Plans for **British Airways, Ltd. (2)** and **American Airlines** to formally sign equity-agreement papers during the month are held up as the two foreign airlines, Iberia, and the holding company SEPI begin to wrangle over management issues. Due to declining passenger numbers, Iberia operates its final scheduled service from Tokyo (NRT) on November 30 following a decision to shut down operations in Japan.

On December 18, the company agrees to take for its own purposes three of the four DC-10-30s previously operated by **VIAS (Venezolana Internacional de Aviacion, S.A.)** and which have been repossessed.

By the end of the year, the 185 aircraft assigned to AVIACO, flying primarily to domestic destinations in Spain, account for 23% of Iberia's daily departures. Angel Mullor is now managing director.

Passenger boardings climb 5.5% to 21.75 million, while freight traffic is up 5.8%, with 766.51 million FTKs operated. Revenues for the year increase by 20.5% to \$4.46 billion and expenses, at \$3.74 billion, are low enough to allow an operating profit of \$304 million and a \$328.3 million net gain.

It is announced on January 17, 1999 that the three DC-10-30s repossessed from the assets of **VIASA (Venezolana Internacional de Aviacion, S.A.)** will be employed as the flight equipment for a new charter subsidiary. When it becomes operational, Arcadia will operate long-haul flights to points in North America.

When Iberia refuses to hire 43 pilots specified in the April labor accord, AVIACO's 323 flyers commence a series of strikes beginning on January 26. Another job action occurs in early February, followed by a third on February 10. The latter forces the cancellation of 70 flights, primarily in the northern Spanish regions of Galicia and Asturias as well as the southern region of Alicante. A spokesman for SEPLA simultaneously indicates that, unless the pilots are employed, there will be three more work stoppages before the end of March.

On February 12, **American Airlines, British Airways, Ltd. (2)**, Iberia, and SEPI (the state holding company that presently owns Iberia) sign an important agreement in Madrid, one that has been delayed since November by wrangling over management issues. Under its terms, the Spanish flag carrier strengthens its relationship with the Anglo-Americans by selling to them, via SEPI, a combined 10% equity stake. For £226 million, BA takes the majority 9% share, with AA acquiring 1%; each of the foreign airlines receives a seat on Iberia's board of directors.

SEPI will sell an additional 30% of the airline to institutional investors in a June flotation on the Madrid stock exchange. The privatization of the Spanish airline will be valued at £2.5 billion.

Most of the CEOs of the "OneWorld" alliance meet in Sydney, Australia, on February 15 where Iberia is formally welcomed into the group.

Managing Director Mullor announces on February 24 that Iberia will divide up its business into six to eight different units before the end of the year in order to improve performance in each new department.

A contract is signed on March 1 with the Mexican courier and delivery service Multipack; the arrangement will enable the airline to provide one-day delivery services between Mexico City and Madrid.

While celebrating the forty-fifth anniversary of service between Spain and the U.S., Iberia, on March 28, inaugurates daily nonstop A340-313 roundtrips between Barcelona and New York (JFK). Iberia is the only carrier operating nonstops between the two cities; however, the services are offered as dual-designator flights with **American Airlines**.

Under terms of an agreement signed on March 8, the company begins to code-share with **Deutsche BA Luftfahrtgesellschaft, GmbH**, over a route from Madrid to Munich on June 17.

It is announced on March 12 that the 400 employees of the about-to-be-closed VIVA Air have voted to accept an agreement for the unit's winding down phase. Under the plan jointly developed by unions and management, employees are given several options, including joining Iberia's workforce, taking voluntary redundancy and a lump-sum

payment, or accepting early retirement if above age 58. Iberia intends to keep just 58 VIVA workers on the payroll.

On March 16, SEPLA calls for a strike during Easter Week; the job action during one of Spain's busiest travel periods, would, hopefully, pressure management into providing a new contract and honor arrangements regarding pilot hiring. SEPLA does, however, indicate that it is willing to negotiate to avert a crisis.

Flight 4494, an MD-80 with 101 passengers, suffers blocked landing gear while on approach to Geneva on March 18. Spectacular TV coverage records the emergency landing made on the international airport's single landing strip and no injuries are reported. The runway must, however, be closed for two hours during the incident, forcing other incoming flights to divert and upsetting thousands of tourists.

The company moves a step closer to completing privatization on March 26 when it closes bids by institutional investors for 30% of the company. Although 16 institutions had initially expressed interest in buying stakes of 3-10%, fewer offers are received. A public offer for most of the remainder of the outstanding stock is expected as soon as June.

Also on March 26, over 50 flights are cancelled as members of SEPLA begin a planned 8-day strike. Fortunately, an agreement is already in place between management and labor under which 95% of Iberia's roughly 800 daily flights are not to be affected. Although both sides in the dispute meet, there is a delay in the signing of a new labor pact as the airline seeks to renegotiate some of its terms, including bonuses for pilots who fly at night. Iberia's officials anticipate a \$100-million loss from the job action.

Despite repeated talks between SEPLA and Iberia, the strike continues into the second quarter. Over 400 flights are cancelled through April 5, impacting at least 100,000 travelers over the Easter holidays. The situation at Spanish airports has, meanwhile, been further exacerbated due to the many cancellations and delays imposed by Operation Allied Force, the NATO bombings in Yugoslavia that began on March 24 and will continue into June.

On April 7, Managing Director Mullor informs Carlos Ruano of Reuters, Ltd. that 100,000 reservations have been cancelled so far in April (a 12% decline), with another 170,000 passengers lost during the first week of the month. Over 800 flights have been cancelled. He notes that Iberia, concerned over the potentially serious repercussions of the strikes on the upcoming privatization, will sue SEPLA for PTA 4 million. At the same time, the airline will be with the union on April 8 in a further effort to resolve the job action.

Citing congestion in European air traffic, Iberia, on April 20, announces that it will cut by 15% the number of its scheduled regional services offered between June and December. Approximately 77 existing flights are to be cancelled each day. The continuing lack of an agreement between Iberia and its pilots also helps prompt the airline into the service reduction.

The same day, the government holding company SEPI talks with both sides in the contract negotiations and encourages them to work more creatively to fashion a collective agreement. At the same time, the market launching of the remainder of the stock planned for June is put off until October.

Reacting to the Iberian traffic cut, both **Spanair, S.A.** and **Air Europa, S.A.** announce on April 26 that they will continue with their scheduled flights and expansion plans despite the air space congestion. Spanair will, however, reduce certain frequencies during the summer.

By this time, the company's schedules appear chaotic. Flights are routinely cancelled and delays can run anywhere from half an hour to half a day. Newspapers across the country run tales of delay and colorful accounts of passenger annoyance and displeasure.

In one instance, police must be called after passengers aboard an aircraft, kept idle on the tarmac for over three hours without explanation, begin using their cell phones to call family, the media, government offices, and the national guard. The police are able to arrange for the captain's takeoff.

In another incident, passengers refuse to disembark from an aircraft that is so far behind schedule that it is grounded by curfew. Together with a pair of sympathetic flight attendants, they elect to spend the night on board rather than lose the plane's place in line for takeoff when the airport is reopened.

On one April day, 90% of all flights from Madrid are delayed, 85% are held up on another, and a daily average of 70% held up at the national capital becomes the standard for the month. At Barcelona, 1,300 flights are delayed during the 30-day period. The delay situation becomes a scandal across the country with everyone involved blaming someone else: Iberia charges the pilots, who blame the overcrowded airports, which scold ATC, which blames the Kosovo crisis and increased military traffic over Europe.

Chairman de Irala informs reporters during a May 7 news conference that his company has no objection to the possibility that **LanChile Airlines, S.A.** may purchase a stake in **Aerolineas Argentinas, S.A.** or that **American Airlines** may seek to increase its shareholding. Indeed, conversations are underway to determine if collaboration with the Chilean line in this regard might be arranged.

Contract talks between SEPLA and Iberia break down on May 13, with both sides accusing the other of cutting off negotiations. In its press release, SEPLA reserves the right to call a strike coinciding with Spain's summer vacation season. Iberia, in turn, makes what it calls a "final and definitive" offer in the form of an ultimatum: accept the company's offer or accept the consequences.

There is by now little public sympathy for the flyers who are, after all, the second highest paid in Europe behind the Swiss. With average after-tax salaries of between £47,000 and £120,000, 1 in every 10 pilots with the flag carrier is the son of another. Indeed, one captain has two brothers and four cousins also flying for Iberia.

Three days later, SEPLA, reacting to adverse publicity, seeks to "re-assure" the carrier's passengers by temporarily lifting their strike threat. It hopes to involve Industry Minister Josep Pique in the on-going negotiations and call upon him to mediate. Pique tells reporters that he has no intention of mediating talks between the two parties. Privately, he informs SEPLA's leaders that he would personally guarantee Iberia's offer, but that the time for negotiation is now over. Iberia says nothing.

The Canary Island subsidiary **Binter Canarias, S.A.** is sold on May 17 to a group of local banks and businesses for \$35 million.

There is no additional public movement on the labor front until May 27, when SEPLA leaders again pledge not to strike during the summer in order to reassure passengers that travel would not be disrupted further during the country's busiest vacation period. Iberia also does not respond to this truce offer.

After months of discord, SEPLA and company management are finally able to come to terms and sign an accord at the beginning of June.

The company introduces its first A319-100 into revenue service on June 9 on its twice-daily route between Madrid and Amsterdam. Operation Allied Force ends on June 11.

On July 1, the carrier signs a code-sharing pact with **Croatia Airlines**, covering flights between Barcelona and Zagreb.

Smoking is banned on all flights beginning on September 1.

In September, Iberia wins EU Commission approval for the final \$125.7-million tranche of its \$672-million government bailout. The award opens the door to a possible initial public offering after the government concludes the airline's privatization.

SEPI Chairman Pedro Ferreras announces in October that Spain will proceed with the last stage of Iberia's privatization with an initial public offering of its remaining 53% stake on or around November 22. A formal document will be signed with **British Airways, Ltd. (2)** and **American Airlines** in the period immediately thereafter. With stockholders questioning as inflated SEPI's 580 billion pesetas (\$3.6 billion) valuation of Iberia, Spanish Industry Minister Joseph Pique suggests in November that the carrier's privatization may be put off until early 2000.

A new A340-313X and the year's last A320-214 are delivered on December 1. **British Airways, Ltd. (2)** signs, subject to shareholder

approval, an agreement on December 15 with SEPI, the government holding company that oversees Iberia. Under its terms, BA will invest approximately 41 billion pesetas (£155 million/\$250 million) for a 9% stake in the Spanish flag carrier. Two BA executives are also to take seats on the Iberia board. The U.S. carrier **American Airlines** acquires a 1% equity, bringing the total stake by the "OneWorld" alliance partners to 10%.

Execution of the privatization package will require debate and procedural agreement between investors and Iberia's other new partners, as 30% is simultaneously set to be acquired by five Spanish firms: Caja Madrid, Spain's second largest savings bank (10%); Banco Bilbao Vizcaya (7.3%); the Logista distribution unit of the tobacco group Tabacalera (6.7%); the retailer El Corte Ingles (3%); and the broker Ahorro Corporacion Financiera, (3%). Although Caja Madrid has a larger stake, the arrangement calls for BA to have principal say in the operation of the Spanish flag carrier. With more votes than any of the other partners, BA will still require the support of at least two of them to wield its majority within the core shareholder group. The entire investment is conditioned by BA and AA on two conditions: SEPI will need to complete the remainder of Iberia's initial public offering by the end of 2000 and the partnership agreement must receive approval from the EU Commission. If either of these conditions is not met, BA and AA may withdraw their stake.

Also in December, Iberia, together with **Air Europa, S.A.** and **Spanair, S.A.**, are fined a total of \$865,000 by the Tribunal de Defensa de la Competencia. Spain's fair-competition agency has found the three guilty of collusion in the termination of a 1997 price war.

The last of eight B-757-256s received during the year is delivered on December 22. It is the 900th B-757 manufactured by Boeing.

Neither **British Airways, Ltd. (2)** or the Spanish banks protest too loudly when, as the month ends, Industry Minister Pique is forced to put off completion of Iberia's initial public offering until the new year. As the result of a lower valuation for Iberia's stake in the Amadeus computerized reservations system and for its real estate holdings, SEPI reduces its valuation of Iberia to 460 billion pesetas (\$2.55 billion) and ends a long, drawn out debate that has been holding up the airline's final disposal.

Passenger boardings slide 3% to 24,274,000, as cargo rises 1.2% to 823 million FTKs. Operating revenues slip 2.8% to \$3,877,980,000, while costs increase by 4% to \$3,820,230,000. Profits are down to \$57.75 million (operating) and \$153.57 million (net). Company assets total 687 billion pesetas, including 114 owned aircraft.

Airline employment at the beginning of 2000 stands at 29,079, a 5% increase over the previous 12 months. Among the world's top 25 airlines, Iberia is 14th in passengers, 13th in employees, 14th in fleet size, 21st in operating revenue, and 21st in net gain.

The first of four A319-111s to be received under charter from ILFC during the year is delivered on January 13. Another new A340-313X, the carrier's sixth, arrives on February 9.

Following considerable debate among investors, **British Airways, Ltd. (2)** announces on February 12 that it has finally concluded execution of an agreement with SEPI. Under its terms, BA pays approximately 41 billion pesetas (£155 million/\$250 million) for a 9% stake in the Spanish flag carrier. The investment can be removed if a public flotation of Iberia stock does not occur by December 31 or the deal does not gain EU approval. **American Airlines** picks up a 1% stake under the same terms. The arrangement values Iberia at E2.73 billion (\$2.74 billion), which is 20% below the original figure quoted by SEPI, but higher than the December figure.

Two more A340-313Xs arrive on April 11 and 13, respectively. The first of 11 A320-214s to be received this year is delivered on April 25. The DC-10-30 fleet begins retirement during the month, with two aircraft retired and put up for sale.

A specially painted B-757-256 is unveiled in ceremonies at Madrid on April 24. The narrow-body, the first of eight to be delivered this year, wears titles celebrating the 25th anniversary of the Madrid-

Barcelona air bridge, the busiest route in Spain. On April 26 a B-747-312 is chartered for a month from **Air Atlanta Icelandic, H.F.** It is employed on the return route from Madrid to Havana.

The carrier reports on June 12 that it will retire 16 DC-9-32s, 4 DC-9-34Fs, 4 DC-9-34s, and 7 DC-10-30s during 2001. At the end of the month, Chairman Xabier de Irala informs the aviation press that the long-delayed initial public offering will not occur until at least the end of August and maybe not until October.

Plans are announced on July 18 for the accelerated retirement of the DC-10-30 fleet, with the last unit departing the fleet at the end of the year. The company board also approves a broad, four-year strategic plan designed to increase accumulated net profit to 153 billion pesetas (\$871 million) by 2003.

While en route from Madrid to Germany on September 26, Flight 5008, a B-757-256, loses cabin pressure and is forced to dive 15,000 feet. A safe emergency landing is made at Dusseldorf. The aircraft had been transporting the Spanish football team Real Madrid to Germany for a European Champions League game against the team Bayer Leverkusen.

Late in September, Iberia makes a bid to take over **Air Europa, S.A.** Arrangements for the merger are completed, subject to government approval, on October 6. The Spanish newspaper *El Pais* reports on October 26 that Sociedad Estatal de Participaciones Industriales, Iberia's majority owner, has yet to approve the amalgamation and even assuming it does, the final outcome will depend on the Spanish and EU antitrust authorities.

A third DC-10-30 completes its final revenue flight on October 9 and is withdrawn. Suspended service from Barcelona to Milan is resumed on October 29. Officials from **Air Europa, S.A.** and Iberia publicly confirm the merger talks on November 4, noting that they have set a 45-day limit on negotiations.

The press reports on November 16 that Iberia has offered to purchase 27 **Air Europa, S.A.** aircraft and hire upwards of half of its staff. **Air Europa, S.A.** owner Juan Jose Hidalgo, in turn, seeks a 10% stake in Iberia before he will turn over his airline. Negotiations between the two majors leads the Spanish government to postpone its own initial public offering plans for Iberia; privatization of the state's remaining 53.7% is tentatively rescheduled for April 2001.

A company official admits on November 20 that the carrier is interested in purchasing the **British Airways, Ltd. (2)** subsidiary GO. Although 2000 losses of £25.3 million are forecast on sales of £101.7 million, the unit is still valued at between £100 million and £300 million.

The same day, arrangements are made with **Air Atlanta Icelandic, H.F.** for a four-year charter of three B-747-341s previously operated by **VARIG (Viacao Aerea Rio Grandense, S.A.)**. It also sells two of its own B-747-256Bs to the Icelandic concern and then leases them back for 18 months.

The final A319-111 of a four-ship order is received on November 15. The last two of three DC-10-30s are retired on November 27 after one completes a final flight to Madrid from Caracas. The final unit completes a roundtrip revenue flight from the Spanish capital to Mexico City, after which the type is fully retired.

The last of 11 A320-214s to be received this year is delivered on November 29. Since May 1999, Iberia has acquired 21 of this Airbus type. The last of the year's eight B-757-256s is delivered on December 6. Since July 1988, the company has accepted 23 of these Boeing narrow-bodies.

The formal period for negotiations between Iberia and **Air Europa, S.A.** ends on December 15. On December 16, Iberia becomes the latest European or Mideast carrier to defy the UN embargo and operate a humanitarian service to Baghdad. The A300B4 transports 150 people and 8 tons of medical and educational equipment.

Wearing full Iberia colors, the first B-747-341 is delivered by **Air Atlanta Icelandic, H.F.** also on December 16. Christened *Jose de Zorrilla* in honor of a classic Spanish writer, the Jumbojet enters service the next day on the route from Madrid to Buenos Aires.

Sunday Business reports on December 17 that Iberia and **KLM (Royal Dutch Airlines, N.V.)** are, together with the venture capital firm Electra Partners, on the shortlist of purchase bidders drawn up by the U.S. brokerage firm Goldman Sachs for the **British Airways, Ltd. (2)** subsidiary GO.

The media also reveals on December 17 that Iberia and **Air Europa, S.A.** have agreed to a merger under which the latter would be purchased by the former for \$212 million. Negotiations on the actual turnover continue.

Noting the formal end of the agreed-upon time for negotiations, on December 19, leaders from Iberia and **Air Europa, S.A.** extend their self-imposed deadline until January 25. Analysts suggest that no merger between the two will be approved by the EU Commission unless the pair agrees to surrender a number of valuable slots held by them at Spanish airports.

Still, the news is encouraging enough for the Spanish government to postpone plans for the initial public offering of its remaining 53.7% stake in Iberia until (or if) a deal with Air Europa can be concluded.

On December 23, a code-sharing agreement is inked with **LanChile Airlines, S.A.** Under its terms, the two will place their codes on each other's flights across the Atlantic and through Europe and South America beginning on January 1.

At the end of the year, Iberia withdraws its plans to bid on GO, the **British Airways, Ltd. (2)** subsidiary, noting that the British carrier operates from an airport where the Spanish line has no facilities. At the same time, the Sepia pilots union rejects a proposal to create a parallel promotion structure for **Air Europa, S.A.** pilots and threatens to obstruct any takeover if the newcomers, no matter how senior, do not start at the bottom of Iberia's promotion ladder.

Revenues for the year rise 16% to 747 billion pesetas, while pretax profit grows 18.5% to 37 billion pesetas.

The flyers' problem will be solved on January 19 when merger discussions between Iberia and Air Europa collapse following an irresolvable disagreement over price.

IBERWORLD AIRLINES, S.A.: Via Portugal 5-4, Palma de Mallorca, Baleares, E-07012, Spain; Phone 34 (971) 229144; Fax 34 (971) 713184; Code TY; Year Founded 1998. Established by Grupo Viajes Iberia in early 1998, this domestic and international charter operator is affiliated with the U.K. charter operator **Airworld Aviation, Ltd.** Managing Director Casimiro Bermudez recruits a workforce of 139 and leases a pair of Airbus Industrie A320-231s. With the first of these on hand, service is launched on April 12 to both local and long-haul holiday destinations in Europe and the Mediterranean.

Two A320-214s are requested in 1999 as an A310-324 is acquired under lease. Among the new tours flown is a weekly service, on behalf of First Choice Holidays, between Humberside, England, and Tenerife.

The workforce stands at 300 at the beginning of 2000. Acquired from Oman Aviation Services, an A320-231 arrives early in the year wearing the company's new color scheme featuring bold "Iberworld" titles.

With the launch of the summer schedule at the end of March, Iberworld takes over the weekly roundtrip service between Tenerife and Humberside previously flown by **Air Europa, S.A.**

On October 29, weekly A320-231 return charters are introduced between Tallin, Estonia, and Las Palmas in the Canary Islands. The flights, which will continue through the end of April, are made in cooperation with the Estonian travel agency Continental Travel.

IBIS AVIATION ARUBA, A.V.V.: P.O. Box 11586/1256, Doiniganesse Straat, #22, Oranjestad, Aruba; Phone 297 (8) 32665; Fax 297 (8) 23038; Code IB; Year Founded 1993. Ibis is established, for financial reasons, at Oranjestad in the summer of 1993 to offer international, regional, and domestic all-cargo services from a base in Africa. Dr. Gibril Mohd is named managing director and an operating subsidiary, Ibis Aviation-Sudan, is established to fly from the company's principal hub at Khartoum, Sudan.

Revenue flights commence in September and continue thereafter with a pair of Boeing 707-320Cs. Destinations visited in **1998–2000** include Central Africa, Doha, Jeddah, Johannesburg, Kano Maiduguri, Nairobi, and Sharjah. Flights to Europe and the Far East are undertaken on a non-scheduled basis.

IC JET: Mather Field, Sacramento, 1209 Orange Street, Wilmington, Delaware 19801, United States; Phone (906) 852-9838; Fax (906) 852-9822; <http://www.icjet.com>; Year Founded 1989. Originally founded in June 1989 as Chancellor Charters, this nonscheduled operator provides Beech lightplane flights to destinations in Northern California from the state capital at Sacramento. In 1992, the concern is purchased by Delaware-based Investment Capital Corporation, which names the carrier after itself, upgrades service with a Beech Super King Air 200, and enters into an executive aviation affiliation with **American Airlines**.

Flights continue apace for the next four years. In 1996, after an extensive study of customers and services, the carrier elects to acquire new equipment and to change its corporate image once again. A Beechjet 400A is selected and the name is shortened; flights are extended from California to worldwide destinations as the **American Airlines** relationship continues.

Service is maintained during the remainder of the decade.

ICAR AIRLINES INDEPENDENT. See **INDEPENDENT CARRIER (ICAR)**

ICARUS CARIBBEAN CORPORATION: Isla Grande Airport, Lot 3, South Isla Grande, San Juan, Puerto Rico 00936, United States; Phone (787) 729-0000; Fax (787) 729-0003; Year Founded 1995. ICC is the FBO at Isla Grande Airport. Established in 1995, it also operates executive and small group passenger charters with 2 Piper PA-31-310 Navajos.

ICC CANADA, LTD. See **INTERNATIONAL CARGO CHARTERS CANADA, LTD.**

ICEBIRD AIRLINES, H.F. See **ISLANDSFLUG, H.F.**

ICELANDAIR. See **FLUGFELAG ISLANDS, H.F. (2) /ICELANDAIR, H.F.**

ICELANDIC AIRLINES. See **LOFTLEIDIR H.F./ICELANDIC AIRLINES H.F.**

ICELANDIC MD AIRLINES, H.F.: Arlanda Airport, Stockholm, Sweden; <http://www.trafficeuropa.se>; Year Founded 2000. A new subsidiary of the **MK Airlines, Ltd.** subsidiary MK Flugfelagid, H. F. is formed at Reykjavik in February 2000. Icelandic MD Airlines, H.F., headquartered at Keflavik but based at Stockholm, specializes in commissioned flights for travel companies and replacement service for regular airlines requiring increased capacity.

An exclusive contract is signed with Traffic Europa Svenska, A.B. and a single McDonnell-Douglas MD-81, previously flown by **SAS (Scandinavian Airlines System)**, is acquired on April 6. From Stockholm's Arlanda Airport, the operator launches inclusive-tour flights on April 13, with Bologna the first destination. Thereafter, weekly roundtrips are also flown to Rome, Nice, Malaga, Alicante, and Thessaloniki. All flights from Arlanda are staffed by Swedish cabin crews. During the summer, charters are also laid on to Edinburgh.

IGARKA AIRLINE (IGARSKA AIR ENTERPRISE): Igara Airport, Krasnoyarsk, Krasnoyarsk Region, Russia; Year Founded 1996. IA is set up as a domestic all-cargo charter operator at Igara Airport in 1996. Wacheslav Kopytov is general director and he begins revenue flights with a fixed-wing fleet of 5 Antonov An-26s and 4 An-2s, plus 8 Mil Mi-8 helicopters.

IKAR: Russia (1994–1995). The joint-stock company Ikar is established at Voronezh in 1994 to provide domestic services. A. S. Mezhor is appointed general director and revenue flights commence with a single Yakovlev Yak-40. Flights cease in 1995.

IKAR (ARSENEVSKAYA A/K): Russia (1994–1995). Ikar (Arsenevskaya) is established at Arsenov in 1994 to offer domestic services. V. I. Manoylenko is named general director and he launches revenue passenger and cargo frequencies with a fleet comprising 3 Antonov An-12s, 1 Tupolev Tu-134, and 1 Mil Mi-8 helicopter. Flights cease in 1995.

IKAROS FLY (IKAROS FLY A.p.S.): Roskilde Airport, Hangarvej A12, Roskilde, DK-4000, Denmark; Phone 45 46 19 10 10; Fax 45 46 19 05 15; <http://www.daa.dk/ikaros>; Code KR; Year Founded 1981. IF is established at Roskilde Airport at Roskilde on March 1, 1981 to provide international, regional, and domestic charter passenger and cargo services. It also serves as a major Danish flight school, preparing pilots for many of the nation's nonscheduled operators. J. Poulsen is chairman, with C. Thomsen as president. Revenue operations commence later in the month and by 1994 the company employs 13 workers and flies 1 each Beech 95, Piper PA-31-350 Navajo Chieftain, and Dornier 228-212.

Flights continue in 1995–2000, during which time the company also begins to fly a Piper PA-31-350P Chieftain Panther Conversion 11. Destinations visited include Baku, Gyandzha, Istanbul, Minsk, Moscow, Rimini, Sharjah, Tashkent, and Urumqi.

On May 7 of the latter year, the company, in association with its owner, the Kharkov Trade Company and the Kharkov Aviation Plant (KhGAPP), becomes launch customer for the Antonov An-140. The first of five are to be delivered within a few weeks.

With production delayed, only the one aircraft has been received by the end of the year. At this point, plans are announced for the March 8, 2001, inauguration of scheduled return service from Kiev to Kharkov, Simferopol, and Lvov.

ILAVIA: Russia (1995–1999). With Emil G. Akopian as president, Ilavia is established at Moscow in 1995 to provide domestic air cargo services. Flights commence with a fleet that includes 5 Ilyushin Il-76s and 3 Il-18Fs. A total of 12,100 tons of freight are hauled during the year.

In 1996, charter flights are inaugurated to the UAE. As a result, 21,300 FTKs are operated.

Like several airlines that have appeared after the collapse of the Soviet Union, Ilavia specializes in facilitating lift for the *chelnoki*, also known as shuttle or suitcase traders. Thousands of these small-time merchants, usually young men but sometimes even middle-aged housewives, travel to foreign lands, often in the Mideast, but also China, Greece, and Africa, to find low-priced goods to sell for large profits at home.

In mid-August 1998, the Russian ruble is devalued. Almost immediately, many of the *chelnoki* must quit their trading as they can no longer afford to pay for hard currency to make their acquisitions. Additionally, the devaluation impacts the Russian air cargo carriers engaged in this trade, forcing them to cut back on scheduled flights and particularly on charters.

The carriers operating certificate is pulled by Russian authorities in 1999 after it is caught flying an IL-76D with time-expired engines purchased from a scrap dealer.

ILFORD RIVERTON AIRWAYS, LTD.: Canada (1953–1987). Founded at Winnipeg Airport in 1953, Ilford Riverton inaugurates passenger and cargo charter flights to various destinations in Manitoba and the Arctic. Operations continue apace over the next 17 years. A Curtiss C-46 Commando is leased in 1970–1971 to operate all-cargo charters.

The carrier suffers only two fatal accidents during its entire existence. On June 24, 1972, a Beech 18 crashes and burns at Winnipeg, killing all nine persons aboard.

A chartered Douglas DC-3, with two crew and one passenger, strikes a riverbank while landing at Fort Severn on January 3, 1975, collides with a building and catches fire; there are no survivors.

By 1978, President P. M. Lazarenko oversees a workforce of 40 and a fleet of 5 Douglas DC-3s, 1 Consolidated PB5Y-5A Canso, 1 Piper Aztec, 1 Piper Apache, 1 de Havilland Canada DHC-3 Otter, and 1 Cessna 180. The flying boat, named *The Fisherman's Friend*, is employed to take anglers to the lakes of northern Manitoba.

During the early 1980s, regularly scheduled services are introduced linking the company's Winnipeg base with Island Lake, Gods Narrows, and Oxford House. The fleet is upgraded and in 1984 comprises 6 DC-3s, 1 Curtiss C-46, 2 Cessna 185s, 1 Cessna 206, and 1 Cessna 337. Late in the year and over the next two, three additional Commandos are purchased.

In early 1987, Ilford Riverton attempts to change its name to Air Manitoba, Ltd.; however, the provincial government will not permit this new corporate identity. The government does not object when company officials adopt the name **Northland Air Manitoba, Ltd.**

ILIAMNA AIR TAXI: P.O. Box 109, Iliamna, Alaska 99606, United States; Phone (907) 571-1248; Fax (907) 571-1244; Code LS; Year Founded 1980. Iliamna is formed by Timothy J. LaPorte at the Alaskan community of Iliamna in 1980 to offer charter and contract service flights to surrounding small communities and bush areas. Four-and-a-half years later, in July 1985, regularly scheduled commuter services are inaugurated linking the company with Nondalton, Port Alsworth, Kakhonak, and other previously charter points. Operations continue apace for the remainder of the decade and into the next.

In 1991, President LaPorte operates a fleet of 2 Cessna 207As, 1 Cessna 206, and 2 de Havilland DHC-2 Beavers. A total of 418 passengers and 712,784 pounds of mail are flown on the year.

Services are maintained in 1992–1993 and the fleet grows to include 3 Beavers, 2 Cessna 207s, 1 Pilatus-Britten-Norman PBN-2 Islander, 1 Piper PA-34 Seneca, 1 Cessna 206, and 1 Beech Bonanza. Enplanements in 1994 total 7,608.

Operations continue apace in 1995–1999. During the latter year, the carrier flies 4 Beavers, the 2 Cessna 207As, the Cessna 206, plus 1 Cessna 208 Caravan I, 1 Beech Baron, and 1 Pilatus-Britten-Norman PBN-2 Islander.

The new millennium begins poorly for the 20-year-old concern. While on a February 5, 2000 air taxi flight from Iliamna to Koliganek, the Cessna 206 with a pilot and five passengers, disappears. Although a search is conducted by the Alaska Air National Guard, the plane's emergency locator transmitter is not working. When the wreckage is found the next day, approximately 31 mi. W of the point of origin, there are no survivors.

ILIM AIRLINES: Magadan, Russia; Year Founded 2000. Privately owned Ilim is established at Magadan in the spring of 2000 to reestablish services over routes to several local communities that have been closed over the past five years. Andrey Koryakin is named director general and he assembles a staff and a fleet of 4 Antonov An-2 biplanes and several Mil Mi-8 helicopters. After the snow melts in late spring, weekly return revenue flights are initiated to Amga, Borogontsy, Churapcha, and Ytyk-Kyuel.

ILLINI AIRLINES: United States (1956–1957). One of the nation's pioneer small regionals or commuter airlines, IA is established at Rockford, Illinois, during the summer of 1956 to provide scheduled passenger and cargo flights to Chicago's downtown airport, Meigs Field.

Employing a pair of de Havilland DH 104 Doves, revenue flights commence linking the company's base with its primary destination, as well as Freeport, Sterling, and Madison. Operations continue apace until late in 1957, when the company is purchased by and merged into Detroit-based **TAG Airlines**.

ILOILO-NEGROS AIR EXPRESS COMPANY (INAEC): Philip-pines (1932–1941). Eugenio Lopez, son of a rich sugar-producing family at Iloilo, on the Philippine island of Panay, establishes INAEC in April 1932. The remainder of the year is taken up in acquiring a fleet of Stinson aircraft and building a hangar and other facilities.

Determined to provide a successful air service where Jose Tinsay had failed during the previous decade, Lopez's new concern begins its operations on February 3, 1933, with a Stinson SM 6000 proving flight to Manila. The next day, a charter route is opened to Bacolod, north of Manila and on February 9 another is extended south to Cebu. With additional Stinson trimotors and several single-engine Stinsons now available, the north-south service between Luzon, Panay, and Negros is given regularly scheduled timetables.

This service is continued without incident until 1935 when frequencies are initiated to the southern Philippine island of Mindanao. Davao and Cagayan de Oro (home of the Del Monte pineapple farms) now become the carrier's fourth and fifth major markets. A total of approximately 24,000 passengers are carried during the year.

A Stinson SM-6000 is lost in a nonfatal accident on May 29, 1936. It is replaced with a Sikorsky S-43 amphibian, which, complete with a steward, enters service on February 22, 1937.

Services and frequencies are increased during the remainder of the decade and into 1940. Twice-weekly services cover the entire archipelago while three more roundtrips are completed in midweek between Manila and Iloilo.

Despite political tensions in the Pacific, 1941 begins on a good note when, on February 12, service is started to the resort community of Baguio. Operations become irregular after the Japanese begin attacks on the Philippines on December 8; the same day, the Lopez family is evacuated to Manila. Ten days later, Rising Sun aircraft wipe out the carrier's entire fleet during air raids on Iloilo.

The airline will rise again late in 1945 under the name **Far Eastern Air Transport, Inc. (FEATI)**.

IMAIR AIRLINES: 115 Hazi Aslanov Street, Baku, 370000, Azerbaijan; Phone 994 (12) 98 23 76; Fax 994 (12) 93 04 78; Code IK; Year Founded 1994. The limited liabilities company Imair is set up at Baku on October 6, 1994 to offer passenger and freight charters to international destinations. Fizouli Alekperov is named chairman/president and he recruits a workforce of 217 and acquires a fleet of 2 each Ilyushin Il-76Ts and Tupolev Tu-154Ms, plus 1 Tu-134A.

The carrier receives its air operators permit in July 1995 and immediately inaugurates flights that link its base with Gyandzha, Istanbul, Minsk, Moscow, Rimini, Sharjah, Tashkent, and Urumqi.

Flights continue in 1996–1999. By the latter year, Chairman Alekperov's fleet has been reduced to 1 each Il-76M, Tu-134A, and Tu-154M. Although Baku is added to the scheduled route network, Gyandzha, Istanbul, and Minsk have been dropped.

IMPALA AIR CARGO (PTY.), LTD.: P.O. Box 8067, Bonaero Park, 1622, South Africa; Phone 27 (11) 395-1527; Fax 27 (11) 395-2619; Year Founded 1993. Impala is established at Johannesburg in 1993 to offer all-cargo charters and international contract service flights. Revenue operations commence and continue with a single leased Boeing 707-351C first flown by **Northwest Airlines** years earlier.

By 2000, employment at President J. P. Bezuidenhout's concern has reached 120.

IMPERIAL AIR, S.A.: Peru (1993–1996). Imperial Air is established at Lima in the spring of 1993 to provide regional services. Revenue operations commence in May with a pair of Antonov An-32s purchased from **Aeroflot (Russian International Airlines)**. The route network of President Luis A. T. Salazar's concern includes 22 destinations by year's end. Three leased Tupolev Tu-134A-3s join the fleet in 1994, along with a pair of Boeing 727-23s.

The company reports traffic figures to ICAO for the first time in **1995**. These show that, for the period through June, a total of 94,888 passengers are transported, a 22.2% increase of the same time a year earlier. Operations cease in **1996**.

IMPERIAL AIRLINE COMPANY, LTD.: 2-12-5 Kyobashi, Chuo-ku, Tokyo, 104, Japan; Phone 82 (3) 3522-1701; Fax 82 (3) 3522-1705; Year Founded 1960. Imperial is established at Tokyo in **1960** to provide executive and small group charters and contract service flights, first with small fixed-wing aircraft and later with helicopters. By **2000**, the carrier employs 15 full-time pilots and operates 4 Aerospatiale AS-350B Ecureuils and 6 Bell 206B JetRangers.

IMPERIAL AIRLINES (1): United States (1960–1962). A major all-cargo operator, Miami Springs, Florida-based Regina Cargo Airlines is renamed in January **1960**. Having taken up charter passenger operations within the continental U.S., the company acquires a pair of passenger-configured Curtiss C-46 Commandos. Later in the year, the company trades in the former freighters for a pair of Lockheed Constellations.

A chartered L-1049E with 5 crew and 74 passengers crashes during final approach to the airport at Richmond, Virginia, on November 8, **1962** (76 dead). Following the crash, the U.S. government cancels the airline's operating certificate.

IMPERIAL AIRLINES (2): United States (1964–1987). Founded as **Visco Flying Company** on October 10, **1964**, this small carrier offers Beech 18 and Beech B-80 Queen Air charter and air taxi service in the San Diego, California, area from its base at Palomar Airport. On August 30, **1967**, the company name is changed to **Imperial Commuter Airlines**. A Beech 18S with four aboard crashes at San Diego on January 8, **1968** (three dead).

Operations continue apace during the remainder of the decade and into the early **1970s**. Embraer EMB-110 Bandeirantes are introduced in **1976**.

Services are provided throughout the San Diego region and, in **1977**, early morning San Diego–Los Angeles (LAX) flights on the half-hour are introduced.

Enplanements are 13,432.

Plans are made in **1978**, but not immediately realized, to replace the company's fleet of six Embraer EMB-110 Bandeirantes with larger aircraft. Despite President Carter's signing of the Airline Deregulation Act in October, the company's growth rate for passenger traffic stalls.

Passenger boardings actually decline by 1.5% to 13,234. Still, freight traffic is up nicely, by 32.1%, to 154,134 pounds.

At the beginning of **1979**, the company is in dire financial straits and is rumored to be near collapse. In July, the company is purchased by former **Golden West Airlines** President James M. Harmon, who, together with his son Mark, named senior vice president, changes the corporate identity to just Imperial Airlines and moves his acquisition to Carlsbad, California. Intrastate destinations include not only Los Angeles, but also Ontario, El Centro, San Diego, and San Luis Obispo as well.

Enplanements total 32,196.

In **1980**, the small regional, now flying 3 Bandeirantes and 5 Cessna 402s, introduces a shuttle service from Los Angeles to San Diego and from Los Angeles to Santa Barbara, with a total of 12 daily departures. In addition, 20 flights (evenly split) are flown daily from San Diego and Los Angeles to Ontario.

Imperial experiences a 72.7% traffic rise as boardings advance to 55,600. Revenues total \$1.91 million, expenses are \$3.41 million, and the loss is \$1.50 million.

In **1981**, following the demise of competing **Swift Aire** and the addition of service from Los Angeles (LAX) to San Luis Obispo and Orange County, boardings skyrocket by 241.6% to 189,910 and cargo traffic reacts likewise, rising a spectacular 172.1% to 174,000 pounds.

This good fortune allows the carrier to increase its workforce by 62.9% to 145 and add three EMB-110s to help handle the demand. Rev-

enues balloon an unbelievable 236% to \$6.41 million. Despite these remarkable figures, the year is not profitable. Operating expenses rise a steep 125% to \$7.66 million, advancing the deficit another 17% to \$1.24 million.

San Diego and Los Angeles shuttle schedules are accelerated from 12 roundtrips to 32 in February **1982** to fill a 40-day void created by strike-struck **Pacific Southwest Airlines (PSA)**. Simultaneously, a contract is signed with **United Airlines** to provide feeder service to the major at the Los Angeles hub. Even after PSA returns to full service, the San Diego–Los Angeles shuttle is continued at a high rate. This is largely due to aggressive marketing, a reduction of UAL jet flights, and a reduction by **Golden West Airlines** in its schedule over the route, a drop from 12 daily flights to 4.

Passenger traffic accelerates by 40.1% to 265,963 passengers carried, forcing the carrier into CAB classification of Large Regional.

The payroll jumps 70.1% in **1983** to 318 and the company begins to replace its Bandeirantes with three Shorts 360s and a Cessna 404 Titan. Options are held for three additional Shorts. Daily flights to Bakersfield begin.

Customer bookings increase 29.2% to 343,680 and cargo climbs 23.6% to 253,000 pounds. Revenues rise 32.8% to \$14.5 million.

The fleet in **1984** includes 6 EMB-110s and 3 Shorts 360s. Following four years of steady growth, Imperial encounters many of the problems of competition suffered by others in the tight California air market.

Enplanements drop by 11.7% to 303,470. Freight also falls, by 25.2%, to 190,000 pounds.

The company can only take one more year of such downturn and it occurs in **1985** as \$2.5 million are lost on revenues of \$11 million. Imperial stops flying on January 10, **1986** and files for bankruptcy protection in February, following its purchase by a group of investors who acquire 70% shareholding. Although efforts are made throughout the rest of the year to reorganize, refinance, and restart, they are unsuccessful.

In February **1987**, the company's operating certificate is voided. The company's assets will be acquired by United Imperial Airlines, which will fail when its own attempted takeover of **Pacific Coast Airlines** ruins them both.

IMPERIAL AIRWAYS, LTD.: United Kingdom (1924–1939). On March 31, **1924**, the British government's "chosen instrument" and first national airline is established in offices at Wolseley House, Piccadilly, London. A motion to name the new company The British Air Transport Service is rejected because of its initials (BATS) and the grander moniker Imperial Airways, Ltd. (IA), is chosen.

The initial components of the new state-owned company will include the serviceable 7 de Havilland DH 34s, 1 Vickers Vimy Commercial (the *City of London*), 2 Supermarine Sea Eagles, and 3 Handley Page HP W8bs) aircraft and assets of the former independents **Handley Page Transport, Ltd.**, **The Instone Air Line, Ltd.**, **The Daimler Airway, Ltd.**, and **British Marine Navigation Company, Ltd.** As noted under their individual entries, these are bought out and the total consideration is £148,750.

Plans are made to start service on April 1 with a staff of 260 from a base at Croydon Airport. Many of the personnel taken on from the previous operators have been in commercial aviation since its birth in 1919; they will, as a group, come to be known in later years as the "Old Contemptibles."

Capitalized at £1 million (\$5 million) with a government promise of an annual £1-million subsidy for a decade, the carrier's initial chairman is Sir Eric Campbell Geddes, previously the first minister of transport and general manager of the North Eastern Railway and current chairman of the Dunlop Rubber Company. Former **Handley Page Transport, Ltd.** officials Col. Frank Searle and George Woods-Humphrey are named managing director and general manager, respectively.

The board of directors is comprised of the chairmen of the former independents plus two government representatives, Sir George Hambling, deputy director of the Barclays Bank and Maj. J. W. Hills, late financial

secretary to the treasury; and two from industry, H. Scott-Paine and Lt. Col. J. Barrett-Lennard. Sir J. George Beharrel, managing director of Dunlop Rubber, a Geddes confidante, assistant, and chartered accountant, is employed as chief financial officer, as well as a director.

Sixteen pilots from the former independents, led by Frank Barnard formerly of **The Instone Air Line, Ltd.**, are offered, just before service is launched, £100-per-year retainer each plus 15-shillings-per-hour flight pay (\$3.75). Among this number are the veterans H. S. Robertson, O. P. Jones, R. H. McIntosh, Gordon P. Olley, Ray Hinchliffe, C. F. Wooley Dod, Herbert Horsey, F. Minchin, A. L. "Scruffy" Robinson, W. Rogers, and future Air Commodore Griffith J. Powell. They are informed that they can be laid off with but one day's notice.

Displeased by this tender as well as by the prospect of their being under the command of Woods-Humphrey, who is seen to be both antisafety and unqualified, the pilots form a union at Croydon at month's end. Unhappily, ground staff are prohibited from following their example. Almost immediately, the Imperial board asks the RAF to release pilots to the carrier to be employed as strikebreakers, should the need arise.

Chairman Geddes, Managing Director Searle, and union leaders meet separately to resolve the crisis with Lord Thomson of Cardington, the Secretary of State for Air (SSA) in the new Labour government. The atmosphere becomes more bitter when Woods-Humphrey files a libel suit against the pilot's new union. Air Ministry officials and the widely respected Sir Samuel Instone now intervene; the latter suggests that an Air Superintendent (AS) acceptable to the flyers be appointed to represent the pilots to the Imperial board.

This proposal, plus a new salary scale (£880 maximum), a £1000 life insurance policy per aviator, and annual contracts, are agreed upon by both parties. Maj. Herbert G. Brackley, formerly of **Handley Page Transport, Ltd.** and now back from a government-assistance tour in Japan, is appointed the first AS and the initial pilot's union is dissolved. The widow of Maj. Brackley will, years later, tell her husband's story in *Brackles: Memoirs of a Pioneer of Civil Aviation* (Chatham, Eng.: W & J Mackay, 1952).

Brackley quickly appoints another pilot, William Armstrong, formerly of **Aircraft Transport and Travel, Ltd. (AT & T)**, who will carefully fly for the carrier and its successor organization **British Overseas Airways Corporation (BOAC)** until his 1945 retirement; his memoir, *Pioneer Pilot* (London: Blandford, 1951) is a helpful introduction to Imperial history.

Once the pilot dispute is finally behind it, IA is able to commence service on April 26. Every pilot is given a copy of the carrier's new 95-pp. *Imperial Airways Pilot's Handbook and General Instructions*. (The book will be reprinted in 1974 by the London firm of Ducimus Books.)

Once more, as in the days of the independents, passengers are offered ground transport to and from scheduled airports and are even given a booklet entitled *Points for the Passenger*, explaining what they might expect. Capt. (an honorary title, as Imperial will not use the term until the early 1930s) H. S. Robertson, flying a DH 34, inaugurates daily return flights on a London (Croydon Airport) to Paris (LBG) route. A number of frequencies are now opened.

Sea Eagles commence flying Southampton (Woolston)—Guernsey on May 1, while Capt. A. L. Robinson, flying a DH 34, operates from London to Cologne on May 2. London to Brussels and Cologne and London to Ostend and Cologne daily flights begin on May 3, followed by weekday London—Amsterdam, Hanover, and Berlin, in cooperation with **Deutsche Aero Lloyd, A.G.** on June 2, and thrice-weekly summer service, London to Paris, Basel, and Zurich on June 17. A Supermarine Sea Eagle, meanwhile, is lost in a May 21 crash.

Failure by Imperial to participate in a previously discussed joint Anglo-French flying boat service from Marseilles to Alexandretta leads to a French refusal to grant overflight rights Paris to Genoa.

Under the original document of incorporation, payment for the predecessor companies is to be made one-third in cash and two-thirds in fully paid shares. A prospectus is issued on Derby Day in June; an initial public offering of 500,000 £1 shares is made. The public response is under-

whelming and the underwriters of the initial public offering are left to purchase 75% of the issue.

A July service between Croydon and Le Bourget is relived by William H. Rankin in his *London to Paris by Air—The "Imperial Way"* (New York: Carey Craft Press, 1924).

On November 3, the company's first trimotor, the Handley Page W8F *Hamilton City of Washington* is christened and placed in service on the Paris route. With Civil Aviation Director (CAD) Sir Sefton Brancker as expedition leader and passenger, Alan Cobham, with his engineer A. B. Elliott, departs London in a DH 50 on November 10 on the first leg of a survey flight through India to Rangoon, Burma. Fiscal support for the expedition is provided by the company, the U.K. Air Ministry, the Society of British Aircraft Constructors, de Havilland Aircraft Company, and the Anglo-Persian Oil Company. The state airline's first fatal accident occurs on December 24 when a DH 34 crashes at Purley (eight dead).

Passenger enplanements for the last three quarters (traffic figures being always reported on March 31 of the following year) are 11,395.

The Amsterdam—Berlin segment of the London—Berlin service is suspended on January 1, 1925. Brancker and company return to London on March 17, having suffered illness at Calcutta on the way to Rangoon and a forced landing near Stuttgart en route home. Still, Brancker's positive report results in the government's decision to replace its military airmail service in the Middle East with one flown by IA under subsidy. Brancker's story, which will end tragically with the crash of the airship R.101 in 1930, is ably told by Basil Collier in *Heavenly Adventurer: Sefton Brancker and the Dawn of British Aviation* (London: Secker & Warburg, 1959).

On April 1, it is reported that in the company's first year, over 800,000 revenue passenger miles have been flown. Simultaneously, Managing Director Searle resigns and is succeeded by General Manager Woods-Humphrey. On one of the April flights (according to information from <http://www.robinsonresearch.com/MOVIES>), the first motion picture screening for airline passengers is made. The film is the silent version of Sir Arthur Conan Doyle's *The Lost World*.

In cooperation with **ABA Swedish Air Lines, A.B.**, a London—Stockholm frequency is inaugurated by the DH 34 *City of Washington* on May 15, with Imperial flying the London to Amsterdam leg.

By summer, the company is unable to position the six serviceable aircraft needed for daily operations; one day in August, the carrier must cancel all flights because it has no ready planes. In early September, three new Handley Page W10s are ordered. The first joint Air Ministry/IA survey of a possible Cairo to Karachi route, begun on August 31, is completed on October 1. During the month-long aerial expedition, Capt. Minchin lands at a large number of airfields of possible utility and writes up a report on each. His work is followed by a ground survey made under the direction of Capt. Wooley Dod, who will shortly be named chief pilot of the eastern route. Simultaneously, Sir Sefton Brancker concludes secret arrangements with the Persians concerning overflights of their territory. The Air Ministry contract and the Persian arrangement allows the company to order four trimotored airliners from de Havilland.

On November 16, the Air Ministry and IA sign an agreement for the latter's operation of a subsidized fortnightly Egypt—India service beginning in 1927. The same day, Cobham and Elliott (with B. W. G. Emmott as cameraman) lift their DH 50J *Sepia*, the *Pelican*, from Edgeware, England, on the first leg of a survey flight to Cape Town. The crew carries a number of souvenir cards, which are to be mailed at Lyons, Brindisi, Athens, Cairo, Wadi Halfa, Khartoum, Pretoria, Johannesburg, Bloemfontein, and Cape Town.

At the annual December general meeting, it is announced that the year's bookings are 11,703. The loss since start-up is put at £15,217. Also, Government Director Maj. J. W. Hills is succeeded by Air Vice Marshal Sir V. Vyvyan and Managing Director Woods-Humphrey also receives a seat.

Flying by way of Greece, Egypt, and the Sudan, Cobham, Elliott, and Emmott reach the Northern Rhodesian (now Zambia) city of

Livingstone on January 27, 1926, arrive at Cape Town on February 17. Cobham and Co. begin the return to London (Croydon) on February 27; the 3 men carry 18 letters that they have all signed, all dated at Cape Town the previous day. The flight arrives at London on March 13. The historic adventure is recorded by Cobham in his *My Flight to the Cape and Back* (London: A & C Black, 1926).

One of three ordered earlier, the first Armstrong Whitworth Argosy I 20-seat, trimotor airliner, piloted by Imperial Capt. F. L. Barnard, makes its inaugural flight.

In ceremonies at Croydon Airport on March 31 for VIPs and shareholders, hosted by Imperial Chairman Geddes, Lady Maud Hoare christens five new aircraft: the trimotor W9 *City of New York* and the twin-engine W10s *City of Melbourne*, *City of Pretoria*, *City of London*, and *City of Ottawa*. Just after the *City of New York* is officially named, a flight of pigeons is released from its cockpit.

All of the planes, which had been flown down to Croydon from Cricklewood in formation, are painted in a new livery that features a dark blue fuselage and silver wings; the style, previously employed by **The Instone Air Line, Ltd.**, also includes the decoration of aircraft with their city names. Meanwhile, orders have been placed for five nine-seat de Havilland DH 66s capable of undertaking mail flights between India and Egypt.

In support of miners, the Trades Union Congress calls a general strike on May 3 that quickly paralyzes the railroads and other ground and water transport companies. As a result, the demand for IA seats triples and the company cannot meet the demand. The first W10 service is flown to Paris on May 4; on the return flight, the Prince of Wales becomes the first Royal heir to cross the Channel by air. The general strike collapses in just eight days, but company bookings remain high even after May 12. Cobham and Elliott depart London in the *Pelican* on June 30 on the first leg of a survey flight to Australia.

The first delivered Armstrong-Whitworth Argosy I, *City of Birmingham*, launches luxury return flights on the Paris route on July 16. This aircraft is the first in company service to carry a steward and offer a buffet. Near Ostend on August 18, the propeller of a W10 is so severely damaged by a wild duck that the plane is forced to make an emergency landing; no one aboard is injured. The first trimotored de Havilland airliner, a DH 66 piloted by H. S. Broad, makes its maiden flight over Edgeware on September 30; the *Hercules* has had its name supplied by Eaton College instructor E. F. Hope-Jones, who had chosen it from submissions made by readers of *Meccano Magazine*. In September, the first finished Argosy I, *City of Glasgow*, is the second to be delivered and is followed by the third, *City of Wellington*.

The *Pelican*, with Cobham and Elliott returns to London on October 1, alighting on the Thames at Westminster; there Cobham is knighted by King George V. The new Sir Alan records the flight down under in his book, *Australia and Back* (London: A & C Black, 1926).

The Amsterdam–London service frequency is taken over by **Deutsche Luft Hansa, A.G.** on October 16. An engine failure causes Capt. Dismore's W10 *City of London* to ditch, without casualties, in the English Channel on October 16. Two days later, legal documents are signed between the Air Ministry and the airline concerning the start-up of Egypt–India operations that are to be subsidized over five years at an annual figure of £93,600. During the last week of October, Managing Director Woods-Humphrey serves notice upon Air Superintendent Brackley for a variety of perceived failings; the latter appeals to the company board and avoids dismissal, continuing in his post for another 13 years.

Three DH 66 Hercules trimotors, designed, built, and tested within the short period of one year, are turned over to Imperial Airways between late November and early December. The first is readied and, piloted by Capt. C. F. Wooley Dod with Sir Sefton Brancker and two other passengers, departs Croydon for Heliopolis, Egypt (serving Cairo), on December 18 with a load of mail.

On December 26, another Hercules, under the command of Capt. Barnard, departs Croydon on a multistop survey flight to India; it carries

Secretary of State for Air Sir Samuel Hoare, his wife Lady Maude, and other VIPs. Sir Samuel will describe the trip in his *India by Air* (London: Longmans, Green, 1927).

During the year, the last four DH 34s, *City of New York*, *City of Washington*, *City of Chicago*, and one unnamed unit, plus the popular Vickers Vimy Commercial G-EASI *City of London* are taken out of service and scrapped. The latter unit, when taken over from **The Instone Air Line, Ltd.** on April 1, 1924, had already transported nearly 30,000 passengers and flown 107,950 miles.

Passenger boardings for the year accelerate to 17,083, but loss also climbs, to £20,415. At the annual general meeting, one shareholder suggests the unprofitable company be shut down.

The DH 66 transporting the party of Sir Samuel Hoare arrives at Karachi on January 6, 1927. Capt. Wooley Dod's DH 66 opens the first segment of the India route on January 7–9, with the first scheduled civilian mail flight into Iraq, flying from Basra to Cairo and Baghdad via Gaza. Flying close to the ground, the aircraft follows a double-plowed furrow, with numbered circles placed at 20-mile intervals, all the way from Amman to Rutbah and beyond.

Following a flight of 62 hrs. 27 min., Capt. Barnard's India-bound DH 66, which had departed London on December 26, reaches Delhi 14 stops later, on January 8, where it is christened *City of Delhi* by Lady Irwin, wife of the viceroy. On January 10, a Supermarine Sea Eagle is rammed by a steamer in St. Peter Port harbor, Guernsey, and sunk. On January 12, a DH 66, piloted by Capt. Hinchliffe, departs Cairo, arriving at Basra on January 14.

Weather, meanwhile, turns sour in England, with heavy snow and sleet. A build-up of snow on one of the company's canvas hangars at Croydon Airport causes its collapse; a W10 inside is badly damaged. During this period, Capt. McIntosh, to allay the concerns of a group of delayed and grumbling passengers, takes off on a scheduled morning service to Paris only to be forced down in a field by deteriorating weather. Suffering an even greater delay than if they had waited, the sullen group is able to continue to France the next day. McIntosh will recall this story and others in his interesting memoir *All-Weather Mac: The Autobiography of Wing Commander R. H. McIntosh, DFC, AFC* (London: Macdonald, 1963).

The *City of Delhi* departs Delhi on February 1, landing at Cairo on February 7 after a flight of 32 hrs. 50 min. At Cairo later in the month, the DH 66 fleet grows to four as the earlier unnamed ship is christened *City of Cairo* by King Faud, and is joined by two others from England, the *City of Jerusalem* and *City of Tehran*. Capt. Wooley Dod is now appointed to manage the IA Cairo Station.

On April 13, the Cairo–Baghdad–Basra frequency becomes weekly. Piloted by Capt. Gordon P. Olley, the Argosy I *City of Glasgow* (first to wear the carrier's new all-silver livery) on May 1 introduces lunchtime, first-class Silver Wing service on the Paris route. This is the world's first named air service, costing £9, and takes 2 hrs. 30 min. and features a steward and bar service. Olley will recall this milestone and others in his useful memoirs *A Million Miles in the Air: Personal Experiences, Impressions, and Stories of Travel by Air* (London: Hodder & Stoughton, 1934). The W10s, meanwhile, are tasked to offer £7 second-class service that takes 20 minutes longer.

Weekday, summer London to Le Touquet flights begin on July 15. A rich pearl merchant charts a DH 66 to fly from Baghdad to Bahrain via Basra and return on August 11–12. The summer and early fall are particularly tragic as three of the company's best-known pilots are lost. Chief Pilot Barnard is killed while testing a private aircraft for the upcoming King's Cup Air Race, which he had won back in 1922. Captains Hinchliffe and Minchin, having found private sponsors, both attempt in separate flights to emulate Charles Lindbergh's successful transatlantic flight, but going east to west; both disappear.

The first Supermarine Swan flying boat is placed on the Southampton (Woolston)–Guernsey service on October 6. During late fall, unsuccessful talks are held with officials of the Irish Free State concerning the possibility of inaugurating London–Dublin services. With his wife and

four other passengers, Sir Alan Cobham, with financial backing from Sir Charles Wakefield, departs the Thames in a borrowed RAF Shorts Singapore flying boat on November 17 to undertake an aerial survey of Africa.

In December, the DH 66 *City of Cairo* is forced down in Iraq out of fuel. It remains out of contact for two days until a second de Havilland can bring in enough fuel to enable both to return to Baghdad. During their sojourn, the crew and passengers of the *City of Cairo* have been treated well by local natives.

Enplanements for the year soar to 26,479 and £11,461 profit is reported.

Early in 1928, IA creates a charter department that is placed under the management of Capt. Olley. An advertised Argosy vacationer's charter flight from London to North Africa is cancelled on January 31 due to a lack of patronage, specifically, American bookings. One of the first efforts to offer an inclusive (meals, hotels, sight-seeing, and guides) air tour, the £456 price is simply too high. Olley and his bosses also begin planning for a domestic joint air-rail all-cargo service.

Built on instructions of the British Air Council specifically for IA, the first trimotored Short S8 Calcutta flying boat piloted by J. Lankester Parker makes its maiden flight from the Medway River on February 14. Based on the Short Singapore, the aircraft is unique among large civil flying boats of its time due to its largely metal construction.

While on a test flight, the first Handley Page W8b, *Princess Mary*, acquired upon the company's formation from **The Instone Air Line, Ltd.**, is destroyed in a nonfatal February crash at Abbeville. Also in February, all three of the Argosy trimotors, parked in the open at Croydon during a period of bad weather, are damaged by a severe squall.

Daily London to Cannes flights begin on March 1. In the spring, the Persian government revokes its 1925 agreement with the carrier. This move is made in reaction to Soviet pressure placed upon it in the wake of British refusal to grant **Junkers Luftverkehr Persien** permission to fly a scheduled service from Tehran to Baghdad. Following some weeks of negotiations, Managing Director Woods-Humphrey is able to secure a route along the southern shore of the Gulf in early May. As the company has no airports in the area, the Mideast route must now be terminated as Basra.

Sir Alan Cobham's Short Singapore returns to England on May 31 having completed its African mission. During the flight, Cobham and company cover 23,000 miles in 330 flying hours via Malta, the Nile, the Great Lakes, Duban, and Cape Town. They also note 50 potential flying boat landing sites. The group's adventure is reported by Cobham in his *20,000 Miles in a Flying Boat: My Flight Round Africa* (Philadelphia: David McKay, 1930).

At this point, the government agrees that the carrier's principal task should now be the development of routes throughout the British Empire; local and regional European services will receive scant attention in the immediate future.

On June 13, Capt. Olley's Argosy I *City of Glasgow* loses (by 15 minutes) a London to Edinburgh race with the London and North Eastern Railway's *Flying Scotsman* passenger train. The publicity stunt had been proposed in an effort to gain support for company plans to introduce a domestic joint air-rail all-cargo service. Unhappily, Capt. Olley had tracked the wrong train passing over the Royal Border Bridge, which crosses the River Tweed at Berwick. The Air Ministry subsequently refuses to approve the proposed cargo operation.

The first Short S8 Calcutta-class flying boat is delivered on July 26 and is christened *City of Alexandria*; it is placed in service on the Southampton (Woolston)–Guernsey frequency the next day, before mooring on the Thames at Westminster for public inspection during August 1–3. During late summer, a joint Air Ministry–IA survey team examines the Arabian side of the Persian Gulf, seeking landing sites in the region ruled by the Trucial Sheikdoms.

To help celebrate Liverpool Civic Week, the second Short S8 Calcutta, *City of Athens*, flies an experimental Liverpool–Belfast passenger and mail service, subsidized by the two cities, between September 24

and October 4. A third Calcutta, *City of Rome*, is delivered in late fall. During the year, Woods-Humphrey begins a correspondence on possible Atlantic cooperation with **Pan American Airways (PAA)** CEO Juan Trippe.

The year's bookings advance to 35,522 and these figures are announced at the annual meeting, along with a £72,567 gain. Lord Chetwynd assumes a board seat as an industry representative.

The Southampton (Woolston)–Guernsey route is closed on February 28, 1929, in order to allow transfer of the S8 flying boats to the Mediterranean. On March 30, Captain A. S. Wilcockson and Maj. Brackley pilot the Argosy I *City of Glasgow* from London to Basel via Paris on the first leg of the U.K.–India airmail service, the first weekly commercial air service between England and its largest colony. When Italian officials refuse to allow British-registered airliners to enter their airspace, the VIP passengers at £130 single fare and 364 pounds of mail are sent to Genoa by train.

On March 31, the Short S8 Calcutta *City of Athens* flies the India-bound mail and passengers from Italy to Alexandria via Ostia, Naples, Corfu, Athens, Suda Bay, and Tobruk, where they are taken to Cairo by train. The DH 66 *City of Jerusalem* then takes the postal sacks on the multistop flight along the Arabian coast and over the sea to Gwader and Karachi, arriving at the latter point on April 6. The *City of Baghdad* inaugurates westbound service the next day; regularly scheduled seven-day England–India passenger operations begin in early May. Fares one way are £130 per head. Meanwhile, new 10-year subsidized agreement between the Air Ministry and IA comes into effect on April 1.

During the spring, orders are placed for eight Handley Page HP 42s (four each E and W models). Three new Armstrong Whitworth Argosy IIs are delivered and christened *City of Edinburgh*, *City of Liverpool*, and *City of Manchester*. Beginning on June 1, mail is accepted in Athens for delivery on the Eastern route.

Although no longer officially acting on behalf of the airline, Sir Alan Cobham, with a small administrative team, determines to use his energies to take the cause of civil aviation to both the public and to those government officials as yet unconvinced of its merit. Employing a brand new DH 61 purchased from de Havilland for £3,750, Cobham now undertakes a 21-week "Municipal Aerodrome Campaign." During this time frame, the noted aviator visits 110 U.K. airfields, makes 5,000 landings and takeoffs, and transports 40,000 passengers, including 10,000 school children. He also gives 110 speeches on the values of airports to communities, provides his expert counsel when asked, and finds time to raise cash by giving rides to the general public.

The wholly owned subsidiary **Imperial Airways (Africa), Ltd.** is registered on June 6. Financial backing is provided by the British Air Ministry, IA, the Union government of South Africa, the various African colonial governments loyal to the Crown, and the Beit Trust, which had been established earlier by Sir Alfred Beit to foster African communications.

During the second week of June, Argosies inaugurate promotional, 30-minute, £2 sight-seeing flights over London called Tea Flights. The novel digressions are initially popular. Also during June, the *City of Basra* arrives at Cairo, the sixth DH 66 acquired. At the same time, Colonel H. Burchall is appointed assistant general manager.

On June 17, the W10 *City of Ottawa* crashes into the English Channel off Dungeness (seven dead). In July, Capt. Wooley Dod is granted leave and is replaced by Air Superintendent Brackley, who is sent out from London on temporary duty.

Upon the completion of his "Municipal Aerodrome Campaign," Sir Alan Cobham sells his DH 61 to IA for £3,000 and personally delivers it to Salisbury, Southern Rhodesia, on behalf of the state airline.

On September 6, the DH 66 *City of Jerusalem*, preparing at Jask in Persia per usual evening practice, catches fire from its own wingtip landing flare, which explodes prematurely, forcing the plane to crash. The pilot, mechanic, and passenger are all killed and 25,000 letters are lost.

Engine trouble forces the S8 *City of Rome* to put down on a rough sea off Spezia on October 26; an Italian tugboat comes to the rescue and begins a tow toward evening. Unfortunately, the towropes part in the

darkness and bad weather causes the flying boat to capsize and sink (seven dead). Another DH 66, *City of Karachi*, is ordered to replace *City of Jerusalem*; it will join the fleet by year's end.

On October 16, Assistant General Manager Burchall informs Superintendent Brackley, acting head of the Near East Division and the Cairo station, that he must remain in Egypt another six months as his predecessor, Capt. Wooley Dod, is needed elsewhere. Brackley busies himself rerouting traffic and rescheduling flights in the wake of an Arab-Jewish conflict in Palestine. His duties as air superintendent will be filled, in turn, by senior captains Armstrong, Wilcockson, and Walters.

On October 19, the Royal Navy's Mediterranean fleet begins a week-long visit to Corfu. The Eastern route of Imperial Airways is employed for mail addressed to these ships and two deliveries of letters to and from the sailors will be made before the fleet moves on.

In early fall, the Italian carrier **Societa Anonima Navigazione Aerea, S.p.A. (SANA)** begins a parallel Genoa-Alexandria service with Dornier Wals, insisting that IA pool the operation and its receipts. When the British refuse, their rights to stage through Italian ports are withdrawn on October 31 and the *City of Alexandria* and *City of Athens* are transferred to Athens. Both flying boats are temporarily put out of action the next day following hard landings of Mersa Matruh.

At the beginning of November, British postal rates are revised. The published airmail schedule shows a cost of 2d. per half-ounce for letters to Egypt, Sudan, and Palestine, 31/2d. per half-ounce to Iraq, and 5d. per half-ounce to Persia and India.

Following refusal of traffic rights by Italy, an all-air Argosy service is opened over a Balkan route Cologne-Salonika on November 2; poor weather forces cancellation of the service after two flights and as of November 16, the Cologne-Athens route is accomplished by train on *The Orient Express*.

Meanwhile, the Air Ministry's Supermarine Southampton flying boat is chartered for six months on November 15 to replace the *City of Rome*. The first acceptance of Australian mail for accelerated aerial delivery to London on the Eastern route is made on December 17. The post had traveled by sea from Perth to Colombo, Ceylon, from whence it was shipped to India and the overland to Karachi, where it is placed on a DH 66.

Under the direction of IA's Capt. Wooley Dod and Air Ministry representative Colonel Shelmerdine, a joint expedition to survey an air route north through Africa from Cape Town to Cairo is undertaken. The mail route is extended by the DH 66 *City of Delhi* on December 21 from Karachi to Jodhpur and on December 30 by the same aircraft from Jodhpur to Delhi under charter to the Indian government.

Calling subsidy gain, Chairman Geddes reports to the company's general meeting during the month that the carrier has earned a £60,000 profit over the past year. On the other hand, he must also confess that enplanements this year are down to 29,338, due in all probability to adverse publicity generated by the air accidents and the onset of world depression.

During the year, the surviving Supermarine Sea Eagle is retired, along with the W9 *City of New York*. Keith Granville, who will rise to become the last chairman/CEO of successor **British Overseas Airways Corporation (BOAC)**, joins the company as a commercial trainee at a salary of 10 shillings per week. This is also the year when the Guild of Air Pilots and Air Navigators is formed, with Sir Sefton Brancker as first Master and several IA senior managers, including Air Superintendent Brackley, as members. At the annual meeting, I. C. Geddes succeeds Lord Chetwynd as a company director.

By December 31, the company's financial condition is so precarious that cash to pay the Croydon staff is obtained by paymasters in a very crafty manner. Checks are cashed in one of London's West End bank branches on Friday with full knowledge that they will not clear the Croydon bank until the following Monday, by which time, it is hoped that weekend Paris services will provide sufficient revenues to cover them. The year's profit is £78,861.

Consignments left with agents at U.K. railway stations are accepted for air shipment as of January 1, 1930. During the month, the new Shorts

Calcutta flying boat *City of Khartoum* enters service at Athens. The first sacks of accelerated Australian mail arrive in London on January 9.

In February, the DH 66 *City of Tehran* is destroyed in a windstorm in Gaza. The joint Air Ministry-IA Cape Town to Cairo route survey begun the previous November under the direction of Capt. Wooley Dod and Col. Shelmerdine is completed on April 11. The former is subsequently appointed manager of the carrier's European division.

The next day, the London-Athens Argosy route is reopened (except for a rail journey between Skopje, Yugoslavia, and Salonika, which is finally omitted on April 22). During the month, the Argosy II *City of Edinburgh* is destroyed in a London (Croydon) crash and at month's end, Maj. Brackley returns to his air superintendent's post in London, being succeeded by Capt. Armstrong as the Near East Division's station chief at Cairo.

On June 16, thrice weekly Birmingham, Manchester, and Liverpool-London Argosy feeder service is opened. Also during June, the new Calcutta flying boat *City of Salonika* enters service at Athens. During six weeks of the summer, an experimental S8 Alexandria-Haifa-Famagusta operation is offered.

On September 20, passengers are once again forced to enjoy *The Orient Express* on portions of the European sector of the India service; on the same day the feeder route to Birmingham, Manchester, and Liverpool is closed.

An agreement between the Air Ministry and the carrier is initialed on October 22 for the launch of a weekly Egypt-South Africa service; seven days later, the W8f *City of Washington* crashes near Neufchatel in bad weather (four dead).

Based on his V/1500 World War I bomber, the aircraft builder Frederick Handley Page watches on November 14 as his HP 42 biplane airliner, ordered for IA, makes its maiden flight from Radlett, England. It is the first four-engine airliner to be built in the U.K. Eight will be delivered to the state carrier at a price of £42,000 each. Future pilots, because of its exaggerated spring in the fuselage during taxiing, will christen the plane "The Flying Banana."

Late in the year, the Argosies *City of Birmingham* and *City of Arundel* are sent to Cairo and the assets of **Cobham-Blackburn Air Lines, Ltd.** are acquired for £50,000. Bookings for the year drop even further, down to 20,993. Profit falls to £60,139.

When the HP 42 *Heracles* enters service on the London-Paris *Silver Wing* route in January 1931, its comfortable and luxurious in-flight operation is widely praised. There are drawbacks: the cruising speed on the return service is only 95 mph. while all previously complementary passenger refreshments provided by the two stewards must be paid for—even the pilots are charged for their cups of tea or coffee.

The first African leg of the London-Cape Town Argosy air route is opened by the *City of Arundel* on February 28, a 14-stop, 10-day passenger and mail service (passengers only as far as Khartoum) from Cairo to Mwanza on Lake Victoria, Tanganyika. A Calcutta flies the Khartoum to Mwanza segments, with mail for the Belgian Congo dropped off at the Juba stop. Return service, with one or two stop variations, departs Mwanza on March 10; through passengers and mail, by air and rail, are back to London within nine days. Cities visited en route north or south include Assiut, Luxor, Aswan, Wadi Halfa, Kareima, Khartoum, Kosti, Malakal, Juba, Port Bell, and Kisumu.

Also during the month, the W8b *Prince George* is taken out of service and scrapped. It is announced about this time that company aircraft will henceforth bear names of classical origin.

On April 1, the Italian government withdraws its ban on company overflights of Italy and Imperial aircraft are freed to fly to Rome, Genoa, or Naples. The same day, the S17 Kent-class flying boat *Sylvanus* is launched. Also, the U.K. and Australian governments, together with IA, agree to a pair of return airmail proving flights from England to Australia. The first of these experimental eight-stop services is begun by Capt. R. Mollard's DH 66 *City of Cairo* from Delhi on April 4. Cities scheduled to be visited en route to Darwin are Calcutta, Akyab, Rangoon, Penang, Singapore, and Batavia.

Night flights are introduced on the Baghdad to Basra segment of the India route on April 11; four days later, Maj. Brackley takes the controls of the *Sylvanus* and flies it from Medway.

On April 19, the *City of Cairo*, having developed a fuel leak and encountered a headwind, cannot complete its flight to Australia and must, instead, make an emergency landing. While putting down on the rocky grass field at Koepang, Timor, the de Havilland crashes and is destroyed beyond repair. The mail is salvaged and forwarded to Darwin via an Australian aircraft flown by noted aviator Charles Kingsford-Smith, who also ferries Capt. Mollard and his colleagues. At Darwin, the mail is turned over to **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)**, which transports it to Melbourne via Dalywaters, Cloncurry, Charleville, Brisbane, and Sydney.

At the Australian city, Mollard receives a telegraph to continue on to Perth and purchase a replacement DH 86 from **West Australian Airways, Ltd.** Mollard's new ship departs Melbourne on April 23 with a return shipment of letters (including those accepted for it in New Zealand), which arrives at London by May 14. Meanwhile, beginning on April 27, a second African mission is started, this time from Cape Town; when the HP 42 *Heracles* arrives at London (Croydon) from Paris on May 8, it is found that only one of the 25 passengers aboard had come all the way through from South Africa.

A second experimental England–Australia mail flight is made (again with Australian assistance) between April 25 and June 4. Having regained staging rights at Italian ports, the Calcutta flying boats now initiate a new route Brindisi–Corfu–Phaleron–Mirabella. The first S17 delivered, the *Scipio*, departs the U.K. for the Mediterranean on April 27; it is followed soon thereafter by the second, *Satyrus*. On April 29, Capt. Olley's Argosy *City of Glasgow* returns the Prince of Wales from France on the final leg of a South American visit. Following a new air traffic agreement with Italy, the central European leg of the India route is abandoned in favor of a combined air and train route, London–Basel and Basel–Genoa.

On May 9, flying the HP 42 *Horatius*, Capt. O. P. Jones departs Croydon Airport for Paris with 13 passengers on the first leg of a new African operation. The aircraft is hit and damaged by lightning and returns to England where Jones and his passengers—now reduced to eight—exchange aircraft and successfully depart again in the HP 42 *Helena*. On May 16, flying boat service over the Mediterranean segment is enhanced when the *Scipio* and *Satyrus* begin service, flying across that sea simultaneously, one from Genoa and one from Alexandria. Later in the month, the *Scipio* is damaged in a rough landing at Candia. She is replaced by the *Sylvanus*.

On June 5, mail is, for the first time, accepted in Zanzibar for conveyance on the northbound Imperial flights from Kisumu. The newly delivered Handley Page HP 42E *Hannibal* is placed on the Paris route on June 11, initiating new standards in air travel. Also during June, the Argosy *City of Birmingham* is destroyed when it crashes at Aswan, Egypt. It is briefly replaced by the *City of Glasgow* and the *City of Wellington*, but both will be recalled to the U.K. by year's end. Meanwhile, two of the four engines of the Kent Class flying boat *Sylvanus* are damaged in Genoa when its tow forces a collision with a Dornier Wal of **Societa Anonima Navigazione Area, S.A. (SANA)**.

The southbound DH 66 on the African route makes a forced landing at Kibanga Port (15 mi. N of Entebbe) on July 4. The mail is unloaded and shipped to Kisumu by road, where it arrives the next day. The sacks are turned over to **Wilson Airways, Ltd.**, which takes them on to Nairobi.

While on the Silver Wing service near Tonbridge during July, the HP 42 *Hannibal* loses a propeller, which disintegrates, its fragments striking the propeller above. Suffering severe vibration and loss of power, the airliner narrowly avoids hitting a row of houses before hitting a telephone pole and tree stump and coming to light in a field; no casualties are reported.

It is decided on August 1 to implement an experimental South West African feeder route. It will be operated by newly formed **South West**

African Airways, A.G. Also in August, the repaired *Hannibal* arrives at Cairo from London. Her sister ship, the HP 42W *Heracles*, enters service on the same route on September 11.

On October 17, the England to India and England to Mwanja routes are separated; still, passengers are required to transverse the Paris–Brindisi sector by train. Also during October, the Kent Class flying boats *Scipio*, *Sylvanus*, and *Satyrus* inaugurate twice-weekly operations from Alexandria to Cyprus via Haifa. For the experimental delivery of the Christmas mail and as a way of conveying aircraft to South Africa, the Croydon–Mwanja flight of December 9 is extended. Flying from Lake Victoria, the DH 66 *City of Karachi* delivers the postal bags (containing letters with special “springbok” envelopes) to Cape Town on December 21. Communities visited on this “Christmas flight” include Nairobi, Moshi, Dodoma, Mbeya, Mpika, Broken Hill, Salisbury, Bulawayo, Pietersburg, Johannesburg, Kimberly, and Victoria West.

During the year, orders are placed for eight Armstrong Whitworth AW-15 Atalantas and at year's end the three-year Indian government mail contract expires and Karachi once more becomes the terminus of the company's Far East service.

The year's passenger traffic rebounds from the 1930 low as a total of 34,162 travelers are carried, including 24,192 transported on European routes. Still, Chairman Geddes must declare a financial decline to the annual meeting late in December; profits are down to only £27,140. At this time, Sir Walter Nicholson succeeds Sir Herbert Hambling as one of the government directors.

On January 20, 1932 the weekly Croydon–Kisumu mail-only route (launched London–Paris by the final HP 42W *Helena*) is extended on to Cape Town, as the Kisumu to Mwanja segment is abandoned. After an 11-day journey with 33 stages and 6 changes of vehicle (train and plane), the Royal postal bags from England finally arrive aboard the DH 66 *City of Jodhpur* on February 2. Mail officials had hoped to introduce their new “speedbird” letter envelopes (“covers”) for this flight, but because they were not received from the printer in time, substituted “springbok” envelopes instead.

The first return South Africa–U.K. flight, meanwhile, departs Cape Town for Croydon on January 27; however, the service meets with delay.

The DH 66 *City of Basra* crashes at Salisbury on January 29 and the replacement aircraft, *City of Delhi*, crashes at Broken Hill on the same day. This leaves the *City of Jodhpur* to arrive at Nairobi on February 3 with mail from only Broken Hill, the mail sacks salvaged from the *City of Delhi* arrive at London with those of the second weekly Cape Town–U.K. service flown February 3–16. Search parties do not find the *City of Basra* until March 1 and the mail recovered from it does not reach London until March 16.

Alexandria to Haifa and Limassol S17 service is begun by the *Sylvanus* on April 19 and the first return mail service departs Limassol on April 24. On April 27 the Croydon to Cape Town frequency is opened for passenger service in both directions, marking the complete introduction of scheduled passenger service between Great Britain and South Africa. Passenger bookings are accepted in both London and the South African city; through flights cannot, however, be completed because the sectors between Cairo and East Africa are always sold out.

For one flight only, the May 15 northbound African mail service does not stop at Kimberley, but diverts to De Aar, where the *City of Jodhpur* and its crew are participants in ceremonies opening a new airport. Less than 60 letters are carried each way between the two communities.

A giant step forward in British large civil transport design, the first Armstrong-Whitworth A.W. 15 monoplane airliner makes its maiden flight on June 6. On July 13, the first of three flights (the others are made on July 30 and August 13) London (Croydon)–Cherbourg flights are made to connect with the RMS *Empress of Britain*, thereby accelerating transatlantic mail during the Imperial Economic Conference in Ottawa. The Tiberias–Baghdad sector of the India route is changed to Ramleh–Baghdad on September 5. The newly delivered Armstrong Whitworth AW-15 *Arethusa* is introduced (for testing) on September 26 on the London to Brussels and Paris to Basel and Zurich routes.

Due to difficulties with the Persian government, which withdraws its permission for flights over its territory, the India route's Gulf segment is switched to the Arabian side on October 1, with new stops initiated at Kuwait, Bahrain, Sharjah, and Gwadar. Much of the credit for the success of this new routing is given to Sheikh Issa, who persuades the other local sheikhs to allow flying boats to land and cooperates with IA and the RAF in the construction of facilities. The Alexandria-Haifa and Lissol routing is suspended on October 12.

Also during the month, the W8b *Prince Henry* is taken out of service and scrapped. In November, HP 42s replace Argosies and Calcuttas on the Cape Town service from Cairo to Kisumu. Chief Financial Officer Beharrel makes the London to Cape Town flight in December. To accommodate a large amount of mail, a special "Christmas flight" is made between Karachi and Cairo on December 11.

Enplanements for the year soar to 60,966, of which 42,892 are flown on the European routes. The financial gain is, however, just £10,186, the lowest in any profitable year of company history.

The new Armstrong Whitworth AW-15 Atalanta, piloted by Maj. Brackley, departs Croydon Airport for Cape Town on January 5, 1933, in the first African flight by this aircraft type. On January 14, an additional Kuwait stop is made on the eastbound route from London to Karachi; the first mail westbound from Kuwait for London departs on January 19.

Aircraft replace trains on the Alexandria-Cairo segment of the India route on February 11. However, the Atalanta, piloted after its Cairo arrival by Capt. H. W. C. Alger, reaches Cape Town on February 14, a day before aircraft replace trains on the Alexandria-Cairo segment of the South African route.

On February 18, the carrier completes its 10-millionth mile of flying; the company's excellent safety record results in a lowering, on March 1, of insurance premiums for those passengers wishing such assurance from 12 shillings per £1,000 to 1 shilling.

Hardly had insurance rates been readjusted when, on March 28, the Argosy *City of Liverpool*, with 3 crew and 12 passengers en route from Cologne to London, suffers a catastrophic structural failure at an altitude of 250 feet. The aircraft crashes in flames at Dixmude, Belgium, 60 mi. WNW of Brussels; there are no survivors. Investigators on the scene surmise that the trimotor has been the victim of a timed incendiary or a fire purposely set in the aft lavatory. Although no one will ever know for sure who may have caused it or exactly how the disaster occurs, suspicion will fall on passenger Albert Voss. His body is found a mile from the crash scene in such a condition as to suggest that he may have jumped or fallen from the plane before the fire had intensified. In debt and speaking of suicide, the 69-year-old dentist has a history of drug trafficking.

The Cairo-Khartoum segment of the Cape Town route is now flown in one day as of April 26, reducing overall journey time to 10 days. On April 29, J. V. Prendergast, with route-planner Maj. Brackley and QANTAS (Queensland and Northern Territories Aerial Service, Ltd.) Managing Director Hudson Fysh as passengers, flies the AW-15 *Astraea*, which has been outfitted with auxiliary fuel tanks, from Croydon on the first leg of a flight that will survey a route from Singapore to Australia.

All eight AW-15 Atalantas are delivered by May. In South Africa, the Union government refuses to allow IA to transport its domestic mail, reserving that right for the local concern, **Union Airways, Ltd.**; the British carrier henceforth flies only Empire mail.

HP 42Ws commence Croydon to Cologne, Basel, and Zurich week-end services on June 10. To provide service Karachi-Calcutta, **Indian Transcontinental Airways, Ltd.** is formed on June 21 as an associate company. Shareholding is divided between IA (24%), **Indian National Airways, Ltd.** (25%), and the Indian government (51%). Several of the Atalantas will be chartered to the new entity.

Having flown via the Middle East, India, Singapore, and the Dutch East Indies, the *Astraea* arrives at Brisbane on June 23, visiting Sydney on June 26, Canberra on June 28, and Melbourne on June 29 before

starting the return flight on July 2, arriving at Karachi on July 16. On July 7-11, meanwhile, the AW-15 *Arethusa* extends the London-Karachi operation to Calcutta, flying via Jodhpur, Delhi, Cawnpore, and Allahabad.

In August, the AW-15s *Arethusa* and *Aurora* are formally transferred to **Indian Transcontinental Airways, Ltd.** The same aircraft, on September 23, extend the Calcutta route to Rangoon via Akyab. The first service departs Rangoon on October 2.

During early fall, the provincial government of Newfoundland completes a secret agreement with IA, granting it a monopoly on landing rights for the next 50 years. This arrangement is not known in Ottawa, where the Canadian government grants the company exclusive rights to fly from the same province during the following 15 seasons.

Working with the government's Empire Marketing Board and the General Post Office Film Unit, the director of public relations, C. F. Snowden Gamble, begins to depict Imperial in a series of documentary films that will be released to the public. The first under his sponsorship is *Wings over Africa*. During the year, two other films will also depict the carrier's activities. The General Post Office Film Unit's *Air Post* shows collection and sorting of the mail, which is sent to Croydon Airport for transport overseas. The film department at Shell Oil releases Edgar Anstey's *Air Port*, which is a study of both Croydon and Imperial.

The Handley Page W10s *City of Melbourne* and *City of Pretoria* are sold in November to National Aviation Day Displays, Ltd. Also during the month, **QANTAS (Queensland and Northern Territories Aerial Service, [Pty.], Ltd.)** Managing Director Fysh arrives in London for discussions with Managing Director Woods-Humphrey. Intent upon an agreement for a joint operation of a regular England-Australia airmail service, the two seek out Sir Geoffrey de Havilland and convince him to construct DH 86s.

On December 9, the *Astraea* departs for Rangoon, thereafter stretching the route on to Singapore where one of her passengers, Hudson Fysh, bids adieu. On December 30, the Avro 10 *Apollo*, 9 miles off course and flying too low, crashes into a 900-ft.-high radio mast at Ruysselede (10 dead). Relatives of the dead passengers will file suit charging pilot error and receive a settlement of £40,000 in damages—a large award for such an airline suit at that time. The *Astraea* begins the first return flight from Singapore on the year's final day.

As the depression deepens, bookings decline again on the year, down to 58,060. Still, a £52,894 profit is reported. At the annual meeting, Air Chief Marshal Sir John Salmond succeeds government representative Air Vice Marshal Sir V. Vyvyan.

Pioneer company pilot Gordon P. Olley (with £6,015) forms **Olley Air Services, Ltd.** on January 10, 1934. Eight days later, his former employer and the Australian carrier **QANTAS (Queensland and Northern Territories Air Service [Pty.], Ltd.)** subscribe equal capital and form **Qantas Empire Airways (Pty.), Ltd.** to stretch the London-Singapore route on to Australia's east coast. In the government's early March air estimates for this year, IA will receive its first subsidy (£10,000) dedicated toward a transatlantic service.

Capitalized at £150,000, **Railway Air Services, Ltd.** is founded on March 21 by the four major British rail companies (Southern Railway, North Eastern Railway, Great Western Railway, and London Midland and Scottish Railway) and Imperial Airways, Ltd. to operate certain domestic routes. Captained by John Lankester Parker and with 3 passengers aboard, the 38-passenger Short S17 *Scylla*, a derivative of the Kent-class flying boat and the last biplane built by this firm, makes its maiden flight on March 26.

On April 10, another day is cut from the total time of the Cape Town-London route, this time by flying the Brindisi-Alexandria segment in one day. Southbound flights depart London on Wednesdays and arrive on Fridays while northbound frequencies leave Cape Town on Tuesdays and arrive at London on Thursdays.

During the month, the South African government refuses to renew its mail contract with the carrier and denies passage to the line's aircraft beyond Salisbury, Southern Rhodesia. Instead, in a move designed to put

the small **Rhodesia and Nyasaland Airways, Ltd.** out of business, it invites IA to open a flying boat route from East Africa to Durban and Cape Town. Woods-Humphrey rejects the idea.

Beginning on May 15, Luxor replaces Aswan as a night stop on north-bound flights from Cape Town to London; it is also substituted for Aswan and Assiut as a refueling stop on the southbound service. The first of two Short L.17s, the *Scylla*, is placed on the London–Paris route on May 16. The first of two Short L.17s, the *Scylla*, is placed on the London–Paris route on May 16.

The first DH 86 is delivered and christened *Delphinus* on May 25. The next day, Postmaster General Sir Kingsley-Wood presents the official Royal Air Mail pennant to IA Chairman Geddes in Croydon Airport ceremonies. The HP 42W *Hengist* wears the flag the next day when it departs for Paris on the first leg of a service to India. Thereafter, the Post Office places special blue pillar post boxes around London designed to receive airmail letters.

Flights continue apace over the summer and during these months Public Relations Director Snowden Gamble's documentary film unit releases the story of *Air Ways to Cape Town*. In November, Managing Director Woods-Humphrey suggests that the company will establish a route linking Khartoum with Gambia and Sierra Leone.

England–Australia regular through mail service is officially inaugurated on December 8, with the HP 42W *Hengist* flying the London–Paris leg. From there, the now-regular eastern route is followed to Singapore. Due to **Qantas Empire Airways (Pty.), Ltd.**'s lack of aircraft, the AW-15 *Arethusa* completes the first flight (under charter) from Singapore, arriving at Darwin via the Ditch East Indies, on December 18. Postal rates for airmail letters on the route are 1s3d. per half-ounce or 6d. for postcards. Return service departs that city the next day.

Meanwhile, the Duke of Gloucester officially launches regularly scheduled Australia–England through mail service on December 10. On December 20, the British government announces the Empire Air Mail Program and plans for its 1937 start-up. The last segment, from Paris to London, is flown by the Argosy *City of Coventry* and the Shorts S17 *Syrinx*, arriving at Croydon Airport on December 24.

The four surviving Armstrong Whitworth Argosies, *City of Birmingham*, *City of Wellington*, *City of Coventry*, and *City of Manchester*, are withdrawn from service in late December. On December 29, Bellary is dropped as a stop on the eastern route, while Hyderabad is added. The London–Cape Town service is duplicated as far as Johannesburg on December 30, with flights scheduled to depart Croydon on Mondays.

The year's bookings rebound to a record 62,382 and profit climbs to £78,572. At the general meeting where these figures are announced, Sir Hardman Lever and the Hon. E. Harmsworth join the board as industry representatives. Still, after a decade of flying, the state airline has exactly the same number of routes as it did on April 26, 1924 and is actually operating over route mileage shorter than that flown by its original merger partners.

A second Calcutta–London frequency (a duplication of the first) is launched on January 1, 1935. Henceforth, flights will depart London on Tuesday and Saturdays. Four days later, the London–Johannesburg route is duplicated from that South African city to the British capital, with this second service slotted onto schedule's Saturday location. The same day, airmail letter rates from London to South Africa are slashed to 1½d. per half-ounce, with 1d. asked for postcards. Ordered by the carrier, the twin-engine, four-passenger Avro 652 makes its maiden flight on January 7.

Later in the month, the first two Boulton Paul P-71As are delivered and christened *Boadicea* and *Britomart*; both will crash within a year. DH 86s, specifically designed to cross the Sea of Timor, enter **Qantas Empire Airways (Pty.), Ltd.** service on February 23. During the month, Air Ministry and IA technical officials meet to discuss possible acquisition of a British-built flying boat capable of flying the North Atlantic.

As the result of a rebellion in Greece, the routing from Egypt to Italy must be changed on March 2. Instead of flying from Alexandria to Brindisi via Athens, the company now operates from Alexandria to Brindisi

via Malta. Although this stretches the route by 400 mi., the schedule is not changed.

The first low-wing monoplane with retractable landing gear to be employed by the British state carrier, the Avro 652, is delivered on March 11 and christened *Avalon*; it is followed into service by the *Avatar*, later *Ava*.

On April 1, Capt. J. T. Percy, flying a DH 86, begins a new unsubsidized route London–Budapest via Brussels, Cologne, Halle, Leipzig, Prague, and Vienna. The first regularly scheduled weekly Croydon–Brisbane through passenger service departs the U.K. on April 13; single fare for the 12,754-mile, 12 1/2-day journey is £195.

In mid-month, the U.K. government completes bilateral agreements with the governments of Italy and France that will permit IA to transport passengers and freight (but not mail) from London to Brindisi via Marseille and Rome. The Avro 652s are placed in service on April 28 as the second aircraft, *Ava*, begins unsubsidized London–Brindisi via Paris, Marseilles, and Rome flights.

On May 8, a mail sack is filled in London with letters and postcards destined for Lusaka, the new capital of Northern Rhodesia (now Zambia).

To accommodate the delivery of airmail posted too late to be placed on regular services, the governments of the U.K., France, and Italy amend their April accords to permit the transport of "Late Mail" by air on the company's Marseille–Rome segments. IA takes advantage of this permission for its eastern route for the first time on May 12 and for the Cape Town run on May 14. Thus, for the first time, post is transported entirely by air from London to Brisbane and Cape Town.

Also in May, plans are announced for a West African survey flight from Khartoum.

When during the summer Maj. Brackley closes pilot access to the public bar at the Croydon terminal building, the nearby Aerodrome Hotel opens a pilots' bar and invites the disbarred flyers over; there the thirsty flyers form a private social club. In future years, caricature portraits of the company's veteran pilots will adorn the walls of the room; A. S. Jackson will reproduce a number of these in his valuable *Imperial Airways and the First British Airlines, 1919–40* (London: Terence Dalton, Ltd., 1995).

Three wholly owned subsidiaries are established in mid-August to assume local services: **Imperial Airways (Far East), Ltd.** and **Imperial Airways (Nigeria and Gold Coast), Ltd.** on August 12 and **Imperial Airways (Continental), Ltd.** on August 21. At home during the month, Chairman Geddes is visited by the new Secretary of State for Air Viscount Swinton. He warns Geddes that forces in Parliament are disturbed over the carrier's monopoly of foreign air routes and suggests that Imperial's board consider abandoning its exclusivity over its line from London–Cologne–Budapest.

London to Singapore service is duplicated as of September 30; Singapore to London duplication begins on October 3. On October 16, Nuremberg replaces the Leipzig and Prague stops on the London–Budapest route. Seven days later, Capt. Armstrong, flying the DH 86 *Dorado*, launches the first of six Penang to Hong Kong return flights via Saigon and Tourane. The first four are proving missions while the last two connect with the **Qantas Empire Airways (Pty.), Ltd.** service. Capt. Armstrong covers the entire 1,852-mi. inaugural route in just one day.

The *Astraea* overshoots the runway while landing at Rangoon on November 2; no injuries are reported and the aircraft is quickly repaired. The next day, an *Atalanta* strikes a tree while taking off from Kisumu; although several crewmembers are hurt, the passengers, including Lord Balfour of Burleigh, are uninjured. The S17 *Sylvanus* is destroyed while refueling (sabotage will be suspected) at Brindisi on November 9; she is replaced on her routes by the older S8 *City of Khartoum*. Later in the same month, the DH 66 *City of Jodhpur* is lost in a crash in Southern Rhodesia.

During December, the remaining DH 66s are withdrawn: *City of Baghdad* and *City of Karachi* are scrapped while *City of Basra*, *City*

of Cape Town, and City of Delhi are sold to the Royal South African Air Force. During the same period, representatives from the governments of the U.K., Canada, and Ireland meet in Montreal to review the Empire's options with regards to transatlantic service. The officials agree that airfields should be built by the Canadians at Montreal and Newfoundland (paid for by London) and that all aircraft flying the North Atlantic in either direction would land at an Irish airfield.

While on landing approach to Alexandria on the evening of December 31, all three engines of the S8 *City of Khartoum*, piloted by Capt. W. Rogers, suddenly stop out of fuel and cause the aircraft to crash into the sea off Alexandria. The crew sent to prepare a flare path is unable to find the sinking flying boat and it will be several hours later before *H.M.S. Beagle* comes upon the scene. Of the 12 passengers, only the pilot, Capt. V. S. Wilson, is saved. A week later, 71 bags of mail will be recovered from the sea floor and are forwarded by steamship. Also on the same night, the *City of Stonehaven* arrives at the same destination with but 12 minutes of fuel left. An inquiry into the two incidents result in all of the Calcutta-class flying boats having their fuel capacity increased by 50 gallons.

Chairman Geddes is able to report to the annual meeting at year's end that a total of 68,372 passengers have been carried on the year. At the time of his report, no one knows that this will be the highest number the carrier will ever board within a 12-month period. Still, of these, only 410 have flown to India or beyond. The profit jumps to £133,769, in addition to an additional £31,593 not attributable to the year.

In January 1936, the U.K. government requires the Armstrong-Whitworth concern to concentrate upon the building of its new Mk. I Whitley bomber, thereby pushing back the delivery schedule for IA's 14 Ensigns requested two years earlier. An east to west trans-Africa mail route is extended on February 9, when the first segment is proven. Capt. O. P. Jones initiates this return service trial from Khartoum to Kano via El Obeid, El Pasher, Geneina, Abecher, Ati, Port Lamy, and Maidugari, with the DH 86 *Daedalus*.

On February 10, the AW 15 *Atalanta Artemis*, which had departed London for Cape Town nine days earlier, crashes while taking off from Pietersburg. Although the aircraft must be written off, no injuries are reported. The recovered mail is forwarded by railroad. Regularly scheduled Kano to Khartoum flights commence on February 17.

During the month, IA surrenders its exclusivity over the service area north of the London-Berlin line and the U.K. government signs a mail contract with Whitehall Securities, Ltd., which has air transport ideas of its own. The carrier agrees with **Pan American Airways (PAA)** that the two companies will, when prepared, fly two return flying boat services per week from New York to England.

At the beginning of March, a British government committee, chaired by Sir Warren Fisher, recommends that IA concentrate on Empire routes and that a second subsidized British airline be created for European operations. It also recommends that a subsidized airmail service be established to compete with the French and Germans on the South Atlantic. The General Post Office will pay the state carriers of those two nations £87,500 to carry British letters to Brazil this year alone. No subsidized services for either Europe or Brazil will be completed and by 1939 the cost of allowing **Deutsche Luft Hansa, A.G.** and **Air France** to fly British mail will rise to £118,000.

In the air estimates published during the month, Imperial Airways is granted funding for transatlantic bases (£75,000), experimental proving flights (£20,000), and scheduled flights to Bermuda (£18,000).

On March 14, London-Hong Kong service is begun, with the DH 86 *Dorado* flying the final segment from Penang to Hong Kong via Tourane and Saigon on March 23. This regularly scheduled service allows mail to reach Hong Kong from England in just 10 days, instead of the 34 previously required by ship. Incidentally, private pilot Ong Eee-lim, nestled atop 16 bags of mail in the *Dorado*'s cargo bay, becomes the first regular airline service passenger to fly into Hong Kong, arriving on the March 23 flight.

Meanwhile, on March 17, a former IA passenger is fined £10 in the Croydon police court for smoking aboard one of the HP 42 *Heracles*'

Paris return flights. The case is the first in Britain involving the prosecution, conviction, and punishment of an airline passenger for smoking aboard an aircraft in flight. The landplane terminus of the South African sector is shifted from Cape Town to Johannesburg on March 24 and on March 27 Hong Kong to Penang flights begin via Saigon and Tourane.

On March 20, the schedule for the Africa route is changed, with departures now announced for Tuesdays and Fridays instead of Wednesdays and Sundays. The mailplane departing London on this date will be the last to complete a through run to Cape Town.

With the coming of spring, the company, hoping to take advantage of the introduction of new roulette gaming at le Touquet's casino, introduces a seasonal series of one-day or weekend flights to the French city employing two dedicated HP 42s plus the *Scylla* and *Syrinx*. Passengers are promised free limousine service and those choosing to return to London on Sunday nights will receive a free dinner served in flight.

With the conclusion of the March 24 flight from London on April 1, IA terminates its Africa route at Johannesburg, turning over all responsibility for South African internal flights to **South African Airways (Pty.), Ltd.**

In association with **Qantas Empire Airways (Pty.), Ltd.** on May 6, the London-Brisbane route is duplicated. Piloted by John Lankester Parker, the first 17-passenger, 4-engine Shorts S23 Empire- or C-Class flying boat *Canopus* makes its inaugural test flight on July 3. Having been ordered in quantity (28) even before the first is built, the type represents one of the first great aircraft gambles in commercial airline history. On July 30, the SSA announces government plans for transatlantic air operations.

As the result of his unwelcome covert efforts to succeed Chairman Geddes, the activities of the Permanent Secretary to the Air Ministry Sir Christopher Bullock become the subject of an August inquiry. The committee of inquiry looking into his case finds the gentleman to have exercised bad form in bending the rules governing private gain for officials and he is forced to resign, being replaced by Sir Donald Banks.

The wholly owned subsidiary **Imperial Airways (Bermuda), Ltd.** is formed on August 22; the same day, the S17 *Scipio* alights heavily at Mirabella, Crete, and sinks (two dead). The mail sacks are brought up from the sea floor within six hours and the letters and cards are delivered by surface ship to Athens for transshipment.

At month's end, the HP 42 *Horsa*, attempting to make up time by flying to a night landing at Bahrain, fails to make appropriate contact with the IA station there and flies on in darkness to a forced landing 100 miles into the desert. The passengers are rescued by the RAF the next day and the plane, refueled, is ferried back to Bahrain.

The second S23 Empire flying boat *Caledonia* makes its first flight on September 11; after she has been stripped of her usual cabin furnishings and outfitted with 2,300-gallon extended-range fuel tanks, it is hoped that she can make a North Atlantic crossing before year's end. Having departed London for Australia on September 25, the Boulton Paul P-71A *Boadicea* crashes into the English Channel; there are no survivors. Most of the mail washes up on beaches along the coast of France or England over the next few months and is returned, as possible, to senders.

Just prior to departure from Delhi on September 29 for a continuation of the service from London to Australia, the AW 15 *Athena* catches fire on the runway; although all aboard escape, the aircraft is destroyed. Most of the mail is recovered (some burned) and delivered later.

Whitehall Securities, Ltd., registers the private carrier **British Airways, Ltd. (1)** on September 30. Also during the month, the Australian government accepts terms of the Empire Air Mail Scheme, with reservations that must be considered by the U.K. government.

By early fall, radio telegraph stations are nearly finished at Foynes and Rineanna, on the Shannon River in Ireland; work is also advanced on transatlantic facilities on Newfoundland. On October 15, the trans-Africa Kano route is extended via Kaduna, Minna, and Oshogbo to Lagos. Mail service from England to Lagos is now reduced from 19 days by sea to 6 by air. With no radio direction stations along the route, all flights from Khartoum to Lagos and back must be made in daylight.

Having departed Rochester, near the Thames estuary, on October 22, the first Short S23 Empire-Class flying boat, the *Canopus* piloted by Maj. Brackley, begins a proving service with it to Alexandria, Egypt. Having arrived via Bordeaux and Marseilles at Lake Bracciano, Rome, Brackley is relieved by Capt. F. J. Bailey, one of the original **British Marine Air Navigation Company, Ltd.** flyers, who takes the ship on to Egypt.

Return service from Lagos to Khartoum begins on October 20. In the first scheduled flight employing the new flying boat, Capt. Bailey's *Canopus* returns to Rome in slightly over 7 hrs. via Brindisi, Athens, and Mirabella on October 30.

On November 2, Capt. Bailey makes the delivery flight for the S23, *Caledonia*. With the waters around Newfoundland frozen, a plan to fly her on a trial mission across the North Atlantic must be scrapped; she will be sent on a long-range flight to the Far East instead. The S23s *Centaurus* and *Cavalier* are also delivered during the month. They will be followed into service by the *Castor* in December. The independent competitor **British Airways, Ltd. (1)**, owned by Whitehall Securities, Ltd., merges the independent companies **Hillman Airways, Ltd., British Continental Airways, Ltd., Highland Airways, Ltd., and Northern and Scottish Airways, Ltd.** on December 11.

Beginning its flight under the command of Capt. Cumming on December 13, the *Caledonia*, flown by Capt. A. S. Wilcockson, makes a roundtrip multistop flight to India carrying 5 1/2 tons of Christmas mail on each run. On December 21, continuing on with the Christmas mail, the *Caledonia* flies 1,700 miles nonstop Alexandria–Marseilles in 11 1/2 hours; the next day she flies 4 hr. 15 min nonstop to Southampton from Marseilles.

After Egypt agrees to join the upcoming Empire Air Mail Scheme in December and pays a 22,500 subsidy to IA, the *Centaurus* is dispatched to Cairo with the first shipment of airmail.

During the fourth quarter, a unit from the independent Strand Films receives a commission to make a motion picture concerning the carrier's imperial air routes. It is hoped that the enterprise will be as successful as *China Clipper*, which had been made in cooperation with **Pan American Airways (PAA)**. By year's end, Strand has captured over 50,000 feet of images.

At the annual meeting at year's end, Chairman Geddes reports that enplanements for the year have dipped to 60,367; however, a profit of £140,705 has been generated, plus £7,487 not attributable to the year.

Instead of sending the usual Paris to Brindisi airmail by rail between those two points, sacks are sent by train only between Paris and Marseilles, beginning on January 2, 1937. On January 4, the S23 *Castor* inaugurates regularly scheduled Marseilles–Alexandria via Rome (Lake Bracciano), Brindisi, and Athens service. The first IA all-air Southampton–Alexandria service is begun by the S23 *Centaurus* on January 12 via Marseilles, Rome (Lake Bracciano), Brindisi, Athens, and Mirabella; an Alexandria–Southampton return service is started by the S23 *Cassiopeia* on January 26. The latter now constitutes the final leg of the regular service from India.

The unsubsidized London–Brindisi service started in April 1935 is withdrawn during the month. Capt. H. W. C. Alger, flying the S23 *Castor*, begins regularly scheduled Southampton–Alexandria service after a false start on February 6. In preparation for service on the North Atlantic, the S23 *Caledonia* flies the 2,222-mile Southampton–Alexandria run nonstop in a record 13 hrs. 5 min. on February 18. The British government on February 22 approves reciprocal transatlantic flying boat services with **Pan American Airways (PAA)**. Also during the month, the Australian reservations concerning the Empire Air Mail Scheme are allayed.

The new company flying boat base at Hythe, near Southampton, is opened on March 5 and from this date on, IA landplane flights are ordered restricted to Europe. Flights to Africa and Australia will be conducted from the new flying boat base at Hythe, in Hampshire starting the next day.

On March 24 while transporting the first through mail for Australia, the new S23 *Capricornus* runs into a blizzard over the French Alps and

becomes lost. The plane ices up and crashes into a mountain near Lyon, killing five of six crewmen aboard. The radio operator alone survives and pushes through deep snow to find a farmhouse and sound the alarm. All of the bodies are recovered, along with the mail, which is forwarded on by the next available aerial service.

To investigate icing conditions reported by his DH 86 pilots on the Cologne run, the European Division's chief, Capt. Wooley Dod, takes a night flight over the route at month's end to see for himself. The de Havilland in which he is flying encounters a snowstorm and crashes, killing all aboard.

At the beginning of April, a subsidy of £25,500 is received to allow continuance of the London–Hong Kong mail service. The Cologne and Leipzig stops on the London to Budapest service are suspended on April 5 in favor of Frankfurt in order to provide a connection with the rigid airships of **Deutsche Zeppelin-Reederei, GmbH**. The S23 *Cavalier* is taken off Mediterranean services and is broken down. Repacked in 21 crates, she is shipped by steamer to Bermuda, where she will be reassembled and readied for her Bermuda–New York trials.

On May 2, the 40,000th Channel crossing is logged by the HP 42W *Heracles*. S23s assume, on May 15, responsibility for the South African route as far as Kisumu, Lake Victoria, the first flight from Cairo being inaugurated on that day by the *Capella*. The mail flight departing Southampton for South Africa on May 21 is the 1000th made over an Empire route. On May 23, Capt. D. C. T. Bennett, flying 14 passengers and 3,000 pounds of mail in the S23 *Cassiopeia*, makes the first one-day Alexandria–Southampton flight in 18 hours.

Bennett, who will become a major figure with the prewar airline, is well remembered by Alan Bramson in his *Master Airman: A Biography of Air Vice Marshal Donald Bennett, CB, CBE, DSO* (Shrewsbury, Eng.: Airline, 1985).

On May 27, the S23 *Cavalier*, piloted by Capt. M. Alderson, flies a proving route over a 700-mile route from Bermuda to New York in just under 6 hours. A **Pan American Airways (PAA)** Sikorsky S-42 simultaneously flies from New York to Bermuda. Six days later, the wholly owned subsidiary Imperial Airways (Atlantic), Ltd., is formed. A hanger fire at Karachi on May 31 destroys the HP 42W *Hengist*. During the month, both the S23s *Corsair* and *Castor* are slightly damaged in incidents while on the water.

Following a May meeting at the Greyhound Hotel at Croydon, the British Airline Pilots' Association (BALPA) is formed, with Lord Chesham as president and Lord Amhurst as vice president. Two pilots each from IA and **British Airways, Ltd. (1)**, plus one each from Surrey Flying Services and **Olley Air Services, Ltd.** make up the original organizing committee. Lane Burslem and Senior Captain W. Rogers are recruited to serve as the new chairman and vice chairman. At the Airways House company headquarters in London, orders are issued for most landplane pilots to undertake a summer of retraining learning to fly the Empire boats.

Capt. E. H. Attwood, flying the S23 *Canopus*, departs Southampton on June 2, inaugurating 20-stop England–South Africa through passenger and mail flying boat service. The route to Kisumu is the same as flown earlier; however, at that point, the *Canopus* travels to Mombasa, Dar es Salaam, Lindi, Mozambique, Quelimane, Beira, Inhambane, Lourenco Marques, and to Durban.

On June 4, the S23 *Cambria*, which like the *Caledonia* has been outfitted with long-range fuel tanks for transatlantic work, completes a survey of African flying boat routes. The S23 *Courtier* begins the return route from Durban to London on June 6. The AW 15 *Amalthea* makes the final IA departure from Johannesburg on June 7; thereafter, all return service between South Africa and England will be operated by flying boats.

The flag carrier's capitalization is increased on June 18 to £5 million. On June 24, the old Kent Class flying boat *Satyrus* departs Alexandria on the first leg of an 18-stop survey flight to Singapore via Lindi, Tanganyika. The flight will examine possible marine facilities for a planned extension of S23 service to Singapore.

Secretary of State for Air Viscount Swinton unveils the Empire Air Mail Scheme on June 29. The rate for "All Up" African letters is set at 1 1/2d. per half-ounce. With 3,500 pounds of unsurcharged mail, the S23 *Centurian* lifts off Southampton Water for Sudan, East and South Africa on the program's inaugural flight. Upon the death of Sir Eric Geddes, his longtime confidant and chief financial officer, Sir George Beharrel, becomes company chairman.

The first return transatlantic survey flight by an S23, the *Caledonia* piloted by Capt. A. S. Wilcockson, with C. H. Bowes, T. E. Hobbs, and T. A. Vallette, departs Foynes, Northern Ireland, on the evening of July 5. Flying at 1,000 feet, the *Caledonia* arrives at Botwood, Newfoundland, 15 hrs. 26 min. later. On July 6, the S23 *Cambria* makes the first flying boat proving flight Southampton-Lisbon. The *Caledonia* flies on to visit Montreal on July 7 and the **Pan American Airways (PAA)** flying boat base at Port Washington, Long Island, New York on July 8 before returning to the U.K. on July 16. Meanwhile, the Bermuda to New York service, run in alternate directions by the British and U.S. carriers, continues weekly.

On July 23, the HP 42W *Heracles* boards its 80,000th Paris-bound passenger. Three days later, on July 26, company officials meet at Dublin with executives from the British and Irish governments and **Pan American Airways (PAA)** to examine issues of common concern, including weather forecasting, postal services, and signal codes in preparation for the reciprocal transatlantic service of the two carriers.

Designed to serve as midair launch platform for the seaplane *Mercury*, the Short S21 *Maia* makes its maiden flight from England's Medway River on July 27. The S23 *Cambria*, piloted by Capt. Powell, with C. F. Elder, C. A. Woods, and J. H. A. Lewis, flies from Foynes to Botwood on July 29-30.

Using the best footage from the 50,000 feet of film shot late the previous year, Strand Films producer Paul Rotha, under commission to Imperial, creates and releases the celebratory *The Future's in the Air*. With narration written by Graham Greene, the documentary traces the route of an airmail letter from Australia to Southampton. Also using shots from the 50,000-foot film cache, the Strand release *Air Outpost* depicts activities at the Persian Gulf airport at Sharjah.

Between August 6-9, the S23 *Ceres* makes an Alexandria-Karachi proving flight flying via the Dead Sea, Habbaniyah, and Sharjah. The aircraft is forced to employ the Dead Sea rather than Lake Galilee because of local religious objections. Meanwhile, the *Cambria* returns to Foynes on August 8-9. Six days later, on August 15, Capt. Wilcockson's *Canopus* returns to Botwood; the flight back to Foynes occurs on August 20-21. The *Cambria* flies again to Botwood on August 27.

Designed to lift off from the S21 *Maia* flying boat in midair, the Shorts S-20 *Mercury* makes its maiden flight from Medway, England, on September 5. The *Canopus*, too, makes another test flight from Foynes to Botwood on September 13-14, returning to Foynes on September 23-24. Completing another New York survey flight, the S23 *Cambria* returns Botwood-Foynes on September 27-28 in a 10 hr. 36 min. hop. During September, the AW-15 *Athena* is destroyed in a Delhi hangar fire and the Bermuda to New York service is duplicated.

The Air Ministry, on October 1, imposes new safety requirements upon the company as well as other British carriers. For the first time, passengers and crew must wear seatbelts. Aircraft seating more than 10 must have a pair of fire extinguishers and oxygen must be available for use on flights above 15,000 feet. In aircraft cockpits, artificial horizons and directional gyroscopes are now necessary.

The same day, the S23 *Courtier* lands so heavily on the sea at Phaleron Bay in Athens that it cracks open and sinks (three dead). Most of the mail, which had been en route to England from India, Iraq, and Egypt, is recovered and forwarded. This disaster will lead the Air Ministry to require the use of seat belts on all British airliners.

On October 3, the S23s *Clio* and *Calypso* inaugurate five-day Southampton-Alexandria and Alexandria-Karachi service. From this point, flying boats are employed to operate the entire eastern route as far east as India. The route, however, is changed; from Alexandria, the air-

craft operate via the Lake of Galilee, Lake Habbaneyeh at Baghdad, Basra, Bahrain, Dubai, Gwa Jor, to Karachi.

On October 4, the Budapest service is suspended. Between October 6-7, the S23 *Caledonia* flies a proving run Southampton to the Azores and on October 7, the S23 *Camilla* launches two-day Karachi-Alexandria flights.

On October 13, the DH 86 *Delia* extends the Lagos route to Accra on the Gold Coast; this new service is operated in conjunction with Elder-Dempster Steamship Lines, Ltd. Two days later, the L.17 *Satyrus* departs Alexandria for a second two-week proving flight to Singapore, arriving in Malaya on October 29.

During the month, the company introduces a new two-tier pay scale for its pilots, with new hires earning considerably less than veterans.

After objecting to the carrier's aging equipment, high fees, and new two-tier wage system, six of the leaders of the new pilots union BALPA, including Chairman Capt. Lane-Burslem and Vice Chairman Capt. W. Rogers, are summarily fired by new Chairman Beharrel. Air Superintendent Brackley, originally appointed to represent pilot concerns, is unsympathetic when many of the flyers express their dismay over developments at the union's strike meeting.

BALPA's council requests that the carrier recognize their group and discuss the action against the dismissed pilots; solicitors for IA answer for the company, upholding the justification of the firings. For this and other, safety- and equipment-related reasons, along with the airline's declaration of a 7% dividend during the month, BALPA Vice Chairman Robert Perkins, a Conservative Member of Parliament (MP) from Stroud, speaks out in the House of Commons on October 27.

Orders are placed on November 10 for three DH 91 Albatross aircraft, to be known at IA as the Frobisher or "F" class; these will be christened *Frobisher*, *Falcon*, and *Fortune*. The S23 *Cordelia* leaves Karachi on November 15 on a six-day proving flight to Singapore.

Following weeks of claims and counterclaims by the fired pilots, unions, airline safety and administration, airliners, and government subsidy, MP Perkins introduces a motion in the House of Commons asking for an inquiry into British civil aviation, issuing a long list of allegations built around the various public issues.

When Perkins sits down, his motion is seconded by MP Moore-Brabazon (later Lord Brabazon of Tara), himself holder of the nation's first civil pilot's license. A Committee of Inquiry into Civil Aviation, under the chairmanship of Lord Cadman of the Anglo-Iranian Oil Company, is formed on November 17 in the House of Commons. Other members include MPs J. W. Bowen and Sir Frederick J. Marquis, plus T. Harrison Hughes and, as secretary, Air Ministry official W. W. Burkett.

The first meeting of the Cadman Committee is held on December 2. Both sides are invited to send position papers (IA provides a 32-page document, with 32 pages of appendices) and provide witnesses to be interviewed.

On December 3, Capt. J. W. Burgess' S23 *Centaurus* departs Southampton on the first leg of a 24-day survey flight to Auckland, New Zealand. Piloted by Capt. Mollard, the S23 *Cygnus* fails takeoff from a choppy sea at Brindisi on December 5 and crashes. Two aboard are drowned before rescue and all of the others, including IA Director Salmond, are injured. Three days later, the *Horatius* carries the 250,000th Paris-bound passenger aboard an HP 42 airliner. The Penang, Saigon, and Tourane segments of the Hong Kong route are abandoned on December 19 in favor of routing via Bangkok, Udorn, Hanoi, and Fort Bayard. The *Centaurus* reaches Auckland on December 27.

Also during December, letters transported on the "All-Up" scheme are found to be underfranked. When the error is discovered, special "Christmas Concession Labels" are attached to all envelopes originating in Great Britain, South Africa, Northern Rhodesia, Southern Rhodesia, Kenya, Nyasaland, and Mauritius.

Enplanements for the year, the last for which passenger traffic figures are available for the unmerged carrier, total 62,105 (as of March 31, 1938). With a network of 80,000 unduplicated miles, the carrier now op-

erates more air route mileage than any other in the world. During the year, the last two Short S8 Calcutta flying boats, the *City of Athens* and *City of Swanage*, are withdrawn and sold. At the annual meeting, Sir Francis Joseph succeeds Sir Walter Nicholson as a government representative to the board and a £164,735 profit is announced, not including £12,229 attributable to the year.

The Short *Mayo* composite aircraft begins taxi trials at Southampton on January 1, 1938. The first official takeoff occurs on January 19; however, during final trials the previous day, *Mercury* test pilot John Parker had inadvertently become airborne. On January 23, under the direction of Sir Alan Cobham, company advisor and founder of **Flight Refueling, Ltd.**, the Armstrong Whitworth AW-23 bomber and transport prototype, acquired on loan from the Air Ministry, refuels the S23 *Cambria* in the first British flying boat in-flight refueling test. The demonstration, made offshore from Southampton, illustrates the possibility of extending the transatlantic range of British aircraft.

During the first quarter, Air Chief Marshal Salmond departs the board to assist in the nation's rearmament process. He is succeeded as a government representative to the board by Sir James Price. Except for the departure of Managing Director Woods-Humphrey a few months hence, the Price appointment is the last change in IA board membership.

On February 6, the piggyback Short *Mayo*, comprising the S21 flying boat *Maia*, piloted by Capt. D. C. T. Bennett and A. J. Coster, and the S20 seaplane *Mercury*, flown by Harold Piper, first successfully separate in midair over Rochester when the *Mercury* departs the *Maia*. Meanwhile, company operations at London (LGW) are temporarily transferred to Heston as the result of the mud conditions at the London field.

After 30 meetings, the Cadman group's *Report of the Committee of Inquiry into Civil Aviation* is delivered to the Secretary of State for Air on February 8; it will be published as a pamphlet a month later. The document offers several recommendations that will be acted upon within a year or so. Among these are coordination of effort between IA and **British Airways, Ltd. (1)**, with the former concentrating on international services and the latter on further penetration to Continental markets as well as to South America. Routes to South America, the West Indies, and the Far East should all be subsidized, while a private company, jointly owned by the two majors, should be established to operate the London-Paris return service.

It is further recommended that more medium-range airliners be built and that the government's civil and military sectors be more closely linked, though not as closely as those in Germany. With Air Ministry agreement, RAF bomber pilots now begin to fly as copilots on company services to Germany, so as to familiarize themselves with the aerial view of the Third Reich. Additionally, it is further recommended that a full-time chairman/CEO be appointed. This view becomes the most controversial of the report and will bring several months of often public debate within the government and aviation circles concerning the position of Managing Director Woods-Humphrey.

A week later on February 17, the S23 *Coogee* departs Southampton for the final proving flight to Singapore via India. The Empire Air Mail Scheme is extended to Singapore on February 23 as the S23 *Centurian* departs Southampton for the Far East on the first flight without surcharge over this scheduled route. The same day, the Shorts *Mayo* makes a second separation flight off Southampton, this one recorded by newsreel cameras. The *Centurian* arrives at Karachi on February 27, meeting the **Qantas Empire Airways (Pty.), Ltd.** S23 *Coolangatta*, which continues on to Singapore. The first "All Up" mail from Ceylon is dated February 28; that from Egypt and India and from Singapore will be dated March 1 and March 2, respectively.

Also during the month, company executives join those from **Pan American Airways (PAA)** in a meeting in Canada with British and Irish government leaders where it is agreed that the weather forecasting and communications procedures of the two airlines will be standardized.

On March 1, the Karachi-Singapore service is terminated at Calcutta and on April 10 the S23 *Centaurus* departs Southampton on the first leg of an accelerated three-day service to Karachi. Cutting a day and a half

off the previous time, the S23 *Ceres* departs Southampton on April 13 inaugurating accelerated two-day England-South Africa return service. By the end of the month, flights from London to Karachi require just three days, while those to Singapore take five and a half and Brisbane can be reached in nine days.

On April 28, a French fishing boat in the English Channel recovers a sack of mail that had been lost when the Boulton Paul P-71A *Boadicea* had crashed on September 25, 1936. Postal authorities return (when possible) all letters and postcards to senders.

Also during the spring, Capt. Powell is dispatched to Bermuda to serve as station manager for the New York service (and backup pilot to Capt. Alderson).

On May 5, IA begins to accept mail in London for a service from Baghdad to Tehran via Kermanshah. In addition to the cost of a letter to Baghdad, each envelope traveling on to the Iranian capital costs 3d. per half-ounce.

On June 3, Chairman Beharrel is visited by Sir John, later Lord Reith, respected Director General of the British Broadcasting Corporation (BBC), who has been sent over by Prime Minister Neville Chamberlain's assistant, Sir Horace Wilson, to inform Sir George Beharrel that the government desires the ex-BBC headman as its new airline CEO.

Discussion on the fate of Woods-Humphrey intensifies. Sir Kingsley Wood now informs the House of Commons that Reith has been appointed and that director Sir James Price will conduct an inquiry into rumored management failures. Following the lengthy and often public debate concerning his tenure, longtime Managing Director Woods-Humphrey, stung by certain Cadman Report criticisms and the threat of an inquest by Sir James, finally resigns from his £7,000-per-annum position, effective June 30. He does, however, agree to remain available to assist the new chairman until he can reorganize the company.

Many of the 3,600 company rank-and-file employees from IA's 111 stations around the world send messages of support to the managing director and two days before he leaves, a testimonial dinner is given for Woods-Humphrey by members of the carrier's senior staff, during which event he receives a huge silver salver.

The S23s *Camilla*, *Cordelia*, and *Challenger* depart Southampton on June 26 to inaugurate the first through flying boat service to Australia. Also in June, the last remaining Kent Class flying boat, the *Satyrus*, is broken up at Hythe on Southampton Water. In Africa, the Elder Dempster shipping company acquires a Short Scion flying boat and, in support of Imperial's Empire mail operation, opens a cooperative contract mail route weekly from Accra to Bathurst and Free-town.

Sir John Reith moves from the BBC to become the new chairman on July 1, succeeding Sir George Beharrel, and Sir James Price remains a director. The former works to improve relations with BALPA pilots while the latter will conduct his investigation into the previous administration's management failures—finding none that stand. Reith soon comes to appreciate the work of ex-Managing Director Woods-Humphrey and years later in his memoir *Into the Wind* (London: Hodder & Stoughton, 1949) pays him tribute: "Woods-Humphrey personally handled an inordinate amount of detail, so that to a great extent the whole business had depended upon him. With his departure, no one in Imperial Airways knew where they were."

Having reached Singapore, the *Challenger* begins to operate, on July 2, the Singapore-Sydney segment of the U.K.-Australia route. The *Camilla* and *Capella*, meanwhile, fly on to Darwin; the seven British journalists accompanying the two flying boats are appalled by the lack of preparation made by the Australians for their arrival.

In the first commercial mail crossing of the Shorts combination aircraft, the *Mercury*, piloted by Capt. D. C. T. Bennett, with Radioman A. J. Coster, on July 20-21, separates from Capt. A. S. Wilcockson's *Maia* near Poynes. The *Maia* returns to base and the *Mercury* then flies 2,930 miles nonstop to Montreal in a record 20 hrs. 20 min., proceeding hence to Port Washington, New York. The S20 returns to the U.K. via Botwood, the Azores, and Lisbon on July 25-27.

The Empire Air Mail Scheme is extended to Australia, New Zealand, and the Western Pacific on July 28 as the S23 *Calypso* departs during the day from Southampton. A special souvenir booklet is issued to mark the occasion and the significance of the service is noted, including that "the postage for letters is now three-halfpence a half-ounce and a penny for postcards. The airmail fee has been abolished."

The month is closed out with the assignment of DH 86s to the four-stop London (Croydon)–Frankfurt service and the loss of the AW-15 *Amalthea* in a Kisumu crash.

The Empire Air Mail Scheme extends to Hong Kong on September 2. During the Munich Crisis of September 22–24, the HP 42W *Heracles* evacuates British residents of Prague back to London.

Also during the month, former Managing Director Woods-Humphrey is sent to New York to ascertain the progress of **Pan American Airways (PAA)** toward the introduction of regular transatlantic service. He will report that the American enterprise is so well advanced that it might be necessary to seek a way to share that pioneer's new facilities in Portugal and the Azores.

By late summer, Chairman Reith is well advanced on his company reorganization. Maj. Brackley, whose post of air superintendent has been abolished, is dispatched to survey the West Coast of Africa at the beginning of September. It is hoped he can find new routes to replace any that would be endangered should war come with Germany.

The first Armstrong-Whitworth AW-27 *Ensign* is delivered at Croydon on October 5 and christened *Ensign*. On October 6–7, after separating from the *Maia*, Capt. Bennett's *Mercury* establishes a long-distance seaplane record, flying the 6,045 miles from Dundee to the Orange River (not far from the Alexander Bay diamond mining settlement in South Africa) in 42 hrs. 5 min. The achievement breaks the record set on August 10 by the New York flight of **Deutsche Luft Hansa, A.G.'s** FW-200S-1 *Brandenburg* and is still considered the current world distance in a straight line record for seaplanes.

The first DH 91 is accepted on October 17 and christened *Frobisher*; it makes a demonstration flight from Croydon Airport to Paris on October 20. The AW-27 *Ensign* is placed in ad hoc service on the scheduled Paris route on October 24; the new DH 91 *Frobisher* begins ad hoc service on the same route on November 25, flying it in 53 minutes.

On November 11, as a result of the findings of the Cadman Committee, Minister of State for Air Sir Kingsley Wood announces in Parliament the government's intention to merge IA and the competing independent, **British Airways, Ltd. (1)** into a new state airline, **British Overseas Airways Corporation (BOAC)**. Private shareholders will now be bought out and an issue of fixed interest stock will provide funding to cover the acquisition, as well as future expenditures. Chairman Reith and his chief assistant, Leslie Runciman, begin to draft guidelines for the new flag corporation. British Airways (1) Chairman Clive Pearson is invited to become deputy director, with Runciman and Harold Brown becoming directors. Director I. C. Geddes is retained.

While en route from London to India, the S23 *Calpurnia*, carrying mail but no passengers, encounters a fast-rising sandstorm while trying to land on the lake at Habbaniyah on November 27; the storm causes the flying boat to crash (four dead). Most of the letters and cards are recovered and forwarded.

As the month ends, the carrier's subsidy to operate DH 86s from Penang to Hong Kong is increased to £56,000; some of the funding comes from the colonial governments of Malaya and Hong Kong.

Also in November, the U.K. government, pushed into faster rearmament by the Munich Crisis, not only refuses to allow IA to consider acquisition of several long-range Focke-Wulf Fw-200 Kondor airliners, but, given the new priority requirements of the RAF, halts North Atlantic flying boat trials until the following year.

In early December, the Elder-Dempster Shorts Scion, flying the mail weekly from Accra to Bathurst and Freetown in Africa, is found to have significant seawater-caused defects. It must be taken out of service while a repair team is sent down from England to affect repairs.

On December 18–19, the *Frobisher* and her new sister, the *Falcon*, fly Christmas mail to Alexandria. At the same time, Capt. Bennett's *Mercury* flies nonstop from Southampton to Alexandria with a cargo of mail.

It might be noted here that this year, under the pseudonym of "A Flying Boat Pilot," Capt. Bennett publishes his short but excellent guide to flying the airline's flying boats, *The Air Mariner* (London: Pitman, 1938).

Three of the newly delivered AW-27s are ordered to take Christmas mail to Australia. The *Egeria* must have a failed engine changed at Athens before proceeding, while neither the *Elsinore* nor *Euterpe* make it as far as India before their Tiger engines also break down. They and their six sisters will be returned to their manufacturer; Armstrong Whitworth replaces the power plants with U.S.-made Wright Cyclones and pays IA a £42,500 settlement to avoid a suit.

Bookings for the year are 191,485 and a £97,267 profit is reported to the air chief marshal; it does not include a £1,205 gain attributable to the year. Also at the general meeting, the chairman acquaints the carrier's shareholders with the proposal and negotiations concerning the merger with BA-1.

On January 8, 1939, the DH 91 *Falcon* flies Croydon–Marseilles in 3 hours. Two days later from the same point, the same plane flies to Brussels in a record 48 minutes. The DH 91 *Fortuna* inaugurates London (Croydon)–Zurich service on January 13; the service is suspended on January 31. Also in mid-month, the S-23 *Calypso* suffers engine failure while flying off the Normandy coast; a tugboat tows the aircraft into Cherbourg harbor, where repairs are made.

Capt. Alderson's S23 *Cavalier*, with 12 others aboard and en route to New York from Bermuda, is forced down by carburetor icing SE of Port Washington, New York, on January 21; rough seas cause the flying boat to sink within 15 minutes (three dead). Survivors of this, the first scheduled airliner to be lost over the Atlantic, are rescued by the tanker *Esso Baytown*. No replacement for the Empire boat is immediately available.

A final Dublin meeting between company officials and those from **Pan American Airways (PAA)** and the British and Irish governments in early March results in creation of the Transatlantic Air Service Safety Organization (TASSO). Having run out of fuel, the S23 *Corsair* makes a forced landing on the Dangu River (Belgian Congo) on March 14. Although the aircraft is holed and sinks, no injuries to anyone in Capt. Kelly Rogers' crew are reported. The mail is recovered and salvage operations commence when a rescue team arrives from Juba, 150 miles away.

The Croydon–Frankfurt via Brussels and Cologne service is withdrawn on April 15. The next day, joint IA/**British Airways, Ltd. (1)** London–Paris and London–Basel–Zurich service begins (the former flown by DH 91s and the latter by BA-1 Lockheed Model 14s). On the same day, overall travel times on the South African and Hong Kong routes are cut to 4 1/2 and 5 1/2 days, respectively.

The S23 *Challenger* crashes into a jetty while landing at Mozambique on May 1 and bounces off into shallow water, badly damaged (two dead).

Also during the month, the repaired Elder-Dempster Shorts Scion seaplane, out of service since the previous December, is able to resume its weekly mail flights on behalf of Imperial from Accra to Bathurst and Freetown via Conakry and Boulama.

The negotiations with the government concerning the takeover being completed, an extraordinary meeting of Imperial shareholders occurs on May 22 in which they vote to approve the chairman's acceptance of the offer from the government. Stockholders are also informed that they will be able to obtain BOAC shares equal to an amount purchasable by their redemption money.

Sir Kingsley Wood, on June 2, introduces the BOAC Bill in the House of Commons; it receives a second reading on July 10. The financial terms of the legislation will have the government pay £2,659,086 for IA and £262,500 pounds for **British Airways, Ltd. (1)**.

The AW-15 *Andromeda* is, meanwhile, withdrawn from service. Two S23s are also lost, the *Centurion* to a crash in the Hooghly River at Cal-

cutta and the *Connemara* in Hythe when a refueling barge alongside it catches fire. These are the eighth and ninth Empire flying boats to be lost within just two years of delivery.

During the month, a new headquarters, under construction for two years, is occupied in Buckingham Palace Road. At the same time, as a result of the deteriorating political situation in Europe, the carrier draws up plans for the evacuation of Croydon should war occur and the establishment of a temporary base at Bristol. Departments are notified and essential personnel designated to remain behind to handle details.

Meanwhile, on July 3, the S23 *Clyde* departs Southampton on the first leg of Imperial's U.K.–India terminating service. Also during July, repairs are completed to the *Corsair* that had crashed in the Congo. Unhappily, the flying boat fails its takeoff run and is holed and sinks again while Capt. Rogers is preparing for a second liftoff attempt. It will be necessary to begin repairing her all over again.

By month's end, preparations are complete to launch transatlantic proving flights employing the S23s *Cabot*, *Caribou*, *Connemara*, and *Clyde*, all of which have been stripped of unnecessary internal furnishings and given extended-range fuel tanks. At month's end, the first of three new S26 G-Class flying boats, the *Golden Hind*, is delivered and employed for crew training.

The training of flying boat crews is demonstrated to the public in Ralph Keene's Strand Films production of *Watch and Ward in the Air*. The film, commissioned by Imperial, focuses on young pilots from their initial appointment through a first voyage out on an imperial air route. Also at this time, the General Post Office Film Unit's *Love on the Wing*, an early color animation by Norman McLaren, celebrates the Empire Air Mail Scheme. The BOAC Bill receives Royal Assent on August 4; the next day, the S23 *Caribou*, piloted by Capt. Kelly Rogers, launches weekly experimental mail service Southampton–New York via Foynes, Botwood, and Montreal. Refueling is provided in-flight by ex-RAF Hampton bombers of Sir Alan Cobham's **Flight Refueling, Ltd.**, operating from bases at Shannon, Ireland and Hatties Camp, Newfoundland (later the great air base at Gander).

Cobham will recall his services for both Imperial and Flight Refueling in his reminiscences, *A Time to Fly: The Memoirs of Sir Alan Cobham* (Concord, Mass.: Paul & Company Publishers Consortium, 1986).

Early in August, arrangements are completed for the temporary housing of personnel at Bristol should the need—now growing increasingly probable—arise. On August 9, Imperial sends all U.K.-based personnel a memorandum entitled "National Emergency," outlining evacuation and pay details, as well as information on how those in the military reserves should separate from the company.

During August, the Karachi–Calcutta service is suspended and at month's end it is noted that the HP 42s have, since their introduction in 1931, transported their customers over 2.3 million revenue-miles without a single passenger fatality.

Also during the month, the Elder-Dempster flying boat, conducting mail flights on behalf of the company under contract in West Africa, is put out of service when it strikes flotsam at its Accra mooring; war will prevent it from resuming flights. With war imminent, the brand new headquarters complex in Buckingham Palace Road is evacuated.

On August 30, an order is placed with the Douglas Aircraft Company in California for the purchase of nine DC-5s that are to begin delivery to New York for ocean-shipment in December. At midnight on the month's last day, all U.K. airlines are, upon receipt of a prearranged code word, ordered to evacuate Croydon Airport, as all of eastern England is put off-limits to civil aviation.

Poland is invaded on September 1 and, by mid-day, all of the company's aircraft present (except three out of service units) have been transferred to Whitchurch, near Bristol; there, IA and **British Airways, Ltd. (1)** officials take over the Grand Spa Hotel as their joint headquarters. A notice from the new headquarters indicates that the merger process will be advanced and that the joint move to Bristol "necessitates the working of the two companies as a single unit and this anticipates the formation of the Corporation."

On September 2, two AW-27s fly RAF officers to France. At the same time, scheduled services to Paris are suspended. Britain declares war on Germany on September 3.

The flying boats are ordered transferred from Southampton Water to Poole on September 9, while the Dragon Rapides and HP-42s are shifted to the airport at Exeter. Some Imperial aircraft begin support operations for the British Expeditionary Force in France under the aegis of National Air Communications. Incidentally, the DC-5 order is now cancelled, with down payment funds already paid slated for other Douglas types of use to the U.K. military.

By mid-month, the two carriers are well into a process of integration. On September 22, the DH 91 *Fortuna* introduces a seven-stop landplane route U.K.–Egypt. On the North Atlantic, the S23 *Cabot*, with in-flight refueling, flies the Foynes–Botwood segment on September 23–24 in a record 13 hours.

The last of 16 weekly experimental New York S23 return flights, all refueled in flight, is completed and the program is terminated on September 30 as the *Cabot*, piloted by Capt. Bennett, alights back at Poole. There she, together with the *Calypso*, *Caribou*, are impressed into RAF Coastal Command to conduct antisubmarine patrols; the *Golden Hind* will also be taken over to conduct long-range maritime reconnaissance flights.

A special agreement is signed with **Air France** on October 11 under which joint service will be operated twice daily between the British and French capitals. During the fall, a route is started from Perth to Oslo and Stockholm, employing BA-1 aircraft. RAF Reservists serving with the company depart to the air service. Even Maj. Brackley, upon his return from his African survey, volunteers, becoming a Coastal Command squadron leader. AW Ensigns immediately resume flying the British schedule. Returning from France on November 7, the HP 42W *Horatius* is wrecked in an emergency landing. BOAC is formally established on November 24, purchasing the assets of its two predecessors for £2,920,000.

Repaired once more, the flying boat *Corsair*, which had made a forced landing in the Belgian Congo 10 months earlier, is flown off the Dangu River by Capt. Kelly Rogers on January 6, 1940 and returns to Alexandria via Juba. During the months of salvage, a native village is established at the wrecksite; Corsairville still exists. In January and February, the S23s *Clio* and *Cordelia* pass to the RAF, along with the new S26 flying boats *Golden Fleece* and *Golden Horn*.

On March 1, en route Jiwani–Sharjah, the HP 42 *Hannibal* is lost over the Gulf of Oman (eight dead), leading to the withdrawal of the type from the Cairo–Karachi route. The mail is not recovered.

Clive Pearson succeeds Sir John Reith as company chairman on March 6. The last documentary film commissioned by Imperial's public relations department is, upon its release, the most controversial. Directed by Donald Taylor, the Strand Films release *African Airways* is not only a depiction of the flying boat service from Southampton to Cape Town but, in its closing scenes, becomes a political statement when the luxury of the imperial traveler is contrasted with the living conditions of South Africa's native population.

Capt. Lloyd C. "Digger" Ifford, who has flown the London–Paris service since 1924, now stands down; he will publish his memoirs in 1949, *Immortal Era: The Birth of British Civil Aviation* (Montreal, Que.: Adanac Press).

A storm at Whitchurch airfield on March 19 destroys the HP 42s *Heracles* and *Hanno*. On April 1, **British Overseas Airways Corporation (BOAC)** officially assumes the operations of IA and **British Airways, Ltd. (1)** and the three surviving HP 42s, *Horsa*, *Hadrian*, and *Helena* are impressed into RAF No. 271 Squadron.

It might be added that, as a result of the war, none of the airways' stock noted at the May 22, 1939 special shareholders meeting is actually issued to members of the public. Rather, it is held by the Commissioners for the Reduction of the U.K. National Debt.

IMPERIAL COMMUTER AIRLINES. See **IMPERIAL AIRLINES**

IMPERIAL PALACE AIR: P.O. Box 97979, Las Vegas 89193, United States; Phone (702) 794-3394; Fax (702) 794-3392; Year Founded 1997. IPA is established at Las Vegas in 1997 to provide charter and inclusive tour services for gamblers visiting the city. Revenue flights commence with a single Boeing 727-200.

IMPULS AERO AIR TRANSPORT ASSOCIATION: Sovetskaya Str 26, Bykovo Town, Moscow, 140120, Russia; Phone 7 (095) 166-2089; Fax 7 (095) 166-2100; Code IMR; Year Founded 1993. Established at Bykovo in the Moscow Region in 1993, General Director S. A. Popov's executive charter carrier begins revenue services to ad hoc destinations in Europe, Asia, Africa, and the CIS with a single Yakovlev Yak-40. A second Yak-40 is acquired in 1994.

Charters continue to be offered.

IMPULSE AIRLINES (PTY.), LTD.: Australia (1982–2001). Gerry McGowan and his wife, Sue, establish Impulse Airlines at Sydney in 1982 as the dedicated cargo carrier of the John Fairfax newspaper group. For the next decade, the concern's aircraft will transport issues of *The Sydney Morning Herald*, *The Age*, and *The Australian Financial Review* around the country. Even later, it will maintain its air freight distribution and warehousing contract with Fairfax.

When **Oxley Airlines (Pty.), Ltd.** goes into receivership in 1993, its assets are purchased by Impulse Transportation Group and is reorganized at Port Macquarie, Queensland. Orders are placed for 10 British Aerospace BAe Jetstream 41s to supplement Oxley's 12 Piper PA-31-350 Navajo Chieftains and w Beech King Air 100s. Four Beech 99s are purchased by Managing Director Gerry McGowan to replace the Chieftains and two BAe (HS) 748s are employed on night freight operations. Unprofitable routes to Lord Howe Island, Wee Waa, and Gunnedah are replaced by new services to Inverell and Glen Innes and from Newcastle to Brisbane.

Early in 1994, the regional transfers its headquarters from Port Macquarie to Sydney. A new corporate identity is taken on as Oxley and Impulse are finally integrated on March 1. Managing Director McGowan becomes executive chairman.

During the spring, the company becomes the Asia-Pacific launch customer for the British Aerospace BAe Jetstream 41 as a US\$75-million order is placed for 10 aircraft.

The fleet is upgraded by the arrival of the first five Jetstream 41s in late fall, and the company begins to feed **Ansett Australia (Pty.), Ltd.** The route network grows to 14 stations, with services added to Canberra and Melbourne.

Enplanements total 240,000.

The company's capacity plans are radically altered in 1995. Both BAe (HS) 748s are withdrawn, along with all five Jetstream 41s so far received. The outstanding order for J-41s is cancelled. Instead, the company acquires three Beech 1900Ds and a 1900C, which complement the four Beech 99s already in hand.

Passenger boardings climb 9.2% to 166,000.

Three more Beech 1900Ds enter service in 1996, replacing three withdrawn Beech 99s. The unit delivered in November is the 200th of its type built. The carrier completes painting of its aircraft in a new livery.

Highlights of 1997 include the inauguration of services from Newcastle to Melbourne and the opening of a new maintenance facility at the first-named location. Enplanements for the year total 148,000. Traffic figures are again unavailable.

When **Tamair (Pty.), Ltd.** ceases operations in July 1998, its assets are sought by Impulse. These are acquired in August, along with the defunct carrier's Tamworth-Sydney route license. Three Beech 1900Ds join the fleet during the fall.

A controversy arises with the Federation of Australian Air Pilots on December 7 when Chief Pilot Quentin Flemming is terminated. Chairman McGowan has replaced his top flyer for allegedly speaking out against and refusing to train company pilots concerning the Civil Aviation

Safety Authority's radar trials in Class G airspace between Canberra and the northern New South Wales community of Ballina.

The fleet in 1999 includes nine Beech 1900Ds. Customer boardings through June jump 32.6% to 199,000. Impulse is served notice during the summer that it will be dropped as an Ansett regional affiliate, effective October 1. Revenues for the year total A\$60.9 million (\$32 million), with a pretax A\$7.5-million profit.

Airline employment stands at 112 at the beginning of 2000. Service into Melbourne's Essendon Airport begins on February 7. On March 22, it is revealed that the carrier is establishing a new national hub at Canberra; a new headquarters, maintenance facility, pilot training center, and call and reservation facility will be opened in time for the initiation of new services in June.

Arrangements are completed with the ACT Government on April 11 on an A\$10-million assistance package that will allow Impulse to develop a southern regional hub at Canberra International Airport.

It is revealed on April 12 that three B-717-2K9s have been leased from Bavaria International Leasing Co. and two from Pembroke Capital, Ltd. The first is expected to arrive in Australia by the end of the month and when it enters service it will be the first of its type operated down under. Simultaneously, it is announced that Impulse will become Australia's first low-cost airline when it begins budget services on routes linking Sydney, Melbourne, and Brisbane. Tickets are expected to be marked 50% cheaper than those sold by either **Qantas Airways (Pty.), Ltd.** or **Ansett Australia (Pty.), Ltd.**

At the same time, it is noted that a mix of local and overseas institutions have agreed to take up private placements of equity in the carrier, capitalizing it at A\$100 million. Among those coming aboard are AMP, Arabian Gulf Investments (Far East), Ltd., GIC Special Investments, and CVC Asia Pacific, Ltd.

Wearing blue and yellow colors, the first B-717-2K9 arrives at Sydney on April 27; it has flown in from Long Beach, California, via Osaka (KIX). On May 22, an A\$5-million National Reservation Centre is opened at Newcastle. Also, the daily Beech 1900D return service between Newcastle and Melbourne ends in May.

The former Ansett partner becomes Australia's first low-cost airline when it receives government authority on June 1 for its deep-discount route from Sydney to Melbourne. Employing the first two of five leased B-717-2K9s, Impulse begins the seven-times-a-day return service on June 5 and the inaugural flight is sold out. Simultaneously, 17 daily Beech 1900D roundtrips are offered between Sydney and Canberra.

Market capitalization of Impulse reaches the A\$100-million level on June 9 as National Australia Asset Management (Pty.), Ltd. assumes a large, undisclosed equity stake. In making the announcement, Chairman McGowan notes that he and his wife, Sue, will continue to maintain their 40% position.

Impulse will cease its own operations on May 14, 2001, and be merged into the super regional **Qantas Link**.

Arrival of the third B-717-2K9 allows return service to be boosted to 11 daily roundtrips on June 19. On July 17, the Motor Trades Association of Australia Superannuation Fund agrees to invest A\$20 million in Impulse in the form of converting debt. The facility will strengthen the airline's available working capital as it expands.

Delivery of a new Beech 1900D is taken on August 1, bringing the number in the company's fleet to 13.

An exclusive, two-year partnership agreement is signed with the leading travel retailer, Flight Centre (Pty.), Ltd., on August 4; the pact is expected to generate A\$50 million annually for Impulse. On August 6, the company initiates Australia's first deep-discount fares exclusively for Internet customers. The Web Hot airfare deal offers reductions of up to 79% for travel on the company's upcoming trunk services. Fares are reduced to just A\$66 (US\$38) on the routes from Sydney to Melbourne and Sydney to Canberra.

In response to deep-discount fares by the low-cost start-up, **Qantas Airways (Pty.), Ltd.** in early August, begins to offer its own cut-rate tickets over the routes from Sydney to Brisbane, Melbourne, and New-

castle. Protesting that the major is engaged in predatory pricing, Impulse objects to this obvious expansion into its potential core markets and protests to the Australian Competition and Consumer Commission. After reviewing the situation, the ACCC, in the person of Allan Fels, its chairman, informs Impulse, Qantas, and the media that there is no basis for legal proceedings because Impulse has not been harmed economically and Qantas has not breached accepted trade practices.

To gain a foothold in the market before competing **Virgin Blue (Pty.), Ltd.** starts flying in September, Impulse, on August 13, offers 10,500 Web Hot Internet-purchased seats on its upcoming four-times-a-week roundtrip service from Brisbane to Sydney for A\$33. The entire ticket batch is sold out within hours, with demand so heavy that the company's website slows to a crawl.

Chairman McGowan and ACT Chief Minister Kate Carnell preside over ceremonies on August 17 for the beginning of construction on a A\$9-million project to build a state-of-the-art aircraft heavy maintenance and engineering training facility at Canberra International Airport. B-717-23S is simultaneously received.

The inauguration of B-717-2K9 service from Brisbane to Sydney is delayed on August 28 until Australian Protective Services can remove four members of the rock group The Screaming Jets, who are being abusive to fellow passengers and crew members. The same day, a revamped Web Hot fare structure is introduced. Four pricing tiers on a range of interstate and regional services for the period through October 7 are offered.

Four-times-weekday Beech 1900D roundtrips are launched on September 11 between Taree and Sydney. Arrival of the second B-717-23S allows Impulse, beginning on September 13, to double to eight the number of daily return services offered between Sydney and Brisbane.

Due to external cost pressures (read: fuel prices), the company announces on October 10 that, effective October 23, it must raise airfares by 9.5%. This despite the fact that Impulse earned its first profit—A\$200,000—in September.

The easy Impulse Freebies loyalty program is started on October 23; one free flight may be earned for every ten direct flights flown at the carrier's flexible economy fare rate. The same day, a multimillion-dollar corporate makeover and advertising campaign is launched. The sulfur-crested cockatoo is the centerpiece of the carrier's new market image.

A bold new Web Hot Internet sales campaign is unveiled on October 30. Impulse will offer over 130,000 seats under A\$100 between January 1 and March 31 for services from Sydney to Melbourne, Brisbane, and Canberra services.

A new color scheme is introduced in November, initially on a Beech 1900D. The entire rear and tail of the aircraft are given over to the image of a *Cacatus galerita* or sulfur-crested cockatoo.

On December 4, Impulse Chairman McGowan and **Virgin Blue (Pty), Ltd.** CEO Brett Godfrey join Christopher Barlow, CEO of Melbourne Airport, for the joint opening of the new A\$8.4-million "Domestic Express" terminal the two competitors will share.

An earlier order for three B-717-200s is cancelled by **Wuhan Airlines Company, Ltd.** on December 11; two of the aircraft will, instead, be taken by Impulse. The new aircraft will enter service on February 12, allowing the number of daily frequencies between Sydney and Melbourne to grow from 12 to 19 and rise to 10 on the Sydney to Melbourne route.

On December 13, Impulse and **Virgin Blue (Pty.), Ltd.** come under renewed competitive pricing from **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.** The majors both slash their summer domestic fares by 75% for the normally quiet booking period between Christmas and April.

Negotiations with the Motor Trades Association for an A\$20-million loan fail on December 18. Still, Impulse plans to continue its rapid low-cost expansion. Once the B-717-2BD and B-217-2CMs have joined the fleet in January, it will begin to operate 19 daily roundtrips between Sydney and Melbourne and 10 from Sydney to Brisbane on February 12. Also on February 12, daily B-717-2K9 return flights will start from Mel-

bourne, via Sydney, to Newcastle. Unhappily, because of a mandatory structural maintenance program on the Beech 1900Ds, daily service on the direct Armidale to Sydney will be suspended a day earlier.

IN TOURS AUSTRALIA (PTY.), LTD.: Australia (1988–1989). ITA is established at Sydney in 1988 to offer regional services throughout Southern Queensland with a fleet of Shorts 330s and 360s. The company does not achieve viability and closes down the next year, 1989.

INAI (INTERNACIONAL DE AVIACION, S.A.): Panama (1967–1987). In January 1967, this company is formed as a charter operation at Panama City. A fleet of 3 Curtiss C-46 Commandos is assembled and under Panamanian permits, scheduled all-cargo services are started to a variety of Central and South American destinations, including Guayaquil, Cali, Lima, and Manus. The American CAB grants Inair permission to initiate flights to Miami, beginning in December 1969.

During 1971, the company expands its route network throughout the Caribbean and acquires a fleet for 4 Douglas DC-6Bs and 1 Boeing 720B. Services link Panama with Chetumal, Caracas, Cozumel, Porlamar, Maracaibo, Bogota, Cali, Medellin, Barranquilla, Lima, Manaus, Iquique, Santiago de Chile, and Arica. The C-46s are withdrawn in late 1973. A former **United Airlines** Boeing 707-022 is added; however, it will be lost in an April 22, 1976 crash landing at Barranquilla.

Airline employment at General Manager George F. Novey's airline reaches 112 in 1975 and in February a DC-6B, the first of its type received by **Pan American World Airways (1)** and once known as *Clipper Liberty Bell*, is withdrawn and scrapped.

Flights continue in 1976–1979. During these years, a single Lockheed L-188A, first flown by **Western Airlines**, is briefly employed. A B-720-022 is acquired and provides lift for the Fiesta Travel Club, beginning in October 1977.

In early 1980, the Boeing is replaced by a Convair CV-880 acquired from **Delta Air Lines**. It is damaged beyond repair when it aborts its takeoff from Panama City on March 29; there are no fatalities.

In 1981–1982, the last DC-6Bs are withdrawn and replaced by two DC-8-55F freighters. Airline employment reaches 105 by 1983 and permission is sought to serve Los Angeles, Montreal, and New York.

As has been the case with many Latin American all-freight carriers, Inair faces severe economic difficulties over the next four years and by 1987 it is flying only one DC-8-55F north to Miami.

In the spring, U.S. Customs agents find 2,500 pounds of cocaine in the aircraft's belly, buried in the center of four pallets of perfume goods. The aircraft is confiscated and rather than pay the penalty to obtain its return, the airline goes out of business.

INDEPENDENT AIR: United States (1966–1990). Formed in the spring of 1966 this charter airline begins commercial contract services in July as the principal domestic and international transport of the Atlanta Skylarks travel club. A single Boeing 707-320 provides lift. The company acquires a B-720-022 in 1969, at which point it is able to offer flights to both the Atlanta Skylarks and, under contract, the U.S. government.

Fifteen years later in August 1984, the company wins charter certification from the CAB. It is now reformed by A. L. Pittman and O. L. Dickerson as a Colorado corporation to acquire all of the stock of its same-named predecessor. Pittman becomes president with Dickerson as executive vice president.

With a workforce of 50 (many executives are transfers from **Capitol Airways**) and two Boeing 707-331Bs and a B-707-323Bs, the supplemental undertakes charter and inclusive-tour services from a Smyrna, Tennessee, base in 1985.

Bookings total 29,000 and profits total \$97,000 (operating) and \$734,000 (net).

Airline employment grows by 33.3% in 1986 to 60 and the fleet is altered to include 1 operational hush-kitted B-707-331B and 1 B-720-022. Two of the Stratoliners are sent off to have their engines hush-kitted.

Passenger boardings skyrocket 132.1% to 65,000. Revenues increase 86.2% to \$5.4 million, expenses are up 23.3% to \$3.7 million, and the operating profit is \$1.7 million. Net gain, however, drops to \$39,000.

Having completed noise-control conversion, the two B-707-331Bs return to the fleet in 1987 along with a B-720-025.

Customer bookings climb 2.9% to 72,000.

Enplanements rise by 31.9% in 1988 to 95,000; however, a \$3.25-million net loss is suffered.

Club International, an Atlanta-based tour operation, is created in January 1989 and to accommodate the new enterprise, facilities are acquired at Atlanta and Hapeville, Georgia.

On February 8, Flight 1851 is on its initial approach to Santa Maria Airport in the Azores on a flight from Bergamo that is continuing on to Punt Cana, Dominican Republic. The B-707-331B with 7 crew and 137 Italian vacationers crashes into the 1,795-ft. level of fog-shrouded Mt. Pico Alto, 7 seconds after the sounding of its enhanced ground proximity warning system (EGPWS); there are no survivors.

Customer bookings rise by 34% this year to 96,505 and the net loss declines to \$2.62 million.

The recession, together with the effects of Iraq's August 2 invasion of Kuwait in 1990, wreaks such traffic and fiscal havoc that the company is forced to file for Chapter XI bankruptcy in November.

Passenger boardings plunge 49.5% to 50,000 and revenues total \$7.68 million. With expenses of \$9.78 million, the operating loss is \$2.1 million and net loss is \$2.05 million. Services cease at year's end.

INDEPENDENT AIR FREIGHTERS (PTY.), LTD.: Hangar 81, Bristol Street, Essendon Airport, Melbourne, Victoria, 3041, Australia; Phone 62 (3) 3979 8999; Fax 62 (3) 9379 5949; Code IN; Year Founded 1993. IAF is set up by the Lamb family concern **Australasian Jet (Pty.), Ltd.** at Essendon Airport in 1993 to offer domestic all-cargo services. Alistair Lamb is chairman/managing director, with Andrew Lamb as director general. A workforce of 25 is recruited, two Douglas DC-9-33Fs are leased, and revenue flights commence.

Operations continue across the Pacific with leased equipment during the remainder of the decade and into the new millennium. Australian domestic cargo charters are also offered with a Fokker F.27-600F.

INDEPENDENT AIR TRANSPORT, LTD.: United Kingdom (1953-1959). Originally formed as a travel agency on January 1, 1953, Independent Air Travel, Ltd. is purchased in January 1954 by a group of airline pilots led by Marian Kozubaki. With a single Avro Anson 1, the company begins ad hoc charters from London (Hurn) in March, replacing the Anson with two de Havilland DH 104 Dove 1s in February and June 1955, respectively. Flying primarily nonscheduled cargo and passenger flights to northern France, and these not often, the two aircraft are sold in July and November as Kozubaki and his colleagues plan a change in emphasis.

In April 1956, the company is renamed Independent Air Transport, Ltd. and is equipped with 4 Vickers Vikings purchased from **British West Indian Airways, Ltd.** They are employed to inaugurate inclusive-tour flights during the summer. These nonscheduled operations continue in 1957 as the fleet is upgraded by the addition of five additional Vikings (one of which is sold in May) and a Beech 18.

Plans for cargo operations fail and a Bristol 170 Mk. 21 Freighter purchased in January is sold in May. Two Douglas DC-4s are delivered during the year, one each in July and November; the former becomes the center of an international incident on December 31 when it is forced down by MIGs in Albania for allegedly violating that country's airspace. During the year, the carrier transports 50,000 travelers.

Airline employment in 1958 totals 100 and the fleet comprises 9 aircraft, 1 Viking being sold in February. The DC-4 held in Albania is allowed to return to the U.K. on January 4. Inclusive-tour services continue, with new destinations added in the Mediterranean, Scandinavia, the Middle East, and Africa. Another DC-4 is acquired in June, replacing a Viking sold the same month.

En route to Tel Aviv from London (LHR) on September 2, a Viking is destroyed in a crash at Southall, Middlesex (five dead). A court of inquiry concludes that IAT had been guilty of technical infractions leading to the disaster.

As a result of the court findings, Capt. Kozubski sells his majority shareholding in March 1959 and departs to form **Falcon Airways, Ltd.** His former company is reorganized with A. E. Cooper becoming chairman; it now operates under the marketing title "Blue Air." A full summer of ad hoc and inclusive-tours are flown about Europe by the company's two remaining Vikings and three Skymasters. Unfortunately, the publicity of the previous year's crash had cost the company significant business; the cash flow situation becomes so desperate that no option exists other than to cease operations on October 16.

INDEPENDENT CARRIER (ICAR): 87/89 Frunze Street, Kiev, 254080, Ukraine; Phone 380 (44) 462 5875; Fax 380 (44) 462 2992; Code C3; Year Founded 1993. ICAR is originally established at Kiev on October 18, 1993, to offer charter cargo services. Victor Vershigora is director general and a fleet of 2 each Antonov An-12Bs and An-24s duly commence freighter runs to local and international points beginning on August 18, 1994. Flights continue in 1995-1997 and the fleet is increased by the addition of one more An-24 and an An-74.

On August 18 of the latter year, the company is granted a new certification to provide scheduled passenger service. The all-cargo operation is maintained through December 31 as orders are placed for a pair of Avions de Transport Regional ATR42-320s.

Airline employment stands at 103 at the beginning of 1998, when passenger flights commence.

The company is severely impacted by the Russian currency devaluation that occurs during the summer and the order for the ATRs must be cancelled. As the situation improves toward the end of 1999, orders are placed for 10 An-140s.

The fleet in 2000 includes 1 An-12 and 2 An-24s. These offer scheduled service to Kharkov, Moscow, Simferopol, and Uzhgorod.

INDIA INTERNATIONAL AIRWAYS, LTD.: India (1990-1998). IIA is established at New Delhi in 1990 to offer air taxi services. In addition to small group and business charters, the company also flies air ambulance and search and rescue missions, airport transfer flights, and provides links with other carriers, both private and commercial at airports around the country.

By 1998, the fleet is made up of Cessna Citation IIs, British Aerospace (HS) 125-700s, Piper PA-31-350 Navajo Chieftains, and Bell 206B JetRanger helicopters.

Faced with mounting debts and unpaid bills, the airline does not survive the year.

INDIAN AIRLINES, LTD.: Airlines House, 113 Gurdwara Rakabganj Road, New Delhi, 110001, India; Phone 91 (11) 371-8951; Fax 91 (11) 371-1730; <http://www.nic.in/indian-airlines>; http://www.redicc.co.in/rediff_on_the_net/freecopy/noticeb/indair.htm; Code IC; Year Founded 1953. Following the Delhi government's decision to nationalize the nation's entire air transport industry, the Air Corporation Act receives presidential assent on May 28, 1953. On June 15, two new corporations modeled on the **British Overseas Airways Corporation (BOAC)/British European Airways Corporation (BEA)** arrangement in Great Britain, come into formal existence. **Air India International, Ltd.** assumes responsibility for overseas service while India Airlines, Ltd. takes over domestic and regional operations.

On August 1, Indian Airlines formally acquires the routes and assets of eight previously independent carriers that are now organized into divisions: **Airways India, Ltd., Bharat Airways, Ltd., Himalayan Aviation, Ltd., Kalinga Air Lines, Ltd., Indian National Airways, Ltd., Deccan Airways, Ltd., Air India, Ltd., and Air Services of India, Ltd.**

Compensation of 47 million rupees is paid to the owners of the nationalized companies, 10% in cash and the remainder in 3.5% interest-bearing

Indian government bonds. The new entity will begin with an extant route structure, a large combined fleet (74 Douglas DC-3s, 12 Vickers Vikings, and 3 DC-4s), and a huge staff which, by law, cannot be trimmed.

Nationalization is completed on August 8 and Prime Minister Nehru launches the corporation's first flights. The service now begun is under the administrative control of the Ministry of Tourism and Civil Aviation, headed by Air Chief Marshal P C Lal. The Night Mail Service, previously operated by **Deccan Airways, Ltd.**, is also assumed. A DC-3 with 4 crew and 10 passengers fails its takeoff from Nagpur on December 11 and crashes (13 dead). Enplanements for the period June–December are 287,122.

A DC-3 with three crew is lost near Delhi on a February 25, 1954 training exercise; there are no survivors.

In July, an order is placed for 10 Vickers Viscount 768s; as it will take three years for their construction and delivery, an order is given to de Havilland in October for eight DH 114 Herons.

Bookings for the first full year are 477,583.

In dense fog, a DC-3 freighter with three crew hits a tree line and crashes at Gauhati on January 21, 1955; there are no survivors. Having failed its initial climb out of Nagpur on February 1, a DC-3 with four crew and six passengers crashes in a field near the runway; there are no survivors.

At the end of the first quarter, the former **Skyways, Ltd.** DC-4 *Sky Freedom*, provided by **Air France** to **Air Vietnam, S.A.** at the beginning of the year, is acquired.

While on initial climb away from Simra, Nepal, on August 30, a DC-3 with three crew stalls and crashes (two dead).

On November 5, DC-4s replace DC-3s on the night mail service flown from Delhi to Madras and Calcutta to Bombay. Placement of the larger aircraft on the post office routes also allows the transport of some "redundant" passengers. The DH 114 Herons arrive and begin service during late fall.

Integration of the previous carriers is completed by the end of December. Indian Airlines now visits 32 domestic destinations, plus markets in Pakistan, Afghanistan, and Burma.

Bookings this year climb to 500,363.

Bombay to Calcutta DC-4 daylight service, replacing Viking Mk. 1Bs, is inaugurated on February 1, 1956, the same day the Delhi to Karachi DC-3 service becomes nonstop and new de Havilland DH 114s are introduced on the Delhi to Rajkot route via Jaipur, Jodhpur, and Ahmedabad.

A DC-3 with 3 crew and 18 passengers is destroyed while landing at Tezpur, Assam, on March 21 (two dead).

A chartered DC-3 with 3 crew and 30 passengers is destroyed while landing at Kathmandu, Nepal, on May 15; in addition to 14 dead aboard the aircraft, a person on the ground is also killed. A DC-3 with 3 crew and 16 passengers is destroyed beyond economical repair while landing at Ahmedabad on May 18; there are no fatalities.

A DC-3 freighter with three crew is lost at Agartala on October 19; there are no survivors.

Enplanements during the 12 months accelerate to 571,106.

While on a first-quarter 1957 training flight, a DC-3 with two crew crashes at Kingsway Camp, India; both men aboard are killed along with three people on the ground.

A DC-3 freighter with three crew is lost at Santoshpur village on May 5 (one dead).

The first of 10 Viscount 768s to be delivered during the year arrives on August 19. As the number of British turboprops increases, they begin service on routes from Bombay to Rangoon on October 10, to Karachi on October 10, to Colombo on October 21, and to New Delhi on November 22.

Meanwhile, while landing at Dum Dum Airport, Calcutta, on September 1, a chartered **Airwork, Ltd.** HP81 Hermes IVA with 6 crew and 64 passengers collides with an Indian Airlines DC-3 with four crew; all aboard the Indian aircraft are killed, along with three persons on the ground.

Daily Delhi to Jaipur DH 114 service begins on December 1. Passenger traffic this year climbs to 599,573.

A DC-3 with 4 crew and 16 passengers is lost near Kathmandu, Nepal, on March 24, 1958; there are no survivors.

Viscount 768s replace DC-4s on evening flights to Nagpur beginning April 9–10 and to Calcutta on May 13. Nonstop Delhi to Srinagar and Kulu twice-weekly service commences on April 17 and October 3, respectively.

A DC-3 freighter with three crew and four passengers is lost at Mahanbari on June 25 (five dead). A second DC-3 freighter with three crew crashes at Dacca on July 9; there are no survivors.

A bad landing wrecks a C-54A with 4 crew and 27 passengers at Madras on September 8; there are no fatalities. Viscount 768s are introduced on the Madras–Calcutta run on October 15, the same day the entire southern DC-3 route pattern is altered.

Bookings this year are up to 653,494.

In 1959, a fleet of seven additional DH 114 Herons is purchased to provide feeder service from smaller communities. The Delhi to Jaipur DH 114 service is replaced by DC-3s, which extend the route beyond Jaipur to Jodhpur, Udaipur, and Ahmedabad.

A DC-3 freighter with three crew and four passengers is lost near Tobu, Assam, on March 12 (five dead). A second DC-3 with 4 crew and 20 passengers is lost near Silchar on March 29; again, there are no survivors.

A DC-3 with three crew and three passengers is lost at Sagone on August 3; there are no survivors.

The year's enplanements are 703,013.

Having entered the wrong valley during a January 3, 1960 cargo flight, a DC-3 freighter with four crew and five passengers stalls while attempting to turn back and crashes 4 mi. NW of Takasing; there are no survivors.

Viscount 768s replace DC-4s on the Delhi–Karachi route on November 1; on November 25, an inaugural Calcutta–Port Blair DC-3 service is offered.

The fleet in 1961 comprises 10 Viscount 768s, 5 DC-4s, 54 DC-3s, 13 DH 114s, and 12 Viking Mk. 1Bs. Orders are placed for 5 Fokker F.27-100s.

A Vickers Viscount 768 with 6 crew and 36 passengers is destroyed as the result of a bad landing at Colombo on November 15; there are no fatalities.

Four Viscount 768s and five DH 114s join the fleet in 1962. A C-54A is destroyed in a hangar fire at Dum Dum Airport, Calcutta, on May 3.

The one-time **Air Vietnam, S.A.** C-54A with 6 crew and 30 passengers makes a forced landing near Haveri, India, on May 7; there are no fatalities.

A C-47 freighter with three crew and six passengers, crashes N of Loheshyphn, India, on July 16; there are no survivors. Another C-47 with three crew and five passengers crashes near India's Sela Pass on September 21; again, there are no survivors.

Flights to Katmandu are suspended on November 1 as a result of the confrontation between China and India. In December, all Indian Airlines aircraft are requisitioned to transport troops, guns, and supplies to the northwest frontier in support of the Indian military. The conflict is quickly resolved without major combat.

All of the DH 114s are sold in 1963 as the F.27-100s enter service. Orders are now placed for five Sud-Est SE-210 Caravelle VINs. While on a June 3 domestic flight, a DC-3 with 3 crew and 26 passengers, crashes at Pathankot; there are no survivors.

While en route from Nagpur, a Vickers Viscount 768D with 5 crew and 13 passengers, crashes 51 km. S of Agra, near Patti, on September 11; again, there are no survivors.

The fleet is upgraded and reduced in 1964 to 66 aircraft, including 5 Caravelles, 12 Viscount 768s, 3 DC-4s, 12 F.27-100s (2 on lease), and 34 DC-3s. The first of the French-made jetliners, the *Gagandoot*, enters service in February on the company's trunk routes.

A C-47 freighter with three crew and four passengers crashes while on final approach to Alor on April 7; no fatalities are reported.

Airline employment in 1965 is 11,615. There is a conflict between India and Pakistan of some magnitude and Indian Airlines again provides logistic support of the military. A DC-3 freighter with three crew and five passengers crashes at Assam on October 17; there are no survivors.

A total of 926,942 passengers are flown.

En route from Srinagar to Delhi via Jammu and Amritsar on February 7, 1966, an F.27-100 with 4 crew and 33 passengers, crashes into a hill-top in the Banihall Pass of the Pirpanjal mountain range; there are no survivors. On final approach to Calcutta on February 15, an SE-210 Caravelle VIN with 7 crew and 73 passengers overshoots the runway while landing, strikes a cement pillar, and bursts into flame (2 dead).

In August, Indian Airlines is among the first postwar carriers to enroll a woman pilot when it hires Durba Banerjee; by 1998, 13% of the airline's total workforce will be made up of women, including 1 executive pilot and 17 line pilots.

An Se-210 Caravelle VIN with four crew crashes into a hill during a training flight from Bombay on September 4; there are no survivors.

The workforce grows to 12,597 in 1967. The fleet now includes 71 aircraft: 7 Caravelles, 10 F.27-100s, 8 Viscount 768s, 4 Viscount 779s, 1 Viscount 723, 1 Viscount 730, 3 DC-4s, 23 DC-3s, 7 DC-3Fs, and 2 Indian-built Hawker Siddeley HS 748s. (The latter are also known as Avro 748s in honor of the British manufacturer that had originally signed an arrangement to coproduce the aircraft.) Although plans are made to purchase Douglas DC-9s, it is alleged that senior executive Capt. R. P. Huilgol has been bribed by the manufacturer. Charges are filed against members of the evaluation committee and although all will later be cleared, the DC-9 request is cancelled.

In September, Indian Airlines aircraft are again requisitioned by the government to provide support to Indian troops defending the Sikkim state against a Chinese incursion. After negotiations, Beijing's forces retreat across the border. Meanwhile, the first of many Avro 748s enter service and an **Air India, Ltd.** B-707 is leased for trunk service.

The year's enplanements pass the million-mark for the first time (1,598,652).

Flights begin from New Delhi to Benares, Khajuraho, and Agra on October 26, 1968.

An overloaded DC-3 with 4 crew and 26 passengers fails its takeoff from Jaipur on February 18, 1969 and comes down hard; although the aircraft is damaged beyond repair, there are no fatalities.

On April 21 en route from Assam, an F.27-100 with 4 crew and 40 passengers crashes during thunderstorms and downdrafts while approaching Khulna, Pakistan; there are no survivors.

With memories of the Douglas scandal still fresh, the company now turns to Boeing for airliners.

An order for seven B-737-2A8s is placed on January 15, 1970.

An F.27-100 with 5 crew and 34 passengers is damaged beyond repair overrunning the runway while landing at Agartala on June 7; there are no fatalities.

Just after takeoff from Silchar, Assam, on August 29 for a flight to Gauhati, a climbing F.27-100 with 5 crew and 34 passengers, crashes into a hill; the wreckage is not found until August 31, but there are no survivors.

The first Boeing 737-2A8 is delivered on November 9. During the year, revenue passenger miles have grown to 997.6 million while cargo traffic is off 2%.

On January 3, 1971, India bans all Pakistani air traffic over India.

Kashmiri members of the Pakistan National Liberation Front, wielding guns and grenades, hijack Flight 422, an F.27-100 with 30 passengers en route from Srinagar to Delhi, on January 30, and force it to fly to Lahore. In Pakistan, the pirates are granted political asylum by the Pakistani government and turn around and destroy the Indian aircraft with grenades the next day. The incident marks the first case of airline hijacking in India.

An outbreak of cholera causes a significant drop in bookings during spring and summer.

A Vickers Viscount 768D with 4 crew and 23 passengers, overruns the runway while landing at Jaipur on August 9; there are no injuries reported.

An Avro 748-2A with 4 crew and 27 passengers strays off course and hits a hill near Chinnamanur on December 9 (21 dead). Calcutta to Dacca flights, suspended during the conflict between India and Pakistan in 1965, are resumed on December 30.

Additional fleet modernization occurs during 1972 as 29 DC-3s begin orderly retirement and are replaced by 7 B-737-2A8s and 13 Avro 748s.

An F.27-100 with 4 crew and 14 passengers, crashes while on initial approach to the airport at Maqsoodpur on August 12; there are no survivors.

Officials report an operating loss of Rs 45 million

While on initial approach to Hyderabad on a March 15, 1973 training flight, an Avro 748-2A with three crew strikes power lines and crashes into a house; all aboard the turboprop are killed, along with a person on the ground.

While on final approach to Delhi on May 31, the B-737-2A8 *Saranga* with 7 crew and 58 passengers, hits power lines and crashes 6 km. from the runway, bursting into flames (48 dead).

An SE-210 Caravelle VIN with seven crew and eight passengers, suffers the collapse of its nosewheel after landing at Bombay on July 3; there are no reported injuries.

The 24-year-old night mail service ends as a separate operation on September 12 and 9 of the 11 Viscounts employed for it are withdrawn. A Caravelle and two Avro 748s are also damaged in operational accidents, the SE-210 so badly that it must be written off.

To offset skyrocketing fuel bills (which will eventually account for 46% of the year's costs), the carrier must boost all ticket prices on February 1, 1974 by 25% and suspend a number of unprofitable routes. The last DC-3 is retired on March 18 as two more B-737-2A8s arrive. Fearing the possibility of a scandal such as that which surrounded the DC-9, company officials pass the decision for which new equipment to order to the Ministry of Aviation. A long pilots strike and retaliatory lockout seriously impact both traffic and revenues.

Enplanements fall 17% to 2,479,484.

The employee population in 1975 is 14,983. After reviewing the technical data, the Ministry of Aviation, and not the airline, places firm orders for three Airbus Industrie A300B2-101s in April, also taking three options. Part of the purchase price (\$2.4 million) will be saved by local production of ground-handling equipment for the new wide-bodies.

Management and the airline unions come to an agreement that permits an end to wasteful practices in exchange for a pay increase. A variety of cost-cutting measures are now put in place, including the elimination of full-meal service and reductions in the number of in-flight cabin crew members.

An SE-210 Caravelle VIN with 6 crew and 87 passengers, overruns the runway after landing at Bombay on June 17; no injuries are reported.

Passenger boardings grow 22.6% to 3,220,000 and cargo jumps 34.9% to 19.8 million FTKs.

In April 1976, A. H. Mehte succeeds P. C. Lal as chairman. The same month, flights to Kabul resume and a new route is opened from Trivandrum to Male, capital of the Maldives Islands.

An F.27-100 with 4 crew and 19 passengers is destroyed as the result of a bad landing at Bhubaneswar on July 24; there are no fatalities.

While on a domestic flight from New Delhi to Bombay with 77 passengers and 6 crew, Flight 491, a B-737-2A8, is commandeered by unidentified hijackers on September 10 and forced to Lahore, Pakistan. The six pirates are arrested by Pakistani police after the hostages are released. All of the hijackers will be released on grounds of "insufficient evidence."

Just after takeoff from Bombay for Madras on October 12, an SE-210 Caravelle VIN with 6 crew and 89 passengers, suffers the failure of its No. 2 engine, which erupts into flames. The crew attempts to return to the point of origin, but crashes 1,000-ft. short of the runway. There are no survivors. The tragedy causes the government to order the three remaining Caravelles grounded and sold.

From October through December, three new A300B2s are delivered. The first machine is placed into service on December 1 on the routes linking New Delhi, Calcutta, Bombay, Bangalore, and Madras.

Passenger bookings climb 13.7% to 3,660,736 while freight is up 26.2%. On revenues of Rs 1.09 billion, a net Rs 77.9-million profit is earned.

During 1977, one Avro 748 and two F.27-100s are disposed of as five B-737-2A8s and five A300B2-101s join the fleet. The last SE-210 Caravelle is sold in January, during which month all three A300B2-101s are operational.

The company joins with the government of the Maldives to establish **Maldivian International Airlines, Ltd.**; Indian Airlines Corporation provides a B-737-2A8 plus technical and managerial assistance under contract. Little noticed during the year is the conclusion of the DC-9 bribery case, first filed in 1967. It is discovered that Exhibit A, an incriminating letter supposedly sent to bribe Capt. R. P. Huilgol, is a forgery; the Indian Supreme Court acquits all of those accused.

A B-737-2A8 with 6 crew and 126 passengers fails its takeoff from Hyderabad on December 17, 1978; the Boeing comes down and slides through a field, catching fire. One person aboard the aircraft is killed along with three people on the ground.

Two armed men hijack Flight 410, a B-737-2A8 en route from Lucknow to New Delhi on December 20, and hold its passengers and crew hostage for 12 hours at its destination in protest of the imprisonment and expulsion from Parliament of former Prime Minister Indira Gandhi. The men release their prisoners and, after being returned to Lucknow aboard a private lightplane, surrender to police.

While on final approach to Madras on an April 26, 1979 service from Trivandrum, a B-737-2A8A with 6 crew and 61 passengers, suffers an explosion from a bomb placed in or near the forward lavatory that causes a total loss of electrical and instrument power. The aircraft makes a flapless crash landing, but runs off the end of the runway into a field; the right side of the fuselage catches fire after the plane has stopped. All aboard are safely evacuated before the Boeing is engulfed in flames, but 10 passengers are hurt, 8 seriously.

While on initial approach to Bombay on the night of August 4, an Avro 748-2A with 5 crew and 40 passengers crashes into the Koroli Hills near Panvel, not far from Bombay; there are no survivors.

Following the Soviet invasion of Afghanistan in December, Indian Airlines is the only foreign airline, other than **Aeroflot Soviet Airlines**, to continue service to Kabul.

Systemwide, enplanements total 5,313,600 and revenues total Rs 2.07 billion (\$37 million).

Airline employment at Chairman Mehta's carrier in 1980 stands at 17,321, a 2.6% boost. Pilot Rajiv Gandhi now enters politics and in June a revenue pooling agreement is signed with **Air Lanka, Ltd.** covering services from Colombo to Madras, Tiruchirappally, Trivandrum, Bombay, and Delhi.

Freight is up 4.3% to 66 million FTKs and passenger bookings grow a scant 1% to 5,048,253. On revenues of \$256.25 million, expenses are \$239.24 million; operating and net profits are, respectively, \$17 million and \$2.9 million.

The number of employees is increased by 0.5% in 1981 to 17,903.

While climbing away from Tirupati on June 16, an Avro 748-2A, with 4 crew and 24 passengers stalls and falls to the ground tail-first from an altitude of 245 ft.; there are no fatalities.

Coming in from Bangalore on August 18, Flight 557, another Avro 748-2A with 4 crew and 22 passengers, overruns the runway while landing at Mangalore, falls over into a valley and comes to rest against several large rocks; there are no fatalities.

In an August 29 finding, the Indian Supreme Court rules that the carrier's female flight attendants can work until age 45 and overturns a regulation requiring retirement at age 35. Also overturned are rules requiring dismissal for pregnancy.

Half owned with **Air India, Ltd.**, the new local service operator **Vayudoot, Ltd.** is created by Indian Airlines. Chaired part-time by Indian Airlines's managing director, the new entrant operates to smaller communities with F.27-100s and Avro 748s leased (later purchased) from the corporation.

Two B-737-2A8As are delivered and on September 29 one of these, Flight 425 with 117 aboard, is hijacked by knife-wielding Sikh separatists, who force the pilot to fly to Lahore in Pakistan. There the pirates release 61 women and children and demand the release of fellow militants from Indian prisons. Pakistani security police surround the little Boeing and the next day commandos storm the aircraft, rescue all 44 remaining captives, and arrest the 5 skyjackers. Indian officials publicly thank the Pakistan government.

Convicted of the hijacking, the group's leader, Tejinder Paul Singh, will be sentenced to a long prison term. After serving 14 years in jail, he will be released in 1995 and flees to Vancouver on a fake passport. Singh will be arrested by Canadian authorities in Vancouver in early December 1997 and extradited back to New Delhi.

Passenger boardings jump 16% to 6,009,825 while cargo soars 25.7% to 58.38 million FTKs. On revenues of \$345.6 million, operating and net profits, respectively, of \$24.9 million and \$2.99 million, are reported.

Airline employment stands at 18,543 in 1982, a 3.6% boost. On March 1, R. P. Billimoria is appointed chairman with Capt. K. Chanha becoming managing director. Two A300B4-203s and 6 B-737-2A8A join the fleet, which also includes 8 A300B4-203s, 20 B-737-2A8/2A8As, 8 F.27-100s, and 12 Avro 748s.

On August 4, Flight 423, a B-737-2A8A with 135 passengers en route from New Delhi to Srinagar via Amritsar, is taken over by a single assailant claiming to have a bomb (later revealed to be a rubber ball) and demanding a flight to Lahore. When Pakistan refuses landing permission, the Boeing returns to Amritsar where, while he is figuring out his next move, the perpetrator is overpowered by crew members.

En route from Jodhpur to New Delhi on August 20, Flight 492, a B-737-2A8A with 71 persons aboard, is taken over by a hijacker who orders it to fly to Pakistan. India's northern neighbor refuses the plane clearance and it must land at Amritsar. There the pirate makes the mistake of stepping outside the cabin door and is shot dead by police surrounding the little Boeing.

Meanwhile, Airbus service is introduced on the Calcutta-Gahati route and B-737-2A8 service is initiated on several routes formerly served by the turboprops.

Freight is up 9.5% to 63.94 million FTKs and passenger boardings advance 11.1% to 6,679,000.

The workforce is increased 1.3% to 18,781 in 1983. Two new points are added to the route network and B-737-2A8 services are extended to two others. The corporation agrees to bankroll an order to the German manufacturer Dornier on November 29 for 10 228-200 turboprops for **Vayudoot, Ltd.** Cost is held down when Dornier agrees to allow the aircraft to be assembled under license at Hindustan Aeronautics, Ltd., an aircraft plant at Bangalore. Passenger bookings shoot up 10.1% to 7,354,000 and cargo grows 21.3% to 76.98 million FTKs.

The employee population is 19,312 in 1984. Eight Fokker F.28s join the fleet, replacing all of the F.27-100s and one Avro 748.

During takeoff from Hyderabad on a March 5 training flight, an Avro 748-2A with three crew runs off the left side of the runway and crashes into a boundary wall; although the aircraft is damaged beyond repair, there are no fatalities.

Carrying 255 passengers and a crew of 9, Flight 405, an A300B4-203 en route from Srinagar on July 5, is hijacked by 9 Sikh separatists and diverted to Lahore. Negotiations continue for the next 17 hours, during which time the hostages remain aboard with little food or water and after which, on July 6, the extremists surrender. The next day, a number of security guards are suspended at Srinagar and others are questioned in connection with the takeover. The perpetrators will be tried; three will receive life prison sentences while two others will be executed.

While en route from Mangalore to Bangalore on August 10, a B-737-2A8 is taken over by a confused man who does not know what to do with his capture. When the plane lands at its scheduled destination, he surrenders and is taken in hand by police.

On August 22, Indian Airlines signs a letter of intent and puts down a \$900,000 refundable deposit on 12 Boeing 757s.

On August 24, 7 Sikhs seize Flight 421, a B-737-2A8 en route to Srinagar from New Delhi with 100 aboard, demanding to go to America; they fly to Dubai via technical stops at Lahore and Karachi. While continuing to threaten the lives of their captives and the aircraft itself, the pirates release seven hostages in Pakistan, five in Lahore and two in Karachi. In exchange for immunity, the hijackers free their remaining prisoners the next day and surrender. All will be tried and given life prison terms.

Following the assassination of his mother Indira on October 31, former company pilot-turned-politician Rajiv Gandhi becomes prime minister.

Passenger traffic rises 12% to 7,669,000.

The payroll is increased in 1985 to 20,100. Thrice-weekly Calcutta to Bangkok flights begin in June. In August, following Prime Minister Gandhi's visit to the Paris Air Show, the Indian Airlines board, having already signed a letter of intent to purchase Boeing 757s, overturns its own decision. It cancels the Boeing request and signs a letter of intent on September 20 to acquire 31 Airbus Industrie "fly-by-wire" A320-231s. Boeing, naturally, protests this political decision.

Passenger boardings rise 8.2% this year to 9.21 million and freight is up 5.18%. The fleet now comprises 53 aircraft, mostly jet. In October, an order is placed for 19 A320s.

The number of workers is boosted by 1.6% in 1986 to 20,884. In January, a \$300, 14-day "Tour India" promotion is introduced.

While taking off from Madras on September 29 on a service to Bombay, Flight 571, an A300B2-101 with 11 crew and 185 passengers, runs into a flock of large birds on the runway, one of which is ingested into the starboard engine. Although the takeoff roll is aborted, the Airbus runs off the end of the runway and is damaged. There are no fatalities.

Customer bookings swell 7.4% to 9,695,349 and cargo grows 1.3% to 98.51 million FTKs. The carrier, in terms of passengers carried, is the largest in South Asia. Profits for the year total \$78.1 million (operating) and \$29.9 million (net).

The payroll is cut 0.8% in 1987 to 20,177 as Regional Director Gerry Pais is appointed managing director; he also becomes chairman of the third-level carrier **Vayudoot, Ltd.** Flights from Madras to Singapore commence with a single weekly roundtrip.

Passenger boardings rise 5.7% to 10,252,000 (the first time the 10 million passenger mark is passed) and freight is up by 9.9% to 108.25 million FTKs. Revenues ascend 10.6% to \$700.9 million and expenses allow an operating profit of \$83.76 million and net gain of \$31.3 million.

Airline employment ascends once again in 1988, growing by 3.8% to 20,934. The fleet now includes 10 A300B2/4s, 25 B-737-2A8/2A8As, 7 Avro 748s, and 3 F.27-100s. Orders are outstanding for 19 A320-231s.

In April, daily service is opened to Karachi; flights operate four times per week from Bombay and thrice weekly from Delhi, while four weekly Calcutta to Bombay frequencies are added in May. In June, weekly nonstop service is initiated between Delhi and the Bangladesh capital of Dhaka. During the summer, frequencies are opened to Bangkok and Singapore.

On October 19, during final approach from Bombay to foggy Ahmedabad Airport, some 300 mi. SW of New Delhi, Flight 131, a B-737-2A8 with 5 crew and 124 passengers, collides with trees and a high-tension pylon near Bel Nagar, 10 km. from the airport. The jetliner crashes and bursts into flame (124 dead).

Within hours, a **Vayudoot, Ltd.** Avro 748, far to the northeast, also goes down, killing all 34 aboard. In light of the two tragedies, Indian legislators and consumer advocates charge the airline on October 23 with lax safety and training standards. Almost exactly two years later, the crash is blamed on pilot error.

The government, in early November, orders the carrier to begin supplementing **Air India, Ltd.**'s capacity on various routes to the Far East, Persian Gulf, and southern Russia. In December, an \$11-million jet engine overhaul plant, built by General Electric, is opened at Delhi.

Late in the year, citing security reasons, the carrier halts its twice-weekly roundtrips between New Delhi and Kabul. A presence is kept in

the Afghan capital, however, through the chartering of a weekly roundtrip by the B-727-113C of **Ariana Afghan Airlines**.

Customer bookings climb a scant 0.2% to 10,271,069 and cargo does better, rising by 5.2% to 113.62 million FTKs.

The 20,934-employee state airline begins taking delivery of its A320-231s in the spring of 1989, placing the first one into service July 1. Meanwhile, company pilots refuse to continue the Delhi-Kabul run after the Soviet troop withdrawal from Afghanistan, citing hazardous conditions at Kabul Airport.

During September, the carrier's first all-women crew takes off. The B-737-2A8A, piloted by Captains Saudamini Deshmukh and Nivedita Bhasin, is operated from Bombay to Goa.

Technical problems aboard the new A320-231s, particularly with on-board computers, increase along with their deliveries—15 by December—causing such difficulty that two units are grounded and cannibalized for spare parts. New Managing Director Raghunandan Prasad announces on November 1 that the airline will expend an additional \$1.56 billion on fleet expansion.

On November 7, 600 machinists go out on strike over pay claims and concerns over the lack of proper maintenance facilities for the new Airbus machines. By year's end, widespread disruption of service has led to a 30% flight cancellation rate.

As the result of these industrial troubles, passenger boardings dip 2.8% to 9,979,250, while freight is off by 4.5% to 108.55 million FTKs. Revenues total \$604.2 million and a \$22.5 million net profit is earned.

Company employment is reduced by 0.4% in 1990 to 20,177, still the 24th largest workforce in the world. The deadlock with machinists continues into the new year. Upon its January resolution, the company's employee training and discipline over the previous decade is seriously impugned by the report of a government committee. The airline, meanwhile, introduces a number of new services. In addition to eight daily frequencies between Delhi and Bombay, new flights are introduced from Delhi to Dibrugarh via Bagdogra, to Guwahati, Calcutta, and Jaipur via Varanasi, and to Visakhapatnam via Raipur.

Flights also begin from Bombay to Bhubaneswar via Nagpur and to Bangalore and Tiruchirapally via Madurai. Three-days-per-week capacity is added to the daily flight on the popular tourist route from Delhi to Agra, Khajuraho, and Varanasi, a fourth weekly service is initiated between Bombay and Karachi, and a third weekly flight begins to Karachi from Delhi.

On a February 14 service from Bombay, Flight 605, a 2-month-old A320-231 with 7 crew and 139 passengers, descends below minimum while on final approach to Bangalore in clear weather. The aircraft keeps on descending until it crashes on the boundary of the Karnataka Golf Club, 2,300-ft. short of the runway. After bouncing, the plane comes to rest on a 12-ft. high embankment, with its landing gear and engines sheared off (92 dead).

Three days later, on February 17, Managing Director Prasad resigns and is replaced by civil service officer P. C. Sen. The remaining 14 aircraft in the A320-231 fleet are grounded on February 19, creating a significant capacity shortage for 40 weeks. The government, meanwhile, refuses access to the crash site to Airbus and French accident investigators and declines to release cockpit-voice-recorder and flight-data-recorder information to the manufacturer. The latter is sent to Canada for decoding while a Judicial Committee of Inquiry, headed by Justice Shivshankar Bhat and with a technical panel led by Air Minister S. S. Ramdas of the Indian Air Force, is appointed to review the airline's A320 preparedness. The latter dispatches an inspector of accidents to Bangalore to review the tragedy.

On March 14, Indian newspapers report engine failure as the cause of the tragedy; however, in May, a preliminary report is released by the inspector of accidents claiming pilot error. Plans are made to resume A320 operations on March 24 and refresher courses are started for senior pilots; however, company pilots refuse to operate the aircraft until a final cause is determined.

Prime Minister V. P. Singh announces in April that the plane will not be allowed to fly pending the inquiry committee's finding; Civil Aviation Minister Arif Mohammed Khan informs Parliament that the aircraft cannot be employed for cargo flights.

Those units on hand remain grounded, even as the government relents and allows an Airbus Industry team to visit the crash site, causing the airline a \$1.4-million per week revenue loss. Also in May, the Indian Central Bureau of Investigation (ICBI) charges five former top government and airline officials, including two former managing directors (Kamini Chadha and Raghunandan Prasad), with accepting bribes in connection with the company's 1985 decision to acquire the A320s rather than Boeing 757s.

The government, in June, directs the carrier to lease out its 14 A320s for a period of not less than 6 months and to sell the delivery positions for 4 more of the type scheduled to arrive later in the year. An Airbus official threatens legal action to quash the previous month's ICBI bribery charges.

In July, the government orders its flag carrier, **Air India, Ltd.**, to turn over its three A300B4-203s to Indian Airlines Corporation in an effort to ease the domestic line's capacity crunch. The Minister of Civil Aviation Madhavrao Scindia now also eases restrictions against competition and encourages a number of air taxi operators (formed in the 1980s) to expand their services, thereby also helping with the Indian Airlines capacity problem.

At the same time, Indian Airlines begins to charge hard currency fares to its nonresident Indian and foreign passengers as one way of boosting foreign exchange income. The affected travelers are exempted from the 15% inland travel tax and are offered priority reservation services.

Following the Iraqi invasion of Kuwait on August 2, **Air India, Ltd.**, together with Indian Airlines, becomes involved in the largest airlift of expatriates from the Gulf region. The latter employs a number of its grounded A320s on these mercy flights. In just four weeks, beginning on August 13, over 125,000 Indians, including a number on Hadj pilgrimage, are taken home from Amman, Jordan, in 488 flights. The massive airlift costs \$117.6 million, which the government promises to reimburse, and wins the airlines a citation in the *Guinness Book of World Records* for the "largest civilian evacuation." These flights and pilot refresher courses point toward an earlier reintroduction of the Airbus equipment than originally planned.

En route from Coimbatore to Bangalore on September 13, Flight 534, a B-737-2A8A, is taken over by a young man demanding to be flown to Australia. The pilot is able to convince him that the aircraft does not have the range to reach that continent and so the little Boeing is allowed to stop at its scheduled destination as the first step in securing a longer-legged aircraft. Once the aircraft puts down, the man surrenders to security police.

Also in September, the government announces that, henceforth, only federal officials will sit on the airline's board of directors.

Air Marshal S. S. Ramdas, the senior Indian Air Force Maintenance Command officer who headed the technical panel investigating the airline's A320 preparedness, is named the company's chairman/managing director in October. The first A320s begin returning to service in December.

Customer bookings plunge 17.9% to 8,214,952 while cargo drops 14.5% to 92.79 million FTKs. Although revenues are up a slight 3.4% to \$625 million, the year's terrible costs also deliver a \$43.6-million net loss.

The payroll is cut 0.4% in 1991 to 21,000 and the fleet now includes 8 owned and 1 leased A300B2/4, 18 A320-231s, 4 B-737-2A8s, 18 B-737-2A8As, 1 B-737-2A8AC, 2 Fokker F.27-100s leased to the Indian Coast Guard, and 1 F.27-400 chartered to Vayudoot.

Following the outbreak of the Mideast war on January 17, the government imposes a 25% fuel cut on the airline and **Air India, Ltd.** The reduction forces Indian Airlines to end all of its international services and many of its domestic frequencies.

Representatives of the U.S.S.R. aviation industry demonstrate the Tupolev Tu-204 for the airline at Delhi on February 12. By April, eight A320s are back in service. During the month, the government permits

the carrier to operate on routes that achieve load factors higher than 50%; consequently, many services cut as a result of the 25% fuel cut are restored. An A320-231 sustains serious damage while trying to avoid a flock of birds during takeoff from Hyderabad at month's end.

While on approach to Imphal after an August 16 service from Calcutta, Flight 257, a B-737-2A8 with 6 crew and 63 passengers, collides with a hill 8 km. from the runway. There are no survivors in the third fatal accident suffered by the carrier during the past three years.

The final A320 is returned to service during the fall.

A massive two-day "sick-out" strike occurs in early December, occasioned by the transfer of eight pilots from Bombay and Delhi to Calcutta. This is the third time that pilots have disrupted service over pilot transfers out of Calcutta, where a B-737-2A8A flyer shortage is noticeable. Chairman/Managing Director Ramdas is initially encouraged to take a tough stand, but Civil Air Minister Scindia quickly agrees to negotiate with the pilots without first informing Ramdas, who now resigns. A high level committee is appointed to consider the pilots' demands and Ramdas is succeeded as acting chairman/managing director by Lakshminarayanan Vasudev.

Passenger boardings recover and grow by 4% to 8.9 million. Freight traffic is not reported. The carrier's worst-ever operating profit is suffered—\$78.9 million.

Employment is lowered another 4% in 1992 to 20,177 as the company survives another bleak financial year. The **Ariana Afghan Airlines** charters cease on March 13 as Indian Airlines resumes its own twice-weekly B-737-2A8A roundtrips between New Delhi and Kabul.

In June, it is announced that Acting Chairman/Managing Director Vasudev has been appointed chairman/managing director, effective September 1. After staging a "work to rule" campaign over a pay dispute, pilots are offered a "fly more, earn more" plan by the government airline, offering to increase pay based on the number of hours worked in excess of 65 hours per week. Unable to fly that much per month because of scheduling, the pilots balk and beginning on December 9, strike at the height of the November-January tourist season, just when the rupee is being devalued.

Approximately 30 Indian Airlines executives and some 45 junior officers are all that are available from the state carrier to operate flights. Desperate for assistance, the carrier wet-leases five **Uzbekistan Airways** Tupolev Tu-154s along with their crews to provide replacement flights.

Through November, customer bookings rise 7.5% to 8,331,014 and cargo rises 3.8% to 84 million FTKs. Although fares are increased upwards of 25% and revenues are elevated 15.7% to \$517.2 million, the net loss swells to \$69 million.

The employee population is increased 12% in 1993 to 22,600. Over the past two years, the fleet is increased by the addition of two A300B4-203s and six A320-231s. Withdrawn are 16 B-737-2A8As and orders remain outstanding for 6 A320-231s. While providing replacement services, a **Uzbekistan Airways** Tu-154 with 163 aboard misses the Madras Airport entirely on January 5 and lands at a nearby military base, nearly hitting a jet on the tarmac.

The next day, it is announced that **Balkan Bulgarian Airlines** will also provide four wet-leased Tu-154 that help Indian Airlines increase its frequencies approximately 50%.

At 4 a.m. on January 9, Flight 840 comes in for a landing in fog at New Delhi on a service from Calcutta. The wet-leased **Uzbekistan Airways** Tu-154B-2 with 11 crew and 152 passengers touches down 700 m. right of the runway and 400 m. past the threshold, knocking out the guide lights. The plane's right wing hits the ground and it flips over, breaks up, and catches fire. Amazingly, there are no fatalities aboard the destroyed Tupolev, which, incidentally, was the same plane involved in the January 5 incident.

The Indian government grounds the Soviet-made jetliners and terminates its contract with Bulgaria and the former Tashkent directorate of **Aeroflot Soviet Airlines**.

Just after takeoff from Lucknow on a January 22 service to New Delhi, an A320-231 with 4 crew and 48 passengers is hijacked by Hindu

militant Satish Pande, who claims to have a bomb. Upon the arrival of the Airbus back at its point of origin, the pirate surrenders peacefully after Atal Berhari Vajpayee, a top Bharatiya Janata Party (Indian People's Party) official, is allowed to come aboard for consultation.

Minister of Civil Aviation Scindia resigns under pressure and is succeeded by Chulam Nabi Azad. Company pilots end their 45-day strike on January 24 when Azad promises to examine their grievances and not to seek punishment of the union for its job action. During the strike, which has cost the company \$1 million per day, 63 pilots quit, causing the airline difficulty in fulfilling its daily schedule.

Minister Azad in February announces that the government has decided to reconsider its proposal to repeal the 1953 Air Corporation Act, which would allow the privatization of Indian Airlines. The air taxi operators that have been expanding—and failing—since 1990 are further encouraged when Azad relaxes restrictions on currency exchange and aircraft financing. In early March, extremists undertake a terrorist bombing campaign in Bombay; a company reservations center is among the buildings destroyed.

On March 24, protesting the violence between Hindus and Moslems and corrupt national politics, a Kashmiri separatist, Mohammed Yusuf Shah, hijacks Flight 427 shortly after its takeoff from New Delhi for Madras, via Hyderabad. The pirate demands that the A320-231 with 205 passengers aboard be flown to Pakistan, but when that country refuses landing permission for Lahore, the plane lands at Amritsar, near the border. The next morning after an 11-hour standoff, Indian commandos storm the plane, killing the hijacker and freeing his captives.

On April 10, a B-737-2A8A, en route from Lucknow to Delhi, is hijacked by four college students, who claim to have explosives and want to protest a postgraduate course being offered at their university. They are eventually overpowered and found to be unarmed.

On April 26, a B-737-2A8A with 6 crew and 112 passengers hits a truck parked on a road just outside the airport perimeter at Aurangabad, in western India, while taking off for Bombay. The aircraft brushes a high-tension wire and crashes into a field where it explodes (58 dead). The government immediately grounds 4 other 20-year-old B-737-2A8As.

Beset with problems from all sides, Chairman/Managing Director Vasudev resigns in the face of a parliamentary inquiry into airline operations, charging government interference in airline activities. Operations are now organized into four regions controlled from Delhi, Bombay, Calcutta, and Madras.

While landing at New Delhi on June 25, an A320-231 with 4 crew and 85 passengers slams into a bull that has strayed onto the runway from a nearby field; the animal is killed and one of the plane's wheels is damaged. No human injuries are reported.

Scheduled services are provided to 73 domestic locations as well as regional markets in Thailand, Sri Lanka, Nepal, Pakistan, Maldives Islands, Afghanistan, and Bangladesh. A number of new and private airlines begin to appear on the scene and take significant traffic and financial bites out of the state carrier's inflexible operations. Pilots continue to resign in order to join the new entrants that offer higher salaries.

Statistics are provided through September and show that passenger boardings are off 15.7% to 7,307,288 and freight is down 19.4% to 70.6 million FTKs. Revenues for the whole year will be established at \$516.1 million. However, after just three quarters, the net loss is already at \$73 million with a quarter of reporting unrevealed at this writing.

On a November 15 service from Madras to New Delhi, the pilot of an A300B2-101 with 13 crew and 250 passengers is unable to retract the flaps following a missed approach to Hyderabad, its midpoint stop. The stricken aircraft returns to Madras at a lower altitude with the flaps extended. Due to fuel exhaustion and flap failure, however, the Airbus is forced to begin a rapid descent. An emergency landing is made into rice fields near the town of Tirupati, 186 nm. SE of Hyderabad. Although the nosegear collapses during the maneuver, no injuries are reported. Indian Air Force helicopters are dispatched to transport the passengers back to Madras.

The workforce is cut by 1.5% in 1994 to 22,250 and K. Padmanabhalah, former secretary of the Ministry of Urban Development, becomes chairman of both Indian Airlines and **Air India, Ltd.** in February. P. C. Sen, who had briefly led the carrier following the Bangalore A320 accident, is appointed managing director. The same month, the government raises its set prices on petroleum products, including avgas.

On March 1, the government of India converts the carrier into a public limited company and Indian Airlines Corporation is renamed Indian Airlines, Ltd. Under the Air Corporation Ordinance giving it effect, all assets, liabilities, and functions of Indian Airlines are vested in a public company. **Air India, Ltd.** is also converted. Although the two airlines share a joint chairman and common directors, the latter sit as two separate boards in making decisions for the state carriers.

Padmanabhalah is also appointed secretary of the Ministry of Civil Aviation in April and as such is given control over the policy of all Indian commercial aviation. The carrier's Hyderabad Training Centre is suggested as a source for the training of pilots for the country's new private airlines.

Just after takeoff from Benaras on an April 22 service to New Delhi, an A320-231 with 4 crew and 50 passengers, suffers hydraulic failure; the Airbus returns to its point of origin and makes a safe emergency landing. No injuries are reported.

After less than two months on the job, Padmanabhalah is unexpectedly transferred in June from the Civil Aviation Ministry to become secretary of the Home Ministry; he retains his chairmanship of both state-owned airlines. To offset increasing costs, the company raises its domestic fares on July 25 by an average of 15%. Indian Airlines and **Air India, Ltd.** together sign an agreement with **American Airlines** in August for joint participation in the U.S. major's SABRE computerized reservations system.

Late in September, when pneumonic plague breaks out in Surat, Indian Airlines planes are banned from landing in a number of regional nations, particularly those in the Gulf. At the same time, Managing Director Sen is forced to replace the company's A320-231s on international service with A300B4-203s in an effort to retain crews by allowing the A320 pilots to earn foreign allowances. The transferred A300B4 pilots are not happy.

Traffic figures for the year are reported only through month's end. These show customer bookings ahead by 8.2% to 5,744,148, with freight up 15.7% to 58.83 million FTKs.

At the end of October, the governments of Russia, Pakistan, Bangladesh, Sri Lanka, and the Gulf nations, responding to diplomatic pressure, lift their embargo of Indian Airlines. In November, Russi Modi, ex-chair of Tata Steel, assumes the dual chairmanship of the airline and **Air India**. Late in the year, the regional **Vayudoot, Ltd.** is absorbed.

Revenues for the year total \$646.19 million, while operating expenses are higher at \$649.14 million. As a result, a \$2.95-million operating loss is taken, along with a huge \$74.46-million net loss.

Airline employment is reduced by 0.3% in 1995 to 22,180. As a result of negotiations completed the previous year, a strategic alliance with **Air India, Ltd.** begins. Under its terms, the two companies link their reservations systems and frequent flyer programs. In addition, **Air India, Ltd.** begins to code-share on 12 weekly Indian Airlines flights from Calicut to Abu Dhabi, Muscat, and Dubai and on certain domestic Indian Airlines routes out of Delhi.

In February, **Singapore Airlines, Ltd.** joins with the Tata Corporation in announcing plans for the expenditure of \$700 million for the establishment of a domestic rival to Indian. SIA would hold a 40% stake in the new concern and gain easier access to the subcontinent's expanding market.

A pilots' strike is threatened in July, but is called off in August. The flyers nevertheless press a campaign of harassment and pressure by a campaign of "working to the rules." Chief Financial Officer N. C. Ghosh issues a warning in August concerning the airline's poor financial state.

While landing at New Delhi on December 2 after a service from Bombay and Jaipur, Flight 492, a B-737-2A8A with 6 crew and 102 passen-

gers, loses its main landing gear wheels on touch down. Consequently, the little Boeing overshoots the runway by 450 m. and comes to rest in a field with its nose and right wing smashed. Rescue personnel arrive and all aboard are safely evacuated, with only four minor injuries reported.

Enplanements of 8 million are recorded, with 72.3 million FTKs operated. Operating income totals \$716.1 million, with expenses of 670.6 million. Although a \$45.4-million operating profit is generated, there is a net loss of \$31.9 million.

The workforce is cut another 0.3% in 1996 to 22,112 and the fleet now includes 30 A320-231s, 8 A300B2-101s, 2 A300B4-203s, 16 B-737-2A8As, and 1 each B-737-2A8, B-737-2A8C, 1 F.27-100, and 1 F.27-400. In addition, 3 Ilyushin IL-76Ts are wet-leased.

On March 15, Gati Cargo Management Services, a division of the Travel Corporation of India, Ltd., enters into a strategic alliance with India Airlines. Under its terms, GCMS is granted permanent reservation for 500 kg. of cargo on the airline's first flights everyday.

During the spring, the company elects to resurrect the feeder operation halted with the merger of **Vayudoot Airlines, Ltd.** The new operation, which will operate autonomously with a fleet of B-737-200s and HAL-manufactured Dornier 228-212s transferred from its parent, will be known as **Alliance Air, Ltd.** The new airline will be staffed by pilots who had once protested against Indian Airlines.

On May 2, in an effort to gain a few points in its rivalry with its private competitors as well as to send a message, begins to crack down on its overweight cabin crew. According to the newspaper *Indian Express*, the airline fires 41 obese male and female flight attendants, all of who exceed company guidelines by at least 85 pounds.

During the third week of July, the government elects to raise by 10-30% its set-prices on all petroleum products except kerosene. The move will raise the financially strapped carrier's fuel bill by \$17 million. Company officials, along with those from the affected private carriers, immediately petition for a 10% fare increase.

The wet-leased IL-76Ts are withdrawn in August as the company, in an economy move, disbands this portion of its cargo operation.

Passenger tariffs are finally hiked by 20% in November.

Indian Airlines joins the on-going airlift with **Air India, Ltd.** On September 30 to bring back some 50,000 Indians from the UAE who do not have proper travel papers. That nation had demanded that the undocumented Indians depart by this day, when the airline lays on seven flights per week. The India Association of Dubai also charts flights and numerous people return by ship.

Just after takeoff from Visakhapatnam on a November 27 service to Hyderabad, a B-737-2A8A with 6 crew and 119 passengers develops engine problems and must return to its point of origin; a safe emergency landing is made and no injuries are reported.

Having failed to wrest control of the company or **Air India, Ltd.** from the government or to persuade either of the carriers to join forces in marketing, code-sharing, and fleet planning, Chairman Russi Modi resigns on December 2.

Simultaneously, biweekly A320-231 service is inaugurated from Bangalore to Sharjah via Muscat. A connection to Mangalore will also be available. The next day, A320-231 flights commence from Tiruchi and Sharjah.

Late on the evening of December 31, a frantic traffic controller at Delhi is successfully able to divert a midair collision between a company and an **Air India, Ltd.** aircraft, with 400 passengers aboard. As both aircraft simultaneously approach Delhi from Bombay for a landing on the same runway, the two aircraft come within 900 feet of one another before one veers off. Civil Air Minister H. S. Khola orders the seizure of the black boxes of both planes and an investigation into the near disaster.

The full year report shows traffic down. Passenger boardings fall to 7 million, while FTKs drop to 69.8 million. Income, on the other hand, rises to \$788.9 million, with costs of \$751.4 million. Still, operating profits fall to \$37.5 million and the net loss is down to \$4 million.

Airline employment is increased by 2.1% in 1997 to 22,585. Early in the year, the Indian government appoints a planning commission, under former petroleum secretary Vijay Kelkar, to look into the corporation's finances. The commission projects 12% annual growth and recommends a \$250-million injection. Yet, despite the possession of 52 routes and 72 destinations, the company's market share continues to drop in the face of competition from independent airlines.

Crew members of a company flight report on January 22 that they have been assaulted by an airport manager at Ahmedabad, in western India. As a result, members of the Indian Commercial Pilots Association begin a work slowdown on January 23 as 77 flyers absent themselves and 64 report sick, causing the cancellation of 22 flights. The number falls to 15 absent pilots the next day and 5 on January 25, when 3 flights are cancelled, including 2 from Bombay and 1 from Guwahati. The union and airline management come to an agreement to end the walkout on January 28.

In March, Managing Director Sen is appointed joint chairman of **Air India, Ltd.** While also remaining Indian managing director, he replaces Chairman Modi, who had resigned three months earlier.

A number of schedule changes are made "for operational reasons" between March 10 and 24. According to an India Airlines press release, flights from Pune to Chennai via Bangalore are cancelled, along with the sectors Goa-Bangalore-Chennai, Bangalore-Calcutta-Bangalore, Singapore-Bombay, Chennai, Mumbai, Hyderabad-Bangalore, Thiruvananthapuram-Chennai, Kozhikode-Madurai-Chennai, Mumbai-Karachi-Bombay, Sharjah-Bombay, and Ahmedabad-Bombay.

Two new A320-231 thrice-weekly Singapore roundtrips are inaugurated on March 31, Bangalore to Singapore and Calcutta to Singapore. Additionally, the Singapore-Kuala Lumpur service is extended to Madras.

Singapore becomes a hub on April 7. Three new weekly flights are added from that point to Bangalore and another three to Calcutta, while a flight from Madras to Kuala Lumpur is extended on to Singapore. These are in addition to the thrice-weekly A300B4-203 roundtrips already operated to Madras.

An appeal by Indian Airlines and the nation's private domestic airlines of an earlier ruling by the Indian Foreign Investment Board results in a new aviation policy in mid-April. Issued by Civil Air Minister C. M. Ibrahim and the cabinet of the United Front government of Prime Minister H. D. Deve Gowda, the new decision prohibits investments in Indian domestic carriers by foreign airlines. However, groups from outside the aviation business may continue to acquire or hold up to 40% of the stakes in domestic carriers. The decision halts **Singapore Airlines, Ltd.** plans to join with the Tata Corporation in forming a rival to Indian Airlines, Ltd.

On June 1, the carrier wins the 1996 Grand Pacific Asia Travel Association Award; executives are proud to accept the trophy as a testimony to the effectiveness of their marketing program and the airline's turnaround success.

Between June 17 and August 12, the company accepts tenders before selling and leasing back its entire B-737-200 fleet. Because of a heavy rush on the route, the company, between July 15 and 31, operates a third section on its twice-weekly roundtrip route from Calicut to Sharjah.

On takeoff from Chennai Airport on August 2, an A320-231 with 81 passengers bursts a tire. A ground safety staff member notices pieces of the tire strewn on the runway and immediately alerts ATC, which in turn alerts the pilot. The airport is closed for an hour as the plane loses fuel and then makes a safe emergency landing. No injuries are reported.

In the middle of the month, it is noted that the carrier will continue to accept losses as it moves to take over services formerly provided by the private carriers **East West Airlines, Ltd.**, **ModiLuft, Ltd.**, **NEPC Airlines, Ltd.**, and **Skyline NEPC, Ltd.** Among the routes to be taken over are those from Cochin to Agatti (Lakshadweep), Guwahati to Dimapur, Delhi to Leh and to Chandigarh, Calcutta to Agartala, and Chandigarh to Ahmedabad.

During the fall, a code-sharing agreement for the provision of feeder services is signed with the small independent airline **Archana Airways, Ltd.**

The domestic departure terminal at Delhi is destroyed by fire on October 30. The calamity disrupts the company's flight schedule and forces it to move back into the cramped facilities it had shared in the old airport terminal.

Throughout the year, productivity makes dramatic improvement. Pilots now fly 50% more than a year earlier while there is a 17% increase in fleet utilization.

Still, physical growth demonstration will have to wait as traffic figures, released in November, show enplanements down 4.7% to 6,018,250, but cargo climbs to 77.21 million FTKs. Fiscal improvement is reflected in the carrier's year end figures. Operating revenues jump 19% to \$1.11 billion and, after eight years of losses, there is now an \$11.5 million net profit.

At the beginning of 1998, Indian is the 14th largest airline in the world in terms of employee population, with 22,582 workers. The fleet, 80% of which is Stage III certified, includes 50 airplanes: 10 each B-737-200s and A300s and 30 A320-231s.

Early in the year, the Kelkar Commission makes several recommendations, including privatization and the injection of \$230 million in new capital. It also notes that, should the new funding not be provided, the airline—which will not have the funds to renew its fleet or protect its market share—will eventually (by about 2003) fold, costing the government its \$1-billion investment.

On the March 8 occasion of International Women's Day, two all-women crew flights take off on roundtrip over-border services. Captains Sangeeta Kabra and Anupama Kohli operate an A320-231 with 5 other women crew and 127 passengers, from Bombay to Karachi. Captains Indrani Singh and Avantika Nittal pilot an A300B4-203 with 8 other women crew and 146 passengers, from Delhi to Kathmandu.

Also during the first quarter, the board of directors, together with that from **Air India, Ltd.**, accepts the government's recommendation that the two carriers not merge, but operate independently under the control of a joint board and chairman. On the other hand, the government proposes only a R 3.2-billion (\$91.5-million) rescue package, instead of the R 10-billion program earlier discussed.

In May, to provide capacity while its A300s are grounded for inspection, the carrier makes preparations to lease four A320s and two A300s. Following national elections during the month, Anant Kumar becomes the new civil air minister, with P. V. Jayakrishna as civil aviation secretary.

The government, on June 1, announces that it will disinvest in the company over the next three years, cutting to 49% its current majority stake. Unlike **Air India, Ltd.**, Indian Airlines is not permitted to have a foreign airline equity partner. It will, however, be allowed to enter into alliances and enjoy a cooperative mechanism.

The Indian Airlines board requests that it be allowed to increase fares in the face of continuing sharp operational costs, depreciation of the rupee, and the continuing necessity to fly unviable routes. Civil Aviation Minister Kumar publicly resists the move, but will eventually, in the face of fiscal realities, be forced to accept the measure.

In one of the largest seizures of illegal narcotics in Indian history, customs officials at New Delhi on September 30 detain two Nigerians who are about to depart on an Indian Airlines flight to Bombay with 18.7 kg. of heroin. If undetected, the pair had planned to connect at Bombay with a **South African Airways (Pty.), Ltd.** service to Luanda, Angola.

During the fall, two A310-304s are chartered by **Air India, Ltd.** and with the beginning of the winter schedule in late October, are employed to break Indian's monopoly on services to the Gulf. The Air India aircraft operate thrice-weekly roundtrips to Calicut, in the southern province of Kerala.

October also witnesses yet another debate between the airline and Civil Air Minister Kumar. It is Kumar's idea that Indian should invest in at least 6 new 50-seat Avions de Transport Regional ATR42-320s to operate routes in the northeastern part of the country. The aircraft would be a joint project between ATR and Hindustan Aeronautics, Ltd.

Managing Director Sen and the Indian Airlines board not only do not believe the carrier needs the new aircraft but continues to find the very

routes themselves unviable. They point to Indian Airlines operations department studies that show the introduction of the new aircraft would, even with fare hikes, cause huge losses.

When it becomes clear that Minister Kumar will continue to exert pressure to accept his plan, Sen and the board demand that, as a condition of acceptance, the government provides the initial down payment on the aircraft and then subsidizes their operation. With the government unwilling to make the investment, the project is, at least for the short haul, put on hold.

Also during the fall, the consultants A. F. Ferguson are retained to review the operations of and future possibilities of the airline and **Air India, Ltd.** and to offer suggestions.

While en route from Delhi to Bombay on November 4 to collect the body of her son, a 50-year-old woman complains that she feels uneasy. Although attended by three physician-passengers, the lady dies before the aircraft can land at its destination. After formalities are completed, both she and her son are returned to Delhi in coffins aboard the first regularly scheduled Indian Airlines flight the next day.

On November 12, as an A300B2-101 with 7 crew and 152 passengers is taxiing away from the gate for departure from Bombay to Delhi, the plane's captain and flight engineer get into an altercation in the cockpit, after which the flight engineer refuses to fly in the aircraft. The captain returns the Airbus to the gate where the engineer is removed. To minimize inconvenience to passengers, the captain is retained and a new flight engineer is assigned to the flight, which departs two hours late. An investigation is ordered.

Just after takeoff from Calcutta to New Delhi on November 20, an A310-304 experiences an engine fire. An emergency is declared and the aircraft makes a safe landing back at its point of origin. No injuries are reported.

A revision in the winter schedule is announced on November 30, effective December 1. As part of the new timetable, times for two flights to Ahmedabad are changed, two other services are withdrawn, and two new Ahmedabad stops are introduced on services from Calcutta. Meanwhile, citizens from Vadodara meet with Minister Kumar on December 1 to protest the end of service from their city to Bombay; the official tells them that he will order the service maintained.

The Times of India reports on December 6 that the company has suffered enormous fiscal losses during the first half of the year and passenger boardings well below those expected, largely because of a 50% decline in tourist arrivals. Company officials are quoted as indicating that plans to achieve profits in order to allow for disinvestment are in serious jeopardy. This despite attempts to arrest losses by generating new business, taking business away from the private carriers, flight rescheduling, and the introduction of various discount fares.

On December 7, following a recommendation based on the Ferguson Report, the boards of both state-run airlines move to form an apex body in the form of a holding company supported by a joint management group. Initially opposed to the concept, Chairman Sen supports the action. The move is completed without consultation with the Ministry of Civil Aviation or Minister Kumar.

Under terms of this apex arrangement, the two airlines owned by the new holding company would be merged in a phased manner. Meanwhile, the two would continue to have day-to-day operational autonomy, but the apex board would give directions on matters of synergy, which would progressively unite them. Although all agree that such a linkup of the airlines into a larger carrier with a joint new network would be helpful in the face of strong competition from the new private airlines, the scheme must still go to the Indian government for its approval.

Minister Kumar is infuriated by the action—and the perceived snub—and is reported by the press to believe the move is a direct effort to derail the manner of the disinvestment process his agency has been promoting.

Kumar's position is supported by members of the Disinvestment Commission, which suggests that creation of a holding company would not only worsen each carrier's financial position, but would also be un-

able to tackle the surplus staff problem and would slow rather than speed disinvestment. Kumar and the Commission must also enforce one other point that the boards have chosen to ignore; under Indian law, foreign airlines are not allowed to take stakes in India's domestic carriers, public or private.

By December 11, Minister Kumar has decided to reorganize the state airlines and wins the Indian government's cabinet approval to do so. Rather than simply rejecting the holding company proposal and sending it back, Kumar dissolves the boards of **Air India, Ltd.** and Indian Airlines and ends the practice of having a common chairman. There will now be two boards with two separate chairmen. To this end, Civil Aviation Secretary P. V. Jayakrishna becomes the new CEO of **Air India, Ltd.**, on December 12 while a joint secretary in the Civil Aviation Ministry, Anil Bajjal, takes over the leadership of Indian Airlines.

Plans for a single apex management board are shelved and common chairman P. C. Sen is relieved two months ahead of schedule.

(Interestingly enough, Sen had confirmed in an article on Indian Airlines in the November 1998 issue of *Air Transport World* that he had, while enjoying government support, been "less than free to do all the things he would have liked to do to improve the airline's cost structure.")

Civil Aviation Secretary Jayakrishna, now also chairman of **Air India, Ltd.**, informs the press on December 14 that the government plans to complete the disinvestment in **Air India, Ltd.** and Indian Airlines by December 1999. The next day, it is reported that both airlines have completed the installation of airborne collision avoidance systems (ACAS) in their aircraft ahead of the December 31 deadline.

It is Indian Airlines Chairman/Managing Director Bajjal's turn to meet the press on December 16. He informs reporters that within two weeks, steps will be taken to improve service for executive class passengers. The carrier will also take additional steps to increase brand loyalty and increase income. It is revealed that Bajjal's first step toward cutting costs was an inspection of the Indian Airlines supply department at Palam Airport. Numerous changes are ordered, while the facility's general manager is sacked and replaced with a new one from corporate headquarters.

Thick fog disrupts company flights all over the country on December 16-17. The timing of the natural disaster is unfortunate as the airline had been able, as of the previous week, to increase its ridership by 2,000 passengers a week due to the holiday season. Fog continues to play havoc with company schedules through the remainder of the month. The delays cause hardships and strain passenger tempers on a widespread basis. In one case at New Delhi on December 23, a Bombay-bound passenger seeking to reschedule his flight gets into a shoving match with company check-in personnel. The incident is reported to police.

Also on December 23, Minister Kumar establishes nine subcommittees to study various areas where greater synergy might be found between **Air India, Ltd.** and Indian Airlines. The areas under review include information technology, scheduling, ground transfer, accommodation, engineering, fare rationalization, common general sales agent appointments, engineering, advertising and marketing, and ground handling.

Customer bookings during the 12 months ascend 2.3% to 5.61 million, while cargo traffic climbs 10.7% to 78.3 million FTKs. Revenues climb 5.2% to \$809 million and a net \$2.4-million profit is reported.

Thrice-weekly A310-304 roundtrips are started on January 1, 1999 by **Air India, Ltd.** from Kozhikode to the Persian Gulf, two to Dubai and one to Abu Dhabi. These A310 frequencies are in addition to the 12 weekly services being operated by the company, with Indian Airlines, between Kozhikode and the Gulf since December 1993—four each to Dubai, Abu Dhabi, and Muscat.

Minister Kumar meets with Air India Managing Director Mascarenhas and Indian Airlines Managing Director Anil Bajjal on January 12 to discover what progress has been made between the two airlines towards cooperation. It is learned that joint bids will be let for ground handling of foreign airlines in India while a proposal is put forward for a joint

fund to cover advertising costs at those stations where both airlines operate. Spare Air India capacity might be employed by Indian Airlines, while additional time will be required to come up with ideas concerning joint scheduling and fares. Plans are put in place to share spaces at various coastal stations.

Sharing the service with 96 ticketed passengers, Prime Minister Vajpayee and Minister Kumar join Managing Director Bajjal and other VIPs aboard Flight 833, an A320-231, as it undertakes the first scheduled roundtrip flight from Lucknow to Sharjah on February 4.

In an effort to make its two carriers financially viable, the Indian government, on March 1, allocates a token amount to strengthen the equity base of **Air India, Ltd.** and of Indian Airlines. The decision, reflected in the 1999-2000 budget presented to Parliament, comes after a committee, headed by Finance Secretary Vijay Kelkar, has made its final recommendations.

The March 3 issue of *Flight International* reports that Indian has dropped its fleet renewal plans, opting instead to pursue a program of refurbishing its aging fleet of 11 A300B2/B4s and 12 B-737-2A8As. On March 23, it is reported on the Asia Pulse website (www.asiapulse.com) that the carrier is expending R 30 million (\$712,081) on the redecoration and sprucing up of the cabin interiors.

Members of the Standing Committee on Transport and Tourism also make a report to the upper house of Parliament, on March 4, concerning its review of the two airlines. Citing continuing losses, the legislators recommend that both companies be merged. Until that process can occur, there should be joint operations of their fleets to avoid duplication. In addition, both carriers require financial restructuring, reduction in manpower, and a discontinuation of flights on loss-making routes.

The fiscal losses suffered from heavy fog in Delhi and cities in north India during December and January become known on March 16. Minister Kumar notes that **Air India, Ltd.** and Indian Airlines have lost a combined R 98.4 million (\$2.33 million), with the latter company suffering the largest loss, R 65 million.

At the springboard meeting at New Delhi three days later, these figures are relayed, together with revised budget estimates. Permission is received to dry-lease four A320s for the upcoming winter schedule and approval is provided for the 1999-2000 capital budget estimates and revenue expenditure budget.

Barely five months after a top level reorganization, senior management is reshuffled again on March 23. The post of marketing director is abolished and its director, A. K. Goyal, is named director of cargo; marketing is merged into commercial and its director, P. S. Shetty, is appointed regional director at Bombay for the airline's western district. Manet Paes, the eastern district director who had previously been commercial director, is now returned to his old post. S. K. Ghorai, western regional director, moves to Calcutta to take over the eastern district from Paes.

While landing as scheduled at Patna on March 27 during a service from Delhi to Calcutta, the left engine of a B-737-2A8A explodes. Although a safe landing and evacuation is completed, the passengers must be put up overnight in local hotels while a replacement engine is brought in the next day. A number of passengers are rebooked on Flight 772, another B-737-2A8A that is diverted on a service from Bangalore to Calcutta.

With the beginning of the summer season on March 29, capacity is increased by over 500 seats per day. New daily flights are added to the schedule for the routes from Bombay to Delhi and from Bombay to Chennai, with seven additional weekly services from Bombay to Hyderabad and six per week from Bombay to Visakhapatnam.

Among these new services is an hourly Metro Shuttle between Bombay and New Delhi. Seven of the company's 30 A321-231s are dedicated to the enterprise, together with two A300B4-203s and a B-737-2A8A chartered from **Alliance Air, Ltd.** The shuttle is promoted with an introductory offer of a free ticket should a customer fail to connect via any of its frequencies.

New daily flights are also started from Bombay to Lucknow and from Bombay to Patna and Ranchi. Jamnagar and Rajkot are also linked to Bombay with new flights.

A fare war is started by **Sahara Airlines, Ltd.** on April 1 over the lucrative Delhi to Bombay route. Sahara offers thrice-daily service compared to the state line's 10 flights, but all are deep-discount, no-frills flights. **Jet Airways, Ltd.**, which operates eight flights either way between the two cities, is forced to join in.

While en route from Bombay to Calcutta on April 8, an A300B2-101 with 11 crew and 160 passengers, experiences a drop in oil pressure in the left engine. An emergency landing is made by Capt. R. K. S. Modi's aircraft at Nagpur, where the customers wait until a replacement aircraft can be flown in during early evening for a completion of their service.

