

Twice-weekly A320-214 return service between Hanoi and Seoul is resumed on October 29, along with thrice-weekly roundtrips between Ho Chi Minh City and the South Korean capital. On October 31, the weekly return frequency between Ho Chi Minh City to Melbourne is doubled.

On November 1, thrice-weekly Fokker 70 return frequencies are started from Hanoi to Phnom Penh via Vientiane. The thrice-weekly return service is part of a "Trans-Indochina" service that now links Hanoi, Vientiane, Phnom Penh, and Ho Chi Minh City with nonstop flights.

Code-shared with **Japan Air Lines Company, Ltd. (2)**, direct twice-weekly return service is initiated on November 2 from Tokyo (NRT) to

Ho Chi Minh City on November 2. At the same time, the six-times-a-week roundtrips from Ho Chi Minh City to Osaka (KIX) become daily.

All flights, both domestic and international, become no smoking on November 15.

On November 22, Vietnam Airlines signs a \$480-million order for three B-777-200ERs and renews the lease of the three B-767-324ERs it has been operating since 1995.

When **Sobelair, S.A.** receives a new wide-body on November 30, the lease of its older B-767-228ER, which is owned by Ansett Worldwide Leasing, is transferred over to Vietnam Airlines the next day. The plane enters service early in December.

Overall passenger boardings for the year rise 5% to 2.5 million. Revenues jump 12% to VN\$8.3 billion and a pretax profit of VN\$464 million (\$32 million) is realized.

VIF AIRWAYS, LTD.: 6-3-668-17, 100-2-102 Punjagutta, Hyderabad, 500582, India; Phone 91 (40) 310 878; Fax 91 (40) 313 836; Year Founded 1993. VIF Airways is founded at Begumpet Airport at Hyderabad in 1993 to offer scheduled third-level commuter services throughout southern India. An order is placed for five Dornier 328-110s, the first of which arrives at New Delhi on March 29, 1995.

Once the plane, christened *Subuhi*, has been ferried down to its new base and familiarization has been completed, the company inaugurates flights to stops in the states of Andhra Pradesh, Timi Nadu, and Kamataka, including the city of Bombay.

Three more German turboprops enter service during 1996 and the number of markets visited is increased. Flights continue.

VIKING AIR LINES: United States (1947–1950). Viking is set up at Los Angeles by Jack Lewin and Ross Hart in 1947 to provide transcontinental passenger charters. Douglas DC-3 revenue flights commence from California to New York. Within two years, the company also adds a Curtiss C-46 Commando, which is employed to operate irregular cargo flights under the name Oxnard Air Freight.

In January 1950, Viking is merged into the North American Airlines Agency, which is also known as **North American Airlines (1)**.

VIKING AIRWAYS: United States (1964–1970). On February 24, 1964, Thomas Corwin establishes **Travel Air Service** on Block Island to provide on-demand air taxi flights to Westerly, Rhode Island. During the fall, Corwin elects to begin scheduled air taxi flights from a base at Westerly. Equipped with a Cessna 402 and a Piper PA-23 Aztec, the renamed commuter inaugurates daily roundtrips on December 27 to Block Island and Newport.

Operations continue apace during the next six years, during which time the fleet is upgraded by the addition of a Britten-Norman BN-2 Islander. Services end in June 1970.

VIKING INTERNATIONAL AIRLINES: United States (1969–1993). VIA is formed at Minneapolis (MSP) in 1969 as a scheduled all-cargo commuter airline. Employing a fleet that comes to include 2 Douglas DC-3s and 5 Beech 18s, the carrier inaugurates flights linking its base with Chicago. Contract and charter services are also available. Operations between the two Midwestern cities continues apace during the remainder of the decade and into the 1970s.

An SC-7 Skyvan, with a single pilot, crashes while on final approach to the airport at La Crosse, Wisconsin, on April 14, 1972; the plane is destroyed and flyer killed.

By 1975, cargo traffic operated totals 677,000 FTKs.

Airline employment in 1976 stands at 50. Bill Ramsey is now appointed president, with Jim Leither as vice president-general manager. Application is made for route expansion and plans are made to purchase turboprop aircraft. Cargo increases by 8% to 735,000 FTKs. In 1977, service is inaugurated from Minneapolis (MSP) and Chicago to Cleveland, St. Louis, Cincinnati, and Kansas City.

Operations continue apace in 1978 and 1979. In 1980, the Minneapolis-based cargo commuter operates 3.95 million FTKs.

The fleet in **1981** includes 6 Beech 18s and 2 Convair CV-600s; many new routes are added early in the year.

Cargo traffic skyrockets 70% to 13.19 million FTKs.

The success of the previous year causes a need for additional capacity in **1982** and consequently, five Beechcraft are sold and replaced by two Convair CV-640s.

Freight climbs again, jumping 33.7% to 17.64 million FTKs.

Flight services continue apace in **1983–1985**.

While climbing away from Chicago (ORD) on September 28, **1986**, a Beech 18 experiences engine problems and attempts to return to the airport. Unable to maintain altitude, the freighter, about one mi. SE of the runway, strikes the roofs of two family-type residences, strikes two garages, and ground impacts, hitting the rear area of a third residence and breaking into fire. The pilot is killed and the aircraft is destroyed.

Service is conducted without incident in **1987–1988** and by **1989**, the fleet includes two leased CV-640Fs and two CV-600Fs. That number is cut in half in **1990** and remains the same in **1991**. During the latter year, the Minnesota airline seeks government permission to begin scheduled DC-9-51 flights between Las Vegas and Laughlin/Bullhead City.

The fleet in **1992** includes 2 chartered CV-600Fs, 2 leased CV-640Fs, and 1 each DC-9-14 and DC-9-15. The company's certificate is purchased in December by Gene Yamagata, CEO of Yamagata Holdings. In **1993**, the carrier is renamed **Eagle Airlines (4)**, doing business as **Viking International Airlines**. Formerly operated by **Delta Air Lines**, a DC-9-32 is acquired in early **1994** as VIA completes its upgrade from a public charter company to a fully certified airline.

VIKTORVIEI AVIAKOMPANIYA VIA VIKTORIE: Russia (1994–1996). VAVV is set up at Mosfilmovskaya in **1994** to offer long haul passenger and cargo charters. S. B. Zelbin is appointed general director and he launches revenue services with 3 Ilyushin Il-76s and 2 Tupolev Tu-154Ms. Flights continue until **1996**.

VILLAGE AIRWAYS (1): United States (1969–1971). VA-1 is set up at West Chicago, Illinois, in **1969** to provide scheduled services (primarily mail and cargo, but occasionally passenger) linking its base with Omaha, Milwaukee, and International Falls. Beech 99 revenue flights begin and continue until **1971** when the company is reformed and renamed **Federal Airlines**.

VILLAGE AIRWAYS (2): Philippines (1970–1981). This all-cargo operation is formed at Manila Domestic Airport in September **1970**. Equipped with a fleet of 3 Douglas DC-3s and 1 Piper PA-32 Cherokee Six, the carrier undertakes nonscheduled charter flights from Manila to Cebu, Bacolod, Iloilo, Roxas, Kalibo, and Tacloban.

During the next eight years, President Rodolfo A. Villaflores also undertakes domestic and international passenger charters. Faced with significantly higher costs (led by radical fuel price increases) and world recession, the carrier is forced to cease operations in **1981**.

VILOCITY AIRLINE (VIKTORVIEL A/K): Mosfilmovskaya Str 176, Moscow, 117330, Russia; Phone 7 (095) 217-4472; Code VKT; Year Founded 1995. Velocity is established at Moscow in **1995** to offer domestic cargo charters. Revenue flights begin and continue with a pair of Ilyushin Il-76TDs.

Although it is understood that this carrier continues to operate in the period after the beginning of the August **1998** Russian currency crisis, no definite information has been located to that effect.

VINCENT AND GRANADA AIR, LTD.: P.O. Box 39, St. Vincent, St. Vincent and the Grenadines; Phone (784) 457-5124; Fax (784) 457-5077; http://www.svgair.com; Code SVD; Year Founded 1999. On November 14, **1999**, **Airlines of Carriacou, Ltd.**, based at St. George's, is taken over and is merged with **SVG Air, Ltd.**, with the latter owning 75% shareholding. Under the direction of SVG founder Martin Barnard, the new **Vincent and Granada Air, Ltd.** almost immediately resumes services from Granada to Carriacou and Union Island

with Airlines of Carriacou's 3 Britten-Norman BN-2 Islanders. It also continues to operate its previous SVG flights with 1 each Islander and Rockwell Aero Commander 500S.

Scheduled destinations visited at the beginning of **2000** include Barbados, Bequia, Canouan, Carriacou, Grenada, Mustique, St. Vincent, and Union Island.

VINTAGE AIR TOURS: United States (1992–1994). Richard Branson, owner and CEO of the British independent **Virgin Atlantic Airways, Ltd.**, establishes Vintage at Orlando in late fall **1992** to offer nostalgic day flights to Key West. Employing 2 Douglas DC-3s in red and white livery, christened *Eve* and *Amelia*, refurbished to 1940 configuration, Vintage begins revenue charter operations from Orlando in December.

To add even more authenticity, pilots and flight attendants dress in period costume, World War II era magazines are in reading racks, and swing music from the big band era is piped in. Kevin Greene is general manager on behalf of the airline's management firm, Pelican Express.

The company is transferred to a new base in January **1994**. Regularly scheduled \$129 roundtrips to Fort Lauderdale from the Jet Center, near the Fort Lauderdale, take up where the unsuccessful Orlando service had ended. Plans are announced for possible expansion into the Caribbean.

Financially strapped, the carrier stops flying on November 1. Charters are offered until the two Douglas transports, which had cost \$500,000 apiece to refurbish, are sold.

VIP AIR, LTD.: Hamilton Airport, Hamilton, New Zealand; Phone 64 (7) 843-6530; Fax 64 (7) 843-0542; http://infosys.co.nz; Year Founded 1995. VIP Air is established at Hamilton Airport in **1995** to provide nonscheduled passenger charters to points throughout New Zealand. Employing six pilots, the company's fleet consists of 1 each Piper PA-32-350 Navajo Chieftain and PA-23 Aztec and revenue operations are undertaken to over 50 destinations.

Points served this year and in **1996–1999** include Invercargill, Dunedin, Timaru, Christchurch, Hokitika, Nelson, Wellington, Palmerston North, Napier, Gisborne, New Plymouth, Auckland, Whangarei, and The Bay of Islands.

VIP AIR (SERVICIOS AEREOS, S.A.): International Airport Don Torcuato, Buenos Aires, C.P. 1611, Argentina; Phone 541-748-7700; Fax 541-748-7700; http://www.geocities.com/~vipair; Year Founded 1996. VIP Air is established at Buenos Aires in **1996** to provide executive and small group passenger charters, cargo flights, aerial photography, and air ambulance work. Revenue flights begin and continue with a fleet of three Beech King Air 100s.

VIPAIR AIRLINES: Zheltoksan Str. 112, Almaty, 480091, Kazakhstan; Phone 7 (3272) 399655; Code 9V; Year Founded 1995. Vipair is established at Almaty in **1995** to operate passenger charters to regional destinations, as well as to Moscow. Revenue flights begin and continue with a pair of Tupolev Tu-154Ms.

VIRGIN AIR: United States (1970–1993). Paul and Margaret Wilkander form Virgin Air at St. Thomas, U.S. Virgin Islands, in the first week of December **1970** to offer scheduled Piper PA-23 Apache flights to St. Barthelemy in the French West Indies. Revenue service begins on December 19.

Operations continue apace during the remainder of the decade and by **1980** the company has grown to support a fleet of 2 Douglas DC-3 and 2 Beech 18s used as freighters and passenger equipment comprising 1 Cessna 402B, 3 Piper PA-23 Aztecs, and the original Apache. Much of the business now consists of all-cargo charter flights to various Caribbean destinations, particularly in the Leeward Islands.

Meanwhile, the passenger business increases as daily service is inaugurated to San Juan, Puerto Rico. Enplanements in **1981** total 4,999 and rise to 5,446 in **1982**. The workforce now totals 10 employees. Largely unaffected by recession or other difficulties plaguing other U.S. small regionals, Virgin Air maintains services without significant change over

the next seven years. In 1989, President Paul Wilkander's fleet includes 3 Beech 18s, 1 DC-3, 1 Cessna 402B, 3 Aztecs, and the Apache.

Much of the all-freight charter operation is discontinued in 1990 and the DC-3, two Beech 18s, and the Apache are withdrawn in favor of the addition of four more Aztecs. The upgrade in passenger services results in the need to add a Pilatus-Britten-Norman BN-2 Islander in 1991. A second C-402B joins the fleet in 1992 as two Aztecs and the last Beech 18 are retired.

In December 1993, a long-standing trademark/name infringement and unfair competition suit against the U.K.'s **Virgin Atlantic Airways, Ltd.** is settled out of court. Under terms of the settlement, the American regional agrees to drop its charges and receive \$30,000 to be employed in changing its brand to **Air St. Thomas**.

VIRGIN ATLANTIC AIRWAYS, LTD.: Ashdown House, High Street, Crawley, West Sussex, England, RH10 1DQ, United Kingdom; Phone 44 (1293) 562 345; Fax 44 (1293) 561 721; <http://www.fly.virgin.com>; Code VS; Year Founded 1982. Founded originally in 1982 as **British Atlantic Airways, Ltd.**, the new carrier proposes to establish a scheduled service between the U.K. and Falkland Islands and from London (LGW) to New York. When the CAA refuses to grant a license, the enterprise is almost immediately sold, receiving a name change upon its sale. The shareholding is now divided between Richard Branson's Virgin Group, Ltd. (75%) and Randolph Field's Field Investments, Ltd. (25%).

Branson is chairman with Roy Gardner as managing director. Branson, in an April 1998 interview in *Success*, reveals that he sought out Sir Freddie Laker at this point to seek his advice on how to compete with **British Airways, Ltd.** (2). Laker suggests that Branson use himself to promote his new entrant.

A Vickers Viscount 800 is obtained and in 1983 scheduled flights are inaugurated from London (LGW) to Maastricht. Chairman Branson is along on the first flight, dressed as a hobo.

Many such publicity gimmicks later, the British press will use the term *Bransonesque* to describe flamboyant entrepreneurs.

CAA and U.S. CAB approval for low-fare transatlantic service is received in March 1984 and daily London (LGW)–Newark (serving New York) flights begin on June 22, with a lone Boeing 747-287B, the *Maiden Voyager*, acquired for £20 million from Boeing, which had had it repossessed from **Aerolineas Argentinas, S.A.**

The initial standard weekday fare is \$166 one-way, including meals and luggage, for the economy class that Branson had originally wished to label Riff-Raff Class. During the inaugural flight, Chairman Branson is clad in a dress-style pilot's uniform—with leather helmet and goggles. In November, a daily connecting flight is offered from London to Maastricht; it is flown by the British Aerospace (BAC) 1-11-432 *Island Esprit* leased from **British Island Airways, Ltd.** Traffic data is not released.

Kazoo player Barbara Stewart entertains passengers on the January 8, 1985 flight from Newark to London in response to CEO Branson's offer of free fare for performing musicians. Still, low traffic forces a cut-back to twice-weekly flights in February. Meanwhile, the tour operation, Virgin Holidays, is established. On March 1, it is reported that \$4.3 million has been lost since start-up.

In August, the daily roundtrip feeder route between London (LGW) and Maastricht in Holland, employing a wet-leased BAC 1-11-400 in modified Virgin colors, is taken over by **British Air Ferries, Ltd.**

Daily service is resumed in the summer and 217,332 passengers are flown on the year by the carrier's lone Jumbojet.

On January 31, 1986, a second B-747-200, the *Dash-243B Scarlet Lady*, is acquired. The BAC is replaced in the spring on the Holland route with a Vickers Viscount 806, *The Maastricht Maiden*. The BAF turboprop also begins flying to Maastricht from London (CTN). The privately owned carrier is taken public, with 35% of its stock sold to the public. In August, Virgin Atlantic joins the **Continental Airlines** TravelBank frequent flyer program.

Extra flights on both the Newark and Miami runs to London are added in late September. In December, a CAA application for a London–Charlotte, North Carolina, route, filed earlier, is withdrawn and replaced by one for London–Boston service, with London–Raleigh/Durham as secondary choice.

Enplanements for the year total 86,733; however, a loss of \$2.1 million is suffered.

In 1987, in a move that dramatically increases its business, the 441-employee carrier begins flying to Miami. Early in the year, Per Lindstrand and CEO Branson make a successful balloon flight eastward across the Atlantic Ocean. A second Viscount 806, *Dublin Lady*, is wet-leased from **British Air Ferries, Ltd.** and employed to launch services in June from London (CTN) to Dublin. Applications are filed to service a number of routes formerly operated by **British Caledonian Airways, Ltd.** (BCAL).

Custom built by Thunder & Col, Ltd. of Shropshire, a hot-air balloon in the shape of a Boeing 747 is flown during the 16th Albuquerque International Balloon Fiesta, October 3–11. At year's end, a contract is signed with the new Irish airline **Club Air, Ltd.** to operate a B-727-46 over the Dublin–London (CTN) route.

Passenger boardings jump 74.4% on the year to 338,800 and net gain totals \$9 million. The first profit, \$7.8 million, is generated.

Early in 1988, plans are made to inaugurate new services from London (LGW) to Los Angeles and on March 26, charter flights to Orlando begin, along with a London (CTN) to Maastricht scheduled route. During the spring, a maintenance base is opened at London (LGW). In May, the carrier elects to postpone the start-up of its Los Angeles service because **British Airways, Ltd.** (2) flies the same route. When **Club Air, Ltd.** goes bankrupt in June, Virgin turns once again to **British Air Ferries, Ltd.** to operate its feeder service from London (CTN) to Dublin.

In August, authority is received for a Tokyo service. In September, daily through-service is inaugurated from Newark, Miami, and Orlando to Dublin. Through September 30, weekend-only standby fares to the U.K. from London and Miami are offered at \$259 and \$299, respectively.

With public interest in investment lagging, chairman Branson now takes his company private.

Customer bookings climb 38.4% to 556,653 and revenues jump 24.8% to \$131 million. A net profit of \$16.1 million is earned. VA is now Britain's second leading long-haul airline after **British Airways, Ltd.** (2).

A one-way London to Newark and Newark to London \$99 fare is offered during January and February 1989. Also in January, an interline agreement is signed with **Air U.K., Ltd.** The London (LGW) to Maastricht route, operated with **British Air Ferries, Ltd.**, is closed down in March. At the same time, the Irish arrangement with BAF is also cancelled and is turned over to new entrant **Capital Airlines, Ltd.**

A \$395 roundtrip fare is introduced through June 15 for senior citizens flying between London and the U.S. Thrice-weekly service is started in May to Tokyo (NRT) via Moscow and in July, Chairman Branson, in a \$310,000 decision, bans all cigarette advertising and sponsorship from his airline. Simultaneously, plans are announced for the initiation of services from the U.K. to Australia.

On August 1, passenger flights begin from London (LGW) to New York (JFK). Daily all-cargo frequencies begin from London (LGW) to New York (JFK) on August 30 with a B-747-212F acquired from **Singapore Airlines, Ltd.** The Japanese group Fujisankei takes a 25% stake in the airline's parent, Virgin Group, in October.

Passenger boardings during the 12 months decline by 4.4% to 532,000. Revenues swell 9.9% to \$144 million, but costs also rise, causing net profit to fall to \$11.2 million.

Now owned by Voyage Travel Holdings, the British independent reduces its workforce by 2.2% in 1990 to 1,300. Authority is won to operate from London (LHR), but the daily London–Maastricht flights, flown by **British Air Ferries, Ltd.** under contract, cease in January. The B-747-123 *Miami Maiden* is delivered in March.

The fleet is also increased by the addition of two more B-747-212Bs. Christened *Maiden Japan*, the first arrives in April and begins flying to Tokyo (NRT) on May 5. On May 16, daily London to Los Angeles flights commence; in conjunction with the new market, the carrier begins participation in the FlightFund frequent flyer program of **America West Airlines**.

Two days later, on May 18, five flights are added to the six weekly frequencies between London (LGW) and Newark. During the summer, four-times-per-week frequencies are introduced to Miami and four times to Tokyo (NRT) via the U.S.S.R. Three-times-per-week charters are also flown from London to Orlando.

Beginning in late June, **Dan-Air/Dan-Air Services, Ltd.** and **Air U.K., Ltd.** join with the carrier to provide deep discount airfares within the U.K. for Virgin's transatlantic passengers. During the month, fiscally distressed **Capital Airlines, Ltd.** ceases operations, thereby ending its Irish arrangement with Virgin.

The year's second added Jumbojet, *Maid of Honour*, is delivered in August. For a three-month trial period beginning in October, passengers to Los Angeles are able to complete immigration procedures before departing the U.K. The opportunity exists as the result of successful negotiations with the U.S. Immigration and Naturalization Service.

Enplanements for the year rise to 569,780 and a total of 129.17 million FTKs are operated. Revenues balloon 95% to \$388.7 million, but net profit slips to \$15.8 million.

Thirty new workers are hired in **1991**. The B-747-238B *Boston Belle* is received in February and begins daily London to Boston service in April. The B-747-238B *California Girl* arrives in May and on July 1, it commences flights from London (LHR) to New York (JFK), Los Angeles (LAX), and Tokyo (NRT).

Passenger boardings accelerate 21% to 915,436 and freight is up by the same percentage to 204.65 million FTKs. Although revenues boom upward 37% to \$433.6 million, expenses do better. As a result, the operating loss is \$15.8 million and net loss totals \$5.2 million.

Airline employment increases 103% in **1992** to 2,700 and the all-Jumbojet fleet now includes the 2 B-747-212Bs *Maiden Japan* and *Maid of Honour* and 2 B-747-238Bs *Boston Belle* and *California Girl* and 1 each B-747-123 *Miami Maiden*, B-747-243B *Scarlet Lady*, B-747-283B *Shady Lady*, and B-747-287B *Maiden Voyager*.

During January and February, Virgin becomes the first airline to carry infant safety seats specifically designed and tested for air travel; provided at no extra charge, they must be reserved at time of booking. Chairman Branson pledges the \$1 billion proceeds from the March cash sale of his Virgin Music Group to airline expansion. The company in April sues **British Airlines, Ltd. (2)** for alleged unfair practices, including the clandestine recruitment of passengers at VA gates.

New services are inaugurated to Orlando and Johannesburg. An alliance is signed with **Midwest Express** providing for code-sharing flights via Boston to Milwaukee.

Customer bookings swell 13.3% to 1,232,983 and cargo climbs 10.1% to 271.93 million FTKs. Revenues grow to \$527,615.

Chairman Branson and joint Managing Directors Roy Gardner and Syd Pennington oversee a workforce of 2,457 in **1993**. Orders are placed for four B-747-4Q8s. **British Airways, Ltd. (2)** agrees to settle an estimated \$3 million libel suit filed by Chairman Branson by admitting on January 11 that it made improper attempts to undermine its upstart rival; Virgin is awarded £610,000 (\$945,000) in damages and court costs. After a public apology, the state line's chairman, Lord King, resigns on February 5. Negotiations between the two airlines now bring a compensation offer of £9 million (\$12.6 million) from BA and a demand that Virgin pledge not to raise past disputes in future proceedings.

The feud between the two airlines reignites on March 20 after efforts collapse to settle allegations by Virgin that BA employed "dirty tricks" to lure away the independent's passengers. Branson turns down **British Airways, Ltd. (2)**'s compensation plan, refuses to take the BA pledge, and calls for special inspectors to be appointed, under the Companies Act, to learn the facts behind the "dirty tricks" campaign.

Branson's request is enlarged by members of the opposition Labour Party into a demand for an investigation into BA's "fitness to operate"; however, the call is turned aside by U.K. Transport Secretary John MacGregor. A code-sharing agreement is signed with Athens-based **South East European Airlines, S.A.** under which the latter's aircraft, painted in modified Virgin livery, begin Athens to London feeder flights on March 29.

Branson joins with Airbus Industrie Managing Director Jean Pierson in early April to announce, at BA's home base at London (LHR), a £300-million (\$445-million) order for the lease-purchase of four A340-311s. In light of the state carrier's decision to purchase the Boeing 777, Chairman Branson delights in pointing out that Virgin will be the first U.K. airline to acquire the A340. Simultaneously, but separately, the company agrees to lease two B-747-400s from ILFC during the next year.

The carrier challenges **Continental Airlines'** Business First Service advertising in an April 11 letter to the National Advertising Division of the U.S. Council of Better Business Bureaus. On May 6, Branson's enterprise files suit against BA in High Court, London, contending that the flag carrier tapped into Virgin's reservations system for information, following what he calls a smear campaign. BA files a statement of regret. The ultimate airport lounge, "Clubhouse," is opened at London (LHR).

The quarrel heats up again on July 12 when the newcomer accuses the pioneer of hindering competition by paying kickbacks to travel agents and corporate clients. On October 21, Virgin files an antitrust suit against BA in U.S. Federal District Court, Manhattan, seeking \$325 million in damages; Chairman Branson admits he wishes to block BA's efforts to extend its global alliance with **USAir**.

Chairman Branson takes back complete control in November when he purchases the 10% shareholding, for \$65 million, held by Seibu Saison. Also in November, the first A340-313 is delivered, one of 20 originally requested by **Northwest Airlines**.

The premier A340-313 is the subject of a media event in December. Chairman Branson, wishing to honor the Duchess of Windsor and his female flight attendants, who wear red uniforms, turns the occasion into a royal ceremony when Princess Diana officially christens the aircraft *Lady in Red*.

Among those participating in the event is singer Chris de Burgh, who performs his hit version of "Lady in Red." Late in the month, the Irish feeder subsidiary **CityJet, Ltd.** is established at Dublin and the second A340-311, *Maiden Toulouse*, arrives from the builder's plant at Toulouse. Passenger boardings for the year decline to 1,226,000 but revenues increase 9.5% to \$583 million.

The workforce is cut to 2,300 in **1994** as the company's tenth anniversary is celebrated. The remainder of the aircraft orders will be delivered this year, painted in the latest version of the company's red livery. They will be the first Virgin aircraft to display full fuselage titles.

Travelers bound for London aboard a B-747-238B *Shady Lady* on January 9 spend 13 hours on the Jumbojet in frigid outside temperatures, snow and sleet, unable to leave New York (JFK) except for one brief flight that has to be called back.

The code-sharing arrangement sealed with Dublin-based **Cityjet, Ltd.** takes effect on January 10 as this regional, which has painted its two leased British Aerospace BAe 146-200s in Virgin colors, begins service from Dublin to London (LCY).

After initial service on the London to Boston route, the A340-311 *Lady in Red* inaugurates the company's new roundtrip service from London (LHR) to Hong Kong on February 21. The third A340-313, *China Girl*, arrives at month's end.

A code-sharing agreement is signed with **Delta Air Lines** on April 12, effective in or before January 1995, giving the American major access to London (LHR) by the process of purchasing blocks of seats on VA flights to London; the two carrier's also agree to share frequent-flyer benefits.

Flights from Boston, New York, Newark, Los Angeles, San Francisco, and Orlando will be displayed as **Delta Air Lines** flights in U.S. reservations systems and Virgin is guaranteed \$150 million in revenues by the Atlanta-based giant under the accord.

The carrier's lone A320-231, *Spirit of Melina*, is delivered in April and is placed in service from London (LHR and LGW) to Athens. Also during the month, the first leased B-747-4Q8, *Lady Penelope*, arrives from Washington.

Beginning on May 18, the carrier adopts a "greener" image, with special green-clad flight attendants teaching crews and passengers the benefits of recycling in-flight disposables. The *Lady Penelope* commences services to San Francisco from London (LHR) on May 21. Chairman Branson, wearing a black-and-white horizontally striped prisoner's costume with the number "Virgin 747," is aboard. CAA approves the code-sharing arrangement with **Delta Air Lines** on the last day of the month.

En route from Tokyo (NRT) to London (LHR) on September 19, the A340-313 *China Girl* suffers cockpit-computer software failures that cause loss of both pilots' map displays and fuel misreadings. Nearing London, the crew declares a fuel emergency and the Airbus lands safely after a hand-flown surveillance-radar approach with 4.5t of fuel remaining.

The fourth A340-311, *Dragon Lady*, is delivered in October, along with the B-747-4Q8 *Tubular Belle*, and the code-sharing and block-space agreement with **Delta Air Lines** takes effect on November 1 allowing flights through London (LHR) for U.S. originating traffic.

The B-747-212B *Maiden Japan* is withdrawn in December while the B-747-136 *Miami Maiden* is rechristened *Spirit of Sir Freddie*, in honor of British aviation pioneer Sir Freddie Laker. The Jumbojet is the first VAA aircraft to appear in the company's revised livery, the main features of which include removal of the cheatline and the addition of bright red engine cowlings (nicknamed BRTs or "Big Red Things").

The year's customer bookings jump 39% to 1,703,600.

Airline employment is increased by 4.3% in 1995 to 2,400. On January 3, Federal District Judge Miriam Goldman Cedarbaum, at New York City, refuses to block the carrier's lawsuit that charges **British Airways, Ltd. (2)** with monopolizing air routes between the U.K. and U.S. Noting that part of the suit charges that American laws have been broken, she also rejects BA's contention that the dispute is between the two British carriers and should not be heard in a U.S. court.

A comprehensive 10-year marketing and code-sharing agreement is signed with **Malaysia Airlines, Ltd. (MAS)** during the third week of January. The pact also provides for shared cabin crews and frequent flyer program linkage.

On February 1, the U.S. DOT approves the company's alliance with **Delta Air Lines**, under which the Atlanta-based major will acquire \$150 million of blocked-seating with the U.K. airline as a way of gaining access to London (LHR). In-flight services will be provided by attendants from both carriers.

Having won a "Wedding in the Sky" competition sponsored by the airline and a southern California radio station, a couple, with all 309 other passengers as witnesses, exchange vows on Flight 008, a B-747-238B, en route from Los Angeles to London (LHR) on February 14. The B-747-212B *Maid of Honour* is retired in March.

The **Delta Air Lines** arrangement commences on April 3 and covers VA flights from San Francisco, Los Angeles, Newark, and New York (JFK) to London (LHR) and to London (LGW) from Boston, Orlando, and Miami. The same day and employing MAS aircraft, the company launches twice-daily code-sharing return flights with **Malaysia Airlines, Ltd. (MAS)** between London and Kuala Lumpur.

It is announced in London on April 6 that one of the several lawsuits against **British Airways, Ltd. (2)** has been settled out of court. During the last week in April, Virgin becomes the first U.K.-based airline to offer reservations and frequent flyer information over the Internet.

The company links its frequent flyer program with that of **Malaysia Airlines, Ltd. (MAS)** on May 22 and starts dual-designator flights with that carrier from London (LHR) to Kuala Lumpur, Sydney, Melbourne, and Adelaide. In an action viewed as an attempt to undermine efforts of U.S. majors to place a cap on travel agent commissions, the airline, on May 29, announces that it will give U.S. travel agents 15% commissions on economy-priced flights through September 30.

Dual-designator service begins with **Cityjet, Ltd.** on June 16 between Dublin and Brussels. In July, a comprehensive arrangement is made with **British Midland Airways, Ltd.** It provides for London (LHR) connections for VA passengers arriving from six U.S. gateways onto BMA flights to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. Frequent flyer programs are also linked.

A Virgin flight en route from London to Hong Kong, also in July, is ordered to land at Moscow's Sheremetyevo-2 Airport because air traffic controllers have not been apprised of its approved flight plan. The 271 passengers have no Russian visas and are forced to stay on board for 8 hours while the matter is cleared up.

On November 21, Virgin is the first airline to be fined by DOT for violations in its advertisements on the Internet. Also during the month, an arrangement is reached with **Ansett Australia (Pty.), Ltd.** that allows joint fares between the United Kingdom and Australia via Hong Kong.

Enplanements swell 20.8% to 2,058,000 and cargo inches up 4.3% to 2.4 million FTKs. Among the shipments carried from the U.K. to the U.S. are issues of the Shephard Press publications *Commuter World* (now *Regional Airline World*) and *Helicopter World*.

The workforce is dramatically increased in 1996, growing 58.3% to 3,800. The fleet now includes 3 B-747-4Q8s, 1 each B-747-287B, B-747-283B, B-747-238B, B-747-123, and A320-231s, 3 B-747-243Bs, and 4 A340-311s.

The **Cityjet, Ltd.** franchise agreement is not resigned when it comes up in January, but in February the code-sharing pact with **Delta Air Lines** is renewed for another two years. Simultaneously, the code-share with **British Midland Airways, Ltd.** is expanded to include Amsterdam, Brussels, and Hong Kong.

On March 12, Virgin agrees to settle its remaining legal dispute with **British Airways, Ltd. (2)** over allegations of dirty tricks. It will pay \$607,800 in court costs to BA for the subsequent case in which Virgin had claimed \$44 million in damages for reported misuse by BA of computerized passenger data.

A leased A340-313, *Virginia Plain*, arrives at the beginning of April. On April 30, the company's parent, Virgin Group, completes takeover of Brussels-based **EuroBelgian Airlines, S.A.**, which is turned into a European feeder under the name **Virgin Express-EuroBelgium Airlines, S.A.** or Virgin Express, S.A. for short.

On May 1, Virgin Group becomes part of a consortium that assumes ownership of the U.K. portion of the Channel Tunnel *Eurostar* project. The airline and its new **Virgin Express-EuroBelgium Airlines, Ltd.** subsidiary begins to offer vacation packages for travelers wishing to use both air and rail for their holiday trips.

On May 17, new A340-313 daily roundtrips commence between Manchester and Orlando, Florida; due to the holiday-travel aspect of the flights, the route is not code-shared with **Delta Air Lines**.

Refurbished, the "Clubhouse" is reopened at London (LHR); with a bar expanded by 20%, the airport lounge also includes a 200,000-sq.-ft., 4-hole putting green that is opened by former U.S. Masters golf champion Ian Woosnam.

While en route from London to Los Angeles on May 31, a passenger aboard Flight 007, suffers severe chest pains. The B-747-238B with 15 crew and 396 passengers, including Prince Michael of Kent and rock singer Gerry Barlow, is forced to divert to the former USAAF World War II airstrip at Iqaluit, on Baffin Island, Northwest Territories. The Jumbojet is able to make a safe emergency landing and the patient is taken to the only hospital that had been within its reach at the time of the attack. During taxiing, the cowl of No. 4 engine is damaged and parts are requested. Although Prince Michael and singer Barlow depart immediately on chartered flights, and the remainder are hosted by the entire community, including tiny Arctic College. Late in the afternoon, all depart for New York aboard a chartered **Delta Air Lines** Lockheed L-1011 TriStar 1 and a **First Air, Ltd.** B-727-233A.

The third B-747-4Q8, *Tinker Belle*, is delivered at the beginning of June. As a result of a June 25 controller error at the New York Air Traffic Control Center, the new Jumbojet, en route to New York (JFK) from

London (LHR), crosses a checkpoint within two minutes of a **Trans World Airlines (TWA)** B-767-231ER. The Traffic Alert and Collision Avoidance systems aboard both wide-bodies sound, allowing early evasive action to be taken.

Daily dual-designator flights with **Delta Air Lines** are inaugurated on June 26 between London (LHR) and Washington, D.C. (IAD); the American major purchases blocked seats upon the British line's flights to its eighth U.S. gateway city. Beginning on June 26, A340-311s perform the service Monday through Thursday and Saturday while B-747-238Bs take over on Fridays and Sundays.

The inaugural flight brings Chairman Branson to Washington, where he spends a week lobbying U.S. lawmakers against the proposed strategic alliance of **British Airways, Ltd. (2)** and **American Airlines**. Spectators at Dulles are surprised when the A340-311 *First Lady* taxis up to the gate wearing the slogan "No Way BA-AA" boldly painted on its fuselage. The aircraft, however, is only the first indication that Virgin has opened a multimillion-dollar campaign in the U.S. to block the pact between its British rival and the U.S. major.

Code-sharing partner **Delta Air Lines** during the first week of July joins in the VA lobbying effort against the BA-AA alliance. On July 8, the U.S. Justice Department begins an antimonopoly probe of the alliance between **British Airways, Ltd. (2)** and **American Airlines** announced on June 11 and seeks information from VA, which opposes the union, concerning its 1993 antitrust suit against the former British state carrier.

Also in July, Virgin enters into a marketing agreement with the South African carrier **Sun Air (Pty.), Ltd.** At the same time, the A340-313 displaced from the Manchester to Orlando route is replaced for eight months by a B-767-31AER released from **Martinair Holland, N.V.**

B-747-4Q8 service to Johannesburg begins on October 3. Chairman/CEO Branson, dressed in an open-neck shirt and brightly colored socks, is the first to deplane from the Jumbojet. On the ground, he enthusiastically shakes hands with the many grey-suited South African businessmen and officials gathered to greet the man who has broken the BA and SAA monopoly on the London route.

Also on October 3, Virgin and **Sun Air (Pty.), Ltd.** link their frequent flyer programs and share codes on Sun Air flights between Durban, Cape Town, and Johannesburg. The schedules of these flights are arranged to connect with the new VAA thrice-weekly roundtrips between London and Johannesburg.

During the year, Tim Jackson profiles the airline's founder in his *Richard Branson, Virgin King: Inside Richard Branson's Business Empire* (Rocklin, Calif.: Prima Publishing).

Customer bookings inch up 12.9% to 2,292,417 and 545.09 million FTKs are operated, a 4.1% increase. Revenues reach \$595.5 million, with expenses of \$545.8 million. The operating profit is \$49.7 million, while a net profit of \$51.8 million is reported.

The employee population grows 26.3% in 1997 to 4,800. During the first week of January, dual-designator flights are launched with **Delta Air Lines** between New York (JFK) and Manchester. The code-sharing agreement between the British major and its Atlanta-based partner are now renegotiated in light of Delta's Frankfurt restructuring and the possibility that the BA-AA alliance might open additional slots at London (LHR).

The only B-747-4Q8 to arrive this year is delivered on January 28. It is christened *Tubular Belle*, in honor of the first record produced by company founder Richard Branson.

During the week of February 2, European Union officials, led by Competition Commissioner Karel Van Miert, hold closed hearings at Brussels on the BA-AA merger proposal. CEO Ayling puts forward the case for the compact while officials from Virgin, **Delta Air Lines**, **United Airlines**, and **Continental Airlines** speak in opposition.

An extensive code-sharing and marketing deal is signed with **Continental Airlines** on March 13, which gives the American major access to London (LHR). Continental purchases blocked space on VA flights from Orlando to Manchester and to London (LHR) from San Francisco, Los Angeles, Newark, New York (JFK), Boston, Miami, and Washington, D.C. (IAD). The arrangement replaces one between VA and **Delta Air**

Lines, which is now left without a British partner. Also during the month another new B-747-4Q8 is received.

When **British Airways, Ltd. (2)** offers a free ticket during March to business-class travelers dissatisfied with its transatlantic service, there are only a few passengers who respond. The fact is cheerfully noted in a public statement, but the bragging is short-lived as rival Virgin places ads over the next month suggesting that businessmen pay closer attention to the BA boast and take up its free-ticket offer. Some do, the promotion ends, and business-class air warfare over the North Atlantic intensifies.

A leased A340-313X is delivered on April 21. On April 22, Chairman Branson testifies before the U.S. Senate Judiciary Committee's Subcommittee on Antitrust, Business Rights, and Competition, which is looking into the proposed alliance between **American Airlines** and **British Airways, Ltd. (2)**. The lawmakers are told that higher prices and poor service would come of the union.

On May 19, Fiona Castle, wife of the late Roy Castle, departs London (LHR) on a company aircraft on the first leg of the jointly sponsored "Tour of Hope," which will visit nine countries in an effort to raise awareness, funds, and understanding of lung cancer. At this time, Virgin also becomes a sponsor of the Adam Walsh Children's Fund.

Successfully previewed in 1996, the carrier now offers Virgin Value Fare as a permanent product. Under its terms, economy-class passengers who book 21 days in advance are offered a free trip on either **British Midland Airways, Ltd.** or a *Eurostar* Channel rail ticket from London to Paris or Brussels or a week of free car rentals from Avis.

The May general election sweeps the Labor Party into power and Tony Blair becomes prime minister. The immediate effect of the voting is to require that the AA-BA alliance question be put on hold while new government ministers are appointed. Chairman Branson, however, still finds something to complain about when, at the same time, the British Airport Authority signs a tentative agreement with **British Airways, Ltd. (2)** that will provide BA and its alliance partners occupancy of the proposed fifth new terminal at London (LHR). Two new A340-311s are delivered at month's end and at the beginning of July, allowing return of the **Martinair Holland, N.V.** B-767-31AER.

In June, the company's B-747-238B *Boston Belle* is tasked to fly the British Lions professional rugby team to Johannesburg for a tour of South Africa. The service celebrates the carrier's six-times-per-week roundtrips from London. A fifth B-747-4Q8 also arrives during the month. Late in the spring, the company contracts with BM Engineering, Ltd., the new London (LHR)-based subsidiary of **British Midland Airways, Ltd.**, for regular maintenance checks of its B-747/A340 fleet.

Daily B-747-4Q8 service is reintroduced on June 26 from London (LGW) to Newark (EWR), where it connects with services offered by **Continental Airlines**. All passengers on the inaugural flight receive a commemorative "Back to Our Routes World Tour" T-shirt. Four days later, the London terminus of the Miami service is switched from Gatwick Airport to Heathrow and frequencies are also increased to daily from five times per week. The first Jumbojet-load of flyers on this route also receive T-shirt souvenirs.

When **British Airways, Ltd. (2)** unveils its new global corporate image and replaces the Union Jack as part of its aircraft liveries, VA, on July 1, announces that it will henceforth replace the red cloak of its previous "Scarlet Lady" trademark image with a new stylized British flag.

Employing the new A340-313Xs, Virgin, on July 10, adds a second daily nonstop flight from London (LHR) to Los Angeles. In response to the **British Airways, Ltd. (2)** cabin attendants strike, Virgin, on July 11, increases the number of its frequencies from London (LHR) to New York (JFK).

On July 15, frequency on the London (LHR) to Johannesburg route is increased to daily. Also during the month, a second new B-747-4Q8 is delivered.

On August 1, a \$2.5-billion order is placed with Airbus Industrie for 18 A340-642s for delivery after the year 2002. **Air France** Industries wins an \$80-million-per-year contract during the first week of August to

maintain the carrier's A340s. The block-space arrangement with **Delta Air Lines** ends in August and on August 19 Chairman Branson goes before the U.S. House of Representatives' Committee on Transportation and Infrastructure to again condemn the proposed alliance between **American Airlines** and **British Airways, Ltd. (2)**.

Virgin officials meet with their counterparts from **Nigeria Airways, Ltd.** on September 29 to explore the possibility of joint operations between London and Lagos. Britain has banned Nigerian operations into the U.K. because of safety concerns.

On October 1, twice-weekly, dual-designator, all-cargo service is inaugurated in cooperation with **Malaysia Airlines, Ltd. (MAS)** over a route from Kuala Lumpur to London (LHR) via Osaka, Japan, on Wednesdays and via Melbourne, Australia, on Saturdays. The new freight operation employs the MD-11F that MAS has leased from **World Airways**.

On October 27, Virgin moves into the west wing of Terminal 4 at New York (JFK); the shift allows the company to double the size of its Club-house lounge.

While on approach to London (LHR) following a service from Los Angeles on November 5, Capt. Timothy Barnby of Flight 24, the A340-313X with 114 other passengers on board, discovers that his left main landing gear will not deploy. Barnby, the 1997 British aerobatics champion, was able to make a successful landing, keeping the aircraft centered on the runway until it skids to a halt as the left wing and engine settle to the ground. Nine passengers and crew are slightly hurt evacuating down emergency chutes.

Odyssey, an in-flight entertainment system, is unveiled on November 28. It offers customers 27 video and audio channels, Nintendo, news, and sports.

Late in the year, the company applies to the CAA for permission to inaugurate transatlantic roundtrips from London to Las Vegas.

On Christmas Day, Chairman Branson appears in costume on the Walt Disney Christmas Parade broadcast on the ABC-TV network in the U.S.

During the year, Virgin is named "Best Transatlantic Airline" by *Travel Weekly* magazine for the eighth consecutive year.

Passenger boardings accelerate 21.8% to 2,792,162 while cargo surges 29.9% to 708.41 million FTKs. Revenues total \$1.07 billion, with expenses of \$1.01 billion. There is a \$63.6-million operating profit and a net gain of \$57.2 million.

Airline employment in 1998 stands at 4,409 and the fleet, all of which is Stage III certified, includes 20 airplanes: 11 B-747s, 1 A320, and 8 A340s.

While en route from London (LHR) to Miami on January 6, a B-747-4Q8 is forced to divert to Charleston, South Carolina, after a Scottish pensioner aboard suffers a heart attack and stops breathing. A flight attendant and a doctor-passenger attend to 73-year-old Alex Tweedie using an on-board defibrillator to restart his heart. At Charleston, Tweedie is dispatched to a local hospital and within an hour the Jumbojet is able to depart for the completion of its Florida service.

The company's application to fly to Las Vegas is turned down by the CAA in January when the regulatory body awards the last nonstop U.K.-U.S. route to **British Airways, Ltd. (2)**, which had requested permission to fly from London to Denver. Chairman Branson reacts angrily and promises to appeal the government's "anticompetitive" decision.

Also during the month, the company firms its launch order for A340-642s.

On February 2, **Continental Airlines**, under a new block-space, dual-designator pact, begins to code-share on Virgin flights from New York (JFK), Newark, Los Angeles, San Francisco, Miami, and Washington, D.C. (IAD) to London (LHR). Virgin will place its codes on Continental's twice-daily frequencies from New York to London (LGW). In essence, the two airlines attempt, with six daily flights, to create a shuttle service between New York and London. Continental will also purchase seats on Virgin's seasonal services between Manchester and Orlando.

Drive-through check-in is introduced on February 25 for business-class passengers flying from Newark (EWR). These travelers may also receive free door-to-door limousine and curbside check-in services; se-

curity questions are asked and boarding passes are issued in the automobiles.

An A340-313X is chartered in March for four years from ILFC. It will complement the owned unit and another owned aircraft that will be delivered on June 12.

Chairman Branson appears on the May 7 episode of the NBC-TV comedy *Friends* in which the airline is featured. To celebrate the colorful leader's cameo appearance as a street vendor, the airline, for the day of viewing, offers its customers a "Friends Fly Free" opportunity: customers purchasing an economy-class fare receive a free companion ticket.

The carrier in mid-May purchases all five B-747-219Bs owned by **Air New Zealand, Ltd.** for just \$130 million. In addition, the Kiwi carrier agrees to refurbish the aircraft to Virgin's specifications before delivering them to England between March 1999 and January 2000.

On May 18, Chairman Branson announces that **Virgin Express, S.A.** is close to establishing a new holiday airline based in the U.K. to be known as **Virgin Sun Air, Ltd.** Arrangements for lift for the new package-tour airline, to be formed in partnership with Virgin Holidays, Ltd., will be provided by **Sabre Airways, Ltd.** starting in 1999.

In June, the carrier announces that it will begin serving the Caribbean for the first time during the autumn. Leading aviation barrister Robert Webb, who had won the **easyJet, Ltd.** High Court ruling in May and had previously represented Virgin Atlantic during the 1993 "dirty tricks" libel action against **British Airways, Ltd. (2)**, is recruited on June 30 to serve, effective September 1, as BA's own general counsel.

A second daily nonstop service from London to Orlando begins on July 7; Virgin is now the dominant carrier between the U.K. and the home of Walt Disney World and offers 27 flights per week from London to Florida.

Under an agreement signed on July 20, Virgin and **British Midland Airways, Ltd.** on August 17 begin dual-designator service over the BMA route between London (LHR) and Warsaw. This is the first time Virgin has been able to offer the Polish capital as a destination.

In mid-September, the CAA chooses Virgin, rather than **British Midland Airways, Ltd.**, as the second U.K. airline to operate from London to Moscow. Virgin plans to operate in partnership with **Transaero**, as holder of the corresponding second Russian license, to convert the four weekly flights allowed under the British license to effective daily service in late October.

Virgin also competes with **British Airways, Ltd. (2)** to win permission to launch a second weekly frequency (26 versus 25) now available from London to Cape Town.

On September 18, the CAA grants the South African frequency to **British Airways, Ltd. (2)**. Virgin appeals the decision, pointing out that with 18 of the weekly services, BA has become the dominant U.K. carrier on the route.

At the same time, Chairman Branson, speaking before the International Aviation Club, promises to expend \$250 million to begin a Virgin American Airlines if, and only if, the U.S. government revises its current restrictive policies on foreign ownership or control of domestic airlines.

It is announced at a London news conference on September 21 that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

Virgin is one airline that will not be invited to join and hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the "OneWorld" news conference is held. A spokesman for Virgin indicates that his airline will gladly pay the parking ticket to get its point over.

Thrice-weekly B-747-200 return frequencies to St. Lucia from London (LGW) commence on September 27 and to Barbados on September 28. Plans to inaugurate thrice-weekly return flights to Antigua three days later are postponed due to Hurricane Georges. Instead, at the request of the Antiguan government and the National Emergency Operation Centre on the island, Hampshire-based Watermark Group is able to assemble a 30-ton relief package, which a B-747-200 flies to St. John's on the day it would have initiated passenger flights.

On October 1, **British Airways, Ltd. (2)**, in conjunction with a British newspaper, offers a 50% discount on international flights with the collection of tokens. VA immediately moves to reduce its fares to certain international destinations by the same amount, in most cases undercutting BA's special rates.

The thrice-weekly service from London to Antigua postponed on September 30 is launched on October 21. The price war with BA continues through October 28.

As the result of an appeal of the September CAA decision by **British Midland Airways, Ltd.**, U.K. Deputy Prime Minister John Prescott, in his dual role as Secretary of State for the Environment, Transport, and the Regions, stops Virgin's plans for Russian service from London (LGW). While not indicating that Virgin is out of contention for the route it is planning to fly with **Transaero Airlines**, Prescott demands on October 22 that the CAA hold new route award hearings on November 26.

Thrice-weekly roundtrip service to Barbados begins on November 5. While en route to Beijing on November 18, where he will attempt to achieve for VA the first direct air routes between Britain and Shanghai, Chairman Branson tells reporters of his plans for the new year. While adding 5 new jetliners, the entrepreneur pledges to create 1,500 or more new jobs even if he fails to win the new routes. Recruitment is beginning immediately, he notes, for 700 cabin crew, 400 reservations agents, 250 in the new Virgin Sun package tour business to be launched in the spring, 100 flight deck personnel, and 100 administrators.

The chairman visits Shanghai on November 24 and announces plans to meet with representatives of **China Eastern Airlines Company, Ltd.** in London in the new year to conclude a commercial agreement in the event of their twin designation to operate services on the London to Shanghai route. Both the British and Chinese governments will decide in December which of their carriers will be authorized to operate the two weekly roundtrips.

The hearing ordered by Deputy Prime Minister Prescott occurs on schedule, with attorneys from both VAA and British Midland making presentations, backed by various witnesses, including Sir Michael Bishop of BMA and Richard Branson of VAA. On balance, the CAA now finds for BMA and grants it the Moscow route license on December 16.

Following the Chinese lead, the U.K. CAA announces on December 23 that, in preference to **British Airways, Ltd. (2)**, it has chosen Virgin Atlantic to be the first British airline to operate to Shanghai. Also in December, the carrier is awarded a three-year contract by the UK Ministry of Defence to fly military personnel between London and the U.S.

Customer bookings this year ascend 14.6% to 3.2 million, while cargo traffic climbs 6.1% to 751.89 million FTKs.

Newly appointed Secretary for Trade and Industry Stephen Byers reacts to a complaint by Virgin Atlantic in early January 1999. Executives of Richard Branson's carrier claim that although they had been interested, they were not given a chance to bid on **CityFlyer Express, Ltd.** before its takeover by **British Airways, Ltd. (2)** was arranged on November 30. Additionally, Byers indicates that the move raises competition concerns in that BA would gain control of 39% of all the take-off and landing slots at London (LGW). Consequently, the proposed acquisition is referred to the U.K.'s Monopolies and Mergers Commission, which will report its findings on April 26.

On January 25, VAA receives the 1998 "Market Development Award" from *Air Transport World* magazine.

In the latest episode in a war of words that never seems to end, Virgin on February 12 complains to the U.K. Advertising Authority concerning the use by **British Airways, Ltd. (2)** of the slogan "World's Favourite Airline."

Documents are completed on February 8 to lease a pair of B-747-267Bs from **Cathay Pacific Airways (Pty.), Ltd.** for five years on a lease-purchase contract. Cathay will refurbish and repaint the Jumbojets to Virgin's specification before delivery.

Virgin Chairman Branson dons a rabbit costume on February 21 to celebrate the Chinese Year of the Rabbit—and his carrier's new route to Shanghai, which will begin twice-weekly in May. Branson indicates that he has learned that the Transport Ministry has denied BA's appeal of the route decision.

Chairman Branson, appearing on the BBC's February 28 edition of *Breakfast News*, reveals that the company will soon be creating 2,000 additional jobs as it adds new routes or frequencies to Shanghai, New York, and Chicago, the latter beginning in August.

In addition, an entire renaming of the airline begins. The current red and white exterior aircraft livery is replaced by silver bodies, emblazoned with the Virgin logo. Also accented in the new color scheme is the red, white, and blue colors of the Union Jack, painted on wings and tail fins. The B-747-4Q8 *Lady Penelope*, first tapped to wear the new patriotic livery, will be unveiled on June 7.

The interiors of all aircraft will also be redone, with exclusively designed economy- and upper-class seats. Although a cost figure is not released, Branson notes that the project will involve the expenditures of "tens of millions of pounds."

On March 1, Virgin goes to court in London in an effort to prevent the takeover of **CityFlyer Express, Ltd.** by **British Airways, Ltd. (2)**. Virgin announces on March 7 that it will match any BA bid for CityFlyer Express. As the value of the BA bid is at present unknown, Virgin is bidding blind. It is also noted that the company will launch its **Virgin Sun Air, Ltd.** charter subsidiary during the upcoming summer.

Company officials are very pleased with their rating in a new survey released on March 9 by the U.K. Consumers' Association's *Holiday Which?* magazine. Based on responses from 20,000 airline travelers earlier asked which airline they would recommend to a friend, the document indicates that Virgin is the second most popular airline, overall, after **Singapore Airlines, Ltd.**

Still hurting from the company's treatment by BA and U.K. regulators over service from Lagos to London, officials of **Nigeria Airways, Ltd.** on March 15, according to an article by Tony Egbulefu in *The News*, enter into a new, and controversial, pact with Virgin Atlantic. Under terms of a memorandum of understanding signed between the two carriers and due to take effect in April, a phased-in arrangement between the 2 lasting 15 years will eventually see profits—and losses—shared on a fifty-fifty basis. Virgin will use its good offices to help Nigeria in the employment of third parties to achieve resolution of its foreign debt problem. The document also calls for immediate termination of Nigeria's partnership with **British Airways, Ltd. (2)** and a replacement of BA's codes with its own on all of Nigeria's services, including the lucrative routes from Lagos to Johannesburg, Amman, and Dubai.

Chief of the general staff Vice Admiral Okhai Akhigbe, on behalf of the National Association of Aircraft Pilots and Engineers, challenges Nigeria Airways Director of Corporate Information Chris Aligbe about the rumored pact with Virgin Airways. Aligbe informs the admiral and the press that no agreement, pact, or joint venture "has been contemplated or signed with Virgin Atlantic Airways." The denial leads to speculation that the new arrangement will be scrubbed.

It is reported in the aviation press on March 19 that Virgin Atlantic has, indeed, pulled out of talks with Nigeria's state-owned carrier over a planned cooperation pact.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement

with the ethnic Albanians fighting for an independent Kosovo, all scheduled service into Bosnia and Yugoslavia is suspended and their airspace closed. A NATO spokesman in Brussels, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo begins.

Service to Yugoslavia remains halted on March 25–26 and for the duration of the NATO bombing campaign, Operation Allied Force. Flights to south-central and southeastern Europe experience delays of 30–60 min. due to airspace closure. Flights to Bosnia will be allowed about five weeks into the campaign. The situation brings about the transfer of large numbers of refugees out of Kosovo into neighboring states, particularly Macedonia and Albania.

To assist in the relief effort, Virgin Atlantic provides support for aid organizations and charities working to bring much-needed humanitarian aid to the Kosovo region. On April 8, an A340-311 transports 20 tons of supplies, such as clothing, tents, and tinned goods, gathered by the Scottish Kosovo Relief Fund from Glasgow to Thessaloniki, Greece, from which it is sent to the Macedonian capital of Skopje. Other relief flights will be made as the campaign continues.

Meanwhile, in early April, the Nigerian magazine *Tempo* reports that discussions with **Nigeria Airways, Ltd.** are very much alive and that a memorandum of understanding is being prepared. On April 15, the airline officially withdraws its bid for a stake in **South African Airways (Pty), Ltd.**

It is reported in an April 16 article by Keith Harper in the online edition of *The Guardian/The Observer* that the CAA has just approved a second British route to Moscow, which **British Midland Airways, Ltd.** has won against strong competition, again from Virgin Atlantic.

On April 19, an A340-311 transports 20 tons of relief supplies, gathered by Project Plus and Lightforce International, from London (LHR) to Athens. In Greece, the goods are sent by road to refugee camps in and around the Albanian capital of Tirana.

Capt. Mohammed Joji, general secretary of the Airways Operators of Nigeria, sends a strongly worded five-page document to the national government on April 27 protesting the proposed commercial agreement between Nigeria Airways and **Virgin Atlantic Airways, Ltd.** The document warns the country's leaders not to allow Nigeria to be turned into a battlefield by VAA and competing **British Airways, Ltd. (2)**.

The British Advertising Standards Authority (ASA), also on April 29, rejects in a letter to BA's marketing department the calls from Virgin Atlantic to prevent BA from using its 16-year-old advertising slogan "the world's favourite airline." A Virgin spokesman indicates that his company is confident of winning a bid in the U.S. to prevent BA's use of the tag.

On May 1, the new **Virgin Sun Air, Ltd.** holiday charter carrier takes wing; lift is provided employing two A320-214s subleased from **Sabre Airways, Ltd.** Revenue charters are operated from London (GTW) and Manchester to Mediterranean and European holiday destinations.

A fire breaks out on the evening of May 2 in a Virgin group office in Holland Park, west London. Forty firemen respond to the blaze and save a secretary trapped on the top floor. Unfortunately for Chairman Branson, 10-years worth of his paperwork and all of his files, past and current, are destroyed. None of the files have a direct impact on business operations.

Despite the fact that it has not until recently been designated by the CAA for a new Chicago route, Virgin is denied permission by the U.S. DOT to begin planned August flights from London (LHR) to capacity-controlled O'Hare International Airport. The U.S. regulators do not find the fact that Virgin had received British authorization too late to apply for slots sufficient reason for its not filing with the FAA on time. The DOT will not grant an exception, but will allow the company to file for future slots, if it does so in a timely fashion. A company spokesman calls the ruling "extremely disappointing," but indicates that it will file for Chicago on the next opportunity.

NATO jets accidentally bomb the Chinese embassy in Belgrade, also on May 7, resulting in violent protests against the attack in several Chi-

nese cities. On May 10, Reuters, Ltd. reports that the airline may face a delay in the start-up of its Shanghai service due to continuing Chinese anger; however, the company responds that it fully anticipates an on-time start. While monitoring the situation, the carrier permits its daily service to Beijing to depart London (LHR) on schedule to show its confidence.

Having teamed up with Mike Myers for a global air traveling marketing blitz prior to the June 11 opening of the new film *Austin Powers: The Spy Who Shagged Me*, Chairman Branson and the actor unveil a re-decorated Virgin jetliner at London on May 13. Christened *Shaglantic*, the aircraft boasts a reclining image of Myers in his role as the 1960s spoof spy Powers painted along its forward fuselage.

Having determined to proceed with its new Shanghai service as scheduled, the company on May 14, to demonstrate its sensitivity to current Chinese concerns, cancels its celebrations planned to mark the occasion. It notes that Chairman Branson will not be aboard the inaugural flight.

After securing a £500,000 down payment, **AB Airlines, Ltd.** on May 21, concludes the sale to Virgin Atlantic for £2 million of its seven weekly takeoff and seven weekly London (LGW) landing slots previously employed for services to Shannon, Ireland, and Nice, France. The financially troubled new entrant does not, however, receive sufficient funding from this deal to resolve its working capital problem.

Also on May 21, Chairman Branson indicates that inaugural celebrations for the new Shanghai service will, in fact, be held, on July 10–13. Shanghai marks the first time Virgin has beaten **British Airways, Ltd. (2)** to a new destination and is too important an event not to be squeezed for its public relations value.

Twice-weekly roundtrips from London (LHR) to Shanghai commence on May 22.

A fifth daily roundtrip from London (LHR) to New York (JFK) is added on June 1, with the carrier now operating between the two cities six days a week.

At Amsterdam's Schiphol Airport on June 7, Chairman Branson unveils for the media his carrier's "striking new look for the new millennium." Photographers eagerly snap pictures of a B-747-400 behind him wearing a silver metallic livery with the Union Jack prominently displayed on the wing nacelles and fuselage. On June 19, a new homepage is opened on the World Wide Web.

A long-term lease is signed with the city of Orlando on June 23 as the airline prepares to become the first tenant at that city's new \$3-billion airport international terminal.

In mid-October, the company enters into an agreement with Volvo, A.B. Under its terms, the Swedish automobile manufacturer will provide 450 S80s to the carrier, which will then be able to offer complementary limousine services in Europe for its upper-class passengers. The new service will even permit its users to check their luggage from their luxury cars.

On October 25, U.S. District Court Judge Miriam Goldman Cedarbaum dismisses all outstanding claims raised by Virgin in its lawsuits against **British Airways, Ltd. (2)** in the United States, including a allegation of BA's monopolization of routes from London (LHR). Chairman Branson promises to appeal the ruling.

Following a pre-flight party and ceremony, daily B-747 service is inaugurated on November 1 from London (LHR) to Chicago (ORD). Among those hosted by Chairman Branson are eight passengers who have won a special Internet contest in which they have bid to participate in this inaugural flight. In addition to pre-flight festivities and the actual service, the eight are included in Chicago activities and have all of their expenses, including hotel fares, paid.

As November ends, Virgin unveils a new *Upper Class* service. It also announces that it will launch twice-weekly roundtrips to Las Vegas in June, the first scheduled service between the U.K. and Nevada.

At the beginning of December, Chairman Branson meets with Australian Prime Minister John Howard to discuss establishment of a low-cost carrier prior to the start of the Sydney Olympics. On December 8, Virgin Atlantic receives permission from the government of Australia on for the creation of a Virgin-branded low-cost airline for Australia. Chair-

man Branson makes a fast trip to Sydney to be present for the announcement, at which time he informs the local media that a deep-discount Virgin-labeled carrier will be granted A\$60 million (\$30 million) in seed money to begin operations by summer. The as-yet-unnamed airline, is simultaneously awarded takeoff and landing slots at Kingsford Smith Airport at Sydney. When up and flying, it will be the first foreign carrier formed in Australia under a June government ruling allowing offshore owners to form wholly owned domestic Australian carriers to compete with **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.**

In an effort to gain benefit from its unused frequencies between London and New Delhi, **Air India, Ltd.**, in mid-December, signs a code-sharing agreement with Virgin Atlantic. Under the arrangement, VAA will, in partnership, fly at least three of the frequencies. STIC Travels will handle ticketing in India. Chairman Branson climbs aboard an elephant dressed up as a Virgin Jumbo before riding into the news conference where the pact is announced.

When the CAA awards Virgin a second frequency to Cape Town during the month, **British Airways, Ltd. (2)** appeals.

The name of Chairman Branson, the fifth richest man in Britain, appears on the New Year's Honours List, which is reported by the BBC on December 31. His knighthood will be awarded by Queen Elizabeth II in an elaborate ceremony.

Passenger boardings jump 13.2% to 3,622,000, while freight accelerates 21.2% to 901.24 million FTKs.

Airline employment at the beginning of 2000 stands at 7,076, a 36.7% increase over the previous 12 months. The "classic" B-747 fleet now includes 5 Dash-219Bs, 2 each Dash-238Bs and Dash-267Bs, and 1 Dash-287B. Also operated are 2 B-747-41Rs and 4 Dash-4Q8s.

On January 26, just three days before the company's second Cape Town service is scheduled to begin, the CAA orders the company, in light of the BA appeal, to suspend the new service until it can determine which airline should have the authority to operate the flight.

On February 7, Chairman Branson is named by *Aviation Week and Space Technology* as the 1999 Laurels and Laureates winner in its Air Transport category.

Announced a month earlier, arrangements are completed on February 11 with **Singapore Airlines, Ltd.** under which SIA will take a £600-million (\$\$600.3/US\$960 million), 49% minority stake in Virgin Atlantic, the holding company for Virgin Atlantic Airways, Virgin Holidays, Virgin Sun, and Virgin Aviation Services, the airline's cargo division. Simultaneously, Virgin Atlantic will be recapitalized to the tune of \$510 million, with \$51 million of the amount coming from the Virgin Group; Chairman Branson will pour the remaining £500 million realized into other Virgin Group enterprises. Three of Virgin Atlantic's seven-member board will be appointed from SIA. Both airlines will retain their distinctive liveries and identities and continue to develop their own products. Relevant government and other approvals must be obtained.

The U.K. government approves the SIA investment in Virgin Atlantic at the beginning of March; as soon as the EU Commission agrees to the arrangement, three SIA members will, according to plan, be named to the Virgin board.

Orders are placed with ILFC on March 23 for 10 Next Generation B-737-7Q8s that will be operated by the new Australian subsidiary beginning in March 2001. The next day, the European Commission formally approves the sale of a 49% stake to **Singapore Airlines, Ltd.** Paperwork for the final buy into Virgin is completed on March 30.

On April 3, SIA and Virgin CEOs Cheong and Branson publicly announce their new relationship. On April 5, **British Airways, Ltd. (2)** wins its appeal against the CAA decision to award Virgin a second Cape Town frequency; Secretary of State John Prescott, who overturns the agency's decision, awards the authority to BA, which will employ it to take its Cape Town service to daily flights.

At the annual awards dinner at the Smithsonian Institution's National Air and Space Museum on April 12, Executive Vice President North America David Tait physically accepts Chairman Branson's *Aviation*

Week and Space Technology 1999 Laurels and Laureates trophy in its Air Transport category. Branson gives his acceptance speech in a video shown during the ceremonies.

By May, **Singapore Airlines, Ltd.** has finalized its 25% investment, agreeing to give Brierley Investments NZ\$426.3 million for a 25% stake in **Air New Zealand, Ltd.** It also secures a regional alliance with ANZ, three seats on the New Zealand line's board of directors, and veto rights over certain management appointments. At the same time, SIA CEO Dr. Cheong promises to abandon previously mentioned possibilities of linkage with the new **Virgin Blue, Ltd.**, which will be directly competing with the established ANZ subsidiary **Ansett Australia (Pty.), Ltd.**

A single A321-211 is delivered on May 12; chartered from GECAS, it is christened *Hellenic Beauty*. It will be placed into service on the carrier's route from London (LHR) to Athens.

Also in mid-month, the company celebrates a decade of in-flight beauty therapy for its premium passengers. Over 250,000 *Upper Class* clients have employed the service during this time and the airline now employs a staff of 200 certified in-flight beauty therapists.

Twice-weekly B-747-4Q8 roundtrips commence on June 8 between London (LGW) and Las Vegas. The Nevada gambling mecca is the carrier's 10th U.S. gateway and access to it marks the successful conclusion of a 7-year effort to obtain licensing and slots. During the inaugural flight, which is three-fourths full, Sir Richard Branson announces that he has obtained a code-sharing, feeder agreement with **National Airlines (4)**.

The new partnership pays off more quickly than anticipated as it falls to the U.S. carrier to reprovision the big Boeing for its return to England. Branson's invited guests and fare-paying passengers had drunk the Jumbojet dry before its landing.

On June 12, a letter of intent is signed for six each of the proposed Airbus A3XX and B-747-400X.

To provide on-going connections throughout India for its new international service from London (LHR), Virgin Atlantic, on July 3, signs an interline agreement with **Indian Airlines, Ltd.**

On July 5, four-times-a-week B-747-200 return service, operating only through October 28, is started from London (LGW) to San Francisco. The flights complement the daily California service operated from Heathrow Airport. The next day, twice-weekly B-747-4Q8 roundtrips, code-shared with **Air India, Ltd.**, are launched from London (LHR) to New Delhi. The services initially utilize Air India's unused authority for the route. Deplaning from the inaugural flight, Sir Richard rides around Delhi's central shopping district in a motorcade of 30 three-wheel "auto-rickshaw" scooter taxis, followed by children waving Virgin balloons.

A tragedy in the skies over England is narrowly averted on August 20. Descending into London (LHR) from different angles, a Virgin B-747-41R and a **United Airlines** B-777-222, with 700 passengers between them, come within 700 ft. of one another before ATC orders the United captain to take evasive action. Both aircraft land normally and no injuries are reported.

On August 22, *Flight International*, in its annual commercial airline survey, reports that Virgin has the second best (77%) load factor of any airline in the world after **KLM: (Royal Dutch Airlines, N.V.)**.

On August 31, orders are placed for two B-747-400s; the pair will arrive under charter from GECAS in October and December 2001. The same day, the subsidiary **Virgin Blue (Pty.), Ltd.** begins operations in Australia.

A code-sharing agreement is signed with **All Nippon Airways Company, Ltd.** on September 28. When the pact takes effect at the end of March 2001, the two will share an unspecified number of routes between London (LHR) and Tokyo (NRT).

At the invitation of President Olusegun Obasanjo, Chairman Branson travels to Lagos at the beginning of October to participate in Nigeria's independence anniversary. While there, he meets with government officials and comes away convinced that a deal, "in principle," has been achieved under which his airline would be designated to offer Nigerian service. As reported in the October 3 issue of the *Ikeja Vanguard Daily*,

Sir Richard has informed the local aviation press that Virgin will hopefully be able to help **Nigeria Airways, Ltd.** operate its London service and that Virgin, itself, will be flying into Nigeria "before next summer."

A second A340-313X weekly roundtrip is added on October 29 between London (LHR) and Cape Town.

When on November 10 **Alitalia, S.p.A.** cancels an order for five B-747-443s in favor of six B-777-243ERs, Virgin Atlantic steps forward to take over the delivery positions for the spurned aircraft; the new *Jumbos* will be delivered as Dash-41Rs between March and June 2001.

On November 14, Chairman Branson pops up at London (LHR) to personally welcome his airline's 25th-million passenger, Toddington resident Raymond Davies, who is traveling from Heathrow Airport aboard Flight 19 to San Francisco. Sir Richard awards Davies two free tickets to any company destinations, along with commemorative champagne and glasses.

Having been forewarned that **Sabena Belgian World Airlines, S.A.** will withdraw service to Johannesburg at the end of March, **Nationwide Air Charter (Pty.), Ltd.** is now forced to find a new code-sharing partner. In mid-November, Virgin steps in and signs a strategic marketing agreement with the South African domestic carrier. Virgin, which operates daily service between London (LHR) and Johannesburg and twice-weekly roundtrips to Cape Town, places its code on Nationwide flights between Johannesburg, Cape Town, and Durban. Nationwide begins to repaint its aircraft in modified Virgin colors and participates in Virgin's frequent flyer program.

On December 1, the company announces that it will launch daily roundtrips from London (LGW) to Toronto beginning on June 1. In sharp contrast to the situation at **British Airways, Ltd. (2)**, Virgin, on December 6, announces that it will recruit 1,700 new employees in 2001 to support its rapid growth. Job opportunities are expected for pilots, cabin crew, ground crew and airport staff, who will be based at Heathrow and Gatwick Airports.

A \$3.8-billion order is placed on December 15 for six Airbus A3XXs, with six options. Now having received the 50 firm orders needed before it can launch construction, Airbus schedules Virgin's first delivery for 2006.

It is now learned that the premier delivery of the first of six A340-642s has been delayed until June. Still, with a number of new jetliners in the pipeline, Virgin announces that it will hire 1,700 staff in the new year, including 250 pilots and 1,000 cabin crew.

Confirmation is provided on December 16 that Virgin will, indeed, order six A3XXs.

The London *Sunday Times* reports on December 24 that CEO Branson is working on plans to start a domestic Canadian airline, modeled on **Virgin Blue (Pty.), Ltd.** Talks concerning the possibility are said to have recently been conducted with Canadian Transport Minister David Collett.

Enplanements for the year surge 18% to 4,281,000.

VIRGIN BLUE (PTY.), LTD.: P.O. Box 1034, Spring Hill, Queensland, 4000, Australia; Phone (7) 3295 3000; Fax (7) 3839 4024; <http://www.virginblue.com.au>; Code VS; Year Founded 1999. Permission is received by **Virgin Atlantic Airways, Ltd.** from the government of Australia on December 8, 1999, for the creation of a Virgin-branded low-cost airline for Australia. Chairman Branson makes a fast trip to Sydney to be present for the announcement, at which time he informs the local media that a deep-discount Virgin-labeled carrier will be granted A\$60 million (\$30 million) in seed money to begin operations by summer. The as-yet-unnamed airline will be the first formed in Australia under a June government ruling allowing offshore owners to form wholly owned domestic Australian carriers to compete with **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.**

The company, under its new CEO Brett Godfrey and using a preliminary Virgin Australia brand, is awarded takeoff and landing slots at Kingsford Smith Airport at Sydney.

Even as a decision on an exact name is being debated, the new entity, in January 2000, applies to Canberra in January for an air opera-

tor's certificate and secures start-up approval from the Australian Foreign Investment Review Board. It must now clear the regulatory process involved in obtaining its AOC, as well as locate sufficient terminal facilities.

With **Virgin Express Airlines, S.A.** plagued by management and quality difficulties, Sir Richard Branson confides to the *Financial Times* in early February that it was a mistake for him to have purchased the carrier and now wishes that he had just started a new airline instead. He vows that his Australian operation will be built up from scratch. At this point, **Singapore Airlines, Ltd. (SIA)** CEO Cheong Choong Kong confirms that Branson has offered him the opportunity to purchase a 49% stake in the Australian start-up; however, despite his new equity partnership with **Virgin Atlantic Airways, Ltd.**, he holds back from a commitment.

The Virgin Australia parent in England now begins to make a number of decisions. First, a total of A\$200 million (\$126 million) will be invested over five years to establish a hub at Brisbane, complete with administration, maintenance, and distribution facilities, and a 750-person staff. Additionally, negotiations are opened for terminal facilities at Sydney and Melbourne (the first two destinations) and fleet plans are made to begin services with five older B-737s sent down to Australia from **Virgin Express, S.A.**, which does not require them during its less-busy winter season.

On March 23, orders are placed with ILFC for 10 Next Generation Boeing 737-7Q8s, scheduled to become available in March 2001. Except for a name and an air operator's certificate, executives report on April 19 that the airline is good to go. At the end of March, **National Jet Systems (Pty.), Ltd.** cofounder Rob Sherrard, is appointed deputy CEO/chief operating officer.

On May 3, the new airline name is finally revealed: Virgin Blue. The brand is the result of a radio naming contest, sponsored by Brisbane station 4KQ, in which over 3,000 entries have been received and reflects how "true blue" Virgin is to be in delivering low-fares. The winner, whose name has been drawn from a hat by CEO Godfrey is, incidentally, a Brisbane interior designer, who is awarded two Virgin roundtrip tickets a year for life.

By May, **Singapore Airlines, Ltd.** has finalized its 25% investment, agreeing to give Brierley Investments NZ\$426.3 million for a 25% stake in **Air New Zealand, Ltd.** It also secures a regional alliance with ANZ, three seats on the New Zealand line's board of directors, and veto rights over certain management appointments. At the same time, SIA CEO Dr. Cheong Choong Kong promises to abandon previously mentioned possibilities of linkage with the new Virgin Blue, which will be directly competing with the established ANZ subsidiary **Ansett Australia (Pty.), Ltd.**

On May 30, it is announced that the company's first route, to be launched on an unspecified date in the fall, will be from Brisbane to Sydney.

The first Virgin Blue aircraft is a **Virgin Express Ireland, Ltd.** B-737-43Q sent down from Brussels via Istanbul and Muscat on May 30-June 1. A new color scheme is unveiled and on June 28 a new logo is unveiled, featuring a curved accent mark that resembles both the nose of a B-737 and a boomerang.

A B-737-3M8 arrives under charter from **Virgin Express, S.A.** on June 29, the same day a sales and distribution agreement is signed with Flight Centre (Pty.), Ltd., under which FC will sell Virgin tickets throughout its network of more than 400 stores across Australia.

The first flight is made on July 9, when a group of 100 celebrities, media types, and government officials are flown on a special charter from Brisbane to the Sunshine Coast aboard the B-737-43Q. Simultaneously, plans for the inauguration of scheduled services between Brisbane and Sydney on August 3 are announced. Appealing for support, Chairman Branson indicates that the one-way fare will be A\$99 for pre-booked tickets.

On July 21, the company is forced to note a delay as it awaits authority from the government's Civil Aviation Safety Authority, which seeks

additional impartial inspectors to help it complete the start-up's review. Refunds of A\$150,000 must be issued for 1,500 tickets already booked for the inaugural flights.

The CASA approves the company's operating manuals on August 19. Sale of tickets is again permitted and an A\$48 (£18) one-way introductory fare is announced on August 25 for all who purchase them on the Internet over the next 48 hours. Also on August 25, Brisbane-Sydney proving flights are made with government inspectors and regulators aboard; the unofficial services represent the last step before certification.

On August 26, the company receives word that inspectors have found all facilities to be in order. Unhappily, the company's online system is now so overloaded by anxious customers seeking to take advantage of the A\$48 introductory sale that it crashes, forcing Virgin to temporarily pull its online booking service. Falling back to the Virgin telephone hotline service, potential passengers find that swamped as well. Waits of three hours are not uncommon.

Having successfully, if belatedly, completed all mandatory trials and requirements, Virgin Blue receives Australian government certification on August 28. The company's aircraft, including two newly received leased ILFC B-737-4Q8s (one of which was previously operated by **Pharaoh Airlines, S.A.E.**), had been approved earlier in the week. The next day, it is announced that due to popular demand, the company's second route start, from Brisbane to Melbourne, will be moved up from October 1 to September 7.

B-737-4Q8 roundtrips commence on August 31 between Sydney's Domestic Express Terminal and Brisbane. The inaugural flight is held up for 25 min. due to a warning light that shows that one of the aircraft's doors has not been properly closed.

In an effort to compete not only with the majors, but with discounter **Impulse Airlines (Pty.), Ltd.**, the "Baby Blue," seeking to make amends for its online booking snafu, offers introductory \$A48 ticket prices for its first month. Throughout September, the company struggles to regain marketing momentum lost to Impulse when it failed to win expected certification in late July.

The new thrice-daily Brisbane to Melbourne return route begins, as advertised, on September 7. A thin route for other carriers, Virgin Blue promises on September 9 to make attractive and open a new thrice-daily route from Brisbane to Adelaide on February 1. By then, it will be operating five **Virgin Express, S.A.** B-737s.

Following almost immediately after the Virgin Blue announcement, **Qantas Airways (Pty.), Ltd.** increases its capacity on the route by 50%, diverting an aircraft from another route to operate the extra service. The major's move will be challenged by Virgin Blue when it files a "predatory pricing" complaint with the Australian Competition and Consumer Commission in January.

On October 26, the company announces that it has carried over 85,000 passengers since August 31, with an average load factor of more than 75%.

It is reported on November 28 that the company will receive two more B-737s within days and six more in 2001. Indeed, a **Virgin Express, S.A.** B-737-46M is received under lease the same day, with the second, a Dash-405, arriving on December 2.

On December 4, Virgin Blue CEO Godfrey and **Impulse Airlines (Pty.), Ltd.** Chairman Gerry McGowan join Christopher Barlow, CEO of Melbourne Airport, for the joint opening of the new A\$8.4-million "Domestic Express" terminal the two competitors will share.

Even sooner than announced, thanks to the fast-tracking of temporary Adelaide airport facilities and the early availability of Virgin Blue's newest aircraft, direct thrice-daily roundtrips between Adelaide and Brisbane commence on December 7. Keeping with a Virgin inaugural flight tradition, CEO Godfrey and fellow executives adopt a "destination theme" for the flight, dressing up as crows to highlight their carrier's "as the crow flies" double, daily, direct services. Simultaneously, the Brisbane to Melbourne return service becomes thrice daily.

A four-year contract is signed with Lufthansa Technik on December 12 for provision of its B-737-4Q8 fleet. Negotiations continue with the

technical arm of **Deutsche Lufthansa, A.G.** on a similar pact that will cover the 10 Next Generation B-737-700s, the first of which is now scheduled for delivery in April.

On December 13, both Virgin Blue and **Impulse Airlines (Pty.), Ltd.** come under renewed competitive pricing from **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.** The majors both slash their summer domestic fares by 75% for the normally quiet booking period between Christmas and April.

As the year ends, Virgin Blue is operating twice-daily roundtrips between Adelaide and Brisbane and nine times daily from Sydney to Brisbane. Eagerly anticipated is the March 1 inauguration of thrice-daily return flights from Sydney to the new International Terminal at Adelaide.

VIRGIN EXPRESS (IRELAND), LTD.: Ireland (1998-2001). The creation of Virgin Express (Ireland), Ltd. is announced on September 25, 1998. Virgin Express CEO James Swigart places a former **Trans World Airlines (TWA)** executive in charge of the new entity and announces that twice-daily roundtrips between Shannon and London (STN) will commence in mid-December.

As the start-up date approaches, a satellite reservations center and crew base is established at Shannon Airport and a B-737-3M8 is chosen to be stationed there. Virgin Express (Ireland), Ltd. tickets go on sale at the introductory one-way price of £17 for twice-daily service between Shannon and London (STN).

At this point, Brian Beal, chairman of the unborn airline's small Shannon-based rival **AB Airlines, Ltd.**, accuses Richard Branson, Virgin Group chairman, of "doing a British Airways." Beal, who appeals the Virgin move to the European Commission, is concerned that it may be forced to pull out of services between the West of Ireland airport and Stansted and accuses his fellow airline boss of doing "exactly what Virgin accuses British Airways of."

Virgin Express (Ireland), Ltd.'s new Shannon headquarters are opened on December 15 in a grand ceremony presided over by Chairman Branson, President/CEO Swigart, Daven Hoare and Luc Bertrand, nonexecutive directors, and Luzveminda O'Sullivan, the 1998 Rose of Tralee. The proceedings include the arrival of the first B-737-3M8 that will be stationed at the Irish airport.

Twice-daily return flights between Shannon and London (STN) begin on December 18.

The *Just Planes* reporting service reveals on August 12 that Virgin Express will launch Berlin Express operations on November 10, employing the Irish-registered "Baby Boeing" to offer nonstop services from London (STN) to one of the three airports of the German capital. Flights from Ireland to other major cities will begin shortly thereafter.

The B-737 fleet at the beginning of 2000 includes 2 Dash-43Qs, 3 Dash-36Ns (chartered from **Virgin Express, S.A.**), and 1 each Dash-4Y0, Dash-36M, and Dash-3M8 (leased from **Virgin Express, S.A.**).

The first **Virgin Blue, Ltd.** aircraft is a Virgin Express Ireland B-737-33Q sent down from Brussels via Istanbul and Muscat on May 30-June 1.

Another B-737-36N is received from **Virgin Express, S.A.** in October and is employed, beginning on October 29, to operate daily roundtrips from Shannon to Milan via Brussels coordinated with the twice-daily return service between Shannon and London (LGW) simultaneously begun by the parent. The arrangement allows Virgin Express to get around the Italian government's prohibition against more than one daily flight into crowded Linate Airport.

Twice-daily B-737-300 return service is inaugurated on December 10 from Shannon to Malaga via Brussels.

It is reported on December 12 that this subsidiary will be shut down on January 15. On that date, the Irish line's Berlin, London (STN), and Shannon bases will be closed down and necessary assets transferred to Brussels. Meanwhile, the company is to be put up for sale for a reported \$10 million; two investment firms and an unnamed airline immediately express interest.

One of the more unusual takeover possibilities in European airline history will occur on January 25, 2001, when Alexander Zurbayev, first

deputy director of **Aeroflot Russian International Airlines (ARIA)**, reveals that his carrier is holding serious discussions concerning the purchase of this Virgin subsidiary. If consummated, it would be the first takeover of a Western airline by a Russian carrier. The offer will be taken seriously enough by Virgin Express executives that the Irish subsidiary will be allowed to continue flying from Shannon to London (LGW) until at least March 15. The Brussels route, will, however, be closed on January 15.

On March 5, the Russian newspaper *Vremya Novostei* will report that Aeroflot has, indeed, purchased a 59% stake; none of the principals will comment, promising more detail later. The report will turn out to be inaccurate and when arrangements cannot be completed, Virgin Express (Ireland) will be formally shut down on March 16.

VIRGIN EXPRESS-EUROBELGIUM AIRLINES, LTD.: Building 116, Melsbroek Airport, Melsbroek, B-1820, Belgium; Phone 32 (2) 752-0511; Fax 32 (2) 752-0520; <http://www.virgin-exp.com>; Code BQ; Year Founded 1996. On February 19, 1996, British entrepreneur Richard Branson holds a press conference to announce that his Virgin Group has plans to take over the **EuroBelgian Airlines, S.A.** for operation as a subsidiary of **Virgin Atlantic Airways, Ltd.** Current majority-owner City Hotel Group plus a small group of private investors will receive a reported £43 million (\$67 million) for a 90% stake in their regional. The acquisition includes the EA subsidiary **Air Provence Charter, S.A.**, based at Paris (CDG).

The takeover is completed on April 30 and the carrier is renamed Virgin Express-EuroBelgium Airlines, S.A. (to also be known as Virgin Express Airlines, S.A.), and is placed under the direction of former **Mesa Airlines** executive and **Continental Express** CEO Jonathan Ornstein. He oversees a workforce of 250 and a fleet that includes a mix of 12 B-737-3M8s, B-737-3Y0s, and B-737-33As and 1 B-737-4Y0. A **Mesa Airlines** and **Continental Express** colleague of Ornstein's, James Swigart, is recruited to serve as chief financial officer.

As might be expected, given the history between VA and BA, the B-747-436 chartered by the previous owners from **British Airways, Ltd. (2)** is returned. Ornstein now begins to copy in Europe the low-fare, short-haul activities of **Southwest Airlines (2)**. The new CEO is quoted on the matter in the May 1997 issue of *Airline Business*: "We're following Southwest in Europe and will emulate them where we can and when we can—why reinvent the wheel?"

From its bases at Brussels and Paris (CDG), the company continues to operate international and regional scheduled and charter passenger and cargo flights to Barcelona, London (LHR and LGW), Milan, Nice, Vienna, the Canary Islands, and holiday points in the Mediterranean.

In partnership with its parent, the holding company Virgin Group, and executives of **Eurostar**, the company begins to offer vacation packages for those wishing air and rail service for their holidays via the Channel Tunnel.

Two B-737-3M8s that Eurobelgian had earlier ordered are received in August painted in a "reversed" color scheme from those jetliners in the VAA fleet. They are the first aircraft to appear in Virgin Express colors; however, the remainder of the Eurobelgian fleet will now be painted to match them.

Virgin Express is officially launched on September 2 as the newly received Boeings provide scheduled flights over the old Eurobelgian routes linking Brussels with Rome and Madrid. Three days later, Brussels-Copenhagen service is inaugurated.

Financially troubled **Air Liberte, S.A.** is placed into receivership on September 26 and its chartered Douglas wide-bodies are returned to Finland. Given six months by the Creteil bankruptcy court to develop a workable reorganization plan, Chairman Belhassine promises to write a recovery program by the end of October, at which time \$120-million fiscal year losses must be reported.

Following further exploration into the company's finances during the first week of October, the Creteil bankruptcy court determines that **Air Liberte, S.A.'s** fiscal situation is worse than was originally reported.

Even though a number of unprofitable routes are now cut, the court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, **Air France** expresses interest. Under EC restrictions against acquisition of other carriers during the time of its \$4-billion state bailout, it appears unlikely that the independent will join the major's stable.

Other companies expressing an interest include **AOM French Airlines, S.A.**, which has been seeking a merger along with **British Airways, Ltd. (2)**, Virgin, **TAT European Airlines, S.A.**, and **Corsair, S.A.**, the in-house airline of France's largest tour operator, Nouvelles Frontières. Seeking to protect the interest of its TAT subsidiary, BA CEO Robert Ayling complains to the European Commission that AOM should not be allowed to seek ownership. It, too, is up for sale as the result restructuring plans announced in the wake of a 1995 state aid package to its parent, Credit Lyonnais.

With **AOM French Airlines, S.A.** and **Air France** out of the picture, two airlines, Nouvelles Frontières, and a group of private investors submit offerings for **Air Liberte, S.A.** to the Creteil Court, also on October 14.

The weakest offering is made by an unnamed French pilot acting on behalf of a group of private investors; no details are provided. **Virgin Express, Ltd.'s** offering, for which details are also not provided, is not, as company officials put it, "fully compliant with the court's requirements."

Nouvelles Frontières notes that it has partners in the Rivaud Bank and **Royal Air Maroc** who would be willing to take over **Air Liberte, S.A.** (including its \$300-million debt) and make it profitable within 18 months. It would also make an offer to acquire **AOM French Airlines, S.A.** The two independents would be merged with its own in-house carrier, **Corsair, S.A.**, to create a major independent airline that could then compete with **Air France**.