The problems of the nation's airlines take a back seat when, on April 16 the Hindu nationalist government of Prime Minister Vajpayee loses a vote of confidence in Parliament and collapses. Still, *The Times of India* reports in this day's issue that, to compete with **Jet Airways, Ltd.** and **Sahara India Airlines, Ltd.** in the fare war, the contest may be spread as Indian Airlines pumps additional capacity onto the routes from Bombay to both Chennai and Bangalore.

On April 22, an effort by the Congress party, led by Sonia Gandhi, widow of former Prime Minister Rajiv Gandhi, fails to obtain the majority support necessary to form a new government. Elections loom.

On April 23, a fire damages the offices of Indian Airlines, **Deutsche Lufthansa, A.G.**, **Air France**, **British Airways, Ltd. (2)**, and **Japan Air Lines Company, Ltd. (2)** in the cargo terminal at New Delhi's Indira Gandhi Airport.

Company officials report on April 29 that average seat utilization per day over the Bombay to New Delhi route has jumped by 70% since the introduction of the Metro Shuttle a month earlier.

On May 7, Minister Kumar informs the press that the government has granted permission for **Air India, Ltd.** and Indian Airlines to quickly acquire new aircraft with which to expand their fleets. Following negotiations with Boeing and Airbus, an expert committee will choose types to be acquired and, hopefully within a week, make a written report to Kumar's department.

Three days later, the Indian cabinet approves a plan to overhaul the carrier's capital structure in order to boost its market share and strengthen its equity base. Using the report of Finance Secretary Kelkar as the basis of its action, the cabinet recommends that an equity injection of R 3.25 billion (\$76.11 million) be made in the form of a loan and that Indian be granted authority to generate funds from an initial public offering. The government body also approves a two-year moratorium on payment of outstanding debts.

Reacting to the decision, officials at the competing private airlines agree that the equity injection will allow the state carrier to acquire badly needed aircraft. Reuters, Ltd. reporter Biman Mukherji on May 12 quotes **Sahara India Airlines, Ltd.**'s Kapil Kaul, "For Indian Airlines, it is the best thing that has happened."

The cabinet's move to boost the airline is not everywhere welcomed. The political opposition urges Indian President K. R. Narayanan to intervene and ensure that the "caretaker" Vajpayee government does not make major policy decisions. Disinvestment of the airline has not been approved by Parliament and the lame duck government, it is charged, has no business taking such an important—and unwarranted—decision.

Also on May 12, the company releases figures that demonstrate that in the month and a half since its introduction, the Bombay–New Delhi shuttle service has boosted Indian Airline's market share in that corridor by 9% to 61% control. This one route now accounts for 11% of all of the airline's traffic.

Indian Airlines refuses to engage in the upgrades of its rivals and continues to push its new shuttle service and to stress "on-time" performance. The May 18 issue of *The Times of India* reports that **Sahara India Airlines, Ltd.** is offering a five-star bed-and-breakfast add-on with tickets purchased for Bombay and Chennai, while **Jet Airways, Ltd.**, having linked up with ITC hotels, offers domestic passengers a 20% discount on overnight accommodations.

On May 22, following ceremonial comments by Minister Kumar, an A320-231 with Commerce Minister Ramakrishna Hedge and 12 other

passengers inaugurates the company's new twice-weekly roundtrip service from Bangalore to Kuala Lumpur via Chennai.

The number of nonstop weekly roundtrip frequencies between Lucknow and Sharjah is increased on May 24 from two to three.

As the result of Indian Air Force raids on "guerrilla" positions in the Kargil area of Kashmir, which begin on May 25, the capital airport of Srinagar is shut to commercial traffic, forcing Indian Airlines to suspend its service to that city.

Just after departure from Amausi, a scheduled stop on a June 16 service from Patna to New Delhi, a fully loaded A320-231 is struck by two birds that badly damage an engine. A safe emergency landing is made and the passengers, including Bihar's chief minister, Rabri Devi, and the RJD President Laloo Prasad Yadav, are flown on to Delhi aboard the regular flight of an unnamed private airline.

Despite the continuing Kargil conflict, air travel between India and Pakistan remains unaffected. As late as July 15, it is noted by *The Times of India* that Indian Airlines continues to operate thrice-weekly service between Bombay and Karachi. Indeed, since May, traffic on the route has increased.

Fares on the twice-daily roundtrip route between Bombay and Ahmedabad are reduced on August 15.

Tariffs are also reduced on the routes from Bombay to Calicut, Bangalore, and Cochin. On September 1, competing **Jet Airways, Ltd.** reduces the cost for flying its thrice-daily return service between the two points, heating up a continuing fare war with the state carrier.

Tensions between India and Pakistan cause the carrier, on October 13, to cancel its scheduled night flight to Karachi.

A mistaken command by a controller at the Nagpur ATC center on December 2 nearly causes a midair disaster. While en route from Bangalore to New Delhi, Flight 812, a **Jet Airways, Ltd.** B-737-33A, is asked to ascend from 26,000 ft. to 35,000 ft. through airspace where Flight 540, an Indian Airlines A300B2, is flying from New Delhi to Chennai at 29,000 ft. Fortunately, the TCAS equipment of both aircraft activates and a collision is avoided.

While en route from Kathmandu to New Delhi on December 24, Flight 814, an A300B4 piloted by Capt. Devi Sharan with 154 others aboard, is hijacked as it crosses into Indian airspace over Lucknow by 5 masked Kashmiri extremists armed with guns and grenades. After being refused permission to land at Lahore in Pakistan, the plane is permitted to put down at the Indian city of Amritsar, where one Indian passenger is knifed to death.

Granted permission to land at Lahore, the plane duly departs for Pakistan; Indian National Security Guards commandos arrive 10 minutes too late to rush the plane while it is still on the ground at Amritsar. At Lahore, the plane refuels and then flies on to the United Arab Emirates. On December 25, 27 passengers are released and the Airbus then flies on to Kandahar.

Once the plane is on the ground in Afghanistan, a diabetic passenger is released and a prolonged period of negotiation begins, with the remaining 155 passengers kept blindfolded in their seats by the violent terrorists. Initial demands include the release of 36 militants, including religious leader Mohammed Azhar Masood, jailed in India for their role in battling Indian rule in Kashmir, \$200 million, and the corpse of a dead comrade in India.

As a result of the Airbus hijacking from Kathmandu, the Indian government suspends its 19 weekly flights to and from Nepal. Airport security had been so lax in Nepal that the terrorists were not only able to go aboard fully armed, but were able to secret explosives in the hold of the jetliner. Three days after the crisis erupts, the Indian government cabinet holds its first meeting on the situation; the country's crisis management team, formed earlier, has yet to decide on a strategy to resolve the incident.

Talks between international intermediaries from the UN and the hijackers of Flight 814 drag on and nearly break off on December 30 amid acrimony and disagreement. The UN now applies a bit of political pressure and, consequently, Afghanistan's Taliban Foreign Ministry threat-

ens to storm the plane if any hostages are harmed. Fundamentalist Taliban Afghan soldiers now surround the Airbus in a move to intimidate the pirates; the hijackers threaten to kill their hostages one by one. The leaders of Afghanistan's Taliban, which controls most of the country, now begin to facilitate an end to the drama by acting as intermediaries, pushing the Indians, Pakistanis, and the hijackers to come to terms. While surrounding the aircraft, the Taliban also agrees to accept any freed Kashmiri rebels and permit free passage for the pirates. On December 31, Indian leaders reverse their policy of refusing to negotiate with terrorists and begin talking in earnest. The decision has been viewed as necessary, even if the talks involve cooperation with avowed enemies in Pakistan and Afghanistan.

Passenger boardings climb 5.4% to 5,912,000, while freight jumps 19.2% to 93,322,000 FTKs. Revenues inch up 0.5% to \$819.44 million, while the net profit shoots up to \$18.2 million.

Airline employment at the beginning of 2000 stands at 21,990, a 0.2% increase over the previous 12 months.

A deal is struck on January 1 to end the hijacking of Flight 814, the longest such hostage drama in over a decade. Although the Indian government is able to shave down the demands of the Kashmiri air pirates, it is, in the end, forced to make some gesture in order to save the situation from becoming a bloodbath. Accordingly, the important Kashmiri guerrilla leaders Maulana Masood Azhar, Mushtaq Zargar, and Ahmad Omar Sayed Sheikh are all freed. The hijackers turn over the aircraft to the Taliban and depart with an Afghani soldier as hostage. At a secret location south of Kandahar, they meet the three released leaders and all disappear into the mountains. The freed hostages are all returned to New Delhi aboard an aircraft sent for them and endure a joyous and chaotic reception.

The following week, India arrests four Kashmiri separatists in connection with the hijacking and issues a statement placing blame for the incident on Pakistan. Civil Aviation Minister Chaman Lal Gupta also indicates that the nation will now create an aviation security force of up to 25,000 that will allow the National Security Guard to place between 2 and 6 commandos on every flight over 37 "sensitive" domestic and international routes.

On January 25, acting on the initiative of Arun Jaitley, the minister of state for disinvestment, the government announces that it will begin the process of privatizing the airline. The state will sell 51% of the carrier by March 31, 2001, and then allow a "strategic partner," which has purchased a required 26% equity stake, a free hand in running the operation. Foreign airlines are not, however, permitted to invest. The ANZ Consortium, comprising ANZ Investment Bank, Speedwing, and IDBI, are retained to advise the government on the carrier's privatization.

With government approval, the IA board of directors on March 1 rolls back the retirement age of company personnel from 60 years to 58 years, thereby sacking 800 employees with the single stroke of a pen. Among the newly retired are Gurdeep Singh, six directors, several general managers, four pilots, a number of flight engineers, and Capt. J. R. D. Rao, chairman of **Alliance Air, Ltd.** and head of the internal committee evaluating potential new jetliners.

During the month, the government increases domestic aviation fuel taxes by 62.96¢ a kiloliter, making overall fuel rates for domestic flights Rs 5,000 (\$114.50) higher than those for international services. With no corresponding fare rates planned (though now necessary), hoped for profits are expected to slide as the year's fuel costs rise by \$73 million.

A tripartite signing ceremony is held in New Delhi, also in March, for a pair of new cargo agreements. In one, **Emery Worldwide Express** acquires 80% of the daily cargo capacity of Indian Airlines between Madras and Singapore. The other, between **Swisscargo** and **Emery**, permits **Emery** to book belly space aboard **Sabena Belgian World Airlines, S.A.** passenger flights and **Swissair, A.G.'s** dedicated thrice-weekly DC-10-30F freighter service to Africa and beyond from Basel.

When the carrier is put up for sale on March 28, the news is met with an underwhelming response. Neither of the independent Indian airlines shows initial interest and foreign carriers are barred by law from taking stakes in domestic Indian carriers.

The next day, Indian and Nepalese government officials open talks concerning the possibility of a resumption of service by the airline from New Delhi to Kathmandu. Tremendous pressure has been exerted by the tourism industry lobby as the suspension has caused nearly a 30% drop in tourist traffic to Nepal. The IA delegation is led by Sunil Arora, who will shortly become IA's new chairman/managing director, while retaining his position as joint secretary (security) in the Ministry of Civil Aviation. In response to a fare hike by **Royal Nepal Airlines, Ltd.**, IA announces that when flights are resumed there will be a 10% rise in ticket prices.

After negotiations are restarted, a deal for the resumption of Nepalese service is finally struck following a visit to India of Nepalese Foreign Minister C. P. Bastola. Daily return flights from New Delhi to Kathmandu begin on June 1, along with service five times a week between Calcutta and Kathmandu. With the resumption of these scheduled flights, Indian sky marshals ride the aircraft and Indian security agents screen passengers at Kathmandu Airport.

Upon completion of the term of Anil Bajjal as chairman/managing director on May 26, Mr. Arora steps into his new post, which is to be temporary until the government recruits a permanent official for the soon-to-be privatized national airline. In a surprise move on June 22, the government, which has so far been unable to find a good prospect to take over the airline's leadership, advertises for the post of chairman/managing director for the newly privatized IA. It also takes the unusual step of writing to Naresh Goyal, chairman of **Jet Airways, Ltd.**, asking him to suggest names of suitable candidates.

To provide on-going connections throughout India for its new international service from London (LHR) set to begin on July 6, **Virgin Atlantic Airways, Ltd.**, on July 3, signs an interline agreement with Indian Airlines.

Thrice-weekly A320-231 roundtrips start on July 10 between Delhi and Bangkok, Thailand.

Tenders are requested from Boeing and Airbus during the last week of July for 39 aircraft; the decision will be made between the 100-seat A310, B-717, and B-737-600 and the 150-seat A320, A321, and B-737-900.

Computerized check-in is offered to passengers boarding flights at Thiruvananthapuram beginning in mid-August. The provision of this service follows its introduction at New Delhi, Calcutta, Bombay, Hyderabad, Bangalore, and Chennai.

On August 24, IA pulls the B-737-2A8A normally employed on the New Delhi-Raipur-Nagpur sector and replaces it with an A320-231 to fly the VVIP BJP passengers, including 17 union ministers, to Nagpur for a three-day party and executive council meeting. The withdrawal of the Boeing and its replacement with the Airbus requires that the Agra-Khajuraho-Varanasi flight be suspended until the beginning of the winter schedule in late October.

The fourth fake bomb threat against a company aircraft is received on August 25, forcing a three-hour search delay at New Delhi for Flight 813 for Kathmandu.

In early September, it is reported that IA's share of the domestic market has fallen below 50% for the first time in company history, totaling 46.8% for the year's first half.

On September 19, the board of directors authorizes the dry-lease of five B-737s in time for the beginning of the winter season next month, along with a pair of A320s to be procured before the summer schedule starts in March.

While en route from New Delhi to Singapore on September 26, Flight 555, an A300B4, encounters heavy turbulence at 29,000 ft. over the Bay of Bengal 80 km. SE of Chennai. The autopilot is disrupted, causing the aircraft to plunge 5,000 ft. An unspecified number of passengers are injured before a safe emergency landing can be made at Chennai.

Without key personnel in some areas since the mass retirements earlier in the year, the company, on September 27, announces that it has filled the open directorships in the operations, flight safety, and training departments.

Coming in from Calcutta on September 29, Flight 229, an A320-231, is forced to circle its intended destination, Gauhati Airport, for three hours as a safety precaution while officials on the ground organize workers and villagers to drive off an elephant wandering around the airport.

While climbing to FL370, the TCAS of Flight 701, an A320-231 en route from Calcutta to Dibrugarh on October 1, sounds a warning that it is near **Jet Airways, Ltd.** Flight 207, a Next Generation B-737-800 cleared to climb to FL350, the TCAS of which is also screaming. Both pilots take corrective action and avoid meeting head-on in an area over the Bangladesh border.

Also on October 1, the government invites expressions of interest (EOI) in IA from those Indian or nonresident Indian companies willing to purchase a 26% equity stake. It willfully excludes **Jet Airways, Ltd.** by inserting a clause in the EOI document prohibiting scheduled Indian air transport operators from applying in order "to maintain a competitive environment."

The code-share arrangement with **Air India, Ltd.** for 12 joint weekly flights to Dubai, Muscat, and Abu Dhabi from Calicut ends on October 29. Return A320-231 service on the route from Ahmedabad to Bangalore via Bombay becomes daily, while a new daily roundtrip A320-231 service is introduced from Chennai to Muscat.

On November 1, new twice-weekly roundtrips are inaugurated from Hyderabad to Doha via Cochin. Twice-daily return frequencies from Hyderabad to Muscat become thrice daily. In mid-month, the company begins to take delivery of five leased B-737-200As that are to be passed along to its **Alliance Air, Ltd.** subsidiary. A pair of A320-231s for Alliance will be delivered in April.

Four-times-a-week return flights are started on December 1 between New Delhi and Chandigarh. The Indian government steps in on December 10 and kills a deal with **Air India, Ltd.** under which the latter would sell to IA, by March, three A300B4s for \$9 million each. The state believes the price is too low.

On Christmas Eve, exactly one year after Kashmiri militants hijacked Flight 814, Capt. Devi Sharan and his flight officer have the ironic luck to draw the evening's service over the very same route filled with so much terror 12 months before.

Allegedly as the result of protests caused in Kathmandu by anti-Nepalese comments made by an Indian motion picture star, Indian Airlines, on December 28, abruptly cancels two scheduled flights to Nepal and sends an empty Airbus to Kathmandu to bring back waiting passengers.

INDIAN AIRLINES CORPORATION. See **INDIAN AIRLINES, LTD.**

INDIAN NATIONAL AIRWAYS, LTD. (INA): India (1933–1946). To serve as a shareholder in **Indian Trans-Continental Airways, Ltd. (ITCA)** and as agent to develop internal and feeder services in northern India, INA is founded in May 1933 with R 3 million in capitalization; controlling interest is held by Govan Brothers, Ltd. concern, 60% of that ownership being non-Indian. Technical assistance will be provided under contract by **Airwork, Ltd.** of the U.K. On July 7, INA officially acquires a 25% stake in ITCA after which INA begins marketing its new product, and that of **Imperial Airways, Ltd.** and ITCA.

Employing de Havilland DH 84 Dragons, the company begins weekly Calcutta–Rangoon service on December 1 via Chittagong, Akyab, and Bassein. Simultaneously, in the country's first daily scheduled flights, DH 83 Fox Moth flights commence Calcutta–Dacca. These services are designed to supplement the ITCA operation to the east of Calcutta.

During the year, pilot Capt. Harold H. Balfour publishes his recollections of flying for the carrier, *An Airman Marches* (London: Hutchinson, 1933).

On December 4, 1934, weekly Percival Gull mail service is launched from Lahore to Karachi via Sukkur; the first return flight is made two days later. On June 13, 1935, Sukkur is dropped as a stop. Daily

Calcutta–Dacca services are withdrawn on June 15; the same day, Chittagong is dropped as a stop on the Calcutta–Rangoon route. The Rangoon service is withdrawn on August 9.

INA flies only a Lahore–Karachi service in 1936. Under charter to the British Air Ministry, INA, employing an Indian government Avro 10, surveys the Southern Shan States for a China route during November and December 1937.

Under terms of the Empire Air Mail Program, the government contracts with INA on February 28, 1938 for the transport of first-class unsurcharged mail over the Lahore–Karachi route, with Jacobabad and Multan added as stops. Beech 17s commence the service the next day. The Lahore end of the Karachi route is extended to Delhi in November. On July 1, 1939, thrice-weekly flights are begun to Kaika from both Delhi and Lahore.

The Delhi end of the Karachi service is extended to Calcutta on June 27, 1940, with Beech 17s now flying from Karachi to Jacobabad, Multan, Lahore, Delhi, Cawnpore, Allahabad, and Calcutta. Frequency is doubled on December 8. Between March 30 and August 25, 1941, Patna replaces Allahabad on the Delhi–Cawnpore–Calcutta segment, but is supplanted by Allahabad once more on November 3.

Twice-weekly Calcutta–Rangoon services begun on January 5, 1942 are suspended on February 17. Seven days later, service is started between Calcutta and Magwe, Burma. On March 17, Calcutta to Shwebo, Burma, flights begin via Chittagong. The Calcutta–Magwe service is withdrawn on March 22 and that between Chittagong and Shwebo is suspended from March 28–April 12.

The Chittagong–Shwebo route is cancelled on April 12, the same day thrice-weekly Calcutta–Dinjang via Tezpur DH 89A/Beech 17 flights commence. A weekly Delhi–Colombo Beech 18 frequency is introduced on May 27 via Bhopal, Hyderabad, Bangalore, and Trichinopoly. Daily Lahore–Multan–Jacobabad–Quetta services are offered during the summer. The first of three Douglas DC-2s to be received from the RAF arrives on September 22 and is placed on the Delhi–Colombo route.

Twice-weekly Delhi–Karachi via Jodhpur DC-2 service is initiated on January 17, 1943. Three days later, Jorhat replaces Dinjang as terminus on the service formerly flown via Tezpur from Calcutta. With Rawalpindi as an optional stop, thrice-weekly Delhi–Peshawar via Lahore Beech 17/DH 89A flights begin on August 19.

INA's first DC-3s are introduced on the Delhi–Colombo service in March 1944. On August 28, DH 89A Gwalior–Delhi flights begin. Twice-weekly DC-3 frequencies are launched Delhi–Madras on April 18, 1945 and are flown via Allahabad, Nagpur, Hyderabad, and Bangalore. On June 4, the carrier ceases operations west of Karachi. Six DC-3s are purchased and after VJ-Day all of its routes are officially certified.

The first Indian air service with a title is launched on February 7, 1946; U. P. Indiaman DC-3 flights commence Delhi–Lucknow. Six Vickers Vikings are ordered in April. On June 1, Delhi–Ahmedabad via Lahore, Bikaner, and Jodhpur Rajputana Indiaman flights begin. During the summer, additional Indiaman frequencies are inaugurated to Calcutta, Peshawar, and Karachi. In July, the carrier is acquired by Dalmia-Jain, Ltd., and is renamed **Dalmia-Jain Airways, Ltd.**

INDIAN OVERSEAS AIRLINES, LTD. (IOA): India (1947–1950). IOA is registered on January 13, 1947 as successor to **Mistri Airways, Ltd.** Equipped with 17 Canadian-built Noorduyn Norsemen and Douglas DC-3s, the carrier operates charters as well as a single route from Bombay to Calcutta via Nagpur.

On February 20, 1948, the company receives an 11-month provisional license to fly a route from Nagpur to Lucknow via Jubbulpore, Allahabad, and Kanpur. Late in the year, executives of the Indian Post Office, in a precursor to a concept developed by Frederick Smith for **Federal Express** a quarter of a century later, design a night mail program based on a single centralized sorting hub.

On January 31–February 1, 1949, the company begins night DC-3 air-mail flights from Delhi to Madras and Bombay to Calcutta; Nagpur is the central exchange point to which aircraft from each city arrive, pick

up their mail, and return. IOA encounters financial difficulties and on June 10 suspends operations. The carrier ceases business in October 1950.

INDIAN TRANS-CONTINENTAL AIRWAYS, LTD. (ITCA): India (1933–1942). Capitalized at R 1 million, ITCA is founded on June 21, 1933 to operate a transcontinental route in association with **Imperial Airways, Ltd.** Shareholding is held by the government of India (51%), **Indian National Airways, Ltd. (INA)** (25%), and **Imperial Airways, Ltd.** (24%). Two British-registered **Imperial Airways, Ltd.** Armstrong Whitworth AW-15 Atalantas, the *Arethusa* and *Aurora*, are wet-leased and transferred to the new carrier, given Indian registry, and painted in ITCA livery. Meanwhile, the enabling arrangement provides for INA to market the new long-distance product, selling tickets at 11 of its owner's (Govan Brothers, Ltd.) offices and handling local promotions.

Alternating weeks with the British carrier, ITCA's *Arethusa* begins Karachi–Calcutta service on July 7 via Jodhpur, Delhi, Cawnpore, and Allahabad. Westward service departs Calcutta on July 11.

On October 1, the *Arethusa* extends the Calcutta end of the Karachi–Calcutta service to Rangoon via Akyab. The first westward flight of the joint **Imperial Airways, Ltd.**–ITCA service departs Rangoon the next day. The two carriers jointly extend the Rangoon destination to Singapore on December 18 via Bangkok and Alor Star. Westward flights begin from Singapore on December 31.

ITCA services continue with little change until March 1, 1938 when the route to Singapore is halted at Calcutta. The route now flown is Karachi–Calcutta via Jodhpur, Delhi, Cawnpore, and Allahabad.

On June 10, 1940, the route is suspended; hope of resumption continues for the rest of the year but, following the outbreak of war in the Pacific, the *Arethusa* and *Aurora* are commandeered by the Indian government in February 1942 and assigned to the air force.

INDIAN WELLS AIRLINES: United States (1984–1985). Founded as **C & M Airlines** and having operated for a year as **Mojave Airlines**, this carrier receives its final corporate identity in 1984. Employing a fleet of Cessna 402s and 441s, the Inyokern, California-based carrier maintains scheduled passenger and freight services to Los Angeles. Previous frequencies to Bishop, Mammoth, Ontario, Palmdale, and San Diego are all suspended.

Operations cease in February 1985 as the result of FAA enforcement action against a variety of alleged company FAR violations.

INDIANA AIRWAYS (1): United States (1930–1931). Organized at Indiana, Pennsylvania, in the fall of 1930, this small operator obtains a Ryan B-5 Brougham and uses it to launch scheduled passenger flights to Pittsburgh in November. Without a mail contract, the carrier is unable to generate sufficient revenue traffic to fly beyond mid-1931.

INDIANA AIRWAYS (2): United States (1977–1980). The second IA is set up by Reid Airways owner Charles R. Reid at West Lafayette, Indiana, in the fall of 1977 to provide scheduled air taxi roundtrips to Indianapolis and Columbus. Daily Piper PA-31-310 Navajo revenue frequencies are inaugurated on November 15 and are maintained until April 15, 1980.

INDIANA AIRWAYS (3): United States (1979–1980). The third IA is set up not in the Hoosier State, but at Indiana, Pennsylvania, in 1979. Employing Piper lightplanes, the commuter inaugurates daily roundtrip scheduled services linking its base with Youngstown, Ohio, via Pittsburgh. The company fails to attract sufficient traffic and closes down in April 1980.

INDOAVIA (INDONESIAN AVIATION CORPORATION): JL, Cileduk Raya No. 9, C & D, Jakarta Selatan, 12230, Indonesia; Phone 62 (21) 720-3651; Fax 62 (21) 725-3330; Year Founded 1990. Indovia is formed at Jakarta in 1990 to offer regional services to and in

Maluku. Managing Director Rusdy Attamimi's initial fleet comprises 4 Beech 18s, 2 de Havilland Canada DHC-6-300 Twin Otters, and 1 Pilatus-Britten-Norman PBN-2 Islander.

The Canadian turboprops are withdrawn in early 1992 as the carrier struggles to maintain economic viability. The situation stabilizes and the fleet of Beech 18s is doubled in size during 1993–1994.

It is understood that flights continue during the remainder of the decade. During these years one Twin Otter is returned to service.

INDONESIAN AIR TRANSPORT: Pondok Cabe Aerodrome, P.O. Box 2485, Jakarta, Indonesia; Phone 62 (21) 749-0213; Fax 62 (21) 749-1287; Code IDA; Year Founded 1968. IAT is set up at Jakarta in 1968 to operate passenger and cargo charter and contract service flights within Indonesia under affiliation with the Netherlands carrier **Schreiner Airways, N.V.** Operations are undertaken and continued with little fanfare. By 1985, the fleet includes 5 Piper PA-31-310 Navajos, 1 Britten-Norman BN-2 Islander, 2 Beech Super King Air 200s, and 6 Aerospatiale Alouettes.

By 2000, Manager Nico Van Der Ploeg oversees a workforce of 300 and his concern operates 2 each British Aerospace BAe (BAC) 1-11-400s and Dassault Falcon 20 jets, 2 each Navajos, Shorts SC-7 Skyvans, and Beech 1900Ds, 4 Grumman Gulfstream I executive jets, 1 Islander and 1 Super King Air 200, and 2 Eurocopter AS365N Dauphin IIs.

On December 19, a pair of Fokker 50s, previously operated by **SAS Commuter, A.B.**, are leased from Pembroke Capital.

INDONESIAN AIRWAYS: Indonesia (1948–1950). Following eruption of the post-World War II revolution in the Dutch East Indies, air transport by the Netherlands armed forces and a local division of **KLM (Royal Dutch Airlines, N.V.)** is a dominant form of communication. Local freedom fighters, led by Achmed Sukarno, president of independence-bound Indonesia, have no comparable capacity.

While visiting Banda Aceh on June 16, 1948, Sukarno presents a model Douglas C-47 (military DC-3) to local officials, pledging to begin a national carrier once Indonesian statehood is achieved. This gesture is so effective that merchants in the north Sumatra area subscribe 40 kilos of gold to purchase a real C-47 located in Singapore, complete with a pallet of spare parts.

A group of airmen, led by Wiweko Supono, are sent off to Singapore to collect the merchants' purchase and fly it to Jakarta. The aircraft, named *Seulewah* after a mountain in northern Sumatra, is flown back to Jakarta. From this capital city, the plane makes several flights between Java and Sumatra, careful not to get itself shot down by Dutch fighter aircraft.

The Douglas transport makes a significant contribution in October when it flies the republic's prime minister, Mohammed Hatta, from the Javanese city of Yogyakarta to Banda Aceh via Jambi and Payakumbuh. From northern Sumatra, the *Seulewah* is flown to Calcutta, India, for its 50-hour check. As the result of renewed combat between The Netherlands and Indonesia, the aircraft cannot now return.

At Calcutta, pilot Supono acquires a contract from the new government of Burma to assist it with air transport during its war on its native guerrillas, particularly insurgent Karens. Arriving at Rangoon during January 26, 1949 Supono's aircraft flies nonscheduled flights to Mandalay and Moulmein. To give itself the legitimacy required to issue an invoice for service to the Burmese government, the one-plane organization is christened as Indonesian Airways two days later. Services continue and sufficient income is received for the fledgling airline to purchase two additional DC-3s.

After Indonesian independence is officially proclaimed on December 19, Indonesian Airways transfers back to Jakarta. There the flyers are drafted into the new national air force and the company goes dormant. With the creation of **Garuda Indonesian Airways** on March 31, 1950, the need for a second carrier ends. Consequently, what remains of the traveling pioneer is dissolved on August 1. Its leader, Wiweko Supono, will become CEO of Garuda itself 18 years later.

INDUSTRIA AERO AGRICOLA, C.A. (IAACA): **Aeropuerto de Barinas, Estado Barinas, Venezuela; Phone 58 (7) 322 668; Fax 58 (7) 322 668; Code WQZ1; Year Founded 1995.** Originally established as an air taxi at Barinas Airport to operate nonscheduled passenger services as well as agricultural and aerial work, IAACA elects to begin scheduled flights in 1995 upon the Venezuela's deregulation of air transport.

President Arnaldo Bazzichelli's 85-person company acquires 2 each Aero International (Regional) ATR42-320s and ATR72-210s for regional and domestic schedules.

Flights continue in 1996–1997. A third ATR72-210 joins the fleet in January 1998.

INDUSTRIAL AIR TRANSPORT. See PACIFIC OVERSEAS AIRLINES CORPORATION

INDUSTRIE AIR CHARTER, S.A.: France (1988–1993): IAC is established at Paris (LBG) in 1988 to fly charter and contract service flights on behalf of **TAT French Regional Airlines, S.A.** Operations continue during the remainder of the year and in 1989 with a pair of Nord 262s.

In the spring of 1990, plans are made to begin scheduled passenger services during the summer with a leased SAAB 340A. Iraq's August invasion of Kuwait and subsequent negative economic and political developments force the company to temporarily give up its goals.

Once the Gulf conflict is resolved in early spring 1991, the regional obtains its SAAB on lease from **Aigle Azur, S.A.** and inaugurates scheduled flights. One Nord is withdrawn in 1992 as operations continue into 1993. Economic difficulties prevent the company from finishing the year.

INEX ADRIA AIRWAYS (INEX ADRIA AVIOPROMET): Yugoslavia (1968–1986). Adria Airways is reorganized and renamed in 1968 and made part of the government-controlled Interexport trading organization. Orders are placed for jet equipment with which to replace the four former **KLM (Royal Dutch Airlines, N.V.)** Douglas DC-6Bs operated since formation.

The first DC-9-32 is delivered on April 25, 1969 and is placed in service on European flights. Scheduled service is introduced in 1970 initially over a Ljubljana–Belgrade route. Coming into Rejeka Airport at Belgrade from Great Britain on May 23, 1971, a Tu-134 with 83 aboard crashes (78 dead).

As additional DC-9-32s are introduced in 1972–1975, scheduled domestic operations are increased as supplemental to the charter task; stops include Sarajevo, Skopje, Split, and Titograd.

Coming in from Tivat in heavy fog on October 30 of the latter year, a DC-9-32 with 5 crew and 115 passengers, strikes high ground 8 km. from Prague (75 dead).

En route from London (LHR) to Istanbul on September 9, 1976, Flight 475, a **British Airways, Ltd. (2)** HS 121 Trident 3B with 9 crew and 45 passengers collides in midair near Vrobec, Yugoslavia, with Inex Adria Flight 550. The DC-9-31 with 5 crew and 108 passengers is en route from Split to Bonn. Both aircraft crash and there are no survivors. The disaster is the worst midair collision in aviation history to date. Six years later, the tragedy will be reported in Richard C. Weston and Ronald Hurst, *Zagreb One-Four—Cleared to Collide?: A Study of Human and Technological Conflict in Aviation* (London: Granada, 1982).

General Manager Janez Nedog's company employs 337 workers in 1977 and owns a fleet of 2 DC-9-51s, 3 DC-9-33s, and 2 DC-9-32F freighters. Total enplanements reach 728,722.

Airline employment is 362 in 1978. The fleet now comprises 3 DC-9-32Fs, 3 DC-9-33s, and 3 DC-9-51s. Orders are placed for 3 DC-9-80s. Passenger boardings climb 19.3% to 902,767. On total revenues of \$45 million, a \$2.1-million profit is revealed.

The number of workers is increased by 11.9% in 1979 to 405. The company's 20th anniversary, together with the 10th anniversary of the introduction of jet service, is celebrated throughout the year.

Cargo traffic soars 47.7% to 848 million FTKs and passenger bookings accelerate 1.2% to 913,845. A net gain of \$5.8 million is posted on total income of \$52.9 million.

In 1980–1981, three DC-9-33s and a DC-9-51 are retired as the first two DC-9-80s and a DC-9-30F are placed in service.

Having arrived from Ljubljana on December 1 of the latter year, an MD-81, with 7 crew and 173 passengers is placed into a holding pattern over Ajaccio. The aircraft descends through the minimum holding altitude and crashes into Mt. San Pietro, 40 km. S of its destination. There are no survivors.

Still, enplanements for the year total 949,520.

Bookings jump 12% in 1982 to pass the million mark in annual boardings for the first time (1,079,000); freight soars 41% to 1.62 million FTKs.

The workforce in 1983 is 509, a 1.2% boost. International scheduled service is begun over a route to Larnaca. Orders are placed for five Airbus Industrie A320s and the third DC-9-80 is delivered.

Passenger boardings grow 2% to 1,103,261; however, cargo declines 17.9% to 1.33 million FTKs. On revenues of \$50 million, the net earnings are \$574,000 and come on top of an operating gain of \$7 million.

Cargo falls 20% to 1.07 million FTKs in 1984, but enplanements climb 9% to 1,197,000. A net \$1.09-million profit is realized on top of an operating gain of \$2.3 million.

The employee population grows to 662 in 1985 and the fleet now includes 2 DC-9-32s, a DC-9-33, 2 DC-9-51s, 1 MD-81, 3 MD-82s, and 2 de Havilland Canada DHC-7s.

Passenger boardings rise 6% to 1,267,204 and freight skyrockets a remarkable 77% to 3.01 million FTKs. Revenues increase 33.9% to \$80.9 million and expenses climb 30.3% to \$75.6 million; this balance produces profits of \$5.23 million (operating) and \$1.78 million (net).

In May 1986, the company becomes independent of the Inex group and its name is changed back to **Adria Airways (Adria Aviopromet) (2)**.

INLAND AIR CHARTERS, LTD.: P.O. Box 592, Prince Rupert, British Columbia V8J 3R5, Canada; Phone (250) 624-2577; Fax (250) 627-1356; <http://www.inlandair.bc.ca>; Year Founded 1980. IAC is set up by Trevor Pearce at Prince Rupert in 1980 to service the local fishing fleet with a single float-equipped Cessna 185.

Over the next 20 years, Pearce enlarges his business and adds five float-equipped de Havilland Canada DHC-2 Beavers and a DHC-3 Otter. These are employed to operate charters of various kinds, including executive flights, flight-seeing, bush tours, sports fishing, and work in support of the forestry industry. The company's aircraft also assist local charter boats by pointing out whale positions.

INLAND AIR LINES: United States (1938–1952). On July 1, 1938, Richard Leferink's **Wyoming Air Service** is reorganized and renamed. Services are maintained linking Cheyenne with Great Falls via Casper, Sheridan, and Billings and with Huron, South Dakota, via Rapid City and Pierre. The fleet at this point comprises 2 Lockheed Model 9D Orions and 7 Boeing Model 247Ds.

Scottsbluff is added as a stop on the Cheyenne–Huron route in August 1940 and during 1941 merger discussions are held with **Mid-Continent Airlines**. The latter are broken off following the Japanese attack on Pearl Harbor on December 7.

Passenger boardings for the year total 12,086.

In April 1942, a contract is signed with the Army's Air Transport Command to operate an all-cargo service within its five-state region and to Washington state. During the summer, flights are resumed to Denver.

Two Lockheed Model 18 Lodestars are received from **Continental Air Lines** during the first week of June to assist with the freight service and a Boeing C-73 (military 247D) acquired from the government is sold to **Transcontinental and Western Air (TWA)** on July 28. Also in July, four company B-247Ds are turned over to the Army for conversion into C-73s and three are sold to the Canadian government.

On October 7, **1943**, Inland transfers its Lockheeds to **Western Air Lines** and purchases two Beech C-17B Staggerwings from J. W. Marshall of Dallas, Texas. On June 1, **1944**, Leferink sells 83.57% majority ownership to Western. The latter operates its new subsidiary as an autonomous division.

In January **1945**, the carrier receives a Douglas C-53 (military DC-3), which allows it to sell the Beech equipment. The lone Douglas transport will fly all Inland services until April 9, **1952** when the subsidiary is merged into its parent.

INLAND EMPIRE AIRLINES: United States (1977–1983). J. Healy forms IEA at La Verne, California, in the spring of **1977** to provide scheduled passenger and cargo commuter flights, as well as charter sight-seeing services. Employing a fleet of 4 Piper PA-31-350 Navajo Chieftains, revenue frequencies commence on May 1, linking the carrier's base with Fresno, Los Angeles, Ontario, Inyokern, Visalia, San Francisco, and Sacramento. In addition, tours are provided to the Grand Canyon and Death Valley. Operations continue apace in **1978** and four Fairchild-Swearingen Metro IIs join the fleet in **1979**.

The company is purchased by Reno-based **Air Chaparral** in October **1980** and thereafter operates as a subsidiary. Enplanements in **1981**, the first full year under new ownership, total 48,280. During **1982**, 180-employee IEA initiates flights from San Francisco to Merced, Modesto, and Stockton, as well as from Merced to Los Angeles. The fleet is upgraded by the addition of eight Metro IIs; orders remain outstanding for eight more.

Passenger boardings climb to 94,332.

Following the collapse of **Air Chaparral** in **1983**, Inland is operated a few months longer, but without the parent's support it must cease operations. At the time of its failure on September 16, bookings are up 21.5% to a total of 52,000.

INLAND FLYING SERVICE, LTD. See **WIGHT AVIATION, LTD.**

INLET AIRLINES: United States (1980–1990). Dennis Rothgeb establishes **Cook Inlet Aviation** at Homer, Alaska, in **1980** to provide charter passenger and cargo flights and contract services to local communities and bush destinations in the surrounding region.

Employing a fleet of float-equipped Cessnas, operations continue apace until **1989**, when the decision is taken to begin scheduled commuter frequencies under the name Inlet Airlines. These services are duly launched, linking the company's base with Seldovia, Port Graham, and English Bay.

In the face of recession, the company cannot maintain its viability and closes down in **1990**.

INNOTECH AVIATION, LTD.: Canada (1970–1989). Organized at Montreal (YUL) in **1970**, Innotech, a subsidiary of the Innocan investment concern, operates charter and contract service flights to various Canadian destinations from what will become a nationwide system of bases. Employing such aircraft as Douglas DC-3s, Convair 580s, Cessna Citations, and Dassault Falcons, operations continue from Montreal, Toronto, Ottawa, Calgary, Vancouver, and St. John's.

Flights continue over the next 15 years, during which time **Air Canada, Ltd.** acquires a 30% equity stake. By **1985–1986**, the fleet includes 1 each Cessna Citation, Falcon 20, Convair 580, Piper PA-31-310 Navajo, and 2 DC-3s. Operations cease in **1989**.

INSTONE AIR LINE, LTD. (1): United Kingdom (1919–1924). Postal delays in the fall of **1919** result in steamers unable to unload due to the tardy arrival of bills of lading. Sir Samuel Instone and his brother Theodore, owners of the shipping line S. Instone & Co., Ltd. to seek a novel solution this problem.

On October 13, the company begins a private Cardiff–London (Hounslow)–Paris (LBG) DH 4A service for corporation documents and officials. Over the French capital that day, chief pilot Frank Barnard

tosses out a number of greeting cards bearing the company name, the Union Jack, and the Tricolor.

Flying the firm's de Havilland DH 4A (converted from the DH 4), chief pilot Barnard, on February 18, **1920**, offers a public service on the company route from London to Paris. In April, a flight is made to Prague to investigate the possibilities of a route to Czechoslovakia via Cologne; no route will materialize due to German opposition.

Also added is a converted Vickers FB 27 bomber, the FB-2B Vimy Commercial, registered G-EASI and christened *City of London*. The airline's flagship, the Vimy is painted royal blue with silver wings and cream-colored interior. It is employed to inaugurate scheduled flight to Brussels on May 9.

During the remainder of the year, additional pilots are hired at an annual salary of £827 and the fleet is increased through the addition of a BAT FK-26, the *City of Newcastle*, and two leased Westland Limousine IIs.

Lack of traffic and capital caused by deep-discount subsidized foreign competition forces the company to downsize early in **1921**. Indeed, it can only offer flights to Paris on a nonscheduled basis when seats are filled and service to Brussels is terminated altogether. Facing ruin, the carrier joins other British pioneer airlines in halting operations on February 28.

While the company is still grounded on March 1, the first former **Aircraft Transport & Travel, Ltd. (AT & T)** DH 18A is delivered; two more will be accepted, one each in April and May. Having originally opposed state aid, Secretary of State for Air Winston S. Churchill organizes a Cross-Channel Subsidies Committee under Lord Londonderry on March 2.

On March 19, the Air Ministry agrees to provide the British overseas carriers with a total subsidy of £88,200, allowing fares to be reduced to the level of those charged by the French lines. With a £25,000 government grant in hand, Paris services are resumed for the public on March 21. Simultaneously, the carrier receives one of only two existing Westland Limousine IIIs on loan from the Air Council.

The second DH 18A is lost in a May 15 crash. The air transport division of S. Instone & Co. is split off on May 20 as plans are laid for incorporation. The first of two DH 18Bs to be delivered before year's end arrives in early December. Capitalized at £50,000, The Instone Air Line, Ltd. is registered on December 12; Sir Samuel names himself chairman, with S. T. L. Greer as general manager.

Uniforms are introduced for pilots and company officials on January 1, **1922**, the first to be worn on a regular basis by personnel of any world airline. The first of four DH 34s to be delivered on loan from the Air Council during the year arrives in March and is christened *City of Glasgow*. All future Instone aircraft will also receive names that will be painted on the sides of their royal blue fuselages.

The Air Ministry, on April 1, introduces an ongoing subsidy scheme under which TIAL's proposed Brussels route will be covered. The *City of Glasgow*, piloted by Barnard and with eight journalists as passengers, makes a proving flight to Paris on April 2; on April 18, an early morning DH 4A newspaper delivery service is launched to the French capital.

On May 8, carrying five passengers, Pilot Barnard launches Brussels service with the DH 34 *City of New York*. On May 22, the first DH 18B is lost in the North Sea. The first of two Vickers Type 61 Vulcans to be acquired during the year is delivered in late May and is christened *City of Antwerp*; it begins flying to Le Bourget on June 1.

During June, the two Westland Limousine IIs leased in 1920 are purchased. Chief Pilot Barnard now wins the huge trophy given to the victor in the King's Cup Air Race, an honor that he shares with Sir Samuel. Five years later, Barnard, by then chief pilot of **Imperial Airways, Ltd.**, will be killed while preparing to compete in another King's Cup Air Race. On August 15, the Brussels route is extended to Cologne. Also during the summer, IAL carries the first known racehorse to be transported by air. Jockeys now become frequent travelers on the company's passenger services. This heritage has recently been recalled by the

latter-day Australian branch of Instone Air Services, Ltd. on its website at <http://www.instone.com.au>.

On October 1, the government announces a revised subsidy scheme designed to prevent cutthroat competition on the same services by assigning specific routes to the various operators; the carrier's Brussels and Cologne route is confirmed and a new £25,000 grant is awarded. Instone's last Paris flight is completed on October 2. Simultaneously, service is inaugurated by the Vickers Vimy Commercial *City of London*, nicknamed "Old Easy" from its registration numbers G-EASI, from London–Cologne; however, poor weather forces an unscheduled night layover at the Brussels intermediate stop.

In early February 1923, the Parliament's Civil Air Subsidies Committee, headed by Sir Herbert Hambling, makes a report favoring the merging into one state carrier of all the private British carriers. On March 14, Sir Samuel Hoare, Secretary of State for Air, indicates the U.K. government's acceptance of the Hambling Report and its intention to merge the private airlines when their subsidy contracts expire the following March.

Nonstop London–Cologne out and return service starts on May 14. Ordered by the company as a 23-seat transport, the world's largest civil airliner, the Vickers Vanguard (1), makes its inaugural flight at Brooklands. Derived from the Virginia I, the prototype G-EBCP will only be employed as a demonstrator. On August 4, chief pilot Barnard makes an experimental Vulcan flight to Prague, but continuing political difficulties prevent the start-up of regular services.

As a result of the French occupation of the Ruhr following Germany's default on reparation payments, the Weimar government must fly currency to its unemployed workers. The only practical way is to charter a British carrier to fly the cash first to London and then back to Cologne. To accomplish this duty, the Vimy Commercial *City of London* launches daily freight service to Cologne, earning Instone an extra £120 per trip.

The *Report of the Civil Air Transport Subsidies Committee*, released earlier, results in a December 3 Air Council agreement to merge the independent British carriers into a single state airline. During the year, a Bristol 175 is added to the fleet and a total of 3,022 passengers are carried.

IALL disappears when **Imperial Airways, Ltd.** is officially incorporated on March 31, 1924. During IALL's existence, the carrier had operated without a single injury to any passenger—a most remarkable achievement in the early 1920s.

Years later, Capt. Alfred Instone recalls his pioneering efforts in *Early Birds: Air Transport Memories, 1919–1924* (Cardiff, Wales: Western Mail & Echo, 1938). He will also reveal that it was this company that introduced what will later become one of the great prizes of the airline memorabilia collector, the stick-on baggage label.

INSTONE AIR LINE, LTD. (2): Charity Farm, Pullborough Road, Pullborough, West Sussex, England, RH20 4HP, United Kingdom; Phone 44 (1908) 740 101; Fax 44 (1908) 740 102; <http://www.instone.com.au>; Year Founded 1976. Named for its owners, the second Instone is organized by Giles and Jeremy Instone at London in August 1979. Following the lease of a Douglas DC-8-63F and the purchase of two Bristol 170 Freighters Mk. 31—wearing red seahorse logos on their tailfins—the carrier begins international freight charters and contract service flights on August 3, 1981. The company specializes in the transport of industrial and other outsized equipment and livestock, especially racehorses. A DC-6A joins the fleet in June 1988 and, by 1992, the fleet has been revised to include the DC-6A and a chartered DC-8-73F.

In 1993, Chairman Jeremy Instone and Managing Director Giles Instone oversee a workforce of 26. Operations, including those flown under marketing alliances with **Air Canada, Ltd.** and **Federal Express**, continue in 1994–2000. During these years, the company, now with the marketing name Instone Air Services, Ltd., boosts its employee population to 28. The all-leased fleet is increased to include 6 Boeing 737-500s, 4 B-737-400s, and 2 each B-767-200ERs and B-767-300ERs.

INSTONE AIR SERVICE, LTD. See **INSTONE AIR LINE, LTD. (2)**

INSULAR AIRWAYS COMPANY (INACO): Philippines (1946–1947). Victor Osias establishes INACO at Manila in the spring of 1946 to operate nonscheduled interisland services with a number of Consolidated PBV-5A Catalina flying boats and Noorduynd C-64 Norsemen. Services duly commence and, late in the war, several Catalinas are leased to another small Filipino carrier, **Trans Asiatic Airlines, Inc. (TAALI)**.

Sympathetic to the revolution under way in the Dutch East Indies, Osias flies arms to rebel forces. Netherlands forces capture his flying boats and put him out of business in the spring of 1947.

INTAIR, LTD.: Canada (1989–1991). **Inter-Canadien Airlines, Ltd. (1)** is renamed in January 1989. Simultaneously, the first 2 of 12 ordered Fokker 100s arrive, followed by 1 per month through June. Their delivery allows orderly release of chartered Boeing B-737-219s in February, April, and November, respectively, as Intair becomes the first North American airline to put the F28 follow-on into revenue service. The new Fokkers are placed on the carrier's **Canadian Airlines International, Ltd.** feeder services from Toronto to Montreal and Quebec City.

A number of new destinations are added during the year and the company becomes the sole airline to serve all regions of Quebec. Among the new stops are Toronto, Ontario; Alma and Dolbeau, Quebec; Moncton, Charlo, Chatham, and St. John, New Brunswick; and Charlottetown, Prince Edwards Island. Service between Ottawa, Montreal, and Quebec is improved, along with that into the Abitibi region, while frequencies are also added in the Maritimes. As a result of all this expansion and continuing hard feelings in certain quarters, shareholders from Quebec vote in October to terminate the agreement with **Canadian Airlines International, Ltd.** and to continue operations as an independent.

By December, the airline is performing 1,000 departures per week to 36 destinations. A total of 843,962 passengers are flown on the year.

The fleet in 1990 includes 6 Avions de Transport Regional ATR42-320s, 9 Convair CV-580s, 7 Fokker 100s, 2 Lockheed L-188ACs, 5 Swearingen Metro IIs, and 2 F28-1000s, the latter being leased to **TAT (Transport Aerien Transregional, S.A.)**. Passenger traffic figures for the first 6 months show that a total of 451,653 customers have been carried, a 3.3% increase over the same period a year earlier. As a result of recession, computerized reservations system difficulties, and the Gulf crisis, costs accelerate and financial difficulties take center stage. In September, the regional seeks C\$20 million from the Quebec provincial government.

New financing is provided in January 1991 as the Quebec provincial government rescues the regional from bankruptcy. First, the government agrees to an advance of C\$2.5 million on annual subsidies for services to remote sites on the north shore of the St. Louis River. To settle a C\$16-million lawsuit filed against the government back when the airline was known as Quebecair, Quebec authorities hand over another C\$2.7 million.

The major shareholders, President Michel LeBlanc and Marcel Dutil, pledge a total of C\$3 million in capital stock and the Bank of Montreal offers C\$2 million more. The Quebec Federation of Labor, also known as Fonds de Solidarité des Travailleurs du Québec, provides C\$5 million in convertible debentures and the lessor, International Lease Financing Corporation (ILFC), agrees to postpone the next rental payments, worth C\$4 million, for an indefinite period.

President LeBlanc resigns in March as the regional's fiscal problems deepen. PWA, Inc.'s new **Canadian Regional Airlines, Ltd.** division purchase 70% of the company's turboprop operation and Quebec routes in June and restart them as **Inter-Canadien Airlines, Ltd. (2)**. Meanwhile, Intair retains four Fokker 100s, which are operated on charter. Regularly scheduled services commence in October between Toronto and Montreal. The costs associated with this service will prove the airline's final undoing.

Discussions are held with **Nationair, Ltd.** concerning a merger; however, when these break down in November, Intair ceases operations and returns its aircraft to their manufacturer. The remaining 30% is cleared for transfer to **Inter-Canadien Airlines, Ltd. (2)** on April 27, 1994.

INTENSIVE AIR (PTY.), LTD.: P.O. Box 91212, Auckland Park, Johannesburg, 2006, South Africa; Phone (011) 788-7659; Fax (011) 880-7404; <http://www.intensiveair.co.za>; Year Founded 1989. The air ambulance service Care Airlines (Pty.), Ltd. is established in 1989 and begins revenue flights with a single Cessna 410 and two staff members. In 1995, the company is renamed, becoming a general passenger charter operation under its present name.

Airline employment stands at 25 in 2000 and the fleet includes 3 British Aerospace BAe (HS) 748s. Charters are provided to numerous domestic destinations, including Cape Town, Durban, Port Elizabeth, East London, Upington, George, Margate, Richards Bay, Mkuzi, Skukuza, Hoedpruit, Komatipoort, Pietersburg, Pietermaritzburg, Wonderboom, Bloemfontein, Alexander Bay, Umtata, Welkom, and Ysterplaat. International flights are also made to Namibia, Malawi, Zambia, Zimbabwe, Mozambique, Lesotho, and Swaziland.

INTER AIR (INTER AVIATION SERVICES (PTY.), LTD.): Unit 12, Jan Smuts Office Park, 12 Jones Road, Jet Park, Johannesburg, South Africa; Phone 27 (11) 397-1445; Fax 27 (11) 397-1449; Code D6; Year Founded 1993. IAS is set up at Johannesburg in 1993; shareholding is divided between J. and M. Attala, M. and R. Ebeling, and N. Schwartz. Domestic charter services are undertaken under the leadership of General Manager Bruce Booysen.

After a year of nonscheduled operations, Inter Air, in early April 1995, becomes licensed to offer regularly scheduled international and regional passenger services. Flights are inaugurated to Entebbe, Seychelles, Antananarivo, and Ndola.

By 1999–2000, the company is flying a pair of chartered Boeing 727-230As to Antananarivo, Entebbe, Ndola, Reunion Island, Comoro Islands, Seychelles, Douala, and Brazzaville. The workforce now stands at 150. On April 15 of the latter year, weekly B-727-100C roundtrips are introduced from Johannesburg to Libreville and Douala.

INTER AIR SERVICES (LIGNES INTERIEURES ALGERIENNES, S.A.): Algeria (1984–1986). IAS is founded at Algiers in 1984 as the new government-owned domestic airline. It is equipped with 9 Fokker F.27s, 16 Beech B-80 Queen Airs, 2 Beech 90 King Airs, and 16 Grumman G-164 Agricons. In addition to air taxi and agricultural duties, the company's main duty is provision of scheduled air service between 25 of Algeria's larger cities and towns. **Air Algerie, S.A.** Boeing 727-2D6s are employed to fly the long segments between Algiers and Oran, Annaba, and Constantine.

After only two years of operation, it is decided to fold domestic flight operations into **Air Algerie, S.A.** The carrier is liquidated and its employees and aircraft are transferred.

INTER-AMERICA, S.A.: Mexico (1993–1994). Inter-America is established at Monterrey in the spring of 1993 to operate passenger charter flights to domestic destinations. A Boeing 737-244 is leased and begins flights linking its base with Mexico City, Acapulco, Cancún, and Puerto Vallarta. Later in the year, a second aircraft is also chartered, a B-737-275.

Operations cease in February 1994.

INTER-AMERICAN AIRWAYS. See TACA (TRANSPORTES AEREOS CENTRO AMERICANOS, S.A.)

INTER ATOLL AIR, LTD.: Maldives (1986–1987). IAI is established at Kadhdhoo Island, in late 1986 to provide interisland shuttle service to vacation resorts in the southern atolls of the Maldives. Revenue flights commence with a single float-equipped de Havilland DHC 6-300 Twin Otter.

The company cannot sustain operations after its aircraft is involved in a nonfatal crash on February 7, 1987.

INTER AUSTRAL, S.A.: Argentina (1993–1995). This third-level operation is established at Buenos Aires in July 1993 as a subsidiary of **Austral Lineas Aereas, S.A.** Feeder operations by CEO Tomas Hanach's concern to a ring of communities around the metropolis commences with a pair of CASA CN-235-200s.

Within a year, a total of 89,700 passengers have been transported.

Inter Austral is renamed **Austral Express, S.A.** at the end of 1995.

INTER-CANADIAN AIRLINES, LTD. (1): Canada (1988–1989). On January 17, 1988, **Quebecair, Ltd., Nordair Metro Express, Ltd., and Quebecair Inter, Ltd.** are merged to form Inter-Canadien. The new regional, Canada's largest, is controlled by the holding companies Quebecair and Les Lignes Aeriennes Inter-Quebec which are, in turn, owned by **Canadian Airlines International, Ltd. (35%),** President/CEO Michel Leblanc (35%), Chairman Marc Racicot (20%), and Marcel Dutil (10%).

The initial fleet comprises 10 Convair CV-580s, 5 Fairchild-Swearingen SA-226 Metro IIs, and 2 Fokker F.28-1000s. Revenue services, coordinated with the major, begin on the Montreal–Toronto return route in early February. A CV-580 is withdrawn in March, by which time all of the aircraft have been given new livery. Montreal to Dolbeau and Alma Metro II flights begin that month, followed by frequencies to Charlottetown and Moncton.

Two leased Boeing 737-219s arrive in May and are used in June to fly replacement flights for Canadian between Montreal and Chatham, New Brunswick, via Charlottetown, along with the Fokkers. Orders are now placed for seven Fokker 100s, for which the carrier becomes North American launch customer. Two Avions de Transport Regional ATR42-320s are delivered in December; orders are placed for three more.

The year's enplanements total 758,857 and a total of 1.83 million FTKs are flown. Revenues are C\$88.46 million and costs allow an operating profit of C\$2.2 million. Net gain is C\$2.6 million.

Late in January 1989, Inter-Canadian becomes **Intair, Ltd.**

INTER-CANADIAN AIRLINES, LTD. (2): 795 Graham Boulevard North, Dorval, Quebec, H4Y 1E4, Canada; Phone (514) 631-9802; Fax (514) 631-2129; Code QB; Year Founded 1991. After only two years operations, the regional **Intair, Ltd.** is in severe financial difficulty. Following the March 1991 resignation of President Michel LeBlanc, PWA, Inc.'s new **Canadian Regional Airlines, Ltd.** division steps forward in June and purchases 70% of Intair's turboprop operation as well as its routes in Quebec. Under the new name, services are resumed with five leased Avions de Transport Regional ATR42-320s as a "Canadian Partner" affiliate of **Canadian Airlines International, Ltd.** Traffic and revenue statistics are not revealed.

Operations continue apace in 1992–1993. The remaining 30% shareholding in **Intair, Ltd.** is acquired on April 27, 1994 and two more ATRs are chartered. The fleet in 1995 includes 7 ATR42-300s and 2 Fokker F.28s, the latter being employed to provide service to several new northern destinations.

Duncan Fischer is president in 1996–1997 as another Fokker Fellowship is acquired. Destinations visited include Bagotville, Saguenay, Baie Comeau, Blanc Sablon, Bonaventure, Chevery, Harrington Harbour, Gaspé, Havre St. Pierre, Iles de la Madeleine, Kegaska, Kuujuaarapik, La Grande, La Romaine Gethsemane, La Tabatiere, Mont Joli, Natashquan, Ottawa, Port Menier, Quebec City, Saint Augustin, Schefferville, Sept Iles, Tete a la Baieine, Toronto, Val d'Or, and Wabush. During the latter year, enplanements total 586,312.

Flights continue in 1998. On August 27, it is announced that **Canadian Airlines International, Ltd.** will terminate its commercial agreement with St. John's-based **Air Atlantic, Ltd.** on October 24 and that the small regional will cease all scheduled flight operations. Only half of the carrier's 118 pilots and 20 flight attendants will be taken on by Inter-Canadian, which will assume the carrier's 12 routes the next day.

After October 25, IMP International Group, which owns Air Atlantic, maintains that company's operating certificate and studies the viability of undertaking nonscheduled flights over the winter season.

In the fall interim, **Canadian Regional Airlines, Ltd.** sells Inter-Canadian to Canadian Investors Corp. The new owners obtain all of the Inter-Canadian assets, including routes in Quebec and Ontario, plus the Air Atlantic routes in Atlantic Canada. Chairman Michael Cochrane indicates that the company will continue to feed CAI's hubs at Halifax, Montreal, and Toronto, while also increasing its fleet size.

Passenger boardings accelerate 11.7% to 664,000, while 1.16 million FTKs are also operated.

By the start of 1999, airline employment has been boosted 80.4% to 868. On February 1, the company enters into a major marketing and code-sharing agreement with **Air Labrador, Ltd.** Under terms of the arrangement, the carriers inaugurate an enhanced schedule of weekday "Canadian Partner" flights. There are now four-times-a-day roundtrips between St. John's and Goose Bay, daily service from Goose Bay to Deer Lake, and twice-daily departures from Deer Lake to Goose Bay. Also included are twice-daily roundtrips from St. John's to St. Anthony and from St. Anthony to Goose Bay, as well as daily roundtrips St. John's to Wabush and Deer Lake, Deer Lake to Wabush and Blanc-Sablon, Blanc-Sablon to St. John's, and Blanc-Sablon to Goose Bay.

The regional enhances its spring and summer "Canadian Partner" schedule on April 4. New offerings include two new direct daily flights between Fredericton and Ottawa; thrice daily roundtrips between Halifax and Iles de la Madeleine and Miramichi as well as from Halifax to Gander. There are also new daily roundtrips between St. John's and Stephenville and the number of daily roundtrips from Gander to St. John's grows from one to two. There is also a new daily roundtrip from Gander to Stephenville.

Flight 2210, an F.28 with 4 crew and 56 passengers, stops approximately 200 ft. past the end of the runway after landing at St. John's, Newfoundland, on August 2. Six people with minor injuries are taken to hospital.

With traffic off by 20%, operations are temporarily suspended in late November as the carrier seeks a rescue package. Although associated with the **Canadian Airlines, Ltd.** regional program, Inter-Canadian is not on the list of assets to be taken over when that major is purchased by **Air Canada, Ltd.** As a result, it may prove extremely difficult to find investors.

After four months of fruitless efforts to find additional financing, the carrier is declared bankrupt on April 1, 2000.

INTER CITIAIR EXPRESS. See ALASKA-WASHINGTON AIRWAYS

INTER-CITY AIR LINES: United States (1932–1933). Another soon-to-be airline victim of the Great Depression, Inter-City is founded at Springfield, Massachusetts, in the summer of 1932 to offer scheduled flights to Boston. Employing two Travel Air 6000s, the new entrant inaugurates revenue passenger and air express flights on July 1.

A multistop route is stretched from Boston to Albany in February 1933. Without a mail contract, the carrier's owners, after witnessing the transport of only 842 passengers and 17 pounds of air express in 10 months, elect to shut the operation down in April.

INTER-CITY AIRLINES. See ALIDAIR, LTD.

INTER-EUROPEAN AIRWAYS, LTD.: United Kingdom (1987–1993). Inter-European is set up by the Asprou family at Cardiff, Wales in 1987 to offer passenger charter and inclusive-tour flights for its Asprou Holidays travel firm to European and Mediterranean holiday destinations. M. G. Asprou is chairman with joint managing directors Chris M. Asprou and George M. Asprou. Two Boeing 737-3Y0s are purchased along with a B-737-33A and a B-737-23A; these are employed to inaugurate revenue operations. Operations continue apace in

1988–1989. Destinations visited include Europe, the Greek Islands, Malta, Portugal, Cyprus, Spain, and the Spanish islands.

Airline employment stands at 173 in 1990 and the Dash-23A is leased to **Air Aruba, N.V.** Enplanements total 411,100 and a net profit of £3.2 million is generated.

A B-737-4S3 is received and orders are placed in 1991 for four B-757-236s. Passenger boardings more than double to 900,000.

The employee population by 1992 totals 389 as the first chartered B-757-236 is placed into service. Requests are now made for two Airbus Industrie A320-321s. Customer bookings ascend a remarkable 113% to 1.3 million. In June 1993, the company is purchased by **Airtours International, Ltd.**

INTER-FRET (INTER-FRET TRANSPORT AERIEN, S.A.): Zaire (1981–1988). Established at Kinshasa in 1981, Inter-Fret undertakes charter and contract passenger and freight services both within Zaire and to other African destinations. For its entire seven-year life span, the company operates a pair of Boeing 707-321Cs.

INTER-ISLAND AIR SERVICES, LTD.: Antigua (1977–1980). Formed as a subsidiary of **LIAT (Leeward Islands Air Transport, Ltd.)**, Inter-Island begins scheduled revenue flights in mid-1977 with a fleet of 3 Britten-Norman BN-2 Islanders and 1 BN-2A Trislander. Destinations served include Barbados, Carriacou, Grenada, St. Lucia, Mustique, Union Island, and St. Vincent.

Unable to make a profit in the face of increasing fuel bills and poor traffic yields, the carrier is merged into its parent in 1980.

INTER-ISLAND AIRWAYS (1): United States (1929–1941). With F. C. Atherton as president and Stanley C. Kennedy as general manager, Inter-Island Airways is incorporated at Honolulu under the laws of the territory of Hawaii on January 30, 1929 as an 80%-owned subsidiary of the Inter-Island Steam Navigation Company. Initial capitalization is \$500,000, with authorization to raise that level to \$5 million. Start-up working capital total \$250,000.

The company's first pilot, Charles I. "Sam" Elliott joins the paper carrier on August 1. After completion of the first hanger during the summer, a Bellanca CH-300 Pacemaker is obtained and beginning on October 6 undertakes passenger sight-seeing flights over Oahu, to and from Koko Head. Meanwhile, two Sikorsky S-38 amphibians ordered earlier arrive by ship at Honolulu from New York via the Panama Canal.

In ceremonies at John Rodgers Airport on November 11, Betty Judd, daughter of Hawaii's territorial governor, Lawrence M. Judd, christens the two Sikorskys. One, the *Hawaii*, is then employed to inaugurate the carrier's scheduled interisland services, Honolulu to Hilo via Maui. Honolulu to Kauai flights begin next day.

A third Sikorsky S-38 is acquired in January 1930 and the company's 3 amphibians transport a total of 10,367 interisland passengers during this first full year of operations; another 2,600 Honolulu sightseers are also accommodated.

Even though a fourth S-38 is added in July, bookings drop to 9,215 scheduled for 1931 and below 7,000 for each year during 1932–1933.

The Great Depression has a significant impact on bookings. When, following the Airmail Scandal of early 1934, the Post Office rebids all mail-carrying contracts in April, Inter-Island is the only company to apply for Hawaii and in September receives route AM-33, linking the four main islands.

Rather than a hoped-for subsidy, the Post Office provides only service payments. Still, history is made on October 8 when the first airmail flights in territorial history commence from Honolulu to Hawaii, Maui, Kauai, Lanai, and Molokai. Late in the year, two S-43s are ordered.

Chief pilot Elliott travels to the Sikorsky plant at Stratford, Connecticut, during the fall of 1935 to familiarize himself with the new flying boats, the first of which is delivered on November 18. Elliott ferries the S-43 to Alameda, California, where it is disassembled in the hangar of **Pan American Airways (PAA)** and shipped to Hawaii by sea. Uncrated

and reassembled, the amphibian is placed into service to Hilo on December 20.

Enplanements for the year exceed 13,000.

The second S-43 joins the fleet on January 15, 1936, followed by the third on January 19, 1937.

During June-August 1938, employees of Inter-Island Steam Navigation Company initiate a job action and the strike encourages increased passenger utilization of the subsidiary.

Passenger boardings rise to 28,000.

A fourth Sikorsky S-43 amphibian is delivered on March 7, 1939 and the CAB grants a permanent certificate on June 16. The company's 10th anniversary is celebrated on November 11.

The outbreak of the European war and heightened tensions in the Pacific bring an increase in bookings and in late 1940 three Douglas DC-3s are ordered for \$483,000.

During the last week of August 1941 the three aircraft are flown in a V-formation from Long Beach to Honolulu; the flight, the longest over water by DC-3s to date, requires 14 hrs. 58 min. During September, the new aircraft are christened *The Moanalua*, *The Haleakala*, and *The Waialeale*.

Thinking ahead to transpacific operations, company officials on October 1 change the corporate identity to **Hawaiian Air Lines** (the present single-word suffix being elected in 1960).

INTER-ISLAND AIRWAYS (2): United States (1964–1980). Jack Chapman forms this small carrier at St. Thomas, U.S. Virgin Islands, in the fall of 1964 to offer scheduled passenger flights to San Juan, Puerto Rico, and to Tortola and charter flights throughout the Caribbean. Daily Piper PA-23 Aztec roundtrips commence on October 21.

When operations cease on March 19, 1980, Chapman is employing just one Britten-Norman BN-2 Islander.

INTER-ISLAND AIRWAYS (3): Pago Pago International Airport, 1000 Airport Road, P.O. Box 4929, Pago Pago, American Samoa 96799, United States; Phone (684) 633-7000; Fax (684) 633-5727; <http://www.samoanet.com/iaa>; Year Founded 1993. IIA-3 is established at Pago Pago in 1993 to offer interisland FAR Part 125 air taxi and charter services. Employing a pair of Aero Commander 680s, revenue passenger and cargo flights commence linking the company's base with Ofu and Tau Islands, as well as to the independent country of Western Samoa. A new hangar is constructed late in the year.

During the next three years, President Alex Sene Jr. and Vice President Barney Sene oversee the investment of \$2 million in their concern and make the decision to seek a scheduled Part 135 certificate from the FAA. A Fairchild Dornier 228-212 is acquired late in 1997.

Scheduled and charter services continue.

INTER-ISLAND AIRWAYS, LTD.: Seychelles (1976–1979). Established at Mahe in August 1976, Managing Director P. Benniman's 22-employee IIA is equipped with 1 Britten-Norman BN-2 III Trislander, 1 BN-2 Islander, and 1 Piper PA-23 Aztec. Scheduled services are undertaken in the fall linking the capital with the islands of Darros, Platte, Bird, Denis, and Frigate. Passenger and cargo ad hoc charters are also undertaken.

The company is combined with **Air Mahe, Ltd.** in July 1979 to create **Air Seychelles, Ltd.**

INTER ISLAND EXPRESS: Base Aerea Muniz, Isla Verde, Puerto Rico, United States; Phone (787) 253-1400; Fax (787) 253-1410; <http://www.interislandexpress.cm>; Year Founded 2000. Inter Island Express is established at San Juan in 2000 to offer local and Caribbean air cargo and passenger charters. Revenue flights begin with a new Cessna 208 Grand Caravan and destinations visited include Culebra, Vieques, St. Thomas, St. Croix, the British Virgin Islands, St. Martien, Anquilla, St. Kitts, Antigua, Guadalupe, Nevis, and St. Barths.

INTER PILOTO, S.A.: Portugal (1994–1995). Inter Piloto is established at Lisbon in 1994 to offer ad hoc passenger and cargo charters. Revenue flights commence with a single Convair CV-580. Flights cease in 1995.

INTER-PROVINCIAL AIRWAYS, LTD.: Canada (1929–1930). In early 1929, **Fairchild Aviation Company, Ltd.** is renamed Inter-Provincial. In addition to the routes of the merger partner, the carrier now offers passenger and freight service from Montreal to Fort Erie. Mail flights begin from Oskelaneo to Chibougamau on December 24.

On November 25, 1930, the company, controlled by the Aviation Corporation of Canada, Ltd. is merged with **Western Canada Airways, Ltd.** to form **Canadian Airways, Ltd.**

INTER-RCA, S.A.: Central African Republic (1980–1985). With assistance from the **UTA French Airlines, S.A.** subsidiary Sodetraf, Inter-RCA is formed by the government at Bangui in 1980. Equipped with two Douglas DC-3s, the company begins revenue operations in 1981 linking the capital with Bambari, Bangassou, Berberati, Birao, Bria, Carnot, Ouadda, and Ouanda Djaile. Within five years of its start-up, the carrier is gone, its services largely replaced by **Air Tchad, S.A.**

INTER-VALLEY AIRLINES: United States (1983–1991). Inter-Valley is established at Chugiak, Alaska, in the spring of 1983 to provide scheduled passenger and cargo commuter service. Revenue flights commence in April to Anchorage, Whittier, Birchwood, Settler's Bay, and other small communities. Unable to maintain viability in the face of recession, the Cessna lightplane operator expires in 1991.

INTERAIR, A.B.: Business Terminal, Malmo-Sturup Airport, Malmo-Sturup, S 230 32, Sweden; Phone 46 (40) 500300; Fax 46 (40) 500309; Year Founded 1981. Interair is the FBO originally established at Malmo-Sturup Airport in 1981. Over the next 19 years, the company also undertakes worldwide executive and small group passenger charters with a fleet that includes 3 Cessna Citations and 2 Dassault Falcon 10s.

INTERAMERICANA CARGO VENEZUELA, S.A.: Venezuela (1982–1995). One of the few Latin American all-cargo airlines to survive into the 1990s, Interamericana is formed at Caracas in 1982 to offer charter and contract cargo services. Services initially begin with a Douglas DC-8-55F over routes to South American destinations as well as Miami. Later in the decade, a second DC-8-55F is acquired.

The economic recession of the early 1990s forces the company to reevaluate its equipment situation. The two DC-8-55Fs are sold in 1990 and replaced by the first leased unit, a DC-8-54F acquired from **Argo Air**. In 1992, the company elects to lease its flight equipment from **Fine Air**, obtaining two DC-8-54Fs. One aircraft is returned in 1993 and operations continue without change thereafter until 1995, when the company encounters fiscal problems and shuts down.

INTERANDES, S.A.: Colombia (1979–1993). Interandes is established as an air taxi at Bogota in 1979. Employing a single Douglas DC-3, the carrier undertakes cargo and ad hoc passenger charters until its demise in early 1993.

INTERBRASIL STAR, S.A. (SISTEMA TRANSBRASIL DE AUTOMACAO DE RESERVAS, S.A.): Rua General Pantaleao, Teles 40, Transbrasil Aeroporto, Sao Paulo-SP, CEP-04355-040, Brazil; Phone 55 (11) 533-7111; Fax 55 (11) 543-8048; <http://www.transbrasil.com.br/i/inter1.htm>; <http://shsibm.shh.fi/an944420/inter.htm>; Code Q9; Year Founded 1994. Interbrasil is established at São Paulo in early spring 1994 to provide third-level regional scheduled passenger and cargo feeder services and charter flights. A total of \$18 million is invested in the company by **Transbrasil, S.A. (Linhas Aereas)**, with financing supplied by BINDES-Banco Nacional de

Desenvolvimento Economico e Social via its Finame agency. Marcos Antonio Lacerda de Athayde is named president and a \$22-million order is placed for three Embraer EMB-120 Brasílias.

Late in the year, **Transbrasil S.A. (Linhas Aereas)** assigns spring delivery to its daughter of three EMB-145 Amazons, the first jetliner to be designed and built in Brazil. Options are taken on eight others.

Ten months later, the first EMB-120 Brasília is delivered during the third week of May 1995, with the other two arriving in June. Revenue flights commence on July 3 with the three Brasílias, which are based at Brasília, São Jose do Rio Preto, and São Paulo. These will feed **Transbrasil, S.A. (Linhas Aereas)** from markets at Gaiania, Londrina, Foz do Iguaçu, Chapeco, Concordia, and Porto Alegre.

In 1996, a Boeing 737-3Q4 is subleased from **Transbrasil, S.A. (Linhas Aereas)** and the route network is expanded to cover the interior of São Paulo State and the states of Parana and Santa Catarina in southern Brazil. Destinations added include Campinas, Guaruihos, Londrina, Maringa, and Riberirao Preto.

Enplanements for the first full year of service total 52,715.

As 1997 begins, the EMB-145s expected in 1995 have still not been delivered. Flights continue in 1998–1999, during which years four Amazons join the fleet.

At the beginning of 2000, the company serves 11 Brazilian cities with daily service, while providing instant connections with **Transbrasil, S.A. Linhas Aereas** flights at the international airports of Porto Alegre, Florianopolis, São Paulo, and Brasília.

INTERCARGO SYSTEM, S.A. See INTERCIEL SERVICE, S.A.

INTERCIEL SERVICE, S.A.: France (1987–1990). Interciel, also known as Intercargo System, is established at Paris in early 1987 to offer all-cargo charter and contract service flights to regional destinations, including many in the Mediterranean and Mideast. Revenue operations commence with a leased fleet of 2 B-737-230Cs, 1 B-737-242C, 2 B-737-2K2Cs, and 1 B-737-2Q5Cs.

Three years later in 1990, company officials, faced with the problems associated with the costs and market closures of the Gulf War, elect to join with **Air Inter, S.A.** to form **Aeropostale, S.A. (2)**.

INTERCITY AIR, LTD.: Canada (1983–1986). Intercity is established at Kelowna, British Columbia, during the summer of 1983 as a division of **Kelowna Flightcraft Air Charter, Ltd.** An application is placed with the government of Canada seeking permission to begin scheduled services throughout the southern part of the province.

Authority is received in October to begin revenue services and over the next eight months, planning for flights is undertaken. Employing a Convair CV-580 and a Swearingen Metro II leased from the parent, Intercity inaugurates scheduled services on June 4, 1984.

Flights linking Kelowna with Kamloops, Vancouver, and Penticton are continued during the remainder of the year and through most of the next two. During these years, a British Aerospace (BAe) 748-2A joins the fleet. Service is suspended in October 1986.

INTERCITY AIRLINES, LTD.: United Kingdom (1981–1983). Intercity is formed at East Midlands Airport in early 1981 to operate contract services for the Scottish oil industry, as well as a limited number of scheduled commuter routes to such points at London (CTN) and Manchester. Revenue flights commence in May with a Shorts 330-200 and continue until the company shuts its doors in August 1983.

INTERCITY AIRWAYS (PTY.), LTD.: Australia (1936–1937). IA is set up at Sydney in the fall of 1936. Outfitted with an L.J.W.-7 Gannett, the company begins twice-weekly service to Nyngan and Broken Hill on November 16. On July 30, 1937, the carrier is purchased and merged into **Southern Airlines and Freighters (Pty.), Ltd.**

INTERCONAIR (IRISH INTERCON CATTLE MEATS, LTD.): Ireland (1975–1977). Interconair is formed at Shannon in 1975 for the express purpose of transporting frozen Irish beef to London (CTN). A single Bristol Britannia 235F is acquired and given a plain white livery, with the Irish flag and a pair of cattle horns painted on its tail. Revenue flights commence in the spring and continue without incident until the Bristol is destroyed as the result of a bad landing at Shannon in September 1977.

INTERCONTINENTAL AIRWAYS: United States (1980–1981). This charter carrier is established at Wilmington, Ohio, in the fall of 1980. Nonscheduled flights begin to various domestic and Caribbean locations, including Atlantic City.

The carrier is unable to gain airspace as a result of the August 1981 PATCO air traffic controller's strike. As a result, the financially debilitated company is forced to quit; at the time the doors are shut, a total of 55,000 passengers have been flown. Its assets are sold to the leasing concern Charlotte Aircraft.

INTERCONTINENTAL AIRLINES, LTD.: Nigeria (1980–1992). Formed by G. O. Onosode as Air Vanni, Ltd., at Lagos in 1978, privately owned Intercontinental is reformed in 1980 and specializes in long-haul holiday passenger and cargo charters between Lagos and London, as well as contract services and aircraft leasing.

For most of the 1980s, the fleet comprises 2 Douglas DC-8-52s, 3 Sud-Est SE-210 Caravelle IIIs, and 2 Hawker Siddeley HS 125 executive jets.

The Douglas airliners are withdrawn in 1989 and the carrier, unable to maintain economic viability during the recession of the early 1990s, is forced to close down in late 1992.

INTERCONTINENTAL COLOMBIA (INTERCONTINENTAL DE AVIACION, S.A.): Avenida Eldorado, Entrada No. 2, Interior 6, Bogota, Colombia; Phone 57 (1) 413-8888; Fax 57 (1) 413-9893; http://www.insite-network.com/Inter; Code RS; Year Founded 1982. The privately owned **Aeropesca, S.A.** is reorganized in December 1982 and changes its name. The route network comprises a base at Bogota and stops at Arauca, Cali, Cucuta, Florencia, Ipiales, Leticia, Medellin, Pasto, Popiyan, Richacha, Santa Marta, and Valledupar. Scheduled passenger and cargo flights are undertaken along with general cargo charters and specialized livestock flights.

In 1983, orders are placed for three Douglas DC-9-15s as replacements for the company's five Vickers Viscount 745s. Passenger boardings total 85,153. By 1985, the fleet comprises 3 DC-9-15s and 1 Curtiss C-46 freighter; airline employment stands at 177.

In 1986–1988, passenger and cargo services are maintained and plans are undertaken to open services to Maracaibo and to Tulcan. The fleet in 1989 includes 2 DC-9-15s, with 2 more added in 1990.

In 1991, traffic statistics for the 236-employee airline are reported through September and show enplanements of 308,706. A total of 792,000 FTKs are hauled during the same period as four Viscounts are retired.

Managing Director Capt. Luis Hernandez Zia's fleet in 1992 comprises 7 DC-9-15s, 5 of which are leased.

A DC-9-15 with 4 crew and 88 passengers is destroyed as the result of a heavy landing at Tumaco on March 26; although the aircraft is destroyed when its fuselage cracks aft of its over-wing exits, there are no fatalities.

Passenger boardings climb 26% on the year to 388,835, but freight declines 15.8% to 667,000 FTKs.

An eighth chartered DC-9-15 is acquired in 1993, along with five leased DC-9-14s. In addition to general and specialized charters, including livestock, passenger services are also operated. From Bogota, local flights are made to Cucuta, Cali, Ipiales, Medellin, Pereira, Popayan, Riohacha, San Andres, Tumaco, and Valle.

Customer bookings accelerate 72.2% to 960,797 while cargo jumps 33.4% to 1.44 million FTKs.

Two units of the DC-9-14 fleet are chartered out in **1994**, one to **SAM (Sociedad Aeronautica de Medellin, S.A.)** and the other to **Aerovias Caribe, S.A.**

Passenger boardings decline by 13.6% to 830,524, but freight accelerates 24.2% to 1.79 million FTKs.

The workforce totals 840 in **1995**. While en route on a return service from Bogota to Cartagena via San Andres, Panama City, and Cali, and back to Bogota on January 11, Flight 2056, a DC-9-14 with five crew and 48 passengers, explodes in midair at 14,000 feet. The aircraft crashes into a grassy field some 10 mi. S of Cartagena. All aboard are killed, except a nine-year-old girl, who is thrown clear when the fuselage breaks in two upon impact.

Traffic figures are only reported through June. These show that enplanements are down 24% to 284,911, but that cargo is up a slight 0.4% to 830,000 FTKs.

A short circuit aboard a DC-9-15 on the ground at Barranquilla in the fall causes the Douglas to catch fire and it is burned out.

Operations continue apace in **1996–1998**. Capt. Zia's fleet now includes 4 DC-9-14s, 1 of which remains on charter to **Aerovias Caribe, S.A.**, and 11 DC-9-15s, 2 of which are leased to **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)**. Destinations visited include Cartagena, Cucuta, Cali, Esmeraldas, Florencia, Havana, Ipiales, Maracaibo, Medellin, Neiva, Panama City, Pasto, Pereira, Popayan, Riohacha, San Andres, Tulcan, and Valledupar.

During the latter year, passenger boardings are 130,000.

The workforce at the beginning of **1999** totals 591. Flights continue without incident or headline.

INTERFLUG DDR AIRLINES (GESELLSCHAFT FÜR INTERNATIONALES FLUGVERKEHR, mGH.): Germany (1955–1991). Claiming to be the rightful successor to the "old" **Deutsche Lufthansa, A.G. (DLH)**, the East German government, employing the same flying crane logo as the West German carrier, establishes its Deutsche Lufthansa in East Berlin on July 1, **1955**. The move is made with the full approval of the U.S.S.R., which had closed all civil airports to East Germans during the previous decade. Viewed as a sister organization to the East German Railways, Lufthansa-East is administered from the Transport Ministry, which largely defers to its Director General Artur Pieck, son of the DDR President Wilhelm Pieck.

A newly received East German license-built Ilyushin Il-14 inaugurates the carrier's first route from East Berlin to Moscow in September.

Equipped with Il-14s, the airline begins operations on February 4, **1956**, and on February 15 the carrier joins the "Six-Pool" league of Eastern block airlines. A route network encompassing the capital cities of the Warsaw Pact nations is inaugurated from East Berlin to Prague, Budapest, and Sofia on May 14, the same day Il-14s open domestic services over a Dresden-Karl Marx Stadt (Chemnitz) route.

Service is launched East Berlin–Bucharest on May 19. A joint agreement is signed with **KLM (Royal Dutch Airlines, N.V.)** on September 22 whereby each will act as the other's agent. East Berlin–Moscow flights begin on October 7 and service to Budapest, suspended during the Hungarian Revolution, is resumed on December 21.

Domestic frequencies begin on June 17, **1957**, over a route that extends from East Berlin–Leipzig, Dresden, Erfurt, and Barth. Proposed **1958** plans to operate segments into Western Europe meet with resistance as the North Atlantic Treaty Organization (NATO) and associated countries prefer to recognize only one Deutsche Lufthansa, that of the Federal German Republic. Consequently, a subsidiary of the East German carrier, Interflug DDR Airlines, is created on September 13 as a marketing cover to overcome Western objections.

Ordered earlier, the VEB-152 II four-engine airliner developed by the Flugzeugwerke Dresden makes its maiden flight on December 4. The passenger jet is the product of the largest industrial project in the DDR.

Employing an Il-14 in Interflug livery, flights begin to and from Western Europe on February 27, **1959**; the first service flown is Copenhagen–Leipzig for the Leipzig Fair.

Services continue apace in **1960**, during which year the carrier becomes the only one to order the VEB-152. The aircraft is proudly heralded on stamps and in the newspapers, with the propagandists proclaiming it the product of the nation's *Wirtschaftswunder*.

Early in **1961**, three turboprop Il-18s join the fleet. Talk of *Wirtschaftswunder* in the aircraft industry simultaneously ends as no more orders are received for the VEB-152, upon which the nation has so far spent DM 1.6 billion. In February, the DDR cancels production and it will be years before the carrier receives its first jetliner—and that a foreign-made unit.

One of the new Il-18s initiates a new service from East Berlin to Moscow on March 30.

In **1962**, the Comecon states reduce their air fares to a point where the East German government decides that it is more cost effective to allow DDR citizens to take passage aboard East Block airliners than to further develop its own internal route network.

An Il-14 is lost near Koningbrek, E. Germany, on February 28, **1963**; there is no report on casualties.

Dropping its claim to the Lufthansa title, which had been employed in parallel with the marketing title since 1958, the carrier is officially renamed Interflug on September 1; control remains with the Ministry of Transport.

By **1964**, all East bloc capitals are served by Interflug with a fleet of An-2s, Il-14s, and Il-18s. Plans are put in place to cut back on domestic services, which are not seen by the government as necessary (or cost effective enough) to the national interest. In addition, the nation's airports, like other aspects of the transport system, will not be developed, with few even provided with concrete runways.

East Berlin to Cairo flights commence on June 22, **1965**. The company, which has always had a terrible service reputation, cancels or accepts delay of 10% of its domestic flights during the year.

Two new routes are started in **1966**—East Berlin to Kiev on June 1 and East Berlin to Bamako via Algiers on October 27.

The first jetliner, a Tupolev Tu-124, is received in early **1967** and placed in service over the West European routes. While undergoing maintenance at Moscow, an Il-18 catches fire on January 16 and is destroyed.

Flights continue in **1968** and by **1969** passenger boardings total 809,500.

Il-62s join the fleet in **1970**, making long-haul routes possible. An East German couple commits suicide when they fail on March 10 in their attempt to seize an An-24 en route from East Berlin to Leipzig. Although having had control of it for almost 15 years, the Transport Ministry only now decides to begin making improvements at Schoenfeld Airport in East Berlin.

Enplanements for the year climb to 847,600.

In **1971**, frequencies are inaugurated to Bamako, Conakry, and Freetown in western Africa and passenger traffic is 923,400.

The **1972** fleet comprises 15 Il-18s, 6 An-24s, 1 Tu-124, 2 Il-62s, and 3 Tu-134s. Flights begin to Dhaka and Hanoi. The helicopter subsidiary **Agraflug** is formed to undertake agricultural, survey, and support missions.

En route to Burgas, Bulgaria, a chartered Il-62 with 8 crew and 148 passengers loses an elevator in flight just after takeoff from Schoenfeld Airport at East Berlin on August 14; there are no survivors.

A Tu-134 is lost at Dresden on October 30; there are no other details concerning the accident.

Bookings accelerate to 925,900.

Between **1973–1979**, the carrier begins an active route expansion effort, providing scheduled passenger and cargo service to some 50 cities by decade's end. Among these are Copenhagen, Amsterdam, Brussels, Stockholm, Helsinki, Leningrad, Moscow, Warsaw, Havana, Algiers, Tunis, Malta, Tripoli, Lagos, Brazzaville, Luanda, Maputo, Cairo, Khartoum, Addis Ababa, Milan, Rome, Vienna, Zagreb, Belgrade, Split, Prague, Tatra, Bratislava, Budapest, Bucharest, Sofia, Burgas, Amman, Kiev, Simferopol, Sotachi, Tashkent, Karachi, and Hanoi.

Director General Dr. Klaus Henkes, who also serves as general in the East German Air Force, head of the aviation department of the Transport Ministry, and CEO of the national institute for flight control, emphasizes the importance of Interflug to the nation. Not only is it a civil transport organization, but the troop-carrying wing of the military as well. For that matter, Interflug is also in charge of the country's airports, general aviation, and all business, agricultural, and charter flying.

During these years, a new passenger terminal is opened for Interflug at East Berlin's Schoenefeld Airport. It has no reliable baggage transport and its air conditioning seldom works. Indeed, company staff handle baggage manually and windows are left open to let in fresh air.

Passenger boardings during these 6 years climb from 911,700 in 1973, pass the million mark for the first time in 1975 (1,139,300), and reach 1,242,600 in 1979. Director General Kurt Diederich and Managing Director Friedwald Oehlmann oversee a workforce of nearly 6,000 and suffer 3 accidents during the period (2 fatal).

While on initial approach to Leipzig on a nonscheduled flight from Stuttgart on September 1, 1975, a Tu-134A with 6 crew and 28 passengers descends below the glide path, strikes a radio mast short of the runway, and crashes (26 dead). The cockpit crew all survive and all three members are sentenced to prison terms ranging from 3–5 years.

Another Tu-134A is damaged beyond repair as the result of a bad landing at Berlin's Schoenefeld Airport on November 22, 1977; there are no fatalities.

The failure of the No. 2 engine causes the pilot of an Il-18D freighter with four crew and six passengers, to abort takeoff from Luanda on March 26, 1979; the aircraft overruns the runway, hits the instrument landing system localizer antenna, and breaks up in flames. There are no survivors.

Domestic service is determined to be not in the national economic interest (i.e., not cost effective) and is withdrawn in **1980–1986**; however, demand for internal operations by hard currency passengers leads to introduction of L-410 "Saloon Service."

On January 30 of the former year, an Il-18, en route from Erfurt to East Berlin, is briefly taken over by a lone assailant; before the aircraft can be diverted, the pirate is overwhelmed by his fellow passengers.

Passenger traffic climbs very slowly, from 1,216,300 in 1980 to 1,446,000 in 1985. Director General Dr. Henkes' fleet by 1986 has grown to include 8 Il-62s, 20 Tu-134s, 14 Il-14s, and 5 L-410s.

During **1987**, three more Il-62s join the fleet as six Tu-134s and six Il-14s are withdrawn. Under terms of its February pact with the People's Republic of China, an Interflug DDR Airlines Il-62 initiates weekly service on May 1 between East Berlin's Schoenefeld Airport and Beijing; the 8,100-km. flight, completed via Moscow, requires 9 hrs. 50 min. The route is the shortest link between China and Europe, being 2,000 km. shorter than services operated by **Air France** and other carriers.

Enplanements reach 1,260,792.

Orders are placed in **1988** by Vice President Andreas Kramer for Airbus equipment. The U.S. government grants an export license to General Electric for CF6-80C2 engines to power the Airbus planes and an agreement is reached with **Deutsche Lufthansa, A.G.** for engine maintenance to be performed at the West German flag line's Hamburg base.

Bookings this year total 1.6 million.

The workforce is increased by 0.7% in **1989** to 7,611. The takeoff of an Il-62 with 113 aboard from East Berlin's Schoenefeld Airport is aborted on June 17; the jetliner's wing crashes into a water tank, fire breaks out, and the aircraft is destroyed (20 dead).

The first of three ordered, long-range Airbus Industrie A310-304s is delivered in a formal ceremony at Toulouse, France, on July 1. Sixteen days later, an elevator malfunction causes an Il-62 to run off the runway at Berlin's Schoenefeld Airport; no injuries are reported.

Two more A310-304s arrive before November and replace Il-62s on services from Berlin to Havana, Singapore, Beijing, and Vietnam. Unprofitable routes to Maputo, Brazzaville, Addis Ababa, and Mexico are cut.

A jammed rudder and elevator causes the pilot of an Il-62MK with 9 other crew and 103 passengers, to abort his takeoff from Berlin's

Schoenefeld Airport for a June 17 service to Moscow; the aircraft overruns the runway and hits various obstacles, catching fire. Nineteen persons on the Ilyushin are killed, along with one person on the ground.

The Berlin Wall comes down on November 9 and 15 Soviet-built jetliners once reserved for use by top East German Communist leaders are put into regular service on December 6. Also in December, an A310-304 performs one of the type's longest flights. After a passenger charter, the European-built jetliner flies the 4,720-nm. segment nonstop from Kumamoto to East Berlin in 13 hrs. 25 min. Following the startling reunification movement at year's end, cooperation with onetime rival **Deutsche Lufthansa, A.G.** begins in earnest.

Passenger boardings for the year, meanwhile, rise 2.2% to 1,616,400, but freight is down by 5% to 87.54 million FTKs.

In the spirit of glasnost, the returned Director General Dr. Henkes engages in conversations with Heinz Ruhnau, chairman of DLH in January **1990** concerning cooperative projects between the two airlines. The initial result is an agreement to make joint use of training and other facilities and the doubling of the West German carrier's flights from Frankfurt to Leipzig.

DLH Chairman Ruhnau also suggests purchase of a 26% equity interest. The fiscal stake is designed to fend off financial participation in the DDR airline by such Western airlines as **British Airways, Ltd. (2)** and **Air France**. The Federal Cartel Office objects to the financial arrangement.

In pursuit of the previous month's discussions, the two airlines announce in February their intention to expand and intensify their cooperation under the marketing name Interhansa. Working together to remove all artificial barriers hindering air traffic between the two German states, including Berlin, the executives of the two airlines plan a variety of joint activities. These include passenger, freight, and charter services, a joint A310 simulator at Berlin's Schoenefeld Airport, an Interhansa catering service, an Interhansa software company, a new Berlin airport, and various engineering and airport handling projects.

Beginning in March, the East German carrier expands its services to West Germany to 17 flights per week. After Interflug's employees vote 92% approval of a closer association with DLH, the West German carrier announces, in April, its plans to go ahead with its 26% investment.

Interflug is now restructured on the **Deutsche Lufthansa, A.G.** model and operates under an eight-member supervisory board with Dr. Henkes as chairman and two **Deutsche Lufthansa, A.G.** members. A second level executive board, chaired by Vice President Kramer, oversees marketing and sales. Service to Paris also begins in May and the airline joins the western industry group, IATA, on July 1.

Unable since its beginning to fly directly into West Germany, Interflug is now able to do so with flights to a number of formerly forbidden cities. The number of flights between east and west Germany is increased during the month from 31 to 56. During August, LET 410 service is inaugurated between Berlin and Erfurt.

In September, daily service is launched from Dresden to Cologne and Hamburg and the number of weekly frequencies between the formerly independent countries grows to 68. Following German unification in October, both **Deutsche Lufthansa, A.G.** and **British Airways, Ltd. (2)** make unsuccessful attempts to purchase the airline outright. Following its failure, the West German flag carrier drops its investment plans on October 16. Later in the month, Berlin–Tel Aviv service is initiated.

Although company officials hope to keep Interflug operating, excessive expenses associated with the Gulf War and growing recession force it to cease operations on February 8, **1991**, becoming a training company. The A310s are purchased by the Luftwaffe for \$192.3 million.

On June 26, the Danish Supreme Court fines the carrier for its earlier role in transporting illegal refugees into Denmark.

INTERGLOBUS: Russia (1994–1995). Interglobus is established at Ulitsa Lobachevskovo in **1994** to offer ad hoc international and regional passenger and cargo charters. General Director A. I. Ekzarkho begins revenue flights with 1 Ilyushin Il-76TD and 1 Tupolev Tu-154B. Unable to achieve viability, the company shuts down in late **1995**.

INTERIOR AIR TAXI. *See* **INTERIOR AIRWAYS**

INTERIOR AIRWAYS: United States (1947–1972). IA is formed at Fairbanks, Alaska, in 1947 to offer lightplane charters to various bush destinations, as well as Anchorage. Operations continue with little change for most of the next 20 years. In 1959, the company acquires the first of five Curtiss C-46 Commandos to be received over the next decade; it is placed into all-cargo service and is the largest aircraft in the fleet.

On April 12, 1965, a subsidiary, **Interior Air Taxi**, begins to offer scheduled passenger and cargo flights to local destinations with Beech 18s and Twin Bonanzas. To operate long-haul charters, a Lockheed L-1049H is leased from **The Flying Tiger Line** on January 21, 1966. The Super Constellation is leased back by the cargo operator for part of 1967.

With the discovery of oil in the state, the company abandons its passenger service in early 1968 and changes its role to that of a heavy cargo operator. In January, the L-1049H is sold back to **The Flying Tiger Line**. A DHC-6-100 freighter with two crew crashes at Sagwan, Alaska, on September 6; both men are killed.

Interior now gradually disposes of its commuter aircraft and begins to assemble a fleet of Lockheed L-100-20 Hercules freighters.

The pilot of an L-100-20 with four crew loses sight of the runway at Prudhoe Bay while landing in heavy snow on December 24 and crashes (two dead).

The Hercules fleet is complete by 1970–1971, complementing the seven Commando freighters. In 1972, Interior is reformed, becoming a subsidiary of Alaska International Industries, which also supplies its new name, **Alaska International Air**.

INTERISLAND AIRWAYS, LTD.: P.O. Box 191, Providenciales, Turks and Caicos Islands, British West Indies; Phone (809) 941-5481; Fax (809) 941-5481; <http://www.interilandairways.com>; Code PLS; Year Founded 1992. Under the direction of Lyndon R. Gardiner, Interisland is established at Providenciales, Grand Turk, in 1992 to offer passenger charters within the Turks and Caicos Islands to Miami or other Caribbean points upon demand. Revenue flights begin with a single Piper PA-23 Aztec.

During the remainder of the decade, the fleet is increased by the addition of another Aztec and a Cessna 421 and a number of unusual charters are provided. Among these are flights to and tours of Grand Caicos, the largest island in the archipelago and the former home of the Arawak Indians. Nature buffs are given the chance to visit North Caicos, the ecology capital of the islands. Flights from Miami to Grand Turk allow visitors a chance to visit the national museum and the shore where Christopher Columbus landed in 1492.

By the beginning of 2000, the Cessna has been replaced with a Piper PA-31-350 Navajo Chieftain and a homepage has been opened on the Internet's World Wide Web. Other destinations now visited include Cap Haitien, Port-au-Prince, Santo Domingo, Inagua, and Santiago de Cuba. Unless in possession of special permits, U.S. citizens are not allowed to fly with the airline to the latter point.

In June, the carrier opens the nation's first full-service FBO.

INTERJET HELLENIC AVIATION, S.A.: 350 Sygrou Avenue, Kallithea, Athens, G-176 74, Greece; Phone 30 (1) 93 02 151; Fax 30 (1) 93 02 152; <http://www.interjet.gr>; Year Founded 1989. Interjet is established at Athens in 1989 as the rotary-wing department of the Interamerican Life Insurance Group. Corporate services are provided with two Eurocopter BO-105s and an AS-355F Twinstar.

A Cessna 560 Citation V bizjet is acquired in 1991 and is employed to inaugurate executive and small group charters throughout Greece. During the remainder of the decade, nonscheduled destinations in southeastern Europe, the Mideast, and North Africa are also visited.

A total of 40 workers are employed at the beginning of 2000, including 12 flight crew.

INTERLINE, LTD.: Unit 5, The Business Centre, Norwich Airport, Norwich, Norfolk, NR6 6BS, United Kingdom; Phone 44 (1603) 484 594; Fax 44 (1603) 484 907; Code 5W; Year Founded 1994. Formerly known as **Aztec Charter, Ltd.**, Richard Underwood and Stephen Hatfield set up Interline at Norwich Airport on January 28, 1994 as a scheduled commuter subsidiary of Eagle Aviation, Ltd. Managing Director Underwood and General Manager Hatfield, with a staff of 20 and 2 British Aerospace BAe Jetstream 31s, launch revenue services to Manchester and Rotterdam the same day.

Operations continue apace in 1995. In January 1996, a Shorts 330 is acquired to launch a new route from Norwich to London (LGW). When this does not immediately prove attractive to customers, the Dash-300 is replaced by a Shorts 360-300 in May.

Scheduled service is discontinued at the end of the summer season. Nonscheduled charters are, however, maintained, including flights to Blackpool and the Isle of Man.

INTERMOUNTAIN AIRWAYS: United States (1977–1978). Intermountain is set up at Boulder, Colorado, in the spring of 1977 to provide scheduled Piper PA-31-310 Navajo services to Durango. The airfield at the latter destination's Animals Air Park must be employed while the runway of the community airport is lengthened.

Early in 1978, the company is taken over by **Rocky Mountain Airways**.

INTERNATIONAL AIR BAHAMA, LTD. *See* **AIR BAHAMA, LTD.**

INTERNATIONAL AIR CARGO CORPORATION. *See* **AIR CARGO EGYPT**

INTERNATIONAL AIR FREIGHT, LTD.: United Kingdom (1937–1938). Capitalized at £50,300, IAF is registered at London on January 22, 1937. Employing four ex-Eastern Air Lines Curtiss T-32 Condors previously flown in the U.S., the carrier inaugurates London (Croydon Airport)–Amsterdam cargo flights on September 29. Under contract to the British Post Office, the company begins flying parcel mail over its London–Amsterdam route on March 27, 1938; the same day, it accepts a subcontract from **British Airways, Ltd.** (1) to fly letters.

London (Croydon)–Brussels freight operations commence on May 3. Flight services cease on September 29. Shortly thereafter, the Condors are purchased by the British Air Ministry and placed in storage, where they remain until sold for scrap in November 1939.

INTERNATIONAL AIR LINES, LTD.: United Kingdom (1933). Equipped with two Monospar ST.4s, this new entrant labels itself The Western Air Express and launches a mail flight from London (Croydon)–Plymouth via Portsmouth and Southampton. The enterprise cannot, figuratively, get off the ground and ceases operations in late September.

INTERNATIONAL AIR TAXI (1): United States (1965–1970). IAT is established at Anchorage in early 1965 to provide scheduled third-level passenger and cargo flights to local destinations. Revenue flights commence with Cessna lightplanes on March 30 and continue until the company goes out of business in 1970.

INTERNATIONAL AIR TAXI (2): United States (1980–1983). A decade after the demise of the first IAT, a second is established at Anchorage in 1980 to serve as a feeder affiliate for **Wien Air Alaska**. Employing a fleet of Cessna lightplanes, the small regional undertakes revenue passenger and cargo flights until it goes out of business in late 1983, just prior to the demise of its national partner.

INTERNATIONAL AIRWAYS (KOKUSAI KOKU). *See* **JAPAN AIR LINES COMPANY, LTD (1)**

INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1946–1950). Thomas Barclay forms this charter carrier at London (Croydon) Airport in the summer of 1946, also giving it the marketing title of Barclay's International Airways. Services begin in August after the delivery of the first company aircraft, an Airspeed AS.65 Consul. Another Consul is delivered in November, followed by third in April 1947. During the French railway strike in June, the company's aircraft returns stranded British tourists from Le Bourget Airport at Paris. Tourist charters are flown to the Channel Islands and the airfields of Holland, Northern France, and Belgium during the remainder of the summer season.

Three more Consuls and an Avro Anson are purchased in October from **Steiner Air Services, Ltd.**; the Consuls are now sent out to Israel on a two-year lease to the UN Commission. On November 13, a Consul is lost in a crash at La Rochelle and a Percival Proctor 5 purchased earlier in the year is destroyed at London (CTN) on November 20.

With too few aircraft on hand in the U.K. at the start of 1948, IAL purchases another Percival Proctor 5 in January and then three de Havilland DH 89As from **British European Airways Corporation (BEA)** in July. The same month, the state carrier grants the independent an associate agreement to fly scheduled passenger service from London to the Isle of Wight.

The Dragon Rapides commence this route immediately. Another associate agreement is received in September for the operation of scheduled flights between London (Croydon) and Birmingham.

Another associate grant is received in May 1949 for operation of a route from London (Hendon) and Birmingham specifically designed to carry passengers to the British Industries Fair. A full schedule of charters is flown during the summer and for part of that season, several of the Dragon Rapides are leased to **Jersey Airlines, Ltd.**

On November 1, a Consul is destroyed in a crash at Normanton, Yorkshire and at the end of the year those Consuls on duty in Israel are returned and sold. Scheduled service to Birmingham is suspended during the winter and as a result of a poor summer tourist season in 1950, the airline stops flying in October.

INTERNATIONAL CARGO CHARTERS CANADA, LTD. (ICC CANADA, LTD.): 6299 Airport Road East, Mississauga, Ontario L4V 1N3, Canada; Phone (905) 672-8731; Fax (905) 672-8732; <http://www.iccaircargo.com>; Code ICC; Year Founded 1997. After a careful review of the Canadian air cargo industry, Edward C. C. Peagram establishes and incorporates ICC International Cargo Charters Canada, Ltd., doing business as ICC Canada, Ltd. in December 1997. During the spring of 1998, arrangements are completed to acquire 3 Airbus Industrie A300B4-203F freighters and in August a contract is signed with **Emery Worldwide** to operate them on its behalf. ICC is the first Canadian airline to import and utilize an Airbus freighter.

Bases are now established at Vancouver and Calgary and in the U.S. at Dayton, Ohio. Flight and ground crew are hired and trained and on November 16 a foreign air carrier certificate is obtained from the U.S. Department of Transportation. The next day, regularly scheduled A300F roundtrips are inaugurated, five nights a week, between Vancouver, Calgary, and Dayton. Cargo, express, and mail are transported.

On March 1, 1999, Toronto to Dayton return service, also on behalf of Emery, is started, followed by flights from Montreal to Dayton in May. Two more A300B4-203Fs enter service and during the summer, operations, administration, and maintenance functions are consolidated at Toronto. Satellite offices are opened in Ottawa, Richmond, British Columbia, Farnham, Quebec, and Santa Rosa, California. Both the Emery contract and the DOT authority are renewed at the end of the year.

Arrangements are made with forwarders early in 2000 to operate transcontinental all-cargo service, to which the carrier's fourth A300B4-203F will be dedicated. Flights duly begin in mid-June, but the volume of business required to make a success of this new approach is not present. At the end of July, the Airbus is withdrawn and the company begins work on a new plan for action beyond its Emery workload.

In December, an 80,000-sq.-ft. service center is opened by **Emery Worldwide** near the Toronto Airport.

INTERNATIONAL CARIBBEAN AIRWAYS, LTD. See **CARIBBEAN AIRWAYS, LTD.**

INTERNATIONAL CHARTER EXPRESS: United States (1992–1994). Danny Jones, former president of **Interstate Airlines** and 1989 founder of the Little Rock, Arkansas-based leasing concern International Cargo Xpress, establishes this subsidiary at Baltimore (BWI) in the spring of 1992. Two Douglas DC-8-62CFs are acquired, configured with 6 berths, 92 first-class seats, and 250-ton freight capacity. Their services will be aimed specifically at the international travel requirements of such organizations as sports teams, oil companies, or entertainers that need to transport large amounts of cargo along with personnel.

From its Maryland base, the new entrant initiates bimonthly charter flights in June to Moscow and Kuwait. By year's end, a total of 25,000 passengers and 2.6 million FTKs are flown. Revenues are \$6.4 million and although a \$186,102 operating loss is suffered, a net profit of \$4.2 million is earned.

Enplanements zoom to 50,000 in 1993 and cargo skyrockets by 233.4% to 8.6 million FTKs. Revenues surge 71.4% to \$11.02 million, expenses climb 53.4% to \$10.15 million, and operating income of \$869,389 is earned. The net gain falls, however, to \$186,000.

The company's new aircraft livery is first unveiled on a DC-8-62CF on March 15, 1994.

Through the year's first 9 months, 45,000 passengers are flown on charter and freight traffic skyrockets an almost unbelievable 437% to 46.2 million FTKs. Despite these figures, the company is in so much fiscal difficulty that it must shut down at year's end.

INTERNATIONAL CORPORATE AND CARGO SERVICE, S.A.: Mexico (1994–1995). ICCS is set up at Mexico City's airport in 1994 to offer both corporate and cargo flights to worldwide destinations. Alberto May is appointed manager and he begins service with a workforce that includes 10 full-time and 20 part-time pilots. His fleet consists of 1 Boeing 727-100F and 1 Learjet 24 for passengers. Unable to achieve economic viability, the company shuts down in 1995.

INTERNATIONAL FLYING SERVICE, S.p.A.: Italy (1991–1998). IFS is established at Orio's Aeroporto in late 1991 to offer regional third-level passenger and cargo flights with 1 each Fairchild Metro II and Metro III. General Manager Carlo Musumeci's fleet is dramatically increased in 1992 as 1 each Beech Super King Air 200, Rockwell Turbo Commander 690A, Beech 400A Beechjet, and Fairchild-Swearingen Merlin IVC are placed into service.

The Beech equipment is withdrawn in 1993, but services continue apace in 1994 with a new Dornier 228-212, the Turbo Commander, the Merlin, and 1 each Metro II and Metro III.

In January 1998, the company is renamed **Eureca (European Regional Carrier, S.p.A.)**.

INTERNATIONAL JET AIR, LTD.: Canada (1969–1976). IJA is established at Calgary in 1969 to operate charter and inclusive-tour flights, initially with a single Lockheed L-188A Electra purchased from **Northwest Airlines**. The turboprop is the first of its type registered in Canada. Many of the charters flown are in support of Panartic Oil and Dome Petroleum, ferrying crews to Arctic drilling locations.

Three more Electras are acquired from the same source and placed into service in 1971, followed by a fifth in 1973, the same year a Fokker F.27 is purchased. Nonscheduled flights continue to be made, flying not only oil company workers, but tourists on gambling trips to and from Las Vegas and Canadian professional athletic teams.

The Fokker is sold to **Northward Airlines, Ltd.** in 1975 and upon the failure of that carrier in 1976, the remaining three L-188As are sold to **Northwest Territorial Air, Ltd.**

INTERNATIONAL JET AVIATION SERVICES: 12830 E. Control Tower Road, Centennial Airport, Englewood, Colorado 80112, United States; Phone (303) 790-0414; Fax (303) 790-4144; Year Founded 1979. IJAS is set up at Centennial Airport in 1979 to offer passenger and light cargo charter services to destinations throughout North America. Revenue operations duly commence and by 2000 the flight staff includes 18 full-time and 10 part-time pilots. The fleet features 4 Learjet 25s, 3 Learjet 24s, 2 Learjet 35As, and 1 each Learjet 25D, Cessna 340A, and a Mitsubishi Mu-2B freighter.

INTERNATIONAL JET CHARTER: 6101 Burton Station Rd., Norfolk, Virginia 23502, United States; Phone (757) 857-6481; Fax (757) 857-1684; <http://www.intljetcharter.com>; Year Founded 1993. This corporate carrier is set up at Norfolk in 1993 to transport business executives worldwide. By 2000, the fleet includes 1 each Grumman G-1159A Gulfstream III and Learjet 25D.

INTERNATIONAL PARCEL EXPRESS (IPX): United States (1986–1987). IPX is formed at Redwoods, California, as a joint venture company by **DHL Airways** and **UPS (United Parcel Service)** in 1986 to bid on the U.S.–Japan small package route award to be let by the DOT. Former **Transamerica Airlines** Chairman Henry Huff is named chairman/president and two Douglas DC-8-73s are leased from UPS. In October, the carrier inaugurates service flying under contract to UPS.

In 1987, the company is wholly acquired by **UPS (United Parcel Service)**, which integrates IPX into its own operations during the year's second half.

INTERNATIONAL SKY CAB: United States (1969–1970). ISC is established at San Juan, Puerto Rico, in 1969 to provide scheduled passenger air taxi services from both of the city's airports, International and Isla Grande.

Employing one each Piper PA-31-310 Navajo and PA-32 Cherokee Six, daily roundtrips are duly inaugurated linking those airports with Ponce, Viequez, Mayaguez, as well as St. Thomas and St. Croix in the U.S. Virgin Islands. Flights cannot be maintained beyond 1970.

INTERNORD, A.B.: Sweden (1965–1968). Internord is established at Stockholm on November 30, 1965 through the merger of the Danish carrier **Aero-Nord, A.S.** and the Swedish charter operator **Osterman Air Charter, A.B.** Inclusive tour revenue services are continued to the destinations of the merger partners with inherited and leased Douglas DC-7s and DC-7Bs that wear both Danish and Swedish registrations.

Early in 1967, a contract is concluded for the acquisition of three former **American Airlines** Convair CV-990 Coronados. The first enters service on June 28, executing a tour flight to the Mediterranean. Another Coronado is received later in the year, followed by the third in March 1968. Unable to maintain economic viability, the carrier shuts its doors on October 30. The jetliners are repossessed by the U.S. major and returned to Texas when the company's assets are liquidated in December.

INTEROT AIRWAYS, GmbH.: Germany (1979–1995). Organized at Augsburg in 1979, **Interot Air Service**, a subsidiary of the Augsburg-based air freight forwarding company Augsburg Internationale Rotationspapier Spedition, inaugurates charter passenger and cargo services to Dusseldorf with a Beech Super King Air 200. In 1986, these occasional frequencies are licensed, Handl Papier becomes a shareholder, and frequencies become regularly scheduled. Indeed, the first regularly scheduled roundtrip flight is undertaken in September between Augsburg and Dusseldorf.

In the fall of 1987, the new managing director, Peter Staehle, purchases a second Beech Super King Air 200 and a Beech 1900C, using them to launch service to Hamburg.

Enplanements in 1988 total 10,050. A second Beech 1900C is acquired in May 1989 and airline certification is received in December.

Passenger bookings climb to 16,000.

Guenther Weiss becomes general manager in 1990 and in October a leased de Havilland Canada DHC-8-103 is acquired for the Dusseldorf route. Late in the year, the corporate name is changed to IA.

Enplanements total 24,000.

During 1991–1992, flights begin to Berlin, Cologne, and Leipzig and the fleet is upgraded by the addition of another DHC-8-103. In the former year, Interot becomes the first German airline to ban smoking on all flights.

A total of 92,500 passengers are flown during the latter year and revenues of DM 25 million (\$17.2 million) are earned.

The new managing director, G. H. Eberhard Schmidt, oversees a workforce of 145 in 1993 and a third DHC-8, a Dash-300, is delivered in August. Destinations served from Augsburg now include Berlin, Cologne, Dresden, Dusseldorf, Hamburg, and Leipzig. Contracts for ground handling are signed with **British Airways, Ltd. (2)** for Dusseldorf, Cologne, Bonn, and Leipzig and **Deutsche BA, GmbH.** for Dresden.

Enplanements during the 12 months total 105,609.

Airline employment is increased by 5.6% in 1994 to 147 and the fleet now includes 1 each Beech 1900C, Beech 1900C-1, and de Havilland Canada DHC-8-314, plus 3 DHC-8-103s, one of which is chartered from **Tyrolean Airways, A.G.** In the face of intense competition from **Deutsche Lufthansa, A.G.**, the Hamburg service is discontinued. However, the company's route to Florence—its first international route—is inaugurated and plans are made to start a new twice-daily service from Cologne and Bonn to London (LCY).

These moves help to increase passenger boardings by 10.4% to 117,867. Revenues advance 16.7% to DM 35 million (\$24 million).

During the second quarter of 1995, daily, all-business class DHC-8-314s roundtrips commence from Cologne to Birmingham, England. On November 6, the company is renamed **Augsburg Airways, GmbH.**

INTERPROVINCIAL AIRLINES, LTD. See PROVINCIAL AIRLINES, LTD.

INTERSTATAL DE AVIACION, S.A. de C.V.: Mexico (1980–1986). Interstatal is formed at Mexico City in March 1980. Equipped with a pair of Convair CV-440s, it inaugurates a route linking the capital with San Luis Potosi, Zacatecas, and Ciudad Victoria.

In 1982, the company is relocated out of the highly competitive Mexico City market to Vera Cruz, where the Convairs are put to work flying passengers between cities in the Bay of Campeche area. Destinations visited include Villahermosa, Minatitlan, and Ciudad del Carmen.

Unable to maintain viability during the difficult economic years of the middle 1980s, the carrier is forced to close down in 1986.

INTERSTATE AIR LINES: United States (1928–1930). Organized at Chicago in June 1928, Interstate is the successful bidder for Post Office Contract Air Mail Route No. 30 (CAM-30), Chicago to Atlanta, which is awarded on August 9. A fleet of Fairchild FC-2W2s and Stearman C3Ms is assembled and appropriate personnel hired during the summer and early fall.

One of the Fairchilds is employed to inaugurate the mail route on November 10, stopping en route at St. Louis, Evansville, Louisville, Knoxville, and Chattanooga. A spur from Evansville to St. Louis is opened on November 19.

On December 1, an FC-2W2 inaugurates a new five-stop route from Chicago to Atlanta via Terre Haute, Evansville, Nashville, and Chattanooga. The airline is the first to provide scheduled service to Nashville and when the Fairchild arrives to participate in the celebratory ceremonies at McConnell Field, it is christened *Miss Nashville* by Martha Lindsey, former president of the Nashville Junior League.

Taking off from Chattanooga to continue a flight to Chicago on December 23, an FC-2W2 is unable to gain altitude and crashes into a railroad embankment (four dead).

On March 22, 1929, having experienced consistently inclement flying conditions at McConnell Field, Interstate purchases a farm 7 mi. N of

Murfreesboro, Tennessee, upon which to build a new Nashville airfield. With fiscal assistance from state and civic groups, additional funding is raised and construction begins on June 5.

In midyear, the control of the company is purchased by a major airline holding company, The Aviation Corporation (AVCO), which allows Interstate to continue operations under its own name. In July, three Stearman LT-1s are acquired. The new Sky Harbor Airport at Nashville is officially opened in public ceremonies on October 14. Company, government, and civic leaders join the public in dedication ceremonies; representing the Army Air Corps is its noted flyer Jimmy Doolittle.

On January 25, 1930, **American Airways** is formed as AVCO's principal operating subsidiary through an exchange of stock with the former subsidiaries. Interstate, for this purpose, receives 1,025 shares.

INTERSTATE AIRLINES (1): United States (1966–1968). The first IA is set up at Springfield, Missouri, in the summer of 1966 to provide scheduled passenger and cargo flights to Wichita, Kansas. Employing a Piper PA-32 Cherokee Six, revenue roundtrips commence in September and are maintained until 1968.

INTERSTATE AIRLINES (2): United States (1978–1988): Initially known as **USAirways**, IA-2 is organized as a scheduled all-cargo airline at Ypsilanti, Michigan, in 1978. Employing a fleet of 11 Convair CV-580s, President David Clark's company undertakes revenue services to Boston, Hartford, Philadelphia, Pittsburgh, Teterborough, Syracuse, Buffalo, Dayton, Columbus, Detroit, Chicago, Memphis, Smyrna, and Memphis.

From its base at Detroit (YIP), the operator maintains services during the remainder of the decade and into the 1980s. The fleet is expanded in 1982–1984 to include 3 Boeing 727-100Cs, 4 Lockheed L-188AFs, and the CV-580s. The company enters the package express business on behalf of other concerns, especially **UPS (United Parcel Service)**, and an additional 11 B-727-100C is leased to operate overnight flights.

The base of operations is transferred to Little Rock, Arkansas, in 1985. The fleet, both owned and chartered, grows to 23 aircraft as 4 DC-8Fs are acquired. The reformed company begins to report its traffic and financial data.

Figures show that a total of 104.8 million FTKs are hauled and revenues of \$19.98 million are earned. Costs are kept low, allowing a \$1.1-million net profit.

Operations continue apace in 1986 and appear headed to significant improvement in 1987. On October 1, however, **UPS (United Parcel Service)** informs its contractors that it is taking over its own airlift and will no longer need the small transporters. The move costs Interstate 80% of its business and forces it to declare Chapter XI bankruptcy in November.

Simultaneously, the freighter files suit against **UPS (United Parcel Service)** on the basis that IA-2 had run up expenses obtaining a fleet that UPS requested; the suit is unsuccessful.

A total of 395.6 million FTKs of cargo are flown on the year and revenues increase to \$48.5 million. Expenses are \$43.28 million and leave an operating profit of \$5.18 million. Net gain reaches \$4.71 million.

Bankrupt IA-2 operates for eight months in 1988. During this time, it takes into service the former **Japan Air Lines Company, Ltd. (2)** DC-8-62 *Taisetsu*, which it has had converted into a freighter. After only a few rotations, the aircraft is sold to **Cargosur, S.A.**

A total of 221.1 million FTKs are flown, down 44.1% from the same period a year earlier. Unable to recover, the carrier is liquidated in September.

INTERSTATE AIRLINES (3): United States (1981–1982). IA-3 is set up at Burbank, California, late in 1981 to provide scheduled commuter flights to Las Vegas. Equipped with a single Handley Page HP 37 Jetstream, the company initiates services on December 11, but is forced to shut down early in 1982.

INTRA AIRWAYS, LTD.: United Kingdom (1969–1979). The charter carrier IAL is formed at Jersey Airport on January 1, 1969 to offer scheduled flights between the Channel Islands. However, with **Aurigny Air Services, Ltd.** already filling that niche, Managing Director L. C. Thomas and other company officials, who have purchased a Douglas DC-3 in February, elect to change emphasis to international charter. Revenue operations begin on March 14 and ad hoc charters are flown between the Channel Islands and into northern France throughout the summer.

Inclusive-tours on behalf of a Belgian booking agency are started from Ostend to the Channel Islands in May 1970. Meanwhile, ad hoc flights into France continue. At the end of the year, the company applies to the Air Transport Licensing Board (ATLB) to take over an abandoned **British Midland Airways, Ltd.** route; permission is granted.

Another DC-3 is purchased in March and weekly scheduled service is started between the Channel Islands and London (Staverton) on April 3, 1971. Frequency on the route is increased on May 15.

As replacement for another suspended British Midland route, Intra joins with **Air Anglia, Ltd.** to operate a scheduled route from Jersey to Cambridge, beginning on May 10, 1972. In August, another DC-3 is added. The Jersey-based air taxi operator **International Air Charter, Ltd.** is purchased in November, together with I.A.C.'s lightplanes. A scheduled all-cargo DC-3 service is initiated with **British Air Ferries, Ltd.** thrice weekly Jersey to Bournemouth in December.

Two more DC-3s are purchased in February and May, 1973, respectively, and in addition to the usual charter operations, they are employed to open scheduled services in the spring from Jersey to Ostend, Dinard, Deauville, and Morlaix. Meanwhile, a Britten-Norman BN-2 Islander is also purchased in May and used to fly, without **Air Anglia, Ltd.**, the Cambridge service. When BAF retires from the all-cargo route to Bournemouth, Intra increases its own frequency.

The company's Islander inaugurates scheduled flights from Deauville to London (LGW) on April 1, 1974. In early May, a second BN-2 is acquired and it is employed to begin twice-weekly scheduled service from Jersey–St. Brieuc. During the summer, company pilots fly Hawker Siddeley HS 748s, leased from **Dan-Air/Dan-Air Services, Ltd.**, from Jersey to Ostend and employ Handley Page Herald, chartered from **British Island Airways, Ltd.**, to carry passengers from Jersey to Caen and Deauville. The Islander obtained in May is sold in November.

Early in 1975, Welsh Bernell Finance purchases 55% controlling interest in Intra and provides it with needed new capital. At this time, the Deauville–London (LGW) service is suspended and two more DC-3s are purchased from **Humber Airways, Ltd.**; these are delivered in June and August.

The scheduled services to France from Jersey are not flown during the summer as the company shifts its emphasis to participation in the support of the North Sea oil industry. The DC-3s fly ad hoc charters around Scotland on behalf of several oil companies and small aviation firms holding support contracts. The second Islander is sold in November.

In March 1976, the company enters into a yearlong lease with **Alidair, Ltd.** for the use of a Vickers Viscount 724. This turboprop is employed, beginning on April 1, on the scheduled Jersey–Cambridge and Ostend services. During the remainder of the year and for the next three, scheduled operations, together with ad hoc and inclusive-tour charters for both tourists and oil companies, continue.

Unable, however, to maintain its financial viability, the third-level carrier enters bankruptcy in early 1979. It will be succeeded in November by **Jersey European Airways, Ltd.**

INVERSIJA, A.S.: Riga Airport, Riga, LV-1053, Latvia; Phone 371 (7) 207 095; Fax 371 (7) 207 029; Code INV; Year Founded 1991. Organized in 1991, this new Latvian carrier is headquartered at Riga with its fleet based at Malta. President Yefim G. Brook recruits a workforce of 300 and assembles a fleet comprising 1 Antonov An-12, 2 Fokker F.27s, 1 Ilyushin Il-76T, and 1 Boeing 757-200. Passenger and cargo charter and contract service flights are undertaken to destinations throughout Europe and the Far East.

The workforce is reduced by a third in **1992–1993**. Operations continue apace in **1994**, during which year the fleet is expanded by the addition of three more Ilyushin Il-76Ts.

Flights continue in **1995–1999**, during which years President Brook's title is changed to director general and the company mission becomes all-cargo. The Fokkers and Boeing are withdrawn and replaced with two more Il-76Ts. Destinations visited include Amsterdam, Berlin, Düsseldorf, Hamburg, Milan, Rome, and Skopje.

Airline employment stands at 100 at the beginning of **2000**.

INVESTMENT CAPITAL CORPORATION. *See* **IC JET**

INVICTA AIR CARGO, LTD. *See* **INVICTA INTERNATIONAL AIRLINES, LTD.**

INVICTA INTERNATIONAL AIRLINES, LTD.: United Kingdom (1964–1980). *Invicta Airways, Ltd.* is formed by Hugh Kennard at Manston Airport in November **1964**. In February and March **1965**, two Vickers 610 Viking 1Bs and two Douglas DC-4s are purchased for inclusive-tour work, the first of these flights being made on March 20 from Manston to Basel.

A Viking 1B with three crew fails its takeoff from Manston on August 2 and crashes; there are no fatalities.

Destinations throughout southern Europe plus the Canary Islands are flown during this first tourist season and 120,143 passengers are transported.

In April **1966**, two more Vikings and three more DC-4s are delivered. The summer season begins on April 5 with charters from Manston and Glasgow (Renfrew) to the Dutch bulb fields. The company's first scheduled route, Manston–Ostend, begins in May on a daily basis. Ad hoc and inclusive-tour charters range as far as Tokyo during the year. Similar flights are undertaken in **1967**, during which time the company sells two Vikings and a Douglas.

In February and March **1968**, two Vickers Viscount 755s are purchased. One is relocated to West Berlin to fly inclusive-tours for German tour agencies. Following completion of the annual Dutch bulb flights, the last two Vikings are sold in May and July. New inclusive-tour destinations in Scandinavia are visited during the summer.

With *Invicta* now controlled by the Minster Assets Group, which also controlled **British Midland Airways, Ltd.**, plans were put in motion in January **1969** to merge the two carriers. As part of the arrangement, it is decided that BMA will fly only Viscounts; *Invicta*'s two Viscounts are turned over on January 13. The merger is an unhappy one and in June, Kennard purchases back the three DC-4s surrendered upon merger and establishes a new carrier—**Invicta Air Cargo, Ltd.**

Ad hoc all-cargo charters are now started from Manston Airport. Company Skymasters visit all major British airports during the next three years and stage flights into Europe and the Middle East from many of them.

In October **1970**, a Vickers Vanguard freighter is purchased from Air Holdings, entering service in November and allowing sale of a DC-4 in February **1971**. Two more Vanguards are purchased, in March and May, respectively. After being restored to passenger standard, they are placed in inclusive-tour service. At this point, the company name changes once again, to IIAL. Among the significant charters now undertaken are pilgrim flights from London (CTN) to Rome and Tarbes. Trooping flights are now also flown for the Ministry of Defence.

Another Vanguard is acquired in March **1972**, allowing the number of passenger services to be increased. Ad hoc and inclusive-tour flights continue as in 1971, with the addition of a significant new series of inclusive tours to Austria a highlight. Low-fare Bristol–Basel and Munich frequencies are flown during the winter.

These cost-cutting services come to an end on January 16, **1973** when the entire Vanguard fleet is repossessed by Air Holdings due to delinquent payments. All IIAL services are now suspended. In February, the European Ferries Group purchases 76% majority control of the airline

and repurchases on a delayed payment plan the Vanguards surrendered to Air Holdings the month before. *Invicta International* resumes operations in early March; however, tragedy strikes on April 4.

En route from Bristol with 6 crew and 139 passengers, mostly members of a women's group from Axbridge, a chartered Vanguard 952 crashes into the Juru Mountains, near Hochwald during a heavy snowstorm while on its Basel landing approach (108 dead); this is the worst accident befalling the Vanguard type.

Air Holdings immediately provides a replacement aircraft. Inclusive-tour personnel and ad hoc cargo charters continue to various B-720-023B (B-720B) European destinations during the remainder of the year. A Boeing 720B is purchased in December.

Charters continue through **1974**, with the Tarbes pilgrimages again proving quite rewarding. During the year, another Vanguard is purchased along with a Boeing B-720-023B that does not enter service, but is instead leased to **Somali Airlines**. The B-720B of 1973 flies only a few services for *Invicta*, spending most of the year and next under lease to **Britannia Airways, Ltd.** and **Dan-Air/Dan-Air Services, Ltd.**

The **1975** company schedule is filled with services similar to those of previous years, such as Tarbes pilgrimages, Algerian cargo flights, and replacement passenger services for **Monarch Airlines, Ltd.** On October 26, in the last flight by its type over the U.K., a Vanguard flies 100 enthusiasts on an hour-long final flight over London (CTN). The five remaining Vanguards are now sold. In December, *Invicta* is sold to Universal Air Transport Sales, Ltd., of which original *Invicta* founder Hugh Kennard is chairman.

Two Bristol Britannia 312s are leased from **IAS Cargo Airlines, Ltd.** in January **1976**, allowing *Invicta* to resume operations on January 3. All-cargo flights are maintained between Manston and European and Middle Eastern destinations. In November **1978**, Chairman/Managing Director Kennard oversees 85 employees. Unable to generate sufficient traffic to overcome expenses generated in a time of recession and much higher fuel costs, the carrier ceases operations two years later.

ION TIRIAC AIR, S.A.: Otopeni-Bucharest Airport, Bucharest, 71850, Romania; Phone 401 230-60-81; Fax 401 230-60-41; Year Founded 1997. Ion Tiriac is established at Bucharest in **1997** to offer executive and small group passenger charters throughout Europe, North Africa, and the Mideast. Operations Director Radu Ruse begins revenue services with a single Cessna 525 Citation. A Bell 206L LongRanger helicopter is also employed on domestic charters.

IONA NATIONAL AIRWAYS, LTD.: Ireland (1989–1994). Privately owned by the Cahill family, Iona is established at Airport Cloghran, County Dublin, in **1985** to offer scheduled freight services and passenger air charters throughout the Irish republic and the United Kingdom. Chairman Peter Cahill and Managing Director Hugh Cahill's initial fleet comprises 2 Cessna 404 Titans, 3 Cessna 310s, 1 Cessna 208 Caravan I, 1 Handley Page Dart Herald, 1 Fokker Fairchild F-27F, and 2 Embraer EMB-110s.

A Cessna 414A joins the fleet in early **1986**; in April, it flies VIPs to Liverpool for a horse race.

The company now begins to concentrate on its major business, which is contract service on behalf of **UPS (United Parcel Service)**, **Federal Express**, and **DHL Airlines**. Neither traffic nor financial figures are released.

In **1990**, the workforce numbers 40 and the fleet is increased by the addition of two Fairchild Hiller FH-227s and a Fokker Fairchild F-27J Friendship. In **1991–1993**, services are provided throughout Ireland, the U.K., and northern Europe. The fleet is altered to include 2 Embraer EMB-110 Bandeirantes, 2 Cessna 404 Titans, 3 Cessna 414 Conquests, 1 Cessna 303, 2 Cessna 310s, 2 Cessna 172s, 1 Cessna 182, and 10 Cessna 152s.

Unable to achieve profits with them, the Bandeirantes are withdrawn in **1994**. The move foreshadows increased economic difficulty, which forces Iona to shut down in December.

IOSHKAR-OLA UNITED AIR DETACHMENT: Ioshkar-Ola Airport, Man El, 424010, Russia; Phone 7 (83622) 54481; Fax 7 (83622) 98847; Year Founded 1995. Named for its airfield, this concern is established to undertake regional charters and aerial work. Flights begin and continue with a single Tupolev Tu-134 and several Mil Mi-8 helicopters.

IOWA AIR LINES: United States (1979). This small regional is set up at Spencer during the first month of 1979 to provide scheduled passenger and cargo services. Cessna 402 flights commence on February 1, linking the company's base with Iowa City via Pocahontas and Des Moines, but cannot be maintained until year's end.

IOWA AIRPLANE COMPANY. See MID-WEST AIR LINES

IOWA AIRWAYS: United States (1985–1994). Founded by Jack Schap as an associate of **Tennessee Airways** at Knoxville Airport in the summer of 1985, IA is equipped with 2 each Embraer EMB-110s and Piper PA-31-350 Navajo Chieftains. Daily roundtrip revenue flights commence on October 15 from a base at Dubuque to Cedar Rapids, Des Moines, Omaha, and Moline. A total of 4,000 passengers are flown by December 31.

In early 1986, the commuter enters into a code-sharing agreement with the Chicago-based national carrier **Midway Airlines**. Two more Bandeirantes arrive to replace the Chieftains.

Enplanements for the first full year jump to 22,925.

A Piper T-1020 is placed into service during 1987. On June 15, the company joins with **Fischer Brothers Aviation** to form the Midway Connection and services are inaugurated to Waterloo, Iowa, Elkhart, Indiana, and Benton Harbor, Michigan.

Passenger boardings jump 27.1% to 29,141.

The fleet in 1988 includes 4 Bandeirantes and 1 Piper T-1020. These insure that customer bookings rise by 18.8% to 34,000.

Another good year is enjoyed in 1989 as enplanements for the 60-employee small regional increase 43.5% to 49,657.

The fleet is increased by two leased EMB-110s in 1990, including one obtained from **Tennessee Airways**. The code-sharing agreement with the Midway Connection ends on February 8. With the demise of its affiliated carrier, the fleet is cut in half during 1991, to 3 Brazilian turboprops.

Operations continue apace in 1992–1993 with 3 leased Bandeirantes, although only one is flown in early 1994 before the company shuts down.

IPEC AVIATION (PTY.), LTD. (INTERSTATE PARCEL EXPRESS COMPANY): Australia (1976–1993). A subsidiary of IPEC (Australia), Pty., Ltd., **IPEC Airbridge (Pty.), Ltd.** is formed at Melbourne and receives a license to operate in 1964. Due to import restrictions, the subsidiary is unable to acquire suitable freighters to operate a desired four-times-per-day, Bass Strait all-cargo service linking Essendon Airport with Launceston in Tasmania. When the possibility for acquisition of a large aircraft presents itself, the carrier is reformed as IPEC A. (retaining the Airbridge subtitle), a subdivision of Interstate Parcel Express Company and IPEC Holdings (Pty.), Ltd. in December 1976.

In 1977, IPEC purchases the Hawker Siddeley HS 650 Argosy 101 and Argosy 222 formerly operated by **BBA Cargo (Pty.), Ltd.** Simultaneously, the Tasmanian charter airline **Fleet Air Services (Pty.), Ltd.**, together with its single Douglas DC-3, is purchased and merged.

Following almost a year of overhaul, the Argosies enter revenue service in January 1978, at which time the carrier employs 44 workers. Scheduled Melbourne–Tasmania freight flights commence on February 1.

FTKs operated total 8,986,000.

Even though a second Argosy 222 is acquired in 1979, the workforce is cut by 17.8% to 37. Both the Argosy 101 and DC-3 are withdrawn;

improved systems and avionics in the larger Argosies allow an increase of cargo traffic by 10.9% to 9,984,000 FTKs.

The number of employees is cut a further 4.9% in 1980 to 39. IPEC A becomes a division of IPEC Transport, Ltd. and Philip Petersen, the aviation manager, becomes a divisional general manager. Singapore-based **Kris Air (Pty.), Ltd.** obtains the Argosy 101 while the Fleet Air subsidiary and its DC-3 are also sold.

A total of 7.84 million FTKs are operated, up 4.8%, and revenues climb 19.8% to \$A4.1 million.

The workforce remains the same in 1981 and cargo advances only a minor 0.4% to 7.87 million FTKs, with most growth occurring in the fourth quarter. In 1982, the company expands its route network, adding such destinations as Adelaide, Brisbane, Hobart, Sydney, Perth, Rockhampton, Mackay, Townsville, and Cairns.

Tonnage carried rises from 15,315 in 1982 to 26,806 in 1983. General Manager Dick Creak's fleet now includes 3 Argosys and the employee population grows to 65.

Operations continue apace in 1984–1988 and a DC-9-33CF is added in 1989, the year Ron Taylor becomes general manager.

A second DC-9, a Dash-33RC, joins the fleet in 1990 and IPEC now has 2 jetliners, 2 Argosy 222s, and 1 Argosy 101.

Still, freight traffic declines 25.6% from the previous year, down to 8.95 million FTKs. Income exceeds costs and there are profits: \$A500,000 (operating) and \$A300,000 (net).

Company employment is cut 5.6% in 1991 to 84 and the fleet now includes 1 each, leased, DC-9-33CF and DC-9-33RC. The Argosies are now retired.

Cargo falls yet another 13.3% to 7.76 million ton-kilometers. Revenue swells 18.9% to \$A22 million, but costs climb 32.8% bringing an operating loss of \$A1.9 million. The net loss is \$A1.4 million.

The payroll rises 11.9% in 1992 to 94, but freight declines 19.2% to 6.7 million FTKs. The workforce at the beginning of 1993 totals 82. R. R. Tayles becomes general manager and the two DC-9-33Fs continue to visit Launceston, Hobart, Brisbane, Sydney, and Melbourne until the company shuts down in April.

IPX. See INTERNATIONAL PARCEL EXPRESS (IPX)

IRAN AIR (IRANIAN NATIONAL AIRLINES CORPORATION): Iran (1961–1979). **United Iranian Airways** is formed on November 2, 1961 through the merger of **Iranian Airways (Iranair)** and **Persian Air Services**. Dr. Ighani is managing director. The Vickers Viscount and Douglas DC-3 Middle Eastern services of the former and the long-haul Avro York, DC-6, and Boeing 707-138 operations of the latter are continued by the amalgamated carrier, once the union is completed on February 24, 1962. (Persian Air's first 707-138 had begun service during August 1961.)

Meanwhile, a DC-3 is lost at Kabul, Afghanistan, on January 2; no other details are available. Another DC-3 is lost at Ahvaz, Iran, on February 20.

Under the direction of Iran Air Force Chief of Staff, Lt. Gen. Ali Mohammad Khademi, the airline is nationalized by imperial decree and is renamed **Iranian National Airlines Corporation (Havapeimai Melli Iran, Homa)** on March 29, 1962. Gen. Khademi had, as a young air force officer, also flown as a captain for **Iranian Airways (Iranair)**. The fleet comprises 5 Douglas DC-3s, 7 DC-6s, and 2 Viscounts.

New bilateral air agreements are negotiated between Iran and various governments through 1963 as the company expands its operations.

The workforce totals 773 in 1964. A DC-3 is lost at Isfahan on May 4 under unknown circumstances.

On August 11, joint Tehran–Moscow service is started in cooperation with **Aeroflot Soviet Airlines**. Two B-727-86s are ordered as the company signs management and technical assistance agreements with **Pan American World Airways (1)**.

Enplanements are 257,000 and revenues total \$16.48 million.

Airline employment nearly doubles in 1965, up to 1,300.

A Vickers Viscount 782D is destroyed as the result of a bad landing at Isfahan on February 15; there are no fatalities.

While awaiting its Boeings, Iran Air leases a 727-100 for the year. Routes are extended during the summer to Beirut, Geneva, Rome, Frankfurt, and Hamburg. Flights also begin to Kabul, and the company becomes the first airline to fly jet aircraft to Afghanistan.

Enplanements for the year climb to 282,841.

The first of two B-727-86s ordered in 1964 is delivered beginning on October 13, **1966**; christened *Abadan*, it enters regional service. They join an owned propeller fleet still comprising 5 DC-3s, 7 DC-6s, and 2 Viscounts.

In **1967**, orders are placed for two B-707-386Cs.

A DC-3 with 4 crew and 24 passengers makes a wheels-up forced landing at Bandar Abbas on March 17; there are no fatalities.

The employee population is 2,688 in **1968**. Two additional B-727-86s are placed in service. International schedules are increased from five to nine per week, including two to London via Moscow. A Tehran-based catering facility, capable of generating 3,000 meals per day is opened.

Passenger bookings hit 535,518, with a 54% increase on the European routes. Revenues are \$22.75 million.

The fleet is enhanced by the delivery of two B-707-386Cs in **1969**. Enplanements climb 35% to 772,948. B-707-386 service is launched to Brussels, Geneva, London, and Paris in **1970**. A B-727-86 with 91 aboard is seized on June 21 by 3 Iranians while on a Tehran-Abadan flight and diverted to Baghdad, where the three seek asylum; the plane and its passengers are allowed to return to Tehran next day.

On October 10, another B-727-86 with 49 passengers en route from Tehran to Abadan, is skyjacked to Baghdad by 3 pirates, who are taken in hand by police after the tri-jet lands. Nine men, including 6 criminals, divert a DC-3 with 22 passengers to Baghdad from a domestic flight between Dubai and Bandar Abbas on November 9; the plane, like those before it, is allowed to return to the Iranian capital.

Bookings this year climb past 728,000.

A third B-707-386C is delivered in **1971** and used to inaugurate service to India. Enplanements grow another 10,000. The workforce in **1972** is 3,885. Two DC-6s are sold as three B-727-86s arrive.

Passenger traffic climbs 18% to 900,000.

One more B-707-386C and a B-727-86 enter operations in **1973**. New services are launched to Peking and Shanghai from Tehran. The fleet now includes 3 B-727-86s, 3 B-707-386Cs, 4 B-737-286s, and 2 DC-6s. On October 10, orders are placed for two B-747SP-86s, with two options.

A total of 1,068,000 passengers are carried as the company passes the one million-mark for the first time.

A third B-747SP-86 is ordered on June 18, **1974**. The world takes heed when orders are placed in October for two Anglo-French Concorde for 1977 delivery; the order will not be filled. Routes are, meanwhile, opened to Zurich, Vienna, Peking, and Tokyo.

Passenger boardings rise 23.7% to 1.4 million and the workforce reaches an even 5,000. A net \$13-million profit is reported.

Formerly flown by **Pan American World Airways (1)**, one each B-707-321B and B-707-321C, plus two new B-727-286As, join the fleet in **1975**. In May, five-times-per-week North Atlantic Stratoliner service is inaugurated from Tehran to New York via London. A total of 16,960 passengers are carried over the route during the next 8 months. Meanwhile, six, later nine, B-747-131s are purchased from cash-poor **Trans World Airlines (TWA)**; most will be delivered to the Iranian Air Force for conversion into freighters. One Jumbojet is resold to TWA in December.

Freight traffic for the year climbs 25% while passenger enplanements rise 43% to 1.95 million. The employee population is increased to 5,198.

In **1976**, Sen. Jacob K. Javits (D-NY) voices opposition to the U.S. SST program. It is revealed on January 15 that his wife, Marian B. Javits, employed by the public relations firm of Ruder & Finn, received a \$67,500 fee as a consultant to Iran Air, which has just ordered an Anglo-French Concorde. Following media exposure and public criticism, Mrs. Javits resigns her account on January 28.

Also during the month, a DC-9-33RC is leased from **Martinair Holland, N.V.** in order to operate a one-month tour for the wife of the Shah.

The first B-747SP-86, christened *Kurdistan*, is delivered on March 12, but must remain at Boeing Field until the end of the month while its crews complete their training. The second SP, the *Khorasan*, is turned over on May 10.

The two B-747SP-86s enter service in June on a 6,296-mi. nonstop route from Tehran to New York. After a good initial load factor, the two aircraft reportedly fly half empty (except for full loads of caviar) while new B-707-386C routes are extended to New York via Cairo and Paris. Two more B-727-286As also arrive before the end of December.

Passenger traffic climbs 28.2% to 2,499,000 while cargo skyrockets 82.9% to 66.9 million FTKs.

Airline employment in **1977** soars to 7,069 and service is maintained to 18 domestic points and 22 foreign markets.

The third B-747SP-86, *Fars*, is delivered on May 27, and is followed into service by a fifth B-727-286A and the B-747-286BC, *Khuzestan*.

Enplanements, nevertheless, dip to 2,367,000.

On March 7, **1978**, a leased Airbus Industrie A300B2-203 enters service and is operated to regional destinations. In April of what will prove to be the airline's final year, the fleet comprises 2 Boeing 747-286Bs, 3 747SP-86s, 2 A300B2-203s, 5 B-727-286As, 4 B-727-86s, 2 B-737-286s, and 2 B-737-286Cs. Orders remain outstanding for three A300B2-203s and a fourth B-747SP-86 is requested on June 1.

A B-727-286A makes a crash landing with a jammed landing gear at Tehran on July 27, but no injuries are reported.

The carrier experiences a traumatic downfall as the result of the national revolution. Employees agree to resume work on November 11 after a strike that has paralyzed domestic air services for a full two months.

Through October, passenger boardings are up 24% to 3,114,000, while freight is off 0.8%; after October, the airline is in disarray.

In November, the 18-year veteran chairman/managing director, Gen. Khademi, resigns. Retired Air Force Maj. Gen. Assadollah Amir-fazli comes out of retirement in London a week later to accept the post.

Service is suspended on December 29 because of civil strife.

IRAN AIR (THE AIRLINE OF THE ISLAMIC REPUBLIC OF IRAN): Iran Air Building, Mehrabad Airport, Tehran, 13185-775, Iran; Phone 32 (20) 683-7744; Fax 98 (20) 685-3522; <http://www.iranair.nl>; <http://www.nether.net/~behzadx/homa.html>; Code IR; Year Founded 1979. As a result of the Islamic revolution, Iran Air is reformed and renamed. Masoud Refghi becomes chairman/CEO in February 1979, succeeding Chairman Maj. Gen. Assadollah Amir-fazli. He is almost immediately replaced by Ghasem Shakibnia, the deputy minister of Post, Telephone, and Telegraph in the Shah's government. Four months later, Shakibnia is out and is succeeded by Deputy Managing Director Cyrus Chaichian.

The carrier, meanwhile, has entered a period of retrenchment; service is cut on many international routes, including the once-prestigious New York run. Four months into his new post, Chairman Chaichian is also replaced.

Wearing an all-white fuselage and no titles save its registration number, the fourth B-747SP-86 is ferried from Everett, Washington, to Frankfurt on July 12. There the Jumbojet is unceremoniously turned over to representatives of the Iranian airline.

The airline is not allowed into New York after November 4 and the multiple frequencies to the major cities of Western Europe are cut to but once per week each. Meanwhile, service is started to Beijing and Tokyo and offices are opened in Bangkok, Manila, and Singapore in preparation for the establishment of future air links. The carry-over company debt is \$15 million.

At such airports as London and Rome, austere counters staffed by women shrouded in black and employing Islamic timetables replace attractive booking facilities. Still, a previously ordered, new B-747SP-86 is delivered in July and is followed by a B-747-186B. Orders for three

more B-747-186Bs are cancelled by Managing Director Houshang Tajadod, who also cancels the 1974 Concorde order.

When **British Airways, Ltd. (2)** stops flying to Iran on December 2, Iran Air is the only carrier still flying a London to Tehran service. Enplanements total 2,827,544.

While on initial approach to Tehran in fog and snow on January 21, **1980**, after a flight from Babo Sar, the B-727-86 *Shiraz* with 8 crew and 120 passengers, crashes into the Elburz Mountains, near Lashgarak; there are no survivors.

Late in the year, when war erupts with Iraq, scheduled flights to various Western Iranian cities are suspended. In August, September, and November, two ex-Iranian Air Force B-747-131SFs are transferred over to the airline; their military markings and roundels are removed and they receive the civil designation of Dash-2J9F. They will be joined by four more Dash-2J9Fs.

John Booth, a British businessman who has been forbidden to leave the country because of his arrest on charges of espionage, stows away to London aboard a B-747-286B on April 25, **1981**.

Enplanements for the year are 1,539,700.

The last of six Airbus Industrie A300B2-203s, which began delivery in 1979, is received in **1982**. Less than 30 weekly A300/B-747 flights are scheduled from Tehran to destinations in the Middle East and European, while 18 points within the nation are served by B-727 and 737 equipment.

After traffic drops in each year since the revolution, bookings increase to 2,009,000.

The fleet in **1983** comprises 7 B-747s, 7 B-747Fs, 6 A300B2-203s, 4 B-707-386s, 7 B-727-286As, and 4 B-737-286s. The workforce totals 9,515, a 0.2% decline.

While giving a B-727-86 a high-speed taxi check at Mehrabad Airport at Tehran on January 7, two mechanics run the Boeing off the side of the runway, badly damaging its undercarriage and the bottom of its fuselage. The aircraft will eventually be written off.

En route from Tehran to Shiraz with 388 passengers on a July 6 domestic flight, a B-747-286B is seized by six Iranians armed with sub-machine guns and explosives. They divert the Jumbojet to Kuwait, where 186 women, children, and elderly men are released. Although the pirates want to go to Iraq, they agree, instead, to fly to France. The aircraft departs Kuwait with 185 hostages and arrives at Paris (ORY) on July 7; the remaining captives are freed and the pirates surrender to French authorities on orders from their exiled guerrilla leader, Massoud Rajavi.

On July 9, Tehran closes two French government offices in the Iranian capital because the Paris government refuses to return the hijackers who will be tried, given suspended sentences, and granted political asylum.

Cargo climbs 37% to 123.6 million FTKs and passenger boardings jump 42.1% to 3,663,000.

Six B-747Fs are sold in **1984**. A B-727-286A departs Paris for Tehran on June 22 with four Iranians who were unwilling passengers aboard a commandeered Iranian navy transport plane that had landed in Nice three days earlier.

Former Iranian military officer Mohammed Reza Aheri and his companion, Gholamreza Vahidjou, hijack an A300B2-203 four days later and force its pilot to fly to Qatar, where 142 passengers and 3 crew members are released. The Airbus travels to Cairo East military field, where the plane is refueled after Egypt refuses to grant the pirates sanctuary. When Iraq offers the skyjackers protection, they surrender to Egyptian officials, who allow them to take passage for Baghdad on June 27.

The Airbus returns to Iran. One of the pirates will later be returned to Iran, which will provide him with a quick trial and execution.

On August 7, armed only with a knife, teenaged Iranians Hosein Eftekhari and Moshsem Rahgohzar commandeer the same A300B2-203 en route from Shiraz to Jeddah with 280 people aboard and order it flown to Cairo via Bahrain. After refueling, the Airbus flies to Rome, where the pirates, identifying themselves as opponents of the Khomeini

regime, release their hostages and surrender to police. The plane is released to fly back to Tehran on August 9. Both hijackers will be placed on trial; one will receive a seven-year prison term, while the other will be released.

A young Iranian couple, reportedly unarmed, hijacks an A300B2-203 with 204 captives and en route from Shiraz to Tehran, on August 28 and force it to land in Iraq. All but the hijackers, plus three other Iranians and a Czech citizen, elect to return home when given the opportunity to do so on September 4; the Airbus is turned over to **Iraqi Airways**.

Five pirates (an Iranian policeman and a family of four, including two young boys), seize a B-727-286A with 123 passengers en route from Bandar Abbas to Tehran on September 8 and force it to land, first in Bahrain and then Cairo. After 52 hostages dash to freedom in Egypt, the plane is flown to an undisclosed military airfield in southern Iraq, where the hostages are released. The next day, the skyjackers surrender in return for political asylum. The Boeing, like the Airbus earlier, is passed to **Iraqi Airways**.

On September 12, another attempted hijacking of an Iranian Airbus to Iraq during a domestic service from Tehran to Shiraz is foiled by security guards aboard the plane. Following a shoot-out between the police and four hijackers, the plane lands at Isfahan and the pirates are arrested. Although the pirates' fate is unrecorded, it is likely to have been terminal.

Security men also foil a lone gunman's attempt to take over another domestic flight, from Meshed to Tehran, on October 5, placing the suspect under arrest. He, too, is probably executed.

Enplanements for the year total 4,591,384, many, as in the previous year, flown in support of the war effort.

The employee population in **1985** is 9,988. Service is now provided to 18 domestic points and 16 Asian, European, and Mideast destinations.

The airline is subjected to three unsuccessful hijacking attempts between August and December. On August 5, two men seek to capture a B-727-286A en route from Tehran to Bandar Abbas, but are frustrated by security guards, who kill one and arrest the other.

On November 2, security guards overpower a lone gunman who tries to capture a B-727-286A as it flies between Tehran and Bandar Abbas. A B-727-86 en route from Sirri Island to Shiraz on December 23 is also subjected to a takeover attempt by a lone gunman who is shot dead by security guards.

Cargo dips 6% to 143.8 million FTKs and bookings fall 14.1% to 4,024,000.

The payroll is cut 1.2% in **1986** to 9,869 and the fleet includes 4 B-747SP-86s, 3 B-747-286Bs, 4 B-727-286As, 2 B-727-86s, 3 B-737-286s, 6 A300B2-203s, 1 B-747F, and 1 B-707-386C.

Having received a minimal warning, passengers aboard a B-737-286 are caught deplaning as Iraqi aircraft sweep in to attack Shiraz Airport on October 15. Three passengers are killed, 30 are wounded, the little Boeing is badly damaged, and several C-130 Hercules freighters are also destroyed.

Passenger boardings ascend 33.4% to 4,023,614 and freight rises 25.1% to 143.8 million FTKs.

Airline employment grows 0.7% in **1987** to 9,942. Customer bookings rise 2.1% to 4,108,109.

The workforce is cut 1.3% in **1988** to 9,615 and the fleet is altered by the addition of one B-727-286A and deletion of two A300B2-203s.

On July 3, the crew of the U.S. Aegis cruiser *Vincennes* mistakes Flight 655, en route from Bandar Abbas to Dubai, for a hostile F-14A. The cruiser shoots down the A300B2-203, carrying 16 crew and 274 passengers, at 12,000 ft. over the Strait of Hormuz in the Persian Gulf. There are no survivors; wreckage and bodies fall into the sea near Henqam Island. Sadly, the airliner's crew had not been monitoring the available international air defense frequencies over which the U.S. task force had been broadcasting radio challenges.

Capt. Will Rogers of the cruiser and his wife will later collaborate with Gene Gregston in revisiting the tragedy in *Storm Center: The U.S.S. Vincennes and Iran Air Flight 655—A Personal Account of*

Tragedy and Terrorism (Annapolis, Md.: Naval Institute Press, 1992). At the same time, the Subcommittee on Investigations of the House Armed Services Committee will also publish an account, *The July 3, 1988 Attack by the Vincennes on an Iranian Aircraft: Hearings*. 102nd Cong., 2nd sess. (Washington, D.C.: GPO, 1992).

The year's overall passenger boardings drop 13.1% to 4,726,291 and cargo declines 24.3% to 157.36 million FTKs.

Company employment is increased by 2.2% in 1989 to 9,827. The company's last two B-747-2J9Fs continue to operate weekly roundtrips from Tehran to London (LHR) via Frankfurt and Amsterdam. A program of fleet modernization is now undertaken as orders are placed for six Fokker 100s.

Customer bookings inch up 2.3% to 4,430, but cargo is down 24% to 92 million FTKs.

The number of employees grows again in 1990 by 15.9% to 11,392, second highest in the Mideast after **Saudia (Saudi Arabian Airlines)**.

Security guards on Flight 133, a B-727-286A en route from Shiraz to Bandar Abbas on January 25, foil a skyjacking attempt, killing all four hijackers.

Also in January, an agreement is signed with **Malaysia Airlines, Ltd. (MAS)** providing for joint services between Tehran and Kuala Lumpur. The first of six Fokker 100s to arrive before year's end is delivered in September and enters service in early October.

In November, an Iran Air team is allowed to retrieve the A300B2-203 hijacked to Baghdad six years earlier; the aircraft is ferried to Hamburg and restored by **Deutsche Lufthansa, A.G.**

Passenger boardings ascend 18% to 5,710,383 while freight moves ahead by 34% to 176.24 million FTKs. Revenues reach \$746.4 million and with costs held down, an \$89,000 operating profit is earned. There is, however, a \$23.1-million net profit.

The payroll is cut again by 14% in 1991 to 9,800. During the Gulf War in January, a portion of the **Iraqi Airways** fleet is flown to Iran and there interned. At the same time, the A300B2-203 rebuilt in Germany returns to service. Four-times-per-week flights to Kuwait City begin in September.

Customer bookings inch up 2.9% to 5,876,577, but cargo drops 21.7% to 138.05 million FTKs.

The fleet in 1992 includes 5 A300B2-203s, 1 B-707-321C, 3 B-707-386Cs, 2 B-727-86s, 5 B-727-286As, 1 B-737-286A, 2 B-737-286CA, 1 B-747-186B, 2 B-747-286B/Cs, 2 B-747-2J9Fs, 4 B-747SP-86s, and 6 Fokker 100s. Orders are outstanding for two A 300B4-605Rs.

In April, new services are inaugurated to Nairobi, Baku, and Yerevan. The carrier now forms a separate charter subsidiary, Iran Air-Tours.

Following lengthy negotiations, the five A310s and one A300B4-605R interned by Iraqi military forces and given over by them to **Iraqi Airways** administration the previous year, are returned in July to **Kuwait Airways Corporation, Ltd.** Pooled flights begin in November with **Gulf Air** over routes from Iran into the Gulf states.

Statistics are provided through November and show passenger boardings off 10.5% to 4,810,382 and freight down 28.2% to 90.5 million FTKs.

In 1993, Chairman/Managing Director S. H. Shafiti oversees an 18.2% increase in the employee population to 11,583. Destinations now visited include Abu Dhabi, Ashghabad, Athens, Bahrain, Baku, Beijing, Bombay, Damascus, Doha, Dubai, Frankfurt, Geneva, Hamburg, Istanbul, Karachi, Kuala Lumpur, Kuwait, Larnaca, London, Muscat, Paris, Rome, Sharjah, Tokyo, and Vienna.

An A300B2-203 and a military plane collide near Tehran on February 8, killing all 132 aboard the commercial plane; the two-man crew of the military plane ejects safely.

A couple, with five children in tow, take over a company Airbus on November 29, diverting it to Basra, Iraq, where they receive the protection of Saddam Hussein.

Customer bookings swell 4.9% to 5,503,765, but cargo plunges 29% to 70.38 million FTKs.

The workforce is cut 15.4% in 1994 to 9,800 and a new color scheme, featuring a Homa bird painted on the fin, is first introduced by a

B-747SP-86 at Hamburg in the fall. Iran Air-Tour B-727s commence service to domestic and Mediterranean destinations.

Customer bookings recover by 3.8% to 5,714,902 and cargo climbs 13.3% to 79.97 million FTKs.

There is no change in the workforce during 1995. Code-sharing begins with **Austrian Airlines, A.G.** flights from Tehran to Vienna; the service employs Austrian aircraft exclusively.

A disgruntled crew member hijacks an A300B2-203 on September 19 and orders it flown to Ovda Air Force Base in Israel where he seeks political asylum. The plane is returned to Iran next day.

Despite this incident, the company has a very good traffic year. Enplanements jump 10.6% to 5,776,131 and freight increases 41.8% to 106 million FTKs.

Airline employment grows 20.9% in 1996 to 11,855. On February 23, a U.S. Department of State spokesman, conceding to error, announces that the U.S. will pay \$60 million in compensation to the families of Iranians aboard the Airbus accidentally shot down in 1988, but that it will pay no money to the Iranian government.

New weekly service (soon doubled) is inaugurated to Stockholm and the Hady traffic to Mecca this year from 15 Iranian airports totals 75,000 pilgrims.

After the 15th touch-and-go landing made during a June 9 training flight from Tehran, a B-727-286 with seven crew crashes into a paddy field (four dead).

Later in the fall, hijacker Gholamreza Vahidjou, on the run since 1984, attempts to return home; he is captured and executed.

Customer bookings soar 15.6% to 7,392,488 and 116.98 million FTKs are operated, a 2.8% boost.

The employee population is decreased by 2.3% in 1997 to 11,579. At the beginning of the year, an arrangement is reached with the Russian government for the wet-lease of 17 Tupolev Tu-154Ms and 8 Yakovlev Yak-42s. All will be turned over to Iran Air-Tour for use on its non-scheduled charter routes.

A new moderate Iranian government takes office in early August. Its leaders appoint a new chairman/managing director for the airline, Ahmad Reza Kazemi.

It is announced on August 24 that Iran and Saudi Arabia will reestablish airline links, severed in 1979. During the summer, frequencies are initiated to Copenhagen and to Dhaka, Bangladesh, via Dubai.

Late in the year, following summer elections, Iranian political leaders put out rapprochement feelers toward the United States, even as Islamic clerics continue to heap scorn on "The Great Satan." Consequently, the DOS continues to ban travel to Iran by American citizens.

In December, the company's 50th anniversary is celebrated; differences between the Iranian and Georgian calendars explain why the birth of Iran Air in 1944 is now commemorated. The company notes that it has transported 100 million people during these years, 83% of whom have flown in the 17 years since the 1979 revolution.

For this year, passenger boardings accelerate 5.7% to 7,815,849 while freight rises 2.1% to 119.39 million FTKs.

On January 5, 1998, a Fokker 100 with 9 crew and 104 passengers en route from Tehran to Orumiyeh, encounters bad weather, forcing it to divert to the central city of Isfahan. Due to certain unspecified "technical problems," the airliner is unable to land at the airport and is forced to perform a night emergency landing in the desert near the city. After an all-night search, rescue teams reach the plane on the morning of January 6 and find all aboard unhurt.

During the spring, new service is introduced to Stockholm, Copenhagen, Goteborg, and Oslo. Plans are made to inaugurate new services to Canada. Managing Director Kazemi informs Reuters, Ltd. on September 3 that government permission has been received for the acquisition of six new airliners. Negotiations for their purchase begin with Airbus Industrie and with Ilyushin in Russia.

Service is maintained throughout the remainder of the year.

Customer bookings fall 7.9% to 7.2 million, while cargo traffic drops 16.1% to 100.13 million FTKs.

Airline employment drops 2.5% in 1999 to 11,285. The company's fleet still only includes 8 planes purchased after the 1979 Islamic revolution: 6 Fokker 100s and 2 Airbus A300B4-605Rs.

On March 9, it is reported that in the nine months prior to December 21, the company's delay-time has been reduced by 43% to just 11 minutes average for each flight. As in the past, delays are blamed on the U.S. embargo, which has prevented Iran from acquiring modern Western aircraft.

A new homepage is opened on the World Wide Web at the beginning of the second quarter. The government signs a bilateral commercial aviation agreement with the Kingdom of Saudi Arabia on May 2. The new pact permits an increase in the number of flights between the two countries and specifically grants **Saudi Arabian Airlines** the right to transport Iranian pilgrims during the Hadj season.

On May 9, Managing Director Kazemi, quoted in the daily *Hamshahri*, indicates that a top state economic body has recently approved a request for purchase of four Airbus jetliners during the months ahead.

After a two-decade suspension, twice-weekly roundtrip service to Beirut from Tehran is resumed on June 27.

After some weeks of media speculation, the carrier, on November 6, confirms an order for four Airbus Industrie A330-300s, delivery of which will begin in 2001.

Fearing a disaster that may be caused if engines fall off an older Iran Air B-747, U.S. Undersecretary of State Strobe Talbott, in mid-November, approves a special license that will allow Boeing to sell selected spare parts to the Tehran-based flag carrier despite the official U.S. embargo. The story is reported in the December 4 issue of *The Washington Post*.

Passenger boardings fall 13% to 6,266,000 while cargo traffic rises 5.6% to 105.77 million FTKs.

Airline employment at the beginning of 2000 stands at 10,840, a 3.9% decrease over the previous 12 months.

While gathering speed for liftoff from Tehran's Mehrabad Airport on February 1, an Iran Air Force Lockheed C-130 Hercules apparently suffers an engine failure and veers off the runway onto the apron. It thereafter smashes into an Iran Air A300B2, which, with airport workers aboard, is taxiing toward a maintenance hangar. Both planes catch fire and a total of six are killed.

On March 16, the navigational system of an A300B2 en route to Tehran from Kerman in SE Iran fails, causing the airliner to become lost. After hours of fruitless searching and unhelpful assistance from the ground, the aircraft eventually lands safely at Karachi, Pakistan.

One of the company's two Boeing 727-86s is leased to **Oman Air** on May 22. It also continues to fly four B-727-286As. Weekly A300B4-605R roundtrips are inaugurated on June 20 from Tehran to Berlin's Tegel Airport.

While on approach to Shiraz Airport on July 27, the crew of a B-727-286A is unable to deploy the trijet's nose gear. A safe emergency landing is made with the gear retracted and no injuries are reported.

A memorandum of agreement is signed on October 9 between the governments of Iran and South Africa. Under its provisions, Iran Air is permitted to begin flights from Tehran to any point in South Africa, while **South African Airways (Pty.), Ltd.** will be able to operate from Johannesburg and Cape Town to Iran's various communities.

While en route from Ahvaz to Bandar Abbas on November 13, Flight 1492, a Yak-42 with 7 crew and 39 passengers and operated on behalf of Iran Airtours, is subjected to a hijack attempt by three men. They are quickly overwhelmed (and injured) by onboard security officers; the aircraft lands as scheduled and no injuries are reported.

IRAN AIR-TOUR. See **IRAN AIR (THE AIRLINE OF THE ISLAMIC REPUBLIC OF IRAN)**

IRAN ASSEMAN AIRLINES: P.O. Box 141748, Mehrabad Airport, Tehran, 13145-1476, Iran; Phone 98 (21) 648-4198; Fax 98 (21) 603-

0413; <http://www.neda.net/tours/asseman.htm>; Code Y7; Year Founded 1980. Following the Iranian revolution, **Air Taxi Company** and **Pars Air** are merged in 1980 to form Iran Asseman. In addition to charter and contract service flights, the new entrant undertakes services connecting the following points in a route system to cities large and small: Ahwaz, Birjand, Fasa, Gonbad, Hamadan, Isfahan, Kerman, Khorramabad, Lar, Mashad, Now Shahr, Ramsar, Shiraz, Tabaz, Tabriz, Tehran, and Zahedan. Late in the year when war breaks out with Iraq, operations into western Iran are severely curtailed, particularly those routes to Ahwaz, Hamadan, Khorramabad, and Tabriz. Traffic and financial statistics are not released.

In 1981-1987, the fleet comprises 2 Fokker F.28-4000s, 2 Fairchild Hiller FH-227Bs, 3 Piper PA-31-350 Navajo Chieftains, 3 Britten-Norman BN-2 Islanders, 2 Dassault Falcons 20s, and 16 Aero Commanders/Turbo Commanders.

One of the more exciting events during this period is the attempted hijacking of an FH-227B during a January 5, 1985, domestic service from Khorramabad to Tehran. All three of the gunmen are captured by security police and their fate, though unrecorded, will probably be terminal.

On February 18 of the same year, Iraqi fighter jets shoot down an F.27-600 with 5 crew and 44 passengers during a scheduled service from Tehran to Ahwaz, some 530 km. SW of the point of origin; there are no survivors. The dead are mourned at a large, outdoor funeral service in Tehran on February 23.

A third FH-227B and another Falcon 20 join Managing Director Ali Abedzadeh's fleet in 1988. Within 4 years, airline employment grows to 1,100.

Operations continue apace in 1989-1990 and the fleet is enhanced by the addition of two F.28-1000s chartered from **TAT European Airlines, S.A.**

An F.27-600 with 4 crew and 46 passengers is destroyed as the result of a bad landing at Ramsar on October 4 of the latter year; there are no fatalities.

Airline employment in 1991 stands at 700 and the fleet includes 24 aircraft. In August, the U.S. government blocks a possible sale of British Aerospace BAe 146 aircraft to the company under its Export Control Act.

Passenger boardings decline 17.5% over the previous year to 184,614.

In 1992, an Ardebil-Abadan route is added to the 21-point route system. A proposal of the previous September is confirmed with Avions de Transport Regional for the purchase of an ATR42-320 and four ATR72-212s.

In 1993, Managing Director Ali Abedzadeh oversees a workforce of 1,100 and a fleet that includes 4 Dornier 228-212s, 3 Dassault Falcon 20Es, 2 each F.28-1000s and F.28-4000s, and 1 each Dassault Falcon 20F and F.28-1000C. The ATR42-320 is delivered in March and is based at a new hub at Shiraz, from which it will offer internal flights and, more importantly, international services to such neighboring Persian Gulf states as Dubai. The four ATR72-212s arrive at Shiraz during the summer and fall.

During August and September 1994, the company completes an arrangement via an unidentified source for the purchase of four B-727-228s. Three are delivered by the first week in October.

Just after takeoff from Natanz on October 12, Flight 746, an F.28-1000 with 7 crew and 59 passengers, suffers the sudden loss of power to both engines, enters an uncontrolled descent, and collides with a peak in Iran's Karkas mountains, 200 mi. S of the capital of Tehran. There are no survivors and wreckage is spread over a 300-m. area.

The fourth used B-727-228 arrives on November 21.

During the spring of 1995, Managing Director Abedzadeh and four other senior company officials are arrested in connection with the October disaster and are put on trial at Esfahan, in central Iran. After a trial that lasts most of the year, the court establishes that poor maintenance led to the crash. The five are convicted of "technical negligence" and four, including Abedzadeh, are sentenced to two-year prison terms; the fifth official receives a six-month sentence.

Operations continue apace in **1996–1997**. On July 9 of the latter year, a B-727-228 inaugurates the first scheduled service between Mashhad, Iran, and Qatari, Doha. The ATR72-212 is lost and in October a \$40-million order is placed for two more ATR72-212s.

Airline employment stands at 1,100 in **1998** and the 2 ATR72-212s are delivered during the summer. Enplanements for the year total 745,000.

After a five-month suspension, flights to Kazakhstan are resumed on August 10.

Enplanements for the year total 365,000.

The fleet at the beginning of **2000** includes 4 B-727-286As.

IRANAIR (IRANIAN AIRWAYS): Iran (1944–1961). A group of Persian businessmen, led by noted local entrepreneur G. H. Ebtehaj, form this enterprise in December **1944**. With Ebtehaj as general manager and equipped with de Havilland DH 89A Dragon Rapides, it begins service, from Tehran to Mashhad, on May 21, **1946**. On October 26, **Transcontinental and Western Air Lines (TWA)** assumes a 10% interest and begins to provide technical and managerial assistance as well as a few Douglas DC-3s. The U.S.-built transports wear a depiction of the Homa bird on their tails and undertake regional services.

Flights to Azerbaijan cease in early **1947** when the U.S.S.R. objects to the carrier's use of an American flight crew. On the other hand, scheduled service to Paris begins in April.

In **1949**, the government reorganizes the carrier; the 10% TWA interest is purchased and the company is merged with independent **Eagle Airlines**. Reza Afshar acquires 70% ownership and becomes managing director.

The company suffers two fatal crashes during the second half of **1950**. A DC-3 with three crew and five passengers crashes at Tehran upon takeoff on September 14; there are no survivors.

On December 1, a DC-3 with seven crew and a passenger makes a forced landing, but collides into a mountain NNW of Chamaran, Iran; there are no survivors.

Operations continue apace in **1951–1952**; however, on December 25 of the latter year, a Curtiss C-46 crashes while landing at Tehran Airport in thick fog (23 dead). The newly amalgamated Iranian Airways, which employs the marketing name Iranair, receives technical assistance and pilot training from the American supplemental operator **Transocean Air Lines (TAL)**.

In **1953**, the carrier signs a contract with TAL for operation and maintenance. While on a training flight from Tehran on June 30, a DC-3 with six crew suffers a propeller failure in flight and makes a hard forced landing; although the aircraft must be written off, there are no fatalities.

Beginning in **1954**, under the TAL arrangement, the company operates another leased Curtiss C-46 Commando for a year.

The fleet is expanded to include DC-3s and in January **1955** a DC-4 is piloted over an Arctic route to Tehran by TAL President Orvis Nelson. During the year, the company begins to fly Muslim pilgrims to Saudi Arabia as part of the Hadj.

A Vickers Viscount joins the fleet in March **1958**. A DC-3 is lost at Kerman on April 25, **1959**; circumstances surrounding the accident are unknown.

Help from Nelson's carrier ends on January 6, **1960** when TAL ceases operations. Assistance is, however, delivered, beginning later in the month, by **Pan American World Airways (1)**, which signs a management and technical assistance contract and supplies the DC-4 it had formerly operated as *Clipper Union*. At this point, Houshang Tajadod becomes managing director and will remain a key management executive until the Islamic Revolution of 1979.

The former *Clipper Union* ceremoniously inaugurates a weekly return European service on Sundays to Frankfurt via Ankara on February 16.

As a result of fuel starvation, the *Clipper Union* with three crew, makes a forced landing into the Caspian Sea on August 4, **1961**; all aboard are rescued, but the DC-4 is a total loss.

Foundering as a result of financial and administrative difficulties, to say nothing of the loss of its largest aircraft, Iranair is merged with **Per-**

sian Air Services on November 2 to form **United Iranian Airlines**, later the present **Iran Air**. Amalgamation is completed in February **1962**.

IRANIAN STATE AIRLINES: Iran (1938–1950). With technical assistance from **Imperial Airways, Ltd.**, the Persian government's Ministry of Posts and Telegraphs forms this carrier in early **1938**. Equipped with de Havilland DH 89A Dragon Rapides, it inaugurates service on March 15 over a single route from Tehran to Baghdad via Kermanshah. The outbreak of World War II in September **1939** prohibits fulfillment of plans to expand westward.

Services are suspended on April 6, **1946**, but resume in July. A route is opened to Bushire in August but is closed in November **1947**. The one-route airway continues until the formation of **Iranair** in **1950**, when it ceases operation.

IRAQI AIRWAYS: Saddam International Airport, Baghdad, Iraq; Phone 964 (1) 887-2400; Fax 964 (1) 887-5808; Code IA; Year Founded 1945. The government-owned Iraqi State Railways, with **British Overseas Airways Corporation (BOAC)** technical assistance, forms the subsidiary IA in December **1945**. A fleet of 5 de Havilland DH 89A Dragon Rapides is assembled.

Domestic Dragon Rapide service is initiated on January 29, **1946** over a Baghdad–Basra route. International service is started on February 25 in pool with **Middle East Airlines, S.A.L. (1)** on a route from Baghdad to Damascus. Douglas DC-3s leased from BOAC join the fleet and on December 17, the joint international route is pushed to Cairo.

Domestic, Middle Eastern, and European routes and frequencies are instituted or improved in the period from **1947** to **1959** with, at first, leased Vickers Vikings, and after April 16, 1956, Viscount 735/773s. Service is extended as far north as London.

Two aircraft are lost during the period.

A Vickers 644 Viking 1B is damaged beyond repair on June 13, 1949, as the result of a hard landing at Baghdad.

A Vickers 644 Viking 1B, with 3 crew and 16 passengers, crashes while on takeoff from Baghdad on October 10, 1955; although the plane must be written off, there are no fatalities.

Independence from the state railway system is gained on April 1, **1960**. On August 8, service is suspended to New Delhi via Karachi as the result of a cholera epidemic in west Pakistan. In cooperation with **Air Jordan, Ltd.**, the carrier resumes Amman to Baghdad service on October 30 after a two-year lapse.

Orders are placed in **1961–1962** for three Hawker Siddeley Trident 1Es to supplement, and eventually replace, the carrier's five Viscounts.

Airline employment in **1964** is 970 and enplanements total 100,000.

In **1965**, offices are opened in Istanbul and Vienna and much of the ground staff undergoes new training, some in other nations.

A Vickers Viscount 773 is destroyed as the result of a bad landing at Cairo on March 19; there are no fatalities.

The first Trident 1E is delivered on October 3 and begins flying the European routes in November. Traffic figures for the year are not released.

Two of the three Viscount 735s are sold in **1966** after the second Trident 1E enters service. In addition to regional destinations, the British aircraft now also visit London, Paris, Vienna, and Moscow. Passenger traffic drops to 74,298 in **1967**, partially as a result of the effects of the Six Day War; it rebounds by 51.5% in **1968**, to 151,939, while freight traffic soars 63%.

Additional North African services are opened in **1969–1970** and plans laid for the eventual acquisition of American jetliners. Orders are also placed for Russian-made Antonov An-12s and An-24s, and a fleet of 10 Lockheed Model 1329 JetStar Is is acquired for domestic operations.

In **1971–1972**, the route network covers some 10,000 unduplicated miles in the Middle East, North Africa, India, and Pakistan. The fleet now includes 3 Trident 1Es, 3 Viscount 735s, and 10 JetStar Is. En route from Baghdad to Khartoum on July 22 of the former year, carrying Iraqi

representatives to the Sudan, a Trident 1E crashes in Saudi Arabia, 10 mi. NW of Jiddah Airport; there are no survivors.

The Antonovs ordered earlier begin to enter service in **1973**. Having run out of fuel, a Vickers Viscount 735 with 6 crew and 27 passengers, belly-lands at Mosul on April 17; there are no fatalities.

On August 11, a **Middle East Airlines, S.A.L. (2)** Caravelle, chartered by Iraqi Airways and en route from Beirut to Baghdad, is forced by fighter planes to land at an Israeli military airfield, where it is hoped that members of the PLO will be captured. An official of the Tel Aviv government concedes, however, that the wrong plane has been intercepted. The gambit is condemned at the UN.

Bookings reach 208,797 and a total of 2.3 million FTKs are flown.

On February 1, **1974**, orders are placed for three Boeing 707s, two 737, and three 727s. While the carrier awaits this equipment, it signs a wet-lease contract with U.K.-based **Donaldson International Airways, Ltd.**; the British operator's B-707-321s begin flying the Iraqi line's European services on May 1. When Donaldson goes bankrupt on August 8, the remaining two months of obligation are assumed by **Monarch Airlines, Ltd.** with a B720-051B. The three B-707-370Cs enter service beginning October 31.

Passenger boardings rise 39.3% to 290,890 and cargo grows 4.3%. The employee population is 1,570.

Two B-737-270Cs join the fleet in **1975** and enplanements rise to 303,880. An order is placed for four B-747Fs.

Three armed hijackers seize a Trident 1E with 85 aboard during a March 1 Mosul-Baghdad flight and order the crew to fly to Tehran, where the pirates demand a \$5-million ransom and freedom for Kurds jailed by Iraq. Security guards aboard the jetliner overcome the pirates in a gunfight on the ground that leaves one passenger dead and 10 wounded.

A bomb causes extensive damage to the carrier's Los Angeles office on April 6, but no injuries are reported. The hijackers captured after the March 1 Tehran gun battle are executed by an Iranian firing squad on April 7.

The workforce is increased 28% to 4,050 in **1976**. The fleet is enhanced by the arrival of two B-747-270Cs, three B-727-270As, and one B-737-270C. Passenger bookings accelerate 46.5% to 568,000 and cargo skyrockets 118.8% to 13.7 million FTKs.

New catering and training centers are occupied at Baghdad in **1977**, along with a huge maintenance hangar. The three British-made Trident 1Es are withdrawn from service.

The carrier receives Ilyushin Il-76MDs for cargo operations in **1978**; the Soviet-made freighters, painted in civil livery, retain military capability, including rear gun turrets. A third B-747-270C also enters service as a new technical agreement is negotiated with **KLM (Royal Dutch Airlines, N.V.)**. Director General Mohammed Tahir Al-Yasin's company now employs 4,000 workers.

With the April 5, **1979** announcement of reciprocal air services between Egypt and Israel, Iraq breaks its air link to Cairo on April 15.

Reliable information evaporates in **1980-1984** following the opening of hostilities between Iran and Iraq. Domestic passenger operations are suspended while regional and international flights are maintained. There are gains and losses.

While on final approach for a September 23, 1980 landing at Baghdad, Iranian fighter planes intercept and shoot down a company Il-76T with four crew; there are no survivors. An An-24TV crashes near Kirkuk on September 24.

It is known that an An-24B crashes while on final approach to Baghdad on April 22, 1982; there is no information concerning any possible casualties.

In July, a B-747-270C is delivered to Baghdad, followed by a B-747SP-70 on August 30. The latter is officially a government aircraft christened *Al-Qadissiya*. An An-24TV crashes on takeoff from Nasiriyah on August 28; again, there is no information concerning deaths or injuries.

In 1984, hijackers provide the fleet with units from the **Iran Air (The Airline of the Islamic Republic of Iran)** fleet: a B-727-286A and an

A300B2-203. On September 12, three Iranians attempt to take over the B-737-270C en route from Larnaca, Cyprus, to Baghdad and divert it to Tehran. The trio is killed by security guards.

Destinations visited during these years and in **1985-1986** include Amsterdam, Athens, Belgrade, East Berlin, Bucharest, Budapest, Copenhagen, Frankfurt, Geneva, Istanbul, Larnaca, Lisbon, London, Madrid, Moscow, Paris, Prague, Rome, Sofia, Vienna, Warsaw, Rio de Janeiro, Bangkok, Beijing, Bombay, Delhi, Dhaka, Karachi, Tokyo, Amman, Cairo, Casablanca, Jeddah, Khartoum, Kuwait, and Tunis. Services are suspended to Munich, Brussels, Abu Dhabi, Algiers, Bahrain, Beirut, Damascus, Dhahran, Doha, Dubai, Kuwait, Muscat, Ras al Khaimah, Sana, Sharjah, and Tripoli.

On December 25 of the latter year, while en route from Baghdad to Amman, gunmen commandeer the carrier's B-737-270C operating as Flight 163, with 15 crew, 1 security guard, and 91 passengers, shortly after takeoff. A fight breaks out with security men as the crew struggles to retain control of the plane, but after two hand grenades are exploded, the little Boeing has only one chance to survive by making an emergency landing at Arar, Saudi Arabia, 400 km. SW of Baghdad. Almost there, the jetliner crashes into the desert 0.8 km. (.5 mi.) from the end of the airstrip; 71 are killed and all of the survivors are injured.

Operations continue apace in **1987-1988**. On August 20 of the latter year, the day of the cease-fire in the Iran-Iraq War, an Iraqi Airways' B-727-270A flies Transport Minister Hamza al-Zubiadi to Basra for the opening of the new international airport. Although still government-owned, the airline now becomes an independent company. To assist in the government's drive to increase tourism, the airline purchases a 40% interest in Baghdad's Palestine Hotel. Enplanements for the year total 695,538.

In April **1989**, Chairman/CEO Nuraldin A. Saffi's carrier enters into discussions with **Egyptair, S.A.E., Royal Jordanian Airways, and Kuwait Airways Corporation, Ltd.** concerning the possibility of establishing an **Air Afrique, S.A.**-type consortium; the talks will lead nowhere. Meanwhile, the Iraqi government elects to establish a tourism industry. While seeking to dry-lease another Jumbojet to supplement the three B-747-270Cs already on hand, the carrier, in October, begins to operate the government B-747SP-70 that is used primarily by President Saddam Hussein.

Although no traffic figures are provided by the airline, it is reported that revenues of \$96 million are earned, a 16.6% increase over the previous year. Airline employees receive 30% of the profit.

The company's first Airbus order is placed in July **1990**; five A310-300s are requested for delivery the following spring. On August 2, Iraq invades Kuwait. Occupation forces take over **Kuwait Airways Corporation, Ltd.**'s facilities and 15 aircraft: 8 A300s and A310s, 2 B767-269ERs, 1 B-727-269A, and 4 bizjets; also captured and destroyed is a **British Airways, Ltd. (2)** B-747-136. Iraqi Airways crews fly all of the transports to Baghdad. Meanwhile, company transports return foreign nationals caught in Kuwait, receiving revenues equal to \$12 million. A month later the dissolution of **Kuwait Airways Corporation, Ltd.** is announced; however, in October, the carrier relaunches limited services from temporary hubs at Cairo and Bahrain.

The UN Security Council votes 14-1 on September 25 to extend an economic blockade against Iraq. This total boycott requires all countries to close their airspace to Iraqi Airways and Iraqi-controlled Kuwaiti commercial flights. Would-be passengers mob the company's check-in counter in Amman on September 26 for the last flights to Baghdad before the carrier is forced to cease almost all of its commercial flights.

ICAO condemns the Baghdad government for its theft of the Kuwaiti jetliners and sets curbs aimed at making it difficult for Iraq to use them. In addition, IATA prohibits its member-carriers from honoring the vast number of Kuwaiti tickets stolen by occupying forces.

While on final approach for a landing at Kuwait City on October 2, an Il-76T with 4 crew and approximately 125 passengers, mostly Iraqi military personnel, is hit by a surface-to-air missile fired by Kuwaiti resistance fighters; the Ilyushin crashes and there are no survivors.

Wearing an all-white livery for protection against the desert sun, the B-747SP-70 *Al-Qadisiya* is ferried to Tozeur, Tunisia, at the beginning of January 1991 and placed into storage for safekeeping. It will remain there for years to come due to the no-fly restrictions that will be instituted against Iraq by the UN. The 20 IL-76MDs, meanwhile, escape to India.

It is reported to the UN Security Council on January 18 that just before the Allied assault the previous day, IA flew 10 stolen Kuwaiti jetliners, repainted to look like its own aircraft, to Mauritania. The British Foreign Office adds that it has a report that President Saddam Hussein's wife and family had traveled to that destination aboard some of the pirated aircraft. It is later reported that all of the captured fleet, along with the three old and parked Trident 1Es, is destroyed during Operation Desert Storm, except for six Airbuses, flown to Iran and interned.

Information appears in April indicating that the Baghdad government intends, once the aircraft are released by Tehran, to lease these aircraft to other carriers in the region as a means of earning badly needed foreign currency. In May, UN permission is received to undertake helicopter flights on limited domestic routes.

In June, Iraqi Airways seeks to resume operations from a temporary base at Amman, employing aircraft flown to Mauritania; parked at Queen Alia International Airport during the unsuccessful request to the UN are two B-707 Stratoliners and four B-727-270As.

On June 26 the Danish Supreme Court fines six foreign airlines a total of Dkr 452,000 (US\$64,570) for bringing illegal refugees to Denmark without visas or identity documents. The decision in the case against European operators **SAS (Scandinavian Airlines System)**, **Sabena Belgian World Airlines, S.A.**, **KLM (Royal Dutch Airlines, N.V.)**, and the defunct **Interflug DDR Airlines, mbH.**, plus Iraqi Airways and **Singapore Airlines, Ltd.**, has been eagerly awaited by the some 50 airlines flying into Denmark.

The companies have argued that it was not their responsibility to do the police's work when checking in Denmark-bound passengers. Nor could they be expected to tell the difference between genuine and false visas and passports, or prevent passengers from tearing up their passports once on board the plane, as has often happened. The supreme court is unconvinced by their arguments and orders the airlines to pay a fine of Dkr 8,000 per passenger illegally brought to Denmark.

Late in the year, the UN agrees to permit a fixed-wing Iraqi internal route.

In January 1992, the carrier's Antonov An-24s are permitted to begin flying from Baghdad to Basra. Cross-border flights remain suspended by UN order.

In 1993-1994, Chairman Saffi oversees a workforce of 3,800 and a fleet of 20 Ilyushin IL-76MDs, 11 IL-76s, 6 B-727-270As, 5 Antonov An-12Bs, 3 B-747-270ACs, 2 each B-737-270ACs, An-24TVs, An-24Vs, and B-747-270Cs, and 1 B-747SP-70. All but the An-24s remain grounded. These, too, stop flying once again in 1995 following renewed disputes between Iraq and the UN.

On April 9, 1996, Iraq openly defies the UN air embargo enforced against it since the Gulf War by allowing the airline's smaller Boeings to transport Hadj Muslim pilgrims to the holy sites in Saudi Arabia. The Saudis offer no objection.

Airline employment stands at 2,770 in 1997-1998, although Chairman/CEO Rabie M. S. Abdulbaki's company has nowhere to fly.

Late in December of the latter year, **Aeroflot Russian International Airlines (ARIA)** Africa and Mideast Division Director Yuri Vasilenko is in Amman for discussions with Lebanese officials concerning the inauguration of additional frequencies to Beirut. Executives of Iraqi Airways approach Vasilenko, seeking a renewal of flights by their carrier between Baghdad and Russia. Support is sought for a lifting of the UN air embargo.

It is reported on March 17, 1999, that one of the carrier's two B-737-270As has recently violated the UN air embargo and the southern no-fly zone to transport 110 Muslim pilgrims to Jeddah, Saudi Arabia. U.S. officials affirm that such Hadj flights, if they occur in the future, will not

be considered targets by allied fighter planes patrolling the region. That said, Iraqi Airways operates two more services, on March 18-19, employing IL-76 freighters temporarily modified to handle large numbers of pilgrims.

The British Broadcasting Corporation reports on April 23 that Iraqi Airways and **Emirates Airlines** are holding discussions aimed at creating a package holiday product for Shi'ite pilgrims wishing to visit the holy sites in the southern cities of Kerbala and Najaf. Although UN sanctions against Iraq prevent tourists from flying into the area, it will be possible for them to travel on the existing ferry service between Dubai and southern Iraq.

Sensing that the time for a resumption of Iraqi services may be nearing, a delegation from Airbus Industrie travels to Baghdad on September 26 for discussion with the airline's leadership. The European consortium remains committed, under a 1990 contract, to the provision of new aircraft to the carrier as soon as UN sanctions are removed.

Saddam International Airport at Baghdad opens for international flights on August 17, 2000.

As the result of an August meeting between Deputy Prime Minister Tariq Aziz and Russian President Vladimir Putin, a decision is taken by the two governments to shortly resume air services.

On September 14, **Aeroflot Russian International Airlines (ARIA)** representative Pavil Piryatku announces the new arrangement, noting that his airline will reopen its Baghdad office in mid-October. Papers are also signed between Iraqi Airways and **Vnukovo Airlines** concerning the inauguration by the latter of regular Iraqi flights.

A memorandum of agreement is signed in Moscow by **Aeroflot Russian International Airlines (ARIA)** CEO Okulov and Iraqi Airways President Maamoon Muhetdin on October 1 calling for the restoration of air service to Baghdad at an unspecified future date.

In accordance with a memorandum of agreement signed the previous month in Moscow, Iraqi Airways opens a representative office in Moscow on November 15; **Aeroflot Russian International Airlines (ARIA)** simultaneously opens a similar office in Baghdad.

Vnukovo Airlines, not ARIA, is the first Russian carrier to launch regularly scheduled services to Baghdad, beginning its flights on October 27.

After being grounded for almost a decade, the airline, on November 5, resumes domestic services, flying from Baghdad to Basra and to Mosul. Because its commercial fleet is unavailable, the airline uses an IL-76 on the Basra service and an An-24 on the Mosul run. It is reported on November 10 that the carrier will soon take back six airliners, four B-727-270As and two B-707s, it had sent to Jordan for safe-keeping on the eve of the 1991 Gulf War. An agreement is reached with Jordan to help rehabilitate the static aircraft.

In ceremonies at Baghdad Airport on November 16, President Sheikh Hamad Ali Jabour Al-Thani of Sharjah-based **Gulf Falcon** presents Iraqi Airways with the gift of a B-747SP-09 previously owned by **Mandarin Airlines, Ltd.**

The company's office at Damascus, Syria, is reopened on November 27; it is the first to restart business outside of Iraq since the UN imposed sanctions.

Managing Director Ayad Abdul-Kareem is quoted in the December 19 issue of *al-Thawra*, the publication of the country's ruling Ba'ath Party, as indicating that Russia, Jordan, Egypt, Yemen, and the United Arab Emirates have all filed requests to resume scheduled service to Baghdad. He also reveals that the airline has reopened its offices in Amman and Damascus. The company will place the new B-747SP-09 into service over the Baghdad to Basra daily return route on January 9. It will also operate the company's first postwar international service, from Baghdad to Damascus, on February 12, a route not flown since 1980.

IRELAND AIRWAYS, LTD.: International House, Dublin Airport, Dublin, Ireland; Phone 353 (1) 704-4799; Fax 353 (1) 844-4884; Code 2E; Year Founded 1991. Ruadhan Neeson establishes Ireland Airways at Dublin Airport in 1991 as a division of EI Air Exports, a

charter operator. Nonscheduled operations are undertaken to Donegal and Sligo through July 1996 with a fleet that includes 1 each Shorts 330, Fairchild F-27, Fairchild Hiller FH-227, and Piper PA-31-350 Navajo Chieftain. On August 1, Shorts 330 scheduled flights are inaugurated between Dublin and Donegal, with an extension added to Sligo in the fall.

The fleet is increased in January 1997 by the addition of a Shorts 360-300. The new aircraft will initially undertake a Dublin to Coventry freight contract on behalf of EI customer Target Express, Ltd. Orders are placed for three British Aerospace BAe ATPs, the first of which is delivered before year's end.

Service continues in 1998–1999.

IRISH CARGO AIRLINES, LTD. *See* AER TURAS TEORANTE

IRISH HELICOPTERS, LTD.: Westpoint Hangar, Dublin Airport, Dublin, Ireland; Phone 353 (1) 628-0059; Fax 353 (1) 628-0059; http://www.iol.ie/irish_helicopter; Year Founded 1968. Having purchased the Fairchild Hiller 1100 helicopter of the U.S. ambassador, Kenneth Besson establishes this company at Dublin in 1968 to provide photographic and executive charters. In 1969, he is able to persuade the Commissioners of Irish Lights to establish helipads at a dozen offshore lighthouse stations. Employing an Aerospatiale SA-319 Alouette II, IHL undertakes an experimental support service during the winter and into 1970. The trial is so successful that the company receives a two-year support contract from the Irish government.

Operations continue apace in 1971 and in the spring of 1972 Besson sells his operation to British Executive Air Services, Ltd. (BEAS). Having convinced the Irish lighthouse authorities that twin-engine equipment would provide better over-water safety, the carrier is allowed in November to substitute an MBB Bolkow Bo-105D for the Alouette II.

In 1973–1976, a Bell 212 is acquired to transport workers and supplies to newly established offshore oil and gas platforms. In 1977, the company becomes a subsidiary of **Aer Lingus Irish Airlines, Ltd.** A second Bell 212 is acquired and is employed to support the Marathon Oil development and construction of the Old Head of Kinsale gas field complex.

In April–September 1978, a supplemental Sikorsky S-61N is leased from KLM (**Royal Dutch Airlines, N.V.**). Beginning in the winter, foreign contracts are undertaken in nations as distant as Tunisia, Turkey, and Egypt. To support BP Petroleum and Phillips Petroleum exploration in the Porcupine Basin, an S-61N is purchased in 1979 and an additional base is later established at Cork.

A second S-61N is purchased in 1981 and new work is undertaken during the winter season on behalf of the state electric utility when exceptionally heavy snowfall damages or downs transmission lines.

Revenues for the year total £5.4 million (\$6.7 million).

In 1982, Managing Director Capt. Frank Laycock's fleet includes 2 owned Sikorsky S-61Ns, 2 Bell 206 JetRangers, 2 Bell 212s, and the German Bolkow.

Unable to justify its expense, one of the JetRangers is sold in 1983–1984. The move is made with the complete agreement of Desmond Traynor, the Aer Lingus board member who chairs the Aer Lingus committee that oversees the helicopter subsidiary.

During March 1985, the company introduces a JetRanger shuttle service between Tory Island and the mainland. In May, IHL is awarded a contract for maintenance on helicopters of the Aer Choir (Air Corps) of the Irish military. On August 27, in the presence of the Lord Mayors of Dublin and Cork, a custom-built helistop facility is opened in the heart of downtown Dublin.

With the decline in offshore oil exploration suffered by the energy industry throughout the North Sea area, revenues for the year slide to £4.2 million.

The workforce in 1986 includes 47 employees, including 17 air crewmen. A total of four helicopters are active in offshore support roles, a figure that does not change in 1987–1989.

Company employment is 45 in 1990, with only three helicopters now active in support of energy concerns. Only Marathon Oil's Kinsale gas

field off Cork remains in year-round production at the beginning of 1991 and it is serviced by Irish's single Bell 212.

On March 26, the company receives a warmly contested £2.5 million 5.5-year contract from the Irish government to operate a search and rescue service that it will coordinate with the SA-365C Dauphins operated by the Irish Air Corps. The line initiates search and rescue (SAR) operations under the award from Shannon in July with an S-61N.

Operations continue apace in 1992–1993. From bases at Dublin, Cork, and Shannon, Managing Director Ray Kenny operates 2 each S-61Ns, MBB BO-105s, McDonnell Douglas MD-500Cs, Bell 212s, and Bell 206B JetRangers.

Late in 1994, plans are made by parent Aer Lingus Group to privatize the company through its sale. The fleet is meanwhile reduced.

Airline employment in 1995 stands at 54. Two S-61Ns continue to be flown on SAR and offshore support, a Bell 212 is used on offshore support, a BO-105 flies lighthouse maintenance, and a JetRanger performs pipeline patrols and other surveillance duties.

On July 28, **Bristow Helicopters, Ltd.** of the U.K. takes a 51% stake while **Petroleum Helicopters** of Louisiana purchases the remaining 49% interest, the maximum allowed for foreign ownership under EC rules. The combined price is \$8 million.

The company retains its name and management, led by Managing Director Kenny, and operates from bases at Shannon, Cork, and Dublin.

Flights continue in 1996. During the spring, the company loses its only short-term oil support contract to **Bond Helicopters, Ltd.** In July, the Irish Department of Marine's coast guard contract for the station at Shannon is—in a move that surprises many—lost to Bond as well. At this point, the company's work involves only the use of a BO-105 on lighthouse support and a few general purpose Bell 206 contracts.

The Shannon SAR mission is handed over to Bond Helicopters (Ireland), Ltd. on January 1, 1997. In an example of industry consolidation, execution of the contract is arranged by Norway's Helikopter Service Group employing a Sikorsky S-61N leased from **Court Helicopters (Pty.)**, Ltd. of South Africa.

Petroleum Helicopter's minority stake is purchased by Bristow in March.

On July 1, 1998, Bond Helicopters (Ireland), Ltd. takes over the SAR contract at Dublin. As with the earlier arrangement, some of the flight crew are provided by the Irish Air Corps. The company continues other services during the remainder of the year.

Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** announces on August 2, 1999 that all of the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S. (HSG)** have been satisfied or waived and that the acquisition is completed. In a move that foreshadows a corporation-wide integration a year later, **Bond Helicopters, Ltd.**, the HSG U.K. subsidiary also acquired, is now renamed **CHC Scotia, Ltd.** Interestingly enough, Bond Helicopters (Ireland), Ltd. is not renamed and its activities in Ireland remain as before. Irish Helicopters continues to fly lighthouse support and medium-range SAR, as well as conduct general purpose contracts.

In late January 2000, company Managing Director Guy Perrem is drawn into a controversy over the government's delay in replacing the Irish Air Corps' Dauphin helicopter fleet. His ire is directed particularly at retired military pilots who suggest that civil operators engaged in SAR work try whenever possible to reduce their attention to the details of SAR training.

Prior to the public announcement on April 14, the Enterprise Oil Company signs contracts with Irish Helicopters for support during its drilling campaign in the newly opened Corrib fields.

IRISH INTERNATIONAL AIRLINES. *See* AER LINGUS IRISH AIRLINES, LTD.

IRISH SEA AIRWAYS. *See* AER LINGUS IRISH AIRLINES, LTD.; BLACKPOOL AND WEST COAST AIR SERVICES, LTD.

IRON DRAGONFLY: Dimitrova Str. II, Kazan, Privolzhskaya Zone ATD, 420033, Russia; Phone 7 (8432) 428 344; Fax 7 (8432) 428 364; Code F7; Year Founded 1994. Under the direction of president M. I. Rozenstein, Iron Dragonfly is established at Kazan, Tatarstan, in 1995 to offer passenger charters and inclusive-tour flights to destinations throughout the CIS and to Europe and the Mideast. Revenue flights begin with an unspecified number of Tupolev Tu-154B/Ms.

Flights continue in 1995–2000, during which years the company opens an office in Moscow and the fleet is standardized on 2 Tu-154Bs, 1 Ilyushin Il-76T, and 1 Mil Mi-8 helicopter.

IRRAWADDY FLOTILLA AND AIRWAYS, LTD. (IF & A): Burma (1934–1937). Formed in late summer with technical assistance from Imperial Airways, Ltd., IF & A, employing a float-equipped de Havilland DH 83 Fox Moth, begins weekly Rangoon to Moulmein service on November 13, 1934. Two days later, weekly Rangoon to Mandalay flights begin.

Service is extended beyond Moulmein to Tavoy, a point beyond the railroad terminus, on January 1, 1935. Later in the year, two Shorts Scion Senior seaplanes are received.

Rangoon to Yenangaung flights begin in June 1936. The summer is hard on the company as the Fox Moth and a Scion are lost in accidents. Rangoon to Prome and Yenangaung to Mandalay service is suspended on May 24, 1937. The company stops flying later in the year.

IRTYSH AVIA IT: Pavlodar Airport, Pavlodar, 637014, Kazakhstan; Phone 7 (3182) 320617; Fax 7 (3182) 324958; Code IRT; Year Founded 1994. The small regional Irtysh Avia is established at Pavlodar in 1994. Employing a fleet of 5 Yakovlev Yak-40s and 2 Yak-42Ds, the company flies to Almaty and other points without headline or reported incident.

As reported by the Kazakhstani newspaper *Vremya* on December 22, 1999, Air Kazakhstan, on November 18, has joined with several smaller Almaty-based carriers, including Irtysh Avia IT and Atyrau United Aviation Detachment, to form Air Kazakhstan Group. President Alexander Krinichansky becomes group CEO, with Yerbol Yetekbay moving up to the Air Kazakhstan presidency. Under the new alliance, Air Kazakhstan operates all foreign and 70% of domestic routes. In a news conference confirming the group's formation, Krinichansky notes that Kazakhstan still has 52 independent domestic airlines, but in his estimation, only two or three are required to meet the nation's air travel needs.

As one of the two small group divisions, Irtysh continues to fly in 2000, primarily employing its two Yak-42Ds on half of the domestic routes not taken over by Air Kazakhstan. Its financial picture, as part of the Air Kazakhstan Group, will become dire.

IRVING AIRWAYS: United States (1935–1936). Backed by Juneau merchant James Hickey Sr., Wilbur "Wing Ding" Irving purchases a float-equipped Lockheed Model 5 Vegas at a sheriff's sale at Seattle in the spring of 1935. Painted snow white with a red stripe, the aircraft is piloted up to Juneau where it provides air taxi and on-demand charter services to local communities and bush destinations for the next year.

In 1936, Irving's Vega is purchased by Sheldon B. "Shell" Simmons, who adds it to the fleet of his newly formed Alaska Air Transport.

ISCARGO, H.F.: Iceland (1972–1980). Organized at Reykjavik in March 1972, Chairman Arni Gudjonsson and Managing Director Hallgrímur Jonsson inaugurate worldwide cargo charter and contract service flights with a fleet comprising 1 each Douglas DC-6A and DC-6B. The 15-employee company also undertakes scheduled all-cargo flights to the Netherlands.

Isargo is unable to survive the higher fuel costs and world recession at the end of the decade and stops flying in 1980.

ISLAND AIR (1): United States (1971–1972). IA-1 is established at Honolulu in 1971 to provide flight-seeing services throughout the Hawai-

ian Islands with a single Britten-Norman BN-2 Islander. The company is unable to achieve viability and closes its doors on January 24, 1972.

ISLAND AIR (2): United States (1970–1990). Following the demise of Puget Sound Airlines in October 1970, the assets of merger partner Island Sky Ferries are purchased out of the combine by John Carabba and Marigine Wilson. These resources form the basis of a new charter carrier, IA-2, which is set up at Anacortes and begins to provide two decade's worth of nonscheduled flights with Cessna lightplanes to Seattle and destinations in the San Juan Islands group.

During this period, Carabba and Wilson sell the company to Katie and Gary Rovetto, who operate it until the first quarter of 1990, when they transfer it to Jim Burton. The new owner reforms the operations and begins scheduled services in April as West Isle Air.

ISLAND AIR (3): United States (1971–1983). Island Aviation of Agana, Guam, establishes an airline division in March 1971 with which to inaugurate charter passenger and cargo flights to other destinations in the Mariana Islands. President R. L. Brown inaugurates flights on April 3 with a pair of Cessna 402s. Destinations visited include Rota, Tinian, Yap, and Palau.

Nonscheduled operations continue over the next five years without significant change. In 1977, the carrier elects to inaugurate scheduled service and enplanes a total of 3,708. Airline employment is reduced by 33 1/3% in 1978, down to 12. The company receives a third Cessna 402 and signs interline agreements with Pan American World Airlines and Continental Airlines. Passenger boardings skyrocket 85.2% to 25,053.

A new route is inaugurated to Yap and Palau in 1979. An Embraer EMB-110 Bandeirante is delivered in December.

Customer bookings accelerate 39.2% to 34,879 while freight traffic soars by 73.3% to 732,547 FTKs. Despite increased income, greater expenses (led by a \$1.20-per-gallon avgas price increase) cause a \$55,250 net loss.

A second Bandeirante is delivered in March 1980 and operations continue apace through 1982. Unable to weather the recession, the carrier ceases operations in 1983.

ISLAND AIR (4): United States (1976). IA-4 is set up at New York (LGA) in 1976 to provide scheduled passenger and cargo services to Farmingdale and also down to Baltimore via Philadelphia. Although daily Douglas DC-3 roundtrips are duly inaugurated, they can only be offered for a few months of the Bicentennial year.

ISLAND AIR (5): United States (1984–1985). Organized at Farmingdale, Long Island, in the fall of 1984 as successor to Trans-East International Airlines, which had ceased operations in the spring, IA-5 resumes revenue services with a fleet of Embraer EMB-110 Bandeirantes, de Havilland Canada DHC-6 Twin Otters, and Cessna 402s.

Scheduled passenger and cargo commuter flights are started or planned to link the carrier's base with New York (LGA), White Plains, Newark, Atlantic City, Washington, D.C. (IAD), Boston, Nantucket, Martha's Vineyard, and New Bedford. Before most of these destinations can be visited, the new entrant encounters significant financial difficulty that forces it to close in January 1985.

ISLAND AIR, LTD. (1): Suite 30, The Concourse, Private Mail Bag, Nadi, Fiji; Phone 722 371; Fax 720 378; Code 4M; Year Founded 1983. Island Air, Ltd. is formed at Nadi in late 1983 to offer scheduled commuter flights from the international airport to Malololailai in the Mamanuca Islands group. Equipped with a single Britten-Norman BN-2 Islander, the company commences revenue services in early 1984.

Managing Director R. Smith's little carrier maintains its one-route service throughout the next 15 years. By the end of 1999, the fleet has grown to include 3 each Embraer EMB-110 Bandeirantes, de Havilland Canada DHC-6-300 Twin Otters, and Beech Super King Air 200s, plus 8 Bell 206L LongRanger helicopters.

ISLAND AIR, LTD. (2): P.O. Box 2433, Georgetown, Grand Cayman, Cayman Islands; Phone (809) 949-0241; Fax (809) 949-7044; <http://www.cayman.com.ky/com/iair>; Code G5; Year Founded 1989. Island Air is established by its owner/president Mervyn Cumber at Georgetown in 1989. Employing a fleet that will come to include 1 each Britten-Norman BN-2 Islander, Piper PA-31-310 Navajo, and de Havilland Canada DHC-6-300 Vistaliner, revenue flights are begun to Cayman Brac and Little Cayman. Charters are also operated throughout the Caribbean area.

In 2000, the company has approximately 30 employees based on all 3 islands and main offices located in a 12,000-sq.-ft. hangar next to the general aviation terminal on Grand Cayman. A Learjet 25A is acquired and worldwide executive charters are now begun.

ISLAND AIR CHARTERS, LTD.: United Kingdom (1946–1950). This nonscheduled carrier is formed at Jersey Airport in early 1946. Following the July purchase of a Percival P.44 Proctor 5, ad hoc charters are initiated between the Channel Islands and to northern France and southern England. A Percival P.28 Proctor 1 is added in September and in October a Miles M.57 Aerovan 3 and a de Havilland DH 89A Dragon Rapide are acquired; however, the former is sold in February 1947, being replaced by an Auster Autocrat two months later. When a second Dragon Rapide is added in May, the company begins scheduled service, both passenger and cargo, between the Channel Islands. In association with **Air Transport Charter, Ltd.**, vacationers are also flown to England and France. A Miles M.65 Gemini 1A is purchased in October.

The scheduled and nonscheduled services flown in 1947 are continued in 1948 and 1949, but by the end of the latter year the fleet had been reduced to comprise only 2 Dragon Rapides. In the spring of 1950, the shrinking operation is purchased and merged into **Air Transport Charter, Ltd.**, which elects to discontinue the interisland scheduled flights of its acquisition.

ISLAND AIR SERVICES, LTD.: United Kingdom (1945–1957). Daughley Hills-Grove-Hills forms IASL at St. Mary's airport in June 1945, equipping his new company with 2 Percival P.44 Proctor 5s. One of the aircraft is leased out; however, the second begins nonscheduled services between the Scilly Isles and Land's End in the spring of 1946, continuing the flights through the summer season. The principal cargo is cut flowers.

When the second Proctor 5 is returned in early 1947, it begins flying passenger charters and joyrides from London (Croydon Airport); the pilot is a lady, Miss Monique "Aggie" Agazarian, the former Air Transport Auxiliary flyer who had been appointed the company's office manager the year before. A de Havilland DH 89A Dragon Rapide is now leased, permitting the carrier to mount nonscheduled services into Europe.

Early in 1948, Miss Agazarian is named managing director of the London half of the company. With the assistance of two additional pilots and two more Dragon Rapides purchased in April and May, respectively, she begins offering profitable and successful pleasure flights from London (LHR). Indeed, the £1, 15-minute cruises prove so popular that an Airspeed AS.65 Consul must (briefly) be acquired to provide additional capacity. Additionally, charters are flown from London's other airfields at Croydon and Northolt. As they also prove a success, it is decided, at the close of the summer season, to end the charter flights from the Scilly Isles and concentrate operations at London. On December 31, Island Air Services (London), Ltd. is registered with Miss Agazarian as chairman; the new firm takes over all facilities and equipment of its predecessor.

Pleasure flights continue to constitute the company's primary business in 1949. During the year, Chairman Agazarian marries Ray Rendall, a former RAF pilot whom she had recruited to fly for the concern. The fleet is rationalized to contain four Dragon Rapides, plus one leased from **Airwork, Ltd.**, for the summer.

In March 1950, the company signs a **British European Airways Corporation (BEA)** associate agreement to provide scheduled services to Deauville. These flights, in association with **Birkett Air Service,**

Ltd., commence on July 1; passengers are hauled primarily on weekend gambling jaunts. La Baule and Le Touquet are also added to the return route network during the summer while pleasure flights from London (LHR) are also continued. The international frequencies do not prove financially viable and are discontinued at the end of the 1951 season.

All company efforts are now placed into the short pleasure flights out of London's airports. As most of this traffic occurs from Heathrow Airport, the Croydon base is shut down at the end of 1952 and its operations are transferred to London (LHR) where Miss Jean Edwards becomes operations manager. Operations continue almost unchanged for the next four years.

When airport officials ban pleasure flying from London (LHR) in 1956 due to the increase in scheduled airline traffic, IAS transfers its business to London (Ramsgate) Airport. Pleasure flights from the new location dry up almost completely in 1957 and, when combined with the loss of a DH 89A in a June takeoff accident, this down turn forces financially depleted IASL to sell off its aircraft and go out of business.

ISLAND AIRLINES (1): United States (1929–1991). Island Airlines (1) is founded at Port Clinton, Ohio, by ex-barnstormer Milton "Red" Hersberger in 1929 to fly mail from Sandusky and Port Clinton to the Lake Erie islands. This small airline, originally known as **Erie Isle Airways**, is dramatically enlarged into a passenger-carrying operation on November 4, 1936 through the acquisition of a Ford Trimotor 4-AT-38 from **Air Service of Pittsburgh**. The Ford 4-AT-5 is acquired on June 10, 1937.

Under the name Air Tours, Inc., Hersberger's Fords transport tourists, ice fishermen, permanent and summer residents, sightseers, and supplies to South, Middle, and North Bass and Rattlesnake Islands, a chain lying some 10 miles into the lake near Toledo. The Ford 4-AT-5 is sold to the Central Flying School at Little Rock, Arkansas, on July 10, 1941 while a 4-AT-42 is purchased from Mike Murphy's Murphy Flying Service of Findlay, Ohio, on October 9 after two years of use as a neon sign carrier for Marathon Oil.

A fourth Tri-Motor, 4-AT-53, is purchased from a private Dallas owner on December 7, 1944 and up-engined with war surplus Wright N3N engines in June 1946. On July 27, the crashed remains of a Ford 5-AT-27 and Ford 5-AT-40 are purchased for spare parts from **Cubana (Compania Nacional Cubana de Aviacion, S.A.)**.

In May 1949, a 4-AT-38 is also up-engined with war surplus Wright N3N engines. In 1950–1952, a 5-AT-40 is repaired, employing a variety of spare parts as diverse as wheels from a Lockheed Model 18 and Oleo struts from a Republic P-47 Thunderbolt. On January 28 of the latter year, the aircraft is sold to a private Idaho owner, who will sell it to **Johnson Flying Service** 18 months later.

In August 1953, Ralph Dietrick of Sandusky, Ohio, owner of rival Sky Tours (which operates a Ford 4-AT-42) and several of his associates, purchase Island Airlines for \$95,000, merging the two operations under the Island banner and the official name Travelair Taxi, Inc. The Post Office contract is retained.

Unable to achieve takeoff from Kelley's Island in early evening on July 31, 1954, a 4-AT-53 crashes; 2 of the 12 passengers aboard are injured and the aircraft must be written off. First flown by **United Air Lines** 20 years earlier, a Boeing 247D is acquired during the year. Island will add another leaf on its wreath of fame as the last commercial operator of the famous B-247D.

Headquarters of the 6-station, 25-mile-long route are moved to Sandusky from Port Clinton in 1961 and the Tri-Motors, still flying a quarter of a century after their purchase, gain national attention as the last of their breed still in regularly scheduled U.S. passenger service. Competing with ferryboats, Dietrick's Tri-Motors and Boeing, backed up by 5 Cessna 172s, transport upwards of 60,000 passengers per year during the late 1960s and 1970s, more than 90% in the Fords.

The larger Tri-Motor, 5-AT-11, is purchased in June 1966. Proving too expensive to operate over the carrier's short segments, it is sold in November 1968. Early in 1969, the Boeing 247D, which has been

grounded for some time due to lack of spare parts, is purchased by a U.K. enthusiast.

The 4-AT-42 is withdrawn in **1972**, following an August 21 crash at Port Clinton. Its remains are sold to Allan T. Chaney of Hebron, Ohio. The Ford 4-AT-38 loses power while taking off from Put-in-Bay Airport and crashes at South Bass Island on July 1, **1977**; pilot David Martin is injured severely. It is rebuilt by Kal-Aero and is flown again, beginning in March **1980**.

In February **1982**, the Ford 4-AT-38 is withdrawn and put up for sale at an asking price of \$950,000. Company headquarters are moved back to Port Clinton. Airline employment stands at 11 and the fleet comes to comprise 2 Cessna 207s, 3 Cessna 172s, and 1 de Havilland Canada DHC-3 Otter.

Tragedy strikes in **1983**. Having received a call, the pilot of a Cessna 207A with three medevac passengers, takes off from Toledo on the night of December 9 to fly to the aid of a heart attack victim on Put-in-Bay Island. Before disappearing, the aircraft radios the sheriff's department to report that it has encountered fog. Wreckage is found the next morning at a point approximately 45 mi. W of the point of origin and there are no survivors.

Flights continue in **1984** and the Ford 4-AT-38 is sold to Mercury Aviation Companies of Richmond Heights, Ohio, on August 12, **1985**. As a postscript, the Ford 4-AT-38 passes to Allan T. Chaney, who barnstorms it around the midwest and southeast for six years, giving the media free promotional rides with which to attract paying passengers. The aircraft is sold in 1991 to Kermit A. Weeks for \$650,000, who currently exhibits it at his Weeks Air Museum at Miami.

Meanwhile, operations continue apace for the Port Clinton-based small regional in **1986–1987**, with some 22,000 passengers transported during the latter year. There is little change over the next three years, although a contract is received from UPS (United Parcel Service), along with the almost 60-year-old mail delivery task. In **1990**, as recession deepens, the owners seek and find a buyer.

ISLAND AIRLINES (2): P.O. Box 2640, Nantucket Memorial Airport, Nantucket, Massachusetts 02584, United States; Phone (508) 228-7575; Fax (508) 775-6645; <http://www.nantucket.net/trans/islandair>; Code IS; Year Founded 1992. William J. McGrath Jr. establishes Island Airlines at Nantucket in **1992** to provide FAA Part 135 charter flights to the mainland. Small-scale operations commence with 3 Cessna 402s and 1 Beech 18 freighter.

ISLAND AIRLINES HAWAII: United States (1977–1984). IAH is established at Honolulu in January **1977** to offer a courier express service for small package delivery. Employing a fleet of 3 Beech 18s, the carrier begins regularly scheduled flights from Honolulu to Kahului on June 5. Soon the aircraft are making pickups at the airports at Waimea, Lanai, Kauai, Kona, and Molokai. In addition to airport-to-door, \$35-per-package delivery for Hawaii business, interline services are also arranged with incoming major carriers.

FTKs total 11,599 and advance each year thereafter for the remainder of the decade: up 286.5% to 44,833 in **1978**; 644% to 333,682 in **1979**; and 25.4% to 418,153 in **1980**. Expenses outpace revenues in each year. The latter climb from \$26,953 in 1977 to \$1.43 million in 1980; however, the former advance from \$186,283 in 1977 to \$1.73 million in 1980. The cumulative loss is \$626,832.

Despite the fact that the fleet is upgraded by the addition of a Convair CV-440 and three Douglas DC-3s, the **1980s** also begin on a mixed basis.

Airline employment in **1981** is up from 60 to 76 and freight advances 54% to 643,589 FTKs. On the other hand, revenues are \$2.25 million and expenses are \$2.55 million. Still, the \$300,000 operating loss is a \$1,563 improvement.

In **1982**, three CV-600s join the fleet of replacing the CV-440 and Douglas transports. As the recession deepens through **1983**, losses continue. Service is steadily downgraded and suspended at Lihue, Lanai

City, Kahului, Kaunakakai, Kalaupapa, Hilo, and Kona. Operations cease in **1984**.

ISLAND AIRWAYS, LTD. See **UNION AIR, LTD.**

ISLAND AVIATION, LTD. See **AIR BC, LTD.**

ISLAND EXPRESS AIRLINES: 750 Southwest 34th Street, Fort Lauderdale, Florida 33315, United States; Phone (954) 359-0383; Fax (954) 359-7944; Code 2S; Year Founded 1995. IEA is established by Ruben Acrich at Ft. Lauderdale in late **1995** to offer charter flights to destinations in south Florida. President Acrich begins revenue operations with a single Cessna 402C.

The fleet is significantly enhanced during **1996**. Two more Cessna 402Cs arrive and allow the inauguration of scheduled flights. Meanwhile, charters are operated with 11 de Havilland Canada DHC-2 Beavers, 2 DHC-2T TurboBeavers, 3 DHC-3 Otters, and 2 TurboOtters. Enplanements reach 18,204.

Services continue in **1997** as passenger boardings advance 4.9% to 19,097. Customer bookings plunge 22.3% to 15,000 in **1998**.

Passenger boardings plunge another 46.3% in **1999** to 8,000.

Flights continue without headline or incident until December 14, **2000**. On that date, Flight 938, a Cessna 310Q with one pilot, is en route from Lewiston, Maine to Albany, New York, when one of its engines ices up. While attempting to make an emergency landing at Keene, New Hampshire, the aircraft crashes into a hill 7 mi. SW of the runway. The pilot is killed and the aircraft and its cargo are destroyed.

ISLAND EXPRESS HELICOPTER SERVICE: 1175 Queens Highway South, Long Beach, California 90802, United States; Phone (310) 510-2525; Fax (310) 510-9671; <http://www.islandexpress.com>; Year Founded 1981. IEHS is established at Long Beach Dugherly Field in March **1982** to provide several-times-daily flights between Long Beach and San Pedro and Catalina Island. John Moore, who will become owner/president, is the first and only employee. Not only does he pilot the helicopter, he also answers the phone and arranges to pick up passengers.

Enplanements for the first month total 31.

Operations continue and by **2000** President Moore and Operations Director John Moore oversee the work of 5 pilots and fly 4 Eurocopter AS-350B A-Stars from a heliport at Avalon, on Catalina Island and a newly built state-of-the-art heliport at the site of the *Queen Mary* exhibit at Long Beach. Mrs. Patti Moore, vice president and personnel director/accountant, helps the company project a family image for its customers.

ISLAND HELICOPTER CORPORATION: United States (1968–1997). IHC is established as an FBO and charter division of Transleisure Corporation at Garden City, New York, in **1968** to provide passenger charter and flight-seeing services from a base at that Long Island city's Island Heliport. Operations commence with a fleet of 2 Sikorsky S-62As and 3 S-55s.

In May **1971**, IHC inaugurates scheduled passenger services from Garden City to the Wall Street and 34th Street East Heliports in Manhattan. These are suspended for lack of traffic in April **1974**. Nonscheduled operations continue apace, however, during the remainder of the decade.

By **1978**, Chairman/CEO Frederick Fine and President Arthur C. Schneider oversee a workforce of 70 and have increased their fleet by the addition of 9 Bell 206 JetRangers and 10 Bell Model 47Gs.

The operator forms a subsidiary in **1981**, **New York Helicopter Corporation**, to provide scheduled passenger shuttle services. Flights continue in **1982**.

While on final approach to the heliport at New York City on August 14, **1983**, an SA-360C, with a pilot and five passengers, loses power and strikes a barrier at the edge of the landing point. Four people receive minor injuries, although the helicopter is badly damaged.

When Transleisure files for Chapter XI bankruptcy reorganization in April 1984, IHC is separated out and allowed to continue over the next decade.

Donald J. Gault is president in 1994–1997 and employs 16 full- and 8 part-time pilots. The fleet now includes 5 Bell 206L LongRangers, 4 S-58Ts, and 1 each Bell 206B JetRanger and Eurocopter AS-355F Twinstar.

The company continues, with lessening gain, to offer agricultural, medevac, aerial photo, and external load services. As it has since its beginning, the company specializes in aerial tours of New York City. Four different flight-seeing tours are offered: United Nations, Statue of Liberty, Skyscraper, and Ultimate Delight; the latter tour combines elements of the other three.

A brief news item in the August 18, 1997 issue of *Travel Weekly* reads simply: "N.Y. closes Island Helicopters."

ISLAND HELICOPTERS KAUAI: P.O. Box 831, Lihue, Hawaii 96766, United States; Phone (808) 245-8588; Fax (808) 245-6258; <http://www.islandhelicopters.com>; Year Founded 1980. One of the state's oldest rotary-wing operators, IHK is established at Lihue by Curt and Bonnie Loftstedt in 1980. Over the next 20 years, the FAA Part 135 company comes to specialize in two major services: personalized, small group passenger tours and flight-seeing and aerial photography charters on behalf of the television and motion picture industry. Indeed, former Vietnam War helicopter pilot Loftstedt's resume includes a number of well-known productions and the flyer, widely respected throughout the film industry, is often the first to be called when aerial photography in Hawaii is required for the movies or television.

Painted in rainbow livery, the charter operator's helicopters have been seen in some of the films they have helped to shoot, including *King Kong* and the Tom Selleck television series *Magnum PI*. IHK has also participated in filming the motion pictures *Raiders of the Lost Ark*, *North*, *George of the Jungle*, and *Six Days/Seven Nights*. Other television series include *Hawaii 5.0* and *Fantasy Island*. Various commercials, Discovery Channel and ESPN specials, and documentaries are also logged in the company's scrapbooks.

Small groups of passengers flown on tours of Kauai have also been a staple of the operator's business since its beginning. Special attention has always been taken to provide ecologically friendly flights designed to preserve the natural beauty of the islands sights and sounds. When in the late 1990s, the FAA began to require helicopter tour operators to fly no lower than 1,500 feet, Island, based on its previous compliance to existing regulations and its spotless safety record, was the first company granted a 500-foot above-ground-level altitude deviation. By the end of the decade, IHK is making over 5,000 annual flights, transporting in excess of 25,000 passengers yearly.

In 2000, the fleet includes 4 Bell 206B JetRangers and 1 Eurocopter AS-350B A-Star.

ISLAND HOPPER CHOPPER (PTY.), LTD.: Australia (1986–1987). This single-machine helicopter airline is formed at Perth in the fall of 1986 to offer scheduled rotary-wing flights to Rottnest Island; the Sikorsky S-61N begins operations on December 20. Unable to compete with **Rottnest Airlines (Pty.), Ltd.** and other services, the company ceases operations on April 30, 1987.

ISLAND HOPPERS HAWAII AERIAL TOURS: Gate 29, Hilo Airport, Hilo, Hawaii 96720, United States; Phone 808 969-2000; Fax 808 331-2079; <http://www.fly-hawaii.com>; Year Founded 1990. Phil Auldridge establishes this Part 135 concern on the Big Island of Hawaii in 1990 to offer air tours, charters, flight lessons, and plane rentals. Daily air tours are provided over Hilo and Kona and by the end of the decade, an average of 900 sight-seeing flights are made annually, transporting over 1,800 passengers.

The fleet in 2000 includes 6 Cessna 172s and Piper Warriors.

ISLAND MAIL: United States (1966–1979). IM is originally set up at Anacortes, Washington, in the spring of 1966 to fly mail under contract to **Island Sky Ferries** and **Skyline Air Service**. Employing Cessna light-planes and a refurbished Stinson SR Reliant, the company begins flying its mail routes in the Puget Sound and San Juan Islands area on July 1.

Even after the sponsors become part of the new **Puget Sound Airlines** in August 1967, IM operations continue apace throughout the remainder of the decade and into the 1970s. The company base is relocated to Friday Harbor in 1973 and services are continued until the enterprise ends in 1979.

ISLAND PACIFIC AIR: United States (1975–1978). Mike Hartley establishes IPA at Honolulu during the first quarter of 1975 to provide scheduled passenger and cargo services to all of the state's main islands. Employing Cessna 402s, Hartley begins revenue flights on April 16 and these continue until early 1978 when the company is purchased by and merged into **Air Hawaii (2)**.

ISLAND SKY FERRIES: United States (1950–1967). This company, originally formed by Robert F. and Margaret Ann Schoen in 1947 as **Orcas Island Air Service**, is purchased by Dr. Wallace Howarth in the spring of 1950, who changes its name to **Island Air**. The Schoens' partner, Roy Franklin, and a Stinson 108 Voyager remain with the company, which is managed by Howarth's son David, just returned from the U.S. Army.

Electing not to continue the operation, the younger Howarth sells the tiny airline in 1951 to Harold and Virginia Ferris, owners of Eastsound Airfield on Orcas Island. They also retain Franklin's services, but rename their acquisition ISF. The fleet is enlarged by the addition of the Ferris' Voyager and two small Cessnas. On June 1, 1953, Roy Franklin becomes the new owner.

Adding Piper lightplanes, ISF continues to provide nonscheduled flights to Bellingham via the islands of the San Juan group. On June 1, 1956, scheduled service is inaugurated to Seattle. Meanwhile, throughout the decade and into the next, a contract is held with the U.S. Forest Service to fly forest fire patrols over Mount Baker National Forest.

In 1962, Franklin travels to Texas and purchases a refurbished Lockheed Model 10A Electra for use on passenger services to the islands from Seattle. However, Travelers do not visit and the pioneer aircraft is sold. Operations continue apace in 1963.

During the summer of 1964, the decision is taken to offer scheduled passenger and package third-level flights to Seattle. Employing Cessna lightplanes, the company begins revenue service on September 24. Two years later, the airline joins with **Skyline Air Service** to found the contract mail subsidiary **Island Mail, Inc.**, which begins revenue flights from a hub on Anacortes on July 1, 1966. ISF continues scheduled and charter services until August 28, 1967, when it is taken over by **Puget Sound Airlines**.

ISLANDS AVIATION (ISLANDS NATIONAIR) (PTY.), LTD.: P.O. Box 488, Boroko, Port Moresby, Central Province, Papua New Guinea; Phone 675 325-4055; Fax 675 311-2611; <http://pinelodge.com.pg/islandsair.html>; Code CN; Year Founded 1991. CN, a subsidiary of **Islands Helicopter Services (Pty.), Ltd.**, is established at Port Moresby in July 1991 to provide fixed-wing scheduled and passenger air charter services throughout the nation. David Pidduck is chairman, with Tony Skelton as general manager. The fleet includes the rotary-wing operator's 9 Bell 206L LongRangers plus 1 Beech 58 Baron, 3 Beech Super King Air 200s, 1 Cessna 206, 3 each de Havilland Canada DHC-6-300 Twin Otters and Embraer EMB-110P1 Bandeirantes plus 2 Pilatus-Britten-Norman PBN-2 Islanders.

From bases at Nadzab, Mt. Hagen, Port Moresby, and Rabaul, flights are initiated and continued in 1992–1995 linking those destinations, as well as Buka, Goroka, and Hoskins. During these years, only six LongRangers are devoted to the charter services of **Islands Helicopter Services (Pty.), Ltd.**

In April 1996, Malaysia-based Mofaz Air purchases a 40% stake. Flights continue in 1997–2000, during which time the workforce grows to 140. Scheduled destinations visited include Boang, Buiolo, Cape Orford, Gonalia, Goroka, Jacquinot Bay, Kavieng, Kerema, Lae, Lihir Island, Malekolon, Manguna, Mount Hagen, Port Moresby, Rabaul, Sauer, Tadjji, and Wewak.

ISLANDS HELICOPTER SERVICES (PTY.), LTD. See **ISLANDS AVIATIONS (ISLANDS NATIONAIR) (PTY.), LTD.**

ISLANDS NATIONAIR (PTY.), LTD. See **ISLANDS AVIATION (ISLANDS NATIONAIR, (PTY.), LTD.)**

ISLANDSFLUG, H.F.: Reykjavik Airport, Reykjavik, IS-101, Iceland; Phone 354 (91) 570-8090; Fax 354 (91) 570-8091; <http://www.islandsflug.is>; Code HH; Year Founded 1991. Islandsflug is set up at Reykjavik Airport in 1991 to offer scheduled domestic passenger services. Gunnar Thor is president, with Omar Ben as general manager. A workforce of 45 is assembled and revenue flights commence with a fleet comprising 3 Dornier 228-212s, 1 Fairchild Metro III, and 1 Piper PA-31-350 Navajo Chieftain.

Flights continue in 1992–1998, during which years an Aero International (Regional) ATR42-320 and a Boeing 737-2M8A are also placed into service.

Islandsflug is now the second largest airline in scheduled and charter flight operation in Iceland, serving 16 domestic destinations with annual boardings in excess of 100,000.

Additionally, the company operates the largest flight school in the nation, employing 12 small training planes.

During the first quarter of 1999, the B-737-2M8A is wet-leased to Caraibenne des Transportes Aeriens. This joint venture was established by **Air France**, **Air Martinique, S.A.**, **Air Saint Martin, S.A.**, and **SATA (Societe Antillaise de Transportes Aeriens, S.A.-Air Guadeloupe)** to replace the French major on its Caribbean routes from Fort de France and Pointe-à-Pitre to Cayenne, Miami, and Port au Prince. The Icelandic Boeing will be returned as soon as Caraibenne is able to secure a pair of B-737-300s.

In June, the marketing name Icebird Airlines, H.F. is introduced for the carrier's foreign operations. Domestic destinations visited include Akureyri, Bidudalut, Egisstadir, Gjogur, Saudarkrokur, Siglufjörður, and Vestmannaeyjar. A B-737-3Q8QC is operated on behalf of **DHL Worldwide Express**.

Airline employment stands at 160 at the beginning of 2000. Wearing a special livery in honor of its employer, the Spanish tour operator Sunbird, a B-737-3Q8 is based at Palma de Mallorca at the end of March to fly tourists to and from northern Europe. Both of the company's ATR42-320s are turned over to **Flugfelag Islands, H.F. (3)** on May 21, although one is also advertised for sale in June with Piedmont Aviation Services.

In order to create a larger carrier in fact as well as by alliance, the small airlines of the French Caribbean are actually merged into **SATA (Societe Antillaise de Transportes Aeriens, S.A.-Air Guadeloupe)** during July. They had been flying the Antilles as part of the umbrella Caraibenne des Transportes Aeriens joint venture.

The surviving partner, controlled by 70% majority owner Groupe Dubreuil, which had previously owned the French carrier **Regional Airlines, S.A.**, is then renamed **Air Caraibes, S.A. (2)**. The enlarged airline maintains the local service routes of three previous independents. It also retains the Islandsflug B-737-2M8A, previously chartered for Caraibenne des Transportes Aeriens, and employs it to operate daily roundtrips from Fort-de-France and Pointe-à-Pitre to Miami via Port-au-Prince, Haiti.

On September 29, the company receives permission from the UN Sanctions Committee for the initiation of charter flights between Paris (CDG) and Baghdad. It is anticipated that such flights may begin in October using a B-737-3Q8.

Flown for Sunbird during the summer, a B-737-3Q8 is repainted and sent to **Bahamasair, Ltd.** for its winter charter schedule that begins in late November.

ISLE OF MAN AIR SERVICES, LTD.: United Kingdom (1935–1947). A major supporter of **Blackpool and West Coast Air Services, Ltd.**, **Olley Air Services, Ltd.** provides total capitalization of £1,000 and registers IOMAS as an airport company on January 21, 1935. On September 27, 1937, Olley, with the Isle of Man Steam Packet Co., Ltd. and London, Midland and Scottish Railway as partners, merges the airline and the FBO, providing it with a fleet of 1 DH 84 and 6 DH 89As.

Blackpool and West Coast Air Services, Ltd. is allowed to fly under its own identity until November 2. On that date, its former mail contract for the Liverpool–Isle of Man–Belfast route is reconfirmed to IOMAS and its **Irish Seas Airways, Ltd.** arrangement with **Aer Lingus Irish Airlines** is renamed **West Coast Air Services, Ltd.** Previous Blackpool direct routes to England and Ireland from the Isle of Man are continued.

Enplanements since start-up total 3,925.

Between May and October 1938, IOMAS operates a service to the Isle of Man from Leeds and Bradford via Liverpool and Blackpool. In accordance with the Air Navigation Order of September 16, the new ATLB on October 21 confirms the carrier's routes from the Isle of Man to Manchester, Liverpool, Manchester, Belfast, and Carlisle. The year's passenger traffic swells to 21,279.

On September 3, 1939, war is declared on Germany and all civil flying ceases. On November 20, the carrier is allowed to resume limited service from the Isle of Man to Liverpool and Belfast. The year's bookings are 12,185.

On May 5, 1940, the Secretary of State for Air signs an agreement with seven independent carriers governing the wartime routes and services to be operated; the coordinating body IOMAS joins is the **Associated Airways Joint Committee**. Passenger boardings for the year are 9,264. Throughout the war, the Isle of Man–Liverpool route is flown and passenger bookings vary: 12,052 (1941); 11,664 (1942); 12,147 (1943); 14,567 (1944); and 16,172 (1945).

During the summer of 1946, the carrier introduces vacation flights to the island from Manchester, Carlisle, Blackpool, Glasgow, and Belfast. **British European Airways Corporation (BEA)** is formed on August 1 and the year's final bookings achieve a carrier highpoint of 24,104. On February 1, 1947, IOMAS is one of 10 ex-AAJC carriers acquired and merged into BEA.

ISLE ROYAL SEAPLANE SERVICE. See **SHAWANO FLYING SERVICE**

ISLE ROYALE AIRWAYS: United States (1965). A Great Lakes-based flying boat operator, IRA is set up at Houghton, Michigan, in 1965 to provide scheduled passenger and cargo services to Rock Harbor, on Isle Royale, by way of Copper Harbor. Although Grumman G-21A Goose (and Beech 18) revenue flights are inaugurated, they cannot be maintained to year's end.

ISLE ROYALE SEAPLANE SERVICE: United States (1975). IRSS is established at Isle Royale, Michigan, during the summer of 1975 to provide scheduled passenger services to small communities in the Upper Peninsula. Employing Piper and Cessna floatplanes, the company offers daily roundtrips during the summer season.

ISLENA AIRLINES (ISLENA DE INVERSIONES, S.A.): P.O. Box 402, Ave San Isidro, Re Parque Central, La Celba, Honduras; Phone (504) 432 631; Fax (504) 432 632; <http://www.intertel.hn/tourism/islena>; Code WC; Year Founded 1981. Islena is established at La Celba in 1981 when Arturo Alvarado Wood begins flying a Cessna 206 on nonscheduled flights to the island of Roatan. As the air taxi

grows, it begins flying to the capital at Tegucigalpa where, in **1989**, it is reformed to offer scheduled third-level passenger and cargo services to domestic destinations, as well as communities in neighboring Central American republics. General Manager Wood's company begins these revenue operations with 3 de Havilland Canada DHC-6-200 Twin Otters and 1 Fairchild F-27J Friendship.

The fleet is radically altered in **1990** as all of the start-up equipment is removed and replaced with 1 Beech King Air 90 and 2 Embraer EMB-110P2 Bandeirantes. A second King Air 90 arrives in **1991**, along with an EMB-110P1, a different leased F-27J, and a Grumman G-159 Gulfstream I.

Operations continue apace in **1992** as the company continues to expand both its frequencies and flight equipment. Added this year is a Beech 99, an F-27A, and an F-27M. The leased F-27J is destroyed on the ground at Miami by Hurricane Andrew on August 24.

Another Beech 99 is delivered in **1993** along with a Shorts 360. These replace the Gulfstream I, which is sold in Guatemala.

In **1994**, the company charts one each Boeing 727-251 and B-727-2B7, which are in turn subleased to the new Bogota-based subsidiary **Islena Colombia, S.A.** A Let L-410UVP is acquired.

In **1995**, orders are placed for two Avions de Transport Regional ATR42-320s, the first of which is delivered by year's end.

The second ATR arrives in early **1996** and is employed to inaugurate new routes to Managua and Guatemala City.

While taking off from La Ceiba on March 3, **1997**, the Let L-410UVP with 2 crew and 19 passengers fails to climb. It returns to Runway 6 after its gear has been retracted and consequently skids 450 meters. Although the aircraft must be written off, there are no fatalities.

From the La Ceiba hub, President/CEO Wood's company in **1998** visits eight destinations, including Grand Cayman in the British West Indies. Two more used ATR42-320s arrive, one in December and the other in January **1999**.

Airline employment stands at 250 at the beginning of **2000**. Scheduled destinations visited include Cauquira, Grand Cayman Island, Guanaja, La Ceiba, Patacios, Puerto Lempira, Roatan, San Pedro Sula, and Trujillo. Late in the year, the company repaints its aircraft in the colors of Grupo TACA.

ISLENA COLOMBIA, S.A.: P.O. Box 402, Ave San Isidro, Re Parque Central, La Ceiba, Honduras; Phone (504) 432 683; Fax (504) 432 632; Year Founded 1994. IC is organized at Bogota in **1994** as a subsidiary of the Honduran carrier **Islena Airlines (Islena de Inversiones, S.A.)**. One each Boeing 727-251 and B-727-2B7 is acquired by the parent and leased to the new entrant, allowing it to commence revenue operations. Later in the year, a B-727-25 freighter is also chartered from **AVENSA (Aerovias Venezolanas, S.A.)**. Operations continue apace in **1995-1998**.

ISLES OF SCILLY SKYBUS, LTD.: Steamship House, Quay Street, Penzance, Cornwall, England, TR18 4BD, United Kingdom; Phone (0) 736 362009; Fax (0) 736 788366; <http://www.islesofscillytravel.co.uk>; Code 5Y; Year Founded 1990. This new commuter operator is established at Lands End Airfield in Cornwall in **1990** to offer scheduled services to the Scilly Isles as a subsidiary of the Isles of Scilly Steamship Company, Ltd. Managing Director J. E. C. Cartwright inaugurates revenue services with a fleet of four Pilatus-Britten-Norman PBN-2 Islanders. A total of 13,557 passengers are transported. Two more Islanders are acquired in **1991**.

Passenger boardings increase to 20,920. Enplanements climb 31.3% in **1992** to 31,824. Kenneth N. Christopher becomes managing director in **1993** and through September customer bookings are up 4.3% to 29,887.

A de Havilland DHC-6-300 Twin Otter is acquired in **1994** and it assists the company to realize, through September, a 22.3% increase in passenger boardings to 37,362.

A new Pilatus Britten-Norman PBN-2B Islander is delivered during the first quarter of **1995**. Traffic growth through September is very en-

couraging. Enplanements rise 18% to 44,100. Airline employment stands at 20 in **1996**, but full-year passenger traffic falls off, dropping 6.8% to 45,931 passengers flown.

In **1997**, the company continues to fly from Land's End to St. Mary's in Scilly Islands with several Islanders, while tasking others to make interisland flights. Frequencies are upwards of 40 per day during the summer, but just 4 in the winter. Passenger boardings inch up 1.7% to 46,719.

Two more Islanders enter service in **1998**. Customer bookings fall 2.1% to 44,000. On the plus side, 296,000 FTKs are operated.

Passenger boardings drop another 7.8% in **1999** to 43,000. The workforce at the beginning of **2000** totals 20.

ISO COMMUTER: United States (1979-1980). ISO Aero Service, the FBO at Kinston, North Carolina, elects to establish a scheduled air taxi service in **1979** to provide passenger services to Raleigh/Durham and to Washington, D.C. Although daily Cessna 310 roundtrips are duly inaugurated, they can only be maintained into **1980**.

ISRAIR AIRLINES AND TOURISM, LTD.: 23 Ben Yehuda Street, P.O. Box 26444, Tel Aviv, Israel; Phone 972 (3) 7955 888; Fax 972 (3) 7955 800; Code 6H; Year Founded 1995. **Emek Wings, Ltd.**, the airline division of Kanfey-Ha'Emek Aviation, changes its corporate identity in **1995**. Revenue scheduled and air taxi flights continue, under the direction of CEO Doron Dovrat, with 2 Shorts 330-200s and 1 each Shorts 360-300 and Aero International (Regional) ATR42-320. Destinations visited include Dov Hoz, Eilat, Haifa, and Jerusalem.

In **1996-1997**, flights continue without incident or coverage, but with four additional ATR42-320s. The ATRs are subcontracted to **El Al Israel Airlines, Ltd.** and are employed on services to Jordan. These turboprop flights bring the carrier much needed capital. Ownership is now divided between Ganden Investments (70%) and Zeev Horn and Moshe Leibovitz Holdings (30%).

Early in **1998**, cooperation negotiations commence with El Al, but these cease when the flag carrier opts, instead, for closer ties with **Arkia Israel Airlines, Ltd.**

Late in the year, the decision is taken to break into the foreign charter market, using a "flexible approach" of customer service and discount prices to lure customers. The owners will invest approximately \$10 million to turn Isair from a small domestic company into an international airline.

A total of 300,000 passengers are flown during the year.

Beginning on February 23, **1999**, two Boeing 737-7S3s are chartered from Pembroke Group, the Irish lessor. The first unit enters revenue service in March with a charter from Tel Aviv to Spain. While Isair pilots are in Seattle training, five pilots will be provided under an agreement with **Balkan Bulgarian Airlines** and they will fly to European destinations with the newly educated aviators. Five former El Al captains are also hired as advisors.

An agreement is also reached with **Onur Air, A.O.** to provide backup for the new Boeings, should that become necessary, within three hours. El Al is contracted to provide maintenance.

Foreign revenue charters to and from Israel commence in April and are expanded following the delivery of the second B-737-7S3 in May.

Airline employment stands at 330 at the beginning of **2000**. **El Al Israel Airlines, Ltd.** Vice President Michael Gat becomes CEO on June 1.

The company's first Next Generation B-737-700 is returned to its lessor, Pembroke Capital, in early October, with the second to follow. In the period prior to the arrival of a pair of chartered A320-200s in January, a Next Generation B-737-8K2 is leased from **Transavia Holland, N.V.** in late October for use through March on its holiday charter services. On November 2, biweekly return charter service is inaugurated from Tel Aviv to Moscow.

ISTAIR ISTANBUL AIRLINES (ISTANBUL HAVA YOLLARI, A.O.): Firuzkoy Yolu No. 26, Avclar, Istanbul, 34850, Turkey;

Phone 90 (212) 509-2100; Fax 90 (212) 593-8742; Code IL; Year Founded 1985. **IA** is established at its namesake city in December 1985 to operate passenger charter flights on behalf of its owner, a tour group with holdings in both Turkey and Germany. General Manager Safi Ergin assembles a fleet comprising 4 Sud-Est SE-210 Caravelle XRs and 2 Boeing 727-200s.

Revenue operations commence on March 14, 1986 from Istanbul, Ankara, Antalya, Adana, Dalaman, and Izmir to Barcelona, Dusseldorf, Berlin, Hanover, Frankfurt, Stuttgart, Bologna, Madrid, Tel Aviv, and Rome.

Between 1987-1988, scheduled services are inaugurated to Amsterdam and Munich and authority is obtained to commence flights to Hamburg and Cologne. Two BAC 1-11s are chartered from **TAROM (Transporturile Aeriene Romane, S.A.)** during the former year and a leased B-737-4Y0 is delivered in November of the latter. Airline employment is increased by 5% in 1989 to 410 and the B-727-200s are withdrawn and replaced in service by a second leased B-737-4Y0. Orders are placed for three B-737-300s. Enplanements ascend 35.4% over the previous year to 355,987.

In 1990, General Manager Ergin's fleet comprises 4 Caravelle XRs and 2 Boeing 737-4Y0s. It is decided not to retain the B-737s; those on hand are returned and those on order are cancelled. Instead, two B-727-228s are leased in 1991 from **Noble Air, A.O.** and five B-727-230As are ordered from **Deutsche Lufthansa, A.G.**, of which one is delivered this year and the remainder in 1992. Also in 1992, the Caravelles are all withdrawn and are replaced with another leased B-737-4Y0.

In 1993, General Manager Ergin oversees a workforce of 1,650 and the fleet now includes 5 each B-737-230As and B-737-4Y0s (leased) and 2 each B-727-228s and B-737-4S3s (leased). Charter flights continue across Europe.

Through September, passenger boardings increase to 1,075,071, a spectacular 161.3% over boost the same period the previous year.

In 1994, scheduled flights are undertaken from Istanbul to Munich, Amsterdam, and domestic stops while charters continue to be flown to the German cities of Cologne, Frankfurt, Dusseldorf, Hamburg, Hanover, Munich, Saarbrücken, and Stuttgart, plus London, Zurich, Vienna, Graz, Linz, and Salzburg. A B-737-291A subleased from **Air Atlanta Icelandic, H.F.** helps to operate the inclusive-tour flights for a year.

Services continue in 1995-1998, during which years the owned fleet comprises 5 B-737-230As and 1 B-737-230AF while the company also charts 4 B-737-4Y0s and 2 each B-727-228s, B-737-4S3s, and 3 B-757-236s.

On August 26 of the latter year, the carrier leases the Salamis Bay Hotel, in the area of Famagusta, for 49 years at an annual fee of \$613,000 plus 10% of any profits.

During the fall, orders are placed for 12 B-737-800s. Arrangements are completed with General Electric Capital Aviation Services to lease three of the type during the following spring.

A B-737-4Y0 must make an emergency landing at Istanbul on March 25, 1999, when its landing gear fails to properly deploy. There are no injuries reported.

The three GECAS B-737-86Ns arrive during the spring and enter service on scheduled Turkish services, as well as on regional charters started with the opening of the spring schedule.

Airline employment totals 2,500 at the beginning of 2000.

While en route from Izmir to Dusseldorf on April 29, a B-727-230A is forced to make an emergency landing at Istanbul when one of its three engines fails. An A300B4 begins a two-month lease on June 15.

A Lockheed L-1011-385 TriStar 1 is wet-leased from **Air Atlanta Icelandic, H.F.** on June 17.

Just after takeoff from Trabzon for Frankfurt on August 23, a B-737-3Y0 is forced to return to its point of origin after colliding with a flock of birds. Although both engines are damaged, the jetliner is able to complete a safe emergency landing.

With his airline in deep financial difficulty, Chairman Safi Ergin attempts to obtain government assistance during July, aid that will help

him pay off some of the company's approximately \$113-million debt. Without aid, Istanbul Airlines attempts to save costs by reducing its fleet and selling assets, including hotel properties. The two B-737-4Y0s owned by GECAS are returned on July 10.

In the end, the savings and aid pleas are not sufficient. The carrier cancels all flights on August 24 and ceases operations. Hundreds of passengers are stranded at Turkish airports as all 900 employees are sent home.

ISTANBUL AIRLINES, A.S. See **ISTAIR ISTANBUL AIRLINES, A.S.**

ISTHMIAN AIRWAYS, S.A.: Panama (1929-1933). Ralph Sexton forms Isthmian in the Panama Canal Zone in the spring of 1929; the company is the first civil air transport concern established in Panama. Employing Hamilton H-45s/H-47s floatplanes, service is inaugurated on May 5 across the entire width of the country, Cristobal to Balboa.

The 47-mile route is maintained until the pioneer airline becomes a victim of the Depression in 1933.

ITA (ITAPEMIRIM TRANSPORTES AEREOS, S.A.): Praca Pio X No. 15, 4th & 6th Floor, Rio de Janeiro, 20 040 020, Brazil; Phone 55 (21) 263-4255; Fax 55 (21) 233-4261; http://www.itapemirim.com.br/visa/aero/htm; Code K9; Year Founded 1990. ITA is founded by its chairman, Camilo Cola, at Rio de Janeiro in September 1989 and is one of the first all-cargo carriers to be established in Brazil since the 1970s. Ownership is held by Cola's Itapemirim Transportes group, the largest surface transport concern in the country. A Boeing 727-25F is acquired and is given a grey belly and yellow fuselage above the wingline, with titles reading "ITA Itapemirim Cargo." After a delay, services are inaugurated in January 1991 on a route to Manaus. A B-727-173C arrives at year's end and doubles the company's capacity.

In 1992-1993, the fleet is significantly increased as two more B-727s, a Dash-46F and a Dash-30C, are placed into service. The former had previously been operated by **Evergreen International Airlines**.

Marketing alliances are established in 1995-1997 with **Federal Express (FedEx)**, **KLM (Royal Dutch Airlines, N.V.)**, and **Deutsche Lufthansa, A.G.** To handle these commitments, Chairman/CEO Cola acquires two Cessna 208B Grand Caravans, as well as one each B-727-25F, B-727-225AF, and B-727-259AF.

Scheduled destinations visited include Belem, Brasilia, Fortaleza, Manaus, Porto Alegre, Recife, Salvador, and Viracopos. Montevideo and Miami are new charter markets.

At the beginning 1998, airline employment stands at 400 and the company is designated a flag carrier; it is assigned to the Brazil-U.S. market as a scheduled all-cargo airline.

It is reported on September 6, 1999 that ITA has been taken over by **TAM (Transportes Aereos Regionais, S.A.)** and will shortly be renamed **Interexpress Transportes Aereos Regionais, S.A.**

Airline employment totals 2,000 at the beginning of 2000.

ITALAIR, S.p.A.: Italy (1996-2000). This third-level operator is established at Rome in 1996 to offer regional scheduled passenger services within Italy. Luigi Greco is president and he begins revenue flights with five Avions de Transport Regional ATR42-320s.

Service is maintained in 1997-2000. In these years, the company's turboprops visit Alghero, Bologna, Brindisi, Cuneo, Genoa, Naples, and Pisa. Enplanements during the latter year total 65,000. The company announces during the summer of the latter year that it's routes from Alghero to Venice and Verona are to be dropped with the beginning of the winter schedule on October 29. At that point, the carrier will be operating a single ATR42-320 on daily roundtrips from Alghero to Bologna and from Cuneo to Rome, thrice weekly to Genoa, and four times a week to Pisa.

Before these changes can be made, ItAlAir shuts down in September.

ITALY FIRST, S.p.A.: 115 Corso d'Augusto, Rimini, 47900, Italy; Phone 0541 438811; Fax 0541 28808; <http://www.italy-first.com>; Code IF; Year Founded 1999. Italy First is established as a subsidiary of Gruppo Condor at Rimini in 1999 to operate scheduled domestic replacement passenger services as well as charters and air ambulance flights to points around the Mediterranean and to the CIS. Two Avions de Transport Aerien Regional ATR42-320s initiate revenue flights to Alghero, Bologna, Milan, Naples, and Rome.

Employing both ATR42-320s wet-leased from Italy First., **Meridiana, S.p.A.**, on behalf of **Alitalia, S.p.A.**, inaugurates twice-daily roundtrips on May 1, 2000, from Naples to Bologna

ITAPEMIRIM TRANSPORTES AEREOS, S.A. See **ITA (ITAPEMIRIM TRANSPORTES AEREOS, S.A.)**

ITAU (COMPANHIA ITAU DE TRANSPORTES AEREOS, S.A.): Brazil (1947–1957). ITAU is formed as an all-cargo carrier at São Paulo on September 30, 1947. Most of 1948 is taken up with obtaining route permits and assembling a fleet of 9 Curtiss C-46 Commandos; however, services do begin late in the year.

Flying also from Rio de Janeiro, in 1949–1955 the carrier is able to offer services to most of the nation's larger cities, including Belo Horizonte, Recife, Salvador, Fortaleza, and Campo Grande.

On February 21, 1951, a C-46A with four crew is forced to make a belly landing at Galeao Airport, Rio de Janeiro, and catches fire; although the aircraft is destroyed, there are no fatalities.

In financial difficulty after the loss of four freighters in two years, the company is purchased in October of the latter year as the cargo component of the airline consortium sponsored by **TAN (Transportes Aereos Nacional, S.A.)**. Assimilation is completed by October 22, 1957.

ITAVIA, S.p.A.: Italy (1958–1989). Itavia is founded in Rome in 1958 to provide, as Italy's second domestic airline, scheduled flights to mainland destinations as well as points on Sicily and Sardinia. Charter operations are also undertaken. The initial fleet consists of de Havilland DH 114 Heron 2s and one of these, with four crew and seven passengers, crashes into Mt. Capanne, Elba, on October 14, 1960; there are no survivors.

Several Douglas DC-3s are acquired in 1961–1962. One of the new American-made transports with three crew and eight passengers, hits a mountain near Sora, Italy, on March 30, 1963; there are no survivors. Service continues without incident during the next six years as several Fokker F.27-100s and F.28-1000s are purchased.

The first of the latter enters service on April 21, 1969. A Fokker F.27-100 is lost in a crash near Reggio di Calabria on May 24 (one dead). Although business is conducted over the next two years without incident, an F.27-100 with 18 aboard smashes into a mountain near Frosinone on April 16, 1972; there are no survivors. At year's end, a Douglas DC-9-15 is purchased from *Hawaiian Airlines*.

Later, the fleet comes to consist of Douglas DC-9s and Fokker F.28-1000s. One of the latter types is involved in the second of the carrier's three fatal accidents, on January 1, 1974. En route from Cagliari to Geneva, a Fokker with 4 crew and 38 passengers, crashes 2 nm. short of the runway while landing at Torino Caselle Airport at Turin in very bad weather (39 dead); among the victims are 5 members of the American Brickheimer family.

An F.28-1000 with 50 passengers fails its takeoff from Bergamo on April 9, 1975 and makes a forced landing that is 200 m. short of the end of the runway; there are no fatalities.

The carrier's third fatal disaster is very controversial. Flight 870, the Ex-Hawaiian DC-9-15 with 4 crew and 77 passengers en route from Bologna to Palermo, disappears into the Tyrrhenian Sea, off Naples, on June 27, 1980. On December 18 of that year, Italian Transportation Minister Rino Formica reports that the crash was caused by a missile, a view that will be debated for over a decade. Operations of the airline, meanwhile, continue apace until Itavia closes its doors for financial reasons at the end of 1989.

In 1990, Franco Scottoni and Luigi Di Stefano review the missile evidence in their *Ustica, Quel Maledetto Missile* (Roma, Italy: Atlantis, 1990).

On February 9, 1991, a motion picture, *The Rubber Wall*, opens in Italian theaters and depicts the 1980 disaster as a government cover-up of a shoot down by "friendly" warplanes. The controversy is further flamed after the *Magellan 725*, a remotely operated vehicle owned by Eastport International, recovers the flight recorder from the Tyrrhenian Sea and photographs 350 pieces of wreckage at a depth of 10,825 ft. during the first week of August.

Claudio Gatti and Gail Hammer revisit the case in their *Il Quinto Scenario* (Milano, Italy: Rizzoli, 1994) while Daria Lucca, Paolo Miggiano, and Andrea Purgatori rework the topic in *A Un Passo Dalla Guerra* (Milano, Italy: Sperling & Kupfer, 1995).

It will be revealed in 1996–1997 that the 1980 incident was the result of political differences between the West and Libya. According to information filed in the 1980 hull-loss database of the *Aviation Safety Network*, a pair of Libyan MiG fighters had concealed themselves from radar detection by flying closely to the Itavia jetliner. This move is detected by either French or U.S. forces in the area, aircraft from which fire on the MiGs. An errant missile strikes Flight 870, causing it to disintegrate and crash off Ustica Island. One MiG escapes, while the other is shot down over Calabria.

ITR AIRLINES. See **FRONTIER COMMUTER**

IVANOVO UNITED AIR DETACHMENT: Ivanovo Airport, Ivanovo, Central Regions Zone, 153041, Russia; Phone 7 (09322) 34289; Code IGAP; Year Founded 1995. Ivanovo is established at its namesake city in 1995 to offer domestic and regional charter and scheduled services, both passenger and all-cargo. Boris Vorobiov is CEO and he begins services with a fleet that comprises 2 Tupolev Tu-134s, 6 Antonov An-24s, and 16 An-2 biplanes.

Services continue in 1996–1999. By the end of the latter year, the company has suffered severe financial reversal, much of it due to the Russian currency crisis, and declares bankruptcy. Despite the views of its creditors and managers, the rules of the bankruptcy code are invoked on November 22 and the airline is given another six months to regain its economic viability.

On April 25, 2000, many employees receive layoff notices.

IZHEVSK AIR ENTERPRISE (IZHAVIA): Izhevsk Airport, Republic of Udmurtia, 426015, Russia; Phone 7 (3412) 641 675; <http://www.izhavia.udm.ru>; Code IZA; Year Founded 1995. IAE is established at Izhevsk Airport in 1995 to provide domestic and regional passenger and cargo charters. Mikhail Khatomkin is CEO and he begins revenue flights with 4 Tupolev Tu-134s and Antonov An-24s, 3 each An-2s and An-26s, and 1 Yakovlev Yak-42D.

Late in 2000, the company opens a Russian-language homepage on the Internet's World Wide Web.

J-AIR COMPANY, LTD.: 4-10-2 Kan-non Shin-Machi, Nishi-ku, Hiroshima, Japan; Phone 81 (82) 234-6168; Fax 81 (82) 296-2443; Code JL6; Year Founded 1991. It is arranged in November 1990 that, upon its creation, **Japan Air Lines Company, Ltd. (2)**'s new Air Academy, a flight training subsidiary, will take over the **Asahi Air Lines Company, Ltd. (AALC)** services in the West Seto region from a base at Hiroshima. To equip the new endeavor, JAL in November places a ¥1.6-billion order for a pair of British Aerospace BAe Jetstream 31s.

The JAL Air Academy is officially founded at Nishi (West) Hiroshima Airport in early March 1991. Later in the month, it is placed in charge of the former AALC commuter operation in the Nishi-Seto region, which JAL had acquired the previous November. The service is renamed J-Air Company, Ltd. in order that the public may gain the impression that the service is operated and supported by JAL. JAL also undertakes an advertising campaign for the new operation.

J-Air services commence in April. Until the Jetstream 31s can be delivered in August, the new flights will be made with Asahi's Bandeirantes.

With the arrival of the Jetstream 31s in August, the Bandeirantes are returned by JL6 to AALC. The new pressurized turboprops begin flying on behalf of the JAL affiliate from Hiroshima to Oita and Matsuyama.

On November 20, JL6 launches Jetstream 31 services from Hiroshima to Nagasaki and from Hiroshima to Komatsu.

Operations continue apace in 1992 and in June 1993 a BAe Jetstream 32 is ordered. It is delivered in August. The 10,000th passenger is transported on December 17.

There are no changes in 1994 and enplanements reach 65,231 in 1995. There are substantial losses: \$2.27 million (operating) and \$1.04 million (net).

Airline employment is increased by 11.1% in 1996 to 50 and the fleet now includes 4 Jetstream 31s. The company, now fully established as a JAL feeder, operates over 10 lightly traveled domestic routes.

Passenger boardings soar 32.4% to 96,495 and operating income jumps 12.4% to \$10.12 million. Costs, however, accelerate 19.9% to \$13.51 million, leaving a \$3.39-million operating loss. The pretax loss declines to \$702,000.

A graduate of the state-owned pilots academy, 26-year-old Aya Nagano becomes Japan's first woman commercial pilot on April 1, 1997 when, as first officer, she begins flying a company Jetstream 31.

Flights continue during the remainder of the decade and into the new millennium. During these years, president Masashi Obuse's 55-worker concern trades in its four Jetstream 31s, replacing them with five Jetstream 32s.

On January 24, 2000, a firm order, with three options, is placed with Bombardier for a pair of Canadair CRJ200ERs. Two of the three options are converted into firm orders on November 3, with deliveries scheduled in December and the second quarter of 2002. Two more options are now taken.

The first CRJ200ER arrives at the company base on December 8. It is announced that the regional jets will replace JAL B-737-400s in April on the routes from Nagoya to Yamagata and from Sapporo to Fukushima.

JAGSON AIRLINES, LTD.: 12-E Vandana Building, 11 Tolstoy Mang, New Delhi, 110 001, India; Phone 91 (11) 372-1593; Fax 91 (11) 332-4693; Code JGN1; Year Founded 1991. Jagson International, Ltd. establishes this air taxi subsidiary at New Delhi in November 1991 to undertake domestic passenger charters. Jagdih Gupta is chairman, with Pardeep Gupta as managing director. Flights commence at this time with a pair of Dornier 228-201s; destinations visited include Chandigarh, Dehra, Dun, Himalayan Darshan, Jaisalmer, Jodpur, Kulu, and Simia.

Orders are placed for a pair of Fairchild Dornier 328-110s at mid-decade and scheduled flights are initiated from New Delhi to the markets previously visited on a nonscheduled basis.

The Dornier 328-110s are not delivered; instead, a third 228-201 joins the fleet. By 2000, airline employment stands at 95.

JAL EXPRESS COMPANY, LTD. (JEX): 4-11 Higashi-Shinagawa, 2-chome, Shinagawa-ku, Tokyo, 1040, Japan; Phone 81 (6) 6857 7378; Fax 81 (6) 6857 7384; <http://www.jal.co.jp/jex>; Code JC; Year Founded 1997. JAL Express is established as a low-fare subsidiary of Japan Air Lines Company, Ltd. (2) on April 1, 1997. Outfitted with two Boeing 737-446s chartered from the parent, the new domestic line begins twice-daily roundtrips from a hub at Osaka to Miyazaki and Kagoshima beginning on July 1, 1998. A Japanese-language homepage is opened on the World Wide Web.

Service is expanded from Osaka to Nagasaki, Oita, and Kumamoto on July 1, 1999. Additional routes are taken over from JAL in 2000 and plans are announced for the January launch of flights from Nagoya to both Kagoshima and Sapporo.

During October, two more B-737-446s are transferred to the carrier on a wet-lease basis.

JALways COMPANY, LTD.: JAL Building 18F, 4-11 Higashi-Shinagawa, 2-chome, Shinagawa-ku, Tokyo, 140-8647, Japan; Phone 81 (3) 5460 6830; Fax 81 (3) 5460 6839; <http://www.jalways.co.jp>; Code JO; Year Founded 1999. Chairman Jirb Sagara's 1,046-employee Japan Air Charter Company, Ltd. is renamed on October 1, 1999. Possession of the company's 50,000 shares remains divided between Japan Air Lines Company, Ltd. (2) (80%) Japan Asia Airways Company, Ltd. (2%), NYK (2%), The Industrial Bank of Japan (1%), the Dai-Ichi Kangyo Bank (1), and private investors (14%).

The fleet of 4 Boeing 747-246Bs and 4 Douglas DC-10-40s, all leased from Japan Air Lines Company, Ltd. (2), is retained. Cockpit crews, hired on a contract basis, are based in Hawaii, while cabin attendants are hired and based in Bangkok, where JAZ operates a cabin crew training center. Some cockpit crew and senior flight attendants are seconded over from JAL as the company's mission, under the direction of President/CEO Yukio Ohtani, is now expanded.

In addition to charter flights to such points as Bangkok, Fukuoka, Guam, Hiroshima, Kona, Nagoya, Niigata, Osaka, Saipan, Sapporo, Sendai, and Tokyo, the company begins to take over the scheduled routes of JAL to Pacific resort locations. JAL had previously flown many of them on a wet-lease basis. The initial return services are the previous JAL flights from Tokyo (NRT) to Kona and Honolulu.

Airline employment at the beginning of 2000 stands at 1,045, including 143 cockpit crew, 844 cabin attendants, and 58 ground staff. On April 1, the carrier takes over the JAL scheduled services from Sapporo, Sendai, Niigata, and Hiroshima to Honolulu. At this point, a fifth chartered B-747-246B arrives from the parent. All of the Jumbojets are now painted in a white livery with depictions of colorful flowers and hummingbirds and wear "Reso'chu" titles.

On August 7, JAL facilitates the lease to JALways of a B-747-146 from Japan Asia Airways Company, Ltd. JAL paid-in capital as of September 30 totals ¥ 188.32 billion.

With the beginning of the winter schedule on October 29, the company also takes over the previous JAL daily frequencies from Tokyo (NRT) and Osaka (KIX) to Saipan and from Fukuoka to Honolulu. The redistribution of routes is part of the parent's effort to drive down costs.

Arrangements are completed at year's end for JAL to take over 100% shareholding on March 9. To process the arrangement, the parent's paid-in capital will be increased by ¥ 226 million to ¥ 188.55 billion.

JAMAHIRIYA AIR TRANSPORT. See JAMAHIRIYA LIBYAN ARAB AIRLINES

JAMAHIRIYA LIBYAN ARAB AIRLINES: P.O. Box 2555, Haiti Street, Tripoli, Libya; Phone 218 (18) 602 083; Fax 218 (21) 602 085; Code LN; Year Founded 1990. Libyan Arab Airlines is renamed in 1990, at the same time assuming the charter services of Jamahiriya Air Transport. The Libyan Arab Airlines marketing name is retained and often is employed in airline directories.

The fleet, inherited from Libyan Arab Airlines, comprises 5 Boeing 707-2L5As, 5 De Havilland Canada DHC-6-300 Twin Otters, 3 Fokker F.28-4000s, 13 F.27-600s, 2 F.27-500s, 1 F.27-400, 21 Ilyushin Il-76s, 4 Lockheed L-100-20 Hercules freighters and 2 Airbus Industrie A310-203s technically leased from Air Algerie, S.A.

Employment stands at 3,798 and enplanements reach 1,803,030 (1,170,731 domestic).

The routes and destinations of the previous carrier are maintained during the remainder of the year and in 1991 the workforce is increased to 5,830. Mohammed Aissa, formerly secretary general, becomes CEO on December 1.

A B-707-351C with 10 crew and 189 passengers, is damaged beyond repair following a takeoff accident at Tripoli on December 7; there are no fatalities.

After a three-year investigation of the Lockerbie tragedy is concluded on November 14 with the Lord Advocate, Scotland's chief law official,

issuing a warrant for the arrest of two Libyans, Abdel Baset Ali Mohamed al-Megrahi and Al-Amin Khalifa Fhimah. The two are charged with conspiracy, murder, and contravention of the U.K.'s Aviation Security Act of 1982. A similar indictment is issued by the U.S. Both men are alleged Libyan intelligence agents. The former was **Libyan Arab Airlines** station manager at Malta at the time of the destruction of the **Pan American World Airways (1)** Jumbojet, while the other was head of LAA's security on the island. In December 1988, he is alleged to have purchased clothes in a Maltese store that were contained in the suitcase bomb on board Flight 103.

A seven-year dispute concerning the Lockerbie suspects begins on December 8 when Libya, concerned that the two will not receive a fair trial, refuses to hand the men over.

Two A300B4-622Rs are leased from **EgyptAir, S.A.E.** in February 1992. The UN Security Council, under Resolution 748, votes sanctions against Libya on April 14 for its refusal to hand over the two men accused of the bombing of the **Pan American World Airways (1)** B-747 over Scotland in 1988.

Beginning on the next day, company passenger jetliners are turned back in flight and are not permitted to land at Amman, Brussels, Cairo, Casablanca, Damascus, Milan, Vienna, and Zurich. Italian jet fighters are scrambled to turn back the Libyan Boeing about to enter their airspace. Only Nicosia, Cyprus, remains open, but it, too, is closed to the carrier, on April 16. On April 17, **Royal Jordanian Airlines** stops accepting reservations for its services to Tripoli.

Operations Manager T. Missurati's Tripoli-based carrier still manages to upgrade its fleet during the remainder of the year, employing the aircraft on domestic services.

Flight 1103, a B-727-2L5A with 10 crew and 147 passengers and en route from Benghazi to Tripoli, collides with a Libyan Air Force MiG 23UB at 3,500 ft. over Soul al-Sabt on December 22 and crashes; all aboard the jetliner are killed, however, the fighter plane crew parachutes to safety.

Replaced through 1993 are several of the Friendships, Twin Otters, B-727-2L5As, and four B-707-3L5Cs. The Ilyushin and Lockheed freighters are transferred to the Air Force and new units purchased include 3 B-737-2L5As, 13 Fokker 50s, 2 Embraer EMB-110 Bandeirantes, and 1 Cessna 441 Conquest. Although the workforce totals 3,798, only domestic services are flown. International passengers travel by surface transport to Djerba in Tunisia and fly via **Tunisair, S.A.** Capt. Saleh Ferjani becomes the airlines managing director in April. Libya continues to maintain its position concerning the Lockerbie suspects, despite the tightening of UN sanctions in December.

There are no operational changes in 1994; however, the fleet now includes 2 B-707-3L5Cs, 9 B-727-2L5As, 15 Friendships, and 3 Fellowships. All of these are grounded except for a pair of B-727-2L5As. Joint insurance purchasing begins with **Royal Air Maroc**.

It is reported in *The New York Times* on April 14, 1995 that the airline plans to defy the UN ban on international flights to and from the country; the same newspaper also reports that 10 of the carrier's trimotors and Stratoliners can no longer fly.

On April 19, the UN Security Council eases its three-year-old ban on flights from Libya; it will permit **EgyptAir, S.A.E.** and other Egyptian airlines to carry Muslim pilgrims to Mecca. The same day, Libyan leader Muammar el-Qaddafi says he will live within the confines of the UN-imposed sanctions for failure to turn over the suspects he harbors that are linked to the bombing of PanAm 103 in 1988. He will not defy the international body's ban on foreign commercial flights by his nation's airline. **EgyptAir, S.A.E.** and **ZAS Airline of Egypt, Ltd.** commence the pilgrim airlift two days later.

The workforce stands at 6,027 in 1996 and despite UN sanctions, the carrier continues to operate a large fleet. Owned units include 12 Il-76TDs, 8 B-727-2L5As, 9 F.27-600s, 5 each Il-76Ts and Il-76Ms, 4 L-382G Hercules freighters, 2 each Grumman G-1159 Gulfstream IIs and Airbus Industrie A310-203s, the latter two leased to **Air Algerie, S.A.**, plus 1 each B-707-3L5C, B-727-224, Dassault Falcon 20C, F.27-400,

F.27-500, L-382E, and L-1329 Jetstar II. In addition, a chartered B-707-351C and Jetstar 8 are also operated.

On April 15, a B-707-3L5C flies Islamic pilgrims without fanfare to Saudi Arabia in violation of the UN ban on Libyan international air travel. The aircraft is allowed to land at Mecca and discharge its passengers.

When a vote comes up at the UN Security Council in November, it is decided to leave the air embargo against Libya in place because of that nation's continuing failure to cooperate in the investigation of two attacks against airliners. Enplanements for the year total 640,424.

Continuing to defy the UN embargo, the company's B-707-3L5C with a Libyan foreign ministry delegation aboard, flies from Tripoli to Accra, Ghana, on January 22, 1997.

Just under a year after the previous unauthorized pilgrim incident, the same Boeing Stratoliner is employed on March 29 to carry Muslims on a pilgrim flight to Saudi Arabia. On September 21, the nations of the Arab League, meeting in Cairo, vote to defy UN sanctions by permitting Libyan aircraft transporting Col. Qaddafi to land in their territory and to permit his airline other flights for humanitarian or religious purposes.

Only internal domestic services are provided in 1998. During a meeting with representatives of Lockerbie victims on April 20, Col. Qaddafi apparently agrees to hand over the two bombing suspects for trial by a Scottish judge in a neutral country. In July, the U.K. and U.S. agree that such a judicial action would be acceptable. In November, authorities in The Netherlands set aside a former air force base near Utrecht for the trial. Despite hopes, the hearings do not proceed. Libya balks over where the men might serve their sentences if convicted and refuses to allow them to be imprisoned in Scotland.

On February 25, 1999, Libya and Dubai sign a memorandum of understanding that will allow Jamahiriya and **Emirates Airlines, Ltd.** to schedule flights between the two countries. Libya, however, remains under UN embargo.

Taking advantage of a UN and U.S. pledge not to attack **Iraqi Airways** aircraft that have begun to illegally operate Hadr flights for Muslim pilgrims to Saudi Arabia on March 17, the Libyan airline, on March 18, also flies a planeload of pilgrims into Saudi Arabia.

Libya informs the UN on March 22 that it will extradite the two men charged in the Lockerbie bombing and will turn them over to representatives of the world body on or before April 6. In return, the UN Security Council indicates that it will abide by its resolutions to suspend sanctions as soon as the two suspects are received.

South African President Nelson Mandela, who has brokered the arrangement, telephones Col. Qaddafi on March 30 to assure him that their deal for the surrender of the two Libyans suspected in the 1988 Lockerbie airline bombing is going as planned.

Following an elaborate farewell ceremony attended by Qaddafi on April 4, the two suspects depart into UN captivity next day. At the hour they are turned over, the world body's sanctions against Libya are lifted.

Two aircraft flown by the carrier and **Air Malta, Ltd. (2)** make commemorative flights into each other's country on April 6. The special flights, carrying aviation officials from the two countries, are the first to be flown into and out of Libya since the UN lifted air restrictions.

On April 9, Managing Director Mohammed al-Mukhtar Ibssim flies into Egypt on a three-day visit, the first stop on a tour of Arab countries that he is making to study markets and to negotiate with other airlines on possible services that might be provided to the Libyan carrier. At a press conference, it is announced that his company will resume international operations within two weeks and will upgrade its aging fleet.

Piloted by Capt. Mohammad Bureiki, Flight 2821, Managing Director Ibssim's B-727-2L5A, arrives at Amman on April 14, ending a seven-year break in flights between Jordan and Libya. All aboard are welcomed with flowers, kisses, and ceremonial cake as they disembark. While the airline chief and fellow executives disappear into talks with their Jordanian counterparts, Capt. Bureiki, caught by a Reuters, Ltd. reporter, notes that regularly scheduled service to Amman will resume in two weeks. He also lets it be known that only one other B-727-2L5A is

operational, the remainder of the fleet having fallen into disrepair during the long UN-sponsored embargo.

On April 24, the first Libyan aircraft in seven years to fly from Libya to Syria arrives at Damascus. Upon arrival, Capt. Bureiki's B-727-2L5A deplanes officials from Tripoli's civil aviation authority and transport ministry. On the last day of the month, flights to Rome are resumed.

The company's international network is gradually rebuilt during the remainder of the year.

Two leased **TransAer International Airlines, Ltd.** A320-231s, resplendent in a new color scheme with Arabic titles on the left side of the fuselage and English on the right, are turned over to the Libyan carrier at Marseilles on December 8.

Airline employment at the beginning of 2000 totals 3,798. In addition to its modern Airbus units, the fleet also includes 8 B-727s, 7 Dash-2L5As, and Dash-228. A B-727-224 and a B-727-2L5A have been withdrawn and is being cannibalized for parts. Also operated are several B-707F and Il-76 freighters. Scheduled international destinations visited include Amsterdam, Accra, Kano, and Mali. Flights are also maintained to the domestic communities of Al Bayda, Al Khufrah, Benghazi, Ghadames, Mersa Brega, Misurata, Sebha, Tobruk, and Tripoli.

On January 19, twice-weekly return service, employing A320-231s, is resumed from Tripoli to Rome, along with weekly roundtrips from Tripoli to Milan.

Thrice-weekly A320-231 roundtrips are initiated on January 24 from Tripoli to London (LHR).

A320-231 return service is resumed on June 13 between Tripoli and Tunis. Also during June, weekly all-cargo roundtrips are inaugurated from Ostend, Belgium, to Tripoli and Benghazi, reportedly handled by European Cargo Services, S.A. and operated by a wet-leased **Trans Mediterranean Airways, S.A.L.** B-707F.

After an eight-year lapse due to the UN embargo, daily A320-231 roundtrips are restarted between Tripoli and Cairo on July 8. Altogether, eight weekly return services will soon be operating from Tripoli, Benghazi, and Sabha to Cairo and Alexandria.

The carrier's single A310-203 is returned to Airbus on August 15. In its place, two A310-203s are wet-leased from **Royal Jordanian Airlines** in early October. On October 24, four days after **TransAer International Airlines, Ltd.** collapses, the Libyan airline seizes the two A320-231s it had chartered from the Irish carrier a year earlier. Both planes are owned by ILFC.

It is announced on December 12 that, after an eight-year suspension, twice-weekly roundtrips will resume on January 1 between Tripoli and Sfax, Tunisia.

Twelve years after the destruction of Pan Am 103 over Scotland and nine months after the beginning of an international \$80-million trial in The Netherlands, former Libyan intelligence agent Abdel Basset Ali al-Megrahi is found guilty of the crime on January 31 and sentenced to life in prison. Former Libyan airline official Lamien Khalifa Fhimah, who had been charged with helping al-Megrahi plant the bomb-laden suitcase at Malta, is found innocent and released.

JAMAICA AIR SERVICES, LTD. See AIR JAMAICA, LTD. (1)

JAMBO AIRLINES, LTD.: Nigeria (1983–1992). Created at Lagos in early 1983, Jambo is outfitted with four Dornier 228-201s and begins revenue flights in the summer to domestic locations.

Six years later in 1989, Managing Director S. Ibrahim Muhammad's fleet comprises 2 British Aerospace BAe (HS) 748-2Bs and 1 BAe (HS) 125. Both passenger and cargo charters are undertaken until the carrier ceases operations in late 1992.

JANA-ARKA AIR: Ningradova, Alma Ata, 480012, Kazakhstan; Phone 7 (3272) 632 874; Fax 7 (3272) 631 909; Code JAK; Year Founded 1996. Under the direction of President Yalken Valin, Jana-

Arka is established at Alma Ata in 1996 to offer regional passenger charters. Revenue flights begin with a single leased Ilyushin Il-86.

Service is maintained throughout the remainder of the decade and into the new millennium. During these years, airline employment grows to 150 and 2 Tupolev Tu-154Bs join the fleet.

JANES AVIATION, LTD.: United Kingdom (1987–1992). Andrew S. and Hilary Janes establish this concern at Southend Airport in November 1987. Having originally planned to operate a think tank to review the commercial air cargo scene, the Janes sign a contract with Lynx Express Delivery Network, a division of the National Freight Corporation, to operate night newspaper and mail services. Employing a leased Pilatus Britten-Norman PBN-2 Islander, overnight flights commence on December 1 to various destinations north of England.

Over the next three years, a variety of aircraft are flown on behalf of Lynx, including the larger Douglas DC-3, Shorts 330s, Handley Page Herald, and British Aerospace (HS) 748. The company undertakes revenue flights to the Isle of Man, Leeds/Bradford, Edinburgh, Aberdeen, Coventry, and London (STN). To accommodate its customers, the company moves to Blackpool Airport, but when that facility, in light of environmental concerns, refuses to allow continuation of night operations with larger aircraft, the enterprise is removed to Speke Airport at Liverpool.

A contract is obtained from the British Post Office to perform Royal Mail flights and new routes are opened to Belfast and Dublin in Ireland at the beginning of the 1990s.

The first owned BAe 748 is purchased in January 1992 and, on June 1, the entire six-unit fleet of the former **Dan Air/Dan Air Services, Ltd.** is purchased. On June 16, the carrier is incorporated as **Emerald Airways, Ltd. (2)** in 1992.

JAPAN AIR CHARTER COMPANY, LTD. (JAZZ): Japan (1990–2000). JAC is established by **Japan Air Lines Company, Ltd. (2)** at Tokyo on October 5, 1990 to provide nonscheduled worldwide passenger and cargo charters. Shinzo Sudo is chairman/president and revenue services begin in July 1991 with a fleet that initially comprises a Boeing 747-246B leased from the parent and a Douglas DC-10-40; emphasis is placed on "Super Resort Express" flights to Hawaii, where a cockpit crew base is established.

Operations continue apace in 1992 with a weekly roundtrip from Sapporo to Honolulu and twice-weekly roundtrips from Fukuoka to Honolulu. In an effort to relieve congestion at Tokyo (NRT), the company also begins to fly to various resort destinations from Japan's regional airports. A cockpit crew base is now established at Bangkok, Thailand.

Airline employment stands at 360 in 1993 as the carrier begins seven-times-per-week scheduled wet-lease replacement flights for its parent, in addition to holiday nonscheduled services. The fleet is increased by a second leased DC-10-40.

By year's end, enplanements total 144,300, including 53,200 on 232 charters.

The number of wet-leased flights is increased to 72 per week in 1994 as another chartered B-747-246B is acquired. In the 4 years since start-up, the company loses \$450 million.

Operations continue apace during 1995–1996. During this period, airline employment grows to 1,046 and JAC replaces upwards of 45 of JAL's 420 weekly departures. In addition, the parent largely employs foreign pilots (Australian, U.S., British, Canadian) and flight attendants (Thai) for JAC under contract and thereby reduces its overall labor costs by 8% or more.

Service is maintained in 1997–1998. During these years, the company continues to operate at costs 20% and more below those of JAL. Airline employment stands at 980 and the leased fleet now includes 5 B-747-246Bs and 4 DC-10-40s.

Japan Air Lines Company, Ltd. unveils its revised corporate plan for the years to April 2002 on March 1, 1999. The first step will be the transfer of routes to Southeast Asia, Oceania, and Pacific routes to JAC.

The low-cost subsidiary will be given a fleet of 14 planes to operate these flights, with JAL sharing codes. Discussion continues on whether or not to change the subsidiary's name from JAC to "JALways."

Results of internal JAL deliberations are released on June 30. JAC will, indeed, be upgraded into a schedule carrier and as of October will be known as "JALways." The carrier's charter routes from Tokyo (NRT) to Hawaii will be scheduled.

The carrier is renamed **JALways, Ltd.** in October.

JAPAN AIR COMMUTER COMPANY, LTD.: 822 Fumoto, Mizobecho, Aira-gun, Kagoshima, 899-64, Japan; Phone 81 (995) 58 2151; Fax 82 (995) 58 3904; http://www.jac.co.jp; Code 3X; Year Founded 1983. This small regional is formed on July 1, 1983 as a subsidiary of **Toa Domestic Airlines Company, Ltd.** Shareholding is divided between the parent carrier (60%) and local Japanese governments (40%). The first Dornier 228-200 is delivered in September and revenue operations begin on December 10 over a route Amami Shima-Kakai Jima.

During 1984-1987, operations continue apace as the employee population at President Hiroshi Hamada's company grows to 19 and a second Dornier turboprop is placed in service. It is reported that increased maintenance costs cause the commuter to lose ¥ 20 million during these years.

Routes are extended to Okinoerabu Shima, Yoron Shima, and Tokuno Shima in July 1988. Ordered in October, a third Dornier 228-200 enters service on November 18, flying from Amami Shima to these nearby islands.

Enplanements for the year are 40,033. Revenues reach \$7.8 million as profits of \$451,000 (operating) and \$306,000 (net) are generated.

The workforce is increased by 33.3% in 1989 to 112 as six YAMC YS-11A-500ss are leased from the parent, now renamed **Japan Air System, Ltd.**

A total of 244,100 passengers are transported, a remarkable 83.5% increase, while freight traffic climbs 59.5% to 437,000 FTKs. Revenues grow to \$14.8 million and with expenses down, operating income climbs to \$886,000. Net gain totals \$395,000.

Company employment is increased by 37.4% to 158 in 1990, the year Shizuo Shigeru becomes managing director. Orders are placed for eight SAAB 340Bs.

Passenger boardings advance by 49.9% to 340,010 while freight skyrockets 204.6% to 5.06 million FTKs. Revenues move up 34.1% to \$23.6 million, but \$23.59 million in costs, led by fuel prices after Iraq's August invasion of Kuwait, lower the operating profit to just \$51,000. Net gain, however, doubles to \$621,000.

In 1991, Yoshitomi Ono succeeds Hiroshi Hamada as president of the 160-employee concern. The company henceforth will not report its traffic figures.

Two purchased SAAB 340Bs and another chartered YS-11A join the fleet in 1992, the first of the former in March.

On April 1, the carrier, employing the YS-11A-500s, begins its first services from Itami Airport at Osaka. It takes over two routes from its parent, **Japan Air Systems, Ltd.**, when it begins to provide four-times-a-day roundtrips between Osaka and Tokushima and daily roundtrips from Osaka to Tanegashima.

A new 4,800-m. hangar is opened at Kagoshima Airport on September 23; large enough to house 4 SAAB 340Bs, it is valued at ¥ 1.7 billion.

Employing its new SAAB 340Bs, JAC, on October 1, takes over the daily **Japan Air System, Ltd.** routes from Oita to Kagoshima, Kagoshima to Matsuyama, Matsuyama to Miyazaki, and Miyazaki to Nagasaki, which the parent had previously operated with YS-11A-500s.

In 1993, President Ono oversees a fleet of 3 Dornier 228-200s, 9 leased YS-11A-500s, and 3 SAAB 340Bs. Orders are outstanding for seven of the latter type. Destinations visited include Amami Oshima, Tokunoshima, and Yoronjima. In October, parent **Japan Air System, Ltd.** announces that it will begin to gradually phase out the regional's subsidies.

During 1994, two YS-11A-500s are withdrawn as four additional SAAB 340Bs are received. The country's third largest regional airline continues operations in 1995-1996; the fleet in the latter year includes 9 SAAB 340Bs and 12 YS-11A-500s. Options are exercised in February for two more SAAB 340Bs, the first of which is delivered during the summer.

The second SAAB 340B optioned the previous year arrives in July 1997. The carrier now operates a total of 78 daily flights linking 14 destinations with Osaka and Kagoshima.

Smoking aboard all company aircraft is banned on July 1, 1998.

Service is continued, largely without fanfare, during the remainder of the decade. During these years, two YS-11A-500s are withdrawn.

Scheduled destinations visited in 2000 include Fukuoka, Hiroshima, Kigaiga-shima, Matsuyama, Okayama, Okino Erabu, Takamatsu, Tanegashima, Yakushima, and Yononjima.

JAPAN AIR LINES COMPANY, LTD. (1) (GREATER JAPAN [DAI NIPPON KOKUYUSO KABUSHIKI KAISHA] AIR LINES): Japan (1938-1945). On December 1, 1938, upon the recommendation of the Ministry of Communications, three companies merge to form **Japan Air Lines Co., Ltd. (1) (Greater Japan [Dai Nippon Kokuyuso Kabushiki Kaisha] Air Lines):** the Imperial Navy-supported paper carrier **Oceanic Airways, Ltd.; International Air Lines Co., Ltd.**, a subsidiary of the Army-backed **Manchurian Air Transport Company, Ltd. (MAT);** and **Nihon Koku Yuso Kabushiki Kaisha (NKYKK),** also known as **Japan Air Transport Company, Ltd.**

Noboru Otani is named chairman, with Takeo Saito as president; International's two Heinkel He-116s are transferred over. Although officially an independent entity, the airline is very heavily influenced by the military and on behalf of the Imperial Navy, even establishes an oceanic division; the civil influence of the Ministry of Posts and Communications, which had previously administered **Nihon Kokuyuso Kabushiki Kaisha (JAT),** begins to evaporate.

On December 16, under direction of the Japanese Army, the company becomes joint founder, with three local Chinese governments under Tokyo's control, of **China Airways, Ltd. (Zhonghua Hangkong Gongsu).** A subordinate to the military, the new entrant succeeds the former **Huitong Airways, Ltd.** The last of 10 Fokker VIIb/3ms and 4 imported Douglas DC-2s are withdrawn in December and are sent out to China Airways, Ltd.

For the year, JAT and JAL-1 transport a total of 69,268 passengers (almost all soldiers); this figure represents 2.6% of the world's air passenger traffic.

The He-116 *Nogi* makes a goodwill flight to Siam between January 25 and February 5, 1939, flying Tokyo-Bangkok in 18 hrs. 52 min. Also in February, the last of seven DC-3s imported by Mitsui & Co., Ltd., beginning at the end of 1937, is received. A modified Kawinishi H4K or Type 97 undertakes a flying boat survey flight from Yokohama to Saipan and Palau on April 1 and on April 9 the modified Mitsubishi G3M2 *Soyokaze* makes a goodwill flight to Persia to participate in the wedding of the Iranian crown prince and for long-range flight training. Twenty-four Mitsubishi G3M2s obtained the previous fall, joined by other types such as Nakajima AT-2s and Douglas DC-3s, now commence operations on internal routes as well as destinations in China, Formosa, Korea, and Thailand.

Orders are placed for the Mitsubishi MC.20 I transport, a design based on the company's Ki-21 bomber. (The Allies codename the type "Sally.") With ¥ 3.725 million from the government and ¥ 6.275-million public investment, JAL is reorganized on August 31 into a half state-owned joint-stock concern; renamed **Great Japan (Dai Nippon Koku) Air Lines (DNK),** Kenzo Nakagawa is appointed president with former JAL President Saito as vice president. The move allows the government to exercise almost direct control over the carrier and its operations.

Between August 26 and October 20, the G3M2 *Nippon* makes a 32,845-mile around-the-world demonstration flight under sponsorship of the *Asahi Shimbun* newspaper group, flying via Alaska, Canada, the

U.S., Central and South America, Dakar, Casablanca, Rome, the Mideast, Southeast Asia, and Taiwan in 194 flying hours. Having been found too large and costly to operate by American carriers, the experimental Douglas DC-4E Super Mainliner is sold to this Japanese airline via the Mitsui Trading Company, Ltd. in mid-September for \$950,000; disassembled, the aircraft is shipped to Japan by sea on September 29. On October 1, all remaining domestic airline activity in Japan ceases or is transferred over to DNK.

Ostensibly to be employed by the carrier, after tests as a VIP transport the DC-4E is reassembled by Douglas technicians at Tokyo in mid-October and given Japanese registration. It is flown on evaluation by Capt. Haruo Odagiri, who will, in the service of the Army's Tachikawa Aeronautical Institute (Engineering), become something of an expert on Allied transports, and will test fly a DC-5 captured from **KNILM (Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij, N.V.)** in February 1942.

Also in October, the builder Showa Hikoki Kogyo KK delivers the first Douglas L2D1 (DC-3) completed in Japan. An aviation bilateral agreement is signed with Thailand on November 30 and the Mitsubishi G3M2 *Yamato* departs Tokyo on December 23 on a goodwill flight to Rome.

The *Yamato's* multistage goodwill flight to Italy is completed on January 23, 1940; in February, another of her type undertakes a survey flight to Bangkok, to which city regularly scheduled weekly service begins on June 10. Meanwhile, regularly scheduled Kawanishi Type 97 services are inaugurated in March from Yokohama to Saipan and Palau and the Tokyo to Taipei via Fukuoka route is extended to Canton.

At midyear, the two He-116s are withdrawn and it is reported that the former Super Mainliner has crashed into Tokyo Bay while on a test flight. In fact, the aircraft has been disassembled by Nakajima for study; components of the DC-4E wing and tail will be employed in creation of the unsuccessful G5N1 Shinzan bomber.

War erupts in Europe on September 1 and the first of 60-plus Mitsubishi MC.20 Is are introduced at Tokyo (HAD) during the month. Provisional scheduled service is initiated on behalf of the Japanese Army during October and in November, while on a test flight, the first MC.20 I crashes into Tokyo Bay (13 dead). The tragedy does not impact the generally high opinion of the aircraft, which is now ordered into full production (several units will be transferred to the Imperial Navy as L4M1s).

Now at its civil peak, the company employs a workforce of 5,000 and operates 120 transports. Its 31,000-km. network stretches from Japan to Korea, Taiwan, China, Manchuria, French Indochina, Thailand, and the Marshall and Caroline Islands.

Early in 1941, the last of 8 Nakajima P-1s and 15 Airspeed Envoys are retired. MC-20 service is inaugurated from Tokyo to Changchun via Seoul on March 17, while on April 1 the company, with Vichy French permission, begins visiting the Indochinese communities of Hanoi, Touran and Saigon. Service arriving at Dairen from Seoul is simultaneously extended on to Peking.

Following a July close inspection by the Army and Imperial Navy, a new agreement is signed by them with the airline promising that, in the event of war with the U.S., a percentage of the JAL-1 fleet and crews would still be reserved for commercial operations. In August, as part of this arrangement—and for the first time since its formation in 1938—the company is called upon to directly support a military operation when several of its aircraft and crews are taken over by the Imperial Navy and formed into the 1st Drafted Air Transport Unit. The group is sent out to Hainan Island, China, to fly local transport missions from Haikou.

Due to a shortage of crews, domestic flights are curtailed in September and in preparation for war with the West, the company establishes a special transport group during October and sends it to Indochina. By late November, Japanese aircraft carriers are at sea en route to attack Hawaii and the airline is now at its prewar zenith, with a total network of 30,600 km., including 17,850 km. of domestic routes.

War is launched with Britain, the Netherlands, and the United States on December 7–8; the same day, the Imperial Navy informs the carrier

that its modified G3M2s and H4Ks, plus a number of AT-2s and DC-3s will henceforth operate under naval control. Drafted Air Transport Units 2, 3, 4, 5, and 6 are now established.

JAL-1 suspends all private commercial services in January 1942; its aircraft lose their civil livery and are painted in camouflage with military *Hinomaru* (The Sun's Red Disc) markings as the company, almost as a whole, now becomes a super transport arm for the nation's military. In February, several provisional scheduled services are started for the Army between Japan and Manila, Davao, Tarakan, Miri, Canton, Kuching, Moulmein, and Rangoon; the latter two points via Saigon and Bangkok.

The same month, the Imperial Navy's Drafted Air Transport Units are dispatched to secured Southeast Asian areas to establish a scheduled service network. With 1,200 affected employees and 75 aircraft, the units provide flights to Japan, the Philippines, French Indochina, Malaya, Singapore, the Dutch East Indies, Burma, and the Marshall and Caroline Islands. The Imperial Navy provides only basic oversight, leaving all operational procedures, maintenance, etc. to the airline officials and personnel involved. The first up-engined MC-20 II transports enter service in May.

On July 10, aircraft and crews from the company and its subsidiaries, **Manchurian Air Transport Company, Ltd. (MAT)** and **China Airways, Ltd.**, are merged into the Army's Southern Air Transport Command (Nanpo Koku Yusobu or NKY), based at Singapore. With almost 2,000 affected employees and 125 aircraft, the NKY provides flights over a 28,000-km. network with destinations in Japan, China, the Philippines, French Indochina, the Dutch East Indies, Thailand, Malaya, Singapore, Burma, and New Guinea. The Army treats civilian personnel as military personnel, but the organization is allowed its own maintenance center and flight school. Integration of personnel and procedures from the three carriers is difficult and causes not only maintenance and repair difficulties, but has a negative effect on the rate of aircraft utilization as well.

Late in the year, the government begins the rapid training of young pilots, many fresh from school. When these are sent out to the forward combat areas, they are often involved in transport accidents. The last of the 8 imported Fokker Model 8 Super Universals and 14 Beech C-17Es are written off, retired, or lost during the year.

As the battle for Guadalcanal reaches its conclusion in March 1943, the use of civil transports for evacuation purposes intensifies. In April, direct airline services are inaugurated between Manila and Tokyo with Army MC-20s and Navy H8K Emily flying boats.

On July 7, the Army attempts to open a commercial air route to Berlin; a Kawasaki Ki-77 with a combined military and civilian crew departs Singapore, but soon goes missing over the Indian Ocean, presumably shot down by the Allies. With the Rising Sun's military air forces shifting over to defensive operations, fighter escort is now unavailable for company transports. During the remainder of the year, at least 15 civilian flight crewmen are killed in action when their unescorted planes are shot down or bombed.

American troops land on Saipan on June 15, 1944 and by July 4, all of the civilian aircrews on the island are dead. By fall, activities of the civilian flight crews operating on behalf of both the Army and Imperial Navy decrease significantly, both because of attrition and because of interception by marauding Allied aircraft. A total of not less than 73 civilian flight crew members are killed in action during the year.

During a single bombing raid on Clark Field, Philippine Islands, in January 1945, the NKY loses 41 transports. The conflict ends on August 15, by which time another 94 civilian flight crew members have perished on the year. The airline's remaining fleet, in Japan, totals 16 G3M2s, 33 MC-20 I/Is, and 38 DC-3s. All civil flying in Japan is banned on August 24.

In cooperation with the Imperial Army and Navy, JAL-1 is allowed to resume domestic services on September 14. Aircraft all wear green crosses on white backgrounds painted over the former location of their Rising Suns. Flights are conducted between the principal cities of

Tokyo, Osaka, Nagoya, Kyushu, Takamatsu, and Sapporo. Hiroshima and Nagasaki are noticeably absent from their route network. By order of General Douglas MacArthur, Supreme Allied Commander, all JAL-1 flights cease on October 9, after completion of a final service from Sapporo to Matsudo.

The airline is dissolved on October 31 and the Supreme Allied Commander's Aviation Prohibition Order SCAPIN 301 takes effect on November 19 banning all civil flight. Beginning in August 1946, **Northwest Airlines** and other U.S. carriers will provide commercial services in and to the country.

JAPAN AIR LINES COMPANY, LTD. (2) (NIHON KOKU KABASHIKI KAISHA) (NKKK/JAL): JAL Building, 4-11 Higashi Shinagawa 2 chome, Shinagawa-ku, Tokyo, 140, Japan; Phone 82 (3) 5460 3109; Fax 82 (3) 5460 5910-1; <http://www.jal.co.jp>; <http://www.japanair.com>; Code JL; Year Founded 1951. On June 26, 1950, the Supreme Commander of the Allied Powers (SCAP) by order 2106 authorizes the resumption of domestic commercial air transport in Japan. Those foreign airlines that had provided services during the 1945-1950 "dark ages" of Rising Sun civil aviation were invited to form a carrier. The Japan Domestic Air Corporation, essentially a paper airline or study group, is established by the joint actions of **Pan American Airways (PAA)**, **Northwest Airlines**, **Canadian Pacific Air Lines**, **Ltd.**, **Philippine Air Lines**, and **Civil Air Transport, Ltd.**

SCAPIN 2106 is altered on January 27, 1951 to allow creation of an indigenous Japanese airline that will employ **Northwest Airlines** pilots and receive maintenance and other technical support from **Transocean Air Lines (TAL)**. Japanese government approval for such a step is received from the Ministry of Transport on May 22.

Private banking and other interests led by central bank vice governor Seijiro Yanagito (who becomes first president) form Japanese Air Lines Company, Ltd. (2), which will come to be known by its JAL initials, on August 1. Initial capitalization is ¥ 100 million (\$280,000) and the carrier's first office is established in a tiny building in Tokyo's Ginza district; it is so small that the freshman directors must sit upon their straw hats.

At the first meeting, Yanagito vows not to play golf, his favorite game, until the infant airline makes a profit. On August 6-7, 13,000 apply for 12 jobs as hostesses with the new airline. On September 4, a peace treaty between the U.S. and Japan is signed at San Francisco.

Forbidden to employ Japanese pilots, the carrier now leases a single Martin 2-0-2 from **Northwest Airlines**; christened *Mokusei-go (Jupiter)* and with a contract crew acquired from **Transocean Air Lines (TAL)**, the plane is employed to start service from Tokyo (HAD) to Osaka and Fukuoka on October 25.

Unable to provide additional equipment, flight crews, or dispatchers, the new Japanese operator subcontracts with TAL to provide both; Orvis Nelson's carrier now begins flying from Honshu to the industrial centers of the outer islands with three 2-0-2s, which it has purchased from **Northwest Airlines**.

A Douglas DC-4 is also leased from TAL, in November. In addition, seven instructors, under the direction of TAL's Far East Operations Director Gene Cohan, begin training Japanese crews for service on the nation's domestic routes.

TAL crews fly two additional 2-0-2s, purchased from **Pioneer Air Lines**, to Japan in February 1952, placing them in service with the other four. Meanwhile, TAL staff begin specified contract maintenance in the company's new JAL Maintenance Company subsidiary facility. The peace treaty with the Allies comes into effect in April. On April 9, the *Mokusei-go* with 4 crew and 33 passengers, crashes into Mount Mikara on Oshima Island; there are no survivors.

During the remainder of the year, additional **Northwest Airlines** and **Transocean Air Lines (TAL)** Martin 2-0-2s and Douglas DC-4s are chartered and 24 additional TAL crewmen are welcomed, allowing extension of the route network to include Sapporo and other points. The Transport Ministry gives the company a full domestic operator's certi-

ficate on September 20, freeing it to begin employing its own owned aircraft and to return the leased 2-0-2s to TAL.

On October 23, a contract is signed with TAL for the provision of international flight crews. On October 25, the carrier employs its owned aircraft, the first of five DC-4s purchased from **Northwest Airlines**. Two de Havilland DH 106 Comet 2s are ordered on November 18, but are never delivered. On December 20, 15 flyers begin training at the TALOA Aeronautics Academy at Oakland.

The fleet is enhanced in 1953 through the purchase of three Douglas DC-6As from **The Flying Tiger Line** and **Slick Airways (1)**; these are converted to DC-6B passenger standard. The Japanese Diet passes legislation on August 1 naming JAL as the nation's single international airline; this Japan Air Lines Law is known as the Nikko Ho. On August 28, company officials announce that, henceforth, its hostesses will wear kimonos. The DC-6Bs are delivered by **Transocean Air Lines (TAL)**, beginning on September 15.

The carrier is reorganized under its present name on October 1 and the \$5.5-million ownership is divided equally between private interest and the government. In fact, the reconfiguration represents an unofficial revival of the prewar **Japan Air Lines Company (1) (Greater Japan [Dai Nippon Kokyuso Kabushiki Kaisha] Air Lines)**, although its Japanese name is Nihon Koku Kabashiki Kaisha (NKKK). The next day, the first DC-6B service is flown from Tokyo to Sapporo.

The same month, JAL joins both ICAO and IATA. Traffic rights to the U.S. are obtained and on October 23, the DC-6B *City of Nagoya*, piloted by **Transocean Air Lines (TAL)** Capt. Claude Turner, departs Tokyo for a survey flight across the Pacific. The first New York sales office is opened in December.

Weekly DC-6B transpacific return flights to San Francisco (Oakland) begin via Wake Island and Honolulu on February 2, 1954. The initial aircraft employed is the *City of Tokyo*, which makes the premier flight in 23 hrs. and introduces the *oshibori* hot towel service to all passengers, a tradition that continues.

The company's first regional service is a route to Okinawa inaugurated on April 5. Tokyo to Osaka night-airmail flights commence on April 27-28. The Emperor and Empress make their first air trip on August 23 aboard a company DC-6B. During the year, additional U.S. sales offices are opened in San Francisco, Los Angeles, and Chicago. The first of two DC-6B flights to Brazil are made in November, allowing passengers to participate in that country's 400th birthday. Although the company acquires a significant share of the transpacific market by year's end and despite a \$3-million government subsidy, it loses money.

A route is opened to Hong Kong on February 4, 1955 and a second Brazil flight is made in March. A group of hostesses begin a promotional tour of the U.S. and Canada on May 23. On August 31, it is reported that the American pilots flying for the carrier may resign rather than pay new higher income taxes.

The 10-millionth mile is recorded in September and 4 DC-8-30s are ordered on November 19. Meanwhile, the decision is taken to replace American pilots on domestic flights while retaining them for foreign services. On December 15, an order is placed for 20 Boeing 707 Stratoliners.

Orders are placed in April 1956 for four DC-7Cs. The first issue of public stock is offered in May; the \$1.38 million raised allows funding for the previously ordered DC-8 jetliners. Labeled the Silk Road, DC-6B service is launched to Bangkok on October 5. The company makes its first profit and Chairman Yanagito is able to play his first game of golf since incorporation.

The first Japanese captain is assigned to a San Francisco flight in March 1957. The subsidiary Airport Ground Service Company is created to provide maintenance services for JAL and other airlines serving Japan.

Company training programs are now finished and for the first time the carrier is able to operate its regular flights with all-Japanese crews. On July 13, the American CAB grants JAL permission to make four special

Tokyo–São Paulo roundtrip flights via San Francisco and New Orleans. On July 20–21, Tokyo–Sapporo summer season midnight flights begin.

The DC-4 *Unzen* with 5 crew and 52 passengers, crash-lands near Itami Airport on September 30; there are no fatalities.

The premier DC-7Cs arrive at the beginning of 1958. On February 15, the *City of San Francisco* is the first to enter transpacific service. As the powerful Douglas transports begin their revenue flights, the DC-6Bs replaced are inserted onto the high-density domestic routes from Tokyo to Osaka, Fukuoka, and Sapporo. On May 9, a DC-6B adds Singapore to the international Silk Road.

A chartered DC-7C flight is made to South America, departing Tokyo on June 8. The carrier's operations center is completed at Tokyo (NRT) on January 26, 1959. All-cargo Tokyo to Los Angeles flights via Honolulu commence on May 2 and on May 28 this new transpacific service is doubled.

One-stop flights to Seattle commence on June 27; Taipei is added as a Silk Road stop on the Hong Kong run on July 30. A new crew training center is opened at Tokyo (HAD). A cooperative pooling agreement is signed with **All-Nippon Airways Company, Ltd.** on October 10 covering domestic routes.

Orders are placed for five Convair CV-880s on March 19, 1960. Joint flights to London and Paris via the North Pole begin in cooperation with **Air France** on March 31, employing French Boeing 707-128s. The first DC-8-32 is delivered to Tokyo on July 22; christened *Fuji*, on August 12 it is placed on the San Francisco route, the company's first jet route, via Honolulu. The second Douglas narrow-body *Nikko* is received on July 29. Osaka to Hong Kong DC-7C service commences the next day.

After trials and demonstrations, the *Nikko* enters service on November 1. Also during the month, the carrier begins to lease a 1,500-sq.-ft. office and warehouse space from **Northwest Airlines** at New York. Share capital of \$14.7 million is acquired and DC-8 service is provided to San Francisco, Seattle, and Hong Kong by the end of the year.

The third DC-8-32 and the first two of five CV-880s are received and placed in service during 1961. It is announced on January 19 that Shizuma Matsuo will succeed President Yanagito the following year. Polar DC-8-32 service to London and Paris via Anchorage is begun on June 7. The premier CV-880M *Sakura* is delivered on July 21 and is employed on training services.

The CV-880Ms *Matsu* and *Kaede* arrive on September 1 and September 8, respectively; they join the *Sakura* in entering revenue service on September 25, initially from Tokyo to Sapporo. On October 1, the CV-880Ms replace DC-6B and DC-8-33 equipment on three routes: Tokyo to Hong Kong direct, with continuing service to Bangkok and Singapore; Tokyo to Hong Kong via Okinawa; and Tokyo to Hong Kong via Osaka and Taipei.

In his final year as president, founder Yanagito's company enplanements total 1,647,940.

Shizuma Matsuo becomes president on January 1, 1962, and his fleet includes 5 CV-880Ms, 5 DC-8-32s, 10 DC-4s, 4 DC-7Cs, and 7 DC-6Bs. Another of the latter type is purchased from **Western Airlines** of the U.S. on February 27.

A DC-4 with 4 crew and 60 passengers is destroyed as the result of a bad landing at Osaka on April 10; there are no fatalities.

Regional Silk Road CV-880M flights commence on June 16. Two more CV-880Ms are received, the *Kiku* on June 7 and the *Ayame* on July 2. A Convair proving flight to London (LHR) is completed on July 14.

European Silk Road CV-880M service begins on October 4; it is flown via Hong Kong, Bangkok, Calcutta, Karachi, Kuwait, Cairo, Rome, and Frankfurt. The stop in Calcutta represents the carrier's first-ever postwar service to India.

During the year, share capital is increased to \$32.5 million.

Three leased CV-880Ms and two additional DC-8-32s join the fleet in 1963. The first two of the former, the *Sumire* and *Kikyo*, are assigned to domestic and regional services. The DC-7Cs and DC-4s are withdrawn. The CV-880M *Yanagi* is received on July 3.

On November 19, an order is placed for five U.S. built SSTs. (The aircraft will never be built and JAL-2 will receive a refund on December 3, 1970.)

Passenger bookings this year reach 1,719,000.

The employee population in 1964 is 8,546. A Tokyo–Seoul route is opened on April 15 and traffic to and from the Tokyo Olympic Games is serviced by an augmented frequency of transpacific flights. The company's two routes to Europe also enjoy traffic increases. Improvements at Osaka Airport to accommodate CV-880Ms makes it possible to reinstate the city as a stop on routes from Tokyo, Taipei, Hong Kong, and Okinawa. A major rapid transit competitor, the *Shin Kansen* or "Bullet Train," begins running in August.

Three additional DC-8-32s join the fleet as six Boeing 727-146s and a DC-8-50F are ordered. Passenger bookings increase 25% to 2,292,000, largely due to the Olympics, but also because this is the first year in which the Japanese government allows tourists to travel abroad. Revenues are \$45.4 million.

The workforce is increased to 8,975 in 1965.

Two B-727-146s and 2 DC-8-32s join a 33 plane fleet that now also includes 10 other DC-8-32s, 7 CV-880Ms, 8 DC-6Bs, and 3 Beech 18 trainers. Outstanding are orders for 4 B-727-146s, 2 DC-8-32s, and 1 DC-8-50F.

The CV-880M *Kaede*, with six crew, crashes at Iki Island, Kyushu, on February 27 while on a training flight; the aircraft, which has descended too fast and hit the runway, slides along, catching fire. There are no fatalities.

Traffic rights to New York City are obtained and plans are made to begin flights to the "Big Apple."

The *Asama* enters service in March over the company's routes from Tokyo to San Francisco; it is the first DC-8-55NB Jet Trader, configured for both passengers (54) and freight (26 tons on 9 cargo pallets).

On April 1, a pooling agreement is signed with **Alitalia, S.p.A., Deutsche Lufthansa, A.G.,** and **Air France**. The arrangement provides for joint maintenance and technical support and is actually a preliminary pact to the larger ATLAS group accords signed later.

CV-880M Polar service to is rerouted via Hamburg on May 2, while Paris and New Delhi become stops on the European Silk Road. The Boeing trimotors, the first products to be acquired from the Seattle manufacturer, enter service on August 1 over the company's several-times-per-day routes from Tokyo to Osaka and Fukuoka, replacing DC-7Cs.

On September 15, requests are made for three Anglo-French Concorde. (The type will never be delivered and JAL-2 will receive a deposit refund for these planes in June 1973.) The *isuru* (crane) is unveiled as an important new and official symbol of corporate identity.

Air cargo on the San Francisco route is growing so quickly that one DC-8-32 on order must be changed to freighter configuration. The first JALPAK two-week group tour to Europe sets off a demand for foreign air travel that requires daily flights to Europe and frequency increases to 17-per-week on the Pacific and Hong Kong routes. JAL, which will compare this sudden re-entry of its citizens into the world to Commodore Perry's initial opening of Japan in 1853, will play a key role in the westernization of postwar Japan. Just after its receipt, the new DC-8-33F crashes at San Francisco on December 25.

While freight traffic, overall, is up significantly; enplanements do not, however, take off immediately and are, in fact, down to 2,073,756. Share capital is increased to \$50.5 million.

Six B-727-146s and four DC-8-32s join the fleet in 1966 as four DC-6Bs are retired. Orders are placed for six B-747-100s. Amsterdam joins the trans-Polar route on April 2, while Silk Road flights touch down at Tehran, en route to Europe, beginning on April 4. The Convair CV-880M *Gina* is leased from **Japan Domestic Airways Company, Ltd.** on May 1.

Negotiations are opened with the Russians for a trans-Siberian route. Flown by a five-man crew and still in JDA colors, the CV-880M *Gina*, explodes in midair while taking off from Tokyo on a training flight on August 26; there are no survivors.

The company's around-the-world network is completed when the San Francisco terminus is connected to New York and London and from there to the head of the Silk Road at Frankfurt.

On Christmas Day, the airline's hostesses win their campaign to be called stewardesses.

Bookings this year rise to 2,175,000.

Airline employment in 1967 climbs to 10,499. In the spring, the JALCOM computerized reservations system is introduced. Four B-727-146s are added and orders are placed for 10 additional DC-8-62s.

On January 20, the governments of the Soviet Union and Japan sign an agreement under which JAL will be allowed to fly to various European destinations via Moscow. The deal requires the use of Soviet aircraft and cockpit crews. In cooperation with **Aeroflot Soviet Airlines**, a joint 4,563-mi. "Great Circle" route Moscow-Tokyo via Siberia, Tu-114 return service is inaugurated on April 17. Aeroflot flight crews pilot the aircraft while JAL cabin crew service passengers. The Tupolevs employed wear JAL's crane logo and name on their lower forward fuselages.

New regional flights to Kuala Lumpur commence on May 8. **Southwest Airlines, Ltd.** (later **Southwest Air Lines, Ltd.**) is formed on June 22 as a subsidiary to offer services from Japan to the Ryukyu Islands. A third consecutive one-year deal is signed with **Trans International Airlines** on October 20 for pilot training. Manila is a new market entered on November 20.

Passenger boardings rise to 3,029,717 while freight traffic is up by 40%.

The payroll in 1968 grows to 11,279 personnel. Including one freighter, six DC-8-62s are delivered as two DC-6Bs are sold. One of the former inaugurates nonstop Tokyo to San Francisco service on June 16. Vancouver becomes a part-time destination on the San Francisco route as of September 11.

A DC-8-62 with 107 aboard comes down in San Francisco Bay about three miles short of the runway at the international airport on November 22; no one is hurt as the passengers and crew are taken off on rafts. Salvage operations begin the next day and the plane is recovered two days later.

On the year, cargo increases 40% and passenger traffic advances by 25.5% to 3,802,211 passengers carried. Revenues of \$89.6 million are earned.

Three more DC-8-62s are placed in service during 1969. The last DC-6B is retired on March 30. As part of a newly unveiled Global Growth plan, frequencies are increased on transpacific, Japan-Europe polar and southern routes, North Atlantic and Asian routes, and the subsidiary JAL Creative Tours, Ltd. to market excursions and various other travel packages. On June 1, Il-62s succeed Tu-114s on the joint service with **Aeroflot Soviet Airlines**.

While on a training flight from Moses Lake, Washington, on June 24, a CV-880M, with five crew and leased for charter work, yaws to the right, strikes the runway, and slides off of it, bursting into flames (three dead).

Orders remain outstanding for seven DC-8-61s, two DC-8-62s, one a CF variant.

The Hong Kong route is extended to Sydney on September 30. Later in the year, the company moves its U.S. operations into a new headquarters building on New York's Fifth Avenue.

Enplanements for the year are 5,938,960.

Airline employment in 1970 is 14,566. In cooperation with **Aeroflot Soviet Airlines**, 14-hr. 40-min. Paris-Moscow-Tokyo "Great Circle" flights begin on March 29. The service is the first Aeroflot-JAL pooled service to be operated employing the Japanese line's aircraft (DC-8-62s) and flight crews, with Aeroflot cabin crew, as well as Il-62s with Japanese cabin crews.

On March 31, a group of some 15 radical Japanese students, including four Red Army terrorists led by T. Tamiya, armed with swords and a bomb, take over Flight 351, a DC-8-62 with 138 passengers en route from Tokyo to Fukuoka, and order it diverted to P'yongyang. After re-

fueling at Fukuoka, where 15 women and children are allowed off, the Douglas transport departs as required. Entering North Korean airspace, it is fired upon and when turned back, is intercepted by South Korean fighter planes, which force it to land at Kimpo Airport, Seoul, where all of the flags have been removed to make it resemble a North Korean airport.

When the ruse fails, a compromise is offered that would allow the plane to proceed to P'yongyang in exchange for the release of the hostages. This offer is rejected by the pirates and the plane sits without significant change until April 3. On that date, the passengers are exchanged for Japanese Vice Transport Minister Yamamura, who agrees to act as hostage.

The DC-8-62, the minister, fanatics, and three crew members are allowed to proceed to P'yongyang where the pirates are taken in. The aircraft and the former hostages return to Tokyo the next day.

Bunsei Sato, in a translated edition, reviews the event in his *Hijack: 144 Lives in the Balance—a First Hand Report* (Los Angeles: Gateway Publications, 1975).

The first of three additional B-747-146s to be delivered on the year arrives at Tokyo on April 22 and joins an all-jet fleet comprising 36 DC-8-32s/62s, 4 CV-880Ms, and 14 B-727-146s. Also in April, pooled services begin with **Garuda Indonesian Airlines** on routes from Tokyo to Jakarta and Denpasar.

Two more Jumbojets arrive on May 18 and June 26, respectively.

Following the same arrangement as that instituted on March 29, twice-weekly London-Moscow-Tokyo service is inaugurated on June 2.

A B-747-146 with a full JAL-only crew is allowed to fly the Tokyo-Paris via Moscow route for the first time beginning on July 1, the same day six-times-per-week Jumbojet transpacific service is inaugurated. The Sydney route is simultaneously rerouted via Manila. The CV-880Ms *Matsu* and *Kiku* are sold to **Cathay Pacific Airways (Pty.), Ltd.** in June and July.

For the first time since 1944, flights to Guam are undertaken, beginning on October 1. By year's end, the last CV-880Ms are retired.

Cargo accelerates 10.6% and passenger boardings swell 26.4% to 6,067,000. In terms of passenger boardings, JAL is now the 15th largest airline in the world; in freight and fleet size it ranks 19th, and in employment it is 16th.

Orders are placed in 1971 for four B-747SRs as five Jumbojets join the fleet between February 11 and November 30—one Dash-146 and four stretched Dash-246Bs. Shizuma Matsuo is named chairman and is succeeded as president by Shizuo Asada. It is reported on January 17 that the heavy passenger traffic enjoyed on the 11-month-old trans-Siberian route from Tokyo to Western Europe is causing friction with the Soviets, whose **Aeroflot Soviet Airlines** has averaged about half as many passengers. JAL personnel in Moscow, meanwhile, complain of poor housing, embargoes on Japanese food, and travel restrictions.

A new joint return cargo service is opened with **Aeroflot Soviet Airlines** on May 28 between Khabarovsk and Tokyo. The Soviet carrier initially flies its Tu-134s from the Russian Far Eastern provincial capital to Tokyo, while JAL operates Boeing 727-146s from Japan to Russia. Again, the aircraft involved wear joint markings. Passengers are able to fly the route after June 2.

Enplanements this year balloon to 6,764,705.

The workforce in 1972 rises to 17,689. The fleet now includes 16 Jumbojets, 19 DC-8-61s, 6 B-727-146s, 13 DC-8-32s/50s, 9 DC-8-62s, 2 DC-8-55Fs, and 5 DC-8-62Fs. Three B-747-146s and five B-747-246Bs are acquired between March 2 and December 8. These, like their predecessors, are called Garden Jets; their upper decks are dubbed "Tea-houses of the Sky."

Copenhagen is added as a destination on the joint "Great Circle" route service with **Aeroflot Soviet Airlines** as of April 3. Daily flights are also simultaneously opened over the polar route via Anchorage to New York, and thrice-weekly Tokyo-Mexico City service via Vancouver is also inaugurated. An \$8-million cargo terminal is opened at New York (JFK).

En route from Tokyo to Hong Kong and Bangkok on June 14, Flight 471, a DC-8-53 with 11 crew and 76 passengers, catches fire in midair as it attempts to land at Palam Airport at New Delhi; it crashes onto the banks of the River Yamuna (82 dead).

Dwindling demand causes the carrier's Calcutta stop to be transferred to Bombay during July.

Japanese jetliners leave Shanghai on August 17 after returning the Shanghai Ballet Troupe to the People's Republic following a Rising Sun tour; the trip represents the first commercial flight by a Japanese aircraft into China since World War II.

A DC-8-53 with 14 crew and 108 passengers, lands on the wrong runway at Bombay's Juhu Airport on September 24 and runs off the runway into a ditch. There are no fatalities.

On a November 6 domestic flight, a short-range B-747-146 with 120 passengers is taken over by T. Nakaoka, who forces it to land at Tokyo. The pirate holds the Jumbojet and its passengers on the ground for 7 hours while awaiting a \$2-million ransom and the arrival of a DC-8-61 to fly him to Cuba. While boarding the Douglas transport, Nakaoka is seized by police. He will be tried and given a 20-year prison term.

A second pilot training center is occupied at Napa, California. At New York (JFK), a \$2-million passenger terminal and an \$8-million cargo terminal are both opened. Plans are made to begin services to Communist China during the next year or two.

While taking off from Moscow's Sheremetyevo Airport on November 28, Flight 446, a DC-8-62 with 14 crew and 62 passengers, crashes (61 dead); a week later, the company offers to pay \$4,000 each to families of the 42 Japanese killed.

On December 1, following an order from Transport Minister Sasaki that requires the line to reduce its services on international routes and restrict its policy of rapid expansion, the carrier announces that it is suspending its "Around-the-World" service links between London, New York, and San Francisco until March.

Passenger boardings soar to 7,840,000, a rise of 25% over 1971.

Operations continue apace throughout the first half of 1973. On June 3 Niigata replaces Tokyo as the Japanese terminus of the joint Japan to Khabarovsk service flown with **Aeroflot Soviet Airlines**.

En route from Amsterdam to Tokyo on July 20, a B-747-246B, Flight 404 with 145 aboard, is hijacked just after takeoff by three Popular Front for the Liberation of Palestine (PFLP) guerrillas and a member of the Japanese Red Army "acting for the people of Palestine." The pirates make unsuccessful attempts to land in Basra, Iraq, and Bahrain, but are finally allowed to land in Dubai. The body of a female hijacker, killed after a grenade she was holding explodes, is removed, along with an injured JAL crewman. UAE Defense Minister Sheik Mohammed Bin Rashid is allowed aboard to negotiate. On July 24, the Jumbojet is forced to fly to Benghazi, Libya, where all deplane and the airliner is blown up. The same day, JAL files a record single-plane aircraft insurance claim of \$24 million. Two days later, two Japanese DC-8-61s arrive at Benghazi to take the stranded passengers back to Tokyo.

Delivered on September 26, the world's first B-747SR, a Dash-46, is placed into service on October 7 on the route from Tokyo to Okinawa. A second B-747SR-46, also capable of lifting 498 passengers, enters service on December 21 and joins the first on the services from Tokyo to Sapporo and Fukuoka. Freight traffic during the year jumps 22% and passenger bookings accelerate 12% to 8,780,800.

Airline employment stands at 20,624 in 1974. Between February 19 and December 17, four B-747SR-46s, two B-747-246Bs, and one B-747-246F are added.

En route from Tokyo to Okinawa on March 12, a B-747SR-46 is hijacked by a lone gunman, who demands a ransom of \$55 million, 15 parachutes, and mountain-climbing gear. Before any of this is delivered, he is captured at Naha by police who boarded the aircraft disguised as caterers.

Japan and Hong Kong enter into new bilateral discussions in March. Also during the month, **Cathay Pacific Airways (Pty.), Ltd.** service to Osaka is restricted; in retaliation, JAL is forced to drop Hong Kong from

its Tokyo to Sydney route. B-747SR-46 Tokyo to Fukuoka and Sapporo flights commence on April 1.

On April 5, Frankfurt becomes a destination on the joint "Great Circle" route service operated with **Aeroflot Soviet Airlines**. Following the government's recognition of the People's Republic of China and the signing of a bilateral agreement between Japan and the PRC on April 20, the flag carrier suspends flights to Taipei on April 22. Also in April, new frequencies are initiated to Rome.

On July 15, a youth armed with a knife and claiming to have a bomb, hijacks a DC-8-61 during an Osaka to Tokyo flight. He orders the craft to fly to Nagoya and demands freedom for imprisoned Red Army Chairman Takaya Shiomi; the pirate is seized by police when the plane lands in Nagoya. He will be held for 3 years, then tried and given a 10-year prison sentence.

The hardball bilateral negotiations between Japan and Hong Kong take a turn for the worse on September 15 when JAL is banned from Hong Kong entirely. British and Japanese diplomats redouble their efforts to find a new accord. Creating the first air link between North America and the PRC via the Pacific, Tokyo-Peking and Shanghai twice-weekly DC-8-62 service is inaugurated on September 30. JAL will be allowed to use Peking as a stopover on flights to the Mideast and Pakistan.

Using the new freighter delivered on September 17, the airline commences B-747-246F flights across the Pacific in October, followed by the opening of new routes to Rome and Frankfurt via Moscow and the introduction of B-747-146 service to Bangkok, Copenhagen, and Singapore. Having found agreement on a new bilateral for Hong Kong, JAL is able to resume full service to the British Crown Colony on November 1; **Cathay Pacific Airways (Pty.), Ltd.** flights to Osaka and other Japanese cities also return to normal.

While it is preparing for departure on a domestic service from Tokyo to Sapporo on November 23, a DC-8-61 is taken over by a 16-year-old boy claiming to have a stick of dynamite. While ranting and raving, the youth is overpowered by a crew member. He will be turned over to police shortly thereafter.

Orders are placed on December 28 for four Douglas DC-10-40s.

Passenger boardings jump 8.79% to 9,204,679 and cargo is up 2.68%.

In 1975 the payroll is increased by 576 personnel. On February 1, a possible airline accident is averted when quick action by Danish health officials identifies a ham omelet served on an Anchorage-Copenhagen flight as the cause of food poisoning in 144 passengers. Joint freighter service is begun with **Air France** on routes from Tokyo to Paris.

On April 1, the new B-747SR-46s are placed in service on domestic routes. Nine days later, one of the new aircraft, while en route from Sapporo to Tokyo, is taken over by a lone gunman who demands a ransom of ¥ 30 million. Following arrival of the flight at its destination, police covertly enter the plane and seize the hijacker while he is engaged in debate with the pilot.

During the month, joint freighter flights commence with **Deutsche Lufthansa, A.G.** over a route from Tokyo to Frankfurt.

The wholly owned subsidiary **Japan Asia Airways Company, Ltd.** is formed on August 8 to operate services to Taipei. One additional B-747SR-46 is ordered and four B-727-146s are retired. One each B-747SR-46, B-747-246B, and B-747-146 are acquired as orders are also placed for two more DC-10-40s.

Nonstop B-747-146 Los Angeles and San Francisco to Tokyo service is launched and Jumbojets replace DC-8-62s on the Vancouver, Mexico City, India, Middle East, and Europe routes. DC-8-62s with a wide-body look, complete with audiovisual entertainment systems, go into service on the daily New York-Tokyo run. The JALCOM II automatic reservations system is extended to Europe, making it the only computerized airline reservations system linking three continents. The carrier's hotel system is expanded by the opening of the new Imperial Hotel in downtown Tokyo.

While preparing to leave snowy Anchorage on December 16 to continue a flight from Tokyo to London, a B-747-246B is blown off a

runway before takeoff and slides backward down an embankment to rest straddling a gully; although there are no casualties, the Jumbojet is badly damaged.

Charter boardings increase 59% on the year to 318,674 and scheduled bookings grow 1.59% to 9,207,097; freight is up 22.5%. A net loss of \$90 million is suffered.

Airline employment declines 2.2% in 1976 to 20,685 as the carrier's twenty-fifth anniversary is celebrated.

While en route from Bangkok to Tokyo, a DC-8-61 with 200 passengers is seized by 2 gunmen at its intermediate Manila stop on January 5. The pirates surrender 10 hours later, after receiving assurances from the Philippine government that it will improve the nation's living conditions.

The first of six DC-10-40Ds for use on domestic routes to arrive during the year is delivered in February and enters service between Tokyo and Fukuoka, Osaka, and Sapporo on March 17.

It is followed in August by the first of 10 DC-10-40s that will be employed on international services. New bilateral discussions are opened with the U.S. with the goal of obtaining additional U.S. destinations and services beyond to South America.

Cargo increases 8% and passenger boardings ascent 2.4% to 9,319,000. A \$3.7-million net profit is recorded.

A DC-8-62AF with 3 crew, 2 passengers, and 56 head of cattle, stalls during its initial climb away from Anchorage on January 13, 1977 and crashes; there are no survivors. It will later be determined that the American pilot had a blood alcohol level of 0.298% or twice the legal limit for drivers on U.S. highways.

Beginning on January 27, the company, in response to the Anchorage tragedy, requires preflight alcohol tests of all pilots. DC-10-40 service from Tokyo to New York via Anchorage begins on April 1 while B-747SR-46 service is inaugurated on May 17 from Tokyo to Osaka. A DC-8-62 inaugurates the company's first service to Brazil on June 20, visiting both São Paulo and Rio de Janeiro.

While on initial approach to Kuala Lumpur in a thunderstorm on September 27, a DC-8-62H with 10 crew and 69 passengers, strikes a 300-ft. hill 4 mi. from the runway and crashes (34 dead).

The corporate shareholding is now realigned; private and local government interests take 62.3% while the national government holds 37.7%. Negotiations begun with the U.S. in 1976 are successfully concluded.

En route from Bombay to Bangkok and Tokyo on September 28 with 156 aboard, a DC-8-62 is seized by 5 members of the Red Army, armed with guns and grenades, and is forced to land at Dacca, Bangladesh. There the pirates demand, and receive the next day, the release of 9 of their colleagues from Japanese prisons, along with a \$6-million ransom. Five hostages are released.

The five ex-Red Army prisoners willing to make the trip are delivered to Dacca on October 1, at which point 30 additional hostages are released. The Red Army pirates order their aircraft flown to Algiers later in the day, where they surrender to authorities after releasing the last of their captives. On a happier note, new scheduled roundtrips to Saipan also begin on October 1.

In December, the airline begins an annual tradition of displaying an origami-decorated Christmas tree in the window of its New York headquarters. The number of DC-10-40s in the fleet inventory grows to eight during the year and a B-747-146 is converted into a B-747-146SF freighter.

On the year, a total of 11,235,306 passengers are carried.

The workforce at Chairman Kogoro Uemura's company is increased 3.2% in 1978 to 21,584. The fleet now comprises 7 B-747-146s, 11 B-747-246Bs, 7 B-747SR-46s, 2 B-747Fs, 2 B-727-146s, 8 DC-10-40s, 3 DC-8-55Fs, 6 DC-8-50s, 17 DC-8-61s, 8 DC-8-62s, and 4 DC-8-62Fs. Orders are outstanding for 5 B-747-246Bs, 2 B-747SR-46s, 2 B-747Fs, and 6 DC-10-40s.

In January the company receives the 1977 "Passenger Service Award" from *Air Transport World* magazine.

The carrier's experimental high speed surface transport (HSST) train achieves an operating speed of 300 km. per hour over its route from Narita Airport to downtown Tokyo. Abu Dhabi becomes a Silk Road stop on June 2.

Beginning on July 18, the carrier offers five beds in its California-Tokyo bound Jumbojets. With government approval, the freight carrier **Nippon Cargo Airlines Company, Ltd.** is formed on September 21.

Baghdad on November 1 becomes a destination on the Silk Road. On November 22, JAL flight attendants strike and threaten additional action if the sleeper service is not ended.

Passenger boardings jump 9% to 12,401,000 and freight is up 15.3%. After paying off all earlier deficits, an \$11.7-million net profit is posted.

Shozo Hotta becomes chairman in 1979. Five B-747-246Bs, a B-747-246F, and three DC-10-40s join the fleet as two DC-8-61s are sold. New Pratt & Whitney engines are installed on the B-747s employed on the Los Angeles service.

In celebration of the twenty-fifth anniversary of the start-up of international operations, initial service is started from Komatsu, Kumamoto, and Nagasaki; a route is extended to Zurich on April 1. Tokyo to Indonesia services via Thailand, however, are suspended between April 15 and May 1 due to a fuel shortage. Advance Purchase Excursions (APEX) fares are introduced across the Pacific.

Two B-747SR-46s return to Tokyo on August 26 after developing engine trouble on flights to Sapporo. A DC-10-40 with 187 aboard hits air turbulence over the north Pacific on November 18; 10 are hurt.

Four days later, Kaqumi Nomura commandeers a DC-10-40 with 356 aboard en route from Osaka to Tokyo, by threatening a stewardess with a can opener. He demands to be flown to the U.S.S.R. While the plane is on the ground at its destination, Nomura is overwhelmed and captured by the aircraft's captain.

Passenger bookings for the year rise 9.2% to 13,535,623 and cargo climbs 16.6%. On revenues of \$2.2 billion, expenses are \$2.1 billion; the profits are, respectively, \$105 million (operating) and \$14.7 million (net).

The workforce is increased by 4% in 1980 to 22,230. Two B-747SR-46s enter service in January and February followed by two B-747-246Fs on March 17; five DC-10-40s are also entered into service.

On February 14, B-747SR-46s fitted with 550 seats are placed on the Okinawa run and the new DC-10-40s become the first wide-bodied airliners to operate into the PRC. New service is inaugurated to Auckland and Nandi on July 4, and Madrid three days later. In September, three classes of service are initiated.

Flights to Bombay cease in October. A new fuel conservation division is established at corporate headquarters in Tokyo during the last quarter.

Freight is up 13.2% to 1.6 billion FTKs, but passenger boardings dip 1.9% to 13,283,000. Revenues are \$1.475 billion, but expenses (led by fuel bills) jump 22.6% to \$1.474 billion, leaving an operating loss of \$1.3 million and a net profit of \$11 million.

Airline employment is decreased by 0.3% in 1981 to 21,854. In January, the company receives the 1980 "Airline of the Year" award from *Air Transport World* magazine.

The fleet now includes 2 DC-8-61s, 12 DC-8-62s, 41 B-747s, 2 B-727-100s, and 18 DC-10-40s, the last Dash-40 unit being delivered in December. Three additional B-747-246Bs and a Dash-246F arrive during the year and the passenger Jumbojets are assigned to new Aloha Express routes started from Sapporo to Honolulu on February 1. Kuwait becomes a Silk Road stop on February 11, replacing Tehran.

The 1953 Japan Air Line Law (Nikko Ho), which recognizes the company as the nation's only international carrier, is revised on April 1, allowing some relaxation in competition. On June 30, Shizuo Asada retires and Yasumoto Takagi, a veteran employee who had begun with **Japan Air Lines Company, Ltd. (1)**, assumes the posts of president/CEO.

The carrier's thirtieth anniversary is celebrated on October 1 and Tokyo (NRT) to Jeddah, Saudi Arabia, flights commence on December 28.

Passenger traffic declines again, by 0.5%, down to 13 million, but freight climbs 8.2% to 1,725,057,000 FTKs, bringing the carrier the honor of becoming (according to IATA figures) the world's leading international cargo carrier. Revenues are up 15.1% to \$2.97 billion, while expenses grow only 13.4% to 2.93 billion; profits are, respectively, \$43.2 million (operating) and \$17 million (net).

The employee population in 1982 is increased 1.3% to 22,132. Two B-747-246Bs and a DC-10-40 are delivered and a B-747-146 is transferred to **Japan Asia Airways, Ltd.** The pioneering DC-8-55NB *Asama* is sold to a Central American concern.

In January, the carrier receives the 1981 "Cargo Development Award" from *Air Transport World* magazine.

On February 8, a deranged Capt. Seiji Katagiri, who had once been grounded for a year for psychosomatic illness, puts one of the four engines of a DC-8-61 during its final approach to Tokyo into reverse thrust. Despite the attempt of flight engineer Yoshimi Ozaki to stop him, the jetliner, with 7 other crew and 166 passengers, loses altitude sharply. After hitting the approach lights, it crashes into Tokyo Bay just 300-m. short of the runway at Haneda Airport, losing its nose and right wing (24 dead). President Takagi apologizes to the Diet during the uproar that follows, but does not, as is customary in Japan, resign.

DC-10-40s replaced DC-8-61s on the company's New Zealand service on April 2. Tokyo-Chicago service via Seattle begins in April.

Just after takeoff from Shanghai on September 17, Flight 792, a DC-8-61 with 11 crew and 113 passengers, loses all hydraulic power; the aircraft is able to make an emergency landing back at its point of origin and there are neither fatalities nor injuries.

Formerly flown by **Pan American World Airways (1)**, a B-747-221F is acquired from the pioneer American carrier on October 29.

The adverse effects of the year's accidents, plus the poor performance of the world's economy in general, leads to a 6.1% decline in passenger boardings to 13,040,000, although freight is up 5.3% to 1.87 billion FTKs.

Airline employment decreases 3.1% in 1983 to 21,058. Four B-747s and a DC-10-40D join the fleet (the Douglas wide-body, the last of its type to be delivered, arrives in March) as six B-767-246s and three B-767-346s are ordered. The year's highlight is the initiation of Tokyo to Chicago via Seattle service. Americans, intrigued about Japan because of the recent television miniseries *Shogun* based upon the James Clavell novel, fly JAL to the Land of the Rising Sun in increasing numbers. Many also join the six million visiting the new Tokyo Disneyland during its first six months. Two more B-747-246Bs arrive during the first two weeks of June and are employed to inaugurate a new Executive Express service.

Meanwhile, an internal company committee recommends that JAL be operated like a commercial enterprise or even privatized. A second B-747-221F is purchased from **Pan American World Airways (1)** on December 20.

As the result of poor ATC, a B-747-200F, just after landing at Anchorage on December 23, strikes an unoccupied and unseen state-operated pickup truck stopped on the runway; of the four crewmen aboard the freighter, one receives serious injuries as the aircraft attempts a quick stop.

Passenger bookings climb 1.9% to 13,584,958 while freight jumps 14.2% to 2.26 billion FTKs. The operating loss is \$37.1 million.

The workforce drops another 1.7% in 1984 to 20,699. Two DC-8-61s, a DC-8-62, and a DC-8-55F are retired as a B-747SR-46 and the first B-747-346 join the fleet in December. With 49 of the Boeing Jumbojets, JAL is now the world's largest operator of the type. Service is reintroduced to São Paulo and Rio de Janeiro on April 1 after a two-year suspension.

Passenger traffic increases. 7.5% to 14,596,000 passengers carried while cargo swells 10.6% to 2.5 billion FTKs. Revenues total \$3.4 billion, up 1.6%, and the operating profit climbs to \$94.5 million.

The payroll in 1985 is reduced by only 134 personnel. The 50th B-747, which is also the second Dash-346, and three B-767-246s are

delivered, the latter beginning in July. Service is launched to Dusseldorf on June 3; a third B-747-246B is assigned to the Executive Express business-class operation.

The worst single-plane accident in commercial aviation history occurs on August 12. Just after takeoff from Tokyo (HAD) for Osaka while the cabin is pressurizing, the rear bulkhead of Flight 123, a B-747SR-46 with 15 crew and 509 passengers, ruptures, severely damaging the tail fin. Without maneuverability, the aircraft is able to remain aloft for 30 min. as the crew employs engine thrust. Eventually, all flight characteristics deteriorate to a point where the Jumbojet brushes against a forested ridge and continues on to hit a second one before impacting a mountainside in flames (520 dead). Details of how much the company will pay victims' families will not be disclosed, but amounts will be estimated at between \$570,000 and \$1.15 million each; survivors of a dead company owner will reportedly receive \$3.45 million.

On September 10, the Minister of Transport appoints a special committee to review Japan's entire air transport and airline structure and to make recommendations on competition and privatization.

En route from Tokyo to Paris via Moscow, a B-747-246B with 132 aboard strays off course over the Sea of Japan on November 2 in the same general area where Soviet fighter planes downed **Korean Airlines/Korean Air (KAL)** KAL 007 two years earlier. Although Russian interceptors are scrambled, they do not confront the airliner. Also in November, a second weekly flight to Auckland is added.

Following the liberalization and privatization recommendations of his special committee, the decision is taken on December 17 to privatize the carrier and, while increased responsibility for domestic service is given, the Transport Ministry also seeks an end to the airline's monopoly on scheduled international flights.

On December 18, President Takagi and Vice President Naoshi Machida resign following company-sponsored memorial services for victims of the August disaster, victim compensation, and government hearings. Tagaki is succeeded by Susumu Yamaji. Also during the December board meeting, Matsuo Toshimitsu is named vice president and Junji Itoh becomes board vice chairman.

Prior to his death at the age of 82 on January 9, 1999, Takagi will not only visit with each victim's family, but will donate \$182,000 to maintain a garden in their memory. Continuing to assume personal responsibility for the disaster, he visits the scene every August 12.

As in 1982, the accident impacts on passenger traffic, which increases only 0.4% to 14,649,000; cargo rises a scant 2.4% to 2.56 billion FTKs, a figure that is still twice as large as that for the second leading Asian freighter, **Korean Airlines/Korean Air (KAL)**. An operating profit of \$152 million and a net profit of \$29.7 million are posted on revenues of \$3.3 billion. Despite the year's difficulties, the carrier at year's end still ranks 14th among all world airlines in terms of passengers carried and total number of employees, 3rd in freight, 23rd in fleet size, 7th in revenues, and 10th in operating profit.

Employment grows 1.6% in 1986 to 20,884. In January, orders are placed for four B-747-346s and a B-747F, while a B-747-146 and the former **Pan American World Airways (1)** Dash-221F are transferred to **Japan Asia Airways, Ltd.** Also in January, in an effort to regain traffic still slowed by the previous year's Jumbojet crash, the company inaugurates hot meal services for early morning flights, with monthly menu changes following. Simultaneously, nonstop Tokyo-London, Paris, and Chicago B-747-246 service is inaugurated, the first two destinations the result of four-times-per-week trans-Siberian runs. The first B-767-346 makes its maiden flight on January 30 and the company's international scheduled service monopoly ends with the introduction of **All Nippon Airways Company, Ltd.** into that arena.

The first B-747-346SUD (SUD stands for "stretched upper deck") with seating for 563 passengers is introduced on March 26. On April 4, Nagoya-Honolulu flights begin; later in the month and in cooperation with **Qantas Airways (Pty.), Ltd.**, joint weekly Tokyo to Perth, Cairns, and Brisbane flights begin with the Australian carrier's B-767-246s. The same month, nonstop Tokyo to London and Paris frequencies are

introduced and, based on the results of a 1985 nationwide contest, new uniform styles for female flight attendants are selected.

In May, the Transport Ministry sets July 1, 1987, as the date for total privatization and Junji Itoh is named chairman on May 27. In July, service is launched to Atlanta. On July 20, the first domestic route since 1951 is opened as B-747SR-46s fly from Tokyo to Kagoshima and Komatsu.

A B-747-246B, carrying Foreign Minister Tadashi Kuranari, is delayed for three hours at New York (JFK) on September 25 after receipt of a bomb threat; no explosive is found. Back in Tokyo the same day, the first B-767-346 is delivered. Also in September, the company signs an interline agreement with **TranStar Airlines** providing JAL's Los Angeles passengers with connections with 11 cities in Florida, Louisiana, Texas, Nevada, and California.

Tokyo to Komatsu flights begin on October 1, followed by Nagoya to Fukuoka service on October 20. Also in October, the first B-767-346 enters revenue service as an \$869-million order is placed for five B-747-346s and six B-767-346s for delivery between September 1987 and June 1988. The DC-8-62 *Taisetsu* is sold to **Interstate Airlines** in the U.S., which has it converted into a freighter.

Flight 1628, a B-747F coming into Anchorage from Iceland on November 17, encounters an Unidentified Flying Object (UFO) near Eielson AFB, which is also captured on radar; the 50 minute incident attracts much public attention.

Another B-747-346 arrives on December 15; since February, four of her type have entered service with the carrier. During the year, the fleet also is enhanced by the staggered delivery of three B-767-246s, two B-747-146SAs, a B-747-246LR, and a B-747-246F; retired are six DC-8-61s and a DC-8-62.

Passenger boardings improve by 2.9% to 15,240,182 and cargo does much better, growing 10.1% to 2.84 billion FTKs. Income accelerates to \$5.3 billion and although an operating profit of \$196.7 million is earned, there is a net loss of \$43.3 million.

The employee population is increased 1.5% in 1987 to 20,884. Under Chairman Itoh's direction, the carrier is restructured and organized into three operating divisions: international, domestic passenger, and cargo. Under criticism from both the government and employees, Itoh resigns on March 31.

Company unions join those from **All-Nippon Airways Company, Ltd. (ANA)** and **Air Nippon Company, Ltd.** in a 48-hour strike on April 22-23 as labor and management negotiations on annual wage hikes collapse. Officials report that the job actions are the first for JAL in two years and the first for ANA in eight. Nearly half of domestic and international services are cancelled on the two days.

Employing B-767-246s, JAL opens its fourth domestic route, between Nagoya and Sapporo, twice daily in May. Four additional weekly U.S.-Japan roundtrips are added in June from Tokyo to New York via Chicago.

The Lower House of the Japanese Diet passes legislation on August 20 abolishing the 1953 Japan Air Lines Law (Nikko Ho), with the Upper House following suit on July 4. Also during the summer, the airline's JALCOM reservations system is revamped and its name is changed to AXESS.

At the end of October and against strong opposition from company labor unions that fear reduced cockpit crews, orders are placed for five B-747-446s. B-747-246s succeed DC-10-40s on November 2 on the company's frequencies to Auckland, New Zealand.

Repeal of the 34-year-old JAL Law, enacted by the Japanese Diet during the summer, takes effect on November 18. Privatization is initiated as the government's remaining 34.5% interest, 48.1 million shares held by the Finance Ministry, is put up for sale to the public on December 15. Much cross-sector shareholding takes place and of the 1.7 billion shares, 30% are held by 14 bank and insurance companies; Tokyo Fire and Marine, with 2.87%, becomes the airline's largest investor, although 400,000 individual investors also gain a stake. The sale nets ¥ 664.5 billion (US\$4 billion).

The same year, the country's airline industry is deregulated and the country's nationalized overseas routes are opened to longtime domestic rival **All Nippon Airways Company, Ltd. (ANA)**. In a major change in JAL's articles of association, the company is now allowed to diversify into 17 new business areas, including real estate and food services. The last DC-8-62 is retired on December 31.

Customer bookings swell 18% to 17,876,636 as freight ascends 12.7% to 3.19 billion FTKs, tops among Asian airlines. Revenues reach \$5.6 billion and profits are \$116 million.

A total of 54 employees are laid off or retired in 1988, a decline in the workforce of 0.1%. Fumio Watanabe is elected chairman on January 11 and in keeping with the company's new private status, a revision of the corporate image is undertaken.

In March, a code-sharing and blocked space agreement is signed with **VARIG Brazilian Airlines (Viacao Area de Rio Grandense, S.A.)** for flights from Tokyo and Nagoya via Los Angeles to Rio de Janeiro and São Paulo. The company's privatization is completed in April. In the same month, President Yamaji writes to Boeing Chairman Frank Schrontz complaining of poor quality control on a newly delivered B-747F and 5 of 11 B-767s; the complaints are leaked to the press.

During the spring, nonstop Tokyo to Frankfurt operations begin. In cooperation with **Aero Asahi Corporation, Ltd.**, the helicopter carrier **City Air Link** is established; it inaugurates Bell 412 passenger transfer services on June 20 between Tokyo (HAD and NRT). In August, joint weekly flights with **Air New Zealand, Ltd.** commence over a route from Tokyo to Christchurch and Auckland. During September, a leasing subsidiary, **Nikko Lease Company, Ltd.**, is established to charter aircraft, ground vehicles, and airport equipment. Simultaneously, a financial company, **JAL Finance Company, Ltd.**, is set up to raise and manage funds for the airline and its affiliated firms.

The number of subsidiary companies now numbers 164, including 16 formed after privatization. Interisland feed in Hawaii is secured through the acquisition of a 20% stake in **Hawaiian Airlines**. In October, joint flights commence with **Thai Airways International, Ltd.** over routes from Nagoya and Fukuoka to Bangkok.

Passenger boardings increase through November by 12% to 18,547,878 and cargo jumps 7.3% to 3.13 billion FTKs. Operating revenues of ¥ 972 million are earned and allow a net profit of ¥ 19.44 million.

The payroll is cut 1.7% in 1989 to 20,486 as the company continues a limited expansion, concentrating on an increase in route frequencies and an expansion into three major non-airline activities: the hospitality industry, associated air transport industries, and information services.

The corporate makeover begun the previous year is completed on May 17, at which time the company name is officially changed to Japan Airlines Company, Ltd. For purposes of consistency in the cross-referencing of this profile, the previous designation will continued to be employed here.

A public offering of \$1 billion in four-year bonds, each with a \$5,000 face value, is placed in the Eurobond market via Nomura International, Ltd. Cooperation with **Southern Air Transport (SAT)** is strengthened in July with the introduction of Tokyo-Chicago freight operations. Later in the month, flights begin from Tokyo to Hakodate.

The carrier, via block-seat purchase, introduces joint weekly service with **Swissair, A.G.** from Tokyo to Zurich in August. The same month, a cargo service network is established in the U.S. in cooperation with **USAir**. Joining with four other companies, the airline, also in August, inaugurates a new subsidiary tourism company, **The Japan Submarine Tourism Company, Ltd.**, to take customers on sight-seeing underwater visits to the Okinawa Marine National Park.

The first B-747-466, publicly called a "Sky Cruiser," is delivered in November. During the month, an alliance is entered into with **Air New Zealand, Ltd.** that provides for code-sharing on services from Tokyo (NRT) and Fukuoka to Auckland and Christchurch.

At year's end, it is reported that the carrier has spent some \$1.1 billion on the purchase of U.S. goods since January, making it the largest

single corporate purchaser of U.S. goods and services. Statisticians for the company also report that, since April 1970, JAL has purchased \$14 billion in U.S. goods from over 3,000 suppliers. Customer bookings accelerate 9.6% on the full year to 21,953,137 while freight is up 5.1% to 3.64 billion FTKs.

Company employment is cut 3% in 1990 to 20,498; however, the workforce is still the 23rd largest among the world's airlines. With 98 aircraft, the fleet is 21st largest.

In January, the first 5 of 20 ordered B-747-446s are placed into service. Simultaneously, the carrier offers an armrest video system in the first- and business-class sections of the new aircraft.

On April 2, the carrier, together with **All Nippon Airlines Company, Ltd.**, begins direct nonstop trans-Siberian flights between Tokyo and Madrid and Tokyo and Stockholm five times a week. These passenger flights will no longer stop in Anchorage.

A new crew training facility is opened at Nagasaki Airport in April to convert flight engineers into pilots. To promote cultural activities, the nonprofit JAL Foundation is established on April 16.

A strategic marketing alliance is signed with the Italian flag carrier **Alitalia, S.p.A.** and late in the month, orders are placed for 10 McDonnell Douglas MD-11s, with options taken on an equal number.

With a May 24 supplemental order for 20 B-747-446s, one unit of which represents the 1,000th request of Boeing for a Jumbojet, JAL now operates or has ordered 104 B-747s, with options taken on 34 more. Also in May, the carrier opens its \$13-million Plane Wash at Tokyo (NRT); the automatic aircraft washing machine can complete the exterior cleansing of a wide-body in 1 hr. 20 min.

During the six-month Garden and Greenery Exposition at Osaka that begins in June, a JAL Sky Restaurant serves selected meals from the airline's executive and first-class menu. Supervised by actual JAL flight attendants, \$80 first-class meals are available in a full-scale B-767 mockup. At the airline's annual meeting on June 28, President Yamaji is named vice chairman; Executive Vice President Matsuo Toshimitsu is elevated to the presidency in his place. The company now begins to sponsor the annual LPGA Big Apple golf classic at New York's Wykagyl Country Club.

During July, the nominal or par value of company stock is reduced from \$3.16 per share to 32 cents in preparation for a summer 10-for-1 stock split that, when completed, increases the volume of authorized shares from 600 million to 6 billion. Also during the month, the company is authorized to begin new North American routes. By the end of the month, there are 6,000 AXESS reservations terminals in operation around the nation, as part of the largest privately owned reservations system in Japan. Incidentally, it is also the first to feature a Japanese-language database employing Japanese characters.

Kuwait is invaded by Iraq on August 6. Later in the month, a cooperative reservations agreement is signed with **Korean Airlines/Korean Air (KAL)**. On November 20, the company reports that it has suffered a loss of more than \$77,500 from counterfeit tickets in circulation since June. Also in November, the carrier orders a pair of British Aerospace BAe Jetstream 31s for use next spring on the Nishi-Seto Air Link.

In December, it is reported that during the past two years the carrier has increased its capitalization by ¥ 235 billion in equity, ¥65 billion in convertible bonds, and \$1 billion in warrant bonds and that the company's bond rating is the highest for any airline in the world.

Passenger boardings rise 7% to 23,463,918, but cargo falls 4.3% to 3.47 billion FTKs. While the passenger figure is only 11th best in the world, the freight figure, although down, is still 3rd behind **Federal Express** and **Deutsche Lufthansa, A.G.** Revenues increase 13.3% to \$6.71 billion, 6th highest in the world and tops among carriers outside of the U.S. Expenses move ahead 14.3% to \$6.24 billion and leave an operating profit of \$468.36 million, 2nd in the world behind only **Singapore Airlines, Ltd.** Net profit increases to \$147.37 million.

The payroll climbs a slight 1.3% in 1991 to 21,485. The fleet now includes 5 B-747-146s, including 1 leased to **Japan Asia Airways, Ltd.**, 3 B-747-146Bs, 1 B-747-146BF, 2 B-747-146BSUDs, 1 B-747-212B,

22 B-747-246Bs, including 1 leased from **Japan Air Charter Company, Ltd.**, 2 B-747-221Fs, including 1 chartered to **Japan Universal System Transport, Ltd.**, 5 owned and 2 leased B-747-246Fs, 16 B-747-446s, 1 B-747SR-46, 4 B-747SR-346s, 3 B-767-246s, 13 B-767-346s, including 3 chartered to other carriers; and 16 DC-10-40s, including 1 leased from **Japan Asia Airways, Ltd.** Orders are outstanding for 24 B-747-446s, 10 B-777-246s, and 10 McDonnell Douglas MD-11s.

Daily flights begin in January from Tokyo to Hiroshima and in February thrice-weekly B-747-246B passenger flights open between Tokyo and Washington, D.C. (IAD). In March, twice-weekly B-747-221F all-cargo service begins from Tokyo to Chicago and on to New York, while the number of Washington, D.C. passenger frequencies is increased from 12 per week to 15. Wet-leased from **Evergreen International Airlines**, a B-747-121F (JAL 43E en route from Tokyo to Chicago) loses its No. 2 engine shortly after takeoff from Anchorage on March 31; there are no injuries.

Employing the two newly received BAe Jetstream 31s, JAL takes over the deficit-ridden Nishi-Seto Air Link service from **Asahi Air Lines, Ltd.** on April 1. The routes from Hiroshima to Matsuyama, Oita, and other destinations, is turned over to **J-Air, Ltd.**, the new commuter subsidiary of the major's JAL Flight Academy. In need of experienced B-767 and Jumbojet crews, discussions are begun with **Qantas Airways (Pty.), Ltd.** for the seconding of a number of surplus Australian personnel.

When the Transport Ministry opens additional slots at Tokyo (HAD) on May 17, they are immediately assigned to Japanese carriers. JAL receives four domestic routes to Akita, Nagasaki, Kumamoto, and Fukuoka, service over which will begin on July 20.

Also in May, weekly B-747-221F flights commence to Cologne and Vice Chairman Yamaji becomes chairman in June. During the last week of June, a bomb is found in the baggage being loaded aboard a company Jumbojet at São Paulo, Brazil; the owner, a Japanese resident of Paraguay, is released after convincing police he had not planted it.

A new passenger charter subsidiary, **Japan Air Charter Company, Ltd.**, is formed and begins service in July, providing lower cost international charter services to the nation's smaller airports under a program labeled JAZ. Simultaneously, a new domestic cargo carrier, **Japan Universal System Transport, Ltd. (JUST)**, is set up to provide express-cargo operations; ownership is divided between JAL (80%) and the trucking firms Yamato Transport (10%) and Nippon Express (10%).

As a result of the company's continuing need for pilots, which translates into the hiring of a significant number of expatriate flyers, local company pilots stage a brief protest strike in late July.

In August, nonstop B-747-446 flights begin to Washington, D.C. In September, domestic flights begin from Osaka to Kagoshima. Later in the month, ground is broken for a new \$115.5-million cargo and office building at New York (JFK). En route from Tokyo (NRT) to Chicago at 16,500 ft. on October 2, a B-747-246B incurs a 3 x 2-ft. hole in its fuselage, punched by hot liquid released from a burst pipe. Although the Jumbojet loses cabin pressure, the pilot is able to dump fuel and make a safe landing back in Japan.

On November 3, twice-weekly B-747-446 passenger flights begin from Tokyo to Berlin's Schoenefeld Airport. Later in the month, daily B-767-346 flights are started from Tokyo to Akita, Kumamoto, and Nagasaki.

Recession and the aftermath of the Gulf crisis cause customer bookings to slide 1.6% to 23,081,459. Cargo dips 3.3% to 3.36 million FTKs and the \$104-million net loss is the largest since privatization.

The number of employees grows 3.2% in 1992 to 22,179. The first of 10 MD-11s is delivered during the first quarter; the group will be named for birds and the first two are the *J-Bird* and *Fairy Pitta*.

In April, the carrier becomes a completely private joint-stock corporation, with 198,836 shareholders. During the spring, a major agreement is signed with **Deutsche Lufthansa, A.G.** that provides for joint freight flights on a route from Tokyo (NRT) to Frankfurt. In addition, joint ventures will begin in such areas as maintenance, the two carriers will share

a cargo facility at Chicago (ORD), and JAL will participate with **Air France** in a joint terminal at New York (JFK).

Beginning in July, the carrier begins introduction of a new first- and business-class food service menu featuring food cooked *Ofukuro no Aji* ("to mother's taste," i.e., home cooking). With the opening of the Beverly Hills hostelry, JAL now operates 32 Nikko hotels worldwide, including 10 in Japan and 22 in major world cities. New services are initiated from Tokyo to Munich, Osaka to Sydney via Cairns, and from Fukuoka to Hakodate. Now unable to provide sufficient flight deck crews to man all of its flights, JAL subcontracts **Qantas Airways (Pty.), Ltd.** to provide replacement services on its routes from Cairns to Brisbane and from Tokyo to Auckland.

As the result of an August agreement with **DHL Worldwide Express**, DHL undertakes cargo delivery in Scandinavia on behalf of the Japanese flag carrier, as well as between inter-U.S. points. The unprofitable route to Bombay is now closed.

Concerned over pollution caused by the painting process, the airline, in September, begins to test a B-747F with a polished aluminum skin, devoid of livery except for the company's name and logo. Chartered **Qantas Airways (Pty.), Ltd.** B-747-338s, repainted in JAL livery, are flown by Australian crews. A new series of first-class and business-class packages are introduced in October on the routes to New York (Big Apple Express) and London (Big Ben Express).

On November 1, the company withdraws from India as its last weekly service to New Delhi via Hong Kong is cancelled. Service to Seattle is suspended the same day.

During December, it is announced that the company will cut costs and reduce capital expenses by ¥ 200 billion (\$1.6 billion) over the next year; bonuses are to be reduced, overtime cut, salary increases limited, the hiring of ground staff will be frozen, and more foreign flight attendants will be employed.

Also during the month, after 5 years of negotiations with Aeroports de Paris, the company is able to obtain 3,200-sq.-m. of warehousing space in the new Fret 4 cargo area at Paris (CDG).

Passenger boardings rebound upward by 4% to 24,005,310, but freight declines 3.9% to 3.22 billion FTKs. Revenues are \$8.4 billion, but expenses are more and as a result, an operating loss of \$98 million is experienced. The net loss is \$22.3 million.

In 1993, Chairman Yamaji and President Toshimitsu oversee a workforce of 21,650, down 3%. The fleet now includes 1 owned and 1 leased B-747-146s, 3 B-747-146Bs and 2 B-747-146SUDs, 14 owned and 7 chartered B-747-246Bs, including 1 borrowed from **Japan Air Charter Company, Ltd.**, 1 B-747-221F, 4 owned and 1 chartered B-747-246Fs, 3 B-747-338s leased from **Qantas Airways (Pty.), Ltd.**, 7 owned and 2 leased B-747-346s, 21 B-747-446s, 4 owned and 4 chartered B-747-446Ds, 4 B-747SR-346s, 10 owned and 3 chartered B-767-346s, 15 DC-10-40s, including 3 leased units, 1 from **Japan Asia Airways, Ltd.**, and 2 MD-11s.

To return the carrier to profitability as quickly as possible and end three years of downturn, a stringent cost-cutting program, the *Mid-Term Plan of 1994-1997*, designed to reduce the operating budget by ¥ 100 million (\$10 million), is instituted. Staff reductions over the next 5 years will reduce the workforce to 17,000.

After six months of operation between Tokyo and Osaka, the East Japan Railway Corporation and Tokai Railway Corporation boost the twice-daily service of their *Nozomi (Hope)* bullet train to hourly on March 18. The competition, now severe, forces JAL to reduce the number of its daily roundtrips two days later from seven to six.

Also in March, as the result of strong turbulence and an undetected 2-inch pylon crack, an engine falls off a B-747F over Anchorage. By March, the complement of expatriate pilots has grown to 300.

With its freighter services unprofitable since 1991, JAL, on April 1, ceases all-cargo flights between Tokyo (NRT) and the Chinese cities of Shanghai and Beijing. It also reduces its transpacific freighter frequencies from 25 to 22 per week.

On April 2, JAL increases its Tokyo to Amsterdam (Schiphol Airport) frequency from three flights per week to five and **KLM (Royal Dutch Airlines, N.V.)**, under a code-sharing agreement, begins transporting JAL passengers from Amsterdam's Schiphol Airport to Madrid and Zurich. The next day, a new direct service originating in Rome is started, linking Milan with Tokyo.

During the same month, a similar agreement, first signed almost 20 years earlier, is revised with **Air France** and now provides for 3 joint freight flights per week between Tokyo (NRT) and Paris (CDG).

A 10% stake is taken in October in Haeco's \$6.3-million Xiamen Aircraft Maintenance Company, scheduled to open in 3 years. On October 29, the carrier asks its more than 200 affiliated companies engaged in the hotel, travel, resort, passenger services, and information sectors, to suspend hiring for fiscal 1995 as part of an ongoing streamlining effort during a prolonged industry slump. The carrier's first president, Seijiro Yanagid, dies on November 18. Customer bookings for the year inch up 0.4% to 23,589,662 and cargo moves ahead by 1.8% to 3.28 billion FTKs. Revenues total \$4.78 billion and expenses are \$4.83 billion. The operating loss declines to \$79.95 million, but the net loss worsens to \$31.93 million. A year later it will be reported that the real operating loss is \$328.98 million and the net downturn is, in fact, \$284.98 million.

The airline population is reduced by another 4% in 1994 to 20,876. A new "survival plan" is unveiled in January that calls for a return to profitability through the elimination of additional positions and the introduction of new products. A joint agreement is signed with **All Nippon Airways Company, Ltd. (ANA)** in February that provides for the joint purchase and repair of aircraft parts, shared hangars and engine test cells, and joint development of technical and staff training manuals for the B-777.

Early in the year, the first two MD-11s, delivered late the previous December, are placed into service as a new route is opened to Bali. The new aircraft are christened "J Birds," with each named for a different species of bird visually portrayed on its winglet, beginning with the *Yairocho (Fairy Pitta)*.

The fortieth year of international service is celebrated. From 2 weekly DC-4 flights to the U.S. in 1954, the carrier has grown to 106 Jumbojet frequencies. In addition to 150 daily flights on its domestic network, the world's 8th largest airline now offers 864 international flights per week to 25 nations. Under a code-sharing agreement signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**, joint flights are undertaken from Tokyo (NRT) to Mexico City; the two companies also begin to participate in one another's frequent flyer programs.

At the same time, following the signing of a new bilateral agreement between Japan and Vietnam, JAL resumes direct, roundtrip flights (suspended in April 1975) between Osaka (KIX) and Ho Chi Minh City. In July, a new automated, multilevel 640,000-sq.-ft. cargo center is opened at New York (JFK).

On August 1, Kobe University student Tomoko Azuma becomes the first female accepted by JAL for pilot training. Her schedule calls for her to begin right-seat service in the fall of 1997. The Hawaiian routes are "branded" in August with the company's new Super Resort Express service, featuring brightly painted aircraft (seven Jumbojets and two DC-10-40s) and new services with a South Seas flavor. The number of weekly Japan to Hawaii roundtrip frequencies increases to 54.

A \$3.5-million advertising concept, centering around the International Family Year sponsored by the UN, Dream Express service is introduced, also in August, with a B-747-146B and two B-767-346s painted in a "Disney on Tour" color scheme. When the company asks its female flight attendants on those aircraft to don Minnie Mouse ears, special aprons, and large red bows to welcome families with children aboard and to sell them Disney products, the ladies refuse. Still, a year of domestic flights from Tokyo (HAD) begin. International flights cannot be made as **Delta Air Lines** holds the exclusive license with Disney for such services).

With the opening of Osaka (KIX) on September 4, the company is able to have its first full-fledged hub, expanding its domestic services

from Osaka, including those from Itami Airport, by 76%—from 21 to 37 per day. International departures climb in number from the 55 from Itami to 90 per week, all of which now originate from Kansai. Itami becomes strictly a domestic hub.

At home, planned flights commence from Kansai to Oita, on Kyushu, and to Nagasaki, Kanazawa, Kumamoto, and Misawa on Honshu. From Tokyo, service is inaugurated to Obihiro, Aomori, and Miyazaki. The number of weekly Tokyo to Vancouver transpacific flights is increased from 4 to 11.

Also on opening day and in cooperation with **Air France**, daily nonstop roundtrips are scheduled to begin from Osaka (KIX) to Paris (CDG). As negotiations over the use of Russian airspace are not completed, it must be postponed.

Later, dual-designator service with **Air New Zealand, Ltd.** is launched from the new airport to Christchurch and Auckland and with **Thai Airways International, Ltd. (THAI)** to Bangkok.

On November 3, company officials join with those from **American Airlines** to announce a linking of their frequent flyer programs; passengers on either carrier's international services are able to earn credits on the other.

Thrice-weekly roundtrips commence on November 16 to Tan Son Nhat Airport at Ho Chi Minh City, Vietnam. Later in the year, plans are made for the introduction during 1995 of the first B-777-246s. The new aircraft will be known as "Star Jets," and each will be named after a star or constellation.

In cooperation with **Air France**, daily nonstop roundtrips are finally inaugurated on December 6 between Paris (CDG) and Osaka (KIX). The service is operated thrice weekly by JAL's B-747-446 and four times per week by the French line's A340-211s. Flight attendants from both carriers work on these new services.

Late in the month, the Transport Ministry relaxes airfare regulations.

Overall passenger boardings for the year swell a welcome 8.8% to 25,666,230, but freight declines by 8.9% to 3.28 billion FTKs. Revenues jump 5.4% to \$11.63 billion, while expenses climb 3.3% to \$11.74 billion. Consequently, there is a \$110.76-million operating loss and an "improved" net loss of \$13.48 million.

Airline employment in 1995 stands at 21,000, a 6% increase. The November pact with **American Airlines** takes effect in January. The two majors also agree to reciprocal cargo sales representations in various geographic regions. The JAL stake in **Air New Zealand, Ltd.**, which has by now shrunk to 5%, is sold to Brierley Investments, Ltd. for \$64.8 million.

On January 20, the company announces that it will fly donated earthquake supplies, free of charge, across its international network to Osaka (KIX), from where they will be shipped by sea to disaster-struck Kobe.

Toward the middle of the second quarter, an agreement is concluded with **Shanghai Airlines** under which the Chinese airline will send approximately 90 flight attendant candidates to Tokyo for a 4-month training course.

In order to build markets without violating its bilateral agreement with the U.S., the company at the beginning of the second quarter introduces charters to Hawaii from such secondary cities as Akita and Takamatsu. It is announced on May 29 that the carrier will, during high-traffic periods, contract a portion of its cross-border cargo business to **Southern Air Transport**; it is estimated that the company will save up to 10% over the cost of operating its own aircraft by wet-leasing needed capacity elsewhere.

Sponsored by the airline, together with **Air France**, **Korean Air Airlines/Korean Air (KAL)**, and **Deutsche Lufthansa, A.G.**, work begins on June 15 on a \$450-million improvement project to Terminal One at New York (JFK). Also during June, a wide-ranging business cooperation agreement is signed with **Air France**. Under terms of the pact, the two link their frequent flyer award programs, establish traffic cooperation at Paris (CDG), and agree to begin joint daily flights between Osaka (KIX) and Paris and four times per week from Tokyo and Noumea.

Deviations from "approved practices" regarding parts and procedures are found by U.S. inspectors at the company's repair facilities at Narita

Airport on July 3 and Haneda Airport on July 10. In response, FAA Administrator David R. Hinson suspends the airline's authority to repair U.S. airliners or to provide them with parts or services from the two repair stations.

Under the subservice contract entered into with **Southern Air Transport**, weekly B-747-212F services are inaugurated in July on JAL's behalf from Tokyo (NRT) to the U.S.

An agreement is signed with **American Airlines** on August 2 that will see the reservations systems of the two companies linked; under terms of the deal, AMR Corporation will also purchase a 25% stake in the JAL computer division.

The company doubles its call for contract flight attendants during the fall, hiring 200. Plans are made to hire 200–300 more by spring.

On November 1, the company adds an extra service from Tokyo to London (LHR), bringing the total to 10 each week, and an additional flight to the same airport from Osaka, making 5 per week.

Simultaneously, the alliance with **Air France** is strengthened when the two carriers link their frequent flyer programs. Plans are made to transfer JAL Paris (CDG) services from Terminal One to the Air France facility at Terminal Two.

Joint services with **Thai Airways International, Ltd. (THAI)** are increased seven-fold in November; frequencies from Bangkok to Fukuoka, Osaka (KIX), and Nagoya are increased to nine per week. Additionally, JAL begins to code-share on THAI frequencies from Bangkok to New Delhi.

Also in November, an agreement is reached with **Mexicana Airlines, S.A. de C.V.** that provides for seamless transfer of JAL and MA passengers on to partner flights departing Los Angeles. Service from Tokyo to Munich is ended.

During the third week, the company announces that it will install a special "smoker's nook" with aft-facing seats and special air conditioning ducts in the tail of each of its Jumbojets. On November 24, agreement is reached with the FAA concerning maintenance procedures and the company's Tokyo (HAD and NRT) facilities again become "approved foreign repair stations" for U.S.-registered airliners.

The twice-weekly roundtrip route to Washington, D.C. (IAD) is closed in December. Dual-designator services with **Thai Airways International, Ltd. (THAI)** between Osaka and Bangkok now grow to 14-per-week.

Customer bookings increase by 11.2% to 28,566,560 and cargo traffic also grows, up to 3.69 billion FTKs. The good traffic year is rewarded with profits: \$124.21 million (operating) and \$3.96 million (net). During the year, Eitaro Itoyama, one of Japan's richest men and chairman/CEO of the golf course concern Shin Nihon Kanko Kogyo Co., Ltd., purchases 12 million shares of company stock.

The workforce is reduced by 3.1% in 1996 to 20,030. A B-737-4Q3 is leased to **Japan TransOcean Air, Ltd.** The first of 10 B-777-246s is delivered on February 16 and is christened *Sirius*.

Between March 8 and 18, company routes are altered during Chinese military missile exercises off Taiwan; flights to Hong Kong, Bangkok, and other Southeast Asian destinations do not pass over Taipei.

Tokyo to Chicago service is inaugurated, also in March.

Also during the first quarter, services are expanded from Tokyo (HAD) to the islands of Shikoku and Hokkaido and the company begins using the old Itami Airport at Osaka for increased regional operations.

A new cargo agreement is signed between the United States and Japan on April 16. The accord removes all limitations on freight services to the U.S. by JAL and grants it rights to three more U.S. destinations. Also during April, the airline introduces daily frequencies from Tokyo to Kona, Hawaii, and thrice-weekly services from Tokyo to Zurich.

Three new alliances also commence in April. A code-sharing agreement with **Canadian Airlines International, Ltd.** begins on a weekly route from Tokyo (Nagoya) to Vancouver; CAI aircraft are employed exclusively. Also during the month, dual-designator cargo services are launched with **SAS (Scandinavian Airlines System)** between Osaka (Kansai Airport) and Goteborg, Sweden. Finally, daily code-sharing

starts with **Vietnam Airlines** between Osaka (Kansai Airport) and Ho Chi Minh City.

The **Sirius** enters service between Tokyo (HAD) and Kagoshima on April 26. As additional aircraft are delivered, they will also fly from Tokyo's domestic airport to Fukuoka and Nagasaki.

From late May to early June, China, which has improved its ATC capabilities, grants the airline a more direct routing north to Beijing, Dalian, and Qingdao than the old direction south to Shanghai from Tokyo, Nagoya, and Osaka and then north. The company quickly adjusts and begins to save 35–45 minutes per flight.

Thrice-weekly B-747-346 roundtrips commence on June 2 between Tokyo (NRT) and Kona, on the "big island" of Hawaii.

On June 13, Meiji Seika Kaisha, Ltd. commercializes its instant soups, which have been served on JAL for over 20 years. First on the market are JAL Beef Consommé and JAL Corn Cream soup.

The number of weekly return services between Nagoya and Bangkok is increased on July 6 from 4 to 5, while the number of weekly return flights is increased from 5 to 5.5 per week between Osaka (KIX) and Ho Chi Minh City.

On July 15, an agreement is signed with Walt Disney Productions. Under its terms, JAL can now offer discounted tickets on its flights to and from the U.S. for visitors to Disney World and Disneyland.

An on-going dispute with the U.S. over air cargo flights to and beyond Tokyo escalates on July 16. The DOT warns the Japanese Ministry of Transport (MOT) that unless it relaxes restrictions by the end of the month on FedEx as promised a year earlier, JAL will be prohibited from carrying any freight to the U.S. that has originated in the Philippines, Indonesia, or China.

On July 18 the MOT refuses to allow **Federal Express** and **Northwest Airlines** to fly to destinations in Asia from Japan in retaliation for the U.S. threat against JAL.

Also on July 18, in response to a March service initiative by **Japan Air System, Ltd.**, four of the carrier's B-747-446s are outfitted with first-class lavatories and are placed back into service between London and New York; the contest with JAS is labeled a "lavatory war" by the aviation press.

Based on expenditures of \$1,258,938,000 in the U.S. during the year ending the previous December 31, JAL reports on July 22 that for the 26th consecutive year, it continues to rank as the largest single foreign corporate purchaser of American goods and services. Between April 1970 and the previous December, the company has acquired a cumulative \$24.85 billion in goods from 3,000 U.S. suppliers.

During late summer and early fall, newspapers in Japan report that HIS Corporation, a ticket broker, intends to form a deep-discount airline of its own to offer low-cost domestic services.

JAL stocks decline in the 60 days following September 1.

On September 25, an interline agreement is reached with **Myanmar Airways International** of the former Burma. Under its terms, a total of 21 of 29 weekly JAL flights between Bangkok and Japan will connect with MAI services to Yangon.

On October 1, two information-related subsidiaries, JAL Data Tsushin and Nikko Information Development, are merged. The new concern is named JAL Informatech and it is expected to help save a portion of the ¥ 25 million annually allocated to information services.

At the same time, the carrier reaches a new agreement with **Qantas Airways (Pty.), Ltd.** and begins to code-share 14 weekly nonstop flights from Tokyo to Brisbane and Cairns.

On October 3, direct frequencies between Japan and India (Tokyo and Osaka to New Delhi), abandoned in 1992, are resumed twice weekly using MD-11 equipment. On November 8, 85-year-old former President Shizuo Asada dies in Tokyo. In December, flights are started from Tokyo to New Delhi.

Enplanements total 30,197,904 and 4.17 billion freight FTKs are operated. Operating revenues jump 7.1% to \$9.63 billion while costs climb 8.2% to \$9.6 billion. The operating profit falls to \$36.75 million and a huge \$74.5-million net loss is suffered.

The workforce is cut by 7% in 1997 to 18,112. A code-sharing agreement with **Malaysia Airlines, Ltd. (MAS)** takes effect on January 14 allowing weekly cargo services from Tokyo (NRT) and Osaka (KIX) to Kuala Lumpur and Penang. The flights are operated by an MAS B-747-3H6F. Two days later, a pact is signed with **Air France** under which the two majors will begin dual-designator flights on April 1 from Tokyo to Paris and Istanbul.

The first link between a Japanese airline and East European carriers occurs on January 18 when JAL signs code-sharing agreements with **CSA Czech Airlines** and **MALEV Hungarian Airlines**. When the pact takes effect during the summer, flights from Tokyo (NRT) or Osaka (KIX) to Frankfurt will be able to make seamless connections on to the partner lines for flights to Prague and Budapest. Between now and June, JAL will aggressively market the new alliance.

Negotiations with **Korean Airlines/Korean Air (KAL)** begun the previous September are successfully completed on January 31. Under terms of the code-sharing and marketing agreement, JAL and KAL will share codes on flights from Osaka (KIX) to Seoul. Plans are made for joint navigation of the Fukuoka–Seoul route.

At the end of February, plans are announced for the creation of a new low-cost subsidiary airline that will be formed to operate over domestic routes employing B-737-400s leased from the parent and expatriate cockpit crews.

It is announced on March 15 that the airline, in conjunction with Nissin Food Products, has developed "Soba De Sky," an instant noodle snack (with small fried shrimp, shiitake mushrooms, and spring onions—just add hot water) that will be offered to all executive-class passengers. The product, based on the 1992 release "Udon (Wheat Flour Noodles) de Sky," will also be available to the public via airport retail stores and mail order. Another scheme designed to boost domestic profits is a series of raffles introduced during the month in which passengers can win what, in Japan, is a wildly popular virtual pet, the "Tamagotchi."

Also in March, the Ministry of Transport announces that JAL will receive nine new slots that will be made available at Tokyo (HAD) following the summer opening of a new runway.

Flights from Tokyo (NRT) to Cairns and Brisbane begin on April 1 in cooperation with **Qantas Airways (Pty.), Ltd.** Frequencies from Kansai Airport to Ho Chi Minh City are increased from six times per week to daily while connections to Frankfurt are boosted from thrice weekly to four per week. The Tokyo to New York route is expanded to eight per week from seven per week while Tokyo to Kona, Hawaii, flights are boosted ahead by one to four times per week.

The new schedule launched this day also includes an increase of frequencies from Nagoya to Manila from twice weekly to six per week, while Nagoya to Singapore service is increased from thrice weekly to five times per week. Nagoya to Bangkok service is also increased, from thrice weekly to four times per week.

Thrice-weekly all-cargo service to Atlanta is inaugurated on the first day of April and daily dual-designator flights begin with **Air France** from Paris (CDG) to Istanbul. The Turkish flights from Paris are timed to connect with the arrival and departure of JAL daily flights from Tokyo and JAL is the first Japanese carrier to operate to Turkey.

On April 1, the company launches a new fully owned low-cost subsidiary airline, JAL Express, which will begin flying in 1998. With initial capitalization of ¥ 5.8 billion, the carrier will be outfitted with a pair of B-737-446s, operate its own domestic network, and hire foreign cabin crew to work short-term contracts.

It is announced in May that additional staff cuts will be required during the next year to help the company return to profitability; as many as 5,000 positions may be cut. At the same time, the carrier enters into an agreement with **Japan Air System, Ltd.** to cooperate in the area of domestic frequent flyer programs.

While on final approach to Nagoya on June 8, an MD-11 encounters severe air turbulence. Three flight attendants and a passenger are seriously injured, while seven other attendants and passengers receive

minor injuries. Cabin attendant Atsuko Taniguchi will die of her injuries in February 1999.

On June 9, **Federal Express** Flight 80, a DC-10-30F with four crew is taxiing into the ramp area at Chicago (ORD). The FedEx plane must stop and back up 20 ft. to avoid being struck by the left wing of JAL Flight 6012, a B-747-246F with three crew that is taxiing out of the ramp area.

In the past year, the carrier has suffered over 40 cases of violent or abusive passenger behavior, 80% of them Japanese. The company is now having so many problems with unruly passengers that it issues tough new guidelines on June 23 that include getting other travelers to use force against disruptive passengers. In addition to improving awareness at check-in, JAL tells its cabin crew that, with the cooperation of other passengers, they can restrain passengers with tape or plastic devices similar to handcuffs.

A total of 155 domestic flights are cancelled on June 27 by **Japan Air System, Ltd.**, JAL, **All Nippon Airways Company, Ltd.**, **Air Nippon Company, Ltd.**, and **Japan Transocean Airways Company, Ltd.** as the result of a tropical storm and tornado.

In July 1, twice-weekly, nonstop, code-shared return service begins with **Air France** to Paris (CDG) from Nagoya. The service is performed by the French line's A340-311. The same day, daily B-767-346 roundtrips commence from Tokyo (HAD) to Memambetsu and Obihiro on Hokkaido and Kochi on the island of Shikoku.

While on approach into London (LHR) on a July 3 service from Osaka (KIX), a fully loaded B-747-346 is involved in a near miss with an ITT Gulfstream IV bizjet en route to London (CTN) from Olbia, Sardinia. The degree of separation in the ATC-caused incident is 100-ft. vertical and 0.83-nm horizontally.

A code-sharing agreement is signed with **South African Airways (Pty.), Ltd.** on July 7, with JAL thus becoming the first Japanese airline to offer connections to South Africa.

On July 11, an interline agreement is signed with **Southern Air Transport**. Under its terms, twice-weekly JAL flights from Tokyo (NRT) to San Francisco will offload their goods to an SAT aircraft, which will deliver them to Dallas (DFW) the next day. The service replaces the current Tokyo-Atlanta offering, which requires truck transport from the Georgia hub to Dallas (DFW).

Basic agreement is reached with **American Airlines** on July 21 on an all-encompassing business deal that includes shared dual-designator flights. When a new bilateral is completed between the U.S. and Japan, AA and JAL will sign a formal contract.

On August 27, the largest sales agreement for used aircraft ever made in Japan is concluded when the carrier agrees to sell 20 DC-10-40s to the NI Aircraft Leasing Co., Ltd. for \$170 million. The planes will be delivered to the concern over the next nine years. Three days of talks on a new bilateral air agreement between the U.S. and Japan end in Washington, D.C. on August 29 without an accord.

On September 1, JAL announces that it will sell all 20 of its DC-10-40s, plus \$170 million worth of spares, to NI Aircraft Leasing Co., Ltd. over the next 7 years, earning \$84 million. On the same date it notes that, since April, it has had 15 incidents of passenger violence on its services, the majority of which have occurred on international flights where alcohol is served.

Late in the first week of September, JAL is named Japan's official airline for the 18th Olympic Winter Games. Under terms of the agreement with the Japanese Olympic Committee and the Organizing Committee for the Games, JAL will provide international and domestic transport for these organizations and promote the Games through in-flight videos shown on all of its flights. Negotiations for a U.S.-Japan bilateral air agreement resume in Tokyo on September 22.

"Welcome to Japan" fares are introduced on October 1; the promotion, for tickets that must be purchased outside the country, features discounts on domestic flights that are 50% or more off regular prices.

Following the Transport Ministry's deregulation of the aviation inspection sector the previous day, JAL, on October 2, announces that it

will boost its outsourcing of aircraft maintenance to foreign carriers and halve its maintenance and inspection staff stationed offshore by 2001. Initial contracts for maintenance and inspection will be entered into with **Qantas Airways (Pty.), Ltd.**, **British Airways, Ltd. (2)**, and **United Airlines**.

Twice-weekly, block-seat service with **South African Airways (Pty.), Ltd.** begins on October 2 between Osaka (KIX) to Johannesburg via Bangkok; the flights are operated by SAA B-747-244Bs.

Late in the month, a traffic alert and collision avoidance system (TCAS) warning is sounded aboard a company B-767-346, en route from Osaka (KIX) to Hakodate, when two USAF F-16 fighters from Misawa AB come so close as to cause the jetliner to take evasive action.

Also during the month, a contract is signed with the Boeing Company's Wichita-based Modification Center for the transformation of four B-747-346s from domestic-passenger to international-passenger configuration. Work will be completed by November 1999.

A new marketing pact with **THY (Turkish Airlines, A.O.)** comes into effect on October 31; JAL purchases block-seats on THY A340-311 thrice-weekly flights to Istanbul from Osaka (KIX).

On November 1, the company's twice-weekly service is replaced by thrice-weekly frequencies code-shared with **Air New Zealand, Ltd.** During the first week of November, it is reported that, for the previous year, JAL had \$118 million in in-flight sales, the most for any airline; from a catalog of 120 selections, top items purchased included scotch whiskey and designer makeup.

On November 6, an agreement is signed with the start-up carrier **Hokkaido International Airlines Company, Ltd. ("Air Do")**; JAL will provide operational, technical, and airport handling support and assist the carrier as it launches Japanese domestic service, hopefully in July.

The scariest moment of the month occurs when the TCAS aboard a B-737-446, en route over Shikoku Island, sounds because two USMC F/A-18s from Iwakuni have come close enough to cause the jetliner to take evasive action. As was the case with a similar near miss a month earlier, both Japanese and American officials investigate.

When the winter schedule is introduced, adjustments are made. Reflecting static demand in Hawaii, the number of weekly flights from Tokyo to Honolulu is reduced from 28 to 21, while the number to Kona is increased from five per week to daily. The route from Tokyo to Los Angeles is increased from 9 to 10 and the Nagoya to Vancouver route code-shared with **Canadian Airlines International, Ltd.** is increased from 2 to 3. Tokyo to Bangkok is increased from 10 to 13, Tokyo to Singapore from 13 to 14, Tokyo to Manila from 7 to 10, and Tokyo to Guam from 7 to 11. The Osaka to Sydney route's daily stop at Cairns is replaced with Brisbane.

It is announced on November 17 that JAL and **Canadian Airlines International, Ltd.** will link their frequent flyer programs in two phases, beginning in January.

Also in November, reclining Sky Sleeper seats are installed in the first-class cabins of 17 B-747-400s. Flights begin to Dalian.

Customer bookings jump 6% to 31,772,241 while cargo does a little better, improving by 7.3% to 4.17 billion FTKs. Operating revenues advance just 2% to \$9.6 billion, while costs hit \$9.54 billion. Significant cost-cutting brings an operating profit of \$60.18 million, but the company's decision to write off hotel and resort losses of \$893.5 million and clear out the accumulated \$453-million deficit brings a gigantic ¥94.19-billion (\$741.6-million) net loss.

At the beginning of 1998, JAL is the 7th largest airline in the world in terms of freight carried, 9th in operating revenues, 11th in passenger boardings, 19th in fleet size, and 23rd in employee number, with 18,514.

The fleet, all of which is Stage III certified, includes 136 airplanes: 6 B-737s, 79 B-747s, 20 B-767s, 5 B-777s, 16 DC-10-30s, and 20 MD-11s.

A new, but tentative, bilateral air agreement is announced between the U.S. and Japan on January 30. President Kondo is disappointed in the arrangement, which gives the company not only beyond-rights to Latin America, but a host of new competitors.

During the month, plans are announced for the receipt during the year of four B-747-400s, three B-777s, and two B-737s; two B-747-300s and a DC-10-30 will be retired.

Also in January, the first phase of the linkage of frequent flyer programs with **Canadian Airlines International, Ltd.** begins; the second phase will kick in during November.

A major code-sharing agreement is signed with **American Airlines** on February 25. Although no start-up date is indicated, the two announce that they will share their designations on each other's flights to and beyond U.S. and Japanese gateways. Additionally, the January 1995 frequent flyer linkage will be extended from international routes to domestic services as well.

Later in the month, JAL announces that it will outsource its passenger and cargo handling functions at New York (JFK), Los Angeles (LAX), San Francisco, and Honolulu. The move will bring a staff reduction of 300 workers.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14.

Two days later, the DOT authorizes **Hawaiian Airlines (HAL)** and **Trans World Airlines (TWA)** to begin serving Japan as the two new American passenger carriers terms of the treaty allow.

As losses mount, JAL is forced to withdraw ¥ 154.6 billion from its reserve fund to cover its ¥ 57.6-billion (\$443-million) 1997 losses, plus the ¥97 billion (\$746 million) loss in JAL Hotels Corp. Perceived as a significant loss of face, this action brings about the resignation of President Kondo and Chairman Yamaji on March 17. Senior Managing Director Isao Kaneko will replace the president.

In an effort to cut costs further, a number of U.S. hotels and Southeast Asian resorts are put up for sale and plans are announced for a reduction of 1,500 ground crew workers. Additionally, executives resolve to join their colleagues at **All-Nippon Airways Company, Ltd. (ANA)** and **Japan Air System, Ltd.** in taking a tough stand against the pilot's unions, finally cutting the practice of paying flyers for 65 hours of flight time a month regardless of actual flight time.

The first students' airline credit card, "JAL Card navi," is introduced in Japan on March 31. Students employing it will be able to earn bonus points for passing foreign language examinations or flying JAL for overseas study. No annual fees will be assessed the young users as long as they remain in school.

When the new pilot flight time and benefit package takes effect on April 1, pilots at ANA go out on strike. Those at JAL and JAS do not, but neither do they agree with management's plan to cut their pay.

Services to certain Southeast Asian points are cut back when the new summer schedule begins on April 1, but flights to the U.S., Chinese, and Europe are expanded. Singapore, Manila, Hong Kong, Guam, Frankfurt, and Milan suffer decreases in frequencies. Passenger flights are boosted to Beijing, Shanghai, Dalian, New York, Honolulu, Los Angeles, London, and Paris. New roundtrips are launched from Nagoya and Hiroshima to Los Angeles and from Nagoya to London.

Under terms of a second subcontract signed with **Southern Air Transport** on March 24, an SAT B-747-212F is employed, beginning on April 1, to offer weekly all-cargo roundtrips from Tokyo (NRT) to both Chicago (ORD) and Atlanta.

Twice-weekly, 9,508-km. MD-11 roundtrips are initiated on April 3 from Nagoya to London (LHR). The new service brings to 18 the number of weekly JAL roundtrips between Japan and the U.K. Deeply disturbed by management's instance on a wage and benefit cut, company pilots stage a 24-hr. strike on April 9. Led by President Kaneko, a cap on wage increases for B-747 pilots will be put in place, bringing remuneration for those flyers down to the same level as that of **United Airlines**, though the salaries are still higher than those paid to other Asian or European competitors.

The economic situation brings a slowdown in the effort to launch **Hokkaido International Airlines Company, Ltd. ("Air Do")**. Still,

plans are afoot to lease a B-767-33AER from Ansett Worldwide Aviation, Ltd. and to achieve certification in September. The start-up date is changed to October 30.

Thrice-weekly B-767-346 roundtrips from Osaka (KIX) to Tianjin begin on April 20; the same day, twice-weekly B-767-346 service to Tianjin is started from Tokyo (NRT).

On May 1, dual-designator cargo service is started with **American Airlines** between Chicago and Tokyo. Under pricing pressure from **United Airlines**, **Delta Air Lines**, and **Northwest Airlines**, JAL in mid-month cuts its roundtrip economy fares to the U.S. by 48%; the Chicago-Tokyo tariff drops from \$1,600 to \$875, while flights from San Francisco fall from \$1,250 to \$675.

Joined by **Deutsche Lufthansa, A.G.**, **Air France**, and **Korean Air/Korean Airlines, Ltd. (KAL)**, the carrier, in mid-May begins a two-week move into the newly opened \$434-million Terminal One at New York (JFK). The four carriers, having developed, financed, designed, and constructed the huge project, will now operate it and sell space to other carriers.

On June 14, Flight 745 lands on the wet runway of the Philippines' Ninoy Aquino International Airport following a service from Tokyo (NRT). The MD-11 with 11 crew and 248 passengers swerves halfway off the runway and becomes stuck at an angle in muddy grass, with its left wing and engine a foot above the ground. A total of 23 passengers are hurt during the emergency chute evacuation that follows, with 5 being taken to hospital. The wide-body blocks the runway for 12 hours, causing ATC to request incoming flights during that period to divert elsewhere.

As noted above, membership on the board of directors and in top executive offices changes at the annual general meeting on June 26. Retiring are Chairman Yamaji, President Kondo, Counselor Toshimitsu, and Senior Vice President-Flight Safety Sadao Hara. Although the post of chairman is left vacant, Senior Managing Director Kaneko becomes president, with Yoshihiko Murata as the new senior managing director and Yasushi Yuasa as managing director-flight operations. A total of 28 other new officials are also named.

Deep-discount JAL Express B-737-446 service is inaugurated on July 1 from Itami Airport at Osaka to Kagoshima and Miyazaki, on the southern island of Kyushu. Departure follows a tape-cutting attended by Mickey and Minnie Mouse, special ambassadors from Tokyo Disneyland, over the routes last flown by parent JAL just the day before. Interestingly enough, JAL Express cabin attendants are called the JAL Express "Sky Cast," and among their duties is the cleaning of the 150-seat cabins between flights.

Twice-weekly B-767-346 roundtrips are started, also on July 1, between Tokyo (NRT) and Dalian; they are followed on July 4 by the introduction of twice-weekly B-767-346 roundtrips from Tokyo (NRT) to Tsingtao. JAL now serves five Chinese cities.

A major marketing agreement is signed with **Swissair, A.G.** on July 7. The two airlines will launch dual-designator service between Japan and Switzerland in October. Additionally, the pair will also cooperate in such areas as information technology, technical services, catering, and cargo.

On August 17, Japanese police arrest two men on suspicion of extorting \$155,000 from the company in return for guaranteeing trouble-free shareholders' meetings. The payments have been disguised as rent for artificial plants at JAL headquarters. In a televised news conference, JAL President Kaneko indicates that these payments to racketeers, or *sokaiya*, were part of a "business contract" not dissimilar from those held by many Japanese corporations. The *sokaiya* are covertly employed to silence hostile shareholders or can, in turn, blackmail companies by threatening to reveal embarrassing secrets to shareholders. As quoted by the Associated Press, this illegal practice is, as Kaneko tells viewers, "very regrettable from the corporate ethics point of view."

Two days later, a company DC-10-30 comes within 525 ft. of a midair collision with a USAF jet fighter over Japan. The incident is investigated by both Japanese and U.S. government aviation authorities.

It is announced on September 1 that smoking will be banned aboard all company flights by March 18.

As the result of negotiations successfully completed during the summer for a joint weekly all-cargo service with **SAS (Scandinavian Airlines System)** and JAL, a **Lufthansa Cargo Airlines, A.G.** B-747-230F begins flying over a polar route on behalf of the three between Frankfurt, Goteborg, and Osaka on September 21. Frequencies over the first northbound cargo connection between Osaka and Europe will be increased to three per week during the following April.

While en route from Sendai to Honolulu on September 27, Flight 56, a DC-10-30, encounters clear air turbulence as it approaches Hawaii; 11 aboard are injured.

Deep-discount **Skymark Airlines Company, Ltd.** inaugurates services at the end of the month over a single route from Tokyo (HND) to Fukuoka.

Smoking is banned on all domestic flights on October 1; the ban will be extended to international services next March. On October 1, just after takeoff from Osaka (KIX) on a service to Sydney, the crew of a B-747-246B with 17 crew and 335 passengers, hears abnormal sounds in one of the Jumbojet's engines. The aircraft is returned to its point of origin and a safe emergency landing is completed without injuries to anyone aboard.

As the two airlines have yet to reach complete agreement, implementation of a seat-sharing pact with **American Airlines** is postponed on October 1; the arrangement is now expected to proceed early in the new year.

Twice-weekly B-747-346 service is inaugurated on October 2 between Tokyo (NRT) and Las Vegas, the airline's first new North American destination in two years and its sixth U.S. gateway. The Jumbojet flights operate on Tuesdays and Fridays from Tokyo (NRT) to McCarran International Airport, while the same-day departures from Las Vegas stop at Los Angeles (LAX) before proceeding nonstop across the Pacific to Tokyo.

It is reported on October 15 that JAL has entered into a strategic alliance with **Cathay Pacific Airways (Pty.), Ltd.** Under its terms, the two will share codes on some routes between Hong Kong and Japan and their frequent flyer programs will be linked. The pact will take effect in early 1999.

Under the code-sharing pact signed on July 7, the company, on October 25, begins daily dual-designator services with **Swissair, A.G.** over routes to Zurich from both Tokyo and Osaka.

Also during the month, the first of four B-747-346s arrives at Wichita, Kansas, for conversion from domestic-passenger to international-passenger configuration by the Boeing Aircraft Modification Center.

By November 1, the company has also added new services from Tokyo to Milan and Rome and added services to Manila, Seoul, and New Delhi. Flights from Tokyo to Hong Kong are cut back while those from Osaka to both Rome and New Delhi are dropped. Three new Osaka to Honolulu services are, however, added.

Having been chartered to transport nearly 500 vendors who supply a Japanese tool manufacturer, 2 B-747-446s both make history in 14-hour flights to Fort Lauderdale on November 2, the longest flights yet made into the Florida city. One Jumbojet flies directly from Tokyo (NRT) nonstop over the North Pole to Fort Lauderdale while the second, operating from Osaka (KIX), makes a refueling stop in San Francisco.

On November 13, President Kaneko holds a new conference to explain how JAL will return to profitability. Admitting that the carrier is "passing through a period of turbulence," the executive expresses confidence that it will be in the black by the end of the year.

Specifically, the company will cut the number of ground workers employed by 2,300 over the next 3 years and increase the number of foreign flight attendants by a quarter during the same period. Fewer new hires will be employed and those who are will be signed to short-term contracts. It is anticipated that these changes will bring labor costs down 40% by the end of December.

In an effort to lure recession-weary travelers aboard its aircraft, company officials announce in early December that fares will be cut for a month on two of the carrier's most lucrative and competitive domestic routes.

Although it has no plans to enter the new "OneWorld" alliance, JAL indicates on December 10 that it is in talks with **British Airways, Ltd.** (2) concerning the formation of a possible strategic marketing arrangement.

A U.S. gateway change is announced on December 16. As the result of declining traffic demand and the competitive situation, the decision has been taken to discontinue the company's thrice-weekly roundtrips between Tokyo (NRT) and Atlanta on March 15. On the same date, thrice-weekly B-747-446 roundtrips will be initiated from Tokyo (NRT) to Dallas (DFW).

The company receives its 100th Boeing Jumbojet, a B-747-446, on December 19.

After a long gestation period, **Hokkaido International Airlines Company, Ltd. ("Air Do")** is finally able to launch service on December 20. Employing a B-767-33AER, the JAL-backed new entrant begins daily roundtrips from Tokyo (HND) to Shin-Chitose Airport near Sapporo. The inaugural one-way service is fully booked with 286 passengers, each of who pay ¥16,000 (\$138) for their tickets, or about 36% less than regular fares on the same route offered by the Big Three Japanese airlines.

HIA is the second discount airline to launch service in Japan since September, when **Skymark Airlines Company, Ltd.** took to the air.

The Singapore Shipping Times reports on December 22 that JAL will follow the lead of **All Nippon Airways Company, Ltd. (ANA)** in March and reduce its fares by half on 13 out of 24 daily roundtrips between Tokyo (HND) and Fukuoka.

The company's largest individual shareholder, Eitaro Itoyama, with a 3% stake, reports to the media on December 30 that he has called upon the company's board of directors, as well as President Isao Kaneko, to resign. A stipulation that Kaneko take responsibility for the decline in revenue and profit at Asia's largest airline is also included. Itoyama, one of Japan's richest citizens, reports that he has lost \$171.6 million from his investment in JAL, whose shares have fallen 67% in the past 30 months.

Customer bookings dip 1.3% to 31.36 million, while cargo traffic falls 3% to 4.04 billion FTKs.

It will be reported at the end of the following May that this year's operating profit has quadrupled to ¥ 32.52 billion (\$269 million), while net profit totals ¥ 26.28 billion (\$220 million), up from the ¥ 10 billion originally projected. This improvement is attributed to ¥ 7 billion in aircraft purchase credits and ¥ 8 billion from aircraft sales.

Heavy snows in northern and central Japan cause the cancellation of many domestic services on January 7-10, 1999; one service from Nigata to Honolulu on January 8 must also be scrubbed.

After some months of discussion, a strategic alliance is entered into with **British Airways, Ltd. (2)** on January 13. The bilateral, which does not include entry of JAL into BA's "OneWorld" alliance network, provides for the initiation of code-sharing on JAL's daily service between London (LHR) and Osaka (KIX) during the summer, as well as an earlier merging of frequent flyer programs.

Twice-weekly roundtrips between Osaka (KIX) and Johannesburg are suspended by both JAL and **South African Airways (Pty.), Ltd.** on January 31.

On February 1, JAL and **Cathay Pacific Airways (Pty.), Ltd.** link their frequent-flyer programs as part of the implementation of their new code-sharing agreement. Overall ticket prices are increased by 5% on February 16, with another 2% anticipated by April.

On February 24, JAL and **Japan Air System, Ltd.** agree to share a common reservations system for their domestic route scheduling. The pact between the two airlines is the first such arrangement in postwar Japanese commercial aviation history.

Nikkei America quotes local media sources on February 26 that report that a reputed Japanese organized crime boss has acquired over a

million JAL shares, making him the second largest individual shareholder in the huge airline.

Also during the month, the first of four B-747-346s to be converted at Boeing-Wichita from domestic-passenger to international-passenger configuration is finished and returned to JAL. The remainder of the schedule calls for a second plane to be finished in May, the same month the third plane will arrive from Japan for modification. The third aircraft will be delivered in July while the last reconfigured aircraft will arrive in September and be completed by November.

On March 1, the carrier announces that it will expand its code-sharing pact with **Singapore Airlines, Ltd.** in April on freighter flights from Tokyo to Singapore from weekly frequencies to thrice weekly.

After 13 years of operation, decreased demand and increased competition forces the company, on March 13, to discontinue its Tokyo (NRT) to Atlanta service.

Thrice-weekly B-747-446 roundtrips commence on March 15 between Tokyo (NRT) and Dallas (DFW); a number of frequencies are marketed with **American Airlines**. The next day, company sources confide to Nikkei America that the carrier will probably report a ¥ 12-billion net profit when results for the fiscal year are announced at month's end.

President Kaneko meets with the press in Tokyo on March 16 to unveil JAL's revised corporate plan for the period covering until April 2002 as well as to announce a number of new measures that the airline will be taking to quicken decision-making, reduce debt, and improve profitability. The number of full-time directors will be reduced on April 1 from the current 28 to just 13, with 10 new executive directors appointed. A total of 3,600 on-the-ground jobs will be eliminated by March 2002 and the operations of certain flight units will be reorganized.

The first of these latter steps will be the transfer of routes to Southeast Asia, Oceania, and Pacific routes to **Japan Air Charter Company, Ltd.** The low-cost subsidiary will be given a fleet of 14 planes to operate these flights, with JAL sharing codes. Discussion continues on whether or not to change the subsidiary's name from JAC to "JALways."

At the same time, JAL Express will receive additional B-737s and even a B-767 and will grow its route network by 20% or more. It is hoped that it will be able to continue to generate operating costs that are much lower than JAL's.

To shave ¥100 billion from its interest-bearing debt of ¥1.4 trillion, there will also be a deferral of deliveries for eight B-777s, three B-767s, and one B-737. Three aircraft will be retired ahead of time.

All of this restructuring is designed to cut debt by some \$850 million to \$12 billion and to achieve, by March 2002, a pretax profit of \$255 million.

In a major news story on March 23, the newspaper *Yomiuri*, in a story picked up by the Associated Press, reveals that a police investigation has found Tadamasu Goto, who heads a gang based southwest of Tokyo, is the second largest individual investor in the airline. The Tokyo police refuse comment on the report that Goto, who is allegedly affiliated with his nation's largest organized crime syndicate, the Kobe-based *Yamaguchi-gumi*, is involved with the carrier and a JAL spokesman indicates that his company cannot confirm who owns its stock.

Government tax authorities reveal that the airline has failed to declare the many discount tickets, valued at millions of yen, provided under the table to racketeers.

Under the terms of the accord signed with **Cathay Pacific Airways (Pty.), Ltd.** in the fall, the two begin dual-designator service on March 28 from Osaka (KIX) to Hong Kong.

Joint flights with **Cathay Pacific Airways (Pty.), Ltd.** between Nagoya and Hong Kong start on April 1. Simultaneously, smoking is banned on all international flights.

Also on April 1, the carrier markets seats on 13 of its 24 daily return services from Tokyo (HND) to Fukuoka for ¥ 13,700, or 49% less than standard fare. A similar sale is in effect on the route from Haneda Air-

port to Sapporo. The measure is necessary to match the deep-discount ticket prices of **Skymark Airlines Company, Ltd.**

Despite growing concerns over security in Indonesia, JAL, on April 1, doubles its flights into that nation. It also opens a new route from Osaka (KIX) to Jakarta, seven times a week.

On April 4, the carrier's code-sharing agreement with **Canadian Airlines, Ltd.** is expanded from two to four daily flights between Tokyo (NRT) and Vancouver. This new service brings the number of nonstops offered by the two airlines from Vancouver to Tokyo and Nagoya to 42 each week.

A portion of the carrier's flight management services at both Tokyo airports (HND and NRT) are transferred to a subsidiary in April; the move is designed to cut labor costs while training flight management experts.

On April 23, a fire damages the offices of JAL, **Deutsche Lufthansa, A.G., Air France, British Airways, Ltd. (2), and Indian Airlines, Ltd.** in the cargo terminal at New Delhi's Indira Gandhi Airport.

The slashing of fares on those services flown in competition with **Skymark Airlines Company, Ltd.** and **Hokkaido International Airlines, Ltd.** begins to show results by the end of April. Both Skymark and Hokkaido show huge 60+% drops in their load factors over the contested routes.

Eitaro Itoyama, a former member of Japan's lower house of Parliament and a major investor (3% personal) who controls, via a commercial group, 7.7% of the company's stock, sends a registered letter to JAL during the last week of April calling for the resignations of all board members. Visiting New York on May 3, Itoyama explains to reporters that he is attempting to line up backing from foreign investors of shareholding sufficient to force management changes at the next shareholders' meeting.

After a year of detail resolution, JAL and **American Airlines** implement the first phase of code-sharing on routes between the U.S. and Japan and on other routes beginning on May 10. American places its "AA" designator on JAL flights from Tokyo (NRT) to Chicago (ORD), Dallas (DFW), Los Angeles, San Francisco, and New York (JFK); between Osaka (KIX) and Los Angeles; between Nagoya and Los Angeles; between both Tokyo (HND) and Osaka and other Japanese cities; and between the U.S. and both Bangkok and Singapore, via Tokyo (NRT).

JAL initially places its code on American and **American Eagle Airlines** flights from Dallas (DFW), Chicago (ORD), San Jose, and Seattle to Tokyo (NRT) and on American's new route from Dallas (DFW) to Osaka (KIX). JAL is also able to assign its designator on American and **American Eagle Airlines** frequencies from Los Angeles, Dallas (DFW), and Los Angeles and other internal U.S. communities.

While en route from Tokyo (NRT) to London (LHR) on May 16, Flight 403, a fully loaded B-747-446, experiences an air rage incident that is embarrassing for the British Royal Ballet company. One hundred members of the company, along with Royal Opera House support staff, are returning home after a six-week tour of China and Japan. In the economy section, a Royal Opera House stage technician gets into a fight with two other passengers that must be broken up by his fellow stage crew members and other passengers, one an Australian special forces soldier. Although claiming to have been attacked, the two passengers fail to press charges after the Jumbojet lands; the technician is suspended while the Royal Ballet investigates.

While en route from Tokyo (NRT) to Honolulu on May 18, a B-747-446 returns to Japan after a 14-year-old physically disabled boy falls ill.

The previous year's profits are announced on May 28. Simultaneously, the company is able to resume dividend payments for the first time in seven years, granting a payout of ¥ 3 per share. At this point, \$1 equals ¥ 121.

On June 1, JAL and **British Airways, Ltd. (2)** link their frequent flyer programs. Executive Club members are able to gain mileage credits on Japan's international route network while Mileage Bank loyalists may accumulate credit on the British line's routes.

Following a 38-month trial, a man accused of hijacking a JAL aircraft in 1970 is acquitted of fraud conspiracy charges by a provincial court in Thailand on June 22. The court rules, however, that the alleged sky-jacker may be detained while Japan seeks an extradition order.

JAL pilots, via their union, protest a company decision on June 25 to allow soldiers in combat fatigues on commercial flights. JAL informs them that the 252 unarmed Japanese soldiers so attired will be allowed to board 2 flights to Hokkaido at the request of the Japanese Self Defense Forces.

During the week, the home of a former JAL president is riddled with bullets in an effort to intimidate the company.

In a coordinated effort designed to dampen the effect of the *sokaiya* tactics, 2,000 Japanese companies hold their annual meetings on June 29. Even though police believe there are only 600 of these criminals still in business, a number do show up at the JAL annual general meeting and disrupt presentations by President Kaneko and other executives.

Results of internal deliberations are released on June 30. **Japan Air Charter Company, Ltd.** will, indeed, be upgraded into a schedule carrier and as of October, will be known as "JALways." The carrier's charter routes from Tokyo (NRT) to Hawaii will be scheduled. Simultaneously, it is noted that JAL will retain its discount fare structure for flights connecting Tokyo (HND) with Sapporo and Fukuoka rather than end them as originally scheduled in September.

In the wake of the ANA disaster on July 23, JAL, on August 2, stops the practice of allowing passengers to visit aircraft cockpits during flights.

CNN, quoting the *Yomiuri* newspaper, reports on August 29 that JAL and **Japan Air Systems Company, Ltd.** have come to an arrangement under which they will jointly run international services. Beginning in October, JAL will provide aircraft and JAS will allocate three of its Tokyo (NRT) arrival and departure slots for services to either the U.S. or Korea.

During October, JAL creates three new in-house companies to handle cargo, engineering and maintenance, and passenger sales. A sales and marketing subsidiary is also formed under the passenger sales company. It is hoped that these managerial moves will improve cost efficiency company-wide.

Four-times-a-week Tokyo (NRT) to São Paulo B-747-446 return service, routed via New York (JFK), begins on November 2. The third of four B-747-446s to be received during the year is delivered on November 21. Seven days later, the final B-767-346 in a 20-ship order is delivered.

JAL completes the sale of its 20% equity stake in **DHL Worldwide Express** on December 13 to two investment trusts. The last of four B-747-446s to be received this year is delivered on December 16.

As the result of problems in the adjustment of their ticketing and reservation systems, JAL and **British Airways, Ltd. (2)** are forced, also in December, to indefinitely postpone the launch of their already delayed code-share on JAL flights between London (LHR) and Osaka (KIX).

Customer bookings climb 5% to 32,933,000, while freight jumps 9.2% to 4,423,157,000 FTKs. Revenues move up a slight 2.1% to \$15.15 billion, while costs rise 1.3% to \$14.72 billion. Operating profit moves up to \$425.43 million, while the net gain slides to \$187.09 million.

Airline employment at the beginning of 2000 stands at 18,974, a 4.2% decline over the previous 12 months. Among the world's top 25 airlines, JAL is 12th in total passengers; 8th in FTKs, 24th in employees, and 22nd in fleet size, while JAL Group is 3rd in operating revenue, 12th in operating profit, and 19th in net profit. The company now operates 5 B-777-246s and 5 B-777-346s.

On January 27, JAL becomes one of the corporate sponsors of Tokyo DisneySea, a new Disney theme park that will open at the Tokyo Disney Resort in the autumn of 2001.

The Japanese government, on February 1, announces a new round of domestic airline deregulation; this significant step removes all entry and

exit restrictions and also eliminates the upper and lower levels of ticket prices. JAL and its competitors now increase unrestricted tariffs an average of 15% while instituting deep discount restricted prices. As part of this approach, JAL now offers a 25% discount off standard fares booked over the Internet.

Continuing JAL's cost-cutting campaign, President Isao Kaneko announces on March 14 that another 700 positions are to be eliminated by March 31, 2003, bringing the workforce to 31,800, down 4,200 posts in five years. Additionally, more routes and airplanes will be transferred to the carrier's subsidiary airlines.

On March 26, JAL is named the official airline of the new Tokyo DisneySea theme park scheduled to open in the fall of 2001.

A 24-hour strike by the carrier's pilot union for both Haneda and Narita Airports at Tokyo on March 28 causes no disruptions. No flights are cancelled as high-ranking senior pilots step in to replace strikers on all affected frequencies. A job action scheduled for the next day is cancelled.

On March 30, the company confirms that it will operate four charters in August from Osaka (KIX) to Havana, Cuba. The tours, requested at the behest of the Castro government, will be booked by a Cuban travel agency and flown via Vancouver.

Return service on the route from Osaka to Seoul is increased to thrice weekly on April 1. Code-shared services between Osaka (KIX) and Zurich are simultaneously increased when **Swissair, A.G.** increases its MD-11 return flights between the two cities from six per week to daily. Also on April 1, JAL becomes the first airline to order the long-range B-777-300X; the first of eight of these aircraft is scheduled for delivery in June 2004.

On April 26, JAL begins to offer special 20% discounts on fares for delegates and media representatives who will attend the series of G8 Summit-related meetings and opens a special JAL G8 Summit support group. Fares are available to visitors to the finance ministers meeting on July 8 in Fukuoka City, the foreign ministers meeting July 12-13 in Miyazaki, and the heads of states and government meeting on July 21-23 in Nago City, Okinawa.

JAL carries out an on-line sales trial, beginning in mid-May and continuing through mid-June, offering a 25% discount to customers who book regular-fare flights over the Internet. Meanwhile, on May 22, JAL becomes the first Japanese airline to offer international ticketless travel when it begins accepting reservations for e-ticket travel from June 12 onward. The new service will be phased in, beginning with flights from Tokyo (NRT) and Osaka (KIX) to Los Angeles and New York (JFK).

On June 1, JAL and **Swissair, A.G.** link their frequent flyer programs. The e-ticket service to the U.S. begins as scheduled on June 12. Also on June 12, JAL places its code on **Air France** flights from Paris (CDG) to Berlin, Munich, Copenhagen, and Stockholm. On June 19, Air France begins to code-share on JAL return services from Tokyo (NRT) to Nagoya.

Daily return frequencies from Tokyo (HND) are increased to eight cities on July 1. Increased from two flights per day to three are Akita, Hiroshima, Komatsu, Matsuyama, Miasaki, and Nagasaki. Kagoshima is increased from three to four and Osaka Itami and Osaka Kansai from five to six. As special encouragement to Japanese athletes bound for the Sydney Olympic games on July 8, a B-747-446 sports "*Ganbarre Nippon!*" (Go Go Japan!) titles on its fuselage aft the wing.

JAL is named 14th best-managed company among non-state-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

On July 13, it is announced that to cut costs, JAL will share passenger-handling services for domestic flights with **JAS (Japan Air Systems Company, Ltd.)** at important off-airport sites beginning in the spring. The two will also introduce joint gate boarding card machines in 2002.

Upon the completion of the 10th annual Japan Airlines Big Apple Classic golf tournament at Wykagyl Country Club in New Rochelle, New York, on July 16, JAL relinquishes its sponsorship.

The first of four planned B-747-246B charters between Japan and Cuba is completed on August 1. On August 7, the company facilitates the lease of a B-747-146 from **Japan Asia Airways Company, Ltd.** to **JALways Company, Ltd.**

With the united goal of gaining some of the 85% market share held by the *Shinkansen* "bullet train," JAL joins with **JAS (Japan Air Systems Company, Ltd.)** and **All Nippon Airways Company, Ltd.** during the second week of August to inaugurate 33 daily roundtrip shuttle flights between Tokyo (HND) and Osaka (KIX/ITM). Start-up of the joint venture has unavoidably been delayed six weeks.

Another B-747-446 is delivered on August 17.

Just after takeoff from Jakarta's Sukarno-Hatta International Airport on a midnight flight to Tokyo (NRT) on September 5, Flight 726, a B-747-346 with 17 crew and 366 passengers, experiences severe engine trouble. Passengers witness the No. 1 engine falling off. The power plant disintegrates in midair at 1,000 ft. and pieces from it damage 16 houses in 3 villages of the Sepatan district of Tangerang regency. After dropping fuel, a safe emergency landing is completed back at the point of origin. No injuries are reported aboard the aircraft or in the affected communities. On September 11, JAL announces that it will pay for the repair of all housing damages.

JAL, **JAS (Japan Air Systems Company, Ltd.)** and **All Nippon Airways Company, Ltd.** open joint check-in counters on September 23 to handle passengers using their roundtrip shuttle service between Tokyo (HND) and Osaka (KIX). It is announced on September 25 that the company is planning an alliance with **Aerolitoral (Servicios Aereos Litoral, S.A. de C.V.)** that will allow the two companies to operate joint operations as early as November.

Also in September, JAL begins to provide ramp handling and cargo support services for **JAS (Japan Air Systems Company, Ltd.)** under contract at Osaka (KIX) for both domestic and international services. Also in September, international ticketless travel is extended to normal fares and published discount fares on all JAL routes between Japan and North America (save Mexico), including Hawaii. Further expansion to South America, Europe, Asia, and Mexico is planned for the first half of 2001.

Between October 5–12, JAL, the Japan Travel Bureau, and the Japan National Tourist Organization offer a special \$2,350–\$2,450 (per head), seven-day tour for U.S. travelers. They will be attending the 400th anniversary observances of the Battle of Sekigahara, which was fought and won in October 1600 by the warlord Ieyasu Tokugawa, founder of the dynasty that ruled the country until 1867.

The carrier joins with **ACES (Aerolineas Centrales de Colombia, S.A.)**, beginning on October 10, to explore joint cooperation in marketing and other services, possibly including code-sharing, handling, and passenger facilities and services.

The cargo divisions of JAL and **Singapore Airlines, Ltd.** begin weekly joint B-747-400F return flights on October 19 between Osaka (KIX) and Singapore.

The code-sharing agreement with **American Airlines** is expanded on October 25 as the Japanese carrier places its designator on AA services to four Mexican destinations (Mexico City, Monterrey, Cancun, and Guadalajara) from Dallas (DFW), New York (JFK) and Chicago (ORD) to Toronto, Montreal, and Ottawa. With these latest additions, the two majors offer an average of 1,700 weekly flights on 116 routes, covering 73 airports in 7 countries.

With the beginning of the winter schedule on October 29, the company transfers to **JALways Company, Ltd.** its daily frequencies from Tokyo (NRT) and Osaka (KIX) to Saipan and from Fukuoka to Honolulu. The redistribution of routes is part of the parent's effort to drive down costs. On March 9, the subsidiary will become 100% owned.

At this point, international cargo charges to Europe are increased by 10% and to North America by 5% in an effort to compensate for soaring fuel costs. The price hike is necessary even though JAL has hedged against fuel price rises on about 40% of its fuel bill.

On November 1, **Alitalia, S.p.A.** and JAL begin code-sharing on each other's weekly return services—eight Alitalia, seven JAL—between Italy and Japan.

Code-shared with **Vietnam Airlines**, twice-weekly direct roundtrip service is initiated on November 2 from Tokyo (NRT) to Ho Chi Minh City. Shared flights from Tokyo (NRT) to Hanoi begin on November 11. When the DC-10-40 with 164 passengers touches down, it marks the first scheduled JAL flight ever into the Vietnamese capital.

On November 11, JAL begins the greatest wine airlift in the nation's history. To meet the demand of enthusiasts for French-made Beaujolais Nouveau wine, which can only be released on the third Thursday of the November, 13 scheduled passenger aircraft, four scheduled freighters, and three ad-hoc aircraft begin the initial deliveries. The first aircraft arrives with 100 tons (527,650 bottles), followed by the others with 620 tons more.

Under a deal worked out with Boeing on November 16, the flag carrier will sell back its eight MD-11s to the U.S. manufacturer and apply the funds received to the purchase of two B-767-346ERs and eight B-777-246ERs in their place. The entire process is to be completed by 2005.

It is announced on December 12 that the carrier will begin a wholly owned subsidiary, JAL Cargo Sales, Ltd., in January. With a staff of 110, the new unit will handle all JAL cargo sales across Japan. It is simultaneously noted that, in response to a growing demand, weekly roundtrips from Tokyo (NRT) to Seoul will be increased to eight on January 15 and nine on February 5.

Arrested in Thailand in 1996 and acquitted in 1999 for extradition back to Japan, Yoshimi Tanaka, one of those charged with the 1970 hijacking of Flight 351, admits his guilt at his Tokyo District Court trial on December 15. Granted political asylum by North Korea after the piracy and believed to have worked as a spy for the P'yongyang government, Tanaka publicly apologizes for his actions. Tanaka is only the second of the Red Army extremists involved in the case ever to appear in court.

A B-747-246F enters service with JAL Cargo on December 17. The last of nine B-747-446s received since April 1998 is delivered on December 19.

As the year ends, the company prepares to celebrate its 50th anniversary and to join with Walt Disney International Japan in a Dream Express 21 marketing campaign that will see six of its aircraft painted in a special livery incorporating Disney-related themes. A special \$43 one-way fare on all domestic services will be offered between May 10–14.

JAPAN AIR SERVICE. *See* FUJITA AIRLINES.

JAPAN AIR SYSTEM, LTD.: JAS M1 Building, 5-1 Hanedakuko 3-chome, Ota-ku, Tokyo, 144-0041, Japan; Phone 81 (3) 5756-4046; Fax 81 (3) 5756-0663; <http://www.jas.co.jp>; Code JD; Year Founded 1988. On April 1, 1988, the former **Toa Domestic Airlines Company, Ltd.** is renamed **Japan Air System, Ltd.** to reflect its new status as an international carrier and its receipt, the previous day, of its first Douglas DC-10-30. Chairman Isamu Tanaka's 4,273-employee carrier maintains its huge domestic network of 66 routes to 38 cities. Charter services are also provided to destinations throughout Southeast Asia. The first two of four ordered DC-10-30s are used for training and charter flights while authority is awaited to begin Tokyo to Honolulu service.

Beginning in June, DC-10-30 service is inaugurated to Okinawa; in July, the first international flights commence with Airbus Industrie A300B2K-36 frequencies to Seoul, South Korea.

Passenger boardings jump 4.6% to 10,683,201 and freight is up by 9% to 49.29 million FTKs.

The workforce in 1989 stands at 3,991. In May, approximately \$61.2 million is raised through the private placement of five-year convertible stock worth SFr 100 million.

The year's enplanements total 12,227,722.

Company employment grows 35.3% in 1990 to 5,400 and the fleet now includes 50 aircraft. Beginning in April, company stock traded over

the counter at the Tokyo Stock Exchange is listed. Additional funds from the listing will be employed to acquire additional aircraft.

Passenger boardings advance by 9% to 13,437,101, a figure 22nd largest among all airlines in the world. Freight climbs by 22% to 76.77 million FTKs.

Operations continue apace in 1991. When the Transport Ministry opens additional slots at Tokyo (HAD) on May 17, they are immediately assigned to Japanese carriers. JAS receives three domestic routes to Fukuoka, Kita-Kyushu, and Komatsu that it will begin on July 20. Meanwhile, on June 3, scheduled service is inaugurated from Tokyo to Honolulu.

The fleet in 1992 comprises 21 YAMC YS-11As (including 7 on lease to subsidiary **Japan Air Commuter Company, Ltd.**), 20 McDonnell Douglas MD-81s, 8 MD-87s, 10 DC-9-41s, 2 leased DC-10-30s, 9 Airbus Industrie A300B2K-36s, and 13 A300B4-203s. Orders are outstanding for 11 A300B4-622Rs, 5 Boeing 747-400s, 6 MD-81s, and 10 MD-90-30s.

On April 1, **Japan Air Commuter Company, Ltd.**, employing the leased YS-11As, begins its first services from Itami Airport at Osaka. It takes over two routes from its parent, JAS, when it begins to provide four-times-a-day roundtrips between Osaka and Tokushima and daily roundtrips from Osaka to Tanegashima.

Having sustained losses with it since 1982, the company, also in April, abandons its helicopter business. Down from 10 helicopters a decade earlier to 2, the 16 pilots involved will be transitioned to the carrier's fixed-wing fleet.

Statistics for the 5,400-employee company are reported only for the first half-year and show enplanements up 4.9% over the same period a year earlier, to 7,671,815. Freight rises 3.4% to 46.92 million FTKs. Revenues are \$2.56 billion, but expenses are more. As a result, there are losses: \$15 million (operating) and \$49.3 million (net).

On October 1, employing its new SAAB 340Bs, **Japan Air Commuter Company, Ltd.** takes over the daily routes from Oita to Kagoshima, Kagoshima to Matsuyama, Matsuyama to Miyazaki, and Miyazaki to Nagasaki, which the parent had previously operated with YS-11As.

In 1993, Chairman Tanaka and President Takeshi Mashima oversee a workforce of 5,669, up 1% over the previous year. The number of YS-11As is reduced to 19, although the number chartered to **Japan Air Commuter Company, Ltd.** is increased to 9. The number of MD-81s is increased to 23.

After six months of twice-daily operations over the Tokyo–Osaka route, the East Japan Railway Corporation and Tokai Railway Corporation on March 18 boost their *Nozomi* (Hope) bullet train trips to hourly. Two days later, in the face of this stiff competition, the airline is forced to cut its daily roundtrip frequencies in half, from two to one.

Hoping to compete with discount travel agents for customers, the airline now begins to introduce more services for passengers paying full-fare for economy-class tickets on international flights. In March, for example, presents of wines, spirits, and handicrafts are offered to passengers boarding at Tokyo (NRT) for flights to Singapore, Honolulu, and Seoul. They also receive discounts on car rentals and a hotline for making reservations at affiliated hotels. On Singapore and Honolulu flights, passengers may also choose between baggage delivery service or a free limousine bus ticket from Narita Airport to anywhere in the Tokyo area.

Flight 451, a DC-9-41 with 4 crew and 72 passengers, is caught by wind shear while putting down at Hanamaki on April 18 and lands hard, skidding 1,860 m. Fuel spills and the Douglas catches fire, but all aboard are safely evacuated before it is destroyed by the flames.

Also in April, a four-year restructuring program is announced. Its provisions include a ¥100 billion (\$880 million) reduction in capital spending by the indefinite postponement of its ordered Dash-400 Jumbojets and a switch from that type to the new B-777. A new employment system will be introduced, including job displacements and labor reductions. In addition, planned construction of maintenance buildings, new hangars at Tokyo (NRT) and Osaka (KIX) and the purchase of upgraded computer systems are put off.

In October, further cost cutting is announced, designed to save ¥5 billion (US\$50 million) the following year. Smaller aircraft will be employed and service will be suspended altogether on a quarter of the company's 74 domestic routes. In addition, company offices will be moved to the downtown Tokyo headquarters to cut down on rental expenses and subsidies paid to **Japan Air Commuter Company, Ltd.** will be gradually eliminated.

Like other Japanese carriers, JAS also suffers a recession-induced downturn. Although passenger boardings inch up 0.5% to 15,018,000, freight falls 10.3% to 878.73 million FTKs. On income of \$2.58 billion, the company's net loss increases to \$103.8 million.

The employee population falls 8.3% in 1994 to 5,200. To combat a continuing poor performance, in February the carrier's leadership undertakes the restructuring program announced in April of the previous year, with revisions. It includes the elimination of unprofitable routes, deferral of investments in new aircraft and facilities, and staff reductions.

The unprofitable Tokyo–Honolulu routes are suspended in June, bringing to 23 the number of unprofitable segments suspended or reduced in a year. A number of thinner routes are transferred to Japan Air Commuter, but 14 domestic flights are scheduled from the new Osaka Airport (KIX) when it opens in early September.

Operations continue apace during the remainder of the year and plans are made in the final quarter to discontinue service to Singapore during the upcoming spring. Beginning in November and just in time for Christmas, the company's in-flight catalog begins to offer \$600 golf clubs (putters) made from recycled B-747 engine fan blades. Late in December, the Transport Ministry relaxes airfare regulations.

Overall, customer bookings recover, growing by 3.1% to 15,352,618, and cargo moves ahead by 2.1% to 106.79 million FTKs.

There is no change in company employment numbers during most of 1995. The carrier continues to reduce its international services, discontinuing its Tokyo to Singapore route in April. At this point, Tokyo to Seoul is the only international route flown.

Jointly sponsored by the airline and the nation's second largest travel agency, Kinki Nippon Tourist Co., Ltd., Peter Pan Flight charters are inaugurated on September 2, initially from Sendai to Honolulu. The service, designed to support fund raising for the Tokyo branch of the international Peter Pan Children's Fund, is provided by a DC-10-30 painted in a special Peter Pan livery.

Traffic figures are reported through September and show passenger bookings accelerating by 9.7% to 12,568,182. On the other hand, freight falls by 7.2% to 72.46 million FTKs. Later in the fall, JAS hires 150 contract flight attendants.

The first of 10 ordered MD-90-30s is turned over during a Long Beach ceremony on December 19; it is the first of its type to be delivered outside of the United States. It is also the first to wear a special livery conceived by famed Japanese motion picture director Akira Kurosawa that highlights the seven colors of the rainbow.

Airline employment surges 15.7% in 1996 to 6,015 and the fleet now includes 78 aircraft. The premier MD-90-30 flies from Long Beach to Tokyo (HAD) via Honolulu and Saipan on January 6–9.

Beginning in March, the company agrees to modify its jetliners to include, for the first time, separate men and women's lavatories. On March 8, the carrier's last YS-11A service is flown from Nanki-Shirahama to Tokyo (HAD). Beginning in April, the withdrawn YS-11As are sold, including several to **Air Philippines** (2).

By the end of the first quarter, the DC-10-30 supporting the Peter Pan Flight has conducted a total of 21 charter flights to Honolulu, Brisbane, Wuhan, and Bali from Tokyo, Hiroshima, Nagoya, and Miyazaki.

The first MD-90-30 in its rainbow livery enters service from Tokyo (HAD) to Nagasaki on April 1. When the new aircraft featuring male and female bathrooms begin flying during the summer tourist season, a "lavatory war" begins. **Japan Air Lines Co., Ltd. (2)** now matches JAS by installing "super lavatories" in the first-class sections of certain B-747-446s.

On July 1, via its computerized reservations links with **Northwest Airlines**, the carrier begins accepting transpacific feed at Osaka for its routes to Sapporo, Fukuoka, Kochi, and Niigata. The same four cities feed Northwest flights to Honolulu and Los Angeles, with JAS able to issue through-tickets to U.S. cities beyond the California gateway.

The first B-777-289 is delivered on December 1. A contest is held over the Internet for the aircraft's livery; from entries by 10,000 participants, a design by a 13-year-old boy is chosen the winner.

Although one month is missing from its annual report to ICAO, JAS announces traffic figures for the full year.

Enplanements for the 11 months are up 6.4% to 12,936,599 and 77.23 million FTKs are operated, a 4.1% increase. Revenues total \$2.65 billion, while expenses are \$2.64 billion; there is a \$2.3-million operating profit and a net gain of \$1.4 million.

The workforce is cut 3.4% in 1997 to 5,223. The charter and domestic subsidiary **Harlequin Air Company, Ltd.** is established at Tokyo on January 20. JAS provides ¥ 480-million initial capitalization.

In March, the Ministry of Transport announces that JAS will receive 12 new slots that will be made available at Tokyo (HAD) following the summer opening of a new runway.

On April 1, the B-777-289, painted in the prize-winning "spiral rain-bow" color scheme, inaugurates service with frequencies from Tokyo to Fukuoka and Sapporo. Following up on the concept first employed by **Western Pacific Airlines (Westpac)** in the U.S., President Hiromi Funabiki authorizes the country's first "logojet." The livery of the initial aircraft, an A300-622R, is sponsored by Otsuka Pharmaceutical Company, Ltd., which produces Japan's third most popular soft drink, Pocari Sweat.

In May, the company signs an agreement with **Japan Air Lines Company, Ltd. (2)** to cooperate in the area of domestic frequent flyer programs.

A total of 155 domestic flights are cancelled on June 27 by JAS, **Japan Air Lines Company, Ltd. (2)**, **All Nippon Airways Company, Ltd.**, **Air Nippon Company, Ltd.**, and **Japan Transocean Airways Company, Ltd.** as the result of a tropical storm and tornado.

A commercial agreement is signed with **Northwest Airlines** on July 17 under which the two carriers, in November, will link their frequent flyer programs. The two agree to study other possible joint operations, including airport handling, marketing, and even code-sharing.

Also during July, President Funabiki announces that the carrier's 100-point domestic network is under review as only a third of the destinations visited are profitable. An increase in service to China is also contemplated.

The Pocari Sweat logojet is unveiled at Tokyo (HAD) on September 1 and begins service to Okinawa, Sapporo, and Fukuoka. During the month, negotiations are undertaken with **KLM (Royal Dutch Airlines, N.V.)** concerning the possibility of a cooperative agreement. A memorandum of understanding is signed with the Dutch major in October; the two airlines will cooperate in commercial areas.

A letter of intent is signed with **Midwest Express** in October via Dolphin Trade & Finance, Ltd. for the sale of eight MD-81s. Deliveries to Midwest will begin in December and continue through 1999.

A code-sharing agreement with **KLM (Royal Dutch Airlines, N.V.)** is signed on October 28; the arrangement, when it takes effect in February, will also include cooperative marketing, joint ground operations, and a joint frequent flyer program.

The alliance with **Northwest Airlines** takes effect on November 1.

The charter subsidiary **Harlequin Air Company, Ltd.** completes its first flight, to Brisbane, on December 19.

Customer bookings slide 3% to 17,435,656, but cargo increases 17.1% to 121.47 million FTKs. Still, costs are so high that a loss of ¥ 1.5 billion is suffered.

At the beginning of 1998, JAS is the 18th largest airline in the world in terms of passenger boardings. Airline employment stands at 6,095 and the fleet, all of which is Stage III certified, includes 86 airplanes: 3 B-777s, 34 A300s, 1 DC-10-30, 34 MD-80s, and 14 MD-90-30s.

The dual-designator pact with **KLM (Royal Dutch Airlines, N.V.)** begins on February 1. As the result of losses suffered over the last several years and the Asian economic downturn, JAS, at the end of the first quarter, begins to implement a number of new cost-cutting measures.

In addition to a hiring freeze, it is announced that the company will cut its workforce by 500 over the next 3 years, suspend pay increases for managers, and restructure the domestic route network so as to emphasize only the most important routes. To save \$4 million in annual rent, it will transfer its headquarters to Tokyo (HAD).

Additionally, executives resolve to join their colleagues at **All Nippon Airways Company, Ltd. (ANA)** and **Japan Airlines Company, Ltd. (2)** in taking a tough stand against the pilot's unions, finally cutting the practice of paying flyers for 65 hours of flight time a month regardless of actual flight time.

Hokkaido Air System, Ltd. is established during the first quarter as a joint venture between JAS (51%) and the Hokkaido prefectural government (49%). Takeshi Kandi is named president and revenue operations begin with a pair of leased SAAB 340Bs. Destinations visited include Asahikawa, Hakodate, Kushiro, and Sapporo.

When the new pilot flight time and benefit package takes effect on April 1, pilots at **All Nippon Airways Company, Ltd. (ANA)** go out on strike. Those at JAL and JAS do not, but neither do they agree with management's plan to cut their pay. Continuing to voice their displeasure, the pilots threaten to walk out on April 9-10, a move that will force the airline to cancel 454 domestic flights. At the last minute, there is no strike.

The crash of a USAF F-16C at Misawa in northeastern Japan on July 24 forces a brief closure of the joint civil and military airfield. JAS must cancel four flights. Service is otherwise continued during the remainder of the year. In October, JAS announces that it will gradually transfer its international operations to **Harlequin Air Company, Ltd.**

On December 28, the carrier announces that it will slash airfares on the Tokyo to Fukuoka route by 50% on March 1 and by 40% on the Tokyo to Sapporo service.

Customer bookings accelerate 11.9% to 19.51 million, while cargo traffic jumps 10.6% to 134.33 million FTKs. Revenues rise 2% to \$2.6 billion.

As part of a master plan to reduce costs, salaries for cockpit crew are cut by 3% in January 1999; pay cuts of 12% will occur in April 2001.

On February 24, JAS and **Japan Air Lines Company, Ltd. (2)** agree to share a common computerized reservations system for their domestic route scheduling. The pact between the two airlines in the first such arrangement in postwar Japanese commercial aviation history.

As the result of stiff competition from **Skymark Airlines Company, Ltd.** and **Hokkaido International Airlines Company, Ltd. ("Air Do")**, JAS, on March 1, reduces its ticket prices on the Tokyo to Fukuoka service by 50% and on its route from Tokyo to Sapporo by 40%.

Twice-weekly return service starts on March 28 between Osaka and Kunming, China.

Demanding better working conditions and an end to wage cuts, JAS pilots begin an eight-day partial strike on April 14. Services from Tokyo (HND) to Sapporo, Osaka, Kushiro, Tokushima, Kochi, Takamatsu, Fukuoka, Hiroshima, Kumamoto, Oita, and the Amami Islands are affected. Thirty domestic flights are cancelled on April 21 as the partial job action continues for another few days.

The slashing of fares on those services flown in competition with **Skymark Airlines Company, Ltd.** and **Hokkaido International Airlines, Ltd.** begins to show results by the end of April. Both Skymark and Hokkaido show huge 60+% drops in their load factors over the contested routes.

The marketing alliance with Northwest Airlines is enhanced on August 7 when the two companies begin code-sharing. The "JD" code is placed on Northwest nonstop roundtrips between Osaka (KIX) and Detroit, Minneapolis (MSP), Seattle, Los Angeles, and Honolulu, while the "NW" designator appears on JAS connecting service from Osaka to Fukuoka and Okinawa.

CNN, quoting the *Yomiuri* newspaper, reports on August 29 that JAS and **Japan Air Lines Company, Ltd. (2)** have come to an arrangement under which they will jointly run international services. Beginning in October, JAL will provide aircraft and JAS will allocate three of its Tokyo (NRT) arrival and departure slots for services to either the U.S. or Korea.

Passenger boardings rise 5.5% to 20,597,000, while cargo jumps 21.3% to 162.94 million FTKs.

Airline employment at the beginning of 2000 stands at 5,994, a 1.6% decline. The company now operates seven B-777-289s.

On February 1, the Japanese government announces a new round of domestic airline deregulation. This significant step removes all entry and exit restrictions and also eliminates the upper and lower levels of ticket prices. JAS and its competitors now increase unrestricted tariffs an average of 15%, while instituting deep-discount restricted prices.

While landing in a snowstorm at Aomori in northeast Japan after a March 9 flight from Osaka, Flight 751, an MD-81 with 159 passengers overruns the runway and ends up in a snow bank. No injuries are reported.

A series of DC-10 charters undertaken on its behalf by **Harlequin Airlines Company, Ltd.** end on March 27.

On July 13, it is announced that to cut costs, JAS will share passenger handling services for domestic flights with **Japan Air Lines Company, Ltd. (2)** at important off-airport sites beginning in the spring. The two will also introduce joint gate boarding card machines in 2002.

With the united goal of gaining some of the 85% market share held by the *Shinkansen* "bullet train," JAS joins with **All Nippon Airways Company, Ltd.** and **Japan Air Lines Company, Ltd. (2)** during the second week of August to inaugurate 33 daily roundtrip shuttle flights between Tokyo and Osaka (KIX and ITM). Start-up of the joint venture has unavoidably been delayed six weeks.

An A300B4 is forced to return to Naha for an emergency landing on August 9 when ground observers report seeing flames coming from its No. 2 engine.

A code-sharing agreement is signed with **China Southern Airlines Company, Ltd.** on September 22 covering service over a route from Guangzhou and Osaka (KIX).

JAS, **Japan Air Lines Company, Ltd. (2)**, and **All Nippon Airways Company, Ltd.** open joint check-in counters on September 23 to handle passengers using their roundtrip shuttle service between Tokyo and Osaka (KIX).

Also in September, **Japan Air Lines Company, Ltd. (2)** begins to provide ramp handling and cargo support services for JAS under contract at Osaka (KIX) for both domestic and international services.

At the end of the year, all employees prepare to celebrate the company's 30th anniversary beginning on May 15, 2001. Throughout the year, a special "birthday fare" will be available—any passenger flying within 15 days of his or her own birthday may purchase a one-way \$86 fare to any point on the JAS domestic system.

JAPAN AIR TRANSPORT COMPANY, LTD. (JAT) (NIHON KOKYUSO KABUSHIKI KAISHA): Japan (1928–1938): Aircraft designer Seibei Kanwanishi forms **Nihon Koku Kabushiki Kaisha (NKKK)** or **Japan Airways Corporation (JAC)** at Osaka in July 1923 to operate a holiday charter service to Beppu, Kyushu.

Japan's first civil aviation law takes effect on January 1, 1927 and, employing a Dornier Wal flying boat christened *Naniwa*, under the direction and sponsorship of the government's Ministry of Posts and Communications, NKKK's first scheduled service is inaugurated on July 1 from Osaka to Fukuoka.

The government-sponsored **Nihon Kokuyuso Kabushiki Kaisha (NKKK)** or **Japan Air Transport Company, Ltd. (JAT)**, is formed as a national flag carrier, administered by the Ministry of Posts and Communications, on October 30, 1928. With capitalization of ¥ 10 million, orders are placed on its behalf for 8 U.S.-made Fokker Model 8 Super Universals and 10 Dutch-built Fokker F-VIIb/3ms as the original NKKK stands down.

Together with **Tozai Teiki Koku Kai (TTKK)** founded in January 1923 and recipient of a commercial operator's certificate a year later, JAC is merged into NKKK in late winter 1929. In exchange for a ¥11-million subsidy to be spread out over the next decade, the company is required to sign a contract allowing the Army free use of the carrier in times of emergency. In exchange, it is provided with 18 Salmson 2-A-2s with which to initiate services.

Sendai to Fukuoka via Tokyo and Osaka Salmson biplane cargo and mail service is inaugurated on April 1. The crated Super Universals arrive in June; after they are assembled and special pilot training is completed, one is test flown over the Korea Strait from Fukuoka to Pusan, Korea, on June 21. The Model 8s launch daily roundtrip passenger flights Tokyo to Fukuoka via Osaka on July 15.

Late in July, the first F-VII/3ms arrive from the Netherlands; they are employed to begin thrice-weekly service from Pusan to Seoul to Dairen via P'yongyang, on September 10. These flights are so well received that the Nakajima and Kawasaki aircraft manufacturers acquire licenses to build Super Universals and Dornier Wals for the company.

A total of 2,755 passengers are flown on the year.

With a Kawasaki-built Dornier flying boat, a proving flight is made from Fukuoka to Shanghai on March 7, 1930. The year's enplanements more than double to 7,642.

The first group of stewardesses ("Air Girls") is employed in February 1931. On August 28, the base of operations is transferred from Tachikawa to newly opened Haneda Airport. The Manchurian Incident occurs on September 18; two days later and under Army direction, JAT dispatches several Fokker Super Universals and their crews to Shenyang to help with military requirements, including resupply flights and the evacuation of wounded soldiers. This is the first mobilization of civil aircraft crews by the Japanese Army or Navy. In December, the company begins provisional scheduled services on behalf of the Army and the Dairen route is extended to Mukden via Sinugi and on to Changchun, on December 28. Bookings slip to 6,766.

The Shanghai incident occurs in January 1932 and the colony of Manchukuo is created on March 9. NKKK supports the formation of **Manchurian Air Transport Co., Ltd. (MAT)** on September 26 as a joint venture between the Manchukuo government and Japanese business interests. When a Super Universal, engaged in an Army liaison flight, makes a forced landing in Manchuria the next day, all eight aboard are killed by Chinese irregulars. The deaths mark the first for JAT in service to the military. MAT commences operations on November 3.

Thereafter, JAT is able to concentrate on civil flying for some time and passenger boardings subsequently rise to 10,716.

The installation of 16 airway beacons between Osaka and Tokyo is completed in September 1933, allowing one of the carrier's 8 new Nakajima P-1s to initiate nightly airmail runs over that route beginning on November 1–2. The route is marked by powerful searchlights; not immediately successful, it is soon suspended. Enplanements for the year are nearly level at 10,992.

The manufacturer Nakajima Hikoki KK, on March 27, 1934, pays \$80,000 to purchase a license to build Douglas DC-2s. The first DC-2 is delivered to Tokyo (HAD) on November 22, and in December, Nakajima, having acquired manufacturing rights, begins to modify the aircraft's plans into the AT-2 (also known as the Ki-34), the first Japan-built twin-engine commercial transport built to a primarily original design.

Customer bookings swell to 12,187.

On April 1, 1935, daily airmail flights commence between Tokyo and Changchun, capital of Manchuria, by way of Dairen. The nightly airmail service via the lighted airway between Tokyo and Osaka is resumed with the coming of spring, while passenger and cargo frequencies to Dairen become daily. Several speedy Airspeed Envoys, imported from the U.K., enter domestic service during the summer. Fukuoka to Taipei, Taiwan F-VII/3m service is inaugurated via Okinawa (Naha), on October 8. A number of additional Airspeed Envoys, license built in Japan as the Mitsubishi *Hina Zuru* (Young Crane) replace the Fokkers on home service.

Unhappily, the year's boardings drop to 10,822.

The first of 33 production AT-2s is completed in January 1936, while in February, four crated DC-2s received under the 1934 contract are assembled. These Japanese and American units are placed into service on company routes, including that to Taipei, beginning on September 12 replacing the Airspeeds and Mitsubishi's. A Beech C-17E, the first of 14 imported from the U.S., is also placed on local routes in September.

On October 1, new AT-2 routes are opened from Tokyo to Niigata and to Osaka via Toyama; from Osaka to Matsue via Tottori; and to Kochi via Tokushima. A scheduled route network is also begun on the island of Taiwan, with service extended from Taipei to Kao-hsiung and Hualien.

A commercial aviation bilateral agreement is signed with Germany on November 25.

These capacity and route improvements have a positive impact on the carrier's traffic and financial reports; enplanements leap to 18,955.

Regularly scheduled Tokyo to Sapporo flights, made via Sendai and Aomori, commence on April 1, 1937. The route network from Tokyo now includes Sendai, Aomori, Sapporo, Niigata, Toyama, Nagoya, Tottori, Tokushima, Kochi, Osaka, Matsue, and Fukuoka in Japan; Taipei, Yilan, Hualien, Taizhong, Tainan, and Naha in Taiwan; Tianjin in China; Ulsan, Taegu, Seoul, P'yongyang, and Sinuiju in Korea; and Shengyan, Darien, and Changchun in Manchukuo.

On June 1, AT-2s launch express service from Tokyo to Changchun via Fukuoka and Seoul.

The Sino-Japanese conflict breaks out on July 7 and on July 12 the company dispatches aircraft and crews to China under Army direction. A block-seat agreement is signed with the military, covering payment for reserved seats (filled or not) on all flights from Japan to China or Manchukuo.

In the fall, **Nippon Koku Yuso Kenkyujo**, founded in 1922 and known as the **Japan Air Transport Research Institute**, is taken over and merged. Orders are placed for 30 Lockheed Model 14s and during the year the Japanese Army Air Force begins to receive AT-2s under the designation Type 97. Flights from Taipei to Shanghai commence on October 2. The first of seven Douglas DC-3s to be delivered over the next year arrives on December 6.

Passenger boardings increase to 47,432.

The trading organization Mitsui & Co., Ltd., covertly acting on behalf of the Imperial Japanese Navy, acquires a \$90,000 license on February 24, 1938 to build the Douglas DC-3 in Japan. Two crated DC-3As will be shipped to Tokyo from California, where they are assembled by the Showa Hikoki Kogyo KK and allow the airline and its successor to test them. Rising Sun airplane builders, led by Showa Hikoki Kogyo KK and Nakajima Hikoki KK, will eventually construct 414 modified Douglas transports, designated Type O.

In March, the North Chinese route network is completed with the inauguration of new services from Fukuoka to Peking via the Shantung Peninsula community of Tsingtao. At the same time, flights begin from Shanghai to Nanking.

In April, newly organized **International Airlines Co., Ltd.**, created the previous August as a subsidiary of the Army-backed MAT in Manchukuo, receives two Heinkel He-116s from Germany; the pair arrives at Tokyo from Berlin in a 5-day, 23-hr., 43-min. flight. The announced plan for the aircraft is to begin mutual air service between Tokyo and Berlin, but this will not materialize. The real, although covert, intention of the flight is to establish a basis for military aerial collaboration in case of emergency.

The same month, the Ministry of Posts and Communication begins large-scale training of civilian pilots. The Imperial Navy, meanwhile, begins planning for its own "civilian" airline, an operation to be known as **Oceanic Airways, Ltd.**

JAT receives its first L-14WGs in June and July and they are employed to commence Tokyo to Changchun operations on August 1. Another 119 Model 14s will be built in Japan and designated Type LOs. On Taiwan, the coastal communities of Taichung, Makung, Pingtung, Taitung, and Giran now all receive air service from Taipei.

JAT is now peaking in size. With a workforce of 1,500 and 80 transports, it operates a 12,800-kilometer route network with destinations in Japan, Korea, Taiwan, China, and Manchukuo. A DC-3 imported from the U.S. is assembled at Tokyo (HAD) on September 30; it opens routes from Tokyo-Peking and Fukuoka-Nanking on October 5. In late fall, the first three of 24 Mitsubishi G3M2s, converted to civil standard, are acquired.

A rivalry occurs between the Army, Navy, and Ministry of Communications for control over the nation's civil airline. Despite the huge military payments that bring an end to the need for subsidy, payments to the airline continue because none of the agencies involved can agree to halt them. In November, a compromise is struck whereby **International Airlines Co., Ltd.**, the still-paper **Oceanic Airways, Ltd.**, and JAT will be merged into an entirely new carrier. JAT ceases operations on November 30 to make way for the establishment of **Japan Air Lines Company, Ltd. (1) (Greater Japan [Dai Nippon Kokyuso Kabushiki Kaisha] Air Lines)** the next day.

JAPAN AIR TRANSPORT RESEARCH INSTITUTE. See **NIPPON KOKU YUSO KENKYUJO (NKYK)**

JAPAN ASIA AIRWAYS, LTD.: **Yurakucho Denki Building, 7-1 Yurakucho 1 Chome, Chiyoda-ku, Tokyo, 100, Japan; Phone 81 (3) 3284 2972; Fax 81 (3) 3284 2980; http://www.japanasia.co.jp; Code EG; Year Founded 1975.** To allow resumption of the lucrative Taiwan route given up when PRC service is started in 1974, **Japan Air Lines Company, Ltd. (2)** creates this wholly owned subsidiary on August 8, 1975 to get around Beijing's objection to the flag carrier's Taiwan service. With three dedicated DC-8-61s and a DC-8-62 transferred from the parent, Chairman Hiroshi Arai's 400-employee JAAC begins Tokyo-Taipei service on September 15. Traffic figures are reported with those of the parent. Routes are opened from Tokyo and Osaka to Manila and Hong Kong in July 1976.

During 1977-1979, the introduction and maintenance of inclusive tour and cargo charters supplement scheduled operations. With three DC-10-40s supplied by JAL, new frequencies are initiated on the Tokyo to Taipei route during 1980. Manila service is suspended in 1981, but a route is started to Kao-hsiung in 1982. The same year, the company receives its first Jumbojet, a B-747-146 transferred from the parent.

Enplanements total 734,955 in 1983. In 1984, a total of 415,480 passengers are flown to Taipei while 228,600 Taiwanese passengers are flown to Japan. When a B-747-146 and a B-747-221F are transferred to the carrier from its parent in 1985-1986, the DC-8s begin scheduled freight service and are all dedicated to the charter operations, which include a return to the Philippines.

The fleet in 1987 includes 1 B-747-346, 2 B-747-146s, and 3 DC-10-40s. In July, **China Airlines, Ltd.** purchases block-space on JAA services between Taipei and Tokyo.

The company's 12th anniversary is celebrated in August, at which time it is reported that 7.3 million passengers (cumulative) have been flown. Through October, the year's bookings jump 21.8% to 793,205 and cargo rises 33.3% to 77.88 million FTKs. Profits total \$37.3 million (operating) and \$13.3 million (net).

The workforce is increased by 14.3% in 1988 to 603 as Okinawa-Taipei flights begin. Customer bookings ascend 15% to 1,125,498 and cargo climbs 7% to 100.63 million FTKs. Revenues ascend by 6.8% to \$398 million. With expenses up only 3.3%, operating income is able to balloon to \$51.6 million. The net profit reaches \$25 million.

The payroll is cut 17.4% in 1989 to 498. Still, passenger boardings jump 17.1% to 1,262,914 and freight ascends 10.1% to 110.45 million FTKs.

Company employment inches up 0.4% in 1990 to 500 and the fleet now includes 2 Boeing 747-146s, 1 B-747-346, and 3 DC-10-40s. Traffic is good as customer bookings rise 3.6% to 1,338,622 and cargo climbs 4.2% to 115 million FTKs.

The fleet in 1991 includes 3 B-747-146s, including 1 leased back to JAL; 1 each B-747-246B and B-747-346; and 4 DC-10-40s, 1 of which

is also leased to JAL. Recession cuts deeply into business and figures are reported only through June. These show passenger boardings down 7.2% to 633,844. On December 25, four-times-per-week service is inaugurated from Nagoya to Guam via Saipan.

Airline employment at Chairman Mitsunari Kawano's carrier reaches 1,023 by 1992 and the fleet comprises 2 B-747-246Bs, 2 B-747-146s, 1 B-747-346, and 3 Douglas DC-10-40s, 1 of which remains on lease to JAL. Faced with greater competition on the principal Japan to Taiwan route, the company hires additional non-Japanese flight attendants, based at Taipei, at lower rates.

Through November, customer bookings climb 6.5% to 1,299,904. Cargo inches up 0.6% to 108.63 million FTKs. The year's net profit is \$5.2 million.

In 1993, Chairman Kawano and President Noboru Okamura oversee a workforce unchanged in size and a fleet cut by one B-747-146. Service continues to be provided from Tokyo and Osaka to Taipei, Kao-hsiung, and Hong Kong and from Okinawa and Nagoya to Taipei. To assist with its parent's cost-cutting efforts, the JAL route from Hong Kong to Bangkok is assumed on a scheduled basis.

For the year as a whole, passenger boardings plunge 8.7% to 1,278,176 and freight is down 1.1% to 117.14 million FTKs.

Despite a recovering Japanese economy, the number of employees is reduced by 12% in 1994 to 900. Customer bookings recover to make up the ground lost the previous year, rising 9.4% to 1,398,481. Cargo ascends 4.3% to 122.15 million FTKs.

There is no change in company employment during 1995. Traffic figures are reported through September and show passenger boardings declining 0.4% to 1,029,813. Conversely, freight jumps 22.2% to 106.86 million FTKs. In late December, as part of the company's 20th anniversary celebration, the carrier's B-747-146 is painted in a "dancing children" motif.

Nine new employees join the company in 1996, a 1% increase, and the fleet now includes 4 DC-10-40s, 2 B-747-246Bs, and 1 each B-747-146 and B-747-346.

During Chinese military missile exercises off Taiwan between March 8 and 18, Japan Asia changes the route of its six-times-a-week service between the southern Japanese city of Naha and Taipei. The service is lengthened by 10 minutes and is not considered a major problem.

Enplanements jump 10.1% to 1,124,513 while 100.65 million FTKs are operated, a 6.2% decline.