Working together, **British Airways, Ltd. (2)** and **TAT European Airlines, S.A.** agree on a three-year plan for **Air Liberte, S.A.** TAT Chairman/CEO Marc Rochet is tasked to manage the offering on behalf of the British major. In addition to an initial payment of \$5 million for AL's assets, the BA/TAT plan would essentially retain the present **Air Liberte, S.A.** fleet and routes, concluding a code-sharing agreement for routes now flown in competition and pledging not to begin new routes that overlap. French management would be maintained, 1,250 employees would be hired, and the British would make a major capital investment. The company would be reformed into the new French carrier **Societe Nouvelle Air Liberte, S.A.**

Also in October, a wet-lease agreement is entered into with **Sabena Belgian World Airlines, S.A.** covering nine daily return flights from Brussels to London (LHR and LGW), as well as those to Barcelona and Rome that will start later. Employing a Sabena B-737-4Y0 and two B-737-46Ms painted in Virgin Express livery, the company begins flying the Belgian line's Brussels to London (LHR) route during the last week of the month. Frequencies will advance to 13 times a day.

When, during the month, **SAS (Scandinavian Airlines System)** reduces certain of its fares on its Copenhagen to Brussels route, Virgin Express files a protest with the European Commission claiming predatory pricing. In response, SAS simply lowers all of its ticket prices on the route.

At the same time, the Rivaud Bank and Nouvelles Frontières abandon their efforts to take over **Air Liberte, S.A.**; Rivaud throws its support behind **British Airways, Ltd. (2)**, with the two pledging to invest \$124 million in the ailing French independent. BA would hold 70% interest with the remaining 30% stake held by Rivaud. Meanwhile, Virgin Express is joined by a number of unnamed investors in presenting an alternative to the French bankruptcy court handling the case; the court extends the deadline for its decision from October 30 to November 5.

Virgin Express does not submit a bid and on the fifth day of November the Creteil Court accepts the BA-Rivaud joint offering to ac-

quire **Air Liberte, S.A.**, which arrangement will become final on December 15.

During the month, the rivalry with **SAS (Scandinavian Airlines System)** intensifies. Virgin Express, in a promotion set to last until late March, reduces its prices on the Brussels to Copenhagen route to a point 37% below those offered by the multinational carrier.

Enplanements for the year increase 43.3% to 1,881,000. Moderate profits are generated, including \$1.84 million (operating) and \$880,000 (net) on revenues of \$173 million (Bfr 6 billion), a 30% increase.

The workforce is dramatically increased in 1997, growing 56.3% to 800. Markets visited include Barcelona, Brussels, Copenhagen, London (LHR), Madrid, Milan, Nice, and Vienna.

On behalf of **Sabena Belgian World Airlines, S.A.**, Virgin doubles its Brussels-Barcelona services in January by taking over all five of Sabena's daily roundtrips. Five-times-a-day replacement flights to Rome's Fiumicino Airport commence on March 30, along with new twice-daily flights to London (LGW) flown with Sabena Avro RJ85s and B-737-229As.

By May, the company is flying 1,609 flights per month, a huge increase over the 300 per month flown at start-up. It operates 150 daily charters and scheduled services between 10 major European cities.

As the year progresses, the carrier begins losing pilots to **Sabena Belgian World Airlines, S.A.** and other carriers as labor relations worsen. Cockpit and cabin crews, represented by the union SETCB, protest pay and working conditions that they claim are worse than at other Belgian airlines.

On August 27, Virgin Express Flight 603 is operating a replacement service into London (LHR) from Brussels on behalf of **Sabena Belgian World Airways, S.A.** The B-737-229A with 29 passengers on ILS approach comes within 200 ft. horizontally and 600 ft. vertically at 2,400 ft. with **British Airways, Ltd. (2)** Flight 818, a departing B-757-236 with 29 aboard. Both aircraft, in cloud, respond to ATC instructions and avoid disaster, although the near miss is caused by initially faulty ATC.

In September and October, two B-737-46Ms are leased to Montreal-based **Air Transat, Ltd.**, which will operate them on its winter charters to Florida. They are sent in the company's red and white colors, with AT titles and a tail logo.

CCAir board member Peter Murnane, a principal in Barlow Partners II, and former **Mesa Air Group** executive Ornstein, now Virgin Express' president, make a \$50-million offer in October for Mesa's "United Express" operation at Denver, along with **WestAir Commuter Airlines**. The tender, largely unnoticed in Europe, is rejected.

The company makes an initial public offering in November, selling a percentage of its equity to the public.

Passenger boardings this year skyrocket 61.4% to 3,019,947 while operating revenues surge 38.8% to \$244.82 million. With expenses up 34.1% to \$234.02 million, there are large profits: \$10.8 million (operating) and \$7.38 million (net).

The dispute between labor and management continues into 1998. During January, it is revealed that, over the past quarter, Ornstein and his group have acquired 5.33% in "United Express." In February, an unofficial one-day strike leads to cancellation of almost of third of the carrier's flights.

In March, CEO Ornstein and Chief Financial Officer Swigart obtain seats on the **Mesa Air Group** board of directors. The two "Baby Boeings" leased in Canada return at the end of March.

At the beginning of the second quarter, Virgin Express begins to sell certain of the tickets it is unable to unload by conventional means in Internet auctions. Bids are solicited from visitors to its Web site and the undesirable tickets are sold off at an average of £33 pounds each, which represents an unexpected £33,000 in additional and unexpected income.

Virgin Express threatens in April to move to the U.K. to skirt Belgium's high taxes and costly personnel benefits. At the same time, President/CEO Ornstein becomes chairman, although he returns to the U.S. on May 1 to operate **Mesa Air Group**. Chief Financial Officer Swigart succeeds him as president/CEO, even though he is also vice chairman of the MAG board.

The code-sharing agreement with **Sabena Belgian World Airlines, S.A.** is deepened on May 17 when the two begin thrice-daily return service from Brussels to London (STN) using Virgin equipment. Simultaneously, the number of peak daily frequencies is increased to six between Brussels and Barcelona. The company now offers 34 daily departures from Brussels and low-fare scheduled services to London, Barcelona, Rome, Madrid, Milan, Nice, and Copenhagen.

On May 18, Virgin Group Chairman Branson announces that Virgin Express is close to establishing a new holiday airline, based in the U.K., to be known as Sun Air. Arrangements for lift for the new package-tour airline, to be formed in partnership with Virgin Holidays, Ltd., will be provided by **Sabre Airways, Ltd.** starting in 1999.

In competition with the new **British Airways, Ltd. (2)** in-house airline GO, Virgin Express, beginning on May 22, inaugurates deep-discount service from London (STN) to Rome. Flights from the same point commence to Milan on May 23 and Copenhagen on June 5. The company does not compete directly on any routes, but offers fares from London (STN) via Brussels to Rome, Milan, Copenhagen, Madrid, Barcelona, and Nice for £98 pounds return, with direct flights to Brussels priced at £78 return.

A cofounder of **America West Airlines**, Donald Monteath, is appointed Vice President-Operations/Chief Operating Officer on June 16, effective July 1. A week later, on July 8, the company announces that, in August, it will seek an Irish operating license (which will hopefully be received by November) in order help it avoid further crippling labor costs in Belgium. It is made clear that the carrier is not quitting Brussels, but will expand in Ireland and start "something new."

Company officials are so pleased about the extra income generated from Internet auction ticket sales that these are continued; someone, however, forgets to specify minimum bids. In its July 31 financial section, *The Irish Times* reports that, as a result of this oversight, the airline has been bound to accept and accommodate a ticket offer of 39 pence for a service from Rome to Brussels. Upon completion of the flight, it is registered in the *Guinness Book of World Records* as having been flown with the cheapest scheduled airline ticket ever.

Costs continue to accelerate during the summer, eventually being pegged at 20% higher than in the spring. Flight staff, meanwhile, defect in larger numbers to **Sabena Belgian World Airlines, S.A.** The loss for the first half of the year reaches £70,000.

The creation of **Virgin Express (Ireland), Ltd.** is announced on September 25. Virgin Express CEO Swigart places a former **Trans World Airlines (TWA)** executive in charge of the new entity and announces that twice-daily roundtrips between Shannon and London (STN) will commence in mid-December. Simultaneously, it is noted that Robert Brayton, former vice president-operations at **Continental Airlines**, has accepted the same post with Virgin Express.

On October 1, **British Airways, Ltd. (2)**, in conjunction with a British newspaper, offers a 50% discount on international flights with the collection of tokens. VA immediately moves to reduce its fares to certain international destinations by the same amount, in most cases undercutting BA's special rates. The price war between BA and VA continues through October 28.

As part of the contest, the BA low-cost division GO cuts the cost of certain fares to Rome, Bologna, Lisbon, and Milan.

Virgin Express (Ireland), Ltd. tickets go on sale at the introductory one-way price of £17 for twice-daily service between Shannon and London (STN). At this point, Brian Beal, chairman of the unborn airline's small Shannon-based rival **AB Airlines, Ltd.**, accuses Richard Branson, Virgin Group chairman, of "doing a British Airways." Beal, who appeals the Virgin move to the European Commission, is concerned that it may be forced to pull out of services between the West of Ireland airport and Stansted and accuses his fellow airline boss of doing "exactly what Virgin accuses British Airways of."

According to the *London Daily Mail* on November 13, Virgin Express reports losses of £2.4 million during the third quarter, which must be added to first-half losses of £70,000. The carrier has been struck by

higher costs, up 51%, and a shortage of flight staff, many of who are defecting to **Sabena Belgian World Airlines, S.A.**

Recruitment is begun in November for 250 reservations agents for the new Virgin Sun package tour business to be launched in the spring.

In a grand ceremony presided over by Chairman Branson, President/CEO Swigart, and Luzveminda O'Sullivan, the 1998 Rose of Tralee, the company's new Shannon headquarters are opened on December 15. The proceedings include the arrival of the first B-737-300 that will be stationed at the Irish airport.

Flights between Shannon and London (Stansted) begin on December 18.

Enplanements jump 17.7% to 3,554,825. Revenues climb 14.1% to \$277.08 million, while costs are up 18.9% to \$276 million. There is an operating profit of \$1.08 million and a net gain of just \$688,000.

An announcement is made on January 29, 1999 that the company will inaugurate twice-daily return flights from London (STN) to Shannon on December 1.

With the beginning of the summer schedule on March 28, the company introduces thrice-daily RJ85 return flights on behalf of **Sabena Belgian World Airlines, S.A.** between Brussels and the Channel Island of Jersey.

On April 13, shareholders approve a plan for the company to repurchase up to \$15 million of its outstanding shares.

On May 1, the new **Virgin Sun Air, Ltd.** holiday charter carrier takes wing; lift is provided employing a pair of A320-214s subleased from **Sabre Airways, Ltd.** Revenue charters are operated from London (GTW) and Manchester to Mediterranean and European holiday destinations.

While taking off from Brussels on July 13, a tire bursts aboard a B-737-4Y0. After circling the airport for three hours to burn off fuel, the aircraft makes a safe emergency landing during which no injuries occur.

Aviation Week and Space Technology reports on August 23 that Virgin Express will launch Berlin Express operations on November 10, employing the company's Irish-registered "Baby Boeing," to offer nonstop services from London (STN) to one of the three airports at the German capital, plus Brussels and Paris (CDG).

Virgin Express announces on October 5 that it has no further interest in acquiring any of the assets of newly defunct **Debonair Airways, Ltd.** The charter base at Paris (CDG) is closed.

With the end of the summer season in late October, the carrier and **Sabena Belgian World Airlines, S.A.** halt their dual-designator service between Brussels and London (LGW), freeing the Sabena B-737-329 employed for the routes the two code-share from Brussels to Barcelona and Rome. The two partners continue to offer code-shared flights from Brussels to London (LHR) nine times weekdays, with a reduced number of flights on weekends.

On November 10, Virgin Express replaces defunct **AB Airlines, Ltd.** on the route from London (LGW) to Berlin (Schoenefeld), twice daily. These are the only nonstop flights from London to the German capital from the U.K., save those offered by **British Airways, Ltd. (2).**

Passenger boardings jump 12.6% to 2,925,000. Revenues climb 11.9% to \$291.8 million, while costs are up 15.1% to \$299.2 million. The previous year's slight profits are now losses: \$7.4 million (operating) and \$5.64 million (net). The net loss is blamed on compensation to former management and a share buyback scheme.

Airline employment at the beginning of 2000 stands at 972, a 36.5% increase over the previous 12 months. The B-737 fleet includes 2 Dash-3M8s (1 of which is leased to **Virgin Express Ireland, Ltd.**), 3 Dash-33As, 2 Dash-3Y0s, 4 Dash-36Ns (2 of which are chartered to **Virgin Express Ireland, Ltd.**), 2 each Dash-4Y0s, Dash-46Ms, and Dash-405s, and 1 Dash-430.

With the company plagued by management and quality difficulties, Sir Richard Branson confides to the *Financial Times* in early February that it was a mistake for him to have purchased the carrier and now wishes that he had just started a new airline instead.

On February 15, an agreement is reached with **City Bird, S.A.** under which City Bird will take over all Virgin charters as of October 1.

Recovery plans are put into place during the first quarter. Flights between Madrid and Rome and Rome and Barcelona are cut and capacity dedicated to increasing routes elsewhere. Additionally, the company's charter operation, which accounts for a third of its revenues, is to be downsized because it is both unprofitable and difficult to manage.

The company's first quarter loss grows to E 13.8 million (\$13.2 million) compared to E 5.1 million for the same period a year earlier. Although revenues have grown by 10.5% to E 59.8 million, costs, led by increased fuel prices, are up 23%.

Return frequencies from Brussels to Copenhagen are expanded on May 1 from one to three flights daily and to London (LHR) from seven to eight.

Service from Brussels to London's Stansted Airport is discontinued on May 3; flights into Gatwick and Heathrow Airports are continued. Beginning on May 4, anyone with the surname Ryan is allowed to fly free (along with a friend) on the company's new frequency between Shannon and London (LGW) through May 14; although the service is designed to compete with the twice-daily roundtrips between the two points made by **City Flyer Express, Ltd.**, the promotion is perceived as a slap by competing **Ryanair, Ltd.**, which institutes a similar offer, running until May 24 on its Shannon to London (STN) service.

On May 26, a press release notes that the carrier will cease its charter operations in October in order to provide capacity for the company's more profitable scheduled services. At the end of the month, the unprofitable routes from Rome to both Madrid and Barcelona are closed.

The first **Virgin Blue, Ltd.** aircraft is a **Virgin Express Ireland, Ltd.** B-737-33Q sent down from Brussels via Istanbul and Muscat, on May 30-June 1. A B-737-3M8 arrives in Australia under charter from Virgin Express in late June.

During June, arrangements are completed with GECAS for the lease of eight Next Generation B-737-700s beginning in July 2001 and with ILFC for the charter of three more starting in 2002.

The carrier reports an E 6.4-million loss for the second quarter. Company executives believe that the airline's current distribution system is not properly filling its aircraft and consequently, negotiations are opened with reservations system providers Galileo and AMADEUS regarding an upgrade of its sales and marketing network.

In accordance with a new game plan released in mid-September, the carrier, on October 28, reduces its charter operations from 23% of its operation to just 2%-3%, with those being ad hoc. Operations from London (STN) are halted and the company's remaining services are consolidated at Gatwick and Heathrow Airports. In addition to nine daily roundtrips between London (LHR) and Brussels, three new daily return frequencies are introduced to the Belgian capital from London (LGW). Return flights from Gatwick to Shannon, Ireland, are doubled from one to two every weekday.

Following the report of a third-quarter E 7.3-million (\$6.2-million) loss at the beginning of November, Managing Director John Osborne resigns to become group operations director at **Ryanair, Ltd.** and is succeeded by Flight Operations Director Neil Burrows. David Hoare becomes executive chairman. In continuing financial difficulty, the carrier on November 10 cancels its 2 orders for 11 Next Generation B-737-700s and 2 Next Generation B-737-800s, which were to have been delivered between July 2001 and April 2003. It also cuts its current B-737-300/400 fleet by returning a B-737-341 to its lessor, **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)**, and subleasing five others to **Virgin Blue (Pty.), Ltd.**

It is reported on November 28 that **Virgin Blue, Ltd.** will receive two more B-737s within days and six more in 2001. Indeed, a Virgin Express B-737-46M is received under lease at Sydney the same day, with the second, a Dash-4Y0, arriving on December 2.

Daily B-737-300 roundtrips are inaugurated on December 10 between Brussels and Malaga. The new flights complement the carrier's twice-daily nonstop return service from the Belgian capital to Madrid and its seven dailies down to Barcelona and back.

It is reported on December 12 that **Virgin Express (Ireland), Ltd.** will be shut down on January 15 and put up for sale. On that date, the

Irish subsidiary's Berlin, London (LGW), and Shannon bases will be closed down and necessary assets transferred to Brussels. The move follows a strategic review that finds it necessary for Virgin Express to re-focus business around the profitable routes out of Brussels.

Enplanements for the year total 3,814,689. Due largely to the strength of the U.S. dollar and high fuel price, the year's net loss deepens to £65.3 million (\$57.5 million).

In actuality, the Irish subsidiary will, due to requests from potential purchasers seeking a smooth transition, be allowed to fly from Shannon to London (LGW) and Brussels until at least March 15. When no takeover is completed, **Virgin Express (Ireland), Ltd.** will be shut down on March 16.

VIRGIN EXPRESS FRANCE, S.A.: BP 10928, 1 Rue de La Haye, Le Dome, Roissy Cedex, Paris, F-95731, France; Phone 33 (1) 4816 1500; Fax 33 (1) 4816 1506; <http://www.virgin-express.com>; Code DG; Year Founded 1997. Air Provence International, S.A., the subsidiary of Euro-Belgian Airlines, S.A., is acquired with its parent by Virgin Group in April 1996. The company is allowed to continue its previous scheduled flights under its own name until November 1997, when it stands down.

In the months that follow, the company is reformed, renamed, and even listed on the Nasdaq and Brussels stock exchanges. Jean-Pierre Rozan remains president, with Harve Tourrei as vice president-operations. A fleet is assembled comprising 1 Boeing 737-300, 2 British Aerospace BAe 748-2As, and 3 Grumman Gulfstream G-1 turboprops.

Revenue flight operations resume on March 24, 1998 from Paris (CDG), as well as a hub at Nice. Scheduled departures are offered to London, Copenhagen, Brussels, Milan, Rome, Barcelona, and Madrid. In addition, charters are offered to over 150 different destinations in Europe, the Mideast, and Africa.

With the **Air France** division Air Charter pulling out of North Africa in the fall, greater emphasis is placed on VEF's nonscheduled flights from Paris (CDG).

Airline employment stands at 70 at the beginning of 1999. Paul Skelion is now president, with Herve Tourral as director of flight operations.

VIRGIN ISLAND AIRWAYS: United States (1963–1968). VIA is founded by Bill Bohike Sr. at St. Croix, U.S. Virgin Islands, in the spring of 1963 to offer scheduled third-level Aero Commander service to St. Thomas and to San Juan, Puerto Rico. Revenue services commence on May 10.

Operations continue apace between 1964–1967, with only one unhappy incident: seven are killed on July 16, 1965 when an Aero Commander crashes during its takeoff from St. Thomas for San Juan. With the addition of de Havilland DH 104 Doves and DH 114 Herons, flights are maintained until the carrier is sold to and merged by **PRINAIR (Puerto Rico International Airlines)** in 1968.

VIRGIN ISLAND AIRWAYS, LTD.: P.O. Box 365, Town Road, Tortola, British Virgin Islands; Phone (809) 495-1972; Fax (809) 495-2354; Code S5; Year Founded 1996. VIA is established at Tortola in 1996 as successor to **Air BVI (Air British Virgin Islands, Ltd.)**. Norbert E. O'Neal is named managing director and he recruits a workforce of 50 and purchases a pair of de Havilland Canada DHC-6-300 Twin Otters.

Revenue flights begin and continue; destinations visited by the flag carrier of the British Virgin Islands include various Caribbean Island points, including the U.S. Virgin Islands.

VIRGIN ISLANDS INTERNATIONAL AIRLINES: The Pavilion, 24901 Dana Point Harbor Dr., Suite 200, Dana Point, California 92629, United States; Phone (949) 488-8494; Fax (949) 488-8494; <http://www.viaa.com>; Code 6G; Year Founded 1998. On May 15, 1998, a new subsidiary, VIIA, is created by **Las Vegas Airlines** to operate scheduled passenger services from St. Thomas. Las Vegas Airlines will continue to hold the FAA operating certificate under which VIIA will operate.

Jehu Hand is named president of the new operation and is able, on September 17, to announce an agreement with the government of the Virgin Islands. In addition to a \$50,000 development contribution, the government agrees to endorse and help market the new entrant as it promotes its services. Simultaneously, plans are announced for the inauguration of 14-times-a-day deep-discount services in October from St. Thomas to San Juan and St. Croix and from San Juan to St. Croix, plus a daily return service from St. Thomas to Antigua.

The first of several turboprop aircraft bearing the VIIA emblem is unveiled in ceremonies at Dana Point, California, on September 22. Revenue flights commence in December.

VIRGIN ISLANDS SEAPLANE SHUTTLE (VISS): United States (1981–1990). VISS is organized in October 1981 as a division of New York-based Seaplane Shuttle Transport, owned by the Sea Air Corporation headed by President/Capt. Michael B. Braunstein, himself a seaplane pilot. In early 1982, the assets of **Antilles Air Boats**, which has been operated by Resorts International since 1979, are purchased and merged. The company name is changed and seaplane ramp operating rights are obtained from respective island governments. With many of the former AAB employees and flyers still available, they are recruited to form the nucleus of the new VISS.

Employing two Grumman G-73 Turbo Mallards painted in the carrier's blue and white livery, the company inaugurates scheduled passenger flights from St. Croix to St. Thomas and St. John on March 15.

Enplanements for the year total 65,771 and revenues are \$1.5 million. The operating profit is \$60,000.

Operating 5 Mallards in 1983, the carrier enjoys an outstanding year, as reflected in the payroll, which jumps 20.4% to 65 workers.

The Mallards, by the way, are now the first aquatic aircraft to be air conditioned. The company's Turbo Mallards are also the first and only ones of their type certified as Day/Night VFR/IFR aircraft and are so operated.

Passenger boardings soar 55.2% to 100,966. Operating income increases to \$3 million and expenses are held to a point where an \$80,000 operating profit is generated.

One more Mallard joins the fleet in April 1984 and allows the company to begin operating 14 daily flights from Alexander Hamilton Airport on St. Croix to the waterfront docks on St. Thomas and St. John. These services are in addition to 40 daily trips made between the seaplane docks on the three U.S. Virgin Islands.

To accommodate additional expansion, VISS paves more concrete ramp area and expands hangar space at its St. Croix waterfront base.

Enplanements climb 8.1% to 109,184. A total of 386,000 pounds of cargo are also flown.

Airline employment is 58 at the start of 1985 and the fleet comprises 7 Grumman Mallards. In the spring, regularly scheduled flights are started to Tortola in the British West Indies and San Juan.

During the year, 16,000 flights are made to 5 Caribbean island markets, passenger boardings accelerate 36.1% to 148,619, and freight rises 3.4% to 399,000 pounds.

The workforce grows 2.2% in 1986 to 140 and the fleet still includes 7 G-73 Turbo Mallards. Three Grumman G-73T Turbo Mallards are purchased from Texaco in June. As of July 1, VISS is the largest certified seaplane airline in the world.

Due to aileron control problems, a G-73 with 13 aboard crash-lands into the sea near the island of St. Croix on October 28 shortly after takeoff. The secretary of the only federal court judge then sitting on St. Croix is killed, while the remaining 12 people are injured, 5 seriously.

Customer bookings rise 21.7% to 182,139.

After his fellow travelers have deplaned at San Juan on June 5, 1987, a lingering passenger aboard a Mallard pulls a gun and demands to be flown to Cuba—and is.

The 135-employee small regional suffers a traffic drop for the year as bookings go down 11.3% to 161,508 passengers flown.

Although three additional G-73Ts join the fleet in 1988, the workforce is cut 7.1% to 118. In April, former Virgin Islands Director of

Tourism Daniel H. Lewis is appointed vice president-general manager and the company negotiates a contract from **Trans World Airlines (TWA)**, becoming a "TWExpress" carrier, effective June 1.

During the spring, the bill comes due for the necessary conversion of the piston engines of the company's Mallards to turboprops. Unhappily, the airline is not in a position to cover the \$2 million per aircraft price tag. In July, VISS, with debts of \$16 million, files for Chapter XI bankruptcy, seeking a way to better its financial situation through reorganization and sale into new ownership. It also hopes to forestall the repossession of its aircraft by Manufacturer's Hanover Trust Bank (MHTB) and its affiliate CIT Leasing. Still, the company is taken over by MHTB that works with it on restructuring.

The year's passenger boardings dip by 1.9% to 158,517 and revenues fall to \$4.97 million.

Operations at Braunstein and Lewis' carrier, including the search for new ownership, continue apace in 1989. In April, "TWExpress" service is initiated from San Juan to Cyril King Airport in St. Thomas and Alexander Hamilton Airport in St. Croix. Two new de Havilland Canada DHC-6-300 Twin Otters are employed on this service. The company schedule totals more than 60 daily interisland flights.

By September 16, fairly detailed warnings have been issued that Hurricane Hugo is rapidly bearing down on St. Croix and that the island will be severely hit. Surprisingly, the VISS Mallard fleet is not ordered to seek safe haven elsewhere, but is simply left on the ramp. The next day, the huge storm strikes the company's base, flipping over or otherwise smashing four of the five aircraft present. All five loss-making planes have instantly become insurance write-offs.

The disaster causes Lewis to suspend operations on October 12. No traffic or financial figures are available for the year due to the carrier's bankruptcy status.

The single available Mallard is employed on charter flights under court protection in the spring of 1990, linking St. Croix and St. Thomas with San Juan. The company's assets are purchased for over \$1 million on June 1 by Anthony Tirri, owner of Caribbean Airlines Services. Plans are announced for the investment of another \$1.5 million to upgrade and expand the fleet and to reestablish services.

Meanwhile, the Virgin Islands Ports Authority asks the carrier to vacate its facilities and denies access to the landing and takeoff ramps previously employed. During the fall, the company is renamed **Sea Air Shuttle**.

VIRGIN SUN AIR, LTD.: Virgin Holidays, The Galleria, Station Road, Crawley, West Sussex, England, RH10 1WW, United Kingdom; Phone 44 (0) 1293 444616; Fax 44 (0) 1293 525496; <http://www.virginholidays.com>; Code VS; Year Founded 1998. In April 1998, Virgin Holidays, the package tour subsidiary of Virgin Group, which also owns **Virgin Atlantic Airways, Ltd.** and **Virgin Express-Eurobelgium Airlines, S.A.**, announces the launch of Virgin Sun, a short-haul holiday airline that will fly to popular Mediterranean and European destinations beginning in a year. To provide lift for the new program, merger discussions are undertaken between **Sabre Airways, Ltd.** and **Virgin Express-Eurobelgium Airlines, S.A.** These negotiations go nowhere. On May 18, Virgin Group Chairman Richard Branson announces that his corporation is close to establishing its own new charter airline, based in the U.K., which will provide all lift for Virgin Holidays. An arrangement is, meanwhile, worked out with **Sabre Airways, Ltd.** for the provision of supplemental Virgin Holiday flights. Lease requests are placed with GECAS for two Airbus Industrie A320-214s.

Recruitment is begun in November for 250 reservations agents for the new airline. Although an early sales lead-in is begun, it will later be reported that many seat-only flights are not booked for the early summer period, with customers preferring to wait for later dates.

Ron Simms is appointed managing director in December and new management personnel are appointed. Also, the company's distinctive new livery is unveiled. The company's aircraft will be painted a striking canary yellow, with red Virgin tails/engine nacelles and billboard-block

"Sun" titles over a white sun on the forward end of the fuselage windowline.

Virgin Holidays finalizes the appointment of its airline staff early in 1999 and in April the two A320-214s arrive under charter from GECAS, including one christened *Mediterranean Maiden*; both Vacation charters from London (GTW) and Manchester to 13 Mediterranean and southern European holiday destinations commence on May 1 and continue. Destinations visited include Majorca, Menorca, Ibiza, Costa Blanca, Costa del Sol, Tenerife, Gran Canaria, Portugal, Turkey, Crete, Rhodes, and Corfu. Standard and Premium Class service is offered. All passengers receive a welcome drink, free headsets, and a newspaper. Flight menus feature snacks and hot dogs. The £49 fare for flight-only customers also includes priority check-in, access to the executive airport lounges at London (LGW) and Manchester, extra legroom, and upscale meals with free drinks and champagne.

It is announced at the beginning of September that the company will acquire additional Airbus equipment in time for the start of the summer schedule. The parent tour operator promises to increase the number of London (LGW) and Manchester summer holiday seats it can offer from 130,000 to 200,000.

At the end of October, a Winter Sun program is introduced with flights to Lanzarote, Gran Canaria, Tenerife, Costa del Sol, Costa Blanca, Cyprus, and Funterventura. At this point, Virgin Holidays becomes one of the first tour operators to enable passengers to book holidays online.

On December 13, Virgin Sun delays the start of its second summer seat-only program. Instead of the previous year's sales beginning six months out in order to introduce the company brand, the lead-in now is scaled back to three months.

Enplanements for the year total 14,000.

A full schedule of charter flying begins at the end of March 2000. Pilots, cabin crew, and ground customer service personnel are provided with new uniforms in April.

On May 10, weekly return flights are inaugurated from East Midlands Airport to the Greek Islands of Rhodes and Crete and to Larnaca, Cyprus.

Not long after the beginning of the summer schedule, on May 31, an A320-211 is acquired. Christened *Sunkissed Girl*, the Airbus flies from London (LGW) and Manchester to the Canary Islands and Mediterranean destinations. New daily Manchester to Naples charters commence on July 10.

It is reported on November 25 that the company has decided to cease all charter operations at a point sometime in late 2001. Whether the date will be at the end of the 2001 summer season or just before the opening the following winter season is not specified. The A320s will be leased to other operators.

VIRUNGA AIR CHARTER, S.A.: Zaire (1978–1996). VAC is established at Kinshasa, Zaire, in 1978 to provide passenger charter flights to bush destinations and small domestic communities. Revenue operations begin with Cessnas, Partenavia, and a Douglas DC-3.

During the 1980s and 1990s, Ngezayo Kambale's concern employs 50 workers and, when required, a single de Havilland Canada DHC-6-300 Twin Otter is leased from **Air Burundi, S.A.**

Flights cease as a result of the civil war in 1996.

VISCOUNT AIR SERVICE: United States (1994–1998). VAS is established by former **Sportsflight Airways** executive Bob Fleming at Tucson, Arizona, in the spring of 1994 to provide charter and scheduled passenger and cargo services, with emphasis on the transport of professional sports franchises. Revenue flights commence in August with a fleet that includes 9 leased Boeing 737-247s, 3 737-284As, 2 each 737-204s and 737-2E1s, and 1 737-89. Enplanements by year's end total 269,000 and revenues are \$4.61 million. Expenses total only \$3.87 million, leaving the difference as operating profit.

By 1995, VA has signed up a host of pro franchises and many of the carrier's aircraft are emblazoned with their logos: baseball's New York

Yankees and Baltimore Orioles, and basketball's New Jersey Nets, Denver Nuggets, San Antonio Spurs, Sacramento Gold Miners, Atlanta Hawks, and Charlotte Hornets.

Enplanements climb to 398,000.

VA enters Chapter XI in March 1996, but continues operations. The company's Boeings transport a total of 120,275 passengers through September, a huge 67.8% decline. Two aircraft, a B-727-89 and B-727-243A, are sold to **Sun Pacific International** and are replaced with a chartered B-727-231, which is promptly subleased to **Nations Air Express**. Flights cease in October. Revenues for the year total \$70 million.

The workforce at President Walter Cole's airline stands at 250 at the beginning of 1997. In February, Chief Pilot Capt. Timothy Frye is sent to repossess the trijet leased to **Nations Air Express**. Within days of this exercise, the FAA suspends his ATP certificate for 18 days, charging that Frye had piloted an unairworthy aircraft. The flyer, in return, files suit against the government agency, charging that his civil rights have been violated. When the matter is resolved in March, the only unairworthiness charge that can be upheld is that for an inoperative bulb in one of the Boeing's landing lights.

During the remainder of the year and into 1998, the company, which has been purchased by Air Oklahoma, attempts to restart operations, but cannot.

VISION AIR, INC.: 118-5360 Airport Road South, Richmond, British Columbia V7B 1B4, Canada; Phone (604) 303-9336; Fax (604) 303-9337; <http://www.visionaire.com>; Year Founded 1995. Vision Air is established at Richmond in 1995 to offer passenger and cargo charters throughout Western Canada. Revenue flights commence with one each Cessna 401 and Fairchild-Swearingen Metroliner.

Flights continue without headline or incident during the remainder of the decade. In these years, weekday scheduled return service is developed and offered from Vancouver to Victoria. Additionally, Friday and Sunday return service is flown from Vancouver to 108 Mile.

VISION AIRWAYS, LTD.: Canada (1993-1995). Vision is established at Timmins, Ontario, in 1993 to offer local domestic services. A fleet is assembled comprising 1 each Dornier 228-201, 228-202, and de Havilland Canada DHC-7. These are employed to inaugurate scheduled flights to Moosonee, Attawapiskat, Fort Albany, and Kaschechewan.

Operations continue for less than two years.

VISTA AIRLINES: 3955 Blue Diamond Rd., Grand Canyon, Arizona 89139, United States; Phone 897-2300; Year Founded 1990. President Eliot Alper establishes Vista at Grand Canyon in 1990 to offer on-demand charter and air taxi flights. Revenue flights, including flight-seeing services over Death Valley, begin and continue with a pair of Cessna 206s.

VISTAJET, LTD.: Canada (1997). Former **Air Ontario, Inc.** executives form this new entrant at London, Ontario, during the first quarter of 1997. Two Boeing 737-291s are acquired on long-term charter from International Air Leases on April 9 and after workup, they inaugurate low-cost jetliner flights on May 26 from Toronto to Thunder Bay and Calgary. Two de Havilland Canada DHC-7 turboprops are also employed to fly from Ottawa to Windsor via Toronto.

Plans are announced for the acquisition of additional aircraft and the extension of flights to Calgary and Edmonton in Alberta. Unhappily, the company is unable to achieve viability and ceases operations on September 12, after reaching an agreement with **Air Canada, Ltd.** to accommodate its previously ticketed passengers.

VITA (VIACAO INTERSTADUAL DE TRANSPORTES AEREOS, S.A.). See LATB (LINHA AEREATRANCONTINENTAL BRASILEIRA, S.A.)

VITAIR: 5 Levanevskokogo St., Kiev, 03058, Ukraine; Phone 7 (095) 292 2160; Fax 7 (095) 292 2010; Code VIT; Year Founded

1994. This Ukrainian all-cargo carrier is established at Kiev in 1994 to offer both domestic and international services. Revenue flights commence with 2 Antonov An-74s and 1 each An-32B and An-12.

During the remainder of the decade, the company comes to specialize in the transport of Ukrainian and other UN troops plus support equipment, to diverse points ranging from Somalia and the Western Sahara to Kuwait and the new republics of the former Yugoslavia.

The company's fleet at the beginning of 2000 includes 1 each An-32B, An-12, and An-24RV.

VITIAZ AVIATRANSPORT (VITIAZ AIRTRANS): Russia (1993-1996). This small all-cargo charter operation is established at Moscow in 1993. V. O. Garin is general director and he begins ad hoc domestic flights with a single Ilyushin Il-76. Nonscheduled passenger flights are added in 1994 with several Tupolev Tu-154Ms.

Services continue in 1995-1996 with the Ilyushin and 4 Tupolevs.

VIVA AIR (VUELOS INTERNACIONALES DE VACACIONES S.A.): Spain (1988-1998). This carrier is formed at Palma de Mallorca on February 24, 1988; the German state airline **Deutsche Lufthansa, A.G.** holds 48% interest with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** holding the remainder. Three Boeing 737-330s are leased from the German partner and inclusive-tour operations begin in April. A network of charter routes is established throughout Europe and the Mediterranean basin and a total of 329,000 passengers are carried by December 31.

The charter operations of Iberia's domestic affiliate **Aviacion y Comercio, S.A. (AVIACO)** are assumed in early 1989 and airline employment is increased by 44% to 345. The fleet also grows, adding two more B-737-330s and three DC-9-32s. A contract is signed with **Aeroflot Soviet Airlines** to transport crews of the Russian fishing fleet from Las Palmas to Moscow.

Enplanements total 808,603 and revenues are \$73.6 million.

In September 1990, the German shares are purchased by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and ownership is now held by the Spanish flag carrier (96%), INI (2%), and Paurner (2%). Manuel Rodriguez Gimeno is president with Jose Ma de Celis as director general. The fleet now comprises 4 B-737-330s, 3 DC-9-32s, and 1 B-747-248B. Orders are outstanding for 4 B-737-36Es as the carrier is reconfigured to also provide scheduled flights.

The 450-employee airline transports a total of 1.4 million passengers and earns a net profit of \$7.2 million.

Scheduled non-trunk services by the 465-employee carrier are begun in spring 1991 linking Madrid and Malaga to London (LGW); Alicante, Malaga, and Palma de Mallorca to London (LHR); Malaga to Paris (ORY), Frankfurt, and Dublin; Palma de Mallorca to Frankfurt, Manchester, and Paris (ORY); and Alicante to Paris (ORY). A number of flights are made as replacement services on behalf of Iberia. The fleet is enhanced by the delivery of half the outstanding order for B-737-36Es.

Enplanements, now reported for scheduled flights only, total 381,509.

The workforce is cut 1.7% in 1992 to 457 as the 3 leased DC-9-32s are returned to Iberia.

Passenger boardings skyrocket 63.7% to 624,382 and freight does even better, shooting up 78.4% to 1.48 million FTKs.

In 1993, President Gimeno returns the Douglas transports and chooses to fly 4 B-737-36Es, 3 chartered B-737-3Q8s, and 1 each chartered B-737-33A and B-737-3K9, the latter obtained from **Bavaria Fluggesellschaft, GmbH**. Flights from Lisbon to Paris cease on September 28.

Customer bookings for the year advance 25.4% to 781,653 and cargo climbs 9.6% to 1.62 million FTKs. Losses of \$4.98 million (operating) and \$13.28 million (net) are suffered.

The workforce is reduced by 2.2% in 1994 to 529. B-737-36E service is inaugurated on March 17 from Santiago de Compostela to London (LGW). Also in March, Lisbon to Paris service is resumed. A commercial agreement is signed with **British Midland Airways, Ltd.** in July

under which through-fares and connections are provided for business travelers from the U.K. to Spain.

Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.) attempts to sell the company, but is unsuccessful and plans are made to absorb the charter operator into the flag carrier. In November, thrice-weekly services are inaugurated from London (LGW) to Las Palmas; ticketing includes through-fares on **Binter Canarias, S.A.** to the other Canary Island destinations.

On December 29, the company, reacting to the Algerian security crisis, announces that it is suspending flights from Alicante to Oran and from Madrid to Algiers via Barcelona.

Passenger boardings decline 10.4% to 2,205,685 and freight plunges to 141.5 million FTKs. Revenues advance 8% to \$192.76 million and expenses are only up 2.5% to \$188 million. Consequently, there are profits: \$4.75 million (operating) and \$732,087 (net).

Employment is reduced another 13.4% in 1995 to 458. Flights to Algeria resume on January 8.

Enplanements fall an almost equal 13% to 962,208 and cargo is off 11.6% to 124.99 million ton-kilometers. Operating income drops 17.1% to \$159.76 million and even though expenses are down 14.2%, they still total \$161.31 million. Consequently, there are losses: \$1.54 million (operating) and \$5.43 million (net).

Only one person leaves the company in 1996, a 0.2% decrease. Customer bookings move ahead by 2.7% to 988,255 and 130.1 million FTKs are operated, a 4.1% increase. Financial figures are not provided.

Flights continue in 1997. On October 26, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** integrates its own resources, together with those of its domestic subsidiary **Aviacion y Comercio, S.A. (AVIACO)**, its charter operation, **VIVA**, and its regional **Air Nostrum, S.A.** under one centralized operational holding company. Long-term plans are made to institute a single Iberia branding over all three, but due to potential union problems, this plan will be implemented in phases. Meanwhile, coordination becomes the theme of the day in the short run.

Although the companies are held as separate legal entities, a management committee made up of the commercial directors from each airline now allocates the group's fleet, crew, and scheduling according to perceived daily requirements for each route. All passenger revenue receipts are turned into a central office, while all marketing activities are also centralized. Under this reorganization, **VIVA** begins to drop unprofitable charters, while **AVIACO** dumps unprofitable routes off on **Air Nostrum**, thereby freeing up capacity for Iberia.

Citing continuing problems, particularly with the pilots' union, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** finally closes **VIVA** on November 1, 1998 and absorbs its assets and responsibilities.

To this point during the year, enplanements are 1.35 million.

VLADIVOSTOK AVIATION. See **NATIONAL CHARTER NETWORK**

VLADIVOSTOK AIR: Portovaya Str 41 Airport, Primorski Krai, 692811, Russia; Phone 7 (42332) 28240; Fax 7 (42332) 28010; <http://www.vladavia.ru>; Code XF; Year Founded 1992. Following the demise of **Aeroflot Soviet Airlines** in 1992, its Vladivostok directorate is reformed into Vladivostok United Air Detachment (Vladivostokskii OAO), an affiliate of the new **Aeroflot Russian International Airlines (ARIA)**. This unit is reformed in 1993, becoming a joint stock company under its present name. Shareholding is divided between the government (51%) and the new airline's employees (49%).

Vladimir Saibel is director general and his fleet comprises an unspecified number of Antonov An-2s and An-28s, Yakovlev Yak-42s, plus three Ilyushin Il-76Ts. These aircraft continue to offer scheduled domestic flights, as well as international return services to points in China, Japan, and Korea. The carrier also operates a large rotary-wing fleet in support of energy and communications activities, including Mil Mi-2s and Mi-8s, plus Kamov Ka-26s and Ka-32s.

Operations continue in 1994 as the Antonovs are replaced with one Tupolev Tu-54M and two Tu-154Bs, which begin to serve trunk routes. Customer bookings total 102,109.

The carrier's 24 aircraft transport a total of 100,700 in 1995, a 1.4% dip. Cargo is also down, dropping 9.1% to 3.81 million FTKs.

Flights continue in 1996-1997, although traffic figures are not available. Destinations visited from Vladivostok in 1998 include Moscow, Novosibirsk, Irkutsk, Yekutsk, Petropavlovsk-Kamchatsky, Zonalnoe, Yuzhno-Sakhalinsk, Khabarovsk, Harbin, P'yongyang, Seoul, Pusan, and Tokyo.

In August as economic problems persist, the Russian government devalues the ruble. The official exchange rate is initially pegged at 6 rubles to the dollar, but soon plunges. By mid-September, currency trades at 16 to 1.

This carrier, like others across Siberia, is able to resist the temptation to sharply increase some economy-class fares on its busy domestic routes.

Late in the year, the company opens a site on the World Wide Web.

Flights continue in 1999. At the beginning of March, North Korea and Russia extend their civil aviation agreement. On March 4, the carrier inaugurates a new international Air Terminal at Vladivostok Airport. Under the pact just signed with North Korea, Vladivostok Air begins one additional weekly Tu-134A return service between its namesake city and P'yongyang on March 30.

Weekly Tu-154M roundtrips commence on July 1 from Vladivostok to Osaka, Japan.

Cross subsidization allows the carrier, beginning on September 3, to restart a number of regional routes earlier abandoned due to the Russian fiscal crisis. During the year and even though Russia and Taiwan do not enjoy diplomatic relations, a bilateral air accord is concluded under which Vladivostok Air and **Trans Asia Airways Company, Ltd.** are to inaugurate twice weekly roundtrips between Taipei and Vladivostok.

Although the services are initially planned for May 2000, they will not, in fact begin until April 30, 2001.

In cooperation with **BAL Bashkiri Airlines (Bashkirskie Avialinii Aviakompaniya)**, a new joint air service is, however, opened in the Russian Far East on October 26.

VLADIVOSTOK UNITED AIR DETACHMENT (VLADIVOSTOKSKI OAO). See **VLADIVOSTOK AIR**

VLM AIRLINES, N.V.: Luchthaven Gebouw, B50, Deurne, B-2100, Belgium; Phone 32 (3) 230-9000; Fax 32 (3) 281-3200; <http://www.vlm-air.com>; Code VG; Year Founded 1992. This third-level commuter, the name of which translates to "Flemish Airlines" in English, is established at Wommelgem on February 15, 1992 to offer scheduled services to local and regional destinations, largely in support of oil, chemical, finance, and shipping interests. Organizer Freddy Van Gaver, former **Transavia Holland, N.V.** managing director who is currently a tire, fruit, and vegetable dealer, is appointed managing director and he recruits a workforce of 40.

Two leased Fokker 50s, formerly flown by **Busy Bee of Norway, A.S.**, are obtained and employed in 1993 to begin, on May 17, four-times-per-day roundtrip revenue flights from Antwerp International Airport to London (LCY). The same scheduled service is introduced between Rotterdam and London (LCY) in April 1994.

As traffic improves, another Fokker 50 is acquired early in 1995. During the year, the Flemish government provides VLM with an interest-free, unsecured BF 20 million (\$680,000) loan. British regional **CityFlyer Express, Ltd.** complains to the EU Commission that this action is anticompetitive state aid, which is illegal under EU guidelines.

Enplanements total 114,048.

The workforce stands at 95 in 1996 and the company now flies 4 Fokker 50s. During the first quarter, the EU Commission agrees with **CityFlyer Express, Ltd.** that the Flemish government loan to VLM constitutes state subsidy. It rules that VLM must pay market rate interest to the government, backdated to the date of the loan, but rejects the British call that the loan be secured or repaid.

In April, VLM pioneers the first-ever scheduled services from Dusseldorf Express Airport at Monchengladbach to London (LCY).

Markets visited by VLM at the end of the year include Antwerp, London (LCY), Dusseldorf, and Rotterdam. Customer bookings soar 29.6% to 162,000. On revenues of E 14.8 million, an E 2-million loss is suffered.

Airline employment is increased by 22.2% in 1997 to 110. Airline employment is increased by 22.2% in 1997 to 110. To help redress the previous year's fiscal downturn, **Constellation International Airlines, S.A.** Executive Vice President Christian Heinzman is brought in to become the new managing director. Among his first moves is to drop such unprofitable routes as Rotterdam–Munich and to start new ones, including Rotterdam–Manchester. Ad hoc charter flights are started and flown on behalf of such multinational corporations as BMW, Phillips, and Hannover Messe.

On July 1, the carrier signs a code-sharing agreement with **Deutsche Lufthansa, A.G.** In addition to shared marketing, sales, and customer service activities, the German major will purchase blocks of seats on 104 weekly VLM flights from Dusseldorf Express Airport and Rotterdam to London (LCY).

The compact with DLH is expanded on September 1 to allow daily dual-designator frequencies between Antwerp and Munich.

Passenger boardings soar 21.2% to 205,000.

Rotterdam to Manchester service starts in September 1998. M2 Communications in the October 14 issue of its *In the Industry* Internet news roundup notes a company promotion. During the month, the carrier's business-class passengers passing through London (LCY) are entitled to a free shoe shine.

VLM, in November, is the first carrier to begin flights from Luxembourg to London (CTY).

Late in the year, an updated homepage is opened on the Internet's World Wide Web. The fleet now includes 7 Fokker 50s, which transport approximately 250,000 passengers on the year.

With the beginning of the new schedule on March 28, 1999, service is inaugurated from London (LCY) to the Island of Jersey. Saturday and Sunday flights are inaugurated on April 17 between Rotterdam and the Island of Guernsey; a Wednesday service is added during July.

The carrier's weekday Fokker 50 return service between London (LCY) and Jersey becomes twice weekly at the end of October.

Orders are placed with British Aerospace on November 15 for a pair of Avro RJ85s. As the year ends, VLM turns down an offer from **Deutsche Lufthansa, A.G.** to become a "Team Lufthansa" franchise partner and the two concerns end their 2-1/2-year collaboration and code-sharing flights.

Passenger boardings jump 19.9% to 320,000. Revenues of E 40.5 million are generated, as is an E 1.4-million net profit.

A total of 220 workers are employed at the beginning of 2000, a 29.4% increase over the previous 12 months.

At this time, the company undergoes a complete corporate makeover. The carrier is renamed VLM Airlines, N.V. Under an E 285,714 contract with Tilburg, the Netherlands-based Lila Design Aviation, a number of other changes in styling are made. Yellow and black, the official colors of the Flanders region—and the airline—are replaced with deep blue and gold, while the company's logo, a lion symbol, and aircraft livery are revitalized. Aircraft cabins are all given a new look with gray leather seats and dark blue wool carpets.

In February, the 500,000th passenger is transported between Rotterdam and London (LCY). During the record-achieving flight, Deutsche Bank executive David Clarke is named the historic passenger and is presented with a magnum of champagne and a box of Belgian chocolates.

Daily (except Tuesday and Saturday) Fokker 50 roundtrips are resumed on April 8 between Jersey and London (LCY). Beginning in May and for the summer only, weekly Fokker 100 charters are operated from Jersey to Humberside.

Early in December, VLM is again licensed to operate summer flights from London (LCY) to Jersey. The move had been opposed by **British European Airways, Ltd.**, which claims to have lost £250,000

since July operating its own service over the route. On December 18, it is announced that Managing Director Christian Heinzman will depart on February 1 to become CEO of the Luxair Group; he will be succeeded by a **KLM (Royal Dutch Airlines, N.V.)** regional manager, Paul Johannes.

Also during December, the two ATR42-320s of **European Air Express, GmbH**, must be grounded at Moenchengladbach owing to incomplete maintenance records dating back to the time when they were operated with **Zambia Airways Corporation**. In the interim, the company leases several aircraft, including a Fokker 50 from VLM.

VNUKOVSKIE AVIALINII (VNUKOVSKIE AVIALINII): Russia (1992–2001). When **Aeroflot Soviet Airlines** is reformed in early 1992, this longtime directorate, based at Moscow's Vnukovo Airport, becomes one of the first autonomous divisions of the new **Aeroflot Russian International Airlines (ARIA)**.

Noted for its introduction of such aircraft as the Tupolev Tu-154 and Ilyushin Il-86, the organization continues to provide scheduled frequencies to the southern areas of the former U.S.S.R. and adds ad hoc international charter services. V. V. Baranov is general director and oversees a fleet that includes 22 Il-86s and 58 Tu-154s.

Enplanements total 3,292,767, a figure slightly more than half the number flown in 1990.

The State Privatization Committee allows the carrier, in March 1993 to be reconfigured into the Vnukovo Civil Aviation Production Association; the \$12-million **Aeroflot Soviet Airlines** debt is carried forward. Shortly thereafter, the new body is divided into an airport and Vnukovo Airlines. The process of division continues in May, with the airport becoming a separate joint stock company.

With 3,000 employees, the airline company is given the association's aircraft and engineering and technical department. The Russian government requires the company to provide services to remote areas and Il-86 flights are undertaken to Pevek, Nadym, Igarka, and Norilsk, the latter in competition with the new **Transaero Airlines**. With fuel shortages causing its aircraft to be frequently grounded at Krasnoyarsk, Vnukovo must arrange to ship 1,000 metric tons of fuel to that city to cover operations during the quarter.

International service begins with inclusive-tour flights, called "scheduled holiday charters," to Korea, Greece, Cyprus, Turkey, and the Mideast. Only about half of the carrier's aircraft are available during the peak summer travel period; the rest are grounded for lack of spare parts and mechanical problems.

In October, the carrier becomes the first Russian company to place the new Tu-204 into service. Although not certified, three units are allowed to fly domestic cargo routes as the carrier assumes responsibility for the airliner's precertification test operations.

Late in the year, Vnukovo becomes the first Aeroflot unit to elect a new board of directors; former engineering department head Yuri Kashitsin is named director general, with Alexei Konstantinov as director of operations. In December, charters to the UAE become weekly. As the result of Russia's economic downturn and a corresponding increase in the price of tickets, Vnukovo's traffic falls.

Passenger boardings decline 53.1% to 2,150,730 while freight plunges 48.8% to 509 million FTKs.

The second Tu-204, with Perm PS90 engines, enters service during the spring of 1994 and the two units available will complete the type's operational trials. The fleet now includes 33 Tupolev Tu-154B/C/Ms, 22 Ilyushin Il-86s, and 3 Tu-204s; the inherited Aeroflot domestic service is maintained and "scheduled holiday charters" continue.

In April, employees threaten a job action in July unless real progress is made on the long-delayed privatization of the airline. Consequently, the State Committee of Property (GKI) begins to provide the necessary assistance required to make the change. The airline's capital base is established at 289 million rubles (worth \$52 million in 1990, but only \$150,000 by this summer), 28% of which are sold at discount to staff and retirees.

Another 29% interest is made available as part of a government voucher system giving every Russian citizen the opportunity to specify which former Soviet state property they wish to "claim." This approach provides no equity, but does give the airline 7,000 new stockholders, none of whom hold more than 5% interest. The remaining 41.4% interest is to be sold in a 1995 investment auction.

Also during the spring, costs begin to rise dramatically, with fuel and air navigation charges in particular up astronomically. Beginning in May, for example, air navigation commences a yearlong upward spiral of 104 increases. Fuel rises from under \$100 per ton to over \$200 at most airports served. To improve reservations, the computerized reservations system is switched from the Soviet-made Sirena 2 to the Western Galileo system.

During the summer, a Tu-204, the first of its type to wear Vnukovo colors, is flown to and exhibited at the annual Farnborough Air Show in the U.K. The Kashitsin-led board is reelected by stockholders at the first annual meeting in December and plans are made to launch charter flights to Thailand, Dubai, Egypt and Spain. Also, a joint-venture contract is signed with Everest Catering for the improvement of in-flight food services.

Customer bookings slide 4.7% to 2,050,000, while cargo falls 13% to 443 million FTKs.

Airline employment is increased by 5.2% in 1995 to 3,708 as the promised investment auction is held. When the shutdown Turkish charter operator **GreenAir, A.S.** locates additional capital early in 1995, it is reborn under the marketing name **ActiveAir, A.S.** A Tu-154M is chartered from Vnukovo and is employed to resume charters at the end of March. Additional Vnukovo Tupolevs will be obtained.

A strategic agreement is signed with **Aeroflot Russian International Airlines (ARIA)** in mid-June that provides for cooperation and coordination of commercial policy. Aeroflot will be able to employ VA's aircraft while Vnukovskie will be able to interline passengers on to Aeroflot international services.

At the beginning of July, the company receives government certification that will allow it to service and repair Russian aircraft of any type.

Later in the summer, Vnukovo and **Transaero Airlines** both lodge applications to become the second Russian carrier permitted to fly from Moscow to London (LGW). For Vnukovo, which will ultimately be unsuccessful in its bid, the route would be the first outside the CIS.

On October 10, the concern becomes the first Russian state-owned airline to complete its privatization, when it is acquired at auction by the trading company VIL. The little-known enterprise purchases a 41% stake for \$150 million. The investment will be challenged in court by rival bidder Finvest. The challenge will not be successful and final shareholding will now be divided between the Russian Aviation Consortium (43.42%), employees (29.7%), the Ministry of State Property (0.00034%), Univerus (18.92%), and individuals (7.95%).

Meanwhile, **ActiveAir, A.S.** continues its European flights through the end of October, when it shuts down a second time—permanently. The Vnukovo aircraft are returned.

The carrier's 54 aircraft transport a total of 1,981,345 passengers, a 7.8% decline. Freight, however, increases by 4% to 463.55 million FTKs. Operating revenues are \$157 million, costs reach \$153.1 million, and a pretax profit of \$3.9 million is reported.

The workforce is reduced to 1,300 in 1996. When the airline's new owners default, the government reacquires Vnukovo and sells it to the group that holds Moscow-based **Oriol Avia**. The two companies are combined, with Oriol's management taking the senior slots in the "new" Vnukovo. An effort is now begun to acquire as much market share as possible through a policy of low-cost fares designed to force competitors off various shared routes.

On August 29, Flight 2801 is on its initial approach to Svalbard, on the remote Norwegian island of Spitsbergen on service from Moscow. The Tu-154M with 12 crew and 129 passengers (mostly Ukrainian and Russian coal miners and their families returning from vacation), collides into 2,000-ft. Opera Mountain Salbard at a point 6 mi. from the runway; there are no survivors.

The crash site is large and the search for bodies requires several days.

Customer bookings drop to 1,488,539 while 39.5 million FTKs are operated. Financial reports are not made available.

The fleet in 1997 comprises 22 Il-86s, 26 Tu-154Ms, and 3 Tu-204s. On February 9, the carrier performs a "jubilee flight" from Moscow to Mineralniye Vody to celebrate the twenty-fifth anniversary of the first Tu-154 service. Chief Pilot Capt. Yevgeny Bagmut, who performed the premier **Aeroflot Soviet Airlines** Tu-154 flight over the route on February 9, 1972, is joined by a group of former pilots and representatives of the Tupolev design bureau, the aircraft building industry, and the federal aviation department.

Scheduled markets visited include Anapa, Aktau, Antalya, Dunai, Hurghada, Igarka, Kaliningrad, Kambala, Kemerovo, Krasnodar, Novosibirsk, Norilsk, Odessa, Samarkand, Sochi, Tbilisi, Thessaloniki, Ulan Ude, and Yerevan.

Charters are also operated to Athens, Barcelona, and Istanbul. On the subject of charters, it should be noted that on March 1, VAL signs a cooperative agreement with Moscow-based Intourist, a large and well-known travel agency and tour operator. Under its terms, Intourist will sell tickets for Vnukovo services and the airline will operate upwards of 700 flights on behalf of the agency over the next year.

It is reported in the September 17 issue of *Delovoy Mir* that the company will add 22 additional domestic flights by the end of the year. Meanwhile, it has also signed exclusive agreements with several tourist companies and local governments designed to help increase enplanements back up above the 2 million annual figure.

Late in the year, Alexander Klimiov is named deputy director general-commercial.

Passenger boardings slide 2.5% to 1,780,000, while cargo falls 2.4% to 20.6% million FTKs.

The low-cost strategy introduced by the "New Vnukovo" in 1996 has not worked; no competitors have been forced off any jointly flown routes and the plan has, by late spring 1998, caused Vnukovo significant financial distress. The fiscal decay, in turn, creates serious service and aircraft maintenance problems. During May, several Russian airports, fuel suppliers, and ATC centers demand immediate payment of 80 million rubles that Vnukovo owes. The airline cannot pay because Russian ministries have yet to reimburse it 217 million rubles owed for tickets.

By June 9, eight aircraft are out of service for lack of spare parts and the airline is experiencing significant flight delays.

Tateros Surinov becomes the new director general and invests substantial equity in the enterprise. During the summer, the carrier loses 40 million rubles in lost business and its employees suffer wage delays.

Russian air transport, like other elements of the economy, encounter rocky times after the government devalues the ruble in mid-August. Airlines begin to fix their own rates, pegging tariffs to both rubles and U.S. dollars, even though the official Central Bank exchange rate is 7.86 rubles to the dollar.

Although the carrier does not immediately raise its domestic ticket prices it does, beginning on August 26, sell its international flights at a rate set and announced by the Transportation Clearing Chamber.

By mid-September, the exchange rate has plunged and currency trades at 16 to 1. This carrier, like many others across the nation, is forced to sharply increase some economy-class fares on their busy domestic routes. Even so, the new fares are still cheaper, in terms of dollars, than they were before the crisis. Vnukovo, for example, increases its one-way fare to Moscow on September 22 to Tomsk, Yekaterinburg, Krasnodar, Blagoveshchensk, and other points.

The fare boost, together with a worsening Russian economy, causes load factors to plummet. On November 2, the carrier indicates that it is reducing domestic ticket prices by 60%–70% through the remainder of the year.

Customer bookings fall another 6.7% to 1.55 million, while cargo traffic plunges 55% to 14.68 million FTKs.

The fare-cutting gambit results in substantial additional losses by the first quarter of 1999. The company's shareholders are not pleased.

Several relief plans are tried, including the transfer of many services to Domodedovo Airport and the introduction of charter flights from Sheremetyevo-1. In March, plans are announced for a merger with **Siberia Airlines (Sibir)**.

Preparing for departure from Al-Ghurdaqah, Egypt, on May 1, a company Il-86 with 350 passengers is seized by Egyptian authorities tired of Russian airlines not paying their fuel and landing fee bills. Those aboard are accommodated in two resort hotels. The Vnukovo Ilyushin is one of 12 planes from different companies held for nonpayment of fuel and ground servicing provided by the local Tiger Aviation Service. Following long and difficult discussions between the Russian Embassy and Tiger, the company, on May 14, agrees to release 11 of the 12 planes. The Ilyushin, however, is held three days until Tiger receives a letter from the Russian Federal Aviation Service guaranteeing that Vnukovo will settle its \$350,000 invoice. The airline is now \$20 million in debt.

Director General Surinov becomes nonexecutive chairman on May 19 and Vladimir Roubtsov, a former high official in the Soviet Civil Aviation Ministry, takes his place with a mandate to halt the fiscal hemorrhage. Demanding payment of four months back wages, the company's 300 flight attendants threaten to strike on June 18. The event does not occur as the airline indicates that it is prepared to employ contract flight attendants from other airlines.

On July 1, **Siberia Airlines (Sibir)** MD Vladislav Filov is named DG of Vnukovo and begins an attempt to run both carriers prior to their merger. At this point, Vnukovo is a shadow of the "New Vnukovo" of 1996-1997, with only six destinations served by three or four daily roundtrips.

Following a one-day symbolic strike in July, company employees on August 5 vote for a full job action beginning on August 15. Preparations for a strike by maintenance and ground staff continue apace; on August 11, the media reports their suspicions concerning a possible desire by the airline to shed its maintenance capability. By now, salaries for the airline's 3,000-man staff are five months in arrears. To make matters worse, fuel prices have risen substantially; by the end of August, aviation kerosene is selling for \$200-\$240 per ton in Moscow. Fuel prices for the year will increase four times.

After six weeks with Vnukovo, Sibir MD Filov realizes that Vnukovo's financial, personnel, and fleet problems are too significant to allow for an early amalgamation of the two carriers. After putting in place a number of small reforms and instituting joint services over several common routes, Filov resigns from Vnukovo. Returning to Sibir, he indicates that, if Vnukovo is able to overcome its problems on its own, a merger may be possible in the second quarter or later in 2000.

In the turmoil surrounding the sacking of the carrier's DG and his replacement, the strike by ground and maintenance personnel is stalled until mid-September. Meanwhile, the Vnukovo board of directors turns to businessman Alexander Krasnenker, the former commercial director of **Aeroflot Russian International Airlines (ARIA)**, and asks him to come aboard on October 1 as Filov's successor. Krasnenker is the seventh DG at Vnukovo Airlines in the last three years. Deputy DG-Commercial Alexander Klimov is named first deputy DG.

About this time, the company, like other airlines, releases its first half figures. These show customer bookings down to 600,000 and revenues of less than \$2 million a month. For September alone, only 52,000 passengers have been flown.

At Vnukovo, Krasnenker launches a restructuring program on October 25 with a RIF of personnel. A number of unprofitable routes are either closed down or flown irregularly. The new DG is able to talk the CEO's of Moscow's airports into freezing old debts for airport services. He is also able to obtain just enough credit to begin the restoration of 13 aircraft, the bare minimum required to operate regular services. Difficult finances will make further improvements problematic.

To make matters worse, Russian investigators, on October 16, accuse Messers. Boris Berezovsky and Nikolai Glushkov, the latter formerly deputy DG of **Aeroflot Russian International Airlines (ARIA)**, and new Vnukovo CEO Krasnenker (regarded as a Berezovsky's protégé during his time at Aeroflot) of taking \$400 million of the national airline's

profits and \$200 million in air traffic fees, which are hidden in Swiss companies and then laundered.

It is reported on November 16 that **Siberia Airlines (Sibir)** and **Perm State Air Enterprise** have joined together in a concentrated effort to acquire part of the 25% market share held by Vnukovo in the Ural and Siberian markets.

Customer bookings for the year as a whole plunge 43.5% to 934,000, while 209 million FTKs are operated. A net loss of \$30 million is suffered.

The workforce at the beginning of 2000 totals 1,300. At the beginning of the year, only two Tu-204s are operational. The other five are half-experimental aircraft which the builder had turned over to the airline after the conclusion of a test program. Fuel costs for this airline, like others in Russia, is now so high that it accounts for almost 50% of ticket prices.

By the end of February, the company's on-time percentage has risen to 93% from 20% or less six months earlier. With the beginning of the summer schedule at the end of March, new three class cabins are available on all scheduled flights; all-economy seating remains only on charter flights. Vnukovo remains the only airline operating scheduled flights from all three Moscow airports: Vnukovo (17), Domodedovo (16), and Sheremetievo-1 (6). The scheduled services from the latter point are new.

During the spring, the company transfers even more services from Domodedovo Airport back to its home base at Vnukovo Airport. An agreement has been reached with East Line Group, which owns both Domodedovo and **East Line Airlines**, that the facility will be employed as a transfer center for foreign passengers flying, via Moscow, to Siberia and other Russian and CIS destinations.

The Moscow Times reports on June 27 that DG Krasnenker had been on a list of candidates for seats on the board of **Aeroflot Russian International Airlines (ARIA)**. Krasnenker had been ousted from the board in 1999 and will not win appointment now.

The first of eight Yakovlev Yak-42Ds enters service on July 7. While en route from Moscow to Yuzhno, via Bratsk, on July 11, an Il-76's wing supposedly suffers mechanical problems. An emergency landing is made at Bratsk, but no significant difficulties are found. A Tu-134A, chartered from JSC Alania Leasing Company, enters service during the last week of August.

On September 4, Aviazapravka-Norilsk, the fueling company at Norilsk and Tolmachevo Airports, warns that Vnukovo's debt may force it to stop refueling the airline's aircraft. Without payment, the pumps are turned off at those locations on September 11. The airline, with a major cash flow problem, is forced to begin making some kind of payment.

As the result of an August meeting between deputy prime minister Tariq Aziz and Russian president Vladimir Putin, a decision is taken by the two governments to shortly resume air services. On September 14, **Aeroflot Russian International Airlines (ARIA)** regional representative Pavil Piryatku announces the new arrangement, noting that his airline will reopen its Baghdad office in mid-October.

Papers are also signed between **Iraqi Airways** and Vnukovo Airlines concerning the inauguration by the latter of regular Iraqi flights. Additionally, a pre-contract agreement is reached between the two that, once the matter of sanctions against Iraq has been resolved, may see Vnukovo selling as many as 10 Tu-204s to **Iraqi Airways**.

After obtaining clearance from the UN Sanctions Committee, a Russian delegation of business and political representatives, led by Central Fuel Company chairman Yuri Shafranik, a chartered Yak-42D arrives at Baghdad on September 17, following a direct flight from Moscow. Shafranik is also president of the Committee for International Scientific and Business Cooperation with Iraq, which has arranged the three-day visit.

Making the first airline flight to Iraq in 10 years, a Vnukovo Tu-134A, transporting humanitarian supplies, a delegation of Russian politicians, and a youth football team arrives at Baghdad from Moscow on September 23. On September 29, a chartered Tu-154M flies 120 passengers, including members of the Council of Europe parliamentary assembly and its speaker plus 11 Nobel prizewinners, and another shipment of humanitarian aid to Baghdad from Paris (CDG). As was the case with the

two previous flights, it is met by Iraqi deputy prime ministers Uasom Ramadan and Tariq Aziz. The group will attend a conference marking the 10th anniversary of the introduction of UN sanctions against Iraq.

By the start of October, Vnukovo is making some progress on paying down its debt and is, reportedly, actively repaying its residual fuel debts to the Norilsk and Tolmachevo airport providers. Still, fuel supplies from some sources remain suspended and access to certain other airports because of debt has been restricted. The pressing cash flow problems remain.

Still with the cloud of his former mentor Boris Berezovsky hanging over his head, DG Krasnenker resigns as CEO on October 9, while retaining a seat on the Vnukovo board. The airline PR department reports that Krasnenker believes he has accomplished the goals set forth for him in his one-year contract and that Vnukovo is well on the road to recovery. He is succeeded on an interim basis by his deputy, Alexander Klimov.

On October 13, the Russian newspaper *Kommersant* reveals that Director General Krasnenker had stepped down because of a "misunderstanding" with Tatevos Surinov, director general of Vnukovo's owner, the Russian Aviation Consortium (RAC) and himself formerly director general of the airline. Disagreements over cash flow, policy, and the Berezovsky relationship are pointed to as being at the core of the falling out. When reporting the same story, *Russia Today* says that the real cause was a decision by RAC to sell the Vnukovo subsidiary Centreleasing, which owns 19 of the airline's 25 operational aircraft, to an undisclosed third party, thereby stripping the carrier of its principal assets. The board's expenditure of \$20 million "for other purposes" is also viewed as a contributing factor.

The press, quoting the Iraqi news agency INA, reports on October 12 that Vnukovo will start a four-times-a-week roundtrip charter service on October 27 between Moscow and Baghdad. Deputy Chairman Alexei Sapkin plays down this version, which has understandably upset U.N. officials, and indicates that any Vnukovo flights are strictly for humanitarian purposes and that no regular flights will resume until the airline receives clearance from the Russian foreign ministry. Vnukovo operates another Tu-154M service to Baghdad on October 27. This aircraft also transports relief supplies, as well as a delegation of Russian businessmen to a trade fair. An Il-86, with 255 passengers, arrives at Saddam Airport on October 30.

While en route from Makhachkala in Dagestan to Moscow on November 11, a Tu-154 is hijacked by a man carrying a bomb (which will later turn out to be a blood-pressure gauge), who orders the Tupolev flown to Israel. Following a refueling stop at Baku, the jetliner proceeds to the Mideast, where it is denied permission to land at Ben-Gurion Airport at Tel Aviv. The Russian airliner is, however, allowed to put down at Uvda, an Israeli air force base in the Negev Desert near Eilat, where the pirate turns himself over to Israeli police.

After Russian officials promise not to execute the pirate, Israel permits the plane, with its passengers and prisoner, to take off for Moscow on November 12. It arrives at Vnukovo Airport early the next day.

Dmitry Kalinichenko, director general of Aviazapravka-Norilsk, the fueling company at Norilsk Airport, proudly informs the press on November 22 that Vnukovo has paid all of its debt to the supplier. It has also put down \$1,800 on account for future delivery—the first advance payment for avgas ever made by the airline.

Noting that salary payments had become almost regular under former Director General Krasnenker, but were nonexistent since August, 1,000 workers stage a one-day strike at the end of the month. Workers remain upset by the departure of Krasnenker and the board's \$20 million "for other business purposes" expenditure revealed in October. Acting Director General Klimov is able to find funds to pay all but 300–400 workers—enough to convince them to end their job action.

Former ARIA Deputy Director General Glushkov is put under arrest at Moscow's Lefortovo Prison on December 7 on charges of fraud. Vnukovo Director Krasnenker is not summoned by prosecutors at this time. He does, however, resign from the airline's board.

On December 20, the 300–400 workers who received no pay in November, including all of the carrier's mechanics and engineers, go on strike demanding payment of wages not received since August. The workers' union also demands that Vnukovo fully observe all labor laws

and safety requirements. By now, only 2 of 50 aircraft are operational, with another 9 having been repossessed by creditors. VKO is \$20 million in debt and heading downhill quickly.

In response to official concerns, the airline announces the next day that its schedules are being operated, but acknowledges that the workers at its maintenance and repair center at Vnukovo Airport are all out. Flight Operations Director Yuri Sytnik reveals that the negotiations with workers and their unions are progressing. He blames much of the difficulty on the Russian defense ministry, which has failed to make good on a 260-million ruble debt to the airline for the transport of military personnel. The work stoppage will continue until December 22.

An agreement is reached on December 23 under which Vnukovo will be taken over by **Siberia Airlines (Sibir)** in the biggest landmark in Russian civil aviation history since the breakup of Aeroflot Soviet Airlines. The State Service of Civil Aviation (GSGA) and the Sibir board of directors must approve the deal and there is no precedent in Russian law for the takeover of one major independent airline by another. There is also a law prohibiting the sale of state holdings that exceed \$17 million in valuation.

Under the arrangement, if approved, Vnukovo will lose its identity and Sibir will cover its \$17-million debt and pay the workers of both carriers for the 2 1/2 months required for integration. Of course, Sibir would prefer that the debt be restructured prior to amalgamation. The deal will provide Sibir with a strategic Moscow hub at Vnukovo Airport, 7 more Tu-204-100s (among other types), and boost its route network to almost 200 cities. Beginning on January 15, Sibir will operate the Vnukovo schedules to Sochi, Ulan-Ude, Novi Urengoi, and a few other northern routes.

Arrangements are immediately completed for the \$16.9-million purchase and delivery to Sibir, in February, of the first ex-Vnukovo Tu-204-100. Upon receipt, the aircraft will be ferried to the Tupolev Aviation Technical Complex at Zhukovsky for further modernization and alteration prior to their joining the fleet in the summer. In addition, \$7.18 million will be expended to purchase one Il-86 and eight Tu-154Ms; Vnukovo will apply the proceeds to its large debt. In addition to the Tu-204s, the Vnukovo fleet includes 22 Il-86s and 17 Tu-154s, but only 1 Il-86 and 5 Tupolevs are actually serviceable.

As anticipated, there is opposition to the potential merger from **East Line Airlines** and **Aeroflot Russian International Airlines (ARIA)**, as well as from within the GSGA itself.

Enplanements for these 12 months total 905,200 and 189.1 million FTKs are operated.

The merger with Vnukovo will be officially reported on January 3, 2001. The GSGA, having heard all opponents, will approve this creation of the nation's second-largest airline with Sibir, as promised, assuming responsibility for Vnukovo's 500-million ruble (\$20-million) debt. Following approval by Sibir stockholders on April 27, Vnukovo, Russia's fourth largest airline, will be the first to disappear in the new year. Although the two will now operate as one entity under the Sibir name, actual amalgamation may require another year.

VOLARE AIR COMPANY: 2 Svyatoshinska Street, Kiev, 03115, Ukraine; Phone/Fax 380 44 452 1115; <http://www.volare.kiev.ua>; Code F7; Year Founded 1994. This freight operator is established at Kiev in 1994 to operate regional and long-haul on-demand charters.

Under the direction of Director General Andrey Likarenko, a fleet of 5 Ilyushin Il-76TDs and 7 Antonov An-12s is assembled. Revenue flights commence and continue to destinations worldwide. Before the end of the decade, the carrier has agents in Belgium and the United Arab Emirates.

VOLARE AIRLINES, S.p.A.: 186 c.so Garibaldi, Verona, I-36016, Italy; Phone (39) 0445 800100; Fax (39) 0445 800101; <http://www.Volare-Airlines.com>; Code 8D; Year Founded 1998. Businessmen in northeastern Italy establish Volare during the first quarter of 1998 to provide additional services as flights into the area by **Noman, S.p.A.** and **TEA Italy, S.p.A.** are reduced. Employing an Airbus Industrie A320-232 chartered from ILFC, President Gino Zoccai's new nonscheduled concern introduces revenue services on April 1. Destinations visited

from Verona, Milan, and Bologna are scattered throughout Europe and the Mediterranean and include Lourdes, Fatima, Tel Aviv, Amman, Cairo, and Sharm-el-Sheik.

SAirGroup, parent of **Swissair, A.G.**, acquires a 34% equity interest in the start-up during September. Volare, in turn, begins to obtain its aircraft maintenance from the major's shops in Zurich.

Plans are now announced by SAirGroup for the creation of a large European Leisure Group that will include not only **LTU International Airways, GmbH.**, but also the **Swissair, A.G.** subsidiary **Balair/CTA**, **Sabena Belgian World Airlines, S.A.**'s subsidiary **Sobelair, S.A.**, **Crossair, Ltd.**, **Air Europe, S.p.A.**, and Volare. The new arrangement, under the direction of project leader Stefan Helsing, is designed to be part of an integrated network built around the already existing "Atlantic Excellence" and "QualiFlyer" alliances.

Late in the year, a homepage is launched on the Internet's World Wide Web and the fleet is enhanced by the addition of four chartered A320-212s. Orders are placed for five more leased units.

In 1999, airline employment reaches 200. Scheduled destinations visited from the main base at Verona and hubs at Milan and Rome include Rome, Milan, and Cagliari. Many European and Mediterranean holiday communities are also visited on a nonscheduled basis.

With the October 1 collapse of the British low-fare airline **Debonair Airways, Ltd.**, the company is persuaded to dedicate two A320-212s to the operation of **Swissair, A.G.** replacement flights on the routes from Turin and Venice to Zurich. To provide lift for its charter program in the fall, Volare wet-leases a pair of A321-131s from the Turkish carrier **Onur Air, A.S.** on October 7. An A320-212 arrives under lease on December 8.

On February 3, 2000, an A320-212 arrives from GECA. With the beginning of the summer season at the end of March, Volare introduces daily nonstop A320 service from Alghero to Venice and Verona, from Bergamo to Olbia, from Naples to Verona, from Olbia to Bergamo and Verona, from Venice to Alghero, and from Verona to Alghero, Naples, and Olbia. Two more A320-212s arrive to help provide lift, one each on April 17 and May 7.

On July 12, a merger agreement is signed with **Air Europe, S.p.A.** Plans are made to merge the carriers at a Venice hub into an as-yet-unnamed airline under the umbrella of the Volare Group, which is 49.9% owned by SAirGroup. Another chartered A320-212 is delivered on July 24.

Formerly operated by **TAP-Air Portugal, S.A.**, another A320-211 is acquired under lease from GATX on August 1.

On October 29, Volare takes over the "Swissair Express" service between Venice and Zurich previously operated by Flightline, Ltd. with a British Aerospace BAe 146-200.

The year does not end well politically for Italy's six major airlines. On December 22, it is announced that the government's competition authority has unleashed an antitrust investigation into Volare, as well as **Alitalia, S.p.A.**, **Air One, S.p.A.**, **Air Europe, S.p.A.**, **Meridiana, S.p.A.**, and **Air Dolomiti, S.p.A.** Under review is a question of whether the six had an understanding on two domestic ticket price hikes that came on the heels of an earlier rise in fuel prices. In June, all of the carriers introduced a 10,000-lire (\$8) fuel surcharge, following it up in September with a 24,000-lire boost.

As the year ends, delivery of a final leased A320, another Dash 211, is expected in March.

VOLARES AIR TRANSPORT (VOLARS AVIATRANST): 3rd Peschanaya Str 6, Moscow, 152252, Russia; Phone 7 (095) 157-4764; Fax 7 (095) 157-0961; Code OP; Year Founded 1993. Volare is founded at Moscow's Sheremetyevo Airport in 1993 to provide worldwide ad hoc passenger and cargo charter services. V. N. Krykov is general director and revenue flights begin with a fleet that includes 3 Ilyushin Il-76s, and 1 each Il-62, Il-18, Tupolev Tu-154 and Tu-134, and Antonov An-12, An-24, and An-26.

Flights continue apace in 1994-1998. During these years, the fleet is reduced to 2 Il-62s and 1 each Il-18 and An-12. Although it is under-

stood that this carrier continues to operate in the period after the beginning of the Russian currency crisis in August 1998, no definite information has been located to the effect.

VOLGA AIRLINES (VOLGA AIR COMPANY STATE ENTERPRISE): Volgograd Airport, Volgograd, 400036, Russia; Phone 7 (8422) 317 562; Fax 7 (8422) 317 785; Code G6; Year Founded 1992. Following the demise of **Aeroflot Soviet Airlines** in 1992, its former Volgograd Directorate is reborn as Volga Aviaexpress Airlines. Nikolai Almazov is director general and he continues to offer scheduled passenger and cargo services to CIS and Russian communities employing a fleet of 5 each Tupolev Tu-134As, Yakovlev Yak-42s, and Antonov An-2s, plus 2 Yak-40s.

Service is maintained during the remainder of the decade. Airline employment totals 271 at the beginning of 2000 and the fleet now comprises 5 Tu-134As, 2 Yak-40Ks, 7 Yak-42Ds, and 6 Yak-40s.

VOLGA-DNEPR AIRLINES: 14 Karbysheva Str., Ulyanovsk, 432062, Russia; Phone 7 (8422) 201 497; Fax 7 (8422) 204 997; <http://www.voldn.ru>; Code VI; Year Founded 1990. The Russian joint stock enterprise Volga-Dnepr, named for the major Russian rivers and based at the Ulyanovsk Aviation Industrial Complex some 425 mi. E of Moscow, had been formed in 1989 when workers demanded that the Gorbachev government "sell" to them several transport aircraft that it had been planning to place aboard.

Shareholding is settled on August 18, 1990 and is divided between JSC Aviastar, Antonov Design Bureau, and Motor Sich. A board of directors is established and Alexey I. Isaikin is elected director general. The company is registered as a joint stock company at Ulyanovsk on August 22.

The company's first aircraft, an Ilyushin Il-76TD, arrives at Ulyanovsk's Vostochny Airport at the start of 1991. It receives its first Antonov An-24-100 Ruslan from JSC Aviastar, as part of the primary shareholder's stake, in early August. After a period of inactivity during which the Moscow government flounders, Volga-Dnepr receives Russian Air Operator's Certificate No. 45 on September 16.

Volga-Dnepr is one of the first non-**Aeroflot Soviet Airlines** Russian carriers to begin free enterprise service when it launches domestic all-cargo operations in October. By year's end, the company is operating 3 of the 12 Ruslans it has been authorized to fly by the Ministry of Aviation Industry, as well as 3 An-12s, and 1 Il-76TD.

The workforce stands at 478 in 1992 as the fleet is increased to a total of 6 An-124-100s, 8 An-12s, and 2 Il-76s. The Russian Department of Air Transport provides over 70 licenses to operate domestic cargo charters, as well as flights to China and the U.S. With ethnic riots and political unrest spreading through Central Asia, a large number of former **Aeroflot Soviet Airlines** pilots from that region are hired.

During May, An-124-100s deliver Euro satellites from Rome to Cayene, in French Guiana, for launch into space; another machine transports 52 tons of gold, valued at £230 million, from Abu Dhabi to Zurich.

While on approach to Skopje, Yugoslavia in a heavy storm on July 24, an An-12BP with 7 crew, crashes into a mountain 26 km. SE of its destination; there are no survivors.

Operations continue apace in 1993 as the company labors to expand its network of nonscheduled destinations. The employee population is boosted to nearly 700 and the company purchases 90 apartments for the rotating use of company flight personnel. A training division is now sanctioned and a significant investment in training is made, both in Moscow and at London; education at the latter point being provided by partner **Heavylift Cargo Airlines, Ltd.**

In January, a 90-ton, one-piece chemical reactor is flown aboard an An-124-100 from Venice to Omsk. Ruslans fly heavy road building equipment from Vladivostok to Polyarny in February. In March, a pair of 72.5-ton solar turbines is airlifted from Houston to Manchester and to London (STN) in England.

During April and employing a new double-deck car loading system, An124-100s fly 107 cars for the London-Sydney marathon from Turkey

to India and then on to Australia. In another Ruslan mission during the spring, the Italian subcontractor Alenia ships Boeing 767 parts from Naples to Seattle in an effort to make up for time lost in a labor dispute.

In June, the joint venture with Heavylift is extended for another three years; **Heavylift Cargo Airlines, Ltd.** continues to provide marketing services for the Russian freighter's Antonovs, eight of which will eventually be positioned at London (STN).

An offshore-drilling-rig repair machine weighing 130 tons is flown by a Ruslan from Amsterdam to Perth, Australia, in September.

During the 12 months, Volga-Dnepr becomes the first Russian cargo airline to become a trustee member of the TIACA, the International Air Cargo Association.

Freight traffic accelerates 124% to 211 million FTKs and revenues skyrocket 130.8% to \$74.8 million.

Early in **1994**, the Mitsui Corporation becomes the airline's Japanese partner. In February, an An-124-100 flies power station components, weighing 107 tons, from Naples to Karachi. Also during the first quarter, the Beijing government grants its authority for operations to and from China. Cargo charters are initially operated to Italy, Israel, and Hong Kong.

A road transport division (RTD) is set up with 10 large trucks in April to start "door-to-door" bonded freight deliveries in Europe. The same month, the company is registered with the International Air Transport Association (IATA). Three unique Ruslan services are completed in April. In the first, four **Canadian Helicopter Corporation** Bell 212s and their crews are transported from Vancouver to Mogadishu in Somalia. Two giant Pratt & Whitney PW4084 engines for the first Boeing 777 are flown from Hartford, Connecticut, to Seattle, while 70 cars participating in the London-Mexico City rally are flown from Lisbon to São Paulo.

The first RTD delivery to Germany is made in June. It is announced on July 1 that the fleet will be expanded from 6 to 10 An-124-100s and from 2 to 6 Il-76TDs. Tentative plans are also made to purchase a pair of Western freighters, possibly B-747Fs.

Antonov and the Russian aviation authority AviaRegistr fly a Ruslan in a certification program that achieves success with the U.S. FAA on October 13. The FAA, on October 14, grants authority for the initiation of scheduled cargo services by the Volga-Dnepr/Heavylift partners from Ulyanovsk and Moscow to Bangor, Maine, and Houston, beginning on November 30. In November, a 72-ton ship engine bed is flown by an An-124-100 from Hanover, Germany, to Memphis, Tennessee.

On December 19, a chartered An-124-100 flown by **Heavylift Cargo Airlines, Ltd.** takes a Soviet SA-10 Grumble SAM system from Minsk to Huntsville, Alabama, where it is turned over to U.S. officials. Il-76TD roundtrip scheduled flights, preparatory to the inauguration of expanded scheduled services next year, are started on December 28 from Moscow to Tianjin in north China.

A total of 219 million FTKs are operated on the year and revenues are estimated to total \$60 million.

Airline employment is increased 45% in **1995** to 1,067. In February, the RTD is certified by the Russian customs office to deliver cargo throughout Russia. On March 29, the airline's maintenance division is certified as a repair station for An-12s, An-32s, An-124s, Il-76TDs, and Yakovlev Yak-40s.

In April, one An-124-100 flies four mobile television stations, built on Mercedes truck bodies, from Frankfurt to Seoul. Also during the spring, the Ruslan charter network is also stretched to India, the UAE, and Thailand. Chinese scheduled return service is inaugurated thrice weekly from Ulyanovsk to Shenzhen and from Ulyanovsk to Dalian and to Shenyang employing Il-76TDs. An Il-76TD is now chartered from **Magadan Airlines** to help increase capacity on freight charters to and from China.

At the beginning of June, an An-124-100 transports three Kamov KA-32s from Ufa to Seoul. On June 20, Volga-Dnepr is awarded the "first and only Russian operator with an air carrier customs license." The fifth anniversary is celebrated on August 19. Also in August, a 27-ton yacht is flown by a Ruslan from Genoa to Tashkent. In November, one of the giant aircraft transports an entire 104-ton Ford Motor engine production line from Valencia, Spain, to Cologne.

Cargo traffic this year increases 19% to 270.69 million FTKs and revenues climb to \$87.65 million.

Unusual An-124-100 out-sized feats of **1996** are turned in during March. One plane flies an entire 81-ton Coca-Cola bottling line from Atlanta to Vladivostok, while another carries two one-piece turbines, weighing 80 and 26 tons, respectively, from Berlin to Jakarta. In May, a 95-ton compressor is taken in a single load from Zurich to Shanghai while in June, a pair of 90-ton gudgeons is flown from Ulyanovsk to Polarny for use in the diamond mines there.

A major customer recruited this year is British Petroleum (BP); in just the next two years, Volga-Dnepr will operate 100 flights for the energy giant, delivering over 10,000 tons. In July alone, a series of mass An-124-100 deliveries of up to 100 tons each, including one of 65 tons, are made for BP between Europe and Colombia.

In September, the airline is named a co-organizer of and official carrier for the Master Rally 96 off-road rally from Paris to Beijing. For the event, an An-124-100 is especially equipped with racks that allow it to transport 40 jeeps, each weighing 2.5 tons, and a number of motorcycles, from Paris to Ulyanovsk.

A seventh An-124-100 joins the fleet in October. Employing a Yakovlev Yak-40 trijet leased from bankrupt JSC Simbirsk Aero, Volga-Dnepr on November 1 inaugurates daily passenger roundtrips from Ulyanovsk, on the Volga River, to Moscow. These are the cargo specialist's first noncargo operations.

In December, an An-124-100 suffers 50% hull loss when it crashes 12 minutes after takeoff from Ulyanovsk following the failure of its No. 3 engine.

Although freight haulage of the smaller An-12s and An-32s is off by 40%, overall cargo traffic rises 36% as 45,100 FTKs are operated. Operating income soars 27% to \$111 million, making Volga-Dnepr one of Russia's most successful companies.

Chairman/President Isalkin holds a press conference at St. Petersburg on March 22, **1997**, and reports that although profits for the previous year were up by 5%-6%, Russia's heavy new taxes had turned a net gain into a net loss.

In the spring, a Free Custom Zone is established at Ulyanovsk; the first joint venture partner within the project is the government of China's Shanxi Province. In May, an An-124-100 flies a yacht from Sydney, Australia, to London (STN).

The board of directors, in July, elects Viktor Ilyich Tolmachov, the airline's technical director, as its new chairman. He will briefly assume some of the duties of Director General Isaikin, who has been appointed chairman of the newborn Russian Association of Cargo Operators, in February.

A memorandum of intent is signed for four Il-96T freighters in September. Each will be equipped with Pratt & Whitney engines and Collins avionics for delivery beginning in the fall of 1999.

Also in early September, two An-124-100s, equipped with the double-deck auto loading system, transport automobiles, jeeps, and motorcycles in five flights from Venice to Turkmenbashi on Turkmenistan's Caspian Sea coast for Master Rally 97. Starting from Turkmenbashi, the marathon is run via Baikonur, Buguruslan, and Cheboksary to Moscow's Red Square. The event is timed to coincide with the city's 850th anniversary.

During October, the company is awarded an honorable diploma by the International Aviation Safety Association for five years of accident-free operations.

In the wake of a Russian military An-124 crash at Irkutsk on December 6, company officials announce that they will intensify control and inspection of their Ruslan fleet.

During the year, Volga-Dnepr flies 57.7% of all international shipments made in the heavylift/outsize cargo market.

A total of 26,220 passengers are flown and 209.6 million FTKs are also operated, which figures cover the actual 50,000 metric tons of cargo flown. An operating profit of \$90.6 million is reported.

Service continues apace in **1998**. The fleet now includes 7 An-124-100 Ruslans and 3 Il-76Ts. Special missions continue to be operated with the Ruslan fleet.

Director General Isalkin is named chairman of TIACA's CIS Chapter in February. Also during the month, the company is awarded the "Wings of Russia" prize as the best cargo operator in Russia. A pair of An-124-100s is contracted to fly the Irish rock group U-2 and its 200 tons of show equipment on a world tour to Buenos Aires, Melbourne, and Tokyo. On February 24, a Ruslan transports a 105-ton generator and its spare parts from Sydney to Auckland, New Zealand.

At the end of the month, the Russian Federal Aviation Authority names Volga-Dnepr Airlines as the top Ruslan operator in the country. It is ordered to head and unite efforts of all An-124 operators and manufacturers, as well as producers of aircraft parts and systems, to smoothly implement an Antonov program for the giant aircraft's modernization.

On March 7, another generator, weighing 113 tons, is transported by An-124-100 from Perth to Auckland.

In May, the company patents the special car-loading system that it had introduced in 1993, allowing an An-124-100 to transport upwards of 40 jeeps or vans in a single load. The functional one-piece unit of a space station is flown from Moscow to Berlin during the month. Also in May, under contract to the UN, IL-76TDs fly a pair of 15-ton loads of humanitarian supplies to Freetown, Sierra Leone, one each from Brindizi, Italy, and the other from Luanda, Angola.

Under contract to BP in October and November, An-124-100s deliver 1,005 metric tons of oil refinery equipment from Baranquilla to El Yopal, Colombia, in 14 flights. Technical specialists test new loading equipment during this contract.

At the beginning of December, a Ruslan under a contract from the Tishman Spair Properties Company, transports a 73-ft. Norway spruce to Newark (EWR) from Cleveland, Ohio; the giant pine will be hauled into New York City to become the 1998 Christmas tree at Rockefeller Center.

Passenger boardings climb 7.2% to 28,000, while cargo traffic falls 7.7% to 193.58 million FTKs. Revenues total \$98 million.

By the beginning of 1999, the workforce has been reduced by 29% to 760. For the second straight year, the company, in February, is awarded the "Wings of Russia" prize as the best cargo operator in Russia. Minsk joins the passenger network at the end of March.

During April, the company's aviation engineering and maintenance operation at Ulyanovsk is certified by the U.K.'s Civil Aviation Administration. In late April, the airline is accused in the European press of having transported NATO armored vehicles to Macedonia on April 5, 7, and 8 as the alliance attack on Yugoslavia, brought on by the crisis in Kosovo, continues. The charge is hotly denied by the airline's deputy managing director, Gennady Yeltsov, at a news conference on April 27. According to Yeltsov, the company had made three "humanitarian" flights into Macedonia on those dates, transporting tons of tents, sleeping bags, blankets, and foodstuffs. Another flight is operated the next day. Volga-Dnepr has been closely monitored by the Russian Federal Aviation Service throughout the Kosovo crisis and all shipments into Yugoslavia or the war zone have been coordinated by the Foreign Ministry.

Four Ruslans are certified as Stage 3 noise compliant by the Russian Federal Aviation Authority in May. One, under contract to the Curis Air Company, flies an 83.4-ton, one-piece industrial scrubber from Tulsa, Oklahoma, to Kuwait. In early June, another An-124-100 transports a 21-ton Angara 1 rocket from Moscow to Le Bourget Field, under contract to the Khronichev State Space Centre, for display at the Paris Air Show.

The U.S. government contracts with the airline on July 28 for use of an An-124-100 to transport heavy material to Macedonia.

It is reported that the company has enjoyed an unusual level of business during the first nine months of the year, due to the political situations in the Balkans and East Timor and the earthquake in Turkey. These three locations alone have received numerous visits from contracted Volga-Dnepr aircraft.

On November 3, the company reports that its various humanitarian aid contracts have significantly boosted its income for the year's first nine months. Additionally, it proudly claims for itself fully half of the world's heavy lift market. In December, new maintenance facilities are opened at Shannon, Ireland, and at Sharjah, UAE.

Freight traffic for the year accelerates 32% to 254 million FTKs, with more than 85% generated by the joint venture with **HeavyLift Airlines, Ltd.** Revenues jump 25% to \$104 million.

Airline employment at the beginning of 2000 stands at 726, a 0.5% decrease over the previous 12 months. Having resolved a number of manufacturing and operational conflicts with **Antonov Design Bureau** and its airline subsidiary Antonov Airlines, the two organizations begin to share technical information at the start of the year concerning An-124-100 civil operations.

Also during the first quarter, Volga-Dnepr and **HeavyLift Cargo Airlines, Ltd.** begin talks designed to find ways of deepening their joint venture relationship. One possibility discussed is an exchange of equity between the two partners.

On April 3, AeroWorld.net reports that since 1990, Volga Dnepr has filled 1,700 orders for An-124-100 service and used its 9 Ruslans to transport over 300,000 tons of cargo to 400 airports around the world. In late April, the Kaskol Group—a private stockholder group affiliated with the Russian defense industry—purchases a minority 16% stake in Volga-Dnepr with the express goal of boosting the carrier's independent out-sized cargo offerings in the world market.

Beginning on May 19, the carrier introduces a new twice-weekly Euroasia Express IL-76T return cargo service from Prague to Beijing via Ulyanovsk and Novosibirsk. Another hush-kitted An-124-100 is delivered on May 25. During late spring and early summer, the company's An-124-100s begin life-extension modifications; beginning with the first delivered on May 25, four will be on hand by the beginning of September.

The company celebrates its tenth anniversary on July 21 by accepting delivery of its tenth An-124-100. The huge new freight features improved crew rest areas. A \$6-million credit from the Russian State Savings Bank Sberbank has provided the spur needed by the Aviastar plant at Ulyanovsk.

During the month's first meeting of the airline's new board of directors, Technical Director Victor Tolmachev is retained as chairman. The 10th new Ruslan is shown to the press at Moscow's Sheremetyevo Airport on August 3.

Media rumors of a pending merger with the **Antonov Design Bureau** subsidiary Antonov Airlines are quashed on August 21. The next day, a \$10-million, 4-1/2-year line of credit is obtained from Sberbank; it will be employed to complete hush-kitting and modernization of the existing fleet and to purchase another Ruslan. Three days later, the airline begins a new contract to deliver Tor-M1 anti-aircraft missiles to Greece.

Other contracts filled during the first nine months of the year include the delivery of oil and energy equipment from Houston to Kazakhstan, Azerbaijan, and Russia, the shipment of emergency equipment to France, rescue helicopters to Mozambique, and additional contract missions to Sierra Leone and East Timor operated on behalf of the U.N.

In mid-October, an \$8-million U.N. contract is received by **Tyumenaviatrans (TAT)** from the U.N. for the provision of helicopter support services in Eritrea. On October 23, a Volga-Dnepr An-24-100 transports four TAT Mi-8MTWs and 32 TAT employees to Eritrea to begin operating the mission.

During the fall and into the winter, discussions, begun months earlier and now often reported as "stormy," are held between representatives of Volga-Dnepr and **HeavyLift Cargo Airlines, Ltd.** concerning the future of their joint venture. While HeavyLift seeks to maintain the marketing arrangement and the fifty-fifty split of costs and revenues, the Russian carrier, despite a lack of experience in the area, believes it is capable of undertaking its own marketing without the intermediation of the British carrier. It also sees little chance of the JV providing the amount of investment capital required for the purchase of additional An-124s, recalling that all of the loans so far obtained to purchase the first nine An-124s have been of Russian origin, with higher interest rates than might have been had from Western banks and institutions. The British, for their part, believe that investment opportunities they have arranged for the joint venture have consistently been turned down by its conservative, short-sighted Russian partners.

In this atmosphere, a number of options are reviewed, including a possible purchase of HeavyLift by Volga-Dnepr and an initial public offering, which could provide the fiscal backing to turn the joint venture into a full partnership airline and legal entity capable of acquiring its own finances, aircraft, and personnel.

By mid-October, rumors are rampant in the Russian press that Volga-Dnepr is in the process of negotiating a separate U.S. marketing deal with Kansas City-based Aircraft Leasing Group, one that would leave its British joint venture partner **HeavyLift Cargo Airlines, Ltd.** out of the picture. Fahhad Azima of ALG, a leading Heavy Lift shareholder, indicates that his firm will continue to represent the British airline and its joint venture with Volga-Dnepr in the Americas. Tensions coming from a failure of the two carriers to rework the current fifty-fifty split of cost and revenues in their joint venture are said to be behind the ALG rumors.

As the year ends, the outsized-carrier has increased its share of the world super heavy lift and unique cargo market by 6.4% to 60.4%. A total of 31,600 tons of cargo are transported, of which 28% is aerospace equipment, 26% is UN humanitarian aid, 34% is general freight, and 12% is industrial freight. Overall revenues accelerate to \$136 million, of which \$125 million is generated by Ruslans.

On January 29, 2001, Volga-Dnepr will be named recipient of the 2000 "Cargo Development Award" from *Air Transport World* magazine. It is the first Russian carrier to achieve the magazine's recognition. Four days later, the 10-year-old joint venture with **HeavyLift Cargo Airlines, Ltd.** will end. With a huge new U.S. Export-Import Bank credit for the purchase of TCAS equipment, the Russian carrier prepares to go it alone and market its An-124 capability through its new London (STN)-based Volga-Dnepr UK, Ltd. and Houston-based Volga-Dnepr (Unique Air Cargo) subsidiaries.

In February 2001, the Moscow government reports that the total number of Russian air carriers has fallen from 328 in January 2000 to a current 294. It also reveals at this time that **East Line Airlines, Atlant Soyuz Airlines, Volga-Dnepr, and Aeroflot Russian International Airlines (ARIA)** have, between them, carried half of all Russian air freight traffic in 2000.

VOLOGDA AVIATION ENTERPRISE (VOLOGDASKOE AVIA PREDPRIATIE): Vologda Aeroport, Vologda Dorozhn, North West Zone, 160015, Russia; Phone 7 (81722) 20686; Fax 7 (81722) 20686; Code VGV; Year Founded 1994. VAE is set up at Vologda Airport in 1994 to offer regional passenger and cargo services. L. P. Yelferov is appointed director general and he launches revenue flights with 16 Yakovlev Yak-40s, 26 Antonov An-2s, and 6 An-28s. Sixteen Mil Mi-2 helicopters provide air ambulance and agricultural support services.

Flights continue in 1995–1999. During these years, Lev P. Eilferov becomes director general and his fleet is altered to comprise 14 Yakovlev Yak-40s, 24 An-2s, 6 An-28s, and 1 An-26. The rotary-wing complement includes 15 Mi-2s and three Mi-8s.

Just after takeoff from Sheremetyevo I Airport at Moscow on a March 9, 2000, charter to Kiev, a Yak-40 with five crew and four passengers loses control and crashes into the ground, breaking into two parts and exploding. There are no survivors. Among the casualties are businessman Zia Bazhayev and well-regarded journalist Artyom Borovik. Ice on the wings will later be blamed for the tragedy.

VOLUNTEER AIRLINES (1): United States (1954–1955). The first indigenous scheduled air carrier set up in the State of Tennessee is this subsidiary of the Nashville FBO and charter operator **Capitol Airways**. Having received certification from the Tennessee Aeronautics Commission, Chairman/President Jesse F. Stalling's company acquires a pair of Douglas DC-3s.

Twice-daily services are inaugurated in September 1954 linking the company's base with Knoxville, Chattanooga, Memphis, and Jackson. Having a greater interest in boosting **Capitol Airways**, Stallings shuts down his profitable intrastate operation on August 12, 1955.

VOLUNTEER AIRLINES (2): United States (1971–1973). Taking the state's nickname, the second Volunteer is set up at Chattanooga, Tennessee, in 1971 to offer scheduled passenger and cargo services to regional destinations. Employing 1 each Lockheed Model 10A Electra (a vintage aircraft, refurbished) and Britten-Norman BN-2 Islander, the commuter inaugurates daily roundtrips linking its base with Nashville, Memphis, Huntsville, Birmingham, and Spartanburg.

Operations continue for only two years.

VOLUSIA AIR SERVICE: United States (1970–1973). Also known as **VQ Airlines**, VAS is set up in 1970 as the scheduled air transport division of Volusia Aviation, the FBO at Daytona Beach, Florida. Employing 1 each Piper PA-23 Aztec and PA-32 Cherokee Six, VAS duly inaugurates daily roundtrips linking its base with Tampa and Walt Disney World. Operations are maintained into 1973.

VORONEZH AIR (VORONEZHSKOE AP). See VORONEZH AIRLINES (VORONEZHSKOE AP/VORONEZHAVIA)

VORONEZH AIRLINES (VORONEZHSKOE AP/VORONEZHAVIA): Voronezh Airport, Voronezh, Central Regions Zone, 394025, Russia; Phone 7 (0732) 160 937; Fax 7 (0732) 553 566; http://www.europages.com/cat/_ec_voronezhaviai.jo.html; Code ZT; Year Founded 1994. The former Aeroflot Soviet Airlines division at Voronezh Airport is reformed into a joint stock company on January 20, 1994. In following years, it will occasionally be known as the Joint Stock Air Company. The previous mission of providing domestic Russian passenger services, both scheduled and charter, is continued. Evgeni Shabunin is director general and he begins services on January 24 with a fleet of 6 Tupolev Tu-134SKHs, 7 Tu-134As, 10 Antonov An-24s, 28 An-2s, and 2 Yakovlev Yak-42Ds. In addition, the reborn carrier undertakes various flights on behalf of the national agriculture department.

Services continue in 1995–1999, during which years the number of aircraft shrinks to 2 An-24Bs, 6 An-24RVs, 6 Tu-134SKHs, 7 Tu-134As, and 1 Yak-42D. Airline employment reaches 1,751 and destinations visited include Abu Dhabi, Ankara, Antalya, Athens, Burgas, Cairo, Damascus, Dubai, Hurgada, Istanbul, Jerusalem, Larnaca, Paris, Prague, Sofia, Tehran, Tel Aviv, Tunis, Varna, and Warsaw. The company's financial health is not helped by the Russian currency crisis of 1998–1999.

Just after takeoff from Moscow's Sheremetyevo 1 Airport on an August 26, 2000 charter service to Barcelona, an engine of a company An-24RV catches fire; a safe emergency landing is made back at the point of origin and no injuries are reported.

VORONEZHAVIA. See VORONEZH AIRLINES (VORONEZHSKOE AP/VORONEZHAVIA)

VOSTOK AIRLINES: Russia (1946–2001). Originally established as an aviation group in 1946, Vostok is reformed in 1993 and registered as a joint stock company, with shareholding divided between the Ministry of State Property (25.5%), the Kharbarovsk State Property Fund (31.9%), and private investors (42.6%). Fanis Mirayanov is elected director general.

The workforce totals 791 and the concern operates a fleet of 8 Let L-410UVPs, 4 Antonov An-28s, and 3 An-32s on intraregional passenger and cargo services. It also undertakes a complete portfolio of rotary-wing aerial work, with a helicopter fleet that includes 16 Mil Mi-8s/-17s, 2 each Mi-6s and Mi-26TCs, and 8 PZL-Swidnik Mi-2s.

Flights continue without headline or reported incident through the remainder of the decade. On April 10, 2001, it will be reported that the company has been merged with **Dalavia** and another small local carrier, **Nikolaevsk-na-Amur Air Enterprise**, with the **Dalavia** name surviving. With the Khabarovsk regional administration providing \$6 million to cover the **Dalavia** leasing package for two new Tupolev Tu-214s, Ministry of State Property ownership in **Dalavia** has been transferred to the region, so that the carrier might be joined with the other two into a stronger and more viable airline. The legality of the arrangement under

which the JSC Vostok is amalgamated into two state-owned companies to form a new state owned concern will lead to local press discussion. Nevertheless, on May—effective August 1—**Dalavia** and **Nikolaevsk-na-Amur Air Enterprises** are joined to form **Khabarovskavia**.

VOTEC (VOTEC SERVICOS AEREOS REGIONAIS, S.A./VOTEC TAXIAEREO, S.A.): Estrada Rio do Pau 2066, Rio de Janeiro, 21655-611, Brazil; Phone (21) 455-1444; Fax (21) 455 1078; Year Founded 1966. On September 23, 1966, the air taxi operation VOTEC (Voos Tecnicos e Executivos, S.A.) is organized at Rio de Janeiro to offer nonscheduled flights into the Tocantins and Araguaia Basins. The carrier is equipped with 3 Britten-Norman BN-2A Islanders and 1 Piper PA-23 Aztec and begins flight operations in 1967. Within the next few years, an autonomous division is formed to handle on-demand traffic in the Amazon area, VOTEC Amazonia Taxi Aereo, S.A.

During the remainder of the decade and into the next, VOTEC becomes a significant charter operation, offering executive air taxi and on demand passenger and express flights, offshore oil industry support, agricultural applications, and resource industry (e.g., logging) support. Douglas DC-3s are added to operate longer segments.

On November 12, 1975, the Brazilian federal government establishes the Sistema Integrado de Transportes Aereos Regional, a system calling for the formation of five regional airlines to provide third-level feeder service to outlying regions. A promise of subsidy is made, based on a 3% surcharge on tickets sold on trunk routes.

Early in 1976, VOTEC is reorganized and upgraded; a new division is established to handle scheduled operations under regional airline brand. Capitalization is now increased and former **TAN (Transportes Aereos Nacional, S.A.)** traffic manager Claudio Hoelck becomes a major shareholder and officer. Return scheduled passenger flights begin over a Goiania—São Simão—Uberlandia route on October 11 employing 2 new Embraer EMB-110P Bandeirantes.

While maintaining its previous charter and support operations, VOTEC over the next 5 years develops a regular network in the states of Goiás and Minas Gerais, featuring 18 destinations. Among the communities visited are Rio de Janeiro, Uberaba, Uberlandia, São Simão, Goiania, Brasília, Argarcas, Arraias, Dianópolis, Porto Nacional, Carolina, Balsas, Grajau, Barra do Corda, Imperatriz, São Luiz, and Belem.

By 1981, the fleet comprises 6 DC-3s, 8 EMB-110P Bandeirantes, 3 BN-2A Islanders, 2 Piper PA-31-350 Navajo Chieftains, 1 Piper PA-23 Aztec, 3 Sikorsky S-61Ns, 5 Sikorsky S-58ETs, 4 Sikorsky S-76s, 4 Hughes 500, 24 Hughes 369s, and 14 Hughes 269s, the last 6 types being helicopters.

Coming in from Tukurui on February 24 in rain and high winds, an EMB-110P1 with 2 crew and 12 passengers collides with a ship in dry dock while on initial approach to Belem. The turboprop bounces onto two barges and breaks into two parts, one of which cascades onto a tugboat and the other, the tail section, sinks (11 dead).

Despite the tragedy, enplanements for the year total 135,721.

During the next 3 years, the fleet is upgraded through the addition of 3 Fokker F27-200 Friendships, 2 EMB-110Ps, 3 BN-2As, 1 Piper Aztec, and 6 Sikorsky S-76s. Withdrawn are 1 DC-3 and 1 Sikorsky S-58ET.

Passenger boardings jump to 156,286 in 1982, but decline dramatically in 1983 to 113,431. Two F27-600s are added in these years, wearing the company's new "minimalist" style livery.

While on initial approach to Imperatriz, Brazil, on April 18, 1984, an EMB-110EJ with 2 crew and 16 passengers collides in midair with another company aircraft, an EMB-110P1 with 2 crew and 15 passengers. The EMB-110EJ crashes out of control and there are no survivors, while the EMB-110P is able to make a forced landing into a river and sinks (1 dead).

Customer bookings this year slide to 104,959, a decline of 7% from the previous year.

Operations continue apace in 1985, but customer bookings plunge to 96,015. A total of \$10.3 million in revenues is earned; however, a large, if unspecified, loss is suffered.

In desperate financial difficulty, VOTEC's fixed-wing division is sold to **TAM (Taxi Aereo Marilia, S.A.)** in August 1986 and is reformed into the wholly owned subsidiary **Brazil Central, S.A.** Having abandoned its scheduled regional operation, VOTEC returns to its roots to concentrate on rotary-wing charter and oil industry support service as VOTEC Taxi Aereo, S.A. Elzo Freitas is managing director in 1999–2000 and his fleet includes 6 Sikorsky S-61Ns and 7 S-76As.

VOTEC TAXI AERO, S.A. See VOTEC (VOTEC SERVICOS AEREOS REGIONAIS, S.A./VOTEC TAXI AERO, S.A.)

VOYAGEUR AIRWAYS, LTD.: P.O. Box 1734, CFB North Bay, Hornell Heights, Ontario, P0H 1P0, Canada; Phone (705) 476-1750; Fax (705) 476-6773; <http://www.voyageurairways.com>; Code 4V; Year Founded 1983. Voyageur is founded by Max Shapiro at North Bay, Sudbury, Ontario in 1983 and equipped with 2 Saunders ST-27s purchased from, respectively, **Air Atonabee, Ltd.** and **Northward, Ltd.** In the spring of 1984, Canadian government permission is received to commence scheduled passenger and cargo flights to Toronto Island Airport. Because of difficulties at TIA, the company is authorized to begin its revenue flights to Toronto in July. In the fall, flights are started—then stopped—between Toronto and Windsor.

The Sudbury terminus is extended in January 1985 to Marathon and Manitouwadge. During the summer, a cooperative agreement is signed with **NorOntair, Ltd.** to connect at Ottawa. The following year, another Saunders is purchased, from **Northward, Ltd.**, as is a Beech King Air 100. These are employed, beginning in April, to launch direct Sudbury to Ottawa service. Ottawa to Rouyn and Val d'Or service is initiated in July. Six months later, in December, flights begin from Marathon to Sudbury, North Bay, and Montreal.

The fleet is further expanded in 1987 by the addition of Piper PA-31T Cheyennes and Beech Super King Air 200s. These assist in the opening of new routes, purchased from **City Express, Ltd.**, linking Toronto with Montreal via Peterborough and Ottawa. By 1989, the fleet has been expanded to include 10 Beech King Air 100s, 1 Super King Air 200, 1 Piper PA-31-310 Navajo, and 3 PA-31T Cheyennes. When service to Elliott Lake, Ontario, is suspended by **Air Ontario, Inc.** on April 2, it passes to Voyageur the same day.

Operations continue apace in 1990–1992 and in 1993–1994 two Cessna 501 Citations and a de Havilland Canada DHC-7-102 are acquired. A second DHC-7-102 arrives in 1995, but late in 1996, when the new Colorado-based charter operator **Maverick Airways (2)** elects to begin scheduled services, both Dash-7s are leased to it. Maverick lasts only a short period and so the DHCs are returned; in 1997 they are joined by a third. The fleet also contains 10 Beech King Air 100s, 2 Cessna 501 Citations, and 1 Super King Air 200. The King Air complement is changed by year's end to include 9 King Air 100s and 2 Super King Air 200s.

On June 17, 1998, the company signs an "Air Canada Connector" contract with the major. Under its terms, which will take effect in September, the regional will acquire a fleet of 10 Beech 1900Ds, painted in modified **Air Canada, Ltd.** colors. Employing Air Canada tickets, it will then operate services from its North Bay base, as well as Toronto, to new local markets in southern Ontario and the Northeast U.S. considered as too uneconomical to receive service from DHC-8s. Voyageur will also provide off-peak service on existing Air Canada routes.

With sufficient Beech 1900Ds on hand and a new marketing name Air Connexion chosen, Voyageur Airways, Ltd., on behalf of Air Canada, prepares to inaugurate nonstop roundtrips on September 20. The first city-pair selected for visits is Toronto and Syracuse, with four daily nonstop roundtrips to be offered during the week and three nonstop roundtrips on both Saturday and Sunday. Unhappily, the new service is cancelled before it is started.

WAGLISLA AIR, LTD.: Canada (1984–1996). Established at Vancouver in 1984, Waglisla inaugurates local and bush services, both scheduled and unscheduled, along the central British Columbia coast. Employing a de Havilland Canada DHC-2 and several Cessna 180s, all float-equipped, the operator visits such destinations as Bella Coola, Bella Bella, and Ocean Falls.

Operations continue apace for the remainder of the decade and into the next. In 1993, President Vivian Wilson's carrier visits Power River, Port Hardy, Bella Bella, Masset, and Prince Rupert. The fleet includes 2 Beech 99s, 3 Piper PA-31-310 Navajos, 1 Douglas DC-3, 2 DHC-3 Otters and 6 DHC-2s (all of the DHCs are float-equipped).

The Douglas transport, Beech 99s, and three Beavers are withdrawn in 1994; however, another Otter is added. Arthur Harrison is general manager in 1995 and he operates 3 Beavers, 3 Otters, and 2 Chieftains. The 2 Beech 99s rejoin the fleet later in the year. The company declares bankruptcy in October, but continues to operate. One Beaver is withdrawn in 1996, just before the entire concern shuts its doors.

WAIRARAPA AIRLINES, LTD.: New Zealand (1980–1991). Established late in 1980 to provide scheduled commuter services, Masterton-based Wairarapa undertakes flights to Auckland with a pair of Piper PA-31-350 Navajo Chieftains. During the remainder of the decade, services are also started to Christchurch, Nelson, and Rotorua.

By decade's end, Managing Director Alan Stewart has only one Chieftain available. Although another Chieftain is acquired in 1990, the small regional is unable to maintain its economic viability and ceases operations in 1991.

WALATKA AIR SERVICES. See NORTHERN CONSOLIDATED AIRLINES**WALKER'S CAY AIR TERMINAL.** See WALKER'S INTERNATIONAL AIRLINE**WALKER'S CAY AIRLINE.** See WALKER'S INTERNATIONAL AIRLINE

WALKER'S INTERNATIONAL AIRLINE: 700 Southwest 34th Street, Fort Lauderdale, Florida 33315, United States; Phone (305) 359-1406; Fax (305) 359-1414; http://ella.netpoint.net/empg/walkers_cay/wc5.htm; Code XW; Year Founded 1967. Walker's is originally founded as the Jet Hansa Corporation at Fort Lauderdale in 1967 to operate and market in America the Hamburger Flugzeugbau HFB 320 Hansa business jet. Charter flights are operated in support of aircraft promotion.

In 1975, James Radcliffe takes over and reforms the company, beginning to operate it as a charter passenger and cargo service linking its base with West Palm Beach and the Bahamian destination of Walker's Cay—hence its new name, Walker's Cay Air Terminal. In 1980, Radcliffe decides to offer daily scheduled roundtrip frequencies and the company is reborn as Walker's Cay Airlines.

By 1981, the fleet includes 1 each de Havilland Canada DHC-6 Twin Otter, Grumman G-73 Mallard, Beech Super King Air 200, and Beech Queen Air 65. Service to Fort Lauderdale begins and operations continue apace during the remainder of the decade until 1990 when, in the face of recession, scheduled operations are suspended.

Charter flights, never abandoned, now receive total emphasis and in 1993–1994, President Radcliffe and General Manager Flemming Andersen still operates a Twin Otter and a Mallard. The fleet is altered in 1995–1996 to include 1 Cessna 206, 1 Cessna 207A, and 6 Piper PA-31-350 Navajo Chieftains. Enplanements during the latter year total 3,680. Flights continue without fanfare.

During October 2000, the Twin Otter receives a fake color scheme and "Fly y Air" titles, which allow it to be featured in the motion picture *Big Trouble*, written by Dave Berry.

WALTAIR, S.A.: Zaire (1993–1994). Waltair is established at Kinshasa in 1993 to offer domestic and regional charter flights to destinations in Africa and the Mideast. Revenue operations commence with a single Aerospatiale (Sud) SE-210 Caravelle XB. The company name is changed in 1994 to **Wetrafa Airlift, S.A.**

WANAIR, S.A.: P.O. Box 6896, Aeroport Tahiti, Faaa, Tahiti, 98702, French Polynesia; Phone 689 855 554; Fax 689 855 556; Year Founded 1987. Wanair is set up at Tahiti in 1987 to offer nonscheduled passenger charters to all of the nearby islands. President Robert Wan operates a Beech 1900D in 2000. Scheduled services begin in May following the acquisition of a colorfully painted Fairchild-Dornier 328JET christened *Marutea*.

WANGANI AERO WORK, LTD.: Wangani Airport, P.O. Box 509, Wangani, New Zealand; Phone 64 (6) 345 3994; Fax 64 (6) 345 3992; <http://www.aerowork.co.nz>; Year Founded 1950. Wally Harding establishes WAW at Wangani in November 1950, originally as a charter and agricultural support concern. Over the next 30-plus years, this founding member of the Aviation Industry Association of New Zealand operates a large fleet of lightplanes and helicopters on a variety of general aviation missions, including aerial work, agricultural spraying, forest fire reconnaissance/suppression, supply dropping, search and rescue, and passenger and cargo air charters.

The concern remains in Harding family hands and in 1972 Richard Harding is managing director, with Bruce and Heather as company directors. The fleet in 1976 comprises 10 Fletcher FU24-950s.

Helicopter aerial work is added to the agricultural business during the remainder of the century. At the beginning of 2000, the fixed-wing fleet includes the 10 Fletchers, plus 1 Cresco 600, and 4 Cresco 750s. A Bell 205, 2 Bell 206B JetRangers, and 1 Hughes 500D are also operated.

WARATAH AIR SERVICES (PTY.), LTD.: Australia (1986–1988). Waratah is formed at Tumut, New South Wales, in 1986 by Chief Pilot G. Pickering. Employing a single Cessna 402, the small commuter begins scheduled daily return services to Sydney. Unable to establish a profitable concern, Pickering is forced to halt operations in late 1988.

WARBELOW'S AIR VENTURES: 3758 University Avenue South, Fairbanks, Alaska 99709, United States; Phone (907) 474-0518; Fax (907) 479-5054; <http://www.akpub.com/fhwag/warbe.html>; Code 4W; Year Founded 1991. Arthur Warbelow founds his WAV at Fairbanks in 1991 to provide scheduled passenger and cargo flights to a number of Alaskan destinations. A staff of 16 is recruited and a fleet is assembled comprising 3 Piper PA-31-350 Navajo Chieftains, 1 Piper PA-31-310 Navajo, 3 Cessna 207As, 1 Cessna 206, and 2 Beech 18s.

A total of 4,253 passengers are flown, along with 472,852 pounds of mail.

Operations continue apace in 1992 and destinations served in 1993 include Fort Yukon, Chalkyitsik, Utopia, Hughes, Huslia, Galena, Rampart, Tanana, Eagle, Circle, and Circle Hot Springs.

Passenger boardings increase 57% to 12,106.

Operations continue apace in 1994 as customer bookings accelerate 35% to 16,357. A total of 333,000 FTKs are also operated.

The fleet in 1995 includes 2 Cessna 207As, 1 Cessna 206, and 3 Navajo Chieftains. The company now serves 18 interior villages. Increased mining activities and the aftermath of the flooding on the Koyukuk River fuel a traffic boom.

Enplanements surge 29% during the 12 months to 21,095.

Airline employment stands at 37 in 1996 and passenger boardings accelerate 13.5% to 23,935.

While on final approach to Prudhoe Bay after a June 20, 1997 all-cargo service from Nuiqsut, the Cessna 206's aft cargo door opens and slams against the side of the fuselage, resulting in substantial damage. The pilot is able to complete his landing and is uninjured.

Enplanements during the 12 months total 26,334.

President Warbelow's fleet in **1998** includes 8 Chieftains, 2 Cessna 207As, and 1 C-206. Passenger boardings ascend 30.7% to 38,000.

Customer bookings climb another 5.3% in **1999** to 40,000.

For the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Governor Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and depend upon salmon as their food source, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by Warbelow's at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of Chief Pilot Michael Morgan, Warbelow's, which has the only bypass mail-shipping permit in Fairbanks, runs the packages through its meter and with USPS assistance farms out this mail for delivery. The airlines involved, including Warbelow's, **Frontier Flying Service, Arctic Circle Air Service, Belair, Larry's Flying Service, Servant Air, Tanana Air Service, Tatonduk Air Service, and Wright's Air Service**, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk Rivers.

WARD AIR: 8991 Yandukin Drive, Juneau, Alaska 99801, United States; Phone (907) 789-9150; Fax (907) 789-7002; Year Founded 1975. Kenneth R. Ward establishes Juneau Flying Service at Juneau, Alaska, in **1975** to offer charter passenger and cargo flights to destinations in southeast Alaska. His fleet consists of float-equipped de Havilland DHC-2 Beavers and Cessna 185s. Airline employment reaches seven.

To provide scheduled commuter services, the carrier is reformed under its owner's name in April **1980**. Employing 1 each Beech 18, de Havilland Canada DHC-2 Beaver, and Cessna 185, revenue frequencies begin over local routes. Services continue without change for the next 13 years.

In **1993**, Ken Ward and his wife Michelle sell the company and purchase Taku Glacier Lodge, a world-famous resort built in 1923. Five years later in **1998**, the company mission has not changed since the days of its founder. The Beech 18 has, however, been replaced with a second Beaver.

Flights continue in **1999**. Coming in from Hawk Inlet on April 27, a Cessna 185 with one pilot and one passenger, lands short of the runway at Juneau. Although the aircraft is damaged beyond repair, no one aboard is seriously hurt.

A total of 9 full-time and 3 part-time pilots are employed at the beginning of **2000** and the fleet now includes 2 Cessna 185 Skywagons, 3 Beavers, and 1 DHC-3 Otter.

WARDAIR, LTD. See **WARDAIR CANADA, LTD.**

WARDAIR CANADA, LTD.: Canada (1946–1989). Ex-RCAF and bush pilot Maxwell W. Ward forms **Polaris Charter Company, Ltd.** at Yellowknife in **1946** and initiates on-demand service with a four-passenger de Havilland DH 83C Fox Moth, flying to the many mining sites of the Northwest Territories. Unlicensed, Polaris Charter is merged into certified **Yellowknife Airways, Ltd.** in **1947** under the latter's logo; operations are suspended in **1949**, briefly restarted in **1950**, and bought out by **Associated Airways, Ltd.** in **1951**.

Wardair, Ltd. is formed at Yellowknife and a new de Havilland DHC-3 Otter is ordered in **1952**. Charter flights with the C\$96,000 ma-

chine commence in June **1953**. The fleet is upgraded in **1954–1956** by the addition of two more Otters and two DHC-2 Beavers. Contract services and passenger and cargo charters continue.

In March **1958**, a Bristol 170 Freighter is purchased from **Central Northern Airways, Ltd.** and employed to offer cargo services to Arctic destinations. A fourth Otter is obtained April, but is lost in a May **1959** accident at Coral Harbor, Hudson's Bay.

In **1961** the decision is taken to emphasize overseas charters and the company takes the name Wardair Canada, Ltd., primarily for marketing purposes. Two modified Douglas DC-6s are obtained; the first, a DC-6A/B, is leased from **Canadian Pacific Air Lines, Ltd.** and enters service at year's end on flights to the U.K.

In January **1963**, a Beech 18S seaplane joins the fleet operating in the north. The second long-range aircraft, a DC-6A purchased from **KLM (Royal Dutch Airlines, N.V.)**, is delivered in March. After eight charters, the CPAL aircraft is returned in December and for the next 2 years the former Dutch Douglas makes approximately 70 charters annually. The company profits from international group and inclusive-tour services to a point where additional capacity is required. A Boeing jetliner is ordered in **1965**.

Equipped with extra fuel capacity, a B-727-11 is delivered on April 25, **1966**. Christened *Cy Becker*, it is placed into service in May on a flight from Vancouver to London (LGW) via Sondre Stromfjord (Greenland). In addition to becoming Canada's premier operator of Boeing jetliners, Wardair Canada now becomes the only airline to operate this tri-jet type on transatlantic charters. Additional flights are laid on to the European destinations of Dusseldorf, Copenhagen, and Amsterdam; however, more range is required and thus two B-707-320Bs are requested. The DC-6A is sold to **Pacific Western Airways, Ltd.** in November while, during the winter season, the Boeing is leased to the American carrier **National Airlines (1)**.

The northern operation receives its first DHC-6-100 Twin Otter in April **1967**; receipt of the larger aircraft allows sale of an Otter in May and the Beech-18 in August. The carrier becomes a public company in September and in the fall arrangements are made for the purchase of four ex-RCAF Bristol 170s, the first of which is delivered in December.

After the withdrawal of the former **Central Northern Airways, Ltd.** Bristol 170 in February **1968**, two former air force Bristols arrive in March and July. Meanwhile, the first B-707-311C is delivered on April 17; christened *Punch Dickens*, it enters revenue service in May, the same month the DHC-6-100 is replaced by a Dash-200. A Beaver is sold in October.

The fleet is further enlarged in **1969** through the arrival of the B-707-396C *W. R. Wop May*, the last Bristol 170, and two DHC-6-300s. The Stratoliner is a used aircraft, previously operated by **Kuwait Airways Corporation**. During the winter charter season, the B-727-11 is leased to **Braniff International Airways**.

The ice gives way on Great Slave Lake, near Snowdrift, Northwest Territories, on May 3, **1970** and a Bristol 170 Mk. 31M Freighter falls in; unable to salvage the aircraft, employees strip it and let it sink. Two other Bristols are sold during the year, one in March and one in November.

Max Ward's holding is reduced to 42% in **1971** as private interests acquire 25% shareholding and **Air Canada, Ltd.** 33%. A B-747-1D1 is ordered and an Otter is sold in November. The B-727-11 is sold to **Cruzeiro Brazilian Airlines (Cruzeiro do Sol, S.A.)** in May **1972**. Two new DHC-6-300s join the northern fleet (one each in January and June) while the last DHC-3 is sold in November.

On April 23, **1973**, the first B-747-1D1 is received; originally ordered by **Braniff International Airways** but not delivered, it is christened *Phil Garratt* and placed into service in May flying transatlantic charters from Canadian cities to London.

An order is placed in **1974** for a B-747-124. The second Dash-1D1 arrives on December 15; it is purchased from **Continental Airlines** and is named *Romeo Vachon*.

The fleet in **1975** comprises 2 Jumbojets, 2 B-707-300Cs, and 6 DHC-6-300 Twin Otters.

On January 1, the carrier's corporate name is changed to Wardair Canada (1975), Ltd. and future Chief Operating Officer George D. Curley is first named to the board of directors.

The main foreign destinations are Florida, Hawaii, the Caribbean, and the four original north European nations. Bush operations are continued throughout the Yellowknife district and are enhanced once passenger charters are started with a Mitsubishi Mu-2.

On June 1, 1976, the carrier becomes a division of Wardair International, Ltd., a holding company established to control airline and associated transport subsidiaries plus International Vacations, Ltd., Wardair Jamaica, Ltd. and Wardair (U.K.), Ltd. The following year, orders are placed for two DC-10-30s and two B-747-200s.

In August 1977, a Grumman Gulfstream I is acquired on lease to fly government executive charters in the northland. Enplanements are 613,366.

Charters are started from Montreal and Toronto to San Juan, Puerto Rico, in 1978. The Gulfstream I is returned and the Mu-2 is sold, but is replaced by major additions. A B-747-211B (christened *H. Hollick Kenyon*) and two Douglas DC-10-30s (*Punch Dickens* and *W. R. Wop May*) are delivered, joining a fleet that includes 2 B-747-1D1s, 6 DHC-6-300s, and 1 Grumman Gulfstream I. The first DHC-7-102 arrives on June 8; called *Don Braun*, it is the first of its type to enter service in Canada.

The two B-707-300Cs are sold late in the year; passenger boardings jump 19.4% to 761,000 and profits soar 41% to C\$5.4 million.

The employee population is increased by 13.6% in 1979 to 2,046. The bush portion of the operation ends as full concentration is placed on international charter flights. The reequipment program begun earlier is completed as the second B-747-211B is received; it is christened *H. A. "Doc" Oaks* and placed in service. A second Dash 7 is received, but like the first, it is not now required and so both are sold.

Despite the grounding of the DC-10s for awhile as a precaution after the May crash of an **American Airlines** unit at Chicago, passenger bookings skyrocket 45% to 1,114,175. Revenues climb 38.7% to C\$236.2 million and the operational profit soars 127% to C\$13.7 million; the net profit is C\$6.5 million.

Orders are placed in 1980 for six Airbus Industrie A310s. A number of government-contract Vietnamese refugee charters are undertaken and in May the first full-frills domestic charters are inaugurated from Vancouver to Toronto. Domestic mixed-frills charters begin in June. As part of a Saskatoon to Honolulu via Calgary charter in December, Wardair's B-747-211B *H. A. "Doc" Oaks* becomes the first Jumbojet ever to land at that Saskatchewan city. Passenger bookings accelerate 15% during the 12 months to 1.28 million.

Cancelled during the winter, charter flights begin again in May 1981. In June, the carrier becomes the Canadian flag representative to St. Lucia and a third DC-10-30, the *Stan McMillan*, is added in October.

As the world recession deepens, passenger boardings dip 2.3% to 1,251,000. A C\$1.04-million profit is reported.

Enplanements recover in 1982 to 1,384,000. Although a C\$5.6-million operating profit is posted, a C\$10.5-million net loss is suffered. The April delivery date for the first A310s is pushed to 1985, while interline arrangements are made with **Air Ontario, Inc.** and **Pacific Western Airlines, Ltd.**

The employee population is cut 10.8% in 1983 to 1,992. Domestic charters are cut during the winter and the A310 order is cancelled. Passenger boardings rise 7.1% to 1,482,000. Revenues increase 5.2% to C\$284 million, producing a C\$21-million operating profit; still, a net loss of C\$2.3 million is taken.

Following U.S. and Canadian negotiations, the existing bilateral air agreement is amended in 1984. Wardair receives Ottawa's approval, under deregulation, to begin scheduled international services. Domestic charters are resumed during the summer and the carrier reaches a settlement with a flight attendants' union threatening a strike.

Passenger boardings advance a slight 1.1% to 1,499,057. The carrier continues to maintain its ranking as the nation's largest charter operator. Profits are C\$110.9 million (operating) and C\$5.1 million (net).

The workforce is increased 8.9% in 1985 to 2,250 and a deal with a Brazilian carrier to lease A300B4s falls through. In April, Maxwell W.

Ward is named board chairman/CEO while longtime board member and Vice President Operations George D. Curley becomes president/chief operating officer. A whole new management team is put into office at the same time.

On May 9, the carrier is officially designated as the second Canadian scheduled airline to the U.S., becoming the first Canadian operator other than **Air Canada, Ltd.** or **Canadian Pacific Air Lines, Ltd.** to receive a license for scheduled services over the Atlantic or Pacific. Twice-weekly scheduled DC-10-30 flights are launched on November 5 from Toronto and Montreal to San Juan, Puerto Rico. Designated the second Canadian scheduled airline to the U.K., Wardair inaugurates flights to Manchester and London in December.

Passenger bookings for the year accelerate 4.5% to 1,566,625 and freight traffic climbs 23.9% to 49.5 million FTKs. Revenues advance to C\$341 million, while expenses increase only 8.3%, producing profits of C\$36.6 million (operating) and C\$7.9 million (net).

On March 20, 1986, a Class I domestic license is requested. Promotion of the new U.K. scheduled service is begun on May 1 and four days later, scheduled domestic DC-10-30 frequencies are started from Toronto to Vancouver via Edmonton and Calgary. A three-year lease-purchase arrangement is signed with **South African Airways, Ltd. (SAA)** for two A300B4-203s and an A300C4-203.

The first A300B4-203 received from Johannesburg is renamed *H. Hollick-Kenyon* and enters service on the Toronto-Vancouver route on August 22. The last two Airbuses are received in late August and early September and christened, allowing the addition of Montreal to the domestic network. The B-747-211Bs *H. Hollick-Kenyon* and *H. A. "Doc" Oaks* are sold to **British Caledonian Airways, Ltd.** in October, leaving the Oaks name available for a former **Air Canada, Ltd.** B-747-133 acquired in December and given the *H. A. "Doc" Oaks* moniker.

Customer bookings swell 4.4% during the 12 months to 1,635,400 and revenues rise 3.8% to C\$355.7 million. With costs kept down, the operating profit moves upward to C\$30.4 million and net gain reaches C\$33.4 million.

Airline employment is increased by 28.7% in 1987 to 3,890 and a C\$920-million order is placed in February for 12 A310-300s. Toronto-Winnipeg scheduled flights begin in May, but are dropped in July while Toronto-Vancouver frequencies are decreased, both actions due to the SAA's August recall of its *Koedoe*, the A300C4-203. Juggling of the fleet briefly requires suspension of service from Montreal and Toronto to San Juan. To allow these to resume along with start-up of a new frequency from those to cities to Puerto Plata, a DC-8-61 is wet-leased from **Nationair, Ltd.**

The first three A310-304s arrive in November and December and are christened *G. Levine Leigh*, *Don C. Braun*, and *Jack Moar*. On November 28, the *G. Levine Leigh* inaugurates the first service by its type from London (LGW) to Toronto.

Passenger boardings rise 6.7% to 1,744,000 and freight jumps 36.1% to 97.2 million FTKs. Revenues swell 13.2% to C\$399 million. Expenses, largely related to preparations for the launch of scheduled services the next year, are up significantly and cut the operating profit to C\$11.1 million. Net profit falls to C\$27.4 million.

The workforce grows another 35% in 1988 to 4,684. A total of nine A310-304s are delivered between January and October; these are named *A. M. Matt Berry*, *H. W. Harry Hayter*, *C. C. Carl Agar*, *S. R. Stan McMillan*, *T. "Rusty" Blakey*, *G. W. Grant McConachie*, *Sheldon Luck*, *W. R. "Wop" May*, and *C. H. "Punch" Dickens*. Meanwhile, in March, an order is announced for eight McDonnell Douglas MD-88s. A request is also made to Fokker for 12 Fokker 100s.

Between April and September, all three DC-10-30s are sold, one each to **Garuda Indonesian Airlines**, **Finnair, O/Y**, and **Canadian Airlines International, Ltd.** Scheduled service to Paris and San Diego is started, while Ottawa and Halifax become scheduled domestic markets. Charters are undertaken to Los Angeles, Hamburg, and Paris, plus the traditional foreign gateways. For the winter season beginning in

December, A310-304 service from Canada to the U.K. is increased to 23 weekly flights.

Customer bookings leap upward 45.2% to 2,532,929 and cargo climbs 10.2% to 107 million FTKs. Revenues jump 33.4% to \$C523.3 million, but the expensive scheduled services run costs up 49.6% to \$C580 million. The resulting operating loss is \$C48 million and the net downturn is \$C17.4 million.

In January 1989, the carrier is purchased by PWA Corporation, parent of **Canadian Airlines International, Ltd.**, for \$C206 million. PWA CEO Rhys Eyton becomes the new Wardair CEO and operates the carrier for six months as a subsidiary under the chairmanship of Wardair founder Maxwell Ward. Service to Winnipeg is halted in March and the Fokker 100/MD-88 orders are cancelled.

Through June, the last month of independent statistics, passenger boardings are down 7.4% to 1,128,761, but freight is up 39.5% to 50 million FTKs. The operator is absorbed into **Canadian Airlines International, Ltd.** in July.

Founder Ward will spend the next two years completing his autobiography, *The Max Ward Story: A Bush Pilot in the Bureaucratic Jungle* (Toronto: McClelland and Stewart, 1991).

WARING AIR: United States (1982–1983). Waring Air is set up at Charlottesville, Virginia, in the late fall of 1982 to offer daily air taxi flights to Charlotte, North Carolina. Employing a Beech 18, roundtrips are inaugurated on December 15, but only continue a few months into 1983.

WASA WINGS, O/Y: Finland (1987–1990). Wasa Wings is established as a Finnish independent in 1987 to offer replacement services over those routes considered to be too lightly traveled to justify regularly scheduled flights by **Finnair O/Y** and **Finnaviation O/Y**. A fleet of 2 Beech 99s and 1 Cessna 404 transport a total of 18,000 passengers during the start-up year.

While on final approach to Ilmajoki during a storm on November 14, 1988, the 2 crew and 10 passengers aboard an EMB-110P1 from Helsinki are startled to witness a massive power failure, which puts out all of the lights at the airport. The aircraft now strikes trees 800 m. beside the runway and crashes (6 dead).

Bookings for the year advance to 30,000.

Early in 1989, the third-level operator purchases a CAT 200 modified Beech King Air.

Enplanements remain level at 30,000 and operations cease in 1990.

WASAYA AIRWAYS, LTD.: P.O. Box 308, Pickle Lake, Ontario P0V 3A0, Canada; Phone (807) 928-2244; Fax (807) 928-2595; <http://www.wasaya.com>; Code WG; Year Founded 1993. Frank W. Kelner sets up Wasaya at Pickle Lake in 1993 to operate scheduled and charter passenger and cargo services to local and regional destinations. Revenue operations commence with a fleet that includes 1 Cessna 208 Caravan I, 3 C-208Bs, and 5 British Aerospace BAe (HS) 748-2A/Bs.

Two BAes are withdrawn in 1994 as a fourth C-208B is acquired.

Fleet changes continue in 1995 as two C-208Bs are replaced by two Beech Super King Air 200s and a BAe (HS) 748-2BF. The original Cessna 208 is sold in 1996. Service is maintained in 1997–2000, with scheduled flights added in October of the former year.

WASHINGTON AIRLINES: United States (1968–1969). During the summer of 1968, Butler Aviation elects to attempt the establishment of a short landing and takeoff (STOL) service linking Washington, D.C. with Baltimore. Employing a pair of Dornier Do-7 Skyservants, its subsidiary, Washington Airlines, inaugurates daily roundtrips on September 20 linking National Airport and Dulles International Airport with Friendship Airport in Baltimore, Maryland.

Technically, the experiment is a success, but failing to generate significant traffic, it is a commercial failure and shuts down in September 1969.

WASHINGTON-BALTIMORE AIRWAYS: United States (1968–1970). Washington-Baltimore is set up at Washington, D.C. (DCA) in 1968 to provide scheduled passenger and cargo services to regional destinations. Employing Piper PA-23 Aztecs and Beech B-80 Queenaires, WBA inaugurates daily roundtrips linking the company's base with Baltimore, Pittsburgh, Harrisburg, Reading, Martinsburg, Bristol, Cumberland, Charleston, and Bluefield.

Services are maintained into 1970.

WASP AIRLINES (PTY.), LTD.: Australia (1935–1936). WASP is formed at Sydney in 1935 to offer short-haul services to various destinations from the capital of New South Wales. Equipped with Codock and Monospar ST.10 aircraft, the company undertakes weekly flights to Coonambie via Narromine and thrice weekly to Young, Leeton, and Griffith.

As is the case for other pioneer airlines during the Depression, traffic does not allow continue and the carrier ceases operations in July 1936.

WATERMAN AIRLINES, S.A. See TACA INTERNATIONAL AIRLINES, S.A.

WATERTOWN AIRWAYS: United States (1935–1936). WA is founded at St. Paul, Minnesota, in the summer of 1935 to offer scheduled passenger flights on a route into the Dakotas, touching en route at such communities as Watertown, Pierre, Rapid City, and Spearfish, plus Mount Rushmore. Revenue frequencies commence in August, but traffic proves too insufficient to justify operations beyond the first quarter of 1936.

WATERWINGS AIRWAYS, LTD.: New Zealand (1990–1994). Under Managing Director Chris Willett, Waterwings is established on Te Anau Island in 1990 to provide scheduled service to various points on the southern tip of the nation's South Island. Sight-seeing flights are also undertaken. The initial fleet includes 2 GAF Nomad N.22s plus 1 Cessna 206 and 1 Cessna 207. Operations continue until 1994.

WAYFARER AVIATION: 10 Hangar Road, Westchester County Airport, White Plains, New York 10604, United States; Phone (914) 949-4424; Fax (914) 949-5206; <http://www.wayfareraviation.com>; Year Founded 1956. Laurence, David, and Nelson Rockefeller establish this aircraft management, charter, sales, maintenance, and consulting concern at Westchester County Airport in 1956. Over the next 40 years, the full-service aviation concern becomes well known for the provision of executive and small group passenger charters to airports in New York, New Jersey, Connecticut, and other Eastern U.S. locations.

James Christiansen is president in 2000 and operates a fleet that includes 2 Canadair 600 Challengers, 1 Dassault Falcon 20, 1 Learjet 35A Century III, and 2 Augusta A-109 helicopters.

WDL AVIATION (KOLN), GmbH.: Postfach 98 02 67, Koln 90, D-51130, Germany; Phone 49 (2203) 53082; Fax 49 (2203) 64100; <http://www.wdl-aviation.de>; Code WDL; Year Founded 1991. In late 1991, WDL Flugdienst is reformed and its group headquarters are moved to Cologne. The airship division, WDL Luftschiffgesellschaft MbH., remains at Mulheim on the Ruhr. In 1992, the route network of this operator is lengthened as President Walter Bohnke acquires three Airbus Industrie A320-231s on lease from **Adria Airways**. The FH-227J is leased to **CARA Express**.

The Airbus lease ends in early 1993 and the fleet now includes 5 F.27-600s, 3 F.27-100s, and 1 F.27-200. Two more F.27-600s, 8 F.27-100s, 2 F.27-200s, and 1 F.27-400 join the fleet in 1994 as both routes and services are expanded. The mission, however, is altered as WDL becomes an all-cargo operator, flying on behalf of **United Parcel Service (UPS)**, **Lufthansa Cargo, A.G.**, **Emery Worldwide**, **DHL Worldwide Express**, and **TNT Express Worldwide**.

Flights continue in 1995–1997, during which years the fleet consists of 9 F.27-600s, 4 F.27-200s, and 1 each F.27-400 and F.27-100.

In addition to contract services on behalf of the large freight operators, WDL also continues to provide its own services, offering logistical support to the automotive and other industries. A corporate shuttle division is established at Frankfurt during the year, flying executives aboard a Bombardier Learjet 55.

Freight service and executive passenger charters are maintained in 1998. During the spring, the decision is taken to reenter the passenger charter market. A British Aerospace BAe 146-100, just off lease to **KLM U.K., Ltd.**, is acquired from the charter arm of the manufacturer on July 1.

Repainted, the BAe enters service on August 8; initial operations consist of the provision of replacement services for **Aero Lloyd, GmbH**. A second British-made jetliner, a VIP-configured Dash-200, is acquired from **Pelita Air Service** late in the year.

Service is maintained in 1999. The former Pelita BAe 146-200 enters service on April 14. The replacement business is found to be most promising as flights are operated on behalf of **LTU International Airlines (Lufttransport Unternehmman, GmbH.)**, **Aero Lloyd Flugreisen, GmbH.**, **Eurowings Luftverkehrs, A.G.**, **Hapag-Lloyd Fluggesellschaft, mbH.**, **Virgin Express, S.A.**, and **Fti Fluggesellschaft, mbH.** Corporate shuttle customers include Airbus Industrie and the automobile manufacturers Audi, BMW, and Daimler Chrysler.

On May 1, 2000, a wet-leased British Aerospace BAe 146-300, operated on behalf of **Air Nostrum, S. A.**, launches Iberia Regional weekday return flights from Zaragoza to Madrid, Nice, and Frankfurt. These are complemented with weekend services to Bologna from Madrid and Barcelona.

A BAe 146-200 is wet-leased to **Deutsche BA Luftfahrtgesellschaft, GmbH.** on November 1 and is employed to offer scheduled frequencies from Koln to Munich, Dusseldorf, and Berlin (Tegel). Two more planes, also wearing Deutsche BA stickers, will follow.

WDL FLUGDIENST, GmbH. (WESTDEUTSCHE LUFTVERBUNDUNG FLUGDIENST, GmbH.): Germany (1956–1991). WDL is incorporated at Mulheim on the Rhur in 1956 as a subsidiary of Westdeutsche Luftwerbung Theodor Wullenkemper GmbH. & Co., K.G., to provide executive air charter and aerial advertising. In the beginning, flights seldom total more than 90 in a whole year. Lightplane charters continue without incident or headline during the next several decades. In 1972, an airship division is also established at Mulheim on the Ruhr; it will eventually become known as WDL Luftschiffgesellschaft MbH. and will operate the company's own dirigible type, the WDL-1-B. Like the Goodyear blimps in the U.S., these will almost always be employed for aerial observation and photography.

The first Fokker F.27-100 is acquired in 1974 and is employed to operate scheduled passenger replacement service under contract to **Deutsche Lufthansa, A.G.** By the middle 1980s, Managing Director Theodor Wullenkemper's fleet comprises 3 Fokker F.27-100s and 1 Fairchild-Swearingen Metroliner.

Operations, primarily on behalf of **Deutsche Lufthansa, A.G.** and **Deutsche Luftverkehrsgesellschaft, GmbH. (DLT)**, continue apace. In 1990, the fleet comprises 4 Fokker F.27-100s (3 of which are leased to **FTG Air Services, GmbH.**), 1 F.27-200, which is also chartered to **FTG Air Services, GmbH.**, and 2 WDL-1-B airships.

The **FTG Air Services, GmbH.** charters end in 1991, at which point the F.27-100/200s are joined by 3 F.27-600s and 1 Fairchild Hiller FH-227J. The carrier is reformed late in the year and renamed.

WEARNE'S AIR SERVICE, LTD.: Malaya (1936–1941). Wearne's is founded at Singapore on December 18, 1936 as an associate of the automobile dealer and importer Wearne Brothers, Ltd. Equipped with a single DH 89 christened *Governor Raffles*, the company launches thrice-weekly Singapore to Penang service via Kuala Lumpur and Ipoh, on June 28, 1937. The route's frequency becomes daily following delivery of another Rapide, the *Governor Fullerton*, on September 27.

Two DH 86s are acquired in 1938, one each from **British Airways, Ltd. (1)** (the *Governor Ibbotson*) and **Jersey Airways, Ltd. (the Gover-**

nor Murchison). A DH 60 is also purchased. In 1939, flights begin from Penang to Kota Bharu and the *Governor Ibbotson* conducts a survey flight across the South China Sea to Sarawak. On June 30, 1940, Penang to Kota Bharu service is suspended. By year's end, the fleet comprises 2 DH 89s and 1 DH 90 Dragonfly.

On December 1, 1941, the carrier becomes "B Flight" of the Malayan Volunteer Air Force; after the attack on Pearl Harbor on December 7, the company officially ceases to exist. As a military unit, Wearne's now flies passengers and mail from Singapore to various military destinations. All three of the company's aircraft are lost in accidents or under Japanese attack.

WEBBER AIRLINES. See **SOUTHEAST ALASKA AIRLINES; TYEE AIRLINES**

WEDELL-WILLIAMS AIR SERVICE CORPORATION: United States (1929–1937). W-WAS is formed at New Orleans in August 1929 by race car driver Jimmy Wedell and lumberman H. P. Williams to offer scheduled passenger services to Fort Worth via Baton Rouge, Alexandria, Shreveport, and Dallas. Ryan Brougham revenue flights commence on November 30, the same day a Loening C-2 Air Yacht amphibian is employed to begin offering flights to Grand Isle.

During the spring of 1930, a Ryan inaugurates a weekly service from New Orleans to St. Louis via Memphis. The overnight stop at Memphis is the first regularly scheduled air service enjoyed by that western Tennessee community.

Caught in a winter storm while flying from Fort Worth to Shreveport on January 7, 1931, a Lockheed Model 5 Vega piloted by Art Brown with two passengers, crashes west of Marshall (three dead). Operations continue until December when the airline is temporarily closed down.

During April 1933, a rejuvenated company undertakes a new service from New Orleans to Laredo. A New Orleans-Houston route won by the **Robertston Airplane Service** as the result of the May 1934 renewed issuance of government airmail contracts is taken as the result of the Robertson brothers decision, reached within months of its September start-up, to exit the airline business.

In 1936, the carrier is purchased by **Eastern Air Lines** for \$160,000.

WELCOME AIR LUFTFAHRT, GmbH. & CO., K.G.: Postfach 81, Innsbruck, A-6026, Austria; Phone 43512295296; Fax 43512288888; http://www.welcomeair.com; Code 2V; Year Founded 2000. An affiliate of Tyrol Air Ambulance, A.G., Welcome Air is established at Innsbruck in the spring of 2000 to offer scheduled passenger flights. Outfitted with a single Fairchild-Dornier 328JET wearing a bright yellow and purple livery, President/CEO Jakob Ringler's 50-employee Welcome launches flights in May from Innsbruck to Graz.

WENELA AIR SERVICE (PTY.), LTD.: Botswana (1952–1975). The Witwatersrand Native Labour Association (WNLA) in 1952 elects to begin transporting workers for the South African mining industry by air. Employing Douglas DC-3s, the concern flies 11,000 miners to Francistown from Molembo, Maun, Mongu, Livingstone, Lilongwe, Blantyre, Fort Hill, and Ndola. At the capital of Botswana, then known as the Bechuanaland Protectorate, the miners are outfitted and dispatched by road and rail to the mines.

Within two years, Wenela is flying 58,000 workers per year. In 1958, the fleet includes 8 DC-3s and 1 DC-4 and boardings total 80,000.

The service transports an annual average of 100,000 workers per year during the 1960s and into the early 1970s. During these years, there is no charge for miners being transported into Francistown. The trip out, however, brings in a small amount of income as the workers, having been paid, are charged for their flights.

Also during these years, additional airlines begin to fly workers and the surface travel infrastructure is improved.

Contaminated fuel causes engine failure aboard a DC-4 with 4 crew and 80 passengers, on April 4, 1974, and a subsequent crash near Francistown, Botswana (78 dead).

WNLA suspends its air service in 1975.

WELCH AVIATION: United States (1987). Robert C. Welch establishes this commuter named for himself at Alpena, Michigan, in the spring of 1987 to offer scheduled shuttle flights to Detroit's Metropolitan Airport. Piper PA-31-310 Navajo frequencies are duly inaugurated, but end six months later when the company is driven out of its market by **Simmons Airlines**.

WEST AFRICAN AIRLINES, LTD.: Ghana (1980–1988). WAA is organized at Accra in 1980 to offer charter and contract cargo services throughout Africa and from Banjul, Gambia, on to London. The carrier's flight equipment comprises a single Boeing 707-3B4C, leased from **Middle East Airlines, S.A.L. (2)**. Unable to maintain economic viability in a period of general recession, the company stops flying in 1988.

WEST AFRICAN AIRWAYS CORPORATION: Nigeria, Sierra Leone, Gold Coast, Ghana, Gambia (1946–1958). As the result of the West African Territories Order-in-Council signed by King George VI on May 15, 1946, WAAC is established as successor to **Elders Colonial Airways, Ltd.** and the airline operating division of the West African Air Transport Authority, owned by the four colonial governments of British West Africa.

Sir Hubert Walker, formerly director of public works and controller of Nigerian civil aviation, is appointed chairman. J. R. McCrindle, seconded from **British Overseas Airways Corporation (BOAC)**, is managing director, with another BOAC executive, B. C. H. Cross, as general manager. Orders are placed for 11 de Havilland DH 104 Dove 1s; the request will be followed within months by an order for 3 Miles Marathon 1s.

While preparations are made to begin services, including the establishment of regulations, airfields, and navigation aids, **British Overseas Airways Corporation (BOAC)** is contracted to provide twice-weekly Douglas DC-3 roundtrips for the temporary **Nigerian Air Services, Ltd.** from Lagos to Jos, Kano, and Port Harcourt.

The first DH 104 Dove 1 is delivered at Lagos on September 14 and initial service to Calabar starts in October.

Following the assemblage of a tiny Douglas DC-3 fleet leased from BOAC, WAAC in September and October 1947 begins assuming the Lagos to Kano route of **Nigeria Air Services, Ltd.** On December 31, the carrier takes over all Gold Coast routes as **Nigeria Air Services, Ltd.** shuts its doors.

Twice-weekly Lagos to Kano DC-3 flights, formerly operated by BOAC under the name **Nigeria Air Services, Ltd.**, commence on January 24, 1948 and full Nigeria service is assumed on January 31.

Between March 5 and 25, services are extended to Benin City, Enugu, Tiko, Potiskum, Maiduguri, Yola, Ibadan, Ilorin, Kaduna, Accra, Takoradi, Kumasi, Kumasi, and Tamale. When BOAC withdraws from its weekly service from Freetown to Dakar on March 27 and from Lagos to Dakar on March 29, these are taken over on March 31.

The last of the Dove 1s enter service as BOAC reclaims its DC-3s.

The first traffic figures are released; boardings for the year total 12,000.

A Dove 1 with eight passengers crashes in the Niger River Delta during May 1949, killing all aboard. As a result, the 10 remaining DH 104s are withdrawn from service, leaving the DC-3s to shoulder the traffic loads. Two Bristol 170 Wayfarers chartered from the military are delivered to Accra and begin low-fare intercolonial services in November.

Enplanements during the 12 months reach 13,813.

Bristol 170 Lagos to Khartoum operations are initiated in April 1950. Two more Bristol Wayfarers are acquired and start flying to Benin City, Kano, Port Harcourt, and Tiko.

The year's customer bookings are 14,149.

Operations continue apace in 1951 as a fifth Bristol Wayfarer enters service and the Doves are brought back. A Bristol 170 Mk. 21 is lost near Kaduna, Nigeria, on July 27; there are no fatalities.

Customer bookings nearly double, reaching 32,089.

During the summer of 1952, a contract is signed with **British European Airways Corporation (BEA)** for the lease of six Miles Marathon

1 transports; these join the fleet between July and October and begin flying throughout Nigeria and the Gold Coast.

One of the Dove 1s is badly damaged in a wheels-up emergency landing in at Lagos on November 18. On December 19, weekly frequencies are initiated to Mamfe.

Bookings for the year soar to 42,769.

One of the unsuccessful Marathons is withdrawn on February 9, 1953. On March 6 the Mamfe route is closed down. A Wayfarer is damaged on June 23 when it runs off the runway while landing at Ikeja and comes to a stop in a ditch; although no injuries are reported, the aircraft will have to be taken out of service and ferried to Lagos for repairs.

Due to poor traffic, Lagos to Khartoum Marathon I service is suspended on August 27. There are two nonfatal crashes involving failed landing gear during October; on October 8, a Marathon I is damaged by the failure of its landing gear drag strut at Jos while a Dove 1 is harmed as the result of a bad landing at Kaduna.

Boardings for the year climb to 57,189.

On February 8, 1954, a Marathon I is damaged while landing at Jos when its landing gear drag strut fails—exactly the same reason as its sister's crash at Jos the previous October. The next day, all of the Marathon 1s are withdrawn. Sir Hubert Walker steps down as chairman on March 31 and is succeeded as Chairman/Managing Director by M. C. P. Mostert who had, years earlier, played a prominent role with Mrs. Florence Wilson's **Wilson Airways, Ltd.** in Kenya.

In September, one of the withdrawn Marathon 1s is sold by BEA to the Royal Jordanian Air Force to become King Hussein's personal transport. To replace the Bristols and Dove 1s, orders are now placed for three DH 114 Heron 2s.

Passenger enplanements accelerate to 69,261.

While on a February 5, 1955 domestic flight from Enugu, a Bristol 170 Mk. 21E with 4 crew and 9 passengers loses a wing and crashes 84 km. NW of Calabar, Nigeria; there are no survivors.

A DC-3 is quickly chartered to take the downed aircraft's place, as the remaining Wayfarers are grounded. Between March and October, all of the remaining Marathon 1s are returned to BEA and the Doves 1s are also withdrawn for modification. Four additional DC-3s and a Vickers Viking are chartered.

As a result of the radical decline in capacity, bookings for the year slip to 49,267.

On January 1, 1956, D. Malcolm Brown succeeds M. C. P. Mostert as chairman/managing director. Lagos–Accra–Kumasi DH-114 Heron 2 flights begin on May 16. As the other two Heron 2s arrive, the aircraft leased the previous year are all returned, as are the two Bristol 170s chartered from the military in 1948.

Passenger traffic rebounds, up to 61,476 passengers flown.

The Gold Coast achieves its independence on March 6, 1957 and is renamed Ghana. The fleet at this point includes 2 Bristol 170s, 8 Herons, and 6 Doves, 3 of which are soon thereafter sold out of service. Seven DC-3s are acquired through the remaining three quarters. To pay for them, the two Wayfarers and a Dove 1 are sold.

During the fourth quarter, an agreement is signed with **British Overseas Airways Corporation (BOAC)**. Under its terms, the British flag carrier is contracted to provide twice-weekly Canadair C-4 Argonaut roundtrips between Lagos and London.

Enplanements for the year are 73,444, the highest number ever.

Given the rush to independence in West Africa, the West African Air Transport Authority determines in a February 1958 meeting that significant changes are required in their consortium airline. Meeting later, the agency determines that Ghana and Nigeria will form their own state airlines and that WAAC will be disbanded.

The consortium air carrier ceases to exist in its original form as of September 30. It is replaced by a separate **Ghana Airways, Ltd.** and the remnants of the old airline, renamed **WAAC (Nigeria), Ltd.** trading as **Nigeria Airways, Ltd. Sierra Leone Airways, Ltd.**, is also created and it will be followed by a **Gambia Airways, Ltd.** in 1964.

In October, twice-weekly international services from Lagos to London are started to London with the Boeing 377 *Calypso* flown by British

crewmembers under contract from **British Overseas Airways Corporation (BOAC)**.

Enplanements for this final year are a combined 72,763.

WEST AFRICAN AIRWAYS CORPORATION (NIGERIA), LTD.
See **NIGERIA AIRWAYS, LTD.**

WEST AIR SWEDEN, A.B.: Box 82, Karlstad, S-65103, Sweden; Phone 46 (54) 180 010; Fax 46 (54) 184 410; <http://www.westair.se>; Code PT; Year Founded 1993. Time Air Sweden, A.B. is reformed in 1993 and given a new corporate identity, livery, and logo. Oskar Nilsson is president and his fleet includes a pair of Israel Aircraft Industry 1124 Westwinds. Scheduled passenger and ad hoc charter flights are undertaken from Karlstad to Avidsjaur, Storuman, and Arlanda Airport at Stockholm.

Two Boeing A75N1b Stearmen are acquired in 1994. Flights continue in 1995–1996, during which years the fleet is increased by the addition of five British Aerospace BAe (HS) 748-B2s. Scheduled services are initiated to Avidsjaur, Goteborg, Hagfors, Lidköping, Östersund, Storuman, Stockholm (Arlanda Airport), Sundsvall, and Torsby.

In May, the company is reformed into an all-cargo operation. Flights are performed on behalf of the major air freight integrators, with special attention paid to next day air delivery of parcels and packages. Mail is also flown under contract to the Swedish Post Office and ad hoc freight services are offered throughout Europe.

Service is maintained in 1998–1999, during which years the fleet is reformed to include 5 BAe (HS) 748-2Bs, 5 748-2As, and 2 748-2Bs, the latter with large freight doors. Early in 2000, a jointly funded freighter conversion program is launched with BAe Systems Regional Aircraft. West Air purchases six ATPs formerly operated by **United Feeder Service (UFS)** in the U.S.; converted into freighters, the first three are delivered by the end of June, with the second three scheduled to arrive just after Christmas.

On June 25, it is reported that two of the three new ATPs are hauling mail, while the third remains in passenger configuration. Plans are underway between the carrier and British Aerospace for the development of a special ATP freighter door that can hopefully be retrofitted to these ATPs during 2001.

On July 24, the passenger-configured ATP appears with company Web site titles, “www.westair.se.”

WEST AUSTRALIAN AIRWAYS (PTY.), LTD.: Australia (1921–1936). With A£50,000 capital, Norman Breauly forms his pioneer carrier at Geraldton, a rail center north of Perth, in April 1921. In response to the Air Navigation Act of December 1920, Breauly now bids on one of four newly available subsidized airmail routes; his tender is accepted on August 2. A fleet of 6 three-seat Bristol Tourers (converted Bristol F.2B Fighters) is purchased in September and readied.

On December 4, Breauly begins the first subsidized mail service in Australian commercial air history (for that matter, the first regularly scheduled service not only in Australia but anywhere in the Southern Hemisphere) from Geraldton to Derby via Carnarvon, Onslow, Roebourne, Port Hedland, and Broome. During the course of the inaugural flight, a Tourer crashes on one of the segments, with both the pilot and engineer killed. Despite the tragedy, weekly flights begin the next day.

Frequencies and flight times along the route are improved during 1922–1923 and on January 17, 1924, the Derby leg is extended to Perth. An unsubsidized Derby–Wyndham via Fitzroy Crossing and Hall’s Creek route is briefly flown in 1925.

Several de Havilland DH 50As and DH 61s are acquired and placed in service in 1926–1928. Four DH-66 trimotors are obtained in 1929, allowing the inauguration on June 2 of a subsidized weekly Perth–Adelaide route via the Nullarbor Plain. Seasonal, weekly, subsidized Derby–Wyndham service is opened on July 13, 1930.

At the end of April 1931, Capt. R. Mollard and his crew attempt to complete the Karachi–Darwin segment of the first England to Australia

experimental service. Mollard’s **Imperial Airways, Ltd.** DH-66 *City of Cairo* crashes at Koepang, Timor, and the entire crew is picked up by **Australian National Airways, Ltd.** co-owner Charles Kingsford-Smith and flown to Darwin. There, Mollard receives orders to go to Perth and purchase the WAA DH-66 *City of Cape Town* to employ on the return flight. Unable to reach his destination by rail, Mollard and his colleagues travel by ship, complete their transaction, and fly back to India. The first Australia to England mail sacks reach London by May 14.

On July 12, a Vickers Vicia flies the 1,450-mile Perth–Adelaide route in a record 22 hrs. 30 min. (11 air hours). While en route from Forrest to Alice Springs via the Great Victoria Desert on December 26, 1932, a DH 50A, flown by Harry Baker with two passengers, crashes-lands on a dry lakebed. Hastily repaired, the aircraft is able to lift one passenger back to Forrest the next day.

The second passenger is returned to Forrest without incident on January 5, 1933. Flights begin from Wyndham along the West Australia coast to Daly Waters on October 3, 1934. The spreading world depression has a significant negative impact on 1935 traffic figures. The fleet at this point includes 1 Vickers Vicia, 1 DH 89, 1 DH 84, and 3 DH 50As.

On July 1, 1936, the carrier is purchased by **Adelaide Airways (Pty.), Ltd.** just before that airline is absorbed into **ANA (Australian National Airlines (Pty.), Ltd.)**.

WEST CARIBBEAN AIRWAYS, S.A.: San Andres Island, Colombia; Year Founded 1999. One of the least-noticed of the many small Caribbean area air transport concerns, West Caribbean is established at Aeropuerto Internacional General Gustavo Rojas Pinilla, also known as Sesquicentenario, on the San Andres y Providencia archipelago in 1999. Scheduled roundtrip revenue flights from San Andres to Providencia begin with 1 (later 2) Let L-410UVP.

During the summer of 2000, orders are placed with a firm in Colombia for a used Avions de Transport Aerien ATR42-320 with which to expand the route network to the mainland. The aircraft, previously operated by **TAROM Romanian Air Transport (Transporturile Aeriene Romane, S.A.)** arrives at year’s end and is employed to offer daily return service from San Andres to Cartagena and Monteria.

WEST CENTRAL AIRLINES (1): United States (1966–1968). West Central is founded at Lincoln, Nebraska, in the fall of 1966 to offer scheduled third-level passenger and cargo flights to destinations in the central and western areas of Nebraska. De Havilland DH 104 Dove revenue flights commence on October 3 and are maintained until the company ceases operations in 1968.

WEST CENTRAL AIRLINES (2): United States (1984–1985). WCA-2 is set up at Minneapolis (MSP) in late spring 1984 to provide scheduled passenger and cargo services to Fergus Falls via Alexandria. Employing Piper lightplanes, the small commuter inaugurates revenue roundtrips on June 1, but is unable to maintain them beyond May 1985.

WEST COAST AIR, LTD. See **AIR BC, LTD.**

WEST COAST AIR CHARTER: 2211 East Missouri, Suite 219B, El Paso, Texas 79903, United States; Phone (915) 543-6069; Fax (915) 532-0195; Year Founded 1974. Yoli Damian sets up WCAC at El Paso in 1974, together with facilities at Ontario, California, Willow Run Airport at Ypsilanti, Michigan, and at Moore-Murrell Airport in Morristown, Tennessee. Executive charter and contract services cargo flights begin and continue over the next 25 years. The 12 employees of the carrier undertake flights with a variety of executive jets and other aircraft.

A decade later, the fleet comprises 2 Gates Learjet 25s, 1 Learjet 35, and 2 Rockwell Turbo Commander 690Bs. Operations continue apace and in 2000 the company flies 1 each Dassault Falcon 20 and Learjet 25D from Michigan, 1 Learjet 25D from California, and 1 each Beech 18 and Douglas DC-3 from Tennessee.

On November 1, the float-equipped Twin Otter with 2 crew and 15 passengers crashes into the Burrard Inlet while taking off from Vancouver Harbour. Although the right wing catches fire, there are no injuries reported.

WEST COAST AIR SERVICES, LTD.: United Kingdom (1937–1946). *Isle of Man Air Service, Ltd.* is merged with **Blackpool and West Coast Air Services, Ltd.** in September 1937. At that time, a joint service between Bristol and Dublin, flown by the latter with **Aer Lingus** under the marketing title **Irish Seas Airways, Ltd.**, is reformed as a separate company and named West Coast Air Services. On September 3, 1939, at which time the carrier is flying 1 each DH 86A, DH 86B, and DH 89A, the U.K. declares war on Germany and all civil flying ceases. Liverpool to Dublin DH-86 services resume in October.

On May 5, 1940, the company is one of seven independent airlines joining with the Secretary of State for Air to initiate the **Associated Airways Joint Committee** for the governance of domestic air transport operations in wartime. The company's DH 86A is abandoned on Jersey in June. The British terminus of the Irish Sea service is transferred from Liverpool to Manchester on August 5.

While flying the Manchester to Dublin service on October 18, 1941, the company's DH 86B is hit by anti-aircraft fire from a British merchant ship; the aircraft, carrying 11 passengers, lands safely. The Liverpool terminus is reopened in November 1942.

On December 3, 1945, the company, in association with Aer Lingus, begins to employ leased **Railway Air Services, Ltd.** Avro 19s on a direct London (Croydon)–Dublin service. On April 5, 1946, the British and Irish governments reach an agreement making **Aer Lingus Irish Airlines, Ltd.** the only recognized trans-Irish Seas carrier between the two nations.

As a result, West Coast Air Services, Ltd. ceases operations on June 29 and is amalgamated, by purchase, into the new state carrier, **British European Airways Corporation (BOAC)**, on February 1, 1947.

WEST COAST AIR TRANSPORT: United States (1928–1931). West Coast is incorporated at Portland, Oregon, early in 1928 to offer scheduled passenger and cargo flights over a multistop route from Seattle down to San Francisco. The initial fleet comprises 2 trimotor Bach 3-CT-6 Air Yachts designed by Californian Mort Bach and the only U.S.-certified civil transport whose frame was made entirely of wood. Revenue services commence on March 5 from Seattle to San Francisco via Tacoma, Chehalis, Portland, Medford, and Corning.

The Bachs, of which only 21 will be built, prove to be extremely quiet and fast; the Seattle–Portland segment is flown in 1 hr. 15 min. while the Portland–San Francisco takes only 5 hrs. One Bach must be written off at Seattle on June 28. Two more Air Yachts are delivered in August and one is christened *Cherokee*. (Although all WCAT Bachs are named for Indian tribes, only the name of this one is known for certain.)

During the remainder of the summer, company aircraft transport 903 passengers over 26,326 miles in 240 hours flight time.

In the fall, two aircraft are committed to sight-seeing flights from Portland to nearby Mount Hood.

En route to San Francisco from Portland on November 2, a Bach 3-CT-6, piloted by Louis Goldsmith with six passengers, crashes while making an emergency landing at De Sabla, California; pilot skill prevents a tragedy, although all six customers are hurt. The company is now acquired by Sacramento-based **Union Air Lines**.

For the 10 months of operation, a total of 4,946 passengers are flown over 210,604 miles.

The successful carrier is incorporated (under Delaware laws) on July 27, 1929 and late in the year it is purchased by **Western Air Express**. The new owners, who operate their prize as a subsidiary, are pleased to have the route, although the mail contract is owned by Union.

In need of additional revenues following the July 16, 1930 "Shotgun Marriage" with **Transcontinental Air Transport (TAT)** that forms **Transcontinental and Western Air (T&WA)**, WAE sells its West Coast route to **Pacific Air Transport** on March 16, 1931.

WEST COAST AIRLINES (WCA): United States (1941–1968). Organized by Nick Bez at Seattle on March 14, 1941, WCA receives a CAB feeder certificate on May 22, 1946 and inaugurates scheduled Seattle–Portland Douglas DC-3 service on December 5. The company adopts as its mascot no less a figure than Paul Bunyan, legendary Northwest lumberjack. The CAB renews the company's feeder permit on July 1, 1949.

Flights from Bellingham, Washington, to Klamath Falls, Oregon, commence in 1950. Other stops are added at Yakima, Wenatchee, Medford, and Spokane. On August 4, 1952, the company absorbs **Empire Airlines**. Having grown in size, the company, in 1953, is required by the government to begin hiring flight stewards. The millionth passenger (cumulative) is boarded in 1955.

By the late 1950s, West Coast is maintaining a lock on a northwestern route network that stretches from San Francisco in the south to Calgary in the north and Billings in the east. The airline's major claim to historical fame appears to rest upon the aircraft it chooses to replace its aging DC-3s.

On September 22, 1958, the company becomes the first local service airline in America to introduce a turbine-powered aircraft and, indeed, is the first scheduled carrier to place a turbine-powered airliner into service in the U.S. (**Eastern Air Lines** will take delivery of its first Lockheed L-188 Electra in October, the same month **Pan American World Airways (1)** begins Boeing 707 flights across the Atlantic.)

The aircraft in question is a turboprop F-27A Friendship built under license from the Dutch airplane builder Fokker by Fairchild at Hagerstown, Maryland. The first, certified on July 16, is handed over to President Bez in August and a much-publicized delivery flight is made back to Seattle. There, company pilots, who have been working without a contract since spring, refuse to fly the aircraft and threaten to strike unless their wage demands are met. The dispute goes to arbitration and is settled (in favor of the flyers) before the start of service. Meanwhile, a proving flight is made to Portland, where the new aircraft encounters landing gear problems.

Four more Fokkers are delivered in September, followed by two more on October 23 and December 12, respectively. Incidentally, the September 28 inaugural service by the F-27A derivative is actually flown over two months before the first Netherlands-built Fokker F.27-100 enters service, with **Aer Lingus Irish Airlines, Ltd.** in December.

Service continues apace during 1959–1962. On January 1, 1963, the first Fokker F-27A, delivered back in 1958, crashes into the Great Salt Lake, Utah, during a training exercise (three dead).

Another F-27A with 3 crew and 13 passengers crashes a mile short of the runway at Calgary on August 24. After the wing breaks off, the fuselage slides 780 feet, but, miraculously, no injuries are reported.

A DC-3 is unable to recover from a bounced landing at Kalispell, Montana, on December 11 and crashes; the six aboard receive slight injuries.

The year's enplanements reach 337,917, but West Coast is the only local service airline to report an operating loss: \$320,000.

Airline employment in 1964 stands at 867 and the fleet includes 19 aircraft. With 34% interest in **Pacific Air Lines**, President Nick Bez now attempts to takeover that carrier; the tactics employed are found unworthy and the CAB requires Bez to cease and desist his efforts. The minority interest in the competitor is thereafter sold. Late in the year, the government regulators authorize the start of scheduled F-27A nonstop Jetbus Service between Spokane and Seattle.

Orders are placed for three (later four) DC-9-14s as passenger boardings jump 28% to an all-time company high of 469,328. Revenues advance 17.6% to \$13.59 million. Still, operating costs are high and another \$53,240 loss is taken. Again, West Coast is the only local service carrier to report a fiscal downturn.

The workforce in 1965 is 875. The fleet now includes 17 aircraft: 7 DC-3s and 10 F-27As; the DC-9-14 order remains outstanding. A total of 506,636 passengers are originated and revenues advance by 18%.

The well-received Jetbus Service is successfully expanded from Seattle to Spokane on September 26, 1966. The F-27As are now supplemented on longer runs by the carrier's first DC-9-14, beginning on September 16.

En route from San Francisco to Portland via Eugene on October 1, the jetliner, operating as Flight 956 with 5 crew and 13 passengers, descends below its cleared 9,000-ft. altitude and disappears into the Cascade Mountains near Squaw Valley, Oregon. The wreck, which has sheared trees and slammed into Salmon Mountain, is found the next day and there are no survivors. The plane is the first of its type to crash anywhere.

The company's second DC-9-14 is delivered in mid-October and enters service without incident. Revenues total \$18,155,585.

In an effort to improve its fortunes, West Coast voluntarily joins in 1967 merger discussions with **Pacific Airlines** and **Bonanza Air Lines**.

Just two minutes after takeoff from Klamath Falls on March 10, Flight 720, an F-27A with three crew and one passenger, crashes into the NW side of 6,525-ft. Stukel Mountain; there are no survivors.

The workforce now totals 1,086 and at year's end the company operates 3 DC-9-14s and 4 F-27As.

Passenger boardings climb to 716,000 and revenues are \$18,392,251. A loss of \$274,000 is suffered.

Plans to retire the last DC-3 in July are announced in early 1968. With approval from both the CAB and President Johnson, West Coast joins its two partners on April 9 to form **Air West**.

WEST COAST AIRLINES, LTD.: Ghana (1982–1985). Organized at Accra in May 1981, WCA obtains a Boeing 707-320C freighter and begins scheduled all-cargo services in July 1982. Destinations visited include nations in West Africa and Rotterdam in Europe. The company is unable to achieve viability and folds in 1985.

WEST COAST AIRWAYS, LTD. See **NEW ZEALAND TRANSPORT AND TRAVEL, LTD.**

WEST COAST CHARTERS: 1971 Campus Drive, Suite 200, Santa Ana, California, 92707, United States; Phone (714) 852-8340; Fax (714) 260-3999; Year Founded 1987. WCA is set up at John Wayne-Orange County Airport in 1987 to provide executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean. Twelve years later, the company employs 10 pilots at this location, 1 of 6 from which it operates.

A large fleet of turbojet, turboprop, and piston-engine aircraft are stationed at Santa Ana, including 1 Dassault Falcon 20, 1 Cessna 550 Citation II, 2 Beech Super King Air 200s, 1 Super King Air 300, 2 King Air 90s, 1 Beech 58 Baron, and 2 A36 Bonanzas.

A Citation II is flown from Carlsbad, California, and another from Camarillo. A Super King Air 200 is based at Daugherty Field, Long Beach, with a C-650 Citation VII stationed at Van Nuys. A Citation V and an IAI 1124 Westwind I also operate for the company from Phoenix.

WEST INDIAN AERIAL EXPRESS, C.A. (WIAX): Dominican Republic (1927–1928). In the fall of 1926, the famous air racer and stunt pilot Basil Rowe and his companion, Bill Wade, having found the U.S. market for their peculiar skills nearly dried up, take ship (with two automobiles and two WACO 9 biplanes) for Puerto Rico. The islands of the Caribbean prove more receptive to the two pilots, even if the terrain is more dangerous.

Having worked their way accident-by-repaired-accident over to Barahona in the Dominican Republic by late spring 1927, the two flyers are more than ready to listen to the requests of a group of local sugar plantation owners and other businessmen. Led by H. L. Harper, the gentlemen are ready to put up \$50,000 to create an airline that will connect Barahona with the outside world. With their WACOs constituting the initial airline fleet, Rowe and Wade, with Roscoe Dunten as operations manager, incorporate WIAX on June 27.

With Rowe gone north to purchase aircraft, an Australian pilot named Jenkins makes the company's first proving flight to Port au Prince on July 14. En route, Jenkins is lost. WIAX seeks the aid of USMC Observation Squadron 9, based in Haiti, which quickly locates the WACO downed with engine failure on the shores of Lake Enriquillo. Once re-

pairs are made, Jenkins is able to take off and complete his run to Port au Prince, where he crash-lands. From Port au Prince, Jenkins, having repaired his plane overnight, flies on to Santo Domingo on July 15.

Meanwhile, having approached several manufacturers in New York and Pennsylvania, Basil Rowe purchases the former *American Legion*, a Keystone Pathfinder (one of only three built) originally outfitted for the transatlantic Orteig Prize competition won by Charles A. Lindbergh. In addition to this trimotor, which is rechristened *Santa Maria*, he purchases a Fairchild FC-2, which is named *La Nina*, and embarks for Barahona after having obtained the service of his friend Cy Caldwell to fly the Fairchild.

During a stopover at Miami to repair an oil leak, Caldwell is telephoned by J. E. Whitbeck, Key West representative of the infant **Pan American Airways (PAA)**, on October 18. Unable to obtain its own aircraft, PAA needs to get a mail shipment over to Havana the next day in order to qualify for a Post Office subsidy. Required to reach the Dominican Republic by way of Cuba anyway, Caldwell agrees to a \$145.50 charter and flies down to Key West about dusk.

On the morning of October 19, Caldwell departs Key West and drops off Whitbeck's mail sacks before proceeding to his original destination. Caldwell's good deed for **Pan American Airways (PAA)** is made without company authority and inadvertently allows the rival to begin a growth surge that will eventually swallow WIAX.

Regularly scheduled WIAX services commence on December 1. Rates charged for seats from San Juan on either the 10-passenger *Santa Maria* or four-passenger *La Nina* are \$50 to Santo Domingo and \$85 to Port-au-Prince. The frequency to the former destination is thrice weekly and the latter once per week, with cargo carried at 25¢ per pound.

Also, mail contracts are held from the governments of Cuba, Haiti, and the Dominican Republic at \$2.50 per pound, while subsidies from the Haitian government total \$500 per month and \$200 per month from the Dominican Republic. As the company is not authorized to fly U.S. mail from the U.S. territory of Puerto Rico, there is no subsidy there; however, the monthly rental fee at San Juan airport is kept by local authorities at only \$10.