The workforce is reduced 1% in 1997 to 900. Customer bookings advance by 2.1% to 1,576,172 and cargo moves up 2.9% to 134.4 million FTKs.

In 1998, the company continues to fly from Tokyo, Osaka, and Nagoya to Hong Kong, Kao-hsiung, Manila, Okinawa, and Taipei. Passenger boardings drop 8.6% to 1.44 million, while traffic is down 3.3% to 129.91 million FTKs.

By the start of 1999, airline employment has been increased by 1% to 909. Passenger boardings jump 4.7% to 1,376,000, while cargo dips 1.8% to 127,588,000 FTKs. The workforce has been reduced to 832 by the beginning of 2000.

On August 7, the company's only B-747-146 is leased via **Japan Air Lines Company, Ltd. (2)** to **JALways Company, Ltd.**

JAPAN CONTINENTAL AIRLINES COMPANY, LTD.: Makurazaki Airport, Kyushu, Japan; Year Founded 1991. JCAC is established at Makurazaki Airport in 1991 to offer nonscheduled flights to Kagoshima Airport, Yakushima, in the Kagoshima Prefecture. Operations commence with a single Pilatus-Britten-Norman PBN-2B26 Islander leased from Tokyo-based ITC Aerospace, Ltd.

Having received its license, the company, in early 1992, inaugurates scheduled services from Makurazaki Airport in the Kyushu islands to Tanegashima. The lone aircraft is occasionally chartered by the Japanese Customs Service for maritime surveillance work.

It is understood that operations continue during the remainder of the decade. Exact information is unavailable.

JAPAN DOMESTIC AIRLINES COMPANY, LTD.: Japan (1964–1971). At the instigation of the Ministry of Transport, Japan Domestic is formed on April 15, 1964 to fly medium-haul services on the longer legs between cities in the nation's four islands. The company is an amalgamation of **Fuji Airlines, Ltd., Nitto Air Lines Company, Ltd.,** and **North Japan Airlines Company, Ltd. (Kita Nihon Kabushiki Kaisha).** The latter, being the largest and most sophisticated, forms the nucleus around which the others are amalgamated.

The aircraft of the merger partners are assembled into a unified fleet that includes 9 Convair CV-240s, several Douglas DC-3s, many light-planes (e.g., Beech 18s), and a few helicopters. Destinations served include those of the merged carriers, e.g., Tokyo, Osaka, Kochi, Sapporo, Wakkanai, Nagasaki, Kyoto, Nagoya, Sendai, Kagoshima, and Sado Island. Additional new routes link Honshu and Hokkaido.

A Convair CV-880M, a large jetliner leased from **Japan Air Lines Company, Ltd. (2)**, is delivered on January 4, 1965 and is christened *Gina*. A trunk route is initiated by the CV-880M on March 1 from Tokyo to Sapporo and Fukuoka.

In July, a Nord 262 is leased and employed, beginning on August 1, over a route from Osaka to Tokushima. Later, a purchased aircraft is also acquired and is placed into service between Osaka and Niigata. Six YAMC YS-11As are also acquired during the year.

Orders are outstanding for four additional YS-11As and two Boeing 727-100s. The Convair jetliner begins flying from Tokyo to Sapporo and Fukuoka while the YS-11As launch flights from the capital to Obhiro, Aomori, Niigata, and Oita. Enplanements for the year are 504,673.

The Boeing trijets, leased Dash-146s, arrive under charter from JAL-2 in February 1966 and enter service on March 15.

The *Gina* is leased back to JAL on May 1. On May 20, the Ministry of Transport, which had created JDA, wins approval of the cabinet for a merger of its creation into JAL-2. Political circumstances will ensure that the plan is not implemented. Still in GDA colors, the *Gina* is lost in a training accident at Tokyo (NRT) on August 26.

Growth continues throughout the remainder of the decade and by May 15, 1971, when the company is combined with **Toa Airways, Ltd.** to form **Toa Domestic Airlines Company, Ltd.**, the fleet comprises 15 YAMC YS-11As and 3 Boeing 727-146s.

JAPAN HELICOPTER AND AEROPLANE TRANSPORT COMPANY, LTD. (NIHON HERIKOPUTA YHUSO KABUSHIKI KAISHA): Japan (1952–1958). Also known as by its initials (JHAT or NHYKK) or as Nippeli, this postwar Japanese pioneer is formed on July 15, 1952 with initial capitalization of ¥ 150 million (US\$450,000). Masuichi Midoro is named president, with Katsuyoshi Nakano and Ryuichi Fukumoto as senior vice presidents and Seiji Torii as vice president. Operating authority is sought from the government via applications filed on July 15. As regulatory decision is awaited, 2 Bell 47D-1s are acquired and a 16-man workforce is recruited.

Government permission to undertake rotary-wing aerial work is received in early February 1953, with the first contract flight undertaken on February 20. A license for charter service is granted to the company on May 26. Over the next seven months, as helicopter contracts continue to be operated, the fleet is increased by the addition of two Bell 47D-1s and two de Havilland DH 104 Doves.

On December 15, the first postwar service using Japanese pilots is initiated as the company's premier DH 104 Dove makes a cargo flight from Tokyo to Osaka.

The carrier's chief competitor, **Far Eastern Airlines, Ltd. (FEA)**, begins revenue services with a mail flight over the JHAT route on January 20, 1954. JHAT's first passenger service is flown from Tokyo to Osaka on February 1. The decision is now taken that the two companies should complement one another and not compete; thus alternate route networks will be developed. On March 1, FEA launches its own passenger services over a route from Osaka to Iwakuni. Employing three DH 114 Heron 1Bs, JHAT commences regularly scheduled revenue

flights from Tokyo to Nagoya and Osaka on March 1. Tokyo to Misawa and Sapporo flights commence on August 10.

The first leased Douglas DC-3s are received in the summer of 1955 and the first 6 cabin attendants are hired in September—from a pool of 1,000 applicants. One of these, Yoko Kitano, gains the honor of becoming the company's first serving stewardess when she hosts passengers on the inaugural DC-3 service, Tokyo–Osaka–Nagoya, on November 15. Meanwhile, on October 1, flights have been launched to Kanazawa and Oshima.

Frequencies are initiated from Osaka to Kitakyushu on May 15, 1956 and from Osaka to Kamazawa on July 2. Merger discussions with officials from FEA now begin. On April 13, 1957, the two companies begin to coordinate their activities on a formal basis. JHAT starts flying from Tokyo to Sendai on April 22 and begins its last new route on October 10 from Tokyo to Kitakyushu, direct.

Services are maintained until March 1, 1958 when the carrier is merged with FEA to create **All-Nippon Airways, Ltd. (ANA)**.

JAPAN REGIONAL AIRLINES COMPANY, LTD.: Yamaguchi-Ube Airport, Honshu, Japan; Year Founded 1995. JRAC is set up at Yamaguchi-Ube Airport on the western side of Honshu in 1995. Non-scheduled operations commence with a single Pilatus Britten-Norman PBN-2A Islander.

The fleet is increased in 1996–1998 to also include 2 leased Cessna 208 Caravan Is and 3 Dornier 228-200s.

It is understood that operations continue during the remainder of the decade. Exact information is unavailable.

JAPAN TRANSOCEAN AIRWAYS COMPANY, LTD.: 3-24 Yamashita-Cho, Naha-shi, Okinawa, 900, Japan; Phone 81 (98) 857-2112; Fax 81 (98) 858-2581; <http://www.210.174.160.218/jta>; Code NU; Year Founded 1993. Based at Naha City on Okinawa, 25-year-old Southwest Airlines Company, Ltd. is renamed in July 1993. Chairman Keiichi Inamine and President Michio Okumo continue to oversee a workforce of 835 and operate a fleet that includes 6 owned and 1 leased Boeing 737-2Q3As, 1 chartered B-737-205A, 2 B-767-246s, including 1 leased from Japan Air Lines Company, Ltd. (2), the carrier's principal owner. Also in the fleet are 5 NAMC YS-11A-500s and 4 de Havilland Canada DHC-6-300 Twin Otters leased to Ryukyu Commuter, Ltd. Orders are placed for four B-737-4Q3s.

From Naha City, interisland flights continue to be offered in the Okinawa (Rack) Group, including the communities of Ishigaki, Miyako, Kume, Yoron, Shimoji, Yonagumi, Nagoya, Okayamu, and Matsuyama. Services are also undertaken from Kagoshima Miyako to Tokyo and from Ishigaki to Tokyo.

Enplanements for the year total 11,304, but there are fiscal losses: \$41.92 million (operating) and \$43.11 million (net).

The workforce in 1994 totals 740 and the first B-737-4Q3 is received in late June.

Customer bookings skyrocket 99.5% to 2,260,603 while freight does even better, climbing 124.7% to 13.79 million FTKs. Revenues inch up 0.8% to \$331.32 million, while expenses are up 0.1% to \$370.78 million. The loss picture worsens as the operating loss is \$46.18 million and the net rises to \$47.54 million.

Airline employment is increased by 5.6% in 1995 to 764. The previous year's good traffic fortune is reversed somewhat.

Passenger boardings decline 5.8% to 2,129,380 and cargo is off by 23.1% to 10.66 million FTKs. Cost-cutting measures greatly improve the financial picture. Although revenues fall 19% to \$273.65 million and expenses are down 27.1% to \$276.08 million, the operating loss is cut to \$2.43 million and the net loss is down to \$1.34 million.

The workforce is reduced by 1.8% in 1996 to 750. The owned fleet includes 5 YS-11-A-500s and 5 B-737-2Q8As; also operated, under charter, are 1 B-737-2Q8A, 3 B-737-205As, 3 B-737-205As, and 3 B-737-4Q3s, 1 of which is chartered from Japan Air Lines Company, Ltd. (2). Four owned de Havilland Canada DHC-6-300 Twin Otters are leased to Ryukyu Air Commuter, Ltd.

Enplanements surge 31.1% to 2,024,511 and freight soars 24.6% to 8.63 million FTKs.

The workforce is increased by 1.3% in 1997 to 760.

A total of 155 domestic flights are cancelled on June 27 by Japan Air System, Ltd., Japan Air Lines Company, Ltd. (2), All Nippon Airways Company, Ltd., Air Nippon Company, Ltd., and Japan Transocean as the result of a tropical storm and tornado.

The carrier's 15 aircraft haul 2,130,703 passengers, a 5.3% increase. Cargo jumps 8.4% to 9.36 million FTKs.

Facing significant fiscal losses, executives at parent Japan Airlines Company, Ltd. (2) agree in mid-March 1998 on a new package of cost-cutting measures. They also join their colleagues at All-Nippon Airways Company, Ltd. (ANA) and Japan Air System, Ltd. in taking a tough stand against the pilot's unions, finally cutting the practice of paying flyers for 65 hours of flight time a month regardless of actual flight time.

The flyers at Japan Transocean are considerably more upset about this policy than their fellow pilots at JAL are. To combat this move against their contracted time and benefit package, they begin staging a series of periodic work stoppages on March 28. Through April 7, the carrier is forced to cancel 22 flights.

Customer bookings inch up 0.9% to 2.11 million just as freight traffic dips 1.5% to 9.22 million FTKs.

By the beginning of 1999, airline employment has been cut 1.3% to 750. Customer bookings jump 4.6% to 2,209,000.

The workforce at the beginning of 2000 totals 750. The B-737-400 fleet now includes 8 Dash-4Q3s and 3 Dash-4K5s.

Having worn a rhinoceros logo advertising the clothing chain Papas since November 1998, the B-737-4Q3 involved begins sporting a new jumping sailfish figure in January. On March 3, another B-737-4Q3 is given a "Kyushu–Okinawa Summit 2000" logo promoting the upcoming G8 meeting between Japan, the U.S., the U.K., France Germany, Italy, Canada, and Russia.

As a result of a March 14 strike threat by a number of its pilots and flight attendants, the airline cancels 6 of the 20 services from Okinawa to Tokyo (HND), Osaka, and Kagoshima and 19 of 52 Okinawa interisland flights.

JAPAN UNIVERSAL TRANSPORT SYSTEM, LTD. (JUST): Japan (1991–1995). Formed by Japan Air Lines Company, Ltd. (2), Nippon Express, and Yamato Transport at Tokyo in October 1991 to overcome a shortage of surface trucking capability, this new all-cargo carrier initiates a daily scheduled roundtrip freight service between Tokyo and Sapporo, on Hokkaido. Flights from Nagoya and Sapporo commence in late November employing a single Boeing 747-221F leased from Japan Air Lines Company, Ltd. (2). The plane has been repainted, given a white livery with billboard "JUST" titles on the forward fuselage and a whale logo on its tailfin.

The domestic flights cease in 1992 with the end of the truck capacity crunch; the airline (now 69.7% owned by JAL) changes course, wet-leasing its Jumbojet back to JAL for frequencies between Japan and the U.S. West Coast, including Los Angeles and Anchorage, and Frankfurt, Germany. The aircraft is reintegrated into the fleet of its airline parent during 1995.

JARO INTERNATIONAL, S.A.: 500 Bucuresti Ploesti 14-22, Bucharest, Romania; Phone 40 (1) 212-2273; Fax 40 (1) 212-2274; Code JT; Year Founded 1990. JARO is established at Bucharest on August 1, 1990 to offer international, regional, and domestic passenger and cargo charters. Mirica Dimirescu is appointed president and he recruits a workforce that will come to total 117 and acquires a leased fleet of 2 British Aerospace (BAC) 1-11-528FLs, 1 Boeing 707-321B, and 1 B-707-327C.

Revenue operations commence on August 5, 1991 from Bucharest and Sibiu to Athens, Berlin, Budapest, Istanbul, Izmir, Paphos, Stockholm, Tunis, Verona, and Naples.

Operations continue apace in **1992–1998**. One each B-737-200 and B-737-300 are received in March and June of the latter year. Revenue flights are expanded and new stops are made at Dusseldorf, Larnaca, London (STN) and Naples.

Another B-707-320C joins the fleet in **1999**. Airline employment totals 150 at the beginning of **2000**.

JAT YUGOSLAV AIRLINES (JUGOSLOVENSKI AEROTRANS-PORT): JAT Poslouni Center, Ho Shi Minova 1670, Novi Beograd, 11070, Yugoslavia; Phone 38 (11) 13 3535; Fax 38 (11) 13 7756; <http://www.jat.com>; Code JU; Year Founded 1946. Marshall Josip Borz Tito's government in the fall of 1946 forms a new company under the name **Jugoslovenski Aerotransport** to take over the Jugoslovensko Ratno Vazduhoplovstvo (military air transport division) civil service started in November 1945 and to restart the domestic services provided by **Aeropot** until May 1941.

Flight operations from grass airfields begin on April 1, **1947** with Junkers Ju-52/3ms, some of which are replaced by Douglas DC-3s during the summer and fall. Many of the aircraft are serviced by former **Aeropot** personnel who had survived the war.

Simultaneously, the government enters into a fifty-fifty partnership with the Soviet Union to provide international Li-2 service via a new company, **Jugoslovenska Soviet Transport Aviaciza (JUSTA)**. Services to Budapest, Tirana, and Bucharest are inaugurated during the summer.

On November 27, a DC-3 with 3 crew and 19 passengers, crashes while on initial approach to Montenegrin; there are no survivors.

Following the diplomatic break with the Soviet Union in **1948**, JUSTA is dissolved and Jugoslovenski Aerotransport suspends service.

En route from Belgrade to Sarajevo on June 4, a DC-3 with 28 passengers is seized by the radio operator and a passenger and diverted to Bari, Italy.

In **1949–1952**, international services are restarted on a limited basis while, due to weather and terrain, domestic services are provided only during summer. Fatal accidents are not uncommon and there are sky-jackings.

Coming in from Belgrade on September 21, 1950, a DC-3 with four crew and seven passengers, crashes while landing at Zagreb (ten dead).

A DC-3 with three crew and eight passengers, must be written off following an emergency landing at Wittelsbach, West Germany, on June 8, 1951, due to an in-flight fire; there are no fatalities.

A Ju-52/3m with 14 aboard crashes near Zagreb on June 29; again, there are no survivors.

The captain and copilot of a DC-3 just happen to have their wives and two children aboard for a domestic service on October 17; midway through the flight, the two fliers change course and fly to Zurich, where they obtain political asylum. The three other crew members and 22 non-participating passengers are returned to Belgrade aboard the Douglas.

Flying between Belgrade and Skopje on October 25, a DC-3 crashes while landing at the latter point (12 dead).

On June 26, 1952, a DC-3 with 32 passengers en route from Zagreb to Pola is seized by three passengers, who order the plane diverted to Foligno, Italy.

During **1953**, preliminary (and eventually unsuccessful) discussions occur between Yugoslavia, Greece, and Turkey with the aim of forming an **SAS (Scandinavian Airlines System)**-type Balkan consortium airline. Orders are placed in the U.S. for three Convair 340s.

By summer **1954**, the fleet comprises 5 DC-3s; it is enhanced during the fall by the arrival and placement into service of three Convair CV-340s. Flying below minimum altitude while on final approach to Schwechat Airport at Vienna, Austria, on October 10, **1955**, a CV-340 with 4 crew and 25 passengers, crashes onto the slope of the Kahlenberg 25 km. out (7 dead).

Having descended below the cleared 3,000-ft. altitude, a CV-340 with 3 crew and 27 passengers en route from Vienna to Munich, collides with the ground while on approach to the airport at Grub, Germany, on December 22, **1956** (3 dead).

To expand charter and scheduled services, the carrier, in November **1957**, takes delivery of the last two DC-6Bs manufactured; they will remain the fleet flagships for six years. During the year, enplanements total 85,941.

Five CV-440 Metropolitans join the fleet during the first half of **1958**. The 288th DC-6B built, which is the 704th and final aircraft in the entire DC-6 series and the final DC propellerliner constructed, is delivered from Santa Monica to Belgrade on October 24 via New York and Gander. It enters service as a VIP transport for President Tito at month's end. A second DC-6B arrives from California on November 17.

President Tito makes a state visit to India on January 14–19, **1959**, aboard his new DC-6B, which is flown by a joint JAT/Yugoslav Air Force team.

En route from Cattaro to Belgrade on July 8, a lone gunman seizes a DC-3. After firing a warning shot, the pirate orders its crew to divert to Bari, Italy.

Later in the year, domestic services, now year-round, are increased in frequency as other Eastern European cities are added to the route network.

The fleet is improved through the addition of five CV-440s so that, by **1960**, the fleet comprises 3 CV-340s, 5 CV-440s, 4 DC-3s, and 2 DC-6Bs.

Overall bookings total 172,454.

Orders are placed in **1961** for 3 Sud Est SE-210 Caravelles VINs and enplanements in **1962** include 226,681 domestic and 81,490 international.

In **1963**, the DC-6Bs are orderly retired as the first two French jetliners are placed into service in January and July, respectively.

Domestic enplanements are 283,600 and international boardings total 111,533.

Airline employment is 1,771 in **1964**. Three DC-3s and two CV-340s are retired as the SE-210s launch new routes to Moscow, Warsaw, and Copenhagen.

Enplanements total 461,000 systemwide and revenues are \$6.51 million.

The employee population is 1,900 in **1965**.

A DC-3 with five crew, is lost near Belgrade on February 20 while on a training flight; there are no survivors.

Bookings are up to 524,170.

Two additional Caravelles are received in **1966**, but cannot keep boardings from dropping to 450,697. During the year, the last DC built, the DC-6B acquired in November 1958, is passed to the government.

As domestic service and Dalmatian coast charters increase in **1967**, the number of DC-3s is increased to nine. One more Caravelle VIN is also received. Passenger traffic is 543,000, a 17% increase.

A sixth Caravelle VIN is delivered early in **1968**. Airline employment climbs to 2,282 and 5 DC-9s are ordered.

A DC-3 is lost at St. Florian, Austria, on January 8; there are no other details.

Passenger boardings accelerate 23.8% to 667,334 and freight traffic skyrockets 101%. Income is \$19.8 million.

A CV-440 is destroyed as the result of a bad landing at Titograd on February 4, **1969**; there are no fatalities.

Two DC-9-32s are leased for a year from their manufacturer on April 15. To sweeten the deal, McDonnell Douglas agrees to purchase \$40,000 worth of canned hams and various small machine tools. A Boeing 707-320B is delivered during the summer.

Enplanements zoom to 718,724.

The workforce totals 3,085 in **1970**.

Three armed Arabs are seized at Munich on February 18 on suspicion that they intend to hijack a JAT plane, refueling while en route from Paris to Belgrade, as it flies to the Yugoslav capital. A search reveals a leaflet identifying them as members of a commando group and proclaiming that the plane will bear the name "Palestine."

The leased DC-9-32s are returned in March. When the transaction is revealed, the media plays up the "hams for planes" aspect of the charter. Interestingly enough, the airplane builder will sell additional planes to

the carrier in the years ahead—and purchase more ham. With the delivery of the 5 owned DC-9-32s, the fleet now totals 22 aircraft, including 2 DC-3s, 8 CV-440s, 6 SE-210s, and 1 B-707-320B.

Cargo is up 21% and passenger boardings pass the one million-mark for the first time, up 35% to 1,105,730.

Three more B-707-320Bs and two Caravelle VIRs are acquired in 1971 as bookings jump to 1,558,050. The employee population is 4,155 in the twenty-fifth anniversary year of 1972.

On January 26, Flight 364 is en route from Stockholm to Zagreb via Copenhagen. Premier Dsemal Bijedic is thought to be among the 5 crew and 23 passengers on board the DC-9-32 when it is blown up over Krussne Hory Mountain by Croatian extremists from the Ustasji group, who have planted a bomb in the forward baggage compartment. Breaking up on the way down, the fuselage crashes into the ground near Hermsdorf, in NW Czechoslovakia; all but one aboard are killed. Alone in the tail assembly, 22-year-old stewardess Vesna Vulovic survives the fall to earth from 33,000 ft.; severely injured, she tumbles out when the segment, which has fluttered down like a leaf providing life-saving deceleration, strikes the earth.

Four CV-440s are retired as two more DC-9-32s and an SE-210 Caravelle III are added, the latter on lease to replace the lost Douglas. Routes are extended Dubrovnik–Pula and London, Tivat–Vienna, and Belgrade–Tirana.

Five passengers aboard the B-707-321B on a New York to Shannon flight are injured on August 12 when the pilot aborts the flight after encountering mechanical problems during his takeoff from New York (JFK). A \$32-million order is placed for 6 additional DC-9s, bringing the total on order to 13.

Passenger bookings grow 15% to 1,833,000.

Two Caravelle VINs and four CV-440s are retired in 1973. Service is inaugurated to Dusseldorf, Lyon, and Manchester.

An SE-210 Caravelle III is damaged beyond repair during its landing at Belgrade on February 15; there are no fatalities.

Coming in from Skopje on September 11 with 6 crew and 35 passengers, a Caravelle VIN crashes into the Maganick Mountains while preparing to land at Titograd Airport; there are no survivors. Orders are placed for two Boeing 727-2H9s late in the year as the last of the CV-440 Metropolitans are withdrawn.

The two Boeings and a pair of DC-9-32s are delivered in 1974 as the last two DC-3s are retired. On April 15, a B-707-351C is purchased from the American carrier **Northwest Airlines**.

A DC-9-32 with 6 crew and 44 passengers lands 2,570-m. short of the runway at Beograd, Yugoslavia, on November 23; the plane is safely evacuated before it catches fire and is destroyed.

Enplanements total 2,158,650.

The workforce is 5,146 in 1975. Dragoslav Radisavljevic becomes director general and three additional B-727-2H9s are delivered. As a partial reward to Zambia for its purchase of Yugoslav-built Soko Galeb and Jastreb military aircraft, President Tito donates JAT's DC-6Bs to the Zambian Air Force.

Routes are opened from Belgrade to Sydney via Karachi and Singapore, to Malta via Ljubljana, and to Baghdad via Athens.

Passenger boardings rise 19% to 2,664,701. Freight climbs a handsome 35% to 13.6 million FTKs.

A total of 120 employees are added in 1976. Belgrade and Zagreb Boeing 707-320B transatlantic service to New York is initiated while two B-747-100s are ordered for 1978 delivery.

Bookings dip 0.6% to 2,646,840, but freight grows by 9% to 21.41 million FTKs.

The Jumbojet order is cancelled in 1977 and replaced by one for two DC-10-30s. The 30th anniversary of JAT is celebrated throughout the year, along with the 50th birthday of commercial flight in Yugoslavia. Flights begin from Belgrade to Damascus.

Enplanements accelerate to 2,943,800.

The workforce grows to 5,600 in 1978. The first DC-10-30 is delivered on December 8 and is christened *City of Belgrade*. A total of 16 do-

mestic and 37 cities are now served by Director General Dragoslav Radisavljevic's carrier.

Passenger boardings move upward 18% to 3,590,000 and freight soars 25.2%.

A second DC-10-30 arrives in 1979 and is placed in service on the New York route. Flights begin to Karachi and Beijing and the remaining Caravelles are all retired. During the year, the company begins an annual Gallery Above the Atlantic art auction on one of its May transatlantic flights; works by the nation's leading contemporary artists are sold to raise money for cultural institutions.

Boardings climb 9.6% to 3,910,000.

Airline employment in 1980 is initially increased by 15.1% to 5,965. Passenger traffic falls 19.2% to 3,161,000 as the effects of the world recession and rising fuel costs are felt. Revenues drop to \$293 million.

En route from Dubrovnik to Belgrade on a September 26, 1981 domestic flight, a B-727-2H9A with 101 aboard is hijacked by 3 Croatians. After Israel refuses the aircraft permission to land, the passengers stage a mock fire alarm that requires the pilot to land at Cyprus, where the pirates are captured and all others escape. The perpetrators will be tried and given prison terms ranging in length of time from 3½ to 8½ years.

Passenger traffic figures for the year are 5.1 million passengers carried. The number of workers is increased by 2.6% in 1982 to 6,136. New frequencies are inaugurated to Algiers, Beirut, and Kuwait.

Customer bookings decline to 3.45 million.

JAT Avio Taxi is formed as a subsidiary in 1983 to provide domestic services from Belgrade with a fleet of three Cessna 402Bs. Orders are placed for seven B-737-300s to replace the parent's aging fleet of DC-9s as two B-727-2H9As are leased, long-term, to **Air Afrique, S.A.**

Enplanements total 3.3 million in 1984 and a net profit of \$17.7 million is reported.

Airline employment in 1985 is 7,315, a boost of 12.6%. Miljenko Zrelec becomes president. Two DC-9-32s are sold as the first four of seven B-737-3H9s enters service in July and a route is opened to Kuala Lumpur. To overcome a shortage of available Douglas wide-body pilots and flight engineers, **Air Afrique, S.A.** contracts for JAT crews, while at the same time leasing one of its DC-10s to the Yugoslavs.

Cargo dips 4.8% to 85.97 million FTKs, but passenger boardings are up 6.5% to 3,531,000. Revenues advance 2.9% to \$364.6 million, and expenses are up 13.9% to \$330 million; these figures conspire to produce profits of \$34.2 million (operating) and \$15.5 million (net).

The payroll is increased by 2.8% in 1986 to 7,522. Former Federal Administration for International Scientific and Technical Cooperation Director Miljenko Zrelec succeeds the retiring Director General Milan Redojcic in February.

Two DC-9s are sold and the fifth and sixth B-737-3H9s are acquired. Two DC-10-30s, including the **Air Afrique, S.A.** charter, join the two already available to handle summer tourist traffic. Orders are placed for a McDonnell Douglas MD-11 and two more B-737-300s.

Customer bookings jump 9.4% to 3,862,000 while freight rebounds by 19.1% to 97.4 million FTKs. The profits are \$55.7 million (operating) and \$25.1 million (net).

The employee population grows by 8.7% in 1987 to 8,069 and the 7th B-737-3H9 is received in January. The B-727-2H9A contract is terminated by **Air Afrique, S.A.** in March and in May, while the carrier studies acquisition of a new regional aircraft, two Avions de Transport Regional ATR42-200s are leased for short-haul routes.

A DC-9-32 is leased to **Air Djibouti** for a year during the fall.

Passenger boardings increase 17.3% to 4,531,000 and revenues rise 27.7% to \$539.8 million. Costs are kept down and as a result, profits of \$60.3 million (operating) and \$16.9 million (net) are earned.

Airline employment is up again in 1988 by 8.1% to 8,988. The fleet now includes 9 DC-9-32s, 8 B-727-2H9As, 7 B-737-3H9s, 5 DC-10-30s, and 3 ATR42-200s. In May, a regional sales office is opened at Washington, D.C.

The eighth and ninth B-737-3H9s arrive later in the year.

An An-12V freighter with seven crew, crashes while on initial approach to Yerevan on December 12; there are no survivors.

Customer bookings decline a slight 0.9% to 4,491,000, but cargo swells 13.1% to 730.24 million FTKs.

The payroll is cut 12.5% in 1989 to 1,400 as traffic plummets. Passenger boardings decline 16.5% to 3,750,000 and freight is off a huge 46.8% to 66 million FTKs.

In 1990, the fleet comprises 1 Aerospatiale/Aeritalia ATR72, 8 Boeing 727-2H9As, 9 B-737-3H9s, 9 Douglas DC-9-32s, 4 DC-10-30s (3 leased), and 3 Piper PA-31T Cheyenne IIs. Orders are outstanding for 2 ATR72-200s and a 4 McDonnell Douglas MD-11s. One DC-9-32 is leased to **Air Djibouti** and a total of 19 domestic and 61 foreign destinations are served.

Foreign destinations include routes to and from Belgrade, Mostar, Nis, Ohrid, Pristina, Sarajevo, Skopje, Titograd, and Tivat. Major overseas markets include Amman, Amsterdam, Athens, Bangkok, Barcelona, Beirut, Berlin, Bucharest, Budapest, Brussels, Cairo, Chicago, Copenhagen, Damascus, Dubai, Dusseldorf, Frankfurt, Glasgow, Goteborg, Hamburg, Hanover, Istanbul, Larnaca, London, Madrid, Melbourne, Milan, Montreal, Moscow, Munich, New York, Paris, Prague, Rome, Singapore, Sofia, Stockholm, Stuttgart, Sydney, Tel Aviv, Thessaloniki, Tehran, Toronto, Tripoli, Tunis, Trieste, Venice, Vienna, Warsaw, and Zurich.

During the year's first half, customer bookings are up 2.6% to 1,726,490; cargo, however, declines 1.4% to 65.21 million FTKs.

At year's end, JAT is the 14th largest airline in Europe and 34th in the world, with 90 weekly departures to 32 European cities. Operating revenues reach \$410 million and a \$40-million net profit is posted.

The Yugoslav civil war has a devastating impact on the carrier and airline is cut 21.6% in 1991 to 7,411. Although the two ATR72s are delivered, one DC-10-30 lease lapses. Still, the carrier is able to initiate six new markets: Tehran, Larnaca, Maastricht, Beirut, Trieste, and Tel Aviv. The secession crisis disrupts air service in Yugoslavia after late June.

Flights to the Slovenian capital of Ljubljana are suspended on June 27, two days before the airport is attacked. The airport at Zagreb, capital of Croatia, is closed by fighting on July 2, the first of many times it will be shut down in the years ahead. On July 4, the company suspends services to the two breakaway republics, although flights to other parts of the nation are continued.

As a result of the conflict, the year's passenger boardings plunge 51.8% to 1,846,296 while cargo drops more, falling 54.2% to 57.67 million FTKs. The net loss is \$90 million.

Following the breakup of the federal government of Yugoslavia in 1992, the new state of Serbia, while attempting to retain the previous national identity in company with the republic of Montenegro, obtains 51% majority ownership of the airline while selling off the remaining 49% interest to public and private interests. Nearly all of the airline's assets, valued at some \$960 million, are held by Belgrade, with the nation's five other former republics owning only the infrastructure and equipment at their airports.

In late April, the UN, as a result of the fighting in Croatia and Bosnia-Herzegovina, places sanctions, under Security Council Resolution 757, on trade and air traffic with Yugoslavia. The international embargo invalidates all of JAT's bilateral air agreements.

In early May, the U.S. seizes all JAT assets in the U.S. and orders the company's offices closed. The last flight by the Yugoslav carrier from New York to Belgrade occurs on May 18; on May 20, Washington revokes JAT's landing authority. After these rights are lost, the company attempts to reroute its U.S. and Canadian passengers through Montreal and Toronto, only to find those avenues closed. One by one gateways in Europe also shut down and the airline, on May 30, must suspend all international services.

Now it flies only two domestic routes from Belgrade: to Tirstand and to Podgorica (formerly Titograd). The **Air Djibouti** lease is concluded; however, two B-737-3H9s are chartered to **Bosphorus Airways, S.A.**

Enplanements for the year (mostly in the first quarter) total 4 million and 43,000 tons of cargo are transported.

Director General Zika Petrovic oversees a workforce of 6,100 employees in 1993. Workers report for duty on a rotational basis, with only 40% working at any one time. Only domestic flights on two routes continue during the year. Income for many employees is so insufficient as to require them to take second jobs or worse, to sell smuggled goods on the black market.

The company's pilots take turns flying the services, thereby logging the minimum number of flying hours required to maintain licensure. Fortunate to have a two-year stockpile of spare parts, company mechanics are able to draw on this hoard in order to keep five airliners operational.

Several efforts are made to find work for company pilots overseas, but all are rejected. The ploy, begun in January with an offer to **Indian Airlines Corporation** to provide flyers during that carrier's strike, is roundly rejected by all concerned as a violation of UN sanctions against Yugoslavia.

The company realizes a total of just \$1.7 million in operating revenues or 0.4% of 1990's income.

The sanctions continue through the first three quarters of 1994. On October 5, the UN embargo is lifted and in celebration the company introduces a new corporate image with "Yugoslav Airlines" titles now a part of its aircraft color scheme.

The company does not have sufficient fuel on hand to begin sustained operations. To get its international services restarted, it is necessary to employ the DC-10-30 *City of Belgrade* as a tanker, continuously flying it back and forth over the short distance from Belgrade to Thessaloniki and Timisoara to fill its tanks. With the UN fuel embargo still in place, the company is charged upwards of \$200 per ton of kerosene.

The first limited international schedule, from Belgrade to Athens and Moscow, is started by the wide-body on October 6.

The number of frequencies grow throughout 1995 and of these, the most important is a return to London (LHR). Following the first service, a team of London-based mechanics is asked to inspect the company's aircraft; finding it to be in order, the airline is given an important bill of health, which assists it in seeking permission to fly elsewhere or to align with additional European operators. The cost of a required \$7-million D check for the *City of Belgrade* in Italy is paid for by donations from state-owned companies as well as the Belgrade government.

In November, the UN withdraws all of its previous sanctions against Yugoslavia. Efforts are made to have the U.S. sanctions removed so that flights to New York (JFK) might resume. Plans are made to resume operations to Canada and Australia, although JAT continues to owe the governments involved for landing and service fees C\$450,000 and A\$1.5 million, respectively. The U.S. is owed \$800,000.

By year's end, a total of 563,300 passengers have been transported and 710,000 FTKs operated.

On February 15, 1996, President Clinton lifts the sanctions placed upon the carrier by the U.S. four years earlier; two days later, airline officials announce that they will resume services to New York and add new services to Chicago.

By May, JAT is operating to all 32 of its 1990 destinations, although with fewer frequencies. During the month, it also initiates a process of renewing transport communications with former Yugoslav republics by introducing a return flight between Belgrade and Skopje.

Employing the carrier's lone owned DC-10-30 repainted in its striking new livery, JAT launches frequencies in July from Belgrade to New York (JFK) and Chicago (ORD).

In September, a commission of aviation experts sent to Belgrade by the U.S. FAA acknowledges that the airline meets all international safety standards. In October, a DC-9-32 is chartered to **Tuninter, S.A.**

Enplanements for the year total 838,990.

Airline employment stands at 6,000 in 1997. Two more DC-9-32s are leased out, both to **Macedonian Airlines**. Destinations visited include Amman, Amsterdam, Athens, Barcelona, Brussels, Bucharest, Copenhagen, Dusseldorf, Frankfurt, Istanbul, Kiev, Larnaca, London, Moscow, Paris, Rome, Stockholm, Stuttgart, Tel Aviv, Vienna, and Zurich.

When Carlos Westendorp, the chief international representative in Bosnia-Herzegovina, reopens the airport at Banja Luka on November 17, it is the only one in the Serbian-controlled area of Bosnia. JAT, which is scheduled to have been the first airline to resume scheduled civilian flights into the airport, must cancel its participation just hours before the reopening for technical reasons. A few days later, JAT begins daily roundtrips in and out of the airport.

DC-10-30 service over a single weekly route to Beijing is restarted on December 18.

Passenger boardings accelerate 16.6% to 1,005,983 while cargo skyrockets 100.7% to 4.74 million FTKs.

Airline employment at the beginning of 1998 stands at 5,707. Offices are maintained in 42 foreign cities and in 11 Yugoslav communities. Flights are conducted to 44 destinations in Europe, the Mediterranean, and China.

Flights to Bosnia resume during the spring. At this point, the airline again becomes the subject of international politics. In an effort to pressure an end to repressive Serb actions in the province of Kosovo, the European Union imposes a ban on support of JAT and upon JAT flights into EU member states. The U.K., citing a 1959 agreement requiring 12 months notice, initially refuses to join in the sanctions.

As the situation on the ground in Kosovo worsens during the summer, pressure for a larger ban on JAT activities builds. On September 7, 15 member states of the European Union impose an embargo on all JAT flights into Europe. Britain, citing the need to grant Yugoslavia notice under the bilateral air agreement existing between the two countries, is slow to join and beginning on September 11 is roundly criticized by EU Commission President Jacques Santer and by the foreign ministries of other European states, lead by Germany.

During the third week of September, the U.K. reluctantly waives the 1959 agreement requirements and joins in sanctions against the Yugoslav flag carrier. In addition, the nation now joins France in seeking a worldwide ban against the operations of Yugoslav airlines. Most European airports, including those in the former Eastern bloc, are now closed to JAT, although the BBC will report that both **Austrian Airlines, A.G.** and **Deutsche Lufthansa, A.G.** are paying the regime in Belgrade in hard currency for the right to take over JAT's trade on certain routes.

Enplanements for the year are down 6.5% to 940,000, but cargo traffic accelerates 112.7% to 5.34 million FTKs. Airline employment is now reduced by 11.9% to 5,640.

When the Bosnian Serb airline **Air Srpska** is established on January 22, 1999, it receives assistance from JAT as well as the Airports of Republic Srpska. The new entrant leases from JAT one each B-737-2H9A and ATR72 and inaugurates scheduled services on January 29 to Tivat, Zurich, and St. Gallen.

During the first quarter, the carrier leases a pair of DC-9-32s to the Nigerian company **Bellview Airlines, Ltd.** Upon their arrival in Africa, the two inaugurate Lagos Express services. Meanwhile, JAT continues to offer local and non-EU charters on an ad hoc basis.

On March 24, in anticipation of NATO air strikes against Serbian military targets in a campaign against Belgrade for an independent Kosovo, Europe's major airlines and several regionals halt all scheduled service into Belgrade as Yugoslavia's airspace is closed. Spokesman, in making the announcement, indicate that the situation will be evaluated further; however, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins that evening.

Service to Belgrade remains halted on March 25–May 25 and into June for the duration of the NATO bombing campaign. During this period, seven JAT airliners, including the DC-10-30, are allowed to find shelter at Kiev, Odessa, and Simferopol. At a news conference on May 3, Ukraine Foreign Minister Boris Tarasyuk had indicated that the Ukraine would continue to provide sanctuary for the aircraft and that the state aviation administration Ukravitsiya would negotiate with JAT officials concerning their possible short-term lease.

Company officials inform the media on June 12 that the carrier plans to resume both domestic and international services as soon as it is al-

lowed to again begin flying. Initial destinations to be served should include Tivat, Banja Luka, Larnaca, Tunis, Prague, Moscow, and Zurich.

JAT remains grounded under the national state of emergency until June 25, at which point it is allowed to resume limited charter work and domestic and regional scheduled service. The first service is flown from Belgrade to Moscow exactly three months and a day after the company had suspended operations. On July 5, Yugoslavia's ambassador to Russia, Borislav Milosevic, will candidly inform a news conference that the reason for the first international flight being made to Moscow was political, to show the significance of relations between the Union Republic of Yugoslavia and Russia.

Flights to Larnaca resume on June 29, with those to Prague and Tunis beginning on July 1 and 8, respectively.

On August 30, weekly roundtrips are inaugurated between Belgrade and Tripoli.

Airline employment totals 5,640 at the beginning of 2000. The fleet's largest components are groups of 9 B-737-3H9s, 8 B-727-2H9As, and 9 DC-9-32s. Restrictions on the airline's scheduled international service are suspended in late February (for six-monthly renewable periods) and the carrier is able to resume domestic services on March 1. The renewal of traffic into Serbia will allow the Milosevic regime to earn valuable income from landing fees and other charges to foreign airlines and passengers.

On April 6, service is resumed from Belgrade to Amsterdam, Brussels, and Prague; flights to Malmoe are started on April 7. CEO Zivorad Petrovic is assassinated on April 25 while walking his dog outside of his Belgrade home. Petrovic is the fourth colleague of President Milosevic to be murdered in 2000.

At the end of June, a B-727-2H9A is leased to the new Enugu, Nigeria-based start-up carrier **Sosoliso Airlines, Ltd.**

Following the concession of electoral defeat on October 6, President Slobodan Milosevic's son Marko, together with his wife and son, flee to Moscow the next day aboard JAT's regularly scheduled service from Belgrade. The Beta news agency reports that the young man has an extensive business empire stretching out of the family hometown of Pozarevac. Also on October 7, authorities of the new Yugoslav government attempt to keep JAT's regularly scheduled DC-10-30 service from departing Belgrade for Beijing. They claim that the former president is attempting to ship an unspecified amount of the state's gold out of the country and that its supports have already prevented some £15 million in national treasure from leaving the country.

Neither the claims nor the airline actions can be independently confirmed. However, the remaining international restrictions against the carrier are lifted within days after the removal of the Milosevic government.

A B-727-2H9A is wet-leased to **Nigeria Airways, Ltd.** on November 13. Limited cooperation agreements are signed with **Air Bosna, S.A.** and **Air Srpska, S.A.** on November 27. The arrangement is initially aimed at the implementation of joint cost-cutting measures, but envisions the opening up of abandoned routes within Yugoslavia and the Balkans. At the end of the month, JAT Director General Mihajlo Vujinovic issues an invitation for representatives from airlines throughout the Balkans to meet at Belgrade to discuss widening their mutual cooperation.

Hosted by JAT Yugoslav CEO Vujinovic, a "meeting of the scheduled airlines of Southeast Europe" is held at Belgrade in mid-December to consider possible joint cooperation. Attending are representatives of **MALEV Hungarian Airlines**, **Croatia Airlines**, **Air Bosna, S.A.**, **Air Srpska, S.A.**, **Monenegro Airlines**, **Macedonian Airlines**, and **Adria Airways (Adria Aviopromet)** (2). Due to an unplanned management change, **TAROM Romanian Air Transport (Transporturile Aeriene Romane, S.A.)** is unable to participate, but expresses interest in joint activities.

Of the eight airlines participating in the conclave, six express interest in joint commercial operations, four in joint technical and maintenance activities, and five in joint training exercises. To study and discuss

matters further, three working committees are established: commercial, chaired by a representative from **Adria Airways (Adria Aviopromet)** (2), technical, chaired by a MALEV representative, and training, chaired by a representative from JAT.

At the end of December, orders are placed for eight Airbus A319s and a second B-727-2H9A is leased to **Sosoliso Airlines, Ltd.**

JATAYU AIR (JATAYU GELANG SEJAHTERA): **Jl. Slamet Riyadi Raya No. 4, Matraman, Jakarta, 13150, Indonesia; Phone (021) 85904657; Fax (021) 85904656; <http://www.jatayu-air.com>; Year Founded 1998.** Jatayu Air is established at Jakarta in 1998 to offer public charter flights to many of the nation's islands. H. Nasiran Wangi is president/commissioner, with Capt. Alexander Lumowa as managing director. Revenue flights begin with a single Fokker F.28 Fellowship.

JAY HAWK AIR: 1842 Merrill Field Dr., Anchorage, Alaska 99501, United States; Phone 907 276-4404; Fax 907 276-0883; Year Founded 1983. Jay Hawk is established at Anchorage in 1983 to offer lightplane air taxi, charter, and freight services to the surrounding area. In 2000, President Tim Karlovich operates a fleet that includes 3 Cessna 206 Stationaires and 1 Piper PA-31-310 Navajo.

JAYLINE, LTD.: United Kingdom (1990–1994). Established at Cardiff in 1990, Jayline does not inaugurate service until January 25, 1993. At that point, Managing Director Jan Schonburg's single Embraer EMB-110 Bandeirante begins scheduled revenue flights from the Welsh capital to Manchester. Operations continue into 1994.

JAYROW HELICOPTERS (PTY.), LTD.: Hangar 59, Bundoora Parade, Moorabbin Airport, Mentone, Victoria, 3194, Australia; Phone 61 3 587-1833; Fax 61 3 580-1236; Year Founded 1965. Jayrow is established at Mentone in 1965 to provide helicopter work services, including passenger and cargo charter, energy support, medevac, and other rotary-wing activities. By 2000, General Manager Lindsay Rose oversees the work of 21 full-time pilots and a large fleet that includes 5 Aerospatiale AS-350B A-Stars, 2 Bell 206L LongRangers, and 22 Bell 206B JetRangers.

JEFFERSON AIR SERVICE: United States (1928). Established at Minneapolis in mid-1928, Jefferson is equipped with the single Ford Tri-Motor, 4-AT-25. Scheduled passenger services are inaugurated to Rochester, but, without traffic, do not last out the year.

JEN AIR: United States (1970–1983). Joseph Flever founds JA at Barrow, Alaska, in 1970 to provide scheduled passenger, cargo, and mail services to the bush communities of Alkasook, Point Lay, Wainwright, Nuiqsut, Barter Islands, and Point Hope. Operations are undertaken with a fleet that comes to comprise 1 Piper PA-31-350 Navajo Chieftain, 1 Cessna 207, 1 Cessna 185, and 1 Cessna 210.

Unable to weather the recession of the early 1980s, the carrier folds in 1983.

JERDON AIR COMMUTER SERVICE: United States (1980–1982). Organized at Ardmore, Oklahoma, in 1980, Donald Ratliff's JACS inaugurates scheduled third-level passenger flights to Sherman and Oklahoma City, plus Dallas (DFW). Operations continue apace during the remainder of the year and in 1981 with two Piper PA-31-310 Navajos; however, the carrier is unable to survive the recession and stops flying in December 1982.

JERSEY AIRLINES, LTD.: United Kingdom (1948–1963). Welshman Maldwyn Thomas forms JA at Jersey Airport in the spring of 1948. Employing leased aircraft, the company undertakes several successful day trips to France during the summer. With business profitable, Thomas seeks to register his company as an airline. With the **Channel Islands**

Airways, Ltd. merger partner **Jersey Airways, Ltd.** holding a similar name, it is decided to keep Jersey Airlines, Ltd. as marketing title for Airlines (Jersey), Ltd., which is registered on December 31.

A de Havilland DH 89A is leased from **International Airways, Ltd.** and is employed to launch initial revenue service on March 9, 1949, a Jersey–St. Brieuc passenger charter. This Dragon Rapide is returned on April 18, but replaced by two other rented units. The company's first owned DH 89A is delivered on May 3; the three Dragon Rapides spend the summer flying vacationers and other tourists to France.

Enplanements for the year total 5,500.

Two more Dragon Rapides are purchased in February 1950 to replace the two returned to **International Airways, Ltd.** However, another is leased in May, followed by a fourth owned aircraft in August. The charter business is expanded during the summer, at the end of which, the rented DH 89A is returned.

Two more Dragon Rapides are purchased in 1951 and three-times-daily-on-Saturday scheduled services are introduced Jersey and Guernsey–Southampton.

Jersey–Exeter and Plymouth scheduled DH 89A service is inaugurated on April 7, 1952 and during the summer, additional charter destinations from Jersey are first flown: Manchester, London (LGW), Paris (LBG), Coventry, Dinard, Lessay, St. Malo, and Lannion. Airline employment is now 53 and orders are placed for 2 new DH 114s.

The first Heron 1B is delivered on May 1, 1953; christened *Duchess of Jersey*, it becomes the first of its type to enter service with a British airline when it commences scheduled operations over the Jersey–London (LGW) route on May 9.

While the Heron remains on this route, the Dragon Rapides, as the result of **British European Airways Corporation (BEA)** associate agreements signed in the spring, are given the additional scheduled routes. Included are Exeter–Paris via Jersey, Manchester–La Baule via Coventry, Bournemouth, Jersey, Dinnard, and Rennes, London (LGW)–Brest via Jersey and St. Brieuc, and Jersey–Exeter via Manchester, Coventry, and Weston-super-Mare.

Bookings for the year climb to 41,000.

In April and July 1954, respectively, two more Heron 1Bs, the *Duchess of Guernsey* and the *Duchess of Alderney*, join the fleet.

Passenger boardings figures for the year advance to 60,000 and the workforce is increased to 135.

A Heron 1B nonstop proving flight is undertaken Manchester–Dinard on January 30, 1955 and results in the start of a scheduled service over this route in June. Meanwhile, in March, the Paris terminus is transferred to Orley and on May 11 Heron flights are initiated Jersey–Bilbao. Two more Heron 1Bs, the *Duchess of Paris* and the *Duchess of Sark*, are delivered in June and August, while four Dragon Rapides are sold.

Passenger traffic for the year jumps to 76,000.

British European Airways Corporation (BEA) obtains a 25% interest in February 1956 and a new operating arrangement between the state carrier and the independent comes into effect on March 31. On April 22, the latter takes over the corporation's scheduled services to and from Alderney as well as those from Guernsey to Southampton, Dinard, and Alderney, dropping its own Jersey–Southampton route. **British European Airways Corporation (BEA)** provides JA with two Heron 2s, the *Duchess of Brittany* and the *Duchess of Normandy*, in May and in early summer a new scheduled Jersey–Nantes frequency is advertised.

By year's end, a record 132,480 bookings have been recorded and the staff is increased to 250.

In January 1957, a Bristol 170 Mk. 31E Freighter is purchased from **Aer Lingus Irish Airlines, Ltd.** and employed, beginning in the summer, to provide "Baronet Class" vehicle ferry service Jersey–Dinard. Three Dragon Rapides are sold during the spring, but otherwise, business operations remain the same as in 1956.

On April 1, 1958, company officials and pilots witness a demonstration of a Handley Page Herald powered by Rolls Royce Dart engines. The carrier's first Heron 1B, *Duchess of Jersey*, is destroyed as the result of a landing accident on Guernsey on August 15. When financially

troubled **Cambrian Airways, Ltd.** suspends flight activities at the end of the summer season, JA takes over its daily scheduled Jersey–Manchester via Bristol and Cardiff route under charter. Simultaneously, the unprofitable Dinard vehicle ferry service is dropped.

Reorganized, **Cambrian Airways, Ltd.** reclaims its Jersey–Cardiff route on March 21, 1959. At about this same time, a fleet of Douglas DC-3s is purchased from **Transair International, Ltd.** These join the Bristol Freighter, now outfitted with passenger seats, on the heavy traffic routes from Jersey to England; however, the Bristol is sold in July. When **British European Airways Corporation (BEA)** withdraws its Southampton–Jersey route, the company resumes it after a three-year absence. Jersey to Nice direct flights begin in September.

In April and May 1960, three more DC-3s are delivered and in the spring the Exeter route is extended on to Dublin. At this point, the company is reorganized, becoming a subsidiary of a new holding company, Jersey Airlines Development Corporation. In September, a £1.5-million order is placed for four Dart Heralds.

In March and April 1961, the Heron 2s are sold, being replaced in June by a pair of DC-3s. With a delay in production holding back delivery time, Handley Page leases the HPR-7 Dart Herald 100 prototype to JA, delivering it on April 17. After several demonstration and proving flights, it is placed in service Jersey–Hurn on May 16. On June 18, the carrier, the first in the world to fly the Dart Herald commercially, uses the prototype to reopen Jersey and Guernsey–Southampton service over the route reclaimed from **British European Airways Corporation (BEA)** in 1960.

In need of additional capacity, JA begins flying a Vickers Viscount 754 chartered from **Middle East Airlines, S.A.L. (1)** on July 1. It will serve a one-month lease while a second leased Dart Herald 100 is delivered and worked up and it enters service on July 28 on the Jersey–London (LGW) route. The Heralds and Herons maintain both scheduled and summer services, the former opening weekly direct Jersey–Amsterdam flights. Lost in the fanfare of the return of the Herald 100 to Bristol in October is the sale that month of the company's last Dragon Rapide. The second Herald is returned to its builder in December.

The first production model Dart Herald 201 is delivered on January 5, 1962, with three more acquired during the second quarter. Air Holdings, Ltd. purchases the carrier on May 20, allowing it to continue operating under its previous identity. On June 2, Jersey–Glasgow (Renfrew) scheduled service is inaugurated. Other new scheduled routes initiated during the summer include Jersey to Belfast via Exeter and Exeter to Cork. During the winter, the carrier's Heralds begin inclusive-tour flights, the first by this aircraft type, for Lord Brothers travel agents to the Mediterranean.

British United (Channel Islands) Airways, Ltd. is formed on November 1 and on August 1, 1963, JA, following receipt of two additional Herald 201s in May and June, is totally absorbed into that new entity.

JERSEY AIRWAYS, LTD.: United Kingdom (1933–1945). Capitalized at £120,000, Jersey is formed on December 9, 1933 by W. L. Thurgood, owner of the People's Omnibus Company. The first aircraft, a DH 84 christened *The St. Aubin's Bay*, is received on December 15. However, it is a Dragon leased from Brian Lewis, Ltd. that opens daily Portsmouth–Jersey service on December 18, the carrier's own craft arriving on the island later in the day. (The beach at St. Aubin's Bay, near St. Helier, serves as the airfield.)

Passenger bookings reach 643.

Daily Jersey–London (Heston) DH 84 service is launched on January 28, 1934. The Jersey–Portsmouth route is extended to Southampton on March 18. On June 4, twice-weekly Jersey–Paris Dragon frequency is undertaken; the route will be withdrawn on September 27 due to a Colorado Beetle scare. On December 1, Whitehall Securities takes an interest in the airline, assigning its shareholding to the financial firm's new nonflying holding company **Channel Island Airways, Ltd.**

The year's enplanements swell to 19,221.

JA starts twice-weekly DH 84 service to Rennes on January 8, 1935. A new DH 86, christened *The Giffard Bay*, is placed in service London (Heston)–Jersey–London (Heston) on February 7, followed shortly by a second service. Financial difficulties become significant and the Southampton extension from Portsmouth is withdrawn on February 28 and the Rennes frequencies are halted on March 29.

Whitehall Securities takes majority shareholding in the carrier and the two, on April 4, found **United Airways, Ltd.**, which is initially capitalized at £50,000. On April 30, the company's two DH 86s accompany United's DH 89A in formation as it begins twice-daily London (Heston)–Blackpool service.

A total of 31,229 passengers are transported on the year in the company's fleet of 2 DH 86s and 8 DH 84s.

JA opens twice-weekly Jersey–Plymouth DH 84/DH 89A summer service on April 3, 1936. The previous Southampton–Jersey service is upgraded on April 5 by the addition of an on-demand stop at Alderney.

Passenger traffic climbs to 32,411.

On April 12, 1937, newspapers become cargo for the first time on the company's Southampton–Jersey route. Jersey–Brighton and Jersey–Exeter flights begin on May 31, the latter replacing the Plymouth route of the previous year. On June 1, mail is initially flown on the Jersey–Southampton route.

As of February 28, 1938, an on-demand stop is made at Portsmouth; the destination becomes regular on May 28. On August 9, a pooled service with **Air France** is launched between Jersey and Dinard, with each company flying the route twice weekly. In accordance with the Air Navigation Order of September 16, the new Air Transport Licensing Board (ATLB) issues the company route certification on October 21 to Jersey from Southampton and London (Heston).

Boardings advance to 33,875.

On May 27, 1939, both JA and **Guernsey Airways, Ltd.** open DH 86 services from Guernsey to Exeter and Brighton. The prototype of the de Havilland DH 95 Flamingo is accepted for testing on July 3. On July 31, founder W. L. Thurgood sells his interest to Whitehall Securities' non-flying holding company **Channel Island Airways, Ltd.**, which now becomes half owner along with Great Western Railway (25%) and Southern Railway (25%).

Services are suspended on June 30, at which point 6,553 passengers have been flown since May. By September, the DH 95 has transported 1,373 passengers over 25,915 miles. On September 3, war is declared on Germany and all civil flying ceases. Working in close association with **Guernsey Airways, Ltd.** as the result of increased railroad investment, limited interisland services are resumed on October 24 as well as flights from Shoreham to Jersey and Guernsey.

As with **Guernsey Airways, Ltd.**, the company is not required to become a member of the British wartime internal route and service coordinating body, **Associated Airways Joint Committee**, formed on May 5, 1940. The seriousness of the war situation forces the suspension of all Channel Islands operations; Company aircraft are transferred to Exeter on June 15 and, flying from there, assist Guernsey in the evacuation of 319 people from the islands to Britain.

In March 1943, the Great Western Railway and Southern Railway take majority shareholding in Channel Islands Airways, naming K. W. C. Grand chairman; the holding company now controls both Jersey Airways, Ltd. and **Guernsey Airways, Ltd.**

Officials of the two carriers fly to the islands on May 26, 1945 aboard a de Havilland DH 89A leased from **Railway Air Services, Ltd.** to plan the resumption of services. Another Dragon Rapide is received on loan from RAS and on June 21 are employed to resume London (Croydon)–Jersey and Guernsey service. The two RAS machines are replaced by purchased units delivered on July 7 and 12, respectively. JA and **Guernsey Airways, Ltd.** begin early morning cargo and newspaper services from London (Croydon) to their namesake islands on July 16, following this two days later with the reintroduction of local weekday interisland services. On September 1, the two airlines are merged by

their railroad owners into a single carrier, which is given the name of the holding company, **Channel Islands Airways, Ltd.**

JERSEY EUROPEAN AIRWAYS, LTD.: United Kingdom (1979–2000). **Express Air Services, Ltd.** is formed at Bournemouth–Hurn Airport in 1978 to offer passenger and cargo charter flights, contract cargo operations, and aircraft leasing. The initial fleet comprises 2 Handley Page HPR 7 Dart Herald.

The third-level carrier Jersey European Airways, Ltd. is formed on November 1, 1979, to take over the assets and activities, as well as the routes, of bankrupt Jersey-based **Intra Airways, Ltd.** Simultaneously, Intra is merged with **Express Air Services, Ltd.**

The new company, wholly owned by St. Aubins Finance Company Holdings, Ltd., appoints J. D. Habin chairman, with C. G. Rabbitts as general manager. A workforce of 70 is recruited and a fleet is assembled comprising 3 de Havilland Canada DHC-6 Twin Otters and 2 Embraer EMB-110 Bandeirantes.

Destinations visited in 1980 from Guernsey and Jersey include London (STN), Shoreham, Dinard, St. Brieuc, Paris (CDG), Brussels, and Lille.

On October 14, the company joins the Royal Mail program known as “Spokes from Speke,” flying a Twin Otter each night from Southend to the sorting hub at Liverpool and back to Southend for distribution.

The fleet is altered late in the year to include 3 Britten-Norman BN-2 Islanders in place of 2 of the 3 Twin Otters. Enplanements for the first complete year total 35,000.

By 1981, passenger boardings are 65,000. In March 1982, service is started Liverpool–Dublin and Liverpool–Waterford and Cork.

Enplanements drop to 61,000 on the year in the wake of poor summer traffic and increasing financial difficulties.

The \$3-million-plus debt-ridden carrier is purchased in November 1983 by Blackburn-based C. Walker and Sons, Ltd. (later Walker Steel Group). Activities of Walker’s small commuter, **Spacegrand Aviation, Ltd.**, begun by Jack Walker in 1978 as a corporate air taxi with a Piper PA-23 Aztec, are coordinated with JEAL in 1984 and Peter Glenister is appointed managing director by the Walker Aviation Group. Exeter is chosen as the coordinated airlines’ main base, as well as headquarters for the leasing and engineering departments of Walker Aviation Group. Following a CAA grant of scheduled routes, Spacegrand begins to provide scheduled services from Belfast to Exeter while JEAL flies to Exeter from Jersey.

Post Office overnight airmail service is launched from Exeter in 1985. Productivity and route rationalization campaigns are continued. The subsidiaries Guide Leasing, Skybreak Tours, and JEAL Engineering are formed. In August, a deal is signed with the French carrier **UTA French Airlines, S.A.** to facilitate transfers and ticketing through the Charles De Gaulle International Airport at Paris.

Enplanements total 150,000.

The employee population in 1986 is 140. The fleet is altered as a Shorts 360 is delivered. In addition to the Shorts 360 and Twin Otters, Managing Director Glenister’s fleet now also possesses 4 Bandeirantes and 3 Shorts 330s.

Spacegrand and JEAL are finally amalgamated within the Walker Aviation Group and the Jersey–Exeter–Belfast networks of the two former independents are integrated on the route map. The JEAL name survives and a new aircraft livery is adopted to provide a uniform appearance over the whole network.

Also during the spring, the carrier withdraws its application for routes out of the new London City STOLport after its five DHC-6 Twin Otters are proclaimed unacceptable for service at the then-unfinished facility. Meanwhile, Exeter–Dublin services are inaugurated.

Teesside joins the route network in 1987. A new sales office is opened at States Airport, St. Peter, Jersey.

Enplanements are 98,000 and revenues total £5.5 million.

Three Twin Otters are replaced in 1988 by three more Shorts 360s. Enplanements total 115,000.

Services are started to Bournemouth in 1989 and the fleet is strengthened by the purchase of two Fokker F.27-500s from Australian-based **Eastwest Airlines (Pty.), Ltd.** and the lease of three British Aerospace (HS) 748s. F.27 service is now begun to Jersey and Guernsey from Southampton and a massive advertising campaign is undertaken.

Passenger bookings jump to 263,000.

David McCullough becomes managing director in 1990 and he inherits a workforce of 150. McCullough now removes all of the Shorts 330s and Twin Otters, replacing them with four more Australian F.27-500s.

Following Iraq’s August 2 invasion of Kuwait, it becomes necessary to increase fares 13%–15% just to cover increased fuel bills.

In October, a new appearance is presented, complete with new uniforms for personnel. All aircraft are painted in the company’s new corporate livery, largely applied under the eager eyes of Chairman Jack Walker, who has retired from the chairmanship of his steel conglomerate to devote his energies to the airline.

Passenger boardings skyrocket 75% to 460,000 and revenues reach £26 million (\$49.4 million).

Company employment is increased by 33.3% in 1991 to 200 as 1 F.27-500 and 1 Shorts 360 are withdrawn. **Birmingham European Airways, Ltd.** founder Trefor Jones is appointed Group managing director in January. Destinations now visited include Belfast, Birmingham, Blackpool, Bournemouth, Bristol, Dinard, Exeter, Guernsey, Isle of Man, Jersey, Leeds/Bradford, London (LGW), Manchester, Paris, Southampton, and Teeside. Two two-year Post Office night mail contracts are received for routes from Glasgow to East Midlands and Edinburgh to Manchester and the last two remaining chartered BAe 748s operate them.

Customer bookings ascend 24% to 605,385.

The workforce is boosted by 90% in 1992 to 380. During the year, **Air Europe Express, Ltd.** and **Dan Air/Dan Air Services, Ltd.** withdraw from their respective routes from London (LGW) to the Channel Islands and to Belfast. JEAL quickly acquires the rights and begins Shorts 360-300 flights to Guernsey within three days. The company also starts to significantly strengthen its fleet by ordering two British Aerospace BAe 146-200s and a 146-300.

In October, the “Spokes from Speke” program is changed into Royal Mail Skynet.

Passenger boardings fall 2.1% to 580,818.

In 1993, new Managing Director Barry Perrott oversees a workforce of 380 and a fleet that includes 4 each Fokker F.27-500s, F.27-500Fs, 5 Shorts 360s, and 1 Bandeirante. The first BAe 146-200 arrives in March and begins flying from London (LGW) to Belfast; two more follow in April. A fourth BAe 146-200 is delivered in late May and in June inaugurates jet service from Belfast to Birmingham.

Scheduled departures total 30,651 this year, customer bookings rise 13.8% to 776,610, and the year’s net loss is \$5.92 million.

For the second straight year, in 1994, JEAL is awarded the “Best U.K. Regional Airline” trophy at the Northern Ireland Travel and Tourism awards ceremony. Business-class services are also introduced. Although the number of scheduled departures drops to 25,473, passenger boardings increase by 29% to 847,462. Consequently, a net gain of \$2.88 million is reported.

There is no change in the workforce in 1995. The jet fleet is, however, increased by three additional BAe 146-200s. A new corporate business image is projected and new uniforms are introduced designed to fit in with JEAL’s new corporate business image.

The company enters into a code-sharing, blocked-seat agreement with **Air U.K., Ltd.** and during the summer employs its BAes in support of its new partner over a route from Belfast to Amsterdam. When it is determined that the joint service will have no long-term benefit, it is suspended and the partnership is ended.

Enplanements, through October, total 982,529 and operating income reaches \$115.4 million. There are profits: \$1.6 million (operating) and \$4.7 million (net).

Airline employment is increased by 20.5% in 1996 to 458 and the owned fleet now includes 3 Shorts 360-300s, 1 F.27-500F, and 6

F.27-500s, 2 of which are leased to **Channel Express Air Services, Ltd.** Also operated, under charter, are 1 BAe 146-100, 3 146-200s, and 2 146-300s.

In March, London (LGW) to Guernsey service is upgraded when the F.27s previously employed are replaced with BAe 146s. The number of daily flights to Birmingham via Jersey is now doubled. During October, the company becomes the first U.K.-based carrier to become an **Air France** franchise partner. Two more BAe 146-100s, painted in "Air France Express" colors, are delivered and are employed to operate thrice-daily "Air France Express" roundtrip routes from Toulouse to London (LHR). It also takes over the Air France service from Lyon to London (LHR), which is upgraded to thrice daily at the end of the year with a fourth BAe 146, a Dash-300, which like the others, has been leased from BAe Asset Management: Jets.

Customer bookings this year reach 1,267,476 and a £2.5-million pre-tax profit is recorded.

The employee population increases 72.7% in 1997 to 791. Markets visited from Belfast and Jersey include Birmingham, Blackpool, Bristol, Derry, Exeter, Glasgow, Guernsey, Isle of Man, Leeds/Bradford, London (LGW and STN), Manchester, and Paris.

In March, the carrier increases frequencies on its core routes from London (LGW) to Belfast (City Airport) and from London (STN) to Belfast International Airport. At the same time, new BAe 146-100 "Air France Express" routes are inaugurated from Birmingham to Glasgow and to Paris (CDG).

Passenger boardings soar 33.7% to 1,694,074 while cargo skyrockets 157.4% to 1.07 million FTKs.

The fleet at the beginning of 1998 includes 3 each BAe 146-100s and Shorts 360s, 7 BAe 146-200s, 5 Fokker F.27s, and 2 BAe 146-300s.

Weekly service is inaugurated on May 2 between London (CTN) and Jersey. As of May 18, all of JEAL's services from the Channel Islands to Birmingham and Glasgow are operated with BAe 146s, which have replaced F.27s.

Arrangements are made to take over five former **Thai Airways International, Ltd. (THAI)** BAe 146-300s that had previously been designated for delivery to **Debonair Airways, Ltd.** All are on hand by the end of June, bringing the number of BAe 146s in the JEAL fleet to 17.

Employing the new aircraft, JEAL inaugurates thrice-daily roundtrips from London (CTN) to both Jersey and Guernsey on June 29.

Flights continue apace during the remainder of the year.

Customer bookings jump 17.3% to 2.06 million and revenues reach £135 million.

On February 13, 1999, **KLM U.K., Ltd.**, apparently without much warning to tour operators, withdraws service to Guernsey from Amsterdam, Southampton, and London (LGW). Upwards of 3,000 vacationers and others are to be left without transport after March 28 and despite its new marketing campaign, the carrier gives itself a black eye with travel agents.

JEAL, the other scheduled carrier into Guernsey, meets with Transport Board officials on February 17 and agrees to do what it can to provide additional lift, particularly over the Easter holidays. Managing Director Ian Taylor agrees to purchase new aircraft after the Transport Board assures him that he will have no competition on the route from Southampton to Guernsey for at least a year.

In March, JEAL adds three new "Air France Express" services from Glasgow and Edinburgh to Paris (CDG). Those from Glasgow are operated with BAe 146-300s while that from Edinburgh is flown with a wet-leased **Air France** B-737-228A.

On March 15, a £150-million (\$250-million) order is confirmed with Bombardier Aerospace of Canada for 15 new DHC-8 turboprops and Canadair CRJ-200 Regional Jets, delivery of which will begin in October and continue through early 2001. It is anticipated that the upgrade will result in over 200 new jobs at the company's Exeter base.

On March 19, **Aurigny Air Services, Ltd.** is granted route authority to serve the Channel island of Guernsey from London (STN). The decision comes as a major surprise to Jersey European, which had itself ap-

plied for the route and had recently committed larger aircraft and additional services to Guernsey following the sudden withdrawal of **KLM U.K., Ltd.** Officials at the government agency indicate AAS is chosen in order to guarantee competition.

At the end of the month, two BAe ATPs are wet-leased from **British World Airlines, Ltd.** and allows JEAL to increase capacity on its route from Southampton to Guernsey.

Correspondent Nick Mollet reports in the April 15 issue of the *Guernsey Press* that JEAL will not appeal to the Royal Commission against the decision to grant **Aurigny Air Services, Ltd.** a conditional license to operate from the island to London (STN). Aurigny Managing Director Andrew Round tells Mollet that his company will take on up to 20 additional workers. He also announces that, from the end of the month, Aurigny will operate two SAAB 340s, one dedicated to serving a route from Guernsey to London (STN) and the other from the island to Amsterdam.

In preparation for a flotation on the stock exchange, JEAL the next day alters its chevron logo to a more contemporary design; it also alters the logo formats of its several divisions.

A number of managers' secretaries testify before an employment tribunal at Exeter on May 14 claiming sex discrimination. Among them is a former JEA secretary who notes that she was asked to carry out hostess duties at management meetings when the male meeting participants were not. JEA's personnel manager notes that the airline has no male management secretaries and thus none would have been present at any management meetings. Indeed, the *Newcastle Chronicle and Journal* reports that only two secretary applications had been received by the airline in the previous decade.

The last F.27-500 revenue flight is operated on December 6.

Customer bookings climb 8.7% to 2,109,000, as cargo falls 26.8% to 619,000 FTKs.

Airline employment at the beginning of 2000 stands at 1,300, a huge 47.6% increase over the previous 12 months. It is announced at the beginning of February that Rockwell-Collins head-up guidance systems have been ordered for the company's Canadair fleet.

Thrice-weekday and once-Sunday DHC-8 nonstop return service is launched on February 25 from London (LCY) to the Isle of Man. The first two of three Bombardier DHC 8-Q200s are received in March.

It is reported at the end of March that company operations from London City Airport will be expanded and that by fall, JEA will be flying 218 weekly flights from that point. It is simultaneously revealed that beginning in June, the company will operate four-times-a-day DHC-8 return trips from London (LCY) to Leeds and thrice-daily roundtrips to Jersey. In September, daily return flights will be started to Aberdeen.

A new five-year franchise agreement is signed with **Air France** on April 1; under its terms, the regional will commit five BAe 146s on "Air France Express" services. It is simultaneously announced that, beginning in September, the company will boost its service from London (LCY) to Jersey to three daily DHC-8 roundtrips while increasing DHC-8 return service to Leeds to four daily return flights. New daily service will be launched to Aberdeen in September.

A strange equipment exchange occurs on April 3 when **CityJet, Ltd.** dry-leases a BAe 146-200 for six months to JEA while JEA wet-leases a CityJet BAe 146-100 to operate its routes from Dublin to London (LCY).

Company officials now believe that the airline's name does not reflect the size or mission of the carrier. Consequently, JEA changes its name to **British European, Ltd.** on May 8, taking pains to assure the public that it is not taking the moniker once held by BEA, a historic British airline, which is still owned by **British Airways, Ltd. (2).**

JERSEY FERRY AIRLINES, LTD.: United Kingdom (1971-1974). With financial backing from R. Barnett and R. N. Norris of the trucking firm Mainland Market Deliveries, John Fisher forms "JF Airlines" at Portsmouth Airport in January 1971. A Scottish Aviation Twin Pioneer is delivered in February, followed by a second in April. With an ATLB

permit in hand, scheduled service is inaugurated from Portsmouth to Jersey and Guernsey on May 20. A de Havilland DH 114 Heron 1B is briefly acquired for the last month of the summer tourist season, which ends on October 15.

Enplanements since start-up total 7,500.

The Channel Islands services resume in April 1972 and in May a second Heron 1B is purchased; christened *Spirit of Enterprise*, the DH 114 begins revenue operations on May 22. Bookings during the summer climb three times over 1971 boardings. In September, the company is purchased by Portsmouth businessman Reginald P. Slack, who sells the Twin Pioneers in October and places orders with Fair Oaks Aviation Services for Britten-Norman equipment.

The *Spirit of Enterprise* maintains the Channel Islands service during the winter. On February 13, 1973, a BN-2 and a BN-2A are delivered and are placed on the Jersey and Guernsey route in March. On May 8, the Islander opens a service from the Channel Islands to Shoreham, which had been briefly flown in early 1972. On December 31, the Islander lands at Portsmouth Airport from Jersey, at which point, that airport is closed.

Company officials are unable to find a suitable replacement airport and flight operations thus end. The Heron 1B is sold to **Fairflight (Charters), Ltd.** while the Islander and Trislander are disposed of at Blackbushe. The carrier's books are officially closed in June 1974.

JERUSALEM WINGS (KANFEI JERUSALEM), LTD.: P.O. Box 27261, Atarot Airport, Jerusalem, 91271, Israel; Phone 972 (2) 583-1444; Fax 972 (2) 583-1880; <http://www.jerwings.co.il>; Year Founded 1995. Jerusalem Wings is set up at Atarot Airport in 1995 to provide flight-seeing and other passenger charters to scenic and historic points, as well as such regional destinations as Jordan, Cyprus, Greece, Turkey, and Egypt.

Haviv Matzliach is managing director and he begins, and continues, revenue flights with a group of small Cessnas. In addition to passenger service, the company also operates air taxi and aerial photography flights.

JES AIR: Bulgaria (1992–1993). Privately funded JA, with 25% backing from the Jupiter Electronic Systems of Singapore, is established at Sofia in 1992. Two Airbus Industrie aircraft are acquired, one each A310-222 and A310-324, the latter leased from **Air Niugini (Pty.), Ltd.** Scheduled services are inaugurated to New York's John F. Kennedy International Airport, Ottawa, and Singapore. The company also provides charters on behalf of **Vietnam Airlines**.

Unable to achieve economic viability during a time of international airline recession, the carrier goes out of business in 1993.

JET AIR CARGO, A.G. See **JET AVIATION GROUP; METRO CARGO, A.G.**

JET AIRE: United States (1985–1986). This short-lived third-level operator is founded at Albuquerque in the first week of January 1985 to provide scheduled passenger and cargo intrastate flights to Las Cruces, Santa Fe, and Taos. Employing a pair of Handley Page HP 37 Jet-streams, daily or weekday flights are inaugurated on January 16 to Las Cruces.

The route network is extended to Carlsbad and Clovis during the remainder of the year, but financial shortfall forces the new entrant to cease operations on January 14, 1986.

JET AIRWAYS (PTY.), LTD.: SM Center, 1st Floor, Andheri-Kurla Road, Andheri (East), Bombay, 400 059, India; Phone 91 (22) 821-5080; Fax 91 (22) 821-5631; <http://www.jetairways.com>; Code 9W; Year Founded 1992. JAL is founded at Bombay on April 1, 1992 to operate domestic services throughout the subcontinent. The privately owned carrier is a wholly owned subsidiary of Naresh Goyal's Isle of Man-based holding company Tailwinds, Ltd.

With initial capitalization of \$10 million, Goyal becomes chairman with Peter Roberts as CEO and Saroj Datta as executive vice president. A fleet is assembled comprising 4 Boeing 737-33As dry-leased from Ansett Worldwide, Ltd. for three years. An agreement is concluded with SABRE for computerized reservations system services.

Revenue operations begin on May 5, 1993 and link the company's base with Ahmedabad, Bangalore, Baroda, Calicut, Coimbatore, Cochin, Goa, Delhi, Hyderabad, Madras, and Mangalore. During the next 7 months, a total of 438,204 passengers and 1.9 million FTKs will be transported.

The airline becomes an associate member of IATA in July. In August, plans are announced to sell 40% shareholding to **Gulf Air, Ltd.** and **Kuwait Airways Corporation, Ltd.**, with each of the Mideast airlines obtaining 20% interest.

Airline employment is increased by 28.8% in 1994 to 1,561 and during the first quarter JAL operates 13 daily flights to 11 destinations. In May, a B-737-4H6 is leased from **Malaysia Airlines, Ltd. (MAS)** which, under contract, agrees to provide maintenance, technical, and training support.

The frequent flyer program Jet Privilege is launched on July 4. Five new cities join the route network during the year, as David Wookey becomes managing director.

Enplanements for the first full 12 months total 1,067,162 and 6.98 million FTKs are flown.

The workforce grows again in 1995, up 19.8% to 1,860. Another B-737-4H6 arrives from **Malaysia Airlines, Ltd. (MAS)**, along with two B-737-4Y0s chartered from a private leasing concern. The extra capacity will help traffic to dramatically improve as will a new connecting agreement signed in August with **KLM (Royal Dutch Airlines, N.V.)**.

Passenger boardings jump 31.3% to 1,480,724 while cargo rises 61.2% to 11.27 million FTKs.

A total of 83 flights per day are operated in 1996 to 23 destinations. Many of these provide connections not only to **KLM (Royal Dutch Airlines, N.V.)** but to **Kuwait Airways Corporation, Ltd.**; indeed, the arrangement with the latter comes to account for 80% of KAC's feed from the Indian interior.

On August 28, it is announced that a reciprocal frequent flyer program will begin with **British Airways, Ltd. (2)** on November 1.

In December, the carrier becomes the first in Southeast Asia to order the Boeing 737-800 when it places a requisition for six, along with four more B-737-400s. The request is valued at \$486 million and when delivered they will be the first provided to an Indian start-up since the advent of deregulation in 1993. The company's twelfth "Baby Boeing," a Dash 500, is now received.

Enplanements increase 46.8% to 2,172,561 and 15.88 million FTKs are operated, a 40.9% increase. Revenues jump 33% to \$200 million.

Airline employment in 1997 is 1,860. JAL is now the second largest domestic airline in India and a serious threat to **Indian Airlines, Ltd.** Destinations served from hubs at Bombay and Delhi include Baroda, Ahmedabad, Pune, Goa, Mangalore, Calicut, Cochin, Trivandrum, Coimbatore, Chennai, Bangalore, Hyderabad, Aurangabad, Indore, Jaipur, Jammu, Srinagar, Bagdogra, Calcutta, Guwahati, Jorhai.

During January, lease and purchase orders are placed for 10 B-737s, 4 Dash-400s and 6 Dash-800s. Arranged by ANZ Grindlays, this is the first direct deal between a private Indian airline and a manufacturer. A total of 85% of the \$325 million required for acquisition of the first 4 is guaranteed by a loan from the U.S. Export-Import Bank.

Indian Airlines, Ltd., together with the nation's domestic airlines, appeal an earlier ruling by the Indian Foreign Investment Board that foreign airlines might take significant shareholding in domestic carriers. This results in the issuance of a new aviation policy in mid-April from Civil Air Minister C. M. Ibrahim and Prime Minister H. D. Deve Gowda's United Front cabinet. Simply put, the new decision prohibits investments in Indian domestic carriers by foreign airlines, although groups from outside the aviation business may continue to acquire or hold up to 40% of the stakes in domestic carriers. The government

decision halts **Singapore Airlines, Ltd.** plans to join with the Tata Corporation in forming a rival to **Indian Airlines, Ltd.**, the action that had set off initial government concern.

The ripple effect from the cabinet ruling impacts Jet dramatically. Company officials are informed by Minister Ibrahim that **Gulf Air, Ltd.** and **Kuwait Airways Corporation, Ltd.** have six months to divest themselves of their stake. During September and October, Chairman Goyal negotiates a buyout of the shares held by both of his foreign investors.

The first of the four new B-737-400s arrives in October and enters service during the first week of November. By mid-month, JA is operating a total of 118 daily frequencies and transporting a quarter of India's domestic airline traffic. Two more B-737-400s arrive in December.

Customer bookings soar 34.8% to 2,298,796 while freight shoots upward 25% to 19.85 million FTKs.

The fleet at the beginning of 1998 includes 4 B-737-33As, 2 each B-737-4H6s and B-737-4S3s, 3 B-737-4Y0s, and 1 B-737-5Y0. Orders remain outstanding for 4 B-737-700s and 6 B-737-800s.

Destinations visited now include Ahmedabad, Aurangabad, Bagdogra, Bangalore, Bhuj Rajkot, Calcutta, Calicut, Chennai, Cochin, Coimbatore, Delhi, Goa, Guwahati, Hyderabad, Imphal, Indore, Jaipur, Jammu, Jhart, Mangalore, Mumbai, Port Blair, Pune, Srinagar, Trivandrum, and Vadodara.

During the first quarter, a special offshore company is established in the Cayman Islands to handle the financing for purchase of the 10 requested Boeing jetliners. Two B-737-33As are returned to their lessor in April upon completion of their charter term.

Despite the announcement by **Sahara India Airways, Ltd.** that it will deeply discount its fares, Jet, on March 26, indicates that it will not cut costs on key routes. The decision is taken after **Indian Airways, Ltd.** also decides against chopping fares. Indian, instead, will increase frequencies, offering hourly shuttle flights between Delhi and Bombay.

At the beginning of the second quarter, the company completes installation of the automated Codeco Departure Control System in twelve of its station networks.

On May 5 it is announced that during the past five years the company has signed interline agreements with 104 major international carriers that fly in and out of India.

Daily B-737-400 roundtrips commence on May 20 from Calcutta to both Imphal and Guwahati and from Bombay to Bhavnagar. By month's end, the fleet includes 22 aircraft: 16 B-737-400s and 6 B-737-500s.

On December 15, the Civil Aviation Ministry announces that Jet is one of several carriers to have completed installation of airborne collision avoidance systems (ACAS) on their aircraft before a December 31 deadline to do so.

Passenger boardings surge 40% to 4.2 million. Revenues total \$380 million.

Early in January 1999, a B-737-71Q is received and enters service. Three more remain to be delivered. In addition, new CEO Nikos K. Kardassis, a 17-year veteran of **Trans World Airlines (TWA)** and **KLM (Royal Dutch Airlines, N.V.)**, who has been with Jet since August 1994, arranges to lease three Avions de Transport Regional ATR72-202s from **Air Liberte, S.A.** The three turboprops are delivered in February and March.

A fare war is started by **Sahara Airlines, Ltd.** on April 1 over the lucrative Delhi to Bombay route. Sahara offers thrice-daily service compared to **Indian Airline, Ltd.**'s 10 flights, but all are deep-discount, no frills offerings. JAL, which operates eight flights either way between the two cities, is forced to join in.

On April 16 the problems of the nation's airlines take a back seat when the Hindu nationalist government of Prime Minister Vajpayee loses a vote of confidence in Parliament and collapses. Still, *The Times of India* reports in this day's issue that, to compete with Jet and **Sahara Airlines, Ltd.** in the fare war, the contest may be spread as **Indian Airlines, Ltd.** pumps additional capacity onto the routes from Bombay to both Chennai and Bangalore.

On April 28, the carrier signs a multimillion-dollar agreement with SABRE for the licensing of the information technology provider's airport check-in and load control system (ASCI) and its flight operating system (FOS).

Indian Airways, Ltd. refuses to engage in the upgrades of its rivals and continues to push its new shuttle service and to stress "on-time" performance. The May 18 issue of *The Times of India* reports that **Sahara India Airlines, Ltd.** is offering a five-star bed-and-breakfast add-on with tickets purchased for Bombay and Chennai, while Jet, having linked up with ITC hotels, offers domestic passengers a 20% discount on overnight accommodations.

As the result of Indian Air Force raids on "guerrilla" positions in Kashmir that begin on May 25, the capital airport of Srinagar is shut to commercial traffic, forcing JAL to suspend its thrice-daily service.

An order, valued at approximately \$550 million, is placed on June 24 for 10 Next Generation B-737-800s; announced at a joint Paris Air Show news conference with Boeing, the request will be filled beginning in 2001.

CEO Kardassis suddenly resigns "for personal reasons" on July 7 and is succeeded by Executive Vice President Saroj K. Datta.

A marketing agreement is signed with **British Airways, Ltd. (2)** on July 28. Under its terms, the frequent flyer programs of the two carriers are linked, while passengers flying on both airlines are granted through-check-in.

On August 9, Chairman Goyal, in an interview published in *The Times of India*, calls for an end to the fare war on the Delhi-Bombay sector. The airline leader also takes the opportunity to note that his ATR72-202s will, beginning in October, boost company traffic on its trunk routes by bringing in passengers from smaller towns.

Plans are announced on August 23 for the creation of an aviation academy where company staff will be trained, as well as the establishment of an engineering and maintenance unit.

Permission is received on June 23 for the import of five ATR72-520s, which will be leased from the French concern Aircraft International Renting, S.A.

Fares on the twice-daily roundtrip route between Bombay and Ahmedabad are reduced by **Indian Airlines, Ltd.** on August 15. Tariffs are also reduced on the routes from Bombay to Calicut, Mangalore, and Cochin.

On September 1, competing Jet reduces the cost for flying its thrice-daily return service between the two points, heating up a continuing fare war with the state carrier. The next day, the last of three Next Generation B-737-85Rs to be received during the year is delivered.

A group of Indian journalists is given a demonstration flight at Toulouse on September 26 aboard the new ATR72-520 that is about to be turned over to Jet.

The first new ATR42-520 is received on October 4 following a three-day delivery flight from Toulouse, France. On October 15, the new high-winged turboprops, the first of their type in India, inaugurate frequencies to smaller towns and tourist centers in the northern, southern, and western portions of the country.

The second and third ATRs are delivered in November. The new aircraft allow expansion of the carrier's feeder routes to Udaipur, Keshod, Porbandar, Chandigarh, Bhavanagar, Diu, Belgium, Visakhapatnam, and Tirupati, in addition to new daily connections from Bombay, New Delhi, Bangalore, and Hyderabad.

A mistaken command by a controller at the Nagpur ATC center on December 2 nearly causes a midair disaster. While en route from Bangalore to New Delhi, Flight 812, a Jet Airways, Ltd. B-737-33A, is asked to ascend from 26,000 ft. to 35,000 ft. through airspace where Flight 540, an **Indian Airlines, Ltd.** A300B2, is flying from New Delhi to Chennai at 29,000 ft. Fortunately, the TCAS equipment of both aircraft activates and a collision is avoided.

Passenger boardings for the year increase 21.4% to 4,870,000 (32% of the domestic market), while 37.59 million FTKs are operated. Operating revenues surge 18.9% to \$440 million.

Airline employment at the beginning of **2000** stands at 4,230, a huge 83.9% increase over the previous 12 months. The B-737 fleet now includes 4 Next Generation Dash-71Qs, 2 NG Dash-86Ns, 4 NG Dash-85Rs, 2 each Dash-4H6s, Dash-497s, and Dash-48Es, and 4 Dash-45Rs.

Flight 605 for Jammu is cancelled on January 4 after a bomb threat against the carrier is received at Palam; despite a four-hour search, no explosives are found. Fog and a strike by ground staff cause cancellations and delays on January 5–7. Two Next Generation B-737-85Rs are now received, one each on January 21 and February 29.

Former **Trans World Airlines (TWA)** Vice President S. Forte is named the carrier's new CEO in early March.

The last two ATR42-520s arrive in March and April, respectively. New Delhi, Bangalore, and Madras each receive one of the new European turboprops and two others are stationed at Bombay. The company now flies to 40 destinations, compared to 23 just 4 years earlier.

With the introduction of the summer schedule, new daily return service is inaugurated between Bangalore and Goa, with convenient links from the former to Hyderabad and Coimbatore. On April 16, Bombay to Madras daily roundtrips begin, along with similar ATR frequencies from Bangalore to Kochi and Coimbatore and from Hyderabad to Chennai, Vishakapatnam, and Tirupati. The B-737 jetliner return frequencies from Bombay to Hyderabad are boosted from three to five every day while those from Bangalore to Chennai are now offered five times a day. Those from Bombay to Calicut and Jaipur are withdrawn.

After weeks of speculation, Jet issues a statement at the end of August indicating that it will not seek equity holding in the **Air India, Ltd.**, which is being privatized by the government. A Next Generation B-737-85R is delivered on September 2 and a B-737-76N is received on September 29.

Tragedy almost strikes on October 1. While climbing to FL370, the TCAS of Flight 701, an **Indian Airlines, Ltd.** A320 en route from Calcutta to Dibrugarh, sounds a warning that it is near Jet Flight 207, a Next Generation B-737-800 cleared to climb to FL350, the TCAS of which is also screaming. Both pilots take corrective action and avoid meeting head-on in an area over the Bangladesh border.

Also on October 1, the government invites expressions of interest (EOI) in IA from those Indian or nonresident Indian companies willing to purchase a 26% equity stake. It willfully excludes Jet Airways by inserting a clause in the EOI document prohibiting scheduled Indian air transport operators from applying in order "to maintain a competitive environment."

To help cope with rising fuel prices and an increase in landing and navigational charges payable to the Airports Authority of India, fares are increased approximately 10% on October 10. The boost is less than the previously announced 18%–20% primarily because principal competitor **Indian Airlines, Ltd.** has chosen not to revise its fare schedule.

The year's last Next Generation B-737 is a Dash-76N delivered on December 20. On January 29, Jet will be named recipient of the 2000 "Market Development Award" from *Air Transport World* magazine.

JET ALASKA. See ERA AVIATION

JET ALSACE, S.A.: France (1992–1993). This charter carrier is established in its namesake department in **1992** to offer charter and inclusive-tour passenger flights to destinations in both Europe and the Mediterranean. Revenue operations commence with one each leased McDonnell Douglas MD-82 and MD-83.

Having accumulated debts of FFf 24 million (\$4.2 million), but no significant income, the operator, unable to assemble additional financing, goes bankrupt in February **1993**.

JET AMERICA AIRLINES (1): United States (1980–1987). Founded in Long Beach, California, by J. Thomas Talbot in September **1980**, this new entrant must first defeat a coalition of local homeowners intent upon preventing the start-up of what they believe will be extremely noisy services. To win support, the carrier acquires a pair of new Mc-

Donnell Douglas MD-82s and it is these noise-restrained jetliners that commence coach-class operations on November 16, **1981** over Jet America's only route, Long Beach–Chicago (ORD).

With a load factor of 63%, the 2 aircraft ferry 21,339 passengers by December 31. Start-up and other costs bring an anticipated loss of \$3.2 million.

Fire engulfs a jet engine moments before an MD-82 is about to take-off from Long Beach for Chicago on March 10, **1982**; no injuries are reported. The initial service continues to be so successful that a second route—to Dallas (DFW)—is opened by the company's MD-82s, now increased to three, in September.

As is the case for many U.S. air transport companies starting up in the era of deregulation, Jet America's first year is rather shaky.

Although 205,361 passengers are transported, the airline's \$38.2 million in operating expenses exceed the \$29.9 millions of revenue earned, leaving a net loss of \$8.3 million atop an operating loss of \$9.3 million.

In **1983**, St. Louis is added to the route network and four MD-83s are acquired.

Passenger traffic nearly doubles, up 94% to 398,324. Revenues do double, rising to \$60 million, while with expenses under control, an operating profit of \$3.86 million is posted. Thanks to the sale of \$4.6 million worth of tax benefits, the net profit jumps to \$7.97 million.

Oakland becomes the company's fourth destination in **1984**. During the summer, two Boeing 707 Stratoliners are leased and placed into service on various charter routes. The company suffers a number of technical problems with the old planes and they are returned toward year's end.

Passenger boardings rise by 35% to 537,737 and freight skyrockets 188% to 4.2 million FTKs. As the result of heavy competition, Jet America earns no profit, suffering instead a net loss of \$3.7 million. On the plus side, however, its \$90.2 millions in revenues boost it into the CAB category of "National."

In March **1985**, twice-daily service is started linking Oakland with Detroit via Chicago and daily flights connect Long Beach with Detroit, also via Chicago.

An MD-83 with 138 aboard makes a second emergency landing at Chicago (ORD) on April 1 because of a landing gear problem that ground crews apparently failed to correct after a first emergency landing a few hours earlier.

At the end of August, the carrier files a complaint with the DOT charging the New Orleans-based air taxi service Jet America Corporation with deceptive practices in assuming the Jet America name within its corporate restructuring and then not reporting same. The two begin to litigate the name issue in California courts. In mid-September, the Louisiana concern files an affidavit noting that it operates only small aircraft in on-demand service, that there is no actual public confusion over the similarity of names, and that, even though it registered the Jet America moniker first, it is being harassed by the California national.

The 695-employee carrier now also initiates a frequency to Los Angeles (Orange County Airport) late in the year and agrees, in principle, to acquire the Kentucky-based charter company **Best Airlines** and its two DC-9s.

Despite participation in the costly fare-wars, Jet America is able to increase its customer bookings by 43.9% to 774,145 and cargo traffic by 33.5% to 6.8 million FTKs. Revenues ascend 13% to \$102 million, costs jump 14.2% to 99.56 million, and an operating profit of \$2.41 million is achieved. Net loss doubles to \$8.1 million.

Airline employment jumps 10.8% in **1986** to 818, but financial troubles prove terminal. Atlanta-based **Delta Air Lines** announces its intention to acquire the company; however, the \$18.7-million deal is not consummated. During the summer, Jet America reports an \$8.7-million net loss for the first half and advises the DOT that it has a working capital deficit of \$27 million and a negative net worth of \$2.8 million.

In the fall, management reaches the decision to sell the carrier to another suitor, **Alaska Airlines** parent Alaska Air Group, for \$25 million. The new owners elect to operate their prize as a separate subsidiary until

such time as the government approves the takeover. In October, nonstop MD-83 service is initiated to Orange County Airport from Chicago.

Twice-daily nonstop flights commence in December from Washington, D.C. (DCA) to Minneapolis (MSP), as well as direct flights from Orange County to Portland and Seattle, plus nonstop service between St. Louis and Las Vegas, Orange County, and Portland. The Detroit service is expanded by the addition of flights from the Michigan city to Chicago, Long Beach, Las Vegas, Orange County, and Portland.

The year's cumulative passenger boardings rise 17.1% to 906,470, but revenues drop 10.7% to \$91.02 million. Expenses are also down, but not far enough, falling 34.5% to \$92.65 million. The operating loss is \$1.62 million and the net loss nearly doubles to \$15.81 million.

The amalgamation process requires nine months and Jet America, spawned of deregulation, disappears within its new parent on October 1, 1987. During its last three quarters of life, the new entrant transports a total of 789,000 passengers. Revenues of \$72.5 million are earned, but expenses are so high that losses ensue: \$11 million (operating) and \$15.8 million (net).

JET AMERICA AIRLINES (2): United States (1989–1994). David Weekly establishes JAA-2 at Fort Lauderdale, Florida, in 1989. Passenger charters are inaugurated and continued with a fleet of 1 each Gates Learjet 25, Learjet 35A, and Learjet 36, plus a Beech Super King Air 200. A base is also established at Lewisburg, West Virginia, where 1 each Learjet 35A and a Mitsubishi Mu-2J turboprop are stationed.

Unable to maintain viability in the face of recession, the company shuts its doors in 1994.

JET AVIATION BUSINESS JETS. See JET AVIATION GROUP

JET AVIATION GROUP: 1515 Perimeter Road, West Palm Beach, Florida 33406, United States; Phone (561) 233-7233; Fax (561) 233-7222; <http://www.jetaviation.com>; Code PP; Year Founded 1967. The world's only global business aviation service company, JAG begins at Basel, Switzerland, in 1967 when Carl W. Hirschman takes over the Globe Air hangar and sets up his own concern. Two years later, Hirschman is able to acquire the maintenance and handling facilities of the aircraft manufacturer Pilatus, A.G. at Geneva and Zurich.

JAG enters the aircraft charter and management business in 1972, operating executive and small group passenger flights with two Learjet 24s and a North American Sabreliner 75. The first step in an eventual encirclement of the world takes place in 1975 when the carrier takes over a maintenance base in Dusseldorf, Germany. During the next 20 years, the company will also acquire FBOs at Munich, Saarbrücken, Hanover, Kassel, and Cologne. Company headquarters are shifted to Zurich.

Two years later the company begins to diversify further, undertaking not only maintenance, repair, avionics support, and ground handling, but business aircraft outfitting and refurbishment as well. In 1979, JAG forms a partnership with a group of Saudi businessmen and opens a handling facility at Jeddah for both corporate and private aircraft.

The expanding service concern enters the U.S. market in 1982 by opening a small office in Washington, D.C. Over the next six years, it acquires FBOs (and their in-house charter operations) at Bedford, Boston, and West Palm Beach, Florida. Six years later, in 1988, the company scores a major coup, taking over the large Aero Services FBO based at Teterboro, New Jersey, as well as **EAF Charter**, the largest U.S. charter operation, which is located in the same city. The latter is reformed into Jet Aviation Business Jets, Inc.

Thomas M. Hirschmann succeeds his father as chairman/CEO in 1990. In one of the first major east and west joint aviation ventures, Swiss **Metro Cargo, A.G.** is established at Lugano in August. Private Swiss investors associated with Metropolitan Aviation, also based at Lugano, join with the Siberian directorate of **Aeroflot Soviet Airlines** to provide international cargo charters.

Mario Calmai is named chairman with Shimon Lahav as managing director; they begin revenue services employing 8 Ilyushin Il-76s and 1

Antonov An-12 contributed by the Soviets. Operational services for the new entrant are provided by Zurich-based Jet Aviation Business Jets, A.G. (JABJ), under a contract that requires Metro to pay for each flight in advance.

Operations continue without incident until May 1991. During that month, Metro Cargo delays its payments to JABJ as well as its aircraft lease payments to Aeroflot. At the beginning of June, the Soviets, owed \$7 million, request that the authorities in Canton Ticino freeze Metro Cargo's bank accounts. Unfunded, Metro Cargo suspends operations while a criminal investigation is launched.

With Metro Cargo finished, the Soviets turn to JABJ to establish another joint operation, Jet Air Cargo, A.G., which will lease and employ, briefly, three Il-76s.

In October, JAG's corporate headquarters are transferred to West Palm Beach in Florida. The move is taken as part of the company's globalization plan, while emphasizing the large U.S. market. On the other hand, the three facilities (JABJ; Jet Aviation Zurich, A.G.; and Jet Aviation Handling, A.G.) at Zurich will continue to employ some 500 workers, the largest number in any corporate location.

Once in the U.S., JAG is reformed and divided into regional operations centers. A new Office of the Chairman is established, comprised of chairman Hirschmann plus Terrance P. Kelley, president/chief operating officer in the U.S., and Heinz Kohli, president/chief operating officer for Europe, the Mideast, and the Far East.

During the mid-1990s, the company continues to develop support facilities around the world. New operations begin at Moscow, Lugano, and Caracas overseas and, in the U.S., at Burbank, San Jose, Chicago, Newark, Morristown, and Nashville. Other U.S. cities include Jackson, Wyoming, Leesburg, Virginia, Rochester, White Plains, and Ronkonkoma, New York, Warwick, Pontiac, and Waterford, Michigan, and Westfield, Massachusetts.

In 1993, JAG wins the right to handle not only charter flights but the scheduled carriers arriving at Zurich and Geneva as well. Among the airlines handled are **Air France**, **Deutsche Lufthansa, A.G.**, **Air U.K., Ltd.**, and **United Airlines**.

Early in 1996, the concern moves into the Pacific, opening a base at Singapore. In September, the charter and aircraft management firm of K-C Aviation, third largest in the U.S., is acquired.

In 1997–1999, JAG has over 1,560 employees worldwide and operates the largest fleet of corporate and private jets and helicopters in the world, some 145 aircraft, ranging in size from Douglas DC-8-72s to Sikorsky S-76 helicopters. Planning and reservations for this huge complement is arranged at two international coordination centers at Zurich and Teterboro.

Early in 2000, Jet Aviation Group completes the remodeling of a new regional hub at Dallas (DAL), which was acquired to meet increased southwestern demand for charter services and aircraft sales. Purchased from another concern, the company's new facilities include a 62,000-sq.-ft. hangar space and 103,000-sq.-ft. ramp area, from which 17 business aircraft are operated.

JET BUSINESS AIRLINES, N.V.: Brussels National Airport, Zaventem, B-1930, Belgium; Year Founded 1989. JBA is set up at Brussels National Airport in 1989 as a subsidiary of the German **Aeroleasing Deutschland, GmbH**. Mme. van de Busch is appointed managing director and she initiates and continues executive passenger and air express charters with 4 Learjet 35A Century IIIs.

JET CARGO, N.V.: Building 70, Suite 138, Schiphol Airport East, Amsterdam, NL-1117, The Netherlands; Phone 31 (20) 601-5811; Fax 31 (20) 601-0057; Code JCL; Year Founded 1988. Jet Cargo is established at Amsterdam in 1988 to provide long-haul, nonscheduled passenger and freight services to international destinations. Revenue services commence and continue with 1 each Boeing 707-321B and B-707-309C. The B-707-321B is withdrawn in 1993.

The privately owned concern continues to offer ad hoc all-cargo flights in 1994–2000 to destinations in Africa, the Mideast, and Europe.

JET CHARTER INTERNATIONAL: 200 Ocean Trail Way, No. 606, Jupiter, Florida 33477, United States; Phone (561) 743-3210; Fax (561) 743-8389; Year Founded 1992. Bruce A. Shinneman sets up JCI at Opa Locka Airport in Florida in 1992 to provide executive and small group passenger charters worldwide. By 2000, the company employs four pilots and bases its three executive jets at three different airports. A Dassault Falcon 10 is stationed in Florida, while another is based at Vail, Colorado, and a third at Chicago (MDW).

JET CHARTER SERVICE: United States (1979–1988). This privately owned supplemental air carrier is founded at Miami in August 1979 to operate domestic and worldwide passenger and freight charters and inclusive-tour services. Three Boeing 707-320Cs, including a Dash-329C first flown by Sabena Belgium World Airlines, S.A., are acquired and the first charter is flown in December 1981 between Miami and Caracas via Central America under the name **Jet 24 International Airways**. All passenger services flown in 1982 are subcontracts offered on behalf of **Air Florida**, **Jet America Airlines**, and several other carriers.

The company receives its own passenger authority in 1983 and is able to initiate charters under its Jet 24 name. Two Douglas DC-10-40s are acquired by charter in 1984 and operate inclusive-tour flights from Miami to San Juan, Bogota, Madrid, Paris, and Zurich.

Operations continue apace in 1985 and beginning on May 18 a scheduled return service is flown from Miami to Madrid via San Juan. This schedule is withdrawn on June 3 as the entire airline loses money. In August, the company ceases operations and files for Chapter XI bankruptcy reorganization. Plans are made to reintroduce transatlantic services.

In 1986, working with the FAA, the company is able to regain its operating certificates, choosing not to fly again under the name **Jet 24 International Airways**.

In March, a former **American Airlines** B-747-123 is leased from Citicorp and employed to offer inclusive-tour flights from New York (JFK) to Madrid. The Jumbojet is returned in June and released to **Cargolux Airlines International, S.A.**

The fleet is expanded over the next 2 years by the addition of 2 more leased DC-10-40s and the workforce grows to 150. An effort is made to win DOT approval for renewed scheduled service to Madrid, Paris, and Zurich, but permission is not forthcoming. Unable to generate sufficient traffic to remain financially healthy, JCS shuts its doors in 1988.

JET CITY (PTY), LTD.: Melbourne Airport, Cargo Road, Tullamarine, Victoria, 3045, Australia; Phone 61 3-93301555; Fax 61 3-93303969; Year Founded 1989. Jet City is established at Tullamarine in 1989 to provide executive and small group passenger and cargo charters. By 2000, Managing Director Lorne Cole oversees the work of 9 full-time pilots and the operations of 1 each Beech 55 Baron, Gulfstream G-1159C Gulfstream IV, and Learjet 35A Century III.

JET CONNECTION BUSINESS FLIGHT, A.G.: Flughafen Frankfurt am Main, Gebaude 514, Frankfurt, D-60549, Germany; Phone 49 (69) 6959-1225; Fax 49 (69) 6959-1224; Year Founded 1997. JCBF is set up at Frankfurt in 1997 to offer executive and small group passenger charters worldwide. Flights commence and continue with a pair of Learjet 55 Longhorns.

JET EAST: 7363 Cedar Springs Road, Dallas, Texas 75235, United States; Phone (214) 350-8523; Fax (214) 358-7641; Year Founded 1975. Beginning as the air taxi and FBO aviation support operation, Jet East, Inc., at Dallas' Love Field in 1975, this concern establishes an airline division and begins to operate charter and worldwide contract service flights with Beech King Airs and Gates Learjets in 1980.

By 1984, the airline division, known as **Jet East International**, has a number of clients but its principal customer is **UPS (United Parcel Service)**, for which it flies 5 Boeing 727-100s. Jet East also operates a B-727-100, a Cessna Citation, and a Beech Super King Air 200 under its

original name and among the regions visited are Alaska, Canada, the Caribbean, South and Central America, the U.S., and Europe.

During 1985, the Texas airline flies 1,000 passengers, but more importantly for its bottom line, 24.5 million FTKs. A total of 63.55 million ton-kilometers of cargo are flown in 1986. In 1987, the airline division, **Jet East International**, is split off and becomes a subsidiary of Wilkert and Wilkert and is renamed **Express One International**.

With its airline division sold, Jet East continues to offer worldwide passenger charter services. By 2000, the company is flying 1 each Cessna 560 Citation V, Dassault Falcon 20, and Learjet 35A.

JET EAST INTERNATIONAL: United States (1980–1988). Beginning as the air taxi and FBO aviation support operation, Jet East, Inc. at Dallas' Love Field in 1975, this concern establishes an airline division and begins to operate charter and worldwide contract service flights with Beech King Airs and Gates Learjets in 1980.

By 1984, the unit, known as Jet East International, has a number of clients but its principal customer is **UPS (United Parcel Service)**, for which it flies 5 Boeing 727-100s. Jet East also operates a B-727-100, a Cessna Citation, and a Beech Super King Air 200 under its original name and among the regions visited are Alaska, Canada, the Caribbean, South and Central America, the U.S., and Europe.

During 1985, the Texas airline flies 1,000 passengers, but more importantly for its bottom line, 24.5 million FTKs.

A total of 63.55 million ton-kilometers of cargo are flown in 1986. In 1987, Jet East International, **Jet East's** airline division, is split off and becomes a subsidiary of Wilkert and Wilkert and is renamed **Express One International**.

JET EUROPE, S.A.: France (1990–1991). JE is set up at Paris in the summer of 1990 to operate scheduled passenger and cargo services to Valence on behalf of **Europe Aero Service, S.A.** Although Aerospatiale Sud Est SE-210 Caravelle XB frequencies are inaugurated during the summer, they are only maintained for a year.

JET EXPRESS: United States (1987–1993). Ken Carlson organizes JE at Atlantic City, New Jersey, in late 1987 to operate regional commuter services with a staff of 20.

In early 1988, Carlson places orders for three CASA C-212-200 Aviocars and following receipt of the first, flights are inaugurated to various northeastern U.S. destinations.

Enplanements for the first full year total 13,253 (a 67.9% increase) and revenues reach \$689,363. The operating profit is \$6,913.

Negotiations are successfully completed by early spring 1989 allowing the carrier to serve as a "TWExpress" code-sharing partner of **Trans World Airlines (TWA)**. Simultaneously, two additional Aviocars join the fleet and service is inaugurated to Washington, D.C. (DCA).

Following its purchase by **Smith Air Express**, the company's headquarters are moved to Norfolk, Virginia, on July 17, 1990, but no further details of the year are publicized.

The fleet in 1991 includes 1 Aviocar and 5 Fairchild Metro IIIs. In May, the company declares Chapter XI bankruptcy and switches affiliations, becoming a "USAir Express" partner. On October 1, thrice-daily Metro III flights commence from Washington, D.C. to Richmond, Virginia.

A total of 14,162 passengers are transported by year's end.

Early in 1992, a reorganization plan is filed. Under its own banner, the company now employs its four Metro IIIs to inaugurate services to New York (LGA) from Groton, Connecticut, and Atlantic City.

Customer bookings shoot up to 100,319.

The fleet in 1993 is increased to 5 Metro IIIs (2 out of service) and 3 chartered CASA C-212-100 Aviocars. In the fall, the company's owners purchase the name of defunct **Midway Airlines** and assume its identity as **Midway Airlines (2)**.

JET FLEET INTERNATIONAL AIRLINES: United States (1970–1992). The Jet Fleet Corporation is established at Dallas' Love Field in

1970 to provide executive charter and contract service flights to U.S. destinations, as well as locations in the Caribbean, Central and South America. Over the next decade, branch bases are set up at Washington, D.C. (DCA), Teterboro, New Jersey, Shreveport, Midland, and Houston.

In **1984**, the carrier obtains government authority for the inauguration of scheduled operations by a new subsidiary to be known as Jet Fleet International Airlines. Although the airline is formed, only charter and contract services are performed.

The fleet in **1985** includes 2 Cessna Citations, 1 Grumman Gulfstream II, and 1 British Aerospace BAe (BAC) 1-11-401. A total of 3,000 passengers are flown during the year. Operations continue apace over the remainder of the decade.

In **1990**, the fleet has come to comprise 1 each Gates Learjet 25/Learjet 35, British Aerospace Jetstream 31, Grumman Gulfstream II, Cessna Conquest, BAC-111-401, and 3 Cessna Citations.

The operator now begins to report its traffic figures to the DOT, with 11,000 boardings the initial statistic. Revenues are \$1.04 million, expenses are \$891,000, and the operating profit is \$150,000. Net gain reaches \$158,000.

Enplanements advance to 20,000 in **1991** and the year is profitable. Revenues climb 28.5% to \$1.1 million, but costs are also up, forcing operating income down to \$77,733 and net gain to \$79,192.

Unable to maintain its fiscal viability, the carrier ceases operations in **1992**.

JET FRET, S.A.: France (1991–1993). JF is established at Paris in **1991** to provide charter cargo and contract service flights to domestic and African destinations. Services begin with a single Lockheed L-382G Hercules leased from Safair Freighters (Pty.), Ltd. of South Africa. A Douglas DC-8-71F is chartered in **1992**, but unable to maintain viability due to the recession, the one-plane operation ends in **1993**.

JET LINK: United States (1990). JL is established at Houston, Texas, on April 15, **1990**, as the temporary corporate umbrella employed by Continental Airlines to coordinate the regional airline operations of its new subsidiaries, Rocky Mountain Airlines, Bar Harbor Airlines, and Britt Airways. The new group's equipment is upgraded through the provision of British Aerospace BAe Jetstream 31s and Avions de Transport Regional ATR42-300s. The organization is reformed into Continental Express on August 16.

JET LINK HOLLAND, B.V.: Jupiterstr 51, Hoofddorp, 2132, The Netherlands; Phone 31 (23) 562 4560; Fax 31 (23) 562 4059; Code JLH; Year Founded 1998. JLH is established at Amsterdam in the spring of **1998** to offer all-cargo charters around the globe. Abdul Messeh is president/CEO and he places orders with C-Aviation for a pair of Airbus Industrie A300B4-203Fs.

The first wide-body freighter is delivered on July 27 and enters service on routes to the Mideast and North Africa in September.

Flights continue without headline or incident in **1999**. The second Airbus cargo plane arrives in November. Only one A300B4-203F is operated by the end of **2000**.

JET SOURCE: 2036 Palomar Airport Road, Carlsbad, California, 92008, United States; Phone (760) 804-1500; Fax (760) 804-1515; Year Founded 1987. Douglas Jacobson establishes this concern at Carlsbad in **1987** to provide executive and small group passenger charters throughout the U.S. and Canada. Thirteen years later, he is flying a Learjet 35A Century III from McClellan–Palomar Airport and another from Van Nuys.

JET SUL CARGO, LTDA.: Aeroporto Internacional Afonso Pena, Hangar Jet Sol, Sao Jose dos Pinhais, 83010-620, Brazil; Phone (41) 381-1500; Fax (41) 381-1505; http://www.jetsul.com; Year Founded 2000. A new cargo division of the FBO Jet Sul is established on April 28, **2000**. Arrangements are made with TAM (Transportes Aereos

Regionais, S.A.) for the purchase of two Fokker F.27-600s as the necessary certification paperwork is completed with the government's civil aviation agency.

The first Fokker enters revenue service on August 9. The second turboprop is leased to TAVAJ (Transportes Aereos Regulares, S.A.).

JET 24 INTERNATIONAL AIRWAYS. See JET CHARTER SERVICE

JET 2000: Vnukovo Airport, Moscow, 121099, Russia; Phone 7 (095) 241-6593; Fax 7 (095) 241-3987; Year Founded 1999. Serguei Fast establishes Jet 2000 at Moscow in **1999** to provide executive and small group passenger charters, along with some express flights, throughout Europe and the CIS. Employing 6 full-time pilots, Managing Director Fast begins revenue services with 2 Dassault Falcon 20s and 1 British Aerospace HS-125-700.

An Embraer ERJ-135 is acquired in the spring of **2000**. On September 17, it begins a dry-lease in its own colors with KLM Exel, B.V., flying from Maastricht to Munich.

JET U.S.: United States (1993). JUS is set up by local businessman Lawrence Adams at Detroit (DTT) during the spring of **1993** to offer first-class-only roundtrip service to Newark. St. Petersburg, Florida-based Sun Jet International leases Adams a McDonnell Douglas MD-80, which is employed to inaugurate revenue flights on July 31. The initial frequency features an on-board concierge and fares that are lower than those of either Northwest Airlines or Continental Airlines.

A week later, a malfunctioning component forces the new entrant to ground its aircraft at Newark, forcing the transfer of over 40 passengers to other flights. Sun Jet International, which has promised to keep a back-up plane available, is unable to provide one and offers no explanation. To search for a certified carrier willing to replace Sun Jet International, JUS initially suspends services until August 30; when no arrangements can be made, the shutdown becomes permanent.

JET WAY. See CONNIE KALITTA SERVICES

JETABOUT (PTY.), LTD. See QANTAS AIRWAYS (PTY.), LTD.

JETAIR: Germany (1982–1985). JetAir is established at Munich in **1982** by a pair of former Bavaria Germanair, GmbH, pilots. The company suffers a long gestation period, as attempts to raise capital for the purchase of aircraft are not successful. By the spring of **1984**, sufficient funds have been cobbled together to lease a former Air Panama International, S.A. Boeing 727-81. Unhappily, the usual links between an airline and tour operators have not been cemented and no inclusive-tour contracts are booked. Beginning in May, JetAir is able to offer a series of one-off charters to several European destinations.

Expensive arrangements are completed with several tour operators in early **1985** and the company is able to complete a full summer season starting at the end of March. Unhappily, costs far exceed income. New efforts to win bridge financing for the winter period are unsuccessful and, consequently, the carrier declares bankruptcy and is liquidated in December.

Several years later, after the books have been closely examined, the carrier's top executives are charged with fraud. Following a trial in which it is revealed that the men had rigged JetAir's bankruptcy as a way of avoiding debt to creditors and shareholders, the founders are imprisoned.

JETALL AIRWAYS, LTD.: Canada (1987–1996). Arie Tall founds this privately owned scheduled and cargo carrier at Mississauga, Ontario, in **1987**. With a fleet that comes to comprise 2 Cessna 402Bs, 5 Convair CV-580s, 8 Fairchild SA-226s and 3 SA-227s, flights are inaugurated late in the year to both domestic and international destinations.

Airline employment in **1993** stands at 105. Canadian destinations now visited include Halifax, Hamilton, Montreal, Moncton, Ottawa,

Quebec City, Saint John's, Sault St. Marie, Stephenville, Sudbury, Thunder Bay, Toronto, Windsor, Winnipeg. International markets are maintained at Buffalo, Guatemala City, Indianapolis, Miami, New York, and Toledo.

The fleet is increased in **1994** by the addition of one each B-737-2A9AC and B-737-210CA; the jet freighters are joined by two more Metro IIIs as one CV-580 is withdrawn. Three more Canadian destinations are added in **1995**, as one more CV-580 is retired.

Several more Metro IIIs are placed into service in **1996**. They come too late, however, as fiscal difficulties force the company to shut its doors before the end of the year.

JETBLUE AIRWAYS: 90 Park Ave., New York, New York 10116, United States; Phone (212) 557-6565; Fax (718) 286-4110; <http://www.jetblue.com>; Code B6; Year Founded 1998. JetBlue is originally established under the working name "New Air" at New York (JFK) on August 24, **1998** to offer low-cost domestic services. David Neeleman, one of the founders of **Morris Air** (later acquired by **Southwest Airlines**), is chairman/CEO, with David Barger, former **Continental Airlines** vice president, as president/chief operating officer. Neeleman initially hopes to become an American version of **Virgin Atlantic Airways, Ltd.**, but negotiations with Sir Richard Branson on the concept fall through. The acquaintance with the U.K. airline does, however, result in the hiring of two of its top marketing executives, Amy Curtis and Gareth Edmondson-Jones.

With support from financier George Soros, Western Presidio Capital, and Chase Capital Partners, \$128 million in financing for the carrier is quickly raised and orders, valued at \$3.6 billion, are placed for 82 new Airbus Industrie A320 jetliners. While awaiting certification, the company wins 75 slots at JFK on the strength of its promise to bring frequent service and low fares to upstate New York.

The search for a new name now begins in earnest. After some months of consideration and an inability to choose from a list of 200 potential titles, the as-yet-unborn concern turns to the well-known airline public relations team Landor Associates for help. By late June, the apparent winning moniker is "True Blue."

On July 1, it is learned that Thrifty Rent-A-Car already owns the "True Blue" name, which is thus unavailable. Landor, embarrassed, halves its bill. Finally, during a casual conversation between Neeleman, Curtis, and the airline's general counsel the next evening, the name "Jet Blue" is suggested. It immediately gains favor and is quickly adopted.

At a on July 14, **1999** news conference attended by New York Governor George Pataki, U.S. Senator Charles Schumer, New York City Mayor Rudy Giuliani, and company officials, the company's new moniker is unveiled. Chairman Neeleman refers to his company as "New York's new low-fare, hometown airline." The press, in covering the event, notes that the airline is the most heavily capitalized new entrant airline in U.S. history and refers to it as a "mega start-up."

On September 17, the start-up receives DOT operational authorization and is awarded 75 takeoff and landing slots at New York (JFK), to be phased in over a 3-year period. The start-up announces in October that Fort Lauderdale and Buffalo will be its first destinations; Rochester and Syracuse will be added later.

The first A320-232, wearing two-tone blue tail stripes, departs Toulouse on December 3 and arrives in time to be unveiled at ceremonies at New York (JFK) the next day. Employees, families and the New York media are all given a chance to board the new jet and look around inside. Another Airbus will be delivered in January.

The company turns on its interactive World Wide Web homepage on January 11, **2000** and immediately sells 1,000 firm bookings for its announced new service to Fort Lauderdale.

Twice-daily return service is inaugurated on February 11 from New York (JFK) to Fort Lauderdale, followed the next day by the introduction of thrice-weekly roundtrips from New York (JFK) to Tampa. Thrice-daily roundtrip frequencies from New York (JFK) to Buffalo commence on February 17 and to Tampa on March 16. Beginning in late

March, the company offers 24-channel DIRECTV, available at seat-back monitors on every seat for a \$5 charge per flight.

"Delta Express" begins direct competition with the carrier on April 2 with its own twice-daily roundtrips between New York (JFK) and Fort Lauderdale. It is reported on May 20 that the start-up has operated 1,144 flights through April 30 without a single cancellation and a 70.9% load factor.

The company's fourth A320-232 is received at New York (JFK) on June 9. Daily roundtrip frequencies from New York (JFK) to Buffalo are increased from three to four on June 21, the same day new twice-daily return service begins to Orlando. Five days later, another A320-232 is received.

On July 6, the Buffalo route is boosted to five daily roundtrips, Fort Lauderdale becomes four a day, and Orlando is made thrice daily. On July 21, daily A320-232 return service is inaugurated from New York (JFK) to Ontario, California. Five days later, the carrier announces it will not implement a \$5 service fee for access to the onboard seat-back DIRECTV system. Two more A320-232s arrive during the month.

New four-times-a-day roundtrips from New York (JFK) to Syracuse are launched on August 1. Two days later, daily A320-232 return frequencies are initiated from New York (JFK) to Oakland, California, while new twice-daily frequencies are introduced to Rochester, New York. On August 6, daily return flights from New York (JFK) to Orlando are increased again, to five roundtrips. The eighth A320-232 is delivered on August 10.

A sixth A320-232 is leased from ILFC on August 11; it will be delivered under a 12-year contract in April 2001. The twice-weekly return service between New York (JFK) and Rochester is doubled on August 22 to four weekly roundtrips. The company's financial position is now further strengthened by the commitment of an additional \$30 million in equity capital from existing shareholders.

In the period between February 11 and August 31, the start-up has operated 4,328 flights with only 10 cancellations.

On September 5, JetBlue becomes the first airline to offer its passengers live, in-flight Olympic television coverage when it begins two weeks of nightly feed from NBC-Sports. Two days later, twice-daily return flights begin from New York (JFK) to Burlington, Vermont. The ninth A320-232 arrives on October 9.

On October 18, daily roundtrip frequencies are initiated from New York (JFK) to West Palm Beach. The 10th and last A320-232 to be received this year is delivered on November 6. Daily Airbus return frequencies begin on November 17 between New York (JFK) and Salt Lake City. The West Palm Beach service becomes twice-daily on November 18, the same day new roundtrips are launched between New York (JFK) and Fort Myers.

In business since February 11, JetBlue reports that it has, as of December 31, carried 1.11 million passengers on 10,246 scheduled flights, with a load factor of 73.2%. \$100 million in passenger flight revenues are generated.

JETCORP: 18152 Edison Ave., Chesterfield, Missouri 63005, United States; Phone (314) 530-7000; Fax (314) 519-1212; Year Founded 1981. Jetcorp is originally established as an FBO in **1981**. During the next 16 years, it also becomes a significant provider of executive and small group passenger charters worldwide. In **2000**, the company employs 14 pilots and bases its aircraft at 4 airports.

The major portion of the fleet is stationed at Spirit of St. Louis Airport. From here are flown 4 Learjet 55 Longhorns, 2 Learjet 35A Century IIIs, and 1 each Dassault Falcon 50 and Beech Super King Air 200. A Learjet 60 is also operated from St. Louis.

An IAI Westwind II is operated from Waukegan Regional Airport in Illinois and a Learjet 31 is flown from Anoka County-Blaine Airport in Minnesota.

JETCRAFT AVIATION (PTY.), LTD.: P.O. Box 270, Archerfield, Queensland, 4108, Australia; Phone 61 (7) 3274 1241; Fax 61 (7)

3277 3481; <http://www.jetcraft.com.au>; Year Founded 1989. Ian Foster establishes this company at Archerfield in **1989** to provide passenger and cargo charters throughout Queensland, with special attention paid to VIP and mining charters, plus priority air freight. Revenue flights commence with 3 Swearingen Metro IIs and 5 Fairchild Swearingen Metro IIIs. Major clients served in the years ahead will include Mayne Nickless, Placer Pacific and Arimco Mining, **Ansett Australia (Pty.), Ltd.**, and Western Mining Corporation.

In **1996**, the company is reformed. Jetcraft becomes the charter and freight subsidiary Transjet Corporation (Pty.), Ltd., which has been established to also oversee an airline, Transtate Airlines (Pty.), Ltd., created to offer scheduled commuter services over routes acquired from **Flight West Airlines (Pty.), Ltd.** Transtate revenue flights, under the direction of Transjet Managing Director Randal McFarlane, commence in November with 6 Embraer EMB-110P1 Bandeirantes and 1 de Havilland Canada DHC-6-300 Twin Otter.

Flights continue without incident or headline in **1997**. A Pilatus-Britten-Norman PBN-2 Islander is added to the fleet in **1998** as a number of additional routes are taken over from **Sunstate Airlines (Pty.), Ltd.**

Destinations visited by Transtate in western and northern Queensland in **1999** include Cooktown, Normanton, Karumba, Mornington Island, and Mt. Isa. Also, under a long-term contract with P&O Australian Resorts, flights are also offered regularly to Dunk, Brampton, and Lizard Islands.

During the 1990s, Jetcraft has not remained idle. Indeed, it has assembled a fleet of 23 aircraft, including the largest collection of Fairchild Metros outside of the United States. Additionally, it flies a de Havilland Canada DHC-7, an IAI Westwind 1124, and a Beech 58 Baron. Services provided include passenger charter, priority air freight, and corporate VIP and mining charters.

The workforce totals 45 at the beginning of **2000**. *AsiaPulse News* reports on May 12 that **Transtate Airlines (Pty.), Ltd.** will soon be merged with **McKinlay Air Charter (Pty.), Ltd. (Macair)**, with the new partner's name surviving. When the event occurs a month later, the passenger activities of Transtate and Jetcraft are passed to Macair, while Jetcraft continues to provide express freight flights.

JETFLIGHT, LTD.: Gwen Roberts International Airport, P.O. Box 10033 APO, Grand Cayman, West Indies; Phone (345) 949-3225; Fax (345) 949-1037; Year Founded 1996. Thom Guyton establishes Jetflight at Grand Cayman in **1996** to provide executive and small group passenger charters throughout the Caribbean, the U.S., and Mexico. Operations begin and continue with a single Learjet 25D.

JETFLITE O/Y: Helsinki-Vantaa Business Flight Center, P.O. Box 86, Vantaa, FI-01531, Finland; Phone 358 (9) 822 766; Fax 358 (9) 870 3202; Year Founded 1980. Jetflite is originally set up at Helsinki in **1981** as an FBO. Over the next 16 years, President Olli Koskimies' concern also enters the air taxi business, specializing in air ambulance, patient transfer, and intensive care flights.

In **2000**, flights are performed with 2 British Aerospace BAe (HS) 125-700 Hawkers and 1 each Canadair 600 Challenger, Cessna 550 Citation II, and Piper PA-31T Cheyenne II.

JETSTREAM COMMUTER: United States (1974). JC is set up at Oklahoma City during the first quarter of **1974** to provide scheduled passenger and cargo services. Employing a British Aerospace BAe Jetstream 31, the new commuter inaugurates daily revenue roundtrips in April, linking its base with Tulsa, Dallas (DAL), and Waco. Unable to achieve viability, the carrier must fold its wings in July.

JETSTREAM INTERNATIONAL AIRLINES: United States (1983-1995). Founded by V. Neal Frey as **Vee Neal Airlines** at Latrobe, Pennsylvania in **1980**, this small regional, in celebration of its dream and its acquisition of British Aerospace BAe Jetstream 31 turboprops, changes its name on December 1, **1983** to **Jetstream International Airlines**.

Shareholding is acquired by a group of Erie businessmen who move the airline's corporate headquarters to that northwest Pennsylvania city on the shores of Lake Erie.

On the year, enplanements rise 32.8% to 38,440.

As additional Jetstream 31s and Embraer EMB-110 Bandeirantes are added in **1984** and the route network is expanded from the carrier's new base at Erie, Pennsylvania, to cover markets in four states.

Passenger traffic jumps 109.8% to 80,533 passengers flown.

Destinations visited in **1985** include Pittsburgh, Indianapolis, Cleveland, and Dayton. The company becomes a "Piedmont Commuter" partner on November 1 and unveils connections from Erie and Dayton to Youngstown and Baltimore.

On the year, customer bookings accelerate 5.8% to 85,213.

Maryland-based **Henson Aviation** purchases the 80-employee carrier on behalf of **Piedmont Airlines** on August 1, **1986**. A reorganization plan is initiated, although the company is allowed to continue operations as an independently named subsidiary. Corporate headquarters are moved from Erie to Dayton, where the carrier becomes Piedmont's principal feeder at that Ohio hub.

While being prepared for a flight at Erie on November 30, a private Cessna 441 gets loose and runs into a company BAe Jetstream 31; both planes catch fire and are burned out, but no injuries are reported.

The newest "Piedmont Commuter" at year's end exercises an option to acquire 14 more Jetstream 31s and takes a new option on another 20 of the aircraft.

Passenger boardings skyrocket 123.2% to 190,235.

Airline employment grows 400% in **1987** to 400 and the fleet now includes 27 Jetstream 31s, with 20 others on order or option. Customer bookings also increase, by 201.5%, to 573,473.

The payroll grows a more sedate 5% in **1988** to 420 and 5 more Jetstream 31s join the fleet.

While on a low-altitude, one-engine, practice go around from Dayton on February 9, a BAe Jetstream 31 with three crew, rolls over and descends into the ground; there are no survivors.

Passenger boardings for the year leap upward by 33.5% to 765,622.

When **Air Kentucky** closes down in May **1989**, many of its routes are acquired by Jetstream. With the absorption of **Piedmont Airlines** into **USAir** in August, **USAir** reconfigures its "Allegheny Commuter" network into "USAir Express." The 455-employee Jetstream becomes a member of the new group and flight attendants begin to appear on the British-made turboprops.

Overall customer bookings rise 3.7% to 793,848.

Enplanements drop in **1990** to 743,146.

The fleet in **1991** includes 28 Jetstream 31s and 7 Brasilias. "USAir Express" Jetstream 31 service is initiated in October from Pittsburgh to Madison, Wisconsin. At the same time, four-times-per-day flights commence from Cleveland to Washington, D.C. (DCA).

A number of other routes are changed and as a result, passenger boardings fall 17% to 635,168.

Two Jetstream 31s are removed in **1992**. A \$180-million order is placed for 20 Dornier 328s, plus options for 20 more.

Thrice-daily nonstop Jetstream 31 service is inaugurated from Dayton to Flint, Michigan, on January 7, along with four-times-per-day frequencies from Indianapolis to Flint. In the spring, President/CEO Keith Houk becomes president of the "USAir Express" division, succeeding new **USAir Shuttle** chief Gordon Linkon. Meanwhile, former **Midway Express** President Richard Pfennig is brought in to take over Jetstream.

The previous year's decline is reversed as customer bookings accelerate 14.7% to 728,592.

At the start of **1993**, president/CEO Pfennig's decade-old "USAir Express" carrier operates from hubs at Indianapolis, Dayton, and Pittsburgh with a fleet of 27 Jetstream 31s and a workforce of 468. During the year, the fleet of Jetstream 31s is reduced by one as seven Embraer EMB-120 Brasilias are acquired under charter.

A significant route exchange is engineered with fellow "USAir Express" partner **Chautauqua Airlines** and the carrier's hub is transferred

to Pittsburgh from Indianapolis. Late in the year, an order is placed for 20 Dornier 328-100s.

Passenger boardings rise another 17.3% to 852,931.

Airline employment is reduced in **1994** to 450 and the first Dornier 328-110 is delivered in early November and begins training and route proving.

Customer bookings move ahead by 11.7% to 952,510.

The first Dornier 328-110 enters service from Pittsburgh on February 20, **1995**. Nineteen more will join the fleet this year, while route realignment continues. As partial payment, the regional returns five Jetstream 31s to the manufacturer and, as their leases begin to expire, nine Brasilias.

To keep alive the name of another **USAir** acquisition, **Pacific Southwest Airlines**, Jetstream is renamed **PSA Airlines** in November.

JETTRAIN: United States (1993–1996). JetTrain is established at Aliquippa, Pennsylvania, on April 2, **1993** to operate domestic charter services between Pittsburgh and Florida. Twenty individual investors subscribe initial capitalization of \$5–\$6 million. James M. Davis, a founder of the **Pan Am Shuttle**, is president/CEO, but the airline depression prevents immediate start-up.

As the market for air transport services improves into the fall of **1995** and officials note the high cost of operation for rival **USAir**, the company's private board elects to begin operations, first nonscheduled and then scheduled. A single Douglas DC-9-31 is leased and is painted with the company's art deco streamliner nose logo on its tail. Nonscheduled services are inaugurated on December 11.

Scheduled deep-discount frequencies are introduced on January 27, **1996** between Pittsburgh, Newark, and Orlando. To keep fixed overhead costs to a minimum, most of the airline's major services are outsourced. For example, ground handling is contracted to UAL, Inc. while **Trans World Airlines (TWA)** agrees to provide heavy aircraft maintenance.

Unable to compete with "Delta Express," JetTrain ceases service to Orlando on September 30. Expecting to return to the South Florida city, few realize that this is the beginning of the end.

Citing "insurmountable barriers" to its entry onto the scene, the 60-employee carrier suspends its schedules in November.

During its 10 months of service, JetTrain transports a total of 110,697 passengers.

Early in **1997**, the ruined Pittsburgh-based deep-discount airline is reformed. Its single McDonnell Douglas DC-9-31 receives a new black, white, and copper livery and the company begins flying charters as **Atlantic City Express**.

JETWAYS: 644 Bayfield Street, St. Paul, Minnesota 55107, United States; Phone (612) 224-3733; Fax (612) 224-3590; Year Founded 1978. Jetways is originally established at downtown St. Paul's Holman Field in **1978** to provide executive and small group passenger services to destinations throughout the U.S., Canada, Mexico, and the Caribbean.

By **2000**, the company employs 20 pilots and operates 2 Beech King Air 90s and 1 each Dassault 10, Dassault 20, and Cessna 500 Citation I business jets.

JETWEST INTERNATIONAL AIRWAYS. See **SUNWORLD INTERNATIONAL AIRWAYS**

JHM CARGO AIRLINES, S.A.: 1 Santamaria International Airport, San Jose, Costa Rica; Year Founded 1997. JHM is established by the TACA Group at San Jose in late **1997** to operate the consortium's cargo services. Revenue flights to points in North, Central, and South America begin with a fleet of 4 Airbus Industrie A300B4-200Fs.

JIANGMAN GENERAL AVIATION COMPANY: 23 Jichang Rd., Xijiao Airport, Changzhou, 231016, China; Phone 86 (519) 60 4640; Fax 86 (519) 60 2037; Year Founded 1990. JGAC is established at Xijiao Airport at Changzhou in **1990** to provide scheduled regional

passenger flights, as well as forestry services and agricultural. President Luo Zhenxi begins and continues services with four Xian Y-11s.

JIHUA AIRLINES COMPANY, LTD.: 164-95 Jichang Rd., Shijiazhuang, China; Year Founded 1987. Jihua is established by the Shijiazhuang Aircraft Plant in **1987** to operate agricultural, aerial photography, and forestry services in the local region. Wu Fengxia is named CEO and he begins and continues operations.

By **2000**, Fengxia's workforce totals 85 and 6 SAP Y-5s are flown.

JIM DODSON AIR SERVICES. See **NORTHERN CONSOLIDATED AIRLINES**

JIM HANKINS AIR SERVICE: 1600 Airport Road, Jackson, Mississippi 39209, United States; Phone (601) 354-2789; Fax (681) 352-8984; Year Founded 1990. The Hankins family airline is established at Jackson in **1990** to provide all-cargo services under FAA Part 135 certification. James A. Hankins is president/treasurer, with his wife Marian B. as vice president/secretary and their son Mike as director of operations. Tom Dugger is chief pilot.

Business proves fruitful and by **2000** the company is flying 11 Beech 18s, 3 Beech Barons, and 1 Douglas DC-3.

JIVAIR, A.B.: Goteborg Saeve Airport, Saeve, S-423, Sweden; Phone 46 (31) 877800; Fax 46 (31) 274512; Year Founded 1981. This tiny air taxi is established in **1981**. By **2000**, Jivair operates both domestic and worldwide executive flights. Four full-time and 2 part-time pilots fly 1 each Cessna Citation I bizjet and Piper PA-31-350 Navajo Chieftain.

JMC AIRLINES, LTD.: 2nd Floor, Commonwealth House, Chicago Ave., Manchester Airport, Manchester, England, M90 3FL, United Kingdom; Phone 44 (161) 489-5757; Fax 44 (161) 489-5758; http://www.jmc-airlines.co.uk; Code MT; Year Founded 1999. In late October **1998**, the Thomas Cook Group, which has recently purchased and begun to merge both the Sunworld travel concern and its house carrier **Airworld Aviation, Ltd.** as well as its own **Flying Colours Airlines, Ltd.**, acquires Carlson Leisure Group and its airlines **Caledonian Airways, Ltd. (2)** and **Peach Air, Ltd.**

By November 1, the U.K. charter airline business is rapidly approaching consolidation. Through its October move, Thomas Cook gains Caledonian's slots at London (LGW) and Manchester and with 32 aircraft, now owns the second largest fleet among the nation's charter carriers. Plans are announced for an increase of service from London (STN), Bristol, Cardiff, Birmingham, and Glasgow. The fleet will be rationalized, with only the TriStars seen as certain for retention.

As the year ends, Thomas Cook Group, which has assigned its own name to the enlarged travel group, is conducting marketing surveys to determine which airline brand name has the best public image and should be retained for the larger carrier. Early betting is that the names Caledonian (with its memory of delays and incidents) and Peach Air will disappear in addition to that of Airworld, with the romantic Flying Colours winning the label. A final decision is promised before the start of the 1999 summer holiday season.

The merger between Thomas Cook and the Carlson companies is completed on February 2, **1999**. Shareholders Carlson Companies, Westdeutsche Landsbank, Thomas Cook, and Preussag, A.G. combine their shares with those of Carlson Leisure Group U.K. to create Thomas Cook Holdings. The Preussag arrangement to acquire 51.1% majority control is transferred to this new entity. With over 20,000 employees, Thomas Cook Holdings is now the third largest of the "big four" British travel and tour operators after Thomson and Airtours.

Although **Flying Colours Airlines, Ltd.** is, indeed, the surviving airline, the **Caledonian Airways, Ltd. (2)** brand does not immediately disappear. The two companies, with their enlarged fleet of 34 aircraft, begin the new summer holiday season at the end of March. The

amalgamation of travel concerns comes as the European Commission grants permission for Thomas Cook to merge with the Carlson Leisure Group's U.K. travel interests.

Plans for amalgamation with **Caledonian Airways, Ltd. (2)** at the conclusion of the summer holiday season in November proceed; it is anticipated that the two carriers will officially become one by the end of March 2000. Caledonian Operations Director David Newall and Operations Manager Barry Fitzgerald resign in July, as Robert Willis becomes operations general manager for the combined operation.

The engineering facilities of the two companies are also combined at Manchester, with some job loss, while fleet rationalization and repainting continues. Arrangements are also made under a new fleet rationalization plan to replace four L-1011s with three B-757-200s and to return three wet-leased TriStars to **Air Atlanta Icelandic, H.F.**

On September 1, Thomas Cook Group establishes a new holiday travel concern to replace its Sunworld, Sunset, and Inspiration holiday subsidiaries, as well as both **Caledonian Airways, Ltd. (2)** and **Flying Colours Airlines, Ltd.** Under the direction of Managing Director Simon Vincent, the new travel brand, to be known as JMC after John Mason Cook, grandson of Thomas Cook, will complete this changeover within five years, assisted in the process by a £200-million (\$320-million) investment program.

As aircraft are repainted with blue bottom and white top fuselages and green tails and other vestiges of corporate image are altered, the names of the tour operating division (JCM Holidays, Ltd.) and in-house airline (JCM Airlines, Ltd.) will be gradually introduced during the next six months. Terry Soult is named managing director of the new JMC Airlines, Ltd. The first two aircraft given the new color schemes are a B-757-28A, previously operated by **Flying Colours Airlines, Ltd.** and an Airbus A320-231. The latter, plus two others, is leased to **Ryan International Airlines** in October for the winter tourist season in the U.S.

It is reported, in late November, that the company is working on a new business class to be introduced in the summer of 2001 that will replace the current Caledonian Highland First product.

Caledonian Airways, Ltd. and **Flying Colours Airlines, Ltd.** disappear completely on March 26, 2000, when JMC Airlines, Ltd. becomes operational under a single air operator certificate. The B-757 fleet now includes 9 Dash-28As, 3 Dash-25Fs, 2 Dash-2Y0s, and 1 Dash-2G5.

A B-757-2G5 is leased from **LTU International Airways (Lufttransport Unternehmen, K.G)** on April 16; it arrives in England on May 1 wearing full JMC colors. On May 11, JMC becomes only the fifth airline to order the stretched B-757 when it places a \$148-million request for two Dash-3CQs to be delivered in the spring of 2001. Two B-757-25Fs leased from GATX join the fleet at the beginning of June. An A300B4 is chartered from **Transaer International Airlines, Ltd.** for six months from July 14.

In September, orders are placed for two leased A330-243s that will replace the DC-10-30s beginning in January and be ready for the opening of the new summer holiday season at the end of March.

With the beginning of the winter schedule on October 29, one B-757-28A, three A320-214s, and one A320-231 are leased to Apple Vacations in the U.S.; they will be operated by **Ryan International Airlines** for the tour operator until March. Another B-757-28A is chartered to **North American Airlines**, which also operates Caribbean holiday charters.

C&N Condor Neckermann Touristik, A.G., parent of **Condor Flugdienst, GmbH.**, purchases Thomas Cook Group at the beginning of December for £550 million. Subject to EU Commission approval, the arrangement will create the world's third largest holiday group. The UK concern had been put up for sale by C&N rival Preussag, A.G., which had recently acquired Thomson Travel Group, parent of **Britannia Airways, Ltd.**

The result of the C&N and Thomas Cook merger will be a close new relationship between **Condor Flugdienst, GmbH.**, which is part-owned by **Deutsche Lufthansa, A.G.**, and JMC Airlines, the aircraft of which complement one another very closely. The combined 70-plane fleet includes A320s, B-757s, and Condor's B-767s.

Also in December, Thomas Cook Group reaches an arrangement with **British Airways, Ltd. (2)**, again subject to EU Commission approval, under which the two will merge their UK-originating scheduled tour operations. Each partner will own 50% shareholding in the new concern when it is officially formed in the new year.

Confirmation of the charter of two A330-200s from CIT Aerospace is provided on December 29. The aircraft will be delivered in late 2001 or early 2002.

JOE BRIGHAM, INC.: 720 Clough Mill Road, Pembroke, New Hampshire 03275, United States; Phone (603) 225-3134; Fax (603) 224-9050; Year Founded 1983. Joe Brigham establishes this carrier named for himself at Pembroke in 1983 to offer air taxi and charter flights, as well as executive and VIP transport, construction support, external load, agricultural, forestry patrol, and sight-seeing services. The company also operates a flight school, as well as FAA Repair Station #FTYR033E.

By 2000, Raymond G. Newcomb is president and oversees five full-time employees. The company generates \$1.6 million in annual revenues and operates a Bell 204B and 4 Bell 206B JetRangers.

JOHNSON, L. McK. (PTY.), LTD.: Australia (1932). Lawrence McKenzie-Johnson of Launceston, Tasmania, wins an Australian government contract in early 1932 to fly the mail between that town and Whitemark on Flinders Island, 120 miles offshore. Employing a Desoutter Mk. II, formerly owned by Ireland's **Iona National Airways, Ltd.**, biweekly service is inaugurated on June 7. In October, McKenzie-Johnson purchases shareholding and merges his operation in a small, unnamed airline owned by the two Holyman brothers, Ivan and Victor; the amalgamated carrier is registered as **Tasmanian Aerial Services (Pty.), Ltd.**

JOHNSON AIRLINES. See **JOHNSON FLYING SERVICE**

JOHNSON AIRWAYS: United States (1931-1934). In December 1931, A. E. Cambas sells his **New Orleans Air Line**, which has been operating foreign airmail (FAM) route 3 from New Orleans to Pilot-town, to a gentleman named Johnson. **Johnson Airways** takes over the foreign airmail route on January 1, 1932, employing an amphibious N-2 Neptune and a pair of Sea Rover flying boats.

En route to New Orleans from Pilot-town on October 12, 1933, the N-2 Neptune, flown by pilot George Canaday, crashes near Belle Chaise. With the principal mailplane now gone, it is less than two months before the carrier goes out of business, losing out in competitive bidding to **Tropical Airways.**

JOHNSON FLYING SERVICE: United States (1928-1975). With \$14,000 subscribed in stock, Bob Johnson's unique air service is incorporated at Missoula, Montana, on December 6, 1928.

Passenger air charter and contract service flights begin late April 1929 after a \$13,000 Travelair 6000, the *Mae Gerard*, is acquired. Flights are undertaken with this and other single-engine aircraft, including U.S. Forest Service freighting contracts begun in May 1931, until 1934 when, on September 5, a big and new Ford Tri-Motor, 5-AT-102, is purchased from **Pacific Air Transport (PAT).**

Caught in a down draft while landing at Big Prairie, Montana, on September 3, 1938, the aircraft breaks a landing gear and swerves into trees; although there are no injuries, the plane must be written off.

The first older and smaller Ford Tri-Motor, 4-AT-58, is purchased from the Link Aeronautical Corporation on April 10, 1939 while the second, 4-AT-46, purchased from William "Bill" Monday, the "Flying Cowboy" of Cody, Wyoming, is delivered on September 19. Over the years, the company comes to specialize in forest fire fighting and builds a fleet around the delivery of U.S. Forest Service smoke-jumping firemen and antifire devices. Employing his two Ford Tri-Motors, Johnson, under contract, makes the first test of the smoke-jumping concept in August 1940 against a Montana fire.

A third Ford, 4-AT-62, is acquired in March 1941. Operations continue apace during the next quarter-century, as men are delivered by parachute to fire sites in Idaho, Montana, and occasionally California.

The first Douglas DC-3 is delivered in 1946 and under sponsorship of the U.S. and Idaho agricultural departments, the company participates in the Tussock Moth Control program in northern Idaho during 1947. For this the control assignment, two Tri-Motors, 4-AT-58 and 4-AT-62, are fitted with special tanks that allow them to dispense 96,527 gallons of spray. In late summer 1948, the carrier cooperates with 20th-Century Fox in the production, at Missoula, of a movie about smoke jumpers, *Red Skies of Montana*.

The Ford 4-AT-58 is modified into a convertible insecticide sprayer in spring 1950 and although licensed in that modification, it is not initially so employed. A larger and later model Ford, the 5-AT-58, is purchased from Tucson-based **G & G Airlines** in June 1951. A record 362 fire jumps are made in 1952.

Having begun service with **Pan American Airways (PAA)** on March 16, 1935, a DC-2, well used throughout South America, is purchased from the North Hollywood firm of Hasmer Independent in March 1953. It is modified to carry smoke jumpers and provide aerial spray. On July 14, the Ford 4-AT-62, while spraying near Boulder, Montana, hits a static cable over a power line and crashes (two dead).

Another Ford, an 5-AT-40, is obtained on August 1; noteworthy as the only 5-AT ever equipped with 420 hp Wright engines, it, too, is lost in a nonfatal crash while taking off for a smoke-jumping drop in Flathead Forest, Montana, 17 days later. By the end of August, an extremely busy fire season has resulted in a huge increase in smoke jumps, to 1,131.

A new subsidiary, Johnson Airlines, is formed in January 1954 to offer DC-3 flights between Seattle and Spokane and to the tri-cities of Pasco, Richland, and Kennewick. Washington State certification of the intrastate airline is quickly received. The company moves into a new airport late in the year, at which time JFS owns a fleet that includes 1 Curtiss C-46, 2 DC-3s, 1 DC-2, 3 Ford Tri-Motors, 2 helicopters, 1 Beech 18, and 20 single-engine lightplanes.

En route from Newark to Tacoma on December 22, a DC-3 with 5 crew and 23 passengers, runs low on fuel and ditches in the Monongahela River, 2 mi. S of Allegheny County Airport at Pittsburgh (10 dead).

Only 429 smoke jumps are made in 1955. In 1956, **Northwest Airlines** leases 5-AT-58, repaints it in company livery, and employs it in a multistop New York–Seattle promotional tour. While spraying sagebrush near Townsend, Montana, on June 19, 1957, the left wing of 4-AT-58 hits a hill causing the plane to crash; both pilots are killed, including 25-year company veteran Penn Stohr. Another Tri-Motor, 4-AT-55, is acquired in October, while 4-AT-69 arrives in May 1958.

Back two years from its **Northwest Airlines** lease, 5-AT-58 crashes while landing at Moose Creek, Idaho, ranger station on August 4, 1959 (four dead).

Two more films receive Johnson support in 1960—a segment of the television series *You Asked For It* and the Disney film *A Fire Called Jeremiah*. The 1953 record for smoke jumping is surpassed in 1961 with a total of 1,938 jumps being made during the fire season. Operations continue apace in 1962–1963 and the fleet grows to include 5 Grumman TBM torpedo bombers, converted to carry slurry against fires.

The workforce in 1964 exceeds 50, although some pilots continued to be employed on a seasonal basis to spray weeds or fight fires. A Douglas DC-4 joins the fleet on May 10. The Ford 4-AT-69 is sold to an Ottawa, Kansas, aerial spraying outfit in July.

A permanent supplemental certificate is received from the CAB in September 1965. In Forest Service Region I, covered by Johnson, the fewest smoke jumps (322) are made since 1955. Although \$711,251 is received in revenues, expenses are \$843,821. As a result, Johnson Airlines suffers a loss of \$102,831.

Negotiations are completed in August 1966 for the sale of JFS to Columbus, Ohio-based **Executive Jet Aviation, Inc.**; however, the transaction will not be completed. In November, Johnson expands its business northward into Canada. A total of 1,564 jumps are made dur-

ing the year. Revenues reach \$1,213,626 and a net profit of \$75,244 is turned in.

A record number of 1,687 smoke jumps are made in 1967. Chief pilot Floyd O. Bowman dies in August and is succeeded by Frank A. Borgeson. Now the 11th largest supplemental, the airline division increases its earnings to \$1,513,896. Profits also rise: \$193,995 (operating) and \$124,531 (net).

The original developer of smoke jumping, Frank Derry, dies at Bigfork, Montana, on August 2, 1968. Airline revenues are down on the year to \$1.08 million. Profits are also down to \$92,555 (operating) and \$59,701 (net). The JFS parent shows a net loss of \$42,014.

The U.S. Forest Service decrees an end to the use of Ford Tri-Motors in 1969. Consequently, the 4-AT-55 is purchased by Jack Adams Aircraft Sales of Walls, Mississippi, in February. The 4-AT-46 is sold to Dexter Coffin in May and donated to the Naval Aviation Museum. Each plane brings in excess of \$50,000.

Airline revenues climb to \$1.35 million, but operating losses are again suffered: \$78,669. Still, a \$26,577 net profit is banked.

In 1970, JFS owns and operates, among other aircraft, the former **Pan American Airways (PAA)** Douglas DC-2.

Income advances to \$1,499,155. Again, an operating loss is taken (\$23,924), but a net profit \$33,679 of is realized.

In 1971, Johnson is the smallest of the 10 surviving supplemental carriers, but still manages to operate 27,000 FTKs. An effort to sell JFS to USSteel is disallowed by the CAB and during the summer fire season, 1,094 jumps are made. On the basis of increasing U.S. Forest Service requirements and a hoped-for improvement from the airline division, Johnson leases a used Lockheed L-188A Electra turboprop first flown by **Western Airlines**.

The 78-employee company sees its airline business slide in 1972 as the number of FTKs operated is down by 1,000.

A total of 28,000 charter passengers are accommodated. Income this year is \$3.18 million, but expenses are \$3.19 million. The losses are \$6,000 (operating) and \$71,000 (net). The sale, in July, of the last Travelair 6000 does not help the balance sheet by more than \$9,000.

Johnson rallies in 1973 and makes a turnaround in both traffic and finances. Consequently, a second Electra is purchased and increased transport of military personnel under the Civil Air Movement program is realized. The DC-2 is traded as partial payment for a used DC-8 jetliner.

Enplanements for the year skyrocket by 67.9% to 47,000 and 697,000 FTKs are flown, an incredible increase of 2,580.8%. Revenues are \$2.87 million and expenses are \$2.73 million. The operating profit is \$139,000 and the net profit, the first since 1970, is \$152,000.

After decades of fire fighting and smoke-jumping operations, the nation's oldest supplemental carrier makes a determined effort in 1974 to continue its charter service revival. With 63 employees and 2 Lockheed L-188A Electras painted in attention-grabbing red, white, and blue livery, the carrier takes over the facilities of defunct **Purdue Airlines** at West Lafayette, Indiana, and establishes a satellite facility at Seattle.

On March 31, a sale of JFS to McMinneville, Oregon-based **Evergreen Helicopters, Inc.** is negotiated. On June 4, Johnson becomes board chairman and Morten S. Beyer, from Hendersonville, Tennessee, is named president/CEO.

With a CAB law judge's recommendation that the supplemental be allowed to institute international charters, the airline division changes its name to **Johnson International Airlines** on September 3.

The noble goal is not realized as passenger bookings actually fall 22.6% to 36,000. The previous year's success in freight transport fails as well; FTKs operated drop 96.7% to 23,000. Income drops to \$3.98 million, but expenses rise to \$4.32 million. The losses—\$342,000 operating and \$273,000 net—will prove fatal.

The company changes its leadership on April 13, 1975 when Vice President/General Manager Jack R. Hughes succeeds Beyer as president/CEO. The end of an era occurs on April 30 when it is announced that the U.S. Forest Service has accepted the lower fire

fighting and smoke-jumper transport bids of Thermopolis, Wyoming-based Christler Flying Service. Out of its decades-old contract business, the firm continues its emphasis on air transport. The carrier's Electras cannot now reverse the carrier's headlong plunge toward bankruptcy.

Passenger enplanements fall 19% to 29,160 and cargo is off another 5%. These figures are for the first nine months of the year as Johnson suspends operations on October 1. Income for the year to date is \$3.99 million, but expenses are \$4.03 million. As a result, the operating loss is \$43,000 and a final \$10,000 net loss is posted.

With the approval of the CAB and President Gerald R. Ford, the pioneer's certificate is acquired by Oregon-based **Evergreen Helicopters** on November 28. The sale price is \$1 million cash. Following absorption, the new company is renamed **Evergreen International Airlines**. In 1979, the wreckage from three withdrawn Ford Tri-Motors will be sold to Kal Aero of Kalamazoo, Michigan, for restoration.

JOHNSON INTERNATIONAL AIRLINES. See **EVERGREEN INTERNATIONAL AIRLINES; JOHNSON FLYING SERVICE**

JORDAN AIRWAYS, LTD.: Jordan (1961–1963). Sheikh Najib Alamuddin acquires the assets of bankrupt Air Jordan of the Holy Land and on October 1, 1961 forms Jordan Airways. **Middle East Airlines, S.A.L. (1)** takes a 35% interest, providing technical assistance.

In 1962, 61,594 passengers and 667.4 tons of cargo are transported. Although flying over the predecessor's routes and offering similar activities, Sheikh Najib's company is no more successful and fails in September 1963.

JORDAN AVIATION, LTD.: Head Office off 3rd Circle, Amman, Jordan; Phone (9266) 461 2229; Fax (9266) 464 49704; <http://www.jordanaviation.com>; Year Founded 2000. Jordan Aviation is established at Amman in early 2000 to offer passenger charters to points around the country, to Egypt, and throughout the Middle East and Mediterranean region. The first privately owned Jordanian airline to be licensed by the Jordan Civil Aviation Authority, the company acquires a leased Boeing 737-3Y0 during the summer with which to launch business. When not flying on behalf of its in-house holiday tour subsidiary, Sunday International, the carrier's aircraft is available for short-term ACMI service to companies and airlines.

On October 30, Jordanian Aviation receives a B-737-4Y0 leased from **Travel Service Airlines, A.S.** Arrangements are also made for the acquisition of a de Havilland Canada DHC-7-102. The former is employed on charter services.

JUNEAU FLYING SERVICE. See **WARD AIR**

JUNKERS LUFTVERKEHR, A.G.: Germany (1921–1926). In March 1919, just as the pioneer **Deutsche Luft Reederei, GmbH** is getting started, the aircraft manufacturer Junkers Flugzeugwerke, A.G., begins flying from its Dessau base to Weimar, site of the new German government. Two years later, on March 12, 1921, these flights are taken over by a special Air Services Section, formed as Junkers-Werke Abteilung Luftverkehr. With the dual purpose of providing service while extolling product, JWAL now initiates flights from Berlin to Munich via Dessau, Leipzig, and Nuremberg. On-demand charters are also operated, including one in late 1922 in which the Papal Nuncio to Germany, Eugenio Pacelli (later Pope Pius XII), is flown roundtrip from Munich to Oberammergau for a viewing of the famous Passion Play.

The aircraft employed to operate these new services was the revolutionary Junkers F-13 Nightingale (*Die Nachtigall*), the first German passenger plane built after World War I. Of all-metal construction and powered by a single 180 hp BMW IV engine (later a 310 hp engine is installed), the durable machine can be configured to accommodate two

crew and four passengers or one crew and five passengers. The Nightingale has the distinction of receiving the first German national numerical registration number, D-1.

Concerned by the competition being generated by **Deutscher Aero Lloyd, A.G.**, Junkers seeks to counter the effort by assembling a route network in north and central Europe through an affiliation of airlines equipped with Junkers F-13s.

Under the name **Aviakultura**, founded by I. A. Valentei, the company organizes a Moscow–Nizhni Novgorod scheduled service at the latter point in mid-summer 1922. Pilots Alfred Gothe and Georg Juterbock arrive with a pair of F-13s and flights are initiated on July 29. A third Junkers monoplane joins the first two on August 17 and, when the prototype service concludes on September 25, a total of 228 passengers have been flown, including 167 revenue.

The successful Russian experiment leads to the creation on November 26 of the Junkers Joint-Stock Company-USSR Air Service Direction (*Aksionernoe Obshchestvo Junkers-Upravlenie Vozdushnogo Soobshcheniya v SSSR*) or Junkers Luftverkehr Russland. The purpose of the new line will be air transport over a line from Sweden to Persia.

The Junkers Luftverkehr Russland agreement is officially signed by representatives of the Soviet central government on January 29, 1923. The Junkers Luftverkehr Russland agreement is officially signed by representatives of the Soviet central government on January 29, 1923. Arrangements will soon be completed for the equipment of the new enterprise. Back in Germany, French troops have occupied the Ruhr industrial area and inflation goes out of control. At the end of March, the Junkers company airline inaugurates new F-13 routes from Munich to Vienna and Zurich. Among the more important passengers flown is King Boris of Bulgaria, who is a passenger over the entire route from Zurich to Munich and on to Vienna.

During April and early May, eight F-13s arrive at Moscow from Germany to begin the nearly 3000-km contract route to Tbilisi. Junkers Luftverkehr secures 9 pilots and 24 other personnel to its Russian subsidiary. On May 14 and October 22, respectively, the **Trans-Europa Union** and **Ost-Europa Union** are formed.

Meanwhile, the first mail is flown from Moscow to Tbilisi on May 31 via Orel, Kharkov, Rostov-on-Don, Novorossiisk, and Batum; twice-weekly passenger flights commence the next day. The route is altered south of Rostov-on-Don as of July 25 and runs via Mineralnye Vody, Vladikavkaz, Grozny, and Baku. The Russian season ends on October 1; a total of 1,231 passengers have been flown (445 revenue).

On April 10, 1924, a proving flight is made by the F-13 *Papagei* from Baku and Enseli in Persia. Meanwhile, beginning in early May and continuing for a year, a series of ground agencies and FBOs are set up in Frankfurt, Breslau, Essen, Dresden, Gleiwitz, and Munich to service JWAL and the Trans-Europa partners. These include **Bayerische Luftverkehrs A.G.**, **Oberschlesische Luftverkehrs A.G.**, **Sudwestdeutsche Luftverkehrs A.G.**, **Schlesische Luftverkehrs A.G.**, **Sächsische Luftverkehrs A.G.**, and **Luftverkehrsgesellschaft Ruhrgebiet A.G.**

Also during the spring, a number of Junkers G-24 trimotors enter service over new company routes to Geneva and Budapest. The all-metal, open-cockpit aircraft, which have been constructed at the subsidiary AB Flygindustri at Linhamm-Malmoe, Sweden, in order to get around Allied restrictions on German aircraft manufacture, have seats for two crew and nine passengers and are equipped with radios for ground communication.

In Russia, permission to fly scheduled services is withdrawn by the government. Several propaganda flights are made on behalf of the Soviets between May and August. On August 13, Junkers' special Air Services Section is eliminated in favor of a formal subsidiary, Junkers Luftverkehr, A.G. Employed are four F-13s christened *Elster*, *Bussard*, *Meise*, and *Widenopf*. Small Junkers A-20 floatplanes are now employed to deliver mail across the Baltic.

The F-13 *Papagei* is transferred to Tehran on November 2 and on December 2 a provisional service is launched by the F-13 *Albatros*

between the Persian capital and Baku. On December 30, the *Wachtel*, *Mowe*, and *Bremse* join the two German monoplanes in Persia.

By year's end, passengers of JL are now able to fly the carrier and its affiliates from Geneva in the south to Helsinki in the north. A total of 3,963 people are flown on charters within the Soviet Union during the year.

The experimental Persian air service between Tehran and Baku ends in March 1925. During April, the company demonstrates a G-24 trimotor at Moscow, but cannot sell it to either the Russian airline *Dobrolet* or the Ukrainian carrier *Ukrvozdukhput*. The latter, however, now arranges to take over the former Junkers Moscow-Baku route. The German concern initially plans to maintain its various efforts, but elects to abandon Russia in favor of Persian operations.

Competition between **Deutscher Aero Lloyd, A.G.** and JL is ferocious during these years and the drain on state, municipal, and private funds for subsidies becomes burdensome. On May 7, Junkers proposes the creation of a superconsortia, the Europa-Union, to unite both the Trans-Europa and Ost-Europa groups. A meeting of the 16 airlines involved takes place in Berlin on September 7. The aviation department of the German Transport Ministry (GTM) disallows this move, seeing it as an attempt by the manufacturer to increase its power.

This government bureau assumes 80% control of JL in October. At approximately the same time, Deutsche Bank/Deutsche Petroleum official Dr. Kurt Weigelt, who had assisted in the creation of DAL, in co-operation with the GTM's aviation bureau chief, Ernst Brandenburg, now prepares a pamphlet entitled *Fusion in the Field of Air Traffic*, which recommends a Junkers/DAL merger.

Consequently, merger negotiations proceed and on January 6, 1926, the two corporate carriers are merged into a new national airline, **Deutsche Luft Hansa (DLH)**.

JUNKERS LUFTVERKEHR PERSIEN, GmbH.: Iran (1927–1932). In 1924, several pilots flew Junkers F-13s to Tehran via Moscow and Baku and received a government concession to form an internal airline. When the enterprise did not begin, the aircraft found their way into the Persian Air Force. There they were found by Kurt Weil and sent to Tehran by Hugo Junkers in January 1927 to test his theories of unsubsidized airline operations. After refurbishing the F-13s and founding JLP, Weil begins negotiations with the Persian government toward a definitive agreement.

Scheduled service begins on February 8 and the final pact is signed on February 26. The routes from Tehran go to Pahlevi and to Qasr-i-Shirin via Hamadan and Kermanshah. The F-13 *Albatros* is returned to Germany later in the year and sold.

Outfitted with a fleet that eventually comprises three F-13s, JLP begins expanding its route network in February 1928 with service to Baku via Pahlevi and to Shiraz and Bushire via Isfahan. Two Soviet pilots are employed by Junkers as compensation to Moscow for permission to land at Baku. Despite initial British opposition, the Kermanshah leg is pushed on to Baghdad later in the year while the company's three aircraft, *Wachtel*, *Albatros II*, and *Bremse*, are registered in Germany:

Meshed joins the system in 1929 and Tabriz in 1930. A connection allowing through-service to Berlin is made at Baku during the latter year with the Ukrainian carrier *Ukrvozdukhput*. For political reasons, services are indefinitely suspended in March 1932; Weil and his aircraft return to Germany.

JUNKERS LUFTVERKEHR RUSSLAND, GmbH.: U.S.S.R. (1923–1925). Having established a production facility at Fili, a Moscow suburb, for production of its all-metal F-13s (known in Russia as Ju-13s), Junkers elects to inaugurate a scheduled multistop service in summer 1923 from the Soviet capital to the Caspian Sea city of Baku (see the *Junkers Luftverkehr, A.G.* entry). With these new flights, those travelers willing to undertake the hardships can now reach Persia by air from Berlin. In early 1925 the operation is closed down and its principal route is taken over by the Ukrainian airline *Ukrvozdukhput*.

JUPITER AIRWAYS, LTD.: India (1948–1949). Capitalized at Rs 2,574,622, JAL is formed at Madras in early 1948 to fly a thrice-weekly service from Madras to Delhi via Visakhapatnam and Nagpur, coining the phrase "By Jupiter, It's Quick!" Licensing difficulties and an adverse ruling by the Bombay High Court force the company to cease activities in February 1949.

KABO AIR, LTD.: 6733 Ashton Road, P.O. Box 1850, Kano, Nigeria; Phone 234 (64) 639 591; Fax 234 (64) 632 386; Code KO; Year Founded 1975. Formed as a subsidiary of Kabo Travels, Ltd. at Kano in 1975, the carrier is established by its chairman, Alhaji Dan Kabo, to transport of Hadj pilgrims to Jeddah, air gateway to Mecca, employing leased jetliners. Shitu Adamu is managing director.

Charter flights to Jeddah from Maiduguri begin in February 1980. In April 1981, the carrier receives permission to begin scheduled domestic services linking Kano with Lagos, Kaduna, and Port Harcourt. Charter rights are obtained a year later, in summer 1982.

In addition to routinely leasing aircraft, particularly larger types such as B-747s subleased from **Cargolux Airlines International, S.A.**, Kabo's fleet during the early-to-mid 1980s comprises 1 chartered Boeing 727-100 and 1 chartered B-737-100, plus 3 owned Sud Est SE-210 Caravelle IIIs.

A Caravelle III overruns the runway on landing at Calabar, Nigeria, on August 6, 1986; although the aircraft is heavily damaged, there are no fatalities.

One each B-727-25, B-727-51, and B-727-225 are purchased in 1987, followed by a Douglas DC-8-55F christened *Sir Amandu Bello* in 1988. The Douglas is employed to fly international cargo and contract service charters. It is joined by a B-707-321C Stratofreighter in 1989.

Domestic and regional charters, particularly in support of the Hadj, are undertaken throughout the remainder of the decade and into the 1990s, while domestic services are also maintained.

A BAC 1-11-204AF with 90 passengers makes a wheels-up landing at Port Harcourt on September 16, 1991; although the jetliner is damaged beyond repair, there are no fatalities.

In 1992, the 120-employee company of Executive Director Shitu Adamu and President Thomas B. Gado possesses a fleet comprising 1 each B-727-25, B-727-51, and B-727-225, 9 British Aerospace BAe (BAC) 1-11-204AFs, 2 1-11-407AWs, 1 Lockheed L-1011-100 TriStar, A B-707-321C, and 1 Douglas DC-8-55F.

On March 31, the chartered Stratofreighter with five crew, loses power to two engines and crashes near Istres, France; although the aircraft must be written off, there are no fatalities. A BAC 1-11-204AF with 4 crew and 53 passengers, overruns the runway while landing at Sokoto, Nigeria, on August 23; although the aircraft is damaged, there are no fatalities.

The number of aircraft is increased by two in 1993–1994 as a second B-727-25 is leased along with a further BAe (BAC) 111-204AF. During May of the former year, the former **Pan American World Airways (1)** B-747-121 *Clipper Juan T. Trippe* is leased from GE Credit Corporation. With a crew made up entirely of personnel from the failed U.S. pioneer, the plane flies Muslim pilgrims from Sokoto to Jeddah. It is joined in this Hadj airlift by two B-747-1D1s wet-leased from **Air Atlanta Icelandic, H.F.**

Operations continue apace in 1995. As they had in the previous two years, the **Air Atlantic Icelandic, H.F.** Jumbojets again fly Hadj charters. Domestic services are maintained from Lagos to Abuja, Enugu, Jeddah, Jos, Kaduna, Maiduguri, Port Harcourt, Sokoto, and Yola.

On November 7, 1996, a B-727-25 with 191 aboard disappears during a flight from Port Harcourt to Lagos; the next day, search crews find the submerged wreckage of the aircraft in a swamp outside Lagos and there are no survivors.

Simon Tumba reports in the November 1997 issue of *Airline Business* that the airline industry in Nigeria is on the verge of collapse, with only 10 aircraft from 8 carriers left to provide domestic services for 90 million people.

By the year's 10th month, **ADC Airlines, Ltd.** has only one operational B-727, while Kabo Air has two. **Bellview Airlines, Ltd.** can fly only one DC-9. **Nigeria Airways, Ltd.** and several small operators fly the remaining six. All call upon the government to politically and financially guarantee a restructuring of the industry.

Flights continue without headline or incident in **1998–2000**. The fleet during these years includes 2 B-747-148s, 3 B-747-136s, 1 B-727-225, 2 B-727-224As, 2 BAC 1-11-407Aws, and 5 BAC 1-11-204AFs. As required, additional B-747s and L-1011s are wet-leased to cover Hady pilgrimages flights.

On July 3 of the latter year, the airline is drawn into a controversy involving the allegedly fraudulent sale of its B-727-225 by its lessor, the Irish-based O Corporation, Ltd., to settle a debt owed to TK Motors.

KACHEMAK AIR SERVICE: P.O. Box 1769, Homer, Alaska 99603, United States; Phone (907) 235-8924; <http://www.xyz.net/~decreeft>; Year Founded 1967. Kachemak is established at Homer in 1967 to provide lightplane point-to-point air taxi flights to bush destinations and communities in the mountains, glaciers, and along the shores of Kachemak Bay. Over the next 30 years, it also flies tourists to the local National Parks and engages in "ecotourism" services.

The subsidiary Kachemak Bay Flying Services is established by owners Bill and Barbara de Creeft in 1998 to operate a restored 1929 Travel Air 6000. The aircraft is the only one of its type operating as a fully licensed air taxi.

Service continues in **1999–2000**.

KACHEMAK BAY FLYING SERVICE. See **KACHEMAK AIR SERVICE**

KAIKEN LINEA AEREA, S.A.: Perito Moreno 937, 9420 Rio Grande, Tierra Del Fuego, Argentina; Phone 54 (964) 22742; Fax 54 (964) 30665; <http://www.kaikenta.com.ar>; Code F7; Year Founded 1990. Oscar Valls establishes KLA in 1990 to offer scheduled third-level passenger and cargo flights throughout Tierra Del Fuego. Revenue services commence with 2 each de Havilland Canada DHC-7-102s and Fairchild Metro III.

Frequencies are continued in **1991–1999**. During this period, the fleet is increased through the addition of three SAAB 340As. Destinations visited include Comodoro Rivadavia, Lago Argentino, Mendoza, Neuquen, Punta Arenas, Rio Gallegos, Rio Grande, San Carlos de Bariloche, Trelew, and Ushuaia.

KAISERAIR: Hangars 3-5 & 7, Oakland International Airport, Oakland, California 94614, United States; Phone (510) 569-9622; Fax (510) 635-3173; Year Founded 1946. Kaiserair is originally established as an FBO at Oakland Airport in 1946. It also undertakes lightplane charters in the San Francisco Bay area.

Fifty-four years later, in 2000, Vice President Sandy Waters oversees a worldwide executive and small group passenger charter business that operates 2 Grumman G-1159 Gulfstreams, 1 Cessna 550 Citation II, and 1 British Aerospace BAe (HS) 125-700 Hawker.

KAKUDA AIR (PTY.), LTD.: Australia (1993–1995). Kakuda is established at Jabiru in 1993 to offer flight-seeing services around the Northern Territory. Nonscheduled services continue through 1994 with a fleet of 2 Cessna 402Cs and 2 Partenavia P.68s. Scheduled services begin in 1995, but cease within a year.

KALAHARI AIR SERVICES & CHARTERS (PTY.), LTD. See **AIR BOTSWANA (PTY.), LTD.; AIR CHARTER BOTSWANA (PTY.), LTD.**

KALAHARI EXPRESS AIRLINE (PTY.), LTD.: P.O. Box 40179, Odessa Hangar, Aviation Road, Eros Airport, Windhoek 9000, Namibia; Phone 264 (61) 245 665; Fax 264 (61) 245 612; [http://](http://www.kalahariexpress.com.na)

www.kalahariexpress.com.na; Code KEA; Year Founded 1996. A new and private local competitor to **Air Namibia (Pty.), Ltd.**, Kalahari Express is formed by Sheik Hani Yamani and five other investors during the fall of 1996. A long gestation period will follow before the new entrant can take to the skies.

By the spring of 1998, the two-year-old has yet to start and finds itself in dire financial straits. Led by its Managing Director, Sattar Aboobakar, the company approaches **Air Namibia (Pty.), Ltd.** offering to sell it 51% controlling interest. The flag carrier's managing director, Andreas Guibeb, expresses great interest, but when he refers the matter to his board of directors for consideration, it becomes split on the issue. As the decision-making process drags on, KEA elects to seek other partners. Its air service license expires and, during the last week of May, all 61 employees are laid off.

On June 5, it is reported in *The Namibian* that plans by Air Namibia to purchase a controlling interest in the beleaguered KEA have collapsed. Namibia Harvest, a company in which Aaron Mushimba, a local businessman and Petrus Damaseb, Air Namibia board chairman, have interests, has purchased the carrier outright. In addition, KEA Managing Director Aboobakar confirms that, while Namibia Harvest will finance the arrangement, **SA Express (Pty.), Ltd.** of South Africa will operate it under a management contract.

Air Namibia Chairman Damaseb and Dr. Peingondjabi Shipoh, Managing Director of the national transportation holding company TransNamib, both deny on June 8 that they know anything about the collapse of the Air Namibia–KEA negotiations. Damaseb indicates that his board had approved acquisition of a 51% majority stake following a positive due diligence report and that only required funding approval from TransNamib Holdings stands in the way of the deal's completion.

By June 9, Chairman Damaseb has become the center of a conflict-of-interest controversy for his role on the board of Namibia Harvest. He claims to be innocent of such charges and notes that both he and Air Namibia's board believed it had an arrangement to takeover KEA on June 1 in partnership with Namibia Harvest, which it now appears, has hijacked the entire arrangement to its own benefit. Indeed, Damaseb protests that it was through his intervention that KEA was able to renew its license, an authority that was conditioned on Air Namibia's acquiring a controlling stake.

On June 24, Namibian Vice President Katutire Kaura informs the National Assembly that he will personally request that Works, Transport, and Communications Minister Hampie Plichta undertake a review of the latest development, the transfer of KEA ownership from Air Namibia to TransNamib Holdings. Such a move, he contends, is also contrary to government liberalization policy. Indeed, he recommends that the entire relationship between TransNamib and the government be investigated.

During the fall, managers from Kalahari Express and **Air Namibia (Pty.), Ltd.** reach an understanding and agree to work in tandem much as **South African Airways (Pty.), Ltd.** does with **SA Express Airways (Pty.), Ltd.** Start-up arrangements between the two, plus **SA Airlink (Pty.), Ltd.**, are sorted out during the remainder of the year, with the South African airline purchasing 49% equity in October. Andre Compton is appointed the new managing director.

A new strategic agreement is signed between **South African Airways (Pty.), Ltd.** and **Air Namibia (Pty.), Ltd.** on January 7, 1999. Under terms of the document, the two carriers pledge to explore such joint business opportunities as combined customer services, linked frequent flyer programs, and code-sharing. The arrangement is extended to Kalahari Express, **SA Express Airways (Pty.), Ltd.**, and **SA Airlink (Pty.), Ltd.**

It is announced on March 15 that Kalahari Express will initiate daily flights between Windhoek, Johannesburg, and Cape Town by midyear using a pair of Fokker F.28-3000s. The services will complement rather than compete with the frequencies offered on those routes by **Air Namibia (Pty.), Ltd.** or **SA Airlink (Pty.), Ltd.**

F.28-3000 revenue flights are finally inaugurated on October 31, linking the company's base with Johannesburg and Cape Town.

A total of 60 workers are employed at the beginning of 2000.

A Kalahari Express Fokker F.28-3000 is acquired by **Air Namibia (Pty.), Ltd.** It is ready to enter service on September 3 when Air Namibia and **SA Express Airlines (Pty.), Ltd.** (employing a Canadair CRJ) launch an intense competition with twice-daily return flights over a new route from Johannesburg and Eros Airport, near Winhoek

KALINGA AIR LINES, LTD.: India (1946–1953). KAL is formed as a charter operation in 1946. In May 1949, it is granted a license to operate scheduled all-cargo flights between Calcutta and Agartala, principal town in Tripura state.

These services continue during 1950–1952; the fleet is built up to 8 Douglas DC-3s and the route frequency grows to 8 per day. This expansion does not come without loss.

A DC-3 with three crew strikes a stand of trees beyond the runway at Dum Dum Airport, Calcutta, on December 31, 1951, and crashes; there are no survivors.

Following an engine failure, a DC-3 freighter with four crew attempts an emergency landing at Agartala on April 10, 1952; the pilot loses control, the aircraft crashes, and there are no survivors.

A DC-3 with three crew is lost on September 15 when it strikes high ground west of Wadi Halfa, Sudan; there are no survivors.

As the result of parliamentary study and debate, it is decided to nationalize Indian air transport. On May 28, 1953, presidential assent is given to an Air Corporation Bill, which results in the August 1 formation of **Indian Airlines Corporation**; the new state enterprise now acquires and merges Kalinga Airlines.

KALININGRADAVIA: Khrabrovo Town Airport, Kalingrad Area, Guriev Region, 238315, Russia; Phone 7 (0112) 459 411; Fax 7 (0112) 460 828; <http://www.baltnet.ru/avia/index.htm>; Code K8; Year Founded 1945. Also known as the Kalingrad United Air Detachment or Kaliningradski OAO from its Russian name, this **Aeroflot Russian International Airlines (ARIA)** division is established on October 8, 1945 to provide service to the Baltic region of Kalingrad from Khrabrovo Airport. Flights commence in the spring of 1946.

Following the collapse of the Soviet Union, the unit is reformed into the joint stock company Kalingradavia in 1993. Comdr. Vladislav S. Philipenko becomes general director and shareholding is divided between the state (51%), Kalingrad employees (40%), and private investors (11%).

Service continues with 5 Tupolev Tu-154s. Enplanements for the year total 339,650 and a total of 47.8 million FTKs are transported.

Two Tu-134s are added in 1994 and passenger boardings climb by 7.7% to 365,500.

Plans are made to begin flying into Scandinavia early in 1995, the company's first international routes; these begin on schedule. Unlike most other Russian carriers, KUAD enjoys a good traffic year.

Customer bookings inch up 2% to 352,900 while a total of 3.85 million FTKs are operated.

In 1996, the company's 11 aircraft transport a total of 270,200 passengers, a 23.4% decline.

Airline employment stands at 1,036 in 1997. The fleet now comprises 2 Tu-154Ms and 9 Tu-134As.

Passenger boardings rise 2.6% to 277,000.

Scheduled destinations visited in 1998 include Almaty, Bishlek, Ekaterinburg, Hanover, Krasnodar, Mineralnye Vody, Moscow, Murmansk, Novosibirsk, Rostov, Samara, St. Petersburg, Tashkent, and Volgograd.

Customer bookings fall 10% to 218,000.

KALUZHSKI ENGINES (KALUGA ENGINES): Ulitsa Moscovskaya Street 247, Kaluga, 248633, Russia; Phone 7 (08422) 24009; Year Founded 1994. Another ex-Soviet state-owned industry allowed to begin private enterprise flights in an effort to raise currency, Kaluzhski Engines establishes an air transport division at Kaluga in 1994. Yuri A. Leikovsko is appointed general director and he launches revenue services with a fleet of Antonov An-12s and An-32s.

Flights continue.

KAMCHAT-AVIA: Russia (1992–1995). Also known as **Kamchatski**, this semiautonomous third-level **Aeroflot Russian International Airlines (AIRA)** detachment continues, in 1992, to operate scheduled flights from Kamchatsky. Victor Klimenkov is managing director and operates an all-Antonov fleet comprising 20 An-24s and 10 An-26s. Enplanements total 176,694.

The declining Russian economy causes a significant traffic downturn in 1993.

Passenger boardings plunge 44.5% to 122,280 while freight traffic falls 36.3% to 9.3 million FTKs.

Customer bookings decline again in 1994, falling 25.5% to 90,500. By year's end, the fleet includes only 1 each An-24, 1 Let 410UVP, and 1 Yakovlev Yak-40. Flights cease in 1995.

KAMLOOPS AIR SERVICES, LTD. See **CENTRAL BRITISH COLUMBIA AIRWAYS, LTD.**

KAMPUCHEA AIRLINES (1): Cambodia (1982–1994). KA-1 is formed at Pochentong Airport, Phnom Penh, in the summer of 1982 with assistance from the government of Vietnam as successor to **Air Cambodge, S.A.**, which had ceased operations following the April 1975 Khmer Rouge defeat and overthrow of Cambodia's government.

Employing a pair of Antonov An-24 turboprops supplied by the Soviet Union, the carrier undertakes regularly scheduled domestic and contract service flights from the capital to Siem Reap and Ho Chi Minh City beginning on September 7.

Flight operations continue for only a short period. On January 10, 1983, the Vietnamese renew their war upon the Khmer Rouge, which had ceased in 1979, grounding KA-1. Although the nonflying flag line is briefly known as **Air Kampuchea** beginning in 1988, its original title is restored by decade's end.

Revenue operations between Phnom Penh and Bangkok are resumed in November 1991 with a wet-leased Tupolev Tu-134A. At the same time, Cambodian and Thai businessmen form a small carrier, **SK Air**, and seek to wet-lease the Tupolev.

Antonov flights to Siem Reap are restarted in 1992, along with other local destinations. The Tupolev is leased to **SK Air** and a Mil Mi-8 helicopter enters service to provide both heavy lift capability and short-haul passenger transport.

All cargo service is initiated between Phnom Penh and Singapore in March 1993. The principal freight consists of supplies and equipment sent into Cambodia by the UN. The twice-weekly B-737 service between Kuala Lumpur and Phnom Penh is increased to thrice weekly on August 6.

In association with **Singapore Airlines, Ltd.**, the new government now plans a new flag carrier, **Royal Air Cambodge, S.A. (2)**. Meanwhile, **SK Air** fails and the Tu-134A is returned. In December, an Avions de Transport Regional ATR72-202 is leased from **TAT (Transport Aerien Transregional, S.A.)** and joins Managing Director Tep Hen's fleet of 3 An-24s and 1 An-26. All KA aircraft are now repainted in blue and white livery.

In 1994, KA-1 receives two more **TAT European Airlines, S.A.** ATR72-202s, one each in October and in mid-November. KA-1 ceases operations at year's end, allowing the new entity to take to the air in January 1995. By December, the carrier's assets have all been taken over by **Royal Air Cambodge, S.A. (2)**.

KAMPUCHEA AIRLINES (2): 62 Tousamuth St., Phnom Penh, Cambodia; Phone 855 232 4167; Fax 855 232 6169; Code KT; Year Founded 1997. In early July 1997, Hun Sen, Cambodia's second prime minister, overthrows the coalition government of first prime minister Prince Norodom Ranariddh. Heavy fighting ensues, much of it along the road to and within the perimeter of Phnom Penh's Pochentong Airport. The airport itself will be badly damaged; its visual omni-directional range (VOR) beacon is put out of service and looters steal or destroy equipment from the ATC tower and passenger terminal.

Despite the chaos that causes all of the international carriers, except **Thai Airways International, Ltd. (THAI)**, to halt services, Cambodia's incumbent carrier, **Royal Air Cambodge (2)**, continues to operate its scheduled flights Hong Kong, Bangkok, Singapore, Kuala Lumpur, Guangzhou, and Ho Chi Minh City.

The company's ATR72-200s maintain limited domestic services to Siem Reap and Battambang. Later in the month, the Boeings are grounded at Kuala Lumpur and the new government of the Cambodian People's Party announces plans to end the airline and form a new one.

The Cambodian government at the end of the month decides to resurrect KA-2 while calling for a quick resumption of air services to the country. Prime Minister Hun Sen announces an "open skies" policy for foreign carriers wishing to resume flights into Phnom Penh. The new policy also permits Royal Air Cambodge to continue; its national monopoly ended, RAC is now marketed as "The Airline of Cambodia."

KA-2 comes to life on August 1. Yin Chan is appointed CEO and a 40% stake is sold to **Orient Express Air, Ltd.** That carrier's CEO, Udom Tantiprasongchai, now serves as Kampuchea's managing director as well, and arranges for the lease to KA-2 of an Orient Lockheed L-1011 TriStar 1 with which to resume service. Flight 311, the inaugural service, is operated to Kuala Lumpur on August 15. A service to Singapore is flown the next day.

Plans are made to acquire Boeing 737s with which to start domestic services to Angkor Wat and Siem Riep; several B-727-200s are received instead.

Flights continue in 1998. Although plans are announced by KA-2 to initiate regional and international services along most of the routes operated by **Royal Air Cambodge (2)**, fears by members of the government that **Malaysia Helicopter Service Sqn. Bhd.** might withdraw its support from RAC cause this initiative to be somewhat thwarted. KA-2 is allowed to fly the routes from Phnom Penh to Bangkok and Hong Kong as charter operations, but with the onslaught of the Asian economic crisis, bookings nearly evaporate.

Scheduled operations to the previous charter points are allowed in 1999 and a second **Orient Express Air, Ltd.** TriStar is briefly dedicated to the company's schedule. Unhappily, the impact of the Asian financial crisis continues to be felt and these new regularly offered flights are not profitable. In addition, an eventual competitor now appears on the scene.

Royal Phnom Penh Airways is established as a tourist airline on October 29 by Prince Norodom Chakrapong, son of King Norodom Sihanouk. The owner is also chairman/CEO. He had previously served as deputy prime minister, civil aviation minister, and chairman of **Kampuchea Airlines (1)**.

As the year ends, the company returns to offering charters only. Still and despite hard times, Kampuchea Airlines is able to survive into the new millennium and is even able to lend a helping hand to another regional company in trouble.

Losing some 20 million baht (\$500,000) a month, Thailand-based **Angel Airlines Company, Ltd.**, on June 1, 2000, stands down for 30 days as it is reorganized. The sublease of a Lockheed L-1011 TriStar 1 from Kampuchea allows Angel to announce that daily flights to Hong Kong will restart on July 15. Despite the formulation of a rescue plan, Angel teeters on the brink of collapse by mid-July. The announced Hong Kong TriStar service is initially cancelled, but begins on July 22.

It is reported on October 8 that Angel will sign a new marketing and code-share agreement with **China Northern Airlines Company, Ltd.** Under its terms, the previous TriStar lease will end as CNA provides a

pair of Airbus Industrie A300-600Rs in November with which to operate Angel's domestic and international routes from Bangkok.

KANAF AIR SERVICES. See **ARKIA ISRAEL AIRLINES, LTD.**

KANAIR LUFTVERKEHRS, A.G.: Germany (1975-1995). Kanair is established at Dusseldorf in 1975 to offer cargo charters, primarily to the United States and South America. Operations continue apace with little fanfare over two decades.

By 1993-1994, Chairman Franz Kanehl and President Karl Werres oversee a workforce of 200 and a fleet comprising 4 B-707-320Cs and 2 Lockheed L-100 Hercules freighters.

Flights cease in 1995.

KANSAS CITY AVIATION CENTER: Johnson County Executive Airport, P.O. Box 1850, Olathe, Kansas 66063, United States; Phone (913) 782-0530; Fax (913) 782-6591; Year Founded 1969. KCAC is originally established as an FBO at Johnson County Airport in 1969. It also flies lightplane passenger charters as part of its operation.

By 2000, the company employs six pilots and offers executive and small group passenger charters throughout the U.S. and to Alaska, Canada, and Mexico. The fleet includes 1 each Cessna 500 Citation I executive jet, 1 C-425 Conquest I, and 1 C-421.

KARAIR O/Y: Finland (1957-1996). To foster a more modern marketing image, **Karhumaki Airways**, once known as Veljekset Karhumaki (VKD), is reformed in 1957 and renamed. Scheduled and non-scheduled services are maintained with Convair CV-440 Metropolitans between the Finnish capital and outlying cities and towns. **Finnair O/Y** takes a 29% interest in the company during 1962, later increasing its shareholding to 35%. A significant portion of the company's business now comprises passenger and cargo charters.

When the carrier encounters financial difficulties, the government instructs **Finnair O/Y** to take the airline over, leaving its name in place. G. Korhonen is named chairman with Tuomas Karhumaki, a cousin of the VKD founders, as managing director. A joint operating agreement is signed between the two airlines under which Finnair assumes Karair O/Y's scheduled routes, leaving its new partner to concentrate on charters as a separate profit center under its previous identity. Karair is, however, allowed to retain one scheduled service linking Helsinki and Lappeenranta.

A Douglas DC-6B is purchased from **Northwest Airlines** on June 12, 1964. Nonscheduled operations are continued throughout the remainder of the decade and into the 1970s. The most interesting development during these years is the 1968 conversion of the former **Northwest Airlines** DC-6B into a swing-tail freighter; the modification is carried out by **Sabena Belgian World Airlines, S.A.** in April-July. The conversion is employed to fly relief missions to Biafra, Nigeria, late in the year and in 1969.

By 1978, the workforce totals 184 and operates a fleet made up of a Douglas DC-8-51 leased from Finnair, the Belgian-modified DC-6B, and a DC-3. Enplanements total 175,394.

Airline employment in 1979 stands at 190. Passenger boardings grow a very modest 0.3% to 175,921.

The workforce is reduced by 19.3% in 1980 to 142. The fleet, on the other hand, is increased by the addition of a de Havilland Canada DHC-6-300 Twin Otter, an Embraer EMB-110 Bandeirante, and a pair of Fokker F.27s. The O/Y is deleted from the corporate marketing identity late in the year.

Customer bookings fall 28.1% to 126,428.

The employee population grows by 3.5% in 1981 to 147. A contract is let on October 12 for an Avions de Transport Regional ATR42 turbo-prop. Enplanements decline again, dropping a significant 27.1% to 92,220. Cargo, however, grows by 27.3% to 28,000 pounds.

The employee population is reduced by 1.4% in 1982 to 145. The famous DC-6B swing-tail freighter is sold out of service in June.

Passenger boardings are level, at 92,240, but freight advances handsomely, up 35.7% to 38,000 FTKs.

The number of workers grows a substantial 17.2% in **1983** to 170. Although 531,000 FTKs are operated, customer bookings drop 6.6% to 86,119.

In **1984**, airline employment is 188 and the fleet comprises a DC-8-63 leased from Finnair along with a DC-8-51, plus an Embraer EMB-110P1 Bandeirante chartered from **Finnaviation O/Y** and an owned de Havilland Canada DHC-6-300 Twin Otter. A Karair-Toivelomat/Dreamtours sales division is now established to handle inclusive-tour operations.

Customer bookings swell 39% to 119,686, while cargo increases an outstanding 221.8% to 1.7 million FTKs.

Enplanements rise a slight 0.9% in **1985** to 120,756, but freight continues to expand, rising 13.6% to 1.94 million FTKs.

Two Airbus Industrie A300B4-203s are requested on lease from Finnair in **1986** to replace the DC-8s; the first arrives in December.

Passenger traffic for the 200-employee Finnish airline falls 9.3% to 109,544 passengers flown; however, cargo continues to thrive, rising 6.6% to 2.07 million FTKs.

The workforce is increased by 19% in **1987** to 238. The first Airbus enters service in February; a second arrives in March and begins flying in late April. The main destination for both, flown as they are by Finnair flight crews, is the Canary Islands.

Passenger boardings revive, moving ahead by 15.1% to 126,124. Freight, on the other hand, falls by 3.1% to 2 million FTKs.

Airline employment is up another 1.5% in **1988** to 278 and the fleet now includes a pair of A300B4-203s and a Twin Otter, the EMB-110 having been returned. The de Havilland Canada DHC-6-300 is employed for geological survey flights.

Passenger boardings advance 40.2% to 176,850, but freight declines 3.4% to 1.93 million FTKs.

The payroll is cut 5% in **1989** to 264 as **Finnair O/Y**, on February 3, assumes 95% shareholding and begins to operate the domestic airline as a subsidiary. The five ATR42s are turned over to the parent, along with responsibility for the flag carrier's domestic routes. Managing Director Tuomas Karhumaki's airline is allowed to operate its new services in its own livery and with its own staff. When Finnair takes delivery of five ATR72-201s, beginning in July, they are gradually shifted to Karair.

Customer bookings fall 12.2% to 155,252 and cargo slides 2% to 1.89 million FTKs. There are losses: \$877,100 (operating) and \$80,227 (net).

Company employment is increased by 28.8% in **1990** to 340. Pekka Valimaki becomes managing director and the fleet is significantly increased and services grow. In addition to the two Airbus Industrie A300B4-203s leased from Finnair, the last of five ATR72-201s is delivered in February. The company enters into a code-sharing agreement with its parent in preparation for the initiation of turboprop replacement services from Helsinki.

Daily Finnair replacement flights to Stockholm and Tallin are undertaken, in addition to new services to such domestic destinations as Turku, Maarianhamina, Port, Vaasa, Kokkola, Oulu, Kittilä, Jyväskylä, Tampere, Kuopio, Varkaus, Joesuu, Savonlinna, and Lappeenranta.

Passenger boardings not only recover but almost double, climbing to 347,000. Revenues jump 13% to \$47.1 and allow an operating profit of \$470,000. Net gain reaches \$110,422.

The payroll is sliced by 11.8% in **1991** to 300 as the company's ATR72-201 operations are separated from Finnair domestic services into an operationally and economically independent unit.

Customer bookings ascend another 26.6% to 398,846.

A sixth ATR72-201 is received in October **1992**, replacing the two A300B4-203s; orders are placed for two more.

The workforce is cut 10% to 270 as enplanements decline an equal amount, 10%, to 359,179.

In **1993**, Chairman Antti Potila and Managing Director Valimaki employ the same workforce and operate the same aircraft. Efforts are made by the parent, **Finnair O/Y**, to absorb the company. Passenger boardings jump 18.6% to 464,560 as freight rises 22.1% to 254,000 FTKs.

Twenty workers are released in **1994** and the fleet now includes the 6 ATR72-201s and 1 de Havilland Canada DHC-6-300.

Customer bookings ascend 11.8% to 519,131 and revenues inch up 0.7% to \$61.1 million. There is no change in the employment base in **1995** as traffic suffers a downturn; enplanements are off 8.7% to 473,839 while freight drops 24.9% to 229,000 FTKs.

During the first quarter of 1995, the company, together with Finnaviation, move into the former Finnair maintenance hangar at Helsinki's Vantaa Airport.

In October **1996**, the company is finally merged into Finnair. Through the first 9 months of the year, a total of 337,336 passengers are transported, a 7.1% decline.

KARAT JOINT STOCK COMPANY: 125-A Vernadskogo Prospect, Moscow, 117571, Russia; Phone 7 (095) 434-2114; Fax 7 (095) 433-2633; <http://www.karat.msk.ru>; Code 2U; Year Founded 1996. Rikori Aviakompania is established at Moscow's Vnukovo Airport in **1993** to provide domestic passenger charters. Viktor Mikheyev is director general and he begins revenue flights with five Yakovlev Yak-42Ds.

The company is reformed in **1996** and renamed. Mikheyev remains CEO as the mission is enlarged to include third-level scheduled regional service. The airline is now also the official carrier for the Russian National Cosmos Agency. The fleet is also boosted, growing to include 3 each Yak-42s and Yak-42Ds, 1 Yak-40, 2 Tupolev Tu-134As, and 2 Antonov An-24RVs.

When Ivanovo Airport gains international status in July **1997**, Karat begins flying regularly scheduled deep-discount services into it from the Russian capital. Enplanements for the year total 20,100.

In August **1998**, Russia devalues the ruble and further exacerbates an economic crisis. From an exchange rate of 6 rubles to the dollar, Russian currency trades at more than 16 to 1 by mid-September. To help offset this situation, Karat is forced, on September 22, to boost its economy-class fares from 720 rubles to 1,045. Still, the company advertises itself as the nation's first low-fare, no-frills airline. Passenger boardings increase 90% to 201,000.

Flights continue in **1999-2000**, during which time a homepage is opened on the World Wide Web.

KARHUMAKI AIRWAYS O/Y: Finland (1951-1957). Organized at Helsinki in **1951**, KA, is a subsidiary of the Karhumaki aircraft manufacturing and manufacturing operation, an overhaul facility, which had been formed by the three Karhumaki brothers (the family name means "Hill of the Bear" in Finnish) in 1925. It is originally known as **Veljekset Karhumaki (VKD)**. Employing Lockheed Model 18 Lodestars, the carrier inaugurates a scheduled service from the Finnish capital to outlying destinations. During the middle part of the decade, the fleet is upgraded by the addition of Douglas DC-3 and Convair CV-440 Metropolitans. In **1957**, the corporate identity is changed to the more modern **Karair O/Y**.

KATALE AERO TRANSPORT. See **KATALE AIR TRANSPORT, S.A.**

KATALE AIR TRANSPORT, S.A.: Zaire (1978-1994). Established at Goma Kivu in **1978**, KAT, originally named for the Domaine de Katale coffee plantation and known as Katale Aero Transport, undertakes cargo transport from Goma to Kinshasa and Mombasa. Much of the work centers on the transport of coffee, using 3 former RAF Bristol Britannia 253Cs.

Within five years, the coffee market suffers a downturn, forcing the one-industry oriented carrier to diversify. A Boeing 707-329C Stratofreighter is purchased from **Sabena Belgian World Airlines, S.A.** in **1983** and is employed to take over from the Britannicas and provide international and regional general freight services and contract service flights.

The Boeing is supplemented in **1988** with a Douglas DC-8-55F Jet Trader christened *Hubert*. By **1989**, the fleet includes 1 each Britannia 312F, Boeing 707-329C, and Douglas DC-8-55F.

Business slows in 1990, requiring the withdrawal of the Britannia 312F and a grounded Britannia 253C. On March 1, the Stratofreighter, with three crew, is damaged beyond repair after its Belgian pilot lands short of the Goma Airport runway; no personnel injuries are reported.

To avoid damage during civil unrest, the surviving Jet Trader is dispatched to a base at Ostend, in Belgium, in September 1991. The aircraft is grounded there until May 1992, when it is sold.

Although the company's international service is thus finished, Katale soldiers on within Central Africa, flying the remaining pair of Britannica 253Cs in 1993 until the airline shuts its doors in 1994.

KATMAI AIR: 4550 Aircraft Drive, Suite 2, Anchorage, Alaska, 99502 United States; Phone (907) 243-5448; Fax (907) 243-0649; Year Founded 1992. Raymond F. Petersen forms this FAR Part 135 operation at Anchorage in 1992 to offer charter flights to small communities and bush destinations. Griffith W. Bennett is named director of operations/chief pilot and he launches revenue services as Katmai Air with 1 each Cessna 206 and de Havilland Canada DHC-3 Otter.

Both planes are float-equipped and flights continue. Enplanements reach 8,613 in 1996, dipping 1.6% in 1997 to 8,478.

Customer bookings inch up to 8,631 in 1998, but plunge 23.3% in 1999 to 7,000.

KATO AIR, A.S.: P.O. Box 5544, Harstad, 9401, Norway; Phone 47 (77) 08 22 00; Fax 47 (77) 08 47 28; <http://www.geocities.com/CapeCanaveral/Hangar/4686/Katoair.html>; Code KAT; Year Founded 1995. Using the initial two letters of their first names to form the company's moniker, Karl Johan and Torlaug Karlsen establish this small carrier at Evens Airport in late 1995 to offer scheduled passenger service to Tromsø and Bodo in northern Norway.

With an initial fleet of one each Dornier 228-200 and Piper PA-31-350 Navajo Chieftain, revenue flights commence in the spring of 1996. Charter flights are also provided to Trondheim and Bronnoysund.

In 1997, the workforce totals eight, including both Karlsons, and a Cessna 208 Caravan I is acquired. It is expanded to undertake all-cargo newspaper services to Tromsø and Bodo.

The Dornier 228-100 *Bjornfjell* is leased in early 1998. On December 11, a supporter, Christian H. Kamhaug, opens a homepage for the carrier on the Internet's World Wide Web.

Flights continue.

KAVMINVODYAVIA: Mineralniye Vody Airport, Mineralniye Vody, Stavropol, 357310, Russia; Phone 7 (86533) 56676; Fax 7 (86533) 59637; <http://www.196.131.10.64/kmvavia>; Code KV; Year Founded 1961. The Aeroflot Soviet Airlines directorate Mineralvodskoe, based at Mineralniye Vody Airport, is reformed in 1992 into a semiautonomous division of Aeroflot Russian International Airlines (ARIA). Vasilii V. Babashkin is director general of this KMV (Kavkazia Mineraline Vody Mineraovodskoe Production Association). Regional revenue services are continued with a fleet of 20 Tupolev Tu-154B/Ms, 25 Tu-134s, and such smaller types as Yakovlev Yak-40s, Yak-42s, and Antonov An-26s.

Operations continue apace in 1993 as regional and truck services are provided to major cities, while charters are provided to Europe and Asia.

Under the leadership of Director General Babashkin, KMV is reformed into Kavminvodyavia in 1994. The independent operates both scheduled and nonscheduled international, regional, and domestic services from Mineralniye Vody. A fleet is assembled comprising 33 Antonov An-2s, 5 Tupolev Tu-134s, and 14 Tu-154A/M/Bs. Enplanements for the year total 565,757.

Regional frequencies to Berlin, Dubai, and Sharjah commence in 1995. Passenger boardings inch up 1% to 568,600 while freight traffic climbs 30% to 14.3 million FTKs.

The CIS carrier has a very bad 1996 as customer bookings plunge 16.9% to 472,506. The fleet in 1997 is much as it was three years earlier, save for the addition of another Tu-154M. Passenger boardings plunge 19.1% to 382,600.

Babashkin's fleet in 1998 includes five Tu-134s, 14 Tu-154s, and a newly delivered Tu-204-100, one of seven ordered at the beginning of the decade. Scheduled service link the company's base with Chisinau, Chita, Ekaterinburg, Khabarovsk, Krasnoyarsk, Moscow, Munich, Murmansk, Nizhnevartovsk, Nizhni Novgorod, Norilsk, Novosibirsk, Omsk, Smarara, St. Petersburg, Surgut, Tashkent, Tyumen, Ufa, and Ylyanovsk.

The company also offers year-round charters to Sharjah, Athens, Thessaloniki, Tel Aviv, Istanbul, Lamaka, and Aleppo. During the summer, charters are also operated to Malta, Varna, and Antalya. For its activities, the carrier is awarded the national "Wings of Russia" prize. Late in the year, a homepage is opened on the World Wide Web.

Customer bookings fall another 12.1% to 332,000.

Service is maintained without headline or incident in 1999. Four Tu-154Bs depart the fleet as the company prepares to receive its second Tu-204.

Airline employment totals 3,117 at the beginning of 2000. The fleet now includes 1 Tu-204-100, 14 Tu-154s, and 5 Tu-134As.

Delivery of the second Tu-204-100 from AviaStar is reported in the Russian press on November 8.

On December 20, the carrier becomes the first Russian airline to order the new 160-seat Tupolev Tu-234, a twin-engine derivative of the Tu-204, from AviaStar. According to a report from OAO Tupolev chief designer Lev Lanovsky, Kavminvodyavia will partially fund the premier plane's completion and the maiden flight will occur in April.

KAZAIR (KAZAKHSTAN NATIONAL AIRWAYS): 59 Mira Prospect, Alma Ata, 483000, Kazakhstan; Phone 7 (3270) 336 349; Fax 7 (3270) 335 506; <http://rz.uni-frankfurt.de/~puersuen/twakza.htm>; Code K4; Year Founded 1993. Long a major Aeroflot Soviet Airlines directorate based at Alma Ata, Kazair in 1993 begins a year-long process of shedding its code-sharing and joint marketing arrangements with the reorganized Russian major. CEO A. Ershov operates a fleet of 12 Ilyushin Il-62s, Il-76s, and Il-86s plus 25 Tupolev Tu-154Ms and 40 Antonov An-24s, An-26s, and An-28s. Domestic and international flights continue, while the airline also takes over responsibility for the operation, maintenance, and upgrade of Almaty Airport and the Academy of Civil Aviation.

While on final approach to Kustanay on January 16, the right engine of an An-24, with 4 crew and 19 passengers, fails; an effort is made to go around, but the aircraft continues to descend and hits the ground 162 m. short of the runway, sliding into a military An-24. Although the aircraft is damaged beyond repair, there are no fatalities.

On January 6, 1994, a Boeing 747SP-31 is acquired from American Airlines and is christened *Sunkar*. Orders are placed for B-767s. The company joins IATA and makes its first traffic reports to the organization. These show, through the first quarter, enplanements of 191,265.

Later in the year, construction is begun on a second runway at Almaty Airport. On September 1, the company takes delivery of two more Tu-154Ms and an Il-76TD.

While taking off from Sambailo on January 26, 1995, an An-26V with five crew and two passengers and wet-leased to Guinee Air Service, S.A. the previous year, overruns the runway, fails on lift off, and collides with a line of trees. Although the aircraft is damaged beyond repair, there are no fatalities. Over the next several years, two replacement An-26Vs will be chartered to the African carrier.

Kazair flights continue as Anatoly Galunov becomes director general. On August 3, one of the company's four Il-76TDs is seized by Taliban rebels in Afghanistan.

During the year, the company encounters significant financial difficulties. A consortium of local construction companies and banks sues the airline for \$11.1 million in damages in a dispute over the Almaty Airport runway construction. A number of aircraft are seized at Western airports for nonpayment of landing or parking fees.

An An-24B with four crew is destroyed as the result of a hard landing at Chimkent after a November 1 training flight; there are no fatalities.

Other aircraft are grounded at year's end when their insurance coverage is allowed to lapse.

The fleet flagship *Sunkar* is leased to the government of Brunei in March 1996.

On April 30, the Kazakstan government announces a plan to restructure the troubled national carrier. The State Property Committee and Kazkommertzbank act as general managers for the airline during the early stages of reorganization. The latter conducts a financial and technical audit, which is published in August. The Transport and Communications Ministry puts forward its own suggestions for restructuring, including plans to spin off Kazair's holdings in the Almaty Airport and the Academy of Civil Aviation.

By July 15, the company's Il-76TD and crew have been held in Afghanistan for almost a year. On this date, a report surfaces that the Taliban rebels have handed the aircraft and its crew over to separatists in the breakaway Russian province of Chechniya. Director General Galunov immediately calls a press conference to report that this is not the case and to reassure families of the crew that the airline is doing everything possible for them. He notes that foodstuffs, drinking water, clothes, medications, and letters are forwarded to them in Quandahar whenever possible.

Meanwhile, some consideration is also given in various quarters to simply transferring all of the airline's assets over to **Kazakhstan Airlines**, which is also known as Air Kazakhstan. That option loses its viability when, on August 20, Air Kazakhstan also goes bankrupt. Thereafter, every effort is put into restructuring Kazair and upgrading its financial situation.

KAZAKHSTAN AIRLINES: Kazakhstan (1994–1996). KA, also known as Air Kazakhstan, is established at Alma Ata in 1994 to provide scheduled and charter passenger and cargo services to domestic, regional, and international destinations.

Yermek S. Abdaramanov is CEO. 3,000 employees are recruited, and a fleet is assembled that comprises 22 Antonov An-24s, 9 An-26s, 8 An-30s, 1 An-72, 1 each Boeing 767-300, B-737-300, and Ilyushin Il-18, 7 Il-86s, 2 Tupolev Tu-154Ms, 10 Tu-134s, 29 Yakovlev Yak-40s, and 5 Yak-42Ds.

Revenue flights are duly inaugurated to destinations throughout the CIS, plus Hanover, Budapest, Beijing, Delhi, and Tel Aviv.

Unable to achieve economic viability after almost two years of operation, the company, with debts of \$180 million, goes bankrupt on August 20, 1996.

Efforts to restart are only briefly considered and by government decree the airline is liquidated by year's end.

KAZAKHSTAN NATIONAL AIRWAYS. See **KAZAIR (KAZAKHSTAN NATIONAL AIRWAYS)**

KAZAN AVIA: Russia (1993–1995). KA is established at Tatarstan's Kazan Airport in 1993 to operate regional and international services, both scheduled and charter. Nikolay P. Tretyak is general manager and he initiates revenue services with a mixed fleet of Antonov An-2s, An-24s, An-26s, Tupolev Tu-154s, Yakovlev Yak-40s and Yak-42s, Let 410VUPs, and Mil Mi-8 helicopters.

Operations continue for just two more years.

KAZAN HELICOPTERS: Ulitsa 10, Let Oktyabr, Kazan, Tatarstan, 420030, Russia; Phone 7 (843) 545 463; Fax 7 (843) 545 252; Year Founded 1994. The Mil helicopter manufacturing concern establishes an air transport division at Kazan in 1994 and begins commercial charter work in an effort to earn financial support. A. F. Levrentev launches services with a fleet comprising 1 Antonov An-26, 1 An-24, and 2 Yakovlev Yak-40s.

Flights continue.

KCI AVIATION: Benedum Airport, Bridgeport, West Virginia 26330, United States; Phone (304) 842-3591; Fax (304) 842-8799;

<http://www.kciaviation.com>; Year Founded 1951. Having operated a small FBO at Morgantown Airport since 1947, Angelo C. Koukoulis moves his family to Clarksburg, West Virginia, in 1951 to open a larger aviation enterprise. Aside from aircraft services, sales, and flight training, charter and air taxi flights become an important segment of his business. Koukoulis acquires a Cessna 310 in 1959 to service local corporate airlift requirements.

In 1964, when the runway at Clarksburg Benedum Airport is temporarily closed for repairs (thereby forcing curtailment of flights by the larger planes of **Lake Central Airlines**), KCI provides regularly scheduled Cessna service to Pittsburgh, Pennsylvania. Three years later in 1968 and with **Lake Central Airlines** failing to meet community air transport needs, Koukoulis resumes full-scale regular, but nonscheduled, service.

Aeromech Airlines, as the company flight division has become known, joins the "Allegheny Commuter" network in November 1971, simultaneously receiving the first of six Beech 99s it will acquire over the next six years. In July 1976, KCI Enterprises is established as a holding company for the airline and FBO subsidiaries. Aeromech will offer scheduled services until its merger into **Wright Airlines** on October 1, 1983.

Following the demise of Aeromech, KCI operates its FBO activities, as it had before and during the years the airline was in operation. Full-scale general aviation support is provided from facilities leased from Benedum Airport, including a 22,500-sq.-ft. hangar. The concern is officially branded KCI Aviation on January 1, 1985.

Under the direction of president Charles A. "Chuck" Koukoulis, KCI Aviation in 2000 continues to fly corporate and small group charters employing a Piper PA-34 Seneca and later a Cessna 310, not unlike that Angelo Koukoulis had operated in 1959. It also offers FAA-approved flight training, some of it in conjunction with nearby Salem College, now the Japanese-owned Salem International University.

KD AIR CORPORATION, INC.: RR #2, Site 225, C-11, Port Albemi, British Columbia V9Y 7L6, Canada; Phone (250) 724-4495; <http://www.kdair.com>; Year Founded 1994. Ketty and Diane Banke form KD Air in 1994 to provide both scheduled local flights and charter services throughout British Columbia and down into the U.S. as far south as Oregon.

By 2000, the fleet includes 1 each Cessna 172 Skyhawk, Piper PA-31-310 Navajo, and PA-31-350 Navajo Chieftain. Daily roundtrips are flown from Vancouver International Airport to Vancouver Island and Texada Island. Charters afford sight-seeing visitors the opportunity to view mountain ranges, valleys, and glaciers, while other customers are taken to bush locations for fishing or hunting.

KEARSLEY AIRWAYS, LTD.: United Kingdom (1947–1950). A subsidiary of the freight forwarding concern J. W. Kearsley and Company, Ltd., KAL is formed at London (STN) Airport and registered as an airline on April 9, 1947. Mr. and Mrs. J. W. Kearsley are directors and initial equipment consists of a single Percival P.44 Proctor 5 purchased in February. During the remainder of the year, ad hoc personnel and freight charters are undertaken.

Three Douglas DC-3s are ordered; when the first arrives on October 31, it is christened *Bora* (North Wind). On November 1, the new aircraft undertakes, on behalf of **British Overseas Airways Corporation (BOAC)**, an urgent charter of medical supplies and aviation spares to India. Following its arrival at Delhi, the DC-3 is quickly leased and pressed into service transporting Hindu refugees out of the new state of Pakistan.

The *Bora* returns to the U.K. in early 1948 and begins a variety of international charter flights to such regions as Africa and the Mideast. A second Douglas transport is received in May and christened *Sirocco*. During June and July, the company's two DC-3s mount a number of long range charters; destinations include India, North Borneo, Singapore, the Gold Coast, Malta, and Cyprus. The *Bora* begins participation

in the civil portion of the Berlin Airlift on its very first day, August 4, followed by the *Sirocco* at the end of September.

The two aircraft fly from Fassberg, Lubeck, and Hamburg until November 10, when they are withdrawn. During their time into the former German capital city, *Bora* and *Sirocco* mount 246 sorties, giving Kearsley Airways, Ltd. second place (to **Ciro's Aviation, Ltd.**) for the number of DC-3 relief flights by a British independent airline. New charters are now flown from London (STN) and in December, another DC-3, the *Mistral*, joins the fleet.

A wide variety of international charters are again undertaken in 1949, beginning with a DC-3 flight to Wunsdorf, West Germany, on January 6. As in previous years, racing pigeons are transported to the Continent and urgently needed aircraft spare parts are flown to India and Africa. General cargo, machinery, fruits and vegetables, and other items are flown about Europe, Africa, and the Far East. On December 27, all three DC-3s fly soccer fans to Hull for a big match with Brentford.

Unable to find sufficient charters during the winter season for the idle Douglas transports, then worth large sums in the used aircraft market, in March 1950 the Kearsleys decide to sell their fleet and get out of the airline business.

KEENAIR CHARTER, LTD.: Hangar #4, General Aviation Apron, Liverpool Airport, Liverpool, England, L24 1YD, United Kingdom; Phone 44 (0) 151 448 0303; Fax 44 (0) 151 448 0909; <http://www.keenair.co.uk>; Year Founded 1963.

This small operator is initially established in 1963 as the Liverpool Aero Club. During the 1960s, it develops into the Liverpool Flying School, which still exists. Kennair, Ltd., an engineering concern, is set up in 1968 to provide maintenance for the flight school's aircraft.

The subsidiary Kennair Services, Ltd. is established in 1971 to provide lightplane charters throughout the country. Employing a fleet of Piper Navajos, business grows substantially during the remainder of the decade, through the 1980s, and into the early 1990s. All cargo services and urgent express deliveries become a company specialty.

The fleet is enhanced in 1995 through the addition of three cargo-configured Britten-Norman BN-2A Trislanders. One of the trimotors is reconfigured in May 1997 for passenger charters. The aircraft is unsuccessful in this role and is replaced in November with an Embraer EMB-110P1 Bandeirante, which, again, is largely employed for cargo charters.

The company's success increases during 1998, particularly in the provision of passenger flights. A second Bandeirante is ordered in early 1999 and is delivered in September. A homepage is now opened on the World Wide Web. Flights continue into the new millennium.

KEEWATIN AIR, LTD.: 15-20 Hangar Line Road, Winnipeg, Manitoba R3J 3Y8, Canada; Phone (204) 888-0100; Fax (204) 888-3300; <http://www.nunavutlifeline.com>; Year Founded 1972. Keewatin Air is established in the Keewatin district in 1972 to provide charter airline services out of Rankin Inlet, Northwest Territories. Rankin is later included in the new Nunavut Territory, 300 mi. S of the Arctic Circle.

During the middle 1980s, the need arises in this remote area for an air ambulance service. To answer the need, Life-Line is established in 1987. Over the next decade, pressurized aircraft, medical staff, and equipment are deployed to meet the needs of the northern health agency. A modern hangar facility, with staff accommodations, is opened in Rankin Inlet, with similar facilities also operated at Churchill, Manitoba. A Beech Super King Air 200 is stationed at Rankin Inlet while a Fairchild Swearingen Metro II is kept at Churchill; a Learjet 35A is employed as regional backup aircraft. It also flies the Critical Care International Service, founded by Keewatin in 1997, to transport patients wherever it may be required.

Under the direction of President/CEO Robert May, the subsidiary Kivalliq Air, Ltd. is established in December 1998 to meet a requirement for public scheduled passenger and express flights between Winnipeg and the communities in the new Nunavut Territory. Beginning in Janu-

ary 1999, a Pilatus PC-12 is employed to fly six-times-a-week return service from Winnipeg and Churchill to Repulse Bay, Coral Harbour, Rankin Inlet, Baker Lake, and Arviat.

Two additional PC-12s are acquired during the first quarter of 2000. These are employed by Kivalliq Air to launch new four-times-a-week roundtrips from Cambridge Bay to the Kitikmeot communities of Gjoa Haven, Taloyoak, and Pelly Bay. On August 12, a new direct flight links those three communities via Rankin Inlet with Iqaluit.

KEL-AIR, S.A.: France (1988–1990). Kel-Air is established at Nice in the fall of 1988 to undertake third-level charters and contract service flights on behalf of **Air Inter**, **TAT Regional Airlines**, and **Air France**. Revenue operations commence in December with a single, brightly liveried British Aerospace BAe 748-B2;

Two more BAes are acquired in early 1989 as the company adds **Air Littoral, S.A.** to its list of replacement customers. Plans are made to purchase two BAe 146-100QCs and to inaugurate scheduled passenger and cargo flights on its own behalf. Economic conditions are such in 1990 that the plans cannot be realized and as a result, the carrier enters bankruptcy in July.

KELOWNA FLIGHTCRAFT AIR CHARTER, LTD.: 1-5655 Kelowna Airport, Kelowna, British Columbia V1V 1S1, Canada; Phone (604) 765-1481; Fax (604) 765-1489; <http://www.flightcraft.ca>; Code KF; Year Founded 1970. Established at Kelowna Airport, British Columbia, on March 20, 1970, this company initially specializes only in the modification of Convairliners into what would become known as Convair 5800s. Five years later, in 1974, a charter subsidiary is organized to fly regional passenger and cargo services to destinations throughout the nation.

Services are operated throughout 1975 and into 1976 without incident. A lavatory fire causes a chartered DC-3 with 2 crew and 24 passengers, to make an emergency landing in a stubble field near Brocket on September 7 of the latter year; all aboard are safely evacuated before the aircraft is destroyed.

Operations continue apace during the remainder of the year and over the next six, during which time contracts are obtained to haul packages on behalf of Purolator Courier of Canada, Ltd. and **Federal Express (FedEx)**.

A scheduled subsidiary, **Intercity Airways, Ltd.**, is set up in 1983 and begins revenue services throughout southern British Columbia in 1984, but is closed down in October 1986. Nonscheduled service is maintained during the remainder of the decade and into the next.

In 1993, President Barry Lapointe oversees a workforce of 275 and his fleet comprises 1 Boeing 727-51C, 1 B-727-172C, 2 Cessna 402Bs, 2 Swearingen Merlin IIs, 14 Convair CV-580s, 1 Douglas DC-3, and 1 Grumman G-159 Gulfstream I. One of the Convairs is leased to the new start-up carrier **All Canada Express, Ltd.**

During the first quarter of 1994, KFAC acquires its major contract from Purolator Courier of Canada, Ltd. To support it, the jet freighter fleet is enhanced by the purchase of a B-727-92C, two B-727-25Cs, and four B-727-22Cs.

Purolator-related flights throughout Canada begin on April 23. While on final approach to the airport at Thompson, Manitoba, on June 1, a Merlin II hits a nondirectional beacon tower and crashes; all three people aboard are killed.

Later in the year, a B-727-27F is purchased and leased to **All Canada Express, Ltd.**

Late in 1995, the carrier enters into an agreement with the Greyhound Corporation, Ltd. to provide capacity for a new air transport company designed to complement the bus operator's ground schedule with links from western Canada to Hamilton, Ottawa, and Toronto, Ontario. Meanwhile, it is reported that over 20,000 passengers a year are transported on KFAC charter flights to fishing lodges around British Columbia.

With the Dial Corporation holding 66% shareholding, **Greyhound Air** is established on February 11, 1996. Greyhound Vice President John

Munro is placed in charge and his fleet includes Kelowna's 2 B-727-25Cs, 3 B-727-22Cs, and 1 B-727-51C. Operations on behalf of Greyhound finally get underway from Winnipeg on July 1; eight daily frequencies are offered to Vancouver, Calgary, Edmonton, Ottawa, and Toronto. Scheduled flights are increased to 12 per week during the second week of July.

Meanwhile, Kelowna continues its FedEx and Purolator flights and a lease of one each B-727-22C and Convair 580 to **All Canada Express, Ltd.**

Just after landing at Hamilton, Ontario, on March 14, the right main landing gear of a B-727F with three crew aboard, collapses; no injuries are reported and the incident with the empty freighter will cause no service issues for Purolator Courier, on whose behalf it is operated.

The decision having been taken to discontinue operations, Greyhound Canada, the parent of failing **Greyhound Air**, works out an arrangement on September 1 with **Canadian Airlines International, Ltd.** The major agrees to honor all reservations made before September 2 for travel after the new entrant's shutdown, subject to availability. Affected Greyhound passengers or their travel agents will be rebooked by September 15. The last Greyhound service is operated on September 21.

All Canada Express, Ltd. also suspends services and at year's end the fleet includes 2 B-727-25Cs and DHC-6-300s, and 1 each CV-580, DC-3, Cessna 402, Piper PA-42, and IAI Westwind I executive jet. A total of 600 workers are on the company payroll.

KFAC continues to provide domestic services in **1997–2000**. During these years, it also maintains its aircraft modification and maintenance business, which now also includes the installation of electronic flight instrument packages into Russian-built Mil Mi-17KF helicopters.

One of the company's B-727-25Fs allows **Winnport Logistics, Ltd.** to inaugurate return all-cargo service between Winnipeg and New York (JFK) on November 1, 1999. It also provides the chartered fleet of four Convair CV-580s that allows the new **Air Monarch, S. A. de C.V.** to begin nightly freight flights in March 2000 from Mexico City to Monterrey.

The B-727 fleet at the beginning of the new millennium includes 6 Dash-227Fs, 4 Dash-22Cs, 2 Dash-225Fs, 3 Dash-25Fs, and 1 each Dash-92C, Dash-51C, Dash-172C, and Dash-214.

KENAI AIR ALASKA: 155 Granite Pt. Court, Kenai, Alaska 99611, United States; Phone (907) 283-7561; Fax (907) 283-3287; http://www.ptialaska.net/julieann/K_Aviation.html; Year Founded 1946. Founded as the FBO Kenai Aviation by Vernon L. Loftsteadt at Kenai, Alaska, in **1946**, KAA provides passenger and cargo charter and contract service flights throughout the future 49th State. Nonscheduled services to urban and bush destinations have been conducted with both lightplanes (e.g., Cessna 185, Piper PA-31-310 Navajo) and helicopter (e.g., Bell 206B JetRanger, Bell 206L LongRanger).

Owner Loftsteadt reconfigures his company into Kenai Air Service in **1977** to offer scheduled passenger and cargo services and renames the enterprise Kenai Air Alaska in **1978**. Employing a Grumman G-44 Wildcat, a Piper PA-31-310 Navajo, and a Beech King Air 100, revenue flights commence to Anchorage, Seward, Soldotna, and other regional destinations.

A subsidiary is established in **1983**, **Kenai Helicopters Hawaii**, doing business as **Pacific Paradise Helicopter**. In October of that year, **Southcentral Air** is purchased and merged. Scheduled services cease in **1987**; however, nonscheduled helicopter operations continue at CEO Craig R. Loftsteadt's carrier.

The Hawaiian subsidiary is renamed **Kenai Helicopters** in **1995**. Service in Alaska is continued during the remainder of the decade, as are sight-seeing tours over the Grand Canyon in Arizona. During these years, the fleet comes to include 2 Bell 212s, 3 Bell 206L LongRangers, and 8 Bell 206B JetRangers.

During its takeoff climb from the Grand Canyon, Arizona, Airport on April 18, **2000**, a Bell 206L Long Ranger suffers loss of engine power. Successfully avoiding electrical wires, the pilot is able to land the air-

craft, albeit hard, onto an adjacent area of the airport. The pilot and five of six passengers are seriously injured in the accident.

KENAI AIR OF HAWAII: United States (1983–1995). Kenai Air of Hawaii is established at Lihue Airport, Kauai, Hawaii in **1983** as a subsidiary of **Kenai Air Alaska**. Something in excess of a dozen rotary-wing flight-seeing activities are now inaugurated as tours are flown to the islands of Kauai, Hawaii, Maui, Molokai, Lanai, and Oahu.

At the end of the decade, the business of the carrier is split between contract service operations and aerial tours. The former continue to be flown under the KHH name while the latter are undertaken as **Pacific Paradise Helicopter**. Paul A. Morris is CEO of the former in **1994** and K. Christy Johnson leads the latter. Both share a fleet of Bell 206B JetRangers and Bell 206L LongRangers.

The company is renamed **Kenai Helicopters** in **1995**.

KENAI AIR SERVICE. See KENAI AIR ALASKA

KENAI HELICOPTERS: P.O. Box 3270, Lihue, Hawaii 96766, United States; Phone 808 329-7412; Fax 808 329-2898; Year Founded 1995. The two divisions of **Kenai Air of Hawaii** are merged in **1995** under this blanket name. Emphasis is placed on providing aerial sight-seeing and tour flights which, as a company advertisement has it: "combine the personalized service of a family-run business with the sophistication of a large fleet staffed by experienced professionals." By the end of the decade, the company is operating over 1,400 annual flights that transport in excess of 15,000 passengers.

The fleet in **2000** includes a mix of Bell 206L3 LongRangers, Bell 206B3 JetRangers, and a single Eurocopter AS-350BA A-Star.

KENDELL AIRLINES (PTY.), LTD.: 86 Baylis Street OR, P.O. Box 78, Wagga Wagga, New South Wales, 2650, Australia; Phone 61 (69) 220 100; Fax 61 (69) 220 116; <http://www.kendell.com.au>; Code KD; Year Founded 1966. Former **British European Airways Corporation** pilot Donald Kendell returns to farming in southwestern New South Wales in 1959, but a dream of returning to aviation is too strong. In 1965, the former flyer and his wife Eilish Burke Kendell move to Wagga Wagga to operate a small general aviation concern. The operation is purchased in **1966** and incorporated as **PremiAir Aviation (Pty.), Ltd.** Operations are undertaken with a Piper PA-23 Apache and later, a Piper PA-28 Cherokee Six. Outback locations visited include Coober Pedy, Streaky Bay, Woomera, Yulara, Ceduna, and King Island.

In early **1971**, Kendell acquires **Inland Aviation, Ltd.** and merges it with his previous operation to form KAL; PremiAir Aviation becomes a holding company.

On October 16, the company inaugurates scheduled Piper PA-31-310 Navajo services between Wagga Wagga and Melbourne on a route from which **Ansett Australian Airlines (Pty.), Ltd.** has withdrawn its Douglas DC-3s and Fokker F.27s. On 10 return flights during the first week, a total of 36 passengers are flown.

In **1972**, the first full year of service, flights are added West Wyalong to Sydney and Wagga Wagga to Canberra. A total of 4,000 passengers are flown. Operations continue apace in **1973**.

In **1974**, a Melbourne–Merimbula frequency is initiated. Within the next five years, Kendell's route network grows to include these southeastern Australian destinations: Albury, Merimbula, Wagga Wagga, Mount Gambier, Hamilton, Melbourne, and Mildura.

The fleet is upgraded by the addition of a de Havilland DH 114 (Riley) Heron in January **1975**. In February, it is placed on the Wagga–Melbourne route. Two years later, in **1977**, a second Riley Heron is acquired for the Griffith–Canberra service and in **1978** the decision is taken to upgrade to pressurized turboprop equipment.

Melbourne–Cooma flights begin in July **1979** and from Melbourne–King Island, Tasmania, before the year's end. During the year, the first Swearingen Metro II is placed into service. Passenger

traffic grows steadily, reaching 29,402 in **1980**. The Navajos are now overhauled and sold.