Service continues apace through the Christmas season and on into the new year. On February 6–7 1928, while on his Caribbean goodwill trip, Charles A. Lindbergh contracts to carry WIAX mail to Havana aboard the *Spirit of St. Louis*—the only time that famous Ryan monoplane is ever used for commercial purposes. On February 20, the carrier stretches its three-stop route to five by adding Santiago de Cuba in the west and St. Thomas/St. Croix in the east.

This expansion proves expensive.

At one point, credit for gasoline is stopped. Later in the month, having sold all of its seats to buy gasoline, Rowe pilots the *Santa Maria* to Puerto-au-Prince on only two engines, having blown a cylinder in a side mount. There he is able to beg sufficient fuel from an oil company agent to get back to Santo Domingo, where he talks another agent into just enough to reach San Juan, where a new propeller awaits. The 1,000-mile trip is made in 10 hours.

In response to the March 8 passage of the Foreign Air Mail Act, the U.S. Post Office, on May 31, puts out bid requests for FAM Route No. 6 (Miami–San Juan), which may be contested by U.S. airlines. To meet that requirement, Manager Dunten travels to New York to enlist support. He even talks to PAA chief Juan Trippe, who immediately offers to buy Dunten out in exchange for 7,000 Pan Am shares worth \$100,000. The offer is left on the table, neither accepted nor refused.

Meanwhile, West Indian Aerial Express, Inc. is formed in June as a holding company for WIAX, C.A. Initial capitalization is \$92,000 and the officers include Graham Grosvenor and Sherman Fairchild, who becomes president. When the bids are opened on July 14, both Pan Am and WIAX have bid the same amount: \$2 per mile. Postmaster General Walter Folger Brown, lobbied earlier by Trippe and his technical advisor, Lindbergh, but not by Rowe or Dunten, awards the contract to Pan Am, which has already demonstrated its ability to exercise a FAM route (FAM-1, won thanks to Cy Caldwell's flight the previous October).

Recognizing that it cannot be profitable without a United States mail contract, WIAX opens—or rather reopens—merger discussions with its rival on August 7. This time, Juan Trippe offers 5,008 shares, with a value of \$75,120. On September 12, with a deal all but concluded, a hurricane grounds *La Nina* and wrecks the company's headquarters at Santo Domingo, destroying all files and records. Still, the acquisition process continues. Even before a formal merger is announced, the *Santa Maria* is delivered to **Pan American Airways (PAA)** on September 20.

In perhaps an ironic twist on the company-saving gesture of a year before, Basil Rowe, on WIAX's last flight, is allowed to take the first U.S. mail service out of San Juan to Port-au-Prince on October 15—in *La Nina*, under contract to PAA. On October 16, it is announced that the Aviation Corporation of the Americas will purchase the company, its first significant takeover of another carrier, on November 28. WIAX is dissolved on December 22.

Offered a pilot's position by the new owner, Basil Rowe accepts and goes on to a noteworthy three-decade career that he will recall in his 1956 autobiography *Under My Wings* (Indianapolis: Bobbs-Merrill).

Roscoe Duntun, who had negotiated with Juan Trippe in June and August, is allowed to remain as San Juan station chief. In 1933, he will commit suicide.

WEST ISLE AIR: 4000 Airport Road, Suite A, Anacortes, Washington 98221, United States; Phone (206) 293-4691; Fax (206) 293-0517; Code 7Y; Year Founded 1990. During the first quarter of 1990, the Anacortes, Washington-based charter carrier **Island Air** is sold to Jim Burton, who wishes to begin scheduled services linking his base with Bellingham, Bayview, and other points in the San Juan Islands. After changing the corporate identity, Burton commences revenue flights in April with a fleet of Cessna 172s/182s, 1 Cessna 206, 1 Cessna 210, and 1 Piper PA-32 Cherokee Six. Operations continue apace in 1991–1995.

President Burton's concern employs 7 workers in 1996 and devotes 2 Cessna 206s and 1 Cherokee Six to the transport of scheduled passengers. By December 31, enplanements reach 22,472.

Customer bookings in 1997 climb 13.2% to 25,432. That boarding figure grows by 2,000 (6.8%) in 1998.

Passenger boardings jump another 4.9% in 1999 to 28,000.

WEST OF SCOTLAND AIR SERVICES, LTD.: United Kingdom (1935). In July 1935, West of Scotland Air Services, Ltd. is given a five-year concession by the Stornoway Trust to open air transport services between Stornoway and Glasgow. Employing a de Havilland Fox Moth, a Short Scion, and a Short Senior Scion, the company flies an experimental daily Greenock–Arran frequency that is shortened to weekend-only during August and September. Unsuccessful, the operation is abandoned.

WEST PACIFIC AIRLINES: United States (1970–1971). West Pacific is set up at Seattle, Washington, in 1970 to provide scheduled intrastate commuter services. Employing a pair of Beech 99s, the new entrant begins flying to Yakima, Pasco, Spokane, and Bremerton. Unable to achieve viability, the carrier folds in 1971.

WEST PENN COMMUTER: United States (1985–1986). Mike Cardimone and Leo Angevine establish **Bradford Air Transport** at St. Mary's, Pennsylvania, during February 1985 to provide scheduled passenger and cargo flights to Pittsburgh. Employing a Piper PA-32 Cherokee Six, Bradford inaugurates daily roundtrips in March. Operations continue apace until the following March when the company is renamed.

Recession and lack of traffic conspire to put the company out of business in April 1986.

WEST WIND AVIATION, INC.: Hangar 10, Saskatoon Airport, Saskatoon, Saskatchewan, 87L 6S1, Canada; Phone (308) 652-9121; Fax (308) 652-3958; <http://www.avcanwest.com/sk.westwind/index.html>; Code WE; Year Founded 1995. West Wind is set up by Dennis Goll at Saskatoon Airport in 1995 to provide both scheduled and non-

scheduled passenger and cargo services to local and regional destinations. A hub is simultaneously established at Regina and revenue flights commence with a fleet that includes 6 Cessna 401s, 1 C-402, 1 Piper PA-31-310 Navajo, 1 PA-31T Cheyenne, 1 Swearingen SA-226 Merlin IV, 2 Beech King Air 100s, 2 British Aerospace BAe (HS) 748-B2s, and 1 BAe Jetstream 31.

The Jetstream 31 is temporarily replaced in 1996 by a pair of Super King Air 200s. The BAe returns to the fleet in 1997. Flights continue in 1998–1999. The workforce, at the beginning of the latter year, totals 110.

WESTAIR: 5005 East Anderson, Fresno, California, 93727, United States; Phone (209) 454-7844; Fax (209) 454-7840; Code PCM; Year Founded 1992. Late in 1991, **Westair Commuter Airlines** Chairman Timothy Flynn announces that the scheduled division of WestAir Holdings will be sold to rapidly expanding **Mesa Airlines** the following summer.

When the WCA transfer is completed on July 1, 1992, the former owner maintains this all-cargo unit to operate a lucrative contract on behalf of **Federal Express (FedEx)**. Flynn remains chairman, with Lawrence W. Olson as president. Bases are set up at Oakland and Ontario, California, and Westair begins service to 10 cities from each of these hubs with a fleet of 24 Cessna 208 Caravan Is, 7 Embraer EMB-110 Bandeirantes, and 1 Beech Super King Air 200.

Two more Caravans are acquired in 1993 and five Bandeirantes are withdrawn. The last two Embraers leave the fleet in 1994. One more C-208B arrives in 1995, followed by seven additional units in 1996.

No changes are made in Chairman Olson's fleet in 1997–2000. The workforce, at the beginning of the latter year, totals 60.

WESTAIR AVIATION, LTD.: General Aviation Centre, Shannon Airport, County Clare, Ireland; Phone 353 (1) 61 475166; Fax 353 (1) 61 474544; <http://ireland.iol.ie/~westair>; Year Founded 1977. Westair Aviation is established at Shannon in 1977 to provide individual and small group passenger charters, with both rotary- and fixed-wing aircraft. Over the next 22 years, the company operates long- and short-haul jet charters, all-weather day and night helicopter services, provides pilot training, and operates a maintenance service.

By 2000, the fleet includes 6 helicopters and 5 British Aerospace (HS) corporate jets. The company, which not only coordinates an air ambulance service, remains Ireland's only all-weather corporate helicopter operator.

WESTAIR COMMUTER AIRLINES: United States (1972–1998). Formed at Burlingame, California, in 1972 under the name **STOL Air**, this commuter is given a fleet of Britten-Norman BN-2 Islanders and BN-2A Trislanders with which to launch scheduled passenger and cargo flights to San Francisco, San Rafael, Concord, Napa, Eureka, Sacramento, Chico, and Fresno.

The company is transferred to Chico in 1975 and the fleet is expanded by the addition of Cessna 402s. Operations continue apace in 1976–1977.

STOL Air is acquired in 1978 by the investment group Westair, which appoints Timothy Flynn its general manager. On April 1, 1979, the new ownership merges its acquisition with another small carrier, Santa Rosa-based **Golden Eagle Airlines**, to form Western Airlines (Westair). In 1980, General Manager Flynn's company undertakes Essential Air Service (EAS) flights to several communities in northern California.

Westair is taken over in 1981 by Chico-based Pacific Express Holding Company, which also controls the commuter carrier **Pacific Express**. General Manager Flynn is promoted to the post of chairman/CEO. T. R. Ashton is named president, and the company's 12 Cessna 402s maintain scheduled passenger and cargo destinations to Santa Rosa, San Francisco, Sacramento, Arcata, Crescent City, and Redding. In 1982, three Shorts 330s join the fleet.

In early 1983, Westair is sold to the new holding company, WestCom Holdings, which operates it as a subsidiary. The purchase includes not only the airline and its aircraft but the FBO as well.

Enplanements reach 123,804. These will be the last traffic figures reported for several years.

In 1984, three Cessnas are temporarily replaced by four de Havilland Canada DHC-6-200 Twin Otters as orders are placed for Embraer EMB-110 Bandeirantes and Shorts 360s. Additional destinations now served include Concord, Eureka, Fresno, Modesto, Monterey, San Jose, and Stockton. **United Airlines** designates Westair as a marketing partner.

Service is expanded in 1985 to Orange County and Burbank airports in southern California. As the Brazilian-manufactured turboprops arrive, the four Twin Otters are withdrawn.

The fleet in 1986 comprises 15 Bandeirantes and 4 Shorts 360s. In early spring, the company moves its headquarters from Chico to Fresno and on July 1 it signs a formal marketing and code-sharing contract with **United Airlines**, adopting the "United Express" name and aircraft livery.

Flights commence to six additional California cities. Orders are placed for 10 EMB-120 Brasilias, with options taken for 10 more.

Enplanements total 544,936 and the year's profits reach \$3 million (operating) and \$1.46 million (net).

Five Brasilias join the fleet in 1987, which also includes 31 EMB-110 Bandeirantes and 5 Shorts 360s. The subsidiary **NPA** is formed at Seattle to handle feed in the Pacific Northwest while the parent adds new services to Los Angeles (LAX).

Passenger boardings jump 57.3% during the 12 months to 856,947.

The 1,190-employee regional expands rapidly in 1988. Just after New Year's, the carrier places three British Aerospace BAe 146-200s into service. In January, the company receives the 1979 "Regional Airline of the Year" award from *Air Transport World* magazine.

Meanwhile, three more EMB-120s arrive during the first quarter and BAe 146-200 service is launched to Reno, Nevada, the company's first "United Express" destination outside the Golden State. On June 30, all outstanding common stock of FG Holdings is acquired in exchange for 826,050 shares of WestCom Holdings common stock.

During the year's second half, four additional Brasilias, six Jetstream 31s, and three more BAe 146-200s are delivered. In September, WestCom Holdings is transformed into WestAir Holdings; Timothy Flynn becomes chairman of the parent concern and Maurice J. Gallagher is appointed president of the airline. The following month, the company's first public offering of 1.6 million shares of common stock is made on the New York Stock Exchange and service is inaugurated to Tucson. Orders are placed in November for 20 optioned Brasilias.

Revenues balloon 127% to \$134.5 million and expenses allow an operating profit of \$9 million and net gain of \$4.8 million.

Airline employment is increased by 29.4% in 1989 to 1,540 as the carrier is now the world's largest Bandeirante operator after the Brazilian Air Force. **NPA** inaugurates commuter operations on March 1 to Boise. In early spring, ALPA is elected as the collective-bargaining unit for the company's 375 pilots.

Westair launches "United Express" service in October from San Francisco to Oxnard, California. The same month, Chairman Timothy Flynn enters into discussions concerning a possible purchase of financially distressed **Aspen Airways**; however, Aspen's high labor costs and an offer of East Coast services from **United Airlines** causes Westair to end its interest in Colorado carrier.

A new operating division, **Atlantic Coast Airlines**, is established at Washington, D.C. (IAD) in late fall. It begins revenue operations in December over routes purchased from the creditors of bankrupt **Presidential Airways**. Meanwhile, an **NPA** Jetstream 31, doing business as "United Express," crashes and bursts into flame 500 feet short of the runway at Tri-Cities Airport in Pasco, Washington, on December 26 (six dead).

Combined enplanements for Westair and its subsidiaries increase 22.4% to 2,361,598 and revenues jump 39.9% to \$188.1 million. Costs, however, accelerate by an unwelcome 45.4% to \$182.4 million and reduce operating income to \$3.92 million. Net gain is cut to \$1.4 million.

The employee population for the company's 3 divisions explodes by 75.3% in 1990 to 2,700 and the fleet now includes 104 aircraft. In March, just after daily roundtrips begin from San Francisco to Fresno,

the San Francisco-based Westair Airlines division is combined with the **NPA** unit, which flies "United Express" services out of Seattle, under the former's name as the West Coast division. **Atlantic Coast Airlines** remains the East Coast division.

Nonstop flights are now inaugurated from John Wayne Airport in Orange County, California, to San Francisco. During the summer, WestAir Holding, Inc., now serving a total of 64 cities, is caught up in industry discounting practices. Following Iraq's invasion of Kuwait on August 2, fuel prices increase significantly and recessionary factors add to financial difficulties.

Overall passenger boardings jump 21.9% to 2,872,208 and revenues ascend 43.37% to \$209.76 million. Expenses jump a further 52.6% to \$217.28 million and leave the company with a \$7.52-million operating loss. The previous year's net profit becomes an \$10.67-million net loss.

The payroll is cut by 11.1% in 1991 to 2,400 and the fleet includes 59 aircraft. The carrier joins with **United Airlines** on June 6 to celebrate the fifth anniversary of their "United Express" partnership.

During the summer, the company's eastern division, **Atlantic Coast Airlines**, is sold for \$14.2 million (plus assumption of \$2.8 million in indebtedness) to a group of financiers led by former **Pan American World Airways** (1) Chairman C. Edward Acker. Operations continue under the Atlantic Coast moniker. In September, the company initiates twice-daily Jetstream 31 roundtrips from San Diego to Fresno while the same schedule is begun in October with SAAB 340Bs from San Jose to Palm Springs.

On December 1, daily roundtrip BAe 146-200 jet service is inaugurated from San Francisco to Monterrey, adding it to the four turboprop daily services already provided. A daily BAe 146-200 flight is also offered from San Francisco to Palm Springs, along with another daily EMB-120 run. Late in the year, the board of directors agrees to the airline's acquisition by rapidly expanding **Mesa Airlines** during the following year. A separate all-cargo operation will be retained.

Customer bookings leap ahead by 4.1% to 2,858,779 and revenues increase by 7.54% to \$225.58 million. Expenses increase 23.07% to \$267.42 million and cause operating income to fall to \$41.84 million. The net downturn doubles to minus \$20.48 million.

Company employment declines another 56.3% in 1992 to 1,050. It is announced in February that the **Mesa Airlines** acquisition will be worth \$41.4 million, with Westair shareholders receiving \$6.37 per share. As Mesa and Westair approach their midsummer marriage, the latter drops a number of unprofitable routes and returns several Jetstream 31s to British Aerospace.

Westair officially becomes a wholly owned subsidiary of **Mesa Airlines** in July. Larry Risley is chairman with Jonathan Ornstein as president. The "United Express" relationship is maintained as the new owners shift the carrier's emphasis away from local services and toward feeding the major.

The company's major hubs are Boise, Los Angeles, Oakland, San Francisco, Sacramento, Portland, Seattle, and Spokane. Destinations visited include Bakersfield, Bellingham, Chico, Crescent City, Eugene, Fresno, Mammoth Lakes, Medford, Merced, Modesto, Monterey, Ontario, Orange County, Palm Springs, Pasco, Portland, Redding, Redmond, Reno, San Luis Obispo County, Sacramento, San Diego, San Francisco, Santa Barbara, Santa Maria, Seattle/Tacoma, Spokane, and Yakima.

A variety of new services are introduced during December. Connecting roundtrip flights between San Jose and San Francisco commence seven times per day on December 1. Seasonal flights begin on December 19 from Fresno and Los Angeles to Telluride, Colorado, and Mammoth Lakes, California. Twice-daily EMB-120 roundtrips are initiated the same day from San Francisco to Lake Tahoe.

Enplanements for the year decline 27.2% to 2,107,503.

Airline employment is 1,050 in 1993 and the fleet comprises 3 British Aerospace BAe 146-200s, 31 BAe Jetstream 31s, and 15 Embraer EMB-120 Brasilias. Orders remain outstanding for 23 Brasilias and the Mesa subsidiary reverts to its previous classification of large regional.

Service is started from Los Angeles (LAX) to Telluride; Los Angeles (LAX) to Mammoth Lakes via Fresno, San Francisco to San Jose, and Orange County to Denver.

Passenger boardings slide another 1% to 2,086,922.

Contract talks with leaders of the company's 75-member chapter of ALPA drag on during the first months of 1994. In April, former **Superior Airlines** President Rolly Bergeson is appointed Westair's CEO and Lawrence O. Olson becomes president of the WCA subsidiary.

When the **United Airlines** Shuttle by United division takes on **Southwest Airlines** in the California corridor during the fall, Westair suffers from the competition. The BAes are now withdrawn and the fleet at year's end includes 18 Brasilias and 34 Jetstream 31s.

Customer bookings slide 3% during the 12 months to 2,023,411.

"United Express" services are provided to four California cities during 1995 as the **Mesa Air Group** division continues to be caught in the contest between Shuttle by United and **Southwest Airlines**.

Two additional EMB-120s join the fleet in December.

This unit reports its traffic statistics, which show enplanements down 5.5% to 1,911,489.

In 1996, Westair exchanges a number of routes with fellow **Mesa Air Group** division **Mountain West Airlines** (4).

Passenger bookings still fall, however, plunging 13.6% to 1,651,532.

Early in 1997, **Mesa Air Group** reorganizes its four main divisions into "America West Express," Independent, "United Express," and "US Airways Express." To these units are added the marketing and customer-service departments of both **Air Midwest** and WCA.

A dispute between **Mesa Air Group** and its WestAir Commuter Airlines unit, doing business as **United Express (Mesa Air Group)**, versus **United Airlines** and **SkyWest Airlines** concerning access to certain West Coast markets results in a July lawsuit. UAL files suit in the U.S. District Court in Chicago seeking a determination as to the rights of all parties to the routes before any of the companies suffer economically. Mesa does not countersue.

On October 1, the company increases services from its Los Angeles hub by 73% to 175 daily flights; at the same time, 12 new California destinations are now initially visited, including San Jose.

CCAair board member Peter Murnane, a principal in Barlow Partners, and former Mesa executive Jonathan Ornstein, president of **Virgin Express Airlines, S.A.**, make a \$50-million offer in October for Mesa's "United Express" operation at Denver, along with WCA. The tender is rejected.

Passenger boardings climb 11.4% to 1,840,264.

In January 1998, **United Airlines** announces that, effective May 31 and September 30, it has cancelled its contract with Westair for "United Express" services from San Francisco and for the Pacific Northwest. The markets will be turned over to **SkyWest Airlines**.

Meanwhile, hoping to help revitalize their carrier, company pilots offer **Mesa Air Group** \$20 million for a 20% stake. Mesa turns down their tender.

In March, President Bergeson memos company employees the bad news that 1,100 of their number will be laid off by mid-June, directly as a result of the loss of the United contract. It is anticipated that the company will stop flying at that time.

In May, parent **Mesa Air Group** retains the International Airline Support Group to assist Westair with the disposition of its leased fleet of Brasilias and Jetstream 31s. On May 31, Westair becomes the latest commuter enterprise casualty in California.

WESTAIR DE MEXICO, S.A. de C.V.: Hangar 5, Fila 8, Aeropuerto Internacional de Guadalajara, Guadalajara, Mexico; Phone (013) 688-5251; Fax (013) 688-5017; <http://www.westairdemexico.com>; Year Founded 1997. Westair de Mexico is established at Guadalajara in the fall of 1997 to offer ad hoc freight charters throughout Mexico and into the U.S. Upon receipt of its air operator's certificate, the new concern launches revenue flights on December 11 employing a small fleet of Fairchild SA227 Metro IIIs.

Flights continue without headline or incident during the remainder of the decade. On June 23, 2000, the company begins operating charters to Miami for **Federal Express (FedEx)**.

WESTAIR FLYING SERVICES, LTD.: Blackpool Airport, Lancashire, England, United Kingdom; Phone 44 (0) 1253 404925; Fax 44 (0) 1253 401121; <http://www.westair.demon.co.uk>; Year Founded 1994. Denis Westoby establishes a flying service at Blackpool Airport in Lancashire in 1994 to provide both scheduled air taxi and charter flights to regional destinations. Revenue services commence with 1 Beech King Air 90 and 2 Cessna 401s. Over the next five years, aircraft sales, engineering, and a flying school are also operated.

WESTAIR TRANSPORT: United States (1948–1964). The Aviation Corporation of Seattle is formed in 1947 to begin nonscheduled air service in and to Alaska under the marketing name Westair Transport. Revenue flights commence with a Douglas DC-3.

A Curtiss C-46 Commando is acquired in 1948 under charter from the USAF. Both passenger and cargo charters are operated over the next decade, with the carrier branching out to provide irregular flights into the Caribbean as well. Although not all operated simultaneously, seven C-46s are operated during these years.

The company is listed by the U.S. government as an interim supplemental carrier in 1959, but is out of business by 1964.

WESTATES AIRLINES (1): United States (1985). Westates is established at Burlingame, California, in the spring of 1985. President John Lowe's new entrant obtains two Convair CV-580s, which are employed, beginning on July 8, to inaugurate thrice-daily scheduled services in the tough Golden State commuter market between Santa Rosa and Los Angeles. An application is made for permission to launch flights to South Lake Tahoe, but the request is denied.

Unable to maintain or grow its vitality, the small regional, after having transported 18,000 passengers during the year's second half, declares Chapter XI bankruptcy and ceases operation in December.

WESTATES AIRLINES (2): United States (1990–1995). Terrence Dennison, acting on behalf of the Finnish concern A. Ahlstrom Corporation, reforms WA at Columbia County Airport in Hudson, New York, in 1990. Although scheduled commuter authority is held, it remains dormant as nonscheduled operations commence with 4 Convair CV-580s between several Virginia destinations and Atlantic City. Operations continue apace in 1991–1993, during which time 3 Mohawk 298s are acquired for the fleet and a code-sharing agreement is briefly operated with **Trans World Airlines (TWA)**.

The company continues to fly charter and scheduled air taxi services in 1994 between Niagara Falls and Newark and between Miami and Cap Haitien. The carrier will be grounded by the FAA during the first quarter of 1995 for maintenance and record-keeping problems with three CV-580s.

In April, an agreement is reached between the FAA and the carrier under which the latter, without admitting to any regulatory violations, will be permitted to resume flights. Westates agrees to properly maintain and report on the three Convairs, to establish a safety and compliance program, and to retrain flight crews and mechanics on approved ways of handling maintenance discrepancies.

Efforts to find additional capital are undertaken, but before an infusion can be made, the carrier's operating rights are revoked because its Finnish owners have been found ineligible to hold them.

WESTCHESTER AIR: 6 Hangar Road, Box 5, Westchester County Airport, White Plains, New York 10604, United States; Phone (914) 761-3000; Fax (914) 761-3291; Year Founded 1982. Established at its namesake airport in 1982, WA undertakes executive and small group passenger charters over the next 15 years throughout the U.S., Canada, and Caribbean. Millie Becker is president in 2000

and she employs 5 pilots, who operate 1 each Cessna 500 Citation I, Beech King Air 100, and Piper PA-31-350 Navajo Chieftain.

WESTCHESTER AIRWAYS: United States (1934–1942). Westchester Airways is established at Auburn, New York, in the summer of 1934 to offer passenger sight-seeing and charter flights to local destinations and during the winter vacation season to Miami, Florida. The Ford Tri-Motor 4-AT-67, which has been employed by the manufacturer as a test vehicle over the past five years, is acquired on September 26 and is employed to inaugurate revenue flights.

Operations continue without fanfare until August 2, 1940. While on a sight-seeing flight over Liberty, New York, the Ford suffers engine loss and crashes; although no injuries are reported, the left wing and landing gear are damaged. The aircraft is repaired and returned to service.

Following U.S. entry into World War II on December 7, 1941, wartime restrictions and the leisure market conspire against the company. On November 21, 1942, the company closes its doors and sells its aircraft to the Cuban airline **Expreso Aereo Inter-Americano, S.A.**

WESTERN AIR (PTY.), LTD. See **NORTHERN AIR (PTY.), LTD.**

WESTERN AIR EXPRESS (WAE): United States (1925–1934). Until its acquisition by **Delta Air Lines** in 1986, **Western Airlines** was for many years the only survivor of a handful of airlines that pioneered commercial air transportation in the U.S. in the mid-1920s. Indeed, arguments were heard suggesting that Western was the first American company specifically formed to operate as an airline. The Delta acquisition traces its pedigree back to Western Air Express (WAE).

WAE is incorporated at Los Angeles on July 13, 1925, with the colorful former race car driver Harris M. "Pop" Hanshue as president and with Major C. C. Mosely as vice president-operations. The company has important backing, including James A. Talbot of Richfield Oil and Harry Chandler of the *Los Angeles Times*. An initial public stock offering valued at \$360,000 is immediately taken up and in November the new entrant wins one of the first Post Office airmail contracts, the 600-mile Contract Air Mail Route No. 4 (CAM-4) route from Los Angeles to Salt Lake City via Las Vegas.

In January 1926, WAE orders six Douglas M-2s, the first commercial aircraft sold by Donald Douglas after the unsuccessful "Cloudster" effort with David Davis earlier in the decade. Five pilots (Maurice F. Graham, Alva R. DeGarmo, Charles N. "Jimmy" James, Fred W. Kelly, and Eldred R. Remelin) and mechanics are hired and ordered to tour the proposed new route system by automobile, marking out emergency landing fields en route.

"Pop" Hanshue now breaks into print with a short article, "Western Business Takes the Air," which appears in *Western Flying* (January 1926): 9–10.

The first three M-2s are delivered on April 10 and, flying simultaneously from each end of the route, Maury Graham and Jimmy James use them to inaugurate mail service on April 17. The operation is so successful that a month later, on May 23, passenger flights are launched and a total of 209 intrepid customers, at \$90 per head, are flown nestled among the mail sacks in the forward cockpits during the remainder of the year. Among these is Maude Campbell, the company's first female passenger, who flies in June. Some 100 pounds of air express parcels are also transported.

Between September and November, the fleet is upgraded by the addition of an M-4 and three ex-U.S. Air Mail Service de Havilland DH 4Bs.

A total of 518 flights are completed; there are only 38 forced landings during the year, giving the company 90% reliability. A \$28,674.19 net profit is realized, all but \$1,029 of the income being derived from CAM-4.

The first significant "break" for WAE comes in early 1927 when the Daniel Guggenheim Fund for the Promotion of Aeronautics chooses the carrier to establish a "model" first-class passenger service between Los Angeles and San Francisco. With substantial fund grants, the WAE airway will incorporate the latest in technical perfection and passenger safety and comfort.

The aircraft selected to initiate the Guggenheim experiment are a trio of 12-passenger Fokker F-10s, upon which all of the fund monies advanced thus far (\$180,000) are spent. These will permit customers to sit in comfortable wicker chairs inside the cabin and be served meals (initially obtained from the Los Angeles cafeteria Pig 'n' Whistle) by a steward. Western now recruits the first flight attendants in U.S. domestic service and of these, Miles Davis is chosen to make the inaugural run.

As preparations for the model airway continues through the year, Hanshue's M-2s continue to fly CAM-4 and earn another profit. On June 16, the company purchases an M-2 and an M-4. "Pop" Hanshue publishes another article, "The Economics of Air Transport," *Western Flying* (June 1927): 11–12, 70.

In October, WAE becomes the first airline in history to pay a cash dividend to its stockholders. In early December, Western makes its first purchase of another airline, **Colorado Airways**, together with its fleet of 3 Ryan M-1 mailplanes and its Pueblo–Cheyenne via Colorado Springs and Denver CAM-12 route. The takeover is the first acquisition of one U.S. airline by another.

The carrier's first fatal accident occurs on December 10 when the M-2 acquired in June crashes at Denver on its first trip over the ex-**Colorado Airways** route, killing pilot Jack Taylor. A new Fokker F-VIIA is now ordered from Atlantic Aircraft Corporation for delivery the following March. By year's end, the Pueblo–Cheyenne run has become a "lighted airway."

The F-VIIA is delivered in March 1928, followed by the arrival of the three long-awaited F-10s beginning on April 24. Passenger operations by WAE along the model airway are initiated on May 26, and result, thanks to the Wasp engines of the Trimotors, in three-hour nonstop scheduled flights between California's two major cities. Within a year, over 3,000 passengers have been transported and the company has maintained a 99% on-schedule reliability.

To a large extent, this success is due to a Guggenheim-U.S. Weather Bureau forecasting system of stations strung out along the California corridor to provide warning of poor flying conditions. WAE, in this connection, also carries out radio experiments and one of its engineers on these projects is Herbert Hoover Jr., son of the commerce secretary and future U.S. president. Thirty-seven different weather stations are established in the California corridor, allowing WAE pilots a choice of five different routes between the two major terminals.

Looking like a "barrel-nosed cigar," the prototype Lockheed Model 3 Air Express, already extensively test flown, is operated by Charles A. Lindbergh on June 1; the aviator's first flight in a Lockheed airplane is made from Vail Field at Montebello, California. Later in the week, the aircraft is turned over to WAE. Piloted from Montebello by Fred Kelly and with Dr. L. D. Cheney and humorist Will Rogers (en route to the Republican national convention at Kansas City) as passengers, Air Express service over the sector to Salt Lake City is inaugurated on June 6. Unhappily, a runway obstruction at Las Vegas, the first stop, causes the plane to crash; Cheney is hurt. Kelly and Rogers continue on in a relief plane.

On June 29, **Pacific Marine Airways**, which has operated a ferry service from Wilmington to Avalon on Santa Catalina Island since 1923, is taken over, along with its fleet of 3 Curtiss HS-21s and its outstanding orders for a pair of Keystone-Loening C-2H Air Yachts and a single Sikorsky S-38A. Beginning in September with the newly received Air Yachts and the S-38A, which is christened *Flying Fish*, WAE stretches the old Pacific Marine route from Avalon to Long Beach and Alhambra, dropping the stop at Wilmington.

Hanshue and James Talbot create the holding company WAE, Inc. on October 1 with Western Air Express the prime subsidiary, along with the Fokker Aircraft Corporation of America, later the Atlantic Aircraft Corporation. Capitalized at \$5 million, the holding company promptly orders five Fokker F-32s for its airline subsidiary. Two more F-10s are received in November and December and the first upgraded F-10, an F-10A, is delivered on Christmas Eve.

Meanwhile, on December 18, the two ex-**Colorado Airways** Ryan M-1s are sold to the Western College of Aeronautics, having been re-

placed, beginning on December 15, by the first two of five ordered Stearman C3Bs.

At year's end, corporate records show that 6,014 passengers have been carried during the 12 months, along with 374,628 pounds of mail over 622,755 miles.

Four more F-10As are acquired during the first quarter of 1929, as WAE, Inc. assumes ownership of Atlantic Aircraft Corporation, the U.S. segment of the Fokker Aircraft Corporation; the Dutch parent is not impacted by the sale. In March, four Boeing 95s and two Boeing 40B-4s are delivered. Three more F-10As join the fleet between April 8 and May 6. On May 7, a Stearman C3B crashes at Denver (one dead) and four days later the Fokker F-VII is sold to **Continental Air Express**.

Passenger service to Albuquerque via Arizona is launched on May 15 while two additional Stearman C3Bs are received on May 17. Two weeks later, the Albuquerque route is extended to Kansas Cit, via Amarillo. Also during May, a Boeing 204 is placed on the Alhambra-Santa Catalina Island run.

Also in May, "Pop" Hanshue publishes a third article, "Financing Air Transport Lines," in *Popular Aviation* (May 1929): 16, 90, 92.

The Albuquerque route is extended to Kansas City on June 1 and a day later, a Fokker F-10A is destroyed at Wichita, Kansas, when a tornado strikes the airfield. On June 5, the Sikorsky S-38A *Flying Fish* crashes at Avalon; irreparable, it is written off. The carrier provides financing and promotional support for **Mid-Continent Air Express**, which is incorporated under Delaware laws on June 19; the new subsidiary will allow the sponsor to push further eastward.

Between August 7 and October 31, the fleet is enlarged by the addition of four more Fokker F-10As. Meanwhile, on September 21, the Albuquerque market is linked by air to El Paso. Late in the year, the carrier acquires **West Coast Air Transport**; WAE will operate it as a subsidiary and thus gain system access to destinations at Medford, Portland, and Seattle. A Fokker F-10A crash-lands at Oakland Airport on December 26; none of the 12 people aboard are hurt.

Enplanements for the year are almost 22,000 and most of the \$1.87-million profit still comes from CAM-4.

On January 6, 1930, a Stearman C3B crashes in a snowstorm at DuPont, Colorado. A Boeing 95 mailplane crashes at Cedar City, Utah, on January 10 (one dead) while, also in January, ice-warning indicators are installed on company aircraft. In mid-month, President Hanshue receives a letter from North American Aviation Chairman Clement Keys requesting a New York City meeting to discuss a merger between WAE and his **Transcontinental Air Transport (TAT)**; after consulting his board, Hanshue declines. After learning of the refusal from TAT General Manager Col. Paul Henderson, U.S. Second Assistant Postmaster Warren Irving Glover writes Hanshue, informing him that he may have made a costly mistake.

A Boeing 40B-4 is destroyed in an accident on February 9. On February 23, a Fokker F-10A crashes at Lake Arrowhead, California (three dead); this disaster is followed on February 24 by the crash of a Boeing 95 at St. George, Utah (one dead). In February and March, the carrier receives four Fokker F-14s plus a Stearman C4D Junior Speedmail and the second of two Boeing 40B-4s.

On April 17, WAE becomes the first line to operate the world's largest available landplane, the four-engine Fokker F-32, two of which are placed in service on the Los Angeles-San Francisco run. The F-32 also allows Western Air Express to claim another "first," as the leading four-engine commercial aircraft operator in the U.S. On April 29, Congress passes the McNary-Waters Act and **Standard Air Lines**, together with its parent, the Aero Corporation of California, and its Los Angeles to El Paso via Phoenix, Tucson, Douglas, route are purchased on April 30. Also received from Standard are four Fokker F-10As.

After May 1, the Western Air Express route system, including that of its subsidiaries, stretches 15,832 miles through 11 Western and Southwestern states making "Pop" Hanshue's 40-plane airline the world's largest. In these heady times, few outside the company realize that severe difficulties are just ahead. Between May 19 and 30, Hanshue re-

luctantly travels to Washington, D.C. to participate in the so-called "Spoils Conference" meetings between Postmaster General Walter Fogler Brown and officers and representatives of various air transport concerns. Once again, the subject of a WAE-TAT merger arises. Operationally, trouble begins with the loss of a Fokker F-10A in a storm at Wichita on June 2. On June 23, a Douglas M-4 is wrecked and withdrawn. Both accidents are attended by bad publicity.

As WAE expands and pushes eastward in a time of great economic uncertainty, it encounters significant financial losses. To help ally these, it desires a significant new mail contract—as does a competitor, **TAT-Maddux Air Lines**, which is moving west. The prize is the Los Angeles-New York CAM Route No. 34; however, Postmaster General Brown, who by authority of the McNary-Watres Act, decides which airlines receive postal subsidy and which do not, refuses to award duplicate contracts for the same route.

The two competing candidates, joined by a small holding company, **Pittsburgh Aviation Industries Corporation (PAIC)**, are forced into a merger on July 16, ever after known as the "Shotgun Marriage." "Pop" Harris is voted the combined company's first president and is given a one-year contract. After the creation of this union, otherwise known as **Transcontinental and Western Air Lines (T&WA)**, into which WAE pours 47 1/2% of its resources, but from which it is able to withhold 52 1/2%, Western Air Express continues to operate independently, but in a much weakened condition.

To assist in the transition into amalgamation, General Motors loans "Pop" Hanshue, who is president of both WAE and T&WA, \$800,000 to keep the former afloat. Through its General Aviation subsidiary, it also acquires 60,000 shares of stock, which will be converted into T&WA stock when the merger arrangement is finally completed.

A Stearman C3B is lost in a Cheyenne crash on August 3 and another is destroyed in a Denver accident on August 10. The shorter routes are flown, especially CAM-4. So much money is lost as the result of the T&WA adventure that WAE, Inc., must begin selling off some of its subsidiaries, routes, and aircraft to bring in sufficient cash to stave off financial ruin.

Principal services transferred to T&WA in September are those from Los Angeles to San Francisco and Kansas City; those to Dallas follow in October. On October 1, the two Fokker F-32s are withdrawn from service; eight days later, five Fokker F-10As are sold to **Southwest Air Fast Express (SAFEWAY)**. Flights are maintained between Salt Lake City and San Diego via Los Angeles and a route is picked up between Pueblo and Cheyenne. The latter is operated with three Fokker F-10As. Also in October, the ex-**Standard Air Lines** Los Angeles-El Paso route is sold to the Aviation Corporation of America (AVCO) then in the process of creating what would become today's **American Airlines**.

A Fokker F-10A makes a nonfatal and spectacular forced landing at Alhambra, California, on December 22 while, at year's end, Los Angeles to Catalina Island flights are maintained employing two Loening C-2H amphibians and a Boeing 204 flying boat. The fleet at year's end comprises 3 Fokker F-10As, 2 Boeing 95s, 2 Boeing 40B-4s, 1 Stearman C4D, 2 Loenings, and the Boeing flying boat.

On January 7, 1931, the Boeing 204 employed on the Santa Catalina Island service is sold to **Gorst Air Transport**. A Fokker F-10 crashes at Alhambra Airport on January 26. The legal complexities of the "Shotgun Marriage" are finally resolved on February 1. As T&WA provides expensive, low-fare competition against Western Air Express on the West Coast (and thus, ironically, against itself), Hanshue, who has withdrawn as T&WA president and returned to WAE, is forced to seek further assistance from General Motors to keep his airline from failing.

On March 3, GM, through its General Aviation Corporation subsidiary, acquires a 30% shareholding in Western Air Express for just \$90,000. Service to Portland and Seattle and other services of the **West Coast Air Transport** subsidiary are halted in early March and on March 16, it, together with the routes of **Mid-Continent Air Express** are sold to **Pacific Air Transport**. Eight days later, an F-10, three F-10As, and an F-14, along with the two F-32s, are sold to T&WA.

In May, when the contract to serve Santa Catalina Island ends, WAE, Inc. sells the rights and aircraft to the island's owner, Philip K. Wrigley, the chewing gum magnate, who organizes a replacement carrier, **Wilmington-Catalina Airline**. Pop Hanshue resigns as TWA president in July and returns to Western and CAM Route 12 is extended on August 1 when the Post Office creates separate Albuquerque and Amarillo links. These are now won and flown with the eight Fokker Model 8 Super Universals retained from the **Mid-Continent Air Express** sale.

On September 27, **Mid-Continent Air Express**, which has no routes, is absorbed into its parent, together with its fleet of Fokker Model 8 Super Universals, its F-14, and two Boeing 40B-4s; at this point, the WAE fleet comprises 12 Model 8 Super Universals, 6 Fokker F-10As, 4 Boeing 40B-4s, and 4 Boeing 95s. This is the first year in which no aircraft are lost in crashes or significant accidents.

On May 21, 1932, WAE receives the first television reception aloft in a specially outfitted Fokker F-10A; signals are broadcast from the Don Lee television station to the aircraft during three flights over Los Angeles. Also in May, company officials announce a new safety record for American airlines. Despite a number of crashes and aircraft accidents, WAE, since its start-up, has not had a single fatal or serious passenger injury. A Fokker F-10A crashes at Lynndyl, Utah, on December 9, but maintains this record.

Early in 1933, General Motors acquires the North American Aviation Corporation and with it 52% majority control of "Pop" Hanshue's carrier. During the year, the company becomes the only American airline to fly the Clark (General Aviation) G.A.-43, which is placed in service on the Albuquerque to Cheyenne run.

Save for two fatal mail and two fatal ferry flights, the company is able to celebrate seven years and five months of operations on September 24, again without a single passenger fatality or injury. For the record, the company has flown 100,001 passengers over that period, together with 3.6 million pounds of mail and 70.5 tons of air express on 26,332 flights over 35.18 million miles.

On December 2, a Fokker Model 8 Super Universal crashes at Colorado Springs; it is followed into the write-off column by the loss of another Model 8 to high winds at Las Vegas, New Mexico, on December 31. The year's profit is \$230,000.

Following the cancellation of all existing airmail contracts by President Roosevelt on February 9, 1934, many airlines find it necessary to choose new titles in order to requalify for government mail subsidies. On February 28, General Motors officials give Western Air Express a new name, **General Air Lines**. As part of the makeover, the former WAE President Harris Hanshue, a participant in the "Spoils Conference" and therefore no longer acceptable to the government as an airline leader, is forced to retire. On April 17, the carrier is reconstituted as a separate entity, **General Air Lines, Inc. (Western Air Division)**, that is General Air Lines with its WAE, Inc. holding company now veiled as a division.

Following the government's unsuccessful attempt to turn the transport of airmail over to the Army Air Corps, the Post Office reopens competitive bidding for commercial air routes. These are awarded in late April and GAL is now awarded a mail route running from San Diego up to Los Angeles and across to Las Vegas and Salt Lake City that is nearly identical to that first initiated back in 1926. The previous route between Cheyenne and Albuquerque has, however, been allocated to other airlines. GAL service is inaugurated on May 8 with aircraft, technically, leased from its Western branch.

During the first half of the year, four Model 8 Universals are sold to Charles H. Babb while the remaining Boeing 95s and Boeing 40B-4s are withdrawn in July. Five new Douglas DC-2s are purchased and introduced by the company on October 15 over the San Diego-Salt Lake City route. The remaining Fokker F-10As are withdrawn. As the result of the nation's new airmail law, the Black-McKellar Act of June 12, General Motors as an aircraft manufacturer must divest itself of its operating airline by year's end.

On September 1, a B-247D, having taken off too steeply from Burbank, stalls at 1,000 ft. and crashes (three dead). Late in the year, an

arrangement is made with William A. Coulter, the financier behind **Pennsylvania-Central Airlines (PCA)**. As a condition of sale, GM forces Coulter to accept payment of a liquidation dividend to stockholders. Coverage of the funding nearly wipes out all of the carrier's resources and forces it to sell off its prized DC-2s to **Eastern Air Lines**. As a result, Coulter now enters into a close connection with **United Air Lines**, leasing from it on December 23 two new Boeing 247Ds to replace the DC-2s.

On December 29, the company is officially turned over and once in possession, Coulter dissolves both General Air Lines and the WAE, Inc. holding company, replacing them with a new **Western Air Express Corporation**, an altogether independent operation.

WESTERN AIR EXPRESS CORPORATION: United States (1934-1941). Passage of the 1934 Black-McKellar Act requires that holding companies involved in both the manufacture of airliners and the operation of airlines divest themselves of the latter. As a result, General Motors, through its General Aviation Corporation subsidiary, seeks a purchaser for its **General Air Lines, Inc. (Western Air Express)** division.

In accordance with the law's timeframe, an arrangement is made with William A. Coulter, the financier behind **Pennsylvania-Central Airlines (PCA)** late in the year. As a condition of sale, GM forces Coulter to accept payment of a liquidation dividend to stockholders. Coverage of the funding nearly wipes out all of GAL's resources and forces it to sell off its prized DC-2s to **Eastern Air Lines**. Western is left with no airplanes with which to conduct business.

As a result of this fiscal situation, the new owner enters into a connection with stronger **United Air Lines**, leasing from it on December 6 two new Boeing 247Ds to replace the DC-2s. These two planes save Western from oblivion. On December 29, the company is officially turned over and once in possession, Coulter dissolves both **General Air Lines** and its holding company WAE, Inc., replacing them with a new Western Air Express Corporation, an altogether independent operation of which Alvin P. Adams is named first president.

The two leased United 247Ds are immediately purchased on start-up subject to the approval of the new CAB which, suggesting the possibility of monopoly over Western routes, refuses to countenance the deal. A B-247D is leased to **Pennsylvania-Central Airlines** in December.

The new aircraft arrive on the same day, January 1, 1935, and arrangements are made for the yearlong lease of 19 more and the lease-purchase of others from Boeing or United over the next 6 years. Western's single route, San Diego to Salt Lake City via Los Angeles and Las Vegas, provides feed to United's transcontinental expansion and allows the two companies to run joint offices and coordinate schedules during the remainder of the decade. Additionally, the two further coordinate the upgrade of WAEC's fleet. The association will be so close that some will claim that WAEC is practically a subsidiary of United.

Charles H. Babb purchases one Fokker F-10A on February 12, followed by four more on December 2. During the year, 25 B-247Ds are added to the fleet through lease or lease-purchase arrangements with **United Air Lines**. Of these, one is lost in a crash caused by heavy fog during its Burbank to Saugus delivery flight on September 1 (three dead). A significant number of Boeing transports are returned to **United Air Lines** following expiration of their leases in late 1936, along with one leased from **Pennsylvania-Central Airlines (PCA)**.

On December 15, while on a flight from Burbank to Salt Lake City, a B-247D becomes lost in a snowstorm near Alpine, Utah, and crashes into Loan Peak mountain (seven dead). The disaster spoils Western's decade-old perfect safety record and the crash site, itself, will not be located until the following June. Still, there is good news at year's end. Back from extinction, the company has been able to turn a welcome \$50,000 profit for the year.

A B-247D with 10 aboard crashes into the Sierra Madre Mountains near Newhall, California, on January 12, 1937 (5 dead). Among the victims is noted explorer Martin Johnson. Three B-247Ds are leased to **Pennsylvania-Central Airlines** during the first quarter. Two new Dou-

glas Sleeper Transports are received in June and enter service on the carrier's Salt Lake City–Los Angeles service.

President Adam's company makes its first acquisition of another airline on August 1, when it acquires Salt Lake City-based **National Parks Airways**, together with its route northward through Idaho to Great Falls, Montana, and its mixed fleet of Fokkers, Stearmans, two Boeing 247Ds, and the Ford Tri-Motor 5-AT-70, which is employed to fly sight-seers over Yellowstone Park.

In December, two Lockheed Model 12As, originally ordered by National Parks, are delivered as another B-247D is sold to the South American airline **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)**.

Charles Boettcher purchases an interest in the company on January 30, 1938 and becomes board chairman. WAEC takes delivery of its first Douglas DC-3 via **United Air Lines** on May 5. Simultaneously, the two Lockheeds are returned to their manufacturer and the Ford 5-AT-70 is sold to Charles H. Babb on June 24 for resale to **ENTA (Empresa Nacional de Transportes Aereos, S.A.)** in Costa Rica. On July 30, a B-247D is sold to **Wilmington-Catalina Airlines**.

Early in 1939, a number of stockholders propose that the carrier be sold to **United Air Lines**. The move is opposed by President Adams, who is fired and succeeded in office on March 12 by William Coulter himself. On June 26, Western is officially sold to **United Air Lines**, but even with support from the CAB examiner in the case, the merger will be overturned when it is heard by the full board. Meanwhile, a Western-United interchange service is started on September 1 from Los Angeles to New York.

The carrier's first named airliner, the DC-3 *City of Las Vegas*, is received from Douglas in August 1940 and during the fall, Western applies to the CAB for permission to begin service into Alberta.

Enplanements for this last full year of WAEC designation total 34,224.

A Boeing 247D is lost in a hangar fire on January 12, 1941; it replaced by another of the same type purchased from **Pennsylvania-Central Airlines** on the last day of the month. Having failed in its merger, the company, on March 11, breaks off all official links to **United Air Lines** on March 11. The third DC-3 is accepted on March 21. On April 17, the company is officially renamed **Western Air Lines**.

WESTERN AIR LINES: United States (1941–1954). **Western Air Express Corporation** is renamed Western Air Lines on April 17, 1941; the fleet now consists of 5 Boeing 247Ds, 2 Douglas DSTs (sleeper version of the DC-3), and 3 DC-3As. Joint operations with **United Air Lines** are now abandoned and new offices are opened and uniforms worn. On June 1, the carrier, having received CAB permission upon an application filed while still WAEC, begins flying from Great Falls to Lethbridge, Alberta, via Cut Bank.

Two more DC-3As join the fleet in August. Western becomes one of the first civilian U.S. airlines to become directly involved in World War II. When news of the Japanese attack on Pearl Harbor is received in California on December 7, a number of the company's aircraft are immediately commandeered by the U.S. Army to fly ammunition to the West Coast's defenders.

Passenger boardings for the last year of peace rise 49% to 69,845.

On May 15, 1942, the carrier's Boeing 247Ds and DC-3s are all taken over by the government for the war effort. Two more DC-3s are, however, acquired on June 1 and are employed to operate the company's domestic services.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA President Edgar Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. Their aircraft are dispatched to Edmonton, Alberta, for participation in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

During the summer, Capt. Patrick Carlson is sent to Edmonton to establish a hub from which the company's former airplanes, now known as C-73s and C-47s with ex-company aircrews in USAAF uniforms, will begin to participate in Operation Sourdough.

For the next three years, the Air Transport Command's requirements will have company aircraft, supported by 100 of the firm's personnel. They will transport supplies over a 2,451-mi. route from Great Falls, Montana, to Fairbanks, Nome, and other points in Alaska via Shelby and Cut Bank, plus the Canadian towns of Lethbridge, Edmonton, White Horse, and a multitude of other Canadian stops along the way. In thousands of flights through terrible weather, not a single accident will be logged after the December 15 landing loss of the carrier's very first DC-3 at Fairfield, Utah.

On August 13, 1943, the CAB grants Western permission to reopen the California corridor route between Los Angeles and San Francisco once flown by the company's predecessor, **Western Air Express**. Despite the hardships posed by wartime service, Western officials continuously plan for the peace and on October 7 acquire 83% controlling interest in **Inland Air Lines**, a move approved by the CAB on May 23, 1944.

Two Inland Lockheed Model 18 Lodestars are transferred to Western and that carrier is now operated as a Western division, operating as a subsidiary retaining its previous identity. On paper, at least, the new purchase allows the company's route network to now stretch from California to the Dakotas; however, the system is circuitous and incapable of generating much traffic.

During the remaining war years, domestic capacity is concentrated on rebuilding the California corridor markets, where flights begin in May, and on maintaining the San Diego–Salt Lake City trunk route. This is accomplished with seven ex-military C-47s (reconfigured to civil DC-3 standard) largely obtained from the Reconstruction Finance Corporation. The first four are delivered between February 10 and November 20.

On March 20, 1945, the CAB, over objections from **United Air Lines**, grants Western a direct route from Los Angeles to Denver, a significant new advantage for customers who would fly east of Salt Lake City. **United Air Lines** suggests that a local service regional like Western cannot handle the difficulties involved in flying over the Rocky Mountains. Western officials, for their part, believe they can fly the peaks with improved transports soon to be available. During the remainder of the year, an additional seven DC-3s are placed in service, one of which crashes at Hollywood on April 24.

Operation Sourdough ends with the war in September. Since its initiation in mid-1942, company pilots have flown 22 million tons of cargo over the 2,451-mi. route from Montana to Alaska. Another DC-3 is lost in an accident at Mount Laguna, California, on October 4. Service to Palm Springs starts on November 15 as Western now orders four-engine DC-4s.

A DC-3 extension of the San Francisco route up to Oakland is made on January 9, 1946. After receiving the first production civil DC-4 (as opposed to the C-54 military version) as world launch customer, Western places it into service on January 18.

While undergoing crew training, a DC-3A with three aboard crashes 2 mi. NW of the Hollywood-Lockheed Air Terminal, California, on April 24; there are no survivors.

Between March and October, seven additional four-engine Douglas transports are received and by September are operating 12 nonstop Los Angeles–San Francisco return frequencies. Orders are now placed for five DC-6s.

Service to Great Falls is resumed on June 1, followed by Jackson on July 1 and Richfield, Cedar, and St. George on July 16. Ogden and Logan join the route network on August 22.

On November 7, the first DC-4 is sold to **Waterman Air Lines**.

While descending near White Mountain, California, on November 13, a DC-3 with three crew and eight passengers crashes; there are no survivors.

Late in the year, Western receives CAB authorization to extend its Canadian route and to offer services to Mexico City. Approval from the foreign governments is not immediately forthcoming and besides, the company needs to grow before it can implement the awards.

A DC-3 with three crew and nine passengers is lost on descent near Mount Laguna, California, on December 24; there are no survivors.

The company suffers a \$9-million loss on the year, which leads to the resignation of President (and principal stockholder) Charles Coulter.

Terrell C. Drinkwater is elected Western president on January 1, 1947 and two DC-4s are sold to **Australian National Airways, (Pty.), Ltd. (ANA)** in February. As aircraft operating costs quickly mount and the immediate postwar travel boom ends, Western is faced with severe financial difficulties. Service to Huron and Minneapolis begins on April 1 while San Diego–Yuma flights commence on May 2. Despite receipt on May 19 of CAB authorization to service Portland and Seattle, the company is fiscally unable to do so.

Indeed, President Drinkwater is forced to sell the new Los Angeles–Denver route certificate to **United Air Lines** on August 1 (along with four DC-4s) in order to raise \$3.75 million just in order to pay off outstanding loans and debts. Pat Patterson's major also agrees to pay for the five DC-6s ordered the previous year. A variety of additional cost-cutting measures are put into effect, including a reduction in force that cuts the 2,800 workforce by 1,000 jobs. With a renewed credit rating, orders can now be placed for 10 pressurized, 40-seat Convair CV-240s.

Between June 16 and July 28, 1948, Western receives its first four CV-240s. Following familiarization and public relations flights, the company places them into service on September 1, becoming the first U.S. airline to fly the Convairliner. The six remaining machines are received during the fourth quarter.

In October, a DC-3 is sold; two more are sold in December, including one to **Bonanza Air Lines**. As an economy measure, onboard catering service aboard the Convairliners is discontinued on December 10.

El Centro becomes a destination on October 27, 1949. During the year, a six-month experiment is mounted in low-cost service, featuring a 5% fare reduction in place of full food service; the discounting approach fails.

The 1950s mark a period of domestic route growth for Western Air Lines and a time of frustration in efforts to expand into foreign markets. After receiving Canadian approval, flights from Great Falls to Edmonton commence on April 30, 1950, followed by Brookings and Mankato in June and July. A \$6-million order is placed in the spring of 1951 for five Douglas DC-6Bs and on August 6 a DC-4 is sold to **Alaska Airlines**.

The total absorption of **Inland Air Lines**, which has been operated as a subsidiary division of the company since 1944, is completed on April 9, 1952. On April 27, Hot Springs, South Dakota, becomes a stop. The carrier's first DC-6B is received on November 24, followed by two more in December. Also in December, the CAB allows Western to fly the Salt Lake City–Rapid City segment, thereby gaining a direct route from Los Angeles to Minneapolis. The new DC-6Bs inaugurate the route in late December and also enter the California market.

A fourth DC-6B is received on January 15, 1953 followed by a fifth on January 29. En route from Los Angeles, the second DC-6B with five crew and five passengers crashes into San Francisco Bay just after its takeoff from San Francisco on April 20 (eight dead).

A DC-3A with three crew is lost while climbing out of Los Angeles on a June 29 training flight (one dead).

On July 19, service is suspended to Yuma and 10 days later the DC-3 that was taken over from the Inland division crashes at Los Angeles. A DC-3 is acquired from **Pacific Northern Airlines** in December.

The first of two Western CV-240s to be accidentally destroyed is lost on February 26, 1954 while en route from Los Angeles to Minneapolis. As the result of a sudden emergency of undetermined origin, the Con-

vairliner, with three crew and nine passengers, makes a rapid descent in heavy turbulence and icing conditions. It disappears into the mountains of northern Wyoming; the wreck is found near Wright, Wyoming, on March 1 and there are no survivors.

A DC-4 is purchased from **Braniff International Airways** on March 19; four more DC-6Bs will join the fleet during the year, one of which is sold to **Slick Airways**. The name "Western Air Lines" is replaced with "Western Airlines" in April.

WESTERN AIR SERVICES: United States (1964–1968). Western Air Services is set up at Mayaguez, Puerto Rico, in the summer of 1964 to provide scheduled air taxi flights to San Juan, Ponce, Viequez, and the U.S. Virgin Islands. Daily Beech 18 roundtrips commence on September 2 and are maintained until 1968, when the company is combined with **Trade Winds Airways** to form **Trade Wings & Western Airways**.

WESTERN AIR STAGES: United States (1972). WAS is established at Grand Junction, Colorado, in 1972 to provide scheduled passenger and cargo flights to Vernal, Aspen, Vail, and Steamboat Springs. De Havilland DH 104 Dove and Beech B-80 Queenaire service cannot be maintained beyond the winter ski season.

WESTERN AIRCRAFT: United States (1966–1967). Western Aircraft begins flying local Beech 18 scheduled services from its base at Gooding, Idaho, in 1966, but fails within the year.

WESTERN AIRLINES (1): United States (1954–1987). **Western Air Lines**, which began as the famous **Western Air Express**, is renamed in April 1954. The company, operator of a mixed fleet of Douglas aircraft and Convair CV-240s, flies passengers and cargo in scheduled service up and down the West Coast of the U.S.

As a result of a favorable ruling in the famous Denver case, the CAB grants the company authority from San Francisco to Denver via Reno and Salt Lake City. A DC-3 is sold to **Page Airways** in March and Sioux Falls becomes a destination on July 16.

Office workers, members of the Railway Workers Union, strike for a wage raise on January 9, 1956; the job action cripples the carrier for 73 days, until March 21.

Six Douglas DC-6Bs are delivered to the company between April 27 and October 10. Meanwhile, four DC-4s are sold, two to **Alaska Airlines** and one each to the Mexican line **Aerovias Guest, S.A.** and the Belgian company **Sobelair, S.A.** A DC-3 is delivered to **Piedmont Airlines** on February 7 with a second withdrawn and disposed of in July. Meanwhile, a \$19.5-million order is announced in May for nine Lockheed L-188A Electras. A record \$3-million profit is reported.

Mexico finally grants its permission and Western begins Los Angeles–Mexico City DC-6B flights on July 15, 1957.

Ten days later, on July 25, an explosion occurs aboard Flight 39, a Convairliner with 3 crew and 13 passengers, 10,000 ft. over the California desert near Daggett. Passenger Saul F. Binstock, a 62-year-old retired jeweler, is sucked out of the lavatory and the explosion leaves a 28-sq.-ft. hole in the rear fuselage. The CV-240 makes a safe emergency landing at a nearby USAF base.

Binstock's body is found on July 27 and it is learned that he had taken out a \$125,000 life insurance policy just before boarding his last flight. On August 18, tests conclude that the explosion that killed Binstock was caused by a dynamite bomb set off in the lavatory.

Meanwhile, Western, which has been consolidating its domestic routes, adds seven more DC-6Bs between April 11 and September 6. Some of these latter begin, for the first time, a competition with intrastate **Pacific Southwest Airlines (PSA)**; Western's Coachmaster service easily outpaces the upstart's DC-4s. Meanwhile, the last two DC-4s are sold to **Loide Aero Nacional, S.A.** of Brazil in May.

The failure of a mechanic to properly secure the right leading edge section of the right wing of a CV-240 leads to a near tragedy on February 13, 1958. Immediately after takeoff from Palm Springs, the aircraft,

with 3 crew and 18 passengers loses the leading edge. The crew is able to make a wheels-up emergency landing on a boulder-covered desert area near Garnet, but the plane breaks up and the left wing catches fire. All aboard are safely evacuated, but the Convair is a total loss.

Another long strike—110 days by ALPA pilots—occurs between February 21 and June 10. A DC-3 is sold in April and a CV-240 in June. **Northwest Airlines** purchases two DC-6Bs and **Braniff International Airways** obtains one; however, nine others are added, completing the company's order. Los Angeles–Mexico City DC-6B coach service is initiated on December 1, the same day Phoenix joins the route network.

Two of the last three DC-3s are sold in February and March 1959. When Hawaii becomes a state, Western applies to the CAB for a route on March 12. The first L-188A is received on May 20 and undergoes familiarization and promotional flights. On June 1, Calgary replaces Lethbridge as a stop on the Edmonton run and during the month a CV-240 is sold. Two more Electras are received beginning on July 10 and on August 1 the first one is placed into revenue service on the Los Angeles to Seattle via San Francisco and Portland route in competition against the low-fare services of **Pacific Southwest Airlines (PSA)**.

Two more L-188As are delivered in September. They are employed, beginning in October, to initiate services over the mountains from California to Salt Lake City, Denver, and Minneapolis (MSP).

Five Electras are in service by mid-December, at which point orders are placed for three additional \$2.5-million units.

Events move somewhat slowly for Western Airlines during the 1960s, with still no authority granted to Hawaii. The early part of the decade is taken up with fleet standardization.

A Convair CV-240 is sold in 1960 and in February, orders are placed for three Boeing 720B-047Bs (B720Bs). Meanwhile, two cancelled **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** B-707-139 Stratoliners are leased from Boeing on May 4 and delivered nine days later. The two jetliners enter service in June 1, flying a Pacific Coast route from Seattle to Los Angeles via Portland and San Francisco. Another L-188A arrives later in the year.

The balance of the 12-plane order, 6 Electras, arrives between February 3 and May 24, 1961. Among these are several units immediately placed into upgraded Coachmaster competition with the L-188As introduced by **Pacific Southwest Airlines (PSA)** in the California corridor.

The last revenue flight by a CV-240 in Western colors occurs on February 16; the final four are disposed of during the year. On February 28, a DC-6B is sold to the Los Angeles Dodgers for use as the team aircraft *Kay O*; **Alaska Airlines**, **Slick Airways**, and Lockheed also purchase DC-6Bs during the year.

Four B-720-047Bs fan-jets are delivered between April 7 and July 11 and the first enters revenue service on May 15, flying the route from Los Angeles to Mexico City. Another new L-188 is acquired two days later.

On June 1, the fan-jets are shifted to the Pacific Coast routes, freeing up the Stratoliners for other duties, and they fly from Mexico City to Los Angeles, San Francisco, and Seattle. The B-707-139s, on June 16, begin flying to Minneapolis from Los Angeles via Salt Lake City and from San Francisco via Denver.

While preparing for takeoff from Seattle on October 11, an Electra with 49 aboard suffers the loss of an engine that falls off as the result of maintenance workers forgetting to properly secure it.

Two DC-6Bs are sold to **Japan Air Lines Company, Ltd. (2)** on February 27, 1962 and with the fleet further upgraded by the delivery of three B-720Bs from March–August, the lease for the two B-707-139s is allowed to expire on September 22. Some of the new fan-jets are placed into commuter competition with **Pacific Southwest Airlines (PSA)** in the California corridor, continuing on from Los Angeles and San Francisco to Seattle, handling World's Fair traffic.

Three additional B-720Bs are received in 1963. DC-6B Thriftair flights commence between Los Angeles and San Francisco; the price is very low (\$11.43 one way)—but so too are the number of frequencies. Three significant accidents occur this year. A DC-6B with 38 aboard

must take violent evasive action to avoid a midair collision with a military aircraft near Mount Hamilton, California, on February 7; one stewardess is severely injured.

An L-188A with 87 aboard crash-lands at Los Mochis, Mexico, on October 19; two passengers are badly hurt. A DC-6B with 46 aboard fails its takeoff from Los Angeles on December 17; only minor injuries are noted.

Enplanements for the year total 2,628,536 and a \$7,743,596 net profit is earned.

Airline employment in 1964 stands at 4,092 and the fleet includes 40 aircraft, including 2 more B-720Bs delivered early in the year. Nonstop Long Beach to San Francisco L-188A Electra flights are introduced and on September 22 a B-720B with 55 aboard overshoots its landing at Sacramento; only minor injuries are reported in the ensuing crash.

Passenger boardings jump 25.6% to 3,532,978. Revenues swell 18.3% to \$117.6 million and the net profit climbs 42% to \$13,351,027, a company high to date.

As the result of increased competition from both **Pacific Southwest Airlines (PSA)** and **United Air Lines** in the Los Angeles–San Francisco corridor, the company introduces Fan-jet Commuter shuttle service on April 2, 1965. Four of the six new B-720Bs received during the year are dedicated to its implementation; **Pacific Southwest Airlines (PSA)**, however, is still able to offer more frequencies. During the past three years, a total of eight DC-6Bs are withdrawn and sold.

The FAA accepts \$75,000 on June 24 as payment on a fine for “multiple” maintenance and operating violations. The 94 persons aboard an L-188A suffer severe turbulence near Battle Mountain, Nevada, on August 12.

Four more B-720Bs are received during 1966 and a new marketing campaign, *Flug Stub*, is launched in May. San Diego and Los Angeles to Minneapolis (MSP) direct flights begin on October 1; also in October, a DC-6B is sold to Purdue University. Having been unable to expand its route network to Hawaii or elsewhere by application to the CAB, the company, on October 31, moves outward in another fashion, reaching agreement to acquire the Alaskan carrier **Pacific Northern Airlines**. For awhile, PNA founder Arthur Woodley becomes Western Airlines' largest single stockholder.

The PNA merger is completed on July 1, 1967, with the former airline becoming the carrier's Northern division. A DC-6B is sold on July 31 and the last DC-3 is passed from storage to Red Dodge Aviation in August. Four more B-720Bs enter service during the year and orders are placed for B-737-247s. Direct California to Alaska flights start on December 9.

The company's attempt to start Hawaiian service drags on, becoming part of the great CAB transpacific route investigation begun in 1966 and not concluded until 1968. On May 3, the company announces that it will expend \$4 million to convert five L-188As into L-188PF combination passenger-freight aircraft.

The first B-737-247 is received on June 11. Between June 22 and September 19, five B-707-347Cs are acquired and the last unit of the 27-plane B-720B order is received on September 20.

Nonstop flights from Denver to Calgary commence on December 1. Also in December, the six Lockheed L-749A Constellations received in the merger of PNA are withdrawn and former **Trans-International Airlines** owner Kirk Kerkorian purchases 28% shareholding for \$61.7 million. Orders are placed for B-727-247s.

In early 1969, the U.S. government finally approves Western's long-sought bid to serve Hawaii, as well as a proposal that would allow it to serve Anchorage from Honolulu, thereby linking up with its Northern division.

The first of the L-188PFs is readied in January and enters service over the former PNA routes to Alaska during February. The seventh B-737-247 arrives on March 17.

On April 11, five of the six withdrawn L-749As are sold to Concare International. In June, the order for B-737-247s is completed with the delivery of the 30th machine. All four L-188As are withdrawn, also during the second quarter.

Actual B-707-347C Hawaiian flight operations begin on July 25, but are then suspended for several weeks by a mechanics' strike that begins four days later. Members of the Teamsters and management reach a mediated agreement on August 14. Stratoliner flights to Hawaii resume shortly thereafter.

During the year, the last three DC-6Bs are sold while the premier B-720B acquired back in 1961 is purchased by **AVIANCA (Aerovias Nacionales de Colombia, S.A.)** on September 24.

The first three B-727-247s are delivered on October 16 followed by three more on November 14. As the decade closes, company advertisers resurrect a now-famous transportation slogan; Western Airlines, they claim, is "The Only Way to Fly."

Kirk Kerkorian has obtained 30.5% shareholding by early 1970 and thus control of the airline. The board of directors is reformed and President Drinkwater is named chairman. A "New Look" color scheme is now introduced on company aircraft.

On August 12, company officials pay \$25,000 to a man who says he placed a bomb on a Seattle flight and demands the cash to tell where the bomb is and how to prevent it from exploding. The B-737-247 lands safely and no bomb is discovered.

Seattle to Minneapolis (MSP) direct service is inaugurated on September 15 and West German G. J. Spiwok is arrested at Portland, Oregon, on September 21 for perpetrating the August bomb hoax. A Lockheed Electra is sold to **Reeve Aleutian Airlines** on September 26.

On November 2, President J. Judson Taylor announces that negotiations have been completed and that Western will merge with **American Airlines**, pending approval of stockholders and the CAB. On November 27, three L-188s are sold to a leasing firm.

At year's end, the fleet includes 30 aircraft and the workforce totals 8,830, a decline of 4%. Revenues jump 24% to \$298 million, but expenses, despite higher fuel prices, are held in check. As a result, an \$11.8-million operating profit is achieved, along with a net gain of \$595,000.

En route from Ontario, California, to Seattle on February 25, 1971 with 94 aboard, including some U.S. Army inductees, a B-727-247 operating as Flight 328 is hijacked by draftee C. S. Patterson and forced to fly to Vancouver, where the pirate seeks asylum. Taken in hand by the RCMP, Patterson is deported back to the U.S. on March 8. He will be given a 10-year prison sentence.

On March 19, the shareholders of both Western and **American Airlines** vote to merge their two companies, even as competitors complain the amalgamation will exceed government guidelines for such arrangements.

While on a pilot orientation flight over Ontario, California, on March 31, Flight 366, a B-720B with five crew, crashes while landing at Ontario International Airport (four dead);

Four **American Airlines** options for Douglas DC-10-10s are taken over on September 29. Spurred by the CAB withdrawal of its Seattle to Juneau and Ketchikan route authority, Western, on December 12, suspends services operated by the Northern division in Alaska. Chairman Drinkwater retires, leaving the company in the hands of President Arthur F. Kelly.

Enplanements for the year are 6,602,191.

En route from Salt Lake City to Los Angeles with 64 aboard on May 6, 1972, Flight 407, a B-737-247, is hijacked by pistol-waving Michael Lynn Hansen and is diverted to Cuba. During the ride, the 21-year-old Hansen threatens death to President Nixon, vows that "the skies of America will not be safe again" until the U.S. ceases its aggression in Indochina, and pledges to return to America for additional skyjackings. Hansen will return to the U.S. three years later; captured by police, he will receive a 10-year prison term.

Dressed in a U.S. Army captain's uniform, William Holder and his female companion, Katherine Mary Kerkow, hijack Flight 701, a B-727-247 with 98 aboard, during a June 2 Phoenix-Seattle flight and divert it to San Francisco. In California, a ransom of \$500,000 and 5 parachutes are received, along with a B-720B, which flies the pair and 48 hostages to New York.

At New York (JFK), Holder and Kerkow are allowed to take their charges aboard a Western B-707-347C, which then takes off for Algiers, arriving the next day. The pirates receive political asylum, but the plane, passengers, and ransom are returned. Holder will be captured in France three years later and receive a three-year prison sentence. Kerkow will simply disappear, her fate unknown.

Following negative rulings by the DOJ and CAB, the planned **Western-American Airlines** merger is dropped in July. Five additional B-727-247s are delivered between May and August and three more L-188As are sold between August and November. On the marketing front, "champagne on every flight" service is reintroduced and in its television advertising, Western is the first airline to air commercials featuring sign language.

Late in the year, a new public stock offering is made: 500,000 shares at \$15.62.

Passenger boardings jump 11.7% to a record 7,477,000 passengers carried. Cargo traffic is up by 1.9%. Revenues are \$365,663,000 and expenses are \$342,056,000. The control of costs results in profits: \$23.6 million (operating) and a record 73.7% in net income to \$11.21 million.

Airline employment in 1973 is 10,015. The first DC-10-10 is delivered on April 19, followed by four more during the remainder of the year. The wide-bodies are employed to inaugurate Spaceship Service on the company's major routes, beginning in June. Two Lockheed Electras are sold to **Jet Air** on November 29 and new flight attendant uniforms are unveiled in December.

For the second year in a row, Western ranks first in on-time performance. Customer bookings incline upward by 6.5% to 7,960,000, but cargo is off by 0.2%. Expenses of \$374.59 million are written off against overall income of \$414.71 million, leaving an operating profit of \$40.1 million and a welcome \$20.38-million net gain.

Airline employment in 1974 is 9,653. The last L-188 is sold on January 18 to **Pacific Western Airlines, Ltd.** Also in January, the carrier begins to sell off seven Boeing 720Bs and three B-737-247s, a process that will be completed in January 1980. One of the former is passed to **Pakistan International Airlines Corporation (PIA)**.

On February 1, Arthur F. Kelly is elected president/CEO, and turns over day-to-day operations to Executive Vice President Dominic P. Renda. Between March and July, seven additional B-727-247s join the fleet along with two more DC-10-10s.

The field organization is divided into 10 regions each headed by a vice president. Major emphasis is placed on participation in and support for the Alaska pipeline project as Ray Waters is named as special vice president-Alaska Projects.

On June 1, the carrier begins an interchange frequency with **Continental Airlines** to Anchorage, Alaska, from Houston and Dallas (DFW) via Seattle. The Houston to Anchorage route is operated by a Continental DC-10, while that from Dallas (DFW) to Anchorage is flown by a Western B-727-247.

On September 28, the carrier purchases the Portland-Seattle-Fairbanks route of **Pan American World Airways (1)** and related equipment for \$6.65 million. After a 14-year hiatus, flights are resumed to Edmonton, Alberta. Employees receive new uniforms this year.

Passenger boardings accelerate a minor 0.1% to 7,963,000; however, the number of FTKs operated advances a full 37.2% to 104.13 million. Income climbs 15% to \$488.39 million and expenses are kept under control at \$450.03 million, despite a 60.5% boost in fuel prices. The operating profit is \$38.36 million and the \$24.09-million net gain is the highest in company history.

A total of 143 new employees are hired in 1975. Hijacker William Holder is arrested in Paris on January 26 and deported to the U.S. for trial.

Flight 470, a B-737-247 with 6 crew and 93 passengers, overshoots the runway while landing at Casper, Wyoming, on March 31; there are no fatalities.

Two B-727-247s arrive in May followed by a third in June. Released after three years detention by the Cubans, pirate Michael Lynn Hanson

is arrested by police at New York (JFK) on June 15 while attempting to sneak back into the U.S.

B-707-347C combined passenger and cargo flights are started between Los Angeles and Anchorage via Seattle. The ACCU-RES computerized reservations system is expanded to accommodate commuter interline connections, now integrated into the company's timetables, as a sixth DC-10-10 is delivered and employed to begin services from Denver to Honolulu.

Customer bookings accelerate 1.88% to 7,530,000 while freight climbs 14% to 192 million FTKs. On revenues of \$518.97 million, expenses are \$510.41 million and the operating profit is \$8.56 million. A record net gain of \$12.32 million is celebrated.

Airline employment is increased by 4.3% in 1976 to 10,221. Having gradually reduced his holdings, Kirk Kerkorian offers to sell his remaining 17% shareholding; the carrier, in January, immediately purchases this 2.5 million share stake for \$30.5 million. A newly awarded route from Seattle and Portland to Las Vegas is inaugurated in February.

A B-737-247 is sold to **Aloha Airlines** on March 13. The company celebrates its fiftieth anniversary on April 17 and is, at this time, the oldest continuously operated commercial airline in the U.S.

A seventh DC-10-10 is delivered on June 22 and enters service on a new nonstop Los Angeles to Miami service beginning on October 1. A new Honolulu to Vancouver nonstop frequency is initiated shortly thereafter.

Enplanements accelerate 7.7% to 8,765,000 while freight does better, growing by 29.4% to 159 million FTKs. On record revenues of \$605.2 million, expenses are \$575.34 million, resulting in an operating profit of \$29.85 million and a net income of \$14.96 million.

Seven B-727-247s join the fleet in 1977. In January, the company shares the 1976 "Market Development Award" from *Air Transport World* magazine with **Pan American World Airways** (1).

En route from San Diego to Denver on August 20, Flight 550, a B-707-347C with 40 passengers, is taken over by a lone gunman, who demands that the aircraft be diverted to Mexico. After the aircraft lands at Salt Lake City for refueling, the pirate is overwhelmed by police. Upon examination, he will be found mentally unstable and sent to a psychiatric institution.

Enplanements for the year total 9,129,000. On revenues of \$691.46 million, the net gain is \$14.36 million.

Airline employment is increased by 5.6% in 1978 to 10,886.

During the spring, an interline agreement begins with **Braniff International Airways**. It links Dallas (DFW) with Calgary and Edmonton via Denver.

On August 1, company officials reach an agreement to merge with **Continental Air Lines** and jointly submit this proposal to stockholders and the CAB.

Meanwhile, an additional five B-727-247s join the fleet, along with two DC-10-10s, and after President Carter signs the Airline Deregulation Act into law in October, a new passenger terminal is opened at Salt Lake City and three new routes are inaugurated: Sacramento–Seattle, Reno–Minneapolis, and Los Angeles–Guadalajara. Senior Vice Presidents R. O. Kinsey and Richard Ensign are elected to the board of directors.

A record 11.32 million passengers are boarded, marking the first time the company exceeds the 10-million mark in annual bookings. The boom pushes revenues up by 20.7% to \$834.5 million and allows a \$55.8-million net profit, up a spectacular 289%. These are the highest profits in Western history.

The workforce is reduced by 0.7% in 1979 to 10,792. The CAB vetoes the proposed merger with **Continental Airlines**. During the year, the company acquires six more B-727-247s and two DC-10-10s and inaugurates service to Washington, D.C., Spokane, and Milwaukee. A B-727-247 with 94 passengers en route from Denver to Sheridan, Wyoming, on August 1, mistakenly lands at Buffalo, Wyoming, 35 miles away; the pilot, copilot, and one other officer are suspended for their error.

While landing at Mexico City from Los Angeles on October 31, Flight 2605, a DC-10-10 with 11 crew and 77 passengers, strikes a truck

and the cab of an excavator and continues on to plough into a building, catching fire. Seventy-two passengers on the aircraft and one person on the ground are killed.

A B-727-247 with 108 aboard nearly collides with a lightplane over San Diego on November 15.

Passenger traffic rises 6.6% as 12,067,000 customers are carried, but cargo declines 11% to 183.19 million FTKs. Revenues climb up to \$932 million, but the net profit dips to \$41.5 million, a respectable figure.

The employee population is decreased by 8.1% in 1980 to 9,917. The last Boeing 720B is sold in January and a yearlong sale of the five B-707-347Cs begins in May. Meanwhile, between March and May, five more B-727-247s join the fleet, followed by two additional DC-10-10s, one each in May and June. Another effort is made to merge with **Continental Airlines** in August, but the effort fails as the potential partner falls to **Texas International Airlines**. Service is started to Milwaukee and Washington, D.C.

Anchorage to London DC-10-10 flights commence on October 9. Various factors cause a sharp financial decline: tougher competition from low-cost carriers; costs involved with the proposed **Continental Airlines** merger and higher fuel bills; a fight against a takeover bid by UNC Resources; and an 18.7% drop in passenger traffic to 9.1 million passengers flown (although cargo does climb a minor 0.7% to 262.65 million FTKs). Instead of a profit, a \$29.6-million net loss is suffered on revenues of \$995.7 million, which is only a 6.8% increase and is overshadowed by a 14% boost in expenses to \$1.04 billion. The loss is the company's first since 1970 and heralds a period of tough economic problems.

The number of workers is cut another 5.2% in 1981 to 9,827. The last DC-10-10 to be acquired arrives on April 9, and is followed by the final three B-727-247s in May and June. Meanwhile, Denver–London DC-10-30 service begins on April 24. On July 20, **Air Florida** begins an effort to acquire Western, purchasing 12% shareholding. Also in July, the last B-707-347C is sold and later in the year, two DC-10-10s are sold to International Air Leases.

Under pressure from the board of directors, Chairman Kelly and president/CEO Renda "retire" in October. While the board searches for new management, Robert Kinsey serves briefly as acting CEO. On December 8, Neil G. Bergt, owner of **Alaska International Air (AIA)**, arrives as company chairman/president/CEO. Andre C. Dimitriadis and Seth M. Oberg are named vice president-finance/chief financial officer and vice president-operations, respectively.

Passenger enplanements fall again, this time by 6.8% to 9,212,000; freight is off as well, down 9.2% to 170.24 million FTKs. Revenues accelerate 6.44% to \$1.05 billion, but expenses increase 8.09% to \$1.12 billion, leaving an operating loss of \$65.95 million and a net loss of \$73.4 million.

The payroll jumps 5.4% in 1982 to 10,360 (although management is reduced by a third and salaries are cut) and orders remain outstanding for 6 B-767-247s. Although the CAB now grants approval for an **Air Florida** acquisition, it is contingent upon the outcome of negotiations begun in January by CEO Berger for the takeover of **Wien Air Alaska**. The Washington-based regulatory body gives its blessing to Berger's plan in April, but stipulates that the CEO must give up his association with **Alaska International Air (AIA)**, which he refuses to do. The entire project collapses and Berger, who has pledged to quit Western if the deal fails, elects to remain in charge.

Salt Lake City and Denver are designated major company hubs in May (the former, under Vice President Lawrence H. Lee, in place of Los Angeles) and frequencies from them increase dramatically. Analysts breathe a sigh of relief that Western has finally adopted the self-feeding hub-and-spoke route system deemed so vital to U.S. airlines in the post-deregulation era.

Former Six Flags executive Ned De Witt is appointed president in July. Transcontinental DC-10-10 service to New York is inaugurated in late summer and all merger activities end on October 29. Plans are made to initiate a Hawaii fare promotion during the upcoming first quarter.

Passenger boardings climb 8.6% to 10,008,000 as cargo declines 3.6% to 165.57 million FTKs. Operating income inches up 0.51% to \$1.06 billion, but costs climb to \$1.09 billion. Although a \$30.79-million operating loss is taken, the net loss "improves" to \$44 million.

Although airline employment is increased 6.1% in **1983** to 10,355, the airline is awash in red ink.

While climbing to cruise from Seattle on January 7 and passing the 20,500-ft. level, a B-727-247 with 5 crew and 32 passengers encounters severe air turbulence; one elderly passenger, a retired priest, is severely injured, causing the flight to divert back to its point of origin.

Also in January, Western becomes the fourth customer to order a B-737-300, with a contract for three Dash-347s. In addition, a 12-year lease is signed with AIA for two new B-727-2Q9s.

During the year, the Los Angeles terminus is beefed up to semi-hub status; however, the push to concentrate at Salt Lake City is continued. Attraction of additional business traffic dominates company marketing.

On April 11, top management is again changed as Seattle attorney and longtime board member Gerald Grinstein succeeds Bergt as board chairman and Vice President Lee moves from Salt Lake City to become president/CEO. The former CEO returns to Alaska at the end of the month. Vice Presidents Dimitriadis and Oberg are retained by Lee and are joined by the new Vice President-Management Henry T. Chandis and Vice President-Service Donald L. Beck.

A Minnesota State Police helicopter patrolling near President Reagan's motorcade and a Western B-727-247 with 144 people aboard come within 300 feet of colliding as the airliner begins landing descent to Minneapolis (MSP) on June 10; evasive action by both craft prevents a disaster.

Also during the month, a public offering of stock brings in \$90 million, which is employed to repay some \$78 million in debt.

AirCal, Pacific Southwest Airlines (PSA), and United Airlines kick off a fare war in the Los Angeles-San Francisco corridor during September. Western, as part of its effort to increase its Los Angeles (LAX) hub, doubles the number of its own flights in this north-south contest from three to six daily roundtrips.

Reminiscent of the **Air Canada, Ltd.** disaster earlier in the year, but with a better ending, a B-727-247 makes a safe landing at Anchorage on October 7 after an electrical fire fills its cockpit with smoke. Employees in the fall agree to a "Partnership," through which they will gain 32% ownership of the carrier (7.8 million shares of common stock) in exchange for major wage and benefit concessions. In October, the first of 34 B-737-247s are delivered.

A second public stock offering in November nets another \$65 million, which is again applied to the company's debts and allows the carrier to sign a new \$22-million line-of-credit. Long-term debt is now down to \$438 million. The "Partnership" with employees is ratified by vote just before Thanksgiving.

Customer bookings accelerate 8.2% to 9,134,000 and freight moves ahead by 7.1% to 243.82 million FTKs. Revenue ascends 7.26% to \$1.14 billion as costs climb 9.36% to \$1.19 billion. The operating loss is \$56.37 million and the net loss is \$54.48 million. Still, if a \$41.5-million pension plan had not been cancelled, the carrier's net loss would be a staggering \$96 million instead of \$54.5 million, which is still \$10.5 million worse than the previous year.

The workforce is cut 0.9% in **1984** to 10,264 and the fleet now includes 44 B-727-247s, 21 B-737-247s, and 10 DC-10-10s. Orders remain outstanding for 6 B-737-247s and 9 B-737-347s. In January, an earlier \$240-million order for a 6 B-767s is replaced with a \$378-million request for 12 more B-737-247s and 6 B-737-347s. The former will be delivered beginning in November and the latter starting in March 1986.

President/CEO Lee becomes chairman/CEO on January 9 as Board Chairman Gerald Grinstein becomes president/chief operating officer. The Los Angeles and Salt Lake City hubs are expanded and schedules are refined to take advantage of the hub-and-spoke system.

A new Concourse D is completed at Salt Lake City, which increases facilities there by 40%; meanwhile, a new ticket lobby is finished at Los

Angeles (LAX). A new hub is started at Los Angeles on March 1, largely to provide service to new leisure markets in Mexico. Daily departures from this hub now stand at 75 per day.

In September, the employees are convinced to accept permanent wage cuts worth \$20.1 million. The last of 34 B-737-247s, which had begun delivery in 1968, are received in December.

Customer bookings decline 9.1% to 8,307,000 and cargo is off by 6.5% to 228.17 million FTKs. Revenues increase 3.4% to \$1.18 billion and expenses decline 2.4% to \$1.17 billion, leaving the company with a net loss of \$29.2 million, but an operating profit of \$11.4 million, its operating profit since 1979.

Airline employment dips 0.2% in **1985** to 10,247. The nation's oldest sustained-service airline is serving 63 cities from Alaska to Mexico and on to New York, Washington, D.C., and London. With 84 daily departures, Western is now the dominant carrier operating from Los Angeles (LAX). At the same time, the number of daily flights from Salt Lake City is boosted 32% to 108.

In March, the first of an order for 13 B-737-347s arrive. They introduce a new company livery and are also the first of the carrier's twinjets to feature first-class sections; five more will be delivered by December. Meanwhile in April, a B-727-247 is sold to Louisiana-based **Gulf Air**; **USAir** is agent in the deal. At the same time, a DC-10-10 is leased by **American Airlines**.

Growing out of a suit by Western employees, the U.S. Supreme Court rules on June 17 that airlines may not force flight engineers to retire at age 60. On August 5, company officials proudly announced a \$45-million profit for the first seven months. In November, the carrier completes a public offering of \$100-million principal amount of 7 3/4% convertible subordinated debentures due in 2005.

A highlight of the year is the release of the motion picture *Commando*. Early in the film, the hero, portrayed by Arnold Schwarzenegger, who has been taken aboard a company DC-10-10 by villains, manages to kill his captor and escape the aircraft as it is taking off from Los Angeles (LAX) by climbing down into the cargo hold and jumping from the forward wheel well.

For the year, passenger boardings advance 9.1% to 9,062,000, but freight is down again, by 2.2% to 223 million FTKs. Revenues advance 10.6% to \$1.3 billion, costs climb just 5.1% to \$1.2 billion, and a \$76.5-million operating profit is achieved. In a \$96-million turnaround and a new company record, \$67.1 million is gained in net profit.

Airline employment rises 14% in **1986** to 11,684 and in May the carrier completes the expansion of its Salt Lake City freight facility from 8,500 to 26,000 square feet. The last of 13 B-737-347s are delivered in June and in August, Donald J. Lloyd-Jones succeeds Robin H. H. Wilson as president/chief operating officer. **Delta Air Lines** purchases Western on December 19 for \$860 million; the company will be operated as a subsidiary for one quarter. Largely unnoticed during the year is the appointment of Terry London Rinehart to the right seat of a B-727-247; she is the company's first female pilot.

Customer bookings accelerate 2.6% to 12,234,000 and cargo ascends 5.3% to 154.63 million FTKs. Revenues decline 5.49% to \$1.23 billion, costs dip 0.20% to \$1.22 billion, and the operating profit is \$7.26 million. The \$6.82-million net profit allows the historic carrier to retire on a profitable note.

In a last-ditch effort to prevent the amalgamation, Western pilots file suit in early **1987** to remodel the company into a one-union airline modeled on Delta. Meanwhile, while on approach to the Salt Lake City Airport on February 7, a B-737-247 with 59 aboard is forced to suddenly veer to the left to avoid a small private plane that strays ahead of it. The anti-amalgamation move by the pilots is now unsuccessful and Western is fully integrated on April 1.

WESTERN AIRLINES (2): United States (1985-1989). Western Airlines, a commuter carrier, is set up at Burlingame, California, in early summer **1985** to provide daily scheduled passenger and cargo roundtrip flights to Santa Rosa. Employing a Convair CV-580, revenue services

are inaugurated on July 8 and maintained until recession forces the carrier out of business in December 1989.

WESTERN AIRWAYS, LTD.: United Kingdom (1938–1953). The Straight Corporation purchases control of **Norman Edgar (Western Airways), Ltd.** on October 18, 1938 and renames it Western Airways, Ltd. In accordance with the Air Navigation Order of September 16, the new ATLB on October 21 grants the company route certification from Weston-super-Mare to Cardiff and Swansea.

In February 1939, a de Havilland DH 90 Dragonfly is acquired, followed by a DH 86B in April, a DH 89A Dragon Rapide in May, two Percival Q.6s in April and June, and a DH 84 Dragon 1 in September. Meanwhile, a daily Swansea–Penzance via Barnstaple and Newquay service is initiated on May 8. Thrice-daily Weston-super-Mare to Manchester via Birmingham operations commence on June 17.

War is declared on Germany on September 3 and all civil flying ceases. Joining neither National Air Communications nor the **Associated Airways Joint Committee**, the state groups coordinating wartime internal routing, the company assumes the role of aircraft repair facility at its Weston-super-Mare base, selling most of its prewar aircraft.

In January 1946, an ex-RAF Percival Proctor 1 and three Piper J-4A Cubs are purchased and used to relaunch revenue flying operations in March. Other Percivals are purchased in the spring and in August, eight ex-RAF Avro Anson 1s are acquired, the first entering service in September.

During 1947, 10 Fairchild 24W Argus 2s are purchased and these join other single-engine aircraft in providing both charter work and flight training. In May 1948, Western Airways, Ltd. is named a **British European Airways Corporation (BEA)** associate and is thus granted a scheduled route from Weston-super-Mare to Cardiff. Flown in association with **Cambrian Airways, Ltd.**, company Ansons start the route on May 25. On October 11, the service is extended for another year.

On April 20, 1949, Airways Union, Ltd. is formed as a holding company for several companies, including Western Airways, Ltd. and several flying clubs, with the Straight Corporation itself changing its name to that of the holding company. The Cardiff route is assumed by **Cambrian Air Services, Ltd.** during the summer. On October 14, Airways Union, Ltd. eliminates support of its flying club subsidiaries and many single-engine aircraft are sold, including all of the Fairchilds.

Ad hoc passenger and freight charters continue on a fairly regular basis until the fall of 1952 when the last Avro Anson 1 is sold. In 1953, only the Proctors are available to fly on an air taxi basis and these transport a total of 3,858 passengers. In the fall, Western Airways stops flying and Airways Union, Ltd. now concentrates on FBO and flight training activities at Weston-super-Mare, Exeter, and Plymouth.

WESTERN ALASKA AIRLINES: United States (1959–1973). Western Alaska is formed at Dillingham in early 1959 and inaugurates local lightplane services on March 13. These continue apace largely without incident during the remainder of the decade and into the early 1960s. An L-12 is destroyed by fire at Dillingham on July 21, 1961.

Operations are conducted without incident in 1962, but on September 12, 1963 a Cessna 180 fails its takeoff from Egegik and crashes; both people aboard receive minor injuries.

In 1964, the company employs 24 workers and owns a fleet of 8 aircraft. A Cessna 180C, with eight aboard, hits an obstruction while landing at Togalak on June 23 and crashes; only minor injuries are reported.

Enplanements for the year total 8,952 and revenues are \$334,000.

The workforce in 1965 grows to 25. The 10 planes flown include 4 Cessnas, 2 Grumman G-21A Geese, 1 G-44A Widgeon, and 1 old Lockheed Model 12A; orders are placed for 1 Cessna 185.

Passenger boardings jump 10% to 10,585 and freight traffic is also up. Revenues also grow by 10%.

Operations continue apace in 1966 and in 1967 the workforce stands at 32; the fleet includes 12 aircraft. Enplanements are 9,411 and 13.85 million freight ton-miles are flown. Customer bookings climb to 13,000

in 1968. Four new employees are hired and revenues are \$413,000. Enplanements in 1969 are 13,055.

The employee population is reduced by one in 1970 as the fleet is reduced to nine aircraft. The passenger count drops by 879 to 12,176 and freight ton-miles are off a substantial 31% to 15,505. Costs, led by increased fuel prices, are up significantly.

Enplanements in 1971 grow to 13,910. Although the number of freight ton-miles flown climbs a spectacular 121% in 1972 to 31,000, the number of passenger boardings falls 7% to 13,000. Merger discussions begin with **Kodiak Airways** in hopes that a union of two fiscally troubled carriers will result in salvation for both.

Western Alaska and Kodiak Airways amalgamate on April 1, 1973 to become **Kodiak-Western Alaska Airlines**.

WESTERN CANADA AIRWAYS, LTD.: Canada (1926–1930). In November 1926, with backing from Winnipeg grain merchant James A., Capt. Harold A. "Doc" Oaks, RFC veteran and former **Patricia Airways and Explorations, Ltd.** official and pilot, founds Western Canada Airways, Ltd. at Winnipeg, with himself as managing director. Richardson had earlier briefly backed **Central Canada Airways, Ltd.** The new company has one pilot, Oaks, one mechanic, Al Cheesman, one clerk, J. A. MacDougall, and one float-equipped Curtiss Lark.

The first aircraft purchased is a Fokker Model 4 Universal which, beginning on December 25, is flown to Sioux Lookout, Ontario, from Teterboro, New Jersey. Sioux Lookout–Rolling Portage and Red Lake flights commence on December 26 and by the end of the year, Oaks has flown the 5-place monoplane 31 hours and carried 18 passengers and 850 pounds of mail.

In early March 1927, a Canadian government contract is obtained to haul drilling equipment to Hudson Bay, where tests will be made to determine if a railway terminus is possible. The noted Norwegian flyer Bernt Balchen and two former **Ontario Provincial Air Service, Ltd.** pilots, Frederick "Steve" Stevenson and Red Ross (also RFC veterans), join the company. Three Fokker Model 4 Universals, purchased by Richardson, arrive from the U.S. at Hudson, Ontario, where Oaks has established a corporate administration facility that Balchen describes as a "lean-to."

On March 27, two Universals, piloted by Stevenson and Balchen, with Cheesman and Ross as engineers (mechanics), begin the airlift, flying 1,200 lbs. of drilling equipment from the end of the rail line at Cache Lake over 125 miles to Fort Churchill. After several flights, it is determined that Ross will remain behind to supervise the growing Fort Churchill base.

Balchen and Cheesman return safely to base after this mission, but the Universal flown by Stevenson suffers engine failure 75 miles north of Cache Lake. Stevenson puts the Fokker down on a frozen lake and begins a three-day trek back to Cache Lake. The day after Stevenson fails to return, Balchen and Cheesman take off to search for him. They find his Universal, which Cheesman is able to repair and fly back to Cache Lake to await its pilot's return.

By April 27, the carrier's three Universals have flown 8 tons of gear and 14 workers to Fort Churchill, completing the contract and the first large airlift in the far north. In August, a contract—marking the start of significant air freighting in Canada—is undertaken on behalf of the owners of the Sherritt-Gordon mine in Manitoba. A mail service is opened from Lac du Bonnet to Wadhope via Bissett on October 4.

During a test flight over The Pas on January 5, 1928, a company Fokker Universal crashes, killing its pilot Steve Stevenson. In mid-month **Yukon Airways and Exploration Company, Ltd.** General Manager David "Andy" Cruickshank joins the company and employing one of Oak's Fokkers, commences a 320-mile circular Post Office contract mail route from Rolling Portage to Red Lake on January 25. On the first flight, he carries 588 pounds of airmail in and 90 pounds out. On May 14, the carrier inaugurates a circular route to the Red Lake area, flying Sioux Lookout–Gold Pines and Red Lake–Narrow Lake and Jackson Manion.

During the summer, a Fokker Model 8 Super Universal and a Boeing Model 204 are acquired (the latter is christened *Pintail*) and are placed in service. Routes are opened from Victoria and Vancouver to Seattle and Hudson to Pine Ridge. A government mail contract is executed during the summer from Lac du Bonnet to Wadhope, Manitoba, via Bissett. The float-equipped Fokker Model 8, piloted by A. H. Farrington, undertakes a 1,000-mile, multistop flight, beginning on August 12, from Winnipeg to Eskimo Point on Hudson Bay to return miners. Weekly mail flights to the Cold Lake Area (Kississing—The Pas) begin on August 31.

In the fall, Vancouver-based **Pacific Airways, Ltd.** is purchased, along with its Curtiss HS-2L flying boat, allowing Oaks's carrier to expand into British Columbia. As of December 1, pilot Cruickshank has flown 28.5 tons of mail on his Rolling Portage to Red Lake return route covering some 26,240 miles. Under Post Office contract, an experimental Universal mail route is flown December 10–29 between Winnipeg and Regina, Calgary, and Banff and to Edmonton, Saskatoon, and Regina. As the year closes, Doc Oaks participates in the formation of **Northern Aerial Mineral Explorations, Ltd.**

With mail added later in the year, a weekly passenger and cargo route is inaugurated for 10 weeks, beginning on January 11, 1929, Waterways—Fort Simpson via Fort Chipewyan. These are the first WCA flights to the Arctic Circle. On March 6, pilot C. H. "Punch" Dickins extends his Fort Simpson route to Fort Good Hope on the Mackenzie River.

On June 1, The Pas—Kississing route is superseded by new twice-weekly service from Cranberry to Kississing. On July 1, Punch Dickins lands a float-equipped aircraft at Aklavik on the Mackenzie River, becoming the first pilot to reach a point along western Canada's Arctic coastline. On August 5, General Manager W. Leigh Brintnell, flying a Fokker Model 8 seaplane in a remarkable service, proceeds from Winnipeg to Fort McMurray, Great Bear Lake, Aklavik, Dawson City, White Horse, Skagway, Prince Rupert, Prince George, Edmonton, The Pas, and back to Winnipeg.

The 9,000-mile flight, which has delivered a variety of passengers and cargos en route, requires 94 hours flying time and the rest of the month. At unknown dates during the year, a variety of additional small operations are flown in the Patricia District and throughout the northern portions of Ontario, Alberta, British Columbia, Saskatchewan, and Manitoba.

Flying a Fokker Model 4, C. M. G. Farrell on March 3–4, 1930 begins the first scheduled commercial air operation in Canadian history. A contract mail route is that night opened Winnipeg—Regina—Saskatoon—Calgary and Regina—Edmonton via Saskatoon and North Battleford. Collectively, these services are known as the Prairie Air Mail.

The Aviation Corporation of Canada and Western Canada Airways in the fall enter into negotiations with the Canadian Pacific Railway and Canadian National Railway. The result of the talks is the November 25 merger of the air transport companies into a new **Canadian Airways, Ltd.**

WESTERN COMMUTER AIRLINES. See **WESTAIR**

WESTERN ISLES AIRWAYS, LTD.: United Kingdom (1937–1945). Western Isles Airways, Ltd. is formed as a holding company on July 19, 1937. On October 21, 1938, in accordance with the Air Navigation Order of September 16, the new ATLB grants the carrier route certification from Glasgow to Islay and North Uist.

Operating as part of the **Scottish Airways, Ltd.** group, the company is absorbed by **British European Airways Corporation (BEA)** on February 1, 1947.

WESTERN KENYA AIR CHARTERS, LTD.: P.O. Box 190, Eldoret, Kenya; Year Founded 1966. Western Kenya is established by the East African Tanning Extract Co., Ltd. at Eldoret in 1966 to provide passenger transport with a Piper PA-32 Cherokee Six on behalf of the concern. Public charters are also offered.

By the mid-1980s, the Cherokee Six has been replaced with a PA-23 Aztec and a PA-31-310 Navajo.

Flights continue into the late 1990s. In 1998, Hofo von Kaufmann's five-person company operates a single Cessna 404 Titan.

WESTERN NSW (WESTERN NEW SOUTH WALES AIRLINES [PTY.], LTD.): Australia (1981–1993). This small regional is established by Chairman Rod Kendall at Wagga Wagga, New South Wales, in 1981 to provide nonscheduled passenger and cargo charter services to Sydney, Griffith, Canberra, Albury, Deniliquin, Hay, and Narrandera. Max Cochrane becomes managing director and revenue flights are initiated with 2 Piper PA-31-350 Navajo Chieftains, 1 PA-31-310 Navajo, and 1 Cessna 310. Operations continue apace for the remainder of the decade with little change in either routes or fleet.

Airline employment in 1990 stands at 42 and enplanements, now reported, total 350. Revenues, made mostly from freight, reach \$A2.7 million and a net \$A300,000 is generated.

The little carrier takes over **Macknight Airlines (Pty.), Ltd.** and earns \$A4 million in 1991 with profits moving to \$A500. The year's enplanements are 32,184.

In 1992, the fleet is increased by three Cessna 310s and an order is made for a Beech 1900. Passenger boardings jump 10.6% to 36,000 as revenues ascend 44.4% to \$A3.9 million. The operating surplus is \$A584,000, but net gain slides to \$A251,000.

Flights cease in 1993.

WESTERN PACIFIC AIR SERVICES, LTD.: P.O. Box 411, Honiara, Solomon Islands; Phone 677 36 533; Fax 677 36 476; Code WPA; Year Founded 1990. Established at Honiara's Henderson Airport in 1990, Western Pacific begins scheduled interisland services. General Manager Gary Clifford's initial fleet comprises 1 Pilatus-Britten-Norman BN-2 Islander and 2 Piper PA-23 Aztecs. Leroy Keim becomes general manager in 1991 and the fleet is enlarged by the addition of an Aero Commander 500B.

Operations continue apace in 1992–1994. Declining traffic during a time of recession forces Keim to remove all aircraft except his Islander and one Aztec.

Flights continue in 1995–1999 and a Piper PA-31-310 Navajo is placed into service as business improves.

WESTERN PACIFIC AIRLINES (WESTPAC): United States (1994–1998). WPA is set up at Colorado Springs, Colorado, in July 1994 by Edward R. Beauvais, former chairman of **America West Airlines**, to offer deep-discount scheduled passenger flights with emphasis on the new Denver International Airport. Beauvais will model his operation on that of **Southwest Airlines (2)**, but will also fly a medium-haul route network and employ ticketless travel from the outset. Capitalization from private investors totals \$25 million; Beauvais, Edward L. Gaylord, and Hunt Petroleum will control 65% of the shareholding.

The remainder of the year is occupied in preparations for service start-up. A \$3-million stock offering is made in October and a new air terminal is simultaneously opened at Colorado Springs; orders are also placed for the acquisition of three B-707-301s and three B-737-3B7s from **USAir**. Although the company name is briefly changed to **Commercial Air**, WPA is quickly restored.

Vice President-Management Tom DeNardin now proposes the concept of an "air logo" program (sometimes called "flying billboards"), whereby Westpac will paint its little Boeings as flying advertisements for corporate and other sponsors. The first company to have its name and logo displayed is The Broadmoor, a Colorado Springs resort hotel owned by Edward L. Gaylord, a Westpac investor. The paint jobs are performed by BF Goodrich Aerospace (TRAMCO), another investor, at its facility at Paine Field, Everett, Washington.

The second company to participate in the "air logo" program is the Fox Television Network, for which a B-737-301 is painted in a memorable yellow scheme that features its cartoon series *The Simpsons*—the plane is also nicknamed the "Electric Banana." The third B-737-301 wears a basic green and burgundy Western Pacific livery with a "WP" on its tail.

The workforce stands at 1,200 at the end of 1995's first quarter. The company turns on its own Unix-based, client-server reservations system

during the first week of April. Sales with a Windows interface program are now started by 50 reservations agents and, during the first two days alone, over 24,000 calls are received seeking seats on the company's \$129 walk-on or \$69 21-day advance, off-peak, one-way flights from Colorado Springs to Los Angeles.

On April 28, the same day it receives its FAA air carrier certificate, Western Pacific inaugurates Part 121 services with a flight to Oklahoma City. During the next 10 days, additional frequencies are laid on from Colorado Springs to Los Angeles, Las Vegas, Phoenix, and Kansas City.

With the addition of a third "flying billboard" jetliner on May 8, painted in a basic red and silver livery with the fuselage markings "Future Logo jet" with a large question mark painted on its blue tail, San Francisco joins the route network. On May 19, *USA Today* profiles *The Simpsons* aircraft and reports that Fox has spent over \$1 million to advertise this cartoon television series on the side of the Westpac jet.

Also in May, the company orders 100 new computers and announces plans to add 150 new operators by June 1 to improve the performance of its reservations center.

On June 1, nonstop frequencies commence from Colorado Springs to Dallas (DFW), Seattle/Tacoma, and Chicago (MDW).

Fleet strength reaches five aircraft in June. Also during the month, CEO Beauvais is profiled by Wendy Oden in her "Local Boy Makes Good," *Colorado Business Magazine* 22 (June 1995): 88-94.

The "Future Logo jet" is repainted in July and rolled out on July 24 to honor the *City of Colorado Springs*; featuring a huge painting of Pikes Peak, the paint job, paid for by private and public subscription, costs \$90,000.

The *Colorado Springs* is followed by a fourth, a newly acquired B-737-3B7 painted for Colorado Technical College with a huge golden eagle along the side of its fuselage and a tall "T" on its yellow tail.

Frequencies and destinations are increased throughout the summer. Nonstop service is initiated on August 1 from Colorado Springs to Houston, San Diego, Indianapolis, and Wichita. The new entrant's best month comes in August when it transports 121,000 passengers. Heavy advance bookings will continue and in later months will exceed this initial surge.

In early October, the company begins to offer limited-time \$59 roundtrip "mystery tours" between Colorado Springs and any of its other markets. There is a catch. Although the overnight, two-day trips may be booked in advance, passengers are only advised as to hot or cold climate and will not know until they board which destination will be visited. Instead of hundreds of takers, thousands of passengers sign up for the seats and the program is expanded.

A B-737-3L9 is leased from Boullioun Aircraft on October 25; painted for the upcoming holidays, the *Winter Wonder Plane* portrays Santa Claus on its tail and has a red nose, in the manner of Rudolph the Red-Nosed Reindeer. Service to Tulsa and Newark begins on November 15.

On December 7, a B-737-3B7 not yet committed to the logo jet program has the symbol of the airline's ProntoPAC package service painted on the forward end of its fuselage above the windowline; the symbol, in the shape of a smiling jetliner, is nicknamed "Westpac Willie." An ex-Air Europa, S.A. B-737-3L9 "Corporate Logo jet" joins the fleet on December 13 wearing huge red and blue Western Pacific markings on the side of its wide fuselage.

Washington, D.C. (IAD) joins the network on December 15. On the latter day, two new "logo jets" are rolled out at Colorado Springs. Aki, a model affiliated with the Stardust Resort Casino, is featured in a stretched-out pose on the tail of a B-737-301 while Thrifty Car Rental is the theme for another B-737-301, complete with the automobile firm's caveman-on-a-unicycle mascot painted on the plane's tail.

Enplanements for the seven months of service total 731,000 and 845,000 FTKs are also operated. Revenues for the operational portion of the start-up year are \$4.7 million; however, costs bring \$3.4 million in losses on both the operating and net lines. The loss figures are later deepened to \$6.85 million (operating) and \$6.21 million (net).

There are no changes in the employee population during 1996; however, the fleet grows to 12 leased B-737-300s, including a B-737-3S3 chartered from El Salvador's **TACA International Airlines, S.A.**

Daily roundtrip service to Atlanta commences on January 6. To accommodate the new route, one of the airline's two daily flights to Dallas is dropped.

Destinations visited now also include Seattle, San Francisco, Los Angeles, San Diego, Chicago (MDW), Dallas (DFW), Houston, Indianapolis, Kansas City, Las Vegas, Newark, Oklahoma City, Phoenix, Tulsa, and Wichita.

Poor bookings force cancellation of service to the last-named point on January 31. It is the first destination dropped by the airline.

Using the B-737 freed up by dropping the largest city in Kansas, Westpac is more easily able to inaugurate daily flights to San Antonio, San Jose, and Nashville next day.

During February and early March, the company conducts negotiations with Boeing; plans are made to sign a \$740-million order for 20 new B-737-300s/700s to be delivered over the next 2 years.

The seventh logo jet *Bronco Buster* is delivered in mid-March. The B-737-3S3 is painted on one side with titles reflecting the Professional Rodeo Cowboy's Association and has a portrait of six-time, all-round world champion Ty Murray riding the bucking bull Playboy Skoal. The other side features titles honoring the Pro Rodeo Hall of Fame with a likeness of the late Casey Tibbs and the bronco Necktie on the tail. The plane enters service on March 26 from Colorado Springs to Las Vegas.

The 1-millionth passenger is boarded during the third week in March and the first anniversary is celebrated on April 28. The B-737-3L9 formerly painted as the *Winter Wonder Plane* is now recolored to become the *Spring Fling Jet* to promote spring and summer fares and vacations. Daily roundtrips commence on May 6 from Colorado Springs to Portland, Oregon. On May 29, Boyd Gaming Corporation underwrites the introduction of the first of two SAM'S Town "logo jets."

Two more Logjets are delivered in early June. The first is a B-737-3K9 that wears billboard-sized Western Pacific corporate titles on a solid red fuselage and blue tail and engine nacelle on its right side and blue fuselage and red tail and engine nacelle on its left. The second aircraft is the third of the original B-737-301s leased from **USAir**, which is now given a livery that honors its sponsor, the Security Service Federal Credit Union of San Antonio.

Also at this time, one each B-727-221A and B-727-277A are acquired under lease from **Express One International** and wear dual Westpac and Express One titles. Between June 15 and September 5, they will provide scheduled service on behalf of Westpac from Colorado Springs to Newark and Washington, D.C. (IAD).

Under a March agreement with the City of Colorado Springs, a \$3-million expansion of a new permanent passenger facility and five-gate temporary concourse is opened at Colorado Springs Airport in late June. The Boyd Gaming Corporation Sam's Town "logo jet" Boeing is unveiled at Las Vegas on July 3. Stretched across the tail are the images of local models Lisa McCutcheon on one side and Corina Harney on the other, both wearing cowgirl apparel featured at the Sam's Town Western Emporium.

The company's Atlanta reservations center receives a telephone call on August 7 indicating that a bomb is aboard Flight 383, which had departed minutes earlier. The aircraft is directed to return and is sealed off in a "bomb disposal" area. Although the Boeing 737, its passengers and cargo are thoroughly searched by law enforcement personnel, no bomb is discovered.

With Westpac Chairman/CEO Beauvais holding the same post, the feeder subsidiary **Mountain Air Express** is established to fly holiday traffic to six Colorado ski resorts beginning in December. The company orders 12 Fairchild-Dornier 328-120 turboprops on behalf of its new child.

Simultaneously, Westpac teams up with Boulder-based Warren Miller Entertainment on a new 3-year partnership to promote the new air service. Under terms of the contract, the carrier becomes the official airline of Warren Miller, which has offices in Canada, Australia, and the U.K.

It will be promoted in an October motion picture release, *Snowriders*, in Miller's popular magazine *Ski World* and will be given a 30-second ad in a weekly television show to be shown for 13 weeks during the winter on Prime Sports Network.

As the result of increased public concern over the May **Valujet Airlines** disaster, higher fuel bills, and reinstatement of a federal ticket tax, the company suffers a \$910,000 loss during the third quarter. Meanwhile, on September 15, the two **Express One International** Boeings are returned.

On October 1, the second Boyd Gaming Corporation Sam's Town is rolled out at Memphis in connection with the opening of a new casino at Tunica, Mississippi. Wearing cowgirl clothing similar to that shown on the first Sam's Town "logo jet," the image of Memphis model Traci Adell adorns one side of the tail and Kansas City model Kori Bailey the other.

The company unveils the ski industry's first flying billboard at Durango-La Plata County Airport on October 17; the B-737 *The Spirit of Durango* has the mountains and markings of Purgatory Ski Resort painted on one side of its fuselage and the nearby Anasazi ruins on the other. Skier Sven Brunso is featured on one side of the tail and the Durango & Silverton Narrow Gauge Railroad on the other.

Another "logo jet" is unveiled at month's end; it is sponsored by the Crested Butte Ski Resort and features images of ski champion Kim Reichhelm on the tail and the fishing opportunities of Gunnison, Colorado, on the fuselage.

Also during the month, a new 23,100-sq.-ft. maintenance hangar is opened at Colorado Springs and orders are placed with Flight Dynamics for its Head-Up Guidance System, which will be placed aboard the aircraft of the Westpac fleet.

Finances dominate a boardroom debate during which Senior Vice President/Chief Operating Officer Trevor Van Horn is ousted. In late November, founder Beauvais is succeeded as president/CEO by Robert A. Peiser, who, by his work as chief financial officer, is noted for his success in delivering **Trans World Airlines (TWA)** from bankruptcy. Beauvais does, however, remain as board chairman. "Logo jet" creator and Vice President-Management DeNardin is succeeded by another TWA veteran, Mark Coleman.

Plans are made to increase frequencies, adjusting departure times to meet the needs of the business traveler, seek additional business traffic, and to challenge **United Airlines** dominance and competing **Frontier Airlines (2)** at Denver.

Unprofitable service to San Jose, California, ends on December 4. Simultaneously, service from Colorado Springs to San Diego is reduced to daily from twice daily. The same day, *The Spirit of Durango* begins daily roundtrip service to Miami on behalf of Floridians on ski vacations and Coloradans seeking warmer weather.

To assist in the Denver invasion, the new regional subsidiary **Mountain Air Express**, formed during the fall, launches scheduled feeder services to six ski destinations on December 15 with two Fairchild Dornier 328-120s. Within 3 days, the commuter is providing 25 daily roundtrips from Colorado Springs.

At the end of the month, the *Spring Fling Jet*, a B-737-3L9, reappears in the red and yellow colors of Century Casinos' Womacks Cripple Creek property, which is located near Colorado Springs. Gaming house employee Lisa Patton poses next to a slot machine on the jetliner's tail. The aircraft is the 13th and last in the "logo jet" series, as the new management team cancels the colorful program in favor of a new business-class emphasis and market realignment designed to return the airline to profitability.

Passenger boardings accelerate to 1,768,139. Operating income reaches \$155.33 million, but expenses are \$176.13 million. The operating loss deepens to \$20.79 million while a large \$21.83-million net loss is suffered.

Yield management strategies are put into practice early in 1997 and improved in-flight amenities are offered to passengers. Daily service to San Antonio, Nashville, and Ontario, California, ends on February 2;

Las Vegas also leaves the route network this day. Simultaneously, daily flights are added to 15 cities already visited.

As part of its planned implementation of the SABRE reservations system, Westpac, on February 28, begins to close its flight stores. The facilities, in the Citadel Mall, the Pueblo Mall, and the Park Meadows store were designed to sell tickets, along with other souvenirs bearing the airline's logo. Unable to stand on their own without ticket sales, the three outlets are shut down by March 31.

Service to Miami ends on April 6. The next day, the 1,300-employee Westpac completes a switch to the SABRE reservations system and the taking of reservations becomes much easier than with its previous in-house operation. The "Baby Boeing" fleet totals 16 in May following delivery of another B-737-300. During the month, \$10 million in new capitalization is received to help with a transfer to Denver and the decision is made to change the company image by abandoning the widely known "logo jet" program.

Service is increased by 50.7% on June 29, when new frequencies are inaugurated from Denver; a total of 45 daily departures will be offered by the company, along with 24 more by its **Mountain Air Express** affiliate. Simultaneously, 13 daily departures are cut out of the Colorado Springs schedule. Concern is expressed in aviation circles over what type of response will be made by the airport's largest client, **United Airlines** and, to a far lesser extent, by competing **Frontier Airlines (2)**.

In a surprise initiative designed to neutralize any adverse traffic or fiscal impact from the latter and to assist in the upcoming battle with the Chicago-based major, Westpac on July 1 begins the process required to takeover its rival. Officials from both companies agree that Westpac, with Peiser as president/CEO, will eventually be the surviving partner after stockholders from **Frontier Airlines (2)** hopefully accept 0.75 shares of Westpac stock for every one of their own. The no-cash arrangement, valued at \$45 million, is to be accomplished in stages, beginning with joint code-sharing on August 1 and total merger in October.

Toward the end of the month, officials of the two carriers suggest that, upon merger, the Frontier name survive for the united entity, as the name is associated with **Frontier Airlines (1)**, widely recognized and still remembered as one of the nation's safest carriers. The proposal is noted in the July 28 issue of *Aviation Week & Space Technology*.

A total of 70 weekday departures are offered by Westpac from Denver International Airport on August 1 by Westpac and **Mountain Air Express** combined to 26 markets. The Colorado Springs hub has been pared down to just 23 daily departures by the airlines, 12, later 10, of which are flown to Denver.

Guaranteed by the Gaylord and Hunt families, Westpac receives a \$10-million short-term loan from Bank One on September 19. Half of the loan is due seven days after the merger with **Frontier Airlines (2)**, with the remainder due six months after that.

Despite the introduction of code-sharing operations on the appointed date, the two companies find it difficult to coordinate their schedules and integrate their cabin and cockpit crews. With both carriers suffering financially, merger plans falter.

On October 3, Westpac President Peiser releases a statement to the media. Due to "cultural differences and the contrast in our scheduling difficulties," the merger with Frontier is dead. Even the dual-designator compact will end, on November 16.

Industry insiders suggest that the union has failed because **Frontier Airlines (2)**, with only \$7 million on hand, is unwilling to join in a situation where \$15 million in debt is due and payable shortly after the merger.

The **Frontier Airlines (2)** divorce and weak finances bring boardroom battles. Four of the company's seven board members resign, including representatives of key backers Edward L. Gaylord and Margaret Hunt Hill, who own one-third of the stock. It is they who have provided \$30 million in capital during the past 12 months and guaranteed the Bank One loan in September.

Three days later, Westpac files for Chapter XI bankruptcy protection, noting assets of \$133 million and liabilities of \$98.8 million. The U.S.

Bankruptcy Court for the District of Colorado at Denver allows the airline to withdraw \$2.8 million from its accounts receivable to pay for fuel, salaries, and various other operational costs needed to keep the company afloat as it seeks a rescue package. It is also allowed to sell tickets for future flights.

It is also announced that all jet service will be eliminated from the former Colorado Springs hub on November 16 and centered on Denver International Airport; flights to Indianapolis and Houston are also ended as of October 20. The November 16 schedule change will provide additional nonstops from Denver to Chicago (MDW), Los Angeles, San Diego, San Francisco, Seattle, and Washington, D.C. (IAD). Elimination of jet service at Colorado Springs will result in the relocation of 90 Westpac employees; however, the company's reservations center and headquarters will remain at that city.

On November 17, the airline begins to allow college students to fly one way between any city pairs on the network for just \$79; the offer is good through May.

Having made a controlling investment in **Hawaiian Airlines (HAL)** the previous year, Smith Management Co. (SMC) of New York City steps forward early in the third week of November to rescue Westpac. That firm joins with company officials to ask the U.S. Bankruptcy Court in Denver to allow it to inject \$10 million into the destitute carrier before December 4 in order to allow the airline to make its aircraft lease payments.

Thereafter, on December 20, another \$20 million in debtor-in-possession financing would become available as working capital, with another possible \$20 million to follow that would assure emergence from Chapter XI. In exchange for this aid, SMC would receive nearly all equity in Westpac. Associated company **Mountain Air Express (MAX)** is also impacted as it, too, files for creditor protection.

On November 21, former partner **Frontier Airlines (2)**, backed by Greenwich, Connecticut-based Wexford Management LLC, submits a surprise bid of its own. The new plan is similar to SMC's in that \$15 million would be put forward by December 4 for Westpac's aircraft lease payments, followed by additional debtor-in-possession financing. Bankruptcy Judge Sidney Brooks orders a preliminary hearing on the two plans for November 28, with a decision on December 3 in time for the lease disbursement.

After Brooks decides in favor of SMC, Westpac files a company reorganization plan with the Denver court that stipulates \$8 million in payments to unsecured creditors and emergence from bankruptcy in March. Under an exit-financing arrangement, SMC President John W. Adams and Sundance Venture Partners general partner Gregory S. Anderson are appointed to the Westpac board.

Westpac, meanwhile, proceeds with its plans to change its image, but also offers a large number of special ticket incentives, both in a traditional format and via the World Wide Web. These have no significant impact upon the carrier's economic situation.

On December 19, the company announces that its fares for travel on Christmas Day and New Year's Day will start at \$39 one way, with no advance purchase required.

Passenger boardings increase 25.4% to 2,217,110, while freight grows 10.2% to 4.85 million FTKs. Operating revenues for the year advance 17.3% to \$182.26 million, but expenses surge 44.4% to \$254.45. Consequently, the operating loss deepens to \$72.18 million, while the net loss deepens to \$81.95 million.

During January 1998, SMC invests another \$13 million into Westpac in an effort to keep it aloft. For weeks, daily readers of the "Message Board" on the World Wide Web's Yahoo financial pages are able to track the continuing downturn as income falls short of projections.

On January 30, in an effort to clarify what it considers to be inaccurate and misleading statements, the airline feels itself compelled to issue a communiqué: "Western Pacific Airlines continues to receive funding from Smith Management Company as part of Smith's original credit agreement with the airline dated December 3, 1997. All operations at the airline are normal. At today's board meeting, where two Smith Manage-

ment representatives hold seats and fully participated in the normal course of Company business, no discussions took place regarding discontinuation or modification of the airline's funding arrangement. In addition, during the past week, Western Pacific has realized the highest level of passenger reservations for a one week period since filing for Chapter 11 protection on October 5, 1997."

Just how dire the situation really has become is revealed on February 2, as lawyers for SMC, Westpac, Westpac's creditors, and Denver-based **Frontier Airlines (2)** argue in U.S. Bankruptcy Court. At the end of the two-hour ordeal, SMC shuts off its cash flow to Westpac, having provided \$23 million since December 3.

Without resources and deeply in debt, officials of the once-innovative Western Pacific reach a liquidation agreement with SMC on February 4, which is reported to U.S. Bankruptcy Judge Sidney Brooks. SMC agrees to pay all employees through Wednesday and to allow completion of a few final flights, which depart Denver during the afternoon, even as the airline terminates all other operations. By February 5, all aircraft are grounded and employees laid off.

Several other airlines now step in to assist those who hold Westpac tickets. **Frontier Airlines (2)** offers to accommodate passengers on a space-available basis, while **Reno Air**, **United Airlines**, and **Vanguard Airlines** make available special cut-rate tickets. **Mountain Air Express (MAX)**, which continues flying, also assist former Westpac customers, who wish to fly turboprops on the routes it operates. MAX itself will be sold to **Air Wisconsin** on February 23.

WESTERN PACIFIC AVIATION (PTY.), LTD.: Australia (1991–1993). Formed at Runaway Bay, Queensland, in 1991, Western Pacific is operated by joint Managing Directors W. S. Childs and Warren Thomas. Flights to coastal destinations are undertaken with a Cessna 441 and two Beech Super King Air 200s. Flights continue for several years.

WESTERN PACIFIC AVIATION CORPORATION: United States (1931). WPAC is established at San Francisco during the first week of January 1931 to offer scheduled passenger services to Oakland and Sacramento. The Ford Tri-Motor 4-AT-16 is purchased and employed to inaugurate revenue flights on January 28.

With the Great Depression deepening, the new entrant cannot attract sufficient traffic to gain viability and is forced to shut its doors on April 24. The aircraft is sold to a Seattle firm.

WESTERN PACIFIC EXPRESS (WESTPAC): United States (1982–1989). Westpac is established at Van Nuys, California, in 1982 to provide scheduled passenger and cargo services with a fleet of Beech 99s. Revenue flights commence over a route from Los Angeles to Palm-dale via Lancaster, Edwards AFB, and Ontario, but cannot be maintained beyond 1983.

The assets and certificate are purchased by new owners in 1984 and the company, reformed into an all-cargo operation, resumes and continues operations in 1985. Flights cease at decade's end.

WESTERN YUKON AIR: United States (1979–1982). WYA is established at St. Mary's in 1979 to fly passenger and cargo charter services. President Lawrence L. Ledlow acquires a fleet of 1 Piper PA-31-350 Navajo Chieftains, 4 Cessna 207s, and 2 Cessna 185s. These are employed to inaugurate revenue flights to Mountain Village, Pilot Station, Marshall, Russian Mission, Bethel, Aniak, Unalakleet, St. Michael, Stebbins, Kotlik, Emmonak, Alakanuk, Sheldon's Point, Scammon Bay, Hooper Bay, Chevak, Dillingham, and Nome. Operations continue apace in 1980.

The decision is taken early in 1981 to initiate regularly scheduled commuter flights. These begin in July and during the next six months a total of 6,000 passengers are transported, together with 5,000 pounds of cargo.

In 1982, three additional Navajo Chieftains are acquired. Recession, however, takes a steady financial toll and only 2,000 passengers are

flown in the year's first half. As a result, the carrier is forced to stop flying on June 30.

WESTFLIGHT AVIATION: United States (1984-1985). Charter, scheduled, and scenic tour flights in southeastern Alaska are inaugurated by Westflight following its August 1984 start-up at Ketchikan. Destinations visited by the company's Grumman G-21 Goose and 2 de Havilland Canada DHC-2 Beavers include Coffman Cove, Craig, Hydaburg, Kassan, Klawock, Long Island, and Thorne Bay.

The fleet is expanded in 1985 through the addition of a DHC-6 Twin Otter and a DHC-3 Otter. The company's last flight is made on September 30 as, the next day, it is taken over by local competitor **Temco Airlines**.

WESTJET, LTD.: 35 McTavish Place, NE, Calgary, Alberta T2E 7J7, Canada; Phone (403) 735-2600; Fax (403) 571-4649; <http://www.westjet.com>; Code M3; Year Founded 1994. In 1994, Calgary real estate developer Clive Beddoe, president of the Hanover Group, obtains an aircraft to travel back and forth between his business interests in Alberta and Vancouver. When not in use, the aircraft was available for charter from Timothy Morgan's Morgan Air. These supplemental offerings are so successful that Beddoe and Morgan and local businessmen Donald Bell and Mark Hill come to believe that a new Western Canada airline, especially if it is low cost, might be viable.

After reviewing the operations of several North American carriers, including **Southwest Airlines (2)** and **Morris Air**, to obtain insights into the operations of successful low cost airlines, David Needleman, president of **Morris Air**, is sought out as a consultant. Needleman visits Calgary and together with Beddoe, Morgan, Hill, and Bell, works out a comprehensive business plan and financial prospectus. The final plan is unveiled at the beginning of 1995 and calls for a three-plane, low-cost, deep-discount carrier that will serve short-haul markets in Western Canada from a base at Calgary. Modeling itself on **Southwest Airlines (2)**, Beddoe's airline will fly without tickets, shun the use of computerized reservations systems, avoid interlining, and serve no in-flight meals.

A number of individuals and concerns are approached and, within a month or so, C\$8.6 million in capital has been raised. Shareholding is divided between **Morris Air** founder Needleman, Ronald Greene of Renaissance Energy, Ltd., Beddoe, and retired Nesbitt Burns, Inc. official William Mathews.

Chairman/CEO Beddoe begins to recruit a nonunionized workforce of 340, including former **Canadian Regional Airlines, Ltd.** executive Donald Clark as chief financial officer. The first workers move into the company's premier downtown Calgary offices in July. Two Boeing B-737-275As are leased in November. The aircraft are painted in a white, blue, and teal livery. A B-737-265C is acquired in January 1996 and, later in the month, Westjet completes another offering to retail and institutional investors, including the Ontario Teachers' Pension Plan Board, through Canada Trust Company, Ltd. Directors and senior company officials also obtain equity.

Revenue flights commence on February 29 and, through the year, a total of 96 weekly flights are mounted linking the carrier's base with Victoria, Vancouver, Kelowna, Edmonton, and Winnipeg. With more demand from Regina than traffic from Winnipeg, the company halts service to the Manitoba capital on June 1 and begins flying to Regina and Saskatoon. During the month, another B-737 joins the fleet, a Dash-2A3. During the summer, a two-story headquarters office building is occupied at Calgary's airport industrial park.

On September 30, the company voluntarily grounds its aircraft when Transport Canada questions the carrier's maintenance procedures. Chairman Beddoe threatens to sue the regulatory body to halt its safety audit; however, by October 14, the company's fleet has been cleared and normal operations, accompanied by slashed fares, are resumed. During the 17 days of idleness, the company has lost C\$5 million. Long-term debt stands at just C\$219,000.

While en route from Victoria to Edmonton on October 25, an engine warning light comes on aboard a B-737-275A; the engine is shut down

and the plane returns to its point of origin. After a safe emergency landing and two hours spent in repair, the flight takes off again and is completed without further incident.

Company spokesman Siobhan Vinish announces on November 11 that the carrier's quest for an injunction against Transport Canada has been dropped. Service to Fort McMurray begins on November 19.

By December 31, 601,149 passengers have been flown and generated income of C\$37 million.

Airline employment remains at 340 in 1997. A rights offering in January raises an additional C\$8.3 million, making Westjet the most heavily capitalized start-up airline in North America during the past 15 years. The funding is employed to purchase a fifth "Baby Boeing" and to restore the cash reserve depleted by the September shutdown.

On March 1, the company's first anniversary, it is announced that 760,000 passengers have been transported during the first year. The new Boeing is employed to inaugurate revenue flights to Grande Prairie and Prince George, British Columbia, and joins with the earlier units to increase monthly departures to 1,250.

On June 18, frequencies are initiated from Vancouver to Abbotsford/Fraser Valley, British Columbia; Westjet becomes the first scheduled airline to service the Abbotsford Airport.

Both of the nation's other long-haul discount airlines, **Greyhound Air, Ltd.** and **Vistajet, Ltd.**, fail during September; Westjet is the only survivor of the three started with such high hopes a few months earlier.

On December 5, the carrier licenses Open Skies' Revenue Management System to help it identify sales opportunities and to maximize system revenues. The computerized program is an important forecasting tool.

Operating revenues of C\$77.3 million are generated, as are costs of C\$66.79 million. Operating profit reaches C\$10.54 million and a net profit of C\$6.16 million is announced.

Service continues in 1998. The fleet is increased to include 10 B-737s that visit 9 cities throughout Western Canada.

On March 30, daily B-737 roundtrips are started between Winnipeg and Calgary, with connecting service to Edmonton, Vancouver, Kelowna, Victoria, and Abbotsford/Fraser Valley.

On November 13, a C\$27-million fixed-rate term loan facility is finalized with Newcourt Capital, Inc. Under its terms, the carrier may employ these new funds to pay for both planned and previous aircraft acquisitions through September 1999. The facility is set to mature in October 2005.

Operating revenues this year climb to C\$125.9 million, while expenses reach C\$111.75 million. The operating profit is C\$14.23 million, while a net gain of C\$6.51 million is turned in.

With the airline having successfully grown and demands having kept pace, the decision is taken on February 11, 1999 to appoint Stephen C. Smith, former president/CEO of **Air Ontario, Inc.**, as Westjet president/CEO. He will concentrate on day-to-day activities, while Chairman Beddoe will continue to emphasize development.

It is confirmed in mid-month that the company is in discussion with **Air Canada, Ltd.** concerning a nonequity strategic commercial agreement.

On March 11, Westjet launches two new routes. Daily roundtrip service is inaugurated from Calgary to Thunder Bay, becoming the only airline to operate a nonstop flight between the two communities. Simultaneously, twice-daily nonstop roundtrips are initiated from Calgary to Prince George.

At the conclusion of the airline's annual meeting on May 5, **Air Canada, Ltd.** CEO Durrett informs reporters that talks will shortly be resumed with Westjet concerning a cost-cutting, code-sharing, strategic alliance. *The Edmonton Journal* reports on May 6 that the major is "keen to ink" a deal in order to help it begin to make money on short-haul routes in the western part of the nation, money previously lost to Westjet's low-cost service.

On May 7, it is noted that the company's first-quarter revenues are C\$37 million, while pretax profits have increased 350% to C\$4.5 million.

A spokesman announces on May 27 that shares valued at approximately C\$25 million will be made available in an initial public offering.

Although no exact percentage of the airline to be offered or date of the offering is given, a preliminary prospectus is filed with the security commissions in all Canadian provinces. Investment dealer CIBC World Markets is retained to lead the forthcoming transaction.

The initial public offering occurs in July and is extremely successful; the oversubscribed sale of 2.5 million shares, or approximately 10% of the company, generates proceeds of C\$25 million. Certain of the funds are employed to purchase a pair of B-737-200As, the first of which joins the fleet on August 18. Daily service from Calgary to Grande Prairie in Alberta begins on September 9.

Although traffic figures are not reported, financial data is. Revenues increase 62.3% to \$138.43 million, while costs surge 54.1% to \$117.71 million. The operating profit accelerates to \$20.71 million, while net gain jumps to \$10.76 million. The company's profit-sharing plan permits the distribution of C6.5 million to Westjet employees.

Airline employment stands at 1,500 at the beginning of 2000. It is announced on January 20, that the carrier has placed orders for four more B-737s and that it will establish a hub at Hamilton, Ontario, in order to expand its operation into eastern Canada. By summer, the carrier will be offering 11 daily departures from Hamilton to such destinations as Halifax, Montreal, Ottawa, Thunder Bay, Winnipeg, and Calgary.

In February, the carrier tentatively agrees to a major upgrade in fleet equipment, including an order for 6 Next Generation B-737-700s, with 17 options. Simultaneously, a contract is signed with GECAS for the charter of 10 more Next Generation B-737-700s, with lease options on another 10.

The first step in the company move into eastern Canada is launched on March 9 when, employing the first of four newly delivered B-737s, it begins a new route from Hamilton to Winnipeg and another from Hamilton to Thunder Bay, continuing on to Calgary. Additionally, another daily flight is added on the Calgary to Abbotsford route.

On April 19, six-times-a-week B-737 return service is inaugurated from Moncton, New Brunswick, via Hamilton, to Winnipeg. Previously operated by **LADECO Chilean Airlines Linea Aerea del Cobre, S.A.**, a B-737-205A arrives on May 23 under a five-year lease from Pegasus Aviation.

Twice-daily B-737-200 roundtrips begin on June 8 between Hamilton and Ottawa. Orders for five B-737-200s are confirmed on July 18; the first will arrive before the end of the month, with another delivered in September, followed by two in December and one in February.

The February reequipment decision is confirmed on August 22 with the six Next Generation B-737-700 orders made firm. The long-term package will now include 20 of the advanced planes, with options taken on another 30. An agreement is also finalized for the lease of 10 Dash-700s from GECAS, with the first arriving before the end of the second quarter of 2001.

On September 18, Westjet reveals the resignation of President/CEO Stephen Smith seven days earlier. A press release indicates that Smith had left due to "management philosophy differences" with the carrier's other directors. Chairman Beddoe once more becomes president/CEO, posts that he had surrendered upon Smith's appointment, and indicates that his move is "not an interim move." The management shakeup has no impact on the airline's business plan or operations.

It is announced on November 9 that the carrier will inaugurate twice-daily roundtrips from Fort McMurray to Calgary and daily return flights from the same point to Edmonton, beginning on January 8.

Preliminary loan approval is received from the U.S. Export-Import Bank on November 23 covering the financing of 26 new Next Generation B-737-700s.

At the end of 2000, a new five-year contract is ratified by 90% of the 165 members of the company's in-house pilots' association. The fleet of "classic" B-737s now includes 6 Dash-281As, 1 each Dash-217, 2M8A, Dash-2Q8A, Dash-2A3, Dash-297A, and Dash-2T4A, Dash-2E3A, 4 2H4As, and 2 each Dash-275As and Dash-204As.

Revenues during the 12 months increase 63% to C\$332.5 million, while expenses rise 61.2% to C\$279 million. The operating profit

climbs 75.5% to C\$53.5 million while net gain skyrockets 91% to C\$30.3 million. Load factor averages a pleasing 76.2%.

WESTKUSTENFLUG HELLINGER, GmbH. (WKF): Germany (1955–1985). Originally established as a flying school in 1955, WKF undertakes scheduled commuter services in summer 1965 in association with Hadag Air. Wyk-auf-Fohr, Westerland (Sylt), St. Peter-Ording, Heide, and Hamburg are linked by Cessna equipment.

Services continue over the new two decades, during which the fleet is increased to comprise 3 Cessna 172s, 1 Cessna 207, and 1 Partenavia P-68. Operations cease in 1985.

WESTMINSTER AIRWAYS, LTD.: United Kingdom (1946–1949). Capitalized at £20,000, Westminster Airways, Ltd. is founded by a group of members of Parliament and registered as an airline company on June 5, 1946. Air Commodore A. V. Harvey is named chairman/managing director. Initial equipment consists of two Percival Proctors and one of these begins company revenue services on June 15 with the transport of a professional boxing team. An Airspeed AS.65 Consul is acquired in July along with an Avro 19, followed by three more Consuls in September and October.

During these months, various ad hoc charters are undertaken, including the transport of young Auschwitz concentration camp survivors to the U.K. During a long-haul trip to Rhodesia, the Avro is lost in a crash on October 31. Late in the fall, the company is transferred between London airports, from Heston to Kenley and Croydon. One of the Proctors is sold in November.

On behalf of **Airwork, Ltd.**, company Consuls in January 1947 fly winter tourists to Sameden Airport, St. Moritz, becoming the first British commercial aircraft to land at that facility. In April, Westminster receives an Auster J/1 Autocrat and, more importantly, a Douglas C-47 converted to DC-3 civil standard. On April 23, four Consuls are leased to **British European Airways Corporation (BEA)** to operate the state carrier's Helsinki service.

In June, Westminster aircraft return 540 people to the U.K. who had been stranded by a French rail strike, more than any other British airline. A second DC-3 is obtained in July and is operated on behalf of London Express Newspapers to carry newspapers from Leeds to London and from London to Glasgow. During October, both DC-3s are sent to India, under an Indian government contract, to fly refugees from India to Pakistan.

This airlift is concluded on December 5, by which time the Douglas transports have transported 4,500 passengers, including 69 by in a single sortie. In December, company business is transferred to Blackbushe Airport; three Consuls are sent on charters to South Africa while the remainder of the fleet flies holiday tourists to Switzerland.

A long-haul DC-3 charter to Cairo via Malta is made in January 1948, followed by another long flight to Nairobi and back in February. Company Consuls take over a **British European Airways Corporation (BEA)** scheduled route London (Croydon) to Cowes in July. During July and August, a DC-3 is chartered to the UN and sent to India and Pakistan.

On August 4, a Westminster DC-3 begins participation in the Berlin Airlift; both DC-3s are fully engaged by the end of October, flying supplies into the former German capital from Hamburg. On November 23, the two planes are withdrawn, having completed 228 sorties and flown in over 300 tons of supplies. They are sold during November and December. A Handley Page HP-70 Halton is purchased in November and on December 15 it is committed to the airlift.

The Halton is converted to tanker status and flies the company's first fuel run into Berlin on January 1, 1949. Two more Haltons are obtained in February and March, together with an HP-61 Halifax 8 in April. After only 10 sorties, the Halton purchased in February crashes at Berlin on April 1.

Between them, the Haltons complete a total of 428 sorties by the time they return to Blackbushe from Germany in July. The post airlift depression in the charter business forces the carrier to stop flying at the end of the summer and to enter liquidation in November.

WESTOVER AIR: United States (1988–1989). A division of Long Island-based **East Hampton Aire**, Westover Air is established at Chicopee, Massachusetts, in the summer of **1988** to provide scheduled passenger services to New York (LGA). Daily Beech 99 and Beech 1900 roundtrips are inaugurated on September 26, but can only be sustained through January 5, **1990**.

WESTPAC. *See* **WESTERN PACIFIC AIRLINES**

WESTWARD AIRWAYS, LTD.: United Kingdom (1969–1970). Westward Airlines is set up at London (LGW) in the summer of **1969** to offer interairport shuttle service linking its base with London (LHR). It is anticipated that the service will be a success because there are no direct connections for the 25-mile trip.

Two newly acquired Britten-Norman BN-2 Islanders launch the new service; plans to allow the new enterprise to land its little turboprops on a London (LHR) taxiway so as to avoid larger traffic are not approved.

In August, daily roundtrip flights are initiated from London (LGW) to St. Mary's, Scilly Isles, via Plymouth and Newquay.

Flights continue in **1970** and during the summer a new stop begins at Bournemouth. Unable to generate either the traffic or profits required to maintain economic viability, the company shuts its doors in October.

WETRAFA AIRLIFT, S.A.: Airport Nidjili, Kinshasa, Democratic Republic of the Congo; Phone 32 (59) 704 409; Fax 32 (59) 704 409; Code W8T; Year Founded 1994. Kinshasa-based Waltair, S.A. is renamed in **1994**; however, the mission of providing regional and domestic charter services continues. Flights are operated with one each Aerospatiale Sud Est SE-210 Caravelle III and Boeing 727F.

Kalambayi M. Faustin is president in **1999** and oversees the work of 90 employees. Regional and domestic passenger and cargo services continue to be provided with two Caravelle III freighters, a B-727F, and a British Aerospace BAe 748-2A.

AirlinersOnline.com reports on December 28, **2000** that Wetrafa has acquired a Douglas DC-9-32. It will join the B-727-25F.

WHEELER AIRLINES: United States (1969–1985). Warren H. Wheeler forms Wheeler Flying Service at Raleigh, North Carolina, in early **1969** with the aid of a loan from the Small Business Administration. Revenue charter flights commence on February 1 with a single twin-engine Piper PA-23 Aztec. By the end of **1973**, WFS has established itself as a moderately successful operation with 12 employees and five aircraft, including several Beech 18s and a Britten-Norman BN-2 Islander.

A scheduled air transport division, Wheeler Airlines, is established in **1976**. Reported in the aviation press as "the first Black airline," this small North Carolina commuter begins to expand following passage of the Airline Deregulation Act in **1978**.

In addition to its original Charlotte, Norfolk, Newport News, and Ashville destinations, Wheeler begins flying daily roundtrips to New York City in **1979**. In an effort to mitigate early developmental losses sustained on the New York service, an Atlantic City stopover is initiated in late **1980**.

In order to enhance the New Jersey service, a joint fare and co-operative marketing agreement is negotiated with **Piedmont Airlines (1)** in **1981**. Simultaneously, the fleet is enlarged to include 1 Fokker Fairchild F-27J, 2 Beech 99s, 1 Piper PA-31-350 Navajo Chieftain, and 2 Smith Aerostars.

New routes are added in **1982** to Tennessee's TriCities Airport, Greensboro, Wilmington, and Washington, D.C. (DCA). The American-made Fokker is withdrawn in favor of a fleet of 3 Beech 99s.

A total of 48,000 passengers are flown in **1983**. Operations continue in **1984** but, overexpanded, Wheeler files for Chapter XI bankruptcy in October **1985**.

WHEELER AIRLINES, LTD.: Canada (1921–1964). Lightplane scheduled services are inaugurated in **1947** by this 26-year-old charter

operator between Jovite and Montreal. Winning contracts to participate in support of the DEW Line in the mid-1950s, Douglas DC-3 and Curtiss C-46 routes are developed and maintained into the Hudson Bay region.

Two DC-4s join the fleet in **1956**, followed by a third in **1958**. The four-engine transports are employed to operate transatlantic passenger charters from Montreal (YUL), but one of these crashes at St. Cleophas on November 4, **1959**.

A Curtiss C-46A with two crew crashes while on initial approach to DEW Line Site 28 in Canada on March 25, **1960**; although the aircraft is destroyed, neither flyer is badly hurt.

The two remaining DC-4s, comprising the carrier's heavy division, are sold to **Nordair, Ltd.** in April. The lightplanes continue to operate for Wheeler until **1964**.

WHEELER FLYING SERVICE. *See* **WHEELER AIRLINES**

WHIDBEY FLYING SERVICE: United States (1964–1967). Wes Lupien founds Whidbey at Oak Harbor, Washington, in the late fall of **1964** to provide scheduled passenger and cargo commuter flights to Seattle. Employing a single Piper Cherokee Six, Lupien inaugurates service on December 17.

Operations continue apace until June of **1967** when Lupien becomes president/CEO of the new, combined regional **Puget Sound Airlines**, which will begin services on August 28.

WHITE EAGLE AVIATION, S.A.: Airport Okęcie, 17 Stycznia 47 Str., Warsaw, Poland; Phone 4822 650 10 30; Fax 4822 650 16 40; http://www.whiteeagle.com.pl; Year Founded 1995. White Eagle is established at Warsaw in **1995** to provide regional cargo and air taxi flights and to engage in helicopter work. Service is offered over the remainder of the decade without headline or incident, employing 1 each Yakovlev Yak-40, Let L-401UVP, Beech 36, and Bell 407.

Taking advantage of the airline market's recent liberalization, in early **2000** White Eagle decides to offer passenger charters to sun destinations in Spain, Greece, Israel, Cyprus, Turkey, Egypt, and Morocco. Arrangements are completed for the charter of a jetliner and tour operators are invited to complete arrangements to fill its seats.

On May 6, a former **Hapag-Lloyd Fluggesellschaft, mbH**, B-737-4K5 is delivered from the Lufthansa Technik, A.G. Hamburg facility and christened *Jurata*. A white-titled fuselage is complemented by a dark blue tail that displays a white stylized eagle logo.

The first Polish airline other than **LOT Polish Airlines, S.A.** to offer charter passenger flights, White Eagle inaugurates service on May 8 from Warsaw to the Iraklion on Crete. Eleven more flights are offered during the month with the number growing through June to total 66 in July.

WHITE HORSE FLYING SERVICE, LTD. *See* **PACIFIC WESTERN AIRLINES, LTD.**

WHITE MOUNTAIN AIRE: United States (1986). WMA is set up at White Mountain Lakes, Nevada, in the summer of **1986** to provide daily roundtrip scheduled Piper PA-31-310 Navajo passenger and cargo services to Phoenix. Unable to continue beyond the vacation season, the commuter stops flying on October 7.

WHITE RIVER AIR SERVICES, LTD. *See* **AUSTIN AIRWAYS, LTD.**

WHYALLA AIRLINES (PTY.), LTD.: 5 St. Whyalla Norrie, Oborn, South Australia, 5608, Australia; Phone 61 (86) 458 922; Fax 61 (86) 451 951; http://www.whyalla.net.au/~wwair; Code WW; Year Founded 1991. Formed at the South Australian town of Whyalla in **1991**, Chief Pilot/Managing Director Kym Brougham's initial fleet comprises 1 Beech 58 Baron and 2 Piper PA-31-350 Navajo Chieftains.

Scheduled services are undertaken linking the base with Adelaide and other nearby towns.

A single Chieftain is added in 1992 and 14 roundtrips are made each week between Whyalla and Adelaide. Frequencies on the route are boosted to 19 per week in 1993 and continue at this rate during 1994. To handle the increase, one more Navajo Chieftain and a Cessna 210 are acquired in 1995.

Revenue services continue apace without change in 1996–1999. During the former year, a homepage is opened on the Internet's World Wide Web.

On May 31, 2000, the pilot of a Piper Navajo Chieftain with seven passengers radios that he is ditching into Spencer Gulf, having lost power on both engines. There are no survivors. Investigators will later rule out fuel exhaustion and cite evidence that both of the turboprop's engines may have independently suffered mechanical failure.

As the result of the accident, Whyalla is grounded by the Australian government the same day. Thereafter, it converts into an FBO to provide ground services to private operators, with particular attention paid to **Airlines of South Australia (Pty.), Ltd.** that flies into Whyalla from Adelaide. The company surrenders its AOC on August 1.

WIA (WINDWARD ISLANDS AIRWAYS INTERNATIONAL, N.V.): P.O. Box 2088, Phillipsburg, Princess Juliana Airport, St. Martin, Netherlands Antilles; Phone 599 (5) 52568; Fax 599 (5) 54229; <http://www.mrstm.com/winair>; Code WM; Year Founded 1961. "Winair" is formed at Philipsburg, St. Martin, on August 24, 1961. With a single Piper PA-23 Apache, charters are offered to various Antillean destinations. Scheduled flights to St. Eustatius commence on August 5, 1962.

Traffic increases and in 1967 the first de Havilland Canada DHC-6-100 Twin Otter is purchased. At the end of the decade, regular frequencies are undertaken beyond the Netherlands Antilles.

Winair's name is officially changed to WIA (Windward Islands Airways International) in 1971. Another Twin Otter is purchased and the route map grows to include stops at Anguilla, Nevis, Saba, St. Barthelemy, St. Eustatius, St. Kitts, and St. Thomas. In 1972–1973, the carrier leases a pair of Fairchild-Hiller FH-227s, which it flies to San Juan. The exercise nearly bankrupts the company.

As a result of the company's brush with failure, it is sold to the government (to avoid its takeover) in December 1974 and management of the nation's new regional commuter is assigned to **ALM Antillean Airlines, N.V.** In 1978 the fleet includes 2 Twin Otters and 1 Islander and the employee population is 42.

A third DHC-6-300 is acquired in 1981 and by 1983 enplanements total 97,847. Passenger boardings jump 11.1% in 1984 to 110,063 while freight traffic climbs 10.5% to 399,958 FTKs. Routes, fleet, and services are maintained throughout the remainder of the decade.

In 1989, the Islander is withdrawn and a NAMC YS-11-100 is acquired for cargo operations. The passenger fleet comprises 3 de Havilland Canada DHC-6-300 Twin Otters. Customer bookings by the beginning of the 1990s average 150,000 per year.

On November 1, 1992, scheduled services are initiated to Tortola, British Virgin Islands. The YS-11-100 is withdrawn at the end of the year and in 1993–1994 the fleet comprises three DHC-6-300s. Chairman N. C. Wathey and President I. Romer oversee a workforce of 110.

Enplanements in 1995 total 190,525. There are profits: \$1.03 million (operating) and \$930,000 (net).

The workforce is cut 13.5% in 1996 to 90. During the year, the company, which has provided connecting flights for **American Airlines**, is criticized by the major for its poor handling of AA customers baggage.

Customer bookings drop 23.8% to 153,898 and revenues decline 24.4% to \$6.75 million. Even though expenses are down 4.9%, they still total \$7.51 million and cause losses: \$760,000 (operating) and \$844,000 (net).

Destinations visited by new Chairman M. Ferrier's 3 Twin Otters in 1997–1999 include Anguilla, Nevis, Saba, St. Barthelemy, St. Eustatius, St. Kitts, St. Thomas, and Tortola.

The board of directors meet with Prime Minister Miguel Purier and other officials of the government of Curaçao on February 9, 2000, to discuss the airline's financial condition, its outstanding tax obligations, and future direction. The political leadership suggests that the airline be privatized and both sides label the conference a success.

The cancellation of night flights to St. Eustatius on March 10 is not well received by that island's leaders. Further conversations between the airline board and the government are held during the month. All come to realize that before the airline can be privatized, it must be reconstructed and made appealing to potential investors. The necessary process to accomplish this end may take a year or so.

On June 16, a new agreement permitting schedule coordination, joint marketing and ticketing, and various other services is signed with **ALM (Antillean Airlines, N.V.)**.

Guaranteed by the central government (and backed by the U.S. Export-Import Bank), WINAIR is awarded a \$2.6-million loan from the Windward Islands Bank on July 6. The funds are necessary to finalize the purchase of two Twin Otters being offered for sale as surplus by the Canadian government. The newer DHC-6-300s will replace two older units that have now reached the end of their cycle and are too expensive to repair. It is hoped that the new aircraft will allow an increase in the number of flights offered to the islands of Anguilla, Saba, St. Barths, St. Kitts, Statia, and Tortola.

Also during the month, the company headquarters and hangar, which had been damaged the previous fall by Hurricane Lenny, are repaired over the next two weeks.

Managing Director John Strugnell and Gary Cullen, CEO of **LIAT (1974), Ltd.** announce a new code-sharing and marketing agreement on July 28. Under terms of the pact, the two will quickly integrate their schedules and launch new services between the French islands, St. Martin, Antigua, and Santo Domingo.

At the end of July, the airline finalizes the purchase of two ex-Canadian government Twin Otters, including one from an Ohio company that had obtained it before WINAIR. Both need some repair. CEOs Strugnell and Cullen unveil a new regional networking plan on September 22. Under their concept, the pair link with Trans Island Airlines, Ltd. of Barbados, **Carib Aviation, Ltd.** of Antigua, and **Air Caraibes Exploitations, S.A.** of Guadeloupe to serve passengers in Miami, Cuba, the Dominican Republic, French Guiana, and Guyana. The new business confederation is tentatively labeled the CARIB Partner Alliance. With Michael Ferrier, WINAIR board chairman, as chairman of the combine, it will later be renamed CARIB Sky Alliance.

On September 26, State Secretary Marcel Gumbs writes to the board of WINAIR requesting that it adopt a new package of austerity measures to help stem its continuing losses. Board Chairman Ferrier writes back, pointing out the impossibility of the demand and noting that employees have not received a raise in five years. Since 1999, it has been able to reduce expenses on materials and services and has introduced a public tendering program. That one measure alone has allowed it to cut a \$360,000 bid to provide a new computer system down to \$190,000, to cut the cost of its recent hangar repair from \$450,000 to \$265,000, and to reduce a \$170,000 bid for the upgrade of the Canadian Twin Otters to \$136,000. Finally, he warns that any cutting of overtime or cost of living allowances could cause major problems with the airline's unions.

As a first step under the CARIB Partner Alliance, WINAIR offers improved connections to St. Martin, beginning on November 1.

The first ex-Canadian Twin Otter arrives on November 14, with the second expected by the end of the year. In the interim, the company seeks a code-sharing agreement with **American Airlines**. The major refuses to sign a deal, however, choosing to remember WIA's 1996 problems with losing passenger baggage.

As the year ends, the company anticipates full implementation of the CARIB Sky Alliance on April 1. The new multi-airline compact is expected to generate 690 daily flight movements serving a projected 1.4 million passengers and linking 46 destinations. With 1,400 employees and 32 aircraft, the group will hopefully enjoy a \$145-million turnover.

WIDEROE NORSK AIR, A.S. See **WIDEROE'S FLYVESELSKAP, A.S. (WIDEROE'S FLYING COMPANY)**

WIDEROE'S FLYVESELSKAP, A.S. (WIDEROE'S FLYING COMPANY): P.O. Box 247, Bode, N-8001, Norway; Phone 47 (67) 116 000; Fax 47 (67) 116 195; <http://www.wideroe.no>; Code WF; **Year Founded 1934.** Pioneer Norwegian aviator Viggo Wideroe founds a smallplane charter service, Wideroe og Bjorneby, A.S., with another pilot on February 19, 1934. In June, he reorganizes the company under its present name and receives government permission to begin scheduled service over a coastal route from Oslo to Haugesund via Kristiansand and Stavanger. Passenger and freight flights begin with a Waco cabin floatplane.

When the state carrier **DNL (Norwegian Airlines, A.S.)** objects to Wideroe's scheduled operations in 1935, the scheduled portion of the small airline is transferred to northern Norway in 1936 and mail and passenger flights are undertaken to the Kirkenese.

Further south during the remainder of the year and in 1937, charter operations are offered, along with taxi flights, a flying school, and aerial photography. The company's technical department builds the nation's first indigenous aircraft in 1938, the high-wing Honingstad Norge A, which is placed into service and flies nonscheduled routes until grounded by the war.

The Kirkenese service ends in 1939. Occupying German forces imprison Viggo Wideroe in 1940; he thus gains—along with Albert Plesman of **KLM (Royal Dutch Airlines, N.V.)**—the dubious honor of being one of the world's few airline executives to suffer such a fate. Wideroe is released in 1943 and his airline is reconstituted in 1946, initially as a flying school. Air taxi and aerial photography work resumes in 1947. Flights continue apace in 1948–1949.

The small Narvik-based operator **Polarfly, A.S.** is purchased and merged in 1950 and the combined company is named **Wideroe's Flyveselskap & Polarfly, A.S.** In 1951 the government and **SAS (Scandinavian Airlines System)** grant the airline certain contract routes in northern parts of the country. Employing Noorduyn Norsemen, Wideroe's Flyveselskap, A.S. begins scheduled floatplane service in early 1952 from Narvik to Bodo via Svolvaer.

Several de Havilland Canada DHC-3 Otters join the fleet in 1953 following an award by **SAS (Scandinavian Airlines System)** of a three-year contract to operate a floatplane route from Tromsø to Alta, Hammerfest, Kirkenes, and Vadso. In 1954–1955, sectors are added from Narvik–Harstad and Bodo–Harstad–Tromsø–Alta and Hammerfest.

By 1956, the carrier has also developed its own Norsemen/Otter services further south. After an uneventful 1957, the company reverts to its original Wideroe's Flyveselskap, A.S. moniker in 1958.

After years of mostly scheduled and contract services with single-engine, piston-engine equipment, Wideroe's undertakes a brief 1962–1964 marketing agreement with **Nordair, A.S.** of Denmark. Flying as **Wideroe Nordair, A.S.**, the airline offers charter services employing Douglas DC-3s and, on trial, the unpressurized Nord 260 Super Broussard.

A chartered C-47A with 3 crew and 15 passengers, fails its takeoff from Oslo on March 5; although the aircraft must be written off, no fatalities are reported. Charter flights end in 1965.

Scheduled flights resume in 1966 as the government awards the company authority to undertake regular service from Bodo to Trondheim via Mo i Rana, Sandnessjoen, Rorvik, and Namso. A route is also started from Tromsø to Hammerfest. The Norwegian Parliament (Stortinget) now enacts a national airport plan that begins with construction of four STOL facilities along the Helgeland coast at Mo i Rana, Sandnessjoen, Bronnoysund, and Namsos.

Wideroe's is awarded this initial route in 1967. Aerial photography, long a company specialty, is increased during these years by the introduction of a camera-equipped Douglas A-26 Invader, which is employed when Wideroe's accepts foreign contracts, some from as far away as Libya.

The carrier receives its first twin-engine, turboprop transport in May 1968, a de Havilland Canada DHC-6-200 Twin Otter. This machine is

employed to inaugurate scheduled services to the four recently opened STOLports on July 1. Late in the year, DHC-3-Otter pilot Turi Wideroe becomes a pilot trainee with **SAS (Scandinavian Airlines System)** and will become the first female to fly for a major European carrier.

By 1969–1970, the company is undertaking operations to 33 destinations throughout Norway. During the latter year, the carrier's photography department is merged with competing **Fjellanger, A.S.** to create **Fjellanger Wideroe, A.S.**, which will become the nation's largest survey firm.

In 1971, the Twin Otter is sold to the German operator **Transair, GmbH**, and is replaced by four DHC-6-300s. These begin flying, during the year, to the new STOLports in western Norway: Orsta-Volda, Flore, Forde, and Sogndal. In 1972, the de Havillands begin flying into the Lofoten and Vesteralen STOLports at Svolvær, Leknes, and Stokmarknes.

Having received a government request to operate a taxi service to Rost and Vaeroy Islands west of Bodo, the company in 1973 contracts with **Helilift, A.S.** to provide the flights.

Enplanements for the year total 135,340.

The workforce in 1974 totals 175. The European launch customer, Wideroe's orders two de Havilland Canada DHC-7-102s. Service begins during the year to five STOLports in the Finnmark region: Hammerfest, Mehamn, Serkjosen, Berlevag, and Vadso.

Passenger boardings during the 12 months jump 33% to 202,000.

In 1975 the carrier's 174 workers oversee inauguration of service to the STOLports at Sandane and Narvik, bringing the number of points served in Norway to 34. Shares are now taken by three major investors: Fred Olsen Flyveselskap Group, A.S. (40%), **SAS (Scandinavian Airlines System)** (22%), and **Braethens SAFE, A.S.** (18%). Fred Olsen becomes chairman with Per Bergsland as managing director.

Customer bookings accelerate 22.5% to 248,057 and freight traffic is up by 25.4% to 48,000 FTKs.

The Canadian-built Dash 7s arrive in 1976. Scheduled domestic passenger service is offered to a significant number of locations along the coastal region from Bergen to Kirkenes. A government subsidy is provided allowing Wideroe to continue service to the series of specially constructed STOLports. **Helilift, A.S.**'s successor, **Offshore Helicopters, A.S.**, takes over the contract service to Rost and Vaeroy Islands, employing Sikorsky S-58Ts.

Twin Otters begin flying into the new STOLport at Honningsvåg in 1977 and the one opened at Batsfjord in 1978. The fleet is upgraded by the purchase of additional Twin Otters. By 1979 enplanements total 445,320.

Airline employment in 1980 stands at 260. Passenger boardings accelerate a minor 0.6% to 448,000, while freight is up 2.8% to 8,000 pounds.

In 1981–1982, the number of employees rises to 235 and the fleet is increased to include 4 DHC-7-102s, 1 Sikorsky S-58T, and 14 DHC-6-300s. Flights are made to 34 domestic points, including 19 STOLports and 2 heliports. Passenger boardings are 491,959 in 1981 and 511,382 in 1982.

A problem with the tailfin causes a DHC-6-300 with 2 crew and 13 passengers to crash into the sea 80 km. E of Nortkapp, Norway, on March 11 of the latter year; there are no survivors. This is the company's first fatal accident.

Enplanements total 575,700 in 1983. When special services and charters are included, passenger boardings rise to 794,000 in 1984. Revenues climb 24% and the net profit 34%.

With a fleet of 5 DHC-7-102s, 12 DHC-6s, and 1 Bell 212, Norway's longest-surviving airline operates to 35 stops in 1985, including 20 STOLports stretching from Oslo to Florø. Bjørn Eldem becomes chairman with Bard Mikkelsen as president.

Peter L. Nissen becomes managing director in early 1986. While en route from Honningsvåg to Hammerfest on May 6, a woman gives birth to a little girl. The child, named Silje, not only receives a lifetime of free travel wherever Wideroe flies, as well as a job offer, but also names the Twin Otter in which she is born after her. In late October, the carrier joins IATA.

Two more Dash 7s join the fleet in **1987** as enplanements reach 646,226. The fleet of the 550-employee airline in **1988** includes 13 Twin Otters and 8 Dash 7s.

While on initial approach to Bronnoysund on May 6 in bad weather, a DHC-7-102 with 3 crew and 33 passengers crashes into Torgghatten Mountain; there are no survivors.

Passenger boardings decline 6.7% to 605,648 and freight traffic dips 2.3% to 337,000 FTKs.

The 555-employee third-level operator adds another Twin Otter in **1989**. In addition to 150,000 replacement passengers flown on behalf of **SAS Commuter**, the carrier's 8 DHC-7-102s and 13 DHC-6-300s haul 787,000 passengers over Wideroe's independent routes. Merger discussions commence with Sandefjord-based **NorskAir, A.S.**, which is failing financially. Enplanements for the year total 787,300.

Company employment is increased 8.1% in **1990** to 600. Two Twin Otters are temporarily withdrawn.

While climbing away from Vaeroy on April 12, the elevator of a DHC-6-300 with two crew and three passengers fails, causing the turboprop to crash into the sea; there are no survivors. The disaster is initially blamed on windshear and leads to the closing of the STOLport at Vaeroy.

Passenger boardings slip 1.6% to 774,398, but freight inches up 0.5% to 435,000 FTKs. A \$1-million net profit is earned.

The payroll grows 3.8% in **1991** to 634 and the DHC-6s are now restored. The former independent **Norsk Air, A.S.**, based at Sandefjord and flying four Embraer EMB-110P1s and a Fokker 50, is taken over and operated as a subsidiary under the name Wideroe Norsk Air, A.S.

Customer bookings increase 2% to 787,500 and revenues rise 3.2% to \$96 million. The net profit climbs to \$4 million.

The workforce is increased by 9.5% in **1992** to 640 and the fleet now includes 12 DHC-6-300s, 5 owned and 3 leased DHC-7-102s, including 1 leased from **British Midland Airways, Ltd.** In December, a \$160-million order is placed for 15 DHC-8-102s.

Passenger boardings increase 6% during the 12 months to 835,000.

In **1993**, Chairman Bjorn Eidem and President Bard Mikkelsen oversee a workforce of 700 and a fleet of 11 Twin Otters, 5 owned and 3 leased Dash 7s, and 4 DHC-8-102s, the first 2 of which arrive in May and June. When the inaugural unit enters service on June 20, it is the first of its type operated by any Scandinavian carrier.

While on final approach to Namsos on an October 27 service from Trondheim, a DHC-6-300 with 4 crew and 17 passengers descends below minimum altitude and collides with the ground near the end of the runway (6 dead).

Scheduled services continue to be offered from Sandefjord to Copenhagen, as well as to 41 Norwegian stops, and enplanements increase to 901,130.

The workforce is cut by 60 positions in **1994**, even as two more DHC-8-103s are delivered in January. New routes are started to Sumburgh in the Shetland Islands and to Copenhagen.

Customer bookings accelerate 3% to 929,000.

Airline employment stands at 640 in **1995**. The company's 21 aircraft transport a total of 725,832 passengers through September, a 5.1% increase over the same period a year earlier. Cargo traffic climbs 6.5% to 459,000 FTKs. In December, the company is awarded a contract from **SAS (Scandinavian Airlines System)** to maintain all of the consortium-carrier's Fokker 50s.

By year's end, all of the Twin Otters have been removed, except one, the *Batsfjord*, which is required to link its namesake city with Vadso and Kirkenes to the southeast and Alta to the west.

Sixty new employees are hired in **1996**. The carrier continues to provide service to 33 destinations, two-thirds of which possess runways of less than 1,000 m. (3,280 ft.), flying an average of 230 flight legs per day. With three Embraer EMB-120 Brasilas, the Wideroe NorskAir, A.S. subsidiary also maintains its schedules into a number of remote communities in southern Norway.

Traffic figures are again reported through September. Customer bookings dip 0.3% to 716,845. At year's end, two leased DHC-7s are re-

turned. Wideroe NorskAir, A.S. is closed down in December and its operations are transferred to the parent.

Enplanements for the year total 1,296,697 on 71,518 scheduled departures.

Destinations visited at the beginning of **1997** include Alta, Andenes, Batsfjord, Bervelag, Bodo, Bronnoysund, Copenhagen, Hammerfest, Kirkenes, Leknes, Mo i Rana, Mosjoen, Namsos, Narvik, Oslo, Rost, Skolvaer, Stokmarknes, Sumburgh, Tromso, Trondheim, Vadso, and Vardoe. New regional routes are opened to Berlin and Murmansk.

In early December, **SAS (Scandinavian Airlines System)** acquires a 29% stake, with the option to take another 34.2%; total value of the shareholding would be \$42.1 million.

Passenger boardings for the year skyrocket 80.9% to 1,303,158 on 83,914 scheduled departures.

At the beginning of **1998**, Chairman Gunnar Reitan and President/CEO Per Arne Watle oversee a fleet that includes 1 Twin Otter, 17 DHC-8-100s, and 8 DHC-8-300s.

A \$27-million order is placed with Bombardier in May for two DHC-8Q-300s with which to replace a pair of DHC-8-102s; an option is taken on a third.

When management refuses the request of the pilots' union for a 15.6% salary increase, the carrier's flyers go on strike in mid-July. The job action ends on July 31 after the strikers vote to accept a new 5-year contract, which includes a 3.5% annual wage boost.

The company unveils its site on the World Wide Web on August 27.

On December 18, SAS uses its option to purchase a further 34.3% stake, raising its stake to 63.2%.

Customer bookings jump 15.2% to 1.41 million.

By the beginning of **1999**, the workforce has been increased by 36.4% to 955.

Daily roundtrips commence on November 1 between Stavanger and Aberdeen, Scotland.

Passenger boardings for the year jump 12.3% to 1,585,000 on 86,038 scheduled departures.

Airline employment at the beginning of **2000** stands at 1,142, a 19.6% increase over the previous 12 months. In March, two DHC-8-100s are withdrawn and put up for sale. Piloted by Capt. Otto A. Holte and Flight Officer Petter Nordbye, the DHC-6-300 *Batsfjord* completes its final service, Flight 945, from Vadso to Batsfjord on March 31. It is now withdrawn from service, ending the carrier's 32-year romance with the rugged type that has flown an estimated 14 million passengers for the airline.

On July 24, another DHC-8-100 is given special Internet titles, "www.wideroe.no."

WIEN AIR ALASKA: United States (1927-1983). At one time Alaska's oldest major airline, this company is founded in by pioneer bush pilot Noel Wien as Wien Brothers, a fixed base operation run together with his four brothers, Ralph, Sigurd, Fridjof (called Fritz), and Harold. Ralph is later killed at Kotzebue in 1930 and Harold returns to the family home in Minnesota.

Noel, the elder brother, employs a Hiss Standard J-1, purchased from the Fairbanks Airplane Corporation, to inaugurate the first scheduled flights between Fairbanks and Nome on June 20, **1927**. In late June, Ralph Lomen is taken aloft to round up reindeer by air. The first mercy flight is made in July, an abortive attempt to get one George Tracey to Anchorage for an operation. Forced back to Fairbanks, Tracey is saved by local action.

Flights of a similar nature continue and when the weather permits, Wien is in the air at all hours of the day and night. A Stinson SB-1 Detrouiter is acquired from Arctic explorer Sir George Hubert Wilkins, allowing scheduled operations to continue throughout the winter. The new aircraft is inaugurated on the first flight ever made from Fairbanks to Deering, on Kotzebue Sound, accomplished nonstop in 6 hours.

In the spring of **1928**, a WACO biplane is purchased; after Noel teaches Ralph to fly, the brothers expand their business. In May, the Fox Film Company charts Wien's Detrouiter to film Arctic life and Noel

makes the first commercial flights in the Arctic part of Alaska. In October, the brothers incorporate as Wien Airways.

In March 1929, the Swenson Fur Company of Seattle charts Noel Wien and his Standard to fly from Nome to the North Cape of Siberia and return with 1,100 furs. In a six-hr. flight across the Bering Sea (and six back), Wien completes the first successful international roundtrip flight to the west of Alaska. In August, Noel elects to return to Minnesota and signs a four-year, noncompetitive, \$25,000 agreement with famed bush pilot Ben Eielson, representing **Alaska Airways**, a subsidiary of the **Pan American Airways (PAA)** holding company, The Aviation Corporation. Noel flies a month for AA until returning south with his wife, Ada, and brother Sig.

In Minnesota, Wien purchases a Stinson Jr. and undertakes charter operations in the Virginia, Minnesota, area. Unable to remain on the "outside" longer than nine months, the Wiens returns north in December 1930. The flight to Fairbanks via Edmonton, Prince George, Telegraph Creek, Atlin, Whitehorse, and Dawson, is only the fifth from the U.S. to this time and requires 14 days.

Noel and his Stinson Jr. fly off and on for **Alaska Airways** until 1932, when his noncompetitive agreement expires. Wien, together with his wife and her parents, then form a new transport company, Wien Airways of Alaska and employing a Bellanca CH-300 Pacemaker, resume operations between the Fairbanks base and Nome.

En route to Fairbanks from Ruby one day in 1933, Wien spies the Lockheed Vega *Winnie Mae* of Wiley Post, obviously lost over the Yukon River. Wien attempts to overcome the globe-circling Post, but cannot catch the speedy Model 5. On April 14, capitalization is increased to \$200,000, plus \$50,000 in preferred stock. The fleet now comprises 1 each Ford, Bellanca, Fokker Model 4 Universal, and 2 Stinson Juniors.

In two of the coldest days of flying on record, Wien wings from Fairbanks to Bethel via Ophir and Crooked Creek on January 13–14, 1934 in temperatures ranging from -70° at ground level to a much warmer -35° degrees at 5,000 feet. Still, the mail gets through.

In 1935, Noel and Ada buy out her parents' interest and the carrier is merged with **Northern Air Transport**, retaining the latter's name. The tragedy surrounding the deaths of Wiley Post and Will Rogers brings Noel Wien into the national spotlight, as it is he who flies to Seattle in August with the first photographs of the accident site and sells them to the wire services.

With the \$3,500 received from this service, Wien, on September 6, places a down payment on Ford 5-AT-58, a Tri-Motor formerly owned by **Northwest Airways**, and with several passengers aboard, departs for Fairbanks on the first commercial flight between Washington State and Alaska. NAT is not a financial success and the Wien brothers purchase it outright, bad debts and all.

In 1936 the company's books are finally written in black ink instead of red. At this point, the carrier is reorganized and named Wien Alaska Airlines. As the carrier prospers, Noel Wien's brothers become more deeply involved with it. The fleet comprises eight aircraft (four pilots) in 1938 and the company operates route spokes radiating outward from Fairbanks to the north, west, and east.

In 1940, the elder Wien retires as president and sells his stock for \$15,000 to Sigurd, who takes his place as CEO on May 16, while Noel and Fritz take seats on the board of directors. On June 24, the Ford Tri-Motor is sold to **Star Air Lines**.

Following America's entry into World War II on December 7, 1941, the Wiens, like their competitors, transport cargo and fly personnel charters for the U.S. military. In addition, the company is contracted by the U.S. Bureau of Mines to support its oil resource exploration. Sig undertakes all flights with the Bellanca.

Two ex-USAAF C-73s (military Boeing 247Ds) join the fleet in 1944. These will be modified with large cargo doors and auxiliary fuel tanks during the next two years.

The profits earned from government service since the Pearl Harbor attack allow purchase of three war surplus Douglas C-47s (military DC-3s) in 1945, followed by three Curtiss C-46s and four Beech 18s in

1946. During these years, the B-247Ds are outfitted with new cargo doors and increase fuel capacity. Numerous small aircraft, including Cessnas and the new de Havilland Canada DHC-2 Beaver begin joining the fleet in 1947. Sig Wien retires from flying in 1948.

Wien acquires **Ferguson Airways** on June 25, 1949, and throughout the early years of the next decade the enlarged carrier makes improvements to its route structure and fleet. Numerous contracts are accepted from the government in the 1950s to support construction of the DEW Line warning system. An Alaskan tour package is marketed, beginning on May 5, 1956, in cooperation with **Pan American World Airways (1)**. Another small company, **Byers Airways**, is absorbed on June 9.

Two Fokker Fairchild F-27As, license-built in Maryland by Fairchild, join the fleet in 1958–1959. In 1960, the year prior to the arrival of the Fairchilds, Wien benefits from a CAB-ordered redistribution of feeder lines from north of the Yukon and Tanana Rivers.

During an April 9 training flight, the copilot of an F-27A prematurely retracts the landing gear during takeoff, causing the aircraft to crash-land; both men are hurt. A Beech 18 crashes at Kotzebue on November 28. Eight passengers aboard another Beech 18 are seriously hurt when it aborts its takeoff from Northeast Cape on December 18 and crashes.

A Beech 18 overturns in mud while landing at Shishmarf on April 6, 1961. A C-46A freighter crashes on June 21 while landing at Kotzebue. The engine of a Cessna 180B fails near Galena on November 14; the plane is able to glide down to safety. Events of December 8 are not as happy. While attempting to rush a sick passenger to the hospital at Nome, the pilot of a Cessna 180B encounters bad weather near the city; the plane crashes and both aboard are killed.

Airline employment in 1962 stands at 295. Mileage in the scheduled route network totals 66,000 and at \$2 million, the company payroll is the largest for any commercial concern in interior or Arctic Alaska.

A Beech 18 with three aboard crashes while landing at Moses Point on March 5 (two dead). The inadvertent retraction of the landing gear during takeoff on July 7 causes another Beech 18 carrying two people to crash; there are no fatalities. While ferrying five people to the Pow "B" DEW Line site on October 1, another Beech 18 undershoots its landing, resulting in injuries to four passengers. The fleet is increased in December by the addition of three Swiss-built Pilatus PC-6A Porters.

In 1963, the company is able to acquire, at no cost, the Fairbanks–Whitehorse–Juneau route given up by **Pan American World Airways (1)**. On January 14, a Beech AT-11 with six aboard crashes while landing at Barter Island in bad weather (five dead). A DHC-2 Beaver suffers an in-flight power failure and crash lands at Savoogna on April 2. Eight days later, a Cessna 180A comes down near McIntire Point; injuries in both accidents are slight.

A Beech 18 with seven aboard fails its takeoff from Baird Bay on May 17; although the aircraft is destroyed in the crash that follows, injuries are again slight.

The workforce in 1964 has increased by two. A whiteout over Elim causes a Cessna 185 with two aboard to crash on April 17 (one dead). In May, a Lockheed L-749A Constellation, previously operated by **KLM (Royal Dutch Airlines, N.V.)**, is obtained for the company's long-haul routes.

Another Cessna 185 with four aboard fails its takeoff from Kotzebue on July 12 and crashes; injuries are minor. The same day, a PC-6A crashes while landing at Ruby Creek. A Porter's strut fails near Hughes on November 28; none of the five persons aboard are seriously hurt in the crash that follows.

Enplanements total 52,437 and 4.49 million freight ton-miles are flown. Revenues grow to \$11.38 million.

The number of workers employed in 1965 is 298. Between April and June, four more Pilatus PC-6A Porters are delivered; built by Pilatus, they are acquired from Fairchild in Hagerstown, Maryland.

A Cessna 185 with four aboard strikes a fuel tank after landing at Bettles on August 23 and explodes; there are no survivors.

A PC-6A rolls off the runway and into a ditch after landing at Selawik

on October 10. A DHC-2 makes a hard landing on a frozen river at Arc-tic Village on November 15.

New facilities, new bush aircraft, and improved services result in an increase in customer bookings to 54,667 and a boost in freight traffic. A B-737-210C is ordered.

The corporate identity is changed in February 1966 when the carrier is reorganized as Wien Air Alaska. Enplanements are 61,000.

In 1967, the employee population numbers 265 and the fleet includes 18 aircraft. Floods in August hold down company traffic gains across the state. Late in the year, company announces plans to merge with friendly rival **Northern Consolidated Airlines**, soon after receiving authority for another Anchorage–Fairbanks route. The fleet now includes 3 F-27As, 1 Twin Otter, and 14 lightplanes used in bush flying. The Boeing jetliner remains on order as passenger bookings ascend to 63,298.

Following receipt of CAB approval, the union with NCA is completed in February 1968. The new amalgamation, renamed Wien Consolidated Airlines, and with Sig Wien as chairman, soon after receives permission for an Anchorage–Fairbanks route, which places it into direct competition with **Alaska Airlines**.

A former **Northern Consolidated Airlines** F-27B with 39 aboard crashes at Spotsy Lake, near Pedro Bay, on December 2; there are no survivors. Meanwhile, the employee population numbers 572 and the fleet totals 38 aircraft, many of them small.

Customer bookings rise to 158,000 and 3.2 million freight ton-miles are flown. Revenues are \$12.51 million.