The fleet in **1981** comprises 3 Swearingen Metro IIs, with 1 SAAB-Fairchild SF340A on order.

Passenger boardings jump 23.3% to 38,300.

The employee population is increased by 4.7% in **1982** to 45. In early spring, services are started from Melbourne to Portland and Warmambool.

The new stops help customer bookings swell 19.5% to 45,160.

A total of 63,600 passengers are carried in **1983**. The workforce is increased by 19% in **1984** to 69. A new maintenance hangar is completed at Wagga Airport.

Enplanements jump 34.1% to 84,329.

The workforce is increased 25% in **1985** to 75 and the fleet grows to include 5 Metro IIs. The first SF340A is delivered in February and when it enters service at month's end, Kendell becomes the first airline to operate the type in the Southern Hemisphere. A new hub is opened at Adelaide and a number of South Australian routes are taken over from the financially distressed **Airlines of South Australia (Pty.), Ltd.** The acquisition virtually doubles the company's network.

Passenger boardings accelerate 21.1% to 102,111 and 74,000 pounds of freight are hauled.

Employment increases 51.9% in **1986** to 120 as two additional SF340s and a sixth Metroliner join the fleet. When Ansett's **Airlines of South Australia (Pty.), Ltd.** shuts its doors, Kendell moves in to assume the remainder of its routes, including those to Broken Hill, Whyalla, Ceduna, Port Lincoln, and Streaky Bay. When the South Australia operator **Opal Air, Ltd.** ceases trading in October, Kendell is able to initiate service to four more markets, Coober Pedy, Olympic Dam, Woomera, and Ayers Rock.

Enplanements total 151,698.

Thirteen new employees join the airline in **1987** as the second SAAB-340A joins the fleet.

Passenger boardings shoot up by 35.6% to 235,555 and freight climbs 8% to 85,000 pounds.

The payroll grows by 9.8% in **1988** to 146 as orders are placed for a 4th SAAB 340. Hub and spoke operations are consolidated on Adelaide and Kendell becomes Australia's largest regional airline.

Customer bookings ascend a more modest 1.2% to 241,844 as cargo dips by 2.4% to 83,000 pounds.

In **1989**, employment at this Australian third-level operator grows by 19.9%, to 175. Largely unaffected by the pilot job actions afflicting the larger domestic operators, Kendell is able to employ its 4 SAAB 340As (the last is delivered in August) and 8 Metro IIs to gain a traffic boost. Among the new markets now entered are Devonport and Burnie on Tasmania.

Enplanements rise 7.1% to 261,829 passengers flown on the year, picking up the slack from **Ansett Airlines of Australia (Pty.), Ltd.** and operating the only frequent service from Melbourne to Burnie and Devonport, Tasmania. Freight traffic is up 28.2% to 108,000 FTKs. On revenues of A\$24.5 million, an operating profit of A\$1.5 million is generated.

The number of workers is cut by 27.2% in **1990** to 127 and 1 SAAB 340A is withdrawn. When **Lloyd Aviation (Pty.), Ltd.** is forced to stop operating in the fall, its scheduled Adelaide to Kangaroo Island route is taken over. TNT/News Corporation, Ltd., parent of **Ansett Airlines of Australia (Pty.), Ltd.**, acquires 100% ownership on October 1, three months after negotiations are completed. Geoffrey Brust becomes general manager, but the company is allowed to operate as an independent subsidiary. Kendell wins the Civil Aviation Authority's inaugural "Airways Award for Excellence" as best Australian airline of the year. It will be a runner-up the following year.

Passenger boardings leap skyward by 21.8% to 319,016, but freight slides 3.9% to 103,470 FTKs. An A\$1.01-million net profit is earned.

Company employment is increased by 10.7% in **1991** to 197 and the fleet now includes 5 SAAB 340As, 1 Fairchild-Swearingen Merlin IV,

and 7 Metro IIs. Kendell joins both the Ansamatic and Galileo computerized reservations systems. Company headquarters are moved to larger premises in Wagga Wagga in August and the sixth SAAB 340A arrives in December.

Customer bookings ascend another 6.6% to 337,864 and cargo climbs 23.5% to 128,000 FTKs. Revenues jump 7.1% to A\$29 million and the net profit is up to A\$1.86 million. The company's assets are now worth A\$50 million.

In **1992**, the carrier is flying 6 SAAB-340As, 8 Metro IIs, and 2 Metro 23s. The SAAB 340A received in December is employed in January to inaugurate a new service from Melbourne to Devonport. Also during the year's first month, Kendell is named the 1991 "Regional Airline of the Year" by *Air Transport World* magazine. Kendall is the first airline in Australia to win this prestigious award.

In February, orders are placed for two Saab 2000s. Founder Kendell is made a member of the Order of Australia (AM) in the Queen's Birthday Honors for his services to aviation.

Passenger boardings rise 19.1% to 402,348 while freight declines 7.7% to 117.99 million FTKs.

In **1993**, Don Kendell oversees a workforce of 210 and adds 2 more Fairchild 23s in September. The company continues to operate services that link Adelaide with Kingscote, Mount Gambier, Port Lincoln, Whyalla, Ceduna, Broken Hill, Woomers, Olympic Dam, Coober Pedy, and Ayers Rock. In addition, flights are made from Melbourne to Albury, Wagga Wagga, Merimbula, Cooma, King Island, Mildura, Portland, Mount Gambier, Burnie, and Devonport.

Customer bookings ascend 6.3% to 427,775 and cargo is up half that percentage, 3.1%, to 121,600 FTKs.

The fleet in early **1994** includes 6 340As, 6 Metro 23s, and 2 Metro IIs; both of the latter type are retired as another new Metro 23 is delivered.

Passenger boardings jump 5% to 449,336 while freight balloons by 19.6% to 145,000 FTKs. An A\$2.6-million net profit is reported.

Airline employment is dramatically increased in **1995**; 70 new workers arrive, a 24.4% increase. The seventh and eighth SAABs join the fleet in June and new routes are opened in July to Sydney from Wagga and Albury.

The new services replace Fokker 50 services previously provided by parent **Ansett Australia (Pty.), Ltd.** A fourth SAAB 340B is delivered during the fourth quarter and begins flying from Wagga Wagga to Albury, Melbourne, and Sydney.

Customer bookings accelerate 12.3% to 525,600.

There are no changes in the workforce during **1996**, but five SAAB 340Bs do enter service and the two Metro IIs are retired. In March, a new program of cooperation with **Ansett Australia (Pty.), Ltd.** begins with initiation of the Capital Shuttle from Sydney to Canberra. Complementing the major's jet service, Kendell provides 11 return turboprop flights per day. Cooperative flights with Ansett are extended in July from Sydney to Coffs Harbour and from Sydney to Ballina in August.

On October 17 the company celebrates 35 years of service to Melbourne, noting that bookings have increased during those years to 17,000 per week on 900 flights.

Flights over the new routes help to send overall passenger traffic upwards by 47.2% to 772,812 passengers flown. Additionally, 184,000 freight FTKs are operated, a 23.6% growth.

Two more SAAB 340Bs are acquired in early **1997** and service begins on two new routes. Acting on behalf of Kendell, **Ansett Australia (Pty.), Ltd.** agrees in May to trade four Fokker 50s to **Skyways, A.B.** of Sweden in exchange for four SAAB 340As.

Customer bookings increase 26.5% to 978,184, while cargo rises 27.4% to 234,000 FTKs.

Services continue apace in **1998**. After some months of negotiations, **Ansett Australia (Pty.), Ltd.** Chairman/CEO Rod Eddington announces, during the third week of September, that the major will turn over most of its regional routes to Kendell over the next two years. Among the regional markets to be completely turned over are Mackay,

Rockhampton, Launceston, and Coffs Harbour, while Kendell will pick up many of Ansett's services into Hobart and Canberra.

To handle the increased responsibility, Kendell begins to assess the possibilities of regional jet acquisition. Both the Canadair CRJ-200ER and the Embraer ERJ-145 undergo evaluation during the remainder of the month and into October. On October 21, Kendell places an order with Bombardier Aerospace for 12 Canadairs, plus 12 options, with deliveries scheduled to begin during the last quarter of 1999.

While on a November 11 night service, a SAAB 340B with 30 passengers, encounters turbulence, stalls, and rolls almost inverted in light icing conditions, losing 2,500 ft. before the stall is recovered. The flight attendant is slightly injured. The Australian Bureau of Air Safety Investigation immediately launches an inquiry.

Passenger boardings inch up 1.3% to 973,000, while cargo traffic increases 13% to 260,000 FTKs. Revenues shoot up 15.2% to A\$82 million and there is an A\$5.7-million net profit.

Airline employment at the beginning of 1999 stands at 430.

In October, a \$40-million deal is signed with GE Engine Services for the maintenance and service of the new GE CF34-3B power plants of Kendell's new CRJs.

Customer bookings dip 0.4% to 969,000 while freight falls 13.5% to 225,000 FTKs. Revenues inch up 1% to \$80.84 million, while costs jump 6.5% to \$75.77 million. The operating profit falls to \$5.07 million.

Airline employment at the beginning of 2000 stands at 780. The fleet now includes 16 SAAB 340Bs and 7 Metro 23s.

In mid-February, the aviation media reports that **Ansett Australia (Pty.), Ltd.** is considering a merger of its regional carriers **Skywest Airlines (Pty.), Ltd.**, **Aeropelican Air Services (Pty.), Ltd.**, and Kendell into a super regional airline; the enlarged Kendell would be led by Ansett executive Ronald Roalky. This move would take the major's two-year campaign to cut A\$55 million (\$31 million) in costs across its regional network to a new stage.

Upon their delivery the previous September, the first CRJs were scheduled to enter service on the airline's routes from Melbourne to Launceston and to Hobart. This start is, however, delayed because of unexpected difficulties experienced by the airline in gaining its High Capacity Air Operators Certificate from the Civil Aviation Safety Authority. Additionally, with the CRJ transitional training of its designated SAAB 340 pilots taking longer than anticipated, a number of those flyers are seconded to **SA Express Airways (Pty.), Ltd.** to gain practical experience. These delays cause **Ansett Airlines (Pty.), Ltd.** to replace the entire senior management at Kendell.

The official domestic carrier of the Olympic flame, one of the new Canadairs makes a short Outback tour during the last week of April with the miner's lantern in which the flame will be carried on its flights around the country. The practice flight from Melbourne lands at Adelaide, Ayers Rock, Alice Spring, Mt. Isa and Longreach.

Kendell picks up the Olympic flame when it arrives in Ayers Rock from Auckland aboard an **Ansett Australia (Pty.), Ltd.** jetliner on June 8 on the last international leg of its journey from Olympia, Greece. With the flame safely in the miner's lantern, the company CRJ transports it on to Alice Springs, Mt. Isa, Longreach, and Dalby in Queensland, where it is handed over to the Sydney Olympic Committee convoy, which travels by road to Cairns.

On July 12, a company jet again collects the Olympic flame, this time at Port Lincoln, in South Australia, and flies it on via Port August, Mildura, Broken Hill, Bourke, and Lightning Ridge, to Mooree, where it is turned over to runners for the final sprint to the Olympic stadium.

Beginning on October 12, passengers are able to employ the **Ansett Australia (Pty.), Ltd.** E-check in machines which were installed at the domestic terminals at Melbourne, Sydney, and Brisbane in August.

Twice-daily nonstop CRJ200ER roundtrips commence on October 30 from Adelaide to Canberra. CRJ200ER return service is inaugurated between Melbourne and Rockhampton on November 6, with flights operated four times a day Sunday through Friday and twice daily on Saturdays.

KENMORE AIR HARBOR: P.O. Box 82064, Kenmore, Washington 98028, United States; Phone (206) 486-1257; Fax (206) 486-5471; <http://www.kenmoreair.com>; Code M5; Year Founded 1940. Founded to undertake floatplane services exclusively, Kenmore begins operations in 1940 from bases on Lake Union and at Kenmore on the northeast end of Lake Washington, near Seattle. In early 1946, Bob Munro, Jack Mines, and Reg Collins establish an "air harbor" or FBO seaplane base at the northeast end of Lake Washington at the town of Kenmore.

The site chosen is a former lumber mill located on a swampland; tons of fill are required to make it useable. The company is initially named Mines Collins Munro, but that name proves so cumbersome that it is quickly scrapped and the concern is renamed in honor of the community.

Kenmore Air officially opens for business on March 21 with the flight of an Aeronca Model K seaplane that Collins and Munro have restored. During the second quarter, the fleet is increased by the addition of an Aeronca Champ and two Taylorcrafts.

The company's first crisis occurs in July when cofounder Mines is killed while flying supplies to a search and rescue team in the Cascade Mountains. His widow sells her interest to Collins and Munro; shortly thereafter, Collins also turns over his share to Munro and leaves for an aviation job in California.

After his partners' departure, Munro, through the remainder of the decade, continues to develop his operation. An FBO and maintenance facility is constructed and air taxi flights become increasingly frequent. Kenmore develops modifications for the popular Republic Seabee aircraft and sets up a parts department to service other operators. Munro and his staff develop a reputation for their expertise in seaplane restoration.

In 1951, Munro signs his first U.S. government contract and leases a restored seaplane to the Bureau of Land Management for a mapping survey in Alaska. A number of bush charters are also operated.

Kenmore is hired by the Canada-based Granby Mining, Power, and Smelting Company in 1953 to fly much of the equipment needed to build a mining camp at LaDuc Glacier, 50 mi. N. of Ketchikan, Alaska. A Republic Seabee and two Norduyn Norsemen are used to complete the two-month operation.

Charters continue during the 1950s and destinations visited include Seattle and Friday Harbor, Washington, and Pender Harbour, British Columbia. Kenmore also becomes a Cessna dealer late in the decade.

The Air Harbor sees accelerated growth during the early to mid-1960s as a flight school is added and new contracts undertaken. A new hangar and office building is opened at Kenmore and in 1963 the carrier acquires its first de Havilland Canada DHC-2 Beaver. President Munro and Bill Peters now establish a rebuilding and modification program for the popular floatplane and by 1998 they will have rebuilt 125 DHC-2s, delivered to operators all over the world.

During the next 20 years, President Munro's fleet comes to comprise 12 de Havilland Canada DHC-2 Beavers of its own, several Grumman G-21 Geese, 2 DHC-3 Otters, and nearly every type of single-engine Cessna. Almost all flight equipment is float-equipped. Charters are flown as far north as Alaska and as far south as California.

In the early 1970s, Kenmore transports unarmed torpedoes to a joint U.S.-Canadian test range facility on the Strait of Georgia off Canada's Vancouver Island; the weapons are flown attached to Beaver floats. Geological survey teams exploring Mt. Olympia for five years during the 1970s are all supplied by company Beavers, which land in the snow at a 6,800-ft. altitude Snow Dome on floats. To takeoff from the glacier, planes are run down a 4,000-ft. downhill "runway" which ends as a cliff to the valley floor below.

Scheduled commuter services are inaugurated in the spring of 1981, linking the company's base with Seattle, Big Bay, British Columbia, Victoria, Friday Harbor, Roche Harbor, Rosario, and Lopez. Also in the 1980s, new return services are introduced to British Columbia's many fishing resorts. Three- and five-day summer fishing packages prove so popular that they will remain a staple of the carrier's product ever after.

Seattle-based **Otter Air** is acquired in **1986**, along with its scheduled route from Seattle to Victoria, British Columbia, which is flown until **1988**, when it is sold to **Lake Union Air**. Kenmore's operations continue apace throughout the remainder of the decade and into the next. Not only does the company fly scheduled and nonscheduled services, it also continues to build on its reputation for DHC-2 modification work. It also provides FBO services to local and transient floatplanes. Two Turbo Beavers are acquired in **1989**.

As in the past, the company through the remainder of the decade and into the **1990s** prides itself on the uniqueness of its airline. As it will later note on its World Wide Web page, "our airline is different." Tickets are not necessary; passengers need only give their name. There are no departure gates. Customers are directed to a picnic table where they meet their pilot and fellow passengers. The panorama from the window is the main in-flight entertainment; if a pod of whales or a Trident nuclear submarine is spotted, the pilot does not mind a slight diversion for a better view.

One hundred workers are employed by the company in January **1993** when it acquires **Lake Union Air Service**, its only seaplane competitor in the Seattle region. Included in the acquisition is a downtown Seattle terminal at Lake Union.

From Lake Washington and Lake Union, company aircraft in **1994** provide services to Victoria, Canada, the San Juan Islands, and many tiny communities along the shores. The fleet is increased by the addition of 1 each rebuilt Beaver and DHC-3 Otter; 2 DHC-2s are also refurbished for other operators.

Enplanements total 50,000.

Operations continue apace in **1995** as two more Otters are acquired. During the peak summer season, the tiny airline offers four daily roundtrips from Seattle to the San Juan Islands and four daily roundtrips from Seattle to Victoria. Traffic is level with the previous year and estimated revenues of \$11 million are generated.

The employee population stands at 72 in **1996** and the fleet now includes 12 Beavers, 5 Otters, 4 Cessna 180s, and 2 Cessna 172s. The aircraft serve 30 points in the Puget Sound and Inside Passage areas of Washington State and British Columbia. Chatterbox Falls at British Columbia's Princess Louise Inlet is a new destination.

A total of 35,659 passengers are transported as the 50th anniversary is celebrated.

The workforce is reduced by 2.8% in **1997** to 70. The fleet of 22 planes annually logs more than 2 million miles for the largest full-service seaplane operation in the world.

Customer bookings accelerate 34% to 47,785.

Airline employment is increased by 2 in **1998**, back to 72. Service is maintained without fanfare.

Enplanements climb 18.9% to 57,000.

Customer bookings ascend 5% in **1999** to 60,000.

KENN BOREK AIR, LTD.: 290 McTavish Road, NE, Hangar 4, International Airport, Calgary, Alberta T2E 7G5, Canada; Phone (403) 291-3300; Fax (403) 250-6908; <http://www.borekair.com>; Code 4K; Year Founded 1971. In **1971**, Borek Construction takes over **Vic Turner, Ltd.**, which is renamed. Operations are undertaken from a head office in a Calgary Airport hangar built in 1941 for the British Commonwealth Air Training Plan (the Aero Space Museum of Calgary is now located just in front of it) and branch bases at Dawson Creek, Inuvik, and Resolute Bay. KBA maintains or initiates scheduled and charter services to Aklavik, Arctic Bay, Coppermine, Ft. McPherson, Grise Fiord, Holman Island, Inuvik, Nanisivik, Paulatuk, Pond Inlet, Resolute Bay, Sachs Harbour, and Tuktoyaktuk in the Northwest Territories, and to Prince George, Prince Rupert, Smithers, and Terrace in British Columbia.

In **1975**, the fixed-wing operations of **Kenting Aviation, Ltd.** are purchased and operated as the subsidiary **Kenting Earth Sciences, Ltd.**; later in the decade, **Reindeer Air Service, Ltd.** is also acquired.

Initially hired in 1973, Steve Penikett becomes general manager in **1976**; this air division leader will remain in charge of the concern's flight operations for the remainder of the century.

A de Havilland Canada DHC-6-300 with two crew and six passengers, loses control while on final approach and crashes 2,200-ft. short of the runway at Nanisivik on December 21; there are no survivors.

Airline employment is 45 at General Manager G. H. Stevenson's company by **1978** and the fleet consists of 4 Douglas DC-3s, 1 Curtiss C-46, and 6 DHC-6 Twin Otters.

While landing in heavy winds at Komakuk on September 18, a DC-3 freighter with two crew, goes off the runway and over a 5-ft. embankment, ending up on its nose. No serious injuries are reported.

In late **1981**, a decade after the company's rebirth, President Borek oversees a workforce of 52 and operates a fleet comprising 3 Douglas DC-3s, 8 de Havilland Canada DHC-6 Twin Otters, 2 Beech 99s, 1 Piper PA-23 Aztec, and several light Cessnas.

Unable to gain takeoff speed from a slush-covered runway at Calgary on May 7, **1982**, a DC-3 aborts its departure, but runs off the runway into a ditch; the aircraft is damaged beyond repair, but there are no injuries to its two-person crew.

By **1985**, the DC-3s are gone, replaced by 1 Douglas C-54G (military DC-4), 4 additional Twin Otters, 1 DHC-5 Caribou, 2 Beech King Air 100s, and 4 Bell 206B JetRanger helicopters. Airline employment is up to 55.

Operations continue apace in **1986-1988**. There are two fatal accidents during these years.

En route from Fort Nelson to Ross River on January 15, 1987, a DHC-4 Caribou, with two crew and two passengers, suffers an engine failure and crashes while executing a missed approach procedure at its destination; both pilots are killed.

While on a flight from Redmond, Oregon, on July 14, 1988, a DHC-6-300 and its pilot, crashes into trees at the 5,900-ft. level on a ridge on the E side of Battle Creek Mountain, 50 km. W of John Day, Oregon; the flyer is killed.

In **1989**, Englewood, Colorado-based Antarctic Support Associates, prime contract for the U.S. National Science Foundation, provides the funding that allows the company to send a pair of ski-equipped DHC-6s to Antarctica to support the work of the American NSF scientists.

With the top halves of their fuselages painted bright red-orange for easy identification at a distance, the aircraft lift scientists to remote, small camps outside helicopter range. Occasionally, they are sent aloft with instruments to gather various data, and are also requested to provide flights to and from New Zealand's Terra Nova Station.

In **1990**, the fleet includes 1 C-54G, 10 DHC-6-300s, 4 DHC-6-100s, and 2 DHC-6-200s; of these, 3 are leased to **Harbour Air, Ltd.**, 2 to **Empire Airways**, and 1 each to **Aeroperlas, S.A.** and one to **ACES (Aerolineas Centales de Colombia, S.A.)**. Two Beech 99s are also flown.

While landing at an Arctic Circle LOD on March 29 after a service from Rae Lakes, the C-54G with three crew, strikes a 4-ft. high snow-bank on the edge of the ice landing strip with its left main landing gear. The Skymaster is spun 180 degrees and the nosegear collapses. There are no fatalities.

The number of DHC-6-300s is reduced to nine in **1991** and one Beech 99 is leased to **Empire Airways**. The Empire and Harbour leases cease in **1992** and one more DHC-6-100 is acquired.

Flights to various northern points continue in **1993** as the fleet is increased by the addition of one each DHC-6-100 and DHC-6-300.

While taking off from Baffin Island on March 6, the nosegear of a DHC-6-100 with two crew, strikes an ice ridge, causing the plane to hit a river bank and do a ground loop; although the Twin Otter is damaged beyond repair, there are no fatalities.

Six more DHC-6-300s are acquired in **1994** along with two DHC-6-200s. Heavy emphasis on aircraft leasing continues as **Aeroperlas, S.A.** charters a Beech 99 and DHC-6-300. **Harbour Air, Ltd.** takes three of the four DHC-6-100s, and two of the five DHC-6-200s.

In June, a joint venture is established with Inuvik-based **Aklak Air, Ltd.** Under terms of this agreement, Kenn Borek provides Twin Otter or Beech 99 equipment to operate Aklak's scheduled flights to Fort McPherson, Paulatuk, Sachs Harbour, and Tuktoyaktuk, as well as its charters to bush locations. Aklak provides ground and management support for a Borek Douglas R4D8 (USN designation for the DC-3) which provides it with all-cargo capacity.

While taking off from Rhotera Adelaide Island Station for a flight to Terranova Bay, Antarctica on November 24, a DHC-6-300 with two crew and four passengers, fails to gain altitude and crashes; there are no survivors.

Service to various northern points from Calgary, Inuvik, Norman Wells, and Resolute Bay continues in **1995** as another Beech 99 is placed into service. A replacement Twin Otter is sent to the South Pole.

The fleet in **1996–2000** includes 35 Twin Otters, 2 Cessna 185s, 1 Beech 55 Baron, 2 Beech King Air 90s, 3 Beech 99s, 5 Beech King Air 100s, 3 Super King Air 200s, 2 Embraer EMB-120P1 Bandeirantes, 1 R4D8, and 2 Bell 206L LongRanger helicopters. Both the NSF Antarctic and Aklak Air contracts continue and beginning on September 21, 1998, the company operates a DHC-6-300 on behalf of the new Nepalese carrier **Yeti Airlines (Pty.), Ltd.**

KENNEDY AIR SERVICE: United States (1978–1979). KAS is established at Valdez, Alaska, in **1978** to offer scheduled passenger and cargo flights to Anchorage. Revenue services commence with a single Piper PA-31-310 Navajo and a Beech 58 Baron and continue until November **1979** when the owner disappears, forcing the company to cease.

KENOSHA AERO: United States (1980–1982). This tiny commuter is set up by Jim Beardsley at Kenosha, Wisconsin, in **1980**, as an outgrowth of an FBO. Kenosha employs a fleet of 2 Cessna 172s, 1 Cessna 207, 1 Cessna 182, and 1 Piper PA-23 Aztec to inaugurate both scheduled and nonscheduled passenger and cargo flights to Madison and Milwaukee. Enplanements on the former service for the year total 55.

The route network is increased in **1981** and destinations visited now include Chicago, Milwaukee, Detroit, Minneapolis, Madison, and Rochester. A Cessna 414 joins the fleet and assists the carrier to increase its scheduled traffic by 36% to 75 passengers carried.

Unable to combat either the ATC effects of the previous summer's PATCO air traffic controller's strike or the recession, the carrier is unable to continue far into **1982**.

KENTING AVIATION, LTD. See KENN BOREK AIR, LTD.

KENTING EARTH SCIENCES, LTD.: Canada (1962–1986). Formed as Atlas Aviation, Ltd. at Ottawa in **1962**, this third-level operation is initially operated as an air charter, air ambulance, and aerial survey provider. An Aero Commander 680 with four aboard crashes near Thompson, Manitoba, on April 1, **1964**; there are no survivors.

Late in the decade, regularly scheduled flights are inaugurated to such remote areas as Pond Inlet, Arctic Bay, Igloolik, and Clyde River. The fleet grows to include several Douglas DC-3s, Britten-Norman BN-2 Islanders, Piper PA-31-310 Navajos, and a Consolidated PB-Y-5A Canso.

Owned by Kenting Aviation, Ltd., this subsidiary is sold to **Kenn Borek Air, Ltd.** in **1975** and operated as a Borek subsidiary. Flights continue for a decade.

KENYA AIRCRAFT COMPANY, LTD.: Kenya (1925–1929). KAC is set up at Nairobi in **1925** to provide airplane charters to citizens, hunters, tourists, and others needing faster transport to bush locations. Shareholding is divided by Thomas Campbell-Black, G. T. Skinner, and A. E. Hughes. Revenue flights commence with a single de Havilland DH 51 purchased from John Carberry, which is christened *Miss Kenya*.

Revenue flights continue in **1926–1928**, during which years Archie W. Watkins is hired as a pilot.

In order to review her late expatriate husband's British business interests, Mrs. Florence Kerr Wilson, in late January **1929**, contracts with pilots Campbell-Black and Watkins to fly her to England. Employing the Fokker Model 8 Universal *Miss Africa* owned by the flyer's KAC, the group departs for England on February 6, **1929**.

During the trip up, so the story goes, Mrs. Wilson convinces the two men to join her in plans to set up an airline when they get home. All realize the need to provide reliable scheduled air services to remote areas of both Kenya and Tanganyika. While in the U.K., the trio visits the de Havilland plant and makes arrangements to purchase a DH 60G Gypsy Moth.

Wilson Airways, Ltd. is officially established at Nairobi on July 13, with Mrs. Wilson as chairman, C. W. F. Wood as general manager, Campbell-Black as chief pilot, with Watkins as his No. 2. At the same time, the Kenya Aircraft Company, Ltd. is disbanded.

KENYA AIRWAYS, LTD.: P.O. Box 19002, Kenyatta International Airport, Nairobi, Kenya; Phone 254 (2) 823 000; Fax 254 (2) 823 488; <http://www.kenyairways.co.uk>; Code KQ; Year Founded 1977. Following the decision to end **East African Airways Corporation (EAAC)**, the Nairobi government forms a new national carrier for the Republic of Kenya and on January 22, **1977**, signs a management contract with **Aer Lingus Irish Airlines, Ltd.** A Douglas DC-9-52 and three Fokker F.27-200s acquired from the assets of the dead multinational are placed on regional and domestic routes.

Two Boeing 707-321s are leased from **British Midland Airways, Ltd.** and begin international service on February 4 on the Nairobi–London route via Athens, Rome, and Frankfurt. Chairman Eliud Mathu and **Aer Lingus Irish Airlines, Ltd.** Managing Director Donald Downing, serving as an advisor, place orders for two Boeing 720Bs. During the peak summer safari season, a B-747-148 is chartered from the Irish flag carrier.

Three used B-707-351Bs Stratoliners previously flown by **Northwest Airlines** and a used B-720-047B, first flown by the U.S. carrier **Western Airlines**, are delivered in late spring and early summer **1978**, allowing development of additional routes and frequencies in Africa and the Middle East.

Enplanements total 356,894.

In **1979**, the fleet comprises 3 owned B-707-351Bs, 1 B-720B, 1 DC-9-52, and 3 F.27-200s. **Air Madagascar, S.A.** begins to pay the company royalties for its Nairobi segment of a longer African route.

Freight traffic declines 11% to 22.4 million FTKs, but passenger boardings rise 5% to 375,678.

Routes are opened to Athens, Rome, and Zurich in **1980**. The summer safari Jumbojet service is now turned over to **KLM (Royal Dutch Airlines, N.V.)** for operation.

Bookings accelerate to 402,566.

The workforce stands at 2,600 and 1 F.27-200 is sold in **1981**. Richard Nyaga becomes managing director.

Passenger boardings accelerate 1.7% to 409,520 and a total of 16.5 million FTKs are operated.

Nonstop Nairobi to Bombay B-707-351B service is inaugurated in **1982**. Cargo service receives greater emphasis, particularly the transport of perishables to the Mideast. Government subsidy ceases in October. Enplanements drop to 392,476 as the effects of the world recession are felt.

The employee population grows 1.7% in **1983** to 2,594. Tanzania operations commence and the government requests that a third-level service be initiated. Late in the year, the company proposes to the Ministry of Transport the acquisition of two DC-8-71s with which to replace the aging Stratoliners.

Freight soars 29.4% to 30.31 million FTKs and passenger traffic rebounds, growing 8.3% to 428,195 passengers carried.

Ninety-four employees are laid off in **1984**, a 3.7% dip. Routes are extended to Lilongwe, Dar es Salaam, Kigali, and Bujumbura. Orders are placed for two Airbus Industrie A310-304s, rather than the DC-8s previously considered.

Cargo grows 4% to 31.45 million FTKs and passenger boardings rise 15% to 502,377.

The employee population is increased in **1985** by 300. Leo Odera succeeds Richard Nyagah as managing director in September, and in November, four-times-per-week European service is begun with an Airbus A310-203 leased from **Condor Flugdienst, GmbH**. Due to a shortage of foreign exchange, foreign airlines cannot repatriate income earned in Zambia, where Kenya Airways now has \$3.5 million frozen.

Freight for the year dips 3% to 30.36 million FTKs, but passenger bookings jump 11% to 559,997.

In March **1986**, service is launched to Kilimanjaro. Two A310-304s are delivered, one each in May and September; christened *Nyayo Star* and *Harambee Star*, both are placed on the European routes, allowing return of the one leased from the German charter carrier. These are the first Dash-300s flown by any African carrier.

Enplanements for the year total 442,209.

Domestic destinations served in **1987** include Kilimanjaro, Mombasa, Malindi, Kisumu, and Nairobi. From the capital, flights are undertaken to Cairo, Athens, London, Rome, Frankfurt, Paris, Dubai, Khartoum, Jeddah, Addis Ababa, the Seychelles, Mogadishu, Entebbe, Dar es Salaam, Harare, and Lusaka. The company's Stratoliners are now re-modeled into B-707Fs.

Through September, the 2,745-employee carrier books 485,943 passengers, a boost of 9%. In October, following the suspension of General Manager Fred Neto and other senior officials, Executive Chairman Leo Odera is forced to take over day-to-day management activities, with David Kagari placed temporarily in charge of commercial services. Joseph Nyagah is appointed managing director at year's end.

Flight 650, an F.27-200 with 4 crew and 39 passengers arriving from Nairobi on July 10, **1988**, approaches its destination too fast, lands gear up, and skids for 600 m.; although the wreck must be written off, there are no fatalities.

Half-year figures only are reported, and show that a total of 334,436 passengers are carried, a 9.4% increase of the same period a year earlier. Freight is also up, by 14%, to 29.24 FTKs.

The first two of an order for three Fokker 50s arrive in November; christened *Simba* and *Chui*, they replace F.27-200s on routes from Nairobi to Mombasa 10 times per day, Malindi twice daily, and Kisumu 12 times per week.

Operations continue apace in **1989**. In February, the company's DC-9-32 is put up for sale and a DC-8-71 is leased to finish the winter season.

On June 30, it is reported that the cumulative loss is \$40.8 million. An economy move begins: 1,000 temporary employees are laid off and frequencies to Addis Ababa, Entebbe, Kigali, and Kisumu are reduced.

Upon departure from Addis Ababa on a July 11 service to Bole, a B-707-351B with 10 crew and 66 passengers, is unable to retract its landing gear. Although the Stratoliner returns to its point of departure, the brakes fail upon touchdown, causing the aircraft to overrun a wet runway. There are no fatalities.

The first of three ordered B-757-23As arrives in November and a third A310-304, named *Uhuru Star*, also arrives under charter from ILFC, allowing retirement of the two B-720-047Bs to commence.

Enplanements for the year double to 760,461. Although there is an operating profit of \$13.5 million, the net loss is \$12.7 million.

In **1990**, the 2,860-employee flag carrier operates 2 owned and 1 leased A310-304s and 2 B-757-23As. The first of the latter, received late the previous year and christened *Jamhuri Star*, enters service in January, the same month during which **Swissair, A.G.** begins a two-year assistance contract. The European line will provide help in reorganization and support in the areas of flight operations, information technology, passenger service, and marketing.

In May, Tel Aviv is added as a stop on one of the flights from Nairobi to London.

By the end of the year, the 707/720 fleet and last F.27-200 are largely phased out and a lease with the GPA Group on a DC-8-71 is cancelled. The third Fokker 50, *Twiga*, arrives in December.

Enplanements rise 7.5% to 643,398 and freight climbs 25.2% to 44.49 million FTKs.

In cooperation with **South African Airways (Pty.), Ltd.**, weekly B-757-23A roundtrip flights commence in January **1991** between Nairobi and Johannesburg. The reciprocal service had been delayed throughout the previous year as a result of conflicting presentations made to Kenyan President Daniel Moi by African National Congress Deputy President Nelson Mandela and South African Foreign Minister Pik Botha.

It is announced in February that the carrier will receive \$1.6 million in UN Development Project funds over the next four years; the ICAO-administered financing will allow for the upgrading of procedures and training of personnel.

Frequency on the new Johannesburg route becomes daily in April, the same month during which the carrier inaugurates twice-weekly service from Nairobi to Bangkok via Bombay.

In July, Philip Ndegwa, a prominent local businessman and former governor of the Central Bank of Kenya, becomes chairman and David Namu is named chief general or administrative manager, reporting to Ndegwa. These two men are mandated by the government to turn the company around.

A two-year assistance agreement with **Swissair, A.G.** concludes in December. With the onset of recession and negative numbers, traffic figures are no longer released.

In **1992**, the fleet is altered again. The former **Western Airlines** B-720B is stored in January and two B-757-23As are withdrawn and replaced by two leased B-737-266As, one of which receives the name *Umoja Star*, beginning in February. These are placed into service over regional routes to Dar es Salaam, Entebbe, and Zanzibar.

Although not an airline man himself, Ndegwa, unlike his predecessors, is convinced that he needs advice from those who are. To that end, a contract is signed, also in February, with Speedwing Consulting, a subsidiary of **British Airways, Ltd. (2)**.

The Speedwing team that comes out from London is headed by BA executive Brian Davies; during the summer and fall he stresses to Ndegwa that one of Kenya Airways' greatest requirements is for top-flight managers. The chairman asks the consultant if he would consider taking up the challenge himself; Davies agrees and is appointed managing director in November.

A \$30-million loss is reported for the year.

In **1993**, Davies oversees a workforce of 2,624 and a fleet of 3 A310-304s, 1 B-707-351B/F, 2 leased B-737-266As, and 3 Fokker 50s. Uneconomical charter flights to Paris, along with scheduled services to Athens, are eliminated during the first quarter. In June, a day-long corporate workshop is held for all 2,700 employees. It is announced that, after years of losses now equal to \$800 million, the first quarterly profit since 1977, \$6.9 million, has been earned.

More hard work lies ahead. Jomo Kenyatta Airport at Nairobi is turned into a hub operation, feeding passengers from London and other European points to domestic and regional airports. Thrice-weekly roundtrips are inaugurated from Nairobi to Harare via Lilongwe.

Much of **1994** is spent in preparing the airline for privatization in late 1995. In the spring, the Fokker 50s are assigned the additional responsibility of providing backup for the B-737-266As on regional services. A contract is signed with International Finance Corporation (IFC) and one of its executives, Michael Tiller, arrives to oversee the privatization process.

Late in the year, the government assumes the carrier's \$89.6 million of debt arrears and makes plans to convert \$31.3 million in loans into equity. Plans are also made to acquire four A340-300s early in the coming year.

A total of 1.8 million passengers are flown during the 12 months and a \$16.9 million profit is recorded.

Work towards privatization continues throughout 1995. A request for proposals is made of the world's major airline groups, with negotiations set to start as early as August.

On March 26, the airline is listed on the Nairobi stock exchange. Pilots, meanwhile, win a court case against the airline and are ordered to receive a 90% retroactive salary increase.

In late fall, **KLM (Royal Dutch Airlines, N.V.)** expresses interest in purchasing shareholding. Thrice-weekly Nairobi to Amsterdam roundtrips commence in November.

After several months of discussion, the Kenya government approves the KLM partnership plan in mid-December.

Enplanements total 800,000 and financial data is posted: operating revenues are \$165 million and a net gain of \$16 million is realized.

KLM (Royal Dutch Airlines, N.V.) purchases a \$26 million, 26% stake in the company on March 1, 1996. Although the Dutch carrier does not seek a management contract, it does agree to provide up to \$3 million worth of helpful services in kind, including new computer systems. This sale is followed on April 6 by implementation of additional public offerings, which allow shareholding to be held by Kenya Airways staff (3%), overseas institutions (14%), and local institutions or individuals (34%).

By late April, the government's interest in the first national carrier in Africa to be privatized is only 23%. The airline's board is changed, with two KLM officials receiving seats. KLM agrees to train all Kenya Airways pilots.

On June 3, Kenya Airways is successfully launched on the Nairobi stock exchange.

Meanwhile, a marketing alliance is formalized with **KLM (Royal Dutch Airlines, N.V.)** that calls for joint service on routes from Amsterdam to Nairobi and code-sharing on Kenya Airways flights out of Nairobi to the rest of Africa.

Services to Frankfurt, Zurich, Copenhagen, and Stockholm are withdrawn and ticket offices are closed in New York, Tokyo, Los Angeles, and Hong Kong.

Under its new alliance with KLM, Kenya Airways, beginning in November, operates an A310-304 replacement service from Nairobi to Amsterdam; in effect, one of Kenya's London flights travels by way of Amsterdam, allowing one of KLM's four weekly MD-11 services to be cut.

Orders are placed at year's end for two B-737-3U8s with which to replace the B-737-266As.

Enplanements are 794,067. Operating income is \$178 million and lower costs allow a net profit of \$16 million to be posted, despite the route closures.

Employment stands at 2,350 in 1997. A310-304 dual-designator return service with **KLM (Royal Dutch Airlines, N.V.)** from Nairobi to Amsterdam begins. At this point, a third B-737-3U8 is ordered.

In late May, a standoff arises between the company and **Aero Zambia, S.A.** over flight schedules and landing rights between the two countries. On June 8, Zambian President Chiluba meets with a Kenyan government delegation led by Transport and Communications Minister Wilson Ayah and thereafter orders a lifting of suspensions imposed upon Kenya flights to Lusaka.

Pointing out that Kenya Airways has not, however, acted in good faith with Aero Zambia to find a more equitable mode of sharing passenger traffic, Zambian Transport Minister Suresh Desai and Aero Zambia Managing Director Yowondwossen Mengishu announce on June 11 that differences have not been resolved nor landing rights reinstated.

Toward the end of the year, a code-sharing agreement is signed with Mombasa-based **Eagle Aviation, Ltd.**

Although customer bookings decline 1% to 786,205, freight traffic accelerates 6.3% to 892.9 million FTKs. Net profit totals \$21.4 million.

The pact with **Eagle Aviation, Ltd.** begins in early 1998. One Eagle Avions de Transport Regional ATR42-320, operating under Kenya Airways' "KQ" flight code, offers increased frequencies to Malindi, Kisumu, and Eldoret from both Nairobi and Mombasa. During the spring and summer, plans are discussed for the initiation of additional

services to the domestic communities of Garissa, Lodwar, Rudolf, and Lamu Island.

Discussions are also held with the government of Tanzania concerning the introduction of additional services to that nation once a new bilateral air agreement is signed. Flights would be started with the second Eagle ATR to Arusha and Kilimanjaro from Nairobi and to Mwanza on Lake Victoria from Kisumu.

Also in the first quarter, Kenya Airways becomes an all-jet operator. The last three Fokker 50s are leased to the Spanish carrier **Air Nostrum, S.A.** and the premier unit of two new B-737-3U8s is delivered during the first week of April and enters service over the company's regional routes later in the month.

With great ceremony, a twice-weekly A310-304 return service is opened from Nairobi to Lagos on April 29. The new route allows the company to complete a plan to connect the four major hubs in Africa—Cairo, Lagos, Johannesburg, and Nairobi.

A code-sharing agreement is signed with **Alitalia, S.p.A.** on May 8 for twice-weekly, dual-designator return flights over the route between Nairobi and Rome.

Authority is granted in May and employed to launch twice-weekly roundtrips from Nairobi up to Cairo via Khartoum. A third weekly roundtrip to Lagos is launched at the end of the month with a B-737-3U8.

In addition, Kenya Airways, with **South African Airways (Pty.), Ltd.**, has become one of the two African airlines seeking an equity stake in **Uganda Airways Corporation**. Ugandan officials reveal at the start of June that Kenya Airways has failed a prequalification review for participation in the divestiture program of UAC.

The second B-737-3U8 arrives at the beginning of June. On June 6, Managing Director Davis and 50 children from the King Baudouin Children's Home place the new aircraft into service on a flight from Nairobi to Mombasa. Also during June, twice-weekly B-737-3U8 return flights are started between Nairobi and Douala, Cameroon.

At the end of the year, plans are made for receipt of the third B-737-3U8 early in the new year.

Passenger boardings this year accelerate 22% to 1.05 million.

Airline employment in 1999 stands at 2,775, an 18.1% increase.

In an investigative report published in the Nairobi *Sunday Standard* on January 3, Managing Director Davies is alleged to have established, without the approval of the airline's board of directors, Simba Finance, Ltd., a private firm. Simba, in turn, has borrowed \$130 million from Kenya Airways to lease four B-737-300s and two Cessna lightplanes. The U.S. Export-Import Bank is found to be a major shareholder in Simba and has structured the loan and guaranteed the leases. Although the article does not specifically say so, it all but accuses Davies of some kind of wrongdoing.

The news for the managing director only gets worse the next day. While taxiing to the terminal after a service from Nairobi on January 4, thieves wave down and force a B-737-3U8 to halt on the Lagos, Nigeria, runway. The passengers are robbed, several pieces of luggage are removed from the cargo hold, and the perpetrators make a clean getaway. The event makes headlines in the January 6 issue of *The International Herald Tribune*.

Leaders of East Africa end their 2 1/2-year embargo of Burundi on January 26; Kenya Airways, which has honored the sanctions since their imposition in July 1996, resumes flights to Bujumbura on February 1.

With the beginning of the new schedule on March 28, European services are increased to 25 weekly flights, with additional frequencies added to Abidjan, Dubai, Entebbe, Dar es Salaam, and Zanzibar. City-pair connections are increased by 73% over what they had been at the beginning of the year.

Former Managing Director Nyaga is reappointed to his old post on April 15, effective upon the conclusion of Managing Director Davies' contract on July 31. Chairman Isaac Omolo Okero reports the change as being made under amiable conditions and that Nyaga and Davies will work closely together over the next three months to secure a smooth transition.

Martin Wahome, a human resources manager with the local Block Hotel, is honored in special Nairobi ceremonies on April 27th as the airline's one-millionth passenger.

Under the code-sharing agreement with **Eagle Aviation, Ltd.**, an Eagle ATR42-320 initiates new twice-daily nonstop Interlink roundtrips on May 1 between Nairobi and Lokichoggio.

In a ceremony keynoted by Kenyan transport and telecommunications minister William ole Ntimama, Kenya Airways and **KLM: Royal Dutch Airlines, N.V.** open their first joint sales office at a facility in Barclays Plaza, Nairobi, on May 13.

Interlink services are expanded on June 1 with new flights from Nairobi to Malindi, Lamu, Kisumu, and Eldoret.

The carrier's three Fokker 50s, out on lease to **Air Nostrum, Ltd.**, are withdrawn on June 17 and are sold to the Spanish airline.

On August 18, Managing Director Nyaga announces that his board of directors has just approved a new cost-cutting plan designed to save \$4.72 million during the remainder of the year. The package includes instructions in the areas of fuel management, route and crew rationalization, and more cost-efficient purchasing.

In September, a cost-cutting program, designed to save \$4.7 million, is put into place.

Passenger boardings surge 20% to 435,000 while cargo jumps 28% to 24.06 million FTKs. Net gain climbs to \$38.09 million.

Airline employment at the beginning of 2000 stands at 2,780, a 0.1% increase over the previous 12 months.

An agreement is signed with **Air Botswana** on January 26, calling for the resumption of service between Gaborone and Nairobi within several months. On January 28, the carrier announces that it will invest \$750 million over the next five years to modernize its fleet with new Boeing equipment. The three A310-304s will be replaced with B-767-300s.

Just after an unusually long takeoff from Abidjan on its January 30 return service to Nairobi via Lagos, Flight 431, the A310-304 *Harambee Star* with 11 crew and 158 passengers, stays low and stalls, crashing 1.5 km offshore into the sea. There are no survivors. Confusion surrounds the initial rescue effort and the investigation thereafter will be described as "particularly secretive." (*Flight International*, January 23, 2001).

The Boeing order announced in late January is officially placed on February 15.

On February 16, a wet-leased B-767-306ER arrives from **KLM (Royal Dutch Airlines, N.V.)** to replace the lost A310-304.

The cockpit voice recorder is recovered by divers on February 24 and sent to Ottawa, Canada, for analysis.

In March, a wholly owned subsidiary, **Kenya Flamingo Airways, Ltd.**, is established to operate the Kenya Airlink feeder services now provided under contract by **Eagle Aviation, Ltd.**

A new service is introduced on May 22 between Nairobi and Eldoret. Also in May, weekly return frequencies from Nairobi to Johannesburg are doubled from three to six. Previously flown by **Emirates Airlines**, a fourth A310, a Dash-308, arrives on May 25 under a 15-month lease from the Airbus Industrie Financial Services (AIFS).

The Nairobi to Johannesburg service becomes daily on June 1. Due to an increase in demand, the B-767-306ER wet-leased from **KLM (Royal Dutch Airlines, N.V.)** for use on the code-shared route between Amsterdam and Nairobi is replaced with a larger MD-11 on July 21.

It is reported on August 8 that experts at Transport Canada have found the black box recovered from the January 30 crash defective and thus will not reveal any early clues as to the cause of the disaster. A B-737-3U8 is severely damaged as the result of a hard landing in crosswinds at Khartoum on September 23.

On November 6, in an effort to promote trade in the countries forming the newly created Common Markets for Eastern and Southern Africa, Kenya Airways reduces fares for its daily Dar es Salaam-Nairobi-Harare flights from \$1,020 to \$450. It also introduces reduced-fare daily roundtrips from Dar es Salaam-Nairobi-Dubai and Zanzibar-Nairobi-Dubai.

On November 13, a memorandum of understanding is signed with **KLM (Royal Dutch Airlines, N.V.)** and **Martinair Holland, N.V.** for the establishment of a joint sales and service organization in Nairobi. When the organization comes into being in 2001, it will employ Nairobi Airport as a hub from which to fly leased freighters on intra-African services. Sales and services in the Kenyan and African cargo markets will also be handled.

A strategic marketing and code-sharing agreement is finalized with **Air Malawi, Ltd.** on November 20. The pact formalizes dual-designator activities between the two airlines that have been occurring for some time.

KENYA FLAMINGO AIRWAYS, LTD.: Kenya Airways, Ltd., Barclays Plaza, 5th Floor, Loita Street, P.O. Box 41010, Nairobi, Kenya; Phone 254 (2) 822288; Fax 254 (2) 336254; <http://www.kenyaflamingo.com>; Year Founded 2000. Kenya Flamingo is set up in March 2000 as a wholly owned subsidiary of **Kenya Airways, Ltd.** to take over the Kenya Interlink feeder routes currently operated under contract by **Eagle Aviation, Ltd.** Two SAAB 340Bs, one of which is christened *Naivasha*, are leased from SAAB Aircraft Leasing.

With delivery of the Swedish-made turboprops, the new regional beginnings operations on June 30. SAAB 340B roundtrips begin on December 8 from Nairobi to Eldoret.

KESTREL INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1970-1972). Peter Anderson and George Corson form KIAL at Lydd Airport in October 1970. Equipping it with a single Douglas DC-3, christened the *Maid of Kent*, the partners begin revenue operations late in the month. When Lydd Airport proves unsatisfactory, the company is transferred to Castle Donington Airport on February 28, 1971. From here, the company operates a variety of ad hoc charters, many of which are equipment haulage for Ford Motor Company to Antwerp and Cologne.

Early in 1972, the company, planning to enter the inclusive-tour business, is renamed KIAL. On March 1, a former **British Midland Airways, Ltd.** Viscount 815 is purchased. The machine not only flies tours to Palma for Tristar Travel, but also replacement services in the U.K. for both **British Midland Airways, Ltd.** and **Dan-Air/Dan Air Services, Ltd.**

During the dock strike of July and August, the company's two aircraft fly stranded shipments around the country, including cigarettes from Southend to Belfast. The *Maid of Kent* is sold in August. Following the September 23 conclusion of the **Dan-Air/Dan Air Services, Ltd.** replacement service contract, it proves difficult to find charters for the big Viscount. On November 1, KIAL ceases operations and returns the unpaid for Viscount to its previous owner.

KETCHUM AIR SERVICE: P.O. Box 190588, Anchorage, Alaska 99519, United States; Phone (907) 243-5525; Fax (907) 243-8311; <http://www.ketchumair.com>; Code K3; Year Founded 1966. Former USAF pilot Lindley H. "Ketch" Ketchum brings his wife Marguerite and their children on a tour of Alaska in 1961 and so taken are the couple that they elect to make the state their home. In 1962, the management of an air taxi service at Anchorage becomes available and the family takes it over. In 1965, Ketchum Air Service is incorporated and continues to offer statewide charter and contract service floatplane flights from Anchorage's Lake Hood. Craig Ketchum joins the staff as a pilot during the 1970s, helping his father fly the aircraft and manage the concern. The most traumatic event of the period is the loss, on September 12, 1975, of a de Havilland DHC-2 Beaver and its occupants in a crash near Kijik.

After years of flying sportsmen and rural residents to backcountry locations, the Ketchums notice a change in the Alaska bush flying business in the early 1980s. As more summer visitors arrive to enjoy nature's wonders, more scenic tour flights are provided. By mid-decade, the company's fleet has grown to comprise 1 Cessna 185, 2 Cessna 206s, and 2 Beavers.

Scheduled services to and between Anchorage, South Central, Cordova, Valdez, and Prince William Sound are started during the late **1980s**. Increased activity, particularly over Prince William Sound, necessitates the opening of branch offices in Valdez and Cordova in **1991**. In **1992–1994**, the 10-employee company operation operates 3 Cessna 206s, 4 Beavers, 3 DHC-3 Otters, and 1 DHC-3 Turbo Otter.

During the mid-**1990s**, floatplane tours over Wrangell–St. Elias National Park and the Columbia Glacier become very popular. The number of sport fishing and hunting trips also increases, with rental houseboats added to the sport-fishing program. In **1995–1996**, two de Havilland DHC-6-300 Twin Otters are added and Craig Ketchum and his wife, Bertsie, take over the business. In the spring of **1997**, the company is taken over by its longtime rival **Taquan Air Services**, but is allowed to continue operations under its own name.

KEY AIRLINES (1): United States (1969–1988). Ogden, Utah-based **Thunderbird Airlines** is renamed Key Airlines on January 1, **1969**. Cessna smallplane operations to Salt Lake City and Logan are continued until August **1975**, when the company is purchased by Johns-Manville Company and merged with another new acquisition, Gooding, Idaho-based **Sun Valley Airlines** (formerly **Janss Airways**), to create the 120-employee **Sun Valley Key Airlines**.

The amalgamated airline is given a large-aircraft exemption by the CAB and begins operation of 2 Convair CV-440s, 3 de Havilland Canada DHC-6 Twin Otters, and 6 Piper PA-31-310 Navajos over a route from Salt Lake City to Boise via Sun Valley. In November, the name reverts to Key Airlines.

Enplanements total 44,888, a 14% rise over Key's bookings the previous year.

A warm winter and lack of snow at ski resorts in its service area create traffic difficulties for Key in **1976**.

Passenger boardings decline 9.4% to 40,878. Enplanements decline sharply in **1977**, falling to 18,569.

The severe winter of **1978**, however, results in a sharp traffic boom upward as the number of passengers boarded climbs 63.7% to 51,154. Costs of fuel and inflation in **1979** lead to the carrier's end in early **1980**.

KEY AIRLINES (2): United States (1983–1993). The Salt Lake City division of **Tiger Air**, a subsidiary of Tiger International Corporation, is purchased by the Key Holding Group in **1983**. The new subsidiary's corporate identity is changed to Key Airlines and contract flights are undertaken for the Department of Defense to various U.S. destinations.

Worldwide charter authority is sought and obtained and charter and inclusive-tour flights commence in **1984**. Destinations visited include Florida, Mexico, and the Caribbean.

At this point, the workforce totals 200 and the fleet includes 4 chartered Boeing 727-22s, 1 B-727-51, 2 Convair CV-580s, 1 Cessna 421, 1 Cessna Conquest, 1 Cessna Cheyenne, 1 Bell 206L LongRanger, and 1 Bell 222.

Airline employment grows 20% in **1985** to 270 as 4 more leased B-727-100s, Dash-95s, join the fleet. Permission is sought for the introduction of scheduled services.

Meanwhile, the number of charter passengers flown totals 540,000.

The workforce is increased again in **1986**, up by 15.8% to 220. The scheduled permission is not received and in midyear the carrier is sold to **Presidential Airways**.

Operating under the colors of both airlines, the company transports a cumulative total of 675,000 passengers, a 25% boost. Revenues advance 32% to \$32 million.

In March **1987**, the company is sold to and becomes a wholly owned subsidiary of WorldCorp, the newly formed holding company that is also parent to **World Airways**.

Passenger boardings advance by 6.4% to 532,000 and revenues climb to \$48.2 million. Unhappily, expenses are higher than income and losses are suffered: \$1.4 million (operating) and \$1.79 million (net).

The four B-727-22s, three B-727-95s, and B-727-51 of the World subsidiary are able to maintain positive traffic levels in **1988**.

The number of passengers flown increases by 6% to 566,000. Revenues plunge 19.2% to \$38.94 million, expenses drop 13.3%, but still total \$43.03 million, and the operating loss deepens to \$4.08 million. The net loss swells to \$5.21 million.

Airline employment is increased by 18.5% in **1989** as the carrier enjoys a good year. A number of international charters are operated employing DC-10-30s leased from **World Airways**.

Passenger boardings move ahead by 13.9% to 644,454 and revenues increase 40.8% to \$54.82 million. Expenses jump 32.2% to \$56.89 million and halve the operating loss to \$2.06 million. Net loss, however, worsens to \$6.41 million.

The payroll swells 7.1% in **1990** to 254 and the fleet is increased by the addition of 2 B-727-228s. The principal passenger destinations continue to be Europe, the Caribbean, Florida, Las Vegas, Florida, Canada, and Mexico.

Customer bookings move ahead by 2.2% to 665,221 and revenues jump 25.2% to \$68.61 million. Expenses grow by 18.1% to \$67.18 million and allow an operating profit of \$2.72 million. The net loss improves to \$2.41 million.

The **World Airlines** sister carrier sees its company workforce cut 26% in **1991** to 188. The company joins with **American Trans Air** in mid-October to call into question the "nationality" of **Aerocancun, S.A. de C.V.**, which is owned by the Spanish Oasis International Group, S.A. in violation of the U.S.–Mexico air agreement. In December, Caribbean Connection charter flights commence from Savannah to St. Thomas.

The fleet's 10 aircraft transport a total of 442,000 passengers, a decline of 33%. Revenues fall 18.9% to \$55.66 million, expenses slip 14.9% to \$56.08 million, and the operating loss is \$420,000. The net loss surges to \$6.98 million.

In **1992**, President Thomas Kolfenbach oversees the same fleet and a workforce of 254. During February, scheduled rights are acquired from the DOT and twice-weekly roundtrip B-727-228 scheduled services commence on April 1 from Savannah to St. Thomas. Key flights from its other U.S. gateways at Atlanta, Baltimore, Boston, New York (JFK), and Philadelphia feed into the Savannah hub for connections.

Chicago (MDW) becomes a sixth gateway on May 17 as the other Caribbean points served with charters receive scheduled services: Aruba, St. Martin, Montego Bay, and Cancún. During the summer, scheduled flights are launched to Antigua, Cozumel, Curaçao, Nassau, and Freeport.

Through September, the last month data is supplied, the charter operator flies 294,182 passengers.

WorldCorp sells Key to a group of Savannah investors on February 2, **1993**; they, in turn, attempt to pass it to a new Florida airline **Skybus (2)**, which is unable to complete the takeover. As a result, Key files for Chapter XI bankruptcy protection on February 11 and begins to seek a new backer.

Key continues to operate charters until May 10, when operations cease and all aircraft are returned to their lessors. The Chapter XI status is converted to Chapter VII liquidation and all remaining assets are sold.

KEY AVIA (KLUICH AVIA): Russia (1994–1995). Key Avia is established at Samar in **1994** to offer domestic passenger and cargo charters. I. N. Kuznetsova is named general director and he launches revenue services with an unspecified number of Antonov An-2s and Ilyushin Il-76s. Flights cease in late **1995**.

KEY LIME AIR: 7625 South Peoria Street, Suite D-15, Englewood, Colorado 80112, United States; Phone (303) 619-6667; Fax (303) 768-8144; Year Founded 1998. Key Lime Air is established by Clifford D. Honeycutt at Englewood, Colorado, in **1998** to provide regional express and small cargo services. Revenue operations begin with a fleet that includes 5 Fairchild Metros, 5 Piper PA-31-310 Navajos, 1 Cessna 404 Titan, and 1 Learjet.

KEY WEST AIRLINES: United States (1980–1981). KWA is created at Boca Raton, Florida, in **1980** to provide daily roundtrip air taxi flights

to Miami via Fort Lauderdale. Cessna lightplane revenue flights are duly inaugurated, but in the face of the summer PATCO air traffic controllers' strike, cannot be maintained beyond September 1981.

KEYSTONE AIR SERVICE, LTD.: P.O. Box 2140, Swan River, Manitoba, R0L 1Z0, Canada; Phone (204) 734-9351; Fax (204) 734-9181; <http://www.keystoneair.mc.ca>; Year Founded 1985; Keystone is established at Swan River in 1985 to provide twice-daily roundtrip passenger flights to Winnipeg. Twice-daily return service is extended to Dauphin in 1989. In addition to regular flight service and aircraft maintenance, passenger charters are often operated on behalf of government employees, industry executives, sportsmen, and trades people to points in Northern Ontario, Manitoba, Saskatchewan, Alberta, Minnesota, and North Dakota.

Flights continue during the 1990s. A new base is occupied at St. Andrews, Manitoba, in 1998, followed by the opening of a new facility at Red Deer, Alberta, in December 1999. The fleet in 2000 includes 1 each Beech 99, Beech Super King Air 200, Piper PA-31-350 Navajo Chief-tain, and PA-34 Seneca.

KEYSTONE AIRLINE: United States (1936–1937). Keystone is organized at Philadelphia in the fall of 1936 to offer passenger and air express flights to New York City employing a Sikorsky S-38 amphibian. Revenue services commence in November. Without a mail subsidy or traffic in winter, the operation ceases in February 1937.

KEYSTONE AIRLINES: United States (1967–1977). In order to expedite the expansion of its local route network in 1969, Connellsville, Pennsylvania-based **Pitt Airlines** is renamed **Keystone Commuter**. Services are inaugurated beyond the Pittsburgh region to Wheeling, Akron, Erie, and other communities.

Operations continue apace over much of the next decade, during which time the company is renamed **Keystone Airlines** and the fleet is upgraded by the addition of several Beech 99s and Embraer EMB-110P1 Bandeirantes. Walter Christman purchases the company in September 1977 and renames it **Christman Air System**.

KEYSTONE COMMUTER. See **KEYSTONE AIRLINES**

KEYSTONE HELICOPTER CORPORATION: 1420 Phoenixville Pike, West Chester, Pennsylvania 19380, United States; Phone (610) 644-4430; Fax (610) 644-7681; <http://www.keystone-helicopter.com>; Year Founded 1953. KHC is established by Peter Wright at West Chester in 1953 to operate general rotary-wing support services. Examples of operations carried out over the next 40 years include executive charter, power line patrol, offshore oil rig shuttles, aerial crane flights in support of construction and logging, and air ambulance work. Helicopter manufacturers represented in the company fleet include Sikorsky, Bolkow, Bell, Hughes, and Aerospatiale.

By 1998–1999, Peter Wright Jr. is president and his concern has also become an authorized service center for all of the major helicopter types: Bell, Sikorsky, American Eurocopter, McDonnell Douglas, and their Al-lison and Turbomeca engines. The fleet now includes 12 Eurocopter BK-117s, 5 Sikorsky S-76s, and 1 Eurocopter SA365N2 Dauphin II.

In addition to its activities as an FAA and JAA approved repair service, Keystone in 2000 manages several corporate helicopters and eight air medical helicopter programs that collectively encompass over 17 twin-engine aircraft, their support, mechanics, and pilots. Keystone's current air-medical programs include: Allgeheny General Hospital's Life Flight, Bangor and Lewiston's Life Flight of Maine, Boston's Med Flight, Conemaugh's Med Star, Hahnemann's University Medevac, Lehigh Valley's University Medevac, Promedica's Promedica Air, and Robert Packer's Guthrie One.

In February, negotiations with Turbomeca Engine Corporation concerning the proposed sale of the Keystone Engine Division in West Chester, Pennsylvania, are broken off.

KEZHEMSK AIR ENTERPRISE: Kodinsk Airport, Krasnoyarsk, 563470, Russia; Phone 7 2 255 4; Year Founded 1992. KAE is set up at Krasnoyarsk in 1992 to operate feeder services and undertake aerial work with helicopters. By 2000, Director General V. M. Shurkin's fleet includes 5 Antonov An-2s, 4 Let L-410UVPs, and 3 Mil Mi-8s.

KHABAROVSK UNITED AIR DETACHMENT (KHABAROVSKI OAO). See **DAK FAR EASTERN AVIATION (KHABAROVSK UNITED AIR DETACHMENT); DALAVIA**

KHAKASIA AIRLINES: Abakan Airport, Abakan, Krasnoyarsk Region, 662608, Russia; Phone 7 (39022) 63061; Fax 7 (39022) 50588; Code BKN; Year Founded 1997. An associate of **Abakan Avia**, Abankanskoe Avioapredpriatie (Abakan Air Enterprise) is re-named in late 1997. Director General B. M. Kochetov continues non-scheduled operations over a domestic route network with 5 Antonov An-24s, 2 Let L-410s, 6 Tu-154Bs, plus 5 Mil Mi-8 and 10 Mi-2 helicopters.

Flights continue in 1998–2000, during which years Nikolai Merelkov becomes director general and the fixed-wing fleet is reduced to 4 each An-24RVs and Tu-154Bs.

KHALIFA AIRWAYS, S.A.: Lotissement Ben Haddadi, No. 61, Algiers, Algeria; Phone 0825-0825-01; <http://www.khalifaairways-dz.com>; Code K6; Year Founded 1999. Under the Algerian government's newly liberalized commercial aviation rules, the private Khalifa is established by Rafik Khalifa at Algiers in early 1999 as a subsidiary of his Khalifa Group, which also includes Khalifa Bank and KRG Pharm. Delivery of a Next Generation B-737-86N is taken on April 14 and the GECAS-owned Boeng is immediately subchartered to **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.S.)**.

On June 27, orders are placed for a pair of Airbus Industrie A310-324s that have come off lease with **Aeroflot Russian International Airlines (ARIA)**. The first unit, christened *Melissa*, arrives on July 7 and the second later in the summer. Employing the pair of leased Airbus Industrie A310-324s, revenue flights to Oran are launched on September 9. Links to Constantine, Lyon, Marseilles, and Paris follow.

On April 5, 2000, an A340-211 is leased from **Sabena Belgian World Airlines, S.A.** The aircraft will operate in full Savena livery with Khalifa titles.

During the spring, two A320-231s are chartered from **Transaer International Airlines, Ltd.** A frequent-flyer program is unveiled on June 1, as is a program giving discounts to customers of the Khalifa Bank. Roundtrips between Oran and Toulouse commence on June 2. A third leased A310-324 arrives on June 12 and is christened *Farida*.

The Transaer machines are returned in late July and early August.

Arrangements are completed with Avions de Transport Aerien on August 18 for the purchase of four new ATR72-520s and the charter of four used ATR42-320s.

Thrice-weekly nonstop roundtrips are inaugurated on August 25 between Algiers and Barcelona. At the same time, twice-weekly service from Algiers to Alicante via Oran is also begun.

By October 1, the carrier has received three ATR42-320s; the first ATR42-520 arrives on October 9.

The company's 18th and 19th domestic lines are initiated on October 22 with daily roundtrips from Algiers to Batna and to Tiaret.

The fourth ATR72-520 is received on November 23. The turboprops are employed on the 19 domestic routes to such points as Batna, Bejaia, El-Oued, Hassi-Messaoud, Ghardaia, Tiaret, and Tlemcen. It is anticipated that flights to Adrar, Bechar, Biskra, and Timimoun will start before year's end.

A lease is signed with AI Leasing on December 1 for the five-year charter of two more A310-324s. On December 29, arrangements are completed for the renewal of the lease of a GECAS-owned Next Generation B-737-86N, currently being operated by **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.S.)**. A new Classe Executive business-class

service is introduced at the end of the year as the company quietly takes over control its smaller rival, **Antinea Airlines, S.A.**

KHARKOV UNITED AIR DETACHMENT: Kharkov Airport, Kharkov, 310031, Ukraine; Phone 380 (0572) 520 163; Fax 380 (0572) 516-907; Year Founded 1992. KUAD is set up at Kharkov Airport in 1992 as the domestic charter subsidiary of **Air Ukraine**. A. N. Chekhov is CEO and he undertakes flights with a fleet of Antonov An-24s and Tupolev Tu-134As leased from the parent.

Service is maintained during the remainder of the decade. Enplanements in 1998 total 11,000, but are more than halved in 1999, falling to just 6,000.

Twenty people are employed by the carrier at the beginning of 2000.

KHAZAR AIRLINE: Turkmenbashi Airport, Turkmenbashi, 745007, Turkmenistan; Phone 7 (43222) 954 154; Fax 7 (43222) 75841; Code KHR; Year Founded 1992. Originally established at Krasnovodsk in May 1940 as an airport and charter operation, Khazar blossoms in 1992 when the city is renamed. **Turkmenistan Airlines** now acquires full shareholding and Mered Myhiyev is named director general. The mixed-purpose concern is outfitted with a fleet of 3 Antonov An-2s, 1 An-24, and 5 An-26s.

Flights, both scheduled and charter, are increased to regional, domestic, and international destinations. Airline employment totals 849 in 2000 and fleet now boasts 5 An-24Bs, 3 An-24RVs, and 5 An-26s.

KHMER AKAS (CAMBODIA AIR): Cambodia (1970–1975). In October 1970, American interests create **Air Alliance**, a **Continental Air Service** subsidiary (the U.S. major **Continental Airlines** is CAS parent) designed specifically to assist in the organization and operation of Phnom Penh-based Khmer Akas (Cambodia Air), which is publicly established by a Cambodian businessman.

Certified to provide both domestic and international scheduled passenger services, KA is outfitted with 6 Douglas DC-3s. Initial service from Battambang to Phnom Penh is inaugurated on October 21.

Operations continue apace in 1971–1975. Flying passenger routes to Saigon, Bangkok, and local destinations, often on behalf of the national flag carrier **Air Cambodge, S.A.**, Khmer is best known as a well-maintained cargo operator specializing in the transport of goods to small towns and provincial capitals. Although no aircraft are lost to hostile action, the company ceases operations after the fall of the country to the Khmer Rouge in April of the latter year.

KHORS AIR COMPANY: 16 Volinskaya St., Kiev, 252133, Ukraine; Phone 380 (044) 295-7731; Fax 380 (044) 294-9811; <http://www.khors.com.us>; Code X9; Year Founded 1990. Khors is set up at Kiev in 1990 to provide international, regional, and domestic charters, both passenger and all-cargo. Edward Samoilov is CEO and he begins revenue services with a fleet of 10 Ilyushin Il-76TDs, 4 Antonov An-12s, and 1 An-26.

While on final approach to Cafunfo, Angola, on a June 24, 1996, service from Luanda, the An-26 with eight crew experiences problems with its No. 1 engine. While attempting a missed approach procedure, the pilot loses control and the aircraft makes a belly landing near the runway and catches fire (four dead).

Flights continue during the remainder of the year and in 1997–1998. Regularly visited destinations include Dubai, Kiev, and Tivat.

Anatol Vissotchanski is director general in 1999 and his fleet includes 4 An-12s, 7 Il-76TDs, and 1 each An-24 and An-26. At the end of the year, a leased Douglas DC-9-51 is acquired.

In 2000, two An-12s are withdrawn. *AirlinersOnline.com* reports on July 27 that the concern is now offering passenger charters with a Tupolev Tu-154M.

KHORTITSA AIR: 77 Lenina Ave., Zaporozhye, 330600, Ukraine; Phone 612-646591; Fax 612-646693; Year Founded 1995. Khortitsa is

established in 1995 to provide passenger and cargo charters and flight training. By 2000, Director General Nikolay N. Zenkevich oversees 38 employees and the flights of 2 Antonov An-28s, 1 Let L-410, and 1 Yak 18T.

KHOSEBA SIC: 17 Tiernobulskaya Street, Kiev, 252115, Ukraine; Phone 380 (044) 444-1139; Fax 380 (044) 450-5942; Year Founded 1995. This all-cargo operator is established at Kiev in 1995. Regional and international flights commence with a single former-military Ilyushin Il-76MD.

KIBRIS TURK HAVA YALLARI, A.O. (CYPRUS TURKISH AIRLINES): Bedreddin Demirel Ave., Box 793, Yenishir, Nicosia, Turkish Republic of Northern Cyprus; Phone 357 (2) 520 83901; Fax 357 (2) 520 81462; http://www.nether.net/~timeflux/public_html/cta.html; Code YK; Year Founded 1974. Following the Cypriot war, Turkey gains control of the northern portion of the island and is the only nation to recognize the creation of the Turkish Republic of Northern Cyprus. Kibris Turk Hava Yallari, A.O. (KTHY) is organized at Ercan Airport near Lefkosa, Nicosia, on December 4, 1974 as an operational subsidiary of **THY Turkish Airlines (Turk Hava Yollari, A.O.)**. Equal shareholding is held by the airline and by the Cyprus Turkish Community Assembly Consolidated Improvements Fund.

Vedat Alpasian is named chairman/president and a bilateral air agreement, the carrier's only one, is signed with the Turkish government. A 99-employee workforce is recruited and a single leased Boeing 727-100 is provided to inaugurate scheduled passenger and cargo services in February 1975 to Istanbul, Ankara, and Adana.

Late in the decade, a B-720B is leased from **Aero America** and Izmir joins the route network of the national carrier of the Turkish Republic of Northern Cyprus. During the early 1980s, the fleet is increased by the addition of a Douglas DC-9-30. When necessary, the Turkish parent provides chartered B-707s.

An office is established in London for a British tour subsidiary, CTA Holidays, Ltd. and traffic figures are reported sporadically: 116,023 (1983), 154,510 (1986), and 233,287 (1988).

Meanwhile, permission to attend meetings of IATA, implied since 1974, is formally withdrawn in 1987. Enplanements in 1989 total 256,973. Revenues are \$16 million, expenses are \$13 million, and a \$2.5-million profit is generated.

The route structure does not change into the 1990s; however, a B-727-2F2A, painted in Cypriot colors, is purchased from **THY Turkish Airlines (Turk Hava Yollari, A.O.)** in the spring of 1990 as capitalization reaches \$2.4 million. Erol K. Andac becomes president in 1992, with Yaljn Erisik as managing director. In 1993, the company owns three B-727-2F2As, leasing added capacity as needed from its parent. Airline employment stands at 269 and destinations visited include Istanbul, Ankara, Adana, Izmir, Antalya, and London.

Operations continue apace in 1994–1995. During the latter year, an Airbus Industrie A310-203 is acquired, replacing one of the B-727-2F2As.

The fleet in 1996 is increased by the addition of a A310-304. Orders are placed for three McDonnell Douglas MD-90-30s. On March 8, a pro-Chechen Turkish waiter, hoping to win sympathy for the Chechen revolt in Russia, hijacks a Boeing trimotor with 109 aboard to Munich; on the ground in Germany, he quickly releases his hostages, gives himself up, and is arrested.

The first of three MD-90-30s is delivered in February 1997, wearing a black-and-white livery and billboard-sized “KTHY” titles. When the remainder of the order is delivered, the last two B-727-2F2As are returned to **THY Turkish Airlines (Turk Hava Yollari, A.O.)**.

Flights continue in 1998–1999. During these years, Umit Utku becomes CEO, two Next Generation B-737-800s are ordered, and the workforce totals 269. Three B-727-2F2As and a B-727-228A are operated.

The first of two chartered Next Generation B-737-8S3s is delivered by Sunrock Aircraft Corporation on April 20, 2000, and is christened

Guzel Yurt. The second arrives the next day and orders remain outstanding for two others. When all of the new aircraft are on hand, they will replace the remaining B-727s on holiday charter flights coming into Turkish-controlled North Cyprus from Turkey, Germany, Israel, and the U.K.

KIEV UNITED AIR DETACHMENT: 77, Vozdukhoflotski Prospect, Kiev, 252036, Ukraine; Phone 380 (044) 276-8128; Year Founded 1994. KUAD is established at Kiev in early 1994 to offer domestic passenger and cargo charters. G. V. Fedchenko is CEO and he begins revenue flights with a fleet made up of an unspecified number of Antonov An-24s and An-2s, plus several Let 410s and Yakovlev Yak-40s.

A chartered An-26 with seven crew is shot down near Bihac, in Bosnia-Herzegovina, on July 27; the aircraft crashes in a minefield and all aboard are killed.

Although operations are understood to continue during the remainder of the decade, exact information is unavailable.

KINAIR CARGO, S.A.: Zaire (1984–1988). Kinair is established at Kinshasa in 1984 to offer regional and domestic cargo charters with one each Douglas C-54D (military DC-3) and a swing-tail DC-4. Operations continue without fanfare until January 7, 1987, when the C-54D loses an engine and is damaged beyond repair.

The company is able to continue until August 23, 1988, when the swing-tail DC-4 with five crew crashes at M'Bamou Island, Zaire; there are no survivors.

KING AIRCHARTERS: Lawrence Municipal Airport, North Andover, Massachusetts 01845, United States; Phone (978) 688-6888; Fax (978) 682-1444; <http://www.800aircharter.com>; Year Founded 1994. King is set up at North Andover in 1994 to provide executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean. Within six years, the company has two bases.

An IAI Westwind II and a Piper PA-42 Cheyenne 400LS are flown from the Massachusetts facility while a second Westwind II is stationed at Indianapolis.

KING AIRLINES: United States (1965–1979). The Wichita Falls, Texas-based FBO King Flight Service establishes a scheduled airline division in January 1965 to provide scheduled passenger and cargo services to Abilene and Dallas. Employing a Beech 18 and a de Havilland DH 114 Heron, King inaugurates daily roundtrips on February 18; these are maintained until May 1971.

KING ISLAND AIRLINES (PTY.), LTD.: Building 35, End of First Street, Moorabbin Airport, Mentone, Victoria, 3194, Australia; Phone 61 (3) 9580 3777; Fax 61 (3) 9580 7361; Code KG; Year Founded 1990. Former Flinders Island Airways (Pty.), Ltd. officials William Patterson and W. G. Saunders form King Island Airways (Pty.), Ltd. at Mentone, Victoria in 1990 to provide scheduled services from Melbourne to King Island and other regional destinations. Saunders becomes general manager and the start-up fleet comprises 3 Piper PA-31-350 Navajo Chieftains.

Patterson becomes general manager in 1993 and oversees flights by 5 Navajo Chieftains. Frequencies to Melbourne total three per day in 1994–1995. Although the route network remains unchanged in 1996, the fleet is increased by the addition of an Embraer EMB-110 Bandeirante. Twice-daily roundtrips from King Island and Melbourne continue to be offered in 1997–1999.

According to Geoff Ayton from King Island, Lee Falkner is in charge of the airline in 2000.

KING SOLOMON AIRWAYS (PTY.), LTD.: Cairns International Airport, Cairns, Australia; Phone 61 (7) 4031 3372; Fax 61 (7) 4031 3272; <http://www.islandshotels.com.au/KSAirways/KSA.html>; Year

Founded 1998. Cairns-based KSA is established in the spring of 1998 as a division of Islands Hotels. Employing a remodeled Convair CV-580, the single-ship carrier launches daily revenue flights to Honiara and Gizo, Guadalcanal, on May 22.

The fate of the concern during the Solomons political unrest in June 2000 is unknown.

KINGDOM OF LIBYA AIRLINES: Libya (1964–1969). Taking over from Libavia and United Libyan Airlines, Kingdom of Libya Airlines is formed as the state carrier in September 1964. Hashem el Abbar is named chairman and a workforce of 260 is assembled.

Initial international routes are flown by 2 Sud Est SE-210 Caravelle VIRs, beginning in August 1965. Roundtrip frequencies are offered from Tripoli to Rome seven times a week, with Paris added as a stop twice weekly and weekly from Tripoli to London.

Also during the summer, roundtrip Caravelle VIR frequencies are offered 16 times a week from Tripoli to Benghazi. To ensure the route's viability, the government requires that no other national airlines operate over it.

A support contract is signed with ATI (*Aero Transporti Italiani, S.p.A.*) in March 1966. Under its terms, the Italian independent airline leases KLA a pair of Fokker F.27-200s. A Gates Learjet 23 is purchased to handle executive and VIP travel.

Other international airlines also provide the company assistance under contract and send executives and experts to Libyan headquarters at Tripoli. KLM (*Royal Dutch Airlines, N.V.*) dispatches a group to operate the carrier's sales and reservations services; communications, finances, and traffic research is handled by a team from British Overseas Airways Corporation (BOAC), while Air France loans aircraft crews and offers technical assistance.

During 1967, an order is placed for another Caravelle VIR that will be employed to handle new routes to Malta, Athens, Beirut, and Cairo. The chartered Fokkers operate over the route from Tripoli to Benghazi, as well as to Djerba, Ghadames, Marsa El Brega, Al Bayda, and Tubruq. A new route from Tripoli to Sabhah is started.

Trans World Airlines (TWA) undertakes a productivity study for the airline in 1968, which recommends that the carrier reequip with new aircraft.

In 1969, two owned Friendships replace the leased examples on domestic routes. Following a coup against King Idris led by Col. Muammar Qaddafi, the government changes the airline's name to Libyan Arab Airlines.

KING'S FLYING SERVICE (1). See KING'S SKYLINE

KING'S FLYING SERVICE (2): United States (1986–1988). KFS is set up at the Alaskan community of South Natnek in the spring of 1986 to provide scheduled passenger and cargo commuter flights to local communities and bush destinations. Employing Piper lightplanes and a de Havilland Canada DHC-2 Beaver, King's inaugurates revenue flights in May linking the company's base with King Salmon, Egegik, Pilot Point, Levelock, Igiugig.

Operations continue apace until KFS goes out of business in August 1988.

KING'S SKYLINE: United States (1968–1969). The FBO and charter operator King's Flying Service (1), based at Olathe, Kansas, sets up a scheduled airline division in 1968. Employing a Beech 18, plus Piper and Cessna lightplanes, the new subsidiary introduces daily passenger and cargo frequencies linking the company's base with Kansas City, Hutchinson, and small communities in northeast Kansas. The service ends within a year.

KIRGIZSTAN AIRLINES (KYRGYSTAN ABA YOLDORU). See KYRGYSTAN AIRLINES (KYRGYSTAN ABA YOLDORU NATIONAL AIRLINE)

KIROV AIR ENTERPRISE (KIROVSKOE AP). *See KIROV AIRLINES*

KIROV AIRLINES: Kirov Airport, 610009, Russia; Phone 7 (8832) 637 632; Fax 7 (8832) 696 600; Code KTA; Year Founded 1993. The Kirov division of **Aeroflot Soviet Airlines** is reformed as an independent joint-stock company in 1993. Comdr. Alexandr Solostei is named director general and his 1,000-man workforce operates a fleet that includes 40 Antonov An-2s, 5 An-24s, 2 An-26s, and 3 Tupolev Tu-134As, plus 9 Mil Mi-2 helicopters.

Scheduled and charter passenger services within Russia and the CIS continue during the remainder of the decade. A total of 1,229 workers are employed at the beginning of 2000 and the fixed-wing fleet includes the original 3 Tu-134As plus 3 An-24Bs, and 1 each An-24, An-26, and An-26B.

KISH AIR: P.O. Box 19395-4639, 215 Afrgha Express Way, Tehran, 19697, Iran; Phone 98 (21) 837-0856; Fax 98 (21) 226-6630; <http://www.itto.org/transport/kishair>; Code KN; Year Founded 1992. Kish Air is established by the Kish Free Zone Organization at Kish Island in 1994 to offer regional passenger services. A. Golrounia is named president and he assembles a fleet comprising 2 Tupolev Tu-154s and 1 Yakovlev Yak-42 with which revenue services are inaugurated.

Flights to Dubai and domestic markets are initiated or continued during the remainder of the year and into 1995. On September 19 of the latter year, a Tu-154, with 174 passengers is taken over by a dissatisfied steward, who orders the aircraft diverted to a military air base in southern Israel. No injuries are reported.

Operations continue without fanfare during the remainder of the decade and the fleet is increased by the addition of two more Tu-154Ms and three Yak-40s. The Tu-154Ms are wet-leased from the Russian carrier **Samara Airlines**.

Enplanements total 280,000 in 1998, while 3.1 million FTKs are also operated. Passenger boardings surge to 551,000 in 1999 and 1.21 million FTKs are also operated.

A new multicolored "sun" color scheme in two versions is introduced on May 1, 2000, along with billboard titles. One version is applied to the Tupolevs and the other to the Yaks. During the fall, a Yak-42D is acquired.

Thrice-weekly Yak-40 roundtrips begin on November 23 between Kish Island and Abu Dhabi.

KITA NIHON KABUSHIKI KAISHA. *See NORTH JAPAN AIRLINES COMPANY, LTD.*

KITTY HAWK AIR CARGO: 1515 West 20th Street, P.O. Box 612787, Dallas-Fort Worth International Airport, Texas 75261, United States; Phone (972) 456-2200; Fax (972) 456-2210; <http://www.kha.com>; Code KR; Year Founded 1976. KHAC is organized by M. Thomas Christopher at Dallas (DAL) in 1976. Regularly scheduled all-cargo and executive charter flights are initiated to destinations in Texas and Louisiana, plus other southwestern communities. Flights with 2 Piper PA-31-350 Navajo Chieftains and 2 Piper PA-34 Senecas begin in July to Shreveport and Lafayette. Operations continue apace in 1977.

In February 1978, a scheduled passenger airline division, Kitty Hawk Airways, is set up to provide daily Navajo Chieftain roundtrips to Texarkana. Although flights are duly inaugurated, the enterprise is folded back into KHAC during October. Meanwhile, Christopher Charters is formed to broker air freight charters.

In 1984, a major subcontract is arranged with **General Aviation (2) (Greeneville Air)** of Greeneville, Tennessee.

Freight and traveler services are maintained during the remainder of the decade and into the next. Kitty Hawk is reorganized into a holding company, Kitty Hawk Group, in 1985 to serve as parent to several operating subsidiaries, including the reborn Kitty Hawk Airways, Kitty

Hawk Air Cargo, Skyfreighters, Christopher Charters, and Kitty Hawk General Aviation and Aircraft Leasing.

In May, the company receives a contract from the U.S. Postal Service (USPS) to operate mail delivery service on its behalf during the peak Christmas holiday season. The agreement will be renewed annually thereafter.

In November 1986, Bruce A. Martin's overnight express operation **Martinaire** purchases Kitty Hawk, combining the two companies into one of the country's largest Part 135 overnight airlines. General Motors Corp. appoints the corporation its air charter manager and the fleet is shared between the divisions as appropriate. Contracts continue to be held with all the major overnight express operators in the industry and flights are made into Oklahoma, Louisiana, Arkansas, Kansas, Colorado, Utah, New Mexico, and Texas.

In 1988, **General Aviation (2) (Greeneville Air)** is purchased; the acquisition increases the Kitty Hawk fleet by six CV 440s.

The Kitty Hawk Air Cargo subsidiary employs 74 persons in 1990 and operates 8 Convair CV-440s, 1 CV-640, 2 Douglas DC-3s, and 1 Dassault Falcon 20.

A total of 4.21 million FTKs are flown and revenues reach \$11.2 million. With expenses held to \$10.75 million, the operator generates \$454,000 in operating income and a net profit of \$196,000.

In 1991, the carrier earns a \$1.32-million net profit on total revenues of \$33.38 million. In 1992, the carrier is chosen to receive a \$1-billion, 10-year U.S. Postal Service contract. The award is immediately protested by **Emery Worldwide**.

When the USAF Log Air program ends, it is revealed that Kitty Hawk has been the only operator in its history to have a 100% reliability record. Contracts are held with **Burlington Air Express**, **Airborne Express**, **DHL Worldwide Express**, **Airborne Express**, and others, while revenues climb to \$50 million and profits to \$2.5 million.

In the spring of 1993, Kitty Hawk settles a dispute out of court, allowing **Emery Worldwide** to assume the government postal contract in exchange for \$18.5 million. At the same time, a quality management program is facilitated by the Richard Rogers Group of Portland, Oregon. Operations continue with a fleet that now includes 11 Convair CV-600s, 3 CV-640s, 1 Dassault Falcon 20, and 2 Learjet 35s. Orders are placed for four McDonnell Douglas DC-9-15s.

Chairman Christopher's workforce totals 77 in 1994 and these join him in a move from Fort Worth's Meacham Field to a modernized hangar and headquarters at Dallas (DFW); the 42,000-sq.-ft. facility had previously been occupied by **SMB Stage Lines** and **Braniff, Inc.**

During the fourth quarter, a B-727-223F is sent to Saipan on a charter for a Chinese seafood shipping company.

The fleet at year's end includes the Convairs, 3 DC-9-15s, and 3 Boeing 727-223Fs. The latter are based at Ypsilanti, Michigan, to fly ad hoc charters for the automotive industry.

On the year, a total of 2.8 million FTKs are flown. Revenues total \$53.53 million and expenses are \$43.56 million. Consequently, there is an operating profit of \$9.96 million and a net gain of \$6.36 million.

In January 1995, another former **American Airlines** B-727-223F is acquired via Aircraft Leasing, Inc.

This year, the company's 20 aircraft operate a total of 58.65 million FTKs. Operating income exceeds costs and there are profits, which are down from the previous year to \$6.08 million (operating) and \$3.22 million (net).

The employee population grows 21.1% in 1996, the twentieth anniversary year, to 270. In August, a B-727-223F is wet-leased to the Philippine freight operator **Pacific East Asia Cargo**. The highlight of the year comes in October when the carrier completes its first public stock offering. The income will allow fleet expansion.

At year's end, **Burlington Air Express** is the company's most prominent domestic client, accounting for nine B-727-200Fs flying routes in the U.S., Canada, and Mexico. **Emery Worldwide**, **Burlington**, and **DHL Worldwide Express** employ Kitty Hawk's nine Convairs

throughout North America, including one that flies daily cross-border trips for Emery between El Paso and Chihuahua, Mexico.

Cargo traffic skyrockets 134.5% to 137.55 million FTKs while revenues soar 53.4% to \$70.24 million. Expenses rise 57.9% to \$62.67 million, there is an operating gain of \$6.98 million, and a net \$7.57-million profit is reported.

During the first half of 1997, five more B-727Fs join the eight already in the fleet. Five DC-9-15Fs and seven Convair CV-600/640s are also operated. One each B-727F and DC-9-15F are based at Fort Worth, Texas.

On September 22, Conrad Kalitta signs a letter of intent to combine the Kalitta companies with Kitty Hawk; Kalitta will receive 5.1 million shares of Kitty Hawk common stock, \$22 million in cash, and a "significant management role" in the combined operation. At the same time and in a related transaction, Kitty Hawk Air Cargo, the airline operating subsidiary of Kitty Hawk, Inc., purchases 16 **American International Airways (3) (AIA)** B-727s for \$51 million in cash. The first three aircraft will start flying under their new livery on October 1, with the remainder arriving at approximately one per month thereafter.

On November 18, Kitty Hawk, which is now the largest nonintegrated air freight transportation company in the U.S. and the seventh largest cargo airline in the world, closes an equity and debt offering of three million shares of common stock. The offering brings in \$39.5 million, which is used to fund the merger, merger-related activities, and general corporate purposes. A private placement of \$340 million in 9.95% senior secured notes (due in 2004) is also successfully completed.

The Kitty Hawk Group merges with the Kalitta Companies, including **AIA** and **Connie Kalitta Services**, on November 19. Mr. Kalitta becomes vice chairman of the Kitty Hawk board even while the process of amalgamation is underway. The synergies of the merger appear exceptional.

For example, the integration of the Kalitta Companies' maintenance capabilities will allow the new company to conduct substantially all of its own maintenance work in-house. Additionally, there is little route overlap. Consequently, the combined operation will enjoy an air network with virtually comprehensive coverage of the U.S. and a significant number of routes throughout Central America, South America, Europe, and the Pacific Rim. Previously capacity-constrained, the new Kitty Hawk will be able to mount a rapid expansion of its air cargo capabilities in all of these regions.

A total of 100 pilots are hired during the year. In addition, the company increases its overseas presence. A B-727-200F is sent to Auckland to operate on behalf of **Ansett New Zealand, Ltd.**; a B-727-200F works for **Japan Air Lines Company, Ltd. (2)** on Guam; and a DC-9-15F is based in Caracas for **DHL Worldwide Express**.

While departing from Syracuse, New York, on November 21 on a flight to Ypsilanti with two crew, several unsecured cargo pallets impact the aft bulkhead of a DC-9-15F; the takeoff is aborted, after which the pallets are secured. Following an inspection for fuselage damage, the Douglas uneventfully completes the service to its Michigan destination.

The annual USPS Christmas Mail contract again requires the company to daily move mail in November and December from almost 36 U.S. cities to a central USPS hub in Arkansas; once the mail is sorted and reloaded into aircraft, it is returned to the spoke cities for local distribution. This single contract brings in \$25.8 million.

Freight traffic accelerates 84.5% to 253.8 million FTKs, while operating revenues advance 11.7% to \$83.38 million. With expenses up only 4.5% to \$70.69 million, the operating profit doubles to \$12.68 million while net gain rises to \$9.17 million.

A new USPS contract is entered into on March 1, 1998. Under its terms, a DC-8-61F flies a daily mail service from Seattle to Indianapolis.

At the end of the first quarter, Connie Kalitta Services are absorbed. **American International Airways (3)** remains a division under its previous name.

On April 1, two B-727-200Fs begin to fly six times a week on behalf of the USPS from Knoxville, Tennessee, to Spokane, Washington, via Dallas and Seattle.

Board Vice Chairman Kalitta retires on April 15, although he does not leave the trustees group. Tilmon "Jim" Reeves, president of Kitty Hawk, becomes chief operating officer, retaining his title as president and his seat on the board of directors.

Valued at \$16 million, the 13th consecutive USPS Christmas Mail contract is received on May 26.

Exclusive of the aircraft thus acquired earlier, Kitty Hawk also takes delivery of five more B-727-200Fs by July, most from **Omni Air Express**.

On July 11, Kitty Hawk begins operating a pair of L-1011F six-times-per-week roundtrip from Los Angeles to Indianapolis and from San Francisco to Indianapolis, while a DC-8-61F puts in the same number of roundtrip frequencies weekly from San Antonio to Dallas (DFW) to Chicago to Indianapolis. These operations are part of the three new two-year contracts, valued at \$62.2 million, signed with the USPS on June 25 as part of the D-Net operation.

Ground is broken on July 22 for a \$33-million cargo hub at Fort Wayne, Indiana. When it is completed in mid-1999, the new facility will become home to American International Freight, the cargo division of **American International Airways (3)**, which will be transferred up from its current Terre Haute base.

On August 24, the same day in which it has extricated itself from due diligence under a letter of intent for its acquisition by **Fine Air, Southern Air Transport** signs a nonbinding letter of intent to be taken over by Kitty Hawk. If completed, the acquisition will be made for a combination of cash and stock and indemnities against certain SAT lease obligations. Kitty Hawk will not get the SAT fleet of Lockheed Hercules aircraft, together with their related parts, equipment, and associated debt; rather, these will be transferred to another entity before closing.

On September 2, SimuFlite Training International President Charles C. Carson II, a former executive with **Southern Air Transport**, is named **American International Airways (3)** president. Kitty Hawk management confirms that AIA will remain in Ypsilanti, although its accounting and finance operations will be consolidated in Dallas.

The same day, it is announced that Connie Kalitta Service (a small aircraft charter service) and Connie Kalitta Enterprises (a small aircraft engine overhaul and repair service) have been folded into Kitty Hawk Charters, under the direction of Vice President/General Manager Skaar. The Kalitta name is dropped.

Unable to reach a definitive agreement, discussions for the acquisition of **Southern Air Transport** end on September 14. The press release issued the next morning indicates that there are no penalties or fees for either side associated with the breakdown. SAT will be able to dispose of its Lockheeds, but will itself be unable to survive. The historic carrier is shut down before the end of the month.

Clark Stevens, former **Mesa Air Group** chief operating officer, becomes AIA vice president-technical services at month's end.

American International Airways (3)'s first B-747-2B4BC is received from Boeing's conversion facility in Wichita in early October and is placed under a three-year aircraft, crew, management, and insurance (ACMI) contract with **Fast Air Chile, S.A.**

Chairman/CEO Christopher announces on December 11 that the company is evaluating the economics of its passenger charter business, which is also operated by **American International Airways (3)**. One B-747-146 has been parked pending a decision about its disposition or cargo conversion; the second B-747-146 will be parked in early January. The two remaining L-1011s will remain in service as the evaluation is continued in 1999.

A nonbinding letter of intent is signed on December 23 for the retirement of the company's seven remaining Convair turboprop freighters.

Further actions to achieve profitability at the AIA division are revealed by Chairman Christopher on December 28. To cut losses, the workforce will be reduced during 1999 in excess of 50% from 2,700 to 1,200 and a reduction in the number of aircraft from 42 to 19. In addition to the Convairs, the Stage II DC-8-50 and DC-8-61 will also be retired. Emphasis will be placed on the division's core business of moving freight in its own aircraft.

During the 12 months, 337.92 million FTKs are operated, a 33.2% boost over the previous year. Financial figures are not available.

To create a more unified image among its operating units, Kitty Hawk, Inc., on February 3, 1999, creates four new divisions. Kitty Hawk Cargo will handle scheduled overnight cargo, Kitty Hawk Charters will fly logistics and small aircraft charters, and Kitty Hawk Air Cargo will be a narrow-body airline. **American International Airways (3)** is renamed **Kitty Hawk International** and will serve primarily as a wide-body airline.

On March 19, Kitty Hawk Air Cargo reaches a settlement with Pacific Aviation Logistics, Inc. whereby it acquires PAL's 40% interest in **Kitty Hawk International**, held since the earlier takeover of American International Airways (3). In announcing the arrangement, Chairman/CEO Christopher indicates that Kitty Hawk will pay PAL and its owner, Ms. Beti Ward, \$2.35 million over the next 3 years at 9.98% interest.

On April 8, the company is awarded an additional contract by the USPS to service the Seattle to Anchorage market. Based at Anchorage, a B-727F will fly on behalf of the USPS six days a week through January 31, 2001. The trijet joins an already committed DC-8 on the same route for the same period. With the addition of this service, Kitty Hawk now flies eight daily scheduled service routes for the USPS, as well as the annual Christmas Network Blytheville Hub contract.

Following the resignation of Vice President Stephen Murray, Toby Skaar, vice president-charter operations, is promoted vice president/general manager of Kitty Hawk Cargo on April 14.

A 5% rate increase for the by-the-pound scheduled cargo service of Kitty Hawk Cargo takes effect on June 1. On June 4, Kitty Hawk Cargo expands its overnight freight system to include Friday night service with next day delivery to its customers, mainly U.S. air freight forwarders, in 22 markets.

The carrier's large maintenance facility at Oscoda, Michigan, is sold early in August. On August 31, Clark Stevens is promoted to be president of Kitty Hawk Air Cargo.

Also during the summer, the remaining seven units of the Convair fleet are sold. Beginning in September and in support of the five-year, \$264-million C-Net USPS contract recently received, B-727Fs are stationed at Honolulu to conduct daily interisland flights to Maui, Kona, and Hilo. It acquires additional air capacity to handle its new USPS business, Kitty Hawk stops freight flights from Baltimore, El Paso, Miami and Hartford. The B-727Fs freed up are sent to Mather Airport, outside Sacramento, from whence they will fly in support of the new dedicated mail service until the USPS can negotiate over noise protests to get into a desired hub at Reno, Nevada. Service to Hartford and Baltimore is provided by trucks. Meeting with freight forwarders believing themselves short-changed, CEO Christopher indicates that air service to the four cities will eventually be resumed.

It is reported in the October issue of the company newsletter *Kitty Hawk Talk* that the carrier is proceeding with the acquisition, through mid-2000, of ten additional B-727Fs from Pegasus Capital Corporation of San Francisco. Also during October, Clark Stevens is promoted to Kitty Hawk Air Cargo president.

Two B-727Fs are leased from on November 12. The first, a Dash-251F, enters service on December 1.

Freight traffic falls 12.1% to 1,164,789,000. Revenues climb 3.9% to \$731.35 million, while expenses increase 26.5% to \$655.89 million. Operating profit grows to \$75.4 million, while net gain reaches \$23.45 million.

The workforce totals 733 at the beginning of 2000. The second Pegasus B-727F, a Dash-232AF, enters service on January 20.

Chairman Christopher is relieved in a January meeting with disgruntled U.S. air freight forwarders to have their pledge to keep his trijet freighters filled if he resumes service to the cities dropped the previous summer. Christopher agrees to resume flights to Baltimore, Hartford, El Paso, and Miami as his new B-727Fs enter service. Additionally, to ensure better loads, stops will also be added in Norfolk, Jacksonville, and Rochester. Further, new flights will be offered to southwestern

manufacturing hubs by coupling Ontario, California, with Tucson, McAllen, Texas, with San Antonio, and Austin with Guadalajara, Mexico.

On April 5, five-times-a-week A300F roundtrip freighter service is initiated from Fort Wayne to Anchorage via Seattle.

On April 12, company officials reveal that the carrier is experiencing a severe cash-flow problem brought on by high fuel prices and unexpected maintenance costs. It has had to purchase a number of expensive hush kits to meet tougher environmental standards. Consequently, first quarter earnings are expected to fall below expectations and Kitty Hawk may not be able to pay a \$17-million interest payment due on May 15. Additionally, the company reports that it may have to restate its 1999 financial figures and write down the value of the aging DC-8s belonging to **Kitty Hawk International Airways**. On top of that, it is noted that Chief Financial Officer Paul Tate has resigned after only 10 days on the job. The next day, Kitty Hawk's price-per-share value plunges 80% to below \$1-a-share.

During the following week, New York law firm Milberg, Weiss, Bershad, Hynes, & Lerach files suit against Kitty Hawk Holdings, alleging that it and certain of its officers have overstated financial reports thereby inflating the stock prices that have now fallen. The large air freight forwarder Eagle Global Logistics, which has eight aircraft making point-to-point flights on its behalf, makes contingency plans to shift its cargo contracts quickly away from Kitty Hawk should it cease operations.

Kitty Hawk's board of directors, after meeting on the crisis, removes Chairman/CEO Christopher without cause and replaces him on an interim basis with President Tilmon J. Reeves. It also announces that it has retained Seabury Advisors to assist in the development of a strategic plan that will assist it in restructuring its debts and easing the liquidity problems. In the process of the shakeup, Directors Richard R. Wadsworth and Daniel R. Garner resign.

Air Cargo World reports in its June 2000 issue that Greeneville, Tennessee-based Forward Air, a leading national expedited trucking concern serving air freight consolidators, has put together a team of former air freight executives, including several from defunct **Roadway Global Air**, to review Kitty Hawk as a potential takeover target. Forward Air had begun years earlier as the cargo airline **General Aviation (2) (Greeneville Air)**. No merger will, this year at least, occur.

On May 1, Kitty Hawk, listing \$907 million in assets and \$500 million in debts, declares Chapter XI bankruptcy and informs the Dallas bankruptcy court handling its case that it will reorganize. The Ypsilanti-based international division, formerly **American International Airways**, is shut down. The three other divisions, including charter, aircraft leasing, and overnight freight, are continued. The freight business, the most visible unit, operates from the new overnight heavy freight hub opened at Fort Wayne the previous year.

Beginning on May 15, a **TradeWinds Airlines** A300F operates on behalf of Kitty Hawk from Fort Wayne to Los Angeles. The last B-727-200F operated by the cargo division of **Ansett Australia (Pty.), Ltd.** is withdrawn on May 22 and returned to Kitty Hawk, from whence it had been leased. During the month, several large accounts, particularly the anchor, General Motors, begins shifting to such operators as **Grand Aire**, **Gemini Air Cargo** and **Evergreen International Airlines** are able to pick up some of the mail which **Kitty Hawk International Airways** is no longer in a position to fly.

On August 21, Starman Brothers, the world's leading aviation auctioneers, sell off over 40,000 line items of DC-8, B-747 and L-1011 spare parts belonging to the defunct **Kitty Hawk International Airways** subsidiary.

It is reported on August 21 that the operating certificate of **Kitty Hawk International Airways** has been sold to former director Conrad ("Connie") Kalitta, together with one or two Jumbojet freighters. The company's reorganization plan is filed with the U.S. Bankruptcy Court in Dallas on August 28. It recommends that all of its remaining subsidiaries be folded into one concern, with the board of the new company controlled by Kitty Hawk's creditors.

The Dallas Bankruptcy Court allows Kitty Hawk to disclose its reorganizational progress in a press release on October 17. With support from its vendors and creditors, the company has refocused on its core business of scheduled freight charter contracts, including the U.S. Postal Service and **BAX Global** contracts held earlier. The company's plan of repayment provides for full payment of its bank creditors and distribution of all of the stock of the reorganized company to its unsecured creditors. Confirmation of this plan is expected by mid-December, with its implementation beginning on January 1, 2001.

A DC-9-15 is sold to **Reliant Airlines** on November 28. At the end of the year, three ex-**Kitty Hawk International** DC-8s are sold for parts to National Aircraft Services via Fortis Aviation.

The company's fleet of B-727Fs now includes 6 B-727F-251Fs, 2 each B-727F-225AFs, B-727F-243Fs, B-727F-232AFs, B-727F-222Fs, B-727F-2J0AFs, 1 each B-727F-214F, B-727F-287AF, and B-727F-259F, 15 B-727F-223Fs and 3 B-727F-224AFs. Three Dash-223Fs are leased from **BAX Global** and operated in its colors, while one Dash-223F is operated under contract to the U.S. Postal Service and wears its livery. In addition, four DC-9-15Fs are also operated.

KITTY HAWK AIRWAYS. See **KITTY HAWK AIR CARGO**

KITTY HAWK INTERNATIONAL: United States (1999–2000). To create a more unified image among its operating units, Kitty Hawk, Inc., on February 3, 1999, creates four new divisions. Among these is KHI, which is the renamed **American International Airways (3)**. The new division, which will continue to operate out of its Michigan base, will fly 19 Stage III-prepared cargo jetliners: 7 B-747-200s, 6 L-1011s, and 6 DC-8s under ACMI leases and scheduled flights. Ten older DC-8Fs, which are not being modified to meet noise standards, will be removed from the fleet by the end of the year.

While en route from Los Angeles to Indianapolis at 33,000 ft. over Kansas on March 2, a Kitty Hawk L-1011F with three crew, comes within 100 ft. of a **Federal Express (FedEx)** DC-10F en route from Portland, Oregon, to Memphis. According to a report in *The Washington Post* two days later, both aircraft had apparently lost radio contact with the Kansas City ATC center.

On March 19, **Kitty Hawk Air Cargo** reaches a settlement with Pacific Aviation Logistics, Inc. whereby it acquires PAL's 40% interest in KHI, held since the earlier takeover of **American International Airways (3)**. In announcing the arrangement, Chairman/CEO M. Tom Christopher indicates that Kitty Hawk will pay PAL and its owner, Ms. Beti Ward, \$2.35 million over the next three years at 9.98% interest.

Even as reparations continue apace for the retirement of the Stage II DC-8s, a new overnight heavy freight hub is opened at Fort Wayne. After two years of negotiation, an agreement is signed with the International Brotherhood of Teamsters for this division's flight crews.

Two new weekly long-haul B-747 roundtrips routes are opened on September 22. The first, requiring three days, takes its Jumbojet freighter from New York (JFK) to Hong Kong and back via Fort Wayne, Los Angeles (LAX), Honolulu, and Melbourne, Australia. The second, also taking three days, is operated from New York (JFK) to Hong Kong via Fort Wayne, Los Angeles, and Guam.

Also during September and in support of the C-Net USPS contract, eight daily B-747F roundtrips are flown every week between Los Angeles and Honolulu.

D. C. "Pete" Sanderlin succeeds Charles C. Carson as vice president/general manager of Kitty Hawk International on November 16.

On November 19, Flight 873, a company L-1011, delivers the BMW Z8 roadster used in the James Bond film *The World Is Not Enough* from Fort Wayne to Los Angeles in time for its offloading to be captured in a live feed by the television series *Entertainment Tonight*.

In support of the C-Net USPS contract between November 20 and December 30, a B-747 and DC-8 mount daily roundtrip mail runs from Honolulu to Los Angeles and San Francisco, respectively.

On January 1, 2000, Kitty Hawk International has just 6 DC-8s, but all are Stage III noise compliant. It also flies 6 L-1011Fs and 7 B-747Fs, including 1 each Dash-146F, Dash-121F, and Dash-132F and 2 each Dash-269BFs and Dash-2B4BFs. All wear blue tail stripes, except one, which is painted all-white and wears the logo of the Willow Run-based air charter management concern Pathfinder Air Resources on its tail. That Jumbojet operates roundtrips to Birmingham, England, and Ostend, Belgium, transporting parts for General Motors.

During takeoff from Seattle on a February 19 service to Anchorage, Flight 8102, a DC-8-63F with five crew, loses its No. 1 and 2 engine cowlings that requires a return to the ground. Although none of the crew or any persons on the ground are injured, the aircraft sustains substantial damage to its left wing and horizontal stabilizer.

On May 1, the Kitty Hawk parent declares Chapter XI bankruptcy, blaming its situation on a number of factors not the least of which are higher fuel bills and the need to purchase expensive hush-kits for the L-1011s. The Ypsilanti-based international division, formerly **American International Airways**, is now shut down. **Gemini Air Cargo** and **Evergreen International Airlines** are able to pick up some of the mail that Kitty Hawk International is no longer in a position to fly.

AirlinersOnline.Com reports on July 30 that former AIA owner Conrad ("Connie") Kalitta may repurchase title to the airline, along with a single B-747-200F with which to resume operations. It is reported on August 21 that the operating certificate of Kitty Hawk International has indeed been sold to former director Kalitta, together with one or two Jumbojet freighters. Plans call for a restart of services, under the name Kitty Hawk Air, before the end of the year.

On November 13, Connie Kalitta's purchase, now renamed **Kalitta Air**, is found fit by the DOT to start all-cargo charter operations. Flights will begin with three B-747F (one each Dash-132F, Dash-146F, and Dash-269BF) which, by November 29, have been painted in the old **American International Airways** color scheme, minus titles. The old Kitty Hawk International B-747-121F has been purchased for spare parts.

KIVILLAQ AIR, LTD. See **KEEWATIN AIR, LTD.**

KIWI INTERNATIONAL AIR LINES: United States (1992–1999). Former **Pan American World Airways (1)** Senior Vice President Russell Thayer and onetime **Eastern Air Lines** pilot and Pan Am executive Robert W. Iverson form Kiwi at Newark in the spring of 1992 with the goal of becoming a full-service airline priced to compete at coach-class fares.

Ownership is divided among a group of former pilots from defunct **Eastern Air Lines**, **Pan American World Airways (1)**, and **Midway Airlines (1)**, who combine to provide initial "insider" capitalization of \$10 million, with Iverson as chairman/CEO and John Anderson as vice chairman. In a democratic spirit that harkens back to the founding days of **PEOPLExpress**, managers and workers invest from \$5,000 to \$50,000 each and feel a sense of ownership entitling each to have their "say" in company operations.

Headquarters are established in an office building across from the airport, with the entire staff housed in the large sixth floor office once slated to be the personal office of **PEOPLExpress** founder Donald Burr. An employee ownership plan is expanded to include emphasis upon an egalitarian work environment designed to create flexible cost structure, friendly service, and very low overhead.

Employing four leased Boeing 727-251s first flown by **Northwest Airlines**, low-fare, one-class services are initiated on September 21 to Orlando, Fort Lauderdale, Atlanta, and Chicago (MDW). CEO Iverson, the only American airline boss qualified at this point to fly a jet transport, undertakes weekly flights between Kiwi's stations. In December, **Continental Airlines** undercuts the new entrant's fares on the routes from Newark to Atlanta and Orlando.

To provide the resources to fight back, employees vote themselves a 50% wage cut until the major's challenge is met. A total of 89,000

passengers are flown during the year's second half. Revenues of \$7.9 million are earned, but start-up expenses are higher. As a result, losses are suffered: \$2.61 million (operating) and \$2.64 million (net).

The number of airline employees in 1993 stands at 581, all of whom have purchased a minimum of \$5,000 in shareholding as a condition of their hiring, and hold 85% of total interest. The fleet includes the four chartered B-727-251s, plus five leased B-727-225As and three B-727-230As. During the year, work is begun on hush-kitting the aircraft to comply with FAA noise-abatement regulations. On April 20, the Romanian aircraft manufacturer Romaero, S.A., noted for its conversions of the British Aerospace BAe (BAC) 1-11 jetliner, purchases \$1 million shareholding. As part of the arrangement, Romaero agrees to provide 11 Rombac (BAC) 1-11-2500s beginning the following year.

The fledgling joins with **Virgin Atlantic Airways, Ltd.** in a June 7 joint venture to provide service between London (LHR) and Chicago (MDW); the arrangement also gives Virgin access to Chicago and Kiwi more passengers. Also in June, daily nonstop flights begin from Newark and Chicago to Tampa.

Nonstop flights commence on July 5 between Newark and San Juan, Puerto Rico, while the daily service between Newark and Tampa is expanded on August 1. The first anniversary is celebrated on September 21 and service to West Palm Beach begins in November. Customer bookings shoot up to 617,000 and revenues are \$68.73 million. Expenses are \$74.37 million and the operating loss deepens to \$5.64 million. The net loss also increases, to \$6.94 million.

The financially stressed carrier continues operations apace in 1994, while increasing its staff of employee-owners to 1,200. On December 7, "small and temporary" pay cuts are announced for 1,000 employees; the savings will be a million dollars.

The company is forced to suspend operations on December 15, after the FAA raises concerns over the carrier's pilot training and requires that all 87 flyers on the payroll receive recurrent training. The FAA also orders the airline to rewrite its training program and places it under administrative surveillance.

The move forces the Airline Reporting Corporation, insurer of travel agents, to require Kiwi to increase its reserves on deposit from \$100,000 to \$1.7 million. Not entirely grounded, the airline is able to operate up to five scheduled flights per day as late as December 18.

Despite these difficulties, the DOT elevates the company to National status and passenger boardings skyrocket 80.7% to 1,115,000. Although revenues rocket up to \$114.3 million, Kiwi suffers a \$24.85-million operating downturn and a \$24.66-million net loss.

The workforce stands at 1,200 in 1995. As a consequence of the December problems, Chairman/CEO Iverson is expelled from his posts during the first week of February in a boardroom coup led by fellow founder and Vice Chairman Anderson. His top lieutenants will follow him out the door. Iverson will be succeeded as chairman/CEO on February 8 by former **Federal Express** Senior Vice President Byron Hogue, with Daniel Wright, CEO of Atlanta-based Aviation Compliance Services, as president. The same day, service is halted between Orlando and San Juan.

When the aircraft of charter carrier **Private Jet Expeditions** are repossessed by their lessor on March 13, PJE contracts with Kiwi to continue its flight commitments to Club America Vacations on a wet-lease basis.

Former CEO Iverson takes his case public in a March 22 interview with *The New York Times*. On March 31, he files suit in New Jersey Superior Court, contending that the airline and its board members wrongfully dismissed him and in so doing, breached their duty to the company and its employees. Although he seeks compensatory and punitive damages, Iverson does not seek reinstatement to his former post. Again, he takes the opportunity to blast certain Kiwi board members, charging them with gross negligence and mismanagement and conspiracy to oust him for their own personal gain.

When Club America Vacations abruptly shuts down on March 30, it leaves nearly 2,000 passengers stranded at destinations in Mexico and

the Caribbean. Although U.S. law requires airlines providing outbound transportation to return stranded passengers if a charter firm goes out of business, that is not possible in this case as the carrier involved, **Private Jet Expeditions**, has itself lost its aircraft and failed two weeks earlier.

Consequently, Kiwi, which had been providing flights for Club America Vacations and **Private Jet Expeditions** under a wet-lease arrangement, becomes one of several U.S. and Mexican operators to assist in the return of the tour operator's clients. By April 6, Kiwi has transported a total of 700 American vacationers back to the U.S. from Mexico and Jamaica.

The Club America Vacations fiasco and other problems cause Kiwi to continue losing money. New chairman Hogue now falls victim to the same sort of intrigue that brought about the dismissal of his predecessor. Following a May 2 internal power struggle with President Wright, who is supported by five other employee-directors, including Vice Chairman Anderson, Hogue, too, is ousted. Wright now moves up to become chairman/CEO.

As costs rise and on-time performance falls, the new chairman/CEO is also sacrificed. A July 12 press release announces that Wright has temporarily been replaced by Vice Chairman Anderson, who will step down on August 1 when joint founder Thayer, an outside director, takes over. He will last only until August, when he will be replaced by Jerry Murphy.

During the fall, new CEO Murphy announces a new business plan for 1996 entitled *Beyond Tomorrow*. Sixty positions will be cut, pilot salaries are to be reduced, and new services will be introduced.

Enplanements increase 42.7% to 1,661,620 and revenues jump 49% to \$170.3 million. Costs climb 22.8% to \$170.9 million. The operating loss is reduced to \$651,000 and the net loss falls to \$770,000.

The employee population is reduced by 16.7% in 1996 to 1,000. In an effort to use its excess capacity, Kiwi introduces flights from Atlanta and Chicago to Las Vegas in February. At the end of the first quarter, the carrier unveils the B-727 *Spirit of KIWI* as a tribute to its employee-owners; it is painted in a teal and purple stream fuselage color scheme designed by Capt. Bill Halsey.

Under increased scrutiny by the FAA in the wake of the May 11 **ValuJet Airlines** disaster, the start-up carrier agrees, on June 21, to voluntarily reduce its fleet of Boeing 727s from 15 to 11. Federal regulators have noted that 32 of its pilots have been improperly trained, an unapproved pilot training manual has been in use, and that the company now lacks sufficient properly trained personnel to crew all of its aircraft. The grounding forces the airline to cut back its 82-flights-per-day schedule by 13 departures.

A midair collision is narrowly avoided on June 24. **USAir** B-737-3B7, en route to New York from Bermuda, passes within 4 nm. and zero vertical separation at 31,000 ft. of a Kiwi B-727-225A, en route from Bermuda to New York. Disaster is averted when the Kiwi plane, which had been wrongly ordered to climb by a controller at the New York Air Route Traffic Control Center, descends.

The Kiwi pilots affected by the June 21 FAA finding all resume training, including classroom work and simulator training. By July 15, 10 have been cleared to return to work. The government by August 19 clears all of the carrier's grounded trimotors. Although all 15 are certified, 3 are held back for 2 months in order for hush kits to be installed.

Noting that debt accumulated in its first three years is insurmountable, CEO Murphy, on September 30, announces that Kiwi must file for Chapter XI bankruptcy protection. As a result, the company will dramatically downsize its services at mid-month, dropping flights to Tampa, Orlando, Las Vegas, and Bermuda. Only a triangle route network between Newark, Atlanta, and Chicago will remain and 400 of the company's 1,200 workers will be laid off. The filing triggers a "continuing fitness review" by the DOT. Twelve days later, the carrier promises to refund tickets or arrange flights for customers affected by the shrinking of its service area.

On October 15, bankruptcy lawyer Howard S. Greenberg reports that the carrier now has \$5 million in assets and \$61.3 million in liabilities

and will have to shut down within a week unless additional financing can be found. A scramble for additional funds ensues, but the airline must be grounded on October 21 as negotiations with different potential-saviors continue.

The next day, counsel Greenberg is able to inform the federal bankruptcy judge, Rosemary Gambardella, that Kiwi has achieved an agreement with the Florida-based investment fund Wasatch International Group, which has promised an injection of \$5 million. Such funds would allow the airline to resume flying by mid-November and Gambardella allows Kiwi to continue its skeletal operations pending another progress hearing.

With the rescue plan for Kiwi in doubt by the time the court reviews the case on November 8, Judge Gambardella gives the airline additional time to secure the financing necessary to resume operations. A contract is signed with **Valujet Airlines** on December 26 under which Kiwi will operate charter flights from Atlanta to Dallas, Fort Myers, and West Palm Beach through January 6. The flights will carry passengers who booked with Valujet when it advertised the service before it received FAA approval.

Customer bookings until the shutdown total 1,218,000, a 27.9% decline over the same period a year earlier. Only 58,000 FTKs are operated. Large, almost equal, losses are suffered on the year: \$12.67 million (operating) and \$12.94 million (net).

CEO Murphy announces on January 2, 1997, that Kiwi has received a \$5-million loan and expects to receive another \$10 to \$15 million capital infusion shortly. The total \$8.5-million debtor-in-possession injection from Edwards-Wasatch Enterprises (E-WE) will allow the company to plan for the future and Murphy goes on to state that his company will emerge from Chapter XI and resume regularly scheduled flights on January 20. A new, abbreviated schedule will permit the recall of 450 to 550 of the airline's 1,200 employees.

As it prepares to emerge from Chapter XI, Kiwi, on January 7, begins to sell \$99 unrestricted fares on flights it will make from Newark to Chicago, Atlanta, and West Palm Beach. Employing seven B-727-200s, the carrier resumes flying to four cities on January 20. Murphy's timetable for emergence from Chapter XI is delayed.

On March 20, the FAA releases Kiwi from administrative surveillance and recertifies its pilot training programs.

A tentative agreement is reached in April with city officials in Niagara Falls, New York, for the inauguration of new services. The arrangement is delayed after Wasatch International Corp., one of Kiwi's financial backers, informs Niagara officials that the money they will provide for the cause should be channeled to them.

On June 19, President Murphy announces that Kiwi has received a \$16-million bid from Kiwi International Holdings, a corporation formed by Baltimore surgeon Dr. Charles Edwards. Edwards, through EW-E, has already provided over \$10 million in debtor-in-possession financing and pledges to retain current management and employees.

News of the agreement with Niagara Falls comes to light on July 10 when, after two days of hearings, Dr. Edwards wins permission from the U.S. Bankruptcy Court in Newark to buy Kiwi for approximately \$16.5 million. After failing to invest as much as it had pledged when it won the court's approval to act as Kiwi's prime backer last November, Wasatch, as a result, becomes just another creditor.

After the carrier's \$16.5-million debt is paid off in July, the company, with Dr. Edwards as chairman and 75% majority owner, is finally able to emerge from Chapter XI, six months behind the original schedule. President Murphy agrees to remain on board for an undetermined amount of time.

In what the media portrays as one of the last great labor-management clashes of this century, 200,000 members of the Teamsters strike **UPS (United Parcel Service)** on August 4. The job action is supported by company pilots. Management flyers and contract aircraft are only able to provide a trickle of service.

Kiwi recruits new business for its shipping services and **Emery Worldwide** attempts to accommodate customers sending packages in

excess of 5 pounds. However, UPS' major competitors, **Federal Express** and **DHL Worldwide Express** refuse most new corporate accounts (the latter takes new international business), but do accept packages left in drop-off boxes.

On August 5, Kiwi celebrates its fifth anniversary by offering coupons for \$5 fares to passengers who fly during August. The coupons are good for \$5 for an outbound flight when customers pay the regular one-way fare for the return segment of the required roundtrip purchase.

Talks between the Teamsters and UPS resume on August 7 and the job action is settled a little over a week later. Kiwi is able to retain some of the new business generated. However, it is unable to sell sufficient seats to crack the hold of **Delta Air Lines** on the Atlanta to Orlando route and so, at month's end, withdraws from it.

By this time, the company has regained approval from the Niagara County Legislature for a \$550,000 loan for start-up and marketing expenses associated with the launch of service to the city. Once the schedule, fares, and other details are worked out in September and service begins, the 5% loan is processed.

Although the majors disagree over routing and other issues, they band together behind **United Airlines** on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing.

This payment initiative is immediately matched by **American Airlines**, **Continental Airlines**, **Delta Air Lines**, **USAirways**, and **Northwest Airlines**. **Southwest Airlines** and Kiwi announce that they will maintain the 10% scale. The travel agency industry, which, despite ticketless travel, still writes 80% of all tickets sold, protests.

On October 10, additional Newark to Orlando and Newark to West Palm Beach flights are added. Twice-daily roundtrip flights from Palm Beach and Newark to Boston commence on October 20.

On November 6, thrice-daily nonstop service is inaugurated to Tampa from Newark, Chicago, and Atlanta. Because one aircraft flies to Chicago through Atlanta, Tampa also will get a fourth scheduled flight back to Atlanta.

To celebrate Veterans Day, the airline gives all veterans a free trip between New York and Boston on November 11–12. On November 21, seasonal Newark to Orlando to San Juan service is restarted.

On December 15, winners of a vacation package to the Bahamas are announced, based on a drawing of tokens from certificates given away on flights during the autumn.

Passenger boardings plunge 69% to 607,539. Operating revenues drop 50.2% to \$71.84 million, while expenses fall 42.1% to \$90.99 million. The operating loss deepens to \$19.15 million while the net loss jumps to \$19.86 million.

During the week of March 2, 1998, Kiwi, which needs extra charter lift capacity, contracts with newly bankrupt **Pan American World Airways (2)** to operate 10 B-737-4Q8 charters on its behalf.

A fifth weekly flight is added on May 1 between Orlando and San Juan.

Thrice-weekly return service is inaugurated on May 8 between Newark and Aguadilla, Puerto Rico; this is the only nonstop flight between the mainland U.S. and the island's second largest airport and the communities of its west coast.

Twice-daily weekday roundtrips are started on May 15 between Newark and Niagara Falls, with continuing service to Orlando.

On June 18, the Aguadilla–Orlando service is stepped up to daily frequency. A second daily B-737-4Q8 service is also added between Orlando and San Juan.

During the second quarter, Boca Raton, Florida-based Coventry Industries Corporation signs a letter of intent to purchase Kiwi. It is not exercised following due diligence. President Murphy, meanwhile, begins lining up tour companies to keep the airline earning during the summer and the lean weekends that will, as usual, follow Labor Day.

Twice-weekly nonstop roundtrips commence on July 21 between Miami and Newark. Simultaneously, thrice-weekly nonstops commence

between Miami and San Juan and from Miami to Aguadilla. With this expansion, the company offers 34 weekly nonstops from Puerto Rico to Newark, Orlando, and Miami.

Also during the third week of July, hundreds of former creditors, shareholders, and employees file millions of dollars in damage claims against the U.S. government under the Federal Tort Claims Act. They charge that the FAA was negligent in failing to follow its own rules when it threatened Kiwi into parking 4 of its Boeings and laying off 42 pilots in 1996, thereby causing a Chapter XI filing.

Frequencies between Miami and Newark are increased to daily on August 22, at which point flights to Niagara Falls cease. Pilots from **Northwest Airlines** walk out on strike on August 29. On August 31 and in an effort to gain new traffic, weekday return service is inaugurated between Newark and Detroit (DTT). Frequencies are twice daily. An additional Thursday roundtrip between Newark and Detroit begins on September 10.

Daily roundtrip frequencies are inaugurated to Minneapolis on September 13 from Newark, Chicago (ORD), and Detroit.

With the Northwest job action resolved, that major's passengers return to it in droves and by the end of September, it becomes necessary for Kiwi executives to admit defeat and begin to abandon the attempt to build new inroads into the Midwest.

A travel slump is encountered toward the end of the month and into October that has a significant fiscal impact. Even so, on October 26 the airline starts to offer daily return service from Flint, Michigan, to Newark (EWR), a flight that replaces the previous short-lived Detroit frequencies.

Having found Chairman Edwards's close oversight and the problems of the summer taxing, President Murphy resigns on November 21.

In a taped message to employees, Edwards, who has refused all media interviews since saving the carrier, reports on his decision to elevate Chief Administrative Officer James Player to the post of interim president. He also admits that the airline is having a difficult time and that his ability to make up its deficit is at an end, his liquidity and ability to raise cash exhausted. The cash flow is such that paychecks will be delayed for each of the next two weekly pay periods.

On a more positive note, it is hoped that new investment, which will be coupled with cost-cutting, better scheduling, and more profitable routes, will lead to profits.

Service continues to be a significant problem. In November, irate customers file a total of 16 complaints about Kiwi with the DOT, 1 fewer than the number raised, for example, about the major **Trans World Airlines (TWA)**, which is many times its size.

On December 12, Chairman Edwards again has a tape-recorded message played to employees, denying that the airline is going bankrupt.

While Kiwi wrestles with its fiscal and public relations situation, plans are made for additional services. On December 15, the company announces that it will begin twice-weekly roundtrips between New York (JFK) and Aguadilla, Puerto Rico, on January 12. Unhappily, as the time approaches for implementation, the new service will be indefinitely postponed and passengers booked for it will be bussed from Queens to instead take the flight from Newark.

Daily return flights commence on December 21 between Flint and Chicago (MDW). Chairman Edwards is required to come to Washington, D.C. on December 23 for a meeting with John Coleman of the DOT's Office of Aviation Analysis. Although the content of the discussion is private, such meetings are unusual and it is known that Edwards is warned that the DOT will monitor his airline's fitness closely.

On Christmas Eve, the departure of the service from Newark to Atlanta is delayed from 5:30 p.m. to 3:30 a.m. on Christmas Day.

Still, the fiscally challenged airline will begin to pull back from additional routes; flights to Flint and Chicago (MD) will end before the new year is a month old. It is also anticipated that flights to Boston, where large amounts in landing fees and federal ticket surcharges are owed, will also be halted.

Customer bookings for the year increase by 12.9% to 685,777. Load factor increases from 53% to 61%, a gain of 8 points. On revenues of

\$76.4 million, there are losses: \$19.8 million (operating) and \$20.6 million (net).

On February 1, 1999, Kiwi adds 16 extra flights each week between the U.S. and Puerto Rico. Turnaround specialist Gene Gillespie becomes a special consultant to Dr. Edwards.

Prompted by rumors and incorrect reports concerning the carrier's cash-flow situation, Chairman Edwards is forced to make a public statement on February 19 concerning the return of two B-737s to lessors. The aircraft, he indicates, were returned "by mutual consent" and "were not repossessed." Only one had been in operation anyway, with the other out under heavy maintenance. As the company struggles to fly its network with just four available aircraft, most analysts agree the planes returned to the British lessor were repossessed.

Edwards indicates the his carrier's scheduled service is fully covered by the fleet's remaining aircraft, as well as by supplemental backup contracts with **Pan American World Airways (2)** and **Sun Jet International Airlines**. Still, Atlanta and Boston are also removed from the network.

At the beginning of March, Kiwi undertakes discussions with Guilford Transportation (GT) owners Timothy Mellon and David Fink, PAA-2 owners, concerning a rescue arrangement.

Kiwi Holdings, which has a 15% stake in the company, is reorganized on March 15. New officers and offices are selected and the pursuit of a bailout is intensified.

On the morning of March 23, Transportation Secretary Rodney Slater holds a press conference to announce possible DOT actions concerning Kiwi. The government, according to Slater, has taken the unusual step of trying to ground the discount carrier, filing a show-cause order that claims Kiwi lacks the financial stability—and management sufficiently competent—to operate the airline safely. Unless Kiwi can successfully respond with a new management plan, its operating certificate may be withdrawn within three weeks.

The FAA, separately, reports that it has, for the last several months, been operating stepped-up surveillance and monitoring of the airline, in light of the situation with its finances and high-ranking personnel. The agency maintains that it has determined that Kiwi may be able to operate safely despite its financial problems, but that the agency will need to continue to devote significantly more resources than it possesses in any monitoring effort.

Kiwi is not caught unaware by Slater's announcement in Washington, D.C. Later in the day, having completed fiscal arrangements, Kiwi files for Chapter XI bankruptcy protection, owing \$750,000 in airport fees. Kiwi simultaneously names consultant Gillespie president and receives \$3 million in debtor-in-financing from GT. A hearing in bankruptcy court on the Pan Am arrangement will be held on March 29.

GT, which also owns **Pan American World Airways (2)**, indicates that it is seeking a stronger scheduled division to complement PAA-2s charter operations. As soon as the bankruptcy court sets a price, GT will purchase Kiwi's assets. Meanwhile, the airline named for the wingless bird will maintain its current, six-city schedule, charter Pan Am aircraft, and continue its upgraded service to Puerto Rico.

Citing safety concerns at bankrupt Kiwi, the FAA grounds the once-innovative discount carrier on March 24. Of particular concern are aircraft in less-than-airworthy condition and failure by the company to perform adequate maintenance on its four B-737s. Kiwi is given 10 days to appeal the ruling, but if it loses, the airline is informed that it will have to reapply for FAA certification. That process, if restarted, will be lengthy, requiring at least several months.

The shutdown comes as a surprise and strands thousands of travelers, many of whom are college students who have booked tickets for spring break or others looking to get away for Easter or Passover. It also throws 450 of the company's 500 employees out of work. Probably few at the time know the exact figures, but passenger boardings so far this year have plunged 91.8% to a final total of 55,000.

On March 25, Kiwi and FAA officials meet for two hours at New York (JFK) with executives of the former attempting to convince the

FAA to reverse its grounding order. Kiwi indicates that the expected Pan Am money and seven wet-leased aircraft will satisfy agency demands, as well as those of the DOT expressed earlier in the week.

When the regulators refuse to relent, Kiwi appeals the FAA decision to the National Transportation Safety Board (NTSB), which must rule within 60 days of its receipt of the FAA response. The board cannot rule until the FAA counters Kiwi's appeal. A spokesman for GT owner Mellon in Connecticut indicates that Pan Am's ownership is waiting to see what happens next and will then determine whether or not to proceed with the takeover.

Continental Airlines offers to honor some Kiwi tickets on a standby basis and to provide reduced-rate tickets to other Kiwi passengers. **American Trans Air** and **Midway Airlines (2)** come forward with similar proposals.

On March 26, President Gillespie informs reporters that the proposed arrangement under which Kiwi is to be purchased by Pan Am will fail if the FAA revokes his airline's operating license. "Without a valid, even severely restricted Air Carrier Certificate," Gillespie reports, "Kiwi has no hope of completing the Pan Am or any other transaction."

Pan Am legal representative Jack Sherwood agrees, informing Gillespie and the press that he will withdraw the Guilford Transportation offer of support on Monday when representatives of the two companies appear before U.S. Bankruptcy Court Judge Rosemary Gambardella in Newark. Sherwood indicates that the original Pan Am offer had been made on the assumption that Kiwi could continue operations, an assumption the FAA grounding ruins. In short, there is nothing to finance unless the airline is able to get up and running again. If it can, Pan Am may reconsider the financing proposal.

Kiwi Chairman Edwards, contacted by the news media, indicates that he is not surprised by the Pan Am development. If, however, the airline is able to win reinstatement and Pan Am chooses not to participate, three other investors have been found who are each willing to invest several millions of dollars. No one, however, is interested in financing a grounded airline. Not only do all of its employees stand to lose their jobs, Edwards notes, but he will personally be out \$21 million.

Late in the day, President Gillespie again urges the FAA to reconsider, this time requesting permission to fly only one of the company's three working jetliners outfitted with safety personnel, and that after FAA-supervised pre-and post-flight inspections. Again, the FAA rejects the petition.

Louis Lavelle, a staff writer for the Bergen County (N.J.) *Record*, reviews the situation in the March 27 issue of his newspaper. All of the analysts contacted in conjunction with the preparation of the article suggest that it is unlikely that any investors will step forward, even if the FAA revocation order is lifted.

On March 29, Judge Gambardella holds off appointing a bankruptcy trustee until April 1, giving Kiwi three days to get the grounding order lifted. Pan Am's general counsel, John Naldolny, indicates that, should the order be reversed, "we certainly stand ready to assist them." An FAA spokesman contacted during the day indicates that the revocation edict still stands.

Company pilots and flight attendants, many in uniform, pack Judge Gambardella's Newark courtroom on April 1 as President Gillespie admits that the FAA has not changed its position. As the result, Charles Stanziale is appointed trustee to take over the day-to-day operations of the airline and to find a buyer; both Dr. Edwards and President Gillespie fade from the picture.

On April 16, the airline and the FAA sign a settlement agreement that will give KIA the opportunity to revalidate its certification on an expedited basis. Subject to approval by the U.S. Bankruptcy Court, the arrangement vacates the agency's revocation order and designates it as a suspension pending completion of the certification review. This change involves no fines or penalties and does not constitute or imply an admission by the airline of the FAA's allegations.

In a letter released on April 17, the DOT pledges that KIA will receive "expeditious consideration" as that agency reviews the airline's economic fitness.

Trustee Stanziale pledges full cooperation with the government agencies and admits that these changes have allowed his charge to avoid a lengthy and expensive litigation process. Still, while KIA's revalidation is handled on an expedited basis, work toward the ultimate goal of restarting the airline proceeds slowly.

Bankruptcy Judge Gambardella formally grants the airline permission on May 7 to seek permission from the FAA to resume operations. Kiwi, meanwhile, continues a frantic search for either a merger partner or investors.

Also on May 7, the British charter carrier **Sabre Airways, Ltd.** files a \$1-million suit against Kiwi for damages sustained to a jet engine it had leased to the American operator.

After spending the summer vainly seeking a buyer for Kiwi, now devoid of market value, Trustee Stanziale gives up on September 1. The next day, papers are filed with the U.S. Bankruptcy Court seeking to convert the carrier's Chapter XI status to Chapter VII, liquidation. At the end, Kiwi owes over \$20 million. The largest and first creditor, the Internal Revenue Service, expects to be out in excess of half that amount.

On November 12, a plan is put forward by Executive JetPort of New Jersey under which it would purchase the company's name and operating certificate and then use the carrier to fly charters on its behalf to Las Vegas. Nothing further comes of the idea and on November 13, liquidation of the carrier is approved.

KIWI TRAVEL INTERNATIONAL AIRLINES, LTD.: New Zealand (1994-1996). Begun as a retail travel agency at Hamilton, New Zealand, sometime earlier, this new entrant, under the direction of Ewan Wilson, becomes an international charter carrier in late 1994. Plans are made to inaugurate twice-daily scheduled frequencies in the trans-Tasman market.

A B-757-225 is wet-leased from the British carrier **Air 2000, Ltd.** at the beginning of August 1995. It is painted in an all-white livery with billboard-sized "Kiwi" titles on the forward fuselage and a footless kiwi bird on the tail. The jetliner is employed to inaugurate twice-weekly scheduled service from its Hamilton base to Sydney on August 23, as well as to Brisbane from Hamilton and Dunedin. The cabin of the aircraft is divided into three classes front-to-back: Kiwi Plus, Nuts & Cola, and Kiwi Economy.

On February 18, 1996, the company reports an operating profit of NZ\$1.2 million for the 10 months since April 1995.

During mid-spring, a B-737-3Y0 is chartered from **Flugfölag Islands (2)/Icelandair, H.F.** In June, it begins thrice-weekly frequencies from Christchurch to Melbourne, Sydney, and Perth.

At the same time, an A320-200 is chartered from Singapore-based Regent Air; the airline thus becomes the first New Zealand carrier to operate the Airbus Industrie type.

On June 30, it is reported that, for the previous three months, the carrier has suffered a trading loss of NZ\$3.16 million and a deficit of shareholders' funds of NZ\$1.91 million.

Despite these losses, the airline continues to trade and accept prepaid bookings until, unable to achieve economic viability, it collapses on September 10, leaving numerous stranded passengers in both Australia and New Zealand. Liquidators are appointed from Price Waterhouse to close out the company, but are unable, after a month, to determine the full extent of its assets and liabilities.

In addition, 12,000 people with prepaid tickets are owed NZ\$5 million. However, during the first week of October, the airline's bankers, the Bank of New Zealand, announces that it will refund money to people who have purchased Kiwi tickets on their credit cards but have been unable to use them.

CEO Wilson will be convicted of four counts of fraud and, in October 1998, a New Zealand judge will sentence him to three months' periodic detention and community service.

KLM/ERA HELICOPTERS, B.V.: The Netherlands (1991–1997). In July 1991, Rowan Companies, Ltd. of Houston, Texas (parent of **ERA Aviation**) signs a letter of intent with **KLM (Royal Dutch Airlines, N.V.)** for the purchase of 49% shareholding in **KLM Helikopters, B.V.** The final agreement with Rowan takes effect in October, at which point the Dutch flag carrier begins a “close association” with **ERA Aviation, Inc.** in a joint venture known as **KLM/ERA Helikopters, B.V.**

The same month **KLM Helikopters, N.V.** Managing Director Harry Schoevers, a 27-year veteran of the company, is named chairman of the European Helicopter Association; he will continue as managing director of the new operation, with former **ERA Aviation Services Division** General Manager Rudy Park as deputy managing director. The combined helicopter fleet numbers 114 medium twin-engine aircraft, except for the previous **KLM Helikopters, B.V.’s** 7 S-61Ns.

Effective November 1, **KLM Helikopters, B.V.** is given the name of the new partnership. A few days later it begins pilot-transport operations in Rotterdam and Amsterdam and makes plans to replace its S-61Ns within two years. While **ERA Aviation** concentrates on the North American market, **KLM/ERA** will concentrate on the rest of the world. The joint-venture company receives its first contract, for six months, in mid-December from British Gas.

Employing a Bell 412 leased from **ERA Aviation**, **KLM/ERA** begins working on the British Gas contract in January 1992, providing support for an exploration drilling rig 105 nm. off the coast of Thailand.

In July, the company contracts with Marathon Petroleum Sakhalin, Ltd., in conjunction with its **ERA Aviation** affiliate, to provide two Bell 212s and eight crew for oil exploration work off Sakhalin Island, north of Japan. The work, conducted through October, marks the first time a U.S. helicopter operator has flown U.S.-registered aircraft in Russian territory.

In March 1993, the company becomes the first North Sea operator to make a crossover between countries when it establishes a base at Norwich, Norfolk, U.K. The move, headquartered in a hangar leased from the **KLM (Royal Dutch Airlines, N.V.)** British affiliate, **Air UK, Ltd.**, is made under terms of European Council regulations that come into effect in January. The British move includes the establishment of an English subsidiary, **KLM-ERA Helicopters (UK), Ltd.** for which the parent firm’s director of operations, Jan G. Nip, becomes manager at its Norwich base.

Two Sikorsky S-76Bs are acquired and modified at Amsterdam according to specifications of the U.K.’s Civil Aeronautics Authority (CAA). On July 1, the concern wins its first North Sea offshore deal, a 16-month support contract from the LASMO oil company. While not considered a major coup, the award represents a start.

At Helitech ’93, a trade show at Redhill Aerodrome in September, the U.K. offspring nearly acquires its first major contract, a five-year commitment from Amoco Oil. In the end, Amoco, however, prefers to remain with **Bristow Helicopters, Ltd.**, which has supported it for 20 years. The S-76Bs arrive at Norwich and begin flying ad hoc charters. Overall, the carrier suffers severe financial losses and is forced to release 100 employees, including 20 pilots.

In March 1994, officials at Amsterdam, who are changing their airport’s complete focus toward air carrier operations, require the helicopter line to transfer its operations to Den Helder Airport. Late in the year, officials, led by new Managing Director T. J. van Wijk, prepare to bid on a major offshore support contract with Shell Expro which, if won, will allow the carrier to move away from its minor North Sea support services.

In March 1995, the company signs a 15-month contract with the Dutch government, Dutch automobile club, and Amsterdam University Hospital for a test of helicopter emergency medical services. A company Eurocopter BO-105 and crew begin the evaluation process in April.

At the beginning of May, **KLM-ERA Helicopters (UK), Ltd.** wins its first major North Sea contract, a three-year award from Shell Expro for support of its activities in the southern sector. The contract, formerly held by **British International Helicopters, Ltd.**, will require assignment of three Sikorsky S-61Ns and an S-76.

Operations continue apace in 1996. On August 28, 1997, **KLM (Royal Dutch Airlines, N.V.)** sells its 51% interest to Schreiner Aviation Group, parent of **Schreiner Airways, N.V.** The Dutch concern indicates its willingness to take over the minority stake held by the U.S. group Rowan Companies. The acquisition will be reformed as North Sea Helicopters, B.V. and will continue to operate within the Netherlands and British offshore market.

KLM/ERA HELICOPTERS (U.K.), LTD. See **KLM/ERA HELICOPTERS, B.V.**

KLM HELIKOPTERS, B.V.: The Netherlands (1977–1991). **KLM Helikopters, B.V.**, formerly known as **KLM Noordzee Helikopters, B.V.**, is established as a wholly owned subsidiary of the Dutch flag carrier **KLM (Royal Dutch Airlines, N.V.)** in mid-1977 to provide domestic and international rotary-wing charter and contract services, including North Sea oil industry support flights. Based at Schiphol Airport at Amsterdam, the 180-employee operates 7 Sikorsky S-61Ns and 3 S-76As.

Operations continue apace in 1978–1985 as the fleet grows to also include four S-76As. During the first quarter of 1986, another S-61N is purchased from the Norwegian operator **Helikopter Service A.S.** During the summer, the company trades in its four S-76As for three S-76Bs. Additionally, an Aerospatiale SA-365N Dauphin is leased from **Schreiner Airways, B.V.** A total of 12 aircraft are now active in offshore support roles.

During 1987–1988, 12 oil companies maintain 43 production platforms in The Netherlands sector of the North Sea and **KLM** support services to the Pennzoil, Nam, Petroland, Placid, and Union fields. These flights, averaging 9,000 hours per year, include regular crew changes and shuttles, plus standby and emergency medical services (EMS). During the latter year, the company begins to diversify into outside maintenance work and establishes the worldwide brokerage house, **KLM Air Taxi**. The number of aircraft involved in offshore support drops to 11.

Airline employment stands at 240 in 1990. On December 30, an S-61N on approach to an offshore installation in the Dutch sector of the North Sea, suffers severe vibration and immediately upon landing, the blade separates and falls into the ocean. No injuries are reported. The company’s five remaining S-61s are immediately grounded and one is sold to Halifax-based **Cougar Helicopters, Ltd.**

Following an improved inspection program, the company’s S-61Ns return to service in January 1991. A fifth S-76B is delivered in July and in July Rowan Companies, Ltd. of Houston signs a letter of intent with **KLM (Royal Dutch Airlines, N.V.)** for the purchase of 49% shareholding. The final agreement with Rowan takes effect in October, at which point **KLM** begins a “close association” with **ERA Aviation, Inc.** in a joint venture known as **KLM/ERA Helikopters, B.V.** The same month Managing Director Harry Schoevers, a 27-year veteran of the company, is named chairman of the European Helicopter Association; he will continue as managing director of the new operation, with former **ERA Aviation Services Division** General Manager Rudy Park as deputy managing director.

Effective November 1, **KLM Helikopters, B.V.** is given the name of the new partnership and a few days later, begins pilot-transport operations in Rotterdam and Amsterdam and makes plans to replace its S-61Ns within two years. While **ERA Aviation** concentrates on the North American market, **KLM/ERA** will concentrate on the rest of the world. The joint venture receives its first contract in mid-December.

Operations continue apace in 1992–1996. Having decided to concentrate on its core business of offshore support, on September 1, 1997, Leiden-based Schreiner Aviation Group purchases the 51% controlling interest in **KLM-ERA Helikopters, B.V.** held by **KLM (Royal Dutch Airlines, N.V.)**. The remaining shares are held by the Rowan Co. via its subsidiary **ERA Aviation**. The acquisition includes six Sikorsky S-61Ns and five S-76Bs.

KLM (ROYAL DUTCH AIRLINES, N.V.): KLM Royal Dutch Airlines, External Communications, (AMS/DR) P.O. Box 7700, Schiphol Airport East, Amsterdam, ZL-1117, The Netherlands; Phone 31 (20) 649-2227; Fax 31 (20) 648-8391; <http://www.klm.nl>; Code KL; Year Founded 1919. Owner of one of the most illustrious records in civil aviation history, Koninklijke Luchvaart Maatschappij (KLM) is generally agreed to have the longest continuous lineage. Until recently, the only remaining competitor for the seniority title is the tiny nonscheduled American operator **Chalk's International Airlines**, founded at Miami on June 1, 1919.

Private interests, led by Lt. Albert Plesman, begin forming **Nederlandsche en Koloniale Luchtverkeer Maatschappij** at the Hague in late spring 1919. During this developmental stage, Plesman organizes a six-week long Eerste Luchtverkeer Tentoonstelling Amsterdam or First Air Transport Exhibition Amsterdam (ELTA) aviation extravaganza in Amsterdam to appeal to public interest in aviation. It is opened by Queen Wilhelmina on August 1 and will host over a half-million visitors during its run.

Meanwhile, company representatives are invited to join officials from five other pioneer carriers at the August 26–28 meetings at The Hague, which result in creation of the International Air Traffic Association (later the International Air Transport Association, IATA). On September 12, Queen Wilhelmina grants the airline-to-be the right to bear the title Koninklijke or "Royal." When the ELTA exhibition closes in late September, it is revealed that over 500,000 persons have attended.

Slightly renamed, **Koninklijke Luchvaart Maatschappij voor Nederland en Koloniën (Royal Airline Company for the Netherlands and Colonies)** or KLM (Royal Dutch Airlines), is officially registered on October 7, with Albert Plesman as managing director. Two weeks later, on October 21, the first KLM office is opened on Heerengracht, above the Odeon Cinema, in The Hague.

Even before a single flight is made, the company, after only five months, is broke and in April 1920 must turn to the Ministry of Waterworks, then in charge of Dutch civil aviation, for a subsidy. With a de Havilland DH 16 piloted by Jerry Shaw and wet-leased from the U.K. pioneer **Aircraft Transport and Travel, Ltd. (AT & T)** following a difficult charter and pool negotiation, KLM begins alternate-day Amsterdam–London service on May 17. In addition to two passengers, one of who is Albert Plesman, Shaw transports 15 pounds of newspapers under his seat.

Waterworks Minister Adriaan Konig, an enthusiastic aviation booster, is able, after two months work, to obtain a subsidy for the infant carrier, promising to cover two-thirds of KLM's losses during the remainder of the year and through 1921, to a maximum of G 200,000. Also in June, four **Aircraft Transport and Travel, Ltd. (AT & T)** DH 9s are purchased.

A contract is signed with Anthony Fokker's Netherlands Aircraft Factory for the delivery of two new passenger aircraft; unbeknownst to KLM, Fokker builds the aircraft in Germany, in violation of the terms of the Versailles Treaty. Only at the last minute does Plesman learn that the Allies will not object.

The first two Fokker F-IIIs are delivered in August and on September 1, in cooperation with the German line **Deutsche Luft Reederei, GmbH.**, a route is inaugurated Amsterdam–Copenhagen via Hamburg. Services are suspended for the winter on October 31. On the year, a total of 345 passengers, 22 tons of freight, and 3 tons of mail have been carried. The first commercial-aviation animal transport is also made—a shipment of bees.

Revenue flight operations resume on April 14, 1921. Also on this day, the inaugural scheduled service by the first of 11 newly delivered, high-wing, 5-seat Fokker F-IIIs is flown between Amsterdam and London (Croydon) by two aircraft, piloted by British aviators G. Ray Hinchliffe and Gordon P. Olley, flying the route in opposite directions. On May 9, the first KLM ticket office is opened at Leidseplein, Amsterdam.

During the summer, frequencies are expanded to London via Rotterdam and to Hamburg via Bremen. By year's end, subsidy payments

from the Ministry of Waterworks total G 406,313, more than twice that promised the previous June; the government, conscious of a need for an air route to the East Indies, agrees to pay these and later sums.

A route is opened to Brussels in 1922 as the last of 14 Fokker F-IIIs are delivered. One is lost in a crash at Hythe in May. Paris is added to the route network on June 4, 1923. Another F-III is lost on October 18 after landing on the Goodwin Sands. During the year, CEO Plesman is able to convince the government to grant his company three years of subsidy, upon his personal promise of a profit. Orders are placed with Anthony Fokker in December for a successor to the F-III, which will be designated the F-VII.

On April 23, 1924, a service is opened to Copenhagen in cooperation with **Det Danske Luftfartselskab, A.S. (DDL)** and **Deutscher Aero Lloyd, A.G.** Also in April, a Fokker F-III is lost when forced to ditch in the English Channel, the same month in which the prototype of the eight-seat, single-engine F-VII is initially flown. The first of five new Fokker F-VIIs is placed in service on July 1 and on July 9 the first recorded flight of a bull is made, that of the champion breeder Nico V in a Fokker F-III from Rotterdam to Paris.

On October 1, Capt. A. N. G. Thomassen a Thuessink van der Hoop and two other crewmen depart Amsterdam aboard the first new F-VIIa on a 22-stop, 55-day, 9,552-mile proving flight to the Dutch East Indies. After a flight of 520 miles, the Fokker lands at Prague, remaining overnight before departing for Belgrade the next day. Engine trouble forces an emergency landing at Plovdiv, Bulgaria, on October 3. After a month-long delay in Bulgaria, where the plane must be reengined, van der Hoop and company depart for the east via Constantinople on November 3. They arrive at Batavia (now Jakarta) by way of Angora, Aleppo, Baghdad, Bushire, Bandar Abbas, Karachi, Calcutta, Amballa, Allahabad, Akyab, Rangoon, Bangkok, Sengora, Medan, and Muntok on November 24. Having returned from the East Indies aboard the steamship *Patria*, pilot van der Hoop and his colleagues receive a hearty welcome back to Schiphol Airport on December 18.

Fokker begins testing an F-VIIa on March 12, 1925, powered by a Packard Liberty engine. In cooperation with **Det Danske Luftfartselskab, A.S. (DDL)**, Amsterdam–Copenhagen F-VII flights are begun on April 20. A new Amsterdam–Paris frequency is opened with Fokker F-IIIs in May. In June, one of the aircraft is lost en route. The first of 11 Fokker F-VIIs is delivered in late September. Another Fokker F-III crashes at Hamburg in November.

Five Fokker F-IIIs are sold to **Basler Luftverkehrs, A.G. (Balair)** and are delivered in a formation flight from Rotterdam to Basel on April 28, 1926. A Fokker F-III crashes at Schiphol Airport at month's end. A Fokker F-VII is destroyed in an accident near Hythe on June 21 and must be written off; another crashes near the Belgian city of Wolverthem on July 9. When the Dutch government subsidy expires on December 31, KLM is unprofitable; the Ministry of Finance refuses to pledge additional funds.

With the company out of funds by early February 1927, it comes within days of bankruptcy before the government relents and mounts a rescue. In exchange for its assistance, the Ministry of Finance demands a substantial increase in private shareholding. Unhappy board members join with colonial investors in the spring to demand establishment of a separate airline for the East Indies.

Produced as a result of a KLM requirement for an aircraft larger than the F-VII, the prototype 10–24 passenger F-VIII makes its maiden flight on March 12. In cooperation with **Basler Luftverkehrs, A.G. (Balair)**, F-VIIas service is launched to Basel on May 2. Also during the spring, **Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij (KNILM)** is formed with backing by KLM board member Cornelis van Aalst, president of Nederlandsche Handel Maatschappij, Holland's largest financial institution.

On June 15, in the first intercontinental long-haul charter flight, an F-VIIa/3m, the *Maryland Free State*, piloted by Capt. G. J. Geysendorffer with *Baltimore Sun* publisher William van Lear Black as passenger, is flown 9,120 miles from Amsterdam to Batavia in 15 days (86 hrs. 27

min). The 14-day return flight of 97 hrs. arrives back at Schiphol Airport on July 23. Lear Black had hoped to become the first airline passenger to fly across the Atlantic, but gladly accepted CEO Plesman's 18,710-mile roundtrip East Indian offer. Capt. Geysendorffer tells the story in the translated and privately printed *Amsterdam to Batavia and Back by Air: A First-Hand Account of the Flying Trip with Mr. Van Lear Black of Baltimore to the Dutch East Indies and Return* (Baltimore, 1928).

By July, CEO Plesman has been able to find a sufficient number of investors to satisfy the Ministry of Finance and KLM becomes a semistate enterprise. The prototype F-VIII is lost in an August 22 crash at Sevenoaks. Officials of the new Dutch East Indies colonial carrier meet with CEO Plesman and as a group, unofficially pledge mutual route cooperation. The new KLM associate will not attempt to compete on intercontinental routes while it will receive autonomy in intra-island routing.

Capt. G. A. Koppen, employing a new Fokker F-VIIa/3m, the *Post-duif* (Carrier Pigeon), makes a second East Indies proving flight beginning on October 1, Amsterdam-Batavia in 10 days.

Basel is replaced as the Swiss terminus when operations begin to Zurich on April 23, 1928. During the first two quarters, six Fokker V-IIIs are placed on the European routes; one is lost in a Nigtevecht accident in April. Unable to afford the creation of another East Indies subsidiary, KLM must stand aside as the right to carry out commercial air transport in the colony passes to another concern.

On July 16, a Royal Charter is issued for the formal incorporation of KNILM, which will be largely financed by the Dutch East Indies colonial government. As part of the arrangement officially establishing this new entrant, KNILM investors take a G 200,000 stake in KLM and CEO Plesman becomes a KNILM board member. KLM undertakes to provide operational assistance (training, wet-leased aircraft, and crews), and technical help in obtaining new airliners.

After taking off from Waalhaven field at Rotterdam later in the month, a Fokker F-III collides with the masts of a ship and crashes. Two new Fokker F-VIIb/3ms are employed to make six East Indies proving flights, one every two weeks between September 13 and October 11. During the same two months, four new F-VIIb/3ms are sent to the East Indies; two are destroyed in landing crashes.

A KNILM F-VIIb/3m, with Dutch East Indies governor general A. C. D. de Graeff as passenger, inaugurates the subsidiary's operations on November 1 with a flight Batavia-Samarang. On December 11, the last Amsterdam-Batavia proving flight is undertaken with Christmas mail. At year's end, a route is opened from Batavia-Bandung.

Fokker F-VIIb/3m night airmail flights begin on May 30, 1929. Seeking additional capacity, the 18-passenger long-range F-IX/3m, Fokker's largest and most modern trimotor, makes its maiden flight on August 26.

A fifth F-VIIb/3m is purchased for KNILM and on September 12, every-two-weeks mail and full passenger service (proving flights) start over a route from Amsterdam-Istanbul via Nuremberg, Budapest, and Sofia. The mail is then continued by F-VIIb/3ms to Batavia. A new F-VIIb/3m purchased at the end of October is the first KLM aircraft to bear the name of a bird—the *Heron*.

The fortnightly Batavia flights continue until December 12, and are then suspended for the winter. During the next decade, this route will be considered the longest scheduled service in the world.

Two final Fokker F-VIIb/3ms are purchased for KNILM, which inaugurates a new service to Palembang on March 4, 1930. The first Fokker F-IX/3m is delivered on May 8; christened *Adelaar* (Eagle), it is initially assigned to the carrier's Amsterdam to Batavia service. Upon its return, it is dedicated to the Amsterdam to London service. During the summer, the final Fokker F-III is withdrawn and sold to **Pacific Aerial Transport, Ltd.**, of Wau, New Guinea. With a government mail subsidy in hand, every-two-weeks service to Batavia is resumed on September 25.

A second F-IX/3m is received and employed to inaugurate passenger service Amsterdam-Athens-Cairo on October 2. On November 13, the F-IX/3m *Adelaar* is dispatched out on the Amsterdam-Batavia route, making the flight down to the East Indies in 13 days (84 hrs. 20 min.

flight time) and back in 12 days (84 hrs). During the mission, the *Adelaar's* crew tests new radio equipment (both short- and long-range plus air-to-ground) and reviews transmission levels.

Come December, the Batavia mail service is not suspended as it had been in 1929 and KNILM officials note that, in the two years since opening, the KLM subsidiary has carried 31,352 passengers, 189 tons of freight and 10 tons of mail.

The second Fokker F-IX/3m is placed in service to London on January 15, 1931. Beginning in early spring, delivery is taken on eight Fokker F-XII/3ms. Christened *Ijsvogel*, *Ibis*, *Havik*, *Ekster*, *Duij*, *Valk*, *Uil*, and *Leeuwerik*, they are placed in service during March-May, initially on European routes. On March 5, the new Fokker F-XII/3m *Leeuwerik* makes an Amsterdam-Batavia proving flight and a Fokker F-IX/3m frequency is extended to Hanover on May 1.

Flying the F-VIIb/3m *Abel Tasman*, Capt. M. P. Pattist and his crew make the first KNILM proving flight to Australia, Batavia-Wyndham on May 12; the plane visits Sydney and Melbourne before returning to Batavia on May 27. During the summer, the parent company begins to concentrate on the development of a domestic network within the Netherlands. Service is inaugurated Rotterdam to Haamsteds in July and to Groningen in August.

The second F-IX/3m is lost after a crash at Rotterdam's Waalhaven Airport, also in August. Regularly scheduled F-XII/3m Amsterdam-Batavia multistop passenger service is launched by the *Leeuwerik* on October 1. An Amsterdam-Rome route is started on October 29. Late in the year, two F-XII/3ms are turned over to KNILM, which employs them to open service Batavia-Medan. During the year, an experimental freighter, built by Werkspoor N.V. and christened *Jumbo*, is acquired and employed for two years to fly all-cargo services between Amsterdam and London via Rotterdam.

Five Fokker F-XVIII/3ms are accepted during 1932; christened *Snip* (Snipe), *Rijstvogel* (Rice Bird), *Kwartel* (Quail), *Pelikaan* (Pelican), and *Oehoe* (Eared Owl), they are placed in service on the Batavia run. In September, CEO Plesman approaches Anthony Fokker, seeking updated designs for new aircraft. As a result, the one and only Fokker F-XII/3m *Zilvermeeuw* (Silver Gull) is delivered in November. On December 18, the *Pelikaan*, which replaces the engine-troubled *Zilvermeeuw*, accomplishes the Amsterdam-Batavia run with Christmas mail in a record 4 days, 4 hrs., 35 min. (74 hrs. 34 min. flying time). The ship is back in Holland by December 30.

Repaired, the *Zilvermeeuw* enters service on the London-Amsterdam-Berlin run in early 1933. In March, Australian confectioner Sir MacPherson Robertson announces a grand England to Australia air race to be staged in October 1934; the winning purse will be £15,000 (\$75,000). Beginning on May 3, KLM provides a connection to Singapore from Palembang, seven months before the arrival of **Imperial Airways, Ltd.** Senior pilot Koene D. Parmentier is sent to the United States in October to study American operations, including night flying; he sends home a glowing report on the new DC-2 transport of Donald Douglas. The KLM board immediately orders one of the new machines for evaluation on the route to the East Indies. On November 28, Anthony Fokker agrees to act as go-between with the U.S. manufacturer.

On January 15, 1934, Fokker signs a contract with Donald Douglas that gives the Dutch airplane builder exclusive manufacturing licensing and sales rights for the DC-2 in Europe. Fokker will not build any Douglas aircraft, but as agent, will import both DC-2s and later, DC-3s for resale, often as a result of negotiations conducted by his top salesman, F. W. Seekatz.

Amsterdam-Liverpool via Hull Fokker F-XIIb/3m summer service begins on June 1. Designed to meet a KLM specification for an East India airliner, the Fokker F-XXXVI makes its maiden flight on June 22. Only this one unit will be built and after service on KLM's London via Amsterdam to Berlin route, it will eventually be sold to **Scottish Aviation, Ltd.**

On loan from Douglas, the first DC-2—the initial aircraft of its type to be exported—arrives by sea on September 11 uncased; it is

reassembled at Rotterdam's Waalhaven Airport and christened *Uiver* (Stork). At the same time, the board votes to purchase 14 more of the type. Meanwhile, Fokker, having obtained all sales and license rights for Douglas aircraft in Europe, charges Plesman's concern a 40% markup for the delivery of the new aircraft. Having already sold a number of older aircraft and in desperate need of the new airliners, KLM has no option but to agree to the arrangement. The order will mark the beginning of an invasion of Europe by U.S.-made equipment.

The Amsterdam–Liverpool summer operation is suspended on October 6. The first new DC-2 *Uiver*, the one obtained by KLM on trial from Donald Douglas in September, is entered in the October 20–24 multi-stage England to Australia MacRobertson Air Race. Piloted by regular officers Capt. Parmentier and Jan Johannes Moll, the aircraft carries 2 stewards, 3 revenue passengers, and a full load of 30,000 letters.

The race begins from Mildenhall in Suffolk, but the Dutch aircraft flies its regular route (1,000 miles longer than the race course) to Melbourne, even backtracking to the Indian city of Allahabad to pick up a missed passenger. After a flight of 90 hrs. 13 min. 36 sec., the *Uiver* comes in second overall and even wins the transport class, defeating a specially configured Boeing 247D provided by **United Air Lines (2)** and flown by famous American pilots Roscoe Turner and Clyde Pangborn.

In honor of the three hundredth anniversary of the Dutch presence in the Lesser Antilles, the F-XVIII/3m *Snip*, outfitted with extra fuel tanks, flies Amsterdam–Curaçao in December; this first KLM transatlantic flight requires 55 hrs. 58 min. flying time.

On December 20, the first Fokker-assembled DC-2, *Uiver*, en route from Amsterdam to Java with seven aboard, is struck by lightning, which instantly kills all aboard. The famed airliner continues on alone until it crashes at Rutbah Wells, Iraq, bursting into flame. During the year, the one and only Koolhoven FK 48, the *Ajax*, is received; it will be employed on the Rotterdam–Eindhoven frequency for two years.

Two more company aircraft are sent to Curaçao, the F-XVIII/3m *Oriol* and the F-VIII/3m *Duif*; with the *Snip*, they are the nucleus of a new West Indisch Bedrijf (West Indies Division) formed on January 19, 1935. Simultaneously, scheduled service is opened Curaçao–Aruba. In March, the only four-motored Fokker F-XXXVI is received and christened *Arend* (Eagle). It is placed into service on various European routes, but is most usually employed to fly from London to Berlin via Amsterdam. During the same month, the first four-motored Fokker F-XXII *Papegaai* (Parrot) arrives.

A second DC-2 is acquired by the parent on March 22 and is christened *Gaai*; eight more Douglas transports arrive between April 3–29. These are respectively christened *Haan*, *Kievit*, *Jan Van Gent*, *Koetlang*, *Lijster*, *Maraboe*, *Machtegaal*, and *Oeverwaluw*. Prague service begins on April 1. Three more DC-2s arrive between May 9–17: *Rietvink*, *Sperwer*, and *Toekan*.

When Donald Douglas visits KLM in May, he informs CEO Plesman that he had not given Fokker exclusive rights as the Dutch manufacturer had maintained the year before; enraged, the airline leader goes before his board and ends the company's long exclusivity with Anthony Fokker.

Three additional DC-2s are ordered and the available fleet launches twice-weekly Amsterdam–Batavia operations on June 12. Fokker, meanwhile, successfully challenges Douglas's claim to Plesman in the U.S. courts; Douglas is shown to have made Douglas his exclusive European sales agent. Although the contract will keep the manufacturer in business, the aircraft builder will be unable to sell another original airliner design until the F.27 Friendship, 20 years later.

Having been purchased from the American carrier **Northwest Airlines** during the spring, the Ford Tri-Motor 5-AT-42 arrives at Rotterdam by sea; uncrated and reassembled at Waalhaven Airport, the aircraft is test flown by Capt. G. A. Koppen on June 19. Following several additional test flights, the aircraft is rejected for survey work or long-haul flights over areas devoid of airports. Meanwhile, the Fokker F-XVIII/3ms, which are being displaced, are assigned to such European

routes as Amsterdam to Prague. Two additional F-XXIIs are acquired in May; these two, named *Kwikstaart* (Wagtail) and *Roerdomp* (Bittern) join the *Papegaai* on European services, including Amsterdam to London.

The *Kwikstaart* crash-lands at Schiphol Airport on July 14 and must be written off. Three DC-2s are delivered to KNILM in July and are placed on the Jakarta–Singapore route. The DC-2 *Gaai* is lost in a Piah San Giacomo crash on July 20, but the Ford 5-AT-42 is placed on the Dutch aircraft register on September 4. Also in September, three de Havilland DH 89A Dragon Rapides are acquired by KNILM to allow aerial survey work in support of the petroleum industry; these are transported to Batavia in a mass flight under command of Capt. Koppen.

Eleven DC-3s are ordered in 1936. The last three DC-2s arrive on April 12 and 16 and are named *Djalak*, *Edelvalk*, and *Flamingo*. Routes are opened to Vienna and Budapest on April 19 and on July 1 F-XVIII/3m flights begin Curaçao–Maracaibo. One F-VIII is modified into a photographic and survey ship. When Fokker F-XII/3ms reopen the summer Amsterdam–Liverpool service, Doncaster replaces Hull as intermediate stop. Six Fokker F-XII/3ms are sold to the two U.K. independents, two to **British Airways, Ltd. (1)** and four to **Crilly Airways, Ltd.**

On August 26, the registration of the Ford 5-AT-42 is cancelled and the trimotor is placed into storage. The F-VIIb/3m *Heron* is retired at the end of the month.

As with the DC-2, KLM becomes the first European operator of the DC-3; the first of an eventual fleet of 24 is delivered on September 21 and christened *Ibis*. Also in October, the noted F-XVIII/3m *Pelikaan*, the last of its type in KLM inventory, is sold to a French independent along with the F-XX/3m *Zilvermeeuw*. During the year, KNILM begins flying from Batavia to Borneo. A DC-2 crashes at London's Croydon Airport on December 10 (14 dead).

Curaçao–Caracas service begins on January 19, 1937 while two more DC-3s, the *Torenvalk* and *Wielewaal* arrive on April 10 and 25, respectively. DC-2s enter service on the London and Paris routes in the spring and one of these crashes at Lembecq-et-Hal, Belgium on July 29 (15 dead). On October 2, DC-3s are placed on the thrice-weekly Amsterdam–Batavia run. CEO Plesman, in the company's most disreputable action of the year, even if unintentional, arranges via his representative in Rome to meet with Benito Mussolini to discuss peace. The former aviator is disillusioned by the dictator's unpleasant response. European enplanements for the year total 91,702.

The first Lockheed Model 14H Super Electra is delivered on February 24, 1938; christened *Ekster* (Magpie), it is placed into service in March on a new route to Manchester, England; the carrier is also the first European operator of this aircraft. Super Electras are also purchased for both the West and East Indian operations and Lockheed 14 Curaçao–Barranquilla operations are inaugurated on May 16. Five Lockheed 14s are sent to KNILM at Batavia and on June 28, in cooperation with KLM, inaugurates the first service to Sydney. Piloted by Capt. Gerson van Messel, the Super Electra touches down at 1442 hrs. on July 5 with 4 passengers, including 12-year-old Diane Riley, and 20,000 letters from Europe. The next day, the *Sydney Morning Herald* proclaims that the local airfield, Kingsford-Smith Airport, officially became an international airport with the arrival of PK-AFM (the Dutch plane's registration number). An eight-day Dutch Amsterdam–Australia route is now a reality. Incidentally, 96-year-old Capt. Van Messel and Ms. Riley will be guests of honor at a Sydney 60th anniversary celebration on October 28, 1998.

A second L-14H, the *Lepelaar* (Spoonville) is acquired on June 30. Following the Munich Crisis in September, KLM is hard pressed to cope with the number of Czech refugees seeking sanctuary in Holland. Night airmail flights to London commence on October 2 and later in the fall, orders are placed for four Douglas DC-5s. The L-14H *Ekster* crashes at Amsterdam on December 9 (six dead).

With **Pan American Airways (PAA)** and **Imperial Airways, Ltd.**, KLM is now one of only three airlines with worldwide service. During

this, the last regular year of European airline operations before the outbreak of World War II, the company is able to earn revenues of G 11.3-million and generate a profit of G 73,609 (\$29,400).

The German move into Czechoslovakia forces cancellation of Prague service on March 14, 1939. Flights from Curaçao to Barbados and Port of Spain begin on May 6. In cooperation with **DNL Norwegian Airlines, A.S.**, connecting routes are opened to Kristiansend and Oslo on June 1 and in cooperation with **ABA Swedish Air Lines A.B.**, the Stockholm line is extended to Helsinki on July 1. In early August, the F-XII *Roerdomp* is sold to **British American Air Services, Ltd.** All European routes are closed down on August 23, except those to England, Belgium, and Scandinavia.

In the West Indies, service to Paramaribo, Surinam, is started on September 4. During this first week of the war, the Fokker F-XXII *Papegai* is sold to **Scottish Aviation, Ltd.** The European terminus of the Batavia route is moved to Naples on September 16, with through-service now requiring nine days. Piloted by Capt. Moll, famed as copilot of the DC-2 *Uiver* in the 1934 England to Australia race, the DC-3 *Mees*, en route from Malmo, Sweden, to Amsterdam on September 26, is mistakenly attacked by Luftwaffe floatplane; Swedish passenger Gustave Lamm is killed by machine gun bullets.

The northern terminus of the company's European daily operations are switched from London's Croydon Airport to Shoreham, in Sussex, England, on October 16. On November 9, flights to Shoreham become twice daily and joint service to that point is carried on with **Det Danske Luftfartsselskab, A.S. (DDL)** after November 13. KLM board is now convinced that subsidiary companies should be established in Lisbon and at Paramaribo in Surinam. On December 27, the DC-2 *Edelvalk* makes a proving flight to Portugal via Shoreham and Madrid; it will, in fact, be the only DC-2 in the company's fleet to survive the war.

The DC-2 *Haan* is sold to the Swedish line **ABA Aero Transport, A.B.** on January 13, 1940. The joint service with DDL is increased to four roundtrips per day on March 1. Flights to Scandinavia end on April 9 and to Belgium on April 18. Weekly Amsterdam-Lisbon DC-2 service via Shoreham and Madrid is started on April 20. Two days later, the route becomes twice weekly. The company must halt flights throughout Europe on May 10 as the German advance into Western Europe begins. That day, Luftwaffe bombers assault Amsterdam's Schiphol Airport, among other points, and destroy five KLM DC-2s on the ground: *Koetlang*, *Nachtegaal*, *Oeverwaluw*, *Perkoetoet*, and *Djalak*. Four DC-3s are also reduced to burned-out hulks: *Tapuit*, *Xema*, *Uil*, and *Patrijs*. Several older units are destroyed, including the old F-VIII survey ship, smashed by bombs at Waalhaven.

When German troops occupy Schiphol five days later, they also capture the DC-2s *Kievit*, *Jan Van Gent*, *Kwak*, *Rietvink*, *Sperwer*, and *Toekan*, along with the DC-3s *Mees*, *Valk*, *Hop*, and *Roek*. At least five DC-3s and the DC-2 *Edelvalk* flee to the U.K., where they take on British registration and are assigned to a base at Heston Airport in Middlesex. KLM President Plesman is placed under house arrest. The four new DC-5s slated for delivery are diverted, two each to the West Indies and East Indies. Later, on June 1 and 2, respectively, the British-based DC-3s *Wielewaal* and *Torenvalk* are sent off to the Dutch East Indies.

In an effort to halt the war's madness, Plesman, through the intercession of his house guest, Swedish Count von Rosen, is allowed to travel to Berlin to speak with Rosen's uncle, Reichmarshall Hermann Goering, about the possibilities of a peace treaty between Germany and Great Britain. Plesman formulates a document that is forwarded to the office of Prime Minister Churchill in London and receipted by Lord Halifax. The Plesman initiative is ignored.

An "agreement" of July 19 concerning "special duties of Lufthansa relating to the war effort" specifies, among other undertakings, the supplying of aircraft to the Ministry of Air Traffic. Thus a number of airline planes and crews come under Luftwaffe control, beginning the following week with one of the former Czech DC-2s and all five of the captured KLM DC-3s and six DC-2s. One of the latter, the *Toekan*, is repainted in camouflage and becomes the personal transport of Nether-

lands-based Wehrmacht commander, General Christiansen, whose name is painted on the airplane's nose. The ship will crash near Lammersshagen on August 9.

The Dutch government-in-exile authorizes escaping KLM personnel to operate the carrier from England under a charter arrangement with **British Overseas Airways Corporation (BOAC)**. The European terminus of the Batavia route is transferred from Naples to Tel Aviv on July 26. In August, a Bristol-Lisbon frequency is inaugurated on behalf of BOAC; signs inside the aircraft cabins proclaim "KLM—Still Flying." At Lisbon, the service connects with the transatlantic flying boat service of **Pan American Airways (PAA)**.

Meanwhile, two new DC-5s, the *Wakago* and *Zonvogel*, acquired by the West Indies Division in May, are diverted along with three others from the U.S. builder to the East Indies. Their use there by KNILM will assure that KLM goes on record as being the only carrier in airline history ever to operate every type of pre-McDonnell-merger Douglas transport ever manufactured.

The DC-3 fleet remaining in England is all but wiped out during the Battle of Britain. One aircraft must be written off following a landing accident at Heston Airport on September 21, while a second is destroyed during a Luftwaffe bombing attack on Whitechurch on November 24. Also during the year, KNILM acquires two Grumman G-21As and two Sikorsky S-43s and employs them in service to the Celebes Islands.

Having allegedly engineered the escape of a Fokker G-1 from Amsterdam's Schiphol Airport in May 1941, KLM President Plesman is confined at Scheveningen Prison, also known by resistance-fighter inmates as the Orange Hotel (orange is the royal color), "for the duration." Deputy Managing Director Hans Martin, who is left free by the occupation forces, supervises the company's Dutch affairs.

West Indies Division Lockheed service to Kingston begins on August 19, with charter flights started to Miami by fall.

The Tel Aviv-Batavia service ends on February 15, 1942 with the Japanese invasion of the East Indies. The four remaining DC-5s ferry war refugees to Australia—or attempt to. One escapes to Australia, two crash on takeoff, and one is damaged in an air raid and left behind. KLM/KNILM management escapes the East Indies aboard five DC-3s, first to Australia and then to New York.

In April, President Plesman is released from Scheveningen Prison, but is placed under house arrest at his home in Driene, in east Holland, again "for the duration."

West Indies Division Lockheed Model 14s commence operations to Havana in July. On October 15, KLM Bristol-Lisbon route is extended, twice weekly on behalf of **British Overseas Airways Corporation (BOAC)**, to Gibraltar. The remnants of the airline are thus placed at Allied disposal.

Abwehr agents in Portugal on June 1, 1943, report that British Prime Minister Winston S. Churchill has boarded the DC-3 flight to London. Word is passed to Capt. Kunkel, commanding the long-range Luftwaffe Ju-88C and Me-110 fighters of I/Z.G.I patrolling over the Bay of Biscay. Kunkel dispatches eight Junkers to find and shoot down the transport. They duly locate Flight 2L272, piloted by Capt. Tepas with 3 other crew and 13 passengers, proceeding north along the coasts of Portugal and Spain en route from Portela Airport, Lisbon, to Whitechurch, England. The kill is quick.

Although Churchill is not among the 13 passengers and 4 crewmen aboard, the killed include Reuters, Ltd. correspondent Kenneth Stonehouse and British actor and spy Leslie Howard. Howard, famous for his role in the recent motion picture *Gone with the Wind*, had been in Portugal promoting his newest release, *The First of the Few*, a propaganda film concerning the Battle of Britain. It will be conjectured that the man mistaken for the prime minister is Howard's business manager, Alfred Chenhalls.

West Indies Division L-14s begin flights Curaçao-St. Martin on July 27 and to Miami on August 17 via Jamaica, Haiti, and Cuba. The first charter flight from Curaçao to St. Martin is made on December 5.

During the year and even with the war still raging, company officials, led by former KNILM Managing Director Hendrik Nieuwenhuis and

operating under authority of the Netherlands government-in-exile in London, but with headquarters at Curaçao, place orders for four Douglas DC-4s and four Lockheed L-049 Constellations to be delivered later.

While serving as a Luftwaffe transport, the airline's former DC-2, the *Sperwer*, crashes at Berlin's Tempelhof Airport on February 11, 1944. On March 29, briefly suspended U.K. to Gibraltar via Lisbon services flown under **British Overseas Airways Corporation (BOAC)** contract, are resumed. The 1,000th Lisbon-London flight is recorded on April 18 by the DC-3 *Buizerd*. Following the invasion of France in June, President Plesman's son Jan is shot down while flying a Spitfire for the British RAF. Late in the year, and with ex-KLM crews, DC-3s of the Netherlands Military Air Transport service launch flights from London to liberated Eindhoven.

When Driene is liberated on April 2, 1945, KLM President Plesman is able to requisition a jeep, drive south through the lines to Brussels in Belgium, and catch a flight to London. There he confers with the Netherlands government-in-exile, placing a claim on his prewar office, now officially occupied by Hendrik Nieuwenhuis. From the U.K., the airline leader makes his way to New York where, over the next three months, he negotiates the loan of 14 C-54s (military DC-4s).

Meanwhile, Canadian troops recapture the carrier's DC-2 *Kwak* at the Luftwaffe base at Flensburg on May 6. On August 17, nationalists in the Netherlands East Indies proclaim the independence of Indonesia. The Dutch government rejects this declaration and a colonial war begins.

De Havilland DH 89A Dragon Rapides restart Dutch domestic service on September 26, reestablishing the local-service route network by year's end.

The prewar East Indies routes of **Koninklijke Nederlandsch Indische Luchtvaart Maatschappij, N.V. (KNILM)** are reopened in October by a No. 19 (Dutch) Squadron of the Royal Australian Air Force. The first C-54 also arrives at Schiphol Airport during the month and reopens weekly Amsterdam-Batavia service on November 10, with twice-weekly frequency after November 28. During the month's Chicago Conference on the future of world civil aviation, KLM is able to offer a compromise position agreeable to both the U.S. and U.K., which allows a convention to be written. Having flown under British registration since escaping in May 1940, the DC-2 *Edelvalk* returns to Schiphol Airport in early December. Initial DC-2/DC-3 intra-European company service begins on December 17 over an Amsterdam-Copenhagen-Malmö line.

The England-Portugal service, flown under contract to **British Overseas Airways Corporation (BOAC)** since August 1940, is terminated in January 1946. A total of 18,108 passengers have been flown over the wartime route, the last operated by the carrier in Europe.

RAAF No. 19 (Dutch) Squadron, which has been providing air transport services in the East Indies, has its civil services reconstituted on February 1 as Vliegtuig Transport Group (Netherlands Indies Government Air Transport Group). The military group will continue to operate during the Indonesian revolution. On February 14, a C-54 flies an Amsterdam-Curaçao proving flight; weekly service between the two destinations will begin on April 10.

With KLM's headquarters now returned to Amsterdam, the prewar board of directors regains administration of the airline and officially reinstates Albert Plesman as managing director and Hans Martin as deputy managing director.

On March 4, KLM takes over the Amsterdam-London service previously flown by the Netherlands Military Air Transport Service. The first of six L-049 Constellations arrives in April and is christened *Utrecht*. North Atlantic Amsterdam-New York via Shannon and Gander C-54 operations begin on May 24; the Dutch flag line thus becomes the first European carrier to begin regular postwar transatlantic New York service. The *Utrecht* is placed on the New York route four days later.

On June 4, Amsterdam-New York-Curaçao C-54 operations are inaugurated, linking with the West Indies service. A new Lockheed L-049 Constellation makes a nonstop, 3,800-mile flight from New York to Schiphol Airport at Amsterdam on September 9 in 14 hours. As of Octo-

ber 3, transatlantic flights from New York are shifted from the North Atlantic to the Mid-Atlantic route for the winter, with Constellations replacing C-54s, which are shifted to European, African, and Latin American routes.

Miami to Curaçao C-54 flights begin on November 5; the next day, all passengers escape injury when an L-049 crashes at Santa Maria in the Azores. Also on November 6, a DC-3 with 5 crew and 15 passengers, crashes near Shere, England; although the aircraft must be written off, there are no fatalities. On November 14, a C-47A with 5 crew and 21 passengers, crashes while on final approach to Schiphol Airport; there are no survivors.

The fleet at year's end includes 40 DC-3s, 24 DC-4s, and 4 L-049s. A total of 313,000 passengers are flown and 42,000 FTKs are operated.

A C-47A with 4 crew and 18 passengers, crashes just after takeoff from Kastrup Airport at Copenhagen on January 27, 1947; there are no survivors. Among the fatalities is Prince Gustav Adolf of Sweden.

An Amsterdam-Johannesburg multistop C-54 frequency is launched on March 26. DC-3s are acquired for the West Indies Division and Curaçao via Ciudad Trujillo, Port-au-Prince, and Kingston to Havana flights start on April 20.

Thrice-weekly Amsterdam-Dublin via Manchester service is inaugurated on May 20. Plans are announced on June 18 for twice-weekly flights to Berlin, now that a permit has been received from the U.S.S.R. for the use of Tempelhof Airport. President Plesman receives an honorary doctorate from the Technical University of Delft during the month's graduation exercises; his "dissertation" is said to consist of but three letters: K L M.

Meals cooked during flights are first offered as of July 7 on the New York to Amsterdam runs and on August 1 KNILM is fully absorbed by its parent. KNILM shareholders are compensated with KLM shares and the company's former routes are now to be flown by KLM under contract to the colonial government at Batavia.

The subsidiary **Nederlands Nieuw Guinea Luchtvaart Maatschappij, N.V. (NNGLM)** is established to provide these scheduled flights between the coastal and inland cities of New Guinea with the Hollandia-Jakarta route now closed. Another division, Het Interinsulair Bedrijf (HIB), is set up to operate the previous KNILM services in the East Indies.

Also during the month, IIB inaugurates services with four Consolidated PB5Y-5A Cansos from Batavia to Pontianak, Samarinda, and Tarakan and from Batavia to Singapore via Billiton, Bangka, Singkep, and Tandjoeng Pinang.

India prohibits KLM from landings between August 4 and October 7; however, the Dutch carrier circumvents the embargo by flying its new Constellations to Batavia via Ceylon.

The first of 20 L-749A Constellations is delivered to Amsterdam on August 13 and is christened *Pontianak*.

In late summer, *Cosmopolitan* L-749A sleeper service to New York is introduced via Montreal. Lockheed Constellations take over the Amsterdam-Brazil via Curaçao route on October 6. A new route is initiated from Biak Island to Port Darwin via Sorong, which connects with the **Qantas Empire Airways (Pty.), Ltd.** service to Australia.

On December 27, a C-47A with 15 passengers is lost while on final approach to Leeuwarden, Netherlands; although the aircraft must be written off, there are no fatalities.

Following the disbanding of the U.S. carrier **Santa Fe Skyways** on January 15, 1948, KLM purchases two of its DC-4s, the *Sky Chief Navajo* and *Sky Chief Apache* on May 24 and June 12; these are rechristened *Limburg* and *Zeeland*, respectively. Meanwhile, the pioneer also acquires six Douglas DC-6s, the first of which arrives in time to inaugurate a new route from Amsterdam to Tehran on April 21. Out in the East Indies, No. 19 Squadron of the Dutch Air Force, which had taken over from the Australians, turns over its C-46s and C-54s to IIB.

A DC-6 with five crew is involved in a Schiphol Airport landing accident on May 1; although the aircraft must be written off, there are no fatalities.

A DC-4 is badly damaged while on final approach to Schiphol Airport on June 16; no serious injuries are reported.

En route from Amsterdam via Scotland to New York City on October 28, the L-049 *Nijmegen*, with 10 crew and 30 passengers, hits a high tension wire 4 km. E of Prestwick, Scotland, during its second radar-guided landing attempt and crashes and burns; there are no survivors. Among the fatalities are Koene Parmentier, who had piloted the DC-2 *Uiver* in the England to Australia MacRobertson Air Race back in 1934, and President Plesman's designated successor Henk Veenendaal.

During the year and into the next, Consolidated PBY-5A Catalinas are employed to open routes from Sarawak–Brunei via the Dutch West Borneo destination of Pontianak and to Hollandia, New Guinea.

Curaçao–Tocumaen, Panama, service is inaugurated on January 3, 1949. Amsterdam–Jakarta flights via Khartoum and Mauritius are flown January 29–July 22. Landing rights on Mauritius Island are received from Great Britain on January 31 as India again bans company aircraft from landing on the subcontinent due to the Indonesian conflict. An L-749A makes the first commercial Amsterdam to New York City flight by an aircraft of its type on March 31.

On May 20, the last of the newly delivered DC-6s begin weekly Amsterdam–Curaçao flights. En route from Batavia to Amsterdam on June 23, an L-749A catches fire and crashes into Bari Harbor, Italy (32 dead, including President Plesman's second son, Hans).

On July 3, India announces that it will exempt at mid-month one Constellation-load of U.S. journalists returning to America from an Indonesian inspection trip. On July 12, 13 of those reporters (including double Pulitzer Prize winners S. Burton Heath and Hobert Renfro Knickerbocker), along with 32 others, are killed when their L-749A crashes during a blinding snowstorm at Tsjatkopar, near Bombay. It is the worst crash yet in Indian commercial aviation history and although terrorism is suspected, it is not proved. India lifts the ban on KLM landings as of July 18.

On August 18, Amsterdam to Batavia frequencies are increased. Curaçao to Amsterdam to Lydda flights resume on October 25. Out in the East Indies, the new government and nation of Indonesia are proclaimed on December 19. At this time, and with KLM technical support and partial minority equity shareholding (valued at G 15 million), the former IIB is reborn as **Garuda Indonesian Airways**. In its almost-four years, the KLM division had flown 508,000 passengers and hauled 14,500 tons of cargo and 4,000 tons of mail.

Operations continue apace in 1950. Following its departure from Schiphol Airport on February 2, a DC-3 with seven crew is lost in the North Sea; there are no survivors.

During the summer, the three surviving L-049s are sold to **Capital Airlines** in the U.S. and are replaced with the first of sixteen additional L-749s. A fashion show is staged aboard a London to Amsterdam flight on October 13 and weekly Sarawak–Hollandia flights are also inaugurated during the year. NNGLM C-54 service is also started from Biak Island to Amsterdam.

Airline employment in 1951 stands at 11,900. On March 12, an L-749 flies from Shannon to New York in a record 10 hrs. 25 min. Flights from Amsterdam to Beirut commence on April 16.

Managua and San Salvador join the route network on May 5. During the summer, the U.S. carrier **Capital Airlines** purchases seven of the company's earlier L-749As, which have been traded back to Lockheed on new Super Constellations.

Beginning on October 18, the carrier joins with Farrell Lines to offer reduced-fare, air-sea travel from New York to Africa. Service to Australia via Manila and Biak is resumed on December 7. At year's end, **Capital Airlines** contracts with the carrier to refurbish the former KLM L-749s to its specifications over the next year.

Customer bookings total 499,000 and 153,000 FTKs are operated.

Service is begun on March 19, 1952 to Salzburg, Naples, Barcelona, and Helsinki. En route from Johannesburg to Amsterdam on March 22, a DC-6 crashes and burns while making a blind approach to Frankfurt Airport (45 dead); \$11,000 of the \$500,000 worth of gold bullion aboard disappears from the wreck.

An L-749 with 10 crew and 34 passengers, must be written off following a hard landing at Bangkok on March 23; there are no fatalities.

Scheduled passenger flights are initiated to Colombia on June 8; the same day, tourist flights from Amsterdam to New York are increased to four per week. Extra frequencies are added on June 29 for Olympic Games visitors. On October 27, Amsterdam–Mexico City via Montreal flights are begun. Orders are now placed for nine L-1049C and three L-1049E Super Constellations.

A DC-6 with 66 aboard crash-lands in the Saudi Arabian desert on January 2, 1953; none aboard are hurt as the USAF rescues the survivors. The prototype L-1049C, slated for the company and christened *Atoom*, makes its maiden flight on February 17 and nine German cities are linked to New York via Amsterdam as of February 20. Beginning in the first quarter and continuing, five of the L-749s refurbished for **Capital Airlines** are ferried to the U.S. from the company's shops at Schiphol Airport.

Just after takeoff from Schiphol Airport for a flight to Paris on May 25, a CV-240 with 6 crew and 28 passengers, makes an unscheduled descent from 60 ft. while climbing. The plane makes a belly landing and slides through a field and into a ditch, killing two people on the ground. Although there are no fatalities on the Convair, it is damaged beyond repair.

The newly delivered L-1049Cs, including ship No. 2, the *Electron*, begin nonstop eastbound New York–Amsterdam service on August 15. Atmospherics prohibit this first nonstop Atlantic landplane service from being available in a westbound direction.

On August 20, the carrier begins using 3-D color films to promote its ticket sales.

In October, a multistop promotional "air race" (for transport evaluation) from Amsterdam to New Zealand is staged between a KLM DC-6, a **British European Airways Corporation (BEA)** Viscount, and a Royal New Zealand Air Force Hastings. KLM supports publication of a 95-page booklet by Henrik Scholte commemorating the adventure, *We Flew to Christchurch: The Story of a Memorable Long Distance Flight* (The Hague, KLM, 1954).

The DC-3 *Robin*, the last airliner in the fleet bearing the name of a bird, is sold to **Air Vietnam, S.A.** at the beginning of December.

Perhaps knowing the end is near, President Plesman, aged 64 and a victim of arteriosclerosis, throws a huge dinner party for company pilots at Schiphol Airport on December 29; on New Year's Eve, he dies in the hospital from arterial bleeding in the stomach. He is succeeded as president by I. A. Aler.

Some 5,000 employees in Indonesia strike on February 1, 1954 over the pending nationalization of **Garuda Indonesian Airways**; however, on March 24, the government of Indonesia and The Netherlands sign a nationalization accord on Garuda, with the former guaranteeing compensation to KLM.

Biweekly Amsterdam to Manila multistop service begins on April 4 and later in the month, orders are placed for nine Vickers Viscount 803s. In May, orders are placed with Lockheed for four L-1049G Super Constellations.

The West Indies Division receives new Convair CV-340s; Amsterdam–Lima service is begun on June 19.

On July 12, KLM shareholding in **Garuda Indonesian Airways** is purchased by the Indonesian government; however, the Dutch airline retains management and maintenance involvement under contract. Some 350 KLM employees will remain in Indonesia to fulfill terms of the arrangement.

On August 23, after stopping at Shannon to disembark 9 passengers, the DC-6B *Willwm Bontekoe* with 9 crew and 12 passengers is en route to New York from Amsterdam via London and Shannon. The aircraft crashes into the North Sea approximately 20 mi. NW of Schiphol Airport, near the community of Ijuuiden; there are no survivors.

Flight 633, the L-1049C *Triton* with 10 crew and 46 passengers en route from Amsterdam to New York on September 5, crashes into the River Shannon after failing its takeoff from Shannon (28 dead).

En route from London to New York on September 8, an L-1049C with 46 passengers, including 9 survivors of the second Shannon disaster, lands safely at Gander, Newfoundland, following the loss of an engine.

Late in the year, the wholly owned subsidiary **Surinaamse Luchtvaart Maatschappij, N.V.** is formed to operate domestic services in the colony of Dutch Guiana. Additionally, the 34-year-old department, which conducts photography and aerial survey work, becomes a full-blown subsidiary, KLM Aerocarto. São Paulo joins the South American route network on December 23.

Amsterdam-Bermuda operations are inaugurated on April 17, 1955. **Australian National Airlines (Pty.), Ltd.**'s 49% interest in **Air Ceylon, Ltd.** is purchased in October and London-Colombo L-1049C flights are begun by year's end.

A new subsidiary, Kroonduif (Crown Pigeon) is established to operate a contract service for the Dutch authorities in New Guinea, where the last Netherlands outpost in Southeast Asia remains.

Meanwhile, as of November 1 the number of Amsterdam to New York all-cargo frequencies increases to five per week.

Destined to be the largest European operator of the passenger Electra, KLM places a \$30-million order on February 29, 1956 for 12 Lockheed L-188Cs. The Dutch company thus becomes European launch customer for the American turboprop, confirming Lockheed's initial decision not to build a jetliner. The order is confirmed on March 8 and when the aircraft arrive, KLM will become the only European operator of factory-delivered Electras.

In March-June, four L-1049Es are converted to L-1049G standard. A DC-6 makes the first company flight into Ferihegy Airport at Budapest on June 21.

Two L-1049Gs originally requested by **Thai Airways, Ltd.** are purchased and delivered in June and July.

On September 22, the company signs an agreement to act as the western agent for **Interflug DDR Airlines**; the East German carrier agrees to serve as the Eastern Block agent for the Dutch flag carrier.

A total of 822,000 passengers are boarded and 235,000 FTKs are operated.

Three Lockheed L-1049H Super Constellations are received during the first half of 1957. Regularly scheduled service to Budapest begins on February 7; KLM is the first Western airline to serve the Hungarian capital. On May 7, KLM Vice President Van Oldenbourg opens an office at Budapest; the company is again the first Western airline to do so.

Flight 844, an L-1049C with 9 crew and 59 passengers fails its take-off from Biak Island on July 15 and crashes into the sea off Netherlands New Guinea; there are no survivors.

All-cargo service to Houston via Montreal begins on September 3. Company technical and managerial support and all other Dutch assistance to **Garuda Indonesian Airways** ceases in September.

On November 8, an L-1049G crashes into a swamp near Montreal (79 dead). Two days later, New York to Curaçao flights begin. Jakarta service ceases on December 3.

Routes are extended Azores-Caracas and Bermuda-Panama, Guayaquil, and Lima in 1958. Between March 16 and 20, pilots strike for the reinstatement of two dismissed colleagues. The carrier is one of four European airlines charged by **Pan American World Airlines (1)** on April 11 with violating IATA rules by serving full meals disguised as sandwiches on economy flights; the industry association promises to investigate this excess-food-sandwich case. Moscow service is opened on July 21.

On August 14, the decade's first major disaster on the transatlantic route involving an airliner flying in all-tourist-class configuration occurs. Flight 607E, the L-1049H *Hugo de Groot* with 8 crew and 91 passengers and en route from Amsterdam to New York via Shannon and Gander is lost at sea 130 mi. SW of Shannon, Ireland; there are no survivors.

A DC-7C frequency in Australia is rerouted on November 1 via the North Pole to Tokyo and Biak. This is the company's first transpolar service. During November, tourist class is abolished in favor of econ-

omy class. Also during the month, the leased L-749A, which has been providing Sapphire service from Colombo to Amsterdam and London on behalf of **Air Ceylon, Ltd.**, is replaced by the chartered L-1049E *Isotoop*. The last DC-7C built is delivered on December 10 and is christened *Barents Zee*.

Services to Singapore are cut to one flight per week on April 1, 1959 by order of the British government. In cooperation with **LOT Polish Airlines**, Amsterdam-Warsaw flights begin on June 1; on June 22, the DC-4 *Limburg* is sold to **Air Algerie, S.A.**

On September 4, a new DC-8-32 flies from Los Angeles to London in a record 10 hrs. 42 min. The first Lockheed L-188C Electra turboprop is delivered on September 21 and is christened *Mercurius*; it is introduced on December 9, along with several other units from Amsterdam to Budapest, Düsseldorf, Frankfurt, and Vienna. Long-haul multistop Electra service from Amsterdam to Khartoum begins on December 15.

During the year, a Publication Distribution Service is established. The somewhat secretive division begins a long-term project to persuade overseas customers to ship their printed matter to Amsterdam, where it is separated into individual pieces and turned over to the Dutch postal system ready to distribute to individual addresses in Holland or to other European postal systems.

The first airline in Europe to take delivery of a DC-8, KLM, on March 19, 1960, receives its first DC-8-32, which is employed to begin scheduled weekly revenue service from Amsterdam to New York's Idlewild Airport on April 16. DC-8-32 frequencies between Amsterdam and New York are advanced to daily on April 23 while Amsterdam to Amman L-188 service begins on April 30.

The fortieth anniversary of Amsterdam-London service is celebrated on May 17 when a DC-8-32, with the carrier's first pilot H. "Jerry" Shaw aboard as a passenger, flies the route.

Electra flights to Jeddah and Benghazi and L-749 service to Accra begins on November 1. Rotterdam-London flights are inaugurated on November 2. Amsterdam to Monrovia L-188 operations are started on November 5 via Casablanca, Las Palmas, and Konahey. Orders are placed for Douglas DC-8-50 jetliners. DC-8-32 Amsterdam to Sydney service is opened on November 20.

When the L-1049E *Isotoop* returns from two years of service with **Air Ceylon, Ltd.**, it is chartered to **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. The last of 12 Electras is received on December 14 and is christened *Sirius*.

In January and February 1961, support is given to the formation of the new South American carrier **VIASA (Venezolana Internaional de Aviacion, S.A.)**; DC-8-32 Caracas-Amsterdam flights on behalf of the new entrant begin on April 1. The same day, an L-1049E is leased to **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**; the two former **Thai Airways, Ltd.** L-1049Gs are also chartered to the Spanish flag line.

The carrier receives its first DC-8-53 on April 3; the second DC-8-53 establishes a new distance record of 6,890 mi. when it flies nonstop from Long Beach to Rome in 11 hrs. 17 min. on April 21.

On May 30, one of the Dutch carrier's Douglas DC-8-32s, under lease to the Venezuelan airline, is lost when it crashes into the Atlantic Ocean during a flight from Lisbon to Santa Maria, Azores (65 dead).

A DC-7C with 73 passengers from the U.S., lands safely at Prestwick, Scotland, on June 11 after an engine catches fire and drops into the Atlantic.

Flight 823, the L-188C *Sirius* with 7 crew and 29 passengers crashes 4 km. SE of Cairo while on final approach after a service from Rome on June 12 (20 dead).

In December, the company's interest in **Air Ceylon, Ltd.** is sold to **British Overseas Airways Corporation (BOAC)**.

Systemwide, enplanements total 1,398 million and 399,000 FTKs are operated. The company's first year of losses leads to the resignation of President Aler.

In 1962, KLM's new president, Ernst Hans van der Beugel, formerly of the Netherlands Foreign Affairs Ministry, hires the consulting firm of

McKinsey & Co. to offer suggestions for a return to profitability. Its report simply confirms staff and capacity reductions already underway. A DC-8-53 is leased from **Philippine Airlines (PAL)** in February. When PAL is unable to obtain a second ordered DC-8-53, its order is cancelled; KLM now steps in, purchases the jetliner, and in April leases the Douglas to PAL long-term.

Portuguese citizen E. da Silva is held at Amsterdam on April 16 after attempting to force a Santiago-bound DC-8-53 with 52 aboard to fly to East Berlin.

The leased L-1049E is returned from **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on May 28. A DC-7C with 62 aboard crashes just after takeoff from Lisbon on May 30; there are no survivors. The two former **Thai Airways, Ltd.** L-1049Gs leased to Iberia are purchased by that Spanish company on August 15. On August 30, **Surinaamse Luchtvaart Maatschappij, N.V. (SLM)** is finally officially registered and is given a DC-3.

In compliance with a Cuban government order, flights to Havana from Curaçao are suspended on October 24. Meanwhile, as additional Douglas jetliners become available, a concentrated effort is launched to dispose of propeller equipment, including the DC-7Cs.

Dutch rule in New Guinea ends and the subsidiary Kroonduif is shut down; its activities are taken over by **Garuda Indonesian Airways**.

Passenger bookings for the year grow to 1,455,000.

The first DC-8-55F freighter is placed in service in 1963. Having already reduced his staff by one-seventh and refusing to slice further, President van der Beugel resigns and is succeeded by banker Horatius Albarda, who undertakes a company reorganization leading to further reductions in staff and services. Curaçao-Havana services are resumed on August 12.

When the third Convair CV-880M is delivered to **VIASA (Venezolana Internacional de Aviacion, S.A.)** late in the year, it wears its own colors on its left side and those of KLM on the right.

A total of 1,466,000 passengers are carried, but a net loss of \$4.2 million is recorded.

Airline employment stands at 14,500 in 1964. Employing the VIASA CV-880M with the two-sided livery, KLM, on May 2, begins jetliner service from Curaçao to Miami. Curaçao to Paramaribo, Surinam, flights commence the next day.

On August 1, the West Indies Division is reformed into the wholly owned subsidiary **Antilliaanse Luchtvaart Maatschappij, N.V. (ALM)**. Late in the year, ALM and SLM begin pooled West Indian service. Fleet standardization continues, as all DC-3s, CV-340s, and most DC-7Cs are retired or transferred to the subsidiaries and two additional DC-8-55Fs join the fleet. An additional VIASA CV-880M is chartered for Caribbean operations.

Passenger boardings for the only European carrier exhibiting at the New York World's Fair rise 9% to 1.6 million. On total revenue of \$182.7 million, a net loss of \$1.7 million is suffered.

The workforce shrinks to 13,900 in 1965. When President Albarda is killed in a private plane crash, he is succeeded by Deputy President Gerit van der Wal. Service is started to Bucharest and frequencies to the Far East are increased. A subsidiary, **KLM Noordzee Helicopters, B.V.**, is created to service North Sea oil platforms and incorporated on October 12. Nine Vickers Viscounts and the last three DC-7Cs are sold as five DC-9-32s are delivered. Orders are placed for six more DC-9s and an additional DC freighter. Passenger boardings climb 7% to 1,705,000 and freight traffic jumps 17%.

A DC-8-55F and six DC-8-55s are delivered in 1966 and placed into service. One of the latter, flying from New York on April 5, arrives at Ferihegy Airport at Budapest after a 10 hr. 20 min. flight; the landing of the Douglas narrow-body represents the first scheduled intercontinental flight to pass through Hungary.

The commuter carrier **NLM Dutch Airlines, B.V.** is formed in August as a wholly owned subsidiary and incorporated on September 12. During the year, Dutch government interest in the airline is reduced to 49.5%.

Enplanements total 1,913,000 and 625,000 FTKs are operated.

The fleet in 1967 comprises 6 DC-8-32s, 7 DC-8-55s, 4 DC-8-55Fs, 2 DC-8-63s, 6 DC-9-55s, 5 DC-9-32s, 4 DC-7Fs, and 11 L-188s. Orders are outstanding for 5 DC-8-63s, 4 DC-9-32s, 5 DC-9-33RCs, 3 B-747s, and 6 U.S. SSTs, the latter on option. The new Schiphol Centre terminal is opened in April. Passenger boardings climb to 1,913,000.

Airline employment in 1968 is 14,243. The carrier undertakes extensive facilities expansion in New York and Holland during the year. Under construction at Schiphol is an eight-story headquarters building with an adjacent three-story computer center, plus a mammoth maintenance hangar.

Early in the year, all 11 L-188Cs are sold to **Universal Airlines**, which will convert them into freighters. The first is turned over to the U.S. carrier on March 14.

The last DC-7Fs are also phased out, making KLM an all-jet airline.

On March 29, the **British Eagle International Airways, Ltd.** BAC 1-11-205 *Stalwart* is leased for use during the summer charter season. It will be returned in August.

A DC-8-55F is purchased from **Philippine Airlines (PAL)** and is christened *Gerard Mercator*.

On December 31, the Dutch Antilles government acquires 96% majority control of **Antilliaanse Luchtvaart Maatschappij, N.V. (ALM)** with KLM retaining a minority interest. The independent airline is renamed **ALM Antillean Airlines**.

Freight accelerates 11% and passenger boardings pass the 2-million mark for the first time (2,050,000). Revenues ascend to \$211.44 million, allowing an operating profit of \$42.87 million and net gain of \$24.64 million.

The last of 11 L-188Cs is turned over to **Universal Airlines** on February 2, 1969. Later, a pair of DC-8-63s and one F.27 join the fleet, the latter for **NLM Dutch Airlines, B.V.**

A new three-level catering center is opened near New York (JFK) during the summer.

Enplanements grow only slightly, to 2,087,780. Revenues swell to \$311 million; although the operating profit is up to \$47.61 million, the net profit slips to \$20.39 million. Orders are placed for Boeing 747s.

Service begins to Casablanca, Kinshasa, Kano, Barbados, and Chicago in 1970. In February, two DC-9-33Cs and a DC-8-63 are received. In the same month, the KSSU Group for technical and operational cooperation is formed with **SAS (Scandinavian Airlines System)**, **Swissair, A.G.**, and **UTA French Airlines**; the multi-airline pact is signed for a 10-year period.

Freight climbs 6%, but passenger boardings do even better, up 14% to 2,423,000. Revenues advance to \$354.17 million; however, the operating profit dips to \$43.51 million and net gain drops to \$12.96 million. In terms of air freight carried, the Dutch flag line is now the ninth largest airline in the world; it ranks 12th in employment and 25th in fleet size.

The employee population stands at 16,755 in 1971. The first of seven B-747-206Bs, all named for major world rivers and the company's first wide-bodied aircraft, to be delivered on the year arrives on January 16; christened *The Mississippi*, it is placed on the New York route in February. It is the airline's first wide-body aircraft. On March 1, the KLM head office moves from The Hague to the newly constructed Amstelveen building. The B-747-206B *Donau* (The Danube) is received on March 5 and Jumbojet flights from Amsterdam to Tokyo via Moscow commence in April.

Also in April, and continuing through November, a joint venture route is opened with **Aeroflot Soviet Airlines** from Moscow to Amsterdam via Zurich. The weekly service is flown by four Soviet Il-62Ms wearing small KLM titles below the main Aeroflot titles on their fuselages. A third new wide-body, *Amazona* (The Amazone) enters service on May 21.

A 74-year-old widow, Mrs. S. Krasnoff, makes an estimated 160 roundtrip transatlantic flights with her 14-year-old grandson between July and September in an effort to keep him from his father, who believes the boy requires psychiatric help for personal problems. During the last of these trips, Mrs. Krasnoff, whom company officials reveal as

having spent \$140,000 on tickets, suffers a heart attack from exhaustion and dies in an Amsterdam hospital.

The last four B-747-206Bs are received between August 31 and December 15 and are christened, respectively, *Nijl* (The Nile), *Rio de la Plata*, *Rijn* (The Rhine), and *The Orinoco*. Enplanements for the year pass the three-million mark, rising to 3.130 million, while 1.24 million FTKs are operated. Revenues advance to \$449.66 million, but operating income falls to \$9.96 million and there is a \$30.11-million net loss.

The fleet in 1972 is increased by delivery in December of the first DC-10-30, christened *Ludwig van Beethoven*, and four DC-9-32s. The fleet is now 100% wide-bodied on U.S. and European routes. A total of 3.5 million travelers are accommodated. Revenues jump to \$557.32 million and the operating gain is \$27.52 million; the net deficit is reduced by almost half, to \$16.40 million.

Beginning on January 7, 1973, the carrier offers \$329 roundtrip New York to Amsterdam flights for chess enthusiasts that includes chess instruction from Dutch grand masters. Two additional DC-10-30s join the fleet in February and March and are named, respectively, *Frederic Francois Chopin* and *Maurice Ravel*; orders are now placed for a fleet of GE-powered convertible or combi Jumbojets, which will be named for aviation pioneers.

On August 1, after a long tenure, President van der Wal retires and is succeeded by Sergio Orlandi; Chairman J. E. de Quay and General Manager J. F. A. de Soet are replaced, respectively, by J. W. de Pous and B. van de Breevaart. The last of the first generation of DC-8s are sold and one more DC-10-30 is acquired.

On October 2, a DC-9-32, preparing for departure from Dusseldorf to Amsterdam, is taken over by a lone assailant, who is quickly talked out of his hijacking plans by the pilot. The man is arrested when police arrive aboard the Douglas.

En route from Beirut to New Delhi and Bangkok, Flight 861, a B-747-206B with 288 passengers, is seized over Iraq on November 25 by 3 members of the Arab Nationalist Youth for the Liberation of Palestine. After making a refueling stop in Damascus, the craft is forced to fly to Nicosia, where the hijackers demand release of 7 Arabs jailed since April for various offenses. After Cypriot officials reject this request, the plane takes off again, stops briefly at Tripoli, and on November 27, lands at Valletta, Malta. Once on the island, the pirates free all 247 passengers and 8 stewardesses, but depart again with 10 crewmen and KLM Vice President A. W. Withholt for Dubai. From Dubai, on November 28, the Jumbojet is flown to Aden and then back to Dubai, where the gunmen surrender the plane and their hostages in return for safe conduct passes.

Enplanements for the year are 3,785,600. Revenues ascend to \$665.53 million and the operating profit climbs to \$31.25 million; the net loss deepens to \$20.05 million.

Service to Aruba in the Caribbean begins in February 1974. The fourth and final DC-10-30, the *Johann Sebastian Bach*, is delivered in March. During the year, **NLM Dutch Airlines, B.V.** begins international regional flights. Under strong pressure from the U.S. government and competing airlines, the carrier, on July 14, drops a controversial rebate scheme under which travelers to Amsterdam aged 16 through 23 are paid \$50 for answering an opinion questionnaire from the Netherlands tourist office.

A DC-8-63, with 162 aboard, crashes while landing at Colombo, Sri Lanka, on December 4; there are no survivors.

Freight soars 22%, but passenger bookings overall dip 4% to 3,640,000. Fuel costs rise significantly, explaining a \$27.24-million loss on total revenues of \$889.02 million.

The workforce in 1975 is 16,700. New flight attendant uniforms are introduced and traffic rights talks commence with the U.S. The first two new B-747-206Cs are acquired on October 19 and December 15 and are christened, respectively, *Albert Plesman* and *Wilbur Wright*. Surinam gains its independence from Holland in November and on November 2, employing a DC-8-55 leased from KLM, begins service to Amsterdam as **Surinam Airways**.

Passenger boardings increase 8% to 3,931,200 and cargo falls 1%. Operating expenses, particularly fuel costs, are reduced by \$30 million, leading to a \$12.6-million profit.

The subsidiary NLM Dutch Airlines is renamed **NLM CityHopper, N.V.** in 1976. Charging that he was bumped from a flight from Aruba and thereby missed his January 3 inauguration, Riverdale, New Jersey, Mayor Howard Card sues the company for \$25,000.

Flight 366, a DC-9-32 with 82 passengers en route from Malaga, Spain, to Amsterdam on September 4, is commandeered just after takeoff by three pro-Palestinian gunmen, who force it to fly to Tunis for refueling.

The next day, the plane proceeds to Larnaca, Cyprus, and then takes off for Tel Aviv, but is turned back to the island after Israeli jet fighters prepare to intercept it. After receiving assurances of safe conduct, the gunmen release their hostages and surrender. They will be turned over to the government of Libya.

Bookings this year slip to 3.7 million, while 1.81 million FTKs are operated. The net profit reaches \$30.84 million.

When KLM repossesses its only jetliner on January 17, 1977, **Air Siam, Ltd.** is grounded.

On March 27, the world's worst aviation disaster grows out of terrorist actions. Just after noon local time, a bomb explodes in the passenger terminal at Las Palmas Airport; warnings are made concerning a second blast. As a result, all air traffic is diverted to Norte Los Todeos on Tenerife Island, Canary Islands. Two such flights are Pan Am Flight 1736, the B-747-121 *Clipper Victor* with 16 crew and 380 passengers flying to Europe from Los Angeles via New York, and KLM Flight 4805, the B-747-206B *Rijn* (The Rhine), with 14 crew and 234 passengers en route to New York from Amsterdam.

Unlike the KLM passengers, those aboard the Pan Am aircraft remain aboard and are ready to leave as soon as the ban on service to Las Palmas is lifted at 3 p.m. Unhappily, all of the taxiways are congested with other diverted aircraft and immediate departure is not possible. Pan Am 1736 is required to backtrack on Runway 12 for departure on Runway 30, but the entrance to Runway 12 is blocked by KLM Flight 4805, which is being refueled.

Finally, at 5:59 p.m., its refueling completed and all but one of its passengers reboarded, KLM 4805 is cleared by ATC to backtrack to Runway 12 and make a 180-degree turn at its end. At 6:02 p.m., Pan Am 1736 is cleared to follow the KLM Jumbojet. Pan Am 1736 is told to leave Runway 12 at the third taxiway. Three minutes later, KLM 4805 reports itself ready for departure and is given instructions, which are reported back to ATC, with the added words "We are now at takeoff." The *Rijn's* brakes are released and it begins to roll.

Meanwhile, ATC, knowing that Pan Am 1736 is still taxiing, advises KL4805 to stand by for takeoff until the *Clipper Victor* has cleared the runway. Not having takeoff clearance but, as the result of misinterpretation, in absolute conviction that it had been given, the Dutch Jumbojet continues.

At the last moment, the flight crew of the *Rijn* sees the *Clipper Victor* still taxiing down the runway and tries to climb away, becoming airborne after a 65-ft. tail-drag in an excessive rotation. The flight crew of the *Clipper Victor* immediately turns their aircraft to the right and applies full power.

Although KLM 4805 is airborne, it smashes through the top of Pan Am 1736's after fuselage, destroying it and taking off the tail as well. The *Rijn* flies on out of control before crashing and bursting into fire; flaming wreckage spills 1,488 ft. down the runway.

All aboard the KLM Jumbojet are killed, but 3 crew and 51 passengers aboard the Pan Am plane survive. To date, the 583 deaths at Tenerife continue to hold the top spot on a grisly list of accidents and death. Somewhat surprisingly, the tragedy results in only one small, 161-page paperback book, that by a survivor, Norman Williams, with George Otis, *Terror at Tenerife* (Van Nuys, Calif.: Bible Voice, 1977).

The Dutch line's booking continue to fall during the year, hitting 3,677,814. Still, the net profit jumps to \$36 million.

New service is inaugurated to Basel, Salonika, and Kilimanjaro in **1978**. Agreements for technical assistance are signed with **THY Turkish Airlines (Turk Hava Yollari, A.O.)** and **Iraqi Airways**. President S. Orlandini and Managing Director L. J. van Ameyden oversee a workforce of 16,500. With orders outstanding for two B-747-200Bs and two B-747-200Cs, the fleet now comprises 6 B-747-206Bs, 2 B-747-206Cs, 11 DC-8-63s, 5 DC-8-50Fs, 6 DC-10-30s, 9 DC-9-30s, 7 DC-9-30Fs, and 2 DC-9-15s.

Three passengers and female flight attendants subdue hijacker Paul Gokkel, who commandeers an Amsterdam–Madrid DC-9-32 flight on August 6 in an effort to reach Algeria. He will be extradited to the Netherlands, tried, and sent to prison.

Two more B-747-206Cs are delivered on September 1 and November 3 and are named, respectively, *Louis Bleriot* and *Charles A. Lindbergh*. Passenger traffic grows 9.1% to 4,046,000 and freight is up 8.1%. Total revenues of \$1.3 billion are earned and the net profit soars to \$63 million, a 75% jump.

Los Angeles, Helsinki, Khartoum, Lome, and Tangiers join the international route network in **1979**. Following the Chicago **American Airlines** crash, all DC-10-30s are briefly grounded. Two more B-747-206Cs are acquired on May 15 and August 17: the *Sir Charles E. Kingsford-Smith*, and the *Anthony H. G. Fokker*. They are joined on September 21 by the GE-powered pure passenger liner B-747-206B, *The Missouri*, which begins Amsterdam–Los Angeles service in April. Still, enplanements accelerate to 4,100,800. A \$39-million net profit is reported.

Airline employment is reduced 0.4% in **1980** to 19,230. Routes are offered to Belfast and San Jose. In January, an alliance is entered into with **Air U.K., Ltd.** that provides from Dutch ground handling of the British airline at Amsterdam in exchange for code-sharing on routes into Britain. The sixtieth anniversary of the Amsterdam–London line, the oldest scheduled air route in the world, is celebrated. The festivities are improved when word is received during the month that the company has received the 1979 “Cargo Development Award” from *Air Transport World* magazine.

A new maintenance hanger is completed and a second GE-powered B-747-206B passenger plane is received on September 11 and is christened *Ganges*. Following the outbreak of hostilities between Iran and Iraq in September, the carrier halts service to Tehran.

On November 3, three former employees receive \$17,500 each and lifetime passes allowing one around-the-world trip annually as settlement of their age discrimination suit. *The Indus*, another B-747-206B, arrives on December 15.

Freight rises 11.6% and passenger bookings are up 6.8% to 4.4 million. Total revenues climb 14.5% to \$1.543 billion, but expenses (again, primarily for fuel) jump 17.6% to \$1.535 billion so that this year's net profit is only \$7 million.

The employee population falls another 0.8% in **1981** to 18,753. New uniforms for female cabin and ground personnel are introduced, as are inaugural frequencies to Muscat, Stuttgart, and Atlanta. An improved business-class service is offered on select flights and a comprehensive marketing agreement is signed with **ALM Antillean Airlines** covering services over the Atlantic from the Dutch Antilles to Amsterdam.

A seventh B-747-206C, the *Admiral Richard E. Byrd*, arrives on September 29 and during the fourth quarter, complete shareholding is secured in Highmark International.

Boardings decline 3.1% to 4,293,000, but freight traffic totals 993 million FTKs. Cost reduction efforts allow a \$43.1-million net profit on \$1.43 billion in revenues.

The carrier in **1982** is one of six participating under an ICAO grant in the training of personnel for **Biman Bangladesh Airlines, Ltd.** A new cargo terminal is completed at Amsterdam.

A total of 4,655,580 passengers are carried and a \$28.6-million profit is posted.

The number of workers is cut 0.7% in **1983** to 18,965. Service is launched to Taipei and Salisbury, Zimbabwe. Four new Airbus Industrie A310-203s are delivered and begin service on high density European

routes and to some destinations in North Africa and the Middle East. Delivered in April, May–June, and December, they are christened, respectively, *Rembrandt*, *Albert Cuyp*, *Jeroen Bosch*, and *Marinus Ruppert*.

The first stretched upperdeck (SUD) B-747-300C, the *Dash-306C Sir Frank Whittle*, joins the fleet on September 30 as orderly retirement of the DC-8-63s begins.

Passenger boardings pass the five-million mark for the first time, accelerating 0.7% to 5,006,000 and cargo jumps 15.8% to 1.21 billion FTKs. Revenues swell 4.1% to \$1.3 billion and the net profit climbs to \$56.5 million.

The payroll is boosted 2.1% in **1984** to 19,365 as 10 B-747-206Bs are chosen for reconfiguration by Boeing to Dash-306 SUD standard over the next two years. New routes are opened to Doha, Larnaca, and Seoul. Two more A-310-203s are delivered in January and February and named *Jan Steen* and *Frans Hals*. Also in February, the KICK quality-raising program is initiated with mass sessions in a hangar at Schiphol East.

Systemwide, in-flight services are improved; meals and tableware are upgraded and free alcoholic beverages and earphones are offered in tourist class. In June, as a result of a new agreement between the Dutch and British governments, 10 new \$70 London–Amsterdam return services are introduced.

The second B-747-306C, the *Sir Geoffrey De Havilland*, arrives on September 13. In December, a restored DC-2, which is renamed *Uiver*, is employed to refly the famous England to Australia MacRobertson Air Race route of 1934.

Passenger bookings accelerate 4.3% to 5,223,150 and freight soars 16.8% to 1.42 billion FTKs. Total revenues jump 9.8% to \$1.2 billion; an \$89.8-million operating profit is thereby generated and an \$84.8-million net profit is realized.

The employee population is boosted 4.8% to 20,287 in **1985**. Service is inaugurated to Portugal, Lyon, and Dubrovnik. In January, February, and March, three additional A-310-203s join the fleet: *Vincent van Gogh*, *Pieter de Hoogh*, and *Jan Toorop*. Flights to Beirut are suspended in May.

In June, the carrier abandons an MD-80 order in favor of becoming the second European major to order the Fokker 100; a \$240-million request is made for 10 of the upgraded Fellowships. The last DC-8-63 is retired, and the last of 10 A310-203s, the *Johannes Vermeer*, enters service in September. In October, a \$385-million order is placed with Boeing for a fleet of 10 737-300s.

In November, the last 16 remaining DC-9s (6 DC-9-33RCs, 9 DC-9-32s, and 1 DC-9-15) are sold to United Aviation Services for 1987 turnover. In cooperation with the Utrecht University School of Veterinary Medicine, the company's pioneering Animal Hotel, located at the cargo facility at Amsterdam's Schiphol Airport where animals are held prior to shipment, is expanded and improved.

Freight remains level with 1984, but passenger boardings climb 4% to 5.4 million. Total revenues are up 4.8% to \$1.79 billion. The operating gain climbs to \$77.7 million and the net profit grows to a record \$88.6 million. At year's end, Europe's oldest carrier ranks 16th in the world in terms of airline revenues generated.

The payroll is cut by 5.4% in **1986** to 19,193. KLM is named “Airline of the Year” for 1985 by *Air Transport World* magazine in January and in February, twice-daily Schiphol–London (LGW) flights begin. In the largest New York airline equity issue since Howard Hughes' sale of his stake in **Trans World Airlines (TWA)**, the Dutch carrier offers 15 million common shares at \$20.50 each in March (government shareholding shrinks from 55% to 38.2%) and raises over \$300 million. In April, the carrier becomes the first in Europe to order the stretched Boeing 747-400.

The same month, it opens a new route to Calgary and Vancouver and joins **Sabena Belgian World Airlines, S.A.** (48.6%) in taking an interest (33.3%) in the regional carrier **Delta Air Transport, N.V.** The carrier and its **NLM CityHopper, B.V.** subsidiary transfer from Terminal 2 to the new Terminal 4 at London (LHR) in May.

In June, London–Tokyo flights begin over a trans-Siberian route via Moscow while in July, a corporate discount program is introduced for

U.S.-based concerns. In October, the KLM board elects J. F. A. de Soet to succeed President Sergio Orlandini upon the latter's September 1, 1987 retirement. From a high of 78%, Dutch government interest in the airline is now reduced to 54.8%.

Boeing's 5,000th jet airliner, a B-737-306, is delivered to the Dutch flag line in September. In fact, six new B-737-306s are added between September and December; these are christened *William Barentsz*, *Olivier van Noort*, *Cornelis de Houtman*, *Anthony van Diemen*, *Abel J. Tasman*, and *Michiel A. de Ruyter*.

Meanwhile, the carrier adds one last B-747-306C, the *Leonardo da Vinci*, on October 3, while retiring four DC-9-32s. In November, KLM signs a marketing agreement with **United Airlines** designed to provide better synchronization of flight schedules at the Dutch flag line's six U.S. gateways—New York, Chicago, Atlanta, Los Angeles, Houston, and Anchorage.

Customer bookings swell 3% on the year to 5,586,586 and cargo jumps 7% to 1.53 billion FTKs. Revenues plunge 10.1% to 1.89 billion, costs are down 10.5% to \$1.76 billion, and the operating profit is down by \$6 million to \$131 million. The net profit falls an even greater amount, from \$156.5 million to \$132.2 million.

Employment at the Dutch flag carrier increases by 4.8% in 1987 to 21,235. The board of directors, in January, rejects a proposed \$975-million purchase of the Hilton International Co. from Transworld Corp., which turns around and sells the 90-hotel chain to UAL, Inc., parent of **United Airlines**. Four additional B-737-306s arrive in January–March and are named *Petrus Plancius*, *Maarten H. Tromp*, *Jan H. van Linschoten*, and *Piet Heyn*.

The carrier inaugurates a nonstop B-747-306 trans-Siberian weekly flight between Tokyo and Amsterdam on April 3. At the same time, one of four weekly flights presenting operating between the two cities via Anchorage is discontinued. Compared to the Anchorage route, the Jumbojet shortens the transit time by some 4.5 hours. In May, all cargo-related functions are centralized, as Jacques Ancher becomes vice president-cargo for KLM Cargo.

Orders are now placed for a fleet of B-737-400s and direct, weekly A310-203 service is inaugurated from Amsterdam to Izmir. President de Soet takes office in September.

En route from Amsterdam to Milan on December 23, Flight 343, a B-737-306 with 97 passengers, is hijacked by a teenager claiming to have a bomb and demanding to be flown to Rome. On the ground at the Italian capital, he demands a \$1-million ransom, but does release half of his hostages. As what appears to be the payoff is brought aboard, the young pirate is overwhelmed by police.

Passenger boardings improve by another 15% to 6,399,000 while freight is up an equal 15% to 1.76 billion FTKs. Revenues climb to \$2.64 billion and allow operating income of \$152.5 million and a net profit of \$161.4 million.

The payroll grows another 7.3% in 1988 to 22,775. In March, the Dutch regional carrier **NetherLines, N.B.** is taken over while Orlando to Amsterdam B-747-306 service begins on April 1. Also during the spring, the carrier acquires the small package airline **XP Express Parcel Systems, N.B.** and takes shareholding in **Transavia Airlines, N.V.** and **Air UK, Ltd.**, plus a 35% stake in **Air Littoral, S.A.** An interest is also taken in the European trucking firm Franz Maas Beheer. A weekly B-747-281F all-cargo service is started on June 7, in cooperation with and employing the aircraft of **Nippon Cargo Airlines, Ltd.** between Tokyo and Amsterdam.

On August 11, Dr. Max Albrecht succeeds G. A. Wagner as board chairman and nonstop twice-weekly DC-10-30 flights commence in November. The B-737-306s *Willem van Ruysbroeck* and *Jacob van Heemskerck* arrive in November and December, respectively.

Customer bookings grow by 5.4% to 6,228,961 and cargo rises 8.5% to 1.87 billion FTKs. Revenues ascend 8.3% to \$2.3 billion and generate an operating profit of \$198 million and net gain of \$173.3 million.

The first two Fokker 100s, *Adriaensz*, *Leeghwater* and *Johannes Blaeu*, arrive in January and February 1989 and the last B-737-306,

Jacob Roggeveen, is delivered in March. Meanwhile, on March 5, the first Fokker 100, after only a few hours service, suffers a left main landing gear collapse upon landing at Geneva. Also during the first quarter, a request is received from **Air Littoral, S.A.** for the lease of up to six Fokker 100s.

During the spring, a contract is entered into with **Air Bridge Carriers, Ltd.** to provide nightly scheduled freight services between Holland and airports in the U.K. and Ireland; the outward bound flights to Amsterdam are known as The Midnight Express while return service becomes The Dawn Breaker.

The first B-747-406 destined for the manufacturer's European market is received on May 20; christened *Atlanta* (all future DASH-400s will be named for cities or countries), it is introduced in June, the same month the second new Jumbojet, the *Bangkok*, is delivered. Meanwhile, a major break with fellow Dutch company Fokker occurs in May. The last Fokker 100, the *Christiaan Huygens*, arrives in early June.