By 1969, Wien Consolidated's fleet comprises 3 Boeing 737-210Cs, 2 Douglas DC-3s, 5 Fairchild Hiller FH-227s, and 7 other small transports: 4 Twin Otters and 2 Shorts SC-7 Skyvans.

Enplanements during the 12 months are up to a healthy 268,200.

The workforce is increased 9% in 1970 to 718 and a fourth B-737-210C joins the fleet. Passenger boardings increase 10% to 298,000 and freight traffic accelerates by 7%.

Brandishing a pistol, ex-convict D. L. Thomas hijacks Flight 15, a B-737-210C with 35 passengers en route from Anchorage to Bethel on October 18, 1971, but a stewardess talks him into allowing the craft to return to Anchorage to discharge its passengers. There the man deplanes, flees to Canada, is captured by the RCMP, and returned to Alaska for trial. He will receive a 20-year prison sentence.

Enplanements for the year are 346,500. Passenger boardings grow only 1% in 1972, up to 350,000. Cargo is up by 6% as 6.83 million freight ton-miles are flown.

Having returned to the name **Wien Air Alaska** in 1973, the pioneer company is forced by increased expenses to reduce its workforce to 646.

Customer bookings decline 3.4% to 338,000. Cargo is up by 9.4% as 10.91 million FTKs are operated.

Employment is boosted back up in 1974 as 244 workers are hired. Due to increased Alaska pipeline construction, Wien experiences substantial growth during the year. Ira Harkey publishes a biography of the company founder, *Pioneer Bush Pilot: The Story of Noel Wien* (Seattle: University of Washington Press).

Passenger boardings accelerate 26.1% to 420,000. A total of 18.13 million FTKs are operated, an impressive increase of 52.9%. Although revenue figures are not released by the privately held carrier, the ledger is written in black ink.

The workforce in 1975 is 1,115. Two B-737-210Cs are acquired, one each in May and July. To better handle spiraling growth, a reorganization plan is implemented in late fall.

Meanwhile, on August 30, Flight 99, an F-27B with 4 crew and 28 passengers, crashes into a mountain and flips over while attempting to land at Gambell, on St. Lawrence Island in the Bering Sea off western Alaska (10 dead); the survivors are rescued by Eskimos.

The service area now covers 190 airfields and Noel Wien is named "Alaskan of the Year."

Customer bookings accelerate 47% to 617,000 and freight is up by 41% to 25.6 million FTKs. On revenues of \$54,782,000, a net profit of \$3.7 million is posted.

The number of employees is decreased by 8.3% in 1976 to 1,023. James J. Flood succeeds Raymond I. Petersen as president/chief operating officer of the state's oldest carrier as Petersen becomes board chairman/CEO. A Data 100 computer is placed into the Anchorage accounting office and the first Flight Information Display System in Alaska is turned on at both Anchorage and Fairbanks.

Enplanements jump 16.7% to 720,000 while cargo falls 4.5% to 24.5 million FTKs. As the result of rising fuel and labor costs, net income falls to \$3.7 million, even though operating revenues are up by 14% to \$63.7 million.

ALPA members strike the company beginning on May 8, 1977 and Noel Wien dies on July 18. The year is also bad from a financial viewpoint, as the carrier posts a net loss of \$742,000.

Although the pilots' job action continues throughout 1978, personnel adjustments, a 14.6% increase in passenger boardings (to 571,000), and the subcontracting of some routes to air taxi operators, allows Wien to record a \$482,000 profit.

Airline employment is now reduced by 12.9% to 826 and Chairman Petersen and President Flood operate a fleet comprising 7 B-737-210Cs, 4 Fairchild Hiller FH-227Bs, 4 F-27s, 4 de Havilland Canada DHC-6 Twin Otters, and 1 Grumman G-73 Mallard.

The workforce is increased by 24.1% in 1979 to 1,025. A presidential commission brings an end to the 22-month job action on March 1, and after the flyers return to work in March, company officials are finally able to begin planning the expansion that deregulation made possible for the industry a year earlier. The year is a climactic one in the history of Wien Air Alaska.

New routes are stretched to Ketchikan, Juneau, and Seattle. The addition of three new B-737-210Cs brings the fleet total to 10 short-haul Boeings.

Passenger traffic increases 20.2% as 685,558 passengers are transported and freight rises 14.4% to 25.4 million FTKs.

Unhappily, most corporate attention cannot be focused on growth, as time and resources must be given over to fighting a takeover bid by rival **Alaska Airlines**. Although the contest is won, the battle is costly to the family enterprise. When added to rapidly rising fuel bills, high interest rates, the bills for new route service, etc., overall expenses are up by 41% to \$85.1 million, overshadowing a 35% growth in operating income to \$85 million. The result is a net loss of \$1.7 million.

Following on the heels of the **Alaska Airlines** bid and continuing financial drain, Household Finance Corporation (HFC) now begins buying up available stock.

The employee population falls by 2.4% in 1980 to 1,025. Wien's control over the longtime family business laps as HFC purchases the remaining stock, takes control, and names President Flood chairman. Wien's 10 B-737-210Cs now fly a 10,500-mile route system over 150 points in Alaska, Canada, and down to Seattle. During the year, authority is obtained to service Chicago and other markets in the "lower 48" and on December 1, service is inaugurated to Portland, Oregon.

The influx of new money from HFC allows Flood to plan further fleet and operations expansion.

Passenger boardings rise 12.5% to 770,964, cargo increases by 57.5% to 40.72 million ton-kilometers, revenues skyrocket by 50% to \$126.5 million, and a net profit, \$1.6 million, is recorded. Under the CAB's new airline classification scheme, Wien Air Alaska is rated as a "national" carrier.

Talks are held between Wien officials and those from **Western Airlines** in 1981 concentrating on a possible merger. On May 8, a B-737-210C is sold to **Arkia Israel Airlines, Ltd.**

Passenger traffic rises 26.1% to 972,000 passengers carried and FTKs operated jump 38.9% to 55.1 million. Revenues advance 42.8% to \$180.7 million while expenses, although up by 46.68%, are contained at \$172.01 million. Although the operating profit of \$8.69 is less than the previous year's \$9.27 million, a second straight net profit is banked, \$4.78 million.

The payroll is significantly boosted in 1982, up 13.1% to 1,159. As the result of continuing negotiations with **Western Airlines** and a joint

plan from the two carriers, the CAB approves the merger of the two companies in the spring. It does, however, impose the restriction that Western President Neil G. Bergt must give up his association with **Alaska International Air (AIA)**, which he owns. Bergt refuses and all merger discussions end.

Control of Flight 517, a DHC-6-200 with two crew and six passengers, is lost while on final approach to Hooper Bay, Alaska, on May 16; the Twin Otter crashes 1,320 ft. short of the runway, but there are no injuries.

The year's recession poses difficulties for Wien, as it does for other American carriers.

Passenger enplanements drop 2.3% to 949,827 and freight declines 8.1% to 50.68 million FTKs. Revenues fall 1.3% to \$178.4 million and expenses are held to \$172.3 million. The operating profit is \$6.11 million and a net profit of \$2.1 million is achieved.

Household Finance sells Wien to Chairman Flood in mid-**1983**, and the new owner immediately opens routes to Reno and Oakland and increases the workforce 36% to 1,500. Consideration is given to changing the corporate identity in such a manner as to de-emphasize the carrier's Alaskan base. Efforts are made to lease additional jetliners to enhance the fleet that consists of 12 B-737-210Cs and 3 B-727-202As.

To demonstrate the widening commitment, the company is now renamed Wien Airlines.

Household Finance sells Wien Air Alaska in mid-**1983** to JFF Investments, owned by Wien Chairman James J. Flood. The new owner immediately sells the carrier's Alaskan route license to **MarkAir** and opens routes to Reno and Oakland, and increases the workforce 36% to 1,500.

Consideration is given to changing the corporate identity in such a manner as to de-emphasize the carrier's Alaskan base and so the pioneer company is renamed Wien Airlines. Efforts are made to lease additional jetliners to enhance the fleet, which consists of 12 B-737-210Cs and 3 B-727-202As.

Passenger boardings for the year, under both names, rise 13.4% to 914,826, while freight falls 9.7% to 14.72 million FTKs. Revenues drop 12.61% to \$155.92 million and even though costs fall 8.21%, they still total \$158.16 million. An operating loss of \$2.23 million is suffered, as a \$2.17-million net loss is taken.

In the spring of **1984**, flights begin to Albuquerque. Continuing to bleed financially, the company, in the summer, suspends flights to Aniak, St. Mary's, Unalakleet, and Galena. In an effort to reorganize its operation, Wien requests permission for a temporary suspension of services at the beginning of November. Following a court's ruling that such an action would be illegal, the company files for Chapter XI bankruptcy on November 28 and closes its doors.

Prior to its demise, Wien flies 1,014,000 passengers on the year, a 15.5% boost; ironically, this is the first time the company has ever broken the million-mark in annual cumulative bookings. Freight traffic plunges 47.7% to 13.03 million FTKs. Losses for the year, reported at the time of bankruptcy, total \$11 million.

Early in **1985**, Chairman Flood and a group of former employees put forward plans to resume operations. Meanwhile, the bankruptcy court allows the lease of the three B-727-202As to **Republic Airlines**.

The airline does not restart.

WIGGINS AIRWAYS (1) (E. W. WIGGINS AIRWAYS): United States (1930–1953). Named for its owner, the first Wiggins Airways is originally established in **1930** as a fixed-base operation (FBO) at Norwood, 11 miles southwest of Boston. The carrier is certified as a feeder airline by the CAB on June 13, **1946** under its new classification scheme.

Employing Cessna T-50s, revenue operations commence on September 19, **1949** over a route to Albany plus four other routes in New England. On August 20, **1951**, the company seeks renewal of its certificate and an extension to New York City, White Plains, and Southampton-Riverhead, New York.

Scheduled operations are terminated on August 1, **1953** and the airline's network is divided between **Northeast Airlines** and **Mohawk**

Airlines. Wiggins Airways resumes its FBO business, flying occasional charters over the decades ahead.

WIGGINS AIRWAYS (2): P.O. Box 250, Memorial Airport, Norwood, Massachusetts 02062, United States; Phone (617) 762-5690; Fax (617) 762-1958; <http://www.wiggins-air.com>; Code WIG; Year Founded 1987. Established years earlier in the 1950s as an FBO that flirted with scheduled services, Wiggins eventually creates an employee stock ownership program that allows the company to be purchased by its employees in 1985. Significant charter business is undertaken and a satellite base is set up at Manchester, New Hampshire.

Wiggins-2 is established in **1987** to operate scheduled all-cargo services. Operations are undertaken with a pair of leased de Havilland Canada DHC-6-300 Twin Otters. The subsidiary **Wiggins Airways (3)** is formed in 1988.

A contract is received in **1989** to operate express package flights on behalf of **Federal Express (FedEx)** and two Cessna 208 Caravan Is are supplied for the purpose. From this point on, Wiggins increases its business substantially, growing each year through **1992**. The fleet in these years also begins rotary-wing operations with 5 Bell 208B JetRanger helicopters.

In **1993–1994**, President David Ladd's contract with **Federal Express (FedEx)** supports the operation of 27 Caravans. In **1995–1998**, a contract is signed with **UPS (United Parcel Service)** and the company begins to fly on behalf of that giant concern as well. The fleet is increased by five Caravans and four Beech 99 freighters.

Airline employment reaches 100 and annual sales top \$12 million.

Destinations visited now include Allentown/Bethlehem, Altoona, Augusta, Baltimore, Bangor, Boston, Bridgeport, Burlington, Chicago (MDW), Cleveland, Cumberland, Elmira/Corning, Harrisburg, Hyannis, Jamestown, Johnstown, Lebanon, Manchester, Martha's Vineyard, Nantucket, Newark, New York (JFK), Owensboro, Pittsburgh, Plattsburgh, Presque Isle, Providence, Portland, Rutland, Syracuse, Wilkes-Barre, and Williamsport.

Flights continue in **1996–2000**, during which years the fleet comes to include 32 Caravans, 4 Beech 99s, 1 de Havilland Canada DHC-6F, and 4 JetRanger helicopters. The UPS and FedEx contracts are flown by 53 pilots.

WIGGINS AIRWAYS (3): Norwood Airport, Norwood, Massachusetts 02062, United States; Phone (617) 762-5690; Fax (617) 762-1958; Year Founded 1988. Wiggins Airways (2) CEO David Ladd founds the third Wiggins in **1988** as a subsidiary of the 1987 firm, also at Norwood Airport in Massachusetts. This firm is an authorized sales and service center for Bell and Eurocopter as well as Allison engines. Avionics are also sold and installed and the operational fleet by **2000** includes 6 Bell 206s, 1 Aerospatiale AS-350D, and 1 Schweizer 300.

WIGHT AVIATION, LTD.: United Kingdom (1930–1932). Inland Flying Services, Ltd., formed in April 1929, is renamed **Wight Aviation, Ltd.** in March **1930**. On June 27, **1932**, the first is reborn again as **Portsmouth, Southsea and Isle of Wight Aviation, Ltd.**

WIKING HELIKOPTER SERVICE, GmbH.: Nagelsweg 34, Postfach 106422, Hamburg, D-20097, Germany; Phone 49 (40) 2354-4300; Fax 49 (40) 2354-4310; <http://www.wiking-helicopter.de>; Year Founded 1975. WHS is established at Hamburg in August **1975** to ferry sea pilots to ships anchored in the German Bight. An exclusive contract for this service is signed with the government's Department of Transportation. On December 2, **1977**, the company is licensed as an approved maintenance and overhaul facility for helicopters owned by Wiking and third parties. A license is granted on December 12 authorizing commercial on- and offshore flights according to Instrument Flight Rules (IFR).

Operations continue apace during the remainder of the decade and into the **1980s**. In **1985**, the company is capitalized at \$920,000 and ownership is divided between the founding VTG-Lehnkering, A.G.

shipping conglomerate, a subsidiary of Preussag, A.G. (51%) and Norway's **Helikopter Service, A.S.** (49%). With a staff of 55 (including 15 pilots), the carrier operates 7 helicopters, as well as a fixed-wing Cessna Citation III based at Hanover. Revenues reach \$6.5 million.

Flights continue with little change during the next five years. In **1990–1992**, Wiking remains the nation's only offshore operator. Flights continue to be made to two compressor platforms on the Ekofisk-Emden pipeline and to a research installation 65 nm. off the German coast.

In October **1993**, the company leases a Sikorsky S-76A+ to the U.K. operator **British International Helicopters, Ltd. (BIH)**. Operations are maintained apace in **1994–1995**. Besides its bases at Hamburg and Wilhelmshaven, a Wiking branch office is now opened at Hanover. From here, EMS-equipped helicopters transfer mainly intensive care patients and newborn babies from general hospitals to specialized hospitals.

Wiking reaches a milestone in the fall of **1996**. Employing an IFR-equipped S-76 on September 1, the company conducts its 25,000th accident-free sea pilot transfer. Wiking ferries marine pilots to tankers and other cargo vessels approaching the German coast under a contract that it has held with the Federal Ministry of Transport for the past 21 years.

In **1997**, bases are operated at Hamburg, Kiel, Hanover, and Bremen for a fleet that comprises 1 Bell 212 and 2 each Sikorsky S-76s, Bell 206B JetRangers, and 206L LongRangers. Capitalization stands at DM 2.5 million.

Late in **1998**, a homepage is opened on the Internet's World Wide Web. Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** announces on August 2, **1999** that all of the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S. (HSG)** have been satisfied or waived and that the acquisition is completed. CHC now also finds itself the owner of the giant Norwegian operator's foreign subsidiaries, including its Wiking stake. As the HSG operation is consolidated into **2000**, CHC maintains the German interest.

WILBUR'S FLIGHT OPERATIONS: United States (1961–1992). Established as an Anchorage-based FBO by Joe Wilbur Sr. in **1961**, this company also sets up a flight division to offer charter passenger and cargo services to local destinations. Certain of these are offered on a scheduled basis, even though such an arrangement is illegal.

In November **1984**, Wilbur elects to begin scheduled third-level Piper PA-34 Seneca flights between his base and Sparrevohn. Service between Anchorage and Cordova is introduced in **1985** and operations continue apace for the remainder of the decade, with McGrath, Valdez, Aniak, and other points joining the route network. Two fatal accidents are recorded during these years.

While on final approach to Merrill Field at Anchorage on April 1, **1987**, a Cessna 402B with a pilot and a passenger suffers fuel exhaustion and crashes into a heavily wooded area upside down in a near vertical attitude; both aboard are killed.

While en route on August 17, **1988**, a Cessna 402B with two crew aboard crashes into Mount Torbet at the 10,570-ft. level; there are no survivors.

The destroyed aircraft are replaced in **1989** and by **1990** the 51-employee small regional continues to operate the Seneca, plus 2 Cessna 401s, 2 Cessna 402s, and 1 Beech 99.

Enplanements for the year total 8,489.

The fleet is increased in **1991** by the addition of a Piper PA-34 Seneca. In March, **Pacific Northern Airways**, owned by Gerald, Newton and Bert Ball, purchase Wilbur's passenger operations and attaches to it a Douglas DC-6 cargo division. President Wilbur continues to operate Flight Safety Alaska, a flying school and maintenance facility at Merrill Field.

On November 20, Dallas-based WAA Leasing, owner of the old **Wien Air Alaska**, purchases Wilbur's, **Pacific Northern Airways**, and several other aviation companies. WAA President Patricia Long indicates that the company, which leases out the four Wien B-737 passenger airliners, may bring two of them north again to fly Wilbur's passengers.

Passenger boardings decline by more than half to 3,465 and 547,399 pounds of mail are flown. Revenues total \$5.8 million, but costs reach \$6.41 million, guaranteeing an operating loss of \$589,997. The net loss is \$561,575.

At the beginning of **1992**, Wilbur's serves 10 communities from Anchorage with cargo flights and transports passengers from Bethel. During the first quarter, the company encounters difficulties in transporting its contracted mail shipments from Anchorage to King Salmon and Dillingham. Difficulties appear imminent and pilots apply to **Northern Air Cargo**, which begins to complete the Wilbur's Flight Operations mail deliveries.

The insurance company AIG Aviation informs the DOT that liability insurance coverage for the airline will be cancelled on March 25, but will be reinstated two days later. In the interim, the government requires the carrier to shut down. Under DOT rules, the company cannot fly again for at least 45 days unless an exemption is granted. No exemption is sought, although no immediate move is made to officially shut down. Wilbur's does not relinquish its flying certificates and DOT makes no move to revoke them.

Over the next few weeks, the government evaluates the airline's financial soundness. No report is finished because, on the evening of April 3, WAA Leasing notifies the DOT that it will close permanently as of 12:01 a.m. April 4. Its last action is to take down the sign outside of Anchorage and disconnect the telephone.

WILD GOOSE AIRLINES: United States (1964–1967). WGA is set up at Del Rio, Texas, during the first quarter of **1964** to provide scheduled intrastate passenger and cargo services. Employing a Piper PA-23 Aztec, the air taxi inaugurates daily roundtrips linking its base with Bracketville, Uvalde, San Antonio, and Eagle Pass. Operations continue apace until **1967**.

WILD GOOSE FLYING SERVICE. See **SOUTHWEST AIRLINES (1)**

WILDERNESS AIR (1975), LTD.: 4540 Agar Drive, Richmond, British Columbia V7B 1A4, Canada; Phone (604) 276-2635; Fax (604) 276-9586; <http://www.alloutdoors.com/Adventure-Travel/TuktoWilderness/default.html>; <http://www.wildernessair.com>; Code 6W; Year Founded 1975. Privately owned WAL is established by David Kahl and Gordon Douglas at Bella Coola, British Columbia, on March 31, **1975**. It takes over the Class 9-4 international charter license, 2 Cessna 206 floatplanes, and 1 de Havilland Canada DHC-2 Beaver of an ad hoc charter operator by this name founded in the late 1950s.

The two Cessnas are sold and replaced by a second Beaver and a Britten-Norman BN-2 Islander. In addition to charter and contract service flights, the carrier in **1976–1977** inaugurates lightplane scheduled service linking the company base with Williams Lake, over the Coast Mountains 200 miles to the east.

The fleet in **1978** comprises the Islander, 3 Beavers, and 1 Cessna 185. The BN-2 offers the company's only east-west scheduled service, a frequency between Bella Coola and Chilcotin Valley and Williams Lake. Class 3 scheduled flights are offered to South Betinck, Kimsquit, Punitzi, Tarla, One Eye, Charlotte, and Anahim. Operations continue apace in **1979–1980**.

When **Air BC, Ltd.** pulls out of Bella Coola in **1981**, Wilderness purchases a Piper PA-31-350 Navajo Chieftain and inaugurates daily scheduled service to Vancouver on April 2, **1982** via Anaheim Lake. Operations continue apace for the remainder of the decade and into the **1980s**. During these years, a charter base is also opened at Vancouver.

In **1985**, the fleet comprises 1 Piper PA-31-350 Navajo Chieftain, the Islander, the Beavers, 1 Cessna 206, and 3 Cessna 185s. A Beech King Air 100 joins the company in **1987**.

There is little change during most of the next decade as services are maintained between the three southern British Columbia destinations. In

1992, President Douglas's company operates 1 Beaver, 1 Islander, 3 Navajo Chieftains, and 1 Beech Super King Air 200.

Cofounder Kahl becomes president in **1993** as one more Super King Air 200 arrives. In **1994**, the fleet comprises 2 each King Air 100s and King Air 200s, 1 Cessna 207, 1 Beaver, and 1 Islander.

Operations continue apace in **1995**.

A float-equipped DHC-2 crashes while taxiing after landing in Karluk Lagoon, about 67 mi. W of Kodiak, on September 28; although the aircraft is badly damaged, the pilot is not hurt.

In November, a Beech 1900C Airliner, first flown by **Business Express**, is purchased from Piedmont Aviation Services' new Airliner Sales Division. It is employed in a combi role in scheduled and charter operations.

Airline employment stands at 40 in **1997–2000**.

WILHURI, O/Y. See FINNAVIATION, O/Y

WILKENAIR, LTD.: Kenya (1963–1987). Wilkenair, Ltd. is established at Nairobi's Wilson Airport in November **1963** to provide charter flights for tourists seeking to visit the country's wild game parks. Under the direction of A. Mayer, revenue flights commence with a single Piper PA-23 Aztec.

Over the next four years, the fleet is increased with a variety of small aircraft, mostly Pipers for which the company is a local dealer. The largest is a PA-31-310 Navajo added in **1967**.

Three years later, in **1970**, a scheduled twice-weekly roundtrip service is inaugurated from Mombasa to Mahe via Astove Island and Diego Suarez.

Commuter and charter operations are maintained until September 6, **1971**, when the company ceases trading.

Employing the dormant authority, new owners resurrect the carrier in **1986** as **Air Kenya Aviation, Ltd.** This new entity is merged with **Sunbird Airlines, Ltd.** in November **1987** to form **Air Kenya Aviation, Ltd.**

WILLIAM DEMPSTER, LTD.: United Kingdom (1948–1953). With a base at Blackbushe Airport, William Dempster forms his carrier in October **1948**; **Ciro Aviation, Ltd.**'s de Havilland DH 89A is obtained in November and employed to launch ad hoc charter operations. A second Dragon Rapide is acquired in January **1949** and during the year the two small aircraft fly a variety of short haul passenger and cargo charters in England and to the Continent.

On April 1, **1950**, the company takes delivery of two ex-**British South American Airways, Ltd.** Avro Tudor 5s. One of these makes a proving flight to Johannesburg on April 6. The success of this flight brings a close operating relationship with the South African charter company **Pan African Air Charter, Ltd. (PAAC)**.

During **1950–1951**, Dempster flies its Tudors to South Africa on behalf of PAAC, often encountering difficulties with the British government concerning various charges of impropriety, mostly involving low fares. Both Dragon Rapides are sold during the summer of 1950.

The Avro 689 Tudor 5 *President Kruger* with seven passengers is destroyed in a hard landing at Bovington on October 26, 1951; although the aircraft must be written off, there are no fatalities.

Although the South African charters continue, the company in **1952** increasingly concentrates on long-haul ad hoc charters to various destinations in North Africa and the Middle East. Another DC-3 is acquired in August. Airline employment at year's end stands at 53. During the spring and summer of **1953**, the Tudor is tasked to long-haul charters, including the transfer of a shipment of specialized lamps to Nairobi in April, while the DC-3 flies short- and medium-haul services to the Continent and to the Channel Islands.

Having lost considerable money in its legal battles over the South African arrangement and now making too little to remain in the black, William Dempster ceases flying at the end of the year, selling its DC-3 to **Dan-Air/Dan-Air Services, Ltd.** in **1954**.

WILLIAMS AIR: United States (1981–1984). Donald E. Williams Jr. founds this third-level carrier named for himself at Medford Lakes, New Jersey, in **1981**. Employing Beech 99s and Britten-Norman BN-2 Islanders, Williams provides scheduled passenger services between Philadelphia and Pittsburgh.

The recession and start-up costs conspire against corporate income and the carrier ceases flying in **1984**.

WILL'S AIR: United States (1982–1986). William R. Welch, president of Nantucket Aviation, establishes Will's Air, "The Little Airline with the Big Heart," at Nantucket Memorial Airport in **1982** to offer scheduled daily roundtrip passenger and cargo commuter flights to Boston and Hyannis. Employing 2 Piper PA-31-310 Navajos and 2 Piper PA-28 Aztecs, the carrier transports 53,159 passengers in **1983**, the first full year of operation.

Although traffic figures are not released in **1984**, the carrier does reequip itself with 5 Britten-Norman BN-2A Trislanders. These are employed to transport a total of 71,000 passengers in **1985**. Although these enplanements represent a traffic improvement, the cost of expansion proves too high.

After merger discussions with **Gull Air** fail, the cash-poor company closes its doors in January **1986**.

WILMINGTON-CATALINA AIRLINE: United States (1931–1940). When the **Western Air Express** contract to serve Santa Catalina Island from Los Angeles expires in May **1931**, it is not renewed. Instead, Philip K. Wrigley, the chewing gum magnate and Chicago Cubs owner, purchases the route and ex-WAE Loening C-2H Air Yachts and establishes a new company, Wilmington-Catalina Airline, to fly the title route. Service is started on June 6. Two Douglas Dolphin amphibians replace the Loening Air Yachts on the 27-mile route in October and the older aircraft are assigned to sight-seeing flights.

While lifting off the water west of Avalon on November 2, **1933**, one of the Dolphins turns crashes into the water (three dead).

The route is maintained throughout the **1930s** (it is not impacted by the **1934** "Air Mail Scandal" controversy), eventually receiving a CAB certificate on October 13, **1939**.

Meanwhile, on July 30, **1938**, the company purchases its first landplane, a Boeing 247D from Western Air Express Corporation. Having employed the marketing title Catalina Air Transport since mid-decade and now preparing to fly landplanes to a new Avalon airfield, the company is officially renamed **Catalina Air Transport** in August **1940**.

WILSON AIRWAYS, LTD.: Kenya (1929–1940). In order to review her late, expatriate husband's British business interests, so the story goes, Mrs. Florence Kerr Wilson in late January contracts with pilots Thomas Campbell-Black and Archie W. Watkins to fly her to England. Employing the Fokker Model 8 Universal *Miss Africa* owned by the flyers' **Kenya Aircraft Company, Ltd.**, the group departs for England on February 6, **1929**.

During the trip up, Mrs. Wilson convinces the two men to join her in plans to set up an airline when they get home. All realize the need to provide reliable air services to remote areas of both Kenya and Tanganyika. While in the U.K., the trio visits the de Havilland plant and makes arrangements to purchase a DH 60G Gypsy Moth.

Wilson Airways is officially established at Nairobi on July 13, with Mrs. Wilson as chairman, C. W. F. Wood as general manager, and Campbell-Black as chief pilot with Watkins as his No. 2. At the same time, **Kenya Aircraft Company, Ltd.** is disbanded. By this time, the Gypsy Moth has arrived and is christened *Knight of the Mist*.

Revenue charters to several nearby bush locations commence from a sheep field at Dugoretti Corner, Nairobi, and the fleet is increased with the addition of two more Gypsy Moths and two Avro Vs, one of which is named *Knight of the Grail*. In August, return flights are started from Nairobi to Dar es Salaam via Mombasa, Tanga, and Zanzibar.

Pilot M. C. P. Mostert joins the company during the first quarter of **1930**. Between April 29 and May 5, Mrs. Wilson, flown by Capt.

Mostert in a Gypsy Moth, undertakes a route proving flight between Johannesburg and Nairobi, stopping en route at Messina, Bulawayo, Livingston, Broken Hill, Ndola, Abercorn, Tabora, and Arusha. Flight operations are started by Capts. Campbell-Black and Watkins to bush destinations during the summer as two DH 80A Puss Moths arrive. One of the Avros is returned on October 7.

Beginning on February 24, 1931, Mrs. Wilson and Capt. Mostert conduct a route survey flight from Zanzibar to Dakar via Nairobi, Entebbe, Stanleyville, Bangui, Fort Lamy, Kano, Gao, and Bathurst. From Dakar, the pair head north via St. Louis, Fort Etienne, Villa Cisneros, Cape Juby, Las Palmas, Agadir, Casablanca, Tangiers, Seville, Madrid, Biarritz, Bordeaux, and Paris to London (Croydon Airport). The entire flight is made in 80 hrs. 40 min.

On July 4, the southbound **Imperial Airways, Ltd.** African flight makes a forced landing at Kibanga Port, some 15 mi. N of Entebbe. The mail recovered from the aircraft is taken by road to Kisumu and the next day is flown by Wilson Airways to Nairobi.

Weekly DH 80A Puss Moth Nairobi-Kisumu scheduled services are started by Capts. Campbell-Black and Mostert on July 8, thereby officially providing a feeder connection for the trans-Africa route of **Imperial Airways, Ltd.** An extra fee of 20c. is charged for letters flown by Wilson on this service. Return flights from Kisumu to Nairobi commence on July 12.

The colonial government of Tanganyika establishes its own feeder service in October. The premier mail flight is made from Dar es Salaam to Mombasa on October 21 via Zanzibar and Tanga. The post is transported by train from Mombasa to Nairobi, where it is picked up by Wilson Airways and flown to Kisumu. The first southbound multistop flight from Mombasa to Dar es Salaam is undertaken on October 22.

Nairobi-Dar es Salaam Puss Moth flights via Mombasa, Tanga, and Zanzibar, are started by Wilson Airways on August 18, 1932. These replace the experimental charters previously operated between Dar es Salaam and Mombasa by the colonial government of Tanganyika. The first service carries letters from Great Britain dated August 10. The first northbound flight from Dar es Salaam takes off on August 20. One of the Gypsy Moths is lost in a crash landing on October 16 under unknown circumstances.

A new DH 84 Dragon is acquired during the first quarter of 1933. In July, A. N. Francombe is sent to Dar es Salaam to open a branch office. Several pilots are hired to fly the Gypsy Moth and two Puss Moths dispatched with him. The new Dragon is lost in a Mombasa crash landing on December 8; no fatalities are reported.

In early 1934, **Imperial Airways, Ltd.** takes a financial interest in the company and supplies it with a replacement DH 84 Dragon. At this point, Capt. Mostert becomes general manager. One of the Puss Moths is sold and the new Imperial-supplied de Havilland is employed, on October 2, to initiate an extension on the Dar es Salaam route to Mafia. By the end of the year, Wilson's fleet includes 4 DH 85s, 3 DH 80s, 2 DH 84s, and 1 each DH 60 and DH 87.

Kisumu to Nairobi service via Kakamega, Eldoret, and Njoro begins on January 14, 1935. This route is replaced by two new weekly frequencies beginning on April 13: Kakamega to Watende and Nairobi to Nungwe via Lolgorien, Watende, Kitere, Kisumu, Musoma, and Mwanza.

The weekly service from Nairobi to Mafia is extended to Kilwa and Lindi on January 1, 1936. During the year, a branch office is set up at Kololo Hill, near Kampala.

A Dragon is lost on April 14, 1937 under unknown circumstances.

Following introduction of the Empire Air Mail Programme in June, Wilson Airways is given a feeder route. Beginning on July 1, the company flies all-up mail on its Kisumu to Nairobi route, connecting with **Imperial Airways, Ltd.** at Kisumu.

On July 3, a feeder service is also started between Nyeri and Kitale via Nakuru. Another route undertaken to connect with the British state carrier at Kisumu is begun on July 7: Kisumu to Lusaka via Nairobi, Moshi, Dodoma, Mbeya, Mpika, and Broken Hill. Dar Es Salaam to Dodoma flights via Morogoro are initiated on October 28.

Mrs. Wilson's company undertakes merger discussions with **Rhodesian and Nyasaland Airways, Ltd.** in 1938, but the talks are unsuccessful. Meanwhile, the fleet is reconfigured to include 1 DH 60, 2 DH 80s, 1 DH 84, 1 DH 85, 4 DH 89As, 1 DH 90, 2 Percival P.10 Vega Gulls, and 1 Klemm L.25A.

The only Leopard Moth is lost in a crash landing at Iringa on January 25, 1939 under unknown circumstances. On the outbreak of war in September, the carrier ceases many services, including its weekly Nairobi-Moshi-Mombasa flights on May 9, 1940. In September, the company is liquidated and its assets are acquired by the RAF.

Nairobi West Airport, which the company had set up in 1930, is renamed Wilson Airport in impressive ceremonies in 1958. Mrs. Wilson, who lives to witness the event, dies in 1966.

WINAIR: United States (1997-1999). The U.S. Winair is established by Richard Winwood at Salt Lake City in August 1997 to offer passenger charters throughout the U.S., Canada, Mexico, and Central America. Certification is received from the DOT in December.

Two Boeing trijets are leased—B-727-2Y5A is painted blue and white and a B-727-236 sports white, red, and black.

Upon receipt of FAA authority in early January 1998, the company undertakes its first charter, to the NFL Super Bowl, on January 25.

In March, bankrupt **Sun Jet International Airlines** files a reorganization plan. By mid-April, President/CEO Kent Elsbree's **Sun Jet International Sales**, via its subcontracts, offers daily flights from Orlando and Tampa/St. Petersburg to Newark and twice-daily roundtrips to Newark from Fort Lauderdale. These flights are operated by TransMeridian Airlines, **Sun Pacific International Airlines**, and the start-up Winair.

Summer scheduled revenue flights commence from Long Beach in May with a third leased "Baby Boeing" requested for delivery in July. In addition to the B-737-236, another B-737-2Y5A will also be received. Destinations visited include Las Vegas, Oakland, Sacramento, Salt Lake City, and Seattle.

On June 20, twice-daily (except Tuesday) roundtrips are started by **Sun Jet International Sales** from Fort Lauderdale to New York (JFK), along with daily return flights between Fort Lauderdale and Long Island MacArthur Airport at Islip, New York. Daily (except Tuesdays) roundtrips simultaneously commence from Islip to Orlando. These flights are performed by **Sun Pacific International Airlines**, **TransMeridian Airlines**, and Winair.

For the third consecutive year (Winair's first year of participation), the popular New York-Myrtle Beach air service operated by **Sun Jet International Sales** as "Myrtle Beach Jet Express" gives away one free golf play for every ticket purchased. Each passenger receives two rounds of championship golf at a choice of five courses from September 9 through February 28. Courses participating in this year's promotion are Angels Trace, Deer Track, Raccoon Run, Toski Links, and Wicked Stick.

In late August, the company begins a new contract, flying the Brigham Young University football team to all of its away games.

Special deep-discount, introductory, one-way Winair fares (as low as \$29 between Long Beach and Las Vegas) are offered on the carrier's own routes beginning on November 2. Two leased B-737-3U3s enter service on the West Coast in December. They are joined in the East by two B-747-4Q8s subchartered from the Turkish charter operator **Pegasus Airlines, A.O.**

A total of 203,000 passengers are flown during the year and revenues of \$4.93 million are generated. Unhappily, expenses are \$6.07 million, leaving a \$1.13-million operating loss. On a brighter note, a \$1.15-million net gain is celebrated.

Travel industry leader Lawrence Gelwix becomes chairman/CEO in January 1999, freeing owner Winwood to honor other commitments.

A new nonstop service is inaugurated by **Sun Jet International Sales** on March 4, from West Palm Beach and Orlando to Newark. The flight brings the total number of daily flights from Florida to New York to seven, including six daily (except Tuesday) roundtrips simultaneously reinstated from Fort Lauderdale to New York (JFK) and Islip. Once

more, the actual service is provided by aircraft operated by **Sun Pacific International Airlines**, **Transmeridian Airlines**, or Winair.

By the first quarter, **Sun Jet International Sales** has flown over 1,000,000 passengers on its "Myrtle Beach Jet Express." A second daily roundtrip "Myrtle Beach Jet Express" service is inaugurated on March 4. The B-737-3U3s depart late in the month.

Winair operates its portion of the Sun Jet schedule with the B-737-4Q8s from Turkey. These two aircraft are returned in April.

On May 13, the company introduces a unique "Dime-a-Mile" promotion, based upon statute miles from its Long Beach hub. Fares are computed as \$23 to Las Vegas (230 mi. x .10); \$31 to Oakland (310 mi. x .10); \$34 to Sacramento (340 mi. x .10); and \$54 to Salt Lake City (540 mi. x .10).

The next day, Christopher Kunze, Long Beach Airport manager, reveals that 188,000 passengers have flown in and out of his facility on Winair flights since November.

On May 17, the company becomes a marketing affiliate of the Long Beach Area Convention & Visitors Bureau. Henceforth, the booster agency will display the Winair logo in its advertisements and the airline will place Long Beach brochures in the seat-back pockets of its aircraft.

Following the June collapse of **Sun Jet International Sales**, Winair, which has lost \$15 million since November, is forced to shut its doors on July 8. The B-737-2Y5As and B-737-236s are redeployed to **Frontier Airlines (2)** by their lessor.

WINAIR, N.V. See **WIA (WINDWARD ISLANDS AIRWAYS INTERNATIONAL, N.V.)**

WIND RIVER AIR SERVICES. See **ARCTIC CIRCLE AIR SERVICE**

WINDHAM AVIATION: Airport Road, Willimantic, Connecticut 06226, United States; Phone (860) 456-4156; Fax (860) 456-2540; Year Founded 1974. Originally established in 1974 as the FBO at Hartford-Brainard Airport, over the next quarter century Windham also undertakes a variety of executive and small group passenger charters throughout the northeastern U.S. The company in 1998-2000 flies 1 each Beech Super King Air 200 and King Air 100.

WINDROSE AIR FLUGCHARTER, GmbH: Flughafen Tempelhof, Gat, Berlin, D-12101, Germany; Phone 49 (30) 6951 2400; Fax 49 (30) 6951 2404; Year Founded 1991. As soon as the opportunity to operate from Berlin's Tempelhof Airport is available in 1990-1991, Thomas Stillman elects to begin a nonscheduled air taxi and air ambulance from the formerly divided city. Six pilots are hired and revenue flights begin with 1 Cessna 500 Citation I, 1 C-550 Citation II, and 2 C-441 Conquest IIs.

WING AIRWAYS (PTY.), LTD.: South Africa (1978-1983). Organized at Krugersdorp's Lanseria Airport, Wing Airways begins scheduled passenger services in 1978 to destinations in the Cape and Transvaal provinces in support of the mining industry. Graeme Conlyn is chairman and Beech King Air 100s and Super King Air 200s are employed to link cities along a route from Lanseria to Kuruman and Aggeney, and Lanseria to Ulco, Lime Acres, and Postmasburg.

National Airways Corporation, a subsidiary of the Lonhro Group, acquires control of the company in February 1983 and the name is changed to **National Airlines (Pty.), Ltd.**

WINGED CARGO AIRLINES: United States (1946). Winged Cargo is perhaps the most unique of the many nonscheduled freight operations to spring up in the U.S. after World War II.

Established at Philadelphia during the first quarter of 1946, the company acquires one each Douglas DC-3 and war surplus WACO CG-4A glider. These are employed, beginning on April 24, to inaugurate the world's first—and only—commercial freight glider service.

The operation proves just a bit too unique and, after only a few trips from the Philadelphia to Miami and beyond to Havana and San Juan, traffic is too light to sustain.

WINGS AIRWAYS (1): United States (1976-1977). Wings Airways (1) is set up at Cincinnati by 24-year-old former **Eastern Air Lines** passenger service agent Pat Sowers and Charles Fugazzi, in the spring of 1976. Employing a single Piper PA-31-310 Navajo, the two inaugurate daily scheduled roundtrips on May 17 to Cleveland via Gainesville. Flights to Evansville, Indiana, are also offered. Unable to find sufficient capital to maintain operations, the company faces bankruptcy at year's end.

In February 1977, the tiny airline is purchased by Raymond and David Mueller, who reform it into **Comair**. In 1988, Sowers will found **Enterprise Airlines**, a corporate commuter.

WINGS AIRWAYS (2): United States (1976-1991). Pennsylvania Aviation, the FBO at Wings Field in Blue Bell, Pennsylvania, which already operates the air taxi service **Wings Charter Services**, establishes a scheduled airline division in late 1976. The initial fleet comprises 2 Britten-Norman BN-2 Islanders. Revenue flights are inaugurated in February 1977, linking the company's base with North Philadelphia Airport.

In 1978, this small regional's first full year, 18,173 passengers are transported by 2 Britten-Norman BN-2 Islanders. Passenger boardings jump 40.3% in 1979 to 25,000.

By 1980, traffic has increased by 35% to 34,416 passengers flown and 3 more Islanders are acquired.

Service is initiated in 1981 from Philadelphia to Dover, Delaware, and Millville New Jersey. Passenger boardings for the privately owned carrier jump 60.2% to 55,130.

The workforce is increased by 24.7% in 1982 to 121. Three BN-3 Trislanders are added to the fleet and twice-daily frequencies are started from Bellville to New York (JFK). Bookings climb by 36.7% to 76,194.

Frank McKeon becomes general manager in January 1983 and the company is forced to undertake major retrenchments as the result of recession and fiscal difficulties caused by expansion. The route system is cut back to a single route between North Philadelphia and Blue Bell and the workforce is reduced 32.8% to 84.

Enplanements for the year increase a slight 1.4% to 77,236.

In 1984, President Warren C. Meyers appoints James B. Vincenzo general manager. Operations continue apace and in 1985 enplanements reach 93,726. The fleet in 1986 includes 3 Islanders, 2 Trislanders, and 1 de Havilland Canada DHC-6-300 Twin Otter. Passenger boardings drop 5.2% to 88,834.

Fred Berkobin is president in 1987 with Joseph Woosley as general manager. The fleet now comprises 3 Islanders, 2 Trislanders, and 1 Twin Otter. Customer bookings fall again, dropping by 21.1% to 70,055.

James Vincenzo becomes president in 1988. Service is started to Washington, D.C. (IAD) and Cape May.

The new routes revitalize traffic totals as passenger boardings leap upward by 16.5% to 81,637.

The 110-employee regional has a rough 1989, as customer bookings decline 19.2% to 65,940.

Eight employees are laid off in 1990 and the fleet remains unchanged. Passenger boardings plunge to just 42,000. In light of deepening financial difficulties caused by war and recession, officials of the longtime Blue Bell-Philadelphia shuttle announce in April 1991 that scheduled flight operations will cease on June 14. Thereafter, charter operations continue.

WINGS ALLIANCE. See **AIR EUROPA, S.A., ALITALIA, S.p.A.; CONTINENTAL AIRLINES; KLM (ROYAL DUTCH AIRLINES, N.V.); NORTHWEST AIRLINES**

WINGS CHARTER SERVICES: Wings Field, 1501 Narcissa Road, Wings Field, Blue Bell, Pennsylvania 19422, United States; Phone (215) 646-1800; Fax (215) 628-3594; Year Founded 1972. WCS is the

nonscheduled division of Pennsylvania Aviation, the FBO established at Wings Field in 1972. Lightplane executive and small group charters commence to local destinations; they will continue even after the establishment of the concern's scheduled airline division, **Wings Airways (2)**, in 1976.

In 1990 the company employs 4 pilots dedicated to charter operations and flies 1 each Beech Super King Air 200, Beech 58 Baron, and Piper PA-31-350 Navajo Chieftain.

In 2000, President James Vincenzo's fleet includes 1 each Piper PA-31-310 Navajo, Beech King Air 90, and Beech 58 Baron. The latter aircraft is shared with **Wings Charter Services**.

WINGS EXPRESS. See AMERIFLIGHT

WINGS OF ALASKA: 8421 Livingston Way, Juneau, Alaska 99801, United States; Phone (907) 789-9863; Fax (907) 789-2021; <http://www.alaskaone.com/wingsofak>; Code K5; Year Founded 1982. In June 1982, President Tom Horne's **Southeast Skyways** is purchased by Jim Shanks and Jim Lindsey. It is given the same name, perhaps inadvertently, as the famous clandestine CIA airline of southeast Asia, Air America.

The company is acquired by Bob Jacobsen, Juneau's Fire Chief Michael Fenster, and Drew Haag on November 1 and is renamed on February 22, 1983 as Alaska Juneau Aeronautics doing business as Wings of Alaska. Shareholding is divided between the three founders, plus Jacobsen's mother, Jerry, his sisters Karen Hansen and Kathy Elmore, Jim and John Jacobsen, and John Lucas, the state's Director of Audit and Management Services, who also provides fiscal advice.

Employing a fleet of 4 Cessna 207As and 6 Cessna 206s, the carrier inaugurates scheduled third-level passenger and cargo flights linking its Juneau base with Excursion Inlet, Gustavus, Haines, Hoonah, Kake, Petersburg, Angoon, Tenakee, and Skagway. As in its earlier years, the company undertakes charter and contract services to a variety of destinations in southeastern Alaska.

Operations continue apace in 1984-1989. The latter year is particularly successful, with passenger loads increasing nearly 30%, although much of the traffic comes about as the result of the FAA's closure of three competitors.

By 1990, President Jacobsen and Vice President-Operations Russell Schaub oversee a workforce of 25 in Alaska's fastest-growing commuter airline. The fleet now comprises 5 Cessna 206s, 5 Cessna 207As, and 2 de Havilland Canada DHC-2 Beavers.

Passenger boardings increase by 8.9% to 47,159 and revenues advance 8.3% to \$3.9 million.

The workforce is increased 11.7% in 1991 to 67 as 3 additional Beavers and 1 Cessna 207A are added. Customer bookings slide to 25,532 and a total of 998,555 pounds of mail are flown.

A Cessna 206 is withdrawn in 1992 and following his retirement from state government, John Lucas joins the company full-time. Enplanements advance 7% to 27,237. In 1993, they decline 7% to 25,433.

Passenger boardings continue to slide in 1994, dropping 5.2% to 18,920. Revenues also decline, to \$4.5 million. The workforce is increased a dramatic 56.9% in 1995 to 80 and the fleet now includes 5 Cessna 207As, 4 Cessna 206s, 6 Beavers, and 5 Otters. Still, enplanements fall 6% to 23,982.

There are no changes in either the employee population or fleet during 1996. Passenger boardings accelerate 4.8% to 25,144.

Company records in 1997 show that Wings has transported over 500,000 passengers and 15 million pounds of freight since its inception. Flight-seeing operations alone have carried over 25,000 passengers per summer over the Juneau ice fields and to the world-renowned Taku Glacier Lodge, built in 1923 and currently held by former **Ward Air** owners Ken and Michelle Ward.

Late in the year, a Cessna Grand Caravan is purchased for express services and a new hangar is constructed at Haines. Passenger boardings accelerate 8.2% to 27,206.

Service is maintained without fanfare in 1998. Customer bookings jump 12.1% to 30,000.

Passenger boardings climb 6% in 1999 to 75,000. A total of 55 workers are employed at the beginning of 2000, a 19.6% increase over the previous 12 months. Among these are 25 full-time pilots at Juneau, who fly the company fleet of 1 C-206, 2 C-207As, 2 C-208Bs, 6 Beavers, and 5 Otters.

WINGS WEST AIRLINES: United States (1979-1998). Wings West begins at Santa Monica in late fall 1979 as the outgrowth of FBO operator William J. Hirsch's desire to become a new entrant in the tough California commuter market and to replace **Sierra Pacific Airlines**, which had been sold and transferred to the Mammoth ski market. Mark Morro is named president/CEO and his original fleet consists of a single Cessna 402 made available on lease-back by Los Angeles attorney Carl A. Albert.

Revenue flights commence on November 11 over a route from Santa Monica to Mammoth Lakes. The CAB names the carrier the Essential Air Service (EAS) provider in the central coastal area: Santa Maria-San Francisco-Los Angeles and San Luis Obispo-San Francisco-Los Angeles.

Passenger boardings in 1980, the first full year of service, total 9,441.

In the spring of 1981, Santa Monica officials evict Morrow's airline in an effort to close the airport. Needing \$100,000 to transfer elsewhere, Morro approaches Albert and his partners. These gentlemen loan the carrier \$100,000 and purchase 25% shareholding for \$25,000. In return for their investment, the gentlemen require that the carrier be reorganized, with Albert as chairman, Morro as CEO, and Hirsch as president; at this point, it is named Wings West Airlines.

The company is now able to transfer its headquarters to Culver City, while a maintenance base is established to the north at Santa Maria. Two Beech 99s are placed in service to supplement the Cessnas and destinations now served include Los Angeles, Burbank, Santa Maria, San Luis Obispo, Sacramento, Fresno, San Francisco, Oakland, Mammoth, and Bishop. The Santa Maria and San Luis Obispo services are picked up upon the failure of San Luis Obispo-based **Swift Aire**.

Enplanements skyrocket 176% during the 12 months to 26,951.

The 190-employee company in 1982 acquires 3 Fairchild-Swearingen Metro IIs and 3 Beech 99s. During the year, the intrastate becomes an interstate carrier as its route network is expanded to markets in Colorado and Arizona.

Passenger boardings rise by 75% to 100,075. Revenues total \$2.63 million and expenses are \$3.54 million, leaving losses of \$903,000 (operating) and \$1.13 million (net).

Airline employment in 1983 totals 251 and the company adds two more Metros and two 99s. On January 19, one of the latter crashes at San Francisco (one dead). Later in the year, a new maintenance and headquarters facility, originally built by **Swift Aire**, is leased and occupied at San Luis Obispo.

Passenger traffic soars upward by 151.8% to 253,000 as the privately held company advances to the ranks of the "large regionals." Still, expenses of \$9.47 million (caused largely by a fare war with Palm Springs-based **Sun Aire**) atop revenues of only \$7.38 million force continued losses of \$2.09 million (operating) and \$2.34 million (net).

Growth continues apace in 1984. In May, the company "goes public," making a public stock offering that brings in \$3 million. A yearlong effort to place itself in better financial condition is undertaken, involving restructuring and stringent cost control measures. All Los Angeles (LAX) operations are relocated to **Trans World Airlines (TWA)** Terminal 3 on June 10.

Flight 628, a company Beech 99 with 2 crew and 13 passengers and a Rockwell Commander 112TC owned by Aesthetech Corporation Flight School on a training flight with two aboard, collide in midair on August 24 half way between Los Angeles and San Francisco near San Luis Obispo. All aboard both aircraft are killed.

Still, boardings for the year advance 42.3% to 360,075. A third straight deficit year is recorded, albeit smaller than the last. On revenues of \$14.95 million, expenses are \$16.33 million; the operating loss is down to \$1.38 million and the net decline drops to minus \$1.94 million.

After such traffic progress, 1985 comes as a major disappointment, one that will bring the resignation of CEO Morro and the assumption of his responsibilities by Chairman Albert. Early in the year, however, the

37,800-sq.-ft. ex-**Swift Aire** facility occupied at San Luis Obispo is purchased from the city for \$275,000. A second stock offering is made in October, which nets \$3.7 million.

Three Metro IIAs are sold at a profit, but, due largely to poor weather and increased competition from the new British Aerospace BAe 146-200 fleet of **Pacific Southwest Airlines (PSA)**, passenger boardings rise only 1.4% to 365,175 and revenues by 5.9% to \$18 million. Initial profits are, however, earned and total \$151,000 (operating) and \$1.52 million (net) atop revenues of \$22.92 million.

Upon the retirement of founder Hirsch, Chairman Albert is also appointed president on April 1, 1986; on June 1, the 490-employee carrier joins the "American Eagle" commuter network of **American Airlines** and its aircraft, painted in new livery, begin to serve the major at Los Angeles and San Francisco.

Enplanements for the year climb 22.8% to 408,480 and revenues ascend 27.3% to \$23.62 million. Expenses jump 31.3% to \$24.95 million and cause an operating loss of \$1.33 million. There is, however, a net gain of \$439,000. The losses are tied directly to the costs of the new code-sharing arrangement.

Airline employment in 1987 rises 36.7% to 670. President Albert and CEO Philip Ben-David operate a fleet of 5 Fairchild-Swearingen Metro IIAs, 16 Metro IIIs, and 4 Beech 99s. The first 2,000-passenger day occurs on June 26. In anticipation of a forthcoming ownership change, \$100 million worth of new aircraft are ordered in October and November for the Wings West fleet, including 15 British Aerospace BAe Super Jetstream 31s (for which it is launch customer) and 10 BAe ATPs, later known as Jetstream 61s. With 325 weekday departures, the company now serves 22 cities.

Late in the year, an agreement is signed selling the company to AMR Corporation, parent of **American Airlines**. Beginning on November 1, the major allows its new, about-to-be Eagle subsidiary to replace jet service on four routes between Burbank and San Francisco with five Convair CV-580s wet-leased in early spring from the onetime airline-turned-leasing-operator **Sierra Pacific Airlines**.

Passenger boardings increase 57.9% to 645,116 and revenues accelerate 29.1% to \$30.5 million. With costs barely held in check at \$30.49 million, the operating profit is a mere \$14,000; net gain increases to \$224,000. The net gain is cut in half to \$224,000.

The workforce is increased by 29.1% in 1988 to 865. The first ATP arrives in May and enters service in June. On August 9, the company officially becomes an AMR Eagle subsidiary, having been purchased by AMR Corporation for \$41.7 million. John Selvaggio is placed in charge as president and the fleet is increased by the addition of 13 Metro IIIs. The "new" Wings West now replaces its parent on the routes emanating from Burbank, which were acquired when **American Airlines** took over **AirCal**.

The year's enplanements increase 47.6% to 952,500.

The ATP is withdrawn in 1989 and the fleet is standardized on 39 Metro IIIs. Operations link the **American Airlines** San Jose and Los Angeles hubs with 24 California cities.

Passenger boardings climb a slight 1.3% to 964,995.

Bob Zoller becomes vice president-operations of the 865-employee large regional in 1990. The fleet now comprises 32 Metros and 4 Beech 99s and customer bookings inch their way up by 3.5% to 998,705.

Gene Hahn succeeds Bob Zoller as vice president-operations in 1991. The Beech 99s are withdrawn and replaced by eight SAAB 340Bs, while the number of Metroliners is increased by five.

Passenger boardings ascend a scant 2.3% to pass the million-mark in annual enplanements for the first time (1,021,680).

Airline employment stands at 1,280 in 1992 as 2 more SAAB 340Bs are added along with 29 BAe Super Jetstream 31s; the number of Metroliners is reduced to 25.

Customer bookings rise 12.1% to 1,144,833.

In 1993, President Selvaggio oversees a workforce of 1,249 and operates a fleet comprising 18 leased BAe Jetstream 31s, 2 leased Metro IIIs, and 30 SAAB 340Bs, 26 of which are chartered. In May, a new 54-

month contract is ratified between the carrier and the Transport Workers Union (TWU).

From the hubs at Los Angeles and San Jose, the carrier serves 25 cities: Bakersfield, Carlsbad, Fresno, Inyokern, Lake Tahoe, Las Vegas, Monterey, Ontario, Orange County, Oxnard, Palm Springs, Reno, San Diego, San Luis Obispo, Santa Barbara, Santa Maria, Visalia, San Jose, Burbank, Klamath Falls, Redding, Sacramento, Santa Rosa, and San Francisco. Several of these routes out of San Jose are new replacement services for **American Airlines**, which now closes its hub there in the face of stiff competition from **Southwest Airlines**.

During the late spring, Wings West also cuts back services at San Jose; however, during the summer, a decision is taken to increase operations from John Wayne Airport at Orange County. Employing SAAB 340Bs, the carrier, in September, inaugurates six daily nonstop roundtrips from the facility, near Los Angeles, to San Francisco. By October, the airline is serving San Francisco, Los Angeles, Las Vegas, Sacramento, and Tucson with 23 nonstop roundtrips per day from John Wayne Airport.

Passenger boardings for the year as a whole jump 9.6% to 1,297,676.

The fleet in 1994 includes 26 British Aerospace BAe Super Jetstream 31s and 32 SAAB 340Bs. When, during the spring, **American Airlines** withdraws certain jet services from Dallas/Fort Worth, Wings West dispatches 28 SAAB 340Bs to the Texas airport to take over or expand short-haul services to some 20 destinations in Texas, Arkansas, and Missouri; a few roundtrip frequencies are also flown daily to Nashville. As the only "American Eagle" company west of the Rocky Mountains, the J-31s and four SAABs remain in California to operate very short routes.

On December 9, the FAA places a prohibition on the operation of ATR turboprops, which comprise much of the American Eagle fleet. Fortunately, "American Eagle" President Robert Martens is meeting at AMR headquarters in Dallas with the presidents of the four confederated regionals and they are quickly able to come up with a plan to reconfigure the combined Eagle fleet around the country.

Under this scheme, six of the ATR42s displaced from the **Simmons Airline** fleet are sent to Wings West at Los Angeles, while Wing West dispatches its four SAAB 340Bs first to Texas, where they join the 28 others sent earlier, and then eventually to Chicago (ORD). LAX now has no SAABs, half a dozen ATRs, and 17 Jetstream 31s.

Customer bookings accelerate 23.2% to 1,598,914.

The workforce stands at 1,553 in 1995. The scattered fleet is gradually returned to its previous hubs between January and the start of the April 2 summer schedule.

In June, former **American Airlines** Vice President-Human Resources Mary Jordan is elected the carrier's president, becoming one of the very few female CEOs in the history of commercial aviation.

Enplanements soar 20% to 1,926,812 while freight traffic is also up, by 26.8%, to 279,000 FTKs.

The employee population is reduced by 9.9% in 1996 to 1,400.

"American Eagle" Flight 547, a SAAB 340B with 3 crew and 12 passengers, sustains an uncontained engine failure resulting in structural damage while on initial takeoff climb from Dallas (DFW) for Shreveport on July 1; no injuries are reported.

A passenger is seriously injured while disembarking from a SAAB 340B that has just arrived at Fort Smith, Arkansas, from Dallas (DFW), on September 20; the initial NTSB report on the matter does not state a cause.

Plans are made or actions completed to initiate code-sharing arrangements with **Hawaiian Airlines**, **Alaska Airlines**, and **Canadian Airlines International, Ltd.** An example of the value of these pacts can be seen in the agreement reached with **Reno Air** on October 15. As a result of this accord, dual-designator services are flown from Los Angeles to nine California cities and to Las Vegas.

The last 19 Super Jetstream 31s are replaced at year's end with SAAB 340Bs.

Passenger boardings this year slide 3.5% to 1,859,054.

The marketing agreement begins with **Hawaiian Airlines** on March 4, 1997. Under its terms, the two companies share codes providing connecting service for Hawaiian passengers from Los Angeles (LAX) to the

airports at San Diego, Orange County, Monterey, San Luis Obispo, Palm Springs, Bakersfield, Carlsbad, Fresno, and Las Vegas.

Another code-share agreement is signed by month's end with **Alaska Airlines**. Wing West flights in California and Nevada will connect with over 40 cities served by the major in the western U.S., Alaska, Canada, Mexico, and even Russia.

Under terms of the May agreement between the Allied Pilots Association and **American Airlines**, "American Eagle" pilots will be offered one of every two new-hire positions, but places limits on the stage length Eagle regional jet pilots may fly (550 nm.). Meanwhile, negotiations between representatives of ALPA and AMR's "American Eagle" subsidiary are completed and sent to the 1,900 pilots of Wings West, **Simmons Airlines**, **Executive Airlines**, and **Flagship Airlines** for ratification.

The new ALPA contract is ratified during the third week of August by a vote of 773 to 473. The 16-year compact provides for guaranteed annual pay increases of 7%, improved crew scheduling and reserve conditions, replacement of the four individual company contracts with one master "American Eagle" document, and a no strike-no lockout agreement.

Scheduled to connect with AA's nonstop service from San Jose to Tokyo (NRT), the carrier, on October 1, begins daily roundtrips from Los Angeles (LAX) to San Jose.

"American Eagle" Flight 3331, a SAAB 340B with 3 crew and 14 passengers en route from Santa Barbara to Los Angeles on December 11, encounters severe air turbulence at 5,000 ft. over Ventura, California. One flight attendant is seriously injured.

Passenger boardings inch up 1.3% to 1,883,929. Operating revenues fall 6.8% to \$169.34 million, while expenses decline 3% to \$158.11 million. Operating profit declines to \$11.22 million and the net profit plunges to \$475,000.

On January 15, 1998, AMR Eagle officials, led by President Daniel P. Garton, announce that the availability of regional jets, together with the previous August's single Eagle pilot contract and changes in the economics of the regional airline business, dictate consolidation. Consequently, AMR will integrate all four of its airlines into a single carrier by year's end.

During the second quarter, the new carrier's field services organization begins to take shape. A number of appointments are made at the end of April, effective July 1, including David Kennedy, who becomes senior vice president-operations, while **Flagship Airlines** vice president-flight operations is named AEA's vice president-flight operations under Kennedy.

Reporting to Senior Vice President-Field Services Ralph Criner will be six new hub vice presidents: Mike Costello at Dallas (DFW), Dave Brown at Los Angeles (LAX); Jacques Vachon at Miami (MIA); Robert Hamilton at New York (JFK); and former **Executive Airlines** President George Hazy at San Juan.

While en route from Fresno to Los Angeles on a May 13 positioning flight, a SAAB 340B is struck by lightning near Visalia; although all generators and emergency avionics power are lost, the uninjured pilot is able to make a safe landing at his destination.

In late May, the company's four semiautonomous carriers (**Simmons Airlines**, **Flagship Airlines**, **Executive Airlines**, and Wings West) begin a seven-month period of amalgamation into the single mammoth **American Eagle Airlines**, now viewed by AMR as a sister of **American Airlines**. The presidents of **Simmons**, **Flagship**, and Wings West are provided with appointments elsewhere within AMR and are replaced with vice presidents at each of the new airline's hubs. With Simmons as the core unit, **Flagship Airlines** joins the merger in May, followed by Wings West in June.

Simultaneously, agreement is reached with the Transport Workers Union of America for a new single-carrier contract. The agreement covers flight dispatchers, mechanics, and ramp-service personnel.

In June, the decision is taken to separately maintain the authority of Puerto Rico-based **Executive Airlines**, moving its operating certificate to Dallas (DFW) on July 1. The physical merger of that company into **American Eagle Airlines** is put off.

WINLINK, LTD.: St. Lucia (1982-1984). Winlink is established at St. Lucia in 1982 to provide scheduled passenger air services to destinations in the eastern Caribbean over routes that extend north from Dominica to Grenada. The first aircraft is a de Havilland Canada DHC-6-300 Twin Otter, which is employed to inaugurate services with shuttle flights between the island's Vigie and Hewanorra Airports.

With the arrival of a second Twin Otter in August 1983, the company is able to introduce regional services to Cane Field, Dominica, Barbados, Grenada, and Union Island. Unable to continue, the company closes its doors in October 1984.

WINNIPESAUKEE AIRLINES: United States (1968-1980). Winnepesaukee is established at Laconia, New Hampshire, in 1968 to offer scheduled third-level service to destinations in New England, including Boston, North Conway, and Worcester. Daily roundtrips are undertaken, beginning in June, with a fleet comprising 3 Piper PA-31-310 Navajos and a PA-31-350 Navajo Chieftain.

Operations continue apace for the next decade and by 1977 enplanements reach 10,722. Passenger boardings jump 44.2% in 1978 to 19,215 while freight increases 5.6% to 77,795 pounds. Customer bookings grow by 3.1% to 20,000 in 1979; cargo is up a huge 74.6% to 136,000 pounds.

The airline is purchased by and merged into **Precision Airlines** in January 1980.

WINNPORT LOGISTICS, LTD.: Winnipeg International Airport, 103-1821 Wellington Avenue, Winnipeg, Manitoba R3H 8G4, Canada; Phone 204 954-9200; Fax 204 954-9214; http://www.winnport.com; Code KN; Year Founded 1998. A consortium of 40 investors from the local financial and transport sector establish this freight concern at Winnipeg International Airport in 1993. Emphasis is placed on the forwarding of cargo aboard scheduled airliners flying between Canada and Nanjing and Shenzhen in China and to domestic locations. In 1998, the decision is taken to operate aircraft. A Boeing 747F is wet-leased from **Evergreen International Airlines** to operate thrice-weekly return flights from Winnipeg to Nanjing and Shenzhen. The Jumbojet cargo service is not a success, primarily because of the Asian economic crisis, and is withdrawn by year's end.

Although the company remains one of only three North American all-freight operations with access to China, it elects to hold off reentering the China market until it can see potential for a profit. Meanwhile, in mid-1999, Winnport elects to revamp its operation and to operate cargo between cities in the NAFTA countries. Authority is sought from the Canadian, Mexican, and U.S. governments for the operation of trans-border freighter service with a smaller plane.

At the beginning of 2000, President Lynn Bishop oversees a workforce of 32 (including 18 flightcrew). In February, **Kelowna Flightcraft Charter, Ltd.**, a major investor, provides a hush-kitted Boeing 727-25F under lease. The same month, Winnport receives its Canadian operators certificate and inaugurates scheduled, overnight, all-cargo service on behalf of the Royal Air Cargo division of **Royal Airlines, Ltd.** between Calgary, Edmonton, Hamilton, and Vancouver.

U.S. authority is received in March and the first ad hoc charter "south of the border" is flown on May 14 between Winnipeg and New York (JFK). Operating authority from Mexico is received in June.

WINWEST SHUTTLE: Fresno Airport, Fresno, California, United States; Phone (888) 594-6937; http://www.winwest.com; Year Founded 1998. WinWest Shuttle is established at Fresno in the fall of 1998 to offer \$59 one-way charter service to Las Vegas. Employing a single Boeing 737-200A, revenue flights commence in November, with three flights from California to Nevada and two return flights. Passengers on the company Web site are advised that the schedule may change during holiday seasons.

WIRA KRIS, LTD.: Malaysia (1976-1978). The Wira Kris Udara (WKU), a fifty-fifty partnership between the Malaysian Armed Forces Cooperative Society (Koperasi Tentera) and private business interests,

forms this charter carrier at Kuala Lumpur in October **1976**. WKU owns 70% control, while a 30% interest is taken by the Dutch Schreiner Group. A fleet of 2 de Havilland Canada DHC-6 Twin Otters, 1 Piper PA-34 Seneca, and 1 Cessna 177B is assembled.

Revenue flights begin from Subang International Airport early in **1977** and are maintained. Airline employment reaches 40 and the fleet is upgraded. There is no further information available concerning this airline and it may well have gone out of existence.

WISCAIR: United States (1978–1980). Owners of Whitman Aviation, an FBO at Waukesha, Wisconsin, set up a scheduled commuter division in late **1978** to take advantage of possibilities opened up by the signing of the Airline Deregulation Act in October. Employing a Piper PA-31-310 Navajo, scheduled daily passenger and cargo roundtrips are inaugurated to Chicago (ORD) and are maintained until **1980**.

WISCONSIN CENTRAL AIRLINES: United States (1944–1952). Having operated a de facto airline since 1940 for employees of his Clintonville, Wisconsin-based Four Wheel Drive Auto Company, President Walter A. Olen incorporates Wisconsin Central Airlines on May 15, **1944**. FWD Public Relations Director Francis M. Higgins is named the airline's first president and travels to Washington to lobby the CAB for route awards in the North Central area. Meanwhile, in **1945**, a new headquarters and hangar is built at Clintonville.

In March **1946**, a CAB examiner recommends against a route award for WCA, suggesting conflict of interest between the air transport and auto firms. Under the direction of former **Transcontinental & Western Air Lines (TWA)** executive and new Vice President-Traffic Hal N. Carr and employing the Howard DGA-15 owned at the time of its formation, the airline inaugurates an intrastate service to six Wisconsin cities on April 6.

When rental property is made available by the U.S. Army Air Forces, headquarters are transferred to Madison in July. Having proved its commitment by serving six cities, WCA ceases its expensive demonstration in November while, on December 19, the CAB reverses its examiner's ruling and grants certification on December 19, provided its association with FWD is severed. Although the corporate reshuffle is approved, WCA has difficulty raising the \$1 million in capital necessary for its start-up.

Hal N. Carr is named executive vice president in January **1947** and given responsibility for day-to-day operations. His workforce now totals 100 and WCA is recertified October 3. During the fall, three Lockheed Model 10As are acquired (the company is so cash starved that it can only paint one side of the first aircraft following its delivery) and service is inaugurated between Minneapolis (MSP) and Hibbing/Chisholm in Minnesota on February 24, **1948**.

A fourth Model 10A, first flown by **Trans Canada Air Lines, Ltd.** in 1937 and destined to hang in Ottawa's National Aviation Museum, is acquired in the spring as the route network grows to 1,028 unduplicated miles. The famous Herman mallard deck logo is introduced and enplanements for the year total 11,400.

Destinations visited in **1949** include Chicago, Milwaukee, St. Cloud, Stevens Point, Wisconsin Rapids, Rhinelander, Eau Claire, and Minneapolis (MSP), as well as smaller communities in Wisconsin and Minnesota. A fifth and a sixth Electra join the fleet and passenger boardings ascend to 32,630. The workforce at year's end stands at 228.

Operations continue apace and in October **1950**, success leads to the purchase of six Douglas DC-3s for \$450,000 from **Trans World Airlines (TWA)**. America's third largest local service carrier transports 100,000 travelers on the year.

In **1951**, the intrastate carrier, employing the advertising phrase "Route of the Northliners" is allowed to extend its routes into North Dakota and additional Minnesota regions. The CAB recertifies the company and despite objections from Vice President Carr, votes to reduce its service to help it save on expenses. Unable to accept this downturn, Carr resigns at year's end.

The situation does not significantly improve in **1952** and the USAF advises the company that it must abandon its rented headquarters. At this

point, President Higgins resigns and is succeeded by new Executive Vice President/General Manager Donald A. Duff. Arthur Mueller is named chairman and president and headquarters are moved to Minneapolis (MSP). In March, two more DC-3s are purchased, this time from **Eastern Air Lines**.

In November, Vice President Duff dies suddenly and his place is temporarily taken by Art Mueller, who himself resigns in early December. Wisconsin State Aeronautics Commission Chairman Howard Morey now becomes the company's leader. To celebrate its new locale, Wisconsin Central changes its name on December 16 to **North Central Airlines**.

WISE AIRLINES: United States (1983–1985). N. M. Michael establishes Wise at San Angelo, Texas, in **1983** to provide scheduled passenger and cargo services to intrastate destinations. Employing 1 each Beech 99 and Piper T-1040, Wise inaugurates daily roundtrips linking its base with Brownwood, Dallas (DAL), Midland, and Austin. Operations continue apace until late **1985**.

WOODLAND AVIATION: Yolo County Airport, Davis, California 95616, United States; Phone (530) 662-9631; Fax (530) 669-3144; <http://woodlandaviation.com>; Year Founded 1952. Woodland is originally set up as the FBO at Yolo County–Davis Woodland Winters Airport in **1952**. Over the next 45 years, the company also undertakes a variety of domestic executive and small group passenger charters.

In **2000**, Mary MacCormac is charter coordinator and she schedules the work of 6 pilots, who fly 1 each Beech 2000 Starship, Beech Super King Air 200, and King Air 90.

WOODLEY AIRLINES: United States (1932–1945). Arthur G. Woodley, employing a single aircraft, establishes a charter service known as **Woodley Airways** at Anchorage on April 10, **1932**. Return flights are undertaken linking that city with points in the southwestern part of the territory. A Post Office mail contract is acquired in **1934** and four years later, in **1938**, route certification from Anchorage to Kodiak and to the regions around the Kuskokwim River and Bristol Bay is obtained.

The fleet by decade's end includes 1 Lockheed Model 10 Electra, 1 Consolidated Fleetster 20A, and 2 Travel Air 6000s. A Stinson Model A is purchased from Frank Reynolds on January 31, **1940**. The aircraft is lost in a crash landing at Juneau on January 19, **1943**.

Two ex-U.S. Army Air Forces C-73s (military Boeing 247Ds) are obtained in July and August **1944** and are placed into service over a route from Anchorage to Juneau. On January 1, **1945**, another Stinson Model A is acquired from the military. Later in the month, the company is renamed **Stinson Airlines** and following various corporate arrangements, is retitled **Pacific Northern Airways** on August 23.

WOODLEY AIRWAYS. See WOODLEY AIRLINES

WOODS AIRWAYS (PTY.), LTD.: Australia (1947–1962). With financial backing from friends and acquaintances and a July 22, **1947** license from the Western Australian Transport Board, Captain James "Jimmy" Woods and his wife Mollie form this tiny airline at Perth on December 4. William Duff is named chairman, with Capt. Woods as managing director. After purchasing an Avro Anson, he begins a 26-mile-long, over-water, twice-weekly roundtrip service from Perth to Rottnest Island on March 5, **1948**.

One of the world's most meager carriers, flying over what its advertising calls "the smallest scheduled air line route in the world," the Woods service is maintained with the only change being the addition of two more Ansons.

In December **1961**, the government bans Ansons from undertaking passenger flights over water. As a result, the tiny airline must be closed. Woods and his wife make the final company run from Rottnest to Perth on December 29.

Company business is finished and its shareholders are paid off in January and February **1962**. The last Anson is sold on March 17 and Woods

retires to become the subject of Julie Lewis's biography *Jimmy Woods: Flying Pioneer*.

WORLD AIR FREIGHT, LTD.: United Kingdom (1947–1950). Capitalized at £15,000, WAF is formed at London on June 24, 1947 as an international all-cargo operation. An ex-military Handley Page HP 61 Halifax 8 bomber, converted to civil freighter standard, is obtained on November 26 and begins operations from London (STN) by month's end.

A second Halifax is delivered in January 1948. Company operations are moved to Bovingdon at the end of February. The two aircraft undertake a variety of long-haul charters during the spring and summer and destinations visited include Zagreb, Lydda, Geneva, Damascus, Bahrain, Rangoon, Nicosia, Basra, Karachi, Calcutta, Madrid, Villafranca.

The two aircraft fly fruit to the U.K. from Spain and Italy in July and August and on August 31 one ship is committed to the "milk airlift" from Belfast to Blackpool and Liverpool. While en route from Belfast on September 28, the Halifax *Trade Wind* crashes near Port St. Mary, Isle of Man (four dead).

The surviving Halifax, the *North Wind*, begins participation in the Berlin Airlift on October 6, flying cargo into the former German capital from Wunsdorf. After only seven sorties, the plane crash-lands near Gatow on October 8; although no one is killed, the aircraft burns out. A replacement Halifax is located in November and begins flying freight into Berlin, from Hamburg, on Christmas Eve.

A second Halifax is placed in service by World Wide in March 1949; however, the Christmas HP 61 crashes near Tegel Airport, West Berlin, on April 30 (4 dead), after having completed 255 airlift sorties.

The remaining machine successfully completes its German service and is withdrawn on August 15 after flying 264 sorties. Refurbished, the Halifax returns to commercial service from Bovingdon in October, flying textiles into the U.K. from Lille.

On January 20, 1950, the Halifax is damaged in a landing accident at Brindisi. Although it is repaired, the aircraft, with six aboard, smashes into Mount Hohgant, Switzerland, on April 16; there are no survivors. With the loss of its last aircraft, the company ceases operations.

WORLD AIR NETWORK CHARTER, LTD. (WAC): Japan (1991–1995). World Air Network is founded at Tokyo on February 8, 1991 as the first international charter airline in Japan and a subsidiary of **All-Nippon Airways Company, Ltd. (ANA)**. President Isao Kasuga's new entrant initially employs 87 workers and leases a single Boeing 767-381ER from its parent.

Revenue flights commence on March 2 from Fukuoka, Nagoya, Niigata, Oita, Okayama, Sapporo, and Sendai. Destinations visited come to include 15 locations, including Bali, Bangkok, Beijing, Brisbane, Cairns, Dalian, Denpasar, Guam, Hanoi, Hong Kong, Melbourne, Phuket, Saipan, Seoul, Shenyang, Singapore, Sydney, Tianjing, and Xi'en.

A total of 120 flights are made during the remainder of the year, transporting 11,500 travelers.

A second B-767-381ER is chartered in 1992 and passenger bookings swell to 63,000. Based at Singapore, the carrier in 1993 employs 16 Australian pilots and 40 cabin attendants from Singapore. It is announced in October that this subsidiary will begin to operate some of its parent's scheduled routes as a way of cutting costs; the first roundtrip replacement flights begin in early December between Tokyo and Singapore.

Service continues in 1994 as two more B-767-381ERs join the fleet. Overextended, the company is shut down in August 1995. Since its start-up, the company has transported only 78,000 passengers on 398 international charters; losses reach \$4.8 million.

WORLD AIRLINES, LTD.: United Kingdom (1995–1996). WA is established by U.K. automobile-leasing magnate Nick Stolberg at London (LCY) in early December 1995 to operate close-in scheduled passenger frequencies to Schiphol Airport in the Netherlands. Capt. Ray Johnson is named managing director and plans are announced to launch

flights in February, four times a day. It is also noted that services to Copenhagen, Vienna, Innsbruck, and Salzburg will follow.

Beginning on May 1, 1996, business-class travelers may undertake luxury flights to Amsterdam aboard a single British Aerospace BAe 146-200 leased from **USAir**. A total of 44 weekly frequencies are offered.

In August, **Air U.K., Ltd.** introduces a cheaper business-class service between the two points. Passengers flock to the less-expensive frequencies of World's rival, putting the new entrant into a fiscal tailspin. Plans to take delivery of a second **USAir** BAe 146-200 and the initiation of a new route to Copenhagen are put on hold.

On October 1, the BAe 146-200 is impounded at London (LCY) for nonpayment of landing fees. Without flight equipment, World goes into liquidation on October 10. **USAir** pays the landing fees to regain its BAe and **Air U.K., Ltd.** honors tickets held by passengers for World.

In November, the Turkish all-cargo **Star Airways (Star Hava Yollari, A.O.)** purchases the British start-up passenger carrier from music entrepreneur Stolberg. A spokesman for World suggests that the grounded airline will soon return to scheduled service. Executives at both airlines are apparently unaware that an airline owned by a non-European company cannot be based in the U.K.

World has the distinction of being the first casualty in a U.K. fare war that will soon engulf other low-cost carriers, such as **easyJet Airlines, Ltd.**, and majors like **British Airways, Ltd. (2)** and **KLM (Royal Dutch Airlines, N.V.)**.

WORLD AIRWAYS: 13873 Park Center Road, Suite 400, Herndon, Virginia 22071, United States; Phone (703) 834-9200; Fax (703) 834-9212; <http://www.worldair.com>; Code WO; Year Founded 1948. World is incorporated as a "large irregular" carrier under Delaware laws by founder Benjamin Pepper at Oakland, California, on March 29, 1948. It supposedly begins operations between the Marine Air Terminal at New York (LGA) and San Juan, Puerto Rico, with the 3 former **British Overseas Airways Corporation (BOAC)** Boeing 314 flying boats *Bristol*, *Berwick*, and *Bangor* purchased for \$50,000 total. Occasional charters are flown to the Foynes in Ireland. Later in the year, the B-314 *Anzac Clipper* is purchased from **American International Airways**. Unable to achieve viability, Pepper halts operations at the end of December.

In January 1949, the Berkoviche Steamship Company acquires World Airways from Pepper and leasing a Curtiss C-46 Commando from the War Assets Administration, reopens the San Juan service. An additional Commando is acquired for spare parts. At this time the three former British flying boats are sold for scrap and the *Anzac Clipper* passes into private hands at Baltimore, only to be destroyed in a storm two years later.

In a January–February 1995 letter to the editor of *Airliners*, Mike Hardy of Rustington, England, will demonstrate that the often-repeated account of World flying boat service is largely a legend.

In July 1950, Edward J. Daly, the son of a Chicago fireman, employing, according to another myth, \$50,000 in poker winnings, purchases 81% controlling interest in World while also assuming its \$250,000 debt. To cut overhead costs, company headquarters are transferred from New York (LGA) to Teterboro Airport, New Jersey. C-46 charters to and from Puerto Rico continue for the remainder of the year.

A Douglas DC-4 is leased from **Braniff International Airways** in 1951, but before it can be placed into service, it must be repaired following a gear-up landing accident at Brownsville, Texas. Meanwhile, a contract is won from the government, the company's first, to undertake supply runs on behalf of the DEW Line construction project in Canada. The Commando provides this airlift support while Daly seeks a second DC-4 to replace the terminated Braniff lease. An ex-military C-54 is purchased, but it must first be repaired and brought up to civil DC-4 standard.

Two DC-4s join the fleet in 1952–1954, replacing the C-46s. During these three years, the carrier's charter service is maintained and the contract service with the U.S. Military Air Transport Service (MATS) grows in volume. Daly is awarded an "on-call" contract, which entails the extension of flights to Frankfurt, Casablanca, Guam, and Oriental

destinations. An interim CAB supplemental certificate is granted to World on December 15, **1955**.

Chairman Daly makes headlines in **1956** by personally flying refugees from Europe to the U.S. following the Hungarian Revolt. Under contract, World's DC-4s make 14 transatlantic refugee flights to Vienna. Late in the year, company headquarters are moved from Teterboro to Oakland, California. On December 16, the company is given a MATS contract to open a daily interisland service between Tokyo, Manila, Okinawa, and Taiwan.

A DC-6A joins the fleet in **1957**, at which time the company is marketed as "The World's Largest Charter Airline." Chairman Daly now receives an "on-call" contract from the government to operate services as needed to any major destination in the Pacific. Operations continue apace in **1958-1959**.

World Airways begins buying up **American Airlines'** surplus Douglas DC-6A Airfreighter fleet in February **1960**. Seven units will be received by August. Meanwhile, the company receives a LOGAIR transcontinental military charter contract on June 15.

Flight 830, an MATS-chartered DC-6A/B with 8 crew and 86 passengers fails its climb from Agana, Guam, on September 18 and makes a forced landing (80 dead).

In January **1961**, three Lockheed L-1049H Super Constellations are leased from **California Eastern Aviation**, along with one formerly operated by **Transocean Air Lines (TAL)**. The final AA DC-6A, the former *Airfreighter Boston*, is delivered on April 7, followed by an ex-**Resort Airlines** L-1049H on May 3. Another DC-6A is purchased from **Northwest Airlines** on July 1 while a second L-1049H is purchased from the Argentine airline **Transcontinental, S.A.**

Having earned \$5.5 million in profits over the previous two years, in May **1962**, World becomes the first supplemental to order jetliners, the long-range Boeing 707-373C. The order is made largely at the insistence of the USAF.

All four of the L-1649A Starliners previously operated by **Deutsche Lufthansa, A.G.** are chartered, two each in July and two in October.

Meanwhile, two L-1049H Super Constellations are chartered from **KLM (Royal Dutch Airlines, N.V.)**. The three jetliners, the first convertible B-707s built, join the fleet early in **1963**. In September, the three **California Eastern Aviation** L-1049Hs are passed to **Slick Airways**.

The first of the new cargo planes enters service in July, completing transpacific MATS flights. Also in July, two L-1049H Super Constellations are chartered to **The Flying Tiger Line**.

One of the Stratoliners makes civil aviation history on August 20 when it flies the first commercial nonstop service between the U.S. and Japan; the flight from Oakland to Tokyo requires 9 hrs. 52 min. Another B-707-373C is delivered on September 26.

By the middle **1960s**, World Airways is the most successful and largest of all 13 American supplemental air carriers.

Airline employment in **1964** totals 516 and the fleet includes 10 aircraft. During February and March, two L-1649A Starliners, acquired earlier on lease from **Deutsche Lufthansa, A.G.**, are passed to the South African independent **Trek Airways (Pty.), Ltd.**, while one goes to Air Venturers and the fourth is returned to Germany. An L-1049H previously flown by **Resort Airlines**, is chartered on May 4 to **The Flying Tiger Line**. Simultaneously, an L-1049H is chartered to **Alaska Airlines**. Late in the year, Daly's carrier becomes the first to inaugurate service with convertible B-727-173QCs.

Enplanements during the 12 months total 72,806 and revenues are \$25,904,000.

The workforce in **1965** is level. Introduction of the new Boeings continues. Plans are unveiled for the construction of a new headquarters at Oakland. On May 27, President Daly personally pays \$152,500 to help reimburse 2,000 victims of a bankrupt travel agency that had booked tours via the carrier; he also arranges for free airlift back to New York for 1,200 travelers stranded in Miami and Hawaii.

On August 22, World reports the initiation of two nonstop flights between the U.S. East Coast and Honolulu, the first such service by a non-scheduled airline.

A total of 110,794 passengers are originated. Revenues are \$33,341,274 and expenses are \$20,479,768. The net profit is \$6.9 million, or 46% of all net income earned by U.S. supplemental carriers.

On April 5, **1966**, World becomes one of 10 supplementals to receive permanent CAB certification; simultaneously, it also receives authority to fly transatlantic jet charters. Thirteen days after the CAB makes that award, CEO Daly's airline becomes a public corporation, with an initial offering of 975,000 shares of common stock. At month's end, the two L-1049Hs leased to **The Flying Tiger Line** in 1963 are sold to that freighter giant.

On June 30, Daly takes delivery positions for three Boeing Model 2707 SSTs; none will ever be delivered. Permission is received on September 30 to provide group transport to markets in South America and the Pacific. The company begins participation in the transpacific airlift to Vietnam.

Enplanements are 227,000. Revenues for the year total \$40,074,796. Profits are \$21,346,228 (operating) and \$9,380,377 (net).

When the flight deck personnel of the L-1049H, with 4 crew and 28 passengers and chartered to **Alaska Airlines** fails to put the landing gear down, the Super Constellation makes a belly landing at Kotzebue on April 17, **1967**; there are no fatalities, but the aircraft must be written off.

Mr. Daly requests CAB permission on April 26 to offer low-fare scheduled transcontinental service, but is turned down. World becomes the first airline to receive the USAF Zero Defects Award. Construction is started at Oakland upon a new headquarters and hangar complex; the \$11-million facility will be known as the Air Center and International Headquarters.

At midyear, World, the nation's largest supplemental carrier, becomes the first in its classification to be listed on the Pacific Coast and New York Stock Exchanges.

The fleet now comprises 20 aircraft: 9 B-707-373Cs, 5 DC-6A/Bs, and 6 B-727-173QCs, including 9 jet freighters received since spring.

Charter boardings increase to 350,948 and 91.19 million freight ton-miles are flown. The year's revenues are \$70,272,371. Net income jumps in both operating (\$21,346,228) and net (\$14,464,338) categories.

Beginning in July **1968**, World provides rest and recuperation (R and R) flights for U.S. troops in Vietnam, flying them to Japan or Australia. It also earns the contract to fly *Stars and Stripes*, the military newspaper, to Saigon from Japan, where it is printed. The carrier leases a DC-9-55F on December 1 for a two-year period from **Trans Caribbean Airlines**.

During the next three years, the carrier's heroic flights into war-torn South Vietnam gain public notice. Flying servicemen, food, and supplies into that nation and Cambodia provide the grist for media focus.

The workforce is now 1,355. A total of 543,000 charter passengers and 91.36 million freight ton-miles are flown during the year. Revenues accelerate to \$84,292,000, but profits fall, both operating (\$19,067,828) and net (\$7,538,547).

The workforce in **1969** is increased to 1,300 and 545,000 charter passengers are flown. The nation's largest supplemental carrier has revenues of \$87,707,963 and enjoys huge profits: \$11,647,304 (operating) and \$4,729,759 (net).

Increased fuel costs, inflation, and Vietnamization bring a **1970** downturn. The year begins with several administrative changes, including the appointment of Howell M. Estes as executive vice president and the election of new board member actor Fess Parker. On February 25, the carrier joins with British Grand Hotels to offer British tourists a new group charter plan for a roundtrip to New York and a six-night hotel stay for \$213.

A strike by pilots, navigators, flight engineers, and flight attendants affiliated with the Teamsters Union, which begins on May 15, limits flights to those that can be made by supervisory pilots. After contracting with members of the Texas Intercollegiate Student Association for six charter flights to Europe, World is unable to carry them out as scheduled because of the continuing job action.

On June 5, the carrier seeks to transfer these groups to **KLM (Royal Dutch Airlines, N.V.)**, but this move is rejected by the CAB, which also challenges the "charter worthiness" of the student association. Having carried out its legal obligation to make alternate arrangements, even

though they fail, the company can do nothing further until the strike is settled, by mutual agreement, on July 4.

The order for Boeing 747s is cancelled in favor of a request for three DC-8-63Fs. In September, a B-707-373C is leased to **Pakistan International Airways Corporation (PIA)**.

A special Homecoming Fare is introduced in December, in cooperation with the United Service Organizations (USO), and allows a serviceman to fly roundtrip from Saigon to Oakland for just \$350.

Passenger boardings decline 36.6% to 345,000. Forty-seven new employees are hired during the year. Income falls to \$58,268,387 and despite an operating profit of \$1,144,550, a net \$970,030 must be absorbed.

During the **1970s**, World's fleet is gradually expanded. The three Douglas DC-8-63CFs are the first to arrive, beginning in March **1971**. During the year, the company also undertakes an eight-year contract to provide scheduled services on behalf of the Republic of Mali. From a base at Bamako, flights are undertaken employing three B-727-173s provided under lease. The Homecoming Fare program ends in December. Enplanements ascend to 375,326.

The workforce in **1972** totals 1,694. Norton Lilly & Company becomes the carrier's U.S. general cargo sales representative, while a major marketing agreement is signed with the Greyhound Lines for the promotion of worldwide air charter tours, inclusive and otherwise. Orders are placed for three B-747-273Cs and World takes delivery of three more DC-8-63CFs.