Late in the Fokker 100 delivery period and after incurring the airline's wrath over corrective actions, the manufacturer finds its long-time national customer cancelling the last 4 of its original order for 10 Fokker 100s and ordering B-737s with which to replace the first 6 as soon as possible.

During late spring, four B-747-206Bs are sold to **America West Airlines**, with two repainted and delivered in time for the new American major to use on its summer and fall schedules. At the same time, construction is undertaken on a major expansion of the cargo handling center at Schiphol Airport.

In July, a \$400-million stake, or about 60% equity, is taken via Wings Holdings in **Northwest Airlines**, as a significant joint step on the road to a global airline system. Plans are made to acquire a 20% interest in the **Sabena Belgian World Airlines, S.A.** subsidiary **Sabena World Airlines, S.A.**, similar to that taken by **British Airways, Ltd. (2)**. Together, the three carriers would also contribute to the creation of a major Eurohub at Brussels.

In August, the company becomes the first airline to begin flying the European flag on its aircraft; it is displayed alongside The Netherlands flag. Two additional B-747-406s, the *Calgary* and *Dubai*, arrive in September, along with the first three B-737-406s, the *Willem C. Schouten*, *Joris van Spilbergen*, and *Gerrit de Veer*. The airline's seventieth birthday is celebrated in October and a third weekly Amsterdam to Orlando roundtrip is initiated. Service to St. Martin, the carrier's 142nd destination, is also celebrated.

In November, it is announced that the remaining order for Fokker 100s will be diverted to **SAS (Scandinavian Airlines System)**, which has recently completed the return of its 100s to Amsterdam for structural strengthening. At the same time, a mutual cooperation agreement is signed with **Garuda Indonesian Airlines** covering expansion of joint services between The Netherlands and Indonesia, studies of human and fleet resource usage, further development of the hub and spoke systems of both carriers, and the joint development of Garuda's organization, management, and workforce.

On December 15, Capt. Karel van der Elst, with first officers Walter Vuurboon and Imme Visscher, the first ever female B-747-400 flight crew member, are flying Flight 867 from Amsterdam to Tokyo. All four engines of the B-747-406 *Calgary* with 234 passengers shut down temporarily when the Jumbojet flies through a cloud of ash from erupting Redoubt volcano at 25,000 ft. over Alaska. After gliding the plane to 13,000 ft. and 8 attempts, the crew is able to restart the engines in time to make a safe landing at Anchorage. Damage to the plane's body and wings from the sandblasting effects of the volcanic ash, together with engine injuries, will cost \$80 million to repair.

The year's enplanements swell by 3.9% to 6,539,883 and freight is up by 6.4% to 1.99 billion FTKs. Revenues ascend 8.8% to \$2.62 billion. The operating profit is \$206.8 million and net gain inclines upward 19% to reach \$180.9 million—the best ever.

Company employment is increased by 10.6% in 1990 to 25,195; this total now gives KLM the 16th largest airline workforce in the world.

The fifth B-747-406 is delivered in January and is christened *Melbourne*. It is followed by the *Freetown* in February and the *Guayaquil* and *Hong Kong* in April. Meanwhile, on March 1, a \$1.3-billion order is placed for 10 McDonnell Douglas MD-11s, with options taken on another 5. The last two of four B-747-206Bs are delivered to **America West Airlines** and three Fokker 100s are chartered to **Air Littoral, S.A.** All interest in Hotel Maatschappij Oud Amsterdam is sold on May 29.

A "Products 90s" quality-raising program is kicked off in June. During the same month, a "Europe by Design" summer vacation program is introduced that allows travelers, who must arrive at Amsterdam, to choose which of 14 other European cities they wish to visit. The **Sabena World Airlines, S.A.** plan falls through in July after KLM, **British Airways, Ltd. (2)**, and **Sabena Belgian World Airways, S.A.** each receive a statement of objections to the new entity from the European Commission.

During the same month, the carrier drops six months of investment conversations with the West German regional **Air Bremen, GmbH**. On the other hand, twice-weekly B-737 service is begun on July 14 to the former East German city of Dresden from Maastricht. Simultaneously, weekly B-747-306C roundtrips begin between Amsterdam and Baltimore (BWI); the service is increased to twice weekly on July 8.

Fokker 50s are delivered in July, August, and October and are christened, respectively, *Bremen*, *Brussels*, *Stavanger*, and *Dusseldorf*.

Following Iraq's invasion of Kuwait on August 2, the carrier begins several weeks of route suspensions, with services discontinued to Tel Aviv, Muscat, Dubai, Damascus, Dhahran, Jidda, and Riyadh. On August 10, KLM is informed that Nigerian officials have withdrawn its landing rights at Kano; although the twice-weekly flights to that city are cancelled, thrice-weekly service to Lagos proceeds per normal.

Two more B-737-406s arrive, also in August, and are christened *Marco Polo* and *Leifur Eriksson*. Shareholding in **Air Littoral, S.A.** is increased to 49% in September. In November, two additional B-737-406s, the *Vasco da Gama* and *Christophorus Columbus*, join the fleet.

The U.S. government, partly due to complaints from competitors and partly due to a law preventing overseas ownership exceeding 25% in a domestic airline, forces KLM by this month to reduce its **Northwest Airlines** investment to \$150 million and 5% of the American major's voting stock. In September, KLM joins the Frequent Traveler frequent flyer program of **USAir**.

On October 28, the Maastricht-Dresden route is turned over to **NetherLines, B.V.**, which flies it with a SAAB 340B. At the same time and as a result of a drop in demand due to the Gulf War, the company withdraws 5 of its 49 weekly services to the U.S. In Europe, frequencies are expanded to Lyon, Goteborg, Budapest, Madrid, and Manchester and withdrawn from Malta, Izmir, Ankara, and Palma de Mallorca.

B-737-406 roundtrips commence on December 17 between Schiphol Airport and Turin, four times a week.

Passenger boardings jump 5% to 7,438,616 and freight rises 6% to 2.13 billion FTKs. In terms of freight carried, KLM is now the eighth largest airline in the world. Expenses exceed income and there are losses: \$18 million (operating) and \$10 million (net).

The payroll is increased by 2.8% in 1991 to 28,660 and on January 1, Pieter Bouw is appointed president, succeeding the retiring J. F. A. de Soet. The Gulf crisis brings a suspension of service to Amman, Jordan, on January 3. As a result of the Gulf War, flights from Amsterdam to Muscat, Doha, and Dubai are suspended on January 21. Services to and from Istanbul are reduced from six to four per week.

Also in January, ski vacation packages are added to the carrier's Europe by Design program and allow skiers to visit Intertaken in Switzerland, Chamonix in France, and the Austrian cities of Innsbruck and Kitzbuehel.

Two more Fokker 50s, the *Eindhoven* and *Paris*, are delivered during the month.

In response to the fuel crisis and growing world recession, the airline announces in February that it will cut up to 1,100 positions and transfer another 2,000 workers to subsidiaries or subcontractors. Weekly service from Amsterdam to Muscat is resumed via Cairo on March 6; weekly

flights from Schiphol Airport to Tel Aviv start on March 8 and to Dubai, also via Cairo, on March 9.

During March, InterPost Systems USA, Inc. is established as a subsidiary to provide international publication distribution services for the American publishing industry. The new enterprise replaces the former KLM Cargo Division unit, KLM Publication Distribution Service.

By March 17, frequencies to Tel Aviv have been increased to thrice weekly, along with those to Muscat, which again becomes the company's intermediate stop between Amsterdam and Hong Kong. On this date, thrice-weekly flights begin again to Dhahran, followed by the same number of flights to Jeddah via Cairo on March 21.

A joint frequent flyer program is now entered into with **Transavia Airlines, N.V.** The major assumes a 40% stake in Transavia (the remaining 20% being held by private investors); however, the two will continue to operate independently.

Also during the month, a new business-class lounge is opened at the carrier's Schiphol Airport base. As of March 24, most of the intra-European schedule has been returned to its prewar level and the next day, all five of the withdrawn U.S. frequencies are reinstated.

As of March 31, four services to Cairo are flown each week and the Istanbul schedule sees five frequencies per week. Another Fokker 50, the *Stuttgart*, arrives in March.

The new subsidiary **KLM Cityhopper, B.V.** is formed in April by the merging of **NLM CityHopper, B.V.** and **NetherLines, B.V.** Simultaneously, thrice-weekly B-747-306 service begins from Amsterdam to Baltimore, a Saturday departure is added from Amsterdam to Newark, and in cooperation with **Northwest Airlines**, twice-weekly roundtrip flights begin from Amsterdam to Minneapolis (MSP).

Weekly DC-10-30 service is inaugurated on April 20 from Amsterdam to the Caribbean island of Bonaire. The return flight stops at Curaçao en route.

Two more B-747-406s are delivered in May and christened, respectively, *Jakarta* and *Karachi*. Celebrating three years of service to Atlanta, the carrier, also in May, presents a three-day floral-related program in conjunction with the city's Art in Bloom celebration.

With permission from the Japanese government, the carrier's five weekly roundtrips to Tokyo from Amsterdam are now made nonstops, and the intermediate landings at Anchorage are discontinued.

The final three Fokker 50s are delivered in May, June, and July and are named, respectively, *Hannover*, *Bordeaux*, and *London*. In the face of growing international competition in its own country, KLM, in June, receives authority from the government to increase its shareholding in **Transavia Airlines, N.V.** from 40% to 80% majority.

On June 17, **Air Littoral, S.A.** begins operating daily EMB-120 return flights on behalf of KLM from Marseilles, Toulouse, and Bordeaux to Amsterdam.

On June 25, code-sharing flights commence, in cooperation with **Cyprus Airways, Ltd.**, on the route from Amsterdam to Larnaca and via Larnaca to Amman and Damascus.

The Danish Supreme Court the next day fines six foreign airlines a total of Dkr 452,000 (\$64,570) for bringing illegal refugees to Denmark without visas or identity documents. The decision in the case against European operators KLM, **SAS (Scandinavian Airlines System)**, **Sabena Belgian World Airlines, N.V.**, and the defunct **Interflug**, plus **Iraqi Airways** and **Singapore Airlines** has been eagerly awaited by the some 50 airlines flying into Denmark.

The companies have argued that it is not their responsibility to do the police's work when checking in Denmark-bound passengers. Nor could they be expected to tell the difference between genuine and false visas and passports, or prevent passengers from tearing up their passports once on board the plane, as has often happened. The Danish Supreme Court is unconvinced by their arguments and orders the airlines to pay a fine of Dkr 8,000 per passenger illegally brought to Denmark.

Weekly A310-203 service resumes to Doha on June 29; a stop at Dubai is made on the Amsterdam-Doha leg.

For the first time in seven years, the carrier announces on July 1 that it will omit its dividend for 1990–1991. Three days later, an A310-203 resumes the weekly Amsterdam–Tehran service suspended in September 1980. The return service stops at Istanbul en route. With the exception of Kuwait, KLM has now resumed service to all of its pre-Gulf War destinations.

The airline yields to pressure from environmental groups on July 15 and agrees not to transport wild tropical birds into the U.S. Also in July, Jumbojet service to Baltimore is increased to four flights per week. Twice-weekly dual-designator service begins with **Cyprus Airways, Ltd.** on July 30 from Amsterdam to Beirut via Larnaca; the service is flown by a Cyprus A320-230.

In August, Baltimore to Reykjavik nonstop frequencies are expanded to five per week.

The company's share in Transavia is extended in October from 40% to 80% majority. The *Fernando Magalhaes*, the eighth B-737-406, is delivered later in the month as a 40% share is acquired in **ALM Antillean Airlines**. At the same time, 49% shareholding in **KLM Noordzee Helikopter, B.V.** is sold to Houston-based Rowan Companies and renamed **KLM/ERA Helicopters, B.V.**

During November, company publicists admit that discussions are underway with **British Airways, Ltd. (2)** concerning future cooperation; insiders read the release to mean merger discussions, which are in fact underway under the code name Project Sahara. The hope is to create a megacARRIER more capable of competing evenly with such U.S. majors as **United Airlines**. The 11th B-747-406, the *Lima*, arrives in December, the same month in which the company introduces its Flying Dutchman "World of Difference" loyalty program, becoming the first European airline to do so.

Routes now cover 148 cities in 77 countries. Customer bookings ascend 3.2% to 7,120,800 while cargo moves ahead by 4.5% to 2.22 billion FTKs. Although revenues are up 14.2% to \$4 billion, a disastrous first year quarter caused by the Gulf War brings yearlong failure. The operating loss hits \$153.9 million and there is a net loss of \$340.2 million.

The employee population is cut a slight 1.9% in 1992 to 25,599. The B-737-406 *Henry Hudson* arrives in January, followed by the B-747-406 *Mexico* and the B-737-406 *David Livingstone* in February. Project Sahara merger discussions held with **British Airways, Ltd. (2)** collapse in March when negotiators cannot agree on how to divided anticipated profits between each company. Simultaneously, the two airlines go to court in an effort to retrieve the BF 1 billion (\$30 million) each had invested in the stillborn **Sabena Belgian World Airlines, S.A.** joint venture carrier **Sabena World Airways, S.A.**

The first phase of a drastic Wave System rescheduling project is also initiated in March covering the European network. An austerity program is now put in place at **Air Littoral, S.A.** by its KLM management team; however, because the French line has not expanded as hoped, the Dutch flag carrier sours on its ownership participation and elects to retire from its commitment. Before that, however, it arranges for Air Littoral to fly additional wet-leased Fokker 100s on its French-speaking routes, four from March and six from October.

In April, the A310-203s *Jan Steen* and *Frans Hals* are leased to **Middle East Airlines, S.A.L. (2)** for three years and a marketing agreement is signed with **Mexicana Airlines, S.A. de C.V.**

Taking advantage of a new bilateral agreement between the U.S. and The Netherlands, KLM and **Northwest Airlines** announce plans in September to merge their operations and create a "global airline." The equity interest in **Northwest Airlines** is allowed by the U.S. government to reach 49%. During September, the carrier becomes the first from Europe to establish electronic clearance links with the U.S. Customs Service and U.S. Department of Agriculture.

In October, the Wave System rescheduling program is introduced systemwide. Thrice-weekly B-747-306C service is inaugurated from Amsterdam to Bombay on October 23. During the fall and winter schedule that begins on October 25, a number of new markets are opened.

That day, twice-weekly A310-203 flights begin from Amsterdam to Sana'a via Jeddah with Jeddah services now flown nonstop instead of via Cairo. The new arrangement with **Mexicana Airlines, S.A. de C.V.** begins on October 26, a date celebrated as the fortieth anniversary of the first KLM flight to Mexico City. The airline's schedule to Mexico is altered; service is no longer through Houston, but thrice weekly nonstop and via Orlando the other four days. KLM's passengers are able to smoothly transfer to Mexicana's extensive domestic network served by 250 flights a day.

On October 27, two of the carrier's thrice-weekly nonstop B-747-406 services to Johannesburg begin to stop at Cape Town. Simultaneously, twice-weekly B-737-406 return flights start to Kiev. The next day, weekly DC-10-30 roundtrips begin from Amsterdam to Bogota. Weekly flights begin on October 31 from Amsterdam to Calcutta via Delhi. The same month the 13th B-747-406, the *Orlando*, is delivered.

Having soured on its investment, the megacARRIER sells its stake in **Air Littoral, S.A.** on November 20 to the **Euralair International, S.A.** subsidiary *Compagnie Francaise d'Investissements Aeronautiques (CIFA)*, making certain to maintain its wet-lease on 6 Fokker 100s for the next 17 months. In December, the B-747-406 *James Cook* is received and an "open-skies" bilateral air agreement is signed with the U.S., which will allow a deepening of the **Northwest Airlines** alliance.

Passenger boardings for the year leap skyward 17% to 9,182,657 while freight moves ahead by 8% to 2.4 billion FTKs. Revenues grow 20.7% to \$4.27 billion and expenses are \$4.04 billion. As a result, there is a \$225-million operating surplus. Unfortunately, there is a net loss of \$117.43 million.

In 1993, Chairman Abrecht and President Bouw oversee a workforce of 26,163, up 2.2% over the previous year. The Dutch government now owns 38.2% of its flag carrier, which remains the only non-U.S. airline to have its common stock traded on the New York Stock Exchange.

Twice-weekly DC-10-30 roundtrips commence on January 1 between Amsterdam and Harare via Dar es Salaam, Tanzania and Lilongwe, Malawi.

On January 11, the U.S. DOT gives its final approval for KLM and **Northwest Airlines** to integrate their services and operate as a single carrier. Under a "Seal of Partnership" of intertwined logos, the two begin to join forces on January 31.

KLM Cargo opens a new regional Cargo Center at Linz, Austria.

The twelfth B-737-406, the *Roadl Amundsen*, is received in March and two B-747-406s are also delivered, one each in April and September and are christened *Nairobi* and *Paramaribo*.

Meanwhile, as of the start of the summer schedule on March 28, KLM will offer flights to 159 cities in 83 countries from Amsterdam. Thrice-weekly B-747-406 service is inaugurated from Amsterdam to San Francisco.

Merger discussions are held with **Austrian Airlines, A.G., SAS (Scandinavian Airlines System)**, and **Swissair, A.G.** in conjunction with the European Quality Alliance.

Under a code-sharing agreement negotiated between the two carriers, KLM on April 2 begins to fly **Japan Air Lines Company, Ltd. (2)** passengers between Amsterdam and Zurich and Amsterdam and Madrid.

Cooperation with **Northwest Airlines** is increased as the Dutch carrier receives access to Northwest's domestic markets under its code-sharing agreement; joint flights begin on April 4, creating the world's third largest airline system, linking more than 300 cities in 100 nations.

In addition to joint ground handling, flight catering, and frequent flyer programs, the two undertake thrice-weekly joint flights, employing **Northwest Airlines** DC-10-30s, between Amsterdam and Boston and Minneapolis (MSP). In the U.S., KLM begins to code-share Northwest flights from Minneapolis (MSP) and Detroit (DTT) to Dallas (DFW) and New Orleans. International code-sharing service is added in February by Northwest via KLM on flights to Berlin, Hamburg, Dusseldorf, Brussels, and Antwerp, all via Amsterdam. In America, KLM undertakes code sharing Northwest flights from Minneapolis (MSP) and Detroit to Denver and Seattle.

A code-sharing deal is inked with **Austrian Airlines, A.G.** at month's end for services over the route from Amsterdam to Vienna.

The Washington, D.C. terminus is switched on May 2 from Baltimore (BWI) to Dulles International Airport. Beginning on May 24, NS Netherlands Railways, KLM, Amsterdam Airport Schiphol, and the Netherlands Ministry of Transport and Public Works combine on a unique six-month trial. Passengers traveling by rail from the eastern and central Netherlands to Schiphol to catch KLM flights are able to check in their baggage on their train, if they have booked for this privilege ahead of time.

Also in May, a joint task force is formed with representatives from **Garuda Indonesia** to examine the possible joint development of cargo and tourist traffic between the Netherlands and Indonesia.

Frequencies on the San Francisco route are increased in June to four times a week. In cooperation with **ALM Antillean Airlines**, twice-weekly service is made possible to Havana; KLM flies the Europe to Curaçao leg, with ALM providing the flights on to Cuba.

The same day, a weekly return service is started from Amsterdam to Ho Chi Minh City via Kuala Lumpur. B-747-306Cs replace A310-203s on the route from Amsterdam to Karachi via Dhahran and from Amsterdam to Colombo via Muscat.

Having decided that market conditions no longer warrant a separate flight to Nagoya, KLM and **Nippon Cargo Airlines, Ltd.** begin shipping cargo for that city via Tokyo on July 8.

It is announced on July 20 that KLM and **Northwest Airlines** will expand their joint operations to all KLM flights in the U.S. and that the two will share revenues and costs of operating these flights.

Flight 110, a B-737-406 en route from Tunis to Amsterdam on August 15 with 135 aboard, is seized by an unidentified 55-year-old Egyptian and is diverted to Dusseldorf. On the ground at the German city, all except two flight crew members are freed as the pirate demands freedom for imprisoned militant Islamic cleric Sheik Omar Abdel Rahman, linked to the bombing of New York's World Trade Center. In darkness 10 1/2 hours after the plane's touchdown, the German antiterrorist unit GSG-9 springs into action, captures the perpetrator, and frees the hostages.

In August and September, KLM and **Northwest Airlines** expand their joint-venture service from Minneapolis (MSP), Detroit, and Boston to 11 additional U.S. domestic destinations, nine of which are served by the Dutch airline. On September 26, the partners link all nine of their transatlantic flights into their joint-venture, dual-designator service, with KLM flying routes to and from nine destinations and Northwest the remaining two. Thus, to illustrate, KLM services to and from New York, Chicago, Washington, Atlanta, Orlando, Houston, Los Angeles, and San Francisco will carry a Northwest "NW" code alongside their "KL" flight numbers.

On October 15, the Dutch and American partnership announces the beginning of identical tourist-class fares for flights between the Netherlands and U.S. The two airlines merge their Dutch cargo operations on October 21 under KLM Cargo.

During the fall, a new contract is negotiated with the local chapter of the Dutch Air Line Pilots Association, VNV; it provides the carrier's pilots with a 2.5% pay increase. The company and union agree to continue discussions on revising certain work rules. The company's first McDonnell Douglas MD-11, the *Amy Johnson*, is delivered on December 9.

Customer bookings for the year jump 19% to 10,892,074 as cargo swells 16% to 2.78 billion FTKs. The passenger count marks the first time in company history that 10 million travelers have been flown in a single year. Revenues advance 2.5% to \$3.39 billion as expenses remain level at \$3.12 billion. The operating profit bolts skyward to \$270.25 million as a net profit of \$133.33 million is generated.

Airline employment is cut by 8.1% in 1994 to 24,048. The B-747-406 *Rio de Janeiro* is introduced in January. In an effort to assist **CSA (Czechoslovak Airlines)**, the government of the new Czech Republic, later in the month and at its airline's request, orders KLM to reduce its Amsterdam to Prague roundtrips from 14 to 10 per week to more evenly

match CSA's 7. At month's end, the *Amy Johnson* enters services on routes from Amsterdam to the Caribbean and West Africa.

The B-737-406 *Alexander von Humboldt* arrives in February, followed by the MD-11 *Mari Montessori* in March. Meanwhile, on February 15, KLM and **Northwest Airlines** introduce World Business Class, a roomier and enhanced international business-class service offered at a regular business-class price. They are the first airlines from two different countries to offer a joint international service product and identical in-flight amenities.

The Mideast receives much-expanded service when the new summer schedule begins on March 27. Daily flights are offered to the Jordanian capital of Amman, with continuing service to Beirut four times a week and to Damascus thrice weekly. Bahrain is served daily — four times a week in combination with Muscat and thrice weekly with Dubai. Daily service is provided to Istanbul, but no longer in combination with Tel Aviv.

Also during the summer season, dual-designator flights with **Northwest Airlines** will grow to include another 28 North American destinations, including Anchorage, Baltimore, Richmond, San Antonio, Sarasota, Sioux Falls, and Ontario, California. Northwest will add its code to 19 more KLM destinations in Europe.

As **Air Littoral, S.A.** deepens its relationship with **Air France**, KLM, on schedule on April 1, recalls the six Fokker 100s it has had on long-term wet-lease with the French regional and places them into operation on its own network.

A global public offering of ordinary shares in April results in a gain of G 1.19 billion (\$625 million); with the purchase of 970,455 shares, the Dutch government retains its 38% voting stake. On April 15, the Operations Division is dissolved with Flight Operations and Cabin Crew combined into the new department, Flight Services.

In May, a block-space agreement is signed with **CSA (Czechoslovak Airlines)** covering flights from Amsterdam to Prague. Also during the month, a multimillion-pound contract is awarded to **Air U.K., Ltd.** for the line maintenance of the carrier's six Fokker 100s.

In July, a joint agreement is signed with **Emirates Airlines, Ltd.** covering all-cargo services; under its terms, the two airlines make plans to employ each other's cargo networks and distribution centers to enhance their freight possibilities. The third MD-11, the *Marie Curie*, arrives during the month.

A weekly, roundtrip freighter service is inaugurated on August 10 between Dubai and Amsterdam; the flight, later increased to twice-weekly, is made on a code- and cost-sharing basis with **Emirates Airlines, Ltd.**

Twice-weekly (later thrice-weekly) B-747-406 service is inaugurated on September 6 from Amsterdam to Osaka (KIX), Japan.

Dipping into its cash reserve of G3 billion (\$2 billion), KLM takes the September opportunity to purchase an additional 5% interest in **Northwest Airlines**. The \$180-million stake, acquired from Australia's Foster's Brewing Group (Pty.), Ltd., brings the Dutch carrier's shareholding in Northwest to 25%, the maximum allowed by U.S. law. At the same time, it also accepts its fourth MD-11, which is christened the *Florence Nightingale*.

KLM celebrates its seventy-fifth anniversary of its incorporation as a commercial airline on October 7; the anniversary theme is "Bridging the World." From October 24, KLM and **Martinair Holland, N.V.** turn KLM's previous thrice-weekly Orlando route into a joint-venture employing Martinair B-767-31AERs four times a week. Both airlines will market the service in the U.S. and Europe.

Later in the fall, plans are made to inaugurate flights to Memphis the following June. In November, joint return flights commence with **Air Aruba** between Aruba and Amsterdam. Later in the month and in December, two more MD-11s arrive, the *Audrey Hepburn* and *Annie Romein*.

Passenger boardings jump 8% to 11,755,487 while freight is up 15% to 3.2 billion ton kilometers. Revenues are up 6% to \$5.85 billion and expenses rise only 2.6% to \$5.36 billion. Consequently, there is an operating surplus of \$474.9 million and a net gain of \$338 million, both figures noted being later adjustments.

The workforce is increased a slight 0.6% in 1995 to 24,177 and four B-737-42Cs are leased from **Air U.K., Ltd.** French officials, who had resisted the move claiming **Air France** required time to recover from its recent ordeals, now accede to European Union demands and on January 1, open Orly Airport to KLM.

Also in January, the company establishes a B-767 maintenance unit, similar to its semiautonomous repair units, established earlier, to handle company Jumbojets, A310-203s, and GE CF-6 jet engines.

On February 22, KLM and leaders of six unions and employee associations representing company personnel agree in principle on the terms of a collective labor contract for 1995. Issues with the Dutch Air Line Pilots Association, VNV, remain unresolved.

During the first quarter, the cargo division is reorganized in an effort to provide closer relations with shippers and air freight forwarders who require long-term alliances. It is announced on March 15 that executives expect that, during the upcoming summer season, KLM will operate more than 41,000 flights with over 10 million available seats.

The summer schedule takes effect on March 27. That day, frequencies to Osaka (KIX) are increased to four per week (later six). Simultaneously and due to poor traffic, service is ended to Bogota, Montevideo, and Doha. At Schiphol Airport, a new "Back on Track" team springs into action; its task is to increase the punctuality of departures from Amsterdam's airport.

In Europe, flights to Nuremberg end, while, twice-weekly service is inaugurated to Almaty in Kazakhstan. In the U.S., the number of dual-designator domestic destinations increases by 30 to 126. Existing daily service to Minneapolis (MSP) and Detroit is doubled, with KLM and **Northwest Airlines** daily operating one code-sharing flight to both cities.

In April, a maintenance and overhaul agreement is signed with **Garuda Indonesia**; planning also begins for joint services from Indonesia to Amsterdam. Service to Hanover is suspended on April 29.

On May 1, a code-sharing agreement is signed with **Eurowings Luftverkehrs, A.G.** and several of the Dutch major's thinner routes are turned over to the German regional, including Hanover and Nuremberg, just dropped from the main line. A similar arrangement covering feed from Indian domestic destinations to the major's service from New Delhi is signed with **Jet Airways, Ltd.**

On May 8, the Dutch Air Line Pilots Association, VNV, files suit against KLM at the Amsterdam District Court in an effort to obtain the 2.5% pay increase promised in the 1993 contract. Additionally, pilots are displeased with management's plan to raise their retirement age from 56 to 60 and its failure to enter into the renegotiation of certain work rules. Yet another MD-11, the *Maria Callas*, enters service at mid-month.

Following informational picketing and a mini-walkout by pilots on May 30, the Dutch Air Line Pilots Association, VNV, schedules another 4-hr. strike on June 8. Once again, the airline reschedules its flights to avoid the hours specified for the job action. The Amsterdam court finds against the pilots association on June 15, but also rejects a countersuit by the airline requesting that the court force the flyers to continue negotiations with the assistance of mediators. KLM invites the union representatives to return to the table and finally, after four days of constructive negotiations, a settlement covering all unresolved issues (some dating from 1992) is signed between the parties on the evening of June 22.

Four-times-a-week MD-11 roundtrips between Amsterdam and Memphis commence on June 27. Both **Northwest Airlines** and **Federal Express** join city officials in welcoming the new service. A contract is signed with the International Lease Financing Corporation (ILFC) on June 30 for the charter of two B-747-4Q8Cs and three B-767-3Q8ERs. When the order is complete, KLM will have the world's largest fleet of combi Jumbojets.

The first two B-767-306ERs, the *Blue Bridge* and *Pont Neuf*, are delivered during July and August; the entire B-767 class will be named for world-famous bridges. In late July, joint weekly cargo flights commence with **Garuda Indonesia** over a route from Amsterdam to Jakarta via

Bombay and Kuala Lumpur, employing a B-747F leased from **Atlas Air**.

A code-sharing agreement is signed with **Garuda Indonesia** in late August. At the same time, a lease order for 4 (later 7) Fokker 70s is placed with their manufacturer.

The MD-11 *Ana Pavlova* is placed into service during September. During the month, the 4 weekly roundtrips from Amsterdam to Kiev are increased to 6.

A third B-767-306ER, the *King Hoessain Bridge*, arrives in October. During the month, the carrier suspends its 4-times-a-week service to Washington, D.C., which now becomes a daily dual-designator flight provided by a **Northwest Airlines'** DC-10-40.

With the start of the winter schedule on October 29, the number of flights to Johannesburg, Tel Aviv, Tehran, and Osaka is increased by 1 per week, while the number to New York and San Francisco is reduced by 1.

A new KLM Cargo sub-hub operation is opened at Zaragoza, in northern Spain, on October 24.

On November 1, the carrier teams with **Northwest Airlines** to provide U.S. passengers with the option to travel from Columbus, Georgia, to Amsterdam via Memphis. The same day, service is halted to Montevideo.

Employing a second B-747F wet-leased from **Atlas Air**, KLM Cargo introduces twice-weekly services on November 7 from Amsterdam to Penang, Malaysia. On Tuesdays, there are stops at Dubai, Kuala Lumpur, and Jakarta and on Thursdays, at Dubai, Kuala Lumpur, and Singapore.

Also in November, the company begins dual-designator service with **Aer Lingus Irish Airlines, Ltd.** on Irish flights between Amsterdam and Dublin. It also takes delivery of its final MD-11, the *Ingrid Bergman*.

In December, KLM files suit in U.S. Federal Court against **Northwest Airlines**, seeking to overturn a "poison pill" provision adopted by its partner's board of directors over the objections of its three KLM representatives. The move is allegedly taken as a self-protection measure against any effort by the Dutch carrier to increase its 19% equity in the Minneapolis-based major.

In mid-month, an planned agreement for shareholding in **Kenya Airways, Ltd.** is approved by the Kenya government. Contract negotiations with the company's pilots, broken off in November, are resumed.

Passenger traffic figures now also reflect those of **KLM Cityhopper, B.V.** and both, together, are up 5% to 12,285,517. Cargo swells 14% to 3.63 billion FTKs and is the highest amount carried by any European airline save **Deutsche Lufthansa, A.G.**

Operating income totals \$4.41 billion, a 3.2% increase, with expenses up 7.3% to \$4.07 billion. There is an operating gain of \$334 million, down from the previous year, and a net profit of \$326 million, also down. Both figures are later reduced, to \$237.82 and \$287.17 million, respectively.

Airline employment is increased by 7.7% in 1996 to 26,030. As the result of recent **British Airways, Ltd. (2)** announcements concerning its European expansion, speculation begins anew in late winter concerning the possible merger of the British and Dutch carriers.

Twice-weekly MD-11 services to Lusaka, Zambia, are inaugurated on January 10, when the one-stop roundtrip from Amsterdam via Nairobi to Lilongwe, is extended. The fourth B-767-306ER, the *Ponte Rialto*, is delivered in late January.

It is reported in the February 19 issue of *The Journal of Commerce* that the company has put on hold a planned freighter link between the western U.S. and Penang and is no longer looking for a partner for the rapidly expanding cargo market in India.

During the last week of February, KLM elects to replace three of its own people on the **Northwest Airlines** board of directors with people not affiliated with the Dutch flag carrier. The departure of KLM President Pieter Bouw, Managing Director Leo van Wijk, and Chief Financial Officer Rob Abrahamsen will allow the carrier to continue its

anti-takeover court challenge against Northwest without any suggestion of a conflict of interest. The first two Fokker 70s are delivered in February and are christened *Amsterdam* and *Bologna*.

On March 1, the company, having signed the official documents in Nairobi on January 11, officially takes a 26% stake in **Kenya Airways, Ltd.** Early in the month, the air ministry at The Hague completes a new bilateral agreement with the People's Republic of China. On March 20, KLM stock rises more than 3% as speculators guess—wrongly, as it turns out—that a merger deal with **British Airways, Ltd. (2)** is imminent.

When **Chalk's International Airlines** is purchased early in the year and transformed into **Pan Am Air Bridge**, KLM takes the honor of being the world's oldest continuously operated airline. New routes are inaugurated to Baku, San Juan, and Bologna and a joint service with **Kenya Airways, Ltd.** is inaugurated over a route from Amsterdam to Nairobi.

On March 31, KLM's twice-daily service between Amsterdam and Billund is transferred to Maersk Air, A.S. Eight-times-a-week B-737-306 roundtrips commence on April 9 between Amsterdam and Bucharest.

Also in April, dual-designator service begins aboard **Ansett Australia (Pty.) Ltd.** flights operating out of Sydney to Adelaide, Brisbane, Cairns, Canberra, and Melbourne.

During the same month, the B-767-306ER *Golden Gate Bridge* enters service.

On April 28, flights to Manila are increased to thrice weekly. B-747-406 flights are undertaken on April 30 from Amsterdam to Den Pasar via Surabaya twice weekly.

As a result of the flights to the Chinese capital begun by **Northwest Airlines** on May 1, the U.S.–Dutch partnership is now able to offer an “around-the-world” service via China. The *Lyon*, the third Fokker 70, arrives at mid-month.

During the first week of June, a conference is held at Minneapolis to focus on **Northwest Airline's** three-year recovery from near bankruptcy. Airline officials admit that cultural and personality differences are largely responsible for the erosion of the KLM–Northwest alliance, rather than the contest over stockholders' rights the Dutch airline leadership claims. KLM, the Northwest officials suggest, has confused alliance with governance.

Officials of the American airline, in light of the legal case filed by the Dutch, have adopted a strictly business approach to the alliance, which is working well financially. Meanwhile in Amsterdam, KLM President Bouw announces that, in light of the uncertain relationship between the two carriers, his airline is shelving for the moment a \$300-million plan to merge its international cargo operation with that of Northwest.

Also during the first week of June, an alliance is signed with **Nippon Cargo Airlines, Ltd.** to provide joint all-cargo B-747F service between Chicago and Osaka. In order to accommodate PRC sensibilities, the Amsterdam to Bangkok via Taipei route is renamed KLM-Asia.

A fourth weekly B-747-306C service is initiated on June 23 between Amsterdam and Seoul; **Korean Airlines/Korean Air (KAL)** will follow suit shortly thereafter. The same day, frequencies are increased by one weekly flight to Hong Kong, Johannesburg, and Cape Town. In Europe, one weekly service is added for Warsaw, Berlin, Budapest, Prague, Athens, Turin, and Istanbul.

When the summer transatlantic season begins this day, the company, in partnership with **Northwest Airlines**, increases its four-times-per-week services from Amsterdam to Memphis or San Francisco to daily flights. The number of code-share destinations on the Northwest domestic network is expanded from 150 to 178.

As a result of the new aviation bilateral agreement signed between the governments of The Netherlands and China, KLM, on June 26, is able to inaugurate twice-weekly nonstop B-747-406C flights from Amsterdam to Beijing.

In an effort to convince Northwest shareholders that a continuing alliance is the best way to defeat the proposed strategic alliance between

American Airlines and **British Airways, Ltd. (2)**, President/CEO Bouw announces on July 1 that his company will sell 6,654 shares of Northwest preferred stock back to the American major for some \$378 million. As the result of additional negotiations, a series of new agreements will be concluded over the remainder of the summer.

When KLM in July adds capacity and lowers roundtrip fares (to just £70) to compete on the London (CTN) to Amsterdam route, **easyJet, Ltd.** finds itself engaged in a fierce price war with the Dutch flag carrier. The new Dutch fares are marketed to customers seeking to switch to a more traditional service; the promotion is titled “Easy Choice.”

The approach is the same taken simultaneously by KLM partner **Air U.K., Ltd.** in its contest with new entrant **World Airlines, Ltd.** on the route from London (LCY) to Amsterdam.

KLM and **Air U.K., Ltd.** merge their frequent flyer programs in July as the seventh B-767-306ER, the *Tower Bridge*, is delivered. As the result of a May incident in which radiation levels are higher than a manufacturer's claims, the company during the month announces that it will no longer transport radioactive materials on passenger services.

On July 20, the B-737-306 service between Amsterdam and Bucharest is boosted to 10 roundtrips per week.

The last of seven leased Fokker 70s is delivered during August. At this time, the 4 Fokker F.28-4000s in the **KLM Cityhopper, B.V.** fleet are traded to **Air U.K., Ltd.** in exchange for the right to purchase the 4 B-737-42Cs that have been chartered for the past 18 months.

KLM makes a significant error in its fare war with **easyJet, Ltd.** in August when one of its officials grants an interview to the London *Financial Times*. The executive is quoted as saying that the “Easy Choice” price cuts are necessary “to stop the growth and development of easyJet and to make sure that this newcomer will not be able to secure a solid position in the Dutch market.” At this point, Chairman Haji-Ioannou directs the company's legal department to send KLM a letter accusing the airline of abusing its market dominance and asking it to cease and desist from such practices as selling seats below their cost.

Eurowings Luftverkehrs, A.G. begins thrice-daily ATR42-300 dual designator roundtrip flights with KLM on September 1 over a route from Cologne to Amsterdam. The next day, weekly roundtrips are inaugurated to Baku, Azerbaijan. In the same month, the B-767-306ER *Erasmus Bridge* arrives.

During the fall, **Air U.K., Ltd.** code-shares 12 daily feeder flights from U.K. destinations to Amsterdam; the number will increase to 14 early in the following year. Its new rival, **World Airlines, Ltd.**, is grounded on October 1.

KLM has not made the changes in its London–Amsterdam fare structure demanded by **easyJet, Ltd.** in August. On October 9, **easyJet, Ltd.** Chairman Haji-Ioannou lodges a 22-page complaint (including the *Financial Times* article) with the competition directorate of the European Commission at Brussels, stating that the Dutch major is engaged in predatory pricing tactics designed to chase easyJet out of Schiphol. The commission investigates.

The B-747-406C *Seoul* is delivered, also in October, along with the Fokker 70s *Toulouse* and *Turijn/Torino*.

In the face of rising fuel costs, the carrier adds a surcharge, beginning on November 1, to its fares, including those for joint flights with **Northwest Airlines**. The sixth Fokker 70 to be delivered since February, the *Berlin*, arrives at the end of the month.

Under its new alliance with KLM, **Kenya Airways, Ltd.**, beginning in November, operates an A310-304 replacement service from Nairobi to Amsterdam; in effect, one of Kenya's London flights travels by way of Amsterdam, allowing one of KLM's four weekly MD-11 services to be cut.

On December 16, executives announce that KLM will pay G 976.5 million (US\$560.2 million) to purchase an additional 13% of its common and preferred shares from The Netherlands government; the national stake in the airline will fall from 38% to 25%.

Customer bookings, minus those for **KLM Cityhopper, B.V.**, which is allowed to report its own, increase 5% to 12,934,690 and 3.78 billion

freight FTKs are operated, a 4% growth. Operating income soars 8% to \$5.43 billion and expenses rise 13.1% to \$5.39 billion. The operating profit drops all the way down to \$47.77 million and due largely to rising fuel costs, the net gain is reduced to \$123.9 million.

The employee population is reduced by 2% in 1997 to 25,500. In February, an alliance is entered into with **Sun Air (Pty.), Ltd.** that provides for code-sharing on the South African carrier's routes from Johannesburg to Cape Town and Durban. The B-767-306ER *Bosporus Bridge* enters service at the same time.

Also during the month, the company wins one and loses one in its ongoing dispute with **Northwest Airlines**. The Delaware Chancery Court rejects Northwest's motion to dismiss the KLM lawsuit, which may now go forward. On the other hand, a New York State court rejects a separate KLM suit regarding other Northwest measures.

On March 1, Surabaya is dropped from the twice-weekly route from Amsterdam to Denpasar. KLM now flies Amsterdam-Denpasar via Singapore.

The company and **Air U.K., Ltd.** merge their marketing and sales operations on April 1, creating a strong competitor for **British Airways, Ltd. (2)** in the British air transport market. Stelios Hajilaonnon, owner of the U.K. start-up carrier **easyJet, Ltd.**, complains to the EU that KLM has employed predatory pricing techniques and dominant market position, in violation of EU competition rules, to drive his carrier out of the Netherlands.

The fuel surcharge imposed the previous November is removed on April 15. The next day, a company B-747-406 near Los Angeles (LAX) unexplainably comes within 400 feet of a **VASP Brazilian Airlines (Viacco Aerea Sao Paulo, S.A.) MD-11**.

At Houston (IAH) on April 20, an **Air France** B-767-328ER, with an unspecified number of passengers on board and number one in sequence for takeoff at the run-up area for Runway 14L, reports to ATC that it is not ready to depart. KLM Flight 662, a B-747-306C with 15 crew and 284 passengers, is cleared to taxi around the French aircraft and precede it in departure. During the maneuver, the right wing of the Dutch aircraft hits and slightly damages the left wing tip of the B-767. Both aircraft are returned to their respective gates and later released; both then take off without further incident.

On May 14, **Surinam Airways (SLM)** and KLM expand their joint roundtrip services between Paramaribo and Amsterdam from twice weekly to thrice weekly.

In cooperation with **Northwest Airlines**, nonstop service is started in May between Amsterdam and Newark. The B-747-406C *Tokyo* enters service late in the month, along with the last B-767-306ER, the *Zeeland Bridge*. The last four Fokker 70s have been delivered, one per month, since January: *Gothenburg*, *Frankfurt*, *Prague*, and *Birmingham*.

President/CEO and 30-year KLM veteran Bouw, who is credited with shaping KLM's pioneering alliance with **Northwest Airlines**, surprises the airline industry on June 22 by saying he will retire from KLM on August 5, because the "time is ripe for a transfer of leadership." Bouw will be replaced by 22-year KLM veteran Leo van Wijk.

The twice-weekly service between Amsterdam and Denpasar via Singapore is cut to weekly on June 23. On July 1, The Netherlands' stake in KLM is 11%, down from 28% in February.

In mid-July, KLM reaches agreement with British Air Transport Holdings, Ltd., owners of **Air U.K., Ltd.**, to purchase its 55% majority stake in the British carrier. The Air U.K. takeover, subject to European Commission approval, leaves that company as Dutch-owned, but operationally independent.

The long-simmering boardroom disputes with **Northwest Airlines**, together with the lawsuits growing out of it, are settled by the two partners on July 31. In effect, they will now become alliance partners, not equity partners. A decade-long commercial and operational partnership document is signed that allows each company to appoint a member to the other's board of directors. Additionally, a compact is entered into by which Northwest will be able to purchase back, in four tranches over the

next three years, the 19% stake held by the Dutch line. KLM will earn a profit on its investment estimated at between \$500-600 million.

With the ticklish legal and financial matters concluded, the two companies announce that their working relationship will be intensified. New joint cargo and passenger services will be introduced and talks with other potential alliance partners will be undertaken.

Two Airbus Industrie A300B4-203Fs, first flown as passenger aircraft by **Air France**, are leased to **HeavyLift Cargo Airlines, Ltd.** in July from S-C Aviation.

On August 1, discussions commence with **Alitalia, S.p.A.** concerning a possible strategic alliance. A \$200-million (\$95-million) arrangement is concluded in August with the Norwegian shipping concern Ludv. G. Braathens Rederi for the acquisition of 30% shareholding in **Braathens SAFE, A.S.**

Simultaneously, the two, spurred on by the pending alliance between **American Airlines** and **British Airways, Ltd. (2)**, negotiate a strategic marketing partnership that will include code-sharing, frequent flyer program linkage, and coordinated customer and airport services. The Bouw-van Wijk management change occurs on August 5 and, late in the month, the B-747-406C *Beijing* enters service.

The first HeavyLift A300B4-203F enters service in August and is flown on behalf of KLM under subcontract. On weekdays, the freighter, flown by **TransAer International Airways, Ltd.** under another subcontract, provides lift between KLM's Scandinavian hub at Skavsta, Sweden, and Amsterdam. On weekends, the Airbus flies from Amsterdam to Bologna, Italy, and Zaragoza, Spain.

Having decided to concentrate on its core business of offshore support, Leiden-based Schreiner Aviation Group on September 1 purchases the 51% controlling interest in **KLM ERA Helikopters, B.V.** held by KLM. The remaining shares are held by the Rowan Co. via its subsidiary **ERA Aviation**. The sale includes 6 Sikorsky S-61Ns and 5 S-76Bs.

The European Union Commission schedules hearings into the complaint by **easyJet, Ltd.** that KLM has engaged in unfair practices against it. Documents have been gained from KLM and experts suspect that the start-up might actually win its claim against the Dutch major.

Also during the ninth month, negotiations are begun with **Japan Air System, Ltd.** concerning the possibility of a cooperative agreement.

The EU Commission, on September 23, grants approval for the acquisition of sole control over Air U.K. Holdings, Ltd. The price is still not disclosed.

On September 29, the new KLM-Northwest joint-venture 10-year agreement is signed by KLM President/CEO Leo van Wijk and Northwest President/CEO John Dasburg in New York ceremonies.

According to the terms of the pact, KLM will receive \$1.2 billion over the next three years for the shares it holds in the American major, or a \$400 million profit on its original investment. Northwest will repurchase all of the common and preferred shares held by KLM in four tranches beginning this day. The schedule calls for 6.8 million common shares and all of the remaining preferred shares to be sold back for \$324 million in 1997; 4.9 million common shares to be returned in 1998 (\$210 million); 3.2 million common shares in 1999 (\$147 million); and 10 million common shares in 2000 (\$491 million).

As a result of these transactions, KLM's common stock voting position in Northwest will decrease from 19% to 17% in 1997 to 13% in 1998, to 10% in 1999, and to 0% in 2000.

In addition, KLM President van Wijk will join the Northwest board while Northwest President Dasburg will sit with the leaders of the Dutch major. A process for adding new partners to the compact is worked out; almost immediately thereafter, KLM opens discussions with **Alitalia, S.p.A.** and **Air France** on the subject.

Plans are unveiled for a single marketing force, which will be in place for the two carriers around the world next year, and a steering committee and employee joint task forces are established to coordinate further integration.

For example, a number of joint task forces are set up to determine and implement improvement recommendations concerning airport check-in,

yield management, ticketing and reservations, and other computer-based applications. Another task force devoted to joint networking determines which airline flies which alliance route; revenues are divided between the partners regardless of which airline operates a given frequency. Already highly profitable, the alliance is now performing 160 weekly dual-designator transatlantic services plus code-sharing on many other routes.

On October 1, Amsterdam's Schiphol Airport begins to enforce two new restrictions against noise. The first cuts down on the operations of wide-bodies from the field during night hours, while the second results in the closure of the outer runway to use as a second runway for departures and arrivals during peak hours. KLM and other airport occupants immediately protest the actions, suggesting that they will hurt its abilities to further its global alliance structure while at the same time causing much inconvenience for its passengers.

Thrice-weekly dual-designator service with **Northwest Airlines** begins on October 3 from Delhi and Bombay to New York via Amsterdam. The inaugural flight of the first Northwest DC-10-40, unfortunately, is scrubbed when the wide-body is hit by mechanical failure that forces its grounding. Passengers are transferred to rival company flights. The service is relaunched the next day.

Also in early October, the company begins to code-share with **Regional Airlines, S.A.** over routes from Amsterdam to Marseilles and to Clermont. Financial and marketing links between the two carriers will be intensified. It also inaugurates dual-designator service with **Transavia Airlines, N.V.** between Amsterdam and Casablanca.

Twice-weekly direct roundtrip B-747-406C service is inaugurated on October 28 from Amsterdam over Russia to Sapporo and Nagoya, Japan. The same day, a code-sharing pact is signed with **Japan Air System, Ltd.**; it is set to begin in February. Also during the month, exact conditions for the equity purchase into **Braathens SAFE, A.S.** are finalized.

The weekly service from Amsterdam to Denpasar via Singapore is dropped on November 1. The only KLM service to Indonesia is the daily roundtrip flown from Amsterdam to Jakarta via Singapore.

Also on November 1, KLM and **Surinam Airways (SLM)** introduce new, permanent low fares on flights between Amsterdam and Paramaribo.

A preliminary report on the work of the KLM-Northwest task forces is released in early November. It is noted that the 10-year alliance extends geographical coverage from Europe to U.S. to include Europe to Canada, Mexico, and India. The two begin sharing Passenger Name Record data, which details the carriers' passenger relationships. Negotiations with **Alitalia, S.p.A.** and **Air France** continue.

In addition to the August KLM pact, which is seen as a way to contest **SAS (Scandinavian Airlines System)** domination of the Norwegian domestic and European regional markets, **Braathens SAFE, A.S.** on December 1 also initials a similar strategic, but nonequity, alliance with **Northwest Airlines**. The same day, KLM-Northwest announces that it will launch a joint, daily roundtrip service the following May from Amsterdam to Philadelphia; a Northwest DC-10-40 will be dedicated to the route.

On December 14, the carrier and **Alitalia, S.p.A.** complete negotiations and announce the formation of a nonequity strategic alliance. With a priority goal of creating a combined multihub system based on Amsterdam, Milan, and Rome, the two agree to concentrate initially on expanded, dual-designator European routes, transatlantic services, and cargo operations.

As part of the latter design, the company, in December, enters into agreements with the freight transportation concerns KLM Cargo, Trailstar, and Jan de Rijk, which will coordinate the rail shipment of air freight goods from Milan to Schiphol Airport at Amsterdam for onward flights aboard KLM aircraft.

During the month, **British Airways, Ltd. (2)** announces plans for the inauguration of its own low-cost division during the following spring. Such a prospect so disturbs **easyJet, Ltd.** that Chairman Haji-Ioannou

drops his claim against KLM in order that the European Union's competition division might focus its attention on investigating this new threat. The last B-747-406C to be received is the *Vancouver*, delivered at year's end.

Passenger boardings jump 12% to 14,507,062 while cargo dips 0.4% to 3.86 billion freight FTKs. Operating revenues accelerate 29% to \$6.68 billion, while expenses are just \$6.2 billion. The G 811-million (\$405.5-million) operating profit sets a new record. Much of the \$1.1-billion net gain comes from the Northwest equity sale.

At the beginning of 1998, KLM is the 12th largest airline in the world in terms of operating profit, 14th largest in operating income, 22nd largest in passenger boardings, and 23rd in fleet size. Airline employment stands at 26,923 and the company owns 91 airplanes, all of which are Stage III certified: 38 B-737s, 32 B-747s, 10 B-767s, 9 MD-11s, and 2 Fokker 100s.

In January, **Air U.K., Ltd.** is renamed **KLM U.K., Ltd.** and **Air Exel Commuter, C.V.** is rebranded **KLM Exel, C.V.** The move, also involving **KLM Cityhopper, B.V.**, is made to better integrate feeder services; the combined fleet of 72 regional aircraft is repainted in a new blue and white livery with silver accents.

The rail-air shipment of goods out of Italy begins during the month. New partner **Braathens SAFE, A.S.** changes its corporate image, becoming **Braathens, A.S.**, and KLM indicates that it will purchase the 50% stake in **Martinair Holland, N.V.** held by Royal Nedlloyd, N.V.

During the first month, KLM and **Northwest Airlines** share the 1997 "Airline of the Year" award from *Air Transport World* magazine. At the same time, the two global partners agree to accelerate Northwest's repurchase of KLM's remaining stake in the Minneapolis-based airline.

Simultaneously, a memorandum of understanding is signed with **Malaysian Airlines, Ltd.** under which the two companies will explore all avenues of commercial cooperation, including frequent flyer programs, joint ground handling, marketing and sales. Dual-designator services will be undertaken between Amsterdam and Kuala Lumpur.

The dual-designator pact with **Japan Air System, Ltd.** takes effect on February 1. It also includes cooperative marketing and linkage of the frequent flyer programs of the two airlines.

Back-dated to January 1, the 50% Royal Nedlloyd, N.V. stake in **Martinair Holland, N.V.** is officially purchased on February 5. Martinair is allowed to retain its independent identity pending conclusion of what will prove to be a lengthy European Commission review. Also during the month, arrangements are completed with ILFC for the charter of a B-767-3Q8ER for seven years, beginning in March 1999.

On April 5, KLM and **Northwest Airlines** introduce daily nonstop service from Seattle to Amsterdam, the only Seattle to Amsterdam nonstops available.

The carrier and **Northwest Airlines** close their financial arrangement on May 1. Northwest repurchases KLM's remaining 18 million shares of its stock for \$775 million in cash and senior unsecured notes.

Philadelphia-Amsterdam Friendship Day is also celebrated on May 1. At a press conference at Philadelphia, a proclamation is read from the Mayor of Philadelphia recognizing the event. Mayor J. van Houwelingen of Haarlemmermeer (the Dutch city that is home to Schiphol Airport) is given a copy, along with a replica of the Liberty Bell. The guest, in turn, presents his host with traditional Dutch wood shoes. Thereafter, **Northwest Airlines** and KLM kick off new daily nonstop return service between Philadelphia and Amsterdam.

A new code-sharing agreement begins on June 1 with **Northwest Airlines** dual-designator partner **Alaska Airlines**. The two will link their frequent flyer programs on selected routes, enter into schedule coordination, and share codes on certain Alaska flights connecting with KLM services to Los Angeles and San Francisco. The arrangement is also extended to KLM services operated by **Northwest Airlines** from Seattle.

Following upon the earlier memorandum of understanding, the carrier, on June 19, signs a commercial agreement with **Malaysia Airlines, Ltd.** that will introduce code-sharing on their seven (later eight) weekly nonstop services between Amsterdam and Kuala Lumpur. The pact is

timed to coincide with the opening of the new KLIA Airport at Sepang, near Kuala Lumpur. Malaysia will handle KLM flights in Kuala Lumpur and KLM will service Malaysia flights in Amsterdam.

Dual-designator services with **Malaysia Airlines, Ltd.** commence on July 1. Employing B-747-4H6, Malaysia (using KLM's "KL" code) begins thrice-weekly roundtrips from Kuala Lumpur to Amsterdam, while placing its "MH" designator on the four weekly nonstops KLM already operates between the two nations. Plans are announced for an upgrade of the service at the end of the year; Malaysia will switch to B-777-2H6 IGWs and increase frequencies to four-per-week.

On July 6, The Netherlands government and KLM reach agreement on the complete withdrawal of the government as a holder of KLM common shares. KLM also reaches agreement with the KLM Flight Personnel Pension Fund Foundation on the repurchase by KLM of all KLM Participation Certificates held by the Pension Fund.

For a new order of eight B-737-806s, to be delivered between 1999 and 2000, the company, on July 8, announces that all will be named after birds: *Swan, Falcon, Grouse, Eagle, Hawk, Swallow, Crane, and Goose*. This will be the first time in 50 years that KLM aircraft have been named after birds.

The same day, the board of the KLM Flight Personnel Pension Fund Foundation approves the proposed privatization plan of July 6, as do priority shareholders.

The Dutch major begins discussions with **Cathay Pacific Airways (Pty.), Ltd.** on July 14 concerning a possible strategic partnership. The talks are announced by CEO van Wijk during a visit to Bombay.

The privatization plan is submitted to the August 4 annual general meeting, where it also wins acceptance. Although the government will continue to hold 11,750,000 preference share-A and 1,300 priority shares (15% voting stake), thereby enabling KLM to continue to operate as the Dutch flag carrier whenever necessary. On August 6-7 and 10, 118,470,723 common shares and 4,844,711 participation certificates are traded on the AEX Amsterdam Exchange. The proceeds from the stock sale are effected on August 14.

As their colleagues at **Northwest Airlines** move toward a strike at the end of the month, leaders of the Dutch Air Line Pilots Association, VNV, calls upon its members on August 19 to join the American flyers in a job action if it occurs. The airline announces that it will take the VNV to court if the union does not respond within a specified period to an urgent request by KLM not to call KLM pilots out in a sympathy strike. When the VNV fails to respond, KLM obtains a hearing before the president of the District Court of Amsterdam on August 20 to prevent a job action.

While en route over the Atlantic Ocean near Ireland on September 11, Flight 752, an MD-11, is involved in a double near-miss with a **Swissair, A.G.** MD-11 and a **British Airways, Ltd. (2)** B-747-436.

On September 27, KLM concludes an arrangement with **Federal Express (FedEx)** to sell the U.S. freight giant all nine of its MD-11s. The transfer to Memphis will begin in 2004.

Northwest Airlines pilots strike between August 19 and September 12. KLM will tell the Associated Press on September 28 that, although it continued to fly during the American partner's job action, it lost passengers who would otherwise have transferred to it from Northwest, so many in fact as to lose \$26 million worth of business.

A new agreement is signed with **Eurowings Luftverkehrs, A.G.** on October 14. The pact is designed to boost German market share up to 15% from the current 7% through an increase in capacity.

So positive are the negotiations between KLM and **Alitalia, S.p.A.** that on October 26, the cargo divisions of the two airlines, not waiting for a master agreement to be finalized, begin the first cooperative projects. Employing two KLM Cargo B-747-306Cs and three Alitalia B-747-243Fs as well as the KLM base at Amsterdam's Schiphol Airport and the Alitalia facilities at Milan and Rome, the two operate joint flights to 16 destinations in Europe, Asia Pacific, India, the Middle East, and Latin America. Although the two are able to expand their cargo networks in these areas as a result, they maintain, for political reasons, their

individual freight services over the Atlantic and their separate alliances with various other partners.

Two days later, the sixtieth anniversary of the first scheduled international service to Australia is celebrated with a special ceremony at Sydney Airport.

Under the terms of the upcoming code-sharing pact with **Alitalia, S.p.A.**, the subsidiary **KLM U.K., Ltd.** and the Italian major begin dual-designator flights on November 30 aboard the British line's Fokker 100s. Both companies will sell tickets aboard the services, which operate from London (STN) to Rome and from Manchester to Milan.

On December 17, the carrier and **Alitalia, S.p.A.** complete negotiations and announce the formation of a nonequity strategic alliance. With a priority goal of creating a combined multihub system based on Amsterdam, Milan, and Rome, the two agree to concentrate initially on expanded, dual-designator European routes, transatlantic services, and cargo operations. A multihub system will be developed at the airports of Rome and Amsterdam.

At year's end, planning begins for a large anniversary celebration on the upcoming October 7; on that date, KLM, the oldest airline still operating under its original name, will celebrate its eightieth anniversary.

On December 10, the carrier is forced to defend itself against claims that it has refused to carry a passenger suffering from the AIDS virus. It is pointed out that the passenger in question had been coughing violently and appeared very weak while on a flight from Harare to Johannesburg. It is determined that the customer is in no physical shape to undertake the remainder of his trip, two lengthy segments to Amsterdam and New York, with a layover. Unaware of the cause of his illness, but wishing to prove helpful, KLM rebooks the man on a direct **South African Airways (Pty.), Ltd.** flight from Johannesburg to New York.

Passenger boardings climb 4% to 15.07 million, while cargo traffic falls 3% to 3.71 billion FTKs. Operating profit plunges 48% to G 425 million (US\$206.4 million). Net gain falls to G 456 million (\$216.37 million), including a G 221-million gain from the sale of holdings.

It is announced on January 5, 1999, that KLM will abandon its plans to reequip with A340s and will, instead, seek additional MD-11s, including previously used units. The company had earlier agreed to sell nine MD-11s to **Federal Express (FedEx)**.

The company makes it known on January 28, that it has a shortage of flight attendants and will need to recruit 800 during the remainder of the year.

The European Commission, fearful of dominance on cargo routes from Amsterdam to North America and the Mediterranean, announces on February 1 that it will undertake an in-depth review of the **Martinair Holland, N.V.** merger with KLM.

An **El Al Israel Airlines, Ltd.** B-747-200 overshoots the runway while landing at Amsterdam's Schiphol Airport on February 9; the accident occurs in slippery conditions and results in the Jumbojet's nose gear sinking into the ground off the pavement. The incident has a greater impact on KLM, which is forced to cancel 25 intra-European and 4 intercontinental flights before the runway can be reopened.

The Italian news agency Ansa reports on February 21 that **Air France** is in discussions with KLM, **Northwest Airlines**, and **Alitalia, S.p.A.** concerning the possibility of Air France joining their global alliance. Northwest and KLM, it will be recalled, are also alliance partners of **Continental Airlines**, which is one of two U.S. airlines seeking a partnership with the French line. None of the suggested participants will confirm the story.

On February 23, breaking ranks with its partners, **Alitalia, S.p.A.**, through an unidentified spokesman, confirms that his carrier, along with **Northwest Airlines** and KLM are at the "very beginning" of alliance talks with **Air France**.

The CEOs of KLM, **Northwest Airlines**, and **Alitalia, S.p.A.** meet with **Air China International Corporation** officials in Beijing, also on February 23, to discuss bringing the Chinese carrier into their global alliance.

The next-to-last of 12 B-767-306ers is delivered on February 25 and is christened *Garibaldi Bridge*. The *Swan*, first of the Next Generation

B-737-806s, is delivered on March 1. KLM, simultaneously, places an order with Boeing for five more of the type, plus four B-747-406Cs. A B-767-3Q8 is immediately chartered from ILFC.

The Beirut *Daily Star* reports the next day that **Middle East Airlines, S.A.L. (2)** has complained to the government of Lebanon that KLM has been allowed to fly too many services into the capital city, thereby causing MEA's losses to deepen.

For business and environmental reasons, KLM flights are ended on March 28 between Amsterdam and the Dutch communities of Enschede and Groningen.

New long-haul, twice-weekly roundtrip service is introduced on April 5 from Amsterdam to Shanghai, along with the resumption of a twice-weekly roundtrip service to Beijing. The move coincides with KLM's celebration of its eightieth anniversary.

While en route to Athens, a shipment of 440 Chinese ground squirrels arrive at Amsterdam on April 12 without the proper import and health papers. Efforts are unsuccessfully made to return the animals to their Chinese exporter and to find them a home in a nation outside of Europe. Left with no option, the airline is forced to eliminate the squirrels.

When news of the incident leaks out the next day, protesters angrily react to an admission that airline workers had employed an industrial shredding machine for the slaughter. While confessing that it has "made a grave mistake on ethical grounds" in using such a method of execution, KLM indicates that it had no choice in the disposal after its failure to find a new home for the little animals. It also notes that all future shipments of ground squirrels from China have been barred pending an investigation.

On April 27, the company announces that it will sell its entire 10.63 million shares in the U.S.-listed travel services provider Galileo International.

The next day, the company, citing the complexity of the project, ends its joint venture with software developer The Baan Company on the development of maintenance software for the airline industry; Baan indicates that it will continue development on its own.

Following the ground squirrel debacle, the company, on April 29, bans all shipments of amphibians, reptiles, and rodents—including squirrels—on its flights.

In a joint statement with **Alitalia, S.p.A.** on April 30, KLM confirms that the two majors are offering dual-designator service under a temporary contract while the final documents of the commercial alliance are hammered out for signature. Original plans had called for the definitive alliance accord to be signed on April 15; the new projected date is November 1.

Also during April, a new joint marketing agreement is entered into with **Air Engiadina, Ltd.** and its new Austrian subsidiary Air Alps, GmbH. Under its terms, the two small companies, with their six Dorniers, become part of the Dutch major's global route network. Together, the two are rebranded as KLM Alps, GmbH. and repaint their aircraft in a modified version of the major's light blue and white livery. Small individual company titles are worn on the port side of aircraft fuselages, below the silver forward cheatlines.

On May 1, KLM Alps, GmbH. inaugurates thrice-daily roundtrips between Bern, Innsbruck, Salzburg, and Amsterdam. The new concern replaces **Tyrolean Airways, A.G.** on the service. Frequencies on the route to Sana'a, Yemen, are reduced, also on May 1.

Chief Financial Officer Rob Abrahamsen announces a buy-back plan on May 3 designed to reacquire up to a quarter of the airline's equity. The gambit depends on the sale of its stake in the Galileo computerized reservations system, in Equant, an airline communications system, share consolidation, and other considerations. If the scheme is approved by shareholders at their annual general meeting in August, it will take effect about two months later and will bring a distribution amount the ultimate size of which is not presently known.

The second Next Generation B-737-8K2, the *Valk* (Falcon), is delivered on May 10. At a New York press conference, also on May 10, it is announced that **Alitalia, S.p.A.** will join the multinational airline alliance operated by **Northwest Airlines** and KLM.

The representatives of the partners present indicate that their companies are asking the DOT to grant antitrust immunity to their joint venture, after which they will be able to set ticket prices together, code-share, manage seat inventories, and share services, costs, and revenues. Following approval, the first routes to be operated under the new joint venture will be from Detroit to both Rome and Milan.

This new partnership will form the core of a long-awaited fourth major global airline alliance, "Wings," which will be formally announced later in the year, probably in the fourth quarter. Before that time, it is anticipated that **Continental Airlines** will also become an alliance partner.

It is reported on May 11 that **Alitalia, S.p.A.** has integrated KLM's Italian sales operations within its own; meanwhile, KLM has absorbed the Italian line's sales operations in The Netherlands.

In a ceremony keynoted by Kenyan transport and telecommunications minister William ole Ntimama, **Kenya Airways, Ltd.** and KLM open their first joint sales office at a facility in Barclays Plaza, Nairobi, on May 13.

While on its takeoff roll from New Delhi for the continuation of a May 16 service from Calcutta to London (LHR), a B-747-406C suddenly experiences an engine fire. The liftoff is aborted and the pilot taxis the plane to a remote bay where firemen put out the flames. The evacuated passengers are put up overnight and resume their trip next day.

At the same May 19 news conference in which the 1998 profit decline is announced, CEO van Wijk notes that talks with **Air France** regarding the possibility of the French line joining the KLM/**Northwest Airlines** "Wings" group continue at an exploratory stage.

On May 25, KLM, in anticipation of a negative decision from the European Commission on its plan to take full control of **Martinair Holland, N.V.**, voluntarily withdraws its application to prevent the media attention that will be generated by a negative finding and to review its options in the case. The move is made after consultation with both Martinair and Royal Nedlloyd, N.V., the Dutch transport group that owns the stake KLM had sought.

The Financial Times reports on May 27 that Royal Nedlloyd, N.V. has begun to seek other investors interested in purchasing Martinair Holland, N.V.

While on approach to London (LHR) on a service from Amsterdam, flight attendants on a B-737-806 with 132 passengers, spot smoke coming from a lavatory. Five men burning documents are subdued and restrained after a brief, but violent fight. After the aircraft has landed, police enter the aircraft and another fight erupts as two men attempt to escape. All are arrested on suspicion of attempting to illegally enter the country.

Received at the end of May, the first **Schreiner Airways, B.V.** A300B4-203F enters service on intra-European routes, also on June 1, flying on behalf of KLM.

Service to Sana'a, Yemen, is suspended on June 15. The next day, twice-weekly flights are started to Riyadh, Saudi Arabia. The Next Generation B-737-8K2 *Korhoen* (Grouse) is delivered on June 30.

The August 23 issue of Malcolm Ginsberg's *Air and Business Travel News* reports that the proposed "Wings" global alliance is in serious jeopardy. Abstracting a report from the previous day's London *Financial Times*, the newsletter notes that a significant disagreement between KLM and **Continental Airlines** concerning linkage and revenue sharing on transatlantic flights risks termination of the grouping and creation of a new alliance without Continental.

New service is started to Tashkent on August 30. The same day, the fourth Next Generation B-737-8K2 *Arend* (Eagle) is delivered.

KLM Cargo serves notice on October 6 that it will not, in light of its forthcoming merger with **Alitalia, S.p.A.**, be renewing its contract with **HeavyLift Cargo Airlines, Ltd.** for the use of its two A300 freighters.

During the month, KLM's GSA in Baku arranges the start of a weekly Antonov An-24 passenger charter between the oil fields at and around Aktau and the Azerbaijan capital, where connections with a scheduled KLM flight are made.

At the end of October, the carrier and **Northwest Airlines** terminate their 16-month-old joint Philadelphia-to-Amsterdam service.

The union with **Alitalia, S.p.A.** becomes effective on November 1. Mario Pascucci, formerly vice president-Alitalia Cargo, is appointed managing director of the joint cargo venture, while Henny Essenberg, former KLM executive vice president/network organizer, is tapped as managing director for the joint KLM-Alitalia Passenger Venture.

Also on November 1, KLM and **Northwest Airlines** introduce their Select line of cargo services; dubbed "3-Speed," the product is offered as Select 100 for urgent cargo, Select 300 for standard cargo, and Select 700 for economy cargo.

Anticipated for some months, a joint marketing agreement is signed with **Continental Airlines** on December 15. Under its terms, the two carriers pledge to undertake code-sharing, reciprocal frequent flyer and lounge programs, and through check-in of passengers and baggage. The same day, **Northwest Airlines** is allowed to place its code aboard the daily KLM return service from Amsterdam to Nairobi and the Dutch line's thrice-weekly roundtrips from Amsterdam to Kilimanjaro and Dar es Salaam.

The KLM-Alitalia Passenger Venture is fully integrated by the end of December as over 100 joint managers are named and stationed at all 80 of the carriers' country organizations.

With the exception of its evening departures for Amsterdam from New York (JFK) and Montreal, the remainder of the carrier's 125-plane fleet remains grounded on New Year's Eve.

Passenger boardings are unreported. Freight traffic climbs 6.8% to 4,149,000,000 FTKs. Overall revenues for KLM Group are up 4.1% to \$6.05 billion, while expenses rise 5.9% to \$5.95 billion. Although the operating profit is down to \$91.14 million, net gain jumps to \$324.02 million.

Airline employment at the beginning of 2000 stands at 27,302, a 5.8% increase over the previous 12 months. Among the world's top 25 airlines, KLM is 9th in FTKs and 15th in employees, while KLM Group is 14th in operating revenue.

On January 6, a company plane and a **British Airways, Ltd. (2)** B-757-236 are in a holding pattern 9,000 ft. over the Essex village of Passingford Bridge awaiting permission to land at London (LHR). The pilots of both planes are able to take last minute evasive action and avoid a midair collision.

Also in January, KLM completes the earlier-promised infusion of E 100 million (\$93 million) to **Alitalia, S.p.A.** to assist the latter as it creates a joint North Italy hub at the new Malpensa Airport at Milan.

The last of 12 ordered B-767-306ERs is delivered on February 1 and is christened *Karmsund Bridge*.

While on a February 6 domestic service from Kabul to Mazar-e-Sharif, an **Ariana Afghan Airlines Company, Ltd. B-727-228A** with 128 passengers is taken over by armed gunmen, who order the jetliner flown on to landings in Uzbekistan, Kazakhstan, and Moscow. Passengers are released at each point, including 10 both at Kazakhstan and Moscow. On February 8, the aircraft is flown to London (STN) where negotiations open. The resulting confusion at the U.K.'s designated hijacking airport causes KLM to lose 28 flights.

When Italy reacts sluggishly in transferring flights to the new airport and privatizing Alitalia, KLM President Leo van Wijk is forced to take the unusual step of publicly announcing in February that the delay is forcing his carrier to completely reconsider the future of its joint venture with Alitalia. Under terms of the accord between the two airlines, KLM has the right to abandon the alliance if Malpensa's development into a joint hub is stalled beyond March 31.

On February 16, a wet-leased B-767-306ER is delivered to **Kenya Airways, Ltd.** to replace the A310-304 lost in January's tragedy over the Atlantic. It is employed on the code-shared route between Nairobi and Amsterdam.

A marketing and code-sharing agreement is signed with **Lithuanian Airlines, A.B. (Lietuvos Avialinijos)** on February 24. Under its terms, the partners are able to jointly operate a service from Vilnius to Amsterdam.

Although the Italians in March announce an interest in fully integrating with the Dutch carrier, the privatization of their own airline is once more pushed back.

At the beginning of the summer season on March 26, KLM ceases flights from Amsterdam to Basel/Mulhouse, Jeddah, Karachi, London (LGW), Riyadh, and Santiago de Chile. Having provided 30 days notice, KLM, which has also found it too expensive to conduct business there, ceases service to Baku, Azerbaijan, on March 31. The aircraft employed on the closed routes are transferred to the services from Amsterdam to both San Francisco and Tokyo (NRT).

Also beginning in March, the carrier initiates enhanced commuter service from Germany to Amsterdam under contract with **Eurowings Luftverkehrs, A.G.** The German originating cities include Berlin, Bremen, Cologne, Dortmund, Dresden, Dusseldorf, Hamburg, Hanover, Leipzig, Munich, Munster, Nuremberg, Paderborn, and Stuttgart.

Designed to combat rising fuel costs and discount operators and return to profitability, a major new cost-cutting plan, Operation Baseline, is announced at the end of March. The chief savings will be through a 7.9% staff reduction (2,700 positions), certain route reductions, and the retirement, beginning in August, of 7 aircraft. Fortunately for them, 60 cadet pilot graduates of the KLM Flight Academy who are among the layoffs will find immediate employment with **Deutsche Lufthansa, A.G.**

The current commercial and operational partnership with **ALM (Antillean Airlines, N.V.)** for joint operations between the Netherlands Antilles and The Netherlands is terminated on April 1.

On April 20, despite bitter opposition from Europe's carriers, the Italian government begins implementation of a long-delayed program to move flights from Milan's Linate Airport to Malpensa. The same day, one of the carrier's two daily summer season return flights between New York (JFK) and Amsterdam is given to partner **Northwest Airlines**, which has found itself with an extra available B-747-451.

All of this corporate and government confusion finally causes KLM, as is its right, to pull the plug on the pending **Alitalia, S.p.A.** operational merger as of April 28. Upon notice of cancellation, the Amsterdam-based major also demands repayment of its E 100 million (\$93 million) advance. Within a month, the Dutch and Italian flag carriers will have restored their own sales offices in 80 countries. A B-747-306C is leased to **Martinair Holland, N.V.** for a six-month period that begins on April 30.

Coming upon the heels of the April 28 breakup of the all-but-concluded operational merger with **Alitalia, S.p.A.**, KLM, in early May, begins discussions with **British Airways, Ltd. (2)** concerning a similar arrangement. The initially denied move reflects a certain amount of frustration by the British line over its inability to fully align with **American Airlines**.

Having taken delivery of four aircraft in 1999, the speed of delivery for the remaining units in KLM's Next Generation B-737-8K2 order picks up, beginning with the delivery of the *Havik* (Hawk) on May 18. To celebrate its status as the official airline of the "Euro 2000" European football championships being held in Belgium and The Netherlands, five of the Next Generation B-737-8K2s enter service with color schemes featuring a ball and players. Also during May, an interline agreement is signed with **Aeroflot Russian International Airlines (ARIA)**.

A fifth daily nonstop, code-shared roundtrip with **Northwest Airlines** is initiated between Amsterdam and Detroit (DTT) on June 1; the service will be flown through October 27 by a Northwest DC-10-41. Another Next Generation B-737-8K2, the *Zwalu* (Swallow), is turned over on June 15.

As a result of the growing uncertainty caused by the April "demerger" with **Alitalia, S.p.A.** and the new merger talks with **British Airways, Ltd. (2)**, the joint venture planned by the Dutch carrier with **Braathens, A.S.** is shelved on July 1. On July 3, frequencies are suspended between Amsterdam and Kristiansand.

New **British Airways, Ltd. (2)** CEO Rod Eddington and KLM CEO Van Wijk meet with EU Competition Commissioner Mario Monti on

July 7 to launch the official EU Commission review required before the proposed BA/KLM merger can be launched. Principal concerns include the number of flights by the merged partners to and from London and Amsterdam as well as international route rights.

Due to the BA discussions and KLM's financial uncertainty, plans for closer collaboration with **Braathens, A.S.** are shelved on July 9. KLM is named seventh best-managed company among non-state-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

Due to an increase in demand, the B-767-306ER wet-leased to **Kenya Airways, Ltd.** for use on the code-shared route between Amsterdam and Nairobi is replaced with a larger MD-11 on July 21. A Next Generation B-737-8K2, the *Kraanvogel* (Crane), is delivered the next day.

News circulates over the weekend of August 5-6 that merger talks with BA had nearly collapsed; they are reportedly saved by Chairman Van Wijk, who lowers KLM's stake demand in a consolidated carrier from 35% to 26%. The two companies announce on August 10 that discussions will continue and that formal merger documents will be filed with the European Union toward month's end.

A legal battle between KLM and **Alitalia, S.p.A.** is also started on August 10 when the board of the Italian carrier files an E250-million (\$228-million) claim against the its erstwhile partner, claiming the split-up is "illegitimate." The case will be heard in Amsterdam by an international panel (one Italian member, one Dutch, one neutral) in Amsterdam applying Netherlands Arbitrage Instituut procedure and using Italian law.

Two Next Generation B-737-8K2s, the *Gans* (Goose) and *Zilvermeeuw*, are delivered in August, one each on August 15 and August 23.

On August 22, *Flight International*, in its annual commercial airline survey, reports that KLM has the best load factor (77.4%) of any airline in the world.

Just after takeoff from Los Angeles (LAX) Runway 25L on an August 27 service to Amsterdam, Flight 602, the B-747-206C *Ganges* with 13 crew and 436 passengers, drops the center tailcone and aft cowl of its No. 3 engine, which has apparently been struck by birds. A safe return to the point of departure is executed, while witnesses find engine pieces at Dockweiler State Park, 1 mi. W of the airport. The NTSB will inform the airline on September 27 that the bird entering the engine was a western sea gull.

Code-sharing, frequent-flyer program reciprocity, and shared lounges with **Alitalia, S.p.A.** ends on August 31 and the "demerger" of the two airlines is completed the next day.

When, on the morning of September 2, maintenance workers at Amsterdam examine the wheel well of a company B-737-406 that had arrived from Moscow late the previous night, they discover the body of a dead 21-year-old Russian youth who had stowed away and died of exposure.

Two more Next Generation B-737-8K2s, the *Gierzwalu* (Swift) and *Sperwer* (Sparrow), arrive during September, one each on September 12 and September 26.

The arrangement with **Eurowings Luftverkehrs, A.G.** is modified on September 19; although the contract remains in place, Dresden and Leipzig will be dropped as service points beginning on October 29.

Having found that the final issues between them cannot be resolved, KLM and **British Airways, Ltd.** (2) end their merger discussions on September 22. The major stumbling block to a deal is structural, revolving around a BA demand for the control necessary to amalgamate the two carriers into one airline.

KLM celebrates its eighty-first birthday on October 7. All World Class passengers that day receive as a gift the 81st addition to the KLM collection of historic Dutch house miniatures, Het Goudkantoor, a replica of a historic building in Groningen.

The last of 22 B-747-406s received since 1989 is delivered on October 24 and is christened *Shanghai*.

The roundtrip service code-shared with **Northwest Airlines** from Amsterdam to India is boosted on October 29, with flights to Delhi increasing from four to seven and those to Bombay from three to seven.

The summer New York (JFK) to Amsterdam service operated by **Northwest Airlines** is reclaimed, as is service from Detroit (DTT) to Amsterdam.

The code-sharing agreement with **Malaysia Airlines, Ltd. (MAS)** is expanded on October 29. Under the arrangement, KLM adds three more flights between Amsterdam and Kuala Lumpur to match Malaysia's already provided daily services. The Dutch code is added to 55 additional Malaysia flights between Kuala Lumpur and 7 destinations in Australia and New Zealand, while the Malaysian designator is added to 75 weekly KLM-operated roundtrips between Amsterdam and 7 cities in Scandinavia.

Frequencies from Amsterdam are increased on October 29 by one daily roundtrip to Milan and Rome; by one weekly return service to Dar es Salaam, São Paulo, Kilimanjaro, and Hong Kong; and by two weekly roundtrips to Damascus and Helsinki (cargo only). The same day, B-747F twice-weekly roundtrip cargo flights from Amsterdam to Osaka (KIX) become thrice-daily. However, dual-designator service with **Regional Airlines, S.A.** now ends.

Martinair Holland, N.V. returns the leased B-747-306C on October 31. Simultaneously, the B-737-306 *Jan H. van Linschote* and the B-747-206C *Wilbur Wright* are retired.

The Amsterdam-Kuala Lumpur route, previously operated four times a week, becomes daily on November 1. On November 13, a memorandum of understanding is signed with **Kenya Airways, Ltd.** and **Martinair Holland, N.V.** for the establishment of a joint sales and service organization in Nairobi. When the organization comes into being in 2001, it will employ Nairobi Airport as a hub from which to fly leased freighters on intra-African services. Sales and services in the Kenyan and African cargo markets will also be handled. Another Next Generation B-737-8K2, the *Kluut* (Avocet), is turned over to KLM on November 27.

A three-month media campaign, complete with a lottery awarding automobiles, television sets, and vacations, is begun in Russia on December 1. It is hoped the advertising blitz will boost the previous year's traffic totals (Amsterdam-Moscow, 38,000 and Amsterdam-St. Petersburg, 58,000).

Also during the first week of the month, the B-747-206C *Louis Ble-riot* is retired.

It is reported on December 8 that the carrier has begun discussions with **Sabena Belgian World Airlines, S.A.** concerning possible commercial cooperation. KLM, it seems, is interested in taking over the Sabena route from Brussels to Johannesburg that is being suspended in March.

On December 12, KLM and **Eurowings Luftverkehrs, GmbH.** agree that, as of March 26, the Dutch national airline will assume full commercial control of the Amsterdam-Germany services currently flown by Eurowings. **KLM Cityhopper, B.V.** will immediately take over the Amsterdam-Bremen route, with the other frequencies gradually turned over by October.

The last of nine Next Generation B-737-8K2s to be delivered this year, the *Merel* (Blackbird), is received on December 16.

Sunday Business reports on December 17 that KLM and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** are, together with the venture capital firm Electra Partners, on the shortlist of purchase bidders drawn up by U.S. brokerage Goldman Sachs for the **British Airways, Ltd. (2)** subsidiary GO.

Chairman Van Wijk indicates on December 19 that the carrier is considering the elimination of service to Buenos Aires, Sydney, and Rio de Janeiro. At the same time, it is noted that capacity on the Amsterdam to Johannesburg and Cape Town route will be boosted on April 1.

An office is opened in Moscow at the end of the year. Simultaneously, it is learned that Managing Director/Chief Financial Officer Rob J. N. Abrahamsen will retire on July 25 and be succeeded by Rob A. Ruijter.

KLM ALPS, GmbH. See **AIR ENGIADINA, LTD.**

KLM CITYHOPPER, B.V.: KLM Royal Dutch Airlines, External Communications (AMS/DR), P.O. Box 7700, Schiphol Airport East, Amsterdam, ZL-1117, The Netherlands; Phone 31 (20) 649-2227; Fax 31 (20) 648-8154; <http://www.klm.nl>; Code KL; Year Founded 1988. The KLM (Royal Dutch Airlines, N.V.) subsidiary NLM City Hopper, B.V. is assigned the responsibility in April 1988 of managing the weakened commuter carrier **Netherlines, B.V.** That company is merged and initially operates as **NLM CityHopper/Netherlines, B.V.** A. J. Leyer is named managing director and the combined fleet comprises 3 Fokker 50s, 4 Fokker F.27-200s, 3 F.27-500s, 4 F.28-4000s, and 8 SAAB 340s.

Domestic destinations visited from Amsterdam's Schiphol Airport (East) include Eindhoven, Rotterdam, and Maastricht. A significant number of foreign destinations are also served, including Antwerp, Belfast, Birmingham, Bremen, Bristol, Brussels, Cardiff, Dusseldorf, East Midlands, Gurnsey, Hanover, Jersey, London (CTN), Luxembourg, Malmo, Southampton, Strasbourg, Stuttgart, London (LHR and LGW), Paris, and Hamburg.

Operations continue apace in 1989 and in late 1990 the F.27-200s are withdrawn. When **KLM (Royal Dutch Airlines, N.V.)** withdraws jet service on its new Maastricht to Dresden route, it is picked up by **NetherLines, B.V.** employing a SAAB 340B. Passenger boardings total 500,982.

The fleet in 1991 includes 4 Fokker 50s, the last F.27-200, 3 F.27-500s, 1 F.27-600, 4 F.28-4000s, 1 SAAB 340A and 9 340Bs. Orders are outstanding for 6 Fokker 50s and 3 SAAB 340Bs.

Between February 11 and March 24, frequencies from Amsterdam to Maastricht are reduced from five daily roundtrips to three.

In April, the company is renamed KLM Cityhopper, B.V. (KLMC) and begins to serve Dresden, Mulhouse/Basel, Berlin (Tegel), Cork, Nuremberg, and Stavanger. The 10th SAAB 340B is delivered in November. The 270th of its type built, the new turboprop is the 100th SAAB 340 to be placed with a European customer.

Customer bookings jump 32.4% to 491,497 and cargo accelerates by 24.9% to 296,000 FTKs.

Thrice-daily Rotterdam to Frankfurt flights begin on January 3, 1992. Seven Fokker 50s and three SAAB 340Bs are acquired during the year. A new route opened in the spring from Rotterdam to Frankfurt is discontinued on July 13 for lack of patronage.

On October 25, the carrier launches daily SAAB 340B roundtrips between Amsterdam and Billund. Traffic figures are now reported with the parent's.

Airline employment in 1993 is 396 as the number of Fokker 50s grows to 10. A route rationalization now occurs; roundtrip services dropped include Eindhoven to Hamburg on January 10 and Amsterdam to Bordeaux on February 1. On May 15, the company ceases service between Rotterdam and London (LGW). The capacity released allows an expansion of frequencies on the routes to Billund and Bremen.

During the summer, KLMC increases its weekly roundtrip flights to 458, with the number of trips to and from Stavanger, Strasbourg, Turin, and Cardiff expanded. The Cardiff flights on six days of the week include a night stop in the Welsh capital.

The workforce is cut to 250 in 1994. Managing Director K. C. E. Roojman's fleet comprises 10 Fokker 50s, 4 F.28-4000s, and 11 SAAB-340Bs. Orders are placed for Fokker 70 jetliners.

Just after departure from Amsterdam on an April 4 service to Cardiff, Flight 433, a SAAB 340B with 3 crew and 21 passengers, encounters problems with its No. 2 engine. While attempting a return to its point of origin, the turboprop stalls and crashes (three dead).

A total of 44,000 scheduled departures are made and enplanements skyrocket to 1.35 million.

Passenger boardings decline in 1995 to 1,216,500. In August, a lease order for four (later seven) Fokker 70s is placed with their manufacturer for Cityhopper by its KLM parent.

Airline employment is increased 18.9% in 1996 to 630 and the fleet increases by the addition of seven Fokker 70s, the last of which is de-

livered in August. Meanwhile, on April 9, twice-daily service is inaugurated between Amsterdam and Aarhus, Denmark.

During late summer and fall, the six Fokker F.28-4000s are sold to **Air U.K., Ltd.** Customer bookings jump 7.1% to 1.5 million on 46,000 scheduled departures.

Destinations visited in 1997 from Amsterdam, Eindhoven, and Rotterdam include Aarhus, Antwerp, Belfast, Berlin, Birmingham, Bremen, Bristol, Brussels, Cardiff, Cork, Dusseldorf, Eindhoven, Frankfurt, Guernsey, Hamburg, Hanover, Jersey, Luxembourg, London (CTN), Luxembourg, Maastricht, Malmo, Mulhouse/Basel, Paris, Rotterdam, Southampton, Stavanger, Strasbourg, Stuttgart, and Toulouse.

In early October, the company begins to code-share with **Regional Airlines, S.A.** over routes from Amsterdam to Marseilles and to Clermont. Financial and marketing links between the two carriers will be intensified. When Cityhopper relinquishes its Amsterdam-Strasbourg route, it is picked up by **Regional Airlines, S.A.** on November 17 and serviced with one of its SAAB 340Bs.

Passenger boardings accelerate 42.9% to 2 million on 52,000 scheduled departures.

To better integrate its feeder operations, the parent, in January 1998, rebrands **Air U.K., Ltd.** as **KLM U.K., Ltd.** and **Air Exel Commuter, C.V.** as **KLM Exel, C.V.** The combined 72-aircraft fleet, including that from KLMC, is repainted in a new blue and white livery with silver accents.

Customer bookings jump 17.7% to 2.15 million.

Customer bookings in 1999 slip 0.9% to 2,134,000.

Airline employment at the beginning of 2000 stands at 700, a 7.7% increase over the previous 12 months. At the beginning of the summer season on March 26, two Fokker 50s are replaced with Fokker 70s.

On August 22, one of the displaced Fokker 50s is subleased to **Norwegian Air Shuttle, A.S.**

On December 12, the KLM parent and **Eurowings Luftverkehrs, GmbH.** agree that, as of March 26, the Dutch national airline will assume full commercial control of the Amsterdam-Germany services currently flown by Eurowings. KLM Cityhopper will immediately takeover the Amsterdam-Bremen route, with the other frequencies gradually turned over by October.

KLM EXEL, C.V.: P.O. Box 300, Vliegvelweg 12, Maastricht-Aachen Airport, 6236 ZN, The Netherlands; Phone 31 (43) 365-0700; Fax 31 (43) 365-0708; <http://www.klm-exel.nl>; Code XT; Year Founded 1998. To better integrate its feeder operations, **KLM (Royal Dutch Airlines, N.V.)** in January 1998 rebrands **Air U.K., Ltd.** as **KLM U.K., Ltd.** and **Air Exel Commuter, C.V.** as **KLM Exel, C.V. (KLME).** The combined 72-aircraft fleet, including that from **KLM Cityhopper, N.V.**, is repainted in a new blue and white livery with silver accents.

The Enschede-based small regional **Fairlines, N.V.** is taken over in April and merged.

Flights continue largely as before and passenger boardings jump 31.4% to 222,000.

Airline employment at the beginning of 1999 stands at 125. During the first quarter, a new Dutch-language homepage is opened on the World Wide Web. Director General Roberto Stinga's fleet now includes 3 Avions de Transport Regional ATR42-320s and 4 Embraer EMB-120 Brasilias. Scheduled destinations include Amsterdam, Eindhoven, Hamburg, London (STN), and Paris (CDG).

Passenger boardings increase 58.3% to 351,000.

Airline employment at the beginning of 2000 stands at 178, a 42.4% boost over the previous 12 months.

The first of three ERJ-145s is received on March 9. On April 10, the new ERJ begins thrice-daily return service linking the company's Maastricht/Aachen base with Munich.

Flight 3925, an ATR72 en route from Eindhoven to London (LHR) on May 2 is forced to return to its point of origin when a bomb threat is received. At Eindhoven, the aircraft is searched; no bomb is found and the turboprop is allowed to takeoff for England again.

On September 17, a **Jet 2000** Embraer ERJ-135 is dry-leased in its own colors to fly daily roundtrips from Maastricht to Munich.

An ERJ-145 previously employed by **European Regions Airlines, S.A. (ERA)** is acquired on October 16 and is employed to complete some of the defunct Spanish line's charters. It is also used to inaugurate weekday-only roundtrips on November 6 between Maastricht and Milan.

Four-times-a-week ERJ-145 return service is begun on December 16 from Maastricht to Berlin (Tempelhof).

KLM U.K., LTD.: Stansted House, London Stansted Airport, Stansted, Essex, England, CM24 1AE, United Kingdom; Phone 44 (0) 1279 660 535; Fax 44 (0) 1279 660 340; <http://www.klmuk.com>; Code UK; Year Founded 1998. In July 1997, **KLM (Royal Dutch Airlines, N.V.)** completes its 100% acquisition of **Air U.K., Ltd.** stock. For the next six months, the carrier functions as a subsidiary of the Dutch carrier under its old identity.

To better integrate its feeder operations, the parent, on January 30, 1998, renames **Air U.K., Ltd.** as **KLM U.K., Ltd. (KLMuk)** and **Air Exel Commuter, C.V.** as **KLM Exel, C.V. (KLME)**. The combined 72-aircraft fleet, including that from **KLM Cityhopper, N.V. (KLME)**, is repainted in a new blue and white livery with silver accents.

A new logo is commissioned for KLMuk, a swan with its wings outspread symbolizes the effortless way customers can fly on the revamped subsidiary. In addition, a £3-million advertising campaign promises unparalleled service "From all over the U.K., to all over the world."

Henry A. Essenberg is succeeded as CEO by Floris J. van Pallandt, with John Derbyshire as chief financial officer. The workforce now stands at 2,000 and the fleet includes 5 ATR72s, 10 BAe 146-300s, 9 Fokker 50s, and 17 Fokker 100s.

Flights continue to destinations throughout the U.K. and Northern Europe.

Previously announced, thrice-weekday roundtrips commence on January 16 from Sheffield to Amsterdam. The new service is also run once on Saturdays and twice on Sundays.

Having lost more than £1 million on its Inverness to London (STN) route since opening it in October 1996, the company announces on February 11 that it will drop the daily return service on March 28.

A drunken passenger aboard a British Aerospace BAe 146-300, preparing to depart from Amsterdam for Aberdeen on March 1, becomes unruly and disturbs both flight personnel and his fellow passengers. After ground security staff is called to remove him, the man claims to have planted a bomb on the aircraft. The Scottish passenger is removed and the plane is cleared and searched. No bomb is found and three hours later all except the perpetrator are allowed to reboard and the aircraft departs. The hoaxer pays a fine of £300 pounds and is released.

Just after takeoff from Amsterdam on a September 24 service to Belfast, a Fokker 100 with 67 passengers, loses its left outside wheel. The pilot of another aircraft on the ground sees the wheel fall off and alerts the ATC tower, which radios the plane. The Fokker circles over the North Sea to burn off fuel before making a safe emergency landing back at Schiphol Airport. No injuries are reported.

On October 19, KLMuk announces that its new service to Milan, due to begin at the end of November, will fly to Linate Airport because of the problems being encountered by airlines in establishing the new Malpensa facility as a hub airport.

Through April 30, business-class ticket prices are reduced on flights over the company's network from 22 departure airports in the U.K. and Ireland to more than 50 European destinations via Amsterdam. Return tariffs include Frankfurt from £319, Zurich from £399, Madrid from £409, and Milan from £389.

A new London (STN) to Dortmund service is opened in September in cooperation with **EuroWings Luftverkehrs, A.G.** The new ATR42-320 flights are operated twice daily during the workweek and daily on weekends.

Thrice-daily BAe 146-300 roundtrip flights to Glasgow begin from London (City Airport) on October 26. The Scottish city is the airline's third domestic U.K. destination.

Under the terms of the code-sharing pact between **KLM (Royal Dutch Airlines, N.V.)** and **Alitalia, S.p.A.**, KLMuk and the Italian major begin dual-designator flights on November 30 aboard the British line's Fokker 100s. Both companies will sell tickets aboard the services, which operate from London (STN) to Rome and from Manchester to Milan.

During the year, the company introduces state-of-the-art "speedpoint" check-in facilities at Aberdeen, Edinburgh, and Glasgow, London (CTN and STN). It also opens new lounges at London (STN) and improves those at Glasgow and Edinburgh.

Passenger boardings move ahead by 1.7% to 4.4 million.

Airline employment at the beginning of 1999 stands at 2,000.

To celebrate its first anniversary, KLMuk launches a £2.7-million advertising campaign in early February, targeting the U.K. print and electronic media. New discount fares for spring and summer travel are also introduced.

While en route from Newcastle to Amsterdam on the evening of February 10, a Fokker 50 with 4 crew and 24 passengers, is nearly hit by an RAF Tornado fighter bomber at 21,000 ft., N of Flamborough Head near Bridlington. No injuries are reported, but both the CAA and RAF investigate.

On February 15, the carrier, apparently without much warning to tour operators, withdraws service to Guernsey from Amsterdam, Southampton, and London (LGW). Upwards of 3,000 vacationers and others are to be left without transport after March 28 and despite its new marketing campaign, the carrier gives itself a black eye with travel agents.

Jersey European Airways, Ltd., the other scheduled carrier into Guernsey, meets with Transport Board officials on February 17 and agrees to do what it can to provide additional lift, particularly over the Easter holidays.

During early March, arrangements are completed with **Suckling Airways, Ltd.** for new replacement services. The Dornier 328-110 to be employed is repainted with a Scottish flag on its nose and a red and black tartan tail design. Tartan seats are in the cabin and cabin crew are outfitted with tartan ties.

KLMuk operates its final ATR42-320 service between Guernsey and London (STN) on March 27. In addition to the loss of 49 jobs, the event marks the end of an era as the airline, in various forms, has served the island for more than 50 years.

In cooperation with **Braathens, A.S.**, the company, on March 28, increases its daily service from Aberdeen to Stavanger from four flights to five; two of the services are operated by the Norwegian carrier with Boeing 737s.

On March 29 the **Suckling Airways, Ltd.** tartan Dornier takes over the larger line's service from London (CTY) to Glasgow, four times a day.

In order to reorganize its scheduled services into a concentrated focus on feeder services to and from Amsterdam and provide additional connections to Amsterdam, the carrier, on October 30, drops its current services from London (STN) to Rome, Aberdeen, and Jersey. Also dropped are from Manchester to London (CTY), from Southampton to Jersey, and from Aberdeen to Stavanger, Norway. In addition, the number of flights to Brussels and Edinburgh from London (STN and CTY) is reduced.

The five aircraft freed up by the service reduction are leased to the new subsidiary **Buzz** (initially known as "K2"), which is being set up to offer low-cost service from London (STN) to various European destinations, particularly Amsterdam.

While revealing his plans for **Buzz** on September 22, KLMuk CEO Floris van Pallandt commits £10 million (\$16.1 million) to **Buzz** start-up costs and promises that the airline will break even by the end of 2001. When **Buzz** begins service, it will employ eight KLMuk BAe 146s painted in yellow, purple, and lime green livery, which are now being

gradually rolled out of KLMuk service to Norwich for repainting (without titles). Two 146s will be retained in KLMuk service to operate the routes from London (LCY).

It is announced on October 5 that **Gill Airways (Gill Aviation, Ltd.)** will soon replace KLMuk on the routes it had operated from Newcastle to London (STN) and from Norwich to Aberdeen. When Gill picks up these services on October 29, they are flown in its own colors and not as part of its "Air France Express" contract. KLMuk begins accepting reservations on October 31 for flights on **Buzz**. Promotional fares are offered for flights made by the new airline in January–March.

Return frequencies between Amsterdam and Aberdeen are increased on November 1 from four to five every day. In late November and through December, the aircraft scheduled for **Buzz** return to Norwich where they receive final paint touchups and their **Buzz** titles.

The final KLMuk service from London (STN) to Brussels is operated on December 19.

Customer bookings fall 6.6% to 4,113,000, while cargo traffic drops 22.5% to 1.06 million FTKs. Airline employment at the beginning of 2000 stands at 2,200, a 10% increase over the previous 12 months.

Revenue flights by **Buzz** commence on January 4 with Done Deal restricted and flexible Open Deal fares on roundtrips between London (STN) and Berlin, Frankfurt, Dusseldorf, Vienna, Milan, Paris and Lyon. All of the routes, except those to Lyon and Vienna, were previously flown by KLMuk. Unlike the other low-cost carriers, **Buzz** employs the primary airport at each community instead of a secondary field.

With the transfer of the bulk of its BAe 146 fleet plus two B-738-3L9s to **Buzz**, KLMuk maintains its principal Amsterdam schedule with Fokker 100s and turboprops. At the end of the winter season in late March, flights cease to London (STN) from Edinburgh and Glasgow.

It is reported on October 2 that, for the first time, more passengers are flying to Amsterdam with **easyJet Airlines, Ltd.** from London (LTN) than with KLMuk from London (STN).

A BAe 146-200 is transferred back to KLMuk by **Buzz** on October 29 so that the parent might replace the Fokker 100 it has been employing on its London (STN) to Amsterdam service. In what will become a routine, the BAe will revert to **Buzz**, which, in the interim, is suspending its thrice-daily route from London (STN) to Hamburg.

KLYUCH AVIA: Russia (1993–1994). KA is established at Samara in late 1993 to offer primarily ad hoc cargo charters to domestic and international destinations. Revenue services commence with a mixed fleet of Ilyushin Il-76s and Antonov An-74s, but do not continue a year.

KMK AIRLINES: United States (1969–1970). KMK is established at Arlington, Virginia, in early 1969 to provide scheduled air taxi services between Washington, D.C. (DCA) and Williamsport, Pennsylvania. Daily Cessna lightplane roundtrips are duly inaugurated, but are only maintained into 1970.

KMV (KAVKAZIA MINERALINE VODY MINERAOVODSKOE PRODUCTION ASSOCIATION). See **KAVMINWODYAVIA**

KNIGHT AIR, LTD.: United Kingdom (1982–1996). KAL is founded by its Chairman Ian Hall at Leeds/Bradford in 1982 to offer regional services to Cardiff, the Isle of Man, Aberdeen, and Southampton. Operations continue apace during the next decade with little change. On the financial front, ownership passes to the Yorkshire conglomerate Lambson Group.

In 1993, Managing Director Malcolm Dobson oversees a workforce of 67 and operates a fleet that includes 1 Cessna C-550 Citation I, 1 Cessna 421, and 2 Embraer EMB-110 Bandeirantes.

Early in 1994, Knight Air assumes the Southampton to Aberdeen scheduled route suspended by **Yorkshire European Airways, Ltd.** upon its cessation of operations the previous November. Later in the year, new frequencies are added to Cardiff and the Isle of Man.

Through September, enplanements for the 30-worker airline total 6,537.

In January 1995, it is announced that a Bandeirante will be replaced the following year by addition of two leased British Aerospace BAe Jetstream 41s.

Passenger boardings are up dramatically to 22,534 during the first 9 months.

The BAes are not taken, as on January 10, 1996 the company elects to halt scheduled service at the end of March. During the first two months of the new year, a total of 3,873 passengers are flown. Having elected to expand its aircraft engineering business at Leeds-Bradford, company owners sell their routes from Belfast, Southampton, and Aberdeen on March 1 to **Manx Airlines, Ltd. (2) (Manx Airlines Europe, Ltd.)**. For its part, Manx assumes the lease of the two BAe Jetstream 41s.

KNIGHT AIRLINES: United States (1979–1980). Knight is set up at Miami in 1979 to offer daily roundtrip air taxi shuttle flights to Lakeland. Although Piper PA-23 Aztec flights are duly inaugurated, they cannot be maintained far into 1980.

KNIGHTHAWK AIR EXPRESS, INC.: 55 York Street, Suite 330, Toronto, Ontario M4P 3B7, Canada; Phone (416) 932-1649; Fax (416) 932-9477; <http://www.knighthawk.ca>; Code KNX; Year Founded 1991. Knighthawk is incorporated at Toronto on July 31, 1991 by Hugh J. MacMillan and F. Martha Deacon to open their own freight and express services, which will operate both domestically and transborder between Canada and the U.S. The two acquire the assets of bankrupt **Soundair Express, Ltd.**, a division of Soundair Corporation, in November. The acquisition includes a pair of small Dassault Falcon 20 jet freighters, along with a stock of spare parts, tools, and office equipment.

At the beginning of 1992, the partners begin operating a series of short-term contracts on behalf of **Purolator Courier, Ltd.** In November, KnightHawk enters into an agreement to operate its Falcons between Toronto and Wilmington on behalf of **Airborne Express**.

During 1993–1996, the fleet grows to 4 Dassault Falcon 20s and 1 Beech 1900C. MacMillan continues as chairman/president, with W. Laurie Fox as vice president-financial as additional bases are established at Ottawa, Calgary, and St. John's. A large number of additional contracts are received for flights on behalf of numerous concerns, including **Airborne Express**, **Purolator Courier**, **TNT Express Worldwide**, **Federal Express (FedEx)**, and **Air Georgian, Ltd.** Revenues in 1995 and 1996 total C\$4.61 million and C\$7.06 million, respectively, with respective net profits of C\$136,000 and C\$112,000.

Early in 1997, a Beech 99 freighter is leased. A new contract arrangement is concluded with **TNT Express Worldwide** on April 8. Under its terms, a Falcon 20 will fly five-nights-a-week roundtrips from Ottawa to Indianapolis via Toronto and Buffalo.

A public offering is completed on July 16 that brings in C\$1 million. Vice President Fox resigns on August 1 and is succeeded by Philip Dziedzic.

Due strategic operational reasons rather than dissatisfaction, **TNT Express Worldwide** provides notice on October 27 of its decision to terminate its KnightHawk contract on December 23. The business represents approximately 35% of KnightHawk's current revenues. Over the next few weeks, KnightHawk executives scramble to market the Beech 1900C and Falcon 20 that are to be freed up by the TNT move.

Also on October 27, Knighthawk enters into a 60-day contract with **Federal Express (FedEx)** to operate a Falcon 20 between Ottawa and Montreal five days a week.

On December 15, Chairman MacMillan announces that a long-term contract has been signed with Dynamex, Inc. to provide Falcon 20 air freight charter services five nights a week between Regina and Calgary. On Christmas Eve, KnightHawk launches five-nights-a-week Beech 1900C air freight charter services from Ottawa to Toronto on behalf of **Airborne Express**.

Although revenues for the year climb to C\$9.23 million, there is a net loss of C\$202,000.

An experimental corporate shuttle service on behalf of Digital Equipment of Canada, Ltd. begins on January 5, 1998. Employing a Piper PA-31T Cheyenne, KnightHawk flies company officials between Digital's U.S. and Canadian operations.

Two days later, Chairman MacMillan reviews the new business that the company has received since October and indicates that it has more than made up for the cancelled **TNT Express Worldwide** contract.

Four-nights-a-week roundtrip Beech 1900C freight charters commence on March 2 between Toronto and New York (JFK) on behalf of Canadex, Ltd., the oldest wholesale courier in North America.

On behalf of **Federal Express (FedEx)**, five-nights-a-week roundtrip Falcon 20 cargo flights are started on April 13 between St. John's, Newfoundland, and Moncton, New Brunswick. A member of the board of directors since 1996, Adrian Noskwith resigns on July 16.

Cofounder Deacon resigns from the board on December 1, the same day former director Noskwith rejoins. The same day, Vice President-Finance Dzedzic is named to the board, along with new member Scott Butler.

The year's operating income rises to C\$9.92 million, while a welcome net profit of C\$168,000 is reported.

The **Airborne Express** Beech 1900C service between Ottawa and Toronto ceases on March 8, 1999. The contract is replaced with a larger arrangement, under which KnightHawk simultaneously launches five-nights-a-week Falcon 20 roundtrips between Ottawa, Montreal, and Wilmington, Ohio. It is noted on March 26 that the company has flown over 27,000 hours since start-up.

In May, two **Federal Express (FedEx)** contracts are extended; one sees a Falcon 20 operating from Moncton to St. John's and the other continues flights of a Falcon 20 between Ottawa and Montreal.

On September 20, **Airborne Express** discontinues the March Falcon route, agreeing to operate KnightHawk's Beech 1900C from Ottawa to Toronto. A new **Federal Express (FedEx)** Falcon 20 contract begins on November 3 with five-times-a-week return cargo flights between Calgary and Regina.

In December, KittyHawk and a partner, the New York & Lake Erie Railroad, acquire 104 miles of track in the Okanagan Valley of British Columbia from the Canadian National Railroad. This diversification into the short-line railroad business will be operated by Kelowna Pacific Railway, Ltd., in which KnightHawk holds a 35% equity stake, under the name Okanagan Lines.

At C\$10.62 million, the year's revenues, up 7%, pass the C\$10 million mark for the first time; net gain climbs to C\$270,000.

Flights continue in 2000. On August 29, Calgary-based Jetport, Inc., headed by financier Ronald Joyce, acquires 250,000 common shares of stock, raising its equity stake in the company to 12.8% or 1.01 million shares.

KOB AIR, LTD.: Uganda (1991–1993). KA is established at Entebbe in early 1991 to offer scheduled all-cargo services to Amsterdam. Managed by the Dutch company Kay Aviation, a single Boeing 707-320C is employed in April to begin weekly roundtrip revenue flights to Amsterdam. Flights cease in 1993.

KOBRIN AIRWAYS: United States (1982). Bernie Kobrin sets up his scheduled air taxi service at Princeton, New Jersey, in early 1982 to offer passenger flights to Philadelphia. Although daily Piper T-1020 roundtrips are duly inaugurated, they cannot be sustained beyond the fall.

KODIAK AIRWAYS: United States (1960–1973). KA is formed in 1960 to provide scheduled passenger and cargo services from Kodiak Island, Alaska, to the mainland. The fleet includes Grumman G-21A Geese and float-equipped Cessna 180s. A Goose is destroyed in a landing accident at Kodiak on June 3 when the pilot, who is injured, fails to

raise the landing gear prior to setting down. A second Goose with four aboard is destroyed while landing at Kodiak on December 19; injuries are slight.

A G-21A without passengers crashes into the crown of Mt. Kodiak on March 31, 1961 during bad weather. When its right float is punctured, a Cessna 185 sinks at its Kodiak moorings on June 21. A Goose with five aboard crashes during takeoff from Old Harbor at Kodiak on December 24; one passenger is killed.

Although 1962 passes without incident, an underprepared pilot crashes a Piper PA-18-150 Super Cub while taking off from Kodiak on December 4, 1963. Still, during the past 3 years, passenger boardings have reached the 10,000 level.

In 1964, airline employment is 22 and the company operates 6 aircraft. One of these, a G-44 with four aboard, is badly damaged in a crash landing at Karluk, on Kodiak Island, on January 21. The great Alaska Earthquake of March causes over \$100,000 in damages, including the total destruction of one G-21A. In addition, the hangar, offices, and passenger waiting rooms are all damaged and revenues are lost when schedules cannot be met.

A G-44 with five aboard strikes a submerged object while taking off from Cape Alitak, Alaska, on November 12 and crashes; only minor injuries are reported as all are quickly rescued.

Enplanements total 14,000 but the number of revenue passenger miles flown declines by 21% to 12,000. Revenues are \$438,000.

Three new employees are hired in 1965 and the fleet includes 10 aircraft: 3 Grumman G-21As, 4 G-44 Widgeons, 2 Piper PA-18-150s, and 1 Cessna 180.

Enplanements grow by 523 bookings and 20,880 ton-miles of freight are flown.

Operations continue apace in 1966 and 1967. By the end of the latter year, the workforce is 23 and fleet size is unchanged from the previous 2 years. A total of 17,000 passengers are boarded and 20,000 freight ton-miles flown.

Bookings in 1968 advance to 22,000, with 15,000 freight ton-miles flown. Revenues are \$710,000.

Passenger enplanements in 1969 are 23,114. The employee population in 1970 numbers 36 and the fleet includes 13 aircraft. An application is filed with the CAB for permission to operate a route from Kodiak to Seattle.

Customer bookings accelerate 20.3% to 25,614 and freight traffic skyrockets by 92.9%.

Enplanements drop sharply in 1971, down to 22,968. Passenger boardings jump 4.3% in 1972 to 26,715 and the number of freight ton-miles flown accelerates 8.5% to 26,000. On April 1, 1973, the carrier joins with **Dillingham Air Service** to form **Kodiak-Western Alaska Airlines**.

KODIAK-WESTERN ALASKA AIRLINES: United States (1973–1984). Kodiak Airways and its services to Kodiak Island merge with **Billingham Air Service**, organized in its namesake town in March 1959, to form K-WAA on April 1, 1973. Operations continue from a Kodiak base over the combined route network of the merger partners. The workforce is now 83.

Passenger boardings for the integrated carrier accelerate 5.4% to 39,000, but freight traffic is off by a huge 57.9%.

Seventeen new employees are hired in 1974. Enplanements climb 19.4% to 42,856, but overall, freight is off again, by 5.7%.

A significant traffic decline is suffered in 1975 as passenger boardings drop 20.9% to 34,000 and cargo is off by 31.7%.

The workforce in 1976 is 71 and the fleet includes 24 aircraft: 5 Cessna 207s, 3 Beech 18s, 4 Grumman G-21As, 3 Grumman G-44As, 2 Cessna 206s, 2 de Havilland Canada DHC-2 Beavers, and 1 each DHC-3 Otter, Cessna 150, C-185, C-421, C-404, and Martin 4-0-4. The latter, in yellow and white livery, is employed to offer summer service from Anchorage to Billingham via Kodiak and King Salmon.

The approaching conclusion of Alaska pipeline construction still has a negative impact upon traffic figures.

Customer bookings drop 50% to 34,910. Cargo stages something of a comeback, rising 2.81% to 96,808 FTKs.

Enplanements decline to 32,424 in 1977 and plummet by 35.1% in 1978 to 24,000. Freight traffic for the 43-employee company is also a failure, declining by a huge 75.9% to 48,000 pounds. The downturn requires the carrier to sell its Martin 4-0-4.

The workforce is increased by 16.3% in 1979 to 50. Passenger boardings jump a meager 4.2% to 25,000 while cargo ascends 9% to 53,000 pounds. Revenues increase 12% to \$1.9 million and expenses are held to \$1.86 million. Consequently, the profits are \$48,000 (operating) and \$164,000 (net).

The fleet in 1981 includes 1 Cessna 402, 2 Cessna 206s, 6 Cessna 207s, 2 Grumman G-21 Geese, 1 Douglas DC-4C, and 2 Sikorsky S-58 helicopters. By November, Chairman John D. Gifford and President Howard Fowler operate an extensive bush community network in the Kodiak and Bristol Bay areas. Destinations visited include Port Williams, Larson Bay, King Salmon, Parks, and Dillingham. Enplanements for the year swell 16% to 21,000 and grow to 26,000 in 1982.

When the parent company, Anchorage-based Gifford Aviation, goes bankrupt in early spring 1984, K-WAA follows suit in May.

KOGALYMAVIA (KOGALIMAVIA TOO): Kogalym Airport, Tyumen Region, 626481, Russia; Phone 7 (3462) 280 066; Fax 7 (3462) 280 067; Code 7K; Year Founded 1993. Early in 1993, engineer Nikolai N. Zolnikov is approached by Lukoil, the largest oil company in western Siberia, concerning the possibility of establishing an airline to support its operations through the provision of both scheduled and charter services. Lukoil had been working with the Tyumen director of **Aeroflot Soviet Airlines** before its demise and with a small subsidiary of Tyumen Airlines, Surgatavia, thereafter. Both **Tyumen Airlines** and **Surgatavia** are named for communities in the region, now enjoying a boom period of energy exploration. The place chosen for the new carrier to set up shop is Kogalym, a 66,000-resident city, where a new airport had been opened in the fall of 1992.

With a Lukoil commitment to pay for the establishment and running of the airline, Zolnikov agrees to operate it and Kogalymavia (Kogalimavia Too), shortened to Kolavia, is established in May. Shareholding is divided between the city of Kogalym (67%), Lukoil (32%), and airline employees (1%).

Director General Zolnikov immediately acquires a fixed-wing fleet of 2 leased Tupolev Tu-154Bs and 1 Yakovlev Yak-40, plus a rotary-wing division comprising 1 Mil Mi-2 and 3 Mi-8 helicopters. A VIP-configured Yakovlev Yak-40 is also purchased.

Revenue flights commence from Surgut to Moscow. Additionally, charter flights are not only provided on behalf of Lukoil, but Gazprom, the state-owned natural gas industry and Surgutneftgaz, a private oil and gas producer as well. Lukoil now also provides the capital with which to purchase four new Tu-154Ms and three Mi-8s, thereby making Kolavia one of the few new Russian airlines of this period to actually purchase its own airliners.

Flights continue in 1994-1996, during which years the fleet is increased by the addition of three Tu-154Ms. Regularly scheduled roundtrips are launched from Kogalym and Surgut to Sochi, Anapa, Krasnodar, Ufa, Kazan, and Samara in Russia and Baku, Azerbaijan. Enplanements in the latter year total 356,686.

The fixed-wing component is further enhanced during 1997 when two more Tu-154Bs and two Tu-154Ms are acquired. Charter services are inaugurated to the United Arab Emirates, Norway, Finland, the Czech Republic, Greece, Turkey, and Bulgaria. Passenger boardings accelerate 9.7% to 395,000.

Scheduled destinations visited in 1998 include Baku, Krasnodar, Moscow, Surgut, and Volgograd. Unhappily, the Russian currency crisis of August has a devastating impact on the carrier's charter operations,

most of which are scrubbed. Bookings this year are up to 560,000, making the company the seventh largest Russian airline in terms of traffic.

Arrangements are completed during the summer of 1999 for the acquisition of three used Tu-134As from **MALEV Hungarian Airlines** and another from **CSA Czech Airlines**. The first of these jetliners is delivered in July and enters service at the beginning of August on a network of regional routes. New destinations added for these aircraft include Mineralnye Vody and Rostov-on-Don. The country's fiscal situation continues to hurt the airline, as passenger boardings for the year fall 10% to 481,000, while 3.87 million FTKs are operated.

Flights continue in 2000.

KOHLER AVIATION CORPORATION: United States (1929-1934). Kohler is organized by John B. Kohler and his brother Frank at Grand Rapids, Michigan, during the summer of 1929 to offer Lake shore flights to Milwaukee. Richard Robbins is appointed president/CEO. Joseph Doerflinger becomes chief pilot, as well as crew chief, baggage handler, and ticket agent. Together with a pair of copilots, Doerflinger travels to New York City to obtain a Keystone-Loening C-2C amphibian, which the trio ferry back to Michigan. A proving flight occurs in late August from Lake Muskegon to Maitland Field, Milwaukee, and the company is officially opened for business on September 1.

Scheduled passenger and air express flights begin on September 21, with Milwaukee's mayor, Daniel W. Hoan, as featured traveler. Following an elaborate welcoming ceremony and banquet, twice-daily frequencies are initiated over Lake Michigan the next day. The route is now sold to **Northwest Airways**, which sublets it back to Kohler.

Between May 15 and June 9, 1930, President Richard Robbins attends the so-called "Spoils Conference" at Washington, D.C., together with Postmaster General Walter F. Brown and the heads of various air transport concerns. While the executives discuss air routes and subsidies, the fleet grows to include three Loenings. As a result of the Washington meeting and during May 1931, Grand Rapids to Detroit service is started with six new C-2Cs.

A C-2C makes a faulty takeoff run from Milwaukee harbor on August 29, 1932 and crashes; pilot Jim Benedict is rescued by a USCG cutter. Plane No. 5 is lost in a hangar fire at Milwaukee in late 1933.

On February 9, 1934 (effective February 19), the government, reacting to an "Air Mail Scandal," cancels all mail contracts. Without subsidy, Kohler's C-2Cs sit idle. At the end of March, following a disastrous attempt by the Army Air Corps to fly the mail, the Post Office offers new bids to commercial operators, excepting those participating in the May-June 1930 "Spoils Conference."

Despite the specific prohibition, Kohler rebids its previous routes, but it is rejected due to Robbins presence at Brown's infamous 1930 meeting. Without the mail subsidy, the carrier cannot continue and is sold in June to **Pennsylvania Airlines**.

KOKUSAI KOKU YUSO K.K.: Chofu Airport, 1060 Nishi-Machi, Chofu-shi, Tokyo, 182, Japan; Phone 81 422-32-2211; Fax 81 422-32-7129; Year Founded 1962. KKY is established at Tokyo in 1962 to offer executive and small group passenger charters and contract service flights. By 2000, the company, which now also flies small-package express, employs 18 full-time pilots and operates 2 Cessna 206 Stationaires, 1 Cessna 207A Skywagon, and 20 Cessna 172 Skyhawks.

KOLAVIA. See **KOGALYMAVIA (KOGALIMAVIA TOO)**

KOLPASHEVO STATE AIRLINE (KOLPASHEVSKOE GAP): Lazo Str. 6, Tomsk Area, Kolpashevo, West Siberian Zone, 636420, Russia; Phone 7 (38254) 75200; Fax 7 (38254) 23761; Code KSAE; Year Founded 1992. KSA is established at Kolpashevo in 1992 to offer domestic and regional scheduled passenger services. Karmil Kuzmin is CEO and he begins revenue flights with a fleet that comprises 5 Yakovlev Yak-40s, 15 Antonov An-28s, 47 An-2 biplanes, and a large rotary-wing contingent of 37 Mil Mi-8/17s and 7 Mi-2s.

KOLYMA AVIA ENTERPRISE (KOLIMA AVIA AVIAPREDRIY-ATIE): Keki Magadaski 7, Magadan Nagberzhenaya, Magadan Zone, 685000, Russia; Phone 7 (41322) 24464; Fax 7 (41322) 21082; Code KLI; Year Founded 1994. KAE is formed at the beginning of 1994 to provide ad hoc all-cargo services throughout the region. V. R. Yefest, the new general director, begins revenue flights with an all-Antonov fleet, comprising an unspecified number of An-24s and An-26s.

While on its takeoff roll from Omsukchan on February 1, an An-24B with 5 crew and 48 passengers, veers right and crashes into a 1.2-m.-high mound of plowed snow; although the aircraft is badly damaged, there are no fatalities.

Flights continue in 1995–1996 with a fleet that comprises 10 An-24s and 2 An-26s.

On January 25, 1997, an An-26 with 6 crew and 24 passengers makes an incredibly bad landing at Chorkurdah. The aircraft is actually put down alongside the runway and then goes across it to come to rest against a building. Although the turboprop must be written off, there are no fatalities.

Flights continue during the remainder of the year. In 1998, customer bookings reach 540,000.

Service is maintained in 1999–2000.

KOMANDOR AERO AIR COMPANY (KOMANDOR AERO A/K): Chubarov St. 14/8, Petropavlovsk-Kamchatski, Kamchatka, 683000, Russia; Phone 7 (41500) 61210; Year Founded 1994. KAAC is established at Petropavlovsk, Kamchatka, in 1994 to offer regional third-level flights. Yu B. Levitski is named general director and he commences revenue services with four Let L-410s. Flights continue.

KOMI AVIA (KOMIAVIA KONTSEM). See KOMIAVIATRANS

KOMIAVIATRANS: Pervomaiskaya Str. 53, Syktyvkar, Komi Zone ATD, Republic of Komi, 167610, Russia; Phone 7 (82122) 22 797; Fax 7 (82122) 25 583; http://www.komi.com/ki_avia; Code KMA; Year Founded 1992. Komi Avia: (Komiavia Kontsem), the former Aeroflot Soviet Airline Komi directorate established in 1967, is reformed in 1992. The new Komiavia State United Aviation Enterprise, better known by its marketing name of Komiaviatrans is upgraded to provide both international scheduled and charter services from the autonomous region in north central Russia. Oleg G. Chernov is director general and he undertakes operations to Africa, Asia, and Europe with a fleet that includes 30 Tupolev Tu-134s, 5 Antonov An-12s, 5 An-26s, and 10 An-28s, all retaining their Aeroflot livery. Enplanements for this initial year of independence total 1,731,634.

En route from Luena to Catumbela, Angola, on April 26, 1993, a chartered An-12 with two crew is hit in its No. 4 engine by a surface-to-air missile; the aircraft crash-lands in a field in Moxico province. Climbing out of the wreck, the uninjured pilots begin to walk out when they step on land mines; one is killed and the other severely injured.

While on initial climb away from Slavgorod, Russia, on August 20, an An-12V with six crew collides with a flock of birds that take out the No. 2 and 4 engines; a safe gears-up landing is carried out, after which the aircraft catches fire. There are no fatalities as all aboard escape safely.

The uncertain Russian economy brings an enormous turndown in traffic. Passenger boardings plunge 49.6% to 1,157,510 while freight falls 52.6% to 116.7 million FTKs.

Managing Director Chernov's fleet is expanded in 1994 by the acquisition of 12 Tu-134s. The additional capacity cannot increase traffic as customer bookings decline another 19.3% to 935,200 while cargo drops 12.8% to 102 million FTKs.

The traffic picture is no brighter in 1995. Enplanements fall 12.7% to 816,000 and cargo drops 9.5% to 9.5 million ton-kilometers. The Russian carrier suffers a bad 1996 as passenger boardings plunge 30.7% to 566,160.

Although flights continue in 1997, the company comes to emphasize charters and wet-lease services over scheduled flights. A fleet of 19 PZL-Mielec An-28s made under license in Poland is employed.

Customer bookings decline 24.1% to 429,730.

Service is maintained in 1998–1999 with a fleet of 12 Polish-built An-28s. The Russian currency crisis has a severe impact upon the airline, nearly driving it out of business. On May 19 of the latter year, a court grants it the time necessary to restructure and avoid bankruptcy.

KOMIINTERAVIA: Sovetskaya Street 69, Syktyvkar, Komi Zone ATD, Republic of Komi, 167619, Russia; Phone 7 (8212) 216732; Fax 7 (8212) 216716; <http://www.komicom.ru>; Code 8J; Year Founded 1996. This joint stock company is established at Syktyvkar in May 1996 to provide domestic scheduled flights within Russia and charters to both domestic and international destinations. Mikhail Kutuzov is named director general and after a year of planning and preparation, he is able to launch revenue services in July 1997.

Flights continue during 1998–1999, during which years the fleet comes to total 9 Tupolev Tu-134As and 1 Tu-134B. A workforce of 664 is employed at the beginning of 2000. Scheduled points visited include Moscow, St. Petersburg, Ukhta, and Usinsk.

KOMSOMOLSK NA ARMURE APO (KOMSMOISK-ON-AMUR AIRCRAFT PRODUCTION ASSOCIATION): Komsomolsk na Amure APO, 681018, Russia; Phone (42172) 28504; Fax (42172) 29851; <http://www.ccebd.co.uk/ccebd>; Code KOMS; Year Founded 1995. Under the leadership of General Director Victor Merkulov, KNAA is founded at Komsomolsk na Amure in 1995 to fly international and domestic all-cargo charters, plus executive passenger flights. Services begin with a fleet that comprises 3 Antonov An-12s, 2 each An-32s, Tupolev Tu-134As, Ilyushin Il-76TDs, and 1 An-26.

TwoMil Mi-8 helicopters are also employed by this concern, which also manufactures military aircraft, light planes, and motor boats.

KONINKITJKE NEDERLANDSCH-INDISCHE LUCHTVAART MAATSCHAPPIJ, N.V. (KNILM): Dutch East Indies (1928–1947). On October 1, 1925, Capt. A. N. G. Thomassen a Thuessink van der Hoop departs Amsterdam on a 22-stop, 9,552-mile Fokker F-VII proving flight to the Dutch East Indies; he arrives at Batavia on November 24.

Seeking an air service capable of rapid delivery of personnel and goods around the islands, a group of Dutch businessmen form Koninkitjke Nederlandsch-Indische Luchtvaart Maatschappij, N.V. (KNILM) at Amsterdam during the spring of 1927. Backing is provided by KLM (Royal Dutch Airlines, N.V.) board member Cornelis van Aalst, president of Nederlandsche Handel Maatschappij, Holland's largest financial institution.

In September, officials from the new company and those from KLM (Royal Dutch Airlines, N.V.) enter into an informal agreement that will come to have the strength of law; KLM will not intrude onto intracolony routes while KNILM agrees not to compete on international services. Capt. G. A. Koppen, employing a new Fokker F-VIIa/3m, makes a second East Indies proving flight beginning on October 1, Amsterdam–Batavia in 10 days.

KNILM is formally incorporated at Amsterdam on July 16, 1928. It joins with KLM in a G 200,000 exchange of stock; KLM receives subsidy from the Dutch national government while KNILM is supported by a 75% stake taken by the Dutch Colonial Government in Batavia. KLM agrees to provide operational support and training, wet-lease of aircraft and crews, and technical assistance in the evaluation and acquisition of new airliners.

Six East Indies proving flights are made, one every two weeks between September 13 and October 11. During these months, four new F-VIIb/3ms are sent to the East Indies; two are destroyed in landing crashes.

On October 15, a Royal Charter is issued to KNILM. A KNILM F-VIIb/3m, with Dutch East Indies Governor General A. C. D. de

Graeff as passenger, inaugurates the company's operations on November 1 with a flight from Batavia to Samarang. Later in the day, a second route is launched from Batavia to Bandoeng. On December 11, the last Amsterdam-Batavia proving flight is undertaken by KLM with Christmas mail.

Flights from Semarang to Surabaya commence early in 1929. On September 12, Amsterdam to Batavia mail and passenger flights are started via Nuremberg, Budapest, Istanbul, and points east; passengers from Holland are carried only as far as the Turkish capital. These every-two-weeks operations are suspended for the winter on December 12.

During February 1930, KNILM launches its first over-water route via the Sunda Strait to Palembang, Sumatra. On March 4, the company's premier international proving flight is made from Palembang to Singapore. Nonscheduled flights between the Dutch and British colonies are thus begun.

With a Netherlands government mail subsidy in hand, every-two-week services to Batavia from Amsterdam are resumed on September 25. Two days later, the Palembang service is extended, by way of Pakanbaroe, to Medan. Come December, the Batavia mail service is not suspended as it had been in 1928 and KNILM officials note that, in the two years since opening, the KLM subsidiary has carried 31,352 passengers, 189 tons of freight and 10 tons of mail.

On May 12, 1931, flying the F-VIIb/3m *Abel Tasman*, Capt. M. P. Patist and his crew make the first KNILM proving flight to Australia: Batavia to Melbourne via Timor and Wyndham. The plane also visits Sydney before returning to Batavia on May 27. F-XII/3m Amsterdam-Batavia multistop passenger service is launched on October 1. Late in the year, two F-XII/3ms are turned over to KNILM, which employs them to open service Batavia-Medan.

Five Fokker F-XVIII/3ms are accepted during 1932; christened *Snip*, *Rijstvogel*, *Kwartel*, *Pelikaan*, and *Oehoe*, they are placed in service on the Batavia run. On December 18, the *Pelikaan* accomplishes the Amsterdam-Batavia run with Christmas mail in 100 hours flying time. The ship is back in Holland by December 30.

Beginning on May 3, 1933, KLM/KNILM provides a regularly scheduled connection to Singapore (from Palembang), seven months before the arrival of **Imperial Airways, Ltd.** at its eastern terminus. The company also begins flying from Medan to Alor Star, a point in the northern Federated Malay States.

As the result of the success of the Douglas DC-2 *Uiver*, flown by **KLM (Royal Dutch Airlines, N.V.)** in the MacRobertson Air Race of October 1934, 13 additional DC-2s are ordered in April and May and the available fleet of five launch twice-weekly Amsterdam-Batavia operations on June 12, 1935. Three DC-2s are delivered to KNILM in July and are placed on the Jakarta-Singapore route. The DC-2 *Gaai* is lost in a Piaah San Giacomo crash on July 20. At year's end, three de Havilland DH 89As *Dragon Rapides* are acquired by KNILM to allow aerial survey work in support of the petroleum industry.

A number of route improvements are made in 1936. Flights begin to Bali and Makassar in the Celebes, while service is also inaugurated from Batavia and Surabaya to Banjarmasin, Balikpapan, and Tarakan on Netherlands Borneo. Additionally, frequencies from Batavia to Sumatra are increased significantly.

On October 2, 1937, DC-3s are placed on the thrice-weekly Amsterdam-Batavia run. After six years of waiting, the British government, on February 22, 1938, finally grants permission for KNILM to inaugurate revenue flights to Australia. Lockheed Model 14H Super Electras are purchased for East Indian operations at the beginning of the year, with the first two arriving at Sluisbrug, Batavia, on March 12. The third arrives on April followed by the fourth and fifth on June 24.

On June 28, in cooperation with **KLM (Royal Dutch Airlines, N.V.)**, the new American-made aircraft inaugurates twice-weekly, multistop return service from Batavia to Sydney. Piloted by Capt. Gerson van Messel, the Super Electra touches down at 1442 hrs. on July 5 with 4 passengers, including 12-year-old Diane Riley, and 20,000 letters from Europe. The next day, the *Sydney Morning Herald* proclaims that the

local airfield, Kingsford-Smith Airport, officially became an international airport with the arrival of PK-AFM (the Dutch plane's registration number).

An eight-day Dutch Amsterdam-Australia route is now a reality. Incidentally, 96-year-old Capt. Van Messel and Ms. Riley will be guest of honor at a Sydney sixtieth anniversary celebration on October 28, 1998.

A second Lockheed international service is started on September 1, a twice-weekly run from Batavia to Saigon in French Indochina via Singapore.

The new Australian route is cut back to one weekly flight on August 1, 1939. Germany invades Poland on September 1, setting off World War II. The European terminus of the Batavia route is moved to Naples on September 16.

On May 10, 1940, The Netherlands is invaded by German forces, being occupied five days later. Much of KLM's fleet, including six DC-2s and five DC-3s, is captured, but at least three DC-3s escape to the East Indies. Meanwhile, two new DC-5s are acquired by the West Indies Division while three others are diverted to Batavia from the U.S. builder to the East Indies. Their use by KNILM will assure that **KLM (Royal Dutch Airlines, N.V.)** goes on record as being the only carrier in airline history ever to operate every type of pre-McDonnell-merger Douglas transport ever manufactured.

On June 1 and 2, respectively, two DC-3s briefly based in the U.K., the *Wielewaal* and *Torenvalk*, are transferred to Batavia. When, on June 19, **Qantas Empire Airways, Ltd.** ceases flying the mail, the Australian government contracts with KNILM to continue transporting it. The joint service north and west with KLM terminates at Lydda in Palestine on July 26. Two Grumman G-21A Goose amphibians are acquired during the first half of August and are utilized, beginning on August 21, to begin flying from Batavia to Makassar via Surabaya and Ambon.

The joint service from England to Australia, by way of India and Africa, continues and the Batavia to Sydney segment is once again increased to twice weekly. On October 1, a new multistop Goose route is started from Makassar to Ambon. The first of two ordered Sikorsky S-43s is received on November 29. Also during this month, permission is received from the U.S. for the operation of charter mail services from Batavia to Manila via Tarakan.

KNILM acquires its second Sikorsky S-43 on January 3 in 1941 and the two replace the Grummans on the Greater Eastern services the G-21As had launched. The two Goose amphibians shifted to multistop routes from Batavia to Singapore and to Pontianak, in western Borneo. Having been refurbished in California after their service with the West Indies Division, the DC-5s *Wakago* and *Zonvogel* arrive by ship in June and July to bolster available air transport in the colony, initially on a route from Batavia to Bandoeng.

On October 6, a third S-43 is purchased from Hawaii's **Inter-Island Airways** for \$100,000. When Japanese Naval Air Force Zero fighters strafe the Dutch Naval Air Station at Lake Tondano in the Celebes on December 25, the original S-43 is destroyed. Also during the month, a DC-2 is lost in a crash at Darmo.

JNAF Zeros claim two aircraft during the last week of January 1942. A DC-3 is reportedly shot down near Samarinda, Borneo, on January 24 while, two days later, they destroy a Grumman Goose near Kupang, Timor. There is no information concerning possible casualties aboard either aircraft.

The Tel Aviv-Batavia service ends on February 15 with the Japanese invasion of the East Indies. The last two S-43s are caught at anchor at Semplek, Java, by Japanese aircraft on February 19. One is sunk outright and the second is destroyed when struck by burning debris from an exploding Hudson of the RAAF. The four DC-5s ferry war refugees to Australia—or attempt to: one escapes to Australia, two crash on takeoff, and one, damaged in an air raid on February 9, is left behind. The latter aircraft, the *Wakago*, is captured more or less intact at Batavia's Kemajoran Airport; it will be overhauled, evaluated, and sent off to Tachikawa, Japan, to end its career as a JAAF navigation trainer.

Following the creation of the Allied Directorate of Air Transport two months earlier, the company charters several aircraft to the composite group on a contract basis as negotiations for their long-term use are undertaken.

KLM/KNILM management, including Managing Director Hendrik Nieuwenhuis, escapes the East Indies during the first two weeks of March aboard five DC-3s. The officials stop first in Australia, where the DC-3s *Wielewaal* and *Torenvalk* are sold to that government, and then fly on to New York. A DC-3 with 12 passengers is attacked by JNAF Zeros near Wyndham, Western Australia, on March 3 and shot down (four dead).

The L-14Hs are purchased by the U.S. Army Air Forces; however, one crashes into Australia's Katherine River on March 26 before it can be acquired. Talks concerning the charter of three KNILM DC-2s and the last two DC-5s are completed two days later and on May 18 they are purchased by the U.S. Armed Forces in Australia.

The company's management transfers to Willemstad in Curaçao and from there to London. In 1943, The Netherlands government-in-exile appoints KNILM Managing Director Nieuwenhuis to oversee the European operations of **KLM (Royal Dutch Airlines, N.V.)**, which at this point consists of a single England-Portugal route flown under contract to **British Overseas Airways Corporation (BOAC)**.

The Dutch resume air service in their colony on August 15, 1945, when Douglas C-47s (military DC-3s) of No. 19 (Dutch) Squadron, Royal Australian Air Force begin flying on behalf of the liberated government. Four North American TB-25 converted medium bombers and five Lockheed L-12s are also available.

On August 17, nationalists in the Netherlands East Indies proclaim the independence of Indonesia. The Dutch government rejects this declaration and a colonial war begins.

The prewar East Indies routes of KNILM are reopened in October by No. 19 (Dutch) Squadron when it receives 17 DC-3s from a depot of Douglas transports maintained by the U.S. military at Manila. A C-54 reopens weekly Amsterdam-Batavia service on November 10 with twice-weekly frequency after November 28.

On February 1, 1946, No. 19 (Dutch) Squadron is reconstituted into Vliegtuig Transport Group (Netherlands Indies Government Air Transport Group). It is also allowed to fly to adjacent nations, with routes from Batavia to Manila via Balikpapan and Pelawan and from Batavia to Bangkok via Singapore.

A permit for Burbank-Batavia flights is dropped on July 17, 1947 and on August 1 KNILM's assets and routes are taken over by KLM, which reconstitutes it as a local division, *Het Interinsulair Bedrijf (IIB)*. KNILM shareholders are compensated with KLM shares and the company's former routes are now flown by KLM under contract to the colonial government at Batavia.

KONVEYOR AIR COMPANY (KONVEYER AVIAKOM-PANIYA): Russia (1994-1996). Konveyor Air Company is founded at Moxcow in 1994 to offer international passenger and freight charter services, primarily to the UAE. I. M. Panov, the new general director, inaugurates revenue flights with 3 Ilyushin Il-76s and 2 Tupolev Tu-154Ms. Unable to achieve economic viability, the carrier shuts down in 1996.

KOREAN AIR LINES/KOREAN AIR (KAL): 41-3 Seosomundong, Jung-Gu, Seoul, South Korea; Phone 82 (2) 751-7915; Fax 82 (2) 751-7386; <http://www.koreanair.com>; Code KE; Year Founded 1962. Under provisions of Corporation Law 1041, **Korean National Airlines** is reorganized on March 3, 1962 and renamed. Capitalized at 250 million won, shareholding is divided between the government of the Republic of Korea (60%) and private interests (40%). Shin You-hyop is appointed president on April 30, with Lee Kak-sun as vice president. Orders are placed for Fokker F-27-100 turboprops. With two DC-3s and a DC-4 taken over from KNA, revenue service is resumed from Seoul on December 2, linking the capital with Pusan, Taegu, Kwangju, Kang-

nung, Samchok, and the island of Cheju. The KNA Lockheed L-1049H, which had been leased from **The Flying Tiger Line**, continues freighter operations.

The Constellation's all-cargo route from Seoul to Hong Kong is discontinued during 1963, while the first Dutch-made turboprop is received in December.

The premier Fokker enters domestic service on February 12, 1964, followed by a second F.27-100 in the spring. These new airliners inaugurate services to Osaka on March 12, followed by Tokyo on April 15 and Fukuoka on September 1.

Enplanements for the year total 181,179.

The fleet in 1965 comprises 6 aircraft: 1 chartered Lockheed L-1049H, 2 Douglas DC-3s, 1 DC-4, and 2 Fokker F.27-100s. An order is placed for a DC-9-32.

Passenger boardings increase 14% to 210,673.

On April 14, 1966, another L-1049H is leased from **The Flying Tiger Line**. Service is launched over two new international routes: Seoul-Osaka-Taipei-Hong Kong and Seoul-Taipei-Hong Kong.

A reciprocal service agreement is signed with **Air Vietnam, S.A.** on January 17, 1967. Several Fairchild-Hiller FH-227s arrive from the U.S. during the spring. Following delivery of the DC-9-32 on July 19, the L-1049H is retired. The new Douglas jetliners are introduced on twice-weekly routes to Osaka on August 9 and Hong Kong on August 14. Orders are now placed for Boeing 707-365Cs and DC-8-63s.

President Shin You-hyop resigns on September 27 and is succeeded by Chang Sung-hwan. Due to fiscal and managerial difficulties, the airline is forced to retrench during the fall. On November 18, services to Taipei and Hong Kong are suspended and the company's Hong Kong and Taiwan offices are closed.

Frequencies on the Japan routes are increased on July 25 to six per week. The Douglas and Boeing orders are postponed in 1968. The carrier, in deep fiscal difficulty, does order a number of Nihon YS-11 turboprops from Japan. It also suffers its fifth consecutive year of \$1-million losses.

On March 1, 1969, President Park sells the carrier to Chong Hoon ("Harry") Cho, co-owner with his brother Choong Kun ("Charlie") Cho of the diversified Hanjin Transport Group, which had begun by earning a trucking fortune during the Korean War. With Harry Cho as chairman/president and Chong Kun Cho as vice president, the brothers begin a policy of recruiting pilots from the Korean Air Force and to prevent hijacking, permit cabin crews to be armed.

The first Nihon YS-11 enters service on April 28 and the Corporation Law 1041 is repealed on August 4. Two Ex-Eastern Air Lines B-720-025s arrive in September and beginning on October 2 they reopen the regional services to Taipei and Hong Kong, adding Saigon and Bangkok as well. Cheju to Osaka via Pusan flights commence five days later.

The Flying Tigers Line L-1049H is returned on December 4. On December 11, a YS-11 with 47 passengers and 4 crew en route from Kangnung to Seoul, is hijacked to Wonsan, North Korea, by the plane's pilot.

Direct Seoul to Hong Kong frequencies commence on December 22.

Four Nihon YS-11As enter domestic service in 1970 and a second route is opened to Saigon.

On February 3, North Korea rejects a South Korean demand for the return of the YS-11 passengers diverted the previous December. A week later, 39 passengers are allowed to return; however, the aircraft, eight passengers, and the four crewmen are retained.

Beginning on May 10, police are assigned to all company international and internal flights to guard against hijacking. The B-707-365Cs arrive during the year.

An order is placed in 1971 for a B-747-200B.

While en route from Kangnung to Seoul on January 23, an F.27-500 with 5 crew and 55 passengers is hijacked by a lone man carrying grenades. As the man is being overwhelmed, he pitches his bombs through the cockpit door and they detonate, killing the pilot and the perpetrator and wounding 16 others. The wounded copilot is able to make an emergency forced landing on a beach near Sokcho.

All-cargo B-707-365C transpacific flights to Los Angeles commence on April 26. The B-720Bs and DC-9-32 are replaced with three B-727-181s chartered from **All-Nippon Airways Company, Ltd.**

Enplanements for the year reach 1,475,838.

The fleet in **1972** comprises 4 B-707-365Cs, 3 B-727-181s, 1 DC-8-63, 7 YS-11As, 1 DC-3, and 5 F.27-100s. Sixth Freedom rights are initiated on April 18 on a new route from Bangkok to Seoul via Hong Kong, Taipei, Tokyo or Osaka. On April 19, twice-weekly Seoul to Los Angeles passenger service is inaugurated via Tokyo and Honolulu.

By year's end, frequencies over the new passenger route have been increased, due to demand, to six per week. Three leased DC-8-63s join the fleet (bringing the total to four) on December 11.

Passenger boardings rise 9% to 1,638,000.

The first of two B-747-2B5Bs to be delivered during the year arrives on May 1, **1973**, followed by the second on July 12; after May 16, these Jumbojets are successively placed on the transpacific Seoul-Honolulu-Los Angeles and Seoul-Tokyo routes. Orders are placed for five DC-10-30s. Sales offices are established in London, Frankfurt, Amsterdam, and Singapore.

The workforce is now 4,123 and an IBM S/360 Model 40 computerized reservations system is opened. In partnership with **Air France**, weekly B-707-365C all-cargo service is initiated on October 6 between Seoul and Paris via Anchorage.

As a result of the fuel shortage, the carrier, beginning on November 20, supplies all of its foreign flights, originating in South Korea, with just enough fuel to allow them to reach their next immediate destination. At the same time, the carrier's 45 domestic flights are reduced in number to 20.

Still, customer bookings climb 35% to 2,214,000 and freight traffic skyrockets by 71%.

Two additional DC-10-30s are delivered in early **1974** as a B-747-273 leased from **World Airways** arrives on June 12.

On July 17, a DC-8-63 with 165 American teenagers aboard from the American Field Services international scholarship program and incoming from Los Angeles, accidentally strays into the prohibited air zone over Seoul and is shot at by antiaircraft artillery. No injuries are reported aboard the aircraft, but shrapnel from the firing falls on the city, killing 1 citizen and wounding 27 others.

KAL Vice President Cho Choong Kun is arrested on September 22 on charges of diverting \$330,000 of the carrier's overseas earnings to various real estate ventures.

Orders are placed in September for six Airbus Industrie A300B2s; KAL becomes the first airline from outside Europe to purchase the European-built aircraft. A second weekly all-cargo service to Paris is begun on October 1.

As South Korea begins to export workers to pay for oil imports in the wake of the previous year's oil crisis, traffic increases; enplanements for the year total 1,915,992.

The work force in **1975** stands at 5,090. Three DC-10-30s and two A300B2s join the fleet as three DC-8-63s are sold. An all-cargo route is started to Singapore on April 17. A weekly 17-hr. passenger frequency is initiated to Paris via Anchorage on March 14. Flights to Manila commence on July 1. The new Airbuses enter regional service in August, visiting Tokyo, Osaka, Taipei, Hong Kong, and Bangkok.

Passenger bookings rise 6.4% this year to 2,075,000.

One each B-747-2B5B and DC-10-30 join the fleet in **1976** along with two A300B2-1Cs; the last DC-8-63 is sold. Direct Tsegu to Cheju Island flights commence on March 1, but better highways lead the carrier to suspend frequencies from Seoul to Chinju, Yosu, and Kangnung. DC-10-30 service to Bahrain is inaugurated on May 21. The Mideast route is extended to Zurich via Bahrain on July 14. Capitalization is increased during the fourth quarter to 12 billion won.

Freight traffic is up 19%, but passenger boardings dip 1.8% to 2 million. Revenue jumps 22% to \$275.9 million.

One each B-747-2B5B and DC-10-30 are received in **1977** along with another A300B2-1C and another B-707-365C. The Bahrain service is

extended to Jeddah on April 5, followed by a direct service from Seoul to Riyadh on April 13. Seoul to Nagoya Airbus flights commence on October 1.

A total of 2,415,105 passengers are flown on the year.

The workforce is increased 32.1% in **1978** to 9,594. Two DC-10-30s and two A300B2-1Cs are received early in the year.

En route from Seoul via Anchorage to Paris on April 28, Flight 903, a B-707-365C with 12 crew and 97 passengers and piloted by Capt. Kim Chang Kyu, strays 1,000 miles off course over the U.S.S.R. until it is near the Northern Fleet base at Severomorsk, near Murmansk. There, it is intercepted by two Soviet Red Air Force Sukhoi Su-15 fighters, which open fire. Damaged, with its left wingtip gone and suffering decompression, the Stratoliner rapidly drops from 35,000 ft. to 5,000 ft. However, Capt. Kyu and his flight crew are able to maintain control and crash-land the plane on a frozen lake not far from Kem, about 300 mi. south of Murmansk. Two passengers are killed and 13 are wounded during the attack.

The wreck is impounded and the surviving passengers are flown out of Leningrad by a **Pan American World Airways** (1) Jumbojet two days later. Kyu and his crew are released a week later. It will be revealed in 1991 that the Sukhoi pilots had ignored an order from their commanders to destroy the aircraft (and its occupants) once the Boeing had put down.

In May 18, weekly all-cargo service is initiated between Seoul and Amsterdam via Anchorage. Simultaneously, a second freight route is started to Singapore. On June 10, Filipino judge Augusto L. Valencia orders KAL to pay \$41,230 in damages to a Filipino passenger who was bumped from a flight in favor of an American. Kuwait joins the Mideast route network on July 8.

Formerly operated by **Deutsche Lufthansa, A.G.**, two Boeing Jumbojets are leased from Intel Air in December, one each Dash-230B and Dash-230F. Colombo joins the route network on December 10. Capitalization is now increased to 23 billion won.

Systemwide on the year, passenger traffic soars 23.5% to 3,156,982 passengers, while freight advances 10.2%.

Abu Dhabi becomes a scheduled destination on February 5, **1979**. A B-747-230B formerly operated by **Condor Flugdienst, GmbH**, is chartered from Intel Air on February 7; it is followed by receipt of a new B-747-2B5B on March 23. The year's first Jumbojet service—a new all-cargo route to New York via Anchorage—is initiated by the B-747-230F on March 23. Beginning on March 29, thrice-weekly Seoul to New York via Anchorage passenger service is also introduced. Also in March, the Jumbojet chartered from **World Airways** five years earlier is returned.

Two B-747SP-5Bs are ordered on April 10, while a third Boeing giant, another Dash-2B5B, is acquired on April 11. Also in April, the largest (to that time) order by a non-U.S. carrier is made to that manufacturer: 10 Jumbojets valued at \$1.2 billion. Another ex-**Condor Flugdienst, GmbH**, B-747-230B is chartered on July 1, the same day direct Pusan to Tokyo service is started. Later in the year, KAAD is formed as a subsidiary company to engage in the manufacture of military aircraft.

The Los Angeles route becomes direct on September 16. Frequencies are opened to Kagoshima on September 28 and to Kumamoto and Niigata on December 17.

Passenger boardings drop to 2,724,926; systemwide, freight grows 35.12% with domestic cargo skyrocketing 126.3%.

Three more Jumbojets arrive in **1980**, including a rare double freighter delivery of two B-747-230Fs on June 25. Another passenger B-747-2B5B arrives on November 13.

On November 18, the B-747-2B5B received the previous April, coming in from Los Angeles for an intermediate stop en route to Seoul with 14 crew and 198 passengers, lands short of the Anchorage Airport runway in poor visibility and catches fire (16 dead). The plane must be written off.

The route network in **1981** now includes 3 destinations in the U.S., 4 in Europe, 7 in the Middle East, and 10 in Asia, plus 9 domestic stops. Among the Mideast stops is Libya, where Korean companies have important contracts.

A B-747SP-5B arrives on January 12 and is followed into service by another B-747SP-5B received on March 18. The SPs now permit non-stop flights from Seoul to New York. One each B-747-2B5B and Dash-2B5F are delivered on April 13 and May 8, respectively.

Meanwhile, direct Cheju to Osaka flights commence on February 28. Service to Tripoli via Baharian begins on August 25. A B-747-2B5B, carrying 378, veers off the runway during its takeoff and crashes through a fence at Manila on September 15; although there are no fatalities, 40 persons are injured.

The two B-747-2B5Bs purchased in 1973 are sold back to Boeing in November and then leased back. A huge new cargo terminal is opened at Los Angeles on December 3.

A total of 3,855,281 passengers are transported.

Orders are placed in 1982 for two B-747-300s and an F.28-4000. On July 27-30, two B-747-2B5Bs are acquired under charter from Orient Leasing. Flights to Baghdad commence on May 8.

Enplanements reach 4,249,141 and a net profit of \$6.4 million is recorded.

Airline employment in 1983 is 9,829, a 0.4% boost. The fleet now comprises 7 B-747-2B5Bs and Dash-230Bs, 2 B-747SPs, 4 B-747-2B5Fs and Dash-230Fs, 4 DC-10-30s, 8 A300B2/4s, 2 B-707-365Fs, 4 B-727-281Bs, 1 F.27, and 1 B-727-181B.

During a foiled hijacking attempt on January 7, a passenger attempts to blow up a B-747-2B5B; the aircraft is able to make a safe emergency landing at Tokyo. A passenger route is extended to Singapore on July 1, complementing the existing cargo runs.

On August 31–September 1, Flight 007 is en route from New York (JFK) to Seoul via Anchorage. The former **Condor Flugdienst, GmbH**. B-747-230B leased from ITEL Air and piloted by senior Capt. Chung Byung-in, carries U.S. Congressman Larry McDonald and 267 other occupants (including 2 other flight crew, 20 flight attendants, 6 off-duty company personnel, and 239 other passengers). The aircraft strays into restricted Soviet airspace E of Kamchatka, where it is mistaken for a USAF Boeing RC-135 spy plane flying in the area. The Jumbojet, 12 mi. N of the Bethel beacon, gains the attention of Russian air defenses, which scramble 6 MIG-23s to intercept it. The giant aircraft wanders back out of Soviet airspace over the Okhotsk Sea and the MIGs return to base.

The Jumbojet now enters Soviet airspace for a second time. After flying over secret installations at Petropavlovsk and heading toward Pacific Fleet base facilities at Vladivostok 185 mi. off course, it is encountered some 80 km. SW of Sakhalin Island off Siberia, by two Red Air Force Sukhoi Su-15s scrambled from the Dolinsk-Sokol AFB. The Su-15, piloted by Lieut. Colonel Gennadi Osipovich, launches two air-to-air missiles, which strike the giant Boeing, forcing it to lose cabin pressure and suffer control problems, causing it to spiral down into the sea.

The remains of several victims and a small amount of debris will be recovered by the West, although the Soviets will locate and hold the flight recorders. The disaster will heat up the Cold War between Russia and the West for months.

Books and articles and other presentations on the disaster will appear for a decade, including the 1989 American television movie *Tailspin: Behind the Korean Airline Tragedy*, starring Michael Moriarty.

Among the book titles are: Oliver Clubb, *KAL Flight 007: The Hidden Story* (Sag Harbor, N.Y.: Permanent Press, 1985); Alexander Dallin, *Black Box: KAL 007 and the Superpowers* (Berkeley, Calif.: University of California Press, 1985); Seymour M. Hersh, "The Target is Destroyed": What Really Happened to Flight 007 and What America Knew about It (New York: Random House, 1986); R. W. Johnson, *Shootdown: Flight 007 and the American Connection* (New York: Viking, 1986); David E. Pearson, *KAL 007: The Cover-Up* (New York: Summit Books, 1987); Richard H. Rohmer, *Massacre 747* (Markham, Ont.: Paperjacks, Ltd., 1984); Jeffrey St. John, *The Day of the Cobra: The True Story of KAL Flight 007* (Nashville, Tenn.: T. Nelson, 1984); and Marilyn J. Young, *Flights of Fancy, Flight of Doom: KAL 007 and Soviet-American Rhetoric* (Lanham, Md.: University Press of America, 1988).

Among the latest studies is James Gollin and Robert Allardyce's, *Desired Track: The Tragic Flight of KAL Flight 007* (Pittsfield, Mass.: American Vision Publishing, 1996).

While taxiing in fog at Anchorage on December 23, KAL Flight 084, a DC-10-30F with three crew, manages to become situated on the wrong runway. During its takeoff roll, the wide-body collides head on with **Southcentral Air** Flight 59, a PA-31-350 Navajo Chieftain with nine passengers, which is waiting on the ground for the fog to clear so it can depart for Kenai. Flight 084 overruns the runway by 1,434 ft. and although both aircraft are badly damaged, amazingly, there are no fatalities and only six injuries.

On the year, passenger boardings jump 12.8% to 4,792,000 and freight is up 9.5% to 1.19 billion FTKs. On revenues of \$1.2 billion, the profits are \$159 million (operating) and \$3.2 million (net).

The employee population is increased by 3% to 10,125 in 1984. All-cargo service to Kuala Lumpur begins on February 21. On March 1, the carrier celebrates its sixteenth anniversary by adopting a new logo and livery and by changing its name to Korean Air. The logo, a round red, white, and blue insignia displayed on aircraft tails, is known as a *Taeguk*.

It is reported on March 20 that the previous year's incidents have led to a series of KAL shake-ups, including the forced resignation of 14 pilots, tightened screening procedures for all cockpit crew members, a new effort to improve the company's image, and the replacement of Chairman/President Harry Cho by his brother, Charlie Cho.

Passenger flights to Kuala Lumpur commence on April 3. Two B-747-2B5Bs, an F.28-4000, and a CASA C-212 are delivered; service starts to Frankfurt via Anchorage and Paris on June 21.

Not flexible enough to meet its requirements, the **Air Afrique, S.A.** B-747-2S4F Jumbojet *Lome*, which had been withdrawn on March 1 and leased to **National Airlines (2)**—and then subleased to **Saudia (Saudi Arabian Airlines)**—is sold to KAL on August 1.

All-cargo service to Amsterdam ends in October. The first B-747-3B5B, a Stretched Upper Deck or SUD model, arrives on December 12.

Passenger boardings advance 12.3% to 5,370,000 and cargo soars 21.6% to 1.45 billion FTKs. Expenses are \$1.06 billion on revenues of \$1.19 billion, leaving an operating profit of \$127.2 million and a net income of \$4.4 million.

The workforce is decreased 8.3% in 1985 to 9,238. Two MD-82s and one F.28-4000 are added and orders are placed for four more MD-82s, two A300F4-203s, and three A300B4-622s. Two B-747SP-B5s are acquired during the first quarter and are employed to increase frequencies on the direct New York service to daily on March 30.

A second B-747-3B5B arrives on April 15 and also in April the airline becomes the only airline to provide cargo service from the U.S. to Kuala Lumpur and Bangkok via Seoul.

En route from Seoul to Cheju on May 18, a B-727-281B with 118 passengers is hijacked by a lone assailant claiming to have a bomb and demanding to be flown to North Korea. Security guards and passengers overwhelm the perpetrator and a search finds no bomb.

The Seoul in-flight food center is expanded and a B-747-2S4F once operated by **Air Afrique, S.A.** is chartered from Japan Leasing in May for use the following year. An ex-**World Airways** B-747-273C is purchased on August 12. On September 9, KAL is named the official airline of the 1988 Seoul Olympics.

Passenger bookings swell 14.6% to 6,156,000 and freight is up 5.1% to 1.3 billion FTKs. The cargo figure ranks the airline second among Asian airlines in terms of freight hauled behind **Japan Air Lines Company, Ltd. (2)**. Revenues are \$1.3 billion and expenses are up 8.8%, thus cutting the operating profit to \$12.4 million. The net profit, however, rises to \$5.15 million. In terms of revenues generated, KAL in 1985 ranks 22nd among all world airlines.

The payroll is boosted 1.3% in 1986 to 10,493 and the fleet includes 49 aircraft. Rotary-wing flights are initiated on March 8 between Cheju and Sogwipo and from Pusan to Jejudo. A joint service agreement is signed with **Deutsche Lufthansa, A.G.**, also in March, covering all-cargo flights between Seoul and Frankfurt.

In August, the two newly acquired A300F4-203s are introduced on the Orient/Southeast Asian cargo routes. Simultaneously, the B-747-2S4F formerly operated by **Air Afrique, S.A.** enters service and orders are placed for three B-747-400s for April 1989 delivery.

Enplanements jump 14.5% to 7,184,031 while cargo rises 13.2% to 1.49 billion FTKs. Revenues accelerate 14.9% to \$1.51 billion, costs are \$1.44 billion, and a \$72.3-million operating profit is achieved.

The employee population grows by 7.6% in 1987 to 11,293. On February 26, the company becomes a launch customer for the MD-11. Weekly charter flights are operated throughout the summer between Seoul and Chicago via San Francisco. The first two of three ordered A300B4-622s are delivered in September and October. During the latter month, these are employed to inaugurate twice-weekly flights from Seoul to Bangkok. Service is now suspended to Baghdad.

On December 1, Flight 858, a B-707-3B5C with 11 crew and 104 passengers en route from Abu Dhabi to Seoul via Bangkok explodes in midair over the Andaman Sea, off Ban Sal Yok, Thailand, near the Burma border; there are no survivors.

Two Koreans, initially claiming to be a Japanese and his daughter, are initially held by police in Bahrain, where they had arrived from Abu Dhabi two days after the disaster. The man, 70-year-old Kim Sungil, commits suicide, but the other, a woman, Kim Hyon-hui codenamed "Mayumi," whose forged passport initially raised the interest of police, will live to be extradited back to South Korea. The two saboteurs, disguised as passengers, had left a radio and liquor bottle containing hidden explosives in the overhead rack at Row 7 and certain of the incriminating evidence had survived.

Passenger boardings ascend 17.3% to 8,423,531 and freight swells 12.7% to 1.67 billion FTKs. Revenues rise 17.8% to \$1.77 billion and low expenses allow an operating profit of \$96.1 million. Profits of \$380.6 million (operating) and \$23 million (net) are generated.

Twice-weekly Airbus A300B4-622s service is inaugurated from Seoul to Bangkok in February 1988. A B-747-2B5B makes an unscheduled landing at Anchorage on April 13, after a man, wielding scissors, is restrained by passengers and crew members. The struggle results in injuries to both the pirate and the vigilantes.

In June, the carrier receives permission to overfly the People's Republic of China. Later in the month, a new five-level, \$71.5-million passenger terminal is opened at Seoul's Kimpo Airport. Twice-weekly roundtrip DC-10-30 service begins on October 1 from London to Toronto and on to Vancouver, Anchorage, and Seoul. New frequencies begin in December to Nagasaki.

The official airline of the summer Olympic Games, KAL transports 9.8 million passengers, a boost of 12.6%. Cargo climbs 13.5% to 1.9 billion FTKs. Revenues jump 21.6% to \$2.1 billion and operating income accelerates to \$889 million. Net gain is \$174 million.

The workforce is increased by 6.4% in 1989 to 11,778 as its fleet is increased by the addition of 2 A300B4-622s, 3 MD-82s, and 3 B-727-281s. The carrier now serves 11 domestic and 27 overseas destinations in 16 countries. In January, the government lifts restrictions on overseas travel, leading to an explosion in overseas flights by South Korean citizens.

Confessed North Korean agent Kim Hyon-hui testifies in a Seoul courtroom on March 7 that she planted the bomb that blew apart the Stratoliner in 1987, claiming that she acted on the orders of Kim Jong II, who wished to disrupt the 1988 Olympics. The lady will be sentenced to execution, but pardoned by the president of South Korea.

Toronto-Seoul via Vancouver all-cargo service begins in mid-March; while flights from Seoul to Baghdad, suspended in 1987, are resumed. On March 26, daily nonstop flights begin from Los Angeles to Seoul, followed five days later by the initiation of daily nonstop service from Los Angeles to Tokyo. Weekly roundtrip passenger service is introduced between Seoul and Amsterdam on April 1. The first of nine ordered B-747-4B5Bs arrives from Seattle in June.

Encountering heavy fog while on final approach off a service from Jeddah, Flight 802, a DC-10-30 18 crew and 181 passengers, crashes

short of the runway at Tripoli, Libya, on July 27, hitting homes and cars before bursting into flames. In addition to the 75 killed aboard the jetliner, 4 people die on the ground. Two Korean pilots are jailed in Libya in connection with the tragedy.

New service to Jakarta begins on August 3 and a ninth weekly Seoul-Los Angeles frequency is added, also in August.

Wing icing causes the No. 1 engine of an F28-4000 with 6 crew and 42 passengers to lose power just after takeoff from Kimpo Airport at Seoul on November 25. The pilot aborts the takeoff, at which point the aircraft overruns the runway and catches fire. Although there are no fatalities, the plane is burned out and 21 aboard are injured.

Weekly passenger service is introduced during December from Seoul to Jakarta via Singapore.

A marketing agreement is signed with **Philippine Air Lines (PAL)** in December that provides for joint freighter service between Seoul and Manila employing KAL aircraft and crews. Passenger boardings shoot up another 15.4% to 11,330,000. Freight does even better, ascending by 26.8% to 2.41 billion FTKs. Revenues only advance 1% to \$2.29 billion as costs cut the operating profit to \$797 million. Net profit, however, marches up to \$181 million.

Company employment is reduced a slight 0.5% in 1990 to 12,102. In cooperation with **Philippine Air Lines (PAL)**, weekly Seoul-Manila A300F4-203 all-cargo flights begin in January. New passenger services are initiated to Kagoshima and Sydney on April 1. A joint marketing agreement is signed with **Cathay Pacific Airways (Pty.), Ltd.** in May providing for joint freight flights between Seoul and Hong Kong and in June, a \$4.8-billion order is placed for B-747-400s (including confirmation of existing orders and some options). Simultaneously, permanent approval is received to overfly the Peoples' Republic of China, thereby cutting 3 hrs. off the weekly service from Seoul to Bahrain.

On June 27, the Polar route to Europe is closed as a new routing is established via Moscow, regularly visited on this date for the first time. Flights to Paris, Frankfurt, London, Amsterdam, and Zurich are all rerouted.

During July, a cooperative computerized reservations system agreement is signed with **Japan Air Lines Company, Ltd. (2)** and in November, a freight block-space agreement is signed with **Garuda Indonesia** covering service from Seoul to Jarkarta. Scheduled frequencies to Honolulu, Los Angeles, and New York total 36 per week, with weekly "charters" made to San Francisco that conclude in Chicago. A new *ab initio* pilot training program is begun at a company academy on Cheju Island, off the southern coast; 45 cadets are enrolled for the initial 24-month program.

Customer bookings ascend 8.2% to 12,259,000, placing the airline 23rd in enplanements among all world airlines. Cargo climbs 4.9% to 2.52 billion FTKs, which is good for 6th best. Although revenues are only up 2.3% to \$2.34 billion, only 18 other carriers do better. Operating profit falls to \$144.4 million, 8th finest in the world, while the net figure turns from profit to a \$10.9-million loss.

The payroll is increased by 11.7% in 1991 to 14,580 and the fleet now includes 80 aircraft: 8 A300B4-103s, 2 A300F4-203s, 5 A300B4-622s, 9 A300B4-622Rs, 1 B-707-321C, 5 B-727-281s, 7 B-727-281As, 4 B-747-2B5Bs, 1 each B-747-212B, B-747-230B, B-747-273C, 6 B-747-2B5Fs, 1 each B-747-2S4F and B-747-230F, 2 B-747-3B5s, 1 B-747-3B5C, 6 B-747-4B5s, 1 B-747-4B5C, 2 B-747SPs, 1 each CASA C-212-100 Aviocar, Cessna 500 Citation I, Dassault Falcon 20F, and Falcon 50, 6 McDonnell Douglas MD-82s, 2 MD-83s, 1 Fokker F27-500, 3 F28-4000s, and 1 Piper PA-41 Cheyenne 400LS. Orders are outstanding for 7 A300B4-622Rs, 7 A330-223/322s, 16 B-747-4B5s, 2 MD-82s, and 5 MD-11s.

The Korean flag carrier and **Garuda Indonesia** agree in January to launch joint freighter services between Seoul and Jakarta using KAL aircraft. Simultaneously, the two companies launch block-seat return passenger flights from Seoul to Jakarta and Denpasar. The first MD-11s are delivered in February. In March, biweekly A300F4-203 flights begin from Seoul to Colombo, Sri Lanka, and weekly A300F4-203 frequencies are started to Jakarta.

The premier Asian operator of the MD-11, KAL places its first unit into nonstop daily service in May on the Seoul to Los Angeles route; later in the month, frequencies on the Seoul to Singapore cargo run become daily. Other new passenger flights begin to Okayama and Kumamoto. Twice-weekly B-747-2B5F flights begin from Los Angeles to Taipei via Seoul. Service to Rome via Moscow begins on June 6.

When the crew fails to read out the landing gear procedure checklist and thus do not lower the landing gear, a B-727-281 with 7 crew and 120 passengers, makes a belly landing at Taegu on June 13 following a service from Cheju. Although the aircraft is damaged beyond repair, there are no fatalities.

In July, a freight agreement is signed with **Malaysia Airlines, Ltd. (MAS)** covering all-cargo services on routes from Seoul to Kuala Lumpur. The pact will later be changed to provide for cargo frequencies from Seoul to Johor Bahru and from Kuala Lumpur via Seoul to Anchorage, San Francisco, and Los Angeles. A strategic code-sharing alliance is entered into with **Alitalia, S.p.A.** in September. The Korean and Italian flag carriers will employ dual designators on passenger flights from Seoul to Rome.

Flights to Milan via Moscow are initiated on October 13. Employing a Jumbojet freighter, the MAS-shared, all-cargo service from Seoul to Los Angeles becomes twice weekly in November. Simultaneously, joint B-747-2B5F twice-weekly service is inaugurated, in cooperation with the Italian flag carrier, from Seoul to Milan via New Delhi.

In December, weekly A300F4-203 cargo flights are initiated from Seoul to Kuala Lumpur and Manila, the latter under a compact signed with **Philippine Airlines (PAL)** earlier. At the same time, an order is placed for nine Fokker 100s, along with three options.

Passenger boardings advance 9.9% to 13,470,000 and freight is up 7% to 2.7 billion FTKs. Revenues shoot up 12.7% to \$2.6 billion and with costs held down, the operating profit swells to \$256.2 million. Net gain is \$21 million.

The number of employees grows by 17% in **1992** to 15,314 as 3 Fokker 100s are placed into domestic service beginning in April, replacing several F.28-4000s. During the spring, the company opens a Service Academy at its Pusan base designed to teach amenities to customer service staff; the operation will be nicknamed "The Smile Academy."

Thrice-weekly roundtrip service is inaugurated on April 12 between Seoul and Chicago. Other new passenger service is also initiated to Guam and Oita. Cargo routes are started to Colombo via Singapore, Bombay via Bangkok, and London. Canada removes its visa requirement for Korean travelers; the move will eventually see tourist traffic from Seoul to that country jump by 300%. Weekly frequencies are initiated to São Paulo on October 25 via Los Angeles.

Customer bookings increase 13% to 15,249,000 while freight is up 4.6% to 2.82 billion FTKs. Revenues jump 16.4% to \$2.97 billion and grant an operating surplus of \$259.3 million. The net falls to \$1.5 million.

In **1993**, Chairman/CEO Charlie Cho oversees a workforce of 15,862, up 5.5% over the previous year. The fleet now includes 10 A300B4-103s, 19 A300-622/622Rs, 11 B-747-4B5s, 8 MD-82s, 7 Fokker 100s, 7 B-747-2B5Fs, 3 each B-727-281As, B-747-2B5Bs, and DC-10-30s, 2 each B-747SP-B5s, MD-83s, and Piper PA-42 Cheyenne 400LSs, and 1 each B-747-212B, B-747-273C, B-747-2S4F, B-747-230F, B-747-3B5C, B-747-4B5C, Cessna 500 Citation I, Dassault Falcon 20F, Dassault Falcon 50, and Fokker F.28-4000 Fellowship.

A Soviet secret for nearly a decade, the "black box" cockpit voice recorder and digital flight-data recorder tapes recovered from the wreckage of KAL 007 are turned over by the Russians in January to ICAO. When played, the recordings suggest errors with the Jumbojet's inertial navigation system.

During the same month, KAL becomes the first international airline to land at China's new Shenzhen Airport, near Hong Kong.

A new cargo route is inaugurated to London in February as the result of a marketing agreement with **British Airways, Ltd. (2)**, with a second started to Penang under the earlier pact with **Malaysia Airlines, Ltd.**

(MAS). Weekly B-747-2B5F passenger service is launched to Bombay on March 29 via Bangkok. Ho Chi Minh City joins the route network on June 1, along with Cairo. At the same time, a B-727-281 is donated to **MIAT (Mongolian Airlines)**. Frequencies to China are increased during the summer and flights begin to Mexico City.

An A300B4-103 with 110 aboard crashes on the southwestern coast of the Korean peninsula on July 26 (66 dead). Also in July, a code-sharing and passenger block-space agreement is signed with **Vietnam Airlines** for services on the new route from Seoul to Ho Chi Minh City. Frequencies from Tokyo to Brisbane commence on August 9.

During the fall, the carrier transports many visitors to the national Expo '93, held at Taejo. A strategic code-sharing alliance is signed with **Air Canada, Ltd.** in September covering services from Seoul to Vancouver and Toronto. Auckland is first visited on November 3.

Passenger boardings swell 8.1% to 16,487,000 while freight rises 18.2% to 3.34 billion FTKs. Revenues ascend 12.7% to \$3.34 billion and expenses increase only 9.3% to \$2.95 billion. As a result, the operating profit jumps to \$384.41 million and net gain increases to \$14.56 million.

The number of employees is increased by 7.8% in the 25th anniversary year of **1994** to 16,515. Early in the year, in-flight telephone service is introduced. A code-sharing and passenger block-space agreement is initiated with **Air New Zealand, Ltd.** in January covering services from Seoul to Auckland. The pact will eventually cover flights to Brisbane as well.

Under terms of the pact signed with **Air Canada, Ltd.** the previous October and employing one of its Jumbojets, Korean Air inaugurates weekly flights in May between Seoul and Toronto via Vancouver. The pact also allows both carriers to exchange seats and cargo pallets on flights between the two countries.

As a result of the airliner gift to **MIAT (Mongolian Airlines)**, the company is given overflight rights; service via Mongolia to Moscow and Rome is thereby reduced by 1.5 hours.

The same month, the first A330-322, displaying markings celebrating the airline's twenty-fifth anniversary, is delivered to Seoul via Alaska. On July 1, it is announced by CEO Charlie Cho that the assets of the owning Hanjin Group are ranked fifth among all South Korean firms. KAL itself now offers 112 domestic daily flights over 19 routes to 12 cities and serves 43 cities in 24 nations with 272 weekly flights. Flights to Christchurch begin on July 11, followed by Phuket on July 27 and Madrid via Bahrain on August 8.

While landing at Cheju in a thunderstorm at the conclusion of an August 10 service from Seoul, Flight 2033, an A300B4-622R with 8 crew and 152 passengers, touches down too far down the runway to stop; going off the concrete, the Airbus strikes the airport wall guard post. The cabin crew safely evacuates all customers and no fatalities are reported, however, the airliner slides off the runway and is destroyed in a post accident explosion and fire minutes after evacuation.

Local prosecutors weigh into the accident investigation and in September, charge pilots Barry Woods, a Canadian, and Chung Chan Kyu with violating aviation law and causing the injuries. The arrest of Woods, who will later be released, is protested by the Canadian Air Line Pilots Association.

Vladivostok joins the route network on September 6, followed by San Francisco on October 29. Flights from San Francisco to Atlanta and Dallas commence on December 12 and 14, respectively. Seventeen weekly flights are started on December 22 to four northern cities in mainland China: Beijing, Tienjin, Qingdao, and Shenyang.

Overall customer bookings jump 14.9% to 18,939,000 while cargo swells 20.6% to 4.03 billion FTKs, 5th highest in the world and tops in Asia. Revenues are up by 16% to \$3.87 billion and expenses are up 19.4% to \$3.53 billion. As a result, the operating profit slips to \$346.31 million while net profit balloons to \$46.77 million.

In January **1995**, the company begins revenue sharing with **Air China** on flights from Seoul to Beijing. Also during the month, the carrier joins with Global Network System Asia to establish a service in South Korea

that provides local forwarders with information about cargo transport and carrier reservations.

During the first half, a decision is made to convert the company's five MD-11s into freighters.

Following the granting of new routes over China and Russia in May, the company is able to begin flying directly to Moscow and then on to Rome. Converted in South Korea, the first MD-11F is available by the end of June.

A major marketing alliance begins with **Delta Air Lines** in July. Its provisions link the frequent flyer programs of the two giants and also provide for code-sharing, via block-space, on their return flights from Seoul to Atlanta, Newark, New York (JFK), Washington, D.C. (IAD), Orlando, Boston, and Portland. Also covered are frequencies from Los Angeles to Honolulu. A joint all-cargo service is inaugurated with **Swissair, A.G.** from Seoul to Basel.

Services to Tel Aviv commence on November 27. On December 6, company officials admit that they had illegally contributed \$4,000 to the 1992 campaign of U.S. Representative Jay Kim (D-California), the first Korean-American elected to Congress. The airline will be arraigned in federal court on December 18 and will end up paying a fine.

As Korean contractors work on construction projects throughout the Mideast, frequencies to Saudi Arabia, Bahrain, and Egypt are also increased during the fourth quarter. Despite good traffic and financial figures, company officials express concern over the negative effect the state of the national economy and rising competition may have on the airline.

Passenger boardings accelerate 13.1% to 21,424,000 while freight moves up 8.2% to 4.4 billion FTKs. Revenues climb 12.5% to \$4,362,823,000 while costs move up an almost equal 12.9% to \$3,986,474,000. Operating profit is \$376,349,000 and net gain leaps to \$136,680,000.

Airline employment stands at 16,000 in 1996 and two more MD-11s become freighters. On January 17, the U.S. Supreme Court rules unanimously that survivors of the passengers killed on KAL 007 shot down in 1983 may sue for monetary damages, but not for compensation for loss of loving relationships enjoyed.

As a result of additional new routes allowed by China and Russia to the company during the last week of April, the carrier is able to save almost three hours when it begins flying from Seoul to Paris over Beijing, Ulan Bator, Novosibirsk, and Kotlas. Also in the spring, code-sharing begins with **Ansett Australia (Pty.), Ltd.** on frequencies from Seoul to Brisbane and Sydney.

While landing at Los Angeles on May 25, an MD-11F suffers a tail strike that damages the wide-body.

Sponsored by the airline, together with **Japan Air Lines Company, Ltd. (2)**, **Air France**, and **Deutsche Lufthansa, A.G.**, work begins on June 15 on a \$450-million improvement project at Terminal One of New York (JFK).

Also in June, the company begins a block-space agreement with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on a route from Seoul to Madrid.

KAL becomes the first Asian airline to serve the Boston gateway to the New England states of the U.S. when, on August 21, it commences thrice-weekly B-747-4B5 roundtrips to Logan International Airport.

The company receives its first B-747-4B5F in September. At this point, the company joins with its sister, Hanjin Shipping, to inaugurate a Sky-Bridge intermodal transport service. Cargo arriving in South Korea from five major Chinese ports is off-loaded aboard Hanjin trucks, which are driven to various airports and loaded aboard KAL aircraft for worldwide distribution.

A B-747-4B5 veers while taxiing toward Terminal One at New York (JFK) on November 2, knocking down a light pole and denting its wing; no injuries are reported.

On December 8, former Soviet Air Force Lt. Colonel Gennadi Osipovich, who shot down KAL 007 in 1983, gives his first interview to the

Western press. The pilot insists that no civilians were aboard the Jumbojet on that fateful day and that his only complaint concerning the incident was that the bonus he received for his act was less than he had expected.

Rising fuel costs and a decline in the value of the South Korean won will cause financial distress.

Enplanements soar 10.8% to 23,740,000 and 4.99 billion FTKs are operated, a 13% increase over the previous year. Operating revenues slip 0.5% to \$4.34 billion and costs are \$4.31 billion. Although there is a \$27-million operating profit, a huge \$249.4-million loss is suffered and the first red-ink annual report in company history is released.

The workforce is increased by 1,000 in 1997. Negotiations with **Japan Air Lines Company, Ltd. (2)** begun the previous September, are successfully completed on January 31. Under terms of the code-sharing and marketing agreement, JAL and KAL will share codes on flights from Osaka (KIX) to Seoul. Plans are made for joint navigation of the Fukuoka-Seoul route.

One of Airbus' largest customers, KAL now also operates a fleet of 29 A300B4-600s and 2 A300F4-203s. On March 21, KAL receives its first B-777-2B5 IGW (IGW stands for "increased gross weight"). At the end of March, thrice-weekly return service is extended from Seoul to Denver via Los Angeles. Korean Air is the first Asian carrier to not only provide service from Denver to Seoul, but also to destinations in Southeast Asia and beyond.

An enhanced memorandum of understanding is signed with **Delta Air Lines** at the beginning of May; it will expand the partnership between the two companies established back in 1995. Beginning on May 23, thrice-weekly service is inaugurated from Seoul to Denver via Los Angeles; the Colorado market is actually an expansion from the company's thrice-daily flights from South Korea to California.

The carrier, which also has 10 flights per week to Honolulu, now counts 15 North American markets, including New York (JFK), Boston, Dallas (DFW), Los Angeles, Toronto, and Vancouver plus an all-cargo service to Portland, Oregon.

On June 1, KAL takes delivery of the second of eight B-777-2B5 IGWs and President/CEO Yang Ho Cho announces plans to spend \$10 billion through the year 2005 to double the carrier's fleet size. It also receives the first of 10 Airbus A330-223s.

In a July report, IATA reveals that KAL has surpassed **Air France** to become the world's second largest cargo-transporting passenger airline behind **Deutsche Lufthansa, A.G.** Freight traffic now accounts for a full one quarter of the carrier's income.

According to an article written by Dave English in *Airways* magazine, KAL now operates one of the longest routes in the world, New York to Seoul. The 6,875-st.-mi. distance is flown in 15 hrs. 15 min. out and 13 hrs. 20 min. back (*Airways* (July-August 1997): 21).

On August 6, Flight 801 is coming in from Seoul for a landing at Agana, Guam. The B-747-3B5, piloted by Capt. Park Yong-chul with 231 passengers and 23 crew, crashes into the south face of 700-ft. Nimitz Hill, a few hundred yards north of the nonfunctioning navigation beacon used for approaches to Runway 6L, breaks up, and bursts into flame. Rescue groups from nearby homes, military bases, and hospitals speed to the scene, cutting their way through 8-ft.-tall saw grass with the assistance of illumination from two USN CH-46 Sea Knights from HC-5. Within 17 hours, 35 survivors are rescued, 8 of whom will die from their injuries. In Korea, hundreds of relatives, complaining of a lack of information, protest at Seoul Airport while the national television network suspends its normal programming to provide blanket coverage of the disaster.

On August 9, a second weekly all-cargo service is inaugurated between Dallas (DFW) and Sydney, Australia, via Seoul. Normal cargo to be flown over the route will consist of computers, aircraft parts, and oil field equipment.

A block-space, code-sharing agreement is signed with **Biman Bangladesh Airlines, Ltd.** in August. Under its terms, Biman purchases space on a weekly Korean B-747-2B5F service to transport locally made ready-to-wear garments to the U.S. from Dhaka via Bangkok and Seoul.

In September, the company begins to phase out all of its A300B4-103s, selling three to Ansett Worldwide and three to Japan Fleet Services. One is broken up and the last is given to an amusement park. In their place, two A300B4-622Rs are leased from Ansett Worldwide and two more from Japan Fleet Services.

On September 30, fares are reduced from 11 U.S. gateways to 13 Asian destinations; roundtrips from Los Angeles to Seoul go for just \$699, while flights to Seoul from New York are just \$200 more.

Revenues from cargo in October total a record \$100.5 million. Still, plunging currency rates will have a severe impact on the bottom line by year's end.

The carrier's first female pilot, 28-year-old MD-82 First Officer Shin Su-jin marries pilot trainee Kim In on October 28.

Late in the year, a new Operations Center is opened at Kimpo International Airport. With a B-747 hangar, a main building 7-stories high, and 13 annexes, the facility is labeled "the world's largest air complex."

Economy-class passengers are offered advance seat assignments on services between South Korea and the Americas or Europe as of November 17.

Starting on November 20, KAL serves the special Beaujolais Nouveau French wine to all cabins on any of its international services for a month.

Passenger boardings shoot up 7.7% to 25,559,000 while cargo moves ahead by 14.6% to 5.71 billion FTKs. Operating revenues jump 17.1% to \$2.66 billion as costs move skyward by 7.5% to \$2.48 billion. Although there is an operating profit of \$170.9 million, the company must also report a huge \$280.7-million net loss.

At the beginning of 1998, KAL is the 3rd largest airline in the world in terms of freight carried, 12th largest in passenger boardings, 21st in operating profit, 22nd in fleet size, and 24th in employee number, with 17,000. The fleet, all of which is Stage III certified, includes 112 airplanes: 45 B-747s, 2 B-777-2B5 IGWs, 32 A300s, 12 Fokker 100s, 5 MD-11s, and 14 MD-80s.

Under terms of an all-cargo marketing agreement signed at the end of the previous year, **Vietnam Airlines** on January 10 begins dual-designator service with KAL, placing its two-letter code aboard the Korean line's A300F4-203 weekly freighter flights between Seoul and Ho Chi Minh City.

Col.-Gen. Anatoly Kornukov, the Soviet air defense commander who had ordered the firing upon KAL 007 in 1983, is appointed Commander-in-Chief of the Russian Air Force on February 1.

In accordance with the announced December 12 agreement between the government of North Korea and IATA, KAL, on March 1, makes the second trial flight (behind **Cathay Pacific Airways (Pty.), Ltd.**) through a North Korean corridor opened to international civil transport.

Departing from the carrier's normal Anchorage to Seoul route flown via Takhtayamsk, Khabarovsk, Harbin, and Beijing, a B-747-4B5 is piloted from Anchorage to Takhtayamsk. It then flies to Yedinka, south to the North Korean coastline (spending 20 min. in Communist airspace), and across the South Korean border to Seoul. Depending on weather, it is anticipated that the new routing can save as much as 50 min. on flights from East Asia to North America. A passenger code-sharing pact is entered into with **Vietnam Airlines** on April 9.

Joined by **Deutsche Lufthansa, A.G.**, **Japan Air Lines Company, Ltd. (2)**, and **Air France**, the carrier in mid-May begins a two-week move into the newly opened \$434-million Terminal One at New York (JFK). The four carriers, having jointly developed, financed, designed, and constructed the huge project, will now operate it and sell space to other carriers.

On June 9, the U.S. Supreme Court unanimously rules that families of the victims lost in the shoot-down of KAL 007 in 1983 are not entitled to sue for damages because the aircraft had been destroyed over international waters.

Nearly a year after the Guam disaster, KAL, in July, contracts with code-share partner **Delta Air Lines** for the performance of a detailed safety survey. Completed by month's end, the audit includes recom-

mendations and an implementation plan designed to upgrade the safety of the company's cockpit procedures and pilot training program.

East Asia's recession requires KAL on July 22 to defer its 1999 delivery of four A330-322s, one A330-223, two B-747-4B5s, one B-747-4B5F, one B-777-2B5, and two B-777-3B5s, plus all of the Pratt & Whitney PW4000 engines needed to power them. Plans, however, go forward to take all 11 aircraft scheduled for delivery by December. The company is still left with a fleet of 111 planes, including 94 passenger jets and 17 freighters, of which 33 are leased.

Four-times-a-week roundtrips commence on August 1 between Cheju and Beijing. On August 5, Flight 8702 is diverted for refueling from Kimpo Airport at Seoul to Cheju because of rain. The B-747-4B5 with 21 crew and 358 passengers spins around while landing, shears off part of its undercarriage, and damages its right wing before skidding to a stop off the runway in a meadow. Although there are no fatalities, 18 passengers are injured.

Under terms of a fifty-fifty code-sharing agreement worked out with **China Eastern Airlines Company, Ltd.** in July, a KAL MD-11F inaugurates scheduled weekly all-cargo roundtrips into China from Seoul at the end of August.

While on approach to Kimhae Airport on a September 8 service from Seoul, an A300B4-103 with 185 passengers experiences landing gear problems and circles the airfield for 30 min. attempting to resolve them. An emergency landing is successfully completed; however, one of the plane's tires explodes during the roll. The plane comes to a stop without further incident and no injuries are reported from the second landing mishap within a month.

The code-sharing agreement with **Delta Air Lines** is expanded on September 15. Under the arrangement, new dual-designator daily services are inaugurated to Seoul via New York or Los Angeles from Las Vegas, New York, Orlando, Philadelphia, and Portland. Flights are also added from Atlanta, Boston, Dallas (DFW), New York, and San Francisco.

Under terms of a dual-designator pact signed on August 10, the company begins code-sharing with **Air France** over long-haul routes from Paris to Seoul (six times a week) and Seoul to Paris (four times a week) on September 16. The French major employs its A340-311s while KAL flies B-747-4B5s.

Just after landing at Ulsan following a September 30 service from Seoul, Flight 1603, an MD-82 with 142 passengers, slides 150 meters past the end of the runway; no injuries are reported.

On October 9, in an effort to discipline the airline for a rash of recent minor accidents and breakdowns, the Transportation Ministry orders KAL to reduce the number of its domestic flights by 20% on October 25. The cutback means a suspension of 138 weekly services on 10 of the company's most lucrative routes and will amount to an overall \$37-million penalty in lost revenues.

The Ministry also notes that it will order the carrier to cut the number of its weekly Seoul-Tokyo flights early in the new year from 28 to 26. Lost revenues from the cut will amount to \$962,000 each week.

Taken together, these are the heaviest assessed penalties in Korean civil aviation history.

The cutbacks, which the airline claims will cost it between \$30 and \$40 million in lost revenues, will last for six months. Airline analysts expect the company to suffer loss of market share and then need to expend large sums and cut fares to win it back, all of which will undermine profitability.

Although the company now pledges 150 billion won over the next two years to improve safety under the **Delta Air Lines** safety audit of July, all observers are agreed that further serious safety incidents will have dramatic and negative economic implications for the airline's viability.

The company finishes the year strongly, taking a large number of aircraft just before its conclusion. On December 30, two B-777-3B5s, two B-747-4B5s, and a B-747-4B5F are received, followed the next day by the arrival of one each B-777-2B5 IGW and B-777-3B5 and another B-747-4B5.

Passenger boardings plunge 22.9% to 19.71 million, while cargo traffic falls 8.6% to 5.22 million FTKs. Revenues jump 25.4% to \$3.79 billion, while costs increase 62.5% to \$3.54 billion. There is a \$253.69-million operating profit and a \$247-million net profit is posted for the year, a significant turnaround since the release of figures for 1997.

Since the previous fall, **Delta Air Lines** has been the only U.S. major still flying to Seoul. Unable to sustain the negative finances of this operation, Delta suspends its daily nonstop roundtrips from Portland, Oregon, on February 14, 1999, thus ending the code-share with KAL on the route. However, Delta continues to provide service between 11 other U.S. cities and Seoul via its dual-designator flights with the South Korean major. Delta also closes down its connecting service from Boston to Portland; officials from Portland now approach KAL concerning the possibility of its taking over the route to Seoul until such time as the U.S. major is ready to resume it.

Discussions opened earlier with **Pakistan International Airlines Corporation** concerning the possible acquisition by PIA of two B-747-3B5Bs end at mid-month. KAL wishes to sell the aircraft while the Pakistan line wishes only to lease.

On March 1, KAL opens an online reservations service on its World Wide Web page; initially, the operation applies only to short-haul routes into China and Japan. The service will be expanded to include Southeast Asia and Europe during the second half of the year.

A company official reveals on March 8, in advance of the release of the airline's annual report, that it will post a sizeable net profit for 1998 due largely to route reductions and the sale and leaseback of 16 aircraft.

Just after landing on its second attempt at Pohang in rain after a March 15 service from Seoul, an MD-82 with 6 crew and 156 passengers, skids off the runway, hits a barbed-wire fence and an airport antenna. The fuselage is cracked and the nose cone is ripped off; 33 people are injured, two seriously.

Three days later, an A300B4-622R with 279 passengers en route from Seoul to Cheju, encounters winds of up to 50 kn. near Kwangju Airport, in southwest Korea. The wide-body's pilot elects to make an emergency landing at Kwangju, where strong crosswinds force him to put down with one wheel off the runway. The aircraft comes to an uneventful stop and no injuries are reported.

With the beginning of the new schedule on April 1, KAL replaces its narrow-body transport with wide-bodies on its thrice-weekly roundtrips from Seoul to Osaka. At the same time, the company doubles its return service to Australia from two flights per week to four and is allowed to operate three charters a week to Ulan Bator, Mongolia, instead of the current one.

Shortly after landing at Chicago (ORD) early on the morning of April 2 after a service from New York (JFK), Flight 9018, an **Air China International Corporation** B-747-4J6C freighter with eight crew, exits its runway onto a taxiway, but makes a wrong turn, ending up back on the runway. At the same time, Flight 36, KAL B-747-4B5 with 22 crew and 357 passengers, is rolling down the same runway toward takeoff for Seoul. The Korean jetliner lifts up and passes over the nose of the Chinese 747, missing it by approximately 50 feet.

On April 14, KAL announces that it is hiring 50 non-Korean pilots from other airlines as part of its safety-improvement program. The move apparently does not come soon enough.

Just after takeoff from Shanghai on April 15 with 68 tons of cargo on a service to Seoul, Flight 6316, an MD-11F with three crew, grazes a building and crashes into a construction site 10 km. SW of its point of departure. All aboard the aircraft are killed, along with 5 people on the ground; 37 others on the ground are injured. The aircraft involved was the same one that had suffered a Los Angeles (LAX) tail strike in 1996. In covering the accident, the media notes that, including the 269 who died when KAL 007 was shot down in 1983, more than 700 people have died in KAL crashes during the past 2 decades.

Delta Air Lines, on April 16, suspends its code-sharing agreement with KAL and immediately contacts its customers booked on KAL-operated flights to assist them in making alternative travel arrangements.

The suspension will remain in effect until Delta has completed a thorough review of KAL operations. **Air Canada, Ltd.** follows suit.

At a cabinet meeting on April 20, South Korean President Kim Dae-jung calls for an overhaul of the airline's management, noting that the series of accidents by the flag carrier is now a national issue that is sullying the country's reputation.

Two days later, on April 22, KAL shuffles its management. Chairman Cho Joong-hoon, the 79-year-old chairman, steps away from the airline, while retaining the chairmanship of its parent, the Hanjin Group, South Korea's sixth-largest corporation. The former leader's son and the airline's president, Cho Yang-ho, becomes the new chairman, while direct, day-to-day management responsibility passes to non-family member Executive Vice President Shim Yi-taek, who steps into the presidency.

All but 4 of the 29 top executives who had earlier tendered their resignations to assume responsibility for the recent Shanghai crash have had their letters accepted by the new CEO by May 3. At a news conference at Seoul, a company spokesman unveils a number of initiatives designed to raise company safety standards by year's end.

The next day, the U.S. Department of Defense advises its personnel not to employ KAL for official travel, citing its poor safety record.

A contract is signed with Boeing Airplane Services on May 7 for the conversion of two passenger MD-11s into freighters by the end of the year. A week later, Korean officials indicate that they hope to begin talks with **Delta Air Lines** in June aimed at a resumption of dual-designator services.

On May 18, as a result of the KAL Shanghai crash in April, **Air France** requires that the South Korean flag carrier suspend its code-sharing pact with the Paris-based major for a year.

Simultaneously, the embarrassed South Korean government, specifically in the person of President Kim Dae Jung, demands changes in the flag carrier and strips KAL of 17 weekly roundtrips between Seoul and Pohang (half of all KAL flights on the route) for 6 months. It is anticipated that the penalty, which amounts to 1% of the company's weekly domestic flights, will cost the airline 36 billion won (\$30 million). Additionally, the company is banned from increasing the number of its domestic flights for the remainder of the year.

Orders are placed on June 15 for a pair of B-747-4B5Fs that will be delivered in May and June 2000.

On June 28, Flight 027, a **British Airways, Ltd.** (2) B-747-436 with 400 passengers en route from London to Hong Kong, accidentally drops down to just 200 m. above a KAL B-747F en route from Seoul to Uzbekistan. The move sets off collision warnings aboard both aircraft and they are able to maneuver safely out of danger.

On June 29, the U.S. Export-Import Bank announces that it will enable KAL to lease six Boeing jetliners under a \$796-million loan package.

A new package of reforms is announced on July 7 designed to improve operations and safety. Among the changes are the outsourcing of pilot training, an English-language training program, and the recruitment of expatriate captains from foreign airlines.

Signed a month earlier, a new \$30-million contract with Flight Safety Boeing begins on August 1. Instructors from Boeing arrive at Seoul to train—or retrain—KAL pilots.

Two new B-777-3B5s are placed into service on August 16, one each on the routes from Seoul to Sydney and Honolulu. The second of two new A330-323Xs to be received this year arrives at Seoul on August 30.

The wreck of the B-747-4B5 that had crash-landed at Seoul on August 5, 1998 is finally declared a total wreck on October 7; written off, the aircraft will be broken up for scrap. Claiming that its pilots are also involved in national security activities, KAL now refuses them permission to form a trade union.

KAL and the Won family, its controlling shareholders, run afoul of the National Tax Administration in October. Having been charged with illegally taking foreign exchange out of the country and also avoiding the payment of 1 trillion won in taxes, the KAL parent Hanjin Group is fined a record 541.6 billion won (\$450 million). Tax officials also indicated that judicial penalties are to be sought against individuals as well.

On November 11, Nonexecutive Chairman Cho Yang-Ho, son of the airline's founder, is arrested and charged with \$17 million in tax evasion and diverting to personal use rebates received from the purchase of Boeing and Airbus equipment in 1997-1998. It is alleged that he has made off with \$142.3 million from the \$243.3 million KAL received on the rebates, upon which appropriate taxes were also not paid. Founder Cho Joong-Hoon and one of his other sons, Cho Su-Ho, are also implicated. The senior Cho is not arrested due to his advanced age and poor health, while Cho Su-Ho also avoids detainment, primarily because prosecutors do not believe his wrongdoing sufficient.

Following a finding by the U.S. National Transportation Safety Board that blames both KAL and local airport authorities for the 1997 Guam crash, the South Korean Ministry of Construction and Transport, on November 12, prohibits the carrier from adding any new air routes for a year. It also bans the company from reopening the fatal Saipan-Guam route.

At the beginning of December, twice-weekly MD-11F return flights are added from Seoul to Sydney and Brisbane.

Having reached 2,532-ft. in its climb away from London (STN) on a December 22 service to Milan, Flight 8509, a B-747-2B5F with 4 crew and 63.7 tons of cargo, noses over into a descent. The plane crashes in flames into a field 1.5 mi. S of the airport, near the M11 motorway; there are no survivors. Almost 700 people have now died in KAL accidents since 1983.

Even as a third B-777-3B5 is delivered on December 28, chances for a renewal of code-sharing arrangements with both **Air France** and **Delta Air Lines** fade in the public glare of renewed safety concerns.

As part of a management shakeup made in response to continuing KAL safety problems, President Cho Yan-Ho becomes chairman, even though he is under indictment.

Passenger boardings rise 4.2% to 20,537,000, while cargo climbs 14.1% to 5,962,143,000 FTKs. Revenues jump 11.1% to \$4,218,794,000, while costs ascend 14.6% to \$4,060,055,000. Profits slide to \$158.73 million (operating) and \$226.59 million (net).

Airline employment at the beginning of 2000 stands at 14,500, a 3.6% increase over the previous 12 months. Among the world's top 25 airlines, KAL is 18th in passengers, 4th in FTKs, 20th in operating revenue, 23rd in operating profit, and 15th in net gain.

As a result of the December 22 crash, the carrier, on January 6, ceases freighter service into London (STN) until at least April; all-cargo service to Heathrow Airport is continued.

While Flight 637, a B-747-2B5F with five crew, is preparing to land at Kuala Lumpur at the end of a service from Seoul on January 9, ATC controllers visibly note a large hole in the aircraft. Once it is down, the plane is ordered grounded until repairs can be made; it is towed behind the MAS Catering facility where a large canvas is put over the hole to keep out rain. Examination will suggest that the damage has been caused by a section of the wing flap assembly detaching and striking the aircraft fuselage just before it put down. The incident immediately results in the reinstitution of a U.S. Department of Defense ban on military personnel flying KAL.

Former **Delta Air Lines** Vice President-Operations David Greenberg is named vice president/chief operating officer on January 10 and he pledges to establish a company-wide culture that emphasizes flight safety. He also promises an immediate fleet review and an enhanced training program, assistance with which will be provided by newly promoted Vice President/Line Operations Director Capt. William Hardy, a former B-747-400 pilot.

On January 13, the government of South Korea announces that a special safety audit of all 107 KAL aircraft will be conducted by June. The first phase, to be concluded by the end of February, begins immediately on nine older B-747s: five Dash-2B5Bs, two Dash-2B5Fs, and one each Dash-212B and Dash-273C. Counting three aircraft permanently grounded earlier and those lost in crashes, the carrier now has only 5 of the 17 freighters it had had on strength at year's end.

At this point, Transport Canada steps into the picture, issuing a threat to ban KAL flights into the country, pending the findings of the safety

audit. With Korean government approval, it dispatches experts to Seoul to conduct an independent review of the South Korean flag carrier. The first of eight Next Generation B-737-8B5s to be delivered during the year arrives at Seoul on January 28. They will join a fleet that also includes two MD-83s and six MD-82s.

At the beginning of February, Chief Operating Officer Greenberg announces that KAL will employ 240 pilots during the year, including 130 expatriate captains, in a bid to improve the carrier's safety record. All are to be offered voluntary Korean language training. The remaining 110 flyers will be chosen from the Korean Air Force, the Korean Aviation University, and Cheju Flying School. The new hiring campaign is a 40% boost over that conducted the previous year. Additionally, the promised new training program is instituted and includes increased simulator training provided by Boeing FlightSafety International, as well as new or refresher ground school and cockpit resource management (CRM) education.

On February 11, the company confirms plans to purchase 23 new aircraft and lease 8 others by the end of 2001: 6 A330-300s, 16 Next Generation B-737-800s, and 2 each B-777-200s and B-777-300s. A leased B-747-47UF is delivered on February 17.

On February 25, the Seoul District Court sentences Chairman Cho Yan-Ho to four years in prison for failing to report and pay taxes on \$24.2 million in hidden overseas investments. Cho is fined 30 billion won (\$27 million), while KAL is assessed penalties of 80 million won from its own coffers. The prosecution had sought a jail term of eight years and a 55-million won fine. Cho now surrenders day-to-day control of the airline to Chief Operating Officer Greenberg. The airline itself pays a 138.9-million won fine.

During March, KAL stops accepting hazardous materials shipments aboard its passenger jets. With several recertified B-747-2B5Bs, frequencies from Seoul to Frankfurt are increased to six per week as of March 26. Return passenger service to Anchorage is doubled on April 14 as the carrier increases its Seoul to Toronto to six times a week.

Also during these weeks, KAL begins to restructure its flight operations division. Four of seven VPs and seven chief pilots are replaced and former **USAirways** Vice President-Safety George Snyder is brought in as the unit's managing vice president. Nine newly assigned chief pilots are given direct responsibility for the division's adherence to all company safety policies and procedures. In April, a cargo reservation service is opened on the World Wide Web.

Angered by the company's effort to boost safety and reduce their workload through the hiring of 205 foreign pilots over the past 2 years, the company's cockpit crews, despite the company's October prohibition, form a union in May. Delivery of the first B-747-4B5F is accepted on May 25 and another A330-323X is delivered on May 31.

The second B-747-4B5F is delivered on June 8 and a fourth B-777-3B5 is received on June 27; on June 29, orders are placed for three additional A330-200s, which will be delivered in 2001 and 2002.

A year after **Air France** and **Delta Air Lines** announce plans to create a global alliance, the new group, which also includes **Aeromexico (2) (Aeronaves de Mexico, S.A. de C.V.)** and KAL, is officially named "SkyTeam" in July. Together, the partners offer 6,402 daily flights to 451 cities in 98 nations.

B-747-4B5 roundtrips are initiated on July 25 between Seoul and Amsterdam. The next day, the year's second new A330-323X arrives.

On August 3, flights begin from Cheju to Beijing. A net loss of 197 million won on sales of 2.5 billion on is reported for the year's first half. A third A330-323X is delivered on August 10.

On August 22, *Flight International*, in its annual commercial airline survey, reports that KAL is the fourth largest cargo airline in the world behind **Federal Express (FedEx)**, **Lufthansa Cargo, A.G.**, and **United Parcel Service (UPS)**.

A code-sharing agreement is signed with **Air Kazakhstan** on September 7. At the end of the month, a new \$102-million dedicated cargo terminal is opened at New York (JFK). It will be shared with other "SkyTeam" alliance members **Aeromexico (2) (Aeronaves de Mexico, S.A. de C.V.)**, **Delta Air Lines**, and **Air France**.

The last of eight new Next Generation B-737-8B5s to be received during the year is delivered on October 11. Another B-777-2B5ER is turned over to the company seven days later.

Demanding higher wages, the carrier's pilots go on strike on October 22. The job action, the first to hit a South Korean airline, forces the airline to cancel 384 flights and many customers are left stranded as only 7 international and 12 domestic services are completed. The strike ends two days later after KAL agrees to increase flight allowances by 50% on top of salary and to gradually cut the number of foreign pilots employed.

With the beginning of the winter schedule on October 29, international freight charges to North America are increased by 10% in an effort to compensate for soaring fuel costs.

The last B-777-2B5ER is delivered on November 9. Two more B-747-4B5Fs are ordered on November 29 for delivery in 2002. The number of KAL Dash-400Fs will then total seven. The same day, the last of four A330-232Xs to be delivered this year arrives at Seoul from France.

It is announced on December 15 that service to Boston will cease at the end of January. Flights will also be suspended to Amsterdam, Ulan Bator (in Mongolia), and to the resort island of Cheju.

Due to rising fuel costs, currency depreciation, and a softening national economy, the company, on the year, suffers a \$368-million loss.

KOREAN AIRWAYS. See **CHOSONMINHANG KOREAN AIRWAYS; AIR KORYO**

KOREAN NATIONAL AIRLINES: South Korea (1947–1962). **Korean National Airlines**, started as a nonscheduled company by Capt. Yong Wook Shinn in 1945, receives the support of the Ministry of Transport in May 1947 to operate domestic services in the Republic of Korea. The initial fleet comprises Shinn's 3 Stinson Voyagers. Several Stinson Model A Tri-Motors are also employed and services link the capital of Seoul with the seaboard communities of Kunsan, Kwangju, Chumunjin, and Pusan.

Douglas DC-3s replace the Voyagers in April 1950. Service is, however, suspended following the North Korean invasion on June 25. All of the company's planes, old and new, are commandeered by the Republic of China's Ministry of Defense.

Following the cease-fire of July 1952, KNA's DC-3s are returned and it is able to resume flights over its previous routes in November. Late in the year, international routes are opened from Seoul to Iwakuni and Tokyo with DC-4s chartered from the Taiwanese carrier **Civil Air Transport, Ltd. (CAT)**, then a proprietary company of the U.S. CIA.

Little significant change occurs during 1953–1961 as the domestic route network is improved; one Lockheed L-1049H is leased from **Transocean Air Lines (TAL)** to fly the Tokyo and Iwakuni route, which is extended down to Hong Kong.

En route from Pusan to Seoul on February 16, 1958, Flight 302, a DC-3 with 34 passengers, is seized by air pirates, reported to be North Korean agents, who order the aircraft flown to P'yongyang. Although the hostages are released within a month, the plane is not; thereafter, the South Koreans enact tighter airline security measures.

The carrier is reorganized on March 3, 1962, and is renamed **Korean Air Lines/Korean Air (KAL)**.

KORSAR SOVIET AUSTRIAN JV AIRLINE (AVSTRISKOE SP AVIAKOMPANIYA KORSAR): Suvorov Square 1, Vnukovo Airport, Moscow, Moscow Region, 101000, Russia; Phone 7 (095) 284-5618; Fax 7 (095) 281-2588; <http://www.olvit.iasnet.ru/transport/korcar/in.htm>; Code 6K; Year Founded 1991. Korsar, presently known as Korsar Airlines, is founded as a joint Russian-Austrian airline at Moscow's Vnukovo Airport in 1991 to provide regional passenger and cargo services. Two-thirds of the company is owned by Russian and Austrian private concerns, while the remaining third is held by the Vnukovo Aviation Enterprise. Oleg V. Sham is appointed director general and he leases from the minority shareholder a fleet of 2 each

Tupolev Tu-154Ms, Tu-134s, and Yakovlev Yak-40s. These begin passenger charters throughout the new CIS on behalf of foreign and local concerns.

The fleet is doubled in size during 1992–1993 and Ilyushin Il-62s are added for long-haul charters. Among the companies and organizations serviced are Sumitomo, Shell, Conoco, Pechiney, the Louisiana Land Corporation, the International Moscow Bank, soccer teams, the Moscow Symphony Orchestra, and Procter & Gamble. To assist in the coordination of lift with charter groups, the company forms its own travel agency. New destinations visited include Siberia, France, Cyprus, Israel. Operations continue apace in 1994.

Flights continue in 1995–2000, during which years Sergei Cheremnykh becomes director general and the fleet is increased by the addition of three Tu-154Ms and a Tu-134.

KOSMOS AND TRANSPORT AVIA (KIT KOSMOS E TRANSPORT AVIAKOMPANNIYA): Reisovaya St. 12, Vnukovo Airport 3, Moscow, 103027, Russia; Phone 7 (095) 436-4252; Fax 7 (095) 436-4252; Code KSM; Year Founded 1992. K&TA is established in 1992 at Vnukovo Airport, Moscow, to provide domestic passenger and cargo charters on behalf of a local industry in need of hard currency. Later, the concern will be restricted to in-house operations.

I. I. Kanygin is named director general and he begins flights with a small and mixed fleet of 1 each Tupolev Tu-134, Yakovlev Yak-40, Antonov An-12, An-24, and An-26, plus 4 Mil Mi-8 helicopters.

By 2000, Director General Alexander N. Ilyukhin oversees the work of 250 employees and the flights of 1 each Antonov An-12 and An-26, an Ilyushin Il-76, and 3 Tupolev Tu-134As.

KOSTROMA AIR ENTERPRISE: Kostroma Airport, Kostroma, 156012, Russia; Phone 7 (09422) 553 651; Code KOST; Year Founded 1995. KAE is set up at Kostroma in 1995 to provide regional third-level passenger and cargo services, plus contract aerial work. Boris Anokhin is named CEO and scheduled flights commence with 9 Let L-410UVPs, 14 Antonov An-12s, 14 An-2s, and 14 Mil Mi-2 helicopters.

KOTLAS UNITED AIR DETACHMENT: Kotlas Airport, Arkhangelsk Region, 165400, Russia; Phone 7 (81837) 44555; Fax 7 (81837) 44269; Code KTS; Year Founded 1995. KUAD is established at Arkhangelsk in 1995 to operate regional third-level passenger and cargo services, plus contract aerial work. V. V. Dmitriev is named CEO and scheduled flights commence with 7 Yakovlev Yak-40s, 28 Antonov An-2 biplanes, and 6 Mil Mi-8 helicopters.

Dmitriev remains director general in 2000 and he oversees a fleet of 6 Yak-40s and 1 Yak 40K.

KRAI AERO RUSSIAN AUSTRIAN JV (KRAI AERO RUSSIAN AVSTRISKOE SP). See **KRAIAERO AIRLINES**

KRAIAERO AIRLINES: 34 Cheremushkinskaya Bolshi St., Moscow, 117259, Russia; Phone 7 (095) 436-7262; Fax 7 (095) 436-7239; Code K3; Year Founded 1993. A second joint-venture Russo-Austrian carrier, KA is set up as Krai Aero Russian Austrian JV (Krai Aero Russian Avstriskoe SP) at Moscow in 1993 to offer passenger charters to Vienna. V. P. Gordienko, the new director general, inaugurates revenue flights with a single Tupolev Tu-154B leased from **Aeroflot Russian International Airlines (ARIA)**.

Flights continue during the remainder of the decade, in which years the company is reformed into the present Kraiaero Airlines and the fleet is doubled by the addition of a Tu-154M. Anatoli Denislov is director general at the beginning of 2000.

KRAS AIR (KRASNOYARSK AVIALINII-KRASAIR): Emelianovo Town Airport, Krasnoyarsk, Krasnoyarsk Zone, 663020, Russia; Phone 7 (3912) 236 366; Fax 7 (3912) 244 896; <http://www.krasair.ru>;

Code 7B; Year Founded 1994. KrasAir is established in 1994 as a charter subsidiary of **Krasnoyarsk Avia (Krasnoyarskavia Aviakompaniya)**. V. I. Medvediev is appointed director general and his initial fleet comprises 12 Tupolev Tu-154Ms, 3 Ilyushin Il-86s, 6 Il-76s, and 10 Antonov An-26s.

Later in the year, the airline begins flying the first of two refurbished Douglas DC-10-30s acquired under lease from McDonnell Douglas, and formerly flown by **KLM (Royal Dutch Airlines, N.V.)**, on long-haul charters to China, India, and East Asia. Kras thus becomes the first Russian airline to fly a passenger-version of the DC-10.

Enplanements during the 12 months total 2,399,343.

The highlight of 1995 for this airline is its inauguration of scheduled international operations, particularly the beginning of a return service to New York (JFK).

Passenger boardings move up 3.6% to 1,451,600 while freight inches up 0.1% to 94.4 million FTKs.

The Russian carrier suffers a terrible 1996. The New York service must be terminated and the DC-10-30 is returned to McDonnell Douglas.

Customer bookings plunge 46.7% to 789,671.

The fleet in 1997 includes 65 airplanes of different types, including 22 Tu-154Ms. Among the 30 destinations visited are Kamchats, Krasnoyarsk, Los Angeles, Moscow, Norilsk, Petropavlovsk, St. Petersburg, and Vladivostok.

On August 10, the company, with financial backing from Citibank, signs a contract with the Egypt-based Sirocco leasing company for 10 Tu-204-120 jetliners, built by Sirocco Aerospace International and powered by Rolls Royce engines. Part of the funding for these planes is provided by the Krasnoyarsk regional administration. It is suggested that the first plane may be in service by October.

Passenger boardings fall another 10.2% to 709,400, while 290 million FTKs are also operated.

In August 1998, Russia devalues the ruble and further exacerbates an economic crisis. Russian currency trades at more than 16 to 1 by mid-September. At this point, the carrier is merged into **Krasnoyarsk Avia (Krasnoyarskavia Aviakompaniya)**. A new management team, headed by Director General Boris Abramovich, comes to power and puts in place a large number of reforms and cost-cutting measures. These come too late to prevent customer bookings from dropping 5.4% to 598,000.

Still, a highlight of the year widely reported for positive gain is the November flight, via the North Pole from Krasnoyarsk via Khatanga to Cherill, Canada. This is the first commercial flight over this route and heralds the airline's published plans to eventually launch cross-polar routes to Toronto and New York (JFK), for which rights have recently been obtained.

The number of routes flown begins to increase, in January 1999, from 20 to 41. Most of these will continue to originate in Krasnoyarsk, but some will also start from other airports, notably Norilsk. In February, the company enters into a code-sharing alliance with **TransAero Airlines**. The event marks the first dual-designator agreement between two Russian carriers.

That highlight is followed by a nadir on June 23 when, out of fuel, the company must cancel the day's flights. Hundreds of passengers who have arrived at the airport are stranded and they are given hotel rooms and meal vouchers until the situation can be resolved.

With only a handful of aircraft in airworthy condition, a crash program in maintenance and service is undertaken. At a cost of 80 million rubles, 18 airliners, mostly Tu-154s, are given a major overhaul for life-time extension, 23 D-30 engines are overhauled at Rybinsk Motors, and 11 new NK-86 engines are purchased from KMPO, the Kazan engine plant. A dispute soon arises with the Moscow trade company OFI-INT and the airline over payments for some of the new engines. Plans are made to replace the unprofitable Il-62s as soon as new Tu-204s become available.

On October 19, the airline places a credit application with the legislative assembly of the Krasnoyarsk Region seeking a loan to pay for the complete construction of the first two Tu-204-100s.

The Russian media reports on October 27 that the administration of the Krasnoyarsk Region is planning to secure the controlling 51% stake in KrasAir, a move that is not opposed by the Federal Ministry of State Property. The local government will reimburse the federal budget by writing off the federal 152-million-ruble debt owed the Krasnoyarsk Region.

The Tu-204-100 loan application is approved by the legislative assembly on October 30. The local administration is instructed to appropriate a 35-million-ruble loan from the budget. In early December, KrasAir and the manufacturer, Ulyanovsk-based Aviastar, jointly define the financing and delivery schedule for the second Tu-204-100.

Passenger boardings accelerate 27.6% on the year to 763,000, while 347 million FTKs are operated. The company's fleet makes nearly 6,000 flights with a total duration of 40,000 hrs. Revenues of \$70.1 million are generated.

It is reported by the media on March 27, 2000 that the carrier will pay its shareholders a dividend. It is also noted that a new hangar complex is under construction. The fleet now includes 10 Tu-154Ms, 7 Tu-154Bs, 11 Il-76T/DTs, 5 Il-62Ms, 4 Il-86s, and 5 Yak-40s.

Also during the first quarter, the company places three Tu-134As into service; one of the new planes is a luxuriously furnished VIP unit to be employed for executive and small group charter services.

As the first half of the year progresses, KrasAir begins training flight and maintenance personnel who will operate and repair the new Tu-204-100s. In addition to the creation of a special maintenance division to service the new jetliners, it also hammers out the certification documents allowing operation of the aircraft by the airline and prepares airport facilities.

A weekly Il-86 return service is inaugurated on July 18 from St. Petersburg to Seoul via Krasnoyarsk.

The Samara newspaper *Samarskoye Obozreniye* reports on July 24 that, for the first time in Russian history, an airliner has been "arrested." The newly repaired KrasAir Tu-154M had been detained in Samara three days earlier on orders of the Samara Region Arbitration Court because of the continuing dispute between the nation's fifth largest air carrier and the OFI-INT trading concern. Moscow-based OFI-INT, unable to recover money for delivered aircraft engines, will apparently attempt to obtain it by auctioning off the money. As the paper puts it, the event "may cause a precedent for other air companies' creditors."

KrasAir files suit claiming that the arrest of its aircraft is illegal, but the Arbitration Court refuses to release the aircraft, as does an appeals court. With support of unknown persons, the aircraft, in defiance of the Arbitration Court's ban, takes off from Samara on August 24 and returns to Krasnoyarsk. Outraged, executives from OFI-INT begin bankruptcy proceedings against KrasAir under the Federal Bankruptcy Law.

The OFI-INT trading concern settles with KrasAir over the engines on September 18. It is suggested that the two concerns will not do future business together. Indeed, OFI-INT offers the hope that their experiences "will help other companies and organizations avoid future losses associated with the financial activities of KrasAir."

Through the first nine months of the year, the carrier transports a total of 583,080 passengers, a 6% decline over the same period a year earlier. Although international bookings jump 55% to 105,145, the number of domestic customers declines 14% to 477,935. On the other hand, revenues advance 22% to 2.2 billion rubles (\$78 million). Freight traffic also rises, by 7%, with 15,768 tons carried.

Company officials and those from the Aviastar manufacturing concern report on October 26 that the company will take delivery of its first Tu-204-100 by the end of November. At the same news conference, it is also reported that KrasAir is reviewing the possibility of acquiring Boeing 737s for its international routes. It is less keen on the possibilities of the Tu-234, which has restarted flight trials this week. The carrier believes that the plane is underpowered and would not be a candidate for its longer segments unless up-engined from its current D-436T1s to D-436T2s or Rolls Royce BR715s.

With the beginning of the winter schedule on October 29, the carrier introduces a new weekly Tu-154M Moscow-Kemerovo-Vladivostok

return service. On November 1, new return flights commence from Magnitogorsk to Mineralnye Vody and to Krasnoyarsk. Tu-154M return frequencies begin on November 4 from Krasnoyarsk to Hanover and Frankfurt.

The premier Tu-204-100, previously operated by the bankrupt Moscow-based charter carrier **Trans European Airlines** but repossessed by Aviastar, is accepted in ceremonies on November 10. During the festivities, it is announced that the airframe of the carrier's second Tu-204-100, originally intended to be its first, is currently being painted at Aviastar and will be paid for in two tranches. The engines are to be leased from Perm.

On November 15, a new Tu-154M route is opened from Moscow to Blagoveshchensk via Novokuznetsk. After workup, the new Tu-204-100 enters service on November 18 on the company's Krasnoyarsk-Tashkent-Irkutsk route.

Between November 21 and 28, the carrier sponsors a familiarization tour of South Korea for Russian journalists and travel agents from Moscow, St. Petersburg, and Krasnoyarsk. It is anticipated that participants will help the carrier expand its popular new route to Seoul.

Meeting at Domodedovo Airport at the end of November, the CEOs of KrasAir, **Domodedovo Airlines**, **Chelai-Chelyabinsk Airlines (Chelyabinsk Chief Aviation Enterprise)**, and **Avia Express Cruise** form a new strategic alliance to be based at this Moscow airport. Under terms of the pact, the four will share fleets, create a single-tariff policy, and adjust their schedules and sales systems for maximum joint benefit, while retaining individual identities. They will finalize arrangements during the winter in hopes of being ready to operate with the beginning of the summer schedule at the end of March.

On December 6, leaders of the new four-airline alliance hold a news conference to announce and promote their pact and invite other Russian airlines to join. To demonstrate the feasibility and potential impact of their joint project, a chart is offered comparing their assets with those of **Aeroflot Russian International Airlines (ARIA)**, the nation's leading carrier. Although Aeroflot is ahead in terms of aircraft (113 to 97) and passengers (4.6 million to 1.8 million), the alliance partners have more domestic routes (44 to 28).

In presenting this information, KrasAir Director General Boris Abramovich indicates that the partner's pact has not been established as a "counterbalance" to Aeroflot, which has itself recently been actively courting and bringing under its wing a number of smaller regional airlines. At a separate news gathering across town, Aeroflot Director General Valery Okulov welcomes news of the alliance, brushing aside suggestions that it might become a domestic rival. Reporters note that, if actually launched, this would be Russia's first true private airline alliance.

Representatives from the four partners continue meeting over the next three weeks. In addition to drafting cooperation proposals to be offered to Western airlines, an application for aid is prepared for submission to the Russian government before the end of the year. The alliance does not seek cash, but rather, the sort of state privileges and tax exemptions currently enjoyed by Aeroflot. It is anticipated that the plan will have the backing of the Russian Aircraft Operator Association.

During the Christmas period, KrasAir undertakes 30 long-haul charters (a 150% increase over 1999) to resorts in Egypt, Finland, Indonesia, Italy, the Philippines, Spain, and Thailand, with 35% of the flights made by the new Tu-204-100s. Revenues from these added services jump 145% to \$1.6 million.

At the end of the year, the newly completed Tu-204-100 begins its acceptance trials with its delivery anticipated before the end of March. Enplanements for the 12 months approach 726,000 and 3.03 million rubles are generated.

In late December, a new charter service is started from Moscow to Langkawi, Malaysia. It is reported by the Just Planes Web site on December 29 that Kras will soon take delivery of its second Tupolev Tu-204-100. In the new year, it is learned that the company will begin Il-76TD cross-polar flights over the Polar 1 route from Krasnoyarsk to

Canada within a month after the Russian state service of civil aviation (GSGA) opens it on February 1.

At the same time in February that the GSGA reports that the total number of Russian air carriers has fallen from 328 in January 2000 to a current 294, it will also reveal that KrasAir, **Siberia Airlines (Sibir)**, **Pulkovo Airlines (Aviation Enterprise Pulkovo)**, and **Aeroflot Russian International Airlines (ARIA)** have, between them, carried half of all Russian passenger traffic in 2000.

Those numbers can be expected to grow under the new "Aeroplan Alyans" alliance that will be signed by KrasAir and **Siberia Airlines (Sibir)** at the beginning of March.

KRASNOYARSK AVIA (KRASNOYARSKAVIA AVIAKOM-PANIYA): Russia (1992-1998). When **Aeroflot Soviet Airlines** is reformed into **Aeroflot Russian International Airlines (ARIA)** in 1992, this Krasnoyarsk-Yemil'yanovo directorate, with its base in the central Siberian town of its namesake, is retained as a semiautonomous division to operate regional and trunk services. A small number of international all-cargo charters are now added.

I. A. Levandovski is managing director and his fleet includes 3 Ilyushin Il-86s, 12 Il-76s, 8 Il-62s, 22 Tupolev Tu-154s, 80 Yakovlev Yak-40s, 12 Antonov An-12s, 15 An-24s, 12 An-26s, and a mix of 123 An-28s, Let 410s, and Mil Mi-2, Mi-6, Mi-8, and Mi-26 helicopters.

Enplanements for the year total 2,681,098.

While landing at Norilsk on June 22 after a freight service from Igarka, an An-12BP with seven crew and five passengers, stalls and strikes the ground; two people survive the crash.

Due to the slowdown in the Russian economy in 1993, Krasnoyarskavia suffers a significant traffic downturn. Passenger boardings plunge 38.7% to 1,933,020 while freight is off 52.6% to 116.7 million FTKs.

The company forms the new **Kras Air (Krasnoyarsk Avialinii)** subsidiary in 1994 and in late fall, it begins flying the first of two refurbished Douglas DC-10-30s acquired under lease from McDonnell Douglas and formerly flown by **KLM (Royal Dutch Airlines, N.V.)**.

Meanwhile, the parent continues to witness a traffic downturn. Customer bookings fall another 28.9% to 1,376,000, while cargo is off by 12.5% to 490 million FTKs.

Flights continue in 1995. While en route from Novosibirsk to Petropavlovsk on April 5, 1996, the pilot of an Il-76TD with 9 other crew and 10 passengers, elects to attempt a shortcut. The aircraft, which is loaded with 57 tons of detergent powder (17 tons overweight), collides with a 2,900-m.-high mountain and there are no survivors.

Service is maintained in 1997, but the fleet is reduced to 1 each Il-86 and Tu-154M. In August 1998, Russia devalues the ruble and further exacerbates an economic crisis. Russian currency trades at more than 16 to 1 by mid-September. At this point, the carrier is merged into **Kras Air (Krasnoyarsk Avialinii)**.

KRILATAYA ROUS (WINGS OF RUSSIA): Russia (1993-1996). Krilataya is founded at Moscow in 1993 to offer domestic and international all-cargo charter services. A. P. Bolshakov is general director and revenue flights begin with a single Ilyushin Il-76. Flights continue until 1996.

KRILO MALOE AVIATSIONNO SMALL AVIATION TRANSPORT ENTERPRISE (TRANSPORTNOE PREDPRIYATIE WING): Russia (1994-1996). Established at Moscow in 1994 to offer ad hoc passenger and cargo charters, KM begins domestic services under the general directorship of E. I. Gorbunov and with a fleet, unspecified in number, of Antonov An-26s and Yakovlev Yak-42s. Flights cease in 1996.

KRIS AIR, LTD.: Singapore (1977-1980). Privately owned Kris Air, Ltd. is formed at Singapore in June 1977 to provide all-cargo charter services to various destinations in Southeast Asia. After acquiring a

Fokker F.27-200 and four Curtiss C-46R Commandos, the company begins services in August.

Although a Vickers VC10 freighter is also acquired, Chairman Lim Kong Bu's 25-employee carrier is unable to maintain its viability in the face of higher costs, led by fuel prices, and must cease operations in 1980.

KROONDUIF. *See* KLM (ROYAL DUTCH AIRLINES, N.V.)

KRYLO AVIAKOMPANIA: 2, Sokoinicheski Val, Moscow, 107113, Russia; Phone 7 (095) 350-3624; Fax 7 (095) 264-2750; Code KRI; Year Founded 1993. Based at Moscow's Sheremetyevo Airport, Krylo and its sister carrier, **Poliot Chernobyl**, are subsidiaries of GOSSNII-GA, the Russian State Scientific and Research Institute for Civil Aviation. When, as a result of a national economic downturn in 1993, this organization, established in the days of **Aeroflot Soviet Airlines** to test and develop civil aviation concepts, is left largely unfunded, it is forced to earn its own income.

Consequently, the two subsidiaries begin international passenger and charter flights to raise the currency necessary for GOSSNII-GA to continue. V. A. Goriatchev is placed in charge of the enterprise and begins revenue service with a fleet that includes 4 Ilyushin Il-18s, 1 Il-62, 1 Il-76, 3 Antonov An-12s, 1 An-30, and 1 each Tupolev Tu-154 and Tu-134.

Operations continue apace during the remainder of the decade, during which years the Tupolev jetliners are withdrawn. A total of 65 workers are employed at the beginning of 2000.