Passenger boardings for the nation's largest supplemental carrier increase 35.4% to 581,000, but freight traffic is down by 26%. Income is \$63.66 million and expenses are \$63.40 million. Consequently, profits are made: \$256,000 (operating) and \$5.57 million (net), the latter best in the nonscheduled industry.

Employment in **1973** is reduced by 62 workers. The company becomes the first charter airline to acquire wide-body aircraft when two nose-loading Boeing 747-273Cs join the fleet in May; they immediately enter service flying transatlantic military passenger charters. Three more DC-8-63CFs are also welcomed over the next eight months. The same year a new \$12-million company headquarters and maintenance facility, the World Air Center, is occupied at the Oakland base.

The maintenance subsidiary now offers itself as a major contract airframe engineering, overhaul, and modification operation available to the entire industry.

Operationally, World now also initially participates, in support of Islamic world carriers, in transporting Muslims from Indonesia, Algeria, and Niger on their Hadj pilgrimage. Within 20 years, Daly's airline will have provided more pilgrim airlift to the Islamic Holy Land than any other.

Charters are undertaken and maintained on behalf of both **Malaysian Airlines, Ltd.** and **Garuda Indonesian Airlines**.

En route from Travis AFB, California, to Yokohama, Japan, and Clark AFB in the Philippines on September 8, Flight 802, a MAC-chartered DC-8-63CF with a six-man crew, crashes into Mount Dutton, near King Cove, during its landing approach to Cold Bay airstrip in Alaska; there are no survivors.

In the fall, one of the B-747-273Cs is changed to all-cargo configuration and undertakes 12 missions to the Pacific for MAC.

The number of charter passengers increases by 46% to 848,000 while freight traffic rises 51.6%. These traffic figures temporarily reduce Daly's company to second place among American supplementals. Still, industry-best revenues of \$81.17 million are generated. Expenses, led by fuel prices, swell to \$91.52 million, leaving an operating loss of \$10.35 million. A million-dollar net profit is, however, realized.

The workforce of the world's largest charter carrier in **1974** reaches 1,017. The company wet-leases its DC-8-63CFs to **Garuda Indonesian Airways** and **Air Algerie, S.A.**, which operate them on Muslim Hadj pilgrimage flights to Saudi Arabia.

In addition, World begins to participate in two projects organized by Holiday Inn in Jordan. A third B-747-273 is received, and is then wet-leased to **Korean Airlines/Korean Air (KAL)**. The World Air Center's maintenance staff undertakes a contract to modify USAF KC-10 tankers.

Due largely to economic factors (as well as the end of the Indochina war), charter traffic is down. Boardings fall 17.3% to 700,000 and cargo declines a huge 47.7%, with much of the freight loss coming from concluded MAC business. Despite an 8.5% rise in revenues to \$84.51 million, expenses (led by fuel costs) jump to \$91.74 million. An operating loss of \$7.22 million is suffered, but thanks to the sale of the First Western Bank, net income actually rises \$20 million dollars to \$21.23 million.

The workforce in **1975** grows to 1,500. As the situation in southeast Asia deteriorates in the spring, World steps up its missions to and from that area. Between February 15 and 26, World aircraft operate an average of six roundtrip DC-8-63CF ammunition and military supply flights per day from Saigon's Tan San Nhut AFB to Phnom Penh. Chairman Daly himself pleads with authorities to allow foodstuffs to be taken to the starving people of the Cambodian capital. Beginning on February 27, the company is able to undertake a rice airlift to provide humanitarian relief.

On March 29, when North Vietnamese forces begin to envelop South Vietnam's second city, Da Nang, the U.S. government contracts with World to provide 20 roundtrip B-727-173C evacuation flights. After the first three, the contract is cancelled by the U.S. Embassy due to the worsening situation. Ignoring Department of State wishes, Daly enlists his crews to fly a mission into Da Nang Airport, under siege by the North Vietnamese and Vietcong, to evacuate civilian women and children.

Only one plane lands, because upon touching down it is rushed by thousands of people. Pushing people off with his pistol, Daly and fellow crew members are able to lift off successfully, even as "friendly" troops begin to fire on them. With people in every corner, including cargo holds and wheel wells, the "Last Flight from Da Nang" returns to Saigon with 368 "passengers." Of these, 60 are in the cargo pits, 8 are in the wheel wells, and the remainder are in the cabin, but only 11 turn out to be women or children.

Chairman Daly now makes international news when he airlifts Vietnamese orphans, in what was to become known as the "Baby Lift," from Saigon to Oakland. Returning to Oakland, Daly's final flight from Vietnam brings in 218 war refugees, of whom 57 are orphans for which the World official takes personal responsibility. The U.S. Immigration and Naturalization service attempts to fine World \$218,000 for his effort, but media and public outcries lead to a cancellation of the charge.

The company withdraws from Indochina after the fall of Saigon at the end of April. Chairman Daly receives the Aero Club's annual achievement award on June 25.

On the year, passenger boardings fall 20.8% to 554,184; however, freight is up by 16.42% to 36.84 million FTKs. On revenues of \$94.64 million, expenses are \$91.09 million and the operating profit is \$3.54 million. Although down from the previous year, a net profit is earned, \$7.47 million.

The number of employees is reduced by 5.1% in **1976** to 1,144. World signs a management and support contract with **Yemenia (Yemen Airways Corporation)** and provides three chartered B-727-173s. Company aircraft ferry a 28-unit motel from the U.S. to Dubai in late February.

A charter jetliner is grounded for 36 hours in Jackson, Mississippi, on May 31 by irate passengers, led by Hinds County Circuit Court Judge Francis Bowling, who are inconvenienced by delays in London and Bangor, Maine, as the result of the company's ongoing labor problems. Judge Bowling obtains a writ of attachment against the plane, which requires a day and a half for World to remove.

Customer bookings fall 35% to 358,466; however, cargo skyrockets 107.4% to 71.2 million FTKs. On revenues of \$70.23 million, expenses are \$79.54 million. This unhappy imbalance results in an operating loss of \$9.31 million. Other diversified activities, however, salvage the year financially and produce an overall \$2.17-million net gain.

By **1977**, the carrier employs 1,400 workers and operates a fleet comprising 1 B-747-273C, 5 DC-8-63CFs, 2 DC-10-30CFs, 3 B-727-173Cs, 1 B-707-373C, and 1 CV-440. Orders remain outstanding for 1 B-747-100F and 4 DC-10-30CFs.

Early in the year, permission is received from the CAB for the initiation of service to Canada and Mexico. The regulatory body also holds expedited hearings on an application for scheduled U.S. transcontinental flights.

Enplanements total 496,000 and a total of 11.4 million FTKs are operated.

Airline employment is increased 8.8% in 1978 to 1,740 and on February 9 a former **Continental Airlines** B-747-124SF is acquired. Most of the year is taken up with planning to meet Ed Daly's decade-old desire for scheduled service, which becomes possible following President Carter's signing of the Airline Deregulation Act on October 14. On November 13, the carrier agrees with Jetsave to a 3-year, \$60-million travel program centered on low-cost vacation flights between the U.S. and U.K.

Customer bookings jump 37.6% to 794,000. Freight, on the other hand, is down a whopping 78.4% to 6.39 million FTKs.

The employee population is increased by 49.4% in 1979 to 2,600. Initial \$99.99 scheduled, nonstop operations commence between Newark and Baltimore to Oakland and Los Angeles on April 11. The first U.S.-U.K. flight under the Jetsave contract is undertaken three days later. During the year and into the next, a fleet of four convertible McDonnell Douglas DC-10-30CFs is acquired.

Scheduled operations are suspended in June following the crash of an **American Airlines** DC-10 at Chicago. Although the wide-bodies are later available for return to duty, only passenger charters are operated, sporadically, for the remainder of the year due to a 132-day transport workers strike.

The company reports, on December 12, that its 1,300 pilots, flight attendants, and mechanics have ended a 4-month job action.

As a result of the strike, however, overall passenger boardings decline 18% to 651,000 and freight traffic plunges by 89.7% to 656,000 FTKs. Although a \$4.25-million operating loss is suffered, there is a net gain of \$11.38 million, the last profit to be shown.

Following a profitable performance, World Airways suffers a fiscal setback in 1980. Transcontinental service is restarted in February and a route to Hawaii is added. California to Honolulu service is expanded by two flights per day on April 15 because of the heavy demand generated by a special discount fare of \$69.99. New York to London standby fares are cut on July 30 by up to 50%.

Although these services cause enplanements to climb to 1,164,840, revenues for the newly reclassified "national" carrier cannot keep pace with costs. Expenses skyrocket 79.98% to \$229.37 million against an operating income of \$200.6 million, a boost of 62.84%. The company is therefore forced to absorb an operating loss of \$28.7 million and a net loss of \$28.2 million.

An annual relationship begins with **MAS (Malaysian Airlines System)** in March 1981 as Hadj pilgrimage flights to Saudi Arabia are flown on behalf of the Southeast Asian carrier. U.S. West Coast service to London and Frankfurt via Baltimore (BWI) is launched on a scheduled basis beginning in May.

Tragedy strikes on September 20 when, during Flight 32 from Baltimore (BWI) to London (LGW), flight attendant Karen Williams is crushed to death in the crew elevator of her DC-10-30CF.

Overall passenger traffic rises 42.9% as 2.03 million passengers are transported and 90.04 million FTKs are operated. Despite this success and a six-month International Commission on Migration Asian refugee transport contract, financial losses, some associated with the slowdown caused by the PATCO air traffic controllers' strike, continue.

Indeed, Chairman/President Daly seeks union concessions and demands the government re-regulate the airlines as a net loss of \$20.228 million is posted.

The fiscal situation does not improve in 1982 as the recession deepens.

While landing at Boston on January 23 after a flight from Newark, Flight 30H, a DC-10-30CF with 12 crew and 200 passengers, is unable to stop. The wide-body is steered off the side of the runway to avoid a pier and slides into shallow water, where, at a point 250 ft. past the end of the runway, the nose section separates (two dead). A salvage crew lifts the aircraft from its resting place eight days later.

Bomb threats, later proved false, result in the evacuation of 500—600 people on 2 DC-10-30CFs at Baltimore (BWI) on September 8.

Passenger bookings for the 1,700-employee carrier fall 19% to 1,651,000 as cargo plunges by 47.3% to 47.47 million FTKs. The

ledgers continue to be written in red ink. Revenues fall 21.29% to \$269.88 million and costs jump to \$282.45 million. The operating loss is \$12.57 million and a \$43.77-million net loss is suffered.

In 1983, World Airways opens a nonstop Newark–Oakland route, as well as one from Newark to Frankfurt. Comedian George Burns becomes the company's "official spokesman." The debt is reorganized and a number of creditors are paid off with preferred stock.

Passenger boardings drop 26.8% to 1,237,000 and freight is down by 1.9% to \$53.97 million FTKs. Costs of \$269.6 million and less than operating income of \$274.4 million and thus a turnaround operating profit of \$4.8 million is claimed. Unhappily, a \$29.38-million net loss is suffered.

Airline employment stands at 2,400 in 1984 and the fleet now includes 2 B-747-273Cs, 1 B-747-124SF, 8 DC-10-30CFs, and 2 DC-10-10s.

Chairman Daly dies on January 21 at the age of 6.

On February 18, a DC-10-10 comes within five miles of two USAF KC-135 tanker planes in flight over Topeka, Kansas, before the civilian pilot changes course.

Former **Western Airlines** Vice President Donald Beck is named president in April and immediately finishes a major recapitalization effort.

The company now changes its focus from charter to scheduled operations and records a passenger traffic increase of 30% as 1,604,000 customers are flown. Freight, meanwhile, balloons by 81.2% to 97.83 million FTKs. On the financial side, revenues, helped along by the national recovery, rise 17.7% to \$322.9 million, as costs climb only 16.1% to \$313.09 million. The operating profit of \$9.78 million represents a significant turnaround and hope is seen in the net loss of \$17.97 million, an improvement over 1983.

As 1985 dawns, the 2,200-employee World continues to provide both charter and low-cost scheduled air service to Saudi Arabia; from Hawaii to the U.S. West Coast; across America via Oakland, Los Angeles, Kansas City, and Baltimore (BWI), to Newark (EWK); and on to London and Frankfurt. The company constantly upgrades its scheduled service to a point where charter traffic totals only 19% of enplanements. The fleet now comprises 8 DC-10-30CFs, 2 DC-10-10s, 1 B-747-124SF, and 2 B-747-273Cs. In April, Jerrold Scoutt Jr. becomes board chairman and in June President Arthur Hutton becomes CEO.

While taxiing at Newark on July 18, a DC-10-10 nearly collides with a **PEOPLEExpress** B-727-227; more than 200 people are jostled, but none are injured. Late in the year, four DC-10-30CFs are leased to **United Airlines** in exchange for the charter of four DC-10-10s, better suited to its needs. To sweeten the arrangement, United pays an additional \$30 million and retires World's Dash-30 debt. The aircraft will be delivered to World later on in a new purchase scheme, complete with a new company logo.

Passenger boardings dip 3.2% to 1,568,000 and revenues jump 12% to \$360.23 million. Costs rise 11.5% to \$347.14 million and the operating gain is up to \$13.08 million. An unhappy \$9.47-million net loss is suffered, a 50% improvement over the previous year.

With its scheduled services continuing to be a significant drain on resources, the company's board, including chief stockholder June Daly, votes in summer 1986 to discontinue scheduled flights and, after making CEO Arthur Hutton vice chairman, seeks new leadership. The B-747-124SF is sold to **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** in July.

After **Presidential Airways** purchases the charter operator **Key Airlines (2)** in July, the latter's president, T. Coleman Andrews III, is named president/CEO of World on August 25. In September, the carrier closes down all of its scheduled services, which account for the bulk of operations, and in an unprecedented success, World exits its scheduled experiment in an orderly fashion. In excess of 100,000 booked passengers are transferred to other airlines with minimal disruption and fiscal loss.

Additionally, 1,500 employees are laid off, the DC-8s are sold, and the leased B-727s and DC-10s are returned to lessors, the latter going back to **United Airlines** along with the new paint scheme and logo. The company successfully attempts to move into profitability, with a \$1-million fourth-quarter net gain showing the way.

Passenger boardings plunge 25.5%, as expected, to 1,368,000 and freight traffic is level at 115.8 million FTKs. Although exact financial figures are not made available, losses are reported as \$49 million (operating) and \$28 million (net).

In late winter 1987, stockholders approve the creation of a new holding company, WorldCorp. On March 1, the 1,300-employee charter operator **Key Airlines (2)** is acquired from **Presidential Airways** for \$18 million and becomes a wholly owned WorldCorp subsidiary, which will be operated separately from World.

The carrier's four DC-10-30CFs are sold and leased back and a B-747-273C is sold to **Evergreen International Airlines** in May. These aircraft transactions reduce long-term debt to \$23 million. Meanwhile, in order to be closer to the headquarters of the U.S. military, its chief customer, World moves its own headquarters cross-country to Washington, D.C. (IAD).

Effective on June 23, World Airways officially becomes the principal subsidiary of WorldCorp through the exchange of one common share of stock in the old airline for one in the new holding concern. The new subsidiary World Airways Cargo is created on October 5.

Customer bookings fall a dramatic 60.3% to 543,000 as the company works only charters and purposefully shrinks itself by two-thirds. Cargo is also down, by 13.4%, to 118.13 million FTKs. Revenues also decline, dropping 56.7% to \$101.2 million. Expenses are, however, held low and a \$14.9-million operating profit is generated, along with a net profit of \$7.8 million.

Airline employment is cut by 50% in 1988 to 650 and the fleet now includes 4 leased DC-10-30CFs and 8 B-727-173Cs.

Once again exclusively a charter operator, the airline boosts its enplanements by 2.5% to 454,000. Freight traffic recovers, rising a welcome 63.2% to 110.92 million FTKs. The airline's profits total \$22.4 million (operating) and \$22.9 million (net). WorldCorp as a whole reports revenues of \$167.5 million, up 17%, and net earnings of \$11.8 million.

The employee population increases 30.2% in 1989 to 479 and the fleet is increased by the addition of 3 DC-10-10s.

Customer bookings balloon 60.2% to 729,329 and cargo skyrockets 182.1% to 334.57 million FTKs. Revenues move upward 37.5% to \$173.6 million and these produce gains of \$27.79 million (operating) and \$31.4 million (net).

The fleet in 1990 includes the 3 new DC-10-10s and 5 DC-10-30CFs. Following the UN's decision to oppose Iraq's August 2 invasion of Kuwait, World begins to transport U.S. servicemen and women to the Persian Gulf in support of Operation Desert Shield. Despite its new-won military contract, the carrier actually suffers a downturn in traffic.

Passenger boardings fall 29.2% to 516,000 and freight is off by 33.3%, to 223.31 million FTKs. Revenues, however, advance by 40.34% to \$243.68 million and stay ahead of costs, which rise 54.54% to \$225.4 million. Still, operating income falls to \$16.98 million and net income is down to \$10.67 million.

A fourth DC-10-10 joins the fleet in 1991 as the 725-employee company continues to fly in support of the UN Persian Gulf commitment, now labeled Operation Desert Storm.

Despite this activity and the introduction of a new color scheme in the fall, the pioneer supplemental suffers a bad traffic year as customer bookings decline another 6.8% to 481,000 and cargo is off by 23.7% to 170.32 million FTKs.

Still, profits are made. Revenues drop 6.5% to \$226.59 million, expenses fall 6.23% to \$211.34 million, and an operating profit of \$15.24 million is generated. Net profit doubles to \$20.48 million. Parent WorldCorp is also profitable, earning an operating profit of \$13.4 million and net gain of \$10.4 million.

The fleet in 1992 includes 5 DC-10-30CFs and 4 DC-10-10s. In April, British Aerospace plc Executive Vice President Russell L. Ray Jr. is elected to the board of directors. Ray had been the last president/CEO of **Pan American World Airways (1)**.

During the summer, World flies U.S. Olympic athletes to Barcelona. A contract is signed with **Japan Air Lines Company, Ltd. (2)** on Oc-

tober 9 under which the carrier's new subsidiary, World Flight Crew Services, will provide the Japanese megacarrier with pilot training for three years at a fee of \$16 million per annum.

The following week, a letter of intent is signed to sell the **Key Airlines (2)** subsidiary to Savannah, Georgia-based Savannah Aviation Group for \$7.25 million. At the same time, the company elects to take leases on 10, later 11, MD-11s with which to replace the DC-10s.

In the fall, the company participates in the Bosnian relief effort and in December is called to assist in Operation Restore Hope in Mogadishu, Somalia.

Passenger boardings decline 35.6% to 410,000 and freight is off by 49.8% to 85.54 million FTKs. Revenues fall 11.6% to \$200.28 million, expenses drop 7.7% to \$194.98 million, and operational income slides 2/3 to \$5.28 million. Net gain tails off to \$6.44 million. Finances at parent WorldCorp slip, even after **Key Airlines (2)** is sold in the fall. Revenues descend 28.5% to \$200.4 million, but costs are higher and force losses of \$5.29 million (operating) and \$6.44 million (net).

The payroll is increased by 24% in 1993 to 598 as President Charles Pollard's carrier continues to fly missions in support of Bosnian relief and Operation Restore Hope. On March 30, World takes delivery of the first 4, in passenger configuration, of an 11-aircraft order for McDonnell Douglas MD-11s; an order is outstanding for an MD-11F. Civil scheduled passenger operations are resumed on April 1 and in addition, plans are made to offer scheduled round-the-world all-cargo services from the east coast to Europe, the Orient, and to the West Coast.

On May 1, three MD-11s are wet-leased to **Garuda Indonesia** for Hadj flights to Saudi Arabia and the fleet now comprises 6 DC-10-30CFs, 2 DC-10-30s, and 6 MD-11s. William F. Gorog is named chairman on May 15, succeeding W. Jerold Scoutt Jr., who retires, but remains a director.

On August 2, World is one of seven carriers to win an Air Force contract to provide long- and short-range international airlift services under the Civil Reserve Air Fleet program; the pact is valued at \$94 million.

Malaysia Helicopter Services, Sqn. Bhn., a subsidiary of the telecommunications company Technology Resources Industry Berhard, which also controls **Malaysia Airlines, Ltd. (MAS)**, purchases a 24.9% stake in the airline during November for \$27.4 million. Added publicity is obtained this year when a company DC-10-30 appears at the end of the Kim Basinger and Val Kilmer adventure film *The Real McCoy*.

Customer bookings for the year inch up 0.4% to 482,000, but cargo slides 6% to 216.64 million FTKs. Revenues rise only to \$201.52 million, while expenses jump 7% to \$208.84 million. As a result, the operating loss worsens to \$7.32 million. The net loss grows to \$9.04 million.

Airline employment is increased by 25.4% in 1994 to 750. Part of the traffic rights to South Africa granted to **USAfrica Airways** are sought from the DOT; they are not received and planned scheduled frequencies to Johannesburg cannot begin. On June 2, the DOT proposes reducing the number of **El Al Israel Airlines, Ltd.** flights between New York and Tel Aviv in retaliation for the Israeli government's refusal to allow World to start scheduled service over the same route. The proposal does not take effect—and World is not certified for the route by the Israelis.

Malaysia Airlines, Ltd. and **Malaysia Helicopter Services, Sqn. Bhn.** join with World on June 15 to forge a code-sharing deal under which the three will operate a joint freighter service to Europe and the U.S. using a World MD-11. The tripartite alliance takes effect on June 19 when a weekly service is opened from Kuala Lumpur to Amsterdam via Dubai and a second is started from Kuala Lumpur to Los Angeles via Penang, Taipei, and Anchorage.

Two MD-11 passenger aircraft are chartered for six months to **Malaysia Airlines, Ltd. (MAS)** in October. Also during the fall, World is finally granted permission to inaugurate scheduled flights to Tel Aviv from New York, beginning in the first quarter of the following year.

An MD-11 is wet-leased to **Ghana Airways Corporation** in November, while, simultaneously, an MD-11F and two DC-10-30s are also chartered to **Malaysia Airlines, Ltd. (MAS)**. The former aircraft is employed to inaugurate twice-weekly New York to Accra flights for six

months on behalf of the renter. Also during the month, over \$70 million worth of new one-year military charters are acquired from the U.S. government.

Plans are made to initiate the scheduled Israel service next July. Simultaneously, the company again files for scheduled services to Accra and Johannesburg, seeking to acquire the route authority of defunct **US-Africa Airways**.

Passenger boardings advance by 4.6% to 294,000 while freight plunges 57.9% to 74.05 million FTKs. Revenues total \$203 million, but a \$9-million net loss is suffered atop a pretax loss of \$5.2 million.

The workforce stands at 838 in 1995, a huge 73.1% increase. In addition to the three aircraft already leased, the company charters a fourth MD-11, an MD-11CF, to **Malaysia Airlines, Ltd. (MAS)**.

Scheduled thrice-weekly MD-11 passenger service begins on July 2 from New York to Tel Aviv, but falls well short of expectations. Meanwhile, federal government shutdowns force cancellations in the carrier's Brazil-U.S. charter program. A code-sharing agreement is entered into with **Continental Airlines** that is designed to improve results on the scheduled front.

In mid-September, WorldCorp spins off World Airways, its largest division, into a separate publicly traded company; when news of the impending public offering of World Airways stock gets out, WorldCorp stock prices are pushed to record levels. As part of the arrangement, Chairman Andrews agrees to sell most of his holdings.

Enplanements surge 31.1% to 737,363 and 523.3 million freight FTKs are operated, a gigantic 90.7% growth. Operating income accelerates 43.6% to \$259.48 million as costs move ahead by 34% to just \$249.14 million. The previous year's losses are turned into profits: \$10.34 million (operating) and \$8.89 million (net). The loss figures are later rewritten and deepened to \$15.89 million and \$14.14 million, respectively.

The employee population is reduced 8.6% in 1996 to 766. The first two MD-11ERs manufactured are received under lease from their builder during April. They will be wet-leased to **Garuda Indonesia** for use on that flag carrier's Hadj flights to Saudi Arabia.

Charles W. Pollard is named CEO at the WorldCorp annual meeting on May 22, succeeding T. Coleman Andrews III, who becomes board chairman. Ahmad M. Khatib is appointed chief operating officer with Vance Fort as executive vice president.

On June 6, a new code-sharing agreement with **Continental Airlines** takes effect. Not only does World transfer four of its long-haul flights to Newark to connect with Continental's, but the two offer weekly dual-designator nonstop flights to Johannesburg, Tel Aviv, Dublin, and Shannon as World inaugurates its new South African service on June 23.

On June 25, a company spokesman announces that World will drop its money-losing European scheduled charter business and will take a \$2.7-million charge loss for the second quarter for the discontinued business. The flights in question end on July 31.

On August 1, a \$55-million contract is signed with the USAF for the transport of military personnel to U.S. bases in the Far East, Europe, and the Mideast for a year. The award is the 40th consecutive annual contract that the carrier has won from the USAF.

Regularly scheduled passenger service between New York and Johannesburg is halted on August 23, while the route from New York to Tel Aviv is dropped on September 3; the suspensions allow the carrier to focus on its more profitable charter and cargo business. Arrangements are, however, made with **Tower Air** and **Trans World Airlines (TWA)** to honor Tel Aviv ticketing and with **South African Airways (Pty.), Ltd.** to care for Johannesburg passengers holding tickets valid beyond August 23.

In September, the company begins to develop a core, long-term wet-leasing strategy that will prove lucrative. Similar to those offered by **Atlas Air**, these aircraft, crew, maintenance, and insurance (ACMI) contracts provide customers services for a fixed price.

Flight 201, an MD 11 with 14 crew and 268 passengers, runs off the end of runway 11 at Buenos Aires after landing on November 6 and be-

comes mired in the mud. All occupants deplane through the passenger door using external stairs and no injuries are reported.

By December 31, the carrier is able to claim the honor of having provided more contract airlift services to the U.S. Department of Defense than any other airline.

Passenger boardings (scheduled and nonscheduled) skyrocket 76.9% to 1,304,475 even as cargo plunges 42.7% to 300.08 million FTKs. Revenues jump 27.7% to \$309.58 million while expenses accelerate only 27.1% to \$287.94 million. Operating gains advance to \$21.64 million and a net \$18.35-million net profit is posted.

The employee population is cut 2.1% in 1997 to 750. On January 6, the carrier signs a \$30 million ACMI agreement with **Garuda Indonesia**. Under its terms, the company will provide the carrier with flight crews, maintenance, four MD-11s, and two DC-10-30CFs between May and September and perform Hadj flights for Muslim pilgrims to Saudi Arabia.

President/CEO Pollard, who had given notice that he would not return upon the expiration of his contract in December, resigns under board pressure on March 14. Chairman Andrews becomes acting president and heads a search committee for a new CEO. A member of the World Airways board for four years, Russell L. Ray Jr. succeeds President Pollard, initially on an interim basis, on April 4. The post will become permanent before the end of the year.

In late May, an MD-11 is wet-leased to the Belgian low-fare carrier **City Bird, S.A.** A month later, a DC-10-30CF is wet-leased to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** for six months; the aircraft is placed into service on behalf of Brazil's No. 2 carrier, transporting cargo from various South American destinations to Miami.

After having received a substantial payment from **Philippine Airlines (PAL)** on July 11, World and PAL resolve a contractual dispute that allows two MD-11s leased to the Asian airline to be placed elsewhere during the third quarter. PAL agrees to operate two other MD-11s currently in its fleet until February 1998.

World's contract with the USAF is not only renewed on August 6, but increased by 35% to \$74 million. Military personnel will continue to be flown to and from the U.S. from bases in Europe, the Far East, and Mideast. It is anticipated that ad hoc awards will again add \$15 to \$25 million to the value of the contract.

On September 18, the airline repurchases 3.2 million shares of its common stock from parent WorldCorp for \$7.65 per share. During the remainder of the month, World repurchases an additional 773,000 shares of its common stock from WorldCorp and other shareholders.

An MD-11 strikes its tail while landing at Montevideo, Uruguay, on October 24, causing it to be out of service for two months.

Also during the month, the carrier completes a private offering of 8% senior subordinated debentures due in 2004. The \$50 million raised will be employed to pay down debt, for working capital, and for general purposes.

An MD-11F experiences a hard landing at Montevideo on October 31; although none of the crew is hurt, it will take two months to repair the aircraft and return it to service.

Former Overnite Transportation President/CEO James Douglas is appointed executive vice president/chief financial officer on December 1. On December 30, **Aer Lingus Irish Airlines, Ltd.** comes to terms with World for the charter of an MD-11 between May and October next. The Irish state line thus makes a change after two years of employing a **Caledonian Airways, Ltd.** Lockheed L-1011 TriStar on its summer services between Dublin and Newark.

The year's passenger boardings plunge 42.2% to 294,000, while freight falls 35.2% to 3.8 million. Operating revenues decline 13.2% to \$309.41 million, while expenses drop 19.8% to \$292.55 million. As a result, the previous year's operating loss is turned into a \$16.85 million operating gain, while the net loss becomes a welcome \$11.26-million net profit.

El Al Israel Airlines, Ltd. is the first ACMI lease customer of 1998, agreeing on January 14 to charter an MD-11 for use on summer tourist flights between Tel Aviv and the U.S.

On February 3, a lease is signed with **Garuda Indonesia** for the operation of six MD-11s for the upcoming Hadj season, from March through early May.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14. A preliminary document had been initiated by their representatives on January 30.

The company celebrates its fiftieth birthday on April 6 and two days later, the U.S. signs a new bilateral air agreement with France.

On April 29, effective in mid-May, **STAF (Servicios de Transportes Aereos Fuegoños, S.A.)** of Argentina wet-leases a McDonnell Douglas MD-11F from World for a three-year period. Painted in STAF colors, the jet freighter will be placed on the Argentine line's services to the U.S.

To cut costs, the six MD-11s out on lease to **Garuda Indonesia** for Hadj services are returned by the Jakarta-based flag carrier on May 6. Simultaneously, Garuda announces that it will retain its five DC-10-30s, using them to help cover the capacity lost with the return of the MD-11s.

On May 13, effective in mid-May, an MD-11 is wet-leased to **Monarch Airlines, Ltd.**

On May 21, World announces the signing of its seventh wet-lease contract since the beginning of the year. In addition to ACMI agreements with **Aer Lingus Irish Airlines, Ltd.**, **Air India, Ltd.**, **El Al Israel Airlines, Ltd.**, **Florida Jet**, and **STAF (Servicios de Transportes Aereos Fuegoños, S.A.)**, this latest arrangement again calls for delivery of a freighter to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**.

The wet-lease with **Monarch Airlines, Ltd.** is simultaneously started. Repainted in modified colors, the aircraft will operate five weekly return flights between Manchester and Orlando and weekly return service between Manchester and Las Vegas, through November 1.

The VASP MD-11F enters service for six months on June 1.

World Chairman Andrews is named the new CEO of **South African Airways (Pty.), Ltd.** on June 15, effective July 1, succeeding Michael Myburgh. Coleman indicates that he will relinquish his chairmanship and board seat and soon move to Johannesburg, but will retain his 46% stake in World. As the two companies do not plan to do business together, no conflict of interest is anticipated.

Two days later, on June 17, President/CEO Ray is elected to become World's new chairman.

On July 30, World signs its 43rd consecutive annual contract with the USAF Air Mobility Command. Effective in the next fiscal year that begins in October, the agreement is valued at \$86 million.

On September 27, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** agrees to lease four of the MD-11s returned by **Garuda Indonesia**. One is delivered immediately, with the other three to sent down once they have undergone a certification check.

A \$2-million wet-lease contract is signed with the TACA Group of Central American airlines on October 31. Under its terms, World, beginning on November 1, operates a DC-10-30CF four to six times a week from Miami (MIA) to San Jose, Costa Rica, San Salvador, and San Pedro Sula, Honduras. Flights will continue through the end of the year.

The contract with **Aer Lingus Irish Airlines, Ltd.** for the wet-leased MD-11 is renewed on November 9. The wide-body will continue its transatlantic passenger services through the holiday season and into January, as well as between May and October 1999.

Led by the New York-based Rothschild Recovery Fund, negotiations are held between the airline's creditors and the carrier's management concerning the restructuring of the carrier's \$65 million in outstanding convertible debentures. An agreement is signed on November 16.

On November 19, a \$3-million contract is signed with **AVIANCA (Aerovias Nacionales de Colombia, S.A.)**. Under its terms, a wet-leased MD-11 will be operated on AVIANCA's behalf on daily passenger services from Bogota to New York (JFK) between December 10 and January 17.

During the 12 months, customer bookings jump 24.9% to 368,000. Figures for cargo traffic are not provided. Total revenues for the year decline

by 12.4% to \$271.14 million, with expenses hitting \$274.31 million. There is an operating loss of \$3.16 million and a net loss of \$11.03 million.

Beginning in mid-February 1999 and continuing through the end of April, World provides a pair of MD-11s each to **Air Asia, Sqn. Bhd.** and **Saudi Arabian Airlines** under ACMI contracts to provide roundtrip Hadj services from various points to Mecca. One of the MD-11s had previously been out on contract to **Aer Lingus Irish Airlines, Ltd.**

It is announced by the airline on April 5 that, upon the retirement of Chairman/President Ray on May 1, the new CEO will be former **Continental Airlines, Delta Air Lines**, and **Air Canada, Ltd.** Chairman/President Hollis L. Harris. Ray will remain on the board.

Former **Delta Air Lines** and **AirTran Airlines** executive Andrew Gilbert "Gil" Morgan Jr. is named president/chief operating officer on May 12, effective June 1. New Chairman Harris continues to hold the position of CEO.

For some unknown reason, the two MD-11s employed on Hadj services for **Saudi Arabian Airlines** are been given the colors and titles of the old Saudia, more than a year after that carrier changed its corporate identity.

Under an agreement signed with Premier Cruises on March 1, World, beginning on May 23 and continuing through October 18, provides weekly MD roundtrips between New York (JFK) and Barcelona for passengers cruising on the holiday ship *Rembrandt*.

During the week of July 12, a number of initiatives designed to redress the carrier's failing finances are announced. A pair of DC-10-30s will each be returned to lessors three months earlier than originally scheduled, with one already returned and the second to be gone by month's end. The two other remaining DC-10s will be retired during the fourth quarter. In addition, lease agreements are being renegotiated for the eight MD-11s. In exchange for a reduction in monthly lease fees, lessors are to be provided warrants for the acquisition of a million shares of World stock at \$2.50 a share.

Also during July, a lucrative agreement is signed with Renaissance Cruises to provide exclusive services on its behalf between New York (JFK), Europe, and the Mediterranean. MD-11 Renaissance flights commence in August from New York (JFK) to Athens and Istanbul.

In exchange for financial considerations and salary reductions of 10%, World, beginning in September, issues common stock to all personnel earning in excess of \$25,000.

Officials at Renaissance Cruises are so pleased with their new partner that arrangements are completed on October 8 for a three-year extension of the July contract. For its part, World promises to add the capacity of one aircraft in April and June and expand the Renaissance route network to include visits to Lisbon and Barcelona.

Passenger boardings jump 31.7% to 482,000, while freight traffic falls 15.5% to 16.29 million FTKs.

The carrier's operating loss totals \$10.3 million.

A total of 835 workers are employed at the beginning of 2000, a 4.5% increase over the previous 12 months. Directors and employees now own 43% of the airline's common stock.

A total of five MD-11s are wet-leased to **Garuda Indonesia** in February for delivery of thousands of Muslim pilgrims from Borneo and Java to Jeddah during the annual Hadj pilgrimage. The same aircraft will return the faithful in April. World has now carried pilgrims from more Muslim countries to the Islamic Holy Land than any other airline in the world.

With the start of the summer season on March 26, an MD-11 is again chartered to **Aer Lingus Irish Airlines, Ltd.**; operated under an ACMI contract, it flies from Shannon to New York (JFK) six times a week.

To pick up the slack in Israel-U.S. frequencies caused by the termination of scheduled service by **Tower Air**, on June 18 **El Al Israel Airlines, Ltd.** boosts its North American return service from 21 to 33, with 27 of the frequencies operated into either Newark or New York (JFK). Many are operated under contract by World Airways. On June 22, arrangements are completed for the three-year lease of three DC-10-30Fs; deliveries will occur in October and December, plus May 2001.

Beginning on June 23 and continuing until September 11, nonstop twice-weekly MD-11 roundtrips are operated on behalf of Lambda World from New York (JFK) to Athens. Another MD-11 is also dedicated to Lambda customers flying nonstop from New York (JFK) to Tel Aviv or back twice weekly from July 2 through October 30.

World is named 16TH best-managed company among nonstate-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

While en route from Newark to Tel Aviv on the evening of July 18, El Al Flight 18, an MD-11 operated under contract by World, is forced to divert to Gander when 19-year-old passenger Daniel Neuhaus becomes abusive toward other passengers. He locks himself into a toilet, where his smoking sets off an alarm; the crew and a doctor are unable to successfully calm the youth and rather than face a transatlantic flight with the unruly customer, the pilot puts down in Canada. RCMP board the plane and escort Neuhaus to jail, where he is charged with disorderly conduct and marijuana possession.

On July 20, World announces that it will relocate its corporate headquarters from Herndon, Virginia, to the Peachtree City area outside of Atlanta, Georgia, during the first quarter of 2001.

WorldCorp, Inc. is liquidated on August 17 and the remaining 1.9 million shares in the former holding company are redistributed to its various creditors in lieu of compensation. One creditor sells some 700,000 shares to a group of World directors and managers led by Chairman/CEO Harris. This gives the Harris group a 45% equity stake and takes World out of bankruptcy.

On September 21, the carrier is awarded an expanded \$127-million USAF Air Mobility Command contract to provide military charters in FY2001, beginning on October 1. A letter of intent is signed on September 29 for the acquisition of two more DC-10-30Fs. The next day, it is reported that the carrier has approximately 10,256,000 shares of common stock outstanding.

On October 16, **Garuda Indonesia** announces that it will lease 15 aircraft for the 2001 Hadj season (February–April), during which it anticipates the transport of 200,000 pilgrims to Mecca. As usual, **World Airways** is sure to be among the participating ACMI carriers.

On October 31, the board of directors approves a stock buyback of up to a million shares of its outstanding common stock.

A contract is signed with the state-owned Angolan fuel corporation Sonangol on November 10 for the February 2001 initiation of twice-weekly Houston Express return charter service from Houston (IAH) to Luanda, with a refueling stop at Cape Verde. The deal is consummated following the November 8 completion of a trial flight with an MD-11 wearing "Sonair" titles.

A DC-10-30 is chartered from **Continental Airlines** on November 17 and will be used to fly military charters. The plane arrives wearing full Continental colors with World titles.

Customer bookings during these 12 months drop 5.10% to 457,000. Revenues for the year are a flat \$264 million while costs rise 4.5% to \$261.9 million. The previous year's operating loss becomes a \$2.1 million gain.

WORLD BRAZILIAN AIR, S.A.: 75 Blvd. Louis Schmidt, Brussels, 1040, Belgium; Phone 32 (2) 735-6737; Fax 32 (2) 734-1481; Code S9; Year Founded 1997. Founded at Rio de Janeiro in 1994, **Skyjet Brazil, S.A.**, a subsidiary of the Belgian charter operator **Skyjet, S.A.**, offers worldwide passenger and inclusive-tour charters with a single Douglas DC-10-30 previously operated by **Deutsche Lufthansa, A.G.** and a B-707-331C.

Early in 1997, the company is renamed World Brazilian Air and the leased DC-10-30 is repainted in a new blue and white livery.

Skyjet, S.A. is renamed **Skyjet European, S.A.** on August 1, 1998. The Brazilian contract is maintained.

WORLD JET AIRCRAFT INTERNATIONAL: P.O. Box 21824, Fort Lauderdale, Florida 33335, United States; Phone (954) 522-

1839; Fax (954) 767-0604; Year Founded 1993. Everett Marsh founds WJA at Fort Lauderdale late in 1993 and begins regional services with a pair of de Havilland Canada DHC-6-300 Twin Otters. The company also leases and finances de Havilland aircraft in south Florida.

Business continues in 1994–2000, during which years Bob Magill becomes president. Revenues of \$6 million are generated in 1996.

WORLD WIDE AIRLINES: United States (1956–1962). WWA is established at Miami (MIA) on January 1, 1956, to provide nonscheduled Douglas DC-3 passenger charters to destinations in the Caribbean. These flights continue until 1959, when the company is transferred to California.

The reformed and relocated company begins operating all-cargo services from Oakland with three Curtiss C-46 Commandos. The carrier soon moves again, to Burbank Airport, and applies for a supplemental certificate from the U.S. CAB. When this requested is refused in October 1962, WWA shuts down.

WORLD WIDE AIRWAYS, LTD.: Canada (1945–1966). World Wide is established in 1945 to offer lightplane charter flights to various destinations within Quebec. During the early 1950s, the company bids upon and wins several contracts to provide support service for those constructing the DEW Line across northern and central Canada.

The first service is provided by a former RCAF Lancaster bomber, acquired in 1952 and outfitted to transport fuel. The tanker crashes and is lost while landing at the construction site at Menihek on June 28, 1953.

In order to fulfill new building support obligations, the carrier next acquires three Curtiss C-46s in 1955, followed by four more plus four Douglas DC-3s in 1956. Among these are one of each type registered to newly acquired **Montreal Air Service, Ltd.**

Two Curtisses are lost in landing accidents, one in a repairable incident on March 25. The second C-46D is lost at DEW Line Site 28 on September 23; although the aircraft must be written off, there are again no fatalities.

A DC-3 is also involved in a landing accident on May 5, 1957, but it can be repaired. It is replaced by another Douglas transport late in the year. In 1958, a DC-3 is sold to Canadian Aircraft Renters.

Following their removal from service, the Canadair C-4 North Stars of **Trans Canada Airlines, Ltd.** are put up for sale and in 1961 World Wide purchases two, along with a former RCAF C-54 (military DC-4). A North Star is sold to International Leases before the end of the year while the second is withdrawn from service at the end of 1962.

The same year, a C-46 is also sold. The last DC-3 is sold in 1963 and the C-54 is lost in a landing accident at Montreal on March 10, 1964.

The last two C-46s are sold in 1965, the year the carrier elects to concentrate on the provision of long-haul charters. To carry out the holiday work, two Lockheed L-1049Gs are purchased from **Qantas Empire Airways (Pty.), Ltd.** while one each L-1049C and L-1049H are acquired under lease from subsidiary **Montreal Air Services, Ltd.** The L-1049C is found to be in such poor repair that it is withdrawn from service before year's end and is employed for spare parts. Traffic from the charter business is insufficient and in the face of safety concerns, the carrier ceases operations in August 1966 after its license is revoked.

Founder Donald M. McVicar remembers his company years later in his *Through Cuba to Oblivion* (Dorval Station, Que.: Ad Astra Books, 1994).

WORLDWAY AIRLINES, LTD. (WORLDWAYS CANADA, LTD.): Canada (1975–1991). Roy T. Moore forms Worldways as a charter operation in April 1975, becoming president and CEO. A former **Keating Aviation, Ltd.** ice patrol Douglas DC-4 is acquired to undertake all-cargo services. Two Gates Learjet 35s and a Hawker Siddeley HS 125-3A are purchased in April and May 1976 for the introduction of executive charters. During the latter month, a Convair CV-640 is obtained from **Pacific Western Airlines, Ltd. (PWA)** and employed to replace the passenger charters into southern Ontario previously provided

by **Great Lakes Airlines, Ltd.** The HS 125 and a Learjet 35 are withdrawn in July 1977.

The DC-4 is sold in February 1978 and replaced by a second CV-640 added in May. Contract service operations are also performed for the Canadian government and such private organizations as the National Hockey League. A Learjet 25 is acquired in July, but sold in April 1979, only to be replaced by a Learjet 35A in December.

Beginning in late fall 1980, the Convairs and Learjets undertake trans-Canada cargo flights for Loomis Couriers, Ltd. After the failure of **Ontario Worldair, Ltd.** in December, the subsidiary **Worldways Canada, Ltd.** is formed to undertake long-haul charters from Toronto.

An ex-**Ontario Worldair, Ltd.** Boeing 707-338C is purchased in early June 1981 and employed on the 21st of that month to inaugurate long-distance charter service from Toronto to Tercera in the Azores. A B-707-365C is acquired from **British Caledonian Airways, Ltd.** in November and employed in December to begin a long series of winter charters to Venezuela.

A second BCAL B-707-338C is purchased for spare parts in January 1982. By March, Worldways is heavily into the inclusive-tour field. Destinations visited from Toronto include Prestwick, Dublin, Shannon, Belfast, Helsinki, Zagreb, Skopje, and Oslo. Flights are also undertaken from Montreal to Paris and Athens and from Vancouver to Amsterdam. One of the CV-640s is leased to Petrocan for the summer, but in the fall, both Convairs are sold to Cleveland-based **Wright Airlines**.

Early in 1983, four Douglas DC-8-63s are purchased from **CP Air, Ltd.** The first is delivered in March, followed by the others in May and June. Their receipt allows sale of the two B-707-338Cs to the Royal Australian Air Force in May. Meanwhile, in April, the carrier begins flying the Calgary-based Lockheed L-382E Hercules freighter of Echo Bay Mines.

Air Niagra, Ltd.'s Convair CV-640 is leased for a year in April to undertake the Petrocan contract at St. John's. New tour destinations added in the winter season include Edinburgh from Toronto, Copenhagen from Vancouver, and London and Amsterdam from Calgary or Vancouver.

During 1984, the DC-8-63s are overhauled in England. The first one finished is leased to **Flugfélag Islands, H.F. (2)/Icelandair**, which subleases it to **Air Algeria, S.A.** for the August Hadj pilgrimage service. The leased **Air Niagra, Ltd.** CV-640 is returned in May. The B-707-365C operates summer tourist flights from Vancouver to Copenhagen via Calgary. Unable to meet U.S. FAR 36 noise control standards, Worldways aircraft are now barred from American markets until they can do so. The Echo Bay Mines Hercules is purchased and resold in December to **TransAmerica Airlines** for \$6.5 million.

In the spring of 1985, tour flights are undertaken from Vancouver to London and to Prestwick and Manchester. Two of the company's DC-8-63s are now outfitted with hush kits, making them suitable for operation in U.S. airspace. Meanwhile, the company wins the government contract to overhaul all five Canadian Forces B-707 transports and leases to the government (complete with crew) the B-707-365C for use as a replacement for a year. Two **Pacific Southwest Airlines (PSA)** Lockheed L-1011-385 TriStars are acquired; the first is delivered in early August and undertakes a Toronto-London charter on August 29.

The second TriStar joins the fleet in September and both are modified in November to long-range L-1011-500 standard. New holiday destinations now visited include Santo Domingo, Puerto Vallarta, Cartagena, Bridgetown, Banjul, Acapulco, Montego Bay, Puerto Plata, and Barcelona. Charters into the U.S. resume from Toronto to St. Petersburg, Fort Lauderdale, Orlando, and Las Vegas.

Enplanements for the year total 450,000.

The B-707-365C is sold to **Transbrazil, S.A. (Linhas Aereas Transbrazil)** in February 1986. The Canadian Forces charter a DC-8-63 that makes nine overseas flights in February and March. In the spring, the carrier moves into a new technical facility in a twin-bay hangar at Toronto.

Vancouver to Copenhagen via Calgary charters are again flown during the summer and in the early fall the last two DC-8-63s are hush-kit-

ted. During the year, a new training center, complete with a DC-8 simulator, is opened.

Passenger boardings during the 12 months jump 31.8% to 560,000.

The HS 125 acquired in June 1985 is sold in July 1987. Meanwhile, the summer tourist season features new stops at Brussels, Paris (ORY), Frankfurt, Munich, Vienna, Venice, Rome, Leeds/Bradford, Lisbon, Oporto, and Malaga. New winter destinations include Aruba, Holguin, La Paz, Margarita Island, and Santiago de Cuba. Enplanements in 1988 total 741,735.

In early 1989, two L-1011s are leased from the **British Airways, Ltd. (2)** charter subsidiary **Caledonian Airways, Ltd.** to fly tours for Regent Holidays; they are operated in Caledonian colors with Worldways titles. The planes are returned in April and May. A DC-8-63 is leased to **Air Jamaica, Ltd.** for 15 months, beginning in the summer; it is based at Toronto and flies to Jamaica weekdays.

Passenger boardings accelerate 27% to pass the million-mark in annual enplanements for the first time (1,016,074).

Unable to continue financially, this charter operator shuts down in August 1990. Management spends a year attempting to relocate resources that will allow the carrier to resume flying.

In October 1991, Worldways officials are denied permission to restart and the following month, the airline's assets are liquidated and its aircraft placed in storage.

WORLDWIDE AIRLINE SERVICES: United States (1992-1995).

Privately owned Worldwide Airline Services is established at Washington, D.C. in the summer of 1992 to offer domestic and international charter and inclusive-tour flights. Revenue services begin in the fall with three leased Airbus Industrie A320-231s and by year's end a total of 57,000 passengers are flown. Financial data is not revealed.

In 1993, a fourth A320-231 is chartered, along with one each A320-232, Boeing 757-23A, and B-757-28A.

All of this capacity helps customer bookings to skyrocket to 254,000 and there are profits: \$1.13 million (operating) and \$707,000 (net).

Operations continue apace in 1994 as revenues increase by 46.6% to \$60.7 million. Unhappily, expenses swell 69.2% to \$68.17 million, leaving an operating loss of \$7.47 million and a net downturn of \$7.71 million.

The fiscal losses of the previous year force the company out of business in 1995.

WORLDWIDE AIRLINES: United States (1983-1986). Worldwide is established at Chicago in early 1983 to operate domestic and international tour group charters on behalf of its owners, Carefree Vacations, one of the city's largest tour operators.

Employing 3 Boeing 707-331Bs first operated by **Trans World Airlines (TWA)**, the company begins revenue flights to destinations in Europe, the Caribbean, and the southern U.S.

Nonscheduled services are maintained in 1984-1985, with enplanements in the latter year reaching 87,000. As the company's aircraft are unable to meet government noise reduction standards, it is forced to close down while replacement aircraft are sought.

A B-727-23A is leased from **Air Holland, N.V.** for domestic charters for a brief period before final liquidation in 1986.

WRA, INC.: United States (1988-1992). Warren H. Wheeler organizes WRA, Inc. at Richmond, Virginia, in late 1988 to replace his bankrupt **Wheeler Airlines**. Part 135 certification is received from the FAA in February 1989. Small-scale operations, both scheduled and charter, are resumed with an ex-**Wheeler Airlines** Beech King Air 100 linking the new company base with destinations in both Virginia and North Carolina. Wheeler, himself, meanwhile, returns to **USAir** as a Boeing 737-3B7 captain. Flights cease in 1992.

WRANGELL AIRWAYS: United States (1985-1989). This small Alaskan carrier is established in late 1985 to offer service to four communities near the state capital of Juneau. Employing a Cessna 207 and a Britten-Norman BN-2 Islander, it inaugurates scheduled third-level

services in 1986 and transports a total of 4,702 passengers during its first full year. Enplanements for the 7-employee small regional climb 8.5% in 1987 to 5,137 as a Cessna 185 is purchased.

The company suffers a major setback when its Islander is lost in a 1988 accident. Funds will not permit replacement. Although the year's passenger boardings have advanced to 6,500, the carrier does not survive to see its fourth birthday.

WRANGLER AVIATION: United States (1969–1991). Wrangler is established at Greensboro, North Carolina, in 1969 as the air transport division of the Blue Bell Corporation, manufacturer of Wrangler jeans and clothing. Employing 3 Canadair CL-44Ds, the company undertakes freighter flights on behalf of the manufacturer to Worcester, Massachusetts, San Juan, Santo Domingo, and New York (JFK). The FAA Part 91 operator also inaugurates charter flights to Miami and destinations in the Caribbean. Such operations continue for a decade until the carrier is upgraded to Part 121 status in 1978.

In 1981, the carrier begins scheduled all-cargo operations with the first of four Canadair CL-44Ds to be delivered over the next nine years. A total of 14.45 million FTKs are operated in 1983, a figure that drops 74% in 1984 to 8.3 million FTKs. Revenues of \$11 million earned in the former year grow to \$15 million in the latter. Services to Haiti begin in 1985.

In 1989, with 4 CL-44Ds on hand, flights are inaugurated to such Caribbean locales as Aguadilla and Santo Domingo.

Two additional leased CL-44Ds arrive in 1990. The company now resumes a report of its annual statistics to the DOT. Initial figures show that 877,000 FTKs are operated on the year.

In February 1991, the fleet is substantially upgraded by the addition of a Lockheed L-1011-1F freighter. Reformed, the carrier is renamed **Tradewinds International Airlines** in November.

WREN AIR: United States (1991–1992). Stan C. and Patricia Sue Wren found this small third-level operation at Dillingham, Alaska, in 1991. With 8 employees and a fleet of 4 Cessna 207As, they begin scheduled operations to Bethel, King Salmon, and Port Heiden. Charter and contract service flights are also made. Unable to achieve viability, the company shuts down within a year.

WRIGHT AIR SERVICES: P.O. Box 60142, Fairbanks, Alaska 99706, United States; Phone (907) 474-0502; Fax (907) 474-0375; Code 8V; Year Founded 1980. Robert P. Bursiel founds WAS at Fairbanks in 1980 to provide charter and contract service flights throughout Alaska and into northwest Canada. Nonscheduled operations continue throughout the decade with a fleet of 2 Piper PA-31-310 Navajos, 2 Cessna 207s, 1 Cessna 185, 1 Grumman G-73 Widgeon, and smaller aircraft.

Regularly scheduled passenger and cargo commuter service is inaugurated in 1986, linking the company's base with Anaktuvuk Pass, Arctic Village, and many of the other previously nonscheduled points visited. Traffic on the new scheduled routes grows steadily in 1987–1989.

A scheduled air division is established in 1990, by which time Bursiel's fleet comprises 2 Cessna 207s, 1 de Havilland Canada DHC-3 Otter, and 4 Navajos.

Enplanements for the year total 6,930.

The fleet of the 17-employee small regional is increased in 1991 to 12 through the addition of 2 Helio Couriers, 1 Aero Commander 500, and 1 Cessna 206.

Passenger boardings slide to 6,791 and a total of 890,923 pounds of mail are carried.

Two additional Otters are obtained in 1992–1993 and enplanements for the latter year total 8,011.

The fleet is revised somewhat and, in 1994 includes 4 Navajos, 1 Cessna 206, 1 Helio H-295, and 1 Cessna 208 Caravan I.

Operations continue as before and passenger boardings jump 13% to 9,207. A total of 120,000 FTKs are also operated.

Although there is no change in either personnel or fleet in 1995, business continues to grow. Enplanements soar 9% to 10,025. Passenger boardings accelerate another 6% in 1996 to 10,429.

The Cessna 206 is removed in 1997 in favor of a second Caravan.

While en route from Arctic Village to Fort Yukon via several remote landing strips on August 23, the tundra tire-equipped Helio H-295 with a pilot and two passengers crashes just after takeoff from one of the intermediate stops, at a point 78 mi. N of the final destination. Although the aircraft sustains substantial damage, no one aboard is injured.

Customer bookings for the year are level at 10,479.

Service is maintained without fanfare in 1998 and passenger boardings jump 8.6% to 11,000.

Passenger boardings climb 3.6% in 1999 to 12,000.

President Bursiel employs 12 full-time and 3 part-time pilots at the beginning of 2000 to operate his fleet, which now includes 1 each Beech A36 Bonanza, PA-31-310 Navajo, C-185 Skywagon, and C-206 Stationaire, 2 C-207As and H-700 Helios, 3 C-208Bs, and 3 PA-31-350 Navajo Chieftains.

For the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Gov. Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and depend upon salmon as their food source, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by **Warbelow's Air Ventures** at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of Chief Pilot Michael Morgan, Warbelow's, which has the only bypass mail-shipping permit in Fairbanks, runs the packages through its meter and with USPS assistance, farms out this mail for delivery. The airlines involved, including **Warbelow's Air Ventures**, **Frontier Flying Service**, **Arctic Circle Air Service**, **Belair**, **Larry's Flying Service**, **Servant Air**, **Tanana Air Service**, **Tatonduk Air Service**, and Wright's, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk Rivers.

While operating an air taxi service from Fairbanks to a remote airstrip near Kavik on December 22, a Piper PA-31-350 with a pilot and two passengers encounters dense fog and crashes 50 mi. ESE of Deadhorse. Although the aircraft is badly damaged, only minor injuries are reported.

WRIGHT AIRLINES: United States (1966–1985). Wright Airlines is founded by Gerald Weller, the ex-sales manager of **TAG Airlines**, at Cleveland's Lakefront Airport on May 25, 1966 to provide Cleveland–Cincinnati commuter service with Cessna 402s. Daily roundtrip revenue flights are inaugurated by the company (named in honor of Orville and Wilbur Wright) on June 27 via Columbus and Dayton. As the fleet is expanded to include Beech 18s and de Havilland DH 114 Herons, Pittsburgh to Cleveland shuttle service is launched on August 20, 1967.

Tyme Airlines, the former West Virginia airline now based at Columbus, is purchased and merged on March 4, 1968, followed by **Air Commuter Airlines**, a small Cleveland competitor, on July 3. Unhappily, despite the addition of services to Louisville, Detroit's Metropolitan Airport, Toledo, and Huntington, West Virginia, the carrier loses money every year for each of the next 11 years.

In 1972, Wright becomes the first American regional airline to go public.

Enplanements for that first year are 31,000 and 40,000 pounds of freight are transported.

Passenger boardings skyrocket 103.2% in 1973 to 63,000. A total of 225,000 pounds of cargo are carried, a spectacular 285% increase. Fuel costs, however, bring the year's net loss to \$40,000.

Early in 1974, a rush package service is initiated. Following CAB exemption approval for the operation of the larger aircraft, the first Convair CV-600s are now acquired.

Recession inhibits growth and customer bookings are up 3.2% to 65,000. A total of 142,000 FTKs are operated, a drop of 37%.

Airline employment in 1975 stands at 70. Union Commerce Bank, a principal shareholder, arranges for **Midwest Air Charter** President Gilbert "Gibbey" Singerman's appointment as CEO.

Customer bookings decline 10.8% to 58,000 and freight falls even further, down 41.6% to 83,000 pounds.

The number of employees is increased by 7.1% in 1976 to 75. Enplanements accelerate 6.9% to 62,000 while cargo rebounds, jumping 54.4% to 128,000 pounds.

In 1977, service is initiated to Detroit and Louisville. Enplanements climb to 74,000 and on revenues of \$3.03 million, a net loss of \$2,000 is suffered.

Following passage of the Airline Deregulation Act in 1978, Wright's fortunes improve somewhat.

Traffic rises 38.4% as 119,000 passengers are carried. Revenues advance by 75% to \$5.3 million. Expenses, however, jump 72% to \$5.37 million. Although a \$72,000 operating profit is earned, the net loss accelerates to \$46,000.

The employee population in 1979 totals 136 and the fleet includes 4 CV-600s.

Enplanements climb by 31.9% to 157,000 and 140,000 FTKs are operated. Although revenues accelerate 0.6% to \$5.33 million, expenses, led by fuel costs, rise 2.4% to \$5.5 million, leaving the carrier with losses: \$168,000 (operating) and \$199,000 (net).

There are no changes in the employee population in 1980 and the carrier obtains a fifth Convair.

Fueled by recession, enplanements drop 7% to 146,000. With no figures provided, the company claims to record its first profitable year.

The following year, 1981, Wright records a 3% rise in bookings (150,621), mostly boarded in the months before the PATCO air traffic controllers' strike and the fall's ATC restrictions. An increase of 9.4% in cargo to 59,000 pounds is recorded, along with some profits. After long negotiations, it elects not to acquire financially troubled **Air New England**.

The Ohio-based carrier reports an outstanding year in 1982. Two Convair CV-640s are acquired from **Worldways Canada, Ltd.** in December, and join a fleet of 4 CV-600s.

Meanwhile, as passenger boardings skyrocket 48.85% to 219,594, Singerman's 500-employee company does suffer a downturn in freight traffic, off by 12.1% to 827,356 pounds. Expenses of \$16.93 million are absorbed by overall income of \$17.94 million. The operating profit is up to \$1.01 million and qualifies the airline to join the ranks of the nation's "large regional" carriers. Net income totals \$710,000.

The workforce grows 12.6% in 1983 to 563. Wright Airlines' route system increases to 21 cities in 8 states in October as it absorbs the Clarksburg, West Virginia-based regional **Aeromech Airlines**. Flying a mixed fleet of 10 Embraer EMB-110P Bandeirantes and 10 Convair CV-600/640s, the enlarged carrier transports 402,812 passengers on the year. Unfortunately for all concerned, the marriage with Aeromech, for a variety of reasons, does not work.

Financial difficulties in the amalgamation develop almost immediately and the workforce is reduced throughout 1984 by 77.1% to 126. Still, the company is able to briefly lease, beginning on April 16, a pair of BAC 1-11-203s for six months from **Air Illinois**. On September 27, Wright files for Chapter XI bankruptcy and follows that with an appeal to Chapter VII. All but two of the carrier's routes are dropped, the work-

force is cut to 250, and only Cleveland-Cincinnati and Cleveland-Detroit flights continue.

Five CV-600/640s are sold and the carrier briefly operates five Shorts 360s, until they are repossessed. Passenger traffic declines 23.6% to 307,998 passengers flown. Cargo, meanwhile, booms upward a spectacular 106.9% to 4.3 million pounds.

The Cleveland to Cincinnati service is dropped on January 19, 1985. As Wright attempts reorganization and disposes of the bulk of its fleet and other resources, company officials file for DOT approval to conduct flights to and from Puerto Rico as **Puerto Rico Express**, while retaining the Wright name for its now-diminished operations. Little comes of the idea and in early November the last scheduled route to Chicago is suspended.

Wright is now purchased by Transystem, Inc., a New York City corporation formed expressly to buy the Cleveland-based airline. Planning to emerge from Chapter XI before Thanksgiving, Marlin Schultz, who now replaces CEO Singerman as CEO, seeks to purchase a few more CV-640s, introduces low-fare charter flights between Cleveland and Detroit, and plans for operations outside the original northern Ohio region.

All operations cease in December as creditors convince the bankruptcy court to order the airline's liquidation. The year's customer bookings total 31,148.

WRIGHTSON AND PEARCE, LTD.: United Kingdom (1934). With 2 de Havilland DH 84 Dragons, this company begins early morning London-Paris newspaper flights on May 14, 1934, continuing them until October 24. A weekend passenger service is operated London (Heston)-Paris via Le Touquet, during the summer. Early morning freight service is initiated over the same route beginning on September 3 and ends a month later.

WRIGHTWAYS, LTD.: United Kingdom (1934-1940). Capitalized at £6,000, Wrightways, Ltd. is formed on December 17, 1934 as, actually, a reformation of **Wrightson and Pearson, Ltd.**, with a better marketing title. The early morning London-Paris newspaper service is reopened year-round, beginning in April 1935.

In April 1937, new DH-86s are introduced to the newspaper operation. On-demand weekend passenger services are provided London (Croydon) to Le Touquet between June 10 and September 30, 1938.

War is declared on Germany on September 3, 1939 and all civil flying ceases. Joining neither the National Air Communications or **Associated Airways Joint Committee**, the company is liquidated in 1940.

WSG EXECUTIVE AIR SERVICE: 5230 W. 63rd St., Chicago, Illinois 60638, United States; Phone (800) 900-5390; Fax (773) 582-0806; Year Founded 1995. WSG is set up at Chicago (MDW) in 1995 to provide executive and small group passenger charters to destinations around the world. Four pilots are hired and these fly 1 each Dassault Falcon 10 and Beech King Air 90.

WUHAN AIR LINES COMPANY, LTD.: 230-1 Hangkong Road, Wuhan, Hubei, 430030, China; Phone 86 (27) 385-4313; Fax 86 (27) 585-3692; Code WU; Year Founded 1986. Wuhan Air Lines is established at Wuhan, China, in 1986 to offer regional and domestic scheduled passenger and cargo services in and from Hubei Province. Cheng Yaokun is president and he inaugurates services with a fleet that includes 2 Avia 14Ms, 2 SAP Y-5s and 4 Xian Y-7-100s (license-built Antonov An-26s).

Operations continue apace in 1987-1991 as the company's aircraft visit Beijing, Chengdu, Chongqing, Dalian, Enshi, Fuzhou, Guangzhou, Guiyang, Haikou, Hangzhou, Huangyan, Kunming, Nanjing, Ningbo, Shanghai, Shantou, Shenyang, Sheruhen, Tianjin, Wenzhou, Xian, Xiamen, and Yiwu.

Having experienced engine problems, an Avia 14M with 7 crew and 28 passengers attempts to return from an April 6, 1992 service to Huajia and land at its point of origin at Lanzhou; the aircraft crashes before it can reach the runway (14 dead).

Flights are maintained in **1993–1995**. During these years, the company begins to operate three leased Boeing 737-3Q8s and orders are outstanding for three more. Enplanements in the latter year total 592,000.

Airline employment stands at 200 in **1996** and passenger boardings jump 8% to 740,000. Cargo traffic accelerates 12.1% to 6.99 million FTKs.

Early in **1997**, Wuhan enters into an agreement with the Texas-based leasing company Air Alaska for the charter of a B-737, which is to be delivered to China for the airline's use. Wuhan makes required escrow and security deposits, including a standby letter of credit.

In compliance with the Chinese government's desire to increase the efficiency of competition by reducing the number of regional airlines, Wuhan joins five other carriers to form the New Star Alliance in September.

Enplanements during the 12 months total 656,490.

When activated on the following January 1, **1998**, the informal compact begins to boost the quality of its members' services via integrated passenger and marketing services and code-sharing on selected routes.

Wuhan does not receive its little Boeing from Air Alaska and brings suit against the leasing firm and its President/CEO Thor K. Tjontveit in U.S. Federal District Court in Manhattan. Represented by the New York office of the international legal firm of Coudert Bros., the court decides a breach of contract claim in favor of the airline before the trial begins.

At the conclusion of the trial on October 30, Wuhan has won a historic victory. The jury returns a verdict finding both the company and Tjontveit liable for fraud for having failed to deliver the aircraft while keeping the deposits and drawing against the standby letter of credit. Wuhan is awarded compensatory damages of \$10.4 million and punitive and exemplary damages of \$10.4 million. This is the largest fraud finding in history by an American jury in favor of a Chinese company against an American concern.

Passenger boardings jump 15.4% this year to 790,000, while cargo traffic increases 59.5% to 9.69 million FTKs.

By the start of **1999**, airline employment has been increased by 9.1% to 719.

Customer bookings for the year total 707,000 and 1.01 million FTKs are operated.

Airline employment at the beginning of **2000** stands at 200, an 11.7% increase over the previous 12 months. The classic B-737 fleet includes 3 Dash-3Q8s, 2 Dash-36Rs, and 1 Dash-3S3.

While on approach to Wuhan in heavy rain and poor visibility at the completion of its June 22 service from Enshi, Flight 343, a Yunshuji Y7-100C with 4 crew and 40 passengers, crashes 12–18 mi. from Wuhan near the village of Sital, Yongfeng Township. Half of the aircraft crashes into a farmhouse while the other half comes to rest on a dike in the Han River after smashing into a vessel and instantly killing seven men installing generators. All aboard the aircraft are also fatalities. The local weather bureau has recorded 451 thunderclaps in the 10 minutes before the disaster and witnesses claim that the aircraft has been hit by lightning.

The remaining six Y-7s are immediately grounded for inspection and their flight crews receive extra training.

The first Y-7s return to service on July 16. At this point, the **CAAC (The General Administration of Civil Aviation of China)** orders all Yunshujis and Tupolevs removed from Chinese airline service by June 1, 2001.

On September 15, the carrier completes arrangements for the charter of two Next Generation B-737-86Rs from CIT Aerospace for eight years; they will be delivered in March and June **2001**.

Reacting to rising fuel costs, the **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Wuhan, increase fares on November 5.

An earlier order for three B-717-200s is cancelled on December 11; the aircraft will, instead, be taken by **Impulse Airlines (Pty.), Ltd.** in Australia.

WYOMING AIR SERVICE: United States (1930–1938). With initial capitalization of \$50,000, Richard (president) and Joseph (chief pilot) Leferink begin WAS as a Casper-based FBO on May 9, **1930**. Flight training and charter services are offered.

Following an agreement with **Border Airlines** CEO Earl Vance, Wyoming Air Service, employing a Stinson SM-8A, begins scheduled Casper–Denver service in February **1931**. A second SM-8A joins the first in April and during the summer both companies stretch their routes and meet at Sheridan. Border, which had come down from Great Falls, ceases operations in September; however, WAS then extends northward to Billings. Flag stops are now made at Hardin, Montana, Freely and Fort Collins, Colorado, and Buffalo, Glen Rock, Douglas, and Wheatland, Wyoming.

Leferink's fleet is expanded in **1932–1933** by the addition of another SM-8A and two Stinson Model 5s.

A Post Office mail contract for service to Pueblo is received in February **1934** and the company's operations are not interrupted by the spring controversy raised by the so-called "Air Mail Scandal." Flights down to Pueblo from Denver commence on May 3. On May 25, the first three Stinson SR-5A Reliants are received and are placed on the Pueblo service. Another mail contract, Cheyenne–Billings via Casper and Sheridan, is received on June 4. Ten days later, three more Reliants and a Stearman 4D are obtained and the northward contract is initiated on June 20. A Stinson SM-8A is sold in August.

In retrospect, **1935** is a significant year for WAS because of its fleet changes. On January 31, a contract is signed with **United Air Lines** under which the major agrees to provide WAS with sufficient chartered and gift aircraft—and all attendant services to operate them save personnel—to fly three daily Denver–Cheyenne roundtrips. In return, WAS will give United 20¢ per airmail letter and half of all passenger revenues.

The Stearman 4D, a Stinson Model 5, and a Stinson SM-8A are sold, but, following the lease of a Boeing 247D from **United Air Lines** on May 1, the only two Boeing 221A Monomails produced are delivered on May 24. One piloted by Alva Lucas crashes 100 mi. N of Cheyenne, near Glendo, on May 27 (one dead). On August 6, two Lockheed Model 9D Orions are purchased from **Northwest Airlines**. During the fall, the second Monomail is destroyed in a Pueblo accident.

A third Orion and two B-247Ds (from **United Air Lines**, including the leased unit) are received in **1936**, while all of the Reliants are sold. An Orion crash-lands at Buffalo, Wyoming, on October 24, and is damaged beyond repair.

A third B-247D is received from **United Air Lines** in February **1937**, the same month in which the carrier sells to the Chicago-based major its Cheyenne to Denver route and AM-17 for \$209,000. In the spring, Leferink sells his Denver–Pueblo route to **Varney Air Transport** for \$35,000. On April 11, the U.S. Post Office accepts bids for four new airmail routes while the last Stinson Model 5 is sold in May.

On August 1, Billings to Great Falls mail flights begin; passenger service over the route begins two weeks later. On August 24, three B-247s are purchased from **Pennsylvania-Central Airlines** and following their upgrade to B-247D status, are added to the fleet. Also in August, the company receives AM-35, the postal route from Cheyenne to Huron via Pierre.

On April 14, **1938**, new mail services are inaugurated from Cheyenne to Huron, South Dakota, via Rapid City, Buffalo, and Pierre; scheduled passenger service is launched over the new system on April 25. On May 3, a B-247D is acquired from **United Air Lines** and is christened *City of Denver* in honor the largest community on its route network. In celebration of its turn eastward, WAS is renamed **Inland Air Lines** on July 1.

XIAMEN AIRLINES COMPANY, LTD.: Gaoqi International Airport, Xiamen, Fujian, 361009, China; Phone 86 (592) 602-2961; Fax 86 (593) 602-8263; <http://www.xiamenair.com>; Code MF; Year Founded 1989. This new Chinese entrant, the first independent airline to be formed under the government's new liberalization policy, is a joint venture formed in **1989** between the port city of Xiamen (50%)

and CAAC (The General Administration of Civil Aviation of China). The company is outfitted with 3 Boeing 737-200s and inaugurates services from the city's Gaoqi International Airport. Orders are placed for three B-757-25Cs. Neither traffic nor financial statistics are released.

Operations continue apace in 1990, though not without tragedy.

En route from Canton to Xiamen on October 2, Flight 8301, a B-737-247A with 104 passengers, is hijacked by "active criminal" Jiang Xiaofeng, who claims to have 15 pounds of explosives strapped to his body. The pirate demands to be flown to Taiwan and refuses an offer to be flown instead to Hong Kong.

With fuel nearly exhausted, the government orders Capt. Cen Longyu to try a ruse in an effort to convince Xiaofeng that his demand has been met and that he is landing. When this gambit fails, a fight breaks out in the cockpit as the little Boeing completes its final approach to Canton's Baiyun Airport.

The aircraft hits hard, veers off the runway, side swipes a China Southwest Airlines Company, Ltd. B-707-336C Stratoliner and then slams into a China Southern Airlines Company, Ltd. B-757-21B with 118 passengers, preparing to depart on a domestic service to Shanghai. In the explosion and fire that follows, both the B-737 and B-757 are burned out, 84 are killed aboard Flight 8301, 47 aboard the B-757, plus the driver of an airport service vehicle. Fifty other passengers are wounded, including the pilot of the Stratoliner. The fireball creates China's worst air disaster ever.

In 1991, operational control of the carrier is taken over by China Southern Airlines Company, Ltd., which also assumes majority (60%) shareholding. A virtual subsidiary, the airline is able to retain its own service region and fleet, which now includes 1 each B-737-2L9A and B-737-25CA, the latter leased; in addition, the carrier flies two leased B-737-2T4As.

In 1992, a B-737-505 is leased from Braathens SAFE, A.S. and two B-737-25Cs are acquired for use as freighters. When the former arrives in China during August, it is the 100th Boeing airliner delivered into the PRC. In addition to routes to the eastern and southern part of the PRC, a new service is inaugurated to Hong Kong with the first new B-757-25C, delivered on August 12.

In 1993, President Wu Rongnan oversees a workforce of 1,800 and 2 more B-737-505s are received from Norway. The company will be plagued with skyjackings during the year.

While en route from Changzhou to Xiamen on June 24, the B-737-505 with 71 passengers is taken over by state factory employee Zhang Wenlong and ordered to Taipei. There the plane is released and Zhang is taken in hand; following his trial, he will receive a nine-year prison term.

While en route from Guangzhou to Xiamen on November 5, a B-737-2T4A with 140 passengers is hijacked to Taipei by city government driver Zhang Hai. This Zhang will also be tried and he will receive a 10-year sentence.

Another B-737-2T4 with 100 passengers en route from Harbin to Xiamen is captured on December 12 by state firm salesman Qi Dachuan; it is also diverted to Taiwan. Again, the aircraft is released and the hijacker is jailed. Following his trial, Qi will receive a 12-year jail term.

Flights continue apace in 1994-1995 as 42 domestic destinations are now served. Over 2.5 million passengers are transported during the latter year.

Airline employment stands at 2,400 in 1996 and the company now leases 3 B-737-505s from Braathens SAFE, A.S. The last of 5 B-757-25Cs is received on February 7.

Upset that his wife has left him and run off with his life savings, an unidentified Hong Kong man, claiming to have a bomb, attempts on April 5 to divert a B-737-505 en route from Guangzhou to Xiamen with 172 passengers on board, on to Taipei. After landing at Xiamen, the pilot convinces the pirate that he has landed on Taiwan, a ruse that works until authorities come on board to make an arrest.

This year, the company's 16 aircraft transport a total of 2,511,786 passengers (up 0.7%) and operate 44.5 million freight FTKs.

There is no change in the workforce in 1997. Orders are, however, placed for four B-737-700s.

On July 16, for the third straight time, air passengers cite the airline as the best among small Chinese airlines that carry less than 3 million passengers annually. Results of the survey are obtained from a total of 1.33 million questionnaires sent to solicit passenger opinion on the service quality of 25 airports and 16 major Chinese airlines.

Other winners are China Eastern Airlines Company, Ltd. and Shenzhen Airlines Company, Ltd., which each won first place in separate contests for the annual passenger volume exceeding 6 million and less than 2 million.

Passenger boardings jump 7.8% to 2,708,000 while freight advances 38.2% to 61.5 million FTKs.

Flights continue in 1998. The first of three B-737-75Cs to be delivered before the end of the year arrives on August 21. It will enter revenue service on September 1.

Late in the year, a Chinese-language homepage is opened on the Internet's World Wide Web.

The "classic" B-737 fleet at the beginning of 2000 includes 1 each Dash-2T4C, Dash-2T4A, and Dash-25CA, plus 3 Dash-3Q8s and 6 Dash-505s. Also operated are 4 Next Generation B-737-75Cs and 5 B-757-25Cs.

A fire alarm sounds aboard a company B-737-2T4A while it is en route to Wuhan on March 28. An emergency landing is made at Xi'an International Airport at Xianyang, where all aboard exit down emergency chutes. Upon examination, firemen find that the bells had been set off by pigeons, which had gotten loose while being transported in the baggage compartment.

The same day, new twice-weekly roundtrips are inaugurated between Wuyishan, in the southeastern province of Fujian, and Macau.

Beginning in August the first of three B-737-3Q8s arrive under a five-year lease from ILFC. A fifth Next Generation B-737-75C is delivered on August 24 and a sixth on October 10.

Reacting to rising fuel costs, the CAAC (The General Administration of Civil Aviation of China), on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Xiamen, increase fares on November 5.

The carrier's B-737-25C is sold to Ethiopian Airlines, S.C. on December 29.

XINHUA AIRLINES COMPANY, LTD.: No. 1, Jong Song South Road, Beijing, China; Year Founded 1992; <http://www.chinaxinhuaair.com>. Xinhua is established at the capital's principal airport by the municipal government and local investors in August 1992. Domestic services commence with a single Boeing 737-341 on June 6, 1993.

Operations continue apace in 1994-1996 and the fleet is increased to include, by the latter year, the original "Baby Boeing," plus 2 each B-737-332s and B-737-39Ks, plus 1 leased B-737-4Y0. Eventually, over 200 flights depart each week from Beijing and Tianjin to over 40 large- and medium-sized cities, such as Harbin, Shanghai, Guangzhou, Haikou, Kunming, and Xian.

When the *Oriental Falcon Jet Service* is set up in April 1997, Xinhua becomes a partner with Dassault of France and Avion Pacific; it soon begins operating Dassault Falcon charters throughout China. One B-737-39K and three B-737-46Qs are delivered during the year, with one more of the latter type to follow in 1998.

Enplanements during these 12 months total 913,610.

A Chinese-language homepage is opened on the Internet's World Wide Web later in 1998. Passenger boardings this year jump 19.1% to 1.12 million, while freight traffic rises 28.5% to 15.02 million FTKs.

Service is maintained without headline or incident in 1999. The workforce, at the beginning of 2000, totals 500.

While en route from Baotou, the second largest city in Inner Mongolia, to Beijing on September 26, a B-737-332 with 143 passengers is subjected to a hijacking attempt. A young man in his 20s rushes into the

cockpit and stabs the plane's captain. The pirate is himself immediately jumped upon by security police and is stabbed to death with his own dagger. This is believed to be the first time that Chinese airline guards have ever killed a hijacker. The copilot makes an emergency landing at Jinan and the pilot is rushed to hospital.

Reacting to rising fuel costs, the **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Xinhua, increase fares on November 5.

XINJIANG AIRLINES COMPANY, LTD.: 46 Yingbin Road, Diwopu Airport, Urumqi, Xinjiang, 830016, China; Phone 86 (991) 335688; Fax 86 (991) 339084; Code XO; Year Founded 1985. A former **CAAC (The General Administration of Civil Aviation of China)** airline division, Xinjiang is formed in 1985 and is 50% owned by CAAC and 50% by Xinjiang Province. Based at Urumqi's Diwopu Airport, the new entrant is provided with a chartered Boeing 737-200 and in November begins scheduled services as the first of several regional carriers established under auspices of the state airline. It undertakes domestic Chinese scheduled and charter services as well as charters to the CIS.

Operations continue apace, although the Boeing is replaced with Soviet equipment. The fleet in 1989 includes 4 Tupolev Tu-154Ms. By 1991, the number of airliners has been increased to 2 Antonov An-24s and 5 Tu-154Ms.

In 1992, the fleet comprises 2 Antonov An-24s, 2 de Havilland DHC-6-300 Twin Otters, 2 Ilyushin Il-86s, 5 Tupolev Tu-154Ms, and 1 Yunshuji Y-8B. Two B-757-2Y0s arrive under charter from ILFC. In 1993-1995, President Zhang Ruifu oversees a workforce of 3,880. One Il-86 is withdrawn and four Boeing 737-31Ls are added. Enplanements in the latter year total 1,201,628.

Airline employment stands at 4,597 in 1996 and the fleet includes 3 Il-86s, 2 Boeing 737-300s, 4 Boeing 737-31Ls, 2 An-24RVs, 2 Twin Otters, 7 Tu-154Ms, and 7 SAP Y-5s. The company is now also known as China Xinjiang Airlines.

Passenger boardings soar 13.2% to 1,384,364 and 30.75 million FTKs are operated, a 6.1% increase.

The workforce grows to 5,000 during 1997. In May, the China Aerospace Supply Corporation places an \$80-million order with Aero International (Regional) for five ATR72-210As, with five options, that it will turn over to this carrier. The order is confirmed during French President Jacques Chirac's visit to Beijing during the month.

The first ATR72-210A is delivered during the last week of August and after route proving in September enters scheduled service on October 1 from Urumqi to tourist areas. As the others arrive over the next year, they will serve on domestic routes throughout the remote home province.

A B-757-28A, chartered from ILFC on March 10 for eight years, is delivered on December 12. Meanwhile, orders are placed for two owned aircraft, Dash-28Ss.

Customer bookings fall 6.9% to 1,289,000, but cargo skyrockets 119.1% to 71.98 million FTKs.

The third of five ATR 72-210As is delivered to the company in April 1998. It is the 200th ATR 72 built.

Weekly roundtrip service is inaugurated on November 2 between Urumqi, in northwest China, and Bishkek, Kyrgyzstan. The first B-757-28S is delivered on July 8.

On December 17, the state approves a \$24.09-million airport expansion project in the Kashi prefecture. The area, which borders on five neighboring countries including Pakistan, has become well known for its integration of eastern, western, and Islamic cultures.

Passenger boardings increase to 1.34 million, while freight traffic increases to 83.5 million FTKs.

On March 12, 1999, a fleet of four aircraft chartered from the company depart Urumqi, China, transporting a group of 1,101 Muslim pilgrims to Mecca in Saudi Arabia. The second B-757-28S is delivered on June 2.

Passenger boardings during these 12 months jump 7.8% to 1,444,000, while freight climbs 10.3% to 92.12 million FTKs.

The workforce at the beginning of 2000 totals 4,598. The Western-built fleet now includes 5 ATR72-210As, 2 Twin Otters, 3 Antonov An-24s, 4 B-737-31Ls, 2 each B-757-2Y0s and Dash-28Ss, and 1 B-757-28A. Also operated are 3 Il-86s and 5 Tu-154Ms.

Destinations visited include Altay, Aksu, Almaty, Ashgabat, Baku, Beijing, Bishkek, Can Tho, Chengdu, Hong Kong, Islamabad, Karamay, Kashi, Korla, Kunming, Kuqa, Lanzhou, Moscow (Sheremetyevo), Novosibirsk, Qiemo, Shanghai, Sharjah, Tacheng, Taos, Tashkent, Xian Xianyang, Xining, and Yining.

When it is decided that three Next Generation B-737-700s that had been requested will go to another Chinese airline instead, the company, on March 28, places orders for three more B-757-28Ss.

In response to a fatal June 22 Xian Airlines Y-7-100C crash, **CAAC (The General Administration of Civil Aviation of China)** delivers a major reorganization plan to the China State Council in mid-July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, and **China Southern Airlines Company, Ltd.** Xinjiang negotiates to become a member of the **China Southern Airlines Company, Ltd.** group.

Agence France Presse reports on July 14 that the company will soon place orders for three new Voronezh-built Ilyushin Il-96-300s. Three spare PS-90A turbofan engines will be obtained for the new aircraft from Perm Motors.

Reacting to rising fuel costs, the **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Xinjiang, increase fares on November 5.

Discussions with China Southern continue during the fall. On November 23, former Xinjing Vice President Wang Chang Shun becomes the major carrier's president.

XL AVIATION, LTD.: Suite 701, Chancery House, Lislet Geoffrey St., Port Louis, Mauritius; Phone 230 (211) 61 13; Fax 230 (211) 28 77; <http://www.xla.com.ch>; Year Founded 1989. XL Aviation is established at Port Louis in 1989 to provide worldwide executive and small group passenger services. By 2000, the small concern employs 7 full-time pilots and operates 1 each Canadair Challenger 600 and a Dassault Falcon 900B.

XP EXPRESS PARCEL SYSTEMS, B.V.: The Netherlands (1971-1989). Former Dutch student Jaap Mulders forms Roetsj ("Zoom"/"Vroom") in 1971, a small company dedicated to providing fast ground pickup and delivery of small shipments around Amsterdam. In 1974, a night delivery system is developed and extended nationwide.

Between 1975-1978, the U.S. firm **Purolator Courier** acquires full control, holding the company until it elects to abandon European operations in mid-1978. At this point, founder Mulders and the original shareholders repurchase the company. Vendex International purchases control in 1979, but **KLM (Royal Dutch Airlines, N.V.)** buys half interest in 1980.

The first aircraft are put in service in 1981, as leased smallplanes are employed to make the carrier an air-express operator on behalf of the Dutch flag carrier. The name Roetsj is dropped in 1982 in favor of a more appropriate title. Nine owned and four leased Piper PA-31-350 Navajo Chieftains are placed in service in 1983.

In 1984, the fleet is augmented by the purchase of a Fokker F.27-200; a BN-2A Trislander, and a Fairchild Metroliner are also leased. Between 1985-1986, the workforce (much of it on the ground) grows to 800 as the total of offices grows to 52 in 18 nations. Since 1982, courier and intercity parcel transfer flights have been maintained or added to Germany, the Netherlands, Austria, Great Britain, Italy, France, Denmark, and Switzerland.

A second F.27 is acquired and operations continue apace in **1987–1989**, when **TNT Express Worldwide, Ltd.** acquires the company in April of the latter year.

XPRESS AIR: Chattanooga Airport, 1001 Airport Road, Chattanooga, Tennessee 37421, United States; Phone (423) 490-4620; Fax (423) 265-5715; Year Founded 1996. XPress is set up at the East Tennessee city in **1996** to provide executive and small group passenger charters and express cargo flights around the country. Revenue operations commence with one each Cessna 560 Citation V and a Swearingen Merlin.

YACUMA (TRANSPORTES AEREOS YACUMA, LTDA.): Bolivia (1981–1991). Yacuma is established at La Paz in **1981** to offer contract service flights to destinations around the country. Operations commence with 1 each Convair CV-240 and CV-340, the latter an ex-USAF C-131. Flights continue for the next 10 years, primarily with the CV-340.

YAK SERVICE AIRLINE: P.O. Box 191, Leningradski Prospect, Moscow, 125315, Russia; Phone 7 (095) 151 8986; Fax 7 (095) 956 1613; Code AKY; Year Founded 1993. YSA is set up at Moscow on February 12, **1993** to provide executive and small group passenger charters to domestic and international destinations. Shareholding is divided between JSC Lavis and Yakovlev, the aircraft manufacturer.

Oleg Demchenko is named president. He recruits a workforce of 22 and assembles a fleet of 2 Yak-40s and 1 Yak-42D that begin revenue flights on November 25.

Although it is understood that this carrier continues to operate in the period after the beginning of the August **1998** Russian currency crisis, no definite information has been located to that effect.

YAKUTAVIATRANS AIR COMPANY (YAKUTAVIATRANS AVIA KOMPANI): Russia (1992–1995). When **Aeroflot Soviet Airlines** is reformed in early **1992**, this directorate becomes an autonomous division of the new **Aeroflot Russian International Airlines (ARIA)**. Based at Yatutsk in Siberia, the company serves its region as both carrier and parent of new airlines forming in the city, while adding worldwide ad hoc cargo charter services. V. T. Pinacv is CEO and his fleet includes 8 Ilyushin Il-76s, 10 Tupolev Tu-154s, 8 Antonov An-12s, 20 An-26s, and 3 An-74s. Enplanements total 1,749,537.

An An-24B with 4 crew and 23 passengers aborts its takeoff from Ust-Kuiga on February 3, **1993**, and runs off the runway; although the aircraft is badly damaged, there are no fatalities.

While landing at Aldan on August 26, a charter Let L410UVP with 2 crew and 22 passengers stalls and crashes 273 m. short of the runway; there are no survivors.

The downturn in the Russian economy causes a fall in traffic. Passenger boardings decline 23.9% to 1,412,056 while freight falls 10.6% to 287.2 million FTKs.

The fleet is reduced in **1994** to only 1 Tu-154M, 8 Il-76s, 8 An-12s, 3 An-24s, and 2 An-26s. Customer bookings fall another 11.5% to 1,250,000.

In **1995**, the carrier is renamed **Sakha Avia National Air Company**.

YAKUTIYA AIRLINES. See **SAKHA AVIA NATIONAL AIR COMPANY**

YAMAL AIRLINES: Salekhard, Yamal, Russia; Code YL; Year Founded 1997. As **1996** ends, **Tyumenaviatrans (TAT)**, having failed to receive agreed upon payment, refuses to renew its contract with the regional administration at Salekhard to provide daily An-2 services between the scattered communities of the region.