K2000 AIRLINES, LTD.: New Zealand (1999-2000). K2000 is established by **Kiwi International Airlines** founder Ewan Wilson at Auckland in late fall 1999 to offer regional scheduled and charter passenger flights. An eight-person workforce is assembled by Managing Director Jeffrey Mathews and a Boeing 737-4Y0 is subleased from **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.S.)**, with which an alliance has been signed. Revenue flights commence on December 1, linking Auckland, Dunedin, and Hamilton with Brisbane, Sydney, and Rarotonga.

Citing lack of demand and stiff competition from **Air New Zealand, Ltd.** and **Qantas Airways, Ltd.**, the company shuts down on January 11, 2000.

KUBAN AIRLINES: Krasnodar Airport, Krasnodar, Southern Zone, 350026, Russia; Phone 7 (8612) 370500; Fax 7 (8612) 321935; http://www.kuban.ru/~airlines; Code GW; Year Founded 1992. The Kuban directorate of **Aeroflot Soviet Airlines**, originally established in 1932, is privatized in 1992 and formed into this joint stock concern. Ownership is divided between the Russian state (51%) and employees (49%). Ivan R. Babichev is named director general and he oversees the inauguration of privatized domestic services with a fleet of 9 Antonov An-24Bs, 4 An-24Vs, 9 An-26s, 4 An-26Bs, 1 Let L-410UVP, 5 Yak-42Ds, and 6 Yak-42s.

Flights continue in 1993-1998, during which years scheduled destinations come to include Adler/Sochi, Gyumri, Kazan, Moscow, Naberevnye Chelny, Nzhenevartovsk, Sartov, St. Petersburg, Surgut, Tashkent, Tbilisi, Ufa, and Volgograd. Long-haul charters to Frankfurt are also frequently undertaken.

Enplanements during the latter year total 504,000.

Customer bookings inch up 1.8% in 1999 to 512,000, while 8 million FTKs are operated. Revenues of \$26 million are generated.

Late in 2000, a Russian-language homepage is opened on the Internet's World Wide Web. At the end of the year, it is learned that the Russian Ministry of State Property, which owns 51% of Kuban, intends to put up a percentage of its stake in the airline for sale in the new year as part of a package of 30 state holdings that are to be privatized. It will first be necessary for the Duma to amend the current law prohibiting the sale of state holdings exceeding \$17 million in valuation.

KUILIMA AIR SERVICE: United States (1973). Robert Faker establishes KAS at Kulima Air Park in early 1973 in order to provide sched-

uled passenger and cargo flights to Honolulu with a Cessna 402C. Unable to achieve viability, the new commuter is unable to finish out the year.

KUMERTAU EXPRESS: Kumertau 54, Bashkortskaya, 453350, Russia; Phone 7 (34761) 22300; Year Founded 1994. **Kumertau Production Enterprise (Kumertauskoe Aviatzionnoe Proivodstvehnniya Predr-e)** is set up at Bashkortskaya in 1994 as the air transport arm of a local manufacturer. General Manager B. S. Malishev commences ad hoc passenger and cargo charters with an all-Antonov fleet that includes an unspecified number of Antonov An-8s, An-12s, An-24s, and An-26s.

Flights continue in 1995-2000, during which years the company is renamed and the number of aircraft is reduced to just 1 each An-26 and An-30. The fleet now includes 1 each An-12, An-30, An-8, and Yakovlev Yak-40.

KUMERTAU PRODUCTION ENTERPRISE (KUMERTAUSKOE AVIATIONNOE PROIVODSTVEHNNIYA PREDR-E). *See* KUMERTAU EXPRESS

KUNGSAIR NORRKOPING, A.B.: Sweden (1984-1990). KNAB is organized at Norrkoping in 1984 to offer both charter and scheduled services. Managing Director Lennart Olsson oversees a fleet that comprises 1 Beech 99, 1 Cessna Citation 500, 1 Piper PA-31T Cheyenne II, 2 Piper PA-31-350 Navajo Chieftains, and 1 PA-31-310 Navajo. Scheduled services are inaugurated to Linkoping, Nykoping, and Trollhattan. The Navajo is withdrawn in 1986-1987. Operations are maintained until 1990, when economic difficulties force the carrier to stop flying.

KURGAN STATE AIR ENTERPRISE (KURGANSKOE GOSUDARTSVENNOE): Kurgan Airport, Kurgan, Urals Zone, 640009, Russia; Phone 7 (35222) 93234; Fax 7 (35222) 99747; Code KURG; Year Founded 1993. Kurgan Avia is established at Kurgan in 1993 to provide domestic freight and passenger charters. Valeriy Bolshakov is general manager and services are undertaken with a mixed fleet of Antonov An-24s, An-26s, and Tupolev Tu-154s.

Airline employment totals 755 in 1994; operations continue in 1995-2000. During these years, the Tupolev is leased out to other carriers and revenue flights are undertaken with 8 An-24s, 2 An-26s, 2 An-2 biplanes, and 1 Kamov Ka-32 helicopter.

KURSK AIR ENTERPRISE: 24 Kursk Aeroport, Kursk, Central Regions Zone ATD, 305024, Russia; Phone 7 (70122) 61205; Fax 7 (70122) 61733; Code KRS; Year Founded 1994. KAE is set up at Kursk Airport in 1994 to offer domestic ad hoc passenger and charter services. New General Director V. V. Darakhvilidze launches revenue flights with an all-Antonov fleet, made up of an unspecified number of An-2s, An-24s, and An-26s.

Flights continue in 1995-1998, during which years the fleet comprises 8 An-24s, 5 An-26s, and 33 An-2 biplanes.

KUSTANAI UNITED AIR DETACHMENT: Kustani Airport, Kustani, 458017, Kazakhstan; Phone 7 (3142) 274 855; Year Founded 1993. Established at Kustani Airport in the spring of 1993, Comdr. Valery V. Lamanov's new Kazakhstani airline begins domestic freight and passenger services with an all-Antonov fleet of An-24s and An-26s.

Operations continue in 1995-2000 with 6 An-24s and 10 An-2 biplanes.

KUWAIT AIRWAYS (KUWAIT AIRWAYS CORPORATION, LTD.): P.O. Box 394, Kuwait International Airport, Safat, 13004, Kuwait; Phone 965 434 5555; Fax 965 431 4118; http://www.travelfirst.com/sub/kuwaitair.html; Code KU; Year Founded 1954. Together with other local interests, the Sheik of Kuwait in March 1954 establishes Kuwait National Airways Corporation as the country's national carrier. Three Douglas DC-3s are acquired; crews and technical

assistance are provided by the **British Overseas Airways Corporation (BOAC)** affiliate **British International Airlines, Ltd.** Services are launched in May over routes to Basra and Beirut, the latter via Jerusalem or Damascus.

The Basra segment is extended to Cairo in April 1955. In July, the Kuwait government takes 50% control, and the airline's name is changed to that presently employed.

A DC-3 is lost under unknown circumstances at Durkham, Saudi Arabia, on February 18, 1956. Two Handley Page Hermes 4s are placed in service during the summer and operations continue apace during 1957.

The government takes full control on June 1, 1958, but at the request of the British government, BOAC is allowed to retain management responsibility. The first Viscount 700 is delivered on September 18 and enters service on October 1. Orderly retirement of the Hermes IVs and DC-3s begins.

As of January 1, 1959, the carrier possesses an all-Viscount 700 fleet. Kuwait-Karachi and Bombay flights via Bahrain are begun during the summer. In September, **British International Airlines, Ltd.** is purchased and merged. The fleet in 1960-1961 includes three Viscount 702s, a Viscount 761, and a Viscount 776.

In 1962, government ownership is increased from 50% to 100% while competition is offered by newly formed **Trans-Arabian Airways, Ltd.** An chartered Avro 685 York C.1 freighter with three crew is destroyed as the result of a hard landing at Lahore, Pakistan, on April 6; there are no fatalities.

Orders are placed on August 8 for two de Havilland (HS) DH 106 Comet 4C jetliners and two DH 121 Trident 1Es. The next day, orders are placed for three BAC 1-11-205s. The first of the Comets arrives late in 1963.

Airline employment is 782 in 1964. The airline's tenth anniversary is celebrated in March, on the second day of which thrice-weekly Comet 4C service to London is inaugurated. As will remain company practice, no alcoholic beverages are served on international flights. A total of 116,000 passengers are flown on the year and revenues of \$10 million are earned. **Trans-Arabian Airways Kuwait, Ltd.**, together with its DC-6Bs, is acquired and absorbed in 1965. Lease of two Comet 4C from **British Overseas Airways Corporation (BOAC)** late in the year allows routes to be opened to Paris, Frankfurt, and Geneva.

The first of two Trident 1Es to be delivered in 1966 arrives on March 19, followed by the second in May. Both enter service on regional routes and then fly to Amman, Baghdad, Cairo, Karachi, and Damascus. On June 8, the company sells its three BAC 1-11-301s before delivery to **British Eagle International Airways, Ltd.**

Flight 32, the second Trident 1E with 11 crew and 72 passengers, crash-lands 3.5 mi. short of the runway at Kuwait City on June 30; although the aircraft must be written off, there are no fatalities.

One of the leased BOAC Comet 4Cs is purchased in December.

Bookings for the year reach 145,039.

The Six Day War of 1967 adversely affects traffic, despite the entry into service of two de Havilland DH Comet 4Cs and the retirement of the last Viscount and DC-6B. Orders remain outstanding for three B-707-320Cs.

Passenger boardings increase only 1.8% to 147,698. The employee population stands at 1,243.

Airline employment rises to 1,411 in 1968. Routes are extended to Athens and Aden. Following receipt of the *Kadhma* on November 14, two more Boeing 707-369Cs are delivered late in the year.

Passenger traffic soars 41% to 207,761 and total revenues top \$17.1 million.

The new Boeings replace the three Comets in January 1969. Within the month, a new IBM 360/20 computer system comes on line. In April, a multistop frequency is opened to Rome.

A total of 231,383 passengers are carried on the year.

The workforce is increased 3.7% in 1970 to 1,589. Operations to Baghdad, suspended in 1967, are restarted in May. New offices are opened in Houston and Toronto and a weekly mixed passenger and cargo service is launched by B-707-369Cs over a route London-Bombay-Abadan.

Freight increases 32% and passenger boardings accelerate 26.6% to 315,236.

Two additional B-707-369Cs are placed into operation during 1971, replacing the two Trident 1Es. A route is inaugurated to Taiz, North Yemen.

Enplanements climb to 335,000.

The employee population stands at 1,703 in 1972. Five B-707-369Cs are in service and in-flight movies and stereo entertainment are introduced on board. Muscat is added to the route network.

Cargo traffic rises 13.1% and passenger traffic jumps 14.2% to 391,000.

Freight increases 4.3% and bookings climb 16.1% to 454,000 in 1973.

Airline employment is now 1,822. In 1974, two additional B-707-369Cs are placed in service (bringing the total to seven) as the carrier enjoys a seventh consecutive profitable year.

Enplanements are up 14.16% to 519,894 while freight rises 15% to 19.5 million FTKs.

The workforce stands at 1,994 in 1975. Frequencies are increased on the Bombay run and new service is inaugurated to Paris via Prague. A new policy now prohibits the serving of alcoholic drinks to passengers on any flights, domestic or international.

Passenger boardings climb 19% to 667,101 and freight jumps 27.3%.

In 1976-1977, a second nonstop London frequency is added. New routes are extended from Kuwait to Cairo, Tripoli, Casablanca, and Tunis; Kuwait to Bahrain and Dubai; Kuwait to Jeddah and Khartoum; and Kuwait to Bahrain and Ras Al Kheimah. Orders are placed for three B-747-200s and a B-737-200.

On July 8 of the latter year, six armed Popular Front for the Liberation of Palestine (PFLP) hijackers seize a B-707-369C on a Beirut-Kuwait flight, landing at the latter destination. There, 18 hostages are released, followed by 28 more the next morning just before the plane departs. In the air, group leader Abu Sayed is overpowered by two of his colleagues, who have had a change of heart, and three hostages. The Boeing is directed to land at Damascus, where all of the remaining prisoners are freed as the skyjacks surrender.

The first wide-bodied B-747-269BC is delivered on July 28, 1978; christened *Al Sabahiya*, this new aircraft makes Kuwait the 50th operator to buy Jumbojets from Boeing and begins service to London in August; at about the same time, the B-737-269 also arrives. The second Jumbojet combi, the *Al Jaberiya*, arrives on August 17.

Chairman/Managing Director Ghassan Al-Nisf's company now employs a workforce of 2,412. A total of 834,000 passengers are carried on the year.

A computerized reservations system is introduced in 1979. An extensive effort is undertaken to improve service standards, staff support and training, and advertising. One additional B-747-269BC, the *Al Mubarakiya*, enters operations and orders are placed for three B-727-200s.

Passenger boardings grow 13.6% to 965,000.

On July 24, 1980, four gunmen hijack the B-737-269 with 80 aboard en route from Beirut to Kuwait, demanding repayment of a large sum they claim is owed to them by a Kuwaiti businessman. They later free 37 women and children before forcing the plane to fly to Iran, where the rest of the passengers are released. Kuwait authorities indicate the demands of the pirates will be met when they return and free the crewmembers still held hostage. The aircraft returns the next day and after the crew escapes, the gunmen surrender.

Transatlantic B-747-269BC service to New York begins in December as an extension of the London route.

Cargo advances 18.2% to 71.56 million FTKs, while passenger enplanements accelerate 11.5% to pass the million mark for the first time (1,076,214). The workforce is unchanged and stands at 5,342 employees.

Airline employment is increased by 4.7% in 1981 to 6,198. The B-727-269As enter service and orders are placed for five Airbus Indus-

trie A310-222s and A300C4-203 combi airliners. Following the November signing of a joint service agreement with **Philippine Airlines**, long-haul flights are inaugurated to Manila via Bangkok employing KAC aircraft.

Freight soars 50.67% to 107.79 million FTKs, while passenger boardings jump 16.4% to 1,078,000. Total revenues are \$323.5 million.

Airline employment is 6,531 in **1982** and a fourth B-747-269BC, the *Al Salmiya*, arrives on January 20. On February 22, 12 fundamentalist gunmen, led by well-known hijacker "Hamzeh," hold 105 passengers captive for 9 hours aboard Flight 538, a B-707-369C that was diverted to Beirut from a Kuwait to Tripoli service, and demand the return of their leader, Imam Moussa Sadr, who disappeared in Libya in 1978. The pirates will surrender after being informed that the UN will mount an inquiry into the matter.

Service is launched to Seoul while domestically, air taxi operations to and from the oil fields and refineries are started with two Hawker Siddeley HS 125 executive jets.

Cargo is up 7.3% to 115.67 million FTKs and passenger traffic rises 16.6% to 1,461,000. Revenues rise 16% to \$382.6 million.

The workforce in **1983** grows 2.3% to 6,700. Three A310-222s are delivered. Police successfully dismantle a bomb at the company's Baghdad office on March 5. A B-707-369C grazes a **Pan American World Airways (1)** jetliner as both are waiting to take off from Frankfurt on March 12; extensive damage is caused to both aircraft, but no injuries are reported. Later in the year, a new technical complex is opened and routes are extended to Algiers and Riyadh.

Freight climbs 15.5% to 133.6 million FTKs and passenger bookings jump 12.1% to 1,640,969. For the 18-month period from January 1982 to June 1983, the carrier reports total revenues of \$632.3 million, an operating loss of \$12.7 million, and a net profit of \$2 million.

The employee population is 6,672 in **1984**. Service is inaugurated to Vienna and on April 12 the first A300C4-203 makes its maiden flight. Orders are placed for three B-767-269ERs as Boeing agrees to purchase the Airbus products ordered earlier as a way of gaining a marketing foothold in the region. Three A310-222s enter service, but are destined for Seattle.

En route from Kuwait to Karachi via Dubai on December 4, Flight 221, an A310-222 with 161 passengers, is captured just after its takeoff from the intermediate point by terrorists, who divert it to Tehran. While demanding the release of 17 prisoners held in Kuwait, the pirates release a third of the hostages, but kill an American passenger and throw his body out onto the runway.

The next day, the hijackers plant explosives around the Airbus and announce their intention to blow up the aircraft if demands are not met promptly. Thirty additional hostages are released, but another American is killed and his body, like that of the U.S. citizen murdered the day before, is thrown off the aircraft.

Although all but seven hostages are released, negotiations are stalemated for four more days. Late on December 8, the pirates ask that a generator be attached to the aircraft and that two cleaning persons be sent aboard to clean up the mess. Two brave Iranian security men, disguised as cleaners, come aboard the aircraft and capture the pirates.

Freight jumps 26.1% to 164.56 million FTKs, but passenger enplanements dip 2.4% to 1,497,340. On revenues of \$419.9 million, a \$735,000 net profit is reported—but so too is a \$14.8-million operating loss.

The workforce dips 9.2% in **1985** to 6,670 as the first A300C4-203s join the fleet. Cost-reduction programs are instituted and service is suspended to Beirut, Baghdad, and Tehran. In May, three B-707-369Cs are sold to **Southern Air Transport**.

Considered security risks, all Lebanese citizens are barred from traveling on the airline as of July 27. The last B-707-369C is retired.

Passenger boardings drop 3.3% to 1,449,000 and cargo declines 3.3% to 159.13 million FTKs. The operating loss deepens to \$35.4 million on total revenues of \$450 million; the net profit drops to \$599.

The payroll is cut again in **1986** to 6,127. Enplanements rise a slight 1.1% to 1,465,726; however, freight is up substantially, by 35.8% to

222.69 million FTKs. Revenues are off 1.6% to \$500.19 million, but costs are also down by 1.6% to \$499.64 million. As a result, operating profit improves to \$544,000.

In January **1987**, a code-sharing agreement is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** covering flights between Kuwait and Madrid.

Enplanements through November are up 3.1% to 1,402,658. The full year's losses total \$26.7 million (operating) and \$838,000 (net).

The small-nation's flag carrier suffers a poor operational and fiscal **1988**.

The most significant incident of the year is the hijacking of Flight 422, the B-747-269B *Al Jaberiya* with 112 passengers en route from Bangkok to Kuwait, on April 5. Pirates force it to land at Mashhad, Iran, where they demand the release of 17 people imprisoned in Kuwait for terrorist attacks against the U.S. and French embassies 5 years earlier. The demands are repeated the next day as 32 hostages are released. After a third day on the ground at Tehran, during which time the gunmen are provided additional arms and more terrorists come aboard, the aircraft departs for Beirut. There, however, the plane is denied permission to land, with Syrian troops blocking the approach roads to the airport and firing warning shots at the Jumbojet as it circles overhead. The odyssey continues on to Cyprus where, after an initial refusal, the Jumbojet is allowed to land.

During a long stalemate with Cypriot officials at Larnaca over whether or not the Boeing will be refueled, the hijackers beat, shoot, and kill one of their hostages on April 9. They dump the victim's body onto the runway, rejecting in the process a Cypriot offer to let them all leave Cyprus if the passengers are freed. The terrorists threaten to kill all of their hostages on April 10; however, PLO negotiators persuade them to hold off on their threat of a "massacre." Impatient, the pirates murder a second hostage the next day and throw his body off the plane as well, halting negotiations.

On April 12, 12 hostages are freed. After PLO head Yasir Arafat is able to negotiate landing permission from Algeria, the Jumbojet takes off for that North African country, putting down at Houari Boumedienne Airport. The next day, Algerian officials begin intensive negotiations with the hijackers, visiting the aircraft on three occasions.

On April 14, one more hostage is released, reducing the number held to 31, and a doctor is allowed aboard to examine the captives, whom he pronounces to be in "fair" condition. Twenty-four hours later, two more hostages are released to deliver a plea for their captors' main demand, the release of the Kuwaiti prisoners. When the pirates begin talking tough again on April 16, negotiations officially break down and stalemate sets in.

Unbeknown to either Kuwait or the media, which is providing intense coverage, talks continue behind the scenes, however, and on April 19 the hostages are released and the gunmen are granted safe passage to Syria, from whence they return to Beirut. Kuwait has given in and commuted the death sentences of 3 of the 17 persons they hold.

Almost unnoticed because of the hostage drama, pooled flights begin during the month with **Gulf Air Company, G.S.C.** between Kuwait and the other Gulf nations.

Passenger boardings for the year as a whole decline 0.8% to 1,485,750 and freight is off 4.3% to 234.21 million FTKs. Revenues also drop, by 5.8%, to \$411.1 million. The operating loss almost doubles, to \$51.1 million; however, a net gain of \$11.6 million is generated.

Company employment is cut by 5.1% in **1989** to 5,339. In April, company officials undertake discussions with leaders from **Egyptair, S.A.E., Iraqi Airways**, and **Royal Jordanian Airlines** to consider the possibilities of forming an **Air Afrique, S.A.**-type airline consortium; the talks will lead nowhere.

Still, customer bookings move ahead by 5.3% to 1,640,556 and cargo rises 4.6% to 233.43 million FTKs.

In May **1990**, plans are discussed with **Egyptair, S.A.E.** concerning the establishment of a joint charter subsidiary with which to begin non-scheduled services to Europe. On August 2, Kuwait is invaded by Iraq.

Occupation forces occupy the airline's headquarters and seize 13 aircraft on the ground: 3 A300C4-620s, 5 A310-222s, 2 B-767-269ERs, 1 B-727-269A, and 2 BAe (HS) 125-700B bizjets; all are flown to Baghdad by **Iraqi Airways** crews. Two airline employees are killed and four taken hostage during the invasion, while two Gulfstream G-1159A Gulfstream III bizjets are destroyed. One of the A300C4-620s had been wet-leased to **Egyptair, S.A.E.** and despite its adornment in the colors of the Cairo-based flag carrier, it, too, is transferred to Iraq.

On vacation in France, Chairman/CEO Ahmed Hamad Al-Mishari rushes to London and begins to establish what will later be called by those who have forgotten their World War II history "The first airline to operate in exile." The first step is to quickly renegotiate all bilateral agreements that require Kuwait City to be flight origin or termination points.

In September, the Iraqis announce the dissolution of KAC, even as executives who have escaped set up a smuggling route in Saudi Arabia to funnel cash back across the border to besieged employees needing to purchase food. **Saudia (Saudi Arabian Airlines)** grants permission for KAC personnel to charge fuel on its account.

Just 80 days after the invasion, KAC begins scheduled exile operations from a temporary hub at Cairo on October 18 employing the four B-747-269BCs, three B-727-269As, and one B-767-269ER that were out of the country in August. Routes served include those to Jeddah, Bahrain, and Dubai. Meanwhile, the airline begins an extensive charter program of flying Allied troops into Saudi Arabia; in Operation Granby, it will concentrate on the airlift of British troops from Germany to the Gulf. Temporarily based in Bahrain, the Kuwaiti Fortune Promoseven agency undertakes a large advertising campaign, including extensive use of the Cable News Network, to thank the world for its support of the nation and the carrier. Scheduled service from Cairo to London, Bombay, and New York begins on November 6.

KAC flights from Cairo cease on January 16, 1991. Air raids on Baghdad, carried out as part of Operation Desert Storm on February 15, bring about the destruction on the ground of two B-767-269ERs and one each BAe (HS) 125-700B and A300C4-620 taken to the Iraqi capital. The remainder of the captive jetliners are flown by **Iraqi Airways** crews to Iran, where **Iran Air** maintains them at Tehran. On February 26, the company obtains a judgment in the High Court of London against **Iraqi Airways** involving the 15 stolen aircraft; the London law firm of Clyde & Co. wins the \$489,455,380 assessment.

Following the successful February 26 removal of Iraq from Kuwait via Operation Desert Storm, Chairman Al-Mishari is aboard the first KAC aircraft, a B-727-269A, to return to Kuwait Airport, on March 7. There is much damage at that location: ATC has been knocked out; the control towers are damaged and partially stripped of equipment; there is no fuel; the terminal buildings are wrecked; ground equipment is missing; the office building is heavily damaged as is the computer center, from which the mainframe computer has been removed; and the flight kitchen is out of order.

Thanks initially to USMC-supplied ATC, a full schedule comes into effect on April 2 with Kuwait employing its temporary hub at Bahrain to link Mideast destinations with its prewar international services to Cairo, New York, London, Frankfurt, Rome, and Bombay. Bahrain will remain the temporary company hub until airport facilities can be rebuilt in Kuwait.

Airline officials report that the war's impact upon KAC has resulted in a minimum of \$1.2 billion in losses. All of the aircraft taken by Iraq, except for six Airbuses interned in Iran, are destroyed by the Allied offensive; insurance provides \$392 million for the lost aircraft and \$300 for the six planes, which is applied to their reacquisition from Iran. During the spring, the carrier signs a support contract with **British Airways, Ltd. (2)**, under terms of which the U.K. giant will provide marketing, training, flight, ground operations, and security support and training.

Simultaneously, Kuwait orders three B-747-469Cs and four A340-300s and is cohosted on the **Aer Lingus Irish Airlines, Ltd.** Astral reservations system. New tickets are printed to replace those stolen by

the Iraqi invading forces and free transportation is offered to enable those Kuwaitis who fled the country after the invasion to return. In addition, charter flights to Colombo and Seoul are laid on to bring back some of the foreign laborers who departed during the occupation. A Jumbojet is leased to **Garuda Indonesia** in October.

The carrier continues rebuilding in 1992 as Alexandria and Lahore are added to the route network. On April 1, plans are announced for the creation, with **Egyptair, S.A.E.**, of a fifty-fifty joint venture cargo and charter subsidiary, **Shorouk Air**, to be based at Cairo with a tentative start-up date of September.

Following lengthy negotiations, Iran, in June, returns five A310-222s stolen by Iraq and flown into Iranian internment during the previous year's military operations. The A300C4-620 painted in **Egyptair, S.A.E.** livery follows in September. All are traded in to Airbus Industrie as partial payment for the new A340s.

During the summer, two Lockheed L-1011s and a DC-10-30 are wet-leased from British Airways to help increase summer capacity. Markets now also served include Amsterdam, Athens, Abu Dhabi, Bahrain, Bangkok, Bombay, Cairo, Colombo, Dhaka, Damascus, Delhi, Dhahran, Doha, Dubai, Frankfurt, Geneva, Istanbul, Jeddah, Karachi, Larnaca, London (LHR), Luxor, Madrid, Manila, Muscat, Paris, Riyadh, Rome, and Tehran.

Shorouk Air is inaugurated on schedule and the main 43,050-sq.-ft. hangar is rebuilt at Kuwait City by year's end. Enplanements for the year are 553,450 and a \$30-million net profit is generated.

In 1993, Chairman al-Mishari and Director General Ahmad al-Zabin oversee a workforce of 4,420 and a fleet of 4 B-747-269Cs, 3 each A300C4-620s, A310-308s, A320-212s, B-727-269As, 2 B-707-327Cs chartered from the Egyptian carrier **Transmed Airlines, Ltd.**, 1 B-707-331C leased from the same source, and 1 B-767-269ER. Two A320-212s are operated on the **Shorouk Air** joint venture with **Egyptair, S.A.E.** The airline's color scheme is slightly altered and new routes are inaugurated to Aleppo, Beirut, Jakarta, Shiraz, and Singapore.

During the third quarter, the company acquires a 20% interest in the new Indian domestic airline **Jet Airways, Ltd.** At the same time, scheduled service is inaugurated from Kuwait City to Singapore and Jakarta. When the U.S. lifts its ban on Syria in December, Kuwait, as payback for Syrian support during the Gulf War, pledges to give Damascus its B-727-269A fleet.

Passenger boardings ascend 11.2% to 559,712 and freight swells 21.3% to 106.69 million FTKs. The net gain slides to \$18 million.

During the first quarter of 1994, the B-707-331C is returned to **Transmed Airlines, Ltd.** and all three B-727-269As are transferred to **Syrianair**. Following the outbreak of pneumonic plague at Surat, India, in mid-September, the airline suspends flights to India. These are not resumed until early October. The four company employees seized by Iraqi forces on August 2, 1990 remain prisoners and are remembered by yellow ribbons painted on every Kuwaiti airliner. Plans are made for the inauguration of service to Copenhagen, Chicago, and Trivandrum during the new year, along with the entry into service of the new A340-313s.

Enplanements through August total 1,242,952 and the last of 4 new A300B4-605Rs is received.

Airline employment stands at 5,000 in 1995 and beginning in March, four A340-313s are delivered. The premier units begin flying company roundtrip routes from Kuwait City to New York via Frankfurt and London, and from Kuwait City to Manila via Bombay and Bangkok.

During the spring, **Polynesian Airlines, Ltd.** replaces its **Air Canada, Ltd.** Boeing with a B-767-269 chartered from KAC. Part of the cost and a shared route are born by **Royal Tongan Airlines, Ltd.**, and, as a result, the aircraft also wears that company's markings as well.

In June, the month in which the final A340-313 arrives, **Cyprus Airways, Ltd.** enters into a block-space agreement covering KAC flights between Kuwait and Larnaca. **Air India, Ltd.** in November begins joint service aboard KAC jetliners flying between Kuwait and Trivandrum. The two carriers also begin cooperating on each other's thrice-weekly frequencies from Kuwait to Madras.

With the second pair of A340-313s in hand, the carrier, on July 1, launches twice-weekly roundtrips from Kuwait City to Chicago via Amsterdam. Later in the month, two B-747-269Bs are sold to **American International Airways**.

Traffic figures are again reported through August and show passenger boardings up 4% to 1,294,741. Cargo is also up, by 19.5%, to 221.36 million FTKs. Flights are also started to Copenhagen and Trivandrum during the fall.

The workforce is cut 4.8% in 1996 to 4,760. Service is initiated in April to Nairobi and Johannesburg. Full year figures reveal customer bookings of 2,130,039.

There is no change in the employee population during 1997. Destinations visited now include Abu Dhabi, Alexandria, Amsterdam, Athens, Bahrain, Bangkok, Bombay, Cairo, Colombo, Dakar, Damascus, New Delhi, Dubai, Istanbul, Jeddah, Johannesburg, Karachi, London, Madrid, Manila, Munich, Nairobi, New York, Paris, Rome, Singapore, and Tehran.

The third near miss over India in two weeks occurs on January 11. An **Air Lanka, Ltd.** A320-211, on approach to Bombay from Trivandrum, is mistakenly authorized by an air traffic controller to land at that city's airport at the same time he has granted permission to land to a Kuwaiti B-747-269BC; a collision is avoided by several hundred feet.

Traffic figures are available only for the first two months of the year. These show enplanements down 0.5% to 332,096, while freight inches up 0.8% to 119.4 million FTKs.

The first scheduled flight in seven years is inaugurated on July 9 between Kuwait City and Amman, Jordan; this resumed service is fully booked within an hour of its initial announcement.

In March 1998, KAC signs a \$282-million syndicated loan accord with a Gulf Arab consortium led by the National Bank of Kuwait to finance the purchase of the two new B-777s. The carrier's first B-777-269 IGW is delivered on April 1.

A new 14-million dinar headquarters is opened in May and the second B-777-269 IGW arrives in early June.

Some 50 minutes into a flight from Kuwait City to Jidda on June 24, an A310-308, with 253 passengers, receives a bomb threat, relayed from the national airport. The aircraft returns to the capital where it is searched. No bombs are found, no injuries are reported, no claims of responsibility are made.

In an interview with Reuters, Ltd. on June 28, Chairman al-Meshari reveals that Kuwait plans to begin, within months, the phased privatization of KAC, which now has some \$2 billion in net assets and \$880 million in debt. The announcement is based on the Kuwait cabinet's June 21 approval of a draft law transforming KAC into a shareholder company, a law that is sent to Parliament for approval.

A strategic marketing agreement is signed with **Trans World Airlines (TWA)** on December 16. Under its terms, the two will, during the upcoming spring, link their frequent flyer programs. Additionally, KAC will place its "KU" code on TWA services to New York (JFK) from Los Angeles (LAX), San Francisco, St. Louis, and Washington, D.C. (DCA).

Enplanements during the 12 months total 1.57 million, while 241.1 million FTKs are operated.

Airline employment at the beginning of 1999 stands at 4,760.

While on approach to London (LHR) from Kuwait on February 10, the crew of an MD-83, being operated for the government, is forced to extend the plane's landing gear manually. Although the gear doors strike runway lights during the landing, the aircraft remains under control until coming to a stop. No injuries are reported.

The British House of Lords on March 15, rules that the airline is entitled to recover \$150 million (plus nine-years interest on same) from war risk insurers for losses taken during the August 1990 Kuwait invasion. Kuwait has already received over \$300 million in insurance payments.

Officials from KAC meet with their counterparts from **Emirates Airlines, Gulf Air Company G.S.C., Oman Airways, Qatar Airways, and Saudi Arabian Airlines** at Kuwait City on May 15 to plan a united

body to compete against the growing number of major world airline alliances. The CEOs, who also agree to meet quarterly, discuss ways to coordinate and develop additional revenues, cut expenses, and invest jointly in support services.

Revenues total \$640.25 million, but expenses are \$880.77 million. The operating loss totals \$240.51 million.

On June 1, 2000, the code-sharing agreement with **Trans World Airlines** is expanded to cover services from Kuwait to Frankfurt and Amsterdam, from Amsterdam to New York (JFK), and from Frankfurt to New York (JFK) and Chicago (ORD).

A dual-designator pact is signed with **Philippine Airlines** on June 28 covering services between Manila and Bangkok.

Flight 165, an A300-605R departing Kuwait International Airport on a service to Paris (CDG) via Rome on November 13 aborts its takeoff after bursting several tires. As the airport's other runway is under repair, the accident causes the airport to be shut down for several hours while the Airbus is moved.

KUWAIT NATIONAL AIRWAYS CORPORATION. *See* KUWAIT AIRWAYS (KUWAIT AIRWAYS CORPORATION)

KYOKUSHIN AIRWAYS COMPANY, LTD.: Nigata, Japan; <http://www.sado.co.jp/kyokusin/default.htm>; Year Founded 1995. Kyokushin is established during the summer of 1995 to offer scheduled third-level services between the northwestern coastal community of Nigata, at the mouth of the nation's largest river, and the island of Sado. Dressed in a livery featuring *toki*, the Japanese crested ibis, a new Pilatus Britten-Norman PBN-2 Islanders is delivered in August, allowing unscheduled frequencies to commence on September 1.

Upon receipt of its Approval for Commuter Operation from the Japanese Civil Aviation Bureau, the company launches scheduled flights in the summer of 1996, which continue.

KYRGYZSTAN AIRLINES (KYRGYSTAN ABA YOLDORU NATIONAL AIRLINE): 720026 Bishkek, Manas Airport, Bishkek, 720062, Kyrgystan Republic; Phone 7 (3312) 25 77 55; Fax 7 (3312) 25 77 55; <http://rz.uni-frankfurt.de/~puersuen/twakqa.htm>; Code K2; Year Founded 1993. The former **Aeroflot Soviet Airlines** Kirghizi directorate is reformed at Manas Airport in 1993 into a joint stock company at Manas International Airport, which is located 35 km. N of Bishkek. The new parent organization is Bishkek Airenenterprise, with Osh and Karakol air enterprises as subsidiaries. The company also acts as the country's Civil Aviation Department and assumes the old Aeroflot responsibility for general aviation, airports, and air traffic control. Shareholding is divided between the government (90.05%) and the carrier's employees (9.95%); constant capitalization is put at 982 million som (\$33 million). Timur Muratov is chairman, with Oroskul B. Kutubaev as president.

Plans are made to separate from **Aeroflot Russian International Airlines (ARIA)** in the near future; however, current code-sharing and marketing arrangements are maintained along with present markets. Operations are undertaken with a fleet of 10 Tupolev Tu-154s, 10 Tu-134s, 20 Yakovlev Yak-40s, and 15 Antonov An-24s/-26s.

These service a nine-stop domestic route and two "foreign" points, the Russian communities of Moscow and Ekaterinburg. Charter flights are undertaken to India, China, Iran, Turkey, and Pakistan. After the nation abandons the ruble in May and establishes its own currency, company growth is slowed by the necessity of paying for all imports in hard currency.

Operations continue apace in 1994, as does the Aeroflot connection. For the first time, the company reports its traffic figures. Through November, it flies a total of 22,132 and 4.74 million FTKs.

The 19 aircraft fleet reports to ICAO in 1995 that it has flown 375,325 passengers through July and operated 10.79 million FTKs.

Airline employment stands at 4,170 in 1996. During the spring, flight crews receive advanced training at Istanbul from instructors employed

by **THY Turkish Airlines (Turk Hava Yollari, A.O.)**. Their additional education will allow the introduction of new scheduled services into Western Europe and the Mideast.

The first Western scheduled service begins during the summer with roundtrips to Frankfurt, Cologne, and Hanover. Istanbul also joins the route network, along with Dubai and Mashhad. New charter services are opened to Seoul, Beijing, Karachi, Aleppo, Warsaw, and Bangkok. To handle some of the anticipated traffic, offices are opened at Frankfurt and Istanbul.

Full year figures reported to ICAO show enplanements of 520,347. Cargo rises to 21.9 million FTKs.

The fleet in 1997 comprises 11 Yak-40s, 14 Tu-154s, 6 Tu-134s, and 1 each An-26, An-28, and Il-76TD. Destinations visited include Almaty, Baku, Ekaterinburg, Frankfurt, Irkutsk, Istanbul, Kalingrad, Karakol, Khabarovsk, Krasnoyarsk, Moscow, Novosibirsk, Omsk, Osh, Samara, St. Petersburg, Tashkent, and Ufa.

In February, the governments of Kyrgyzstan and France sign an agreement under which the latter will make a 13-year FFr 25-million loan for the reconstruction of the airport at Osh.

During July, the national government receives a \$45-million loan from Russia. On August 22, the government hands over \$16 million of the Russian funding to the national carrier, which will employ it to modernize its fleet. An Airbus A320 will be obtained under a lease-purchase deal with its manufacturer, while a Tu-154B will be secured from Russian sources.

In October, a strategic alliance is entered into with **Aeroflot Russian International Airlines (ARIA)**. Under its terms, the two pledge to co-operate in the areas of maintenance, marketing, and ticketing and to code-share on selected scheduled flights.

Regularly scheduled twice-weekly Tu-154B roundtrips are initiated on December 20 between Bishkek and Kuala Lumpur, Malaysia.

Passenger boardings plunge 19.6% on the year to 382,589, while freight falls another 26.3% to 14.15 million FTKs. Losses total 110 million som.

A company Tu-154B transports Kyrgyz President Askar Akayev to Beijing for a state visit on April 26-30. During the meetings, arrangements are made for the inauguration of regular airline service between the CIS republic and China. Regularly scheduled Tu-154B return service is inaugurated on May 16 from Bishkek to Beijing via Urumqi.

Negotiations are made with Airbus Industrie during the spring for the lease of an Airbus Industrie A320-231 and two A319-100s. The A320, previously operated by **Trans Asia Airways, Ltd.** of Taiwan and repainted in company livery by Lufthansa Technik, is delivered on June 29; the smaller pair will follow in 2002.

With approval of the government and backing from the State Property Fund, the airline begins the work necessary for a major upgrade to Manas International Airport. Bids are put out and the major contractor chosen is Germany's HOKTIF Construction Company, GmbH. The estimated DM 171.6-million cost will be financed with a ¥ 5.454-billion loan from Japan's Bank for International Cooperation (JBIC) and the Kyrgyz government, which allocates \$6.6 million to the project.

President Akayev signs a special decree on September 16 appointing Jumabek Ibraimov chairman of the state carrier. Timur Muratov, the former chairman, becomes president.

The Russian financial crisis that begins during the summer has negative impact on Kyrgyzstan and its national airline and service deteriorates. Seven-times-daily Yak-40 roundtrips between Bishkek and Osh are, for example, often reduced to one Tu-154 service. Flights to Karakol are reduced to weekly, with four-times-a-week service to Cholpon-Ata.

Toward year's end, President Muratov informs a news conference that the carrier will be privatized in the near future.

Customer bookings surge 45.4% to 262,000, while cargo traffic skyrockets 71.5% to 8.95 million FTKs. Expenditures exceed revenues by 41 million som (\$1.4 million).

Expansion and improvement to Manas International Airport continues in 1999. When joint venture opportunities for services at the new airport

are opened, the Italian financial concern ITI, S.p.A., in April, becomes the first to announce that it will participate. The same month, the Malaysian investment concern Safuan signs a contract with the national airline creating a joint international air company. Under terms of the arrangement, into which Safuan will pour \$4 million in capitalization in return for a controlling interest, the Malaysians will provide a pair of A310-300s with which to launch new routes from Kyrgyzstan to the Asian cities of Bangkok, Kuala Lumpur, Tokyo, and Seoul.

With his country suffering from the continuing regional economic crisis, new Prime Minister Amageldy Muraliyev announces on June 25 that his government will sell a controlling stake in the airline before the end of the year. At the same time, the A320-231 is returned to its Irish lessor and the A319 order is cancelled.

A new international route is inaugurated at the beginning of August linking Bishkek with Ancona, Italy, via Baku.

Enplanements during the 12 months total 156,000 and 3.07 million FTKs are operated

Airline employment totals 4,170 at the beginning of 2000. The fleet now includes 1 Ilyushin Il076TD, 2 An-26Bs, 6 Tu-134A-3s, 12 Tu-154Bs, 2 Tu-154Ms, and 24 Yak-40s. A number of Mi-8 and Mi-2 helicopters are available, although many are out of service.

Destinations visited include Baku, Bathen, Beijing, Birmingham, Bombay, Chardzhou, Cholpon-Ata, Delhi, Dushanbe, Ekaterinburg, Frankfurt, Hanover, Irkutsk, Istanbul, Jalal-Abad, Kaliningrad, Karachi, Karakol, Kazarman, Khabarovsk, Krasnojarsk, Kuala Lumpur, Kyzyl-Kiya, London (LHR), Moscow, Novosibirsk, Tolmachevo, Omsk, Orenburg, Osh, Rostov, Samara, St. Petersburg, Sharjah, Tashkent, Tbilisi, Ulanbator, and Urumqi.

It is reported in January that the national airline has saved an estimated DM 9 million in loans for the Manas International Airport expansion project as the result of the efficient completion of the first phase by HOKTIF Construction Company, GmbH. Pending approval from the JBIC, plans are made to employ the unexpended funds to construct a second telescopic boarding passage for domestic flights, perform needed repairs to the terminal's ceiling, and replace lighting facilities and fix technical facilities throughout the airport.

Chairman Muratov reveals in July that his board of directors has come to terms with ITI, S.p.A. on the establishment of a new joint venture concern to be called Manas Management Company. With a seven-year, \$10.5-million loan from Mediocredito Centrale in Rome, the partners will create a turnkey air cargo and catering complex, built to IATA standards, at the expanded Manas International Airport. Construction will be undertaken by ITI's civil engineering and construction division.

Sunday Tu-154B roundtrips to Birmingham, England, are suspended between August 13 and 27.

Malcolm Ginsberg's *Air & Business Travel News* reports on October 8 that Kyrgyzstan Airlines will turn over management control to London, England-based Eastlink Lanker. The arrangement calls for the UK firm to acquire a 77% stake in the former Kyrgyz Division of **Aeroflot Soviet Airlines**, not through privatization, but through a technical pact under terms of which the state property fund retains its shares, but loses its voting rights. Shareholding in the nation's airports will also come as part of the deal.

KYRNAIR, S.A.: Aeroporto Campo dell'Oro, Ajaccio, Corsica, F-20090, France; Phone 33 (4) 95 10 60 80; Fax 33 95 46 81 01; Code KH; Year Founded 1986. Originally established as an air taxi at Aeroporto Campo dell'Oro at Ajaccio, Corsica, in 1986, Krynair is upgraded in 1990 to offer a scheduled service to Toulon. President J. P. Thouemen inaugurates flights with 1 each Cessna 402, Pilatus- Britten-Norman PBN-2 Islander, and Embraer EMB-110P2 Bandeirante.

Another Brazilian turboprop is added in 1992. Operations continue in 1993-1999. During these years, two more Bandeirantes are acquired and nightly all-cargo flights are added.

Scheduled destinations visited in 2000 include Ajaccio, Bastia, and Toulon.

LA COSTENA AIRLINES, S.A.: Aeropuerto Internacional Augusto C. Sandino, Managua, Nicaragua; Year Founded 1993. Bay of Pigs veteran Don Alfredo Caballero establishes La Costena at Managua in the spring of 1993 to offer scheduled domestic passenger and cargo services. One of two Antonov An-32 turboprops belonging to the former **Aeronica, S.A.** Antonov An-32 is purchased; christened *Bilwi*, it begins revenue services from the international airport to Tegucigalpa, Honduras, as well as 10 domestic destinations.

Having also obtained the Cessna dealership for Central America, Chairman Caballero also places four C-208B Grand Caravans into service. The single-engine turboprops are primarily employed for freight flights.

Operations continue apace, with flights started to regional locations. With 150, employees, LCA is the largest airline employer in Nicaragua by 1997. The company suffers its first fatal accident in October when a Grand Caravan crashes into the mountains of northern Costa Rica. The *Bilwi* is withdrawn at the end of the year and replaced with a leased Shorts 360-300.

Although it is understood that operations continue thereafter, exact information is not available.

LA HELICOPTER: United States (1986–1989). The eighties' first new scheduled U.S. helicopter operator, L.A. Helicopter inaugurates revenue flights around Los Angeles during September 1986. The company's 3 Aerospatiale A350 Ecureuils transport a total of 1,200 passengers during the fourth quarter.

A fourth A350 is acquired in May 1987 and passenger boardings jump 15% to 1,380. Operations cease in 1989.

LA POSADA AIRWAYS: United States (1968). Owned by Tom Herring Sr., La Posada is set up at Laredo, Texas, in February 1968 to provide scheduled shuttle passenger and cargo flights from San Antonio, via McAllen, for travelers visiting the company's associate firm, the La Posada Hotel. Employing a Cessna 402 and a Britten-Norman BN-2 Islander, La Posada begins daily roundtrips on March 13. The traffic is not there and the service is ended with the year.

LA RONGE AVIATION SERVICES, LTD.: Hangar 6, John G. Diefenbaker Airport, Saskatoon, Saskatchewan, S7L 5X4, Canada; Phone (306) 425-2382; Fax (306) 933-0155; Year Founded 1960. Originally set up at La Ronge, Saskatchewan, in 1960, this nonscheduled operator undertakes charter and contract service flights in Western and Arctic Canada. Revenue services commence with a pair of de Havilland Canada DHC-2 Beavers.

The company continues to grow during the remainder of the decade, adding bases at Lynn Lake in Manitoba and Yellowknife in the Northwest Territories. A scheduled airline division, Air Sask Aviation, Ltd., is established and a former **Wardair Canada, Ltd.** DHC-6-100 Twin Otter, acquired in 1968, is assigned to it.

Flights continue apace during the 1970s and the fleet is upgraded with additional aircraft, including a pair of Beech 58 Barons, several DHC-3 Otters, and numerous Cessna 185s. A second DHC-6 arrives in 1978. During the next decade, three more Twin Otters are placed into service.

A variety of new aircraft join the fleet during the 1990s, including a British Aerospace BAe Jetstream 31 and a Beech 99. A Grumman Gulfstream I operated during the 1980s is removed.

After almost 40 years of competition, **Athabaska Airways, Ltd.** takes over Air Sask Aviation, Ltd., the airline division of La Ronge Aviation Services, Ltd., on August 15, 2000. The new entity, renamed **Transwest Air, Ltd.** on September 9, is based at Saskatoon, from which it operates 40 fixed- and three rotary-wing aircraft and employs over 300 people.

LA TUR. See **LATUR (LINEAS AEREAS LATUR, S.A. de C.V.)**

LAB (LINHAS AEREAS BRASILEIRAS, S.A.): Brazil (1944–1948). Following Air Force authorization for formation received in No-

vember 1943, this carrier is organized at Belem in 1944. The first shareholders meeting is held on February 9, 1945, at which capitalization is realized from public subscription. Six ex-military Douglas C-47s reconfigured to DC-3 civil standard are ordered in May and the company is officially registered on July 14. Scheduled services are started from Rio de Janeiro to Salvador on December 8.

In early 1946, flights begin to São Paulo, with route extensions to destinations in Minas Gerais. Despite the addition of a seventh DC-3, route frequencies and services deteriorate during the remainder of the year and through 1947.

A March 1948 request to the government for frequency increases is turned down and employees face nonpayment of wages. The company is reorganized on April 27 and a new board of directors is installed. The change cannot impact the failing financial or service situation and in August, the carrier's insurance provider seizes the DC-3s as collateral against a mounting debt. Unable to fly, LAB shuts its doors.

LAB (LINEAS AEREAS DEL BALSAS, S.A.). See **SAM (SERVICIOS AEREOS DE MICHOACAN, S.A.)**

LAB (LLOYD AERO BOLIVIANO, S.A.): Aeropuerto Jorge Wilstermann, Casila 132, Cochabamba, Bolivia; Phone 591 (42) 25903; Fax 591 (42) 50744; http://labairlines.bo.net; Code LB; Year Founded 1925. Led by E & W Hardt associate Wilhelm Kyllmann, a group of resident German businessmen in Cochabamba strive to establish a domestic air transport service in 1925. Following demonstration flights between Cochabamba and Sucre that begin on July 31, the men subscribe capital and purchase a Junkers F-13 that they christen *Goldweber* and present to the government during the 100th independence day celebration on August 6. Having stirred the interest of Bolivian parties as well, an airline under the present title is begun on September 15, with Kyllmann named first director general. The new entity is capitalized at 400,000 pesos and shareholding is divided between Bolivian citizens (75%) and the Cochabamba German community (25%). This is the second South American carrier with German interest created after the Colombian **SCADTA (Sociedad Colombo-Alemana de Transportes Aereos, S.A.).**

Agreement is reached with the government over routes within days. The officials promise an annual \$b 100,000 subsidy for five years and to return to the shareholders the F-13 *Goldweber*, which is rechristened *El Oriente*.

With Willy Neuenhoffen, a well-known Junkers pilot now also LAB air operations chief, at the controls, the *El Oriente* begins service to Santa Cruz de la Sierra on September 23–24. The time saved is extraordinary; the trip between the two points is reduced from fifteen days by mule to just two-and-a-half hours.

During the last quarter, the F-13 makes 118 flights over this main route. A total of 12,381 miles are covered in 128 hrs. 10 min. flying time and 631 passengers are carried. Meanwhile, on November 7, the carrier is recognized by government resolution and three more Junkers F-13s are ordered.

On January 25, 1926, the second F-13, *Beni*, is lost in a crash during the delivery flight; the replacement, *Beni II*, arrives in April. A proving flight is made to Trinidad on October 28, cutting the previous thirty-day mule and boat journey time down to two-and-a-half hours. Unhappily, the *Oriente* is lost in a Santa Cruz crash on November 6. The F-13 *Charcas* arrives from Peru in December.

The F-13 *Oriente II* arrives early in January 1927, allowing the pioneer to launch weekly service in April and May to Vallegrande, Santa Cruz, Todos Santos, and Trinidad. In response to a request for aid, **Junkers Luftverkehrs, A.G.** pilot Hermann Schroth—a future LAB director general—arrives during the summer to improve technical facilities. Following a government request for an extension of service, Kyllmann works out an arrangement with Junkers; the German company agrees to supply additional aircraft and spares in exchange for 1,000 shares in the infant airline.

Santa Cruz-Puerto Suarez flights commence in February 1928. The time required to travel between these two cities falls from ninety days by ox cart to three-and-a-half hours. Three more F-13s arrive on April 16, two of which are converted into floatplanes during May. In April, LAB's entire 6-plane F-13 fleet and their crews are lined up for a famous Cochabamba group photograph that will be employed as an illustration in most historical accounts of the airline written thereafter. On May 7, the F-13 *Charcas* is lost at Bacas. Floatplane services to Riberalta begin on June 3; landplane flights to Yucuiba start five days later.

Weekly F-13 service is started early in 1929 Cochabamba-Sucre and Cochabamba-La Paz via Oruso. The first Junkers W.34 is delivered on July 24; christened *Vanguardia*, it enters service on those routes opened at the start of the year.

The second W.34 arrives at Cochabamba in March 1930, where it is christened *Tunari* and placed in service. By summer, the route network includes 16 stops flown either weekly or every two weeks. Occasional contract flights are made to the mining centers at Potosi and Sucre. On July 30, LAB begins participation in the German European airmail service, flying the postal sacks to Puerto Suarez on the Brazilian border for a connection with the **Condor Syndikate, S.A.**

On July 3, 1931, Hermann Schroth makes the first of six reconnaissance flights over the Chaco area. On July 7, an F-13 makes the carrier's first all-cargo flight, taking mail and military supplies Cochabamba-Robore. Since 1925, LAB has made 4,486 flights, transporting 16,535 passengers over 581,255 miles. Negotiations begin with Junkers late in the year aimed at acquisition of several new Ju-52/3ms.

The one-millionth kilometer is flown on April 25, 1932. An F-13 proving flight is made La Paz-Tacna on May 23 preparatory to a proposed joint mail service with **Pan American-Grace Airways (PANAGRA)**. In association with the U.S. carrier, a joint service is started four days later from Lima to Tacna and hence over the border to La Paz. The operation is short-lived, being abandoned by LAB on June 27.

The carrier's first large airliner, the Ford 5-AT-113 *Cruz del Sur*, is delivered on September 26 during the same month in which the Bolivia-Paraguay Chaco War erupts for control of a huge jungle area known as Gran Chaco and often called "the Green Hell." Simultaneously, two Junkers W.33s are also added and christened *Mururata* and *Sajama*.

Quickly impressed into the service of the military, the *Cruz del Sur*, which has yet to receive a civil registration, is lost in a crash at Villa Montes on October 26. American pilot Donald Duke and German mechanic Willy Kettman are both killed. The Junkers Ju-52/3m originally sought in 1931 is delivered in November and is christened *Choroloque*.

Following the outbreak of the Chaco War, patriotic tin millionaire Senor Patino subscribes capital for the purchase of two Ju-52/3ms as a gift to the government. These, the first production models of their type, duly arrive in January 1933 and are accepted by Bolivian officials, who christen them *Juan del Valle* and *Huanuni*. The government, in turn, hands the transports over to LAB in exchange for a commitment of the carrier's resources to the war effort as a logistical air bridge. Four pilots, led by Hermann Schroth, immediately employ the new trimotors to begin supply and medical flights from Villa Montes to Fortin Munoz. Late in the year, the fleet is enhanced by the delivery of three Junkers A-50 Juniors that are christened *Acre*, *Piray*, and *Warnes*, and two Sikorsky S-38Bs, the *Mirihui* and *Nicholas Sudrez*.

The Chaco War and LAB's involvement therein continues during 1934. In January, a Sikorsky S-38B is delivered and is christened *Nicholas Suarez*. A maintenance hangar is completed at Cochabamba in October. The facility will exist into the next century and in 2001 the modified structure is employed as a training center.

A second B-38B, *Marihui*, joins the fleet in January 1935. The fourth Ju-52/3m is delivered in April and is christened *Bolivar*.

The Chaco War ends with Bolivian defeat in June. Since 1933, LAB's aerial involvement has consisted of 9,706 flights, during which 58,259 passengers have been carried plus 9.25-million kilograms of freight. Following the war, LAB is reconstituted with the government acquiring 48% interest. The *Marihui* is lost in a September 27 crash.

The Ju-52/3m *Choroloque* is lost between Cochabamba and La Paz on January 17, 1936. The charred wreck is found two days later near Challavinto (13 dead). Later in the year, a Ju-86 is ordered; it is delivered in March 1937 and is christened *Illimani*, thereafter being placed on the Cochabamba-La Paz and Santa Cruz de la Sierra routes. On March 13, the Junkers W.33 *Sajama* is destroyed in a crash. Another Ju-52/3m arrives from Germany during the summer and is named *Illampu*. During the fall and with assistance from **Deutsche Lufthansa, A.G.**, the fleet begins to receive radio and navigational aids. On December 15, the Ju-52/3m *Huanuni* is lost in a crash while en route from La Paz to Apolo.

LAB's fleet in 1938 comprises one Ju-86, three Ju-52/3ms, two W.34s, and three F-13s. In cooperation with **Deutsche Lufthansa** and the **Condor Syndikate**, company Ju-52/3ms on May 24 open the La Paz-Corumbá leg of the Lima-Frankfurt international route known as "La Recta." Three Ju-86K-7s (bomber configuration of the transport aircraft) arrive at La Paz in July. They will be employed for freight operations. Simultaneously, a Grumman G-21 Goose is acquired, christened *Moxoa*, and is placed in service in Beni Province.

Since the end of the Chaco War, LAB's books reveal in 1939 that the carrier has made 11,010 flights and transported 68,695 passengers. The unduplicated route network has been expanded to 2800 miles and reaches every manor community in Bolivia. The Junkers W.33 *Mururata* is lost on April 3 while the Junkers W.34 *Vanguardia* is destroyed in an April 12 crash. The three Ju-86K-7s are transferred to the Fuerza Aerea Boliviana (Bolivian Air Force) in early 1940. On November 4, the Ju-52/3m *Juan del Valle* crashes while en route from Santa Cruz to Corumbá.

As the result of inter-American agreements, LAB is nationalized on May 14, 1941, the government obtaining 64% shareholding. All German employees are summarily dismissed, including Director General Hermann Schroth. **Pan American-Grace Airways (PANAGRA)** personnel take over on June 3, an act ratified by government resolution on July 31, the same day the American giant obtains a loan from the U.S. Defense Supplies Corporation, American Republics Aviation Division, loan that will be employed to order three Lockheed L-18s. The funds will also allow airport improvement and the provision for additional ground equipment and radio gear.

On August 6, **Pan American-Grace Airways (PANAGRA)**, in exchange for 23% interest in LAB, receives a five-year management and operational contract. Immediately, it takes over flights on the main Cochabamba-Puerto Suarez trunk line, leaving the national carrier to operate as a feeder. PANAGRA flies the route at no cost to the Bolivian government, receiving its income for the service from a U.S. postal contract. The LAB fleet of 1 Ju-86, 1 W-34, 2 Ju-52/3ms, and the G-21 is strengthened by the arrival of the first pair of Lodestars in September. During the third quarter, the *Moxos* is sold to a U.S. operator and the Ju-86 *Illimani* to Fuerza Aerea Boliviana.

The W.34 *Tunari* is retired on April 22, 1942 and two more L-18s are placed in service. The Ju-52/3m *Bolivar* is sold in June 1943.

Under **Pan American-Grace Airways (PANAGRA)** direction, LAB begins direct weekly return service to Tarija on April 6, 1944. A month later, LAB's Cochabamba to Yacuiba roundtrip route is stretched to Santa Cruz. At the same time, the *Illampu* is sold. On September 18, receives the Inter-American Safety Council Award for 1943.

Six ex-USAAF C-47s (rebuilt to DC-3 civil standard) join the fleet in August 1945.

The **Pan American-Grace Airways (PANAGRA)** contract expires on August 2, 1946, but a second is negotiated on November 26. Technical support is retained under the new arrangement, but the American carrier's share shrinks to 19.8%. The Bolivian government's interest is also reduced, to 55.4%, with private interests assuming the remainder. One more DC-3 is placed in service and enplanements total 32,000.

Route development is undertaken during 1947-1948 with concentration on the reopening of service to all of the provincial capitals, particularly Trinidad. In 1948, capitalization is increased to \$b 50 million and orders are placed for additional aircraft. Additional DC-3s are received.

Valued for their cargo capacity, three Curtiss C-46As are delivered throughout 1949 and are placed in service to outlying areas.

The fleet is significantly strengthened in 1950 by the addition of 3 more C-46s, 1 DC-3, and the first of 11 Boeing B-17F/G bombers converted to civil standard.

A C-46 with two crew is damaged beyond repair at Cochabamba, Bolivia, on April 24; there are no fatalities.

A DC-3 is lost at La Paz on January 1, 1951; there is no information on casualties.

An agreement is reached with the Brazilian government allowing **Cruzeiro do Sul, S.A.** to extend westward from Corumba and to enjoy cabotage rights within Bolivia. LAB's fleet is increased by the addition of four DC-3s, a Consolidated C-87, and two B-17s. The last two C-46As are withdrawn. On July 29, four LAB officials and the wives of two are killed when a C-46 fails takeoff and crashes near Cochabamba.

One DC-3 and one more B-17 are placed in service during 1952 and on January 30, 1953, service is started from Cochabamba to Santa Cruz, Yacuiba, and Salta. Two more DC-3s join the fleet and on November 3, one of these, with 28 aboard, disappears while on a Camiri-Sucre flight. The wreck is found two days later near the city of Tarabuco and there are no survivors.

DC-3 multistop flights commence on an east to west line from La Paz to Arica, Chile, on March 20, 1954.

Boardings for the year reach 89,000.

The fleet is next increased through the addition, in April 1955, of two DC-4s. Traffic rights into Colombia are received on November 2. DC-3 service Cochabamba-Bogota via Riberalta starts on April 19, 1956; it will end on November 3. Meanwhile, on August 25, one of the Douglas transports, with two aboard, crashes while landing at La Paz; neither crewman survives.

Three additional civil B-17s and another DC-4 are received. During the year, a total of 20,884 flights are made and 171,243 passengers are transported.

A DC-3 crashes into Mt. Sayary in the Andes on April 7, 1957 (19 dead). DC-4 flights to Corumba are inaugurated on July 9. A B-17G is delivered in November. During the year, DC-3s launch Cochabamba-Puerto Suarez service and assume the cabotage routes of Cruzeiro do Sul. Cochabamba-Porto Velho, Brazil, service is launched on January 28, 1958 while flights begin to Asuncion on April 1.

Asuncion service is withdrawn on July 1, 1959 while La Paz-Buenos Aires DC-4 flights begin the next day. The *Handley Page Herald* is demonstrated for the carrier during the summer as a possible Flying Fortress replacement, but it is not chosen due to a shortage of funds. Orders are, however, placed for three Douglas DC-6Bs previously operated by **American Airlines**.

The Porto Velho route is closed in December and on the last day of the year, a DC-3 with 11 aboard crashes near San Jose de Chiquitos; there are no survivors.

Enplanements for the year are 165,030.

A DC-4 with 4 crew and 55 passengers crashes at Cochabamba, near the city of La Paz, on February 5, 1960; there are no survivors.

A leased DC-4 is received as a replacement on April 1 and another B-17G in September. The first DC-6B is delivered on December 15. DC-6B service starts to Lima on March 2, 1961. The second pressurized Douglas transport is delivered on November 9 and the leased DC-4 is returned on December 18.

Bookings for the year are 175,542.

Meanwhile and while on a maintenance test flight on August 21, 1962, a DC-3 with five crew crashes at Cochabamba Airport (four dead).

Pan American-Grace Airways (PANAGRA)'s long-term lease expires in 1963 and is not renewed as financial difficulties mount. The LAB fleet now comprises 2 DC-4s, 2 DC-6Bs, 6 DC-3s, and 6 B-17Gs. The second DC-6B with 3 crew and 36 passengers crashes on a slope of Mount Tacora, a volcano located 60 mi. NE of Arica, on March 15; there are no survivors.

The carrier's third DC-6B is delivered on July 24, followed by a leased C-46 in September.

In October, the U.S. carrier **North Central Airlines** is awarded a two-year contract by the U.S. Agency for International Development (AID) to provide LAB with the managerial and technical assistance given up by **Pan American-Grace Airways (PANAGRA)**.

When the NCA team arrives just before Christmas, they find that the 33% of LAB's 12-plane fleet has been grounded in order that they might be cannibalized for the parts necessary to keep the other eight planes flying. The airline is also without published flight and tariff schedules, up-to-date manuals, a reservations system, or a modern administrative and financial structure.

The workforce in 1964 totals 957. A fourth DC-6B is delivered on January 8 and a DC-3 is damaged and one person is killed in a Potosi crash six days later. A La Paz-Cochabamba-Santa Cruz-São Paulo route is inaugurated on February 4. The same day, another Douglas transport goes down near Yacuiba (two dead). During the year, a concrete runway is completed at La Paz, only the second in the country after that at Cochabamba.

Enplanements for the year are 197,000 and revenues of \$3.22 million are earned.

A B-17G crashes at La Paz on February 7, 1965. On March 29, the government transfers a Curtiss C-46 to the carrier from the assets of the *Corporacion Boliviano de Fomento*, but it will not be flown. Unsuccessful in providing the desired aid, North Central's contract is cancelled in July; however, three additional DC-3s are received throughout the remainder of the year. When the **North Central Airlines** contract ends, LAB is in a far superior position to that in which it had been found just two years earlier.

The Washington, D.C.-based Systems Analysis Research Corporation is contracted in 1966 to advise LAB on new equipment. As a result of its work, orders are placed for two Fairchild Hiller FH-227Ms.

A C-46D with three crew disappears on August 3 while en route from Riberalta to Cochabamba; the wreckage is found 12 days later and there are no survivors.

A Lockheed L-188A is ordered in 1967. Enplanements for the year are 268,672.

Airline employment in 1968 is 690. A DC-3 aborts its takeoff from Trinidad, Bolivia, on April 19 and crashes; although the aircraft will be written off, there are no fatalities.

A B-17G crashes near La Paz on August 2; the same day, the *Electra*, formerly the **American Airlines Flagship Memphis**, is delivered. In September, it is placed in service on the international routes.

Bookings for the year are 284,000 and revenues of \$4.3 million are generated.

The two FH-227Ms are delivered on July 31 and August 6, 1969, respectively, and soon enter service over domestic routes. Also in August, **Braniff International Airways** is asked to supply a Boeing 727-171C.

En route from Santa Cruz to New York (JFK) on September 26 via La Paz, a DC-6B with 5 crew and 69 passengers, crashes into Mount Choquetanga near Viloco, 176 km. SE of La Paz; there are no survivors. The disaster is ranked as Bolivia's worst air accident ever.

Despite the disaster, passenger boardings are up to 315,351.

The jetliner is delivered on March 14, 1970; christened *Puerto Suarez*, it is placed in service on the La Paz-Cochabamba route three days later. Bookings rise to 341,787.

Frequencies are increased and routes refined during 1971-1972. On December 16 of the former year, one of the FH-227Ms is commandeered by an air pirate during a domestic service from Sucre to La Paz. The gunman kills the pilot and orders the copilot to fly to Arica, Chile. The Fairchild halts at Cochabamba for refueling, where the plane is attacked by police and military police, who shoot and kill the hijacker.

The L-188A is sold in 1973 to the Bolivian Air Force. Enplanements for the year are up to 357,840.

The workforce in 1974 totals 679. The fleet now includes 2 DC-3s, 3 B-17Gs, 2 FH-227s, and 1 B-727-171C. A second B-727-171C is delivered in May and a third FH-227 on December 17.

Passenger boardings rise 29% to 504,000.

The company's fiftieth anniversary is celebrated in **1975**. A B-727-78 is delivered on March 7, followed by a fourth FH-227 on March 26 and a B-727-2KS on October 8. A DC-6B are sold to **TAM (Transport Aereo Militar)**. On September 17, B-727-171C weekly service is inaugurated to Miami via Panama City.

Bookings decline to 486,144.

The employee population is reduced 7.9% in **1976** to 816. By now, the fleet possesses only one DC-3.

A B-707-131F with three crew fails its takeoff from Santa Cruz on October 13, striking trees, utility poles, and the rooftops of houses; the plane turns left and crashes into a football pitch 560 m. from the runway. All aboard the aircraft are killed, along with 88 people on the ground.

Weekly return flights commence to Santiago de Chile on December 3.

Passenger bookings accelerate 25.5% to 575,559 and freight skyrockets 79%.

In April **1977**, orders are placed for two additional B-727-2KSs. Yacuiba-Salta service is withdrawn on May 16. A proving flight is made to Caracas on July 25, followed by the start-up of twice-weekly B-727-171C service on October 5. During the year, the fleet is enlarged through the addition of two F-27Js, a leased B-727-14, and a purchased B-707-323CF freighter, **American Airline's** former *Astrojet Detroit*.

Enplanements drop to 493,200.

A B-727-2KS is delivered on August 8, **1978** and another on October 2; the leased B-727-14 is returned on October 16. A new Miami route via Manaus, Brazil and Caracas, is opened on November 30.

Bookings soar 58.9% to 1.2 million, producing the carrier's first one-millionth passenger year. Consideration is given to the purchase of wide-body aircraft.

Enplanements inch up ever so slightly in **1979** to 1,236,240.

The workforce in **1980** totals 1,692. On January 23, an F-27J with 3 crew and 15 passengers runs off the taxiway at Yacuma into a ditch, catching fire; although the aircraft is destroyed, all aboard are safely evacuated.

Another F-27J with 3 crew and 10 passengers, crashes while on approach to Yacuiba on June 2; there are no survivors.

In October, LAB joins IATA.

Passenger boardings jump 9.1% to 1,376,894, while freight is up 9.8% to 34.6 million FTKs. Revenues remain static at \$7.5 million, but expenses, led by fuel price increases, jump to \$8.1 million, producing a loss of \$654,500.

Another B-707-323C/F freighter is delivered on June 30, **1981**. Bookings decline to 1,249,000.

Thrice-weekly flights to Cuzco commence on November 27, **1982**. Boardings drop again, down to 1,163,400.

Several routes in northern Bolivia are found to be uneconomical and are transferred in **1983** to the small, DC-3 equipped feeder **Linea Aerea Candedo, S.A.**, a privately owned airline that also provides contract services. Bookings dip again.

All but one FH-227 is sold in **1984**. They are replaced with one each Fokker F.27-200 and F.27-600, plus an F-27M.

The F-27M with 3 crew and 20 passengers crashes into the jungles near El Pillon Hill, Bolivia, on March 16; there are no survivors.

Enplanements decline to 1,131,200 as the recession continues to trouble the airline.

Company employees total 1,627 in **1985**.

En route from La Paz to Asuncion via Santa Cruz on January 23, Flight 900, a B-727-2K3 with 7 crew and 120 passengers, becomes the target of a suicide-for-insurance scheme. The perpetrator locks himself in the lavatory when the aircraft is at 10,000 ft. and descending toward its intermediate stop. He lights a single stick of dynamite, which blows up and kills him. The force of the blast is absorbed by the pirate and does little damage to the aircraft, which lands at its destination on schedule. Three other passengers are injured in the incident.

Cargo is up this year by 1.4% to 41.03 million FTKs and passenger boardings rise 2% to 1,414,000. This despite record inflation that reaches a peak of 24,000%.

The fleet in **1986** includes 3 B-727-2K3As, 3 B-727-100s, 2 B-707-323C/Fs, and 1 owned and 2 leased F.27s. In August, employees go on a six-day strike to force the ouster of President Agustin Saavedra.

Customer bookings drop 6.6% to 1,329,160. Revenues jump 39% to \$83.9 million, but costs zoom upward 77% to \$87.4 million, causing an operating loss of \$3.5 million.

The workforce is cut 3.9% in **1987** to 1,661. Passenger boardings rise only 0.8% to 581,622, while freight does slightly better, up 1.3% to 20.14 million FTKs. Revenues decline to \$80.8 million, expenses jump to \$88.4 million, and an operating loss of \$7.5 million is suffered. The net loss is \$5.8 million.

Airline employment is downsized another 1.1% in **1988** to 1,642 and the fleet now includes 3 each B-727-100s and B-727-2K3As, plus 2 B-707-323C/Fs, and 2 leased F.27s.

In March an agreement to integrate routes is signed with **LAP Paraguayan Airlines, S.A.** and **Pluna (Primera Uruguayas de Navegacion Aerea, S.A.)** of Uruguay.

Customer bookings decline 1.8% to 1,307,059 and cargo is off by 3% to 23.69 million FTKs. Income exceeds expenses and profits are earned: \$8.36 million (operating) and \$7.32 million (net).

The payroll is increased by 2.7% in **1989** to 1,707; however, the fleet remains unchanged. A slow privatization process begins and beginning on December 1 and continuing for two months, a B-767-204 is leased from U.K.-based **Britannia Airways, Ltd.** and flown roundtrip to Miami. The British aircraft is the first wide-body operated by the carrier.

Passenger boardings recover and inch up by 0.6% to 1,314,809, while freight does much better, gaining by 9.4% to 25.92 million FTKs. Revenues swell 7.8% to \$102.79 million, expenses are up 9.9% to \$95.61 million, and the operating profit is \$2.3 million. Net gain dips to \$1.9 million.

The decision is taken during the summer of **1990** to replace the aging Boeing fleet with three leased Airbus Industrie planes. The first Airbus, an A300B2, is wet-leased, beginning in June, for four months from **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. Meanwhile, the company assists the government and national banks with studies designed to foster the creation of up to three feeder airlines. The Bolivian government in August announces that the carrier will be privatized, with the state disposing of a 50% interest.

Customer bookings climb a modest 1.8% to 1,330,000, but cargo does quite well, moving ahead by 45.3% to 31.96 million FTKs. Revenues rise 6.9% to \$107. The operating profit is \$4 million and net gain totals \$3.4 million.

Airline employment in **1991** stands at 1,729 and the fleet now includes 1 leased A310-304 and an owned fleet comprising 1 each B-707-323C, B-727-78, B-727-1A0, B-727-171C, F.27-200, F.27-600, and 3 B-727-2K3As.

An A310-304 arrives under wet-lease from **Royal Jordanian Airlines** in June; it will serve through the summer season. The B-707-323C is burned out in a La Paz hangar fire on August 31. Another A310-304, chartered long-term from IFLC, is delivered on December 1.

Passenger boardings decline to 1,141,289; however, freight ascends to 35.39 million FTKs.

The employee population is reduced by 1.4% in **1992** to 1,705 as 2 Fokker Friendships, 1 F.27-200 and 1 F.27-600 are acquired. Following a bid period, only one tender is received. The offer from **Iberia Spanish Airlines (Lineas Aereas de Espana, S.A.)** (2) is rejected as too low. It will now be necessary to restart the entire privatization process all over again.

Customer bookings ascend a slight 0.5% to 1,275,086, but cargo drops 14.6% to 33.17 million FTKs. Revenues total \$118.8 million, but expenses are more. Consequently, there are losses: \$9.1 million (operating) and \$11.8 million (net).

In **1993**, President Edgar Rottes Saravia and General Manager Luis Gereca oversee a workforce of 1,530, down 10.3% from the previous

year. The fleet now includes 3 B-727-2K3As and 1 each A310-304 (leased), B-707-323CF, B-727-78, B-727-1A0, B-727-171C, F.27-200, and F.27-600.

Destinations visited include Arica, Asuncion, Belo Horizonte, Buenos Aires, Caracas, Lima, Manaus, Mexico City, Miami, Montevideo, Panama City, Rio de Janeiro, Salta, Santiago de Chile, and São Paulo.

Passenger boardings drop 8.2% to 1,170,145, but freight rises 22.9% to 40.69 million FTKs.

Early in 1994, a code-sharing agreement is entered into with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** covering service on a route between Santa Cruz and La Paz. The fleet is increased by the addition of a leased Airbus Industrie A310-304 and the new ship helps the company to increase its passenger traffic.

Customer bookings accelerate by 7.2% through October to 1,036,363; cargo, however, reverses itself and falls 3.3% to 32.12 million FTKs.

On December 22, while on its takeoff roll from Guayaramerin, Bolivia, an F.27-600 with 4 crew and 36 passengers suffers the loss of its No. 2 engine; takeoff is aborted, but the turboprop overruns the runway and is halted by a tree 120 m. beyond. There are no fatalities.

Airline employment is increased by 2.9% in 1995 to 1,373.

In October, **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**, the only bidder for the airline in the government's second sell-off round, acquires a 49% stake in LAB for \$47.4 million. The fee consists of \$5 million in cash, \$10.5 million through credit services and other assets, and the remaining \$31.9 million through the transfer to LAB of a B-737-3A1 christened *Paititi*. The remaining shareholding is split between the Bolivian government (51%), **American Airlines** (.5%), and LAB employees (.5%). VASP is also given a management contract.

The company's 8 aircraft transport a total of 1,272,715 passengers this year, a 0.8% dip. Cargo traffic, on the other hand, jumps 8.3% to 36.91 million FTKs.

The workforce grows 12.6% in 1996 to 1,546. **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** is now in charge and in July LAB introduces a new two-tone blue color scheme on its aircraft, reflective of the changes. Ulisses Canhedo, son of VASP's owner, becomes president, with Daniel Doering as director general.

Customer bookings increase 5.4% to 1,342,149 and 46.21 million FTKs are operated, a 25.3% increase.

The employee population dips 1% during 1997 to 1,530. The fleet now includes 2 leased A310-304s, 3 owned Boeing 727-2K3As, 1 each owned B-707-323C, B-727-78, B-727-1A0, B-727-171C, and F.27-400M. One each B-727-2J4A and B-737-3A1 are chartered from **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** and an F.27-200 is also leased.

In addition to domestic markets, the carrier now also visits Arica, Asuncion, Belo Horizonte, Buenos Aires, Caracas, Lima, Manaus, Mexico City, Miami, Montevideo, Panama, Quito, Rio de Janeiro, Santiago, and São Paulo.

Passenger boardings surge 28.6% to 1,726,071 while freight rises 2% to 47.14 million FTKs.

Service is maintained without fanfare in 1998. Unhappily, Bolivia fails to comply with ICAO safety standards and LAB consequently finds itself rated as a Category II carrier, unable to add new routes to or fly new equipment into the U.S. The airline is restricted to Miami, where it continues to operate its A310-304s.

Customer bookings inch up 1.8% to 1.75 million, while cargo traffic falls 6.4% to 44.14 million FTKs.

By the beginning of 1999, airline employment has been increased by 17.6% to 1,800. In addition to the work required for the removal of its Category 2 status, LAB now begins planning for fleet renewal and the addition of new routes to Washington, D.C. (IAD) and Havana.

A review by Boeing during the year reveals that the Dash-171C *Puerto Suarez* is the world's highest-cycle B-727. Also during the spring, a new airport terminal is opened at Cochabamba.

Passenger boardings decline 13.1% to 1,526,000, while 19.15 million FTKs are also operated. Revenues reach \$146,259,506.

Airline employment at the beginning of 2000 stands at 1,713, a 4.8% decline over the previous 12 months. The company will celebrate its seventy-fifth anniversary throughout the year.

On May 11, officials of the Brazilian carrier announce that they will soon sell all **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** shareholding in LAB and **Ecuatoriana de Aviacion, S.A.** to help meet its huge deficit problems.

Flying members of the National Pilot Association call a 24-hour strike on May 30 to protest the entry of the new TAM (Transportes Aereos Regionais, S.A.) subsidiary into the Bolivian market. The job action leaves thousands stranded at airports across the country. The Bolivian government does, however, suspend the TAM authority.

In June, one each B-727-1A0 and B-727-171C are leased to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** for six months.

A B-737-382 is chartered from Pegasus Aviation on August 22. A newly Stage III-compliant B-727-2K3, equipped with QWS winglets, is placed on the Miami route on September 11.

As the result of employee complaints concerning alleged "cannibalization" of LAB assets by VASP, the Bolivian Civil Aviation Authority opens an audit of LAB in the days just before Christmas. The CAA also brings in the Superintendent of Pension Funds to assist in the review.

LAB FLYING SERVICE: P.O. Box 272, Haines, Alaska, 99827-0272, United States; Phone (907) 766-2222; Fax (907) 766-2734; <http://www.haines.ak.us/lab>; Code JF; Year Founded 1956. Layton A. Bennett forms LAB Flying Service at Haines, Alaska, in the late spring of 1956 to operate charter and flight-seeing services from his base to destinations in southeastern Alaska and Canada. Piper lightplane operations commence on July 1.

Unscheduled operations continue for 10 years. A contract is won from the U.S. Post Office in 1974 and scheduled mail flights begin late that year.

Scheduled passenger and cargo services are introduced on November 15, 1975 and by 1981, daily or more frequent flights are offered to Excursion Inlet, Gustavus, Hoonah, Juneau, and Skagway. With a workforce of 37, the fleet now comprises 1 Piper PA-31-310 Navajo, 1 Piper PA-34 Seneca, 2 Britten-Norman BN-2 Islanders, 3 Piper PA-32R Cherokee Lances, 4 Piper PA-32 Cherokee Sixes, and 3 Piper PA-28 Cherokee Arrows.

Early in 1982, the decision is taken to discontinue scheduled operations in August; during the year's first 8 months, 11,000 passengers are flown. Unscheduled and charter flights continue apace in 1983-1984, but on November 1 of the latter year, a feeder agreement is signed with **Alaska Airlines**. Scheduled commuter flights resume in January 1985 linking the company's base with all of its previous scheduled points, plus Funter Bay.

Services continue apace in 1986-1989. The latter year is particularly successful, although much traffic is acquired when the FAA closes three competitors.

By 1990, the 30-employee small regional is the state's oldest and largest air taxi and operates a mixed bush-oriented fleet of 1 each Piper PA-31-350 Navajo Chieftain, Aerostar, Douglas DC-3, 2 each Helio Courier, Senecas, and Islanders, 3 Cherokee Lances, and 7 Cherokee Sixes.

A total of 19,985 passengers are transported.

Customer bookings accelerate in 1991 to 22,101 and a total of 694,689 pounds of mail are flown.

Company employment is increased by 40% in 1992 to 42. Passenger boardings climb 28% to 28,389.

In 1993, President Bennet's fleet still contains 2 Islanders and 1 Navajo, plus 3 Senecas, 16 Cherokees, 1 Aerostar, and 2 Helio Courier 2s.

Enplanements total 36,404, a 28% increase.

Operations continue apace in 1994 and passenger boardings accelerate 17% to 42,742. A total of 39,000 FTKs are also flown.

While circling 700 ft. above the shoreline over a moose on July 7, **1995**, a Piper PA-32R on a flight-seeing sortie with one pilot and five passengers, goes out of control and crashes; there are no survivors.

The 19 aircraft of the Haines-based company transport a total of 66,737 passengers during the year, a huge 61% increase.

The employee population stands at an even 100 in **1996** and the fleet now includes 15 Cherokees, 5 Senecas, 4 Navajo Chieftains, and 2 Islanders. Lynn N. Bennett, son of the founder, is now deputy president, while Mrs. Lou Bennett, remains chief financial officer.

While on a September 1 flight-seeing sortie over an extensive field of glaciers, a PA-32R with a pilot and five passengers, runs into a fog bank; the aircraft inadvertently descends and collides with the glacier. All aboard are injured, four seriously.

Passenger boardings drop 9.7% to 60,281.

In **1997**, founder Bennett switches to the position of vice president/maintenance director as his son takes the helm. Destinations visited now include Excursion Inlet, Gustavus, Haines, Hoonah, Juneau, Kake, Petersburg, Skagway, and Sitka.

While on an all-cargo service from Juneau to Kake on October 23, a PA-32 with two crew crashes into mountainous terrain 16 mi. SE of its point of origin; there are no survivors.

Unhappily, customer bookings for the year plunge 43.3% to 34,176.

LAB suffers another bad business year in **1998**. Passenger boardings drop another 11.2% to 30,000. Still, the workforce is increased by 66.7% to 100 as plans are made to increase cargo services further.

Customer bookings in **1999** fall 37.6% to 19,000. A total of 100 workers are employed at the beginning of **2000**.

LABRADOR AIRWAYS, LTD.: Goose Bay Airport, P.O. Box 310, Stn. A, Goose Bay, Labrador, A0P 1S0, Canada; Phone (709) 896-3658; Fax (709) 896-5209; Code WJ; Year Founded 1969. The bush division of **Eastern Provincial Airways, Ltd.** is sold to an employee group in **1969**. With their headquarters at Goose Bay, the new owners assemble their fleet that ranges in size from 2 de Havilland Canada DHC-6-100 Twin Otters down to DHC-3 Otters, DHC-2 Beavers, and Cessna 207As. Revenue services, both charter and scheduled, are inaugurated linking the company base with such destinations as St. Anthony and Deer Lake.

Flights continue apace in the **1970s** and by the date of the company's tenth anniversary in **1979**, President G. E. Patey oversees a workforce of 110 and a fleet comprising 2 Twin Otters, 2 Beech B-80 Queen Airls, 1 Aero Commander 500B, 3 Otters, 1 Beaver, and 1 Turbo Beaver.

Early in **1984**, a Saunders ST-27 is purchased, but it is soon lost. With three crew and five passengers, it is damaged beyond repair during its landing at St. Johns on August 25 when its gear collapses; there are no fatalities.

Electing to continue a visual flight rules (VFR) ambulance flight into adverse weather conditions, the pilot of a DHC-6-100 with two crew and two passengers, flies his aircraft into one of the Mealy Mountains on October 11; there are no survivors.

A second Saunders ST-27 joins the fleet in **1985–1986**, together with a replacement Twin Otter, a Dash-300, purchased from **Norontair, Ltd.** A major owner of the new **Air Nova, Ltd.**, Labrador begins to feed traffic to that carrier at Goose Bay.

In **1987**, Goose Bay-based **Goose Bay Air Service, Ltd.** is purchased, together with its fleet of 4 Otters, 3 Beavers, and 1 Britten-Norman BN-2 Islander.

Operations continue apace during the remainder of the decade and into the **1990s**. In **1993**, President W. Pike's fleet consists of 4 Twin Otters, 1 Otter, 1 Beaver, 1 Cessna 208, and 1 Shorts 330. One more Cessna 208 Caravan I joins the fleet in **1994**, along with three Shorts 330s and two Shorts 360-300s. Services continue.

Scheduled service is provided to 21 communities in **1995** and a DHC-7 joins the fleet. Airline employment stands at 75 in **1997–1998**. **Air Nova, Ltd.** is now the East Coast's "Air Canada Connector" carrier, which creates enhanced income for both carriers as they fly parallel

competing routes between St. John's and Goose Bay. Planning begins to take advantage of potential revenue to be earned from the various commercial megaprojects being launched at Lower Churchill Falls and Voisey's Bay.

Scheduled destinations visited at the beginning of **1999** include Cartwright, Charlottetown, Davis Inlet, Fox Harbour, Gander, Goose Bay, Hopedale, Makkovik, Mary's Harbour, Postville, Nain, Rigolet, and Wabush. On behalf of **Air Nova, Ltd.**, Labrador inaugurates a scheduled route from Quebec City to Moncton via the New Brunswick communities of Charlo and Miramichi.

At the beginning of **2000**, **Air Canada, Ltd.**, which has also taken over **Canadian Airlines, Ltd.**, begins the consolidation of its "Air Canada Connector" commuter network. On October 15, Labrador upgrades its Quebec City to Moncton service to twice daily. Increasing fuel prices do not have an immediate impact and the airline is initially spared the necessity of adding a ticket surcharge. Late in the year, the company joins the Air Canada Enroute frequent flyer program.

LAC (LIGNES AERIENNES CONGOLAISES, S.A.). See **LIGNES AERIENNES CONGOLAISES, S.A.**

LAC (LINEAS AEREAS CANEDO, S.A.). See **LINEAS AEREAS CANEDO**

LAC (LINEAS AEREAS DE CARIBE, S.A.): Colombia (1976–1997). Trading under the name LAC Airlines, this carrier is formed at Barranquilla in late **1976** by Capt. Luis Carlos Donado Velilla to take over the routes (but not the assets) of **Aerocosta International, S.A.**, which had ceased trading earlier in the year. The new entrant does not claim any connection with **LIDCA (Lineas Aereas de Caribe, S.A.)**, which failed in 1980.

A fleet of 7 Douglas DC-6As and 2 DC-8-54Fs is built up during the remainder of the decade and scheduled all-cargo services are undertaken linking Barranquilla with the Colombian cities of Bogota, Cali, Cartagena, and Medellin.

Having received a U.S. permit, regularly scheduled freight services are also initiated to Miami. There are two fatal accidents without survivors in **1978**.

A C-118A with three crew and nine passengers fails its initial climb away from Bogota on April 29 and crashes.

En route from Bogota to Trinidad on December 8, a DC-6A with three crew disappears in the vicinity of Sierra Cucuy.

In **1979–1980**, the company sells five of its piston-engine Douglas transports. In **1981–1988**, President Orlando Donado and his brothers, Vice Presidents Carlos, Raul, and Alvaro, increase the size of the family carrier to 327 employees. There are losses.

A DC-6BF with four crew strikes an 800-ft. hill while on initial approach to Cerro el Tablazo, Colombia, on February 19, 1982; there are no survivors.

A DC-8-54F with three crew and two passengers is destroyed as the result of a bad landing at Barranquilla on September 18, 1984; there are no fatalities.

The lost DC-6A and DC-8-54F replaced by a DC-8-30F and a DC-8-63F and new routes are opened to Asuncion, Caracas, Panama, São Paulo, and Toronto. Worldwide charters continue to be flown. A total of 43.88 million FTKs are hauled during the latter year.

The fleet in **1989** includes 1 DC-6A, 2 DC-8-33Fs, and 2 DC-8-55Fs.

Cargo traffic declines by 9.3% to 36.09 million ton-kilometers.

The 309 employees of the Colombian freight operator watch as its FTKs zoom upward 47.4% during the first eight months of **1990** to 46.65 million.

Airline employment is increased by 10.4% in **1991** to 270 and the fleet is altered to now include 2 DC-8-33Fs and 1 DC-8-54F.

The previous year's traffic grow goes into reverse as freight falls 5.5% through September to 50.13 million FTKs.

The workforce grows by 21.1% in **1992** to 327.

While landing at Medellin after an all-cargo service from Miami on October 15, a DC-8-55F with three crew overruns the runway and is damaged; there are no fatalities.

Statistics are provided through October and reveal that cargo traffic has risen 31% to 72.98 million FTKs. Revenues total \$26.9 million and produce an operating profit of \$800,000.

In 1993, President Donado oversees an employee population of 327 and a fleet of but 1 owned DC-8-54F and 1 DC-8-55F leased from **Fine Air**. Freight slips 0.4% to 89.75 million FTKs.

The workforce is cut by 17.4% in 1994 to 270 as a DC-8-52F arrives under charter. Cargo recovers, growing by 21.8% to 109.36 million FTKs.

There is no change in the workforce during 1995. Traffic figures are reported through August and show a 9.7% increase to 74.48 million FTKs.

A DC-8-52F is chartered in 1996 and from bases at Barranquilla and Bogota, the carrier's three freighters visit Asuncion, Caracas, Miami, Panama City, São Paulo, and Toronto on a scheduled basis.

Just after takeoff from Asuncion, Paraguay, on February 4, the DC-8-55F with 3 crew and 1 passenger, loses control and crashes into a playing field 2 km. from the runway; all aboard the freighter are killed, along with 20 people on the ground.

The carrier is unable to survive this disaster. Not only does the government quickly pull its operating certificate forcing it into bankruptcy, but the U.S. DOT revokes its foreign air carrier authority. Interestingly enough, the DOT Docket suggests that a principal reason for the U.S. suspension is an allegation that the company has been operating all-cargo flights carrying unauthorized passengers.

LAC (LINEAS AEREAS DE CUYO, S.A.): Argentina (1958–1960). LAC is formed at Mendoza in early 1958 to provide hub services on spokes spanning north, south, and west. A fleet of Aero Commanders and a Lockheed Model 18 Lodestar is assembled and revenue flights commence in early 1959. Flights link the carrier's base city with Buenos Aires, Bariloche, Mar del Plata, Cordoba, and Tucuman.

Despite great expectations on the part of company and government officials when the original announcement of a 15-year concession was made in 1958, the third-level operator is unable to earn sufficient revenues to maintain its heavy commitment and operations cease in July 1960.

LAC (LLOYD AEREO COLOMBIANO, S.A.): Columbia (1954–1964). Colombia's first second-level airline is formed at Bogota in August 1954 to operate domestic and regional services with a fleet of 3 Curtiss C-46 Commandos. Daily revenue flights commence in December over routes to Barranquilla, Cartagena, Medellin, and Cali.

A Fairchild C-82 Packet is acquired in March 1956 and during the first quarter, a C-46 is equipped with Palas/JATO jets for difficult operations. After two years of start-up operations, the company initiates flights from Bogota–Leticia–Riberalta–Cochabamba on April 19. The rocket-assisted Commando crashes at Bogota on June 26. Without the traffic to make it economically viable, the new Colombia–Bolivia route is suspended on November 3.

In early 1957, LAC orders three Vickers Viscounts and is awarded a U.S. CAB foreign air carrier permit for Miami operations. Later in the year, as financial problems continue, the Viscount order is cancelled and a new government begins to question the company's various route awards.

The company is reorganized in 1958 and sold to its employees, who unsuccessfully seek another buyer. En route from Barranquilla to Miami on June 26, a C-46A with 3 crew and 20 passengers, makes a forced landing at Puerto Colombia, Colombia; there are no fatalities.

The domestic network is maintained during the next seven years against stiff well-funded competition from **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**.

Flight 503, a C-46D with 7 crew and 44 passengers en route from Miami, crashes at Bogota's Eldorado Airport on April 19, 1960 (37 dead).

The contest with AVIANCA Colombian eventually proves unequal and LAC is faced with very unattractive prospects by late 1964. In February 1965, the Colombian government withdraws the carrier's Miami authority and follows this drastic action with cancellation of its operating certificate during the fall.

LACSA (LINEAS AEREAS COSTARRICENSES, S.A.): Apartado 1531, La Uruca, San Jose, 1000, Costa Rica; Phone (506) 290-2727; Fax (506) 232-4178; http://www.flylatinamerica.com/acc_lacsa.html; Code LR; Year Founded 1945. Pan American Airways (PAA), the Costa Rican government (20%), and local private interests (40%) form this carrier at San Jose on October 17, 1945; the American major's shareholding is 40%. In the late January 1946, the first company aircraft, a Douglas DC-3, is received on lease from **COPA (Compania Panamenana de Aviacion, S.A.)** and it is employed to fly a San Jose–Parrita demonstration flight on June 1. Service with the machine continues between summer and fall.

On November 27, the DC-3 with 3 crew and 20 passengers crashes near San Jose while on initial approach to the capital's airport; there are no survivors.

The public outcry later in the year and early 1947 occasioned by the loss of the COPA Douglas delays the further start-up of flight activities. A replacement DC-3 lands into the sea off the Ecuadorian island of Santay on January 22; there are no fatalities among those aboard.

In early summer joint flights begin to Managua in cooperation with another PAA affiliate, **LANICA (Lineas Aereas de Nicaragua, S.A.)**, which supplies the DC-3. At the same time, the carrier begins to receive new fleet elements: a C-47, a pair of DC-3s, a Consolidated C-46D, and a pair of Beech 18s. These are used to begin domestic flights and on August 16, service to Panama City.

The government commandeers LACSA's three Douglas transports upon the outbreak of the March 12, 1948 revolution, the leadership employing them to flee to Nicaragua on April 24. As a result of this development, the carrier is forced to limit operations. Although the airline is recompensed by the new Costa Rican government, it has no aircraft until four Curtiss C-46 Commandos can be purchased.

The DC-3s in Nicaragua are repatriated in 1949, but are later sold in Miami. The new Curtiss fleet maintains increasingly reliable domestic services as the carrier regains strength. During the year, LACSA is designated as the national flag carrier and is authorized to open foreign routes, including services to the U.S. cities of Miami, New Orleans, and Brownsville. The U.S. CAB, however, balks at San Jose's largess and only permits service to Miami. Still, new international routes are started in 1950 to Panama City, Havana, Miami, Mexico City, and San Salvador.

A longtime rival now politically out of favor, the pioneer **TACA de Costa Rica, S.A.** is purchased on June 2, 1952 and integrated; among the assets thus acquired are 4 DC-3s and a route network of 20 domestic stops. One of the new Douglas transports, with 3 crew and 11 passengers en route from Palmar Sur Airport, crashes in the San Ramon Mountains near San Isidro del General on June 15, 1953; there are no survivors. On August 7, the PAA shareholding is reduced to 36%.

The first pressurized airliners to fly for any Central American airline are two Convair CV-340s placed in service by LACSA on March 5, 1954; the C-46s are diverted to new duties, primarily cargo. Grand Cayman is authorized as a scheduled destination during the year.

LACSA's DC-3s are employed in government support during an abortive January 1955 coup attempt. In February, the subsidiary **Cayman Brac Airways, Ltd.** is established to provide Cessna T-50 service to the Cayman Islands on routes leased from **British West Indies Airlines, Ltd. (2) (BWIA)**.

San Jose–Panama City–Curaçao–San Juan CV-340 service is initiated in February 1956; uneconomical, the new route will be dropped within a year.

Other operations, however, continue without change or incident in 1957–1959. Flight 19, a DC-3 freighter with three crew, is lost at San Isidoro, Costa Rica, on August 15 of the latter year (one dead).

A C-46 with 32 aboard crashes while landing at Bogota on April 19, 1960; there are no survivors. On June 25, a DC-3 crashes near San Jose (one dead). Two ex-PAA DC-6Bs are introduced on the international routes in 1961, replacing the CV-340s. On June 1, 1964, PAA shareholding is reduced to 33%.

On January 19, 1966, an order is placed for a single BAC 1-11-409, with an option. The BAC 1-11-409 is received in early May 1967 and is christened *El Tico*; it begins revenue flights on May 14 from San Jose to Miami. The jetliner cuts two hours off the DC-6B time.

Cayman Brac Airways, Ltd. is reorganized by the Cayman Islands government and LACSA, becoming **Cayman Airways, Ltd.** While en route to Miami on October 9, two passengers are killed and six hurt when the *El Tico* hits clear air turbulence over Nicaragua.

Airline employment in 1968 totals 473 and the fleet comprises 2 BAC 1-11-409s, 2 DC-6Bs, 2 CV-340s, 3 C-46s, and 1 DC-3.

Following the sale of *El Tico* to **TACA International Airlines, S.A.** in September 1969, the second BAC 1-11-409, taken up on option and leased to two other carriers after its inaugural flight on February 14, is delivered on charter in November.

En route from Puerto Limon to San Jose on December 23, a C-46 with 3 crew and 30 passengers, is captured by a lone hijacker, who orders the aircraft flown to Cuba. The pilot persuades the gunman to let the passengers deplane at an intermediate stop before proceeding to Havana.

Enplanements this year reach 193,579.

The workforce is increased 13% in 1970 to 544 as the number of C-46s drops to 3. An order is placed for three BAC 1-11-531s.

On September 14, the Costa Rican investment firm Aero Transportes Internacionales, S.A. purchases Pan Am's remaining 33% shareholding.

En route from Limon to San Jose on October 21, a C-46 with 44 passengers is captured by five men and two women passengers, who demand that it be diverted to San Andres Island for refueling. There they steal a smaller aircraft and flee to Cuba.

Passenger boardings jump 21.3% to 245,971 and freight traffic is up 7.8%.

The Grand Cayman-Miami and Kingston routes are transferred to **Cayman Airways, Ltd.** in 1971 as LACSA opens a new service to Caracas via Barranquilla and Maracaibo. The first BAC 1-11-531 arrives in June and is christened *Arenal*. It replaces the Dash-409 on the international frequencies from San Jose to Mexico City or Miami.

Airline employment stands at 750 in 1972 and the fleet includes 10 aircraft: 2 Curtiss C-46As, 1 BAC 1-11-409, 2 CV-440s, 3 BAC 1-11-531s, and 2 DC-6Bs. Jetliner service is now available from San Jose to Barranquilla, Maracaibo, and Caracas. The second BAC 1-11-531, *Poas*, arrives on November 6.

Passenger bookings jump 10.3% to 299,000 and freight traffic is up a slight 2.3%.

Enplanements in 1973 total 333,216. This rise comes in spite of the fact that the previously operated route from Grand Cayman to Miami and Kingston is now operated by **Cayman Airways, Ltd.** using the BAC 1-11-531 *Arenal* chartered from LACSA and given the name *Cayman Progress*. Meanwhile, on May 14, the third BAC 1-11-531 enters service as the *Barracuda*. A former **Paninternational Airways, mbH. & Co.** BAC 1-11-531 is acquired in December and is christened *Arenal*.

The BAC 1-11-409 is returned to the U.K. in January 1974. Passenger boardings increase 19.9% to 416,000 and cargo climbs 14.3%.

The employee population in 1975 totals 886. Two Lockheed L-188 Electra freighters, including one first flown by **Pacific Southwest Airlines (PSA)**, are ordered late in the year to join a fleet that now includes 3 BAC 1-11-531s, 2 DC-6Bs, 1 DC-3, 2 C-46s, and 2 CV-340s.

Passenger bookings rise 5.3% to 423,000 and cargo accelerates 4.5%.

The workforce is reduced 7.9% to 816 in 1976. On June 1, the former PSA L-188A, converted to AF status, joins the C-46s on the all-cargo service to Miami, replacing the DC-6Bs, which are now retired.

Freight skyrockets 53.67% while passenger traffic is up only a slight 0.24% with 425,000 passengers carried.

Ownership of the carrier is reconfigured in 1977; shareholders are now the Costa Rican government (8.52%), local government and private interests (81.11%), and an employee association (10.37%). Dr. A. Pena Chavarria is named chairman of the 860-employee company.

Revenue services continue as before. First flown by **Western Airlines** and converted to freighter status, an L-188CF is acquired for the company's growing air cargo business.

Enplanements drop to 358,000.

The CV-340s and C-46s are retired in 1978 and the ex-PSA L-188AF is sold to **Hawaiian Airlines**. When **Pan American World Airways (1)** transfers its Central American hub from Guatemala to Miami, opportunity exists in the Central American market for expansion. Simultaneously, a 900% devaluation of Costa Rica's currency leads to a drop in operating costs.

Although bookings dip by another 1,000 to 357,000, cargo grows 8.3% and a net \$531,000 profit is realized.

In an effort to increase tourism and earn hard foreign currency, a liberal aviation bilateral is signed by Costa Rica with the U.S. in 1979; the arrangement allows protection for LACSA from competition on its route to Miami. Four Boeing 727-200As are ordered and BAC 1-11-531 scheduled routes are started to New Orleans, Los Angeles, and Cancun. In September, the domestic subsidiary **SANSA (Servicios Aereos Nacionales, S.A.)** is formed by the carrier (51%) and the government (49%).

Late in the year, SANSA's commuter operations are launched with a fleet of 2 DC-3s and 2 CASA C-212s.

Passenger boardings are up 7.1% to 360,000 and freight shows a 4.2% increase. Revenues jump 17.5% to \$37.1 million, but expenses, including dramatically increased fuel costs, advance 18.8% to \$36.9 million. The previous net profit is thus turned into a \$220,000 loss.

The workforce is reduced by 6.6% in 1980 to 995. Two B-727-2Q6As arrive and are placed in service, allowing the L-188CF to be withdrawn. To ease the financially weak airline's move to competition from monopoly, protection of the airline's Miami route is continued for another two years under a letter of understanding signed between the U.S. and Costa Rican governments.

The world economic situation and rising fuel costs force enplanements down to 244,375. Expenses outrun revenues by 4.2%, resulting in an operating loss of \$936,000 and a net downturn of \$813,000.

A third B-727-2Q6A is delivered in 1981, replacing the three BAC 1-11-531s, two of which are sold by year's end to **Dan Air, Ltd./Dan Air Services** and one of which remains leased to **Cayman Airways, Ltd.** On October 30, Nicaraguan rightists hijack a BAC 1-11-409 with 19 aboard, demanding the release of seven Nicaraguan prisoners in Costa Rica. After releasing all of the hostages, except for the plane's two pilots, in exchange for six willing prisoners, the aircraft is flown to El Salvador, where officials detain both the pirates and their newly freed colleagues.

A DC-8-55F freighter is also received and as a result, cargo gains 2.8%. Passenger boardings, however, dip again, falling 5.9% to 325,189. Revenues accelerate 16.6% to \$54.7 million and expenses grow only 7.3% to \$51.3 million, allowing profits: \$2.98 million (operating) and \$2.9 million (net).

The company's fiscal improvement allows the workforce to be increased 11.9% in 1982 to 1,112. The carrier's administrative functions are computerized and service is inaugurated to San Pedro Sula, as a fourth B-727-2Q6A joins the fleet. The U.S.-Costa Rica market surges and, for a period of nine months ending in July, LACSA's market share actually reaches a high of 61%.

When **TACA International Airlines, S.A.** is revitalized, LACSA loses its fifth-freedom rights over El Salvador to the U.S.

Passenger bookings rise 6.4% to 364,302 and cargo is up 2.7% to 21.9 million FTKs. Revenues jump 21.7% to \$66.6 million and expenses rise 15.7% to \$59.8 million. The operating profit doubles to \$6.7 million, but the net income falls by about \$800,000 to \$3.12 million.

Airline employment rises 7.6% in 1983 to 1,200. Returned from **Cayman Airways, Ltd.**, the BAC 1-11-531 that it had flown as *Cayman*

Progress is sold and a second DC-8-55F is acquired. Joint flights commence in April with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**. In the face of heavy traffic declines, the **SANSA (Servicios Aereos Nacionales, S.A.)** subsidiary is reorganized in May, its two CASA C-212s being sold and replaced with three Cessna 306s.

Overall passenger boardings fall 19.8% to 320,368 while freight soars 13.4% to 24.67 million FTKs. Revenues total \$63.7 million.

Staff layoffs ensue in **1984**, primarily at **SANSA (Servicios Aereos Nacionales, S.A.)**, dropping the workforce to 990. Orders are placed for two B-757-200s.

Passenger bookings dip 4.8% to 294,000, but freight jumps 36.6% to 33.72 million FTKs. Losses are again suffered: \$2.7 million (operating) and \$9.2 million (net).

Airline employment declines another 1.9% in **1985** to 943. Direct San Jose–Orlando flights commence.

Passenger enplanements dip 0.8% to 291,189. Revenues rise 2.3% to \$61.9 million and expenses fall 8.1% to \$58.1 million; although a \$3.75-million operating profit is generated, another net loss is taken: \$2.85 million.

The payroll is increased 3.5% in **1986** to 976 and the fleet includes 3 B-727-2Q6As and 1 DC-6.

Customer bookings accelerate 5.8% to 326,739 and cargo is up 20.7% to 29.43 million FTKs. Revenues swell 6.7% to \$64.8 million and with expenses gaining only 0.9%, the operating profit is able to improve to \$2.39 million, but the net gain falls to \$72,000.

The employee layoffs commence again in **1987** as 36 positions are cut (a 3.7% decline). Two B-727-100s are acquired. In late fall, government ownership is reduced from a third to 5% as a number of Japanese investors, operating through the local investment company Agraexport and Costa Rican concerns, purchase significant shareholding.

In addition, the Sanyo Oil group directly acquires a 4.6% stake. Briefly dismissed by the company, longtime Director General Luis Casafont returns to his office in December.

Although passenger boardings are up only 2.6% to 313,042, freight ascends by 24.9% to 31.02 million FTKs.

The workforce grows in **1988**, rising a healthy 22.3% to 1,150; again, there are no fleet changes. In January, the company contracts to carry the traffic of **Challenge International Airlines** between Miami and San Jose.

On May 23, a B-727-22 with 10 crew and 16 passengers fails to lift off from the runway at San Jose. It overruns the end of the runway and goes through a fence, crosses a ditch, crashes into a hill, and catches fire; although the wreck must be written off, there are no fatalities.

Customer bookings shoot up 14.5% to 358,424 and cargo climbs 6.9% to 33.17 million FTKs. Revenues reach \$78.84 million and expenses are \$78.04 million; the operating profit is \$801,000, but a net loss of \$3.32 million is suffered.

Company employment is cut by 13.4% in **1989** to 996 and the fleet now includes 2 B-727-212As, 2 B-727-2Q6As, 1 B-727-100, and 1 DC-8-55F. Orders are placed for three Airbus Industrie A320-212s and two A310-300s. In a decade, dependence upon the U.S. market has increased from 30% of sales to 49%. For the same period, passenger enplanements are level and on total revenues of more than \$760 million, the airline has lost \$9 million. Throughout most of the year, the company battles a proposed entry into the Miami–San Jose market by **American Airlines**.

The debate reaches a point where the U.S. government announces its plan to restrict LACSA's route access to U.S. markets. As a result, Costa Rican officials drop their resistance and American begins its service in December.

Passenger boardings jump 11.8% to 400,859, but freight slips 0.5% to 33 million FTKs. Revenues are \$90.88 million and costs total \$88.06 million; although there is an operating profit of \$2.82 million, there is also a net loss of \$1.66 million.

The employee population remains the same in **1990**. The joint leasing venture GATX/CL Air delivers an Airbus Industrie A320-212 in December; when it is placed into service, the Costa Rican airline becomes the first in Latin America to operate the type.

Customer bookings move ahead by 6.1% to 425,850 and cargo rises 18.2% to 39.23 million FTKs. Revenues total \$103.32 million, but expenses are \$103.84 million; as a result, there is an operating loss of \$524,000 and a net downturn of \$2.56 million.

The payroll is cut 11.7% in **1991** to 1,100 and the fleet now features 4 leased A320-212s, 2 B-727-2Q6As that are leased to **Mexicana Airlines, S.A. de C.V.**, 1 B-727-212A, and 1 CASA C-212-200 Aviocar chartered to the domestic operator **SANSA (Servicios Aereos Nacionales, S.A. de C.V.)**. The A310-300 order is still pending.

Daily flights begin from Cancún to New York in March and in July, twice-weekly service is inaugurated from San Jose to Los Angeles via Acapulco.

Passenger boardings ascend 9.4% to 465,674, but freight declines by 7.4% to 36.14 million FTKs. Revenues total \$109.04 million.

The number of workers drops another 9.5% in **1992** to 996 as a 5th leased A320-212 is delivered. A 10% interest is sold to **TACA International Airline, S.A.**'s TACA Group. Under terms of the agreement, the two companies begin joint purchasing, fleet rationalization, and cooperation in such support services as ground handling, catering, and maintenance. Under leadership from the San Salvador-based carrier, TACA Group will come to comprise six members.

Statistics are provided only through May, but these show customer bookings up 58.6% to 262,496 and cargo rises 12.9% to 15.95 million FTKs. Revenues total \$127.2 million and an operating surplus of \$500,000 is recorded. Unhappily, so too is a net loss of \$1.6 million.

In **1993**, Chairman/President Mario Quiros Lara oversees an employee population of 1,100, up 10.4% over the previous year, and a fleet of 6 chartered A320-212s, 2 each B-737-2L9As and CASA C-212-200 Aviocars, and 1 B-737-242A. International markets served from San Jose include Barranquilla, Cancún, Caracas, El Salvador, Guatemala, Los Angeles, Maracaibo, Mexico City, Miami, New Orleans, New York, Panama City, and San Pedro Sula. Again, only partial year figures are made public.

Through August, passenger boardings of up 3.8% to 568,241, but freight is off by 4% to 20.97 million FTKs. Revenues reach \$141.18 million.

One A320-212 is returned in **1994**, as four leased A320-233s take its place. TACA Group begins to refine its infrastructure. Hubs are established in San Salvador for traffic headed to North America and San Jose for southbound TACA Group passengers. A secondary hub is also set up at Guatemala City.

Customer bookings, reported through June, are ahead by 14.3% to 341,093 while cargo is up 22.5% to 21.84 million FTKs.

There is no change in the size of the workforce in **1995**, just as there had been none a year earlier. An A320-233 is leased to **LADECO Chilean Airlines, S.A.** between January and March to fly that carrier's international services to Argentina, Brazil, Uruguay, and Paraguay. The U.S. reservations centers of the TACA Group members are consolidated in a single El Salvador facility.

Although enplanements dip 1.9% through the first half to 334,689, cargo inches ahead by 0.6% to 21.97 million FTKs. During the summer, four B-737-200s are leased from **TACA International Airlines, S.A.** Three are repainted in full LACSA colors while one wears TACA livery with LACSA titles.

Airline employment climbs 4.5% in **1996** to 1,150. Two Airbus A320-233s are subleased from **TACA International Airlines, S.A.** During the year, **American Airlines** begins discussions with the TACA Group concerning a possible strategic alliance. By the end of the year, TACA Group operates an impressive international route network with 14 destinations in Central America, 12 in South America, 3 in Mexico, and 8 in the U.S.

Full year traffic figures show that 868,872 passengers are carried and 42.41 million FTKs operated.

The employee population declines 4.3% in **1997** to 1,100. From its base at San Jose, the company visits Barranquilla, Cancún, Caracas, El Salvador, Guatemala City, Guayaquil, Havana, Liberia, Lima, Los

Angeles, Managua, Mexico City, Miami, New Orleans, New York, Orlando, Panama City, Quito, Rio de Janeiro, San Juan, San Pedro Sula, Santiago, and Tegucigalpa.

During the spring, TACA Group signs a code-sharing pact with **American Airlines**.

LAC inaugurates thrice-weekly roundtrip service from San Jose to Toronto via Havana, on July 2. In so doing, it becomes the only airline to offer scheduled service from Cuba to North America. The company also starts flights to Buenos Aires, Bogota, and Santo Domingo in August, September, and November, respectively.

During the fall, a number of company aircraft are repainted in a new TACA Group livery, which features a white fuselage and a blue tail, with a red vertical slash over which appears a logo consisting of five golden macaws, which represent the group members.

Thrice-daily roundtrip service to Dallas (DFW) from San Salvador, San Jose, and Guatemala City begins in December.

Passenger boardings increase by 4.2% to 833,488, while freight soars 29% to 50.59 million FTKs.

At the beginning of **1998**, LACSA flies the longest A320 route currently operated in regularly scheduled service; the service is the 2,500-nm. nonstop segment from Guayaquil to Rio de Janeiro. Another long-haul A320 route is the 2,200-nm. route from Guatemala to San Francisco, with a flight time in excess of 6 hours.

On January 10, Flight 691, an A320-233 with 122 passengers, veers off the runway at San Francisco at full speed during takeoff in heavy rain at 1 a.m. on a flight to Guadalajara. The aircraft blows an engine and comes to rest in a field of mud; no one is injured and the passengers are taken to a nearby hotel to spend the night while a replacement aircraft is dispatched. Meanwhile, the airport's longest runway is closed for several hours.

On behalf of the TACA Group, LACSA, on April 1, inaugurates thrice-weekly B-737-200 roundtrips between Santo Domingo and Havana, Cuba.

Airbus Industrie achieves a historic victory over its Boeing competitors in April when it signs a gigantic South American consortium purchase agreement. Under its terms, TACA Group, including **TACA International Airlines, S.A.**, **SAHSA (Servicio Aereo de Honduras, S.A.)**, **NICA (Nicaraguenses de Aviacion, S.A.)**, **LACSA (Lineas Aereas Costarricenses, S.A.)**, and **Aviateca (Aerolineas de Guatemala, S.A.)** promises to take 32 firm A320 family planes, plus 32 options.

Other participants are **TAM (Transportes Aereos Regionais, S.A.)**, on behalf of itself and its subsidiaries, which agrees to acquire 38 firm A320 family aircraft, with 37 options and **LanChile Airlines, S.A.**, which will take 20 A320 family aircraft, with 20 options.

Arriving in bad weather at Havana on May 5 after a service from San Jose, Costa Rica, Flight 622, a B-737-200 with 6 crew and 63 passengers, departs the runway during its landing roll; although the aircraft is badly damaged, no injuries are reported.

During the year's second half, the company's operations are largely undertaken under the banner of TACA Group, which continues to be led by **TACA International Airlines, S.A.**

Customer bookings accelerate 12% to 743,000, while cargo traffic increases 75.6% to 38.79 million.

Airline employment at the beginning of **1999** stands at 1,100. Enplanements total 923,000 and 77.15 million FTKs are operated.

Airline employment at the beginning of **2000** stands at 1,364, a 24% increase over the previous 12 months.

Service from San Jose to Orlando is cancelled on January 21; although the carrier advises officials at the Florida airport that service will be resumed by February 3, it is not.

Due to safety concerns and its inability to measure up to ICAO standards, the FAA downgrades El Salvador to Category 2 status during June. Grupo TACA's core airline **TACA International Airlines, S.A.** now faces a freeze on its U.S. operations, including its alliance with American Airlines, forcing the Group to shift much of its international operational emphasis to its partners **COPA (Compania Panamena de**

Aviacion, S.A.) and **LACSA**. LACSA is now able to shoulder more of the load because, in July, Costa Rica is upgraded to Category 1.

LADE (LINEAS AEREAS DEL ESTADO): Peru 714, Buenos Aires, Argentina; Phone 54 (1) 361-7071; Fax 54 (1) 362-4899; <http://www.alde.com.ar>; Code LD; Year Founded 1940. Following a series of proving Buenos Aires-Esquel flights, the Fuerza Aerea Argentina (the nation's air force) consolidates the pattern into a regular route and forms a special commercial air transport arm on June 19, **1940** to provide service from the capital to the southern Argentine mountain resort community. Employing a single Junkers Ju-52/3m, **LASO (Linea Aerea Suroeste)**, the military unit designated to fly the route, begins operations on September 4, flying weekly via Santa Rosa, Neuquen, and Bariloche. The frequency is soon there after advanced to twice weekly.

Following an exploratory flight from Buenos Aires to Iguazu Falls, it is decided that this remote, but economically desirable area, also be opened to air service. Regularly scheduled operations commence on September 20, **1943** and prove so successful that another division of the air force transport arm is created in honor of the route, **LANE (Linea Aerea Nor-Este)**, on January 6, **1944**. This division is subdivided on December 15, when a special small plane mail and express route is developed, **SADE (Servicio Aeropostales del Estado)**. Another subdivision occurs the same day when thrice-daily flights are initiated from the capital to Mar del Plata by **Servicio a Mar del Plata**. Additional Ju-52/3ms are acquired.

On May 15, **1945**, LANE is requested to extend its route first to Clorinda on the Paraguay River and then to offer service westward to Posadas and hence to Presidencia Roque Saenz Pena via Resistencia. Late in the year, the LASO and LANE units are combined into a single air force-run commercial air transport division, **LADE (Lineas Aereas del Estado)**; SADE and Servicio a Mar del Plata are retained as subsidiary-equivalents and several former **Air France** Dewoitine D-338s join the fleet.

Following the **1946** creation of several government-backed joint-stock companies designed to assert local control over the nation's commercial air industry, the government, by a January 21, **1947**, transfers LADE's routes to the new entrants. Between 1940 and 1947, the various lines of the special Argentine military air transport unit have carried a combined total of 31,071 passengers.

By the same edict that has transferred its routes, LADE is now directed to provide essential air service to small areas not served by the commercial carriers and to develop, by experimental flights, new routes that might be developed for exploitation by the civilian carriers.

Over the next quarter century, as commercial operators come to provide coverage to most major cities and towns, LADE's service area moves gradually south of the capital. There are occasional operational failures. For example, a Vickers Viking Mk. 1B with 17 aboard fails its takeoff from Buenos Aires on January 11, **1957**; there are no survivors aboard the aircraft and one person is killed on the ground. Only five months later, on May 13, a second Viking with 16 aboard crashes near Bariloche and again no one walks away.

Several thin **Aerolineas Argentinas, S.A.** routes are acquired during the spring of **1966**, together with that major's last remaining Douglas DC-3s.

The Fuerza Aerea Argentina takes delivery of seven de Havilland Canada DHC-6-200 Twin Otters in **1968-1969** and painted in full air force livery and titles, is assigned to the domestic service. The first Fokker F.27-400M is delivered in June of the latter year.

An F.27-400M with eight passengers crashes into a 4,500-m.-high mountain near Huaricanga, Peru, on June 10, **1970** (five dead). Flights continue without incident in **1971**.

In **1972**, with British permission, services are started from Comodoro Rivadavia to Stanley in the Falkland Islands. Two fatal accidents are suffered in mid-decade.

The premier F.27-400M with 52 passengers, crashes near San Carlos de Bariloche, Argentina, on March 16, **1975**; there are no survivors.

While climbing away from El Bolson on August 7, 1977, a DHC-6-200 with four crew and two passengers, crashes into a mountain; there are no survivors.

Late in the decade, President Oscar Araque Angulo's 1,700-employee unit, headquartered at El Palomar Air Base at Buenos Aires, is serving 31 destinations in the Patagonian region, primarily in the states of Neuquen, Rio Negro, Santa Cruz, Chubut, and Tierra del Fuego.

By 1978, the fleet comprises 5 Fokker F.28-1000C jetliners, 7 DHC-6-200 Twin Otters, 10 Fokker F.27-400M turboprops, and 3 Douglas DC-6Bs. Services continue without change in 1979-1981, primarily from the Comodoro Rivadavia area in the Patagonian region.

The Comodoro Rivadavia-Stanley service is abruptly ended on April 2, 1982 upon the outbreak of war between Argentina and the U.K. Orders are placed for five Fokker F.28-1000C jetliners, the first of which enters service in 1985. Operations continue apace on the mainland through 1988; however, the size of President D. Aly Luis Ipres Corbat's unit drops to only 450 personnel.

In 1989, the fleet includes 9 de Havilland Canada DHC-6-200 Twin Otters, 7 F.27-400Ms, 3 F.27-600s, 5 F.28-1000C Fellowships, and 1 Lockheed L-382G Hercules freighter.

An F.28-1000C, with 6 crew and 59 passengers fails its takeoff from the snow-covered runway at San Carlos de Bariloche on August 16, strikes an ILS aerial, bounces across a ditch, and comes to rest against a dyke; although the aircraft is damaged beyond repair, there are no fatalities.

Another Fellowship is withdrawn in 1990, followed by an F.27-400M in 1991. Director Corbat's fleet in 1992 receives two more DHC-6-200s as one F.27-400M is retired.

Operations from El Palomar AFB continue in 1993 to the same 31 Patagonian destinations visited 20 years earlier.

While en route from Maceio on January 31, a B-707-387B with 12 crew and 156 passengers suffers a hydraulics failure and is diverted to Recife; the crew lowers the landing gear manually, but they do not lock in place and collapse as the plane lands. Although the Stratoliner is damaged beyond repair, there are no fatalities.

Just as the previous year had provided traffic joy, this one is a disaster. Customer bookings plunge 38.2% to 469,989 and cargo drops 47% to 15 million FTKs. The workforce is reduced to 450; however, operations are suspended at year's end.

Flights resume in 1994 and traffic continues its nosedive. Passenger boardings fall all the way down to 15,537.

Airline employment is decreased by 3.3% in 1995 to 353.

While landing at Jeremie Airport in Haiti on June 16, a chartered F.27-400M with 4 crew and 31 passengers, suffers the collapse of the left main landing gear; the turboprop runs off the runway and collides with the airport terminal building. There are no fatalities.

On November 9, while en route from Comodoro Rivadavia to Cordoba via Villa Reynolds in bad weather, an F.27-400M with 5 crew and 48 passengers collides with an 8,000-ft. mountain near Villa Dolores; there are no survivors.

Despite the accidents, the company's fortunes seem to recover along with the return of prosperity to the world's airline industry. Enplanements jump 19.5% to 19,300 and cargo increases by 38.1% to 25,000 FTKs.

The workforce swells 27.5% to 450 in 1996. Traffic figures are only provided for the first quarter, but are promising. Customer bookings are up 16.6% to 6,443.

Passenger boardings for 1997 are reported for the year's first half. These show a significant 26.9% increase over the same period in 1996, up to 13,393.

Service is maintained in 1998-1999. Enplanements for the latter year total 20,000.

LADECA (LINEAS AEREAS DEL CARIBE, LTDA.): Costa Rica (1967-1971). The San Jose-based air taxi Expreso Aereo Costarricenses, S.A. is reformed in 1967 and is reborn as this larger all-cargo

carrier. A Douglas DC-3 is acquired and services commence to the Colombian free port island of San Andres.

Later in the year, the new concern trades its Douglas to **LACSA (Lineas Aereas Costarricenses, S.A.)** for a larger Curtiss C-46 Commando and also leases a DC-6 from **Pan American World Airways (1)**. The latter is employed to feed passengers to the American major at Panama City. The company is history by 1971.

LADECO CHILEAN AIRLINES (LINEA AEREA DEL COBRE, S.A.): Chile (1958-2001). Nicknamed "The Copper Airline," LADECO is formed at Santiago de Chile on September 3, 1958 to serve Calama and El Salvador, in the copper-mining region of northern Chile, from a base at Santiago. Owned by the U.S. concern Anaconda, the world's largest open pit copper mine at Chuquibambilla, near Calama, generates sufficient traffic to guarantee success to any entrant.

Major shareholders are the Costabal family (48.78%), Fondo de Asistencia Social LADECO (14.73%), Tierras Amarillas (15.77%), and Agustin Edwards (15.77%). Equipped with two ex-**United Air Lines** Douglas DC-3s, the new entrant inaugurates revenue services on November 1 over a route to Calama, with stops at Potrerillos and Antofagasta. In December, the domestic route of **CINTA (Compania Nacional de Turismo Aereo, S.A.)**, which had merged with **ALA (Sociedad de Transportes Aereos, S.A.)** the previous December, is acquired.

Within two years, the carrier acquires two more DC-3s and two Curtiss C-46s and has opened a route south of Santiago to Puerto Montt.

A C-47 with 20 passengers fails its initial climb away from San Jose on June 25, 1960; one person is killed in the subsequent forced landing.

A C-46A with two crew strikes a tree while landing at Palma Sur on November 8 and smashes into the ground; although the aircraft must be written off, there are no fatalities.

A DC-3 freighter with two crew crashes at Cerro del Arenal, C.R. on September 6, 1961; both flyers are killed.

In 1962-1963, Arica, El Salvador, and Iquiqueto are added to the domestic network. Airline employment in 1964 is 1,108. The company joins IATA as an associate member on October 1 and enplanements for the year total 19,000.

The scheduled route network in 1965 includes three southern cities and seven northern mining communities. In addition, many flights are offered on a charter basis. Airline employment totals 65 and the fleet comprises 1 Beech 18, 2 DC-3s, and 2 C-47s.

In 1966, 6 Douglas DC-6Bs are purchased and 1 is leased, allowing operations to begin to Buenos Aires, Argentina. Enplanements total 29,000.

LADECO becomes a full IATA member on December 1, 1967. Airline employment is now 1,201 and bookings are up to 46,312.

Thirty-seven new workers are hired in 1968. Two new domestic routes are granted and construction is started on new facilities at Pudahuel International Airport.

While on an April 8 domestic flight, a DC-3 with 3 crew and 33 passengers crashes near Coihaique; there are no survivors.

Enplanements advance to 50,373 and freight is up by 63.6%.

The two new domestic routes are inaugurated in February 1969. Cargo operations are expanded in April, following the delivery of a DC-6A. Enplanements total 56,728.

The Pudahuel facilities are occupied in 1970. Airline employment declines 0.6% to 163. The fleet now comprises 3 DC-6s, 2 DC-3s, and 1 each Beech 65 and 95. Marxist Salvador Allende becomes president on November 4.

Although freight traffic is flat, passenger boardings jump 18.5% to 69,690.

Domestic and Argentine flights continue in 1971.

En route from El Plumerillo to Los Cerrillos on October 19, a DC-6B freighter with three crew, crashes into Mt. Santa Elena, Argentina; there are no survivors.

In 1972, enplanements total 68,289.

The workforce in 1973 is 223. The third and fourth quarters are plagued by political difficulty in the country (culminating in Allende's September 11 assassination) and as a result, traffic drops sharply.

Customer bookings are down 33.9% to 51,000 and freight is off by 11.5%.

National recovery and national stabilization begins under President Gen. Augusto Pinochet in 1974, during which year the carrier operates 6 DC-6Bs and 1 DC-3. An order is placed for a Boeing jetliner.

Passenger boardings increase a scant 2% to 52,000.

In 1975, a Boeing 727-100 is acquired and an orderly retirement of the DC-6Bs is planned. Domestic routes are extended to Arica and Punta Arenas, allowing LADECO to cover the extremes of the country. Authorization is granted by the free market-oriented Pinochet regime for scheduled twice weekly all-cargo flights to São Paulo, Brazil, and the company begins later in the year following receipt of a second B-727-100.

Late in the year, authority is granted for the operation of new non-scheduled cargo flights to a variety of destinations throughout the hemisphere.

Customer bookings accelerate 11.8% to 62,000 and freight traffic is up a healthy 16.7% to 10.67 million FTKs.

Operations continue apace in 1976.

En route from Arica to Santiago on July 5, 1977, a B-727-100 with 60 passengers is hijacked to Lima, Peru. Seeking political asylum, the four perpetrators are allowed to take passage to Cuba.

Enplanements for the year total 93,353.

Employment at President Julio Bouchon's airline totals 196 in 1978 and another B-727-100 is ordered. Patricio Reich is named executive vice president. Scheduled frequencies are launched to Asuncion, Paraguay, and São Paulo, Punta Arenas, and Puerto Montt, Brazil. Passenger boardings zoom upward by 15.7% to 110,738 while freight is up by 28.5% to 8.5 million FTKs.

With another Boeing jetliner on hand by summer 1979, the final DC-6B can be withdrawn. International service is opened to the Argentine cities of Mendoza and Rio de Janeiro via Asuncion and São Paulo.

A total of 145,188 customers are transported.

The workforce is increased by 23% in 1980 to 428. A third B-727-100 is placed in service and flights commence to the Chilean towns of Iquique and Balmaceda.

Passenger boardings soar 49.7% to 288,644 while freight traffic advances by 36.9% to 6.2 million FTKs. Revenues accelerate 50% to \$43.9 million and net gain registers \$1 million.

Three B-737-2E3s are ordered during 1981, with the first entering service by October; feasibility studies for new routes and equipment are conducted.

Enplanements total 436,700, a 51.3% boost, while cargo jumps 28.1% to 7.9 million FTKs. Revenues advance 33.1% to \$59.5 million and expenses, though up by 25%, are held to just \$54.8 million. Profits generated total \$4.7 million (operating) and \$1.2 million (net).

The world economic situation and rising costs (led by increased fuel costs) impact both profits and traffic in 1982. Passenger boardings decline to 420,000. Highlight of the troubled year is delivery of two B-737-200s in July. The low point is the carrier's placement into receivership.

Scheduled multistop flights to Miami commence on July 9, 1983 via Guayaquil, Ecuador, and Bogota, Colombia. Bookings decline again, down to 330,500.

The third B-737-2E3 is received in 1984-1985 and as a result, domestic frequencies are increased along the 13-stop network.

Enplanements pick up during the middle 1980s, reaching 373,844 in 1986, during which year the company is reformed into a public corporation.

In mid-October 1987, LADECO, in cooperation with the Chilean Air Force, operates a unique charter service. Three B-727-100s fly adventurous tourists from Santiago de Chile to Punta Arenas, the nation's southernmost town; there, the visitors board a CAF Lockheed C-130 Hercules for a roundtrip visit to the Marsh Martin Base in Antarctica.

Passenger boardings for the year accelerate 15.2% to 440,853.

The workforce is increased by a huge 31.4% in 1988 to 670 and the fleet now includes 5 owned and 1 leased B-727-100s, 3 B-737-2E3s, and 2 chartered Fokker F.27-500s. Super Class business service is introduced on May 1 with 12 seats so designated on each B-727-100 flight.

In August, an agreement is signed with Ansett Worldwide Services, under which the Chilean carrier will sell 25% of its equity to the Australians in exchange for several cargo jets. The first of two hush-kitted B-707-320C or "Super Q" is delivered in November.

Passenger boardings swell 15.1% to 507,355 and freight skyrockets 142.6% to 32.31 million FTKs. Revenues for the year total \$72.6 million and a net gain of \$1.6 million is reported.

Company employment rockets ahead by 49.3% in 1989 to 1,000. In January, a second B-707-320B is acquired for General Manager Ernesto Silva's fleet via the Ansett arrangement. Following the signing of a very liberal U.S.-Chile bilateral air service agreement, which will lead to difficulties for the nation's airlines later on, new service is added from New York (JFK) to Iquique, Chile, Asuncion, Paraguay, and Santiago de Chile.

The company now visits Bogota, Guayaquil, Mendoza, São Paulo, and Rio de Janeiro as well as local destinations. A new marketing campaign is undertaken in which the carrier identifies itself as "The First-Class Airline" and an in-flight magazine, *LADECO America*, is introduced in March.

In April, a hush-kitted Stratoliner introduces thrice-weekly nonstop roundtrips from Miami to Santiago de Chile. In June, thrice-weekly direct flights begin from New York to Santiago. Following the privatization of **LanChile Airlines, S.A.** in September by a group led by LADECO Vice President Guillermo Carey and backed by **SAS (Scandinavian Airlines System)**, Carey becomes CEO of **LanChile Airlines, S.A.** and that carrier's ousted president, Patricio Supulveda moves over to briefly head up LADECO.

Customer bookings swell 5.8% to 536,782. Cargo rises a huge 40.4% to 45.36 million FTKs. Revenues total \$84.2 million; the operating profit is \$1.1 million and net gain is \$6.4 million.

The workforce is increased another 20% in 1990 to 1,200 and scheduled flights to Buenos Aires commence in January. With 56% of all boarding passengers, the airline is now the leading air transport concern in the Chilean domestic market; in the international arena, LADECO flies 24% of Chilean capacity to the U.S. and 27% to other South American markets. In competition with **LanChile Airlines, S.A.**, LADECO, now under the direction of Gaston Cummins, formerly executive vice president, now offers promotional night fares 40% lower than regular ticket prices.

In June, frequencies to Miami are doubled from two to four per week. The carrier's extensive scheduled domestic network comes to reach every major city in Chile while Cancún, Mexico City, Havana, Montevideo, and San Jose join the international system. During July, the company acquires a pair of BAC 1-11-207AJs; these replace the F.27-500s.

In July, the company joins with **LanChile Airlines, S.A.** to go before the Comision Resolutiva Antimonopolios (Chilean Antitrust Commission) to charge **American Airlines**, which has placed massive capacity and discount fares into the region over the last year, with price dumping. A joint "direct access" agreement is signed with **LanChile Airlines, S.A.** in August providing use of the System One computerized reservations system. Two B-737-300s are added to the fleet late in the month.

In September, weekly roundtrip Stratoliner flights begin from Washington, D.C. (IAD) to Santiago de Chile via Miami; the frequency is increased to twice weekly in November. During the third quarter and in response to **LanChile Airline, S.A.'s** 50% discount on international services, LADECO is forced to initiate its own half-price tickets, bringing a fare war to South America's only deregulated air space.

Passenger boardings rise 6% to 568,743 and freight skyrockets 94.6% to 86.27 million FTKs. Revenues ascend to \$115.9 million; however, there are now losses: \$11.9 million (operating) and \$8.7 million (net).

In 1991, President Jose Luis Ibanez's workforce totals 1,059 and his upgraded and entirely leased fleet now comprises 2 B-757-2Q8s, 2 B-727-100s, 6 B-737-2E3s, 2 B-737-3E3s, 1 B-707-321B, 1 B-707-327C, 2 BAC 1-11-207AJs, 2 BAC 1-11-301AGs, and 1 Douglas DC-8F.

During the first quarter, a new strategic plan is developed, with emphasis on route expansion into Central America and the Caribbean. The Spanish state carrier **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, in the year's most significant company event, purchases 35% minority shareholding—and one board seat—in April for \$11 million. Although there is no management contract, there is a comprehensive marketing arrangement also signed between the two and Ernesto Silva becomes president.

A code-sharing agreement is signed with **USAir** in July that is designed to promote transportation between Chile and those USAir cities served from Baltimore (BWI). Thrice-weekly B-757-2Q8 flights begin from Buenos Aires to Baltimore in September. Later in the fall, flights begin to Montevideo.

The year's statistics are revealed through August and show customer bookings up a slight 0.2% to 378,047. Cargo, however, is down by 25% to 43.24 million FTKs. Revenues jump to \$128.7 million, but the operating loss also rises to \$39 million. The net loss "improves" to minus \$3.2 million.

The employee population skyrockets 70% in 1992 to 1,800. The company's two B-727-100s, two B-737-2E3s, and the Douglas freighter are withdrawn and an order for another B-737-3E3 is cancelled.

Passenger boardings jump 29.1% to 760,500 while freight rises 54.4% to 107.02 million FTKs. Revenues total \$168.5 million, but expenses are higher, causing an operating loss of \$5.9 million. This year, net downturn rises to \$8.7 million; net losses since 1990 total \$21 million.

The workforce is unchanged in 1993, but a chartered B-737-3Q8 is placed into service and the two BAC 1-11-301AGs are withdrawn. Among the Argentine points now served are Salta, Neuquen, San Carlos de Bariloche, Tucuman, and Ushuaia; elsewhere in the hemisphere, flights are made to Cancun, Guatemala City, Guayaquil, San Jose, Havana, Montego Bay, and Punta Cana. When **American Airlines** and **United Airlines**, beginning in April, increase their frequencies, the company, again in partnership with **LanChile Airlines, S.A.**, charges the U.S. majors with capacity dumping; the Comision Resolutiva Antimonopolios grants an injunction against the new services.

During the period of government hearings, LADECO drops service on a number of unprofitable routes, including the route from Bogota to Miami. Discussions are now held with **Continental Airlines** concerning a possible code-sharing arrangement and the **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** investment reaches \$16 million and 37.5% shareholding. During the year, the company begins code-sharing flights with Aerolineas Argentinas over routes from Santiago to Miami via Buenos Aires.

Customer bookings accelerate by 17.6% to 653,208 while cargo climbs 29.1% to 99.77 million FTKs.

Airline employment is cut by 44.4% in 1994 to 1,000 and the fleet now includes 1 each owned BAC 1-11-207AJ, B-727-95 and B-727-116, as well as many leased units: 3 B-737-205As, 2 B-757-2Q8s, and 1 each B-737-3Q8, B-737-219A, B-737-2T5A, B-737-2Q8A, B-737-2M8A, and B-737-2A6.

A strategic and commercial alliance is signed with competing **LanChile Airlines, S.A.** in June and its most important provision allows passengers of either to fly on routes flown by both. During the fall, **LanChile Airlines, S.A.** approaches the government's Anti-Monopolies Commission for permission to takeover the carrier altogether, even though all know the major would thus gain control of 80% of Chile's total air transport market.

The bid is turned down, but **LanChile Airlines, S.A.** successfully reapplies in December. The final BAC 1-11-207AF service is flown on December 30.

The year's passenger boardings are up 46.2% to 1,221,937. Freight moves ahead by 3.7% to 134.73 million FTKs.

Despite the **LanChile Airlines, S.A.** takeover, there is no change in the workforce during 1995. Between January and March, an Airbus A320-232 is leased from **LACSA (Lineas Aereas Costarricenses, S.A.)** and is employed to provide international flights to Argentina, Brazil, Uruguay, and Paraguay. Also during the first quarter, a code-sharing agreement is signed with **Carnival Air Lines**. Prior to its inauguration, the U.S. carrier employs one of its B-737-225s to provide connecting USA Express service on behalf of the Chilean line between Miami, Washington/Baltimore, and New York. Dual-designator service with Carnival officially begins on April 28 over the route and is provided by a CAL A300B4-203 also painted in USA Express colors.

A \$20.4-million, 57.9% stake is purchased by Chilean investor Sebastian Pinera on June 1 from a family holding equity; at the same time, Pinera sells to LAN owner Enrique Cueto, a business colleague, the 21% stake he holds in **LanChile Airlines, S.A.** The Chilean Comision Resolutiva Antimonopolios approves the arrangement on August 11. There is speculation that LADECO stakeholder **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and the nation's No. 3 carrier **National Airlines, S.A.** may challenge the decision in court as a monopoly.

When the company seeks a capital increase of \$3 million during the last week of October, the plan is blocked by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, which indicates that it must first evaluate LADECO's expansion strategy.

After **LanChile Airlines, S.A.** pilots go on strike on December 4-5, that carrier is able to continue services over certain routes by renumbering LADECO flights as its own. During the year, a B-737 is seen landing to start the Steve Railsbach action film *Pressure Point*.

Traffic figures are mixed. Enplanements recover and grow by 4.3% to 1,397,199, but cargo plunges 76% to 33.13 million FTKs.

Eight hundred new workers are hired in 1996 as **LanChile Airlines, S.A.** begins to negotiate with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** for purchase of the European company's 38% stake in LADECO.

A company jet at New York (JFK) in November requests permission to cross an active runway. ATC requires that he continue to hold short until one more plane has departed. The pilot of the LADECO aircraft, having misunderstood, moves out onto the runway. The controller orders an American Eagle turboprop to abort its takeoff and that plane is able to stop short of a collision.

Customer bookings fall 19.1% to 1,130,346 and 20.81 million FTKs are operated, a 37.2% decline.

The employee population increases by 80% in 1997 to 1,800. Chile's Anti-Monopoly Commission tentatively rules, in February, that the company's assets may not be acquired by **LanChile Airlines, S.A.** when the Liquidation Commission places them on the open market.

LanChile appeals the ruling to the Supreme Court and wins a reversal in June. International services to Asuncion, Bogota, Guayaquil, Mendoza, Miami, Rio de Janeiro, and Washington, D.C. are withdrawn as the company concentrates on domestic operations.

Passenger boardings, consequently, fall 15.7% to 953,205 while freight plunges 46.2% to 11.2 million FTKs.

During the remainder of the year and into 1998, eight new aircraft are received and services are increased to the Chilean markets of Punta Arenas, Puerto Montt, La Serena, and Temuco. In July, LADECO and LanChile agree that the former should absorb **Fast Air Chile, S.A.** during early 1999. In fact, LADECO takes over Fast Air in October.

A contract is signed with **Atlas Air** of the U.S. on February 24, 1999, which provides for the placement of a B-747-245F with LADECO under a standard aircraft, crew, maintenance, and insurance (ACMI) contract.

Enplanements for the year total 608,000 and 11.07 million FTKs are operated.

Service is maintained without incident or headline during 2000. At the end of the year, the carrier signs a new \$1.3-million, four-year contract

with its pilot's union. The pact gives company flyers a pay raise and restructured earning incentives.

LADECO will be shut down on September 1, 2001.

LADESA (LINEAS AEREAS DEL ESTE, S.A.): Mcal Lopez 4531, Asuncion, Paraguay; Phone 595 (21) 600 984; Fax 595 (21) 611 052; Code OQG; Year Founded 1994. Pastor Verdun founds LADESA at Asuncion in late 1994 to provide regional scheduled and charter services. Roberto Neira becomes vice president-operations, a workforce of 50 is recruited, and a Fokker-Fairchild F-27F is leased.

Revenue flights commence on January 18, 1995. From a hub at Ciudad del Este, frequencies are undertaken to Pilar and Concepcion.

Operations continue into 1996-2000, during which years a British Aerospace BAe Jetstream 31 is leased.

LAER (LINEA AEREA ENTRE RIOS, S.A.): Aeropuerto Gral. Urquiza, Parana (Entre Rios), 3100, Argentina; Phone 54 (43) 230 347; Fax 54 (43) 316 375; <http://www.laer.com.ar>; Code ER; Year Founded 1986. The former LAPER (Lineas Aerea Parana Entre Rios, S.A.) is reformed in 1986. Ownership is vested in the regional government of Entre Rios. The former carrier's Israeli Aircraft IA-50s begins service over routes from Parana to Buenos Aires and Buenos Aires to Concordia via Gualaguaychu. A SAAB 340A is leased from its manufacturer in 1987 and is the vehicle to introduce the airline's new livery.

As recession attacks the airline at the beginning of the 1990s, Operations Director Ariel San Martin's fleet is reduced to two Cessna 402s and one Cessna 411A.

In August 1992, orders are placed for the charter of two British Aerospace BAe Jetstream 32EPs. Introducing another new color scheme, they are delivered in November, giving their operator the distinction of becoming the first Jetstream operator in South America. The turboprops begin flying from Parana to Buenos Aires' downtown Aeroparque and between the central Argentine cities of Concordia, Paso de los Libres, Rosario, Goya, and Reconquista.

In 1993, President Dato oversees a workforce unchanged from the previous year as a third Jetstream 32EP arrives. Destinations served includes the Aeroparque at Buenos Aires, Concordia, Goya, Paso de los Libres, Reconquista, Santa Rosa, Santa Teresita, Rosario, and Villa Gesell. Enplanements reach 46,877.

Operations continue apace in 1994 and passenger boardings, through July, are up 60.7% to 30,157.

Enplanements in 1995, through September, total 53,700. On December 5, the carrier is privatized and sold to Aerovip by the regional government of Entre Rios.

Airline employment stands at 58 in 1996. Customer bookings, again for 9 months, are up 9% to 59,010.

The employee population is increased by 27.6% in 1997 to 74. From its Parana hub, the company now visits Buenos Aires, Concordia, Goya, Paso de los Libres, Reconquista, Santa Rosa, Santa Teresita, Santa Rosa, and Villa Gessel.

Passenger boardings are reported through the year's first half and show an increase of 12.5% to 43,000. Flights continue during the remainder of the year.

Service is maintained in 1998. Customer bookings are again reported through June and show growth of 7.3% to 47,000. Business declines somewhat during the second half and employment is cut by 32.4% to 50.

During the first quarter of 1999, the BAe leases are extended through the summer of 2002. In addition, a fourth BAe Jetstream 32EP is acquired in May and is employed to inaugurate new service from Buenos Aires to Olavarria, increase frequencies to Tandil, and cover on-demand charters.

Enplanements for the year total 115,000.

Service continues in 2000. In September, thrice-weekly return service is introduced from Montevideo to Parana and Rosario.

On October 12, two ex-Argentine Air Force (Fuerza Aerea Argentina) Fokker F.28s are purchased; upon delivery, they will initiate new flights to Florianopolis and other points around the country.

LAGE (LINEAS AEREAS DE GUINEA ECUATORIAL, S.A.): Equatorial Guinea (1969-1987). Following the independence of the Republic of Equatorial Guinea from Spain in 1968, this company is established at Santa Isabel in early 1969 to take over the domestic services previously provided by Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.) Two Convair CV-440s are leased from the Spanish line and fly from Santa Isabel to Bata and Douala.

The Convairs have been replaced by 1985 with a single Letov L-410A of the type acquired by the national carrier, EGA (Ecuato Guineana de Aviacion, S.A.) Services end two years later.

LAGOSA (LINEAS AEREAS GUERRERO-OAXACA, S.A. de C.V.): Mexico (1946-1951). Isidoro Linares and Anastasio Blanco Elola create LAGOSA in the summer of 1946 for the purpose of flying livestock and cargo inland from the Mexican coast. An old Boeing 247D is acquired and service begins.

The Ford Tri-Motor 5-AT-75 is purchased from TACA (Transportes Aereos Centros Americanos, S.A.) in April 1947 and begins flying livestock from Guerrero and Oaxaca on the coast to Puebla and Huajuapán. The Ford transports different cargos (groceries, medicines, sundry supplies) on its return runs, but like the Boeing, it proves difficult to service. In December, a C-39 (military DC-2) is leased from Aeronaves de Mexico, S.A. de C.V. and an experienced pilot, Manuel Gomez Mendez, is hired to fly it. The following year the aircraft is purchased.

Operations continue apace in 1948; however, 1949 is costly. While taking off from Putla, Oaxaca, on August 16, the 5-AT-75 with a 2-man crew and a 2,600-lb. load of coffee, blows a tire and crashes; the aircraft is destroyed but no injuries are reported.

Damaged in an accident at Pinotepa Nacional the previous October, the repaired Ford Tri-Motor 5-AT-103 is purchased from TAJ (Transportes Aereos de Jalisco, S.A. de C.V.) in January 1950. In February, a C-60 (military L-18) is obtained to fly services under contract. Departing Pinotepa on its inaugural flight, the Lockheed is destroyed in a crash (three dead).

The Ford, which had originally begun service with National Air Transport in the U.S. during 1931, soldiers on until the company closes in June 1951 and it is sold to SACS (Servicios Aereos de Chiapas, S.A. de C.V.).

LAI (LINEA AEREA IAACA, C.A.): Aeropuerto de Barinas, Barinas, Venezuela; Phone 58 (7) 322-668; Fax 58 (7) 322-668; Code KG; Year Founded 1995. Originally established as an aerial work company that operated air taxi flights, President Arnaldo Baaicheli's LAI begins domestic commuter service in 1995 following the country's deregulation of air transport. By 2000, flights from Caracas are operated with 2 Avions de Transport ATR42-320s and 3 ATR72-212As.

LAI (LINEA AEREA IMPERIAL, S.A.): Bolivia (1983-1989). LAI is formed at La Paz in 1983 to offer scheduled passenger flights in central and southern Bolivia. Employing a pair of Swearingen Metro IIs, General Manager Luis Jamio Alvarez oversees the inauguration of service to Cochabamba, Potoai, Santa Cruz, Sucre, and Tarija. The main lines, served by daily or near-daily flights, link the capitol to Sucre and Tarija.

The carrier maintains the same routes, frequencies, and aircraft until the end of the decade.

LAKE CENTRAL AIRLINES: United States (1950-1968). This post-war local service company is originally organized as Roscoe Turner Aeronautical Corporation, named in honor of its owner, the famous aviation pioneer, and is certified on September 3, 1947. The CAB grants the company local service authorization from a base at Indianapolis early in 1948. Later, Turner, agreeing to remain president and work on public relations, sells out majority control to his two partners, Paul and John Weesner.

On May 31, 1949, the firm's name is changed to Turner Airlines and reflecting its new purpose, it begins scheduled Douglas DC-3 service from Indianapolis on November 12.

A year later, on November 12, **1950**, the airline is renamed again, this time becoming Lake Central Airlines. Employing 3 DC-3s and 3 V-tailed Beech BE-35 Bonanzas, the company operates a pair of twice-daily roundtrip routes: one from Indianapolis to Grand Rapids, Michigan, via Kokomo, South Bend, and Kalamazoo; and the other from Chicago (MDW) to Cincinnati via Indianapolis and Connersville. During the fall, Bloomington and Richmond, Indiana, join the route network.

Enplanements for the year, as both Turner and Lake Central, total 12,757.

Operations are refined during **1951** as a fourth DC-3 enters service. Also, a Curtiss C-46 Commando is leased from the USAF and operates all-cargo charters on behalf of the U.S. military.

Enplanements exceed 24,000.

Turner sells his remaining 25% interest to the Weesners in **1952** and retires to the lecture circuit. The company, encountering financial difficulties, does not expand; indeed, Connersville service is ended.

While on final approach to Indianapolis in August, a BE-35 is caught in the wake turbulence caused by a **Trans World Airlines (TWA)** Constellation; pilot Jerry Haas is just barely able to keep the Bonanza from crashing. About the same time, a DC-3 survives a midair collision with an unidentified small aircraft over Richmond. No injuries are reported in either incident.

Cash-starved LCA is approached by Dr. Robert B. Stewart and Grove Webster of the Purdue University Aeronautical Foundation in early fall. The Foundation, which has recently gained significant holding in **North Central Airlines**, would be willing to purchase LCA from the Weesners. A contract to this end is signed between the parties in October. With the approval of the former owners and the board of North Central, Stewart and Webster record the arrangement on a merger application, which is dispatched to the CAB. The government agency does not immediately approve the marriage, preferring to order the Weesner's LCA stock held in trust while it studies the situation.

Enplanements for the year remain at the 24,000 level.

Dr. Stewart becomes chairman/president in January **1953**. He immediately changes the livery on the DC-3s, which are now marketed as "Centraliners," upgrades station facilities, and institutes a large employee training program at Purdue University. Also during the first quarter, the company receives CAB route authority for a large number of Ohio cities, service to which had been ended by **Trans World Airlines (TWA)**.

With three more DC-3s acquired from **Braniff International Airways** between April 30 and May 20 are employed to initiate services to Gary in Indiana and Cleveland, Columbus, Dover, Dayton, Youngstown, Mansfield, Zanesville, and Pittsburgh. During the year, *Holiday* magazine presents a lifetime safety award to Capt. James Elrod.

Customer bookings ascend to 58,200.

The year **1954** is one of consolidation. The CAB has yet to make a decision on the LCA/NC merger application. In January **1955**, the company is sold by the Weesners to a group of 162 company employees, led by Vice President Lloyd Hartman. Because of merger proceedings, the stock of the nation's first employee-owned airline is initially held in trust.

At this point, Dr. Stewart returns to Purdue and **West Coast Airlines** executive Gwin Hicks is recruited to succeed him. An eighth DC-3 is purchased in June.

Flights continue apace in **1956–1957**. The CAB, in July of the latter year, denies the North Central application; however, that airline appeals the decision to the U.S. Supreme Court. Service is maintained in **1958**. In these three years, the CAB increases the number of authorizations, allowing LCA to operate to Detroit (YIP), Buffalo, Erie, and New York (LGA) over routes suspended by **Capital Air Lines**.

By **1959**, the company's 10-station route network has grown to 33 destinations and the fleet contains 10 Douglas DC-3s, including 1 each turned over in February and March by **Braniff International Airways**.

During the spring, the CAB allows LCA to float a \$300,000 unsecured bond underwritten by a Chicago-based firm. In the fourth quarter,

the Supreme Court rules that the North Central merger is not in the public interest and joins the CAB in its denial. Lake Central's employees now own the airline, free and clear of any North Central concern. Profit for the year reaches \$129,000.

The carrier's stock is released from trust in **1960**. A \$3-million loan is achieved from Indiana banks and an initial public offering is made, netting \$5 million on \$20 shares. No longer an employee-owned concern, but a public enterprise, the company enters the marketplace seeking Convair 340s. The first, from **United Airlines**, is purchased on October 27.

In addition to the new aircraft, new uniforms and a new livery are introduced, the latter featuring the company's new logo, a stylized airplane fitted between two ellipses. Two DC-3s are leased from the USN at \$2,000 per month each.

In December, the CAB authorizes service to 17 additional markets, including all of the former **Capital Air Lines** destinations in West Virginia. The grant in the Mountaineer State is opposed by **Allegheny Airlines (1)**, but to no avail. Plans are made to fly south from Pittsburgh to Wheeling and Morgantown, from where an extension is authorized to Washington, D.C. (DCA) and Baltimore. Continuing south from Morgantown, the company picks up Clarksburg, Elkins, Charleston, Parkersburg, and Portsmouth, the latter in Ohio.

To handle the new additions, two more ex-**United Airlines** CV-340s are brought in, one each on December 28 and December 30; three DC-3s are acquired from **Northeast Airlines** on the latter date.

Fleet growth continues in **1961**. Three more **Braniff International Airways** DC-3s arrive between January 19–30. A former **Northeast Airlines** DC-3 follows on February 3, followed a **United Airlines** CV-340 on February 27.

Another ex-Northeast DC-3 is delivered on March 10, while a CV-340, also from United, is brought in on March 27. Two more ex-Braniff DC-3s are delivered on April 17 and 20, respectively.

The Convairs begin twice-daily multistop roundtrips from Indianapolis to both Buffalo and Grand Rapids as well as from Detroit to Cincinnati. The DC-3s fly to the remaining Ohio, Indiana, and West Virginia destinations and points east.

During the year, the company transfers its Chicago operation from Midway Airport (MDW) to O'Hare International Airport (ORD), while low ridership causes the carrier to halt service to the Ohio communities of Dover and Marion.

A DC-3, landing on a wet runway at Morgantown, West Virginia, on November 23, skids into a crash; none of the 14 aboard is hurt. By year's end, airline employment reaches 800.

Former Vice President Hartman becomes president in **1962**, while his predecessor, Gwin Hicks, remains a member of the board of directors. New routes and services opened in 1961 are consolidated and improved upon.

A DC-3 is destroyed in a hangar fire at Indianapolis on November 1, **1963**; the hangar is saved.

Enplanements for the year reach 476,651 and net earnings total \$113,303.

After extensive research, LCA elects not to undertake a DC-3 modification program on its own, but to replace the aging Douglas transports in its fleet through the purchase of eight Nord Aviation (now Aerospa-tiale) Nord 262s, at \$585,000 per copy, in March **1964**. These are the first new aircraft requested by the airline. A USN DC-3 is returned in June.

A fleet-financing program of \$10.6 million is completed: \$7 million in loans and \$3.6 million in convertible debentures. The company also continues to receive approximately \$3 million each year in federal subsidy for maintenance of service to small communities. The money is needed when one considers that passenger boardings at small towns like Richmond, Indiana, Findlay, Ohio, and Jackson, Michigan, average just one person.

Three more Convairs, all from **United Airlines**, are delivered, one each on July 31, November 2, and December 14. Meanwhile, a new

single-day company service record is achieved on October 16—2,315 passengers. An owned DC-3 is sold to a dealer in September, followed by a second in December.

Passenger bookings jump 10.8% to 534,361 and cargo increases by 18.1%. Revenues increase to \$7.21 million and a net profit of \$186,319 is banked.

Airline employment in 1965 stands at 904. On March 17, orders are placed for eight Convair 580 turboprops, which will be rebuilt from company units. Six of the Nords are received from France between August 17 and November 20, including two each delivered on the first and last named dates.

Five of the new aircraft are placed into service to 32 cities beginning on October 31. In the jubilation, orders are placed for four more, which will also have interiors designed by Dave Ellies Industrial Design, of Columbus, Ohio. Sold earlier, two DC-3s are turned over to dealers in December; the last chartered USN unit is returned.

Bookings for the country's smallest local service carrier, which also has the shortest average route stage at 80.2 miles, grow by 14.8% to 613,686. These make the shortest average passenger trips among all local service customers—159 miles. Net earnings skyrocket 85% to \$344,424.

The high-wing French-made transport is not a Lake Central success. Between February 1966 and August 12, four in-flight turbine failures are recorded, with some engines flying apart; four passengers are injured, one seriously. On the latter date, Nord officials arrive in the U.S. from France to examine the Bastan power plants; the carrier's entire 262 fleet is grounded for 5 months. Even so, six more aircraft are delivered, the last on July 15.

To help compensate for this equipment disaster, Lake Central initiates operations with the first of eight August-delivered turboprop Convair CV-580s on September 6.

Passenger boardings are 699,000 and a total of 870,000 freight ton-miles are flown. The year is a disaster, financially.

The employee population in 1967 is 1,363 and the fleet includes 23 aircraft: 12 Nord 262s and 11 CV-580s. The Nords, now labeled Nord IIs, return to service on February 24, although with FAA restrictions applied.

Five DC-3s will be sold during the year. Despite mounting debt, President Hartman opens negotiations with Boeing for three B-737-200s, hoping for delivery in 1968.

While en route from Columbus to Toledo and Detroit on March 5, Flight 527, a CV-580 with 3 crew and 37 passengers suffers the separation of all 4 propeller blades from the No. 4 engine. One of the propeller blades pierces the fuselage causing it to fail; there are no survivors from the subsequent crash near Kenton, Ohio.

Within weeks of the disaster, the board of directors has sacked President Hartman, replacing him in June with **Allegheny Airlines (1)** executive Thomas Ferguson.

In mid-August, the NTSB issues a finding that the disaster is due to manufacturing defects in a propeller and on October 18, Allison pays an \$8,000 fine for manufacturing faulty propellers and failing to issue proper warnings of defects. The \$8,000 does not begin to cover revenues lost to the bad publicity surrounding the accident.

Still, President Ferguson and his staff must try and a new "Airline with a Heart" marketing campaign is introduced. To emphasize the slogan, the tails of the Nords and Convairs are painted red with a white heart in their center. The "Love at First Flight" campaign begins soon thereafter, as does service to St. Louis and Louisville.

Discussions begin with officials of **Allegheny Airlines (1)** in October. The last DC-3 service is operated on October 28 from Washington, D.C. to Pittsburgh via Clarksburg and Morgantown. At the end of the year, a joint application for a merger is filed with the CAB.

Customer bookings climb 3% to 718,000, but freight traffic is down by 7.36%. Further losses are taken on the revenue side: \$4.5 million.

On March 14, 1968, the CAB and the stockholders of both airlines approve the merger of Lake Central into **Allegheny Airlines (1)**, effective

July 1. The Pittsburgh-based carrier assumes all of LCA's debts and liabilities, property and assets while holders of LCA common shares receive 0.44 of an Allegheny share for each of their own.

LAKE CENTRAL AVIATION: United States (1976–1977). LCA is established at Traverse City, Michigan, during the summer of 1976 to provide regional scheduled passenger and cargo services. Employing Cessna 402s, LCA inaugurates daily roundtrips on August 31 to Hancock and Marquette as well as to Lansing and down to Columbus in Ohio.

Operations are maintained until the fall of 1977.

LAKE GENEVA AIRWAYS: United States (1970–1973). LGA is set up at Lake Geneva, Wisconsin, in 1970 to provide scheduled roundtrip Beech 18 passenger flights for those wishing to visit the local Playboy Club from Chicago (ORD). Operations continue until 1973.

LAKE HAVASU AIR SERVICE: United States (1974–1978). LHAS is founded in the summer of 1974 to offer passenger and cargo charter flights between Lake Havasu City, Arizona, and Las Vegas. Piper PA-31-310 Navajo flights continue until the spring of 1978 when the operation is purchased by **Nicholson Air Service** (owners of **Cumberland Airlines**) and reconfigured as that company's **Havasut Airlines** division.

LAKE STATE AIRWAYS: United States (1973–1981). Founded by Roger Karuse in 1973 as a division of his New Ulm Flight Service, this third-level operation is originally known as **Air New Ulm**. Scheduled passenger commuter operations are flown by the owner in his single aircraft, a Piper PA-31-310 Navajo, linking his base with the Minnesota communities of Marshall and Minneapolis (MSP) and the Iowa cities of Spencer and Des Moines.

In January 1976, the company is merged with Marshall-based **Midwest Aviation**, with flights continuing under the LSA name until October 9, 1981. Midwest will be able to disentangle itself from LSA and continue flying.

LAKE UNION AIR SERVICE: United States (1946–1992). Founded by Hank Riverman as an FBO at Seattle's Lake Union in 1946, this company sets up a charter floatplane division and inaugurates seasonal (summer) passenger flights to various destinations in Puget Sound, to Lopez Island, and to Friday Harbor and Roche Harbor on San Juan Island. Charter flights are offered throughout Washington State and into British Columbia.

Operations continue in this vein for the next 35 years, even after the company is purchased by Clyde Carlson on May 12, 1961.

In the spring of 1981, the decision is taken to offer scheduled services. Employing float-equipped Cessna 206s and de Havilland Canada DHC-2 Beavers, Carlson's firm inaugurates regular revenue flights on July 3, linking its base with Roche Harbor, the San Juan islands, and to several destinations in British Columbia.

Operations continue apace for the remainder of the decade; Bruce Leven purchases Lake Union on October 9, 1987.

In 1991–1992, President Leven's company operates 1 float-equipped de Havilland Canada DHC-6-300 Twin Otter and 6 DHC-2 floatplane Beavers. Unable to maintain economic viability in a tough recession, the pioneer folds during the latter year. In January 1993, its assets are acquired by **Kenmore Air Harbor**.

LAKELAND COMMUTER AIRLINES: United States (1980–1984). Organized by Steven C. Van Beck at Rice Lake, Wisconsin, in the late spring of 1980, Lakeland initiates scheduled third-level passenger and cargo services on June 2, linking its base with Minneapolis (MSP). The initial workforce totals 10 and the fleet is made up of Cessna 207s. Start-up costs for President Van Beck's carrier result in a loss of \$33,114.

Two Cessna 402s are purchased in 1981 and the route network is significantly increased; new destinations added include Duluth, Rhinelander, and Wisconsin Rapids.

A total of 12,480 passengers are carried and profits of \$85,443 are reported.

Early in 1982, the number of destinations added is upped again; now flights are also made to Eau Claire, Hayward, and Ashland.

In 1983, Van Beck initiates frequencies to Madison and Chicago. Recession and financial difficulties caused by overly rapid expansion force the carrier to suspend scheduled passenger and cargo flights on January 21, 1984, and metamorphose into a cargo air taxi that will subsequently fail.

LAKER AIRWAYS: United States (1995–1999). Sir Freddie Laker and Texas investor Oscar Wyatt, CEO of LaSara Grain Corporation, establish LAI at Fort Lauderdale in late 1995 to offer scheduled international passenger services. James Kenney is appointed president, a workforce of 50 is recruited, and two Douglas DC-10-30s are leased.

Revenue services are launched by the *Endeavour* on March 26, 1996, linking the company's base with London (LGW). Laker becomes the only carrier to offer nonstop scheduled London service to Fort Lauderdale.

Two days later, Laker inaugurates frequencies from Orlando to Manchester and Prestwick.

Traffic figures are reported through September and reveal enplanements of 57,000. Revenues during the second half total \$24.86 million, but expenses are \$28.66 million. There is an operating loss of \$3.1 million and a net loss of \$2.77 million.

Miami joins the route network in early 1997. In March, a new Regency Premier business-class product is introduced on daily flights between Florida and the U.K.

On July 1, LAI files suit against **British Airways, Ltd. (2)** in U.S. District Court for the Southern District of Florida. LAI charges that the U.K. major is barring Laker from obtaining commercially viable landing and takeoff slots and refusing to enter into the same standard interline ticketing and baggage agreements that it has with 150 other competitors.

Claiming that BA is violating U.S. and Florida antitrust laws, Laker seeks treble damages, a preliminary injunction, and a permanent injunction against BA, as well as better takeoff and landing slots, and standard interline ticketing and baggage agreements. Florida Attorney General Robert Butterworth meets with both sides in his office on July 9 to resolve their difficulties.

En route from Orlando to Prestwick on July 25, a DC-10-30 with 10 crew and 310 passengers, encounters turbulence over the Atlantic Ocean near Jacksonville. Four cabin attendants are injured, one seriously, and are taken to the hospital after the aircraft lands at Bangor, Maine. One attendant is quickly released and able to continue the flight to Scotland.

At the end of the year, the computer company that operates LAI's Florida-based reservations system declares bankruptcy, although it is able to handle Christmas and New Year's holiday traffic.

Customer bookings accelerate 12.9% to 175,000, while 8.3 million freight FTKs are also operated. Operating revenues skyrocket 106% to \$16.04 million, but expenses rise 159.5% to \$27.96 million. The operating loss worsens to \$11.91 million, while the net loss reaches \$11.95 million.

Scheduled flights from Fort Lauderdale and Miami to London (LGW) are suspended on January 16, 1998. Well in advance, booked customers are provided refunds or switched to other scheduled airlines.

On July 26, Laker is purchased by Breakthrough Aviation, an affiliate of Star Group; the new owners are known for specializing in top-end VIP, White House press, and rock group charters.

For the year as a whole, only 20,000 passengers are flown, many from the categories noted above.

Airline employment stands at 60 at the beginning of 1999. The company does not survive the year.

On July 15, 2000, one of the DC-10-30s, which had been returned to GECAS, is sold to **Gemini Air Cargo**.

LAKER AIRWAYS, LTD.: United Kingdom (1966–1982). With £211,500 of his own money and £4 million borrowed from the Scottish Clydesdale Bank, Freddie Laker, the former **British United Airways, Ltd.** managing director, establishes a holding company (Laker Airways [Leasing], Ltd.) on February 8, 1966 for a new package tour charter carrier bearing his name.

Three BAC 1-11-320AZs are ordered and two Bristol Britannia 312s are purchased in March from **British Overseas Airways Corporation (BOAC)**. Under contract to **Air France**, Britannia charters to southern Europe commence on July 29.

The first of the BAC 1-11-320AZs is delivered on February 27, 1967; the other two are acquired on April 8 and May 13 and, for a year each, are leased to **Air Congo** and **Middle East Airlines, S.A.L. (2)**. Arrow-smith Holidays, a Liverpool travel agency, is now purchased and Laker introduces the principle of the "time charter," under which tour- and resort-operators virtually wet-lease aircraft for a year, thereby allowing lower inclusive rates for customers.

For the remainder of this year and in 1968, inclusive-tours are flown for the new tour subsidiary, as well as such other well-known travel firms as Lord Brothers and Wings. Capacity is augmented on April 11 when another BAC 1-11-320AZ is delivered.

An Indonesian carrier purchases the two Britannia 102s in January 1969. At this point, Laker is Britain's first all-jet air carrier. Following the February purchase of two Boeing 707-138Bs from bankrupt **British Eagle Airways, Ltd.**, the company flies Eastern Hemisphere inclusive tours while applying to the U.S. CAB for permission to mount tours into America. Charter rights are granted on August 5. North Atlantic charters, primarily to the U.S., are now organized for all manner of special groups.

Enplanements for the year advance 44% to 335,272.

On February 1, 1970, the parent company name is changed to Laker Airways (International), Ltd.; in addition to LAL and Arrow-smith Holidays, other travel agency subsidiaries include Lord Brothers, Middleton Travel Agency, and, in Spain, *Viajas Trans Espana* and *Trans Espana*.

In September, the subsidiary **International Caribbean Airways, Ltd.** is formed with the government of Barbados taking a 51% shareholding and Laker a 49% share. A Laker B-707-138B begins a low-cost Luxembourg-Barbados weekly frequency.

Previously owned by **British Eagle International Airways, Ltd.**, the BAC 1-11-301AG *Superb* is acquired on February 18, 1971; the fleet is enhanced by its delivery in March. It is now that Laker conceives the idea of low-fare, no-frills Skytrain service to America and on June 15, applies to the British Air Transport Licensing Board (ATLB) for authority. The idea meets resistance from the major scheduled carriers and IATA.

While the Skytrain idea undergoes litigation and an appeal is made in April 1972 for permission from the new Civil Aviation Authority, Laker purchases two Douglas DC-10-10s from the Japanese Mitsui Bank, christening them *Eastern Belle* and *Western Belle*. The transatlantic services are approved by the government on October 5. The two wide-bodied jetliners are introduced to Europe during November demonstration flights around the U.K. and on November 21 in a southern European charter flight from London (LGW)–Majorca.

At the close of the year, the Laker fleet includes 9 jetliners and passenger bookings average 250,000 per year.

On January 11, 1973, the Civil Aeronautics Authority (CAA) designates LAL as a British flag carrier and grants it a license to operate Skytrain service from London (STN); however, the U.S. CAB refuses to grant a permit, recommending study and approval the following year.

In May 1974, another DC-10-10 is purchased and named *Canterbury Belle*. President Richard M. Nixon, meanwhile, delays the Laker permit in June and the British operator is forced to file an antitrust suit. The new Labour government's secretary for trade, Peter Shore, reacting to union opposition to Laker's independent enterprise, revokes the Skytrain license. Following the collapse of **Courtline, Ltd.** in August, Laker's DC-10-10s return many of the stranded tourists.

As Skytrain litigation proceeds apace, passenger boardings continue to increase; traffic figures for 1975 top 952,000, making LAL the second largest charter operator on the North Atlantic after **Pan American World Airways (1)**.

Airline employment increases by 3% in 1976 to 865 and the fleet at the beginning of the year includes 3 DC-10-10s, 2 B-707-138Bs, and 5 BAC 1-11-301AG/320AZs. A fourth DC-10-10 arrives. Unreasonable CAA guidelines imposed under **British Airways, Ltd. (2)** pressure the previous year are withdrawn as the result of court action and public opinion.

Charter enplanements for the year drop to 933,661, a 2.8% dip.

A fourth DC-10-10 is added early in 1977 as the Labour government's next trade secretary, Edmund Dell, reacting to a court decision by Lord Denning, reverses his predecessor and allows Laker a license. In America, under pressure from Laker attorney Bob Beckman and the new CAB chairman, liberalization proponent Alfred Kahn, President Carter, on June 15, grants Laker his U.S. permit. To allow his competitors some relief from the new low fares, the CAA allows other international airlines to institute cheap "stand-by" fares as well.

As part of an inaugural festival, DC-10-30 Skytrain London (LGW)–New York JFK service, £59 one-way fare, is launched on September 26. Skytrain goes on to carry over 50,000 passengers before year's end with each flight over 80% full. Just over one million passengers are carried systemwide on the year and net profit reaches \$1.5 million.

In January 1978, the company receives the 1977 "Market Development Award" from *Air Transport World* magazine. Now a hero in many quarters, Laker is knighted by Queen Elizabeth II in the spring and his face appears on the cover of *Time* magazine. From this point on, he is referred to as "Sir Freddie."

A low-fare Skytrain route is extended to Los Angeles on September 26 as the entrepreneur talks of Globetrain flights. Ticket prices from London to Los Angeles are \$162 during the off-season and \$165 during the summer months. The first year of no-frills, low-priced flights are celebrated on September 27 when the company welcomes its 250,000th passenger. At this point, airline employment totals 1,071 and the fleet comprises 4 DC-10-10s, 2 Boeing 707-320Bs, 2 B-707-138Bs, and 5 BAC 1-11-301AG/320AZs.

Passenger boardings rise 52% to 1,520,000 in 1978 and profits jump to \$3 million.

On April 10, 1979, Sir Freddie orders 5 more DC-10-30s and 10 Airbus Industrie A300B4s to complement the current fleet of 6 DC-10-30s, 2 B-707-138Bs, and 5 BAC 1-11-301AG/320AZs.

Enplanements pass 1.8 million as the 5 additional Douglas widebodies are placed in service.

The grounding of all DC-10s for six weeks as the result of the Chicago **American Airlines** crash costs the carrier some \$13 million in lost revenue. The resistance of Hong Kong, Australia and New Zealand combined with the rise in fuel costs triggered by the second oil crisis of the decade causes the concept of Globetrain to be placed on hold. Indeed, even the new Los Angeles service loses \$2 million its first full year.

The workforce in 1980 stands at 3,000. An effort to extend the Skytrain concept to the Continent runs into national protectionism and is scrapped. Plans to offer Skytrain flights to and from Hong Kong fail again. On February 8, the CAA approves requests from **Cathay Pacific Airways (Pty.), Ltd.** and **British Caledonian Airways, Ltd. (BCAL)** to service the Far Eastern crown colony, but specifically denies Laker. After direct appeal to Prime Minister Thatcher, the U.K. Secretary of State on June 17 directs that permits be issued to all three airlines, without restrictions. Unhappily, executives of the company in Hong Kong alienate members of the Hong Kong ATLB, which, on October 18, rejects application for landing rights.

Charter and Skytrain passenger traffic increases to 1,983,000 passengers carried; freight traffic is also up to 31.12 million FTKs. The independent airline is now the sixth largest overall operation on the North

Atlantic; nine different U.K.–U.S. frequencies are offered and one in seven of every transatlantic air passenger flies aboard a Laker DC-10-30.

The worsening world economic condition, overextension, increased expenses, monetary devaluation, and the reactions of competitors cause severe financial difficulties for Laker in the spring of 1981. In May, Laker realizes he cannot pay his loans and warns his main lenders; they grant him no leniency. In September, the airline chief meets with his bankers in London and seeks postponement of repayments for a year.

McDonnell Douglas financial analysts project that, given concessions, Laker might earn a profit within two years; as a result, Midland Bank corporate finance officer Dennis Kitching is able to offer a rescue plan through the restructuring of LAL's loans. On October 16, **Pan American World Airways (1)**, **Trans World Airlines (TWA)**, and **British Airways, Ltd. (2)**, themselves all in some financial difficulty, win British government approval to lower their own fares. Along with other carriers, they take on Laker in a price war, seen by many as a predatory move designed to kill off Skytrain. The move takes effect immediately; during the first two weeks of November alone, Laker's transatlantic traffic falls to 59% of projection. First-class, high-fare Regency Service is introduced in an effort to regain some lost bookings and capital.

On the year, passenger boardings fall 3% to 1,941,000, but cargo skyrockets 118% to 74.06 million FTKs. A week before Christmas, the bank's rescue plan is announced.

In January 1982, under the leadership of Sir Adam Thomson of **British Caledonian Airways, Ltd. (BCAL)**, Laker's competitors unveil a new tactic: pressure upon the aircraft engine division of General Electric and McDonnell Douglas, which are allowing the conversion of debts into preferred Laker shares. Thomson's threat not to purchase further equipment from them is followed by similar messages from **Sabena Belgian World Airlines, S.A.** Chairman Carlos Van Rafeleghem, **UTA French Airlines, S.A.** Chairman Rene Lapautre, **SAS (Scandinavian Airlines System)** official Bo Stahle, **Swissair, A.G.** Chairman Armin Baltensweiler, **Deutsche Lufthansa, A.G.** leader Dr. Abraham Kraemer, and **KLM (Royal Dutch Airlines, N.V.)** Chairman Sergio Orlandini, among others.

Unable to arrange a last-minute financial bailout at the height of the world economic recession and \$270 million in debt, LAL collapses on February 5; all scheduled and tour operations cease immediately. In November, the airline's liquidator, Christopher Morris of Touche, Ross & Company, files an \$350-million antitrust action against McDonnell Douglas, General Electric, Midland Bank, **British Caledonian Airways, Ltd. (BCAL)**, **Sabena Belgian World Airlines, S.A.**, **UTA French Airlines, S.A.**, **KLM (Royal Dutch Airlines, N.V.)**, **Deutsche Lufthansa, A.G.**, **Swissair, A.G.**, **SAS (Scandinavian Airlines System)**, **British Airways, Ltd. (2)**, **Pan American World Airways (1)**, and **Trans World Airlines (TWA)**. An out-of-court settlement is reached on June 12, 1985, as Morris recovers \$48 million. Eventually, claims of \$300 million are settled.

LAKER AIRWAYS (BAHAMAS), LTD.: 1170 Lee Wagner Blvd., No. 200, Fort Lauderdale, Florida 33315, United States; Phone (305) 359-7708; Fax (305) 359-7698; Code 7Z; Year Founded 1985. Following the 1982 demise of his **Laker Airways, Ltd.**, Sir Freddie Laker becomes a consultant to Bahamas-based Princess Hotels International/Princess Casino. Two years later, in 1984, he forms Princess Vacations International at Miami. For the next eight years, he will contract with foreign carriers, including **Carnival Air Lines**, to fly tourists to the Bahamas Princess Resort and Casino at Freeport.

Meanwhile, LABL is incorporated in September 1985, but remains dormant. A total of eight million tourists are transported through late 1991.

Carnival Air Lines now increases its charter rates, triggering a decision by Laker to take over the Miami–Bahamas flights with his reactivated company. He will work closely with two other men with whom he

now divides shareholding: Texas investor Oscar Wyatt, CEO of LaSara Grain Corporation (33%) and Grand Bahamas Port Authority owner Sir Jack Hayward (33%).

Laker acquires three Boeing 727-281s and on May 18, 1992 assumes the \$16-million contract from Princess Casinos to bring it customers from the U.S. cities of Birmingham, Chicago, Cincinnati, Cleveland, Fort Lauderdale, Hartford, Jacksonville, Memphis, Nashville, Orlando, Tampa, and West Palm Beach. On December 15, all routes become fully scheduled; the same day, service is started to Miami.

Operations continue apace in 1993-1994. In December of the former year, the three non-Advanced trijets are replaced with two B-727-2J7As. Additional destinations added include Greenville/Spartanburg, Raleigh/Durham, and Richmond. Plans are made to inaugurate transatlantic DC-10-30 service and enplanements total 250,000 per year.

Late in 1995, Sir Freddie and Mr. Wyatt establish **Laker Airways** at another Fort Lauderdale location to undertake the transatlantic flights that duly begin on March 26, 1996. Meanwhile, through those years and during the remainder of the decade, the original concern's two trimotors continue to fly vacationers to Orlando, Miami, Fort Lauderdale, and West Palm Beach from Baltimore, Birmingham, Chicago, Cincinnati, Cleveland, Greenville/Spartanburg, Hartford, Memphis, Raleigh/Durham, Richmond and Manchester, New Hampshire.

Enplanements reach 142,324 in 1998, but slide 19.6% to 119,000 in 1999. At the end of the year, the company is renamed **LB, Ltd.**

LAKESIDE AVIATION, LTD.: United Kingdom (1991-1994). Organized at Aberdeen Airport in 1991, this new Scottish regional, an associate of **Lakeside Helicopters, Ltd.**, provides scheduled domestic commuter services as well as charter and contract service flights on behalf of the North Sea oil industry. Chairman Christopher Thomas and Managing Director John Begg initiate operations with a pair of Cessna 404 Titans.

Two British Aerospace BAe Jetstream 31s are acquired by lease in 1992, with a third chartered Jetstream 31 arriving in 1993. Flights cease in 1994.

LAKESIDE HELICOPTERS, LTD. See LAKESIDE AVIATION, LTD.

LAM (LINEA AEREA MISIONERS, S.A.): Argentina (1978-1995). LAM is formed at Posadas in Misiones Province in 1978 to offer commuter services. Two Israel Aircraft Industries Aravas are obtained and scheduled services are initiated linking the capital with destinations throughout the northeastern Argentine province as well as Asuncion, Paraguay.

During the early 1980s, a Piper PA-31 Navajo is acquired. Operations continue apace throughout the remainder of the decade and President Hector Do Santos fleet is altered to include 1 each de Havilland Canada DHC-6-300, Fokker F.27, and F.28-1000.

In 1992-1994, services remain unchanged, but the company goes out of business in 1995.

LAM LINHAS AEREAS DE MOCAMBIQUE (LAM MOZAMBIQUE AIRLINES, S.A.): CP 2060, Maputo, Mozambique; Phone 258 (1) 465 137; Fax 258 (1) 735 601; <http://www.lam.co.mz>; Code TM; Year Founded 1980. On June 14, 1980, following the independence of Mozambique for Portugal, work begins on a makeover of **DETA (Divisao de Exploracao dos Transportes Aereos, S.A.)**. The workforce is increased by 50.2% to 1,996 and the fleet includes 4 Boeing 737-2B1s and 3 Fokker F.27-200s. A state company reporting to the Ministr of Transport and Communications, DETA is renamed on November 19 by Decree 8/80. Cargo grows 11.2% to 10.5 million FTKs, while passenger boardings increase 5% to 299,670.

Airline employment grows another 1.1% in 1981 to 2,017. Orders are now placed for four additional B-727-2B1A/Cs.

Freight accelerates 3.4% to 9.82 million FTKs and the passenger count in 306,374, up 8.6%.

The Douglas DC-8-62 ordered in 1979 joins the fleet in 1982, contributing to a 58% jump in freight traffic to 15.6 million FTKs; passenger bookings soar 30% to 398,937, due largely to the addition of more B-727-200s.

The employee population is 1,927 in 1983, a 3.6% decline, while an order is placed for a DC-10-30.

While on final approach to Quelimane on the night of March 27, a B-737-2B1 with 6 crew and 104 passengers, lands 400 m. short of the runway, causing the landing gear to collapse; there are no fatalities.

In cooperation with **Air Lesotho (Lesotho Airways Corporation)**, F.27-200 flights are initiated from Maputo to Maseru via Manzini.

Cargo grows 3% this year to 16.2 million FTKs while bookings for passengers rise 7% to 428,024.

The Douglas DC-10-30 ordered late in the year and is delivered in 1984, allowing the extension of routes to East Berlin, Copenhagen, and Paris.

Passenger boardings are now down to 282,048.

The DC-10-30 is leased to **TACV Cabo Verde Airlines, S.A.** on weekends in April 1985 while, because of fuel shortages, domestic operations are also curtailed. In November, the Douglas wide-body is chartered to **TAAG Angola Airlines** to operate a weekly flight from Luanda to Lisbon.

Passenger bookings decline further, down to 208,000 and freight is off 26.43%.

The employee population stands at 1,975 in 1986 and the fleet includes 4 Partenavia P.68Cs, 5 Cessna 402Cs, 3 B-737-2B1A/Cs, 2 DC-10-30, and 2 Il-62M. In cooperation with the East German carrier **Interflug DDR Airlines**, weekly services are started during the summer from Maputo to Addis Ababa.

Customer boardings grow 17.7% to 244,409 and cargo swells 13% to 10.3 million FTKs.

The payroll is advanced by 1.6% in 1987 to 1,692, even though a large traffic downturn occurs.

Passenger bookings drop 11.8% to 220,296 and freight slips by 17% to 11.27 million FTKs.

The payroll is increased by 11.3% in 1988 to 1,883 and the fleet now also includes 4 turboprops: 2 Beech Super King Air 200s and 2 CASA C-212-200 Aviocars. The Douglas wide-body undertakes weekly Sal-Boston flights on behalf of TACV and plans are made to initiate service between Maputo and London.

Customer boardings rise a welcome 10.3% to 243,094 and cargo recovers, rising 3.3% to 11.65 million FTKs.

An Antonov An-26 is acquired in 1989. A B-737-2B1A with 108 passengers overruns the runway at Lichinga while landing in a rainstorm on February 9; although one engine separates from the wing, there are no fatalities.

Beginning in May, a stop at Madrid is added to the Maputo-Lisbon route.

Enplanements for the first 9 months reported total 184,883, with 7.63 million FTKs of freight flown.

During the spring of 1990, the airline contracts with **Air Botswana (Pty.), Ltd.** to operate certain domestic flights; one day per weekend, the Botswana British Aerospace BAe 146-300 is based at Maputo.

Through November, the 1,700-employee flag carrier transports a total of 265,114 passengers and hauls 8.75 million FTKs of freight.

Company employment grows by 1.7% in 1991 to 1,729 and the fleet now includes 2 Beech Super King Air 200s, 3 CASA C-212-200 Aviocars, 4 P.68Cs, 5 Cessna 402Cs, and 1 each B-737-2B1, B-737-2B1CA, 1 DC-10-30, and 1 Il-62M. Orders are outstanding for 2 B-767-2B1ERs.

This year traffic figures are only reported through the first quarter. They show boardings off by 3.8% to 64,965, but freight climbs 2.5% to 2.27 million FTKs. The first of two B-737-3B1s to be leased from GPA Group during the year arrives in April.

There is no change in either fleet or employment in 1992. Recession attacks bookings, however, and enplanements decline 16.2% to 244,781. Freight also falls, by 6.8%, to 10.3 million FTKs. In addition, with the

end of the civil war, domestic flights cease to be the main mode of transportation as the government places emphasis on the opening of roads.

In 1993, Chairman/Director General Jose Ricardo ZuZarte Viegas oversees a workforce of 1,948. Gone from his fleet are the DC-10-30, IL-62M, replaced by two leased B-737-3Y0s and two chartered B-767-2B1ERs, whose arrival triggers the introduction of a new livery throughout the airline.

In addition to domestic stops at Beira, Quelimane, Nampula, Pemba, Tete, and Lichinga, the Maputo-based flag carrier also serves the regional cities of Johannesburg, Harare, Matsapa, and Dar es Salaam as well as the European destinations of Lisbon, Madrid, Paris, Copenhagen, and Berlin (Schoenfeld Airport).

Operations continue apace in 1994, but business is off significantly, causing the return of the leased B-737s.

Enplanements total but 134,000. The carrier now has an accumulated deficit of \$6 million and a debt of approximately \$15 million.

The fleet in 1995 includes 4 CASA C-212-200 Aviocars, 2 Beech Super King Air 200Cs, 4 Partenavias, 5 Cessnas, and 1 each B-737-2B1, B-737-2B1CA, and 1 B-767-2B1ER that is leased to **South African Airways (Pty.), Ltd.**

Equipment-related flight cancellations and stiff competition from airlines in neighboring countries, pushes down both traffic and finances, neither of which are reported.

The Mozambique government begins to consider privatizing its flag line during 1996. The Restructuring of Enterprises agency of government favors the move, which is opposed by senior government officials who wish LAM to continue as a national airline. In June, code-sharing is started with **TAP-Air Portugal, S.A.** on services from Maputo to Lisbon; these employ a Lockheed L-1011-385-3 TriStar 500 leased from the Portuguese flag carrier. A Fokker 100 is chartered in October from **Royal Swazi Airways Corporation, Ltd.**

Enplanements during the 12 months total 160,198.

Airline employment stands at 1,403 in 1997. During the spring, the light aircraft company TTA is privatized; the new owners understand that part of their arrangement with the government includes assumption of certain domestic and regional routes currently operated by LAM.

On October 15, a marketing agreement is signed with **PGM (Portugal Airlines, S.A.)**. Under its terms, passengers are able to make reservations in Portugal for the Mozambique carrier's domestic services and regional flights to South Africa, Swaziland, and Zimbabwe. The reverse is true in that customers may purchase tickets in Mozambique for PGM, which only flies in Europe. PGM also becomes the LAM sales agent in Spain.

As a result of the PGM arrangement, the TAP TriStar is returned in November.

Passenger boardings jump 15.4% to 189,359 while freight climbs 11.9% to 6.36 million FTKs. Revenues total \$41.59 million.

Flights continue in 1998. On February 3, a Lockheed L-1011-500 previously operated by **TAP-Air Portugal, S.A.** is leased from Air Madeira.

During the summer, a B-747SP-44 is chartered from **South African Airways (Pty.), Ltd.** Just after takeoff from Maputo on October 5, the Jumbojet suffers an uncontained engine failure in its No. 3 engine. The No. 4 engine and portions of the wing are damaged by debris from the No. 3 engine; however, the giant aircraft is able to complete a safe emergency landing back at its point of departure. No injuries are reported.

LAM is now left with just one B-737-2B1A and the Swazi Fokker 100 with which to operate its domestic and regional services.

On December 23, the airline is transformed into a limited company, adopting the name LAM (Mozambique Airlines) by Decree 69/98. Shareholding is divided between the state (80%) and company managers, technicians, and workers (20%). It will take a year for the paperwork to be completed and a new board of directors to be installed, but it now enjoys complete administrative and financial independence from the Ministry of Transport and Communications.

Customer bookings climb 6.7% to 202,133 while revenues advance by 6.4% to \$45.88 million. A net profit of \$248,000 is reported.

Airline employment at the beginning of 1999 stands at 1,153. On January 25 **SA Air Link (Pty.), Ltd.** purchases 43% of **Royal Swazi Airways Corporation, Ltd.** and passes word to LAM Mozambique that it wishes the Swazi Fokker 100 to be returned by March. Now LAM will be down to just one little Boeing with which to operate its domestic and regional flights.

Company officials on February 1 open negotiations with TTA, which has not received a single route since its privatization in 1997 and remains a paper airline. There is speculation, reported by the Panafrican News Agency, that LAM may now be forced to seek the help of TTA.

As late as March 19, LAM denies continuing reports that Royal Swazi has recalled the Fokker, indicating that the lease remains opened-ended and that the required six-month repossession notice has not been given.

Late in the year, the names of the principal members of the new board of directors are finally announced: Jose Viegas, chairman; Capt. Joao Abreu, operations director; Dr. Jeremias Tchamo, chief financial officer; and Armindo Matos, representative from the government of Mozambique.

Customer bookings jump 16.3% to 235,000 while freight climbs 12.8% to 6.64 million FTKs. Operating revenues dip 1.3% to \$46.71 million as expenses rise 3.6% to \$41.82 million. Operating gain falls to \$4.88 million, but net profit is boosted to \$545,000.

Airline employment at the beginning of 2000 stands at 1,142, a 3.5% decrease over the previous 12 months.

A comprehensive cooperative agreement is signed with **TAP-Air Portugal, S.A.** on January 24. Under terms of the pact, the Portuguese flag carrier will purchase blocks of seats and place its code on LAM's return services from Maputo to Lisbon. Arrangements are simultaneously made for the return of the B-767-2B1ER, leased earlier to **South African Airways (Pty.), Ltd.**, which will provide most of the lift.

The B-767-2B1ER leased to **South African Airways (Pty.), Ltd.** is returned to Maputo on March 23; it arrives with a cargo of nine metric tons of relief supplies sent by aid agencies to help with flood relief.

The block-seat, dual-designator pact begins with **TAP-Air Portugal, S.A.** on April 1. Three of the four weekly roundtrips from Maputo to Lisbon are operated with LAM's B-767-2B1ER, with the third flown by TAP's A340-312. The Tuesday and Wednesday LAM flights stop at Beira, while the other two frequencies are direct.

Government authority for the initiation of scheduled domestic trunk line service is awarded to tiny **TTA (Empresa Nacional de Transporte e Trabalho Aereo, S.A.)** on December 13. It is anticipated that the Maputo-based Britten-Norman BN-2 Islander operator will soon be purchasing larger flight equipment.

LAMA (LINEAS AEREAS DE LA AMAZONICA, S.A.): Colombia (1991-1994). LAMA is established at Villavicencio in 1991 to provide both scheduled and unscheduled cargo and express flights to local destinations. Revenue operations commence with a single de Havilland Canada DHC-6-200 Twin Otter. The Canadian-built turboprop is withdrawn in 1992 and replaced with a Lockheed L-188C Electra; operations continue until 1994.

LAMBAIR, LTD.: Canada (1938-1981). To provide quicker transportation for customers of his lumber and fishing businesses, Thomas Lamb starts a lightplane (often floatplane) charter service in 1938. The operation, known as **Thomas Lamb Airways, Ltd.**, remains small until 1968, when the decision is made to open scheduled commuter service. Reformed and renamed Lambair, Ltd., the company acquires a Britten-Norman BN-2 Islander and employs it to inaugurate passenger flights linking Rankin Inlet, Churchill, Thompson, and The Pas.

The passenger commitment is strengthened in 1969 by the addition of a de Havilland Canada DHC-6-100 Twin Otter while two Bristol Mk. 31 Freighters are obtained to support the cargo portion of the business.

Service and frequencies are increased over the next decade and the fleet is significantly enlarged. Added between 1971 and 1977 are three more Twin Otters (two of which are sold after two-year stints), four Douglas

DC-3s, and a Fokker F.27F Friendship. Following Lamb's death, Jack Lamb becomes president with Gregory Lamb as vice president.

Airline employment stands at 90 in 1978 and the fleet comprises 1 F.27F, 5 DC-3s, 4 Twin Otters, 1 Islander, 2 DHC-3 Otters, and 2 Cessna 180s.

A Curtiss C-46F is obtained in early 1979. Experiencing engine trouble during a November 13 flight, the new freighter with two crew, attempts to return to Churchill. Instead, it must make a forced landing in rough terrain 1/4-mi. short of the runway; there are no fatalities.

Unable to maintain the operation in the face of recession and higher fuel prices, the Lambs are forced to close the company in February 1981.

LAMSA (LINEAS AEREAS MEXICANAS, S.A. de C.V.): Mexico (1944–1953). Having acquired 80% majority control on October 1, 1943, **United Air Lines** acts to change the name of Gordon Barry's **LAMSA (Lineas Aereas Mineras, S.A. de C.V.)** on February 9, 1944. On May 4 of that year, a permanent route concession is received for a Chihuahua–Nogales service that had been planned by Barry before his resignation the previous October 28. On May 13 and June 8, respectively, the carrier applies to the Mexican and U.S. governments for permission to fly from Mexico City to Phoenix and Los Angeles. The Mazatlan–Tayoltita segment is sold on September 6.

On October 8, **United Air Lines** obtains 100% control, and the next day transfers five Boeing 247Ds to its Latin subsidiary; these will be known as *Aguila Aztec* (Aztec Eagles) and will each be named after a Mexican state: *Estado de San Luis Potosi*, *Estado de Coahuila*, *Estado de Sonora*, *Estado de Chihuahua*, and *Estado de Sinaloa*.

They will also employ markings similar to those employed by UAL in 1941 and wear colors of white, with red, white, and green trim. The last received is christened *Estado de Chihuahua*. Application is made on October 24 to operate from Nogales to San Diego.

Torreón–Houston permission is sought on August 19, 1945. In the first six months of 1946, **United Air Lines** adds six new Douglas DC-3s to the LAMSA fleet and pays for a new maintenance facility at Torreón. By December, only one *Aguila Aztec*, the *Estado de Chihuahua*, is still in operation, being employed on a Mexico City to Juárez freight service.

Two more DC-3s are transferred from **United Air Lines** in 1947 and in November the B-247D *Estado de San Luis Potosi* is retired. It is followed in December by the *Estado de Sinaloa* and the *Estado de Chihuahua*. In January 1948, family fares are introduced.

During 1949 an ex-Pan American Airways (PAA) DC-4 is purchased and christened *Ciudad de Juarez*. Although Mexican services are maintained, the necessary U.S.–Mexican bilateral air agreement cannot be negotiated and without it, the American carrier's plans for services between the two nations are dashed.

Frustrated, **United Air Lines** sells its subsidiary on July 22, 1952 to a purchasing syndicate, which is ironically entitled LAMSA (Lineas Asociadas Mexicanas, S.A. de C.V.) and headed by Mexican President Miguel Aleman, for \$1,230,000. LAMSA's routes are coordinated with those of **Aeronaves de Mexico, S.A. de C.V.** and the two are completely merged on July 17, 1953.

LAMSA (LINEAS AEREAS MINERAS, S.A. de C.V.): Mexico (1934–1944). Former CAT (**Corporacion de Aeronautica de Transportes, S.A. de C.V.**) pilot Gordon Barry, flying an ex-CAT Bach 3-CT-6 Air Yacht, opens a service between Mazatlan and the mining town of Tayoltita in 1931 on behalf of the San Luis Mining Company. William Randolph Hearst holds majority control of the mining company. A Belanca P-100 Airbus is obtained to operate over the 68-mile route.

After three years of service, the miners put up a \$25,000 loan (against a guarantee of continuing service) as capitalization, which allows Barry to incorporate his operation on August 27, 1934. A government experimental permit for scheduled operation of the Mazatlan–Tayoltita route is granted on September 24.

A WACO is added to the fleet in 1935 along with a Sikorsky S-38B; on September 3, the initial single route is extended to La Paz and Durango. Meanwhile, a 30-year concession for the original service is awarded on October 10.

Another experimental certificate is received for the Durango and La Paz extensions on June 10, 1936, and is followed by receipt of a permanent concession on March 29, 1937. Barry acquires a Mazatlan to La Paz route following the death of Noel Bullock and his five passengers in the crash of his Bach Air Yacht.

During the year, the owner's wife is appointed president of LAMSA, becoming the first woman in the Western Hemisphere to hold that position. On December 4, multistop flights are initiated from Mexico City–Torreón–Ciudad Juárez. By year's end, most of the 11 Lockheed Model 5 Vegas ordered have been received.

A 30-year permit for Barry's north central route of December 1937 is awarded on October 3, 1938. On August 29, 1939, a spur is thrown from Durango to Torreón (conceded in 1940) and flights start to Nuevo Laredo in March 1941 (conceded a year later). At this point, LAMSA's route network appears very much like that first flown by CAT years earlier. **United Air Lines** lends Barry \$230,000 on October 6; \$50,000 is immediately invested in six Lockheed Vegas.

A scheduled service for a route from Chihuahua northwest to Nogales is granted on November 7, 1942. Unable to compete against both **American Airlines** and **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**, the Nuevo Laredo service is cancelled in January 1943. The Chihuahua–Nogales service is inaugurated on February 5. Three quarters interest in the carrier is purchased by **United Air Lines** on September 17; the American trunk line's holding is increased to 80% on October 1. With the U.S. major now seeking for international expansion and making all operational decisions, Gordon Barry resigns on October 28.

United Air Lines changes the carrier's name to **LAMSA (Lineas Aereas Mexicanas, S.A. de C.V.)** on February 9, 1944.

LAN (LINHAS AEREAS NATAL, S.A.): Brazil (1946–1950). Cyro Novais Armando creates "Natal" in the Minas Gerais State city of Juiz de Fora on July 3, 1946. Capitalization is provided by the former **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** pilot's uncle, a wealthy textile plant operator, and in his honor the airline's initials, at least initially, form the acronym for Navegacao Aerea Theodorico Alvares de Assis, S.A.

After government operating permission is received on July 30, Armando imports four ex-RCAF Douglas C-47s (reconfigured to DC-3 civil standard) and employs them to inaugurate service between Rio de Janeiro and São Paulo on December 7.

Early in 1947, "Natal" comes to stand for a more ambitious goal, Navegacao Aerea Trans-Americana, S.A. Four more routes are opened west of São Paulo: to Belo Horizonte via Mococo and Guaxupe; to Buaxupe via Mococo; to Aracatubo via Lins; and to Campo Grande via Rancharia, Presidente Prudente, and Presidente Wenceslau.

On February 1, 1948, the carrier is purchased by the nonflying entrant **VITA (Viacao Interestadual de Transportes Aereos, S.A.)**; however, when that company's operating permit is cancelled for nonuse on June 6, 1949, "Natal" is sold to a Capt. Aguiar. The new owner cannot hold on a year and in May 1950 sells the airline, its routes, and DC-3s to **REAL, S.A.**

LANA AIR COMPANY: Gogolevskaya 25, Kiev, 252054, Ukraine; Phone 380 (044) 264 863; Fax 380 (044) 244 664; Code RKS; Year Founded 1995. Lana is set up in 1995 to offer domestic and regional all-cargo services. Charter flights begin with three Ilyushin Il-76MDs.

LANCASHIRE AIRCRAFT CORPORATION, LTD.: United Kingdom (1946–1957). Having formed LAC during World War II as a repair facility for Bristol Beaufighters, J. Eric Rylands adds a charter operation in January 1946, becoming chairman/managing director. With two de Havilland DH 89As acquired in February and a third in

April, ad hoc charters are undertaken in northern England from Blackpool and Preston.

At the end of the summer, six ex-RAF Percival Proctors 1s/3s and three Airspeed AS.65 Consuls are acquired. In September, five Handley Page HP-61 Halifax bombers are purchased for conversion into civilian transports.

The first civil standard Halifax freighter is delivered on April 10, 1947; christened *Air Viceroy*, it is followed into service by four others during the remainder of the quarter. Before it could be christened, one of these is lost in a landing accident at London (LHR) on June 6. The survivors fly produce charters from the Continent as well as long-range missions to Asia. The first Halifax, *Air Viceroy*, is lost in a Tegel crash on July 6.

Three additional DH-89As are purchased in July and together the six Dragon Rapides fly a variety of unscheduled charters from Blackpool. In the first week of September, a Halifax is converted to passenger standard and is employed on September 12 to fly, on behalf of the U.S. Maritime Administration, a Liverpool–New York charter via Prestwick, Iceland, and Gander. Other long-distance passenger and freight charters are undertaken during the fall.

A company Halifax becomes, on December 11, the first British civil aircraft to land at Budapest since V-E Day. The same day, the carrier begins a series of textile flights to Britain from France. On December 12, another Halifax, the *Air Adventurer*, is destroyed in a Rhyl crash.

Textile flights increase in 1948 between Paris (Le Bourget), Lille, and Liverpool. Halifax flights to distant destinations continue; examples include Saigon and Athens. Beginning in May, pleasure flights are offered by company Dragon Rapides from London (Northolt). In July, as the result of acquiring **British European Airways Corporation (BEA)** associate agreements, lightplanes begin flying scheduled service Leeds to the Isle of Man and Blackpool to Southport. On August 31, Halifaxes begin participation in a "milk airlift" between Belfast and Liverpool and Blackpool, continuing into early October.

LAC begins its contribution to the civil portion of the Berlin Airlift on October 16, with three Halifax freighters flying into the former German capital from Wundtsdorf; company Halifax tankers join in this service in early November. On November 24, operations are transferred to Schleswigland; on December 16, the freighters are withdrawn and the number of tankers is increased to 12.

Tanker flights into Berlin continue during the winter of 1949; on January 23, some 100 tons of diesel fuel are transported. On March 21, a Halifax is destroyed in a crash near Schleswigland (three dead). When the Russian blockade ends in May, LAC has completed over 2,000 sorties into the city carrying 3 million tons of fuel oil and 15,000 tons of cargo. With the exception of **Flight Refueling, Ltd.**, the carrier completes more sorties than any other charter company. When the 11 surviving aircraft are withdrawn on July 12, the final sortie tally reads 183 freight and 2,577 tanker flights.

Meanwhile, two Halifaxes are lost in crashes at Tegel, one on May 10 and one on June 1. Three of the Berlin Airlift Halifaxes are reconverted to freighter standard and the first of these completes a produce charter from France on July 27. During the summer and again under arrangement with **British European Airways Corporation (BEA)**, DH-89A, Airspeed Consul, and Percival Proctor scheduled flights are flown from Blackpool to Southport, Jersey, the Isle of Man, and London (Northolt) and from Leeds to the Isle of Man, London (Northolt), and Jersey.

In August, Newcastle-based **Astral Aviation, Ltd.** is purchased, giving LAC the opportunity to commence a scheduled service from that town to London. During the same month, the company receives the first of two Hanley Page HP.70 Halton transports. All but the Leeds to London service are maintained following the summer tourist seasons, while the four available Halifaxes are so heavily booked with textile and fruit flights to England from the Continent that business must be turned away. The Halifax *Air Explorer* is lost in a Paris (LBG) crash on December 28.

The Halifax textile and fruit flights continue in 1950, although a long-distance charter to Tehran on March 13 breaks the Continental pattern.

Meanwhile, the Halifax *Air Enterprise* is withdrawn in January. Other destinations visited during the spring include Milan, Rome, and Abadan. A new charter service for ship passengers is now introduced whereby a company representative drives agreeable passengers disembarking at British ports to the nearest airfield and puts them on an LAC aircraft flying to their destination. During the summer, a new **British European Airways Corporation (BEA)** approved scheduled service is initiated from London (Northolt)–Penzance.

Other routes include Jersey to Blackpool and Leeds; London (Northolt) to Newcastle via Leeds and Manchester; and Isle of Man to Newcastle via Blackpool, Carlisle, and Leeds. Pleasure charters, as well as air racing with Proctors, is also engaged. On October 27, 14 of the 15 scheduled routes are suspended for the winter. When **Eagle Airway, Ltd.**'s last Halifax is lost in November, LAC finds itself the only British charter operator still flying the type.

In December, under contract to **British Overseas Airways Corporation (BOAC)**, all of the company's Halifaxes fly cargo to Singapore and Tokyo. At the conclusion of this charter, the Halifax *Air Rover* is withdrawn, joining four Percival Proctors and a Dragon Rapide sold earlier in the year.

Long-distance Halifax charters to such destinations as Buenos Aires, Bangkok, and Hong Kong continue in the spring of 1951. A second Handley Page Halton is added in February and another Halifax is lost in a crash on March 8, the *Air Monarch* at Great Missenden.

With the availability of Halifax spare parts drying up, company officials purchase 23 Avro Yorks from **British Overseas Airways Corporation (BOAC)** in May. Simultaneously, a number of light aircraft are purchased from the failed carrier **Skytravel, Ltd.**; however, three older Percival Proctors are sold.

While the Yorks, 16 of which will be delivered during the year, including 9 in May and June, are readied, Halifaxes continue to provide charters, though in fewer numbers as crews are trained on the Avros.

An Avro 685 York C.1 is lost at Fayid, Egypt, on August 31; there is no information on casualties. Throughout the year, the carrier's lightplanes continue flying the scheduled routes of the previous 12 months.

In March 1952, **Skyways, Ltd.** is purchased for £157,000 and the new company is known as **Lancashire Aircraft Corporation and Skyways, Ltd.** David Brown remains chairman with Eric Rylands as managing director. Two divisions are created out of the merger partners, with **Skyways, Ltd.** responsible for long-range charters and LAC in charge of single- and twin-engine operations. During the spring, the Yorks and last two remaining Halifaxes mount operations to the Continent. When its two-year contract with **British European Airways Corporation (BEA)** is concluded, **Northwest Airlines (Isle of Man), Ltd.** sells its two Douglas DC-3s and agrees to have the remainder of its assets sold to Lancashire.

By July, 20 Yorks have been painted in **Skyways, Ltd.** livery and are transferred. These now undertake a variety of long-range ad hoc charters as well as troop transport contracts on behalf of the War Office; this history is continued separately under the **Skyways, Ltd.** entry. Three Douglas DC-3s are delivered in November.

Enplanements on the north England scheduled services for the year total 15,000.

The company's 1953 workforce totals 75. While en route from the Azores to Gander, Newfoundland, on an RAF troop transport flight, an Avro 685 York I with 6 crew and 33 passengers, disappears off Newfoundland on February 2; there are no survivors. Neither wreckage nor bodies are ever found.

Scheduled services from Leeds are suspended in February; however, earlier routes are maintained. The first Douglas transport enters service in April, followed by the other two in May and a new purchased machine in July. In addition to scheduled services, the American-made airliners also fly a weekly inclusive tour from Manchester to Tarbes, France, and various ad hoc charters to the Continent.

Passenger bookings for the year total 21,073.

Airline employment in 1954 drops to 63. Despite the sale of four Dragon Rapides, passenger boardings grow to 30,334.

The DC-3s are employed in **1955** to fly inclusive tours from Manchester and London (LGW) to Spain. The light aircraft are left to handle scheduled services. On September 22, two DC-3s are transferred to Skyways and launch scheduled coach service from London to Paris in association with **Air-Coach, Ltd.**, still in LAC colors. Following two days of proving flights, regularly scheduled coach flights begin on September 30.

Sir Wavell Wakefield becomes chairman in **1956**. Scheduled services continue much as before. On September 14, a DH 89A is lost in a crash at Newcastle-under-Lyme. During the fall, the last two DC-3s are transferred to **Skyways, Ltd.**; however, in November and December, before the switch is completed, a company DC-3 in its final charter flies 120 Hungarian refugees from Austria to the U.K. Meanwhile, on December 10, the LAC portion of Lancashire Aircraft Corporation and **Skyways, Ltd.** is purchased by British Aviation Services Corporation.

Almost all of the light airliners are now sold and in early **1957** two Bristol 170 Mk. 21 Wayfarers are leased from **Silver City Airways, Ltd.** to fly the routes to Jersey and the Isle of Man. LAC is amalgamated into the northern division of that carrier.

LANCHILE AIRLINES (LINEA AEREA NACIONAL CHILE, S.A.): P.O. Box 147D, Santiago, Chile; Phone 56 (2) 639-4411; Fax 56 (2) 638-3976; http://www.lanchile.com; Code LA; Year Founded 1932. Under terms of a March 5, **1932** government decree (No. 247), the commercially oriented air transport arm, **LASA (Linea Aeropostale Santiago-Arica)**, is separated from the Fuerza Aerea Nacional (National Air Force) on July 21 and becomes an independent state-owned agency under its present name. The new entrant also receives a monopoly on all national routes, sharing several with the U.S. international **Pan American-Grace Airways (PANAGRA)**. The initial fleet comprises 5 Ford 5-ATs, 6 de Havilland DH 60 Gipsy Moths, and 5 Fairchild FC-2s.

A Fairchild FC-2 is lost in an April 24, **1933** crash. New aircraft ordered earlier make their appearance and by **1934** the fleet comprises 2 Fords, 4 Douglas DC-2s, and 2 DH-60s. The fleet is significantly strengthened in **1935** when three Curtiss T-32C Condor IIs, formerly owned by **American Airlines**, are delivered. One of these initiates service to Puerto Montt, nearly doubling the carrier's unduplicated route mileage.

Fleet building continues apace in **1936** as eight French-made Poetz 56s and two American-made Sikorsky S-43s are acquired. During the year, crashes destroy an FC-2 near Ovalle on March 14 and a Condor II on July 29. Five are killed in the former tragedy. The Curtiss-Wright Export Company's aircraft factory at Los Cerillos Airport, Santiago de Chile, is purchased. Here the carrier sets up its first maintenance center and begins to perform maintenance for both its own and foreign airliners.

Routes are opened on an experimental basis to Puerto Aisen in the spring of **1937** and Punta Arenas in September; both destinations are abandoned due to lack of technical facilities. Crashes claim two Poetz 56s, on March 27 and October 13, respectively.

While en route from Puerto Montt to Punta Arenas in May, one of the carrier's two S-43s suffers engine trouble and makes a forced water landing, sliding up a beach into a tree where its wing is damaged.

During the first week of June, LanChile's lone operational S-43 disappears while on a service from Punta Arenas to Puerto Montt. Flying his S-38 from Buenos Aires across the Uspallata Pass to Santiago, Capt. Fritz Sterling of **Pan American-Grace Airways (PANAGRA)** participates in the search for the lost aircraft; after several days, only one body and pieces of debris are located.

Replacing lost aircraft, the carrier leases a Junkers Ju-52/3m from **Syndicato Condor, S.A.** in **1938** and adds two Ju-86s. A second Ford 5-AT is lost in an accident on May 10.

When an earthquake smashes the Chillan zone at the beginning **1939**, an air link is established to the area from the capital city, allowing LAN to fly emergency material in and evacuate casualties. Crashes destroy an FC-2 (March 9) and a Ju-86 (March 14).

The leased Ju-52/3m is returned in **1940**. A total of 2,600 passengers are carried on the year.

Orders are placed for six Lockheed Model 10A Electras, the first of which arrives at Santiago de Chile on March 11, **1941**. The American-made aircraft begins new services to Concepcion. An air hostess service division is established later in the year and the first female flight attendants are employed. In **1942**, service is opened from Concepcion to Chanarel.

Early in **1943**, crashes claim two Poetz 56s on January 18 and March 29, respectively. The first of four Lockheed Model 18 Lodestars to be delivered on the year is flown into Santiago on September 11. The Lockheed fleet in **1944** includes 6 Electras and 5 Lodestars. Regularly scheduled service is kicked off to Puerto Aisen. In June **1945**, L-10A flights commence from Punta Arenas to Porvenir, Tierra del Fuego. Bookings climb to 27,000.

In cooperation with **FAMA (Flota Aerea Mercante Argentina, S.A.)**, L-18 flights from Santiago de Chile to Buenos Aires, over the Andes, are inaugurated in March **1946**. This is the company's initial international route. The first of what would eventually total 17 Douglas DC-3s are received from war surplus stocks and regular flights are finally started to Punta Arenas far to the south.

The DC-3 fleet in **1947** stands at 10 as 4 Martin 2-0-2s are placed in service on the Buenos Aires run, replacing the L-18s. A Lockheed Model 10A Electra is lost in an August 4 landing accident.

The Buenos Aires route is extended to Montevideo in **1948**. Orders are placed for 12 de Havilland DH 104 Doves.

In **1949**, the Doves are received and placed on domestic routes, replacing DC-3s. Routes are opened to a variety of new destinations in **1950-1954**, including Illapel, Valdivia, Ancud, Castro, Putalénfu, Alto Palena, Balmaceda, Puerto Natales, Rio Gallegos, Manantiales, and San Sebastian. Lima and La Paz increase the international network.

This expansion is not made without cost. A Lockheed Lodestar with seven aboard crashes near Copiapo on June 15, **1953**; there are no survivors. After completing its landing at Provenir, Chile, on May 29, **1954**, a DC-3 with 3 crew and 26 passengers, runs off the runway and catches fire; although the aircraft must be written off, there are no fatalities.

Orders are placed for 6 DC-6Bs, which order is later increased to 11.

LAN-Chile Airlines is adopted as a marketing title in **1955**. The first two of three DC-6Bs to be delivered during the year arrive in January and enter service in the spring. During the year, the new aircraft allow initiation of the first nonstop flights linking Santiago with Punta Arenas in the south and Arica and Antofagasta in the north.

DC-6B Lima service is started during the summer of **1956**. On December 22, a DC-6 makes a proving flight to Antarctica. LanChile thus becomes the first commercial airline to make a flight over that frozen continent, a fact ever afterward recorded on all aircraft fuselages, "First Over the Antarctic."

The carrier receives approval from the U.S. CAB in April **1958** to commence flights from Santiago to Florida. DC-6B Miami flights via Lima and Panama City start in August. They will be flown twice weekly by the third DC-6B, after its introduction into service on September 4. The return service continues on from Santiago to Buenos Aires and Montevideo.

Following the **1959** Castro revolution and the demise of the competing independent **ALA (Sociedad de Transportes Aereos, S.A.)**, LanChile initiates service to Havana late in the year.

Two violent earthquakes strike southern Chile in May **1960**—so violent that maps of Chile will need to be redrawn. LanChile joins the Air Force in providing an air bridge to bring assistance and relief to the disaster areas. In terms of passenger kilometers flown, the carrier now ranks as the seventh largest in Latin America. A total of 388,000 passengers are transported on the year. Meanwhile, a deal is struck with **Allegheny Airlines (1)** for the purchase of four Convair CV-340s.

The carrier's very first DC-3 (CC-CBG), operating as Flight 310 with 4 crew and 20 passengers, disappears into the Andes near Lastima on April 3, **1961**. The wreck is found on La Gotera Hill a week later and there are no survivors.

Delivery of the CV-340s from Pennsylvania is completed during the remainder of the year.

No new services or fleet units are introduced in **1962**; however, in **1963**, orders are placed for three Sud-Est SE-210 Caravelle VIRs.

The first Caravelle VIR is delivered on March 6, **1964**, and is placed in service on the Miami route, replacing a DC-6B on March 30. The twice-weekly jet route, 8 hrs. shorter than the piston-engine flight, is now christened the Lan-Jet Royal Blue Caravelle Service. The return service is operated to Santiago via Panama and Lima and continues from the capital on to Buenos Aires and Montevideo.

The two other SE-210s are received during the year, joining several DC-6Bs displaced from the Florida run on domestic routes. The jetliners cut the travel time between the extreme ends of the country in half. Eric Campana becomes chairman/president with Pedro Gase as vice president-operations.

Enplanements climb by 29.4%.

Flight 107, a DC-6B with 7 crew and 80 passengers, crashes near San Jose Volcano in the Andes Mountains near Santiago on February 6, **1965**; there are no survivors.

As of April, all Miami services are provided by Caravelles, with a stop being added at Guayaquil. The destroyed Douglas is replaced by another DC-6B purchased from **Western Airlines** on August 17.

Orders are placed in **1966** for nine Hawker Siddeley HS 748-234s, the first being delivered in December, and a Boeing 707-385C.

On January 6, **1967**, the first HS 748-234 service is flown from Santiago de Chile to Puerto Montt and San Carlos de Bariloche.

A DC-6B makes a proving flight to Easter Island on April 3, becoming the first commercial aircraft to land on that isolated part of the nation. Regularly scheduled flights to Easter Island commence on April 8.

Meanwhile, the first Boeing jetliner, the former **Deutsche Lufthansa**, A.B. B-707-330B *Bremen*, is delivered on April 5 and is employed to inaugurate New York (JFK) service on April 15 as an extension of the twice-weekly Miami frequencies. The "Big Apple" becomes a joint terminus with Miami, as twice-weekly flights begin. Roundtrip Caravelle frequencies to Miami are increased to four per week. A B-727-116C is ordered toward year's end.

A DC-6B route is opened to Tahiti, French Polynesia, via the Easter Island airfield, on January 2, **1968**. The B-727-116C is delivered on March 13 and Lima to New York nonstop B-707-385C service is launched on March 25.

On April 1, the B-727-116C begins flying from Santiago de Chile to Punta Arenas and Arica. Hawker Siddeley HS 748-234s begin Santiago de Chile-Balmaceda operations on July 8; by fall, the British-made liners are replaced by DC-6Bs. On November 2, the B-707-385C begins a frequency from Buenos Aires to New York via Santiago de Chile and Guayaquil. An order is placed for another B-707-385C late in the year.

Cali, Colombia, is added to the route network on April 27, **1969**.

On final approach to Santiago after an April 28 flight from Buenos Aires, Flight 160, a B-727-116 with 8 crew and 52 passengers, strikes the ground 24 km. N of Colina; although the aircraft must be written off, there are no fatalities.

Service is inaugurated from Santiago de Chile to Asuncion via Antofagasta on May 2; this route is stretched to Rio de Janeiro on May 12.

Caravelle VIRs replaced DC-6Bs on the Balmaceda run on September 27. While en route from Santiago to Puerto Montt on November 12, a Caravelle VIR is subjected to an attempted hijacking by two juveniles; just after takeoff from an intermediate stop at Antofagasta, the young people are captured by the flight crew.

A DC-3 freighter with three crew fails its takeoff from El Tepual, Chile, on December 5 and makes a wheels-up forced landing from which all aboard walk away.

Later in the month, the second B-707-385C is delivered and christened *Lago Ranco*. En route from Santiago to Arica on December 19, a DC-6B with 99 passengers is captured by a lone gunman and diverted to Cuba. The craft is allowed to depart next day after Chile agrees to pay \$20,000 for provisions, fuel, and landing rights.

A youth is slain and a second held in a February 6, **1970** attempt to force a Caravelle VIR, with 71 passengers and on a domestic flight from Puerto Montt to Santiago, to fly to Cuba. Two detectives, a crewman, and a mechanic are wounded in the shootout, before a third policeman, disguised as a caterer, is able to act successfully.

The *Lago Ranco* is employed to begin an additional weekly Tahiti frequency via Easter Island on February 28. Having gained long-haul experience, the B-707-385C's crew inaugurates service to Europe on August 1, flying a route from Santiago and Asuncion to Frankfurt via Buenos Aires, Rio de Janeiro, Madrid, and Paris (ORY). The DC-6 service on the South Pacific route to French Polynesia is replaced by Strato-liner frequencies, when the *Lago Ranco* returns from Europe, thereby linking Tahiti with Europe via South America.

Marxist Salvador Allende becomes president of Chile on November 4. Domestic passenger boardings for the year are 200,069.

Given Soviet and Cuban political cooperation, the government in March **1971** decrees the opening of a new service from Santiago de Chile to Madrid via Havana, which begins on July 17.

Inconclusive talks are held with the governments of Australia and New Zealand concerning South Pacific rights.

Domestic enplanements for the year are down to 189,147.

When Braden Copper wins a court action to freeze Chilean assets in the U.S., LanChile is forced to cease New York services on February 18, **1972**; the suspension lasts just over a week. During the spring, domestic fares are significantly reduced and frequencies to Europe are doubled.

While en route from Panama City to Miami on May 25 on the continuation of a flight originating in Santiago, the B-727-116C with 60 passengers and flying at 30,000 ft., is subjected to a pipe-bomb explosion in its ice water service compartment. The blast causes rapid decompression and significant damage; however, the flight crew is able to cope and a safe emergency landing is made at Montego Bay, Jamaica. No injuries are reported.

In the summer, the carrier's technical staff successfully thwarts a government desire for the purchase of Soviet-made Ilyushin Il-62s.

In late winter **1973**, LanChile holds discussions with **SAS (Scandinavian Airlines System)** concerning the technical possibilities of opening a route to Sydney via McMurdo Sound in Antarctica.

President Allende is overthrown by assassination on September 11 and succeeded by Gen. Augusto Pinochet. Shortly thereafter, board member Gen. German Stuardo becomes the airline's new president. A charter proving flight is made Santiago de Chile-Sydney via Tahiti and Fiji on September 29. The former **Western Airlines** DC-6B is sold to the Chilean Air Force late in the year.

An experimental B-707-385C flight is made from Sydney to Punta Arenas via McMurdo Sound on February 9, **1974**. The historic aerial voyage is the first nonstop flight over the South Pole and is widely heralded in the international press. The Tahiti route is extended on a regular basis to Fiji on September 5. The fleet now comprises 8 B-727-116/116Cs, 2 B-707-385Cs, 3 Caravelle VIRs, 9 HS 748s, 8 DC-6Bs, and 6 DC-3s; orders are placed for two additional B-727-100s. On November 14, a B-707-351C is acquired from the American carrier **Northwest Airlines**.

A DC-3 with 3 crew and 27 passengers crashes on takeoff from Santo Domingo for a January 30, **1975** flight to Port au Prince (one dead).

During the remainder of the year and in **1976**, the carrier seeks to recover the success of the Allende period, facing record inflation and the loss of foreign credit only slowly restored. Although three additional B-707-385Cs are acquired, financial losses are suffered in both years.

The B-727-100s ordered in 1974 are received in **1977**. Carlos Tamayo hijacks one of the new Boeings, with 78 aboard, during a June 21 domestic service from Antofagasta to Santiago and diverts it to Mendoza, Argentina, where he surrenders.

Led by Patricia Castro Flores, three Chileans hijack a B-727-116 on a July 10 domestic flight and force it to land in Lima. There, they release their hostages and surrender to police in exchange for a promise of asy-

lum in the Venezuelan embassy; the pirates are allowed passage to Cuba the next day. On November 1, a nonstop Santiago de Chile–Miami service is started.

Enplanements for the year total 489,712, as a \$2.4-million loss is taken.

The workforce in 1978 totals an incredible 39,815. Santiago de Chile–Bogota and Caracas service begins in June. Simultaneously, service is suspended to Asuncion, Paraguay, and Guayaquil, Ecuador. Four Nihon YS-11As are placed in domestic operation.

While on final approach in fog to Buenos Aires after an August 3 flight from Miami, a B-707-342 with 8 crew and 55 passengers, strikes trees 2,500 m. short of the runway and hits the ground; although the plane is badly damaged, there are no fatalities.

Passenger boardings fall 1.6% to 481,591 and freight traffic is up a slight 0.2%. Revenues jump 26.3% to \$109.5 million and expenses are up 18.8% to \$105.9 million, providing a \$3.6-million operating profit.

Airline employment is reduced by 26.8% in 1979 to 2,059. Both a new logo and flight attendant uniforms are introduced, but otherwise, the carrier begins to retrench as the financial picture, led by increased fuel prices, worsens. Three B-727-116Cs and the four YS-11As are sold, the former to **Federal Express**. Service is suspended on several domestic routes, HS-748 flights are ended, along with flights to Bogota and Mendoza.

Passenger boardings drop 20.1% on the year to 384,801 and cargo falls 18.3%. A period of large financial losses begins.

The workforce is reduced 5.8% in 1980 to 1,940. Service is restarted to Mendoza and U.S. frequencies are increased. During the year, the last B-727-116 and all of the propeller equipment are withdrawn. In December, the company acquires its first wide-body, a DC-10-30 christened *Santiago*, leased from **Laker Airways, Ltd.** The first of two B-737-2A1A/Cs is delivered on December 22 and is christened *Arica*.

Passenger boardings dip 0.8% to 381,644, but cargo ascends by 13.1%. In terms of passenger kilometers flown, LAN-Chile now ranks as the 15th largest airline in Latin America.

The fleet in 1981 comprises 1 leased DC-10-30, 3 B-707-385Bs, 1 B-707-385C, 1 B-737-2A1A, and 1 B-737-2A1C. Patricio Supulveda is named president. The *Santiago* is returned to Laker in February; however, three other units will eventually be operated.

Enplanements grow to 435,554, but cargo is down by 23% to 75 million FTKs.

Airline employment in 1982 is 1,432. Two former **Air New Zealand, Ltd.** DC-10-30s are leased, replacing the returned Laker Douglas; the fleet is also enhanced by the addition of two more B-707-320Bs.

As the recession continues, along with internal problems, bookings plunge 17.4% to 370,781; freight, however, is up 12.7% to 79.2 million FTKs.

As the financial and traffic crises deepen in 1983, one B-707-320B and two B-707-385Cs are withdrawn.

In recognition of Chile's tacit support of Great Britain during the previous fall's Falklands War, Chile becomes the main commercial-air departure point to those islands. It is home to 2,000 British citizens and a large military base that has been beefed up to guard against any further attack from Argentina.

LanChile Flight 991 operates weekly return service from Puerto Montt via Punta Arenas, both on the tip of Chile, to Mount Pleasant airport on the Falklands.

Passenger boardings fall again, down 13.6% to 320,368 and cargo is off by 8.9% to 72.18 million FTKs.

After a level employment year, the workforce is increased in 1984 to 1,495. Passenger boardings finally rise, up 5.2% to 337,183; freight grows 1.6% to 73.33 million FTKs.

Airline employment is slashed to 851 in 1985. One more B-707-320B is sold as a B-767-284ER and a B-737-216 are ordered. In July, the structure of LanChile is changed as it becomes a public share company.

Bookings swell 17.3% to 395,524 and cargo grows a miniscule 0.7% to 73.82 million FTKs. Revenues are \$126.3 million and expenses

\$124.9 million; profits (at last) are \$1.34 million (operating) and \$675,000 (net).

The B-767-284ER is received in July 1986 and placed on the Miami and New York routes. The B-707-330C, first known as the *Bremen*, is retired and one of the chartered New Zealand DC-10-30s, the *Valparaiso*, is returned to its owner.

On September 1, the new B-767-284ER with 193 passengers, makes the first ever twinjet revenue service across the South Atlantic, Rio de Janeiro to Madrid. A second B-767-284ER and a B-737-216 are received late in the year, allowing the return of the carrier's second chartered New Zealand DC-10-30. In an effort to restore financial viability, the government, in December, transfers 51% shareholding to the state development agency CORFO, which begins to sell shares to the private sector.

Enplanements for the year total 433,743.

Airline employment stands at 895 in 1987. Operating under its new legal and administrative status, LanChile undertakes a number of cost-cutting strategies. Early in the year, the two leased DC-10-30s are returned and the in-flight catering division is closed down and replaced by a contract with Marriott Corporation. Even the flight attendants are dismissed—and then rehired indirectly through a temporary employment agency.

Arriving at Calama with the sun in his eyes on an August 4 service from Santiago, the pilot of the first B-737-2A1, the *Arica*, with 2 other crew and 30 passengers, lands 520 m. short of the runway. The nosegear collapses, the aircraft breaks in two, and a fire starts (1 dead).

LanChile provides transport around the country for Pope John Paul II during his visit. Mercury Air Cargo is retained at Los Angeles (LAX) as the company's cargo handler and general cargo sales agent.

The carrier's 9 jetliners transport a total of 498,555 travelers, for a 13% increase; cargo accelerates 42.9% to 123.97 million FTKs. These figures translate into profits of \$5.6 million (operating) and \$4.12 million (net).

The workforce is increased by 22.7% in 1988 to 1,261 and 4 B-737-216s join the fleet, all dedicated to increasing domestic services. At the beginning of the year, a new route to Los Angeles is inaugurated.

The company's third hush-kitted B-707F is received in March and is the 100th Stratoliner modified by Tracor Aviation with its Tracor/Shannon Quiet 707 hush kit. In August, **British Airways, Ltd. (2)** proposes its acquisition of up to 35% of the Chilean carrier; the two companies undertake feasibility studies, as other airlines also prepare bids.

The privatization is opposed by the military on national security grounds. Later in the year, B-767-284ER flights begin to Los Angeles. Also, Gen. Pinochet is rejected by a popular referendum. Having himself named a senator-for-life, he leaves the presidency to what will become a multiparty democratic system.

Passenger boardings jump 17.2% to 587,520 and freight increases 23.9% to 153.66 million FTKs. Revenues rise 16.8% to \$183 million and although the operating profit falls to \$3.9 million, net gain climbs to \$4.86 million.

Company employment grows by 26.9% in 1989 to 1,600. In January, the government alters the terms of the bidding process available to foreign airlines seeking an interest in the carrier and as a result, most drop out forcing the government to temporarily cancel the planned 32.7% privatization. A liberal Chile–U.S. air service bilateral agreement, which will lead to later difficulties, is negotiated.

Simultaneously, twice-weekly B-767-284ER flights begin from Santiago de Chile to Montreal via Miami and New York. Employing a leased DC-8-73F, all-cargo services begin over the same route. Meanwhile, a B-767-284ER frequency is stretched by President Patricio Supulveda's airline from Santiago de Chile to Los Angeles via Panama City. Late in the first quarter, construction is started on a new \$4.2-million, 13,000-sq.-m. maintenance center in Santiago.

Representatives of 60 Latin American export corporations are transported during August to destinations in Tahiti, New Zealand, Indonesia, and Australia. The carrier is privatized in September, with **SAS**

(**Scandinavian Airlines System**) acquiring both minority shareholding and the resulting management contract. With SAS support, the Chilean firm Icarosan, S.A. takes \$42.3-million majority, 51% control. Icarosan is headed by **LADECO Chilean Airlines, S.A.** Vice President Guillermo Carey, who jointly owns it with Banque Europeene pour Amerique Latine; \$29.5 million of the purchase price comes from SAS-backed loans from New York's Morgan Guaranty Trust.

Following the October takeover, Carey is named CEO, succeeding Sepulveda, who moves to LADECO. A third leased B-767-284ER is delivered, also in October; the new aircraft replaces the last leased Strato-liner and is employed to double the Santiago to Madrid frequency to twice weekly.

During the final two months of the year, negotiations are opened with **Aeroflot Soviet Airlines** concerning the establishment of joint Santiago-Moscow air services, with reciprocal ground handling at the two destinations.

The B-747-44 *Ciaran* (St. Kieran), painted in full LanChile colors, is leased to the Santiago-based flag carrier on December 1 by **Aer Lingus Irish Airlines, Ltd.** For the high summer season in South America, the Jumbojet is placed on the services from Santiago to Miami and New York and to Los Angeles.

Also the first of two ordered British Aerospace BAe 146-200s is received in December.

Customer bookings jump 15.6% to 673,842 while cargo rises 19.8% to 184.09 million FTKs. Profits are \$2.56 million (operating) and \$6.4 million (net) on revenues of \$213.1 million.

The payroll climbs 15.3% in 1990 to 1,743 and the fleet now includes 2 ex-**Presidential Airways** BAe 146-200As delivered on January 8, 3 B-767-284ERs, 2 B-737-291As, and 5 B-707C/Fs. **SAS (Scandinavian Airlines System)** acquires 30% shareholding, worth \$15 million, in January. That figure will later climb to 35% and include three seats on the Chilean carrier's board of directors. The acquisition is made from Icarosan via Inversiones SAS Chile, a company incorporated just for the occasion.

Also in January, the first BAe 146-200 enters domestic service as the second arrives; orders are placed with GPA Group for two leased B-767-33AERs. On February 20, one of the new BAes, with 84 aboard, overruns a runway on landing at Puerta Williams, Navarino Island, and comes to rest on a submerged sandbar offshore (19 dead).

The privatized carrier becomes much more aggressive and during February and March introduces, in competition with LADECO, new promotional night fares that are 40% lower than regular ticket prices. The company is now the leading Chilean airline between Santiago and the U.S., carrying 76% of all traffic, and between Santiago and other South American nations, transporting 73% of the passengers; at home, 44% of domestic Chilean flights are made aboard LanChile aircraft.

The *Ciaran* (St. Kieran) returns to Dublin on March 5. In April, new domestic destinations are added at La Serena, Los Angeles, Valdivia, Osorno, and Coyhaique.

The new Santiago maintenance center is opened in April and on June 23, a B-707-321C is destroyed beyond repair in a towing accident at Santiago.

In July, a supersaver 50% promotion is unveiled on international flights. Following signature of the previous year's bilateral, **American Airlines** begins massive capacity and discount competition in the company's region. During the month, LanChile joins with **LADECO Chilean Airlines, S.A.** to file a suit with the Chilean Comision Resolutiva Antimonopolios charging the American major with price dumping. Following Iraq's August invasion of Kuwait, oil prices rise rapidly.

At the same time, a joint "direct access" agreement is signed with **LADECO Chilean Airlines, S.A.** covering the use by both airlines of the System One computerized reservations system. In September and October, LADECO retaliates with its own 50% discount tickets; the two airlines are now engaged in the first fare war in South America's only deregulated skies.

The competition, rising fuel costs, excessive capacity, and other factors have brought a \$7.6 million loss since January. The **SAS (Scandinavian Airlines System)** partnership with Icarosan collapses in November, following the dismissal of the latter's head as airline chairman/CEO by the former and his replacement by two Swedish appointees. Jose Luis Moure, a Corfo member of the board, becomes chairman, with former SAS U.K. official Karl A. Kristiansen as CEO. Two other SAS officials, Rudi Schwab and Luis Davids Poskitt, are also seconded from Stockholm. Capitalization is increased by \$10 million, 40% immediately with the remainder due in eight quotas every three months. Frequencies to some destinations are reduced, while all New York flights are scheduled through Miami. With union agreement to a wage freeze and a reduction in force, personnel layoffs begin. In addition, two B-707Fs are sold to the Chilean Air Force for \$8 million and a B-737-291A is disposed of to **Aloha Airlines** for \$15 million.

En route from Tahiti to Santiago de Chile on November 23, Flight 33, a B-767-284ER, is seized on Easter Island by a group of passengers protesting the high cost of Chilean air fares. Once the demonstration has been completed, the hijackers release their hostages and allow the flight to be completed.

Passenger boardings for the year ascend 11% to 752,848 while freight swells 14% to 209.85 million FTKs. Revenues are up 14.2% to \$243.4 million, but expenses increase 22.9% to \$258.74 million. As a result, the carrier suffers an operating loss of \$15.3 million and a net loss of \$8.5 million.

The payroll is sliced 31.2% in 1991 to 1,200 and the leased fleet now includes 1 each B-707-323C, B-707-331C, B-737-2L9A, B-737-2T5A, B-737-291A and 2 each BAe 146-200s, B-707-351Cs, B-767-2Q8ERs, and 2 B-767-284ERs that are leased to **Royal Brunei Airlines** and **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** Orders are outstanding for one B-767-216ER and a B-767-33AER. During the year an extensive corporate restructuring and reorganization occurs and the company is divided into six business units.

In January, an agreement is signed with **Mexicana Airlines, S.A. de C.V.**, whereby LanChile will feed passengers into Mexico City for transfer to the Mexican airline's flights to the U.S. and Caribbean.

Just after landing at Puerto Williams on February 20 after a non-scheduled service from Punta Arenas, a BAe 146-200A with 7 crew and 66 passengers, overruns the runway and ends up in the water (20 dead).

Also during the first quarter, a \$7-million loan is negotiated from the NMB Bank of Holland. Having completed his emergency work, CEO Kristiansen resigns in April and is succeeded Rudi Schwab, who actually resigns from SAS before accepting the post.

In July, the company joins with **SAS (Scandinavian Airline System)** in a joint venture to operate duty-free sales on the Chilean carrier's international services to North America, Europe, the South Pacific, and within Latin America. SAS Trading provides training and other support. The following month, the Chilean airline becomes general sales agent for the Scandinavian carrier in Chile.

Customer bookings decline 7.7% to 693,531, but cargo is up 5.5% to 221.39 million FTKs. Income of \$261.1 million exceeds expenses and there are record profits of \$12.1 million (operating) and \$3.5 million (net).

Company employment is increased a dramatic 58.8% in 1992 to 1,905 and the fleet is increased by the addition of a B-767-33AER and two B-767-3Y0ERs, one of which is subleased to **Transbrasil S.A. (Linhae Aereae Transbrasil)**, plus a Douglas DC-8-71F. In an effort to improve its Executive business-class service, seat pitch is increased to 50 inches in April.

Passenger boardings resume their upward path, growing by 33% to 922,653. One of the few international airlines to have both a good 1991 and 1992, LanChile sees its revenues ascend 18.5% to \$309,000. Revenues swell to \$309.4 million, but the operating profit drops to \$8.6 million. This year's net profit also slides, declining to \$1.2 million, due largely to a \$7.5-million charge required to unload the leases on unneeded flight equipment.

In 1993, President Moure and General Manager/Chief Operating Officer Sverneric Persson oversee a workforce of 1,979, up 3.9% over the previous year. Fleet modernization continues and by March two more DC-8-71Fs and a B-767-3Y0ER are placed into service. A domestic network is operated from Santiago to Arica, Antofagasta, Calama, Concepcion, Copiapo, Coyhaique, Easter Island, El Salvador, Iquique, Osorno Puerto Mont, Punta Arenas, and Temaco. From the same hub, international markets served include Asuncion, Buenos Aires, Caracas, Rio de Janeiro, Lima, La Paz, Los Angeles, Madrid, Mexico City, Miami, Montevideo, Montreal, New York, Panama City, Papeete, Santa Cruz, and São Paulo.

In April, both **American Airlines** and **United Airlines** announce plans to dramatically increase capacity and services into Chile. Once again, the two Chilean carriers go before the Comision Resolutiva Antimonopolios seeking relief and this time the government body grants an injunction. The capacity question intrudes on bilateral discussions with the American government. During the summer, negotiations are held with **Delta Air Lines** concerning a possible code-sharing agreement.

CEO Moure resigns in October, effective the coming March 1. Former CEO Carey sells his 20% stake to Fast Air in December and to Chilean investor Boris Hirmas. Fast Air, represented by its Executive Vice President Enrique Cueto, and Hirmas each receive seats on the LanChile board of directors. Later in the month, the U.S.-Chile bilateral disagreement is resolved; however, the airline's pilots go on strike for two days.

By year's end, the **SAS (Scandinavian Airlines System)** 42.1% share totals \$35 million in equity and loans; the Scandinavian consortium offers to sell all or part of this investment.

Customer bookings move ahead by 14.3% to 953,000 while cargo is up 13.3% to 256.3 million FTKs. Revenues climb 2.7% to \$317.9 million and an operating surplus of \$10.5 is registered; net profit, however, plunges 72% to \$324,000.

Airline employment is increased 3.8% in 1994 to 2,143. Cueto and Hirmas, in February, purchase the 42.1% stake held by **SAS (Scandinavian Airlines System)** for a bargain \$19 million. At the same time, the new board authorizes a \$45-million capital expansion.

Although he remains on the board of directors, CEO Moure's resignation takes effect on March 1, at which time he is succeeded by Cueto. Company officials join with those from **Air New Zealand, Ltd.** in March to announce the inauguration of code-sharing flights between Santiago and Australia and New Zealand via Tahiti. In April, frequencies to Madrid and Frankfurt are increased from twice weekly to thrice weekly. Flights to Panama City end.

In the spring, the two B-767-2Q8ERs are subleased to **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and the two B-767-284ERs to **Transbrasil S.A.** The Cueto consortium, on May 26, acquires the 19.98% stake held by the Icarosan investment company and former CEO Carey. For the first time in its history, the carrier is 100% privately owned, with shareholding divided four ways: Cueto Group 38.5%, Pinera Group 33.1%, Hirmas Group 19%, and Eblen Group 8.1%. Four days later, \$20 million in new capital is injected, which will lead to many dynamic initiatives.

Full control of **Fast Air Chile, S.A.** is acquired on June 1 for \$13.7 million. The same month, a strategic and commercial agreement is signed with competing **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)**. Its most significant provision allows passengers to fly on either airline on routes flown by both. In addition, flights to Bolivia are increased to 10 per week.

Service expansion continues throughout the summer and into the fall. In July, frequencies to Easter Island and Papeete, Tahiti, are increased to three per week while new domestic flights commence to La Serena and Valdivia. Flights over the route to Mexico City and Los Angeles climb to four per week during August, while an equal number of flights to Europe begin in September.

In November, the carrier wins a case in a U.S. federal court against the Immigration and Naturalization Service; under the court's ruling, the

INS will pay the Chilean company \$620,678 plus interest to cover its costs for passengers who flew into the U.S. without visas and then claimed asylum. During the fall, the airline applies to the Antimonopolios Commission for permission to take over **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)**; however, the bid, which will give LanChile control of 80% of the domestic market, is turned down. LanChile successfully reapplies in December.

Passenger boardings leap up 16.4% to 1,176,389, while freight accelerates by 9.5% to 322.47 million FTKs. Revenues jump 27.9% to \$406.76 million and expenses are up 27.5% to \$391.95 million. The pretax gain climbs to \$14.77 million and the net profit reaches \$5.33 million.

The workforce grows 5.2% in 1995 to 2,255.

In January, the company expands its services to and from U.S. gateways. In Miami, the carrier adds daily nonstop flights direct to Santiago, bringing the total number of weekly flights to 11. From New York (JFK), it adds two weekly nonstops to Lima, Peru. An additional flight is also added on the Los Angeles to Santiago run, bringing the total number of weekly departures to four.

On June 1, **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)** majority owner and close business associate Sebastian Pinera sells his 19% equity in LanChile to the LanChile investor group headed by the company's chairman Enrique Cueto; the equity costs \$19 million. The arrangement is approved by the Chilean Comision Resolutiva Antimonopolios in August.

Unhappy with contract negotiations, the company's 200 unionized pilots strike on December 4-5. In order to maintain some services, the company is able to successfully renumber certain **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)** flights as its own. Talks resume on December 6 and reach closure.

Enplanements jump 21.3% to 1,427,195 and cargo accelerates by 38.3% to 446.04 million FTKs. Operating revenues increase 44.8% to \$588.87 million and costs ascend 41.6% to \$554.85 million. Operating gain moves up to \$34.01 million and net profit increases five-fold to \$25.36 million.

Airline employment is increased 28.4% in 1996 to 3,546.

The routes to Asuncion, Paraguay, and Guayaquil, Ecuador, closed 18 years earlier, are reopened in June. In July, code-sharing is begun with **Air New Zealand, Ltd.** aboard flights between Santiago and Auckland. New routes are also opened to Cancún, Mexico, and Punta Cana, Dominican Republic.

During the year, negotiations are undertaken with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** for purchase of the European carrier's 38% stake in **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)**

Customer bookings increase 34% to 1,912,207 and 529.83 million freight FTKs are operated, an 18.8% increase. Revenues advance 18.5% to \$697.68 million while expenses are up only 17.4% to \$651.52 million. A \$46.15-million operating profit is generated and a net return of \$38.31 million is posted.

The employee population is cut by 23.9% to 2,700 in 1997 to 2,700, the year the company celebrates its sixty-eighth anniversary. The BAe 146-200s are retired during the year.

In February, the Chilean Comision Resolutiva Antimonopolios tentatively rules that the company may not acquire the assets of **LADECO Chilean Airlines (Linea Aerea del Cobre, S.A.)** when the Liquidation Commission places them on the open market. LanChile appeals the ruling to the Supreme Court.

At the end of the first quarter, the company announces that it will undertake a \$20-million investment program to upgrade its first- and business-class seating, install new in-flight entertainment systems, improve in-flight services, and modernize airport lounges and ticket counters. Additionally, it contracts with Davies Bacon Co. for a makeover of the LanChile logo and livery, as well as the design of new uniforms and service products.

On June 1, a \$300-million order is placed with Boeing for three B-767-316ERs, which will begin delivery in April 1998. The same day,

Chile's Minister of Labor Jorge Arrate and company President Videla announce the signing of a historic labor pact with the unions of administrative employees, pilots, technicians, and mechanics good for the next four and a half years.

Six days later, service from Santiago to Mexico City is increased from five flights per week to seven while frequencies to Cancún are boosted from one each week to thrice-weekly. Seven new flights to the U.S. are also added.

The purchase of **LADECO Chilean Airlines (Linea Aerea del Co-bre, S.A.)** is completed on June 27. For a total purchase price of \$38.4 million handled by the subsidiary San Alberto, S.A., LanChile has acquired 99.41% of LADECO's property and a new wholly owned affiliate. LADECO's international services to Asuncion, Bogota, Guayaquil, Mendoza, Miami, Rio de Janeiro, and Washington, D.C. are withdrawn.

A B-737-281 is purchased from **Arkia Israel Airlines, Ltd.** during July. By month's end, the carrier has increased its share of the domestic passenger market to 42.9% since January.

In August, an all-cargo alliance is entered into with **American Airlines**; the South American carrier assumes responsibility for boosting American's cargo sales throughout Chile. CEO Purcell notes at an August 21 meeting that he is negotiating with both **American Airlines** and **United Airlines** concerning a possible code-sharing agreement.

Two weeks later, in the first week of September, Lan Chile signs a full code-sharing agreement with **American Airlines** designed to increase the number of its U.S. passenger destinations and permit its customers to travel from any city in Chile to any destination in the U.S. airline's worldwide network.

The compacts will be held up in regulatory hearings following challenges to the U.S. DOT by **United Airlines** on September 12.

During the summer and fall, joint planning is undertaken with the TACA Group and the Brazilian carrier **TAM (Transportes Aereos Mercosur, S.A.)** for the joint acquisition of up to 200 new narrow-body jetliners.

In November, the carrier becomes the first airline from Latin America to be listed on the New York Stock Exchange. Its initial public offering brings in \$100 million.

Having exceeded its existing cargo facilities at Miami (MIA), the company, on December 1, retains Mercury Air Cargo as its import cargo ground handler.

Twice-weekly B-767-3Y0ER roundtrips commence on December 26 from Santiago de Chile to Orlando. In celebration of the new service, all passengers departing on the new route through March 1 and who are LatinPass frequent flyer club members will receive a bonus 5,000 loyalty miles. LanChile is the only South American carrier offering regularly scheduled flights between these two communities.

Passenger boardings jump 38.5% to 2,647,584 while freight skyrocket 78% to 943.25 million FTKs. Operating revenues accelerate 39.8% to \$969.8 million, while expenses rise 37% to \$886.9 million. The operating profit climbs to \$82.9 million and net gain nearly doubles, reaching \$64.1 million.

Lufthansa Lan Technical Training Chile, S.A., a new maintenance, repair, and overhaul (MRO) training operation jointly owned with Lufthansa Technik, opens at Santiago on January 1, 1998.

During an official ceremony in Santiago on January 23, a commercial alliance agreement is signed with **Canadian Airlines International, Ltd.** When the pact takes effect on March 11, the two will coordinate their schedules and link their frequent flyer programs. Initially, passengers will be able to travel on LanChile from Santiago to Los Angeles and connect with Canadian service to Vancouver. The signing by the airline representatives is witnessed by Eduardo Frei, president of the Republic of Chile, and Canadian Prime Minister Jean Chretien.

Also in January, the company unveils a new \$600-million, 3-year self-investment plan. In addition to fleet standardization, the program will include interior renovation of all aircraft and a corporate image change.

On March 2, nonstop B-767-3Y0ER roundtrip frequencies between Lima and New York (JFK) are increased from four times a week to daily,

while roundtrip service from Lima to Los Angeles, the only nonstop service between Chile and California, is boosted to thrice weekly.

As a result of the new air bilateral agreement between Peru and Chile, the number of weekly frequencies between Santiago and Lima is simultaneously increased from 7 to 21.

Dual-designator flights with **Canadian Airlines International, Ltd.** commence on April 8. In addition to the daily Los Angeles connection announced earlier, the two companies also share daily return flights between Toronto and Santiago. Customers fly Canadian to Miami, where they seamlessly board LanChile for the remainder of their trip; the process is reversed on the return.

Airbus Industrie achieves an historic victory over its Boeing competitors in April when it signs a gigantic South American consortium purchase agreement. Under its terms, LanChile will take 20 A320 family aircraft (11 A319-100s and 9 A320-200s), with 20 options. Other participants are **TAM (Transportes Aereos Regionais, S.A.)** on behalf of itself and its subsidiaries, which agrees to acquire 38 firm A320 family aircraft, with 37 options. TACA Group, which includes **TACA International Airlines, S.A.**, **SAHSA (Servicio Aereo de Honduras, S.A.)**, **NICA (Nicaraguenses de Aviacion, S.A.)**, **LACSA (Lineas Aereas Costarricenses, S.A.)**, and **AVIATECA (Aerolineas de Guatemala, S.A.)** promise to take 32 firm A320 family planes, plus 32 options.

In May, service from Miami to both Bogota and Guayaquil is increased from two flights every week to three.

A new \$30-million corporate identity, designed by the British firm Diefenbach, Elkins, Davis and Baron, is unveiled on June 10, based on the theme "The Spirit of the South of the World." New images, colors, and design elements are incorporated into a new logo. In addition to new exterior paint, all aircraft receive interior makeovers, with new fabrics, colors, and textures. New uniforms, designed by Ruben Campos, are introduced, along with new menus. Enhanced in-flight service and customer training for company flight attendants also begins.

A B-767-316ER delivered during the month is the first aircraft to wear the new livery. Two more will arrive before the end of the year. Arrangements are also made to exchange one of the B-767-316ERs, scheduled for delivery in June 1999, for a B-767F, to be delivered in September.

On July 6, daily nonstop B-767-3Y0ER roundtrips commence between Lima and Los Angeles. The new frequency more than doubles that previously available over the route. Also during the month, agreement is reached to merge **Fast Air Chile, S.A.** into LADECO.

A strategic marketing agreement is signed with **Qantas Airways (Pty.), Ltd.** on July 22. The new alliance will allow customers of one airline to participate in the frequent flyer program of the other. Qantas is able to place its codes on LanChile return flights from Santiago to Easter Island and Papeete, while the Chilean major affixes its code to Qantas services from Papeete onto Auckland and Sydney.

Twice-daily B-737-230A roundtrips are introduced on August 1 between Santiago and Cordoba, Argentina. Unexpected slow growth in the Chilean airline industry so far this year leads to the carrier's layoff of 150 workers on August 10.

The regrettable news for workers is succeeded on August 17 by the award of an international prize. In the tenth annual "Cellars in the Sky" airline wine voting sponsored by *Business Traveler International Magazine*, LanChile is judged to have the top cellar out of the 34 airlines participating in the contest.

In celebration of the fortieth anniversary of Santiago to Miami service, the company, on August 26, makes a special offer. All passengers purchasing a full-fare roundtrip from the U.S. to South America over the next three days may have a companion ticket for just \$40.

During September, a survey of the readers of *Travel & Leisure* magazine finds LanChile to be the best airline for service between North America and Latin America. Also during the month, the B-767F is received and enters service.

In an effort to assist individuals impacted by Hurricane Georges in and around the city of San Pedro de Macoris, Dominican Republic,

LanChile, on its two flights to Punta Cana from Miami during the week of October 5, flies in *gratis* some 21,000 pounds of food.

Later in the month, former Chilean dictator Augusto Pinochet is arrested while in the U.K. for medical treatment and faces extradition to Spain on murder and torture charges arising from his years in power.

Fast Air Chile, S.A. is merged into LADECO at the end of the month.

In November, the carrier announces a 49% stake in a new domestic Peruvian airline to be called **LanPeru, S.A.** The start-up will operate a pair of B-737-200s leased from LanChile. Also during the month, the company begins to code-share with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on flights between Santiago and Mexico City.

Pinochet appears in a London court on December 11 and is remanded on bail pending another hearing in January. Reacting to the charges facing the now Chilean senator-for-life, Chilean Foreign Minister Jose Miguel Insulza the next day indicates his government's opposition to any extradition of Pinochet to Spain.

As a way of putting pressure on Great Britain, Insulza announces that LanChile has been requested to halt its Flight 991 to Mount Pleasant Airport on the Falkland Islands. The airline initially resists implementation of the drastic step, which would effectively sever regular commercial air contact between the remote South Atlantic islands and the outside world.

Thrice-weekly B-767-3Y0ER roundtrips commence on December 26 from Santiago de Chile to Orlando via Miami. The next day, the company's wide-bodies launch direct return service from Miami to Iquique, four times a week. Connections are available from the oceanfront city to other destinations in northern Chile, including Arica, Calama, and Antofagasta.

Passenger boardings shoot up 13.3% to 2.99 million and cargo traffic increases 27.7% to 1.2 billion FTKs. Net income of \$31 million is reported for the year, on top of revenues of \$1.08 billion.

Airline employment stands at 4,884 at the beginning of **1999**, a huge 80.9% increase.

On March 5, the company celebrates its seventieth anniversary. The carrier announces on March 31 that it has raised \$60 million in the international debt capital markets by securing future U.S. credit card ticket sales.

As former ruler Gen. Pinochet's case moves through British courts, the government of Chile on April 10 suspends LanChile's services from Punta Arena to Port Stanley in the Falkland Islands. The only commercial air service to the British possession, except for a single weekly flight from Britain, is thus terminated.

Executives express interest in rejoining the LatinPass multi-airline frequent flyer program on April 20; meanwhile, customers continue to earn bonus miles on the company's LanPass program, or on the Canadian Plus plan of **Canadian Airlines, Ltd.** or AAdvantage of **American Airlines.**

On April 22, the long-planned alliance with American receives tentative approval from the U.S. DOT, with certain restrictions. Although the two are allowed to coordinate their routes and jointly market tickets on each other's flights through code-sharing, computerized reservations system cooperation and fare coordination are restricted and the Miami-Santiago route is excluded from antitrust immunity for a period of 18 months.

The British government on April 30 requests that Chile reconsider its April 10 suspension of LanChile's flights to the Falkland Islands.

Following a meeting of the CEOs of the "OneWorld" global airline alliance in Vancouver on May 14, it is announced that LanChile will become the group's eighth member in early **2000**. It will also be the first South American partner in the international marketing pact.

On May 21, LanChile moves to the new Terminal A at Miami (MIA). The location allows the carrier to enjoy new counters, equipment, and the latest computer technology.

Under terms of a strategic agreement signed on May 21, LanChile and **VARIG Brazilian Airlines, S.A.** commence dual-designator service on June 1 from Peru to Japan.

During the week of May 24, three days of discussions are held in London between British and Argentine ministers concerning the possibility of renewed air links between Argentina and the Falkland Islands. Although no breakthrough is reached, the parties agree to resume negotiations in New York during the summer. Meanwhile, the LanChile ban remains in place.

LanPeru, S.A. receives certification from the Peruvian government on June 24 and inaugurates B-737-2Q3As service on July 5 from Lima to Cuzco and Arequipa.

Three new nonstop weekly B-767-3Y0ER roundtrips begin on July 7 from Santiago to Los Angeles, with direct service to Buenos Aires. The new service marks an increase to 10 flights weekly between the 2 cities, a 42% increase in frequency.

All international flights become nonsmoking on August 1. Saturday-only B-737-291A return service is resumed on August 7 from Santiago to Mount Pleasant Airport in the Falkland Islands via Puerto Montt and Punta Arenas.

Internet ticket sales are launched on September 8.

The code-sharing pact with **American Airlines**, started in September 1997, is finally approved by the U.S. DOT on September 15. The same day, a joint-venture company, formed with Lufthansa Flight Training, GmbH., opens at Santiago. Designed to become the largest airline-run pedagogical academy in South America, the new facility will offer comprehensive pilot training, flight attendant emergency instruction, and other educational instruction.

Code-sharing flights between Miami and Santiago with **American Airlines** commence on October 13.

A joint-marketing and code-sharing agreement is signed with **Alaskan Airlines** on November 3; in the first phase, the South American carrier will place its designator on Alaskan flights from Los Angeles to Portland and Seattle.

The company accepts delivery of its second B-767-316F on December 22.

Passenger boardings accelerate 2.6% on the year to 4,288,000 while freight traffic increases 39.5% to 1.73 billion FTKs. Operating revenues ascend 14.1% to \$1,236,667,000 and expenses are also up 14.1%, to \$1,185,827,000. The operating profit climbs to \$44.39 million, while net gain reaches up to \$47.58 million. These figures confirm that LanChile is the most profitable airline in South America.

Airline employment at the beginning of 2000 stands at 5,492, a 12.4% increase over the previous 12 months. Among the world's top 25 airlines, LanChile ranks 21st in FTKs.

In May, the U.S. DOT proposes to levy a \$332,500 fine against the airline for its undeclared shipment of oxygen generators on a U.S. flight in 1999.

A comprehensive marketing and code-sharing alliance is entered into with **British Airways, Ltd. (2)** on June 12. Under terms of the new code-sharing agreement with its "OneWorld" partner LanChile, the previous BA service from London (LHR) to Santiago via Buenos Aires is halted at the Argentine city on August 1. The connection between Buenos Aires and the Chilean capital are now flown by LanChile, with these flights also operating with a BA designator.

The company's third B-767-326F enters service on a Santiago to Miami route on August 25.

An extraordinary shareholders meeting is held on September 5 during which stakeholders approve a measure to increase capitalization by \$120 million. The board of directors will determine the exact price of an offering at a later point. The new funds will be employed for the acquisition of new aircraft.

The first A340-313X is delivered during Toulouse ceremonies on September 25 and flies to Lima the next day.

A woman passenger aboard the airline's September 28 B-767-3Y0ER service from Santiago to New York (JFK) suffers an epileptic seizure, causing the pilot to divert to Guayaquil. Just before landing, flight attendants, checking the plane, discover a man's dead body in the rear restroom.

The premier A340-313X enters service on September 29 on the carrier's thrice-weekly roundtrip service between Santiago and Madrid, with continuation to Frankfurt. En route, a Brazilian male passenger attempts to open an exit door (which is not physically possible). He is restrained and arrested by police when the aircraft reaches Spain.

On October 7, the daily B-767-3Y0ER roundtrip service between Santiago and New York (JFK) is doubled.

The first of 25 new A320-233s is delivered on October 21. After its arrival at the Chilean capital a day later, it is put into service on domestic and regional routes to São Paulo, Buenos Aires, Lima, and Cordoba.

At the end of October, Eagle Global Logistics, new majority owner of **Miami Air International**, enters into a strategic all-cargo alliance with LanChile, as well as the freight lines it controls, **Fast Air Chile, S.A.**, **MasAir (Aerotransportes Mas de Cargo, S.A. de C.V.)**, and **Florida West International Airways**.

On November 1, a two-year commercial agreement is signed with **Ecuadoriana Airlines, S.A.** to operate its aircraft on the Ecuadorian airline's international routes beginning in December. The initial wet-leased and code-shared services will be flown from Guayaquil and New York (JFK); later, Guayaquil to Miami via Quito flights will be added.

A court in Lima, on November 4, approves the continuing ACMI contract with LanChile, S.A. **LanPeru, S.A.** ceases its international flights on November 16, however, when its founders, LanChile and Peruval, get into a brawl over cargo regulations and use of the B-767, Peruval requests that a Peruvian court appoint a provisional administration to replace LanPeru's LanChile managers. In fact, the battle is really over the division of belly-cargo revenues. On November 24, LanPeru is placed into administration (declared bankrupt). A court-appointed administrator takes over day-to-day operations, now restricted to domestic flights only.

The second A320-233 arrives on November 9. Also in November, the former Chilean cabinet member and businessman Sebastian Pinera succeeds Jorge Awad as chairman of the board of directors; Awad remains a director. At the same time, CEO Cueto is named "2000 Aviation Person of the Year," by the leading Spanish-language aeronautical journal *Rivista Aerea*. Also during November, an agreement is signed with Eagle Global Logistics under which the giant U.S. forwarder will seek greater use of LanChile's freighter capacity.

LanPeru, S.A., on December 1, files a \$10-million suit against LanChile, claiming that the Chilean line had forged customs papers in order to illegally employ shared joint cargo space on the company's services to Miami. Employing a pair of A340-313Xs received in September and November, daily nonstop return service commences on December 1 from Santiago to Madrid. The last two of four A320-233s to be delivered this year arrive at Santiago on December 1 and 7, respectively.

On December 11, the internal dispute at **LanPeru, S.A.** causes it to cease domestic operations and park its aircraft at midnight when their leases expire. The concern is officially closed down at 6 a.m. the next morning.

On behalf of **Ecuadoriana Airlines, S.A.**, B-767-3Y0ER roundtrips commence between Guayaquil and New York (JFK) on December 15. On December 19, it is reported that LanChile will, in fact, enhance its own cargo service, purchasing a pair of B-767Fs and leasing a third from GECAS.

To provide assistance as it reaches to expand its cargo markets in North America, LanChile, on December 22, formally purchases a 25% stake in **Mas Air (Aerotransportes MAS de Cargo, S.A. de C.V.)** for \$5.1 million. It also pays another \$900,000 to acquire a 25% equity share of **Florida West International Airlines**.

On December 22, a code-sharing agreement is inked with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Under its terms, the two will place their codes on each other's flights throughout Europe and South America beginning on January 1.

Revenues this year grow 15.2% to \$1.42 billion, while expenses rise 13.2% to \$1.34 billion. Net income surges 92.2% to \$36.7 million.

LANEP (LINEAS AEREAS DE NICARAGUA, EMPRESA PALAZIOS, S.A.): Nicaragua (1934–1935). In 1934, Palazio and Company purchases the year-old carrier **LANEV (Lineas Aereas de Nicaragua, Empresa Vendetti, S.A.)**, plus its Ford Tri-Motor and route from Managua to the Pacific coast. Despite coordination with equally unsuccessful Honduran-based **Morgan Airlines, S.A.**, the operator is unable to turn a profit and is sold to Lowell Yerex's **TACA (Transportes Aereos Centro Americanos, S.A.)** on October 16, 1935.

LANEV (LINEAS AEREAS DE NICARAGUA, EMPRESA VENDETTI, S.A.): Nicaragua (1933–1934). LANEV is organized at Managua in 1933 to connect the Nicaraguan capital with the Pacific coast. A Ford Tri-Motor is obtained and employed to launch revenue flights. Unable to succeed, the company is sold to Palazio and Company in 1934.

LANG AIRE: United States (1987–1992). Lang is established by Larry J. Siggelkow at Las Vegas in early 1987 as the airline division of his Lang Enterprises, Inc. to fly passenger charter flights over the Grand Canyon. The company's 11 Cessna 402s and 207s transport a total of 27,000 customers. Orders are placed for four Skytrader 1400s.

Operations continue during the remainder of the decade and into the early 1990s. In December 1992, the airline's Part 135 certificate is purchased by Gene Yamagata, CEO of Yamagata Holdings, and in early 1993 the company is reformed into **Eagle Canyon Airlines**.

LANICA (LINEAS AEREAS DE NICARAGUA, S.A.): Nicaragua (1944–1981). Taking 40% shareholding, **Pan American Airways (PAA)** forms LANICA as an affiliate on November 17, 1944. Nicaraguan citizens subscribe 60% of the initial \$1-million capitalization, with the government taking the remaining stake. A charter network of unscheduled services, based on routes out of the capital city of Managua, is started in June 1945.

Scheduled flights do not begin until 1946, in which year two Boeing 247Ds and, later, two Douglas DC-3s initiate domestic service in competition with **TACA de Nicaragua, S.A.** to business and mining communities along the coast.

Regional services to San Jose and Guatemala City via San Salvador begin in early 1947, but are soon too expensive to maintain and are dropped by midyear. Contract flights from Managua to Miami are, however, begun and will be the only direct link between Nicaragua and the U.S. for almost a decade.

The Somoza family acquires principle ownership of the airline in early 1948 and arranges with the government for the cancellation of mail and subsidy payments to competitors. As a result, the assets of **TACA de Nicaragua, S.A.**, a unit of the famous **TACA (Transportes Aereos Centro Americanos, S.A.)** are acquired. The near monopoly allows the company to pay a record dividend in 1949.

In 1950, the small charter operator **FANSA (Flota Aerea Nicaraguense, S.A.)** is purchased and merged, allowing LANICA to take over the routes to the Bonanza and Siuna gold mines. Destinations served from Managua by the carrier's DC-3s now include Bluefields, El Gallo, Puerto Cabezas, Bilwaskarma, Waspan, Bonanza, Siuna, and Matagalpa. On September 6, PAA shareholding is reduced to 20%. Operations continue apace with little change in 1951–1955.

The U.S. CAB grants authority for Miami flights in June 1956. Two Vickers Viscount 786s are now ordered. A DC-3 with 3 crew and 13 passengers smashes into Concepcion Volcano, at Ometepe Island, Nicaragua, on January 23, 1957; there are no survivors. On October 14, the **Pan American World Airways (1)** interest is reduced to 13%. Flights to Miami commence in December utilizing a leased DC-4.

Employing Vickers pilots hired away from the U.S. carrier **Capital Airlines**, the two Viscounts, christened *Nicarao* and *Ruben Dario*, respectively, are placed in service on February 17, 1958, allowing the chartered four-engine Douglas to be withdrawn. The first of five Curtiss C-46 Commando freighters are also acquired this year.

On March 2, **1959**, the carrier begins flying from Miami to Lima via Managua and Guayaquil.

A C-46A with 4 crew and 14 passengers fails its climb and crashes 1.5 mi. from Suina Airport on April 5, **1960** (2 dead).

The new Viscount routes prove deceptive in terms of traffic and now LANICA's financial difficulties are such that it is forced to suspend the two frequencies to Florida later in the year and sell its Vickers.

The Nicaraguan government provides fresh capitalization in **1961**, allowing the acquisition of a new DC-4, which is placed on the Miami run via San Salvador on September 15. The Four will be followed by a DC-6.

A C-46 freighter with two crew fails its initial climb away from Managua on December 15 and crashes; there are no survivors.

Curtiss C-46s are added to the Miami route in **1962-1964**. The C-46 fleet stands at three in **1965**.

On April 6, **1966**, an order is placed for a single BAC 1-11-412, with an option. Pending delivery of the ordered unit, the **Aer Lingus Irish Airlines, Ltd.** BAC 1-11-208 *St. Malachy* is leased in October. When it arrives at Managua from Dublin at the end of the month, it allows LANICA to become the first Central American airline to operate a jet transport. The BAC inaugurates service on November 1 to Miami via San Salvador.

Following delivery of the LANICA Dash-412 on April 27, **1967**, the chartered jetliner is returned to Ireland. The new, unnamed jetliner begins flying over the *St. Malachy* routes on May 1, adding Mexico City to the schedule as well.

A short-lived agreement to pool BAC 1-11 service is concluded with **TAN (Transportes Aereos Nacionales, S.A.)** of Honduras on October 19; the document is signed by the national presidents, Gen. Anastasio Somoza on behalf of Nicaragua and Col. Oswaldo Lopez of Honduras. Joint service begins on November 1 from San Pedro Sula, Honduras, to Miami.

The DC-6 is withdrawn in **1968**, but with the start of border problems with El Salvador in July **1969**, the carrier is not permitted to fly between San Salvador and Honduras. A female-impersonator attempts to take over a C-46 during a domestic service on July 29, but is captured and turned over to police.

On November 4, two gunmen seize a BAC 1-11 with 32 passengers en route from Managua to San Salvador and divert it to Grand Cayman; there, an attempt to seize the pirates fails and the plane is flown on to Cuba.

Contract chilled-beef flights on behalf of the Nicaraguan government begin in July **1970**; these and other operations continue without major event into **1971**. A **Court Line, Ltd.** BAC 1-11-518 is leased for four months in December. The year's major event is a December 12 sky-jacking.

En route from Miami to Managua, Flight 419, a BAC 1-11-412 with 54 passengers is taken over by 3 armed men who order it flown to Cuba. The plane proceeds to El Coco Airport at San Jose for refueling, but once on the ground, Costa Rican forces, personally led by President Jose Figueres Ferrer, refuse to allow it to depart. During the two-hour siege that follows, the BAC's tires are shot out and one engine is hit and set ablaze (the first is quickly extinguished). Troops assault the aircraft, killing one pirate and capturing the other two, who are returned to Nicaragua.

While serving prison terms, the two culprits will escape on December 23, **1972**, during the great Nicaraguan earthquake.

On August 21, **1972**, two Convair CV-880s, formerly leased by **Northeast Airlines** but now in storage, are formally acquired from the Hughes Tool Company, owned by resident billionaire recluse Howard Hughes, in exchange for 25% shareholding. Actually, the first had been delivered in June and had begun service on July 14 over a return route from Miami to Mexico City via Managua, San Pedro Sula, and San Salvador.

A C-46A with two crew is destroyed in a belly landing at Managua on August 29; neither flyer is hurt.

A BAC 1-11-401 is chartered during the spring and summer of **1973**. On December 31, Pan Am reduces its stock to 10% interest, which is sold to local interests in August **1974**.

The two Hughes 880s, out of time before overhaul, are traded in during February **1975** for two from **Delta Air Lines** that have official flying time left. The swap actually occurs following the December earthquake, which causes Mr. Hughes to depart Managua.

Two nonfatal accidents occur to the Curtiss fleet in **1976**. The right main landing gear of a C-46D collapses just after the Commando lands at Managua on February 25; although the aircraft is damaged, there are no serious injuries reported. A C-46A is damaged beyond repair as the result of a bad landing at Puerto Cabezas on March 17; again, there are no fatalities.

Two Boeing 727-76s are leased in **1977**. Upon their arrival in June, the two former Delta Convairs are withdrawn.

The upswing of political turbulence in **1978** leads to outright civil war by the spring of **1979**. To protest the growing violence, which will lead to a shutdown of the airline, a B-727-76 crew hijacks their own flight to Costa Rica as a protest.

A C-46A strikes a ditch while landing at Bonanza, Nicaragua, on May 16, **1980** and crashes; there are no fatalities.

Following the Sandinista victory in July, flights, temporarily suspended in June, resume, although the CV-880s are now grounded and a DC-6B is employed instead.

On August 28, **1981**, the carrier purchases a B-727-25 from **Eastern Air Lines**. Two days later, the ministry of transport elects to reform the airline and declares LANICA legally bankrupt. The colorful Central American pioneer ceases operations on August 31 in order that it might be succeeded by a new state-sponsored carrier, **Aeronica (Aerolineas Nicaraguenses, S.A.)**.

LANPERU, S.A.: Av. Jose Pardo 805, Piso 5, Miraflores, Lima, Peru; Phone (51-1) 241-5522; Fax (51-1) 445-6237; http://www.lanperu.com; Code LP; Year Founded 1998. LanPeru is established at Lima in November **1998**. Shareholding is divided between Lorenzo Sousa's Peruval, S.A.(30%), Inversiones Aereas, S.A., owned by Enrique Cueto and Boris Hirmas (21%), and **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** (49%)

The Chilean flag carrier's CEO, Enrique Cueto, presents a prospectus on the new affiliate at the 7th International Airline CEO conference at Miami on March 3, **1999**. In his presentation, Cueto reports that the new Peruvian entity will operate entirely with local personnel, will benefit from the safety standards and quality service guaranteed by the experience of its parent, and should be able to corner 40% of the Peruvian domestic market within a year.

During the spring, as LanPeru completes its gestation period, the national carrier **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** is forced to suspend operations for economic reasons. Although several attempts are made to sell an equity stake in it to foreign carriers such as **Continental Airlines**, they all fail. In an effort to ensure continued commercial air transport, the Peruvian government now comes to look with favor upon the authorities requested by LanPeru and several other private companies.

LanPeru, via **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**, receives its certification papers on June 24. Employing a pair of B-737-2Q3As registered in Bermuda and leased via LanChile Airlines, the new entrant launches daily return services on July 5 from Lima to Cuzco and Arequipa. A third "Baby Boeing" is received in August, allowing the initiation of flights to Juliaca.

Authority is sought from the U.S. government for the initiation of service to New York and Miami and in anticipation, a B-767-375ER is subleased from the parent. On September 20, the DOT authorizes service between Peru and the U.S. Direct, twice-daily B-767-375ER roundtrips are inaugurated on October 16 between Lima and New York (JFK).

Flights continue without incident or headline for the first eleven months of **2000**—and then the entire operation nearly disappears.

A Lima court on November 14 approves the company's ACMI contract with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**. All international flights are suspended on November 16, however, due to a fight between LanChile Airlines, S.A. and Peruval over use of the B-767 and cargo regulations. LanChile is charged with wishing to operate cargo against regulations on the Boeing's Lima to Miami return service, while Peruval is accused of unjustly refusing to renew the 767's rental contract. In fact, the battle is really over the division of belly-cargo revenues. Peruval requests that a Peruvian court appoint a provisional administration to replace LanPeru's LanChile managers.

On November 24, LanPeru is placed into administration (declared bankrupt). A court-appointed administrator takes over day-to-day operations, now restricted to domestic flights only. LanPeru, S.A., on December 1, files a \$10-million suit against **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**, claiming that the Chilean line had forged customs papers in order to illegally employ shared joint cargo space on the company's services to Miami.

The internal dispute continues and, on December 11, LanChile terminates its leasing contracts for the two Bermuda-registered LanPeru B-737-2Q3As and suspends domestic flights. The concern is officially shut down at 6 a.m. on December 12.

An agreement will be reached between LanChile, S.A. and Peruval, S.A. on January 16 ending the pending legal actions of both concerns. Peruval will sell its stake to Peruvian businessman Emilio Rodriguez-Larrain, thereby allowing stakeholders LanChile and Inversiones Aereas, S.A. to ink a compact with a new partner. Sergio Purcell resumes his duties as CEO and both domestic and international scheduled flights are to be restarted between February 1 and March 5.

LANSA (LINEAS AEREAS NACIONALES, S.A.) (1): Colombia (1945-1954). Led by Ernesto Recaman, a group of Colombian investors form **LANSA (Limitada Nacional de Servicio Aero, S.A.)** as a limited partnership at Bogota on May 5, 1945; initial capitalization is 135,000 pesos, which is increased to 523,000 pesos on January 2, 1946. Employing Douglas DC-3s and light aircraft, the carrier spends the remainder of the year establishing a domestic route network to large and small cities.

An agreement for pooled Bogota to Caracas via Maracaibo service is reached with **LAV Venezuelan Airlines (Linea Aeropostal Venezolana, S.A.)** on January 21, 1947; however, the Colombian line takes over the entire service on May 27. On June 13, the carrier is incorporated and changes its name.

On December 16, 1948, while taking off from Bogota for Barranquilla, a DC-3 crashes and burns (20 dead). The tragedy is the second worst accident in Colombian history. Another Douglas transport, with 12 aboard, crashes into the mountains near Barranquilla on November 27, 1949; there are no survivors.

A C-47 freighter with two crew is lost at Santa Ana, Colombia, on April 15, 1950; there are no survivors.

A DC-3 with 3 crew and 23 passengers hits Galeras volcano and crashes near Pasto, Colombia, on May 24; a 10-year-old girl survives.

At the end of the expansion period, however, the carrier runs into severe financial difficulty and faces the unhappy choice of merger or shut-down. The first quarter of the new year is also marked by accident.

A C-47 freighter with two crew suffers an engine failure on a flight from Cali to Bogota on January 31, 1951 and is forced to make an emergency landing at Madrid, Colombia; although the aircraft is destroyed, there are no fatalities.

A C-46A is lost at Yali, Colombia, on February 14.

While on a flight from Cartagena on March 21, a C-47 with 3 crew and 27 passengers crashes at Corozal, Colombia; there are no survivors.

The government allows LANSA to issue stamps for its domestic network and the resumption of its international route to Havana on May 23. On September 10, an agreement is signed with **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** that permits LANSA to continue flying under its own name through a five-year period of integration. AVIANCA completes its takeover on May 1, 1954.

LANSA (LINEAS AEREAS NACIONALES, S.A.) (2): Honduras (1962-1993). Based at La Ceiba, Lansa Airlines is set up in November 1962 and begins charter flights in March 1963.

Scheduled third-level commuter service linking La Ceiba with Tegucigalpa and San Pedro Sula is started in 1967.

During the 1970s, the fleet includes 4 Douglas DC-3s, 1 DC-4 for all-cargo flights, and 1 each Fairchild F-27J, Cessna 186, and Cessna 182.

The DC-4 and F-27J are removed during the early 1980s, at which time the route network includes stops at Ahuas, Brus Laguna, Guanaja, La Ceiba, Puerto Lempira, Roatan, San Pedro Sula, Tegucigalpa, Trujillo, and Utila. The Cessna light equipment and one of the DC-3s are retired from General Manager Rafael Nunez's carrier by 1990, to be replaced by a Pilatus-Britten-Norman PBN-2 Islander.

Carrying a false U.S. registration, a covertly acquired Curtiss C-46D Commando with two crew and four passengers, crashes while trying to land at a farm near Quirigua; there are no survivors and the cargo (three tons of cocaine) is destroyed.

Operations cease in 1993.

LANSA (LINEAS AEREAS NACIONALES, S.A.) (3): Peru (1963-1972). A group of local bus company owners and operators combine in late 1963 to form this carrier at Lima. Employing Douglas DC-3s initially, service is inaugurated from Lima to seven major domestic cities in January 1964. In February, two Lockheed L-749A Constellations are acquired from **Eastern Air Lines** in the U.S. Four more arrive before year's end.

In late 1965, Eastern, in exchange for managerial and technical assistance contracts, purchases a third of the carrier. In addition to its regularly scheduled routes, LANSA now begins charter and inclusive-tour flights to the tourist destinations and ruins in or near Arequipa, Iquitos, Machu Picchu, and the Chan-Chan area near Trujillo. An L-1049E once flown by **Qantas Empire Airways (Pty.), Ltd.** is leased during the year.

Flight 501, an L-749 with 6 crew and 43 passengers, disappears into the Andes on April 27, 1966, during a flight from Lima to Cuzco; the wreck is found two days later on Mount Talsula, near the former city, and there are no survivors.

Despite Eastern's stake and influence, the airline now faces poor economic times and suspends operations until September. During its hiatus, the company is reorganized and the **Eastern Air Lines** interest is bought out.

With its fortunes on the mend in 1967, LANSA upgrades its fleet during the summer. Four Japanese-made Nihon YS-11As are purchased new and upon entering service, take over the company's domestic routes.

While maintaining its routes and services in 1968, LANSA continues to operate on the edge with regard to both finances and safety. Still, the company in need of more capacity to its high-altitude airports and on international services, is able to place orders with Boeing for three Lockheed Electras traded in by **Braniff International Airways** on new jetliners.

The first ex-Braniff L-188A is delivered on August 5, 1969. While on a Cuzco to Lima flight with 100 aboard, including 54 U.S. students who are members of the student exchange organization International Fellowship, Inc., the Lockheed crashes near the flight's point of origin on August 9, 1970. Ninety-nine people aboard the plane are killed, along with two on the ground.

A second former Braniff turboprop is received later in the month and a third in October.

A fourth L-188A is acquired in April 1971. The 1970 Electra disaster is followed by a second on Christmas Eve. While en route from Lima on December 24, Flight 508, an L-188A with 6 crew and 86 passengers, is hit by lightning, causing a fire in the right wing, which separates; the turboprop crashes in flames at Puerto Inca (91 dead).

The uproar caused by the second tragedy within six months causes the Peruvian government to withdraw the company's operating permit on January 4, 1972. Almost out of cash, LANSA stops flying immediately.

Meanwhile, a survivor of the Christmas crash is found in the jungles of eastern Peru the next day; the wreckage is found on January 6 and there are no other survivors.

LAO (LINEAS AEREAS OCCIDENTALES, S.A. de C.V.): Mexico (1933–1935). Having relocated to Burbank Airport following the summer 1933 demise of the California portions of his Varney Speed Lines System, **Varney Speed Lines Air Service**, U.S. airline pioneer Walter Varney negotiates an airmail contract with the government of Mexico and establishes LAO as another subsidiary late in the fall. The son of the Mexican president is named company vice president.

On April 10, 1934, with a 20-year Mexican government mail route and concession in hand, Varney inaugurates thrice-weekly service from Los Angeles. Employing 1 Lockheed Model 9 Orion and 2 Model 5 Vegas, cities served include Mexico City via San Diego, Tijuana, Mexicali, Nagales, Hermasillo, Ciudad Obregon, Los Machis, Mazatlan, and Guadalajara. Extensions are made to offer weekly flights to La Paz in Baja California from Mazatlan and multistop from Mexico City to Tapachula.

Fearful of giving offense to **Pan American Airways (PAA)**, the Mexican government, in January 1935, revokes Varney's arrangements and hands the mail routes and subsidies over to a new PAA subsidiary, **Aerovias Centrais, S.A. de C.V.** Not forewarned, Varney barely has time to get his Orion and one Vega out of the country before they are impounded for outstanding fuel bills; one Model 5 is caught and the major equipment and furnishings of eight LAO stations are impounded.

LAO AIRLINES. *See* LAO AVIATION COMPANY

LAO AVIATION COMPANY: BP 119, 2 Rue Pang Kham, Vientiane, Laos; Phone 865 (21) 212 057; Fax 865 (21) 212 056; <http://www.lao-aviation.com>; Code QV; Year Founded 1976. The **Lao Civil Aviation Company** is formed at Vientiane on January 19, 1976. The company, which had operated during the Indochina War on behalf of the Pathet Lao with assistance from North Vietnam, is the People's Republic of Laos' successor to the earlier **Royal Air Laos, S.A.** and **Lao Airlines**. Having ceased operations with the Communist victory the previous May, the two companies are now combined under the new banner. The initial fleet comprises 6 Antonov An-24s, 1 Yakovlev Yak-40, and 1 Vickers Viscount 700 taken over from **Royal Air Laos, S.A.** As there are now parts or maintenance available for the damaged Douglas DC-3s, DC-4s, and Lockheed C-130 Hercules, these aircraft are sold or scrapped.

Flying from Wattay Airport, the carrier inaugurates domestic flights to major provincial centers, including Luang Prabang, Savannakhet, and Pakse. In December 1977, a bilateral agreement is signed with Thailand. The arrangement allows the company to inaugurate DC-3 services to Chiangmai and Bangkok during 1978.

In 1979, the company name is changed to LAC. In association with **Thai Airways Company, Ltd. (TAC)**, the carrier inaugurates twice-weekly An-24 service to Hanoi. During the 1980s, the fleet includes 7 An-24RVs, 2 Yak-40s, 2 Viscount 700s, and 2 Sikorsky S-58 helicopters. Services connect Vientiane with Bangkok, Hanoi, and Phnom Penh in addition to the domestic network. There are few changes over the next 12 years.

Having aborted its April 22, 1990 takeoff from Luang Namtha, an An-24RV with three crew, overshoots the runway and crashes into a building, killing one occupant.

On July 16, 1991, the carrier is reformed. Although domestic responsibility is still held by a state enterprise, international shareholding is divided between the Del Chang Import-Export Company and China Travel Air Service at Hong Kong.

Hu Chang is named managing director and the workforce is increased to 300. An Avions de Transport Regional ATR42-300 is leased for a year, along with two Boeing 737-291s. Three An-24RVs are grounded as their service lives end; as arrival of the Boeings is anticipated, a

Tupolev Tu-154M is leased from **Balkan Bulgarian Airlines**. Permission is sought to begin flights to Rangoon, Chiangmai, and Kunming.

As the company waits into 1992 for authority to fly to the desired Burmese and Chinese markets, economics force the carrier to cut its expensive Western aircraft leases. Removed are one Boeing and the ATR42-300, replaced by four Harbin Yu-12 IIs and one Xian Y-7-100.

The service life of one An-24RV is stretched by Russian engineers during the former year and the remaining leased B-737-291 arrives in June from Iceland (where it is registered) via Keflavik, Helsinki, Tehran, and Bombay. A month later following departure of the Bulgarian jetliner, the new Boeing enters service from Vientiane's Wattay Airport to Bangkok, Ho Chi Minh City, Hanoi, and Phnom Penh.

In the spring of 1993, the fleet includes the 4 Chinese-made Yu-12s, 1 Y-7-100, 2 Mil Mi-8 helicopters (only 1 of which is operable), and 1 An-24RV, as well as 1 B-737-291. The non-American built aircraft maintain domestic services to the old capital of Luang Prabang, Savan, Pakse, Louang Namtha, Savannakhet, and smaller stations.

Westcoast Helicopters (Pty.), Ltd. of Australia begins Bell 206B JetRanger charter services on behalf of the government and the UN. The An-24RV with 17 aboard crashes 100 mi. E of Vientiane on December 1; there are no survivors.

While on final approach to Phong Savanh on December 13, a Yunshuji Y-12-II with 2 crew and 16 passengers, collides with a treeline in fog and crashes, catching fire; there are no survivors.

Managing Director Hu Chang's 1994 fleet includes the 1 B-737-291, 3 Y-7s, 3 Y-12s, and 2 new, leased Avions de Transport Regional ATR42-320s. As traffic improves, a second B-737, a Dash-2P5A, is now chartered and the lease on the first Dash is extended.

In 1995, the company charters an ATR72-202s. In 1996–1998, the company owns 6 Y-12s and 1 Y-7. It also operates, under lease, 2 ATR72-202s and 1 each Y-7 and B-737-2P5A. Regional destinations visited include Bangkok, Chiangmai, Hanoi, Ho Chi Minh City, Kunming, Luang Prabang, Pakse, Phnom Penh, Xieng Khouang, and Yangon. Enplanements average 65,000 per year.

While on its normal service between the Xaysomboune and Xieng Khouang provinces on June 25, 2000, an Mi-8 with 3 crew and 15 passengers, encounters bad weather and crashes into Phasay Mountain. There are no survivors.

While on approach to Sam Neua from Vientiane on October 19, Flight 703, an off-track Harbin Y-12 with 2 crew and 15 passengers, crashes into an 1,800-ft. high mountain ridge at a point 15 km. from its destination. Eight passengers are killed. One of the survivors leaves the wreck site to summon help.

LAOS (LINEAS AEREAS ORIENTALES, S.A.): Colombia (1971–1978). Alfredo Betancourt and Manuel Borde form LAOS at Villavicencio in 1971 to offer all-cargo services to Mitu and other regional towns. A fleet of 3 Douglas DC-3s is employed, along with a Curtiss C-46. Unable to compete with larger carriers also hauling freight, this small operator stops flying in 1978.

LAP (LINEAS AEREAS PETROLERAS, S.A.): Aptdo Aereo 151227, Ave. Eldorado, Entrada 1, Bogota, Colombia; Phone 57 (1) 413-5711; Fax 57 (1) 413-8635; Year Founded 1975. Having obtained a mixed fleet comprising 1 Douglas DC-3, 3 Piper PA-31-310 Navajos, and 1 Piper PA-34 Seneca, LAP is formed at Bogota in late 1975. Charter and contract services are started to various destinations throughout the country.

Never undertaking scheduled operations, the ad hoc carrier grows to include a helicopter division with Bell 47Gs, and Eurocopter Lamas and Ecureuils.

Maria Fernanda Drango is general manager in 1997–2000, with Capt. Gabriel Toro as director of operations. In addition to the Ecureuils and Lamas, the fleet now features Hughes 500s.

LAP (LINHAS AEREAS PAULISTAS, S.A.): Brazil (1943–1951). Capitalized at 50 million cruzeiros received as the result of public

subscriptions, LAP is formed at São Paulo in the fall of 1943. An organizational meeting is held on February 9, 1945, officers are chosen, and the new entrant proceeds to purchase an ex-military Lockheed Model 14.

Operating authority is received from the government in June; however, the remainder of the year is spent lining up a fleet of four ex-military Douglas C-47s (converted to DC-3 civil standard) for purchase in early 1946. During the summer, the airline initiates flights to several coastal and slightly inland destinations, including Pernambuco, Campina Grande, and Recife.

Shuttle flights are started to Rio de Janeiro in 1947. Service to Maceio is suspended in October 1948 and from that point on the carrier, facing competition from numerous and sometimes larger operators, begins to suffer financial reversals. Fortaleza and Natal become route destinations on the coast in April 1950.

As a way of cutting costs, LAP now joins with TABA (Transportes Aereos Bandeirantes, S.A.) and Loide Aereo Nacional, S.A. in a technical consortium. The inland stops are cut later in the year. By early 1951, all three airlines are losing serious money and thus plans are made for them to join into an operational consortium under the Loide banner. Before this can be accomplished on August 21, LAP loses a DC-3 on July 12 as it is attempting to land at Rio do Sul (33 dead).

LAP (LINEAS AEREAS PICH0, S.A. de C.V.) See SAM (SERVICIOS AEREOS DE MICH0ACAN, S.A. de C.V.)

LAP PARAGUAYAN AIRLINES (LINEAS AEREAS PARAGUAYAS, S.A.): Paraguay (1962–1994). LAP is formed at Asuncion in late 1962 as Paraguay's national airline and is at first, essentially, the international arm of the military's domestic carrier TAM (Transportes Aereo Militar). Initial capitalization is 200 million Guaranis (some \$700,000) and the board of directors includes four military representatives. All operations personnel are air force officers.

Early in 1963, three Convair CV-240s are purchased from Aerolineas Argentinas, S.A. They are christened *Carlos Antonio Lopez*, *General Bernardino Caballero*, and *Jose Gaspar Rodriguez de France* and are employed to begin twice-weekly flights to Rio de Janeiro, Buenos Aires, and São Paulo in August.

In early 1964, an agreement is negotiated with **Cruzeiro do Sul, S.A.** whereby the latter will provide ticket, baggage handling, and other ground support services at Brazilian destinations.

Following the demise of LAPS (Lloyd Aereo Paraguayo, S.A.) in 1965, LAP has a free hand to develop additional frequencies in 1966–1968 into Brazil as well as Chile, Bolivia, and Uruguay.

A CV-240 with 5 crew and 18 passengers crashes onto the runway at Buenos Aires while on final approach on May 26, 1967; although the aircraft is destroyed, there are no fatalities.

In December 1968, the carrier purchases one Lockheed L-188A and two L-188C Electras from Eastern Air Lines.

Repainted in LAP's red-on-white livery, the ex-EAL turboprops are placed into service in February 1969 on routes from Asuncion to Buenos Aires, Montevideo, Rio de Janeiro, and São Paulo. Service continues apace in 1970–1971.

Domestic service is enhanced in 1972 by the addition of a Douglas DC-3. L-188C flights into the Argentine communities of Jujuy, Resistencia, and Salta commence in 1973–1974. Electra frequencies are initiated to Lima and Santiago de Chile in 1975–1977.

Three years later, in October 1978, the company purchases two Boeing 707-321Bs from Pan American World Airways (1), employing them on November 17 to begin stretching the Lima route twice-weekly to Miami. Following the award of a Florida permit, the U.S. CAB joins the Paraguayan government in granting permission for a new marketing title—Air Paraguay. At this point, President Luis A. Gonzales Ravetti's airline has 500 employees.

On November 2, 1979, a B-707-321B inaugurates European service with a flight to Frankfurt via Rio de Janeiro and Madrid. There is no change in either fleet or operations during 1980–1983.

On December 20, 1984, the fleet is increased by the addition of a DC-8-63 formerly flown by Air Canada, Ltd. and in 1985 another B-707-321B is added to the fleet and Brussels is added to the European route network.

Operations continue apace in 1986–1988 and in March of the latter year an agreement to integrate routes is signed with LAB (Lloyd Aero Boliviano, S.A.) and PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.) of Uruguay.

In 1989, the fleet includes 3 B-707-321Bs and 1 each Douglas DC-8-61 and DC-8-63. The three Lockheed Electras go out of service, but during the spring, weekly Asuncion to Brussels DC-8-63 service is inaugurated via Dakar, Madrid, and Frankfurt.

As the result of problems associated with its old equipment and plagued with large annual losses, 50% of the carrier is put up for sale by the government in July. The DC-8-61 is taken out of service in 1990 and replaced by a leased DC-8-71.

An L-188C is returned to the fleet in 1991. In late spring, the executive branch of the government proposes a privatization plan under which shareholding would be divided between VASP Brazilian Airlines (Viaçao Aerea de São Paulo, S.A.) (30%), Paraguayan investors (30%), VASP employees (5%), and the government (30%). The U.S. informs the national legislature, which must approve the arrangement, that the major Paraguayan investors had previously been involved in aircraft transactions with the Medellin drug cartel; consequently, the plan is defeated. With \$180 million in foreign debt, the company lays off 1,170 employees—30% of the workforce—while seeking to accelerate the privatization process.

A major fleet change is made in 1992. Two B-707-321Bs are taken out of service and are succeeded by a leased British Aerospace BAe 146-300.

The chartered BAe 146-300 and DC-8-63 are returned in 1993. Chairman Gen. Geraldo Johansen Roux and President Raul F. Calvert oversee a workforce of 1,000. Destinations visited from Asuncion include Brussels, Buenos Aires, Frankfurt, Lima, Madrid, Miami, Santa Cruz de la Sierra, Santiago, Montevideo, Rio de Janeiro, and São Paulo. A wet-leased DC-10-30 is obtained from European Airlift in September.

During the first quarter of 1994, the company ceases flights to Europe. Later in the same time frame, frequencies are suspended to Montevideo, Buenos Aires, São Paulo, Rio de Janeiro, and Miami. With a total debt of \$41 million, LAP closes its doors in April, at which time the nation's Senate opens a special line of credit to cover the firm's debt.

A consortium of Paraguayan investors, joined by SAETA (Sociedad Anonima Ecuatoriana de Transportes Aereos, S.A.), has the winning bid when the government places LAP in the privatization market during the fall. The group, in October, makes a \$22.1-million offer for an 80% stake. The carrier is reborn as LAPS Air Paraguay, S.A.

LAPA (LINEAS AEREAS PATAGONIAS ARGENTINAS, S.R.L.): Argentina (1960–1966). Formed at Buenos Aires in late August 1960, LAPA is authorized to perform nonscheduled all-cargo charters throughout the country and beyond to the rest of Central and South America. Revenue services commence the following month with a pair of Curtiss C-46 Commando freighters.

Services continue without significant event until 1964, when the company acquires a Lockheed L-1049 Super Constellation. Too expensive to operate and having drained the concern of its resources, the huge aircraft is grounded and the company is forced suspend operations in September 1965.

New support is generated and a second Super Constellation is acquired. The new aircraft crashes in March 1966 while on its delivery flight. Evidence is found that it had been smuggling cigarettes and the government consequently cancels LAPA's license.

LAPA (LINEAS AEREAS PRIVADAS ARGENTINAS, S.A.): Av. Santa Fe 1970, 2 Piso, Buenos Aires, 1123, Argentina; Phone 54 (11) 4819 6255; Fax 54 (11) 4819 6204; <http://www.lapa.com.ar>; Code

MJ; Year Founded 1977. LAPA is set up at Buenos Aires in December 1977 to operate local services within Buenos Aires Province. An initial fleet of 3 Swearingen Metro IIs, 1 Douglas DC-3, and 1 Piper PA-31T Cheyenne is assembled and revenue services are inaugurated to Pehuajo and Mar del Plata on January 22, 1978. Authority to operate international charters to points in North, Central, and South America is received in May.

Permission to initiate scheduled third-level regional flights to the eastern provinces of Buenos Aires, Entre Rios, and La Pampas is given in March 1979, the same month in which three Japanese-made Nihon YS-11As are purchased from **Austral Airlines, S.A.** for delivery over the next three years. Frequencies begin on September 29, linking the capital city with La Plata, San Nicholas, Necochea, Tres Arroyos, Pahuajo, Olavarria, Parana, General Pico, and General Roca. At this point, the Metroliners are sold.

The company, during 1980, obtains international notice when it announces forthcoming orders for British Aerospace BAe 146-100 jetliners that will be placed upon new routes. When the new routes are not awarded, the company elects to purchase two Shorts 330s. Meanwhile, when routes to Gualaguaychu and Concordia are dropped by **Aerolineas Argentinas, S.A.**, this smaller operator grabs them up.

In 1981, President Count Claudio Zichy-Thyssen's fleet includes 1 Japanese-made Nihon YS-11A, 1 DC-3, and 2 Shorts 330s.

The DC-3 with three crew is destroyed as the result of a forced landing into a plowed field near Anapoima on March 2; there are no fatalities.

The two outstanding Nihons are acquired and services continue in 1982. The Falklands War with Great Britain results in an embargo on British goods, including needed spare parts for the Shorts 330s. Consequently, one of them remains grounded throughout much of the year and into 1983.

The carrier is purchased by Gustavo Andres Deutsch and a group of fellow investors in September 1984; he immediately places orders with SAAB for the lease of two new 340As. Deutsch's relationship with the U.S.-based Flight Level Corporation results in the lease in 1985 of a third Shorts 330 as well as an Embraer EMB-110P1 Bandeirante. The latter is assigned to operate the company's less profitable segments.

The route network is expanded in 1986 with services to the three Uruguayan cities of Tandil, Montevideo, and Colonia del Sacramento, which benefits from one of the world's shortest international routes (25 miles). The SAABs arrive in early 1987 to replace the Shorts and the chartered Embraer EMB-110 Bandeirante; bureaucratic difficulties result in a delay of several months before they can be introduced.

In January 1989, service is inaugurated to Catamarca, La Rioja, San Luis, Villa Dolores, and Villa Mercedes. Unhappily, however, the national economy is now victimized by inflation that is so high that it virtually dries up any demand for LAPA's domestic services. Consequently, one after another, the new services are abandoned. Additionally, the YS-11As are withdrawn in favor of an Aero Commander, a Dassault Falcon 50, and most importantly, the two leased SAAB 340As. By year's end, the company is operating only the Swedish-made turboprops.

Only one SAAB 340A is available in 1990 and it enplanes a total of 57,801 passengers. A second SAAB is acquired in 1991 and passenger boardings move to 62,725. Customer bookings rise to 75,270 in 1992.

Airline employment stands at 60 in 1993 as President Deutsch's company applies for permission to begin serving Montevideo. A Boeing 737-244 is leased in March and is employed to initiate flights to Bariloche, Iguazu, Mendozas, and Mar del Plata on March 15. Although advertised as scheduled flights, the frequencies are, in fact, nonscheduled. The government does not, however, choose to interfere with them.

A second "Baby Boeing, a B-737-2M6A, is acquired from **Air New Zealand, Ltd.** Employing a B-757-212 leased from **American Trans Air (ATA)**, the company enters the Caribbean charter business in the fall.

Passenger boardings skyrocket 172% to 131,853. Although there is an operating profit of \$2.2 million, there is also a net loss of \$2.35 million.

Despite opposition from **Aerolineas Argentinas, S.A.**, LAPA achieves it scheduled route authority on January 19, 1994. The ATA aircraft is returned at the end of the winter holiday season. Having decided to emulate the deep discount services of the U.S. carrier **Southwest Airlines (2)**, LAPA now leases four more B-737s, two each DASH-204Cs and DASH-2T4As.

From Buenos Aires' downtown Jorge Newberry Airport, the company inaugurates one-fare jetliner flights to Cordoba, as well as 23 other points. Early in September, a B-757-236 is chartered from the **British Airways, Ltd. (2)** subsidiary **Caledonian Airways, Ltd.** and is employed to inaugurate charter services from Buenos Aires to Miami and Caribbean destinations.

Customer bookings are reported through June and show a total of 89,585. Revenues for the year skyrocket 146.5% to \$35.63 million, while expenses are up 112.3% to \$26.01. Consequently, the operating profit swells to \$9.61 million while there is a net gain of \$1.53 million. The profit, a first, brings much cheer.

Airline employment stands at 100 in 1995 and two leased B-757-2Q8s are ordered. Traffic figures are reported through June and show enplanements of 331,000, a huge 127.7% increase over the same period a year earlier. During the year, the fleet is increased by the addition of one each leased B-737-2P6A, B-737-2S3A, and B-737-2T4C.

The **Caledonian Airways, Ltd.** B-757-236 is reacquired in September for the winter charter season. The carrier's own DASH-2Q8 arrives at the end of the month and is christened *Sirius*; it enters service on October 16. At the end of the year, the company is reorganized. Changes bring layoffs and some contract cancellations. Whole-year revenues total \$60 million.

The *Sirius* helps the no-frills, low-fare company post huge traffic returns in 1996 equal to 27% of the entire Argentine domestic market. A total of 1.3 million passengers are transported and income reaches \$100 million.

The second B-757-2Q8 arrives in 1997 and is named *Antillaco*, in honor of an Argentine community. More importantly, this is the aircraft that introduces the carrier's premier First Class services. The B-737 fleet now stands at 14. Plans are made to extend services to points in Chile and Brazil. The carrier also applies for permission to assume the dormant Buenos Aires to Los Angeles authority previously exercised by **Aerolineas Argentinas, S.A.** The two SAAB 340As continue to fly twice daily to Colonia del Sacramento, Uruguay.

In October, orders are placed for 6 (later 12) Next Generation B-737-700s for delivery in the year 2000. In addition, two will be chartered from the International Lease Finance Corporation (ILFC) in January and September 1999.

Passenger boardings leap ahead by 38% to 1.8 million and operating revenue total \$150 million. There is a \$2.1-million net loss.

Flights continue in 1998. The first ILFC Next Generation B-737-7Q8 arrives on August 2, four months ahead of schedule. It is employed, beginning on September 1, to inaugurate twice-daily roundtrips on a new Buenos Aires to Montevideo route which, after a 15-year legal battle, LAPA has finally won authority to operate.

Also during September, the company receives Argentine route authority to operate an international service from Buenos Aires to Atlanta. Talks commence with **Delta Air Lines** concerning the launch of a possible code-share on the route by year's end.

The second B-737-7Q8 is delivered in early October. Late in the year, a homepage is opened on the Internet's World Wide Web.

Enplanements remain level at 1.8 million and represent a 26% domestic market share. Cargo traffic surges 60.3% to 8.64 million FTKs. Revenues advance 20.6% to \$161.69 million, while costs are up 24.8% to \$160.36 million. Although a \$1.33-million operating profit is generated, there is a \$1.79-million net loss.

During the first quarter of 1999, the parent Deutsch group sells off its Tia supermarket chain to The Exxel Group for \$300 million. The newspaper *El Clarin* reports on April 11 that the proceeds will be injected into the airline as part of a plan to upgrade the fleet by 2002 with 17 new Boeing jetliners.

Employing a B-737-3Q8 leased from ILFC, the company inaugurates daily nonstop roundtrips on August 19 from Buenos Aires to Atlanta; the service is offered in conjunction with **Delta Air Lines**.

Scheduled on August 31 from Buenos Aires to Cordoba, Flight 3142, a B-737-204C with 6 crew and 95 passengers, is delayed in order to allow technicians to go over an engine. After its release, the aircraft fails its takeoff, rising some 2 ft. above the runway when the left, No. 1 engine catches fire. The "Baby Boeing" settles back down, but then rolls off the runway, through a perimeter fence and onto Costanera Avenue. As the aircraft rolls across the highway, it hits 8 cars, finally coming to a stop at the Costa Salguero Convention Center and Golf Course, where it bursts into flames (69 dead).

Delivery of another Next Generation B-737-76N is accepted on November 19. A leased B-757-3Q8ER, previously operated by **Transaero Airlines** in Russia, is received at year's end.

Enplanements for the year total 1,757,000.

Airline employment at the beginning of 2000 stands at 2,250, a 21.5% decline over the previous 12 months. The fleet now also includes 1 B-767-3Q8ER, 2 B-757-2Q8s, 3 Next Generation B-737-7Q8s, and 4 B-737-76Ns. LAPA now flies thrice-weekly scheduled nonstop roundtrips to Atlanta and regular service to 27 domestic destinations, plus 2 in Uruguay. Regular charters are offered to 12 additional international points.

An earlier unannounced order, valued at \$270 million, for six Next Generation B-737-700s is confirmed on May 25. During the fourth quarter, one each B-737-2T4C and B-737-2U4 are leased, while another Next Generation B-737-7Q8 is delivered on November 29.

Enplanements during these 12 months surge to 2,076,258.

LAPE. See **LINEAS AEREAS POSTALES ESPANOLAS, S.A.**

LAPER (LINEAS AEREAS PARANA ENTRE RIOS, S.A.): Argentina (1967–1979). LAPER is formed at Parana, Entre Rios, in 1967 and offers scheduled services to destinations in the central part of the country. At its base, President Domingo Dato's 48-employee carrier supports a fleet that grows from 2 Cessna 337s to 1 Cessna 402, 1 Cessna 411A, and 1 Bell 206 JetRanger. Cities served include Buenos Aires, Concordia, Goya, Paso de los Libres, Reconquista, and Rosario.

Operations continue apace with little change in route or fleet until 1973, when two FMA IA-50 Guarini IIs are acquired. The company shuts its doors in 1979.

LAPSA (LLOYD AERO PARAGUAYO, S.A.): Paraguay (1960–1965). With 88% Paraguayan shareholding, LAPSA is formed at Asuncion on September 14, 1960. Two Curtiss C-46s are acquired late in the year and in May 1961, scheduled twice-weekly services are started to Rio de Janeiro via Curitiba and São Paulo. An additional Curtiss is added in 1962 and service is maintained through the following year.

In January 1964, the carrier purchases a Lockheed L-049 Constellation in the U.S. for use on a new service to Buenos Aires. While the Rio run continues and appropriate Argentine permissions are sought, carrier pilots obtain the "Connie," but are unable to get it beyond Campinas, where it loses an engine. Meanwhile, officials in Buenos Aires inform the Paraguayan carrier that it will not receive authority to fly the new aircraft to their city.

Financially overextended through these exertions, the company shuts its doors in 1965. In February 1995, a new company, **LAPSA Air Paraguay, S.A.**, will start up as successor to LAP.

LAPSA AIR PARAGUAY, S.A.: Paraguay (1994–1996). In September 1994, a consortium led by **SAETA (Sociedad Anonima Ecuatoriana de Transportes Aereos, S.A.)** purchases from Paraguay 80% control of this reborn national, which will operate jointly with the Ecuadorian airline. Miguel Candia is named managing director and a fleet is assembled at Aeropuerto Internacional at Asuncion. It includes one each Boeing 737-2Q8 and B-737-219A, plus an Airbus Industrie A310-304, all leased from SAETA, plus two Fokker 100s.

Revenue flights commence in February 1995 over a network that will increase by December to the South American destinations of Buenos Aires, Lima, Montevideo, Rio de Janeiro, Santa Cruz de la Sierra, São Paulo, and Santiago de Chile, plus Miami.

Although the Florida point had been removed from the company's route network by FAA's ban on flights into the U.S. by Paraguayan airlines, LAPSA gets around the prohibition by operating an A320-232 jointly with SAETA.

Although traffic figures are not released, it is noted that an operating profit of \$23.6 million is posted for the period from start-up through October.

Two more A320-232s and an A310-304 join the fleet early in 1996. All are leased from or through SAETA. The long-range A310s inaugurate services to Madrid, Brussels, and Frankfurt.

A major stake and management control is acquired in August by **TAM (Transportes Aereos Regionais, S.A.)** and on September 1 the entire company is sold to the new Brazilian airline holding company, TAM Group, for \$27 million. The same day, service between Asuncion and Miami is suspended.

The carrier is now renamed **TAM-Mercosur (Transportes Aereos Mercosur, S.A.)** in honor of the free trade zone established by Argentina, Brazil, Paraguay, Uruguay, and Chile. TAM President Rolim Adolfo Amaro appoints former **VARIG Brazilian Airlines (Viacao Area de Rio Grandense, S.A.)** President Rubel Thomas as his deputy director in charge of TAM-Mercosur.

A code-sharing agreement is signed with **American Airlines** in October. Under its terms, TAM-Mercosur purchases blocked seats on AA's daily roundtrips from Miami to Asuncion. Plans are made to lease a fleet of 10 Fokker 100s from TAM.

LAR ROMANIAN AIRLINES (LINILILE AERIENE ROMANE): Romania (1975–1996). LAR Romanian is organized at Bucharest in 1975 as the charter subsidiary of **TAROM (Transporturile Aeriene Romane, S.A.)**. Employing 3 BAC 1-11-424s, Managing Director C. Radut's carrier inaugurates unscheduled and inclusive-tour flights in December to holiday destinations in North Africa, Europe, and the Middle East. These operations are continued with little change for the remainder of the decade and throughout the 1980s. In 1990, the fleet comprises 3 Antonov An-26s and 1 BAC 1-11-424.

Following the fall of the Communist government, the company is reformed on February 19, 1991 as a joint stock company, one-third of which is owned by the new Romanian government. Dorin Ivascu is named general director and a workforce of 61 is recruited. Charter services are resumed with a new fleet, which includes 2 An-24Vs, 1 of the previously owned An-26s, 1 Ilyushin Il-18D, and 2 BAC 1-11-424s leased from TAROM.

The recession causes a significant cutback in operations during 1992–1994 and only two An-26s are flown. Flights continue in 1995, during which year two American-made Beech 1900Ds replace the Antonovs. Destinations visited include Izmir, Skopje, Zagreb, and Tirana. Unable to maintain economic viability, the company shuts down in 1996.

LAR TRANSREGIONAL, S.A. (LIGACOE AEREAS REGIONALS): Portugal (1986–1997). Founded at Aeroporto de Lisboa in 1986, Portugal's new domestic operator is organized as a subsidiary of **TAP-Air Portugal**, which owns a 30% interest, under the name **Ligacoe Aereas Regionais, S.A. (LAR)**. The carrier is initially equipped with 1 Beech King Air 90 and 3 de Havilland Canada DHC-6 Twin Otters. These are employed to inaugurate scheduled passenger and cargo air bridge services linking the capital with Faro and Oporto.

In 1988–1989, Managing Director Alberto Aragao's fleet is altered; gone are the Canadian turboprops, replaced by three British Aerospace BAe (HS) 748-B2s and two Dornier 228-202Ks. These provide twice-daily service to Faro and eight-times-per-day roundtrips to Oporto. In addition, first time flights are inaugurated from Oporto to Braganca and

Vila Real and from Lisbon to Covilha. Enplanements during the latter year total 300,000.

Two DHC-6-300s join the fleet in **1990**, along with three leased BAe ATPs and another Dornier 228-202K. International services are begun in **1991** from Lisbon and Oporto to Bilbao, Bordeaux, Compostela, Malaga, Santiago, and Seville. The marketing title is now changed to LAR Transregional, S.A.

President Armando Moreira's fleet in **1992** includes 2 BAe ATPs, 3 BAe (HS) 748-B2s, 2 Dornier 228-202Ks, and 2 Twin Otters. In the spring, the ATPs are grounded and replaced by a pair of BAe 146-200s, the company's first jet equipment. These are employed during the summer to offer new or enhanced scheduled services over routes from Lisbon to Seville, Malaga, Bilbao, Genova, Las Palmas, and Port-Bordeau.

Unsuccessful, the British jetliners are withdrawn in early **1993** and the ATPs, upon which no lease payments have been made in some time, are returned to their owners, the Canadian Imperial Bank of Commerce. CEO Rogelio Rodrigues' fleet now includes 3 Dornier 228-202Ks. A de Havilland Canada DHC-6-100 Twin Otter is leased in **1994** and plans are made to charter a pair of Boeing 737-200s.

The Boeings are not acquired and one Dornier is removed from service in **1995**. Operations continue apace in **1996**. During both years, the carrier suffers from poor traffic, the accumulation of debt, and an inability to identify a strategy that will ensure survival. As a result, the carrier is forced to shut its doors at the beginning of **1997**.

LARADO AIR: United States (1989–1990). Wolf Holman organizes Larado Air at the Texas city of that name in **1989** to offer scheduled services to the state's larger communities with a pair of Convair CV-440s. Daily roundtrip passenger and cargo flights commence in April, linking the company's base with San Antonio, Dallas, and Monterrey, Mexico.

Unable to attract sufficient traffic, the company abandons its scheduled work and begins flying charters in early **1990**. The failed enterprise is sold for its equipment later in the year.

LARES. See **LINILE AERIENE ROMANE EXPLOATATE CU STATUL, S.A. (LARES)**

LARIVIERE AIR SERVICES, LTD. See **AIRGAVA, LTD.**

LARKIN AERIAL SUPPLY COMPANY (PTY.), LTD.: Australia (1921–1928). Following enactment of the 1920 Air Navigation Act, the government of Australia accepts tenders for the operation of new routes. After **QANTAS (Queensland and Northern Territories Aerial Service, [Pty.], Ltd.)** and **West Australian Airways (Pty.), Ltd.** had received contracts, a third is awarded on November 1, **1921** to Larkin, which had originally been formed in London in 1919 as the Larkin-Sopwith Aviation Company of Australasia. Equipped with Sopwiths, the carrier inaugurates operations over an Adelaide–Sydney route on June 2, **1924**.

As the result of significant competition from the railroads, the company is granted permission to withdraw its frequency east of Cootamundra, substituting branch lines from Hay to Melbourne and from Mildura to Broken Hill, the latter an important mining community now served commercially from the air for the first time.

Service is maintained over these routes in **1925–1928**; however, at the end of the latter year, the company ceases operations when the government mail subsidy is withdrawn.

LARRY'S FLYING SERVICE: 3822 University Ave., P.O. Box 72348, Fairbanks, Alaska 99707, United States; Phone (907) 474-9169; Fax (907) 474-8815; <http://www.larrysflying.com>; Code J6; Year Founded 1978. Lawrence A. Chenaille and his wife Jean establish LFS at Fairbanks, Alaska, in **1978** to undertake passenger and cargo charter and contract service flights throughout Alaska and Western Canada. Scheduled frequencies are initiated in July **1982** linking the

company's base with Denali National Park and Mount McKinley. By **1985**, the fleet comprises 1 each Cessna 206, Cessna 207A, Cessna 185, and Piper PA-23 Aztec.

Regularly scheduled third-level passenger flights to communities commence in **1986**, with Galena, Bethel, and Kotzebue the first destinations. Frequencies are inaugurated in **1987–1988** to Tanana, Ruby, Alakaket, and Anakiuvuk Pass.

By **1989**, enplanements total 18,040.

Airline employment in **1990** stands at 55 and the fleet includes 1 Aztec, 2 Cessna 207As, 3 Cessna 206s, and 6 Piper PA-31-310 Navajos.

Passenger boardings jump 18% to 22,000.

The payroll is increased by 9.1% in **1991** to 60 as a reconditioned Beech 99 joins the fleet during the first quarter.

Customer bookings inch up 0.2% to 25,028 and 1.3 million pounds of mail are also flown. Revenues are \$4.3 million.

Airline employment stands at 35 in **1992** and the fleet includes 7 Navajos, 2 Cessna 207As, and 1 each Beech 99, Cherokee Six, Saratoga, Lance, and Aztec.

Passenger boardings climb 3% to 27,531.

The workforce still stands at 35 in **1993** but the fleet has grown to include 6 Piper PA-31-310 Navajos, 5 Piper PA-32 Cherokee Sixes, 4 Cessna 207As, 1 Pilatus Britten-Norman PBN-2 Islander, and 2 Beech 99s.

Unhappily, customer bookings decline by 30% to 12,339.

Passenger boardings plunge an additional 30% in **1994** to 8,696; however, 242,000 FTKs are flown.

Although there are again no changes in the workforce in **1995**, the fleet is reduced to just 12 aircraft: 4 Navajos, 2 Beech 99s, 1 Cherokee Six, 2 C-207As, and 1 each Piper Aztec, Cherokee Lance, and Saratoga.

Enplanements inch up 2% to 8,847.

One Beech 99 is withdrawn in **1996**. Encountering power problems, the June 4 takeoff of a Cessna 207 from the gravel strip at Akiachak is aborted; the aircraft is unable to stop and overruns the runway, losing its nosegear and nosing over. Both crewmen aboard receive slight injuries.

Passenger boardings plunge 11.3% to 7,494.

The company's 10 aircraft transport a total of 7,185 customers in **1997**, a 4.1% decline.

While en route from Gambell to Nome via Kaltag on a February 6, **1998** air taxi service, a new PA-31-350 Navajo Chieftain with a pilot and nine passengers suffers fuel exhaustion; the aircraft makes a forced landing into snow seven mi. W of its destination. No injuries are reported.

Larry's enjoys a good traffic year as passenger boardings jump 26.1% to 9,000.

During the first quarter of **1999**, a new homepage is opened on the World Wide Web.

While en route on a June 11 all-cargo service from Fairbanks to Galena via Tanana, a Piper PA-31-350 Navajo Chieftain with one pilot, crashes through trees into the Yukon River some 1.5 mi. from its intermediate stop. The flyer is killed.

Customer bookings during these 12 months fall 7.3% to 8,000.

A total of 20 full-time pilots are employed at the beginning of **2000** to fly the company's fleet, which now includes 4 PA-31-310 Navajos and 3 PA-32-301 Saratogas.

For the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Gov. Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and which depend upon salmon as their food source, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by Warbelow's at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock-bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of chief pilot Michael Morgan, Warbelow's, which has the only bypass mail shipping permit in Fairbanks, runs the packages through its meter and with USPS assistance, farms out this mail for delivery. The airlines involved, including **Warbelow's Air Ventures, Frontier Flying Service, Arctic Circle Air Service, Belair, Larry's, Servant Air, Tanana Air Service, Tatonduk Air Service, and Wright's Air Service**, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk rivers.

LAS (LIGNES AERIENNES SEYCHELLES, LTD.): Seychelles (1987-1988). LAS is established by Paul Lewis at Mahe in January 1987. Equipped with a single Boeing 707-323C, it undertakes all-cargo charters to Malawi and Botswana in southern Africa, as well as Singapore and Perth, Australia. Unable to establish economic viability, the company folds in 1988.

LAS (LINEAS AEREAS SANTAFECINAS, S.A.): Argentina (1986-1992). Established at Rosario in 1986, LAS is outfitted with two Rockwell Aero Commander 690s provided by the provincial government and is requested to provide third-level scheduled flights to communities throughout Santafecinas. In 1988, two CASA C-212-200 Aviocars are leased from their Spanish manufacturer and these remain in service for four years.

As a result of the general recession of the early 1990s, LAS is forced to retrench and the CASAs are returned. Schedules are often missed and the Aero Commander service, while continuing to provide service, might better be described as that of an on-demand air taxi. Operations cease in 1992.

LAS VEGAS AIRLINES: P.O. Box 15105, Las Vegas, Nevada, 89114, United States; Phone (702) 647-3056; Fax (702) 647-1846; <http://www.lasvegasair.com>; Code 6G; Year Founded 1973. LVA, billing itself as "The Grand Canyon Professionals," is founded by Donald J. Donohue and his wife Joan at Las Vegas, Nevada, in October 1973 as a sight-seeing concern offering various air tour packages. In addition to a flight school and Piper dealership, scenic air tours over the Grand Canyon and charters to destinations throughout the U.S. are also available. Revenue flights commence on November 23.

Operations continue apace in 1974-1977. Early in 1978, scheduled frequencies are initiated, linking the company's base with the Grand Canyon. A Piper PA-31-350 Navajo Chieftain and its occupants are lost in a crash at Las Vegas on August 30.

It is reported in 1979 that more than 90% of the company's traffic is foreign speaking. The company begins a process of diversification by acquiring Las Vegas Piper, the local smallplane distributorship from which it has been acquiring its aircraft.

A total of 36,069 passengers are carried by the company's 10 Navajo Chieftains during 1980; however, as a result of currency fluctuations, bookings drop 19% in 1981 to 29,159. Still, the workforce is increased by 29.7% to 48.

To attract additional foreign business, the company opens offices in England, France, Australia, Japan, Germany, Italy, and Norway in 1982 and offers its brochures in five languages.

The recession; however, continues to bite into company success and bookings fall 29.3% to 20,622.

Flight 88, a Piper PA-31-350 Navajo Chieftain with 10 aboard en route for the Grand Canyon, crashes at Peach Springs, Arizona, on August 17, 1983; there are no survivors. Enplanements for the year plunge another 23.6% to 15,744.

In 1984, airline employment totals 43 and the fleet is half of what it was 5 years earlier. Customer bookings fall another 13.5% to 12,421. The workforce is cut by a third in 1985 to 28 as business continues to slip badly, with passenger boardings plunging 43.6% to 7,002.

Employment drops by another 19.2% in 1986 to 21 and the fleet now includes 4 Piper Chieftains and 1 Saratoga. Still, the year is good traffic-wise as enplanements jump 78.9% to 12,530. Airline employment grows 14.3% in 1987 to 24 and orders are placed for 2 more Chieftains. Passenger boardings swell 17.5% to 14,728.

The workforce is increased by another 16.2% in 1988 to 34. Lean bookings bring further equipment reductions and only three PA-31-350 Navajo Chieftains are on the flight line. The scheduled service is now relinquished and the company reverts to its original on-demand charter status.

The year's enplanements decline by 5.8% to 13,874.

Business picks up in 1989 and another Navajo Chieftain is obtained. Passenger boardings jump 13% to 15,684.

A fifth Chieftain is purchased in 1990. In order to generate even more foreign bookings, general sales agents are appointed for South Africa, Canada, and the U.K.

Customer bookings accelerate 22.6% to 19,230, due largely to the cost of foreign travel and fear of war in the Mideast.

Company employment is cut by 8.8% in 1991 to 31. A Navajo Chieftain crashes at Temple Bar, Arizona, on December 10 (five dead).

Still, the fear of the Iraq situation causes more customers to choose Las Vegas and passenger boardings shoot up 45.8% to 28,043.

The payroll decline is reversed in 1992, growing 16.1% to 36. The 5 Chieftains increase ridership by 3% to 29,129.

In 1993, Chairman Donohue oversees a workforce of 29, a 14.7% decline. Although the fleet remains unchanged, orders are outstanding for two more PA-31-350s.

The number of overseas visitors declines, forcing passenger traffic to fall by 13.7% to 25,126.

Airline employment increases to 41 in 1994 and the fleet now includes 8 Chieftains.

With 97% of its traffic made up of foreign tourists, Las Vegas watches its renewed Grand Canyon tour traffic surge 48.7% to 37,369.

The most successful and profitable year in the company's history gives way to tragedy in the next. On February 13, 1995, a Piper Chieftain with a pilot and nine Taiwanese tourists aboard reports an engine out. The aircraft crashes during its attempt to return from a point south of the Grand Canyon to Grand Canyon Airport at Tusayan (eight dead).

After this disaster, the company suffers a continuing decline, requiring a workforce reduction of 17.7% to 18. Enplanements drop 26.2% to 27,569.

The employee population is increased to 36 in 1996. Just after landing at Grand Canyon on February 28, a PA-31-350 with a pilot and nine passengers, suffers the collapse of its main landing gear as it slides across an icy runway. No injuries are reported.

Passenger boardings continue to fall this year, dropping 9.9% to 24,850.

Services continue in 1997 with six Navajos. Customer bookings plunge another 40% to 14,731.

On May 15, 1998, a new subsidiary, **Virgin Islands International Airlines**, is created to operate scheduled passenger services from St. Thomas. LVA will continue to hold the FAA operating certificate under which VIIA will operate.

Jehu Hand is named president of the new operation and on September 17 announces an agreement with the government of the Virgin Islands. In addition to a \$50,000 development contribution, the government agrees to endorse and help market the new entrant as it promotes its services. Simultaneously, plans are announced for the inauguration of 14-times-a-day deep-discount services in October from St. Thomas to San Juan and St. Croix and from San Juan to St. Croix, plus a daily return service from St. Thomas to Antigua.

The first of several turboprop aircraft bearing the VIIA emblem is unveiled in ceremonies at Dana Point, California, on September 22.

Overall passenger boardings drop 21% to 12,000.

By the beginning of **1999**, airline employment has been cut by 11.1% to 32.

LASA (LINEA AEREA SACIFI, S.A.): Cerrito 1320, Piso 3, Capital Federal, Buenos Aires, 1010, Argentina; Phone 54 (1) 812-3390; Fax 54 (1) 811-2966; Code CT; Year Founded 1993. CATA Linea Aerea Sacifi, S.A. is reformed at Buenos Aires in **1993** and renamed. Roque Pugliese remains president as his company receives a new corporate identity, logo, and aircraft livery. Operations are continued from Buenos Aires to Bariloche, Viedma to Bariloche, and Viedma to Buenos Aires with a fleet of 4 Fokker F-27Js, 1 Israeli Aircraft Industries 102 Arava, and 2 Rockwell Turbo Commanders. Operations continue apace in **1994–1995**.

Airline employment stands at 200 in **1996** and through June, enplanements total 2,086. Flights continue in **1997–2000**, during which years two Fairchild-Hiller FH-227Bs are acquired.

LASA (LINEA AEREA SUD AMERICANA, S.A.): Chile (1964–1983). LASA is founded at Santiago de Chile in **1964** as an all-cargo carrier offering general purpose and beef-hauling charters both within the nation and over the Andes to Argentina. Services are started with a fleet of 5 Curtiss C-46 Commandos, which are eventually succeeded in **1976–1977** by 2 Douglas DC-6s acquired from **LADECO Chilean Airlines, S.A.**

Unable to pay higher fuel costs or make a profit in the poor economy of the early eighties, LASA closes down in **1983**.

LASA (LINEA AEROPOSTALE SANTIAGO-ARICA, S.A.): Chile (1929–1932). Having received authorization from Chilean President Carlos Ibanez del Campo, FAN (Fuerza Aerea Nacional) (National Air Force) founder Commandante Arturo Merino Bonitez forms LASA as a division of his military organization on March 5, **1929**.

Equipped with 12 de Havilland DH 60 Gipsy Moths, the pioneer airline, in late spring, inaugurates regular mail and passenger service from Santiago de Chile to Arica on the Peruvian frontier, via Ovalle, La Serena, Vallenar, Copiapo, Antofagasta, Tocopilla, and Iquique.

A total of 762 passengers are carried over this route during the year's final three quarters.

FAN takes delivery of seven Fairchild FC-2W2s in early **1930** for its airline division; these are followed by four Ford 5-ATs, one of which is lost in a December 22 crash. New routes are opened southward to Puerto Montt via Chillan and Temuco. More than 5,000 passengers have been transported by year's end.

The LASA fleet is increased in **1931** by the addition of six Fairchild FC-2s, again delivered via FAN. As guests of the Chilean government, the Prince of Wales and his brother the Duke of Kent are flown from Antofagasta to Santiago in February.

The route network is increased as the American-made trimotors fly over the Andes to the Chilean cities of San Juan and Mendoza.

An FC-2W2 is destroyed in a February 27, **1932** crash. On July 21, under terms of government decree No. 247, the airline is separated from FAN and made an independent agency under the name **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**.

LASER (LINEAS AEREAS DE SERVICIO EJECUTIVO REGIONAL, S.A.): Avenida Francisco de Miranda Torre, Bazer Bolivar, Piso 8, El Marques, Caracas, D.F., Venezuela; Phone 58 (2) 235-6181; Fax 58 (2) 235-8359; http://www.laser.com.ve; Code KZ; Year Founded 1993. Capt. Jose Augusto Azpurua, founder of **VIASA (Venezolana Internacional de Aviacion, S.A.)** and a chief consultant in the launch of **Aserca (Aerolineas Regional de Centro, S.A.)**, joins with his brother, Capt. Rodolfo Azpurua, and a group of experienced commercial pilots to establish LASER at Caracas toward the end of **1993**. With the promise of good service at affordable prices, the veterans attract a sufficient number of investors to begin operations.

Employing a single Douglas DC-9-14, christened *El Pitufu* and outfitted with full-size, first-class leather seats, the company inaugurates scheduled flights in the spring of **1994** between Caracas and Porlamar (Margarita Island).

Over the next six years, two more DC-9s, Dash-32s are chartered and daily return service is also initiated to Maracaibo and Puerto Ordaz. A Boeing 727-224AF freighter is also operated.

Airline employment totals 90 at the beginning of **2000**.

LATAVIO LATVIYSKIE AVIALINII (LATVIAN AIRLINES, A.S.): Latvia (1992–1995). Following national independence in **1992**, the former **Aeroflot Soviet Airlines** division based at Riga is reformed as Latavio to provide scheduled passenger and cargo flights, as well as charter services. President/General Manager Edward I. Makharev acquires a fleet of ex-Russian aircraft from his former unit. These include 14 Tupolev Tu-134B-3s, 1 Tu-154B, and 7 Tu-154B-2s. Revenue operations commence and continue, primarily over the old routes to Moscow and other Russian communities.

While landing at Stepanavan, Armenia, on April 6, **1993**, the nosegear of an An-24RV with 4 crew and 28 passengers, collapses, forcing the plane to overrun the runway by 600 m. There are no fatalities.

In January **1994**, the company receives an offer from **SAS (Scandinavian Airlines System)** to participate in the formation of a new Riga-based Latvian airline. Under terms of the arrangement, SAS would acquire 40% shareholding and provide technical and financial support. The offer is not immediately accepted.

Domestic and international markets are visited with a fleet that now includes 5 Tu-154B-3s, 9 Tu-134s, 9 Antonov An-24s, 2 An-26s, and 2 Yakovlev Yak-40s.

Enplanements in January–July are 50,674.

Airline employment stands at 500 in **1995**. A major traffic decline is suffered during the first half of the year and figures are again reported only through this period.

Customer bookings are down 4.8% to 48,354 and freight falls 24% to 781,000 FTKs. The company cannot survive this plunge.

At a meeting of the stockholders in early September, a management change is immediately ordered. It is also announced that the company will discontinue all regularly scheduled flights on October 1. Newly formed **Air Baltic, A.S.** will take them over.

LATB (LINHA AEREA TRANSCONTINENTAL BRASILEIRA, S.A.): Brazil (1944–1951). LATB is formed at Rio de Janeiro on July 22, **1944**. Following V-J Day in **1945**, a fleet of 5 British-made Avro Ansons is assembled and employed to undertake a series of route proving flights under the direction of President Col. Dulcideo Espirito Santo Cardoso.

Three ex-military Douglas C-47s (reconfigured to DC-3 civil standard) are purchased in January **1946**; beginning in February, these aircraft join the Ansons in a year and a half of charter work around north-east Brazil.

In early **1948**, LATB moves into a partnership arrangement with another new entrant, **VASD (Viacao Aerea Santos Dumont, S.A.)**. Santo Cardoso becomes joint president and the two carriers share facilities, equipment, and other resources, as well as revenues. VASD, idle for part of 1947, now resumes its coastal routes while LATB, as the result of an August 27 government concession, starts two new routes: São Paulo–Rio de Janeiro direct and multistop Rio de Janeiro–Recife. The Ansons are withdrawn and after chartering two of its DC-3s to VASD, LATB leases two others from **NAB (Navegacao Aerea Brasileira, S.A.)**.

A Beech 18 is acquired and the LATB route network is expanded in **1949**. Local services are provided to destinations in Minas Gerais State, while an internal route to Fortaleza is opened via Conquista, Salvador, and Paulo Afonso. All-cargo flights are started between Rio de Janeiro and São Paulo with a newly purchased Curtiss C-46A Commando.

Despite its growing success, LATB, with VASD leaning upon it, remains a fragile operation. In August **1950**, the Curtiss is severely

damaged in a crash, thereby ending a fairly profitable all-freight operation.

Within six months, in January 1951, one of the NAB DC-3s is destroyed in an accident. LATB's financial situation becomes hopeless as claims on its meager resources mount. The relationship with VASD is ended and in August, Santo Cardoso's carrier is purchased by **REAL, S.A.**

LATCHARTER, A.S.: 2 Blaumania St., Riga, LV-1050, Latvia; Phone 371 (7) 207 392; Fax 371 (7) 207 398; Code LT; Year Founded 1992. Post-Soviet Latvia's first international charter company is set up at Riga in late 1992. Yuri Rubenchik is named managing director and 4 Tupolev Tu-134As are acquired.

Ad hoc revenue flights, including business and VIP charters, are launched at the end of March 1993. These continue through the remainder of the decade to Athens, Bologna, Naples, and other European points, as well as destinations in Western Europe and Asia.

By the end of the decade, the fleet comprises just 2 Tu-134As. A total of 38 workers are employed at the beginning of 2000.

LATHAM ISLAND AIRWAYS, LTD. See **AIR TINDI, LTD.**

LATIN CARGA (LATINAMERICANA AEREAS DE CARGA, S.A.): Venezuela (1972–1980). The Caracas-based all-cargo carrier **Ti-gres Voladores, S.A.** is reformed in 1972 and continues operating domestic freight charters with a fleet of 9 Curtiss C-46 Commandos. Flights continue until 1980.

LATN (LINEA AEREA DE TRANSPORTE NACIONAL, S.A.): Paraguay (1944–1956). Following some preliminary experimentation in 1941, the national government decrees the establishment of LATN at Asuncion on July 12, 1944. The initial fleet comprises 3 Fleet biplanes and 2 Italian-made Caproni AP-1s. Nonscheduled flights are started to outlying Army posts during the summer. Following the initial organization meeting of the board of directors on October 2, scheduled passenger flights are inaugurated on October 9.

On February 6, 1945, the government de-emphasizes the airline's military identity in order to attract additional traffic. Capitalization is increased and the fleet is upgraded by the addition of a Breda 44 and two Travel Air 6000s. By year's end, the two-route system includes stops at over 30 destinations.

Despite a slight increase in the number of passengers carried (enplanements total 700 in 1946), the nation does not have the resources to sufficiently support both a civil airline operation and military logistics. In 1954, the air force transport unit **TAM (Transportes Aereo Militar)** acquires a fleet of Douglas C-47s that are employed to support both logistical requirements and commercial routes.

By 1956, the military line is outperforming the civil carrier and has taken over flights to the nation's 12 largest destinations. LATN is again downgraded to outpost resupply flights and soon thereafter disappears.

LATUR (LINEAS AEREAS LATUR, S.A. de C.V.): Mexico (1988–1991). The Mexican ALPA and Promotora Mexicana de Hoteles establishes this charter carrier in late spring 1988 to operate between U.S. East Coast cities and Mexican resorts, especially Cancun, enlivening the local tourist markets. Shareholding of 5% is also distributed among minor investors. Employing a dry-leased McDonnell Douglas MD-83, the carrier initiates service in December. It is the first exclusive passenger-charter operator in Latin America, the first to order new generation high-tech transports, and the first South American airline to order the Airbus Industrie A320.

The first high-tech A300-621, christened *Yum'ik*, is delivered for service on August 3, 1989, with a second arriving in October. Orders are outstanding for two A320-200s and contracts with four major tour operators insure a steady flow southward of leisure travelers from the United States and Canada.

Start-up and associated costs lead to a \$1.3-million operating loss.

Company employment is increased by 13.2% in 1990 to 172. Due to a lack of bookings, the two A300B4-621s are wet-leased to **Garuda Indonesian Airlines** as three McDonnell Douglas MD-83s arrive to replace them. An MD-87 is ordered.

Passenger boardings skyrocket 154.1% to 628,963. Revenues increase 166.4% to \$52.5 million and the operating loss is cut to \$839,000.

Mexican air transport deregulation, currency devaluation, and the growing recession combine to fatally impact the carrier, which ceases operations on December 18, 1991.

LATVIJAS GAISA SATIKMES, A.S. See **AERONAUT, A.S.**

LAU (LINEAS AEREAS SURAMERICANAS COLOMBIA, S.A.): Aeropuerto Eldorado, Entrada 2, Interior 7, Bogota, AA 98971, Colombia; Phone 57 (1) 413-9515; Fax 57 (1) 413-9608; Year Founded 1993. Luis Enrique Prieto sets up this all-cargo carrier at Bogota in 1993. Services are launched with an initial fleet that includes 1 leased Boeing 727-25F, along with 1 each owned Aerospatiale (Sud) Caravelle XB3 and Caravelle XR.

A Caravelle VIR is purchased in 1994 and two B-727-24Cs follow in 1995. In 1996–1998, the Caravelle VIR is taken out of service and replaced with a Caravelle XB1R. Even though the Caravelles are employed as freighters, they are among the last of their type in commercial operation anywhere in the world.

Operations continue without headline or incident. Freight traffic in 1999 totals 163.31 million FTKs. The fleet in 2000 includes not only the Caravelles but 5 B-727s, 2 hush-kitted Dash-24Cs, 1 Dash-C3, and 1 each hush-kitted Dash-25F and Dash-51F.

It is not until January 31, 2001 that a tragic event brings this carrier, one of the last Caravelle operators in the world, back to public attention.

While on approach to Mitu, coming in from Yopal and en route to Bogota, the crew of the Caravelle XR experiences difficulty putting down the landing gear and elects to return to Yopal. Just 3 mi. short of the runway at its destination, the jetliner, with a crew of 3 plus 3 passengers and 14 55-gallon barrels filled with gasoline, crash-lands in a meadow and catches fire. Two passengers and a crewman are killed and the aircraft is burnt out.

LAUDA AIR LUTFAHRTGESELLSCHAFT, A.G.: World Trade Centre, P.O. Box 56, Vienna-Schwechat, A-1300, Austria; Phone 43 (1) 7007 2081; Fax 43 (1) 7007 2091; <http://www.laudaair.com>; Code NG; Year Founded 1979. World champion and Grand Prix race driver Andreas Nikolaus "Niki" Lauda establishes Lauda at Vienna in April 1979 to offer air taxi and charter services with a fleet of 2 Fokker F.27s, which are acquired for \$3 million. Lauda holds 51% shareholding, with ITAS Austria obtaining the remainder. The certificate of **Alpair** is taken over and revenue services commence on May 24.

Operations continue apace in 1980–1982, during which time President/CEO Lauda personally pilots many flights. Unable to offer scheduled airline services because of political considerations, a disappointed Lauda leases the F.27s to **Egyptair, S.A.E.** and returns to racing in 1983.

After winning his third world championship title, founder Lauda, late in 1984, decides to retire from Grand Prix racing and return full-time to the airline scene. Two Dassault Falcon 20s are acquired and the reborn company becomes a joint-stock concern. A year later in 1985, two BAC 1-11-500s are leased from **TAROM (Transporturile Aeriene Romane, S.A.)** and used to inaugurate charter and inclusive-tour flights to Spanish and Greek holiday destinations in a cooperative venture with partner tour operator ITAS Austria, owned by Basile Varvaressos Vermoegens-ferwaltungs, GmbH. (BVV).

Managing Director Olmar Lenz's fleet is significantly increased in 1986 as two Boeing 737-200s are leased for the charter business. An application is made for a license to begin charter flights to the Far East and Australia. The company's first owned Boeing, a B-737-3Z9, arrives in July. It, together with its sister, will allow ITAS to increase its named

charters to Spain and the Canary Islands (Paco Leone), to Egypt and Israel (Topic), and to various other destinations (Belmondo).

When Lauda petitions the Austrian government for the right to operate scheduled domestic and regional services, the move is strongly opposed by the national flag carrier, **Austrian Airlines, A.G.**

Enplanements this year total 192,369 and a \$3-million operating profit is earned. The net gain is \$2.6 million.

Airline employment is increased by 50.9% in 1987 to 169 as, beginning in the spring, the B-737-3Z9 launches seasonal charter flights (with two refueling stops) from Vienna to Recife. Scheduled operations are licensed by the government in December.

Passenger boardings jump 23.1% to 250,124 and revenues advance 14.2% to \$36.6 million. With costs held down, the profits are \$4.1 million (operating) and \$3.1 million (net).

A B-767-3Z9ER is received in the spring of 1988. Upon receipt of a desired certificate for Far East flights, the new twin-engine wide-body is employed to inaugurate scheduled flights to Bangkok, Hong Kong, and Sydney in May. The second B-767-3Z9ER arrives in November.

In 1989, the 467-employee Lauda becomes an all-jet airline as the fleet now includes 2 Boeing 737-3Z9s, 2 B-767-3Z9ERs, and 1 Gates Learjet 35A. Orders are outstanding for three B-737-4Z9s and a third B-767-3Z9ER.

Enplanements are 356,045 and a total of 6.04 million FTKs are operated.

Company employment is increased by 8.8% in 1990 to 508. In February, weekly flights are opened from Vienna to Singapore via Bangkok. The company begins trading on the Vienna Stock Exchange in June. Licensure for worldwide scheduled services, previously limited to **Austrian Airlines, A.G.**, is obtained from the government on August 23. The first scheduled European regional route is inaugurated in December—weekday B-737-3Z9 roundtrips from Vienna to London (LGW).

Passenger boardings this year jump 28.7% to 458,300.

The payroll is cut 7.5% in 1991 to 470 as 1 owned B-737-4Z9 is delivered; a B-767-3Q8ER is leased from **Air France** along with a B-767-3Z9ER from **Martinair Holland, N.V.** Charter destinations now visited include Hong Kong, Singapore, Thailand, Cyprus, Greece, Jamaica, Mexico, Portugal, Florida, Spain, St. Lucia, and Santo Domingo via Milan, from Vienna, and from Lauda and Milan. Holiday flights are made to the Bahamas, Barbados, Heraklion, Montego Bay, Rhodes, St. Martin, and Santo Domingo.

On May 26 Flight NG004 is en route from Hong Kong to Vienna with 10 crew and 213 passengers. Piloted by American Thomas Welsh, the Martinair B-767-3Z9ER crashes at 11:18 p.m. local time, 16 minutes after takeoff from Mong Muang International Airport outside Bangkok. Rescuers reaching the scene report that they cannot locate any piece of the aircraft larger than 6 feet. There are no survivors from the 12th worst commercial aviation disaster to date and although a terrorist bomb is initially suspected, it is later established that a manufacturing fault had caused the port engine's thrust reverser to deploy unexpectedly. Via **Condor Flugdienst, GmbH., Deutsche Lufthansa, A.G. (DLH)** now acquires 25% shareholding.

Enplanements of 309,002 are reported for the year's first seven months.

Twice-weekly scheduled services are inaugurated on March 29, 1992 from Vienna to Miami via Munich in cooperation with the German flag carrier. Lauda operates the Vienna to Munich segment. Also added from Vienna to Seoul via Bangkok are flights to Phuket, Hong Kong, Melbourne, and Sydney.

Chairman Lauda now oversees 676 employees and his fleet is upgraded by the addition of another B-737-4Z9. Orders are placed for four B-777-2Z9s. In July, the company sells another 26.5% shareholding to **Condor Flugdienst, GmbH.** and in August another B-767-3Z9ER is delivered.

In November, a major alliance with DLH, also inked in July, comes into effect. Under its terms, codes will soon be shared on flights from Munich

to Miami and Los Angeles and the two companies will engage in sales and marketing cooperation to seven European destinations. A fourth B-767-3Z9ER is delivered in December. Just before Christmas, thrice-weekly services are inaugurated from Frankfurt to Miami via Vienna.

Passenger boardings swell 16.6% to 644,784 while freight is up an almost unbelievable 267.8% to 28.71 million FTKs.

The workforce grows by 40.5% in 1993 to 950 and the fleet now includes 2 each B-737-3Z9s and B-737-4Z9s, 3 B-767-3Z9s, and 1 Learjet 36A.

Backing up its strategic marketing agreement with Lauda signed the previous fall, DLH purchases another 13.24% stake on January 4, the same day **Condor Flugdienst, GmbH.** acquires 26.47% shareholding. A "Partner of Lufthansa" logo is applied to all Lauda aircraft liveries. Also during the first quarter, the subsidiary **Lauda Air, S.p.A.** is formed in Italy to provide holiday flights to the Caribbean and is outfitted with a single B-767-31AER.

In cooperation with DLH, four-times-per-week flights begin on April 1 from Los Angeles to Miami and Munich, with continuation service provided by Lauda to Vienna. Later in the month, twice-daily service is launched to London (LGW).

Other destinations visited include Bangkok, Phuket, Hong Kong, Melbourne, Miami, Sydney, Cyprus, Florida, Greece, Jamaica, Mexico, Portugal, Spain, St. Lucia, Santo Domingo, the Bahamas, and Barbados.

In July, the **Condor Flugdienst, GmbH.** interest is shifted to DLH, which now controls 39.71% of Lauda Air. Founder Lauda's share falls to 39.71%, with the remaining 20.58% traded on the Austrian stock exchange. In October, a contract is placed with Bombardier Regional Aircraft Division for six Canadair CRJ-100ER regional jets.

Customer bookings ascend by 21.2% to 782,200 and after-tax profits reach Sch 43 million (\$4.3 million).

The first three Canadair Regional Jets, beginning with the lead plane *Herbert von Karajan*, are delivered in January and February 1994. After workup, the three CRJ-100ERs begin flying twice daily on March 27 on behalf of DLH from Vienna to Barcelona, Madrid, Brussels, Geneva, Manchester, and Stockholm. In April, the last 25.94% stake held by BVV is purchased. The strategic alliance signed with the German flag carrier in 1992 is now enhanced as European sales and marketing joint efforts are expanded to eight more cities.

Reflecting national approval of the expensive material, it is announced in July that, by summer's end, cabin crew members will be wearing Levi's blue jeans as part of their uniforms.

Despite a ruling by the EU Commission during August, the government of France refuses to allow Lauda Air flights from Vienna and Salzburg to land at Paris (ORY), despite the fact that it already has the necessary landing slots. On September 8, another 13.2% stake is sold to Lufthansa; both DLH and Lauda each now hold a 39.71% interest, however, the latter retains control through ownership of an additional two shares. The remaining stock is sold on the Vienna Stock Exchange. In October, the company enters the executive travel market, operating a Learjet 60 and a Cessna Citation II on the service.

Passenger boardings for the year rise 5.7% to 826,835 while freight ascends 3.3% to 45.41 million FTKs. There are profits: \$10.9 million (operating) and \$4.1 million (net).

The workforce is increased by 37.8% in 1995 to 1,120. French officials, who had resisted the move claiming that **Air France** needed time to recover from its recent ordeals, accede to European Union demands and open Paris (ORY) to Lauda on January 1. Three more Canadair CRJ-100ERs now become available, allowing routes and frequencies to be significantly increased from Salzburg, beginning on January 30 with new twice-daily service to Frankfurt and daily flights to Paris (ORY) and London (LGW).

On March 26, three new Canadairs based at Milan begin flying to Vienna, Manchester, Brussels, Paris (Orly), Barcelona, and Dublin while, from Vienna, new daily B-737-3Z9 frequencies commence to Lisbon via Barcelona and to Milan with a Canadair. Meanwhile, several new destinations are added in Asia and the Pacific.

A trilateral around-the-world service is initiated in October with **United Airlines** and **Thai Airways International, Ltd. (THAI)**. The new thrice-weekly flights allows dual-designator code-sharing via Bangkok with THAI, Los Angeles or San Francisco with **United Airlines**, and Vienna via Lauda. **Deutsche Lufthansa, A.G.** is the big winner in this arrangement in that, under its pact with Lauda, the German major is provided with an alternative service from Frankfurt to Sydney, Australia, one that permits it to drop its own thrice-weekly frequencies over the route.

On November 1, changes occur in the European regional market. As Milan has failed to generate the traffic expected, the two CRJ-100ERs based there are returned to Vienna. Meanwhile, new schedules are introduced to Rome and Paris (Orly) and the number of frequencies to London (LGW) and Frankfurt is increased.

Enplanements jump 15.7% to 935,799 while cargo accelerates 21.7% to 594,000 FTKs. Operating revenues are boosted 24.3% to \$308.6 million and costs, while up 25.7%, are still \$298.2 million. Operating gain dips slightly to \$10.4 million, but net gain rises to \$4.6 million. Both figures are later adjusted upward slightly, to \$11 million and \$4.7 million, respectively.

Airline employment grows another 21.6% in **1996** to 1,273 and the fleet now includes 7 Canadair CRJ-100ERs, 3 B-767-3Z9ERs, 4 B-737-3Z9s and 1 each Learjet 36A, B-767-33AER, and B-767-31AER, the latter continuing its charter to **Lauda Air, S.p.A.** Orders are outstanding for four B-777-2Z9As.

In April, a Dassault Falcon 20 joins the carrier's executive fleet. Also during the early spring, the carrier contracts with DO & CO to provide catering services. Weekly B-767-3Z9ER roundtrips commence in May between Vienna and Ho Chi Minh City in Vietnam. In June, the company begins to code-share with **Austrian Airlines, A.G.** on frequencies from Vienna to Nice, Milan, and Rome; Lauda CRJ-100ERs operate the services. The two carriers also enter into a "gentleman's agreement" not to compete over the same routes.

Daily CRJ-100ER frequencies commence on July 1 between Salzburg and Sofia, Bulgaria, the company's first gateway in Eastern Europe. By month's end, the company is operating 100 weekly dual-designator departures with Lufthansa to destinations throughout Western Europe as well as thrice weekly to Miami.

In November, Salzburg to Rome Canadair flights commence. At the same time, two B-737s devoted to inclusive-tour flights are integrated into the European regional service, flying from Vienna to Paris (ORY) and London (LGW), as well as from Vienna to Lisbon via Barcelona. A newly redesigned fleet livery is introduced in December.

Passenger boardings surge 30.9% to 1,224,584 and 65.19 million FTKs are operated, a 25.2% increase. Operating income climbs 24.1% to \$385 million and expenses are up 23.3% to \$368.6 million. Operating profit accelerates to \$16.4 million and a net \$5.5-million profit is recorded.

The workforce grows by 2% in **1997** to 1,299. During the third week of March, DLH agrees to sell almost half of its 39.7% stake to **Austrian Airlines, A.G.** At the same time, a tentative equity agreement is signed by Lauda with **Austrian Airlines, A.G.** The agreement with **Austrian Airlines, A.G.** takes effect on June 1 when Lauda surrenders 36% shareholding. Despite loss of majority control, founder Nikki Lauda remains CEO.

After months of negotiations, the company is able to announce that it has won Australian government permission for new flights to their nation that include fifth freedom rights to bring in passengers from Kuala Lumpur, Malaysia. On August 18, the carrier is able to begin offering its passengers electronic visa applications when they book for services to Australia.

The former **Tyrolean Airways, A.G.** route to the Romanian city of Timisoara is taken over on October 6, with a Lauda Canadair providing weekday flights. A Sunday service to Timisoara begins on October 26.

When the winter schedule begins on October 26, the carrier launches daily Canadair services over the former **Austrian Airlines, A.G.** routes

to the Baltic cities of Riga, Latvia, and Vilnius, Lithuania, and begins its own new route from Vienna to Tallinn, Estonia. It also begins flying to Sydney and Melbourne via Kuala Lumpur instead of Singapore. In addition, the number of weekly dual-designator flights with new code-sharing partner **Malaysia Airlines, Ltd.** from Vienna to Kuala Lumpur is doubled from three to six.

During November, the company joins with **Austrian Airlines, A.G.** and **Tyrolean Airways, A.G.** to create Austrian Airlines Group-Cargo. The airline has a turnkey network for freight of 118 destinations in Europe, the Mideast, the Far East, the U.S., and Australia.

Passenger boardings accelerate 13.6% to 1,438,100.

On January 28, **1998**, a memorandum of understanding is signed between **Austrian Airlines, A.G.** and **TAP-Air Portugal, S.A.** for a broad commercial agreement, that includes Lauda; plans are made to begin code-sharing on routes from Austria to Portugal during the summer.

With the inauguration into service of the first new B-777-2Z9 in March, the company also begins to allow in-flight video gambling.

In July, the company takes delivery of the first of two Next Generation B-737-8Z9s. Christened *Falco* after the famous Austrian singer, the aircraft enters revenue service on August 1.

The second B-777-2Z9 arrives at the end of September. It is placed into revenue service on October 15, operating an additional service to Australia via Kuala Lumpur.

Passenger boardings ascend 8.7% to 1.56 million.

During the second week of January **1999**, a \$519-million order is placed with Boeing for two B-737-6Z9s and four B-737-7Z9s to be delivered between **2000** and **2002**. The airline takes delivery of a B-767-3Z9s, with the second scheduled to arrive in August.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Lauda, **Tyrolean Airways, A.G.**, and **Austrian Airlines, A.G.**, on March 24, halts all scheduled service into Belgrade, as well as Sarajevo, Mostar, Zagreb, Split, Skopje, Tirana, Ljubljana, Timisoara, and Sofia. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25-26 and for much of the duration of the NATO bombing campaign Operation Allied Force. Flights to south-central and southeastern Europe experience delays of 30-60 min. through mid-May due to airspace closure.

Flights worldwide begin to operate under a nonsmoking policy on March 28; Nicorette inhalers are, however, available for those passengers who need to smoke.

By April 23, the company is able to fly to all of its previous Balkan destinations except Belgrade, Skopje, and Tirana.

Austrian CEO Mario Rehulka reports on April 26 that the Austrian group, including Austrian Airlines, Lauda Air, and Tyrolean Airways, have lost revenue in each of the past 5 weeks because of the Kosovo crisis, including Sch 4.4 million (\$340,000) the week of April 19.

A second weekly B-777-2Z9 service to Denpasar, Bali, is launched on May 9 via Bangkok.

In an interview with Austria's *Format* magazine, Lufthansa Chairman Juergen Weber indicates that his company is willing to sell its stake in Lauda if the price is right. Lufthansa confirms to Reuters, Ltd. on May 10 that the quote is accurate.

Between June 2 and June 20, Lauda sponsors the "Renaissance of Johann Strauss" at the Renaissance Hotel at Kuala Lumpur, Malaysia. To help promote Austrian culture and tourism, the airline brings in a musical ensemble and chefs from two Vienna hotels.

Piloted by owner Lauda, a B-767-3Z9ER departs Frankfurt on August 30 on a World Adventure. When the Lauda aircraft returns to Germany on September 15, it has covered 40,000 km. in 46.1 hrs. flying time—improving the record by almost an hour—and has made stops at Bangkok, Sydney, Honolulu, and Los Angeles.

Citing lack of customer support, the carrier, on November 1, halts its service from Vienna to Puerto Plata via Miami.

Passenger boardings climb 9.2% to 1,707,000.

Airline employment at the beginning of 2000 stands at 1,692, a 17.5% increase over the previous 12 months. After six months of successful changeover and an investment of ATS 500 million, the full Austrian Airline Group—**Austrian Airlines, A.G.**, Lauda Air, and **Tyrolean Airways (Tyrolean Airways Luftfahrtgesellschaft, GmbH.)**—becomes the 10th official member of the “Star Alliance” on March 26.

Weekly B-767-3Z9ER roundtrips are inaugurated on May 4 from Vienna to Kathmandu, Nepal. The service has been taken over from **Austrian Airlines, A.G.** Two Next Generation B-737-6Z9s are delivered on May 4 and May 10, respectively. Outfitted with leather seats, both aircraft are employed for business-class services from Vienna to Hamburg and Munich.

Employing its first new Next Generation B-737-8Z9, Lauda, on May 22, initiates new four-times-a-day return service from Linz to Frankfurt, taking over the route from **Tyrolean Airways (Tyrolean Airways Luftfahrtgesellschaft, GmbH.)**.

The Next Generation B-737-6Z9s, christened *Romy Schneider* and *Albert Einstein* are placed into service in mid-June on routes from Frankfurt to Linz and from Vienna to Istanbul, Madrid, Munich, and Rome.

Beginning on July 14, weekly B-767-3Z9ER charters are operated, through September 15, from Milan to Osaka (KIX).

On August 22, officials at **Austrian Airlines, A.G.** announce that they will increase its current 35.6% stake in Lauda Air to 59% over the next 11 months. Officials at Lauda are criticized for alleged mismanagement, setting off a war of words.

Acknowledging an expectation of a 558-million-schilling loss for the year to October 31, Chairman Lauda, in October, announces a plan to offset the downturn through a 1.1-billion-schilling (\$67-million) sale-and-leaseback deal with Boeing for five company aircraft. The rescue plan is pushed through without the blessing of the major shareholders at **Austrian Airlines, A.G.**

With the beginning of the winter schedule on October 29, the number of weekly roundtrips from Vienna to Kathmandu is increased from one to three. Weekly return frequencies from Vienna to Sydney are reduced from six to four, with flights to Melbourne held at twice weekly.

On November 10, the **Austrian Airlines, A.G.** board of directors approves the start of negotiations with **Deutsche Lufthansa, A.G.** for the purchase of the German flag carrier's 20% stake in Lauda Air. When Reuters, Ltd. reports the development the next day, it reminds readers that, as part of its minority purchase in 1986, Austrian also acquired the right to buy an additional 23% of founder Nikki Lauda's 30% remaining stake by July 2001. Lauda, on the other hand, can remain CEO as long as he holds at least 7% of the carrier's shares.

Expecting huge losses beyond those suggested by Lauda, the board of directors, led by Chairman Rudolf Streicher, orders an external review of the company's finances by the independent accounting firm of KPMG Corporate Finance.

When received on November 20, the KPMG report criticizes the lack of internal financial control by the airline of its foreign currency dealings.

The Austrian carrier's board members, on November 21, call for a special meeting of Lauda shareholders on December 7 to vote founder Niki Lauda out of the carrier's management. Lauda, who has been speaking ill of Austrian's efforts to takeover the airline, calls for a special meeting on December 22 to vote off the **Austrian Airlines, A.G.** representatives. At the same time, Lauda also resigns as CEO and the next day accepts a simple pilot's contract from the airline's personnel chief.

New Lauda Air CEO Ferdinand Schmidt refuses to acknowledge the contract and, in effect, fires founder Lauda as a company pilot on December 8. Lauda agrees to accept the ban because he has no desire for a direct meeting with Schmidt. Instead, a week later the former race car driver turns around and accepts a captaincy with the subsidiary, **Lauda Air, S.p.A.**

On December 13, Austrian Airlines Group announces that its large restructuring process will bring a profit for FY00, despite an expected

E 14.5-million (\$12.8-million) loss at Lauda. Lauda will be reined in and its new management will be integrated closely with those of wholly owned subsidiary airlines Austrian and Tyrolean. The group's supervisory board approves implementation of the reorganization scheme by the executive board during the first half of 2001. Lauda will continue as a charter operator with a few scheduled flights and Tyrolean will be primarily a domestic and regional carrier.

A news report from the U.K. press service *Ananova* reveals on December 14 that officials of Austrian Airlines Group have had founder Niki Lauda's executive office cleaned out in the World Trade Center. Lauda agrees to the move only on condition that the furniture and other items are sold and the money given to the charity Light in the Dark. Consequently, a sale is staged by the Internet auction house OneTwoSold later in the month.

LAUDA AIR, S.p.A.: Strada Provinciale 52, Aeroporto Milano Malpensa, Vizzola Ticino (VA), I-21010, Italy; Phone 39 (331) 75931; Fax 39 (331) 230467; Code L4; Year Founded 1993. This Italian subsidiary of the Austrian independent is founded at Milan in September 1993 to offer charter flights to the Caribbean. Shareholding is divided between **Lauda Air Luftfahrtgesellschaft, A.G.** (33%), ITC&P (33%), and Volante Sri (33%).

A. Molinaris is named general manager and is provided with a single Boeing 767-31AER, under lease from the parent, which inaugurates holiday services in October to Barbados, the Bahamas, St. Martin, and Santo Domingo.

Flights continue apace in 1994. When **Deutsche Lufthansa, A.G.** advances its shareholding in the Lauda parent to 39.71% in early August, it also receives access to General Manager Molinaris's Milan base.

International and regional charters are continued in 1995–1999, during which years a second Boeing wide-body is leased and two Canadair CRJ200ERs are acquired. During the latter year, the entire fleet is repainted, adopting a green accent that complements the colors of its Austrian parent.

A total of 151 workers are employed at the beginning of 2000. Destinations visited now include Recife in Brazil, Colombia, Sharm-el Sheikh and Hurganda in Egypt, Cancún in Mexico, Senegal, Tobago, and the Florida cities of Fort Lauderdale and Orlando.

Following his November 21 resignation as chairman/CEO of **Lauda Air Luftfahrtgesellschaft, A.G.** and his December 8 dismissal as a pilot from the airline he had created, Lauda Air founder Niki Lauda turns around and accepts a captaincy with this subsidiary. His first flight is a December 18 B-767-31AER charter from Rome to the Dominican Republic.

LAUGHING SKY AIR CHARTERS, LTD. See **AVWEST CHARTERS, LTD.**

LAUMSA (LINEAS AEREAS MEXICANAS UNIDAS, S.A. de C.V.): Mexico (1950–1964). In 1950, Felipe Gutierrez de Lara, owner of **TAT (Transportes Aereos de Tampico, S.A. de C.V.)**, orchestrates a merger between his **TAT, Aeronaves Oaxaca, S.A. de C.V.**, and **SAN (Servicios Aereos Nacionales, S.A. de C.V.)**. The resulting amalgamation is registered as **LAUSA (Lineas Aereas Unidas, S.A. de C.V.)** (“United Air Lines”) and begins flying the routes of its predecessors with Avro Ansons, Cessna T-50s, and Douglas DC-2s and DC-3s, some still in military configuration. Principal destinations served from Mexico City include Putla, Ometepe, and Cacahuatpec.

While taking off from San Luis on November 27, 1951, a C-39 (military-configured DC-2) with 13 aboard, crashes; there are no survivors. Operations are conducted safely in 1952 and plans are made in April 1953 to operate Matamoros–Acapulco and Tampico with Lockheed L-1049s and permission for start-up is sought. Certification is not forthcoming and the concept is abandoned. Local routes are flown for another decade, during which time the carrier's name is changed to LAUMSA.

On July 14, 1955, a DC-3 en route from Acapulco to Oaxaca crashes near the latter point, killing all 21 aboard. Two Curtiss C-46 Commandos enter service during 1957 and the fleet is upgraded in late 1961 with four Canadair DC-4M-2s.

In 1962, following a change in ownership, the carrier is awarded permission to fly from Tampico to the U.S. border town of Reynosa. In early 1964, the carrier is purchased by and merged into SAESA (*Servicios Aereos Especiales, S.A. de C.V.*).

LAURENTIDE AIR SERVICES, LTD.: Canada (1921–1925). After two summers of forest fire patrol and timberland charting, the aerial division of Quebec's Laurentide Company is reorganized late in 1921 as the separate Laurentide Air Services, Ltd. Equipped with two original Curtiss HS-2Ls, the first of the ex-military flying boats to be employed on civil service anywhere, new pilot Managing Director/ William Roy Maxwell finds C\$10,000 capitalization from shareholder Thomas Hall.

The fleet is increased by the addition of 1 each HS-2L, Loening M23 Air Yacht, and Vickers Viking IV amphibian. During the summer operating season of 1922, the 5 aircraft fly 688 hours, although the original 2 Curtiss machines must be written off after nonfatal takeoff accidents.

By transporting 310 revenue passengers, the carrier becomes one of the world's first bush charter operations, providing not only contract and charter services on behalf of the parent, but forestry patrols and aerial mapping flights under charter to the Ontario government.

Nine additional HS-2Ls and a JN-4 (Can.) Jenny are acquired in 1923 as Laurentide becomes the first Canadian air transport company to allocate fleet numbers to its aircraft. A large headquarters and maintenance building is acquired at Trois-Rivieres, Quebec, as the staff continues to grow and the mapping work is expanded along the north shore of the St. Lawrence River and into the unrecorded regions north of the Manicouagan River.

A total of 1,480 hours are flown over 20,000 square miles of forest with an HS-2L and the Loening lost in nonfatal accidents. When the new **Ontario Provincial Air Service, Ltd.** is founded in the fall, it contracts with Laurentide for the modification and delivery of 13 civil HS-2Ls. During the year, some 550 passengers are carried.

The carrier's Trois-Rivieres facility completes modification of the first contract HS-2L on April 21, 1924 and delivers it to the new OPAS provincial carrier. On May 21, Laurentide joins the Canadian Pacific Railroad in establishing a scheduled thrice-weekly service (the first in Canada) for the transport of passengers, mail, and express from the railroad at Angliers and the gold mines at Rouyn and Noranda. Considered the first air-rail cooperative operation of passenger aircraft, the service, flown by pilot Jack Caldwell in an HS-2L, is also remembered as the country's first regular airmail service.

Laurentide's principal operating base is transferred to Haileybury, Ontario, on July 31. On August 9, the company receives Post Office permission to issue its own airmail stamps, the first to be printed by a private concern in Canada. The premier Canadian airmail service is inaugurated on September 11 between Haileybury and the Rouyn and Noranda gold mines.

Financial difficulties ensue, and all but four of the 11 HS-2Ls are sold to the newly formed **Ontario Provincial Air Service, Ltd.** A number of pilots, including Maxwell, also transfer to the new state-sponsored carrier and business follows them. Still, the year is the company's best. In 933 flying hours, a total of 1,004 passengers are carried, as well as 15,000 letters and 39.4 tons of freight.

Overextended and unable to recoup, the pioneer airline is in deep financial trouble by early January 1925. A ski-equipped de Havilland DH 9C is acquired to fly winter airmail from Haileybury to Rouyn and Noranda, but is lost in a nonfatal accident after only three runs. Laurentide shuts its doors; one HS-2L is sold to **Northern Air Services, Ltd.** and the other three are scrapped. In 1928, Maj. Gen. James MacBrien organizes the assets of Laurentide, the Canadian Fairchild Companies, and several other bush operations into **Inter-Provincial Airways, Ltd.**, beginning Montreal–Fort Erie passenger and freight services.

LAUSA (LINEAS AEREAS UNIDAS, S.A. de C.V.). See **LAUMSA (LINEAS AEREAS MEXICANAS UNIDAS, S.A. de C.V.)**

LAV VENEZUELAN AIRLINES (LINEA AEROPOSTAL VENEZOLANA, S.A.)/AEROPOSTAL (ALAS DE VENEZUELA, S.A.): Torre Capriles, Pisos 21-22-23, Plaza Venezuela, Caracas 105, Venezuela; Phone 58 (2) 708-6211; Fax 58 (2) 782-6323; <http://www.aeropostal.com>; Code VH; Year Founded 1933. Following the French government's withdrawal of subsidy from Marcel Bouilloux-Lafont's **Compagnie General Aeropostale, S.A.**, the Venezuelan government on December 31, 1933 purchases that carrier's subsidiary, which had been registered at Caracas back in 1929.

Renamed ANV (**Aviacion Nacional Venezolana, S.A.**), the nationalized carrier continues operations in 1934 as before; a French management team, headed by Robert Guerin, who reports to the Ministry of Labor and Communications, flies the planes and provides all support. In 1935, ANV becomes an autonomous government entity; capitalized at B 1.16 million, it is renamed **LAV (Linea Aeropostal Venezolana, S.A.)** and Lt. Colonel Francisco Leonardi is named CEO.

LAV's independence is guaranteed by a government decree of May 21, 1937. Capitalization is increased and three Fairchild 71s are purchased to succeed the inherited Latecoerte 28s. Route expansion begins. The first of six Lockheed Model 10As ordered is delivered in February 1938 as orders are placed for two L-14 Hudsons, which join the fleet in 1939, the year the operations center is shifted from Maracay to Maiquetia. Two new Lockheed Model 14H Super Electras are received on December 13.

The fleet in 1942 comprises 6 L-10As and 2 L-14s and the carrier's route network links all of the country's major cities. Difficulties in receiving supplies due to the war curtail company operations for much of the year. The first of five L-18 Lodestars ordered in 1941 is placed in service in 1943. Early in 1944, LAV acquires a 23% interest in competing **Avensa (Aerovias Venezolanas, S.A.)**.

Service is inaugurated to Boa Vista, Brazil, in July 1945. The first of 33 ex-USAAF Douglas C-47s (converted to civil DC-3 standard) made available to the airline by the Reconstruction Finance Corporation begin to arrive late in the year.

On January 24, 1946, routes are extended to Aruba and to Bogota via Cucuta and authorization is received from the U.S. CAB to start a route from Caracas to New York via Havana and Miami.

Two Lockheed L-049s are delivered late in the summer and are christened *Simon Bolivar* and *Francisca de Miranda*. On August 21, the former, having come up from Maiquetia, departs on a European proving flight from New York (LGA) for Rome via Labrador, Iceland, London, and Paris. Employing leased Douglas DC-4s, contract flights to the U.S. begin in November.

While on a March 20, 1947 training mission, a DC-3A with three crew crashes at La Carlota Airfield; there are no survivors.

The Constellations inaugurate Caracas–New York service on March 21, while DC-3 flights begin to Port of Spain, Trinidad. Meanwhile, domestic service is strengthened by the addition to the fleet of two Martin 2-0-2s, which are christened *Rafael Urdaneta* and *Andres Bello*.

On April 8, a C-47 with 3 crew and 24 passengers is lost 40 mi. E of Cara, Venezuela; there are no survivors.

The routes and schedules of **Linea Aeria TACA de Venezuela, S.A.** (founded in 1944) are integrated with LAV's on July 1. The competitor is allowed to continue reduced operations under its own name. Meanwhile, a new law passed on June 9 increases capitalization to B 14.6 million (\$4.37 million) and an order is placed for two L-749As.

While undergoing flight tests over Ciudad Bolivar on November 25, a C-47 with three crew crashes; there are no survivors. A new international division is formed at year's end.

The two L-749As are delivered in 1948–1949. Christened *Jose Martin* and *Antonio Jose de Sucre*, they are placed in service on the New York run. Meanwhile, on February 24 of the former year, a DC-3 crashes near Lafrie (13 dead). **TACA de Venezuela, S.A.** is liquidated in 1950,

having no resources of its own upon the collapse of its multinational parent, **TACA (Transportes Aereos Centro Americanos, S.A.)**. Four Curtiss C-46s are acquired in 1951 to boost the carrier's freight haulage capabilities and scheduled passenger flights begin to Lima, Peru.

Early in 1952, the routes and 88% of the physical assets of **TACA de Venezuela, S.A.** (including 13 DC-3s) are purchased and the new subsidiary is allowed to operate under its previous identity. During the summer, orders are placed for two de Havilland DH 106 Comet 2s, but these will never be delivered.

Inspired by Capt. C. Baughan, LAV initiates \$200, weekend DC-3 package trips, from Caracas to Gran Sabana on March 20, 1953. In November, the L-749As launch Caracas-Rome service via the Azores, Lisbon, and Madrid.

Martin 2-0-2 flights to Panama City are initiated in 1954. On April 6, the first production Lockheed L-1049E Constellation, slated for the carrier, makes its maiden flight. Late in the year, this plane and one other are received; they are christened *Rafael Urdaneta* and *Simon Bolivar*.

A C-47A is lost on the ground at Guasualito, Venezuela, on December 10; there are no injuries or fatalities. While on an all-cargo flight, a C-47A with two crew is lost 120 km. S of Ciudad Bolivar on December 18; there are no survivors.

The New York terminus is changed to Miami in 1955. Orders are placed for three Vickers Viscount 700s and seven L-1049Gs as the *Rafael Urdaneta* and *Simon Bolivar* enter service. One of the "Connies" is assigned to a route from Caracas to Miami via Havana alternating with a nonstop route from Caracas to New York. The other begins to fly from Caracas to Rome via Bermuda, the Azores, Lisbon, and Madrid.

A DC-3 with 13 passengers must make an emergency landing at sea off Barcelona, Venezuela, on May 21 (4 dead).

In August, the retired L-049s *Simon Bolivar* and *Francisca de Miranda* are sold to **Braniff International Airways**.

The **TACA de Venezuela, S.A.** subsidiary is completely absorbed in mid-1956. The L-1049Gs begin to arrive during the summer and the first is immediately christened *Simon Bolivar*. In the worst accident in commercial aviation history to date, one of these new aircraft en route to Caracas from New York on June 20 with 10 crew and 64 passengers, develops a runaway engine problem and attempts to return to Idlewild Airport.

While dumping avgas preparatory to an emergency landing after the failure of the No. 2 propeller, the Super Constellation *Simon Bolivar*, piloted by Capt. Luis Plata, catches fire and crashes into the Atlantic 32 mi. E of Asbury Park, New Jersey; there are no survivors.

Flight 253, an L-749 with 7 crew and 18 passengers en route from New York to Caracas, crashes into Mt. Naiguata, Venezuela, on November 27; there are no survivors.

On August 13, 1957, an entire four-ship fleet of L-1049Gs is purchased from the American carrier **Northwest Airlines**. The L-1049E *Rafael Urdaneta*, with 25 aboard, is destroyed in a Caracas forced landing on November 27; there are no survivors.

A decree of March 1, 1958 declares the carrier an Instituto Autonomo, thereby reconfirming the independence charter first guaranteed in 1937. The arrival of additional Super Constellations now results in the European frequency being advanced to twice weekly.

On a flight from Maracaibo, an L-1049G with 6 crew and 17 passengers is lost at Alto del Cedro, Venezuela, on October 14; there are no survivors. This is the third Super Constellation lost by the airline in three years.

The fleet in 1959 comprises 22 DC-3s, 1 Martin 2-0-2, 4 C-46s, 4 Viscount 700s, and 5 L-1049Gs. A sixth of the latter type is acquired during the year.

En route from Caracas to Puerto Ayacucho via Calabozo on April 28, a DC-3 with four crew and nine passengers is suddenly rocked by an explosion and crashes in flames 10 mi. from Calabozo. The two survivors, who will succumb to injuries, inform rescuers that a berserk Russian, V. Lavinski, had detonated a live grenade after the plane's captain had thwarted the immigrant's attempt to take over the aircraft.

On November 21, LAV and **AVENSA (Aerovias Venezolana, S.A.)**, on a 55 to 45 share basis, form **VIASA (Venezolana Internacional de Aviacion, S.A.)** to handle their long-haul international operations.

On March 10, 1961, a missing DC-3 with four crew and eight passengers is found wrecked in the mountains of Trujillo State where it had crashed the previous day; there are no survivors. When **VIASA (Venezolana Internacional de Aviacion, S.A.)** begins international services on April 1, LAV is allowed to retain its Rome route until a reciprocal agreement can be worked out with **Alitalia, S.p.A.** later in the year.

LAV now concentrates on domestic and regional services, turning over all of its surviving Super Constellations to **VIASA (Venezolana Internacional de Aviacion, S.A.)** in 1962. In 1963, orders are placed for Hawker Siddely HS 748s. Also, a U.S. federal judge, acting on a lawsuit filed in the wake of the June 1956 Constellation crash, awards \$387,387 to the wife and daughter of one of the victims.

Airline employment in 1964 totals 1,208 and the fleet numbers 28 aircraft. A total of 323,000 passengers are carried on the year and revenues of \$7.2 million are earned. The first HS 748s are placed in service during 1965.

An order is placed in 1967 for a Douglas DC-9-10 jetliner, which is received and placed in service during 1968. In that latter year, airline employment stands at only 34 more than in 1964. The fleet comprises 4 C-46s, 20 DC-3s, 6 HS 748s, and 4 Viscount 700s.

Just after takeoff from Maturin on an August 20 domestic flight, an HS-748-2A with three crew and four passengers, suffers the failure of its No. 1 engine; the aircraft crashes while maneuvering at low altitude (four dead).

Enplanements for the year total 479,000 and revenues are \$11.1 million.

Seven armed men divert an HS 748 to Havana from a domestic flight from Maracaibo to Caracas on February 11, 1969. Cuba holds the turboprop pending its probe of whether the skyjacking is "legitimate" or simply a "provocation" on Venezuela's part. The British-made plane is released on February 17 after Venezuela pays Cuba \$31,466 for "expenses."

The DC-9-10 with 155 aboard crashes into the suburb of La Coruba just after takeoff from Maracaibo on March 16. There are no survivors and the black box recording indicates that the pilot has been shot.

Beginning in 1970, two additional DC-9-15s are placed in service; in a unique arrangement, a DC-9-30 is operated jointly with **AVENSA (Aerovias Venezolanas, S.A.)**.

A C-46A with two crew and four passengers crashes into the sea off Puntarenas, Costa Rica, on May 22; there are no survivors.

En route from Merida to Caracas on January 25, 1971, a Viscount 749 with 4 crew and 43 passengers, smashes into Cruces del Daji mountain, near the flight's point of origin (13 dead).

Another Viscount 749, with four crew, crashes just after takeoff from Maracaibo on November 1; there are no survivors. The cause of the crash cannot be determined.

Having lost its No. 1 engine while en route from Valencia to Ciudad Bolivar, a C-47D with 3 crew and 31 passengers, attempts to return to the airport at Canaima on August 27, 1972, but crashes before it can arrive; there are no survivors.

A Fairchild C-123 is leased from the Venezuelan Air Force later in the year as the last two C-46s are withdrawn.

Service is maintained over domestic routes in 1973 and to the new regional destinations of Curaçao, Trinidad, and Guyana. Leftists, led by F. Bottini, a member of the Punto Cero guerrilla organization, brandishing pistols and hand grenades, take over a DC-9-15 with 50 aboard on May 19, demanding the release of 35 political prisoners from Venezuelan jails. After a refueling stop at Panama, where three women and two children are allowed to deplane, the aircraft flies to Merida, Mexico. When the Venezuelan government refuses to grant the pirates' requests, the plane flies on to Havana. The Douglas is allowed to return to Caracas next day.

Enplanements for the year total 736,560.

The employee population in **1974** totals 1,813. The fleet now includes 3 DC-9-15s, 1 DC-9-30 (with AVENSA), 5 HS 748s, and 6 DC-3s (3 dedicated to commuter passengers and 3 exclusively to cargo).

While en route from Caracas to the Island of Margarita on August 14, an HS 748 with 4 crew and 45 passengers, crashes into La Gloria mountain during a torrential rainstorm; there are no survivors.

Passenger boardings increase 7% to 792,315 and freight traffic is up 1%.

During **1975–1977**, the fleet is increased by the addition of 5 DC-9-50s, 3 DC-9-32s, and 6 de Havilland Canada DHC-6s, while all of the DC-3s and an HS 748 are retired. Enplanements rise significantly, exceeding first the million and then the two-million mark in annual boardings.

Just after takeoff from Punta Mulatos on March 3, **1978**, an HS 748-2A with 4 crew and 43 passengers, encounters artificial horizon problems and attempts to return to its point of origin. The turboprop crashes into the sea 2.8 nm. offshore and there are no survivors.

A DHC-6-300 with two crew crashes at Uriman, Venezuela, on April 17; there are, again, no survivors.

A total of 2,316,314 passengers are carried on the year.

The workforce in **1979** totals 2,794. Passenger boardings increase 19.6% to 2,881,000 and cargo jumps 14.9% to 124.28 million FTKs.

In terms of passenger kilometers flown, LAV in **1980** ranks as the 17th largest airline in Latin America.

On December 5, 4 armed hijackers commandeer a DC-9-30 with 120 aboard during a domestic flight from Porlamar to Caracas and force the plane to land at a small airstrip 53 miles east of Caracas. Deplaning, they escape in a truck with B 7.5 million (\$1.6 million) in insurance money that had been aboard in two chests. The loot will later be recovered and 35 people will be arrested in connection with the crime.

In a coordinated December 7, **1981** in the skies over Venezuela, 11 hijackers seize 2 LAV DC-9s and an AVENSA B-727, with over 250 aboard, and force the crews to fly to Colombia and later to Tegucigalpa and Guatemala City. Twenty-two hostages are freed at an Aruba stop and 67 in Colombia, while Caracas newspapers receive a ransom demand for \$10 million, plus freedom for 12 jailed in Venezuela. On December 8, the 3 airliners, with 11 gunmen plus 89 passengers and 19 crew members, are flown to Havana, where the pirates are taken into custody. The next day, the 3 planes are allowed to return to Caracas with their 102 passengers and crew members.

Operations continue apace in **1982–1983**.

On July 29, **1984**, two gunmen—a former Haitian Army captain and a man with a Dominican passport—hijack a DC-9-32 en route from Caracas to Curaçao with 87 aboard and force it to fly to Trinidad and Aruba. In Aruba, the pirates free 8 hostages and demand that the Venezuelan government give them a \$5-million ransom. A small group of U.S. Delta Force soldiers rendezvous at a racetrack on the eastern end of Curaçao with 12 Delta-trained Venezuelan commandos and Netherlands Antilles security forces. This force is helicoptered to Hato International Airport, 18 miles away, where they storm the Douglas on July 30, killing both pirates and rescuing the remaining captives.

Late in the year, orders are placed for two McDonnell Douglas MD-83s, the first of which joins the fleet in **1985**. Enplanements in the new year reach 2,192,826 and profits are \$5 million (operating) and \$1.38 million (net).

Airline employment is increased by 4.9% in **1986** to 2,106 and in July the second MD-83 is delivered.

Passenger boardings jump 20.3% to 2,751,350 and cargo swells 12% to 75.84 million FTKs. Revenues advance 30.7% to \$58.4 million and with costs held down, the operating profit rises to \$5.1 million and a net gain of \$3.9 million is celebrated.

The employee populations is reduced by 19.3% in **1987**. Enplanements climb 9.8% to 2,253,789. The fleet in **1988** includes 2 MD-83s, 1 MD-82, 6 DC-9-51s, 3 DC-9-32s, 1 DC-9-15, 1 DC-9-34CF, and 6 DHC-6-300s. The third MD-83 arrives in May as new services are inaugurated to Barbados and Boa Vista in the Amazon region of Brazil.

Passenger boardings increase 29.5% to 3,855,993, but freight is down by 3.1% to 5.57 million FTKs.

The 2,500-employee Venezuelan carrier has a bad **1989**. Customer bookings decline 14.1% to 2,913,335 while cargo does even worse, falling by 21.8% to 1.52 million FTKs.

The fleet is cut by 15 aircraft in **1990**. In September, daily service is started from Caracas to Orlando. Four-times-per-week Aruba to Atlanta MD-82 flights begin in December along with thrice-weekly Aruba to Orlando runs.

Airline employment is increased by 20% in **1991** to 3,000.

While en route from Maracaibo on March 5, Flight 108, a DC-9-32 with 5 crew and 38 passengers, strays off course and strikes a cloud-covered mountain near La Puerta in western Venezuela; there are no survivors.

Corporate statistics are only reported through July, but these show passenger boardings rising 9.3% to 1,551,573. Freight during the same period ascends 16.4% to 1.26 million FTKs.

The employee population stands at 1,699 in **1992** and the fleet includes 3 owned MD-83s, 6 DC-9-51s, 2 DC-9-32s, and 1 each DC-9-31 and DC-9-34CF.

Enplanements total 936,098 through July and a \$30.8-million operating loss is suffered for the full year.

In **1993**, President Rafael Santana Barrios oversees a workforce of 1,750, up 2.9% over the previous year. Three DC-9-51s are leased from **Finnair, O/Y**. Although most international services are handled by **VIASA (Venezolana Internacional de Aviacion, S.A.)**, routes are maintained to Aruba, Curaçao, and Port of Spain.

While on a maintenance check flight from Caracas on April 2, a DC-9-15 with three crew and eight passengers, crashes into the sea N of Margarita Island; there are no survivors.

During the first six months, the carrier reports that its passenger boardings are down 8.6% to 861,969. For the year as a whole, the operating loss is cut to \$18 million.

As financial and traffic difficulties continue unabated in **1994**, the company reports its statistics only through April. These show customer bookings down 10% to 631,889 and cargo off 17.6% to 539,000 FTKs.

A privatization effort fails in July when the Venezuelan Investment Fund rejects as too low a \$35-million offer for the airline. Unable to maintain viability, the pioneer is forced to halt operations in August. LAV declares bankruptcy in October.

LAV is moribund during **1995**. The company continues to control prime counter space, good hangars, a huge stockpile of spare parts, and its DC-9 fleet is well maintained in a Maiquetia hangar.

In April **1996**, the Venezuelan Investment Fund sets a price of \$40 million for the airline, but this, in fact, represents a \$30-million tag, as the bankruptcy court is authorized to accept any bid that comes within 75% of the set figure. As late as July, no prospective purchaser has stepped forward. After considering a reduction to \$28 million, the VIF instead opts to dispose of the airline in a public auction.

Aviation broker Nelson Ramiz purchases the company when its assets are sold at auction in August. Ramiz, who has formed an investment company Corporacion Alas de Venezuela, S.A. together with Aeron Aviation Resources, acquires the LAV name, 9 DC-9s, and domestic route authority for just \$43 million. With a 53% majority stake, Ramiz becomes president/CEO and restarts the airline's operations in December.

Employing the marketing name Aeropostal (Alas de Venezuela, S.A.), the carrier is relaunched on January 7, **1997**. The fleet, although reduced in size and comprising 3 DC-9-31s, 6 DC-9-51s, 2 MD-83s, and 1 DC-9-34CF, continues to call at Aruba, Curaçao, Port of Spain, and several domestic locations, including the capital. Every expectation is held that the airline will return to profitability by June.

Despite this eye-opening success, LAV descends into a legal battle that threatens to put it out of business once more. During the spring, Ramiz's investment partners accuse the CEO of failing to repay their \$20-million loan, which he, as the nominal Venezuelan purchaser, had employed to place the winning bid in the previous year's asset sell-off.

Israeli banker Zadik Bino, David Massie, who is chairman of the U.K. finance concern IAF, and Aeron Aviation Resources Chairman Ben Yosef, have wanted to liquidate the airline's assets, but are resisted by Ramiz. They now claim that the LAV president had, per a prepurchase agreement, failed to transfer the newly won airline assets into a special-purpose offshore holding company. Instead, they allege, he had fraudulently employed the assets, plus their \$1-million security deposit, to capitalize Alas de Venezuela, S.A.

The three foreign partners file suit against Ramiz in New York over the money trail and in Caracas for fraud. They also seek an independent financial assessment of the airline.

Later in the year, as the boardroom and legal battles continue, LAV begins flights to Atlanta, Orlando, San Juan, Havana, and Santiago.

In March 1998, a marketing agreement is entered into with **Delta Air Lines**. The two begin to share codes on Delta's new Atlanta to Caracas return service that starts on April 2.

By fall, LAV, which has settled its fiscal dispute, is operating services to 9 cities in Venezuela and 10 destinations in the Caribbean and South America.

At this time, two Airbus Industrie A320-231s are wet-leased to LAV by **TransAer International, Ltd.** of Ireland. They are employed on the carrier's northern winter holiday schedule and allow the company to visit three U.S. gateways despite Venezuela's classification by the FAA as a country failing to meet international air safety standards.

A strategic alliance is entered into with **American Airlines** on December 9. In addition to the usual linkage of frequent flyer programs, marketing, ground handling, and other activities, the two agree to implement code-sharing as soon as government approvals are received. Aeropostal will place its "VH" designator code on American's flights between Caracas and the U.S. cities of Miami, Dallas (DFW), and New York (JFK). It will also place its code on certain American flights connecting at Miami, Dallas (DFW), and New York (JFK) to other U.S. cities.

Although traffic figures are not released, it is noted that revenues of \$117 million have been generated.

Airline employment stands at 1,612 at the beginning of 1999. Aeropostal signs a strategic code-sharing agreement with **Air France** on March 3. In addition to coordinating connections at Paris (CDG) and Caracas, the two, employing AF A340-311s, inaugurate dual-designator flights on June 9 between those two cities, four times a week.

Passenger boardings surge 22% on the year to 2,100,000.

The workforce at the beginning of 2000 totals 1,732. International destinations visited include Aruba, Curaçao, Santo Domingo, Havana, Barbados, Puerto Espana, Miami, Orlando, Guayaquil, Lima, and Varadero. Domestic points include Caracas, Island of Margarita, Barcelona, Maturin, Puerto Ordaz, Maracaibo, Valencia, Barquisimeto, and San Antonio.

In late spring, **AVENSA (Aerovias Venezolanas, S.A.)** is approached by LAV with a buyout offer. Under the proposal, AVENSA would pay \$20 million for 80% majority control. In June, the AVENSA board rejects the Aeropostal offer, preferring instead a union with **Aserca (Aerolineas Regional de Centro, S.A.)**.

Two B-737-3H6Fs, previously operated by **Malaysia Airlines, Ltd. (MAS)**, are chartered from Aviacargo Leasing on September 22. These are operated to Miami from Caracas and Maracaibo under subcontract by **Falcon Air Express**.

Falcon Air Express also paints two of its own B-727-224As in Aeropostal colors and operates them on LAV's behalf beginning on November 1. At the end of the year, it is learned the thrice-weekly DC-10-30 roundtrips from Caracas to Madrid will begin in June.

LAVERY AIRWAYS. See ALASKA AIRLINES

LAW (LINHAS AEREAS WRIGHT, S.A.): Brazil (1947-1948). Lasting only a year, LAW is founded at Rio de Janeiro in early 1947. After obtaining an operating permit and 2 Lockheed Model 18 Lodestars,

the new entrant bravely inaugurates multistop services to Santos on April 1. Unable to succeed financially, the outfit is purchased by expanding **REAL, S.A.** on March 17, 1948.

LAWRENCE AVIATION: United States (1973-1983). Founder/President Eugene F. Kletchka sets up LA as an FBO at the Lawrence, Kansas, municipal airport in April 1972. After gaining certification for a third-level division, Kletchka inaugurates daily scheduled Cessna and Piper lightplane roundtrips to Kansas City in 1973. Operations continue apace over the next decade, with Emporia added to the route network.

LB, LTD.: 1170 Lee Wagner Blvd., No. 200, Fort Lauderdale, Florida 33315, United States; Phone (954) 359-0199; Fax (954) 359 7698; http://www.princess-vacations.com; Code 7Z; Year Founded 1999. With customer bookings sliding, the decision is taken at the end of 1999 to rename **Laker Airways (Bahamas), Ltd.** Ownership continues to be divided between founder Sir Freddie Laker (34%), Texas investor Oscar Wyatt, CEO of LaSara Grain Corporation (33%), and Grand Bahama Port Authority owner Sir Jack Hayward (33%). The lone Boeing 727-2J7A is supplemented with a former **Western Airlines** B-727-247, which is christened *Lucayan Princess* and wears "Grand Bahama Island" titles.

With a workforce of 101 and a pair of B-727s, the company in 2000 continues to operate holiday charters on behalf of Laker's Princess Vacations. With Freeport via Miami and Fort Lauderdale the final destination, the trijets transport travelers from Baltimore, Cincinnati, Cleveland, Greenville/Spartanburg, Hartford, Memphis, Nashville, New York (LGA), Pittsburgh, Raleigh/Durham, and Richmond. One B-727-89 is operated at the end of the year.

LBC AIRWAYS OF MANILA: 14th Corner Railroad St., Port Area, Metro Manila, Philippines; Phone 63 (2) 832-2066; Fax 63 (2) 832-1775; Year Founded 1990. LBC is established as an express parcel carrier at the LBC Aviation Center at Pasay City's Domestic Airport in 1990. Initially equipped with 3 BAe 748-B2s and 1 Pilatus-Britten-Norman BN-2T Turbo-Islander, President Rommel C. Mabansat's airline begins services to various island destinations throughout the nation.

In order to allow visits to smaller landing fields, the fleet is upgraded during the next nine years by the addition of a Beech B-50 Twin Bonanza, two Cessna 207s, two more BN-2T Turbo-Islanders, and one Aero Commander 500.

LEADAIR UNIJET, S.A.: Aeroport du Bourget, Le Bourget Cedex F-93352, France; Phone 33 (1) 48 35 90 90; Fax 33 (1) 48 35 90 65; Year Founded 1966. Leadair is originally established as an FBO at Paris (LBG) in 1966. Over the next 34 years, it also undertakes executive and small group passenger charters on a worldwide basis.

By 2000, General Manager Anne Bouis oversees the operations of 4 Dassault Falcon 10s, 1 each Falcon 20 and Falcon 50, and 1 Beech Super King Air 200.

LEAVENS BROS. AIR SERVICES, LTD.: Canada (1927-1946). The Leavens brothers establish a small charter operation at Toronto's Bake Airport in 1927. Single-engine operations continue apace during the next 20 years, with a scheduled frequency offered between Leamington and Pelee Island, Ontario.

An application is filed with the Air Transport Board in 1945 for the inauguration of feeder services in Ontario's southeastern peninsula. When they are not approved, the company fails.

LEBANESE INTERNATIONAL AIRLINES, S.A.L.: Lebanon (1956-1969). Two wealthy Lebanese, the Arida brothers, form this carrier at Beirut in 1950 to operate passenger charters to Europe and South America. Irregular operations begin in the Mideast, however, in 1953 with 2 Curtiss C-46s flying cargo over a route from the Lebanese capital to Kuwait. In January 1956, service is inaugurated from Beirut to Baghdad via Doa and to Dhahran via Kuwait.

Rights to operate to South America are gained in 1957 when LIA purchases and absorbs the small competitor **Compagnie de Tourisme Mondial, S.A.L.**

A C-46A with 4 crew and 23 passengers, fails its takeoff from Beirut on October 3 on a flight to Kuwait City and plunges into the sea; there are no survivors.

In 1958, **Sabena Belgian World Airlines, S.A.** purchases an interest and provides DC-6s, which serve to increase the route network to Baghdad, the Gulf states, Tehran, and twice weekly to Brussels via Rome and Paris. The second C-46 is sold in 1959 and Sabena's interest is withdrawn in 1960.

In 1962, Sheikh Najib Alamuddin begins to campaign for an amalgamation of all Lebanese airlines into a single national carrier. In March 1963, LIA enters into a joint agreement with **Air Liban, S.A.L.** and **Middle East Airlines, S.A.L. (2)**; the associates operate under joint schedules and merge the operations of their aircraft. Operating revenues reach \$2,240,000.

In 1964, a Boeing 720B is chartered to handle the Beirut to Paris via Milan frequencies; it brings the airline into the jet age.

Bookings increase to a new high of 27,376 and revenues jump 44% to \$4 million.

Airline employment in 1965 stands at 521. The company purchases 2 Convair CV-990s from **American Airlines** to be added to its fleet of 3 Douglas DC-6Cs, 1 leased B-720B, and 1 chartered Sud-Est SE-210 Caravelle; an option is taken on a third Coronado. CV-990A service begins on December 23; twice-weekly Coronado services are flown to Rome and Paris, together with a weekly flight to Zurich.

Late in the year, two of the three jointly operating carriers are fully merged and take the name **Middle East Airlines Airliban, S.A.L. (MEAA)**. Bookings increase to 28,254 and cargo traffic is up by 10%.

Operations continue apace in 1966. The second ex-AA CV-990A is delivered in February and allows all of the principal routes to become jet. Competition from MEAA is severe and LIA falls into fiscal difficulty.

By the summer of 1967, the carrier is \$5 million behind on its lease payments to **American Airlines**. Rather than simply repossess the jetliners, the American major works out an arrangement whereby it acquires a 31% equity stake in LIA, as well as technical and management contracts.

One of the Coronados is leased to **Balkan Bulgarian Airlines** between June 1 and December 1, 1968.

Israeli commandos hit Beirut International Airport on December 28, destroying or damaging beyond repair two Douglas DC-7s and two Convair CV-990As.

The company, which has continued to be closely associated with MEAA, is finally purchased by that concern in April 1969. The resulting entity is **Middle East Airlines, S.A.L. (2)**.

LEBANON AIRPORT DEVELOPMENT CORPORATION: United States (1975–1976). The Lebanon Airport Development Corporation of West Lebanon, New Hampshire, begins to offer a scheduled air taxi service to Whitefield, New Hampshire, in 1975. Daily Aero Commander 500B roundtrips are only maintained into early 1976.

LEBAP-TURKMENISTAN: Turkmenistan (1993–1995). LEBAP is established at Ashkabad in 1993 to offer regional passenger and cargo services. Revenue flights commence with a fleet of 10 Yakovlev Yak-40s. Schedules are maintained until 1995.

LEBCA (LINEA EXPRESA BOLIVAR, S.A.): Venezuela (1958–1968). LEBCA is set up at Maracaibo in early 1958; capitalized at B 500,000 (\$167,000), U.S. citizens hold 29% of the shares with Venezuelan interests the rest. Employing a Fairchild C-82 Packet and a Curtiss C-46, the company begins all-cargo contract flights to Miami on August 18. In 1959, the carrier receives both U.S. and Venezuelan cargo service operators certificates, greatly increasing the company's value.

A C-46D with two crew and two passengers crashes into La Culata Peak, Venezuela, on January 21; there are no survivors.

Additional contracts and services are undertaken between Florida and Venezuela in 1960–1961 and a C-46A with three crew is damaged beyond repair in a forced landing at David, Panama, on May 19 of the former year; there are no fatalities.

In January 1962, three Canadair DC-4M2 Argonauts are purchased from the British independent airline **Overseas Aviation, Ltd.**

A DC-4M freighter with three crew is lost off Caracas, Venezuela, on July 6; there are no survivors. A C-46F with three crew is damaged beyond repair after ground looping at Carora, Venezuela, on November 2; there are no fatalities.

A variety of freight operations are undertaken in 1962–1964 as five more C-46s and three DC-3s join the fleet. A second DC-4M2 Argonaut is written off at Miami on August 27 of the latter year.

In 1965, two Lockheed L-1049H Super Constellations formerly operated by **Seaboard & Western Airlines** are obtained and placed into service on the company's Caracas–Miami scheduled all-cargo route.

Two more L-1049Hs arrive in 1966, one each from **Slick Airways** and one from **Trans World Airlines (TWA)**. The Ministry of Communications names LEBCA the nation's official cargo airline on September 14, 1967 and in a reorganization, all of the shareholding is acquired by the state airline **VIASA (Venezolana Internacional de Aviacion, S.A.)**. LEBCA ceases operations on January 22, 1968 and on April 24 its traffic rights are assigned by VIASA to its newly formed subsidiary **Transcarga (Transportes Aereos de Carga, S.A.)**.

LECONTE AIRLINES: United States (1981). Owned by Camps, Inc., Leconte is established at Wrangell, Alaska, in October 1981 to provide scheduled flights to Yakutat, Petersburg, Sitka, Juneau, and Ketchikan. Revenue operations, some of which are flown as feed for **Alaska Airlines**, commence with a fleet of Cessna 185s and 207s, a Piper PA-31-310 Navajo, and a de Havilland Canada DHC-2 Beaver. A victim of the effects of the PATCO air traffic control strike, the company shuts down in November.

LEES-HILL AVIATION, LTD. See **DON EVERALL (AVIATION), LTD.**

LEEWARD ISLANDS AIR TRANSPORT, LTD. See **LIAT (LEEWARD ISLANDS AIR TRANSPORT, LTD.)**

LEGEND AIRLINES: United States (1996–2001). In 1996, Dalforth Aviation C. Chairman Bruce Leadbetter proposes the establishment of an airline at Dallas (DAL) to operate long-haul service using 56-seat aircraft, the largest allowed under the 1979 Wright Amendment to the 1978 Airline Deregulation Act. The Wright Amendment had been enacted by the U.S. Congress as a measure to protect the new Dallas–Fort Worth International Airport from competition by limiting flights from Love Field to short intra-state hops only. Even airfield incumbent **Southwest Airlines**, which had won a compromise to the total restriction originally conceived by the Wright law, is unable to gain an allowance for passenger service to points beyond the four contiguous states of Arkansas, Louisiana, New Mexico, and Oklahoma. A legal battle would ensure as Leadbetter and his allies attempt to clarify the possibilities of the 56-seat rule in order to determine if Contrails, the working name for the new airline, could take to the skies.

Former FAA administrator T. (Trusten) Allan McArtor and former **Continental Airlines/Pan American World Airways (1)** leader Thomas Plaskett are recruited to lead the charge for the new carrier, now renamed Legend Airlines. Shareholding in the new enterprise is divided between Dalforth Aviation and private interests, including the Dallas-based investment firm The Hampstead Group (who together will pump \$60 million into the start-up). McArtor is named as chairman/CEO and Plaskett, vice-chairman.

The legal struggle to open up Love Field now begins, with the potential new entrant opposed by the cities of Dallas and Fort Worth and

American Airlines. The initial round appears to go to the cities as the DOT rules that the aircraft are designed for 56 seats (e.g., Canadair Regional Jets) and not larger aircraft with fewer seats, as Leadbetter and McArtor have envisioned.

Under the sponsorship and guidance of Senator Richard Shelby (D-Ala.), Congress, on October 9, 1997, passes another law, the Shelby Amendment, which weakens the Wright rule by authorizing airlines flying aircraft of 56 seats or fewer (regardless of size) to operate long-haul flights from Love Field. It is this law which, potentially, opens the gate for Legend. First, however, it must be kept on the books.

The two Texas cities, supported by **American Airlines**, now attempt to circumvent Shelby by filing lawsuits. The first goes on the docket on October 10, when Fort Worth files against Dallas to block any service expansion from Love Field. On November 6, Dallas countersues Fort Worth, seeking a determination of its rights and requirements.

In January 1998, the U.S. District Court returns the Fort Worth lawsuit of October 10 to a Texas state court. The case is refiled with the plaintiffs again, alleging that long-distance flights from Love Field violate a 1968 pact between Dallas and Fort Worth made as part of the arrangement to build Dallas-Fort Worth International Airport. The state judge rules in favor of the cities, agreeing that they may continue to place Texas-originated restrictions on flights from the contested airport. In December 1998, the U.S. Department of Transportation rules that federal law (read: Shelby) takes precedence over the local agreements for control of Love Field made between the Texas cities.

In early 1999, Legend files suit with the court of appeals for the second district of Texas appealing the state court decision of 1998, which, in effect, upholds the Wright Amendment. Meanwhile, Dallas, Fort Worth, and **American Airlines** file suit with the Fifth Circuit U.S. Court of Appeals at New Orleans appealing the legality of the DOT ruling.

There is no judicial action on either case during the next 11 months. There is, however, another player added when **Continental Airlines** sues Dallas and Fort Worth seeking long-haul rights and the Dallas-Fort Worth Airport Board countersues Continental and **Continental Express**. For good measure, on June 4 the Dallas-Fort Worth Airport Board will also sue **American Airlines**, which has begun contingency planning in case the airport is opened, to also prohibit it from beginning distance flying from Love Field. American is now a plaintiff and a defendant in the Dallas (DAL) matter.

Legend, meanwhile, continues to make preparations for a service launch. Construction is nearly completed on a new \$21-million, 6-gate, 105,000-sq.-ft. terminal building at Love Field, the first private terminal built by an airline before its premier service. Additionally, four former **Continental Airlines** Douglas DC-9-32s are being refurbished, two each leased from Republic Financial Corporation and Triton Aviation Services. Plans call for these planes to provide an upscale service that includes chef-crafted meals on custom Legend china, complementary wine and champagne served to passengers in 56 leather seats equipped with the latest electronic and telecommunications gear.

Dallas, Fort Worth, and **American Airlines** fear that Legend may stage a *fait accompli* and begin flying before the courts can rule. On December 20, their attorneys appear before the court of appeals for the second district of Texas at Fort Worth asking for an injunction to keep Legend on the ground.

In the week after New Year's 2000, the Texas appeals court notifies attorneys for Legend that it may, in fact, prevent it from selling tickets as planned in mid-January or launching service at the end of February if the Fifth Circuit Court of Appeals in New Orleans has not ruled. It also refuses to rule on Legend's 1999 appeal the Dallas-Fort Worth's enforcement of the Love Field restrictions in their 1968 compact.

On January 26, President McArtor announces that the carrier's upscale DC-9 nonstop return service from Dallas (DAL) to Los Angeles and Washington, D.C. (IAD) will start on February 29; daily nonstop roundtrips from Dallas (DAL) to Las Vegas are scheduled to begin on March 9. The Founders Society, meanwhile, is unveiled, offering double miles for life to passengers who fly during the introductory period of

flights to Las Vegas, Chicago, or New York. The plan also allows redemption of sky miles aboard **Delta Air Lines** flights under a deal made with the Atlanta-based major.

On February 1, the U.S. Fifth Circuit Court of Appeals at New Orleans upholds the December 1998 DOT Love Field ruling and, in effect, grants Legend authority to operate from Love Field to any U.S. destination. **American Airlines** hesitates to join an appeal of the New Orleans court's ruling made by Fort Worth to the U.S. Supreme Court. Fort Worth contends that the city of Dallas itself would be in violation of the two-city 1968 compact agreed upon before construction of Dallas-Fort Worth International Airport, a compact virtually dissolved by the DOT ruling over a year earlier. Within days, **American Airlines**, which has been planning for a possible opening the airfield, announces that it will launch its own 56-seat Fokker 100 services from Love Field to Los Angeles and Chicago (ORD) beginning on May 1.

The Supreme Court refuses to take the case, thereby letting the New Orleans Court of Appeals ruling stand. The Fort Worth-based Second District Texas Court of Appeals also rules in favor of long-haul flights in the case first brought by **American Airlines** in December. American files a motion asking the court to reconsider its decision and hints that a negative outcome will result in a petition to the Texas Supreme Court.

Following the protracted legal gestation period, Legend must still complete the FAA certification process before it can offer the revenue flights that are set to commence on February 29. Unhappily, government inspectors conducting a final conformity review of the airline's DC-9s on February 22 discover approximately 60 items that do not pass certification. Of particular concern are uncertified custom-made galley ovens. Consequently, the announced service start-up is postponed on February 28. In addition to the necessity to reequip with conventional steam ovens, an unexpected slowness is also experienced in the installation of new 24-channel satellite television equipment, with monitors on every DC-9-32 seat.

During late March, FAA route proving demonstrations are conducted by the company's DC-9-32s, with the last practice run into Los Angeles (LAX) on March 25. It is anticipated that the company's Part 121 operating certificate will be received without further problem and within about a week. Unhappily, start-up will be pushed back, however, from March 29 to April 2, and then to April 4. Despite the fact that two DC-9-32s, including one christened *Birth of a Legend*, are ready to go, launch is pushed back 24 hours on April 4.

The first scheduled service is undertaken on April 5 from Dallas (DAL) to Washington, D.C. (IAD). Flights to Las Vegas and Los Angeles begin the next day. Return frequencies from Dallas to Dulles (IAD) and Los Angeles (LAX) are operated five times a day, while those to Las Vegas go daily.

On May 22, a lease is signed with Pegasus Aviation for two more DC-9-32s. The carrier goes to court on June 29 claiming that earlier in the year an **American Airlines** employee had gained access to a proprietary area of its computer system by "guessing" the password of a SABRE reservations colleague. American admits the incident, blames it on the employee's "innocent" mistake, and offers an apology.

American Airlines President Donald Carty, on July 7, instructs his attorneys to drop the airline's appeal to the Second District Texas Appeals Court concerning its earlier affirmative decision permitting Love Field long-haul flights and promises not to appeal, as earlier suggested, to the Texas Supreme Court. During July, Legend transports 15,866 passengers from Dallas (DAL), while **American Airlines** flies out 12,988. The figures provide Legend workers with a great psychological boost. Wearing an "I Love New York" sticker on its nose (with a Legend star replacing the standard heart), a fifth DC-9-32 arrives at Dallas (DAL) on August 18.

Four-times-a-day DC-9-32 roundtrips are inaugurated between Dallas (DAL) and New York (LGA) on September 6. The first scheduled service over this route since 1974 is piloted by Capt. Timothy Berwick and Flight Officer Diane Hensleigh-Mullins.

The *Dallas Morning News* reports on October 12 that, between April and September, Legend has lost \$10.8 million flying its modified

upscale 56-seat DC-9s from Love Field to Washington (IAD), Los Angeles, Las Vegas, and New York (LGA). Documents later filed with the DOT will show an actual loss of \$25.6 million. Having lost \$1 million a week during its first six months, the carrier suspends operations on December 2 after a key investor withdraws support. **Continental Airlines** and **Continental Express Airlines** agree to honor the failed upscale start-ups tickets to all of its destinations.

On December, 3, Legend files for Chapter XI protection with the U.S. Bankruptcy Court in the Northern District of Texas. Documents show that the airline owes \$9.26 million to its 20 largest creditors; it lists assets of \$87.3 million and debts of \$84.97 million. Since its 1996 formation, it has lost \$44.7 million, even as investors have injected \$52.75 million capital.

The staff is largely laid off and the company Web page goes blank. On December 19, Legend wins a 10-day extension from the bankruptcy court to come up with the money needed to resume operations. If it fails, liquidation appears inevitable. Permission is also granted for the operation of charter flights.

During the last week of December, a group of New York investors, the Legend Funding Group, steps forward to offer a \$20-million debtor-in-possession loan. A Customer Accommodation Plan, reflecting a commitment to accommodate customers holding Legend tickets, is developed which, together with the financing package, is presented to the U.S. Bankruptcy Court on December 29, which gives its permission for the resumption of services using \$1 million in LFG funding. Chairman McArtor reports that his service to New York (LGA) and Washington, D.C. (IAD) could resume as early as January 15. On December 31, a simple statement appears on Legend's Web page indicating that it "will be flying again in January," pending approval of its creditors, the court, the FAA, and the DOT.

Unhappily, the statement may prove optimistic. By the end of January, the airline will have only 31 employees and no funding has as yet been received from the Legend Funding Group. Because of objections by creditors, the airline's charter operations will be halted by U.S. Bankruptcy Judge Robert McGuire on January 30 when he refuses to permit a Triton Aviation Services affiliate to supply a short-term \$700,000 loan. Ironically, the company's death warrant is thus signed on the first anniversary of the federal appeals court ruling allowing it to begin its flights from Dallas (DAL). The next day, the creditors will reclaim all remaining aircraft and the FAA will move Legend's operating certificate to the dormant file, indicating that it will be permanently withdrawn on March 5 if the carrier is not restarted by then.

In late February, it will be reported that the airline has plans to petition the bankruptcy court for permission to permit it to auction off its operating certificate. Upon learning of this, the FAA will notify Legend CEO/President McArtor, a former FAA administrator, on February 20 that airlines may, under the law, sell only their names and assets, not their operating certificates. The agency will also demand that the company now surrender its document or face legal action. FAA representatives will pick up the certificate from Legend's offices on Monday morning March 5. The story of Legend's epic Love Field battle and its short operational life now become another chapter in American aviation lore.

LEISURE INTERNATIONAL AIRWAYS: United States (1992–1995). Harold "Hap" Pareti, a former official with **PEOPLExpress** and owner of **Presidential Airways**, establishes this charter operation at McLean, Virginia, in July 1992 as a subsidiary of his Worldwide Airline Services. Part 121 certification, with extended range permission (EROPS), is received from the U.S. DOT on September 17. A trio of chartered Airbus Industrie A320-231s, flown by former **Braniff, Inc.** pilots, begin international and regional operations at year's end from a base at Smith Reynolds Airport, Winston-Salem, North Carolina.

Operations continue apace in 1993. By March 1, the company is flying a schedule of 16 to 18 weekly flights to holiday destinations in Florida, Mexico, the Caribbean, and Las Vegas. A contract is accepted

from a tour operator to fly from Los Angeles and San Francisco to Hawaii during the winter period. As the A320s are not suited to this transpacific work, two Douglas DC-10-30s are leased from **United Airlines** to operate the service. At this point, arrangements are completed for the recurring winter season lease of the A320s to the Irish carrier **Translift Airways, Ltd.** Enplanements for the first full year total 500,000.

On behalf of the West Coast tour operator SunTrips, DC-10-30 charters are started from Los Angeles and San Francisco to Honolulu and Maui in January 1994. The Douglas wide-bodies are repainted in a new livery and two B-757-39HERs join the fleet in June. The new Boeings commence charters from Ontario, California, to Guadalajara, Mexico.

Weekly SunTrips flights are undertaken, beginning on June 2, from Los Angeles to Boston, Newark, and onto London (STN). Twice-daily scheduled roundtrip service from Boston to Atlanta commence on June 16. Seats are sold on a first-come first-served basis at the airports, with a \$30 extra charge for a confirmed booking.

Weekly SunTrips begin on July 12 from San Francisco to London via Newark. On November 18, following a weeklong special inspection that uncovers apparent unsafe practices in maintenance and flight operations, the FAA grounds the company. This temporary shutdown lasts over the lucrative Thanksgiving holiday period; however, once safety questions are resolved, the carrier receives FAA permission to resume services in early December.

The new operating authority excludes, however, both the DC-10s and B-757s. In deep financial trouble and only able to fly its A320-231s, which cannot now be sent to Ireland, the carrier fails to release its traffic and financial figures for the year. Only a few charters can be completed in January 1995 before the company runs out of resources. Leisure enters Chapter XI bankruptcy on February 4 and is shortly thereafter liquidated. The DC-10s will be returned to their lessor, who will charter them to the new **Laker Airways**.

LEISURE INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1996–1998). In June 1996, Unijet Group, plc, is able to purchase the 60% stake held in LIA by **Air U.K., Ltd.** The company, which had been formed in February 1992 to offer international charter passenger and cargo services, now becomes an independent operator. C. J. Parker is chairman with Philip Ovenden as managing director. The fleet includes 3 Airbus Industrie A320-212s and 2 Boeing 767-39HERs. The main base is now transferred from London (STN) to London (LGW).

Revenue services continue as before and enplanements climb to 1,399,800.

Airline employment in 1997 stands at 450. The all-leased fleet includes 3 A320-212s, 2 B-767-39HERs, and 2 B-737-4YOs, 1 of which is briefly leased to the Indian carrier **Modiluft, Ltd.** Destinations visited from London (LGW), Birmingham, Glasgow, and Manchester include cities in Florida and the Caribbean. Orders are placed in December for a pair of A330-200s for delivery in 2000.

Passenger boardings drop 7% to 1,302,100.

In early April 1998, at the start of the summer season, the growth of scheduled services at London (LGW) prevents the company from operating a third aircraft from that prime charter airport.

While landing at Ibiza after a flight from Manchester on May 20, an A320-212 with 7 crew and 180 passengers, overshoots the runway and skids 200 meters before coming to a stop. Seventeen passengers are injured during the emergency evacuation that follows.

The carrier establishes a network of trucking contacts in the U.K. and begins to transport freight to 20 sites in the U.K. and 38 in Europe.

During June, First Choice, the tour-operator parent of **Air 2000, Ltd.**, purchases Unijet, the business of which is quickly wound up. First Choice creates a combined carrier the size of **Monarch Airlines, Ltd.**, the country's third largest charter airline. All seven LIA aircraft are incorporated into the Air 2000 fleet in time for the opening of the winter holiday season at the end of October.

LENSIBAVIA: Pilotov 38, St. Petersburg, 196210, Russia; Phone 7 (812) 104-1531; Code LSB; Year Founded 1993. Another reformed **Aeroflot Soviet Airlines** division, Lensibavia is established at St. Petersburg in late 1993 to offer international passenger charter flights. V. V. Romanenko is appointed director general and he launches revenue services in early 1994 with an unspecified number of Tupolev Tu-154Ms. Flights continue.

LENTOHUOLTO, O/Y. See **FINNAVIATION, O/Y**

LEOPARD AIR, LTD.: Malawi (1965–1968). Robert G. Cathcart "Chip" Kay and eight members of the Luchenza Flying Club establish this small charter operation at Tennet Airport in 1965. Maintenance and flight training are the company's initial concern.

Central African Airways Corporation (CAAC) opposes the grant of scheduled authority, but agrees to allow the company's Cessna 206 to fly nonscheduled passenger and cargo services and air taxi flights from its bases at Luchenza and Cholo. These begin in 1966.

Following the demise of CAAC at the end of 1967, the carrier flies a Cessna 310. Flights cease in 1968.

LENTOTOIMI O/Y: Finland (1990–1993). Lentotoimi is established at Pirkkala in 1990 to offer regional air taxi services. Laura Heinonen is managing director and operations begin and continue with a Cessna 401 and a Piper PA-31-350 Navajo Chieftain. Operations cease in 1993.

LES AILES DE CHARLEVOIX, LTD.: Canada (1990–1992). Yvan Gaudreault sets up this small carrier at Clermont, Quebec, in 1990 to offer charter and contract service flights with a Cessna 421C and a Rockwell Aero Commander 500S. In 1991, the first full year of service, a total of 300 passengers are flown. In 1992, that number falls to 260. Operations cease.

LESOTHO AIRWAYS (PTY.), LTD.: Lesotho (1967–1970). With the assistance of **Comair (Commercial Air Services [Pty.], Ltd.)** of South Africa, **Basutair, Ltd.** is reformed in mid-1967. Founder/Managing Director Richard Southworth remains in charge. A Douglas DC-3 is leased from Comair and under contract to the government it is employed, beginning on October 2, to offer a scheduled weekly roundtrip between Maseru and Johannesburg. A second weekly roundtrip is offered as a pooled frequency in partnership with **South African Airways (Pty.), Ltd.**

After two years of service with South African support, the company's entire R 100,000 capitalization is purchased by the government of Lesotho on December 12, 1969. Again reformed, this time into a national corporation, the company's service continues as before.

LESOTHO AIRWAYS CORPORATION, LTD.: Lesotho (1970–1982). To succeed privately owned **Lesotho Airways (Pty.), Ltd.**, LAC is formed at the capital of Maseru on January 1, 1970. H. M. Nts'aba becomes chairman, with C. G. Kenyon as managing director.

In addition to charters, the reformed carrier's carry-over Douglas DC-3 flies scheduled twice-weekly services from the capital's Leabua Jonathan Airport to Johannesburg in association with **South African Airways (Pty.), Ltd. (SAA)**.

In 1971, an HS 748-A1 is wet-leased from SAA and replaces the Douglas transport. Three Cessna 180s are acquired and are used to begin domestic services.

Within a decade, P. Mangoela has become chairman and the carrier employs 58 workers. The South African HS 748 has been returned and the fleet comprises 2 Britten-Norman BN-2 Islanders and 3 Cessna 206s. New destinations include Maputo and Manzini.

Airline employment in 1981 is 125 and the fleet comprises 1 Fairchild FH-227, 3 de Havilland Canada DHC-6 Twin Otters, 2 Britten-Norman BN-2 Islanders, and 1 Dornier Do-28. Domestic services link Maseru with 11 towns and villages, while mail is delivered to 15 additional

airstrips. The FH-227s fly internationally to Johannesburg, Manzini, and Maputo.

A total of 36,000 passengers are carried on the year as the company suffers a net loss of \$152,000.

In January 1982, the carrier takes the new operating title **Air Lesotho (Lesotho Airways Corporation)**.

LETABA AIRWAYS (PTY.), LTD.: South Africa (1974–1985). Formed by a local businessman at Tzaneen in the summer of 1974 to operate domestic flights in South Africa's Transvaal, Letaba is also known as **Letaba Lugdiens**. Set up as a result of the fuel crisis and the resulting reduction of the speed limit for road traffic, the company acquires a single Piper PA-31-350 Navajo Chieftain and employs it to inaugurate revenue services to Johannesburg on September 23.

In October 1976, the one-route airline is taken over by the Shangaan Tsonga Development Corporation and is renamed **Giyani Airways, Ltd.** Despite the addition of services to Giyani, the new name does not stick and the carrier continues to trade under its old title. During 1977–1981, flights are also initiated to Pietersburg.

The Gazankulu government takes control and in the period 1982–1983, the fleet is upgraded by the replacement of the PA-31-350 by 1 Fairchild-Swearingen Metro II, 2 Cessna 404 Titans, and 1 Cessna 421 Golden Eagle. However, Letaba is unable to maintain its economic viability in a time of international recession and the boycott of South Africa and passes from the scene in 1985.

LETHBRIDGE AIR SERVICE, LTD.: Canada (1966–1969). Alberta rancher Walter Ross establishes LAS at Lethbridge, Alberta, in May 1966 to replace the service previously offered to Calgary by **Air Canada, Ltd.** A single Beech 18S is acquired and placed on the service, which is maintained without change until 1969, when the company name is changed to **Time Air, Ltd.**

LEVETZ GROUP: Youngstown Municipal Airport, Youngstown, Ohio 44484, United States; Phone (330) 847-8660; Fax (330) 847-6419; Year Founded 1989. Michael Leveto sets up this small executive and public passenger charter operator at Youngstown Airport in 1989. By 2000, the company's Beech Super King Air 300 is transporting customers throughout the Midwest and Eastern U.S.

L'EXPRESS: United States (1989–1992). L'Express is organized by Stephen Reed at Kenner, Louisiana, in the summer of 1989 to provide regional scheduled passenger and cargo services from New Orleans. Norman McInnis becomes president with Jim Clark as general manager. The initial fleet comprises 5 Beech 99s and 3 Beech 1900Cs. Revenue flight operations commence on August 9, linking the company's base with New Orleans, Shreveport, Alexandria, Baton Rouge, Lake Charles, and Monroe.

By year's end, a total of 20,058 passengers are transported. Revenues total \$1.61 million, expenses are \$2.63 million, and the operating loss is \$1.01 million. The net loss, due to start-up costs, is \$2.01 million.

The workforce is increased by 50% in 1990 to 180 and the fleet is increased by the addition of 1 Beech 1900 and 1 Beech 99. Interline and joint fare agreements are signed with a number of major carriers.

Passenger boardings increase to 75,574 and revenues rise to \$6.55 million. Expenses, however, skyrocket and the carrier is forced to file for Chapter XI bankruptcy.

Company employment is reduced 16.7% in 1991 to 150. Although former **Trump Shuttle** President Bruce Nobles is appointed president, he is unable to alter the carrier's financial tailspin.

En route from Mobile on July 10, Flight 508 is on the last leg of a flight from New Orleans via the Birmingham, Alabama. The Beech 99C with 2 crew and 13 passengers stalls while landing at its destination during a thunderstorm and crashes into a house; there are no survivors and 4 people on the ground are injured.

Customer bookings for the year, nevertheless, jump 7.3% to 77,858.

In February 1992, Beach Aircraft Corporation repossesses its aircraft for nonpayment and L'Express is forced to cease operations. The New Orleans-based regional is unable to find the capital necessary to resume and closes down for good on March 22.

LIA (LINEA INTERNACIONAL AEREA, S.A.): Ecuador (1958–1963). LIA is formed at Guayaquil in June 1958 as the country's officially designated second international airline after **CEA (Compania Ecuatoriana de Aviacion, S.A.)**. Several Douglas DC-3s and two Curtiss C-46s are acquired and by the spring of 1959, service is being offered on the Guayaquil–Quito trunk route. Simultaneously, government-subsidized flights are undertaken from Guayaquil to the Galapagos Islands.

On April 29, 1960, the carrier is designated as Ecuador's participant in a major South American route from Buenos Aires to Miami. Later in the year, the U.S. CAB approves a permit that would allow service to Los Angeles.

During 1961–1962, efforts are made to raise the capital to purchase the long-haul aircraft for the Buenos Aires run. Arrangements are reportedly made for the purchase of a Boeing 307 Stratoliner, possibly one of the two once operated by **AREA (Aerovias Ecuatorianas, C.A.)**.

Although the earlier services are continued in the face of stiff domestic trunk line competition from **CEA (Compania Ecuatoriana de Aviacion, S.A.)**, funds cannot be found for the overseas operations. As a result, LIA shuts its doors in early 1963.

LIA (LINHAS AEREAS DA GUINEA-BISSAU, S.A.): Guinea Bissau (1974–1995). Portuguese Guinea declares its independence on September 24, 1973, a fact recognized by Lisbon the following year. In 1974, **TAGB (Transportes Aereos da Portugusa, S.A.)** is renamed LIA. With a fleet of 5 Douglas DC-3s, 2 de Havilland DH 114 Herons, 3 Dornier Do-27s, and 3 Cessna 206s, the company maintains scheduled services linking Bissalanca International Airport at the capital of Bissau to Dakar, plus the domestic destinations of Farim, Nova Larnego, Bafata, Buba, Catio, and Santo Domingo.

During the next eight years, the carrier's fleet is upgraded by the addition of a Fokker F.27-100 Friendship and a Hawker Siddeley HS 748-B2, which replace the two Herons. Scheduled flights are initiated to Conakry and Praia.

Operations continue apace during 1985–1987. Employing a Boeing 727-100 wet-leased from the French operator **Europe Aero Service, S.A.**, the company undertakes Bissau–Lisbon–Paris flights in August 1988.

Operations continue in 1989 as two Antonov An-24Vs are acquired from the Soviet Union. In July 1990, the government of Guinea-Bissau and the International Bank for Reconstruction and Finance agree that the company should be replaced by a new entity partially owned by a foreign operator.

Meanwhile, the Bissau–Paris frequencies are suspended as the company returns to its domestic and regional services during the period of world recession.

During 1991–1992 there two accidents. On August 15 of the former year, the Friendship, with three crew, crashes near Dori, Burkina Faso; there are no survivors. On April 8 of the latter year, an An-24V with 3 crew and 10 passengers en route from Khartoum to Tunis, crashes near Sarra, Libya (3 dead).

In 1993, the Bissau-based airline, with Capt. Eduardo Pinto Lopez as general manager, operates 1 British Aerospace BAe (HS) 748-B2, 1 Do 228-200, and 1 Antonov An-24. Operations, often under the marketing title **Air Bissau**, continue apace in 1994. In 1995, the airline is officially designated **Air Bissau (Transportes Aereos da Guine-Bissau S.A.)**.

LIANA AIR COMPANY: Nikoliaiev Morekhodnaya 2A, Kiev, 327021, Ukraine; Phone 380 (0512) 341 152; Fax 380 (0512) 349 458; Code NSG; Year Founded 1995. This Russo-Ukraine joint venture company is established at Kiev in 1995 to provide ad hoc all-cargo charters. Revenue flights begin with a single Antonov An-74.

LIAT (LEEWARD ISLANDS AIR TRANSPORT, LTD.): Antigua (1956–1974). With 56% controlling interest held by **British West Indies Airways, Ltd. (2) (BWIA)**, aviation entrepreneur Frank de Lisle forms Leeward Islands Air Transport, Ltd. in 1956 to provide local services. Flights begin in November with a single Piper PA-23 Apache over an Antigua to Montserrat route.

In response to growing demands for more Caribbean air links, the carrier acquires a second aircraft, a Beech Twin Bonanza, in 1957 and initiates services to St. Kitts, St. Eustatius, and St. Martin.

During the year, arrangements with BWIA are formalized and it begins to increase its shareholding in LIAT, as it will annually until, within two years, it has acquired 75% and de Lisle has gradually withdrawn.

By 1959, the fleet has also been increased, growing by three more Twin Bonanzas and a de Havilland DH 114 Heron 2B. Also during the year, **St. Vincent Government Air Service** is purchased and merged. The new DH 114 Heron 2B is lost at St. Kitts on August 23; there are no fatalities.

As the 1960s begin, the company acquires a pair of de Havilland DH 114 Herons. A Curtiss C-46 Commando is employed for all-cargo services during four months in 1964. During the remainder of the decade, the route network grows to 22 island destinations, stretching from Trinidad in the north through the Lesser Antilles to the Virgin Islands. To help properly service these points, six Avro 748s and five Britten-Norman BN-2 Islanders are acquired.

Late in 1970, BWIA announces its plan to dispose of its LIAT stake. In December 1971, with its shipping parent Court Line already owning holdings in the West Indies, the expanding British independent carrier **Court Line Aviation, Ltd.** takes the 75% controlling interest formerly held by BWIA; the purchase price is £1.6 million (\$4 million).

The Court Line group, which is building a large resort at St. Lucia and planning to begin air service to the U.K., names M. A. Warwick as managing director and he brings in a new management team. The CLA BAC 1-11-416EK *Halcyon Sun* is leased and placed into service as the carrier adopts a mauve livery, the two-tone paint scheme favored by the new owners.

In late winter with British business slow, two of CLA's BAC 1-11-518s are transferred to LIAT in what will become an annual practice. Enplanements for the year total 495,611.

Airline employment in 1972 is 806. Plans continue to be made for long-haul service as a second former CLA BAC 1-11-400 joins the fleet that now also includes the first BAC plus 6 HS 748-B2s and 5 Islanders. Originally slated for delivery to **Bahamas Airways, Ltd.**, a BAC 1-11-517 is acquired in June. It replaces the *Halcyon Sun*, which returns to the U.K. on July 5.

In October the fleet is repainted in the same livery scheme as the previous year's BAC delivery; CLA's last two HS 748-B2s are sent out from England. Following the collapse of **Bahamas Airways, Ltd.**, its two BAC 1-11-517s are acquired by CLA and are sent to LIAT in November and December.

Passenger boardings increase 9.56% to 548,000 and freight traffic is up a huge 65%.

In June 1973, LIAT attempts to raise fares in the face of financial problems, but the island governments involved refuse permission. Services are cut and some islands agree to fare hikes only when faced with discontinuance of services. Inflation, high fuel costs, and a decline in ridership by U.S. citizens cause significant fiscal difficulties.

Services to those islands refusing to approve rate hikes is withdrawn in 1974 as the company's financial difficulties deepen. Amidst growing acrimony, the BAC 1-11-517s are forced out of service due to increasing fuel costs. One jetliner per month is returned to the U.K. in March, April, and May.

In mid-August, the carrier slips into bankruptcy along with its parent. Emergency aid from the U.K. and the island governments keeps LIAT alive until a new consortium can be put together in September by the governments of Dominica, St. Lucia, St. Vincent, Grenada, Antigua, and St. Kitts/Nevis. LIAT is reregistered as **LIAT (1974), Ltd.**

LIAT (1974), LTD.: P.O. Box 819, VC Bird International Airport, Coolidge, Antigua; Phone (268) 462-0700; Fax (268) 462-3455; <http://www.flyliat.com>; Code LI; Year Founded 1974. In mid-August 1974, Court Line Aviation, Ltd. of the U.K., which owns LIAT (Leeward Islands Air Transport, Ltd.) declares bankruptcy, taking its Antiguan subsidiary into receivership as well. Emergency aid from the British government and the leaders of several West Indies islands keeps LIAT alive until a new consortium can be put together in September by the governments of Dominica, St. Lucia, St. Vincent, Grenada, Antigua, and St. Kitts/Nevis.

LIAT is reregistered on September 30, under the Companies Act, Chapter 358, of the Laws of Antigua. Although frequent inadvertent errors concerning the carrier's name will continue, from this point on, the legal name of the company is simply LIAT (1974), Ltd.

The governments of Barbados, Guyana, Jamaica, and Trinidad and Tobago join the consortium in 1975. With funds from Venezuela and technical and administrative assistance from Air Canada, Ltd., services are resumed and an agreement is reached with British West Indies Airways, Ltd. (2) (BWIA) for at least initial avoidance of cutthroat competition.

During the peak winter season of 1975–1976, on-time performance suffers due to unpredictable mechanical breakdowns and attendant tight aircraft scheduling. The costs associated with maintaining its expensive older aircraft place immense pressure on the carrier's finances. Indeed, there is insufficient funding for the purchase of new planes, so those on hand are simply refurbished.

The subsidiary Four Island Air Services, Ltd. is formed at Antigua in 1976 to offer service with three BN-2s to Anguilla, Barbuda, Nevis, St. Croix, and St. Kitts. A second subsidiary, Inter-Island Air Services, Ltd., is created in 1977; it begins service from Antigua–Barbados, Carriacou, Grenada, St. Lucia, Mustique, Union Island, and St. Vincent with a fleet of three Islanders and a BN-2A Trislander.

Overall, it is reported that revenues have increased by 34% in 1977 over 1976.

The main LIAT fleet is revised during 1978–1980 to comprise 4 Hawker Siddeley HS 748s, 5 de Havilland Canada DHC-6s, 2 BN-2As, and 6 BN-2s, some of which are employed by the subsidiaries. Service is maintained between all the islands in the consortium.

Another HS 748 and an Embraer EMB-110 are placed in service in 1981–1982. Enplanements are 396,909 (1981) and 374,223 (1982). After several difficult financial years, profits are earned in 1982: \$213,324 (operating) and \$304,365 (net).

The workforce in 1983 totals 688, a 4.9% boost. The Antigua-based airline now operates 4 HS 748s, 8 Islanders, 2 DHC-6s, and 1 Banderante, with orders outstanding for two more Twin Otters.

Passenger bookings climb 7.3% to 403,744 as revenues jump 8.4% to \$24.3 million. Expenses, however, surge 9.1% and cause the operating profit to fall to \$76,053. The net gain is significant: \$636,240.

The employee population is reduced in 1984 to 683. Orders are placed for four additional HS 748s and five DHC-8-100s. With financial assistance from their Canadian manufacturer, the company will be able to receive the five new DHCs for the price of three.

Future Aer Lingus Irish Airlines, Ltd. CEO Gary Cullen is now seconded to LIAT, where he will spend the next three years as commercial manager.

Passenger boardings increase 0.5% to 447,435. Revenues drop 0.5% to \$24.1 million as expenses accelerate 7.5% to \$26.2 million, leaving a \$2.1-million operating loss.

Still, airline employment is allowed to grow in 1985, up 9.5% to 748. A DHC-8 and four HS 748s join the fleet as routes are opened to Caracas, San Juan, and St. Eustatius. The overall route system is revised and numerous intermediate stops are suspended.

Passenger boardings jump 13.8% to 460,302.

The payroll is cut in 1986 by 13.1% to 650; however, another DHC-8 is acquired.

While on final approach to St. Vincent on August 4, a DHC-6-300 with 2 crew and 11 passengers, crashes into the sea in poor weather; there are no survivors.

Also in August, a marketing agreement is signed with Eastern Air Lines to feed traffic to and from the lower Caribbean into the American major's hub at San Juan; LIAT/Eastern Express service commences from St. Kitts and Antigua to the Puerto Rican capital.

Customer bookings increase 16% to 529,858.

The previous year's boarding figures lead to a 1987 boost of 12.3% in employment to 911. The fleet now includes 4 BAe (HS) 748-B2s, 5 DHC-8-110s, 5 DHC-6-310s, and 2 Islanders.

Passenger boardings rise another 8.9% to 581,622 and revenues jump 19.5% to \$43 million. A \$553,000 operating profit is enjoyed.

Operations continue apace in 1988, during which year the fleet is increased by the addition of a fifth BAe (HS) 748-B2 and a sixth Twin Otter.

Enplanements in 1989 reach 710,000 and the operating profit totals \$322,000. There is, however, a \$2.4-million net loss.

Company employment is increased by 5.6% in 1990 to 975. Passenger boardings inch up 1% to 712,244 and revenues ascend 2% to \$38 million. The operating loss is \$5.1 million and net loss is \$8.7 million.

Three DHC-8-102s are leased in 1991 and the fleet in 1992 includes 6 DHC-6-310s, 3 leased DHC-8-102s, 5 DHC-8-110s, and 4 BAe (HS) 748-B2s. In March, a joint marketing agreement is signed with BWIA. Employing Antigua and Barbados as connecting hubs, the two pledge through-baggage service, as well as joint fares and schedules.

In 1993, Chairman Rawle C. Brancker and CEO William Warren Smith oversee a workforce of 1,070. Destinations visited from Antigua include San Juan, Tortola, St. Thomas, Anguilla, St. Croix, St. Martin, St. Eustatius, St. Kitts, Nevis, Barbuda, Montserrat, Guadeloupe, Dominique, Martinique, St. Lucia, Barbados, St. Vincent, Union Island, Carriacou, Grenada, Trinidad and Tobago, Venezuela, Guyana, and Mustique. The company's reputation for service suffers; some claim its initials now stand for "Leaves Island Any Time." Plans are made to privatize the company, now suffering from significant financial losses.

In 1994, a DHC-8-102 is replaced by a DHC-8-103, and a new Pilatus Britten-Norman PBN-2 Islander is acquired. The 650-person employee population now amounts to 3% of the national labor force. In August, a new board of directors is appointed with St. Lucia businessman William Rapier as chairman and former Air Alliance, Ltd. executive Gilles Filiatreault as managing director. The company begins a rationalization process in September trimming its employee population by 14% and retiring its four BAe (HS) 748s-B2s. The operational and engineering base at Barbados is closed down along with several regional offices and all activities are concentrated at Antigua. The carrier markets itself as "The Caribbean Airline."

In 1995, the company fleet includes 5 owned and 4 leased DHC-8-100s plus 6 Twin Otters. It flies to 28 points on 26 Caribbean islands and continues to provide feed to BWIA. Competition from Barbados-based new entrant Carib Express, Ltd. begins in February. The restructuring program begun the previous September is completed in May.

Having struggled financially for years, the carrier has now amassed a \$15-million debt. In July, its owner, the Caricom economic group, agrees to a monetary infusion and also permits the company to order three DHC-8-300s.

The first step toward privatization occurs on November 21 when a public stock offering is made. Twenty-one shareholders take most of the paper and ownership is now divided between Caricom, BWIA (29%), the government of Antigua and Barbuda (13.8%), and company employees (11.6%). A new board of directors is installed under the chairmanship of Senator Aziz Hadeed. Former chief pilot Capt. Ferdinand De Gannes, whose career spans almost the entire history of the airline, is appointed CEO.

Traffic figures are not reported, but it is noted that a profit slightly in excess of \$4 million has been earned.

Although plans are made to finish privatization during the first half of 1996, the action cannot be completed due to disagreement between the shareholders and the Caribbean governments of Antigua, Barbados, Dominica, Grenada, the Grenadines, Guyana, Jamaica, Montserrat, St. Kitts/Nevis, St. Lucia and St. Vincent, and Trinidad and Tobago.

The first new DHC-8-300 is arrives on June 30, followed by the second on July 5. The third is delivered in September.

Markets visited in 1997 include Anguilla, Antigua, Barbados, Barbuda, Caracas, Carriacou, Grenada, Guadeloupe, Guyana, Martinique, Montserrat, Nevis, San Juan, St. Croix, St. Kitts, St. Lucia, St. Martin, St. Thomas, St. Vincent, Tortola, Trinidad and Tobago, and Union Island.

Former **Air Canada, Ltd.** executive Fred Jarvis is named CEO on March 1, succeeding the retiring Capt. De Gannes.

In ceremonies at London's Royal Garden Hotel in March, LIAT, for the second year in a row, is named "Interisland Airline of the Year," by the U.K.-based lifestyle and travel magazine *Caribbean World*. A city sales office is opened in downtown St. John's, capital of Antigua, in April. In May, daily direct service is expanded to Antigua from St. Vincent, Barbados, St. Lucia, and Trinidad.

CEO Jarvis resigns in mid-August and the search for a new CEO begins. Management of the airline is turned over to Dr. Vincent Richards. The government of Dominica now bans the operation of Beech 99 aircraft into Canefield, on the west coast of the island. LIAT's Twin Otters, which the company had planned to sell are, other than charters, the only aircraft now permitted. Canefield travelers are advised to board the LIAT aircraft at Melville Hall, on the east coast of Dominica.

During the fall, Chairman Hadeed orders a number of cost-cutting programs. The carrier grounds its Twin Otter fleet, servicing its Caribbean routes only with Dash 8s. The company suffers financially and Chairman Hadeed now reverses an earlier decision to divest the airline.

On December 3, LIAT takes over the twice-daily air bridge roundtrip service between Trinidad and Tobago operated by BWIA. The move is contested in court by the designated air bridge carrier, **Air Caribbean, Ltd. (ACL)**.

On June 18, 1998, Justice Fyard Hosein grants the ACL request and orders LIAT to halt flights on behalf of BWIA over the Trinidad to Tobago air bridge. BWIA and LIAT, in turn, appeal Hosein's decision to the court of appeals.

On July 1, that high court overturns Judge Hosein's finding and permits BWIA and LIAT to return to the air bridge effective August 31. A week later, unfruitful discussions are held between representatives the governments of Antigua and Barbuda and Trinidad concerning the possibility of establishing a joint holding company for both LIAT and BWIA.

Chairman Hadeed appoints Ray Sayer, an airline professional from the U.K., as CEO of LIAT on July 28.

On August 20, ACL Executive Chairman Leslie "Lucky" Samaroo and General Manager Nelson Tom Yew meet in a "peace conference" at the Red House at Port-of-Spain with BWIA Chairman Lawrence Duprey and CEO Conrad Aleong. The session, brokered by TT Works and Transport Minister Senator Sadiq Baksh, is designed to create an atmosphere under which previous operational differences between the two carriers, including those involving LIAT, might be resolved. During the meeting, Baksh expresses a hope that BWIA will fly more services over the air bridge, while ACL might be designated a national air carrier, which will allow it to expand its regional and international activities.

Hurricane Georges forces LIAT to stand down on September 20 and during several days following. With the exception of St. Kitts, where the airport is badly damaged, LIAT is able to resume service to St. Vincent and the Grenadines, Antigua and Barbuda, St. Lucia, and Grenada on September 25.

The new **HelenAir (Barbados), Ltd.** overcomes objections from LIAT and receives operating authority from the Barbados Air Transport Licensing Authority on September 28.

A "security event," the details of which are unknown, forces Flight 1533, a Dash-8 with 3 crew and 33 passengers en route from St. Kitts to

Antigua, to be met on the Antigua runway by a full emergency crew on November 25. **HelenAir (Barbados), Ltd.** begins flying to Trinidad, St. Lucia, Grenada, and St. Vincent five days later.

Flights continue through the remainder of the year while financial troubles mount.

On February 12, 1999, the Antigua Workers' Union, representing 400 company employees, threatens a strike. The airline, which had promised employees a 4.25% wage increase effective in January 1998, has yet to make good on the arrangement. CEO Sayer acknowledges the increments or pay raises are due, but notes that the airline just does not have the money to pay them.

Chairman Senator Hadeed circulates a letter to employees on February 16 asking them to withdraw their threat and warns that a job action could lead to the carrier's collapse. By February 27, the situation has reached the point where LIAT is obligated to delay payment of February salaries to everyone on the staff from the CEO down.

As if increased competition from the new **HelenAir (Barbados), Ltd.** were not enough, LIAT now faces an even larger challenge.

Having been delivered in January and February, two new DHC-8Q-300s, for which BWIA has paid \$12.5 million each, enter service under the subsidiary name **BeeWee Express, Ltd.** on March 1. The turboprops fly to Grenada (thrice daily), to Barbados (twice daily), to St. Lucia and Barbados (twice daily), to Tobago (twice daily), and to Caracas (daily).

Later in the week, Chairman Hadeed meets with Antiguan Prime Minister Lester Bird and on March 8 the government leader announces that Antigua and Barbuda is buying out BWIA and Hadeed, that LIAT is becoming a wholly state-owned company, and that the jobs of its workers are protected.

Officials from the head office at Antigua travel to Barbados and there sack Winslow Lewis, the local representative, without notice on March 12. The move angers local staffers and politicians.

As workers continue to complain over the next two months, David Jardine becomes acting chairman. In a letter to employees on May 13, he confesses that the company is still in serious financial trouble. Although negotiations are underway with an important bank for a \$3.7-million loan, the arrangement is not yet set. Consequently, employees are again asked to defer receipt of their salaries. May salaries will not be paid for at least two weeks.

In early June, Guyanese national Lynden Bollers is named chief financial officer at a monthly \$6,290 salary. Company employees, angered to learn of the high-priced managerial appointment at a time when they seek back pay for 1998-1999 and are accepting salary deferrals, strike the company on June 22-24. Antiguan Labor Minister Stedroy Benjamin is able to satisfy employees by withdrawing Boller's work permit; the brief industrial action costs the fiscally troubled carrier \$370,000.

St. Vincent joins the route network following delivery of a third Dash-8 at the end of June.

In July, CEO Ray Sayer resigns; he is succeeded, on acting basis, by Capt. Osmond Lake.

During the summer, the **British Airways, Ltd. (2)** subsidiary Speedwing, Ltd., is commissioned to conduct a review of the airline's potential in light of its continuing financial problems. The BA group makes a number of recommendations to the carrier's board, including installation of new management and an infusion of new capital, a radical downsizing of the troubled carrier (principally via a staff and management reduction in force), even its complete shutdown.

Local political and tourism leaders react with horror to the last idea; some travel agents go so far as to suggest that a shutdown would be nothing short of a disaster. On September 4, Antigua and Barbuda Prime Minister Bird calls a meeting of the Organization of Eastern Caribbean States to discuss the LIAT situation.

LIAT's board of directors meets on September 16 to review the Speedwing recommendations. It also authorizes the airline to begin making good on bills owed the government of Grenada.

On September 22, Grenadian Prime Minister Dr. Keith Mitchell informs his parliament that LIAT owes the government close to \$900,000

in ticket taxes, to say nothing of unpaid landing fees for use of Point Salines International Airport. The politician is embarrassed to later learn that LIAT had begun regular payments on these bills three days before presentation of his parliamentary report.

In a further effort to keep LIAT alive and improve its dismal financial situation, on November 20 the board of directors, with stockholder approval, proposes a series of drastic cost-cutting measures that are sent to various unions representing its workers across the Caribbean. Among the ideas floated is a salary rollback for flight attendants and a salary freeze for everyone else through the end of 2001.

The board also acts to restructure the airline's management, reducing the number of managerial staff from 14 to 7. Under this arrangement, Capt. Lake remains acting CEO. Five other positions are filled by managers with acting titles, while four positions remain unfilled, including those of directors of marketing and flight operations.

The leadership of 9 of the company's 10 unions meets at Barbados on November 30 to review the management proposal and flatly reject them, indicating that they would soon present concrete counter ideas, including a plan under which they would acquire 55% of the airline, making it employee-owned. The Barbados Union will not be a party to the news release of the other nine, simply because it has a policy of never signing joint measures.

On December 1, also in keeping with the Speedwing report, the airline offers its employees, from top management to the lowest-paid worker, a voluntary separation package. Those accepting before the December 10 agreement are to receive 80% of whatever their involuntary severance pay would be, along with 75% of outstanding vacation time.

The carrier's new, albeit acting, management team, headed by Capt. Lake, is introduced on December 6; all are required to accept a 10% pay cut. At this time, the CEO indicates that downsizing will continue with an initial layoff of 77 staff, to be followed by between 150 to 200 systemwide. Two of the 12 Dash-8s will be withdrawn and the 10 remaining will be deployed to the most lucrative routes. After the planes were withdrawn and sold, the pilots and flight attendants flying them will be laid off. Plans continue for meetings with the various labor unions, as first requested by the Antigua & Barbuda Workers Union (ABWU) several days earlier, and efforts continue to find funding from several nervous local banks.

It is reported on December 8 that several of the workers' unions are threatening to strike to protest the restructuring measures Capt. Lake has launched. It is noted that the ABWU, which has scrubbed meeting plans, has now taken the unusual step of formally writing to LIAT's board demanding the dismissal of the airline's management team.

The next day, the embattled CEO reports that a number of workers have filed applications for voluntary separation. Several days later, *The Antigua Sun* will reveal that three pilots have withdrawn. Antigua Aviation Minister Robin Yearwood holds talks with **BWIA West Indian Airways, Ltd.** on December 10 regarding LIAT's tenuous position. With 29%, BWIA remains the carrier's largest single shareholder.

On December 11, U.S. Virgin Island authorities contact LIAT threatening to shortly cease any of the company's aircraft landing in the territory if immediate and satisfactory arrangements are not concluded to pay on back landing fees, now totaling \$400,000. Meanwhile, several of the lessors owning company de Havillands begin issuing similar threats if guarantees of payments against long-standing arrears are not soon forthcoming. With payday only three days off, the overdraft facility of the airline is \$2 million above the agreed upon limit. Although the paychecks are cut, it requires the immediate redundancy of 50 workers to find the money.

Workers expecting the first portion of their bimonthly salaries on January 14, 2000, are informed a day earlier that they will be paid their January amounts on February 15. In an effort to force management to back down from the pay deferral, 100 reservations, check-in, and other staff workers at Antigua strike on January 16. Most stage a sit-in, while others call in sick. Manager Wilbur Edwards and Chief Engineer Eugene Abbot man the check-in county, while a "Closed" sign is placed on the

ticket counter. Late on January 17, management caves in, pledging to pay these workers on January 28 instead waiting until February.

When flight attendants strike on January 20 because their paychecks are late, the whole airline must be shut down. All LIAT flights to Barbados and throughout the region are cancelled. Representatives of the unions, LIAT flight attendants, and the board of directors are able to resolve the dispute the next day, allowing flights to resume.

No sooner do the flight attendants get agreement for a new pay date than the 86 company pilots, members of the Leeward Islands Air Line Pilots Association, threaten to strike. On January 25, this group, too, is pacified as CEO Lake indicates all staff will be paid on or before January 31. At this point, the largest indigenous carrier in the eastern Caribbean has \$76 million in liabilities, including \$11 million owed to Caribbean governments for landing fees and other charges.

Work on a large rescue package for LIAT progresses behind the scenes during the first two weeks of February. A number of company directors are sent on missions to persuade owed Caribbean governments that the airline needs their support (read: funding or fee cancellation) in order to survive. On February 11, the same day that the carrier temporarily shelves a plan for another personnel reduction in force, Minister Yearwood goes before the cameras to announce that a \$2.8-million financing arrangement, backed by the Antigua and Barbuda government, has been created. Funding involves a \$1.4-million bank overdraft facility and a \$1.5-million bank loan.

As the month wears on, other Caribbean governments, noting the importance of LIAT and Antigua's generosity, agree to provide a \$14.8-million financing package.

Following a special stockholders meeting, local businessman Wilbur Harrigan, whose firm Pannell Kerr Foster, Ltd. has audited the airline for 13 years, is named chairman on February 21. At his first news conference the next day, he declares that he can "fix" the troubled airline by installing a new management team, cooperating with competing **BWIA West Indies Airways, Ltd.**, outsourcing LIAT's unprofitable in-house facets, and a further personnel RIF. Addressing the company's huge debt, the new leader indicates that his board will continue to reach out across the region for forgiveness, even though some shareholder governments, like Barbados, have indicated an unwillingness to do so.

Although no new routes are started with the beginning of the summer schedule, the opportunity of its beginning is taken to note a number of improvements. Chief among these is a 6% increase in passenger boardings during the first quarter, vis-à-vis a year earlier, together with improved on-time performance and a new standardized schedule. Bookings for the upcoming charter season, particularly with regards to cricket matches, are encouraging.

On March 30 at an emergency board meeting, the decision is made to appoint former **Aer Lingus Irish Airlines, Ltd.** CEO Gary Cullen as the company's new CEO, succeeding Capt. Lake on June 1. Cullen, who had suddenly resigned from the Dublin-based major on February 9, had been seconded to LIAT as its commercial manager in 1984-1987.

The launch of the new start-up **Caribbean Star Airlines, Ltd.** brings considerable concern at the beginning of April, particularly after it is reported that three experienced LIAT pilots and five flight attendants have resigned from LIAT to join the new concern.

New CEO Cullen has barely arrived on June 1 before his new concern is faced on June 7 with a crisis of a potentially more dangerous kind than financial. An armed gunman allegedly hijacks a company Dash-8 with 17 aboard at V.C. Bird International Airport and demands a \$2.5-million ransom. A hostage drama involving the airline, various police, government, and military agencies, is played out for almost eight hours before the pirate surrenders. When it is revealed that this had been the annual test for the Regional Security System, many people are not amused. *Caribbean Week*, in its June 8 issue, runs the headline: "LIAT Hijacked, 2.5 Million Demanded."

During the next month and a half, CEO Cullen brings in a new management group and the board of directors prepares a new development plan, which is revealed after a July 14 meeting. Although details are not

provided, it is noted that personnel productivity, additional cost cutting, and recapitalization are to be stressed. Attention is also paid to feeding, wherever possible, the flights of **BWIA West Indies Airways, Ltd.** Plans to lay off workers will, however, be soft-pedaled as reports suggest that severance pay could cost LIAT \$9.9 million it does not have.

CEO Cullen and John Strugnell, managing director of **WIA (Windward Islands Airways International, NV-Winair)** announce a new code-sharing and marketing agreement on July 28. Under terms of the pact, the two will quickly integrate their schedules and launch new services between the French islands, St. Martin, Antigua, and Santo Domingo.

The two airline leaders unveil a new regional networking plan on September 22. Under their concept, the pair link with Trans Island Airlines, Ltd. of Barbados, **Carib Aviation, Ltd.** of Antigua, and **Air Caraibes Exploitations, S.A.** of Guadeloupe to serve an anticipated 1.4 million passengers in Miami, Cuba, the Dominican Republic, French Guiana, and Guyana with upwards of 690 daily flight movements. The new business confederation, which is expected to be fully effective by April 1, is tentatively labeled the CARIB Partner Alliance.

On October 6, Grenada becomes the first government to grant route rights to **Caribbean Star Airlines, Ltd.**; LIAT, as its most probable competitor, files objections to permits from Barbados, Dominica, Trinidad, and St. Lucia. To protect cash-strapped LIAT, the Antigua and Barbuda government refuses Caribbean Star flying rights on the profitable route to St. Martin.

Employing three DASH-8-100s and a DASH-8-300, **Caribbean Star Airlines, Ltd.** launches low-cost roundtrip service on October 18 from Antigua to Trinidad via Grenada. Receipt of route rights from Dominica allows the inauguration of service between Antigua and Roseau on October 23.

In the wake of the failure of **Air Caribbean, Ltd.**, **Caribbean Star Airlines, Ltd.** on October 27 applies to the Air Transport Licensing Authority to operate a service on the Trinidad-Tobago air bridge. After an objection by LIAT ally **BWIA West Indies Airways, Ltd.**, ATLA Chairman Ramsaran Bissessar announces that law and international treaties exclude the Antigua-based carrier's bid.

In recent years, the government of Antigua and Barbuda has injected \$6.1 million in cash and contingent liability into LIAT, in addition to waiving \$4.4 million in unpaid landing and navigational fees. Without stating exactly why additional state funding is required, LIAT, on October 25, approaches the government for a temporary overdraft guarantee of \$2.5 million over the next six months. Speculation for the request centers around a necessity to lower ticket prices in the face of competition from Caribbean Star Airlines, Ltd.

Consideration of the LIAT request is not immediately heard by the government cabinet; however, on November 3, Prime Minister Bird indicates that he would support a merger of LIAT with its new rival, Caribbean Star. LIAT Chairman Harrigan had earlier invited the new entrant's to discuss such a possibility rather than engage in a devastating fare war. In the interest of LIAT's preservation, the government now guarantee's the requested \$2.5 million, subject to presentation of an acceptable business plan.

LIAT CEO Garry Cullen and Conrad Aleong, CEO of **BWIA West Indies Airways, Ltd.**, sign a comprehensive marketing and code-sharing agreement on November 16.

As the year ends, arrangements are completed for the initiation in January of DHC-8 roundtrips, in cooperation with **WIA (Windward Islands Airways International, NV-Winair)**, between Antigua and Santo Domingo via St. Martin. Additionally, CEO Cullen plans to put another management structure into place, headed by new COO Louis Harkin, another veteran of **Aer Lingus Irish Airlines, Ltd.**

LIBAVIA: Libya (1958-1964): A 21-year-old Libyan travel agency, with offices at Tripoli and Benghazi, sets up its own in-house airline at Tripoli in the spring of 1958. Hag Mustafa Mezran is named president. A Douglas DC-6B is leased from the French independent carrier **UAT**

(Union Aeromaritimes de Transport, S.A.) to launch twice-weekly roundtrips to Ankara, beginning in July.

Twice-weekly flights to Athens commence in May 1959 when the Greek capital is added as a stop on the Ankara service. The route is made thrice weekly before year's end.

The segment from Greece to Turkey is withdrawn in 1960, although thrice-weekly roundtrips from Tripoli to Athens continue, now with a stop at Benghazi.

In 1961, **Tunis Air, S.A.** turns over a cabotage route from Tunis to Sabah to Libavia, along with a DC-3. To prevent its competition and to strengthen its foundation, Libavia is taken over by the government-owned national carrier **Libyan Arab Airlines** in 1964.

LIBERIA NATIONAL AIRLINES: Liberia (1965-1974). At the command of the government and with assistance from **UTA (Union de Transports Aeriens, S.A.)**, **Liberia National Airways** is reformed on January 1, 1965. Romeo A. Horton is appointed president and scheduled services previously operated to domestic and regional destinations are continued with 2 Douglas DC-3s. A new route is opened from Monrovia to Freetown, Sierra Leone.

Unable to maintain its viability in the face of intense competition from the more modern aircraft of neighboring states, LNA is reformed into **Air Liberia** in January 1974.

LIBERIA NATIONAL AIRWAYS: Liberia (1949-1965). LNA is established at Monrovia in the fall of 1949 to serve as the country's national airline. For the first four years, flights by President F. H. Syphert's concern are largely charter.

Employing LNA's de Havilland DH 89A Dragon Rapide and Douglas DC-3, scheduled services are inaugurated in 1952 to domestic and regional destinations, including Robertsfield.

The company never earns a profit and on January 1, 1965, with the assistance of **UTA (Union de Transports Aeriens, S.A.)**, it is reformed into Liberia National Airlines.

LIBERIA WORLD AIRLINES. See **LWA (LIBERIA WORLD AIRLINES)**.

LIBERTY AIR: United States (1984). Liberty Air is set up at Fairbanks in August 1984 by former executives of **Sunair** and **Markair** through the purchase and merger of **Air North (Yukon Air Service)** and **Valdez Airlines**. Even before the combined fleet comprising aircraft from the two acquisitions can be painted, the new entrant goes bankrupt in September.

LIBERTY AIRLINES: United States (1982-1983). Organized by Thomas Wiles at Toledo, Ohio, during the first week of January 1982, this third-level carrier opens daily roundtrip scheduled passenger and cargo services to Chicago (MDW) on January 18 with a pair of Convair CV-440s and a Beech B-58 Baron. Later, in August, flights are inaugurated to Akron and Canton and to Philadelphia.