Unwilling or unable to redress its dispute with Tyumenaviatrans, the Salekhard regional administration promotes the establishment of Yamal Airlines in February **1997**. Yamal, under the leadership of Director General Vasily Kryuk, is, like TAT, organized into two divisions: rotary-wing and fixed-wing. A total of 16 Mil Mi-8T helicop-

ters are purchased for the former while the latter comes to comprise 1 each Tupolev Tu-154B, Tu-154M, and Tu-134A, 6 Yakovlev Yak-40s, and 3 Antonov An-74s. Twice-weekly scheduled services are inaugurated from Salekhard to Yar Sale and Novy Port, while charter and bush services are provided to many other towns and bush locations. A separate contract is also signed between the local government and the airline for the provision of Mi-8T aeromedical flights to isolated communities.

TAT, it should be noted, will eventually receive payment and resume its flights, which are particularly important during the winter when river transportation is impossible.

By the end of September **2000**, a new money dispute has arisen with the regional administration at Salekhard. This time the local leaders have failed to make good on a \$4-million debt for local air services. When TAT once again shuts off flights, the leaders of that community, on October 1, turn to Yamal Airlines, which by now has grown into a well-respected local service operation. Under a new contract, Yamal agrees to double its twice-weekly services from Salekhard to Yar-Sale and Novy Port and to launch new flights to Mys Kamenny, Seyakha, Yaptik-Sale, and Tambey.

During the fourth quarter, the regional government for the Khanty Mansisk Autonomous District puts out feelers concerning the creation of a possible “super regional airline,” through some combination of Yamal, **Tyumenaviatrans (TAT)**, **Kogalym Airlines**, and **TyumenAirlines**. It is understood that any such amalgamation is a long way off.

YANA AIR CARGO, LTD.: Kenya (1991–1995). Yana is established at Nairobi in late summer **1991** to offer all-cargo services with Swiss and British companies each taking 24.5% shareholding. A Boeing 707-338C is leased from **Anglo Airlines, Ltd.** of the U.K., while two Antonov An-12Fs are also acquired.

Managing Director John Sanyer’s new Boeing begins revenue flights on September 19 over a twice-weekly route from London (LGW) to Nairobi via Amsterdam and back. The Russian-made turboprops fly regional services.

The 15-employee carrier runs into financial difficulties in **1992** and withdraws one Antonov. In **1993**, Roger Hargreaves becomes CEO and Yana applies for a multistop route from Nairobi to Bujumbura that begins in **1994**. Flights cease in **1995**.

YANDA AIRLINES (PTY.), LTD.: Range Road, Whittingham, New South Wales, 2330, Australia; Phone 61 (65) 723100; Fax 61 (65) 722757; Code ST; Year Founded 1989. Established at Singleton, New South Wales, in **1989**, Managing Director Paul Rees’ new small carrier is equipped with 2 Piper PA-31-350 Navajo Chieftains. Scheduled services are inaugurated linking the base with Scone and Sydney.

A third Navajo Chieftain is acquired in **1990** and Maitland is added as a destination. A fourth PA-31-350 is purchased in **1992**. Flights continue in **1993–1994** as a fifth Navajo Chieftain enters service. In the fall of **1995**, the company suffers an accident that is serious enough to cause government authorities to suspend its license. Safety concerns are addressed and Yanda is allowed to resume operations in January **1996**.

A total of 34 weekly flights are offered from Sydney to Scone, Maitland, Gunnedah, and Coonabarabran without further incident or headline in **1997–2000**.

At the end of the latter year, the company’s operating certificate is again suspended by the Civil Aviation Safety Authority for alleged breaches of safety regulations. Further investigation into a range of issues will occur and it is unclear if the four-plane carrier will survive.

YANGON AIRWAYS, LTD.: 22/24 Pansondan Street, Kyauktada Township, Yangon, Myanmar; Phone 95 (1) 251 935; Fax 95 (1) 251 932; <http://www.yangonairways.com>; Code HK; Year Founded 1996. Yangon is established at its namesake city during the summer of **1996** to provide scheduled and charter domestic passenger and cargo

services. The new entrant is a joint venture between Myanmar Airways and Krong Sombat of Thailand. U. Khin Maung Myint is named chairman, with U. K. Win as managing director.

Two Avions de Transport Regional ATR72-210s are leased and revenue flights commence on October 15.

The Krong Sombat shares are sold to Mayflower Holdings Group in September 1997. Flights continue without interruption through the remainder of the year and 1998. By 1999, the turboprops of the 152-worker company regularly visit Dawe, Heho, Kawthaung, Kengtung, Lashio, Mandalay, Myeik, Mytkyina, Nyaung-u, and Tachilek.

The workforce at the beginning of 2000 totals 164. The carrier's 2 ATR72-210s continue to operate from Yangon to Bagan, Mandalay, Heho, Techileik, Kengtung, Dawei, Myeik, and Kawthoung.

YAROSLAVI AIR COMPANY (YAROSLAVI AVIA KOMPANII): Russia (1993–1996). Yaroslavi is established at Yaroslavi's Leftsovo Airport in 1993 to operate third-level passenger and cargo services as well as agricultural support and other rotary-wing functions. Nikolay I. Kuprianov recruits a workforce of 250 and begins operations with a mixed fleet of Antonov An-2s and Mil Mi-2s and Mi-8s. Flights continue apace in 1994–1995.

YELLOWKNIFE AIRWAYS, LTD. *See* **WARDAIR CANADA, LTD.**

YEMEN AIRLINES CORPORATION: Yemen (1954–1972). Yemen Airlines is formed in 1954 by a group of local businessmen to provide domestic lightplane services. Weekly Douglas DC-3 flights begin in 1957 to Djibouti, French Somaliland.

A chartered DC-3, with four crew and four passengers is lost at Rome on November 3, 1958; there are no survivors.

The company's single remaining aircraft carries on flights without incident during the remainder of the year and through the next two.

In 1961, the nation's ruler sells a pair of DC-3s to the company and takes 51% majority shareholding. Operations continue as the flag carrier begins 1962. During the middle part of the decade, civil war forces the carrier to suspend operations for over 18 months, forcing it out of business by 1966.

In 1967, the previous entity is replaced by a new national air transport company, **Yemen Arab Airlines**. Ownership is divided between Yemen (51%) and Egypt (49%), but even with assistance from the Soviet Union, service is sporadic and the international partnership is dissolved in 1968. Yemen Airlines is now reestablished as a government corporation.

Operations continue apace during 1969–1971 and two DC-6Bs are added to the fleet, including a former **Hawaiian Airlines** unit. Two DC-3s and a DC-6 are lost during these years.

While on a maintenance test flight from Taiz on March 19, 1969, a DC-3 with four crew, crashes; there are no survivors. With icing on the wings, a DC-3 with two crew and three passengers crashes just after takeoff from Belgrade on a European charter on September 16, 1971; there are no survivors. A DC-6B is destroyed at Hodeidah, Yemen, on November 11 under unknown circumstances.

In 1972, the carrier is renamed **Yemen Airways Company**, although it is still also known as **Yemen Arab Airlines**.

YEMEN AIRWAYS COMPANY. *See* **YEMENIA (YEMEN AIRWAYS COMPANY)**

YEMEN ARAB AIRLINES. *See* **YEMEN AIRLINES CORPORATION**

YEMENIA (YEMEN AIRWAYS COMPANY): Al-Hasaba, P.O. Box 1183, Airport Road, Sana'a, Yemen; Phone 967 (1) 232 380; Fax 967 (1) 252 991; <http://www.yemenia.com.ye>; Code IY; Year Founded 1972. Yemen Airlines is renamed **Yemen Airways Company** in 1972, although it is also known as **Yemen Arab Airlines**.

En route from Taiz to Asmara on August 25, 1973, the company's Douglas DC-6B is hijacked to Kuwait by a lone gunman, who surrenders once his safety is guaranteed.

Enplanements for the year total 11,520.

Shaif M. Saeed is appointed president in 1974, with Ahmed M. Ali as general manager. The first jetliner, a Boeing 737-2N8A, is delivered, joining the fleet's 2 DC-6s and 2 DC-3s. The jetliner largely accounts for a 120% increase in boardings, up to 96,000. Two B-727-2N8As are ordered and the workforce grows to 335.

En route from Hodeida to Sana'a on February 23, 1975, a DC-3 is diverted to Qizon, Saudi Arabia, by a lone gunman. Taken in hand by police, the pirate is tried and condemned to execution. The death sentence is later commuted to life imprisonment.

The two Boeings are delivered in 1976–1977, allowing the inauguration of service to such southern European destinations as Athens.

The government reorganizes the carrier on July 1, 1978, giving it the present name and taking 51% controlling interest; the remaining 49% of the shares are acquired by **Saudia (Saudi Arabian Airlines)**. Mohammed Ahmed Al-Haimy is named chairman with Saudia Senior Vice President Rida Hakeem as managing director. Airline employment is now 750 (including 500 foreigners) and the fleet comprises 2 B-727-2N8As, 1 B-737-2N8, 1 DC-6, and 4 DC-3s.

One DC-3 is, however, destroyed as the result of a heavy landing at Marib on November 14.

In 1979–1984, operations are upgraded and service is started to India, Pakistan, and additional Middle Eastern points. Four B-727-173Cs are leased from **World Airways** and replaced by five purchased B-727-2N8As. For domestic operations, two de Havilland Canada DHC-7-102s are acquired with Canadian financial assistance in 1980 to replace the DC-3s. A total of 356,000 international passengers are transported during the latter year.

Overall enplanements in 1985 are 426,000, falling to 333,000 in 1986. The fleet now includes 1 B-737-2N8, 5 B-727-2N8As, and 2 de Havilland DHC-7-102s. Airline employment in 1987 stands at 1,905, including 225 foreigners, and destinations visited from Sana'a include Sharjah, Karachi, Bombay, Aden, Djibouti, Addis Ababa, Khartoum, Abu Dhabi, Doha, Bahrain, Dhahran, Riyadh, Kuwait, Amman, Damascus, Jeddah, Cairo, Larnaca, Istanbul, Moscow, Rome, Frankfurt, Amsterdam, Paris, and London. Traffic figures are not released.

In 1988 the 1,800-employee North Yemen flag carrier owns a fleet of 5 B-727-2N8As, 1 B-737-2N8A, and 2 DHC-7-102s. Flights begin to Tunisia.

Through the first 6 months of the year, enplanements total 199,866 and a total of 4.59 million FTKs are operated. A net profit equivalent to \$6.4 million is reported for the year.

Operations continue apace in 1989. The net profit jumps 65% to \$10.5 million. In May 1990, following the political merger of North and South Yemen, it is announced that an agreement has been reached with **Alyemda**, the South Yemen airline, for the coordination of services.

Passenger boardings during the year's first half total 205,247. After Iraq invades Kuwait in early August, the company's newly improved prospects seem to evaporate as the government refuses to support the deployment of non-Arab forces in Operation Desert Shield. The airline loses remittance and aid income from the Gulf States, as well as oil supplies from Iraq. Frequencies to Rome are reduced from two to one per week, while all service to Baghdad and Kuwait City must be suspended. A meeting between the carrier's management and Saudi shareholders is abruptly cancelled on December 11.

The payroll is cut 1.5% in 1991 to 1,950. On January 18, Chairman Mohammad al-Haimiy reports that the company has lost 60% of its traffic since the Kuwait crisis began. The company's continuing isolation in the period surrounding Operation Desert Storm leads to a loss of flights to and support from Saudi Arabia (which holds a 49% stake in the carrier) and a series of delays in implementing a merger with **Alyemda**.

The undercarriage of a B-707-369C collapses as the freighter is landing at Amman, Jordan, on November 26; there are no fatalities to its five-person crew.

Customer bookings are again only reported for the January–July period. These show customer bookings down 51.5% to 99,485 and cargo off 59.9% to 1.65 million FTKs.

A proposal to merge Yemenia and Alyemda into **Alyemda-Air Yemen** is put forward in October 1992. Work is begun on acquiring the 49% shareholding of **Saudia (Saudi Arabian Airlines)** and plans are made to integrate fleets and routes. Chairman Mohamed al-Haimiy dies late in the year.

The proposed merger remains uncompleted in 1993 and Yemenia continues to operate independently. Ahmed Kaid Barakat is appointed the new chairman/president in February and oversees a workforce of 1,954 and a fleet that continues to boast 5 B-727-2N8As, 1 B-737-2N8A, and 2 DHC-7-102s. Domestic destinations visited from Sana'a include Taiz, Hodeidah, Albuque, Aden, and Riyan. International markets include Djibouti, Bahrain, Doha, Jeddah, Sharjah, Dhahran, Khartoum, Addis Ababa, Abu Dhabi, Karachi, Damascus, Cairo, Rome, London (LGW), Amsterdam, Istanbul, Moscow, Frankfurt, Larnaca, Bombay, Amman, Paris, and Riyadh.

Civil war breaks out between the northern and southern parts of the country in May 1994. One B-727-2N8A is withdrawn and **British Airways, Ltd. (2)** and **Air France** both end service to Yemen in the early summer. The German airline **Deutsche Lufthansa, A.G.** remains and its regional director will report in June 1995 that Lufthansa had a DM300-million profit in 1994 serving Yemen, compared to a DM300-million loss in 1993.

Normal operations resume on July 22, including the airline's thrice-weekly service from Sana'a to London. A terminal building damaged during the fighting is repaired.

Yemen's tourism industry in 1995 is hampered by the shortage of international flight connections. Yemenia, one of the two nationals, charges fares for Yemenis that do not cover costs. Attempting to make up the difference on fares for non-Yemenis reduces the airline's competitiveness.

Most visitors from Europe arrive on the twice-weekly **KLM (Royal Dutch Airlines, N.V.)** or **Deutsche Lufthansa, A.G.** flights. A total of seven flights a week to Egypt are offered and five or six (depending on the season) to Jordan.

The union with **Alyemda Democratic Republic Airlines** is finally completed on May 26, 1996 when Alyemda is merged. Ownership in the amalgamated carrier is divided between the Republic of Yemen (51%) and the Kingdom of Saudi Arabia (49%). Hassan Abdo Sohbi is chairman and oversees a workforce of 2,655. The combined fleet includes 4 B-727-2N8As, 3 DHC-7-102s, 1 B-737-2N8A, 2 B-737-2R4Cs, 1 each B-707-369C, and 1 Airbus Industrie A310-304. Overall enplanements reach 672,955.

Two Airbus Industrie A310-304s are received in March 1997. According to an August 20 press release, in an effort to improve its performance and services, and in order to cope with the financial burden caused by increasing employee wages by 30% and pilots wages by 100%, Yemen has raised its ticket prices by 30%. In addition, the company promises to upgrade its fleet with new equipment at a cost of \$200 to \$300 million. Two new A320s join the fleet during the fall.

Flights continue in 1998–1999. Scheduled domestic destinations visited at the end of the decade include Aden, Al Ghaydah, Ataq, Hodeidah, Riyan Mukala, Seiyun, Socotra, and Taiz. International services are operated to Abu Dhabi, Addis Ababa, Amman, Asmara, Bahrain, Beirut, Bombay, Cairo, Damascus, Dar es Salaam, Djibouti, Doha, Dubai, Frankfurt, Jeddah, Karachi, Khartoum, London (GTW), Nairobi, Riyadh, Rome, and Sharjah. On December 4 of the latter year, weekly A310-304 return service is started from Sanaa to Johannesburg via Dar es Salaam. Enplanements during those 12 months approach one million.

Hassan Sohbi is chairman at the beginning of 2000 and he oversees a workforce of 4,017. The fleet continues to include not only the Air-

bus equipment, but 5 B-727-2N8As, 2 B-737-2R4Cs, and 1 B-737-2N8A as well.

Weekly A310-304 roundtrips begin on January 16 from Sanaa to Paris (CDG) via Moroni, Comores.

In May, an A310-324 previously operated by **Austrian Airlines, A.G.** is leased for five years from AIFS.

The company's B-737-2N8A loses direction while landing in a sandstorm at Khartoum, Sudan, on June 26. The Boeing runs off the runway and its landing gear separates. No injuries are reported.

A company B-727-2N8A lands at Baghdad on September 29 after Saudi officials change their mind and allow the flight overflight authority. Despite the U.N. embargo, Yemenia is the third company to make a charter flight into the Iraqi capital during September.

YENISEISH AIR ENTERPRISE: Romanshkin Str. 14, Yeniseisk, 663130, Russia; Phone 7 (39115) 3363; Year Founded 1996. YAE is established at Yeniseisk in 1996 to provide regional and domestic cargo charters, as well as a full portfolio of rotary-wing aerial work.

Revenue flights begin with a fleet that includes 10 Let L-410UVPs, 6 Antonov An-26s, 17 An-2 biplanes, 11 Mil Mi-8s, and 9 PZL-Swidnik Mi-2s.

Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

YEREVAN AVIA: 1/3 Busand Str., Yerevan, 375010, Armenia; Phone (3741) 580121; Fax (3741) 567511; http://www.yer-avia.am; Code ERV; Year Founded 1992. At the direct urging of Yerevan Mayor Hambartsum Galstyan, this freight operator is established in 1992 as the first all-cargo airline in Armenia equipped with its own aircraft. Under the leadership of Director General Dr. Arsen Aslanian, a staff and a small fleet of Ilyushin Il-76TDs are assembled and ad hoc flights are initiated to other countries within the Commonwealth of Independent States.

Service is maintained throughout the remainder of the decade. Over the years, the company's aircraft range further afield, visiting France, Germany, Bulgaria, Italy, The Netherlands, Belgium, China, India, Democratic Republic of the Congo, Kenya, Egypt, Australia, and more than 12 others. Both commercial and humanitarian contracts are accepted, with the U.N. and International Red Cross providing a number of the latter.

In 2000, the carrier employs both of its Il-76TDs under a long-term contract to provide air cargo shipments from the United Arab Emirates to the CIS countries of Moldavia, Georgia, Tajikistan, and Russia (mainly Moscow). Few trips are now made to Europe or Africa.

YESSENTUKI AIR: Russia (1996–1998). V. V. Lapchenko founds YA at Stavropol in 1996 to offer domestic passenger and cargo charters. Revenue services commence with a pair of Antonov An-2 biplanes and continue into 1998.

YETI AIRLINES, LTD.: Lazimpat, P.O. Box 20011, Kathmandu, Nepal; Phone 977 (1) 411912; Fax 977 (1) 420766; http://www.yeti-airlines.com; Year Founded 1998. Yeti is formed at Kathmandu in the spring of 1998 to provide both scheduled and charter passenger air service to major destinations around the country. Shareholding is divided between the Nepal Indo-Suez Bank, Ltd. and the Himalayan General Insurance Company of Nepal. A seven-man board of directors is named that includes Chairman Sonam Sherpa and Managing Director Ang Tshiring Sherpa.

Application is made to the government for an air operator's certificate, which is duly received on May 29. In addition, arrangements are made with the Canadian carrier **Kenn Borek Air, Ltd.** for the wet-lease of a de Havilland Canada DHC-6-300. Upon the arrival of the Twin Otter, revenue flights commence on September 21.

Flights continue without incident or headline in 1999 and the fleet is increased by the addition of four more DHC-6-300s. During the summer of 2000, an Embraer EMB-120 Brasília is chartered from CS Aviation.

It arrives at Kathmandu on October 1 and enters service shortly thereafter. A homepage is opened on the Internet at the end of the year.

YORKSHIRE EUROPEAN AIRWAYS, LTD.: United Kingdom (1993). Yorkshire is organized in the spring of 1993 to offer scheduled third-level regional services from Southampton to Aberdeen with a fleet of 2 leased Embraer EMB-110P1 Bandeirantes. Unable to achieve viability, the company closes its doors in November.

YOSEMITE AIRLINES: United States (1975–1981). Columbia, California-based charter operator Dean H. Jung, owner of **Tuolumne Air Service**, establishes a scheduled airline subsidiary in early 1975. Employing a Piper PA-23 Aztec and a Cessna 337, the carrier begins scheduled flights on June 30 linking its base with San Francisco, Sacramento, Modesto, Stockton, and Yosemite/Pine Mountain Lake.

During the next two years, the fleet is increased by the addition of a Beech B-80 Queen Air. Orders are placed for another, plus a King Air 90. By 1977, enplanements are 1,750 and revenues are \$108,000.

The second Queen Air and the King Air join the fleet in 1978.

Passenger boardings skyrocket 75% to 7,000. Operating income also increases, up 100.9% to \$217,000.

Service to South Lake Tahoe and Monterey begins in May 1979. Three Piper PA-31-310 Navajos and a Flyapak cargo service are introduced. George Moore becomes president in November and installs a new management team.

Customer bookings jump 172% during the 12 months to 9,000.

The employee population is boosted 120% in 1980 to 33. A computer system for accounting and reservations is purchased for installation at the Columbia base and three new Chieftains join the fleet. Plans are made to extend services to Merced, San Jose, and Oakland.

Passenger boardings decline by 13.2% to 7,456, but operating income totals \$803,295—a 94% boost.

Increased fuel and other costs in a time of recession force the company out of business in May 1981.

YOUNG AIR: United States (1980–1982). H. Wayne French establishes Young Air as the commuter division of his Young Flying Service in 1980. Based at Harlingen Industrial Airport at Harlingen, Texas, the carrier's Piper PA-31-350 Navajo Chieftain and PA-34 Seneca inaugurate scheduled passenger flights to McAllen and the cross-border Mexican cities of Reynosa and Ciudad Victoria.

Meanwhile, YFS continues to operate charter and contract passenger and cargo flights to various nonscheduled destinations in the Rio Grande Valley with a second Chieftain.

Increased costs and recession make the scheduled service unprofitable and it is abandoned in 1982 in favor of all-charter operations. These are continued until late in the decade.

YOUNG CARGO, S.A.: Belgium (1974–1981). Established at Zaventem in September 1974, Young Cargo begins all-cargo charter flights with two Boeing 707-320Cs to various worldwide destinations in March 1975. Contract service flights are also undertaken.

Within three years, Managing Director Edouard de Jeune's workforce grows to 90. Unable to generate sufficient traffic to overcome expenses caused by recession and radically higher fuel costs, the carrier stops flying in 1981.

YPFB TRANSPORTES AEREOS, S.A. See SERVICIOS AEREOS PETROLEROS, S.A. (SAPSA)

YUGAVIA AVIATRANSPORTNII KONCERN. See SOUTHERN AIR LINES (YUGAVIA AVIATRANSPORTNII KONCERN)

YUKON AIR NORTH. See AIR NORTH (YUKON AIR SERVICE)

YUKON AIR SERVICE: United States (1967–1973). Yukon Air Service is established at Fairbanks in 1967 to offer nonscheduled passenger

and cargo services to local destinations in central Alaska with a fleet of Beech 18s, Scottish Twin Pioneers, and Cessna lightplanes. The company is renamed **Air North (Yukon Air Service)** in 1973.

YUKON AIRWAYS AND EXPLORATION, LTD.: Canada (1927–1939). This short-lived Yukon operation is established at White Horse in the spring of 1927 to operate passenger and express charters and mail flights to Dawson City and Mayo. Initial capitalization is C\$50,000 and the fleet comprises 1 Ryan Brougham, christened *Queen of the Yukon*.

David "Andy" Cruickshank is named general manager and chief pilot and he flies and ships the aircraft to and from Vancouver and on to Skagway, Alaska, where it is reassembled on October 21. Regularly scheduled Whitehorse–Dawson City via Mayo mail flights commence on November 11.

Cruickshank departs the company for **Western Canada Airways, Ltd.** in 1928. Flown by a new pilot, the Ryan crashes on April 5, 1929 while initiating a Dawson City to Aklavik route; the pilot is killed. With the loss of the aircraft and the coming depression, the company shuts down in 1930.

YUKON SOUTHERN AIR TRANSPORT, LTD.: Canada (1938–1942). In 1938, **Ginger Coote Airways, Ltd.** and **United Air Transport, Ltd.** amalgamate into YSAT, with Grant McConachie as president. Ford 5-AT Tri-Motor service is now started from Ware to Prince George and from Vancouver to Fort St. John and Edmonton.

In 1939–1941, the fleet grows to include several Barkley Grows and a pair of Lockheed L-14s.

On January 30, 1942, the carrier is one of 10 airlines purchased by the Canadian Pacific Railway and formed into the subsidiary **Canadian Pacific Air Lines, Ltd. (CPAL)**. McConachie is named president of what would eventually become Canada's second largest air transport concern.

YUKOS AVIA AIR: Russia (1996–1998). YAA is set up in 1996 to undertake passenger charters in support of the region's developing energy industry. Revenue flights begin and continue with a single Tupolev Tu-134A.

The Russian currency crisis, which begins in the summer of 1998, forces the company out of business.

YUNG SHING AIRLINES, LTD. See FORMOSA AIRLINES, LTD.

YUNNAN AIRLINES OF CHINA, LTD.: Wujaba Airport, Kunming, Yunnan Province, 650200, China; Phone 86 (871) 717-7528; Fax 86 (871) 313-8675; <http://sunflower.signet.com.sg/grasroot/cya.html>; Code 3Q; Year Founded 1992. YAC is established at Wujaba Airport at Kunming in 1992 to offer scheduled passenger services to destinations within its region. Xu Xiaoming is named president of the 2,300-employee subsidiary of CAAC (**The General Administration of Civil Aviation of China**), which is given a fleet comprising 5 Boeing 737-3W0s, 1 B-737-3Y0, and 1 B-737-341.

Operations continue apace in 1993 and in 1994 a chartered B-737-37K joins the fleet.

While landing at Kunming in rain on July 20, a B-737-3W0 with 8 crew and 140 passengers overruns the runway, hitting approach lights and the ILS antenna; although the little Boeing is damaged beyond repair and there are injuries, no fatalities are reported.

On December 31, a contract is signed with the city of Vientiane, Laos, under which the airline will provide local and international flight services.

Flights from Beijing to Vientiane via Kunming begin during 1995. Enplanements total 1,920,185.

The workforce stands at 2,300 in 1996 and the fleet now includes 10 B-737-300s and 3 B-767-3W0ERs. Passenger boardings accelerate 24.1% to 2,529,887 and 28.68 million FTKs are operated, a huge 59.5% increase.

Airline employment is increased by 30% in 1997 to 3,000. At the end of January, a \$68-million order is placed with Boeing for two B-737-3W0s. The first is delivered at year's end.

Customer bookings climb 14% to 2,883,336 while cargo increases 28.7% to 72 million FTKs.

In 1998, the company employs three newly delivered B-767-300ERs to begin service to Bangkok and Singapore. Passenger boardings jump to 3.29 million, while cargo traffic increases 28.7% to 72 million FTKs.

With a fleet of 9 B-737-3W0s, 3 B-737-33As, 1 B-737-341, 4 Next Generation B-737-7W0s, and 3 B-767-3W0ERs, the carrier, in 1999, makes scheduled visits to Bangkok, Baoshan, Beihai, Beijing, Changchun, Changsha, Chendu, Chongqing, Dali City, Dalian, Diqing, Fuzhou, Guangzhou, Guilin, Guiyang, Haikou, Harbin, Hefei, Jinan, Jinghong, Lijiang City, Luxi, Macau, Nanchang, Nanjing, Nanning, Ningbo, Qingdao, Shanghai, Shantou, Shenyang, Shenzhen, Shijiazhuang, Simao, Singapore, Taiyuan, Tunxi, Vientiane, Wenzhou, Wuhan, Xian, Xiamen, Xuzhou, Yibin, Yichang, Zhanjiang, Zhaotong, Zhengzhou, and Zhuhai.

Customer bookings surge 31.6% to 4,337,000, while cargo jumps 9.9% to 113.06 million FTKs.

The workforce at the beginning of 2000 totals 2,300.

Weekly roundtrip service is inaugurated on June 16 from Kunming to Chengdu and Jinzhou.

In response to a fatal June 22 **Xian Airlines Y-7-100C** crash, **CAAC (The General Administration of Civil Aviation of China)** delivers a major reorganization plan to the China State Council in mid-July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, and Yunnan begins negotiations to become a member of the **China Southern Airlines Company, Ltd.** group.

Six Bombardier CRJ200ERs are ordered during the first week of September.

Reacting to rising fuel costs, the **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Yunnan, increase fares on November 5.

By the end of the year, concern has been expressed in many circles that **China Southern Airlines Company, Ltd.** is becoming far larger than the government had intended. It is suggested that the **CAAC (The General Administration of Civil Aviation of China)** may "give" Yunnan to **China Eastern Airlines Company, Ltd.** as a form of "compensation."

On March 1, 2001, Yunnan will enter into a code-sharing agreement with **China Southern Airlines Company, Ltd.** covering flights between Guangzhou and Kunming. The pact will be the first domestic code-share signed between two Chinese airlines and demonstrates the "camp" with which Yunnan is allied.

YUTANA AIRLINES: United States (1987–1994). Dale E. Erickson establishes Yutana Airlines at Fairbanks, Alaska, in 1987 to operate regional and bush flights with a fleet of 2 Piper Cherokee Lances. Scheduled flights are introduced in 1991 and a total of 668 passengers and 510,230 pounds of mail are flown during the inaugural year. Operations continue apace until September 1994, when the company is renamed Alaska Central Express.

YUTE AIR ALASKA: 4451 Aircraft Drive, Anchorage, Alaska 99502, United States; Phone 907 243-1011; Fax 907 243-2811; <http://www.yuteiar.com>; Code 4Y; Year Founded 1956. YAS is established as Bob Harris Flying Service in Dillingham, Alaska, during 1956 to undertake passenger and cargo charter services throughout the 49th state.

In 1973, local Dillingham pilot Philip L. Bingman and his wife, Demptha, purchase the concern and change the name to Yute, which roughly translates as "people." The word is derived from the Upik Eskimo word *Yuut*, a term that the indigenous Yipik people in the southwest employ to refer to themselves. During the next nine years, Yute becomes a dominant air charter and air taxi operator, specializing in the transport of people and goods to bush locations.

Following the "Bethel Experiment," a government test designed to improve airmail transportation in Alaska, Yute, in late 1981, receives its Part 401 certificate from the CAB.

Scheduled passenger and freight services are provided to destinations in the Togiak and Nushagak River and Bristol Bay regions beginning in 1982. Destinations visited include Aleknagik, Clarks Point, Ekuk, Ek-wok, King Salmon, Koliganek, Manokotak, New Stuyahok, Portage Creek, and Togiak. As is the case with many other Alaskan bush commuters, Yute will encounter its share of operational accidents.

After picking up four passengers on a beach near Twin Hills on May 8, 1983, the pilot of a Cessna 206 bounces his aircraft during takeoff; the aircraft yaws, encounters loose gravel, and goes into the water. No injuries are reported.

While taking off from Ekuk on June 26, 1984, a PA-32 with a pilot and seven passengers strikes a six-ft. pipe and crashes; four people are injured, one seriously.

Having taken off from Koliganek on November 20 without first having its snow removed, a Cessna 207A with three passengers crash-lands; two aboard receive minor injuries, but the aircraft must be withdrawn.

The fleet in the middle 1980s comprises 1 each Piper PA-31-350 Navajo Chieftain, Cessna 207, Britten-Norman BN-2 Islander, Cessna 185, and various miscellaneous aircraft.

While en route to Togiak on September 14, 1985, a PA-32 with two aboard crashes into a mountain in bad weather; both people are seriously injured. The accident comes at the worst possible time, as the FAA, in the aftermath of a **Ryan Air** Beech 1900 crash, begins a focused inspection of Alaska's small regionals. Eight companies, including Yute, fail the federal review and are shut down.

Yute regains its certification and service to Bethel begins in 1986. Operations continue apace in 1987 and during these years the fleet grows to 22 aircraft, 7 of which are committed to flights out of Bethel. Additional stations are opened at St. Mary's, Kotzebue, Iliamna, and Aniak.

Having elected to fly in very bad weather, a Navajo Chieftain strikes a 350-ft. hill at Nightmute on May 7; the pilot is killed and the aircraft is destroyed.

A number of problems and failed government inspections culminate in September 1988 when various FAR violations lead to the carrier's grounding by the FAA for a second time. The company is now sold to William L. Johnson, who begins work to gain recertification.

In the spring of 1989, Yute applies to the DOT for permission to resume scheduled operations with 3 Navajo Chieftains, 5 Cessna 207s, and 1 de Havilland DHC-6-300 Twin Otter. Operating authority (Part 135) is restored at year's end.

The fleet of the 45-employee regional is increased in 1990 to 14 aircraft: 2 Navajo Chieftains, 2 Saratogas, 2 Cessna 207As, and 1 each Cessna 172, Cessna 208, and Douglas DC-3. Service is resumed on February 12.

Enplanements by December total 20,000. Revenues are \$2.4 million and with costs contained, the operating profit is \$400,000 and net gain reaches \$60,000.

Neither fleet nor employee population changes in 1991 as passenger boardings soar to 35,840. In addition, 4,274,293 pounds of mail are flown. Customer bookings jump 64.9% in 1992 to 59,089.

Yute witnesses a 4% increase in passenger boardings during 1993 to 61,632. Flights continue in 1994, but customer bookings decline 7% to 57,026. On the plus side, a total of 330,000 FTKs, mail and express, are flown.

The fleet in 1995 includes 2 Navajo Chieftains, 12 Cessna 207As, 2 Cessna 206s, and 1 lone Cherokee Six.

On February 25, a Cessna 207A crashes on the southwest side of a box canyon 10 min. out from Kotzebue; the pilot, who had been searching for wolves, is killed.

After experiencing whiteout conditions, another Cessna 207A, with a pilot and a passenger, collides with flat, snow-covered terrain 5 mi. N of Bethel on March 20. Although the aircraft is badly damaged, no injuries are reported.

Enplanements for the year soar 28% to 72,790.

The employee population numbers 180 in 1996.

Just 500 ft. into its April 17 climb away from Kotzebue, witnesses observe a Cessna 207A make a right turn, bank right 90 degrees and descend into the ground; the pilot is seriously injured.

In cooperation with San Antonio, Texas-based **Merlin Express**, Yute, in July, inaugurates service with three Fairchild Metro IIIs between Anchorage and Aniak, Bethel, and Dillingham. Metroliner flights commence on November 17 from Anchorage to Kotzebue.

Having exhausted fuel, a Navajo Chieftain with a pilot and five passengers makes a precautionary landing at Nunapitchuk on December 5; just after touchdown, a gust of wind pushes the aircraft off the right side of the runway. No injuries are reported.

Passenger boardings during the 12 months accelerate 15.7% to 84,204.

In 1997, President Johnson's company flies 18 C-207As, 3 C-206s, 3 C-172s, 3 Chieftains, 1 Cherokee Six, 2 Metro IIIs, and 1 C-208 Caravan I.

During the spring, the Metroliner network is expanded from Anchorage to Nome, Kenai, and King Salmon.

Distracted from his checklist by another aircraft, the pilot of a Navajo Chieftain makes a wheels-up landing at Selawik on April 25; although the aircraft is badly damaged, the flyer is unhurt.

In June, Jeffrey R. Pereira is appointed president/CEO. His main task is to develop the airline from a Part 135 into a Part 121 charter carrier as soon as possible. To assist him, Pereira contracts with former **Pennsylvania Commuter Airlines** President William C. Clark, now employed by Aviation Management International, to provide advice on marketing, sales, and yield management.

Just after landing in the ocean near Cape Pierce following a July 7 service from Cape Newenham, a float-equipped Cessna 206 with a pilot and two passengers is caught by a wind gust and shoved up out of the water onto the beach, where it noses over. No injuries are reported.

While taxiing for takeoff from Anchorage on August 22, Yute Air Alaska Flight 421, a Metro III with two crew and five passengers wet-leased by Yute to **Merlin Express**, collides with an airport tug. Although the aircraft sustains substantial damages, no injuries are reported.

The year's customer bookings drop 5.3% to 79,732.

As 1998 begins, Yute employs 160 workers and 54 contract agents. It provides scheduled service (most of them twice daily) to 57 villages from hubs at Aniak, Bethel, Dillingham, Kenai, King Salmon, Kotzebue, and Nome. Almost all of the company's passengers continue to be carried between rural villages and bush hubs, including Naknek, Lev-
clock, Shishmarefand, and Koyuk. Approximately half of the revenue generated by Yute continues to come from passenger flights and most customers (80%) continue to be native Eskimos.

While taking off from Quinhagak on May 21, a Cessna 207A with a pilot and four passengers strikes a runway edge light, severely damaging the left stabilizer. The aircraft continues on to its destination of Bethel, where an uneventful landing is made. The company maintenance department later replaces the entire left stabilizer.

During the summer and fall, President/CEO Pereira retires his Navajo Chieftains, replacing them with additional Cessna Caravans.

Following the purchase of **Reno Air** by **American Airlines**, negotiations between Reno and Yute concerning a code-sharing agreement are terminated.

Passenger boardings fall 14.3% to 72,000.

Yute experiences a severe cash-flow problem during the first quarter of 1999. The fiscal situation forces the Alaskan commuter to file for Chapter XI bankruptcy protection in March. The two wet-leased Metroliners are returned to **Merlin Express** as the company stops flying while efforts are made to reorganize. Passenger boardings this year plunge 90% to 7,000.

By 2000, the company is still alive and the workforce at the beginning of the year totals 215.

Z. BOSKOVIC AIR CHARTERS, LTD. See **ZB AIR, LTD.**

ZAGAL (ZAGREB AIRLINES). See **CROATIA AIRLINES**

ZAIRE CARGO, S.A.: Zaire (1981–1986). This cargo airline is established at N'Djili Airport at Kinshasa in the spring of 1981. A single Lockheed L-100-30 Hercules freighter is acquired, allowing the start-up of domestic and regional nonscheduled service in September. Flights are maintained to a variety of destinations until the company stops trading in 1986.

ZAIRE EXPRESS, S.A.: Zaire (1994–1997). Express Cargo of Kinshasa forms the airline subsidiary Zaire Express, S.A. in 1994 to offer scheduled domestic and regional passenger and cargo services. Stavros Papaioannou is chairman with Jose Endundo as president. A workforce of 1,200 is recruited and revenue flights commence with 1 Boeing 707-358C and 3 British Aerospace BAe (BAC) 1-11-500s.

Despite the civil war that will result in the replacement of the government of Zaire with a new Democratic Republic of the Congo, services continue in 1995–1996.

One each B-737-214 and B-737-227A are acquired and destinations visited include Bauavu, Beni, Bunia, Butembo, Gbadolite, Gemena, Goma, Isiro, Kananga, Kindu, Kisangani, Lubumbashi, Mbandaka, and Mbuji-Mayi.

In the spring of 1997, after the rebel forces of Desire Kabila come to power, this most important privately owned airline in the country changes its name to **Congo Airlines, S.A.** It also makes an unsuccessful claim on the traffic rights of defunct **Air Zaire, S.A.**, which rights are rather passed to **Lignes Aeriennes Congolaises, S.A.**

ZAIREAN AIRLINES, S.A.: Blvd. du 30 Juin 3555-3560, P.O. Box 2111, Kinshasa, Democratic Republic of the Congo; Phone 243 (12) 24 624; Fax 248 (88) 48 103; Code ZAR; Year Founded 1981. Formed at Kinshasa in 1981, Zairean Airlines begins revenue services as a charter carrier with two Vickers Viscount 757 turboprops. Over the next 12 years, the company undertakes regular passenger and cargo services to Bandundu, Boma, Gbadolite, Gemena, Inongo, Kananga, Libenge, Lodja, Mbuji-Mayi, Muanda, Nioki, and Tshikapa.

In 1993, Director General Capt. Alfred Sommerauer's company employs 38 workers and operates a fleet comprising 1 each Viscount 757 and 1 Piper PA-28-180 Cherokee. Many charter services are now provided.

The fleet is significantly upgraded in 1994 as two B-707-320C Stratofighters are placed into service, leaving the Viscount and Piper to handle passenger traffic.

Flights continue in 1995–1996, during which years a B-727-100 is also acquired. One of the Stratofighters is stored as civil war disrupts the nation. In early 1997, Zaire becomes the Democratic Republic of the Congo. Details on the company thereafter dry up, but it is believed to remain in operation, at least for a time.

ZAKAVIA: U.S.S.R. (1923–1928). This small airline, the name of which is derived from Zakavkazie ("Trans-Caucasus"), is founded at Tbilisi in the Caucasus on May 10, 1923. Employing a Junkers F-13, the company initiates a single return route to Baku.

Later, despite local political difficulties and extremely difficult terrain, the company is able to establish services from its base to south, west, and north, respectively: Djoulda, Yerevan, Batum, and Mineral'nye Vody.

Unable to achieve growth or maintain viability, the airline is acquired by the Ukrainian carrier **Ukvozduchput** in 1928.

ZAMBIA AIRWAYS, LTD.: Zambia (1964–1967). Zambia Airways is formed in April 1964 as a subsidiary of **Central African Airways Corporation (CAAC)**. T. M. D. Mtine is named chairman, with R. P. Hartley as managing director. A fleet of 3 de Havilland Canada DHC-2s and 2 Douglas DC-3s is received from CAAC and revenue flight operations commence on July 1 over a route from Salisbury to Kitwe via Kariba, Lusaka, and Ndola.

At the beginning of November, joint service is launched with **Air Congo, S.A. (2)** over a return route from Ndola to Elisabethville. The Congolese fly the service on Fridays and the Zambians on Thursdays.

On November 11, 1965, Southern Rhodesia's Prime Minister Ian Smith makes a Unilateral Declaration of Independence speech, breaking relations with its former federated partners, Zambia and Malawi.

Two BAC 1-11-207s originally requested by CAAC are withheld as part of the Commonwealth's sanctions against Smith's government. Instead, they are leased out to **British Eagle Airways, Ltd.** and **Swissair, A.G.** Flights are maintained during the remainder of the year and through 1966 with the equipment already in hand.

Planning begins in early 1967 for a separation of Air Zambia from CAAC and the Zambia Airways Act passes the national parliament authorizing the creation of a new state carrier to fly both domestic and international services. **Alitalia, S.p.A.** is chosen from a pool of three applicants to provide management support after the divorce. A new airport is opened at Lusaka in July.

Zambia Airways Corporation is established on September 1 to take over the CAAC subsidiary. Alitalia executive Francesco Casale is seconded to Lusaka to serve as general manager while the two BAC 1-11-207s held back in 1965 are turned over to ZAC in mid-December.

When, as part of the sanctions movement, Zambia requires that its airports be closed to service to or from Rhodesia on December 31, **Central African Airways Corporation** collapses.

ZAMBIA AIRWAYS CORPORATION: Zambia (1967-1994). On January 1, 1968, BAC 1-11-207 services are introduced by Zambia's new flag carrier on regional routes to Kenya, Malawi, Tanzania, and Mauritius. The four original **Zambia Airways, Ltd.** Douglas DC-3s continue to provide domestic services.

General Manager Francesco Casale, on loan under a management contract signed with **Alitalia, S.p.A.**, provides leadership in support of the initiation of new international services. Employing a Douglas DC-8-43 leased from **Alitalia, S.p.A.**, Lusaka to London flights are inaugurated in November via Nairobi and Rome. This one service doubles the length of the route network to 12,000 miles.

Airline employment at Chairman T. M. D. Mtine's airline in 1969 is 854. Flights to Mauritius commence in November and enplanements for the year total 143,789.

The workforce grows 11% in 1970 to 960. Three owned Hawker Siddeley HS 748s and a chartered DC-8-43 are delivered by Alitalia, the latter allowing start-up in February of the carrier's first London service with owned aircraft.

Freight soars 52.8% and passenger boardings climb 22.39% to 185,271.

Simon C. Katilungu becomes chairman in 1971, while Roberto Tarrantino rotates in as the new Italian general manager. A bilateral agreement is signed between Zambia and Botswana in February 1972, allowing ZAC to commence service to Gaborone. Two more HS-748s begin plying regional routes in 1973. The first Boeing Stratoliner, a B-707-343C, is delivered in 1974, while the subsidiary **National Air Charters, S.A.** is formed during the latter year.

Early in 1975, the company's two BAC 1-11-207s are sold to **Dan-Air, Ltd./Dan-Air Services, Ltd.** and are turned over on March 29. Meanwhile, the **Alitalia, S.p.A.** management contract is replaced by one signed with **Aer Lingus Irish Airlines, Ltd.** A B-707-348B, leased from the Irish carrier, is delivered on March 24.

The Irish Stratoliner begins nonstop Lusaka to London roundtrips on April 1. The leased **Alitalia, S.p.A.** DC-8-43 is now returned.

A B-707-351C is purchased from the American carrier **Northwest Airlines** on June 30; simultaneously, an Aer Lingus B-737-248A is chartered.

An owned B-737-2M9A, ordered the previous summer, arrives in June 1976. With the addition of two more Irish Stratoliners earlier in the year, scheduled service is inaugurated in July from Lusaka to Frankfurt. No sooner has this important event occurred than a pilot strike in August

grounds the company for most of the next four months. A Boeing crash-lands at Lusaka on May 14, 1977.

Routes are extended or improved throughout the remainder of the decade to a total of 12 domestic points as well as London, Frankfurt, Rome, Salisbury (Harare), Johannesburg, Lilongwe, and Nairobi.

Enplanements for 1981 total 276,700. The carrier is reorganized in April 1982, becoming a subsidiary of the government-owned **Zambian Industrial and Mining Corporation (ZIMCO)**. Patrick Chisanga, director general of ZIMCO, becomes ZAC chairman. A contract is signed with **Ethiopian Airlines, S.C.** under which the older airline will manage the Zambian line's technical and operations departments for the next three years.

A total of 251,110 passengers are flown.

A Boeing 737-2M9A is acquired in 1983. As the result of engine problems, an HS 748-2A with 4 crew and 42 passengers aborts its take-off from Kasaba on July 4, but runs off the end of the runway and is damaged; there are no injuries reported.

Company pilots, of whom nearly 70% are now Zambian nationals, continue to employ for training the B-707 simulators of **Deutsche Lufthansa, A.G.** and the B-737 simulators of **Aer Lingus Irish Airlines, Ltd.**

One of the Stratoliners is now grounded and cannibalized for spare parts. Another is employed as a freighter, while the other two offer regional services as well as weekly return flights to Rome.

Passenger traffic for the year drops to 235,400 passengers, all but 37,000 of which are carried on international services.

The employee population stands at 1,686 in 1984. Managing Director Oliver Chama is suddenly replaced at the beginning of July by Lawrence Bwalya who, like his predecessor, has no airline experience.

The carrier's first wide-body, a DC-10-30, is delivered on July 31 and is named *Nkwazi*. A month later, it is placed in service on the Rome-Paris-London route, but not without difficulty. The British government had initially refused to allow the sharp increase in capacity the wide-body represented on the thrice-weekly Lusaka to London service. Consequently, one of the three flights is now terminated at Paris, a destination not previously visited.

In cooperation with **Air India, Ltd.**, ZAC also starts weekly Stratoliner return service to Bombay via Mauritius and a B-737-2M9A route is launched to Lubumbashi.

On October 5, the government dismisses Civil Aviation Director Capt. Patrick Kawanu following a September incident in which he had closed Lusaka Airport for 45 minutes when he could not get a seat on a departing Zambia Airways Corporation flight.

Passenger boardings for the year grow 5.1% to 247,487 and cargo skyrockets 213.5% to 73.58 million FTKs.

The fleet in 1985 comprises 1 DC-10-30, 2 B-707-348Bs, 1 B-707-351C, 1 B-737-2M9A, and 2 HS 748s. An agreement is signed in February allowing **Air India, Ltd.** to code-share on Zambia Airways' Bombay-Lusaka service. Frankfurt joins the European network and flights start to Jeddah.

In December, the two B-707-348Bs are transferred to a new subsidiary, **National Air Charters, Ltd.**

Passenger bookings grow 3.6% to 254,000 and freight is up a slight 0.38%. Revenues advance 57% to \$34.8 million and expenses climb 44.2% to \$34.8 million; losses are \$132,000 (operating) and \$4.81 million (net).

A January 1986 contract is signed with **Deutsche Lufthansa, A.G.** authorizing the German flag carrier's experts to conduct a comprehensive review of technical and operational departments. In September, Capt. Godfrey M. Mulundika is named managing director. Meanwhile, a weekly flight is started to Matsapa, Swaziland, via Gaborone. Operations continue apace in 1987.

On April 1, 1988, DC-10-30 roundtrip flights are initiated from Lusaka to New York via Monrovia. Two chartered Avions de Transport Regional ATR42-320s arrive in May and June, entering service in July and allowing the removal of an HS 748. A sales office is opened in

Tokyo during August and in October all three B-707-348B/-351Cs are put up for sale.

Enplanements for the 1,681-employee state carrier increase by 7.1% to 268,200 while freight skyrockets by 226.3% to 84.21 million FTKs.

In April 1989, a contract is formed with **Pakistan International Airlines Corporation (PIA)** under which the Asian carrier provides assistance in the areas of computerization, data processing, engineering, accounting, and flight operations. A DC-8-61 is leased from **Nationair, Ltd.** in May and is employed to double the Lusaka to New York service to twice weekly via Monrovia. In September, the airline initiates next-day cargo service from New York to all of its African destinations.

A second chartered DC-10-30 now arrives and in October, following return of the Canadian Douglas, weekly service from New York to Windhoek, Namibia, service is opened via Lusaka—the first ever from North America to Namibia; the return flight routes additionally via London from Zambia. In 1990, an order is placed for an MD-11. In December of that year, the airline becomes the second outside of the U.S. to place a B-757-23APF, leased from Ansett Worldwide Aviation, into service.

The workforce is increased to 2,130 in 1991 and the fleet now includes 2 ATR42-320s and 1 each B-737-2M9A, B-737-291A, B-757-23APF, and DC-10-30. Orders are outstanding for a McDonnell Douglas MD-11.

Following the outbreak of the Mideast war on January 17, together with higher fuel bills, avgas is no longer uplifted in Lusaka on international flights and service is suspended to Kitwe, Lubumbashi, Mansa, and Mongu. Managing Director Mulundika is succeeded by Luke Mbewe in February. Also early in the year, Lome, Togo, is substituted for Monrovia, Liberia, on the Lusaka to New York route. In March, a DC-8-71, configured with a 200-seat, 2-class interior, is acquired.

Despite the substitution of Lome, the New York service loses money; consequently, it is suspended in April.

Traffic figures are provided for the first six months of the year. Passenger boardings fall 37.2% to 80,000 and freight is off 42.6% to 39.87 million FTKs. It is reported in November that financial arrangements made to help acquire the MD-11 have been cancelled due to the company's poor fiscal situation and, in fact, cost it \$2 million.

In 1992, the fleet of Managing Director Mbewe's 2,130-employee company includes 2 ATR42-300s, and 1 each B-737-2M9A, B-737-291A, DC-8-71, B-757-23APF, and DC-10-30. The McDonnell Douglas MD-11 order is outstanding.

In addition to domestic routes, the carrier undertakes scheduled international flights from Lusaka to Bombay, Dar es Salaam, Entebbe, Frankfurt, Gaborone, Harare, Johannesburg, Lilongwe, London, Nairobi, and Rome. Service to Lubumbashi is reinstated.

Statistics are reported for the first 8 months of the year and show passenger enplanements of 160,570 and FTKs of 11.76 million.

Airline employment declines 10.8% in 1993 to 1,900 and the B-757-23APF is withdrawn. Peter Kaoma becomes managing director and a large restructuring program is put into place designed to save the governmental corporation from bankruptcy. General sales agents replace foreign ticket offices and a number of assets are sold in addition to the Boeing.

Data is available through May. In the year's first 5 months, customer bookings are up 1.2% to 97,600, but freight is off 25.5% to 5.32 million FTKs.

The workforce is increased by 12.1% in 1994 to 2,130. In early spring, the government announces plans to restructure and privatize the carrier. Managing Director Kaoma is given another ZIMCO post and he is succeeded by George A. Lewis.

Traffic figures are reported through July and show passenger boardings up 14.5% to 108,730. Cargo recovers, moving ahead by 24.6% to 7.81 million FTKs. The airline is at least \$100 million in debt by fall; international donors threaten Zambia with loss of its aid packages if the plan to save the airline is continued. As a result, the company ceases operations on December 3 and is liquidated, its 1,200 remaining workers being dismissed.

During the summer of 1995, the company's DC-10-30, *Nkwazi*, is sold to **Monarch Air Lines, Ltd.**

ZAMBIA SKYWAYS, LTD.: Lusaka Airport, Box 32661, Lusaka, Zambia; Phone 260 (1) 233 097; Fax 260 (1) 286 508; <http://196.36.240.13/zambia/easternair.htm>; Code X7; Year Founded 2000. Lusaka-based **Eastern Air, Ltd.** is renamed on April 1, 2000. Yoosuf Zunda remains managing director and continues to operate a pair of Let L-410UVPs to the country's tourist destinations, as well as into Chipata, Dar es Salaam, Johannesburg, Kasaba Bay, Kasama, Lilongwe, Livingstone, Lubumbashi, Mansa, Mfuwe, Mongu, and Ndola.

A marketing and code-sharing agreement is signed with **South African Airways (Pty.), Ltd.** When the pact begins on April 18, Solly Patel becomes managing director and SAA takes over the smaller line's Lusaka to Johannesburg route, operating larger equipment six times a week until Zambia Skyways can obtain Western jetliners of its own over the next 18 months. Patel confirms that qualified Zambia aircrew personnel only will be employed to fly the new aircraft.

ZAMBIAN AIRWAYS, LTD.: P.O. Box 310277, Lusaka International Airport, Lusaka, Zambia; Phone 260 (1) 271230; Fax 260 (1) 271054; <http://www.africa-insites.com/zambia/roanair.htm>; Code Q3; Year Founded 1999. Roan Air, Ltd. is purchased by Zambian interests, reformed and renamed on September 2, 1999. Gregory Havermahf is managing director and employing a pair of new Raytheon Beech 1900Ds, he increases the number of daily roundtrip scheduled service from Lusaka to Ndola and Kitwe to 18. Flight schedules are also arranged to complement international arrivals and departures to tourist destinations such as Mfuwe and Livingstone/Victoria Falls. Charters are offered to such points as Kasaba Bay and Chipata. Zambian Airways also manages the operations of the government's Bombardier CL-601-1A Challenger fleet.

The reborn airline also joins the International Air Transport Association and the Southern African Bank Settlement, while linking its reservations system to the international Galileo network.

Thrice-weekly Beech 1900D return service is initiated on October 18 from Lusaka to Harare, Zimbabwe. Later in the month, the company enters into a strategic partnership with **Air Namibia (Pty.), Ltd.** from which it will purchase blocks of seats and thereby code-share on its London route.

The weekly B-747-48EC dual-designator roundtrips are inaugurated on November 2 from Lusaka to London (LHR). Later in the month, the number of weekly frequencies from Lusaka to Harare is doubled from three to six. As the year ends, the company has increased its domestic operations by 50% and has taken a dominant market position, controlling 85% of the domestic flights made in Zambia.

Airline employment stands at 60 at the beginning of 2000.

On March 6, the carrier enters into a marketing and code-sharing agreement with South African carrier **Comair (Pty.), Ltd.** Daily Beech 1900D roundtrips commence on March 26 from Lusaka to Johannesburg and to Nairobi. Plans are announced on July 4 for the acquisition of a Boeing 737-200.

On December 15, the company signs up to become a **British Airways, Ltd. (2)** franchise carrier. A Boeing 727-200 will be acquired from **Comair (Pty.), Ltd.**; repainted in modified BA colors, it will operate on the major's behalf twice weekly from Johannesburg to Ndola and to thrice weekly Lusaka starting in January.

ZAMBIAN AIR CARGOES, LTD.: Zambia (1966–1971). This ZAC is set up in early 1966 by the Roan Selection Trust at Lusaka specifically to operate freight services in support of the copper industry. Under a subcontract from Lockheed Aircraft International at Geneva, London, England-based Field Aircraft Services provides support and management, including CEO H. E. Linsley and a fleet of 5 L-100-20 Hercules transports.

The 320-employee concern begins flying on March 21, transporting copper to Dar es Salaam and returning with petroleum and other products of national priority.

Service is provided without incident in 1967. Having completed a cargo service from Cambridge, England, to Lusaka via Benina and Entebbe on April 11, 1968, an L-100-20 Hercules catches fire as it is being parked next to a second ZAC Hercules; although both planes are destroyed, there are no fatalities.

Operations continue until 1971.

ZAMBIAN EXPRESS AIRWAYS, LTD.: Private Bag E811, 5th Floor, Finance House, Heroes Place, 10101 Lusaka, Zambia; Phone 224276; Fax 224158; <http://www.zamnet.zm/zamnet/zntb/zamex.html>; Code OQ; Year Founded 1995. Privately owned Zamex is established at Lusaka in March 1995 to fill the void left by the defunct **Zambia Airways Corporation**. Shareholding is divided between private Zambian investors (51%) and **SA Express (Pty.), Ltd.** of South Africa (49%). SA Express Chairman William Deluce is given the same post with this concern.

An initial fleet comprising 2 de Havilland Canada DHC-8-314s chartered from SA Express and a Piper PA-31-310 is assembled with which to begin revenue passenger services, both scheduled and charter.

General Manager Linton Bell's new entrant continues during the remainder of the year and in 1996 and beyond to link the capital with Ndola, Livingstone, Johannesburg, Lilongwe, and Lubumbashi. An Aero International (Regional) ATR42-320 is ordered in July, along with a chartered Boeing 727-100.

A second frequency into the Malawian capital of Lilongwe is introduced on December 2; it connects Victoria Falls in Livingstone and the shore of Lake Malawi. The accompanying tour package is designed for the discerning tourist who has little time to see many places in Livingstone, South Luangwa National Park, and Lake Malawi.

Simultaneously, the airline becomes the first Zambian operator to introduce duty free sales on board its flights.

The ATR enters service in 1997 and allows the Navajo to double the company's daily flights to Ndola. Flights continue in 1998-1999.

ZAMRUD AIRLINES. See AOA ZAMRUD AVIATION CORPORATION

ZANTOP INTERNATIONAL AIRLINES: Hangar 2, 840 Willow Run Airport, Ypsilanti, Michigan 48198, United States; Phone (313) 485-8900; Fax (313) 485-4813; <http://www.flyzantop.com>; Code VK; Year Founded 1946. Duane A. Zantop and his three brothers form the FBO Zantop Flying Services at Jackson, Michigan, in 1946 to provide general aviation services, air taxi flights, and ad hoc cargo charter services. Giving a taste of things to come, the brothers' lightplane is occasionally employed over the next six years to fly freight on behalf of General Motors Corporation. At the recommendation of GMC and Ford Motor Company executives, the Zantops, in 1952, apply for and receive an airline operating certificate.

During the early 1950s, the Zantops define their purpose by coming to specialize in the air shipment of automobile parts from Detroit to assembly plants across America. Services are also flown under contract to the Department of Defense. Three Douglas DC-3s and three Curtiss C-46 Commandos are employed on these flights.

A DC-3 freighter with three crew crashes in icing conditions while on final approach to Kansas City Airport on January 24, 1954; there are no survivors. On July 6, 1956, the company name is changed to **Zantop Air Transport**. A C-46A with four crew is lost after a bad landing at Long Beach on December 16; although the aircraft must be written off, there are no fatalities. Service continues apace for the remainder of the decade.

A DC-6A is purchased from **Northwest Airlines** on August 24, 1961. A DC-4 freighter with three crew is destroyed as the result of a bad landing at Cincinnati on November 14; there are no fatalities.

The Curtiss C-46 operator achieves Supplemental status on May 9, 1962, when it takes over, with CAB approval, the abandoned supplemental certificate of **Coastal Cargo Company** and begins to branch out into the delivery of other goods. In late June, **Riddle Airlines** encounters financial difficulty and is forced to sell back its seven Armstrong-Whitworth AW.650 Argosy Is to their manufacturer; two of these now come to Zantop. On July 5, a C-46F crashes into several parked aircraft at Vandenberg AFB, California, while taxiing for takeoff.

While attempting to make a single-engine landing at Puyallup, Washington, on February 16, 1963, a C-46F crashes and burns; both crewmen are seriously injured. Another Commando with two crew and a passenger is destroyed in a crash landing 10 mi. NW of Nederland, Colorado, on December 7 (three dead).

During this year and the next, the company successfully bids on and receives large LogAir contracts from the U.S. government. The Commando fleet is quickly increased from 16 to 24 aircraft.

Services continue apace in 1964, but once again accidents are plentiful. A C-46 crash-lands at Denver on February 21 and following a premature liftoff from Osceola, Michigan, on August 26, an Argosy I makes a wheels-up landing that causes severe damage to the plane. The right main landing gear of a C-46 collapses as the aircraft lands at Pittsburgh on October 30.

An Argosy I suffers an in-flight fire over Gwinn, Michigan, on November 19, but is able to land safely (but with damages). The next day, a C-46 with two crew fails its Inkster, Michigan, takeoff and is destroyed in the nonfatal crash that follows. Five days later, another Commando suffers landing gear failure after it lands at Covington, Kentucky.

A C-46A with four crew crashes at New Boston on December 20; there are no survivors.

The year's final crash, on December 30-31, is fatal; four crewmen are killed when their C-46 loses control after touchdown at Detroit in icy weather.

The company has another accident-filled year in 1965. Only five days into the new year, a C-46 strikes a tractor-trailer truck while taxiing at St. Louis and is badly damaged. The left main landing gear of another Commando fails while it is landing at Atlanta on February 8. On March 20, the company is fined \$70,000 by the FAA, which has been investigating the safety concerns raised over the past several years, for maintenance and operating violations.

Despite the fine, mishaps continue. On July 17, the No. 4 engine of a DC-6A falls off while the plane is in flight near San Jose, California; a safe emergency landing is executed.

The landing gear of a C-46 collapses as it is landing at Atlanta on August 31, while another loses power while taking off from Dover AFB, Delaware, on September 13. Engine failure forces an Argosy I with three crew to make an emergency landing on a highway outside of Piqua, Ohio, on October 14; there are no fatalities.

In April 1966, the company is one of 10 Supplemental carriers to receive permanent certification from the CAB.

En route from Detroit to Kansas City on June 16, a C-46A with two crew and leased from **Saturn Airways**, collides with a single-pilot Piper; both aircraft crash 6 mi. NW of Columbia City, Indiana, and there are no survivors.

Flight 7990, a C-46A with two crew loses an engine while climbing away from Port Elizabeth, New Jersey, on July 28; the Commando makes a wheels-up landing on a salt flat from which both flyers walk away. The plane must, however, be written off.

Zantop Air Transport becomes a wholly owned subsidiary of the Detroit-based Universal Airline Company, itself a subsidiary of Universal Consolidated Industries, on September 21 and operates as **Universal Airline Company** for the next four years.

The costs of expansion in 1970 cannot be overcome and as a result, Universal shuts its doors on May 4, 1971. After Universal files for bankruptcy, the Zantop family reenters the picture in May 1972, rescuing and reorganizing the carrier, incorporating it as a Michigan company, and renaming it Zantop International Airlines. Duane A. Zantop is board

chairman and his sons, James M., Duane G., and David B. will all help him to operate the reborn carrier.

New financing is obtained, along with a fleet of DC-6A/Bs and CV-640Fs, ground facilities at Detroit's Willow Run Airport, and, most importantly, new FAA operating authority.

The year ends on a positive note when B. J. Barret is employed on November 22 as the only female commercial-cargo airline pilot in America.

Charter and contract service flights are the initial offering of ZIA and continue apace in 1973. The Lockheed fleet of **Overseas National Airways** is acquired in 1974, nine L-188AFs. One of these new freighters, with three crew, makes a heavy landing at Deadhorse on April 30, 1975, and flips over; there are no fatalities, but the aircraft must be written off. In 1976-1977, six additional L-188AFs are acquired, all formerly operated by **Eastern Air Lines**.

Scheduled freighter flights are begun in April 1978. President Duane A. and Vice President Duane G. Zantop now operate a fleet of 13 DC-6A/Bs, 14 L-188AFs, and 14 Convair CV-640Fs. The automobile industry remains a prime source of income.

The big fleet transports a total of 43.5 million FTKs this year, a huge 309.3% boost.

The employee population in 1979 stands at 1,025 and the company's first jet transport, a Douglas DC-8-54F, enters service in January. Another L-188AF is purchased, this one from **Trans Continental Air Transport**.

After the Airline Deregulation Act takes effect in the fall, Zantop begins to develop a commercial hub network connecting important communities around the nation. The network, which grows to 38 cities, will be busy mostly at night. Still in this first year of domestic liberalization, cargo falls by 40.2% to 26.03 million FTKs.

When a DC-6A loses a door over Syracuse on January 18, 1980, a carton containing military explosives is also lost; the USAF reports that the explosives cannot go off without detonators and that there were none in the carton.

Eight more Lockheed L-188AF Electras join the fleet in September as Zantop acquires the mainland cargo division of **Hawaiian Airlines**, started at Macon, Georgia, two years earlier. A total of 79.12 million FTKs are operated.

On February 1, 1981, Zantop International becomes a wholly owned subsidiary of the Aviation Group, a holding company incorporated in North Carolina in December 1977. The Zantop family, however, continues to remain in control of the carrier.

The fleet now comprises 1 DC-8-54F, 5 DC-8-30Fs, 25 L-188AFs, 12 DC-6A/Bs, and the 14 CV-640Fs. The carrier receives CAB certification in September and posts a 10.2% traffic gain (88.1 million FTKs) on the year.

The 1,250-man workforce remains level in 1982. Two L-188AFs are destroyed when the roof of their hangar collapses at Macon, Georgia, on March 21.

Cargo traffic dips 1.3% during the year to 86.97 million FTKs. Despite the national recession, Zantop earns revenues of \$80.5 million, allowing it a \$3.8-million net profit.

During 1983, Reese Zantop establishes Detroit (YIP)-based **Reliant Airlines** to offer on-demand all-cargo services to destinations in Europe and the Americas. Additionally, an L-188AF is sold to **Reeve Aleutian Airways**.

Continuing to maintain its emphasis on auto parts transport, Zantop operates 184.9 million FTKs, an increase of 82%. Total revenues are \$106.4 million and the net profit is \$8.8 million.

Just after departing from Baltimore (BWI) for Detroit (YIP) on the evening of May 30, 1984, an overloaded L-188AF with three crew and a passenger enters into a descending spiral and its speed increases to a point where it suffers structural failure, breaking up in flight. Wreckage is spread over an area near Chalkhill, Pennsylvania, 2 mi. long by 1 mi. wide and there are no survivors.

Traffic for the year dips 1.7% to 187.05 million FTKs.

As 1985 dawns, the company's fleet of 5 newly received Douglas DC-8-62Fs, plus 21 Electras, 9 Convair CV-640s, and 6 DC-6As con-

tinues to ferry goods to a variety of automobile and other markets in the eastern and central U.S.

Total FTKs flown by the 1,146-employee operator dip 4.7% to 185.83 million. Revenues, however, are up 20.6% to \$128.7 million. With costs at \$109.46 million (a 12.9% increase), the operating profit is able to climb to \$19.23 million. Net income jumps \$3 million to \$11.98 million.

Airline employment in 1986 continues to stand at 1,146 and the fleet is upgraded by the addition of 2 more DC-8-62Fs and 1 DC-8-50F. The DC-6As are retired.

Cargo is down again, by 26.6% to 136.4 million FTKs. Revenues plunge 11.7% to \$113.63 million, expenses drop 5.5% to \$103.45 million, and the operating profit is \$10.17 million. Net profit falls by half to \$5.52 million.

The workforce is increased significantly in 1987, rising 57.1% to 1,800.

Freight traffic makes a strong recovery, growing by 17.1% to 12.99 million FTKs. Revenues take another 3.2% fall to \$110.06 million, costs jump 9.4% to \$113.17 million, and the operating loss is, accordingly, \$3.1 million. The previous year's net gain turns into a \$2.58-million net loss.

The payroll is cut by 31.2% in 1988 to 1,238. All of the DC-8-62Fs are sold to **CF Airfreight**. Traffic is also down, falling 6.6% to 109.92 million FTKs.

The number of workers increases by 21.1% in 1989 to 1,500 and the fleet includes 1 Beech King Air 90, 1 Beech Super King Air 200, 9 Convair CV-640s, 6 DC-6Bs, 10 Lockheed L-188AFs, and 11 L-188CFs.

Freight traffic plunges 48.9% to 56.19 million FTKs and the company suffers the stigma of being demoted by the DOT from the status of national airline to that of a large regional. Expenses exceed income and there are losses: \$3.28 million (operating) and \$1.2 million (net).

One L-188AF is withdrawn in 1990 as one more L-188CF joins the fleet, only to be immediately leased to **Channel Express Air Services, Ltd. (CEASL)**, along with 11 Convair CV-640Fs.

Cargo rebounds, climbing by 24.5% to 97.52 million FTKs. Revenues advance 18.3% to \$75.13 million, expenses are held to an 11.2% gain, to \$74.27 million, and operating income totals \$860,001. Net profit reaches \$1.86 million.

Airline employment is increased by 13.3% in 1991 to 1,700 and the fleet now includes 34 aircraft. Two DC-8-54Fs are acquired, but are then leased out to **Trans Continental Airlines (TCA)**. During the Persian Gulf crisis, which actually began the previous August, Zantop operates a day hub exclusively for the U.S. Post Office.

Freight declines by 9.3% to 88.51 million FTKs, but revenues improve by 5.7% to \$79.42 million. Expenses are unchanged and total \$74.24 million, causing the operating profit to increase to \$5.18 million. Net profit surges to \$7.65 million.

Two more L-188AFs are leased to Channel Express in 1992, while the TCA lease is concluded. Destinations visited regularly now include Albany, Ashville, Atlanta, Baltimore, Boston, Buffalo, Charlotte, Chicago, Cincinnati, Cleveland, Dallas (DFW), Dayton, Detroit, Fort Wayne, Grand Rapids, Hartford, Houston, Indianapolis, Jackson, Kansas City, Little Rock, Los Angeles, Memphis, Minneapolis (MSP), Nashville, New York (JFK), Newark, Norfolk, Philadelphia, Richmond, Rochester, Shreveport, South Bend, St. Louis, and Syracuse.

Late in the year, the decision is taken to discontinue the company's hub system in favor of charter and contract service flights.

Cargo plunges 36.3% in these 12 months to 73.03 million FTKs. Revenues plunge 33.6% to \$52.76 million, costs fall 21.3% to \$58.44 million, and there is a \$10.9-million operating loss. The previous year's net gain now turns into a \$6.3-million net loss.

A total of 1,200 workers are employed in 1993. The company's fleet of 2 DC-8-54Fs, 11 CV-640Fs, and 20 L-188 Electras (3 remain leased out to CEASL) continues to provide "prime-time" overnight scheduled services until April, when Zantop terminates its schedule in favor of nonscheduled flights. On-demand cargo charters and contract services

throughout the U.S., together with special charter flights, are now also available to worldwide locations.

The air conditioning duct of an L-188AF overheats while the aircraft is parked at Detroit (YIP) on April 14; the fire spreads to the cockpit and the whole aircraft is eventually burned out. The engines and propellers are salvaged and the remainder of the hull is scrapped.

In May, the scheduled routes are taken over by **American International Airlines**.

Freight falls another 47.8% to 38.09 million FTKs and revenues decline 29.6% more to \$37.1 million. Still, the operating loss is cut to \$8.9 million and net loss is reduced to \$4.1 million.

The workforce is cut in half during 1994 to 600 as cargo plunges 25.5% to 25.85 million FTKs. Revenues, however, increase by 19.3% to \$44.72 million. Still, expenses, even if down 4.2%, total \$47.3 million and cause an operating loss of \$2.58 million. There is a \$4.76-million net gain.

In 1995, the company's 33 aircraft operate a total of 19.53 million FTKs, a 24.4% decline, translating into a fiscal downturn as costs exceed operating income and leave losses of \$10.78 million (operating) and \$9.1 million (net).

The employee population grows to 755 in 1996 and 2 L-188AFs remain out on charter to **Channel Express, Ltd.**

Cargo traffic skyrockets 134.2% to 45.73 million while revenues jump 22% to \$29.85 million. Unhappily, expenses rise 29% to \$45.49 million and leave a \$21.8-million operating loss. The net loss grows to \$14.95 million.

The workforce is slashed 20.5% during 1997 to 600. The fleet now includes 11 CV-640Fs (5 of which are out of service), 18 L-188Fs, 3 DC-8-54Fs, and 1 each DC-8-62CF and Beech Super King Air 200, the latter used for the transport of company executives.

On March 21, Zantop ceases airline operations on its own accounts and begins to operate aircraft exclusively on contract to its air freight customers. These include the U.S. Postal Service, **Emery Worldwide**, **DHL Worldwide Express**, **Channel Express, Ltd.**, **Lynden Air Freight**, **American International Airlines**, and **Kitty Hawk Aircargo**.

For that reason, the year is horrible from a traffic and financial standpoint. Freight plunges 62.1% to 17.33 million FTKs, while revenues decline 45% to \$16.85 million. Expenses jump 53.5% to \$24.41 and, although cut somewhat, losses continue. The operating loss is significantly reduced to \$7.56 million, but net loss is still \$14.91 million.

The downturn, although slowed, continues in 1998. Cargo traffic declines by 8.4% to 15.88 million FTKs. The 100-employee carrier continues services in 1999.

Cargo traffic this year accelerates 5.1% to 16,698,000 FTKs.

A total of 100 workers are employed at the beginning of 2000. Two DC-8-54Fs are operated.

ZAS AIRLINE OF EGYPT (ZARKANI AVIATION SERVICES, LTD.): Egypt (1982–1995). This new scheduled charter operation is organized at Cairo in June 1982 by Amir Zarkani, whose family operates the ground handling company Zarkani Aviation Services (ZAS) and for two decades has chartered foreign airliners to transport vegetables from family land to Europe. The private company obtains a pair of Boeing 707-328C Stratoliners and undertakes nonscheduled charter and contract service cargo flights from the Egyptian capital to such European cities as London, Brussels, Frankfurt, and Amsterdam. Scheduled all-cargo operations and nonscheduled passenger flights are authorized by the Egyptian government in April 1983.

By 1986, the fleet includes 13 B-707-320Cs and 3 Lockheed L-1329 Jetstar 6s. The Jetstars, acquired from the German government, are the first ZAS aircraft employed for passenger services.

It is reported in June 1987 that the company has moved 40,000 metric tons of freight in the past year and earned revenues of \$71 million. In July, a B-707-328C is leased to **Uganda Airlines, Ltd.** and in September ZAS is granted a license to transport passengers, initially on a nonscheduled basis. Regular services are now undertaken by Chair-

man/President Sherif Zarkani's carrier to Alexandria, Aswan, Hurghada, Luxor, and Sharm el Sheikh; these soon become scheduled destinations. In December, scheduled weekly roundtrip passenger service is launched to Amsterdam.

In 1988, the airline begins a close affiliation with **Tradewinds, Ltd.**; a hush-kitted B-707-320C is leased to the British freight operator in March, allowing joint services to begin to North Yemen, Somalia, Kenya, and the Sudan. Frequency on the Amsterdam route is boosted to thrice weekly in October.

East African operations continue through the remainder of the year and into 1989, during which 12 months a McDonnell Douglas MD-11 is ordered for the company by its major Swiss stockholder, ADO Finance. Also during the year, a DC-9-32 is leased from **Adria Airways** to fly charters from Aswan to Abu Simbel.

A total of 600,000 passengers is transported on the year (in addition to cargo), and they contribute \$45 million to the company's coffers.

Beginning in July 1990, scheduled services between Khartoum, Cairo, and Frankfurt and Paris are undertaken under contract by **Sudan Airways, Ltd.** Following Iraq's August 2 invasion of Kuwait, the company suspends its passenger operations and begins to earn its only revenues from the transport of cargo in support of Operation Desert Shield.

Operations continue apace in 1991 in support of Operation Desert Storm in January and February, and in the air transport work of its aftermath. At this point, the company begins a leasing arrangement with **Conair of Scandinavia, A.S.**, taking the first of three Airbus Industrie A300B4-120s it will eventually charter for seasonal charter flights. Still, income is down and the company's 700 employees are forced to endure 40% pay reductions. On August 31, the company is \$10.3 million in debt.

Notoriously slow with its creditors, ZAS improves its lot in the summer of 1992 when it becomes a joint stock company, with the three Zarkani brothers as majority shareholders. A total of £41,020,900 (\$12.4 million) is subscribed in the initial offering. The fleet is increased by the addition of a McDonnell Douglas MD-83, but the MD-11 order is cancelled.

A total of 319,000 passengers are transported on the year and revenues of \$88 million are banked.

The fleet in 1993 comprises 3 B-707-320Cs, 1 MD-83, 4 Jetstar 6s, and 3 Airbus Industrie A300B4-120s leased from Conair. One of the Stratoliners is sold to Nile Safaris Aviation during the year.

Scheduled international flights are inaugurated to Amsterdam and Berlin in Europe, and to the Asian destinations of Male, Sharjah, and Kuwait. Charter destinations, all in Europe, include Barcelona, Bologna, Cologne, Frankfurt, Madrid, Milan, Munich, Paris, and Vienna.

During early 1994, one B-707-320C is sold, while the fleet is increased by the addition of one more MD-83 and three MD-87s. In a copyrighted article in the November 22 issue of *The New York Times*, founder Zarkani states that he is being driven out of business by capricious government regulations designed to safeguard the state carrier **Egyptair, S.A.E.**

On April 12, 1995, ZAS officials explain to the chairman of the Egyptian civil aviation authority, Mr. Munsef, that the airline has not ceased operations, but has merely had a partial stand-down until inspection and maintenance on its planes are completed. ZAS requests authority to operate 12 unscheduled flights between Cairo and Salalah employing aircraft leased from abroad. It also submits a petition to the authority's manpower committee explaining that the company's financial status requires it to lay off 280 workers.

Following a threat by Libyan leader Qaddafi to defy the UN sanctions imposed against his country, the Security Council on April 19, 1995 agrees to ease restrictions on flights from Libya; it will permit Egyptian airlines to carry Muslim pilgrims to Mecca.

Although ZAS will obtain its charter license and receive a portion of the pilgrimage business, the flights will not generate sufficient revenues to allow the airline to continue. Consequently, ZAS shuts its doors in October.

ZB AIR, LTD.: P.O. Box 45646, Nairobi, Kenya; Phone 254 (2) 501 219; Fax 254 (2) 505 964; Code ZB; Year Founded 1963. In June 1963, **Campling Bros. & Vanderwal, Ltd.**, the largest air charter operation in East Africa, is purchased by New York-based Blackwell Enterprises for £120,000. Now unemployed, former Campling director and chief pilot Zivota Boskovic takes his share and establishes a small charter operation, **Z. Boskovic Air Charters, Ltd.**, at quarters at Nairobi's Wilson Airport, not far from his former employer's. Revenue operations commence with a single Cessna 172.

In 1964–1966, the fleet is increased by the addition of a Beech A-36 Bonanza, one each Cessna 175 and C-180, and three each C-150s and C-182s. A Beech 58 Baron arrives in 1967.

These is little change in the company over the next 20 years, as light-plane charters are provided to small communities and bush destinations for tourists, hunters, and local citizens alike.

With T.A.D. Watts as managing director, Boskovic continues to undertake charter services for those seeking aerial safari and sight-seeing holidays. Contract service and passenger and cargo ad hoc charters are also undertaken. The fleet comprises 2 Cessna 404s, 1 Cessna 402, 1 Cessna 310, 1 Cessna 210, 2 Cessna 206s, and 3 Beech B-58 Barons.

At the end of the 1980s, the aging Chairman Boskovic, together with Managing Director Watts, elects to convert the company from a charter and air taxi operation into a scheduled commuter. At this point, the original Z. Boskovic Air Charters, Ltd. name is changed to the present moniker.

Scheduled passenger and cargo services are undertaken in 1989 linking the capital with Mombasa and other small towns, villages, and landing strips. The fleet now comprises 2 Cessna 404 Titans, 1 Cessna 401, 3 Cessna 310s, 2 Cessna 206s, and 3 Cessna 182s.

Cargo and passenger charters are also undertaken, particularly in connection with the tourist trade to animal reserves.

A fourth Cessna 310 and another Titan join the fleet in 1990 followed by three Beech Barons, a type previously flown, in 1991–1992.

Operations continue in 1993–2000, during which years another C-206, four C-208B Grand Caravans, and a C-208 Caravan I are acquired.

ZENIT AIRLINE: Leningradskoe Shosse 6, Moscow, 125299, Russia; Phone 7 (095) 155 2017; Fax 7 (095) 150 3916; Code EZT; Year Founded 1992. This transport division of the MIG design bureau is reformed in 1992 in order to offer domestic and regional cargo charters. Vladislav Mikhailovski is named director general and he begins revenue services with 2 Antonov An-12s and 1 Yakovlev Yak-40.

ZENITH AIR, LTD.: Nigeria (1994–1995). Zenith Air is established by Dewayne Sheehy at Lagos in 1994 to provide charter services to destinations throughout Africa. Revenue operations commence with a pair of ex-Eastern Air Lines Douglas DC-9-31s, but cease within a year.

ZHEJIANG AIRLINES COMPANY, LTD.: Jian Qiao Airport, 7 Yucheng Road, Hangzhou, Zhejiang, 310021, China; Phone 86 (571) 808-2490; Fax 86 (571) 517-3015; <http://www.zjair.com>; Code ZJ; Year Founded 1990. CAAC (The General Administration of Civil Aviation of China) authorizes creation of this regional during the summer of 1990. Officially established on September 7, shareholding is divided between **China Eastern Airlines Company, Ltd.** and the Zhejiang provincial government.

Initially equipped with 2 de Havilland Canada DHC-8-301s, the carrier, under the leadership of President Luo Qiang, inaugurates flights to tourist centers along the southeast coast on November 1. The major route is between the company base at Hangzhou and Shanghai.

Operations continue apace in 1991–1995, during which time the fleet is increased by the addition of a third DHC-8-301 and two Tupolev Tu-154Ms, the latter wet-leased from Russia.

The most exciting event of these years is one of China's many aircraft skyjackings. While en route from Hangzhou to Fuzhou on November 8, 1993, a DHC-8-301 with 59 passengers is taken over by factory worker

Wang Zhihua. The turboprop is diverted to Taipei, where Wang seeks political asylum. After the plane is released, Wang will be tried and sent to prison for 10 years.

In 1996, orders are placed for three Airbus Industrie A320s.

Flights continue in 1997–1998. The Tu-154Ms wet-leased from Russia are returned on March 22, 1999. The company now operates 4 A320-214s. Overall enplanements total 630,000 and 1.24 million FTKs are operated.

Just after takeoff from Hangzhou and a February 22, 2000 service to Wenzhou, the left engine of a Dash-8 develops an oil leak forcing automatic shutdown of the power plant; a safe emergency landing is made back at the point of origin and no injuries are reported.

In response to a fatal June 22 **Xian Airlines** Y-7-100C crash, **CAAC (The General Administration of Civil Aviation of China)** delivers a major reorganization plan to the China State Council in mid-July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, and **China Southern Airlines Company, Ltd.** Zhejiang negotiates to become a member of the **Air China International Corporation** group.

The last of five A320-214s delivered since August 29, 1997 is accepted on September 15.

Reacting to rising fuel costs, the **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Zhejiang, increase fares on November 5.

ZHETYSU AVIAKOMPANIA: Kazakhstan (1999–2001). Zhetysu is established at Taldy-Kurgan in the first quarter of 1999 to offer 40–45 min. roundtrip flights to Astana and Almaty. Revenue flights with 6 Yakovlev Yak-40s commence in April.

Despite relatively low prices for the service, the operator is unable to attract passengers or become viable. Difficulties in accessing the airport at Almaty and poor ground handling at both the capital airport and at Astana make the 3-hr. ground service by taxi or bus just as attractive for many travelers. Having lost an estimated \$62,000, the company will shut its doors at the beginning of March 2001.

ZHONGFEI GENERAL AVIATION CORPORATION: P.O. Box 73-90, Lin Yun Road, Yanliang District, Xian, Shannxi, 710089, China; Phone 29-721-4527; Fax 29-620-2094; Code CFZ; Year Founded 1991. This division of the China Flight Test Establishment is set up at Xian in 1991 to provide aerial photography and remote sensing. The division is officially reformed into a separate concern on April 18, 1993.

During the remainder of the decade, Zhongfei expands its original mission to include executive charters and a host of activities in support of China's energy and technology industries. It also provides management services for company's owning their own bizjets.

President Cheng Dunbin oversees a workforce of 90 at the beginning of 2000 and his fleet includes 1 HAMC Y-12-II and 3 Cessna 550 Citation IIs.

ZHONGHUA HANGKONG GONGSI (CHINA AIRWAYS CORPORATION). See **CHINA AIRWAYS CORPORATION**

ZHONGYUAN AIRLINES COMPANY, LTD.: 143 Minggong Road, Zhengzhou, Henan Province, 450000, China; Phone 86 (371) 622-2542; Fax 86 (371) 622-2542; <http://www.zy-air.com>; Code Z2; Year Founded 1986. ZYA is established at Zhengzhou, in Henan Province, on May 17, 1986 to provide regional services under the leadership of President Xie Yongliang. A workforce of 180 is recruited and a fleet is assembled, comprising 2 Xian (license-built Antonov An-26s)

Y-7-100s and 6 Ilyushin Il-14s. Revenue flights begin on May 17 to Beijing, Changsha, Guangzhou, Hefei, Huangyan, Nanjing, Shanghai, and Xiamen.

Operations continue apace in **1987–1993**, during which years, orders are placed for three Boeing 737-37Ks and the number of Il-14s is reduced.

The first two Boeings are delivered to General Manager Rong Liang's fleet in the fall of **1994** and enter service in December, helping enplanements to reach 244,920 in **1995**.

Airline employment stands at 300 in **1996** and additional destinations served a decade after start-up include Fuzhou, Chengdu, Haikou, Harbin, Kunming, Qingdao, Shengyan, Shenzhen, Wenzhou, and Wuhan.

Passenger boardings increase 52.9% to 520,000, while cargo traffic skyrockets 83.8% to 4.42 million FTKs.

In compliance with the Chinese government's desire to increase the efficiency of competition by reducing the number of regional airlines, Zhongyuan joins five other carriers to form the New Star Alliance in September **1997**.

Enplanements during the 12 months total 509,098.

When activated on January 1, **1998**, the informal compact begins to boost the quality of its members' services via integrated passenger and marketing services and code-sharing on selected routes. Late in the year, Zhongyuan opens a Chinese-language homepage on the Internet's World Wide Web.

Passenger boardings decline by 11.4% to 457,000, while freight traffic is off by 3.4% to 5.26 million FTKs.

At the beginning of **1999**, airline employment stands at 300.

Overall customer bookings for the year reach 404,000, while 557,000 FTKs are operated.

The workforce at the beginning of **2000** continues to total 300. Five "classic" B-737-37Ks are still operated.

In response to a fatal June 22 **Xian Airlines** Y-7-100C crash, **CAAC (The General Administration of Civil Aviation of China)** delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around **China Southern Airlines Company, Ltd.**, **China Eastern Airlines Company, Ltd.**, and **Air China International Corporation**.

CSA is the first to take operational and managerial control of another airline under the CAAC mandate. Although it will be allowed to retain its name, Zhongyuan, valued at \$176.54 million and based at Zhengzhou in Henan Province, almost immediately becomes part of the Southern Airlines Group on August 1.

Over the next three months, a number of changes are made. CSA immediately seeks to optimize a joint route network and deletes three duplicate routes from the Zhongyuan schedule. This is accomplished by combining two flights into one and transferring the added capacity into four other routes. Within a month, the revitalized company has operated 1,071 flights, with 2,237 hours flown. These include 48 additional domestic flights, 8 charter flights between Zhongyuan and Hong Kong, and 9 international tourist charters.

Other improvements include the addition of first-class cabins aboard two Zhongyuan B-737s for use on the routes to Beijing and Shanghai. The unprofitable cargo stations at Zhengzhou, Mengzhou, and Qinyang are closed, while a new office is opened at Luoyang. A new Air Mail Transit Service is also added.

A Boeing 737-37K is leased to **Sichuan Airlines Company, Ltd.** on September 2.

Reacting to rising fuel costs, **CAAC (The General Administration of Civil Aviation of China)**, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Zhongyuan, increase fares on November 5.

ZIA AIRWAYS: United States (1972–1980). The **Associated Air Ambulance Service** is established at Las Cruces, New Mexico, on August 16, **1972** to provide ambulance and charter services in the local region. Two years later, in **1974**, the decision is taken to offer scheduled passenger and cargo flights and the company is reorganized and renamed Zia Airways. Employing Cessna 402Bs, frequencies are initiated linking the company's base with Albuquerque, Santa Fe, Taos, El Paso, and Silver City.

Routes are stretched to Denver, Farmington, and Alamogordo in **1975–1976** and by **1977** enplanements total 5,153. In **1978**, the year that the Airline Deregulation Act becomes federal law, the fleet includes 3 British Aerospace BAe Jetstream 31s and 4 Cessna 402Bs.

Zia enjoys a 68.3% jump in passenger boardings to 16,255 while cargo accelerates by 38.1% to 263,396 pounds.

Customer bookings skyrocket 112.8% in **1979** to 35,000, while freight grows by 27.1% to 335,000 pounds.

The final revenue flight is made on May 21, **1980**, after which the company, purchased by new owners, is renamed **Air New Mexico**.

ZIMBABWE EXPRESS AIRLINES, LTD.: P.O. Box 513-, Harare, Zimbabwe; Phone 263 (4) 729681; Fax 263 (4) 737117; <http://www.zimsurf.co.zw/zex>; Code Z7; Year Founded 1994. Privately held ZEA is established by Tirez Aviation Services at Harare in December **1994** with founder Evans Ndebele as managing director. A Boeing 727-23 and a British Aerospace (HS) 748 are acquired and employed to launch services during the spring of **1995** to Kariba and Victoria Falls.

A total of 77,000 passengers are transported in **1996**. Business is sufficiently positive at the beginning of **1997** to warrant the lease of a B-727-23F and a British Aerospace (BAe) 146-200.

Arrival of the new trijet, under charter from Million Air Charter in South Africa allows the company to service a new Bulawayo-to-Harare route, which is inaugurated with a special flight on January 14. It is promised that a free flight will be made between the two cities whenever the plane is delayed an hour or more. Twice-daily return service begins the next day.

The Hawker arrives at the end of the month under charter from South Africa's Executive Aerospace (Pty.), Ltd.
